Docket No. A-110150 Folder 0033

Dear Secretary McNulty:

Enclosed for filing are an original and six (6) copies of the Letter of Notification of Duquesne Light Company for Increasing the Voltage of a 5.13 mile Long Transmission Line in Ross Township, Shaler Township, Hampton Township, and Indiana Township, Allegheny County. Copies of the Letter of Notification are being served by certified mail upon all persons who are listed in the Certificate of Service.

Thank you for your attention to this matter. Please contact me at (412) 393-1546, if you have any questions.

Sincerely,

Regina M. Sestak  
Attorney for Duquesne Light Company

Letter of Notification of Duquesne Light Company for Increasing the Voltage of a 5.13 mile Long Transmission Line in Ross Township, Shaler Township, Hampton Township, and Indiana Township, Allegheny County :  
Docket No. A-110150  
Folder 0033

**LETTER OF NOTIFICATION  
OF DUQUESNE LIGHT COMPANY**

TO THE HONORABLE COMMISSION:

AND NOW comes Duquesne Light Company ("Duquesne Light") and, pursuant to Commission Regulation 57.72(d)(1)(iv), 52 Pa. Code § 57.72(d)(1)(iv), files the within Letter of Notification of which the following is a statement:

**STATEMENT REQUIRED BY REGULATION 57.72(d)(5)**

This Letter of Notification is being filed on July 27, 2005.

The Commission will review and, by order, approve or disapprove this letter of notification. If the Commission approves this letter of notification, the voltage will be raised without the application process set forth in Regulations 57.71 - 57.77. If the Commission does not approve this letter of notification, its order shall direct the applicant to comply with the application process.

**INTRODUCTION**

1. The name and address of the Applicant is:

Duquesne Light Company  
411 Seventh Avenue  
Pittsburgh, PA 15230-1930

2. Duquesne Light is a duly incorporated Pennsylvania public utility engaged in the distribution of electric service to the public, primarily within Allegheny and Beaver Counties, Pennsylvania, in an area of approximately 800 square miles.

DOCUMENT  
FOLDER

DOCKETED  
AUG 08 2005

miles having a combined population based on the 2000 census of approximately 1,327,057.

3. The name and address of Duquesne Light's attorney is:

Regina M. Sestak  
Assistant General Counsel  
Duquesne Light Company, 8-2  
411 Seventh Avenue  
Pittsburgh, PA 15219

#### DESCRIPTION OF THE PROPOSED LINE

4. Duquesne Light proposes to increase the voltage of each circuit of an existing 5.13 mile double circuit 69 kilovolt ("kV") transmission line to 138kV. These lines are currently and will continue to be identified as "Pine Creek - North No.1" and "Pine Creek - North No.2" ("Lines"). The Lines connect the Duquesne Light Pine Creek Substation to the Duquesne Light North Substation. A topographic map of the area showing the location of the Lines is attached hereto and incorporated herein as Exhibit 1.

5. The existing 69kV line consists of lattice steel towers constructed in the late 1920s and early 1930s. Between 1969 and 1970, the line was upgraded for operation at 138kV. The upgrade consisted of replacing the steel crossarms with bowed laminated wood crossarms, modifying each tower with a single steel peak to accommodate one common shield wire for both circuits, tower and foundation reinforcement, and replacing the conductors and insulators.

6. The height of the towers and the span lengths will remain the same. The height of the existing towers ranges between 84 feet and 127 feet above the ground. Existing span lengths range from 424 to 1814 feet, with typical span lengths varying between 500 and 1000 feet. The maximum span length is 1,814 feet at the Route 8 crossing in Shaler Township.

7. The Lines will continue to be three-phase alternating current transmission lines. Each circuit consists of three phase conductors with one shield wire common to both circuits. Each phase conductor is 853.7 kcmil 24/13 Aluminum

Conductor Alloy Reinforced ("ACAR") conductor. The shield wire is a 5/16" stainless steel conductor. A cross-sectional diagram showing the typical arrangement of the towers is attached hereto and incorporated herein as Exhibit 2.

8. No new construction, reconstruction, or modifications, except for routine maintenance items, will be required to increase the voltage from 69kV to 138kV on these Lines.

#### **GENERAL DESCRIPTION OF ROUTE OF THE LINE**

9. The Lines begin at Pine Creek Substation and proceed a distance of 5.13 miles in a generally westerly direction, through Indiana Township, Hampton Township, and Shaler Township, and end at North Substation in Ross Township, Allegheny County. Approximately 8,970 feet of the Lines are within Indiana Township, 2,050 feet are within Hampton Township, 15,360 feet are within Shaler Township, and 710 feet are within Ross Township, Allegheny County. Approximately 10 % of the Line is located on existing 40-foot rights-of-way, 26 % is located on existing 30-foot rights-of-way and 61 % is located on existing centerline rights-of-way. Approximately 3 % is located on Duquesne Light property and by railroad permit.

