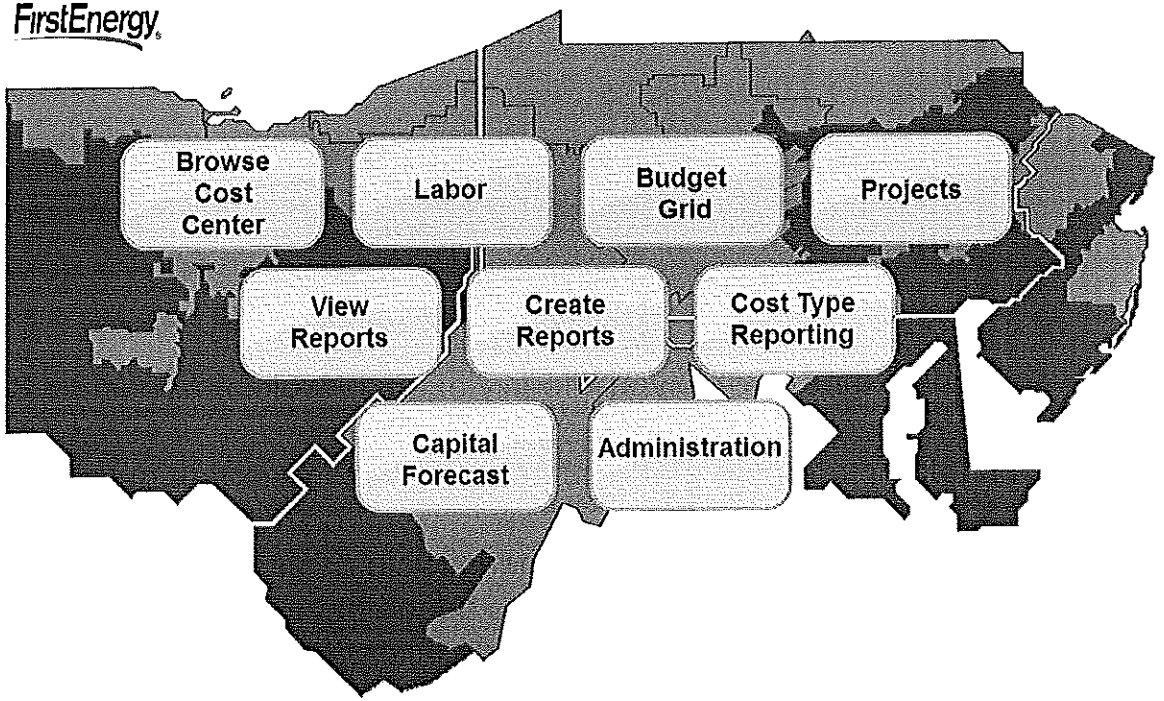
Navigating in UIPlanner — Browse Cost Center

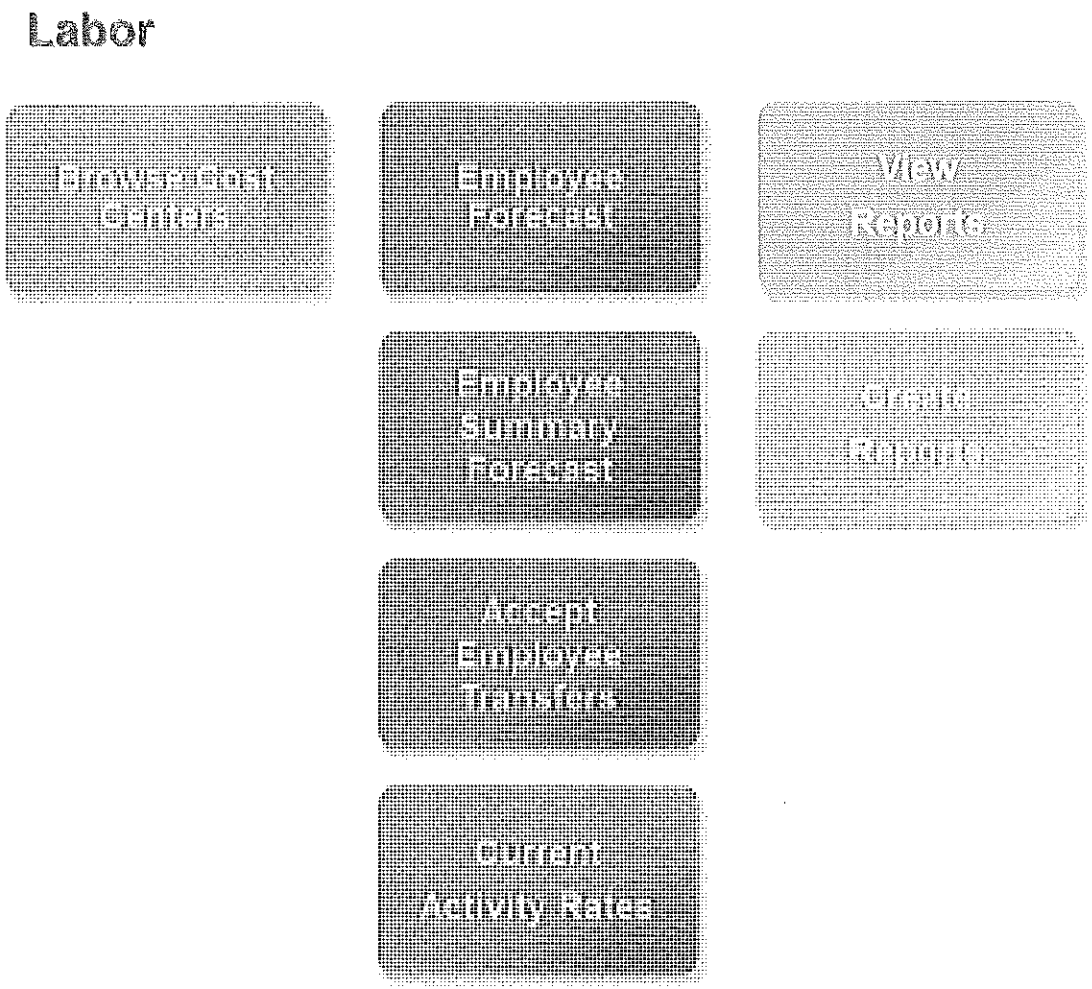
Navigating in UIPlanner



1. • Select Budget
   • Click Switchboard

2. • Select Main Switchboard-Pilot

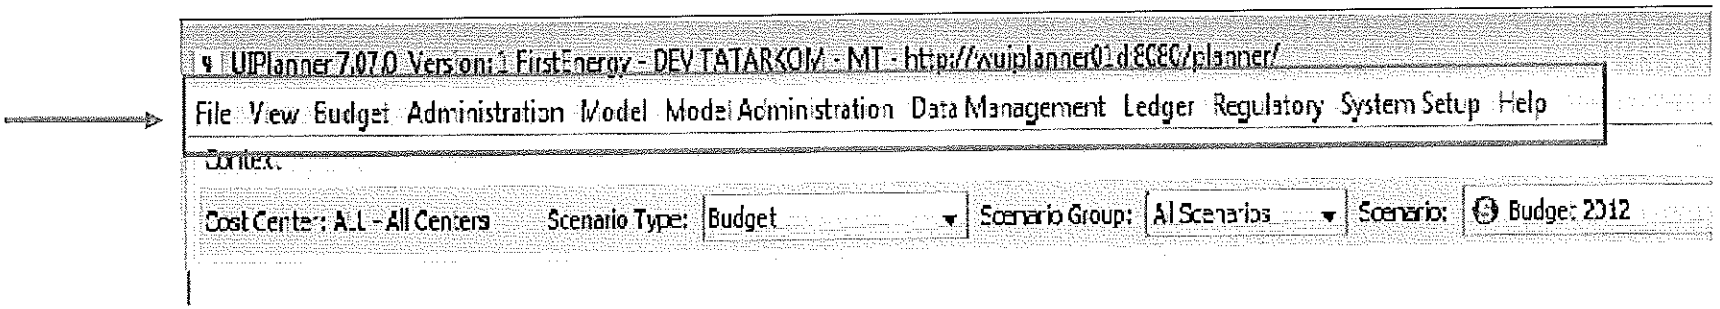
- Switchboards allow users to visually navigate through various screens
- User can map processes and features to a diagram created in Power Point or Visio
- Hot-spotted areas on a switchboard can open menu items, run reports, open files, and open other switchboards
- Switchboards will be maintained by the System Administrator



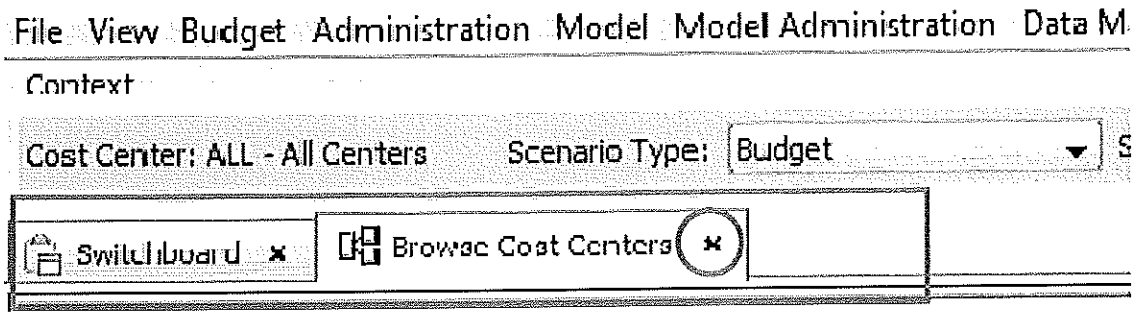
Navigating in UIPlanner

Secondary switchboards exist for the following screens/activities:

- Labor
- Budget Grid
- Projects
- Import Projects
- Cost Type Reporting
- Capital Forecast
- Administration
- Labor Administration



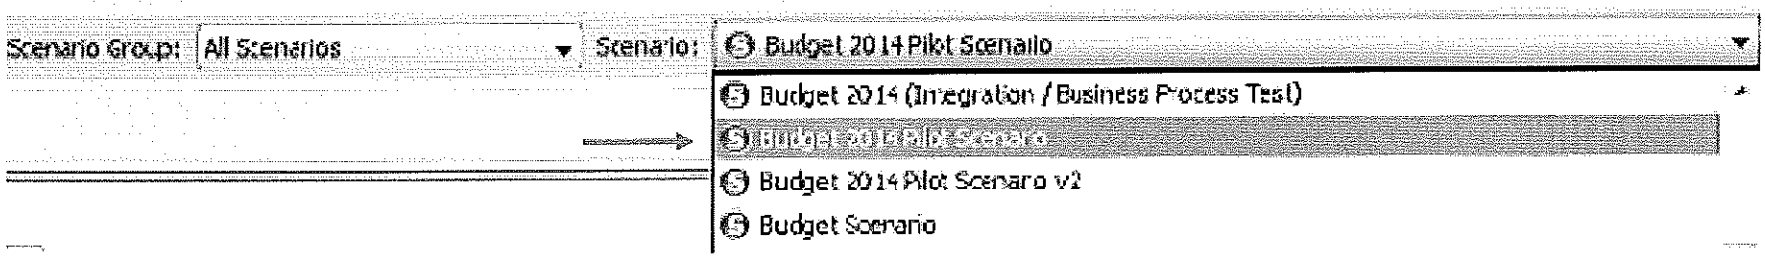
Example of Labor switchboard:



Navigating In UIPlanner

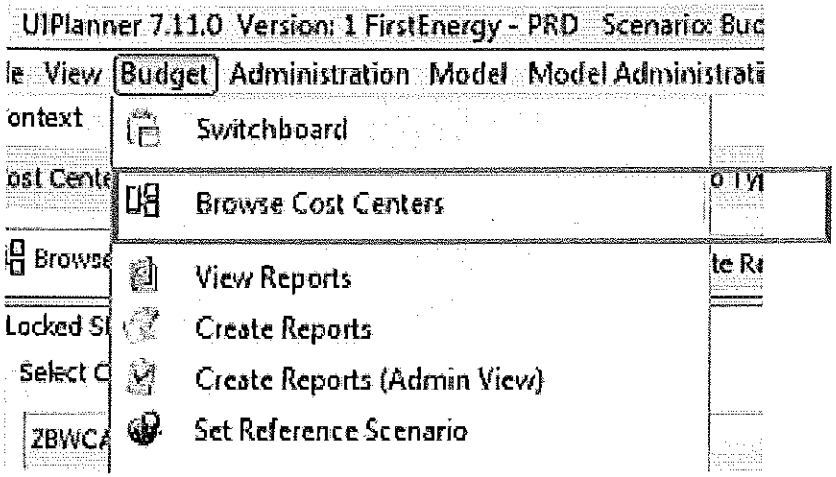
3

- Once logged into UIPlanner, menu options will appear across the screen
- Depending on your security, certain menu items may not be available

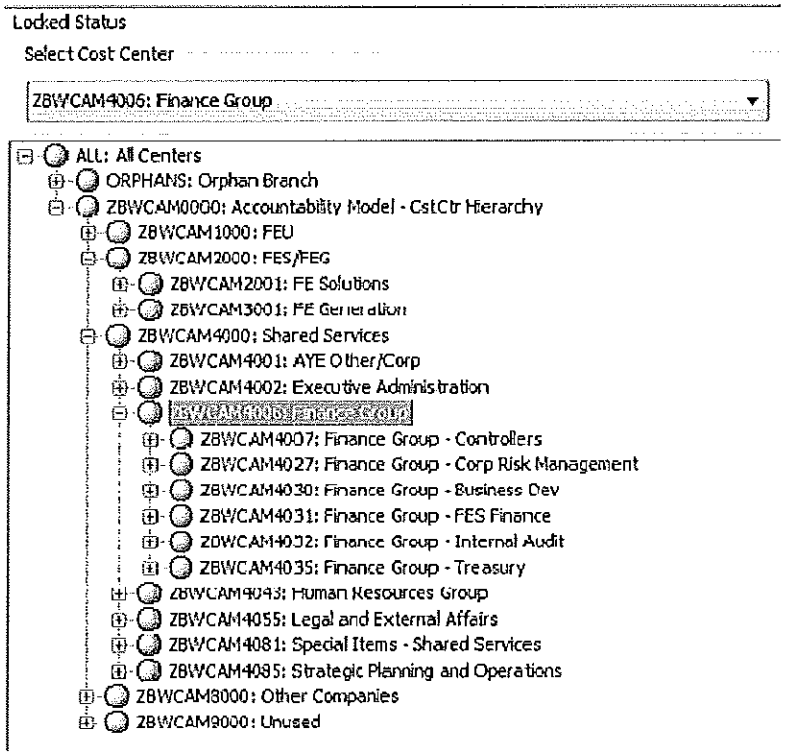


- As menu items are opened, the tab for each menu item will stack across the screen
- Menu items can be closed by clicking the X

Navigating in UIPlanner

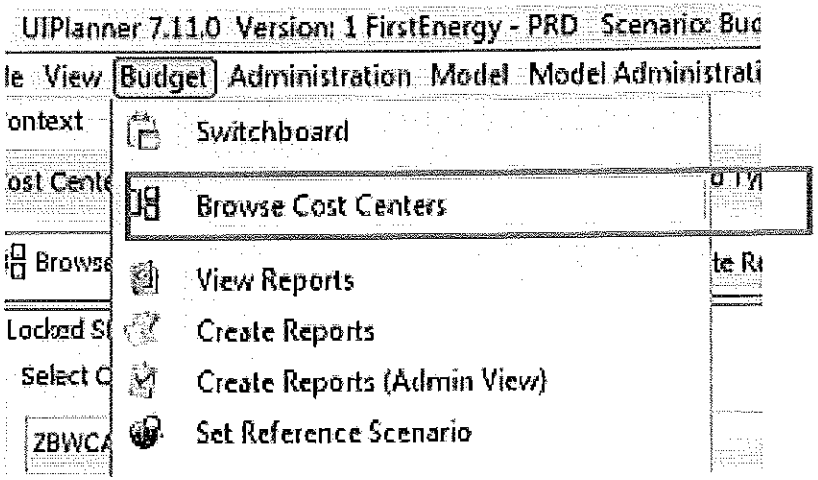


4

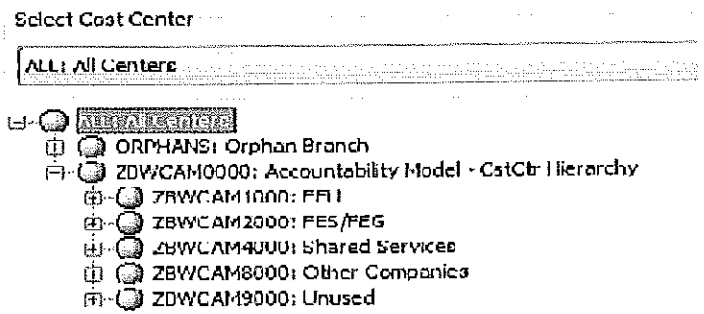


- UIPlanner categories determine the environment to administer the budget, forecast and plan
  - Cost Center: Displays the Cost Center or Cost Center group level selected
  - Scenario Type: Budget or Model
    - Select Budget
  - Scenario Group: Grouping of like scenarios for either Budget or Model
    - Select All Scenarios
  - Scenario: Various iterations and versions of the budget, forecast and plan such as the 3+9, 2013 annual budget, etc. Scenarios will be available within the Scenario drop down box. Scenarios will be created and managed in B2
    - Select Budget 2014 Pilot Scenario

Browse Cost Center Overview

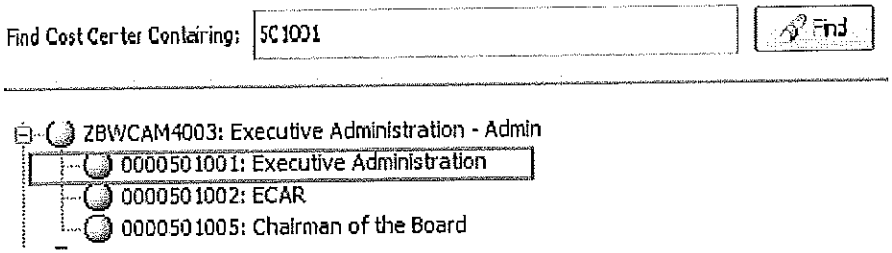


- The Browse Cost Centers function is used throughout UIPlanner to view data for budget, forecast and plan activities
- The Select Center screen is used to select a cost center or department, manage status and monitor changes within UIPlanner
- The Cost Center or Cost Center node selected is carried forward as a filter on department to all budget screens



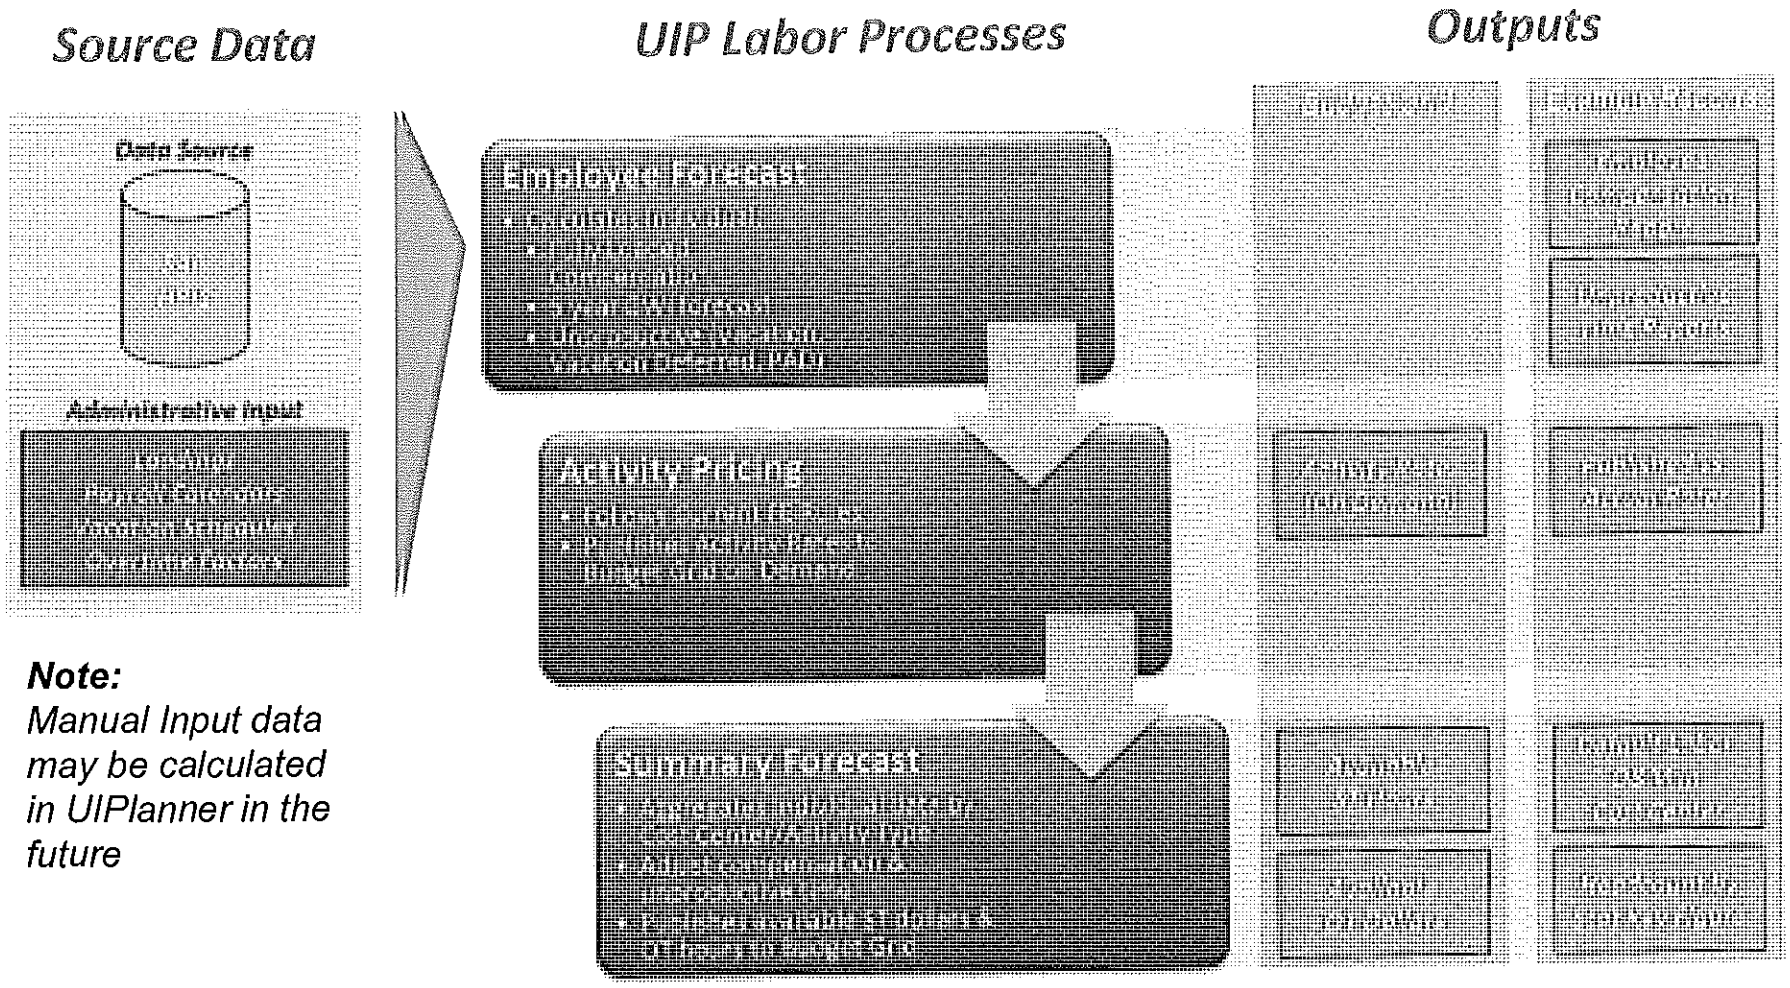
Browse Cost Center

5 • Select **Budget**
• Click **Browse Cost Centers**



- The Finanical Accountability Model hierarchy is available in UIPlanner and SAP
  - SAP transaction KSH3 – ZBWCAM0000
- Hierarchy is based on cost ownership
- The responsible cost center hierarchy will no longer be available starting 2014

6 • Expand Hierarchy by clicking ⊕



7 • Search Cost Centers in the Hierarchy
• Enter Cost Center or Cost Center description and Click **Find**

Labor Overview

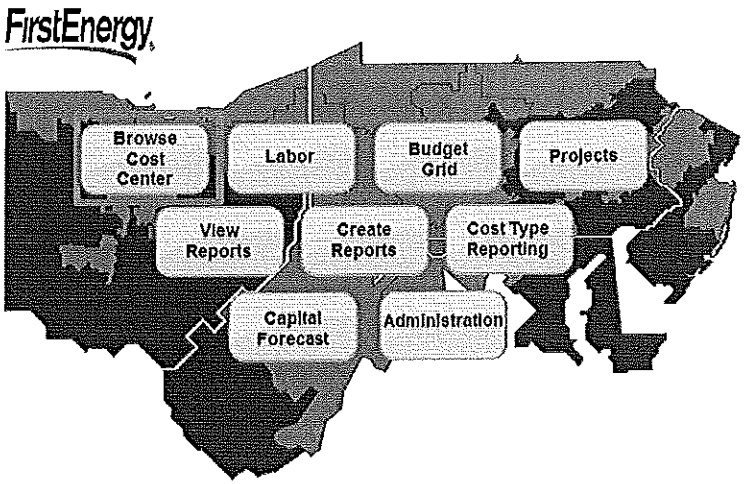
UIPlanner Labor Schematic

Note:
Manual Input data may be calculated in UIPlanner in the future

The new Labor process ensures that activity rates will be available prior to the budget process while enhancing data security and transparency

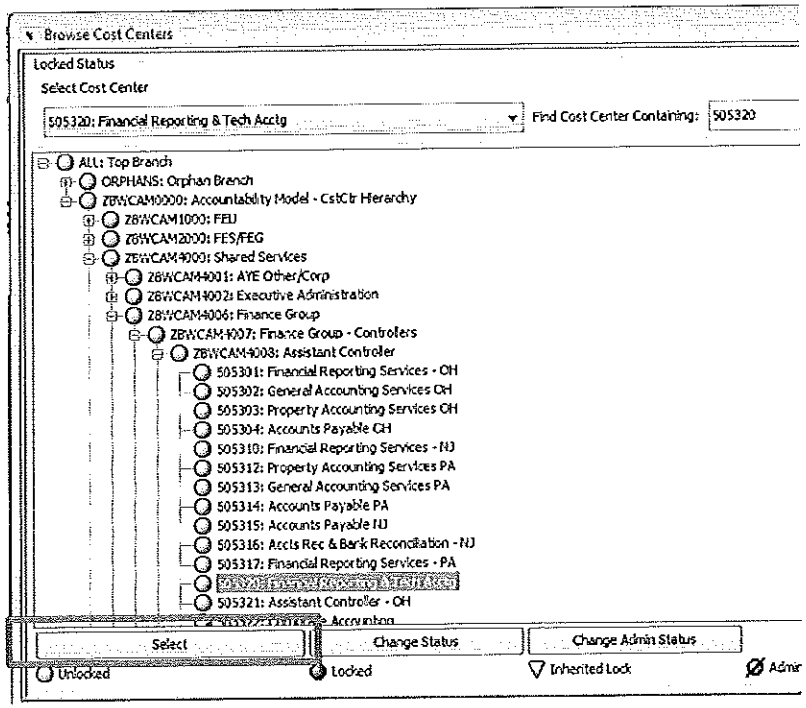
System Entry - Budget Grid Functions

Budget Grid Overview



- The Budget Grid is where users enter their Labor and Other-Than-Labor (OTL) budget, forecast, and plan data by the various cost collectors.
- Used only for ALLOCATING hours and dollars --- use "View Reports" to see complete Cost Center view
- Specific budget grid fields comprise the code block combinations necessary to validate system entry

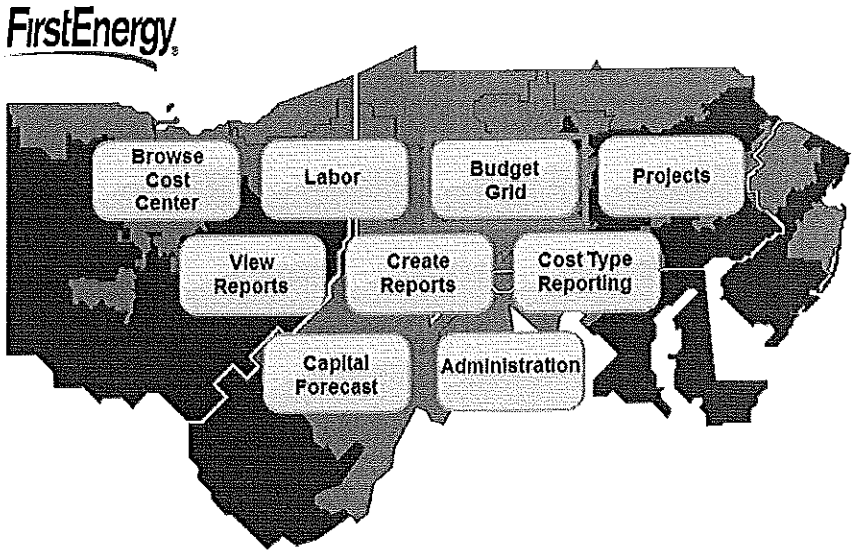
Budget Grid Data Fields



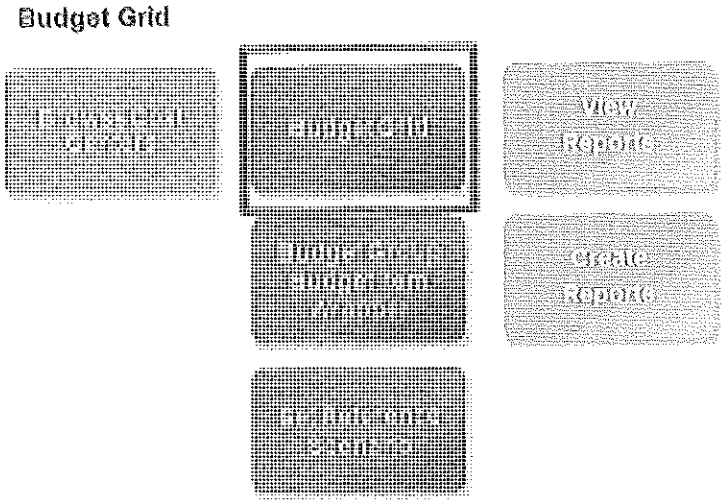
Field	Input vs. Derived	Notes
Cost Source	Input	Cost Source is the Cost Center where employee labor resides. Available Cost Centers will be limited based on user security
Cost Owner	Input	Cost collector owner. When budgeting Labor, this will be the Cost Center being billed for the Labor. When budgeting OTL, Cost Owner and Cost Source will be the same
Cost Collector Type	Input	Types : Cost Center, Internal Orders and WBS
Planning Project	Input	Project Definition of either SAP WBS or the UI Planning Project being budgeted
Planning WBS Element	Input	SAP WBS Elements or the UI Planning Project Elements
Internal Order	Input	Valid and budgetable internal orders
Activity Type	Input	Required only for Labor. Should be set to 'OTL' when budgeting OTL.
Cost Element	Input	Valid and budgetable cost elements
Budget Group	Input	Allows user to apply more detail to the budget. Budget Groups might include Travel or Office Supplies
Budget Item	Input	Allows user to apply more detail to the budget. Budget Items might include Airfare, Hotel and Meals for the Budget Group of Travel.
Comment	Input	Text field. Used for additional notes
Input Type	Derived	Hours if Labor and Dollars if OTL

Budget Grid Startup

1. Defining a Context Cost Center
   - Open the **FE Main Switchboard**
   - Click on **Browse Cost Center**

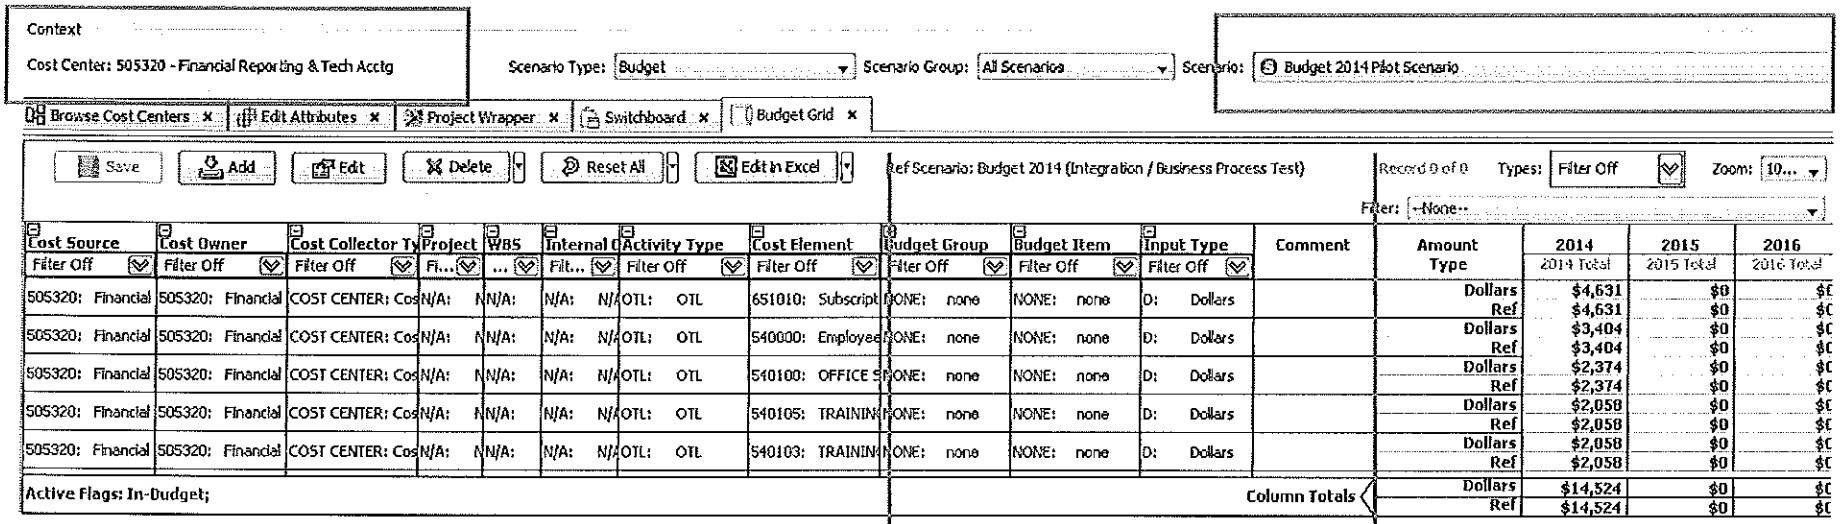


2. • Select a Cost Center (either double-click on or highlight a Cost Center and click the **Select** button at the bottom of screen)



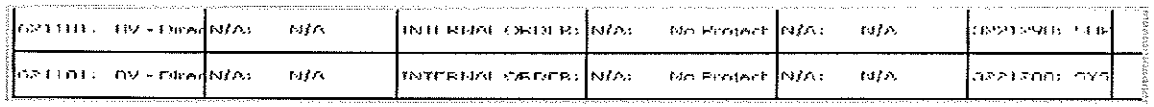
3 Opening the Budget Grid

- Open the **FE Main Switchboard**
- Click on **Budget Grid**



4 • Click **Budget Grid**

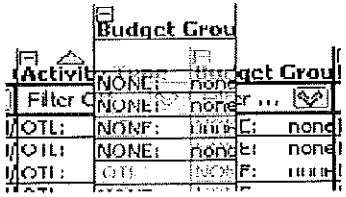
Budget Grid Layout Overview



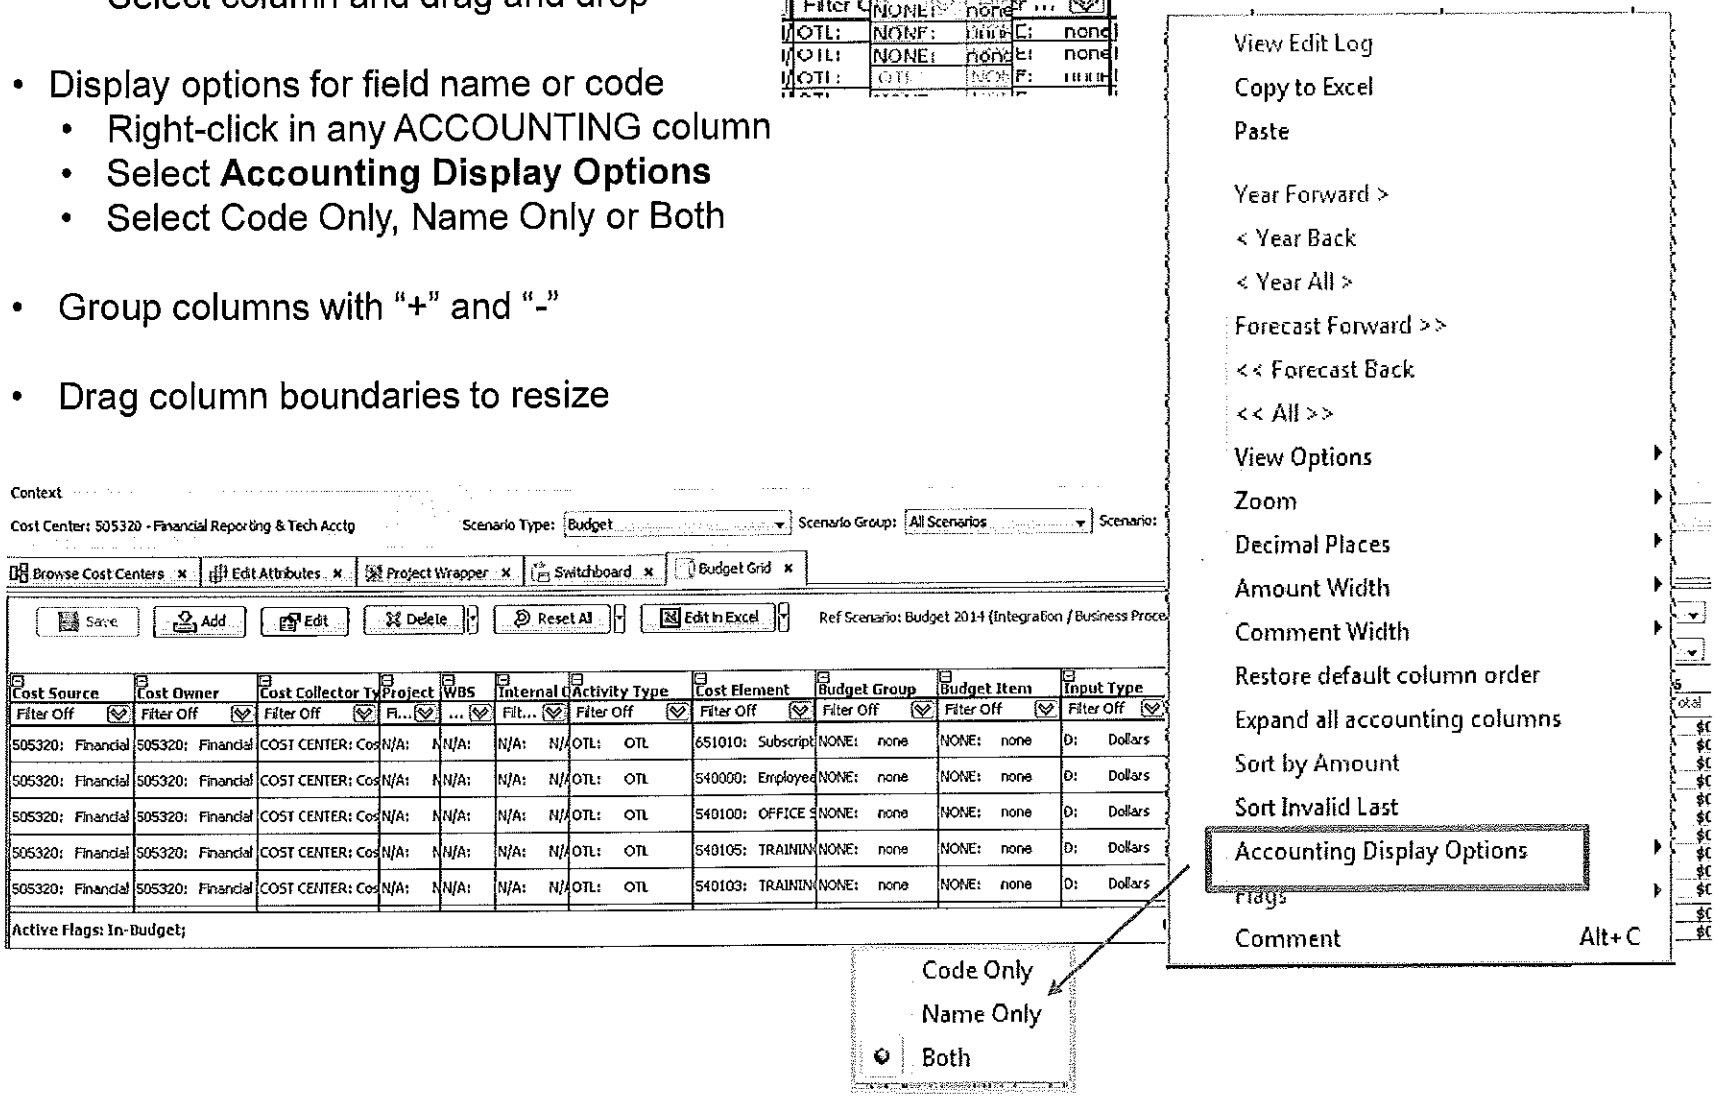
- The Budget Grid consists of required and optional entries
- User can customize grid and maintain user preferences
- Attributes are listed on the left hand side (Accounting) of the Grid
- Data entry takes place on the right hand side of the Grid

Codeblock combinations align with SAP actuals

User defined fields to facilitate budget, forecast, plan preparation and approvals



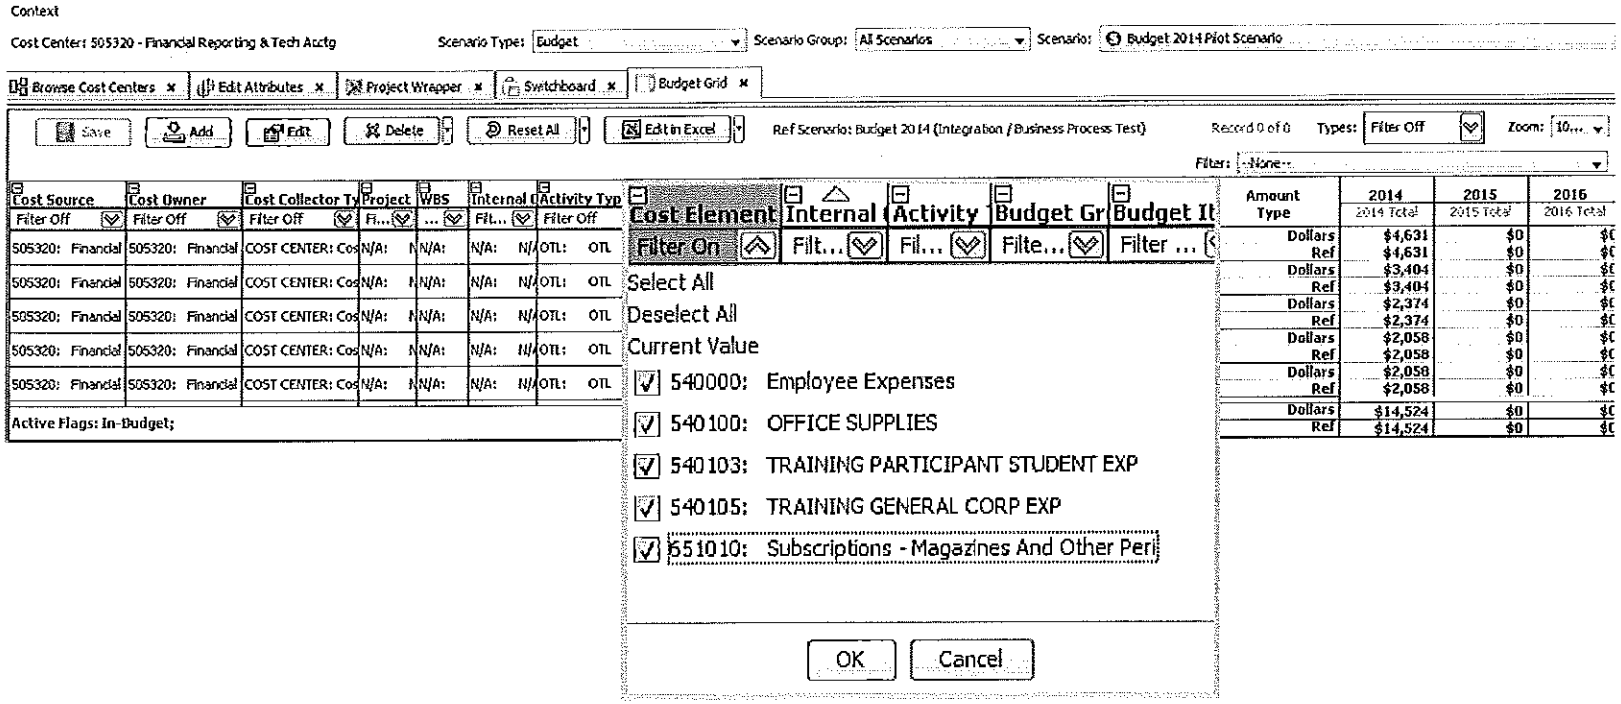
Rows displayed in red denote invalid combinations. Would occur if system validations were changed. User will not be able to enter invalid codeblock



Budget Grid Functions - Display Options

5

- Column ordering
  - Select column and drag and drop
- Display options for field name or code
  - Right-click in any ACCOUNTING column
  - Select **Accounting Display Options**
  - Select Code Only, Name Only or Both
- Group columns with "+" and "-"
- Drag column boundaries to resize



Budget Grid Functions - Filters

6

- Column filtering (e.g. cost element, activity type, etc)
  - All columns have filtering available
  - Select a column to filter
  - Click on filter (column heading turns red when filter is on)
  - Drop down available to select options

Budget Grid Functions - Data Display

- Monthly or annual view of data
  - Click on the year header to toggle between monthly and annual data

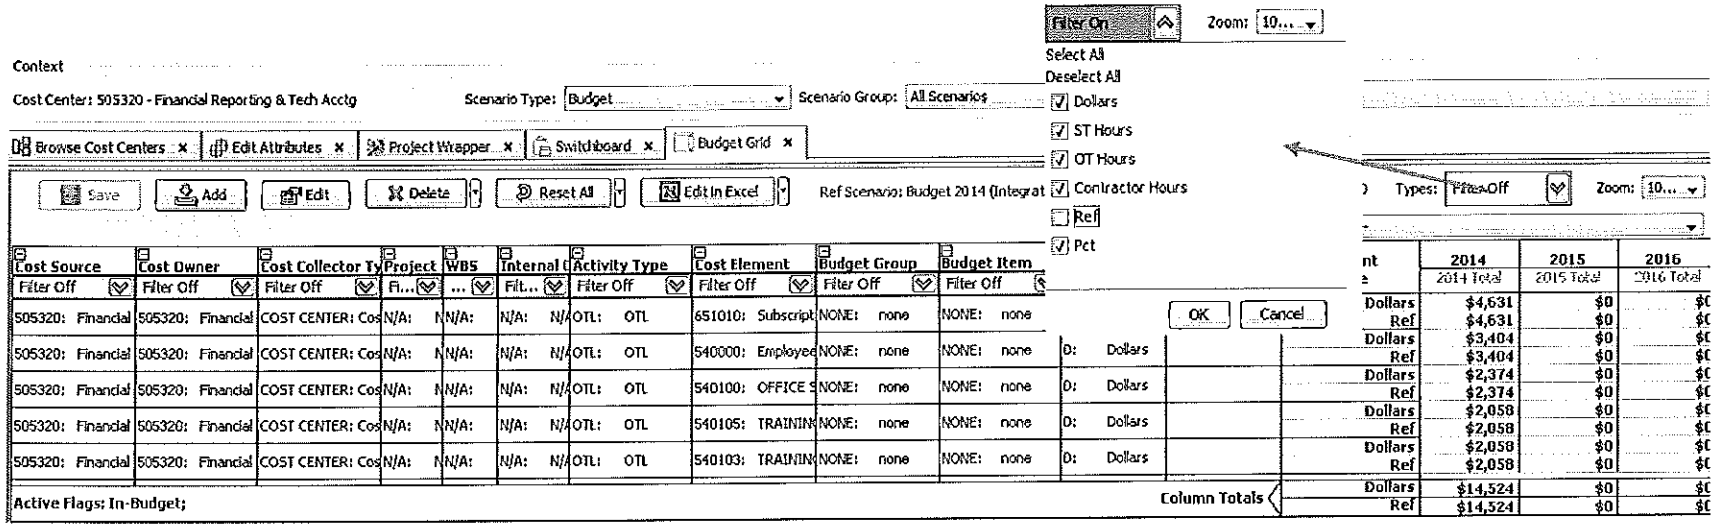
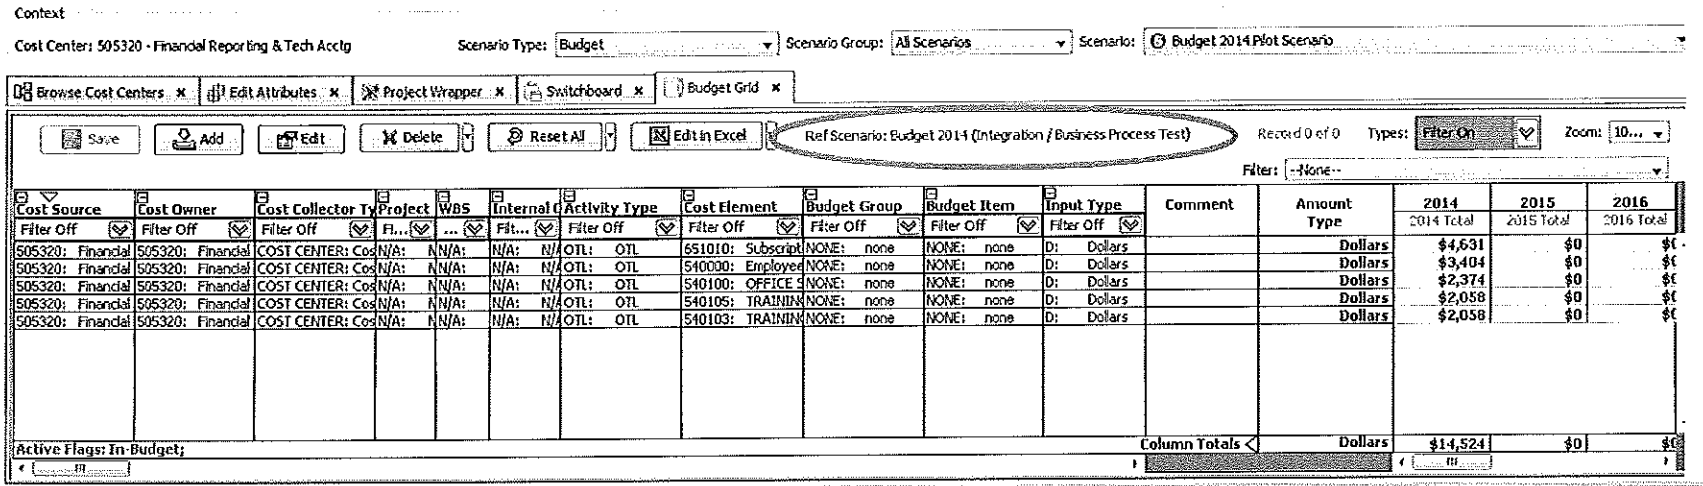
Budget Grid Functions - Forecasting Options

- Year Forward - Year Back
  - Year Forward - Copy value from one month to remaining months in year
  - Forecast Forward - Copy value in current year to outer year

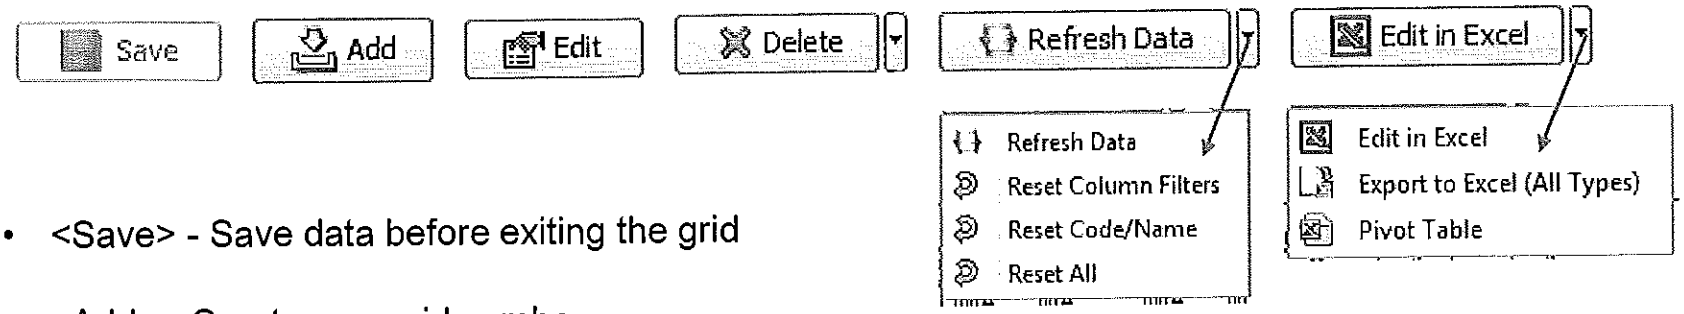




2013	2014				
2013 Total	2014 - Jan	2014 - Feb	2014 - Mar	2014 - Apr	2014 - May
$4,631	$100	$100	$100	$100	$100
$3,404	$0	$0	$0	$0	$0
$2,374	$0	$0	$0	$0	$0
$2,058	$0	$0	$0	$0	$0
$2,058	$0	$0	$0	$0	$0

Dollar value copies to remaining months

Budget Grid Functions - Reference Scenario



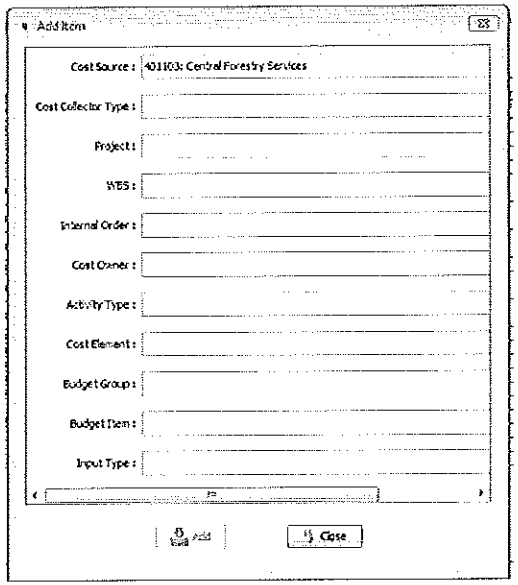
- UIP Grid allows for direct comparisons between scenarios (called "Reference Scenarios")
- Reference Scenarios are set by System Administrator
- Toggle by clicking on "Type" filter and selecting/deselecting "Ref"

12

- Basic Functions

- <Save> - Save data before exiting the grid
- <Add> - Create new grid combo
- <Edit> - Change a cost collector combo
- <Delete> - Remove a cost collector combo
- <Refresh Data> - Update grid with most recent changes/data
- <Reset Column Filters>
- <Reset Code/Name>
- <Reset All>

  } - Restores accounting data columns to original settings

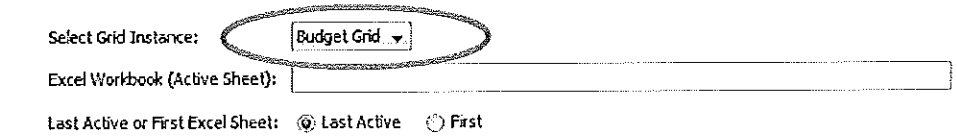


- <Edit in Excel> - Copies Grid data (Directs) to Excel for editing and then pastes it back into UIP.
- <Export to Excel (All Types)> - Sends ALL Budget Grid data to Excel to SAVE (can be imported).
- <Pivot Table> - Sends Budget Grid data to Excel and sets it up in Pivot Table format.

Add Budget Grid Data Overview

Multiple ways to enter data to the Grid

Add button with Edit Combo drop down



Edit in Excel or
Right Click in grid and
select *"Copy to Excel"*

	A	B	C
1			
2	Cost Center	Receiving Cost Center	Cost Collector Type
3	0000401001: Central Reg	0000401001: Central Regi	COST CENTER: Cost Ce
4	0000401001: Central Reg	0000401001: Central Regi	COST CENTER: Cost Ce
5	0000401001: Central Reg	0000401001: Central Regi	COST CENTER: Cost Ce
6	0000401001: Central Reg	0000401001: Central Regi	COST CENTER: Cost Ce

To import saved data return to Browse Cost Center screen and right click – select *"Import" (file must be on C: drive)*

All entries are validated prior to save to ensure accurate values were selected

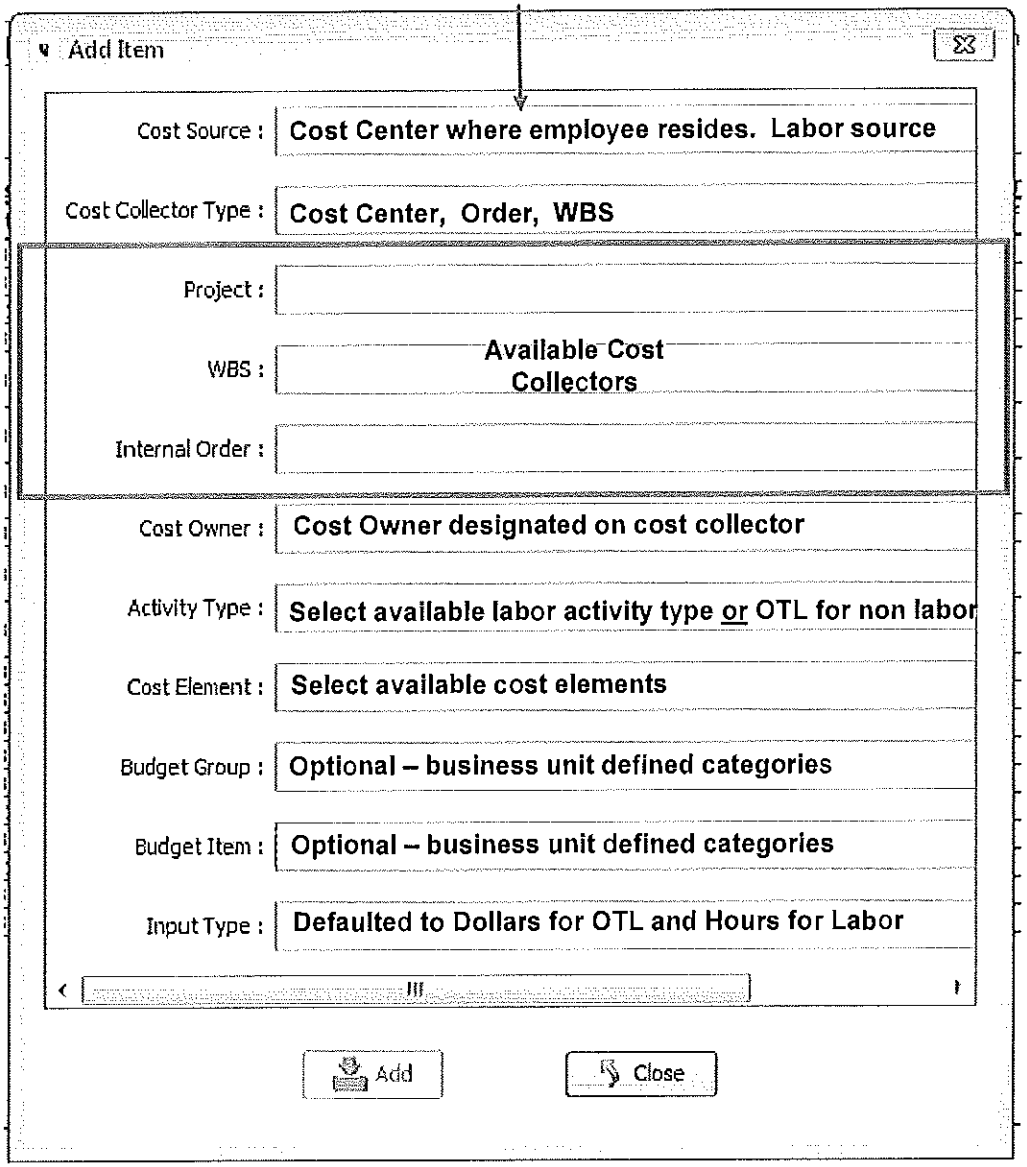
Add Budget Grid Combination

Right click in box to either select value or enter directly

1. <Add> button with drop down

Cost Centers will be limited based on the user security →

Cost Collector defaults "N/A" if Cost Collector Type not selected. A drop down of valid cost collectors for owner selected will display →

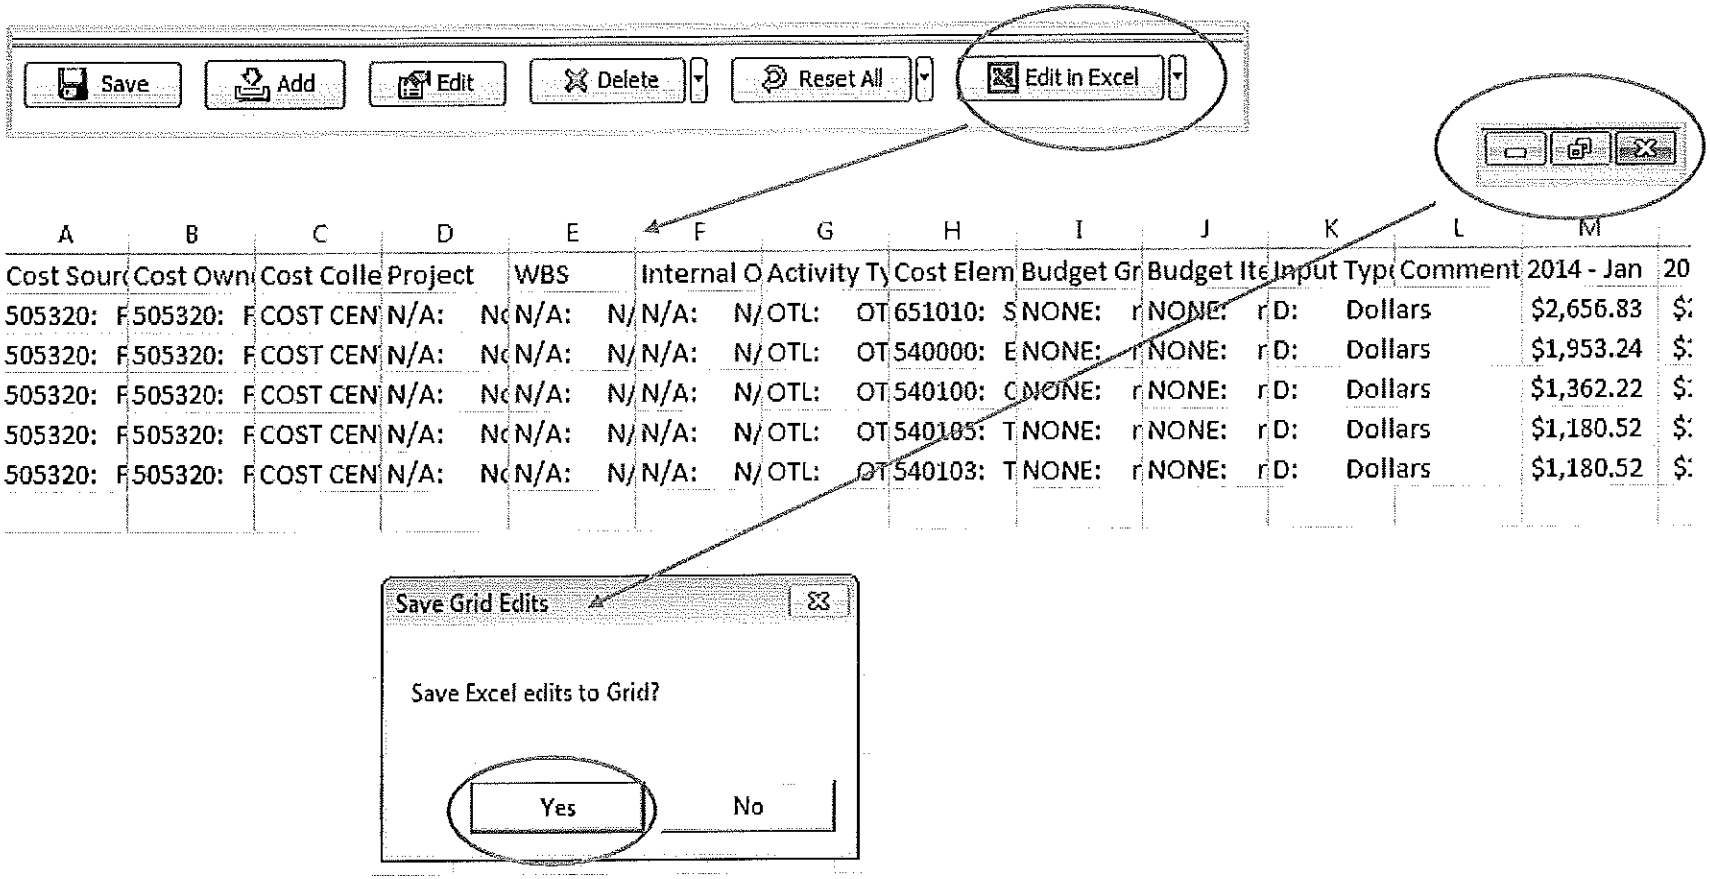


When budgeting Labor, this will be the Cost Center being billed for the Labor.
When budgeting OTL, this will be the same as the Cost Source →

Will be required only for Labor. Should be set to 'OTL' when budgeting OTL. Contractor hours and dollar value available →

Appropriate cost elements display (labor or OTL or Contractor/Prof Services). Ability to lock cost elements →

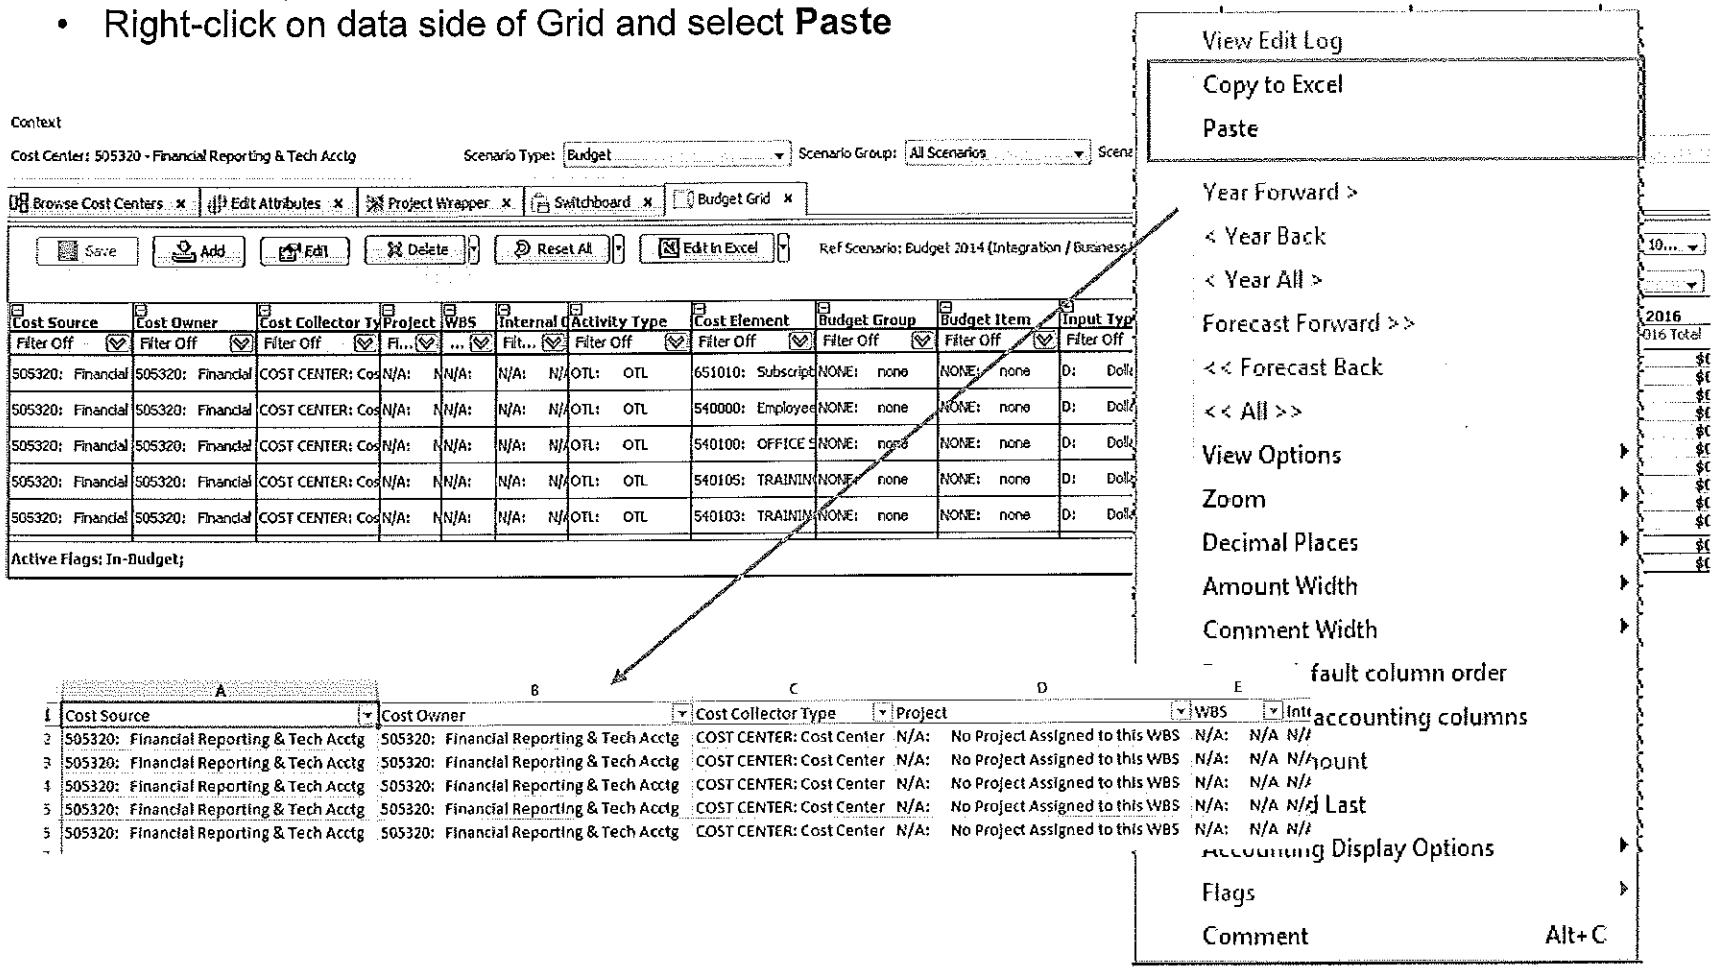
Allows user to apply more detail to the budget. Budget Groups might include Travel or Office Supplies. →



Allows user to apply more detail to the budget. Budget Items might include Airfare, Hotel and Meals for the Budget Group of Travel. →

Add Budget Grid Combination

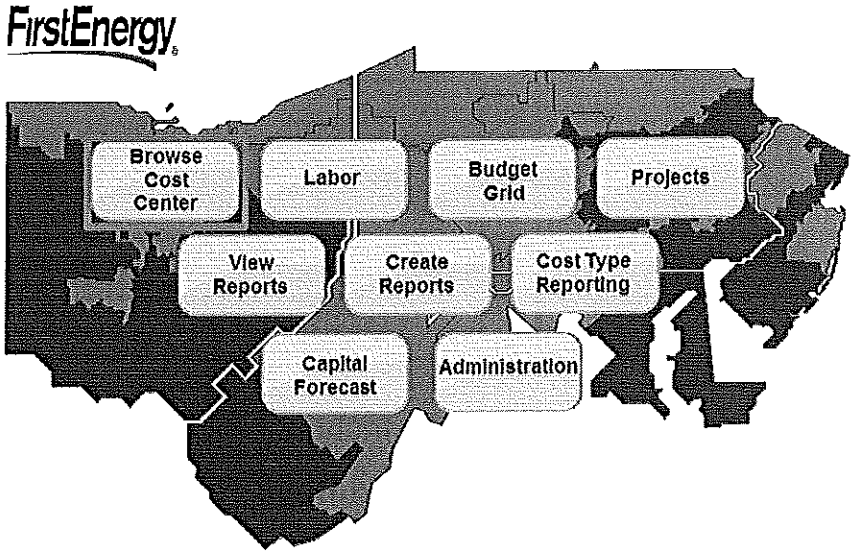
2 Edit in Excel



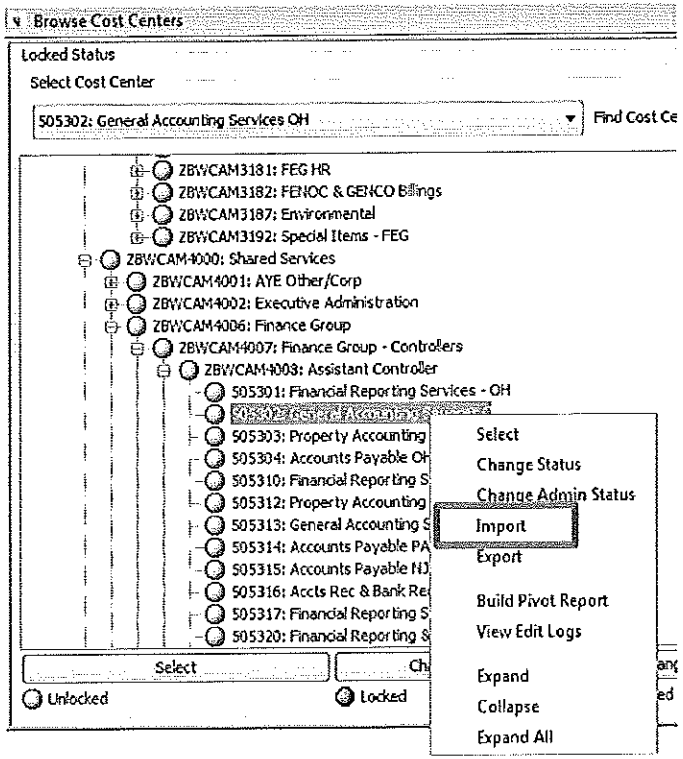
- Select **Edit in Excel** button
- When Excel opens, enter values in desired cells' dollars or make adjustments to existing values
- Click the "X" button to save back to the grid

Add Budget Grid Combination

3 Copy to Excel



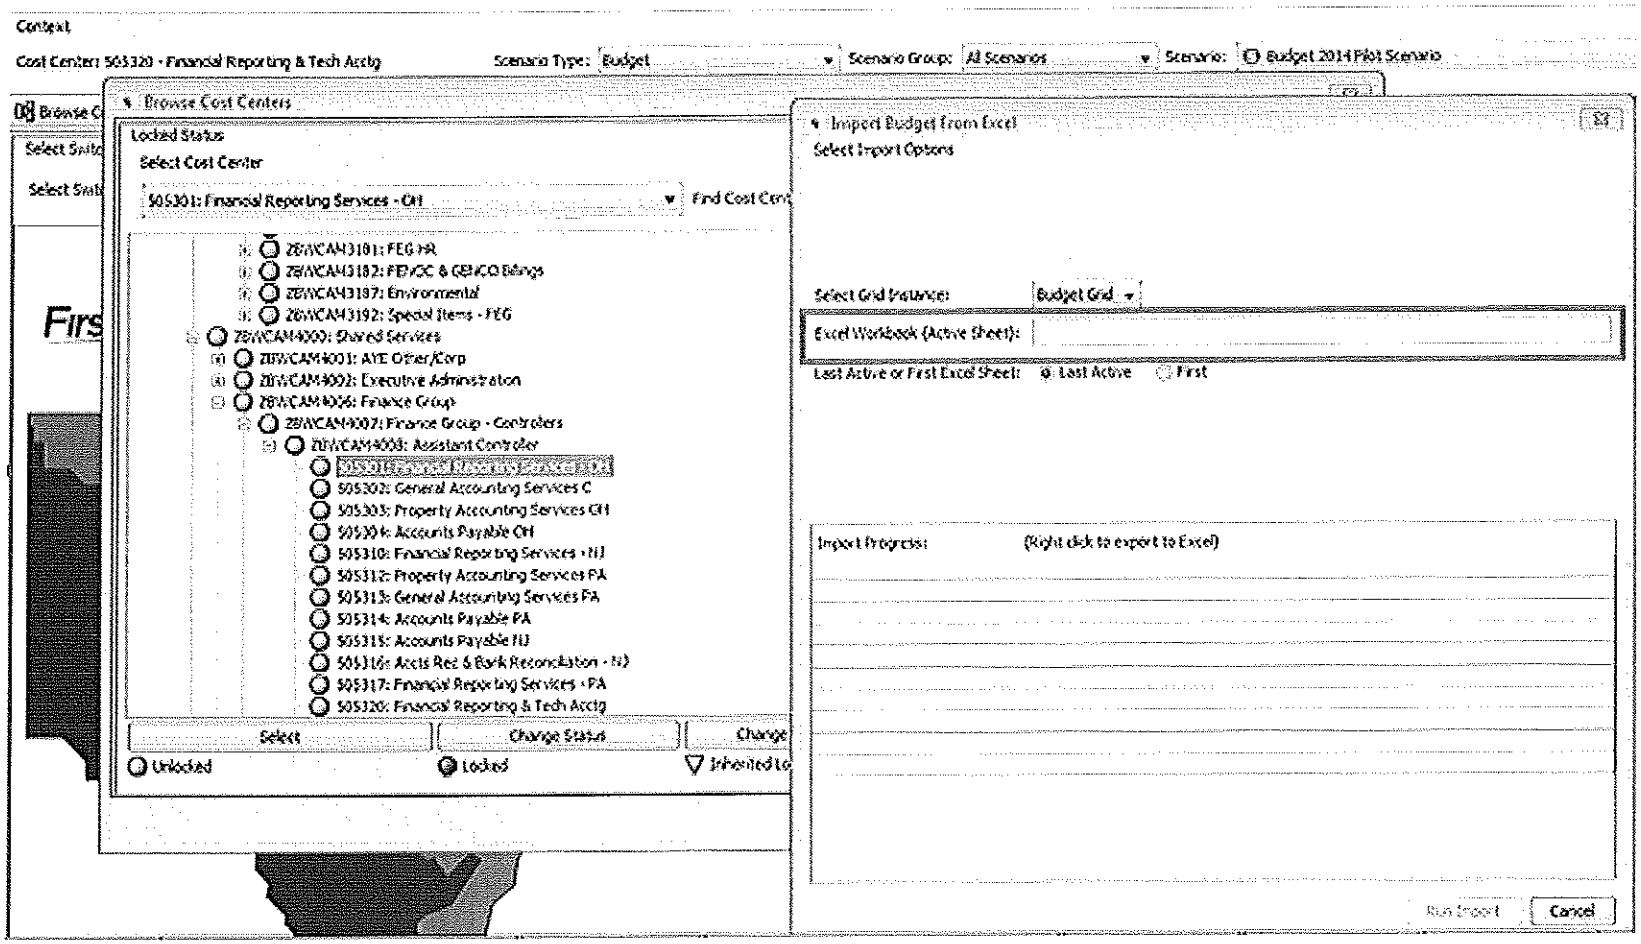
- Right-click on data side of Grid and select **Copy to Excel**
- Enter values in desired cells
- When completed, highlight sheet, select "copy"
- Right-click on data side of Grid and select **Paste**



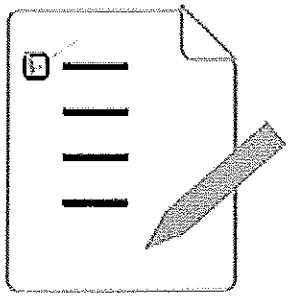
Add Budget Grid Combination

4 Import Budget Grid Data

- Open **FE Switchboard**
- Click **Browse Cost Center**
- Right click on any Cost Center
- Select "Import" from the menu window



Note: This method is primarily used for data imports. Users should select the **Edit in Excel** button or **Copy to Excel** option for basic budget grid entry



Add Budget Grid Combination

continued

4. Click in the "Excel Workbook (Active Sheet)" window
   - Browse through "C:/" drive to find import spreadsheet
   - NOTE: Spreadsheet must have all the same fields as displayed on the budget grid

Exercise #1 – Budget Grid Entry and Functionality

- Customize your Grid
- Add a budget grid combination by using the Add button
- Export the budget Grid to Excel and make additional changes. Populate multi-year. Copy back to Grid
- Perform other grid functions
- Add an existing Budget Group and Budget Item for a selected Cost Center
- Add comments to various Grid combinations
- Create a new Budget Group and Budget Item for a selected Cost Center
- Start developing your Budget Group and Budget Item categories for the 2014 budget process. *Users should complete their list on paper before creating in UIPlanner to ensure consistency and avoid duplication*

Project Planning and Tracking

Project Planning and Tracking Overview

- SAP Projects and WBS elements will be used for all current year projects
  - Project/WBS list from SAP will be refreshed every 60 minutes along with all attributes
- Planning Projects (conceptual projects) will be created and managed in UIPlanner for multi-year forecasts
  - Create Planning Projects using templates
  - UIPlanner will derive key attributes - user can populate remaining attributes
  - Some attributes will be required fields
- There is a process for when a Planning Project becomes "real", i.e., is in SAP
- Current list of attributes is on the next slide. Ability to create additional attributes

Current Year	Multi-Year
SAP Projects	**UI Planning Projects**
• Approved projects in the current year • Project definition and WBS elements exists in SAP • Ability to track actuals vs. budget	• Unapproved Projects in the queue • Planning projects (project definition and WBS elements) mirror real SAP structures but utilize UIP naming conventions • SAP project templates utilized as starting point

- Mirroring the SAP project to the UI Planning Project ensures important attributes such as the Costing Sheet data are applied accurately and automatically
- Budget close will work in the same manner for the multi-year planning process

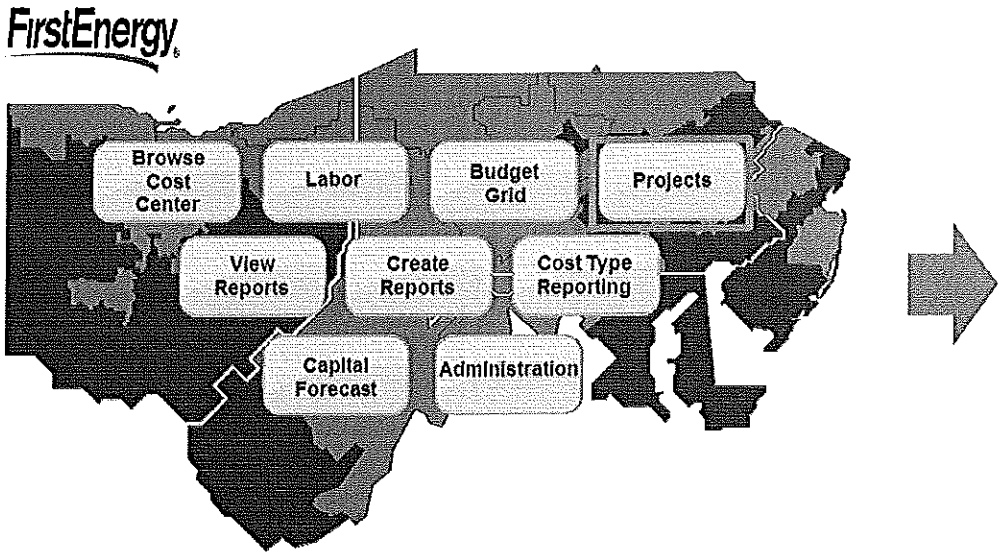
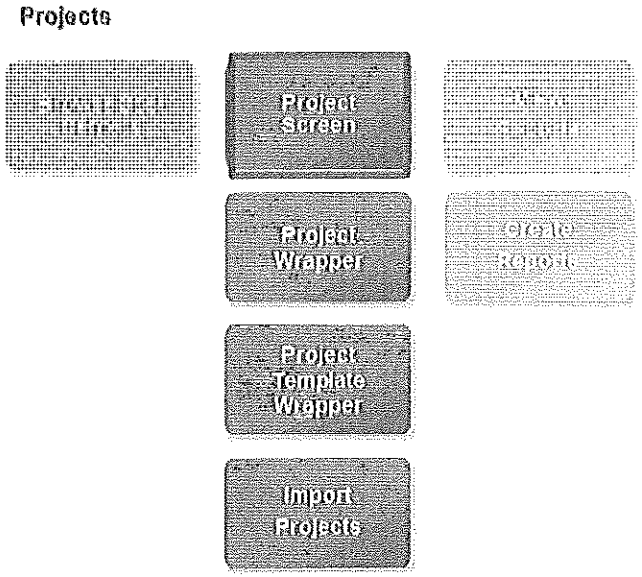
Project Planning and Tracking Startup

1. Define a Context Cost Center
   - Open the **FE Switchboard**
   - Click **Browse Cost Center**

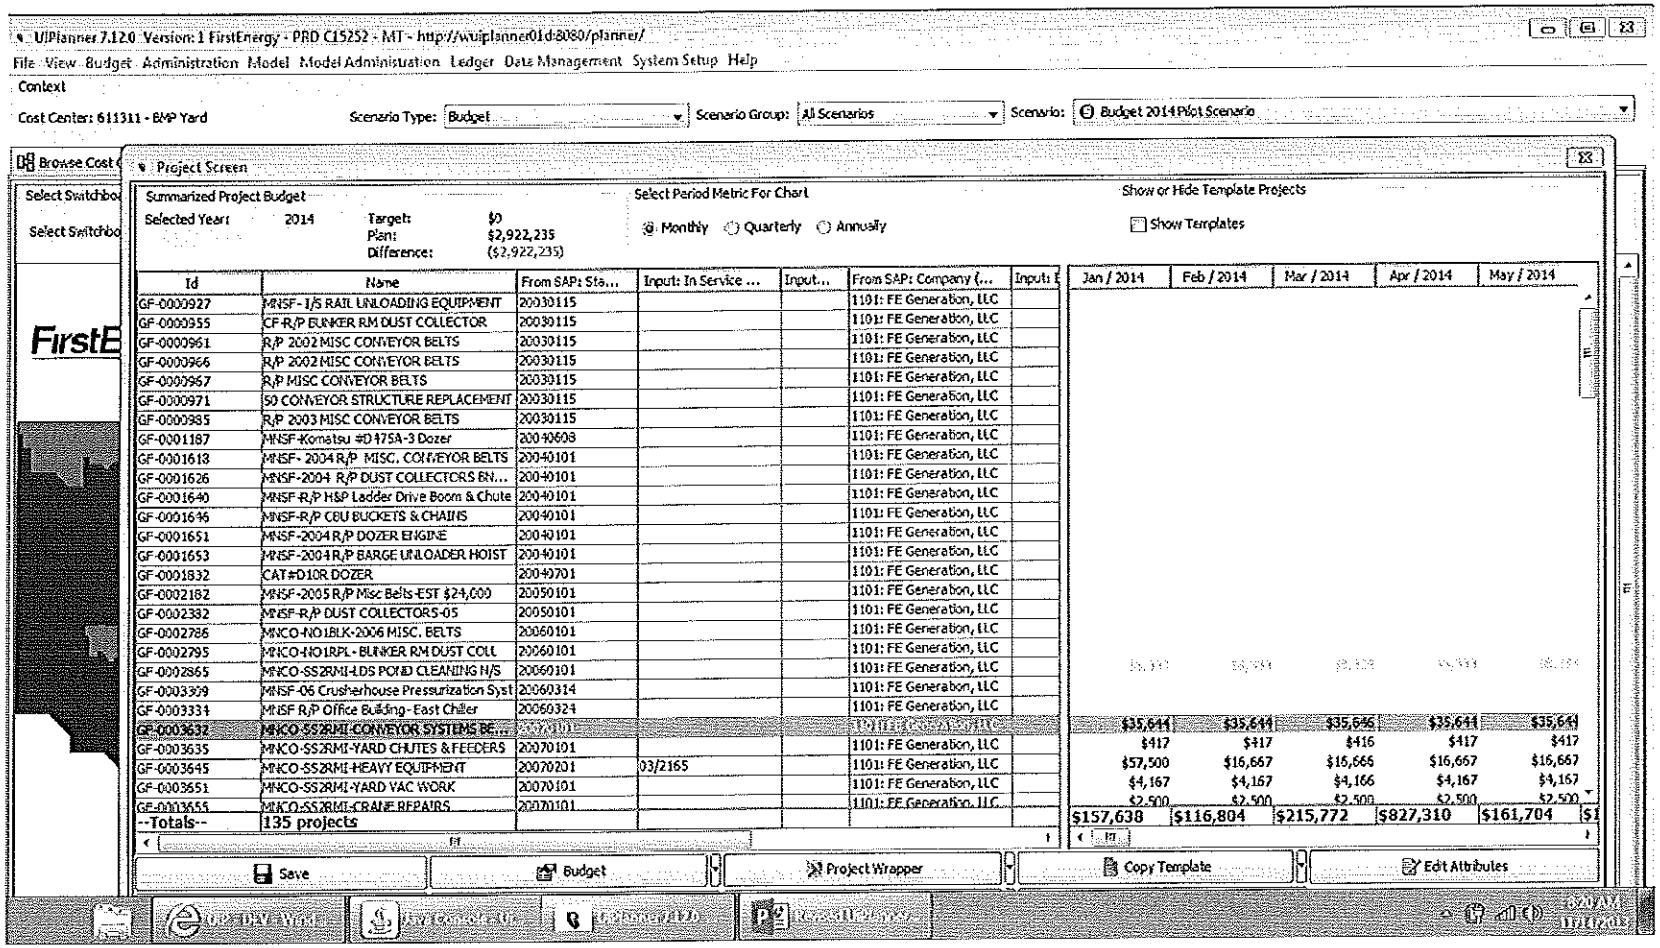


2.
   - Select a Cost Center (either double-click Cost Center or highlight Cost Center and click the **Select** button on the bottom of screen)
   - **Note:** Select the ALL node to view a full list of projects



Project Planning and Tracking Startup

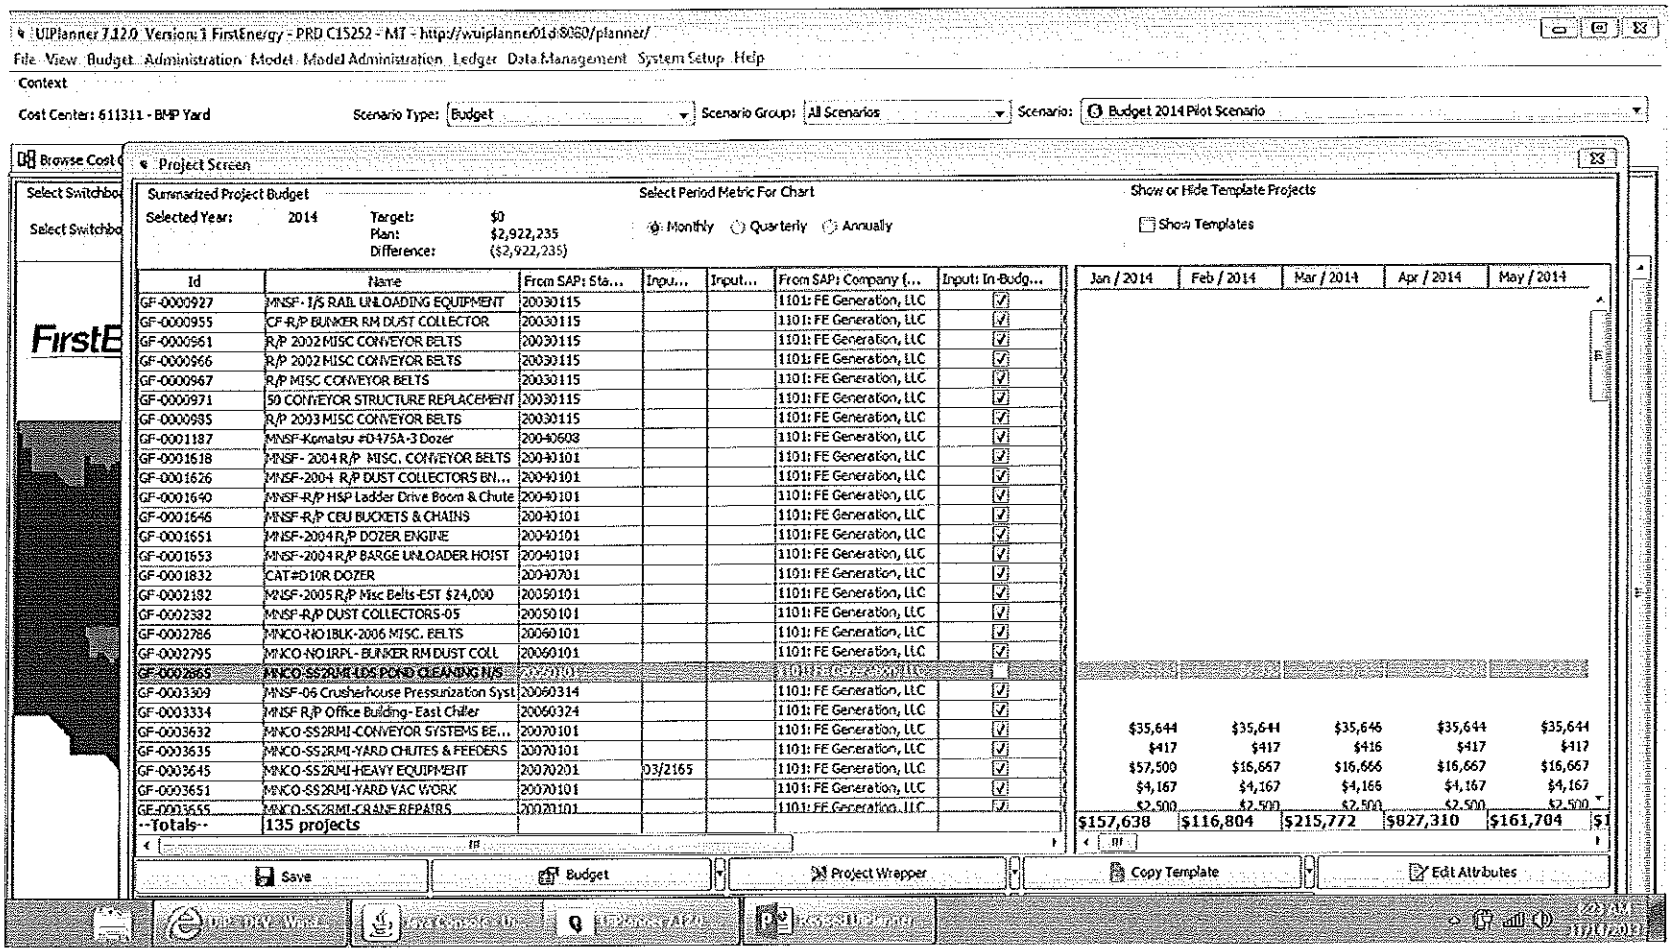
3 Open Project Screen
- Return to the **FE Switchboard**
- Click on the **Projects** button



4
- Click **Project Screen** menu item

Project Planning and Tracking Screen Navigation

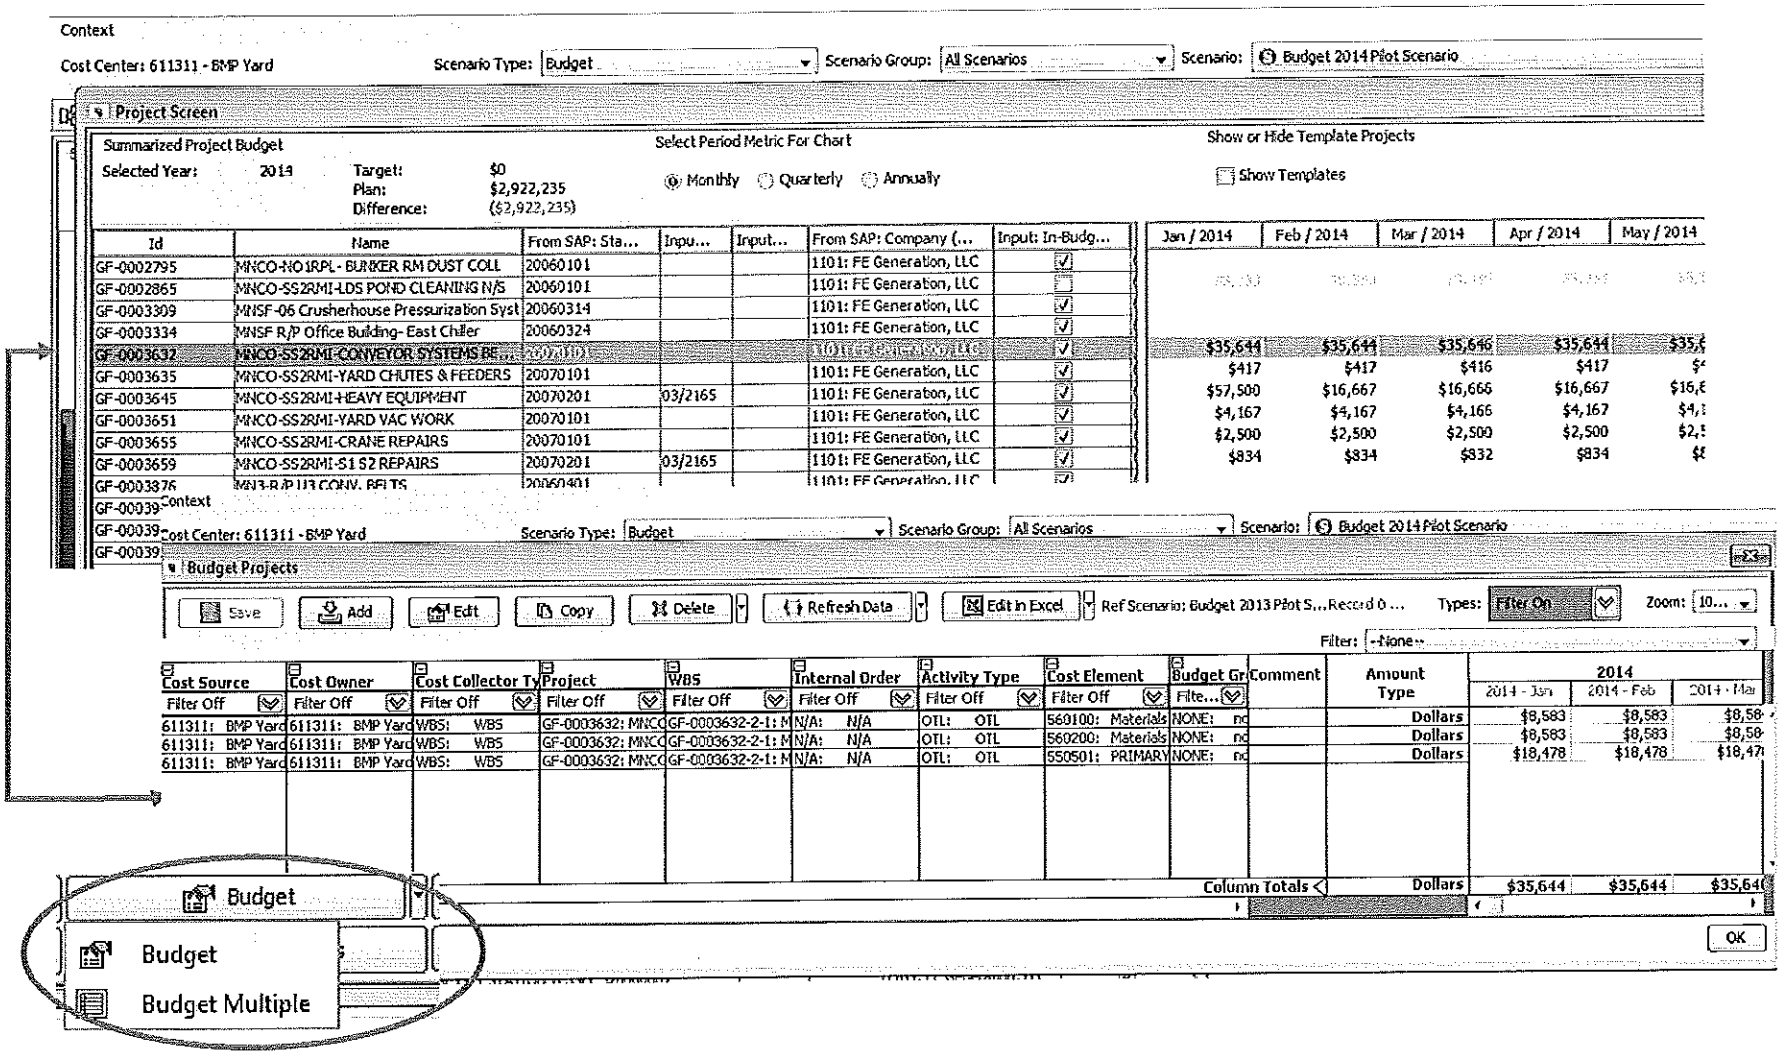
5



- Move projects from year to year
  - Select dollar amount for a given project and drag to a different year
  - Changes will automatically update Grid keeping the Project Screen and Budget Grid in sync
  - Note: you cannot drag projects that have already started (i.e. have amounts in actuals months)
- Change the column display (Monthly, Quarterly, or Annual)

Project Planning and Tracking Screen Navigation

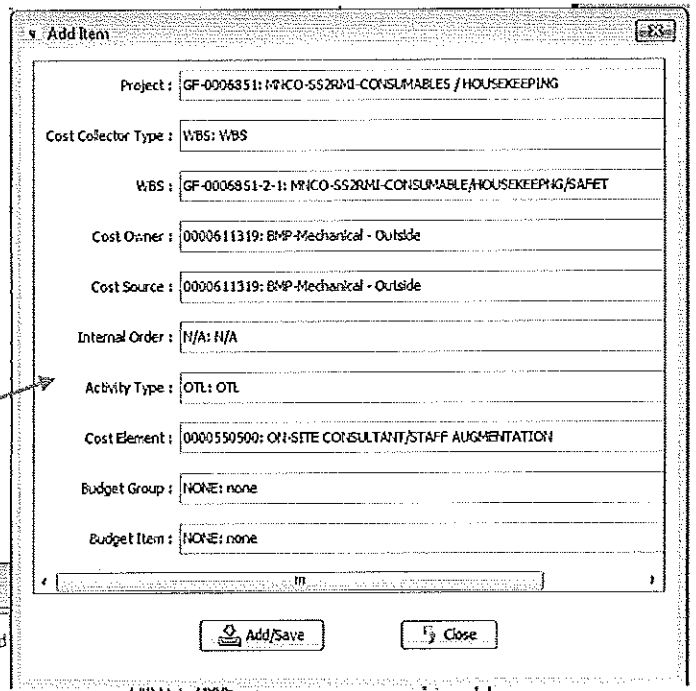
6



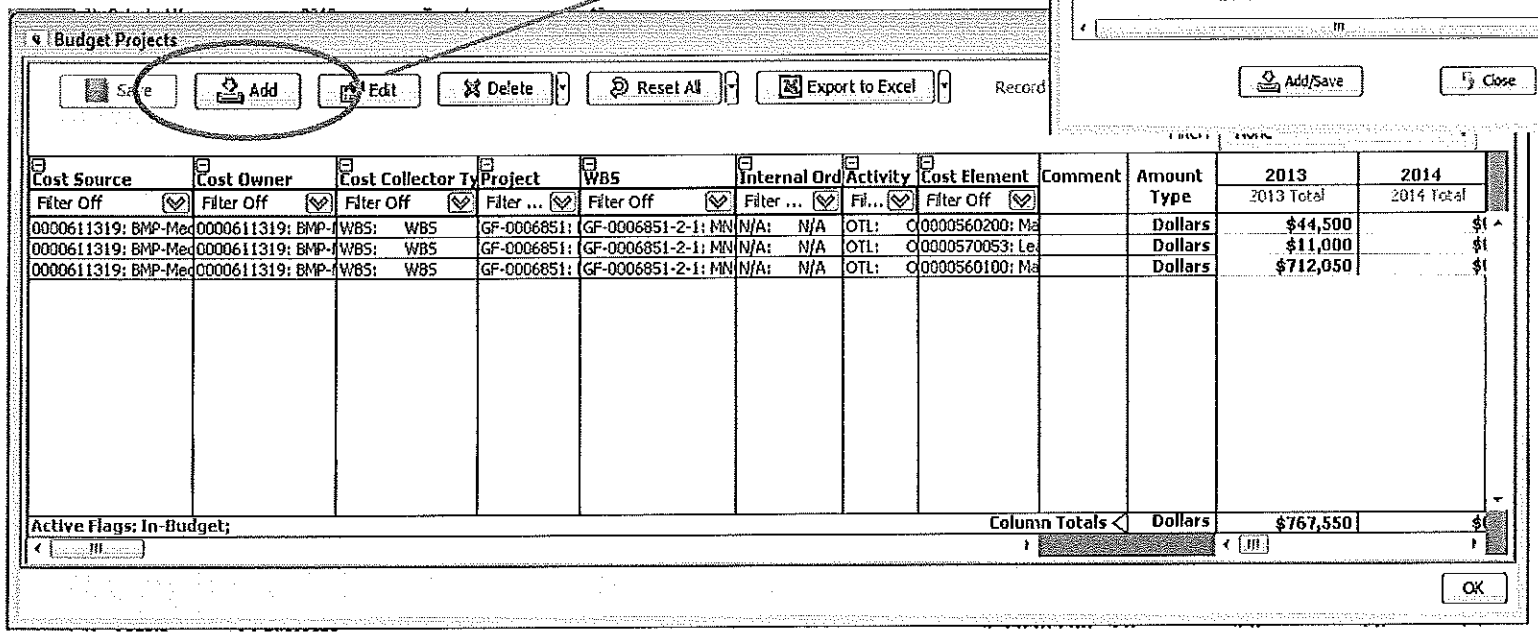
- Turn projects on and off (using the In-Budget flag)
  - The project spending will be grayed out
  - It will be excluded from the totals
  - Click on a column, and the top of the screen shows the totals against the target for that year

Project Planning and Tracking Budgeting

7

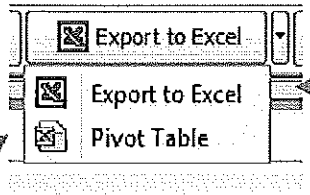


- Select Budget button on bottom of screen to view projects in the budget grid
- Use the droplist on the side of the button to choose whether to budget one project or multiple projects



Project Planning and Tracking - Add Combo

8



- Budget Grid - Project View
  - All Grid functionality
    - Dollars, Hours
    - Enter or paste from Excel
    - Monthly, Annual
    - Grouping and filters
    - Right-click options
  - Add Combos
    - Project Validations - fills in the available choices for the next field
    - Some fields are prepopulated

Project Planning and Tracking – Export to Excel / Pivot Table

9 • Select **Export to Excel/Pivot** button on bottom of screen to send the screen contents to Excel
  • Select the dropdown on the right of the button to choose raw Excel or a Pivot table

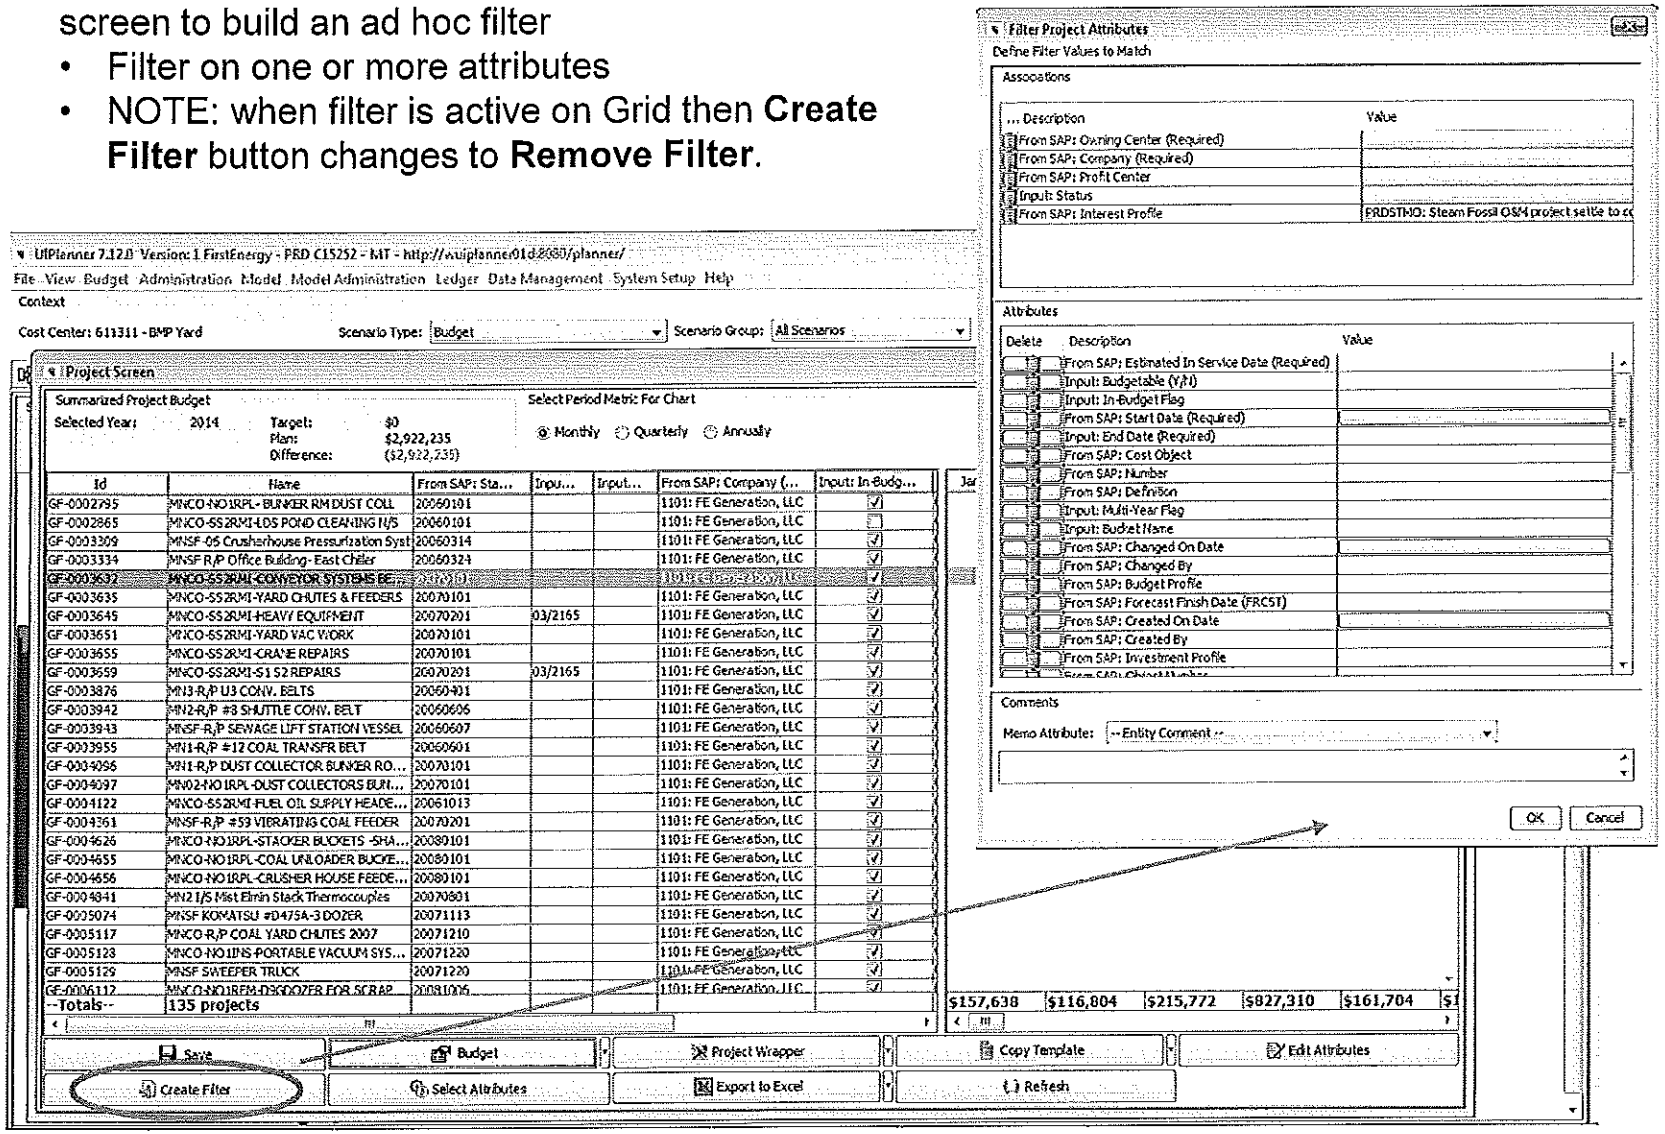
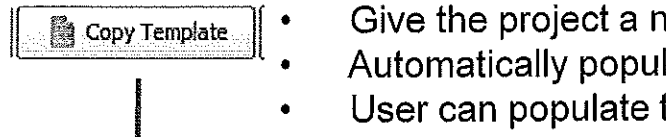
Project Planning and Tracking - Select Attributes

10

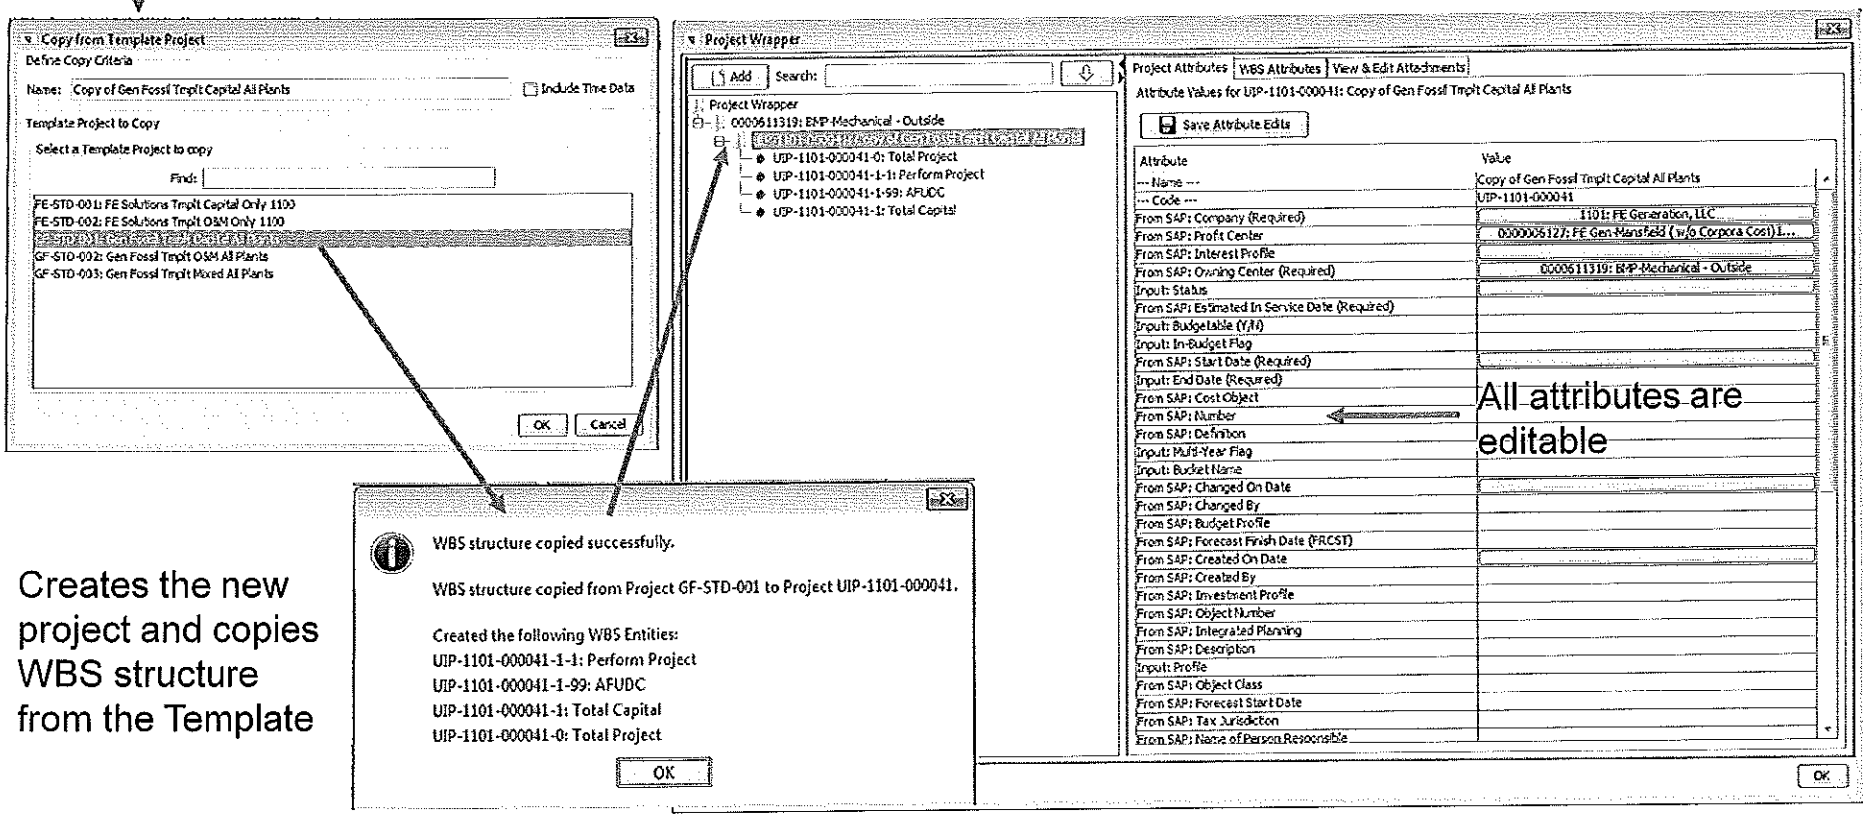


- Users can customize the project screen and view project attributes
- Select the **Select Attributes** button on bottom of screen
- Click on/off attributes you want to display
- Attributes can be sorted

- View only - attributes are edited on the Project Wrapper
  - In-Budget Flag can be changed right on the Project Screen)



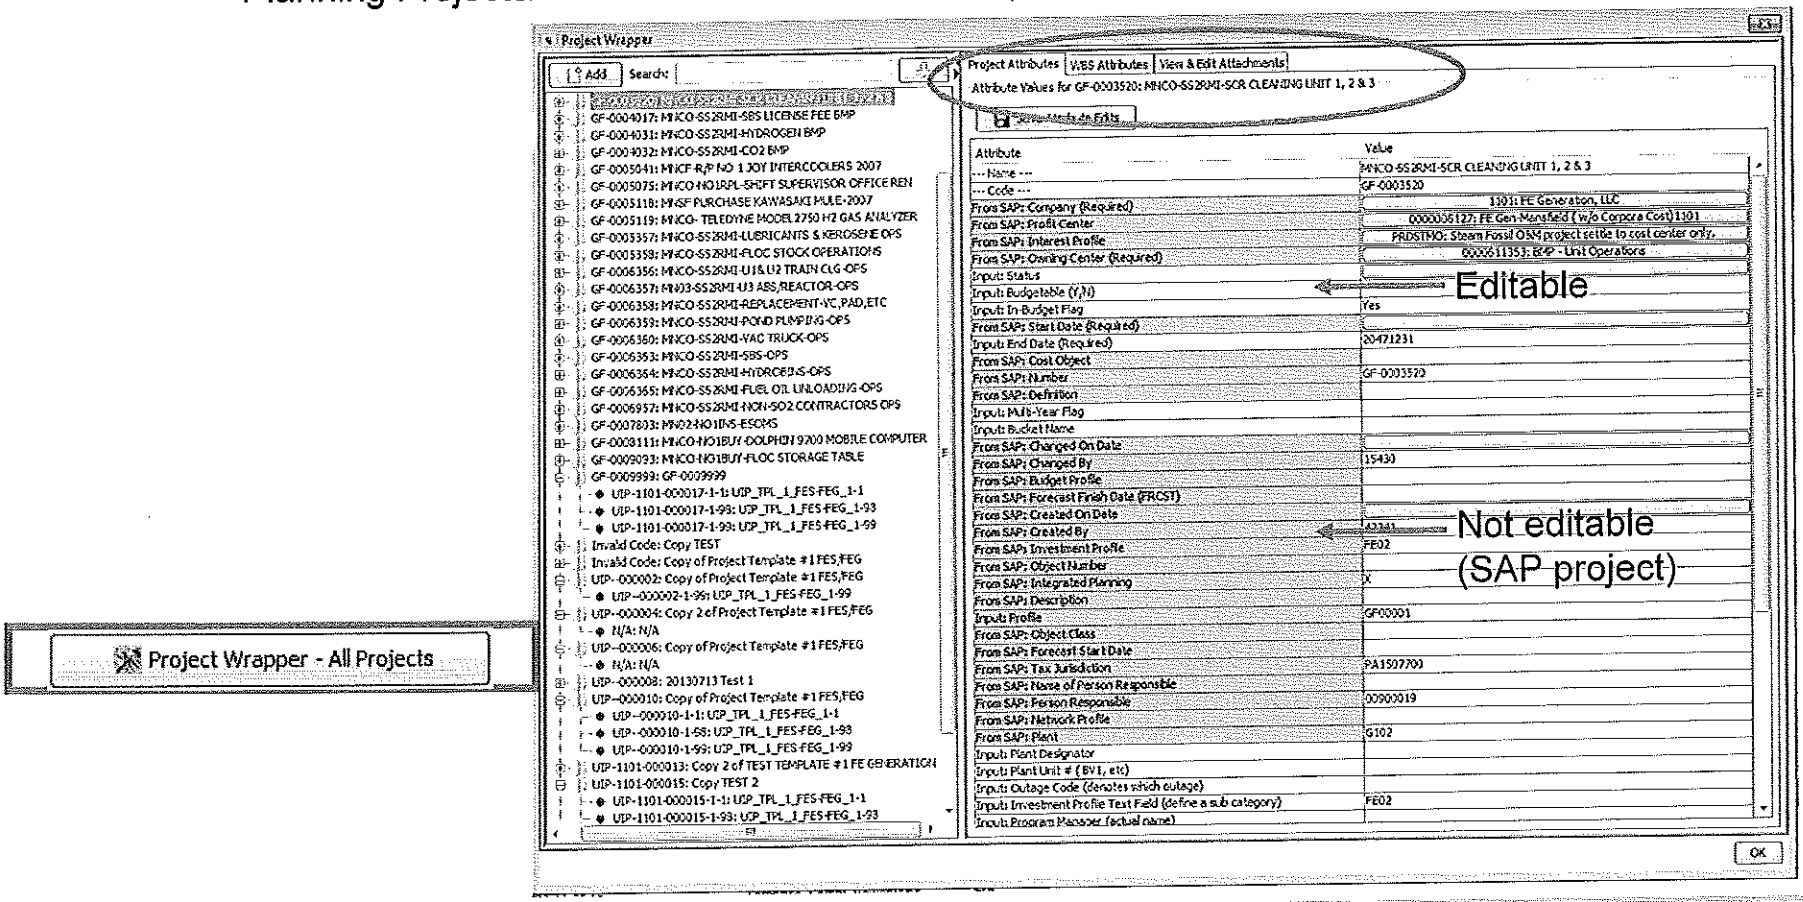
Project Planning and Tracking - Filters



- Select the **Create Filter** button on the bottom of the screen to build an ad hoc filter
  - Filter on one or more attributes
  - NOTE: when filter is active on Grid then **Create Filter** button changes to **Remove Filter**.

