
COMPETITIVE LOCAL EXCHANGE CARRIER

11. SERVICES PROVIDED TO FORMER CUSTOMERS OF SNiP Link, LLC

11.1 GENERAL

All services, rates and charges listed in this Section are available only to former Customers of SNiP Link, LLC. who were obtained through NetCarrier Telecom, Inc.'s purchase of SNiP Link, LLC's assets in Pennsylvania and who received service under SNiP Link, LLC's Tariff Telephone PA P.U.C. No. 2 at the time of the transfer. These services are not available to new Customers.

11.3 DATA SERVICES

11.3.1 BUSINESS ISDN-PRI SERVICE

A. GENERAL

Business ISDN-PRI is an optional service arrangement for local exchange access based on the Primary Rate Interface (PRI) arrangement of the ISDN. ISDN-PRI is a high capacity access path for communications providing voice or data transmission over the public network.

Integrated Services Digital Network (ISDN) describes the end-to-end digital telecommunications network architecture which provides for the simultaneous access, transmission and switching of voice, data and image services. These functions are provided via channelized transport facilities over a limited number of standard user-network interfaces. The ISDN architecture consists of digital switching systems which connect Primary Rate Interface lines to their serving central office.

Business ISDN-PRI is provisioned on the 1.544 Mbps bandwidth and uses the ISDN architecture of 23 B channels and one D channel or 24 B channels to provide the Customer with the capabilities of simultaneous access, transmission and switching of voice, data and imaging services via channelized transport.

Circuit Switching

Circuit Switching is a switching technique in which an entire circuit or, in a digital switch equipped for ISDN, a specific selection of time slots is dedicated to a given call.

11.3.2 BUSINESS ISDN – BRI SERVICE

A. GENERAL

Integrated Services Digital Network (ISDN) describes the end-to-end digital telecommunications network architecture which provides for the simultaneous access, transmission and switching of voice, data and image services. These functions are provided via channelized transport facilities over a limited number of standard user-network interfaces. The ISDN architecture consists of digital switching systems which connect Basic Rate Interface lines to their serving central office.

Business ISDN-BRI Arrangement provides ISDN capabilities from an ISDN equipped switch in the central office. The BRI Arrangement consists of two “B” (Bearer) channels and one “D” channel (2B+D) which are defined as:

B Channels

The B channels are 64 kilobit per second (kbps) channels used for information transfer between users. The B channels may be used in conjunction with circuit-switched service.

D Channel

The D channel is a 16 kilobit per second packet-switched channel that carries signaling and control for the B channels.

Circuit Switching

Circuit Switching is a switching technique in which an entire circuit or, in a digital switch equipped for ISDN, a specific selection of time slots is dedicated to a given call.

COMPETITIVE LOCAL EXCHANGE CARRIER

11. SERVICES PROVIDED TO FORMER CUSTOMERS OF SNiP Link, LLC, (Cont'd.)

11.3 DATA SERVICES, (Cont'd.)

11.3.3 SECRETARIAL LINES AND ASSOCIATED TELEPHONE ANSWERING EQUIPMENT

A. GENERAL

1. Function

These services are furnished to permit a telephone answering company to answer incoming calls on the central office lines of one or more of their clients by means of Customer-provided secretarial equipment.

2. Concentrator - Identifier Used In Telephone Answering Service

This equipment permits common use of up to six interoffice lines to connect telephone answering bureaus with their clients in central office districts other than those in which the telephone answering bureau is located, thus eliminating the necessity of providing a separate channel extension from each client's line to the telephone answering bureau.

a. TYPE 2 (1)

Type 2 concentrator-identifier equipment may serve a maximum of 100 clients. one signaling channel and two to six telephone channels are required between the concentrator located at a central office and identifier equipment located on the same premises as the secretarial equipment. Concentrators equipped for less than 100 secretarial lines may be expanded to a larger capacity only when the number of connected secretarial lines equals 90% of the equipped capacity and after notification from the telephone secretarial service bureau.

