- 6. Quality Assurance and Evaluation, Measurement, and Verification
- 7. Cost Recovery Mechanism
- 8. Cost Effectiveness
- 9. Plan Compliance Information and Other Key Issues
- 10. Appendices

1. OVERVIEW OF PLAN.....	11
1.1. SUMMARY DESCRIPTION OF PLAN, PLAN OBJECTIVES, AND OVERALL STRATEGY TO ACHIEVE ENERGY EFFICIENCY AND CONSERVATION GOALS.	15
<i>Residential Energy Star and High Efficiency Appliance Program</i>	16
<i>Compact Fluorescent Lighting (CFL) Rewards Program</i>	16
<i>Residential HVAC Efficiency Program</i>	16
<i>Residential Home Performance Program</i>	17
<i>Residential Low Income Home Performance Check-up Audit and Appliance Replacement Program</i>	17
<i>Residential Low Income Joint Utility Usage Management Program</i>	17
<i>Residential Low Income Room Air Conditioner Replacement Program</i>	17
<i>Residential Efficiency Rewards Rate</i>	18
<i>Commercial HVAC Efficiency Program</i>	18
<i>Commercial Lighting Efficiency Program</i>	18
<i>Governmental/Non-Profit Lighting Efficiency Program</i>	18
<i>Custom Technology Applications Program</i>	18
<i>Programmable Controllable Thermostat (PCT) Program</i>	19
<i>Pay Ahead (Smart) Service Rate</i>	19
<i>Commercial and Industrial Drives Program</i>	19
<i>Custom Applications Program</i>	19
<i>Customer Load Response Program</i>	20
<i>Critical Peak Rebate (CPR) Rate</i>	20
<u><i>Customer Resources Demand Response Program</i>.....</u>	<u>20</u>
<i>Time of Use (TOU) with Critical Peak Pricing Rate</i>	21
<i>Hourly Pricing Option (HPO) Rate</i>	21
<i>Overview of Plan -- Conclusion</i>	22
1.2. SUMMARY DESCRIPTION OF PROCESS USED TO DEVELOP THE EE&C PLAN AND KEY ASSUMPTIONS USED IN PREPARING THE PLAN.	24
1.3. SUMMARY TABLES OF PORTFOLIO SAVINGS GOALS, BUDGET AND COST-EFFECTIVENESS	26
1.4. SUMMARY OF PROGRAM IMPLEMENTATION SCHEDULE OVER FOUR YEAR PLAN PERIOD (SEE CHART 1 NOTES).	31
1.5. SUMMARY DESCRIPTION OF THE EDC IMPLEMENTATION STRATEGY TO MANAGE EE&C PORTFOLIOS AND ENGAGE CUSTOMERS AND TRADE ALLIES.....	31
1.6. SUMMARY DESCRIPTION OF EDCs DATA MANAGEMENT, QUALITY ASSURANCE AND EVALUATION PROCESSES; INCLUDE HOW EE&C PLAN, PORTFOLIOS, AND PROGRAMS WILL BE UPDATED AND REFINED BASED ON EVALUATION RESULTS.	32
1.7. SUMMARY DESCRIPTION OF COST RECOVERY MECHANISM.	32
2. ENERGY EFFICIENCY PORTFOLIO/PROGRAM SUMMARY TABLES AND CHARTS.....	35
2.1. RESIDENTIAL, COMMERCIAL/INDUSTRIAL SMALL, COMMERCIAL/INDUSTRIAL LARGE AND GOVERNMENTAL/NON-PROFIT PORTFOLIO SUMMARIES (SEE TABLE 4).	35
2.2. PLAN DATA: COSTS, COST-EFFECTIVENESS AND SAVINGS BY PROGRAM, SECTOR AND PORTFOLIO (SEE TABLES 1-4).....	38
2.3. BUDGET AND PARITY ANALYSIS – (SEE TABLE 5).	43
3. PROGRAM DESCRIPTIONS.....	45
3.1. DISCUSSION OF CRITERIA AND PROCESS USED FOR SELECTION OF PROGRAMS:	45
3.1.1 <i>Describe portfolio objectives and metrics that define program success (e.g., energy and demand savings, customers served, number of units installed).</i>	45
3.1.2 <i>Describe how programs were constructed for each portfolio to provide market coverage sufficient to reach overall energy and demand savings goals. Describe analyses and/or research that were performed (e.g., market, best-practices, market modeling).</i>	45
3.1.3 <i>Describe how energy efficiency, conservation, solar, solar photovoltaic systems, geothermal heating, and other measures are included in the portfolio of programs as applicable.</i>	46
3.2. RESIDENTIAL SECTOR (AS DEFINED BY EDC TARIFF) PROGRAMS	50

a.	RESIDENTIAL ENERGY STAR AND HIGH EFFICIENCY APPLIANCE PROGRAM.....	50
b.	COMPACT FLUORESCENT LIGHTING (CFL) REWARDS PROGRAM	55
c.	RESIDENTIAL HVAC EFFICIENCY PROGRAM	60
d.	RESIDENTIAL HOME PERFORMANCE PROGRAM.....	65
e.	RESIDENTIAL EFFICIENCY REWARDS RATE.....	70
f.	PROGRAMMABLE CONTROLLABLE THERMOSTAT (PCT) PROGRAM	74
g.	PAY AHEAD (SMART) SERVICE RATE	79
h.	CRITICAL PEAK REBATE (CPR) RATE	83
i.	TIME OF USE RATE (TOU) WITH CRITICAL PEAK PRICING RATE.....	87
j.	HOURLY PRICING OPTION (HPO) RATE	87
3.2.1	<i>Low-Income Sector (as defined by 66 Pa. C.S. § 2806.1) Programs</i>	88
a.	RESIDENTIAL LOW INCOME HOME PERFORMANCE CHECK UP AUDIT & APPLIANCE REPLACEMENT PROGRAM (SINGLE & MULTI-FAMILY DWELLINGS)	88
b.	RESIDENTIAL JOINT UTILITY USAGE MANAGEMENT PROGRAM – LOW INCOME WEATHERIZATION (LIURP, HOME CHECK UP & APPLIANCE REPLACEMENT).....	94
c.	RESIDENTIAL LOW INCOME ROOM AIR CONDITIONER REPLACEMENT PROGRAM.....	100
3.3.	COMMERCIAL/INDUSTRIAL SMALL SECTOR (AS DEFINED BY EDC TARIFF) PROGRAMS	106
a.	COMMERCIAL HVAC EFFICIENCY PROGRAM	106
b.	COMMERCIAL LIGHTING EFFICIENCY PROGRAM.....	111
c.	CUSTOM TECHNOLOGY APPLICATIONS PROGRAM.....	116
d.	TIME OF USE (TOU) WITH CRITICAL PEAK PRICING RATE.....	122
e.	HOURLY PRICING OPTION (HPO) RATE	126
f.	PROGRAMMABLE CONTROLLABLE THERMOSTAT (PCT) PROGRAM	130
g.	PAY AHEAD (SMART) SERVICE RATE	130
h.	COMMERCIAL AND INDUSTRIAL DRIVES PROGRAM.....	130
i.	CUSTOMER LOAD RESPONSE PROGRAM.....	130
j.	CUSTOMER RESOURCES DEMAND RESPONSE PROGRAM.....	130
k.	CRITICAL PEAK REBATE (CPR) RATE	130
3.4.	COMMERCIAL/INDUSTRIAL LARGE SECTOR (AS DEFINED BY EDC TARIFF) PROGRAMS	131
a.	COMMERCIAL AND INDUSTRIAL DRIVES PROGRAM.....	131
b.	CUSTOM APPLICATION PROGRAM.....	136
c.	CUSTOMER LOAD RESPONSE PROGRAM.....	141
d.	CUSTOMER RESOURCES DEMAND RESPONSE PROGRAM.....	146
f.	COMMERCIAL LIGHTING EFFICIENCY PROGRAM.....	152
g.	CUSTOM TECHNOLOGY APPLICATIONS PROGRAM.....	152
h.	PAY AHEAD (SMART) SERVICE RATE	152
3.5.	GOVERNMENTAL/NON-PROFIT SECTOR PROGRAMS	153
a.	GOVERNMENT/SCHOOL/NON-PROFIT LIGHTING EFFICIENCY PROGRAM	153
b.	COMMERCIAL HVAC EFFICIENCY PROGRAM	159
c.	CUSTOM TECHNOLOGY APPLICATIONS PROGRAM.....	159
d.	PROGRAMMABLE CONTROLLABLE THERMOSTAT (PCT) PROGRAM	159
e.	PAY AHEAD (SMART) SERVICE RATE	159
f.	COMMERCIAL AND INDUSTRIAL DRIVES PROGRAM.....	159
g.	CUSTOMER LOAD RESPONSE PROGRAM.....	159
h.	CUSTOMER RESOURCES DEMAND RESPONSE PROGRAM.....	159
i.	CRITICAL PEAK REBATE (CPR) RATE	159
j.	TIME OF USE RATE (TOU) WITH CRITICAL PEAK PRICING (CPP) RATE.....	159
k.	HOURLY PRICING OPTION (HPO) RATE	160
4.	PROGRAM MANAGEMENT AND IMPLEMENTATION STRATEGIES.....	161
4.1.	OVERVIEW OF EDC MANAGEMENT AND IMPLEMENTATION STRATEGIES.....	161
4.1.1.	<i>Describe the types of services to be provided by EDC as well as consultants, trade allies, and CSPs. Indicate which organizations will provide which services and the basis for such allocation. Reference reporting and EM&V information from Sections 5 and 6 below.</i>	<i>161</i>
4.1.2.	<i>Describe how the risk categories of performance, technology, market and evaluation can affect the programs and any risk management strategies that will be employed to mitigate those risks.....</i>	<i>165</i>
4.1.3.	<i>Describe how EDC plans to address human resource and contractor resource constraints to ensure that adequate personnel and contractors are available to implement the EE&C plan successfully.</i>	<i>166</i>

4.1.4. Describe “early warning systems” that will be utilized to indicate progress towards the goals and whether they are likely to be met. Describe EDCs approach and process for shifting goals and funds, as needed, between programs and adding new measures/programs.....	166
4.1.5. Provide implementation schedules with milestones.	167
4.2. EXECUTIVE MANAGEMENT STRUCTURE:	168
4.2.1. Describe EDC structure for addressing portfolio strategy, planning, review of program metrics, internal and external communications, budgeting and financial management, program implementation, procurement, program tracking and reporting, and Quality Assurance/Quality Control (QA/QC). Include EDC organization chart for management team responsible for implementing EE&C plan.	168
4.2.2. Describe approach to overseeing the performance of sub-contractors and implementers of programs and how they can be managed to achieve results, within budget, and ensure customer satisfaction.....	169
4.2.3. Describe basis for administrative budget.	170
4.3. CONSERVATION SERVICE PROVIDERS (CSPS):.....	170
4.3.1. List any selected CSPs, describe their qualifications and basis for selection (include contracts in Appendix).	170
4.3.2. Describe the work and measures being performed by CSPs.	171
4.3.3. Describe any pending RFPs to be issued for additional CSPs.	171
5. REPORTING AND TRACKING SYSTEMS	173
5.1 REPORTING	173
5.1.1. List reports that would be provided to the Commission, the schedule for their delivery, and the intended contents.....	173
5.1.2. Describe data that would be available (including format and time frame of availability) for Commission review and audit.	173
5.2 PROJECT MANAGEMENT TRACKING SYSTEMS	173
5.2.1. Provide brief overview of the data tracking system for managing and reporting measure, project, program and portfolio activities, status and performance as well as EDC and CSP performance and expenditures.....	173
5.2.2. Describe the software format, data exchange format, and database structure you will use for tracking participant and savings data. Provide examples of data fields captured.....	174
5.2.3. Describe access and mechanism for access for Commission and statewide EE&C Plan Evaluator.	174
6. QUALITY ASSURANCE AND EVALUATION, MEASUREMENT AND VERIFICATION	175
6.1 QUALITY ASSURANCE/QUALITY CONTROL	175
6.1.1. Describe overall approach to quality assurance and quality control.....	175
6.1.2. Describe procedures for measure and project installation verification, quality assurance and control, and savings documentation.	176
6.1.3. Describe process for collecting and addressing participating customer, contractor and trade ally feedback (e.g., suggestions and complaints).	178
6.2 DESCRIBE ANY PLANNED MARKET AND PROCESS EVALUATIONS AND HOW RESULTS WILL BE USED TO IMPROVE PROGRAMS.....	179
6.3 DESCRIBE STRATEGY FOR COORDINATING WITH THE STATEWIDE EE&C PLAN EVALUATOR (NATURE AND TYPE OF DATA WILL BE PROVIDED IN A SEPARATE COMMISSION ORDER).	179
7. COST-RECOVERY MECHANISM.....	181
7.1 PROVIDE THE AMOUNT OF TOTAL ANNUAL REVENUES AS OF DECEMBER 31, 2006, AND PROVIDE A CALCULATION OF THE TOTAL ALLOWABLE EE&C COSTS BASED ON 2% OF THAT ANNUAL REVENUE AMOUNT.	181
7.2 DESCRIPTION OF PLAN IN ACCORDANCE WITH 66 PA. C.S. §§ 1307 AND 2806.1 TO FUND THE ENERGY EFFICIENCY AND CONSERVATION MEASURES, TO INCLUDE ADMINISTRATIVE COSTS.....	181
7.3 PROVIDE DATA TABLES (SEE TABLES 6A, 6B, AND 6C).	182
7.4 PROVIDE AND DESCRIBE TARIFFS AND A SECTION 1307 COST RECOVERY MECHANISM. PROVIDE ALL CALCULATIONS AND SUPPORTING COST DOCUMENTATION.	184
7.5 DESCRIBE HOW THE COST RECOVERY MECHANISM WILL ENSURE THAT MEASURES APPROVED ARE FINANCED BY THE SAME CUSTOMER CLASS THAT WILL RECEIVE THE DIRECT ENERGY AND CONSERVATION BENEFITS.....	184
8. COST EFFECTIVENESS.....	191

8.1 EXPLAIN AND DEMONSTRATE HOW THE PROPOSED PLAN WILL BE COST EFFECTIVE AS DEFINED BY THE TOTAL RESOURCE COST TEST (TRC) SPECIFIED BY THE COMMISSION.191

8.2 PROVIDE DATA TABLES (SEE TABLES 7A THRU 7E).191

9. PLAN COMPLIANCE INFORMATION AND OTHER KEY ISSUES197

9.1 PLAN COMPLIANCE ISSUES197

9.1.1. Describe how the plan provides a variety of energy efficiency, conservation, and load management measures and will provide the measures equitably to all classes of customers in accordance with the January 15 Implementation Order.197

9.1.2. Provide statement delineating the manner in which the EE&C plan will achieve the requirements of the program under 66 Pa. C.S. §§ 2806.1(c) & 2806.1(d).197

9.1.3. Provide statement delineating the manner in which the EE&C plan will achieve the Low-Income requirements under 66 Pa. C.S. §§ 2806.1(b)(1)(i)(G).197

9.1.4. Provide statement delineating the manner in which the EE&C plan will achieve the Government/Non-Profit requirements under 66 Pa. C.S. §§ 2806.1(b)(1)(i)(B).198

9.1.5. Describe how EDC will ensure that no more than two percent of funds available to implement the plan shall be allocated for experimental equipment or devices.198

9.1.6. Describe how the plan will be competitively neutral to all distribution customers even if they are receiving supply from an EGS.198

9.2 OTHER KEY ISSUES198

9.2.1. Describe how this EE&C plan will lead to long-term, sustainable energy efficiency savings in the EDCs service territory and in Pennsylvania.198

9.2.2. Describe how this EE&C plan, and the EDC, will avoid possible overlaps between programs offered in different Pennsylvania EDC service territories as well as possibly programs offered in neighboring states.199

9.2.3. Describe how this EE&C plan will leverage and utilize other financial resources, including funds from other public and private sector energy efficiency and solar energy programs.200

9.2.4. Describe how the EDC will address consumer education on energy efficiency, conservation, solar and solar photovoltaic systems, and geothermal heating, and other measures.200

9.2.5. Indicate that the EDC will provide a list of all eligible federal and state funding programs available to ratepayers for energy efficiency and conservation.208

9.2.6. Describe how the EDC will provide the public with information about the results from the programs.208

10. APPENDICES209

A. Commission approved electricity consumption forecast for the period of June 1, 2009 through May 31, 2010.209

B. Average hourly demand in the EDCs 100 highest peak hours during the period of June 1, 2007 through September 30, 2007.210

C. Approved CSP contract(s).211

D. Program by program calculation of savings and costs for each program year. Include separate sections for each program with sub-sections for each year describing savings and costs information. Cost data should include for each program (and for General Administrative Cost Areas of Planning, Evaluation and Other) and each program year separate budgets for (see Example Tables 6A, 6B, and 6C):243

E. Calculation methods and assumptions. Describe methods used for estimating all program costs, including administrative, marketing, and incentives costs; include key assumptions. Describe assumptions and present all calculations, data and results in a consistent format. Reference Appendix D.251

F. Other.253

Table of Tables and Figures

1. Overview of Plan

West Penn Power Company d/b/a Allegheny Power (“Allegheny Power” or “the Company”) is a Pennsylvania electric distribution company (“EDC”) providing service in southwestern, south-central and northern Pennsylvania. Allegheny Power serves approximately 715,000 customers in Pennsylvania in an area of about 10,400 square miles with a population of approximately 1.5 million. Allegheny Power is a wholly owned subsidiary of Allegheny Energy, Inc. Allegheny Power and Allegheny Energy, Inc., have corporate headquarters at 800 Cabin Hill Drive, in the City of Greensburg, Westmoreland County, Pennsylvania.

On October 15, 2008, Governor Edward Rendell signed Act 129 of 2008 (“Act 129”), to be effective November 14, 2008. Act 129 requires EDCs with at least 100,000 customers in Pennsylvania to adopt a plan to reduce energy consumption and demand in their service territories. As directed by Act 129 the Pennsylvania Public Utility Commission (“Commission” or “PUC”) entered an Implementation Order on January 16, 2009 at Docket No. M-2008-2069887 establishing standards for EDC plans under Act 129.

Allegheny Power proposes to meet the energy efficiency and conservation requirements of Act 129 with a portfolio of 21 energy-efficiency and conservation (“EE&C”) and demand response (“DR”) programs, and rate offerings, including 11 for the residential sector, 6 for the small commercial and industrial sector, 3 for the large commercial and industrial sector, and 1 for government, school and non-profit customers. Included in Allegheny Power’s plans are measures or programs that target customers in each of the Company’s customer segments – residential, commercial, and industrial - respectively. Most of Allegheny Power’s EE&C and DR measures target the major energy-consuming systems in households and businesses. These systems include, but are not limited to: heating, ventilating and air conditioning (“HVAC”), refrigeration, and clothes washing and drying appliances (“White Goods”) and lighting. Allegheny Power’s EE&C and DR measures and programs have been designed with a sufficiently broad scope and variety to provide opportunity for all of the Company’s Pennsylvania customers to participate and benefit. Many of the Company’s EE&C and DR measures and programs provide customers with rebates or other direct incentives that not only encourage participation but also foster positive behavioral change that in turn creates lasting economic, environmental, and societal benefit.

The Company has sought to develop EE&C and DR programs that are consistent and uniform to minimize customer confusion and leverage customer education regarding energy efficiency and conservation. As a result, included in the Company’s Plan are programs that are proposed by other Pennsylvania EDCs as well as programs offered by the Company in its Maryland service territory. In addition, the Company has pursued discussions with stakeholders and the other Pennsylvania EDCs to develop consistency and uniformity within like programs including equipment eligibility requirements as well as proposed incentive levels and incentive structures. Furthermore, the Company has sought to leverage existing programs and resources in its Plan to avoid competition between like programs that may be available to customers. While variances do exist from EDC to EDC in their programs, the Company believes that these efforts have resulted in consistency and uniformity to the extent possible for this filing.

During the past several years and as part of a nationwide trend, Pennsylvania's energy-consuming citizens and businesses have faced rising prices without the ready ability to decrease their energy use or control costs. The Company's filing herein responds to this issue by providing Allegheny Power customers with robust energy conservation and efficiency tools enabling customers to reduce their electricity consumption and demand with the concomitant opportunity to save money. The measures, programs and rate offerings described in this EE&C and DR filing will help customers adjust their energy use with the aim of reducing overall consumption and decreasing peak demand for electricity.

Demand Response and the Smart Metering Infrastructure

Many of the data, communications, systems control, and appliance control capabilities discussed in this filing are technology enabled by a group of technologies often described as Advanced Metering Infrastructure (AMI) or Smart Meter infrastructure. In Allegheny Power's forthcoming Smart Meter Technology Procurement and Installation Plan ("SMIP")¹, targeted for filing on or before August 14, 2009, the Company will provide significantly greater detail about the Smart Meter, Smart Meter infrastructure, technology-based tools, and the costs for these technologies which underpin many of the EE&C and DR programs, measures, and rate offerings described in this filing. This future SMIP filing will also provide more significant detail into how Allegheny Power will enable customers to monitor and effectuate changes in their usage to manage their energy bills. This dynamic, customer driven demand response not only creates economic benefit for individual customers but also places significant downward pressure on regional electricity wholesale capacity and energy prices creating a larger region-wide economic and social benefits. The SMIP also takes customers to a future where Demand Side Management (DSM) programs, focused on both energy efficiency and conservation and demand response, are enabled by new technology investments that best meet customer lifestyles, behaviors, and electricity needs.

Several of the proposed measures and programs in this filing are enhanced by and/or rely on the installation of Smart Meters and Smart Metering infrastructure as well as new rate structures and tariffs. The Company believes that Smart Meters, Smart Metering infrastructure and a set of complementary designed rates and tariffs are essential components of the Company's EE&C and DR plan to meet the mandated consumption and demand reduction targets mandated by Act 129. Well-designed rate structures, implemented in conjunction with Smart Metering infrastructure, will allow customers the opportunity to change their energy usage behavior based on price signals in the electricity market. This filing concentrates on the description of the Company's EE&C and DR programs, measures, and rate offerings. The forthcoming SMIP filing and other future anticipated rates and tariff filings will provide additional description and detail about the Company's compliance with the requirements of Act 129. The Company is hopeful that its SMIP and tariff filings will be approved in a timely manner in order for the Company to meet its goals.

Customer response to energy prices can be automated and/or manual. The primary purpose of these smart metering efforts is to educate customers on their energy usage and the true cost of electricity and to assist the Company in: 1) achieving Act 129 mandates and 2) learning how to best serve customers who are in turn responding to price signals and saving energy.

¹ For additional detail and graphical depiction of SMIP, refer to Section 10.F.3

To the extent feasible, the program herein uses technology that has the capability to provide remote meter reading, load research data, and potentially to convey outage detection and voltage monitoring from the customer's residential premise to the utility. The technology will also be able to verify customer compliance with a variety of electricity consumption guidelines and agreements with Allegheny Power established by rates and other EE&C and DR programs.

Most smart metering systems support prepay and back office improvements implemented in concert with smart metering can soften inflexible rules built into existing systems. Smart metering systems also allow customers to be more aware of their energy usage so that they can make more conscious decisions about how to use their energy. By having access to more timely information on their energy usage customers can link the consumption decision to real time, real life activities.²

While strongly emphasizing innovation, Allegheny Power's programs are designed to provide pragmatic, actionable results that achieve targets mandated by Act 129 and the energy conservation and DR targets that are likely to be mandated in the near future.

Ultimately, the Company's success in achieving Act 129 goals relies on the combined ability of rates and programs and technology to influence customer behavior and choices about electricity consumption in homes and businesses. From years of experience, the Company knows that each customer will think about, behave and react differently to energy price signals based on individual choice, preference for comfort, or business need. Allegheny Power plans to use a combination of technical and non-technical solutions to influence customer choice and behavior. In the non-technical sphere, the company will use various public media to educate and inform customers of the Company's EE&C and DR programs and rate offerings to achieve customer participation. In the technological realm, this EE&C and DR filing assumes the approval and deployment of Smart Meters and Smart Metering infrastructure plus the use of several new technologies, such as web portals, in-home displays, programmable controllable thermostats, along with the application of email, text messaging and other social networking tools to provide new, innovative ways of communicating with customers and influencing their behavior.

Each of the EE&C and DR measures and programs Allegheny Power has designed was developed with the imperative that customers would: 1) be provided with a participation incentive (e.g., financial and/or environmental); 2) be provided with near real-time information upon which to undertake decision or action; and/or 3) be provided the necessary measurements, control systems, and equipment to receive full benefit in choosing to participate. To this end, the Company's planned technology and non-technical infrastructure and utility business operations must have new capabilities. These new and broad reaching capabilities include, but are not limited to, the capability to:

- 1) Provide multiple means of communicating with customers and registering customer sign ups for the various programs through a web portal, through a customer service representative, and through the integrated voice response system.
- 2) Provide for campaign management for each of the programs.

² For additional detail and graphical depiction of SMIP, refer to Section 10.F.3.

- 3) Provide for measurement of individual compliance to terms of the programs.
- 4) Provide for billing adjustments for various rates, tariff and pricing incentives.
- 5) Provide for service adjustments and additions to customer and account records
- 6) Provide new types of customer service and customer care that are significantly and materially different than the customer care of the past.
- 7) Provide for ongoing reporting of the effectiveness of each EE&C and DR program or measure.
- 8) Provide for continuous improvement in approved EE&C and DR programs and provide for the ability to improve the design of future programs.

While the Company has expended a considerable amount of effort in developing the programs in a manner to best meet the Act 129 targets and requirements, the Company does recognize that all Pennsylvania EDCs will gain valuable experience and knowledge from offering programs to Pennsylvania customers. Allegheny Power recognizes the dynamic nature of EE&C and DR programs and anticipates that the programs will change over time based on this experience and to meet the changing needs of customers, the environment and the Commonwealth. The Company proposes that all Pennsylvania EDCs will need to consider enhancements and revisions on a going forward basis to EE&C and DR programs based on this experience and that all parties will need to work together in order to maximize Plan effectiveness in meeting Act 129 targets and requirements. The Company will conduct stakeholder meetings at least twice annually to discuss any revisions or improvements to the Plan. The Company has also constructed the EE&C and DR plan with flexibility, scalability and adaptability to accommodate new technologies, new programs and new business requirements. Allegheny Power anticipates that once the 2011 and 2013 EE&C and DR goals are met, current and future programs along with the infrastructure investment will enable the Company to achieve potential new targets.

This EE&C and DR filing is a significant effort by the Company to achieve the energy and demand savings goals established under Act 129. The Company believes it will take considerable effort on behalf of all parties to ensure the success of the measures and programs herein submitted. In total, Allegheny Power's portfolio of EE&C and DR measures and programs represents an investment in energy efficiency of \$94.25 million, which will result in approximately 647.4 million kilowatt-hours ("kWh") of net energy savings and 163.8 megawatts ("MW") of net peak demand reduction. While the foundation of the portfolio relies on well established EE&C and DR programs that target the major energy consuming appliances, systems and processes, the projected savings rely on the installation of smart metering infrastructure to support and enable programs and rate offerings for all customer classes, as well as encourage changing customer behavior, with the specific plan components included in the forthcoming SMIP filing to be completed on or before August 14, 2009. The Company is hopeful that its SMIP and tariff filings will be approved in a timely manner in order for the Company to meet its goals.

All programs and measures will be marketed under the Watt Watchers brand. Beginning in 2008, Allegheny started branding its energy efficiency and conservation programs under the Watt Watchers name. Watt Watchers is Allegheny Power's program to help customers learn more about saving energy and money. A brand is a consumer's perception of a product or service. The purpose of our Watt Watchers branding strategy is to build awareness of

Allegheny's programs and demonstrate that our energy efficiency and conservation programs provide value. Messages will be based upon our commitment to customer service and a need to develop programs that will capture the interest of customers. Ultimately, the Company's success in achieving Act 129 goals relies on the combined ability of rates, programs and technology to influence customer behavior and choices about electricity consumption in homes and businesses. For simplicity, the Watt Watchers name is not included in each program and measure name in this filing.³

A list of acronyms and abbreviations used in this filing is located in Section 10.F.1.

1.1. Summary description of plan, plan objectives, and overall strategy to achieve energy efficiency and conservation goals.

Allegheny Power has sought to create a portfolio of EE&C and DR programs and rate offerings that enable all customers to participate in one or more programs. The proposed residential programs cover most of the major energy consuming appliances and equipment in the home thus increasing the opportunity for more residential customers to benefit from a measure or program and the attending rate offerings. Likewise, the commercial and industrial programs encompass the core energy consuming appliances, equipment and machinery for commercial and industrial customers. Allegheny Power believes that its approach maximizes the potential for energy and cost savings because the Company's portfolio of programs addresses each energy consuming appliance, system or process across the full spectrum of its customer needs and electricity use cases. It is important to note that:

- The residential demand response programs, in conjunction with the rate offerings, utilize Smart Metering, Smart Metering infrastructure and associated equipment that will be installed at residential customers' homes and will be used to convey energy consumption and price information. The information will enable customers to make informed decisions and manage their monthly energy consumption and their monthly electricity bills.
- The commercial/industrial demand response programs are focused on achieving demand reduction goals by curtailing customer load. By using a mix of load management, customer generation, and/or third-party curtailment service providers, significant demand reduction will be realized.

The proposed EE&C and DR measures, programs, and rate offerings are as shown in the following chart and described as follows:

³ See Section 9.2.4. for a detailed description of the Pennsylvania Watt Watchers Energy Efficiency & Conservation Campaign.

Program Name	Energy Efficiency & Conservations	Demand Response	Enabled by Smart Metering Infrastructure	Residential	Residential - Low Income	Small Commercial & Industrial	Large Commercial & Industrial	Governmental & Non-Profit

Residential Energy Star and High Efficiency Appliance Program

The Energy Star and High Efficiency Appliance Program provides rebates to customers for the purchase of certain appliances that meet or exceed Energy Star or other efficiency ratings.⁴ Mail-in and point-of-sale (where possible) rebates will be offered for clothes washers, clothes dryers, dishwashers, refrigerators (with turn-in), programmable thermostats, room air conditioners, room air conditioner recycling and freezers (with turn-in).

Compact Fluorescent Lighting (CFL) Rewards Program

The Residential CFL Rewards Program provides rebates to customers for the purchase and installation of single and multi-pack CFLs. Mail-in and point-of-sale (where possible) rebates and product markdowns will be offered for single-pack and multi-pack CFLs.

Residential HVAC Efficiency Program

The Residential HVAC Efficiency Program encourages customers to purchase a high efficiency central air conditioner (CAC) or heat pump (HP) (SEER ratings of 14.5 or

⁴ In instances where Energy Star does not provide an efficiency rating for a device, other standards, such as the federal minimum efficiency standards may be used to establish eligibility criteria.

greater). To qualify for the CAC & HP rebates under this program, the work must be completed by a certified contractor and a programmable thermostat must be installed.

Residential Home Performance Program

The Residential Home Performance Program provides a holistic approach to educating customers on energy efficiency and conservation, and to improving overall home performance, by providing customers with educating information and three energy audit measures, including an on-line audit, a check-up audit and a comprehensive audit. Allegheny Power will contract with Building Performance Institute (“BPI”) certified contractors or consultants or leverage third party programs or providers to provide the audits conducted at the home and install standard measures at the time of the audit. At the completion of the audit, the customer will be presented with home energy efficiency and conservation recommendations, including no-cost or low-cost actions, and information regarding Allegheny Power’s other residential program offerings.

Residential Low Income Home Performance Check-up Audit and Appliance Replacement Program

The Residential Low Income Home Performance Check-up Audit and Appliance Replacement Program provides home energy check-up audits and appliance replacement to low income customers with household incomes up to 150% of the federal poverty level. The program will be available to ratepayers who own or rent their residence, including customers residing in multi-family buildings and mobile homes. The program will be offered at no cost to qualified low-income customers. Appliances eligible for replacement include refrigerators and room air conditioners that meet certain qualifications or are inefficient as determined by standard test and/or are in disrepair. Allegheny Power will contract with BPI certified contractors or consultants to provide the audits and install standard measures at the time of the audit.

Residential Low Income Joint Utility Usage Management Program

The Low Income Joint Utility Usage Management Program will initially be a partnership with Columbia Gas, in Pennsylvania, to leverage resources and respective program dollars to provide comprehensive energy saving measures and weatherization services to low-income customers. The program will achieve bill reduction through usage reduction to customers with household incomes up to 200% of the federal poverty level (in excess of current program). The program will be available to ratepayers who own or rent their residence.

Residential Low Income Room Air Conditioner Replacement Program

The Residential Low Income Room Air Conditioner Replacement Program provides replacement of room air conditioners as an add-on to the Company’s existing Low Income Usage Reduction Program (LIURP). The room air conditioner replacement will be offered at no cost to qualified low-income customers in LIURP for room air conditioners that meet certain qualifications. The addition of room air conditioners to LIURP provides the same appliance replacement as currently proposed in the

Company's Low Income Home Performance Program and leverages this program to provide additional measures to low income customers.

Residential Efficiency Rewards Rate

The Residential Efficiency Rewards Rate is a rate offering that encourages residential customers to lower their energy consumption from historical levels through a credit/discount on their bill based on their actual reduction in their energy use. Customers that sign up for this program and lower their energy consumption over a set period of time from the historical period would receive a credit on their electric bill. This rate offering could be competitively neutral to allow customers to continue to pay the same generation charge as on utility-provided default service or from an electric generation supplier.

Commercial HVAC Efficiency Program

The Commercial HVAC Efficiency Program encourages small commercial and industrial and governmental/non-profit customers to purchase high efficiency split system or packaged air conditioners (SEER ratings of 15 or greater) and high efficiency unitary heat pump units (SEER ratings of 15 or greater, and an HSPF of 9.0 or greater) instead of units meeting the current minimum federal standards. To qualify for rebate under this program, the work must be completed by a certified contractor.

Commercial Lighting Efficiency Program

The Commercial Lighting Efficiency Program provides rebates for installing T8 lamps (reducing the number of lamps per fixture by 1 to 2 fewer lamps and installing high-efficiency electronic ballasts), T5 fixtures (replacing High Intensity Discharge ("HID") lights), LED Exit Sign installations and Occupancy Sensors (wall plates controlling interior lighting).

Governmental/Non-Profit Lighting Efficiency Program

The Governmental/Non-Profit Lighting Efficiency Program provides increased incentives to governmental/non-profit customers to install T8 lamps (reducing the number of lamps per fixture by 1 to 2 fewer lamps and to install high-efficiency electronic ballasts), LED Traffic Signals, LED Exit Sign installations, and Compact Fluorescent Lights.

Custom Technology Applications Program

The Custom Technology Applications Program is focused on reducing energy and demand in the small and large, commercial and industrial, and governmental/non-profit customer sector for customers with usage of 1M-2.5M kWh/year. The program will focus on improving the energy efficiency for specific processes and applications such as lighting systems, compressed air, chillers, refrigeration, variable speed drives, motors, energy management systems, fan/pumps systems, renewable energy and combined heat-power systems will be considered. The customer or third party provider will identify the energy efficiency and conservation opportunities and will submit projects to Allegheny Power for review and approval. Allegheny Power will provide

incentives to the customer up to 25% of the capital investment, up to \$100,000 of the project, to obtain the energy and demand savings.

Programmable Controllable Thermostat (PCT) Program

The primary purpose of the Programmable Controllable Thermostat (PCT) Program is to automate demand response through direct load control of central air conditioners for residential and small commercial and industrial and governmental/non-profit customers. Smart Metering and associated equipment⁵ will be installed to provide communications to the thermostat, thus providing direct load control. Customer response to energy prices may also be automated and/or manual. This program may utilize one of the time-of-use or hourly priced option rates that are being developed.

Pay Ahead (Smart) Service Rate

The Pay Ahead (Smart) Service Rate is a billing option that provides customers with a better understanding of their electric usage, by providing them with information regarding their energy consumption relative to their prepaid account balance, to support their energy use awareness and support their energy efficiency initiatives. Pay Ahead Smart Service requires the installation of a Smart Meter and the associated in-home/in-facility display⁶ to provide customers with their energy consumption relative to their prepaid account balance. The Pay Ahead Smart Service Rate is voluntary and is only available to customers that are receiving utility-provided default service and would include all utility charges. Anticipated voluntary participants will be those with high consumption, high bill complaints and college students.

Commercial and Industrial Drives Program

The Commercial and Industrial Drives Program provides rebates to small and large, commercial and industrial and governmental/non-profit customers to improve motor efficiency by applying variable frequency drives on specific loads that have variable torque requirements, such as fans and pumps.

Custom Applications Program

The Custom Applications Program provides energy auditing services and custom incentives for highly specialized processes and applications targeting Allegheny Power's 550 highest-consuming Pennsylvania customers. The Company proposes to use a bidding process to select energy savings projects from large commercial and industrial customers. Allegheny Power will annually issue a request for proposals for energy savings projects of 250,000 kWh/year or greater. Customers will submit their electric energy project proposals, including the amount of the incentive required to complete the project. The Company will review the submittals and pre-qualify customers for this program, by performing a high-level facilities audit to assess the energy project savings potential. For the customers that pre-qualify, Allegheny Power will expend up to \$10,000 per customer for an energy services company to perform a detailed audit of the targeted systems or processes. Allegheny Power will exclude any

⁵ For additional detail and graphical depiction of SMIP, refer to Section 10.F.3.

⁶ For additional detail and graphical depiction of SMIP, refer to Section 10.F.3.

measures from the incentive determination that are not cost-effective, test to assure that the project still meets the minimum load reduction criteria, and accept the proposal or counter with a revised incentive amount. This process will be iterative until such time the targeted annual MWh reductions have been contracted and the annual incentive cap has been reached or proposals are withdrawn by either party, whichever occurs first.

Customer Load Response Program

The Customer Load Response Program is focused on reducing kW demand by providing load management services to small and large commercial and industrial, and governmental/non-profit customers. Under this program, Allegheny Power will act as a “Curtailed Service Provider” and call events to meet a portion of the demand reduction requirements. In addition, Allegheny Power would also act as a Curtailed Service Provider with PJM Interconnection, L.L.C. (“PJM”), to leverage and enroll customer’s load curtailment into PJM’s capacity markets during peak load hours.

Customer Resources Demand Response Program

The Customer Resources Demand Response Program is focused on reducing kW demand by deploying customer load and generation resources. Under this program, Allegheny Power would contract with PJM curtailed service providers for load and generation resources and a distributed generation manager that would operate, maintain and dispatch a customer’s standby generator. The PJM curtailed service providers and distributed generation manager would dispatch the customer resources to meet a portion of the demand reduction requirements during peak load hours. Based on typical operating scenarios, standby generators are typically used less than 500 hours year, with 100 of those hours being used for demand response events, with the remaining hours being used by the customer for planned maintenance and/or unplanned outages. In addition, Allegheny will explore the use of alternative fuels such as bio-diesel, or waste methane/landfill gas and will ensure all permitting requirements for the dispatch of customer standby generators are adhered to in this program.

Critical Peak Rebate (CPR) Rate

The Critical Peak Rebate (CPR) Rate encourages residential and commercial, industrial, government, school, and non-profit customers under 500 kW to lower their demand and energy consumption during on-peak periods by providing a rebate based on their demand reduction during peak load hours. CPR could be competitively neutral to allow customers to continue to pay the same generation charge as on utility-provided default service or from an electric generation supplier. CPR relies on the installation of a Smart Meter⁷ to track the customer’s demand during peak hours, and the addition of an in-home/in-facility display improves customer notification and communication regarding peak periods. Participants will receive additional information to assist them in controlling their demand and their electric bills.

⁷ For additional detail and graphical depiction of SMIP, refer to Section 10.F.3.

Time of Use (TOU) with Critical Peak Pricing Rate

TOU rates reflect the cost of serving customers during different time periods, but do not change as frequently as hourly. TOU encourages residential and commercial, industrial, government, school, and non-profit customers under 500 kW to lower their demand and energy consumption during on-peak periods by charging a higher price that reflects the higher cost of serving customers, and charging lower prices during off-peak periods that reflects the lower cost of serving customers. TOU also includes critical peak pricing which is designed to address the short-term need to reduce demand at the time of the system peak by charging prices significantly higher than other periods. Critical peak pricing periods will vary in frequency and duration using predefined or notified peak hours, but will balance the need to keep the period as short as possible to effectively allow customers to reduce demand or shift usage to lower cost periods. TOU is voluntary and is only available to customers that are receiving utility-provided default service. TOU relies on the installation of a Smart Meter⁸ to track the customer's demand and energy usage during the various TOU periods, and the addition of an in-home/in-facility display improves customer notification/communication regarding peak periods.

TOU is offered as an optional service and does not replace the default service program approved by Commission Order entered July 25, 2008 at Docket No. P-00072342.

Hourly Pricing Option (HPO) Rate

The Hourly Pricing Option (HPO) Rate reflects the different cost of energy during each hour and encourages residential and commercial, industrial, government, school, and non-profit customers under 500 kW to lower their demand and energy consumption during high priced periods and/or shift usage to low priced periods. Billing for the HPO is calculated from the PJM hourly market pricing for the AP Zone, and includes the price of energy, capacity, ancillary services, alternative energy compliance, and any other Federal Energy Regulatory Commission and/or PJM charge directly related to the HPO, as adjusted for taxes. Participants can receive a daily updated approximation of their monthly bill to date (since last bill) and an approximation of their electricity cost for the prior day. The HPO is voluntary and is only available to customers that are receiving utility-provided default service. The HPO requires the installation of a Smart Meter⁹ to track the customer's hourly energy consumption, and the addition of an in-home/in-facility display improves customer communications regarding their energy consumption and billing.

The HPO is offered as an optional service and does not replace the default service program approved by Commission order entered July 25, 2008 at Docket No. P-00072342.

⁸ For additional detail and graphical depiction of SMIP, refer to Section 10.F.3.

⁹ For additional detail and graphical depiction of SMIP, refer to Section 10.F.3.

Overview of Plan -- Conclusion

Allegheny Power's overall Plan is cost effective as required by the Pennsylvania-specific TRC test as set forth by the Commission in its order of June 23, 2009. Table 1 in Section 1.3 of the EE&C Plan shows that the overall Plan as well as the portfolio of programs and measures specific to each customer sector are cost effective. In addition, most programs and measures in the plan have been determined to be cost effective, as illustrated in Table 7 in the Appendices of the EE&C Plan. This Table also depicts the net present value and cost/benefit analysis results required by the Commission. Allegheny Power has focused on choosing and incorporating in its programs those measures that resulted in a TRC test of greater than 1.0. While a few measures were determined to be cost neutral or not cost effective, they were included to determine if real-world performance proves otherwise. Allegheny Power also plans to evaluate all measures upon each annual review and to revise its plan based on actual performance. This maximizes cost-effectiveness of the programs, as it does not dilute the benefits of the most cost-effective measures with those that are not cost-effective.

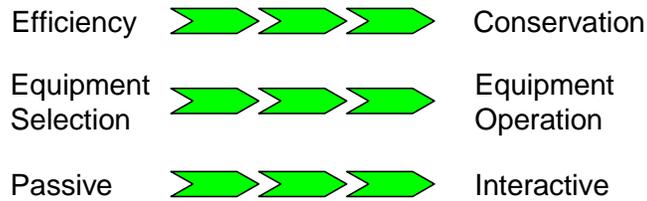

Allegheny Power strongly believes its approach to EE&C and DR programs and measures maximizes potential energy savings. The Company's portfolio of measures and programs addresses each major energy consuming appliance, system or process across the full spectrum of both customers' usage and customer segments. A key element in the design of the Company's proposed programs is to provide incentives to customers that elect to install more efficient end-use devices. Changing how customers use energy is the ultimate objective. A logical progression in changing customer behavior is first a focus on the deployment of more efficient equipment. Then, over time, the focus shifts to the manner in which equipment or appliances are operated.

A crucial tool in effecting customer change in behavior is providing customers with information on how they use energy in conjunction with energy prices. Allegheny Power's EE&C and DR Plan relies heavily on the availability of Smart Metering Infrastructure to provide customers with this knowledge.¹⁰

The figure below illustrates Allegheny Power's programmatic approach to driving customer behavior changes. Please note that the continuum moves from passive customer participation to interactive customer participation, while the program offerings move from targeting equipment efficiency to targeting more efficient appliance and equipment operation.

¹⁰ For additional detail and graphical depiction of SMIP, refer to Section 10.F.2.

Programmatic Approach

To effectuate this behavioral transformation, Allegheny Power believes that customers must be provided not just more information, but more real-time information, on which to base operating decisions. Allegheny Power research and review of industry literature reveals that monthly electric bill presentment that provides only aggregated historical consumption and cost data is not a sufficient communication medium and motivator to incent customer behavior change at a scale and scope required to achieve Act 129 EE&C and DR targets. For example, the ability to view the actual and projected costs for individual appliances, such as air conditioning and clothes washing, will enable customers to understand the consequences of their specific electricity consumption and demand decisions and to react to prices in real-time in a way that is concrete and meaningful. Such specific information is also proven to directly impact future decisions, making desirable customer behavior changes durable.