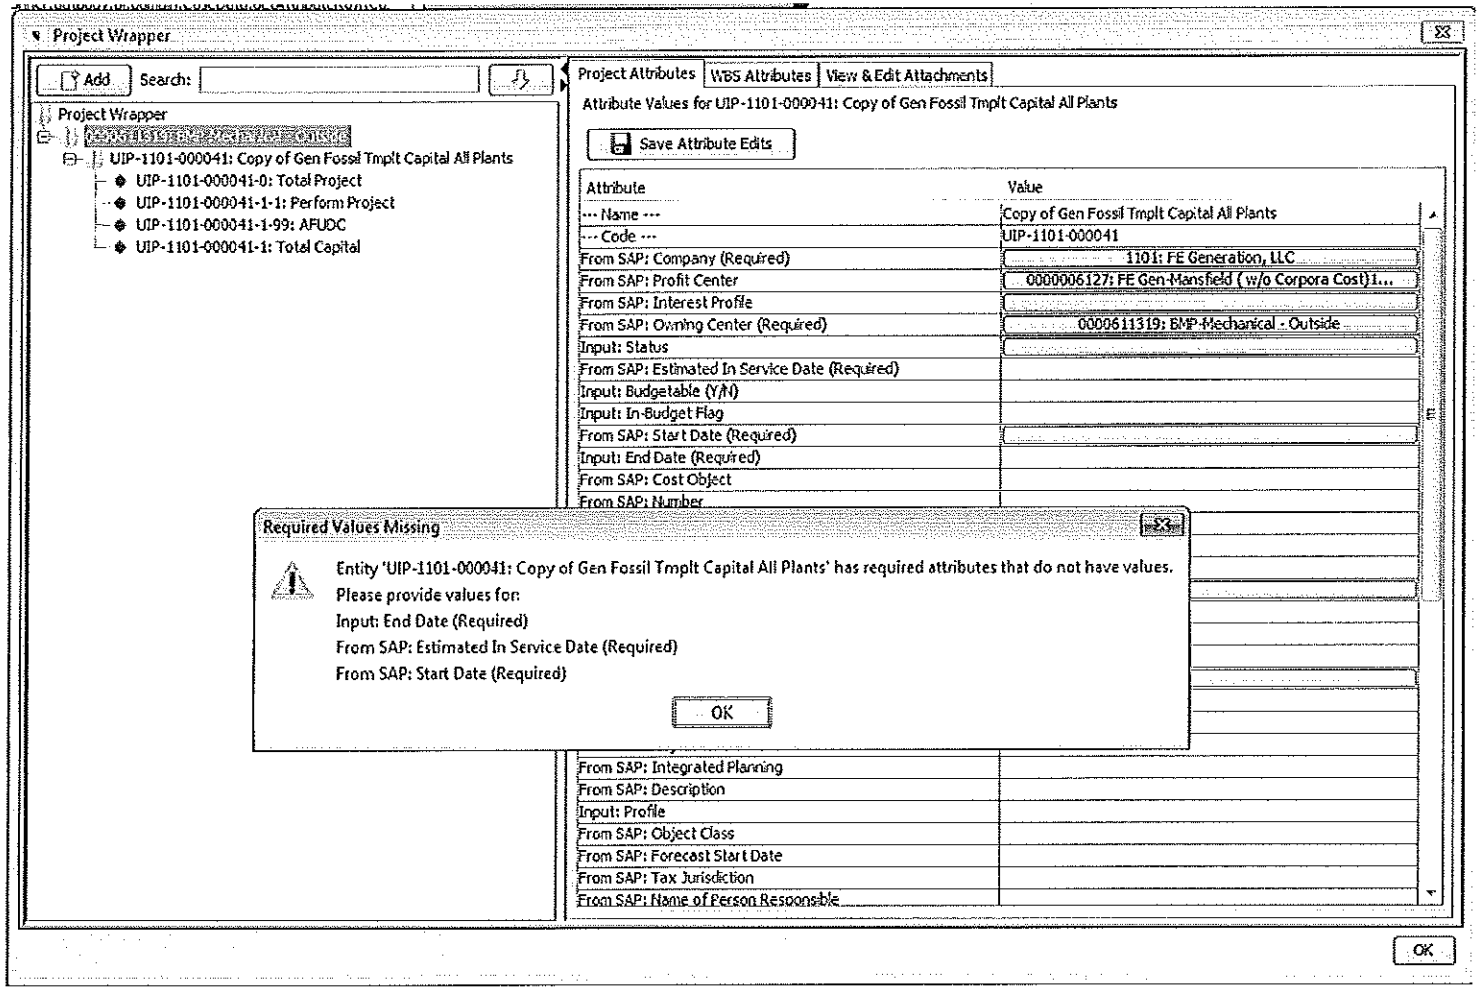
Project Planning and Tracking - Create New Project

12 • Create Planning Project / WBS
  - Planning Projects/WBS will be created in UIPlanner
  - Based on Template Projects brought in from SAP
  - Hit the Copy Template button at the bottom of the Project Screen
    - Select a template from the list (templates are at rollup CC; available to CC under)
    - Give the project a name (starts with a default Copy of . . . .)
    - Automatically populates key elements (Company, Cost Center, Project, etc.)
    - User can populate the rest. All attributes are editable in the Project Wrapper



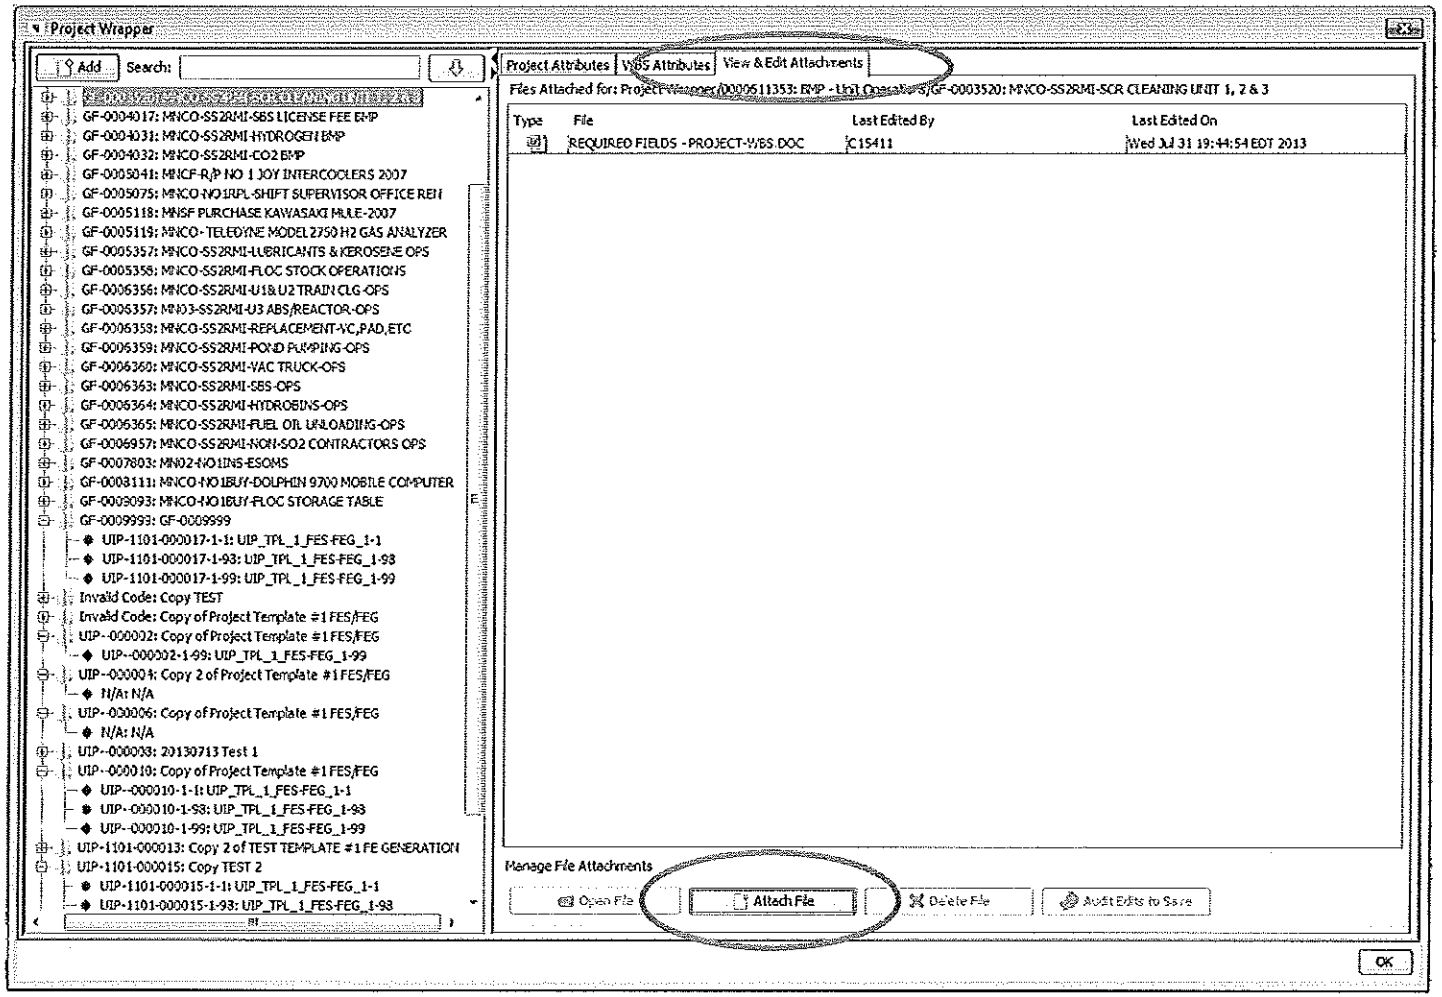
Creates the new project and copies WBS structure from the Template

Project Planning and Tracking - Project Wrapper



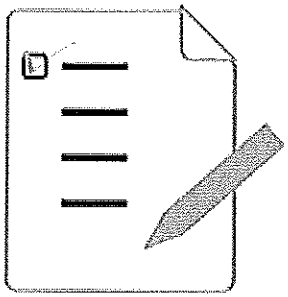
13

- Select the Project Wrapper button to open the Project Wrapper
  - Separate tabs for Project attributes and WBS attributes
  - Shows all attributes
    - Grayed out if you can not edit them
  - Rules for what can be edited and what cannot
    - Projects/WBS from SAP - attributes brought over and cannot be edited
    - Planning Projects/WBS - can edit all attributes (except ones populated by UIPlanner)



Project Planning and Tracking - Create New Project

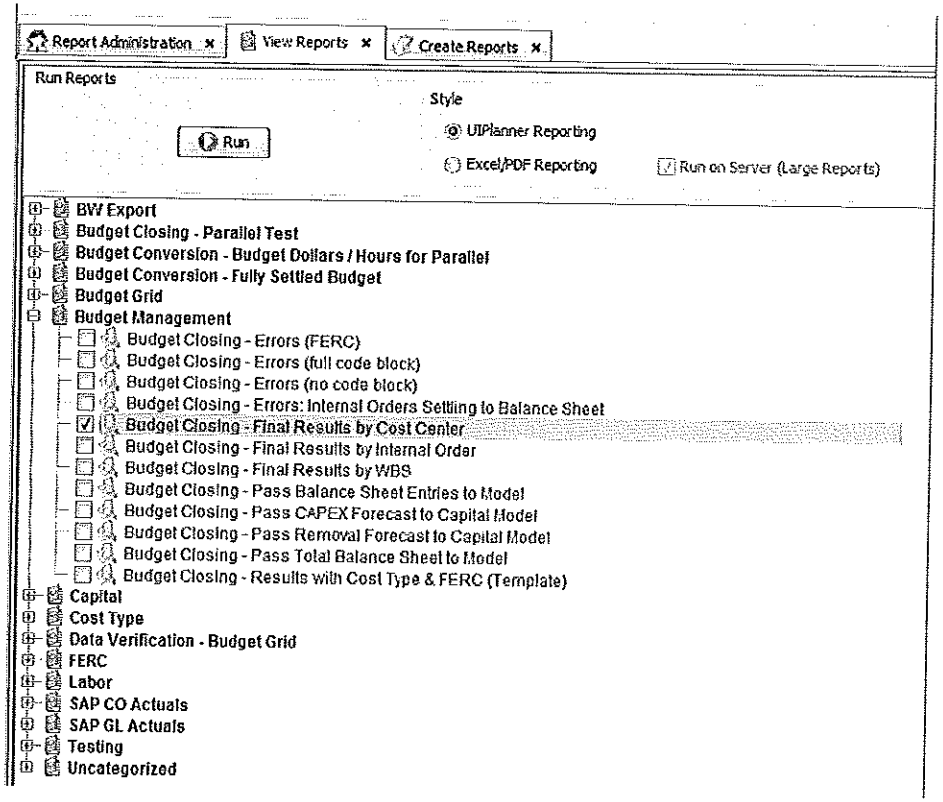
14 • Certain fields for Projects and WBS are required
  - Needed in order to perform key calculations (closings, assessments, etc.)
  - Already populated for Projects/WBS from SAP
  - Need to make sure these are populated when you create a Planning Project



Project Planning and Tracking - Project/WBS Element Attachments

15 • Project Wrapper - Attachments
  - Select the View and Edit Attachment Tab
  - You can attach any document (DOC, XLS, etc.) to the project
  - Stored in the database and archived

Exercise #2 – Project Budget and Tracking

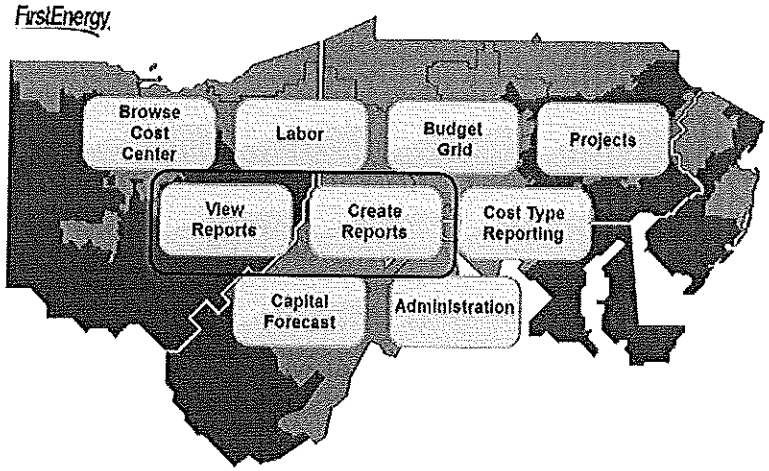


- Customize your Project Screen
  - Select attributes you would like to view
- Open the Budget Grid and make changes for a specific project
- Open Project Wrapper and view/edit project and WBS element attributes
- Export project to Excel pivot
- Create planning project using template

Reporting – Development and Usage

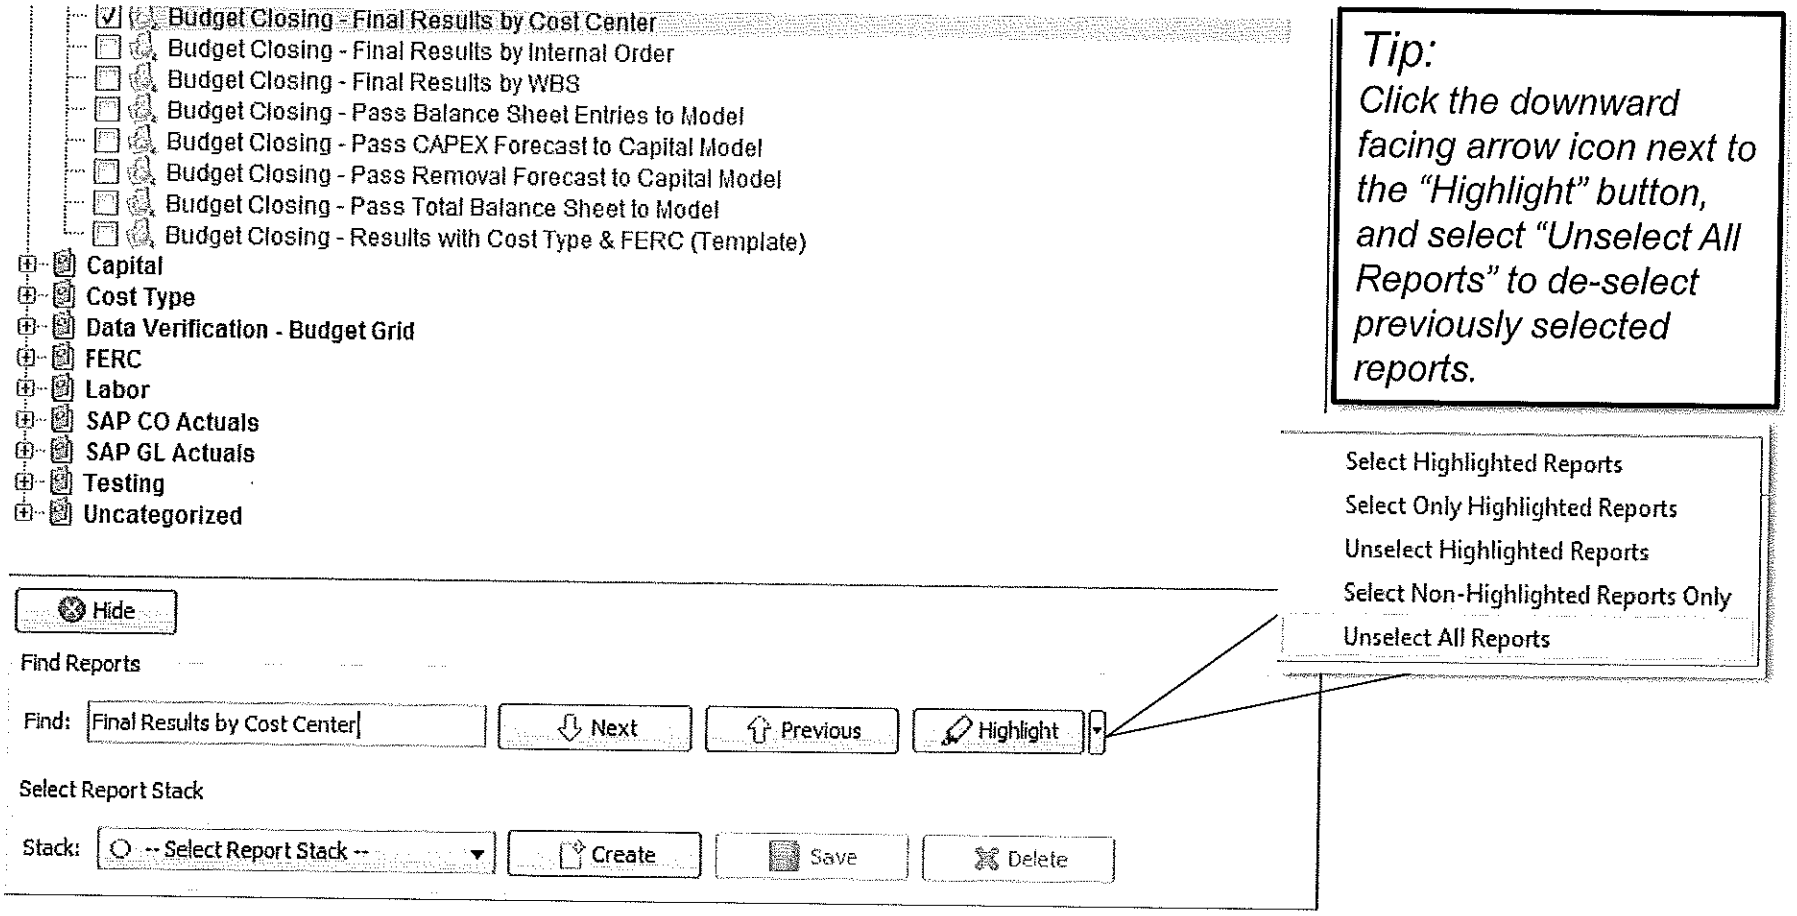
View Reports Screen

- Access View Reports screen by pressing Ctrl+F12 and typing "View Reports" or through a Report link from a Switchboard



- Reports are published into thematic sections which can be expanded or collapsed by clicking on the +/- icon next to the section titles

View Reports screen

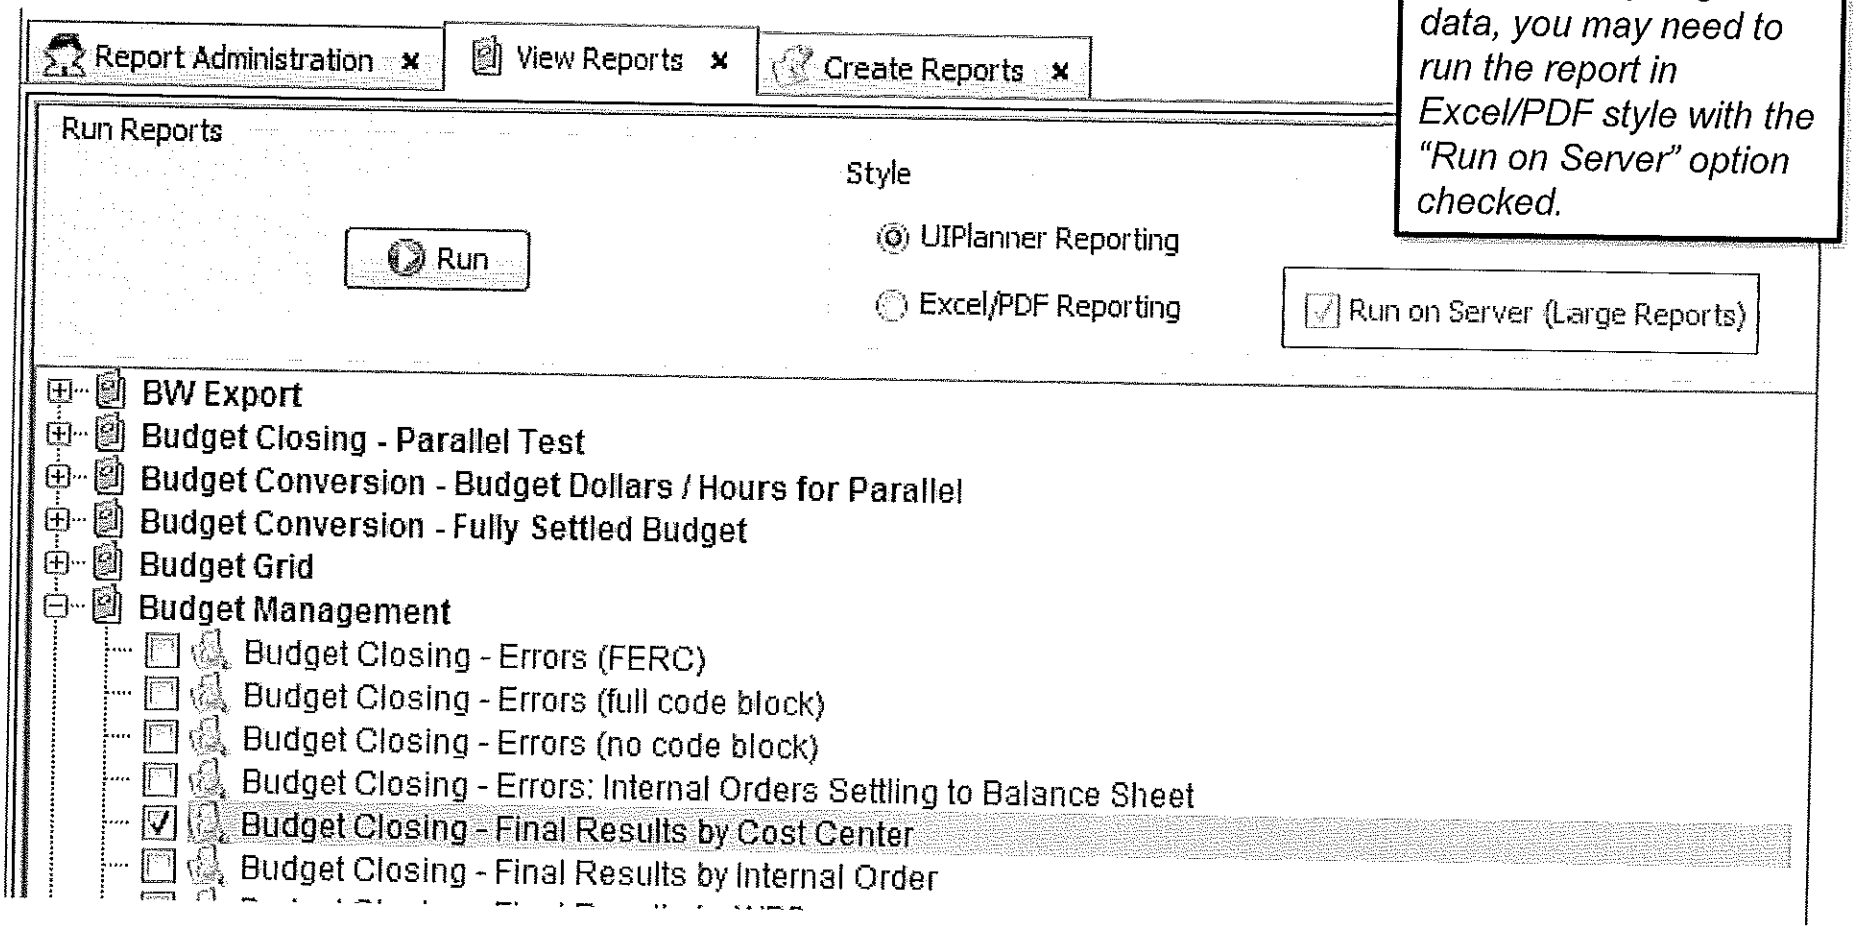


Tip:
Make sure that you have selected the correct Scenario before running reports.

Switchboard Reports

Finding Your Report

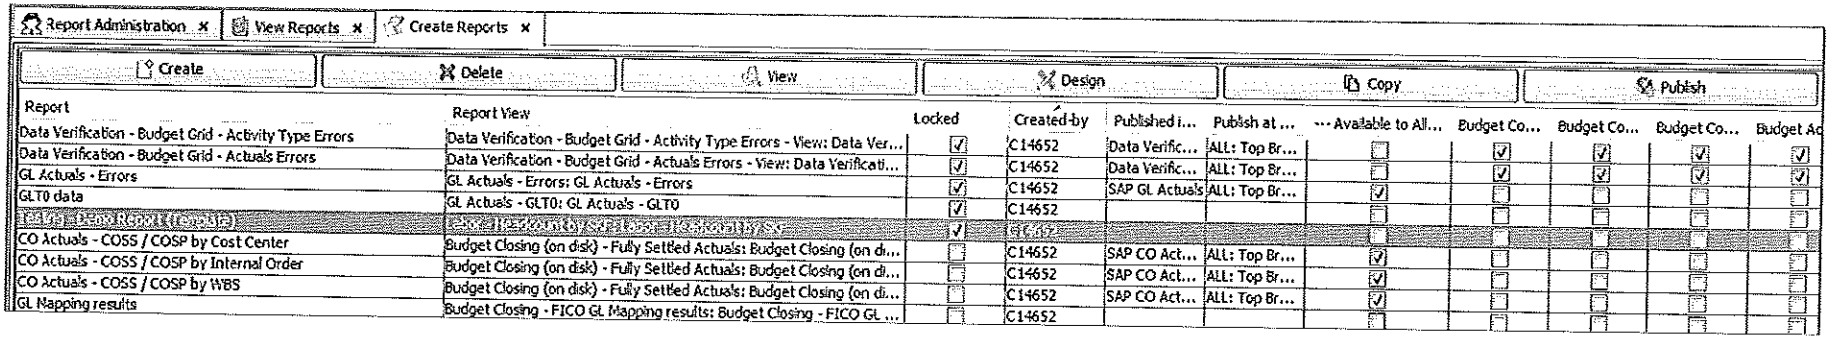
- Open Search controls by clicking the Search button at the bottom of the screen.
- Search by typing the name of your report. You can perform a "wildcard" search by adding "*" to your search terms. E.g. "*cost center*" will find any report that contains the phrase "cost center" within its name.
- Press the "Next" and "Previous" buttons to jump back and forth to the next results.



Tip:
Click the downward facing arrow icon next to the "Highlight" button, and select "Unselect All Reports" to de-select previously selected reports.

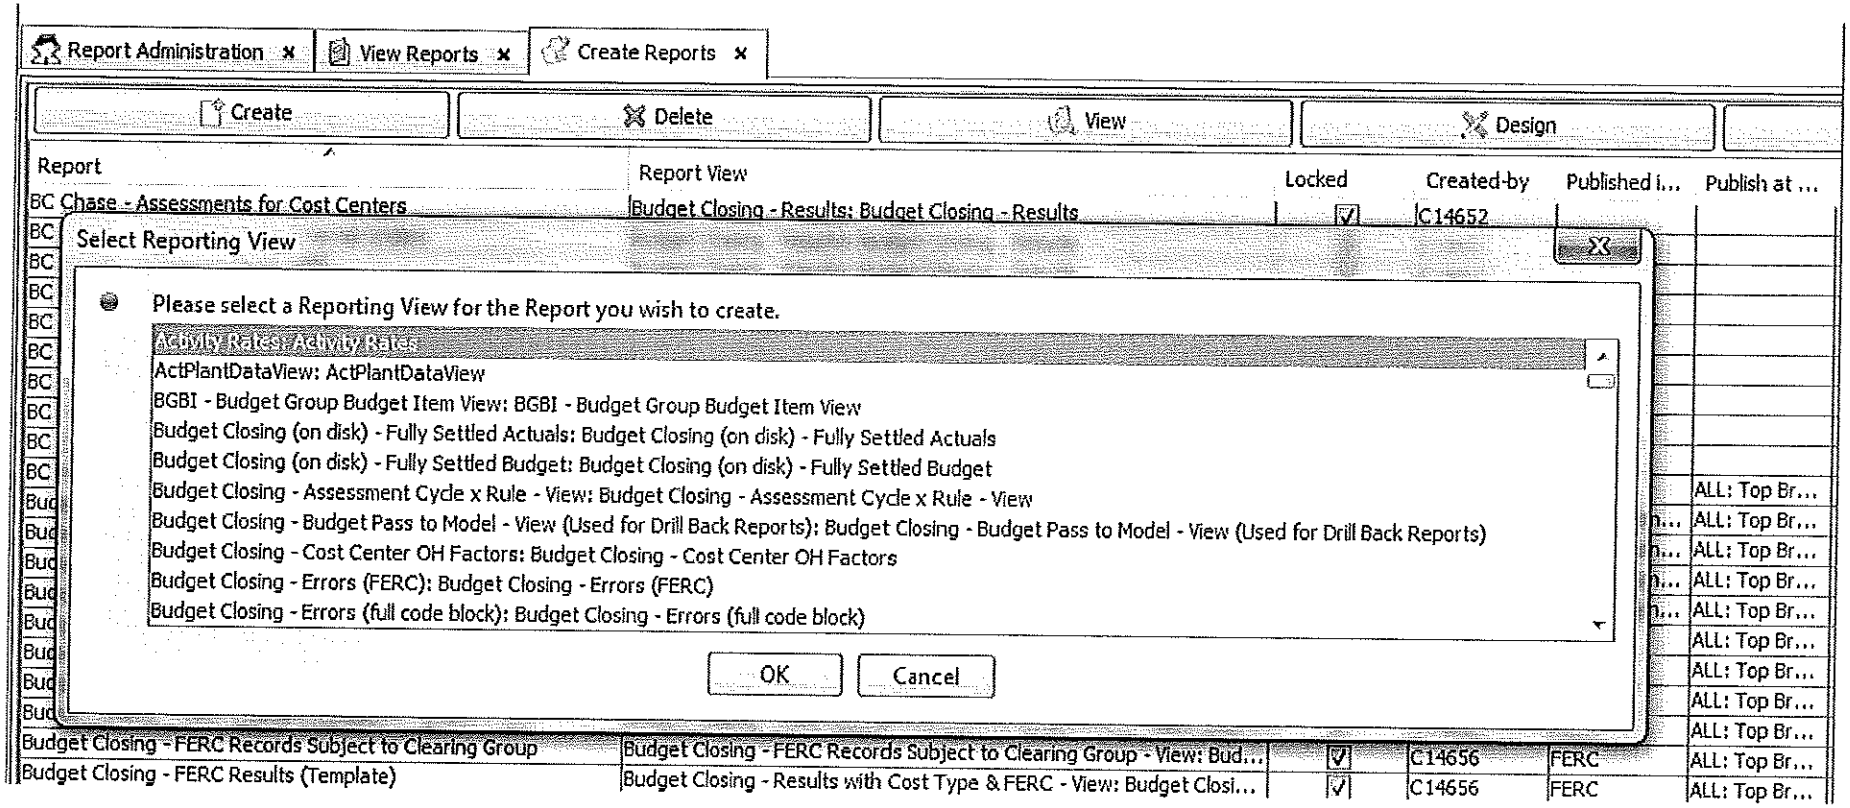
Running a Report from View Reports Screen

- Select the report style by checking the box next to the report and click Run
- Report Styles:
  - Excel/PDF for printing, saving locally, or if the data is too large.
  - UIPlanner style for the fully featured UIPlanner reporting screen



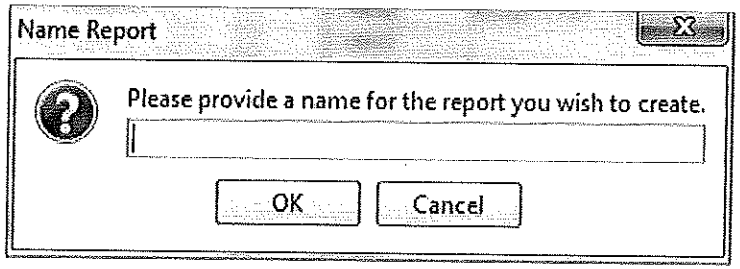
Tip:
For extremely large data, you may need to run the report in Excel/PDF style with the "Run on Server" option checked.

Create Reports Screen



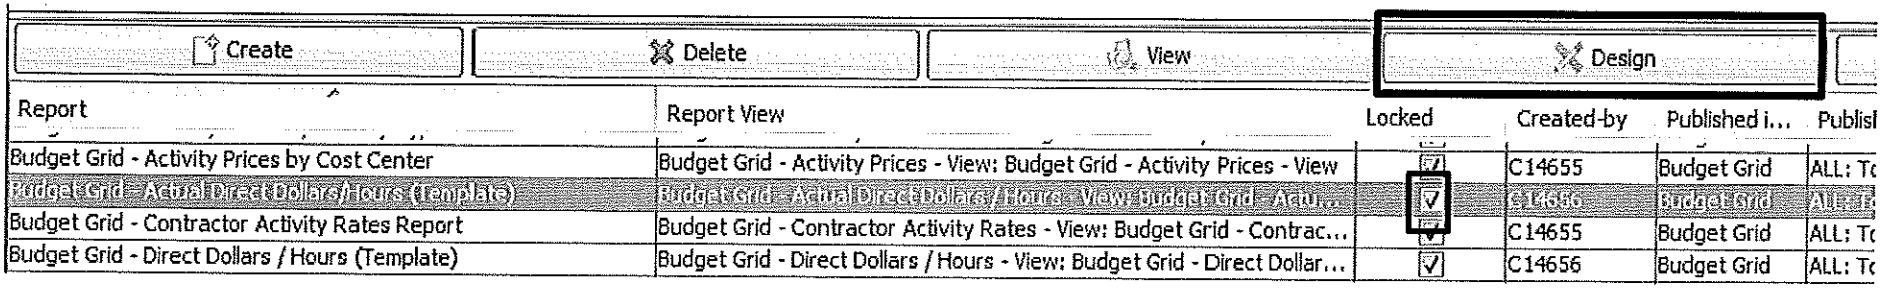
- The Create Reports screen is more flexible than the View Reports screen and allows for greater functionality enabling the user to develop and save versions of reports using these views.
- A Report Administrator can create a View on a set of data and enable features.
- Users can create, delete, view, design, copy, lock, and publish reports to reporting sections by User Role.

Create Reports screen



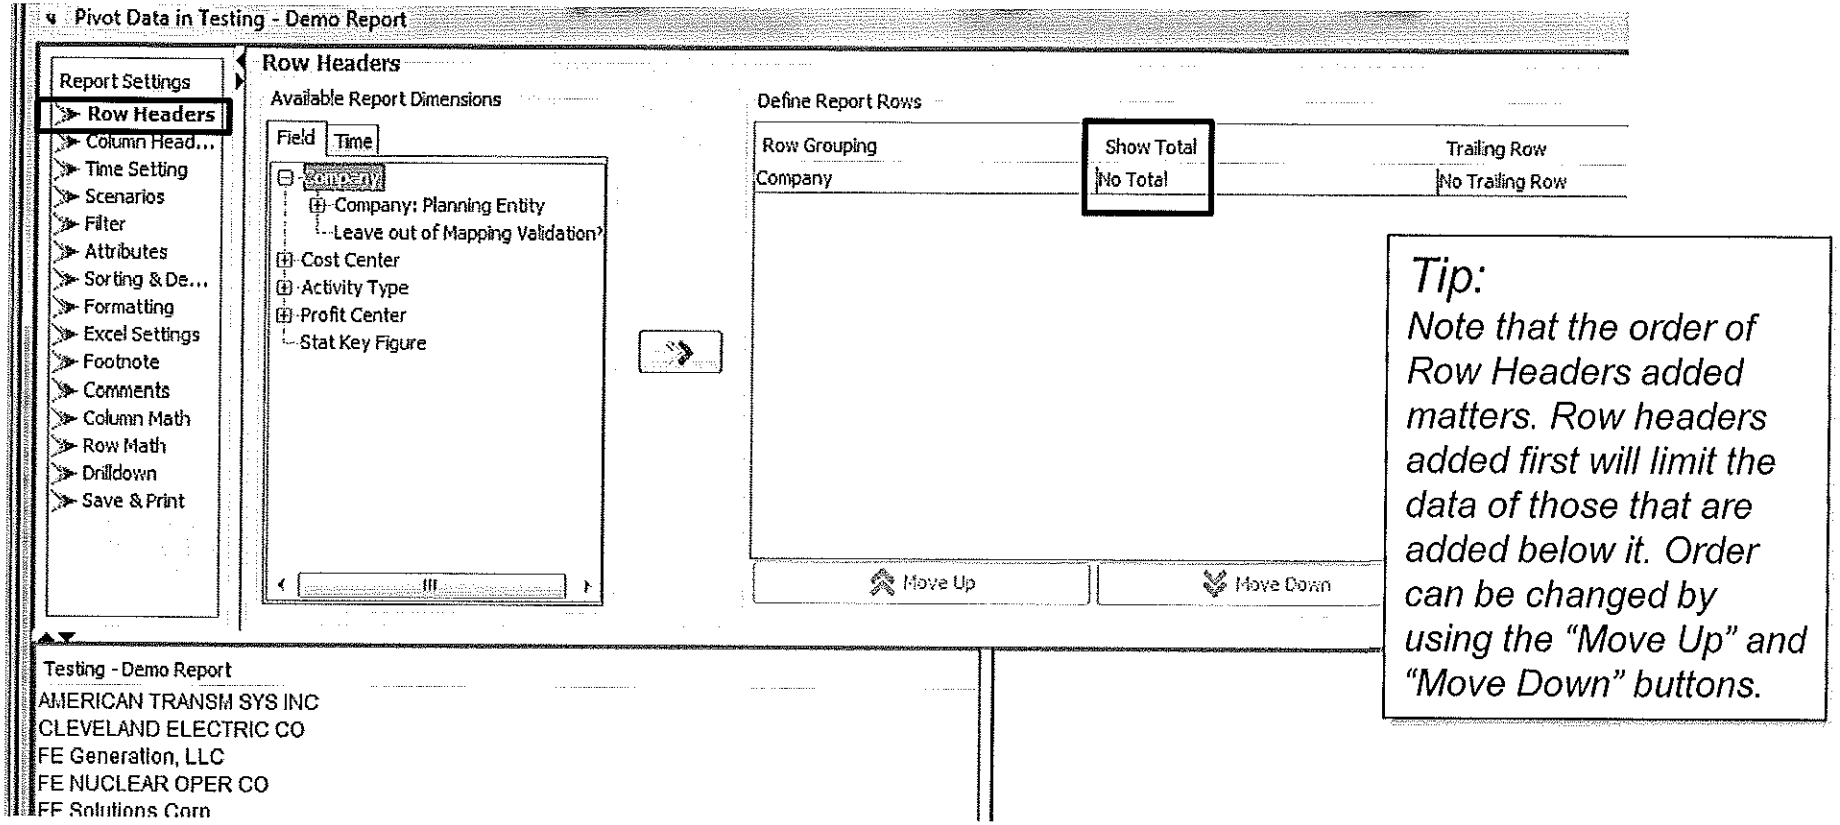
Create Reports Screen – Creating a Report from Scratch

- Click the "Create" button, you will be prompted to select the dataset View on which you wish to build a report.



- Give your report a name but pay close attention to the preferred naming conventions to help organize your report.

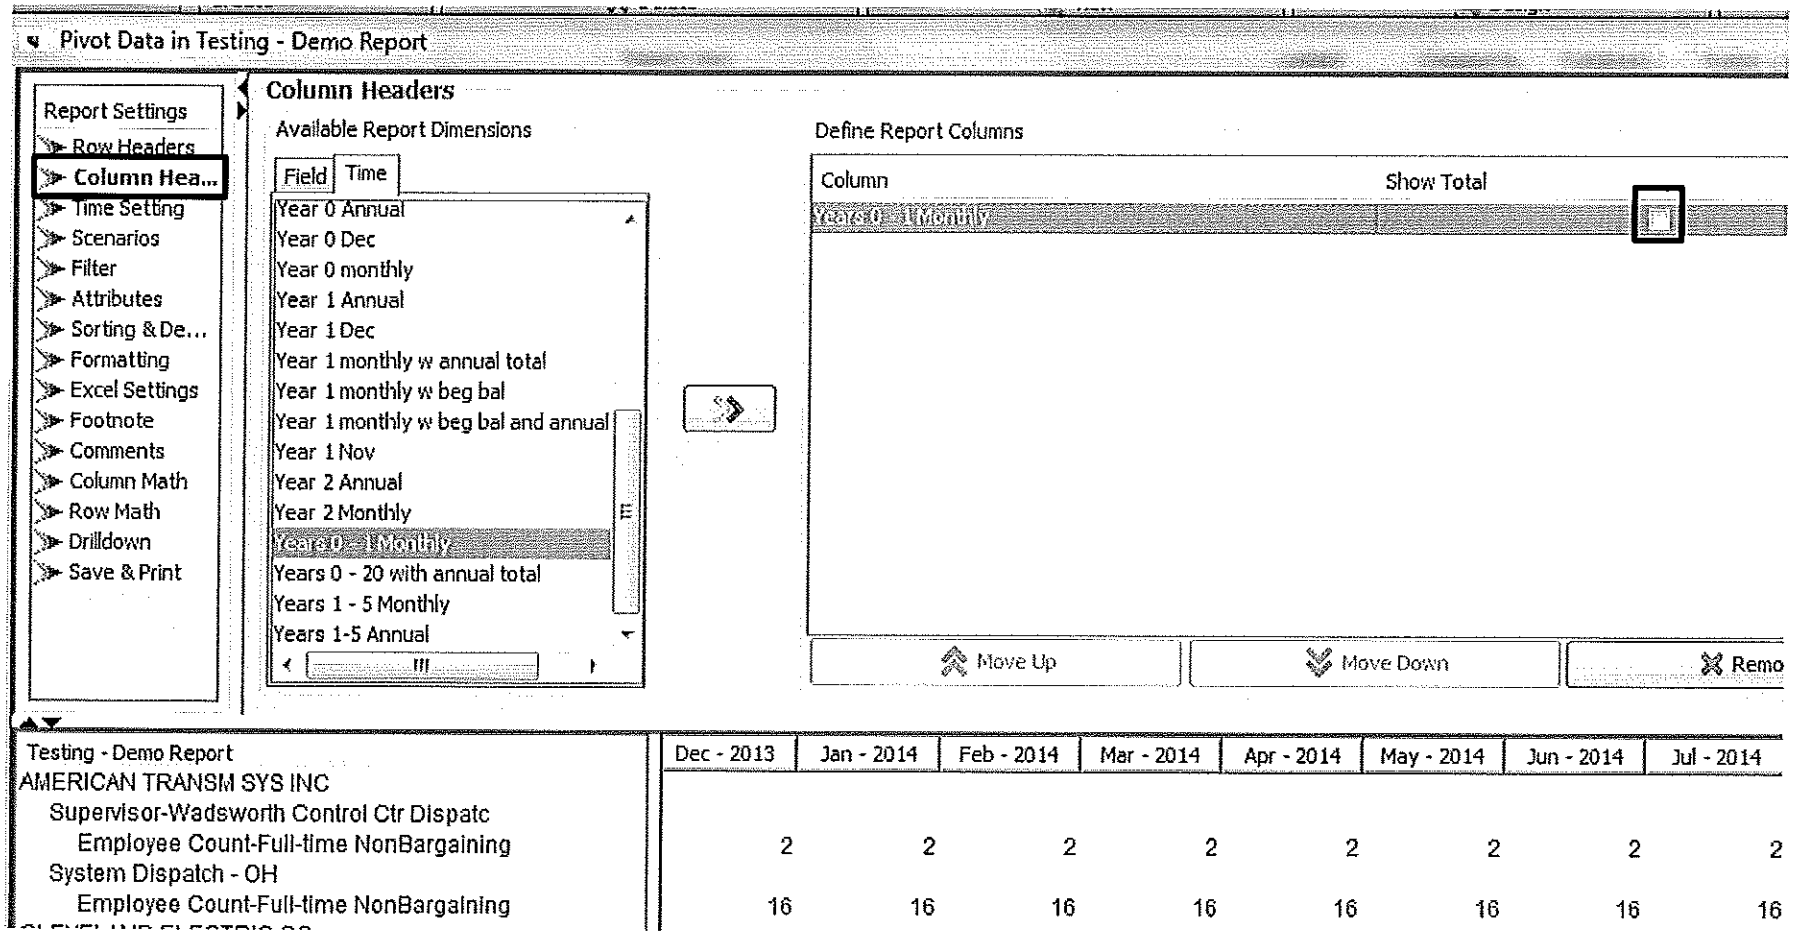
Create Reports Screen - Creating a Report from a Template



- Select the report from the list on the Create Report screen; should have "(Template)" in the name.
- Note that the Locked checkbox should be checked to prevent someone from accidentally saving their changes to the template itself.
- Press the Design button to bring up the report in design mode, which limits the data being returned to 200 records and allows for faster edits.
- The View button will return ALL records, which can be slow for very large datasets.

Report	Report View	Locked	Created-by	Published i...	Publisl
Budget Grid - Activity Prices by Cost Center	Budget Grid - Activity Prices - View: Budget Grid - Activity Prices - View	☑	C14655	Budget Grid	ALL: Tc
Budget Grid - Actual Direct Dollars/Hours (Template)	Budget Grid - Actual Direct Dollars / Hours - View: Budget Grid - Actu...	☑	C14656	Budget Grid	ALL: Tc
Budget Grid - Contractor Activity Rates Report	Budget Grid - Contractor Activity Rates - View: Budget Grid - Contrac...	☑	C14655	Budget Grid	ALL: Tc
Budget Grid - Direct Dollars / Hours (Template)	Budget Grid - Direct Dollars / Hours - View: Budget Grid - Direct Dollar...	☑	C14656	Budget Grid	ALL: Tc

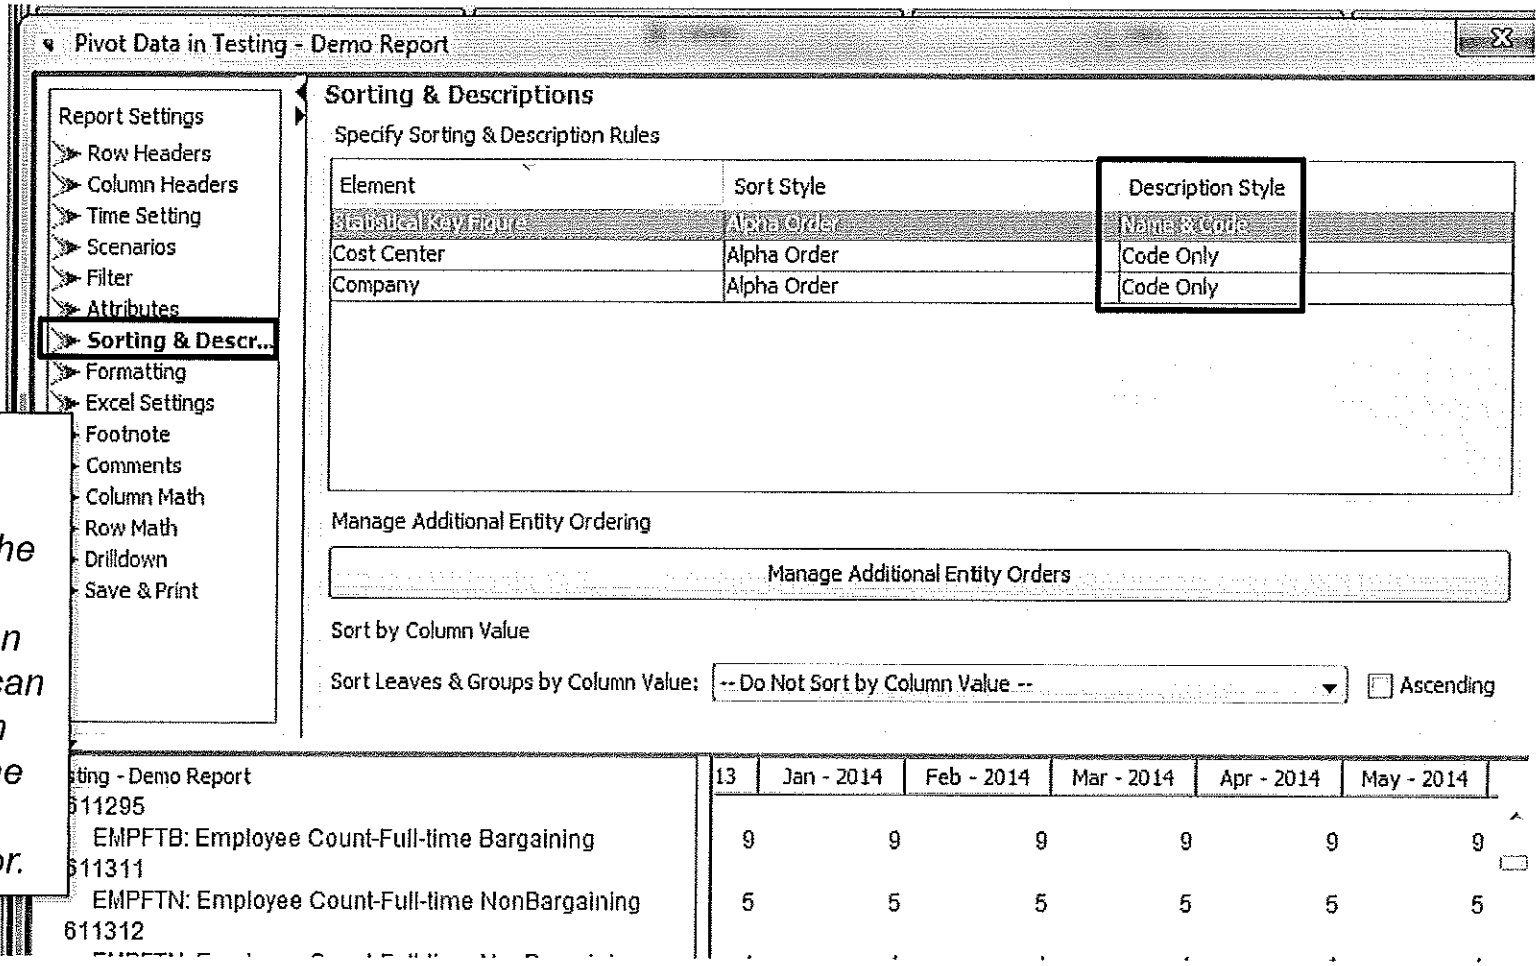
Create Reports Screen – Adding Row Headers



- Select "Row Headers" chevron from the "Report Settings" column to view available fields within the data set view. Highlight the field name and click the Arrow button to add the header to the report.
- You can expand some headers to select a header's attributes to be added. (e.g. Company Planning Entity)
- There is an option to add subtotals and trailing rows to each row added to the report by clicking the text under "Show Total" and "Trailing Row" labels.

Tip:
Note that the order of Row Headers added matters. Row headers added first will limit the data of those that are added below it. Order can be changed by using the "Move Up" and "Move Down" buttons.

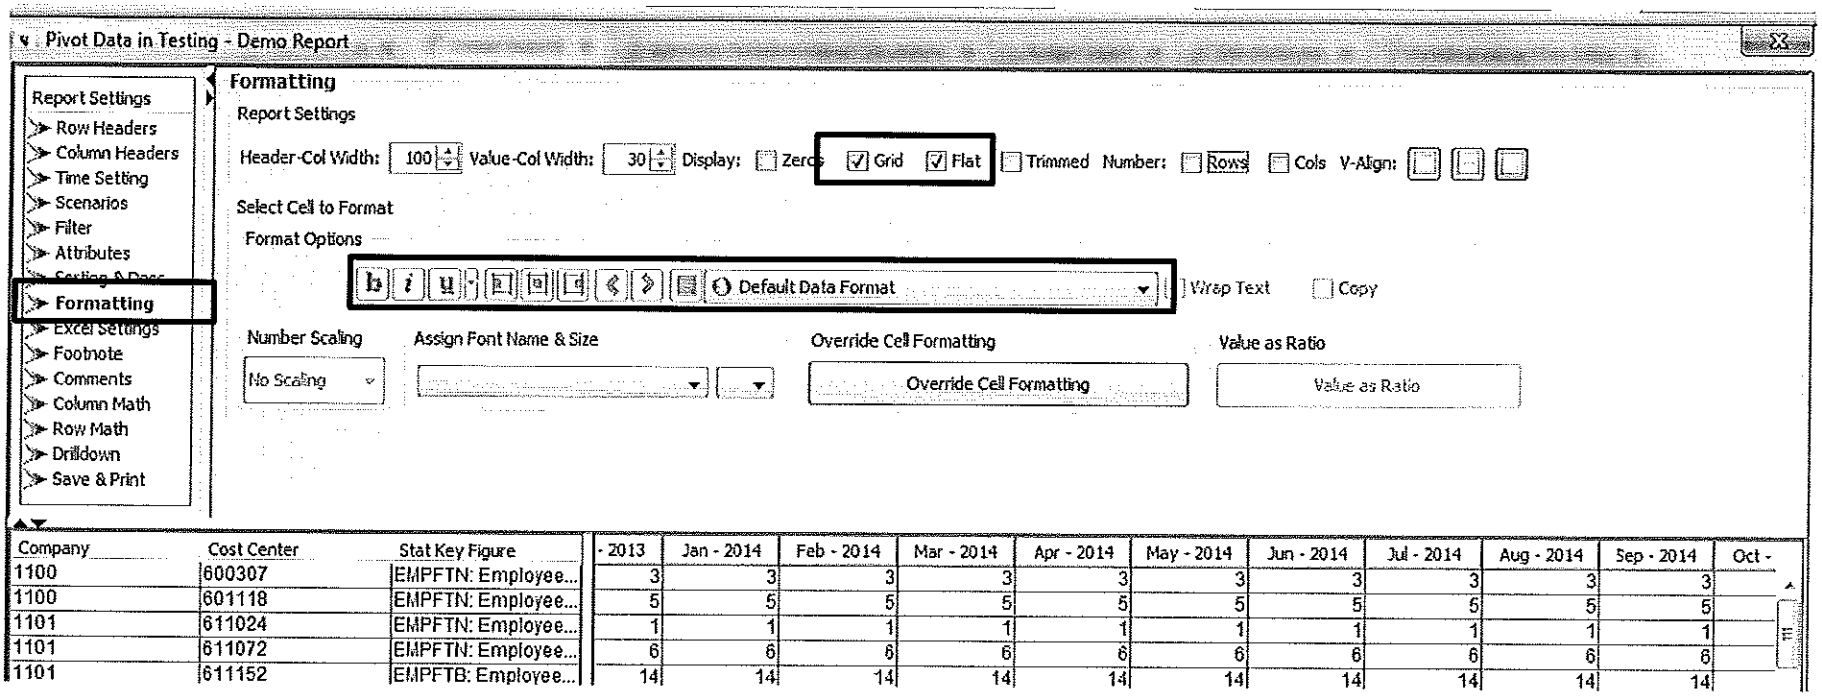
Create Reports Screen – Adding Column Headers



- Add Column Headers to view the time data.
- You can add additional columns to total the time period by checking the "Show Total" box.

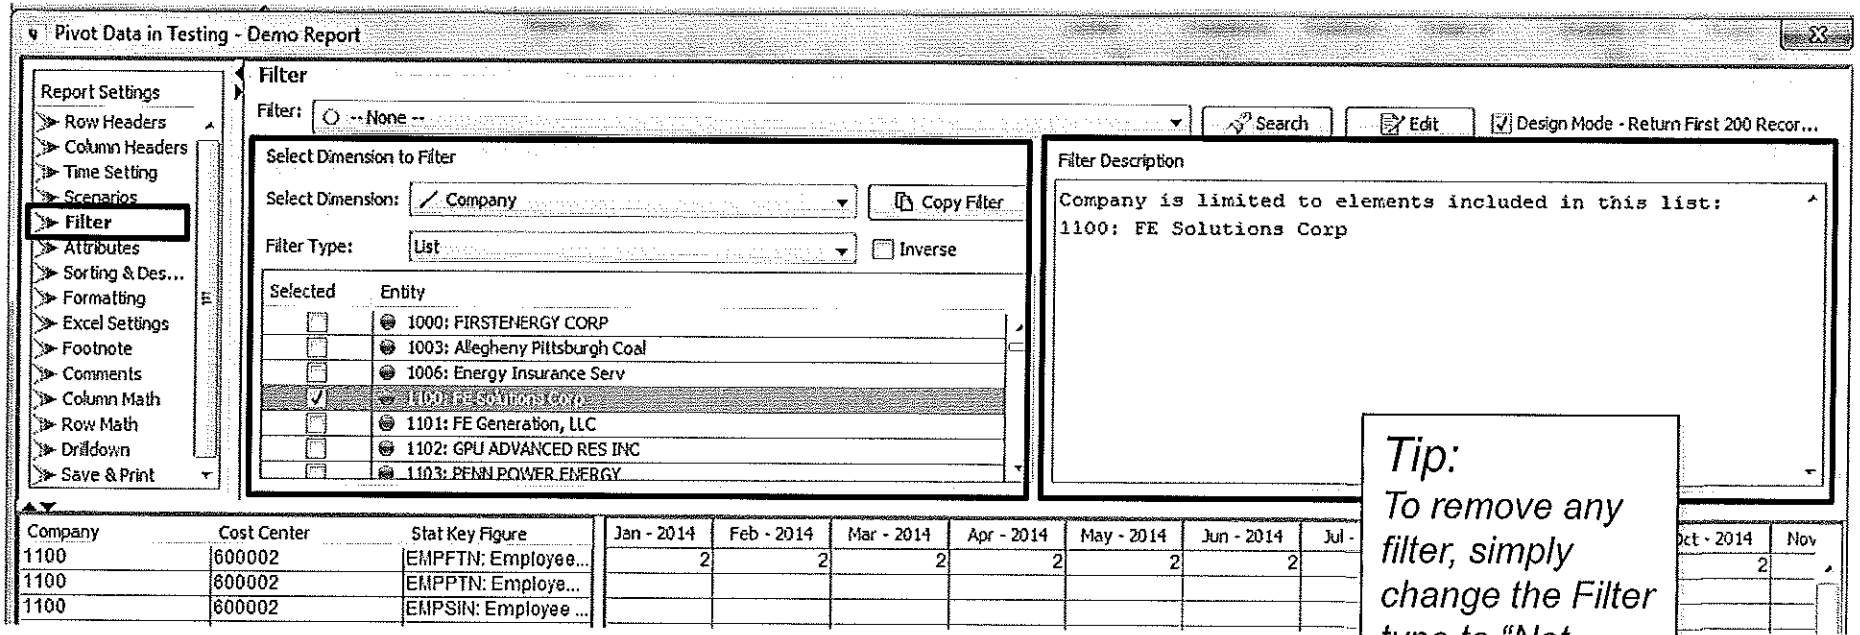
Create Reports Screen – Changing Row Value Descriptions

- From the "Sorting and Descriptions" chevron, you can toggle a row header to display the "Name," "Code," or both values. E.g. The company code named "FE Solutions Corp" has a code of 1100, and either or both values can be displayed.



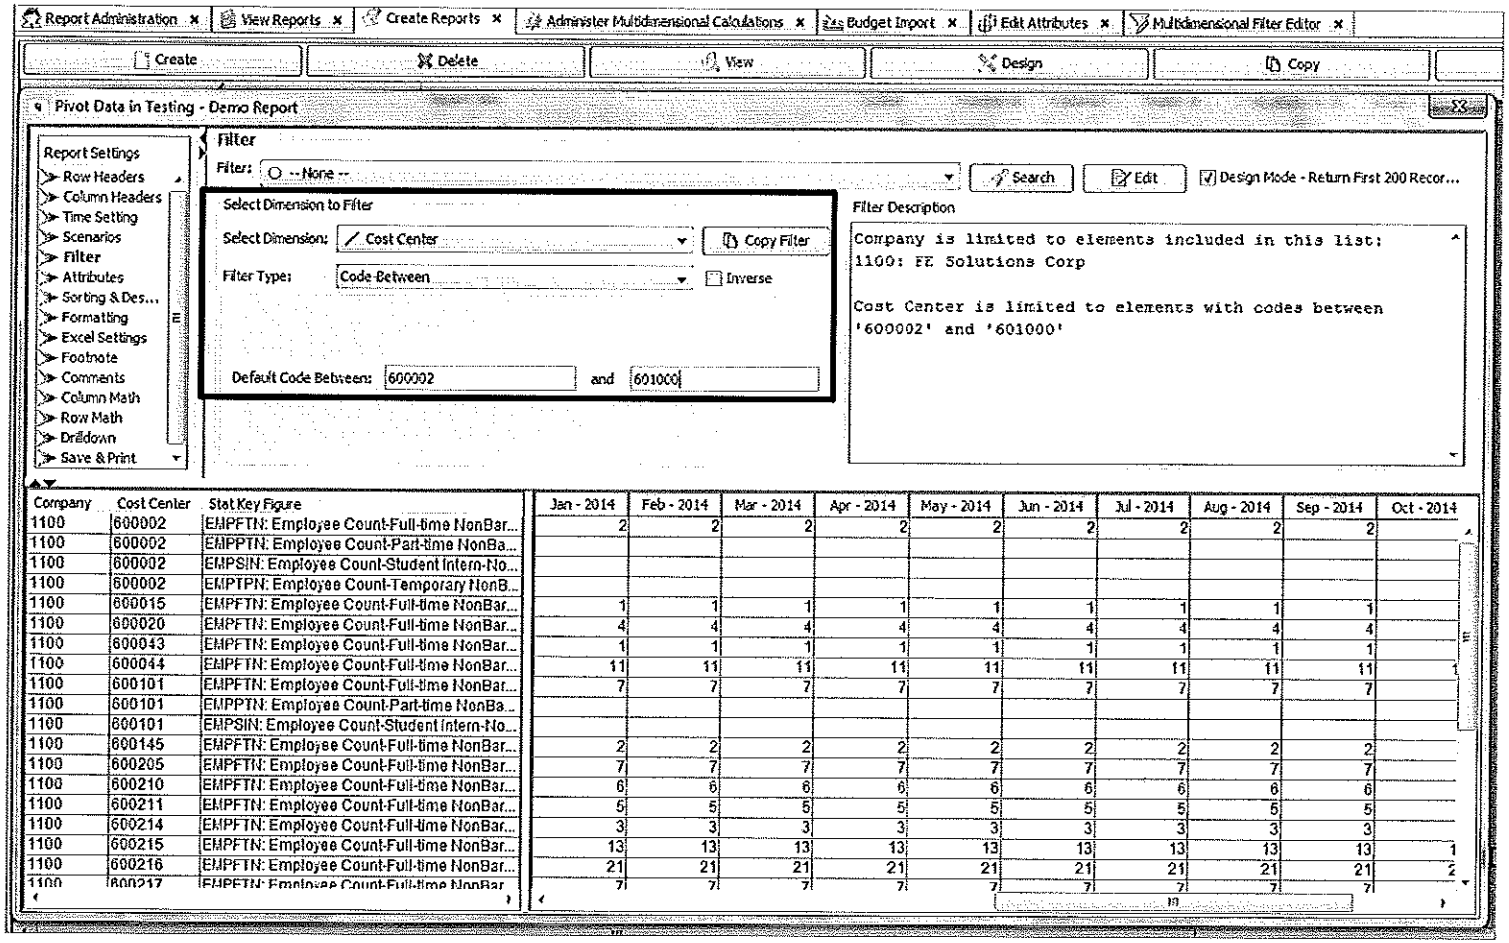
- The Filters in the following section work off of the "Code" values.

Tip:
All of the features in the Report Configuration (chevrons) can be turned on and off by the Report Administrator.



Create Reports Screen – Changing Formatting

- You can change the formatting to add grid lines, flatten out the row headers, etc...
- You can change the level of precision on the time data by clicking on a cell and changing the menu from "Default Data Format" to the desired format.

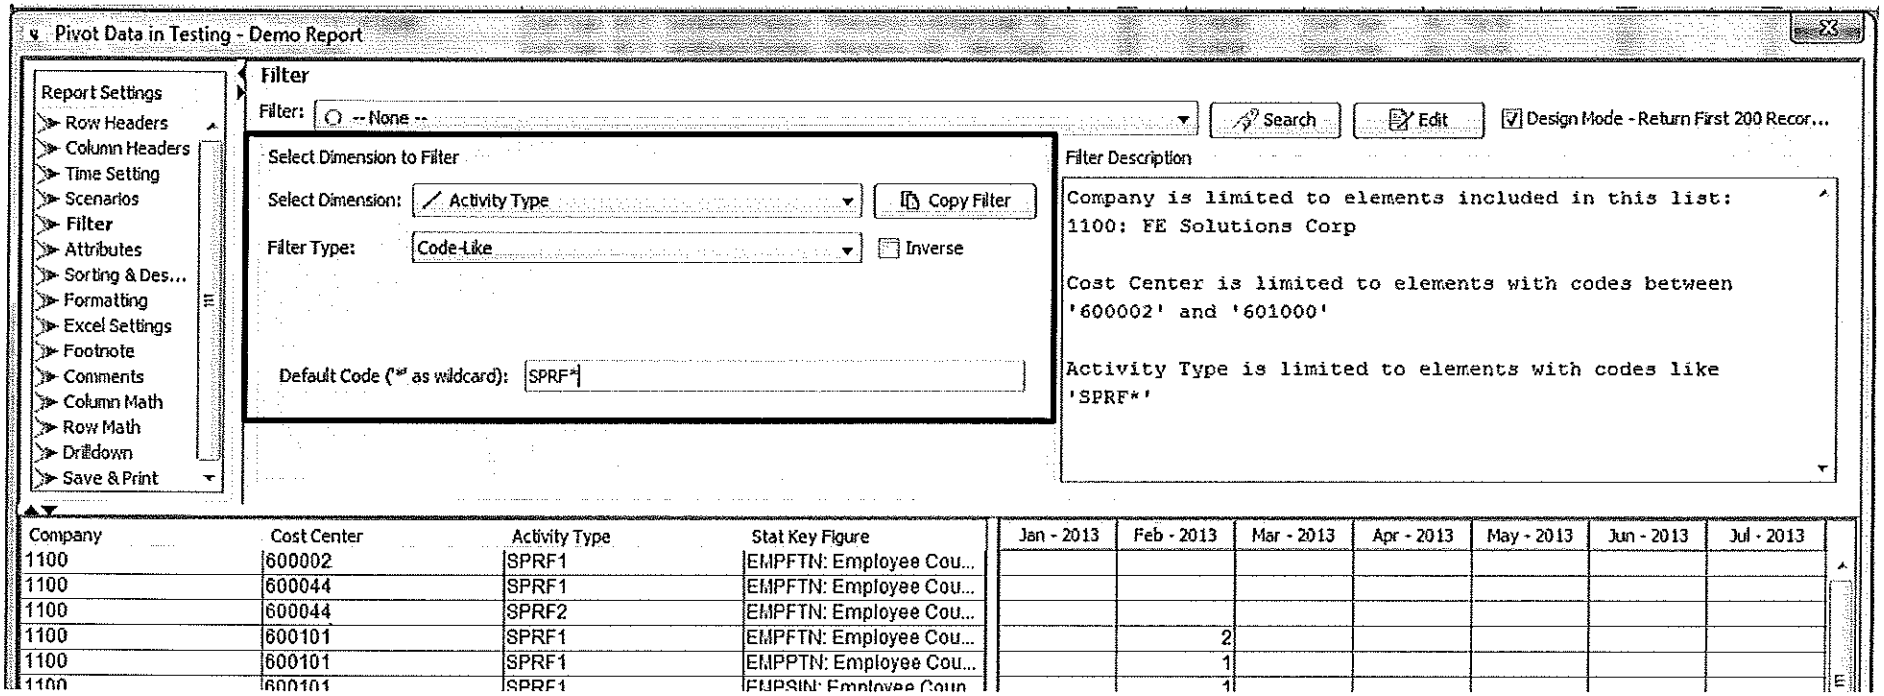


Create Reports Screen – Adding Filters (List Type Example)

- The Filter menu is for selecting Named Filters defined in the "Multidimensional Filter Editor" screen.
- There is a simple filter editor that allows you to select a dimension (one of the row headers) and select a filter type (list, tree, attribute, range, code-between, and code-like).
- The example pictured is an example of a List type filter on Company. Company 1100 is selected from the list and is described in the Filter Description box.

Create Reports Screen – Adding Filters (Code-Between Type Example)

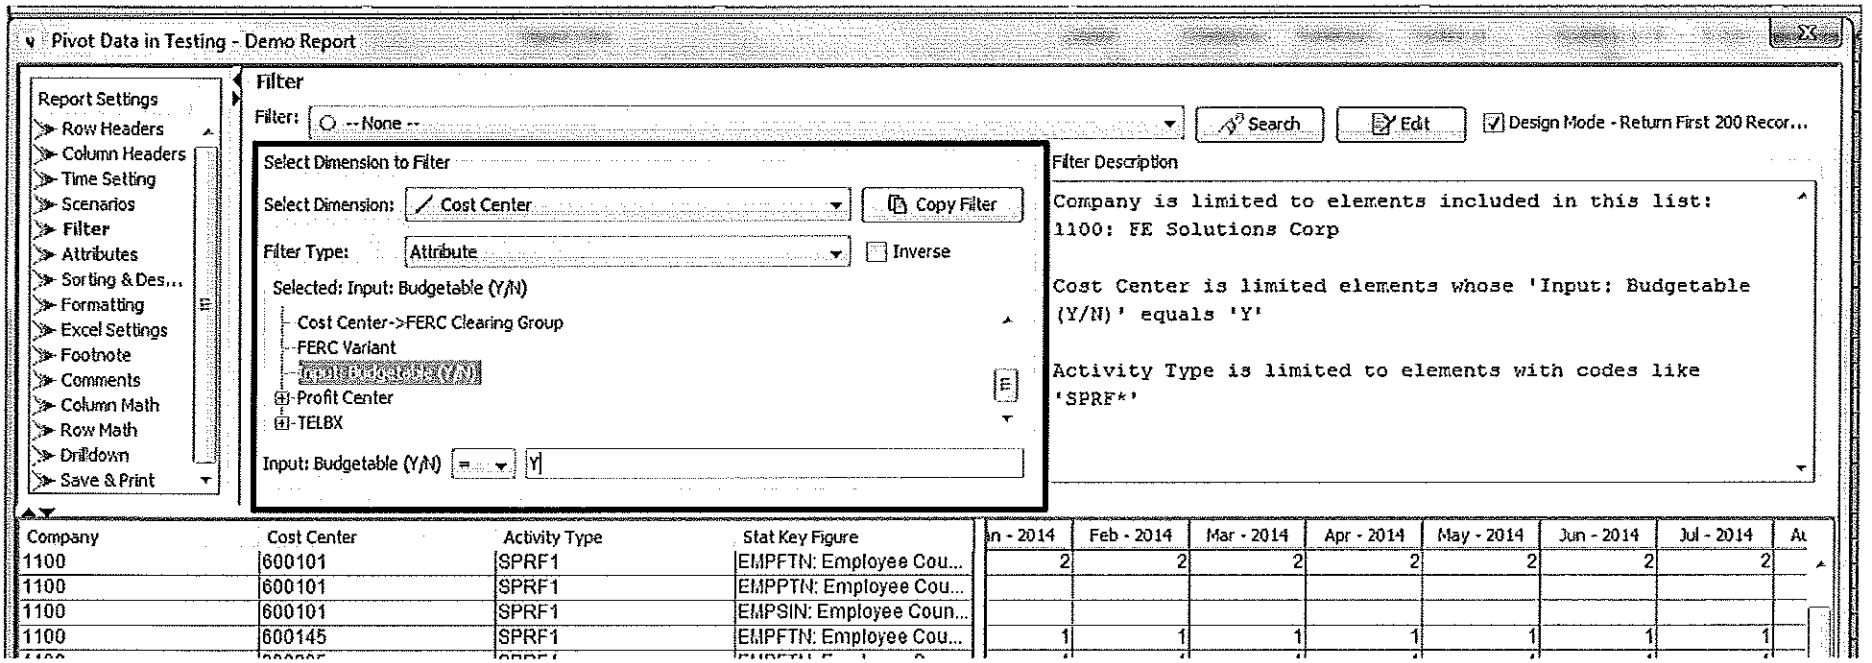
- The example pictured is an example of a Code-Between type filter on Cost Center range. Cost Center Ranges from 600002 to 601000 is filtered.
- Note that the previous Company List type filter is still being applied



Tip:
The Filter Description window will show which filters are being applied.

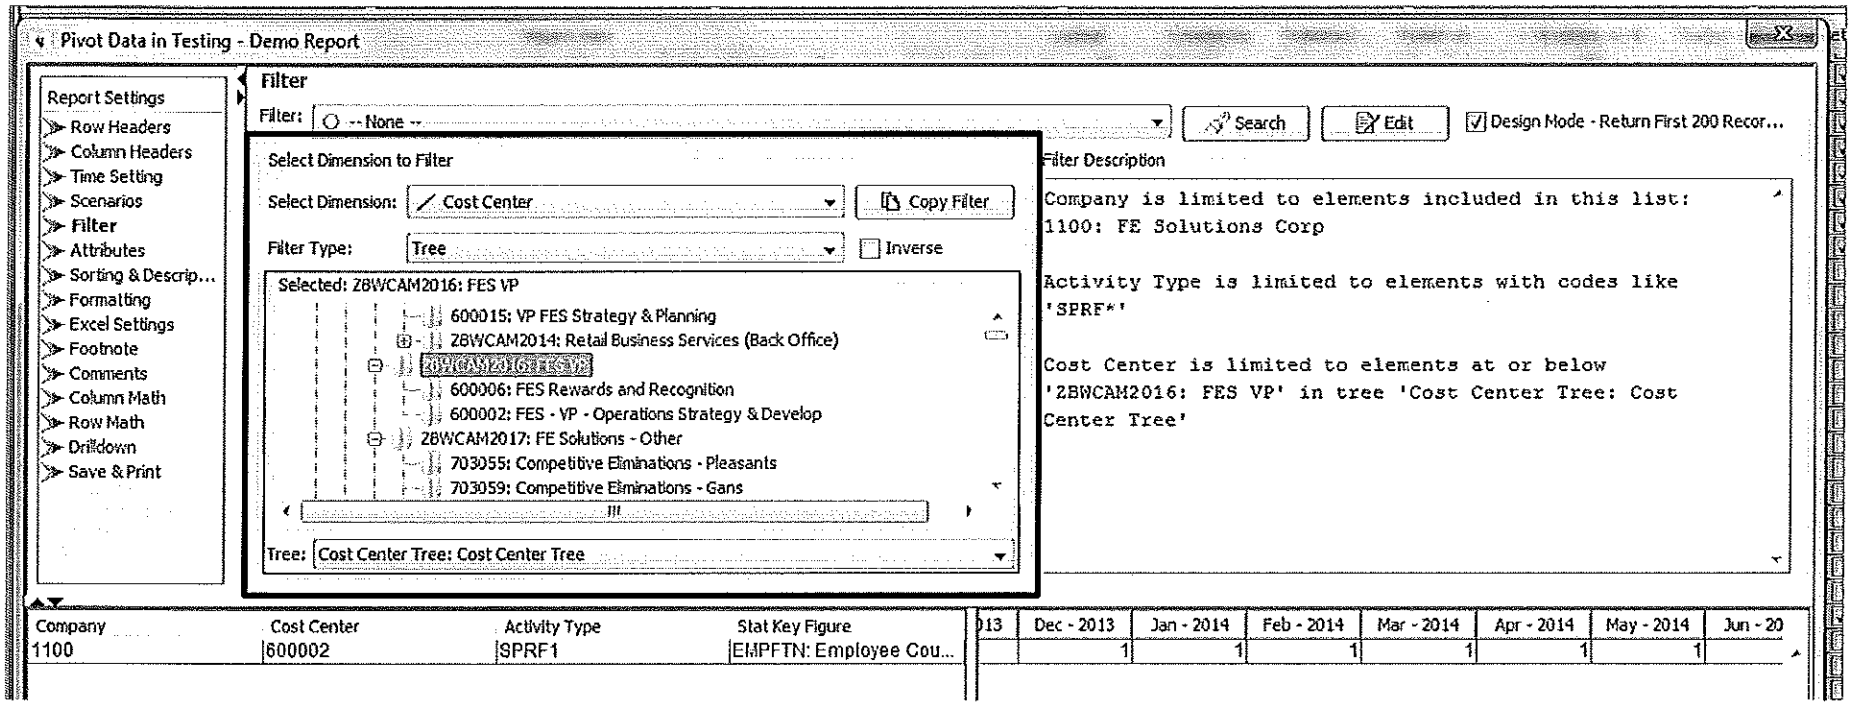
Create Reports Screen – Adding Filters (Code-Like Type Example)

- The example pictured is an example of a Code-Like type filter on Activity Type range. Activity Types matching the pattern "SPRF*" are filtered.



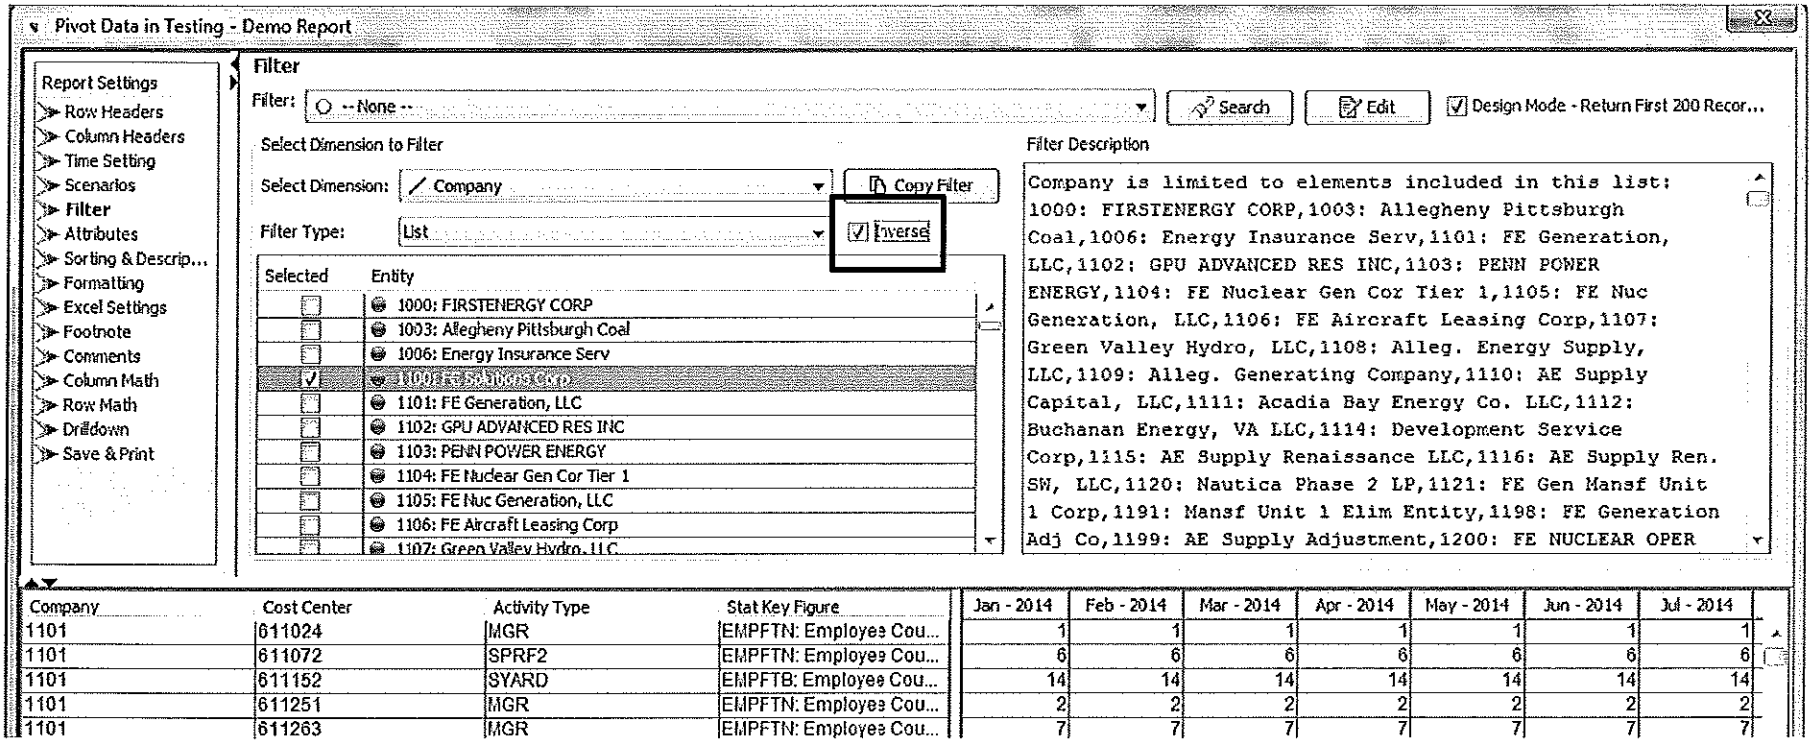
- The wildcard "*" denotes that any characters that <u>follow</u> "SPRF" will match the pattern. "SPRF1" and "SPRF2" match the pattern. "SPFR" would not match nor would "123SPFR" due to the placement of the wildcard character.

Create Reports Screen – Adding Filters (Attribute Type Example)



- The example pictured is an example of an Attribute type filter on Cost Center. The filter is checking against the value of the Cost Center's "Budgetable (Y/N)" attribute to only include Cost Centers where this attribute = "Y" It is also possible to use other operators such as >, >=, <, <=, or <> (not equal)

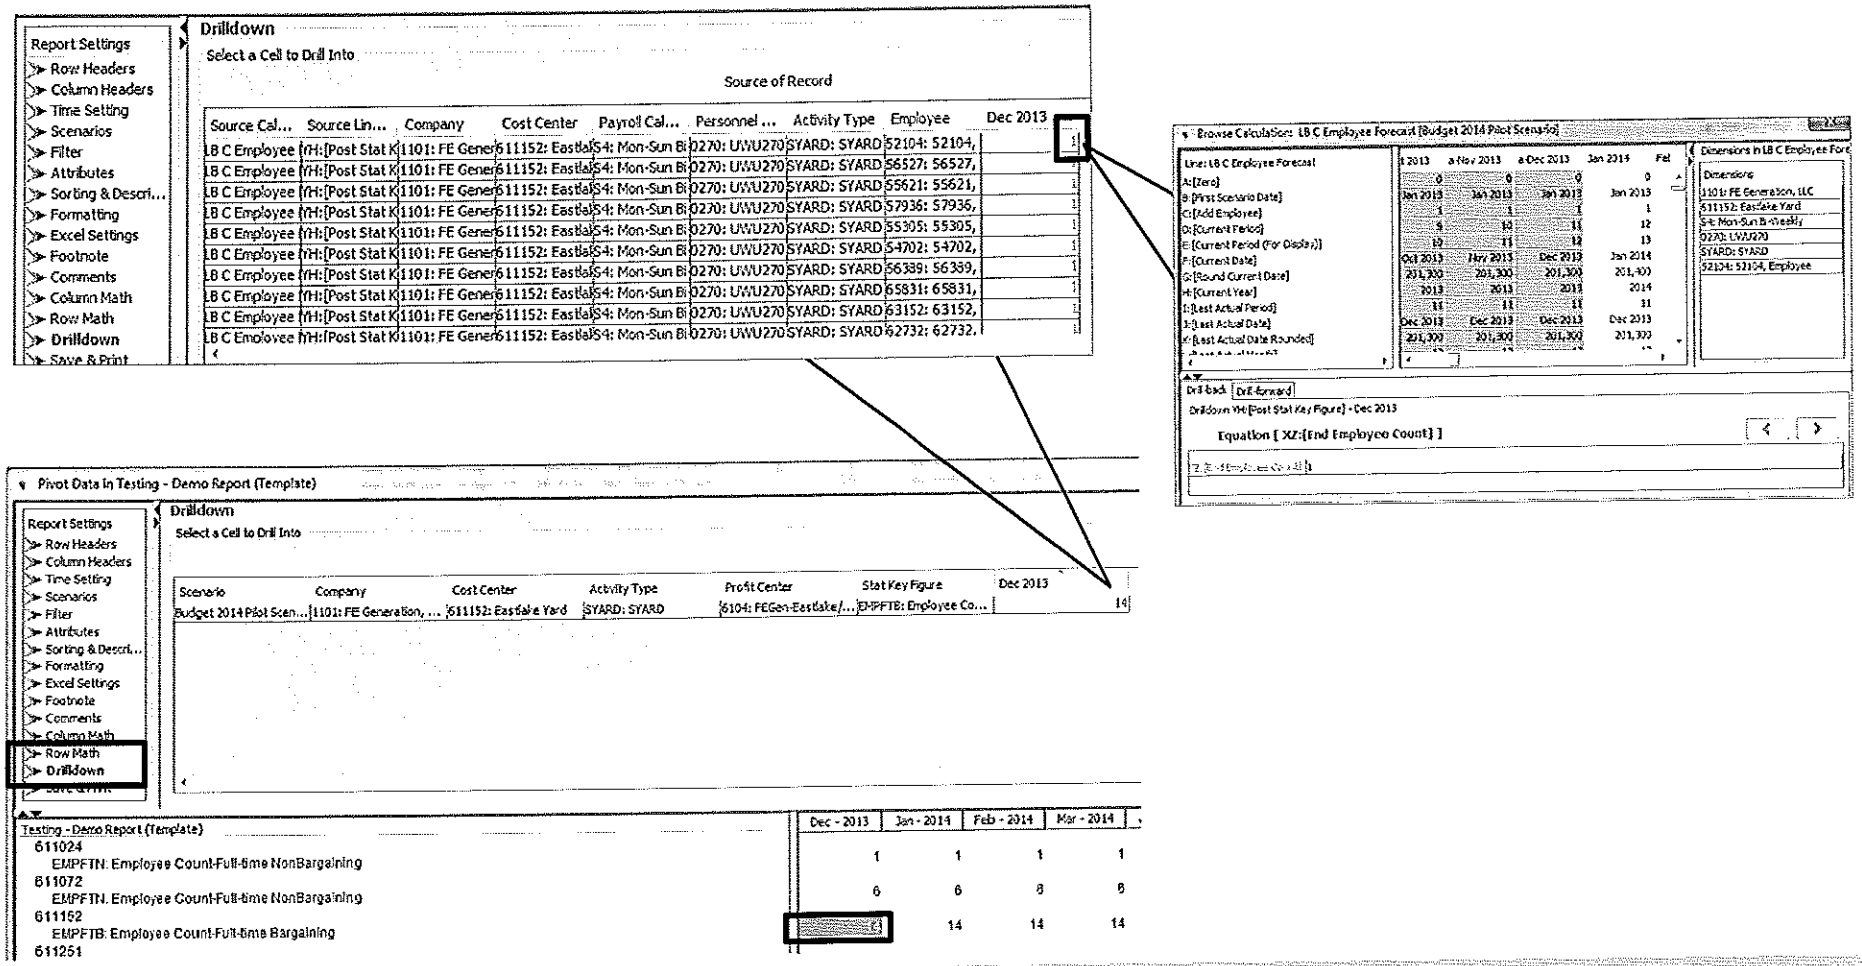
- Note that although the previous filters are still being applied, the Attribute filter on Cost Center has replaced the Cost Center Range type filter.



Create Reports Screen – Adding Filters (Tree Type Example)

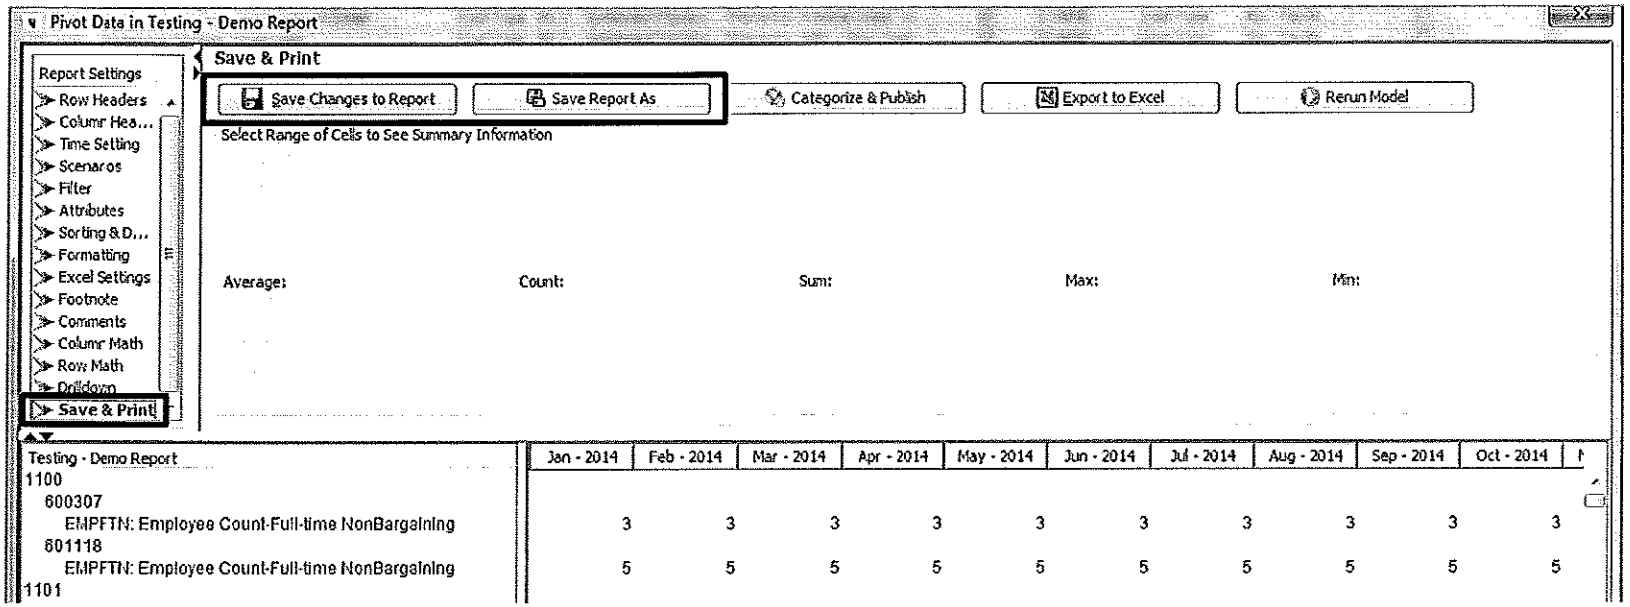
- Tree filters can only be used on hierarchical elements like Cost Centers. The filter will include any element that appears at or below the selected node on the tree structure.
- Note that although the previous filters are still being applied, the Tree filter on Cost Center has replaced any other Cost Center filters.

Create Reports Screen – Inverse Filters



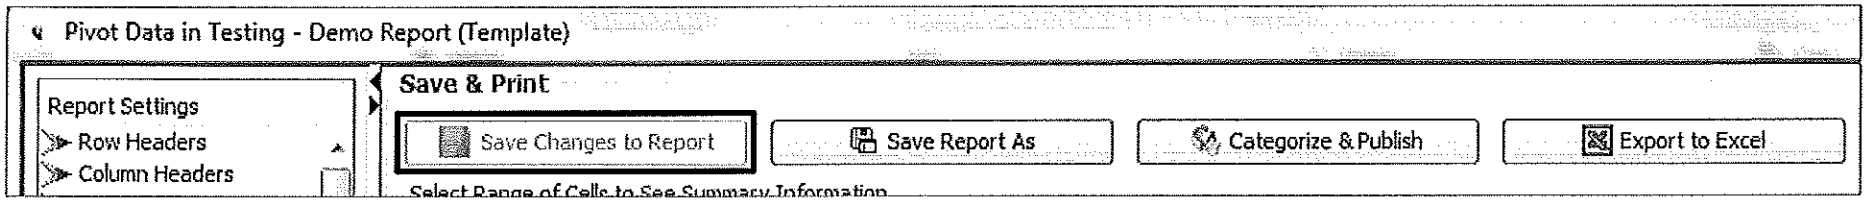
- For any Filter type, you can inverse the filter logic by checking the "Inverse" box. E.g. By inversing a Company List filter type set to "1100 - FE Solutions Corp", the results will include every company in the data set EXCEPT the company selected.

Create Reports Screen – Using Drill Down



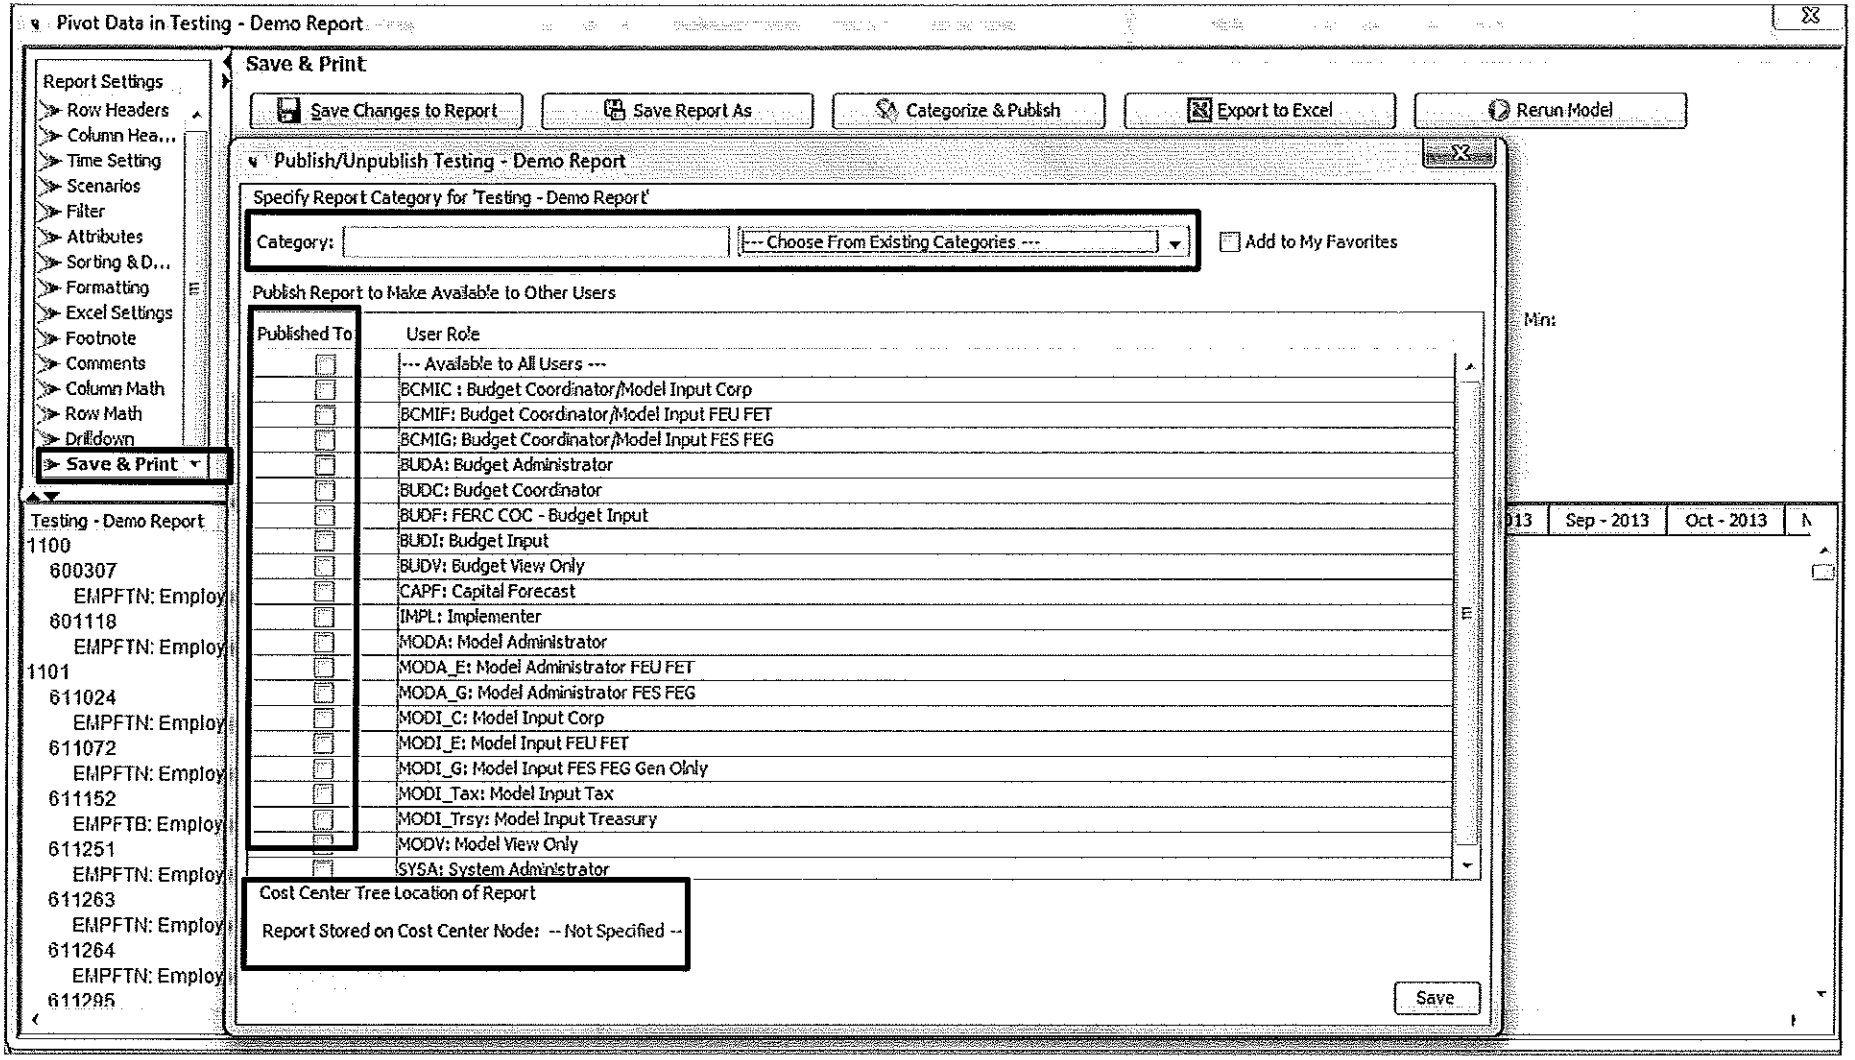
- By selecting the Drill Down chevron, you can drill down into the data and trace the data back to the calculation, formula applied, and constituent data.

- Highlight the data cell and click the linked values to keep drilling back to the data source.

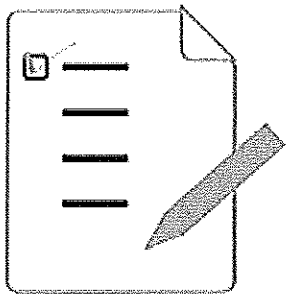


Create Reports Screen – Save and Print Screen

- If you are editing a previously configured report, you can save changes provided that the report is not locked and the "Save" function is enabled by the Report Administrator.



- If you are editing a locked "Template," use the "Save Report As." The "Save" button should be disabled for all Locked reports.

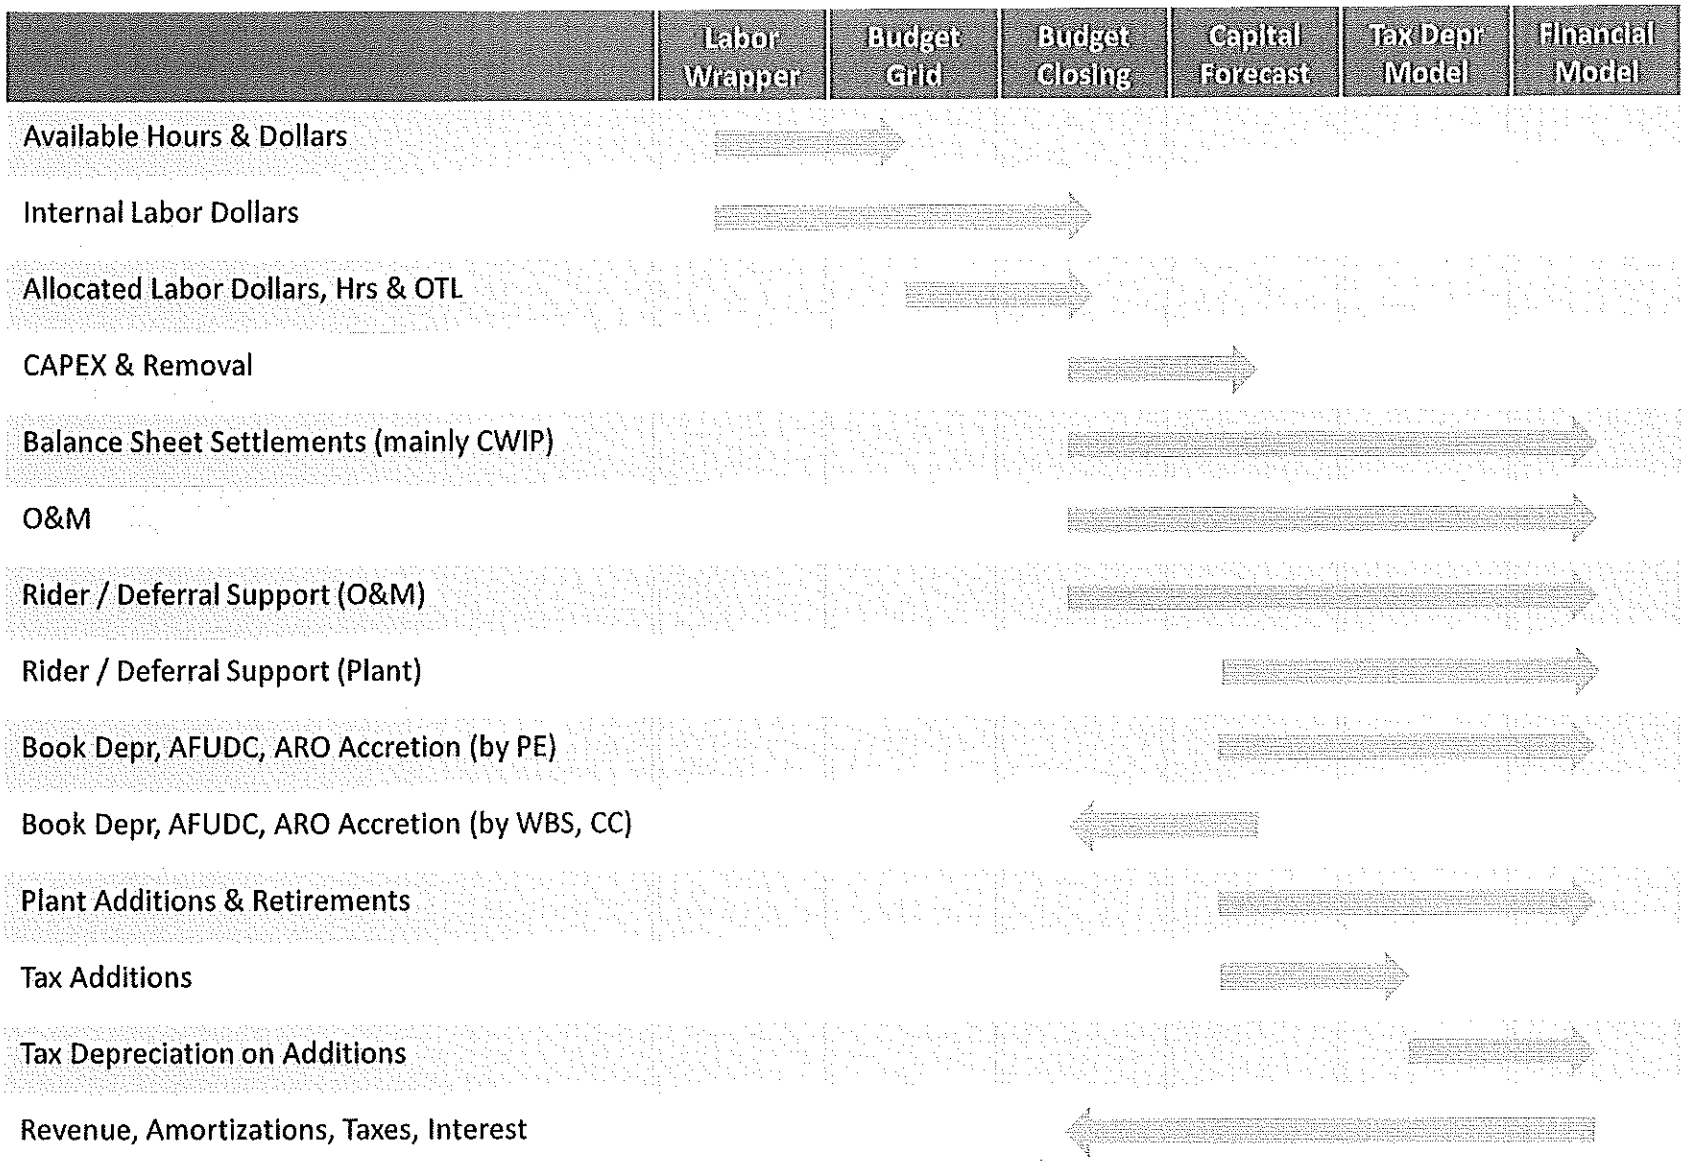


- Some reports will be Read-Only and all Save functionality will be disabled by the Report Administrators.

Create Reports Screen – Publishing Reports

- Push the "Categorize & Publish" button, and select or create a Category.
- Before saving, select the User Role checkboxes that should have access to the report.
- Be aware of your Cost Center Tree Context since your report will inherit it.

Exercise #3 – Reporting



- Select View Reports and a category
  - Run various reports and review the output for selected areas

- Select Create Reports
  - Select dataset view
  - Create report name
  - Select the various reporting chevrons and customize your report
    - Add column headers
    - Change row value descriptions
    - Change formatting
    - Add a filter
    - Publish report

Multi-Year Plan / Forecast

Multi-Year Plan / Forecast Overview

Multi-Year Forecast Requirements

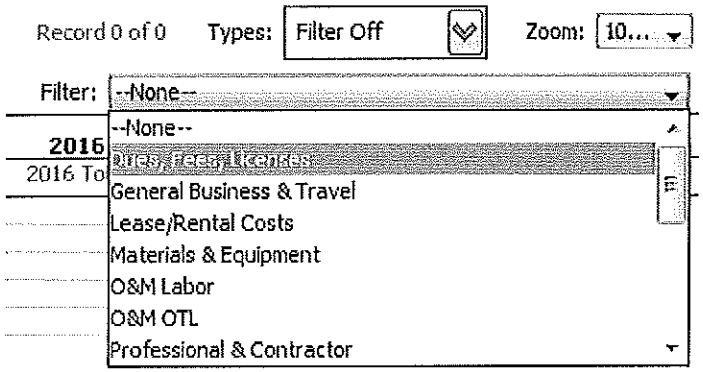
- Ability to properly run the budget close process for years 1-5 (cost collector detail needed for this to occur)
- Allows users the ability to develop a detailed forecast or adjust at a summary level
- Ability for System Administrator to set global assumptions

Filters available to target specific areas to change

A. Filter on common categories (e.g. Cost Element groupings, O&M other than labor, Labor, etc.)
B. Filter on dollars or hours
C. Grid filters for each code block data field (specific Cost Elements, specific Cost Source, etc)

Multi-Year Plan / Forecast Options

Available options to perform multi-year plan/forecast



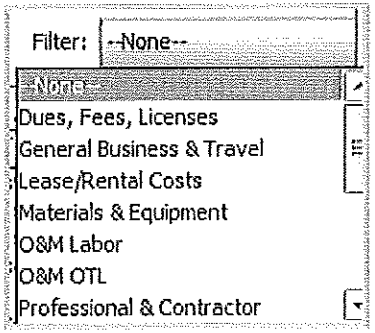
Detailed

- Labor automatically calculates for planning horizon
- Copy current year grid to Excel for entire group or specific Cost Centers (years 1-5)
- Make detailed adjustments at any level in Excel
- Copy data back to grid (grid validates)
- User can then use the "column total" feature in the grid to adjust the forecast

Summary

- Labor automatically calculates for planning horizon
- Utilize available filters
  - Using the cost element hierarchy, users can easily select the cost element node and then make adjustments to the related code block (e.g. O&M non-capital) or create filters based on the income statement groups
- User can then use the "column total" feature in the grid to adjust the forecast

Users can view filters in the Budget Grid by using the drop down to select a group



Current and Multi-Year Forecast Filters

Current and Multi-Year Forecast Filters

- Grid filters are available to assist with the current and multi-year forecast process
- Filters utilize various nodes within the internal income statement cost element hierarchy
  - The cost element hierarchy is maintained in SAP
  - Transaction KAH3 – Cost Element Group = ZBWIIS0000
- Additional filters include leveraging attributes on master data
  - Projects and WBS Elements
- When a grid filter is selected, only the data that matches the filter will display
  - Example: Labor – only displays grid combinations that contain labor cost elements

- Budget Grid
  - Select a grid filter
  - Edit on screen or Excel

Roles and Responsibilities

Roles and Responsibilities

HRIS – (B2) 1

- Create HR information file for interface

IBP – (B2) 2

- Create scenario/cases
- Maintenance of hierarchy trees
- Monitoring/validation of UIPlanner interfaces (on-demand)
  - Master data
  - Companies
  - Power Plant

Business Services / Planning & Anaysis / Operations – (B2) 3

- Input controlled and assigned labor (overtime), OTL and Capital dollars into UIP
- Labor pool validation

General Acct (PA) – (B2) 4

- Update of costing sheets (OH)
- Create cost center assessments, variants and cycles

IBP – (B2) 5

- Application of overheads
- Execution of settlements (Plan vs. Actual)
- Update variants in UIP (provided by GA-PA)
- Execution of assessments
- Run data validation reports
- Run financial reports
- Execution of FERC process
- Run FERC derivation validation reports

FEU Long Term Planning – (Model) 6

- Run Rider/Deferral reports
- Validate results and review with Acctg.

Property Accounting – (Model) 7

- Powerplant interface validation
- Existing plant depreciation calculation validation
- Existing plant AFUDC calculation validation
- Plant addition depreciation/AFUDC calculation validation

Treasury – Debt/Interest (Model) 8

- Update debt transactions, debt amortizations and reacquired debt projections

Tax Planning (Model) 9

- Validation of apportionment factor interface
- Unitary tax calculation validation
- Schedule M item confirmation
- Existing and additions tax depreciation and deferred tax calculation validation
- Tax sharing agreements

Roles and Responsibilities – Labor Planning

- Labor pool preparation – gross payroll, unproductive/productive hours and activity pricing will be developed within UIPlanner
- Finalize labor pool – shift differentials, headcount adjustments
- Labor pool validation – balance labor among capital and cost center, lock budget node

	Labor Pool Prep	Finalize Labor Pool	Develop & Enter Labor for Cost Center	Develop Labor for to Blankets	Enter Labor for Blankets	Develop Labor for Specifics & Programs	Enter Labor for Specifics & Programs	Final Labor Pool Validation

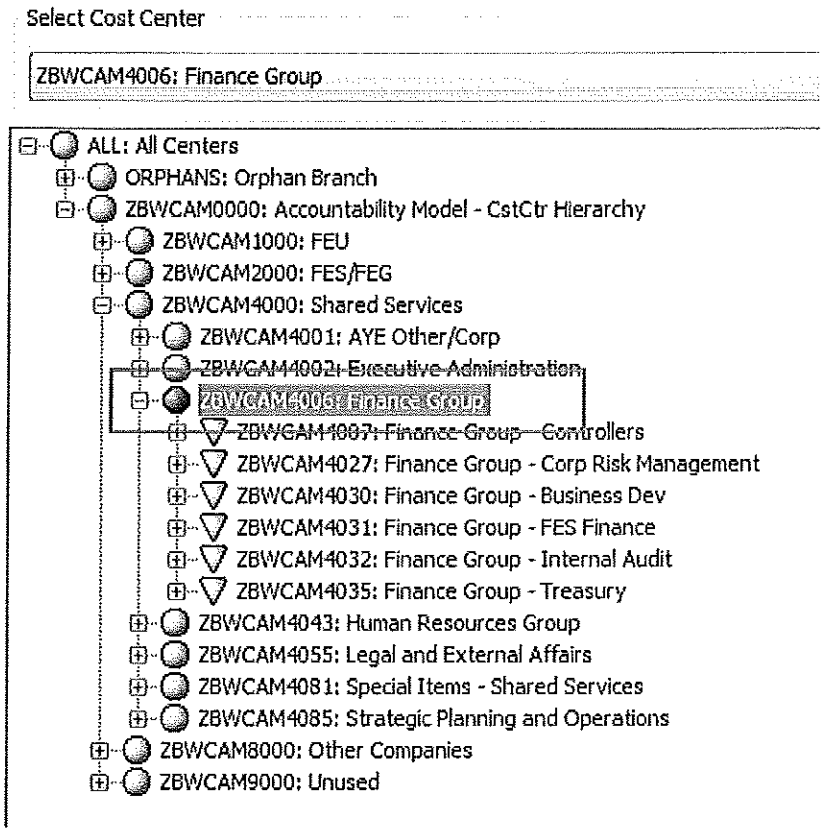
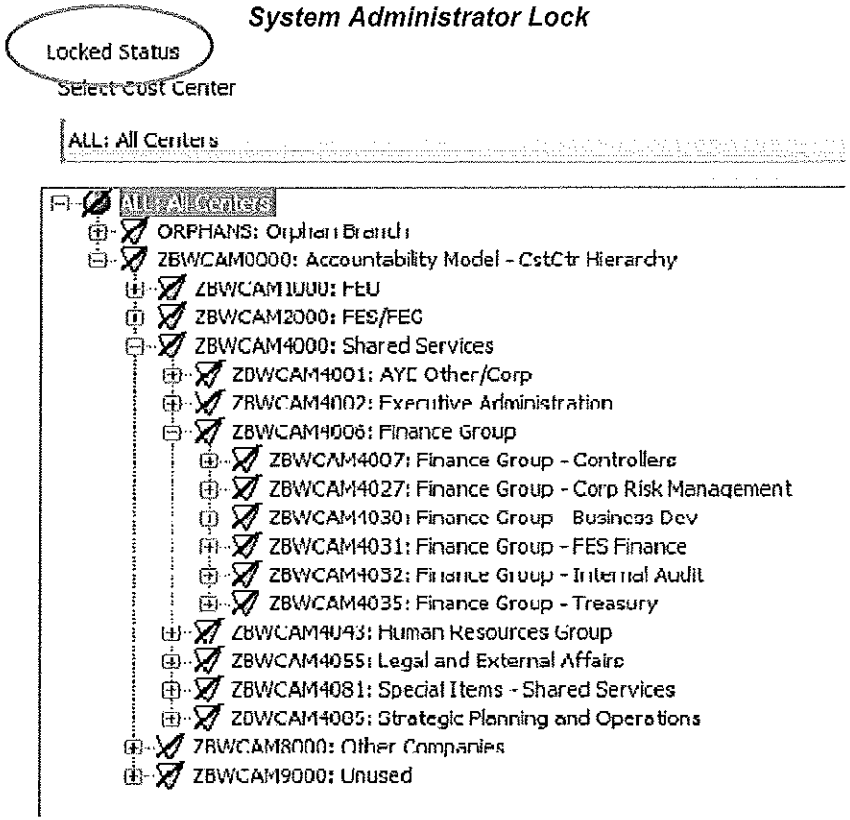
UIP Work Flow Schedule

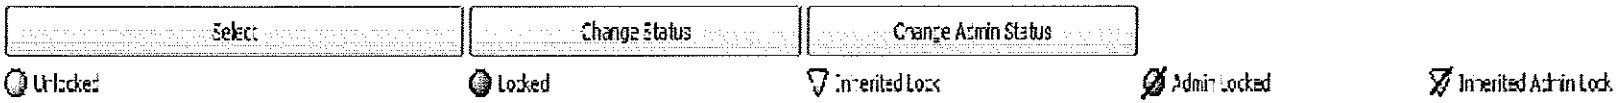
UIP Work Flow Schedule



Cost Center Locking



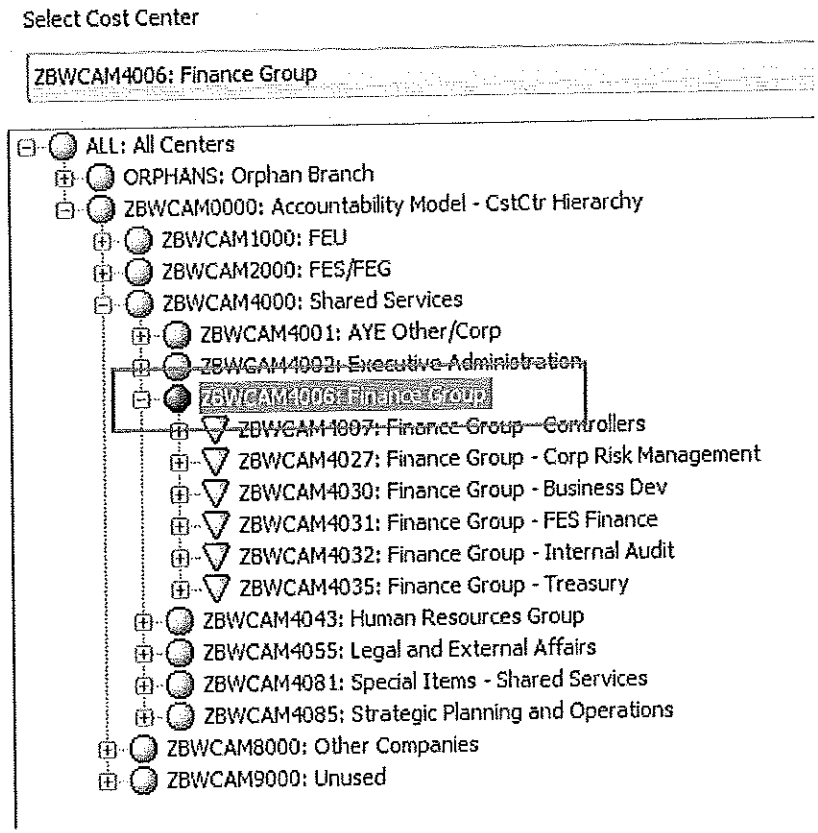
Cost Center Locking Overview

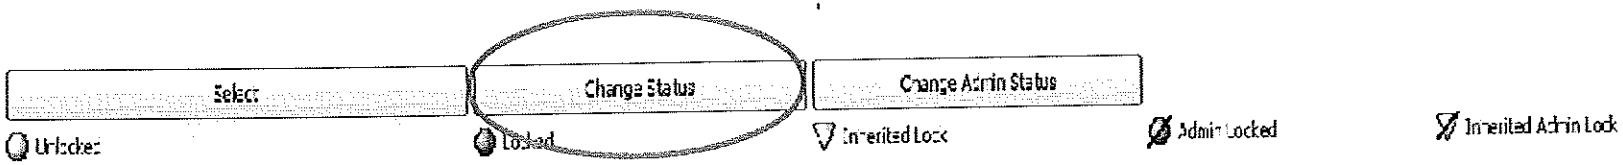


- Budget Administrators can lock their cost centers prior to system processing
- Cost Center locking will serve as part of the budget, forecast and plan approval process
- System Administrator can view user status and perform a global cost center lock
- Cost Center locking also prevents users from entering data to the grid

Budget Owner/Budget Administrator Lock

System Administrator Lock





Cost Center Locking

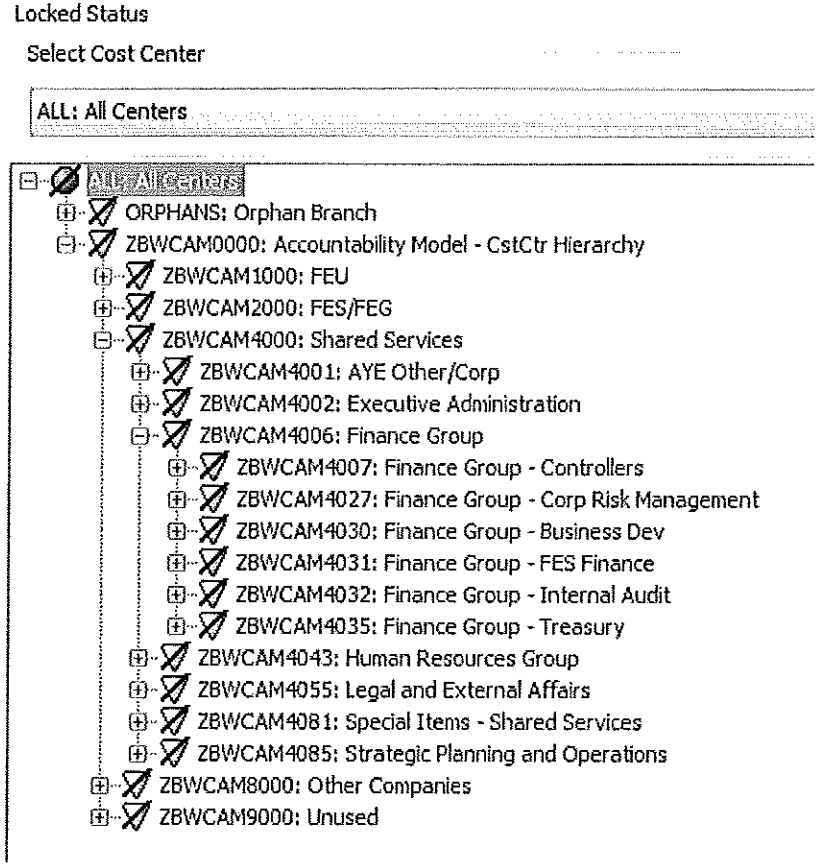
1. Highlight the cost center or cost center node you want to lock
2. Click **Change Status** button on bottom of screen
3. The selected group will lock at the node level (red circle) and perform an inherit lock for all cost centers under that node. Click **Change Status** again to unlock
4. Cost center locking can also be done at the individual cost center level
5. WHEN TRAINING, PLEASE DO NOT LEAVE ANY COST CENTERS LOCKED

Budget Coordinator Lock

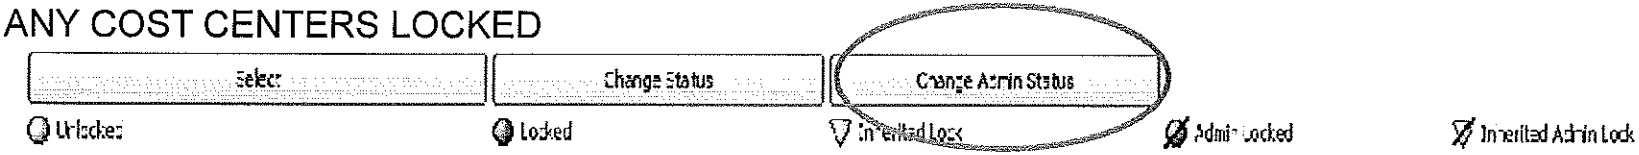
Cost Center Locking

- The System Administrator will have the ability to lock the entire system (scenario). This action would typically be done once the budget or forecast is ready to close and process

- Highlight the cost center or cost center node you want to lock

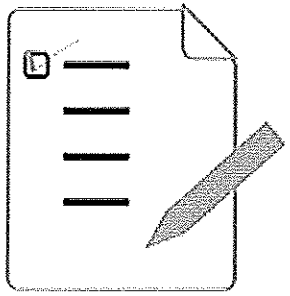


- Click **Change Admin Status** button on bottom of screen. A strike will be appear across the circle and triangles. Click **Change Admin Status** again to unlock



- The selected group will lock at the node level (red circle) and perform an inherit lock for all cost centers under that node. Cost center admin locking can also be done at the individual cost center level

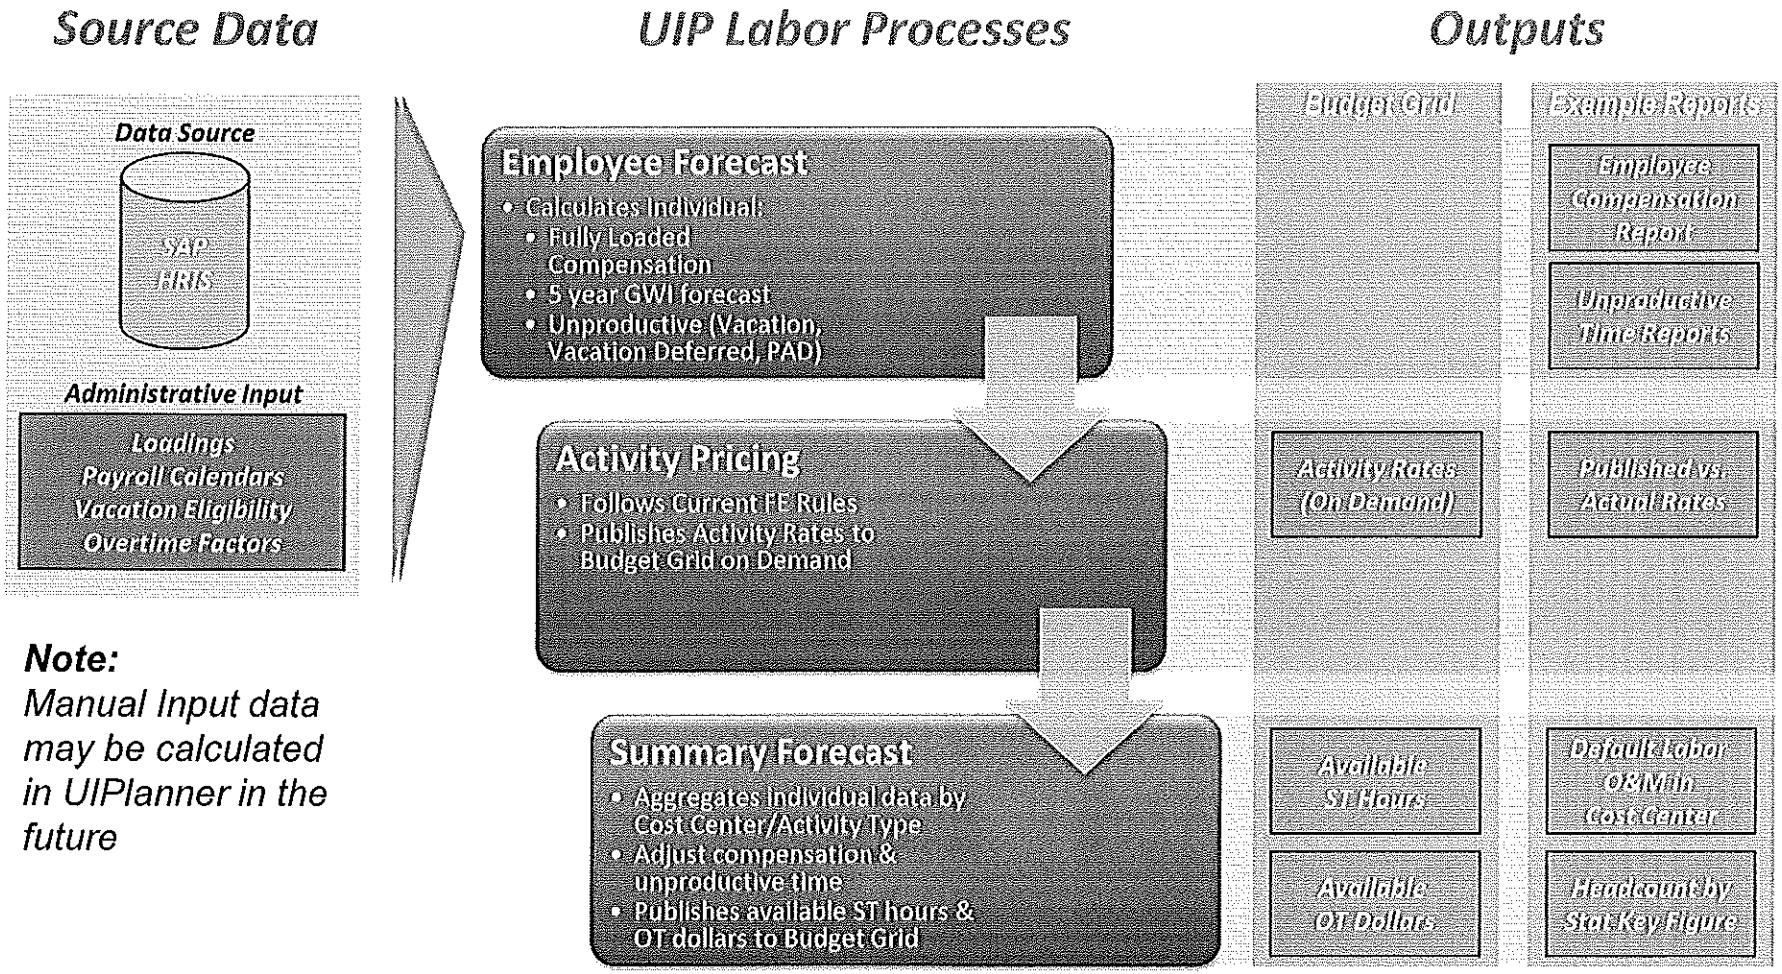
- Your security level may not allow you to do a system lock



- WHEN TRAINING, PLEASE DO NOT LEAVE ANY COST CENTERS LOCKED

System Administrator Lock

Exercise #4 – Browse Cost Center and Center Locking



Use the previous slides to perform the following tasks

- Review the new cost center hierarchy for your Business Unit/Department
- Expand and collapse the hierarchy
- Search a cost center
- Perform a cost center lock for an individual cost center or group
  - Remember to unlock all cost centers before exiting the screen

Employee Labor

UIPlanner Labor Schematic

Note:
Manual Input data may be calculated in UIPlanner in the future

The new Labor process ensures that activity rates will be available prior to the budget process while enhancing data security and transparency

Employee Labor Overview - Benefits

Edit Forecasts at Multiple Levels

- Interact with labor data and edit forecasts at the individual employee or cost center level

Activity Prices Prior to Budgeting

- UIPlanner will calculate activity prices prior to the start of the annual budget process. In addition, SAP HR data will be interfaced to UIPlanner monthly

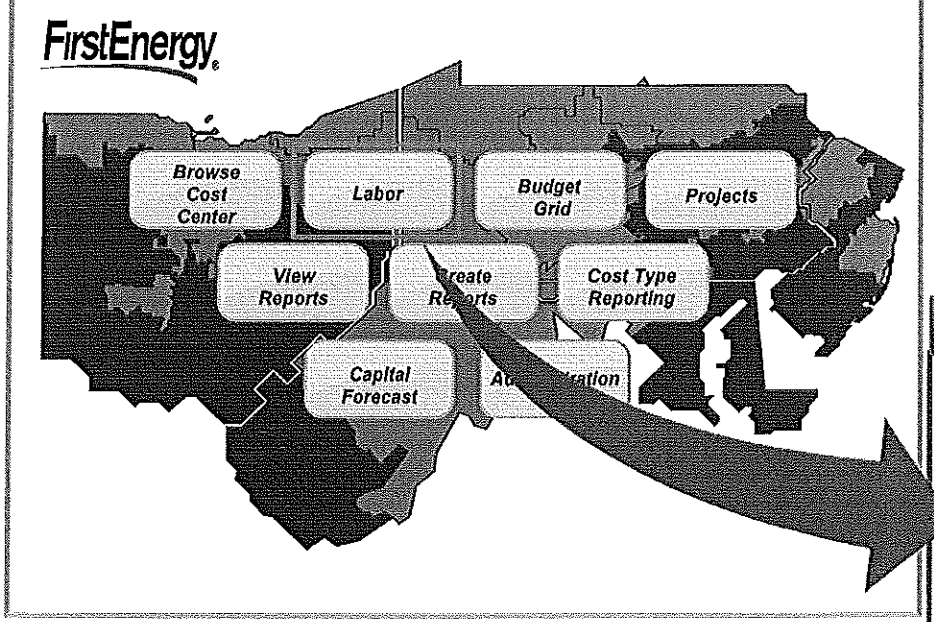
Calendars & Loadings Auto Calculated

- Additional employee information such as vacation eligibility, available payroll hours, etc… will be summarized to help facilitate building of the labor budget

Enhanced Data Security

- Access to the labor screens will be secured based on user role and business unit/department

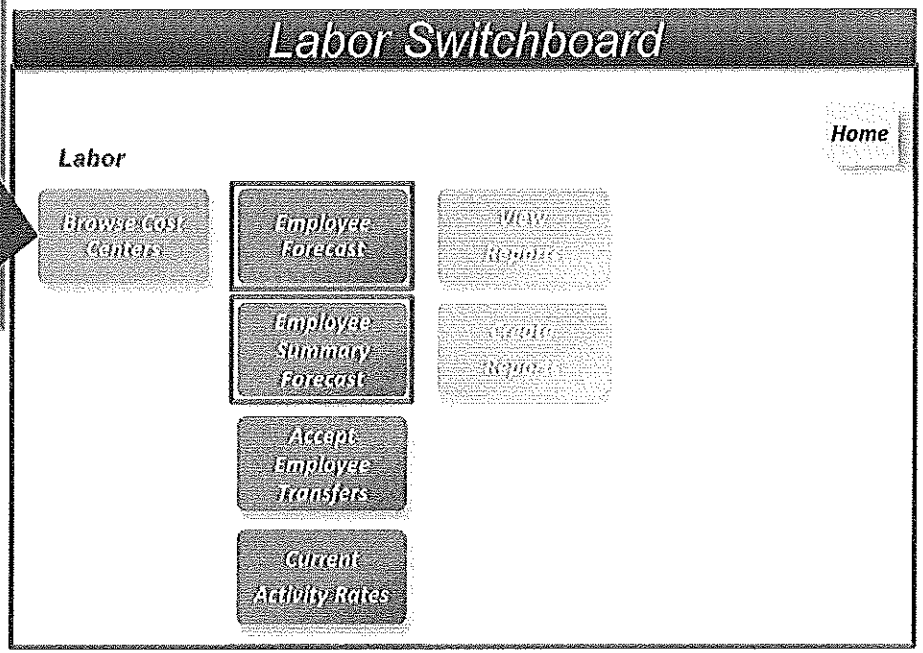
Automated 5 Year Labor Forecast



- The correct business rules are applied producing calculated results across the planning horizon for each employee

