PA PUBLIC UTILITY COMMISSION
SECRETARY'S BUREAUComplaint
②

This letter is regarding complaint number 2. You guys better contact U.G.I. Corp. AS ANOTHER person seen the mess that same yellow chemical is making. To quote the gentleman "it even STAINED your sidewalk." U.G.I. doesn't know what to blame? This chemical is not harmless to the public AS kids are part of the public. Just imagine that 7 or 8 year old standing alone waiting for a bus or a parent and then he or she hears a noise and begins to look at a duct which is eye level. He or she moves closer AS hot air begins to come out. He or she thinks it's a dryer duct and moves dead on with the hot air when suddenly his or her eye starts to burn. Ouch. Finally the bus arrives and they get on with one eye closed and full of tears. They finally arrive home, tell their parents who call an eye doctor. Bring him or her

into my office. They get examined and to your surprise no more 20/20 vision. Now, no vision. Where were they when this happened. Waiting for a bus downtown. He or she got hit in the eye with something. But what? Was he standing near any ducts? yes, you reply. The doctor then tells you that all those ducts that come out at different levels do not belong to a dryer, some are gas ducts, that contain a chemical that ends up blowing with the wind and 30 to 40% lands on the buildings side or a lower will yellow the sidewalk. Now their vision went to hell as that person had poor vision in the right eye now his or her left eye (once 20/20) is just as bad or worse. Too late to file a complaint or call U.G.I. Corp, still hiding their yellow chemical 45 to 49 years later. Hiding is not part of code.

Who makes code? This is code? Why is U.G.I. Afraid to come and look? I will not be ignored. I have vinyl siding and deck railing becoming a

2-28-2019

Pg. 3

mess, and one good eye. I wouldn't be able to even watch T.V. If this were to happen to me. Kids, do you care about kids, or do you only care when you can put a good act on for the public.

The new code using a 4ft. piece of plastic behind a gas range is only meant to hide U.G.I.'s chemical since it does not cling to plastic. See lady, rubbing his finger around the inside, perfectly clean, no yellow chemical. Why do you make codes? To hide chemicals? Certainly looks that way. Leaving this chemical in the gas line when U.G.I. went from gas made out of coal to natural gas has been and will always be dangerous and harmful to kids and adults who spent too much time around a gas stove cooking, baking and canning. Their (U.G.I.'s) lab report is comical, the code with a gas range exists for one reason; to hide their yellow chemical. Why hide it if you call it harmless which is another laugh, since it causes COPD.

Pg. 4

I AM requesting phone numbers AND
AN ADDRESS to the people who make
codes. I have one question, ARE YOU
PAID to hide gas companies? They
ARE NOT WORTH the money AS I know
ALL ABOUT plastic AND how their
yellow chemical does NOT cling to
plastic pipe. Why do you think U.G.I.
Corp. stopped using plastic. Ask them.
Also, I need another set of
complaint forms. That 4 foot piece of
plastic behind a gas range will
stay if replaced with another gas
range, something I will never do.
Do you want to die quicker? Well,
then inhale flour, powdered sugar
or smoke. Make lots of money for
healthcare, leave U.G.I. keep
pumping gas through pipes that
could kill you, now hide them with
false lab reports AND plastic pipe.
Why should you care? Got drip pipes
in your basement?

Respectfully!

complaint # 2

I believe I just caught the code people hiding U.G.I. Corp. Why also would they allow plastic behind a kitchen's worst enemy, a gas range (in the Hazelton area). The gas range yellows walls and everything else and makes things sticky, and the metal pipe which contains U.G.I.'s yellow chemical is from your floor to the connection on a gas range only you don't know something that I do, either do the people who hide, sorry make codes. A piece of metal pipe acts differently than plastic. I know, I tried both and know about gas lines blocking years ago, and why they blocked.

I never knew a company could harm people and legally get away with it, until now. Follow that new code and you will do two things: hide U.G.I. Corp and die quicker or get health problems and make lots of money for healthcare, all that matters is making money and hiding people.

Complaint #2

pg. 6

You the PUC call this harmless to the public. I do not agree. Cancer rates are up in this area and I got health problems. I'm not allowed to drive in PA, either. If you have experience, you might guess what's wrong along with my one eye. I want my day in court. Looking forward to showing a jury or the PUC the chemical that has people using plastic in very questionable areas, and a gas company afraid to come and look at this mess. Funny, they aren't afraid to cause eye injury or health problems. One thing U.G.I. can't hide. You will not hide U.G.I. and we all have drip pipes and I say again, all gas stoves should be vented, especially those that are covered or provided gas in the Hazleton area. I say again, do you care, do you have drip pipes?

Read my letters!

Respectfully,

Michael J. Mitchell

I believe I also found some-
thing else out which when my father
was alive probably added to his
health problems.

Do you care about Kids? No,
since you don't even care about
eyes. Why?

Don't worry about
me (OTF)