Despite the many demonstrable benefits of customer participation in beneficial EE&C and DR behaviors, Allegheny Power believes, however, that incentive programs are a logical and necessary first step to initiate market transformation and progress towards meeting the mandated reductions under Act 129. Once vendors increase their stock of high-efficiency appliances, or no longer stock standard efficiency appliances (which is reported to have resulted from rebate programs in California), and customers more consistently choose high-efficiency appliances, rebates may be reduced, reallocated to new initiatives such as those encouraging customer behaviors, or eliminated.

Finally, the proliferation of Smart Meter and Smart Grid technology will result in lower costs for the infrastructure, and the market transformation may be completed with the deployment of highly interactive interfaces in customer homes and businesses, that deliver detailed information on individual appliance usage and cost, and real-time pricing information, the extent of which is limited only by budget and imagination.

To catalyze market transformation and meet EE&C and DR targets mandated by Act 129, Allegheny Power is proposing several EE&C and DR programs and rate offerings that require the installation of Smart Metering and Smart Metering infrastructure. The proposed programs and rate offerings that rely on the Smart Metering and Smart Metering infrastructure, or a portion thereof, are:

1. Programmable Controllable Thermostat (PCT),
2. Customer Load Response, and
3. Customer Resources Demand Response Program.

The rate offerings that rely on Smart Metering and Smart Metering infrastructure include:

1. Residential Efficiency Rewards
2. Pay Ahead Smart Service,
3. Critical Peak Rebate (CPR),
4. Time of Use (TOU) with Critical Peak Pricing, and
5. Hourly Pricing Option (HPO)

The Company plans to file these rate options in mid-2010 for an effective date in first quarter 2011.

Through thoughtful program design, Allegheny Power has addressed the main energy consuming appliances, systems and processes impacting EE&C and DR across all customer segments. The Company strongly believes that this group of programs are most likely to achieve the greatest energy consumption savings, demand reductions, and create the most economic, societal and environmental benefits.

Allegheny Power urges the Commonwealth to timely approve cost recovery and other financial incentives for utilities like Allegheny Power that are willing to make significant investments in energy efficiency, energy conservation and demand response. This timely and full cost recovery and incentive is essential until such time that real-time, transparent market signals provided via cost-effective communications infrastructure can appropriately motivate this investment not just for the Company but for utilities across the Commonwealth.

1.2. Summary description of process used to develop the EE&C plan and key assumptions used in preparing the plan.

Allegheny Power completed program design with input received from various stakeholders and the output of these collaborative efforts is incorporated in this Plan. Allegheny Power held twelve stakeholder or working group meetings throughout the program development process to solicit stakeholder input and feedback regarding the development of the Company's Act 129 Plan. The stakeholder process also included numerous informal meetings and discussions that provided the Company with valuable input on the proposed programs. The Company looks forward to continuing collaborative efforts to ensure the success of EE&C and DR plan implementation.

Stakeholder Meeting Summary:

- April 8, 2009 – Harrisburg (All interested stakeholders)
- April 23, 2009 – Greensburg (Municipalities)
- May 5, 2009 – Uniontown (Low-Income)

- May 7, 2009 – Butler (Low-Income)
- May 11, 2009 – Harrisburg (Rates)
- May 12 & 13, 2009 – Latrobe, Chamber Fest (residential, low income, and small business customer survey conducted)
- May 13, 2009 – Greensburg (Government)
- June 3, 2009 – Harrisburg (All)
- June 5, 2009 – Williamsport (Seda-Cog)
- June 10, 2009 – Greensburg (Government)
- November 12, 2009 – Connellsville (All)
- November 18, 2009 – Connellsville (All)

Allegheny Power has designed its EE&C and DR programs to control and moderate utility program costs and, thereby, limiting costs to customers. Allegheny Power has also sought to limit program development and implementation costs first by performing initial program design and evaluation internally with stakeholder input. Since that time all retained expert resources were procured through competitive bid.

Allegheny Power does not currently have any studies specific to expected participation rates for energy efficiency and conservation and demand response initiatives within its Pennsylvania service territory. For purposes of cost-effective evaluations, a conservative estimation approach to participation rates and energy savings was used to ensure a greater likelihood that the measure or program will remain cost effective throughout its lifecycle. In the case of residential measures, Allegheny Power looked to its 2006 Residential Appliance Saturation Survey to determine the potential pool of participants. With respect to commercial and industrial measures, the Company relied on information from sources such as the Energy Information Administration and the results of pilot studies conducted by other utilities across North America. Within the estimation regime, data was gathered as to incentive levels, program duration, and customer participation. Participation rates were selected somewhat qualitatively from looking at the potential pool of participants, their similarity to the participants of other utilities and the actual take up and participation rates achieved.

Allegheny Power has undertaken benchmarking studies in an effort to ensure the reasonableness and viability of its program proposals. In doing so, numerous utilities (and sometimes their contractors) and end-users were contacted to ascertain the parameters of the programs offered and the relative success of those program offerings. Benchmarking was used to validate and refine assumptions, and the Company generally found that the benchmarking data gathered was convergent. In those instances where outlying data appeared, Allegheny looked further into the cause of those results to determine if the Company's service territory might have similar characteristics and other correlating factors. Such observation permitted general validation of the assumptions regarding participation levels (both take up and steady state), participation costs and savings estimates from sources such as the EPA, DOE, Northeast Efficiency

Partnership (“NEEP”), American Council for an Energy-Efficient Economy (“ACEEE”) and the Consortium of Energy Efficiency (“CEE”).

Allegheny Power reviewed ACEEE exemplary programs and other utility programs identified through internal benchmarking to determine its incentive strategy. The general approach to setting incentive levels for measures, other than those in the custom programs, was to provide an incentive between 25% to 75% of the incremental cost of the high-efficiency device, with 50% being the target, as compared to the standard efficiency device. The Company’s Plan also includes a general reduction in customer incentives beginning in the 2011 Plan year. The Company proposes that as customer awareness and education regarding energy efficiency and conservation increases that smaller customer incentives will be necessary to encourage customers to participate in programs that promote energy efficiency and conservation.

1.3. Summary tables of portfolio savings goals, budget and cost-effectiveness ¹¹

Allegheny Power proposes to implement energy efficiency programs that are designed to serve the unique needs of its residential, residential low-income and commercial and industrial customers as well as federal, state and local governments, including municipalities, school districts, institutions of higher education and nonprofit entities. Allegheny Power’s Plan comports with the requirements of Act 129. Allegheny Power has developed its plan to meet the 2011 and 2013 energy and demand reductions mandated by Act 129. The following table summarizes the programs and their primary targeted customer sector as well as eligibility across customer sectors.

¹¹ All Plan Years in summary tables run from June 1st of Plan Year in Table through May 31st of the following year. It is assumed that there are four program years, each starting June 1 and ending May 31st. The first program year (PY) is Program Year 2009 (although it is expected that programs will not start before late 2009 or early 2010), and the last program year is Program Year 2012.

Program Name	EEC	DR	Residential	Residential - Low Income	Small Commercial/Industrial	Large Commercial/Industrial	Governmental/Non-Profit
1 Residential Energy Star & High Efficiency Appliance Program	X						
2 Compact Fluorescent Lighting (CFL) Rewards Program	X						
3 Residential HVAC Efficiency Program	X						
4 Residential Home Performance Program	X						
5 Residential Low Income Home Performance Check-Up Audit & Appliance Replacement Program	X

21 Hourly Pricing Option (HPO) Rate	X	X					

Key	
	Primary Customer Target (Savings & Demand Impacts)
	Eligible Customers (No Impacts)

These programs are projected to provide a total peak electricity demand reduction of 163.8 MW by June 1, 2012 and at the conclusion of four years, these programs are projected to achieve a total annual electric energy reduction of 647,434 MWh. Should the Commission approves each of the programs recommended by Allegheny Power at the proposed rebate levels and the projected penetration rates are achieved, the annual cost of the programs is estimated to be \$8.3 million for year one, \$25.9 million for year two, \$30.5 million for year 3 and \$29.5 million for year four. The total cost over a four year period is expected to be approximately \$94.25 million, including program start-up expense that includes internal labor related expense, contractor support and tracking database or other IT requirements for a total start-up expense of \$3.2 million. Energy and demand savings, funding levels and cost-effectiveness projections for the programs are as follows:

Table 1: Portfolio Summary of Lifetime Costs and Benefits**Notes:**

o Net Lifetime Benefits, and TRC per the California Standard Practice Manual

Portfolio	Discount Rate	Total Discounted Lifetime Costs (\$000)	Total Discounted Lifetime Benefits (\$000)	Total Discounted Net Lifetime Benefits (\$000)	Cost-Benefit Ratio	TRC[1]
Residential (exclusive of Low Income)	0.08996	\$43,974	\$104,673	\$60,698	2.4	\$60,698

Programmable Controllable Thermostat (PCT) Demand Response								Launch Jan-11												Close May-13	
DR Rate Offerings (per SMIP schedule)								Launch Jan-11												Close May-13	
Reports PUC Annual and Plan-end Reporting												Jul-15-11				Jul-15-12				Jul-15-13	

1.5. Summary description of the EDC implementation strategy to manage EE&C portfolios and engage customers and trade allies.

Allegheny Power will hire Plan Implementation Providers to administer various components of the Residential programs, Residential Low Income programs, and non-Residential programs. In addition, the Company will contract for some specific services, leveraging contracts for Maryland EE&C Plan Programs where applicable. Allegheny anticipates that some contracts will be performance-based to promote goal achievement. Plan Implementers will be responsible for plan implementation including but not limited to: hiring sub-contractors required for successful program implementation; quality; engaging trade allies; marketing, including customer engagement; reporting on identified metrics including presenting to stakeholder groups as requested; coordinating with contractors hired directly by Allegheny Power for specific services; customer issue handling; and, early identification of program success risks as well as best practices and recommendations to mitigate or leverage.

Allegheny Power plans to meet as required and at least twice per year with stakeholders to review Plan implementation and program details and to consider Plan or program revisions to improve the Plan or programs. Allegheny Power will work for

consensus of the stakeholders and propose consensus positions to the Commission, or alternative recommendations if consensus is not achieved.

1.6. Summary description of EDCs data management, quality assurance and evaluation processes; include how EE&C plan, portfolios, and programs will be updated and refined based on evaluation results.

Allegheny Power will comply with data management requirements developed by the statewide Plan Evaluator

Allegheny Power will build quality control checks into each program and measure as well as at key customer touch points. This will include customer surveys; requirements for rebate processors to verify rebate applications; and in field verification of HVAC, lighting, drives, home audits, and custom applications.

A third party contractor will be hired to provide program and overall plan evaluation, measurement, and verification.

A support team responsible for program implementation and EM&V will work closely with the program development group to analyze program results. Once enough data and experience exists to determine with confidence program effectiveness based on results identified changes, enhancements, adjustments, and/or cancellations of programs and measures will be implemented.

1.7. Summary description of cost recovery mechanism.

For non-residential customers, Allegheny Power proposes to recover all program costs via a separately stated non-bypassable line-item bill surcharge entitled EE&C Surcharge. For residential customers, EE&C program costs are recovered in addition to the currently approved distribution rates. Following the appendices is a pro-forma tariff for Tariff No. 39 and Tariff No. 37 describing the proposed surcharge, which is provided in accordance with 66 Pa. C.S. §§ 1307 and 2806.1. Allegheny Power respectfully requests Commission approval to begin surcharge recovery effective on one day's notice on the portions of the plan the Commission has approved.

The EE&C Surcharge is designed on a levelized basis over the 43-month period beginning November 2009 and running through May 31, 2013 for all customers except large commercial and industrial customers. The EE&C Surcharge for large commercial and industrial customers is designed on a levelized basis over the 40-month period beginning February 2010 and running through May 31, 2013. Subject to the annual reconciliation mechanism described below, the implementation of a levelized surcharge helps mitigate the peaks and valleys that may otherwise occur if the surcharge had not been designed on a levelized basis.

Allegheny Power will submit to the Commission by March 31 of each year: (1) a comparison between forecasted revenues billed and actual revenues billed through February, as adjusted for removal of gross receipts tax; (2) any adjustment to the forecasted revenues anticipated to be billed during March through May, as adjusted for

removal of gross receipts tax; (3) any adjustment to the costs levelized over the 43-month period (or 40-month period for large commercial and industrial customers) based upon actual costs incurred through February and any revised estimates for future months, up to the amount permitted to be recovered under Act 129; and (4) the subsequent reconciliation effect to the surcharge adjusted for gross receipts tax, and levelized over the period of the upcoming June 1 and continuing through the remaining months of the surcharge. A final reconciliation of amounts to be collected or refunded after May 31, 2013, through a further surcharge, should be authorized by the Commission. The purpose of this annual reconciliation mechanism is to mitigate the magnitude of the reconciliation balance. Commission approval of this annual reconciliation mechanism to ensure dollar for dollar recovery of all prudently incurred costs through May 31, 2013, with a projected aggregated cost of \$94.25 million, will allow the Company to utilize regulatory accounting to properly match surcharge revenue with the program costs. Allegheny Power is requesting authorization for regulatory accounting to track on a dollar for dollar basis the amounts to be recovered on a deferred basis for any under-collections, or refunded on a deferred basis any over-collections, that may occur throughout the lifespan of the surcharge, which can arise because of the levelized nature of the surcharge.

THIS PAGE INTENTIONALLY LEFT BLANK

2. Energy Efficiency Portfolio/Program Summary Tables and Charts

2.1. Residential, Commercial/Industrial Small, Commercial/Industrial Large and Governmental/Non-profit Portfolio Summaries (see Table 4).

Table 4: Program Summaries

	Program Name	Program Market	Program Two Sentence Summary	Program Years Operated	Net Lifetime MWh Savings	Net Peak Demand kW Savings	Percentage of Portfolio and Total Lifetime MWh savings	
Residential Portfolio Programs (exclusive of Low Income)	<i>Compact Fluorescent Lighting (CFL) Rewards Program</i>	All residential customers	A rebate program that encourages the purchase of single and multipack CFL's. Mail-in rebates and point-of-sale discounts (where possible) will be offered.	4	627,810	339	39%	9%
	<i>Critical Peak Rebate (CPR) Rate</i>	All residential customers with Smart Metering	A rebate rate offering that encourages customers to lower their energy demand during peak load hours by offering a rebate based on their actual energy demand.	3	2,497	9,513	0%	0%
	<i>Residential Energy Star and High Efficiency Appliance Program</i>	All residential customers	A rebate program that encourages the purchase of certain appliances that meet or exceed Energy Star or other efficiency ratings, through mail-in rebates.	4	440,219	19,894	27%	7%
	<i>Residential Home Performance Program</i>	Single family or multifamily residential dwelling units.	A program that educates customers on EE&C and improves overall home performance by promoting and providing the installation of standard EE&C measures. Includes three home energy audit options. Encourages additional qualified measures through mail-in rebate.	4	462,042	6,418	29%	7%
	<i>Programmable Controllable Thermostat (PCT) Program</i>	All residential customers with Smart Metering	A program that provides automated demand response and reduces energy usage during peak load hours through the direct load control of air conditioners. Customers will receive a credit on their bill for participation in this program.	3	2,497	9,513	0%	0%
	<i>Residential HVAC Efficiency Program</i>	All residential customers with air conditioners or heat pumps.	A rebate program that encourages customers to purchase high efficiency air conditioners or heat pumps. Mail-in rebates will be offered for central air conditioners or heat pumps that exceed certain efficiency ratings.	4	69,152	5,515	4%	1%
	<i>Residential Efficiency Rewards Rate</i>	All residential customers with Smart Metering	A rate offering that encourages customers to lower their energy consumption from historical levels. Customers will be provided a credit/discount on their bill based on their actual reduction in energy usage.	3	11,024	959	1%	0%
	<i>Pay Ahead Smart Service Rate</i>	All residential customers with Smart Metering	A billing option that provides customers with a better understanding of their energy usage and the impact on their electric bill. Customers will be provided information regarding their energy usage and account balance to support customer efficiency initiatives.	3	4,724	411	0%	0%
Totals for Residential Sector					1,619,964	52,563	100%	24%
Residential Low-Income Sector Programs	<i>Residential Low Income Home Performance Check-Up Audit & Appliance Replacement Program</i>	Residential customers up to 150% of the federal poverty level.	A program that educates customers on EE&C and improves overall home performance by providing the installation of EE&C measures. Includes replacement of refrigerators and room air conditioners that meet certain qualifications.	4	36,427	1,193	26%	1%
	<i>Residential Low Income Joint Utility Usage Management Program</i>	Residential customers up to 200% of the federal poverty level.	A program that leverages resources and funding to provide comprehensive energy saving measures and weatherization services to low income customers through partnership with gas utilities.	4	101,868	1,210	72%	2%
	<i>Residential Low Income Room Air Conditioner Replacement Measure</i>	Residential Low Income Usage Reduction Program (LIURP) customers.	A program that provides replacement of room air conditioners meeting certain qualifications as an add-on to the Company's existing Low Income Usage Reduction Program.	4	4,010	351	3%	0%
Totals for Low-Income Sector					142,305	2,753	100%	2%
Governmental / Non-Profit Portfolio Programs	<i>Governmental/Non-Profit Lighting Efficiency Program</i>	All government, school and non-profit customers with lighting.	A rebate program that encourages customers to upgrade lighting systems to more efficiency lighting technologies. Mail-in rebates and/or product buy-downs will be offered for certain lighting replacements or installations including CFL's, T8, LED Exit Signs and LED Traffic Signals.	4	588,345	7,962	100%	9%
	Totals for Gov't/NP Sector Programs					588,345	7,962	100%

	Program Name	Program Market	Program Two Sentence Summary	Program Years Operated	Net Lifetime MWh Savings	Net Peak Demand kW Savings	Percentage of Portfolio and Total Lifetime MWh savings	
Commercial/Industrial Small Portfolio Programs	<i>Commercial HVAC Efficiency Program</i>	Small commercial and industrial and governmental/non-profit customers with air conditioners or heat pumps.	A rebate program that encourages customers to purchase high efficiency air conditioners or heat pumps. Mail-in rebates will be offered for central air conditioners or heat pumps that exceed certain efficiency ratings.	4	60,246	2,522	2%	1%
	<i>Commercial Lighting Efficiency Program</i>	Small and large commercial and industrial and governmental/non-profit customers with lighting.	A rebate program that encourages customers to upgrade lighting systems to more efficiency lighting technologies. Mail-in rebates will be offered for certain lighting replacements or installations including T8, T5, LED Exit Sign and Occupancy Sensors.	4	3,047,224	42,701	94%	46%
	<i>Custom Technology Applications Program</i>	Small and large commercial and industrial customers and governmental/non-profit customers.	An incentive program that encourages energy and demand reductions by providing incentives for qualified projects that improve energy efficiency of customer processes and applications.	3	127,876	2,235	4%	2%
	<i>Time of Use (TOU) with Critical Peak Pricing Rate</i>	Small commercial and industrial customers and governmental/non-profit customers, with Smart Metering.	A rate offering that encourages customers to lower their demand and energy consumption during on-peak and peak load periods by charging a higher price during these periods and a lower price during off-peak periods, that reflects the cost of serving customers during these periods.	3	7,638	2,856	0%	0%
	<i>Hourly Pricing Option (HPO) Rate</i>	Small commercial and industrial customers and governmental/non-profit customers, with Smart Metering.	A rate offering that encourages customers to lower their demand and energy consumption during higher priced periods and/or shift usage to lower priced periods. Billing is calculated from the PJM hourly market pricing for the AP zone.	3	1,348	504	0%	0%
Totals for C/I Small Sector					3,244,333	50,817	100%	48%
Commercial/Industrial Large Portfolio Programs	<i>Custom Applications Program</i>	Large commercial and industrial customers with at least 2,500,000 kWh's energy usage per year.	An incentive program that encourages energy and demand reductions by providing incentives for qualified projects that improve energy efficiency of customer processes and applications.	3	901,721	11,793	82%	13%
	<i>Customer Load Response Program</i>	Small and large commercial and industrial customers and governmental/non-profit customers, with Smart Metering.	A program that provides demand response with participating customers by contracting with customers for load reduction during peak load hours. Customers will receive payment for their participation in Company demand response events.	3	8,074	59,494	1%	0%
	<i>Customer Resources Demand Response Program</i>	Small and large commercial and industrial customers and governmental/non-profit customers.	A program that provides demand response with participating customers by deploying customer load or generation resources during peak load hours. The Company will contract with PJM curtailment service providers for load and generator resources, and a distributed generation manager to operate, maintain and dispatch a customer's standby generator.	3	6,500	30,000	1%	0%
	<i>Commercial and Industrial Drives Program</i>	Small and large commercial and industrial customers and governmental/non-profit customers.	A rebate program that improves customer process efficiency by applying variable frequency drives to existing applications or process loads. Mail-in rebates will be offered for qualifying installations.	4	185,456	2,446	17%	3%
Totals for C/I Large Sector					1,101,752	103,733	100%	16%
Total for Plan					6,696,697	217,828	100%

Total Portfolio Annual Budget	\$8,340,953	100%	\$25,924,700	100%	\$30,482,180	100%	\$29,502,454	100%

Table 4: Program Summaries

	Program Name	Program Market	Program Two Sentence Summary	Program Years Operated	Net Lifetime MWh Savings	Net Peak Demand kW Savings	Percentage of Portfolio and Total Lifetime MWh savings	
Residential Portfolio Programs (exclusive of Low Income)	<i>Compact Fluorescent Lighting (CFL) Rewards Program</i>	All residential customers	A rebate program that encourages the purchase of single and multipack CFL's. Mail-in rebates and point-of-sale discounts (where possible) will be offered.	4	627,810	339	39%	9%
	<i>Critical Peak Rebate (CPR) Rate</i>	All residential customers with Smart Metering	A rebate rate offering that encourages customers to lower their energy demand during peak load hours by offering a rebate based on their actual energy demand.	3	2,497	9,513	0%	0%
	<i>Residential Energy Star and High Efficiency Appliance Program</i>	All residential customers	A rebate program that encourages the purchase of certain appliances that meet or exceed Energy Star or other efficiency ratings, through mail-in rebates.	4	440,219	19,894	27%	7%
	<i>Residential Home Performance Program</i>	Single family or multifamily residential dwelling units.	A program that educates customers on EE&C and improves overall home performance by promoting and providing the installation of standard EE&C measures. Includes three home energy audit options. Encourages additional qualified measures through mail-in rebate.	4	462,042	6,418	29%	7%
	<i>Programmable Controllable Thermostat (PCT) Program</i>	All residential customers with Smart Metering	A program that provides automated demand response and reduces energy usage during peak load hours through the direct load control of air conditioners. Customers will receive a credit on their bill for participation in this program.	3	2,497	9,513	0%	0%
	<i>Residential HVAC Efficiency Program</i>	All residential customers with air conditioners or heat pumps.	A rebate program that encourages customers to purchase high efficiency air conditioners or heat pumps. Mail-in rebates will be offered for central air conditioners or heat pumps that exceed certain efficiency ratings.	4	69,152	5,515	4%	1%
	<i>Residential Efficiency Rewards Rate</i>	All residential customers with Smart Metering	A rate offering that encourages customers to lower their energy consumption from historical levels. Customers will be provided a credit/discount on their bill based on their actual reduction in energy usage.	3	11,024	959	1%	0%
	<i>Pay Ahead Smart Service Rate</i>	All residential customers with Smart Metering	A billing option that provides customers with a better understanding of their energy usage and the impact on their electric bill. Customers will be provided information regarding their energy usage and account balance to support customer efficiency initiatives.	3	4,724	411	0%	0%
Totals for Residential Sector					1,619,964	52,563	100%	24%
Residential Low-Income Sector Programs	<i>Residential Low Income Home Performance Check-Up Audit & Appliance Replacement Program</i>	Residential customers up to 150% of the federal poverty level.	A program that educates customers on EE&C and improves overall home performance by providing the installation of EE&C measures. Includes replacement of refrigerators and room air conditioners that meet certain qualifications.	4	36,427	1,193	26%	1%
	<i>Residential Low Income Joint Utility Usage Management Program</i>	Residential customers up to 200% of the federal poverty level.	A program that leverages resources and funding to provide comprehensive energy saving measures and weatherization services to low income customers through partnership with gas utilities.	4	101,868	1,210	72%	2%
	<i>Residential Low Income Room Air Conditioner Replacement Measure</i>	Residential Low Income Usage Reduction Program (LIURP) customers.	A program that provides replacement of room air conditioners meeting certain qualifications as an add-on to the Company's existing Low Income Usage Reduction Program.	4	4,010	351	3%	0%
Totals for Low-Income Sector					142,305	2,753	100%	2%
Governmental / Non-Profit Portfolio Programs	<i>Governmental/Non-Profit Lighting Efficiency Program</i>	All government, school and non-profit customers with lighting.	A rebate program that encourages customers to upgrade lighting systems to more efficiency lighting technologies. Mail-in rebates and/or product buy-downs will be offered for certain lighting replacements or installations including CFL's, T8, LED Exit Signs and LED Traffic Signals.	4	588,345	7,962	100%	9%
	Totals for Gov't/NP Sector Programs					588,345	7,962	100%

	Program Name	Program Market	Program Two Sentence Summary	Program Years Operated	Net Lifetime MWh Savings	Net Peak Demand kW Savings	Percentage of Portfolio and Total Lifetime MWh savings	
Commercial/Industrial Small Portfolio Programs	<i>Commercial HVAC Efficiency Program</i>	Small commercial and industrial and governmental/non-profit customers with air conditioners or heat pumps.	A rebate program that encourages customers to purchase high efficiency air conditioners or heat pumps. Mail-in rebates will be offered for central air conditioners or heat pumps that exceed certain efficiency ratings.	4	60,246	2,522	2%	1%
	<i>Commercial Lighting Efficiency Program</i>	Small and large commercial and industrial and governmental/non-profit customers with lighting.	A rebate program that encourages customers to upgrade lighting systems to more efficiency lighting technologies. Mail-in rebates will be offered for certain lighting replacements or installations including T8, T5, LED Exit Sign and Occupancy Sensors.	4	3,047,224	42,701	94%	46%
	<i>Custom Technology Applications Program</i>	Small and large commercial and industrial customers and governmental/non-profit customers.	An incentive program that encourages energy and demand reductions by providing incentives for qualified projects that improve energy efficiency of customer processes and applications.	3	127,876	2,235	4%	2%
	<i>Time of Use (TOU) with Critical Peak Pricing Rate</i>	Small commercial and industrial customers and governmental/non-profit customers, with Smart Metering.	A rate offering that encourages customers to lower their demand and energy consumption during on-peak and peak load periods by charging a higher price during these periods and a lower price during off-peak periods, that reflects the cost of serving customers during these periods.	3	7,638	2,856	0%	0%
	<i>Hourly Pricing Option (HPO) Rate</i>	Small commercial and industrial customers and governmental/non-profit customers, with Smart Metering.	A rate offering that encourages customers to lower their demand and energy consumption during higher priced periods and/or shift usage to lower priced periods. Billing is calculated from the PJM hourly market pricing for the AP zone.	3	1,348	504	0%	0%
Totals for C/I Small Sector					3,244,333	50,817	100%	48%
Commercial/Industrial Large Portfolio Programs	<i>Custom Applications Program</i>	Large commercial and industrial customers with at least 2,500,000 kWh's energy usage per year.	An incentive program that encourages energy and demand reductions by providing incentives for qualified projects that improve energy efficiency of customer processes and applications.	3	901,721	11,793	82%	13%
	<i>Customer Load Response Program</i>	Small and large commercial and industrial customers and governmental/non-profit customers, with Smart Metering.	A program that provides demand response with participating customers by contracting with customers for load reduction during peak load hours. Customers will receive payment for their participation in Company demand response events.	3	8,074	59,494	1%	0%
	<i>Customer Resources Demand Response Program</i>	Small and large commercial and industrial customers and governmental/non-profit customers.	A program that provides demand response with participating customers by deploying customer load or generation resources during peak load hours. The Company will contract with PJM curtailment service providers for load and generator resources, and a distributed generation manager to operate, maintain and dispatch a customer's standby generator.	3	6,500	30,000	1%	0%
	<i>Commercial and Industrial Drives Program</i>	Small and large commercial and industrial customers and governmental/non-profit customers.	A rebate program that improves customer process efficiency by applying variable frequency drives to existing applications or process loads. Mail-in rebates will be offered for qualifying installations.	4	185,456	2,446	17%	3%
Totals for C/I Large Sector					1,101,752	103,733	100%	16%

3. Program Descriptions

3.1. Discussion of criteria and process used for selection of programs:

3.1.1 Describe portfolio objectives and metrics that define program success (e.g., energy and demand savings, customers served, number of units installed).

Allegheny Power has sought to create a portfolio of energy efficiency and conservation, and demand response programs that enable most or all customers to participate in one or more programs. Programs were selected to target the major energy-consuming systems, which are HVAC, major consumer appliances and lighting, with a sufficiently broad scope to provide an opportunity for almost all Pennsylvania customers to participate. Programs were selected to target each customer class including Residential, Residential Low-Income, Small Commercial and Industrial, Large Commercial and Industrial, and Governmental/Non-Profit customers. The proposed programs incorporate services that are targeted directly to end-users and to key trade allies.

Allegheny Power conducted program design in coordination with input received from various stakeholders. Allegheny Power conducted 12 stakeholder or working group meetings throughout the program development process to solicit stakeholder input and feedback regarding the development of the Company's Act 129 Plan. The stakeholder process also included numerous informal meetings and discussions which provided the Company with valuable input on the proposed programs. In the course of arriving at these recommended programs, over 40 measures were considered or evaluated. The collaborative efforts provided through the stakeholder process have been incorporated in this Plan. The Company looks forward to continuing collaborative efforts to ensure the success of Plan implementation and providing energy efficiency and conservation and demand response programs to its customers. In addition, Allegheny Power met with Commission Staff to provide a preliminary review of its Plan for feedback.

Success factors for this plan include: attaining the planned participation and energy savings goals, the number of homes completed versus goal, energy savings achieved, increased market share, customer awareness and acceptance, high customer satisfaction and the benefit/cost ratio. To improve success, many of the proposed programs were modeled after ACEEE exemplary programs or other utility programs identified through benchmarking.

3.1.2 Describe how programs were constructed for each portfolio to provide market coverage sufficient to reach overall energy and demand savings goals. Describe analyses and/or research that were performed (e.g., market, best-practices, market modeling).

Please see 3.1.3 for combined response.

3.1.3 Describe how energy efficiency, conservation, solar, solar photovoltaic systems, geothermal heating, and other measures are included in the portfolio of programs as applicable.

Allegheny Power proposes eleven energy efficiency and conservation, and demand response programs and rate offerings for residential and low income residential customers. Two of the programs are very similar and are only differentiated because they are only offered to low income participants. The proposed residential programs cover most of the major energy consuming devices in the home, thus increasing the opportunity for more residential customers to benefit from a program. The residential programs differ generally by the types of measures that are offered, the delivery mechanism that is used, and the residential sector being targeted. The following table provides a listing of the Residential and Residential Low Income programs and the general type of energy efficiency measure activity or demand reduction target activity anticipated in the program. In general, the program delivery mechanism differs between measures that are delivered at the premise level and mass market programs. Appliance programs are mass market programs whereas Home Performance programs are delivered at the premise level.

Residential Including Low Income									
Program Name	EEC	DR	Heating	Cooling	Water Heating	Building Envelope	Kitchen Appliances	Clothes Washing	Lighting
Residential Energy Star and High Efficiency Appliance Program	X		X	X			X	X	
Compact Fluorescent Lighting (CFL) Rewards Program	X								X
Residential HVAC Efficiency Program	X		X	X					
Residential Home Performance Program	X		X	X	X	X	X	X	X
Residential Low Income Home Performance Check-Up Audit & Appliance Replacement Program	X		X	X	X	X	X	X	X
Residential Low Income Joint Utility Usage Management Program	X		X	X	X	X	X	X	X
Residential Low Income Room Air Conditioner Replacement Program	X			X					
Residential Efficiency Rewards Rate	X		X	X	X		X	X	X
Programmable Controllable Thermostat (PCT) Program		X		X	X

Critical Peak Rebate (CPR) Rate		X	X	X	X		X	X	X
Time of Use with Critical Peak Pricing Rate	X	X	X	X	X		X	X	X
Hourly Pricing Option (HPO) Rate	X	X	X	X	X		X	X	X

Allegheny Power proposes ten energy efficiency and conservation, and demand response programs and rate offerings for non-residential customers. The commercial, industrial, governmental and non-profit programs encompass the core energy consuming devices for the types of customers in these sectors, especially with the inclusion of the custom programs. Fundamentally, each of the programs includes the same types of measures; the biggest differences between measures arise in the size and type of commercial and industrial customer that is served by the program. The following tables provide a list of the programs that Allegheny Power proposes for Small Commercial and Industrial, Large Commercial and Industrial and Governmental/Non-Profit customers. The measures described herein are organized by six different end-uses and are differentiated by type (prescriptive or common). “Prescriptive measures” are measures that are commonly implemented in large scale and have well-established, predefined and consistent applications and savings estimates whereas “custom measures” are specific in relation to the customer and typically evaluated on a case-by-case basis. The Company also sought to include new technology and renewable energy projects in the Plan and has included these as custom measures.

Non-Residential										
Program Name	SC&I	LC&I	GNP	EEC	DR	HVAC	Lighting	Motors	Refrigeration	Process
Commercial HVAC Efficiency Program	X	X	X	X		X				
Commercial Lighting Efficiency Program	X	X		X			X			
Governmental/Non-Profit Lighting Efficiency Program			X	X			X

Commercial and Industrial Drives Program	X	X	X	X				X		X
Custom Applications Program		X		X		X	X	X	X	X
Customer Load Response Program	X	X	X		X	X	X	X	X	X
Customer Resources Demand Response Program	X	X	X		X	X	X	X	X	X
Time of Use (TOU) with Critical Peak Pricing Rate	X		X	X	X	X	X	X	X	X
Hourly Pricing Option (HPO) Rate	X		X	X	X	X	X	X	X	X

To the extent possible, assumptions used to estimate load impacts (e.g., kWh and kW savings per unit, program net-to-gross ratios, measure lives) in the calculation of the TRC are taken from the Pennsylvania Technical Reference Manual (“TRM”). For measures where the required load impacts for cost-effectiveness test inputs were not available in the TRM, the Company utilized benchmarking studies or other resources to support its calculations.

Allegheny Power does not currently have any studies specific to expected participation rates for energy efficiency and conservation and demand response initiatives within its Pennsylvania service territory. For purposes of cost-effective evaluations, a conservative estimation approach to participation rates and energy savings was used to ensure a greater likelihood that the measure or program will remain cost effective throughout its lifecycle. In the case of residential measures, Allegheny Power looked to its 2006 Residential Appliance Saturation Survey to determine the potential pool of participants. With respect to commercial and industrial measures, the Company relied on information from sources such as the Energy Information Administration and the results of pilot studies conducted by other utilities across North America. Within the estimation regime, data was gathered as to incentive levels, program duration, and customer participation. Participation rates were selected somewhat qualitatively from looking at the potential pool of participants, their similarity to the participants of other utilities and the actual take up and participation rates achieved.

As mentioned above, Allegheny Power has undertaken benchmarking studies in an effort to ensure the reasonableness and viability of its program proposals. In doing so, numerous utilities (and sometimes their contractors) and end-users were contacted to ascertain the parameters of the programs offered and the relative success of those program offerings. Benchmarking was used to validate and refine assumptions, and the Company generally found that the benchmarking data gathered was convergent. In those instances where outlying data appeared, Allegheny looked further into the cause of those results to determine if the Company’s service territory might have similar characteristics and other correlating factors. Such observation permitted general validation of the assumptions regarding participation levels (both take up and steady state), participation costs and savings estimates from sources such as the EPA, DOE, Northeast Efficiency Partnership (“NEEP”), American Council for an Energy-Efficient Economy (“ACEEE”) and the Consortium of Energy Efficiency (“CEE”). Finally, programs from Energy Star and ACEEE’s “America’s Best Exemplary Programs” were also reviewed.

The following companies and entities (in no particular order) were contacted to gather benchmarking information:

United Illuminating	City of Little Rock, AR
Austin Energy	Southwestern Pennsylvania Commission
Xcel Energy	City of Pittsburgh, PA
City of Philadelphia Municipal Energy Office	Institute of Transportation Engineers
Puget Sound Energy	American Council for an Energy Efficient Economy
Avista Utilities	California Energy Commission
Alliant Energy	Consortium for Energy Efficiency
Efficiency Vermont	Lighting Research Center
City of Fayetteville, AR	U.S. Department of Energy
Gainesville Reg. Utilities	
City of Greensburg, PA	

Allegheny Power also conducted research on existing state and federal building codes and standards for consideration in the measure assumptions. Rebates were only considered for appliances that exceed the federal minimum energy efficiency standard.¹² In cases where this minimum standard for the measure was already Energy Star qualified, incentives were designed only for higher efficiency models.

In other cases, such as for CFL, where CFLs are to become the federal standard in 2012 (incandescent lamps will no longer be manufactured or imported in the U.S.), the Company plans to revise the incentive program to promote specialty CFLs and/or new energy efficient lighting types. Therefore, Allegheny Power's fundamental approach will not provide rebates for appliances that simply meet current standards. In fact, the Company supports a migration from rebates to increasing customer behaviors as the market transforms.

Allegheny Power reviewed ACEEE exemplary programs and other utility programs identified through internal benchmarking to determine its incentive strategy. The general approach to setting incentive levels for measures, other than those in the custom programs, was to provide an incentive for between 25% to 75% of the incremental cost of the high-efficiency device, with 50% being the target, as compared to the standard efficiency device. The Company's Plan also includes a general reduction in customer incentives beginning in the 2011 Plan year. The Company proposes that as customer awareness and education regarding energy

¹² Residential appliances: http://www.energysavers.gov/your_home/appliances/index.cfm/mytopic=10050

efficiency and conservation increases that smaller customer incentives will be necessary to encourage customers to participate in programs that promote energy efficiency and conservation. This concept also coincides with the Company's implementation of Smart Metering and related infrastructure that further supports customer awareness and education and changing customer behaviors. The Company proposes to revise the Plan during the annual review process, based on the experience gained from offering programs to our PA customers, in an effort to maximize Plan effectiveness in meeting the targets and requirements of Act 129. Required incentive levels will vary from program to program and as programs are reviewed, updated, added or removed the overall incentive strategy will need to be updated to reflect this experience.

3.2. Residential Sector (as defined by EDC Tariff) Programs

a. RESIDENTIAL ENERGY STAR AND HIGH EFFICIENCY APPLIANCE PROGRAM

Years during which program will be implemented

January 2010 through May 2013

Objective(s)

The Energy Star and High Efficiency Appliance Program encourages customers in Allegheny Power's Pennsylvania service territory to purchase the most energy-efficient appliances available instead of less energy-efficiency appliances.

Target market

This program targets Allegheny Power's approximately 618,000 Pennsylvania residential customers.

Program description

The Energy Star and High Efficiency Appliance Program encourages customers in Allegheny Power's Pennsylvania service territory to purchase the most energy-efficient appliances available instead of less energy-efficiency appliances. To encourage participation and to overcome cost barriers, this program provides rebates (equal to about 50% of the appliance's incremental cost in most cases) for the purchase of appliances that meet or exceed Energy Star or other energy efficiency ratings.¹³

Mail-in and point-of-sale (where possible) rebates will be offered for clothes washers, clothes dryers, dishwashers, refrigerators (with turn-in), freezers (with turn-in), programmable thermostats, and room air conditioners.

Implementation strategy (including expected changes that may occur in different program years)

Allegheny Power will contract directly with rebate processing and appliance recycling services providers.

Allegheny Power will contract implementation administration activities including coordination of point of sale agreements, marketing activities, rebate processing and appliance recycling services provider contractor oversight, reporting, and program evaluation.

¹³ In instances where Energy Star does not provide an efficiency rating for a device, other standards, such as the federal minimum efficiency standards may be used to establish eligibility criteria.

Possible future enhancements for this program include adding consumer electronics, high efficiency water heaters and renewable technologies. Additionally, the Program will be modified as federal minimum energy efficiency standards increase to ensure the program continues to incent customers to purchase more energy efficient appliances.

Program issues and risks and risk management strategy

Achieving estimated participation rates is a program risk. The program will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy;
- Modify rebates; and
- Modify or eliminate measures being offered.

Another risk is the possibility of an increase in the federal energy efficiency standards for appliances resulting in reduced energy savings of appliances based on the current appliance measure requirements. As these standards change, appliance requirements and/or energy savings will be modified to reflect the energy efficiency standards of appliances available at that time. The program manager will be responsible for monitoring these changes and updating each appliance measure as needed.

Anticipated costs to participating customers

The customer will be required to pay for the full cost of the new appliance minus the offered appliance rebate. The offered appliance rebate amount is approximately 50% of the appliance's incremental cost.¹⁴

Ramp up strategy

This program is expected to be 'full launched' that is, offered to the entire target population on the launch date. Allegheny Power will execute the launch in this manner since it will have had some experience in program management in another state prior to the Pennsylvania launch. It is assumed that the ramp up period for this program will occur in the 2009 and 2010 plan years. In the 2009 plan year, the participation rates are projected to be 33% of future year levels. In the 2010 plan year, the participation rates are projected to be 50% of future year levels.

Marketing strategy

Marketing activities will target eligible customers to inform them of the program, its components, and the associated benefits primarily through bill inserts, direct mail, print and radio advertising, and in-bound call center contact. In addition, the Home Performance Program will inform customers of this program at all customer contact points.¹⁵

¹⁴ Incremental cost is the cost to purchase the required higher energy efficient unit instead of the federal energy efficient standard unit.

¹⁵ The Home Performance Program is detailed in Section 3.2.d.

Marketing activities will include leveraging and promoting federal and state funding opportunities (stimulus dollars, tax incentives, grants, etc.) that may be associated with this program.¹⁶

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

To encourage participation and to overcome cost barriers, this program provides the following program rebates for each year of the program:

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (% of Incremental \$)
Room Air Conditioner Rebate	\$25	83%
Room Air Conditioner Recycling	\$25	N/A
Refrigerators Rebate	\$50	50%
Refrigerators Recycling	\$35	N/A
Freezers Rebate	\$25	58%
Freezers Recycling	\$35	N/A
Clothes Washers	\$75	25%
Clothes Dryers	\$25	50%
Dishwashers	\$25	50%
Programmable Thermostat	\$25	33%

Program start date with key schedule milestones

Allegheny Power will determine and measure key milestones achieved as referenced in program participation levels and savings tables for respective years.¹⁷

- Implementation: Award vendor contracts fourth quarter 2009
- Program Marketing: Begin fourth quarter 2009
- Program Start Date: January 1, 2010
- Program End Date: May 31, 2013¹⁸

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 1 EM&V category.¹⁹

All rebate applications will be reviewed upon receipt to verify adherence to eligibility requirements and applicant eligibility. A statistically valid sample of all rebate

¹⁶ Reference Additional Funding Table in Section 10.F.2.

¹⁷ Start date and milestones based on assumed Plan approval in fourth quarter 2009.

¹⁸ All measures subject to modification or elimination if federal energy efficiency standard changes or other changes warrant.

¹⁹ Reference Section 6.1.2. for details of Level 1 EM&V.

applications, based on 90% confidence level and a plus-or-minus 5% margin of error, will be selected for survey.

Information that will be collected for EM&V purposes will include the quantity of the measure installed, nameplate data from the existing model, the capacity (size) of the existing model, the nameplate data for the new model and the capacity (size) of the new model. A customer survey will also be completed.

The refrigerator and freezer recycling measures also include verification that an operating refrigerator or freezer was removed from a customer’s premise, and that the refrigerator or freezer was appropriately recycled. The recycling vendor is also responsible for verifying the nameplate data of the removed equipment.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program. Allegheny Power will notify the Commission if it appears that changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

Allegheny Power will assign a program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. It is estimated that program management will require 0.25 FTE.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	3,806,971	8,700	8,700
2010	3,829,813	32,899	32,899
2011	3,852,792	63,397	63,397
2012	3,875,908	63,777	63,777

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$321,729	\$570,000	\$279,193	\$61,519	\$298,611	\$1,531,052
2010	\$145,119	\$1,409,040	\$1,012,833	\$223,187	\$1,116,196	\$3,906,375
2011	\$148,410	\$1,451,310	\$2,034,384	\$192,349	\$2,006,704	\$5,833,158
2012	\$151,777	\$872,000	\$2,046,591	\$198,294	\$2,018,744	\$5,287,406
TOTAL	\$767,035	\$4,302,350	\$5,373,001	\$675,349	\$5,440,256	\$16,557,991

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	3,062	3,062	1.0	1.0
2010	11,176	14,239	3.8	4.9
2011	22,315	36,553	7.5	12.4
2012	22,448	59,001	7.5	19.9

Cost-effectiveness – include TRC for each program year and cumulative

The cumulative TRC for this program is calculated to be 1.8
 Refer to Table 7A for TRC for each program year.

