CHAIRMAN'S OFFICE

June 18, 2004

Mr. Terrance J. Fitzpatrick
Chairman
Pennsylvania Public Utility Commission
P.O. Box 3265
Harrisburg, Pennsylvania 17105-3265

Dear Commissioner Fitzpatrick,

I am a concerned citizen that lives near the proposed site of the new PECO Energy Company electric substation in Montgomery County (Horsham and Kenas Road).

We understand PECO's intentions for choosing a site include:

- 1) little impact as practical on nearby residents
- 2) little impact as practical on sensitive environmental areas

This site (Horsham and Kenas Road) is literally in the backyard of at least five residential communities (Estates of Montgomery, Windlestrae, Venco Group, Raven Hollow and Neshaminy Falls) to name a few. There are thousands of adults and hundreds of young children to consider.

There is a 172-acre park (Windlestrae Park) right down the road from the proposed location. It is the largest dedicated recreational area in Montgomery Township. Windlestrae is used in winter and summer, day and evening with baseball fields, soccer fields, four tennis courts, picnic areas, basketball courts, volleyball area and hiking paths.

The long term effects from exposure to substation radiation are still being argued today. However, what is known and cannot be argued is that all of us in these nearby neighborhoods and parks will receive an increased level of radiation exposure because we will be exposed on a *continual basis*. Whether we or our children will develop cancer in 10-20 years down the road is not known but we sure are at a greater risk than if we lived in a neighborhood without such exposure. That is a chance that most of us are not willing to take.

In addition, our home values will decrease dramatically as well.

The effects on us will be far from "little impact." We understand that development (both residential and industrial) in Montgomery County has

RJP

DOCKETED
JUN 07 2005

**DOCUMENT
FOLDER**

increased dramatically over the past years. As a result, we naturally need to accommodate the increased demand for electricity and transmission. A substation of this magnitude *does not belong in a residential area*, especially when there are other sites being considered that are zoned "light industrial".

We are not a group that will give up easily and will use every resource we have available to us to halt the construction of this substation at Horsham and Kenas Roads.

Any support you and your staff can offer us would be greatly appreciated.

Sincerely,

Carl J Vassia (Signature)

A substation of this magnitude *does not belong in a residential area*, especially when there are other sites being considered that are zoned "light industrial".

We are not a group that will give up easily and will use every resource we have available to us to halt the construction of this substation at Horsham and Kenas Roads.

Any support you and your staff can offer us would be greatly appreciated.

Sincerely,

Karen S. Cleland (Signature)

PA PUBLIC UTILITY COMMISSION
SECRETARY'S BUREAU

Dear Commissioner Fitzpatrick,

I am a concerned citizen that lives near the proposed site of the new PECO Energy Company electric substation in Montgomery County (Horsham and Kenas Road).

We understand PECO's intentions for choosing a site include:

- 1) little impact as practical on nearby residents
- 2) little impact as practical on sensitive environmental areas

This site (Horsham and Kenas Road) is literally in the backyard of at least five residential communities (Estates of Montgomery, Windlestrae, Venco Group, Raven Hollow and Neshaminy Falls) to name a few. There are thousands of adults and hundreds of young children to consider.

There is a 172-acre park (Windlestrae Park) right down the road from the proposed location. It is the largest dedicated recreational area in Montgomery Township. Windlestrae is used in winter and summer, day and evening with baseball fields, soccer fields, four tennis courts, picnic areas, basketball courts, volleyball area and hiking paths.

The long term effects from exposure to substation radiation are still being argued today. However, what is known and cannot be argued is that all of us in these nearby neighborhoods and parks will receive an increased level of radiation exposure because we will be exposed on a *continual basis*. Whether we or our children will develop cancer in 10-20 years down the road is not known but we sure are at a greater risk than if we lived in a neighborhood without such exposure. That is a chance that most of us are not willing to take.

In addition, our home values will decrease dramatically as well.

The effects on us will be far from "little impact." We understand that development (both residential and industrial) in Montgomery County has

increased dramatically over the past years. As a result, we naturally need to accommodate the increased demand for electricity and transmission. A substation of this magnitude *does not belong in a residential area*, especially when there are other sites being considered that are zoned "light industrial".

We are not a group that will give up easily and will use every resource we have available to us to halt the construction of this substation at Horsham and Kenas Roads.

- 2.) little impact as practical on sensitive environmental areas

This site (Horsham and Kenas Road) is literally in the backyard of at least five residential communities (Estates of Montgomery, Windlestrae, Venco Group, Raven Hollow and Neshaminy Falls) to name a few. There are thousands of adults and hundreds of young children to consider.

There is a 172 acre-park (Windlestrae Park) right down the road from the proposed location. It is the largest dedicated recreational area in Montgomery Township. Windlestrae is used in winter and summer, day and evening with baseball fields, soccer fields, four tennis courts, picnic areas, basketball courts, volleyball area and hiking paths.

The long-term effects from exposure to substation radiation are still being argued today. However, what is known and cannot be argued is that all of us in these nearby neighborhoods and parks will receive an increased level of radiation exposure because we will be exposed on a continual basis. Whether we or our children will develop cancer in 10-20 years down the road is not known but we sure are at a greater risk than if we lived in a neighborhood without such exposure. That is a chance that most of us are not willing to take.

In addition, our home values will decrease dramatically as well.

The effects on us will be far from "little impact". We understand that development (both residential and industrial) in Montgomery County has increased dramatically over the past years. As a result, we naturally need to accommodate the increased demand for electricity and transmission. A substation of this magnitude does not belong in a

COMMUNICATIONS BUREAU
AUG 16 AM 8:03

residential area; especially when there are no other sites being considered that are zoned "light industrial".

We are not a group that will give up easily and will use every resource we have available to us to halt the construction of this substation at Horsham and Kenas Roads.

Any support you and your staff can offer us would be greatly appreciated.

Sincerely,

Joseph B. Paddock (Signature)

There is a 172-acre park (Windlestrae Park) right down the road from the proposed location. It is the largest dedicated recreational area in Montgomery Township. Windlestrae is used in winter and summer, day and evening with baseball fields, soccer fields, four tennis courts, picnic areas, basketball courts, volleyball area and hiking paths.

The long term effects from exposure to substation radiation are still being argued today. However, what is known and cannot be argued is that all of us in these nearby neighborhoods and parks will receive an increased level of radiation exposure because we will be exposed on a *continual basis*. Whether we or our children will develop cancer in 10-20 years down the road is not known but we sure are at a greater risk than if we lived in a neighborhood without such exposure. That is a chance that most of us are not willing to take.

In addition, our home values will decrease dramatically as well.

The effects on us will be far from "little impact." We understand that development (both residential and industrial) in Montgomery County has

Dear Commissioner Fitzpatrick,

I am a concerned citizen that lives near the proposed site of the new PECO Energy Company electric substation in Montgomery County (Horsham and Kenas Road).

We understand PECO's intentions for choosing a site include:

- 1) little impact as practical on nearby residents
- 2) little impact as practical on sensitive environmental areas

This site (Horsham and Kenas Road) is literally in the backyard of at least five residential communities (Estates of Montgomery, Windlestrae, Venco Group, Raven Hollow and Neshaminy Falls) to name a few. There are thousands of adults and hundreds of young children to consider.

There is a 172-acre park (Windlestrae Park) right down the road from the proposed location. It is the largest dedicated recreational area in Montgomery Township. Windlestrae is used in winter and summer, day and evening with baseball fields, soccer fields, four tennis courts, picnic areas, basketball courts, volleyball area and hiking paths.