Labor Attributes Imported from SAP

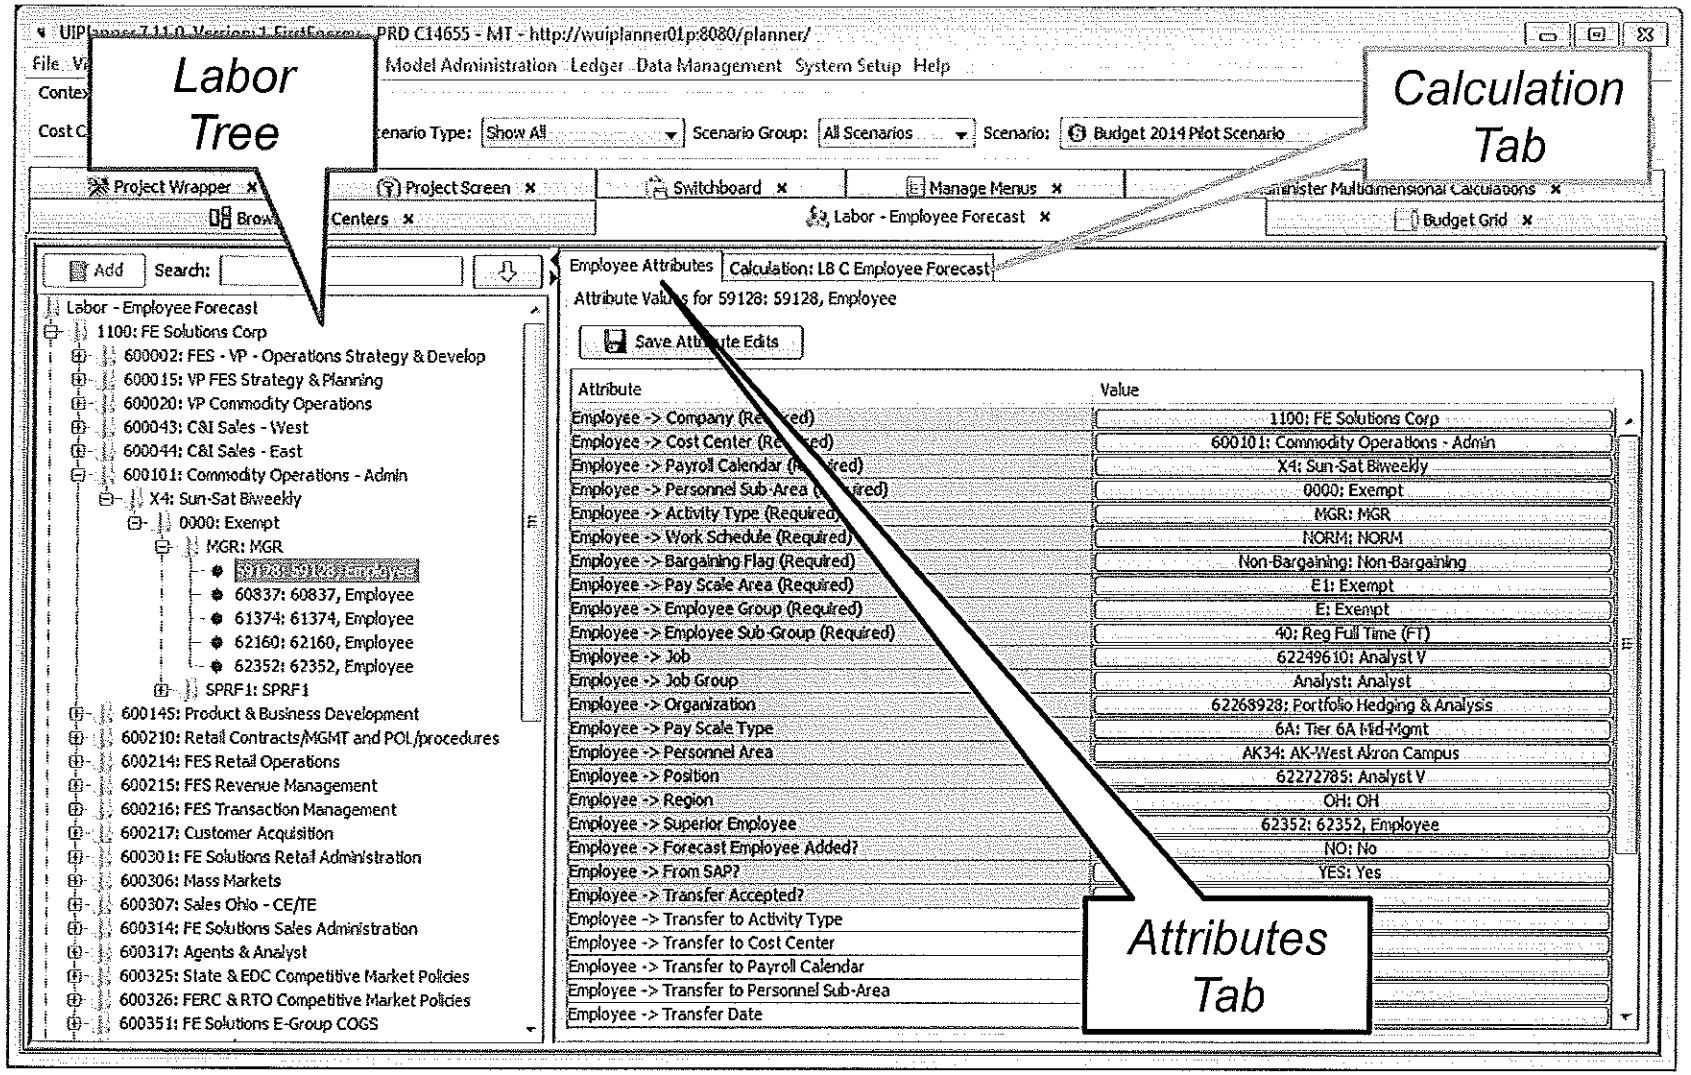
- *Employee Number*
- *Employee Name*
- *Company*
- *Organization*
- *Personnel Area*
- *Personnel Sub Area*
- *Position*
- *Job*
- *Job Group*
- *Region*
- *Employee Group*
- *Employee Subgroup*
- *Cost Center*
- *Activity Type*
- *Pay Scale Type*
- *Pay Scale Area*
- *Annual Salary*
- *Unit Pay*
- *Vacation Eligibility Date*
- *Latest Hire Date*
- *Vacation Used to Date*
- *PAD Used to Date*
- *Vacation Rolled Over from Previous Year*



Employee Labor Overview - Navigation

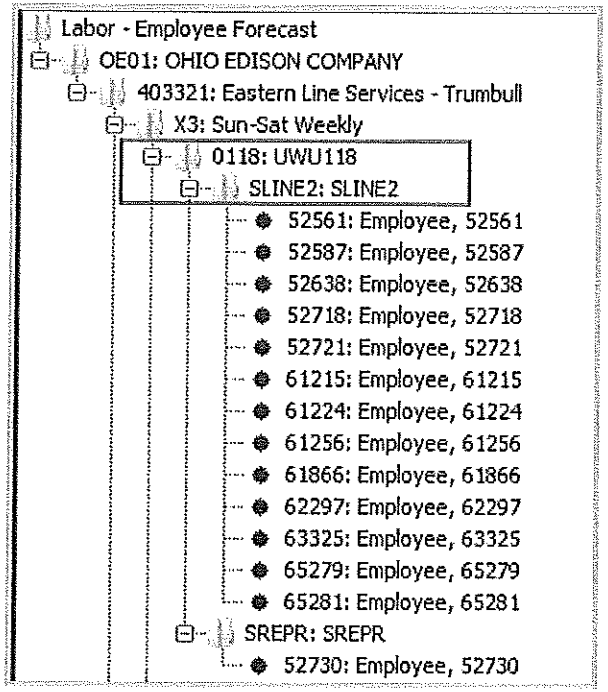
Home Switchboard

1. Click the "Labor" button to open the Labor Switchboard



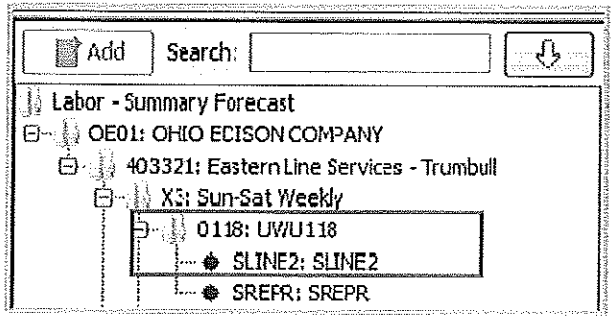
Labor Switchboard

2. Select "Browse Cost Centers" to select the center you wish to view/edit
3. Then click "Employee Forecast"
4. Then click "Summary Forecast"

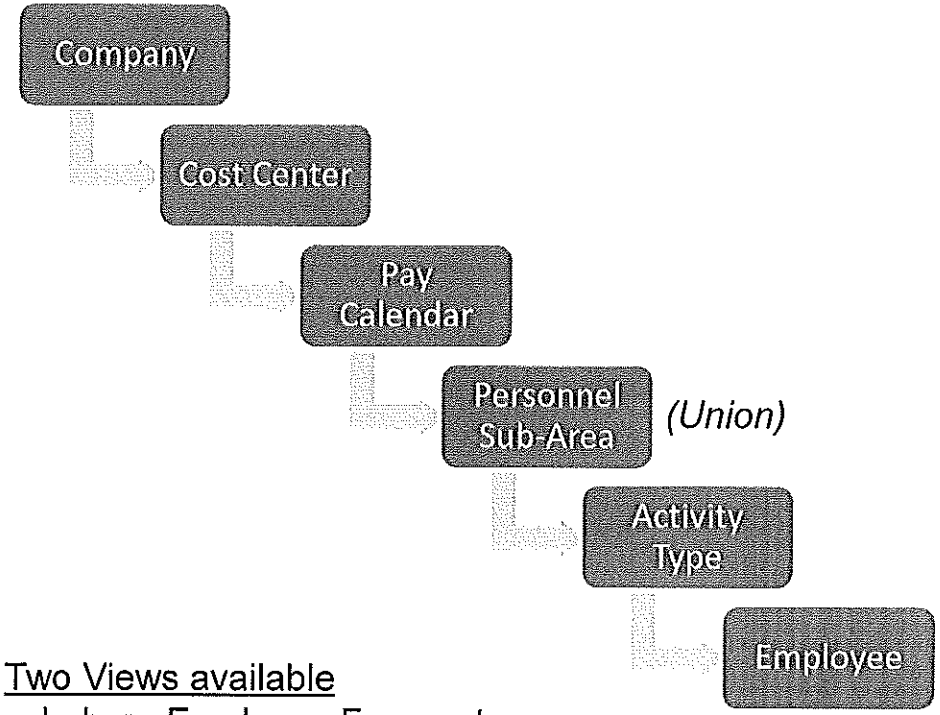


Employee Labor Overview - Wrappers

The Two Labor Wrappers have Three Main Sections



Employee Labor Overview - Trees



Employee Forecast

Summary Forecast

Labor data will be organized and presented in a tree format by:

Two Views available

- Labor - Employee Forecast
- Labor - Summary forecast

To View Data

- **Employee Forecast:** Open tree to employee level and click on an employee
- **Summary Forecast:** Open tree to activity type level and click on an activity type

Employee Labor Overview – Attributes Tab

The Employee Attributes tab contains a list of each employee's attributes including imported SAP and those that can be set by users

Three Types of Inputs

Attributes: *Opens a dropdown list of attributes*

Dates: *UIPlanner date fields open in a pop-up calendar in MM/YYYY format*

Numbers: *Numbers in UIPlanner can be entered freeform. Note SAP dates in UIPlanner are entered as numbers in YYYYMMDD format*

Employee Labor Calculations – Overtime Inputs

10 Overtime Loadings

Edit	Line: LB C Employee Forecast	Jan 2013	Feb 2013	Mar 2013
	Monthly Base Salary	$3,200.00	$3,200.00	$4,000.00
	Escalation Factor	1.67780	1.67780	1.67780
	Monthly Overtime Base Salary	$5,368.96	$5,368.96	$6,711.20
	Incentive Compensation Loading	5.00%	5.00%	5.00%
	Incentive Compensation for Overtime	$268.45	$268.45	$335.56
	Monthly Overtime Base Salary	$5,368.96	$5,368.96	$6,711.20
	+ Incentive Compenstation for Overtime	$268.45	$268.45	$335.56
	Taxable Overtime Compensation	$5,637.41	$5,637.41	$7,046.76
	* Tax Loading	7.54%	7.54%	7.54%
	Taxes On Base Salary for Overtime	$425.06	$425.06	$531.33
	Monthly Loaded Salary for Overtime	$6,062.47	$6,062.47	$7,578.09
	Monthly Hours for Overtime	160	160	200

- Escalation factors are used to inflate base salaries to approximate hourly overtime rates

Employee Labor - How to Update Data

Two options to update Employee Labor

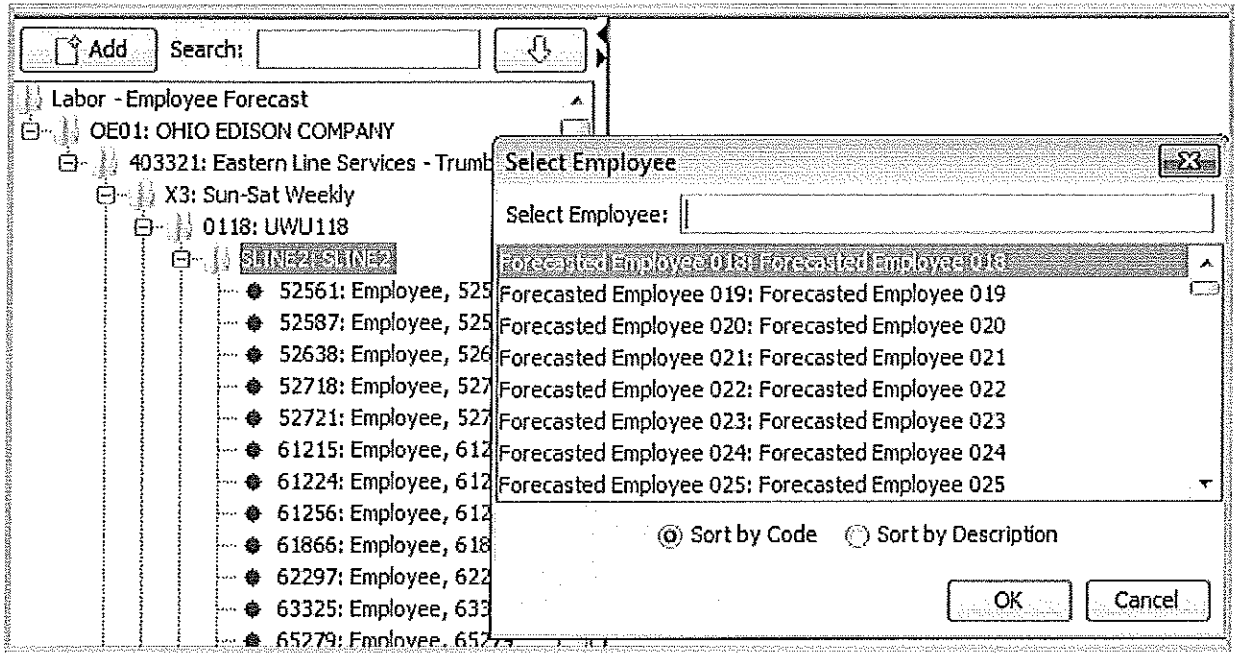
Edit on Screen

- *Inputs can be made directly in the screen.*
- *Select save on screen edits*

Edit In Excel

	B	C	D	E
1	Line Item to Edit	Jan 2013	Feb 2013	Mar 2013
2				
3	VR:[Forecasted PAD Use]			
4	WY:[Forecasted Vacation Use]			
5	YI:[Forecasted Vacation Deferred Use]			
6	ZC:[Manual Unit Pay Adjustment]			
7	ABM:[Bonus Compensation]			
8	AEL:[Miscellaneous Unproductive Time in Budget]			

- You can edit the rows highlighted in yellow or Select the **Edit in Excel** to update
  - When editing in Excel simply close out to save
  - Column headings will need to remain in tact in order to properly save



Employee Labor – Forecasting Headcount Changes

Employee Labor – Add a Forecast Employee

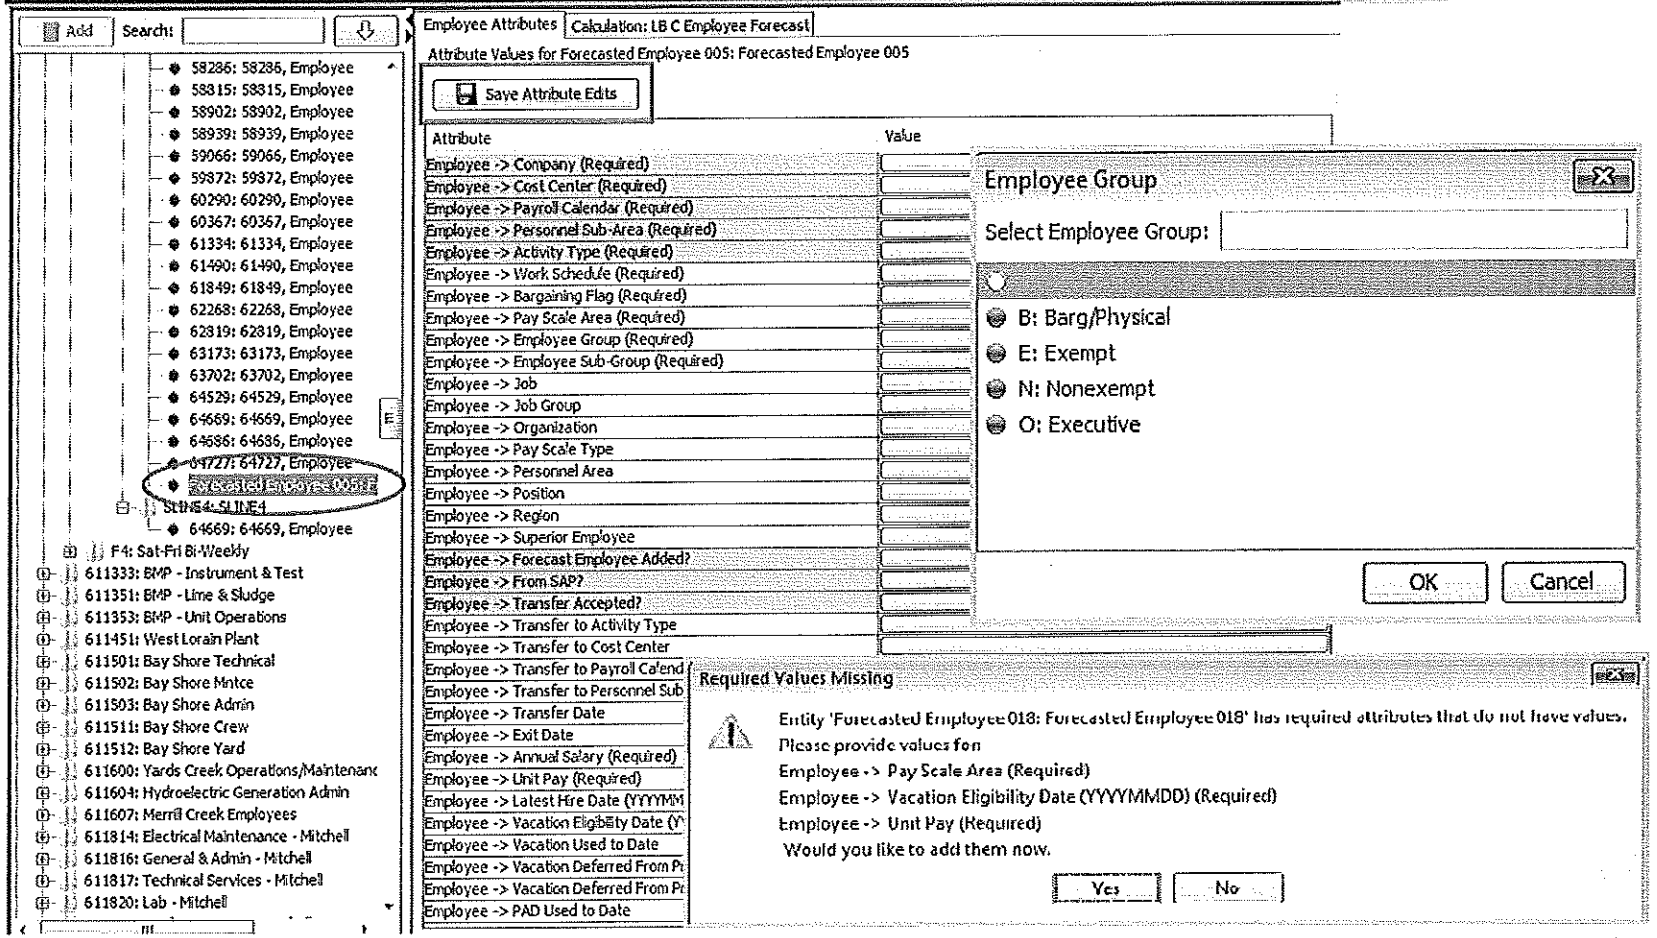
Forecast Employees are employee entities which can be added to the labor forecast to forecast new employees in a department. Forecast Employees should be used when either: ***1.) the position has been filled and the employee has not started yet, or 2.) the Cost Center/Activity Type does not exist within FE.***

Process: To add Forecast Employee

- Highlight the activity type
- Click the **Add** button
- Select a forecast employee to add
- Fill in required attributes

Required Attributes

- Company
- Cost Center
- Payroll Calendar
- Personnel Sub-Area
- Activity Type
- Work Schedule
- Pay Scale Area
- Employee Group
- Employee Sub-Group



Required Inputs

- Annual Salary
- Unit Pay
- Latest Hire Date (YYYYMMDD)
- Vacation Eligibility Date (YYYYMMDD)

Employee Labor – Add a Forecast Employee

- **Enter all required fields**
  - Searchable drop boxes appear for attributes
  - Monthly Calendars appear for UIPlanner Date fields
  - Type directly into number fields (including SAP date formats – YYYYMMDD)
- Select **Save Attribute Edits** when complete

  Note: An error message will occur if required fields are left blank

Employee Labor – Add a Forecast Employee

- Select the **Calculation: LB C Employee Forecast** tab
- View auto populated data

Employee Attributes | Calculation: LB C Employee Forecast

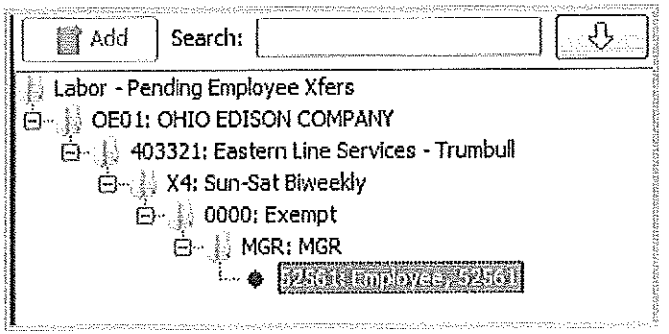
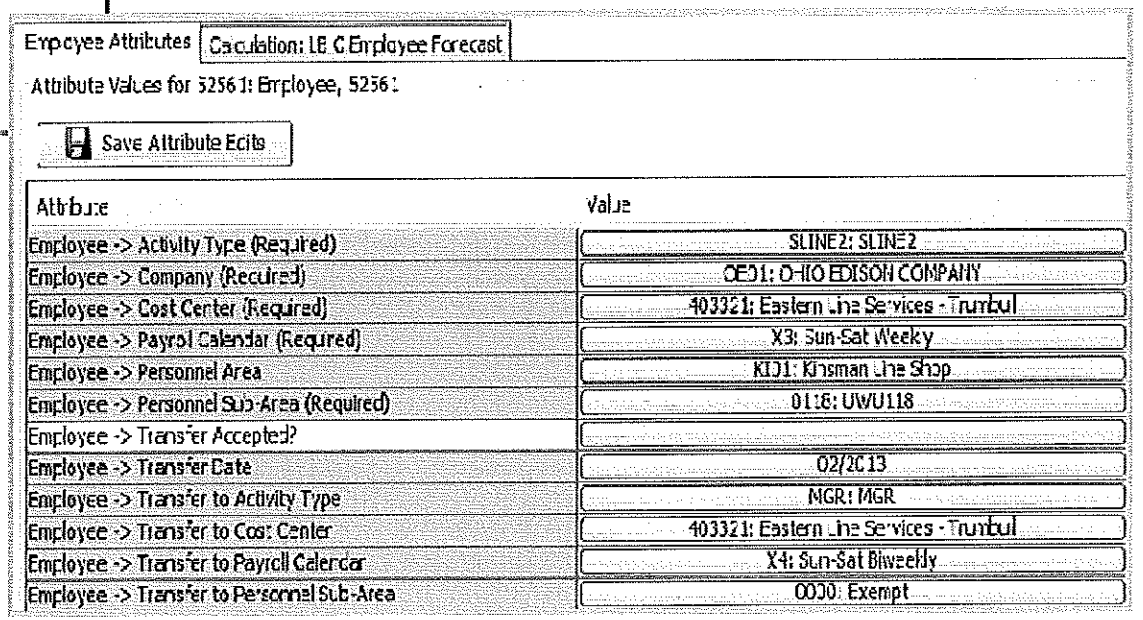
Employee Labor – Transfer Individual Employee

- Select the **Employee to Transfer**
- Enter **ALL** "Transfer" required fields
  - Activity Type
  - Cost Center
  - Payroll Calendar
  - Personnel Sub-Area
  - Transfer Date
- Select **Save Attribute Edits**





Employee Labor – Transfer Individual Employee

Step 1
- Open the switchboard tab
- Click **Accept Employee Transfers**

Step 2
- Highlight transfer employee
- Select **Yes** to accept transfer
- Select **Save Attributes**

Employee Labor – Verify Transfer

- Select **Employee Forecast** Wrapper
- Employee displays in both old and new cost center
- Record adjusts to reflect transfer date, new pay area and activity type
- Preserves the employee's PAD, Vacation, etc…

Employee Labor – Activity Pricing in UIPlanner

Employee Labor – Activity Pricing

Activity Rates are used to allocate labor to projects, orders, and cost centers other than the employees' home center.

Note: Some Companies use a company-wide activity rate which aggregates certain activity type across the whole company

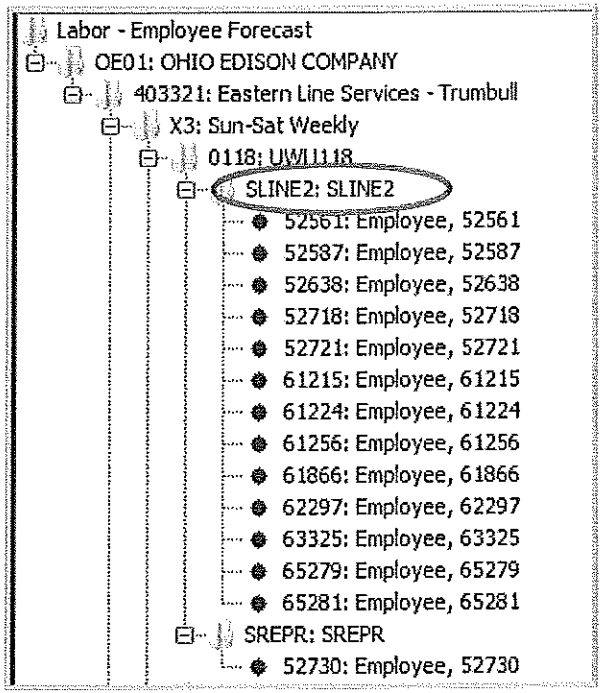
Activity Pricing FAQ

Does Forecasting Vacation Use Affect Activity Rates?

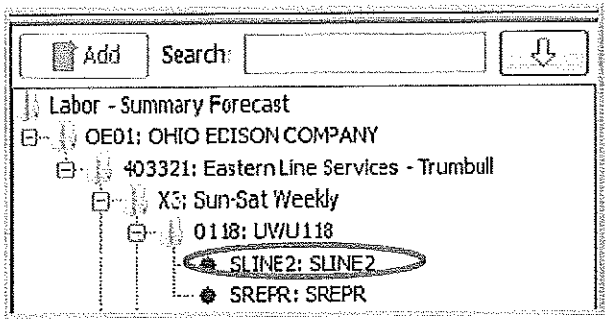
No. The unproductive time in the Activity Pricing Calculation uses assumptions for unproductive time including assumed meeting hours and utilization of all vacation & PAD earned in a year.

Does Adding Compensation Affect Activity Rates?

It depends. If a future raise or promotion for an employee is known, it could be added to the employee prior to the activity pricing process. However, forecast compensation changes made during the annual budget process or reforecasting will not affect rates



Does Adding an Employee Affect Activity Rates?

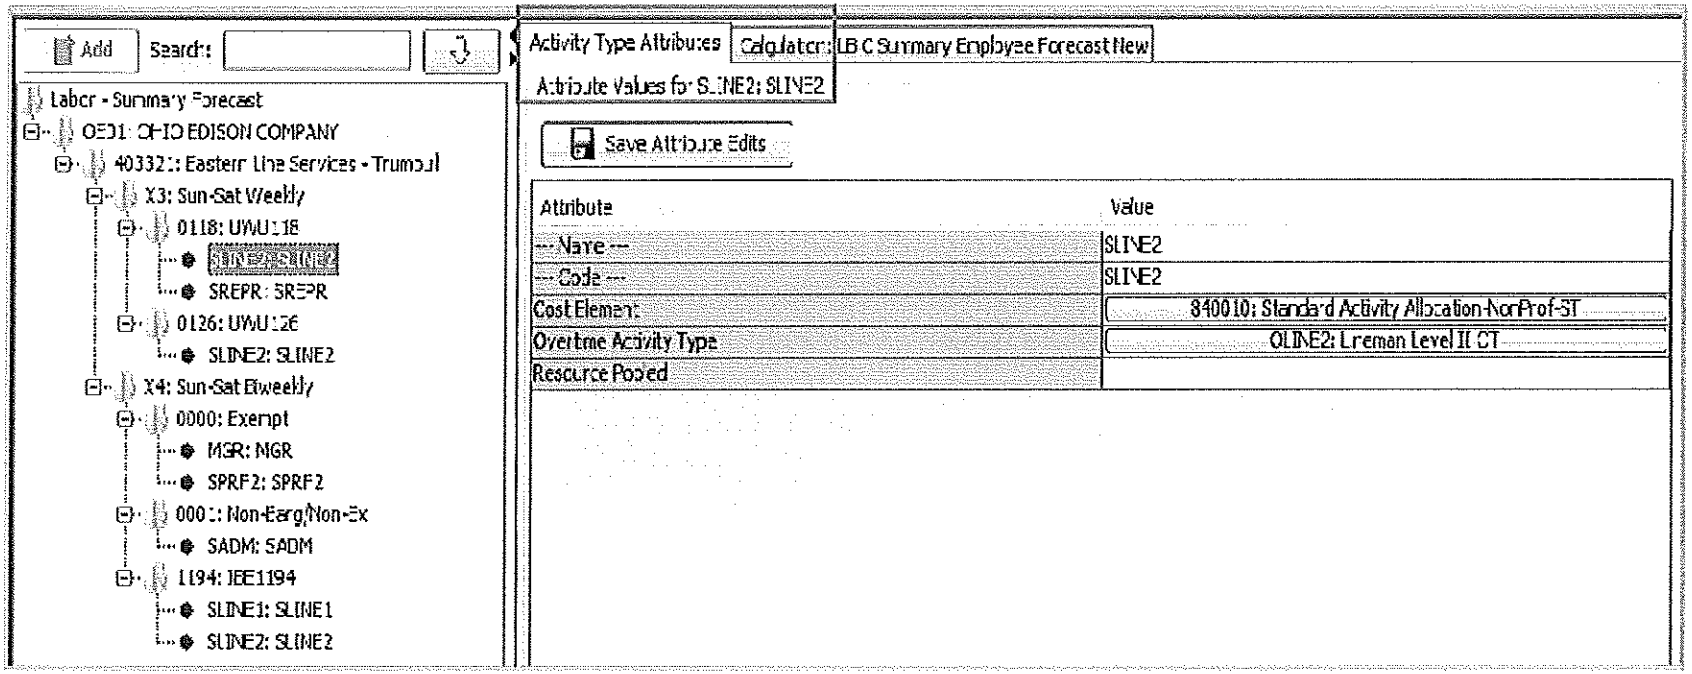


No. Activity Rates are set and published prior to users being able to edit and add employees

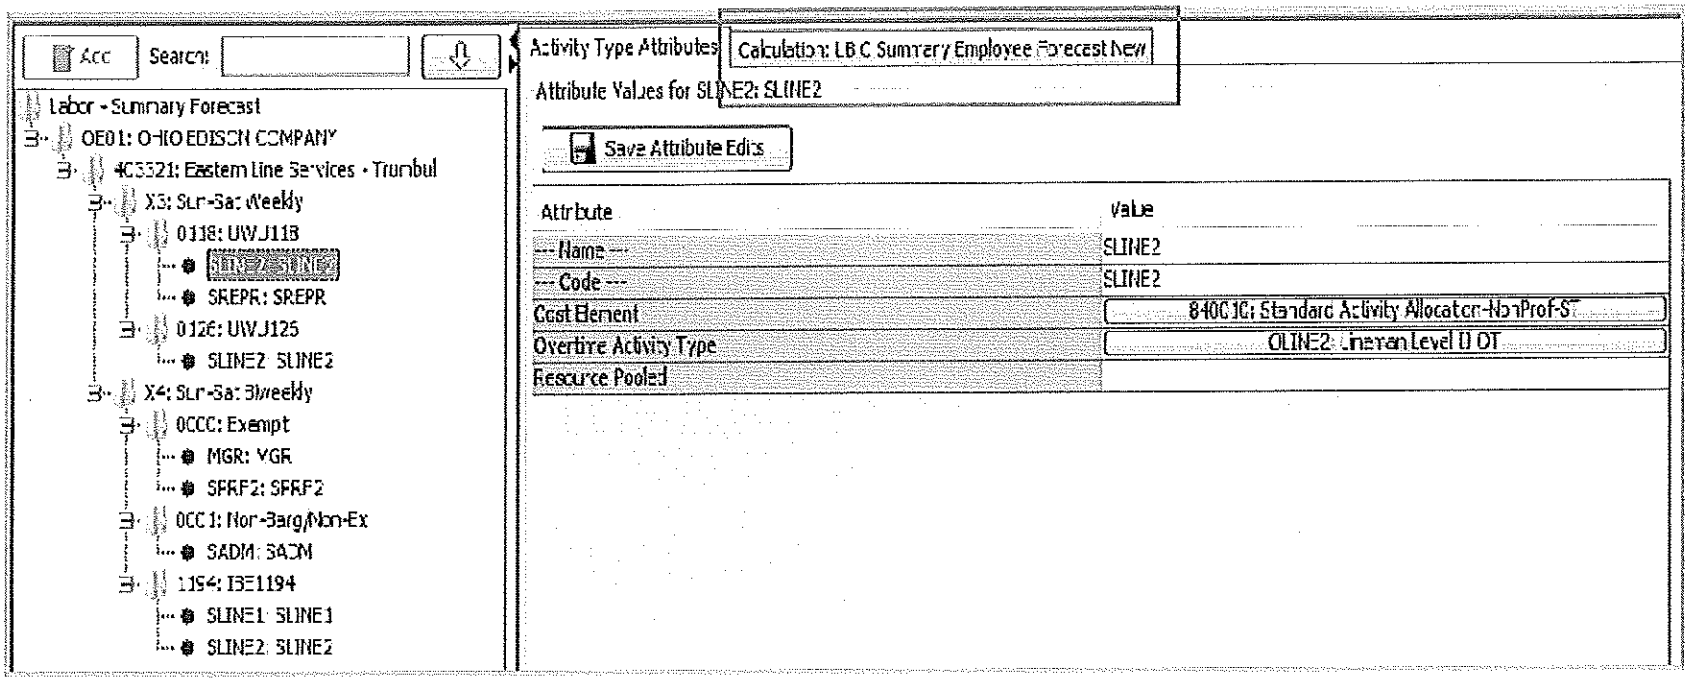
Employee Labor – Summary Forecast

Employee Labor – Summary Forecast

Employee Summary wrapper summarizes individual employee information to the cost center activity type level for each cost center



Information related to SLINE2 activity type is summarized in the Employee Summary wrapper



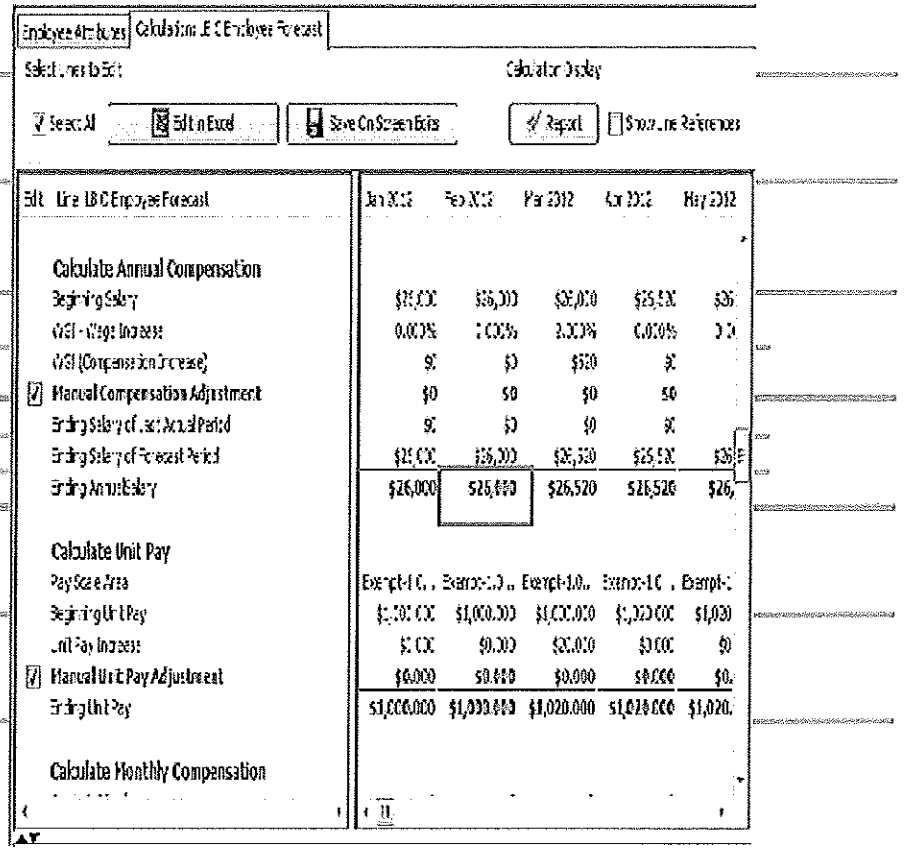
Employee Labor – Summary Forecast

- Select **Activity Type Attributes**
- Information auto populated

Employee Summary

Select **Summary Employee Forecast**

To add a new activity type to a cost center either:



- Add a forecast employee with the desired Cost Center/Activity Type combination
- **Transfer an employee into the Cost Center/Activity Type combination (if the new combo occurs as a result of a transfer)**

Employee Summary – Calculations (Overview)

Summary Forecast Calculations

1. Headcount & FTE
2. PAD
3. Vacation
4. Vacation Deferred
5. Compensation
   - a. Monthly Compensation
   - b. Annual Compensation
6. Loadings (Admin Maintained)

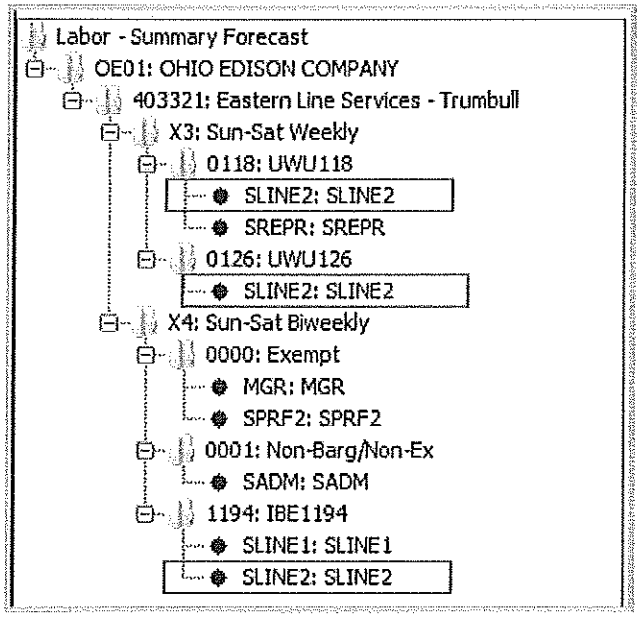
Employee Summary – Wrapper Reports

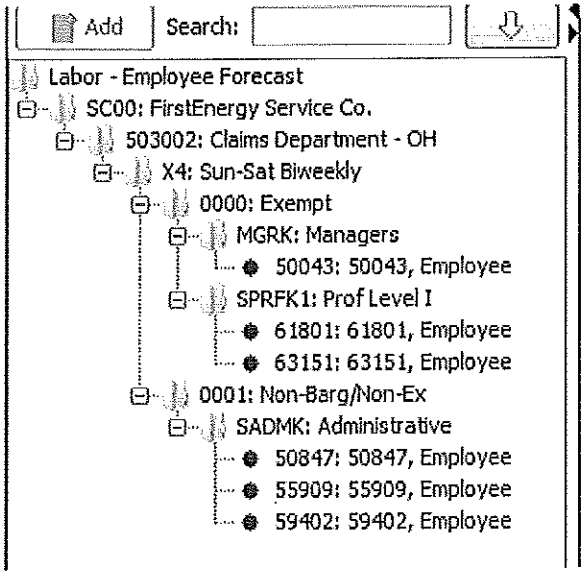


- View total hours and dollars by activity type at the cost center level
- Report will be view only

Employee Summary to Budget Grid

- The grid is used to allocate hours and dollars
- If labor is not activity allocated, then labor dollars will not show on the grid. Information is available via report

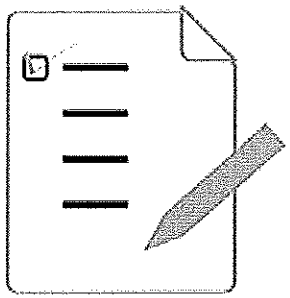
Cost Source	Cost Owner	Cost Collector Ty	Project	WBS	Internal Order	Activity Type	Cost Element	Comment	Amount Type	2013
Filter Off	Filter Off	Filter Off	Filter Off	...	Filter Off	Filter On	Filter Off			2013 - Jan
403321: Eastern L	401221: Centra	WBS	WBS	OE-900083: N-Line	OE-9000	N/A: N/A	SLINE: Lineman-a	840010: Stand		
									Dollars	$5,193
									Hours	95.0



Column Totals	Dollars	$247,939
	Hours	4,583.8
Available Amounts	Available Hours	0.0

- Subtotal for SLINE2 will display and total on the available amounts row
- As hours are activity allocated out the available hours row will adjust

Budget Grid - How to Handle Labor Dollars/Hours



After the labor pool has been built:

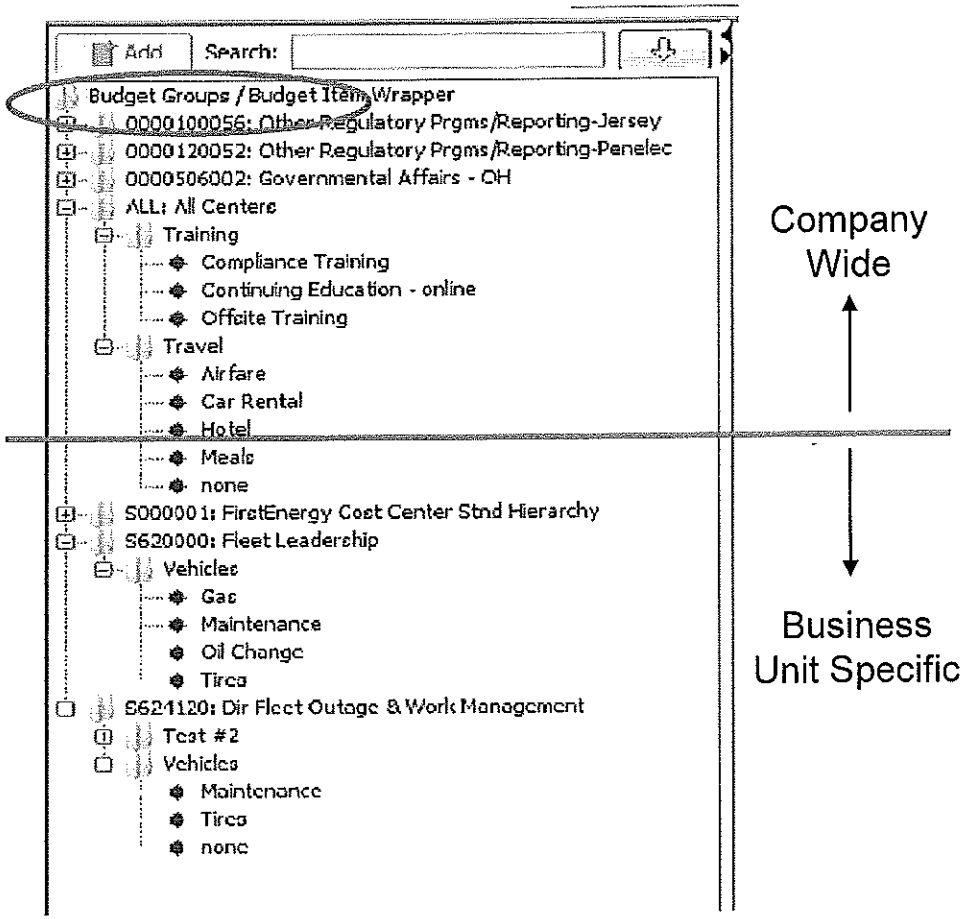
- View the labor and hour report which will show the total calculated hours and dollars by activity type for each cost center
- Open the Budget Grid:
  - If labor has been allocated from your cost center, verify that the total labor pool matches the pool calculated in the **Summary Forecast**
  - Next users can start activity allocating labor hours and dollars.

Note: The Budget Grid is only for allocating hours and dollars. It will not show the labor dollars and hours allocated to the primary cost center.

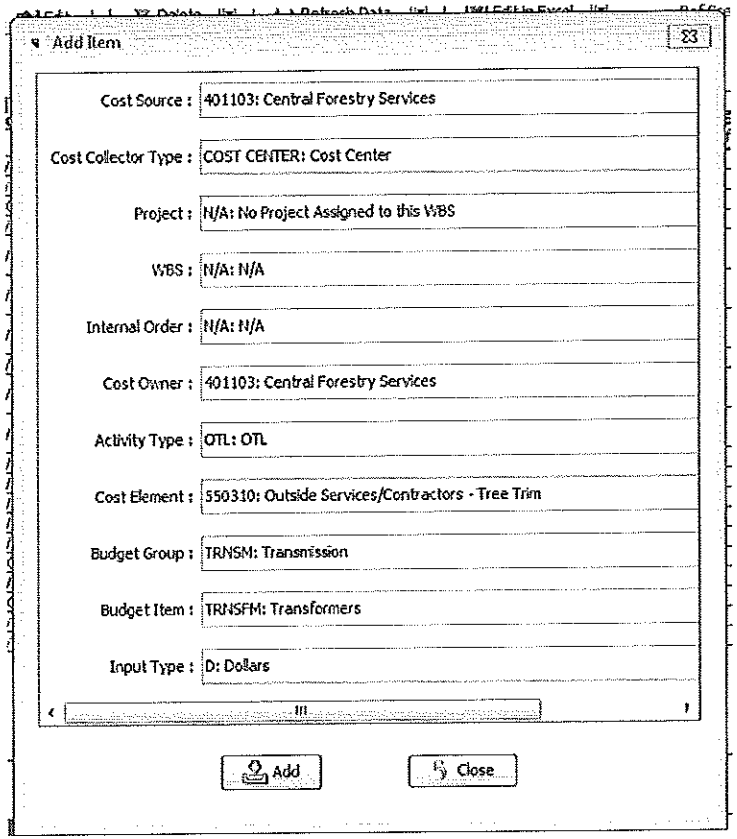
Exercise #5 – Employee Labor

- Select a cost center and review an individual employee labor profile

- Under the Employee Attribute tab:
  - Transfer an employee
  - Exit an employee



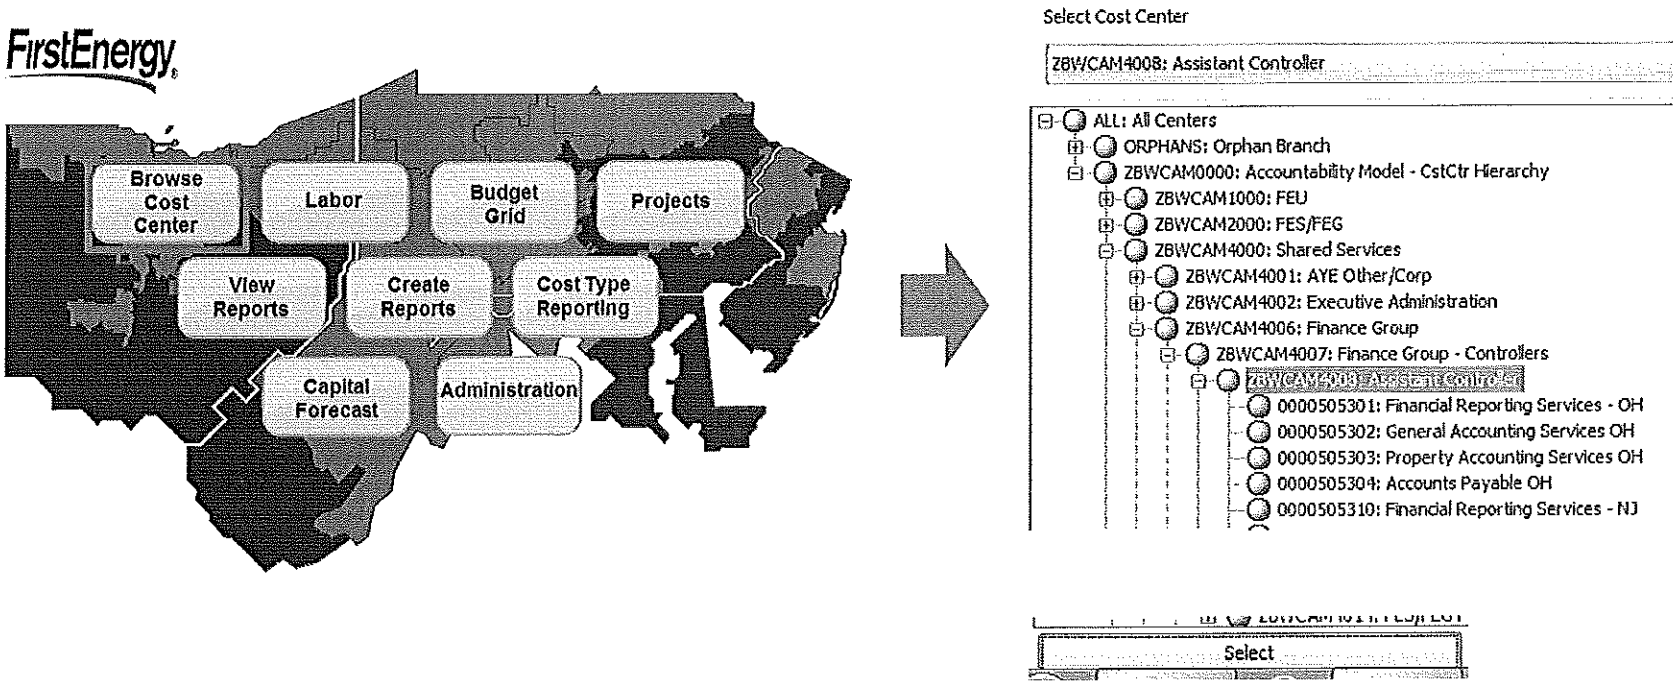
- Under the Calculation: Labor Budget Employee Forecast
  - Add a salary adjustment on the screen
  - Enter vacation and PAD allocations



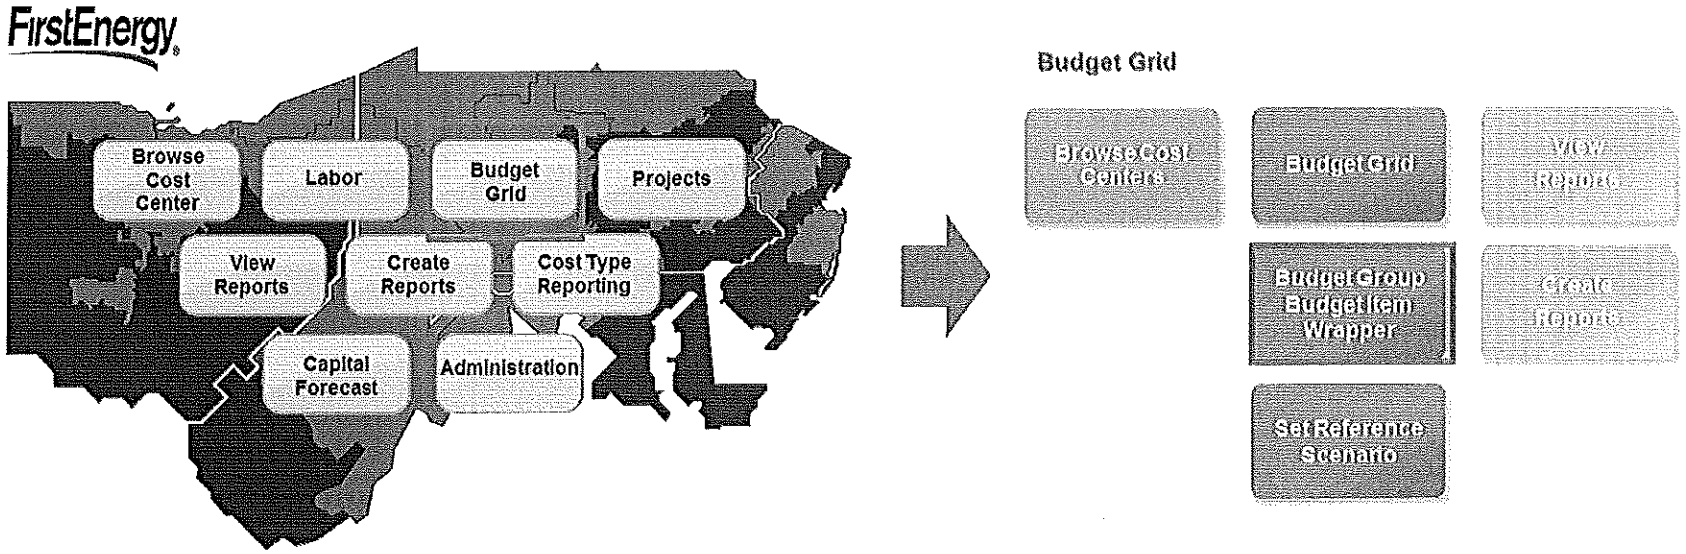
- View Summary Wrapper
  - Add a salary adjustment on the screen
  - Enter vacation and PAD allocations

Budget Group / Budget Item Wrapper

Budget Group / Budget Item Wrapper Overview



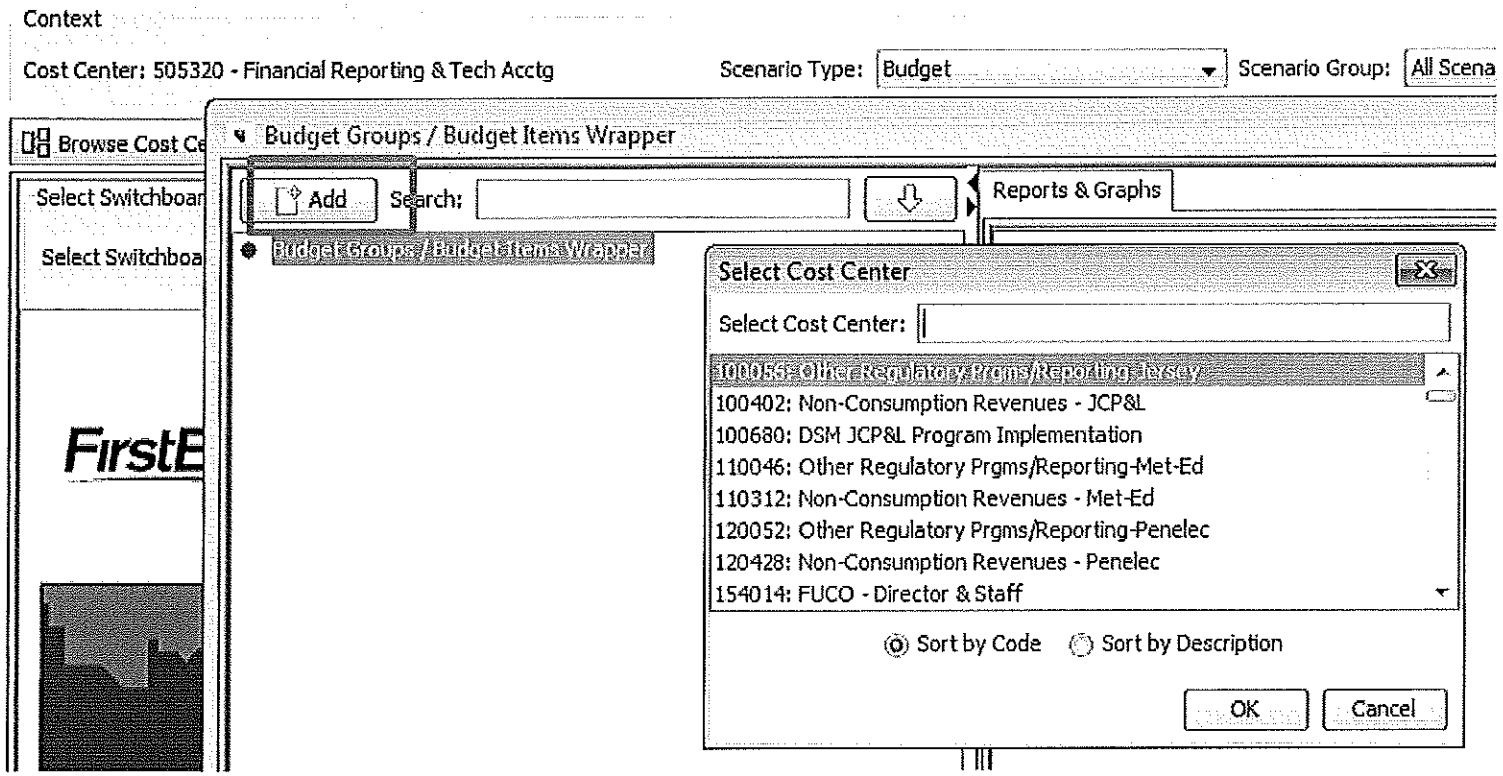
- Standard Budget Group and Budget Item groupings will be made available for all users
- Specific business unit budget groups and items can easily be created
- Ability to create Budget Group and Budget Item at the Cost Center level
- Business Unit/Department Budget Coordinators will create and maintain Budget Groups and Budget Items for their areas



Budget Group / Budget Item Wrapper Startup

1. Using the Budget Group/Budget Item Wrapper
   - Open **FE Main Switchboard**
   - Select a Cost Center using **Browse Cost Centers** (either double-click a Cost Center or highlight Cost Center and click the Select button at the bottom of the screen)
   - NOTE: Any Budget Group/Budget Item assigned to a rollup node will be available for use for any Cost Center children of this node

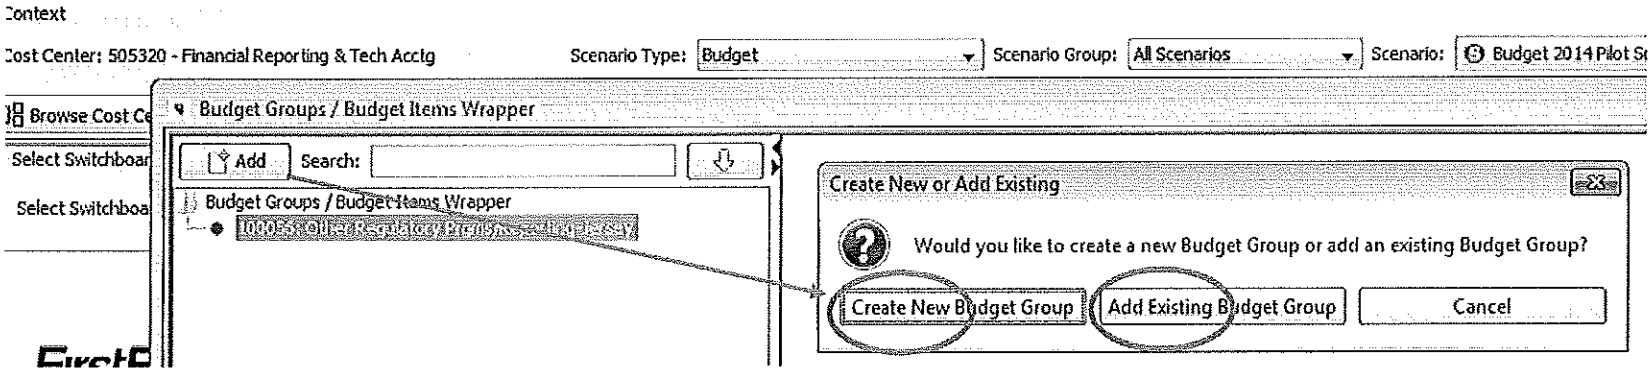
Budget Group / Budget Item Wrapper Startup



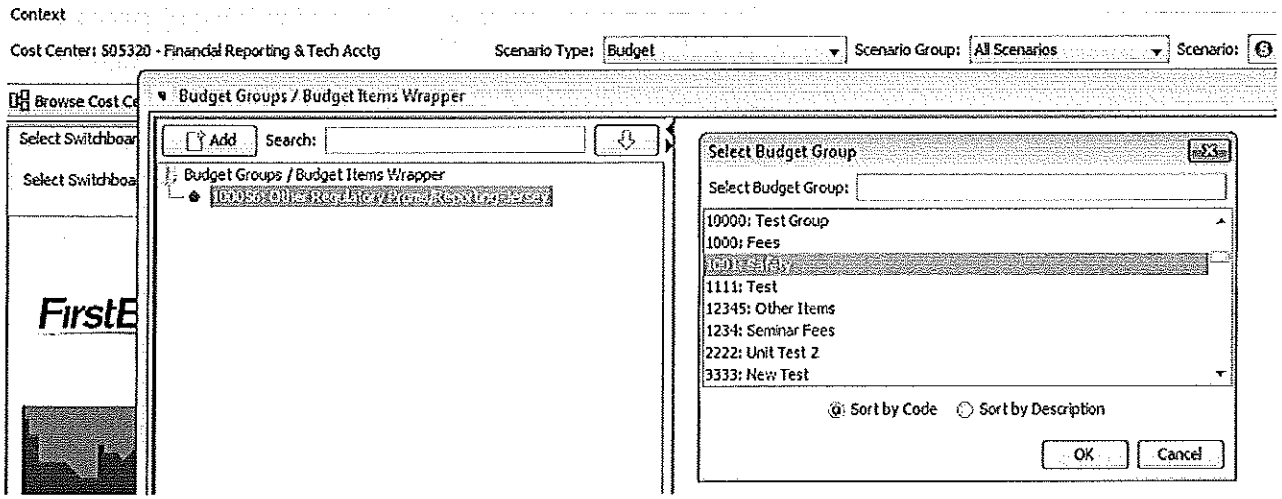
2
- Return to the **FE Main Switchboard**
- Click **Budget Grid**
- Click **Budget Group Budget Item Wrapper**

Adding a Cost Center

3



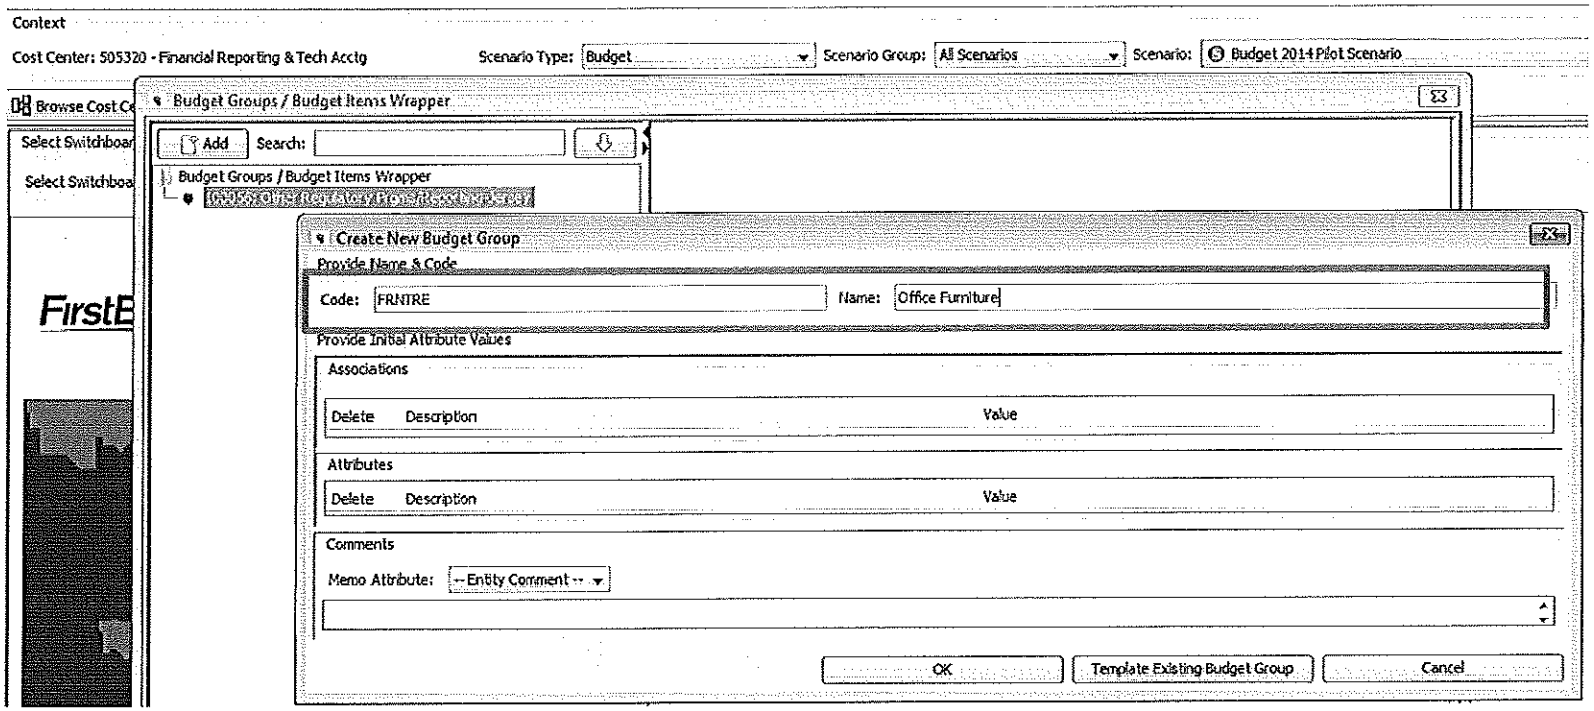
- If the Wrapper Tree is empty and no Cost Center is readily available, select "Budget Groups / Budget Items Wrapper" and click on the Click the **Add** button.
- Scroll through the list of Cost Centers and select one (use Select Cost Center window to search). Click **OK** when finished.



Add Existing Budget Group

4

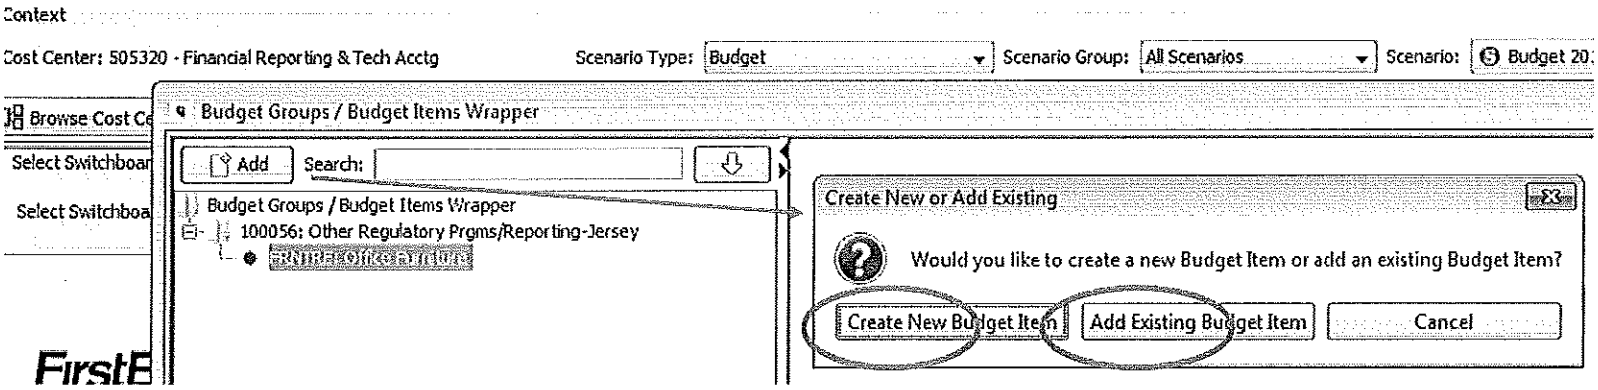
- Select the Cost Center where a Budget Group and its associated Budget Item will be added and click **Add** button.
- Select either "Create New" or "Add Existing" Budget Group.



- If adding an existing Budget Group, simply select from the popup window and click **OK**.

Create a New Budget Group

4



- Enter a unique Budget Group Code using process as defined by FE.
- Enter Name of Budget Group (MAX length = 80 characters)
- Click **OK**.

Adding / Creating Budget Items

5

- Follow a similar process for creating or adding Budget Items
- NOTE: Budget Items must have an associated Budget Group

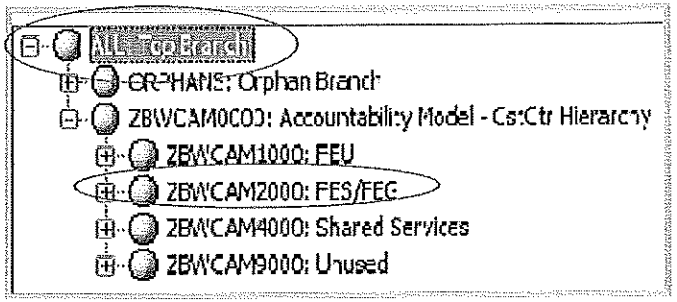
Budget Group / Budget Item Guidelines

- Budget Coordinators will have the ability to create Budget Groups Budget and Items for their respective areas

Guidance on codes and names

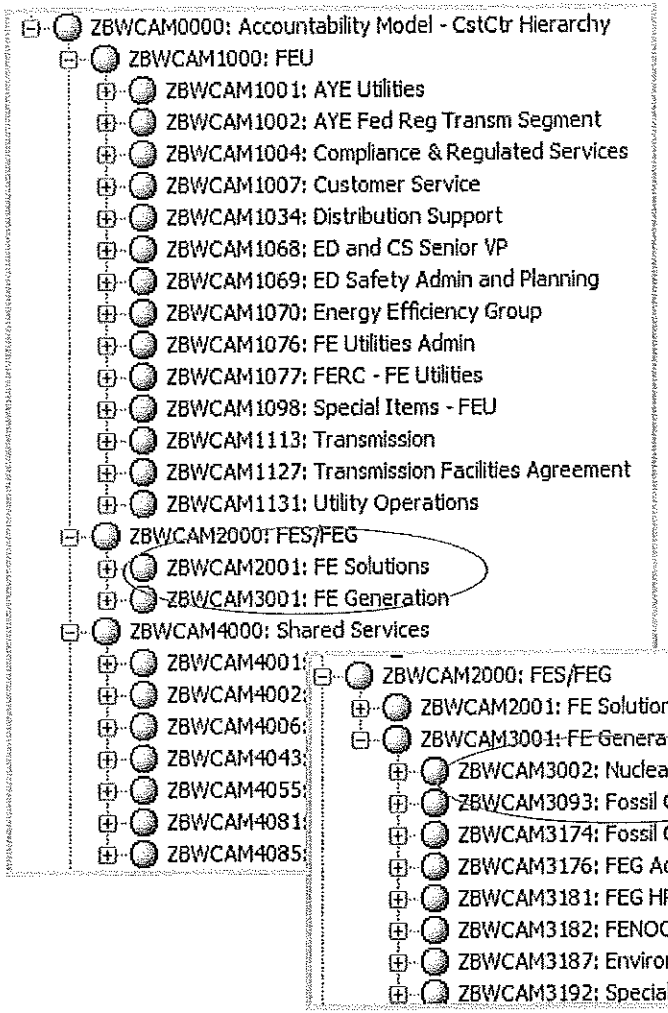
• **Budget Group Budget Item Codes**	• **ALL CAPS** • **Up to 12 alpha characters**
• **Budget Group Budget Item Descriptions**	• **Upper and lower case** • **Up to 80 characters in length**

Example



Budget Group	• **TRAIN**	**Training**
Budget Items	• SAFETY	Safety
	• COMPL	Compliance
	• OPER	Operations
	• CONTEDU	Continuing Education

Avoid creating similar Budget Groups and Budget Items



- Codes should be meaningful so when the accounting name is turned off on the Budget Grid the user can easily identify the Budget Group and Budget Item

Budget Group / Budget Item Guidelines

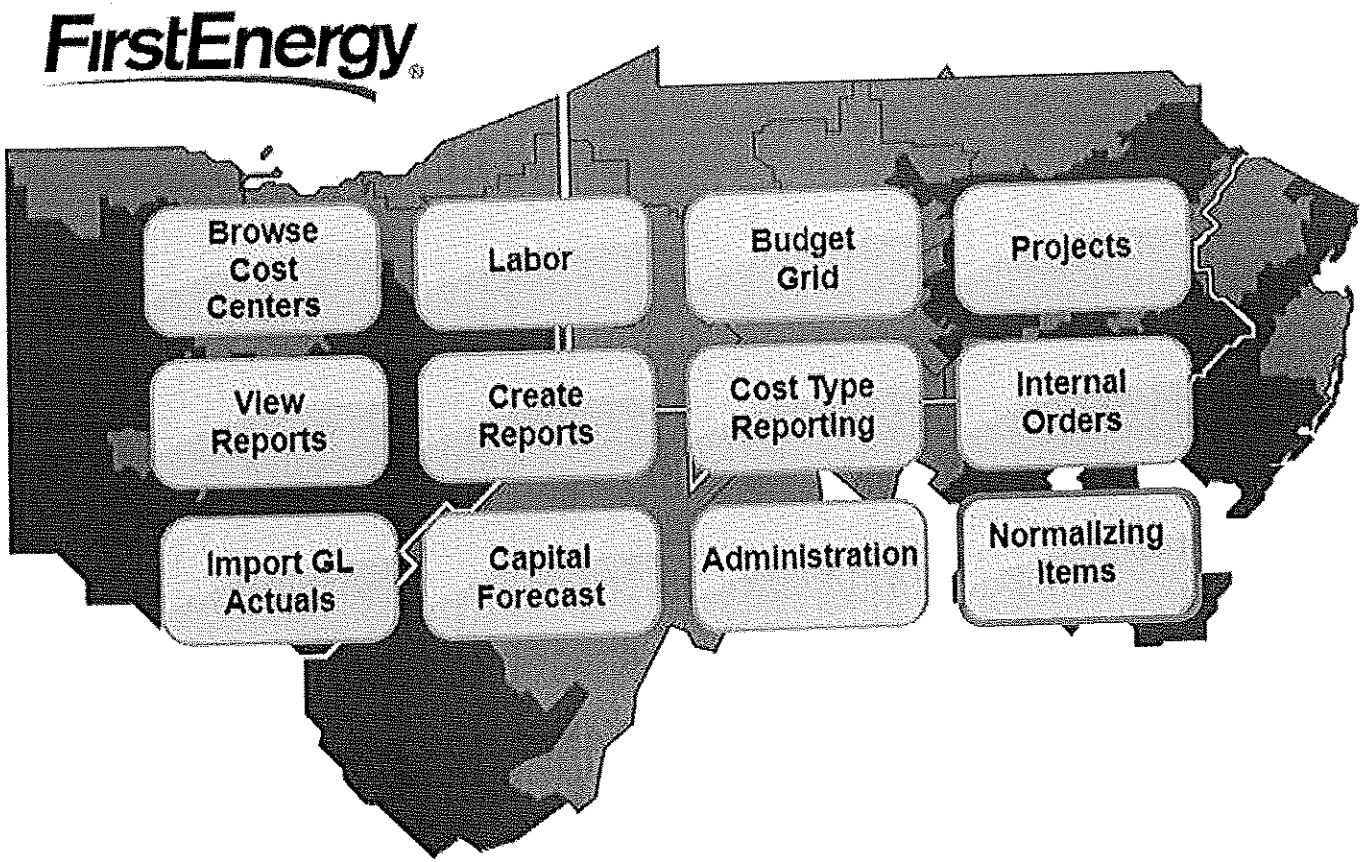
1. Budget Group / Budget Items will be created at the ALL NODE (created by Budget Administrator) and the Business Unit level (created by the Budget Coordinator)

2. Budget Groups / Budget Items can also be created at the <u>second</u> and <u>third</u> levels of the cost center tree

Note:

- **<u>DO NOT</u>** create budget groups and budget items at the cost center level

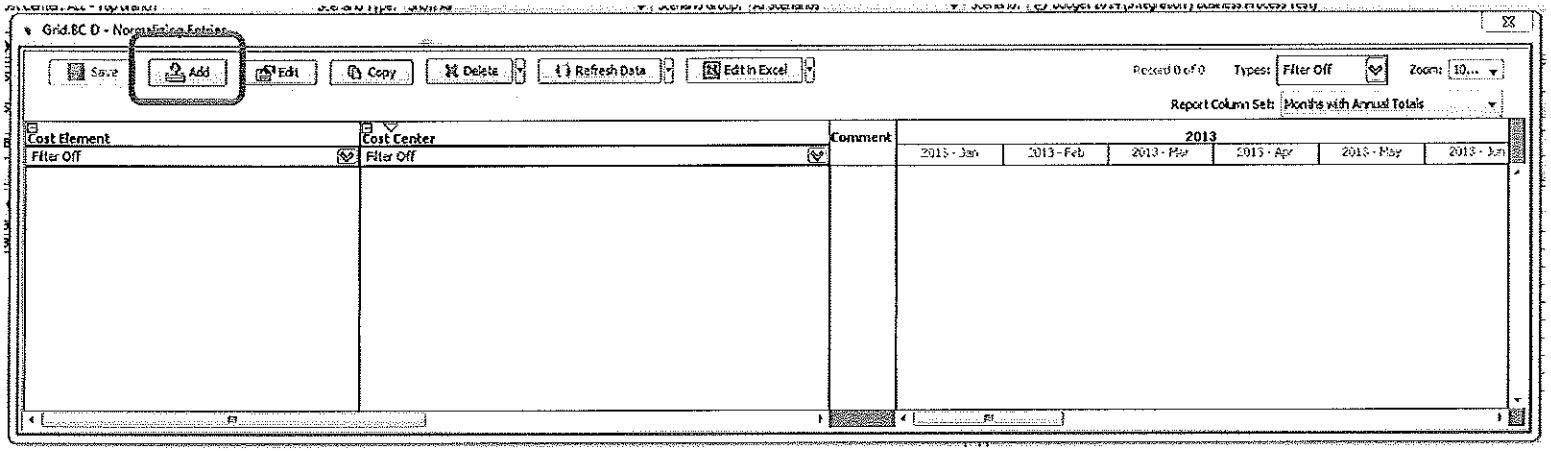
Normalizing Entries



Normalizing Items

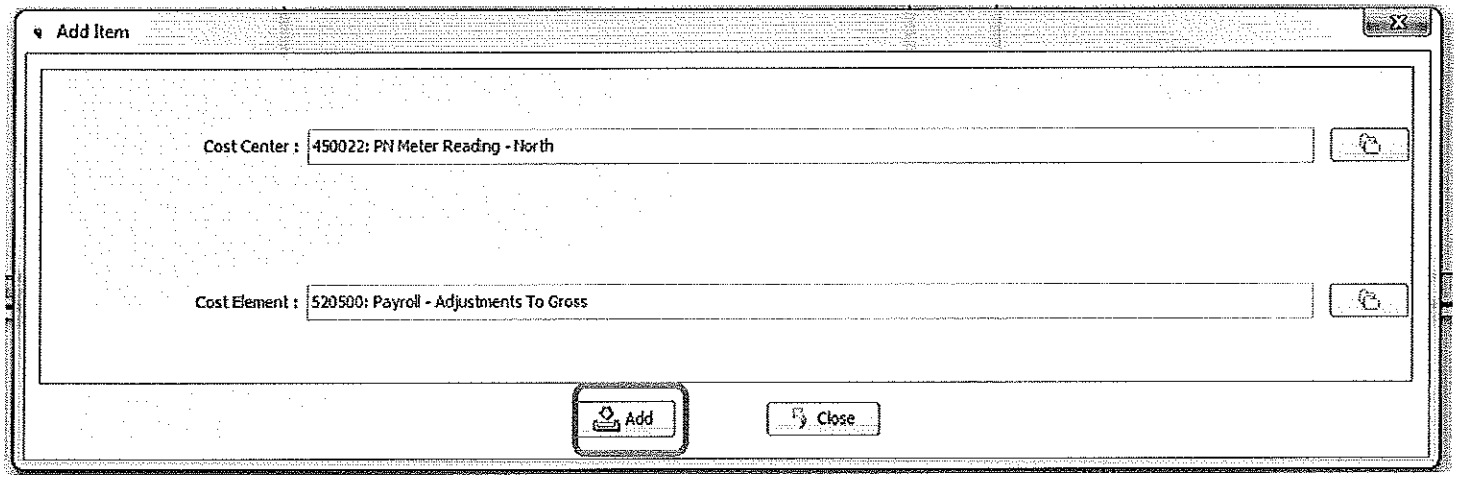
- **Normalizing Items**
  - Separate grid for normalized items
  - Normalized items will be applied to budget <u>after</u> closing process
  - GAAP budget and normalized items will be sent to the model, taxes will then be calculated by the model
  - Normalized budget will then be sent to BW

Note: The new budget entry process in UIP will be on a GAAP basis



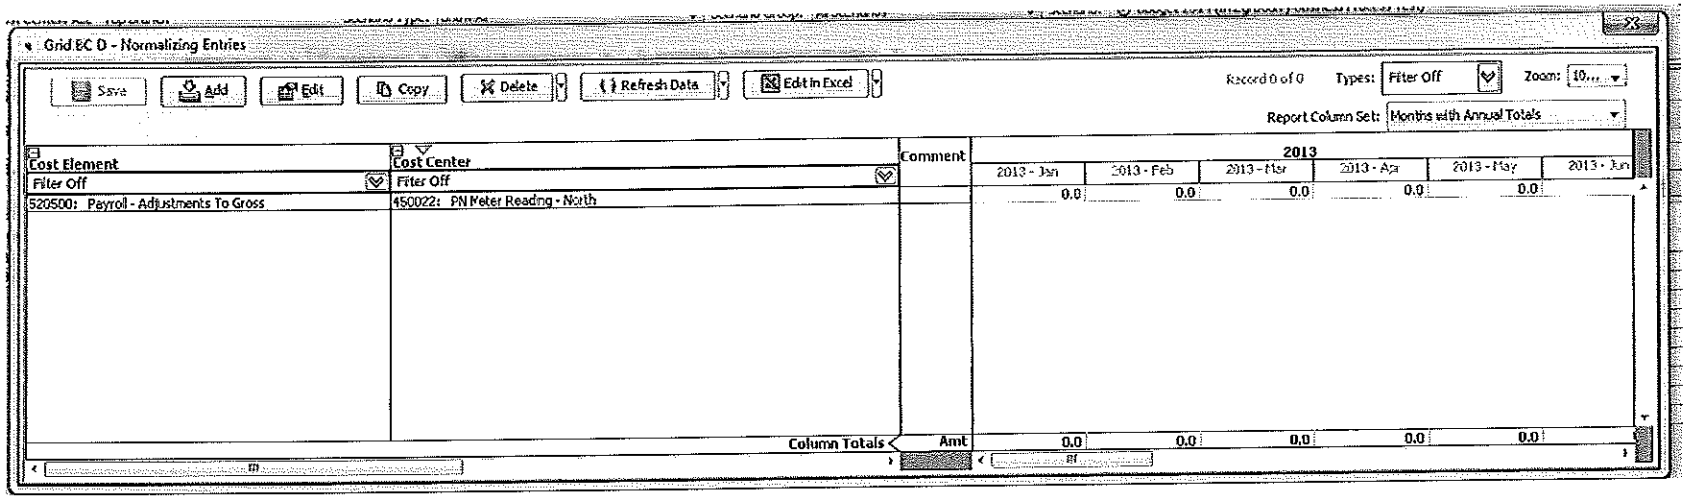
Normalizing Items

- From the Switchboard, select 'Normalizing Items'



Normalizing Items

- The window below will open from the switchboard. Click Add to assign the code block.



- Users can assign the Cost Center and Cost Element. Then click Add to save to grid.

Normalizing Items

- The new code block combination will be applied to the grid
- User can then update dollars in grid for entries

- Or, users can Edit in Excel to add rows…just like the usual grid.

Reference Materials

Commonly Used Terms in UIPlanner

Attribute
- Facts about an entity. Attributes are assigned to the Entity Group. Attribute data is then entered for each entity

B2
- The internal name given to the multidimensional calculation budget system when it was first developed (UIPlanner's second generation budget system)

Codeblock
- Codeblock consists of the budget grid data fields (cost source, cost owner, cost collector type, cost element, activity type, etc.)

Combo
- A budget data entry, comprised of the required code block elements

Cost Owner
- Owning cost center of the cost collector

Cost Source
- Cost Center where employee labor resides

Entities
- Building blocks for structured data within UIPlanner. Entities are specific elements of an Entity Group. Example: Generation plants are "Entities" in the Generation Entity Group

Commonly Used Terms in UIPlanner

Financial Model
- UIPlanner's modeling tool. Generates the key financial statements (income statement, balance sheet, cash flow)

Grid
- Budget Grid where users can allocate labor and other than labor. The Grid requires valid codeblock for entry

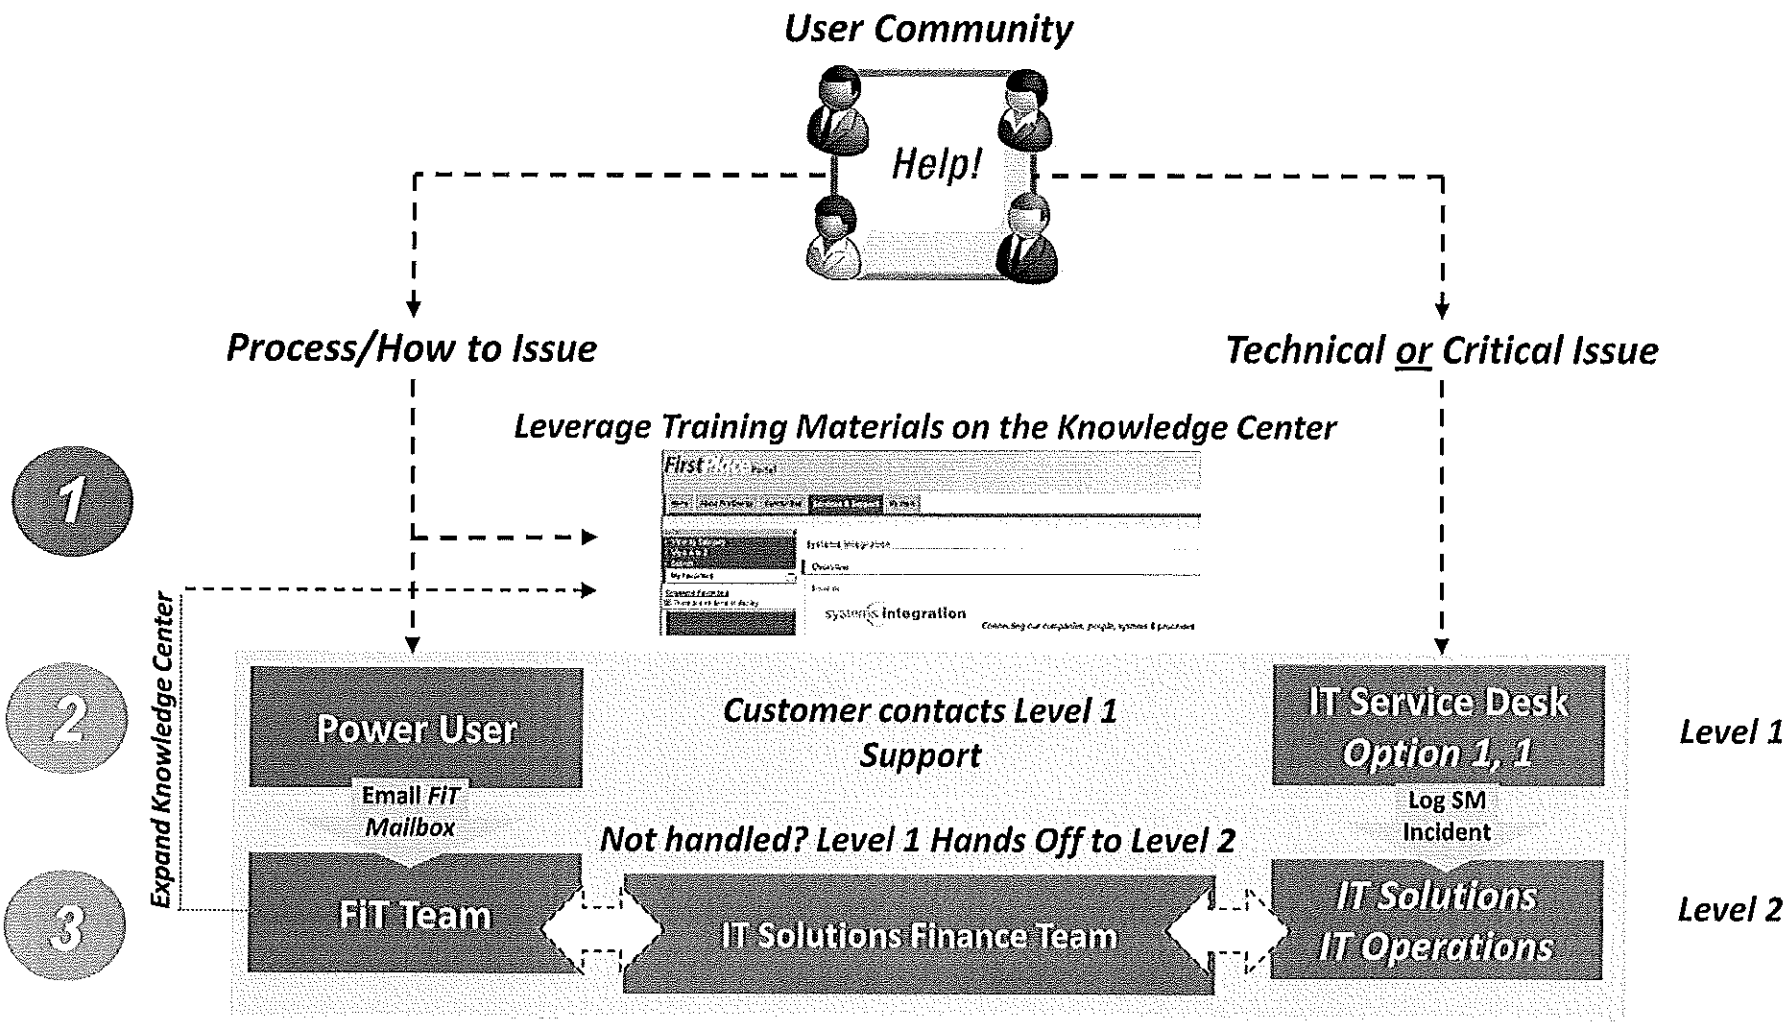
Java Console
- Java window that echoes back information about the user's UIPlanner session, including java error messages. Also known as the Stack Trace

Menu Item
- Row at the top of the UIPlanner screen contains menu items. Each menu item contains a drop list of screens or options

Scenario
- Scenarios are essentially collections of cases. Similar to SAP versions (V20, V12, etc.), but can be in various formats (Name, Description, etc.)

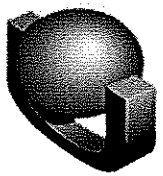
Switchboard
- Graphical object with hotspots that invoke actions in UIPlanner. Hot-spott areas on a switchboard and can open menu items, run reports, open files, and open other switchboards

Commonly Used Terms in UIPlanner



UIPlanner Add In

- **UIPlanner utilizes an Excel Add In function**



Wrapper

- **An interface that is built to present a calculation to the end user in a more user-friendly fashion**

METROPOLITAN EDISON COMPANY

Original Cost of Plant, Reserves and Accruals by Functions for Fully Projected Future Test Year Ending 4/30/2016

FILING REQUIREMENT V-A-1:

"Provide schedules supporting claimed amounts for Electric Plant in Service by function and by account if available."

FILING REQUIREMENT V-A-2:

"Provide a comparison of calculated depreciation reserve versus book reserve at the end of the test year. Provide this comparison by functional group and by account if available."

FILING REQUIREMENT V-B-1:

"Provide a comparison of calculated depreciation accruals versus book accruals by function and by account if available."

FILING REQUIREMENT V-D-1:

"Provide the surviving original cost plant at the appropriated test year date or dates by account and functional property group and include claimed depreciation reserves. Provide annual depreciation accruals where appropriate. These calculations should be provided for plant in service as well as other categories of plant, including but not limited to, contributions in aid of construction, customers' advances for construction and anticipated retirements associated with construction work in progress claims, if applicable."

RESPONSE:

Met-Ed Exhibit RAD-46 Attachment A satisfies the filing requirements cited above. The accruals shown on Met-Ed Exhibit RAD-46 Attachment A are claimed remaining life accruals for booking.

Met-Ed Exhibit RAD-46 Attachment B provides original cost activity at detail account levels for plant and reserves, updating this information from 4/30/15 through 4/30/16, the fully projected future test year-end. Additionally, this exhibit shows the affected balances after net adjustments made for rate case purposes, and the affected balances after net adjustments. This information is in support of Met-Ed Exhibit RAD-46 Attachment A as follows:

Pages 1-2 Company claim basis for Electric Plant in Service reflecting projected plant at 4/30/16 and net adjustments thereto.

Pages 3-4 Company claim basis of book reserves for Electric Plant in Service at 4/30/16 and net adjustments thereto.

Pages 5 Informational calculated reserves at 4/30/16 for Electric Plant in Service and net adjustments thereto.

Metropolitan Edison Company

METROPOLITAN EDISON COMPANY

Original Cost of Plant, Reserves and Accruals by Functions for Future Test Year Ending 3/31/2015

FILING REQUIREMENT V-A-1:

"Provide schedules supporting claimed amounts for Electric Plant in Service by function and by account if available."

FILING REQUIREMENT V-A-2:

"Provide a comparison of calculated depreciation reserve versus book reserve at the end of the test year. Provide this comparison by functional group and by account if available."

FILING REQUIREMENT V-B-1:

"Provide a comparison of calculated depreciation accruals versus book accruals by function and by account if available."

FILING REQUIREMENT V-D-1:

"Provide the surviving original cost plant at the appropriated test year date or dates by account and functional property group and include claimed depreciation reserves. Provide annual depreciation accruals where appropriate. These calculations should be provided for plant in service as well as other categories of plant, including but not limited to, contributions in aid of construction, customers' advances for construction and anticipated retirements associated with construction work in progress claims, if applicable."

RESPONSE:

Met-Ed Exhibit RAD-47 Attachment A satisfies the filing requirements cited above. The accruals shown on Met-Ed Exhibit RAD-47 Attachment A are claimed remaining life accruals for booking.

Met-Ed Exhibit RAD-47 Attachment B provides original cost activity at detail account levels for plant and reserves, updating this information from 3/31/14 through 3/31/15, the future test year-end. Additionally, this exhibit shows the affected balances after net adjustments made for rate case purposes, and the affected balances after net adjustments. This information is in support of Met-Ed Exhibit RAD-47 Attachment A as follows:

Pages 1-2 Company claim basis for Electric Plant in Service reflecting projected plant at 3/31/15 and net adjustments thereto.

Pages 3-4 Company claim basis of book reserves for Electric Plant in Service at 3/31/15 and net adjustments thereto.

Pages 5 Informational calculated reserves at 3/31/15 for Electric Plant in Service and net adjustments thereto.

Metropolitan Edison Company
Accrual Expense Computation after Adjustments
At Future Year from April 2014 to March 2015
($000)

METROPOLITAN EDISON COMPANY

Original Cost of Plant, Reserves and Accruals by Functions for Historical Test Year Ended 3/31/2014

FILING REQUIREMENT V-A-1:

"Provide schedules supporting claimed amounts for Electric Plant in Service by function and by account if available."

FILING REQUIREMENT V-A-2:

"Provide a comparison of calculated depreciation reserve versus book reserve at the end of the test year. Provide this comparison by functional group and by account if available."

FILING REQUIREMENT V-B-1:

"Provide a comparison of calculated depreciation accruals versus book accruals by function and by account if available."

FILING REQUIREMENT V-D-1:

"Provide the surviving original cost plant at the appropriated test year date or dates by account and functional property group and include claimed depreciation reserves. Provide annual depreciation accruals where appropriate. These calculations should be provided for plant in service as well as other categories of plant, including but not limited to, contributions in aid of construction, customers' advances for construction and anticipated retirements associated with construction work in progress claims, if applicable."

RESPONSE:

Met-Ed Exhibit RAD-48 Attachment A satisfies the filing requirements cited above. The accruals shown on Met-Ed Exhibit RAD-48 Attachment A are claimed remaining life accruals for booking.

Met-Ed Exhibit RAD-48 Attachment B provides original cost activity at detail account levels for plant and reserves, updating this information from 3/31/13 through 3/31/14, the historical test year-end. Additionally, this exhibit shows the affected balances after net adjustments made for rate case purposes, and the affected balances after net adjustments. This information is in support of Met-Ed Exhibit RAD-48 Attachment A as follows:

Pages 1-2 Company claim basis for Electric Plant in Service reflecting projected plant at 3/31/14 and net adjustments thereto.

Pages 3-4 Company claim basis of book reserves for Electric Plant in Service at 3/31/14 and net adjustments thereto.

Pages 5 Informational calculated reserves at 3/31/14 for Electric Plant in Service and net adjustments thereto.

Metropolitan Edison Company
Accrual Expense Computation after Adjustments
At Future Year from April 2013 to March 2014
($000)

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT V-A-3:

"Provide supporting schedules which indicate the procedures and calculations employed to develop the original cost plant and applicable reserves to the test year end as submitted in the current proceeding."

RESPONSE:

Met-Ed Exhibit RAD- 49 Attachment A presents the example showing the methodology used to update original cost plant and reserves from 3/31/13 to 3/31/14 (the historic test year-end) and to 3/31/15 (the future test year-end) and to 4/30/2016 (the fully future test year). The procedure applied is the same as has been used and found acceptable in prior base rate cases for projecting the future year original cost plant related data.

The example depicts a mass property remaining life investment set, Account 373, Street Lighting and Signal Systems.

Original Cost Plant and Reserve and Accrual Rate Adjustments for Rate Case Purposes
(Fully Projected Future Test Year)

FILING REQUIREMENT V-A-4:

"Provide a schedule showing details of rate case adjustments."

RESPONSE:

This response provides original cost plant and reserve adjustments for rate case purposes at 4/30/16, the fully projected future test year-ended. This information is in support of Met-Ed Exhibit RAD-46 Attachment B.

The following provide detail for plant and reserve adjustment items:

1. Asset Retirement Costs: No claim is being made for the Asset Retirement Costs related to the implementation of Statement of Financial Accounting Standards Statement 143, Accounting for Asset Retirement Obligations or FIN 47, Accounting for Conditional Asset Retirement Obligations. The Plant in Service was reduced by $95,358,364; book reserves were reduced by $95,344,166; and calculated reserves were reduced by $22,949.

2. FERC Transmission Plant was removed because it is non-jurisdictional. Transmission Plant in Service was reduced by $454,163,285 and the budgeted book and calculated reserve accruals were reduced by $155,934,333 and $130,390,153 respectively.

3. A portion of Intangible Plant associated with the FERC Transmission Plant was removed. Intangible Plant in Service was reduced by $9,694,591; Intangible Plant book reserves were reduced by $6,012,241; and Intangible Plant calculated reserves were reduced by $7,444,387.

4. A portion of General Plant associated with FERC Transmission Plant was removed. General Plant in Service was reduced by $43,569,748; General Plant book reserves were reduced by $30,270,230; and General Plant calculated reserves were reduced by $25,593,811.

5. Legacy meters were removed. Meter plant in service was reduced by $66,794,533; meter book reserves were reduced by $16,631,748; and meter calculated reserves were reduced by $16,672,615.

METROPOLITAN EDISON COMPANY

Original Cost Plant and Reserve and Accrual Rate Adjustments for Rate Case Purposes
(Future Test Year)

FILING REQUIREMENT V-A-4:

"Provide a schedule showing details of rate case adjustments."

RESPONSE:

This response provides original cost plant and reserve adjustments for rate case purposes at 3/31/15, the future test year-ended. This information is in support of Met-Ed Exhibit RAD-47 Attachment B.

The following provide detail for plant and reserve adjustment items:

1. Asset Retirement Costs: No claim is being made for the Asset Retirement Costs related to the implementation of Statement of Financial Accounting Standards Statement 143, Accounting for Asset Retirement Obligations or FIN 47, Accounting for Conditional Asset Retirement Obligations. The Plant in Service was reduced by $95,358,364; book reserves were reduced by $95,343,344; and calculated reserves were reduced by $22,190.

2. FERC Transmission Plant was removed because it is non-jurisdictional. Transmission Plant in Service was reduced by $433,209,181 and the budgeted book and calculated reserve accruals were reduced by $151,083,591 and $125,510,429 respectively.

3. A portion of Intangible Plant associated with the FERC Transmission Plant was removed. Intangible Plant in Service was reduced by $6,968,446; Intangible Plant book reserves were reduced by $5,488,712; and Intangible Plant calculated reserves were reduced by $6,292,334.

4. A portion of General Plant associated with FERC Transmission Plant was removed. General Plant in Service was reduced by $43,409,672; General Plant book reserves were reduced by $28,831,646; and General Plant calculated reserves were reduced by $23,934,946.

5. Legacy meters were removed. Meter plant in service was reduced by $66,794,533; meter book reserves were reduced by $14,727,733; and meter calculated reserves were reduced by $13,647,379.

METROPOLITAN EDISON COMPANY

Original Cost Plant and Reserve and Accrual Rate Adjustments for Rate Case Purposes
(Historical Test Year)

FILING REQUIREMENT V-A-4:

"Provide a schedule showing details of rate case adjustments."

RESPONSE:

This response provides original cost plant and reserve adjustments for rate case purposes at 3/31/14, the historic test year-ended. This information is in support of Met-Ed Exhibit RAD-48 Attachment B.

The following provide detail for plant and reserve adjustment items:

1. Asset Retirement Costs: No claim is being made for the Asset Retirement Costs related to the implementation of Statement of Financial Accounting Standards Statement 143, Accounting for Asset Retirement Obligations or FIN 47, Accounting for Conditional Asset Retirement Obligations. The Plant in Service was reduced by $95,358,364; book reserves were reduced by $95,342,585; and calculated reserves were reduced by $22,190.

2. FERC Transmission Plant was removed because it is non-jurisdictional. Transmission Plant in Service was reduced by $397,455,541 and the budgeted book and calculated reserve accruals were reduced by $148,795,864 and $123,277,074 respectively.

3. A portion of Intangible Plant associated with the FERC Transmission Plant was removed. Intangible Plant in Service was reduced by $6,478,107; Intangible Plant book reserves were reduced by $5,092,397; and Intangible Plant calculated reserves were reduced by $5,427,721.

4. A portion of General Plant associated with FERC Transmission Plant was removed. General Plant in Service was reduced by $42,590,158; General Plant book reserves were reduced by $27,687,278; and General Plant calculated reserves were reduced by $22,770,157.

5. Legacy Meters were removed. Meter plant in service was reduced by $66,794,533; meter book reserves were reduced by $12,084,587; and meter calculated reserves were reduced by $10,848,688.

METROPOLITAN EDISON COMPANY

Annual Depreciation Review on Capital Plant Investments

FILING REQUIREMENT V-B-2

"Supply a schedule by account or by depreciable group showing the survivor curve or interim survivor curve or interim survivor curse and annual accrual rate estimated to be appropriate:

a. For the purpose of this filing
b. For the purposes of the most recent filing prior to the current proceeding.
c. Supply an explanation for any major change in annual accrual rate by account or by depreciable group
d. Supply a comprehensive statement of major changes in depreciation methods, procedures and techniques and the effect of the changes upon accumulated and annual depreciation, if any."

FILING REQUIREMENT V-C

"Where the retirement rate actuarial method of mortality is utilized, set forth representative examples including charts depicting the observed and estimated survivor curves and a tabular presentation of the observed and estimated life tables plotted on the chart. Other analysis results shall be subject to request."

FILING REQUIREMENT V-D Item 2

"Provide representative examples of detail calculations by vintage at account or at a more detailed level, as performed for those purposes. Other vintage detail calculations shall be subject to request."

FILING REQUIREMENT V-E

"Provide a description of depreciation methods utilized in calculating annual depreciation amounts and depreciation reserves, together with a discussion of significant factors which were considered in arriving at estimates of service life and forecast retirements by facilities, accounts or sub-accounts as applicable."

RESPONSE:

V-B-2:

See Met-Ed Exhibit RAD-53 Attachment A, Pages 1-2 for the fully projected future test year. See Met-Ed Exhibit RAD-53 Attachment A, Pages 3-4 for the future test year. See Met-Ed Exhibit RAD-53 Attachment A, pages 5-6 for the historical test year.

See Met-Ed Exhibit RAD-53 Attachment B for the 2014 Annual Depreciation Report.

V-C:

See Met-Ed Exhibit RAD-53 Attachment C.

V-D Item 2:

See Met-Ed Exhibit RAD-53 Attachment D for Annual Depreciation Report details.

V-E:

See Met-Ed Exhibit RAD-53 Attachment B for the 2014 Annual Depreciation Report.

Based on Data at 12/31/2013

To the Pennsylvania Public Utility Commission
Per Reference No. M-110300F2013ADR

June 2014

METROPOLITAN EDISON COMPANY

2014 Annual Depreciation Report
Based on Data at 12/31/2013

Index

Executive Summary

- Introduction
- Depreciation Method
- Explanation of Extraordinary Events
- Plant and Reserve Activity
- Net Salvage Analysis
- Three Year Table of Original Cost, Book Reserve and Calculated Annual Depreciation Accrual

Schedule 1 – Depreciation Calculation Summary by Account and Functional Property Group Levels

- Original Cost at 12/31/13
- Book Reserve at 12/31/13
- Net Original Cost at 12/31/13
- Average Service Life and Survivor Curve
- Average Remaining Life
- Annual Accrual
- Annual Accrual Rate

Schedule 2 – Retirement Summary by Account and Functional Property Group Levels

- Original Cost Balance at 12/31/12 and 12/31/13
- Original Cost of Additions and Retirements during the year
- Adjustments to Original Cost
- Percent of beginning of year Original Cost Retired

Schedule 3 – Book Reserve Summary by Account and Functional Property Group Levels

- Book Reserve at 12/31/12 and 12/31/13
- Annual Accrual and Retirements during the year
- Gross Salvage and Cost of Removal
- Adjustments to Book Reserve
- Book Reserve as a percentage of Original Cost

Schedule 4 – Cost of Removal and Salvage

- Cost of Removal and Gross Salvage for 2013
- Net Salvage for 2013
- Five year average calculation of Cost of Removal and Gross Salvage
- Five year average calculation of Net Salvage

METROPOLITAN EDISON COMPANY
2014 ANNUAL DEPRECIATION REPORT
YEAR ENDED DECEMBER, 31, 2013
EXECUTIVE SUMMARY

Introduction

In accordance with 52 Pa. Code, Chapter 73, the attached report provides the following:

- A summary of plant transactions, including the 2013 retirements expressed as a percent of the beginning plant balance
- A summary of depreciation reserve activity, including the reserve as a percent of the plant balance
- The calculation of remaining life depreciation accrual rates as of December 31, 2013
- A summary of cost of removal, gross and net salvage.

Metropolitan Edison Company (Met-Ed) is requesting the Pennsylvania Public Utility Commission (PaPUC) to approve this filing, for accounting purposes only, so that the new depreciation rates can be implemented effective January 1, 2014 to be consistent across all FirstEnergy Pennsylvania Operating Companies.

The annual accrual rate calculations are based on a depreciation service life study of Transmission, Distribution and General Plant data filed with the PaPUC in 2010 that included data through the year ended 2009. The annual accrual rate calculations were based on the same service life and survivor curve estimates and also on the same group procedures and basis as those submitted to the PaPUC in 2010.

Included with this Executive Summary is a table that sets forth a comparison of the original cost, book reserve and calculated annual depreciation accruals by function at December 31, 2011; December 31, 2012; and December 31, 2013. The annual accrual amounts, as summarized, are presented as a percent of original cost for each function and for the total Company. The overall composite depreciation accrual rate related to depreciable electric plant in service decreased from 2.09 percent in 2012 to 2.08 percent for 2013.

Depreciation Method

For most plant accounts, depreciation accruals and accrued depreciation were calculated using the straight line remaining life method and the average service life broad group (ASL-BG) procedure for all vintages.

The depreciation calculations were based on the attained ages and estimated service life characteristics for each depreciable group of electric plant. For certain general plant accounts, the amortization amounts, annual and accrued, were based on the age of the vintage and the selected amortization period.

The service life study filed with the PaPUC in 2010 determined the appropriate service life and survivor curves utilized in the accrual rate calculations as explained further below.

Service Life

The method of estimating service life consisted of compiling the service life history of the plant accounts, sub-accounts or depreciable groups through 2009. The history was then reduced to trends through the use of acceptable actuarial techniques. Lastly, the trend of survivors for each depreciable group was forecasted on the basis of interpretations of past trends and consideration of Company plans for the future. The combination of the historical trend and the estimated future trend developed a complete pattern of life characteristics from which the average service life was derived.

Survivor Curves

Iowa type survivor curves were used to reflect the expected dispersion of retirements, thus providing a consistent method of estimating service lives and depreciation for mass property. For life span groups, the estimate of life characteristics is consistent because the calculated lives of the units within a group are obtained by employing a single probable retirement date for the entire group.

Plant and Reserve Activity

Schedule 1 provides the net original cost balance at December 31, 2013, the average service life and the Iowa Survivor Curve for each account along with the average remaining life, annual depreciation accrual and accrual rate. The functional plant level accrual rates for 2013 did not change significantly from 2012.

Schedule 2 provides the plant activity during 2013 by account and functional group. It sets forth the original cost at the beginning of the year, January 1, 2013; additions; retirements; transfers or adjustments; the balance at the end of the year, December 31, 2013; and the retirements expressed as a percent of the beginning plant balance.

Schedule 3 summarizes the reserve activity during 2013 by account and functional group. It includes the book depreciation reserve balance at the beginning of the year, January 1, 2013; annual accruals; retirements; gross salvage; cost of removal; transfers or adjustments; the balance at the end of the year, December 31, 2013; and the book reserve as a percent of the ending plant balance.

Net Salvage Analysis

Schedule 4 reports the 2013 and a five year rolling average for Cost of Removal, Gross and Net Salvage. The five-year rolling average is based on 2009 through 2013 experience. Since this report relates primarily to Pennsylvania rate regulation practices, no adjustments for expected net salvage were made to either the annual depreciation accrual or the calculated accrued depreciation for individual accounts. Met-Ed, in general, records cost of removal and salvage directly to expense (Account 403, Depreciation Expense) in the year the transactions occur rather than to the depreciation reserve account (Account 108, Accumulated Depreciation).

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT I-A-4:

> "Whenever a major generating plant is placed in operating service or removed from operating service the utility shall separately indicate the effect of the plant addition or removal from service upon rate base, revenue, expense, tax, income and revenue requirement as it affects the test year."

RESPONSE:

This base rate case filing requirement is not applicable to the Company's filing.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT I-B-2:

"Provide a description of the property of the utility and an explanation of the system's operation, and supply the following, using available projections if actual data is unavailable

a. A schedule of generating capability showing for the test year, and for the two consecutive 12-month periods prior to the test year, net dependable capacity in KW by unit, plant capacity factor by unit, and total fuel consumption by type and cost for each unit, if available, or for each station, and operation and maintenance expenses by station.

b. A schedule showing for the test year and for the 12-month period immediately prior to the test year the scheduled and unscheduled outages—in excess of 48 hours—for each station, the equipment or unit involved, the date the outage occurred, duration of the outage, maintenance expenses incurred for each outage, if available, and amounts reimbursable from suppliers or insurance companies.

c. A schedule for each unit retired during the test year or subsequent to the end of the test year, which shows the unit's KW capacity, hours of operation during the test year, net output generated, cents/KWH of maintenance and fuel expenses, and date of retirement

d. A schedule showing latest projections of capacity additions and retirements—costs and KW—and reserve capacity at the time of peak for at least 10 years beyond the test year, including the inservice dates—actual or expected—and AFDC cutoff dates—if different from inservice dates—for all new generating units coming on line during or subsequent to the test year, if claimed."

RESPONSE:

This base rate case filing requirement is not applicable to the Company's filing.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-B-5:

"Describe long-term debt reacquisition by issue by Company and Parent as follows:

a. Reacquisition by issue by year.
b. Total gain or loss on reacquisitions by issue by year.
c. Accounting for gain or loss for income tax and book purposes.
d. Proposed treatment of gain or loss on such reacquisition for ratemaking purposes."

RESPONSE:

a. Please see Met-Ed Exhibit RAD-60 Attachment A.
b. Please see Met-Ed Exhibit RAD-60 Attachment A.

c. *Tax Accounting:*

Gains attributable to the reacquisition of long-term debt are recognized on the same basis recorded for book purposes.

Losses on the reacquisition of long-term debt are deducted currently for income tax purposes in the year of reacquisition, which creates book-tax temporary differences. As a result of these temporary differences, the Company records deferred income taxes by means of debits to Account 410.1, Provision for Deferred Income Taxes, Utility Operating Income, with corresponding credits to Account 283, Accumulated Deferred Income Taxes – Other. Amounts recorded in Account 283 are reversed over the remaining life of the respective security issue consistent with book amortization of the loss by means of credits to Account 411.1, Provision for Deferred Income Taxes – Credit, Utility Operating Income.

Book Accounting:

In accordance with General Instruction 17 of the Uniform System on Accounts, gains on reacquired debt are placed in Account No. 257 "Unamortized Gain on Reacquired Debt". The gains are then amortized to Account No. 429.1 "Amortization of Gain on Reacquired Debt-Credit" over the remaining lives of the respective issues (old original debt).

In accordance with General Instruction 17 of the Uniform System of Accounts, losses on reacquired debt are placed in Account No. 189 "Unamortized Loss on Reacquired Debt". The losses are then amortized to Account No 428.1 Amortization of Loss on Reacquired Debt" over the remaining lives of the respective issues (old original debt).

d. The amortization of gain or loss on long term debt reacquisition for ratemaking purposes is addressed on RAD-2, page 12.

"Filing of information and materials – Whenever a public utility proposes a change in rates under section 1308 (relating to voluntary changes in rates), the public utility shall file with the commission a listing of each type of advertising prepared, distributed or presented by the pubic utility or to be prepared, distributed or presented during the test year utilized by the public utility in discharging its burden of proof, and a listing of each type of advertising prepared, distributed or presented by the utility during the year immediately preceding the test year, as well as an accounting of the expenditures by the public utility for such advertising, to the extent such advertising is proposed to be included as operating expense for ratemaking purposes. The filing requirements imposed by this subsection shall not be construed to limit the right of any party to discovery under this or any other provision of law."

Summary of Advertising Expenses

Section 1316 of Title 66, Pa. Consolidated Statutes, addresses recovery of advertising expenses. In accordance with the filing requirements specified in § 1316(c), following is a listing of the types of advertising comprising the total advertising expenses for the fully future test year and the immediately preceding 2 years.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT TITLE 52, SECTION 69.36

"The Pennsylvania Public Utility Commission intends to examine specific factors in rate proceedings of electric and gas utilities regarding the action or failure to act to encourage development of cost effective energy supply alternatives. Specifically, the Commission will review utilities' efforts to meet the criteria in this section when determining just and reasonable rates in future rate proceedings and may consider those efforts in other proceedings instituted by the Commission

(1) *Information.* At least twice annually utilities should provide customers with information on specific means of utilizing their energy services more effectively and efficiently. Topic areas should include insulation, lighting efficiencies, appliance efficiencies, conservation practices, load management techniques or other relevant information that informs the customer of the efficient use of energy.

(2) *Energy surveys.* Class A utilities should offer onsite energy surveys to the residential, commercial and industrial classes on an ongoing basis. Surveys should be conducted by trained personnel and the results of the survey, upon written request of the customer, be delivered in writing with a clear explanation of the resulting components.

(3) *Cogeneration and small power production.* Electric utilities for which a need for capacity is projected should establish effective programs to explore and encourage the development of additional cogeneration and small power production facilities within their respective service territories.

(4) *Least cost planning.* Gas and electric utilities should actively pursue a least-cost strategy by acquiring and developing the resources necessary to effectively meet their customers' future energy needs, consistent with established availability and reliability criteria. Utilities should make a reasonable effort to promote the utilization of practical and economical energy conservation and demand management through cost effective programs.

(5) *Evaluation.* Class A utilities should demonstrate progressive work regarding development of a reliable customer data base, including, but not limited to:

(i) End-use applications for each class of customer in terms of energy and demand.
(ii) Customer behavior with regard to the decision-making process.

(iii) The impact of program decisions or strategies and how they effect the overall planning process.

6) *Natural gas co-firing.* Electric utilities should explore the potential for increasing capacity and output at coal-fired generating stations through gas co-firing"

RESPONSE:

1) Customer service representatives discuss these "Energy Efficient" topics with customers by referring to the "Energy Decision Maker Brochure" which provides energy saving information for most household electrical appliances and equipment. Representatives offer to mail a copy of the brochure to customers and if appropriate, discuss the Time of Day Rate. The Company's interactive voice response unit also provides this brochure through the "Literature Request" option. These "Energy Efficient" topics are also fully described and available 24/7 on the FirstEnergy website under the "Customer Care" section at the following location:

http://www.firstenergycorp.com/customercare/engine?s=com.firstenergycorp.customercare.www.Home&p=%2F

In addition, on October 15, 2008, Governor Rendell signed HB 2200 into law as Act 129 of 2008[1], with an effective date of November 14, 2008. The Act imposes requirements on electric distribution companies (EDCs), with the overall goal of reducing energy consumption and demand. Act 129 directed all EDCs with at least 100,000 customers to develop and file an energy efficiency and conservation plan. The Company has filed and obtained approval for an Energy Efficiency and Conservation (EE&C) Plan that complies with Commission Orders[2]. The EE&C plan contains numerous programs that are designed to achieve energy efficiency and conservation across all customer segments. Essential to the success of these programs is a concurrent marketing and educational campaign. As part of this, the Company has an outreach effort that: (i) builds awareness and interest in the programs; (ii) communicates ways that customers may participate; and (iii) explains expected benefits and reasons for participating. Information about the EE&C programs available to customers is provided using a number of marketing channels such as via bill inserts, advertisements as well as through the Company's website at:

http://www.firstenergycorp.com/save_energy/save_energy_pennsylvania.html

2) Residential home energy surveys are conducted at no additional cost for income-eligible customers as part of the Low Income Usage Reduction Program known as

[1] 66 Pa.C.S. §§ 2806.1 and 2806.2
[2] Docket Nos. M-2009-2092222 and M-2012-2334387

WARM (Chapter 58). Met-Ed income eligible customers who have lived at their residence at least 6 months are eligible for WARM. The WARM program home energy survey addresses ways to save electricity for customers who have electric heat, electric water hear, air conditioning or base load use. These surveys are conducted by Building Performance Institute Certified contractors hired by Met-Ed. The program is open to both homeowners and renters with landlord agreement. As part of the home energy survey, contractors may perform pressure diagnostic testing using a blower door and manometers to determine where there is air leakage in the home. They also test ducts, conduct combustion safety testing and monitor electricity use of various appliances such as refrigerators and freezers for possible replacement. A personalized partnership agreement and energy-saving strategy for the home and occupants are provided as part of the program.

In addition, residential customers may also participate in the Company's Act 129 energy audit program. Under this program, home energy audits are conducted by trained local contractors hired by the Company's Conservation Service Provider for a fee of $350. Customers who participate in this program receive a comprehensive home energy audit which is designed to provide information on how to reduce their energy usage and increase their home's comfort and energy efficiency. Participating customer's qualify for up to $250 in rebates towards the cost of a comprehensive residential energy audit and qualified retrofits.

Residential customers can also complete the Company's Home Energy Analyzer online tool at http://www.firstenergycorp.com/content/customer/save_energy/save_energy_pennsylvania/for_your_home/pa_home_energy_analyzer.html to save energy and money. The tool enables customers to gain a better understanding of their household energy use and identify ways to improve their efficiency.

The Company also promotes detailed energy audits for commercial and industrial customers under the Company's Act 129 programs. Customers who implement recommended building and/or system improvements are eligible for incentives towards the cost of the third party audit and qualifying audit recommended improvements.

Similar to residential customers, business customers can complete the Business Energy Analyzers online tool at https://www.firstenergycorp.com/content/customer/save_energy/save_energy_pennsylvania/for_your_business/pennsylvania_businessenergyanalyzer.html. The tool will enable business customers to gain a better understanding of their energy use and identify ways to improve their efficiency.

3) Met-Ed's Rider H- Renewable Energy Development Rider is currently available to residential and non-residential customers. This rider encourages the installation and

operation of qualifying renewable energy generation projects to operate in parallel with the Company's electrical system.

4) All capacity requirements are secured through Commission approved default service plans.

5) See the direct testimony of Kevin M. Siedt, Met-Ed Statement No. 4.

6) This filing requirement is not applicable to the Company's filing.

METROPOLITAN EDISON COMPANY
Distribution Storm Costs
2009 – 4/30/2016

Line No.	Year	Storm Costs
1	2009	$ 7,075,372
2	2010	12,760,136
3	2011	34,827,259
4	2012	32,594,558
5	2013	1,208,183
6	12 mos. Ended March 31, 2014	14,921,313
7	12 mos. Ended March 31, 2015	6,564,065
8	12 mos. Ended April 30, 2016	6,625,214

Met-Ed/Penelec/Penn Power/West Penn
Costs of Compliance with Docket No. L-2014-2409383

This exhibit contains the expenditures and operations and maintenance ("O&M") costs associated with implementation of the Commission's three day switching requirement introduced at Docket No. L-2014-2409383 entered April 3, 2014. The exhibit contain incremental O&M expenses plus a five year amortization of additional capital expenditures to implement 3-5 day switches.

Phase I is an eight month project commencing May 1, 2014 with anticipated implementation by the end of December 2014. Phase I will enable the Companies to allow for one customer switch to be accomplished per individual customer account that has no other pending orders. The first phase of the project is a capital effort requiring the labor of 12 full time equivalent ("FTE"), working during Phase I development. Phase I development costs are expected to be $1,382,000.

Phase II is the on-going effort to modify the existing systems in order to implement multiple customer switches per month and ensure customers on payment programs can be accommodated. Phase II development would commence after Phase I is completed with anticipated implementation by the end of June 2015. The Phase II development costs are expected to be $850,000.

In addition, the Companies would need to add to existing staff 6 FTE's in Customer Service and Information Technology plus the cost of mailing letters to customers of multiple switches of $455,000 plus $227,500 for labor related overheads for a total of $682,500 on ongoing O&M costs.

Line No.	Description	Amount
1.	Phase I Capital Costs	$1,382,000
2.	Phase II Capital Costs	850,000
3.	Total	$2,232,000
4.	Five Year Recovery	$ 446,400
5.	On-going O&M expenses	682,500
6.	Total to be recovered annually	$1,128,900

DIRECT TESTIMONY
OF
CHARLES V. FULLEM

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Charles V. Fullem, and my business address is 2800 Pottsville Pike, Reading, Pennsylvania 19612.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company, which is a direct subsidiary of FirstEnergy Corp. ("FirstEnergy"). I am the Director, Rates and Regulatory Affairs – Pennsylvania. The Pennsylvania Rate Department of FirstEnergy Service Company provides regulatory support for each of FirstEnergy's wholly-owned Pennsylvania operating companies: Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power") and West Penn Power Company ("West Penn") (collectively, the "Companies").

I am responsible to the Vice President of Rates and Regulatory Affairs for the development, coordination, preparation and presentation of the Companies' rate-related matters before the Pennsylvania Public Utility Commission ("Commission") and the New York Public Service Commission, including the default service programs. My responsibilities encompass the preparation of various statements and reports addressing, among other things, distribution revenue requirement, energy costs, non-utility generation costs, quarterly earnings, and other financial matters. I am also responsible for

administering the Companies' tariffs, including developing retail electric rates, rules and regulations and ensuring their uniform application and interpretation.

Q. What is your educational and professional background?

A. I received a Bachelor of Science degree in Mineral Economics from the Pennsylvania State University in November 1981. I have over thirty years of experience with FirstEnergy and its predecessor companies. My work experience is more fully described in my professional biography, which is attached as Appendix A.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of Met-Ed, Penelec, Penn Power and West Penn.

Q. Please describe the purpose of your testimony.

A. The purpose of my testimony is to provide an overview of the distribution base rate increase requests that the Companies are proposing for approval by the Commission. I will explain why the proposed distribution rate increases will provide a fair return to shareholders and benefit customers by establishing the groundwork for enhanced reliability and customer service.

In addition to the Introduction, my testimony is divided into four subsequent substantive sections: Section II provides an overview of the Companies' requested rate increases. In Section III, I discuss the Companies' initiatives to manage costs and enhance customer service and reliability. In Section IV, I set forth the primary reasons the Companies are requesting increases in rates. In Section V, I describe the organization of the Companies'

rate filings, introduce the Companies' witnesses submitting direct testimony, and explain the importance of this case to the Companies and their customers.

Q. Are you sponsoring any exhibits?

A. Yes, I am sponsoring Exhibits CVF-1 through CVF-4 for each of the Companies, which consist of the following:[1]

Exhibit CVF-1 provides a summary of the rate request and specific reasons for each rate increase. This exhibit also identifies and quantifies the major components of each Company's proposed revenue increase.

Exhibit CVF-2 identifies the witnesses submitting direct testimony, their corresponding statement numbers and their areas of responsibility.

Exhibit CVF-3 is a table showing, at present and proposed rates, each Company's revenues, operating expenses, operating income and rate base, as adjusted for ratemaking purposes, and the resulting overall rates of return for the fully projected future test year ("FPFTY"), the twelve months ended April 30, 2016. The table also provides references to exhibits sponsored by other witnesses that set forth this information in more detail.

Exhibit CVF-4 provides a corporate history, including the dates of each Company's original incorporation and subsequent mergers and acquisitions.

[1] Exhibits CVF-1 through CVF-4 respond to filing requirements outlined in 52 Pa. Code § 53.53(a)(3). Specifically, these exhibits respond to requirements I-A-1, 2 and 3 and I-B-1 of Exhibit C to Section 53.53.

I am also sponsoring Met-Ed/Penelec/Penn Power/West Penn Exhibit CVF-5, which depicts a comparison of residential customer bills at the Companies' existing and proposed base rates to residential customer bills, at the same usage levels, of Duquesne Light Company, PECO Energy Company and PPL Electric Utilities Corporation.

II. OVERVIEW OF THE REQUESTED DISTRIBUTION RATE INCREASES

Q. Please explain when the Companies' base rates were last increased.

A. The current distribution base rates of Met-Ed and Penelec were established pursuant to the Commission's Final Order entered January 11, 2007 at Docket Nos. R-00061366 and R-00061367, which were the last base rate proceedings for those Companies. Notably, that proceeding resulted in a **decrease** in Met-Ed's and Penelec's distribution base rates. Consequently, Penelec's base rates have not increased since 1986 and Met-Ed's base rates have not increased since 1992, when their fully bundled base rates were last increased.

Penn Power's current distribution base rates were established pursuant to the Commmission's Final Order issued July 22, 1998 in the proceeding at Docket No. R-00974149, in which Penn Power's bundled rates for electric service were functionally unbundled. Prior to unbundling, Penn Power's fully bundled rates had been established in a general base rate increase proceeding at Docket No. R-870732, which concluded with a Final Order entered on May 3, 1988.

West Penn's current distribution base rates were established when West Penn's base rates were functionally unbundled pursuant to the Commission's Final Order entered November 19, 1998 at Docket No. R-00973981. Prior to that case, West Penn had last

increased its base rates pursuant to the Commission's Final Order entered December 29, 1994 in a general base rate proceeding at Docket No. R-00942986.

As the summary above shows, the distribution base rate increases proposed by the Companies would be, when they become effective, their first general base rate increases in over twenty-one to twenty-nine years, depending on the Company.

Q. Please describe the increases and changes in rates for distribution service that the Companies are proposing.

A. The Companies are proposing increases in their distribution base rates that constitute general rate increases under Section 1308(d) of the Public Utility Code. In addition, the Companies are proposing to adopt new riders and to change several existing riders that set forth reconcilable adjustment clauses established or proposed to be established under Section 1307 of the Public Utility Code. Certain of these riders and changes in existing riders affect distribution base rate revenue.

Q. Please identify the principal new riders and principal changes in existing riders that affect distribution base rate revenue in this case.

A. West Penn is proposing to adopt a Universal Service Cost ("USC") Rider to recover the cost of its Universal Service programs. West Penn's proposed USC Rider mirrors the USC Riders that the Commission approved for Met-Ed and Penelec in their last distribution base rate cases. The Commission approved a similar USC Rider for Penn Power in its order entered April 11, 2008 at Docket Number R-00072437. West Penn's proposed USC Rider is discussed in more detail in the direct testimony of Kimberlie L. Bortz (Met-Ed/Penelec/Penn Power/West Penn Statement No. 3). As Ms. Bortz explains,

the USC Rider is needed to help West Penn continue to meet the needs of its low-income customers.

West Penn is also proposing a revision to its Default Service Support ("DSS") Rider and its Hourly Pricing Default Service ("HPS") Rider. As explained by Laura W. Gifford in Met-Ed/Penelec/Penn Power/West Penn Statement No. 7, the DSS Rider and HPS Rider, as revised, will include components to recover default service-related uncollectible accounts expense for residential and commercial customers and industrial customers, respectively. These changes are being made to unbundle default service-related uncollectible accounts expense by removing that expense from West Penn's distribution base rate revenue requirement and recovering it through West Penn's DSS and HSP Riders. As Ms. Gifford also explains, Met-Ed, Penelec and Penn Power, all three of which previously unbundled their default service-related uncollectible accounts expenses, are proposing revisions to their DSS and HPS Riders so that default service-related uncollectible accounts expense for industrial customers will be recovered in their HPS Riders rather than as they are currently being recovered through their DSS Riders.

Each of the Companies currently has a Smart Meter Technologies Charge ("SMT-C") Rider that sets forth a Commission-approved adjustment clause imposing a SMT-C to recover the costs of implementing their Smart Meter Deployment Plan ("Smart Meter Plan"). The Companies are proposing to include in their distribution base rate revenue requirements their test period costs to implement their Smart Meter Plans, to recover those costs in their distribution base rates, and to reduce their SMT-C Rider rates to zero. The SMT-C Rider will remain in the Companies' tariffs as the mechanism to recover the

costs of implementing their Smart Meter Plan, net of savings, in excess of such costs being recovered in base rates in the future.

Q. Are the Companies proposing to adopt any additional riders or revise any existing rider?

A. Yes, they are. Each of the Companies is proposing to adopt: (1) a Storm Damage Charge Rider, to recover the cost of storm damage in excess of that recovered in base rates; (2) a Partial Service Rider, to recover the cost of back-up and auxiliary services furnished to customers operating behind-the-meter generation that does not qualify for net metering; and (3) a Cogeneration and Small Power Production Qualifying Facility Rider, which will provide the terms on which each of the Companies will purchase electricity generated by "qualifying facilities" with maximum generating capacity under 500 kW. The Storm Damage Charge Rider is described in more detail in Ms. Bortz's direct testimony. The Partial Service Rider and Cogeneration and Small Power Production Qualifying Facility Rider are described in more detail in the direct testimony of Kevin M. Siedt (Met-Ed/Penelec/Penn Power/West Penn Statement No. 4).

In addition, Met-Ed and Penelec are each proposing to adopt a Time-of-Use Default Service Rider as an option available to all residential customers that obtain default service from the Company. The proposed Time-of-Use Default Service Rider is similar to the Time-of Use-Default Rider and Time-of-Use Rider approved by the Commission for Penn Power and West Penn, respectively, in the Commission's Final Order at Docket Nos. P-2011-2273650, et al., which approved the Companies' default service programs

for the period June 1, 2013 through May 31, 2015. West Penn's Time-of-Use Default Service Rider is described in more detail in Mr. Seidt's direct testimony.