Other information deemed appropriate

In an effort to enable all customer classes to gain added benefits, Allegheny Power will educate customers on the availability of incentives from other funding sources including, but not limited to, Federal Tax Credits for Energy Efficiency under the “Emergency Economic Stabilization Act of 2008” and Stimulus Funds under the “American Recovery and Reinvestment Act of 2009” as appropriate and as funding is available.²⁰

²⁰ Reference Additional Funding Table in Section 10.F.2.

b. COMPACT FLUORESCENT LIGHTING (CFL) REWARDS PROGRAM

Years during which program will be implemented

January 2010 through May 2013

Objective(s)

The CFL Rewards Program encourages customers in Allegheny Power's Pennsylvania service territory to purchase compact fluorescent lights (CFLs) instead of incandescent lamps.

Target market

This program targets Allegheny Power's approximately 618,000 Pennsylvania residential customers.

Program description

The CFL Rebate Program encourages customers in Allegheny Power's Pennsylvania service territory to purchase CFLs instead of incandescent bulbs. To encourage participation and to overcome cost barriers, this program provides mail-in and point-of-sale rebates and markdowns (where possible) in parts of Allegheny Power's service territory with large retail stores. In parts of the service territory that border other EDCs and in Allegheny Power's more rural territory, only the mail-in rebates will be available to customers.

Implementation strategy (including expected changes that may occur in different program years)

Allegheny Power is evaluating partnership opportunities with companies such as Technical Consumer Products ("TCP") to work with retail stores such as Home Depot and others to further market this program in their stores.

Allegheny Power will contract implementation administration activities including coordination of point of sale agreements, marketing activities, rebate processing services provider contractor oversight, reporting, and program evaluation.

Allegheny Power will contract directly with rebate processing services provider.

As incandescent bulbs will become unavailable at the end of 2011, this program will be modified based on the available bulbs at that time.

Program issues and risks and risk management strategy

A risk with this program is the possibility of new lighting technologies not being as efficient or available at the time incandescent bulbs will become unavailable at the end of 2011. If and when this were to happen, claimed energy savings will need to be modified based on the available bulbs at that time. The program manager will be responsible for monitoring these changes and updating the measure as needed.

Achieving estimated participation rates is a program risk. The program will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy;
- Modify rebates; and
- Modify or eliminate programs.

Anticipated costs to participating customers

The customer will be required to pay for the full cost of the CFLs minus the offered CFL rebate or point of sale markdown. The offered CFL rebate amount is approximately 50% of the incremental cost of purchasing a CFL instead of an incandescent bulb.

Ramp up strategy

This program is expected to be 'full launched' that is, offered to the entire target population on the launch date. AP will execute the launch in this manner since it will have had some experience in program management in another state prior to the Pennsylvania launch. It is assumed that the ramp up period for this program will occur in the 2009 and 2010 plan years. In the 2009 plan year, the participation rates are projected to be 33% of future year levels. In the 2010 plan year, the participation rates are projected to be 50% of future year levels.

Marketing strategy

Marketing activities will target eligible customers to inform them of the program, its components, and the associated benefits primarily through bill inserts, direct mail, print and radio advertising, and in-bound call center contact. In addition, the Home Performance Program will inform customers of this program at all customer contact points.²¹

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

To encourage participation and to overcome cost barriers, this program provides the following program rebates for each year of the program:

²¹ The Home Performance Program is detailed in Section 3.2.d.

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (% of Incremental \$)
CFL Rewards Program		
Single Pack	\$1.50	38%
Multi-Pack	\$3.00	30%

Program start date with key schedule milestones

Allegheny Power will determine and measure key milestones achieved as referenced in program participation levels and savings tables for respective years.²²

- Implementation: Award vendor contracts fourth quarter 2009
- Program Marketing: Begin fourth quarter 2009
- Program Start Date: January 1, 2010
- Program End Date: May 31, 2013²³

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 1 EM&V category.²⁴

All rebate applications will be reviewed upon receipt to verify adherence to eligibility requirements and applicant eligibility. A statistically valid sample of all rebate applications, based on 90% confidence level and a plus-or-minus 5% margin of error, will be selected for survey.

Information that will be collected for EM&V purposes will include the quantity of the measure installed and the wattage of the new CFL. A customer survey will also be completed.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program. Allegheny Power will notify the Commission if it appears that changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

Allegheny Power will assign a program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. It is estimated that program management will require 0.25 FTE.

²² Start date and milestones based on assumed Plan approval in fourth quarter 2009.

²³ All measures subject to modification or elimination if federal standard changes or other changes warrant.

²⁴ Reference Section 6.1.2. for details of Level 1 EM&V.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	16,469,117	34,100	161,975
2010	16,307,141	121,553	577,377
2011	15,729,765	234,498	1,113,868
2012	14,615,897	217,893	1,034,992

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$321,729	\$63,000	\$20,946	\$16,260	\$89,513	\$511,448
2010	\$145,119	\$155,736	\$74,664	\$70,053	\$319,077	\$764,648
2011	\$148,410	\$160,408	\$144,041	\$59,656	\$567,699	\$1,080,214
2012	\$151,777	\$96,379	\$133,841	\$38,802	\$527,498	\$948,297
TOTAL	\$767,035	\$475,523	\$373,491	\$184,771	\$1,503,787	\$3,304,607

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	7,002	7,002	0.0	0.0
2010	24,960	31,963	0.1	0.1
2011	48,153	80,116	0.1	0.2
2012	44,743	124,859	0.1	0.3

Cost-effectiveness – include TRC for each program year and cumulative

The TRC for this program is calculated to be 8.7

Refer to Table 7A for TRC for each program year.

Other information deemed appropriate

This program will be revised from offering rebates for standard CFLs to offering rebates for LED lighting and/or specialty CFLs as these technologies become available and/or the standard CFLs saturate the market. The recent Energy Independence and Security Act (EISA) of 2007 legislation requires that the efficiency standards of incandescent bulbs (in the form of minimum lumen per watt values) be phased in by 2014. The savings per bulb decreases beginning in 2012 in conjunction with this legislation.

c. RESIDENTIAL HVAC EFFICIENCY PROGRAM

Years during which program will be implemented

January 2010 through May 2013.

Objective(s)

The Residential HVAC Efficiency Program encourages residential customers in Allegheny Power's Pennsylvania service territory to purchase energy efficient central air conditioners and heat pumps instead of available less energy efficient units.

Target market

This program targets all residential customers in Allegheny Power's Pennsylvania service area who have interest in electric HVAC systems. There are approximately 618,000 residential customers in Allegheny Power's Pennsylvania service territory, of which about half cool their homes with air conditioning.

Program description

The Residential HVAC Efficiency Program encourages residential customers to purchase a high efficiency central air conditioner (CAC) or heat pump (HP) (SEER ratings of 14.5 or greater). To encourage participation and to overcome cost barriers, this program provides rebates (equal to about 50% of the appliance's incremental cost in most cases) for the purchase of units that exceed the federal energy efficient standard (SEER ratings of 13). To qualify for these rebates under this program, the work must be completed by a certified contractor and a programmable thermostat must be installed.

Implementation strategy (including expected changes that may occur in different program years)

Allegheny Power will contract implementation administration activities including coordination with HVAC equipment distributors and installation contractors, marketing activities, rebate processing services provider contractor oversight, reporting, and program evaluation.

Allegheny Power will contract directly with rebate processing service providers.

Future enhancements may include renewable heating and cooling technologies.

Program issues and risks and risk management strategy

Achieving estimated participation rates is a program risk. The program will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy;
- Modify rebates; and

- Modify or eliminate measures being offered.

Another risk is the possibility of an increase in the federal energy efficiency standards for HVAC equipment resulting in reduced energy savings based on the current HVAC measure requirements. If and when these standards change, HVAC requirements and/or energy savings will be modified to reflect the energy efficiency standards of HVAC equipment available at that time. The program manager will be responsible for monitoring these changes and updating each appliance measure as needed.

Anticipated costs to participating customers

The customer will be required to pay for the full cost of the new central air conditioner or heat pump minus the offered appliance rebate. The offered rebate amount is approximately 50% of the unit's incremental cost.²⁵ Approximate (net) equipment costs are:

- Residential Air Conditioner: \$1,190
- Residential Heat Pump: \$1,673

Ramp up strategy

This program is expected to be 'full launched' that is, offered to the entire target population on the launch date. Allegheny Power will execute the launch in this manner since it will have had some experience in program management in another state prior to the Pennsylvania launch. It is assumed that the ramp up period for this program will occur in the 2009 and 2010 plan years. In the 2009 plan year, the participation rates are projected to be 33% of future year levels. In the 2010 plan year, the participation rates are projected to be 50% of future year levels.

Marketing strategy

Marketing activities will target eligible customers to inform them of the program, its components, and the associated benefits primarily through bill inserts, direct mail, print and radio advertising, and in-bound call center contact. In addition, the Home Performance Program will inform customers of this program at all customer contact points and HVAC equipment distributors and installation contractors will be notified of the program's requirements and available customer incentives.²⁶

Marketing activities will include leveraging and promoting federal and state funding opportunities (stimulus dollars, tax incentives, grants, etc.) that may be associated with this program.²⁷

²⁵ Incremental cost is the cost to purchase the required higher energy efficient unit instead of the federal energy efficient standard unit.

²⁶ The Home Performance Program is detailed in Section 3.2.d.

²⁷ Reference Additional Funding Table in Section 10.F.2.

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (% of Incremental \$)
High Efficiency Air Conditioner		
SEER 14.5	\$100	42%
SEER 15	\$150	60%
SEER 16 & Above	\$200	65%
High Efficiency Heat Pump		
SEER 14.5	\$100	26%
SEER 15	\$150	29%
SEER 16 & Above	\$200	24%

Program start date with key schedule milestones

Allegheny Power will determine and measure key milestones achieved as referenced in program participation levels and savings tables for respective years.²⁸

- Implementation: Award vendor contracts fourth quarter 2009
- Program Marketing: Begin fourth quarter 2009
- Program Start Date: January 1, 2010
- Program End Date: May 31, 2013²⁹

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 1 EM&V category.³⁰

All rebate applications will be reviewed upon receipt to verify adherence to eligibility requirements and applicant eligibility. A statistically valid sample of all rebate applications, based on 90% confidence level and a plus-or-minus 5% margin of error, will be selected for survey.

Information that will be collected for EM&V purposes may include a description of the application, the quantity of the measure installed, nameplate data from the existing model, the capacity (size) of the existing model, the nameplate data for the new model and the capacity (size) of the new model. A customer survey will also be completed.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that changes are warranted in this program.

²⁸ Start date and milestones based on assumed Plan approval in fourth quarter 2009.

²⁹ All measures subject to modification or elimination if federal standard changes or other changes warrant.

³⁰ Reference Section 6.1.2. for details of Level 1 EM&V.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

Allegheny Power will assign a program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. It is estimated that program management will require 0.25 FTE.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	339,251	406	406
2010	341,287	2,453	2,453
2011	343,335	4,935	4,935
2012	345,395	4,964	4,964

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$289,222	\$92,500	\$499	\$25,641	\$60,948	\$468,809
2010	\$145,119	\$228,660	\$3,013	\$111,148	\$367,881	\$855,821
2011	\$148,410	\$235,520	\$6,062	\$100,224	\$682,627	\$1,172,844
2012	\$151,777	\$141,509	\$6,098	\$87,090	\$686,723	\$1,073,198
TOTAL	\$734,528	\$698,189	\$15,673	\$324,103	\$1,798,179	\$3,570,672

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	163	163	0.2	0.2
2010	982	1,145	1.1	1.2
2011	1,976	3,120	2.1	3.4
2012	1,987	5,107	2.1	5.5

Cost-effectiveness – include TRC for each program

The TRC for this program is calculated to be 1.0

Refer to Table 7A for TRC for each program year

Other information deemed appropriate

In an effort to enable all customer classes to gain added benefits, Allegheny Power will educate customers on the availability of incentives from other funding sources including, but not limited, to Federal Tax Credits for Energy Efficiency under the “Emergency Economic Stabilization Act of 2008” and/or Stimulus Funds under the “American Recovery and Reinvestment Act of 2009” as appropriate and as funding is available.³¹

³¹ Reference Additional Funding Table in Section 10.F.2.

d. RESIDENTIAL HOME PERFORMANCE PROGRAM**Years during which program will be implemented**

January 2010 through May 2013

Objective(s)

The Residential Home Performance Program encourages residential customers in Allegheny Power's Pennsylvania service territory to improve the overall efficiency of their homes and reduce their carbon footprint through a holistic approach to energy consuming systems in the home including customer EE&C education, the installation of audit measures and informing customers of Allegheny Power's other EE&C residential programs.

Target market

The program will target the approximately 618,000 residential customers in Allegheny Power's Pennsylvania service territory.

Program description

The Residential Home Performance Program provides a holistic approach to educating customers on energy efficiency and conservation, and to improve overall home performance, by providing customers with a choice of three energy audit measures including an On-line Audit, a Check-Up Audit and a Comprehensive Audit. Allegheny Power is offering a \$50 incentive for the Check-Up Audit and Comprehensive Audit. The customer will be eligible to receive an additional incentive for the installation of measures recommended by the audit up to the balance of the audit cost.

Allegheny Power will contract with BPI certified contractors³² or consultants to provide the audits conducted at the home and install standard measures at the time of the audit. At the completion of the audit, the customer will be presented with home energy efficiency and conservation recommendations and information for Allegheny Power's other residential program offerings.

The measures directly available through this program for electric heat customers are attic insulation and home sealing via the comprehensive audit and attic insulation via the Check-Up audit. Home sealing is not offered to the Check-Up Audit customer due to the concern of reducing air exchanges in the home to a level which may produce poor air quality from, for example, carbon monoxide, moisture and mold. Allegheny Power will only offer incentives for home sealing as a recommendation from a blower-door test,

³² The Building Performance Institute offers nationally-recognized training, certification, accreditation, and quality-assurance programs. This includes standard construction and modular housing.

<http://www.bpi.org/content/contractors/faq.html>

available as part of a Comprehensive Audit. This program leverages Allegheny Power's portfolio of programs for a more energy efficient home.

The measures directly supported by this program and available to all audit participants are:

- Residential Energy Star and High Efficiency Appliance Program;
- Residential CFL Rewards Program;
- Residential HVAC Efficiency Program

Implementation strategy (including expected changes that may occur in different program years)

Allegheny Power will contract implementation management and administration activities including sub-contracting for home audit services, marketing activities, reporting, and program evaluation.

Program issues and risks and risk management strategy

There is currently a significant deficiency in certified auditors. An RFP is planned to contract a minimum of 40 more auditors. Allegheny Power is also discussing opportunities to partner with PA Home Energy³³ to provide the audits conducted in the home.

Achieving estimated participation rates is a program risk. The program will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy;
- Modify incentives; and
- Modify or eliminate measures being offered.

Anticipated costs to participating customers

- | | |
|---|-------|
| • Comprehensive Audit | \$442 |
| • Check-Up Audit | \$239 |
| • On-Line | \$0 |
| • Comprehensive and Check-Up Direct Measures - Installation and/or material costs less the customer's audit fee above ³⁴ | |

Ramp up strategy

This program is expected to be at 'full launch' that is, offered to the entire target population on the launch date. Allegheny Power will execute the launch in this manner

³³ PA Home Energy with Keystone HELP promotes a holistic approach to educating customers on energy efficiency and conservation to improve overall home performance. This is a potential partnership to leverage their existing process, BPI certified auditors, state presence, and program infrastructure to reduce start-up time and cost along with providing a quality program to the customer. See PA Home Energy <http://www.pahomeenergy.com/>

³⁴ Keystone HELP offers a \$325.00 rebate when replacement or new installation is funded through the Keystone HELP Loan Program.

since it will have had some experience in program management in Maryland prior to the Pennsylvania launch. It is assumed that the ramp up period for this program will occur in the 2009 and 2010 plan years. In the 2009 plan year, the participation rates are projected to be 33% of future year levels. In the 2010 plan year, the participation rates are projected to be 50% of future year levels.

Marketing strategy

Marketing activities will target eligible customers to inform them of the program, its components, and the associated benefits primarily through bill inserts, direct mail, print and radio advertising, and in-bound call center contact.

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

To encourage participation and to overcome cost barriers, Allegheny Power is offering a \$50.00 incentive for the Check-Up Audit and Comprehensive Audit. The customer will be eligible to receive an additional incentive for the installation of measures recommended by the audit up to the balance of the audit cost. The table below reflects the combination of both incentives on average.

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (%)
On-Line Audit	4 CFLs	100%
Check-Up Audit	\$50 + 15% up to audit cost	
Comprehensive Audit	\$50 + 15% up to audit cost	
Consumer Efficiency	CFLs & Educational Material	

Program start date with key schedule milestones

Allegheny Power will determine and measure key milestones achieved as referenced in program participation levels and savings tables for respective years.

- Implementation: Establish partnership with PA Home Energy and execute vendor contracts
- Program Marketing: Early 4th quarter 2009 so customers can plan for their 2010 home projects
- Program Start Date: January 2010
- Program End Date: May 31, 2013³⁵

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 1 EM&V category.³⁶ Allegheny will evaluate software tools referenced in the PA TRM and discuss options with the successful EM&V vendor.

³⁵ All projects accepted must be completed by May 31, 2013. This assumes Plan will end May 31, 2013.

³⁶ Reference Section 6.1.2. for details of Level 1 EM&V.

A statistically valid sample of all participants, based on a 90% confidence level and a plus-or-minus 5% margin of error, will be selected for a follow-up phone call to verify that they received their energy efficiency kit and, including but not limited to, the number of and location of CFLs installed.

Allegheny Power will audit 20% of each certified contractor’s projects in the first year and 5% per year thereafter for quality assurance. The Company expects that contractor training programs would be modified to address any trends discovered through the audit process.

A statistically valid sample, based on a 90% confidence level and a plus-or-minus 5% margin of error, will be selected annually for post-installation inspection. Inspections will include a site visit to verify energy-efficient technical specifications and quantities

TRC analysis of the program will occur annually to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

Allegheny Power will assign a program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. It is estimated that program management will require 0.5 FTE.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	1,788,780	4,952	4,952
2010	1,794,099	66,956	66,956
2011	1,793,477	94,540	94,540
2012	1,785,333	94,756	94,756

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$304,776	\$500,000	\$366,878	\$38,775	\$232,810	\$1,443,239
2010	\$245,552	\$798,600	\$1,108,312	\$179,993	\$1,499,620	\$3,832,077
2011	\$290,220	\$832,308	\$913,540	\$165,685	\$2,413,993	\$4,615,745
2012	\$293,911	\$826,491	\$921,171	\$150,669	\$2,395,583	\$4,587,824
TOTAL	\$1,134,459	\$2,957,399	\$3,309,901	\$535,122	\$6,542,005	\$14,478,886

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	1,872	1,872	0.2	0.2
2010	23,370	25,243	2.5	2.7
2011	32,704	43,883	3.5	4.8
2012	29,950	59,685	3.1	6.4

Cost-effectiveness – include TRC for each program

Home Performance Program TRC result is 1.6

Refer to Table 7A for TRC for each program year

Other information deemed appropriate

In an effort to enable all customer classes to gain added benefits, Allegheny Power plans to access and educate customers on the availability of incentives from available funding sources including, but not limited, to Federal Tax Credits for Energy Efficiency under the “Emergency Economic Stabilization Act of 2008” and/or Stimulus Funds under the “American Recovery and Reinvestment Act of 2009” as appropriate, and as funding becomes available.³⁷

³⁷ Reference Additional Funding Table in Section 10.F.2.

e. RESIDENTIAL EFFICIENCY REWARDS RATE**Years during which program will be implemented**

January 2011 through May 2013

Objective(s)

This rate offering encourages residential customers in Allegheny Power's Pennsylvania service territory to lower their electricity consumption.

Target market

The rate offering will target the approximately 618,000 residential customers in Allegheny Power's Pennsylvania service territory. Customers will be offered this rate offering in conjunction with the installation of smart metering and the related infrastructure, with a projected start date in first quarter 2011.

Program description

This rate offering encourages the reduction in energy consumption by providing bill credits to customers based on the amount of reduction in their electricity consumption from historical consumption levels. Coupled with the smart metering infrastructure,³⁸ customers will have access to energy consumption and price information enabling them to control their monthly energy consumption and electric bills. Studies show that customers become more efficient by virtue of receiving direct feedback regarding their energy usage.

This rate offering will be offered to customers on a voluntary basis. If the customer achieves the energy savings goal they will receive a bill credit based on the amount of their reduction.

Implementation strategy (including expected changes that may occur in different program years)

This rate offering requires the installation of a smart meter to collect the customer's hourly energy consumption. The addition of an in-home/in-facility display improves customer communications regarding their energy consumption and billing, providing the customer with direct feedback necessary for the customer to become more efficient. This rate offering leverages the smart metering infrastructure in providing customers with timely information to enable them to make wise energy choices.

Program issues and risks and risk management strategy

This rate offering is most effective when coupled with Smart Metering Infrastructure that provides customers with real-time price signals and information about current and past

³⁸ For additional detail and graphical depiction of SMIP, refer to Section 10.F.3.

energy consumption. The rate offering is at risk if the Company does not receive timely approval of its SMIP plan to be filed on or before August 14, 2009.

Achieving estimated participation rates is a program risk. The rate offering will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy;
- Modify incentives, subject to PUC approval; and
- Modify or eliminate program, subject to PUC approval.

Anticipated costs to participating customers

There are no customer costs to participate.

Ramp up strategy

The implementation timeline for this rate offering will align with the smart metering infrastructure plan. See **Program start date with key schedule milestones** below for rollout.

Marketing strategy

Marketing activities will target eligible customers to inform them of the rate offering, its components, and the associated benefits primarily through bill inserts, direct mail, print and radio advertising, and in-bound call center contact.

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

The incentive to the customer will be by virtue of a bill credit, based on the customer’s actual reduction in energy use.

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (%)
Residential Efficiency Rewards	Based on Usage Reduction	

Program start date with key schedule milestones

2009

August – December Program development

2010

January – December Smart meter installations as per SMIP to be filed on or before August 14, 2009

Rate tariff development and filing

Marketing plan development

2011

February	Smart Meter System Operable Smart meter installations as per SMIP to be filed on or before August 14, 2009 Marketing plan deployed
March – April	Deploy thermostats

Smart meter installations as per SMIP to be filed on or before August 14, 2009

2012

Smart meter installations as per SMIP to be filed on or before August 14, 2009

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 2 EM&V category.³⁹

It is expected that the smart metering infrastructure will provide the method for EM&V of this rate.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program; Allegheny Power will file with the Commission for approval of program modifications if it appears that changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

Allegheny Power will assign a program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. It is estimated that program management of all demand response rate offerings will require 1.0 FTE.

³⁹ Reference Section 6.1.2. for details of Level 2 EM&V.

Estimated participation – includes tables indicating metric(s) with target value(s) per year⁴⁰

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	0	0	0
2010	35,438	276	276
2011	120,488	4,217	4,217
2012	205,538	14,388	14,388

Estimated program budget (total) by year – include table with budget per year⁴¹

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$0	\$0	\$0	\$0	\$0	\$0
2010	\$72,676	\$0	\$0	\$9,625	\$0	\$82,301
2011	\$74,324	\$0	\$0	\$10,500	\$0	\$84,824
2012	\$76,010	\$0	\$0	\$10,111	\$0	\$86,121

⁴² Table reflects the combination of Residential Efficiency Rewards and Pay Ahead Smart Service Programs.

f. PROGRAMMABLE CONTROLLABLE THERMOSTAT (PCT) PROGRAM**Years during which program will be implemented**

January 2011 through May 2013

Objective(s)

This program encourages demand reduction in the residential, small commercial and industrial and government/non-profit customer segment using programmable controlled thermostat (PCT) technology to control central air conditioners.

Target market

This program targets all residential customers in Allegheny Power's Pennsylvania service territory whose residence has a central air conditioning system and/or a heat pump. According to the Residential Appliance Saturation Survey that was completed by KEMA⁴³ for Allegheny Power in 2006, the current saturation is 53% for central air conditioning systems, and 2% for electric air-source heat pumps. This program will be offered to customers upon installation of smart metering and the related infrastructure necessary to effectuate control of the air conditioner during periods of peak system load.

Program description

A Programmable Controllable Thermostat coupled with smart metering infrastructure will provide energy consumption and price information to the customer to enable them to control their monthly energy consumption and electric bills. An automated demand response will be accomplished by directly controlling the air conditioning system via the thermostat in the residential home.⁴⁴ Participating customers will receive a professionally installed Programmable Controllable Thermostat that will have the following capabilities:

- **Pricing Signals**
Customer will receive price signals and/or notices of peak-period events from Allegheny Power.
- **Programmable Set-Points to Reduce Energy Consumption**
By using pre-programmed set-points, the customer can conserve energy. According to the U.S. Department of Energy, an Energy Star programmable thermostat compared to a non-programmable thermostat can reduce energy usage by as much as 16%.

Implementation strategy (including expected changes that may occur in different program years)

This program requires the installation of a smart meter to collect the customer's hourly energy consumption. The addition of an in-home/in-facility display improves customer communications regarding their energy consumption and billing. This program leverages

⁴³ KEMA provides energy consulting in the fields of risk, performance and quality management. www.kema.com

⁴⁴ For additional detail and graphical depiction of SMIP, refer to Section 10.F.3.

the smart metering and related infrastructure to allow the Company to control customer air conditioner loads during periods of peak system loading.

Program issues and risks and risk management strategy

This program is most effective when coupled with Smart Metering Infrastructure that provides customers with real-time price signals and information about current and past energy consumption. The program is at risk if the Company does not receive timely approval of the SMIP plan to be filed on or before August 14, 2009.

Achieving estimated participation rates is a program risk. The program will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy;
- Modify incentives; and
- Modify or eliminate program.

Anticipated costs to participating customers

There are no customer costs to participate.

Ramp up strategy

The implementation timeline for this program will align with the smart metering infrastructure plan. See **Program start date with key schedule milestones** below for rollout.

Marketing strategy

Marketing activities will target eligible customers to inform them of the program, its components, and the associated benefits primarily through bill inserts, direct mail, print and radio advertising, and in-bound call center contact.

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

The incentive included in the table below is an annual credit that the customer will receive for participating in this program. The customer can obtain additional savings through their energy conservation initiatives that are supported and enabled by smart metering infrastructure.

Eligible Program Measures & Incentives

Other information deemed appropriate

g. PAY AHEAD (SMART) SERVICE RATE

Years during which program will be implemented

January 2011 through May 2013

Objective(s)

This rate offering will encourage greater awareness of energy consumption and energy costs as well as enable residential, small commercial and industrial and governmental/non-profit customers to better manage their electricity costs in the context of their overall monthly expenses by paying ahead for electric service and receiving information relative to their account balance and usage.

Target market

This rate offering will be targeted on a voluntary basis for residential customers with a smart meter. It is felt that participants will primarily be those customers with a desire to control their usage. Pay Ahead Smart Service may also deem to be good applications for high energy consumption customers and for landlord accounts.

Program description

Participants will receive a monthly report mailed with their bill depicting their electricity consumption for the month. Each of the participants will also be offered a thermostat/in-home display device that can provide customer messages including energy usage information and pricing.

Implementation strategy (including expected changes that may occur in different program years)

This rate offering requires the installation of a smart meter to collect the customer's hourly energy consumption. The addition of an in-home/in-facility display improves customer communications regarding their energy consumption and billing. This rate offering leverages the installation of smart metering and related infrastructure to provide customers with timely information to allow them to control their electricity usage and monthly electric bill.

Program issues and risks and risk management strategy

This rate offering is most effective when coupled with Smart Metering Infrastructure that provides customers with real-time price signals and information about current and past energy consumption. The rate offering is at risk if the Company does not receive timely approval of the SMIP to be filed on or before August 14, 2009.

Achieving estimated participation rates is a program risk. The rate offering will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy; and

⁴⁹ Table reflects the combination of Residential Efficiency Rewards and Pay Ahead Smart Service Programs.

h. CRITICAL PEAK REBATE (CPR) RATE**Years during which program will be implemented**

January 2011 through May 2013

Objective(s)

This rate offering encourages residential, small commercial and industrial and governmental/non-profit customers in Allegheny Power's Pennsylvania service territory to lower their demand during periods of high system loading.

Target market

This rate offering will target residential customers in Allegheny Power's Pennsylvania service territory, in conjunction with the installation of smart metering and related infrastructure.

Program description

This demand response program encourages customers to lower their demand during peak load hours by offering a rate discount/rebate based on actual demand reduction. The reduction can occur during predefined or notified peak hours. CPR could be competitively neutral to allow customers to continue to pay the same generation charge as on utility-provided default service or from an electric generation supplier. CPR relies on the installation of a smart meter⁵⁰ to measure the customer's demand during peak hours. The addition of an in-home/in-facility display improves customer notification and communication of peak periods. Participants will receive additional information to assist them in controlling their demand and their electric bills.

Implementation strategy (including expected changes that may occur in different program years)

This rate offering requires the installation of a smart meter to measure the customer's hourly demand. The addition of an in-home/in-facility display improves customer communications regarding their demand and billing. This rate offering leverages the smart metering and related infrastructure to provide customers with timely information regarding their electric demand.

Program issues and risks and risk management strategy

This rate offering is most effective when coupled with Smart Metering Infrastructure that provides customers with real-time price signals and information about current and past energy consumption. The rate offering is at risk if the Company does not receive timely approval of the SMIP plan to be filed on or before August 14, 2009.

⁵⁰ For additional detail and graphical depiction of SMIP, refer to Section 10.F.3.

Achieving estimated participation rates is a rate offering risk. The program will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy; and
- Modify or eliminate program, subject to PUC approval.

Anticipated costs to participating customers

There are no customer costs to participate.

Ramp up strategy

The implementation timeline for this rate offering will align with the smart metering infrastructure plan. See **Program start date with key schedule milestones** below for rollout.

Marketing strategy

Marketing activities will target eligible customers to inform them of the rate offering, its components, and the associated benefits primarily through bill inserts, direct mail, print and radio advertising, and in-bound call center contact.

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

Customer incentives will be included as part of the rate offering to encourage customers to reduce load during periods of peak system loading.

i. **TIME OF USE RATE (TOU) WITH CRITICAL PEAK PRICING RATE**

This program is the same as that listed under Commercial/Industrial Small Sector section.

j. **HOURLY PRICING OPTION (HPO) RATE**

This program is the same as that listed under Commercial/Industrial Small Sector section.

3.2.1 Low-Income Sector (as defined by 66 Pa. C.S. § 2806.1) Programs

In addition to programs listed below, the Low-Income Sector is eligible for all programs offered to the Residential Sector.

a. **RESIDENTIAL LOW INCOME HOME PERFORMANCE CHECK UP AUDIT & APPLIANCE REPLACEMENT PROGRAM (SINGLE & MULTI-FAMILY DWELLINGS)**

Years during which program will be implemented

January 2010 through May 2013

Objective(s)

The Residential Low Income Home Performance Check-up Audit and Appliance Replacement Program encourages low income residential customers to improve the overall efficiency of their home and reduce their carbon footprint through a holistic approach to energy consuming systems in the home.

Target market

This program targets low income ratepayers with household income up to 150% of the federal poverty level who own or rent. Allegheny Power currently has 39,140 confirmed or stated low income customers. This number includes those customers that received an energy assistance benefit and/or are participants in the Company's Customer Assistance Program (CAP) otherwise known as the Low Income Payment and Usage Reduction Program (LIPURP) and customers that are on level one payment agreements with a stated income that places them in the low income category. Based on census data, Allegheny Power could have as many as 90,000 residential customers up to 150% of the federal poverty level.

Program description

Program consists of a Home Check-Up Audit along with standard installed measures. The auditors will provide and install standard EE&C measures, with the customer's consent. The installed measures are as follows:

- Non Electric Hot Water heating customers – up to 6 CFLs
- Electric Hot Water heating customers – 6 CFLs, up to 3 Faucet Aerators, and 1 Low Flow Shower Head.

Under the Appliance Replacement component, the refrigerator and/or room air conditioner may qualify for replacement.

- Refrigerator – The auditor will determine if the customer's existing refrigerator is eligible for replacement based on the age and operational effectiveness. If eligible, the refrigerator will be replaced with a like-size Energy Star model. In

addition, should the customer also have an older, inefficient freezer in use, the customer will be provided the opportunity to replace both the refrigerator and freezer with a larger, more efficient refrigerator, so that the freezer may be removed.

- Room Air Conditioner - The auditor will determine if the customer's existing room air conditioner is eligible for replacement based on the age and operational effectiveness.

For homes with supplemental electric space heaters, auditors will provide messaging to the customer that weatherization services reduces the need to utilize the electric space heaters. Auditors will also be required to determine condition of the unit, need and appropriate use of space heater. If the auditor determines space heater use is needed as an alternative heating source because primary heating system is inoperable, steps will be taken to repair or replace primary heating source by accessing appropriate agency or contractor and accessing available funding sources.

The following residential programs are available to all participants.

- Residential Energy Star and High Efficiency Appliance Program
- Residential HVAC Efficiency Program
- Residential CFL Rewards Program

Compliance Achievement Plan:

- Allegheny Power expects to meet with available service providers to explain scope of program services and projected participation levels. Keeping service providers informed as to participation levels will enable them to address their workforce planning.
- Annual meetings with contractors/auditors will be scheduled.
- Allegheny Power plans targeted outreach to certain customer segments such as multi-family dwellings.

Implementation strategy (including expected changes that may occur in different program years)

Allegheny Power will contract implementation management and administration activities including sub-contracting for home audit services, networking, marketing activities, internal reporting, support external reporting and program evaluation.

Allegheny Power will oversee all contract work to ensure the scope of work is fully implemented, and will be responsible for all PUC reporting.

The implementation manager will handle customer issues and coordination of program services with home auditing contractors. Allegheny Power staff will also be available to address customer issues as needed.

Training of call center representatives, implementation management and home audit contractors will be held prior to roll-out of the program to ensure thorough understanding of deliverables. Allegheny Power expects to have a close working relationship with all parties and will provide added training and direction when appropriate and as needed.

Program issues and risks and risk management strategy

With the projected number of audits for all customers and increased comprehensive weatherization services for residential customers with low to moderate incomes, Allegheny Power has identified a resource constraint for performing home energy audits and comprehensive weatherization services. This has been an issue for several years as Allegheny Power has needed to contract with both Community Action Agencies and private contractors in order to have adequate coverage of Allegheny Power's service territory as well as have contractors able to provide the scope of energy conservation measures under the company's Low Income Usage Reduction Program (LIURP). It is Allegheny Power's intent to meet with available contractors prior to program start-up to review scope of work and projected participant levels to allow contractors the opportunity to increase and train their workforce.

Program issues and risks involved include the condition of the home and acquiring approval from the property owner for eligible appliance replacement, if the residence is a rental property. Allegheny Power plans to secure the required approvals for rental properties prior to any appliance replacement. In addition, all sub-contractors will be required to provide as part of the contract, Allegheny Power's standard level of liability insurance.

Achieving estimated participation rates is a program risk. The program will be reviewed monthly to determine reasonable participation. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy; and
- Modify or eliminate measures being offered.

Anticipated costs to participating customers

There is no cost to the customer.

Ramp up strategy

This program is expected to be 'full launched', that is, offered to the entire target population on the launch date.

Marketing strategy

Marketing activities will target eligible customers to inform them of the program, its components, and the associated benefits through bill inserts, direct mail, in-bound call center contact, and through social service agencies.

Allegheny Power will continue to work with State agencies to identify low income customers so they may be enrolled into, and receive services from the low income residential programs.

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (%)
Low Income Home Performance Check-Up & Appliance Replacement Program	100% of total expenditures	

Program start date with key schedule milestones

- Meet with implementation management: Third quarter 2009
- Obtain and meet with auditing contractors: Fourth quarter 2009
- Begin training of call center representatives: Fourth quarter 2009
- Program Start Date: January 2010
- Program End Date: May 31, 2013

Allegheny Power will monitor participation levels, spending and savings on a monthly and annual basis to determine if milestones are being achieved as outlined in the table.

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 1 EM&V category.⁵²

A statistically valid sample of all requests, based on a 90% confidence level and a plus-or-minus 5% margin of error, will be selected for a follow-up phone call to verify that they received their energy efficiency kit and, including but not limited to, the number of and location of CFLs installed.

Reports will be prepared and maintained by the third-party administrator to verify adherence to customer eligibility requirements. A statistically valid sample, based on a 90% confidence level and a plus-or-minus 5% margin of error, will be selected annually for post-installation inspection. Inspections will include a site visit to verify energy-efficient technical specifications and quantities

Information that will be collected for EM&V purposes will include the quantity of the measures installed, nameplate data from the existing model, the capacity (size) of the existing model, the nameplate data for the new model and the capacity (size) of the new model. A customer survey will also be completed.

⁵² Reference Section 6.1.2. for details of Level 1 EM&V.

The refrigerator and room air conditioner replacement measures also include verification that an operating refrigerator or room air conditioner was removed from a customer’s premise, and that the refrigerator or room air conditioner was appropriately recycled. The vendor is also responsible for verifying the nameplate data of the existing and new appliance.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that significant changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Allegheny Power will place a code on the customer accounts indicating the date of service and related costs of the job. For customers in receipt of comprehensive installed measures, the account will trigger an alert for investigation should the customer’s usage exceed 10% above historical usage prior to installed measures.

Allegheny Power is also considering including this program as part of the required program evaluation of company’s existing Low Income Usage Reduction Program (LIURP).

Administrative requirements – include utility staffing levels

For inclusion of all PA low income weatherization programs, Allegheny Power will assign an internal program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. This will account for 0.50 FTE. In addition, it is estimated that 4.5 FTEs will be required from a third party administrator.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	13,878	308	308
2010	13,570	2,714	2,714
2011	10,856	1,086	1,086
2012	9,770	977	977

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$72,914	\$30,000	\$51,227	\$7,824	\$264,135	\$426,101
2010	\$117,703	\$33,000	\$153,682	\$39,156	\$2,324,388	\$2,667,930
2011	\$114,458	\$37,000	\$153,682	\$30,934	\$857,467	\$1,193,541
2012	\$116,588	\$24,000	\$153,682	\$28,001	\$771,720	\$1,093,991
TOTAL	\$421,664	\$124,000	\$512,273	\$105,915	\$4,217,710	\$5,381,563

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	368	368	0.1	0.1
2010	3,240	3,609	0.6	0.7
2011	1,296	4,905	0.3	1.0
2012	1,167	6,071	0.2	1.2

Cost-effectiveness – include TRC for each program year and cumulative

The cumulative TRC for this program is calculated to be 2.8

Refer to Table 7A for TRC for each program year.

Other information deemed appropriate

Allegheny Power plans to access and educate customers on the availability of incentives from available funding sources including, but not limited to, Federal Tax Credits for Energy Efficiency under the “Emergency Economic Stabilization Act of 2008” and/or Stimulus Funds under the “American Recovery and Reinvestment Act of 2009” as appropriate, and as funding becomes available.⁵³

⁵³ Reference Additional Funding Table in Section 10.F.2.

b. RESIDENTIAL JOINT UTILITY USAGE MANAGEMENT PROGRAM – LOW INCOME WEATHERIZATION (LIURP, HOME CHECK UP & APPLIANCE REPLACEMENT

Years during which program will be implemented

January 2010 through May 2013

Objective(s)

The Joint Utility Usage Management Program (JUUMP), is a joint program with gas utilities and available to customers who heat with gas. This program enables leveraging of LIURP program dollars as well as DCED funding. This joint effort will provide a holistic approach to energy conservation and will minimize the impact on the customer's time by coordinating program services. This program is beginning as a cooperative effort between Allegheny Power and Columbia Gas.

Target market

Program will be available to low to moderate income customers with household incomes up to 200% of the federal poverty level.⁵⁴ Customers must also heat by gas and/or be eligible for any gas reduction measure. The initial program will target customers of both Allegheny Power and Columbia Gas.

Savings attributed to customers from 151% to 200% of federal poverty level will not be counted toward low income savings, however will be counted toward total goal.

Program description

The program consists of a Home Check-Up Audit with Appliance Replacement or LIURP Program measures for gas and electric customers.

Under the Appliance Replacement component, the refrigerator and/or room air conditioner may qualify for replacement.

- Refrigerator – The auditor will determine if the customer's existing refrigerator is eligible for replacement based on the age and operational effectiveness. If eligible, the refrigerator will be replaced with a like-size Energy Star model. In addition, should the customer also have an older, inefficient freezer in use, the customer will be provided the opportunity to replace both the refrigerator and freezer with a larger, more efficient refrigerator, so that the second freezer may be removed.

⁵⁴ The threshold of 200% of the federal poverty level in the program was established to be consistent with that of the gas company's approved LIURP Program eligibility level and to avoid customer confusion. It should be noted that the Company will track program savings between 0-150% and 151-200% of the federal poverty level.

- Room Air Conditioner - The auditor will determine if the customer's existing room air conditioner is eligible for replacement based on the age and operational effectiveness.

For homes with supplemental electric space heaters, auditors will provide messaging to the customer that weatherization services reduces the need to utilize the electric space heaters. Auditors will also be required to determine condition of the unit, need and appropriate use of space heater. If the auditor determines space heater use is needed as an alternative heating source because primary heating system is inoperable, steps will be taken to repair or replace primary heating source by accessing appropriate agency or contractor and accessing available funding sources.

The following residential programs are available to all participants.

- Residential Energy Star and High Efficiency Appliance Program
- Residential HVAC Efficiency Program
- Residential CFL Rewards Program

Compliance Achievement Plan:

- Allegheny Power expects to meet with available service providers to explain scope of program services and projected participation levels. Keeping service providers informed as to participation levels will enable them to address their workforce planning.
- Annual meetings with contractors/auditors will be scheduled.
- Allegheny Power plans targeted outreach to certain customer segments such as multi-family dwellings.

Implementation strategy (including expected changes that may occur in different program years)

Allegheny Power will work closely with Columbia Gas Staff to ensure an effective and efficient process flow for coordination of program benefits.

Allegheny Power will contract implementation management and administration activities including sub-contracting for home audit services, weatherization services, networking, marketing activities, internal reporting, support external reporting and program evaluation.

Allegheny Power will oversee all contract work to ensure the scope of work is fully implemented, and will be responsible for all PUC reporting.

The implementation management will handle customer issues and coordination of program services with weatherization contractors. Allegheny Power staff will also be available to address customer issues as needed.

Training of call center representatives, implementation management and weatherization contractors will be held prior to roll-out of the program to ensure thorough understanding of deliverables. Allegheny Power expects to have a close working relationship with all parties and will provide added training and direction when appropriate and as needed.

Program issues and risks and risk management strategy

With the projected number of audits for all customers and increased comprehensive weatherization services for residential customers with low to moderate incomes, Allegheny Power has identified a resource constraint for performing home energy audits and comprehensive weatherization services. This has been an issue for several years as Allegheny Power has needed to contract with both Community Action Agencies and private contractors in order to have adequate coverage of Allegheny Power's service territory as well as have contractors able to provide the scope of energy conservation measures under the company's Low Income Usage Reduction Program (LIURP). It is Allegheny Power's intent to meet with available contractors prior to program start-up to review scope of work and projected participant levels to allow contractors the opportunity to increase and train their workforce.

Program issues and risks involved include the condition of the home and acquiring approval from property owner for eligible appliance replacement if a rental property. Allegheny Power plans to obtain the required approvals for rental properties prior to any appliance replacement. In addition, all sub-contractors will be required to provide as part of the contract, Allegheny Power's standard level of liability insurance.

Achieving estimated participation rates is a program risk. The program will be reviewed monthly to determine reasonable participation. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy; and
- Modify or eliminate measures being offered.

Anticipated costs to participating customers

There is no cost to the customer.

Ramp up strategy

This program is expected to be available on the launch date.

Marketing strategy

Marketing activities will target eligible customers to inform them of the program, its components, and the associated benefits through bill inserts, direct mail, in-bound call center contact, and through social service agencies.

[AP will continue to work with State agencies to identify low income customers so they may be enrolled into, and receive services from the low income residential programs.](#)

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (%)
Low Income Joint Utility Usage Management Program	100% up to \$5,000	

Program start date with key schedule milestones

- Meetings with Columbia Gas: Beginning April 2009 and on-going
- Meet with implementation management: Third quarter 2009
- Obtain and meet with contractors: Fourth quarter 2009
- Begin training of call center representatives: Fourth quarter 2009
- Program Start Date: January 2010
- Program End Date: May 31, 2013

Allegheny Power will monitor participation levels, spending and savings on a monthly and/or annual basis to determine if milestones are being achieved as outlined in the table.

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 1 EM&V category.⁵⁵

A statistically valid sample of all energy efficiency kit requests, based on a 90% confidence level and a plus-or-minus 5% margin of error, will be selected for a follow-up phone call to verify that they received their energy efficiency kit requests and, including but not limited to, the number of and location of CFLs installed.

Reports will be prepared and maintained by the third-party administrator to verify adherence to customer eligibility requirements. A statistically valid sample, based on a 90% confidence level and a plus-or-minus 5% margin of error, will be selected annually for post-installation inspection. Inspections will include a site visit to verify energy-efficient technical specifications and quantities.

Information that will be collected for EM&V purposes will include the quantity of the measures installed, nameplate data from the existing model, the capacity (size) of the existing model, the nameplate data for the new model and the capacity (size) of the new model. A customer survey will also be completed.