This service is furnished subject to the working limits of the concentrator-identifier equipment.

11.3 DATA SERVICES, (Cont'd.)

11.3.3 SECRETARIAL LINES AND ASSOCIATED TELEPHONE ANSWERING EQUIPMENT, (Cont'd.)

A. GENERAL, (Cont'd.)

2. Concentrator - Identifier Used In Telephone Answering Service, (Cont'd.)

b. Type 3 (1)

Type 3 concentrator equipment may serve a maximum of five client lines, which must be located in the same central office district as the concentrator, and be served by the central office equipment with which the concentrator is associated. No identifier equipment is available with Type 3 concentrator equipment. One telephone channel is required between the concentrator located at a central office and the secretarial equipment. A Customer-provided switching key is required at each telephone station of lines connected to the concentrator. The Customer-provided key is used to connect or disconnect the line from the concentrator. When the Customer-provided key is operated, the client's line is disconnected from the concentrator, and outgoing calls can be made by the client. When the key is in the normal position, incoming calls can be answered only at the telephone secretarial bureau via the concentrator, and no outgoing calls can be made by the client.

NOTE:

(1) Furnished only to the extent of available stock.

11.3 DATA SERVICES, (Cont'd.)

11.3.4 SWITCHED 56 KILOBIT SERVICE

A. GENERAL

This service will provide the end user with the ability to send and receive data at a speed of 56,000 bits per second over the Public Switched Network (PSN). This service will be provided from specially equipped Telephone Company Wire Centers in conjunction with loop plant and inter-office facilities (Local or Remote Channels) designed to accommodate only 56 kilobits/second full duplex, synchronous transmission.

11.3.5 FRAME RELAY SERVICE

A. GENERAL

Frame Relay Service is a high performance, cost-effective offering for connecting multiple Local Area Networks (“LAN”) or Synchronous Network Architecture (“SNA”) locations. Frame Relay Service is accessible at speeds of up to 1.536 Mbps. The service elements for frame relay service include access facilities, ports and Permanent Virtual Circuits (“PVCS”). The minimum service term requirement for Frame Relay Service is one (1) year.

11.3.6 HIGH CAPACITY - 1.544 MBPS SERVICE

A. GENERAL

High Capacity Channels provide simultaneous two-way transmission of serial, bipolar, return to zero isochronous digital signals. The transmission speed of a High Capacity Channel is 1.544 Megabits Per Second (Mbps). A pulse density restriction, plus a constraint on Customer-provided framing are part of the format constraint on High Capacity Channels. The format constraints permit the Telephone Company the use of every 193rd bit position for future use, therefore, the effective throughput rate available to the Customer is 1.536 Mbps.

Commencing on the date of installation, the monthly rate for this service when furnished for intraLATA service will not increase for a period of 24 months.

High Capacity Channels are provided between Customer premises, between a Customer premises and a Telephone Company hub or between serving wire centers.

11.4 LOCAL EXCHANGE SERVICES

11.4.1 LOCAL EXCHANGE SERVICE

A. GENERAL

Local Exchange Service provides a Customer with a telephonic connection to, and a unique telephone number address on, the public switched telecommunications network. Each Local Exchange Service enables users to:

1. receive calls from other stations on the public switched telecommunications network;
2. originate telephone calls through DTMF, i.e., the use of pushbuttons transmitting alternating currents in lieu of rotary dial or push buttons transmitting direct current.
3. access other services offered by the Company as set forth in this tariff;
4. access certain intrastate, interstate and international calling services provided by the Company;
5. access (at no additional charge) the Company's operators and business office for service related assistance;
6. access (at no additional charge) emergency services by dialing 0- or 9-1-1; and
7. access other services (at the Customer's expense) provided by other common carriers on a per-call basis.

Each Local Exchange Service is available on a "Full" service basis, whereby service is delivered to a demarcation/connection block at the Customer's premises.