Finally, as explained by Ms. Bortz, Penn Power is proposing to revise its existing USC Rider simply to make its terms uniform with those of the existing, Commission-approved USC Riders of Met-Ed and Penelec.

Q. Please summarize the effect that the proposed increases and changes in distribution rates and riders will have on the Companies' pro forma revenues at current rates for the FPFTY.

A. The effect of the proposed increases and changes in distribution rates and riders on the Companies' pro forma revenues at current rates for the FPFTY is provided in the table below:

	Requested Revenue Change			
	Met-Ed	**Penelec**	**Penn Power**	**West Penn**
	($ Thousands)	**($ Thousands)**	**($ Thousands)**	**($ Thousands)**
Distribution Base Rates	149,328	116,499	25,379	66,825
USC Rider				29,565
DSS and HPS Riders	(716)	(524)	(1,074)	7,351
Smart Meter	3,315	3,817	4,178	11,794
Total Revenue Increase	151,927	119,792	28,483	115,535
Percentage Change Over Revenues At Existing Rates[1]	11.5%	8.6%	8.7%	8.4%

[1] The percentage was calculated based on total estimated revenue for the fully projected future test year consisting of distribution revenue as well as generation service revenue, with the latter reflecting generation rates equivalent to the Companies' prices for applicable default service.

Q. What are the overall rates of return and the rate of return on common equity that the Companies propose as the basis for calculating each of their revenue requirements in this case?

A. The Companies' proposed distribution rates are designed to recover the Companies' costs to provide distribution service and provide them the opportunity to earn fair returns on their investments in distribution assets. As explained in more detail in the direct testimony of Michael J. Vilbert, Ph.D. (Met-Ed/Penelec/Penn Power/West Penn Statement No. 9) and Steven R. Staub (Met-Ed/Penelec/Penn Power/West Penn Statement No. 10), the increases in distribution base rate revenues proposed by the Companies would provide each of them an opportunity to earn a 10.90% return on equity. The overall rates of return requested for each of the Companies are as follows:

Met-Ed	8.05%
Penelec	8.31%
Penn Power	8.51%
West Penn	8.14%

Q. You indicated earlier that the Companies are proposing certain new riders and revisions to existing riders. Will those new or revised riders, if approved, increase the Companies' rates of return?

A. No, they will not. The costs proposed to be recovered under the new or revised riders are not included in the Companies' distribution base rate revenue requirements. Those costs, which are clearly identifiable, volatile, and not within the Companies' control, would be recovered under the proposed riders on a dollar-for-dollar basis, neither more nor less. Because the riders would only recover actual costs, they will not augment the rates of

return forming the basis for the Companies' proposed distribution base rates in this case. For those reasons and because the proposed new and revised riders reflect adjustment clauses that, either in form or concept, have been previously approved by the Commission, the Companies' new and revised riders should be approved.

Q. How will the proposed distribution rate increases impact the total bill of a typical residential customer using 1,000 kWh per month for each Company and how do the Companies' bills to residential customers at proposed rates compare to existing bills of other Pennsylvania electric distribution companies ("EDCs")?

A. The table below shows for each Company: (1) a September 2014 monthly bill for a residential default service customer using 1,000 kWh; (2) the increase for September that would result from the proposed base rates; and (3) the new total September bill under proposed base rates.

	September Bill	**Increase**	**Total Bill After Increase**
Met-Ed	$116.56	$20.78	$137.34
Penelec	$120.46	$19.58	$140.04
Penn Power	$104.76	$12. 39	$117.15
West Penn	$92.47	$13.62	$106.09

Using rates in effect as of July 19, 2014 for the other three major Pennsylvania EDCs (those companies' September 2014 default service rates were not publicly available when the comparison was prepared), a residential customer using 1,000 kWh per month would pay a monthly bill of between $137.05 and $153.19. Thus, even at the Companies' proposed base rates, residential customers receiving default service from the Companies would pay either approximately the same or considerably less than customers of the other

three major Pennsylvania EDCs at a similar usage level. Page 1 of Met-Ed/Penelec/Penn Power/West Penn Exhibit CVF-5 graphically depicts the billing comparison I just described. Page 2 of the exhibit graphically depicts the same comparison of monthly bills, excluding generation and transmission-related costs. Based on that comparison, West Penn, Penn Power and Met-Ed, at their existing distribution base rates, are the three lowest-priced electric utilities in Pennsylvania. At the proposed distribution base rates, the average of the bills of residential customers of the Companies using 1,000 kWh is approximately equal to the average of the bills of residential customers with comparable usage of the other three major Pennsylvania EDCs at their existing distribution rates.

III. INITIATIVES TO MANAGE COSTS, ENHANCE CUSTOMER SERVICE AND MAINTAIN RELIABLE ELECTRIC SERVICE

Q. Please describe the principal initiatives the Companies have implemented to control operating and maintenance ("O&M") expenses.

A. The Companies have implemented various initiatives that have allowed them to control O&M expenditures and, in particular, administrative and general ("A&G") costs, since their base rates were last increased. Some of the initiatives that have had the most significant impacts are the following:

1. **Capturing economies of scale and maximizing merger-related synergies**. FirstEnergy, the parent of the Companies, was formed on November 7, 1997, when Ohio Edison Company ("Ohio Edison") acquired Centerior Energy Corporation ("Centerior"). That merger formed a single holding company structure that included Centerior's operating utilities (The Cleveland Electric Illuminating Company ("CEI") and The Toledo Edison Company ("Toledo

Edison")) and Ohio Edison, which was itself an operating utility, and its Pennsylvania subsidiary, Penn Power. In 2001, GPU, Inc. ("GPU") merged with FirstEnergy, which added Met-Ed, Penelec and Jersey Central Power & Light Company ("JCP&L") to FirstEnergy's family of operating electric utilities. In 2011, Allegheny Energy, Inc. ("Allegheny Energy") merged with FirstEnergy, which added to the holding company system Allegheny Energy's operating subsidiaries, consisting of Monongahela Power Company, Potomac Edison Company and West Penn.

FirstEnergy Service Company was established in its current form to capture economies of scale by providing various services on a shared basis across all of FirstEnergy's subsidiaries. In addition, FirstEnergy has implemented standardized programs and business processes that adopt the best practices identified among its various operating subsidiaries. These practices have maximized the savings achievable by eliminating duplication and from capturing economies of scale, which were made possible by the mergers that formed the current FirstEnergy utility holding company system.

2. **Aggressive management of indirect labor-related costs.** Most of the Other Post-Employment Benefits ("OPEBs") formerly provided to FirstEnergy Service Company employees and utility supervisory, management, and non-bargaining unit employees have been eliminated. This measure and other measures to aggressively manage employee benefit costs while maintaining a competitive compensation package have helped the Companies contain their labor-related costs. Consequently, the Companies are only claiming the service cost

component associated with OPEBs, which represents the actuarial present value of the benefit liabilities accrued under the plan benefit formula, for services rendered during the FPFTY in this proceeding.

3. **A sharper, renewed focus on maintaining and enhancing reliability.** The Companies' sharper, renewed focus on reliability has resulted in higher levels of capital expenditures for distribution system enhancements. In addition to enhancing reliability and, thereby, directly reducing maintenance expenses, a secondary consequence of this renewed focus on reliability-related capital improvements has been to increase the percentage of total costs that are capitalized rather than charged to O&M expense.

Q. Please describe the Companies' initiatives to improve customer service and maintain or improve reliability and their significant accomplishments in those areas.

A. The Companies have implemented many more customer service and reliability-related enhancements than I can reasonably identify and describe in my testimony. Consequently, I will focus on major initiatives and accomplishments since 2006, which is a reasonable starting point because it was the last time Met-Ed and Penelec filed a base rate case and because it predates the FirstEnergy/Allegheny merger. Those major initiatives and accomplishments consist of the following:

1. **Integration of three call centers.** Between the completion of the FirstEnergy/GPU merger and 2007, two call centers were operating independently to serve the customers of FirstEnergy's utility subsidiaries. One call center served

CEI, Ohio Edison, Penn Power and Toledo Edison customers, and another served Met-Ed, Penelec, and JCP&L customers . In 2007, after careful review and detailed planning, FirstEnergy integrated the technology and operations of the two call centers, enabling the following steps to create efficiencies and enhance performance:

i. The call centers initiated "virtualization" of certain types of location-specific calls, which enabled those calls to be routed to an available agent in any call center regardless of where the call originated. This change increased, from approximately 200 to approximately 400, the number of agents that could take outage, move-in and move-out calls at a given time.

ii. The utilization of agents was increased by routing to the next available agent whatever caller had been waiting the longest, regardless of the caller's location.

iii. By integrating the call centers, calls could be routed from one center to another as necessary to reduce "busy outs" and increase business continuity/disaster recovery capabilities. A busy out occurs when a customer calling the Company gets a busy signal as the capacity of the call center has been reached or exceeded.

iv. The call centers adopted the same technology for monitoring and reporting performance to ensure that call volumes, call types, service levels, agent performance, busy outs, and other metrics were calculated uniformly and could be meaningfully compared and assessed.

v. Call flows were standardized in order to decrease average handle time and improve the quality of customers' experience.

As I previously noted, in 2011, Allegheny Energy merged with FirstEnergy, which added the call center serving West Penn and Allegheny Energy's other utility subsidiaries. In 2012, FirstEnergy integrated the technology and operations of the former Allegheny Energy call center with its two other call centers, which achieved the following additional efficiencies and service enhancements:

i. Further "virtualization" was achieved for outage, move-in, move-out, and credit calls, which had the effect of increasing, from approximately 130 to 800, the number of agents available to take those types of calls for West Penn and the other former Allegheny Energy utility subsidiaries at a given time.

ii. Call center resources were maximized and optimized by creating the capability to route calls to agents in any one of three call centers, which further reduced the likelihood of busy outs and provided even better business continuity/disaster and recovery capabilities.

iii. The process of integration provided the former Allegheny Energy call center the capability, which it did not previously have, to monitor and report performance metrics at the operating company level. Previously, Allegheny Energy's utility subsidiaries could compile and report data and metrics based only on their combined performance levels.

iv. FirstEnergy implemented "virtual hold" at the former Allegheny Energy call center. Virtual hold is a technology that allows customers to choose to receive a callback rather than waiting on line to speak to an agent.

By integrating the technology and operations of multiple call centers, Met-Ed, Penelec, and Penn Power have been able to answer 80% of all the calls they received within 30 seconds in three of the last four years. West Penn is on track to achieve the goal of answering 70% of all the calls its receives within 30 seconds by 2015, which is a commitment it made in the Joint Petition for Partial Settlement approved by the Commission as part of the proceeding which granted approval of the FirstEnergy/Allegheny Energy merger. Additionally, West Penn's average speed of answer has decreased from 145 seconds in 2011 to 104 seconds for the first six months of 2014.

2. **Enhanced communication during major storms.** The Companies have materially enhanced communication with customers, local governments, emergency service providers and first responders during major storm events by adopting and effectively using social media and internet-based access to storm and restoration-related information. For the second year in a row, FirstEnergy's mobile-optimized website and Smart Phone "app" have been recognized among the top performers in a customer satisfaction survey conducted by J.D. Power. Specifically, in J.D. Power's 2014 Utility Website Evaluation Study, FirstEnergy received the third highest score for overall customer satisfaction when its utility subsidiaries' websites were viewed from a mobile device (FirstEnergy's mobile website and SmartPhone app for Apple® iPhone® and Android™ devices

received a score of 425 out of 500 points). FirstEnergy also was among the top three performers for mobile websites in J.D. Power's 2013 study. In 2013, the number of customers visiting the FirstEnergy website(s) via a Smart Phone or tablet tripled over the previous year, which is why the Companies are continuing to make it easier to manage electric accounts and report power outages using mobile tools.

3. **Recognition for customer service.** The Companies, as part of the FirstEnergy family of utilities, were recognized by the Edison Electric Institute's National Key Accounts Customer Advisory Group for providing outstanding customer service in 2014. This is the second time FirstEnergy received honors in this category, having won similar recognition in 2006. In addition, Met-Ed, Penelec and Penn Power have on average seen a five percent increase in overall customer satisfaction between 2010 and 2014 as measured by the J.D. Power 2014 Electric Utility Residential Customer Satisfaction Study released July 16, 2014 when compared to the same study in 2010 (West Penn did not have a rating in the J.D. Power survey in 2010). All of the Companies earned scores that were above their segment average in the J.D. Power 2014 Electric Utility Residential Customer Satisfaction Study, and Penn Power ranked second in overall satisfaction in the East Region: Midsize Segment Customer Satisfaction Index in that same survey of customer satisfaction by J.D. Power.

4. **Customer referral programs.** The Companies have successfully implemented customer referral programs that, since their implementation in August 2013, have enrolled over 100,000 residential and small commercial customers with

competitive retail suppliers. The Companies developed their customer referral programs in response to the Commission's recommendations in its Order entered on April 29, 2011 in the *Investigation of Pennsylvania's Retail Electricity Market* at Docket No. I-2011-2237952. The Companies' customer referral programs were adopted, with Commission approval, in conjunction with their default service plans for the period from June 1, 2013 through May 31, 2015.[2]

5. **Portable Customer Assistance Program ("CAP") benefits.** The Companies have offered fully portable CAP benefits since generation rate caps have expired, which has enabled their low income customers to access competitive retail electric markets while preserving their ability to take full advantage of the benefits available under the Companies' Universal Service programs, regardless of their shopping status.

6. **Maintaining reliable electric service**. Each of the Companies has made system enhancements and implemented specific initiatives designed to enhance reliability and provide customers high-quality, dependable service. The table below reflects each Company's performance measured by System Average Interruption Duration Index ("SAIDI"), System Average Interruption Frequency Index ("SAIFI") and Customer Average Interruption Duration Index ("CAIDI") and shows how the Companies' performance compares to the Commission's benchmark and to the twelve-month standard for each of those reliability indices:

[2] *Joint Petition of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company and West Penn Power Company for Approval of Their Default Service Programs*, Docket Nos. P-2011-2273650, P-2011-2273668, P-2011-2273669 and P-2011-2273670 (Final Order entered August 16, 2012).

Company	12 month rolling	Benchmark	12-Month Standard	Pennsylvania 2009	2010	2011	2012	2013
	SAIDI	135	194	134	181	142	155	115
	SAIFI	1.15	1.38	1.21	1.51	1.21	1.29	1.09
	CAIDI	117	140	111	120	117	120	105
	SAIDI	113	162	87	95	143	133	188
	SAIFI	1.12	1.34	0.75	1.01	1.03	1.17	1.35
	CAIDI	101	121	116	95	138	114	140
	SAIDI	148	213	143	162	233	194	174
	SAIFI	1.26	1.52	1.22	1.31	1.40	1.41	1.48
	CAIDI	117	141	117	124	167	138	117
	SAIDI	179	257	161	191	211	241	222
	SAIFI	1.05	1.26	0.97	1.00	1.40	1.07	1.21
	CAIDI	170	204	166	190	151	226	183

32%	19	Exceed Benchmark
62%	37	Between Benchmark and Standard
7%	4	Below Standard

Over the last five years, the Companies' reliability metrics have been better than the Commission's 12-month standard in 94% of the comparisons and better than the Commission's Benchmark in 32% of the comparisons.

Further, the table below shows a total capital outlay by the Companies to enhance or maintain reliability between 2009 and 2013 of nearly $ 1.9 billion.

	T&D Capital - Reported under Section 57.195(b)(8)						
			Dollars in Millions				
	2009	2010	2011	2012	2013		5-Year Total
Penn Power	$ 21.10	$ 24.90	$ 24.90	$ 31.60	$ 24.80		$ 127.30
Penelec	$ 124.30	$ 126.40	$ 126.60	$ 156.00	$ 140.10		$ 673.40
Met-Ed	$ 95.80	$ 101.50	$ 107.50	$ 156.50	$ 90.20		$ 551.50
West Penn	$ 71.70	$ 86.90	$ 128.20	$ 149.30	$ 102.80		$ 538.90
Total	$ 312.90	$ 339.70	$ 387.20	$ 493.40	$ 357.90		$ 1,891.10

7. **Smart Meter Implementation.** Under their Smart Meter Plans, the Companies will be providing 95% of their customers with smart meters by mid-2019. To

implement those plans, the Companies will make capital expenditures totaling approximately $667 million for smart meters and advanced metering infrastructure ("AMI") designed to allow customers to better manage their energy usage.

IV. REASONS FOR REQUESTED RATE RELIEF

Q. What are the principal factors driving the Companies' needs to increase their distribution base rates?

A. There are four principal factors driving the Companies' needs to increase their distribution base rates, as follows:

1. **Growth in the Companies' distribution rate bases**. The single biggest factor driving the need for rate relief is the growth in the Companies' rate bases attributable to increases in net investment in distribution plant in service. This is shown in the table below which provides a comparison of net distribution plant in service as of April 30, 2016, derived from each Company's Exhibit RAD-1, to their net investments in distribution plant in service from a point in time that corresponds with their last base rate cases. For Met-Ed and Penelec, the historic point of comparison is the net investment in distribution plant in service established by the Commission's January 11, 2007 Order in their 2006 distribution base rate cases. For Penn Power and West Penn, the data source is each Company's FERC Form 1 for the year of their last change in base rates, as explained in footnote (a) to the table. The differences between the earlier timeframe and the period depicted in Exhibits RAD-1 provide a reasonable

indication of the additional investment the Companies have made in net distribution plant in service since their last base rate cases, which also confirms that growth in rate base is a significant driver of their requested distribution rate increases.

	MET-ED	PENELEC	PENN POWER		WEST PENN	
Year of Last Base Rate Case	2007	2007	1988		1994	
Net Plant in Service	1,007,085	1,155,461	87,447	(a)	635,246	(a)
Net Plant in Service at 4/30/2016 (From Exs. RAD-1)	1,514,554	1,766,868	420,106		1,408,494	
Growth in Net Plant	50.39%	52.91%	380.41%		121.72%	

(a) Penn Power's and West Penn's last rate cases occurred before restructuring of the electric industry in Pennsylvania, and the net plant in service reflected in their supporting data and the Commission's final orders in those cases included generation, transmission and distribution plant. Therefore, the net plant shown above for Penn Power and West Penn for 1988 and 1994, respectively, was obtained from each Company's FERC Form 1 for those years and reflects total distribution plant plus an allocable portion of general and intangible plant.

2. **Depreciation expense associated with increased investment in plant in service.** The increases in new distribution plant in service result in corresponding increases in depreciation expense.

3. **Increase in depreciation expense related to retirement of legacy meters**. Act 129 of 2008 added Section 2807(f) to the Pennsylvania Public Utility Code, requiring EDCs to adopt and implement smart meter and AMI technology for all customers. As I previously discussed, the Companies are implementing Commission-approved Smart Meter Plans under which they will replace 95% of all existing meters with smart meters by mid-2019, or approximately three years from the end of the FPFTY. Absent the Smart Meter mandate of Section 2807(f) and the adoption of the Companies' Smart Meter Plans, the Companies' existing "legacy" meters would have remained in service and continued to be depreciated

over the average remaining lives of between twenty-three and forty-eight years, as reflected in the Companies' existing distribution base rate revenue requirements. The Companies are proposing to recover their remaining investment in their legacy meters over five years, which produces a material increase in depreciation expense.

4. **Deferred Storm Damage Expense Recovery.** The Companies' service areas have experienced numerous severe storm events which caused extensive damage to their distribution systems and required the expenditure of significant storm damage recovery expenses. Because those storm damage expenses were extraordinary, non-recurring and material for some of the Companies, those Companies requested, and the Commission granted, approval to defer those expenses. Specifically, Met-Ed, Penelec and Penn Power deferred costs for distribution non-capital storm expenses that exceeded 125% of storm costs included in base rates between the period of February 25, 2011 through September 30, 2012 pursuant to the terms of the Joint Petition for Partial Settlement approved by the Commission as part of the FirstEnergy/Allegheny Energy merger proceeding. These deferrals included amounts associated with Hurricane Irene, the October 2011 snowstorm, and Tropical Storm Lee, among other events. In addition, orders were issued granting the requests to approve deferrals for certain storm costs incurred by Met-Ed associated with Winter Storm Nika (Docket No. P-2014-2412229) and Hurricane Sandy (Docket No. P-2013-2351260) and by West Penn Power associated with the February 5-16, 2010 winter storm (Docket No. P-2010-2216111). In this proceeding, the Companies

are proposing to recover the deferred expenses in their distribution revenue requirement by amortizing the deferrals over three years, as explained in more detail in the direct testimony of Richard A. D'Angelo (Met-Ed/Penelec/Penn Power/West Penn Statement No. 2).

Q. Are the factors you discussed above offset in part by reductions in any other components of the Companies' revenue requirement?

A. Yes. As I previously explained, the Companies have been carefully managing their O&M expenses and, in particular, their A&G expenses. In the case of Met-Ed and Penelec, for which comparisons can readily be made between the O&M expense claims in this case and their prior distribution base rate cases, O&M expenses excluding depreciation claimed for the FPFTY and smart meter costs are actually lower than the O&M expenses excluding depreciation those Companies incurred during the future test year in their 2006 base rate cases when, of course, they had no smart meter costs.

V. ORGANIZATION OF THE FILING, WITNESSES AND THE IMPORTANCE OF THIS CASE TO THE COMPANIES AND THEIR CUSTOMERS

Q. Please identify the other witnesses presenting direct testimony on behalf of the Companies and the principal subjects they address.

A. The Companies are submitting the direct testimony of ten witnesses including myself. The other witnesses submitting direct testimony and the principal subjects they address are as follows:

Richard A. D'Angelo	Statement No. 2	Development of the Companies' revenue requirements, including sponsoring and explaining the Companies' principal accounting exhibits.
Kimberlie L. Bortz	Statement No. 3	Proposed changes to tariff Rules And Regulations; proposed Storm Damage Charge Riders; proposed West Penn USC Rider.
Kevin M. Siedt	Statement No. 4	Development of normalized sales and revenues; development of the Companies' proposed rate design; description of proposed Time-Of-Use Default Service Riders, Partial Service Riders And Cogeneration and Small Power Production Qualifying Facility Riders.
Hillary E. Stewart	Statement No. 5	Development of the Companies' cost of service studies; separation studies; cost of service at existing rates.
Patricia M. Larkin	Statement No. 6	Development of the Companies' claims for cash working capital.
Laura W. Gifford	Statement No. 7	Unbundling of West Penn default service uncollectible accounts expense and associated revisions to West Penn's DSS and HPS Riders; updating Met-Ed's, Penelec's and Penn Power's DSS and HPS Riders to recover industrial default service-related uncollectible accounts expenses through the HPS Riders.
Christopher D. Ciccone	Statement No. 8	Proposed LED Street Lighting Rate Schedules.
Michael J. Vilbert, Ph.D.	Statement No. 9	Cost of common equity.
Steven R. Staub	Statement No. 10	Capitalization ratios; cost rates of long-term debt and common equity; overall cost of capital.

Q. Please explain the importance of the proposed rate increases to the Companies?

A. Due in large part to their substantial investment in utility plant, and notwithstanding their success in containing O&M expenses, the Companies' overall rates of return, at present rates, are projected to be 2.10% (Met-Ed), 3.98% (Penn Power), 4.01% (Penelec) and 4.78% (West Penn) for the FPFTY. More importantly, the indicated returns on common equity under present rates are anticipated to be 1.0% (Met-Ed) 2.56% (Penn Power), 2.38% (Penelec) and 4.18% (West Penn), which are inadequate by any reasonable standard. Returns at those levels are simply not sufficient to fully support the substantial amounts of additional investment the Companies will be required to make to maintain and enhance reliability, replace aging infrastructure, and fully implement their Smart Meter Plans while benefitting customers with continued safe, reliable and high-quality service. Accordingly, it is critically important that the Companies obtain the rate relief they are requesting in this case.

Q. Given the importance of this case to the financial health of the Companies and their ability to continue to invest in plant and equipment to maintain and enhance reliability and customer service, do you have a recommendation regarding the rate of return that should be approved for the Companies?

A. Yes, I do. It is important that the Commission adopt a rate of return at the top of the range of rates of return on common equity developed by Dr. Vilbert. In addition to providing the Companies the level of income they need to maintain and increase their level of investment in distribution infrastructure, a rate of return at the top of Dr. Vilbert's recommended range will properly recognize the Companies' efficiency, their focus on customer service, their dedication to maintaining and enhancing reliability, and

their support of Pennsylvania's competitive retail energy market, all of which are exhibited by the initiatives and accomplishments discussed in Section III of my testimony. Additionally, a top-of-range rate of return on equity would also properly recognize the quality of the Companies' management decisions and, in particular, their success in controlling O&M expenses, which has enabled the Companies to extend the period between base rate cases, to the benefit of their customers.

Q. Does this conclude your direct testimony?

A. Yes, it concludes my direct testimony at this time. However, I would like to reserve the right to supplement my direct testimony should it become necessary to do so

Biography
Charles V. Fullem
Director – Rates & Regulatory Affairs/Pennsylvania

Charles V. Fullem is Director- Rates & Regulatory Affairs/Pennsylvania, a position he was appointed to on January 22, 2006. In that capacity, he is responsible for developing the default service plans of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company and West Penn Power Company, as well as all retail tariff filings and financial reports to the Pennsylvania Public Utility Commission ("PaPUC") and the New York State Public Service Commission. He has over 30 years of experience in the energy industry, with a background in rates and regulation, marketing, unregulated retail pricing and regulated tariffs, contract development and negotiations of both wholesale and retail electric service contracts.

From December 2000 through January 2006, he served in various positions, including Director of Energy Consulting Operations for The E Group, the energy consulting subsidiary of FirstEnergy Corporation ("FirstEnergy"). As Director, he managed technical staff teams and was responsible for delivering all aspects of The E Group's client services for an over one billion dollar client energy spend, including energy management, bill and rate analysis, development of energy procurement strategies, preparation of requests for proposal, evaluation of bids, contract development and implementation, open market analysis, and negotiations with suppliers and utilities and utility bill payment.

From November 1999 through December 2000, Mr. Fullem was Director, Pricing and Regulatory Affairs, in FirstEnergy's rate department, where he was responsible for tariff administration and pricing programs serving over 2.2 million customers in Ohio and Pennsylvania. In this capacity, Mr. Fullem developed and implemented the unbundled tariffs designed to implement Customer Choice in Ohio, coordinated the development of FirstEnergy's Supplier Tariff and Net Metering Rider, and participated in the Operational Support Plan (OSP) workgroups. The OSP workgroups were collaborative working groups charged with establishing the various rules and policies of retail choice in Ohio.

From December 1994 through November 1999, Mr. Fullem served in various roles in FirstEnergy's marketing department, including Director, Planning and Strategy, and Director of Centerior Energy's Competitive Analysis Department, where he developed and implemented successful marketing programs targeted to commercial and industrial customers and mass market customers in both competitive generation markets and traditional areas of competition between fully integrated electric utility providers.

From 1982 through December 1994, Mr. Fullem served in various roles in rates and regulation at Centerior Energy and Cleveland Electric Illuminating Company, including the roles of Director, Planning & Strategy, and Director of Rates & Contracts. In these roles, Mr. Fullem managed and performed cost of service studies, load research, customer requirements analyses, designed rates and tariffs, participated in the development of revenue requirements, and performed financial analyses.

Mr. Fullem holds his Bachelor of Science degree in Mineral Economics from the Pennsylvania State University. Mr. Fullem is a Certified Energy Procurement Professional by the Association of Energy Engineers. He has provided expert testimony before the Public Utilities Commission of Ohio ("PUCO"), the PaPUC, The New York State Public Service Commission and the Federal Energy Regulatory Commission ("FERC").

Mr. Fullem has prepared and presented testimony in the following rate-related cases:

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT I-A-1:

> "Provide a summary discussion of the rate change request, including specific reasons for each increase or decrease. Also provide a breakdown which identifies the revenue requirement value of the major items generating the requested rate change."

RESPONSE:

Metropolitan Edison Company
Statement of Reasons for Rate Changes

Introduction

Metropolitan Edison Company ("Met-Ed" or the "Company") has filed a new tariff and accompanying supporting data setting forth a proposed distribution base rate increase and other proposed tariff revisions ("Rate Plan") for approval by the Pennsylvania Public Utility Commission ("Commission"). Met-Ed has not filed a general base rate case since 2006, which resulted in a distribution base rate decrease, and has not increased its base rates since 1992.

The Rate Plan proposes rates that would produce an increase in Met-Ed's annual distribution revenue of $151.9 million based on a fully projected future test year ending April 30, 2016 and reflecting the Company's proposed overall rate of return of 8.05% and a rate of return on the common equity portion of its capital structure of 10.9%. The average total-bill increases under the proposed rates vary by class of customers, and average class increases range from approximately 1.8% to 19.96% for customers that

receive default service from the Company. The monthly bill of a residential default service customer using 1,000 kilowatt-hours ("kWh") per month would increase from $116.56 to $137.34.

Principal Reasons For The Proposed Increase In Rates

Four principal factors are driving the Company's need to increase its distribution rates:

1. **Significant Growth In The Company's Investment In Plant In Service.** Met-Ed's investment in electric plant in service has increased by $507 million since it last filed a general base rate case.
2. **Increase In Depreciation Expense.** The growth in utility plant investment has caused the Company's annual depreciation expense to increase by $38 million for the fully projected future test year in this case as compared to the annual depreciation expense that the Company was permitted to recover in the rates established in its 2006 rate case.
3. **Unrecovered Investment In Meter Costs.** Depreciation expense has also increased as a result of the legislative mandate imposed by Act 129 of 2008, which added Section 2807(f) to the Pennsylvania Public Utility Code. Section 2807(f) requires electric distribution companies ("EDCs") to install Smart Meters for all customers. Under the Commission-approved Smart Meter Deployment Plan for Met-Ed, 95% of its customers will have Smart Meters installed by mid-2019. As a result, Met-Ed's investment in existing "legacy" meters has to be

recovered over their now much shorter remaining service lives, which added $8.4 to Met-Ed's annual depreciation expense.

4. **Deferred Storm Damage Expense.** Met-Ed's service area has experienced several severe storm events over the last four years, which caused extensive damage to its distribution system and caused the Company to incur significant storm damage remediation costs. With the Commission's prior approval, those expenditures were deferred for recovery in the Company's next base rate case. Therefore, in this case, Met-Ed is seeking to amortize $65 million of deferred storm expenses and has requested a return on the unamortized balance.

Notably, the factors driving Met-Ed's need for rate relief explained above have been partially offset by reductions in other components of Met-Ed's revenue requirement. Specifically, as a result of carefully managing operating and maintenance ("O&M") expenses and, in particular, administrative and general expenses, Met-Ed's O&M expenses, excluding depreciation and Smart Meter costs, are actually $4.0 million lower than the O&M expense, excluding depreciation, that the Company incurred during the future test year in its 2006 base rate case.

Due in large part to its substantial investment in utility plant and notwithstanding its success in containing O&M expenses, Met-Ed's overall rate of return, at present rates, is projected to be only 2.10% for the fully projected future test year. More importantly, the indicated return on common equity under present rates is anticipated to be (1.0)%, which is inadequate by any reasonable standard.

Principal Components of the Rate Plan

The Company's Rate Plan consists of the following principal components:

1. **Increased Distribution Base Rates**. Met-Ed is proposing distribution base rates that reflect its costs to furnish distribution service during the fully projected future test year and to provide a reasonable return on its investment in plant dedicated to public service.
2. **Storm Damage Charge Rider**. Met-Ed is proposing a Storm Damage Charge Rider that will add to its tariff an adjustment clause authorized by Section 1307(a) of the Pennsylvania Public Utility Code. The adjustment clause will impose a charge or credit on customers' bills to reflect the difference, on an annual basis, between storm damage expenses recovered in Met-Ed's base rates and the storm damage expense it actually incurs. The Storm Damage Charge Rider is a reasonable means for the Company to recover its actual storm damage costs – neither more nor less – on a timely basis.
3. **Roll-In To Base Rates Of Smart Meter Costs.** Met-Ed currently has a Smart Meter Technologies Charge Rider containing a Commission-approved adjustment clause that imposes a Smart Meter Technologies Charge to recover the costs of implementing its Smart Meter Deployment Plan ("Smart Meter Plan"). Met-Ed is proposing to include in its distribution base rate revenue requirement its fully projected future test year costs to implement its Smart Meter Plan and to recover those costs in its distribution base rates. Accordingly, Met-Ed is also proposing to reduce its Smart Meter Technologies Charge to zero. The Smart Meter

Technologies Charge Rider will remain in the Company's tariff as the mechanism to recover the cost of implementing its Smart Meter Plan, net of savings, in excess of such costs being recovered in base rates. Additionally, the roll-in to base rates will enable Met-Ed to clearly establish baselines for the Smart Meter costs being recovered in base rates and for those cost categories that it will need to track to determine future savings produced by the implementation of its Smart Meter Plan.

4. **Updating "Unbundled" Default Service-Related Uncollectible Accounts Expense**. Met-Ed recovers "unbundled" uncollectible accounts expense associated with providing default service, including its Purchase of Receivables Program for electric generation suppliers' accounts receivable, under its Default Service Support ("DSS") Rider and Hourly Pricing Default Service ("HPS") Rider. The charges imposed under the applicable provisions of the DSS Rider and HPS Rider are being updated in this filing to reflect current cost levels and to reconcile prior period costs and revenues.

5. **New Rules And Regulations**. Met-Ed, together with its affiliated EDCs in Pennsylvania (Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company), which are making contemporaneous distribution base rate filings, is proposing to adopt Rules and Regulations that will be uniform across all four companies. Establishing uniform Rules and Regulations will extend to the Companies' tariffs and tariff administration a level of standardization that will help create a uniform customer experience across their

Pennsylvania service territories; streamline their practices; and help to control administration costs.

6. **Elimination Of Certain Riders, Rate Schedules And Tariff Rules.** Certain riders, rate schedules and rules in Met-Ed's current tariff are legacies of the era when the Company furnished fully "bundled" generation, transmission and distribution service. Following the restructuring of the electric industry in Pennsylvania, those riders, rate schedules and rules are not applicable to the provision of unbundled distribution service or are obsolete for other reasons and, therefore, Met-Ed proposes to eliminate them.

The following table shows the composition of Met-Ed's proposed revenue increase by component:

	$ Thousands
Distribution Base Rates	149,328
Smart Meter Roll-In	3,315
DSS and HPS Riders	(716)
Total Revenue Increase	151,927
Percentage Increase Over Revenues At Existing Rates[1]	11.5%

1. The percentage was calculated based on total estimated revenue for the fully projected future test year consisting of distribution revenue and generation service revenue, assuming all customers receive default service at the Company's applicable default service rates.

Customer Impact/Bill Comparisons

As previously noted, if Met-Ed's proposed rates were fully implemented, a residential customer of the Company using 1,000 kWh of electricity per month and receiving default service would pay a total monthly bill of $137.34. That amount is

approximately the same as, or lower than, the monthly bills of default service customers using 1,000 kWh per month served by the three other major EDCs in Pennsylvania not affiliated with Met-Ed,[1] which range from $138.05 to $153.19 under those companies' existing rates.

Conclusion

The Rate Plan reflects the Company's need for adequate and timely rate relief to support the substantial amounts of additional investment it will be required to make to maintain and enhance reliability, replace aging infrastructure, and fully implement its Smart Meter Plan while continuing to furnish its customers the safe, reliable and high-quality electric service they have come to expect. Accordingly, it is critically important for both the Company and its customers that the Rate Plan be approved.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT I-A-2:

"Identify the proposed witnesses for all statements and schedules of revenues, expenses, taxes, property, valuation, and the like."

RESPONSE:

Witness	Statement Designation	Area of Testimony
C. Fullem	Statement 1	Overview of Distribution Base Rate Case Filing
R. D'Angelo	Statement 2	Revenue Requirements
K. Bortz	Statement 3	General Rules and Regulations, and New Riders
K. Siedt	Statement 4	Sales & Revenue Normalization and Rate Design
H. Stewart	Statement 5	Cost of Service
P. Larkin	Statement 6	Cash Working Capital
L. Gifford	Statement 7	Unbundled Uncollectible Expense, Smart Meters
C. Ciccone	Statement 8	New LED Streetlighting Schedule
Dr. M. Vilbert	Statement 9	Rate of Return
S. Staub	Statement 10	Cost of Capital and Rate of Return

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT I-A-3:

"Provide a single page summary table showing, at present and at proposed rates, together with references to the filing information, the following as claimed for the fully adjusted test year:

Revenues
Operating Expenses
Operating Income Rate Base
Rate of Return (produced)"

RESPONSE:

	Total Distribution At Present Rates* ($ millions) (Exhibit RAD-2 Page 1, Column 13)	Total Distribution At Proposed Rates* ($ millions) (Exhibit RAD-2 Page 3, Column 33)
Revenues	$ 285	$ 438
Operating Expenses	$ 255	$ 324
Operating Income	$ 30	$ 114
Rate Base	$1,413	$1,413
Rate of Return (produced)	2.10%	8.05%

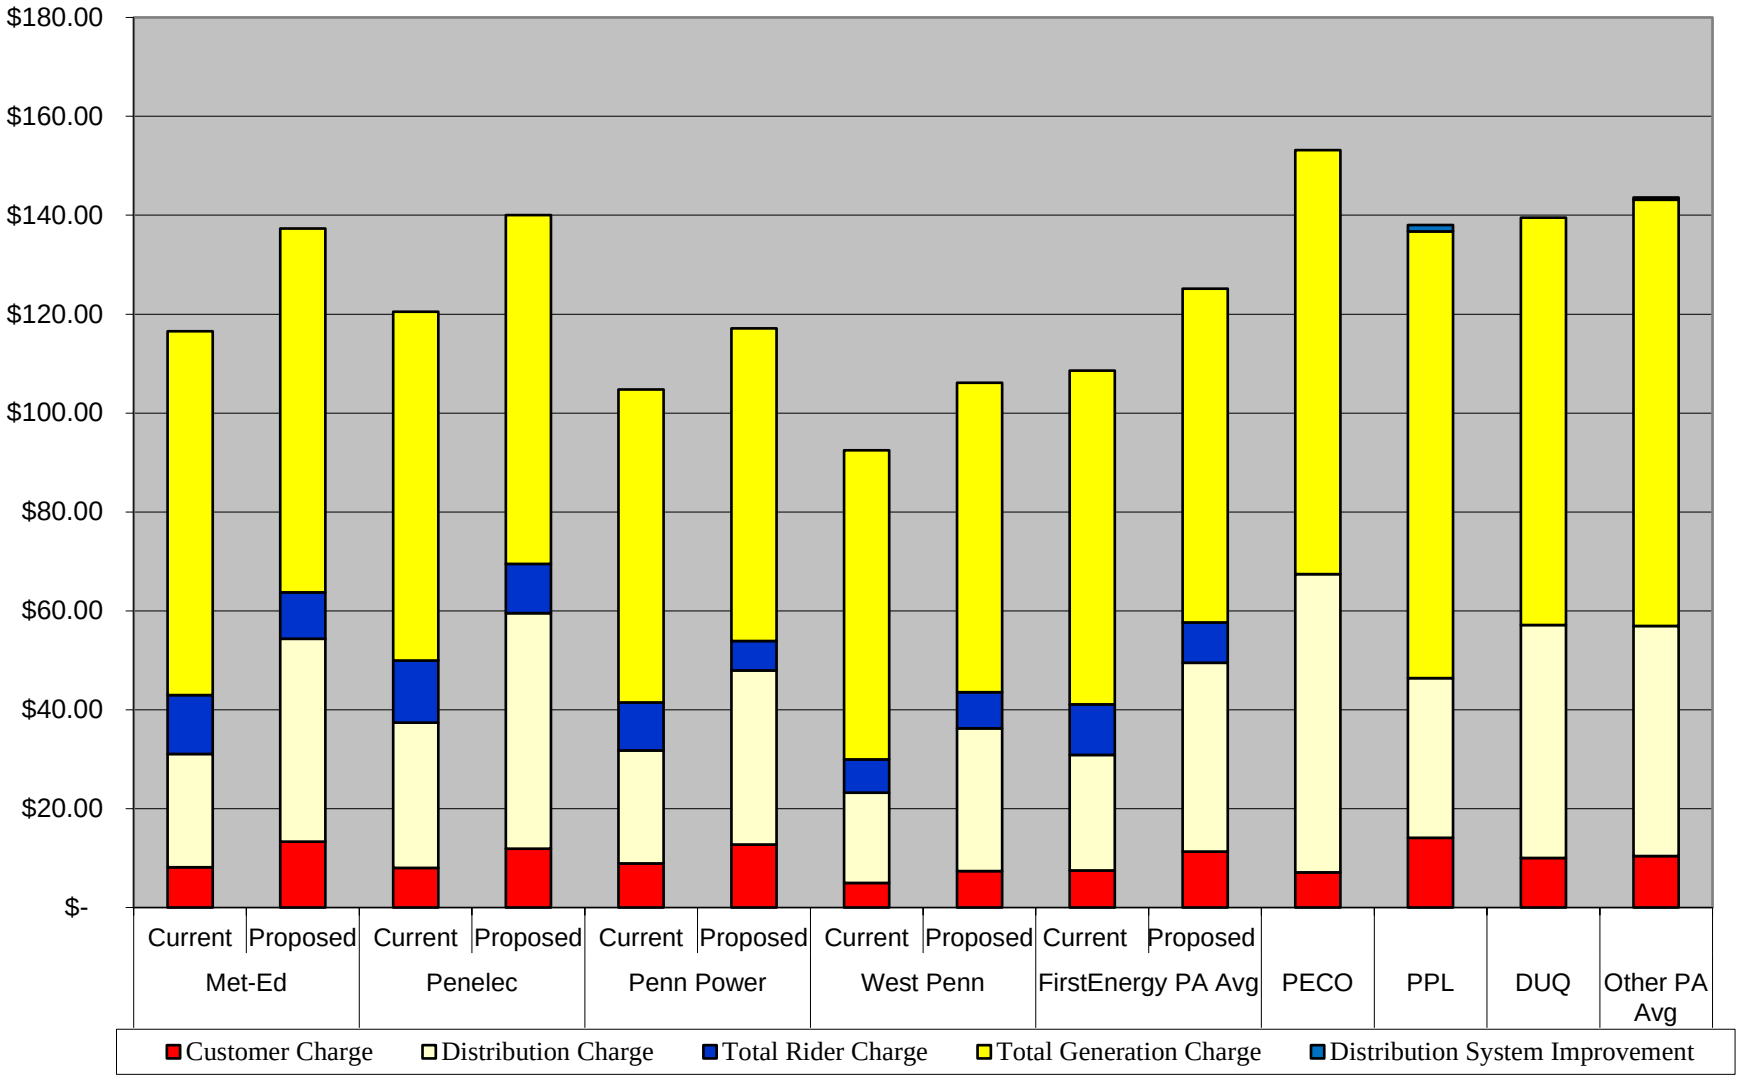
*There is a difference in the total revenue requirements because of slight changes in the Default Service Support Rider of $(716).

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT I-B-1:

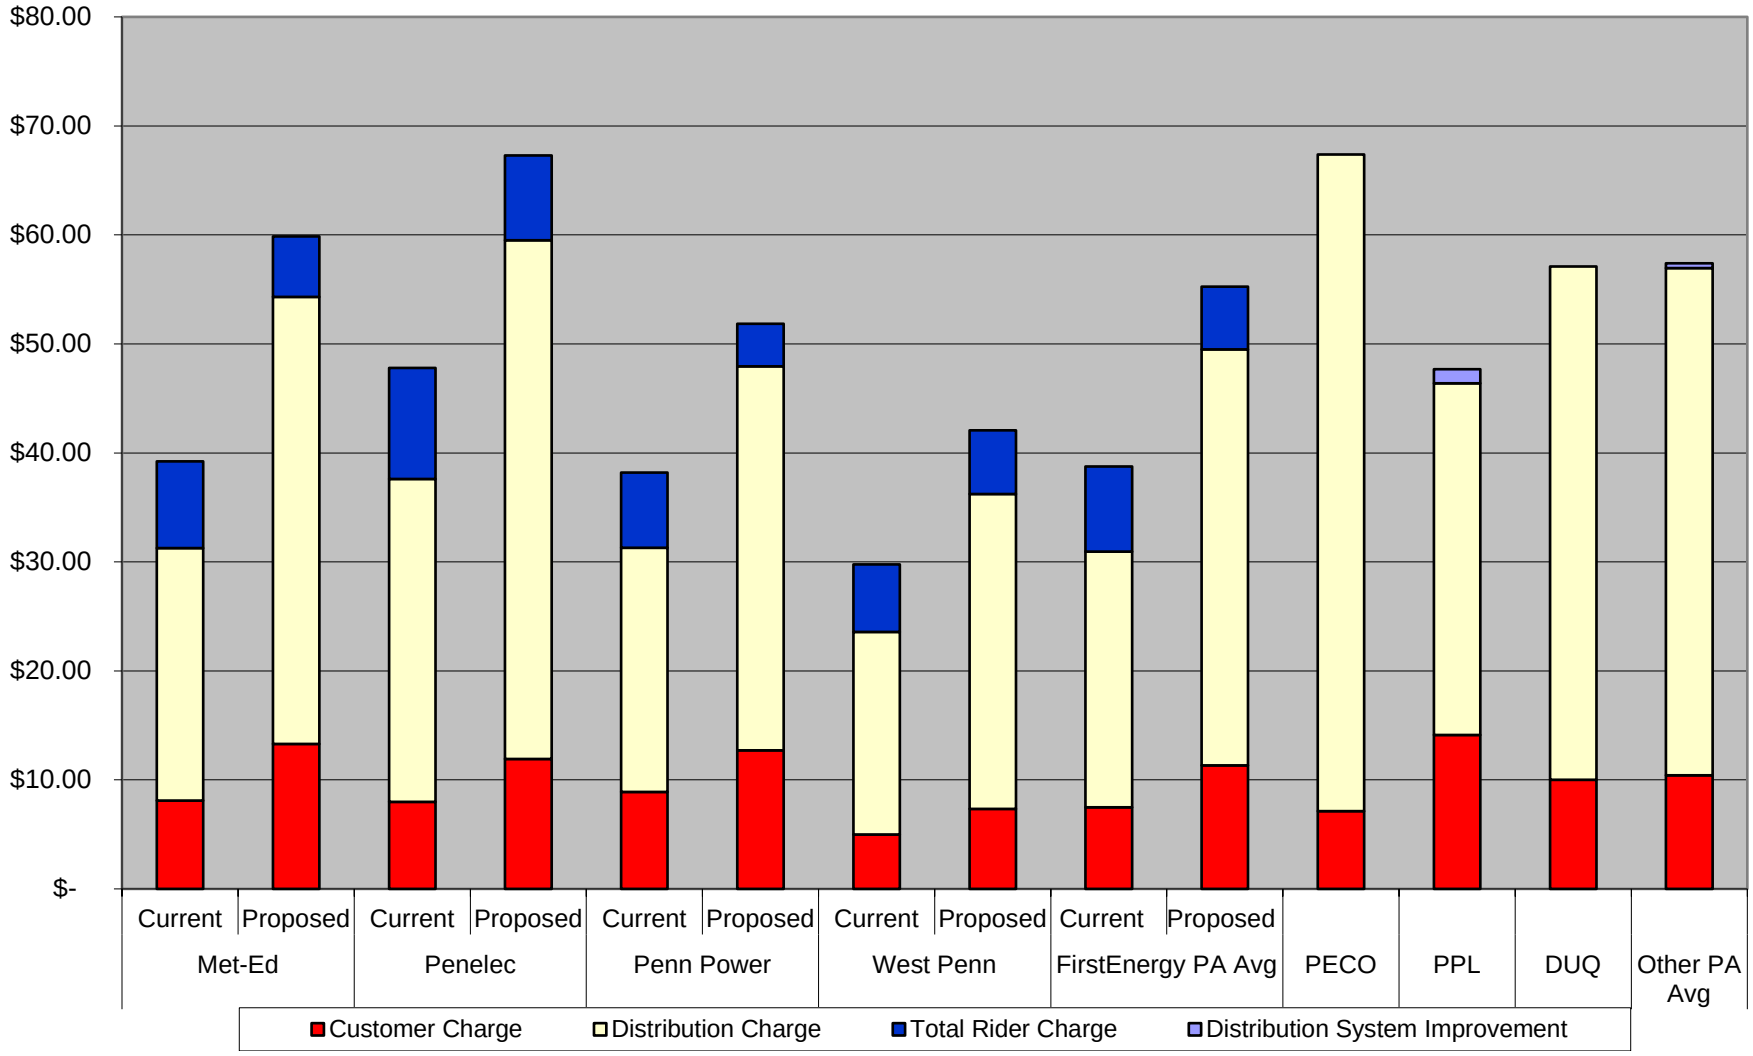
> "Provide a corporate history including the dates of original incorporation, subsequent mergers and acquisitions. Indicate all counties, cities and other governmental subdivisions to which service is provided, including service areas outside this Commonwealth, and the total number of customers or billed units in the areas served."

RESPONSE:



Metropolitan Edison Company ("Met-Ed" or "Company"), a Pennsylvania corporation, was formed by a consolidation and merger of Metropolitan Edison Company (a predecessor constituent company of the same name as Met-Ed) and Metropolitan Electric Light & Power Company by an agreement dated June 8, 1922 in accordance with the provisions of the Action of 1909, P. L. 408, and letters patent were issued to Met-Ed on July 24, 1922. That predecessor constituent company of the same name as Met-Ed was likewise formed as the result of various successive mergers and consolidations. Since its incorporation, Met-Ed has acquired by purchase the properties and franchises of numerous electric light, heat and power and water power companies chartered to serve various parts of the area now embraced within Met-Ed's territory.

In 1946, General Public Utilities, Inc. (later "GPU Inc.") was created, forming the umbrella under which Met-Ed, Pennsylvania Electric Company ("Penelec") and Jersey Central Power & Light Company conducted business. On November 7, 2001, GPU merged with FirstEnergy Corp. Since that merger, Met-Ed has been a wholly owned subsidiary of FirstEnergy Corp.



The Company's principal business is the transmission, distribution and sale of electricity in eastern and south central Pennsylvania. Met-Ed is affiliated with three other Pennsylvania electric distribution utilities (Penelec, Pennsylvania Power Company and West Penn Power Company), as well as six additional sister distribution utilities in New Jersey, Ohio, Maryland and West Virginia. Other affiliates include FirstEnergy Service Company (a service company) and various regulated transmission and unregulated competitive energy companies.

The Company provides retail service to approximately 557,000 customers in all or portions of fourteen counties in the eastern and south central parts of Pennsylvania. The municipalities which the Company serves are listed in the Company's filed Electric Service Tariff, Electric Pa. P.U.C. No. 52.

DIRECT TESTIMONY
OF
LAURA W. GIFFORD

I. INTRODUCTION AND BACKGROUND

Q. Please state your name and business address.

A. My name is Laura W. Gifford. My business address is 2800 Pottsville Pike, Reading, Pennsylvania 19612.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company as a Rate Analyst V in the Rates and Regulatory Affairs Department – Pennsylvania.

Q. What are your responsibilities as a Rate Analyst V?

A. Generally, the Rates and Regulatory Affairs Department provides regulatory support for Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power") and West Penn Power Company ("West Penn") (each of which may be referred to as "Company" and/or collectively as the "Companies"). I am responsible to the Manager of Rates and Regulatory Affairs for the preparation and coordination of the Companies' accounting and financial data in all their rate-related matters before the Pennsylvania Public Utility Commission ("PUC" or "Commission"), the New York State Public Service Commission and the Federal Energy Regulatory Commission ("FERC"), including the preparation of statements and reports addressing, among other things, smart meters, energy costs, non-utility generation costs, default service support charges including uncollectible accounts expense, quarterly earnings, and other financial matters.

Q. What is your educational background and professional experience?

A. I am a graduate of The College of Wooster where I received a Bachelor of Arts degree with a major in Business Economics in 1978. I have over seventeen years of experience with FirstEnergy Corp. and GPU Energy. My work experience is more fully described in Appendix A.

Q. Have you previously testified in proceedings before the Commission?

A. Yes. I have previously testified before this Commission, as further outlined in Appendix A.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of Met-Ed, Penelec, Penn Power and West Penn. My testimony equally applies to all of the Companies, unless otherwise stated.

Q. Please describe the purpose of your direct testimony.

A. The purpose of my testimony is to discuss the unbundling of default service related uncollectible accounts expense and to describe the roll-in of the revenue requirement associated with Smart Meters into distribution base rates, including the development of cost baselines for determining savings resulting from the deployment of smart meters.

Q. Have you prepared any exhibits to accompany your testimony?

A. Yes. Met-Ed Exhibit LWG-1, Penelec Exhibit LWG-1, Penn Power Exhibit LWG-1 and West Penn Exhibit LWG-1 (collectively, "Exhibits LWG-1") and Met-Ed/Penelec/Penn Power/West Penn Exhibits LWG-2 and LWG-3 were prepared by me or under my supervision and are described in detail later in my testimony. In addition, I am

sponsoring Riders I and J to Met-Ed Company Exhibit 1; Riders I and J to Penelec Company Exhibit 1; Riders I and J to Penn Power Company Exhibit 1; and Riders I and J to West Penn Company Exhibit No. 1.

II. UNCOLLECTIBLE ACCOUNTS EXPENSE

A. Met-Ed, Penelec, and Penn Power

Q. Did Met-Ed, Penelec, and Penn Power previously unbundle uncollectible accounts expense associated with the provision of default generation service?

A. Yes. In accordance with the Commission's Final Order in their Default Service Program proceedings at Docket Nos. P-2009-2093053 and P-2009-2093054, Met-Ed and Penelec fully unbundled uncollectible accounts expense associated with default service for residential, commercial and industrial customers. Specifically, on January 1, 2011, the unbundled uncollectible accounts expense associated with default service and electric generation supplier ("EGS") service was removed from distribution rates and since then has been recovered through each Company's Default Service Support ("DSS") Rider on a non-bypassable, non-reconcilable basis. As part of that proceeding, Met-Ed and Penelec also each established a Purchase of Receivables ("POR") program for their residential and small commercial customers.

Penn Power similarly fully unbundled uncollectible accounts expense associated with default service for residential, commercial and industrial customers in accordance with the Commission's Final Order in its Default Service Program proceeding at Docket No. P-2010-2157862. Specifically, on June 1, 2011, the unbundled uncollectible accounts expense associated with default service and EGS service was removed from distribution rates and thereafter recovered through the DSS Rider on a non-bypassable, non-

reconcilable basis. As part of that proceeding, Penn Power also established a POR for its residential and small commercial customers.

Q. What changes, if any, are Met-Ed, Penelec, and Penn Power proposing in these proceedings as to the recovery of uncollectible accounts expense?

A. In a Commission-approved settlement[1] in their most recent default service proceeding (the "Default Service Settlement"), Met-Ed, Penelec, and Penn Power committed that, effective June 1, 2015, the uncollectible accounts expense associated with the provision of hourly-priced service to industrial customers would no longer be recovered through the DSS Riders and instead would be recovered in the default service rates established pursuant to those Companies' Hourly Priced Default Service ("HPS") Riders.

Q. Are any changes required in the Companies' base rate cases to update the uncollectible accounts expense in the DSS Rider for residential and commercial customers and the HPS Rider for industrial customers for Met-Ed, Penelec and Penn Power?

A. Yes. Since Met-Ed, Penelec and Penn Power have included a claim for uncollectible accounts expense with these rate filings based on data for the fully projected future test year ("FPFTY") ending April 30, 2016, those amounts will need to be unbundled to determine what portion of the expense will remain in distribution base rates, what portion will be included in the DSS Rider for residential and commercial customers, and what portion will be included in the HPS Rider for industrial customers.

[1] *Joint Petition of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company for Approval of their Default Service Programs*, Docket Nos. P-2013-2391368 (Met-Ed), P-2013-2391372 (Penelec) and P-2013-2391375 (Penn Power)(Order entered July 24, 2014).

Q. Please explain the methodology used to calculate the updated uncollectible accounts expenses in the DSS Riders and HPS Riders for Met-Ed, Penelec and Penn Power.

A. To determine an appropriate amount of uncollectible accounts expense for each Company, I first calculated the ratio of (1) the default service revenue in the budget for the FPFTY plus the projected revenues billed to customers on behalf of EGSs for that same time period to (2) the total retail revenue in the FPFTY ending April 30, 2016, plus the projected revenues billed to customers on behalf of EGSs. I then multiplied this ratio by the total uncollectible accounts expense in the FPFTY budget for each Company yielding the default service-related uncollectible accounts expense. This total Company amount of default service-related uncollectible accounts expense was then allocated to the residential, commercial and industrial customer classes based on the weighted average of uncollectible write-offs over the two-year period, June 2012 through May 2014. The customer class allocated amount was then divided by projected kWh for that customer class to determine the appropriate rate.

The calculation of the uncollectible accounts expense components of the DSS Rider rates and HPS Rider rates are shown in Exhibits LWG-1 for each of the Companies, and which rates are reflected in Riders I and J in each of Companies' Exhibits 1.

Q. Where can the total uncollectible accounts expense amounts for the FPFTY be found?

A. The total amounts of uncollectible accounts expense in the FPFTY budget are set forth in FERC Account No. 904, as shown in Attachment A to Exhibits RAD-55 for Met-Ed,

Penelec and Penn Power, which are being sponsored by Mr. Richard A. D'Angelo in Met-Ed/Penelec/Penn Power/West Penn Statement No. 2.

B. West Penn

Q. Has West Penn previously unbundled any portion of its uncollectible accounts expense?

A. No. West Penn currently recovers all uncollectible accounts expense through base distribution rates.

Q. Is West Penn proposing in this proceeding to fully unbundle its uncollectible accounts expense?

A. Yes. West Penn committed in the Default Service Settlement to propose, in its next base rate case, the unbundling of all uncollectible accounts expense associated with default service and its POR program similar to Met-Ed, Penelec, and Penn Power.

Q. Is West Penn also proposing to include the uncollectible accounts expense charge for the Industrial customer class in its HPS Rider?

A. Yes. The calculation of the uncollectible accounts expense component of the HPS Rider rate for West Penn is shown in West Penn Exhibit LWG-1, column 3.

Q. How does West Penn propose to fully unbundle its uncollectible accounts expense?

A. West Penn will utilize the same methodology that was used to update the unbundling of the uncollectible accounts expense for Met-Ed, Penelec and Penn Power in these proceedings. Details of these calculations by customer class, including the unbundled default service-related portion of the total uncollectible accounts expense in FERC

Account No. 904, are contained in West Penn Exhibit LWG-1. In addition, the total amount of uncollectible accounts expense in the FPFTY budget is provided in FERC Account No. 904 shown in West Penn Exhibit RAD-55 attached to Mr. D'Angelo's testimony.

Q. Please explain the uncollectible accounts expense components that will be added to the existing West Penn DSS Rider and HPS Riders.

A. West Penn already has DSS Riders and HPS Riders in West Penn Electric Pa. P.U.C. No. 39 (general application) and West Penn Electric Pa. P.U.C. No. 37 (applicable only to Pennsylvania State University, an industrial customer) that were approved as part of its default service program at Docket No. P-2011-2273670. West Penn is proposing to add uncollectible accounts expense components to the DSS Rider in West Penn Tariff No. 40[2] to collect the default service-related uncollectible accounts expense on a non-reconcilable, non-bypassable basis similar to Met-Ed, Penelec and Penn Power. This will allow West Penn to collect the default service and POR-related uncollectible accounts expense for residential and commercial customers in its DSS Rider. Both West Penn tariffs will have similar changes to the HPS Riders to allow for the collection of the uncollectible accounts expense for industrial customers. The proposed updates to the West Penn DSS Riders and HPS Riders are shown in West Penn Company Exhibit No. 1, Riders I and J, and West Penn Company Exhibit No. 2, Rider I.

[2] West Penn is proposing new tariffs in this instant proceeding. Therefore, they will be numbered with the next sequential number.

West Penn proposes to annually update the computation for the default service related-uncollectible accounts expense in the revised West Penn DSS Rider and HPS Riders similar to Met-Ed, Penelec and Penn Power.

Q. Will the adjustment to the retail default service prices for uncollectible accounts expenses be a component of the reconciliation of the West Penn DSS Rider and HPS Riders?

A. No. Consistent with the process for Met-Ed, Penelec and Penn Power, reconciliation will address only the revenues billed to customers for default service and costs actually incurred by the Company associated with the default service program.

Q. What is contained in Met-Ed/Penelec/Penn Power/West Penn Exhibit LWG-2?

A. Met-Ed/Penelec/Penn Power/West Penn Exhibit LWG-2 provides a summary of the unbundling for each Company. The exhibit shows the separation of the total uncollectible accounts expense for each Company into default service-related and distribution based on the calculations contained in Exhibits LWG-1.

III. SMART METER REVENUE REQUIREMENTS AND COST SAVINGS BASELINES

Q. What are the Companies proposing in this proceeding relative to the costs from their Commission-approved Revised Smart Meter Deployment Plan?

A. Met-Ed, Penelec, Penn Power and West Penn are proposing to roll the adjusted SMT-C Rider rate base, revenues and costs for the fully projected future test year into the determination of their distribution rate revenue requirement rather than collecting the costs in their existing Smart Meter Technologies Charge ("SMT-C") Riders.

Consequently, the Smart Meter rates in each of the Companies' SMT-C Riders will be set to zero upon the implementation of new rates from this proceeding. The Riders will be available to the Companies when smart meter revenue requirements exceed the amount rolled into distribution base rates or when billable savings are achieved.

Q. Where can the smart meter revenue requirements that are being rolled into distribution base rates be found?

A. The smart meter revenue requirements for the FPFTY are identified on page 5 of the individual Company Exhibits RAD-2 presented by Mr. D'Angelo for Met-Ed ($19.0 million), Penelec ($20.3 million), Penn Power ($12.6 million) and West Penn ($47.1 million).

Q. Why is it appropriate for the Companies to move smart meter costs into distribution base rates?

A. First, Act 129 of 2008 provides that electric distribution companies may recover smart meter costs through base rates or a rider mechanism. While the Companies chose to establish the SMT-C Rider to facilitate recovery of initial smart meter costs, they also proposed to have the ability in a future proceeding to propose rolling existing Smart Meter costs into base rates while continuing to recover new smart meter costs through a reconcilable automatic adjustment clause. Following review of that proposal, the Commission agreed that base rate recovery of smart meter costs could appropriately be considered in a future proceeding.[3]

[3] See *Joint Petition of Metropolitan Edison Company, Pennsylvania Electric Company and Pennsylvania Power Company for Approval of Smart Meter Technology Procurement and Installment Plan,* Docket No. M-2009-2123950 (Order entered August 3, 2010).

Second, while the Companies expect smart meter costs to escalate over the next several years as smart meters are deployed throughout their territories, once deployment is complete, smart meter costs are expected to be more stable and predictable and therefore more akin to costs recovered in base rates than the volatile, more unpredictable costs included in riders authorized under Section 1307(e) of the Public Utility Code.

Third, there is ample precedent for rolling into base rates categories of costs that were previously recovered through a reconcilable automatic adjustment clause. For example, certain state taxes are routinely rolled into base rates after being recouped through the State Tax Adjustment Surcharge ("STAS") between rate cases. Similarly, and perhaps more on point, the Distribution System Improvement Charge ("DSIC") implemented by many of the Commonwealth's major jurisdictional water companies and now electric companies is "zeroed out" in base rate proceedings and the depreciated original cost, *i.e.*, unrecovered investment, and related costs of replacement property previously included in the DSIC, are added to base rates.

Q. Please describe how the Companies will transition the recovery of smart meter costs from the SMT-C Rider to distribution base rates.

A. The Companies anticipate that the distribution base rates established in this proceeding will become effective on or about May 1, 2015, and those rates will include the smart meter revenue requirements approved in this proceeding. At that time, the SMT-C rate for each Company will be set to zero. However, the Companies will still need to reconcile revenues and costs for the July 1, 2014 through June 30, 2015 period[4] and file

[4] The SMT-C reconciliation year, as defined in the SMT-C Rider, is from July 1 through June 30.

their 1307(e) reconciliation statements. Any over or under collection balances from this reconciliation process will be held on the books, with interest, until such time that a Company reactivates the SMT-C Rider rate, which, as previously noted, will occur when either smart meter revenue requirements exceed the amount rolled into distribution base rates or when billable savings are achieved. Each Company will track the twelve months of costs and savings for each reconciliation year to determine if reinstatement is appropriate. The Companies will file SMT-C Rider rates on August 1, 2015, if appropriate, and each August 1 thereafter with a determination of whether there will be an incremental SMT-C rate for the following calendar year. The reconciliation year of July through June and the SMT-C rates effective the following January through December is in accordance with the Companies' existing Commission-approved SMT-C Riders.

Q. Will the Companies be measuring savings achieved from the deployment of smart meters and flowing those savings through the SMT-C Rider?

A. Yes. In the Companies' most recent smart meter proceedings, the Commission approved a December 31, 2013 cost baseline for purposes of measuring savings achieved from the deployment of smart meters.[5] In addition, the Commission directed the Companies to provide detailed information on cost savings baseline measures as of December 31, 2013 and explain how cost savings will be calculated as part of the next SMT-C rate filing to be made August 1, 2014. It further requested that the Companies file similar information each year with subsequent SMT-C rate filings.

[5] *See Joint Petition of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company and West Penn Power Company For Approval of Their Smart Meter Deployment Plan*, Docket Nos. M-2013-2341990, M-2013-2341991, M-2013-2341993, and M-2013-2341994 (Order entered March 6, 2014).

Q. Will the Companies be filing December 31, 2013 baseline data in this proceeding?

A. No. The Companies are proposing to establish a cost baseline as of April 30, 2016 to measure savings achieved from the deployment of smart meters. The Companies believe the April 30, 2016 baseline date is more appropriate than December 31, 2013 because: (1) it is consistent with the end of the FPFTY period which is being used to determine the smart meter revenue requirements being rolled into base rates; and (2) the Companies do not anticipate achieving any meaningful savings from the deployment of smart meters until sometime after May 2016.

Q. How will cost savings resulting from smart meters be identified and flowed through to customers?

A. First, each Company is establishing smart meter baseline costs for eight categories as of April 30, 2016, and one category as of March 31, 2014,[6] as shown in Met-Ed/Penelec/Penn Power/West Penn Exhibit LWG-3. Four of those categories were identified by the Companies in their Smart Meter Deployment Plan that was approved by the Commission: (1) meter reading; (2) meter services; (3) back-office; and (4) contact center. In addition, the Companies have committed to investigate five additional categories[7]: (1) reduction in theft of service; (2) revenue enhancements; (3) avoided capital costs; (4) distribution operations; (5) and load research. Once the baseline costs

[6] Baseline costs for the "avoided capital cost" category, which includes legacy meters, were established based on the March 31, 2014 material and supply inventories included in rate base.

[7] As part of the Companies' most recent smart meter proceeding, the Companies agreed to investigate certain costs categories that were identified by the Office of Consumer Advocate ("OCA"). In addition, West Penn committed, as part of an earlier smart meter settlement at Docket No. M-2009-2123951, to investigate certain costs. The Companies are addressing all of the items identified by OCA and in the earlier West Penn settlement, except for credit and collections. The Companies have not included this category in their baseline because the Commission has not adopted rules authorizing the use of smart meter for customer shut-offs, which would be the predominant, if not sole, source of savings in this category.

are established and approved by the Commission, any cost savings moving forward will be reflected as an offset to the costs that will be included in the SMT-C Riders.

Q. How did the Companies determine the cost baseline for the four categories that were part of their Smart Meter Deployment Plan?

A. ***Meter Reading***. The Companies have developed the projected baseline by tracking the following: (i) labor costs, which include headcount, salary, overtime benefits and taxes; (ii) meter reader reductions due to attrition and retirement; (iii) total severance costs; (iv) total cost of uniform supplies; (v) fleet costs, which include lease, license, direct parts and labor, indirect parts and labor, and fuel; (vi) the estimated expense of personal mileage; (vii) handheld costs, which include both maintenance and replacement costs; and (viii) the cost of claims.

Meter Services. The Companies have developed the projected baseline by tracking the following: (i) labor costs-original roles, which include headcount, salary, overtime benefits and taxes; (ii) total severance costs; (iii) total cost of uniform supplies; (iv) fleet costs, which include lease, license, direct parts and labor, indirect parts and labor, and fuel; (v) original tablet costs, which include both maintenance and replacement costs; (vi) new device costs; (vii) staff retraining costs; and (viii) labor costs-new roles, which include headcount, salary, overtime benefits and taxes.

Back-office. The Companies have developed the projected baseline by tracking the following: (i) labor costs, which include headcount and salary, and severance costs; and (ii) staffing updates.

Contact Center. The Companies have developed the projected baseline by tracking the following: (i) labor costs, which include headcount and salary; and (ii) staffing updates.

Q. How will the Companies determine the cost baselines for the five additional categories that were not part of their Smart Meter Deployment Plan?

A. ***Reduction in Theft of Service***. Revenues recovered due to theft of service currently are not separately recorded on the Companies' books. If the Companies are successful in recovering any revenues as a result of theft of service, they are booked as retail revenues. Therefore, the baseline for this category is zero and when the Companies do record any recovered revenues due to the discovery of theft, the savings will be flowed to customers through the SMT-C Rider.

Revenue Enhancements. This category refers to a reduction in the lag between the time a meter is read and when a bill is produced. The Companies currently recognize a 1.5 day lag, as supported by the Direct Testimony of Patricia M. Larkin in Met-Ed/Penelec/Penn Power/West Penn Statement No. 6. Because smart meters could possibly reduce this lag, a baseline cost associated with this 1.5 day delay has been established for purposes of measuring savings.

Avoided Capital Costs. This category refers to legacy meters and meter services handheld equipment used for meter reading that the Companies will no longer have to purchase as they are replaced with smart meters. As noted earlier, baseline costs were established based on the March 31, 2014 material and supply inventories included in rate base. Savings will accrue as these legacy inventories get smaller.

Distribution Operations. This category refers to the costs associated with sending a utility crew to a customer's location in response to a customer reported power outage. Smart meters could reduce the number of these "truck rolls" by allowing the Company to remotely determine whether the smart meter at the customer's location still has power. If the smart meter still has power, the problem is likely on the customer side of the meter and a truck roll may be avoided entirely. The Companies do not currently track, and have not separately budgeted for, costs associated with truck rolls where the problem is on the customer side of the meter. Therefore, the Companies are utilizing a baseline of zero and all savings will be shown in the form of a negative value in this category. The Companies will track the number of truck rolls avoided as a result of smart meters and will determine cost savings by looking at vehicle fuel expense, line department employee payroll, including overtime and training expenses.

Load Research. This category refers to a statistical sampling of customers with specialized interval meters that provide information to the Companies so as to determine appropriate load shapes for each customer class. The Companies are not currently conducting load research; therefore, there are no costs for load research in the budget. However, there are interval meters in the field that are capable of being used for load research and it is the cost of those existing load research meters that are in the baseline.

Q. When will measured savings be included in the SMT-C Riders?

A. The savings will be included in the SMT-C Riders once they are substantial enough to be billable. The Companies will measure savings on a monthly basis and accumulate the amount of cost savings during each reconciliation year and include billable savings either

in the form of a negative SMT-C rate or as an offset to costs in the SMT-C rates to be filed August 1 and effective the following January.

Q. What do you mean that the savings must be billable?

A. Met-Ed, Penelec, and Penn Power residential, commercial and industrial SMT-C rates, as well as West Penn commercial and industrial SMT-C rates, are billed on a twelve-month average meter count. The billing system can bill rates that are one hundredth of a cent; therefore, the amount of savings must be 12 cents per customer in order to be billable. At West Penn, the SMT-C residential rate is on a kWh basis, so the amount of accumulated savings should exceed $0.00001 for an average 1000 kWh customer.

Q. Will incremental smart meter costs or savings be included in the SMT-C Rider on a permanent basis?

A. No. During future base rate proceedings, the Companies will propose to move the recovery of any incremental costs or savings from the SMT-C Rider to base distribution rates.

Q. Does this conclude your direct testimony?

A. Yes, it does.

Resume: Education and Experience of Laura W. Gifford

Education:

1978	Bachelor of Arts Degree in Business Economics - The College of Wooster, Wooster, Ohio
1999 – Present	Various utility industry conferences and seminars addressing issues in the areas of Utility Finance, Electric Utility Operations, Rate Design, FERC Organization and Transmission Pricing

Experience:

7/78 – 3/79	Trust Accountant - Union Commerce Bank, Cleveland, Ohio
5/79 – 5/82	New Business and Pension Coordinator – Connecticut General Life Insurance Company/CIGNA, Buffalo, NY
9/88 – 9/92	Director of Mom's Morning Out – St. John's Lutheran Church, Sinking Spring, PA
9/92 – 10/94	Office Manager/Medical Secretary – Southeastern Berks Internal Medicine Associates, Reading PA
10/94 – 2/97	Senior Customer Service Representative/Medical Claims Processor – AETNA Life Insurance Company, Reading, PA
2/97 – 8/98	Employed as Customer Service Representative – Customer Service Department of GPU Energy
8/98 – 5/00	Rate Analyst – FERC Activity within the Rate Department – GPU Energy
5/00 – 11/01	Rate Analyst – Rate Activity within the Rate Department – GPU Energy
11/01 – 3/03	Associate Business Analyst – Rates & Regulatory Affairs – Pennsylvania – FirstEnergy Service Company
3/03 – 3/05	Business Analyst – Rates & Regulatory Affairs – Pennsylvania – FirstEnergy Service Company
3/05 – 12/06	Advanced Business Analyst – Rates & Regulatory Affairs – Pennsylvania – FirstEnergy Service Company
12/06 – 3/12	State Regulatory Analyst IV / Senior Business Analyst – Rates & Regulatory Affairs – Pennsylvania – FirstEnergy Service Company
3/12 – Present	State Regulatory Analyst V – Rates & Regulatory Affairs – Pennsylvania – FirstEnergy Service Company

Prepared and presented testimony in the following rate-related cases:

I. INTRODUCTION AND PURPOSE 1

II. CASH WORKING CAPITAL - OVERVIEW 3

III. SUMMARY OF CASH WORKING CAPITAL REQUIREMENTS 14

DIRECT TESTIMONY
OF
PATRICIA M. LARKIN

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is Patricia M. Larkin and my business address is 2800 Pottsville Pike, Reading, Pennsylvania 19612.

Q. Ms. Larkin, by whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company as a State Regulatory Analyst in the Rates and Regulatory Affairs Department – Pennsylvania.

Q. What are your responsibilities as a State Regulatory Analyst?

A. Generally, the Pennsylvania Rates and Regulatory Affairs Department provides regulatory support for Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power") and West Penn Power Company ("West Penn") (collectively, the "Companies"). I am responsible to the Manager of Rates and Regulatory Affairs for the preparation and coordination of the Companies' accounting and financial data in all their rate-related matters before the Pennsylvania Public Utility Commission ("Commission") and the New York State Public Service Commission, including the preparation of statements and reports addressing, among other things, energy costs, regulatory program cost recovery, quarterly earnings, and other financial matters. Also, I am responsible for the administration of the Companies'

wholesale tariffs, the development of retail electric rates and the promulgation of rules and regulations ensuring uniform tariff administration and interpretation.

Q. What is your educational background?

A. I graduated from Allentown College St. Francis DeSales in 2000 with a Bachelor of Science degree in Accounting and Alvernia College in 2003 with a Master in Business Administration degree. I have over fourteen years of experience with GPU Energy/FirstEnergy Corp. My work experience is more fully described in Appendix A.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying in this proceeding on behalf of Met-Ed, Penelec, Penn Power and West Penn. My testimony equally applies to all of the Companies, unless otherwise stated.

Q. Ms. Larkin, have you prepared exhibits to accompany your testimony?

A. Yes. Met-Ed Exhibit PML-1, Penelec Exhibit PML-1, Penn Power Exhibit PML-1 and West Penn Exhibit PML-1 (collectively, "Exhibits PML-1"), were prepared by me or under my supervision and are described in detail in my testimony.

Q. What is the purpose of your direct testimony?

A. The purpose of my direct testimony is to describe the process I used to determine the total Cash Working Capital requirement for each of the Companies as shown on Page 1 of Exhibits PML-1.

II. CASH WORKING CAPITAL - OVERVIEW

Q. Please define "Cash Working Capital" as it pertains to ratemaking.

A. For ratemaking purposes, Cash Working Capital is generally defined as the average amount of capital provided by investors, over and above the investment in plant and other specifically identified rate base items, to bridge the gap between the time expenditures are required to provide service and the time collections are received for that service. Cash Working Capital is determined for ratemaking purposes by a Lead/Lag Study.

Q. Please define the terms "lead" and "lag" as used in your testimony and explain how each is calculated.

A. In general, a lead or a lag measures the time that elapses between receipt of a product or service and receipt of compensation by the party providing that product or service. A lead occurs when payment is made in advance of receiving a product or service. A lag occurs when payment for a product or service occurs after the product has been received or service has been rendered. Exhibits PML-1 quantify lead or lag time in days, depict all identified lags as positive figures, and depict all identified leads as negative figures.

Q. What time period was used for the Companies' Lead/Lag Studies?

A. These studies incorporate projected financial data for the twelve months ended April 30, 2016. Fully normalized Electric Revenues, reflecting distribution revenues at proposed rates, were used to calculate revenue lag.

Q. What was the source of the relevant data used to calculate Cash Working Capital?

A. For the most part, I used financial data for the fully projected future test year that underlie the development of the Companies' revenue requirement shown in exhibits accompanying Met-Ed/Penelec/Penn Power/West Penn Statement No. 2, the direct testimony of Richard A. D'Angelo. However, the determination of Cash Working Capital and the development of revenue requirement are interdependent because changes in Cash Working Capital will affect rate base and net income. Performing the Cash Working Capital and revenue requirement calculations on an iterative basis reduces, but does not eliminate, the impact of that interdependence. Appropriate adjustments to the pro forma distribution revenue, federal and state income taxes, and Pennsylvania gross receipts taxes were made in my Cash Working Capital calculations to account for that interdependence.

Q. Have you prepared a summary showing each of the components that comprise the Total Cash Working Capital for each Company?

A. Yes, I have. Page 1 of Exhibits PML-1 shows each component of the total Cash Working Capital requirement. Using Met-Ed's Exhibit PML-1 to illustrate, the Cash Working Capital requirement associated with revenue lag is $152,122,000, as shown at line 3, column 7. The average lag in payment of the Companies' operating expenses reduces the Cash Working Capital requirement. For Met-Ed, this reduction is $37,061,000 as shown at line 11, column 7. On average, taxes

are paid in advance of the service period to which they relate, which adds to Cash Working Capital requirements ($1,304,000 in the case of Met-Ed as shown at line 22, column 7). The Net Cash Working Capital (shown at line 26, column 7) is the sum of those figures – in Met-Ed's case, $116,365,000 (line 27, column 7). Prepayments and Unamortized Cash Pension Contributions are other elements of Cash Working Capital, as shown at lines 28 and 29, which bring the Total Cash Working Capital, in Met-Ed's case, to $147,828,000, as shown at line 30. Column 8 of the summary identifies the page of Exhibits PML-1 where I developed the lead/lag days for the applicable components of Cash Working Capital.

Q. How did you calculate the lag associated with Electric Revenue?

A. Payment for electric service occurs after service is provided, which produces a lag in receipt of revenues. To calculate total revenue lag, Electric Revenue lag was calculated separately for the periods: (1) from billing to cash collection ("Collection Lag"); (2) from meter reading to billing "Billing Lag"); and (3) from the mid-point of the service period to meter reading ("Service Period Lag").

Collection Lag is the period from mailing a customer's bill until payment is received for that bill. This lag was calculated based on the turn-over in accounts receivable. The ratio of accounts receivable to total billed revenues (identified as "Accounts Receivable Turnover" at page 3 of Exhibits PML-1) is divided into 365 days to derive the average number of days accounts receivable are outstanding or, in other words, the average

time between issuing a bill and collecting a bill. That figure, in days, is the Collection Lag, which, in Met-Ed's case, is 48.5 days.

Billing Lag is the period from the reading of a customer's meter until the bill is mailed. Generally, the bill is prepared the same day the meter is read and is mailed the next day. However, there are exceptions. Reading the meters of large industrial customers can take an additional day because there is more work involved given the nature of the service such customers receive. Also, weekends, holidays, and severe weather may add to the time to read and bill customers. Accounting for these exceptions, the Billing Lag is 1.5 days.

Service Period Lag is measured from the mid-period of the service period to the date a meter is read. Because bills are typically issued once per month, or twelve times per year, the Service Period Lag is 15.2 days (365 days per year/12 billing cycles per year/2). This calculation assumes that electric usage is uniform throughout the month.

The overall Electric Revenue lag is the sum of the Collection Lag, Billing Lag and Service Period Lag, as shown on page 3 at line 21 of Exhibits PML-1. In Met-Ed's case, Total Revenue Lag is 65.2 days.

Q. How did you calculate the lead or lag associated with Other Operating Revenue?

A. The calculation of the Other Operating Revenue lag is shown on page 4 of Exhibits PML-1, which lists each of the individual components of Other Operating Revenue and their respective lead or lag. Lag in receipt of Late Payment Charges and Miscellaneous Service Revenues were calculated with overall Electric Revenue lag because each component is billed with Electric Revenue. The footnotes at the bottom of page 4 explain how leads and lags were calculated for other components of Other Operating Revenue. Total Other Operating Revenue lag is the dollar-weighted average lag time calculated by dividing total (Lead)/Lag Dollars (line 11, column 6) by Total Other Operating Revenue in (line 11, column 4).

Q. Please explain the lag associated with the payment of Energy Costs.

A. The lag days associated with Energy Costs are shown on page 5 of Exhibits PML-1. This measures the average lag between the Companies' receipt of generation service from suppliers of default generation until the Companies pay for that service. The period from the midpoint to the end of each monthly service period is 15.2 days, which assumes uniform purchases over any given month. The Companies' Default Service Supplier Master Agreements require payment on the first business day after the 19th of the month, or twenty days after the end of the service period. The lag is, therefore, 35.2 days (15.2 + 20 days).

Q. How was the lag associated with Payroll determined?

A. Payroll is divided into five categories: Bi-weekly Payroll, Weekly Payroll, Payroll-Adjustments, Payroll Taxes, and Incentive Compensation. A weighted average lag time was calculated for each component, as shown on page 7 of Exhibits PML-1. The lags for each component of Payroll vary among the Companies due to: (1) differing payroll periods; (2) variations in the use of direct deposit and paper checks; and (3) the ratio of Weekly Payroll to Bi-weekly Payroll. The total dollar-weighted Payroll lag time is calculated on page 6 of Exhibits PML-1 by dividing total (Lead)/Lag dollar (line 6, column 6) by total Payroll (line 6, column 4).

Q. Please identify the components of Employee Benefits and explain how the leads and lags were calculated for each component.

A. The principal components of Employee Benefits consist of: (1) Medical Insurance; (2) Life Insurance; (3) Savings Plan Match; (4) Worker's Compensation and Long-Term Disability ("LTD") Insurance; and (5) Other Post-Employment Benefits ("OPEB"). The footnotes on page 8 of Exhibits PML-1 describe how the lag was calculated for each category. The total dollar-weighted average lag for Employee Benefits is shown at line 7, column 6, on page 8.

Q. Please explain how you calculated the lag in payment of the Service Company O&M Allocation.

A. The lag associated with the Service Company O&M Allocation is based on the period from the midpoint of the monthly service period to the date the

intercompany accounting transaction closes. Under the Companies' Service Agreement with FirstEnergy Service Company ("Service Company") and accompanying annual Service Requests, the intercompany accounting transactions occur on the last day of the service period, which is the date when the Service Company bills for those transactions. The bills are paid as part of the monthly accounting close on the same day. Therefore, the lag in payment is 15.2 days. This calculation is shown on page 9 of Exhibits PML-1.

Q. How did you calculate the lag for Other O&M-Distribution?

A. Other O&M-Distribution consists of non-labor related expenses incurred in the normal course of business for products and services that are not addressed elsewhere in Exhibits PML-1. The lag was calculated as the sum of: (1) the period from the midpoint to the end of the monthly service period; and (2) the thirty-day "default" payment period incorporated in the Companies' accounts payable system. This calculation is shown on line 4 of page 9 of Exhibits PML-1.

Q. How did you calculate the lag for Other O&M-Riders?

A. The Companies incur expenses for services and functions provided pursuant to its Universal Service Charge ("USC"), Energy Efficiency and Conservation Charge ("EEC"), Smart Meter Technologies Charge ("SMT"), and Default Service Support ("DSS") Riders. Each of these categories and their associated payment terms are shown on page 10 of Exhibits PML-1 and further explained by footnotes on page 11. The categories and dollar amounts for the USC and EEC Riders are based on the Companies' 2015 Universal Service and Energy

Efficiency and Conservation Plans. The categories and dollar amounts associated with the SMT and DSS Riders are based on the Companies' forecast for the twelve months ending April 30, 2016, as adjusted for ratemaking purposes. The lag days for each category consist of the period from the midpoint of the relevant service period to the applicable vendors' payment dates, which were obtained from personnel responsible for administering each of these programs. For any costs that relate to services provided internally, the lag used is the same as the lag for Service Company O&M Allocation discussed previously.

Q. How did you calculate the lag for Uncollectible Accounts expense?

A. Uncollectible Accounts expense is not considered a cash expense and, therefore, was not included in calculating the Cash Working Capital requirement, as explained in footnote (d) on page 9 of Exhibits PML-1.

Q. How did you calculate the leads and lags associated with Taxes?

A. A weighted average lead or lag was calculated based on the required payment dates and percentage of the payment due on those dates for each tax listed on page 12 of Exhibits PML-1. The calculation of each weighted average lead or lag is set forth on page 13 of Exhibits PML-1.

Q. Why did you assign Depreciation, Amortization, Provision for Deferred Income Taxes and Investment Tax Credit a zero lag?

A. These are considered non-cash items by the Commission and, therefore, they were not included in calculating the Cash Working Capital requirement, as shown on page 1, lines 12, 13, 23, and 24 of Exhibits PML-1.

Q. Was any element of the return on invested capital included in the Companies' Lead/Lag Studies?

A. No element of the return on invested capital was included in calculating Cash Working Capital in Exhibits PML-1. A return on invested capital, in any form, becomes the property of the utility's investors when service is rendered. Consequently, even if some portion of that stream of income were available for use as working capital before being paid out as interest or dividends, it would represent the use of investor-supplied capital to cover the on-going costs of providing service to customers and, as such, does not reduce the Companies' Cash Working Capital requirement.

Q. Why are Prepayments included in the Companies' Cash Working Capital?

A. The Companies must pay certain costs before such costs are charged to expense for accounting and ratemaking purposes. Prepayments are cash expenditures that, while made in one period are not charged to expense until a future period. The claim for Prepayments is based on a thirteen-month average of the various prepaid items, including Prepaid Commission Assessments, Prepaid Property and Liability Insurance, Prepaid Edison Electric Institute ("EEI") Dues Assessments,

and Other Prepaid items, which include rating agency fees, financing fees, line of credit fees, and trustee fees. The detailed calculations of Prepayments are shown on page 14 of Exhibits PML-1.

Q. Please explain the basis for including Unamortized Cash Pension Contributions in the Companies' Cash Working Capital claim.

A. In Met-Ed's and Penelec's 2006 base rate cases, the Commission approved the recovery of pension expense calculated on the basis of a ten-year historical average of actual cash contributions. In its Final Order in that case, the Commission stated:

> Fundamentally, we believe that, regarding the recovery of pension expense, the alternative method requested by MEPN [the Companies] in this proceeding is fair to both ratepayers and stockholders. The Companies' normalization methodology will provide a more consistent and less variable expense claim to be included within base rates as compared to the more significant sums contributed in the two years preceding the 2006 test year in this proceeding. Additionally, we should not ignore this significant benefit to current and former employees just because the Companies' did not make a contribution to the pension fund during any given year."[1]

Q. How does recovering a cash contribution to the pension plan over a ten year period create a working capital need?

A. The Companies have made large cash contributions to their pension trust fund over the last ten years. For ratemaking purposes, the Companies recover those cash outlays over ten years. Throughout those ten years, the Companies bear the

[1] *Pa. PUC v. Metropolitan Edison Company, Pennsylvania Electric Company*, Docket Nos. R-00061366, *et. al*, p. 92 (Order entered January 11, 2007).

carrying costs associated with the prior period expenditures that they made but have not recovered in base rates. That unrecovered amount constitutes the Unamortized Cash Pension Contributions that form the basis for the Companies' claim, as shown on page 15 of Exhibits PML-1.

Q. Did you consider the effect of the earnings on the pension trust fund in your Cash Working Capital claim?

A. Yes. The average earnings on the pension trust fund are reflected in the calculation of the amount of cash contributions and, in that way, reduce the cash contribution. Stated another way, earnings on the cash contributions accrue to the benefit of the fund, reduce the Companies' contribution obligations, and, in that way, provide an "upfront" benefit to customers.

Q. Was Pension expense included in the Companies' Cash Working Capital requirement as a component of their Lead/Lag Studies?

A. No, it was not. Pension expense is shown on page 1, line 7, of Exhibits PML-1 at a zero lag. Thus, pension expense is reflected in the Cash Working Capital requirement only once, through the Unamortized Cash Pension Contribution Balance I described above.

Q. How does the methodology used to calculate the Total Cash Working Capital claim for the Companies in this case compare to that employed by Met-Ed and Penelec in their previous base rate proceedings?

A. Except for the inclusion of Unamortized Cash Pension Contributions to reflect the Cash Work Capital requirement associated with pension expense, the Companies are using the same methodology in this case that Met-Ed and Penelec employed in their 2006 base rate cases at Docket Nos. R-00061366 and R-00061367.

III. SUMMARY OF CASH WORKING CAPITAL REQUIREMENTS

Q. Are all of Met-Ed's lead/lag calculations consistent with the general calculations you described above?

A. No. The employees belonging to the International Brotherhood of Electrical Workers Local 777 do not participate in the Company-sponsored medical insurance plan. Therefore, the weighted average lag for Medical Insurance shown on line 1 of page 8 of Met-Ed Exhibit PML-1 was calculated based on the medical insurance lag appropriate to the expenses incurred for Local 777 employees in addition to the balance of Met-Ed's employees who do participate in the Company-sponsored medical insurance plan.

Q. Please summarize your testimony and recommendations regarding Met-Ed.

A. Met-Ed has supported a Total Cash Working Capital requirement of $147,828,000, as shown on page 1, line 30, of Met-Ed Exhibit PML-1.

Q. Are all of Penelec's lead/lag calculations consistent with the general calculations you described above?

A. Yes. The calculations set forth in Penelec Exhibit PML-1 are consistent with the calculations I described above.

Q. Please summarize your testimony and recommendations regarding Penelec.

A. Penelec has supported a Total Cash Working Capital requirement of $124,842,000, as shown on page 1, line 30, of Penelec Exhibit PML-1.

Q. Are all of Penn Power's lead/lag calculations consistent with the general calculations you described above?

A. Yes. The calculations on Penn Power Exhibit PML-1 are consistent with the calculations I described above.

Q. Please summarize your testimony and recommendations regarding Penn Power.

A. Penn Power has supported a Total Cash Working Capital requirement of $27,636,000, as shown on page 1, line 30, of Penn Power Exhibit PML-1.

Q. Are all of West Penn's lead/lag calculations consistent with the general calculations you described above?

A. Yes. The calculations on West Penn Exhibit PML-1 are consistent with the calculations I described above.

Q. Please summarize your testimony and recommendations regarding West Penn.

A. West Penn has supported a Total Cash Working Capital requirement of $117,080,000, as depicted on page 1, line 30, of West Penn Exhibit PML-1.

Q. Ms. Larkin, does this complete your direct testimony?

A. Yes, it does.

Resume: Education and Experience of Patricia M. Larkin

Education:

2000	Bachelor of Science Degree in Accounting – Allentown College of St. Francis de Sales
2003	Master of Business Administration Degree – Alvernia College

Experience:

6/00 - 8/07	Accountant – Property Accounting Services – GPU Energy
8/07 - 9/08	Accountant – Accounting Research – FirstEnergy Service Company
9/08 - 6/12	Accountant – General Accounting Services (Regulatory Accounting focus) – FirstEnergy Service Company
6/12 – Present	Analyst – Rates & Regulatory Affairs – Pennsylvania – FirstEnergy Service Company

Assisted in development and preparation of filings in the following rate-related proceedings:

DIRECT TESTIMONY
OF
KEVIN M. SIEDT

I. INTRODUCTION AND BACKGROUND

Q. Please state your name and business address.

A. My name is Kevin M. Siedt. My business address is 2800 Pottsville Pike, Reading, Pennsylvania 19612.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company as an Analyst in the Rates and Regulatory Affairs Department – Pennsylvania.

Q. What are your responsibilities as an Analyst?

A. Generally, the Rates and Regulatory Affairs Department provides regulatory support for Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power"), and West Penn Power Company ("West Penn") (each of which may be referred to as "Company" and/or collectively the "Companies"). As an Analyst in the Rates and Regulatory Affairs Department, my responsibility is to support the development, preparation, and presentation of the Companies' retail electric rate design and related rules and regulations, and ensure the uniform administration and interpretation in all the Companies' rate-related matters before the Pennsylvania Public Utility Commission ("Commission"). I also am responsible for, among other things, default service plan development and implementation, recovery of non-utility generation costs, regulatory program cost recovery and other financial matters.

Q. What is your educational background and work experience?

A. I obtained a Masters Degree in Business Administration from Moravian College in 1994. I am also a graduate of Rowan University where I received a Bachelor of Science Degree with a major in Accounting and Finance in 1984. My work experience is more fully described in Appendix A.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying on behalf of Met-Ed, Penelec, Penn Power and West Penn. My testimony applies to all of the Companies, unless otherwise stated.

Q. What is the purpose of your direct testimony?

A. My testimony addresses: (i) the annualization and normalization of sales and revenues used in the Companies' cost-of-service studies; (ii) the rate design methodology used to develop the distribution rates proposed in this proceeding; (iii) a customer impact analysis, which compares bills at current and proposed rates; and (iv) a proof of revenue analysis.

Q. Have you prepared and are you sponsoring exhibits to accompany your testimony?

A. Yes. As discussed in more detail later in my testimony, I am sponsoring Exhibits KMS-1 through KMS-7 for each of the Companies, which were prepared by me or under my supervision. The subjects addressed in each of these exhibits are summarized below:

KMS-1 These exhibits consist of Attachments A, B and C, reflecting normalized sales and revenues for the test years ending April 30, 2016, March 31, 2015, and March 31, 2014, respectively

KMS-2 Summary of Present and Proposed Distribution Revenues

KMS-3 Reactive Billing Demand Charge Calculation

KMS-4 TOU Aggregation Agreement (Met-Ed and Penelec Only)

KMS-5 Proof of Revenues Analyses

KMS-6 Customer Impact Analyses

KMS-7 Cost Curves

KMS-8 Responses to the following Commission filing requirements:

52 Pa. Code § 53.52 (a)-(d)
52 Pa. Code § 53.53 - IV-A-1
52 Pa. Code § 53.53 - IV-A-2
52 Pa. Code § 53.53 - IV-A-3
52 Pa. Code § 53.53 - IV-A-4
52 Pa. Code § 53.53 - IV-A-5
52 Pa. Code § 53.53 - IV-C
52 Pa. Code § 53.53 - IV-D-1
52 Pa. Code § 53.53 - IV-D-2
52 Pa. Code § 53.53 - IV-E-2

In addition, I am sponsoring: (1) modifications to Riders A, L, M (all Companies) and P (Met-Ed and Penelec only) to the Companies' proposed tariffs, which are identified as each Companies' Exhibit 1 and, for service to the Pennsylvania State University, West Penn Company Exhibit 2; and (2) all modifications to the rate schedules in the Companies' proposed tariffs. The modifications to the Companies' riders and rate schedules for which I am responsible are discussed further in this testimony.

II. ENERGY SALES AND REVENUE NORMALIZATIONS

Q. What was the basis for developing each Company's claim for energy sales, demand and base rate revenue for the fully projected future test year?

A. The starting point for each Company's claim was the budget forecast of energy sales, demand and base rate revenue for the twelve months ending April 30, 2016. The budget forecast was developed by reviewing current customer consumption data, conducting

appliance saturation surveys and analyzing actual historical customer usage for the past several years to identify patterns and trends. That information was used to develop detailed projections of the actual billing determinants (number of customers, demand (in kW) and energy (in kWh)) for each rate schedule. The actual charges for each component of each rate schedule were applied to the applicable billing determinants (customers, kW or kWh) to project the revenue to be billed under each rate schedule by month for the fully projected future test year. This detailed process assures that revenue under proposed rates can be directly tied in to the billing determinants underlying the Companies' revenues under existing rates that are used to calculate their revenue deficiency in this case.

Q. In developing the Companies' revenue claims in this case, were the budget projections and, specifically, the application of rates to the projected billing determinants reviewed for computational accuracy?

A. Yes. The budget forecasts were found to be very accurate. However, in a few instances either the billing determinants or the rates used in the budget projections did not align precisely with the more detailed and granular information available to the Rates and Regulatory Affairs Department for certain rate schedules. Consequently, I made appropriate adjustments to the budget data. Those adjustments are both few in number and very small in their impact, representing a net increase in total normalized revenue of the Companies of 0.02%, as shown in Exhibits KMS-1, Attachment A, page 3, column 14 and within the associated footnotes. Although these adjustments do not have a material impact on revenues, they were made to assure that billing determinants are properly stated for each rate schedule so that pro forma revenues at existing and proposed rates

can be tied in directly to the budget data that formed the starting point for developing the Companies' revenue claims in this case.

Q. Were any adjustments made to the budget forecast data to present energy sales, demand and base rate revenue on a ratemaking basis?

A. Yes. Adjustments for ratemaking purposes were made to annualize and normalize the budget data. Annualization is the process of adjusting budgeted sales and revenues projected to be billed over a full test year to reflect the level of sales and revenues as of the end of the test year. In that way, pro forma sales and revenues are stated on a basis that properly reflects sales and revenues to be experienced going forward. Normalization is the process of adjusting budgeted sales and revenues to remove outliers and anomalies from the test year data. Thus, unusual events and one-time effects are "normalized" to reflect ongoing conditions.

Q. Have you prepared an exhibit setting forth annualized and normalized sales and revenues?

A. Yes, I have. Annualized and normalized sales and revenues are presented in Attachments A through C of Exhibits KMS-1 for the twelve months ending April 30, 2016, March 31, 2015, and March 31, 2014, respectively. Summaries of each Company's distribution revenues under existing and proposed rates are provided in Exhibits KMS-2. The principal adjustments to the budget forecast data were made to annualize the sales and revenue effect of customers added during the test year and to normalize and annualize sales levels to reflect reductions attributable to measures that have been or will be implemented under the Companies' Commission-approved Energy Efficiency and

Conservation ("EE&C") Plans, which were adopted pursuant to Section 2806.1 of the Pennsylvania Public Utility Code.

Q. Please describe the adjustment made to budget forecast data for the twelve months ending April 30, 2016 to annualize revenues for changes in number of customers.

A. In accordance with the Commission's filing requirements, an adjustment was made to annualize energy usage and demand for the difference between the monthly average number of customers forecasted for the fully projected future test year and the number of customers forecasted for the end of the fully projected future test year. Usage (kWh) and demand (kW) forecasted for the fully projected future test year were divided by the monthly average number of customers at mid-month (for each month) to calculate the average usage and average billed demand per customer. The average usage (in kWh) and average demand (in kW) per customer were multiplied by the difference between the monthly average number of customers and the number of customers forecasted for the end of the test year to determine the additional kWh and kW to be added to the budget forecast to annualize sales and revenue.

The additional revenues attributable to the customer annualization were calculated by multiplying the additional billing determinants (customers, kW or kW) derived from the customer annualization by the applicable customer, demand or energy charges to determine the additional revenue attributable to annualization. This calculation is shown in Exhibits KMS-1, Attachment A, page 3, column 12.

Q. Please describe the adjustments made to budget forecast data for the twelve months ending April 30, 2016 to normalize and annualize revenues for conservation measures implemented or to be implemented pursuant to the Companies' EE&C Plans.

A. The energy sales that were forecasted by rate schedule for the fully projected future test year reflect anticipated usage reductions from energy efficiency measures implemented in accordance with the Companies' Commission-approved EE&C Plans. The forecasted reductions are reflected by month from May 1, 2015 through April 30, 2016. The revenue reductions for the entire fully projected future test year were calculated by annualizing the usage reduction targets that the Companies must achieve by the end (May 30) of the 2016 EE&C plan year. The annualized amount was netted against the monthly savings already included in the fully projected future test year sales forecast to derive the additional energy efficiency normalization adjustment. The same approach was used to annualize and normalize behind-the-meter generation to derive a total energy efficiency normalization adjustment. The revenue effect of the annualization was calculated by multiplying the annualized energy efficiency sales reductions by the average rate per customer by rate schedule.

III. RATE DESIGN

Q. When was each Company's current rate design established?

A. Met-Ed's and Penelec's current distribution base rates were established pursuant to the Commission's Final Order entered January 11, 2007 at Docket Nos. R-0061366 and R-0061367. Penn Power and West Penn concluded base rate cases in 1988 and 1993, respectively. However, the overall structure of each of those Companies' rates was

modified when their rates were functionally unbundled into distribution, generation and transmission components as part of their respective restructuring proceedings. Because of the time that has elapsed since each Companies' last base rate and restructuring cases, the Companies determined that their existing distribution rate designs should be reviewed to ensure that they reflect the current characteristics of electric distribution service. Accordingly, the Companies have taken this opportunity to consolidate and simplify rate designs and make them more uniform across all four Companies.

Q. What considerations, concepts and objectives underlie the rate designs proposed by the Companies?

A. The following general principles were employed in designing the proposed rates:

- Rates must be designed to produce revenues equal to each Company's revenue requirement at the appropriate billing determinants.

- Rates should be designed to properly reflect cost causation and, in that regard, the results of a cost of service study are used as a guide.

- Rates generally should be designed, if practicable, to move revenues for each rate schedule (or in some instances, customer classes consisting of aggregated rate schedules) toward that schedule's cost of service, giving due regard to factors such as gradualism, economic efficiency, relative ease or difficulty of administration, and customer understandability.

In addition to the general principles I just described, the Companies determined that in developing their proposed rates, they should strive to achieve the following objectives:

- There should be a unified distribution rate design for all four Companies. The Companies are managed on a consistent basis with a uniform set of business processes. The rate design should be aligned to conform with the Companies' operations.

- The rate design should give due consideration to the fact that distribution service has now been fully unbundled for ratemaking purposes. For Penn Power and West Penn, this case is the first opportunity to implement a rate design that focuses specifically on unbundled distribution service and does not continue to apply concepts or rate designs that are a legacy of the previously bundled rate environment.

- All else being equal, distribution rates should reflect customer demand rather than energy usage. This is because distribution costs are driven predominantly by investment in fixed assets, which does not vary with a customer's energy usage.

- With the impending implementation of the Companies' Smart Meter Deployment Plan1 and the significant investment in smart meter technology that the Plan requires, the Companies' rate design should incorporate the functionality that smart meters provide to accurately measure demand.

- The number of rate options, which in large part were a legacy of bundled rates that included generation costs, should be reduced to promote better customer

[1] *Joint Petition of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company and West Penn Power Company For Approval of Their Smart Meter Deployment Plan*, Docket Nos. M-2013-2341990, M-2013-2341991, M-2013-2341993 and M-2013-2341994 (Opinion and Order entered June 25, 2014).

understanding of the Companies' rates and to allow for more efficient tariff administration.

- Reconcilable adjustment clauses, set forth in riders to the Companies' base rates, should be used to recover certain costs that are volatile in nature and generally not under the Companies' control, consistent with the criteria for adjustment clauses established under Section 1307 of the Public Utility Code. Applying those principles, a Storm Damage Charge Rider is being proposed for all Companies to recover storm damage costs not recovered through distribution base rates.

- A Universal Service Cost Rider is being proposed for West Penn, which is modeled after the Universal Service Cost Riders previously approved by the Commission for the other Companies. Both of these riders are discussed in more detail by Kimberlie L. Bortz in Met-Ed/Penelec/Penn Power/West Penn Statement No. 3.

Q. What role did the results of cost of service studies play in designing the proposed distribution rates?

A. Cost of service studies for each of the Companies were prepared by Hillary E. Stewart, which are described in Met-Ed/Penelec/Penn Power/West Penn Statement No. 5. The results of the cost of service studies were the starting point for designing the proposed distribution rates. However, the final rate designs for the distribution rates that I am recommending also incorporate the rate design principles and objectives that I previously described, as well as my experience in designing utility rates.

Q. How did you design the proposed distribution rates?

A. I began by reviewing the rates of return produced by the various rate schedules under current rates and the fully projected future test year level of revenue requirement. The rate schedules exhibit a range of returns from positive to negative. The divergent class returns provide an indication, based on a snapshot at a specific moment in time, of the general magnitude of interclass subsidies that exist among rate classes under current rates. Based upon each Company's overall retail rate of return, the cost of service studies show that certain rate schedules are producing less than that rate of return, while others are producing rates of return in excess of the applicable Company's overall rate of return level.

Next, I reviewed the revenue that each rate schedule would have to produce to achieve a rate of return equal to the applicable Company's overall rate of return under the proposed distribution rates. This level of revenue shows the magnitude of the rate changes necessary to move each rate schedule to its cost of service as indicated by the cost of service studies.

While movement toward cost of service is an important element in designing rates, it is not the only factor that must be considered. For instance, the impact on customers' bills from implementing a range of potential rate increases must be considered. Establishing rates for each rate schedule that produce a retail rate of return equal to the applicable Company's overall rate of return is the theoretical target of the rate design process. However, the Companies understand that bringing some of the rate schedules to their indicated cost of service would impose potentially disruptive rate increases. The

proposed rate design, therefore, properly applies the principle of gradualism to mitigate customer impact.

Q. Have tables been prepared that show the rates of return under existing and proposed rates by rate schedule for each of the Companies?

A. Yes. Such tables are set forth in Ms. Stewart's direct testimony. Those tables also show the unitized rates of return ("UROR") for each rate schedule. The UROR of a rate class is the class rate of return divided by the Company's overall average rate of return. A class UROR greater than 1.0 indicates that the class revenue exceeds the class cost of service. A class UROR less than 1.0 indicates that the class revenue is less than the class cost of service. URORs are used as a guide to measure the progress that changes in rates will achieve in moving classes toward a UROR of 1.0 or "unity," which is generally accepted as a desirable goal in rate design, subject to those other rate design factors that I previously discussed.

Q. Were any specific criteria used in determining how much progress should be made in moving specific rate schedules toward unity, or cost of service?

A. Yes. In order to implement the concept of gradualism as applied to the guidance provided by the results of the Companies' cost of service studies, two general criteria were developed. The first criterion was that no customer class would experience, on average, an increase of more than 20% of total revenue assuming customers were taking default service. The second criterion was a benchmark calculated by reference to total distribution revenues. Specifically, for each rate schedule, the Companies calculated two percentages, as follows: (1) revenue equal to the rate schedule's cost of service divided

by total-Company distribution revenue under existing rates; and (2) revenue under the rate schedule's existing rates divided by total-Company distribution revenue under existing rates. The average of those two percentages became a target, such that revenue produced by each rate schedule under the proposed rates, expressed as a percentage of total-Company distribution revenue under proposed rates, would approximate the target percentage.

Q. Turning to the design of specific rates, please describe, in general, the changes the Companies propose to their existing Residential rate schedules.

A. There are two principal substantive differences between the Companies' existing Residential rate schedules and the Residential rate design proposed in this case. First, all Time-of-Day/Seasonal rate schedules were eliminated and have been (for Penn Power and West Penn[2]), or are proposed to be (for Met-Ed and Penelec), replaced with Time-of-Use Default Service Riders. While generation costs can and often do differ – sometimes significantly – based on time of use, the same is not true of the cost of providing distribution service. As I previously explained, the cost of providing distribution service is largely determined by fixed costs that do not vary with the amount of usage or the time of day when usage occurs. Time-of-day and seasonal rate schedules in the existing Met-Ed and Penelec tariffs are a vestige of bundled rates that are not applicable to distribution-only service in the current unbundled rate environment. The Time-of-Use Default Service Riders, on the other hand, are designed to recover generation costs associated with default service for residential customers. Because generation costs vary

[2] West Penn's Rider is denominated in its current tariff a "Time-of-Use Rider" not a "Time-of-Use Default Service Rider." West Penn plans to conform the name of its Rider to the names used by the other Companies.

based on time of use, the Riders provide the appropriate vehicle for recognizing time-of-use differences in such costs.

Second, the Companies propose to increase the customer charge more than the usage charge for Residential service. This approach is consistent with the principle of cost causation because it recognizes that most of the cost of providing distribution service is attributable to investment in fixed assets and does not vary based on the level of customer usage. Additionally, recovering an appropriate level of fixed costs through a fixed charge provides a more stable revenue stream, which is also consistent with the fixed nature of the costs being recovered. Stated another way, because the bulk of the cost of providing distribution service does not vary based on usage, reductions in customer use cannot be matched with reductions in the costs – largely fixed – to furnish distribution service.

Although the Companies' cost of service studies indicate that most of the Companies' costs are indeed fixed, the Companies moderated the increase in the customer charge in order to avoid larger increases for lower-usage customers. The impact of this moderating factor on the average bills of Residential customers at various usage levels is shown in each Company's Exhibit KMS-6 – Customer Impact Analyses, which I discuss later in my testimony.

Q. Do the proposed changes to Residential rate schedules you described apply to all of the Companies?

A. Yes, they do. The Companies' objective is to establish a uniform, relatively simple Residential rate design for consistent use by each of the Companies and, in so doing, to

eliminate various outdated elements of the existing Residential rate designs that are legacies of previously bundled rates.

Q. Please describe the proposed rate schedules that will apply to Commercial customers served at secondary voltage.

A. For all of the Companies, there will be three rate schedules that apply to Commercial customers, with the following availability criteria and principal rate components:

- **Rate Schedule GS Small**. This rate schedule, which will be available to customers with usage up to 1500 kWh per month, will have a modified monthly customer charge and an energy charge per kWh of usage.

- **Rate Schedule GS Medium**. This rate schedule, which will be available for customers with billed demand of up to 400 kW for at least two consecutive months, will have a modified customer charge per month, a per-kW demand charge, a reactive billing demand charge, and a relatively low energy charge.

- **Rate Schedule GS Large**. This rate schedule, which will be available for all customers exceeding 400 kW of billed demand, will also have a modified customer charge per month, a per-kW demand charge, a reactive billing demand charge, and a relatively low energy charge.

Q. What is a reactive billing demand charge as proposed for use in Rate Schedules GS Medium and GS Large?

A. A reactive billing demand charge encourages efficient use of power by customers. Reactive power is in effect wasted energy that, as explained below, requires the

Companies to make additional investments in distribution facilities to correct for the adverse effects of customers' poor power factors. The Companies will calculate a "power factor" for each customer to determine whether the reactive billing demand charge will be applied.

Q. What is "power factor?"

A. Power factor is the ratio of the "real" power flowing to a load (measured in kW) to the "apparent" power (measured in Kilovars or "kVA") in the circuit. Real power is the capacity of the circuit for performing work in a particular time. Apparent power is the power, in excess of real power, needed to serve a load with a poor power factor. Thus, a load with a poor power factor draws more current than a load with a high power factor for the same amount of useful power transferred. In summary, power factor measures how efficiently power is being used by comparing the amount of energy supplied to the circuit (kVA) to the actual amount of energy (kW) used to perform work at a particular point in time. To illustrate the concept, consider a horse pulling a railroad car down a railroad track. Because the railroad ties are uneven, the horse must walk at the side of the track and pull the car at an angle from the centerline of track. The power that would be required to move the car down the track if the motive force were applied along the centerline of the track is the real power (i.e., kW). The effort expended by the horse, pulling from one side of the track, is the total (apparent) power (kVA). The angle by which the horse's pull diverges from the centerline determines the power factor. As the angle to the centerline gets smaller (i.e., as the horse walks closer to the center of the track), the force required to pull the car is reduced and the power factor improves.

The Companies propose that the reactive power be assessed at the unit of measurement for reactive power on a per-reactive kilovolt-ampere ("rKVA") basis. This charge will apply to secondary and primary customers with three-phase service.

Q. Why is it appropriate to include a reactive power charge in distribution rates?

A. A reactive power charge is appropriately included in distribution rates for certain rate schedules because the way to correct for the distortion created by customers' poor power factors is to install capacitors on the distribution system. Capacitors are part of the fixed assets that comprise the distribution system and, as such, their cost is properly reflected in distribution rates and, consistent with principles of cost causation, are appropriately reflected in a reactive power charge.

Q. How was the rkVA charge developed?

A. The rkVA charge proposed by the Companies is based on a study of the cost of adding a 1200 KVAR capacitor bank to each Company's system. The rkVA charge is designed to recover a pre-tax weighted average overall rate of return on the Company's investment in the capacitor bank, applicable depreciation and ongoing operation and maintenance expense associated with the capacitors. Exhibits KMS-3 show the calculation of the rkVA charges that will be applied to all commercial and industrial secondary and primary customers.

Customers with a high power factor would not be subject to the rkVA charge. Therefore, each customer can perform an analysis of whether it is more cost-effective to pay the rkVA charge or invest in its own capacitors and avoid the rkVA charge by individually managing its own power factor.

Q. Will a minimum billing demand charge apply to GS customers, and will it be consistent across all the Companies?

A. Yes. The proposed GS rate schedules for all four Companies contain the following provision regarding a minimum billing demand calculation:

> A Customer's demand shall be measured by indicating or recording instruments. Demands shall be integrated over 15-minute intervals. The billing demand in the current month shall be the greatest of: (i) the maximum measured demand established in the month during On-peak hours, adjusted for Power Factor as stated herein, (ii) forty percent (40%) of the maximum measured demand established in the month during Off-peak hours, adjusted for Power Factor as stated herein, (iii) contract demand or (iv) fifty (50%) of the highest billing demand established during the preceding eleven (11) months.

Q. Why are the Companies proposing a minimum per-kW demand charge for Commercial and Industrial customers?

A. In order to provide safe and reliable service to a customer who applies for new service, a Company must assess its current infrastructure and make appropriate investments to existing infrastructure or in new infrastructure. These investments are based on the customer's estimated load. To the extent that the customer makes a change in its operation and reduces its requirements, the Company still needs to recover the investment that it made in its infrastructure to provide service to that customer.Consistent with the principles of cost causation, such costs should be recovered from those customers who are receiving the benefit of that investment. To do otherwise would improperly shift costs to other customers who are already paying for the investment that the Companies made in the infrastructure to serve that customer.

Q. How do the Companies propose to bill customers that do not have a demand meter, but will be served under a rate schedule that includes a demand charge as part of their applicable distribution rates?

A. For those customers that do not have demand meters, the Company is proposing to derive a measured demand based on an hours-use demand factor of 200. The formula for this calculation is: Measured Demand = kWh/200. The hours-use of demand value of 200 reflects the average hours-use for customers that will be charged a kW demand charge. Under the Companies' Smart Meter Deployment Plan, all customers will eventually have meters capable of registering demand. Consequently, it makes sense to develop and implement appropriate rate designs to properly reflect demand costs and to use a measured demand calculation for customers currently without demand meters. When smart meters are installed for customers that do not currently have demand meters, they will benefit from appropriate demand-based rate schedules that leverage the full functionality of smart meters. To do otherwise would require implementing a non-demand-based rate design that would have to be changed in a future base rate case, while my proposed approach allows the Companies to phase customers onto more responsive demand charges as their metering is upgraded.

Q. Do the rate schedules proposed in this case for service to Commercial and Industrial customers contain a change to the minimum charges assessed to such customers under current rates?

A. Yes. The applicable rate schedules for the Companies will apply a minimum charge to such customers equal to the sum of the Customer Charge, the minimum billing demand charge described above, charges under any applicable Riders, and any energy charges

applicable.[3] For instance, if a customer has no energy use in a given month, the customer would still pay a Customer Charge which is a specific dollar amount per month regardless of usage.

Q. Are the Companies proposing additional riders as part of this filing?

A. Yes. As I noted previously, all four Companies are proposing to adopt a Storm Damage Charge Rider to recover storm damage expenses in excess of the amount that is included in their base rates, and West Penn is proposing to adopt a Universal Service Cost Rider modeled after the Universal Service Cost Riders approved by the Commission for the other Companies. Both of these Riders are addressed in more detail by Ms. Bortz in her direct testimony.

In addition, Time-of-Use Default Service Riders ("TOU Riders") are being proposed for Met-Ed and Penelec. Those Riders are included in the proposed Met-Ed and Penelec tariffs. The TOU Riders will be available to all Residential customers who obtain default service from the Companies. The TOU Riders proposed for Met-Ed and Penelec are similar in their general design to the Time-of-Use Default Service Rider for Penn Power and the Time-of-Use Rider for West Penn that were approved by the Commission in its Final Order approving Default Service Plans for the Companies for the period June 1, 2013 through May 31, 2015.[4] There is, however, one small difference. The TOU Riders Met-Ed and Penelec are proposing maintain the same definition of on-peak hours that

[3] A minimum charge calculation would include energy charges for the current month's usage, while the minimum demand charge would be based upon the highest demand recorded over a prior twelve-month period.

[4] *Joint Petition of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company and West Penn Power Company for Approval of Their Default Service Programs*, Docket Nos. P-2011-2273650, P-2011-2273668, P-2011-2273669 and P-2011-2273670 (Final Order entered August 16, 2012), pp. 87-93.

currently exists in their Rate Schedules RT in order to ease the transition of current RT customers applying for service under the proposed TOU Riders.

Under the TOU Riders, qualifying enrolled customers obtain time-of-use default service from Commission-certified EGSs that contract to provide such service under the terms set forth in the Rider. Additionally, the terms of the relationship between the Companies and the EGSs offering time-of-use service is set forth in a TOU Aggregation Agreement, a form of which is being provided as Met-Ed Exhibit No. KMS-4 and Penelec Exhibit No. KMS-4. The form of TOU Aggregation Agreement set forth in those exhibits are identical to the TOU Aggregation Agreements approved by the Commission for use by Penn Power and West Penn.[5]

In the event that no EGSs contract to provide time-of-use service, the time-of-use default service will be available under the terms and conditions of the Companies' Price to Compare Default Service Rate Rider, which applies the same time-of-use on-peak and off-peak factors as set forth in the proposed Met-Ed and Penelec TOU Riders.

The Companies are also proposing to adopt two Riders that relate to non-utility generation – a Partial Service Rider and a Cogeneration and Small Power Production Qualifying Facility Rider.

[5] *Joint Petition of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company and West Penn Power Company for Approval of Their Default Service Programs*, Docket Nos. P-2011-2273650, P-2011-2273668, P-2011-2273669 and P-2011-2273670 (Opinion and Order on Second Compliance Filing entered May 23, 2013), pp 5-10.

Q. Please explain the proposed Partial Service Riders.

A. The Public Utility Regulatory Policies Act ("PURPA") requires electric utilities to provide back-up, maintenance, supplemental and emergency electric service to PURPA "qualifying facilities" ("QFs"). The Companies currently take different approaches to furnishing this service. Met-Ed and Penelec offer this service to QFs under Rate Schedule QF. (Notably, these Companies offer the same service to non-QFs under Rule 18 of their existing General Rules and Regulations, and the terms of that service are the same as under Rate Schedule QF.) Penn Power offers such services for both QFs and non-QFs under a Partial Service Rider. West Penn provides these services to QFs under its Alternative Generation Rider. The Companies propose to consolidate the provision of these services through a single, standardized Partial Service Rider that will apply to all generating facilities (QFs and non-QFs) that are not net-metered customers.

Q. What services will be offered under the proposed Partial Service Riders?

A. Under the Partial Service Riders, the Companies will provide the following four levels of service, as required by, and defined in, PURPA for QFs: Backup Reservation Service, Scheduled Maintenance Service, Supplemental Service, and Emergency Service. Each form of service has its own set of applicable rules. QFs will pay a per-kW charge for contract demand equal to the greater of their measured billing demand or the net generating capability of their generating facility. The proposed Partial Service Riders are set forth as Rider L in the proposed tariffs of each of the Companies.

Q. Please explain the proposed Cogeneration and Small Power Production Qualifying Facility Riders.

A. The Cogeneration and Small Power Production Qualifying Facility Riders will provide the terms under which the Companies will purchase electricity generated by QFs with maximum generating capacity under 500 kW. Any QFs with generating capacity of 500 kW or greater from which the Companies are required by PURPA to purchase energy will not be eligible for the Riders but instead would have to enter into individually negotiated contracts with one of the Companies. Under the Riders, the Companies will pay eligible QFs 75% of the Real Time Location Marginal Price each for each hour at each Company's aggregate zone for net electric energy delivered. The proposed Cogeneration and Small Power Production Qualifying Facility Riders are set forth as Rider M in the proposed tariffs of each of the Companies.

Q. Are the Companies proposing to eliminate any Riders as part of this filing?

A. Yes, they are. The riders proposed to be eliminated are identified and discussed by Ms. Bortz in Met-Ed/Penelec/Penn Power/West Penn Statement No. 3. As she explains, those riders are not applicable for "unbundled" electric service or have been deemed unnecessary or outdated for other reasons.

Q. Are any riders proposed to be modified as part of this filing?

A. Yes. Penn Power proposes to modify its Universal Service Cost Rider so that it will be consistent with the Met-Ed and Penelec Universal Service Cost Riders, as Ms. Bortz explains in her direct testimony. Additionally, as explained by Laura W. Gifford in Met-Ed/Penelec/Penn Power/West Penn Statement No. 7, West Penn is proposing revisions to

its Default Service Support ("DSS") Rider and its Hourly Pricing Default Service ("HPS") Rider to include components for recovery of default service-related uncollectible accounts expense for residential and commercial customers and industrial customers, respectively. The other Companies are revising their DSS and HPS Riders so that default service-related uncollectible accounts expense for industrial customers will be recovered in their HPS Riders rather than their DSS Riders, as they currently are. In addition, Met-Ed and Penelec are proposing to modify their existing Non-Utility Generation Charge Riders to calculate the NUG-C rate on an annual rather than a quarterly basis effective on June 1, 2015. This proposed change is incorporated in the Non-Utility Generation Charge Riders of Met-Ed and Penelec, which are set forth as Rider P in the proposed tariffs of each of those Companies.

Q. Are any changes being proposed with respect to charges imposed under riders that are already in place for all four Companies?

A. Yes, each Company is proposing to set its State Tax Adjustment Surcharge ("STAS") at zero because its base rate revenue requirement was calculated at the applicable state tax rates. Except for Penn Power, the current STAS for the Companies is a credit. In addition, all four Companies propose to reduce their Smart Meter Technology Charge to zero and include the appropriate level of costs as part of their proposed distribution base rate revenue requirement. This proposed change is set forth in the State Tax Adjustment Surcharge Rider set forth as Rider A in the proposed tariffs of each of the Companies.

IV. PROOF OF REVENUE ANALYSIS AND BILL COMPARISONS

Q. What is a proof of revenue analysis?

A. A proof of revenue analysis provides the total billing units for a specified period (May 1, 2015 through April 30, 2016, for the fully projected future test year), including pro forma ratemaking adjustments, summarized by rate components for each rate schedule and multiplied by the applicable unit rates to derive the base rate revenues that proposed rates will produce. Exhibits KMS-5 contain each Company's respective proof of revenue analysis.

Q. Have you prepared an analysis of the rates in the Companies' proposed tariffs showing their impact upon various customer classes?

A. Yes. Exhibits KMS-6 set forth each Company's comparison of bills at current and proposed rates for the Companies' residential, commercial and industrial customers at selected ranges of usage. Each exhibit shows, among other things, the percentage impact on a customer's total electric service bill based on the proposed rates. For example, as shown on page 1 of Met-Ed Exhibit KMS-6, a residential customer of Met-Ed that receives service under Rate Schedule RS and uses 1000 kWh per month would pay $149.13 under the proposed rates, which represents an increase of 16.02% in the customer's total bill.

Q. Please explain what is shown in Exhibit KMS-7 for each Company.

A. Filing Requirement IV-E-2 requires that the Companies provide a comparison showing costs, as defined by the cost of service study, and the proposed base rate revenues and

usage for all rate schedules. Exhibit KMS-7 for each Company depicts that comparison graphically for representative rate schedules.

V. COMPANY-SPECIFIC MODIFICATIONS

A. Met-Ed And Penelec

Q. Please describe the specific changes to the Met-Ed and Penelec rate designs that are being proposed.

A. The following changes are being proposed to the Met-Ed and Penelec rate designs:

1) Rate Schedule RT will be eliminated, and all of the rate schedules applicable to the residential class will be consolidated into one standard Residential rate schedule. As previously explained, the Companies are proposing a Time-of-Use Default Service Rider for Met-Ed and Penelec that, along with similar Riders already in place for Penn Power and West Penn, will provide Residential customers a time-of-use option for default generation supply service. This approach is consistent with the Commission's Final Order in the Retail Markets Investigation which recommends that the Companies move away from Time-of-Use distribution rates and towards a Time-of-Use rider for generation.[6]

2) As explained earlier, an upper limit of 400 kW will be placed on the availability of Rate Schedule GS-Medium. In addition, the eight-hour and twelve-hour time-of-day rates will be eliminated, and a reactive power charge will be added to this rate schedule.

[6] *Investigation of Pennsylvania's Retail Elec. Market Intermediate Work Plan*, Docket No. I-2011-2237952 (Final Order entered March 2, 2012), p. 47.

3) Rate Schedule GS-Large will be available only for secondary voltage customers with loads over 400 kW. In addition, the eight-hour and twelve-hour time-of-day rates will be eliminated and a reactive power charge will be added.

4) The eight-hour and twelve-hour time-of-day provisions in Rate Schedules GP and TP are being eliminated.

5) The voltage discount for customers served at voltages of 115kV or higher will be made consistent across all the Companies.

Q. Why are all of the eight-hour and twelve-hour time-of-day options being eliminated from the Commercial and Industrial rate schedules?

A. They are being eliminated for several reasons. First, in the current rate schedules the time-of-day rate and the standard rate are the same. Second, the time-of-day provisions were established when bundled rates, which included a generation component, provided customers a meaningful incentive to take service on a time-differentiated rate. The time-of-day rate differentials were largely driven by the cost of providing generation service, which exhibits differences based on time of use. However, after unbundling, time-of-use differentials in distribution rates are not justified because distribution service does not exhibit comparable cost differences based on time of use. Customers desiring time-of-use generation service can shop for that service with EGSs or obtain hourly default service for the generation and transmission portion of their electric service.

B. Penn Power

Q. Please describe the specific changes to the Penn Power rate design that are being proposed.

A. The following changes are being proposed to the Penn Power rate design:

1) Rate Schedule RH – Heating Service, as well as the water heating option of Rate Schedule RH, will be eliminated, and all of the rate schedules applicable to the residential class will be consolidated into one standard Residential rate schedule. The rate schedules being eliminated have been grandfathered for existing customers since June 1, 2008. The Company will maintain the existing Time-of-Use provision within Penn Power's PTC Default Service Rider.

2) The Optional Controlled Service ("OCS") for Water Heating as well as the OCS – Add-On Electric Heat Pump or Centralized Resistance Heating Rate are being eliminated. These rates no longer provide an advantage to Residential customers as compared to the standard Rate Schedule RS.

3) Rate Schedule GS currently is available for secondary voltage customers with loads up to 50 kW. The Company proposes to modify the availability of this Rate Schedule to conform to the standardized rate design, and, as such, it will apply to all customers with usage up to 1,500 kWh per month.

4) Rate Schedule GS-Medium will be revised consistent with the changes I previously discussed for Met-Ed and Penelec.

5) The Company proposes to add a new Rate Schedule GS-Large for those secondary voltage customers with demands over 400 kW. This new rate schedule will have the same rate design as Met-Ed's and Penelec's GS-Large, except that the cost allocation differentials will be derived from Penn Power's cost of service study.

6) The Company proposes to eliminate Rate Schedule OH – Commercial and Industrial Optional Heating.

7) The Company proposes to modify the design of Rate Schedule GP to include a Customer Charge and to replace the existing kVA charge with a reactive power charge in addition to a kW demand charge.

8) For Rate Schedule GT, a new Customer Charge is proposed. The balance of the rate design will remain as currently structured.

9) As previously explained, the voltage discount for customers served at 115kV or greater will be made consistent across all the Companies.

C. West Penn

Q. Please describe the specific changes to the West Penn rate design that are being proposed.

A. The following changes are being proposed to the West Penn rate design:

1) The Wind Energy Service Rider that currently applies to all rate schedules will be eliminated. No customers are served on this Rider.

2) The Company is proposing a Universal Service Cost Rider consistent with those of the other three Companies. As I noted earlier, Ms. Bortz addresses this Rider in Met-Ed/Penelec/Penn Power/West Penn Statement No. 4.

3) As previously explained, to be consistent with the other three Companies, West Penn proposes to revise its DSS and HPS Riders to include an uncollectible accounts component, as Ms. Gifford discusses in Met-Ed/Penelec/Penn Power/West Penn Statement No. 7.

4) Rate Schedule 20 currently is available for non-Residential customers with loads of less than 100 kW. The Company proposes to re-map the customers served on this Rate Schedule to include all non-Residential customers that have usage of less than 1,500 kWh per month. The rate design for this rate class will include a new Customer Charge and will replace the demand charge with an energy-only charge.

5) The Company proposes to transition Rate Schedules 22, 23, and 24 to Rate Schedule 20. Rate Schedules 22 and 23 have been grandfathered for an extended period of time and, due to unbundling, no longer provide a benefit to customers. Because of the seasonal aspect of Rate Schedule 24- Fair and Carnival Service, it is not designed for the current unbundled rate environment. Consequently, there is no reason to retain these Rate Schedules.

6) For all Rate Schedules, the Company proposes to eliminate the block rate structures and space heating options. Due to unbundling, block rates and pricing

differentials for space heating are not cost-justified. For that reason, and in order to simplify the tariff, these provisions should be eliminated.

7) The Company proposes to remap Rate Schedule 30 to conform to the structure of the other three Companies. Rate Schedule 30 currently distinguishes between Rate Schedule 30 (Small) and Rate Schedule 30 (Large), with only customers having loads of 500 kW or greater qualifying for the latter. The new structure West Penn is proposing would maintain all secondary voltage customers with loads of 400 kW or less on Rate Schedule 30. Rate Schedule 30 will be revised to include a new Customer Charge and to remove the voltage discount for customers with loads between 1,000 and 15,000 volts and for customers over 15,000 volts. In addition, all block pricing will be eliminated. The Company also proposes to include a reactive power charge in addition to a standard demand charge.

8) For all secondary voltage customers with loads over 400 kW, the Company is proposing a new Rate Schedule 35 consisting of a Customer Charge, a kW Demand Charge, and a reactive power charge.

9) The Company proposes to consolidate Rate Schedules 40 and 41 and to eliminate the weekly demand provision in Rate Schedule 41, which is currently the only difference between these two rate schedules. The rate design will include a Customer Charge, a kW Demand Charge, and a per kWh energy charge. The Company will maintain the existing reactive power charge, but eliminate the block pricing and modify the voltage discounts to be stated on the basis of a percentage of demand.