The refrigerator and room air conditioner replacement measures also include verification that an operating refrigerator or room air conditioner was removed from a customer's premise, and that the refrigerator or room air conditioner was appropriately recycled.

⁵⁵ Reference Section 6.1.2. for details of Level 1 EM&V.

The vendor is also responsible for verifying the nameplate data of the existing and new appliances.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that significant changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Allegheny Power will place a code on the customer accounts indicating the date of service and related costs of the job. For customers in receipt of comprehensive installed measures, the account will trigger an alert for investigation should the customer’s usage exceed 10% above historical usage prior to installed measures.

Allegheny Power is also considering including this program as part of the required program evaluation of company’s existing Low Income Usage Reduction Program (LIURP).

Program participation savings will be tracked for these two segments of Federal Poverty Level:

- 0% – 150%
- 151% – 200%

Administrative requirements – include utility staffing levels

For inclusion of all PA low income weatherization programs, Allegheny Power will assign an internal program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. This will account for 0.50 FTE. In addition, it is estimated that 4.5 FTEs will be required as a third party administrator.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	89,166	621	24,226
2010	89,076	3,749	146,230
2011	88,534	3,772	147,108
2012	87,989	3,795	147,990

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$74,009	\$30,000	\$51,227	\$9,328	\$233,381	\$397,946
2010	\$121,327	\$33,000	\$153,682	\$41,045	\$1,440,051	\$1,789,105
2011	\$123,860	\$37,000	\$153,682	\$33,652	\$1,365,802	\$1,713,996
2012	\$126,450	\$23,000	\$153,682	\$30,218	\$2,128,164	\$2,461,514
TOTAL	\$445,646	\$123,000	\$512,273	\$114,243	\$5,167,398	\$6,362,561

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	589	589	0.1	0.1
2010	3,555	4,144	0.4	0.4
2011	3,576	7,721	0.4	0.8
2012	3,598	11,319	0.4	1.2

Cost-effectiveness – include TRC for each program year and cumulative

The cumulative TRC for this program is calculated to be 1.2

Refer to Table 7A for TRC for each program year.

Other information deemed appropriate

Allegheny Power will access and educate customers on the availability of incentives from available funding sources including, but not limited to, Federal Tax Credits for Energy Efficiency under the “Emergency Economic Stabilization Act of 2008” and/or Stimulus Funds under the “American Recovery and Reinvestment Act of 2009” as appropriate, and as funding becomes available.⁵⁶

⁵⁶ Reference Additional Funding Table in Section 10.F.2.

c. RESIDENTIAL LOW INCOME ROOM AIR CONDITIONER REPLACEMENT PROGRAM

Years during which program will be implemented

January 2010 through May 2013

Objective(s)

This program expands the existing Low Income Usage Reduction Program (LIURP) to include replacement of room air conditioner in an effort to increase energy savings.

Target market

This program targets low income ratepayers with household income up to 150% of the federal poverty level who own or rent. Allegheny Power currently has 39,140 confirmed or stated low income customers. This number includes those customers that received an energy assistance benefit and/or are participants in the Company's Customer Assistance Program (CAP) otherwise known as the Low Income Payment and Usage Reduction Program (LIPURP) and customers that are on level one payment agreements with a stated income that places them in the low income category. Based on census data, Allegheny Power could have as many as 90,000 residential customers up to 150% of the federal poverty level.

Program description

Program consists of comprehensive Low Income Usage Reduction Program (LIURP) measures as currently available with the addition of the replacement of a room air conditioner. The program requires the recycling for the replaced unit.

For homes with supplemental electric space heaters, auditors will provide messaging to the customer that weatherization services reduces the need to utilize the electric space heaters. Auditors will also be required to determine condition of the unit, need and appropriate use of space heater. If the auditor determines space heater use is needed as an alternative heating source because primary heating system is inoperable, steps will be taken to repair or replace primary heating source by accessing appropriate agency or contractor and accessing available funding sources.

The following Residential Programs are available to all participants:

- Residential Energy Star and High Efficiency Appliance Program
- Residential Heat Pump Efficiency Program
- Residential CFL Rewards Program

Compliance Achievement Plan:

- Allegheny Power expects to meet with available service providers to explain scope of program services and projected participation levels. Keeping service providers informed as to participation levels will enable them to address their workforce planning.
- Annual meetings with contractors/auditors will be scheduled.

Implementation strategy (including expected changes that may occur in different program years)

Allegheny Power will contract with implementation management and administration activities including sub-contracting for weatherization services, networking, marketing activities, internal reporting, support external reporting and program evaluation. This program will be implemented in conjunction with the existing LIURP program.

Allegheny Power will oversee all contract work to ensure the scope of work is fully implemented, and will be responsible for all PUC reporting.

The implementation management will handle customer issues and coordination of program services with home auditing contractors. Allegheny Power staff will also be available to address customer issues as needed.

Training of call center representatives, implementation management and weatherization contractors will be held prior to roll-out of the program to ensure thorough understanding of deliverables. Allegheny Power expects to have a close working relationship with all parties and will provide added training and direction when appropriate and as needed.

Program issues and risks and risk management strategy

With the projected number of audits for all customers and increased comprehensive weatherization services for residential customers with low to moderate incomes, Allegheny Power has identified a resource constraint for performing home energy audits and comprehensive weatherization services. This has been an issue for several years as Allegheny Power has needed to contract with both Community Action Agencies and private contractors in order to have adequate coverage of Allegheny Power's service territory as well as have contractors able to provide the scope of energy conservation measures under the company's Low Income Usage Reduction Program (LIURP). It is Allegheny Power's intent to meet with available contractors prior to program start-up to review scope of work and projected participant levels to allow contractors the opportunity increase and train their workforce.

Program issues and risks involved include the condition of the home and acquiring approval from property owner, if rental property, to replace appliance. Allegheny Power plans to obtain the required approvals for rental properties prior to any appliance replacement. In addition, all sub-contractors will be required to provide as part of the contract, Allegheny Power's standard level of liability insurance.

The program will be reviewed monthly to determine reasonable participation, spending and savings. If participation rates, spending or savings become a concern, the following steps will be evaluated:

- Modify marketing strategy; and
- Modify or eliminate measures being offered.

Anticipated costs to participating customers

There is no cost to the customer.

Ramp up strategy

This program is expected to be at ‘full launch’, that is, included in the existing LIURP Program as an added measure.

Marketing strategy

Marketing activities will target eligible customers to inform them of the program, its components, and the associated benefits through bill inserts, direct mail, in-bound call center contact, and through social service agencies.

Allegheny Power will continue to work with State agencies to identify low income customers so they may be enrolled into, and receive services from the low income residential programs.

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (%)
Low Income Room Air Conditioner Replacement Program	100% of total expenditures	

Program start date with key schedule milestones

- Meet with implementation management: Third quarter 2009
- Obtain and meet with auditing contractors: Fourth quarter 2009
- Begin training of call center representatives: Fourth quarter 2009
- Program Start Date: January 2010
- Program End Date: May 31, 2013

Allegheny Power will monitor participation levels, spending and savings on a monthly and annual basis to determine if milestones are being achieved as outlined in the table.

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 1 EM&V category.⁵⁷

All technical information in support of energy-efficient measure qualification will be entered into the database. A statistically valid sample of all requests, based on a 90% confidence level and a plus-or-minus 5% margin of error, will be selected for a follow-up phone call to verify that they received their air conditioner. Allegheny Power proposes that program results be reported quarterly and annual EM&V reports be filed for each program by June 30th of the following year.

Allegheny Power will audit 20% of each certified contractor's projects in the first year and 5% per year thereafter for quality assurance. The Company expects that contractor training programs would be modified to address any trends discovered through the audit process. Among other things, data relative to the number of participants, the saturation within the Allegheny Power territory and the energy savings will be maintained in the database. Analysis of this data will occur annually to assess the success of the program. The program will be evaluated to determine overall cost-effectiveness, participation rates, and levels of achieved energy and demand savings. Allegheny Power may consider program modifications or improvements, and will notify the Commission if it appears that changes were warranted in this program. Reports will be prepared and maintained by the third-party administrator to verify adherence to customer eligibility requirements. A statistically valid sample, based on a 90% confidence level and a plus-or-minus 5% margin of error, will be selected annually for post-installation inspection. Inspections will include a site visit to verify energy-efficient technical specifications and quantities

Information that will be collected for EM&V purposes may include a description of the application, the quantity of the measure installed, nameplate data from the existing model, the capacity (size) of the existing model, the nameplate data for the new model and the capacity (size) of the new model.

The room air conditioner replacement measure also includes verification that an operating room air conditioner was removed from a customer's premise, and that the room air conditioner was appropriately recycled.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that significant changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Allegheny Power will place a code on the customer accounts indicating the date of service and related costs of the job. For customers in receipt of comprehensive installed measures, the account will trigger an alert for investigation should the customer's usage exceed 10% above historical usage prior to installed measures.

⁵⁷ Reference Section 6.1.2. for details of Level 1 EM&V.

Allegheny Power will also include this program as part of the required program evaluation of company’s existing Low Income Usage Reduction Program (LIURP).

Administrative requirements – include utility staffing levels

For inclusion of all PA low income weatherization programs, Allegheny Power will assign an internal program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. This will account for 0.50 FTE. In addition, it is estimated that 4.5 FTEs will be required as a third party administrator.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	39,140	100	100
2010	39,040	597	597
2011	38,443	588	588
2012	37,855	579	579

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$72,184	\$30,000	\$0	\$7,824	\$64,875	\$174,883
2010	\$110,295	\$34,000	\$0	\$39,156	\$388,255	\$571,706
2011	\$112,717	\$36,000	\$0	\$30,934	\$352,589	\$532,241
2012	\$115,196	\$23,000	\$0	\$28,001	\$347,195	\$513,391
TOTAL	\$410,392	\$123,000	\$0	\$105,915	\$1,152,914	\$1,792,221

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	21	21	0.0	0.0
2010	128	150	0.1	0.1
2011	127	276	0.1	0.2
2012	125	401	0.1	0.4

Cost-effectiveness – include TRC for each program year and cumulative

The cumulative TRC for this program is calculated to be 0.6

Refer to Table 7A for TRC for each program year.

Other information deemed appropriate

Allegheny Power will access and educate customers on the availability of incentives from available funding sources including, but not limited to, Federal Tax Credits for Energy Efficiency under the “Emergency Economic Stabilization Act of 2008” and/or Stimulus Funds under the “American Recovery and Reinvestment Act of 2009” as appropriate, and as funding becomes available.⁵⁸

⁵⁸ Reference Additional Funding Table in Section 10.F.2.

3.3. Commercial/Industrial Small Sector (as defined by EDC Tariff) Programs

a. COMMERCIAL HVAC EFFICIENCY PROGRAM

Years during which program will be implemented

January 2010 through May 2013

Objective(s)

The Commercial HVAC Efficiency Program encourages small and large commercial and industrial, and governmental/non-profit customers in Allegheny Power's Pennsylvania service territory to purchase central air conditioners and heat pumps that are more energy efficient than the federal energy efficiency standard requires.

Target market

This program targets small commercial and industrial, and governmental/non-profit customers in Allegheny Power's Pennsylvania service area who are interested in electric HVAC products. There are about 82,000 commercial customers in AP's PA territory of which about 36% cool buildings.

Program description

To encourage participation and to overcome cost barriers, this program provides a rebate for the customer to purchase a more energy-efficient unit.

Implementation strategy (including expected changes that may occur in different program years)

Allegheny Power will contract implementation administration activities including coordination with HVAC equipment distributors and installation contractors, marketing activities, rebate processing services provider contractor oversight, reporting, and program evaluation.

Allegheny Power will contract directly with rebate processing service providers.

Future enhancements may include renewable technologies.

Program issues and risks and risk management strategy

The current economic downturn may be a risk to program success. To overcome this factor, Allegheny Power will bring to bear the resources available through Allegheny Power and state agencies, possible tax credits as well as emphasize potential energy and maintenance savings. An additional risk is that programs may not be approved in time to align with commercial and industrial customers' budget cycles for 2010. Possible mitigation strategies include:

- Request phased review and approvals for those programs at risk due to budget planning cycles.
- Consider contacting eligible customers in advance of approvals to alert them of a possible program.

Achieving estimated participation rates is a program risk. The program will be reviewed monthly to determine if participation rates are as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy;
- Modify incentives; and
- Modify or eliminate measures being offered.

Another risk is the possibility of an increase in the federal energy efficiency standards for HVAC equipment resulting in reduced energy savings based on the current HVAC measure requirements. If and when these standards change, HVAC requirements and/or energy savings will be modified to reflect the energy efficiency standards of HVAC equipment available at that time. The program manager will be responsible for monitoring these changes and updating each appliance measure as needed.

Anticipated costs to participating customers

The customer will be required to pay the cost of the new device less rebates. The average expected customer cost per unit is approximately 50% of incremental costs. Approximate costs are:

- Commercial Air Conditioner: \$2,300
- Commercial Heat Pump: \$2,500

Ramp up strategy

Begin communicating program in the fourth quarter of 2009 so Commercial and Industrial customers can plan and budget for projects in 2009. This program is expected to be 'full launched' that is, offered to the entire target population on the launch date. Allegheny Power will execute the launch in this manner since it will have had some experience in program management in another state prior to the Pennsylvania launch. It is assumed that the ramp up period for this program will occur in the 2009 and 2010 plan years. In the 2009 plan year, the participation rates are projected to be 33% of future year levels. In the 2010 plan year, the participation rates are projected to be 50% of future year levels.

Marketing strategy

Marketing activities will target eligible customers to inform them of the program, its components, and the associated benefits through bill inserts, direct mail, Allegheny Power website, trade shows, the business customer newsletter, and key account managers. Allegheny Power will work with HVAC contractors to market HVAC products with higher efficiency than required by federal standard.

Marketing activities will include leveraging and promoting federal and state funding opportunities (stimulus dollars, tax incentives, grants, etc.) that may be associated with this program.⁵⁹

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (% of Incremental \$)
High Efficiency Air Conditioner (\$35 per ton, 15 SEER)	\$175	50%
High Efficiency Heat Pump (\$75 per ton, 15 SEER)	\$375	48%

Program start date with key schedule milestones

Allegheny Power will determine and measure key milestones achieved as referenced in program participation levels and savings tables for respective years.⁶⁰

- Implementation: Award vendor contracts fourth quarter 2009
- Introduction of program to target customers: Begin fourth quarter 2009
- Program Marketing: Begin fourth quarter 2009
- Program Start Date: January 1, 2010
- Program End Date: May 31, 2013⁶¹

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 1 EM&V category.⁶²

All rebate applications will be reviewed upon receipt to verify adherence to eligibility requirements and applicant eligibility. A statistically valid sample of all rebate applications, based on 90% confidence level and a plus-or-minus 5% margin of error, will be selected for survey.

Information that will be collected for EM&V purposes will include the quantity of the measure installed, nameplate data from the existing model, the capacity (size) of the existing model, the nameplate data for the new model and the capacity (size) of the new model. A customer survey will also be completed.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that changes are warranted in this program.

⁵⁹ Reference Additional Funding Table in Section 10.F.2.

⁶⁰ Start date and milestones based on assumed Plan approval in fourth quarter 2009.

⁶¹ All measures subject to modification or elimination if federal standard changes or other changes warrant.

⁶² Reference Section 6.1.2. for details of Level 1 EM&V.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

Allegheny Power will assign a program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. It is estimated that program management will require 0.25 FTE.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	126,014	146	146
2010	127,526	884	884
2011	129,057	1,790	1,790
2012	130,605	1,811	1,811

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$331,059	\$20,000	\$179	\$14,318	\$31,091	\$396,647
2010	\$172,520	\$49,440	\$1,086	\$87,730	\$188,784	\$499,560
2011	\$176,433	\$50,924	\$2,199	\$99,719	\$352,390	\$681,665
2012	\$180,435	\$30,596	\$2,225	\$91,166	\$356,619	\$661,041
TOTAL	\$860,448	\$150,960	\$5,689	\$292,932	\$928,884	\$2,238,914

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	142	142	0.1	0.1
2010	860	1,001	0.5	0.6
2011	1,740	2,742	1.0	1.5
2012	1,761	4,503	1.0	2.5

Cost-effectiveness – include TRC for each program year and cumulative

The TRC for this program is calculated to be 1.0

Refer to Table 7A for TRC for each program year

Other information deemed appropriate

In an effort to enable all customer classes to gain added benefits, Allegheny Power will educate customers on the availability of incentives from other funding sources including, but not limited, to Federal Tax Credits for Energy Efficiency under the “Emergency Economic Stabilization Act of 2008” and/or Stimulus Funds under the “American Recovery and Reinvestment Act of 2009” as appropriate and as funding is available.⁶³

⁶³ Reference Additional Funding Table in Section 10.F.2.

b. COMMERCIAL LIGHTING EFFICIENCY PROGRAM

Years during which program will be implemented

January 2010 through May 2013.

Objective(s)

The Commercial Lighting Efficiency Program encourages small and large, commercial and industrial and governmental/non-profit customers in Allegheny Power's Pennsylvania service territory to upgrade to state-of-the-art energy efficient lighting technologies.

Target market

The program will be targeted at small and large, commercial and industrial customers in the Allegheny Power's Pennsylvania service territory with building facilities.

Program description

The program provides rebates to Commercial & Industrial customers for installing:

- T8 lamps: Reducing the number of lamps per fixture by 1 to 2 fewer lamps, and installing high-efficiency electronic ballasts;
- T5 lights: Replace high-intensity discharge high bay style lights;
- Occupancy Sensors (wall-plate style sensors to replace conventional switches); and
- LED Exit Signs: Replacing incandescent exit signs.

Implementation strategy (including expected changes that may occur in different program years)

Allegheny Power will contract implementation administration activities including coordination with HVAC equipment distributors and installation contractors, marketing activities, rebate processing services provider contractor oversight, reporting, and program evaluation.

Allegheny Power will contract directly with rebate processing service providers.

Allegheny Power anticipates this program will be revised/expanded during the plan to include LED and other new lighting technologies, in conjunction with annual reviews in consideration of program performance, budget, cost effectiveness and savings opportunities.

Program issues and risks and risk management strategy

A significant risk to the program success is customers' access to capital to finance energy efficiency and conservation programs. The rebate level structure along with resources

Marketing strategy

Marketing activities will target eligible customers to inform them of the program, its components, and the associated benefits through bill inserts, direct mail, Allegheny Power website, trade shows, the business customer newsletter, and key account managers. Allegheny Power will work with HVAC contractors to market HVAC products with higher efficiency than required by federal standard.

Marketing activities will include leveraging and promoting federal and state funding opportunities (stimulus dollars, tax incentives, grants, etc.) that may be associated with this program.⁶⁵

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (% of Incremental \$)
T8s	\$14	38%
T5s	\$25	38%
Occupancy Sensors	\$25	32%
LED Exit Signs	\$15	47%

Program start date with key schedule milestones

Allegheny Power will determine and measure key milestones achieved as referenced in program participation levels and savings tables for respective years.

- Program Marketing: Begin in early 4th quarter 2009 so that projects can be added to customers' 2010 budget.⁶⁶
- Implementation: Award vendor contracts fourth quarter 2009
- Program Start Date: January 2010
- Program End Date: May 31, 2013⁶⁷

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 1 EM&V category.⁶⁸

All rebate applications will be reviewed upon receipt to verify adherence to eligibility requirements and applicant eligibility. A statistically valid sample of all rebate

⁶⁵ Reference Additional Funding Table in Section 10.F.2.

⁶⁶ Discussions with customers are expected to begin prior to plan approval, but with caveat that program is contingent upon PUC approval of EEC and DR Plan.

⁶⁷ All projects accepted must be completed by May 31, 2013. This assumes Plan will end May 31, 2013.

⁶⁸ Reference Section 6.1.2. for details of Level 1 EM&V.

applications, based on 90% confidence level and a plus-or-minus 5% margin of error, will be selected for survey.

Information that will be collected for EM&V purposes will include the quantity of the measure installed, nameplate data from the existing model, the capacity (size) of the existing model, the nameplate data for the new model and the capacity (size) of the new model. A customer survey will also be completed.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

Allegheny Power will assign a program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. It is estimated that program management will require 0.25 FTE.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	12,507,579	669	29,595
2010	12,561,122	5,028	198,139
2011	12,457,308	7,659	342,588
2012	12,222,552	6,307	174,325

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$327,751	\$40,000	\$822	\$44,122	\$447,177	\$859,872
2010	\$161,241	\$98,880	\$6,177	\$164,539	\$2,993,455	\$3,424,292
2011	\$164,898	\$101,848	\$9,409	\$138,491	\$4,786,038	\$5,200,684
2012	\$168,638	\$61,192	\$7,748	\$134,299	\$2,608,064	\$2,979,942
TOTAL	\$822,528	\$301,920	\$24,156	\$481,452	\$10,834,735	\$12,464,790

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	8,166	8,166	1.8	1.8
2010	54,561	62,726	11.6	13.4
2011	94,431	157,157	21.3	34.8
2012	45,991	203,148	7.9	42.7

Cost-effectiveness – include TRC for each program year and cumulative

The Commercial Lighting Program’s TRC is 5.8

Refer to Table 7A for TRC for each program year

Other information deemed appropriate

Allegheny Power will access and educate customers on the availability of incentives from available funding sources including, but not limited, to Federal Tax Credits for Energy Efficiency under the “Emergency Economic Stabilization Act of 2008” and/or Stimulus Funds under the “American Recovery and Reinvestment Act of 2009” as appropriate, and as funding becomes available.⁶⁹

⁶⁹ Reference Additional Funding Table in Section 10.F.2.

c. CUSTOM TECHNOLOGY APPLICATIONS PROGRAM**Years during which program will be implemented**

January 2010 through May 2013

Objective(s)

The program encourages energy and demand reductions in small and large, commercial and industrial, and governmental/non-profit customers. The program will focus on improving the energy efficiency for specific process and applications, such as: lighting systems,⁷⁰ compressed air, chillers, refrigeration, variable speed drives,⁷¹ motors, energy management systems, fan and pump systems, renewable energy, LED, and combined heat-power systems.

Target market

The program will be targeted at small and large, commercial and industrial, and governmental/non-profit customers in the Allegheny Power's Pennsylvania service territory, with usage between 1 million up to 2.5 million kWh's per year.

Program description

The Custom Technology Applications Program is focused on reducing energy & demand in the small and large, commercial and industrial and governmental/non-profit customers with usage of 1 million - 2.5 million kWh/year. The program will focus on improving the energy efficiency for specific processes and applications through the onsite energy audit. Applications such as lighting systems, compressed air, chillers, refrigeration, variable speed drives, motors, energy management systems, fan/pumps systems, renewable energy and combined heat-power systems will be considered. The customer will directly contract with a third party provider to identify the energy efficiency and conservation opportunities. The customer will submit these opportunities/projects to Allegheny Power for review and approval. Allegheny Power will provide incentives to the customer up to 25% of the capitol investment, up to \$100,000.00 of the project, to obtain the energy and demand savings. Allegheny Power has also capped the annual program incentive budget at \$1 Million in an effort to control plan costs.

There are no specific limitations for eligible measures, other than that they must be electro-technology based and each measure must be individually cost effective. The following measures are the most commonly applied in industrial/commercial facilities:

- Lighting systems
- Compressed air
- Chillers
- Refrigeration
- Variable speed drives

⁷⁰ For applications beyond Commercial Lighting Program.

⁷¹ For applications beyond Commercial and Industrial Drives Program.

- Motors
- Energy management systems
- Fan/pumps systems
- Combined heat-power systems.

The comprehensive audit and report are required to include the Energy Star Portfolio Manager to assess building quartile ranking. The results must be submitted to Allegheny Power as verification that the EE&C project is justified. Building already in the top quartile will not qualify for the incentive. The eligible measures are all existing Allegheny Power Commercial programs for which the customer qualifies plus custom EE&C.

Projects will be awarded based on kWh savings.

Future enhancements include providing governmental audits and audit rebates.

Implementation strategy (including expected changes that may occur in different program years)

Allegheny Power will review the proposals and use a selective evaluation process to maximize the energy savings investment under the program. Allegheny Power will screen the projects based on, but not limited to, a TRC test to determine which projects and/or sub-measures are cost effective. Allegheny Power will then use a ranking methodology and financial analyses to determine which projects provide the best energy savings return on investment. To verify which projects are technically viable, Allegheny Power will rely on auditing partners to perform the energy audits and studies on the selected projects. The project review process will be iterative until the targeted kWh reductions are reached or the yearly capital incentive cap has been reached.

Program issues and risks and risk management strategy

A significant risk to the program success is customers' access to capital to finance energy efficiency and conservation programs. With the capital incentive, or up to 25% of the project cost, the Company believes that these projects will be very attractive due to the short payback period plus the reduction in operating costs because of the lower energy usage.

The program will be reviewed to determine if participation rates are not as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Increase and/or modify marketing strategy;
- Increase award structures if TRC test and EE&C Plan budget justify; and
- Eliminate the program.

An additional risk is that programs may not be approved in time to align with commercial and industrial customers' budget cycles for 2010. Possible mitigation strategies include:

- Request phased review and approvals for those programs at risk due to budget planning cycles; and

- Consider contacting eligible customers in advance of approvals to alert them of a possible program.

Anticipated costs to participating customers

An EE&C comprehensive commercial audit costs approximately \$.10-.50/SF of the building, and the additional anticipated cost would be 75% of capital cost of project.

Ramp up strategy

As shown by the incentive strategy above, the program will be more heavily weighted with incentives in the early years to attract end-users with larger projects that will capture larger energy savings opportunities. Given the nature of capital budgeting cycles, Allegheny Power expects that it will also take several budgeting cycles to get these projects into the customer’s capital construction budgets. All customers will be eligible to participate in the program in each year of the Plan.⁷²

Marketing strategy

This program will be offered directly to a customer by soliciting proposals that will provide energy and demand savings by improving specific electrical processes or applications.

Marketing activities will include leveraging and promoting federal and state funding opportunities (stimulus dollars, tax incentives, grants, etc.) that may be associated with this program.⁷³

Allegheny Power’s Account Management staff and direct mail information will be used to contact these commercial and industrial customers.

Allegheny Power will promote a whole building approach to energy conservation for government entities by offering increased incentives for select projects and measures under the Custom Technology Applications Program to those government entities that have undergone building energy audits. This program will provide information on the benefits of guaranteed energy savings contracts to government entities and will be promoted to all consumers in the sector. The program will be targeted to the highest energy users in this sector.

Eligible measures and incentive strategy include tables for each year of program, as appropriate showing financial incentives & rebate levels

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (%)
Custom Technology Application Program	25% up to \$100,000	

⁷² Customers may participate in multiple years if their proposals are accepted based on screening criteria.

⁷³ Reference Additional Funding Table in Section 10.F.2.

Program start date with key schedule milestones

Allegheny Power will determine and measure key milestones achieved as referenced in program participation levels and savings tables for respective years.

- Program Marketing: Begin discussions with key customers early 4th quarter 2009 so that projects can be added to customers' 2010 budget.⁷⁴
- Program Start Date: January 2010
- Project Proposals Awarded: December of each year
- Program End Date: May 31, 2013⁷⁵

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 2 EM&V category.⁷⁶

It is assumed that most changes and/or improvements to processes and applications resulting in energy efficiency improvements will require system level spot or short-term measurements. Because of the overall size of customers' usage in industrial/commercial facilities, utility billing records may not provide discrete results to verify the improvement in energy efficiency. Depending on type of process of application that is being modified, baseline measurements may also be required to determine existing loading, usage, or time of operation levels. If the customer uses the energy savings to fund the project, before and after type measurement will be required as a part of the EM&V process. These evaluations would be considered in the application of all measures.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

This program would be managed and administered by Allegheny Power. Based on the evaluation process, contract administration, and utility accounting needs, Allegheny Power estimates 0.5 FTE will be required to administer the program. Allegheny's existing Account Management staff will be also be utilized to support the program.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

⁷⁴ Discussions with customers are expected to begin prior to plan approval, but with caveat that program is contingent upon PUC approval of EEC and DR Plan.

⁷⁵ All projects accepted must be completed by May 31, 2013. This assumes Plan will end May 31, 2013.

⁷⁶ Reference Section 6.1.2. for details of Level 2 EM&V.

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	82,227	0	0
2010	83,214	15	15
2011	84,212	21	21
2012	85,223	21	21

Estimated program budget (total) by year – include table with budget per year

2010	\$173,629	\$6,180	\$133,154	\$31,885	\$728,120	\$1,072,968
2011	\$177,568	\$6,365	\$196,794	\$35,068	\$970,810	\$1,386,604
2012	\$181,595	\$3,825	\$198,689	\$33,010	\$982,460	\$1,399,579
TOTAL	\$864,123	\$18,870	\$537,613	\$99,962	\$2,681,390	\$4,201,958

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	0	0	0.0	0.0
2010	2,266	2,266	0.6	0.6
2011	3,276	5,542	0.9	1.5
2012	2,984	8,525	0.8	2.2

Cost-effectiveness – include TRC for each program year and cumulative

The Custom Technology Applications Program's TRC is 4.7

Refer to Table 7A for TRC for each program year

Other information deemed appropriate

Allegheny Power will access and educate customers on the availability of incentives from available funding sources including, but not limited, to Federal Tax Credits for Energy Efficiency under the "Emergency Economic Stabilization Act of 2008" and/or Stimulus

Funds under the “American Recovery and Reinvestment Act of 2009” as appropriate, and as funding becomes available.⁷⁷

⁷⁷ Reference Additional Funding Table in Section 10.F.2.

d. TIME OF USE (TOU) WITH CRITICAL PEAK PRICING RATE**Years during which program will be implemented**

January 1, 2011 through May 2013

Objective(s)

This rate offering encourages residential, small commercial and industrial and governmental/non-profit customers to lower demand and energy consumption during peak load hours.

Target market

This rate offering targets Allegheny Power's small commercial and industrial and governmental/non-profit customers under 500 kW in Allegheny Power's Pennsylvania service area receiving default service, in conjunction with the installation of smart metering and the related infrastructure.

Program description

TOU rates reflect the cost of serving customers during different time periods, but do not change as frequently as hourly. TOU encourages residential and commercial, industrial, government, school, and non-profit customers under 500 kW to lower their demand and energy consumption during on-peak periods by charging a higher price that reflects the higher cost of serving customers, and charging lower prices during off-peak periods that reflects the lower cost of serving customers. TOU also includes critical peak pricing that is designed to address the short-term need to reduce demand at the time of the system peak by charging prices significantly higher than on-peak periods. Critical peak pricing periods will vary in frequency and duration using predefined or notified peak hours, but will balance the need to keep the period as short as possible to effectively allow customers to reduce demand or shift usage to lower cost periods. TOU is voluntary and is only available to customers that are receiving utility-provided default service. TOU relies on a smart meter to measure the customer's demand and energy usage during the various TOU periods and the addition of an in-home/in-facility display improves customer notification/communication regarding peak periods.⁷⁸

Implementation Strategy

This rate offering requires the installation of a smart meter to collect the customer's hourly energy consumption. The addition of an in-home/in-facility display improves customer communications regarding their energy consumption and billing. This rate offering leverages the installation of smart metering and related infrastructure to provide the customer with timely information regarding their usage.

⁷⁸ For additional detail and graphical depiction of SMIP, refer to Section 10.F.3.

Program issues and risks and risk management strategy

This rate offering is most effective when coupled with Smart Metering Infrastructure that provides customers with real-time price signals and information about current and past energy consumption. The rate offering is at risk if the Company does not receive timely approval of the SMIP plan to be filed on or before August 14, 2009.

Achieving estimated participation rates is a program risk. The rate offering will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the Company will modify the marketing strategy.

Anticipated costs to participating customers

There are no customer costs to participate.

Ramp up strategy

The implementation timeline for this program will align with the smart metering infrastructure plan. See **Program start date with key schedule milestones** below for rollout.

Marketing strategy

Marketing activities will target eligible customers to inform them of the rate offering, its components, and the associated benefits primarily through bill inserts, direct mail, print and radio advertising, and in-bound call center contact.

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

The incentive for this rate offering will be included within the rate.

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (%)
Time of Use with Critical Peak Pricing	N/A	N/A

Program start date with key schedule milestones

2009

August – December Program development

2010

January – December Smart meter installations as per SMIP to be filed on or before August 14, 2009

Smart Meter System deployment

Rate tariff development and filing

Marketing plan development

2011

February

Smart Meter System Operable

Smart meter installations as per SMIP to be filed on or before August 14, 2009

October – December

Program review and adjustments

2011

Smart meter installations as per SMIP to be filed on or before August 14, 2009

2012

Smart meter installations as per SMIP to be filed on or before August 14, 2009

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 2 EM&V category.⁷⁹

It is expected that the smart metering infrastructure will provide the method for EM&V of this rate.

Allegheny Power will file with the Commission for approval of program modifications if it appears that changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

Allegheny Power will assign a program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. It is estimated that program management of all demand response rate offerings will require 1.0 FTE.

⁷⁹ Reference Section 6.1.2. for details of Level 2 EM&V.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	69,893	0	0
2010	70,732	220	220
2011	70,732	1,980	1,980

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$0	\$0	\$0	\$0	\$0	\$0
2010	\$130,740	\$0	\$0	\$11,688	\$0	\$142,427
2011	\$133,705	\$0	\$0	\$12,750	\$0	\$146,455
2012	\$136,738	\$0	\$0	\$12,277	\$0	\$149,015
TOTAL	\$401,183	\$0	\$0	\$36,715	\$0	\$437,898

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	0	0	0.0	0.0
2010	206	206	0.1	0.1
2011	1,858	1,858	1.0	1.0
2012	5,574	5,574	2.9	2.9

Cost-effectiveness – include TRC for each program year and cumulative

The cumulative TRC for this program is calculated to be 2.5

Refer to Table 7A for TRC for each program year.

Other information deemed appropriate

TOU is offered as an optional service and does not replace the default service program approved by Commission order entered July 25, 2008 at Docket No. P-00072342.

e. HOURLY PRICING OPTION (HPO) RATE**Years during which program will be implemented**

January 1, 2011 through May 2013

Objective(s)

This rate offering encourages residential, small commercial and industrial, and governmental/non-profit customers to lower demand and energy consumption during peak load hours.

Target market

This rate offering targets Allegheny Power's small commercial and industrial, and governmental/non-profit customers under 500 kW in Allegheny Power's Pennsylvania service area receiving default service, in conjunction with the installation of smart metering and related infrastructure.

Program description

The HPO reflects the different cost of energy during each hour and encourages residential and commercial, industrial, government, school, and non-profit customers under 500 kW to lower their demand and energy consumption during high priced periods and/or shift usage to low priced periods. Billing for the HPO is calculated from the PJM hourly market pricing for the AP Zone and includes the price of energy, capacity, ancillary services, alternative energy compliance, and any other Federal Energy Regulatory Commission and/or PJM charges directly related to the HPO, as adjusted for taxes. Participants can receive a daily updated approximation of their monthly bill, to date (since the prior bill), as well as an approximation of their electricity cost for the prior day. The HPO is voluntary and is only available to customers that are receiving utility-provided default service. The HPO relies on the installation of a smart meter⁸⁰ to collect the customer's hourly energy consumption and the addition of an in-home/in-facility display improves customer communications regarding their energy consumption and billing.

Implementation Strategy

This rate offering relies upon the installation of a smart meter to collect the customer's hourly energy consumption. The addition of an in-home/in-facility display improves customer communications regarding their energy consumption and billing. This rate offering leverages the installation of smart metering and related infrastructure to provide customers with timely information regarding their energy usage.

⁸⁰ For additional detail and graphical depiction of SMIP, refer to Section 10.F.3.

Program issues and risks and risk management strategy

This rate offering is most effective when coupled with Smart Metering Infrastructure that provides customers with real-time price signals and information about current and past energy consumption. The rate offering is at risk if the Company does not receive timely approval of the SMIP plan to be filed on or before August 14, 2009.

Achieving estimated participation rates is a rate offering risk. The program will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the Company will modify the marketing strategy.

Anticipated costs to participating customers

There are no customer costs to participate.

Ramp up strategy

The implementation timeline for this rate offering will align with the smart metering infrastructure plan. See **Program start date with key schedule milestones** below for rollout.

Marketing strategy

Marketing activities will target eligible customers to inform them of the rate offering, its components, and the associated benefits primarily through bill inserts, direct mail, print and radio advertising, and in-bound call center contact.

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (%)
Hourly Pricing Option	N/A	N/A

Program start date with key schedule milestones

2009

August – December Program development

2010

January – December Smart meter installations as per SMIP to be filed on or before August 14, 2009

Smart Meter System deployment

Rate tariff development and filing

Marketing plan development

2011

February

Smart Meter System Operable

Smart meter installations as per SMIP to be filed on or before August 14, 2009

Marketing plan deployed

March – April

Deploy thermostats

June – September

Thermostats and DLC Operable

October – December

Program review and adjustments

2011

Smart meter installations as per SMIP to be filed on or before August 14, 2009

2012

Smart meter installations as per SMIP to be filed on or before August 14, 2009

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

It is expected that the smart metering infrastructure will provide the method for EM&V of this rate.

Allegheny Power will file with the Commission for approval of program modifications if it appears that changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

Allegheny Power will assign a program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. It is estimated that program management of all demand response rate offerings will require 1.0 FTE.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	12,334	0	0
2010	12,482	39	39
2011	12,482	349	349
2012	12,482	1,048	1,048

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$0	\$0	\$0	\$0	\$0	\$0
2010	\$23,072	\$0	\$0	\$2,063	\$0	\$25,134
2011	\$23,595	\$0	\$0	\$2,250	\$0	\$25,845
2012	\$24,130	\$0	\$0	\$2,167	\$0	\$26,297
TOTAL	\$70,797	\$0	\$0	\$6,479	\$0	\$77,276

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	0	0	0.0	0.0
2010	36	36	0.0	0.0
2011	328	328	0.2	0.2
2012	984	984	0.5	0.5

Cost-effectiveness – include TRC for each program year and cumulative

The cumulative TRC for this program is calculated to be 2.5

Refer to Table 7A for TRC for each program year.

Other information deemed appropriate

The HPO is offered as an optional service and does not replace the default service program approved by Commission order entered July 25, 2008 at Docket No. P-00072342.

f. **PROGRAMMABLE CONTROLLABLE THERMOSTAT (PCT) PROGRAM**

This program is the same as that listed under Residential Sector section.

3.4. Commercial/Industrial Large Sector (as defined by EDC Tariff) Programs

a. COMMERCIAL AND INDUSTRIAL DRIVES PROGRAM

Years during which program will be implemented

January 2010 through May 2013

Objective(s)

The program encourages small and large, commercial and industrial, and governmental/non-profit customers to improve motor efficiency by applying variable frequency drives on specific loads that have variable torque requirements, such as fans and pumps.

Target market

The program will be targeted to large commercial and industrial customers that utilize fans and pumps to control fluid or air flow in specific processes or pumping schemes. Since greater energy savings may be realized from larger motor applications, this program will focus on motors between 25 – 200 hp. Applications of variable frequency drives for motors exceeding 200 hp are eligible for incentive through the Custom Applications Program. Based on market studies of electric motors, Allegheny Power estimates that there are approximately 18,800 motors in Allegheny Power's Pennsylvania service territory rated between 25 hp and 200 hp. Of that number, it is estimated 1% to 1.5% are applied on pumps/fans with a conventional motor drive that could be economically upgraded to a variable frequency drive.

Program description

The application of a variable frequency drive will enhance the performance of the driven equipment using speed control, instead of the existing mechanical means (vane, throttling valves, etc.). These types of variable torque loads offer the best energy savings return with the application of a variable frequency drive. Other benefits realized from the use of variable frequency drives include less maintenance on mechanical parts, and ability to provide much finer speed control of the motor.

This program will be offered to industrial, manufacturing, water treatment, and commercial customers that have motor-driven fan and pump applications that presently utilize mechanical vanes or throttling valves to control fluid flow. According to the EPRI ASD Master User's Guide, the following applications can provide fair to good savings results.

- Adjustable Speed Drive (ASD) Application – Centrifugal Fans, Pumps, Compressors, Blowers
- Load Duty Cycle – Full range of operation from 20 – 100% of rated load
- Motor Size – Above 30 hp
- Annual Operating Hours – Over 2500 hours

The rebate strategy will be to provide 50% of the drive's cost. The rebate will be limited to the retrofit of an existing motor that drives a variable torque load the "fits" into the application criteria described above.

New installations of drives for motors and maintenance or replacement of existing failed drive components are not included in the program.

Implementation strategy (including expected changes that may occur in different program years)

The program will use an "upstream" delivery method by enlisting industrial electrical distributors to help with education, drive application, and incentive payment activities. All electrical distributors that supply variable frequency drives in Allegheny Power's Pennsylvania service territory, plus other areas, will be trained on the details of AP's program. When an Allegheny Power customer contacts an electrical distributor concerning purchasing a drive, the distributor would inform him of Allegheny Power's program, assist with the application, and verify that the application meets Allegheny Power's requirements for an incentive payment. If a customer uses an electrical distributor that is outside of Allegheny Power's service area, then the distributor can be informed the rebate incentive and become part of Allegheny Power's program by simply contacting the Program Administrator.

To be eligible for this program, the application of the drive must meet the requirements as stated in the program description. Installations of variable frequency drives in new construction or replacement of a failed variable speed drive for an existing application are not eligible.

Program issues and risks and risk management strategy

The current economic downturn may also be a risk to program success. To overcome this factor, Allegheny Power will bring to bear the resources available through Allegheny Power and state agencies, possible tax credits as well as emphasize potential energy and maintenance savings. An additional risk is that programs may not be approved in time to align with commercial and industrial customers' budget cycles for 2010. Possible mitigation strategies include:

- Request phased review and approvals for those programs at risk due to budget planning cycles; and
- Consider contacting eligible customers in advance of approvals to alert them of a possible program.

Achieving estimated participation rates is a program risk. The program will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy;
- Modify incentives; and
- Modify or eliminate measures being offered.

Anticipated costs to participating customers

Allegheny Power will be providing a capital incentive of up to 50% of the variable speed drive’s cost. The customer will be responsible for the remaining capital, plus the installation costs of the equipment.

Ramp up strategy

Allegheny Power will begin communicating program in the fourth quarter of 2009 so Commercial and Industrial customers can plan and budget for 2010 projects in 2009. This program is expected to be ‘full launched’ that is, offered to the entire target population on the launch date. Allegheny Power will execute the launch in this manner since it will have had some experience in program management in another state prior to the Pennsylvania launch. It is assumed that the ramp up period for this program will occur in the 2009 and 2010 plan years. In the 2009 plan year, the participation rates are projected to be 33% of future year levels. In the 2010 plan year, the participation rates are projected to be 50% of future year levels.

Marketing strategy

Marketing activities will target eligible customers to inform them of the program, its components, and the associated benefits through bill inserts, direct mail, Allegheny Power website, trade shows, the business customer newsletter, and key account managers. Electrical distributors will also be trained on the program and able to market it to customers.

Marketing activities will include leveraging and promoting federal and state funding opportunities (stimulus dollars, tax incentives, grants, etc.) that may be associated with this program.⁸¹

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (%)
Commercial and Industrial Drives Program	50% of VFD Cost	

Program start date with key schedule milestones

The proposed implementation and roll out strategy is:

2009

August to September	Develop process, online forms, web pages, contact potential wholesale electrical distributors for participation
---------------------	---

⁸¹ Reference Additional Funding Table in Section 10.F.2.

August to November	Establish and train wholesale distributors on program.
November to December	Market program to customers via direct mail, and assigned accounts

2010

January	Program kick off
---------	------------------

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 2 EM&V category.⁸²

It is assumed that most changes and/or improvements to processes and applications resulting in energy efficiency improvements will require system level spot or short-term measurements. Because of the overall size of the customer's usage in industrial/commercial facilities, utility billing records may not provide discrete results to verify the improvement in energy efficiency. Depending on type of process of application that is being modified, baseline measurements may also be required to determine existing loading, usage, or time of operation levels. If the customer uses the energy savings to fund the project, before and after type measurement will be required as a part of a contract with and Energy Service Company (ESCO). These evaluations would be considered in the application of all measures.

Among other things, data relative to the number of participants, the saturation within the Allegheny Power Pennsylvania service territory and the energy savings will be maintained in the database.

Analysis of data collected will occur annually to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that changes are warranted in this program. The program will be evaluated to determine overall cost-effectiveness, participation rates, and levels of achieved energy and demand savings. Allegheny Power may consider program modifications or improvements, and will notify the Commission if it appears that changes were warranted in this program. Reports will be prepared and maintained by the third-party administrator to verify adherence to customer eligibility requirements.

Administrative requirements – include utility staffing levels

This program will be managed and administered by Allegheny Power. The electrical distributor will provide equipment application and fulfillment, and the requested reimbursements will be handled by a rebate fulfillment center. Based on the contract administration, and utility accounting needs, Allegheny Power estimates 0.5 FTE will be required to administer the program.