COMPETITIVE LOCAL EXCHANGE CARRIER

11. SERVICES PROVIDED TO FORMER CUSTOMERS OF SNiP Link, LLC, (Cont'd.)**11.4 LOCAL EXCHANGE SERVICES, (Cont'd.)****11.4.2 BUSINESS EXCHANGE SERVICE**

Business Exchange Service provides business Customers with the ability to originate calls from a Company-provided access line to all other stations on the public switched network bearing the designation of any central office exchanges, areas and zones included in the Customer's local calling area. All calls to destinations outside the basic local calling area but within the same state and LATA will be charged the intraLATA or interLATA rates of the Customer's chosen intraLATA or interLATA toll carrier. Rates for Business Exchange Service are composed of the following elements:

- Dial Tone Line
- Usage Package(s)
- Measured Use

A. DIAL TONE LINE

The Dial Tone Line provides Customers with access to the telephone network. The Dial Tone Line applies to individual, multi-lines and party lines and is based upon the exchange area cell classification and the grade of Service. Dial Tone Line cell classifications are defined in Section 12.

B. USAGE PACKAGES

Local exchange service is provided to business Customers under options which vary according to the way rates applicable to outgoing usage are charged. The exchange service area and calling service area is listed in Section 12 of this tariff. The following Usage Packages are available to business exchange Customers:

1. Extended Area Unlimited

Under this option, the Customer pays a stipulated monthly rate for an unlimited number of outgoing calls within the Customer's local calling area plus additional exchanges as identified in the underlying carrier's tariffs. Extended Area Unlimited is available to Customers in the service exchange areas listed in Section 12 of this tariff.

11.4 LOCAL EXCHANGE SERVICES, (Cont'd.)

11.4.2 BUSINESS EXCHANGE SERVICE, (Cont'd.)

B. USAGE PACKAGES, (Cont'd.)

2. Local Area Unlimited

Under this option, the Customer pays a stipulated monthly rate for an unlimited number of outgoing calls within a specified local calling area. Usage within the specified local calling area is not measured. This option is available only to existing business exchange Customers who continue such service at their present location. Local Area Unlimited is available to Customers in the service exchange area listed in Section 12 of this tariff.

3. Local Area Valu-Pak

Under this option, Customers pay a stipulated monthly rate for up to a specified amount of outgoing measured use with a specified measured local calling area. Additional charges accrue for local outgoing measured use in excess of the Valu-Pak allowance. The Local Area Valu-Pak also includes an allowance that is applied only to charges that accumulate on the Customer's account. Allowances are calculated on a pro rata basis and accumulate when service is established or discontinued during a billing month. No credit is given for unused allowances accumulated and/or carried forward over billing months. This option is available to Dial Tone Line Customers and Centrex Customers in the service exchange areas listed in Section 12 of this tariff.

11.4 LOCAL EXCHANGE SERVICES, (Cont'd.)

11.4.2 BUSINESS EXCHANGE SERVICE, (Cont'd.)

B. USAGE PACKAGES, (Cont'd.)

4. Local Area Standard

Under this option, the Customer pays a stipulated monthly rate for up to a specified amount of outgoing measured use within a specified measured local calling area. Additional charges accrue for local outgoing measured use in excess of the standard option. The Local Area Standard option is available to business Dial Tone Line Customers and Centrex Customers. The Local Area Standard option also includes an allowance that applies only to charges that accumulate on the Customer's account. Allowances are calculated on a pro rata basis and accumulate when standard service is established or discontinued during a billing month. No credit is given for unused allowances during a billing month, nor are any unused allowances accumulated and/or carried forward over billing months. Local Area Standard is available to all Customers in any service exchange areas listed in Section 12 of this tariff.

C. MEASURED USE RATE SCHEDULE

Measured use charges are applicable to completed local calls placed on a dial station-to-station basis. Measured use rates accumulate on a monthly basis by Metro Call Band commencing on the billing date of the exchange designation. Measured rates do not apply to calls for Directory Assistance or Call Verification.