#### **BACKGROUND**

10. In 1999, Duquesne Light divested all of its generation, thus relinquishing the ability to control the availability of certain generation facilities critical to the voltage stability in the eastern portion of Duquesne Light's service territory. To compensate for this loss of control and to support the system voltage during periods of heavy load, Duquesne Light installed numerous capacitor banks on the distribution system and developed "must run" agreements with the owners of the critical generation facilities. These agreements assured that adequate voltage was available during anticipated critical operating periods. Subsequent to Duquesne Light joining the PJM ISO System in 2004, these "must run" agreements became economically burdensome to continue. Consequently, Duquesne has identified

transmission projects such as the voltage increase herein that, once completed, will eliminate the need for the "must run" agreements in the eastern portion of the system.

#### STATEMENT OF NEED

11. Concerns have arisen regarding the limited transmission resources supplying the northeastern areas of Duquesne Light's service territory. Increasing the transmission supply from 69kV to 138kV will increase the capacity of the transmission system, decrease the number of transformations to 69kV and consequently reduce losses and investment in 69kV autotransformers, while addressing the need for extensive rehabilitation of aging substations. Conversion of the terminal substations at Pine Creek and North Substations are part of the overall strategy to establish the eastern area source and eliminate 69kV as a transmission supply voltage because:

- (1) Duquesne's aging 69kV substation equipment requires increased maintenance on obsolete equipment with limited parts availability.
- (2) Conversion from 69kV to 138kV will reduce transmission system losses by eliminating double transformations resulting from the use of numerous 138-69kV autotransformers to serve islands of 69kV and by reducing current flow on the transmission line conductors due to the increased voltage level.
- (3) There is a need to improve voltage on the existing 69kV system, which typically experiences the lowest system voltage following certain transmission system contingencies.

#### SAFETY CONSIDERATIONS

12. In 1969, the Lines were modified and upgraded to increase the voltage from 69kV to 138kV. Although the Lines have continued to operate at 69kV since that time, the modifications were designed and constructed, and the Lines have been operated and maintained, to meet or exceed the requirements of the 6<sup>th</sup> Edition of the National Electrical Safety Code (NESC) for 138kV operation in effect at the time of the structural conversion to 138kV. The safety standards contained in the 6<sup>th</sup> Edition

of the NESC relating to overhead electric supply lines were incorporated into the design and construction of the line modifications implemented between 1969 and 1970 as minimum safety standards as to required clearances and structural loadings. The operation and maintenance procedures for these Lines conforms to Duquesne Light's transmission and distribution construction standards and Duquesne Light's procedures for line clearance and vegetation management on rights-of-way. These standards meet or exceed all relevant NESC standards and all standards of the Federal Occupational Safety and Health Administration.

#### **IN-SERVICE DATE**

13. The proposed in-service date for the Lines at 138kV is December 2005.

#### **SERVICE OF LETTER OF NOTIFICATION**

14. Copies of this Letter of Notification have been sent to all interested parties by certified mail, return receipt requested, as required by Commission Regulation 57.74, 52 Pa. Code § 57.74.

#### **LETTER OF NOTIFICATION IN LIEU OF FULL SITING APPLICATION**

15. Commission Regulation 57.72(d)(1)(iv), 52 Pa. Code §57.72(d)(1)(iv), provides:

A letter of notification may be filed with the Commission in lieu of the application process set forth in §§ 57.72-57.76 for the following:

\* \* \*

(iv) A line for which the voltage is proposed to be increased above its present levels, so long as the size, character, design or configuration of the proposed HV line does not substantially alter the right-of-way.

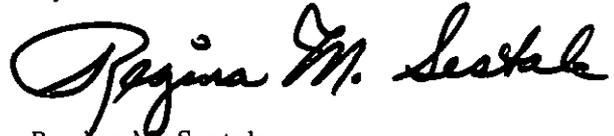

16. The proposed increase in voltage of the Lines will not substantially alter the right-of-way. The Lines have existed and operated in their present location since the early 1930s and in their present configuration since 1970. The size, character, design, or configuration of the Lines will not change to increase the

voltage of these Lines. The existing right-of-way agreements are written for a "transmission system for the conveyance and distribution of electric current." The route of the transmission line will remain unchanged. The existing rights-of-way widths of 40 foot, 30 foot, or centerline, will remain unchanged.

**RELIEF REQUESTED**

WHEREFORE, in consideration of the foregoing, it is requested that the Pennsylvania Public Utility Commission grant Duquesne Light Company approval to proceed with the proposed increase in voltage of these Lines as described in this Letter of Notification.

Respectfully submitted,  
DUQUESNE LIGHT COMPANY