Finally, I would note that, in compliance with its commitment in the Commission-approved Joint Petition for Partial Settlement at Docket Nos. A-2010-2176520 and A-2010-2176732, West Penn is proposing no change in the design of Rate Schedules 44 and 46 in this case.

VI. MISCELLANEOUS MATTERS

Q. Please describe the provisions of 52 Pa. Code § 69.36.

A. This section of the Commission's regulations is a Statement of Policy expressing the Commission's intent to examine in electric and gas rate proceedings actions taken by utilities to encourage the development of cost effective energy supply alternatives. I am responding only to 52 Pa. Code § 69.36(5), which requires utilities to demonstrate "progressive work regarding the development of a reliable customer data base."

Q. Please address the Companies' efforts to develop a reliable customer data base in accordance with 52 Pa. Code § 69.36(5).

A. The Companies have completed substantial work in this area. The Companies' Customer Care System currently contains data for each customer regarding billing, usage and usage-related revenue, demand and demand-related revenue, rate categories and a "premises" code. The premises code keeps track of all data associated with a location, even if the customer at that location changes its name, moves, etc. More recently, the Companies have developed a "business warehouse" data base that allows the Companies to query customer-specific data. In addition to this data base, the Companies routinely complete residential customer surveys, which produce additional information concerning customers' characteristics, such as appliance usage and air conditioning saturation. Also,

each year the Companies conduct a Large Power Customer contact survey. Throughout the year, Company representatives routinely meet with large customers to discuss their current and long-term needs and other factors related to their electric service. These contacts provide information regarding programs, services, rates and other information which might affect their businesses.

From these data bases, surveys and other contacts with customers, the Companies have amassed a substantial amount of information about customers' end-use applications and their behavior and decision-making processes. This information is routinely factored into the Companies' planning for furnishing service and conducting their operations.

VII. CONCLUSION

Q. Does this complete your direct testimony?

A. Yes, it does.

Resume: Education and Experience of Kevin M. Siedt

Education:

1984	Bachelor of Science Degree- Accounting/Finance, Rowan University, Glassboro, New Jersey
1994	Masters of Business Administration Degree, Moravian College, Bethlehem, PA

Experience:

1984 – 1987	Commercial Credit Analyst – First Fidelity Bank
1987 – 1993	Financial Analyst, Corporate Finance Department – Foster Wheeler Corporation
1993 – 1996	Senior Financial Analyst, Corporate and Project Finance – Foster Wheeler Corporation
1996 – 1997	Manager of Financial Analysis, Corporate and Project Finance - Foster Wheeler Corporation
1997 – 1998	Director of Financial Analysis, Corporate and Project Finance – Foster Wheeler Corporation
1998 – 2001	Financial Consultant, Treasury Department – GPU Corporation
2001 – 2002	Consultant, Market Economics – GPU Corporation
2002 – 2010	Staff Business Analyst, Rates and Regulatory Affairs – FirstEnergy Service Company
2010 – Present	Rate Analyst V, Rates and Regulatory Affairs – FirstEnergy Service Company

*Includes billed kW, minimum kW, and standby kW
**Excludes STAS revenue; includes 5.9% GRT

Other Revenue Adjustments

	Amount
1) GS Voluntary Fire Department Rate Schedule Adjustment - Budget forecast assumed that all customers served under this Rate Schedule receive service on the seasonal rate, and revenues projected at the non-summer rate of $0.01946 per kWh. However, there are no customers taking service under this Rate Schedule subject to the seasonal rate provision. Therefore, an adjustment was made to reflect revenues based on the applicable non-seasonal rate of $0.05043 per kWh.	$ 40,776
2) Borderline Adjustment - This adjustment was made to account for revenues associated with an Investment Charge that was not included in the budget forecast. The Investment Charge is 1% of the Company's investment in facilities to deliver and meter service to borderline customers.	561
3) Street Lighting Adjustment - This adjustment was made to account for revenues associated with an Underground Alternative Technology Lighting charge of 0.20 cents per kWh, which was not included in the budget forecast.	219
Total Other Revenue Adjustments	$ 41,556

Time of Use Agreement

Residential Time of Use Customer Class Full Requirements

for

{INSERT EDC HERE}

TIME OF USE AGREEMENT

THIS TIME OF USE AGREEMENT ("Agreement") is made and entered into as of {Insert Date} ("Effective Date") by and between the {Insert EDC Name Here} ("Company"), a corporation organized and existing under the laws of the Commonwealth of Pennsylvania and _____ ("TOU Supplier") a corporation organized and existing under the laws of [State of or Commonwealth of…..]. The Company and the TOU Supplier hereinafter are sometimes referred to collectively as the "Parties," or individually as a "Party."

WITNESSETH:

WHEREAS, the Company is an electric public utility engaged, *inter alia*, in providing retail electric service within its service territory located in the Commonwealth of Pennsylvania; and

WHEREAS, the Company's retail tariff includes a Time-of-Use ("TOU") Default Service Rider to meet its obligation under Pennsylvania Act 129 of 2008 ("Act 129") to have at least one Time-Of-Use rate available for residential Customers ("TOU Program"); and

WHEREAS, the Pennsylvania Public Utility Commission ("PaPUC" or "Commission") has found that it would serve the public interest for the Company to secure licensed Electric Generation Suppliers ("EGS") to provide residential Time-of-Use Default Service pursuant to the Company's Time-of-Use Default Service Rider; and

WHEREAS, the Company has sought and received approval from the PaPUC to randomly assign Time-of-Use default service customers to participating EGSs, if they have no preference; and

WHEREAS, the TOU Supplier is licensed by the PaPUC to offer and supply competitive retail electric service in Pennsylvania.

NOW, THEREFORE, in consideration of the mutual covenants and promises set forth below, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties hereto, intending to be legally bound, hereby covenant, promise and agree as follows:

Article 1: Definitions

Any capitalized or abbreviated term not elsewhere defined in this Agreement shall have the definition set forth in this Article.

1.1 **Agreement** – This Agreement for the TOU Supplier to provide default service to TOU Customers and Appendices attached hereto.

1.2 **Applicable Legal Authorities** – Those federal and Pennsylvania statutes and administrative rules, regulations and Orders that govern the electric utility industry in Pennsylvania, as they may be amended from time to time.

1.3 **Business Day** – Any day on which the Company's corporate offices are open for business.

1.4 **Consolidated EDC Billing** – Shall have the meaning set forth in the Company's Electric Generation Supplier Coordination Tariff as filed with the PaPUC and available on the Company's website.

1.5 **Customer** – Any person or entity who a:) has been provided a smart meter pursuant to the Company's PaPUC-approved smart meter plan or b:) Customers served under Rate Schedule RT as of 12/31/2014 and have existing Time-of-Use metering installed, and who enters a contractual agreement with the Company to receive retail electric service including, without limitation, all persons or entities with a Company-provided smart meter taking service under a retail tariff that are eligible to receive competitive electricity supply from an EGS or Default Service in accordance with the Applicable Legal Authorities.

1.6 **Default Service** – Shall mean Default Service as defined in 52 Pa. Code § 54.182

1.7 **Default Service Period** – Shall mean the period beginning June 1, 2015 and ending when the PaPUC approves termination of the TOU Program.

1.8 **Electronic Data Interchange or "EDI"** – A standardized format for the electronic transfer of data between different entities.

1.9 **Electric Distribution Company or "EDC" –** A public utility providing facilities for the transmission and distribution of electricity to retail Customers in Pennsylvania subject to the jurisdiction of the Commission.

1.10 **Electric Generation Supplier or "EGS"** – A person or entity that is certified by the Commission to offer and provide competitive retail electric service to retail Customers located in the Commonwealth of Pennsylvania.

1.11 **FERC** – The Federal Energy Regulatory Commission.

1.12 **PJM** – PJM Interconnection, LLC

1.13 **Rate Schedule(s)** – The Customer rate schedule(s) in the electric service tariff of the Company on file with the Commission as they may be modified from time to time.

1.14 **Rate Ready** – Shall have the meaning set forth the Company's Electric Generation Supplier Coordination Tariff as filed with the PaPUC and available on the Company's website.

1.15 **Residential Class** – Customers on Metropolitan Edison Company Rate Schedules RS and RT and Pennsylvania Electric Company Rate Schedules RS and RT as defined in the electric service tariff of the Company on file with the Commission as they may be modified from time to time.

1.16 **Seller** – The TOU Supplier.

1.17 **Service Territory** – The service territory in which the Company is authorized to furnish retail electric service in Pennsylvania.

1.18 **Supplier Tariff** - The PaPUC-approved Supplier Coordination Tariff for the Company.

1.19 **TOU** – Time of Use.

1.20 **TOU Customer(s)** – Retail Customers who are provided default service pursuant to the terms of the Company's Time-Of-Use Default Service Rider in the Company's Retail Electric Service Tariff as filed with the PaPUC and available on the Company's website.

1.21 **TOU On - Peak Price** – The price, in cents per kWh, set forth in the Company's Time-Of-Use Default Service Rider and Appendix A.

1.22 **TOU Off - Peak Price** – The price, in cents per kWh, set forth in the Company's Time-Of-Use Default Service Rider and Appendix A.

1.23 **TOU Supplier** – An entity that: (i) has accepted the obligations and associated rights to provide Time-of-Use Default Service on behalf of the Company for retail Customers in accordance with the Applicable Legal Authorities; (ii) has entered into this Agreement with the Company as a Party; (iii) is a full member of PJM and registered with PJM as a Load Serving Entity; (iv) is licensed by the PaPUC to offer and supply electric generation services in Pennsylvania; and, (v) is in full compliance with the terms and conditions of the Company's Electric Generation Supplier Coordination Tariff.

1.24 **TOU Supplier Representative** – Any officer, director, employee, consultant, contractor, or other agent or representative of the TOU Supplier having actual or apparent authority to act on behalf of the TOU Supplier in connection with TOU Supplier's performance under this Agreement. To the extent the TOU Supplier is a division or group of a company, the term "TOU Supplier Representative" excludes any person in that company who is not a part of the TOU Supplier's division or group and is specifically limited to any person in that company who is a part of the TOU Supplier's division or group.

Article 2 General Terms and Conditions

2.1 Term

This Agreement shall be effective upon execution by the Parties with the approval by the PaPUC. This Agreement may be terminated by the existence of any of the following conditions: (1) if the TOU default service is terminated by governmental action before the end of the Default Service Period; (2) if the TOU Supplier is no longer a certified EGS; (3) if either Party is in material breach of this Agreement or the Supplier Tariff; or, (4) pursuant to Article 3 of this Agreement.

2.2 Modifications to Time Of Use Agreement

This Agreement may be modified from time to time to: 1) reflect changes in the Company's Time-of-Use default service rate; or 2) with the approval of the PaPUC.

2.3 Supplier Tariff

Except as otherwise stated herein, all terms and conditions of the Company's Supplier Tariff, as modified from time to time with the approval of the PaPUC, are incorporated herein by reference, are in full force and effect, and are binding upon the parties for the duration of this Agreement.

2.4 Company Obligations and Authority

The Company shall:

(a) Have a Time-of-Use Default Service Rider that has been approved by the PaPUC effective June 1, 2015;

(b) Bill TOU Customers on behalf of the TOU Supplier under Rate Ready Consolidated EDC Billing utilizing the summer On-Peak and Off-Peak rates, and the non-summer rates calculated as specified in quarterly adjusted Appendix A;

(c) Notify Customers pursuant to the Company's PaPUC-approved smart meter plan of the availability of the Time-of-Use Default Service Rider as required by Commission regulations;

(d) Record the Customer's intent to participate and then transmit the Customer's name, address, and account number to a TOU Supplier of their choice or, if the customer has no preference, on a rotating basis via a secure website post or secure electronic data transfer;

(e) Assign Customer accounts to Seller of their choice or, if the customer has no preference, on a rotating basis, with the requisite Customer consent, consistent with the Supplier Tariff;

(f) Refer Customers that, during the Default Service Period, express an interest in Time-of-Use rates to the TOU Supplier of their choice or, if the customer has no preference, on a rotating basis designed to result in each of the participating TOU Suppliers receiving roughly the same number of TOU Customers for enrollment during a given month;

(g) Provide standard enrollment confirmation letters to TOU Customers;

(h) Notify TOU Supplier a minimum of 15 days prior to the date of a change in the TOU default service rate;

(i) Serve TOU Supplier with any filings at the PaPUC made by the Company that would modify the TOU default service rate, the Agreement, or the TOU Program;

(j) Provide monthly On-Peak and Off-Peak usage, based on actual or estimated monthly meter readings to the TOU Supplier for customers that chose or have been assigned to TOU Supplier; and

(k) Provide a TOU load profile for TOU Customers per Section 6 of the Company's Supplier Tariff, for use in estimating customer consumption for settlements as defined in Section 8 of the Company's Supplier Tariff, until such time that the Company has completed smart meter infrastructure deployment and the PaPUC has approved modifications to this Agreement and the Supplier Tariff that allow TOU Customers to be settled on an individual basis.

2.5 Obligations of the TOU Supplier

The TOU Supplier shall:

(a) Provide Competitive Energy Supply (as defined in the Supplier Tariff) to TOU Customers, consistent with the Company's Time-of-Use Default Service Rider, under the terms and conditions of service set forth in Appendix B ("TOU Supply");

(b) Meet all of the obligations and requirements of a PaPUC licensed EGS under the then-current Supplier Tariff;

(c) Cooperate with the Company in any regulatory compliance efforts that may be required to maintain the ongoing validity and enforceability of the terms of this

Agreement and the Time-of-Use Default Service Rider in the Company's retail electric service tariff, and fulfill any regulatory reporting requirement associated with the provision of TOU Supply before the PaPUC, FERC or any other regulatory body asserting jurisdiction;

(d) Utilize EDC Rate Ready Consolidated Billing to bill TOU Customers the TOU rates calculated as set forth in Appendix A and in the Company's Time-of-Use Default Service Rider;

(e) Submit the quarterly adjusted rates through the EDI protocol;

(f) Process TOU Customer enrollments, adhere to the Company's meter reading schedule, comply with the switching rules in the Supplier Tariff, mail contracts to TOU Customers providing standard terms and conditions of service as set forth in Appendix B, and maintain copies of contracts with TOU customers; and

(g) The TOU Supplier shall not drop service to an individual TOU Customer that chose or has been assigned to the TOU Supplier for TOU default service, except as requested by the TOU Customer or as provided for in Article 3.

2.6 No Guarantee of TOU Customers

Both Parties acknowledge that the Company's Time-of-Use Default Service Rider is only available to Customers in the Company's Service Territory that are in the Residential Class, that have smart metering installed in accordance with the terms of the Company's Smart Meter Technology Procurement and Installation Plan, or were served on the Companies' Rate Schedule RT as of December 31, 2014 and therefore have Time-of-Use metering installed and that affirmatively elect TOU default service during the

Default Service Period. The Company makes no guarantee or representation as to: (1) the number of residential Customers, if any, that will have smart metering installed during the term of this Agreement; (2) the number of residential Customers, if any, with smart metering installed that may enroll for service under the Time-of-Use Default Service Rider during the Default Service Period; or (3) the number of existing RT Customers as of 12/31/2014 that may enroll for service under the Time-of-Use Default Service Rider during the Default Service Period.

2.7 Fees, Penalties, and Exceptions

TOU Customers will be billed in accordance with the rates, terms and conditions of the Time-of-Use Default Service Rider in the Company's retail electric service tariff. TOU Suppliers will be paid by the Company pursuant to rates calculated in accordance with Appendix A and the terms and conditions of the Supplier Tariff. TOU Supplier will not impose any additional penalties or fees on TOU Customers other than those included in the Company's Time-of-Use Default Service Rider or Appendix B to this Agreement.

2.8 Obligation to Accept Additional Customers

The TOU Supplier will accept all referred Customers into the TOU default service who are transferred from the Company to the TOU Supplier and request enrollment during the Default Service Period.

2.9 Guaranteed Power Supply to TOU Customers for the Default Service Period

All TOU Customers enrolled in the TOU default service shall receive power at the rates calculated as set forth in Appendix A, from the TOU Customer's initial meter read date during the Default Service Period.

2.10 Default Service Period Conclusion

Upon conclusion of the Default Service Period, an enrolled TOU Customer will not automatically revert to Default Service. The TOU Supplier must inform Customers of their right to select another EGS or return to Default Service prior to the conclusion of the service period, in accordance with the notice requirements of 52 Pa. Code § 54.5(g)(1). The TOU Supplier will retain the TOU Customer unless the Customer elects a different EGS or Default Service. If the TOU Supplier retains the TOU Customer, the TOU Supplier may establish new TOU prices, without Commission approval of those prices, in the same manner as any other EGS rates.

2.11 Enrollment Procedures and Policies

TOU Customers can enroll or switch to an EGS, including an alternative offer from the TOU Supplier, at any time during the Default Service Period without restriction or penalty.

2.12 Service Inquiries and Notices to TOU Customers

TOU Customers may direct inquiries regarding this Agreement, and any power supply or billing questions regarding the Time-of-Use Default Service Rider, to the Company, at the phone number which shall be provided in all TOU default service communications with TOU Customers.

Article 3 Early Termination of Agreement

The TOU Supplier wishing to withdraw from providing TOU default service is required to do so in compliance with the procedures included in Section 13 of the Company's Supplier Tariff. The TOU Supplier may only terminate its Consumer

Contract and Disclosure Statement with TOU Customers in accordance with the terms and conditions in the form of Consumer Contract and Disclosure Statement set forth in Appendix B.

Article 4 Energy Efficiency and Conservation Programs

TOU Supplier acknowledges that TOU Customers may participate in energy efficiency and conservation programs offered by the Company (as required by Applicable Legal Authorities or otherwise), by PJM, or by other third parties, and that such participation may reduce or change the amount of TOU Supply that TOU Supplier is required to provide and, therefore, the amount of money it may receive under this Agreement. TOU Supply does not include the load which TOU Supplier may have served in the absence of such programs, and the Company shall have no obligation whatsoever to TOU Supplier with respect to the effect, if any, of such programs. TOU Supplier is solely responsible for determining the effect, if any, of such programs on future load requirements.

Article 5 Entire Agreement

This Agreement and Appendices constitute the entire Agreement and understanding between the Parties with respect to the services that are to be provided hereunder. All prior written and verbal agreements and representations, if any, with respect to these services are merged into and superseded by this Agreement. No revisions or modifications to this Agreement will be valid, unless written and executed by all Parties and approved by the PaPUC.

Article 6 Authorization

Each Party to this Agreement represents and warrants that it has full and complete authority to enter into and perform this Agreement. This includes the Company's warranty that it has the authority to enter into the Agreement and is not bound to any special contract or other commitment which will prevent the Company from discharging its obligations under this Agreement as of the commencement date. Each person who executes this Agreement on behalf of either Party represents and warrants that he or she has full and complete authority to do so and that such Party will be bound by the Agreement.

Article 7 Jurisdiction

Any and all matters of dispute between the Parties, whenever arising, shall be governed, construed and enforced in accordance with the laws of the Commonwealth of Pennsylvania regardless of the theory upon which such matter is asserted.

IN WITNESS WHEREOF, the Parties hereto have caused this Agreement to be executed by their duly authorized representatives to be effective as of the day and year first written above.

APPENDIX A

TIME OF USE PRICING

For service rendered xx/xx/xx to xx/xx/xx*

Summer Months (June – August)

TOU ON-PEAK Price **EDC's Residential $PTC_{Default}$ X x.xx**
(Met-Ed 1.28/ West Penn Power 1.28)

TOU OFF-PEAK Price **EDC's Residential $PTC_{Default}$ X x.xx**
(Met-Ed 0.82/ Penelec 0.82)

Non-Summer Months (September – May)

TOU ON-PEAK Price **EDC's Residential $PTC_{Default}$**

TOU OFF-PEAK Price **EDC's Residential $PTC_{Default}$**

* The EDC Consolidated Rate Ready Billing percentage off program used to bill the Time-of-Use Default Service Rider will first determine total customer Default Service revenue by taking the Price-To-Compare Default Service rate times the monthly On-Peak and Off-Peak kilowatt hours ("kWhs"). The revenue so determined will then be multiplied by the TOU Factors. The average rate will be calculated by dividing the kWh. As a result of rounding, the exact price per kWh will vary from the price per kWh shown above.

APPENDIX B

TIME OF USE AGREEMENT

{INSERT EGS NAME HERE} CONSUMER CONTRACT AND DISCLOSURE STATEMENT OF TERMS OF PENNSYLVANIA RESIDENTIAL ELECTRIC GENERATION SERVICE LICENSE NUMBER {Insert EGS License Number here}

Purchase of Power and Energy Service

("{INSERT EGS Name HERE}") agrees to sell, and you agree to buy, your full requirements for Time-of-Use ("TOU") default service for residential electric generation service at the price and on the terms and conditions specified in this Consumer Contract and Disclosure Statement (the "Contract"). Price and other terms of this Contract are subject to change as provided below. {INSERT EGS Name HERE} reserves the right to revoke its electricity offer for any reason at any time prior to your acceptance of this Contract. Throughout this Contract, the words "you" and "your" refer to the Customer who has signed this Contract. The words "we", "us" and "our" refer to {INSERT EGS Name HERE}. {INSERT EGS Name HERE} represents and warrants that it is an independent seller of electric generation service licensed by the Pennsylvania Public Utility Commission ("PaPUC") and is representing or acting on behalf of the Electric Distribution Company ("EDC") responsible for the service territory where you reside, e.g., West Penn Power Company or Pennsylvania Power Company (each referred to as the "Electric Distribution Company" or "EDC"). {Insert EGS Name Here} is not representing or acting on behalf of any governmental bodies, or consumer groups. You will receive written notification from the EDC confirming a pending switch of your electric generation supply.

Term

The term will begin on the starting date that is the next meter read date after the EDC processes your enrollment (the "Starting Date"). Your switch to {INSERT EGS Name HERE} will commence with the next available meter reading following the Right of Rescission Period. You have the right at anytime to terminate this service. The term will continue month to month ending with customer notice, termination or modification of the Time-Of-Use Default Service Rider by the PaPUC.

Guarantee Period

You may terminate this Contract without incurring an early termination fee at any time by selecting another Electric Generation Service Provider or returning to Default Service with the EDC. To do so, you must also notify us in writing or by calling our customer care center at {insert EGS 800 number here}. Upon your termination of this Contract, we will transfer your residential or small commercial electric generation service to be supplied by the EGS of your choice or your EDC at your next available meter read date and you will remain responsible for payment for electricity and related costs and charges incurred under this Contract through such meter read date.

Variable Pricing

By choosing the TOU default service, your price for electric generation service during the summer months of service rendered June 1 – August 31 will be the EDC's Residential $PTC_{Default}$ multiplied by x.xx (Met-Ed 1.28/Penelec 128) for On-Peak Hours and the EDC's Residential $PTC_{Default}$ multiplied by x.xx (Met-Ed 0.82/Penelec 0.82) for Off-Peak Hours. Your price for non-summer month On-Peak and Off-Peak Hours will be the EDC's Residential $PTC_{Default}$. This variable price includes generation charges (as defined below), market based transmission charges (defined below) and all Independent System Operator charges (defined below) and gross receipt taxes. This variable price does not include distribution charges (as defined below) or other EDC charges including non-market based transmission charges (which will be invoiced by the EDC), applicable state or local sales or other taxes, nor any other governmental taxes or assessments, all of which will be passed through and invoiced to you in addition to the variable price. The Price-to-Compare kWhs rate may vary from the define equation above due to rounding.

Key Pricing Definitions

"Distribution charges" are part of the basic service charges on every Customer's bill for the physical delivery of electricity from the EDC to your home. The PaPUC regulates distribution prices and services. This charge will vary according to how much electricity you use.

"Generation charges" are charges that represent the cost of producing the electricity and are specific to this Contract. Generation prices and charges are set by the electric generation supplier you have chosen, which is {INSERT EGS Name HERE}. This charge will vary according to how much electricity you use.

"Independent System Operator charges" are charges for services necessary to support the transmission of electric power from seller to purchaser given the obligations of control areas and transmitting utilities within those control areas to maintain reliable operations of the interconnected transmission system

"Market Based Transmission & Ancillary Service charges" are charges that represent the market based costs of transporting electricity from the source of supply to the EDC. This

charge will vary with your source of supply. The Federal Energy Regulatory Commission regulates transmission prices and services.

"Non-Market Based Transmission Charges" are part of the basic service charges on every Customer's bill for delivering electricity from the EDC to your home. These services include Non Market Based Charges which consist of Regional Transmission Expansion Plan Costs ("RTEP") charges billed under Schedule 6 of the PJM Operating Agreement, and PJM Expansion costs billed under Schedule 12 and 13 of the PJM Open Access Transmission Tariff. RTEPs and PJM Expansion Costs are billed by the Independent System Operator, and will be included on your bill from the EDC.

"Non-Summer Months" are the months of September through May.

"On-Peak Hours" are the hours from 8:00 a.m. to 8:00 p.m. weekdays.

"Off-Peak Hours" are the hours from 8:00 p.m. to 800 a.m. weekdays and all hours during weekends and recognized holidays observed for New Year's Day, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day.

"Price-to-Compare" is a quarterly adjusted rate, in cents per kWh, representing the Company's costs to provide Default Service to a Customer.

"PTC" See "Price-to-Compare" (defined above).

"$PTC_{Default}$" See "Price-to-Compare" (defined above).

"Summer Months" are the months of June through August.

Other Pricing Terms

The price charged for electric generation and market based transmission service under this Contract is reflective of competitive market conditions, was not set or approved by the PaPUC and does not include any applicable taxes (other than gross receipts taxes) or local distribution company fees or charges, which will be charged by the EDC. Based on the information provided by you during your signup, this address is your personal residence, vacation home or residential rental property or you are the parent or guardian for the person residing here, and you are paying the EDC bill. Accordingly, under current applicable laws, we are not required to assess sales taxes on our charges under this Contract. There is no charge for entering into this Contract or for terminating this Contract at the end of the then applicable Contract term as provided in the "Term" and "Guarantee Period" sections.

Right of Rescission

You may cancel this Contract at any time before midnight of the third business day after receiving this disclosure by either notifying us in writing at the address provided below or

by phone by calling us at {insert EGS 800 number here} that you would like to rescind this Contract.

Price Comparison

Because the EDC's tariff rates and other factors relevant to the EDC's current Residential Price-To- Compare shall change, {INSERT EGS Name HERE} cannot guarantee savings over the EDC's standard Default Service rates for the entire term of this Contract and any savings are limited to a comparison against the EDC's Residential Price-To- Compare applicable at the time you enter into this Contract, and your ability to shift load from On-Peak to Off-Peak periods.

Net Metering

If you currently own or plan to install during the term of this Contract solar, wind, or other eligible renewable electrical generating facilities in order to supply all or part of your electricity usage and such generating facility is or will be net metered by the EDC you must notify us in order for us to determine your eligibility and to properly enroll or continue to serve you.

Initiation of Service

THE PURPOSE OF THIS DOCUMENT IS TO AUTHORIZE {INSERT EGS NAME HERE} TO CHANGE YOUR ELECTRIC GENERATION SERVICE SUPPLIER AND, BY ENTERING INTO THIS CONTRACT, YOU AUTHORIZE {INSERT EGS Name HERE} TO UNDERTAKE WHATEVER STEPS NECESSARY TO ACCOMPLISH YOUR SWITCH. {INSERT EGS Name HERE} will begin providing electric generation service to you on the next applicable meter read date after the EGS processes your enrollment and your service will continue throughout the term of this Contract. The EDC will notify you of the date on which your electric generation service from {INSERT EGS Name HERE} will begin. {INSERT EGS Name HERE}'s electric generation service will be delivered to your residence using the EDC's electricity distribution wires. You represent and warrant that the electricity supply being purchased under this Contract is to be used solely for residential purposes. {INSERT EGS Name HERE}'s obligations under this Contract are conditioned on you providing complete and accurate information and on you remaining a EDC distribution Customer throughout the term under the applicable residential electric rate class.

Billing and Payment

The cost of your electric generation service will be included on your bill from the EDC, and is due and payable when your EDC bill is due at the billing address provided in your

EDC bill. You acknowledge that the EDC may provide us with your billing and payment information. You will be invoiced for {INSERT EGS Name HERE}'s charges under this Contract at the applicable price set forth in the "**Variable Pricing**" section above multiplied by your electricity usage as measured by the EDC in kWh during the applicable billing period. You agree to accept the measurements as determined by the EDC for purposes of accounting for the amount of power and energy services provided by us under this Contract. If the EDC is unable to read your meter, the EDC will estimate your usage and your charges will be calculated accordingly and adjusted on a future bill. Supplying you under this Contract is conditioned on the EDC accepting our enrollment of your account and your continued eligibility for consolidated billing by the EDC. If you are not eligible for consolidated billing, you need to remedy that restriction with the EDC before we can serve you. Should the EDC cease providing consolidated billing for your account and/or commence billing us for any charges relating to you, we will bill you and you will pay us for all such charges. You will be billed additional charges, including taxes and charges to distribute the electricity to your home, from the EDC consistent with its filed tariffs. You are responsible for paying any new or increased taxes, fees or other charges imposed on us or you in connection with our supply of electricity to you during the term of this Contract. {INSERT EGS Name HERE} reserves the right to change billing methods, upon the completion of the term of this Contract. If we change our billing methods, we will send you two (2) advance written notices either in your bills or in separate mailing before the effective date of any such change.

Equal Payment Plan

The EDC is offering an Equal Payment Plan for our electric generation service charges. You may elect the Equal Payment Plan at any time by contacting the EDC's customer service department as long as you are not past due on your payments and are eligible for EDC consolidated billing. The Equal Payment Plan is calculated by estimating your Delivery Service Charges and electric generation service charges for a twelve (12) month period. A payment of approximately one-twelfth (1/12) of such estimate shall be rendered monthly by the EDC, subject to a monthly historical review by the EDC which may result in a change in the equal payment monthly amount to be paid by the Customer. The EDC will true up your account based on your actual charges upon termination of service or if you wish to discontinue Equal Payment Plan. For more information or to signup for the Equal Payment Plan, contact the EDC customer service center at the number shown below.

Late or Insufficient Payment

When the EDC issues you a consolidated bill, all invoiced balances under this Contract that are not paid in full by the due date will be subject to the EDC's late payment policies and procedures, including imposition of late fees, interest and other charges as described in the EDC's filed tariff(s) pursuant to the terms of the Company's Time-of-Use Default Service Rider. In addition, the EDC will have the ability to terminate service to a Customer for the Customer's non-payment of either EGS Basic Electric Supply charges or EDC charges.

Credit

In the event that the EDC does not continue to purchase the right to receive your payments during the term of this contract, {INSERT EGS Name HERE} reserves the right to determine if your credit standing is satisfactory for originating or continuing electric generation service under this Contract. Consistent with applicable law, {INSERT EGS Name HERE} uses uniform income, deposit and credit requirements in determining whether to offer service to our Customers. You hereby authorize {INSERT EGS Name HERE} to perform a credit check on you if the EDC does not continue to purchase the right to receive your payments.

Termination

{INSERT EGS Name HERE} may terminate this Contract if:

- You move within or outside of the EDC's service territory or you fail to remain an EDC distribution Customer throughout the term under the applicable residential electric rate class;
- You fail to be eligible for EDC consolidated billing throughout the term;
- You rescind your authorization for release of information provided in the "**Information Release Authorization**" section below; or,
- You provide any false, inaccurate or misleading information to {INSERT EGS Name HERE} or the EDC.

YOU MAY TERMINATE THIS CONTRACT PRIOR TO THE END OF THE APPLICABLE TERM FOR YOUR CONVENIENCE BY GIVING US NOT LESS THAN 30 DAYS' PRIOR WRITTEN NOTICE.

Upon any termination of this Contract, you will need to select another service offered by this EGS, select another electric generation supplier or return to the EDC's standard Default Service. The effective date of any termination will be the next applicable meter read date after expiration of the required notice period. Upon any termination, you will remain responsible for all obligations, including payment for electricity and related costs and charges incurred under this Contract prior to the effective date of termination. The delivery of electricity to you cannot be terminated or interrupted by the EDC as a result of any dispute between {INSERT EGS Name HERE} and you but may be terminated by the EDC for nonpayment of EDC charges in accordance with applicable law. The EDC will continue to respond to any service calls and emergencies and switching to {INSERT EGS Name HERE} will not impact your electric service reliability. Because the EDC purchases the right to receive your payments under this Contract, your payment obligations under this Contract are EDC charges for purposes of termination of service.

Assignment, Address Change

{INSERT EGS Name HERE} may assign, subcontract or delegate all or any part of our rights and/or obligations under this Contract, including your payment obligations under this Contract, without notice or your consent in accordance with the rules and regulations of the PaPUC. You may not assign any of your rights or obligations under this Contract without our prior written consent. If you move, you may terminate our Contract. You will be responsible for paying for all electricity supplied to your old address until the date this Contract is terminated in accordance with its terms. If you move within the EDC's service territory, you must contact the EDC at the number provided in the "**Contact Information**" section below in order to obtain new account and meter numbers for your new residence. Please contact us if you would like us to serve you again at your new location.

Change in Terms

This Contract may be revised at any time by {INSERT EGS Name HERE} upon the Commission's approved modifications to TOU default service. Whenever changes to the terms of service in this Contract are proposed, you will receive two written notifications from us in corresponding separate mailings that precede either the expiration date or the effective date of the proposed changes. We will explain your options to you in these two advance notifications. The first of these notices will occur between 52 and 90 days prior to the expiration date of the Contract or the effective date of the proposed Contract change; the second of these notices will occur at least 45 days prior to the Contract's expiration or the effective date of the proposed Contract change. You will have an opportunity to terminate this Contract without any further obligation by notifying us in writing within 30 days after the date of the second notice of the new terms and conditions, in which case your electric generation service will terminate effective as of the next meter read date after expiration of the required notice period. You will remain responsible for any unpaid balance as of the termination date.

Information Release Authorization

Throughout the term, you authorize {INSERT EGS Name HERE} to obtain information from the EDC that includes, but is not limited to, account name, account number, billing address, service address, telephone number, standard offer service type, historical and future electricity usage, rate classification, meter readings, characteristics of electricity service and, when charges hereunder are included on your EDC bill, billing and payment information from the EDC. You authorize {INSERT EGS Name HERE} to release such information to third parties that need to know such information in connection with your power and energy service and to {INSERT EGS Name HERE}'s affiliates and subcontractors. These authorizations will remain in effect as long as this Contract is in effect. You may rescind these authorizations at any time by either calling or providing written notice to us. We reserve the right to the extent permitted by law to reject your enrollment or terminate this Contract in the event these authorizations are rescinded.

Dispute Resolution

If you have a billing or other dispute involving our service, please contact us at {Insert EGS 800 number here}. You must still pay your bill in full, but may deduct the specific amount in dispute while the charges remain in dispute. You may call the PaPUC if you are not satisfied after discussing the terms with us at 1-888-PUC-FACT or 1-800-782-1100 from 8:00 am to 5:00 pm weekdays or in writing at P.O. Box 3265, Harrisburg, PA 17105-3265.

Limitation of Liability; Jury Trial Waiver

You agree that neither {INSERT EGS Name HERE} nor any of its affiliates or subcontractors will be liable for any damages or claims for matters within the control of the EDC or the ISO controlled electricity grid, which include maintenance of electric lines and systems, service interruptions, loss or termination of service, deterioration of electric services, meter readings or injury to persons or damage to property caused by the delivery or supply of electricity. Neither {INSERT EGS Name HERE} nor any of its affiliates or subcontractors will be responsible for any failure to commence or terminate power and energy service on the date specified herein due to any failure or delay in enrolling you with the EDC. {INSERT EGS Name HERE}'s liability will be limited to direct actual damages only, which will not exceed the amount of your single largest monthly invoice during the preceding 2 years. In no event will {INSERT EGS Name HERE} or any of its affiliates or subcontractors be liable for any punitive, incidental, consequential, exemplary, indirect, third-party claims or other damages whether based on contract, warranty, tort, negligence, strict liability or otherwise, or for lost profits arising from any breach or nonperformance of this Contract. BOTH YOU AND {INSERT EGS NAME HERE} AGREE IRREVOCABLY AND UNCONDITIONALLY TO WAIVE ANY RIGHT TO A TRIAL BY JURY OR TO INITIATE OR BECOME A PARTY TO ANY CLASS ACTION CLAIMS IN RESPECT OF ANY ACTION, SUIT OR PROCEEDING DIRECTLY OR INDIRECTLY ARISING OUT OF OR RELATING TO THIS CONTRACT OR THE TRANSACTIONS CONTEMPLATED BY THIS CONTRACT.

Force Majeure

We do not transmit or deliver electricity and causes and events out of our reasonable control ("Force Majeure Events") may result in interruptions in service. We will not be liable for any such interruptions or any other failure to perform under this Contract caused by a Force Majeure Event. We are not and will not be liable for damages caused by Force Majeure Events, including but not limited to acts of God; acts of any governmental authority; accidents; strikes; labor disputes; required maintenance work; inability to access the EDC's system; nonperformance by the EDC, including, but not limited to, a facility outage on its distribution lines; changes in laws, rules or regulations of any governmental authority; or any cause beyond our reasonable control.

Miscellaneous

Except with respect to {INSERT EGS Name HERE}'s affiliates and subcontractors under the "**Limitation of Liability; Jury Trial Waiver**" section, there are no third party beneficiaries of this Contract. Any payments due under this Contract, and all provisions relating to the payment and collection thereof, and the provisions contained in the "**Limitation of Liability; Jury Trial Waiver**" section above, will survive expiration or termination for any reason. This Contract constitutes the entire agreement between you and {INSERT EGS Name HERE}. No statement, promise or inducement made by either party not contained in this Contract will be valid or binding. Any reference to days or periods will mean calendar days.

Contact Information

{INSERT EGS Name HERE} RESIDENTIAL LICENSE NUMBER IS {Insert EGS license number here}

Should you have any questions about your {INSERT EGS Name HERE} contract or {INSERT EGS Name HERE} charges on your invoice, please contact us between the hours of 8:00 a.m. and 8:00 p.m. eastern time on weekdays, except holidays. Our toll-free number is {INSERT EGS 800 number HERE}. We can be reached by email at: {INSERT EGS WEB-SITE HERE} or by mail at: {INSERT EGS Mailing ADDRESS here}. Please contact us at this address to provide all notices under this Contract and contact us at this address or phone number to resolve any disputes regarding this Contract. For emergencies relating to your service, such as a power outage, or for information about universal service programs, please call your EDC at the following number:

Metropolitan Edison Company at 1-800-545-7441,
or Pennsylvania Electric Company at 1-800-545-7441

The Pennsylvania Utility Commission can be reached by mail
at P.O. Box 3265, Harrisburg, PA 171053265,
or by phone at 18006927380
and their website address is
http://www.puc.state.pa.us/. You may contact the PUC if after discussing with us you are not satisfied with these terms and conditions.

METROPOLITAN EDISON COMPANY

TITLE 52, SECTION 53.52 (a) FILING REQUIREMENT:

"(a) Whenever a public utility, other than a canal, turnpike, tunnel, bridge or wharf company files a tariff, revision or supplement effecting changes in the terms and conditions of service rendered or to be rendered, it shall submit to the Commission, with the tariff, revision or supplement, statements showing all of the following:
(1) The specific reasons for each change.
(2) The total number of customers served by the utility.
(3) A calculation of the number of customers, by tariff subdivision, whose bills will be affected by the change.
(4) The effect of the change on the utility's customers.
(5) The direct or indirect effect of the proposed change on the utility's revenue and expenses.
(6) The effect of the change on the service rendered by the utility.
(7) A list of factors considered by the utility in its determination to make the change. The list shall include a comprehensive statement about why these factors were chosen and the relative importance of each. This subsection does not apply to a portion of a tariff change seeking a general rate increase as defined in 66 Pa.C.S. § 1308 (relating to voluntary changes in rates).
(8) Studies undertaken by the utility in order to draft its proposed change. This paragraph does not apply to a portion of a tariff change seeking a general rate increase as defined in 66 Pa.C.S. § 1308.
(9) Customer polls taken and other documents which indicate customer acceptance and desire for the proposed change. If the poll or other documents reveal discernible public opposition, an explanation of why the change is in the public interest shall be provided.
(10) Plans the utility has for introducing or implementing the changes with respect to its ratepayers.
(11) FCC, FERC or Commission orders or rulings applicable to the filing."

RESPONSE:

52 Pa. Code 53.52(a)(1)

Q. The specific reasons for each change.

A. See Testimony of Kevin M. Siedt, Met-Ed/Penelec/Penn Power/West Penn Statement No. 4.

52 Pa. Code 53.52(a)(2)

Q. The total number of Customers served by the utility.

A. As of March 2014, the end of the historical test year, Met-Ed served a total of 557,266 customers.

52 Pa. Code 53.52(a)(3)

Q. A calculation of the number of Customers, by tariff subdivision, whose bills could be affected by the change.

A. See Met-Ed Exhibit KMS-1, Attachment A, B, and C, Sales and Distribution Revenue Normalization (Fully Projected, Future, and Historical Test Years, respectively)

52 Pa. Code 53.52(a)(4)

Q. The effect of the change on the utility's customers.

A. See Met-Ed Exhibit KMS-6, Comparison between Present and Proposed Rates, and Met-Ed/Penelec/Penn Power/West Penn Statement No. 4, Direct Testimony of Kevin M. Siedt.

52 Pa. Code 53.52(a)(5)

Q. The direct or indirect effect of the proposed change on the utility's revenue and expenses.

A. See Met-Ed/Penelec/Penn Power/West Penn Statement No. 2, Direct Testimony of Richard A. D'Angelo and Exhibits RAD 1 and 2.

52 Pa. Code 53.52(a)(6)

Q. The effect of the change on the service rendered by the utility

A. See Met-Ed/Penelec/Penn Power/West Penn Statement No. 1, Direct Testimony of Charles V. Fullem.

52 Pa. Code 53.52(a)(7)

Q. A list of factors considered by the utility in its determination to make the change. The list shall include a comprehensive statement about why these factors were chosen and the relative importance of each. This subsection does not apply to a portion of a tariff change seeking a general rate increase as defined in 66 Pa.C.S. § 1308 (relating to voluntary changes in rates).

A. Not applicable.

52 Pa. Code 53.52(a)(8)

Q. Studies undertaken by the utility in order to draft its proposed change. This paragraph does not apply to a portion of a tariff change seeking a general rate increase as defined in 66 Pa.C.S. § 1308.

A. Not Applicable.

52 Pa. Code 53.52(a)(9)

Q. Customer polls taken and other documents which indicate customer acceptance and desire for the proposed change. If the poll or other documents reveal discernible public opposition, an explanation of why the change is in the public interest shall be provided.

A. None

52 Pa. Code 53.52(a)(10)

Q. Plans the utility has for introducing or implementing the changes with respect to its ratepayers.

A. At the time of filing, the Company will issue and provide to customers notice of its distribution rate increase request pursuant to the Commission's general rate case filing regulations. A customer bill insert will describe the rate changes approved by the Commission and indicate the impact on customers. The Company will also inform customers about the Commission-approved rate changes in news releases and on the Company's Internet site. After a final Commission Order is entered in connection with this rate filing, the Company will file a compliance tariff to implement all of the approved changes.

52 Pa. Code 53.52(a)(11)

Q. FCC, FERC or Commission orders or rulings applicable to the filing.

A. The following orders or rulings are applicable to the filing:

- Joint Petition of Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company for approval of Their Default Service Programs, Docket Nos. P-2011-2273650, P-2011-2273668, P-2011-2273669, and P-2011-2273670.
- Investigation of Pennsylvania's Retail Electricity Market Intermediate Work Plan, Docket No. I-2011-2237952.
- Merger Settlement, Docket Nos. A-2010-2176520 and A-2010-2176732.
- Companies' Smart Meter Deployment Plan, Docket Nos. M-2013-2341990, M-2013-2341991, M-2013-2341993, and M-2013-2341994.
- Met-Ed and Penelec 2007 Rate Case order, Docket No. R-0061366 and R-0061367.

TITLE 52, SECTION 53.52 (b) FILING REQUIREMENT:

"(b) Whenever a public utility other than a canal, turnpike, tunnel, bridge or wharf company files a tariff, revision or supplement which will increase or decrease the bills to its customers, it shall submit in addition to the requirements of subsection (a), to the Commission, with the tariff, revision or supplement, statements showing the following:
(1) The specific reasons for each increase or decrease.
(2) The operating income statement of the utility for a 12-month period, the end of which may not be more than 120 days prior to the filing. Water and wastewater utilities with annual revenues under $100,000 and municipal corporations subject to Commission jurisdiction may provide operating income statements for a 12-month period, the end of which may not be more than 180 days prior to the filing.
(3) A calculation of the number of customers, by tariff subdivision, whose bills will be increased.
(4) A calculation of the total increases, in dollars, by tariff subdivision, projected to an annual basis
(5) A calculation of the number of customers, by tariff subdivision, whose bills will be decreased.
(6) A calculation of the total decreases, in dollars, by tariff subdivision, projected to an annual basis.."

RESPONSE:

Metropolitan Edison Company ("Met-Ed" or the "Company") submits the following information in support of Tariff Electric – Pa. P.U.C. No. 52. In response to each of the applicable subsections of 52 Pa. Code 53.52(b), Met-Ed states the following:

52 Pa. Code 53.52(b)(1)

Q. The specific reasons for each increase or decrease.

A. See Testimony of Charles V. Fullem, Met-Ed/Penelec/Penn Power/West Penn Statement No. 1, Testimony of Richard A. D'Angelo, Met-Ed/Penelec/Penn Power/West Penn Statement No. 2, Testimony of Kimberlie L. Bortz, Met-Ed/Penelec/Penn Power/West Penn Statement No. 3, and Testimony of Kevin M. Siedt, Met-Ed/Penelec/Penn Power/West Penn Statement No. 4.

52 Pa. Code 53.52(b)(2)

Q. The operating income statement of the utility for a 12-month period, the end of which may not be more than 120 days prior to the filing.

A. See Met-Ed Exhibit RAD-4.

52 Pa. Code 53.52(b)(3)

Q. A calculation of the number of customers, by tariff subdivision, whose bills will be increased.

A. See Met-Ed Exhibit KMS-1, Attachment A, B, and C, Sales and Distribution Revenue Normalization (Fully Projected, Future, and Historical Test Years, respectively), Met-Ed Exhibit KMS-2, Summary of Distribution of Revenues, Met-Ed Exhibit KMS-5, Proof of Revenues Analysis, and Met-Ed Exhibit KMS-6, Bill Comparisons.

52 Pa. Code 53.52(b)(4)

Q. A calculation of the total increases, in dollars, by tariff subdivision, projected to an annual basis.

A. See Met-Ed Exhibit KMS-2, Summary of Distribution of Revenues, Met-Ed Exhibit KMS-5, Proof of Revenues Analysis, and Met-Ed Exhibit KMS-6, Bill Comparisons.

52 Pa. Code 53.52(b)(5)

Q. A calculation of the number of customers, by tariff subdivision, whose bills will be decreased.

A. See Met-Ed Exhibit KMS-2, Summary of Distribution of Revenues, Met-Ed Exhibit KMS-5, Proof of Revenues Analysis, and Met-Ed Exhibit KMS-6, Bill Comparisons.

52 Pa. Code 53.52(b)(6)

Q. A calculation of the total decreases, in dollars, by tariff subdivision, projected to an annual basis.

A. See Met-Ed Exhibit KMS-2, Summary of Distribution of Revenues, Met-Ed Exhibit KMS-5, Proof of Revenues Analysis, and Met-Ed Exhibit KMS-6, Bill Comparisons.

TITLE 52, SECTION 53.52 (c) FILING REQUIREMENT:

> "(c) If a public utility files a tariff, revision or supplement which it is calculated will increase the bills of a customer or a group of customers by an amount, when projected to an annual basis, exceeding 3% of the operating revenues of the utility—subsection (b)(4) divided by the operating revenues of the utility for a 12-month period as defined in subsection (b)(2)—or which it is calculated will increase the bills of 5% or more of the number of customers served by the utility—subsection (b)(3) divided by subsection (a)(2)—it shall submit to the Commission with the tariff, revision or supplement, in addition to the statements required by subsections (a) and (b), all of the following information:
> (1) A statement showing the utility's calculation of the rate of return or operating ratio (if the utility qualifies to use an operating ratio under § 53.54 (relating to small water and wastewater utilities) earned in the 12-month period referred to in subsection (b)(2), and the anticipated rate of return or operating ratio to be earned when the tariff, revision or supplement becomes effective. The rate base used in this calculation shall be supported by summaries of original cost for the rate of return calculation. When an operating ratio is used in this calculation, it shall be supported by studies of margin above operation and maintenance expense plus depreciation as referred to in § 53.54(b)(2)(B).
> (2) A detailed balance sheet of the utility as of the close of the period referred to in subsection (b)(2).
> (3) A summary, by detailed plant accounts, of the book value of the property of the utility at the date of the balance sheet required by paragraph (2).
> (4) A statement showing the amount of the depreciation reserve, at the date of the balance sheet required by paragraph (2), applicable to the property, summarized as required by paragraph (3).
> (5) A statement of operating income, setting forth the operating revenues and expenses by detailed accounts for the 12-month period ending on the date of the balance sheet required by paragraph (2).
> (6) A brief description of a major change in the operating or financial condition of the utility occurring between the date of the balance sheet required by paragraph (2) and the date of transmittal of the tariff, revision or supplement. As used in this paragraph, a major change is one which materially alters the operating or financial condition of the utility from that reflected in paragraphs (1)—(5)."

RESPONSE:

See Met-Ed/Penelec/Penn Power/West Penn Statement No. 2, Testimony of Richard A. D'Angelo and Exhibit RAD 54 and Exhibit RAD 55.

TITLE 52, SECTION 53.52 (d) FILING REQUIREMENT:

> "(d) If a utility renders more than one type of public service, such as electric and gas, information required by § § 53.51—53.53 (relating to information furnished with the filing of rate changes), except subsection (c)(2), relates solely to the kind of service to which the tariff or tariff supplement is applicable. In subsection (c)(2), the book value of property used in furnishing each type of public service, as well as the depreciation reserve applicable to the property, shall be shown separately."

RESPONSE:

See Met-Ed/Penelec/Penn Power/West Penn Statement No. 2, Testimony of Richard A. D'Angelo and Exhibit RAD 54 and Exhibit RAD 55.

FILING REQUIREMENT IV-A-1:

"Provide a summary schedule of the individual rate effects. For each state jurisdictional rate, show the following information to the test period elected:

1. Rate schedule designation."

FILING REQUIREMENT IV-A-2:

"Provide a summary schedule of the individual rate effects. For each state jurisdictional rate, show the following information to the test period elected:

2. For existing rates:
   a. Customers served as of end of period.
   b. Annual Kwh sales
   c. Base rate revenues adjusted for any changes in base rate application that may have occurred during the test period.
   d. Tax surcharge revenues.
   e. Energy Cost adjustment clause revenues.
   f. Revenues received from other clauses or riders separately accounted for.
   g. Total of all revenues."

FILING REQUIREMENT IV-A-3:

"Provide a summary schedule of the individual rate effects. For each state jurisdictional rate, show the following information to the test period elected:

3. For proposed rates:
(a) Estimated number of customers whose charges for electric service will be increased or decreased as a result of this filing.
(b) Base rate revenues:
   (1) Annual dollar amount of increase or decrease.
   (2) Percentage change.
(c) Estimated tax surcharge revenues based on the assumption that the base rate changes proposed were in place.
(d) Estimated Energy cost adjustment clause revenues.
(e) Revenues received from other clauses or riders separately accounted for.
(f) Total of all revenues:
   (1) Amount of total annual dollar change.
   (2) Percentage change."

FILING REQUIREMENT IV-A-4:

"Provide a summary schedule of the individual rate effects. For each state jurisdictional rate, show the following information to the test period elected:

4. Supplement the revenue summary to obtain a complete revenue statement of the electric business, that is, show delayed payments, other electric revenues, FERC jurisdictional sales and revenues and all other appropriate revenue items and adjustments."

FILING REQUIREMENT IV-A-5:

"Provide a summary schedule of the individual rate effects. For each state jurisdictional rate, show the following information to the test period elected:

5. Develop the grand total showing total sales and revenues as adjusted and the various increases and decreases and percent effects as described above."

RESPONSES:

See Met-Ed Exhibit KMS-1, Attachment A, B, and C, Sales and Distribution Revenue Normalization (Fully Projected, Future, and Historical Test Years, respectively), Met-Ed Exhibit KMS-2, Summary of Distribution of Revenues.

FILING REQUIREMENT IV-C:

> "The annual revenue effect of any proposed change to any rate must be supported by a billing analysis. This may consist of the use of bill frequency distributions or individual customer billing records for the most recent annual periods available. All billing determinants should be displayed. The blocking and corresponding prices of the existing rate and the proposed rate should be applied to the determinants to derive the base rate revenues under both present and proposed rates. The derived base rate revenues should form the basis for measuring the annual base rate effect of the rates in question for the test periods."

RESPONSE:

See Met-Ed Exhibit KMS-5, Proof of Revenues Analysis.

FILING REQUIREMENT IV-D-1:

"The effects of the proposed rates on monthly billing conditions should be provided as follows:

1. *Residential Bill Comparisons*

   For each rate applicable to residential service provide a chart or tabulation which shows the dollar and percentage effect of the proposed base rate on monthly bills ranging from the use of zero kWh to 5,000 kWh at appropriate intervals."

FILING REQUIREMENT IV-D-2:

"The effects of the proposed rates on monthly billing conditions should be provided as follows:

2. *General Bill Comparisons*

   For each rate that requires both a billing demand (kW) and kWh's as the billing determinants, provide a tabulation or graphical comparison showing the percentage effect of the proposed base rate on monthly bills using several representative demand (kW) levels, the monthly kWh for each demand selected to be in load factor increments of 10% starting at 0% and ending at 100% (730H) or by hours' use increments that covers approximately 95% of the bills."

RESPONSE:

See Met-Ed Exhibit KMS-6, Comparison between Present and Proposed Rates.

FILING REQUIREMENT IV-E-2:

> "Provide comparisons in either graphical or tabular form showing cost, as defined in the cost of service study, and proposed base rate revenues and usage for all residential and demand/energy rate schedules. Demand shall be for representative loads for each demand/energy rate schedule."

RESPONSE:

See Met-Ed Exhibit KMS-7, Cost Curves.

STEVEN R. STAUB

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is Steven R. Staub and my business address is 76 South Main Street, Akron, Ohio 44308.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company as Vice President and Treasurer.

Q. What are your current responsibilities?

A. I am responsible for Treasury activities including capital markets, cash management, derivatives, investment management, and debt compliance. I am also responsible for Business Planning activities including budgeting, forecasting, and financial planning. My responsibilities extend to each of the companies owned by FirstEnergy Corp., including its distribution operating companies.

Q. What is your educational and professional background?

A. I am a graduate of the University of Pittsburgh with undergraduate degrees in Business/Accounting and Political Science. I received an MBA from the University of Pittsburgh and a Master of Taxation from Robert Morris University. I have over twenty years of professional experience in finance related-positions,

including fifteen years with the regulated utility industry. My work and testimonial experience is more fully outlined in Appendix A.

Q. On whose behalf are you testifying in this matter?

A. I am testifying on behalf of Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power"), and West Penn Power Company ("West Penn") (collectively, the "Companies"). My testimony applies to all of the Companies, unless otherwise stated.

Q. What is the purpose of your direct testimony?

A. My testimony describes and supports the capital structure, embedded cost of long-term debt and overall weighted average cost of capital claimed by each of the four Companies. In addition, I explain why the Companies have requested that their authorized return on common equity be set at the high end of the range of values developed by their outside consultant on the cost of capital, Dr. Michael J. Vilbert of The Brattle Group.

Q. Are you sponsoring any exhibits?

A. Yes. I am sponsoring responses to various standard filing requirements dealing with financial matters, which responses are sequentially numbered as Exhibits SRS-1 through SRS-21 for each of the Companies. In addition, I am sponsoring the following summary schedules for each of the four Companies, which will be discussed further in this testimony:

Exhibits SRS-22: Capitalization and Capitalization Ratios

Exhibits SRS-23: Schedule of Long-Term Debt Outstanding Projected at April 30, 2016

Exhibits SRS-24: Capital Cost Rates April 30, 2016

Each of these exhibits were prepared by me or under my supervision.

II. CAPITAL STRUCTURE

Q. What capital structure ratios are you proposing be utilized for purposes of determining the Companies' overall weighted average costs of capital?

A. I recommend use of each Company's projected capital structure at April 30, 2016, exclusive of short-term debt. That date corresponds to the end of the fully projected future test year in these proceedings and, accordingly, reflects the mix of long-term debt and common equity capital that will support the Companies' claimed rate bases.

Q. Why have you excluded short-term debt from your proposed capital structure ratios?

A. Short-term borrowings typically are sources of liquidity and are not utilized to finance long-lived assets, such as those included in the Companies' claimed rate bases. In addition, it is my understanding that the Pennsylvania Public Utility Commission typically excludes short-term debt from a utility's capital structure in base rate cases.

Q. How did you derive the Companies' anticipated capital structure ratios at April 30, 2016?

A. As set forth in Exhibits SRS-22, the starting point was the actual capital structure in place at March 31, 2014, which represents the end of the historic test year. Then, based on recent financial forecasts, the respective amounts of long-term debt and common equity[1] were adjusted forward to March 31, 2015, the end of the future test year, and to April 30, 2016, the end of the fully projected future test year, to capture: (1) consummated and planned issuances of long-term debt (Met-Ed and Penelec in 2014 and Penn Power and West Penn prior to April 30, 2016); (2) the pay down of long-term debt; (3) the amortization of long-term debt discount and, in the case of West Penn, certain fair value adjustments booked in accordance with the FirstEnergy / Allegheny Energy merger; and (4) anticipated increases in retained earnings.

Q. What specific capital structure ratios do you recommend be adopted for rate of return purposes in this case?

A. Since rate setting is prospective, the rate of return should reflect a utility's expected capital structure at the end of the test year. I therefore recommend the adoption of the projected April 30, 2016 capital structure ratios set forth below:

Company	Long-Term Debt	Common Equity
Met-Ed	50.0%	50.0%
Penelec	50.1%	49.9%
Penn Power	49.9%	50.1%
West Penn	49.9%	50.1%

[1] None of the four Companies has any preferred or preference stock outstanding.

III. COST OF LONG-TERM DEBT

Q. What cost rates have you assigned to the long-term debt component of the Companies' capital structures?

A. The determination of a utility's weighted average long-term debt cost rate is essentially an arithmetic exercise due to the fact that the utility has contracted for the use of the capital in question for a defined period of time at a specified cost rate. The necessary calculations, which take into account issuance expense and, in the case of Penn Power, annual sinking fund requirements, are provided in Exhibits SRS-23.

Q. Please describe what is shown in Exhibits SRS-23.

A. Exhibits SRS-23 itemize each series of debt, the date of issuance, maturity, original amount issued and projected amount outstanding as of April 30, 2016. The Premium/Discount and Issuance Expenses column represents legal, underwriting and other miscellaneous costs associated with each issuance. The principal amount issued, adjusted for any premium or discount, less any issuance expenses equals the Net Proceeds. The effective rate is calculated by taking the Net Proceeds at the time of issuance and calculating the Internal Rate of Return based on the interest rate and the years to maturity. After the effective rate is calculated for each individual series, the rates are weighted by taking the effective rate multiplied by each respective amount outstanding divided by the total adjusted amount of long-term debt outstanding.

Q. What long-term debt cost rates do you recommend be utilized in developing the Companies' overall costs of capital?

A. As indicated in Exhibits SRS-23 and as summarized below, the Companies' weighted average long-term debt cost rates range from 5.21% (Met-Ed) to 6.12% (Penn Power):

Company	Long-Term Debt Cost Rate
Met-Ed	5.21%
Penelec	5.72%
Penn Power	6.12%
West Penn	5.38%

IV. COST OF COMMON EQUITY

Q. What rate of return on common equity ("ROE") are the Companies requesting authorization to earn?

A. The Companies seek a reasonable opportunity to earn an ROE of 10.9%. As noted previously, this represents the upper end of the cost of equity range determined by Dr. Vilbert, and is more fully explained in Met-Ed/Penelec/Penn Power/West Penn Statement No. 9.

Q. Why do you believe that the Companies should be provided an ROE at the high end of Dr. Vilbert's range?

A. For several reasons. First, the Companies project the need to make very significant capital investments over the next five to ten years as they install smart meters and replace and rehabilitate aging infrastructure to ensure reliability. To

that end, it is critically important that they maintain a healthy financial profile so they can access the capital markets on reasonable terms.

Second, and as pointed out by Dr. Vilbert, capital-intensive entities such as the Companies face considerable uncertainty as to the future course of the capital markets. In my view, short and medium term interest rates will likely not go any lower than they are today and, in all probability, will begin to trend upwards in 2015. Consequently, my proposed 10.9% equity allowance reflects, in part, my expectation that capital costs are far more likely to increase than they are to decrease or remain flat during the period that the new rates are in effect. Furthermore, setting rates with a ROE that is below that of other investment opportunities of corresponding risk will imperil the Companies' ability to maintain their financial integrity and continue to attract capital at reasonable rates and terms.

Third, the Companies have taken a number of positive steps over the past several years to control costs, improve customer service, and promote retail electric competition, as described by Mr. Fullem in Met-Ed/Penelec/Penn Power/West Penn Statement No. 1. I believe all of these efforts should be considered as favorable factors in setting the Companies' authorized ROE.

V. OVERALL COST OF CAPITAL

Q. How did you calculate the Companies' overall costs of capital?

A. As set forth in the respective Exhibits SRS-24, I quantified, and then combined, each Company's weighted average costs of long-term debt and common equity by

multiplying the projected April 30, 2016 capitalization ratios presented in Exhibit SRS-22 by: (1) the average cost of debt developed on Exhibits SRS-23; and (2) the recommended ROE of 10.9%. The results are as follows:

Company	Overall Weighted Cost of Capital
Met-Ed	8.05%
Penelec	8.31%
Penn Power	8.51%
West Penn	8.14%

Q. Does that conclude your direct testimony at this time?

A. Yes, it does.

Resume: Education and Experience of Steven R. Staub

Education:

1993	Bachelor of Science Degree in Business/Accounting and Political Science – University of Pittsburgh
1997	Masters of Business Administration Degree – University of Pittsburgh
2007	Master of Taxation – Robert Morris University

Experience:

4/94 – 2/98	Finance-related positions in the corporate banking, capital markets, and securities lending divisions – Mellon Bank
2/98 – 8/99	Senior Finance Analyst – Ford Motor Company
8/99 – 9/02	Senior Financial Consultant – Duquesne Light Company
9/02 – 12/03	Manager of Corporate Finance – Duquesne Light Company
12/03 – 11/07	Assistant Treasurer – Duquesne Light Company
12/07 – 8/12	Assistant Treasurer – Allegheny Energy Inc. (FirstEnergy)
8/12 – 12/12	Executive Director and Assistant Treasurer – FirstEnergy
12/12 – Present	Vice President and Treasurer – FirstEnergy

Prior Rate Case Testimony:

Public Service Commission of West Virginia	Case No. 12-1571-E-PC Case No. 14-0702-E-42T
New Jersey Board of Public Utilities	BPU Docket No. ER12111052 OAL Docket No. PUC16310-2012N

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-B-5:

"If a claim is made for compensating bank balances, provide the following information:

(a) Name and address of each bank.
(b) Types of accounts with each bank – checking, savings, escrow, other services, and the like.
(c) Average daily balance in each account.
(d) Amount and percentage requirements for compensating bank balance at each bank.
(e) Average daily compensating bank balance at each bank.
(f) Documents from each bank explaining compensating bank balance requirements.
(g) Interest earned on each type of account.
(h) A calculation showing the average daily float for each bank."

RESPONSE:

No compensating bank balances are maintained.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-E-2:

"Supply summaries of the utility's projected operating and capital budgets for the 2 calendar years following the end of the test year."

RESPONSE:

This information is not available at this time.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-A-1:

"Provide a schedule showing the major components of claimed capitalization, and the derivation of the weighted costs of capital for the rate case claim. This schedule shall include a descriptive statement concerning the major elements of changes in claimed capitalization, cost rates and overall return from comparable historical data."

RESPONSE:

See the testimony and exhibits of Steven R Staub.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-A-2:

"Provide a schedule in the same format as Schedule 1, except for the omission of the descriptive statement, for the most immediate comparable annual historical period prior to the test year and the two calendar years most immediately preceding the rate of return claim period. Irrespective of whether the capitalization claimed on Schedule 1 includes short-term debt, Schedule 2 should reflect capital ratios with and without short-term debt."

RESPONSE:

See ME Exhibit SRS-4 Attachment A

Unamort Discount on long-term debt	119	43		46

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-B-1:

"Provide a schedule showing the calculation of embedded cost of long-term debt by issue, supporting the related rate case claim. The schedule shall contain the following information:

a. Date of issue.
b. Date of maturity.
c. Amount issued.
d. Amount outstanding.
e. Amount retired.
f. Amount reacquired.
g. Gain or loss on reacquisition.
h. Coupon rate.
i. Discount or premium at issuance.
j. Issuance expense.
k. Net proceeds.
l. Sinking fund requirements.
m. Effective cost rate.
n. Total average weighted effective cost rate.

Projected new issues, retirements and other major changes from the comparable historic data should be clearly noted."

RESPONSE:

See ME Exhibit SRS-5 Attachment A.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-B-2:

"In the event that a claim made for a true or economic cost of debt exceeds that shown in the preceding nominal cost schedule because of convertible features, sale with warrants or for any other reason, a full statement of the basis for such a claim should be provided."

RESPONSE:

Not applicable.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-B-3:

"Provide the following information concerning bank notes payable for test year and for latest comparable annual historical period prior to the test year:

a. Line of credit at each bank.
b. Average daily balances of notes to each bank, by name of bank.
c. Interest rate charged on each bank note (Prime rate, formula rate, or other).
d. Purpose of each bank note (for example, construction, fuel storage, working capital, debt retirement).
e. Prospective future need for this type of financing."

RESPONSE:

a. Metropolitan Edison can borrow up to $500 mm under the FirstEnergy Corp. Revolving Credit. Royal Bank of Scotland (RBS) is the administrative agent for this credit facility.

b. As of 12/31/2013 Metropolitan Edison had a balance of $50 mm with the FirstEnergy Corp. Revolving Credit.
As of 3/31/2014 Metropolitan Edison had a balance of $75 mm with the FirstEnergy Corp. Revolving Credit.

c. As of 12/31/2013 interest rate was at 1.69%.
As of 3/31/2014 the interest rate was 1.71%

d. Working Capital Requirements

e. Working Capital Requirements

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-B-4:

"Provide detailed information concerning all other short-term debt outstanding."

RESPONSE:

Metropolitan Edison is a participant in the Utility Money Pool and borrows and invests in the pool as needed. The balance borrowed from the Utility Money Pool at 12/31/2013 was $24.8 mm and the borrowing rate was 1.31%. The balance borrowed from the Utility Money Pool at 3/31/2014 was $61.8 mm and the borrowing rate was 1.61%.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-C:

"Provide a schedule showing the calculation of the embedded cost of preferred stock equity by issue, supporting the related rate case claim. The schedule shall contain the following information:

a. Date of issue.
b. Date of maturity.
c. Amount issued.
d. Amount outstanding.
e. Amount retired.
f. Amount reacquired.
g. Gain or loss on reacquisition.
h. Dividend rate.
i. Discount or premium issuance.
j. Issuance expenses.
k. Net proceeds.
l. Sinking fund requirements.
m. Effective cost rate.
n. Total average weighted effective cost rate.

Projected new issues, retirement and other major changes from the comparable historical data should be clearly noted."

RESPONSE:

Not applicable

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-D-2:

"Provide a summary statement of all stock dividends, splits or par value changes during the 2 calendar year period preceding the rate case filing."

RESPONSE:

See file ME Exhibit SRS-10 Req III-D-2_Attachment A

Metropolitan Edison Company

Common Stock Dividend Record

Payment Date	Common Dividend	Return of Capital	Stock Re-purchase
Jun-12		20,000,000	
Oct-12		10,000,000	
Dec-12		15,000,000	
Mar-13		30,000,000	

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-D-3:

"Provide a schedule of all issuances of common stock, whether or not underwriters are used, for the most immediately available annual historical period and the 2 calendar years most immediately preceding the test year."

RESPONSE:

Not applicable.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-D-4:

"Submit details on the utility and parent company stock offerings—past 5 years to present - as follows:

a. Date of prospectus.
b. Date of offering.
c. Record date.
d. Offering period – dates and numbers of days.
e. Amount and number of shares offered.
f. Offering ratio, if rights offering.
g. Percent subscribed.
h. Offering price.
i. Gross proceeds per share.
j. Expenses per share.
k. Net proceeds per share (i—j).
l. Market price per share.
   (1) At record date.
   (2) At offering date.
   (3) One month after close of offering.
m. Average market price during offering.
   (1) Price per share.
   (2) Rights per share—average value of rights.
n. Latest reported earning per share at time of offering.
o. Latest reported dividends at time of offering."

RESPONSE:

The only public issuance of common stock by FirstEnergy Corp. since January 1, 2009 involved the exchange of 113,381,030 shares in connection with the Allegheny Energy merger. The dollar amount of the equity issued was $4,326,620,111.82 and was based on the closing price of FirstEnergy stock on February 24, 2011, the day before the effective date of the merger, of $38.16 per share.

In the 4th Quarter of 2013, FirstEnergy started issuing shares under the Stock Investment Plan (SIP), Divided Re-Investment Plan (DRIP), and certain Human Resources benefit programs that will provide approximately $75 mm per year of additional equity.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-E-1:

"If a claim of the filing utility is based on utilization of the capital structure or capital costs of the parent company and system – consolidated - the reasons for this claim must be fully stated and supported."

RESPONSE:

Not applicable.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-E-2:

"Regardless of the claim made, provide the capitalization data requested at Item III.A.2. for the parent company and for the system - consolidated."

RESPONSE:

See ME Exhibit SRS-14 Attachment A.

Section 1: 10-Q (10-Q)

UNITED STATES SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

FORM 10-Q
(Mark One)

☑ **QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

For the quarterly period ended March 31, 2014

OR

☐ **TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**

For the transition period from _____ to _____

Commission File Number	Registrant; State of Incorporation; Address; and Telephone Number	I.R.S. Employer Identification No.
333-21011	FIRSTENERGY CORP. (An Ohio Corporation) 76 South Main Street Akron, OH 44308 Telephone (800)736-3402	34-1843785
000-53742	FIRSTENERGY SOLUTIONS CORP. (An Ohio Corporation) c/o FirstEnergy Corp. 76 South Main Street Akron, OH 44308 Telephone (800)736-3402	31-1560186

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes ☑ No ☐ FirstEnergy Corp. and FirstEnergy Solutions Corp.

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

Yes ☑ No ☐ FirstEnergy Corp. and FirstEnergy Solutions Corp.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of “large accelerated filer,” “accelerated filer” and “smaller reporting company” in Rule 12b-2 of the Exchange Act.

Large Accelerated Filer ☑ FirstEnergy Corp.

Accelerated Filer ☐ N/A

Non-accelerated Filer (Do not check if a smaller reporting company) ☑	FirstEnergy Solutions Corp.
Smaller Reporting Company ☐	N/A

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes ☐ No ☑ FirstEnergy Corp. and FirstEnergy Solutions Corp.

Indicate the number of shares outstanding of each of the issuer's classes of common stock, as of the latest practicable date:

CLASS	OUTSTANDING AS OF APRIL 30, 2014
FirstEnergy Corp., $0.10 par value	419,908,686
FirstEnergy Solutions Corp., no par value	7

FirstEnergy Corp. is the sole holder of FirstEnergy Solutions Corp. common stock.

This combined Form 10-Q is separately filed by FirstEnergy Corp. and FirstEnergy Solutions Corp. Information contained herein relating to any individual registrant is filed by such registrant on its own behalf. No registrant makes any representation as to information relating to the other registrant, except that information relating to FirstEnergy Solutions Corp. is also attributed to FirstEnergy Corp.

FirstEnergy Web Site and Other Social Media Sites and Applications

Each of the registrants' Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K, and amendments to those reports filed with or furnished to the SEC pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934 are also made available free of charge on or through the "Investors" page of FirstEnergy's Internet web site at www.firstenergycorp.com.

These SEC filings are posted on the web site as soon as reasonably practicable after they are electronically filed with the SEC. Additionally, the registrants routinely post additional important information including press releases, investor presentations and notices of upcoming events, under the "Investors" section of FirstEnergy's Internet web site and recognize FirstEnergy's Internet web site as a channel of distribution to reach public investors and as a means of disclosing material non-public information for complying with disclosure obligations under SEC Regulation FD. Investors may be notified of postings to the web site by signing up for email alerts and RSS feeds on the "Investors" page of FirstEnergy's Internet web site or through push alerts from FirstEnergy Investor Relations apps for Apple Inc.'s iPad® and iPhone® devices, which can be installed for free at the Apple® online store. FirstEnergy also uses Twitter® and Facebook® as additional channels of distribution to reach public investors and as a supplemental means of disclosing material non-public information for complying with its disclosure obligations under SEC Regulation FD. Information contained on FirstEnergy's Internet web site or its Twitter® or Facebook® site, and any corresponding applications of those sites, shall not be deemed incorporated into, or to be part of, this report.

OMISSION OF CERTAIN INFORMATION

FirstEnergy Solutions Corp. meets the conditions set forth in General Instruction H(1)(a) and (b) of Form 10-Q and is therefore filing this Form 10-Q with the reduced disclosure format specified in General Instruction H(2) to Form 10-Q.

Forward-Looking Statements: This Form 10-Q includes forward-looking statements based on information currently available to management. Such statements are subject to certain risks and uncertainties. These statements include declarations regarding management's intents, beliefs and current expectations. These statements typically contain, but are not limited to, the terms “anticipate,” “potential,” “expect,” "will," "intend," “believe,” “estimate” and similar words. Forward-looking statements involve estimates, assumptions, known and unknown risks, uncertainties and other factors that may cause actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements, which may include the following:

- The speed and nature of increased competition in the electric utility industry, in general, and the retail sales market in particular.
- The ability to experience growth in the Regulated Distribution and Regulated Transmission segments and to continue to successfully implement our direct retail sales strategy in the Competitive Energy Services segment.
- The accomplishment of our regulatory and operational goals in connection with our transmission plan and planned distribution rate cases and the effectiveness of our repositioning strategy.
- The impact of the regulatory process on the pending matters before FERC and in the various states in which we do business including, but not limited to, matters related to rates and pending rate cases.
- The uncertainties of various cost recovery and cost allocation issues resulting from ATSI's realignment into PJM.
- Economic or weather conditions affecting future sales and margins such as the polar vortex or other significant weather events.
- Regulatory outcomes associated with storm restoration, including but not limited to, Hurricane Sandy, Hurricane Irene and the October snowstorm of 2011.
- Changing energy, capacity and commodity market prices including, but not limited to, coal, natural gas and oil, and their availability and impact on retail margins.
- The continued ability of our regulated utilities to recover their costs.
- Costs being higher than anticipated and the success of our policies to control costs and to mitigate low energy, capacity and market prices.
- Other legislative and regulatory changes, and revised environmental requirements, including, but not limited to, possible GHG emission, water discharge, water intake and CCR regulations, the potential impacts of CSAPR, and the effects of the EPA's MATS rules including our estimated costs of compliance.
- The uncertainty of the timing and amounts of the capital expenditures that may arise in connection with any litigation, including NSR litigation or potential regulatory initiatives or rulemakings (including that such expenditures could result in our decision to deactivate or idle certain generating units).
- The uncertainties associated with the deactivation of certain older regulated and competitive fossil units including the impact on vendor commitments, and the timing thereof as they relate to, among other things, RMR arrangements and the reliability of the transmission grid.
- Adverse regulatory or legal decisions and outcomes with respect to our nuclear operations (including, but not limited to the revocation or non-renewal of necessary licenses, approvals or operating permits by the NRC or as a result of the incident at Japan's Fukushima Daiichi Nuclear Plant).
- Issues arising from the indications of cracking in the shield building and the steam generator replacement at Davis-Besse.
- The impact of future changes to the operational status or availability of our generating units.
- The risks and uncertainties associated with litigation, arbitration, mediation and like proceedings, including, but not limited to, any such proceedings related to vendor commitments.
- Replacement power costs being higher than anticipated or not fully hedged.
- The ability to comply with applicable state and federal reliability standards and energy efficiency and peak demand reduction mandates.
- Changes in customers' demand for power, including but not limited to, changes resulting from the implementation of state and federal energy efficiency and peak demand reduction mandates.
- The ability to accomplish or realize anticipated benefits from strategic and financial goals including, but not limited to, the ability to reduce costs and to successfully complete our announced financial plans designed to improve our credit metrics and strengthen our balance sheet, including but not limited to, our announced dividend reduction and our proposed capital raising and debt reduction initiatives.
- Our ability to improve electric commodity margins and the impact of, among other factors, the increased cost of fuel and fuel transportation on such margins.
- Changing market conditions that could affect the measurement of certain liabilities and the value of assets held in our NDTs, pension trusts and other trust funds, and cause us and our subsidiaries to make additional contributions sooner, or in amounts that are larger than currently anticipated.
- The impact of changes to material accounting policies.
- The ability to access the public securities and other capital and credit markets in accordance with our announced financial plans, the cost of such capital and overall condition of the capital and credit markets affecting us and our subsidiaries.
- Actions that may be taken by credit rating agencies that could negatively affect us and our subsidiaries' access to financing, increase the costs thereof, and increase requirements to post additional collateral to support outstanding commodity positions, LOCs and other financial guarantees.
- Changes in national and regional economic conditions affecting us, our subsidiaries and our major industrial and commercial customers, and other counterparties including fuel suppliers, with which we do business.

- The impact of any changes in tax laws or regulations or adverse tax audit results or rulings.
- Issues concerning the stability of domestic and foreign financial institutions and counterparties with which we do business.
- The risks and other factors discussed from time to time in our SEC filings, and other similar factors.

Dividends declared from time to time on FE's common stock during any period may in the aggregate vary from prior periods due to circumstances considered by FE's Board of Directors at the time of the actual declarations. A security rating is not a recommendation to buy or hold securities and is subject to revision or withdrawal at any time by the assigning rating agency. Each rating should be evaluated independently of any other rating.

The foregoing review of factors should not be construed as exhaustive. New factors emerge from time to time, and it is not possible for management to predict all such factors, nor assess the impact of any such factor on FirstEnergy's business or the extent to which any factor, or combination of factors, may cause results to differ materially from those contained in any forward-looking statements. The registrants expressly disclaim any current intention to update, except as required by law, any forward-looking statements contained herein as a result of new information, future events or otherwise.

GLOSSARY OF TERMS

The following abbreviations and acronyms are used in this report to identify FirstEnergy Corp. and its current and former subsidiaries:

AE	Allegheny Energy, Inc., a Maryland utility holding company that merged with a subsidiary of FirstEnergy on February 25, 2011. As of January 1, 2014, AE merged with and into FirstEnergy Corp.
AE Supply	Allegheny Energy Supply Company, LLC, an unregulated generation subsidiary
AGC	Allegheny Generating Company, a generation subsidiary of AE Supply
ATSI	American Transmission Systems, Incorporated, formerly a direct subsidiary of FE that became a subsidiary of FET in April 2012, which owns and operates transmission facilities.
CEI	The Cleveland Electric Illuminating Company, an Ohio electric utility operating subsidiary
FE	FirstEnergy Corp., a public utility holding company
FELHC	FirstEnergy License Holding Company, Inc.
FENOC	FirstEnergy Nuclear Operating Company, which operates nuclear generating facilities
FES	FirstEnergy Solutions Corp., which provides energy-related products and services
FESC	FirstEnergy Service Company, which provides legal, financial and other corporate support services
FET	FirstEnergy Transmission, LLC, formerly known as Allegheny Energy Transmission, LLC which is the parent of ATSI and TrAIL and has a joint venture in PATH.
FEV	FirstEnergy Ventures Corp., which invests in certain unregulated enterprises and business ventures
FG	FirstEnergy Generation, LLC, a subsidiary of FES, which owns and operates non-nuclear generating facilities
FirstEnergy	FirstEnergy Corp., together with its consolidated subsidiaries
Global Holding	Global Mining Holding Company, LLC, a joint venture between FEV, WMB Marketing Ventures, LLC and Pinesdale LLC
Global Rail	A subsidiary of Global Holding that owns coal transportation operations near Roundup, Montana
JCP&L	Jersey Central Power & Light Company, a New Jersey electric utility operating subsidiary
ME	Metropolitan Edison Company, a Pennsylvania electric utility operating subsidiary
MP	Monongahela Power Company, a West Virginia electric utility operating subsidiary
NG	FirstEnergy Nuclear Generation, LLC, a subsidiary of FES, which owns nuclear generating facilities
OE	Ohio Edison Company, an Ohio electric utility operating subsidiary
Ohio Companies	CEI, OE and TE
PATH	Potomac-Appalachian Transmission Highline, LLC, a joint venture between FE and a subsidiary of AEP
PATH-Allegheny	PATH Allegheny Transmission Company, LLC
PATH-WV	PATH West Virginia Transmission Company, LLC
PE	The Potomac Edison Company, a Maryland electric utility operating subsidiary
Penn	Pennsylvania Power Company, a Pennsylvania electric utility operating subsidiary of OE
Pennsylvania Companies	ME, PN, Penn and WP
PN	Pennsylvania Electric Company, a Pennsylvania electric utility operating subsidiary
PNBV	PNBV Capital Trust, a special purpose entity created by OE in 1996
Signal Peak	An indirect subsidiary of Global Holding that owns mining operations near Roundup, Montana
TE	The Toledo Edison Company, an Ohio electric utility operating subsidiary
TrAIL	Trans-Allegheny Interstate Line Company, a subsidiary of FET, which owns and operates transmission facilities
Utilities	OE, CEI, TE, Penn, JCP&L, ME, PN, MP, PE and WP
WP	West Penn Power Company, a Pennsylvania electric utility operating subsidiary

The following abbreviations and acronyms are used to identify frequently used terms in this report:

AEP	American Electric Power Company, Inc.
AFS	Available-for-sale
AFUDC	Allowance for Funds Used During Construction
ALJ	Administrative Law Judge
Anker WV	Anker West Virginia Mining Company, Inc.
Anker Coal	Anker Coal Group, Inc.
AOCI	Accumulated Other Comprehensive Income
Apple®	Apple®, iPad® and iPhone® are registered trademarks of Apple Inc.
ARO	Asset Retirement Obligation
ARR	Auction Revenue Right

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Unaudited)

1. ORGANIZATION AND BASIS OF PRESENTATION

Unless otherwise indicated, defined terms and abbreviations used herein have the meanings set forth in the accompanying Glossary of Terms.

FirstEnergy Corp. was organized under the laws of the State of Ohio in 1996. FirstEnergy's principal business is the holding, directly or indirectly, of all of the outstanding common stock of its principal subsidiaries: OE, CEI, TE, Penn (a wholly owned subsidiary of OE), JCP&L, ME, PN, FESC, FES and its principal subsidiaries (FG and NG), AE Supply, MP, PE, WP and FET. In addition, FirstEnergy holds all of the outstanding common stock of other direct subsidiaries including: FirstEnergy Properties, Inc., FEV, FENOC, FELHC, Inc., and GPU Nuclear, Inc.

These interim financial statements have been prepared pursuant to the rules and regulations of the SEC for Quarterly Reports on Form 10-Q. Certain information and disclosures normally included in financial statements and notes prepared in accordance with GAAP have been condensed or omitted pursuant to such rules and regulations. These interim financial statements should be read in conjunction with the financial statements and notes included in the combined Annual Report on Form 10-K for the year ended December 31, 2013.

FirstEnergy follows GAAP and complies with the related regulations, orders, policies and practices prescribed by the SEC, FERC, and, as applicable, the PUCO, the PPUC, the MDPSC, the NYPSC, the WVPSC, the VSCC and the NJBPU. The accompanying interim financial statements are unaudited, but reflect all adjustments, consisting of normal recurring adjustments, that, in the opinion of management, are necessary for a fair statement of the financial statements. The preparation of financial statements in conformity with GAAP requires management to make periodic estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses and disclosure of contingent assets and liabilities. Actual results could differ from these estimates. The reported results of operations are not indicative of results of operations for any future period. FE and its subsidiaries have evaluated events and transactions for potential recognition or disclosure through the date the financial statements were issued.

FE and its subsidiaries consolidate all majority-owned subsidiaries over which they exercise control and, when applicable, entities for which they have a controlling financial interest. Intercompany transactions and balances are eliminated in consolidation. FE and its subsidiaries consolidate a VIE when it is determined that it is the primary beneficiary (see Note 6, Variable Interest Entities). Investments in affiliates over which FE and its subsidiaries have the ability to exercise significant influence, but with respect to which they are not the primary beneficiary and do not exercise control, follow the equity method of accounting. Under the equity method, the interest in the entity is reported as an investment in the Consolidated Balance Sheets and the percentage share of the entity's earnings is reported in the Consolidated Statements of Income and Comprehensive Income. These Notes to the Consolidated Financial Statements are combined for FirstEnergy and FES.

Certain prior year amounts have been reclassified to conform to the current year presentation. These reclassifications include, but are not limited to, the classification of discontinued operations associated with our sale of hydro assets discussed in additional detail in Note 13, Discontinued Operations.

New Accounting Pronouncements

New accounting pronouncements not yet effective are not expected to have a material effect on the financial statements of FE or its subsidiaries.

2. EARNINGS PER SHARE OF COMMON STOCK

Basic earnings per share of common stock are computed using the weighted average number of common shares outstanding during the relevant period as the denominator. The denominator for diluted earnings per share of common stock reflects the weighted average of common shares outstanding plus the potential additional common shares that could result if dilutive securities and other agreements to issue common stock were exercised.

The following table reconciles basic and diluted earnings per share of common stock:

(In millions, except per share amounts)	Three Months Ended March 31	
Reconciliation of Basic and Diluted Earnings per Share of Common Stock	**2014**	**2013**
Income from continuing operations	$ 122	$ 192
Discontinued operations (Note 13)	86	4
Net income	$ 208	$ 196
Weighted average number of basic shares outstanding	419	418
Assumed exercise of dilutive stock options and awards[(1)]	1	1
Weighted average number of diluted shares outstanding	420	419
Earnings per share:		
Basic earnings per share:		
Income from continuing operations	$ 0.29	$ 0.46
Discontinued operations (Note 13)	0.21	0.01
Net earnings per basic share	$ 0.50	$ 0.47
Diluted earnings per share:		
Income from continuing operations	$ 0.29	$ 0.46
Discontinued operations (Note 13)	0.20	0.01
Net earnings per diluted share	$ 0.49	$ 0.47

(1) For the three months ended March 31, 2014, 2 million shares were excluded from the calculation of diluted shares outstanding, as their inclusion would be antidilutive. The number of potentially dilutive securities not included in the calculation of diluted shares outstanding due to their antidilutive effect was not significant for the three months ended March 31, 2013.

3. PENSIONS AND OTHER POSTEMPLOYMENT BENEFITS

The components of the consolidated net periodic cost (credits) for pensions and OPEB (including amounts capitalized) were as follows:

Components of Net Periodic Benefit Costs (Credits)	Pensions		OPEB	
For the Three Months Ended March 31,	2014	2013	2014	2013
		(In millions)		
Service costs	$ 42	$ 49	$ 2	$ 3
Interest costs	100	93	10	9
Expected return on plan assets	(115)	(125)	(8)	(8)
Amortization of prior service costs (credits)	2	3	(44)	(50)
Net periodic costs (credits)	$ 29	$ 20	$ (40)	$ (46)

FES' share of the net periodic pensions and OPEB costs (credits) were as follows:

	Pensions		OPEB	
For the Three Months Ended March 31,	2014	2013	2014	2013
		(In millions)		
Net Periodic Costs	$ 4	$ 5	$ (5)	$ (5)

Pension and OPEB obligations are allocated to FE's subsidiaries employing the plan participants. The net periodic pension and OPEB costs (net of amounts capitalized) recognized in earnings by FE and FES were as follows:

Net Periodic Benefit Expense (Credit)	Pensions		OPEB	
For the Three Months Ended March 31,	2014	2013	2014	2013
		(In millions)		
FirstEnergy	$ 21	$ 11	$ (27)	$ (30)
FES	4	3	(4)	(3)

4. ACCUMULATED OTHER COMPREHENSIVE INCOME

The changes in AOCI, net of tax, in the three months ended March 31, 2014 and 2013, for FirstEnergy and FES are shown in the following tables:

FirstEnergy

	Gains & Losses on Cash Flow Hedges	Unrealized Gains on AFS Securities	Defined Benefit Pension & OPEB Plans	Total
		(In millions)		
AOCI Balance as of January 1, 2014	$ (36)	$ 9	$ 311	$ 284
Other comprehensive income before reclassifications	—	22	—	22
Amounts reclassified from AOCI	—	(9)	(26)	(35)
Net other comprehensive income (loss)	—	13	(26)	(13)
AOCI Balance as of March 31, 2014	$ (36)	$ 22	$ 285	$ 271
AOCI Balance as of January 1, 2013	$ (38)	$ 15	$ 408	$ 385
Other comprehensive income before reclassifications	—	15	—	15
Amounts reclassified from AOCI	1	(12)	(28)	(39)
Net other comprehensive income (loss)	1	3	(28)	(24)
AOCI Balance as of March 31, 2013	$ (37)	$ 18	$ 380	$ 361

FES

	Gains & Losses on Cash Flow Hedges	Unrealized Gains on AFS Securities	Defined Benefit Pension & OPEB Plans	Total
		(In millions)		
AOCI Balance as of January 1, 2014	$ (1)	$ 8	$ 47	$ 54
Other comprehensive income before reclassifications	—	21	—	21
Amounts reclassified from AOCI	(1)	(9)	(3)	(13)
Net other comprehensive income (loss)	(1)	12	(3)	8
AOCI Balance as of March 31, 2014	$ (2)	$ 20	$ 44	$ 62
AOCI Balance as of January 1, 2013	$ 3	$ 13	$ 56	$ 72
Other comprehensive income before reclassifications	—	14	—	14
Amounts reclassified from AOCI	(1)	(10)	(4)	(15)
Net other comprehensive income (loss)	(1)	4	(4)	(1)
AOCI Balance as of March 31, 2013	$ 2	$ 17	$ 52	$ 71

The following amounts were reclassified from AOCI in the three months ended March 31, 2014 and 2013:

FE	Three Months Ended March 31		
Reclassifications from AOCI (b)	2014	2013	Affected Line Item in Consolidated Statements of Income
	(In millions)		
Gains & losses on cash flow hedges			
Commodity contracts	$ (2)	$ (3)	Other operating expenses
Long-term debt	2	4	Interest expense ($2) in 2014 and Interest expense ($2) and loss on debt redemptions ($2) in 2013
	—	1	Total before taxes
	—	—	Income taxes
	$ —	$ 1	Net of tax
Unrealized gains on AFS securities			
Realized gains on sales of securities	$ (14)	$ (19)	Investment income
	5	7	Income taxes
	$ (9)	$ (12)	Net of tax
Defined benefit pension and OPEB plans			
Prior-service costs	$ (42)	$ (47)	(a)
	16	19	Income taxes
	$ (26)	$ (28)	Net of tax

(a) These AOCI components are included in the computation of net periodic pension cost. See Note 3, Pensions and Other Postemployment Benefits for additional details.

(b) Parenthesis represent credits to the Consolidated Statements of Income from AOCI.

FES	Three Months Ended March 31		
Reclassifications from AOCI (b)	2014	2013	Affected Line Item in Consolidated Statements of Income
	(In millions)		
Gains & losses on cash flow hedges			
Commodity contracts	$ (2)	$ (3)	Other operating expenses
Long-term debt	—	2	Loss on debt redemptions
	(2)	(1)	Total before taxes
	1	—	Income tax benefits
	$ (1)	$ (1)	Net of tax
Unrealized gains on AFS securities			
Realized gains on sales of securities	$ (14)	$ (16)	Investment income
	5	6	Income tax benefits
	$ (9)	$ (10)	Net of tax
Defined benefit pension and OPEB plans			
Prior-service costs	$ (5)	$ (5)	(a)
	2	1	Income tax benefits
	$ (3)	$ (4)	Net of tax

(a) These AOCI components are included in the computation of net periodic pension cost. See Note 3, Pensions and Other Postemployment Benefits for additional details.

(b) Parenthesis represent credits to the Consolidated Statements of Income from AOCI.

5. INCOME TAXES

FirstEnergy's and FES's interim effective tax rates reflect the estimated annual effective tax rates for 2014 and 2013, adjusted for tax expense associated with certain discrete items.

FirstEnergy accounts for uncertainty in income taxes recognized in its financial statements. Significant judgment is required in determining FirstEnergy's income taxes and in evaluating tax positions taken or expected to be taken on its tax returns. There were no material changes to FirstEnergy's unrecognized income tax benefits during the first three months of 2014 or 2013.

As of March 31, 2014, it is reasonably possible that approximately $35 million of unrecognized income tax benefits, including interest, may be resolved within the next twelve months as a result of the statute of limitations expiring, all of which would affect FirstEnergy's effective tax rate.

FirstEnergy recognizes interest expense or income related to uncertain tax positions. That amount is computed by applying the applicable statutory interest rate to the difference between the tax position recognized and the amount previously taken or expected to be taken on the tax return. FirstEnergy includes net interest and penalties in the provision for income taxes. During the first three months of 2014 and 2013, there were no material changes to the amount of accrued interest. The net amount of interest accrued as of March 31, 2014 and December 31, 2013 was approximately $9 million.

FirstEnergy's effective tax rate from continuing operations for the three months ended March 31, 2014 and 2013 was 28.2% and 37.2%, respectively. The decrease in the effective tax rate is primarily due to an increase in AFUDC equity flow through, changes in state apportionment factors and the elimination of certain future tax liabilities associated with basis differences.

FES's effective tax rate from continuing operations for the three months ended March 31, 2014 and 2013 was 35.2% and 24.8%, respectively. The increase in the effective tax rate is primarily related to the impact of permanent tax adjustments on estimated annual pretax earnings from continuing operations.

In April 2014, the Internal Revenue Service completed its examination of FE's 2011 and 2012 federal income tax returns and issued Revenue Agent Reports for these years.

6. VARIABLE INTEREST ENTITIES

FirstEnergy performs qualitative analyses to determine whether a variable interest gives FirstEnergy a controlling financial interest in a VIE. This analysis identifies the primary beneficiary of a VIE as the enterprise that has both the power to direct the activities of a VIE that most significantly impact the entity's economic performance and the obligation to absorb losses of the entity that could potentially be significant to the VIE or the right to receive benefits from the entity that could potentially be significant to the VIE. FirstEnergy consolidates a VIE when it is determined that it is the primary beneficiary.

VIEs included in FirstEnergy's consolidated financial statements are: the PNBV capital trusts that were created to refinance debt originally issued in connection with sale and leaseback transactions; wholly-owned limited liability companies of the Ohio Companies (as described below); wholly owned limited liability companies of JCP&L created to sell transition bonds to securitize the recovery of JCP&L's bondable stranded costs and special purpose limited liability companies created to issue environmental control bonds that were used to construct environmental control facilities.

The caption "noncontrolling interest" within the consolidated financial statements is used to reflect the portion of a VIE that FirstEnergy consolidates, but does not own.

In order to evaluate contracts for consolidation treatment and entities for which FirstEnergy has an interest, FirstEnergy aggregates variable interests into the following categories based on similar risk characteristics and significance.

Ohio Securitization

In September 2012, the Ohio Companies formed CEI Funding LLC, OE Funding LLC and TE Funding LLC, respectively, as separate, wholly-owned limited liability SPEs. Each SPE is a bankruptcy-remote, special purpose limited liability company that is restricted to activities necessary to issue phase-in recovery bonds and perform other functions in connection with the bond issuance. Creditors of FirstEnergy and the Ohio Companies have no recourse to any assets or revenues of the SPEs. The phase-in recovery bonds issued by these SPEs are payable only from, and secured by, phase-in recovery property held by the SPEs (i.e. the right to impose, charge and collect irrevocable non-bypassable usage-based charges payable by retail electric customers in the service territories of the Ohio Companies) and the bondholder has no recourse to the general credit of FirstEnergy or any of the Ohio Companies. The SPEs are considered VIEs and each one is consolidated into its applicable utility.

Mining Operations

FEV holds a 33-1/3% equity ownership in Global Holding, the holding company for a joint venture in the Signal Peak mining and coal transportation operations. FEV is not the primary beneficiary of the joint venture, as it does not have control over the significant activities affecting the joint venture's economic performance. FEV's ownership interest is subject to the equity method of accounting.

Trusts

FirstEnergy's consolidated financial statements include PNBV. FirstEnergy used debt and available funds to purchase the notes issued by PNBV for the purchase of lease obligation bonds. Ownership of PNBV includes a 3% equity interest by an unaffiliated third party and a 3% equity interest held by OES Ventures, a wholly owned subsidiary of OE.

PATH-WV

PATH is a series limited liability company that is comprised of multiple series, each of which has separate rights, powers and duties regarding specified property and the series profits and losses associated with such property. A subsidiary of FirstEnergy owns 100% of the Allegheny Series (PATH-Allegheny) and 50% of the West Virginia Series (PATH-WV), which is a joint venture with a subsidiary of AEP. FirstEnergy is not the primary beneficiary of PATH-WV, as it does not have control over the significant activities affecting the economics of the portion of the PATH project that was to be constructed by PATH-WV.

On August 24, 2012, PJM removed the PATH project from its long-range expansion plans. See Note 9, Regulatory Matters, for additional information on the abandonment of PATH.

Power Purchase Agreements

FirstEnergy evaluated its power purchase agreements and determined that certain NUG entities at its Regulated Distribution segment may be VIEs to the extent that they own a plant that sells substantially all of its output to the applicable utilities and the contract price for power is correlated with the plant's variable costs of production. FirstEnergy maintains 20 long-term power purchase agreements with NUG entities that were entered into pursuant to PURPA. FirstEnergy was not involved in the creation of, and has no equity or debt invested in, any of these entities.

FirstEnergy has determined that for all but two of these NUG entities, it does not have variable interests in the entities or the entities do not meet the criteria to be considered a VIE. FirstEnergy may hold variable interests in the remaining two entities; however, it applied the scope exception that exempts enterprises unable to obtain the necessary information to evaluate entities.

Because FirstEnergy has no equity or debt interests in the NUG entities, its maximum exposure to loss relates primarily to the above-market costs incurred for power. FirstEnergy expects any above-market costs incurred at its Regulated Distribution segment to be recovered from customers. Purchased power costs related to the contracts that may contain a variable interest were $61 million and $49 million during the three months ended March 31, 2014 and 2013, respectively.

Sale and Leaseback

FirstEnergy has variable interests in certain sale and leaseback transactions. FirstEnergy is not the primary beneficiary of these interests as it does not have control over the significant activities affecting the economics of the arrangements.

In March of 2013, FG acquired the remaining interests in connection with the 1987 Bruce Mansfield Plant sale and leaseback transactions for approximately $221 million. Also during 2013, NG purchased lessor equity interests in OE's existing sale and leaseback of Beaver Valley Unit 2 for $23 million and in February 2014, NG purchased additional lessor equity interests for approximately $94 million.

FES, and other FE subsidiaries are exposed to losses under their applicable sale and leaseback agreements upon the occurrence of certain contingent events. The maximum exposure under these provisions represents the net amount of casualty value payments due upon the occurrence of specified casualty events. Net discounted lease payments would not be payable if the casualty loss payments were made. The following table discloses each company's net exposure to loss based upon the casualty value provisions as of March 31, 2014:

	Maximum Exposure	Discounted Lease Payments, net[1]	Net Exposure
		(In millions)	
FES	$ 1,293	$ 1,081	$ 212
Other FE subsidiaries	716	495	221

[1] The net present value of FirstEnergy's consolidated sale and leaseback operating lease commitments is $1.1 billion.

7. FAIR VALUE MEASUREMENTS

RECURRING AND NONRECURRING FAIR VALUE MEASUREMENTS

Authoritative accounting guidance establishes a fair value hierarchy that prioritizes the inputs used to measure fair value. This hierarchy gives the highest priority to Level 1 measurements and the lowest priority to Level 3 measurements. The three levels of the fair value hierarchy and a description of the valuation techniques are as follows:

Level 1
- Quoted prices for identical instruments in active market

Level 2
- Quoted prices for similar instruments in active market
- Quoted prices for identical or similar instruments in markets that are not active
- Model-derived valuations for which all significant inputs are observable market data

Models are primarily industry-standard models that consider various assumptions, including quoted forward prices for commodities, time value, volatility factors and current market and contractual prices for the underlying instruments, as well as other relevant economic measures.

Level 3
- Valuation inputs are unobservable and significant to the fair value measurement

FirstEnergy produces a long-term power and capacity price forecast annually with periodic updates as market conditions change. When underlying prices are not observable, prices from the long-term price forecast, which has been reviewed and approved by FirstEnergy's Risk Policy Committee, are used to measure fair value. A more detailed description of FirstEnergy's valuation process for FTRs and NUGs are as follows:

FTRs are financial instruments that entitle the holder to a stream of revenues (or charges) based on the hourly day-ahead congestion price differences across transmission paths. FTRs are acquired by FirstEnergy in the annual, monthly and long-term RTO auctions and are initially recorded using the auction clearing price less cost. After initial recognition, FTRs' carrying values are periodically adjusted to fair value using a mark-to-model methodology, which approximates market. The primary inputs into the model, which are generally less observable than objective sources, are the most recent RTO auction clearing prices and the FTRs' remaining hours. The model calculates the fair value by multiplying the most recent auction clearing price by the remaining FTR hours less the prorated FTR cost. Generally, significant increases or decreases in inputs in isolation could result in a higher or lower fair value measurement. See Note 8, Derivative Instruments, for additional information regarding FirstEnergy's FTRs.

NUG contracts represent purchase power agreements with third-party non-utility generators that are transacted to satisfy certain obligations under PURPA. NUG contract carrying values are recorded at fair value and adjusted periodically using a mark-to-model methodology, which approximates market. The primary unobservable inputs into the model are regional power prices and generation MWH. Pricing for the NUG contracts is a combination of market prices for the current year and next three years based on observable data and internal models using historical trends and market data for the remaining years under contract. The internal models use forecasted energy purchase prices as an input when prices are not defined by the contract. Forecasted market prices are based on ICE quotes and management assumptions. Generation MWH reflects data provided by contractual arrangements and historical trends. The model calculates the fair value by multiplying the prices by the generation MWH. Generally, significant increases or decreases in inputs in isolation could result in a higher or lower fair value measurement.

FirstEnergy primarily applies the market approach for recurring fair value measurements using the best information available. Accordingly, FirstEnergy maximizes the use of observable inputs and minimizes the use of unobservable inputs. There were no changes in valuation methodologies used as of March 31, 2014, from those used as of December 31, 2013. The determination of the fair value measures takes into consideration various factors, including but not limited to, nonperformance risk, counterparty credit risk and the impact of credit enhancements (such as cash deposits, LOCs and priority interests). The impact of these forms of risk was not significant to the fair value measurements.

Transfers between levels are recognized at the end of the reporting period. There were no transfers between levels during the three months ended March 31, 2014. The following tables set forth the recurring assets and liabilities that are accounted for at fair value by level within the fair value hierarchy:

FirstEnergy

Recurring Fair Value Measurements	March 31, 2014				December 31, 2013			
	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3	Total
Assets				*(In millions)*

Settlements	(2)	2	—
March 31, 2014 Balance	$ 4	$ (8)	$ (4)

Level 3 Quantitative Information

The following table provides quantitative information for FTRs held by FES that are classified as Level 3 in the fair value hierarchy for the period ended March 31, 2014:

	Fair Value, Net (In millions)	Valuation Technique	Significant Input	Range	Weighted Average	Units
FTRs	$ (4)	Model	RTO auction clearing prices	($4.20) to $7.60	$0.60	Dollars/MWH

INVESTMENTS

All temporary cash investments purchased with an initial maturity of three months or less are reported as cash equivalents on the Consolidated Balance Sheets at cost, which approximates their fair market value. Investments other than cash and cash equivalents include held-to-maturity securities, AFS securities and notes receivable.

At the end of each reporting period, FirstEnergy evaluates its investments for OTTI. Investments classified as AFS securities are evaluated to determine whether a decline in fair value below the cost basis is other than temporary. FirstEnergy first considers its intent and ability to hold an equity security until recovery and then considers, among other factors, the duration and the extent to which the security's fair value has been less than its cost and the near-term financial prospects of the security issuer when evaluating an investment for impairment. For debt securities, FirstEnergy considers its intent to hold the securities, the likelihood that it will be required to sell the securities before recovery of its cost basis and the likelihood of recovery of the securities' entire amortized cost basis. If the decline in fair value is determined to be other than temporary, the cost basis of the securities is written down to fair value.

Unrealized gains and losses on AFS securities are recognized in AOCI. However, unrealized losses held in the NDTs of FES, OE and TE are recognized in earnings since the trust arrangements, as they are currently defined, do not meet the required ability and intent to hold criteria in consideration of OTTI.

The investment policy for the NDT funds restricts or limits the trusts' ability to hold certain types of assets including private or direct placements, warrants, securities of FirstEnergy, investments in companies owning nuclear power plants, financial derivatives, securities convertible into common stock and securities of the trust funds' custodian or managers and their parents or subsidiaries.

AFS Securities

FirstEnergy holds debt and equity securities within its NDT, nuclear fuel disposal and NUG trusts. These trust investments are considered AFS securities, recognized at fair market value. FirstEnergy has no securities held for trading purposes.

The following table summarizes the amortized cost basis, unrealized gains (there were no unrealized losses) and fair values of investments held in NDT, nuclear fuel disposal and NUG trusts as of March 31, 2014 and December 31, 2013:

	March 31, 2014[1]			December 31, 2013[2]		
	Cost Basis	Unrealized Gains	Fair Value	Cost Basis	Unrealized Gains	Fair Value
			(In millions)			
Debt securities						
FirstEnergy	$ 1,670	$ 44	$ 1,714	$ 1,881	$ 33	$ 1,914
FES	698	22	720	918	17	935
Equity securities						
FirstEnergy	$ 433	$ 31	$ 464	$ 308	$ 9	$ 317
FES	308	19	327	207	—	207

(1) Excludes short-term cash investments: FE Consolidated - $324 million; FES - $276 million.
(2) Excludes short-term cash investments: FE Consolidated - $204 million; FES - $135 million.

Proceeds from the sale of investments in AFS securities, realized gains and losses on those sales, OTTI and interest and dividend income for the three months ended March 31, 2014 and 2013 were as follows:

	Three Months Ended				
March 31, 2014	Sale Proceeds	Realized Gains	Realized Losses	OTTI	Interest and Dividend Income
			(In millions)		
FirstEnergy	$ 621	$ 28	$ (16)	$ (2)	$ 25
FES	423	19	(5)	(2)	15
March 31, 2013	**Sale Proceeds**	**Realized Gains**	**Realized Losses**	**OTTI**	**Interest and Dividend Income**
			(In millions)		
FirstEnergy	$ 539	$ 24	$ (6)	$ (7)	$ 26
FES	252	20	(3)	(7)	13

Held-To-Maturity Securities

The following table provides the amortized cost basis, unrealized gains (there were no unrealized losses) and approximate fair values of investments in held-to-maturity securities as of March 31, 2014 and December 31, 2013:

	March 31, 2014			December 31, 2013		
	Cost Basis	Unrealized Gains	Fair Value	Cost Basis	Unrealized Gains	Fair Value
			(In millions)			
Debt Securities						
FirstEnergy	$ 24	$ 8	$ 32	$ 33	$ 2	$ 35

Investments in employee benefit trusts and cost and equity method investments, including FirstEnergy's investment in Global Holding, totaling $635 million as of March 31, 2014, and $636 million as of December 31, 2013, are excluded from the amounts reported above.

LONG-TERM DEBT AND OTHER LONG-TERM OBLIGATIONS

All borrowings with initial maturities of less than one year are defined as short-term financial instruments under GAAP and are reported as Short-term borrowings on the Consolidated Balance Sheets at cost. Since these borrowings are short-term in nature, FirstEnergy believes that their costs approximate their fair market value. The following table provides the approximate fair value and related carrying amounts of long-term debt and other long-term obligations, excluding capital lease obligations and net unamortized premiums and discounts:

	March 31, 2014		December 31, 2013	
	Carrying Value	Fair Value	Carrying Value	Fair Value
		(In millions)		
FirstEnergy	$ 18,034	$ 19,321	$ 17,049	$ 17,957
FES	2,996	3,098	3,001	3,073

The fair values of long-term debt and other long-term obligations reflect the present value of the cash outflows relating to those securities based on the current call price, the yield to maturity or the yield to call, as deemed appropriate at the end of each respective period. The yields assumed were based on securities with similar characteristics offered by corporations with credit ratings similar to those of FirstEnergy and its subsidiaries. FirstEnergy classified short-term borrowings, long-term debt and other long-term obligations as Level 2 in the fair value hierarchy as of March 31, 2014 and December 31, 2013.

On March 31, 2014, FE, FES, AE Supply, FET and FE's other borrower subsidiaries entered into extensions and amendments to the three existing multi-year syndicated revolving credit facilities. Each facility was extended until March 31, 2019. The FE facility was amended to increase the lending banks' commitments under the facility by $1 billion to a total of $3.5 billion and to increase the individual borrower sublimit for FE by $1 billion to a total of $3.5 billion. The FES/AE Supply facility was amended to decrease the lending banks' commitments by $1 billion to a total of $1.5 billion. The lending banks' commitments under the FET facility remain at $1 billion and that facility was amended to increase ATSI's individual borrower sublimit to $500 million from $100 million and

TrAIL's individual borrower sublimit to $400 million from $200 million. FirstEnergy expensed approximately $5 million (FES - $3 million) of unamortized debt expense as a result of the amendments. The amount was included in Loss on Debt Redemptions in the Consolidated Statement of Income in the first quarter of 2014.

On March 31, 2014, FE executed, and fully utilized, a new $1 billion variable rate term loan credit agreement with a maturity date of March 31, 2019. The initial borrowing under the term loan, which took the form of a Eurodollar rate advance, may be converted from time to time, in whole or in part, to alternate base rate advances or other Eurodollar rate advances.

During the first quarter of 2014, FG and NG remarketed approximately $417 million of PCRBs previously held by the companies. Of the total, $182 million was remarketed with a fixed interest rate of 4% per annum with a mandatory put date of June 3, 2019 and $235 million was remarketed with a fixed interest rate of 3.75% per annum with a mandatory put date of December 3, 2018.

In addition, in the first quarter of 2014, FG and NG repurchased approximately $197 million and $16 million of PCRBs, respectively, which were subject to a mandatory tender. The companies are currently holding the PCRB's for remarketing subject to future market and other conditions.

On April 1, 2014, PN and ME repurchased approximately $45 million and $29 million of PCRBs, respectively, which were subject to a mandatory put on such date. The companies are currently holding the PCRB's for remarketing subject to future market and other conditions.

8. DERIVATIVE INSTRUMENTS

FirstEnergy is exposed to financial risks resulting from fluctuating interest rates and commodity prices, including prices for electricity, natural gas, coal and energy transmission. To manage the volatility relating to these exposures, FirstEnergy's Risk Policy Committee, comprised of senior management, provides general management oversight for risk management activities throughout FirstEnergy. The Risk Policy Committee is responsible for promoting the effective design and implementation of sound risk management programs and oversees compliance with corporate risk management policies and established risk management practice. FirstEnergy also uses a variety of derivative instruments for risk management purposes including forward contracts, options, futures contracts and swaps.

FirstEnergy accounts for derivative instruments on its Consolidated Balance Sheets at fair value unless they meet the normal purchases and normal sales criteria. Derivatives that meet those criteria are accounted for under the accrual method of accounting, and their effects are included in earnings at the time of contract performance. Changes in the fair value of derivative instruments that qualified and were designated as cash flow hedge instruments are recorded in AOCI. Changes in the fair value of derivative instruments that are not designated as cash flow hedge instruments are recorded in net income on a mark-to-market basis. FirstEnergy has contractual derivative agreements through 2020.

Cash Flow Hedges

FirstEnergy has used cash flow hedges for risk management purposes to manage the volatility related to exposures associated with fluctuating commodity prices and interest rates. The effective portion of gains and losses on a derivative contract is reported as a component of AOCI with subsequent reclassification to earnings in the period during which the hedged forecasted transaction affects earnings.

Total net unamortized gains included in AOCI associated with instruments previously designated to be in a cash flow hedging relationship totaled less than $1 million and $2 million as of March 31, 2014 and December 31, 2013, respectively. Since the forecasted transactions remain probable of occurring, these amounts will be amortized into earnings over the life of the hedging instruments. Approximately $9 million is expected to be amortized to income during the next twelve months.

FirstEnergy has used forward starting swap agreements to hedge a portion of the consolidated interest rate risk associated with anticipated issuances of fixed-rate, long-term debt securities of its subsidiaries. These derivatives were treated as cash flow hedges, protecting against the risk of changes in future interest payments resulting from changes in benchmark U.S. Treasury rates between the date of hedge inception and the date of the debt issuance. No forward starting swap agreements accounted for as a cash flow hedge were outstanding as of March 31, 2014 or December 31, 2013. Total pre-tax unamortized losses included in AOCI associated with prior interest rate cash flow hedges totaled $57 million and $59 million as of March 31, 2014 and December 31, 2013, respectively. Based on current estimates, approximately $9 million will be amortized to interest expense during the next twelve months.

In connection with certain debt redemptions, FirstEnergy recorded interest expense related to deferred losses on terminated interest rate swaps of approximately $2 million for the three months ended March 31, 2013.

As of March 31, 2014 and December 31, 2013, no commodity or interest rate derivatives were designated as cash flow hedges.

Refer to Note 4, Accumulated Other Comprehensive Income, for reclassifications from AOCI during the three months ended March 31, 2014 and 2013.

Fair Value Hedges

FirstEnergy has used fixed-for-floating interest rate swap agreements to hedge a portion of the consolidated interest rate risk associated with the debt portfolio of its subsidiaries. These derivative instruments were treated as fair value hedges of fixed-rate, long-term debt issues, protecting against the risk of changes in the fair value of fixed-rate debt instruments due to lower interest rates. As of March 31, 2014 and December 31, 2013, no fixed-for-floating interest rate swap agreements were outstanding.

Unamortized gains included in long-term debt associated with prior fixed-for-floating interest rate swap agreements totaled $41 million and $44 million as of March 31, 2014 and December 31, 2013, respectively. Based on current estimates, approximately $11 million will be amortized to interest expense during the next twelve months. Reclassifications from long-term debt into interest expense totaled approximately $3 million and $6 million during the three months ended March 31, 2014 and 2013, respectively.

As of March 31, 2014 and December 31, 2013, no commodity or interest rate derivatives were designated as fair value hedges.

Commodity Derivatives

FirstEnergy uses both physically and financially settled derivatives to manage its exposure to volatility in commodity prices. Commodity derivatives are used for risk management purposes to hedge exposures when it makes economic sense to do so, including circumstances where the hedging relationship does not qualify for hedge accounting.

Electricity forwards are used to balance expected sales with expected generation and purchased power. Natural gas futures are entered into based on expected consumption of natural gas primarily for use in FirstEnergy's combustion turbine units. Heating oil futures are entered into based on expected consumption of oil and the financial risk in FirstEnergy's coal transportation contracts. Derivative instruments are not used in quantities greater than forecasted needs.

As of March 31, 2014, FirstEnergy's net asset position under commodity derivative contracts was $117 million, which related to FES positions. Under these commodity derivative contracts, FES posted $85 million of collateral. Certain commodity derivative contracts include credit risk related contingent features that would require FES to post $11 million of additional collateral if the credit rating for its debt were to fall below investment grade.

Based on commodity derivative contracts held as of March 31, 2014, an adverse change of 10% in commodity prices would decrease net income by approximately $40 million during the next twelve months.

NUGs

As of March 31, 2014, FirstEnergy's net liability position under NUG contracts was $185 million representing contracts held at JCP&L, ME and PN. NUG contracts represent purchased power agreements with third-party non-utility generators that are transacted to satisfy certain obligations under PURPA. Changes in the fair value of NUG contracts are subject to regulatory accounting treatment and do not impact earnings.

LCAPP

The LCAPP law was enacted in New Jersey during 2011 to promote the construction of qualified electric generation facilities. JCP&L maintained two LCAPP contracts, which were financially settled agreements that allowed eligible generators to receive payments from, or make payments to, JCP&L pursuant to an annually calculated load-ratio share of the capacity produced by the generator based upon the annual forecasted peak demand as determined by PJM. JCP&L expected to recover from its customers payments made to the generators and give credit to customers for payments from the generators under these contracts. As a result, the projected future obligations for the LCAPP contracts were considered derivative liabilities with a corresponding regulatory asset. Since the LCAPP contracts were subject to regulatory accounting, changes in their fair value did not impact earnings. On October 11, 2013, the U.S. District Court for the District of New Jersey declared that the LCAPP was preempted by the FPA and unconstitutional. On October 22, 2013, the Superior Court of New Jersey Appellate Division dismissed two consolidated appeals which had been taken from the final order of the NJBPU which accepted and adopted the recommendation of the NJBPU's Agent regarding implementation of the LCAPP law. Dismissal of the consolidated appeals, along with pending matters currently on remand to the NJBPU, was without prejudice subject to the parties exercising their appellate rights in the federal courts. The parties filed an appeal with the U.S. Court of Appeals for the Third Circuit and briefing by the parties was completed by March 5, 2014. Consistent with the provisions of the LCAPP contracts, the U.S. District Court's ruling was a termination event. During the fourth quarter of 2013, JCP&L issued termination notices to the counterparties and reversed the derivative liability and corresponding regulatory asset on its Consolidated Balance Sheet.

FTRs

As of March 31, 2014, FirstEnergy's and FES's net liability position under FTRs was $1 million and $3 million, respectively, and FES posted $4 million of collateral. FirstEnergy holds FTRs that generally represent an economic hedge of future congestion charges that will be incurred in connection with FirstEnergy's load obligations. FirstEnergy acquires the majority of its FTRs in an annual auction through a self-scheduling process involving the use of ARRs allocated to members of an RTO that have load serving obligations and through the direct allocation of FTRs from the PJM RTO. The PJM RTO has a rule that allows directly allocated FTRs to be granted to LSEs in zones that have newly entered PJM. For the first two planning years, PJM permits the LSEs to request a direct allocation of FTRs in these new zones at no cost as opposed to receiving ARRs. The directly allocated FTRs differ from traditional FTRs in that the ownership of all or part of the FTRs may shift to another LSE if customers choose to shop with the other LSE.

The future obligations for the FTRs acquired at auction are reflected on the Consolidated Balance Sheets and have not been designated as cash flow hedge instruments. FirstEnergy initially records these FTRs at the auction price less the obligation due to the RTO, and subsequently adjusts the carrying value of remaining FTRs to their estimated fair value at the end of each accounting period prior to settlement. Changes in the fair value of FTRs held by FES and AE Supply are included in other operating expenses as unrealized gains or losses. Unrealized gains or losses on FTRs held by FirstEnergy's utilities are recorded as regulatory assets or liabilities. Directly allocated FTRs are accounted for under the accrual method of accounting, and their effects are included in earnings at the time of contract performance.

FirstEnergy records the fair value of derivative instruments on a gross basis. The following table summarizes the fair value and classification of derivative instruments on FirstEnergy's Consolidated Balance Sheets:

Derivative Assets			Derivative Liabilities		
	Fair Value			Fair Value	
	March 31, 2014	December 31, 2013		March 31, 2014	December 31, 2013
	(In millions)			*(In millions)*	
Current Assets - Derivatives			**Current Liabilities - Derivatives**		
Commodity Contracts	$ 240	$ 162	Commodity Contracts	$ (154)	$ (102)
FTRs	7	4	FTRs	(5)	(9)
	247	166		(159)	(111)
			Noncurrent Liabilities - Adverse Power Contract Liability		
			NUGs	(188)	(222)
Deferred Charges and Other Assets - Other			**Noncurrent Liabilities - Other**		
Commodity Contracts	64	53	Commodity Contracts	(33)	(11)
NUGs	3	20	FTRs	(3)	(3)
	67	73		(224)	(236)
Derivative Assets	$ 314	$ 239	Derivative Liabilities	$ (383)	$ (347)

FirstEnergy enters into contracts with counterparties that allow for net settlement of derivative assets and derivative liabilities. Certain of these contracts contain margining provisions that require the use of collateral to mitigate credit exposure between FirstEnergy and these counterparties. In situations where collateral is pledged to mitigate exposures related to derivative and non-derivative instruments with the same counterparty, FirstEnergy allocates the collateral based on the percentage of the net fair value of derivative instruments to the total fair value of the combined derivative and non-derivative instruments. The following tables summarize the fair value of derivative instruments on FirstEnergy's Consolidated Balance Sheets and the effect of netting arrangements and collateral on its financial position:

March 31, 2014	Fair Value	Amounts Not Offset in Consolidated Balance Sheet: Derivative Instruments	Amounts Not Offset in Consolidated Balance Sheet: Cash Collateral (Received)/Pledged	Net Fair Value
		(In millions)		
Derivative Assets				
Commodity contracts	$ 304	$ (182)	$ (4)	$ 118
FTRs	7	(7)	—	—
NUG contracts	3	—	—	3
	$ 314	$ (189)	$ (4)	$ 121
Derivative Liabilities				
Commodity contracts	$ (187)	$ 182	$ 2	$ (3)
FTRs	(8)	7	1	—
NUG contracts	(188)	—	—	(188)
	$ (383)	$ 189	$ 3	$ (191)

December 31, 2013	Fair Value	Amounts Not Offset in Consolidated Balance Sheet: Derivative Instruments	Amounts Not Offset in Consolidated Balance Sheet: Cash Collateral (Received)/Pledged	Net Fair Value
		(In millions)		
Derivative Assets				
Commodity contracts	$ 215	$ (106)	$ (9)	$ 100
FTRs	4	(4)	—	—
NUG contracts	20	—	—	20
	$ 239	$ (110)	$ (9)	$ 120

FTRs	(12)	4	5	(3)
NUG contracts	(222)	—	—	(222)
	$ (347)	$ 110	$ 12	$ (225)

The following table summarizes the volumes associated with FirstEnergy's outstanding derivative transactions as of March 31, 2014:

	Purchases	Sales	Net	Units
		(In millions)		
Power Contracts	41	38	3	MWH
FTRs	26	—	26	MWH
NUGs	7	—	7	MWH
Natural Gas	65	8	57	mmBTU

The effect of derivative instruments not in a hedging relationship on the Consolidated Statements of Income during the three months ended March 31, 2014 and 2013, are summarized in the following tables:

	Three Months Ended March 31		
	Commodity Contracts	FTRs	Total
	(In millions)		
2014			
Unrealized Gain Recognized in:			
Other Operating Expense [1]	$12	$5	$17
Realized Gain (Loss) Reclassified to:			
Revenues [2]	($13)	$52	$39
Purchased Power Expense [3]	436	—	436
Other Operating Expense [4]	—	(7)	(7)
Fuel Expense	9	—	9

[1] Includes $12 million for commodity contracts and $5 million for FTRs associated with FES.

[2] Represents losses on structured financial contracts. Includes ($13) million for commodity contracts and $51 million for FTRs associated with FES.

[3] Realized losses on financially settled wholesale sales contracts of $321 million resulting from higher market prices were netted in purchased power. Includes $436 million for commodity contracts associated with FES.

[4] Includes ($7) million for FTRs associated with FES.

2013			
Unrealized Loss Recognized in:			
Other Operating Expense [5]	($5)	($2)	($7)
Realized Gain (Loss) Reclassified to:			
Revenues [6]	$10	$7	$17
Purchased Power Expense [7]	(11)	—	(11)
Other Operating Expense [8]	—	(9)	(9)
Fuel Expense	(1)	—	(1)

[5] Includes ($5) million for commodity contracts and ($1) million for FTRs associated with FES.

[6] Includes $10 million for commodity contracts and $6 million for FTRs associated with FES.

[7] Includes ($11) million for commodity contracts associated with FES.

[8] Includes ($8) million for FTRs associated with FES.

The unrealized and realized gains (losses) on FirstEnergy's derivative instruments subject to regulatory accounting during the three months ended March 31, 2014 and 2013, are summarized in the following tables:

	Three Months Ended March 31			
Derivatives Not in a Hedging Relationship with Regulatory Offset	NUGs	LCAPP[1]	Regulated FTRs	Total
	(In millions)			
2014				
Unrealized Gain on Derivative Instrument	$ 27	$ —	$ 4	$ 31
Realized Loss on Derivative Instrument	(10)	—	(1)	(11)
2013				
Unrealized Gain (Loss) on Derivative Instrument	$ 18	$ (2)	$ —	$ 16
Realized Gain (Loss) on Derivative Instrument	23	—	(1)	22

[1] During the fourth quarter of 2013, all LCAPP contracts were terminated as discussed above.

The following tables provide a reconciliation of changes in the fair value of certain contracts that are deferred for future recovery from (or credit

to) customers during the three months ended March 31, 2014 and 2013:

Derivatives Not in a Hedging Relationship with Regulatory Offset	Three Months Ended March 31			
	NUGs	LCAPP[1]	Regulated FTRs	Total
	(In millions)			
Outstanding net liability as of January 1, 2014	$ (202)	$ —	$ —	$ (202)
Additions/Change in value of existing contracts	27	—	4	31
Settled contracts	(10)	—	(1)	(11)
Outstanding net liability as of March 31, 2014	$ (185)	$ —	$ 3	$ (182)
Outstanding net liability as of January 1, 2013	$ (254)	$ (144)	$ —	$ (398)
Additions/Change in value of existing contracts	18	(2)	—	16
Settled contracts	23	—	(1)	22
Outstanding net liability as of March 31, 2013	$ (213)	$ (146)	$ (1)	$ (360)

[1] During the fourth quarter of 2013, all LCAPP contracts were terminated as discussed above.

9. REGULATORY MATTERS

STATE REGULATION

Each of the Utilities' retail rates, conditions of service, issuance of securities and other matters are subject to regulation in the states in which it operates - in Maryland by the MDPSC, in Ohio by the PUCO, in New Jersey by the NJBPU, in Pennsylvania by the PPUC, in West Virginia by the WVPSC and in New York by the NYPSC. The transmission operations of PE in Virginia are subject to certain regulations of the VSCC. In addition, under Ohio law, municipalities may regulate rates of a public utility, subject to appeal to the PUCO if not acceptable to the utility.

As competitive retail electric suppliers serving retail customers primarily in Ohio, Pennsylvania, Illinois, Michigan, New Jersey and Maryland, FES and AE Supply are subject to state laws applicable to competitive electric suppliers in those states, including affiliate codes of conduct that apply to FES, AE Supply and their public utility affiliates. In addition, if any of the FirstEnergy affiliates were to engage in the construction of significant new transmission or generation facilities, depending on the state, they may be required to obtain state regulatory authorization to site, construct and operate the new transmission or generation facility.

MARYLAND

PE provides SOS pursuant to a combination of settlement agreements, MDPSC orders and regulations, and statutory provisions. SOS supply is competitively procured in the form of rolling contracts of varying lengths through periodic auctions that are overseen by the MDPSC and a third party monitor. Although settlements with respect to residential SOS for PE customers expired on December 31, 2012, by statute, service continues in the same manner unless changed by order of the MDPSC. The settlement provisions relating to non-residential SOS have also expired; however, by MDPSC order, the terms of service remain in place unless PE requests or the MDPSC orders a change. PE recovers its costs plus a return for providing SOS.

The Maryland legislature in 2008 adopted a statute codifying the EmPOWER Maryland goals to reduce electric consumption by 10% and reduce electricity demand by 15%, in each case by 2015. PE's initial plan submitted in compliance with the statute was approved in 2009 and covered 2009-2011, the first three years of the statutory period. Expenditures were originally estimated to be approximately $101 million for the PE programs for the entire period of 2009-2015. Meanwhile, after extensive meetings with the MDPSC Staff and other stakeholders, on August 31, 2011, PE filed a new comprehensive plan for the second three year period, 2012-2014, that includes additional and improved programs. The 2012-2014 plan is expected to cost approximately $66 million out of the original $101 million estimate for the entire EmPOWER program. On December 22, 2011, the MDPSC issued an order approving PE's second plan with various modifications and follow-up assignments. PE continues to recover program costs subject to a five-year amortization. Maryland law only allows for the utility to recover lost distribution revenue attributable to energy efficiency or demand reduction programs through a base rate case proceeding, and to date such recovery has not been sought or obtained by PE.

Pursuant to a bill passed by the Maryland legislature in 2011, the MDPSC adopted rules, effective May 28, 2012, that create specific requirements related to a utility's obligation to address service interruptions, downed wire response, customer communication, vegetation management, equipment inspection, and annual reporting. The MDPSC will be required to assess each utility's compliance with the new rules, and may assess penalties of up to $25,000 per day, per violation. The new rules set utility-specific SAIDI and SAIFI targets for 2012-2015; prescribe detailed tree-trimming requirements, outage restoration and downed wire response deadlines; and impose other reliability and customer satisfaction requirements. PE has advised the MDPSC that compliance with the new rules is expected to increase costs by approximately $106 million over the period 2012-2015. On April 1, 2013, the Maryland electric utilities, including PE, filed their first annual reports on compliance with the new rules. The MDPSC conducted a hearing on August 20, 2013 to discuss the reports, after which an order was issued on September 3, 2013, which accepted PE's filing and the operational changes proposed therein. PE filed its second annual report on March 27, 2014.

Following a "derecho" storm through the region on June 29, 2012, the MDPSC convened a new proceeding to consider matters relating to the electric utilities' performance in responding to the storm. Hearings on the matter were conducted in September 2012. Concurrently, Maryland's governor convened a special panel to examine possible ways to improve the resilience of the electric distribution system. On October 3, 2012, that panel issued a report calling for various measures including: acceleration and expansion of some of the requirements contained in the reliability standards which had become final on May 28, 2012; selective increased investment in system hardening; creation of separate recovery mechanisms for the costs of those changes and investments; and penalties or bonuses on returns earned by the utilities based on their reliability performance. On February 27, 2013, the MDPSC issued an order (the February 27 Order) requiring the utilities to submit several reports over a series of months, relating to the costs and benefits of making further system and staffing enhancements in order to attempt to reduce storm outage durations. The order further requires the Staff of the MDPSC to report on possible performance-based rate structures and to propose additional rules relating to feeder performance standards, outage communication and reporting, and sharing of special needs customer information. PE has responded to the requirements in the order consistent with the schedule set forth therein. PE's final filing on September 3, 2013, discussed the steps needed to harden the utility's system in order to attempt to achieve various levels of storm response speed described in the February 27 Order, and projected that it would expect to make approximately $2.7 billion in infrastructure investments over 15 years to attempt to achieve the quickest level of response for the largest storm projected in the February 27 Order. The MDPSC has ordered that certain reports of its Staff relating to these matters be provided by July 1, 2014, and otherwise has not issued a schedule for further proceedings in this matter.

NEW JERSEY

JCP&L currently provides BGS for retail customers who do not choose a third party EGS and for customers of third party EGSs that fail to provide the contracted service. The supply for BGS, which is comprised of two components, is provided through contracts procured through separate, annually held descending clock auctions, the results of which are approved by the NJBPU. One BGS component and auction, reflecting hourly real time energy prices, is available for larger commercial and industrial customers. The other BGS component and auction, providing a fixed price service, is intended for smaller commercial and residential customers. All New Jersey EDCs participate in this competitive BGS procurement process and recover BGS costs directly from customers as a charge separate from base rates.