⁸² Reference Section 6.1.2. for details of Level 2 EM&V.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	18,800	24	24
2010	18,800	141	141
2011	18,800	282	282
2012	18,800	282	282

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$331,059	\$5,000	\$29	\$7,855	\$73,438	\$417,381
2010	\$172,520	\$12,360	\$173	\$49,378	\$440,625	\$675,057
2011	\$176,433	\$12,731	\$346	\$45,410	\$812,733	\$1,047,654
2012	\$180,435	\$7,649	\$346	\$40,931	\$812,733	\$1,042,094
TOTAL	\$860,448	\$37,740	\$895	\$143,574	\$2,139,528	\$3,182,185

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	399	399	0.1	0.1
2010	2,393	2,792	0.5	0.6
2011	4,786	7,578	0.9	1.5
2012	4,786	12,364	0.9	2.4

Cost-effectiveness – include TRC for each program year and cumulative

The cumulative TRC for this program is calculated to be 1.2

Refer to Table 7A for TRC for each program year.

Other information deemed appropriate

b. CUSTOM APPLICATION PROGRAM**Years during which program will be implemented**

January 2010 through May 2013

Objective(s)

The program encourages energy and demand reductions with large commercial and industrial customers. The program will focus on improving the energy efficiency for specific process and applications, such as: lighting systems,⁸³ compressed air, chillers, refrigeration, variable speed drives,⁸⁴ motors, energy management systems, fan and pump systems, and combined heat-power systems.

Target market

The program will be targeted at approximately 550 large commercial and industrial customers in the Allegheny Power's Pennsylvania service territory, with usage of at least 2.5 million kWhs per year.

Program description

The program provides up to \$10,000 for a targeted energy audit.⁸⁵ To further entice the customer to complete the physical installation of the energy saving measure(s) as recommended by the targeted energy audit, Allegheny Power will provide a capital contribution incentive of up to 50% of the customer's project cost, with a per project cap of \$500,000. The maximum award expenditure for Allegheny Power under the program will be as follows:

- 2010: \$1,500,000
- 2011: \$2,000,000
- 2012: \$2,000,000

Projects will be awarded based on kWh savings.

There are no specific limitations for eligible measures, other than that they must be electro-technology based. The following measures are the most commonly applied in industrial/commercial facilities:

- Lighting systems
- Compressed air
- Chillers
- Refrigeration
- Variable speed drives
- Motors
- Energy management systems

⁸³ For applications beyond Commercial Lighting Program.

⁸⁴ For applications beyond Commercial and Industrial Drives Program.

⁸⁵ Targeted energy audits focus on specific commercial and industrial processes and related equipment.

- Fan/pumps systems
- Combined heat-power systems.

Individual measures eligible for the custom program were not evaluated to estimate program savings. Rather, the program was evaluated at the customer level to estimate savings and it is assumed that each participating customer has the potential for a 10% reduction in energy usage.

Implementation strategy (including expected changes that may occur in different program years)

Allegheny Power will contract with an energy services company experienced in performing comprehensive large commercial and industrial audits to provide audits and energy usage studies.

Allegheny Power will review the proposals and use a selective evaluation process to maximize the energy savings investment under the program. Allegheny Power will screen the projects based on, but not limited to, a TRC test to determine which projects and/or sub-measures are cost effective. Allegheny Power will then use a ranking methodology and financial analyses to determine which projects provide the best energy savings return on investment. To verify which projects are technically viable, Allegheny Power will rely on auditing partners to perform the energy audits and studies on the selected projects. The project review process will be iterative until the targeted MWh reductions are reached or the yearly capital incentive cap has been reached.

Program issues and risks and risk management strategy

A significant risk to the program success is customers' access to capital to finance energy efficiency and conservation programs. With the capital incentive, or up to 50% of the project cost, we believe that these projects will be very attractive due to the short payback period plus the reduction in operating costs because of the lower energy usage.

The program will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Increase and/or modify marketing strategy;
- Increase award structures if TRC test and EE&C Plan budget justify; and
- Eliminate the program.

An additional risk is that programs may not be approved in time to align with commercial and industrial customers' budget cycles for 2010. Possible mitigation strategies include:

- Request phased review and approvals for those programs at risk due to budget planning cycles.
- Consider contacting eligible customers in advance of approvals to alert them of a possible program.

Anticipated costs to participating customers

Allegheny Power will provide a large capital incentive, up to 50% of the project cost with a per project cap of \$500,000, so that customer will implement an energy savings project. The customer will have to provide the remaining capital to install the project.

Ramp up strategy

As shown by the incentive strategy above, the program will be more heavily weighted with incentives in the early years to attract end-users with larger projects that will capture larger energy savings opportunities. Given the nature of capital budgeting cycles, Allegheny Power expects that it will also take several budgeting cycles to get these projects into the customer’s capital construction budgets. All customers will be eligible to participate in the program in each year of the Plan.⁸⁶

Marketing strategy

This program will be offered directly to a customer by soliciting proposals that will provide energy and demand savings by improving specific electrical processes or applications.

Marketing activities will include leveraging and promoting federal and state funding opportunities (stimulus dollars, tax incentives, grants, etc.) that may be associated with this program.⁸⁷

Allegheny Power will begin marketing the program late in 2009 by contacting the top industrial customers by usage.⁸⁸ Allegheny Power’s Account Management staff and direct mail information will be used to contact these commercial and industrial customers.

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (%)
Commercial & Industrial Custom Applications Program	50% up to \$500,000	

Program start date with key schedule milestones

Allegheny Power will determine and measure key milestones achieved as referenced in program participation levels and savings tables for respective years.

⁸⁶ Customers may participate in multiple years if their proposals are accepted based on screening criteria.

⁸⁷ Reference Additional Funding Table in Section 10.F.2.

⁸⁸ Top 180 electric usage customers are expected to provide the greatest opportunity for savings and therefore are targeted first.

- Program Marketing: Begin discussions with key customers early 4th quarter 2009 so that projects can be added to customers' 2010 budget.⁸⁹
- Program Start Date: January 1, 2010
- Project Proposals Awarded: December of each year
- Program End Date: May 31, 2013⁹⁰

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 2 EM&V category.⁹¹

It is assumed that most changes and/or improvements to processes and applications resulting in energy efficiency improvements will require system level spot or short-term measurements. Because of the overall size of the customer's usage in industrial/commercial facilities, utility billing records may not provide discrete results to verify the improvement in energy efficiency. Depending on type of process of application that is being modified, baseline measurements may also be required to determine existing loading, usage, or time of operation levels. If the customer uses the energy savings to fund the project, before and after type measurement will be required as a part of a contract with an Energy Service Company (ESCO). These evaluations would be considered in the application of all measures.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

This program would be managed and administered by Allegheny Power. Based on the evaluation process, contract administration, and utility accounting needs, Allegheny Power estimates 0.5 FTE will be required to administer the program. Allegheny's Account Management staff will be also be utilized to support the program.

⁸⁹ Discussions with customers are expected to begin prior to plan approval, but with caveat that program is contingent upon PUC approval of EEC and DR Plan.

⁹⁰ All projects accepted must be completed by May 31, 2013. This assumes Plan will end May 31, 2013.

⁹¹ Reference Section 6.1.2. for details of Level 2 EM&V.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	550	0	0
2010	550	5	5
2011	550	8	8
2012	550	8	8

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$326,547	\$5,000	\$8,976	\$0	\$0	\$340,523
2010	\$157,139	\$12,360	\$98,936	\$25,718	\$1,250,000	\$1,544,153
2011	\$160,703	\$12,731	\$152,912	\$29,070	\$1,844,500	\$2,199,917
2012	\$164,348	\$7,649	\$152,912	\$26,657	\$1,844,500	\$2,196,067
TOTAL	\$808,738	\$37,740	\$413,736	\$81,446	\$4,939,000	\$6,280,660

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	0	0	0.0	0.0
2010	18,522	18,522	3.6	3.6
2011	29,635	48,157	5.8	9.5
2012	11,958	60,115	2.3	11.8

Cost-effectiveness – include TRC for each program year and cumulative

The cumulative TRC for this program is calculated TBD.

Refer to Table 7A for TRC for each program year.

Other information deemed appropriate

c. CUSTOMER LOAD RESPONSE PROGRAM

Years during which program will be implemented

January 2011 through May, 2013

Objective(s)

The program is focused on reducing demand in the small and large, commercial and industrial, and governmental/non-profit customer sectors. Under this program, Allegheny Power will contract with customers to implement load curtailments during peak load periods. By controlling the demand for energy during the peak periods, load resources can become an integral part of managing the overall supply of energy to the system. A customer who participates in capacity and/or energy markets will also realize savings in the form of reduced capacity and energy costs.

Target market

The program will initially target small and large, commercial and industrial, and governmental/non-profit customers in the Allegheny Power Pennsylvania service territory, with demand of at least 300 kW or greater. This program will be expanded to other small commercial and industrial, and governmental/non-profit customers in conjunction with implementation of Smart Metering infrastructure.

Program description

Allegheny Power will assist customers by providing load management services by actively educating and providing assistance with the transition to market prices, load shaping, participation in PJM energy and capacity markets, and advanced metering technology. Contracting with customers for load reduction as well as assisting customers with entry into the real time energy markets will help control the demand during peak hours. Since Allegheny Power is also functioning as a “curtailment service provider” in the PJM Load Management Programs, customers will receive additional benefits by having Allegheny Power bid their load resources into the PJM markets. Allegheny Power plans to leverage available PJM programs to provide benefits to participants and limiting program expenses recovered through the EE&C surcharge.

Implementation Strategy

Allegheny Power will provide all technical assistance, project management and marketing activities to support the program. Allegheny Power will also be responsible for all marketing materials, contract preparation, load curtailment, and reconciliation services. Allegheny is already registered as a curtailment service provider under the PJM Load Management Programs. As part of this program, Allegheny Power (directly or through contracted services) will develop the necessary online user tools for customers: customer signup, download data for load profiling or historical energy usage, model load modification schemes and review load curtailment events.

Allegheny Power has employed a Conservation Service Provider (CSP) to perform a market assessment of the demand response potential in Allegheny Power's commercial, industrial and government customer base. This study will focus on identifying a controllable load reduction and assigning confidence levels. As part of this study, the vendor will review the impact of the discontinuation of the PJM Interruptible Load Response program in 2012.

Program issues and risks and risk management strategy

Customer participation rates and effectively dispatched demand response events will drive the results of the program. The use of real time or advanced metering will also influence the results of the program. Allegheny Power will leverage this technology in order to improve the performance of customers during the dispatched events.

The recent PJM Base Residual Auction for 2012/2013 also introduces a hurdle in that the value of capacity in the Allegheny Power zone cleared at approximately 10% of the net cost of new entry. In the past, participating customers have realized tremendous value in PJM's Interruptible Load Response (ILR) programs without having to frequently reduce load. Customers making the transition to Allegheny's Demand Response (DR) program for delivery year 2012/2013 will be required to control load over numerous events, and up to 100 hours per year.

Anticipated costs to participating customers

Since customers will be solicited for load resources, the customer will be compensated for capacity and/or energy during demand response events. We do not expect any other costs for the customer in this program.

Ramp up strategy

Account Managers and Business Account Specialists will roll-out the program using direct contacts with eligible customers in early 2010.

Marketing strategy

The customers will be targeted in one of two ways:

Assigned accounts: Account Managers proactively handle approximately 130 of the top energy users that would be eligible for the program. They will personally contact their assigned customers to educate them about the program. We will follow up with a direct mail piece to encourage participation and provide more program details.

Non-assigned accounts: These accounts are managed by Business Account Specialists in Allegheny's call center. Direct mail will be sent to these customers with program details and contact information from an assigned Business Account Specialist from the call center.

As a follow up to both audiences, an email will be sent to reinforce the program details. A link to Allegheny’s web site will allow customers to access more program details and information.

Sales/marketing/educational materials will be developed for the Account Managers and Business Account Specialists to provide to their customers.

Eligible measures and incentive strategy

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (%)
Customer Load Response Program	Variable by customer contract	

Program start date with key schedule milestones

- Complete Market Assessment Study: Fourth quarter 2011
- Program Marketing: Fourth quarter 2011
- Complete Customer Recruitment: January 2012
- Program Start Date: June 1, 2012
- Program End Date: May 31, 2013⁹²

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 2 EM&V category.⁹³

It is expected that the smart metering infrastructure will provide the method for EM&V of this rate.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

This program would be managed and administered by Allegheny Power. Based on the customer education and assistance requirements, contract administration, and utility accounting needs, Allegheny Power estimates 3.0 FTEs will be required to administer the program. Internal staff will be also be utilized to support the program.

⁹² All projects accepted must be completed by May 31, 2013. This assumes Plan will end May 31, 2013.

⁹³ Reference Section 6.1.2. for details of Level 2 EM&V.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	0	0	0
2010	3,000	180	180
2011	3,000	240	240
2012	3,000	360	360

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year						
PROGRAM YEAR	UTILITY ADMINISTRATIVE COSTS	MARKETING COSTS	OUTSIDE SERVICES	EVALUATION COSTS	INCENTIVES	TOTAL
2009	\$283,434	\$5,000	\$0	\$0	\$0	\$288,434
2010	\$457,539	\$12,360	\$0	\$6,667	\$0	\$476,566
2011	\$461,103	\$12,731	\$0	\$10,667	\$0	\$484,501
2012	\$533,621	\$7,649	\$0	\$10,000	\$1,069,940	\$1,621,210
TOTAL	\$1,735,698	\$37,740	\$0	\$27,333	\$1,069,940	\$2,870,711

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	0	0	0.0	0.0
2010	2,125	2,125	42.5	42.5
2011	2,975	2,975	59.5	59.5
2012	2,975	2,975	59.5	59.5

Cost-effectiveness – include TRC for each program year and cumulative

The cumulative TRC for this program is calculated to be 2.3
Refer to Table 7A for TRC for each program year.

Other information deemed appropriate

Allegheny Power has employed a Conservation Service Provider (CSP) to perform a market assessment of the demand response potential in Allegheny Power's commercial, industrial and government customer base. The results of this study may impact the participation, budget and savings targets projected for this program.

d. CUSTOMER RESOURCES DEMAND RESPONSE PROGRAM**Years during which program will be implemented**

June 2010 through May 2013

Objective(s)

The program is focused on reducing demand in the small and large, commercial and industrial, and governmental/non-profit customer sectors, by deploying customer load resources from load curtailment strategies and by contracting for distributed customer generation resources. Allegheny Power will contract with PJM Curtailment Service Providers or Customer Curtailment Service Providers for load and/or distributed generation resources and with a distributed generation manager to “harvest” installed standby generation capacity. These entities will develop a portfolio of callable demand response resources that will be dispatched for demand response activities during Allegheny Power’s 100 hours of highest demand. Contracted load and distributed generation resources provide a multitude of utility and customer benefits, including: reduces peak demand, improved grid reliability and providing standby power service. In addition, Allegheny will explore the use of alternative fuels such as bio-diesel, or waste methane/landfill gas for the distributed generation resources and will ensure all permitting requirements are adhered to for their utilization under this program.

Target market

Contracts for load resources will be initially targeted at existing small and large, commercial and industrial, and governmental/non-profit customers with a demand of at least 300 kW or greater. The program will be expanded to customers less than 300 kW in conjunction with the deployment of smart metering infrastructure that will provide the required metering and communications network for these customers to participate. Contracts for distributed generation resources will be targeted at customers with a demand of at least 300 kW or greater, or own generators rated larger than 100 kW or for new electric service customers where standby capacity greater than 100 kW is planned.

Program description

Under the program, customers will be given incentives for responding to event notices by Allegheny Power to curtail electric consumption and/or utilize standby generation during targeted hours of Allegheny Power’s 100 hours of highest demand. A customer who participates in this program will realize revenues from Allegheny Power in addition to participating with their Curtailment Service Providers in PJM’s capacity and energy markets.

For customers who participate by utilizing distributed generation resources, Allegheny will provide incentives by either 1) contributing up to 50% of the operation and maintenance cost of the qualified participating generation resource or 2) providing traditional capacity/energy payment for the resulting load reduction. Allegheny will

require the Curtailment Service Provider or distributed generation manager to submit proposals for utilizing customer generation in order to select those to be awarded prior to contracting for the distributed generation resource under [an on-going operation and maintenance contract arrangement](#).

Many electric customers own and maintain backup standby generators in order to meet the requirements of Section 701 of the National Electrical Code for “Legally Required Standby Systems” or Section 702 for “Optional Standby System.” In Allegheny Power’s Pennsylvania service territory, there is approximately 70 MW of existing standby generation, some of which may be able to be utilized to contribute to meeting the demand reduction target during the 100 hours of highest demand. These sources are primarily in hospitals, banking, data center and high tech manufacturing facilities, and the generators range in size up to 2000 kW. This “non-utility” distributed generation fleet does not include co-generation facilities since these units are normally operated in parallel with the grid and are part of a combined heat/power scheme where the generation could not be readily changed to meet a peak demand situation.

The wholesale electricity market prices vary each hour as the supply and demand of energy changes. By controlling the demand for electricity during the highest demand periods, customer load and distributed generation resources can become an integral part of managing the overall delivery of energy on the system. A customer who participates in load management activities by curtailing load or utilizing standby generation can realize savings in the form of reduced capacity and energy costs. Allegheny Power will require the contracted Curtailment Service Providers to leverage available PJM programs to provide benefits to customers and limit the program expenses recovered through the EE&C surcharge.

Program Issues and Risks and Risk Management Strategy

Allegheny Power anticipates a mixed response from various entities regarding the use of standby generation as a resource for demand response. However, Allegheny Power has received positive comments for exploring the use of alternative fuels. Therefore, alternative fuel sources such as bio-diesel, and methane gas, will be explored as a potential fuel source for distributed generation resources that are contracted under an on-going operation and maintenance arrangement. We also believe that distributed generation is a suitable resource for demand response because of the following:

- Limited hours of operation
- Alternative fuel sources will reduce emissions
- Emission control can be added to generators (selective catalytic reduction) for NO_x
- Local generation can save on transmission/distribution losses

Implementation strategy

Allegheny Power believes that it will be difficult to obtain customer interest in a callable demand response program that requires customers to participate for up to 100 hours. To mitigate customer impact and fatigue, Allegheny Power will structure the dispatch parameters with the Curtailment Service Provider's so that customers will have options including 1) participation in a maximum number of hours per event, 2) participation in a limited number of events per year, and/or 3) participation on consecutive days.

Each program year, from February 1st to March 31st, Allegheny Power will solicit nominations from Curtailment Service Providers who are in good standing with PJM for the customer load or distributed generation resources to fulfill Allegheny Power's program requirements from the small and large, commercial and industrial, and governmental/non-profit customer sectors. Existing Curtailment Service Providers that have Allegheny Power customer load resources under contract in our Pennsylvania service territory can contract those resources to respond to Allegheny Power's callable demand response events that will contribute to meeting the demand reduction goals for Allegheny Power.

Allegheny Power has customer data for existing customer owned standby generators that may be "harvested" for this program. The program can be marketed to these existing installations, and will be the focus of the initial efforts for contracting distributed generation resources under an on-going operation and maintenance arrangement. The Curtailment Service Provider or distributed generation manager will be responsible for providing all services to operate, maintain, and fuel the generators that are enrolled in this program. Allegheny Power will assist with initial and follow-up sales calls to select customers, in conjunction with the Curtailment Service Provider or distributed generation manager.

Anticipated costs to participating customers

Until Allegheny Power's smart metering infrastructure is deployed and functional at the customer's facility, Allegheny will target customers with a demand greater than 300 kW who have interval metering to participate in this demand response program. In cases where Curtailment Service Provider's request the installation of a KYZ pulse contact for use with the Curtailment Service Provider's telemetry system, the customer cost for the installation of this equipment is estimated to be \$800 to \$1000 per location.

For customers participating with distributed generation resources under an on-going operation and maintenance arrangement, the Curtailment Service Provider or the distributed generation manager will contract with the customer to maintain/operate their existing generator. Allegheny Power will contribute up to 50% of the operation and maintenance costs for the opportunity to utilize the qualified distributed generation resource for demand response. Customer costs will vary depending on the installation.

Ramp up strategy

In order for customers to become accustomed to performing in callable demand response events and for Allegheny Power to assess program performance, Allegheny Power will contract for approximately 20 MW for the 2010/2011 and for the 2011/2012 delivery years. This will allow for customer recruitment activities and to assess performance of Allegheny Power's EE&C and DR Plan in order to establish the final program parameters and targets for the 2012/2013 delivery year. At the end of the 2010/2011 program delivery year, Allegheny Power will issue a forecast for the contracted load that will be required for the 2012/2013 delivery year.

Because of the lead time to establish contracts with customers to nominate and qualify distributed generation resources into the program, Allegheny will start recruiting customers during the 2010 Plan year. The Curtailment Service Providers or distributed generation manager will contract with the customer to maintain/operate the generator. Allegheny Power will contribute up to 50% of the operation and maintenance costs for the opportunity to utilize the qualified distributed generation resource for demand response.

Marketing strategy

For load resources that will be contracted from Curtailment Service Providers, we anticipate some marketing efforts from the Curtailment Service Provider's because they have contracts with customers who are currently participating in the PJM load response programs.

If additional marketing is required to attract new load and/or customer generation resources into the Customer Resources Demand Response Program, Allegheny will provide unbiased information to any potential program participant on all registered PJM Curtailment Service Providers who can enroll the customer's resources into the PJM markets and Allegheny's program. The information will state the customer can freely choose any PJM Curtailment Service Provider.

For distributed generation resources, the program will be jointly marketed between the Curtailment Service Providers or distributed generation manager and Allegheny Power's Customer Management Group. Allegheny Power's assigned account managers actively manage approximately 50% of the customers who presently own standby generation that would be eligible for the program.

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (%)
Customer Resources Demand Response	Variable by Load Reduction or Contract	

Program start date with key schedule milestones

- Program Marketing: January 2010
- Program Start Date: June 1, 2010
- Program End Date: May 31, 2013⁹⁴

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 2 EM&V category.⁹⁵

It is expected that the existing interval metering and smart metering infrastructure that will be installed will provide the method for EM&V of this program.

As our Smart Metering Technology Procurement and Installation Plan is implemented, new user tools will be developed for customers to retrieve and review energy usage data to aid their participation in the Company’s programs. These tools will be made available to all Allegheny Power customers.

TRC analysis of the program will occur annually during the annual review process to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

This program will be completely managed and administered by Allegheny Power, and Curtailment Service Provider’s and distributed generation manager will manage the program with their participating customers. Based on the evaluation process, contract administration, and utility accounting needs, Allegheny Power estimates 1.0 FTE will be required to administer the program. The existing Account Management staff will be also be utilized to support the program.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

⁹⁴ All projects accepted must be completed by May 31, 2013. This assumes Plan will end May 31, 2013.

⁹⁵ Reference Section 6.1.2. for details of Level 2 EM&V.

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	0	0	0
2010	3,000	27	27
2011	3,000	35	35
2012	3,000	53	53

Estimated program budget (total) by year – include table with budget per year

Estimated Program Budget (Total) by Year

Savings targets – include tables with total MWh and MW reduction goals per year and cumulative & tables that document key assumptions of savings per measure or project

Estimated Energy & Demand Savings Targets				
PROGRAM YEAR	ANNUAL ENERGY SAVINGS (MWh)	PROGRAM ENERGY SAVINGS (MWh)	ANNUAL DEMAND SAVINGS (MW)	PROGRAM DEMAND SAVINGS (MW)
2009	0	0	0.0	0.0
2010	1,500	1,500	15.0	15.0
2011	2,000	2,000	20.0	20.0
2012	3,000	3,000	30.0	30.0

Cost-effectiveness – include TRC for each program year and cumulative

The cumulative TRC for this program is calculated to be 0.7

Refer to Table 7A for TRC for each program year.

Other information deemed appropriate

e. COMMERCIAL HVAC EFFICIENCY PROGRAM

This program is the same as that listed under Small Commercial and Industrial Sector section

f. COMMERCIAL LIGHTING EFFICIENCY PROGRAM

This program is the same as that listed under Small Commercial and Industrial Sector section.

g. CUSTOM TECHNOLOGY APPLICATIONS PROGRAM

This program is the same as that listed under Small Commercial and Industrial Sector section.

h. PAY AHEAD (SMART) SERVICE RATE

This program is the same as that listed under Residential Sector section.

3.5. Governmental/Non-Profit Sector Programs

a. GOVERNMENT/SCHOOL/NON-PROFIT LIGHTING EFFICIENCY PROGRAM

Years during which program will be implemented

January 2010 through May 2013

Objective(s)

This program encourages government, school, and non-profit customers in Allegheny Power's Pennsylvania service territory to upgrade to state-of-the-art energy efficient lighting technologies.

Target market

The target market for this program is Allegheny Power's approximate 19,700 governmental/non-profit customers in Pennsylvania.

Program description

The program provides increased incentives and equipment (at no up front costs to the customer) to these customer classes, for installing:

- T8 lamps: Reducing the number of lamps per fixture by 1 to 2 fewer lamps, and installing high-efficiency electronic ballasts (increased rebate).
- LED Exit Signs: Replace or retrofit existing incandescent exist signs w/ LED (provided to the customer at no upfront cost except shipping cost).
- LED Traffic Signals: Retrofit LED packs into existing incandescent units
- CFLs: Supply CFLs to this customer class via customer application (Provided to the customer at no upfront cost)

Allegheny Power is offering this program to encourage customers in Allegheny Power's Pennsylvania service territory to upgrade to new lighting technologies and to help overcome additional cost barriers associated with it.

Implementation strategy (including expected changes that may occur in different program years)

Allegheny Power will contract implementation administration activities including coordination with HVAC equipment distributors and installation contractors, marketing activities, rebate processing services provider contractor oversight, reporting, and program evaluation.

Allegheny Power will contract directly with rebate processing service providers.

Allegheny Power will leverage the Local Development District Associations (LDDA) of Pennsylvania to market this program to this customer sector. These Associations have established relationships with this target market and the Company is discussing coordination efforts with these groups.

Allegheny Power anticipates including LED lighting as an enhancement to the program after 2011 when CFLs become the sole market offering.

Program issues and risks and risk management strategy

A significant risk to the program success is customers' access to capital to finance energy efficiency and conservation programs. The increased incentive structure along with resources available through state agencies and possible tax credits⁹⁶ and emphasizing potential energy and maintenance savings are expected to mitigate this risk.

An additional risk is that programs may not be approved in time to align with these customers' budget cycles for 2010. Possible mitigation strategies include:

- Request phased review and approvals for those programs at risk due to budget planning cycles.
- Consider contacting eligible customers in advance of approvals to alert them of a possible program.

Achieving estimated participation rates is a program risk. The program will be reviewed monthly to determine if participation rates are not as high as anticipated. If participation rates are lagging, the following steps will be evaluated:

- Modify marketing strategy;
- Modify incentives; and
- Modify or eliminate measures being offered.

Another risk is the possibility of an increase in the federal energy efficiency standards for commercial lighting equipment resulting in reduced energy savings based on the current commercial lighting equipment measure requirements. If and when these standards change, commercial lighting equipment requirements and/or energy savings will be modified to reflect the energy efficiency standards of commercial lighting equipment available at that time. The program manager will be responsible for monitoring these changes and updating each measure as needed.

Anticipated costs to participating customers

- | | |
|----------------------|-------------------------------------|
| • T8 | \$150 / Fixture |
| • LED Exit | \$ 35 / Fixture (Installation Only) |
| • LED Traffic Signal | \$ 65 / Single Fixture |
| • CFL | \$ 0 / Fixture |

⁹⁶ Reference Additional Funding Table in Section 10.F.2.

Ramp up strategy

Begin communicating program in the fourth quarter of 2009 so customers can plan and budget for projects for 2010. This program is expected to be ‘full launched’ that is, offered to the entire target population on the launch date. AP will execute the launch in this manner since it will have had some experience in program management in another state prior to the Pennsylvania launch. It is assumed that the ramp up period for this program will occur in the 2009 and 2010 plan years. In the 2009 plan year, the participation rates are projected to be 33% of future year levels. In the 2010 plan year, the participation rates are projected to be 50% of future year levels.

Marketing strategy

Marketing activities will target eligible customers to inform them of the program, its components, and the associated benefits through bill inserts, direct mail, Allegheny Power website, trade shows, the business customer newsletter, and Account Managers. Allegheny Power will work with LDDAs to market the program to customer with whom they have an established relationship.

Marketing activities will include leveraging and promoting federal and state funding opportunities (stimulus dollars, tax incentives, grants, etc.) that may be associated with this program.⁹⁷

Allegheny Power will promote a whole building approach to energy conservation for government entities by offering increased incentives for select projects and measures under the Government/School/Non-Profit Lighting Efficiency Program to those government entities that have undergone building energy audits. This program will provide information on the benefits of guaranteed energy savings contracts to government entities.

Eligible measures and incentive strategy, include tables for each year of program, as appropriate showing financial incentives & rebate levels (e.g., \$ per measure, \$ per MWh or MW saved)

Eligible Program Measures & Incentives		
MEASURE	REBATE (\$)	REBATE LEVEL (% of Incremental \$)
CFLs	100% of total expenditures	
T8s	\$25	67%
LED Exit Signs	100% of total expenditures	
LED Traffic Signals	\$92	57%

Program start date with key schedule milestones

⁹⁷ Reference Additional Funding Table in Section 10.F.2.

Allegheny Power will determine and measure key milestones achieved as referenced in program participation levels and savings tables for respective years.

- Program Marketing: Begin discussions with key customers early fourth quarter 2009
- Implementation: Award vendor contracts fourth quarter 2009
- Program Start Date: January 2010
- Program End Date: May 31, 2013⁹⁸

Assumed Evaluation, Measurement, and Verification (EM&V) requirements required to document savings by third-party consultant

This program falls into the Level 1 EM&V category.⁹⁹

All rebate applications will be reviewed upon receipt to verify adherence to eligibility requirements and applicant eligibility. A statistically valid sample of all rebate applications, based on 90% confidence level and a plus-or-minus 5% margin of error, will be selected for survey.

Information that will be collected for EM&V purposes will include the quantity of the measure installed, nameplate data from the existing model, the capacity (size) of the existing model, the nameplate data for the new model and the capacity (size) of the new model. A customer survey will also be completed.

TRC analysis of the program will occur annually to determine the feasibility of continuing the program; Allegheny Power will notify the Commission if it appears that changes are warranted in this program.

The EM&V Plan will be adjusted to meet statewide Plan Evaluator Requirements and/or per recommendation of the EM&V contractor to be hired.

Administrative requirements – include utility staffing levels

Allegheny Power will assign a program manager to oversee program implementation, contract management, tracking and reporting, and program evaluation. It is estimated that program management will require 0.25 FTE.

⁹⁸ All projects accepted must be completed by May 31, 2013. This assumes Plan will end May 31, 2013.

⁹⁹ Reference Section 6.1.2. for details of Level 1 EM&V.

Estimated participation – includes tables indicating metric(s) with target value(s) per year

Estimated Annual Participation			
PROGRAM YEAR	POTENTIAL MEASURES	PARTICIPATING CUSTOMERS	PARTICIPATING MEASURES
2009	1,437,307	392	15,827
2010	1,440,391	5,532	197,527
2011	1,404,244	2,042	88,426
2012	1,374,444	383	28,760

This program is the same as that listed under Residential Sector section.

4. Program Management and Implementation Strategies

4.1. Overview of EDC Management and Implementation Strategies

4.1.1. Describe the types of services to be provided by EDC as well as consultants, trade allies, and CSPs. Indicate which organizations will provide which services and the basis for such allocation. Reference reporting and EM&V information from Sections 5 and 6 below.

In summary, Allegheny Power will perform the following services:

- Contract Management oversight
 - Rebate Processing
 - Recycling Services
 - Residential Energy Audit Services
 - Non-residential Energy Audit Services
 - Distributed Generation Management Services
 - Plan Implementation Services Providers
 - Demand Services Consultant
 - Marketing and Advertising
 - EM&V
- Customer Service Center support
- Direct marketing to large commercial and industrial key account customers

Allegheny Power believes the most cost-effective method for program implementation is to contract with vendors for specific services to leverage similar activities across the Plan portfolio of programs and measures. Additionally, the Company will leverage its contracts with vendors for its Maryland EE&C Plan to ensure best pricing for like services.

In summary, Allegheny Power will hire consultants, contractors, and CSPs for the following services:¹⁰¹

- **EE&C and DR Plan Consultation and Design:** Allegheny Power contracted with EDS to provide consulting services associated with EE&C and DR Plan development.
 - Primarily, EDS provided consulting services for Demand Response Programs.
- **Rebate Processing for Programs that provide customer rebates:**¹⁰² Allegheny Power believes the most cost-effective method for processing

¹⁰¹ This summary does not include contracted consulting services for the development of the SMIP.

¹⁰² The Custom Technologies Applications Program and the Custom Applications Program rebate processing will be handled by Allegheny Power.

rebates is contracting the service. Additionally, the Company will leverage its contract with this vendor for its Maryland EE&C rebate programs to ensure best pricing.

- Residential Energy Star and High Efficiency Appliance Program
 - Compact Fluorescent Light (CFL) Rewards Program
 - Residential HVAC Efficiency Program
 - Commercial HVAC Efficiency Program
 - Commercial Lighting Efficiency Program
 - Government/non-Profit Lighting Efficiency Program
 - Commercial and Industrial Drives Program
- **Appliance Recycling Services:** Allegheny Power believes the most cost-effective method for processing rebates is contracting the service. Additionally, the Company will leverage its contract with this vendor for its Maryland EE&C recycling programs to ensure best pricing.
 - Refrigerators
 - Freezers
 - Room Air Conditioners
 - **Energy Audit Services for Residential Programs:** Allegheny Power believes this is the most cost-effective method of procuring this service as the Company can leverage existing relationships with providers of these services through its LIURP program and with PA Home Energy.
 - Residential Home Performance Program
 - **Plan Implementation Provider to administer Residential programs:** Allegheny Power will contract with an Implementation Provider to leverage similar activities across the Plan portfolio of programs and measures. Implementation service providers will be responsible for implementation coordination, marketing activities, rebate and recycling processing services provider contract oversight, reporting, and program evaluation.
 - Residential Energy Star and High Efficiency Appliance Program
 - Compact Fluorescent Light (CFL) Rewards Program
 - Residential HVAC Efficiency Program
 - **Plan Administration for Residential Low Income programs:** Allegheny Power will contract with the program administrator currently under contract for LIURP administration. The program administrator will be responsible for implementation coordination, marketing activities, rebate and recycling processing services provider contract oversight, reporting, and program evaluation.
 - Low Income Home Performance Check-up Audit and Appliance Replacement Program
 - Low Income Joint Utility Usage Management Program

- Low Room Air Conditioner Measure (added to existing LIURP Program)
- **Plan Implementation Provider to administer non-Residential programs:** Allegheny Power will contract with an Implementation Provider to leverage similar activities across the Plan portfolio of programs and measures. Implementation service providers will be responsible for implementation coordination, marketing activities, rebate and recycling processing services provider contract oversight, reporting, and program evaluation.
 - Commercial HVAC Efficiency Program
 - Commercial Lighting Efficiency Program
 - Government/non-Profit Lighting Efficiency Program
 - Commercial and Industrial Drives Program
 - Custom Technology Applications Program
- **Demand Response Programs:** Allegheny Power has executed a contract with a Conservation Services Provider consultant to complete a market assessment of the demand load resources that are available from Allegheny Power's commercial and industrial customer base.¹⁰³
- **Advertising and Marketing:** Allegheny Power has contracted with the same advertising firm hired for the Pennsylvania Consumer Education Plan and the Maryland EE&C and DR Plan. This will leverage similar activities as well as retain the same look and feel of all promotional materials.
 - All Programs
- **EM&V Services:** Allegheny Power will contract with one or more EM&V contractors to perform all measurement and verification activities to support State TRM data collection, measurement, and reporting requirements.
 - All Programs

Allegheny anticipates that some contracts will be performance-based to promote goal achievement. Plan Implementation Providers will be responsible for plan implementation including but not limited to: program implementation including hiring all sub-contractors required for successful program implementation and quality; marketing coordination; reporting on identified metrics, including presenting to stakeholder groups as requested; customer issue resolution; best practices; and early identification of program success risks, including recommendations to mitigate or leverage.

Allegheny Power will hire one or more evaluation, measurement, and verification (EM&V) contractors who are independent and not affiliated with the Plan Implementation Providers or with Allegheny Power. EM&V contractors will be responsible for: completing a baseline study should this be determined to be beneficial to support alternative measurement and verification for some programs

¹⁰³ Roth Brothers, Inc. is a registered CSP in Pennsylvania. See Section 4.3. and Appendix 10.C. for details.

and measures; completing all measurement and verification activities to support State TRM data collection, measurement, and reporting requirements as well as PJM Energy Efficiency M&V Manual specifications for measuring and reporting EE Resource bids into the RPM; developing and maintaining EM&V database; and working with the statewide Plan Evaluator EM&V audits.

Allegheny Power will assign contract and program managers to oversee Plan Implementers and EM&V contractors. The program managers will be responsible for: contract management and oversight including contract compliance, reporting activities, invoice processing, budget variance, and serving as a liaison between the contractors and other parties, both internal and external; coordinating internal training; program results analysis; and recommendations for program adjustments to ensure target achievement.

Allegheny Power will evaluate program and plan results to report to Commission. The Company's Corporate Communications will be responsible for designing and maintaining the external website to promote EE&C and DR Plan; coordination of marketing efforts through bill inserts and customer newsletters; and, managing the advertising agency contract.

Allegheny Power's Customer Service Center (CSC) will be responsible for ensuring CSC representative training; quality control; responding to customer inquiries; tracking complaints and other pertinent information in customer information system; performing quality surveys; promoting programs when applicable to customers calling the CSC for other reasons (for example, marketing low-income programs available to customers inquiring about bill payment assistance); and promoting programs to commercial and industrial (C&I) customers through email distribution lists and "Message on Hold."

The Customer Account managers and engineers will be responsible for: establishing and maintaining relationships with commercial and industrial customers to directly promote programs; establishing and maintaining relationships with trade allies, vendors, retail stores, etc.; and attending events to market programs such as home shows and municipal events.

The Customer Programs Development group will be responsible for Plan and program evaluation for effectiveness.

Contractors will be hired for:

- Advertising and Marketing Plan development and implementation including: reporting on identified metrics; focus group and other message testing and review; and ad development and placement.
- Rebate processing including customer inquiry handling, database development, and reporting on identified metrics.

- Recycling of refrigerators, freezers, and window air conditioning units including reporting on existing and replacement equipment specs and environmentally sound recycling of old appliances.
- Developing and maintaining an online home energy audit tool that will interface with actual customer data and recommend programs and estimated savings from participation.
- Performing energy audits for residential, commercial, and industrial customers.
- Performing Industrial Custom Application services including performing comprehensive energy audits, completing reports for program manager review and approval, and completing approved measures recommended on energy audit report.
- Performing Measurement and verification services including: completing a baseline study; completing all measurement and verification activities to support State TRM data collection, measurement, and reporting requirements as well as PJM Energy Efficiency M&V Manual specifications for measuring and reporting EE Resource bids into the RPM; developing and maintaining EM&V database; and, working with the statewide Plan Evaluator during EM&V audits.

4.1.2. Describe how the risk categories of performance, technology, market and evaluation can affect the programs and any risk management strategies that will be employed to mitigate those risks.

Performance risk will be identified through early warning systems including customer complaints and inquiries, focus groups, and quality surveys and will be addressed by the program managers.

Allegheny Power is designing EE&C programs that use established and proven technologies thereby mitigating the technology risk for these programs.

A crucial tool in affecting customer change in behavior is providing customers with information on how they use energy in conjunction with energy prices. Allegheny Power's EE&C and DR Plan relies heavily on the availability of Smart Metering Infrastructure to provide customers with this knowledge.¹⁰⁴ Should approval of the Smart Meter Technology Procurement and Installation Plan (SMIP) be delayed, Allegheny Power would be at risk of missing demand reduction targets. Therefore, the Company will request review and approval of the SMIP filing due on or before August 14, 2009 by January 29, 2010.

Customer participation in programs is expected to be impacted by the economic downturn and the tightening of the credit markets. Customer participation risk in programs will be mitigated through marketing and advertising program benefits including customer incentives to participate and energy savings associated with

¹⁰⁴ For additional detail and graphical depiction of SMIP, refer to Section 10.F.3.

participation as well as assisting the customer in determining other resources for funding and assistance (such as tax benefits, grants, other agency programs).¹⁰⁵

Other market participation risks will be mitigated through relationship building and support for programs. The state should consider partnering with financial institutions to offer no and low-interest loans on a state-wide basis, as Allegheny Power has not been successful identifying banks or other financial institutions to offer an Allegheny Power program.

Evaluation risk will be addressed through review of EM&V contractor reports and implementation reports to ensure consistency in methodology. Differences in assumptions will be fully vetted with internal and external stakeholders (including the statewide Plan Evaluator) to determine the most appropriate result.

Others risks to consider regarding delays in the deployment of smart meters include: insufficient manufacturing capacity; higher than expected failure rates; and incompatibility of certain meter manufactures with dependent devices (e.g. T-stat in-home display).

4.1.3. Describe how EDC plans to address human resource and contractor resource constraints to ensure that adequate personnel and contractors are available to implement the EE&C plan successfully.

Allegheny Power expects to hire approximately 15 new FTEs to administer, manage, and evaluate programs. New and existing resources will be fully leveraged to achieve maximum efficiency between programs within the plan.

With the projected number of energy audits for all customers and increased comprehensive weatherization services for residential customers with low to moderate incomes, Allegheny Power has identified a resource constraint for performing home energy audits and comprehensive weatherization services. This has been an issue for several years as Allegheny Power has needed to contract with both Community Action Agencies and private contractors in order to have adequate coverage of Allegheny Power's service territory as well as contractors able to provide the scope of energy conservation measures under the company's Low Income Usage Reduction Program (LIURP). It is Allegheny Power's intent to meet with available contractors prior to program start-up to review scope of work and projected participant levels to allow contractors the opportunity increase and train their workforce.

Allegheny Power will also work with Stakeholder groups interested in participating in discussions on how to best resolve resource issues and on how to deploy ARRA funding effectively to meet this workforce deficiency.

4.1.4. Describe “early warning systems” that will be utilized to indicate progress towards the goals and whether they are likely to be met. Describe EDCs

¹⁰⁵ See Section 10.F.2. for a partial listing of these resources.

approach and process for shifting goals and funds, as needed, between programs and adding new measures/programs.

Currently there is a corporate “Enterprise Reporting Program” initiative focused on improving the ability to access consistent and reliable information to enable effective business decisions and analysis. As part of this program, reporting tools will be implemented to enable access to information in a timely and efficient manner. Allegheny Power will use these tools to obtain the data necessary to monitor progress towards goals in order to make adjustments to programs as needed.

Allegheny Power will monitor plan and plan component metrics to assess effectiveness. Once it is felt that a program has been in the field long enough to validate effectiveness (we expect this will vary by program and measure) and it is not meeting participation or other design expectations, a review of implementation plan, assumptions, and other pertinent information will be completed to determine best course of action. Should the Company decide it is advisable to cancel a plan component or program to focus resources on more successful or new programs, the Commission will be notified and the process for amending the plan initiated.

4.1.5. Provide implementation schedules with milestones.

Allegheny Power will begin a phased program launch to customers two months after Plan approval is received with some early soft awareness marketing for programs for which success is heavily influenced by customer budget and planning cycles (largely government, schools, and municipalities, and commercial and industrial programs). Assuming approval is received early November 2009, the implementation schedule and key milestones are outlined below:

October – November 2009

- Begin program awareness campaign for government, schools, and municipalities, and commercial and industrial customers to ensure projects are included in 2010 budget.
- Execute contracts to provide identified services.
- Print collateral materials and identify events for program marketing.

December 2009

- Complete EE&C and DR Program website.
- Complete Plan training for all internal audiences.
- Finalize marketing campaign and media buys.
- Complete program database tracking development.
- Establish relationships with trade allies, vendors, retail stores, etc.

January 2010

- Launch Residential Programs.
- Launch Low Income Programs.
- Launch Government/non-Profit Programs.
- Launch Commercial & Industrial Programs.

March 2010

- Launch Customer Resources Demand Response Program
- Launch Customer Load Response Program
- Complete EM&V baseline studies.

December 2010

- Complete Demand Load Resources Market Assessment Study.

January 2011

- Launch Residential Efficiency Awards Program.
- Launch Programmable Controllable Thermostat (PCT) Program.
- Launch Demand Response Rate Programs.

May 2013

- Close Programs.

4.2. Executive management structure:

4.2.1. Describe EDC structure for addressing portfolio strategy, planning, review of program metrics, internal and external communications, budgeting and financial management, program implementation, procurement, program tracking and reporting, and Quality Assurance/Quality Control (QA/QC). Include EDC organization chart for management team responsible for implementing EE&C plan.

Allegheny Power's Customer Management group reporting to the Executive Director of Customer Service is responsible for portfolio development and evaluation, implementation, measurement and verification, and reporting.

The Executive Council reviews the EE&C Plan prior to submission to the Commission. Program level reviews, including program metrics, are completed by Customer Management.

Corporate Communications is responsible for all internal and external portfolio communication coordination with the exception of providing EE&C Plan training key employees. This is handled by Allegheny Power's Customer Management Group (Customer Management) as a part of implementation.