11.5 PRIVATE LINE SERVICE

This tariff applies to services that occupy a channel dedicated to its use, which may be furnished jointly by the Company and other participating companies, as specified for a particular service. The regulations and rates specified herein may be in addition to the applicable regulations and rates specified in other tariffs of the Company.

11.5.1 GENERAL

A PLS channel is a path, for electrical or optical communications, between two or more points furnished by means of any type facilities over any route the Company may elect to use. Channels will be provided based on the type of communications service(s) the client wants to support.

11.5.2 REGULATIONS

The Company has the over responsibility for PLS and the channels associated with it, up to and including (at the Company's option) the network interface device (NID). Where the NID is not provided the Company will inform the Customer. Service is provided on a 24 hour x 7 day a week basis after it is installed according to specifications. Services will be provided wherever they are available. Certain limitations might apply, depending on the type of service.

11.5.3 EXPLANATION OF TERMS

Private Line Service offers features that include, but are not limited to:

Analog

Digital Data Service (DDS)

Local channels

Interexchange channels

Half-duplex (one-way)

COMPETITIVE LOCAL EXCHANGE CARRIER

11. SERVICES PROVIDED TO FORMER CUSTOMERS OF SNIp Link, LLC, (Cont'd.)

11.5 PRIVATE LINE SERVICE (Cont'd.)

11.5.3 EXPLANATION OF TERMS, (Cont'd.)

Full duplex (two-way)

Point-to-point

Multi-point

Dedicated Cable-pair option (providing specified local channels and consisting of dedicated complements of cable pairs between a Customer and the serving wire center)

Served Direct (which allows channels between two Customer locations in the same exchange, instead of routing the channels through the individual serving wire centers)

Transmission speeds from 2.4 kbps – 1.544 kbps, depending on the service selected

High Capacity Digital Service (1.544 Mbps service that can connect either Customer locations or to other 1.544 Mbps services)

Digital Hand-Off Service (1.544 Mbps connection from the Customer's premises to the serving wire center, which might carry multiple channels and media of services)

11.5.4 RATES

A. SERIES 1000 CHANNELS

Series 10000 channels (Entrance Facilities) are furnished by the the Company for the purposes of extending Customer-provided communications systems to a premises of the Customer. Channels are furnished for duplex operation on a two-point basis.

Type 10001 – Approximate bandwidth of 300-3000 Hertz. Furnished, to the extent permitted by the normal transmission characteristics of this grade of channel, for types of transmission similar to those set forth for Series 1000, 2000 and 3000 channels.

1. Channels

Between different buildings on the same or different premises routed through the serving wire center*

Each channel between the station location and the serving Wire Center	<u>Per Month</u>
Types 11081	\$23.50

*Where, at the option of the Telephone Company, a channel is provided directly between Customer locations on different premises, i.e., does not route through a wire center, the monthly rate is equivalent to one channel, of the appropriate type, between the station location and the serving wire center.

5. Competitive Pricing Arrangements

Competitive pricing arrangements can be furnished to meet the communication needs of specific Customers on a case by case basis under individual Contracts. Contract rates, which are on file with the P.S.C. under Proprietary agreement, will be priced above an established cost rate flow for the service and are structured in the same manner as the equivalent Access Service. The competitive pricing arrangement contracts, once executed, will also be on file with the Commission under proprietary agreement.

C. HIGH CAPACITY DIGITAL SERVICE – DS1

Service is furnished on either a two-point basis between Customer premises, or between another DS1-Type service provided in a C&P central office and a Customer premises or between central offices for connection to other DS1-Type services. This service provides the simultaneous two-way transmission of serial, bi-polar, return-to—zero isochronous digital signals at a speed of 1.544 Megabits Per Second (Mbps).

1. The Clear Channel Capability (CCC) and Extended Super Frame (ESF) optional features have no recurring monthly charge. When these features are installed coincident with the DS1 service, there are no additional charges. When installed subsequent to an existing service, a charge equal to a channel termination nonrecurring charge will apply for each channel termination converted.