On September 7, 2011, the Division of Rate Counsel filed a Petition with the NJBPU asserting that it has reason to believe that JCP&L is earning an unreasonable return on its New Jersey jurisdictional rate base. The Division of Rate Counsel requested that the NJBPU order JCP&L to file a base rate case petition so that the NJBPU may determine whether JCP&L's current rates for electric service are just and reasonable. In its written Order issued July 31, 2012, the NJBPU found that a base rate proceeding "will assure that JCP&L's rates are just and reasonable and that JCP&L is investing sufficiently to assure the provision of safe, adequate and proper utility service to its customers" and ordered JCP&L to file a base rate case using a historical 2011 test year. The rate case petition was filed on November 30, 2012. In the filing, JCP&L requested approval to increase its revenues by approximately $31.5 million and reserved the right to update the filing to include costs associated with the impact of Hurricane Sandy. The NJBPU transmitted the case to the New Jersey Office of Administrative Law for further proceedings and an ALJ has been assigned. On February 22, 2013, JCP&L updated its filing to request recovery of $603 million of distribution-related Hurricane Sandy restoration costs, resulting in increasing the total revenues requested to approximately $112 million. On June 14, 2013, JCP&L further updated its filing to: 1) include the impact of a depreciation study which had been directed by the NJBPU; 2) remove costs associated with 2012 major storms, consistent with the NJBPU orders establishing a generic proceeding to review 2011 and 2012 major storm costs (discussed below); and 3) reflect other revisions to JCP&L's filing. That filing represented an increase of approximately $20.6 million over the revenues produced by existing base rates. Testimony has also been filed in the matter by the Division of Rate Counsel and several other intervening parties in opposition to the base rate increase JCP&L requested. Specifically, the testimony of the Division of Rate Counsel's witnesses recommended that revenues produced by JCP&L's base rates for electric service be reduced by approximately $202.8 million (such amount did not address the revenue requirements associated with major storm events of 2011 and 2012, which are subject to review in the generic proceeding). JCP&L filed rebuttal testimony in response to the testimony of other parties on August 7, 2013. Hearings in the rate case have concluded. In the initial briefs of the parties filed on January 27, 2014, the Division of Rate Counsel recommended that base rate revenues be reduced by $214.9 million while the NJBPU Staff recommended a $207.4 million reduction (such amounts do not address the revenue requirements associated with the major storm events of 2011 and 2012). Reply briefs were filed on February 24, 2014. The matter is pending before the ALJ.

On March 20, 2013, the NJBPU ordered that a generic proceeding be established to investigate the prudence of costs incurred by all New Jersey utilities for service restoration efforts associated with the major storm events of 2011 and 2012. The Order provided that if any utility had already filed a proceeding for recovery of such storm costs, to the extent the amount of approved recovery had not yet been determined, the prudence of such costs would be reviewed in the generic proceeding. On May 31, 2013, the NJBPU clarified its earlier order to indicate that the 2011 major storm costs would be reviewed expeditiously in the generic proceeding with the goal of maintaining the base rate case schedule established by the ALJ where recovery of such costs would be addressed. The NJBPU further indicated in the May 31 clarification that it would review the 2012 major storm costs in the generic proceeding and the recovery of such costs would be considered through a Phase II in the existing base rate case or through another appropriate method to be determined at the conclusion of the generic proceeding. On June 21, 2013, consistent with NJBPU's orders, JCP&L filed the detailed report in support of recovery of major storm costs with the NJBPU. On February 24, 2014, a Stipulation was filed with the NJBPU by JCP&L, the Division of Rate Counsel and NJBPU Staff which will allow recovery of $736 million of JCP&L's $744 million of costs related to the significant weather events of 2011 and 2012. As a result, FirstEnergy recorded a regulatory

asset impairment charge of approximately $8 million (pre-tax) as of December 31, 2013. By its Order of March 19, 2014, the NJBPU approved the Stipulation of Settlement and on March 25, 2014, transmitted a copy of that Order to the Office of Administrative Law so that "actual recovery of the 2011 costs can be determined in relation to the pending base rate case." Recovery of 2011 storm costs will be addressed in the pending base rate case; recovery of 2012 storm costs will be determined by the NJBPU.

Pursuant to a formal Notice issued by the NJBPU on September 14, 2011, public hearings were held in September 2011 to solicit comments regarding the state of preparedness and responsiveness of New Jersey's EDCs prior to, during, and after Hurricane Irene, with additional hearings held in October 2011. Additionally, the NJBPU accepted written comments through October 28, 2011 related to this inquiry. On December 14, 2011, the NJBPU Staff filed a report of its preliminary findings and recommendations with respect to the electric utility companies' planning and response to Hurricane Irene and the October 2011 snowstorm. The NJBPU selected a consultant to further review and evaluate the New Jersey EDCs' preparation and restoration efforts with respect to Hurricane Irene and the October 2011 snowstorm, and the consultant's report was submitted to and subsequently accepted by the NJBPU on September 12, 2012. JCP&L submitted written comments on the report. On January 24, 2013, based upon recommendations in its consultant's report, the NJBPU ordered the New Jersey EDCs to take a number of specific actions to improve their preparedness and responses to major storms. The order includes specific deadlines for implementation of measures with respect to preparedness efforts, communications, restoration and response, post event and underlying infrastructure issues. On May 31, 2013, the NJBPU ordered that the New Jersey EDCs implement a series of new communications enhancements intended to develop more effective communications among EDCs, municipal officials, customers and the NJBPU during extreme weather events and other expected periods of extended service interruptions. The new requirements include making information regarding estimated times of restoration available on the EDC's web sites and through other technological expedients. JCP&L is implementing the required measures consistent with the schedule set out in the above NJBPU's orders.

OHIO

The Ohio Companies primarily operate under an ESP, which expires on May 31, 2014. The material terms of the ESP include:

- Generation supplied through a CBP;
- A load cap of no less than 80%, so that no single supplier is awarded more than 80% of the tranches, which also applies to tranches assigned post-auction;
- A 6% generation discount to certain low income customers provided by the Ohio Companies through a bilateral wholesale contract with FES (FES is one of the wholesale suppliers to the Ohio Companies);
- No increase in base distribution rates through May 31, 2014; and
- A new distribution rider, Rider DCR, to recover a return of, and on, capital investments in the delivery system.

The Ohio Companies also agreed not to recover from retail customers certain costs related to transmission cost allocations by PJM as a result of ATSI's integration into PJM for the longer of the five-year period from June 1, 2011 through May 31, 2016 or when the amount of costs avoided by customers for certain types of products totals $360 million, subject to the outcome of certain PJM proceedings. The Ohio Companies also agreed to establish a $12 million fund to assist low income customers over the term of the ESP and agreed to additional matters related to energy efficiency and alternative energy requirements.

On April 13, 2012, the Ohio Companies filed an application with the PUCO to essentially extend the terms of their ESP for two years. The ESP 3 Application was approved by the PUCO on July 18, 2012. Several parties timely filed applications for rehearing. The PUCO issued an Entry on Rehearing on January 30, 2013 denying all applications for rehearing. Notices of appeal to the Supreme Court of Ohio were filed by two parties in the case, Northeast Ohio Public Energy Council and the ELPC. While briefing has been completed, the matter has not yet been scheduled for oral argument.

As approved, the ESP 3 plan continues certain provisions from the current ESP including:

- Continuing the current base distribution rate freeze through May 31, 2016;
- Continuing to provide economic development and assistance to low-income customers for the two-year plan period at levels established in the existing ESP;
- A 6% generation rate discount to certain low income customers provided by the Ohio Companies through a bilateral wholesale contract with FES (FES is one of the wholesale suppliers to the Ohio Companies);
- Continuing to provide power to non-shopping customers at a market-based price set through an auction process; and
- Continuing Rider DCR that allows continued investment in the distribution system for the benefit of customers.

As approved, the ESP 3 plan provides additional provisions, including:

- Securing generation supply for a longer period of time by conducting an auction for a three-year period rather than a one-year period, in each of October 2012 and January 2013, to mitigate any potential price spikes for the Ohio Companies' utility customers who do not switch to a competitive generation supplier; and
- Extending the recovery period for costs associated with purchasing RECs mandated by SB221 through the end of the new ESP 3 period. This is expected to initially reduce the monthly renewable energy charge for all non-shopping utility customers of the Ohio Companies by spreading out the costs over the entire ESP period.

Under SB221, the Ohio Companies are required to implement energy efficiency programs that achieve a total annual energy savings equivalent of approximately 1,211 GWHs in 2012 (an increase of 416,000 MWHs over 2011 levels), 1,726 GWHs in 2013, 2,306 GWHs in 2014 and 2,903 GWHs for each year thereafter through 2025. The Ohio Companies were also required to reduce peak

demand in 2009 by 1%, with an additional 0.75% reduction each year thereafter through 2018. On May 15, 2013, the Ohio Companies filed their 2012 Status Update Report in which they indicated compliance with 2012 statutory energy efficiency and peak demand reduction benchmarks.

In accordance with PUCO Rules and a PUCO directive, on July 31, 2012 the Ohio Companies filed their three-year portfolio plan for the period January 1, 2013 through December 31, 2015. Estimated costs for the three Ohio Companies' plans total approximately $250 million over the three-year period, which is expected to be recovered in rates to the extent approved by the PUCO. Hearings were held with the PUCO in October 2012. On March 20, 2013, the PUCO approved the three-year portfolio plan for 2013-2015. Applications for rehearing were filed by the Ohio Companies and several other parties on April 19, 2013. The Ohio Companies filed their request for rehearing primarily to challenge the PUCO's decision to mandate that they offer planned energy efficiency resources into PJM's base residual auction. On May 15, 2013, the PUCO granted the applications for rehearing for the sole purpose of further consideration of the matter. On July 17, 2013, the PUCO denied the Ohio Companies' application for rehearing, in part, but authorized the Ohio Companies to receive 20% of any revenues obtained from bidding energy efficiency and demand response reserves into the PJM auction. The PUCO also confirmed that the Ohio Companies can recover PJM costs and applicable penalties associated with PJM auctions, including the costs of purchasing replacement capacity from PJM incremental auctions, to the extent that such costs or penalties are prudently incurred. On August 16, 2013, ELPC and OCC filed applications for rehearing under the basis that the PUCO's authorization for the Ohio Companies to share in the PJM revenues was unlawful. The PUCO granted rehearing on September 11, 2013 for the sole purpose of further consideration of the issue.

On September 16, 2013, the Ohio Companies filed with the Supreme Court of Ohio a notice of appeal of the PUCO's July 17, 2013 Entry on Rehearing related to energy efficiency, alternative energy, and long-term forecast rules stating that the rules issued by the PUCO are inconsistent with and are not supported by statutory authority. On October 23, 2013, the PUCO filed a motion to dismiss the appeal. The Ohio Companies' response was filed on November 4, 2013. The motion is still pending and additional briefing has followed. While briefing has been completed, the matter has not been scheduled for oral argument.

SB221 requires electric utilities and electric service companies in Ohio to serve part of their load from renewable energy resources measured by an annually increasing percentage amount through 2024. The Ohio Companies conducted RFPs in 2009, 2010 and 2011 to secure RECs to help meet the renewable energy requirements established under SB221. In September 2011, the PUCO opened a docket to review the Ohio Companies' alternative energy recovery rider through which the Ohio Companies recover the costs of acquiring these RECs and selected auditors to perform a financial and management audit. Final audit reports filed with the PUCO generally supported the Ohio Companies' approach to procurement of RECs, but also recommended the PUCO examine, for possible disallowance, certain costs associated with the procurement of in-state renewable obligations that the auditor characterized as excessive. Following the hearing, the PUCO issued an Opinion and Order on August 7, 2013 approving the Ohio Companies' acquisition process and their purchases of RECs to meet statutory mandates in all instances except for part of the purchases arising from one auction and directing the Ohio Companies to credit non-shopping customers in the amount of $43.3 million, plus interest, and to file tariff schedules reflecting the refund and interest costs within 60 days following the issuance of a final appealable order on the basis that the Ohio Companies did not prove such purchases were prudent. The Ohio Companies, along with other parties, timely filed applications for rehearing on September 6, 2013. On December 18, 2013, the PUCO denied all of the applications for rehearing. Based on the PUCO ruling a regulatory charge of approximately $51 million, including interest, was recorded in the fourth quarter of 2013. On December 24, 2013, the Ohio Companies filed a notice of appeal and a motion for stay of the PUCO's order with the Supreme Court of Ohio. On February 10, 2014, the Supreme Court of Ohio granted the Ohio Companies' motion for stay, which went into effect on February 14, 2014. On February 18, 2014, the Office of Consumers' Counsel and the ELPC also filed appeals of the PUCO's order. The Ohio Companies filed their merit brief with the Supreme Court of Ohio on March 6, 2014. On April 15, 2014, the Supreme Court of Ohio stayed the briefing schedule pending the court's resolution of the Ohio Companies' motion to seal certain confidential portions of the appendix and supplement to their merit brief.

The Ohio Companies conducted an RFP in 2013 to cover their all-state SREC and their in-state and all-state REC compliance obligations. On April 15, 2014, the Ohio Companies reported that they met all of their annual renewable energy resource requirements for reporting year 2013.

The PUCO instituted a statewide investigation on December 12, 2012 to evaluate the vitality of the competitive retail electric service market in Ohio. The PUCO provided interested stakeholders the opportunity to comment on twenty-two questions. The questions posed are categorized as market design and corporate separation. The Ohio Companies timely filed their comments on March 1, 2013, and filed reply comments on April 5, 2013. On June 5, 2013, the PUCO requested additional comments and reply comments on the topics of market design and corporate separation, which the Ohio Companies timely filed on July 8, 2013 and July 22, 2013, respectively. The PUCO held a series of workshops throughout 2013, which included an en banc workshop on December 11, 2013. The PUCO Staff filed a report on January 16, 2014, which contained a limited discussion of the workshops and the PUCO Staff's recommendations. The Ohio Companies submitted comments on February 6, 2014 and Reply Comments on February 20, 2014. The PUCO issued its Order in this matter on March 26, 2014, which included a wide range of issues such as, maintaining SSO service in its current form, requiring corporate separation audits of all EDUs, establishing a market development working group, and ordering changes to the bill format. The Ohio Companies filed their Application for Rehearing on April 25, 2014. The Ohio Companies filed their memorandum contra applications for rehearing of other stakeholders on May 5, 2014.

On April 9, 2014, the PUCO initiated a generic investigation of marketing practices in the competitive retail electric service market, with a focus on the marketing of fixed-price or guaranteed percent-off SSO rate contracts where there is a provision that permits the pass-through of new or additional charges.

PENNSYLVANIA

The Pennsylvania Companies currently operate under DSPs that expire on May 31, 2015, and provide for the competitive procurement of generation supply for customers that do not choose an alternative EGS or for customers of alternative EGSs that fail to provide the contracted service. The default service supply is currently provided by wholesale suppliers through a mix of long-term and short-term contracts procured through descending clock auctions, competitive requests for proposals and spot market purchases. On November 4, 2013, the Pennsylvania Companies filed a DSP that will provide the method by which they will procure the supply for their default service obligations for the period of June 1, 2015 through May 31, 2017. The Pennsylvania Companies proposed programs call for quarterly descending clock auctions to procure 3, 12, 24, and 48-month energy contracts, as well as, one RFP seeking 2-year contracts to secure SRECs for ME, PN, and Penn. The Pennsylvania Companies have reached a settlement with all parties on all issues raised in the case with the exception of the treatment of NITS charges. On May 6, 2014, the ALJ issued a Recommended Decision recommending adoption of the settlement without modification and the denial of several parties' request for non-bypassable treatment of NITS charges. A final order is expected from the PPUC by August 2014.

The PPUC entered an Order on March 3, 2010 that denied the recovery of marginal transmission losses through the TSC rider for the period of June 1, 2007 through March 31, 2008, and directed ME and PN to submit a new tariff or tariff supplement reflecting the removal of marginal transmission losses from the TSC. Pursuant to a plan approved by the PPUC, ME and PN refunded those amounts to customers over a 29-month period that began in January of 2011. On appeal, the Commonwealth Court affirmed the PPUC's Order to the extent that it holds that line loss costs are not transmission costs and, therefore, the approximately $254 million in marginal transmission losses and associated carrying charges for the period prior to January 1, 2011, are not recoverable under ME's and PN's TSC riders. The Pennsylvania Supreme Court denied ME's and PN's Petition for Allowance of Appeal and the Supreme Court of the United States denied ME's and PN's Petition for Writ of Certiorari. ME and PN also filed a complaint in the U.S. District Court for the Eastern District of Pennsylvania to obtain an order that would enjoin enforcement of the PPUC and Pennsylvania court orders under a theory of federal preemption on the question of retail rate recovery of the marginal transmission loss charges. On September 30, 2013, the U.S. District Court granted the PPUC's motion to dismiss. As a result of the U.S. District Court's decision, FirstEnergy recorded a regulatory asset impairment charge of approximately $254 million (pre-tax) in the quarter ended September 30, 2013. The balance of marginal transmission losses was fully refunded to customers by the second quarter of 2013. On October 29, 2013, ME and PN filed a Notice of Appeal of the U.S. District Court's decision to dismiss the complaint with the United States Court of Appeals for the Third Circuit. Oral argument was held on April 8, 2014, and, at the end of the argument, the Third Circuit directed ME and PN, and the PPUC, each to submit a brief on April 16, 2014 on the question of whether it is possible to waive the preemptive effect of FERC's classification of line loss charges as transmission charges. On April 16, 2014, ME and PN, the PPUC, and the Pennsylvania Industrials each submitted briefs on the Third Circuit's questions.

Pennsylvania adopted Act 129 in 2008 to address issues such as: energy efficiency and peak load reduction; generation procurement; time-of-use rates; smart meters; and alternative energy. Among other things, Act 129 required utilities to file with the PPUC an energy efficiency and peak load reduction plan (EE&C Plan) by July 1, 2009, setting forth the utilities' plans to reduce energy consumption by a minimum of 1% and 3% by May 31, 2011 and May 31, 2013, respectively, and to reduce peak demand by a minimum of 4.5% by May 31, 2013. Act 129 provides for potentially significant financial penalties to be assessed on utilities that fail to achieve the required reductions in consumption and peak demand. The Pennsylvania Companies submitted a report on November 15, 2011, in which they reported on their compliance with statutory May 31, 2011, energy efficiency benchmarks. ME, PN and Penn achieved the 2011 benchmarks; however WP did not. WP could be subject to a statutory penalty of between $1 and $20 million. On November 15, 2013, the Pennsylvania Companies submitted their energy efficiency and peak demand reduction report for the period ending May 31, 2013, in which they indicated that all of the Pennsylvania Companies met their statutory requirements. On March 20, 2014, the PPUC issued an Order initially determining that ME, PN and Penn achieved the 2011 and 2013 statutory energy efficiency benchmarks. The PPUC also initially determined that WP is not in compliance with the 2011 statutory energy efficiency benchmarks but is in compliance with the 2013 energy efficiency benchmarks. As such, the PPUC, with regards to WP's compliance with the 2011 statutory benchmarks, referred the matter to the PPUC Bureau of Investigation and Enforcement for the initiation of an appropriate proceeding no later than May 30, 2014 to investigate whether WP is in compliance with the 2011 statutory benchmarks and whether WP is subject to statutory penalties. The PPUC also ordered that the initial determination will be deemed final unless any petitions challenging its initial determination are filed within 20 days of the Order. On April 9, 2014, WP filed its petition challenging the PPUC's initial determination arguing, among other things, that the May 2011 target was not mandatory and WP is in compliance because it achieved its May 2013 targets. On April 21, 2014, WP filed an appeal with the Commonwealth Court of Pennsylvania in which it challenged the PPUC's initial finding of a violation of Act 129 on due process grounds. On that same day, the Bureau of Investigation and Enforcement, consistent with the PPUC's March 20, 2014 Order, initiated a proceeding by filing a Complaint against WP in which it alleges that WP violated Act 129 and recommends a penalty in the amount of $11.4 million. The Pennsylvania Companies have 20 days in which to respond to the Complaint. A prehearing conference is scheduled for May 9, 2014 at which time a procedural schedule for this matter is expected to be established.

Pursuant to Act 129, the PPUC was charged with reviewing the cost effectiveness of energy efficiency and peak demand reduction programs. The PPUC found the energy efficiency programs to be cost effective and in an Order entered on August 3, 2012, the PPUC directed all of the electric utilities in Pennsylvania to submit by November 15, 2012, a Phase II EE&C Plan that would be in

effect for the period June 1, 2013 through May 31, 2016. The PPUC has deferred ruling on the need to create peak demand reduction targets until it receives more information from the EE&C statewide evaluator. Based upon information received, the PPUC has not included a peak demand reduction requirement in the Phase II plans. The Pennsylvania Companies filed their Phase II plans and supporting testimony in November 2012. On January 16, 2013, the Pennsylvania Companies reached a settlement with all but one party on all but one issue. The settlement provides for the Pennsylvania Companies to meet with interested parties to discuss ways to expand upon the EE&C programs and incorporate any such enhancements after the plans are approved, provided that these enhancements will not jeopardize the Pennsylvania Companies' compliance with their required targets or exceed the statutory spending caps. On February 6, 2013, the Pennsylvania Companies filed revised Phase II EE&C Plans to conform the plans to the terms of the settlement. Total costs of these plans are expected to be approximately $234 million. All such costs are expected to be recoverable through the Pennsylvania Companies reconcilable Phase II EE&C Plan C riders. The remaining issue, raised by a natural gas company, involved the recommendation that the Pennsylvania Companies include in their plans incentives for natural gas space and water heating appliances. On March 14, 2013, the PPUC approved the 2013-2016 EE&C plans of the Pennsylvania Companies, adopting the settlement, and rejecting the natural gas companies recommendations.

In addition, Act 129 required utilities to file a SMIP with the PPUC. On December 31, 2012, the Pennsylvania Companies filed their Smart Meter Deployment Plan. The Deployment Plan requested deployment of approximately 98.5% of the smart meters to be installed over the period 2013 to 2019, and the remaining meters in difficult to reach locations to be installed by 2022, with an estimated life cycle cost of about $1.25 billion. Such costs are expected to be recovered through the Pennsylvania Companies' PPUC-approved Riders SMT-C. Evidentiary hearings were held and briefs were submitted by the Pennsylvania Companies and the OCA. On November 8, 2013, the ALJ issued a Recommended Decision recommending that the Pennsylvania Companies' Deployment Plan be adopted with certain modifications, including, among other things, that the Pennsylvania Companies perform further benchmarking analyses on their costs and hire an independent consultant to perform further analyses on potential savings. On December 2, 2013, the Pennsylvania Companies submitted exceptions in which they challenged, among other things, certain recommendations in the ALJ's decision, and requested approval of a modification to the deployment schedule so as to allow the entire Penn smart meter system (170,000 meters) to be built by the end of 2015, instead of the original proposed installation of 60,000 meters by the end of 2016. The OCA took exception to one issue and both parties filed replies to exceptions on December 12, 2013. In its March 6, 2014 Opinion and Order, the PPUC rejected the OCA's exception and many of the ALJ's recommendations, including the recommendation to hire an independent consultant and the disallowance of $5.1 million of customer information system costs, and affirmed the ALJ's recommendation on the accounting treatment for legacy meter costs. The PPUC also directed the Pennsylvania Companies to file an amendment to the Deployment Plan within thirty days of the Order with sufficient supporting documentation for proper evaluation if the Pennsylvania Companies intend to pursue an accelerated deployment schedule, and the PPUC indicated that it would establish an expedited procedural schedule and rule on the filing within 90 days of the March 6, 2014 Order. The Pennsylvania Companies filed an amended Deployment Plan on March 19, 2014, to which, the OCA filed exceptions arguing that the amended plan failed to: 1) list certain potential cost savings categories that are to be considered by the Pennsylvania Companies; and 2) follow proper procedure. On April 7, 2014, the Pennsylvania Companies filed a reply to OCA’s exceptions explaining why they should be rejected. A prehearing conference was held on April 25, 2014, and a procedural schedule was established that is expected to allow the PPUC to issue an order by June 5, 2014.

In the PPUC Order approving the FirstEnergy and AE merger, the PPUC announced that a separate statewide investigation into Pennsylvania's retail electricity market would be conducted with the goal of making recommendations for improvements to ensure that a properly functioning and workable competitive retail electricity market exists in the state. On April 29, 2011, the PPUC entered an Order initiating the investigation and requesting comments from interested parties on eleven directed questions concerning retail markets in Pennsylvania to investigate both intermediate and long term plans that could be adopted to further foster the competitive markets, and to explore the future of default service in Pennsylvania following the expiration of the upcoming DSPs on May 31, 2015. A final order was issued on February 15, 2013, providing recommendations on the entities to provide default service, the products to be offered, billing options, customer education, and licensing fees and assessments, among other items. Subsequently, the PPUC established five workgroups and one comment proceeding in order to seek resolution of certain matters and to clarify certain obligations that arose from that order.

The PPUC issued a Proposed Rulemaking Order on August 25, 2011, which proposed a number of substantial modifications to the current Code of Conduct regulations that were promulgated to provide competitive safeguards to the competitive retail electricity market in Pennsylvania. The proposed changes include, but are not limited to: an EGS may not have the same or substantially similar name as the EDC or its corporate parent; EDCs and EGSs would not be permitted to share office space and would need to occupy different buildings; EDCs and affiliated EGSs could not share employees or services, except certain corporate support, emergency, or tariff services (the definition of "corporate support services" excludes items such as information systems, electronic data interchange, strategic management and planning, regulatory services, legal services, or commodities that have been included in regulated rates at less than market value); and an EGS must enter into a trademark agreement with the EDC before using its trademark or service mark. The Proposed Rulemaking Order was published on February 11, 2012, and comments were filed by the Pennsylvania Companies and FES on March 27, 2012. If implemented these rules could require a significant change in the ways FES and the Pennsylvania Companies do business in Pennsylvania, and could possibly have an adverse impact on their results of operations and financial condition. Pennsylvania's Independent Regulatory Review Commission subsequently issued comments on the proposed rulemaking on April 26, 2012, which called for the PPUC to further justify the need for the proposed revisions by citing a lack of evidence demonstrating a need for them. The House Consumer Affairs Committee of the Pennsylvania General Assembly also sent a letter to the Independent Regulatory Review Commission on July 12, 2012, noting its opposition to the proposed regulations as modified. On March 24, 2014, the PPUC issued a letter withdrawing the Proposed Rulemaking.

WEST VIRGINIA

MP and PE currently operate under a Joint Stipulation and Agreement of Settlement reached with the other parties and approved by the WVPSC in June 2010 that provided for:

- $40 million annualized base rate increases effective June 29, 2010;
- Deferral of February 2010 storm restoration expenses over a maximum five-year period;
- Additional $20 million annualized base rate increase effective in January 2011;
- Decrease of $20 million in ENEC rates effective January 2011, providing for deferral of related costs for later recovery in 2012; and
- Moratorium on filing for further increases in base rates before December 1, 2011, except under specified circumstances.

The WVPSC opened a general investigation into the June 29, 2012, derecho windstorm with data requests for all utilities. A public meeting for presentations on utility responses and restoration efforts was held on October 22, 2012 and two public input hearings have been held. The WVPSC issued an Order in this matter on January 23, 2013 closing the proceeding and directing electric utilities to file a vegetation management plan within six months and to propose a cost recovery mechanism. This Order also requires MP and PE to file a status report regarding improvements to their storm response procedures by the same date. On July 23, 2013, MP and PE filed their vegetation management plans, which provided for recovery of costs through a surcharge mechanism. A hearing was held on December 3, 2013, and briefing followed. The WVPSC issued an order on April 14, 2014 approving the plan, stating rate recovery will be addressed in the base rate case filed on April 30, 2014. In the interim, MP and PE are authorized to defer all costs associated with the plan.

MP and PE filed their Resource Plan with the WVPSC in August 2012 detailing both supply and demand forecasts and noting a substantial capacity deficiency. MP and PE filed a Petition for approval of a Generation Resource Transaction with the WVPSC in November 2012 that proposed a net ownership transfer of 1,476 MW of coal-fired generation capacity to MP. The proposed transfer involved MP's acquisition of the remaining ownership of the Harrison Power Station from AE Supply and the sale of MP's minority interest in the Pleasants Power Station to AE Supply. FERC authorized the transfers on April 23, 2013 and the financing on May 13, 2013. A Joint Settlement Agreement was filed by the majority of parties on August 21, 2013. On October 7, 2013, the WVPSC authorized the transaction, with certain conditions, and on October 9, 2013, the transaction closed resulting in MP recording a pre-tax impairment charge of approximately $322 million in the fourth quarter of 2013 to reduce the net book value of the Harrison Power Station to the amount that was permitted to be included in jurisdictional rate base. Concurrently, MP recognized a regulatory liability of approximately $23 million representing refunds to customers associated with the excess purchase price received by MP above the net book value of MP's minority interest in the Pleasants Power Station. The transaction resulted in AE Supply receiving net consideration of $1.1 billion and MP's assumption of a $73.5 million pollution control note. The $1.1 billion net consideration was originally financed by MP through an equity infusion from FE of approximately $527 million and a note payable to AE Supply of approximately $573 million. The note payable to AE Supply was paid in the fourth quarter of 2013. The settlement also required MP and PE to file a base rate case by April 30, 2014. On November 6, 2013, the WVCAG petitioned for appeal with the Supreme Court of Appeals of West Virginia. MP and PE filed their response to the WVCAG petition on December 27, 2013 and WVCAG filed its reply on January 16, 2014. The Supreme Court of Appeals of West Virginia held oral arguments on March 5, 2014. On April 23, 2014 the Supreme Court of Appeals of West Virginia delivered an Opinion affirming the WVPSC order approving the Generation Resource Transaction.

On April 30, 2014, MP and PE filed a rate case requesting a base rate increase of approximately $96 million, or 9.3%. The filing also included a surcharge to recover costs of MP's and PE's vegetation management program in the amount of approximately $48 million. The proposed total rate increase request, including the cost of the vegetation management program, is approximately $144 million, or 14%. MP and PE anticipate a decision from the WVPSC in February 2015.

RELIABILITY MATTERS

Federally-enforceable mandatory reliability standards apply to the bulk electric system and impose certain operating, record-keeping and reporting requirements on the Utilities, FES, AE Supply, FG, FENOC, ATSI and TrAIL. NERC is the ERO designated by FERC to establish and enforce these reliability standards, although NERC has delegated day-to-day implementation and enforcement of these reliability standards to eight regional entities, including RFC. All of FirstEnergy's facilities are located within the RFC region. FirstEnergy actively participates in the NERC and RFC stakeholder processes, and otherwise monitors and manages its companies in response to the ongoing development, implementation and enforcement of the reliability standards implemented and enforced by RFC.

FirstEnergy believes that it is in compliance with all currently-effective and enforceable reliability standards. Nevertheless, in the course of operating its extensive electric utility systems and facilities, FirstEnergy occasionally learns of isolated facts or circumstances that could be interpreted as excursions from the reliability standards. If and when such items are found, FirstEnergy develops information about the item and develops a remedial response to the specific circumstances, including in appropriate cases “self-reporting” an item to RFC. Moreover, it is clear that the NERC, RFC and FERC will continue to refine existing reliability standards as well as to develop and adopt new reliability standards. Any inability on FirstEnergy's part to comply with the reliability standards

for its bulk power system could result in the imposition of financial penalties that could have a material adverse effect on its financial condition, results of operations and cash flows.

FERC MATTERS

PJM Transmission Rates

PJM and its stakeholders have been debating the proper method to allocate costs for new transmission facilities. While FirstEnergy and other parties advocated for a traditional "beneficiary pays" (or usage based) approach, others advocate for “socializing” the costs on a load-ratio share basis - each customer in the zone would pay based on its total usage of energy within PJM. On August 6, 2009, the U.S. Court of Appeals for the Seventh Circuit found that FERC had not supported a prior FERC decision to allocate costs for new 500 kV and higher voltage facilities on a load ratio share basis and, based on that finding, remanded the rate design issue to FERC. In an order dated January 21, 2010, FERC set this matter for a “paper hearing” and requested parties to submit written comments. FERC identified nine separate issues for comment and directed PJM to file the first round of comments. PJM filed certain studies with FERC on April 13, 2010, which demonstrated that allocation of the cost of high voltage transmission facilities on a beneficiary pays basis results in certain LSEs in PJM bearing the majority of the costs. FirstEnergy and a number of other utilities, industrial customers and state utility commissions supported the use of the beneficiary pays approach for cost allocation for high voltage transmission facilities. Other utilities and state utility commissions supported continued socialization of these costs on a load ratio share basis. On March 30, 2012, FERC issued an order on remand reaffirming its prior decision that costs for new transmission facilities that are rated at 500 kV or higher are to be collected from all transmission zones throughout the PJM footprint by means of a postage-stamp (or socialized) rate based on the amount of load served in a transmission zone and concluding that such methodology is just and reasonable and not unduly discriminatory or preferential. On April 30, 2012, FirstEnergy requested rehearing of FERC's March 30, 2012 order and on March 22, 2013, FERC denied rehearing. On March 29, 2013, FirstEnergy filed a Petition for Review with the U.S. Court of Appeals for the Seventh Circuit, and the case subsequently was consolidated with several other cases before that court for briefing and disposition. Briefing is complete, oral argument was held on April 22, 2014, and a decision is expected in 2014.

Order No. 1000, issued by FERC on July 21, 2011, required the submission of a compliance filing by PJM or the PJM transmission owners demonstrating that the cost allocation methodology for new transmission projects directed by the PJM Board of Managers satisfied the principles set forth in the order. To demonstrate compliance with the regional cost allocation principles of the order, the PJM transmission owners, including FirstEnergy, submitted a filing to FERC on October 11, 2012, proposing a hybrid method of 50% beneficiary pays and 50% postage stamp to be effective for RTEP projects approved by the PJM Board of Managers on, and after, the effective date of the compliance filing. On January 31, 2013, FERC conditionally accepted the hybrid method to be effective on February 1, 2013, subject to refund and to a future order on PJM's separate Order No. 1000 compliance filing. On March 22, 2013, FERC again accepted the hybrid method. Certain parties sought rehearing of parts of FERC's March 22, 2013 order. These requests for rehearing are pending before FERC. On July 10, 2013, the PJM transmission owners, including FirstEnergy, submitted filings to FERC setting forth the cost allocation method for projects that cross the borders between: (1) the PJM region and the NYISO region and; (2) the PJM region and the FERC-jurisdictional members of the SERTP region. These filings propose to allocate the cost of these interregional transmission projects based on the costs of projects that otherwise would have been constructed separately in each region. On the same date, also in response to Order No. 1000, the PJM transmission owners, including FirstEnergy, also submitted to FERC a filing stating that the cost allocation provisions for interregional transmission projects provided in the Joint Operating Agreement between PJM and MISO comply with the requirements of Order No. 1000. On December 30, 2013, FERC conditionally accepted the PJM/SERTP cross-border project cost allocation filing, subject to refund and future orders in PJM's and SERTP's related Order No. 1000 interregional compliance proceedings. The PJM/NYISO and PJM/MISO cross-border project cost allocation filings remain pending before FERC. On January 16, 2014, FERC issued an order regarding the effective date of PJM's separate Order No. 1000 regional transmission planning and cost allocation compliance filing, noting that it would address the merits of the comments on and protests to that filing and related compliance filings in a future order.

Numerous parties, including ATSI, FES, TrAIL, OE, CEI, TE, Penn, JCP&L, ME, MP, PN, WP and PE, sought judicial review of Order No. 1000 before the U.S. Court of Appeals for the D.C. Circuit. Briefing is complete and oral argument was held on March 20, 2014.

The outcome of these proceedings and their impact, if any, on FirstEnergy cannot be predicted at this time.

RTO Realignment

On June 1, 2011, ATSI and the ATSI zone transferred from MISO to PJM. The move was performed as planned with no known operational or reliability issues for ATSI or for the wholesale transmission customers in the ATSI zone. While many of the matters involved with the move have been resolved, FERC denied recovery by means of ATSI's transmission rate for certain charges that collectively can be described as "exit fees" and certain other transmission cost allocation charges totaling approximately $78.8 million until such time as ATSI submits a cost/benefit analysis that demonstrates net benefits to customers from the move. On December 21, 2012, ATSI and other parties filed a proposed settlement agreement with FERC to resolve the exit fee and transmission cost allocation issues. However, FERC subsequently rejected that settlement, stating that its action is without prejudice to ATSI submitting a cost/benefit analysis demonstrating that the benefits of the RTO realignment decisions outweigh the exit fee and transmission cost allocation charges. On October 21, 2013, FirstEnergy filed a request for rehearing of FERC's order.

Separately, the question of ATSI's responsibility for certain costs for the “Michigan Thumb” transmission project continues to be disputed. Potential responsibility arises under the MISO MVP tariff, which has been litigated in complex proceedings in front of FERC and certain U.S. appellate courts. The MISO and its allied parties assert that the benefits to the ATSI zone of the Michigan Thumb project are roughly commensurate with the costs that MISO desires to charge to the ATSI zone, estimated to be as much as $16 million per year. ATSI has submitted evidence that the Michigan Thumb project provides no electric benefits to the ATSI zone and, on that basis, opposes the MISO’s efforts to impose these costs on the ATSI zone loads. The MISO and its allied parties also assert that certain language in the MISO Transmission Owners Agreement requires ATSI to pay these charges. In the event of a final non-appealable order that rules that ATSI must pay these charges, ATSI will seek recovery of these charges through its formula rate. While FERC proceedings regarding whether the MISO can charge ATSI for MVP costs remain pending, on February 24, 2014, the U.S. Supreme Court declined to hear appeals filed by FirstEnergy and other parties of the Seventh Circuit's June 2013 decision upholding FERC's acceptance of the MISO's generic MVP cost allocation proposal.

In addition, in a May 31, 2011 order, FERC ruled that the costs for certain "legacy RTEP" transmission projects in PJM could be charged to transmission customers in the ATSI zone. ATSI sought rehearing of the question of whether the ATSI zone should pay these legacy RTEP charges and, on September 20, 2012, FERC denied ATSI's request for rehearing. ATSI subsequently filed a petition for review with the U.S. Court of Appeals for the D.C. Circuit. Briefing is complete, oral argument was held on December 11, 2013, and a decision is expected in the second quarter of 2014.

The outcome of those proceedings that address the remaining open issues related to ATSI's move into PJM cannot be predicted at this time.

California Claims Matters

In October 2006, several California governmental and utility parties presented AE Supply with a settlement proposal to resolve alleged overcharges for power sales by AE Supply to the California Energy Resource Scheduling division of the CDWR during 2001. The settlement proposal claims that CDWR is owed approximately $190 million for these alleged overcharges. This proposal was made in the context of mediation efforts by FERC and the U.S. Court of Appeals for the Ninth Circuit in several pending proceedings to resolve all outstanding refund and other claims, including claims of alleged price manipulation in the California energy markets, during 2000 and 2001. The Ninth Circuit had previously remanded one of those proceedings to FERC, which dismissed the claims of the California Parties in May 2011, and affirmed the dismissal in June 2012. On June 20, 2012, the California Parties appealed FERC's decision back to the Ninth Circuit. Briefing was completed before the Ninth Circuit on October 23, 2013. The timing of further action by the Ninth Circuit is unknown.

In another proceeding, in June 2009, the California Attorney General, on behalf of certain California parties, filed another complaint with FERC against various sellers, including AE Supply, again seeking refunds for transactions in the California energy markets during 2000 and 2001. The above-noted transactions with CDWR are the basis for including AE Supply in this complaint. AE Supply filed a motion to dismiss, which was granted by FERC in May 2011, and affirmed by FERC in June 2012. The California Attorney General has appealed FERC's dismissal of its complaint to the Ninth Circuit, which has consolidated the case with other pending appeals related to California refund claims, and stayed the proceedings pending further order.

FirstEnergy cannot predict the outcome of either of the above matters or estimate the possible loss or range of loss.

PATH Transmission Project

The PATH project was proposed to be comprised of a 765 kV transmission line from West Virginia through Virginia and into Maryland, modifications to an existing substation in Putnam County, West Virginia, and the construction of new substations in Hardy County, West Virginia and Frederick County, Maryland. PJM initially authorized construction of the PATH project in June 2007. On August 24, 2012, the PJM Board of Managers canceled the PATH project, which it had suspended in February 2011. As a result, approximately $62 million and approximately $59 million in costs incurred by PATH-Allegheny and PATH-WV, respectively, were reclassified from net property, plant and equipment to a regulatory asset for future recovery. On September 28, 2012, those companies requested authorization from FERC to recover the costs with a proposed return on equity of 10.9% (10.4% base plus 0.5% for RTO membership) from PJM customers over the next five years. Several parties protested the request. On November 30, 2012, FERC issued an order denying the 0.5% return on equity adder for RTO membership and allowing the tariff changes enabling recovery of these costs to become effective on December 1, 2012, subject to settlement judge procedures and hearing if the parties do not agree to a settlement. PATH, PATH-Allegheny and PATH-WV have requested rehearing of FERC's denial of the 0.5% return on equity adder for RTO membership; that request for rehearing remains pending before FERC. In addition, FERC consolidated for settlement judge procedures and hearing purposes three formal challenges to the PATH formula rate annual updates submitted to FERC in June 2010, June 2011 and June 2012, with the September 28, 2012 filing for recovery of costs associated with the cancellation of the PATH project.

On March 20, 2014, the settlement judge declared an impasse in efforts to achieve settlement. On March 24, 2014, the Chief ALJ terminated settlement judge procedures and appointed an ALJ to preside over the hearing phase of the case. The hearing is scheduled to commence on November 5, 2014. The issues set for hearing include the prudence of the costs, the base return on

equity and the period of recovery. Depending on the outcome of the hearing, PATH-Allegheny and PATH-WV may be required to refund certain amounts that have been collected under their formula rate.

Hydroelectric Asset Sale

On September 4, 2013, certain of FirstEnergy's subsidiaries submitted filings with FERC for authorization to sell eleven hydroelectric power plant projects to subsidiaries of Harbor Hydro Holdings, LLC (Harbor Hydro), a subsidiary of LS Power Equity Partners II, LP (LS Power). The eleven hydroelectric projects are: the Seneca Pumped Storage Project, Allegheny Lock & Dam No. 5, Allegheny Lock & Dam No. 6, the Lake Lynn Project, the Millville Hydro Project, the Dam No. 4 Project, the Dam No. 5 Project, and four additional projects located in Shenandoah, Front Royal and Luray, Virginia. The eleven projects have a combined generating capacity of approximately 527 MW. On February 12, 2014, the sale of the hydroelectric power plants to LS Power closed for approximately $394 million. See Note 13, Discontinued Operations for additional information regarding the assets sold.

MISO Capacity Portability

On June 11, 2012, in response to certain arguments advanced by MISO, FERC issued a Notice of Request for Comments regarding whether existing rules on transfer capability act as barriers to the delivery of capacity between MISO and PJM. FirstEnergy and other parties have submitted filings arguing that MISO's concerns largely are without foundation and suggesting that FERC order that the remaining concerns be addressed in the existing stakeholder process that is described in the PJM/MISO Joint Operating Agreement. On April 2, 2013, FERC issued an order directing MISO and PJM to make presentations to FERC regarding ongoing regional efforts to address whether barriers to transfer capability exist between the MISO and PJM regions and the actions the FERC should take to address any such barriers. The RTOs presented their respective positions to FERC on June 20, 2013 and provided additional information regarding their stakeholder prioritization survey, in response to a FERC request on June 27, 2013. On September 26, 2013, the RTOs jointly submitted an informational filing providing a description of and schedule for their Joint and Common Market initiatives. On December 19, 2013, FERC issued an order directing that FERC staff are to attend the "joint and common market" stakeholder meetings for the purpose of monitoring progress on the initiatives described in the September 26, 2013 joint informational filing and establishing a new proceeding to reflect the broadened scope of issues contemplated by that filing and the RTOs' joint and common market initiatives. FERC has not acted on the presentations, and the RTOs and affected parties are working to address the MISO's proposal in stakeholder proceedings. Changes to the criteria and qualifications for participation in the PJM RPM capacity auctions could have a significant impact on the outcome of those auctions, including a negative impact on the prices at which those auctions would clear.

MOPR Reform

On December 7, 2012, PJM filed amendments to its tariff to revise the MOPR used in the RPM. PJM revised the MOPR to add two broad, categorical exemptions, eliminate an existing exemption, and to limit the applicability of the MOPR to certain capacity resources. The filing also included related and conforming changes to the RPM posting requirements and to those provisions describing the role of the Independent Market Monitor for the PJM Region. On May 2, 2013, FERC issued an order in large part accepting PJM's proposed reform of the MOPR, including the proposed exemptions and applicability but also requiring PJM to commit to future review and, if necessary, additional revisions to the MOPR to accommodate changing market conditions. On June 3, 2013, FirstEnergy submitted a request for rehearing of FERC's May 2, 2013 order. In its rehearing request, FirstEnergy referenced the results of the May 2013 PJM RPM capacity auction, and publicly-available data about the reasons for the unexpectedly low "rest-of-RTO" clearing price of $59 per MW-day, as supporting its contention that the MOPR reform depressed prices as predicted in FirstEnergy's December 28, 2012 and January 25, 2013 comments. FirstEnergy's request for rehearing is pending before FERC.

FTR Underfunding Complaint

In PJM, FTRs are a mechanism to hedge congestion and they operate as a financial replacement for physical firm transmission service. FTRs are financially-settled instruments that entitle the holder to a stream of revenues based on the hourly congestion price differences across a specific transmission path in the PJM Day-ahead Energy Market. FE also performs bilateral transactions for the purpose of hedging the price differences between the location of supply resources and retail load obligations. Due to certain language in the PJM tariff, the funds that are set aside to pay FTRs can be diverted to other uses, resulting in "underfunding" of FTR payments. Since June 2010, FES and AE Supply have lost more than $87 million in revenues that they otherwise would have received as FTR holders to hedge congestion costs. FES and AE Supply expect to continue to experience significant underfunding.

On December 28, 2011, FES and AE Supply filed a complaint with FERC for the purpose of modifying certain provisions in the PJM tariff to eliminate FTR underfunding. On March 2, 2012, FERC issued an order dismissing the complaint. In its order, FERC ruled that it was not appropriate to initiate action at that time because of the unknown root causes of FTR underfunding. FERC directed PJM to convene stakeholder proceedings for the purpose of determining the root causes of the FTR underfunding. FERC went on to note that its dismissal of the complaint was without prejudice to FES and AE Supply or any other affected entity filing a complaint if the stakeholder proceedings proved unavailing. FES and AE Supply sought rehearing of FERC's order and, on July 19, 2012, FERC denied rehearing. In April 2012, PJM issued a report on FTR underfunding. However, the PJM stakeholder process proved unavailing as the stakeholders were not willing to change the tariff to eliminate FTR underfunding. Accordingly, on February 15, 2013, FES and AE Supply re-filed their complaint with FERC for the purpose of changing the PJM tariff to eliminate FTR underfunding. Various parties filed responsive pleadings, including PJM. On June 5, 2013, FERC issued its order denying the new complaint. On

July 5, 2013,FESC, on behalf of FES and AE Supply, filed a request for rehearing of FERC's order. That request for rehearing, and all subsequent filings in the docket, are pending before FERC.

PJM RPM Tariff Amendments

In November 2013, PJM began to submit a series of amendments to its RPM capacity tariff in order to address certain problems that have been observed in recent auctions. These problems can be grouped into four categories: (i) Demand Response (DR); (ii) imports; (iii) modeling of transmission upgrades in calculating geographic clearing prices; and (iv) arbitrage/capacity replacement. The purpose of PJM's tariff amendments is to ensure that resources that clear in the RPM auctions are available as physical resources in the delivery year and that the rules implement comparable obligations for different types of resources. In each of the relevant dockets, FirstEnergy submitted comments as part of a coalition of utilities (generally including an affiliate of AEP, Duke and Dayton). The FirstEnergy/coalition position was that all of the PJM proposals should be accepted as proposed, and that the FERC should order PJM to take additional steps that should have the effect of eliminating additional distortions and flaws in the RPM market. PJM made two filings regarding DR; FERC accepted one as proposed on January 30, 2014, and issued a deficiency letter regarding the other on March 6, 2014. FERC also issued deficiency letters requesting additional information from PJM regarding the modeling filing on January 17, 2014 and regarding the imports filing on January 28, 2014. On February 18 and 21, 2014, respectively, PJM filed its responses to FERC's deficiency letters regarding the modeling filing and the imports filing. On April 18, 2014, FERC conditionally accepted PJM's modeling filing, as supplemented, subject to PJM's submission of a compliance filing. On April 22, 2014, FERC accepted PJM's imports filing, as supplemented. The second DR filing, which relates to the rules applicable to DR performance obligations, the arbitrage/capacity replacement filing and related filings in those dockets, and a request for rehearing of the January 30, 2014 order on the first DR filing, are pending before FERC. PJM requested FERC action on the DR performance obligations filing by April 11, 2014, and prior to the May 2014 BRA for the arbitrage/capacity replacement filing. Although FirstEnergy believes that these filings (and the associated tariff changes) should have positive implications for RPM clearing prices, generally there can be no assurance as to their ultimate impact on FirstEnergy.

PJM RPM Auctions - Calculation of Unit-Specific Offer Caps

The PJM RPM capacity tariff describes the rules for calculating the “offer cap” for each unit that offers into the RPM auctions. In summary, the offer cap is calculated by identifying certain going-forward costs, including the going-forward capital requirements, for a given unit, and then subtracting the projected energy and ancillary services revenues, net of marginal costs, from the going-forward costs. The remainder becomes the offer cap. FES learned that the PJM Market Monitor’s practice for calculating the forecast energy and ancillary services revenues has been to use the lower of the unit’s economic or cost-based offers into the PJM energy market. The Market Monitor engages in this practice based on his interpretation of certain provisions of the PJM capacity tariff. However, review of the relevant tariff language suggests that only the cost-based offer data should be used. FES determined that the Market Monitor’s use of the lower of cost-based or economic offer data has the effect of suppressing the offer cap, which can distort the price signal that is intended to come out of the RPM auction process. On April 7, 2014, FES submitted a Petition for Declaratory Order to FERC, asking for an interpretation of the relevant provisions of the PJM capacity tariff. Specifically, FES identified the difference of opinion between FES and the Market Monitor regarding interpretation of the relevant provision and asked FERC to rule on the question of whether the tariff language permits the Market Monitor’s use of the lower of cost-based or economic offer data or requires use of the cost-based offer data. FES asked FERC to rule on the petition by May 9, 2014. On April 18, 2014, the Market Monitor and other parties filed protests to FES's petition, arguing that the PJM capacity tariff allows the Market Monitor to use market-based energy offers instead of cost-based energy offers in calculating RPM auction offer caps and asking FERC to delay action on the petition until after the May 2014 BRA. FES' petition, the protest, and related filings are pending before FERC. The timing of FERC action and the outcome of this proceeding cannot be predicted at this time.

Market-Based Rate Authority, Triennial Update

OE, CEI, TE, Penn, JCP&L, ME, PN, MP, WP, PE, AE Supply, FES, FG, NG, FirstEnergy Generation Mansfield Unit 1 Corp., Buchanan Generation, LLC, and Green Valley Hydro, LLC each hold authority from FERC to sell electricity at market-based rates. One condition for retaining this authority is that every three years each entity must file an update with the FERC that demonstrates that each entity continues to meet FERC’s requirements for holding market-based rate authority. On December 20, 2013, FESC submitted to FERC the most recent triennial market power analysis filing for each market-based rate holder for the current cycle of this filing requirement. That filing is pending before FERC.

10. COMMITMENTS, GUARANTEES AND CONTINGENCIES

GUARANTEES AND OTHER ASSURANCES

FirstEnergy has various financial and performance guarantees and indemnifications which are issued in the normal course of business. These contracts include performance guarantees, stand-by letters of credit, debt guarantees, surety bonds and indemnifications. FirstEnergy enters into these arrangements to facilitate commercial transactions with third parties by enhancing the value of the transaction to the third party.

As of March 31, 2014, outstanding guarantees and other assurances aggregated approximately $4.0 billion, consisting of parental guarantees ($896 million), subsidiaries' guarantees ($2,207 million) and other guarantees ($891 million).

FES' debt obligations are generally guaranteed by its subsidiaries, FG and NG, and FES guarantees the debt obligations of each of FG and NG. Accordingly, present and future holders of indebtedness of FES, FG, and NG would have claims against each of FES, FG and NG, regardless of whether their primary obligor is FES, FG or NG.

COLLATERAL AND CONTINGENT-RELATED FEATURES

In the normal course of business, FE and its subsidiaries routinely enter into physical or financially settled contracts for the sale and purchase of electric capacity, energy, fuel, and emission allowances. Certain bilateral agreements and derivative instruments contain provisions that require FE or its subsidiaries to post collateral. This collateral may be posted in the form of cash or credit support with thresholds contingent upon FE's or its subsidiaries' credit rating from each of the major credit rating agencies. The collateral and credit support requirements vary by contract and by counterparty. The incremental collateral requirement allows for the offsetting of assets and liabilities with the same counterparty, where the contractual right of offset exists under applicable master netting agreements. This posted collateral is used to settle gains or losses on those bilateral agreements or derivatives.

Based on FES' power portfolio exposure as of March 31, 2014, FES has posted collateral of $544 million and AE Supply has posted collateral of $8 million. The Regulated Distribution segment has posted collateral of $28 million. The collateral posted at FES primarily relates to the extreme weather and market conditions experienced in January of 2014. On April 16, 2014, approximately $275 million of cash collateral was returned to FES as a result of the PJM semi-annual peak market activity calculation reset.

These credit-risk-related contingent features stipulate that if the subsidiary were to be downgraded or lose its investment grade credit rating (based on its senior unsecured debt rating), it would be required to provide additional collateral. Depending on the volume of forward contracts and future price movements, higher amounts for margining could be required.

Subsequent to the occurrence of a senior unsecured credit rating downgrade to below S&P's BBB- and Moody's Baa3, or a “material adverse event,” the immediate posting of collateral or accelerated payments may be required of FE or its subsidiaries. The following table discloses the additional credit contingent contractual obligations as of March 31, 2014:

Collateral Provisions	FES	AE Supply	Utilities	Total
		(In millions)		
Split Rating (One rating agency's rating below investment grade)	$ 461	$ 6	$ 49	$ 516
BB+/Ba1 Credit Ratings	$ 497	$ 6	$ 49	$ 552
Full impact of credit contingent contractual obligations	$ 796	$ 58	$ 87	$ 941

Excluded from the preceding chart is the potential collateral obligations due to affiliate transactions between the Regulated Distribution Segment and Competitive Energy Services Segment. As of March 31, 2014, neither FES nor AE Supply had any collateral posted with their affiliates. In the event of a senior unsecured credit rating downgrade to below S&P's BB- or Moody's Ba3, FES and AE Supply would be required to post $111 million and $1 million, respectively.

OTHER COMMITMENTS AND CONTINGENCIES

FE is a guarantor under a syndicated three-year senior secured term loan facility dated October 18, 2011, as amended, that matures October 18, 2015, under which Global Holding borrowed $350 million. Proceeds from the loan were used to repay Signal Peak's and Global Rail's maturing $350 million syndicated two-year senior secured term loan facility. In addition to FE, Signal Peak, Global Rail, Global Mining Group, LLC and Global Coal Sales Group, LLC, each being a direct or indirect subsidiary of Global Holding, have also provided their joint and several guarantees of the obligations of Global Holding under the new facility.

In connection with the facility, 69.99% of Global Holding's direct and indirect membership interests in Signal Peak, Global Rail and their affiliates along with FEV's and WMB Marketing Ventures, LLC's respective 33-1/3% membership interests in Global Holding, are pledged to the lenders as collateral.

FE, FEV and the other two co-owners of Global Holding, Pinesdale LLC, a Gunvor Group, Ltd. subsidiary, and WMB Marketing Ventures, LLC, have agreed, most recently as of August 14, 2013, to use their best efforts to refinance the facility no later than July 20, 2015, on a non-recourse basis so that FE's guaranty can be terminated and/or released. If that refinancing does not occur, FE may require each co-owner to lend to Global Holding, on a pro rata basis, funds sufficient to prepay the facility in full. In lieu of providing such funding, the co-owners, at FE's option, may provide their several guaranties of Global Holding's obligations under the facility. Since January 1, 2013, FE has received a fee for providing its guaranty. The fee is payable semiannually, and accrues at a rate of 5% per annum on the average daily outstanding aggregate commitments under the facility for each semiannual period.

ENVIRONMENTAL MATTERS

Various federal, state and local authorities regulate FirstEnergy with regard to air and water quality and other environmental matters. Compliance with environmental regulations could have a material adverse effect on FirstEnergy's earnings and competitive position to the extent that FirstEnergy competes with companies that are not subject to such regulations and, therefore, do not bear the risk of costs associated with compliance, or failure to comply, with such regulations.

CAA Compliance

FirstEnergy is required to meet federally-approved SO_2 and NOx emissions regulations under the CAA. FirstEnergy complies with SO_2 and NOx reduction requirements under the CAA and SIP(s) by burning lower-sulfur fuel, utilizing combustion controls and post-combustion controls, generating more electricity from lower or non-emitting plants and/or using emission allowances.

In July 2008, three complaints representing multiple plaintiffs were filed against FG in the U.S. District Court for the Western District of Pennsylvania seeking damages based on air emissions from the coal-fired Bruce Mansfield Plant. Two of these complaints also seek to enjoin the Bruce Mansfield Plant from operating except in a “safe, responsible, prudent and proper manner.” One complaint was filed on behalf of twenty-one individuals and the other is a class action complaint seeking certification as a class with the eight named plaintiffs as the class representatives. FG believes the claims are without merit and intends to vigorously defend itself against the allegations made in these complaints, but, at this time, is unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In January 2009, the EPA issued an NOV to GenOn Energy, Inc. alleging NSR violations at the Keystone, Portland and Shawville coal-fired plants based on “modifications” dating back to the mid-1980s. JCP&L, as the former owner of 16.67% of the Keystone Station, ME, as a former owner and operator of the Portland Station, and PN as former owner and operator of the Shawville Station, are unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In August 2009, the EPA issued a Finding of Violation and NOV alleging violations of the CAA and Ohio regulations, including the PSD, NNSR and Title V regulations, at the Eastlake, Lakeshore, Bay Shore and Ashtabula coal-fired plants. The EPA's NOV alleges equipment replacements during maintenance outages dating back to 1990 triggered the pre-construction permitting requirements under the PSD and NNSR programs. In June 2011, EPA issued another Finding of Violation and NOV alleging violations of the CAA and Ohio regulations, specifically, opacity limitations and requirements to continuously operate opacity monitoring systems at the Eastlake, Lakeshore, Bay Shore and Ashtabula coal-fired plants. FG intends to comply with the CAA and Ohio regulations, but, at this time, is unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In August 2000, AE received an information request pursuant to section 114(a) of the CAA from the EPA requesting that it provide information and documentation relevant to the operation and maintenance of the following ten coal-fired plants, which collectively include 22 electric generation units: Albright, Armstrong, Fort Martin, Harrison, Hatfield's Ferry, Mitchell, Pleasants, Rivesville, R. Paul Smith and Willow Island to determine compliance with the NSR provisions under the CAA, which can require the installation of additional air emission control equipment when a major modification of an existing facility results in an increase in emissions. In September 2007, AE received an NOV from the EPA alleging NSR and PSD violations under the CAA, as well as Pennsylvania and West Virginia state laws at the coal-fired Hatfield's Ferry and Armstrong plants in Pennsylvania and the coal-fired Fort Martin and Willow Island plants in West Virginia. On June 29, 2012, January 31, 2013, and March 27, 2013, EPA issued additional CAA section 114 requests for the Harrison coal-fired plant seeking information and documentation relevant to its operation and maintenance, including capital projects undertaken since 2007. FirstEnergy intends to comply with the CAA but, at this time, is unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In June 2005, the PA DEP and the Attorneys General of New York, New Jersey, Connecticut and Maryland filed suit against AE, AE Supply, MP, PE and WP in the U.S. District Court for the Western District of Pennsylvania alleging, among other things, that AE performed major modifications in violation of the NSR provisions of the CAA and the Pennsylvania Air Pollution Control Act at the coal-fired Hatfield's Ferry, Armstrong and Mitchell Plants in Pennsylvania. A non-jury trial on liability only was held in September 2010. On February 6, 2014, the Court entered judgment for AE, AE Supply, MP, PE and WP finding they had not violated the CAA or the Pennsylvania Air Pollution Control Act. On March 10, 2014, New York, Connecticut, and Maryland filed an appeal with the U.S. Court of Appeals for the Third Circuit. This decision does not change the status of these plants which remain deactivated.

National Ambient Air Quality Standards

The EPA's CAIR requires reductions of NOx and SO_2 emissions in two phases (2009/2010 and 2015), ultimately capping SO_2 emissions in affected states to 2.5 million tons annually and NOx emissions to 1.3 million tons annually. In 2008, the U.S. Court of Appeals for the D.C. Circuit decided that CAIR violated the CAA but allowed CAIR to remain in effect to "temporarily preserve its environmental values" until the EPA replaces CAIR with a new rule consistent with the Court's decision. In July 2011, the EPA finalized CSAPR, to replace CAIR, requiring reductions of NOx and SO_2 emissions in two phases (2012 and 2014), ultimately capping SO_2 emissions in affected states to 2.4 million tons annually and NOx emissions to 1.2 million tons annually. CSAPR allows trading of NOx and SO_2 emission allowances between power plants located in the same state and interstate trading of NOx and SO_2 emission allowances with some restrictions. On December 30, 2011, CSAPR was stayed by the U.S. Court of Appeals for the D.C. Circuit and was ultimately vacated by the Court on August 21, 2012. The Court has ordered the EPA to continue administration of CAIR until it finalizes a valid replacement for CAIR. On April 29, 2014 the U.S. Supreme Court reversed the D.C Circuit decision vacating CSAPR and generally upheld the EPA's authority under the CAA to establish the regulatory structure underpinning CSAPR. Depending on the outcome of further proceedings in this matter and how the EPA and the states implement the final rules, the future cost of compliance may be substantial and changes to FirstEnergy's and FES' operations may result.

Hazardous Air Pollutant Emissions

On December 21, 2011, the EPA finalized the MATS imposing emission limits for mercury, PM, and HCL for all existing and new coal-fired electric generating units effective in April 2015 with averaging of emissions from multiple units located at a single plant. Under the CAA, state permitting authorities can grant an additional compliance year through April 2016, as needed, including instances when necessary to maintain reliability where electric generating units are being closed. On December 28, 2012, the WVDEP granted a conditional extension through April 16, 2016 for MATS compliance at the Fort Martin, Harrison and Pleasants stations. On March 20, 2013, the PA DEP granted an extension through April 16, 2016 for MATS compliance at the Hatfield's Ferry and Bruce Mansfield stations. In addition, an EPA enforcement policy document contemplates up to an additional year to achieve compliance, through April 2017, under certain circumstances for reliability critical units. MATS was challenged in the U.S. Court of Appeals for the D.C. Circuit by various entities, including FirstEnergy's challenge of the PM emission limit imposed on petroleum coke boilers, such as Bay Shore Unit 1. On April 15, 2014, MATS was upheld by the U.S. Court of Appeals for the D.C. Circuit, however, the Court refused to decide FirstEnergy's challenge of the PM emission limit imposed on petroleum coke boilers due to a January 2013 petition for reconsideration still pending but not addressed by EPA. Depending on the outcome of further appeals, if any, and how the MATS are ultimately implemented, FirstEnergy's total cost of compliance with MATS is currently estimated to be approximately $465 million (Competitive Energy Services segment of $240 million and Regulated Distribution segment of $225 million).

As of September 1, 2012, Albright, Armstrong, Bay Shore Units 2-4, Eastlake Units 4-5, R. Paul Smith, Rivesville and Willow Island were deactivated. FG entered into RMR arrangements with PJM for Eastlake Units 1-3, Ashtabula Unit 5 and Lake Shore Unit 18 through the spring of 2015, when they are scheduled to be deactivated. In February 2014, PJM notified FG that Eastlake Units 1-3 and Lake Shore Unit 18 will be released from RMR status as of September 15, 2014. As of October 9, 2013, the Hatfield's Ferry and Mitchell stations were also deactivated.

FirstEnergy and FES have various long-term coal transportation agreements, some of which run through 2025 and certain of which are related to the plants described above. FE and FES have asserted force majeure defenses for delivery shortfalls under certain agreements, and are in discussion with the applicable counterparties. As to two agreements, FE and FES have settled monetary claims for damages for the failure to take minimum quantities for the calendar year 2012 by the payment of approximately $70 million, and agreed to pay liquidated damages for delivery shortfalls for 2013 and 2014. FE and FES recorded $67 million in liquidated damages in the fourth quarter of 2013, associated with estimated 2013 delivery shortfalls, which were paid in the first quarter of 2014. Additionally, in January 2014, FE and FES reached an agreement in principle with Mepco Holdings LLC to terminate a contract for future coal deliveries to Hatfield for $18 million, which was approved by the United States Bankruptcy Court on February 26, 2014. If FE and FES fail to reach a resolution with applicable counterparties for coal transportation agreements associated with the deactivated plants or unresolved aspects of the transportation agreements and it were ultimately determined that, contrary to their belief, the force majeure provisions or other defenses do not excuse delivery shortfalls, the results of operations and financial condition of both FirstEnergy and FES could be materially adversely impacted. If that were to occur, FE and FES are unable to estimate the loss or range of loss.

Climate Change

There are a number of initiatives to reduce GHG emissions at the state, federal and international level. Certain northeastern states are participating in the RGGI and western states led by California, have implemented programs, primarily cap and trade mechanisms, to control emissions of certain GHGs. Additional policies to reduce GHG emissions, such as demand reduction programs, renewable portfolio standards and renewable subsidies have been implemented across the nation. In his 2013 State of the Union address, President Obama called for Congressional action on GHG emissions indicating his administration will take action in the event Congress fails to act. In June 2013, the President's Climate Action Plan outlined goals to: (1) cut carbon pollution in America by 17% by 2020 (from 2005 levels); (2) prepare the United States for the impacts of climate change; and (3) lead international efforts to combat global climate change and prepare for its impacts. GHG emissions have already been reduced by 10% between 2005 and 2012 according to an April, 2014 EPA Report. Due to plant deactivations and increased efficiencies, FirstEnergy anticipates

its CO2 emissions will be reduced 25% below 2005 levels by 2016, exceeding the President's Climate Action Plan goals both in terms of timing and reduction levels.

In September 2009, the EPA finalized a national GHG emissions collection and reporting rule that required the measurement and reporting of GHG emissions commencing in 2010. In December 2009, the EPA released its final "Endangerment and Cause or Contribute Findings for Greenhouse Gases under the Clean Air Act." The EPA's finding concludes that concentrations of several key GHGs increase the threat of climate change and may be regulated as "air pollutants" under the CAA. In April 2010, the EPA finalized new GHG standards for model years 2012 to 2016 passenger cars, light-duty trucks and medium-duty passenger vehicles and clarified that GHG regulation under the CAA would not be triggered for electric generating plants and other stationary sources until January 2, 2011, at the earliest. In May 2010, the EPA finalized new thresholds for GHG emissions that define when NSR pre-construction permits would be required including an emissions applicability threshold of 75,000 tons per year of CO_2 equivalents for existing facilities under the CAA's PSD program. On April 13, 2012, the EPA proposed new source performance standards for GHG emissions from newly constructed fossil fuel generating units that are larger than 25 MW, which were ultimately withdrawn. On June 25, 2013, a Presidential memorandum directed the EPA to complete, in a timely fashion, proposed new source performance standards for GHG emissions from newly constructed fossil fuel generating units, starting with re-proposal by September 20, 2013. The memorandum further directed the EPA to propose by June 1, 2014 and complete by June 1, 2015, GHG emission standards for existing fossil fuel generating units. On September 20, 2013, the EPA proposed a new source performance standard, which would not apply to any existing, modified, or reconstructed fossil fuel generating units, of 1,000 lbs. CO_2/MWH for large natural gas fired units (> 850 mmBTU/hr), and 1,100 lbs. CO_2/MWH for other natural gas fired units (≤ 850 mmBTU/hr), and 1,100 lbs. CO_2/MWH for fossil fuel fired units which would require partial carbon capture and storage. On October 15, 2013, the U.S. Supreme Court agreed to review a June 2012 D.C. Circuit Court of Appeals decision upholding the EPA's May 2010 regulations to decide a single narrow question: "Whether EPA permissibly determined that its regulation of greenhouse gas emissions from new motor vehicles triggered permitting requirements under the CAA for stationary sources that emit greenhouse gases?" Oral argument was held on February 24, 2014. Depending on the outcome of these proceedings and how any final rules are ultimately implemented, the future cost of compliance may be substantial and changes to FirstEnergy's and FES' operations may result.

At the international level, the Kyoto Protocol, signed by the U.S. in 1998 but never submitted for ratification by the U.S. Senate, was intended to address global warming by reducing the amount of man-made GHG, including CO_2, emitted by developed countries by 2012. In 1997, the U.S. Senate passed the Byrd-Hagel resolution by a unanimous vote of 95-0. The resolution stated that it is the sense of the Senate that the United States should not be a signatory to any protocol to, or other agreement regarding, the United Nations Framework Convention on Climate Change which would mandate new commitments to limit or reduce GHG emissions, unless the protocol or other agreement also mandates new specific scheduled commitments to limit or reduce GHG emissions for developing country parties within the same compliance period, or would not result in serious harm to the economy of the United States. A December 2009 U.N. Climate Change Conference in Copenhagen did not reach a consensus on a successor treaty to the Kyoto Protocol, but did take note of the Copenhagen Accord, a non-binding political agreement that recognized the scientific view that the increase in global temperature should be below two degrees Celsius; includes a commitment by developed countries to provide funds, approaching $30 billion over three years with a goal of increasing to $100 billion by 2020; and establishes the "Green Climate Fund" to support mitigation, adaptation, and other climate-related activities in developing countries. To the extent that they have become a party to the Copenhagen Accord, developed economies, such as the European Union, Japan, Russia and the United States, would commit to quantified economy-wide emissions targets by 2020, while developing countries, including Brazil, China and India, would agree to take mitigation actions, subject to their domestic measurement, reporting and verification. In December 2010, the U.N. Climate Change Conference in Cancun, Mexico resulted in an acknowledgment to reduce emissions from industrialized countries by 25 to 40 percent from 1990 emissions by 2020 and support enhanced action on climate change in the developing world. In December 2011 the U.N. Climate Change Conference in Durban, South Africa, established a negotiating process to develop a new post-2020 climate change protocol, called the "Durban Platform for Enhanced Action". This negotiating process contemplates developed countries, as well as developing countries such as China, India, Brazil, and South Africa, to undertake legally binding commitments post-2020. In addition, certain countries agreed to extend the Kyoto Protocol for a second commitment period, commencing in 2013 and expiring in 2018 or 2020. In December 2012, the U.N. Climate Change Conference in Doha, Qatar, resulted in countries agreeing to a new commitment period under the Kyoto Protocol beginning in 2020. The new Doha Amendment to establish a second commitment period requires the ratification of three-quarters of the parties to the Kyoto Protocol before it becomes effective. In November 2013, the U.N. Climate Change Conference in Warsaw, Poland advanced negotiations of a new global agreement to reduce GHG emissions by 2015. FirstEnergy cannot currently estimate the financial impact of climate change policies, although potential legislative or regulatory programs restricting CO_2 emissions, or litigation alleging damages from GHG emissions, could require significant capital and other expenditures or result in changes to its operations. The CO_2 emissions per KWH of electricity generated by FirstEnergy is lower than many of its regional competitors due to its diversified generation sources, which include low or non-CO_2 emitting gas-fired and nuclear generators.

Clean Water Act

Various water quality regulations, the majority of which are the result of the federal CWA and its amendments, apply to FirstEnergy's plants. In addition, the states in which FirstEnergy operates have water quality standards applicable to FirstEnergy's operations.

In 2004, the EPA established new performance standards under Section 316(b) of the CWA for reducing impacts on fish and shellfish from cooling water intake structures at certain existing electric generating plants. The regulations call for reductions in impingement mortality (when aquatic organisms are pinned against screens or other parts of a cooling water intake system) and entrainment

(which occurs when aquatic life is drawn into a facility's cooling water system). In 2007, the U.S. Court of Appeals for the Second Circuit invalidated portions of the Section 316(b) performance standards and the EPA has taken the position that until further rulemaking occurs, permitting authorities should continue the existing practice of applying their best professional judgment to minimize impacts on fish and shellfish from cooling water intake structures. In April 2009, the U.S. Supreme Court reversed one significant aspect of the Second Circuit's opinion and decided that Section 316(b) of the CWA authorizes the EPA to compare costs with benefits in determining the best technology available for minimizing adverse environmental impact at cooling water intake structures. On March 28, 2011, the EPA released a new proposed regulation under Section 316(b) of the CWA to reduce fish impingement to a 12% annual average and determine site-specific controls, if any, to reduce entrainment of aquatic life following studies to be provided to permitting authorities. On April 16, 2014, counsel for EPA informed the United States District Court in which a settlement agreement with certain NGOs set April 17, 2014 as a deadline for finalizing the Section 316(b) regulation that an additional 29 days would be needed to finalize the Section 316(b) regulation by May 16, 2014. FirstEnergy is studying various control options and their costs and effectiveness, including pilot testing of reverse louvers in a portion of the Bay Shore power plant's water intake channel to divert fish away from the plant's water intake system. Depending on the results of such studies and the EPA's further rulemaking and any final action taken by the states exercising best professional judgment, the future costs of compliance with these standards may require material capital expenditures.

On April 19, 2013, the EPA proposed regulatory changes to the waste water effluent limitations guidelines and standards for the Steam Electric Power Generating category (40 CFR Part 423). The EPA proposed eight treatment options for waste water discharges from electric power plants, of which four are "preferred" by the Agency. The preferred options range from more stringent chemical and biological treatment requirements to zero discharge requirements. The EPA is required to finalize this rulemaking by September 30, 2015, under a consent decree entered by a U.S. District Court and the treatment obligations are proposed to phase-in as waste water discharge permits are renewed on a 5-year cycle from 2017 to 2022. Depending on the content of the EPA's final rule, the future costs of compliance with these standards may require material capital expenditures.

In October 2009, the WVDEP issued an NPDES water discharge permit for the Fort Martin Plant, which imposes TDS, sulfate concentrations and other effluent limitations for heavy metals, as well as temperature limitations. Concurrent with the issuance of the Fort Martin NPDES permit, WVDEP also issued an administrative order setting deadlines for MP to meet certain of the effluent limits that were effective immediately under the terms of the NPDES permit. MP appealed, and a stay of certain conditions of the NPDES permit and order have been granted pending a final decision on the appeal and subject to WVDEP moving to dissolve the stay. The Fort Martin NPDES permit could require an initial capital investment ranging from $150 million to $300 million in order to install technology to meet the TDS and sulfate limits, which technology may also meet certain of the other effluent limits. Additional technology may be needed to meet certain other limits in the Fort Martin NPDES permit. MP intends to vigorously pursue these issues but cannot predict the outcome of these appeals or estimate the possible loss or range of loss.

In December 2010, PA DEP submitted its CWA 303(d) list to the EPA with a recommended sulfate impairment designation for an approximately 68 mile stretch of the Monongahela River north of the West Virginia border. In May 2011, the EPA agreed with PA DEP's recommended sulfate impairment designation which requires the development of a TMDL limit for the river, a process that will take PA DEP approximately five years. Based on the stringency of the TMDL, MP may incur significant costs to reduce sulfate discharges into the Monongahela River if the NPDES permit for the coal-fired Fort Martin plant in West Virginia is required to be modified or renewed to include more stringent effluent limitations for sulfate. However, the Hatfield's Ferry and Mitchell Plants in Pennsylvania that discharge into the Monongahela River were deactivated on October 9, 2013.

FirstEnergy intends to vigorously defend against the CWA matters described above but, except as indicated above, cannot predict their outcomes or estimate the possible loss or range of loss.

Regulation of Waste Disposal

Federal and state hazardous waste regulations have been promulgated as a result of the RCRA of 1976, as amended, and the Toxic Substances Control Act of 1976. Certain fossil-fuel combustion residuals, such as coal ash, were exempted from hazardous waste disposal requirements pending the EPA's evaluation of the need for future regulation.

In December 2009, in an advance notice of public rulemaking, the EPA asserted that the large volumes of CCRs produced by electric utilities pose significant financial risk to the industry. In May 2010, the EPA proposed two options for additional regulation of CCRs, including the option of regulation as a special waste under the EPA's hazardous waste management program which could have a significant impact on the management, beneficial use and disposal of CCRs. On April 19, 2013, the EPA stated it would "align" its proposed CCR regulations with revised waste water discharge effluent limitations guidelines and standards for the Steam Electric Power Generating category (40 CFR Part 423) that were proposed on that date. On July 25, 2013, the House of Representatives passed H.R. 221 that would require CCRs to be regulated under Subtitle D of RCRA, as non-hazardous. On January 29, 2014, EPA agreed to take final action by December 19, 2014 on whether or not to pursue the proposed non-hazardous waste option for regulating CCRs in a Consent Decree to be filed in pending litigation. Depending on the content of the EPA's final effluent limitations rule, the specifics of any "alignment", whether EPA chooses to pursue the non-hazardous or hazardous waste option and the potential enactment of legislation, the future costs of compliance with such standards may require material capital expenditures.

On July 27, 2012, the PA DEP filed a complaint against FG in the U.S. District Court for the Western District of Pennsylvania with claims under the RCRA and Pennsylvania's Solid Waste Management Act regarding the LBR CCB Impoundment and simultaneously proposed a Consent Decree between PA DEP and FG to resolve those claims. On December 14, 2012, a modified Consent Decree that addresses public comments received by PA DEP was entered by the court, requiring FG to conduct monitoring studies and submit a closure plan to the PA DEP, no later than March 31, 2013, and discontinue disposal to LBR as currently permitted by December 31, 2016. The modified Consent Decree also required payment of civil penalties of $800,000 to resolve claims under the Solid Waste Management Act. On February 1, 2013, FG submitted a Feasibility Study analyzing various technical issues relevant to the closure of LBR. On March 28, 2013, FG submitted to the PA DEP a Closure Plan Major Permit Modification Application which provides for placing a final cap over LBR that would require 15 years to fully implement following the closure of LBR. The estimated cost for the proposed closure plan is $234 million, including environmental and other post closure costs. On October 3, 2013, the PA DEP issued a technical deficiency letter citing four main deficiencies with the Closure Plan: (1) seeking to accelerate the 15 year period proposed by FG for closure activities to complete closure in 9 years by commencing closure activities prior to 2017 as proposed by FG; (2) seeking to extend bond closure and post closure activities beyond the 45 years proposed by FG; (3) seeking active dewatering of the CCBs in areas where there are seeps impacted by the Impoundment; and (4) seeking an abatement plan for groundwater impacted by arsenic. FG responded to the PA DEP on December 3, 2013, and as a result of the Closure Plan, FG increased its ARO for LBR by $163 million in 2013. On April 3, 2014, PA DEP issued a permit requiring FE to provide bonding for 45 years of closure and post-closure activities and to complete closure within a 12-year period, but authorizes FE to seek a permit modification based on "unexpected site conditions that have or will slow closure progress." The permit does not require active dewatering of the CCBs, but does require a groundwater assessment for arsenic and abatement if certain conditions in the permit are met. The Bruce Mansfield Plant is pursuing several options for its CCBs following December 31, 2016, and on January 23, 2013, announced a plan for beneficial use of its CCBs for mine reclamation in LaBelle, Pennsylvania. In June 2013, a complaint filed in the U.S. District Court for the Western District of Pennsylvania, alleges the LaBelle site is in violation of RCRA and state laws. In addition, on December 20, 2012, the Environmental Integrity Project and others served FG with a citizen suit notice alleging CWA and PA Clean Streams Law Violations at LBR.

On October 10, 2013 and December 5, 2013, complaints were filed on behalf of approximately 50 individuals against FE, FG and FES in the U.S. District Court for the Northern District of West Virginia and approximately 15 individuals against FG in the U.S. District Court for the Western District of Pennsylvania seeking damages for alleged property damage, bodily injury and emotional distress related to the LBR CCB Impoundment. The complaints state claims for private nuisance, negligence, negligence per se, reckless conduct and trespass related to alleged groundwater contamination and odors emanating from the Impoundment. FE, FG and FES believe the claims are without merit and intend to vigorously defend themselves against the allegations made in the complaints, but, at this time, are unable to predict the outcome of the above matter or estimate the possible loss or range of loss.

FirstEnergy's future cost of compliance with any CCR regulations that may be promulgated could be substantial and would depend, in part, on the regulatory action taken by the EPA and implementation by the EPA or the states. Compliance with those regulations could have an adverse impact on FirstEnergy's results of operations and financial condition.

Certain of FirstEnergy's utilities have been named as potentially responsible parties at waste disposal sites, which may require cleanup under the CERCLA. Allegations of disposal of hazardous substances at historical sites and the liability involved are often unsubstantiated and subject to dispute; however, federal law provides that all potentially responsible parties for a particular site may be liable on a joint and several basis. Environmental liabilities that are considered probable have been recognized on the Consolidated Balance Sheet as of March 31, 2014 based on estimates of the total costs of cleanup, FE's and its subsidiaries' proportionate responsibility for such costs and the financial ability of other unaffiliated entities to pay. Total liabilities of approximately $129 million have been accrued through March 31, 2014. Included in the total are accrued liabilities of approximately $82 million for environmental remediation of former manufactured gas plants and gas holder facilities in New Jersey, which are being recovered by JCP&L through a non-bypassable SBC. FirstEnergy or its subsidiaries could be found potentially responsible for additional amounts or additional sites, but the possible losses or range of losses cannot be determined or reasonably estimated at this time.

OTHER LEGAL PROCEEDINGS

Nuclear Plant Matters

Under NRC regulations, FirstEnergy must ensure that adequate funds will be available to decommission its nuclear facilities. As of March 31, 2014, FirstEnergy had approximately $2.3 billion invested in external trusts to be used for the decommissioning and environmental remediation of Davis-Besse, Beaver Valley, Perry and TMI-2. The values of FirstEnergy's NDT fluctuate based on market conditions. If the value of the trusts decline by a material amount, FirstEnergy's obligation to fund the trusts may increase. Disruptions in the capital markets and their effects on particular businesses and the economy could also affect the values of the NDT. FE maintains a $125 million parental guaranty relating to a potential shortfall in nuclear decommissioning funding for Beaver Valley Unit 1 and Perry. FE also maintains an $11 million parental guaranty in support of the decommissioning of the spent fuel storage facilities located at its Davis-Besse and Perry nuclear facilities. As required by the NRC, FirstEnergy annually recalculates and adjusts the amount of its parental guaranty, as appropriate. By a letter dated March 28, 2013, FENOC informed the NRC that the nuclear decommissioning parental guarantee would be increased to $155 million during the second quarter of 2014. Moreover, a new parental guarantee for the Beaver Valley spent fuel storage facility of $9.5 million would also be put in place.

In August 2010, FENOC submitted an application to the NRC for renewal of the Davis-Besse operating license for an additional twenty years, until 2037. A NRC ASLB granted a hearing on the Davis-Besse license renewal application to a group of petitioners. On July 9, 2012, the petitioners' proposed a contention on the environmental impacts of spent fuel storage in the Davis-Besse license renewal proceeding. In an order dated August 7, 2012, the NRC stated that it will not issue final licensing decisions until it has appropriately addressed the challenges to the NRC Waste Confidence Decision and Temporary Storage Rule and all pending contentions on this topic should be held in abeyance. The ASLB has suspended further consideration of the petitioners' proposed contention on the environmental impacts of spent fuel storage at Davis-Besse. The NRC Staff issued Waste Confidence Draft Generic Environmental Impact Statement and published a proposed rule on this subject in September of 2013. Other contentions proposed by the petitioners in this proceeding have been rejected by the ASLB. On February 18, 2014, Beyond Nuclear and Don't Waste Michigan, two of the petitioners in the Davis-Besse license renewal proceeding, requested that the NRC institute a rulemaking on the environmental impacts of high density spent fuel storage and mitigation alternatives. On February 27, 2014, these petitioners requested a suspension of the licensing decision in the Davis-Besse license renewal proceeding to allow the NRC to complete this rulemaking. On March 21, 2014, both FENOC and the NRC opposed the request for a suspension. On April 21, 2014, the Intervenors proposed an additional contention in the license renewal proceeding related to the shield building.

As part of routine inspections of the concrete shield building at Davis-Besse Nuclear Power Station in 2013, FENOC identified changes to the subsurface laminar cracking condition originally discovered in 2011. The shield building is a 2 1/2-foot thick reinforced concrete structure that provides biological shielding, protection from natural phenomena including wind and tornadoes and additional shielding in the event of an accident. FENOC then expanded its sample size to include all of the existing core bores in the shield building. These inspections, which are now complete, identified additional subsurface cracking that was determined to be pre-existing, but only now identified with the aid of improved inspection technology. These inspections also revealed that the cracking condition has propagated a small amount in select areas. Preliminary analysis of the inspections results confirms that the building continues to maintain its structural integrity, and its ability to safely perform all of its functions.

On February 1, 2014 the Davis-Besse Nuclear Power station entered an outage to install two new steam generators, replace about a third of the unit’s 177 fuel assemblies and perform numerous safety inspections and preventative maintenance activities. These activities, including amounts spent in prior years in preparation for this outage, represent an investment of approximately $600 million by FES at Davis Besse. During the preliminary stages of the outage an area of concrete that was not filled to the expected thickness within the shield building wall was discovered at the top of the temporary construction opening that was created as part of the 2011 outage. The 2011 temporary construction opening was created to install the new reactor head. FENOC has assessed the as-found condition of the concrete and has determined the shield building would have performed its design functions. This condition within the shield building wall was repaired to conform to its original design configuration.

On March 12, 2012, the NRC issued orders requiring safety enhancements at U.S. reactors based on recommendations from the lessons learned Task Force review of the accident at Japan's Fukushima Daiichi nuclear power plant. These orders require additional mitigation strategies for beyond-design-basis external events, and enhanced equipment for monitoring water levels in spent fuel pools. The NRC also requested that licensees including FENOC: re-analyze earthquake and flooding risks using the latest information available; conduct earthquake and flooding hazard walkdowns at their nuclear plants; assess the ability of current communications systems and equipment to perform under a prolonged loss of onsite and offsite electrical power; and assess plant staffing levels needed to fill emergency positions. These and other NRC requirements adopted as a result of the accident at Fukushima Daiichi are likely to result in additional material costs from plant modifications and upgrades at FENOC's nuclear facilities.

ICG Litigation

On December 28, 2006, AE Supply and MP filed a complaint in the Court of Common Pleas of Allegheny County, Pennsylvania against ICG, Anker WV, and Anker Coal. Anker WV entered into a long term Coal Sales Agreement with AE Supply and MP for the supply of coal to the Harrison generating facility. Prior to the time of trial, ICG was dismissed as a defendant by the Court, which issue can be the subject of a future appeal. As a result of defendants' past and continued failure to supply the contracted coal, AE Supply and MP have incurred and will continue to incur significant additional costs for purchasing replacement coal. A non-jury trial

was held from January 10, 2011 through February 1, 2011. At trial, AE Supply and MP presented evidence that they have incurred in excess of $80 million in damages for replacement coal purchased through the end of 2010 and will incur additional damages in excess of $150 million for future shortfalls. Defendants primarily claim that their performance is excused under a force majeure clause in the coal sales agreement and presented evidence at trial that they will continue to not provide the contracted yearly tonnage amounts. On May 2, 2011, the court entered a verdict in favor of AE Supply and MP for $104 million ($90 million in future damages and $14 million for replacement coal/interest). On August 25, 2011, the Allegheny County Court denied all Motions for Post-Trial relief and the May 2, 2011 verdict became final. On August 26, 2011, the defendants posted bond and filed a Notice of Appeal with the Superior Court. On August 13, 2012, the Superior Court affirmed the $14 million past damages award but vacated the $90 million future damages award. While the Superior Court found that the defendants still owed future damages, it remanded the calculation of those damages back to the trial court. The specific amount of those future damages is not known at this time, but they are expected to be calculated at a market price of coal that is significantly lower than the price used by the trial court. On August 27, 2012, AE Supply and MP filed an Application for Reargument En Banc with the Superior Court, which was denied on October 19, 2012. AE Supply and MP filed a Petition for Allowance of Appeal with the Pennsylvania Supreme Court on November 19, 2012. On July 2, 2013, the Petition for Allowance of Appeal was denied and in the second quarter of 2013 the now final past damage award of $15.5 million (including interest) was recognized. The case was sent back to the trial court to recalculate the future damages only and is currently in the discovery phase. A damages hearing is scheduled for May 13-14, 2014, and a ruling is expected in the fourth quarter of 2014.

Other Legal Matters

In 2010, a lawsuit was filed in Allegheny County Court of Common Pleas by Michael Goretzka, for wrongful death and negligence after his wife was fatally electrocuted when she contacted a downed power line. The trial resulted in a verdict against WP and the parties settled this matter. WP's portion of the settlement was covered by insurance subject to the remainder of its deductible. On May 30, 2012, the PPUC's Bureau of Investigation and Enforcement (I&E) filed a Formal Complaint at the PPUC regarding this matter. On February 13, 2013, WP and I&E filed a Joint Petition for Full Settlement that includes, among other things, WP's agreement to conduct an infrared inspection of its primary distribution system, modify certain training programs, and pay an $86,000 civil penalty, which settlement is subject to PPUC approval. On August 29, 2013, the PPUC entered an Order granting the Goretzka family limited party status for the sole purpose of submitting comments to the settlement and issuing the settlement for comment by the parties. On September 16, 2013, the Goretzka family filed Limited Objections to the settlement. Reply comments were filed by WP on September 30, 2013. The PPUC entered an Opinion and Order on January 9, 2014 approving the Settlement with limited modifications regarding the frequency of refresher training and reporting obligations. WP filed a letter on January 17, 2014 accepting those modifications and noting its intent to begin implementation of the settlement terms.

There are various lawsuits, claims (including claims for asbestos exposure) and proceedings related to FirstEnergy's normal business operations pending against FirstEnergy and its subsidiaries. The loss or range of loss in these matters is not expected to be material to FirstEnergy or its subsidiaries. The other potentially material items not otherwise discussed above are described under Note 9, Regulatory Matters of the Combined Notes to Consolidated Financial Statements.

FirstEnergy accrues legal liabilities only when it concludes that it is probable that it has an obligation for such costs and can reasonably estimate the amount of such costs. In cases where FirstEnergy determines that it is not probable, but reasonably possible that it has a material obligation, it discloses such obligations and the possible loss or range of loss if such estimate can be made. If it were ultimately determined that FirstEnergy or its subsidiaries have legal liability or are otherwise made subject to liability based on any of the matters referenced above, it could have a material adverse effect on FirstEnergy's or its subsidiaries' financial condition, results of operations and cash flows.

11. SUPPLEMENTAL GUARANTOR INFORMATION

In 2007, FG completed a sale and leaseback transaction for its undivided interest in Bruce Mansfield Unit 1. FES has fully and unconditionally and irrevocably guaranteed all of FG's obligations under each of the leases. The related lessor notes and pass through certificates are not guaranteed by FES or FG, but the notes are secured by, among other things, each lessor trust's undivided interest in Unit 1, rights and interests under the applicable lease and rights and interests under other related agreements, including FES' lease guaranty. This transaction is classified as an operating lease for FES and FirstEnergy and as a financing lease for FG.

The Condensed Consolidating Statements of Income and Comprehensive Income for the three months ended March 31, 2014 and 2013, Condensed Consolidating Balance Sheets as of March 31, 2014 and December 31, 2013, and Condensed Consolidating Statements of Cash Flows for the three months ended March 31, 2014 and 2013, for FES (parent and guarantor), FG and NG (non-guarantor) are presented below. Investments in wholly owned subsidiaries are accounted for by FES using the equity method. Results of operations for FG and NG are, therefore, reflected in FES' investment accounts and earnings as if operating lease treatment was achieved. The principal elimination entries eliminate investments in subsidiaries and intercompany balances and transactions and the entries required to reflect operating lease treatment associated with the 2007 Bruce Mansfield Unit 1 sale and leaseback transaction.

12. SEGMENT INFORMATION

FirstEnergy continues to have three reportable operating segments - Regulated Distribution, Regulated Transmission and Competitive Energy Services. The external reporting is consistent with the internal financial reporting used by FirstEnergy's Chief Executive Officer (its chief operating decision maker) to regularly assess the performance of the business and allocate resources.

Financial information for each of FirstEnergy's reportable segments is presented in the tables below. FES does not have separate reportable operating segments.

The Regulated Distribution segment distributes electricity through FirstEnergy's ten utility operating companies, serving approximately six million customers within 65,000 square miles of Ohio, Pennsylvania, West Virginia, Maryland, New Jersey and New York, and purchases power for its POLR, SOS, SSO and default service requirements in Ohio, Pennsylvania, New Jersey and Maryland. This segment also includes regulated electric generation facilities in West Virginia and New Jersey that MP and JCP&L, respectively, own or contractually control. Its results reflect the commodity costs of securing electric generation and the deferral and amortization of certain fuel costs. This business segment currently controls approximately 3,780 MWs of generation capacity.

The Regulated Transmission segment transmits electricity through transmission facilities owned and operated by ATSI, TrAIL, and certain of FirstEnergy's utilities (JCP&L, ME, PN, MP, PE and WP) and the regulatory asset associated with the abandoned PATH project. The segment's revenues are primarily derived from rates that recover costs and provide a return on transmission capital investment. Except for the recovery of the PATH abandoned project regulatory asset, these revenues are derived from transmission services provided pursuant to the PJM open access transmission tariff to LSEs. Its results also reflect the net transmission expenses related to the delivery of electricity on FirstEnergy's transmission facilities.

The Competitive Energy Services segment, through FES and AE Supply, supplies electricity to end-use customers through retail and wholesale arrangements, including competitive retail sales to customers primarily in Ohio, Pennsylvania, Illinois, Michigan, New Jersey and Maryland, and the provision of partial POLR and default service for some utilities in Ohio, Pennsylvania and Maryland, including the Utilities. This business segment currently controls approximately 14,000 MWs of capacity, including 885 MWs of capacity subject to RMR arrangements with PJM. This segment also purchases electricity to meet sales obligations. The segment's net income is primarily derived from electric generation sales less the related costs of electricity generation, including fuel, purchased power and net transmission (including congestion) and ancillary costs charged by PJM to deliver energy to the segment's customers.

The Other/Corporate Segment contains corporate items and other businesses that are below the quantifiable threshold for separate disclosure as a reportable segment. Reconciling adjustments primarily consist of elimination of intersegment transactions.

13. DISCONTINUED OPERATIONS

On September 4, 2013, certain of FirstEnergy subsidiaries applied for authorization from the FERC to sell eleven hydroelectric power stations in Pennsylvania, Virginia and West Virginia to subsidiaries of Harbor Hydro, a subsidiary of LS Power. The asset purchase agreement was entered into on August 23, 2013, and amended and restated as of September 4, 2013. On February 12, 2014, the sale of the hydroelectric power plants to LS Power closed for approximately $394 million (FES - $307 million). The carrying value of the assets sold was $235 million (FES - $122 million), including goodwill of $29 million (FES - $1 million) which was allocated to the hydroelectric plants to be sold.

Pre-tax income for the hydroelectric facilities of $155 million and $6 million (FES - $186 million and $5 million) for the three months ended March 31, 2014 and 2013, respectively, were reported in FirstEnergy's and FES' Consolidated Statement of Income as discontinued operations. Included in income from discontinued operations in the three months ended March 31, 2014, was a pre-tax gain on the sale of assets of $142 million (FES - $177 million). Revenues for the hydroelectric facilities of $5 million and $6 million (FES - $5 million and $6 million) for the three months ended March 31, 2014 and 2013, respectively, are reported in FirstEnergy's and FES' Consolidated Statement of Income as discontinued operations.

Item 2. Management's Discussion and Analysis of Registrant and Subsidiaries

FIRSTENERGY CORP.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

OVERVIEW

Net income in the first quarter of 2014 was $208 million, or basic earnings of $0.50 per share of common stock ($0.49 diluted), compared with net income of $196 million, or basic and diluted earnings of $0.47 per share of common stock in the first quarter of 2013. Net income and changes by segment are summarized below:

	Three Months Ended March 31		
	2014	2013	Increase (Decrease)
	(In millions, except per share)		
Net Income (Loss) By Segment:			
Regulated Distribution	$ 214	$ 210	$ 4
Regulated Transmission	51	51	—
Competitive Energy Services	(38)	(38)	—
Other and reconciling adjustments	(19)	(27)	8
FirstEnergy Corp.	$ 208	$ 196	$ 12
Earnings per share - Basic	$ 0.50	$ 0.47	$ 0.03
Earnings per share - Diluted	$ 0.49	$ 0.47	$ 0.02

Three months ended March 31, 2014 compared to the three months ended March 31, 2013

The Regulated Distribution segment's earnings were impacted by the following:

- Higher distribution deliveries of 5.9% across all customer classes with increases of 10.8% and 5.5% in the residential and commercial class, respectively, primarily reflecting increased weather-related usage resulting from heating degree days that were 17% above 2013.
- Increased regulated generation earnings primarily associated with the Harrison/Pleasants asset transfer in October of 2013. Currently, the Harrison Plant is subject to a temporary surcharge including a return on and return of the plant costs.
- Increased distribution operation and maintenance activities and higher non-deferred storm related restoration expenses.
- Increased depreciation expense, primarily associated with a higher asset base.
- Increased interest expense primarily associated with the financing of the Harrison Plant.

The Regulated Transmission segment's earnings were impacted by the following:

- Higher revenue at ATSI and TrAIL primarily resulting from its annual rate filing effective June 2013.
- Increased operating expenses principally due to higher property taxes, depreciation and operating and maintenance expenses.

The Competitive Energy Services segment's earnings were impacted by the following:

- Higher net cost to serve additional retail load as a result of increased customer demand, primarily due to extreme weather conditions, and higher wholesale energy prices.
- Additional purchased power at higher prices resulting from the timing of unplanned outages and derates.
- Additional purchased power resulting from planned outages.
- Higher PJM ancillary service charges for transmission system reliability, partially offset by "pass-through" revenues to commercial and industrial customers, as well as increased capacity expense primarily due to higher capacity rates.
- Reduced fuel and operating expenses, such as operating and maintenance, depreciation and general taxes, associated with the Harrison/Pleasants asset transfer and the deactivation of certain power plants during 2013, partially offset by the cost of replacing that generation.
- Lower interest expense associated with the redemption and repurchase of long-term debt at FES and AE Supply in 2013.
- Other items impacting the Competitive Energy Services Segment's earnings include the following pre-tax changes:
    - Loss on debt redemptions decreased $110 million primarily related to debt repurchased in the first quarter of 2013.
    - Gains related to commodity mark-to-market adjustments increased $21 million.
    - An increase of $146 million from discontinued operations (before income taxes) primarily associated with a $142 million (pre-tax) gain on the sale of certain hydro facilities.
    - Costs associated with plant closings increased $26 million primarily related to fuel contract terminations.

- Amortization expense associated with purchase accounting adjustments on commodity contracts decreased $9 million.
- PJM charges associated with deactivated plants decreased $15 million.

The Other segment's earnings were impacted by the following:

- A lower effective income tax rate primarily resulting from an increase in AFUDC equity flow-through, changes in state apportionment factors and the elimination of certain future tax liabilities associated with basis differences.
- Increased interest expense due to the issuance of $1.5 billion of FE senior unsecured notes in March of 2013.

Executive Summary

FirstEnergy holds a large and diverse mix of assets, featuring an electric distribution service area and transmission footprint that are among the largest in the nation, as well as a significant competitive generation fleet and retail business.

FirstEnergy's competitive operations, the Competitive Energy Services segment, has been challenged by prolonged weak demand for power, low capacity payments and declining energy prices. Recently, market dynamics within PJM, the region served by the Competitive Energy Services segment's generating fleet, have been unpredictable. Capacity prices resulting from recent annual auctions have produced prices for generators that have been lower than expected. FirstEnergy believes that a thorough review of the rules associated with the capacity auctions, as well as the broader functioning of the PJM market, are necessary to effectuate a robust competitive market. FirstEnergy intends to actively participate in this dialogue at both PJM and FERC.

As a result of the challenging competitive environment, FirstEnergy has begun redirecting its growth strategy to pursue more predictable and sustainable long-term growth opportunities in its regulated businesses.

The centerpiece of this strategy is a $4.2 billion "Energizing the Future" investment plan beginning in 2014 through 2017 to upgrade and expand the transmission system owned by FirstEnergy's Regulated Transmission segment. This program is focused on rebuilding the transmission system, starting with ATSI's system and moving east across FirstEnergy's service territory over time. Also included in the investment are projects that enhance system performance, physical security and add operating flexibility and capacity. These activities began in the first quarter of 2014. FirstEnergy expects to fund these investments through a combination of debt, previously announced equity issuances through stock investment and employee benefit plans, and cash. Due to their investments, Regulated Transmission's earnings are expected to grow modestly over the next two years and then accelerate as the investments are fully recognized in rates. In total, FirstEnergy has identified at least $7 billion in transmission investment opportunities across the 24,000 mile transmission system, making this a continuing platform for growth in the years ahead.

In the territory served by FirstEnergy's distribution segment, Regulated Distribution, the economy has struggled to recover from the recession, and there continues to be weak demand for electricity as evidenced by flat distribution sales over the last three years. However, the location of the Marcellus and Utica shale gas region provides optimism for growth in this portion of Regulated Distribution's service territory over the long term. More than 200 MW of new industrial demand associated with shale gas activity has already come online in FirstEnergy's region, with more than 400 MW of additional planned expansion at customer facilities. These projects alone are expected to result in more industrial growth over the next two years, and a robust pipeline of mid-stream projects represent further opportunities for additional growth, as well as the potential for growth in the residential class.

FirstEnergy is also pursuing regulatory initiatives across its utility footprint, including a rate case application in West Virginia filed in April 2014, as well as the current rate proceeding in New Jersey. FirstEnergy expects to pursue additional targeted rate filings over the next several years as part of its focus on driving stable and predictable growth at its Regulated Distribution segment in the future.

While the Competitive Energy Services segment is not identified as a growth driver in the near term, FirstEnergy is focused on maintaining the value of its competitive business. FirstEnergy has reduced the size and shifted the mix of its generating assets, as well as reduced operating expenses and capital expenditures. As a result, the remaining competitive fleet is more cost-effective, efficient and environmentally sound. While FirstEnergy cannot predict if or when a power price recovery may occur, FirstEnergy believes it has taken appropriate action over the last two years to reposition this business for such a recovery.

In alignment with FirstEnergy's strategy to reposition the Regulated Transmission and Regulated Distribution segments and preserve the competitive business, FirstEnergy will also focus on reducing balance sheet risk, maintaining investment grade metrics, and improving the business risk profile at each of our businesses. Specifically, at the regulated businesses, authority has been obtained for various regulated distribution and transmission subsidiaries to issue or refinance debt. Finally, at the competitive business, FirstEnergy completed the sale of certain hydro assets for approximately $394 million on February 12, 2014. The actions taken in 2013 and those planned for 2014 are expected to support a regulated investment strategy.

Operational Matters

Nuclear Operations

On February 1, 2014 the Davis-Besse Nuclear Power station entered an outage to install two new steam generators, replace about a third of the unit's 177 fuel assemblies and perform numerous safety inspections and preventative maintenance activities. These activities, including amounts spent in prior years in preparation for this outage, represent an investment of approximately $600 million by FES at Davis Besse. During the preliminary stages of the outage an area of concrete that was not filled to the expected thickness within the shield building wall was discovered at the top of the temporary construction opening that was created as part of the 2011 outage. The 2011 temporary construction opening was created to install the new reactor head. FENOC has assessed the as-found condition of the concrete and has determined the shield building would have performed its design functions. This condition within the shield building wall was repaired to conform to its original design configuration.

Beaver Valley Unit 1 returned to service January 29, 2014, following replacement and testing of its main unit transformer, which experienced a fault on January 6, 2014 that resulted in an automatic shutdown of the Unit.

On April 19, 2014, Beaver Valley Unit 2 shut down for scheduled refueling and maintenance. While the unit is off line, one-third of the reactor's 157 fuel assemblies will be replaced and safety inspections will be conducted, including inspections of the unit's reactor vessel head, turbine and electrical generator. In addition, preventative maintenance expected to support continued safe and reliable operations will be performed on major components including pumps, valves and the cooling tower. Beaver Valley Unit 2 will also undertake a number of projects in preparation for replacement of the unit's three steam generators and reactor head in 2017. These activities include installation of a heavy-duty crane system in containment and measurements to support planning for the future replacement.

January 2014 Extreme Weather and Market Conditions

During January 2014, given higher customer usage associated with extreme weather conditions and unit unavailability, including the Beaver Valley Unit 1 outage, FirstEnergy's Competitive Energy Services segment (including FES) was required to purchase higher volumes of power. These extreme weather events caused an increase in the demand for electricity and natural gas throughout the PJM zones. In order to maintain system reliability, PJM incurred higher ancillary service costs, such as synchronous and operating reserves, throughout these extreme conditions. Approximately $800 million in ancillary service charges for the month of January 2014 were billed to all LSEs serving customers throughout the PJM region based on load served, including FES. Certain of these costs are considered a "pass-through" event under existing contracts and revenue of approximately $33 million was recognized associated with commercial and industrial customers in the three month period ended March 31, 2014.

Sammis Planned Outage

In late March of 2014, Sammis Unit 7 came off line to start a planned maintenance outage. Key projects planned for the outage include boiler tubing repairs, blade replacements and other turbine work, a full rewind of the main generator, air heater basket replacements and a booster fan hub rebuild. Other work may take place depending on the outcome of testing scheduled for this outage.

Employee Relations

On April 14, 2014, a lock-out of UWUA Local 180 members ended. The 20-week lock-out started on November 25, 2013. The employees returned to work under the terms of PN's Last, Best and Final Offer of November 6, 2013. The Last, Best and Final Offer contains wage increases, increases in shift premiums and meal allowances, and additional operational improvements, such as a new job classification intended to increase customer service and efficiency. Employees were reinstated to the positions they held prior to the lock-out. The collective bargaining agreement with IBEW Local 272, which represents approximately 300 employees at the Bruce Mansfield Plant expired on February 16, 2014. The collective bargaining agreement with Local 102, which represents 700 employees at WP and PE, expired on April 30, 2013. FirstEnergy continues to engage in negotiations with each of Local 180, 272, and 102, and work continuation plans are in place in the event of a work stoppage.

Regulatory Matters

JCP&L Rate Filing Update

On February 24, 2014, a Stipulation was filed with the NJBPU by JCP&L, the Division of Rate Counsel and NJBPU Staff which will allow recovery of $736 million of JCP&L's $744 million of costs related to the significant weather events of 2011 and 2012. On March 19, 2014, the NJBPU issued an order stating that the stipulation was reasonable and in accordance with the law, that the stipulation struck an appropriate balance between the needs of the customers and JCP&L, and that the 2011 and 2012 major storm costs may be recovered from ratepayers. The manner for recovery of 2011 costs will be decided within the current distribution rate case however the mechanism for recovery of the 2012 storm costs remains to be determined. On March 21, 2014, briefs on recovery of the 2012 storm costs were filed at the NJBPU by JCP&L and the Division of Rate Counsel. Reply briefs were filed on April 1, 2014.

WV Rate Filing

On April 30, 2014, MP and PE filed a rate case requesting a base rate increase of approximately $96 million, or 9.3%. The filing also included a surcharge to recover costs of MP's and PE's vegetation management program in the amount of approximately $48 million. The proposed total rate increase request, including the cost of the vegetation management program, is approximately $144 million, or 14%. MP and PE anticipate a decision from the WVPSC in February 2015.

Financial Matters

Hydro Asset Sales

On February 12, 2014, FirstEnergy completed the sale of 11 hydroelectric power stations to Harbor Hydro Holdings, LLC, a subsidiary of LS Power Equity Partners II, LP, for approximately $394 million. The hydroelectric power stations included in this sale were owned by FG, AE Supply and Green Valley Hydro, LLC and had a total capacity of 527 MW. The sale includes Seneca Pumped Storage (451 MW) in Warren, Pa.; Allegheny Lock & Dam 5 (6 MW) in Schenley, Pa.; Allegheny Lock & Dam 6 (7 MW) in Ford City, Pa.; Lake Lynn (52 MW) in Lake Lynn, Pa.; Millville (3 MW) in Millville, W. Va.; Dam 4 (2 MW) in Shepherdstown, W. Va.; Dam 5 (1.2 MW) in Falling Waters, W.Va.; Warren (750 kW) in Front Royal, Va.; Luray (1.6 MW) in Luray, Va.; and Shenandoah and Newport (860 kW and 1.4 MW, respectively) in Shenandoah, Va. The 35 employees at these power stations were retained by the new owner. Pre-tax income for the hydroelectric facilities of $155 million and $6 million (FES - $186 million and $5 million) for the three months ended March 31, 2014 and 2013, respectively, were reported in FirstEnergy's and FES' Consolidated Statement of Income as discontinued operations. Pre-tax income for the three months ended March 31, 2014 primarily relates to the gain on sale of $142 million (FES - $177 million).

Revolving Credit Facilities and Debt Activity

On March 31, 2014, FE, FES, AE Supply, FET and FE's other borrower subsidiaries entered into extensions and amendments to the three existing multi-year syndicated revolving credit facilities. Each facility was extended until March 31, 2019. The FE facility was amended to increase the lending banks' commitments under the facility by $1 billion to a total of $3.5 billion and to increase the individual borrower sublimit for FE by $1 billion to a total of $3.5 billion.The FES/AE Supply facility was amended to decrease the lending banks' commitments by $1 billion to a total of $1.5 billion. The lending banks' commitments under the FET facility remain at $1 billion and that facility was amended to increase ATSI's individual borrower sublimit to $500 million from $100 million and TrAIL's individual borrower sublimit to $400 million from $200 million. FirstEnergy expensed approximately $5 million (FES - $3 million) of unamortized debt expense as a result of the amendments. The amount was included in Loss on Debt Redemptions in the Consolidated Statement of Income in the first quarter of 2014.

On March 31, 2014, FE executed, and fully utilized, a new $1 billion variable rate term loan credit agreement with a maturity date of March 31, 2019. The initial borrowing under the term loan, which took the form of a Eurodollar rate advance, may be converted from time to time, in whole or in part, to alternate base rate advances or other Eurodollar rate advances.

During the first quarter of 2014, FG and NG remarketed approximately $417 million of PCRBs previously held by the companies. Of the total, $182 million was remarketed with a fixed interest rate of 4% per annum with a mandatory put date of June 3, 2019 and $235 million was remarketed with a fixed interest rate of 3.75% per annum with a mandatory put date of December 3, 2018.

In addition, in the first quarter of 2014, FG and NG repurchased approximately $197 million and $16 million of PCRBs, respectively, which were subject to a mandatory tender. The companies are currently holding the PCRB's for remarketing subject to future market and other conditions.

On April 1, 2014, PN and ME repurchased approximately $45 million and $29 million of PCRBs, respectively, which were subject to a mandatory put on such date. The companies are currently holding the PCRB's for remarketing subject to future market and other conditions.

During the first quarter of 2014, AE Supply returned $500 million of capital to FE Corp. Additionally, FE Corp. contributed $500 million of equity to FES.

FIRSTENERGY'S BUSINESS

FirstEnergy continues to have three reportable operating segments - Regulated Distribution, Regulated Transmission and Competitive Energy Services. The external reporting is consistent with the internal financial reporting used by FirstEnergy's Chief Executive Officer (its chief operating decision maker) to regularly assess the performance of the business and allocate resources.

The Regulated Distribution segment distributes electricity through FirstEnergy's ten utility operating companies, serving approximately six million customers within 65,000 square miles of Ohio, Pennsylvania, West Virginia, Maryland, New Jersey and New York, and purchases power for its POLR, SOS, SSO and default service requirements in Ohio, Pennsylvania, New Jersey and Maryland. This segment also includes regulated electric generation facilities in West Virginia and New Jersey that MP and JCP&L,

respectively, own or contractually control. Its results reflect the commodity costs of securing electric generation and the deferral and amortization of certain fuel costs. This business segment currently controls approximately 3,780 MWs of generation capacity.

The Regulated Transmission segment transmits electricity through transmission facilities owned and operated by ATSI, TrAIL, and certain of FirstEnergy's utilities (JCP&L, ME, PN, MP, PE and WP) and the regulatory asset associated with the abandoned PATH project. The segment's revenues are primarily derived from rates that recover costs and provide a return on transmission capital investment. Except for the recovery of the PATH abandoned project regulatory asset, these revenues are derived from transmission services provided pursuant to the PJM open access transmission tariff to LSEs. Its results also reflect the net transmission expenses related to the delivery of electricity on FirstEnergy's transmission facilities.

The Competitive Energy Services segment, through FES and AE Supply, supplies electricity to end-use customers through retail and wholesale arrangements, including competitive retail sales to customers primarily in Ohio, Pennsylvania, Illinois, Michigan, New Jersey and Maryland, and the provision of partial POLR and default service for some utilities in Ohio, Pennsylvania and Maryland, including the Utilities. This business segment currently controls approximately 14,000 MWs of capacity, including 885 MWs of capacity subject to RMR arrangements with PJM. This segment also purchases electricity to meet sales obligations. The segment's net income is primarily derived from electric generation sales less the related costs of electricity generation, including fuel, purchased power and net transmission (including congestion) and ancillary costs charged by PJM to deliver energy to the segment's customers.

The Competitive Energy Services segment derives its revenues from the sale of generation to direct and governmental aggregation, POLR and wholesale customers. The segment is exposed to various market and financial risks, including the risk of price fluctuations in the wholesale power markets. Wholesale power prices may be impacted by the prices of other commodities, including coal and natural gas, and energy efficiency and demand response programs, as well as regulatory and legislative actions, such as MATS among other factors. The segment attempts to mitigate the market risk inherent in its energy position by economically hedging its exposure and continuously monitoring various risk measurement metrics to ensure compliance with its risk management policies.

The Competitive Energy Services segment economically hedges exposure to price risk on a ratable basis, which is intended to reduce the near-term financial impact of market price volatility. As of March 31, 2014, committed sales for calendar year 2014 are at 98% of the 98.8 million MWH target. For the nine months from April to December 2014, supply from expected generation and committed purchases are approximately 103% of the committed sales under normal weather conditions. As of March 31, 2014, committed sales for 2015 and 2016 are approximately 56 million MWHs and 32 million MWHs, respectively. On average, the Competitive Energy Services segment expects to produce approximately 75 - 80 million MWHs of electricity annually. The Competitive Energy Services segment fulfills the difference between committed sales, which is based on estimated customer usage, assuming normal weather, and electricity generated, through forward contracts and options, generation produced by its peaking units and purchasing power on the wholesale market.

Other and Reconciling Adjustments contains corporate items and other businesses that are below the quantifiable threshold for separate disclosure as a reportable segment as well as reconciling adjustments for the elimination of intersegment transactions. See Note 12, Segment Information, of the Combined Notes to Consolidated Financial Statements for further information on FirstEnergy's reportable operating segments.

FirstEnergy considers a variety of factors, including wholesale power prices, in its decision to operate, or not operate, a generating plant. If wholesale power prices represent a lower cost option, FirstEnergy may elect to fulfill its load obligation through purchasing electricity in the wholesale market as opposed to operating a generating unit. The effect of this decision on its results of operations would be to displace higher per unit fuel expense with lower per unit purchased power.

FirstEnergy engages in discussions with various commodity vendors, from time to time, regarding the impact that these and other actions may have on certain of its long-term agreements and FirstEnergy cannot provide assurance that these discussions will be satisfactorily resolved.

RESULTS OF OPERATIONS

The financial results discussed below include revenues and expenses from transactions among FirstEnergy's segments. A reconciliation of segment financial results is provided in Note 12, Segment Information, of the Combined Notes to Consolidated Financial Statements. Certain prior year amounts have been reclassified to conform to the current year presentation. These reclassifications include, but are not limited to, the classification of discontinued operations associated with the sale of hydro assets discussed in additional detail in Note 13, Discontinued Operations.

Summary of Results of Operations — First Quarter 2014 Compared with First Quarter 2013

Financial results for FirstEnergy's business segments in the first quarter of 2014 and 2013 were as follows:

First Quarter 2014 Financial Results	Regulated Distribution	Regulated Transmission	Competitive Energy Services	Other and Reconciling Adjustments	FirstEnergy Consolidated
			(In millions)		
Revenues:					
External					
Electric	$ 2,501	$ 187	$ 1,474	$ (56)	$ 4,106
Other	51	—	48	(16)	83

Regulated Distribution — First Quarter 2014 Compared with First Quarter 2013

Net income increased $4 million in the first quarter of 2014 compared to the same period of 2013, as more fully described below.

Revenues —

The $340 million increase in total revenues resulted from the following sources:

Revenues by Type of Service	Three Months Ended March 31		Increase
	2014	2013	(Decrease)
	(In millions)		
Distribution services	$ 983	$ 972	$ 11
Generation sales:			
Retail	1,104	1,005	99
Wholesale	254	62	192
Total generation sales	1,358	1,067	291
Transmission	160	116	44
Other	51	57	(6)
Total Revenues	$ 2,552	$ 2,212	$ 340

The increase in distribution services revenue is primarily related to higher electric distribution MWH deliveries as described below and an increase in the Ohio Companies' DCR rider revenues, partially offset by a decrease in revenues from the ME and PN NUG riders as a result of the expiration of certain NUG contracts in 2013. Distribution deliveries increased by 5.9% in the first quarter of 2014 compared to the same period of 2013. Distribution deliveries by customer class are summarized in the following table:

Electric Distribution MWH Deliveries	Three Months Ended March 31		Increase
	2014	2013	(Decrease)
	(In thousands)		
Residential	16,570	14,956	10.8 %
Commercial	11,028	10,449	5.5 %
Industrial	12,700	12,623	0.6 %
Other	144	147	(2.0)%
Total Electric Distribution MWH Deliveries	40,442	38,175	5.9 %

Higher deliveries to residential and commercial customers primarily reflect increased weather-related usage resulting from heating degree days that were 17% above 2013, and 19% above normal. In the industrial sector, increased sales to steel, automotive and shale gas customers were partially offset by lower sales to chemical customers. For 2014, FirstEnergy continues to expect an increase in industrial sales, with a majority of that increase resulting from shale gas activities. Additionally, FirstEnergy expects growth in the industrial sector beyond 2014 for potential shale gas projects. As new gas fields are developed, the opportunity for additional manufacturing expansion could further support growth.

The following table summarizes the price and volume factors contributing to the $291 million increase in generation revenues for the first quarter of 2014 compared to the same period of 2013:

Source of Change in Generation Revenues	Increase
	(In millions)
Retail:	
Effect of increase in sales volumes	$ 39
Change in prices	60
	99
Wholesale:	
Effect of increase in sales volumes	82
Change in prices	110
	192
Increase in Generation Revenues	$ 291

The increase in retail generation sales volumes was primarily due to increased weather-related usage, as described above, and reduced customer shopping in Maryland, partially offset by higher shopping in other jurisdictions. Total generation provided by alternative suppliers as a percentage of total MWH deliveries increased to 80% from 79% for the Ohio Companies, 65% from 63% for the Pennsylvania Companies and 53% from 52% for JCP&L, and decreased to 41% from 43% for PE. The increase in retail generation prices reflects higher Pennsylvania auction prices, the completion of marginal transmission loss refunds to ME and PN customers in the second quarter of 2013 and a higher generation rate at WP, which includes the recovery of transmission costs effective June 2013. Additionally, the impact of MP's Temporary Transaction Surcharge associated with the Harrison/Pleasants asset transfer was offset by a rate reduction associated with the recovery of ENECs.

The increase in wholesale generation revenues of $192 million in the first quarter of 2014 reflects increased energy prices associated with extreme weather and market conditions in January 2014 and increased volume related to the Harrison/Pleasants asset transfer.

The increase in transmission revenues of $44 million reflects higher FTR revenues at MP related to the extreme weather and market conditions in January 2014 and an increase in the Ohio Companies' NMB transmission rider revenues, partially offset by the termination of WP's network transmission rider effective June 2013. Network transmission costs are now recovered through WP's generation rate.

Operating Expenses —

Total operating expenses increased $318 million primarily due to the following:

- Fuel expense was $66 million higher in 2014 primarily related to increased generation as a result of the Harrison/Pleasants asset transfer.

- Purchased power costs were $106 million higher in 2014 primarily related to higher unit power supply costs during the first quarter of 2014 compared to the same period of 2013, partially offset by lower required volumes as a result of the Harrison/Pleasants asset transfer.

Source of Change in Purchased Power	Increase (Decrease)
	(In millions)
Purchases from non-affiliates:	
Change due to increased unit costs	$ 117
Change due to decreased volumes	(45)
	72
Purchases from affiliates:	
Change due to increased unit costs	30
Change due to increased volumes	3
	33
Increase in costs deferred	1
Increase in Purchased Power Costs	$ 106

- Other operating expenses increased $212 million primarily due to:
    - Higher transmission expenses of $125 million primarily due to PJM transmission costs associated with higher congestion rates at MP as a result of extreme weather and market conditions in January 2014 and higher transmission volumes as a result of the Harrison/Pleasants asset transfer. The differences between current transmission revenues and transmission costs incurred are deferred for future recovery, resulting in no material impact on current period earnings.
    - Higher distribution operating and maintenance expenses of $64 million primarily due to higher maintenance activities and storm-related restoration costs, including $22 million associated with Winter Storm Nika during the first quarter of 2014 as well as higher pension related costs.
    - Higher energy efficiency expenses of $9 million in Pennsylvania primarily related to smart meter implementation, which are recovered through rates, and
    - Increased regulated generation operating and maintenance expenses of $14 million, reflecting increased costs associated with the Harrison/Pleasants asset transfer and a planned outage at Fort Martin.
- Depreciation expense increased $18 million due to a higher asset base, including $7 million associated with the Harrison/Pleasants asset transfer.
- Amortization (deferral) of regulatory assets decreased $89 million primarily due to higher storm cost deferrals, including $15 million related to Winter Storm Nika, lower default generation service costs recovery in Pennsylvania, a reduction of NUG costs recovery at ME and PN, and increased deferral of energy efficiency program costs, partially offset by lower transmission cost deferrals in Ohio and the completion of marginal transmission loss refunds at ME and PN.
- General taxes increased $5 million primarily due to higher property taxes and an increase in the West Virginia business and occupation tax as a result of the Harrison/Pleasants asset transfer.

Other Expense —

Other expense increased $19 million in the first quarter of 2014 primarily due to higher interest expense at MP as a result of financing the Harrison/Pleasants asset transfer and at JCP&L resulting from new debt issuances in 2013.

Regulated Transmission — First Quarter 2014 Compared with First Quarter 2013

Net income was $51 million in the first quarter of 2014 compared to $51 million in the same period of 2013.

Revenues —

Total revenues increased $11 million principally at ATSI and TrAIL associated with increased rates resulting from their annual rate filing effective June 2013.

Revenues by transmission asset owner are shown in the following table:

Revenues by Transmission Asset Owner	Three Months Ended March 31 2014	2013	Increase (Decrease)
		(In millions)	
ATSI	$ 56	$ 49	$ 7
TrAIL	53	48	5
PATH	4	5	(1)
Utilities	74	74	—
Total Revenues	$ 187	$ 176	$ 11

Operating Expenses —

Total operating expenses increased $13 million principally due to higher property tax, depreciation and other expenses.

Competitive Energy Services — First Quarter 2014 Compared with First Quarter 2013

Net income was unchanged in the first quarter of 2014, compared to the same period of 2013, as more fully described below.

Revenues —

Total revenues increased by $141 million in the first quarter of 2014, compared to the same period of 2013, primarily due to increased Transmission revenue and increased sales volumes in Governmental Aggregation, Mass Market, and POLR and Structured Sales channels. Revenues were also impacted by higher unit prices compared to 2013 as a result of increased channel pricing and ancillary pass-through revenues associated with PJM expenses incurred in January 2014.

The increase in total revenues resulted from the following sources:

Revenues by Type of Service	Three Months Ended March 31 2014	2013	Increase (Decrease)
		(In millions)	
Direct	$ 713	$ 710	$ 3
Governmental Aggregation	320	292	28
Mass Market	142	117	25
POLR and Structured	363	351	12
Wholesale	67	71	(4)
Transmission	118	47	71
Other	48	42	6
Total Revenues	$ 1,771	$ 1,630	$ 141

MWH Sales by Channel	Three Months Ended March 31 2014	2013	Increase (Decrease)
		(In thousands)	
Direct	12,841	13,614	(5.7)%
Governmental Aggregation	5,769	5,386	7.1 %
Mass Market	2,126	1,780	19.4 %
POLR and Structured	8,172	6,817	19.9 %
Wholesale	11	228	(95.2)%
Total MWH Sales	28,919	27,825	3.9 %

The following table summarizes the price and volume factors contributing to changes in revenues:

	Source of Change in Revenues Increase (Decrease)				
MWH Sales Channel:	Sales Volumes	Prices	Gain on Settled Contracts	Capacity Revenue	Total
			(In millions)		
Direct	$ (40)	$ 43	$ —	$ —	$ 3
Governmental Aggregation	21	7	—	—	28
Mass Market	23	2	—	—	25
POLR and Structured Sales	68	(56)	—	—	12
Wholesale	(6)	—	3	(1)	(4)

The increase in Direct revenues of $3 million resulted from higher unit prices, partially offset by lower sales volumes from large commercial and industrial customers. Direct sales volumes decreased due to Competitive Energy Services' strategy to be more selective in customers targeted in response to the current market environment. The increase in Governmental Aggregation revenues of $28 million primarily reflects increased weather-related usage resulting from heating degree days that were 17% higher than the first quarter of 2013 and higher unit prices. The increase in Mass Market of $25 million resulted from the acquisition of new customers

primarily in Ohio and Pennsylvania, increased weather-related usage and higher unit prices. The Direct, Governmental Aggregation and Mass Market customer base remained at 2.7 million customers as of March 31, 2014. Higher unit prices in each of the above sales channels resulted from increased channel pricing. Additionally, higher Direct unit prices were impacted by approximately $33 million of ancillary pass-through revenues associated with PJM expenses incurred in January 2014 as more fully described below.

The increase in POLR and structured revenues of $12 million was due to higher POLR and structured sales volumes primarily as a result of increased weather-related usage described above. Lower structured unit prices were primarily due to extreme weather and market conditions in January 2014 that reduced the gains on various structured financial sales contracts, partially offset by higher POLR rates associated with recent auctions.

Wholesale revenues decreased $4 million, primarily due to a decrease in short-term (net hourly positions) transactions. The decrease in wholesale sales volumes was due to lower generation available for sale primarily as a result of the Harrison/Pleasants asset transfer and the deactivation of certain power plants in 2013, and increased sales volume requirements discussed above.

Transmission revenue increased $71 million due to higher congestion and ancillary revenue associated with additional retail load.

Other revenue increased $6 million primarily due to higher lease revenues from additional repurchased equity interests in affiliated sale and leasebacks since the first quarter of 2013. Competitive Energy Services earns lease revenue associated with the equity interests it purchased.

Operating Expenses —

Total operating expenses increased by $415 million in the first quarter of 2014 due to the following:

- Fuel costs decreased $79 million primarily due to lower volumes associated with the Harrison/Pleasants asset transfer, the deactivation of certain power plants in 2013 and lower nuclear generation due to outages, partially offset by higher unit prices and the termination of a coal contract for $18 million.

- Purchased power costs increased $436 million due to higher volumes ($267 million), increased prices ($124 million), and higher capacity expenses ($45 million). Higher purchased volumes were primarily due to increased sales volume requirements and lower available generation due to outages, the Harrison/Pleasants asset transfer and the deactivation of certain power plants in 2013. The increase in prices was primarily a result of extreme weather and market conditions in January 2014, partially offset by net gains on financially settled contracts. Increased customer demand that was unhedged and replacement power requirements due to the timing of unplanned outages and derates contributed to purchasing additional volumes at these higher prices. The increase in capacity expense was the result of higher capacity rates primarily in the MAAC zone and increased sales volumes.

- Fossil operating costs decreased $51 million due primarily to lower labor costs resulting from previously deactivated units, the Harrison/Pleasants asset transfer and fewer planned outage days in the first quarter of 2014 as compared to the same period of 2013.

- Nuclear operating costs increased $15 million as a result of higher contractor, materials and equipment costs associated with the refueling outage at Davis-Besse that began on February 1, 2014. In the same period of 2013, there was a refueling outage at Perry that began on March 18, 2013.

- Transmission expenses increased $133 million due primarily to higher operating reserve and market-based ancillary costs associated with the extreme weather and market conditions in January 2014. A portion of these ancillary charges from PJM, which were for system reliability, are able to be passed through to commercial and industrial customers. Additionally, effective June 1, 2013, network expenses associated with POLR sales in Pennsylvania became the responsibility of suppliers.

- General taxes decreased $6 million due primarily to lower payroll taxes as a result of lower labor costs noted above and the Harrison/Pleasants asset transfer, partially offset by higher gross receipts taxes.

- Depreciation expense decreased $19 million primarily due to a reduction in the asset base as a result of the plant deactivations and the Harrison/Pleasants asset transfer noted above.

- Other operating expenses decreased $14 million primarily due to a reduction in mark-to-market expenses on commodity contract positions, partially offset by higher leasehold costs from the Ohio Companies due to increased generation by Perry and increased agent fees associated with the retail business.

Other Expense —

Total other expense in the first quarter of 2014 decreased $143 million compared to the same period of 2013 due to the absence of a $110 million loss on debt redemption in connection with senior notes that were repurchased in 2013, higher investment income of $4 million on NDT investments, and lower net interest expense of $29 million due to debt redemptions.

Discontinued Operations —

Discontinued operations increased net income in the first quarter of 2014 compared to the same period of last year primarily due to a a pre-tax gain of approximately $142 million associated with the sale of hydro assets described above.

Other — First Quarter 2014 Compared with First Quarter 2013

Financial results from other operating segments and reconciling items, including interest expense on holding company debt and corporate support services revenues and expenses, resulted in a $8 million increase in net income in the first quarter of 2014 compared to the same period of 2013 primarily due to tax benefits resulting from higher AFUDC equity flow-through, changes in state apportionment factors and the elimination of certain future tax liabilities associated with basis differences. This benefit was partially offset by increased interest expense due to the issuance of $1.5 billion of FE senior unsecured notes in March of 2013.

Regulatory Assets

Regulatory assets represent incurred costs that have been deferred because of their probable future recovery from customers through regulated rates. Regulatory liabilities represent amounts that are expected to be credited to customers through future regulated rates or amounts collected from customers for costs not yet incurred. FirstEnergy and the Utilities net their regulatory assets and liabilities based on federal and state jurisdictions. The following table provides information about the composition of net regulatory assets as of March 31, 2014 and December 31, 2013, and the changes during the three months ended March 31, 2014:

Regulatory Assets (Liabilities) by Source	March 31, 2014	December 31, 2013	Increase (Decrease)
		(In millions)	
Regulatory transition costs	$ 236	$ 266	$ (30)
Customer receivables for future income taxes	514	518	(4)
Nuclear decommissioning and spent fuel disposal costs	(207)	(198)	(9)
Asset removal costs	(363)	(362)	(1)
Deferred transmission costs	92	112	(20)
Deferred generation costs	360	346	14
Deferred distribution costs	190	194	(4)
Contract valuations	229	260	(31)
Storm-related costs	466	455	11
Other	281	263	18
Total	$ 1,798	$ 1,854	$ (56)

Regulatory assets that do not earn a current return totaled approximately $514 million as of March 31, 2014 primarily related to storm damage costs.