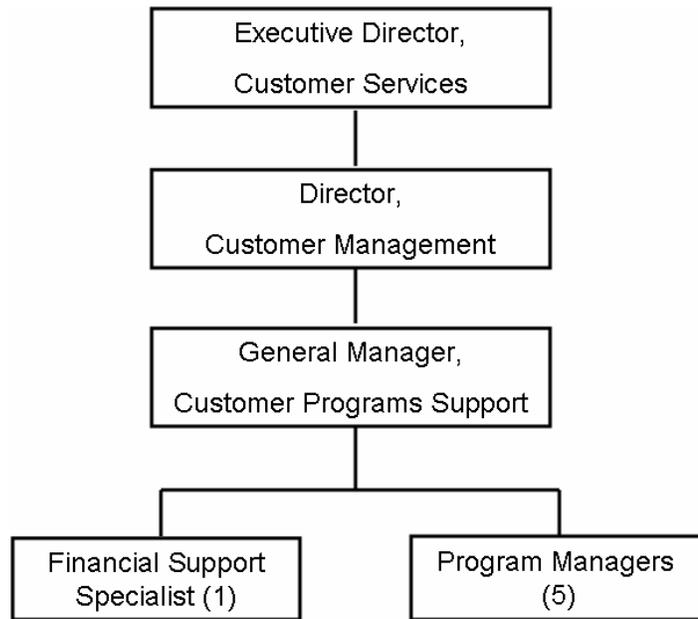

Customer Management is responsible for budgeting, tracking, and reporting of Plan financials. Program Managers are responsible financial management and review of assigned programs. The Executive Director, Customer Services and the Director, Customer Management will review program financials monthly.

Procurement for Plan services is the responsibility of the Program Managers with guidance and assistance from the Procurement group. All services are

competitively bid per Company business practice. Approvals of contracts and purchase requisitions follow the Company’s internal business practice concerning expense and cost approval limits.

Plan Quality Assurance/Quality Control will be the responsibility of Customer Management in conjunction with the Allegheny Power Audit Services group. All applicable Sarbanes-Oxley Controls and Business Practices will be followed and a review and/or audit will be completed annually.

The organization chart for management team responsible for implementing EE&C plan is depicted below:

4.2.2. Describe approach to overseeing the performance of sub-contractors and implementers of programs and how they can be managed to achieve results, within budget, and ensure customer satisfaction.

The Customer Programs Support group will be responsible for Plan implementation. A program manager will be assigned to each program to provide contract management oversight and administration for both the program implementers and the sub-contractors hired by the implementation providers. Allegheny anticipates that some contracts will be performance-based to promote goal achievement.

The Financial Support Specialist will provide support to program managers to ensure accurate invoices. Customer satisfaction will be measured by independent contractors as well as by Allegheny Power.

4.2.3. Describe basis for administrative budget.

Allegheny Power calculated administrative costs by estimating costs associated with specific activities, utilizing price quotations and by using actual charges year to date to establish program development costs. Administrative costs include start-up costs such as IT, database and web portal development and program development. IT, database and web portal development costs were estimated based on IT requirements that were identified specific to the proposed EE&C and DR programs. Other administrative costs include program development costs, with this component based on actual charges year to date. See Tables 6A and 6B for the common and specific costs per customer sector for administration costs.

4.3. Conservation Service Providers (CSPs):

4.3.1. List any selected CSPs, describe their qualifications and basis for selection (include contracts in Appendix).

Allegheny Power has contracted with Roth Bros. Inc.¹⁰⁶ to complete an assessment of the demand response market for Allegheny Power's small/large commercial, small/large industrial governmental, schools, higher education, non-profit and municipal customer segments. This study will help the Company to better understand and quantify customer interest and required incentives and to assist with program design details.

Allegheny released an RFP for completion of this study. Three consultants responded.

Roth Bros. Inc. was selected based on the technical and experience evaluation criteria. This capability and experience coupled with their low bid made them the successful bidder.

Roth Bros. Inc. and Enerlogics submitted a joint proposal to provide a market assessment of the demand response market for Allegheny Power's small/large commercial, small/large industrial governmental, schools, higher education, non-profit and municipal customer segments. Enerlogics has developed demand response systems for PJM and numerous commercial, industrial, and institutional customers and specializes in software and telecommunications systems related to demand response. Roth Bros., Inc. is a technology company specializing in building automation systems and hardware to implement demand response programs. The staff at Enerlogics has significant experience with implementing and designing demand response programs and presented a customized proposal that addressed Allegheny Power's concerns with market assessment, program design, implementation, and required support.

¹⁰⁶ Roth Brothers, Inc. is a registered CSP in Pennsylvania. See Appendix 10.C. for contract.

4.3.2. Describe the work and measures being performed by CSPs.

Roth Bros. Inc. will perform a study to assess feasibility of contracted demand response load reduction programs.

The scope of work includes:

Allegheny Power has contracted with Roth Bros. Inc.¹⁰⁷ to complete a market assessment of the demand response potential in Allegheny Power's commercial, industrial and government customer base. This study will focus on identifying a controllable load reduction and assigning confidence levels. As part of this study, the vendor will review the impact of the discontinuation of the PJM Interruptible Load Response program in 2012.

4.3.3. Describe any pending RFPs to be issued for additional CSPs.

Appliance Recycling Services: Allegheny Power plans to contract with JACO, Inc.¹⁰⁸ to provide appliance recycling services. Allegheny released an RFP for these services for both Pennsylvania and Maryland service territories to leverage scale for better pricing. Two vendors responded and JACO, Inc. was selected based on the technical and experience evaluation criteria. JACO, Inc. has submitted application to become a registered CSP.

EM&V Services: Allegheny Power issued an RFP for EM&V services but will wait to award contract after the statewide Plan Evaluator has completed its recommendation for EM&V requirements for Allegheny Power EE&C and DR Plan. The successful bidder may or may not be a registered CSP in Pennsylvania.

Energy Audit Services for Residential Program: Allegheny Power must issue an RFP for additional energy audit services.

Plan Implementation Provider: Allegheny Power must issue RFPs for Plan Implementers for each customer sector.

Energy Audit and Weatherization Services for Low Income Programs: Allegheny Power must issue an RFP for Energy Audit and Weatherization Services.

¹⁰⁷ Roth Bros. Inc. is a registered CSP in Pennsylvania. See Appendix 10.C. for contract.

¹⁰⁸ JACO, Inc. has submitted application to become a CSP in Pennsylvania.

THIS PAGE INTENTIONALLY LEFT BLANK

5. Reporting and Tracking Systems

5.1 Reporting

5.1.1. List reports that would be provided to the Commission, the schedule for their delivery, and the intended contents.

Per the implementation plan, issued by this Commission on January 15, 2009, the first annual report due to the Commission is July 15, 2010 and that at this time, no other reporting requirements exist although quarterly reporting requirements are mentioned in the statewide Plan Evaluator RFP. Allegheny Power will comply with all reasonable reporting requirements.

The Allegheny Power Customer Information System (CIS) modernization effort, through a combination of technologies, includes requirements to provide reports on energy conservation programs as stipulated by Commission ruling.

It is also Allegheny Power's understanding that the statewide Plan Evaluator will define reports and intended contents as a part of the Phase 1 deliverable to be completed 90 days after contract execution. Allegheny Power will comply with all reasonable statewide Plan Evaluator's recommendations and/or Commission directives. Expected contents include an executive summary along with plan and individual programs and measures: budget vs. actual costs; measure and verification results; effectiveness (savings and annual TRC results); customer complaints; and, recommendations for changes, improvements, enhancements or cancellations. Allegheny Power does not expect to report to the customer level.

5.1.2. Describe data that would be available (including format and time frame of availability) for Commission review and audit.

Allegheny Power will comply with the all reasonable data requirements per the statewide Plan Evaluator's recommendations and/or Commission directives. Examples of expected data to be accessible include: customer account number, meter number, and service location; program participation information; customer complaint data; program costs; evaluation, measurement, and verification data.

5.2 Project Management Tracking Systems

5.2.1. Provide brief overview of the data tracking system for managing and reporting measure, project, program and portfolio activities, status and performance as well as EDC and CSP performance and expenditures.

Allegheny Power will use its customer information system (CIS) and other technologies to be determined to track energy conservation programs. The data tracking system will enable the measuring and tracking of customer counts per program and measure, benefits from the programs and measures, expenditures per program and measure and other details as required for the various programs and

measures. Data integrity will be ensured through proper security access and mechanisms will be implemented to ensure data validation.

Consideration is being given to obtaining the services from qualified vendors to provide services to develop, build, host and deploy a Data Base Tracking System related to Allegheny Power's Plan.

5.2.2. Describe the software format, data exchange format, and database structure you will use for tracking participant and savings data. Provide examples of data fields captured.

The specifications for the data tracking system is currently in development and not available at this time.

5.2.3. Describe access and mechanism for access for Commission and statewide EE&C Plan Evaluator.

Allegheny Power will provide the Commission with required data samples electronically directly to the statewide Plan Evaluator provided database or by whatever method is deemed appropriate. Allegheny Power does not expect to provide third party access directly to data systems due to customer confidentiality, privacy, and security concerns. Should the statewide Plan Evaluator or the Commission request access to Allegheny's data system, the Company will arrange an on-site visit with a database expert to review with requestor.

6. Quality Assurance and Evaluation, Measurement and Verification

6.1 Quality Assurance/Quality Control

6.1.1. Describe overall approach to quality assurance and quality control.

Allegheny Power will build quality control checks into each program and measure as well as at key customer touch points. The Program Manager will review reports to identify issues and take action necessary to resolve. Quality checks are summarized below:

- Customer Satisfaction: Customer satisfaction for overall plan offerings and program participation will be assessed through random survey.
- Call Center Support: An expected service level will be set based on best practices and benchmarking. Calls will be monitored for quality.
- Rebate Programs: Customers will be required to submit a completed rebate form, a copy of the sales receipt and include the UPC label from the box of the appliance (where applicable). The Rebate Contractor will review all rebate applications upon receipt to verify adherence to eligibility requirements and applicant eligibility. A statistically valid sample of all rebate applications, based on 90% confidence level and plus-or-minus 5% margin of error, will be selected for survey or site visit depending on the measure. The refrigerator and freezer recycling measures also include verification that an operating refrigerator or freezer was removed from a customer's premises, and that the refrigerator or freezer was appropriately recycled.
- HVAC Programs: A statistically valid sample of all rebate applications based on a 90% confidence level and a plus-or-minus 5% margin of error, will be selected for post-installation inspection. Inspections will include a site visit to verify energy-efficient technical specifications. Company employees will perform 90% of the site visits, to include on-site verification of equipment installation. The other 10% of the site visits will be performed by a certified contractor, to include testing for proper installation and operation.
- Home Audit Programs: Allegheny Power will audit 20% of each certified contractor's projects in the first year and 5% per year thereafter for quality assurance. The Company expects that contractor training programs would be modified to address any trends discovered through the audit process. Reports will be prepared and maintained by the third-party administrator to verify adherence to customer eligibility requirements. A statistically valid sample, based on a 90% confidence level and a plus-or-minus 5% margin of error, will be selected annually for post-installation inspection. Inspections will include a site visit to verify energy-efficient technical specifications and quantities.
- Drives and Customer Application Programs: All applications will be reviewed by Allegheny Power upon receipt to verify adherence to eligibility

requirements and applicant eligibility. A statistically valid sample, based on a 90% confidence level and a plus-or-minus 5% margin of error, will be selected annually for post-installation inspection. Inspections will include a site visit to verify energy-efficient technical specifications and quantities. Pre-installation and post-installation energy use and energy savings will be estimated using engineering calculations and/or one-time or short-term in-situ end-use measurements. One-time measurements will be used where the operating factor and hours of operations are consistent. Short-term measurements will be used where the operating factor and the hours of operation are more variable.

6.1.2. Describe procedures for measure and project installation verification, quality assurance and control, and savings documentation.

Allegheny Power will meet or exceed the EM&V requirements of the Pennsylvania Technical Reference Manual (TRM) and to use the protocols that are adopted and implemented by the Statewide Plan Evaluator for Evaluation, Measurement and Verification such as the Energy Star Portfolio Manager and Home Performance with Energy Star data collection protocols, where appropriate.. Additionally, the information provided below will be adjusted if recommended by the EM&V contractor once hired as well as per recommendations from the statewide Plan Evaluator. Finally, as the Company works with State agencies, partners, trade allies, and other key stakeholders to improve and maximize program and measure design, its EM&V plan will be adjusted accordingly. The goal is to balance the costs of EM&V processes, program and measure effectiveness, and other necessary considerations to provide the best benefit to customers while achieving energy consumption and demand reduction targets.

Once it is expected to be beneficial to participate in the PJM RPM Market,¹⁰⁹ EM&V plans will be modified to ensure compliance with the PJM Energy Efficiency M&V Manual.¹¹⁰ Any incremental costs to comply with PJM M&V requirements will be netted against the revenues from the RPM market participation.

Demand and energy savings may be derived from a computation using a combination of measurements of some parameters and estimates of others. Consideration will be given to each parameter's contribution to the overall uncertainty of the estimated savings. Estimates may be based on historical data

¹⁰⁹ Allegheny Power evaluated a possible bid of the EE&C plan for the PE service territory into the May 2009 Base Residual Auction (BRA) for Delivery Year 2012/2013. The results of this BRA resulted in a clearing price of \$16.46 for the Allegheny Power LDA. At that clearing price, the estimated administrative cost required to support PE's participation in the auction – including the cost to complete the required PJM reporting, the cost to perform the EM&V per the PJM M&V Manual, and the cost of potential PJM audits - would have exceeded the revenue derived from the auction.

¹¹⁰ PJM Manual 18B: Energy Efficiency M&V Manual,
<http://www.pjm.com/documents/~media/documents/manuals/m18b.ashx>

such as recorded data, manufacturer's published ratings and representative sampling.

Level I: Deemed Savings

Level 1 measurement supports the programs and measures for which the deemed savings approach is appropriate. These are the programs and measures for which algorithms are available in the PA TRM.

Applicable Programs and Measures:

- Residential Energy Star and High Efficiency Appliance Program
 - Room Air Conditioner
 - Clothes Washer
 - Clothes Dryer
 - Dishwashers
 - Refrigerator
 - Freezer
 - Programmable Thermostat
- Residential CFL Rewards Program
 - CFL Lighting
- Residential HVAC Efficiency Program
 - Central Air Conditioners
 - Heat Pumps
- Residential Home Performance Program
- Residential Low Income Programs
- Commercial HVAC Program
 - Central Air Conditioners
 - Heat Pumps
- Commercial Lighting Program
 - T8 lamps
 - T5 lights
 - LED Exit Signs
- Government & non-Profit Lighting Efficiency Program
 - T8 lamps
 - T5 lights
 - LED Exit Signs
 - LED Traffic Signals

Level II: Custom Measurements

Level II Custom Measurements are appropriate for custom programs and measures and where on-site measurement is preferred over the Level 1: Deemed

Savings approach. Pre-installation and post-installation energy use and energy savings will be estimated using engineering calculations and/or one-time or short-term in-situ end-use measurements. The demand reduction will be estimated or measured using one-time or short-term measurements. One-time measurements will be used where the operating factor and hours of operation are consistent. Short-term measurements will be used where the operating factor and the hours of operation are highly variable. The difference between one-time measurement and short-term measurement is that for a one-time measurement, a "snap-shot" is taken pre-installation and post-installation, whereas for a short-term measurement portable monitoring equipment is installed for up to a week to measure the pre-installation and/or post-installation performance of the specific measure installed.

Applicable Programs and Measures:

- Commercial and Industrial Drives Program
 - Variable Speed Drives
- Commercial Technology Application Program
- Custom Applications Program
- Rate-based Programs
- Demand Response Programs

Allegheny Power will create a database of participating customers including their application date, installation date, incentive date and amount (where applicable), customer input regarding their impression of the effectiveness of the measures and any commentary they wish to provide along with the appropriate measurement algorithms and measurement methodologies.

6.1.3. Describe process for collecting and addressing participating customer, contractor and trade ally feedback (e.g., suggestions and complaints).

Customer satisfaction surveys will be completed to assess awareness of the EE&C and DR Plan, to assess satisfaction with programs and measures, and to solicit customer suggestions. This data will be collected as a part of existing surveys and as a part of measurement and verification. In addition, Allegheny will conduct EE&C Plan specific surveys if conditions warrant and budget permits.

Customers may also provide feedback to the customer service center via phone, mail, email, or online. The customer contact will be handled through a self-service option if available and selected, or it will be processed by a customer service representative. All contacts are recorded in a contact management system. The program manager and/or implementation provider will be responsible for handling escalated customer issues.

Contractor and trade ally feedback will be collected primarily through the program managers and implementation providers. Secondly, this information will be collected via account managers and customers. All data and information will be recorded in a contact management system.

6.2 Describe any planned market and process evaluations and how results will be used to improve programs.

Program managers and program developers will review programs and measures monthly to assess current Plan performance to target for all Plan metrics. Should results fall short of expectations, Allegheny Power will consider completing a market assessment study to better understand its market base.

The EM&V Contractor may be required to complete a baseline study for existing programs.

Allegheny Power has contracted with Roth Bros., Inc.¹¹¹ to complete a market assessment of the demand response potential in Allegheny Power's commercial, industrial and government customer base. This study will focus on identifying a controllable load reduction and assigning confidence levels. As part of this study, the vendor will review the impact of the discontinuation of the PJM Interruptible Load Response program in 2012.

6.3 Describe strategy for coordinating with the statewide EE&C Plan Evaluator (nature and type of data will be provided in a separate Commission Order).

Allegheny Power will assign an Allegheny Power EM&V coordinator to serve as a liaison between the Company, the Company's EM&V contractor, and the statewide Plan Evaluator. Allegheny Power views this as a collaborative effort and welcomes the review and input from the statewide Plan Evaluator.

¹¹¹ See Section 4.3. for additional information on Roth Bros. Inc.

THIS PAGE INTENTIONALLY LEFT BLANK

7. Cost-Recovery Mechanism

7.1 Provide the amount of total annual revenues as of December 31, 2006, and provide a calculation of the total allowable EE&C costs based on 2% of that annual revenue amount.

	Energy Consumption Forecast (MWh) 06/2009 - 05/2010		Annual 2006 Revenues (\$) <i>With ITC</i>	
Residential	7,231,347	35%	\$494,664,993	42%
Commercial	5,097,326	24%	\$293,832,582	25%
Industrial	8,557,651	41%	\$382,115,769	32%
Street Lighting	52,326	0%	\$7,516,761	1%
Retail Billed MWh Sales	20,938,650		\$1,178,130,105	

Consumption Reduction Targets (MWh)		
Year Ending May 31, 2011	209,387	1%
Year Ending May 31, 2013	628,160	3%

Peak Demand Reduction Target (MW)		
Year Ending May 31, 2013	157	4.5%

Annual Expenditure Cap	<i>With ITC</i>	
Residential	\$9,893,300	
Commercial	\$5,876,652	
Industrial	\$7,642,315	
Street Lighting	\$150,335	
	\$23,562,602	2%

7.2 Description of plan in accordance with 66 Pa. C.S. §§ 1307 and 2806.1 to fund the energy efficiency and conservation measures, to include administrative costs.

For non-residential customers, Allegheny Power proposes to recover all program costs (respective to the allocation and cost structure described below in 7.5) via a separately stated non-bypassable line-item bill surcharge entitled EE&C Surcharge, which is provided in accordance with 66 Pa. C.S. §§ 1307 and 2806.1. For residential customers, EE&C program costs are recovered in addition to the currently approved distribution rates. The EE&C Surcharge is designed on a levelized basis over the 43-month period beginning November 2009 and running through May 31, 2013 for all customers except large commercial and industrial customers. The EE&C surcharge for large commercial and industrial customers is designed on a levelized basis over a 40-month period beginning February 2010 and running through May 31, 2013. Subject to the annual reconciliation mechanism described below, the implementation of a levelized surcharge helps mitigate the peaks and valleys that may otherwise occur if the surcharge had not been designed on a levelized basis.

Allegheny Power will submit to the Commission by March 31 of each year: (1) a comparison between forecasted revenues billed and actual revenues billed through

February, as adjusted for removal of gross receipts tax; (2) any adjustment to the forecasted revenues anticipated to be billed during March through May, as adjusted for removal of gross receipts tax; (3) any adjustment to the costs levelized over the 43-month period or 40-month period for large commercial and industrial customers) based upon actual costs incurred through February and any revised estimates for future months, up to the amount permitted to be recovered under Act 129; and (4) the subsequent reconciliation effect to the surcharge adjusted for gross receipts tax, and levelized over the period of the upcoming June 1 and continuing through the remaining months of the surcharge. A final reconciliation of amounts to be collected or refunded after May 31, 2013, through a further surcharge, should be authorized by the Commission. The purpose of this annual reconciliation mechanism is to mitigate the magnitude of the reconciliation balance. Commission approval of this annual reconciliation mechanism to ensure dollar for dollar recovery of all prudently incurred costs through May 31, 2013, with a projected aggregated cost of \$94.25 million, will allow the Company to utilize regulatory accounting to properly match surcharge revenue with the program costs. Allegheny Power is requesting authorization for regulatory accounting to track on a dollar for dollar basis the amounts to be recovered on a deferred basis for any under-collections, or refunded on a deferred basis any over-collections, that may occur throughout the lifespan of the surcharge, which can arise because of the levelized nature of the surcharge.

7.3 Provide data tables (see Tables 6A, 6B, and 6C).

Table 6A: Portfolio-Specific Assignment of EE&C Costs

Residential Portfolio (including Low-Income)							
EE&C Program	Cost Elements (\$)						Totals
	Administration Costs	Marketing Costs	Outside Services Costs	Evaluation Costs	Customer Incentive Costs	Utility Capital Equipment Costs	
CFL Rewards Program	\$0	\$0	\$0	\$0	\$1,503,787	\$0	\$1,503,787
Critical Peak Rebate Rate Offering	\$0	\$0	\$0	\$0	\$0	\$0	\$0
Energy Star Appliance Program	\$0	\$0	\$5,165,663	\$0	\$5,440,256	\$0	\$10,605,918
Home Performance Program	\$391,805	\$0	\$3,300,154	\$0	\$6,542,005	\$0	\$10,233,963

7.4 Provide and describe tariffs and a Section 1307 cost recovery mechanism. Provide all calculations and supporting cost documentation.

Residential program costs are allocated entirely to Tariff No. 39 residential Rate Schedule 10, whereas commercial, industrial, government, school and non-profit program costs are allocated to the various Tariff No. 39 non-residential rate schedules and Tariff No. 37 based on the programs attributable to each rate schedule/tariff. This allocation is described more fully below in 7.5 and is done to align cost recovery with the customer class that will receive the direct energy and conservation benefits.

Following the appendices is a pro-forma tariff for Tariff No. 39 and Tariff No. 37 describing the proposed surcharge (which is provided in accordance with 66 Pa. C.S. §§ 1307 and 2806.1) and the calculations and supporting cost documentation.

Allegheny Power respectfully requests Commission approval to begin surcharge recovery effective on one day's notice on the portions of the plan the Commission has approved.

7.5 Describe how the cost recovery mechanism will ensure that measures approved are financed by the same customer class that will receive the direct energy and conservation benefits.

The various EE&C programs proposed by Allegheny Power have a target market of residential, commercial, industrial, government, school and/or non-profit customers. With the exception of the Tariff No. 39 residential customer class and Tariff No. 37, Allegheny Power does not have retail rate schedules available specifically for commercial, industrial, government, school or non-profit customers. Instead, Allegheny Power's Tariff No. 39 non-residential rate schedules are available based upon customer size (i.e., minimum monthly billing demand) and service voltage.

The Tariff No. 39 retail rate schedules can generally be grouped into the following customer classes:

- Residential
 - Schedule 10 - Residential rate schedule available to all residential service customers.
- Commercial
 - Schedule 20 - General Service rate schedule available to all non-residential customers, but designed for customers with a billing demand under 100 kW.
 - Schedule 22 - General Service rate schedule available to churches and schools. Schedule 22 was closed to new customers as of August 30, 1979.
- Commercial & Industrial
 - Schedule 30 - Mid-size commercial and industrial rate schedule available to customers with a billing demand of 100 kW or greater. This rate schedule consists of a very wide spectrum of customers since billing demands range from 100 kW to 2,000 kW. Due to such a wide spectrum of customers, a convenient delineation point is the 500 kW threshold established in the Retail Electric Default Service Program and Competitive Procurement Plan at Docket No. P-00072342. This delineation point separates Schedule 30 customers into those with a billed demand less than 500 kW and those with a billed demand of 500 kW or greater, and can also generally be used to group customers into a small commercial and industrial class and a large commercial and industrial class. As such, Schedule 30 customers with a billed demand less than 500 kW can be generally considered small commercial and industrial customers and are identified as “Schedule 30 (small)”; whereas Schedule 30 customers with a billed demand of 500 kW or greater can be generally considered large commercial and industrial customers and are identified as “Schedule 30 (large).”
- Industrial
 - Schedule 40 - Large industrial rate schedule available to customers with a billing demand of 2,000 kW or greater, with a service voltage of 25 kV or greater.
 - Schedule 41 - Large industrial rate schedule available to customers with a billing demand of 2,000 kW or greater, with a service voltage of 25 kV or greater. Schedule 41 was closed to new customers as of December 31, 1998.
 - Schedule 44 - Large interruptible industrial rate schedule available to customers with a billing demand of 5,000 kVA or greater, with a service voltage

of 25 kV or greater. Schedule 44 was closed to new customers as of December 31, 1998.

Schedule 46 - Large industrial rate schedule available to customers with a billing demand of 30,000 kVA or greater, with a service voltage of 25 kV or greater. Schedule 46 was closed to new customers as of December 31, 1998.

- Government/School/Non-Profit

Government, school and non-profit customers are served on suitable non-residential rate schedules based on the size of their electrical load.

Tariff No. 37 provides service to Pennsylvania State University’s main campus at University Park in State College, Pennsylvania, and for the purposes of EE&C programs is classified similarly as Tariff No. 39 Schedule 30 (large).

Although not perfect, the above groupings of Tariff No. 39 rate schedules and Tariff No. 37 into various customer classes provides a better means to match EE&C programs with the customer class for which such programs are designed.

For non-residential customers, Allegheny Power proposes to collect the costs of EE&C programs through a separately stated non-bypassable line-item bill surcharge that will be specific to each designated Tariff No. 39 rate schedule and Tariff No. 37. For residential customers, EE&C program costs are recovered in addition to the currently approved distribution rates. The residential EE&C program allocation is straightforward since Allegheny Power has only one residential rate schedule, which means all residential EE&C programs are allocated to Tariff No. 39 Schedule 10.

With the exception of Tariff No. 37, the commercial, industrial, government, school, and non-profit EE&C program cost allocation is more complicated, since Allegheny Power does not have Tariff No. 39 rate schedules dedicated solely to one specific class of customer. However, to align cost recovery with the customer class that will receive the direct energy and conservation benefits, the allocation of the non-residential EE&C programs follow the same guidelines as the target market and the previously discussed rate schedule/tariff customer class groupings. A summary of the non-residential EE&C program cost allocation is provided below:

Tariff Classification	Commercial HVAC Efficiency Program	Lighting Efficiency Program	Governmental/ Non-Profit Traffic Signals Measure	Custom Technology & Applications Program	Commercial and Industrial Drives Program	Custom Applications Program	Customer Load Response Program	Customer Resources Demand Response Program	Time of Use (TOU) with Critical Peak Pricing Rate	Hourly Pricing Option (HPO) Rate
Tariff No. 39, Schedule 20	X	X	X						X	X
Tariff No. 39, Schedule 22	X	X							X	X
Tariff No. 39, Schedule 30 (small)	X	X		X	X		X	X	X	X
Tariff No. 39, Schedule 30 (large)		X		X	X	X	X	X		
Tariff No. 39, Schedule 40					X	X	X	X		
Tariff No. 39, Schedule 41					X	X	X	X		
Tariff No. 39, Schedule 44					X	X	X	X		
Tariff No. 39, Schedule 46					X	X	X	X		
Tariff No. 37		X			X	X	X	X		

Although not all non-residential customers taking service under each rate schedule/tariff will participate in each and every program, the above allocation attributes programs to each of the various rate schedules/tariff where the customer(s) taking service are most likely to have an application that permits them to participate in the program. However, even if costs of a program are not presently allocated to a given rate schedule/tariff, that does not mean that customer(s) on the rate schedule/tariff are not eligible to participate. It just means that the number of participating customer(s) taking service under the rate schedules/tariff that have not been allocated costs is not assumed to be significant. However, should it be determined that the number of customers participating in a given program that has not been allocated costs becomes significant, a redesigned allocation methodology will be proposed so that EE&C Plan costs and benefits are best aligned. A brief description of the allocation methodology for each non-residential EE&C program is provided below:

- Commercial HVAC Efficiency Program. The Commercial HVAC Efficiency Program was allocated only to Schedules 20, 22 and 30 (small). Schedule 30 (large) and Tariff No. 37 would typically have HVAC beyond or not significantly within the scope of the target market. Schedules 40, 41, 44 and 46 customers are assumed to have very few, if any, air conditioning applications.
- Commercial and Government/Non-Profit Lighting Efficiency Program:
 - T8 and T5 Lighting. The T8 and T5 Lighting Efficiency Programs would typically be allocated only to Schedules 20, 22 and 30 (small). However, Allegheny Power wanted to recognize that Schedule 30 (large) and Tariff No. 37 would include customers with buildings and the potential to take advantage of such a program. Although Schedule 30 (large) and Tariff No. 37 customers have a larger electrical load requirement than Schedule 30 (small) customers, the larger electrical load requirement is not necessarily attributable to an increased lighting requirement but can instead be attributable to other factors such as additional motors, larger HVAC equipment, etc. Therefore, to recognize that Schedule 30 (large) and Tariff No. 37 customers could have the potential to take advantage of the T8 and T5 Lighting Efficiency Programs, a rate was designed so that these customers would pay, on average, an amount proportional on a demand basis to the same average monthly amount as Schedule 30 (small) customers. Schedules 40, 41, 44 and 46 customers are assumed to have an insignificant number of T8 and T5 lighting applications.
 - LED Exit Signs. Similar to the T8 and T5 Lighting Efficiency Programs, the LED Exit Signs Program would typically be allocated only to Schedules 20, 22 and 30 (small). However, Allegheny Power wanted to recognize that Schedule 30 (large) and Tariff No. 37 would include customers with buildings and the potential to take advantage of such a program. Using the same methodology previously discussed, a rate was designed so that these customers would pay, on average, an amount proportional on a demand basis to the same average

monthly amount as Schedule 30 (small) customers. Schedules 40, 41, 44 and 46 customers are assumed to have an insignificant number of LED exit sign applications.

- Occupancy Sensors. Similar to the LED Exit Signs Program, the Occupancy Sensor Program would typically be allocated only to Schedules 20, 22 and 30 (small). However, Allegheny Power wanted to recognize that Schedule 30 (large) and Tariff No. 37 would include customers with buildings and the potential to take advantage of such a program. Using the same methodology previously discussed, a rate was designed so that these customers would pay, on average, an amount proportional on a demand basis to the same average monthly amount as Schedule 30 (small) customers. Schedules 40, 41, 44 and 46 customers are assumed to have an insignificant number of occupancy sensor applications.
- LED Traffic Signals. General Service Schedule 20 is the only rate schedule grouping in which LED Traffic Signals would be applicable. Therefore, all LED Traffic Signal Program costs were allocated to Schedule 20.
- Custom Technology Applications Program. Since the Custom Technology Applications Program is designed for customers with usage between 1 million up to 2.5 million kWh's per year, the program costs were allocated to Schedules 30 (small) and 30 (large). Schedules 40, 41, 44, 46, and Tariff No. 37 customers are assumed to participate in the Custom Applications Program.
- Commercial and Industrial Drives Program. Since the Commercial and Industrial Drives Program is designed for customers with motors between 25 – 200 hp, the program costs were allocated to Schedules 30 (small), 30 (large), 40, 41, 44, 46, and Tariff No. 37. It is assumed that the number of eligible applications for the smaller Schedules 20 and 22 are not significant within the target market.
- Custom Applications Program. Since the Custom Applications Program is designed for Allegheny Power's 550 largest customers, the program costs were allocated to Schedules 30 (large), 40, 41, 44, 46, and Tariff No. 37.
- Customer Load Response Program. Since the Customer Load Response Program is designed for customers with a demand of at least 300 kW or greater, the program costs were allocated to Schedules 30 (small), 30 (large), 40, 41, 44 and 46, and Tariff No. 37.
- Customer Resources Demand Response Program. Since the Customer Resources Demand Response Program is designed for customers larger than 300 kW or for customers that own generators rated larger than 100 kW, the program costs were allocated to Schedules 30 (small), 30 (large), 40, 41, 44 and 46, and Tariff No. 37.
- TOU and HPO Program. Since Schedules 30 (large), 40, 41, 44, 46, and Tariff No. 37 are already subject to hourly-pricing for default generation service, subject to the terms and conditions contained in the Company's Retail Electric Default Service

Program and Competitive Procurement Plan at Docket No. P-00072342, the program costs for TOU and HPO Program plan management and reporting requirements were allocated to Schedules 20, 22 and 30 (small).

Once program costs are allocated to each rate schedule/tariff, cost recovery is accomplished via a per kilowatt-hour energy surcharge for Schedules 10, 20, and 22 since the majority of customers on these rate schedules presently do not have demand meters. Since all customers on Schedules 30 (small), 30 (large), 40, 41, 44, 46 and Tariff No. 37 have meters capable of recording demand, cost recovery for Schedule 30 (small) will be accomplished via a per kilowatt-hour energy surcharge and a per kilowatt demand surcharge, and cost recovery for Schedule 30 (large), 40, 41, 44, 46 and Tariff No. 37 will be accomplished via a per kilowatt PJM peak load contribution. The EE&C program costs allocated to Schedule 30 (small) is separated into an energy-related portion and a demand-related portion, based upon the resultant load factor calculated from the energy and demand savings projections for each program.

The EE&C Surcharge is designed on a levelized basis over a 43-month period (or 40-month period for large commercial and industrial customers). Subject to the annual reconciliation mechanism described above in 7.2, the surcharge for each rate schedule/tariff is provided below:

Tariff Classification	\$ per kWh	\$ per kW	\$ per kW PLC
Tariff No. 39, Schedule 10	\$ 0.00222	\$ -	\$ -
Tariff No. 39, Schedule 20	\$ 0.00118	\$ -	\$ -
Tariff No. 39, Schedule 22	\$ 0.00098	\$ -	\$ -
Tariff No. 39, Schedule 30 (small)	\$ 0.00071	\$ 0.34	\$ -
Tariff No. 39, Schedule 30 (large)	\$ -	\$ -	\$ 0.59
Tariff No. 39, Schedule 40	\$ -	\$ -	\$ 0.29
Tariff No. 39, Schedule 41	\$ -	\$ -	\$ 0.29
Tariff No. 39, Schedule 44	\$ -	\$ -	\$ 0.29
Tariff No. 39, Schedule 46	\$ -	\$ -	\$ 0.29
Tariff No. 37	\$ -	\$ -	\$ 0.44

Allegheny Power projects its total program costs, including customer incentives, start-up costs and administrative costs, to be approximately \$94.25 million. Commission approval of the annual reconciliation mechanism (described above in 7.2) to ensure dollar for dollar recovery of all prudently incurred costs through May 31, 2013, with a projected aggregated cost of \$94.25 million, will allow the Company to utilize regulatory accounting to properly match surcharge revenue with the program costs. Allegheny Power is requesting authorization for regulatory accounting to track on a dollar for dollar basis the amounts to be recovered on a deferred basis for any under-collections, or refunded on a deferred basis any over-collections, that may occur throughout the lifespan of the surcharge, which can arise because of the levelized nature of the surcharge.

Customer bill impacts from the new surcharge will vary based upon customer consumption levels and the magnitude of default service generation rates. A range of customer total bill impacts averaged over the 43-month period (or 40-month period for large commercial and industrial customers), based upon average customer energy/demand consumption and assumed default service generation rates, is provided below:

Tariff Classification	Avg Total Bill Impact
Tariff No. 39, Schedule 10	2.3%
Tariff No. 39, Schedule 20	1.3%
Tariff No. 39, Schedule 22	1.0%
Tariff No. 39, Schedule 30 (small)	1.9%
Tariff No. 39, Schedule 30 (large)	1.5%
Tariff No. 39, Schedule 40	0.7%
Tariff No. 39, Schedule 41	0.6%
Tariff No. 39, Schedule 44	0.7%
Tariff No. 39, Schedule 46	0.6%
Tariff No. 37	1.2%

8. Cost Effectiveness

8.1 Explain and demonstrate how the proposed plan will be cost effective as defined by the Total Resource Cost Test (TRC) specified by the Commission.

The Company performed TRC testing in accordance with the draft PA specific TRC test provided by Secretarial Letter on May 21, 2009. The Company reviewed the final PA specific TRC test order as adopted on June 18, 2009 and entered on June 23, 2009, and amended its filing on July 31, 2009 in accordance with changes to the TRC testing. The TRC testing completed as part of this filing were completed in accordance with the final PA specific TRC test order.

Allegheny Power supports the use of the TRC test in assessing the cost-effectiveness of the plan. The TRC test is the broadest in scope without including externalities. The TRC test includes the participants cost, the program administrator costs and the avoided supply costs and thus provides a basis of comparing both supply-side and demand-side options.

Evaluations were conducted at the individual measure basis and Allegheny Power focused on including those measures which were determined to be cost-effective as part of the plan. Allegheny Power did include some measures which were not determined to be cost-effective or were cost neutral in order to meet the requirements of the plan, and plans to evaluate the actual benefits/costs of measures and will consider or propose revisions be made to the plan during the annual review to ensure the Company meets its savings targets in a cost-effective manner.

8.2 Provide data tables (see Tables 7A thru 7E).

The Company has projected the expected benefits and costs associated with the energy efficiency and conservation programs. The tables below summarize the expected benefits, and costs for the individual programs that the Company proposes to implement in the Plan. The Company has spent a considerable effort in the assumptions used in its cost-effectiveness models, such as participation rates, rebate levels, cost of equipment, savings, etc. The Company looks forward to obtaining actual program performance in order to improve both Program Design and Modeling.

Table 7A: TRC Benefits Table

Residential	TRC Benefits By Program Per Year (\$000)												
	Program	Program Year	TRC	Program Costs (\$000)	Program Benefits (\$000)	Capacity		Energy		Load Reductions in kW		MWh Saved	
						Annual		Annual		Annual	Lifetime	Annual	Lifetime

THIS PAGE INTENTIONALLY LEFT BLANK

9. Plan Compliance Information and Other Key Issues

9.1 Plan Compliance Issues

9.1.1. Describe how the plan provides a variety of energy efficiency, conservation, and load management measures and will provide the measures equitably to all classes of customers in accordance with the January 15 Implementation Order.

Allegheny Power has developed a portfolio of programs that target major energy consuming appliances, systems, and processes by customer sector. This provides the best opportunity for all customers to participate in a program as well as for the Company to meet its goals under Act 129. Table 2 illustrates the energy and demand savings and Table 3 illustrates the annual budget to provide the Company's programs to all classes of customers. Table 4 provides the Program level energy and demand savings. In addition, the Company has developed specific programs to target specific customer sectors; i.e., low income and government/non-profit that further supports Act 129 requirements regarding these customer sectors as illustrated by Table 5, the Parity Analysis of providing programs to all customer sectors.

9.1.2. Provide statement delineating the manner in which the EE&C plan will achieve the requirements of the program under 66 Pa. C.S. §§ 2806.1(c) & 2806.1(d).

Section 2806.1(c) provides the EDC consumption reduction requirements of one percent by mid 2011 and three percent by mid 2013. Section 2806.1(d) sets a 4.5% reduction in annual system peak by mid 2013. Allegheny Power's anticipated programs for meeting the reductions of consumption and peak demand are fully described in Section 3 of the Plan. A summation of the programs' anticipated contribution, as a percentage of total target reductions for consumption and peak demand, is provided in Table 2.

9.1.3. Provide statement delineating the manner in which the EE&C plan will achieve the Low-Income requirements under 66 Pa. C.S. §§ 2806.1(b)(1)(i)(G).

Section 2806.1 (b) (1) (i) (G) provides that the Plan shall include specific energy efficiency measures for households at or below 150% of the Federal Poverty Income Guidelines, and that a proportionate number of measures be provided relative to the share of the total energy use for these customers. Allegheny Power has developed three programs for these households to specifically participate, in addition to the Residential programs. Both the budget provided to these programs and the savings achieved from this customer sector is relative. A summation of the programs' anticipated results specific to this customer sector is provided in Tables 1, 2 and 5.

9.1.4. Provide statement delineating the manner in which the EE&C plan will achieve the Government/Non-Profit requirements under 66 Pa. C.S. §§ 2806.1(b)(1)(i)(B).

Section 2806.1(b)(1)(i)(B) provides that at least 10% of the energy consumption savings be achieved from the Government/Non-Profit customer sector. Allegheny Power has targeted a program for this customer sector, in addition to the other Commercial and Industrial programs, to ensure this requirement is met. A summation of the programs' anticipated results specific to this customer sector is provided in Table 2.

9.1.5. Describe how EDC will ensure that no more than two percent of funds available to implement the plan shall be allocated for experimental equipment or devices.

Allegheny Power has developed two programs which can be utilized for new technologies including experimental equipment or devices, including the Custom Technology Applications Program and the Custom Applications Program. Allegheny Power will evaluate all projects submitted under these programs for selection of the programs and measures to provide incentive, and will manage these programs to limit any funding provided for experimental equipment or devices to no more than two percent.

9.1.6. Describe how the plan will be competitively neutral to all distribution customers even if they are receiving supply from an EGS.

All EE&C and DR programs included in the plan were developed without any consideration given to the status of the customer receiving supply from an EGS. Any customer can participate in any EE&C and DR program and no provisions of these programs limit or restrict the customer's ability to receive supply from an EGS. Allegheny Power is proposing several rate options for customers that may not be applicable to a customer receiving supply from an EGS.

9.2 Other Key Issues

9.2.1. Describe how this EE&C plan will lead to long-term, sustainable energy efficiency savings in the EDCs service territory and in Pennsylvania.

Allegheny Power believes its plan will drive long-term sustainable energy efficiency savings among customers for key reasons as follows:

Allegheny Power's portfolio of energy efficiency and conservation, and demand response programs enable all customers to participate in one or more programs. Programs were selected to target the major energy-consuming systems, which are heating, HVAC, major consumer appliances and lighting, with a sufficiently broad scope to provide an opportunity for all Pennsylvania customers to participate. Programs were also selected to target each customer class. Long-

term sustainability is supported by having the most customers and customer classes actively participating in an energy efficiency and conservation, and demand response programs.

The design of the proposed programs is to provide incentives to customers to install more efficient end-use devices. With rebate programs in place, vendors will increase their stock of high-efficiency appliances, or no longer stock standard efficiency appliances (which is reported to have resulted from rebate programs in California) and customers more consistently choose high-efficiency appliances, thus leading to increased energy efficiency.

Understanding that changing customer behavior is the ultimate objective, the logical progression is to first focus on the deployment of more efficient equipment via the incentive programs and then shift the focus to the manner in which it is operated by facilitating interactive customer participation. Program offerings will expand from targeting equipment efficiency to targeting more efficient equipment operation and energy usage, with the implementation of smart meter infrastructure that will provide customers with more real-time information that will enable customers not only to understand the consequences of their energy decisions, but to react to them in real-time. In addition, new rate offerings are proposed to provide incentive and support long term energy efficient behavior among customers.

9.2.2. Describe how this EE&C plan, and the EDC, will avoid possible overlaps between programs offered in different Pennsylvania EDC service territories as well as possibly programs offered in neighboring states.

Allegheny Power conducted program design in coordination with input received from various stakeholders, including State agencies and other utilities. Allegheny Power conducted twelve stakeholder and working group meetings throughout the program development process to solicit stakeholder input and feedback regarding the development of the Company's Plan. The stakeholder process also included numerous informal meetings and discussions which provided the Company with valuable input on the proposed programs.

In addition, Allegheny Power completed benchmarking studies in an effort to ensure the reasonableness/viability of its program proposals. In doing so, numerous utilities were contacted to ascertain the parameters of the programs offered and the relative success of those program offerings. This permitted Allegheny Power to design its programs in consideration of programs offered elsewhere in the State or region to minimize customer confusion as much as possible.

Allegheny Power has contacted other PA EDCs to discuss common programs in order to establish common program elements, including incentive levels, where possible. The Company fully supports working with other utilities in establishing common equipment eligibility requirements and incentive levels, to the extent

possible, to avoid conflict or overlap between similar programs. Allegheny has also leveraged its EE&C programs in Maryland as much as possible and strived to maintain program consistency including eligible equipment and incentive levels with both other PA EDCs and the Company's programs in Maryland.

9.2.3. Describe how this EE&C plan will leverage and utilize other financial resources, including funds from other public and private sector energy efficiency and solar energy programs.