As of March 31, 2014 and December 31, 2013, FirstEnergy had approximately $382 million and $440 million, respectively, of net regulatory liabilities that are primarily related to asset removal costs. Net regulatory liabilities are classified within Other noncurrent liabilities on the Consolidated Balance Sheets.

CAPITAL RESOURCES AND LIQUIDITY

FirstEnergy expects its existing sources of liquidity to remain sufficient to meet its anticipated obligations and those of its subsidiaries. FirstEnergy's business is capital intensive, requiring significant resources to fund operating expenses, construction expenditures, scheduled debt maturities and interest and dividend payments. In addition to internal sources to fund liquidity and capital requirements for 2014 and beyond, FirstEnergy expects to rely on external sources of funds. Short-term cash requirements not met by cash provided from operations are generally satisfied through short-term borrowings. Long-term cash needs may be met through the issuance of long-term debt and/or equity. FirstEnergy expects that borrowing capacity under credit facilities will continue to be available to manage working capital requirements along with continued access to long-term capital markets.

In January 2014, FirstEnergy's Board of Directors declared a revised quarterly dividend of $0.36 per share of outstanding common stock. The dividend was paid on March 1, 2014, to shareholders of record at the close of business on February 7, 2014. This revised dividend equates to an indicated annual dividend of $1.44 per share, reduced from the $0.55 per share quarterly dividend ($2.20 per share annually) that FirstEnergy had paid since 2008. In March 2014, FirstEnergy's Board of Directors declared a quarterly dividend of $0.36 per share of outstanding common stock that will be paid on June 1, 2014, to shareholders of record at the close of business on May 7, 2014.

As a result of the challenging competitive environment, FirstEnergy has begun redirecting its growth strategy to pursue more predictable and sustainable long-term growth opportunities in its regulated businesses.

The centerpiece of this strategy is a $4.2 billion "Energizing the Future" investment plan beginning in 2014 through 2017 to upgrade and expand the transmission system owned by FirstEnergy's Regulated Transmission segment. This program is focused on rebuilding the transmission system, starting with ATSI's system and moving east across FirstEnergy's service territory over time. Also included in the investment are projects that enhance system performance, physical security and add operating flexibility and capacity. These activities began in the first quarter of 2014. FirstEnergy expects to fund these investments through a combination of debt, previously announced equity issuances through stock investment and employee benefit plans, and cash. In total, FirstEnergy has identified at least $7 billion in transmission investment opportunities across the 24,000 mile transmission system, making this a continuing platform for growth in the years ahead.

In alignment with FirstEnergy's strategy to reposition the Regulated Transmission and Regulated Distribution segments and preserve the competitive business, FirstEnergy will also focus on reducing balance sheet risk, maintaining investment grade metrics, and improving the business risk profile at each of our businesses. Specifically, at the regulated businesses, authority has been obtained for various regulated distribution and transmission subsidiaries to issue or refinance debt. Finally, at the competitive business, FirstEnergy completed the sale of certain hydro assets for approximately $394 million on February 12, 2014. The actions taken in 2013 and those planned for 2014 are expected to support a regulated investment strategy.

Any financing plans by FirstEnergy, including refinancing of maturing debt and reductions in short-term borrowings, are subject to market conditions and other factors. No assurance can be given that any such financings, refinancings, or reductions in short-term debt, as the case may be, will be completed as anticipated. In addition, FirstEnergy expects to continually evaluate any planned financings, which may result in changes from time to time.

As of March 31, 2014, FirstEnergy's net deficit in working capital (current assets less current liabilities) was due in large part to currently payable long-term debt and short-term borrowings. Currently payable long-term debt as of March 31, 2014, included the following:

Currently Payable Long-Term Debt	(In millions)
PCRBs supported by bank LOCs [1]	$ 415
Unsecured notes	600
FMB	175
Unsecured PCRBs [1]	26
Collateralized lease obligation bonds	91
Sinking fund requirements	103
Other notes	6
	$ 1,416

[1] These PCRBs are classified as currently payable long-term debt because the applicable interest rate mode permits individual debt holders to put the respective debt back to the issuer prior to maturity.

Short-Term Borrowings

FirstEnergy had $3,085 million of short-term borrowings as of March 31, 2014, and $3,404 million as of December 31, 2013. FirstEnergy's available liquidity as of April 30, 2014, was as follows:

Borrower(s)	Type	Maturity	Commitment	Available Liquidity
			(In millions)	
FirstEnergy[1]	Revolving	March 2019	$ 3,500	$ 1,629
FES / AE Supply	Revolving	March 2019	1,500	1,031
FET[2]	Revolving	March 2019	1,000	250
		Subtotal	$ 6,000	$ 2,910
		Cash	—	74
		Total	$ 6,000	$ 2,984

[1] FE and the Utilities.
[2] Includes FET, ATSI and TrAIL.

Revolving Credit Facilities

FirstEnergy, FES/AE Supply and FET Facilities

FE and certain of its subsidiaries participate in three five-year syndicated revolving credit facilities with aggregate commitments of $6.0 billion (Facilities).On March 31, 2014, FE, FES, AE Supply, FET and FE's other borrower subsidiaries entered into extensions and amendments to the three existing multi-year syndicated revolving credit facilities. Each facility was extended until March 31, 2019. The FE facility was amended to increase the lending banks' commitments under the facility by $1 billion to a total of $3.5 billion and to increase the individual borrower sublimit for FE by $1 billion to a total of $3.5 billion.The FES/AE Supply facility was amended to decrease the lending banks' commitments by $1 billion to a total of $1.5 billion. The lending banks' commitments under the FET facility remain at $1 billion and that facility was amended to increase ATSI's individual borrower sublimit to $500 million from $100 million and TrAIL's individual borrower sublimit to $400 million from $200 million. FirstEnergy expensed approximately $5 million (FES - $3 million) of unamortized debt expense as a result of the amendments. The amount was included in Loss on Debt Redemptions in the Consolidated Statement of Income in the first quarter of 2014.

Generally, borrowings under each of the Facilities are available to each borrower separately and mature on the earlier of 364 days from the date of borrowing or the commitment termination date, as the same may be extended. Each of the Facilities contains financial covenants requiring each borrower to maintain a consolidated debt to total capitalization ratio (as defined under each of the Facilities, as amended) of no more than 65%, and 75% for FET, measured at the end of each fiscal quarter.

The following table summarizes the borrowing sub-limits for each borrower under the Facilities, the limitations on short-term indebtedness applicable to each borrower under current regulatory approvals and applicable statutory and/or charter limitations, as of March 31, 2014:

Borrower	FE Revolving Credit Facility Sublimit	FES/AE Supply Revolving Credit Facility Sublimit	FET Revolving Credit Facility Sublimit	Regulatory and Other Short-Term Debt Limitations
		(In millions)		
FE	$ 3,500	$ —	$ —	$ — [1]
FES	—	1,500	—	— [2]
AE Supply	—	1,000	—	— [2]
FET	—	—	1,000	— [1]
OE	500	—	—	500 [3]
CEI	500	—	—	500 [3]
TE	500	—	—	500 [3]
JCP&L	600	—	—	850 [3]
ME	300	—	—	500 [3]
PN	300	—	—	300 [3]
WP	200	—	—	200 [3]
MP	500	—	—	500 [3]
PE	150	—	—	150 [3]
ATSI	—	—	500	500 [3]
Penn	50	—	—	50 [3]
TrAIL	—	—	400	400 [3]

[1] No limitations.
[2] No limitation based upon blanket financing authorization from the FERC under existing open market tariffs.
[3] Includes amounts which may be borrowed under the regulated companies' money pool.

The entire amount of the FES/AE Supply Facility, $630 million of the FE Facility and $225 million of the FET Facility, subject to each borrower's sublimit, is available for the issuance of LOCs (subject to borrowings drawn under the Facilities) expiring up to one year from the date of issuance. The stated amount of outstanding LOCs will count against total commitments available under each of the Facilities and against the applicable borrower's borrowing sub-limit.

The Facilities do not contain provisions that restrict the ability to borrow or accelerate payment of outstanding advances in the event of any change in credit ratings of the borrowers. Pricing is defined in "pricing grids," whereby the cost of funds borrowed under the Facilities is related to the credit ratings of the company borrowing the funds, other than the FET Facility, which is based on its subsidiaries' credit ratings. Additionally, borrowings under each of the Facilities are subject to the usual and customary provisions for acceleration upon the occurrence of events of default, including a cross-default for other indebtedness in excess of $100 million.

As of March 31, 2014, the borrowers were in compliance with the applicable debt to total capitalization ratios under the respective Facilities.

Term Loans

On March 31, 2014, FE executed, and fully utilized, a new $1 billion variable rate term loan credit agreement with a maturity date of March 31, 2019. The initial borrowing under the term loan, which took the form of a Eurodollar rate advance, may be converted from time to time, in whole or in part, to alternate base rate advances or other Eurodollar rate advances. Additionally, FE has a $200 million variable rate term loan, due December 31, 2015. Each of the term loans contains covenants and other terms and conditions substantially similar to those of the FE Facility described above, including the same consolidated debt to total capitalization ratio requirement.

FirstEnergy Money Pools

FirstEnergy's utility operating subsidiary companies also have the ability to borrow from each other and the holding company to meet their short-term working capital requirements. A similar but separate arrangement exists among FirstEnergy's unregulated companies. FESC administers these two money pools and tracks surplus funds of FirstEnergy and the respective regulated and unregulated subsidiaries, as well as proceeds available from bank borrowings. Companies receiving a loan under the money pool agreements must repay the principal amount of the loan, together with accrued interest, within 364 days of borrowing the funds. The rate of interest is the same for each company receiving a loan from their respective pool and is based on the average cost of funds available through the pool. The average interest rate for borrowings in the first three months of 2014 was 1.68% per annum for the regulated companies' money pool and 1.25% per annum for the unregulated companies' money pool.

Pollution Control Revenue Bonds

As of March 31, 2014, FirstEnergy's currently payable long-term debt included approximately $415 million ($342 million applicable to FES) of variable interest rate PCRBs, the bondholders of which are entitled to the benefit of irrevocable direct pay bank LOCs. The interest rates on the PCRBs are reset daily or weekly. Bondholders can tender their PCRBs for mandatory purchase prior to maturity with the purchase price payable from remarketing proceeds or, if the PCRBs are not successfully remarketed, by drawings on the irrevocable direct pay LOCs. The subsidiary obligor is required to reimburse the applicable LOC bank for any such drawings or, if the LOC bank fails to honor its LOC for any reason, must itself pay the purchase price.

The LOCs for FirstEnergy's variable interest rate PCRBs outstanding as of March 31, 2014 were issued by the following banks:

Bank	Aggregate Amount [1]	Termination Date	Reimbursements of Draws Due
	(In millions)		
UBS[2]	$ 268	April 2014	April 2014
CitiBank N.A.	164	June 2014	June 2014
The Bank of Nova Scotia[2]	49	April 2014	April 2014
The Bank of Nova Scotia	81	April 2015	April 2015
The Bank of Nova Scotia	96	December 2015	December 2015
Total	$ 658		

(1) Excludes approximately $8 million of applicable interest coverage.
(2) The LOCs for UBS and The Bank of Nova Scotia with a termination date of April 2014 expired in April 2014.

Long-Term Debt Capacity

FE's and its subsidiaries' access to capital markets and costs of financing are influenced by the credit ratings of their securities. The following table displays FE's and its subsidiaries' credit ratings as of March 31, 2014:

	Senior Secured			Senior Unsecured		
Issuer	**S&P**	**Moody's**	**Fitch**	**S&P**	**Moody's**	**Fitch**
FE	—	—	—	BB+	Baa3	BB+
FES	—	—	—	BBB-	Baa3	BB+
AE Supply	—	—	—	BBB-	Baa3	BB+
AGC	—	—	—	BBB-	Baa3	BBB
ATSI	—	—	—	BBB-	Baa2	BBB+
CEI	BBB+	Baa1	BBB	BBB-	Baa3	BBB-
JCP&L	—	—	—	BBB-	Baa2	BBB
ME	—	—	—	BBB-	Baa2	BBB+
MP	BBB+	Baa1	A-	—	—	—
OE	BBB+	A3	BBB+	BBB-	Baa2	BBB
PN	—	—	—	BBB-	Baa2	BBB
Penn	BBB+	A3	BBB+	—	—	—
PE	BBB+	Baa1	A-	—	—	—
TE	BBB	Baa1	BBB	—	—	—
TrAIL	—	—	—	BBB-	Baa1	BBB+
WP	BBB+	A3	A-	—	—	—

On April 21, 2014, Moody's assigned a Baa3 Issuer Rating to FET and raised TrAIL's senior unsecured rating to A3 from Baa1. On May 1, 2014, Fitch affirmed FE's Issuer Default and senior unsecured debt ratings of BB+. Fitch also affirmed the ratings of FE's subsidiaries as indicated in the table above. The Rating Outlook for all companies is Stable. Fitch expects to withdraw its ratings of FE's subsidiaries in the second quarter of 2014.

Debt capacity is subject to the consolidated debt to total capitalization limits in the Facilities previously discussed. As of March 31, 2014, FE and its subsidiaries could issue additional debt of approximately $4.8 billion and remain within the limitations of the financial covenants required by the Facilities (as amended). As of March 31, 2014, FES' incremental debt capacity under its consolidated debt to total capitalization financial covenant is also $4.8 billion given FE's consolidated debt to total capitalization ratio under its Facility, as amended.

Changes in Cash Position

As of March 31, 2014, FirstEnergy had $109 million of cash and cash equivalents compared to $218 million of cash and cash equivalents as of December 31, 2013. As of March 31, 2014 and December 31, 2013, FirstEnergy had approximately $75 million and $103 million, respectively, of restricted cash included in Other Current Assets on the Consolidated Balance Sheets.

Cash Flows From Operating Activities

FirstEnergy's consolidated net cash from operating activities was provided by its regulated distribution, regulated transmission and competitive energy services businesses (see Results of Operations above). Net cash used for operating activities was $92 million during the first three months of 2014 compared with $50 million provided from operating activities during the first three months of 2013, as summarized in the following table:

	Three Months Ended March 31		
Operating Cash Flows	**2014**	**2013**	**Increase (Decrease)**
		(In millions)	
Net income	$ 208	$ 196	$ 12
Non-cash charges	378	604	(226)
Working capital and other	(678)	(750)	72
	$ (92)	$ 50	$ (142)

The $142 million decrease in operating cash flows for the first quarter of 2014 compared to the same period of 2013 was primarily due to increased cash posted as collateral due to the extreme weather and market conditions experienced in January of 2014. On April 16, 2014, approximately $275 million of cash collateral was returned to FES as a result of the PJM semi-annual peak market activity calculation reset.

The $226 million decrease in non-cash charges is primarily due to the following:

- $110 million decrease from loss on debt redemptions incurred in 2013 associated with the completion of the FES/AE Supply tender offers and FES debt redemptions.
- $9 million decrease from lower deferred purchased power and other costs primarily due to the expiration of certain NUG agreements.
- $87 million decrease in amortization (deferral) of regulatory assets primarily due to lower default generation service costs recovery in Pennsylvania, partially offset by the completion of marginal transmission loss refunds at ME and PN.
- $47 million increase due to deferred income taxes and investment tax credits.
- $44 million increase in retirement benefits due to reduced payments in 2014 as compared to 2013.
- $82 million decrease associated with discontinued operations primarily as a result of the adjustment to eliminate from operating activities the gain on sale in 2014 of approximately $78 million (after-tax).
- $21 million decrease due primarily to unrealized gains on commodity transactions as described in the Results of Operations above.

The $72 million increase in cash from working capital and other is primarily due to the following:

- $460 million decrease due to cash collateral paid resulting from higher PJM collateral requirements associated with the extreme weather and market conditions in January of 2014.
- $134 million decrease associated with higher customer receivables, primarily as a result of increased weather related usage as described in the Results of Operations above.
- $578 million increase in accounts payable due to the timing of payments to vendors, including payments in 2013 related to restoration costs associated with Hurricane Sandy.
- $120 million increase in customer deposits and changes in other assets and liabilities.
- $27 million decrease in accrued compensation and benefits associated with higher incentive compensation payments in 2014 compared to 2013.

Cash Flows From Financing Activities

In the first three months of 2014, cash provided from financing activities was $498 million compared to $772 million of net cash provided from financing activities during the first three months of 2013. The following table summarizes new debt financing (net of any discounts) and redemptions and repurchases:

	Three Months Ended March 31	
Securities Issued or Redeemed / Repaid	**2014**	**2013**
	(In millions)	
New Issues		
PCRBs	$ 417	$ —
Term Loan	1,050	—
Unsecured Notes	—	1,800
	$ 1,467	$ 1,800
Redemptions / Repayments		
PCRBs	$ (444)	$ —
Senior secured notes	(45)	(17)
Unsecured notes	—	(829)
	$ (489)	$ (846)
Tender premiums paid on debt redemptions	—	(110)
Short-term borrowings, net	$ (319)	$ 181

On March 31, 2014, FE, FES, AE Supply, FET and FE's other borrower subsidiaries entered into extensions and amendments to the three existing multi-year syndicated revolving credit facilities. Each facility was extended until March 31, 2019. The FE facility was amended to increase the lending banks' commitments under the facility by $1 billion to a total of $3.5 billion and to increase the individual borrower sublimit for FE by $1 billion to a total of $3.5 billion.The FES/AE Supply facility was amended to decrease the lending banks' commitments by $1 billion to a total of $1.5 billion. The lending banks' commitments under the FET facility remain at $1 billion and that facility was amended to increase ATSI's individual borrower sublimit to $500 million from $100 million and TrAIL's individual borrower sublimit to $400 million from $200 million. FirstEnergy expensed approximately $5 million (FES - $3 million) of unamortized debt expense as a result of the amendments. The amount was included in Loss on Debt Redemptions in the Consolidated Statement of Income in the first quarter of 2014.

On March 31, 2014, FE executed, and fully utilized, a new $1 billion variable rate term loan credit agreement with a maturity date of March 31, 2019. The initial borrowing under the term loan, which took the form of a Eurodollar rate advance, may be converted from time to time, in whole or in part, to alternate base rate advances or other Eurodollar rate advances.

During the first quarter of 2014, FG and NG remarketed approximately $417 million of PCRBs previously held by the companies. Of the total, $182 million was remarketed with a fixed interest rate of 4% per annum with a mandatory put date of June 3, 2019 and $235 million was remarketed with a fixed interest rate of 3.75% per annum with a mandatory put date of December 3, 2018.

In addition, in the first quarter of 2014, FG and NG repurchased approximately $197 million and $16 million of PCRBs, respectively, which were subject to a mandatory tender. The companies are currently holding the PCRB's for remarketing subject to future market and other conditions.

On April 1, 2014, PN and ME repurchased approximately $45 million and $29 million of PCRBs, respectively, which were subject to a mandatory put on such date. The companies are currently holding the PCRB's for remarketing subject to future market and other conditions.

During the first quarter of 2014, AE Supply returned $500 million of capital to FE Corp. Additionally, FE Corp. contributed $500 million of equity to FES.

Cash Flows From Investing Activities

Cash used for investing activities in the first three months of 2014 principally represented cash used for property additions. The following table summarizes investing activities for the first three months of 2014 and the comparable period of 2013:

	Three Months Ended March 31		
Cash Used for Investing Activities	**2014**	**2013**	**Increase (Decrease)**
		(In millions)	
Property Additions:			
Regulated distribution	$ 269	$ 436	$ (167)
Regulated transmission	217	89	128
Competitive energy services	318	283	35
Other and reconciling adjustments	17	18	(1)
Nuclear fuel	55	27	28
Proceeds from asset sales	(394)	—	(394)
Investments	(3)	20	(23)
Asset removal costs	39	53	(14)
Other	(3)	1	(4)
	$ 515	$ 927	$ (412)

Net cash used for investing activities during the first three months of 2014 decreased by $412 million compared to the same period of 2013. The decrease was principally due to the proceeds from the sale of the Hydro assets of $394 million.

GUARANTEES AND OTHER ASSURANCES

FirstEnergy has various financial and performance guarantees and indemnifications which are issued in the normal course of business. These contracts include performance guarantees, stand-by letters of credit, debt guarantees, surety bonds and indemnifications. FirstEnergy enters into these arrangements to facilitate commercial transactions with third parties by enhancing the value of the transaction to the third party. The maximum potential amount of future payments FirstEnergy and its subsidiaries could be required to make under these guarantees as of March 31, 2014, was approximately $4.0 billion, as summarized below:

Guarantees and Other Assurances	Maximum Exposure
	(In millions)
FE's Guarantees on Behalf of its Subsidiaries	
Energy and Energy-Related Contracts[1]	$ 257
LOC (long-term debt) - interest coverage[2]	5
Deferred compensation arrangements	476
Other[3]	158
	896
Subsidiaries' Guarantees	
Energy and Energy-Related Contracts	76
LOC (long-term debt) - interest coverage[2]	2
FES' guarantee of NG's nuclear property insurance	89
FES' guarantee of FG's sale and leaseback obligations	2,030
Other	10
	2,207
Global Holding facility	350
Surety Bonds	464
LOCs[4]	77
	891
Total Guarantees and Other Assurances	$ 3,994

(1) Issued for open-ended terms, with a 10-day termination right by FirstEnergy.

(2) Reflects the interest coverage portion of LOCs issued in support of floating rate PCRBs with various maturities. The principal amount of floating-rate PCRBs of $658 million, of which $415 million is reflected in currently payable long-term debt on FirstEnergy's consolidated balance sheets.

(3) Includes guarantees of $125 million for nuclear decommissioning funding assurances, $11 million supporting OE's sale and leaseback arrangements, and $22 million for various leases. By a letter dated March 28, 2013, FENOC informed the NRC that the nuclear decommissioning parental guarantee would be increased to $155 million during the second quarter of 2014. Moreover, a new parental guarantee for the Beaver Valley spent fuel storage facility of $9.5 million would also be put in place.

(4) Includes $7 million issued for various terms pursuant to LOC capacity available under FirstEnergy's revolving credit facilities, $45 million pledged in connection with the sale and leaseback of Beaver Valley Unit 2 by OE and $25 million pledged in connection with the sale and leaseback of Perry by OE.

FES' debt obligations are generally guaranteed by its subsidiaries, FG and NG, and FES guarantees the debt obligations of each of FG and NG. Accordingly, present and future holders of indebtedness of FES, FG, and NG would have claims against each of FES, FG and NG, regardless of whether their primary obligor is FES, FG or NG.

Collateral and Contingent-Related Features

In the normal course of business, FE and its subsidiaries routinely enter into physical or financially settled contracts for the sale and purchase of electric capacity, energy, fuel, and emission allowances. Certain bilateral agreements and derivative instruments contain provisions that require FE or its subsidiaries to post collateral. This collateral may be posted in the form of cash or credit support with thresholds contingent upon FE's or its subsidiaries' credit rating from each of the major credit rating agencies. The collateral and credit support requirements vary by contract and by counterparty. The incremental collateral requirement allows for the offsetting of assets and liabilities with the same counterparty, where the contractual right of offset exists under applicable master netting agreements.This posted collateral is used to settle gains or losses on those bilateral agreements or derivatives.

Based on FES' power portfolio exposure as of March 31, 2014, FES has posted collateral of $544 million and AE Supply has posted collateral of $8 million. The Regulated Distribution segment has posted collateral of $28 million. The collateral posted at FES primarily

relates to the extreme weather and market conditions experienced in January of 2014. On April 16, 2014, approximately $275 million of cash collateral was returned to FES as a result of the PJM semi-annual peak market activity calculation reset.

These credit-risk-related contingent features stipulate that if the subsidiary were to be downgraded or lose its investment grade credit rating (based on its senior unsecured debt rating), it would be required to provide additional collateral. Depending on the volume of forward contracts and future price movements, higher amounts for margining could be required.

Subsequent to the occurrence of a senior unsecured credit rating downgrade to below S&P's BBB- and Moody's Baa3, or a "material adverse event," the immediate posting of collateral or accelerated payments may be required of FE or its subsidiaries. The following table discloses the additional credit contingent contractual obligations as of March 31, 2014:

Collateral Provisions	FES	AE Supply	Utilities	Total
		(In millions)		
Split Rating (One rating agency's rating below investment grade)	$ 461	$ 6	$ 49	$ 516
BB+/Ba1 Credit Ratings	$ 497	$ 6	$ 49	$ 552
Full impact of credit contingent contractual obligations	$ 796	$ 58	$ 87	$ 941

Excluded from the preceding chart is the potential collateral obligations due to affiliate transactions between the Regulated Distribution Segment and Competitive Energy Services Segment. As of March 31, 2014, neither FES nor AE Supply had any collateral posted with their affiliates. In the event of a senior unsecured credit rating downgrade to below S&P's BB- or Moody's Ba3, FES and AE Supply would be required to post $111 million and $1 million, respectively.

Other Commitments and Contingencies

FE is a guarantor under a syndicated three-year senior secured term loan facility dated October 18, 2011, as amended, that matures October 18, 2015, under which Global Holding borrowed $350 million. Proceeds from the loan were used to repay Signal Peak's and Global Rail's maturing $350 million syndicated two-year senior secured term loan facility. In addition to FE, Signal Peak, Global Rail, Global Mining Group, LLC and Global Coal Sales Group, LLC, each being a direct or indirect subsidiary of Global Holding, have also provided their joint and several guarantees of the obligations of Global Holding under the new facility.

In connection with the facility, 69.99% of Global Holding's direct and indirect membership interests in Signal Peak, Global Rail and their affiliates along with FEV's and WMB Marketing Ventures, LLC's respective 33-1/3% membership interests in Global Holding, are pledged to the lenders as collateral.

FE, FEV and the other two co-owners of Global Holding, Pinesdale LLC, a Gunvor Group, Ltd. subsidiary, and WMB Marketing Ventures, LLC, have agreed, most recently as of August 14, 2013, to use their best efforts to refinance the facility no later than July 20, 2015, on a non-recourse basis so that FE's guaranty can be terminated and/or released. If that refinancing does not occur, FE may require each co-owner to lend to Global Holding, on a pro rata basis, funds sufficient to prepay the facility in full. In lieu of providing such funding, the co-owners, at FE's option, may provide their several guaranties of Global Holding's obligations under the facility. Since January 1, 2013, FE has received a fee for providing its guaranty. The fee is payable semiannually, and accrues at a rate of 5% per annum on the average daily outstanding aggregate commitments under the facility for each semiannual period.

OFF-BALANCE SHEET ARRANGEMENTS

FES and certain of the Ohio Companies have obligations that are not included on their Consolidated Balance Sheets related to the Perry Unit 1, Beaver Valley Unit 2, and 2007 Bruce Mansfield Unit 1 sale and leaseback arrangements, which are satisfied through operating lease payments. The total present value of these sale and leaseback operating lease commitments, net of trust investments, was $1.1 billion as of March 31, 2014 and primarily relates to the 2007 Bruce Mansfield Unit 1 sale and leaseback arrangement expiring in 2040. From time to time FirstEnergy and these companies enter into discussions with certain parties to the arrangements regarding acquisition of owner participant and other interests. However, FirstEnergy cannot provide assurance that any such acquisitions will occur on satisfactory terms or at all.

In February 2014, NG purchased lessor equity interests in OE's existing sale and leaseback of Beaver Valley Unit 2 for approximately $94 million. As of March 31, 2014, FirstEnergy's leasehold interest was 8.11% of Perry Unit 1, 93.83% of Bruce Mansfield Unit 1 and 2.60% of Beaver Valley Unit 2.

MARKET RISK INFORMATION

FirstEnergy uses various market risk sensitive instruments, including derivative contracts, primarily to manage the risk of price and interest rate fluctuations. FirstEnergy's Risk Policy Committee, comprised of members of senior management, provides general oversight for risk management activities throughout the company.

Commodity Price Risk

FirstEnergy is exposed to financial risks resulting from fluctuating commodity prices, including prices for electricity, natural gas, coal and energy transmission. FirstEnergy's Risk Management Committee is responsible for promoting the effective design and implementation of sound risk management programs and oversees compliance with corporate risk management policies and established risk management practice. FirstEnergy uses a variety of derivative instruments for risk management purposes including forward contracts, options, futures contracts and swaps.

The valuation of derivative contracts is based on observable market information to the extent that such information is available. In cases where such information is not available, FirstEnergy relies on model-based information. The model provides estimates of future regional prices for electricity and an estimate of related price volatility. FirstEnergy uses these results to develop estimates of fair value for financial reporting purposes and for internal management decision making (see Note 7, Fair Value Measurements, of the Combined Notes to Consolidated Financial Statements). Sources of information for the valuation of derivative contracts assets and liabilities as of March 31, 2014 are summarized by year in the following table:

Source of Information- Fair Value by Contract Year	2014	2015	2016	2017	2018	Thereafter	Total
				(In millions)			
Prices actively quoted[1]	$ 3	$ —	$ —	$ —	$ —	$ —	$ 3
Other external sources[2]	16	(33)	(24)	(15)	—	—	(56)
Prices based on models	9	—	1	1	(13)	(14)	(16)
Total[3]	$ 28	$ (33)	$ (23)	$ (14)	$ (13)	$ (14)	$ (69)

(1) Represents exchange traded New York Mercantile Exchange futures and options.

(2) Primarily represents contracts based on broker and ICE quotes.

(3) Includes $185 million in non-hedge derivative contracts primarily related to NUG contracts. NUG contracts are generally subject to regulatory accounting and do not materially impact earnings.

FirstEnergy performs sensitivity analyses to estimate its exposure to the market risk of its commodity positions. Based on derivative contracts held as of March 31, 2014, a 10% adverse change in commodity prices would decrease net income by approximately $40 million during the next 12 months.

Equity Price Risk

As of March 31, 2014, the FirstEnergy pension plan assets were approximately allocated as follows: 33% in equity securities, 38% in fixed income securities, 20% in absolute return strategies, 6% in real estate and 3% in cash and short-term securities. A decline in the value of pension plan assets could result in additional funding requirements. FirstEnergy’s funding policy is based on actuarial computations using the projected unit credit method. During the three months ended March 31, 2014, FirstEnergy made no contributions to its qualified pension plans. See Note 3, Pensions and Other Postemployment Benefits, of the Combined Notes to Consolidated Financial Statements for additional details on FirstEnergy's pension plans and OPEB. Through March 31, 2014, FirstEnergy's pension plan assets earned approximately 2.9% as compared to an annual expected return on plan assets of 7.75%.

NDT funds have been established to satisfy NG’s and other FirstEnergy subsidiaries' nuclear decommissioning obligations. As of March 31, 2014, approximately 66% of the funds were invested in fixed income securities, 21% of the funds were invested in equity securities and 13% were invested in short-term investments, with limitations related to concentration and investment grade ratings. The investments are carried at their market values of approximately $1,487 million, $463 million and $305 million for fixed income securities, equity securities and short-term investments, respectively, as of March 31, 2014, excluding $8 million of net receivables, payables and accrued income. A hypothetical 10% decrease in prices quoted by stock exchanges would result in a $46 million reduction in fair value as of March 31, 2014. Certain FirstEnergy subsidiaries recognize in earnings the unrealized losses on AFS securities held in its NDT as OTTI. A decline in the value of FirstEnergy’s NDT or a significant escalation in estimated decommissioning costs could result in additional funding requirements. During the three months ended March 31, 2014, no contributions were made to the NDT.

Interest Rate Risk

FirstEnergy recognizes net actuarial gains or losses for its pension and OPEB plans in the fourth quarter of each fiscal year. A primary factor contributing to these actuarial gains and losses are changes in the discount rates used to value pension and OPEB obligations as of the measurement date of December 31 and the difference between expected and actual returns on the plans' assets. At this time FirstEnergy is unable to determine or project the mark-to-market adjustment that may be recorded as of December 31, 2014.

CREDIT RISK

Credit risk is defined as the risk that a counterparty to a transaction will be unable to fulfill its contractual obligations. FirstEnergy evaluates the credit standing of a prospective counterparty based on the prospective counterparty's financial condition. FirstEnergy may impose specified collateral requirements and use standardized agreements that facilitate the netting of cash flows. FirstEnergy monitors the financial conditions of existing counterparties on an ongoing basis. An independent risk management group oversees credit risk.

Wholesale Credit Risk

FirstEnergy measures wholesale credit risk as the replacement cost for derivatives in power, natural gas, coal and emission allowances, adjusted for amounts owed to, or due from, counterparties for settled transactions. The replacement cost of open positions represents unrealized gains, net of any unrealized losses, where FirstEnergy has a legally enforceable right of set-off. FirstEnergy monitors and manages the credit risk of wholesale marketing, risk management and energy transacting operations through credit policies and procedures, which include an established credit approval process, daily monitoring of counterparty credit limits, the use of credit mitigation measures such as margin, collateral and the use of master netting agreements. FirstEnergy's portfolio of energy contracts has a current weighted average risk rating of A (S&P) for energy contract counterparties.

Retail Credit Risk

FirstEnergy's principal retail credit risk exposure relates to its competitive electricity activities, which serve residential, commercial and industrial companies. Retail credit risk results when customers default on contractual obligations or fail to pay for service rendered. This risk represents the loss that may be incurred due to the nonpayment of customer accounts receivable balances, as well as the loss from the resale of energy previously committed to serve customers.

Retail credit risk is managed through established credit approval policies, monitoring customer exposures and the use of credit mitigation measures such as deposits in the form of LOCs, cash or prepayment arrangements.

Retail credit quality is affected by the economy and the ability of customers to manage through unfavorable economic cycles and other market changes. If the business environment were to be negatively affected by changes in economic or other market conditions, FirstEnergy's retail credit risk may be adversely impacted.

OUTLOOK

STATE REGULATION

Each of the Utilities' retail rates, conditions of service, issuance of securities and other matters are subject to regulation in the states in which it operates - in Maryland by the MDPSC, in Ohio by the PUCO, in New Jersey by the NJBPU, in Pennsylvania by the PPUC, in West Virginia by the WVPSC and in New York by the NYPSC. The transmission operations of PE in Virginia are subject to certain regulations of the VSCC. In addition, under Ohio law, municipalities may regulate rates of a public utility, subject to appeal to the PUCO if not acceptable to the utility.

As competitive retail electric suppliers serving retail customers primarily in Ohio, Pennsylvania, Illinois, Michigan, New Jersey and Maryland, FES and AE Supply are subject to state laws applicable to competitive electric suppliers in those states, including affiliate codes of conduct that apply to FES, AE Supply and their public utility affiliates. In addition, if any of the FirstEnergy affiliates were to engage in the construction of significant new transmission or generation facilities, depending on the state, they may be required to obtain state regulatory authorization to site, construct and operate the new transmission or generation facility.

MARYLAND

PE provides SOS pursuant to a combination of settlement agreements, MDPSC orders and regulations, and statutory provisions. SOS supply is competitively procured in the form of rolling contracts of varying lengths through periodic auctions that are overseen by the MDPSC and a third party monitor. Although settlements with respect to residential SOS for PE customers expired on December 31, 2012, by statute, service continues in the same manner unless changed by order of the MDPSC. The settlement provisions relating to non-residential SOS have also expired; however, by MDPSC order, the terms of service remain in place unless PE requests or the MDPSC orders a change. PE recovers its costs plus a return for providing SOS.

The Maryland legislature in 2008 adopted a statute codifying the EmPOWER Maryland goals to reduce electric consumption by 10% and reduce electricity demand by 15%, in each case by 2015. PE's initial plan submitted in compliance with the statute was approved in 2009 and covered 2009-2011, the first three years of the statutory period. Expenditures were originally estimated to be approximately $101 million for the PE programs for the entire period of 2009-2015. Meanwhile, after extensive meetings with the MDPSC Staff and other stakeholders, on August 31, 2011, PE filed a new comprehensive plan for the second three year period, 2012-2014, that includes additional and improved programs. The 2012-2014 plan is expected to cost approximately $66 million out of the original $101 million estimate for the entire EmPOWER program. On December 22, 2011, the MDPSC issued an order approving PE's second plan with various modifications and follow-up assignments. PE continues to recover program costs subject

to a five-year amortization. Maryland law only allows for the utility to recover lost distribution revenue attributable to energy efficiency or demand reduction programs through a base rate case proceeding, and to date such recovery has not been sought or obtained by PE.

Pursuant to a bill passed by the Maryland legislature in 2011, the MDPSC adopted rules, effective May 28, 2012, that create specific requirements related to a utility's obligation to address service interruptions, downed wire response, customer communication, vegetation management, equipment inspection, and annual reporting. The MDPSC will be required to assess each utility's compliance with the new rules, and may assess penalties of up to $25,000 per day, per violation. The new rules set utility-specific SAIDI and SAIFI targets for 2012-2015; prescribe detailed tree-trimming requirements, outage restoration and downed wire response deadlines; and impose other reliability and customer satisfaction requirements. PE has advised the MDPSC that compliance with the new rules is expected to increase costs by approximately $106 million over the period 2012-2015. On April 1, 2013, the Maryland electric utilities, including PE, filed their first annual reports on compliance with the new rules. The MDPSC conducted a hearing on August 20, 2013 to discuss the reports, after which an order was issued on September 3, 2013, which accepted PE's filing and the operational changes proposed therein. PE filed its second annual report on March 27, 2014.

Following a "derecho" storm through the region on June 29, 2012, the MDPSC convened a new proceeding to consider matters relating to the electric utilities' performance in responding to the storm. Hearings on the matter were conducted in September 2012. Concurrently, Maryland's governor convened a special panel to examine possible ways to improve the resilience of the electric distribution system. On October 3, 2012, that panel issued a report calling for various measures including: acceleration and expansion of some of the requirements contained in the reliability standards which had become final on May 28, 2012; selective increased investment in system hardening; creation of separate recovery mechanisms for the costs of those changes and investments; and penalties or bonuses on returns earned by the utilities based on their reliability performance. On February 27, 2013, the MDPSC issued an order (the February 27 Order) requiring the utilities to submit several reports over a series of months, relating to the costs and benefits of making further system and staffing enhancements in order to attempt to reduce storm outage durations. The order further requires the Staff of the MDPSC to report on possible performance-based rate structures and to propose additional rules relating to feeder performance standards, outage communication and reporting, and sharing of special needs customer information. PE has responded to the requirements in the order consistent with the schedule set forth therein. PE's final filing on September 3, 2013, discussed the steps needed to harden the utility's system in order to attempt to achieve various levels of storm response speed described in the February 27 Order, and projected that it would expect to make approximately $2.7 billion in infrastructure investments over 15 years to attempt to achieve the quickest level of response for the largest storm projected in the February 27 Order. The MDPSC has ordered that certain reports of its Staff relating to these matters be provided by July 1, 2014, and otherwise has not issued a schedule for further proceedings in this matter.

NEW JERSEY

JCP&L currently provides BGS for retail customers who do not choose a third party EGS and for customers of third party EGSs that fail to provide the contracted service. The supply for BGS, which is comprised of two components, is provided through contracts procured through separate, annually held descending clock auctions, the results of which are approved by the NJBPU. One BGS component and auction, reflecting hourly real time energy prices, is available for larger commercial and industrial customers. The other BGS component and auction, providing a fixed price service, is intended for smaller commercial and residential customers. All New Jersey EDCs participate in this competitive BGS procurement process and recover BGS costs directly from customers as a charge separate from base rates.

On September 7, 2011, the Division of Rate Counsel filed a Petition with the NJBPU asserting that it has reason to believe that JCP&L is earning an unreasonable return on its New Jersey jurisdictional rate base. The Division of Rate Counsel requested that the NJBPU order JCP&L to file a base rate case petition so that the NJBPU may determine whether JCP&L's current rates for electric service are just and reasonable. In its written Order issued July 31, 2012, the NJBPU found that a base rate proceeding "will assure that JCP&L's rates are just and reasonable and that JCP&L is investing sufficiently to assure the provision of safe, adequate and proper utility service to its customers" and ordered JCP&L to file a base rate case using a historical 2011 test year. The rate case petition was filed on November 30, 2012. In the filing, JCP&L requested approval to increase its revenues by approximately $31.5 million and reserved the right to update the filing to include costs associated with the impact of Hurricane Sandy. The NJBPU transmitted the case to the New Jersey Office of Administrative Law for further proceedings and an ALJ has been assigned. On February 22, 2013, JCP&L updated its filing to request recovery of $603 million of distribution-related Hurricane Sandy restoration costs, resulting in increasing the total revenues requested to approximately $112 million. On June 14, 2013, JCP&L further updated its filing to: 1) include the impact of a depreciation study which had been directed by the NJBPU; 2) remove costs associated with 2012 major storms, consistent with the NJBPU orders establishing a generic proceeding to review 2011 and 2012 major storm costs (discussed below); and 3) reflect other revisions to JCP&L's filing. That filing represented an increase of approximately $20.6 million over the revenues produced by existing base rates. Testimony has also been filed in the matter by the Division of Rate Counsel and several other intervening parties in opposition to the base rate increase JCP&L requested. Specifically, the testimony of the Division of Rate Counsel's witnesses recommended that revenues produced by JCP&L's base rates for electric service be reduced by approximately $202.8 million (such amount did not address the revenue requirements associated with major storm events of 2011 and 2012, which are subject to review in the generic proceeding). JCP&L filed rebuttal testimony in response to the testimony of other parties on August 7, 2013. Hearings in the rate case have concluded. In the initial briefs of the parties filed on January 27, 2014, the Division of Rate Counsel recommended that base rate revenues be reduced by $214.9 million while the

NJBPU Staff recommended a $207.4 million reduction (such amounts do not address the revenue requirements associated with the major storm events of 2011 and 2012). Reply briefs were filed on February 24, 2014. The matter is pending before the ALJ.

On March 20, 2013, the NJBPU ordered that a generic proceeding be established to investigate the prudence of costs incurred by all New Jersey utilities for service restoration efforts associated with the major storm events of 2011 and 2012. The Order provided that if any utility had already filed a proceeding for recovery of such storm costs, to the extent the amount of approved recovery had not yet been determined, the prudence of such costs would be reviewed in the generic proceeding. On May 31, 2013, the NJBPU clarified its earlier order to indicate that the 2011 major storm costs would be reviewed expeditiously in the generic proceeding with the goal of maintaining the base rate case schedule established by the ALJ where recovery of such costs would be addressed. The NJBPU further indicated in the May 31 clarification that it would review the 2012 major storm costs in the generic proceeding and the recovery of such costs would be considered through a Phase II in the existing base rate case or through another appropriate method to be determined at the conclusion of the generic proceeding. On June 21, 2013, consistent with NJBPU's orders, JCP&L filed the detailed report in support of recovery of major storm costs with the NJBPU. On February 24, 2014, a Stipulation was filed with the NJBPU by JCP&L, the Division of Rate Counsel and NJBPU Staff which will allow recovery of $736 million of JCP&L's $744 million of costs related to the significant weather events of 2011 and 2012. As a result, FirstEnergy recorded a regulatory asset impairment charge of approximately $8 million (pre-tax) as of December 31, 2013. By its Order of March 19, 2014, the NJBPU approved the Stipulation of Settlement and on March 25, 2014, transmitted a copy of that Order to the Office of Administrative Law so that “actual recovery of the 2011 costs can be determined in relation to the pending base rate case.” Recovery of 2011 storm costs will be addressed in the pending base rate case; recovery of 2012 storm costs will be determined by the NJBPU.

Pursuant to a formal Notice issued by the NJBPU on September 14, 2011, public hearings were held in September 2011 to solicit comments regarding the state of preparedness and responsiveness of New Jersey's EDCs prior to, during, and after Hurricane Irene, with additional hearings held in October 2011. Additionally, the NJBPU accepted written comments through October 28, 2011 related to this inquiry. On December 14, 2011, the NJBPU Staff filed a report of its preliminary findings and recommendations with respect to the electric utility companies' planning and response to Hurricane Irene and the October 2011 snowstorm. The NJBPU selected a consultant to further review and evaluate the New Jersey EDCs' preparation and restoration efforts with respect to Hurricane Irene and the October 2011 snowstorm, and the consultant's report was submitted to and subsequently accepted by the NJBPU on September 12, 2012. JCP&L submitted written comments on the report. On January 24, 2013, based upon recommendations in its consultant's report, the NJBPU ordered the New Jersey EDCs to take a number of specific actions to improve their preparedness and responses to major storms. The order includes specific deadlines for implementation of measures with respect to preparedness efforts, communications, restoration and response, post event and underlying infrastructure issues. On May 31, 2013, the NJBPU ordered that the New Jersey EDCs implement a series of new communications enhancements intended to develop more effective communications among EDCs, municipal officials, customers and the NJBPU during extreme weather events and other expected periods of extended service interruptions. The new requirements include making information regarding estimated times of restoration available on the EDC's web sites and through other technological expedients. JCP&L is implementing the required measures consistent with the schedule set out in the above NJBPU's orders.

OHIO

The Ohio Companies primarily operate under an ESP, which expires on May 31, 2014. The material terms of the ESP include:

- Generation supplied through a CBP;
- A load cap of no less than 80%, so that no single supplier is awarded more than 80% of the tranches, which also applies to tranches assigned post-auction;
- A 6% generation discount to certain low income customers provided by the Ohio Companies through a bilateral wholesale contract with FES (FES is one of the wholesale suppliers to the Ohio Companies);
- No increase in base distribution rates through May 31, 2014; and
- A new distribution rider, Rider DCR, to recover a return of, and on, capital investments in the delivery system.

The Ohio Companies also agreed not to recover from retail customers certain costs related to transmission cost allocations by PJM as a result of ATSI's integration into PJM for the longer of the five-year period from June 1, 2011 through May 31, 2016 or when the amount of costs avoided by customers for certain types of products totals $360 million, subject to the outcome of certain PJM proceedings. The Ohio Companies also agreed to establish a $12 million fund to assist low income customers over the term of the ESP and agreed to additional matters related to energy efficiency and alternative energy requirements.

On April 13, 2012, the Ohio Companies filed an application with the PUCO to essentially extend the terms of their ESP for two years. The ESP 3 Application was approved by the PUCO on July 18, 2012. Several parties timely filed applications for rehearing. The PUCO issued an Entry on Rehearing on January 30, 2013 denying all applications for rehearing. Notices of appeal to the Supreme Court of Ohio were filed by two parties in the case, Northeast Ohio Public Energy Council and the ELPC. While briefing has been completed, the matter has not yet been scheduled for oral argument.

As approved, the ESP 3 plan continues certain provisions from the current ESP including:

- Continuing the current base distribution rate freeze through May 31, 2016;
- Continuing to provide economic development and assistance to low-income customers for the two-year plan period at levels established in the existing ESP;
- A 6% generation rate discount to certain low income customers provided by the Ohio Companies through a bilateral wholesale contract with FES (FES is one of the wholesale suppliers to the Ohio Companies);
- Continuing to provide power to non-shopping customers at a market-based price set through an auction process; and
- Continuing Rider DCR that allows continued investment in the distribution system for the benefit of customers.

As approved, the ESP 3 plan provides additional provisions, including:

- Securing generation supply for a longer period of time by conducting an auction for a three-year period rather than a one-year period, in each of October 2012 and January 2013, to mitigate any potential price spikes for the Ohio Companies' utility customers who do not switch to a competitive generation supplier; and
- Extending the recovery period for costs associated with purchasing RECs mandated by SB221 through the end of the new ESP 3 period. This is expected to initially reduce the monthly renewable energy charge for all non-shopping utility customers of the Ohio Companies by spreading out the costs over the entire ESP period.

Under SB221, the Ohio Companies are required to implement energy efficiency programs that achieve a total annual energy savings equivalent of approximately 1,211 GWHs in 2012 (an increase of 416,000 MWHs over 2011 levels), 1,726 GWHs in 2013, 2,306 GWHs in 2014 and 2,903 GWHs for each year thereafter through 2025. The Ohio Companies were also required to reduce peak demand in 2009 by 1%, with an additional 0.75% reduction each year thereafter through 2018. On May 15, 2013, the Ohio Companies filed their 2012 Status Update Report in which they indicated compliance with 2012 statutory energy efficiency and peak demand reduction benchmarks.

In accordance with PUCO Rules and a PUCO directive, on July 31, 2012 the Ohio Companies filed their three-year portfolio plan for the period January 1, 2013 through December 31, 2015. Estimated costs for the three Ohio Companies' plans total approximately $250 million over the three-year period, which is expected to be recovered in rates to the extent approved by the PUCO. Hearings were held with the PUCO in October 2012. On March 20, 2013, the PUCO approved the three-year portfolio plan for 2013-2015. Applications for rehearing were filed by the Ohio Companies and several other parties on April 19, 2013. The Ohio Companies filed their request for rehearing primarily to challenge the PUCO's decision to mandate that they offer planned energy efficiency resources into PJM's base residual auction. On May 15, 2013, the PUCO granted the applications for rehearing for the sole purpose of further consideration of the matter. On July 17, 2013, the PUCO denied the Ohio Companies' application for rehearing, in part, but authorized the Ohio Companies to receive 20% of any revenues obtained from bidding energy efficiency and demand response reserves into the PJM auction. The PUCO also confirmed that the Ohio Companies can recover PJM costs and applicable penalties associated with PJM auctions, including the costs of purchasing replacement capacity from PJM incremental auctions, to the extent that such costs or penalties are prudently incurred. On August 16, 2013, ELPC and OCC filed applications for rehearing under the basis that the PUCO's authorization for the Ohio Companies to share in the PJM revenues was unlawful. The PUCO granted rehearing on September 11, 2013 for the sole purpose of further consideration of the issue.

On September 16, 2013, the Ohio Companies filed with the Supreme Court of Ohio a notice of appeal of the PUCO's July 17, 2013 Entry on Rehearing related to energy efficiency, alternative energy, and long-term forecast rules stating that the rules issued by the PUCO are inconsistent with and are not supported by statutory authority. On October 23, 2013, the PUCO filed a motion to dismiss the appeal. The Ohio Companies' response was filed on November 4, 2013. The motion is still pending and additional briefing has followed. While briefing has been completed, the matter has not been scheduled for oral argument.

SB221 requires electric utilities and electric service companies in Ohio to serve part of their load from renewable energy resources measured by an annually increasing percentage amount through 2024. The Ohio Companies conducted RFPs in 2009, 2010 and 2011 to secure RECs to help meet the renewable energy requirements established under SB221. In September 2011, the PUCO opened a docket to review the Ohio Companies' alternative energy recovery rider through which the Ohio Companies recover the costs of acquiring these RECs and selected auditors to perform a financial and management audit. Final audit reports filed with the PUCO generally supported the Ohio Companies' approach to procurement of RECs, but also recommended the PUCO examine, for possible disallowance, certain costs associated with the procurement of in-state renewable obligations that the auditor characterized as excessive. Following the hearing, the PUCO issued an Opinion and Order on August 7, 2013 approving the Ohio Companies' acquisition process and their purchases of RECs to meet statutory mandates in all instances except for part of the purchases arising from one auction and directing the Ohio Companies to credit non-shopping customers in the amount of $43.3 million, plus interest, and to file tariff schedules reflecting the refund and interest costs within 60 days following the issuance of a final appealable order on the basis that the Ohio Companies did not prove such purchases were prudent. The Ohio Companies, along with other parties, timely filed applications for rehearing on September 6, 2013. On December 18, 2013, the PUCO denied all of the applications for rehearing. Based on the PUCO ruling a regulatory charge of approximately $51 million, including interest, was recorded in the fourth quarter of 2013. On December 24, 2013, the Ohio Companies filed a notice of appeal and a motion for stay of the PUCO's order with the Supreme Court of Ohio. On February 10, 2014, the Supreme Court of Ohio granted the Ohio Companies' motion for stay, which went into effect on February 14, 2014. On February 18, 2014, the Office of Consumers' Counsel and the ELPC also filed appeals of the PUCO's order. The Ohio Companies filed their merit brief with the Supreme Court of Ohio on March 6, 2014. On April 15, 2014, the Supreme Court of Ohio stayed the briefing schedule pending the court's resolution of the Ohio Companies' motion to seal certain confidential portions of the appendix and supplement to their merit brief.

The Ohio Companies conducted an RFP in 2013 to cover their all-state SREC and their in-state and all-state REC compliance obligations. On April 15, 2014, the Ohio Companies reported that they met all of their annual renewable energy resource requirements for reporting year 2013.

The PUCO instituted a statewide investigation on December 12, 2012 to evaluate the vitality of the competitive retail electric service market in Ohio. The PUCO provided interested stakeholders the opportunity to comment on twenty-two questions. The questions posed are categorized as market design and corporate separation. The Ohio Companies timely filed their comments on March 1, 2013, and filed reply comments on April 5, 2013. On June 5, 2013, the PUCO requested additional comments and reply comments on the topics of market design and corporate separation, which the Ohio Companies timely filed on July 8, 2013 and July 22, 2013, respectively. The PUCO held a series of workshops throughout 2013, which included an en banc workshop on December 11, 2013. The PUCO Staff filed a report on January 16, 2014, which contained a limited discussion of the workshops and the PUCO Staff's recommendations. The Ohio Companies submitted comments on February 6, 2014 and Reply Comments on February 20, 2014. The PUCO issued its Order in this matter on March 26, 2014, which included a wide range of issues such as, maintaining SSO service in its current form, requiring corporate separation audits of all EDUs, establishing a market development working group, and ordering changes to the bill format. The Ohio Companies filed their Application for Rehearing on April 25, 2014. The Ohio Companies filed their memorandum contra applications for rehearing of other stakeholders on May 5, 2014.

On April 9, 2014, the PUCO initiated a generic investigation of marketing practices in the competitive retail electric service market, with a focus on the marketing of fixed-price or guaranteed percent-off SSO rate contracts where there is a provision that permits the pass-through of new or additional charges.

PENNSYLVANIA

The Pennsylvania Companies currently operate under DSPs that expire on May 31, 2015, and provide for the competitive procurement of generation supply for customers that do not choose an alternative EGS or for customers of alternative EGSs that fail to provide the contracted service. The default service supply is currently provided by wholesale suppliers through a mix of long-term and short-term contracts procured through descending clock auctions, competitive requests for proposals and spot market purchases. On November 4, 2013, the Pennsylvania Companies filed a DSP that will provide the method by which they will procure the supply for their default service obligations for the period of June 1, 2015 through May 31, 2017. The Pennsylvania Companies proposed programs call for quarterly descending clock auctions to procure 3, 12, 24, and 48-month energy contracts, as well as, one RFP seeking 2-year contracts to secure SRECs for ME, PN, and Penn. The Pennsylvania Companies have reached a settlement with all parties on all issues raised in the case with the exception of the treatment of NITS charges. On May 6, 2014, the ALJ issued a Recommended Decision recommending adoption of the settlement without modification and the denial of several parties' request for non-bypassable treatment of NITS charges. A final order is expected from the PPUC by August 2014.

The PPUC entered an Order on March 3, 2010 that denied the recovery of marginal transmission losses through the TSC rider for the period of June 1, 2007 through March 31, 2008, and directed ME and PN to submit a new tariff or tariff supplement reflecting the removal of marginal transmission losses from the TSC. Pursuant to a plan approved by the PPUC, ME and PN refunded those amounts to customers over a 29-month period that began in January of 2011. On appeal, the Commonwealth Court affirmed the PPUC's Order to the extent that it holds that line loss costs are not transmission costs and, therefore, the approximately $254 million in marginal transmission losses and associated carrying charges for the period prior to January 1, 2011, are not recoverable under ME's and PN's TSC riders. The Pennsylvania Supreme Court denied ME's and PN's Petition for Allowance of Appeal and the Supreme Court of the United States denied ME's and PN's Petition for Writ of Certiorari. ME and PN also filed a complaint in the U.S. District Court for the Eastern District of Pennsylvania to obtain an order that would enjoin enforcement of the PPUC and Pennsylvania court orders under a theory of federal preemption on the question of retail rate recovery of the marginal transmission loss charges. On September 30, 2013, the U.S. District Court granted the PPUC's motion to dismiss. As a result of the U.S. District Court's decision, FirstEnergy recorded a regulatory asset impairment charge of approximately $254 million (pre-tax) in the quarter ended September 30, 2013. The balance of marginal transmission losses was fully refunded to customers by the second quarter of 2013. On October 29, 2013, ME and PN filed a Notice of Appeal of the U.S. District Court's decision to dismiss the complaint with the United States Court of Appeals for the Third Circuit. Oral argument was held on April 8, 2014, and, at the end of the argument, the Third Circuit directed ME and PN, and the PPUC, each to submit a brief on April 16, 2014 on the question of whether it is possible to waive the preemptive effect of FERC's classification of line loss charges as transmission charges. On April 16, 2014, ME and PN, the PPUC, and the Pennsylvania Industrials each submitted briefs on the Third Circuit's questions.

Pennsylvania adopted Act 129 in 2008 to address issues such as: energy efficiency and peak load reduction; generation procurement; time-of-use rates; smart meters; and alternative energy. Among other things, Act 129 required utilities to file with the PPUC an energy efficiency and peak load reduction plan (EE&C Plan) by July 1, 2009, setting forth the utilities' plans to reduce energy consumption by a minimum of 1% and 3% by May 31, 2011 and May 31, 2013, respectively, and to reduce peak demand by a minimum of 4.5% by May 31, 2013. Act 129 provides for potentially significant financial penalties to be assessed on utilities that fail to achieve the required reductions in consumption and peak demand. The Pennsylvania Companies submitted a report on November 15, 2011, in which they reported on their compliance with statutory May 31, 2011, energy efficiency benchmarks. ME, PN and Penn achieved the 2011 benchmarks; however WP did not. WP could be subject to a statutory penalty of between $1 and $20 million. On November 15, 2013, the Pennsylvania Companies submitted their energy efficiency and peak demand reduction report for the period ending May 31, 2013, in which they indicated that all of the Pennsylvania Companies met their statutory

requirements. On March 20, 2014, the PPUC issued an Order initially determining that ME, PN and Penn achieved the 2011 and 2013 statutory energy efficiency benchmarks. The PPUC also initially determined that WP is not in compliance with the 2011 statutory energy efficiency benchmarks but is in compliance with the 2013 energy efficiency benchmarks. As such, the PPUC, with regards to WP's compliance with the 2011 statutory benchmarks, referred the matter to the PPUC Bureau of Investigation and Enforcement for the initiation of an appropriate proceeding no later than May 30, 2014 to investigate whether WP is in compliance with the 2011 statutory benchmarks and whether WP is subject to statutory penalties. The PPUC also ordered that the initial determination will be deemed final unless any petitions challenging its initial determination are filed within 20 days of the Order. On April 9, 2014, WP filed its petition challenging the PPUC's initial determination arguing, among other things, that the May 2011 target was not mandatory and WP is in compliance because it achieved its May 2013 targets. On April 21, 2014, WP filed an appeal with the Commonwealth Court of Pennsylvania in which it challenged the PPUC's initial finding of a violation of Act 129 on due process grounds. On that same day, the Bureau of Investigation and Enforcement, consistent with the PPUC's March 20, 2014 Order, initiated a proceeding by filing a Complaint against WP in which it alleges that WP violated Act 129 and recommends a penalty in the amount of $11.4 million. The Pennsylvania Companies have 20 days in which to respond to the Complaint. A prehearing conference is scheduled for May 9, 2014 at which time a procedural schedule for this matter is expected to be established.

Pursuant to Act 129, the PPUC was charged with reviewing the cost effectiveness of energy efficiency and peak demand reduction programs. The PPUC found the energy efficiency programs to be cost effective and in an Order entered on August 3, 2012, the PPUC directed all of the electric utilities in Pennsylvania to submit by November 15, 2012, a Phase II EE&C Plan that would be in effect for the period June 1, 2013 through May 31, 2016. The PPUC has deferred ruling on the need to create peak demand reduction targets until it receives more information from the EE&C statewide evaluator. Based upon information received, the PPUC has not included a peak demand reduction requirement in the Phase II plans. The Pennsylvania Companies filed their Phase II plans and supporting testimony in November 2012. On January 16, 2013, the Pennsylvania Companies reached a settlement with all but one party on all but one issue. The settlement provides for the Pennsylvania Companies to meet with interested parties to discuss ways to expand upon the EE&C programs and incorporate any such enhancements after the plans are approved, provided that these enhancements will not jeopardize the Pennsylvania Companies' compliance with their required targets or exceed the statutory spending caps. On February 6, 2013, the Pennsylvania Companies filed revised Phase II EE&C Plans to conform the plans to the terms of the settlement. Total costs of these plans are expected to be approximately $234 million. All such costs are expected to be recoverable through the Pennsylvania Companies reconcilable Phase II EE&C Plan C riders. The remaining issue, raised by a natural gas company, involved the recommendation that the Pennsylvania Companies include in their plans incentives for natural gas space and water heating appliances. On March 14, 2013, the PPUC approved the 2013-2016 EE&C plans of the Pennsylvania Companies, adopting the settlement, and rejecting the natural gas companies recommendations.

In addition, Act 129 required utilities to file a SMIP with the PPUC. On December 31, 2012, the Pennsylvania Companies filed their Smart Meter Deployment Plan. The Deployment Plan requested deployment of approximately 98.5% of the smart meters to be installed over the period 2013 to 2019, and the remaining meters in difficult to reach locations to be installed by 2022, with an estimated life cycle cost of about $1.25 billion. Such costs are expected to be recovered through the Pennsylvania Companies' PPUC-approved Riders SMT-C. Evidentiary hearings were held and briefs were submitted by the Pennsylvania Companies and the OCA. On November 8, 2013, the ALJ issued a Recommended Decision recommending that the Pennsylvania Companies' Deployment Plan be adopted with certain modifications, including, among other things, that the Pennsylvania Companies perform further benchmarking analyses on their costs and hire an independent consultant to perform further analyses on potential savings. On December 2, 2013, the Pennsylvania Companies submitted exceptions in which they challenged, among other things, certain recommendations in the ALJ's decision, and requested approval of a modification to the deployment schedule so as to allow the entire Penn smart meter system (170,000 meters) to be built by the end of 2015, instead of the original proposed installation of 60,000 meters by the end of 2016. The OCA took exception to one issue and both parties filed replies to exceptions on December 12, 2013. In its March 6, 2014 Opinion and Order, the PPUC rejected the OCA's exception and many of the ALJ's recommendations, including the recommendation to hire an independent consultant and the disallowance of $5.1 million of customer information system costs, and affirmed the ALJ's recommendation on the accounting treatment for legacy meter costs. The PPUC also directed the Pennsylvania Companies to file an amendment to the Deployment Plan within thirty days of the Order with sufficient supporting documentation for proper evaluation if the Pennsylvania Companies intend to pursue an accelerated deployment schedule, and the PPUC indicated that it would establish an expedited procedural schedule and rule on the filing within 90 days of the March 6, 2014 Order. The Pennsylvania Companies filed an amended Deployment Plan on March 19, 2014, to which, the OCA filed exceptions arguing that the amended plan failed to: 1) list certain potential cost savings categories that are to be considered by the Pennsylvania Companies; and 2) follow proper procedure. On April 7, 2014, the Pennsylvania Companies filed a reply to OCA's exceptions explaining why they should be rejected. A prehearing conference was held on April 25, 2014, and a procedural schedule was established that is expected to allow the PPUC to issue an order by June 5, 2014.

In the PPUC Order approving the FirstEnergy and AE merger, the PPUC announced that a separate statewide investigation into Pennsylvania's retail electricity market would be conducted with the goal of making recommendations for improvements to ensure that a properly functioning and workable competitive retail electricity market exists in the state. On April 29, 2011, the PPUC entered an Order initiating the investigation and requesting comments from interested parties on eleven directed questions concerning retail markets in Pennsylvania to investigate both intermediate and long term plans that could be adopted to further foster the competitive markets, and to explore the future of default service in Pennsylvania following the expiration of the upcoming DSPs on May 31, 2015. A final order was issued on February 15, 2013, providing recommendations on the entities to provide default service, the products to be offered, billing options, customer education, and licensing fees and assessments, among other items. Subsequently,

the PPUC established five workgroups and one comment proceeding in order to seek resolution of certain matters and to clarify certain obligations that arose from that order.

The PPUC issued a Proposed Rulemaking Order on August 25, 2011, which proposed a number of substantial modifications to the current Code of Conduct regulations that were promulgated to provide competitive safeguards to the competitive retail electricity market in Pennsylvania. The proposed changes include, but are not limited to: an EGS may not have the same or substantially similar name as the EDC or its corporate parent; EDCs and EGSs would not be permitted to share office space and would need to occupy different buildings; EDCs and affiliated EGSs could not share employees or services, except certain corporate support, emergency, or tariff services (the definition of "corporate support services" excludes items such as information systems, electronic data interchange, strategic management and planning, regulatory services, legal services, or commodities that have been included in regulated rates at less than market value); and an EGS must enter into a trademark agreement with the EDC before using its trademark or service mark. The Proposed Rulemaking Order was published on February 11, 2012, and comments were filed by the Pennsylvania Companies and FES on March 27, 2012. If implemented these rules could require a significant change in the ways FES and the Pennsylvania Companies do business in Pennsylvania, and could possibly have an adverse impact on their results of operations and financial condition. Pennsylvania's Independent Regulatory Review Commission subsequently issued comments on the proposed rulemaking on April 26, 2012, which called for the PPUC to further justify the need for the proposed revisions by citing a lack of evidence demonstrating a need for them. The House Consumer Affairs Committee of the Pennsylvania General Assembly also sent a letter to the Independent Regulatory Review Commission on July 12, 2012, noting its opposition to the proposed regulations as modified. On March 24, 2014, the PPUC issued a letter withdrawing the Proposed Rulemaking.

WEST VIRGINIA

MP and PE currently operate under a Joint Stipulation and Agreement of Settlement reached with the other parties and approved by the WVPSC in June 2010 that provided for:

- $40 million annualized base rate increases effective June 29, 2010;
- Deferral of February 2010 storm restoration expenses over a maximum five-year period;
- Additional $20 million annualized base rate increase effective in January 2011;
- Decrease of $20 million in ENEC rates effective January 2011, providing for deferral of related costs for later recovery in 2012; and
- Moratorium on filing for further increases in base rates before December 1, 2011, except under specified circumstances.

The WVPSC opened a general investigation into the June 29, 2012, derecho windstorm with data requests for all utilities. A public meeting for presentations on utility responses and restoration efforts was held on October 22, 2012 and two public input hearings have been held. The WVPSC issued an Order in this matter on January 23, 2013 closing the proceeding and directing electric utilities to file a vegetation management plan within six months and to propose a cost recovery mechanism. This Order also requires MP and PE to file a status report regarding improvements to their storm response procedures by the same date. On July 23, 2013, MP and PE filed their vegetation management plans, which provided for recovery of costs through a surcharge mechanism. A hearing was held on December 3, 2013, and briefing followed. The WVPSC issued an order on April 14, 2014 approving the plan, stating rate recovery will be addressed in the base rate case filed on April 30, 2014. In the interim, MP and PE are authorized to defer all costs associated with the plan.

MP and PE filed their Resource Plan with the WVPSC in August 2012 detailing both supply and demand forecasts and noting a substantial capacity deficiency. MP and PE filed a Petition for approval of a Generation Resource Transaction with the WVPSC in November 2012 that proposed a net ownership transfer of 1,476 MW of coal-fired generation capacity to MP. The proposed transfer involved MP's acquisition of the remaining ownership of the Harrison Power Station from AE Supply and the sale of MP's minority interest in the Pleasants Power Station to AE Supply. FERC authorized the transfers on April 23, 2013 and the financing on May 13, 2013. A Joint Settlement Agreement was filed by the majority of parties on August 21, 2013. On October 7, 2013, the WVPSC authorized the transaction, with certain conditions, and on October 9, 2013, the transaction closed resulting in MP recording a pre-tax impairment charge of approximately $322 million in the fourth quarter of 2013 to reduce the net book value of the Harrison Power Station to the amount that was permitted to be included in jurisdictional rate base. Concurrently, MP recognized a regulatory liability of approximately $23 million representing refunds to customers associated with the excess purchase price received by MP above the net book value of MP's minority interest in the Pleasants Power Station. The transaction resulted in AE Supply receiving net consideration of $1.1 billion and MP's assumption of a $73.5 million pollution control note. The $1.1 billion net consideration was originally financed by MP through an equity infusion from FE of approximately $527 million and a note payable to AE Supply of approximately $573 million. The note payable to AE Supply was paid in the fourth quarter of 2013. The settlement also required MP and PE to file a base rate case by April 30, 2014. On November 6, 2013, the WVCAG petitioned for appeal with the Supreme Court of Appeals of West Virginia. MP and PE filed their response to the WVCAG petition on December 27, 2013 and WVCAG filed its reply on January 16, 2014. The Supreme Court of Appeals of West Virginia held oral arguments on March 5, 2014. On April 23, 2014 the Supreme Court of Appeals of West Virginia delivered an Opinion affirming the WVPSC order approving the Generation Resource Transaction.

On April 30, 2014, MP and PE filed a rate case requesting a base rate increase of approximately $96 million, or 9.3%. The filing also included a surcharge to recover costs of MP's and PE's vegetation management program in the amount of approximately $48

million. The proposed total rate increase request, including the cost of the vegetation management program, is approximately $144 million, or 14%. MP and PE anticipate a decision from the WVPSC in February 2015.

RELIABILITY MATTERS

Federally-enforceable mandatory reliability standards apply to the bulk electric system and impose certain operating, record-keeping and reporting requirements on the Utilities, FES, AE Supply, FG, FENOC, ATSI and TrAIL. NERC is the ERO designated by FERC to establish and enforce these reliability standards, although NERC has delegated day-to-day implementation and enforcement of these reliability standards to eight regional entities, including RFC. All of FirstEnergy's facilities are located within the RFC region. FirstEnergy actively participates in the NERC and RFC stakeholder processes, and otherwise monitors and manages its companies in response to the ongoing development, implementation and enforcement of the reliability standards implemented and enforced by RFC.

FirstEnergy believes that it is in compliance with all currently-effective and enforceable reliability standards. Nevertheless, in the course of operating its extensive electric utility systems and facilities, FirstEnergy occasionally learns of isolated facts or circumstances that could be interpreted as excursions from the reliability standards. If and when such items are found, FirstEnergy develops information about the item and develops a remedial response to the specific circumstances, including in appropriate cases “self-reporting” an item to RFC. Moreover, it is clear that the NERC, RFC and FERC will continue to refine existing reliability standards as well as to develop and adopt new reliability standards. Any inability on FirstEnergy's part to comply with the reliability standards for its bulk power system could result in the imposition of financial penalties that could have a material adverse effect on its financial condition, results of operations and cash flows.

FERC MATTERS

PJM Transmission Rates

PJM and its stakeholders have been debating the proper method to allocate costs for new transmission facilities. While FirstEnergy and other parties advocated for a traditional "beneficiary pays" (or usage based) approach, others advocate for “socializing” the costs on a load-ratio share basis - each customer in the zone would pay based on its total usage of energy within PJM. On August 6, 2009, the U.S. Court of Appeals for the Seventh Circuit found that FERC had not supported a prior FERC decision to allocate costs for new 500 kV and higher voltage facilities on a load ratio share basis and, based on that finding, remanded the rate design issue to FERC. In an order dated January 21, 2010, FERC set this matter for a “paper hearing” and requested parties to submit written comments. FERC identified nine separate issues for comment and directed PJM to file the first round of comments. PJM filed certain studies with FERC on April 13, 2010, which demonstrated that allocation of the cost of high voltage transmission facilities on a beneficiary pays basis results in certain LSEs in PJM bearing the majority of the costs. FirstEnergy and a number of other utilities, industrial customers and state utility commissions supported the use of the beneficiary pays approach for cost allocation for high voltage transmission facilities. Other utilities and state utility commissions supported continued socialization of these costs on a load ratio share basis. On March 30, 2012, FERC issued an order on remand reaffirming its prior decision that costs for new transmission facilities that are rated at 500 kV or higher are to be collected from all transmission zones throughout the PJM footprint by means of a postage-stamp (or socialized) rate based on the amount of load served in a transmission zone and concluding that such methodology is just and reasonable and not unduly discriminatory or preferential. On April 30, 2012, FirstEnergy requested rehearing of FERC's March 30, 2012 order and on March 22, 2013, FERC denied rehearing. On March 29, 2013, FirstEnergy filed a Petition for Review with the U.S. Court of Appeals for the Seventh Circuit, and the case subsequently was consolidated with several other cases before that court for briefing and disposition. Briefing is complete, oral argument was held on April 22, 2014, and a decision is expected in 2014.

Order No. 1000, issued by FERC on July 21, 2011, required the submission of a compliance filing by PJM or the PJM transmission owners demonstrating that the cost allocation methodology for new transmission projects directed by the PJM Board of Managers satisfied the principles set forth in the order. To demonstrate compliance with the regional cost allocation principles of the order, the PJM transmission owners, including FirstEnergy, submitted a filing to FERC on October 11, 2012, proposing a hybrid method of 50% beneficiary pays and 50% postage stamp to be effective for RTEP projects approved by the PJM Board of Managers on, and after, the effective date of the compliance filing. On January 31, 2013, FERC conditionally accepted the hybrid method to be effective on February 1, 2013, subject to refund and to a future order on PJM's separate Order No. 1000 compliance filing. On March 22, 2013, FERC again accepted the hybrid method. Certain parties sought rehearing of parts of FERC's March 22, 2013 order. These requests for rehearing are pending before FERC. On July 10, 2013, the PJM transmission owners, including FirstEnergy, submitted filings to FERC setting forth the cost allocation method for projects that cross the borders between: (1) the PJM region and the NYISO region and; (2) the PJM region and the FERC-jurisdictional members of the SERTP region. These filings propose to allocate the cost of these interregional transmission projects based on the costs of projects that otherwise would have been constructed separately in each region. On the same date, also in response to Order No. 1000, the PJM transmission owners, including FirstEnergy, also submitted to FERC a filing stating that the cost allocation provisions for interregional transmission projects provided in the Joint Operating Agreement between PJM and MISO comply with the requirements of Order No. 1000. On December 30, 2013, FERC conditionally accepted the PJM/SERTP cross-border project cost allocation filing, subject to refund and future orders in PJM's and SERTP's related Order No. 1000 interregional compliance proceedings. The PJM/NYISO and PJM/MISO cross-border project cost allocation filings remain pending before FERC. On January 16, 2014, FERC issued an order regarding the effective date of PJM's

separate Order No. 1000 regional transmission planning and cost allocation compliance filing, noting that it would address the merits of the comments on and protests to that filing and related compliance filings in a future order.

Numerous parties, including ATSI, FES, TrAIL, OE, CEI, TE, Penn, JCP&L, ME, MP, PN, WP and PE, sought judicial review of Order No. 1000 before the U.S. Court of Appeals for the D.C. Circuit. Briefing is complete and oral argument was held on March 20, 2014.

The outcome of these proceedings and their impact, if any, on FirstEnergy cannot be predicted at this time.

RTO Realignment

On June 1, 2011, ATSI and the ATSI zone transferred from MISO to PJM. The move was performed as planned with no known operational or reliability issues for ATSI or for the wholesale transmission customers in the ATSI zone. While many of the matters involved with the move have been resolved, FERC denied recovery by means of ATSI's transmission rate for certain charges that collectively can be described as "exit fees" and certain other transmission cost allocation charges totaling approximately $78.8 million until such time as ATSI submits a cost/benefit analysis that demonstrates net benefits to customers from the move. On December 21, 2012, ATSI and other parties filed a proposed settlement agreement with FERC to resolve the exit fee and transmission cost allocation issues. However, FERC subsequently rejected that settlement, stating that its action is without prejudice to ATSI submitting a cost/benefit analysis demonstrating that the benefits of the RTO realignment decisions outweigh the exit fee and transmission cost allocation charges. On October 21, 2013, FirstEnergy filed a request for rehearing of FERC's order.

Separately, the question of ATSI's responsibility for certain costs for the “Michigan Thumb” transmission project continues to be disputed. Potential responsibility arises under the MISO MVP tariff, which has been litigated in complex proceedings in front of FERC and certain U.S. appellate courts. The MISO and its allied parties assert that the benefits to the ATSI zone of the Michigan Thumb project are roughly commensurate with the costs that MISO desires to charge to the ATSI zone, estimated to be as much as $16 million per year. ATSI has submitted evidence that the Michigan Thumb project provides no electric benefits to the ATSI zone and, on that basis, opposes the MISO’s efforts to impose these costs on the ATSI zone loads. The MISO and its allied parties also assert that certain language in the MISO Transmission Owners Agreement requires ATSI to pay these charges. In the event of a final non-appealable order that rules that ATSI must pay these charges, ATSI will seek recovery of these charges through its formula rate. While FERC proceedings regarding whether the MISO can charge ATSI for MVP costs remain pending, on February 24, 2014, the U.S. Supreme Court declined to hear appeals filed by FirstEnergy and other parties of the Seventh Circuit's June 2013 decision upholding FERC's acceptance of the MISO's generic MVP cost allocation proposal.

In addition, in a May 31, 2011 order, FERC ruled that the costs for certain "legacy RTEP" transmission projects in PJM could be charged to transmission customers in the ATSI zone. ATSI sought rehearing of the question of whether the ATSI zone should pay these legacy RTEP charges and, on September 20, 2012, FERC denied ATSI's request for rehearing. ATSI subsequently filed a petition for review with the U.S. Court of Appeals for the D.C. Circuit. Briefing is complete, oral argument was held on December 11, 2013, and a decision is expected in the second quarter of 2014.

The outcome of those proceedings that address the remaining open issues related to ATSI's move into PJM cannot be predicted at this time.

California Claims Matters

In October 2006, several California governmental and utility parties presented AE Supply with a settlement proposal to resolve alleged overcharges for power sales by AE Supply to the California Energy Resource Scheduling division of the CDWR during 2001. The settlement proposal claims that CDWR is owed approximately $190 million for these alleged overcharges. This proposal was made in the context of mediation efforts by FERC and the U.S. Court of Appeals for the Ninth Circuit in several pending proceedings to resolve all outstanding refund and other claims, including claims of alleged price manipulation in the California energy markets, during 2000 and 2001. The Ninth Circuit had previously remanded one of those proceedings to FERC, which dismissed the claims of the California Parties in May 2011, and affirmed the dismissal in June 2012. On June 20, 2012, the California Parties appealed FERC's decision back to the Ninth Circuit. Briefing was completed before the Ninth Circuit on October 23, 2013. The timing of further action by the Ninth Circuit is unknown.

In another proceeding, in June 2009, the California Attorney General, on behalf of certain California parties, filed another complaint with FERC against various sellers, including AE Supply, again seeking refunds for transactions in the California energy markets during 2000 and 2001. The above-noted transactions with CDWR are the basis for including AE Supply in this complaint. AE Supply filed a motion to dismiss, which was granted by FERC in May 2011, and affirmed by FERC in June 2012. The California Attorney General has appealed FERC's dismissal of its complaint to the Ninth Circuit, which has consolidated the case with other pending appeals related to California refund claims, and stayed the proceedings pending further order.

FirstEnergy cannot predict the outcome of either of the above matters or estimate the possible loss or range of loss.

PATH Transmission Project

The PATH project was proposed to be comprised of a 765 kV transmission line from West Virginia through Virginia and into Maryland, modifications to an existing substation in Putnam County, West Virginia, and the construction of new substations in Hardy County, West Virginia and Frederick County, Maryland. PJM initially authorized construction of the PATH project in June 2007. On August 24, 2012, the PJM Board of Managers canceled the PATH project, which it had suspended in February 2011. As a result, approximately $62 million and approximately $59 million in costs incurred by PATH-Allegheny and PATH-WV, respectively, were reclassified from net property, plant and equipment to a regulatory asset for future recovery. On September 28, 2012, those companies requested authorization from FERC to recover the costs with a proposed return on equity of 10.9% (10.4% base plus 0.5% for RTO membership) from PJM customers over the next five years. Several parties protested the request. On November 30, 2012, FERC issued an order denying the 0.5% return on equity adder for RTO membership and allowing the tariff changes enabling recovery of these costs to become effective on December 1, 2012, subject to settlement judge procedures and hearing if the parties do not agree to a settlement. PATH, PATH-Allegheny and PATH-WV have requested rehearing of FERC's denial of the 0.5% return on equity adder for RTO membership; that request for rehearing remains pending before FERC. In addition, FERC consolidated for settlement judge procedures and hearing purposes three formal challenges to the PATH formula rate annual updates submitted to FERC in June 2010, June 2011 and June 2012, with the September 28, 2012 filing for recovery of costs associated with the cancellation of the PATH project.

On March 20, 2014, the settlement judge declared an impasse in efforts to achieve settlement. On March 24, 2014, the Chief ALJ terminated settlement judge procedures and appointed an ALJ to preside over the hearing phase of the case. The hearing is scheduled to commence on November 5, 2014. The issues set for hearing include the prudence of the costs, the base return on equity and the period of recovery. Depending on the outcome of the hearing, PATH-Allegheny and PATH-WV may be required to refund certain amounts that have been collected under their formula rate.

Hydroelectric Asset Sale

On September 4, 2013, certain of FirstEnergy's subsidiaries submitted filings with FERC for authorization to sell eleven hydroelectric power plant projects to subsidiaries of Harbor Hydro Holdings, LLC (Harbor Hydro), a subsidiary of LS Power Equity Partners II, LP (LS Power). The eleven hydroelectric projects are: the Seneca Pumped Storage Project, Allegheny Lock & Dam No. 5, Allegheny Lock & Dam No. 6, the Lake Lynn Project, the Millville Hydro Project, the Dam No. 4 Project, the Dam No. 5 Project, and four additional projects located in Shenandoah, Front Royal and Luray, Virginia. The eleven projects have a combined generating capacity of approximately 527 MW. On February 12, 2014, the sale of the hydroelectric power plants to LS Power closed for approximately $394 million. See Note 13, Discontinued Operations for additional information regarding the assets sold.

MISO Capacity Portability

On June 11, 2012, in response to certain arguments advanced by MISO, FERC issued a Notice of Request for Comments regarding whether existing rules on transfer capability act as barriers to the delivery of capacity between MISO and PJM. FirstEnergy and other parties have submitted filings arguing that MISO's concerns largely are without foundation and suggesting that FERC order that the remaining concerns be addressed in the existing stakeholder process that is described in the PJM/MISO Joint Operating Agreement. On April 2, 2013, FERC issued an order directing MISO and PJM to make presentations to FERC regarding ongoing regional efforts to address whether barriers to transfer capability exist between the MISO and PJM regions and the actions the FERC should take to address any such barriers. The RTOs presented their respective positions to FERC on June 20, 2013 and provided additional information regarding their stakeholder prioritization survey, in response to a FERC request on June 27, 2013. On September 26, 2013, the RTOs jointly submitted an informational filing providing a description of and schedule for their Joint and Common Market initiatives. On December 19, 2013, FERC issued an order directing that FERC staff are to attend the "joint and common market" stakeholder meetings for the purpose of monitoring progress on the initiatives described in the September 26, 2013 joint informational filing and establishing a new proceeding to reflect the broadened scope of issues contemplated by that filing and the RTOs' joint and common market initiatives. FERC has not acted on the presentations, and the RTOs and affected parties are working to address the MISO's proposal in stakeholder proceedings. Changes to the criteria and qualifications for participation in the PJM RPM capacity auctions could have a significant impact on the outcome of those auctions, including a negative impact on the prices at which those auctions would clear.

MOPR Reform

On December 7, 2012, PJM filed amendments to its tariff to revise the MOPR used in the RPM. PJM revised the MOPR to add two broad, categorical exemptions, eliminate an existing exemption, and to limit the applicability of the MOPR to certain capacity resources. The filing also included related and conforming changes to the RPM posting requirements and to those provisions describing the role of the Independent Market Monitor for the PJM Region. On May 2, 2013, FERC issued an order in large part accepting PJM's proposed reform of the MOPR, including the proposed exemptions and applicability but also requiring PJM to commit to future review and, if necessary, additional revisions to the MOPR to accommodate changing market conditions. On June 3, 2013, FirstEnergy submitted a request for rehearing of FERC's May 2, 2013 order. In its rehearing request, FirstEnergy referenced the results of the May 2013 PJM RPM capacity auction, and publicly-available data about the reasons for the unexpectedly low "rest-of-RTO" clearing price of $59 per MW-day, as supporting its contention that the MOPR reform depressed prices as predicted in FirstEnergy's December 28, 2012 and January 25, 2013 comments. FirstEnergy's request for rehearing is pending before FERC.

FTR Underfunding Complaint

In PJM, FTRs are a mechanism to hedge congestion and they operate as a financial replacement for physical firm transmission service. FTRs are financially-settled instruments that entitle the holder to a stream of revenues based on the hourly congestion price differences across a specific transmission path in the PJM Day-ahead Energy Market. FE also performs bilateral transactions for the purpose of hedging the price differences between the location of supply resources and retail load obligations. Due to certain language in the PJM tariff, the funds that are set aside to pay FTRs can be diverted to other uses, resulting in "underfunding" of FTR payments. Since June 2010, FES and AE Supply have lost more than $87 million in revenues that they otherwise would have received as FTR holders to hedge congestion costs. FES and AE Supply expect to continue to experience significant underfunding.

On December 28, 2011, FES and AE Supply filed a complaint with FERC for the purpose of modifying certain provisions in the PJM tariff to eliminate FTR underfunding. On March 2, 2012, FERC issued an order dismissing the complaint. In its order, FERC ruled that it was not appropriate to initiate action at that time because of the unknown root causes of FTR underfunding. FERC directed PJM to convene stakeholder proceedings for the purpose of determining the root causes of the FTR underfunding. FERC went on to note that its dismissal of the complaint was without prejudice to FES and AE Supply or any other affected entity filing a complaint if the stakeholder proceedings proved unavailing. FES and AE Supply sought rehearing of FERC's order and, on July 19, 2012, FERC denied rehearing. In April 2012, PJM issued a report on FTR underfunding. However, the PJM stakeholder process proved unavailing as the stakeholders were not willing to change the tariff to eliminate FTR underfunding. Accordingly, on February 15, 2013, FES and AE Supply re-filed their complaint with FERC for the purpose of changing the PJM tariff to eliminate FTR underfunding. Various parties filed responsive pleadings, including PJM. On June 5, 2013, FERC issued its order denying the new complaint. On July 5, 2013,FESC, on behalf of FES and AE Supply, filed a request for rehearing of FERC's order. That request for rehearing, and all subsequent filings in the docket, are pending before FERC.

PJM RPM Tariff Amendments

In November 2013, PJM began to submit a series of amendments to its RPM capacity tariff in order to address certain problems that have been observed in recent auctions. These problems can be grouped into four categories: (i) Demand Response (DR); (ii) imports; (iii) modeling of transmission upgrades in calculating geographic clearing prices; and (iv) arbitrage/capacity replacement. The purpose of PJM's tariff amendments is to ensure that resources that clear in the RPM auctions are available as physical resources in the delivery year and that the rules implement comparable obligations for different types of resources. In each of the relevant dockets, FirstEnergy submitted comments as part of a coalition of utilities (generally including an affiliate of AEP, Duke and Dayton). The FirstEnergy/coalition position was that all of the PJM proposals should be accepted as proposed, and that the FERC should order PJM to take additional steps that should have the effect of eliminating additional distortions and flaws in the RPM market. PJM made two filings regarding DR; FERC accepted one as proposed on January 30, 2014, and issued a deficiency letter regarding the other on March 6, 2014. FERC also issued deficiency letters requesting additional information from PJM regarding the modeling filing on January 17, 2014 and regarding the imports filing on January 28, 2014. On February 18 and 21, 2014, respectively, PJM filed its responses to FERC's deficiency letters regarding the modeling filing and the imports filing. On April 18, 2014, FERC conditionally accepted PJM's modeling filing, as supplemented, subject to PJM's submission of a compliance filing. On April 22, 2014, FERC accepted PJM's imports filing, as supplemented. The second DR filing, which relates to the rules applicable to DR performance obligations, the arbitrage/capacity replacement filing and related filings in those dockets, and a request for rehearing of the January 30, 2014 order on the first DR filing, are pending before FERC. PJM requested FERC action on the DR performance obligations filing by April 11, 2014, and prior to the May 2014 BRA for the arbitrage/capacity replacement filing. Although FirstEnergy believes that these filings (and the associated tariff changes) should have positive implications for RPM clearing prices, generally there can be no assurance as to their ultimate impact on FirstEnergy.

PJM RPM Auctions - Calculation of Unit-Specific Offer Caps

The PJM RPM capacity tariff describes the rules for calculating the "offer cap" for each unit that offers into the RPM auctions. In summary, the offer cap is calculated by identifying certain going-forward costs, including the going-forward capital requirements, for a given unit, and then subtracting the projected energy and ancillary services revenues, net of marginal costs, from the going-forward costs. The remainder becomes the offer cap. FES learned that the PJM Market Monitor's practice for calculating the forecast energy and ancillary services revenues has been to use the lower of the unit's economic or cost-based offers into the PJM energy market. The Market Monitor engages in this practice based on his interpretation of certain provisions of the PJM capacity tariff. However, review of the relevant tariff language suggests that only the cost-based offer data should be used. FES determined that the Market Monitor's use of the lower of cost-based or economic offer data has the effect of suppressing the offer cap, which can distort the price signal that is intended to come out of the RPM auction process. On April 7, 2014, FES submitted a Petition for Declaratory Order to FERC, asking for an interpretation of the relevant provisions of the PJM capacity tariff. Specifically, FES identified the difference of opinion between FES and the Market Monitor regarding interpretation of the relevant provision and asked FERC to rule on the question of whether the tariff language permits the Market Monitor's use of the lower of cost-based or economic offer data or requires use of the cost-based offer data. FES asked FERC to rule on the petition by May 9, 2014. On April 18, 2014, the Market Monitor and other parties filed protests to FES's petition, arguing that the PJM capacity tariff allows the Market Monitor to use market-based energy offers instead of cost-based energy offers in calculating RPM auction offer caps and asking FERC to delay action on the petition until after the May 2014 BRA. FES' petition, the protest, and related filings are pending before FERC. The timing of FERC action and the outcome of this proceeding cannot be predicted at this time.

Market-Based Rate Authority, Triennial Update

OE, CEI, TE, Penn, JCP&L, ME, PN, MP, WP, PE, AE Supply, FES, FG, NG, FirstEnergy Generation Mansfield Unit 1 Corp., Buchanan Generation, LLC, and Green Valley Hydro, LLC each hold authority from FERC to sell electricity at market-based rates. One condition for retaining this authority is that every three years each entity must file an update with the FERC that demonstrates that each entity continues to meet FERC's requirements for holding market-based rate authority. On December 20, 2013, FESC submitted to FERC the most recent triennial market power analysis filing for each market-based rate holder for the current cycle of this filing requirement. That filing is pending before FERC.

ENVIRONMENTAL MATTERS

Various federal, state and local authorities regulate FirstEnergy with regard to air and water quality and other environmental matters. Compliance with environmental regulations could have a material adverse effect on FirstEnergy's earnings and competitive position to the extent that FirstEnergy competes with companies that are not subject to such regulations and, therefore, do not bear the risk of costs associated with compliance, or failure to comply, with such regulations.

CAA Compliance

FirstEnergy is required to meet federally-approved SO_2 and NOx emissions regulations under the CAA. FirstEnergy complies with SO_2 and NOx reduction requirements under the CAA and SIP(s) by burning lower-sulfur fuel, utilizing combustion controls and post-combustion controls, generating more electricity from lower or non-emitting plants and/or using emission allowances.

In July 2008, three complaints representing multiple plaintiffs were filed against FG in the U.S. District Court for the Western District of Pennsylvania seeking damages based on air emissions from the coal-fired Bruce Mansfield Plant. Two of these complaints also seek to enjoin the Bruce Mansfield Plant from operating except in a "safe, responsible, prudent and proper manner." One complaint was filed on behalf of twenty-one individuals and the other is a class action complaint seeking certification as a class with the eight named plaintiffs as the class representatives. FG believes the claims are without merit and intends to vigorously defend itself against the allegations made in these complaints, but, at this time, is unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In January 2009, the EPA issued an NOV to GenOn Energy, Inc. alleging NSR violations at the Keystone, Portland and Shawville coal-fired plants based on "modifications" dating back to the mid-1980s. JCP&L, as the former owner of 16.67% of the Keystone Station, ME, as a former owner and operator of the Portland Station, and PN as former owner and operator of the Shawville Station, are unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In August 2009, the EPA issued a Finding of Violation and NOV alleging violations of the CAA and Ohio regulations, including the PSD, NNSR and Title V regulations, at the Eastlake, Lakeshore, Bay Shore and Ashtabula coal-fired plants. The EPA's NOV alleges equipment replacements during maintenance outages dating back to 1990 triggered the pre-construction permitting requirements under the PSD and NNSR programs. In June 2011, EPA issued another Finding of Violation and NOV alleging violations of the CAA and Ohio regulations, specifically, opacity limitations and requirements to continuously operate opacity monitoring systems at the Eastlake, Lakeshore, Bay Shore and Ashtabula coal-fired plants. FG intends to comply with the CAA and Ohio regulations, but, at this time, is unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In August 2000, AE received an information request pursuant to section 114(a) of the CAA from the EPA requesting that it provide information and documentation relevant to the operation and maintenance of the following ten coal-fired plants, which collectively include 22 electric generation units: Albright, Armstrong, Fort Martin, Harrison, Hatfield's Ferry, Mitchell, Pleasants, Rivesville, R. Paul Smith and Willow Island to determine compliance with the NSR provisions under the CAA, which can require the installation of additional air emission control equipment when a major modification of an existing facility results in an increase in emissions. In September 2007, AE received an NOV from the EPA alleging NSR and PSD violations under the CAA, as well as Pennsylvania and West Virginia state laws at the coal-fired Hatfield's Ferry and Armstrong plants in Pennsylvania and the coal-fired Fort Martin and Willow Island plants in West Virginia. On June 29, 2012, January 31, 2013, and March 27, 2013, EPA issued additional CAA section 114 requests for the Harrison coal-fired plant seeking information and documentation relevant to its operation and maintenance, including capital projects undertaken since 2007. FirstEnergy intends to comply with the CAA but, at this time, is unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In June 2005, the PA DEP and the Attorneys General of New York, New Jersey, Connecticut and Maryland filed suit against AE, AE Supply, MP, PE and WP in the U.S. District Court for the Western District of Pennsylvania alleging, among other things, that AE performed major modifications in violation of the NSR provisions of the CAA and the Pennsylvania Air Pollution Control Act at the coal-fired Hatfield's Ferry, Armstrong and Mitchell Plants in Pennsylvania. A non-jury trial on liability only was held in September 2010. On February 6, 2014, the Court entered judgment for AE, AE Supply, MP, PE and WP finding they had not violated the CAA or the Pennsylvania Air Pollution Control Act. On March 10, 2014, New York, Connecticut, and Maryland filed an appeal with the U.S. Court of Appeals for the Third Circuit. This decision does not change the status of these plants which remain deactivated.

National Ambient Air Quality Standards

The EPA's CAIR requires reductions of NOx and SO_2 emissions in two phases (2009/2010 and 2015), ultimately capping SO_2 emissions in affected states to 2.5 million tons annually and NOx emissions to 1.3 million tons annually. In 2008, the U.S. Court of Appeals for the D.C. Circuit decided that CAIR violated the CAA but allowed CAIR to remain in effect to "temporarily preserve its environmental values" until the EPA replaces CAIR with a new rule consistent with the Court's decision. In July 2011, the EPA finalized CSAPR, to replace CAIR, requiring reductions of NOx and SO_2 emissions in two phases (2012 and 2014), ultimately capping SO_2 emissions in affected states to 2.4 million tons annually and NOx emissions to 1.2 million tons annually. CSAPR allows trading of NOx and SO_2 emission allowances between power plants located in the same state and interstate trading of NOx and SO_2 emission allowances with some restrictions. On December 30, 2011, CSAPR was stayed by the U.S. Court of Appeals for the D.C. Circuit and was ultimately vacated by the Court on August 21, 2012. The Court has ordered the EPA to continue administration of CAIR until it finalizes a valid replacement for CAIR. On April 29, 2014 the U.S. Supreme Court reversed the D.C Circuit decision vacating CSAPR and generally upheld the EPA's authority under the CAA to establish the regulatory structure underpinning CSAPR. Depending on the outcome of further proceedings in this matter and how the EPA and the states implement the final rules, the future cost of compliance may be substantial and changes to FirstEnergy's and FES' operations may result.

Hazardous Air Pollutant Emissions

On December 21, 2011, the EPA finalized the MATS imposing emission limits for mercury, PM, and HCL for all existing and new coal-fired electric generating units effective in April 2015 with averaging of emissions from multiple units located at a single plant. Under the CAA, state permitting authorities can grant an additional compliance year through April 2016, as needed, including instances when necessary to maintain reliability where electric generating units are being closed. On December 28, 2012, the WVDEP granted a conditional extension through April 16, 2016 for MATS compliance at the Fort Martin, Harrison and Pleasants stations. On March 20, 2013, the PA DEP granted an extension through April 16, 2016 for MATS compliance at the Hatfield's Ferry and Bruce Mansfield stations. In addition, an EPA enforcement policy document contemplates up to an additional year to achieve compliance, through April 2017, under certain circumstances for reliability critical units. MATS was challenged in the U.S. Court of Appeals for the D.C. Circuit by various entities, including FirstEnergy's challenge of the PM emission limit imposed on petroleum coke boilers, such as Bay Shore Unit 1. On April 15, 2014, MATS was upheld by the U.S. Court of Appeals for the D.C. Circuit, however, the Court refused to decide FirstEnergy's challenge of the PM emission limit imposed on petroleum coke boilers due to a January 2013 petition for reconsideration still pending but not addressed by EPA. Depending on the outcome of further appeals, if any, and how the MATS are ultimately implemented, FirstEnergy's total cost of compliance with MATS is currently estimated to be approximately $465 million (Competitive Energy Services segment of $240 million and Regulated Distribution segment of $225 million).

As of September 1, 2012, Albright, Armstrong, Bay Shore Units 2-4, Eastlake Units 4-5, R. Paul Smith, Rivesville and Willow Island were deactivated. FG entered into RMR arrangements with PJM for Eastlake Units 1-3, Ashtabula Unit 5 and Lake Shore Unit 18 through the spring of 2015, when they are scheduled to be deactivated. In February 2014, PJM notified FG that Eastlake Units 1-3 and Lake Shore Unit 18 will be released from RMR status as of September 15, 2014. As of October 9, 2013, the Hatfield's Ferry and Mitchell stations were also deactivated.

FirstEnergy and FES have various long-term coal transportation agreements, some of which run through 2025 and certain of which are related to the plants described above. FE and FES have asserted force majeure defenses for delivery shortfalls under certain agreements, and are in discussion with the applicable counterparties. As to two agreements, FE and FES have settled monetary claims for damages for the failure to take minimum quantities for the calendar year 2012 by the payment of approximately $70 million, and agreed to pay liquidated damages for delivery shortfalls for 2013 and 2014. FE and FES recorded $67 million in liquidated damages in the fourth quarter of 2013, associated with estimated 2013 delivery shortfalls, which were paid in the first quarter of 2014. Additionally, in January 2014, FE and FES reached an agreement in principle with Mepco Holdings LLC to terminate a contract for future coal deliveries to Hatfield for $18 million, which was approved by the United States Bankruptcy Court on February 26, 2014. If FE and FES fail to reach a resolution with applicable counterparties for coal transportation agreements associated with the deactivated plants or unresolved aspects of the transportation agreements and it were ultimately determined that, contrary to their belief, the force majeure provisions or other defenses do not excuse delivery shortfalls, the results of operations and financial condition of both FirstEnergy and FES could be materially adversely impacted. If that were to occur, FE and FES are unable to estimate the loss or range of loss.

Climate Change

There are a number of initiatives to reduce GHG emissions at the state, federal and international level. Certain northeastern states are participating in the RGGI and western states led by California, have implemented programs, primarily cap and trade mechanisms, to control emissions of certain GHGs. Additional policies to reduce GHG emissions, such as demand reduction programs, renewable portfolio standards and renewable subsidies have been implemented across the nation. In his 2013 State of the Union address, President Obama called for Congressional action on GHG emissions indicating his administration will take action in the event Congress fails to act. In June 2013, the President's Climate Action Plan outlined goals to: (1) cut carbon pollution in America by 17% by 2020 (from 2005 levels); (2) prepare the United States for the impacts of climate change; and (3) lead international efforts to combat global climate change and prepare for its impacts. GHG emissions have already been reduced by 10% between 2005 and 2012 according to an April, 2014 EPA Report. Due to plant deactivations and increased efficiencies, FirstEnergy anticipates its CO2 emissions will be reduced 25% below 2005 levels by 2016, exceeding the President's Climate Action Plan goals both in terms of timing and reduction levels.

In September 2009, the EPA finalized a national GHG emissions collection and reporting rule that required the measurement and reporting of GHG emissions commencing in 2010. In December 2009, the EPA released its final "Endangerment and Cause or Contribute Findings for Greenhouse Gases under the Clean Air Act." The EPA's finding concludes that concentrations of several key GHGs increase the threat of climate change and may be regulated as "air pollutants" under the CAA. In April 2010, the EPA finalized new GHG standards for model years 2012 to 2016 passenger cars, light-duty trucks and medium-duty passenger vehicles and clarified that GHG regulation under the CAA would not be triggered for electric generating plants and other stationary sources until January 2, 2011, at the earliest. In May 2010, the EPA finalized new thresholds for GHG emissions that define when NSR pre-construction permits would be required including an emissions applicability threshold of 75,000 tons per year of CO_2 equivalents for existing facilities under the CAA's PSD program. On April 13, 2012, the EPA proposed new source performance standards for GHG emissions from newly constructed fossil fuel generating units that are larger than 25 MW, which were ultimately withdrawn. On June 25, 2013, a Presidential memorandum directed the EPA to complete, in a timely fashion, proposed new source performance standards for GHG emissions from newly constructed fossil fuel generating units, starting with re-proposal by September 20, 2013. The memorandum further directed the EPA to propose by June 1, 2014 and complete by June 1, 2015, GHG emission standards for existing fossil fuel generating units. On September 20, 2013, the EPA proposed a new source performance standard, which would not apply to any existing, modified, or reconstructed fossil fuel generating units, of 1,000 lbs. CO_2/MWH for large natural gas fired units (> 850 mmBTU/hr), and 1,100 lbs. CO_2/MWH for other natural gas fired units (≤ 850 mmBTU/hr), and 1,100 lbs. CO_2/MWH for fossil fuel fired units which would require partial carbon capture and storage. On October 15, 2013, the U.S. Supreme Court agreed to review a June 2012 D.C. Circuit Court of Appeals decision upholding the EPA's May 2010 regulations to decide a single narrow question: "Whether EPA permissibly determined that its regulation of greenhouse gas emissions from new motor vehicles triggered permitting requirements under the CAA for stationary sources that emit greenhouse gases?" Oral argument was held on February 24, 2014. Depending on the outcome of these proceedings and how any final rules are ultimately implemented, the future cost of compliance may be substantial and changes to FirstEnergy's and FES' operations may result.

At the international level, the Kyoto Protocol, signed by the U.S. in 1998 but never submitted for ratification by the U.S. Senate, was intended to address global warming by reducing the amount of man-made GHG, including CO_2, emitted by developed countries by 2012. In 1997, the U.S. Senate passed the Byrd-Hagel resolution by a unanimous vote of 95-0. The resolution stated that it is the sense of the Senate that the United States should not be a signatory to any protocol to, or other agreement regarding, the United Nations Framework Convention on Climate Change which would mandate new commitments to limit or reduce GHG emissions, unless the protocol or other agreement also mandates new specific scheduled commitments to limit or reduce GHG emissions for developing country parties within the same compliance period, or would not result in serious harm to the economy of the United States. A December 2009 U.N. Climate Change Conference in Copenhagen did not reach a consensus on a successor treaty to the Kyoto Protocol, but did take note of the Copenhagen Accord, a non-binding political agreement that recognized the scientific view that the increase in global temperature should be below two degrees Celsius; includes a commitment by developed countries to provide funds, approaching $30 billion over three years with a goal of increasing to $100 billion by 2020; and establishes the "Green Climate Fund" to support mitigation, adaptation, and other climate-related activities in developing countries. To the extent that they have become a party to the Copenhagen Accord, developed economies, such as the European Union, Japan, Russia and the United States, would commit to quantified economy-wide emissions targets by 2020, while developing countries, including Brazil, China and India, would agree to take mitigation actions, subject to their domestic measurement, reporting and verification. In December 2010, the U.N. Climate Change Conference in Cancun, Mexico resulted in an acknowledgment to reduce emissions from industrialized countries by 25 to 40 percent from 1990 emissions by 2020 and support enhanced action on climate change in the developing world. In December 2011 the U.N. Climate Change Conference in Durban, South Africa, established a negotiating process to develop a new post-2020 climate change protocol, called the "Durban Platform for Enhanced Action". This negotiating process contemplates developed countries, as well as developing countries such as China, India, Brazil, and South Africa, to undertake legally binding commitments post-2020. In addition, certain countries agreed to extend the Kyoto Protocol for a second commitment period, commencing in 2013 and expiring in 2018 or 2020. In December 2012, the U.N. Climate Change Conference in Doha, Qatar, resulted in countries agreeing to a new commitment period under the Kyoto Protocol beginning in 2020. The new Doha Amendment to establish a second commitment period requires the ratification of three-quarters of the parties to the Kyoto Protocol before it becomes effective. In November 2013, the U.N. Climate Change Conference in Warsaw, Poland advanced negotiations of a new global agreement to reduce GHG emissions by 2015. FirstEnergy cannot currently estimate the financial impact of climate change policies, although potential legislative or regulatory programs restricting CO_2 emissions, or litigation alleging damages from GHG emissions, could require significant capital and other expenditures or result in changes to its operations. The

CO_2 emissions per KWH of electricity generated by FirstEnergy is lower than many of its regional competitors due to its diversified generation sources, which include low or non-CO_2 emitting gas-fired and nuclear generators.

Clean Water Act

Various water quality regulations, the majority of which are the result of the federal CWA and its amendments, apply to FirstEnergy's plants. In addition, the states in which FirstEnergy operates have water quality standards applicable to FirstEnergy's operations.

In 2004, the EPA established new performance standards under Section 316(b) of the CWA for reducing impacts on fish and shellfish from cooling water intake structures at certain existing electric generating plants. The regulations call for reductions in impingement mortality (when aquatic organisms are pinned against screens or other parts of a cooling water intake system) and entrainment (which occurs when aquatic life is drawn into a facility's cooling water system). In 2007, the U.S. Court of Appeals for the Second Circuit invalidated portions of the Section 316(b) performance standards and the EPA has taken the position that until further rulemaking occurs, permitting authorities should continue the existing practice of applying their best professional judgment to minimize impacts on fish and shellfish from cooling water intake structures. In April 2009, the U.S. Supreme Court reversed one significant aspect of the Second Circuit's opinion and decided that Section 316(b) of the CWA authorizes the EPA to compare costs with benefits in determining the best technology available for minimizing adverse environmental impact at cooling water intake structures. On March 28, 2011, the EPA released a new proposed regulation under Section 316(b) of the CWA to reduce fish impingement to a 12% annual average and determine site-specific controls, if any, to reduce entrainment of aquatic life following studies to be provided to permitting authorities. On April 16, 2014, counsel for EPA informed the United States District Court in which a settlement agreement with certain NGOs set April 17, 2014 as a deadline for finalizing the Section 316(b) regulation that an additional 29 days would be needed to finalize the Section 316(b) regulation by May 16, 2014. FirstEnergy is studying various control options and their costs and effectiveness, including pilot testing of reverse louvers in a portion of the Bay Shore power plant's water intake channel to divert fish away from the plant's water intake system. Depending on the results of such studies and the EPA's further rulemaking and any final action taken by the states exercising best professional judgment, the future costs of compliance with these standards may require material capital expenditures.

On April 19, 2013, the EPA proposed regulatory changes to the waste water effluent limitations guidelines and standards for the Steam Electric Power Generating category (40 CFR Part 423). The EPA proposed eight treatment options for waste water discharges from electric power plants, of which four are "preferred" by the Agency. The preferred options range from more stringent chemical and biological treatment requirements to zero discharge requirements. The EPA is required to finalize this rulemaking by September 30, 2015, under a consent decree entered by a U.S. District Court and the treatment obligations are proposed to phase-in as waste water discharge permits are renewed on a 5-year cycle from 2017 to 2022. Depending on the content of the EPA's final rule, the future costs of compliance with these standards may require material capital expenditures.

In October 2009, the WVDEP issued an NPDES water discharge permit for the Fort Martin Plant, which imposes TDS, sulfate concentrations and other effluent limitations for heavy metals, as well as temperature limitations. Concurrent with the issuance of the Fort Martin NPDES permit, WVDEP also issued an administrative order setting deadlines for MP to meet certain of the effluent limits that were effective immediately under the terms of the NPDES permit. MP appealed, and a stay of certain conditions of the NPDES permit and order have been granted pending a final decision on the appeal and subject to WVDEP moving to dissolve the stay. The Fort Martin NPDES permit could require an initial capital investment ranging from $150 million to $300 million in order to install technology to meet the TDS and sulfate limits, which technology may also meet certain of the other effluent limits. Additional technology may be needed to meet certain other limits in the Fort Martin NPDES permit. MP intends to vigorously pursue these issues but cannot predict the outcome of these appeals or estimate the possible loss or range of loss.

In December 2010, PA DEP submitted its CWA 303(d) list to the EPA with a recommended sulfate impairment designation for an approximately 68 mile stretch of the Monongahela River north of the West Virginia border. In May 2011, the EPA agreed with PA DEP's recommended sulfate impairment designation which requires the development of a TMDL limit for the river, a process that will take PA DEP approximately five years. Based on the stringency of the TMDL, MP may incur significant costs to reduce sulfate discharges into the Monongahela River if the NPDES permit for the coal-fired Fort Martin plant in West Virginia is required to be modified or renewed to include more stringent effluent limitations for sulfate. However, the Hatfield's Ferry and Mitchell Plants in Pennsylvania that discharge into the Monongahela River were deactivated on October 9, 2013.

FirstEnergy intends to vigorously defend against the CWA matters described above but, except as indicated above, cannot predict their outcomes or estimate the possible loss or range of loss.

Regulation of Waste Disposal

Federal and state hazardous waste regulations have been promulgated as a result of the RCRA of 1976, as amended, and the Toxic Substances Control Act of 1976. Certain fossil-fuel combustion residuals, such as coal ash, were exempted from hazardous waste disposal requirements pending the EPA's evaluation of the need for future regulation.

In December 2009, in an advance notice of public rulemaking, the EPA asserted that the large volumes of CCRs produced by electric utilities pose significant financial risk to the industry. In May 2010, the EPA proposed two options for additional regulation of CCRs, including the option of regulation as a special waste under the EPA's hazardous waste management program which could

have a significant impact on the management, beneficial use and disposal of CCRs. On April 19, 2013, the EPA stated it would "align" its proposed CCR regulations with revised waste water discharge effluent limitations guidelines and standards for the Steam Electric Power Generating category (40 CFR Part 423) that were proposed on that date. On July 25, 2013, the House of Representatives passed H.R. 221 that would require CCRs to be regulated under Subtitle D of RCRA, as non-hazardous. On January 29, 2014, EPA agreed to take final action by December 19, 2014 on whether or not to pursue the proposed non-hazardous waste option for regulating CCRs in a Consent Decree to be filed in pending litigation. Depending on the content of the EPA's final effluent limitations rule, the specifics of any "alignment", whether EPA chooses to pursue the non-hazardous or hazardous waste option and the potential enactment of legislation, the future costs of compliance with such standards may require material capital expenditures.

On July 27, 2012, the PA DEP filed a complaint against FG in the U.S. District Court for the Western District of Pennsylvania with claims under the RCRA and Pennsylvania's Solid Waste Management Act regarding the LBR CCB Impoundment and simultaneously proposed a Consent Decree between PA DEP and FG to resolve those claims. On December 14, 2012, a modified Consent Decree that addresses public comments received by PA DEP was entered by the court, requiring FG to conduct monitoring studies and submit a closure plan to the PA DEP, no later than March 31, 2013, and discontinue disposal to LBR as currently permitted by December 31, 2016. The modified Consent Decree also required payment of civil penalties of $800,000 to resolve claims under the Solid Waste Management Act. On February 1, 2013, FG submitted a Feasibility Study analyzing various technical issues relevant to the closure of LBR. On March 28, 2013, FG submitted to the PA DEP a Closure Plan Major Permit Modification Application which provides for placing a final cap over LBR that would require 15 years to fully implement following the closure of LBR. The estimated cost for the proposed closure plan is $234 million, including environmental and other post closure costs. On October 3, 2013, the PA DEP issued a technical deficiency letter citing four main deficiencies with the Closure Plan: (1) seeking to accelerate the 15 year period proposed by FG for closure activities to complete closure in 9 years by commencing closure activities prior to 2017 as proposed by FG; (2) seeking to extend bond closure and post closure activities beyond the 45 years proposed by FG; (3) seeking active dewatering of the CCBs in areas where there are seeps impacted by the Impoundment; and (4) seeking an abatement plan for groundwater impacted by arsenic. FG responded to the PA DEP on December 3, 2013, and as a result of the Closure Plan, FG increased its ARO for LBR by $163 million in 2013. On April 3, 2014, PA DEP issued a permit requiring FE to provide bonding for 45 years of closure and post-closure activities and to complete closure within a 12-year period, but authorizes FE to seek a permit modification based on "unexpected site conditions that have or will slow closure progress." The permit does not require active dewatering of the CCBs, but does require a groundwater assessment for arsenic and abatement if certain conditions in the permit are met. The Bruce Mansfield Plant is pursuing several options for its CCBs following December 31, 2016, and on January 23, 2013, announced a plan for beneficial use of its CCBs for mine reclamation in LaBelle, Pennsylvania. In June 2013, a complaint filed in the U.S. District Court for the Western District of Pennsylvania, alleges the LaBelle site is in violation of RCRA and state laws. In addition, on December 20, 2012, the Environmental Integrity Project and others served FG with a citizen suit notice alleging CWA and PA Clean Streams Law Violations at LBR.

On October 10, 2013 and December 5, 2013, complaints were filed on behalf of approximately 50 individuals against FE, FG and FES in the U.S. District Court for the Northern District of West Virginia and approximately 15 individuals against FG in the U.S. District Court for the Western District of Pennsylvania seeking damages for alleged property damage, bodily injury and emotional distress related to the LBR CCB Impoundment. The complaints state claims for private nuisance, negligence, negligence per se, reckless conduct and trespass related to alleged groundwater contamination and odors emanating from the Impoundment. FE, FG and FES believe the claims are without merit and intend to vigorously defend themselves against the allegations made in the complaints, but, at this time, are unable to predict the outcome of the above matter or estimate the possible loss or range of loss.

FirstEnergy's future cost of compliance with any CCR regulations that may be promulgated could be substantial and would depend, in part, on the regulatory action taken by the EPA and implementation by the EPA or the states. Compliance with those regulations could have an adverse impact on FirstEnergy's results of operations and financial condition.

Certain of FirstEnergy's utilities have been named as potentially responsible parties at waste disposal sites, which may require cleanup under the CERCLA. Allegations of disposal of hazardous substances at historical sites and the liability involved are often unsubstantiated and subject to dispute; however, federal law provides that all potentially responsible parties for a particular site may be liable on a joint and several basis. Environmental liabilities that are considered probable have been recognized on the Consolidated Balance Sheet as of March 31, 2014 based on estimates of the total costs of cleanup, FE's and its subsidiaries' proportionate responsibility for such costs and the financial ability of other unaffiliated entities to pay. Total liabilities of approximately $129 million have been accrued through March 31, 2014. Included in the total are accrued liabilities of approximately $82 million for environmental remediation of former manufactured gas plants and gas holder facilities in New Jersey, which are being recovered by JCP&L through a non-bypassable SBC. FirstEnergy or its subsidiaries could be found potentially responsible for additional amounts or additional sites, but the possible losses or range of losses cannot be determined or reasonably estimated at this time.

OTHER LEGAL PROCEEDINGS

Nuclear Plant Matters

Under NRC regulations, FirstEnergy must ensure that adequate funds will be available to decommission its nuclear facilities. As of March 31, 2014, FirstEnergy had approximately $2.3 billion invested in external trusts to be used for the decommissioning and environmental remediation of Davis-Besse, Beaver Valley, Perry and TMI-2. The values of FirstEnergy's NDT fluctuate based on market conditions. If the value of the trusts decline by a material amount, FirstEnergy's obligation to fund the trusts may increase. Disruptions in the capital markets and their effects on particular businesses and the economy could also affect the values of the NDT. FE maintains a $125 million parental guaranty relating to a potential shortfall in nuclear decommissioning funding for Beaver Valley Unit 1 and Perry. FE also maintains an $11 million parental guaranty in support of the decommissioning of the spent fuel storage facilities located at its Davis-Besse and Perry nuclear facilities. As required by the NRC, FirstEnergy annually recalculates and adjusts the amount of its parental guaranty, as appropriate. By a letter dated March 28, 2013, FENOC informed the NRC that the nuclear decommissioning parental guarantee would be increased to $155 million during the second quarter of 2014. Moreover, a new parental guarantee for the Beaver Valley spent fuel storage facility of $9.5 million would also be put in place.

In August 2010, FENOC submitted an application to the NRC for renewal of the Davis-Besse operating license for an additional twenty years, until 2037. A NRC ASLB granted a hearing on the Davis-Besse license renewal application to a group of petitioners. On July 9, 2012, the petitioners' proposed a contention on the environmental impacts of spent fuel storage in the Davis-Besse license renewal proceeding. In an order dated August 7, 2012, the NRC stated that it will not issue final licensing decisions until it has appropriately addressed the challenges to the NRC Waste Confidence Decision and Temporary Storage Rule and all pending contentions on this topic should be held in abeyance. The ASLB has suspended further consideration of the petitioners' proposed contention on the environmental impacts of spent fuel storage at Davis-Besse. The NRC Staff issued Waste Confidence Draft Generic Environmental Impact Statement and published a proposed rule on this subject in September of 2013. Other contentions proposed by the petitioners in this proceeding have been rejected by the ASLB. On February 18, 2014, Beyond Nuclear and Don't Waste Michigan, two of the petitioners in the Davis-Besse license renewal proceeding, requested that the NRC institute a rulemaking on the environmental impacts of high density spent fuel storage and mitigation alternatives. On February 27, 2014, these petitioners requested a suspension of the licensing decision in the Davis-Besse license renewal proceeding to allow the NRC to complete this rulemaking. On March 21, 2014, both FENOC and the NRC opposed the request for a suspension. On April 21, 2014, the Intervenors proposed an additional contention in the license renewal proceeding related to the shield building.

As part of routine inspections of the concrete shield building at Davis-Besse Nuclear Power Station in 2013, FENOC identified changes to the subsurface laminar cracking condition originally discovered in 2011. The shield building is a 2 1/2-foot thick reinforced concrete structure that provides biological shielding, protection from natural phenomena including wind and tornadoes and additional shielding in the event of an accident. FENOC then expanded its sample size to include all of the existing core bores in the shield building. These inspections, which are now complete, identified additional subsurface cracking that was determined to be pre-existing, but only now identified with the aid of improved inspection technology. These inspections also revealed that the cracking condition has propagated a small amount in select areas. Preliminary analysis of the inspections results confirms that the building continues to maintain its structural integrity, and its ability to safely perform all of its functions.

On February 1, 2014 the Davis-Besse Nuclear Power station entered an outage to install two new steam generators, replace about a third of the unit’s 177 fuel assemblies and perform numerous safety inspections and preventative maintenance activities. These activities, including amounts spent in prior years in preparation for this outage, represent an investment of approximately $600 million by FES at Davis Besse. During the preliminary stages of the outage an area of concrete that was not filled to the expected thickness within the shield building wall was discovered at the top of the temporary construction opening that was created as part of the 2011 outage. The 2011 temporary construction opening was created to install the new reactor head. FENOC has assessed the as-found condition of the concrete and has determined the shield building would have performed its design functions. This condition within the shield building wall was repaired to conform to its original design configuration.

On March 12, 2012, the NRC issued orders requiring safety enhancements at U.S. reactors based on recommendations from the lessons learned Task Force review of the accident at Japan's Fukushima Daiichi nuclear power plant. These orders require additional mitigation strategies for beyond-design-basis external events, and enhanced equipment for monitoring water levels in spent fuel pools. The NRC also requested that licensees including FENOC: re-analyze earthquake and flooding risks using the latest information available; conduct earthquake and flooding hazard walkdowns at their nuclear plants; assess the ability of current communications systems and equipment to perform under a prolonged loss of onsite and offsite electrical power; and assess plant staffing levels needed to fill emergency positions. These and other NRC requirements adopted as a result of the accident at Fukushima Daiichi are likely to result in additional material costs from plant modifications and upgrades at FENOC's nuclear facilities.

ICG Litigation

On December 28, 2006, AE Supply and MP filed a complaint in the Court of Common Pleas of Allegheny County, Pennsylvania against ICG, Anker WV, and Anker Coal. Anker WV entered into a long term Coal Sales Agreement with AE Supply and MP for the supply of coal to the Harrison generating facility. Prior to the time of trial, ICG was dismissed as a defendant by the Court, which issue can be the subject of a future appeal. As a result of defendants' past and continued failure to supply the contracted coal, AE Supply and MP have incurred and will continue to incur significant additional costs for purchasing replacement coal. A non-jury trial was held from January 10, 2011 through February 1, 2011. At trial, AE Supply and MP presented evidence that they have incurred in excess of $80 million in damages for replacement coal purchased through the end of 2010 and will incur additional damages in excess of $150 million for future shortfalls. Defendants primarily claim that their performance is excused under a force majeure clause in the coal sales agreement and presented evidence at trial that they will continue to not provide the contracted yearly tonnage amounts. On May 2, 2011, the court entered a verdict in favor of AE Supply and MP for $104 million ($90 million in future damages and $14 million for replacement coal/interest). On August 25, 2011, the Allegheny County Court denied all Motions for Post-Trial relief and the May 2, 2011 verdict became final. On August 26, 2011, the defendants posted bond and filed a Notice of Appeal with the Superior Court. On August 13, 2012, the Superior Court affirmed the $14 million past damages award but vacated the $90 million future damages award. While the Superior Court found that the defendants still owed future damages, it remanded the calculation of those damages back to the trial court. The specific amount of those future damages is not known at this time, but they are expected to be calculated at a market price of coal that is significantly lower than the price used by the trial court. On August 27, 2012, AE Supply and MP filed an Application for Reargument En Banc with the Superior Court, which was denied on October 19, 2012. AE Supply and MP filed a Petition for Allowance of Appeal with the Pennsylvania Supreme Court on November 19, 2012. On July 2, 2013, the Petition for Allowance of Appeal was denied and in the second quarter of 2013 the now final past damage award of $15.5 million (including interest) was recognized. The case was sent back to the trial court to recalculate the future damages only and is currently in the discovery phase. A damages hearing is scheduled for May 13-14, 2014, and a ruling is expected in the fourth quarter of 2014.

Other Legal Matters

In 2010, a lawsuit was filed in Allegheny County Court of Common Pleas by Michael Goretzka, for wrongful death and negligence after his wife was fatally electrocuted when she contacted a downed power line. The trial resulted in a verdict against WP and the parties settled this matter. WP's portion of the settlement was covered by insurance subject to the remainder of its deductible. On May 30, 2012, the PPUC's Bureau of Investigation and Enforcement (I&E) filed a Formal Complaint at the PPUC regarding this matter. On February 13, 2013, WP and I&E filed a Joint Petition for Full Settlement that includes, among other things, WP's agreement to conduct an infrared inspection of its primary distribution system, modify certain training programs, and pay an $86,000 civil penalty, which settlement is subject to PPUC approval. On August 29, 2013, the PPUC entered an Order granting the Goretzka family limited party status for the sole purpose of submitting comments to the settlement and issuing the settlement for comment by the parties. On September 16, 2013, the Goretzka family filed Limited Objections to the settlement. Reply comments were filed by WP on September 30, 2013. The PPUC entered an Opinion and Order on January 9, 2014 approving the Settlement with limited modifications regarding the frequency of refresher training and reporting obligations. WP filed a letter on January 17, 2014 accepting those modifications and noting its intent to begin implementation of the settlement terms.

There are various lawsuits, claims (including claims for asbestos exposure) and proceedings related to FirstEnergy's normal business operations pending against FirstEnergy and its subsidiaries. The loss or range of loss in these matters is not expected to be material to FirstEnergy or its subsidiaries. The other potentially material items not otherwise discussed above are described under Note 9, Regulatory Matters of the Combined Notes to Consolidated Financial Statements.

FirstEnergy accrues legal liabilities only when it concludes that it is probable that it has an obligation for such costs and can reasonably estimate the amount of such costs. In cases where FirstEnergy determines that it is not probable, but reasonably possible that it has a material obligation, it discloses such obligations and the possible loss or range of loss if such estimate can be made. If it were ultimately determined that FirstEnergy or its subsidiaries have legal liability or are otherwise made subject to liability based on any of the matters referenced above, it could have a material adverse effect on FirstEnergy's or its subsidiaries' financial condition, results of operations and cash flows.

FIRSTENERGY SOLUTIONS CORP.

MANAGEMENT'S NARRATIVE
ANALYSIS OF RESULTS OF OPERATIONS

FES is a wholly owned subsidiary of FE. FES provides energy-related products and services to retail and wholesale customers, and through its principal subsidiaries, FG and NG, owns or leases, operates and maintains FirstEnergy's fossil and hydroelectric generation facilities (excluding AE Supply and MP), and owns, through its subsidiary, NG, FirstEnergy's nuclear generation facilities. FENOC, a wholly owned subsidiary of FE, operates and maintains the nuclear generating facilities. FES purchases the entire output of the generation facilities owned by FG and NG, and may purchase the uncommitted output of AE Supply, as well as the output relating to leasehold interests of OE and TE in certain of those facilities that are subject to sale and leaseback arrangements, and pursuant to full output, cost-of-service PSAs. On February 12, 2014, FES sold its hydroelectric generation facility to LS Power and recorded a pre-tax gain of $177 million associated with the sale in the first quarter of 2014.

FES' revenues are derived primarily from sales to individual retail customers, sales to customers in the form of governmental aggregation programs, and participation in affiliated and non-affiliated POLR auctions. FES' sales are primarily concentrated in Ohio, Pennsylvania, Illinois, Michigan, New Jersey and Maryland. The demand for electricity produced and sold by FES, along with the price of that electricity, is principally impacted by conditions in competitive power markets, global economic activity as well as economic activity and weather conditions in the Midwest and Mid-Atlantic regions of the United States.

FES is exposed to various market and financial risks, including the risk of price fluctuations in the wholesale power markets. Wholesale power prices may be impacted by the prices of other commodities, including coal and natural gas, and energy efficiency and demand response programs, as well as regulatory and legislative actions, such as MATS among other factors. FES attempts to mitigate the market risk inherent in its energy position by economically hedging its exposure and continuously monitoring various risk measurement metrics to ensure compliance with its risk management policies.

During the first quarter of 2014, FE completed a $500 million equity contribution to FES.

For additional information with respect to FES, please see the information contained in FirstEnergy's Management's Discussion and Analysis of Financial Condition and Results of Operations under the following subheadings, which information is incorporated by reference herein: Overview, Capital Resources and Liquidity, Guarantees and Other Assurances, Off-Balance Sheet Arrangements, Market Risk Information, Credit Risk and Outlook.

Results of Operations

Net income increased by $11 million in the first three months of 2014 compared to the same period of 2013, as more fully described below.

Revenues -

Total revenues increased $305 million, in the first three months of 2014, compared to the same period of 2013, primarily due to increased Transmission revenue and increased sales volumes in Governmental Aggregation, Mass Market sales, and POLR and Structured Sales channels, partially offset by a decline in wholesale sales. Revenues were also impacted by higher unit prices compared to 2013 as a result of increased channel pricing and ancillary pass-through revenues associated with PJM expenses incurred in January 2014.

The increase in total revenues resulted from the following sources:

	Three Months Ended March 31		Increase
Revenues by Type of Service	**2014**	**2013**	**(Decrease)**
		(In millions)	
Direct	$ 713	$ 694	$ 19
Governmental Aggregation	320	292	28
Mass Market	142	117	25
POLR and Structured	350	287	63
Wholesale	157	60	97
Transmission	107	40	67
Other	40	34	6
Total Revenues	$ 1,829	$ 1,524	$ 305

MWH Sales by Channel	Three Months Ended March 31 2014	2013	Increase (Decrease)
	(In thousands)		
Direct	12,801	13,341	(4.0)%
Governmental Aggregation	5,769	5,386	7.1 %
Mass Market	2,126	1,780	19.4 %
POLR and Structured	7,736	5,678	36.2 %
Total MWH Sales	28,432	26,185	8.6 %

The following table summarizes the price and volume factors contributing to changes in revenues:

	Source of Change in Revenues Increase (Decrease)				
MWH Sales Channel:	Sales Volumes	Prices	Financially Settled Contracts	Capacity Revenue	Total
			(In millions)		
Direct	$ (28)	$ 47	$ —	$ —	$ 19
Governmental Aggregation	21	7	—	—	28
Mass Market	23	2	—	—	25
POLR and Structured Sales	104	(41)	—	—	63
Wholesale	—	—	102	(5)	97

The increase in Direct revenues of $19 million resulted from higher unit prices, partially offset by lower sales volumes from large commercial and industrial customers. Direct sales volumes decreased due to FES' strategy to be more selective in customers targeted in response to the current market environment. The increase in Governmental Aggregation revenues of $28 million primarily reflects increased weather-related usage resulting from heating degree days that were 17% higher than the first quarter of 2013 and higher unit prices. The increase in Mass Market of $25 million resulted from the acquisition of new customers primarily in Ohio and Pennsylvania, increased weather-related usage and higher unit prices. The Direct, Governmental Aggregation and Mass Market customer base remained at 2.7 million customers as of March 31, 2014. Higher unit prices in each of the above sales channels resulted from increased channel pricing. Additionally, higher Direct unit prices were impacted by approximately $33 million of ancillary pass-through revenues associated with PJM expenses incurred in January 2014 as more fully described below.

The increase in POLR and structured revenues of $63 million was due to higher POLR and structured sales volumes primarily as a result of increased weather-related usage described above. Lower structured unit prices were primarily due to extreme weather and market conditions in January 2014 that reduced the gains on various structured financial sales contracts, partially offset by higher POLR rates associated with recent auctions.

Wholesale revenues increased $97 million due to higher net gains of $102 million on financially settled contracts, primarily with AE Supply, and a $5 million decrease in capacity revenues resulting primarily from reduced PJM tariff payments on RMR units. Increased gains on financially settled contracts with AE Supply resulted from higher market prices associated with extreme weather and market conditions in January 2014.

Transmission revenue increased $67 million due to higher congestion and ancillary revenue associated with additional retail load.

Other revenue increased $6 million primarily due to higher lease revenues from additional repurchased equity interests in affiliated sale and leasebacks since the first quarter of 2013. FES earns lease revenue associated with the equity interests it purchased.