Allegheny Power fully intends to leverage and utilize available funding resources to the extent possible in the delivery of this plan. At this time, the Joint Utility Usage Management Program services will primarily be provided through state agencies that have access to the American Recovery and Reinvestment Act (ARRA) funding through which stimulus dollars have been designated for program services for energy reduction for low-moderate income customers. Allegheny Power will continue to explore additional funding under the Act or from other resources to promote, enhance or expand services to customers.

9.2.4. Describe how the EDC will address consumer education on energy efficiency, conservation, solar and solar photovoltaic systems, and geothermal heating, and other measures.

Background

Education has proven to be a valuable component of energy-efficiency programs and experience has shown that energy-efficiency programs increase energy savings and enhance the persistence of savings. Education causes the customer to be more committed to the program and gives the customer control over energy usage and savings. Customer education and awareness is essential for the successful implementation of these proposed energy-efficiency and conservation programs. A successful awareness campaign activates the participant base required for these programs to achieve the Act 129 goals.

The Plan will leverage the on-going Pennsylvania Consumer Education Program, which is designed to educate customers that electric rates are increasing and the steps they can take to use less energy and manage their bills.

Allegheny Power's Corporate Messages

- Allegheny Power is committed to minimizing the environmental impact of its operations and, along with its employees, will promote energy conservation and efficiency.
- Allegheny Power is committed to helping its customers make smart energy choices and Watt Watchers is Allegheny Power's program to help customers learn more about saving energy and money.
- In implementing Act 129 the Company will develop new energy conservation programs and information to help customers manage their electric bill and use energy more efficiently.

Allegheny Power is actively engaged in new technologies, such as smart grid initiatives and advanced meters. The Plan will leverage the on-going Pennsylvania Consumer Education Program,¹¹² which is designed to educate customers that electric rates are increasing and steps they can take to use less energy and manage their bills.

Allegheny Power's customer education plan is designed to meet the mandated energy reductions set forth in the Act by informing customers and successfully deploying programs and technology to increase conservation while relying on customer acceptance and willingness to change their energy usage behavior.

This plan recognizes that meeting the requirements of Act 129 will require an evolving strategy that will change over time. The plan will remain flexible in its key messages and tactics to continually evolve to support a developing strategy.

Allegheny Power will integrate its Act 129 awareness campaign with its ongoing Consumer Education Plan which is designed to educate customers that rates are increasing and that there are steps they can take to use less energy and manage their bills. The combined plan will be known as the Pennsylvania Watt Watchers Energy Efficiency and Conservation Campaign.

The combined plan will incorporate a general awareness campaign and program-specific campaigns, and will build upon the messages delivered by the Company's Consumer Education Plan. Together, the two Act 129 plan components will:

- Build awareness of Allegheny Power's consumption and demand reduction efforts;
- Position the Allegheny Power brand as a leader in energy conservation, awareness and efficiency; and
- Transform Allegheny Power's relationship with its customers from one of a highly reliable supplier of energy to a partner in energy conservation and environmental stewardship.

Pennsylvania Watt Watchers Energy Efficiency & Conservation Campaign

Overview

Allegheny Power's Act 129 general awareness campaign is focused on educating customers about the benefits of energy efficiency and conservation, and influencing customers to make decisions that reduce their energy consumption.

The Company's plan assumes the following definitions:

- Energy Efficiency & Conservation - focused investment for consumption reduction by Allegheny Power and/or customer; and
- Demand Response - enables and rewards changing customer behavior through meters and dynamic rates & tariffs.

¹¹² The Pennsylvania Consumer Education Plan funding is not included within this filing or cost recovery request.

The Pennsylvania Watt Watchers Energy Efficiency & Conservation Campaign provides Allegheny Power's customers with education and information regarding the benefits of energy-efficiency and conservation. This program is the vehicle to educate customers regarding the benefits of energy-efficiency and conservation as well as inform them of opportunities to reduce their electricity bills through EE&C activities.

To meet the mandated reductions specified in Act 129, customers must be educated to make informed choices about participation in programs that will not only meet their energy needs, but also have the added benefits of reducing their energy costs and protecting the environment. Through a combination of educational and promotional messaging throughout the duration of this program, the Pennsylvania Watt Watchers Energy Efficiency & Conservation Campaign will employ the AIDA model¹¹³ to focus key communications and marketing campaigns. The basic four steps of the process include:

- Increasing market awareness of energy efficiency and conservation, and brand of Allegheny Power;
- Generating stakeholder interest by communicating the value proposition of the programs;
- Creating desire for conservation and demand response; and
- Crafting actionable opportunities that encourage adoption and purchase.

Allegheny Power's plan will integrate a general awareness campaign along with program-specific campaigns. The objectives for the Pennsylvania Watt Watchers Energy Efficiency & Conservation Campaign are to:

- Educate all classes of Allegheny Power customers about opportunities to reduce their electric bills through energy efficiency, conservation, and demand response programs as well as to educate customers on the no and low cost actions they can take;
- Motivate customers to participate in one or more of the new programs offered to reduce energy consumption;
- Demonstrate how participation in one or more of the new programs can offset the cost of the monthly surcharge;
- Assist customer understanding of the benefits of these programs to the environment and to securing a reliable energy future; and
- Provide clear, easily understood information so that customers can make informed energy decisions.

¹¹³ Attention, Interest, Desire, Action. This is a traditional model of the purpose and flow of marketing communications and direct sales efforts.

Program Implementation—Marketing Plan

The Pennsylvania Watt Watchers Energy Efficiency & Conservation Campaign is planned for rollout in the first quarter of 2010. The first partial program year will end in May 2010. Three full-year programs beginning June 1 and ending on May 31 will follow. The last program year ends May 31, 2013. The communication plan outlines key messages, branding and visual identity considerations, stakeholder needs, and planned communications events and activities. The plan will be shaped by the knowledge and feedback obtained through a series of customer and stakeholder meetings. Communications tactics will include a variety of media that will address various areas of the Company's residential and non-residential customer base including low-income and hard-to-reach customers. To be effective, the program will use consistent design techniques across all media elements. Message delivery platforms will include newspaper and radio advertisements, bill inserts and bill messages, attendance at special events, distribution of information during trade shows, conventions or any other special events held in Allegheny Power's Pennsylvania service territory, press releases, websites, customer training and personal contacts. The Pennsylvania Watt Watchers Energy Efficiency & Conservation Campaign is designed to be flexible to the changing needs of the program requirements and the customers' response to the campaign. Education efforts are anticipated to continue through the length of this education program.

Leveraging its established Watt Watchers Consumer Education Plan, Allegheny Power will create a message platform built around a theme of energy-efficiency and conservation and the steps customers can take to save electricity and manage their electric bills.

First, Allegheny Power will develop a comprehensive geographic media analysis of its Pennsylvania service territory to determine county-by-county media coverage that will fulfill its communication objectives. This will include:

- Newspaper coverage analysis
- Radio analysis (metro, suburban and small-market coverage)
- TV/cable Direct Marketing Association penetration analysis
- Business-to-business print coverage analysis
- Non-traditional media coverage analysis

Second, Allegheny Power will develop a comprehensive demographic targeting analysis of all customer classes in order to determine targeting requirements for buying multimedia advertising. Allegheny Power will utilize extensive customer demographic data to shape the appropriate media usage by their target. This will be done by examining media habits of those within the target demographic groups using local syndicated research such as Scarborough, Media Audit and/or Marshall Marketing. Due to the geographic uniqueness of the Allegheny Power footprint, media selection will be highly weighted based on the ability to deliver within the designated geography with minimal waste.

Marketing Strategy

Allegheny Power will execute a two-tiered strategy to communicate the energy efficiency and conservation programs.

Tier One

Allegheny Power will create an umbrella message to educate customers that there are energy efficiency & conservation and demand response programs available. This communication will be delivered via mass media and will direct customers to the web to learn more about the specific programs that will benefit their lifestyle.

Tier Two

The second tier will involve customer segmentation to determine which customers/counties have the highest concentration of energy consumption. Directly targeting these specific targets will allow Allegheny Power to focus their dollars and create the biggest return on investment.

Both Tier One and Tier Two strategies will encourage enrollment in the programs, but Tier Two will be much more targeted and focused on enrollment. Identification of customers who are “early adopters” of the programs will be a key component of the targeted marketing approach. Additionally, Allegheny Power will highlight corporate and employee results in EE&C initiatives to underscore that the company is an equal partner and actively supports the goals of Act 129.

Target Audiences

Residential energy customers:

- People in the households responsible for reviewing and paying utility bills
- African-American and Latino markets
- Senior Citizens
- Low Income Households
- Rural Households
- School-Aged Children

Commercial energy customers:

- Small business customers

All segments will be targeted for Tier One messaging. A select group will be more targeted for Tier Two communications. Allegheny Power’s account managers will be used to market those programs designed for large commercial industrial customers—leveraging existing relationships with those customers.

Program Components

Allegheny Power will utilize the following marketing mix to communicate to its customer base:

Tier One

- Customer Service Center/Fulfillment Provider
- Conservation Service Provider(s)
- CBO Outreach
- Newspaper
- Radio
- Internet
- Non-traditional Vehicles
- Press Releases
- Personal Contacts
- Educational Materials

Tier Two

- Bill Inserts
- Direct Mail/Email
- Non-traditional Vehicles

Tier One Approach

1. Customer Service Center Training

Allegheny Power will train its customer service center representatives so they are prepared to assist customers by providing them up-to-date information on energy efficiency, conservation and details of specific Act 129 programs.

2. Conservation Service Provider(s)

CSPs will offer a unique point-of-entry to customers, especially the audit programs. Participating customers will already be engaged in the process of improving energy efficiency and conservation so the CSP will be in an excellent position to provide information on the full portfolio of programs.

3. Community-based Outreach

Comprehensive customer education programs are most efficient when they include a partnership with established organizations and agencies. The Company will develop outreach plans as needed to reach diverse stakeholder groups.

Special events offer unique opportunities to talk face-to-face with customers and answer any questions they have about specific programs and energy savings available to them. Business and community events can be used to highlight program features and technologies in ways that advertising cannot and allow Company representatives to make personal presentations with the opportunity for customers to have their questions answered in familiar surroundings.

4. Newspaper

Newspaper is geographically flexible and can be purchased to cover Allegheny Power's entire footprint. Newspaper offers the ability to communicate necessary message details and offers a format appropriate for announcements. Newspaper ads will be placed within the appropriate editorial section whenever possible; for example, running small business ads in the business pages of the newspaper. Print advertising will complement the radio spots and provide a visual aid as well as permit specific information about the programs to be communicated to customers. Print placements reach various sized minority populations and feature various sized advertisements.

5. Radio

Radio is another mass media vehicle useful to reach a broad audience base with the Company's general awareness message. Radio also allows for flexibility in the message mix and station selection. Radio also provides an effective tool to reach illiterate populations and also customers for whom English is a second language.

6. Internet

Up-to-date information on Allegheny Power's education campaign and program offerings will be posted on its web site. The web site will present information for residential, commercial and industrial customers, including Watt Watchers materials and information about specific programs

7. Non-Traditional Communication Vehicles

An analysis will also be conducted to determine the effectiveness of innovative, non-traditional vehicles to reach target audiences. Creative and production viability among desired media will also be reviewed. Non-traditional advertising will be an important element to connect with hard-to-reach audiences in an unexpected and niche way.

Allegheny Power intends to spread its messages through unconventional and innovative vehicles that may include, but are not limited to:

- Energy efficiency and conservation reminders, such as switch plates, magnets and reusable shopping bags printed with energy conservation messages;
- Social media; and
- Targeted e-mail blasts for customers who request e-mail updates.

8. News Releases

News releases will be issued to keep all stakeholders abreast of the energy awareness effort and ultimately to alert them of the specific programs that will be available to help save energy.

9. Personal Contacts

Allegheny Power's employees will create an awareness and interest in energy conservation and demand response while incenting early adoption and transformation. Allegheny Power's account managers will provide personal communication with large commercial and industrial customers to answer specific questions and provide additional information.

10. Educational Materials

Allegheny Power will create educational materials to provide detailed program information to targeted audiences and complement other campaign elements. Some materials will target small business customers and make materials available through outreach at business-oriented events, such as chamber of commerce meetings, through the web site and mailed-upon-request information. Printed materials will also be developed for approved programs targeting other customer segments.

Tier Two Approach

1. Bill Inserts

Bill inserts provide flexibility to customize messages to specific demographics within the Allegheny Power footprint. Act 129 bill inserts will be incorporated into the regular cycle of inserts that are sent to Pennsylvania customers. Inserts will support the General Awareness Campaign but can also be more program-specific as needed.

2. Direct Mail

Allegheny Power will use direct mail as a way to target specific residential and small business audience segments. Information will include materials explaining how to conserve energy, and the programs that will be provided to help customers manage electricity consumption. The Company is able to geo-target certain customer segments and communicates more specific and relevant messages.

3. Email Newsletters

Allegheny Power will encourage customers to provide their email addresses so that the Company can send them monthly or quarterly EE&C newsletters. The newsletters will highlight program results and reinforce key plan messages.

4. Non-Traditional Vehicles

Allegheny Power will use non-traditional vehicles to reach its customer base in an unexpected or niche way.

Program Implementation Activities for 2009/2010:

After Commission approval of the Company's plan Allegheny Power will launch the Pennsylvania Watt Watchers Energy Efficiency & Conservation Campaign

marketing plan to inform customers of the programs, program components, the benefits of energy conservation and the values of participating in these efforts.

Implementation of the Pennsylvania Watt Watchers Energy Efficiency & Conservation Campaign will begin with high-level public relations and mass media advertising that will create immediate awareness among customers and community leaders who are influential in educating customers and encouraging them to participate in energy efficiency and conservation programs. Small business customers will also be targeted through outreach to organizations that serve them, seminars and educational functions. Throughout the campaign, detailed publications and a web site will be available for those customers who seek more information or to sign up for programs.

Program Economics

Program Assumptions and Analysis

For estimating costs of the Pennsylvania Watt Watchers Energy Efficiency & Conservation Campaign, Allegheny Power assumed newspaper and radio advertising would be supplemented by bill inserts providing customers with campaign awareness information each year, additional special events per year centered around activities that would provide customer-related information regarding energy efficiency and conservation, direct mailing(s) to target audiences that describe specific programs, and customer training sessions per year providing contact with targeted customers.

9.2.5. Indicate that the EDC will provide a list of all eligible federal and state funding programs available to ratepayers for energy efficiency and conservation.

Allegheny Power plans to promote and provide to customers any opportunities for funding that are available for energy efficiency and conservation. This information is contemplated to be included in relevant program marketing materials, on the Company's web site or through other marketing and advertising channels as available. A partial list of these funding sources is found in Appendix Section 10.7.3.

9.2.6. Describe how the EDC will provide the public with information about the results from the programs.

Allegheny Power maintains an on-line database of available agencies for Company representatives to use as a reference for referrals that provides information on available bill assistance and energy efficiency and conservation programs.

Allegheny Power also informs customers of funding and programs via bill inserts, direct mailings and its website.

10. Appendices

A. Commission approved electricity consumption forecast for the period of June 1, 2009 through May 31, 2010.

1. INTRODUCTION

Allegheny Power, a subsidiary of Allegheny Energy Service Corporation, is seeking vendors to manage system load by developing a load curtailment program for both small commercial and industrial, and large commercial and industrial customer classes. The program is designed to capture electrical demand reduction opportunities in the commercial and industrial sectors during the 2010-2013 implementation periods.

1.1 Background

On October 15, 2008, Governor Edward Rendell signed Act 129 of 2008 (“the Act” or “Act 129”) into law. The Act took effect 30 days thereafter on November 14, 2008. Among other things, the Act created an energy efficiency and conservation program, codified in the Pennsylvania Public Utility Code at Sections 2806.1 and 2806.2, 66 Pa. C.S. §§ 2806.1 and 2806.2. This program requires an EDC with at least 100,000 customers to adopt a plan, approved by the Commission, to reduce, by May 31, 2013, peak demand by a minimum of four-and-a-half percent (4.5%) of the EDCs annual system peak demand measured against the EDCs demand average over the 100 highest peak hours during the period of June 1, 2007 through May 31, 2008.

1.2 Buyer Overview:

Allegheny Energy headquartered in Greensburg, PA., is an investor-owned electric utility with total annual revenues of over \$3 billion and more than 4,000 employees. The company owns and operates generating facilities and delivers low-cost, reliable electric service to 1.6 million customers in Pennsylvania, West Virginia, Maryland and Virginia. For more information, visit the company’s website at www.alleghenyenergy.com. Allegheny Power is the delivery side of the Allegheny Energy Corporation

State	Residential	Commercial	Industrial
Maryland	220,000	22,500	2,100
Pennsylvania	620,000	81,000	13,500
Virginia	85,500	14,150	1,550
West Virginia	440,000	61,000	9,150

1.3 Purpose

As described herein, the Allegheny Power (Allegheny or Company) is requesting the services of a contractor to provide one, or more of the following:

- Perform an initial market assessment of the load resources that are available from Allegheny's commercial and industrial customer base.
- Design, document, market and execute a comprehensive and complete Load Curtailment plan for Demand Response w/ Allegheny Power's PA Commercial and Industrial customers, on Allegheny's behalf, for delivery years 2010/2011 and 2011/2012.

Allegheny Power currently administers a demand response program as a Curtailment Service Provider in PJM's capacity market. It is Allegheny's intent for the DR vendor to administer this program on Allegheny's behalf, continuing to work as a CSP within the guidelines of PJM's capacity market for the 2010/2011 and 2011/2012 delivery years.

- Design, document, market and execute a comprehensive and complete Load Curtailment plan for Demand Response w/ Allegheny Power's PA Commercial and Industrial customers, on Allegheny's behalf for delivery years 2012/2013 delivery years.

Upon the discontinuation of the PJM demand response program for the 2012/2013 delivery years, the vendor will implement the demand reduction program per the goals of Allegheny to continue to meet the requirements of Act 129.

- Design, document, market and execute a customer demand response (load control) program. The main objective of this program is to offer for a customer to control their demand at and within their facility by implementing a self dispatched demand control system at and within the customer's facility. The end result for the customer is that he will maximize savings by controlling their monthly peak demand reducing the demand cost charged by the utility rate structure.

1.4 Expectations

The contractor must have the capability directly or through a subcontractor to perform curtailment services for the demand response program which is consistent with accepted curtailment program standards and protocols, and to comply with any Pennsylvania Public Utility Commission (“PA PUC”) and PJM requirements per PJM’s Reliability Assurance Agreement (RAA) and Open Access Transmission Tariff (OATT), and PJM Manual #M18. It is expected that the selected bidder and the Company’s personnel will work very closely to ensure the Curtailment Service Provider proposal meets all applicable requirements.

The process may include working with other stakeholders such as PA PUC staff, PJM staff, PA PUC’s statewide Plan Evaluator and applicable Pennsylvania Consumer Advocates.

The Company is issuing this Request for Proposal (“RFP”) with the goal of obtaining proposals for a comprehensive curtailment plan of the Company’s curtailment program. The PA Act 129 programs may change because of PUC action, the establishment and feedback from a collaborative group or other stakeholders, or the Company’s decisions. For the purposes of responding to this RFP, assume that there will be no changes to what was filed for PA Act 129 and that there will be no changes to the PJM RAA, OATT or Manual M18.

The winning bidder will execute a contract in the form of the Standard Terms and Conditions attached hereby, with the Company. Additional other contractual requirements will be required for the bidder to enter into a contract with Allegheny to perform Curtailment Service Provider activities within the PJM markets. Allegheny will make available such documents upon review of vendor’s proposals and issuing notice that Allegheny wishes to proceed with vendor’s proposal.

2.0 DEMAND RESPONSE PROGRAM

2.1 Overview

The Company will be implementing a suite of Demand Response programs to provide customers with cost saving opportunities, as well as providing for environmental benefits and a positive impact on regional loads. The programs covered in this RFP are limited to providing a load curtailment type demand response program for Allegheny’s commercial and industrial customers. The assessment of the demand response markets and potential programs are being evaluated by responses to the following items:

- Initial Market Assessment
- Curtailment Service Provider in PJM as Agent for Allegheny
- Allegheny Demand Response Program
- Individual Customer Demand Response (Control) Program

**** Allegheny is open to other alternative proposals that would help meet the requirement of Act 129.**

2.2 Pennsylvania Act 129 Requirements

The goal of Allegheny Power’s Demand Response program is to reduce the peak load on the system by 4.5% during the top 100 hours of operation. Based on historic operating data, a demand reduction target of 157 MW, averaged over the top 100 summer (June – September) operating hours is Allegheny’s goal. Allegheny will be implementing other demand response initiatives, including contributions from energy efficiency measures that will also contribute to the Act 129 demand reduction Goal. The award of a contract to implement any demand response program is contingent upon any approvals of the Pennsylvania Public Utility Commission.

2.3 Market Analysis of Demand Response Opportunity

Allegheny is requesting an analysis of the available demand potential for each customer segment described in Section 2.4.1 of this RFP. The goal of the program is to achieve a minimum controllable load reduction based on the available market. The following items shall be addressed in the study:

- a. Identify a minimum controllable and stretch goal for load reduction per the following customer segments:

Small Commercial/Industrial	Demand < 500 kW
Large Commercial/Industrial	Demand > 500 kW
Government	Schools
	Higher Education Non-Profit Municipalities

- b. Based on the overall study of available demand, the vendor shall assign a “confidence level” rating to determine how much of this demand is realizable. The “confidence level” shall be broken down in the following ranges:

<u>Confidence</u>	<u>Realizable MW</u>
100%	

75%

50 %

25% and below

c. The vendor shall describe the manner, size and hourly shape of the proposed load reduction. Please state any data or other requirements for the analysis in your proposal. Allegheny will provide metered interval data that is available for each customer segments and customer data that is available including: SIC code, peak demand, etc..

d. The vendor shall provide an analysis of the capacity markets and anticipated changes to the PJM ILR programs.

2.4 Curtailment Service Provider - DR Program for Delivery Years 2010/2011 and 2011/2012

Allegheny is requesting a DR vendor to implement a demand response program as a Curtailment Service Provider as an agent for Allegheny , per the requirements of PJM. Allegheny is presently acting as Curtailment Service Provider, and we are asking a DR vendor to administer this program as an agent for Allegheny. The load curtailments will need dispatched, monitored, measured, and verified by the vendor within the following general parameters:

Program Type(s)	Interruptible Load Resource Economic Load Resource
Program Delivery Year	June 1 – May 31
Interruptions Per Year	Up to 10
Interruption Duration	Up to 6 consecutive hours
Notification Time	1 - 2 hours, by customer
Load Management Type	Firm Service Level or Guaranteed Load Drop
Load Reduction Amount	100 kW, minimum
Metering Requirement	Interval metering (see Section 2.4.2)
Load Shedding Speed	1-2 hours

2.4.1 Customer Segments

The program will be focused on load control for the following customer segments:

Large Commercial Load: There are approximately 2900 commercial customers with a demand ranging from 100 kW to 2000 kW. The market potential for this customer segment is estimated at approx. 754 MW (average over top 100 hours).

Large Industrial Load: There are approximately 150 customers with a demand larger than 2000 kW. The market potential for this customer segment is estimated at approx. 554 MW.(average over top 100 hours).

Small Commercial Load: There are approximately 89,000 general service customers with a demand up to 100 kW. The market potential for this customer segment is approx. 646 MW. (average over top 100 hours).

2.4.2 Metering and Communications Requirements:

The vendor shall have the technology to monitor in real time the aggregate load that is enrolled in Allegheny's program, and the response that is achieved during the demand response event. Allegheny expects the vendor to actively manage a demand response event using real time data in order to pro-actively manage the response and make adjustments as needed.

The DR Vendor will be required to provide and install all necessary communications and data equipment at the participating customer's facility. If the DR vendor needs to install additional sub-metering to complete the installation, the vendor shall do so at their expense. All additional metering required shall meet the accuracy and reliability standards, as required by Allegheny and/or PJM. The DR vendor shall be responsible for all control power and and/or communications services as part of the installation.

At present and for the purposes of this proposal, Allegheny will provide KYZ pulses for use by the DR Vendor in determining the interval loading. The wiring will be

terminated local to Allegheny's revenue meter. Allegheny will NOT provide any shadow metering or sub-metering equipment for this program.

2.4.3 DR Vendors Scope of Work

The successful vendor shall provide the following services, as part of the contract:

- 2.4.3a The bidder will act as an agent for Allegheny in the marketing of commercial and industrial customers into the demand response program. The vendor shall be responsible for developing all marketing material, including promotional literature, directly marketing by phone calls or customer visits, as well as using direct mail pieces. Allegheny's industrial customers are presently managed by an Account Management staff. All direct contact with large commercial and industrial accounts will be co-managed with Allegheny's Account Managers. Marketing and promotional materials will be made available to Allegheny for review and approval prior to program start.
- 2.4.3b The DR Vendor will provide all necessary forms and/or contracts to enroll customers into the program. Contractual documents will be made available to Allegheny for review and approval, prior to program start.
- 2.4.3c The DR vendor will provide all necessary infrastructures to implement, monitor, dispatch, notify, measure and verify the demand response activities.
- 2.4.3d The DR vendor will perform all services to act as a Curtailment Service Provider per PJM's requirements.
- 2.4.3e The DR vendor will perform all resource testing, reconciliation and compliance activities related to participating as a Curtailment Service Provider per PJM's requirements.

2.4.4 Event Notification

The DR vendor shall develop a process to notify participating customers and Allegheny for all dis-patchable events. The vendor shall use both an automated telephone calling system and an email paging system to notify customers of the events.

The basic notification procedure, shall include the following entities:

- **For PJM Emergency (ILRP) or Economic (ELRP) Events**
 1. PJM calls ILR/ELR Event and Notifies DR Vendor, and Allegheny Power Dispatch
 2. Allegheny Dispatch contacts Allegheny Electric Supply
 3. DR Vendor contacts Customer
 4. DR Vendor contacts Allegheny Power Account Manager (if managed account)

2.5 Demand Response Program for Delivery Year 2012/2013

Allegheny is requesting a proposal for a Demand Response program for delivery years 2012/2013 to meet the goals of Act 129.

The program has to consider the following technical and energy market issues:

- Advance Metering Initiatives
- Effect of hourly rate structures
- Direct Load Control – Small commercial customers air conditioners, or other loads
- Future capacity markets
- Energy efficiency contributions for demand response
- Dispatch methods and technology
- Event notification, reconciliation and compliance activities

The following delivery and pricing topics need to be addressed in the DR vendor's proposal:

- Explain how contract will be structured between Allegheny –Customer-DR Vendor
- Costs: Setup costs, cost per customer, \$/MW/Day, stretch goals, etc.
- Identify staffing or other requirements for both DR Vendor and AP personnel
- Timeline for development of Demand Response Program
- Identify customers and target DR amounts per the following segments:

Small Commercial/Industrial

Demand < 500 kW

Large Commercial/Industrial	Demand > 500 kW
Government	Schools, Higher Education, Non-Profit Municipalities

2.6 Demand Response Load Resources Only

Allegheny is requesting proposals for any load resources that directly wants to bid price and volume for Allegheny's Demand Response program in delivery years 2012/2013.

For example: XYZ Food Mart has 100 stores that are controlled by a central office and can contribute 1200 kW, in aggregate, and can self dispatch the load response.

As part of your proposal, please address the following technical and delivery issues:

- Estimated load resource(s) MW and confidence level
- Description of resource
- Proposed curtailment hours
- Proposed load control schemes
- Restrictions or limitations
- Energy efficiency contributions for demand response
- Advanced metering requirements

2.7 Customer Demand Response (Control)

Allegheny is requesting proposals for the development of a customer demand response (load control) program. The main objective of this program is for a customer to control their demand by implementing a self dispatched demand control system. The end result for the customer is that he maximizes saving by controlling the demand charge by the utility rate structure. The program would not consider any type of grid initiated demand response events. The program should consider the following technical issues:

- Energy Efficiency Contributions for Demand Response
- Metering Requirements, including Advanced Metering Infrastructure
- Hourly, Time of Use Rate Structures
- Dispatch/Control Technology (hardwired, wireless, etc.)
- Controllable loads (furnaces, air handlers, compressors, heating, HVAC, etc.)

3.0 GENERAL SUBMITTAL INFORMATION

This Section of the RFP provides information for bidders concerning the submittal process, general requirements, schedule, and qualifications. Specific requirements for the content and preparation of bids are contained in Section 4.

3.1 Questions, Contact and Communications

All communications between Allegheny Power and interested bidders will be handled by Allegheny Power's strategic sourcing web site (Power Advocate see Appendix A10). These communications include the posting and receiving of questions and answers, and submitting electronic versions of the proposal.

No other contact with Allegheny Power, related to this RFP shall be made after the release of the RFP. Any unauthorized contact may result in the disqualification of the contacting firm's proposal(s). Bidder questions related to this RFP should be submitted using the online discussion tool on Allegheny Power's strategic sourcing website. Questions will be accepted until 5 PM EST on May 22, 2009. Questions submitted after this date will not be addressed. Copies of all questions and answers will be posted on the strategic sourcing website and will be available to all invited bidders.

3.2 Intent to Bid

Potential bidders are encouraged but not required to submit an E-mail notification of intent to submit a proposal in response to this RFP. This information helps Allegheny Power plan and administer the RFP. Bidder's notice of intent to bid should be submitted by Thursday, May 21, 2009 to Allegheny Power's strategic sourcing web site (PowerAdvocate see Appendix A10).

3.3 Bidders' Conference Call

Bidders are encouraged, although not required, to participate in a bidder's conference call. The conference call will provide interested firms with an opportunity to seek clarification on the requirements of the Residential and Commercial EM&V RFP. Following is the schedule and instructions for the conference call:

Date: Wednesday, May 20, 2009 Time: 1-2:30 PM EST

Dial-In Information:

1. Dial 1-888-521-5895
2. You will then be prompted to enter an extension = 3144
3. You will then be asked to introduce yourself = Please use Co. Name

3.4 RFP Submittal Format and Due Date

Bidders are required to submit an electronic version of their proposal to Allegheny Powers strategic sourcing website. The submittals must be uploaded by 4 PM EST Friday May 29, 2009. Late submittals will be rejected.

Bidders are required to submit two documents: their proposal (as an Adobe Acrobat .pdf file) and a Microsoft Excel file with their pricing. See Section 4 for details.

Allegheny Power is not liable for any costs incurred by any person or firm responding to this

RFP or participating in best and finals interviews.

3.5 RFP

Schedule

RFP release	May 15, 2009
Bidder’s conference call	1-2:30 PM EST, May 20, 2009
Intent to bid notice	May 21, 2009 by 5:00PM
Close of RFP question period	5 PM EST, May 22, 2009
Electronic Proposals due	4 PM EST, May 29, 2009
Internal Technical Evaluation by Allegheny Power	June 1 to 5, 2009
Interviews	Week of June 08, 2009
Contract negotiations	Week of June 08, 2009
Anticipated contract start date	Week of January 01, 2010

3.6 Minimum Qualifications

Any bidding team must have at least the following qualifications to be considered for selection:

1. Key staff members must have demonstrated experience delivering high-quality implementation services for utility sponsored Demand Response Programs. Demonstrated organizational, financial, data tracking and reporting abilities that will adequately support the work load and demands associated with the implementation effort;
2. The lead firm or entity must demonstrate sufficient infrastructure, history and experience to handle the required work and manage sub-contractors, if applicable;
3. Demonstrated ability to provide independent implementation of Allegheny Power’s Demand Response programs with the implementation free of any conflict of interest with other services and products offered by the bidder’s team. **The DR Vendor must be registered with the Pennsylvania Public Utility Commission as a Conservation Service Provider prior to contract execution.**

3.7 Instructions to Bidders

The following are general instructions to bidders. Specific requirements for the content and format of the proposals are presented in Section 4.

3.7.1 Modification or Cancellation of the RFP

The Company reserves the right, in its sole judgment and discretion, to modify or cancel this RFP. The Company will post a notice on the RFP website and make reasonable efforts to notify participants of any such changes, cancellations, or schedule changes. The Company shall not have any responsibility for making such notification. The Company shall not have any liability for damages suffered by bidders as a result of modification or cancellation of the RFP.

3.7.2 Proposal Preparation Costs

Costs for developing proposals are entirely the responsibility of the bidder.

3.7.3 Post Proposal Negotiation and Awarding of Contracts

Allegheny Power reserves the right to negotiate both price and non-price factors during any post-proposal negotiations with a finalist. Allegheny Power has no obligation to enter into an Agreement with any respondent to this RFP and may terminate or modify this RFP at any time without liability or obligation to any respondent. This RFP shall not be construed as preventing Allegheny Power from entering into any Agreement that it deems appropriate at any time before, during or after this RFP process is complete. The Company may, but is not obligated to, request additional information and materials from any bidder for evaluation of a proposal. Failure to provide such additional information and materials may result in rejection of the proposal for further evaluation.

3.7.4 Allegheny Power is under No Obligation to Execute Agreement

Allegheny Power reserves the right to terminate the RFP process or reject any or all of the proposals received in response to this RFP at its sole discretion. Also, the bidder understands that this RFP is not intended to and does not constitute a commitment by Allegheny Power to consummate any definitive agreement with any bidders. Neither the Company nor any bidder will have any rights or obligations of any kind whatsoever by virtue of the RFP or any other written or oral expression by any party hereto.

3.7.5 Changes in Scope of Work

Provisions for payment for any additional work or changes in the scope of the work shall be mutually agreed upon at the time the EM&V Contractor is requested to perform additional work or change the scope of the work. Allegheny Power reserves the option to price the work on lump sum, time and material or competitive bid or other basis.

3.7.6 Changes in Key Personnel

Changes in EM&V C key personnel may not be made without written approval of Allegheny Power.

3.7.7 Bidders Acceptance and General Terms and Conditions

The submission of a proposal to Allegheny Power shall constitute a Bidder's acknowledgement and acceptance of all the terms, conditions and requirements of this RFP. (See Appendix A3 for

General terms and Conditions, Form 26-069)

A list of exceptions to this document should be returned with bidder's response, see Section 4 of this RFP.

Bidders shall note the minimum mandatory insurance requirements in Item 8 of the GT&C's and the additionally insured will be "Allegheny Energy Service Corp. and West Penn Power Co." Bidders should also note the following Sales tax message "Buyer is exempt from PA sales tax – direct permit applies" which applies to Item 15 of the GT&C's.

3.7.8 All Submitted Proposals Become Exclusive Property of Allegheny Power

All proposals submitted to Allegheny Power pursuant to this RFP shall become the exclusive property of Allegheny Power and may be used for any reasonable purpose by Allegheny Power.

3.7.9 Confidentiality Terms and Proprietary Information

Allegheny Power shall consider materials provided by bidders in response to this RFP to be confidential. However, bidders also agree that Allegheny Power may provide copies of the bidder's proposal to the PA PUC. Bidders should be aware that their proposal, even if marked "Confidential," may be subject to discovery and disclosure in regulatory or judicial proceedings that may or may not be initiated by Allegheny Power. Bidders may be required to justify the requested confidential treatment under the provisions of a protective order issued in such proceedings. If required by an order of an agency or court of competent jurisdiction, Allegheny Power may produce the material in response to such order without prior consultation with the bidder. The successful bidder will be required to execute a confidentiality agreement with Allegheny Power prior to contract award (Appendix A4).

3.7.10 Warranty on Information

The information provided in the RFP, or on the Company's RFP website, has been prepared to assist bidders in evaluating the RFP. It does not purport to contain all the information that may be relevant to a bidder in satisfying its due diligence efforts. The Company makes no representation or warranty, expressed or implied, as to the accuracy or completeness of the information, and shall not, individually or as a corporation, be liable for any representation expressed or implied in the RFP or any omissions from the RFP, or any information provided to a bidder by any other source.

A bidder should check the Company's website frequently, to ensure it has the latest documentation and information. Neither the Company nor its representatives shall be liable to a bidder or any of its representatives for any consequences relating to or arising from the bidder's use of outdated information.

3.7.11 Hold Harmless

Bidders shall hold Allegheny Power harmless of and from all damages and costs, including but not limited to legal costs, in connection with all claims, expenses, losses, proceedings or investigations that arise as a result of the RFP or the award of a bid pursuant to the RFP.

3.7.12 Permits, Licenses and Compliance with the Law

Supplier shall obtain all licenses and permits that may be required by any governmental body or agency necessary to conduct supplier's business or to perform hereunder. Supplier's

subcontractors, employees, agents and representatives of each in performance hereunder shall comply with all applicable governmental laws, ordinances, rules, regulations, orders and all other governmental requirements.

3.8 Notice to Bidders

Allegheny is notifying potential vendors that other contractual requirements will be required for the vendor to enter into a contract with Allegheny to perform Curtailment Service Provider activities within the PJM markets. Allegheny will make available such documents upon review of vendor's proposals and issuing notice that Allegheny wishes to proceed with vendor's proposal.

4. SUBMITTAL REQUIREMENTS

4.1 Outline

Proposals must include each of the following items. Please see sections of this RFP listed in parentheses for more information regarding a specific item.

- Proposal cover and transmittal letter
- Executive Summary
- Work Scope and Schedule (5.1)
- Short Essays (5.2)
- Proposal Pricing (5.3)
 - Pricing Explanation and Allocation Logic (5.3 Appendix A1)
 - Pricing Template (5.3 Appendix A2)
- Project Management (6.1)
- Bidder's Background (6.2)
- Bidder's Experience (6.3)
- References (6.4)
- Vendor Information, Form 37-215 (Appendix A5)
- Subcontracting Plan, Form 37-216 & 37-217 (Appendix A6)
- Safety & Health Commitment (Appendix A8)
- Substance Abuse Program (Appendix A9)

4.2 Electronic Submittal Instructions

Electronic submittal should consist of two items:

1. A .doc or .pdf file containing all of the items listed in Section 4.1 of this document, in the order presented.
2. A completed Pricing Template in .xls format, satisfying the criteria listed in Section 5.3 of this document.

The PDF file and Excel spreadsheet should be attached to an email addressed to the designated contact person at the Company. The appropriate contact information is listed in Section 6.1 of this document.

5.0 PROPOSAL REQUIREMENTS

To be considered, bidders must adhere to the guidelines and requirements set forth in this RFP. The Company reserves the right to make changes to the RFP including the elimination of some conservation measures with proper notification to bidder. The Company also reserves the right to withdraw the entire RFP at any time in the process. The Company is under no obligation to procure services under this RFP.

In addition to providing a Work Scope and Schedule document meeting the criteria listed in Section 4.1, proposals should also contain detailed responses to all of the questions or statements listed in Sections 5.2 (Short Essays), 5.3 (Proposal Pricing), and 6 (About the Bidder). Where a statement is made, Bidder should indicate how it will comply with the statement. All responses should clearly indicate the referenced section. Please note a response to each one even if it repeats that of another section, notes not applicable, or response declined. Responses should be thorough yet concise. Excessive length is discouraged.

5.1 Work Scope and Schedule

At a minimum, bidders should include a detailed description of the following items in their Demand Response proposal. The bidder may separately address different methods or strategies should the bidder perceive significant benefit there from. The bidder needs to clearly mark the sections to which it is responding.

1. Detailed cost-effective Demand Response proposal program will include, but is not limited to, the following elements:
 - a. approach for assessing each evaluation component (market, process and impact) with the timing, key milestones, and scheduled tasks
 - b. description of the evaluation objectives, evaluation questions, and evaluation rigor level for each program category
 - c. description of the expected evaluation techniques, explicitly specifying the standards or protocols relied upon
 - d. description of expected evaluation software that will be used
 - e. description of the expected market research including customer surveys or other surveys
 - f. description of data and information expected to be needed from program administrators
 - g. description of primary research expected to be necessary
 - h. description of how the overall program evaluation and project management are expected to evolve over time
 - i. how program results are communicated to key stakeholders to facilitate their incorporate into future program design with the IT methodology and format you can support.

2. Data collection and management including proposed reporting. (e.g., PA Act 129 quarterly reports, PJM Capacity Markets & Reports)
 - a. Description of electronic information expected to be needed from Allegheny Power
 - b. Description of electronic information expected to be provided to Allegheny Power
 - c. Description of system interfaces expected to be needed with Allegheny Power and other third-party systems
 - d. Description of data file formats that will be supported (i.e. xml, flat files, etc)
 - e. Description of data transfer technologies that will be supported (i.e. ftp, EDI, etc)
 - f. Frequency of data transfer
3. Reporting documents for the Company, along with recommended evaluation schedule for each program and detailed work plan.
4. Plan for annual updates to Demand Response Plan.

5.2 Short Essays

Please respond to the questions and information requests that follow in the order in which they appear, referencing the section number. If there is additional information not solicited in the included questions that would provide important information concerning the bidder's approach and capabilities to satisfy the requests of this RFP, feel free to include that information at the end of the answers to questions. All responses should be provided in Microsoft Office format. Questions or statements should be restated and followed by the bidder's responses. Tables should be completed in the format provided.

5.3 Proposal Pricing

The pricing instructions and the pricing template that must be completed by the bidder can be found in Appendices A1 and A2. If granularity of any portion of the pricing template is deemed excessive, please explain the reasoning and provide the greatest level of pricing detail possible without being excessive.

6. ABOUT THE BIDDER

6.1 Project Management

Please answer the following questions to provide information about your project management approach.

1. Describe your methodology for project management.
2. From past projects, indicate the amount of the Company' support such as number of FTEs expected to support this project on an ongoing basis and in what capacities or to handle what tasks.
3. Describe your methodology and tools for managing project quality. Include a methodology for tracking issues (both resolved and unresolved).
4. Describe your project problem resolution process.
5. Describe how updated methodologies, baselines, standards would be handled in analysis, reporting, etc.
6. Include a Management and organizational chart that depicts the proposed relationships and proposed agreements among team members.
7. Identify lead staff member assigned to manage the evaluation work (including short bio and explanation of why they are qualified to manage the work).
8. Identify key personnel assigned to the project and describe their responsibilities.
9. Lists anticipated subcontractors and describe subcontractors' mark-up percentage.
10. Describe use of local contractors.

6.2 Bidder's Background

At a minimum, bidder must provide the following information relative to bidder's company and team members. If the RFP response includes subcontractors, it must make clear the subcontractor's responsibility, scope of work, and capabilities to perform that work. Identical information must be provided for each subcontractor and/or joint venture member:

1. Years of professional practice (Provide the number of years of professional experience related to the areas of evaluation).
2. Total number of clients in operation with a similar demand response programs.
3. Key people assigned to evaluate the programs (include their experience and area of expertise).
4. Demonstrated ability to provide demand response solutions.
5. The D&B report reflecting the bidder's financial status.

6.3 Bidder’s Experience

Summarize experience and relate its relevance for each of the proposed programs including specific examples where the bidder has executed similar demand response programs for that particular customer segment throughout North America. Several examples of actual programs should be provided.

6.4 References

Appendix A6 - Vendor Company and Evaluation Questionnaire requires 3-4 client references. Vendors should provide references for each one of the residential and small commercial programs that the Vendor has evaluated. Please follow the below format when providing references.

Customer/Client Name					
Reference Name					
Title					
Phone Number					
Mailing Address					
Fax Number					
Customer Type (for example, Investor Owned Utility, co-op and/or municipality)	Customer Size	Program Evaluated	Program Participants	Study Complete Date	Evaluation Technique (engineering, interval metering, and/or billing data)

7. SELECTION PROCESS AND EVALUATION CRITERIA

Allegheny Power's business principles include selecting consultants using a fair, transparent, well defined, clear and unbiased process based on explicit selection criteria. Using these principles, a quick and straightforward selection and contracting process is planned with work scheduled to begin at the end of January 2010. This Section describes the selection process and evaluation criteria.

7.1 Selection Process

All proposals will be evaluated using the following process:

Step 1: Threshold Review

The threshold review ensures that proposals contain all required elements and that the bidders demonstrate that there are no legal claims/judgments or conflicts of interest that would make it difficult for them to perform. The threshold review, and ongoing reviews, will also include consideration of omissions, inaccuracies or misstatements. Allegheny Power can remove proposals that do not pass the threshold review from further consideration.

Step 2: Evaluation Criteria

Proposals passing the threshold review are evaluated using a formal review and scoring process. Evaluation criteria are described below.

Step 3: Interviews

Top-ranked bidders may be invited to an interview. Presentations and answers to reviewer questions will be scored. Criteria will include:

- o Quality of presentation
- o Interaction and cohesiveness of the team
- o Responses to questions

Note that Allegheny Power reserves the right to forego this step should a single proposal be ranked in the technical review as clearly superior to others.

Step 4: Selection and Contract Negotiation

Allegheny Power will initially notify only the selected bidder(s) for the evaluation of the DR portfolios via E-mail. This notification will initiate the Agreement negotiation process. Should Allegheny Power and the selected bidder(s) be not able to quickly enter into an Agreement, Allegheny Power may terminate negotiations and initiate negotiations with the next ranked bidder(s).

7.2 Evaluation Scoring Matrix

Allegheny Power will base their evaluation of proposals on the scoring matrix in Table 7.1. Brief descriptions of the criteria are provided below.

Table 7.1: RFP Evaluation Criteria/Scoring Matrix

	Approximate Weighted Percent
Part A: Technical Approach	30%
1. Proposal quality	
2. Thoroughness and practicality of approach	
3. Clarity regarding Allegheny Powers Demand Response objectives and quality of proposed approach for meeting those objectives	
4. Best practice, innovation, and likelihood for success in accurately measuring impacts.	
5. Balancing of complex issues for conducting Demand Response for Allegheny Power	
Part B: Organizational and Management Capability	30%
1. Demonstrated competence and experience	
2. Management structure	
3. References	
4. Assigned staffing for prime and subcontractors	
Local presence	
Part C: Cost (per individual item, as defined)	40%
1. Initial Market Assessment – Firm Cost	
2. Curtailment Service Provider Yearly Cost Unit Cost – Customer Equipment Capacity and Energy Payment - % Split	
3. Demand Response Program – Allegheny Yearly Cost Unit Cost – Customer Equipment Capacity and Energy	
4. Load Resources Only - Price and volume: Committed Capacity (Load Reduction) - MW Capacity Price - \$/MW/Day	
5. Customer Demand Response (Control) Program	
Total	100%

7.2.1 Technical Approach

Included in this category will be an assessment of the overall quality of the proposal and the approach to achieving successful demand response start-up, planning, delivery, and reporting. This will include assessment of ability to achieve proposed program milestones and sub-tasks and achieve demand response results. Allegheny Power will award points based on the assessment of the quality of approach to the work scope, and proposed metrics and reporting approaches. Significant consideration will also be given to the overall thoughtfulness and creativity of the approach and means of allocating the budget between Tasks and Programs proposed in order to achieve high quality demand results that meet or exceed Allegheny Power's objectives.

This purchase order is issued for the completion of an initial Market Assessment for Demand Response of Allegheny Power's commercial/industrial customer base per Scope of Work in Section 5.3.1 of Allegheny Power's "Request for Proposal for the Demand Response Provider for Non Residential Demand Response Programs per Pennsylvania Act 129, Version 1, dated May 14, 2009.

As part of this purchase order, Seller will not make any onsite visits to, or have any contact with, Allegheny Power customers.

Seller has confirmed that it is not affiliated with an Electric Distribution Company (EDC) through ownership, partial ownership or control. Affiliation or merger with an EDC by a Conservation Service Provider (CSP) at any time during the term of the contract will constitute a breach of the contract by the CSP and cause the termination of the contract. The CSP will immediately notify Allegheny Power of a merger and provide for automatic termination of the contract.

Seller is required to maintain registration with the PA PUC as an approved CSP during the term of the contract.

Incorporated by reference are the following:

1. PowerAdvocate bid event 18833, Demand Response Provider (Non-Residential)-BMC472-S, dated 05/15/09.
2. Roth Bros. proposal (Initial Market Assessment, Section 5.3.1 only) submitted via PowerAdvocate by Kevin Callahan and Gene Ameduri, as revised by email dated 06/16/09 from Gene Ameduri.

PAYMENT TERMS NET 60 DAYS.

Allegheny Energy Service Corporation General Terms and Conditions shall apply.

This purchase order is dependent upon the approval of the Energy Efficiency and Conservation Plan by the Pennsylvania Public Utility Commission.

D. Program by program calculation of savings and costs for each program year. Include separate sections for each program with sub-sections for each year describing savings and costs information. Cost data should include for each program (and for General Administrative Cost Areas of Planning, Evaluation and Other) and each program year separate budgets for (see Example Tables 6A, 6B, and 6C):

- **Direct Program Costs**
 - EDC labor and expenses
 - EDC materials and supplies
 - CSP labor
 - CSP materials and supplies
 - Other outside services (define)
 - Customer incentives
 - Other (define)

Allegheny follows specific methodologies and procedures for the allocation of the cost of shared assets, employees, and services among Allegheny's entities. These methodologies and procedures have been developed to be consistent with applicable state and federal regulatory requirements, to protect ratepayers and to ensure the integrity of the financial information presented for each entity within the Allegheny Energy, Inc.'s holding company system. In addition, there are Sarbanes Oxley controls in place that specifically address the issue of appropriate cost allocation among the entities within SAP.

The Federal Energy Regulatory Commission recently completed an audit of Allegheny Energy Service Corporation's reporting and allocation methodologies in 2008. Allegheny's entities are also audited periodically by the State Commissions.

Allegheny Power is using SAP (System Applications Product) to track actual internal and external program costs. Cost objects have been created to accurately capture all costs incurred related to PA Act 129. There are controls in place to ensure that all costs charged to these cost objects are accurate. Each month, reports are run and costs are analyzed by Corporate Accounting, Internal Auditors and a Financial Support Specialist in the Customer Services area.

The costs incurred related to Act 129 include internal labor and overheads, employee expenses, outside services, advertising and other miscellaneous expenses. These dollars are tracked for labor, outside services, etc., for each program and measures within the plan. All outside services invoices are reviewed by the departments responsible for procuring the service. A summary report of these costs is prepared each month for management's review.

All costs and labor incurred related to planning and program development, cost benefit analysis, measurement and verification, and reporting will be captured using these SAP cost objects.

See Tables 7A through 7E for program by program calculations of savings and costs for each year. See Tables 6A and 6B as follows for program specific costs by cost element. See section 10.E. for a description of cost elements.

- **Administrative Costs, including but not limited to costs relating to plan and program development, cost-benefit analysis, measurement and verification, and reporting.**

Allegheny Power calculated administrative costs by estimating costs associated with specific activities, utilizing price quotations and by using actual charges year to date to establish program development costs. Administrative costs include start-up costs such as information technology (IT), database and web portal development, and program development. IT, database and web portal development costs were estimated based on IT requirements that were identified specific to the proposed EE&C and DR programs. Other administrative costs include costs for program development costs, with this component based on actual charges year to date. See Tables 6A and 6B as follows for the common and specific costs for administration.

- **Total costs.**

Table 6A: Portfolio-Specific Assignment of EE&C Costs

Residential Portfolio (including Low-Income)							
EE&C Program	Cost Elements (\$)						Totals

E. Calculation methods and assumptions. Describe methods used for estimating all program costs, including administrative, marketing, and incentives costs; include key assumptions. Describe assumptions and present all calculations, data and results in a consistent format. Reference Appendix D.

Allegheny estimated program costs as follows:

- The Company issued RFP's, quotes and/or RFI's for various services and based its estimates off of the RFP, quote and/or RFI results. RFP, quote and/or RFI results were utilized to estimate costs for rebate administration, appliance recycling, energy efficiency kits, home energy audits, commercial and industrial energy audits, measurement and verification of program results and the demand response study. Key assumptions include program business requirements and participation levels, as well as the results of the RFP, quote and/or RFI received for the various functions and services.
- The Company calculated costs based on detailed business or IT requirements, or specific estimates associated with the function or service, for calculating the cost for program administration and management, database and web portal development, engineering services, marketing and training. Estimates based on similar projects or rates were utilized where applicable. Key assumptions includes the specific business or IT requirements of the Plan or Program upon which costs were calculated, the estimate for a specific function or service required of a program, and the marketing plan. Participation levels, to the extent that this impacts the cost, were included in the business or IT requirements or specific estimates in arriving at the final cost.
- The Company calculated costs based on expenditures associated with the specific function or service incurred YTD, and an estimate of the time commitment required to perform or complete the function or service going forward. Program design and development expenditures were calculated in this fashion. Key assumptions include the required remaining or on-going time commitment for the function or service.

The Company allocated program costs to customer sectors, programs and/or measures (where applicable) on a shared or participation level basis, and to specific programs and/or measures when such cost was specific to the program or measure. Energy usage by customer sector was also utilized to allocate certain costs to customer sectors.

See Section 3.2 to 3.5 for program cost information. See Tables 6A and 6B as presented in Section 10.D. for the program specific and common costs for each program and respective customer sector. The following table summarizes the cost detail elements in which the Company calculated program costs:

Program Cost Elements	
Element	Description
Utility Administrative Costs	Includes internal utility costs associated with program design, development, management, training, support, and quality assurance. Costs captured in this activity include: employee labor, benefits, expenses, materials, and supplies. Also includes start-up costs including: database development, web portal and IT requirements.
Marketing Costs	Includes costs associated with marketing, advertising, trade shows and events, brochures, bill inserts and collateral materials, toll free numbers, and web site. Costs captured in this activity include: labor, benefits, expenses, consultants, contractors, materials, and supplies.
Outside Services	Includes the cost of contractors and consultants used in support of program design, development, support, and quality assurance. Captures all of the utility's external costs associated with program administration. Examples include recycling vendors, program administrators, development of educational materials, rebate administration, engineering services and other third party services.
Evaluation Costs	Includes costs associated with measurement and evaluation. Costs captured in this activity include: labor, benefits, expenses, consultants, contractors, tracking systems, materials, and supplies.
Incentives	All rebate dollars paid directly to customers as well as "indirect" payments to customers such as discounted prices and give aways. Also includes utility costs not paid by the customer that are attributable to providing energy efficiency services to customers (e.g. technical audits, employee and contract labor for installing efficiency measures, expenses, materials, and supplies).

F. Other**F.1. List of Acronyms and Abbreviations**

ACEEE	American Council for an Energy-Efficient Economy
AIDA	Attention, Interest, Desire, Action
ASD	adjustable speed drive
BAS	Business Account Specialists
BPI	Building Performance Institute
CAC	central air conditioning
CEE	Consortium of Energy Efficiency

F.3. Smart Meter Procurement and Installation Plan (SMIP)

The basic demand response program concept is that smart metering and associated equipment will be installed to convey energy consumption and price information to customers to enable them to better control their monthly energy consumption and their monthly electricity bills. In order to meet its demand reduction targets in 2013, it is necessary to install SMIP and associated Smart Meters, with installation beginning in 2010. The specific SMIP, including schedule and cost information, will be filed with the Commission on or before August 14, 2009. The Company is hopeful that its SMIP and tariff filings will be approved in a timely manner in order for the Company to meet its goals.

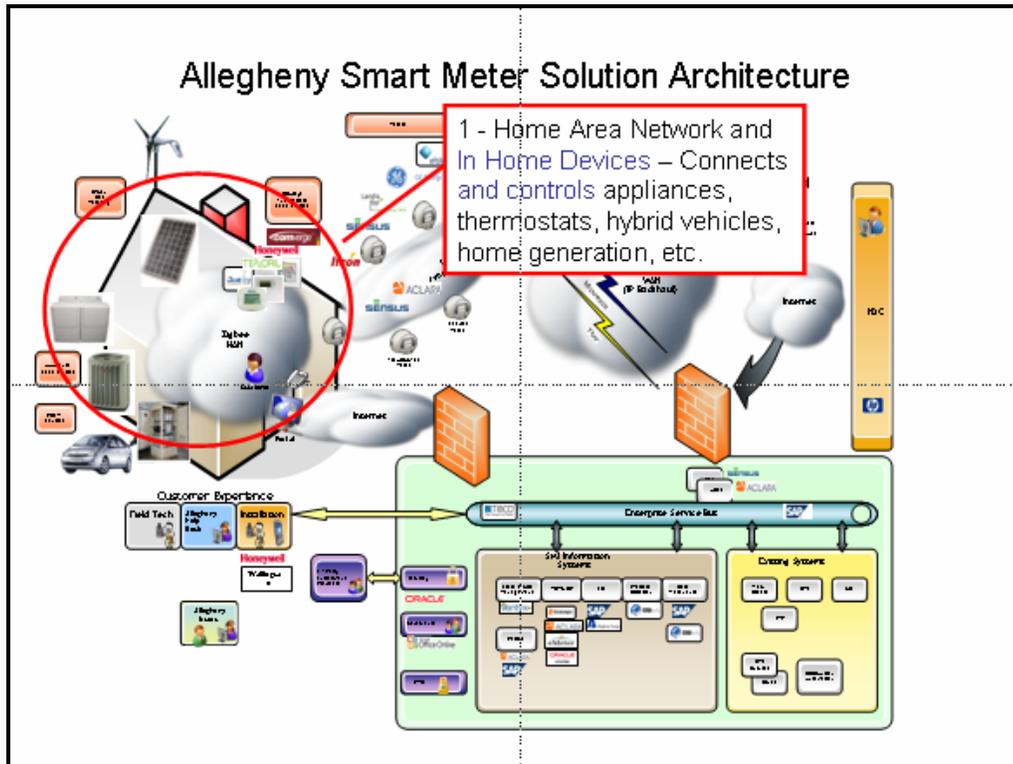

There are five basic components of the SMIP as depicted in the following diagrams.

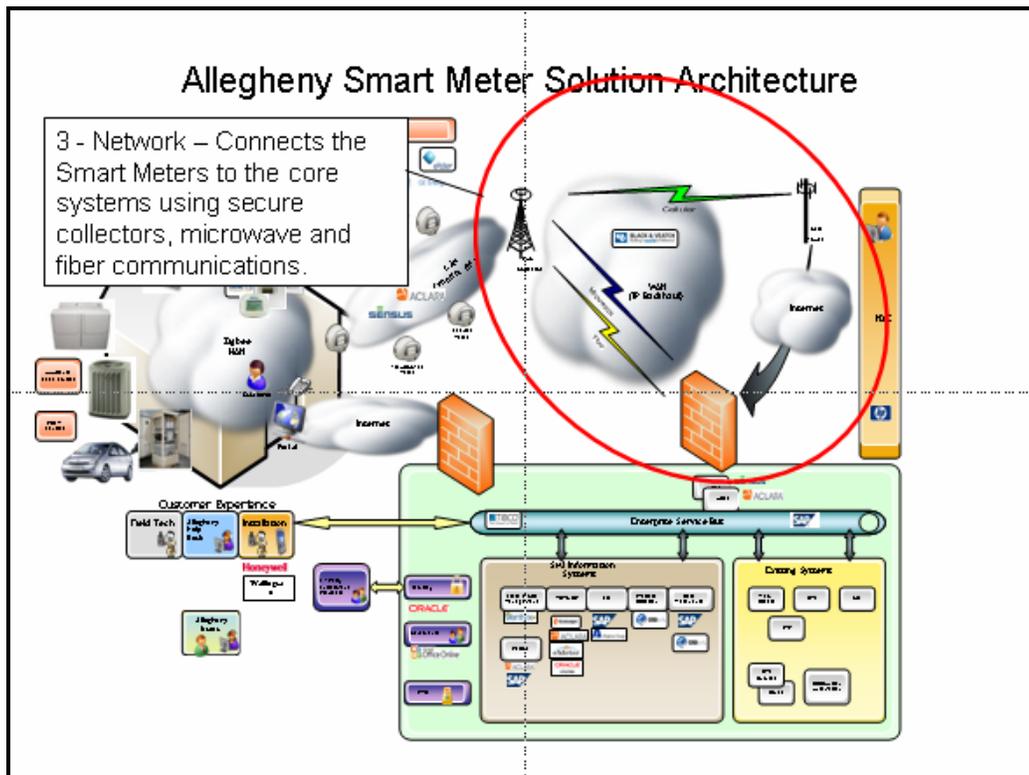

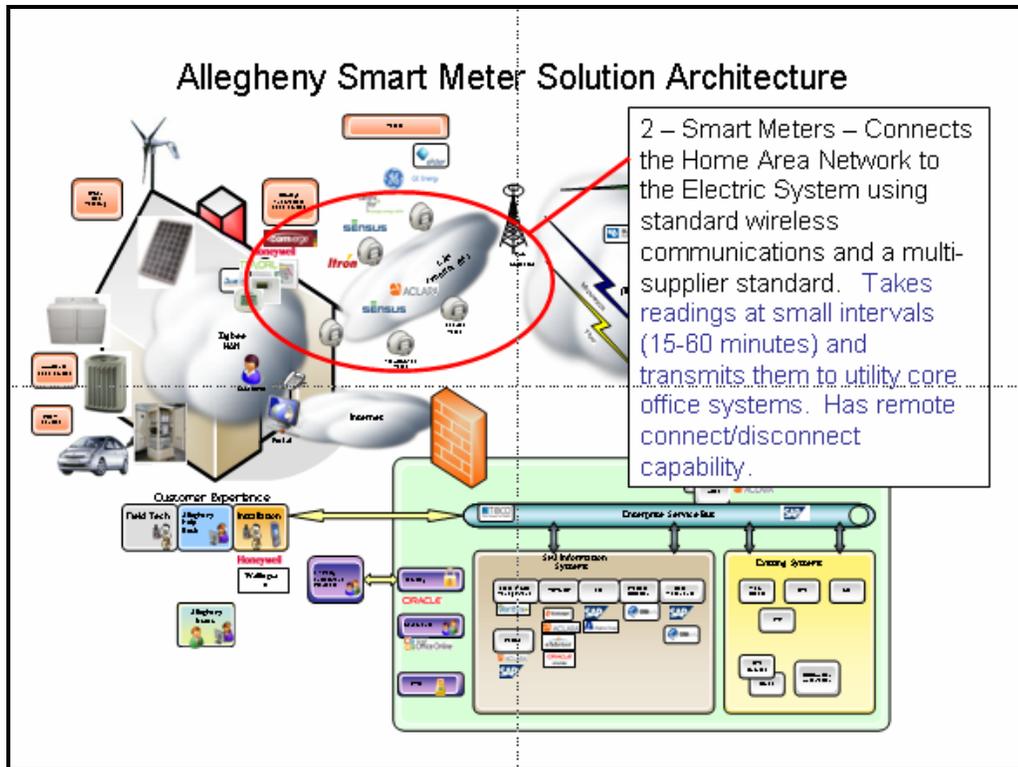

1. Home Area Network and In Home Devices – Connects and controls appliances, thermostats, hybrid vehicles, home generation, etc.
2. Smart Meter – Connects the Home Area Network to the Electric System using standard wireless communications and a multi-supplier standard. Takes readings at small intervals (15-60 minutes) and transmits them to utility core office systems. Has remote connect/disconnect capability.
3. Network – Connects the Smart Meters to the core systems using secure collectors, microwave and fiber communications.

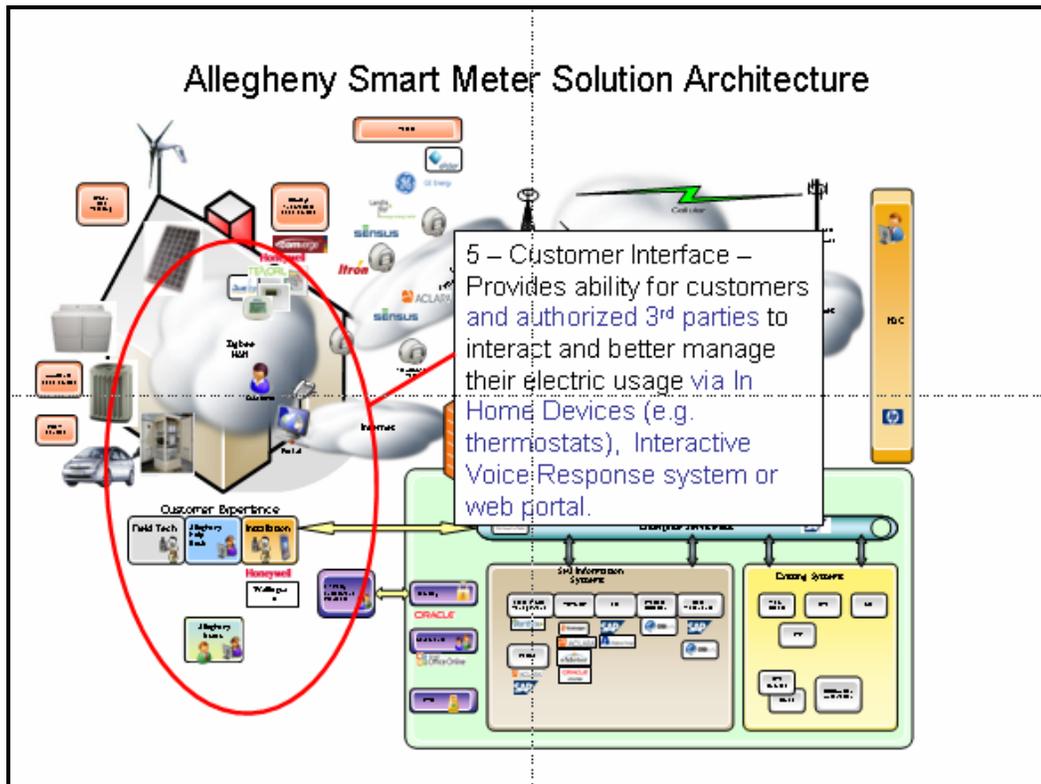

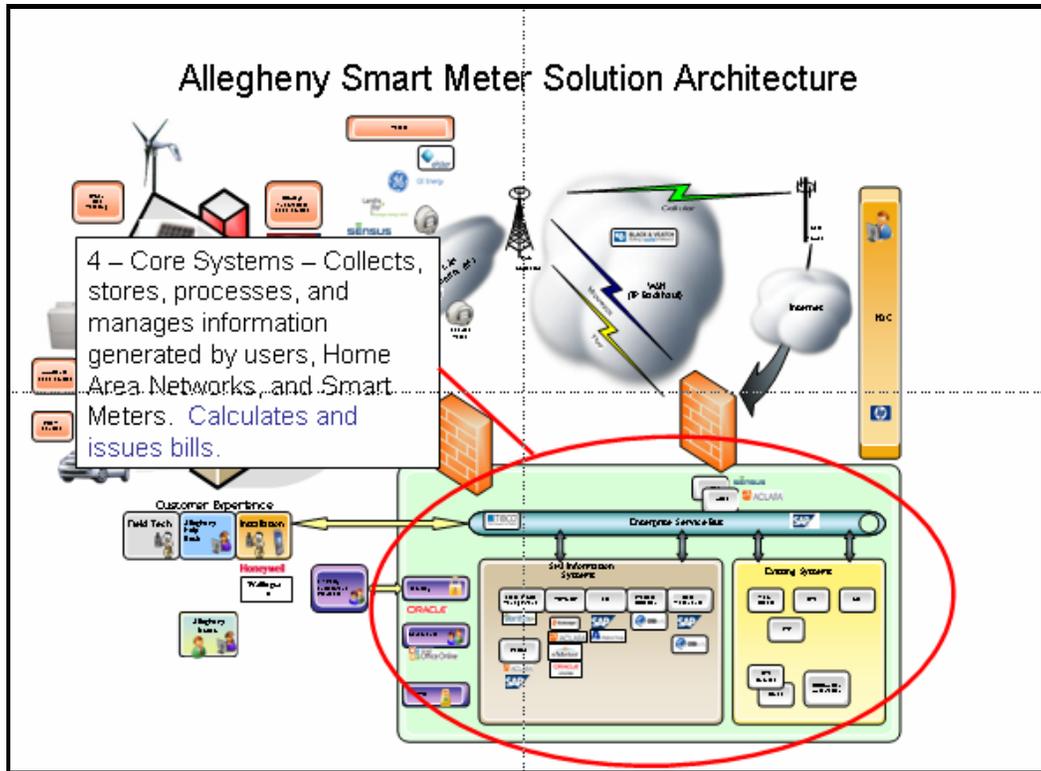

4. Core Systems – Collects, stores, processes, and manages information generated by users, Home Area Networks, and Smart Meters. Calculates and issues bills.
5. Customer Interface – Provides ability for customers and authorized third parties to interact and better manage their electric usage via In Home Devices (e.g. thermostats), Interactive Voice Response system or web portal.

A wide range of benefits other than operational savings have been attributed to Smart Metering investments. The list below provides some of the potential benefits that are specific to EE&C/DR initiatives.

- Increased utility EE, DR, and PR participation.
- Expanded product offerings from competitive retailers.
- Avoided capacity costs.
- Avoided energy costs.
- Enable demand-side generation technologies.
- Facilitate revolutionary technologies like Plug-in-Hybrid Electric Vehicles and on-site renewable generation.
- Conservation effect on energy usage from direct feedback.
- Modernization of electricity industry.
- Accelerate adoption of more efficient devices and technologies.

Table 4. Program Summaries

	Program Name	Program Market	Program Two Sentence Summary	Program Years Operated	Net Lifetime MWh Savings	Net Peak Demand kW Savings	Percentage of Portfolio and Total Lifetime MWh savings	
Residential Portfolio Programs (exclusive of Low Income)	<i>Compact Fluorescent Lighting (CFL) Rewards Program</i>	All residential customers	A rebate program that encourages the purchase of single and multipack CFL's. Mail-in rebates and point-of-sale discounts (where possible) will be offered.	4	627,810	339	39%	9%
	<i>Critical Peak Rebate (CPR) Rate</i>	All residential customers with Smart Metering	A rebate rate offering that encourages customers to lower their energy demand during peak load hours by offering a rebate based on their actual energy demand.	3	2,497	9,513	0%	0%
	<i>Residential Energy Star and High Efficiency Appliance Program</i>	All residential customers	A rebate program that encourages the purchase of certain appliances that meet or exceed Energy Star or other efficiency ratings, through mail-in rebates.	4	440,219	19,894	27%	7%
	<i>Residential Home Performance Program</i>	Single family or multifamily residential dwelling units.	A program that educates customers on EE&C and improves overall home performance by promoting and providing the installation of standard EE&C measures. Includes three home energy audit options. Encourages additional qualified measures through mail-in rebate.	4	462,042	6,418	29%	7%
	<i>Programmable Controllable Thermostat (PCT) Program</i>	All residential customers with Smart Metering	A program that provides automated demand response and reduces energy usage during peak load hours through the direct load control of air conditioners. Customers will receive a credit on their bill for participation in this program.	3	2,497	9,513	0%	0%
	<i>Residential HVAC Efficiency Program</i>	All residential customers with air conditioners or heat pumps.	A rebate program that encourages customers to purchase high efficiency air conditioners or heat pumps. Mail-in rebates will be offered for central air conditioners or heat pumps that exceed certain efficiency ratings.	4	69,152	5,515	4%	1%
	<i>Residential Efficiency Rewards Rate</i>	All residential customers with Smart Metering	A rate offering that encourages customers to lower their energy consumption from historical levels. Customers will be provided a credit/discount on their bill based on their actual reduction in energy usage.	3	11,024	959	1%	0%
	<i>Pay Ahead Smart Service Rate</i>	All residential customers with Smart Metering	A billing option that provides customers with a better understanding of their energy usage and the impact on their electric bill. Customers will be provided information regarding their energy usage and account balance to support customer efficiency initiatives.	3	4,724	411	0%	0%
Totals for Residential Sector					1,619,964	52,563	100%	24%
Residential Low-Income Sector Programs	<i>Residential Low Income Home Performance Check-Up Audit & Appliance Replacement Program</i>	Residential customers up to 150% of the federal poverty level.	A program that educates customers on EE&C and improves overall home performance by providing the installation of EE&C measures. Includes replacement of refrigerators and room air conditioners that meet certain qualifications.	4	36,427	1,193	26%	1%
	<i>Residential Low Income Joint Utility Usage Management Program</i>	Residential customers up to 200% of the federal poverty level.	A program that leverages resources and funding to provide comprehensive energy saving measures and weatherization services to low income customers through partnership with gas utilities.	4	101,868	1,210	72%	2%
	<i>Residential Low Income Room Air Conditioner Replacement Measure</i>	Residential Low Income Usage Reduction Program (LIURP) customers.	A program that provides replacement of room air conditioners meeting certain qualifications as an add-on to the Company's existing Low Income Usage Reduction Program.	4	4,010	351	3%	0%
	Totals for Low-Income Sector					142,305	2,753	100%
Governmental / Non-Profit Portfolio Programs	<i>Governmental/Non-Profit Lighting Efficiency Program</i>	All government, school and non-profit customers with lighting.	A rebate program that encourages customers to upgrade lighting systems to more efficiency lighting technologies. Mail-in rebates and/or product buy-downs will be offered for certain lighting replacements or installations including CFL's, T8, LED Exit Signs and LED Traffic Signals.	4	588,345	7,962	100%	9%
	Totals for Gov't/NP Sector Programs					588,345	7,962	100%

	Program Name	Program Market	Program Two Sentence Summary	Program Years Operated	Net Lifetime MWh Savings	Net Peak Demand kW Savings	Percentage of Portfolio and Total Lifetime MWh savings	
Commercial/Industrial Small Portfolio Programs	<i>Commercial HVAC Efficiency Program</i>	Small commercial and industrial and governmental/non-profit customers with air conditioners or heat pumps.	A rebate program that encourages customers to purchase high efficiency air conditioners or heat pumps. Mail-in rebates will be offered for central air conditioners or heat pumps that exceed certain efficiency ratings.	4	60,246	2,522	2%	1%
	<i>Commercial Lighting Efficiency Program</i>	Small and large commercial and industrial and governmental/non-profit customers with lighting.	A rebate program that encourages customers to upgrade lighting systems to more efficiency lighting technologies. Mail-in rebates will be offered for certain lighting replacements or installations including T8, T5, LED Exit Sign and Occupancy Sensors.	4	3,047,224	42,701	94%	46%
	<i>Custom Technology Applications Program</i>	Small and large commercial and industrial customers and governmental/non-profit customers.	An incentive program that encourages energy and demand reductions by providing incentives for qualified projects that improve energy efficiency of customer processes and applications.	3	127,876	2,235	4%	2%
	<i>Time of Use (TOU) with Critical Peak Pricing Rate</i>	Small commercial and industrial customers and governmental/non-profit customers, with Smart Metering.	A rate offering that encourages customers to lower their demand and energy consumption during on-peak and peak load periods by charging a higher price during these periods and a lower price during off-peak periods, that reflects the cost of serving customers during these periods.	3	7,638	2,856	0%	0%
	<i>Hourly Pricing Option (HPO) Rate</i>	Small commercial and industrial customers and governmental/non-profit customers, with Smart Metering.	A rate offering that encourages customers to lower their demand and energy consumption during higher priced periods and/or shift usage to lower priced periods. Billing is calculated from the PJM hourly market pricing for the AP zone.	3	1,348	504	0%	0%
Totals for C/I Small Sector					3,244,333	50,817	100%	48%
Commercial/Industrial Large Portfolio Programs	<i>Custom Applications Program</i>	Large commercial and industrial customers with at least 2,500,000 kWh's energy usage per year.	An incentive program that encourages energy and demand reductions by providing incentives for qualified projects that improve energy efficiency of customer processes and applications.	3	901,721	11,793	82%	13%
	<i>Customer Load Response Program</i>	Small and large commercial and industrial customers and governmental/non-profit customers, with Smart Metering.	A program that provides demand response with participating customers by contracting with customers for load reduction during peak load hours. Customers will receive payment for their participation in Company demand response events.	3	8,074	59,494	1%	0%
	<i>Customer Resources Demand Response Program</i>	Small and large commercial and industrial customers and governmental/non-profit customers.	A program that provides demand response with participating customers by deploying customer load or generation resources during peak load hours. The Company will contract with PJM curtailment service providers for load and generator resources, and a distributed generation manager to operate, maintain and dispatch a customer's standby generator.	3	6,500	30,000	1%	0%
	<i>Commercial and Industrial Drives Program</i>	Small and large commercial and industrial customers and governmental/non-profit customers.	A rebate program that improves customer process efficiency by applying variable frequency drives to existing applications or process loads. Mail-in rebates will be offered for qualifying installations.	4	185,456	2,446	17%	3%
Totals for C/I Large Sector					1,101,752	103,733	100%	16%
Total for Plan					6,696,697	217,828		100%

Chart 1: Gantt Chart of Program Schedule Summary (For Section 1.4)

Please see the following pages for sector specific implementation schedules.

Allegheny Power EE&C and DR Plan Residential Portfolio Implementation Schedule
 - This chart assumes November 2009 Plan approval.
 - Programs included in chart are those for which referenced sector is the primary market.

Key Activities and Milestones	Pre-Plan		Plan Year - 2009				Plan Year - 2010				Plan Year - 2011				Plan Year - 2012				Post Plan				
	'09 Qtr 1	'09 Qtr 2	'09 Qtr 3	'09 Qtr 4	'10 Qtr 1	'10 Qtr 2	'10 Qtr 3	'10 Qtr 4	'11 Qtr 1	'11 Qtr 2	'11 Qtr 3	'11 Qtr 4	'12 Qtr 1	'12 Qtr 2	'12 Qtr 3	'12 Qtr 4	'13 Qtr 1	'13 Qtr 2	'13 Qtr 3	'13 Qtr 4			
Design Portfolio Design and Annual Evaluation	Design S: Jan-09 C: Jun-09						Annual Evaluation Mar-2010					Annual Evaluation Mar-2011					Annual Evaluation Mar-2012					Plan-end Evaluation Mar-2013	
Pre-Implementation Contract for Recycling Services Vendor		S: May-09 C: Jun-09																					
Contract for Implementation Services Vendor		Start Jul-09	Complete Sep-09																				
Contract for EM&V Services Vendor		Start Jul-09	Complete Sep-09																				
Contract for Rebate Processing Services Vendor		Start Jul-09	Complete Sep-09																				
Tracking and Reporting Database			Start Aug-09	Complete Nov-09																			
Program Marketing Plans			Start Aug-09	Complete Nov-09																			
Internal Training (key customer touch points, general employee)				S: Oct-09 C: Dec-09																			
External Training & Relationship Building (State Agency Partnerships, Trade Alleys, Community Based Organizations, etc.)				S: Oct-09 C: Dec-09																			
Implementation Residential Energy Star and High Efficiency Appliance Program					Launch Jan-10																Close May-13		
Compact Fluorescent Light (CFL) Rewards Program					Launch Jan-10																Close May-13		
Residential HVAC Efficiency Program					Launch Jan-10																Close May-13		
Residential Home Performance Program					Launch Jan-10																Close May-13		
Residential Low-Income Home Performance Check-up Audit and Appliance Replacement Program					Launch Jan-10																Close May-13		
Residential Low-Income Joint Utility Usage Reduction Management Program					Launch Jan-10																Close May-13		
Residential Low-Income Room Air Conditioner Replacement Program					Launch Jan-10																Close May-13		
Residential Efficiency Rewards Rate										Launch Jan-11											Close May-13		
Programmable Controllable Thermostat (PCT) Demand Response Program										Launch Jan-11											Close May-13		
Pay Ahead (Smart) Service Rate										Launch Jan-11											Close May-13		
Critical Peak Rebate (CPR) Rate										Launch Jan-11											Close May-13		
Reports PUC Annual and Plan-end Reporting																						Jul-15-13	

Allegheny Power EE&C and DR Plan Commercial/Industrial Small Portfolio Implementation Schedule

- This chart assumes November 2009 Plan approval.
 - Programs included in chart are those for which referenced sector is the primary market.

Key Activities and Milestones	Pre-Plan		Plan Year - 2009				Plan Year - 2010				Plan Year - 2011				Plan Year - 2012				Post Plan			
	'09 Qtr 1	'09 Qtr 2	'09 Qtr 3	'09 Qtr 4	'10 Qtr 1	'10 Qtr 2	'10 Qtr 3	'10 Qtr 4	'11 Qtr 1	'11 Qtr 2	'11 Qtr 3	'11 Qtr 4	'12 Qtr 1	'12 Qtr 2	'12 Qtr 3	'12 Qtr 4	'13 Qtr 1	'13 Qtr 2	'13 Qtr 3	'13 Qtr 4		
Design Portfolio Design and Annual Evaluation	Design						Annual Evaluation Mar-2010				Annual Evaluation Mar-2011				Annual Evaluation Mar-2012				Plan-end Evaluation Mar-2013			
Pre-Implementation Contract for Implementation Services Vendor		Start Jul-09	Complete Sep-09																			
Contract for EM&V Services Vendor		Start Jul-09	Complete Sep-09																			
Contract for Rebate Processing Services Vendor (same vendor as for Residential Rebate Processing Services)		Start Jul-09	Complete Sep-09																			
Tracking and Reporting Database			Start Aug-09	Complete Nov-09																		
Program Marketing Plans			Start Aug-09	Complete Nov-09																		
Internal Training (key customer touch points, general employee)				S: Oct-09 C: Dec-09																		
External Training & Relationship Building (State Agency Partnerships, Trade Alleys, Community Based Organizations, etc.)				S: Oct-09 C: Dec-09																		
Early Notification of Potential Program Availability for Customer Budgeting				S: Oct-09 C: Dec-09																		
Commercial HVAC Efficiency Program						Launch Jan-10													Close May-13			
Commercial Lighting Efficiency Program						Launch Jan-10													Close May-13			
Custom Technology Applications Program						Launch Jan-10													Close May-13			
Time of Use (TOU) with Critical Peak Pricing (CPP) Rate									Launch Jan-11										Close May-13			
Hourly Pricing Option (HPO) Rate									Launch Jan-11										Close May-13			
Reports PUC Annual and Plan-end Reporting													Jul-15-11						Jul-15-12			Jul-15-13

Allegheny Power EE&C and DR Plan Commercial/Industrial Large Portfolio Implementation Schedule

- This chart assumes November 2009 Plan approval.
 - Programs included in chart are those for which referenced sector is the primary market.

Key Activities and Milestones	Pre-Plan		Plan Year - 2009				Plan Year - 2010				Plan Year - 2011				Plan Year - 2012				Post Plan		
	'09 Qtr 1	'09 Qtr 2	'09 Qtr 3	'09 Qtr 4	'10 Qtr 1	'10 Qtr 2	'10 Qtr 3	'10 Qtr 4	'11 Qtr 1	'11 Qtr 2	'11 Qtr 3	'11 Qtr 4	'12 Qtr 1	'12 Qtr 2	'12 Qtr 3	'12 Qtr 4	'13 Qtr 1	'13 Qtr 2	'13 Qtr 3	'13 Qtr 4	
Design Portfolio Design and Annual Evaluation	Design						Annual Evaluation Mar-2010				Annual Evaluation Mar-2011				Annual Evaluation Mar-2012				Plan-end Evaluation Mar-2013		
Pre-Implementation Contract for Implementation Services Vendor		Start Jul-09	Complete Sep-09																		
Contract for EM&V Services Vendor		Start Jul-09	Complete Sep-09																		
Contract for Rebate Processing Services Vendor (same vendor as for Residential Rebate Processing Services)		Start Jul-09	Complete Sep-09

Supporting Cost Documentation: Surcharge Recovery

Please see the following pages for surcharge cost recovery calculations.

WEST PENN POWER CO. d/b/a Allegheny Power
Summary of Program Costs

	Program Costs
<u>Residential</u>	
Low Income Home Performance & Appliance Program	\$ 5,381,563
Low Income Joint Utility Usage Management Program	\$ 6,362,561
Low Income Room Air Conditioner Replacement Program	\$ 1,792,221
Residential HVAC Efficiency Program	\$ 3,570,672
Residential Energy Star & High Efficiency Appliance Program	\$ 16,557,991
CFL Rewards Program	\$ 3,304,607
Residential Home Performance Program	\$ 14,478,886
Programmable Controllable Thermostat Program	\$ 1,718,584
Critical Peak Rebate Rate Offering	\$ 361,780
Residential Eff. Rewards - Pay Ahead Rate Offering	\$ 361,780
<u>Non-Residential</u>	
Commercial HVAC Efficiency Program	\$ 2,238,914
Custom Technology Applications Program	\$ 4,201,958
Lighting Efficiency Program	\$ 16,344,533
Time of Use - Hourly Rate Offerings	\$ 515,174
Commercial and Industrial Drives Program	\$ 3,182,185
Customer Load Response Program	\$ 2,870,711
Customer Resources Demand Response	\$ 3,032,824
Custom Applications Program	\$ 6,280,660
Municipal LED Traffic Signals	\$ 1,692,684
Total	\$ 94,250,287

Above costs exclude GRT of 5.9%

WEST PENN POWER COMPANY

ENERGY EFFICIENCY AND CONSERVATION ("EE&C") SURCHARGE

(C)

In addition to the charges provided in this Tariff and in accordance with 66 Pa. C.S.A. §2806.1, there shall be a surcharge as set forth below to recover the costs associated with Company-sponsored programs for energy efficiency and conservation programs as approved by the Commission. This surcharge is applied to designated Rate Schedules to recover costs allocated to that Rate Schedule. This surcharge will be applied each month until changed by the Commission. The resulting surcharge is in addition to any minimum charge set out in the Rate Schedule and is added to the Customer's bill before any tax surcharge is levied against the Customer's total bill. Amounts billed hereunder shall be subject to late payment charges.

CALCULATION OF SURCHARGE

The EE&C Surcharge is calculated as a levelized surcharge through May 2013. The surcharge is calculated by separating the Program Costs allocated to each Rate Schedule into an energy-related portion and a demand-related portion, and dividing by forecasted distribution energy and distribution demand sales, respectively, for the same Rate Schedule. The calculation includes an Annual Reconciliation Factor adjustment and an adjustment for gross receipts tax. The Annual Reconciliation Factor adjustment will be filed by March 31 to become effective the forthcoming June 1. Upon determination that the surcharge, if left unchanged, would result in a material over/under-collection, the Company may file a proposed interim revision of the surcharge for Commission approval.

For Customers receiving service under Schedule 10, the EE&C Surcharge is added to the Distribution Charge for billing purposes. For all other Customers, the EE&C Surcharge shall be set out separately on the Customer's bill.

Bills shall include an amount equal to the surcharge rate times the number of distribution energy and capacity sales as follows:

EE&C SURCHARGE

Rate Schedule	Rate per kWh	Rate per kW	Rate per kW PLC
10	\$0.00222		
20	\$0.00118		
22	\$0.00098		
30 (small)*	\$0.00071	\$0.34	
30 (large)*			\$0.59
40			\$0.29
41			\$0.29
44			\$0.29
46			\$0.29

*Rate Schedule 30 (small) defined as Customers receiving service under Rate Schedule 30 with a Kilowatt Demand less than 500 kilowatts, and Rate Schedule 30 (large) defined as Customers receiving service under Rate Schedule 30 with a Kilowatt Demand greater than or equal to 500 kilowatts. The Company will categorize Customers as those with Kilowatt Demands less than 500 kilowatts and those with a Kilowatt Demand greater than or equal to 500 kilowatts.

(C) Indicates Change

WEST PENN POWER COMPANY

ENERGY EFFICIENCY AND CONSERVATION ("EE&C") SURCHARGE (Concluded)

(C)

ELIGIBLE COSTS

Costs eligible for recovery through the EE&C Surcharge are approved by the Commission and include:

Program Costs -- Program Costs are the estimated costs for research, development, implementation, and operation of programs to be incurred by the Company and approved by the Commission. Program costs include, but are not limited to, Company labor, rebates and incentives, payments to third parties for program administration and implementation, direct marketing and advertising costs incurred by the Company, market research costs, program development, monitoring and evaluation, consultant and contractor fees, applicable software and software licenses, program measurement and monitoring hardware, and all other administrative activities associated with program development and implementation.

Annual Reconciliation Factor -- The Annual Reconciliation Factor corrects for over/under-collection of Program Costs and may reflect items such as an update of forecasted billing determinants, re-evaluation or re-design of EE&C programs, and re-allocation of Program Costs to the designated Rate Schedules. The Company will submit to the Commission by March 31 of each year: (1) a comparison between forecasted revenues billed and actual revenues billed through February, as adjusted for removal of gross receipts tax; (2) any adjustment to the forecasted revenues anticipated to be billed during March through May, as adjusted for removal of gross receipts tax; (3) any adjustment to the Program Costs levelized through May 2013 based upon actual costs incurred through February and any revised estimates for future months, subject to this Tariff's allocation portion of the amount permitted to be recovered under 66 Pa. C.S.A. §2806.1; and (4) the subsequent reconciliation effect to the EE&C Surcharge adjusted for gross receipts tax and levelized over the period of the upcoming June 1 and continuing through the remaining months of the surcharge. There shall also be a final reconciliation of amounts to be collected or refunded after May 31, 2013.

ENERGY EFFICIENCY AND CONSERVATION ("EE&C") SURCHARGE

In addition to the charges provided in this Tariff and in accordance with 66 Pa. C.S.A. §2806.1, there shall be a surcharge as set forth below to recover the costs associated with Company-sponsored programs for energy efficiency and conservation programs as approved by the Commission. This surcharge is applied to this Tariff to recover costs allocated to this Tariff. This surcharge will be applied each month until changed by the Commission. The resulting surcharge is in addition to any minimum charge set out in the Tariff and is added to the Customer's bill before any tax surcharge is levied against the Customer's total bill. Amounts billed hereunder shall be subject to late payment charges.

CALCULATION OF SURCHARGE

The EE&C Surcharge is calculated as a levelized surcharge through May 2013. The surcharge is calculated by separating the Program Costs allocated to this Tariff and dividing by forecasted distribution PLC demand sales. The calculation includes an Annual Reconciliation Factor adjustment and an adjustment for gross receipts tax. The Annual Reconciliation Factor adjustment will be filed by March 31 to become effective the forthcoming June 1. Upon determination that the surcharge, if left unchanged, would result in a material over/under-collection, the Company may file a proposed interim revision of the surcharge for Commission approval.

Bills shall include an amount equal to the surcharge rate times the number of capacity sales as follows:

EE&C SURCHARGE

Rate per kW PLC
\$0.44

ELIGIBLE COSTS

Costs eligible for recovery through the EE&C Surcharge are approved by the Commission and include:

Program Costs -- Program Costs are the estimated costs for research, development, implementation, and operation of programs to be incurred by the Company and approved by the Commission.