Operating Expenses -

Total operating expenses increased by $548 million in the first three months of 2014 compared to the same period of 2013.

The following table summarizes the factors contributing to the changes in fuel and purchased power costs in the first three months of 2014 compared with the same period of 2013:

Operating Expense	Source of Change Increase (Decrease) Volumes	Prices	Financially Settled Contracts	Capacity Expense	Total
			(In millions)		
Fossil Fuel	$ 16	$ (1)	$ —	$ —	$ 15
Nuclear Fuel	(7)	11	—	—	4
Non-affiliated Purchased Power[1]	84	844	(453)	48	523
Affiliated Purchased Power	4	(2)	(70)	—	(68)

[1] Realized losses on financially settled wholesale sales contracts of $321 million resulting from higher market prices were netted in purchased power and are included within Gain on Settled Contracts.

Fuel costs increased $19 million primarily due to higher fossil generation volumes and nuclear prices from higher fuel costs, partially offset by lower nuclear generation volumes due to an increase in outages in the first quarter of 2014.

Non-affiliated purchased power costs increased $523 million due to increased prices ($844 million), higher volumes ($84 million) and higher capacity expenses ($48 million), partially offset by gains on financially settled contracts ($453 million). The increase in rate was primarily a result of higher on-peak prices from extreme weather and market conditions in January 2014, partially offset by gains on financially settled contract hedges. Higher purchased volumes were primarily due to increased sales volume requirements, planned outages, and the timing of unplanned outages and derates during on-peak hours. The increase in capacity expense was the result of higher capacity rates primarily in the MAAC zone and increased sales volumes.

Affiliated purchased power costs decreased $68 million as a result of net gains on financially settled contracts with AE Supply, partially offset by increased volume purchases from the Ohio Companies as a result of increased generation by Perry at slightly lower rates.

Other operating expenses increased $73 million in the first three months of 2014, compared to the same period of 2013 due to the following:

- Fossil operating costs decreased $12 million due primarily to fewer planned outage days in the first quarter of 2014 as compared to the same period of 2013.

- Nuclear operating costs increased $15 million as a result of higher contractor, materials and equipment costs associated with the refueling outage at Davis-Besse that began on February 1, 2014. In the same period of 2013, there was a single refueling outage at Perry that began on March 18, 2013.

- Transmission expenses increased $88 million due primarily to higher operating reserve and market-based ancillary costs associated with the extreme weather and market conditions in January 2014. These ancillary charges from PJM were for system reliability and a portion of which are able to be passed through to commercial and industrial customers. Additionally, effective June 1, 2013, network expenses associated with POLR sales in Pennsylvania became the responsibility of suppliers.

- Other operating expenses decreased $18 million primarily due to a decrease in mark-to-market expense on commodity contract positions.

Other Expense -

Total other expense decreased $85 million in the first three months of 2014, compared to the same period of 2013, primarily due to a $66 million loss on debt redemptions in connection with senior notes that were repurchased in 2013, lower net interest expense of $18 million due to debt redemptions and higher investment income of $3 million on NDT investments.

Discontinued Operations -

Discontinued operations increased net income in the first quarter of 2014 compared to the same period of last year primarily due to a pre-tax gain of approximately $177 million associated with the sale of a hydro asset described above.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

See “Management’s Discussion and Analysis of Financial Condition and Results of Operations — Market Risk Information” in Item 2 above.

ITEM 4. CONTROLS AND PROCEDURES

(a) Evaluation of Disclosure Controls and Procedures

The management of FirstEnergy and FES, with the participation of each registrant's chief executive officer and chief financial officer, have reviewed and evaluated the effectiveness of the registrant's disclosure controls and procedures, as defined in the Securities Exchange Act of 1934, as amended, Rules 13a-15(e) and 15d-15(e), as of the end of the period covered by this report. Based on that evaluation, the chief executive officer and chief financial officer of FE and FES have concluded that their respective registrant's disclosure controls and procedures were effective as of the end of the period covered by this report.

(b) Changes in Internal Control over Financial Reporting

During the quarter ended March 31, 2014, there were no changes in internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, FE's and FES' internal control over financial reporting.

PART II. OTHER INFORMATION

ITEM 1. LEGAL PROCEEDINGS

Information required for Part II, Item 1 is incorporated by reference to the discussions in Note 9, Regulatory Matters, and Note 10, Commitments, Guarantees and Contingencies, of the Combined Notes to the Consolidated Financial Statements in Part I, Item 1 of this Form 10-Q.

ITEM 1A. RISK FACTORS

During the quarter ended March 31, 2014, there were no material changes to the risk factors included in our Annual Report or Form 10-K for the year ended December 31, 2013.

ITEM 2. UNREGISTERED SALES OF EQUITY SECURITIES AND USE OF PROCEEDS

None.

ITEM 3. DEFAULTS UPON SENIOR SECURITIES

None

ITEM 4. MINE SAFETY DISCLOSURES

Not Applicable

ITEM 5. OTHER INFORMATION

None

ITEM 6. EXHIBITS

	Exhibit Number	
FirstEnergy		
	10.1	Amendment, dated as of March 31, 2014, to the Credit Agreement, dated as of June 17, 2011, as amended as of May 8, 2012, May 8, 2013 and October 31, 2013, among FirstEnergy, The Cleveland Electric Illuminating Company, Metropolitan Edison Company, Ohio Edison Company, Pennsylvania Power Company, The Toledo Edison Company, Jersey Central Power & Light Company, Monongahela Power Company, Pennsylvania Electric Company, The Potomac Edison Company and West Penn Power Company, as borrowers, The Royal Bank of Scotland plc, as administrative agent, and the lending banks, fronting banks and swing line lenders identified therein (incorporated by reference to FE's Form 8-K filed April 4, 2014, Exhibit 10-1, File No. 333-21011).
	10.2	Amendment, dated as of March 31, 2014 to the Credit Agreement, dated as of May 8, 2012, and as amended as of May 8, 2013, among FirstEnergy Transmission, LLC, American Transmission Systems, Incorporated and Trans-Allegheny Interstate Line Company, as borrowers, and PNC Bank, National Association, as administrative agent, and the lending banks and fronting banks identified therein (incorporated by reference to FE's Form 8-K filed April 4, 2014, Exhibit 10-3, File No. 333-21011).
	10.3	Term Loan Credit Agreement, dated as of March 31, 2014, among FE, as borrower, the banks named therein and The Royal Bank of Scotland, plc, as administrative agent (incorporated by reference to FE's Form 8-K filed April 4, 2014, Exhibit 10.4, File No. 333-21011).

Certification

I, Anthony J. Alexander, certify that:

1. I have reviewed this report on Form 10-Q of FirstEnergy Corp.;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

    a) designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

    b) designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

    c) evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

    d) disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth fiscal quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial

reporting, to the registrant's auditors and the audit committee of the registrant's board of directors (or persons performing the equivalent functions):

a) all significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

b) any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

FirstEnergy®

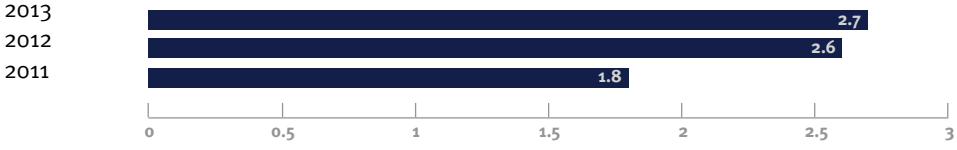
On the cover: A monopole is constructed to replace a steel tower in East Hanover, N.J., as part of a $200 million, multiyear program to enhance Jersey Central Power & Light's transmission system.

FINANCIAL HIGHLIGHTS

KEY ACCOMPLISHMENTS

- Reduced debt by approximately $1.5 billion at FirstEnergy Solutions (FES) and Allegheny Energy Supply
- Generated $2.7 billion in cash from operations
- Reduced planned capital spending on generation over the next several years by more than $1 billion
- Achieved a 9 percent increase in retail sales volume at FES
- Announced *Energizing the Future* – a $4.2 billion investment through 2017 to expand and strengthen our transmission system

FINANCIALS AT A GLANCE



(dollars in millions, except per share amounts)

	2013	2012	2011
TOTAL REVENUES	$14,917	$15,273	$16,105
NET INCOME	$392	$771	$869
BASIC EARNINGS per common share	$0.94	$1.85	$2.22
DILUTED EARNINGS per common share	$0.94	$1.84	$2.21
DIVIDENDS PAID per common share*	$2.20	$2.20	$2.20

COMPETITIVE RETAIL SALES

(in millions of megawatt-hours)

DISTRIBUTION ELECTRIC SALES

(in millions of megawatt-hours)

(Note: 2011 distribution sales reflect 10 months of Allegheny Energy sales)

MESSAGE TO OUR SHAREHOLDERS

We took a number of aggressive steps in 2013 to position your company for future growth.

We reduced the size and shifted the mix of our competitive generating assets, ultimately creating a fleet that is more cost-effective, efficient and environmentally sound. We also decreased operating expenses and the size of our workforce by nearly 800 employees. And, we considerably lowered the capital requirements for environmental compliance.

More important, we refocused our business to pursue more predictable and sustainable growth in our regulated operations. We expect much of this growth over the next several years to come from investments to upgrade and expand our transmission system, which comprises approximately 24,000 miles of lines.

While these and other significant actions are helping us meet the challenges of a difficult economy, they have not been sufficient to offset the cumulative impact the recession has had on our balance sheet or earnings. For example, our distribution utility sales in 2013 were still lower than sales in 2007, the year before the economic downturn. This loss of sales over the past six years has reduced distribution revenues by approximately $1 billion. In addition, our utilities have yet to recover more than $1 billion in costs related to their response to unprecedented storm activity in 2011 and 2012.

The recession also negatively impacted our competitive operations. Market prices for competitive generation in the past three years alone have dropped more than $20 per megawatt-hour (MWH), with 85 percent of that drop – the equivalent of over $2 billion in revenues – occurring since the end of 2011.

The sustained and long-term effect of the recession, and its direct impact on our operations, undermined our ability to maintain the dividend at its previous level. As a result, in January of this year, your Board declared a quarterly dividend of $0.36 per share of outstanding stock – an annual dividend equivalent of $1.44 per share. This level better reflects the economic realities we are now facing. The dividend change is expected to preserve a solid payment for our shareholders and provide the company with additional financial flexibility to pursue regulated growth opportunities.

Above: A helicopter guides high-voltage transmission lines onto towers that run from the Davis-Besse Nuclear Power Station in Oak Harbor, Ohio, to the new Hayes Substation in Sandusky. **Right:** One of two new 470-ton steam generators is offloaded at the Port of Toledo to be installed at Davis-Besse to support its continued safe and reliable operation.

GROWING OUR REGULATED UTILITY OPERATIONS

As part of our repositioning efforts, we announced plans to expand our *Energizing the Future* initiative by making significant investments in our transmission system over the next several years. Some of these investments will involve advanced technologies designed to enhance system reliability and reduce maintenance costs. These projects also will take advantage of our ideal location as we expect to increase our load-serving capability in the Marcellus and Utica shale gas regions, where future economic growth is anticipated.

Initial efforts focus on approximately 7,500 circuit miles of transmission lines to be evaluated and rebuilt as needed, as well as the renovation of 170 substations serving Ohio Edison, The Illuminating Company, Toledo Edison and Penn Power. We expect to expand the program as we continue to strengthen one of the nation's largest transmission systems.

We're also improving the efficiency of our utility distribution system to meet the energy needs of our customers. For example, smart meter technologies show promise in improving customer service and reliability by providing faster restoration during major power outages and empowering customers to make more informed decisions about their energy use.

We recently installed 25,000 smart meters within The Illuminating Company service area as part of a three-year pilot program launched in 2011. Information gathered from this pilot will help us develop cost-effective strategies to expand our smart meter implementation efforts in Ohio. In Pennsylvania, we plan to begin installing smart meters in the Penn Power service area later in 2014, and to expand that effort to nearly all of our 2 million customers in that state by 2019.

We are encouraged by the ongoing development of shale gas resources and related businesses that should help us grow our industrial sales in the years ahead. Much of the Marcellus and Utica formations are located directly beneath FirstEnergy's service area – primarily across western Pennsylvania, eastern Ohio and West Virginia – and the full development of these resources could have a significant impact on the long-term growth of our service area.

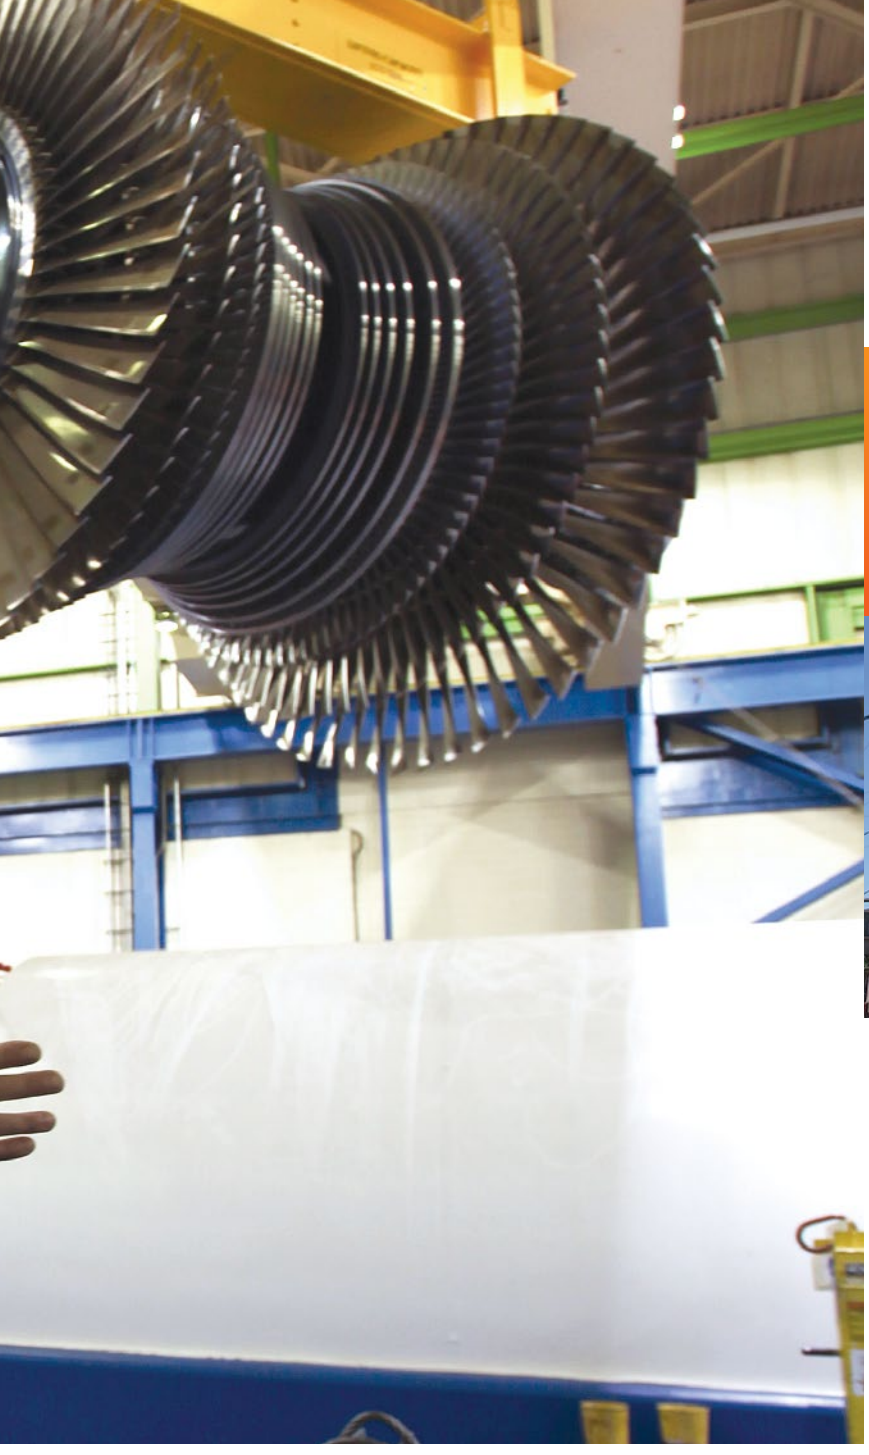
Already, sales related to shale gas have resulted in 210 megawatts (MW) of new industrial demand and an additional 430 MW of planned expansions at customer facilities. Over the next two years, industrial sales are expected to increase by 4 percent, with opportunities for additional growth through 2018. We also should see increased commercial and residential growth related to these industrial expansions and a more robust overall economy.

PRESERVING VALUE IN OUR COMPETITIVE BUSINESS

We continue to view our competitive business as a key aspect of our long-term strategy. Although we have been challenged by weak demand for power, low capacity payments and soft energy prices, we've responded by repositioning our competitive operations through several major steps taken during the year.

We transferred ownership of our Harrison Power Station to our Mon Power utility – a move that will continue to provide our customers with cost-effective generation from this coal-based facility located in West Virginia.

Due to the U.S. Environmental Protection Agency's Mercury and Air Toxics Standards (MATS) and other environmental regulations, we reduced the size of our generating fleet by more than 2,000 MW by deactivating the Hatfield's Ferry and Mitchell power stations.



In addition, we rebalanced the mix of our generating assets with the sale of 527 MW of competitive hydroelectric capacity in 2014. Following these and previously announced actions, our competitive fleet will total approximately 13,000 MW. While the size of our competitive fleet is about the same as it was before the merger with Allegheny Energy, it is now far more effective, efficient and environmentally sound.

These transactions, combined with approximately $1.5 billion of debt reduction during 2013 at FES and Allegheny Energy Supply, have placed our competitive business in a better position to successfully navigate current and future market conditions. We've also reduced the amount of capital needed to support our generating fleet over the next several years by more than $1 billion, and continue to reduce our expenses by aggressively managing fuel, operating and maintenance costs.

As one of the largest retail energy suppliers in the U.S., FES remains focused on selectively growing its business across a variety of channels and customer groups. During the year, FES pursued highly targeted marketing strategies that increased its retail sales volume by 9 percent and its retail base by approximately 100,000 customers, bringing its total to more than 2.7 million customers. Although the realignment of our competitive generation assets and challenging retail markets are expected to result in lower sales over the near term, we will concentrate our marketing efforts on maintaining the highest-margin sales and channels. Consistent with our plans, we already have sales of more than 90 million MWH under contract for 2014, and we're well-positioned to take advantage of any increases in market and energy prices through 2016.

While we have taken significant and aggressive actions to reposition our competitive operations, we believe reforms in both capacity and energy market rules are needed. For example, in both markets, far too many regulated, subsidized and other favored resources are treated the same as competitive baseload assets. Unfortunately, some of those favored resources, such as intermittent renewables, cannot support the reliability of the grid, and others are allowed to compete but face none of the costs or risks associated with competitive markets. We will continue to work with key stakeholders to find a fair and equitable solution to these challenging issues.

Left: New low-pressure turbine rotors were installed to improve the reliability and efficiency of Unit 1 of our Beaver Valley Power Station in Shippingport, Pa. **Below:** An Ohio Edison crew member replaces a three-phase power bank as part of a service upgrade for a commercial customer in Akron.

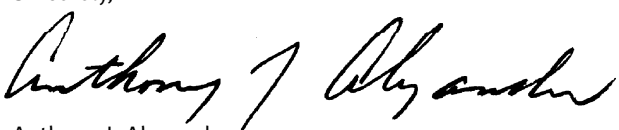
PROTECTING THE ENVIRONMENT

FirstEnergy is committed to enhancing the environmental performance of our plants and other facilities while meeting our customers' need for safe, reliable and affordable electricity.

With the deactivation of a number of older coal-fired units and improvements in the efficiency of our nuclear units, we are reducing emissions of carbon dioxide (CO_2) across our fleet. Overall, we expect to achieve a 24 percent reduction in CO_2 emissions below 2005 levels – significantly exceeding President Obama's goal of a 17 percent reduction in CO_2 emissions by 2020, using the same 2005 baseline.

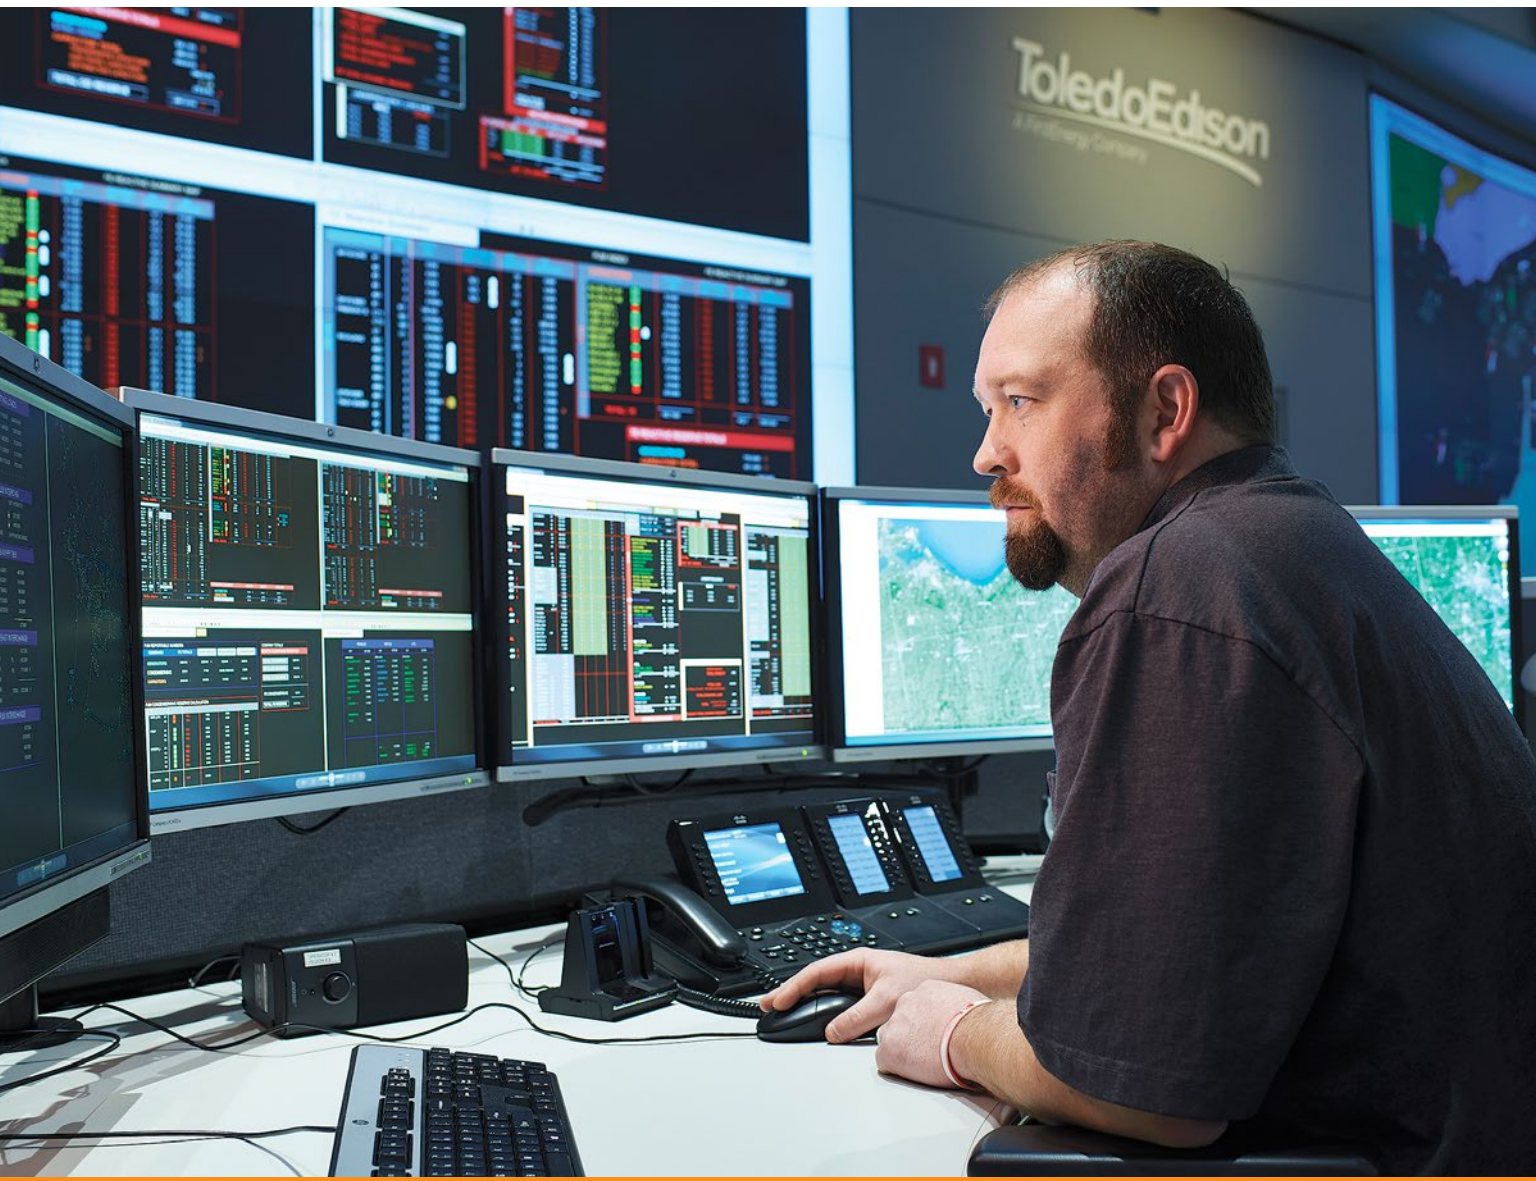
In addition, we remain on track to exceed benchmarks established by the U.S. Environmental Protection Agency's MATS and other environmental regulations while continuing to significantly reduce our expected capital investment for compliance. Our projected spend for MATS compliance is now $465 million, from an original projection of $2 billion to $3 billion. This is a direct result of the deactivation of certain plants and other cost-cutting measures.

We now operate one of the cleanest and lowest-cost fleets in the U.S. As we complete our MATS compliance program and other current projects, nearly 100 percent of our power will be generated from non- or low-emitting sources.



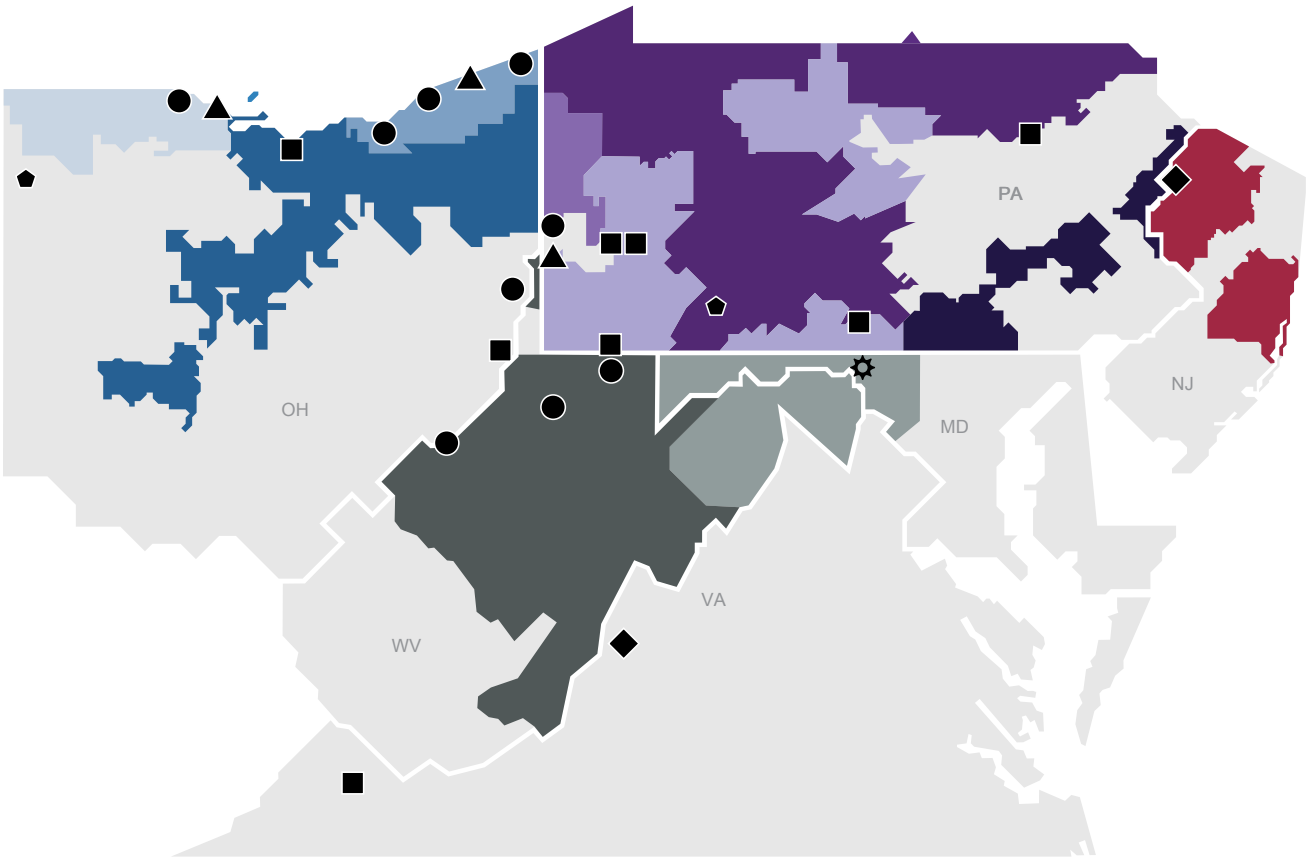
POSITIONED FOR LONG-TERM GROWTH

Our employees have overcome a number of significant hurdles in helping us reposition our company for long-term growth, and I'm confident of their ability to meet the challenges that lie ahead.



Whether it involves enhancing the efficiency of our regulated utility operations, improving the productivity of our generating fleet or increasing profitable sales at FES, our employees are committed to safe operations and their company's success. And, we are confident that the diversity and flexibility of FirstEnergy's assets will continue to offer us the best opportunities to grow our business in the future.

Our team remains focused on achieving solid results in a difficult business climate and delivering greater value to our investors. Thank you for your continued support.



Sincerely,

Anthony J. Alexander
President and Chief Executive Officer
March 19, 2014

Our new Akron Control Center in Ohio uses advanced technologies to monitor the transmission system serving our electric utility operating companies.

CORPORATE PROFILE

FirstEnergy is a leading regional energy provider headquartered in Akron, Ohio. Our subsidiaries and affiliates are involved in the generation, transmission and distribution of electricity, as well as energy management and other energy-related services.

Our 10 utility operating companies form one of the nation's largest investor-owned electric systems based on 6 million customers served within a nearly 65,000-square-mile area of Ohio, Pennsylvania, New Jersey, West Virginia, Maryland and New York.

Our generation subsidiaries control nearly 18,000 megawatts (MW) of capacity from a diversified mix of scrubbed coal, nuclear, natural gas, oil, hydroelectric pumped-storage and contracted wind and solar resources – including nearly 1,900 MW of renewable energy. The company's transmission subsidiaries operate approximately 24,000 miles of transmission lines connecting the Midwest and Mid-Atlantic regions.

FirstEnergy Solutions, our competitive subsidiary, is one of the largest retail energy suppliers in the U.S., serving more than 2.7 million residential, commercial and industrial customers in Ohio, Pennsylvania, New Jersey, Maryland, Michigan and Illinois.

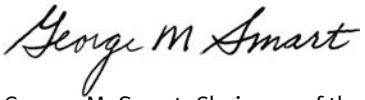
DEAR SHAREHOLDERS:

In 2013, your management team and employees made significant progress in strengthening the company's financial position, preserving its competitive business, and controlling costs.

As FirstEnergy repositions its business to achieve more sustainable growth, your Board of Directors continues to provide management with guidance on creating long-term value for its shareholders, customers and communities.

Toward that end, the Board conducted a thorough review of the dividend and determined it was prudent to declare a new quarterly dividend of $0.36 per share to more closely reflect the expected earnings from the company's regulated businesses. While this was a difficult decision, we believe this action provides shareholders with a strong dividend and presents the best path forward for FirstEnergy.



In keeping with our policy, the Board will continue to review the dividend on a quarterly basis as the company moves forward with its new strategic direction and pursues growth opportunities during the next several years. We also remain committed to ensuring your company has the appropriate corporate governance practices and policies in place.

On a personal note, let me express my gratitude on behalf of your Board to Dr. Carol A. Cartwright, who is retiring from the Board as of the 2014 Annual Meeting of Shareholders. We are thankful for the leadership and guidance Dr. Cartwright has provided during her 22 years of distinguished service to FirstEnergy and its shareholders.

I welcome Luis A. Reyes, who was elected to the Board in September 2013. Luis is a well-respected and seasoned nuclear industry veteran, with more than 36 years of experience in the field, including senior leadership positions at the U.S. Nuclear Regulatory Commission.

Your Board appreciates your ongoing trust and support. We look forward to representing your interests and working with your management team to capitalize on the opportunities that lie ahead.

Sincerely,

George M. Smart, Chairman of the Board

FIRSTENERGY BOARD OF DIRECTORS

Paul T. Addison
Retired, formerly Managing Director in the Utilities Department of Salomon Smith Barney (CitiGroup).

Anthony J. Alexander
President and Chief Executive Officer of FirstEnergy Corp.

Michael J. Anderson
Chairman of the Board and Chief Executive Officer of The Andersons, Inc. (diversified agribusiness).

GLOSSARY OF TERMS

The following abbreviations and acronyms are used in this report to identify FirstEnergy Corp. and its current and former subsidiaries:

AE	Allegheny Energy, Inc., a Maryland utility holding company that merged with a subsidiary of FirstEnergy on February 25, 2011
AESC	Allegheny Energy Service Corporation, a subsidiary of AE
AE Supply	Allegheny Energy Supply Company, LLC, an unregulated generation subsidiary of AE
AGC	Allegheny Generating Company, a generation subsidiary of AE Supply
Allegheny	Allegheny Energy, Inc., together with its consolidated subsidiaries
Allegheny Utilities	MP, PE and WP
ATSI	American Transmission Systems, Incorporated, formerly a direct subsidiary of FE that became a subsidiary of FET in April 2012, which owns and operates transmission facilities.
Buchanan Energy	Buchanan Energy Company of Virginia, LLC
CEI	The Cleveland Electric Illuminating Company, an Ohio electric utility operating subsidiary
Centerior	Centerior Energy Corp., former parent of CEI and TE, which merged with OE to form FirstEnergy in 1997
FE	FirstEnergy Corp., a public utility holding company
FENOC	FirstEnergy Nuclear Operating Company, which operates nuclear generating facilities
FES	FirstEnergy Solutions Corp., which provides energy-related products and services
FESC	FirstEnergy Service Company, which provides legal, financial and other corporate support services
FET	FirstEnergy Transmission, LLC, formerly known as Allegheny Energy Transmission, LLC, a subsidiary of AE, which is the parent of ATSI and TrAIL and has a joint venture in PATH.
FEV	FirstEnergy Ventures Corp., which invests in certain unregulated enterprises and business ventures
FG	FirstEnergy Generation, LLC, a subsidiary of FES, which owns and operates non-nuclear generating facilities
FirstEnergy	FirstEnergy Corp., together with its consolidated subsidiaries
Global Holding	Global Mining Holding Company, LLC, a joint venture between FEV, WMB Marketing Ventures, LLC and Pinesdale LLC
Global Rail	A subsidiary of Global Holding that owns coal transportation operations near Roundup, Montana
GPU	GPU, Inc., former parent of JCP&L, ME and PN, that merged with FirstEnergy on November 7, 2001
JCP&L	Jersey Central Power & Light Company, a New Jersey electric utility operating subsidiary
ME	Metropolitan Edison Company, a Pennsylvania electric utility operating subsidiary
Merger Sub	Element Merger Sub, Inc., a Maryland corporation and a wholly owned subsidiary of FirstEnergy
MP	Monongahela Power Company, a West Virginia electric utility operating subsidiary of AE
NG	FirstEnergy Nuclear Generation, LLC, a subsidiary of FES, which owns nuclear generating facilities
OE	Ohio Edison Company, an Ohio electric utility operating subsidiary
Ohio Companies	CEI, OE and TE
PATH	Potomac-Appalachian Transmission Highline, LLC, a joint venture between Allegheny and a subsidiary of AEP
PATH-Allegheny	PATH Allegheny Transmission Company, LLC
PATH-WV	PATH West Virginia Transmission Company, LLC
PE	The Potomac Edison Company, a Maryland electric utility operating subsidiary of AE
Penn	Pennsylvania Power Company, a Pennsylvania electric utility operating subsidiary of OE
Pennsylvania Companies	ME, PN, Penn and WP
PN	Pennsylvania Electric Company, a Pennsylvania electric utility operating subsidiary
PNBV	PNBV Capital Trust, a special purpose entity created by OE in 1996
Shippingport	Shippingport Capital Trust, a special purpose entity created by CEI and TE in 1997
Signal Peak	An indirect subsidiary of Global Holding that owns mining operations near Roundup, Montana
TE	The Toledo Edison Company, an Ohio electric utility operating subsidiary
TrAIL	Trans-Allegheny Interstate Line Company, a subsidiary of FET, which owns and operates transmission facilities
Utilities	OE, CEI, TE, Penn, JCP&L, ME, PN, MP, PE and WP
WP	West Penn Power Company, a Pennsylvania electric utility operating subsidiary of AE

The following abbreviations and acronyms are used to identify frequently used terms in this report:

AEP	American Electric Power Company, Inc.
AFS	Available-for-sale
ALJ	Administrative Law Judge

SHAREHOLDER RETURN

The following graph shows the total cumulative return from a $100 investment on December 31, 2008 in FirstEnergy's common stock compared with the total cumulative returns of EEI's Index of Investor-Owned Electric Utility Companies and the S&P 500.

HOLDERS OF COMMON STOCK

There were 103,266 and 102,914 holders of 418,628,559 and 418,734,086 shares of FirstEnergy's common stock as of December 31, 2013 and January 31, 2014, respectively. Information regarding retained earnings available for payment of cash dividends is given in Note 12, Capitalization of the Combined Notes to Consolidated Financial Statements.

CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL DISCLOSURE

None.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Forward-Looking Statements: This Form 10-K includes forward-looking statements based on information currently available to management. Such statements are subject to certain risks and uncertainties. These statements include declarations regarding management's intents, beliefs and current expectations. These statements typically contain, but are not limited to, the terms "anticipate," "potential," "expect," "will," "intend," "believe," "estimate" and similar words. Forward-looking statements involve estimates, assumptions, known and unknown risks, uncertainties and other factors that may cause actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements.

Actual results may differ materially due to:

- The speed and nature of increased competition in the electric utility industry, in general, and the retail sales market in particular.
- The ability to experience growth in the Regulated Distribution and Regulated Transmission segments and to continue to successfully implement our direct retail sales strategy in the Competitive Energy Services segment.
- The accomplishment of our regulatory and operational goals in connection with our transmission plan and planned distribution rate cases and the effectiveness of our repositioning strategy.
- The impact of the regulatory process on the pending matters before FERC and in the various states in which we do business including, but not limited to, matters related to rates and pending rate cases or the WVCAG's pending appeal of the Generation Resource Transaction.
- The uncertainties of various cost recovery and cost allocation issues resulting from ATSI's realignment into PJM.
- Economic or weather conditions affecting future sales and margins such as the polar vortex or other significant weather events.
- Regulatory outcomes associated with storm restoration, including but not limited to, Hurricane Sandy, Hurricane Irene and the October snowstorm of 2011.
- Changing energy, capacity and commodity market prices including, but not limited to, coal, natural gas and oil, and availability and their impact on retail margins.
- The continued ability of our regulated utilities to recover their costs.
- Costs being higher than anticipated and the success of our policies to control costs and to mitigate low energy, capacity and market prices.
- Other legislative and regulatory changes, and revised environmental requirements, including possible GHG emission, water discharge, water intake and coal combustion residual regulations, the potential impacts of CSAPR, CAIR, and/or any laws, rules or regulations that ultimately replace CAIR, and the effects of the EPA's MATS rules including our estimated costs of compliance.
- The uncertainty of the timing and amounts of the capital expenditures that may arise in connection with any litigation, including NSR litigation or potential regulatory initiatives or rulemakings (including that such expenditures could result in our decision to deactivate or idle certain generating units).
- The uncertainties associated with the deactivation of certain older regulated and competitive fossil units including the impact on vendor commitments, and the timing thereof as they relate to, among other things, RMR arrangements and the reliability of the transmission grid.
- Adverse regulatory or legal decisions and outcomes with respect to our nuclear operations (including, but not limited to the revocation or non-renewal of necessary licenses, approvals or operating permits by the NRC or as a result of the incident at Japan's Fukushima Daiichi Nuclear Plant).
- Issues arising from the indications of cracking in the shield building and the steam generator replacement at Davis-Besse.
- The impact of future changes to the operational status or availability of our generating units.
- The risks and uncertainties associated with litigation, arbitration, mediation and like proceedings, including, but not limited to, any such proceedings related to vendor commitments.
- Replacement power costs being higher than anticipated or not fully hedged.
- The ability to comply with applicable state and federal reliability standards and energy efficiency and peak demand reduction mandates.
- Changes in customers' demand for power, including but not limited to, changes resulting from the implementation of state and federal energy efficiency and peak demand reduction mandates.
- The ability to accomplish or realize anticipated benefits from strategic and financial goals including, but not limited to, the ability to reduce costs and to successfully complete our announced financial plans designed to improve our credit metrics and strengthen our balance sheet, including but not limited to, the benefits from our announced dividend reduction and our proposed capital raising and debt reduction initiatives.
- Our ability to improve electric commodity margins and the impact of, among other factors, the increased cost of fuel and fuel transportation on such margins.
- Changing market conditions that could affect the measurement of certain liabilities and the value of assets held in our NDTs, pension trusts and other trust funds, and cause us and our subsidiaries to make additional contributions sooner, or in amounts that are larger than currently anticipated.
- The impact of changes to material accounting policies.

- The ability to access the public securities and other capital and credit markets in accordance with our announced financial plans, the cost of such capital and overall condition of the capital and credit markets affecting us and our subsidiaries.
- Actions that may be taken by credit rating agencies that could negatively affect us and our subsidiaries' access to financing, increase the costs thereof, and increase requirements to post additional collateral to support outstanding commodity positions, LOCs and other financial guarantees.
- Changes in national and regional economic conditions affecting us, our subsidiaries and our major industrial and commercial customers, and other counterparties including fuel suppliers, with which we do business.
- The impact of any changes in tax laws or regulations or adverse tax audit results or rulings.
- Issues concerning the stability of domestic and foreign financial institutions and counterparties with which we do business.
- The risks and other factors discussed from time to time in our SEC filings, and other similar factors.

Dividends declared from time to time on FE's common stock during any period may in the aggregate vary from prior periods due to circumstances considered by FE's Board of Directors at the time of the actual declarations. A security rating is not a recommendation to buy or hold securities and is subject to revision or withdrawal at any time by the assigning rating agency. Each rating should be evaluated independently of any other rating.

The foregoing review of factors should not be construed as exhaustive. New factors emerge from time to time, and it is not possible for management to predict all such factors, nor assess the impact of any such factor on FirstEnergy's business or the extent to which any factor, or combination of factors, may cause results to differ materially from those contained in any forward-looking statements. The registrants expressly disclaim any current intention to update, except as required by law, any forward-looking statements contained herein as a result of new information, future events or otherwise.

See Item 1A. Risk Factors for additional information regarding risks that may impact our business, financial condition and results of operations.

OVERVIEW

Earnings available to FirstEnergy Corp. in 2013 were $392 million, or basic earnings of $0.94 per share of common stock ($0.94 diluted), compared with $770 million, or basic earnings of $1.85 per share of common stock ($1.84 diluted) in 2012 and $885 million, or $2.22 per basic share ($2.21 diluted), in 2011. The principal reasons for the changes in basic earnings per share are summarized below:

Change In Basic Earnings Per Share From Prior Year	2013	2012
Basic Earnings Per Share - Prior Year	$ 1.85	$ 2.22
Segment operating results[1] -		
Regulated Distribution	0.06	(0.05)
Regulated Transmission	(0.03)	—
Competitive Energy Services	(0.45)	(0.21)
Regulatory charges	(0.46)	(0.03)
Non-core asset sales/impairments	—	(0.78)
Merger-related costs	0.03	0.36
Merger accounting — commodity contracts	0.05	0.11
Net merger accretion[1][2]	—	0.01
Trust securities impairments	(0.09)	0.01
Mark-to-market adjustments-		
Pension and OPEB actuarial assumptions	1.29	(0.17)
All other	(0.07)	0.13
Plant deactivation costs	(0.74)	0.20
West Virginia asset transfer charges	(0.51)	—
Litigation resolution	—	0.06
Debt redemption costs	(0.20)	—
Restructuring costs	0.01	(0.02)
Interest expense, net of amounts capitalized	(0.01)	0.04
Investment income	—	(0.01)
Income tax legislative changes	0.08	(0.02)
Change in effective tax rate	0.11	(0.09)
Settlement of uncertain tax positions	—	0.06
Discontinued operations	—	0.01
Other	0.02	0.02
Basic Earnings Per Share	$ 0.94	$ 1.85

(1) Excludes amounts that are shown separately.
(2) Includes dilutive effect of shares issued in connection with the Allegheny merger.

FirstEnergy continued to be exposed to weak economic conditions across its multi-state utility service territory throughout 2013, as evidenced by relatively flat distribution sales over the last three years. This prolonged decrease in demand, coupled with excess generation supply in the region, has caused a period of protracted low power and capacity prices. Further, the PJM RPM Auction for 2016/2017 capacity that was conducted in May 2013 produced prices in the regions served by FirstEnergy's Competitive Energy Services segment that were lower than expected. This result is a broader indication of an underlying supply/demand imbalance that is expected to continue to affect power producers in this region, adding pressure on already depressed energy prices and potentially pushing any significant power price recovery further into the future than FirstEnergy, or the industry at large, previously expected.

Over the course of 2013, FirstEnergy took a number of actions designed to reposition the Competitive Energy Services segment, including adjusting its hedging strategy by slowing forward sales in order to capture any potential future improvements in power prices, being more selective in the customers targeted and focusing more on customers with higher profit margins. With the deactivation of the Hatfield’s Ferry and Mitchell plants and the Harrison/Pleasants asset transfer in October of 2013, as well as the sale of 527 MW of hydro assets on February 12, 2014, FirstEnergy has reduced the size of the competitive fleet and changed the

mix of its assets. While these actions will result in the competitive fleet being about the same size as before the Allegheny merger, FirstEnergy believes it is a much stronger, more efficient, and environmentally controlled platform of units.

In late 2013, FirstEnergy announced plans to grow its regulated operations - specifically its transmission segment. FirstEnergy plans to implement a transmission expansion plan designed to improve operating flexibility, increase the reliability of the regional transmission system, position capacity for future load growth and facilitate response to system events. These investments will focus primarily in ATSI, which has a formula rate recovery mechanism, but will ultimately extend throughout FirstEnergy's service area.

Operational Matters

Employee Relations

As of December 31, 2013, the IBEW, the UWUA and the OPEIU unions collectively represented approximately 48% of FirstEnergy's total employees. There are various CBAs between FirstEnergy's subsidiaries and these unions, most of which have three year terms. There were seven CBAs covering approximately 2,850 bargaining unit employees that expired in 2013. Negotiations on five of the seven CBAs resulted in new CBAs that expire in 2014, 2015, or 2016.

FirstEnergy is engaged in separate negotiations with Local 102 and Local 180 of the UWUA. The CBA with Local 102, which represents approximately 700 employees at WP and PE, expired on April 30, 2013. WP and PE have work continuation plans in place in the event of any work stoppage. The CBA with Local 180, which represents approximately 150 employees at PN, expired on August 31, 2013. After multiple bargaining sessions without an agreement on a new CBA, FirstEnergy issued a final offer, which Local 180 rejected. Beginning November 25, 2013, FirstEnergy locked out members of Local 180 and commenced its work continuation plan.

In addition, two other CBAs due to expire in 2014 were extended to 2017 prior to their expiration.

West Virginia Asset Transfer - 2013

On October 9, 2013, MP sold its approximate 8% share of Pleasants at its fair market value of $73 million to AE Supply, and AE Supply sold its approximate 80% share of Harrison to MP at its book value of $1.2 billion. The transaction resulted in AE Supply receiving net consideration of $1.1 billion and MP's assumption of a $73.5 million pollution control note. The $1.1 billion net consideration was originally financed by MP through an equity infusion from FE of approximately $527 million and a note payable to AE Supply of approximately $573 million. The note payable to AE Supply was repaid in the fourth quarter of 2013. In connection with the closing, in the fourth quarter of 2013, MP recorded a pre-tax impairment charge of approximately $322 million to reduce the net book value of the Harrison Power Station to the amount that was permitted to be included in jurisdictional rate base. Additionally, MP recognized a regulatory liability of approximately $23 million in the fourth quarter of 2013 representing refunds to customers associated with the excess purchase price received by MP above the net book value of MP's minority interest in the Pleasants Power Station.

Hatfield's Ferry, Mitchell & Mad River Plant Deactivations

As a result of the cost of compliance with current and future environmental regulations and the continued low market price for electricity, FirstEnergy deactivated its 1,700-MW Hatfield's Ferry and 370-MW Mitchell coal-fired plants on October 9, 2013. In connection with the deactivations, in the second quarter of 2013, FirstEnergy recorded a pre-tax impairment of approximately $473 million to continuing operations, which also includes pre-tax impairments of $13 million related to excessive inventory at these facilities. The impairment charge is included within the results of the Competitive Energy Services segment.

Approximately 240 plant employees and generation related positions were affected by these plant deactivations. FirstEnergy recorded approximately $6 million (pre-tax) of severance related expenses that were recognized in Other operating expenses in the Consolidated Statements of Income for the year ended December 31, 2013.

On January 9, 2014, FirstEnergy deactivated the 60 MW Mad River power station in Springfield, Ohio as PJM found no reliability issues.

Davis-Besse Inspection

As part of routine inspections of the concrete shield building at Davis-Besse Nuclear Power Station in 2013, FENOC identified changes to the subsurface laminar cracking condition originally discovered in 2011. The shield building is a 2 1/2-foot thick reinforced concrete structure that provides biological shielding, protection from natural phenomena including wind and tornadoes and additional shielding in the event of an accident. FENOC then expanded its sample size to include all of the existing core bores in the shield building. These inspections, which are now complete, identified additional subsurface cracking that was determined to be pre-existing, but only now identified with the aid of improved inspection technology. These inspections also revealed that the cracking condition has propagated a small amount in select areas. Preliminary analysis of the inspections results confirm that the building continues to maintain its structural integrity, and its ability to safely perform all of its functions.

Nuclear Refueling Outages

The following table includes details for the two refueling outages in 2013:

Unit	Outage Start	Returned to Service
Perry	March 18, 2013	May 2, 2013
Beaver Valley Unit 1	September 30, 2013	November 4, 2013

On March 18, 2013, Perry Nuclear Power Plant safely shut down for scheduled refueling, maintenance and a turbine upgrade. While the unit was off-line, 280 of the 748 fuel assemblies were replaced, and numerous safety inspections were conducted on the unit's reactor vessel, turbine and generator. In addition, preventative maintenance was performed on major components, including testing more than 160 valves, replacing several control rod blades and inspecting and cleaning cooling tower piping. During the outage, Perry's three low pressure turbines were replaced with new 175-ton turbine rotors.

On September 30, 2013, the 911 MW Beaver Valley Unit 1 entered into a scheduled refueling and maintenance outage, including a turbine upgrade that is designed to improve efficiency and reliability. During the outage, 60 of the 157 fuel assemblies were exchanged. Numerous inspections, maintenance activities and improvement projects designed to ensure continued safe and reliable operations have occurred. Prior to the outage, Beaver Valley operated safely and reliably for 507 consecutive days since the completion of its last refueling outage in May 2012.

Beaver Valley Unit 1 returned to service January 29, 2014, following replacement and testing of the Main Unit Transformer associated with a fault that occurred on January 6, 2014 that resulted in an automatic shutdown. In addition, during January 2014, given higher customer usage associated with extreme weather conditions and unit unavailability, including Beaver Valley Unit 1, FirstEnergy's Competitive Energy Services segment (including FES) was required to purchase higher volumes of power. Given the market conditions in PJM, the Competitive Energy Services segment (including FES) also experienced increased levels of transmission charges, primarily associated with ancillary expenses, such as synchronous and operating reserves, which are intended for reliability purposes and are socialized across all load serving entities based on load share. Certain of these transmission charges are expected to be billed to retail customers.

On February 1, 2014, the Davis-Besse Nuclear Power Station entered into an outage to install two new steam generators, replace about a third of the unit’s 177 fuel assemblies and perform numerous safety inspections and preventative maintenance activities. During the preliminary stages of the outage an area of concrete that was not filled to the expected thickness within the shield building wall was discovered at the top of the temporary construction opening that was created as part of the 2011 outage. The 2011 temporary construction opening was created to install the new reactor head. FENOC has assessed the as-found condition of the concrete and has determined the shield building would have performed its design functions. This condition within the shield building wall will be repaired during this outage to conform to its original design configuration. This condition is not expected to extend the outage.

Regulatory Matters

Ohio Alternative Energy Rider Update

Under SB221 the Ohio Companies are required to serve part of their load from renewable energy sources. During 2009 through 2011, the Ohio Companies, in accordance with SB221, conducted RFPs to secure RECs. On August 7, 2013 the PUCO disallowed the Ohio Companies' recovery of $43.4 million, plus interest, that related to 2011 RECs that were purchased in the August 2010 RFP. The Ohio Companies, along with other parties, timely filed applications for rehearing on September 6, 2013. On December 18, 2013, the PUCO denied all of the applications for rehearing. Based on the PUCO ruling, a regulatory charge of approximately $51 million, including interest, was recorded in the fourth quarter of 2013 included in Amortization of regulatory assets, net within the Consolidated Statement of Income. On December 24, 2013, the Ohio Companies filed a notice of appeal and a motion for stay of the PUCO's order with the Supreme Court of Ohio. On February 10, 2014, the Supreme Court of Ohio granted the Ohio Companies' motion for stay, which went into effect on February 14, 2014. On February 18, 2014, the Office of Consumers' Counsel and the Environmental Law and Policy Center also filed appeals of the PUCO's order.

Pennsylvania Marginal Transmission Losses

On September 30, 2013, the U.S. District Court granted the PPUC’s motion to dismiss. As a result of the U.S. District Court's September 30, 2013 decision, FirstEnergy recorded a regulatory asset impairment charge of approximately $254 million (pre-tax) in the quarter ended September 30, 2013 included in Amortization of regulatory assets, net within the Consolidated Statement of Income. The balance of marginal transmission losses was fully refunded to customers by the second quarter of 2013. On October 29, 2013, ME and PN filed a Notice of Appeal of the U.S. District Court’s decision to dismiss the complaint with the United States Court of Appeals for the Third Circuit. On December 30, 2013, ME and PN filed a brief with the Third Circuit that explained why it was legal error for the U.S. District Court to dismiss the complaint. The PPUC filed its brief on February 3, 2014, and ME and PN filed a reply brief on February 21, 2014. Oral argument has been scheduled for April 9, 2014.

JCP&L Rate Filing Update

On September 7, 2011, the Division of Rate Counsel filed a Petition with the NJBPU asserting that it has reason to believe that JCP&L is earning an unreasonable return on its New Jersey jurisdictional rate base. The Division of Rate Counsel requested that the NJBPU order JCP&L to file a base rate case petition so that the NJBPU may determine whether JCP&L's current rates for electric service are just and reasonable. JCP&L's rate case petition was filed on November 30, 2012. JCP&L is requesting an increase in base rate revenues of approximately $20.6 million. Hearings in the rate case have concluded. Initial briefs were filed on January 27, 2014. In the initial briefs, the Division of Rate Counsel and the Staff of the NJBPU recommended current rate revenues be decreased by $214.9 million and $207.4 million, respectively. Such amounts do not address the revenue requirements associated with the major storm events of 2011 and 2012. Reply briefs were filed on February 24, 2014.

On February 24, 2014, a Stipulation was filed with the NJBPU by JCP&L, the Division of Rate Counsel and NJBPU Staff which will allow recovery of $736 million of JCP&L's $744 million of costs related to the significant weather events of 2011 and 2012. As a result, FirstEnergy recorded a regulatory asset impairment charge of approximately $8 million (pre-tax) as of December 31, 2013, included in Amortization of regulatory assets, net within the Consolidated Statements of Income. The agreement, upon which no other party took a position to oppose or support, is now pending before the NJBPU. Recovery of 2011 storm costs will be addressed in the pending base rate case; recovery of 2012 storm costs will be determined by the NJBPU.

Financial Matters

In early 2013, FirstEnergy announced a financial plan with the intention of strengthening the balance sheets of its subsidiaries. Completion of the plan was also expected to significantly improve credit metrics at the Competitive Energy Services segment and included the net transfer of 1,476 MW of the Harrison and Pleasants power plants between AE Supply and MP, and the proposed sale of up to 1,240 MW of unregulated hydro assets. In line with these efforts, FirstEnergy and its subsidiaries executed its 2013 financial plan as described below.

FE

On March 5, 2013, FE issued in aggregate $1.5 billion of senior unsecured notes in two series: $650 million of 2.75% senior notes due March 15, 2018 and $850 million of 4.25% senior notes due March 15, 2023. The stated interest rates are subject to adjustments based upon changes in the credit ratings of FirstEnergy but will not decrease below the issued rates. The proceeds were used to repay short-term borrowings and to invest in the money pool for FES and AE Supply's use in funding a portion of their tender offers. During the second quarter of 2013, FE also completed a $1.5 billion equity contribution to FES.

On September 25, 2013, FE filed a registration statement with the SEC to register 4 million shares of common stock to be issued to registered shareholders and its employees and the employees of its subsidiaries under its Stock Investment Plan. In addition, during December 2013, FE began fulfilling certain share-based benefit plan obligations through the issuance of authorized but unissued common stock.

During December of 2013, FE entered into an agreement to extend and amend its $150 million term loan agreement with a maturity date of December 31, 2014. The maturity of the loan was extended to December 31, 2015 and the principal amount was increased to $200 million.

Competitive Energy Services

On March 28, 2013, pursuant to tender offers launched in February 2013, FES and AE Supply repurchased $369 million and $294 million, respectively, of outstanding senior notes with interest rates ranging from 5.75% to 6.8%. FES and AE Supply paid $67 million and $43 million, respectively, in premiums to repurchase the tendered senior notes.

On April 15, 2013 FES redeemed $400 million of its 4.8% senior notes due 2015 and paid $31 million of premiums in connection with the redemption.

On June 3, 2013, FG exercised a mandatory put option and repurchased approximately $235 million of PCRBs due 2023, which FG is currently holding for remarketing subject to future market and other conditions.

On September 4, 2013, FESC, on behalf of FG, AE Supply and Green Valley Hydro LLC applied for authorization from FERC to sell eleven hydroelectric power stations in Pennsylvania, Virginia and West Virginia to subsidiaries of Harbor Hydro, a subsidiary of LS Power. The hydroelectric power stations involved have a total generating capacity of approximately 527 MW, which represents less than 3 percent of FirstEnergy's competitive generation fleet output. An asset purchase agreement was entered into on August 23, and amended and restated as of September 4, 2013. On February 12, 2014, the sale of the hydroelectric power plants to LS Power closed for approximately $395 million. In the first quarter of 2014, FirstEnergy expects to recognize a pre-tax gain of approximately $145 million (FES - $177 million) related to the sale.

On November 15, 2013, AE Supply optionally redeemed $235 million of its 7.00% PCRBs due July 15, 2039 at 100% of the principal amount in connection with the deactivation of operations at Hatfield's Ferry.

Regulated Distribution and Regulated Transmission

In March 2013, ME issued $300 million of 3.50% senior unsecured notes due March 15, 2023. Proceeds from this offering were used to repay $150 million of ME's 4.95% senior unsecured notes that matured in March 2013 and repay short-term debt.

In June 2013, the Ohio Companies, through newly formed limited liability SPEs, executed a securitization transaction that resulted in the issuance of approximately $445 million of pass-through trust certificates supported by phase-in recovery bonds with a weighted average coupon of 2.48%. The proceeds were primarily used to redeem $410 million in existing taxable bonds of the Ohio Companies with a weighted average coupon of 5.71%, including $30 million of make-whole premiums. The securitization effectively allows for the recovery of the make-whole premiums and transactional costs through the imposition of non-bypassable phase-in recovery charges on retail electric customers of the Ohio Companies pursuant to Ohio law. The $410 million redemption consisted of original maturities of $225 million due 2013, $150 million due 2015 and $35 million due 2020.

On August 21, 2013, JCP&L issued $500 million of 4.7% senior unsecured notes due April 1, 2024. The proceeds were used to pay down a portion of its short-term debt obligations, including borrowings incurred to finance a portion of Hurricane Sandy-related repair and restoration costs.

On August 28, 2013, the Ohio Companies redeemed an additional $660 million of long-term debt with interest rates ranging from 5.65% to 7.25% and maturities ranging from 2013 to 2020. In addition, approximately $120 million was paid in make-whole premiums which was deferred as a regulatory asset and will be amortized over the original life of the redeemed debt.

On October 9, 2013, MP sold its approximate 8% share of Pleasants Power Station at its fair market value of $73 million to AE Supply, and AE Supply sold its approximate 80% share of Harrison Power Station to MP at its book value of $1.2 billion. The transaction resulted in AE Supply receiving net consideration of $1.1 billion and MP's assumption of a $73.5 million pollution control note. The $1.1 billion net consideration was originally financed by MP through an equity infusion from FE of approximately $527 million and a note payable to AE Supply of approximately $573 million.

On November 27, 2013, MP issued $400 million of 4.10% FMB due April 15, 2024 and $600 million of 5.40% FMB due December 15, 2043. Proceeds from this offering were used by MP to: (i) repay at maturity $300 million of its FMB, 7.95% Series due December 15, 2013; (ii) redeem $120 million of its FMB, 6.70% Series due June 15, 2014; (iii) repay the note payable to its affiliate, AE Supply; and (iv) for working capital needs and other general corporate purposes. In connection with the closing, in the fourth quarter of 2013, MP recorded a pre-tax impairment charge of approximately $322 million to reduce the net book value of the Harrison Power Station to the amount that was permitted to be included in jurisdictional rate base. Concurrently, MP recognized a regulatory liability of approximately $23 million representing refunds to customers associated with the excess purchase price received by MP above the net book value of MP's minority interest in the Pleasants Power Station.

On December 26, 2013, PN redeemed $150 million of its 5.13% Senior Notes due April 1,2014 and ME redeemed $100 million of its 4.88% Senior Notes due April 1, 2014.

Overall, these actions, consisting of the 2013 financial plan, including debt reductions at the Competitive Energy Services segment and cost savings across all of its businesses, contributed to FirstEnergy's progress in achieving its financial goals for each of its businesses in 2013, including strengthening their balance sheets, improving their liquidity and maintaining their credit ratings.

FIRSTENERGY'S BUSINESS

The Regulated Distribution segment distributes electricity through FirstEnergy's ten utility operating companies, serving approximately six million customers within 65,000 square miles of Ohio, Pennsylvania, West Virginia, Maryland, New Jersey and New York, and purchases power for its POLR, SOS, SSO and default service requirements in Ohio, Pennsylvania, New Jersey and Maryland. This segment also includes regulated electric generation facilities in West Virginia and New Jersey that MP and JCP&L, respectively, own or contractually control. Its results reflect the commodity costs of securing electric generation and the deferral and amortization of certain fuel costs. This business segment currently controls approximately 3,780 MWs of generation capacity, including the net transfer to Regulated Distribution of 1,476 MWs of capacity associated with the Harrison and Pleasants asset swap which occurred on October 9, 2013.

The service areas of, and customers served by, our regulated distribution utilities are summarized below (in thousands):

Company	Area Served	Customers Served
OE	Central and Northeastern Ohio	1,034
Penn	Western Pennsylvania	161
CEI	Northeastern Ohio	745
TE	Northwestern Ohio	308
JCP&L	Northern, Western and East Central New Jersey	1,098
ME	Eastern Pennsylvania	556
PN	Western Pennsylvania	590
WP	Southwest, South Central and Northern Pennsylvania	720
MP	Northern, Central and Southeastern West Virginia	388
PE	Western Maryland and Eastern West Virginia	393
		5,993

The Regulated Transmission segment transmits electricity through transmission facilities owned and operated by ATSI, TrAIL, and certain of FirstEnergy's utilities (JCP&L, ME, PN, MP, PE and WP) and the regulatory asset associated with the abandoned PATH project. The segment's revenues are primarily derived from rates that recover costs and provide a return on transmission capital investment. Except for the recovery of the PATH abandoned project regulatory asset, these revenues are derived from transmission services provided pursuant to the PJM open access transmission tariff to LSEs. Its results also reflect the net transmission expenses related to the delivery of electricity on FirstEnergy's transmission facilities.

The Competitive Energy Services segment, through FES and AE Supply, supplies electricity to end-use customers through retail and wholesale arrangements, including competitive retail sales to customers primarily in Ohio, Pennsylvania, Illinois, Michigan, New Jersey and Maryland, and the provision of partial POLR and default service for some utilities in Ohio, Pennsylvania and Maryland, including the Utilities. This business segment currently controls approximately 14,000 MWs of capacity, including 885 MWs of capacity subject to RMR arrangements with PJM and excluding 1,476 MWs of generation capacity transferred to Regulated Distribution in connection with the Harrison and Pleasants asset swap that occurred on October 9, 2013. This segment also purchases electricity to meet sales obligations. The segment’s net income is primarily derived from electric generation sales less the related costs of electricity generation, including fuel, purchased power and net transmission (including congestion) and ancillary costs charged by PJM to deliver energy to the segment’s customers.

The Competitive Energy Services segment derives its revenues from the sale of generation to direct and governmental aggregation, POLR and wholesale customers. The segment is exposed to various market and financial risks, including the risk of price fluctuations in the wholesale power markets. Wholesale power prices may be impacted by the prices of other commodities, including coal and natural gas, and energy efficiency and demand response programs, as well as regulatory and legislative actions, such as MATS among other factors. The segment attempts to mitigate the market risk inherent in its energy position by economically hedging its exposure and continuously monitoring various risk measurement metrics to ensure compliance with its risk management policies.

The Competitive Energy Services segment economically hedges exposure to price risk on a ratable basis, which is intended to reduce the near-term financial impact of market price volatility. As of December 31, 2013, the percentage of expected physical sales economically hedged was 91% for 2014 (out of a 99 million MWH target). As of December 31, 2013, committed sales for 2015 and 2016 are approximately 49 million MWHs and 27 million MWHs, respectively.

Other and Reconciling Adjustments contains corporate items and other businesses that are below the quantifiable threshold for separate disclosure as a reportable segment as well as reconciling adjustments for the elimination of intersegment transactions. See Note 19, Segment Information, of the Combined Notes to Consolidated Financial Statements for further information on FirstEnergy's reportable operating segments.

FirstEnergy considers a variety of factors, including wholesale power prices, in its decision to operate, or not operate, a generating plant. If wholesale power prices represent a lower cost option, FirstEnergy may elect to fulfill its load obligation through purchasing electricity in the wholesale market as opposed to operating a generating unit. The effect of this decision on its results of operations would be to displace higher per unit fuel expense with lower per unit purchased power.

FirstEnergy engages in discussions with various commodity vendors, from time to time, regarding the impact that these and other actions may have on certain of its long-term agreements and FirstEnergy cannot provide assurance that these discussions will be satisfactorily resolved.

STRATEGY AND OUTLOOK

FirstEnergy has taken a series of actions across the company to position itself for future growth. This includes repositioning its asset mix to reflect a more regulated business profile.

The strength of FirstEnergy is based on the diversity and scale of its operations. The following describes each operating segment's plans to pursue growth initiatives in spite of the downward pressures, such as declining energy prices, a multi-year recession and flat load growth, over the past several years.

Regulated Distribution

While customer demand is expected to grow only modestly over the next several years, FirstEnergy believes early indications of a sustained recovery, and the recent signs of growth in industrial sales are encouraging. In 2014, overall load growth is expected to be 0.6%, with the majority of the increase in the industrial sector. Since FirstEnergy's utility footprint overlays the Marcellus and Utica shale territories, it expects to benefit from the manufacturing expansion related to shale gas activity and has already seen 210 MWs of demand from new industrial projects placed in service, with an additional 430 MW of expected demand from planned expansions at customer facilities. These projects are expected to result in nearly 4 percent industrial load growth over the next two years.

From a regulatory perspective, FirstEnergy intends to be more active over the next several years in rate filings for its distribution utilities than it has in the past as it looks to modernize and improve the efficiency of its utility distribution system in order to continue to provide solid reliability to customers. For example, JCP&L has a pending rate case in New Jersey and MP plans to file a rate case in West Virginia in April 2014. In addition, Penn expects to seek approval to accelerate smart meter deployment beginning later this year, and one or more of the Pennsylvania Companies are expected to file rate cases later this year in Pennsylvania.

Regulated Transmission

FirstEnergy currently expects approximately $4.2 billion in transmission investments in 2014 through 2017 focused on improving system reliability and customer service along with addressing reliability requirements associated with plant deactivations or as required by NERC and PJM. These investments will initially focus on ATSI's 69kV system in Ohio and on TrAIL, both of which receive formula rate recovery, and then move across the entire FirstEnergy footprint over time.

Competitive Energy Services

Over the past two years, FirstEnergy has taken deliberate actions to change the character of its competitive generation fleet and to stabilize this business for the future. FirstEnergy has reduced the size of the fleet and changed the mix of assets. With the deactivations of the Hatfield and Mitchell power plants, the completion of the Harrison and Pleasants asset transfer in West Virginia, the sale of certain hydro assets and eventual deactivation of units currently operating under RMR arrangements with PJM, FirstEnergy’s competitive generating portfolio will consist of more than 13,000 MWs of diversified capacity, down from approximately 18,000 MWs at the beginning of 2013.

FirstEnergy also has significantly reduced projected capital expenditures for this segment by approximately $1 billion over the next four years. Competitive Energy Services segment spending for MATS is expected to be approximately $240 million, and the majority of the remaining capital investments will be focused on projects to extend the life of FirstEnergy's nuclear assets, including the planned installation of new steam generators at Davis-Besse in 2014, and new steam generators and a new reactor head at Beaver Valley Unit 2 in 2017.

Over the next several years FirstEnergy is targeting annual retail sales of approximately 100 million MWH, primarily supported by its competitive generation assets. FirstEnergy's competitive generation portfolio, excluding RMR units, is comprised of 38% supercritical coal, 10% subcritical coal, 31% nuclear, 12% gas and oil, and 9% renewables. In total, these generating assets make up one of the cleanest, lowest-cost generation fleets in the U.S. and are expected to generate between 75 and 80 million MWHs annually.

Overall, FirstEnergy's actions are expected to place its competitive operations in a much stronger position to manage through the current power market cycle, while also retaining upside potential if and when markets improve and limiting downside risk from continued depressed conditions associated with capacity prices and forward energy prices.

Financial Outlook

FirstEnergy endeavors to manage operating and capital costs in order to achieve its financial goals, including strengthening its balance sheet, improving liquidity, improving its credit metrics and maintaining investment grade metrics for the operating companies in its Regulated Distribution, Regulated Transmission and Competitive Energy Services segments.

In January 2014, FirstEnergy’s Board of Directors declared a revised quarterly dividend of $0.36 per share of outstanding common stock. The dividend is payable March 1, 2014, to shareholders of record at the close of business on February 7, 2014. This revised dividend equates to an indicated annual dividend of $1.44 per share, reduced from the $0.55 per share quarterly dividend ($2.20 per share annually) that FirstEnergy had paid since 2008.

As of January 31, 2014, FirstEnergy's available liquidity is $2.8 billion. Capital expenditures for 2014 are expected to be approximately $3.3 billion, an increase of $1 billion from 2013 primarily due to increased transmission investments. Over the next several years, these capital expenditures, including this transmission expansion program, are expected to be funded with a combination of debt, equity issuances through the stock investment and employee benefit plans, and the projected $320 million annually in cash preserved as a result of the dividend action taken in January 2014. The Utilities and FirstEnergy's competitive generation operations expect to fund their capital expenditures over the next several years through cash from operations, debt, and, depending on the operating company, equity contributions from FE. Additionally, FirstEnergy also expects to issue long-term debt at certain Utilities and certain other subsidiaries to refinance short-term and maturing debt in the ordinary course, subject to market and other conditions. These actions are expected to continue the focus, in 2014, of maintaining strong balance sheets at the Utilities and the Competitive Energy Services segment.

The following represents a high level summary of assumptions and drivers that management expects will impact 2014 results of operations:

- Increased distribution revenue from projected sales of 148.8 million MWH in 2014 versus 147.9 million MWH in 2013.
- Increased transmission revenue due to increased investments at ATSI and TrAIL.
- Higher regulated generation operating margin primarily as a result of the West Virginia asset transfer which occurred in October 2013.
- Lower operations and maintenance expense due to reduced overall benefit expenses and lower expenses at the Competitive Energy Services segment resulting from the plant deactivations and asset sales, partially offset by increased expenses at the Regulated Distribution segment primarily due to increased maintenance costs for vegetation management.
- An effective income tax rate of 35% to 35.5%.
- Reduced commodity margin at the competitive operations.
- Two planned nuclear refueling outages in 2014, including an extended outage at Davis-Besse in 2014 for steam generator replacement, and outages at Beaver Valley Unit 1 for refueling and a transformer replacement.
- Increased pension/OPEB expense at the Regulated Distribution segment due to a lower asset balance and lower amortization of prior service cost credits.
- Higher net financing costs primarily due to higher interest expense.

Environmental Outlook

FirstEnergy continually strives to enhance environmental protection and remain good stewards of our natural resources. FirstEnergy also devotes significant resources to environmental compliance efforts, and its employees share a commitment to, and accountability for, environmental performance. The corporate focus on continuous improvement is integral to FirstEnergy's environmental programs.

More than $10 billion has been spent by FirstEnergy companies on environmental protection efforts since the initial passage of the Clean Air and Water Acts in the 1970s, and these investments demonstrate FirstEnergy's continuing commitment to the environment. Recent investments of $3 billion at the Fort Martin and Sammis Plants further reduced emissions of SO_2 by over 95%, and NOx by at least 64% from these facilities. Since 1990, NOx emissions have been reduced by more than 80%, SO_2 by more than 90%, and mercury by approximately 70% at FirstEnergy generating units.

Aggressive steps have been taken by FirstEnergy to reduce its overall CO_2 emissions by 24% below 2005 levels, 7 years ahead of the Presidential 2020 goal of a 17% carbon pollution reduction below 2005 levels. In early 2012 and 2013, FirstEnergy announced its intent to deactivate 5,429 MW of older, coal-based generation, with 2,464 MWs deactivated in September 2012, another 2,080 MWs deactivated in October, 2013, and 885 MW remaining available to meet electric system reliability concerns pursuant to RMR arrangements with PJM. As a result of these further deactivations, FirstEnergy's CO_2 emissions are expected to continue to decline, depending on economic conditions.

FirstEnergy has taken a leadership role in pursuing new ventures to test and develop new technologies that may achieve additional reductions in CO_2 emissions. These include:

- Sales of over 1 million MWH per year of wind generation.
- CO_2 sequestration testing to gain a better understanding of the potential for geological storage of CO_2.
- Supporting afforestation - growing forests on non-forested land - and other efforts designed to remove CO_2 from the environment.
- Reducing emissions of SF_6 by more than 30% between 2011 and 2012, as reported to the EPA's Mandatory Greenhouse Gas Reporting Rule.
- Supporting research to develop and evaluate cost effective sorbent materials for CO_2 capture including work by EPRI and The University of Akron.

FirstEnergy remains actively engaged in the federal and state debate over future environmental requirements and legislation by actively working with policy makers and regulators to develop fair and reasonable requirements, with the goal of reducing emissions while minimizing the economic impact on customers. Due to the significant uncertainty as to the final form or timing of a significant number of regulations and legislation at both the federal and state levels, FirstEnergy is unable to determine the potential impact and risks associated with all future environmental requirements. On December 30, 2011, CSAPR was stayed by the U.S. Court of Appeals for the District of Columbia Circuit and was ultimately vacated by the Court on August 21, 2012. On January 24, 2013, the EPA and intervenors' petitions seeking rehearing or rehearing en banc were denied by the U.S. Court of Appeals for the District of Columbia Circuit. On December 10, 2013 the Supreme Court heard arguments on whether to reinstate the EPA's rule to reduce emissions of SO_2 and NOx, which is being challenged by several states and industry groups. The Court has ordered EPA to continue administration of CAIR until it finalizes a valid replacement for CAIR. The new MATS were finalized at the end of 2011, which contributed to FirstEnergy's decision to deactivate some of its older coal-fired generation plants. The total MATS compliance cost for the remaining fleet is estimated at $465 million with $240 million at the competitive fleet and $225 million at the regulated fleet.

FirstEnergy also has a long history of supporting research in distributed energy resources. Distributed energy resources include fuel cells, solar and wind systems or energy storage technologies located close to the customer or direct control of customer loads to provide alternatives or enhancements to the traditional electric power system. FirstEnergy is testing the world's largest utility-scale fuel cell system to determine its feasibility for augmenting generating capacity during summer peak-use periods. Through a partnership with EPRI, the Cuyahoga Valley National Park, the Department of Defense and Case Western Reserve University, two solid-oxide fuel cells were installed as part of a test program to explore the technology and the environmental benefits of distributed generation.

FirstEnergy is also evaluating the impact of distributed energy storage on the distribution system through analysis and field demonstrations of advanced battery technologies. FirstEnergy's EasyGreen® load-management program utilizes two-way communication capability with customers' non-critical equipment, such as air conditioners in New Jersey and Pennsylvania, to help manage peak loading on the electric distribution system. FirstEnergy has also made an online interactive energy efficiency tool, Home Energy Analyzer, available to our customers to help achieve electricity use reduction goals.

RISKS AND CHALLENGES

In executing our strategy, we face a number of industry and enterprise risks and challenges. See ITEM 1A. RISK FACTORS for a discussion of the risks and challenges faced by FirstEnergy, FES and their subsidiaries.

RESULTS OF OPERATIONS

The financial results discussed below include revenues and expenses from transactions among FirstEnergy's business segments. Results of operations for the year ended December 31, 2011, include only ten months of Allegheny results which have been segregated from the pre-merger companies (FirstEnergy and its subsidiaries prior to the merger) for reporting and analysis. A reconciliation of segment financial results is provided in Note 19, Segment Information, of the Combined Notes to Consolidated Financial Statements. Certain prior year amounts have been reclassified to conform to the current year presentation. These reclassifications include, but are not limited to, the classification of discontinued operations associated with our sale of hydro assets discussed in additional detail in Note 20, Discontinued Operations and Assets Held for Sale. Net income by business segment was as follows:

				Increase (Decrease)	
	2013	2012	2011	2013 vs 2012	2012 vs 2011
	(In millions, except per share)				
Net Income (Loss) By Business Segment:					
Regulated Distribution	$ 501	$ 540	$ 488	$ (39)	$ 52

Regulated Distribution — 2013 Compared with 2012

Net income decreased by $39 million in 2013 compared to 2012, as more fully described below.

Revenues —

The $322 million decrease in total revenues resulted from the following sources:

Revenues by Type of Service	For the Years Ended December 31, 2013	2012	Increase (Decrease)
		(In millions)	
Distribution services	$ 3,762	$ 3,948	$ (186)
Generation sales:			
Retail	3,959	4,104	(145)
Wholesale	330	347	(17)
Total generation sales	4,289	4,451	(162)
Transmission	448	450	(2)
Other	239	211	28
Total Revenues	$ 8,738	$ 9,060	$ (322)

The decrease in distribution services revenue is primarily the result of a NJBPU-approved reduction to the JCP&L NUG Rider which was effective March 1, 2012 and a decrease to the ME and PN NUG riders resulting from the expiration of certain NUG contracts in 2012 and 2013. Additionally, lower recovery of energy efficiency expenses reflecting reduced costs was partially offset by an increase in the Ohio Companies' DCR rider and slightly higher distribution deliveries. Distribution deliveries increased by 0.9% in 2013 compared to 2012. Distribution deliveries by customer class are summarized in the following table:

Electric Distribution MWH Deliveries	For the Years Ended December 31, 2013	2012	Increase (Decrease)
		(In thousands)	
Residential	54,479	53,993	0.9 %
Commercial	42,582	42,645	(0.1)%
Industrial	50,243	49,378	1.8 %
Other	584	585	(0.2)%
Total Electric Distribution MWH Deliveries	147,888	146,601	0.9 %

Higher deliveries to residential customers primarily reflects increased weather-related usage resulting from heating degree days that were 18% above 2012, and 2% above normal, partially offset by cooling degree days that were 15% below 2012, and 3% above normal. Lower deliveries to the commercial sector primarily reflect increasing energy efficiency mandates and demand response initiatives. In the industrial sector, increased sales to steel, chemical, and shale gas customers were partially offset by lower sales to automotive and paper customers. Additionally, FirstEnergy expects additional growth in the industrial sector beyond 2013 for potential shale gas projects. As the gas fields are developed, the opportunity for additional manufacturing expansion could further support growth.

The following table summarizes the price and volume factors contributing to the $162 million decrease in generation revenues in 2013 compared to 2012:

Source of Change in Generation Revenues	Increase (Decrease)
	(In millions)
Retail:	
Effect of decrease in sales volumes	$ (194)
Change in prices	49
	(145)
Wholesale:	
Effect of decrease in sales volumes	(95)
Change in prices	78
	(17)
Decrease in Generation Revenues	$ (162)

The decrease in retail generation sales volume was primarily due to increased customer shopping in the Utilities' service territories during 2013, compared to 2012. This increased customer shopping, which does not impact earnings for the Regulated Distribution segment, is expected to continue. Total generation provided by alternative suppliers as a percentage of total MWH deliveries increased to 81% from 79% for the Ohio Companies, 66% from 64% for the Pennsylvania Companies, 47% from 46% for PE and 52% from 50% for JCP&L. The increase in prices reflects the completion of marginal transmission loss refunds to ME and PN customers in the second quarter of 2013 and a higher generation rate at WP, which includes the recovery of transmission costs beginning in June 2013.

The decrease in wholesale generation revenues of $17 million in 2013 resulted from the expiration of NUG contracts, partially offset by higher energy and capacity prices in 2013.

Other revenues increased by $28 million primarily due to more customer requested work for OE and JCP&L in 2013 compared to 2012.

Operating Expenses —

Total operating expenses decreased by $318 million primarily due to the following:

- Fuel expense was $114 million higher in 2013 primarily related to increased generation at Fort Martin as a result of planned and forced outages in 2012 and the asset transfer between MP and AE Supply of the Harrison Power Station effective October 9, 2013.
- Purchased power costs were $493 million lower in 2013 primarily due to a decrease in volumes required as a result of increased customer shopping, higher generation, reduced NUG purchases and lower unit power supply costs.

Source of Change in Purchased Power	Increase (Decrease)
	(In millions)
Purchases from non-affiliates:	
Change due to decreased unit costs	$ (68)
Change due to decreased volumes	(429)
	(497)
Purchases from affiliates:	
Change due to decreased unit costs	(10)
Change due to decreased volumes	(92)
	(102)
Decrease in costs deferred	106
Decrease in Purchased Power Costs	$ (493)

- Other operating expenses decreased $353 million primarily due to:
    - a decrease in energy efficiency program expenses of $40 million resulting from the completion of certain initiatives in Ohio and Pennsylvania, which are recoverable through rates;
    - lower distribution operating and maintenance expenses of $363 million due to lower storm related maintenance activities during 2013 compared to 2012. Maintenance costs in 2012 related to Hurricane Sandy and the "derecho" wind storm totaled $386 million;
    - higher transmission expenses of $50 million primarily due to PJM transmission costs associated with RMR units.
- Pension and OPEB mark-to-market charges decreased $541 million, primarily reflecting a higher discount rate to measure related obligations in 2013.
- Depreciation expense increased by $48 million due to a higher asset base.
- Deferral of storm costs decreased by $370 million primarily related to the absence of storm restoration expenses associated with Hurricane Sandy and the "derecho" wind storm.
- Net regulatory asset amortization increased $224 million primarily due to regulatory asset charges associated with the recovery of marginal transmission losses at ME and PN ($254 million), recovery of RECs for the Ohio Companies ($51 million), and the asset transfer between MP and AE Supply ($23 million) as well as higher default generation service cost recovery in Pennsylvania, partially offset by a reduction of NUG cost recovery at ME and PN and higher transmission cost deferrals in Ohio.
- General taxes decreased by $9 million primarily due to lower gross receipts and payroll taxes, partially offset by higher property taxes.
- Impairment of long-lived assets of $322 million reflects MP's charge to reduce the net book value of Harrison to the amount permitted to be included in rate base.

Other Expense —

Other expense increased $29 million in 2013 primarily due to lower investment income resulting from the liquidation of investments at Shippingport and lower NDT investment income.

Regulated Transmission — 2013 Compared with 2012

Net income decreased by $12 million in 2013 compared to 2012, as further described below.

Revenues —

Total revenues increased by $1 million principally due to higher revenue requirements at ATSI and TrAIL, partially offset by lower PJM network service revenues for the Utilities, reflecting lower peak loads from the prior year.

Revenues by transmission asset owner are shown in the following table:

Revenues by Transmission Asset Owner	For the Years Ended December 31, 2013	2012	Increase (Decrease)
		(In millions)	
ATSI	$ 219	$ 213	$ 6
TrAIL	207	200	7
PATH	20	18	2
Utilities	295	309	(14)
Total Revenues	$ 741	$ 740	$ 1

Operating Expenses —

Total operating expenses increased by $16 million principally due to higher regulatory asset amortization related to the PATH abandonment and higher property taxes reflecting a higher asset base.

Competitive Energy Services — 2013 Compared with 2012

Net income decreased by $435 million in 2013, compared to 2012, as more fully described below.

Revenues —

Total revenues decreased by $149 million in 2013, compared to 2012, primarily due to a decline in wholesale sales. Although MWH sales increased 5.8% compared to the prior period, revenues were adversely impacted by lower unit prices compared to 2012 as a result of a significant decrease in power prices beginning in the fourth quarter of 2011 when the 2013 competitive retail sales position was only approximately 50% committed. These decreases were partially offset by growth in Governmental Aggregation, Mass Market, and POLR and Structured sales channels. The decrease in total revenues resulted from the following sources:

Revenues by Type of Service	For the Years Ended December 31, 2013	2012	Increase (Decrease)
		(In millions)	
Direct	$ 2,913	$ 2,934	$ (21)
Governmental Aggregation	1,185	1,029	156
Mass Market	448	352	96
POLR and Structured	1,279	1,265	14
Wholesale[(1)]	341	751	(410)
Transmission	144	160	(16)
RECs	2	7	(5)
Other	183	146	37
Total Revenues	$ 6,495	$ 6,644	$ (149)

[(1)] Excludes wholesale revenues classified as Discontinued Operations.

MWH Sales by Channel	For the Years Ended December 31, 2013	2012	Increase (Decrease)
	(In thousands)		
Direct	56,145	54,528	3.0 %
Governmental Aggregation	20,859	17,287	20.7 %
Mass Market	6,761	5,212	29.7 %
POLR and Structured	24,805	22,664	9.4 %
Wholesale[(1)]	1,250	4,091	(69.4)%
Total MWH Sales	109,820	103,782	5.8 %

[(1)] Excludes wholesale sales classified as Discontinued Operations.

The following tables summarize the price and volume factors contributing to changes in revenues:

MWH Sales Channel:	Source of Change in Revenues Increase (Decrease)				
	Sales Volumes	Prices	Gain on Settled Contracts	Capacity Revenue	Total
			(In millions)		
Direct	$ 87	$ (108)	$ —	$ —	$ (21)
Governmental Aggregation	213	(57)	—	—	156
Mass Market	105	(9)	—	—	96
POLR and Structured Sales	130	(116)	—	—	14
Wholesale[(1)]	(74)	4	(204)	(136)	(410)

[(1)] Excludes wholesale sales classified as Discontinued Operations.

The decrease in Direct revenues of $21 million resulted from lower unit prices, partially offset by higher sales volumes due to the acquisition of new larger customers in central and southern Ohio. The increase in Governmental Aggregation of $156 million resulted from the acquisition of new customers primarily in Illinois, partially offset by lower unit prices. The increase in Mass Market of $96 million resulted from the acquisition of new customers primarily in Ohio, Illinois and Pennsylvania, partially offset by lower unit prices. The Direct, Governmental Aggregation and Mass Market customer base increased to 2.7 million customers as of December 31, 2013, as compared to 2.6 million as of December 31, 2012.

The increase in POLR and structured revenues of $14 million was due to higher structured sales, partially offset by lower prices and lower POLR sales. The decline in POLR sales is in line with FES' strategy to realign its sales portfolio.

Wholesale revenues decreased $410 million due to a $204 million reduction in gains on financially settled contracts, a $136 million decrease in capacity revenues primarily from lower capacity prices, and a $70 million decrease in short-term (net hourly positions) transactions. The decrease in wholesale sales volumes was due to lower generation available for sale primarily as a result of the asset transfer between MP and AE Supply, plants that were deactivated in 2012 and 2013, and those under RMR arrangements, and higher retail sales volumes.

Transmission revenue decreased $16 million due primarily to lower congestion and ancillary revenue.

Other revenue increased $37 million due primarily to an $17 million pre-tax gain on the sale of property to a regulated affiliate and a $19 million increase in income from FEV's equity method investment in Global Holding.

Operating Expenses —

Total operating expenses increased by $370 million in 2013 due to the following:

- Fuel costs decreased $89 million primarily due to lower volumes associated with plants that were deactivated in 2013 and 2012, those under RMR arrangements, the asset transfer between MP and AE Supply and lower unit prices associated with new and restructured contracts, partially offset by settlements associated with past damages on transportation contracts.

- Purchased power costs increased $118 million due to higher volumes ($402 million) and increased prices ($81 million), partially offset by reduced losses on financially settled contracts ($239 million) and lower capacity expenses ($126 million). The increase in rate primarily resulted from higher on-peak prices compared to 2012. The increase in purchased power volumes relates to the overall increase in sales volumes and decrease in fossil generation.

- Fossil operating costs decreased by $25 million due primarily to lower labor costs resulting from previously deactivated units and lower compensation and benefit expenses associated with plan changes.

- Nuclear operating costs decreased by $21 million due primarily to lower labor costs and lower compensation and benefit expenses associated with plan changes.

- Transmission expenses increased $101 million due primarily to higher retail load and higher network costs associated with POLR sales in Pennsylvania, partially offset by lower congestion costs as well as credits received in 2013 for previously incurred PJM transmission costs associated with RMR units in the ATSI zone. Effective June 1, 2013, network transmission costs became the responsibility of suppliers of POLR sales in Pennsylvania.

- Impairments of long-lived assets increased $473 million due to the decision to deactivate the Hatfield and Mitchell generating plants. The plants were deactivated on October 9, 2013.

- General taxes decreased by $7 million due primarily to lower payroll taxes as a result of lower labor costs noted above, partially offset by higher property taxes.
- Depreciation expense increased $30 million primarily due to a higher asset base and accelerated depreciation associated with the deactivations noted above.
- Other operating expenses decreased by $210 million primarily due to a $322 million decrease in pensions and OPEB mark-to-market charges primarily reflecting a higher discount rate to measure related obligations in 2013, partially offset by an increase in mark-to-market expense on commodity contract positions ($98 million) and increased retail expenses ($26 million).

Other Expense —

Total other expense in 2013 increased $141 million compared to 2012 due to a $149 million loss on debt redemptions in connection with senior notes that were repurchased, lower investment income of $52 million due to higher OTTI on the NDT investments, partially offset by lower net interest expense of $60 million due to debt redemptions and repurchases.

Other — 2013 Compared with 2012

Financial results from other operating segments and reconciling items, including interest expense on holding company debt and corporate support services revenues and expenses, resulted in a $107 million increase in net income in 2013 compared to 2012 primarily due to lower income tax expense of $128 million primarily resulting from reduced pre-tax income and a lower effective tax rate and increased investment income of $39 million. Partially offsetting the increase was higher interest expense of $73 million due to the issuance of $1.5 billion of senior unsecured notes in the first quarter of 2013.

Summary of Results of Operations — 2012 Compared with 2011

Financial results for FirstEnergy's business segments in 2012 and 2011 were as follows:

2012 Financial Results	Regulated Distribution	Regulated Transmission	Competitive Energy Services	Other and Reconciling Adjustments	FirstEnergy Consolidated
			(In millions)		
Revenues:

Regulated Distribution — 2012 Compared with 2011

Net income increased by $52 million in 2012 compared to 2011, primarily due to two additional months of earnings from the Allegheny Utilities and lower merger-related costs, partially offset by decreased weather-related customer usage in 2012.

Results of operations for the year ended December 31, 2011, include only ten months of Allegheny results which have been segregated from the pre-merger companies (FirstEnergy and its subsidiaries prior to the merger) for reporting and analysis.

Revenues —

The $853 million decrease in total revenues resulted from the following sources:

Revenues by Type of Service	For the Years Ended December 31, 2012	2011	Increase (Decrease)
		(In millions)	
Pre-merger companies:			
Distribution services	$ 3,247	$ 3,428	$ (181)
Generation sales:			
Retail	2,540	3,266	(726)
Wholesale	206	377	(171)
Total generation sales	2,746	3,643	(897)
Transmission	300	219	81
Other	167	180	(13)
Total pre-merger companies	6,460	7,470	(1,010)
Allegheny Utilities[(1)]	2,600	2,443	157
Total Revenues	$ 9,060	$ 9,913	$ (853)

(1) Allegheny results include 12 months in 2012 and 10 months in 2011.

The decrease in distribution services revenue for the pre-merger companies reflects lower distribution deliveries (described below), the suspension of Ohio's deferred distribution cost recovery rider in December 2011 and an NJBPU-approved reduction to the JCP&L NUG Rider which became effective on March 1, 2012, partially offset by an increase in Ohio's energy efficiency rider and a PPUC-approved increase to the ME and PN NUG Riders which also became effective on March 1, 2012. Distribution deliveries (excluding the Allegheny Utilities) decreased by 1.7% in 2012 from 2011. Distribution deliveries by customer class are summarized in the following table:

Electric Distribution MWH Deliveries	Year Ended December 31 2012	2011	Increase (Decrease)
		(In thousands)	
Pre-merger companies:			
Residential	38,493	39,369	(2.2)%
Commercial	32,149	32,610	(1.4)%
Industrial	35,139	35,637	(1.4)%
Other	492	513	(4.1)%
Total pre-merger companies	106,273	108,129	(1.7)%
Allegheny Utilities[(1)]	40,328	33,449	20.6 %
Total Electric Distribution MWH Deliveries	146,601	141,578	3.5 %

(1) Allegheny results include 12 months in 2012 and 10 months in 2011.

Lower deliveries to residential and commercial customers for the pre-merger companies primarily reflect decreased weather-related usage resulting from heating degree days that were 10% below 2011 levels, a slight reduction in the number of residential customers and declining average customer consumption caused, in part by, increasing energy efficiency mandates and demand response

initiatives. In the industrial sector, MWH deliveries decreased 1.4%, reflecting slight decreases in deliveries to steel, petroleum and automotive customers.

The following table summarizes the price and volume factors contributing to the $897 million decrease in generation revenues for the pre-merger companies in 2012 compared to 2011:

Source of Change in Generation Revenues	Decrease
	(In millions)
Retail:	
Effect of decrease in sales volumes	$ (587)
Change in prices	(139)
	(726)
Wholesale:	
Effect of decrease in sales volumes	(120)
Change in prices	(51)
	(171)
Decrease in Generation Revenues	$ (897)

The decrease in retail generation sales volume was primarily due to increased customer shopping in the Utilities' service territories in 2012, compared with 2011. This increased customer shopping, which does not impact earnings for the Regulated Distribution segment, is expected to continue. Total generation provided by alternative suppliers as a percentage of total MWH deliveries increased to 79% from 76% for the Ohio Companies, 64% from 52% for ME's, PN's and Penn's service areas and 50% from 44% for JCP&L. The decrease in retail generation prices resulted from the impact of lower auction prices on power supply prices in 2012 compared to 2011, partially offset by a full year of Ohio's RER Rider (recovers deferred costs relating to electric heating discounts).

The decrease in wholesale generation revenues of $171 million in 2012 resulted from the expiration and termination of NUG contracts in August 2011 and April 2012, lower capacity revenues and lower PJM market prices.

Transmission revenues increased $81 million primarily due to the implementation of Ohio's NMB transmission rider in June of 2011, which recovers network integration transmission service costs as describer further below.

The Allegheny companies added $157 million to revenues in 2012, including $136 million for distribution services and $43 million from generation sales, partially offset by a decrease of $19 million of transmission revenues and $3 million of other revenues.

Operating Expenses —

Total operating expenses decreased by $936 million in 2012. Excluding the Allegheny Utilities, total operating expenses decreased by $897 million due to the following:

- Purchased power costs, excluding the Allegheny Utilities, were $890 million lower in 2012 primarily due to a decrease in volumes required from increased customer shopping, the impact of milder weather and lower unit power supply costs during 2012 compared to 2011 as a result of lower auction prices.

Source of Change in Purchased Power	Increase (Decrease)
	(In millions)
Purchases from non-affiliates:	
Change due to decreased unit costs	$ (149)
Change due to decreased volumes	(490)
	(639)
Purchases from affiliates:	
Change due to decreased unit costs	(65)
Change due to decreased volumes	(257)
	(322)
Decrease in costs deferred	71
Decrease in Purchased Power Costs	$ (890)

- Transmission expenses increased $115 million during 2012 compared to 2011. The increase is primarily due to network integration transmission service expenses that, prior to June 2011, were incurred by the generation supplier, and are now being recovered through the NMB transmission rider referred to above.
- Other operation and maintenance expenses increased $197 million primarily due to higher labor, professional contractor and material costs to repair storm-related damage.
- Energy Efficiency program costs, which are recovered through rates, increased by $16 million.
- Other costs decreased due to the absence of a provision for excess and obsolete material of $13 million that was recognized in 2011 relating to revised inventory practices adopted in conjunction with the Allegheny merger.
- Merger-related costs decreased $60 million in 2012 compared to 2011.
- Pension and OPEB mark-to-market charges increased $87 million, reflecting lower discount rates to measure related obligations in 2012.
- Depreciation expense increased by $27 million due to a higher asset base.
- Deferral of storm costs increased by $186 million primarily related to storm restoration expenses associated with Hurricane Sandy and the "derecho" wind storm.
- Net regulatory asset amortization decreased $162 million primarily due to the scheduled suspension of the Ohio rider recovering deferred distribution costs in December 2011 and the rate reduction for JCP&L's NUG deferred cost recovery in March of 2012, partially offset by the recovery in Ohio of residential generation credits for electric heating discounts, which began in September 2011.
- General taxes decreased by $28 million primarily due to a decrease in revenue-related taxes.

Operating expenses for the Allegheny Utilities are summarized in the following table:

	For the Years Ended December 31,		Increase
Operating Expenses - Allegheny[1]	**2012**	**2011**	**(Decrease)**
	(In millions)		
Purchased Power	$ 1,170	$ 1,146	$ 24
Fuel	263	268	(5)
Transmission	180	184	(4)
Deferral of storm costs	(49)	(10)	(39)
Amortization of other regulatory assets, net	(14)	(13)	(1)
Pensions and OPEB mark-to-market adjustment	91	76	15
Other operating expenses	273	240	33
General taxes	130	113	17
Depreciation	152	144	8
Impairment of long-lived assets[2]	—	87	(87)
Total Operating Expenses	$ 2,196	$ 2,235	$ (39)

(1) Allegheny results include 12 months in 2012 and 10 months in 2011.
(2) Deactivation of three regulated coal-fired fossil generating plants in West Virginia.

Other Expense —

Other expense increased $23 million in 2012 primarily due to higher interest expense on debt of the Allegheny Utilities and lower investment income on OE's and TE's NDT assets and the PNBV and Shippingport trusts.

Regulated Transmission — 2012 Compared with 2011

Net income increased by $32 million in 2012 compared to 2011 primarily due to two additional months of earnings in 2012 associated with TrAIL, PATH, and the Allegheny Utilities' transmission assets that were acquired in the merger.

Revenues —

Total revenues increased by $80 million principally due to revenues from TrAIL, PATH and the Allegheny Utilities' transmission assets in 2012 compared to 2011.

Revenues by transmission asset owner are shown in the following table:

Revenues by Transmission Asset Owner	For the Years Ended December 31, 2012	2011	Increase
		(In millions)	
ATSI	$ 213	$ 207	$ 6
TrAIL[(1)]	200	170	30
PATH[(1)]	18	14	4
Utilities[(1)]	309	269	40
Total Revenues	$ 740	$ 660	$ 80

(1) Allegheny results include 12 months in 2012 and 10 months in 2011.

Operating Expenses —

Total operating expenses increased by $28 million principally due to the addition of TrAIL, PATH and the Allegheny Utilities' transmission operating expenses for twelve months in 2012 compared to ten months in 2011, partially offset by reduced regulatory asset amortization due to the completion in May 2011 of ATSI's deferred vegetation management cost recovery.

Other Expense —

Other expense increased by $1 million due to twelve months of TrAIL interest expense in 2012 compared to ten months in 2011.

Competitive Energy Services — 2012 Compared with 2011

Net income decreased by $162 million in 2012, compared to 2011. The decrease in net income was primarily due to a $569 million gain ($358 million net of tax) on the partial sale of FEV's interest in Signal Peak in 2011 partially offset by 2011 impairment charges of $315 million primarily resulting from the decision to deactivate six older coal-fired generating plants. In addition, higher operating expenses were partially offset by increased direct and governmental aggregation sales and the inclusion of two additional months of earnings from the Allegheny companies in 2012.

Results of operations for the year ended December 31, 2011, include only ten months of Allegheny results which have been segregated from the pre-merger companies (FirstEnergy and its subsidiaries prior to the merger) for reporting and analysis.

Revenues —

Total revenues decreased by $376 million in 2012, compared to 2011, primarily due to a decline in POLR and structured sales and the sale of RECs. Revenues were also adversely impacted by lower unit prices compared to 2011.These decreases were partially offset by growth in direct, governmental aggregation and mass market sales and the inclusion of the Allegheny companies for twelve months in 2012 compared to ten months in 2011.

The decrease in total revenues resulted from the following sources:

Revenues by Type of Service	For the Years Ended December 31, 2012	2011	Increase (Decrease)
		(In millions)	
Pre-merger Companies:			
Direct	$ 2,849	$ 2,624	$ 225
Governmental Aggregation	1,029	1,032	(3)
Mass Market	352	129	223
POLR and Structured	899	944	(45)
Wholesale[1]	516	435	81
Transmission	116	106	10
RECs	7	67	(60)
Other	145	173	(28)
Allegheny companies[2]	1,607	1,627	(20)
Intra-segment eliminations[3]	(876)	(117)	(759)
Total Revenues	$ 6,644	$ 7,020	$ (376)
Allegheny companies[2]			
Direct	$ 85	$ 84	$ 1
POLR and Structured	366	561	(195)
Wholesale[1]	1,110	900	210
Transmission	45	88	(43)
Other	1	(6)	7
Total Revenues	$ 1,607	$ 1,627	$ (20)

(1) Excludes wholesale revenues classified in Discontinued Operations.

(2) Allegheny results include 12 months in 2012 and 10 months in 2011.

(3) Intra-segment eliminations represent the impact of wholesale netting transactions for FES and AE Supply on an hourly basis, and the elimination of intra-segment sales between the companies.

MWH Sales by Channel	For the Years Ended December 31, 2012	2011	Increase (Decrease)
	(In thousands)		
Pre-merger Companies:			
Direct	53,099	46,187	15.0 %
Governmental Aggregation	17,287	15,786	9.5 %
Mass Market	5,212	1,936	169.2 %
POLR and Structured	16,212	15,340	5.7 %
Wholesale[1]	96	2,916	(96.7)%
Allegheny companies[2]	29,697	26,379	12.6 %
Intra-segment eliminations	(17,821)	(1,806)	886.8 %
Total MWH Sales	103,782	106,738	(2.8)%
Allegheny companies[2]			
Direct	1,429	1,390	2.8 %
POLR	5,874	7,974	(26.3)%
Structured	578	1,492	(61.3)%
Wholesale[1]	21,816	15,523	40.5 %
Total MWH Sales	29,697	26,379	12.6 %

[1] Excludes wholesale sales classified in Discontinued Operations.

[2] Allegheny results include 12 months in 2012 and 10 months in 2011.

The following tables summarize the price and volume factors contributing to changes in revenues (excluding the Allegheny companies):

	Source of Change in Revenues Increase (Decrease)				
MWH Sales Channel:	Sales Volumes	Prices	Gain on Settled Contracts	Capacity Revenue	Total
		(In millions)			
Direct	$ 393	$ (168)	$ —	$ —	$ 225
Governmental Aggregation	98	(101)	—	—	(3)
Mass Market	219	4	—	—	223
POLR and Structured Sales	16	(61)	—	—	(45)
Wholesale[1]	(90)	(1)	276	(104)	81

[1] Excludes wholesale sales classified in Discontinued Operations.

The increase in Direct revenues of $225 million resulted from higher sales volumes due to the acquisition of new customers, partially offset by lower unit prices. The decrease in Governmental Aggregation of $3 million resulted from lower unit prices, partially offset from the acquisition of new customers primarily in Illinois. The increase in Mass Market of $223 million resulted from the acquisition of new customers primarily in Ohio and Pennsylvania, partially offset by lower unit prices. The Direct, Governmental Aggregation and Mass Market customer base increased to 2.6 million customers in December 2012 as compared to 1.8 million in December 2011.

The decrease in POLR and structured revenues of $45 million was due primarily to lower sales volumes at the Ohio Companies, ME, PN and other non-associated companies. Revenues were also adversely impacted by lower unit prices, which were partially offset by increased structured sales. The decline in POLR sales reflects a continued strategic focus on other sales channels.

Wholesale revenues increased $81 million due to increased gains of $276 million on financially settled contracts, partially offset by $91 million decrease in short-term (net hourly positions) transactions resulting primarily from reduced generation and a $104 million decrease in capacity revenues.

The Allegheny companies had a decrease in POLR and structured revenues of $195 million due to lower sales volumes at associated companies. The decline in POLR sales reflects a continued focus on other sales channels by this segment. Transmission revenues declined $43 million due primarily to lower congestion revenues, partially offset by an increase in wholesale revenues due to the intra-segment sale to FES.

Operating Expenses —

Total operating expenses decreased by $621 million in 2012. Excluding the Allegheny companies, total operating expenses decreased by $525 million in 2012 due to the following:

- Fuel costs increased $92 million primarily due to the absence of cash received in 2011 from the assignment of a substantially below-market, long-term fossil fuel contract to a third party ($123 million) and higher unit prices ($57 million), partially offset by lower volumes consumed ($88 million). Higher unit prices resulted primarily from a $50 million termination charge associated with the retirement of a coal contract that is no longer needed as a result of the plant deactivations. Volumes decreased as a result of the deactivation of fossil generating units, the temporary reduction in operations at the Sammis Plant in September 2012 and an increase in economic purchases of power.

- Purchased power costs decreased $26 million due to lower unit prices ($310 million) and reduced capacity expenses ($116 million), partially offset by higher volumes ($158 million) and losses on settled contract ($235 million). The increase in purchased power volumes primarily relates to the overall increase in direct and governmental aggregation sales volumes, economic purchases and lower generation resulting from the deactivation of fossil generating units and the temporary reduction in operations at Sammis.

- Fossil operating costs decreased by $38 million due primarily to lower contractor, materials and equipment costs resulting from a decrease in planned and unplanned generating unit outages.

- Nuclear operating costs decreased by $13 million due primarily to lower contractor, materials and equipment costs, which were partially offset by higher labor costs. In 2012, there were refueling outages at Davis-Besse and Beaver Valley Units 1 and 2. There were refueling outages at Perry and Beaver Valley Unit 2 during 2011. Total MW days were reduced slightly in 2012 compared to 2011.

- Transmission expenses decreased $74 million due primarily to lower congestion, network and line loss costs, partially offset by higher ancillary costs.

- General taxes increased by $8 million primarily due to an increase in revenue-related taxes, which were partially offset by lower taxes associated with a lower ownership percentage in Signal Peak and lower property taxes.

- Depreciation expense decreased $14 million primarily due to a lower asset base resulting from 2011 asset sales and impairments, combined with credits resulting from a settlement with the DOE regarding storage of spent nuclear fuel.

- Other operating expenses decreased by $145 million primarily due to favorable mark-to-market adjustments on commodity contract positions ($123 million), a $5 million decrease in pensions and OPEB mark-to-market adjustment charges from lower net actuarial losses, and the absence of 2011 expenses for a $54 million excess and obsolete inventory adjustment relating to revised inventory practices adopted in connection with the Allegheny merger. These decreases were partially offset by net increases in other expenses of $37 million associated with the absence of revenue related to coal sales due to a lower ownership percentage in Signal Peak, and labor and agent fees associated with the retail business.

- Impairments of long-lived assets decreased $315 million due to the decision to deactivate six unregulated, coal-fired generating plants in 2011.

The Allegheny companies' operations for twelve months in 2012 and ten months in 2011 added $1,486 million and $1,582 million to operating expenses, respectively, as shown in the following table:

Operating Expenses - Allegheny[1]	For the Years Ended December 31, 2012	2011	Increase (Decrease)
		(In millions)	
Fuel	$ 861	$ 794	$ 67
Purchased power	103	149	(46)
Fossil generation	149	148	1
Transmission	123	198	(75)
Other operating expenses	38	100	(62)
Pensions and OPEB mark-to-market adjustment	49	44	5
General taxes	41	39	2
Depreciation	122	110	12
Total Operating Expense	$ 1,486	$ 1,582	$ (96)

[1] Allegheny results include 12 months in 2012 and 10 months in 2011, and excludes items classified in Discontinued Operations.

Fuel expenses increased due to higher generation levels and fuel prices. The purchased power expense decreased due to lower volumes purchased and lower capacity expenses. Transmission expense declined as a result of lower congestion.

Other Expense —

Total other expense in 2012 increased $541 million compared to 2011 due to the absence of the gain on the partial sale of FEV's interest in Signal Peak in 2011 ($569 million), partially offset by reduced net interest expense ($18 million) from debt reductions in 2011 and higher investment income ($10 million) from the NDTs.

Other — 2012 Compared with 2011

Financial results from other operating segments and reconciling items, including interest expense on holding company debt and corporate support services revenues and expenses, resulted in a $37 million decrease in earnings available to FirstEnergy Corp. in 2012 compared to 2011. The decrease resulted primarily from lower other operating expenses ($95 million) due to lower merger-related costs. These benefits were offset by decreased investment income ($33 million), decreased income attributable to noncontrolling interest ($17 million) relating to Signal Peak, which was deconsolidated in the fourth quarter of 2011, and increased income tax expense ($83 million).

Regulatory Assets

Regulatory assets represent incurred costs that have been deferred because of their probable future recovery from customers through regulated rates. Regulatory liabilities represent amounts that are expected to be credited to customers through future regulated rates or amounts collected from customers for costs not yet incurred. FirstEnergy and the Utilities net their regulatory assets and liabilities based on federal and state jurisdictions. The following table provides information about the composition of net regulatory assets as of December 31, 2013 and December 31, 2012, and the changes during the year ended December 31, 2013:

Regulatory Assets by Source	December 31, 2013	December 31, 2012	Increase (Decrease)
		(In millions)	
Regulatory transition costs	$ 266	$ 293	$ (27)
Customer receivables for future income taxes	518	505	13
Nuclear decommissioning and spent fuel disposal costs	(198)	(219)	21
Asset removal costs	(362)	(372)	10
Deferred transmission costs	112	352	(240)
Deferred generation costs	346	379	(33)
Deferred distribution costs	194	231	(37)
Contract valuations	260	463	(203)
Storm-related costs	455	469	(14)
Other	263	229	34
Total	$ 1,854	$ 2,330	$ (476)

Regulatory assets that do not earn a current return totaled approximately $477 million as of December 31, 2013 primarily related to storm damage costs.

As of December 31, 2013 and December 31, 2012, FirstEnergy had approximately $440 million and $480 million, respectively, of net regulatory liabilities that are primarily related to asset removal costs. Net regulatory liabilities are classified within Other noncurrent liabilities on the Consolidated Balance Sheets.

CAPITAL RESOURCES AND LIQUIDITY

FirstEnergy expects its existing sources of liquidity to remain sufficient to meet its anticipated obligations and those of its subsidiaries. FirstEnergy's business is capital intensive, requiring significant resources to fund operating expenses, construction expenditures, scheduled debt maturities and interest and dividend payments. In addition to internal sources to fund liquidity and capital requirements for 2014 and beyond, FirstEnergy expects to rely on external sources of funds. Short-term cash requirements not met by cash provided from operations are generally satisfied through short-term borrowings. Long-term cash needs may be met through the issuance of long-term debt and/or equity. FirstEnergy expects that borrowing capacity under credit facilities will continue to be available to manage working capital requirements along with continued access to long-term capital markets.

As discussed in the Overview, FirstEnergy's 2013 financial plan also included a series of actions, including the net transfer of 1,476 MW between AE Supply and MP of the Harrison and Pleasants power plants, which closed on October 9, 2013, and the sale of 527 MWs of unregulated hydro assets which closed on February 12, 2014. Proceeds from Harrison and the hydro sale were used to reduce debt at the Competitive Energy Services segment and at FE.

On September 25, 2013, FE filed a registration statement with the SEC to register 4 million shares of common stock to be issued to registered shareholders and its employees and the employees of its subsidiaries under its Stock Investment Plan. In addition, during December 2013, FE began fulfilling certain share-based benefit plan obligations through the issuance of authorized but unissued common stock.

In January 2014, FirstEnergy's Board of Directors declared a revised quarterly dividend of $0.36 per share of outstanding common stock. The dividend is payable March 1, 2014, to shareholders of record at the close of business on February 7, 2014. This revised dividend equates to an indicated annual dividend of $1.44 per share, reduced from the $0.55 per share quarterly dividend ($2.20 per share annually) that FirstEnergy had paid since 2008.

Capital expenditures for 2014 are expected to be approximately $3.3 billion, an increase of $1 billion from 2013 primarily due to increased transmission investments. Over the next several years, these capital expenditures, including this transmission expansion program, are expected to be funded with a combination of debt, equity issuances through the stock investment and employee benefit plans, and the projected $320 million annually in cash preserved as a result of the dividend action taken in January 2014. The Utilities and FirstEnergy's competitive generation operations expect to fund their capital expenditures over the next several years through cash from operations, debt, and, depending on the operating company, equity contributions from FE. Additionally, FirstEnergy also expects to issue long-term debt at certain Utilities and certain other subsidiaries to refinance short-term and maturing debt in the ordinary course, subject to market and other conditions. These actions are expected to continue the focus, in 2014, of maintaining strong balance sheets at the Utilities and the Competitive Energy Services segment.

A material adverse change in operations, or in the availability of external financing sources, could impact FirstEnergy's liquidity position and ability to fund its capital requirements. To mitigate risk, FirstEnergy's business strategy stresses financial discipline and a strong focus on execution. Major elements include the expectation of: adequate cash from operations, operational excellence, business plan execution, well-positioned generation fleet, no speculative trading operations, appropriate long-term commodity hedging positions, manageable capital expenditure program, adequately funded pension plan, minimal near-term maturities of existing long-term debt and a commitment to our dividend.

As of December 31, 2013, FirstEnergy's net deficit in working capital (current assets less current liabilities) was due in large part to currently payable long-term debt and short-term borrowings. Currently payable long-term debt as of December 31, 2013, included the following:

Currently Payable Long-Term Debt	(In millions)
PCRBs supported by bank LOCs [1]	$ 809
FMBs	175
Unsecured notes	150
Unsecured PCRBs [1]	76
Collateralized lease obligation bonds	74
Sinking fund requirements	124
Other notes	7
	$ 1,415

(1) These PCRBs are classified as currently payable long-term debt because the applicable interest rate mode permits individual debt holders to put the respective debt back to the issuer prior to maturity.

Short-Term Borrowings

FirstEnergy had $3,404 million and $1,969 million of short-term borrowings as of December 31, 2013 and December 31, 2012, respectively. FirstEnergy's available liquidity as of January 31, 2014, was as follows:

Borrower(s)	Type	Maturity	Commitment	Available Liquidity
			(In millions)	
FirstEnergy[1]	Revolving	May 2018	$ 2,500	$ 224
FES / AE Supply	Revolving	May 2018	2,500	2,489
FET[2]	Revolving	May 2018	1,000	—
		Subtotal	$ 6,000	$ 2,713
		Cash	—	48
		Total	$ 6,000	$ 2,761

(1) FE and the Utilities.
(2) Includes FET, ATSI and TrAIL.

Revolving Credit Facilities

FirstEnergy, FES/AE Supply and FET Facilities

FE and certain of its subsidiaries participate in three five-year syndicated revolving credit facilities with aggregate commitments of $6.0 billion (Facilities). The Facilities consist of a $2.5 billion aggregate FirstEnergy Facility, a $2.5 billion FES/AE Supply Facility and a $1.0 billion FET Facility, that are each available until May 2018, unless the lenders agree, at the request of the applicable borrowers, to an additional one-year extension. Generally, borrowings under each of the Facilities are available to each borrower separately and mature on the earlier of 364 days from the date of borrowing or the commitment termination date, as the same may be extended. Each of the Facilities contains financial covenants requiring each borrower to maintain a consolidated debt to total capitalization ratio (as defined under each of the Facilities, as amended) of no more than 65%, and 75% for FET, measured at the end of each fiscal quarter.

On May 8, 2013, FE, FES, AE Supply and FE's other borrowing subsidiaries entered into extensions and amendments to the three existing multi-year syndicated revolving credit facilities. Each facility was extended until May 2018, unless the lenders agree, at the request of the applicable borrowers, to an additional one-year extension. The FE Facility was amended to increase the lending banks' commitments under the facility by $500 million to a total of $2.5 billion and to increase the individual borrower sub-limits for FE by $500 million to a total of $2.5 billion and for JCP&L by $175 million to a total of $600 million.

On October 31, 2013, FE amended its existing $2.5 billion multi-year syndicated revolving credit facility to exclude certain after-tax, non-cash write-downs and non-cash charges of approximately $1.4 billion (primarily related to Pension and OPEB mark-to-market adjustments, impairment of long-lived assets and regulatory charges) from the debt to total capitalization ratio calculations incurred through September 30, 2013. Additionally, the amendment provides for a future allowance of approximately $1.35 billion for after-tax, non-cash write-downs and non-cash charges over the remaining life of the facility. Similarly, the FES/AE Supply $2.5 billion revolving credit facility was also amended to exclude certain similar after-tax, non-cash write-downs and non-cash charges of $785.7 million incurred through September 30, 2013 from the debt to total capitalization ratio calculations. As of December 31, 2013, the borrowers were in compliance with the applicable debt to total capitalization ratios under the respective Facilities.

The following table summarizes the borrowing sub-limits for each borrower under the Facilities, the limitations on short-term indebtedness applicable to each borrower under current regulatory approvals and applicable statutory and/or charter limitations, as of December 31, 2013:

Borrower	FirstEnergy Revolving Credit Facility Sub-Limit	FES/AE Supply Revolving Credit Facility Sub-Limit	FET Revolving Credit Facility Sub-Limit	Regulatory and Other Short-Term Debt Limitations
		(In millions)		
FE	$ 2,500	$ —	$ —	$ — [1]

(1) No limitations.
(2) No limitation based upon blanket financing authorization from the FERC under existing market-based rate tariffs.
(3) Includes amounts which may be borrowed under the regulated companies' money pool.

The entire amount of the FES/AE Supply Facility, $700 million of the FirstEnergy Facility and $225 million of the FET Facility, subject to each borrower's sub-limit, is available for the issuance of LOCs (subject to borrowings drawn under the Facilities) expiring up to one year from the date of issuance. The stated amount of outstanding LOCs will count against total commitments available under each of the Facilities and against the applicable borrower's borrowing sub-limit.

The Facilities do not contain provisions that restrict the ability to borrow or accelerate payment of outstanding advances in the event of any change in credit ratings of the borrowers. Pricing is defined in "pricing grids," whereby the cost of funds borrowed under the Facilities is related to the credit ratings of the company borrowing the funds, other than the FET Facility, which is based on its subsidiaries' credit ratings. Additionally, borrowings under each of the Facilities are subject to the usual and customary provisions for acceleration upon the occurrence of events of default, including a cross-default for other indebtedness in excess of $100 million.

Term Loan

During December of 2013, FE entered into an agreement to extend and amend its $150 million term loan agreement with a maturity date of December 31, 2014. The maturity of the loan was extended to December 31, 2015 and the principal amount was increased to $200 million.

FirstEnergy Money Pools

FirstEnergy's utility operating subsidiary companies also have the ability to borrow from each other and the holding company to meet their short-term working capital requirements. A similar but separate arrangement exists among FirstEnergy's unregulated companies. FESC administers these two money pools and tracks surplus funds of FirstEnergy and the respective regulated and unregulated subsidiaries, as well as proceeds available from bank borrowings. Companies receiving a loan under the money pool agreements must repay the principal amount of the loan, together with accrued interest, within 364 days of borrowing the funds. The rate of interest is the same for each company receiving a loan from their respective pool and is based on the average cost of funds available through the pool. The average interest rate for borrowings in 2013 was 0.67% per annum for the regulated companies' money pool and 1.34% per annum for the unregulated companies' money pool.

Pollution Control Revenue Bonds

As of December 31, 2013, FirstEnergy's currently payable long-term debt included approximately $809 million ($736 million applicable to FES) of variable interest rate PCRBs, the bondholders of which are entitled to the benefit of irrevocable direct pay bank LOCs. The interest rates on the PCRBs are reset daily or weekly. Bondholders can tender their PCRBs for mandatory purchase prior to maturity with the purchase price payable from remarketing proceeds or, if the PCRBs are not successfully remarketed, by drawings on the irrevocable direct pay LOCs. The subsidiary obligor is required to reimburse the applicable LOC bank for any such drawings or, if the LOC bank fails to honor its LOC for any reason, must itself pay the purchase price.

The LOCs for FirstEnergy's variable interest rate PCRBs outstanding as of December 31, 2013 were issued by the following banks:

Bank	Aggregate Amount[1]	Termination Date	Reimbursements of Draws Due
	(In millions)		
UBS	$ 268	April 2014	April 2014
CitiBank N.A.	164	June 2014	June 2014
Wells Fargo	151	March 2014	March 2014
The Bank of Nova Scotia	48	April 2014	April 2014
The Bank of Nova Scotia	82	April 2015	April 2015
The Bank of Nova Scotia	96	December 2015	December 2015
Total	$ 809		

(1) Excludes approximately $9 million of applicable interest coverage.

Long-Term Debt Capacity

FE's and its subsidiaries' access to capital markets and costs of financing are influenced by the credit ratings of their securities. The following table displays FE's and its subsidiaries' credit ratings as of December 31, 2013:

	Senior Secured			Senior Unsecured		
Issuer	**S&P**	**Moody's**	**Fitch**	**S&P**	**Moody's**	**Fitch**
FE	—	—	—	BB+	Baa3	BB+
FES	—	—	—	BBB-	Baa3	BB+
AE Supply	—	—	—	BBB-	Baa3	BB+
AGC	—	—	—	BBB-	Baa3	BBB
ATSI	—	—	—	BBB-	Baa2	BBB+
CEI	BBB+	Baa1	BBB	BBB-	Baa3	BBB-
JCP&L	—	—	—	BBB-	Baa2	BBB
ME	—	—	—	BBB-	Baa2	BBB+
MP	BBB+	Baa1	A-	—	—	—
OE	BBB+	A3	BBB+	BBB-	Baa2	BBB
PN	—	—	—	BBB-	Baa2	BBB
Penn	BBB+	A3	BBB+	—	—	—
PE	BBB+	Baa1	A-	—	—	—
TE	BBB	Baa1	BBB	—	—	—
TrAIL	—	—	—	BBB-	Baa1	BBB+
WP	BBB+	A3	A-	—	—	—

Debt capacity is subject to the consolidated debt to total capitalization limits in the Facilities previously discussed. As of December 31, 2013, FE and its subsidiaries could issue additional debt of approximately $5.3 billion and remain within the limitations of the financial covenants required by the Facilities (as amended). As of December 31, 2013, FES' incremental debt capacity under its consolidated debt to total capitalization financial covenant is also $5.3 billion given FE's consolidated debt to total capitalization ratio under its Facility, as amended.

Changes in Cash Position

As of December 31, 2013, FirstEnergy had $218 million of cash and cash equivalents compared to $172 million of cash and cash equivalents as of December 31, 2012. As of December 31, 2013 and December 31, 2012, FirstEnergy had approximately $103 million and $62 million, respectively, of restricted cash included in Other Current Assets on the Consolidated Balance Sheets.

Cash Flows From Operating Activities

FirstEnergy's consolidated net cash from operating activities was provided by its regulated distribution, regulated transmission and competitive energy services businesses (see Results of Operations above). Net cash provided from operating activities was $2,662 million during 2013, $2,320 million during 2012 and $3,063 million during 2011, as summarized in the following table:

	For the Years Ended December 31,		
Operating Cash Flows	**2013**	**2012**	**2011**
		(In millions)	
Net income	$ 392	$ 771	$ 869
Non-cash charges	2,635	2,058	2,306
Pension trust contributions	—	(600)	(372)
Working capital and other	(365)	91	260
	$ 2,662	$ 2,320	$ 3,063

The $342 million increase in cash from operations is primarily a result of a $600 million pension contribution in 2012 that did not occur in 2013. The increase was partially offset primarily as a result of payments in 2013 associated with 2012 storm restoration activities.

The $577 million increase in non-cash charges is primarily due to the following:

- $795 million increase from impairment of long-lived assets due to the Hatfield's Ferry and Mitchell plant deactivations as well as the West Virginia asset transfer.
- $132 million increase from the loss on debt redemptions associated with the completion of the FES/AE Supply tender offers and FES debt redemptions described below.
- $162 million increase from lower deferred purchased power and other costs primarily due to the expiration of certain NUG agreements.
- $50 million increase from higher deferred rents and market lease valuation as a result of increased net amortization of lease expense.
- $232 million increase in amortization of regulatory assets primarily due to a regulatory asset impairments associated with the recovery of marginal transmission losses at ME and PN ($254 million), recovery of RECs for the Ohio Companies' ($51 million), and the asset transfer between MP and AE Supply ($23 million) as well as higher default generation service cost recovery in Pennsylvania, partially offset by a reduction of NUG cost recovery at ME and PN and higher transmission cost deferrals in Ohio.
- $99 million increase due to net commodity derivative transactions.
- $404 million decrease in deferred income taxes and investment tax credits. Of the decrease, $156 million was the result of the reversal of deferred income tax liabilities associated with the impairment of Hatfield's Ferry and Mitchell.
- $375 million increase due to storm deferrals related to Hurricane Sandy in 2012.
- $865 million decrease due to Pensions and OPEB mark-to-market charges, reflecting a higher discount rate to measure related obligations in 2013.

The $456 million decrease in cash flows from working capital and other is primarily due to the following:

- $101 million decrease from increased customer receivables during 2013 primarily as a result of increased weather related usage as described in the Results of Operations above.
- $183 million of decreased asset removal costs charged to income primarily related to hurricane Sandy in 2012.
- $146 million increase from materials and supplies, primarily due to reduced fuel inventory resulting primarily from plant deactivations in 2013 and 2012.
- $125 million decrease from lower accounts payable balances at the end of 2013, primarily due to higher balances related to Hurricane Sandy in 2012, a portion of which was paid in 2013.
- $187 million decrease from make whole premiums paid on debt redemptions during 2013.
- $114 million decrease from increased prepaid taxes.
- $87 million increase from higher accrued taxes driven by the timing of state tax related liabilities.

Cash Flows From Financing Activities

In 2013, cash provided from financing activities was $477 million compared to $807 million of net cash provided from financing activities during 2012. The following table summarizes new debt financing (net of any discounts) and redemptions:

	For the Years Ended December 31,		
Securities Issued or Redeemed / Repaid	**2013**	**2012**	**2011**
		(In millions)	
New Issues			
PCRBs	$ —	$ 650	$ 272
Long-term revolving credit	—	—	70
Senior secured notes	445	—	—
FMBs	1,000	100	—
Unsecured Notes	2,300	—	262
	$ 3,745	$ 750	$ 604
Redemptions / Repayments			
PCRBs	$ (470)	$ (238)	$ (792)
Long-term revolving credit	(50)	—	(495)
Senior secured notes	(376)	(118)	(460)
FMBs	(420)	—	(15)
Unsecured notes	(2,284)	(584)	(147)
	$ (3,600)	$ (940)	$ (1,909)
Tender premiums paid on debt redemptions	$ (110)	$ —	$ —
Short-term borrowings, net	$ 1,435	$ 1,969	$ (700)

On March 5, 2013, FE issued in aggregate $1.5 billion of senior unsecured notes in two series: $650 million of 2.75% senior notes due March 15, 2018 and $850 million of 4.25% senior notes due March 15, 2023. The stated interest rates are subject to adjustments based upon changes in the credit ratings of FirstEnergy but will not decrease below the issued rates. The proceeds were used to repay short-term borrowings and to invest in the money pool for FES and AE Supply's use in funding a portion of their concurrent tender offers.

On March 28, 2013, pursuant to tender offers launched in February 2013, FES and AE Supply repurchased $369 million and $294 million, respectively, of outstanding senior notes with interest rates ranging from 5.75% to 6.8%. The $369 million of FES repurchases consisted of original maturities of $252 million due 2021 and $117 million due 2039. The $294 million of AE Supply repurchases consisted of original maturities of $194 million due 2019 and $100 million due 2039. FES and AE Supply paid $67 million and $43 million, respectively, in tender premiums to repurchase the tendered senior notes. FirstEnergy recorded a loss on debt redemption of $119 million (FES - $71 million), including such premiums and other related expenses. The tender premiums paid are included in cash flows from financing activities in the Consolidated Statement of Cash Flows.

In March 2013, ME issued $300 million of 3.50% senior unsecured notes due March 15, 2023. Proceeds from this offering were used to repay $150 million of ME 4.95% senior unsecured notes that matured in March 2013 and short-term borrowings.

On April 15, 2013, FES redeemed $400 million of its 4.80% senior notes due 2015 and recorded a loss on debt redemption of $32 million including $31 million of make-whole premiums paid. The make-whole premiums paid are included in cash flows from operating activities in the Consolidated Statement of Cash Flows.

On June 3, 2013, FG exercised a mandatory put option and repurchased approximately $235 million of PCRBs due 2023, which FG is currently holding for remarketing subject to future market and other conditions.

During August, the Ohio Companies redeemed an additional $660 million of long-term debt with interest rates ranging from 5.65% to 7.25% and paid approximately $120 million of make-whole premiums which were deferred as a regulatory asset and will be amortized over the original life of the redeemed debt. The make-whole premiums paid are included in cash flows from operating activities in the Consolidated Statement of Cash Flows. Additionally, during August, JCP&L issued $500 million of 4.7% unsecured notes due April 2024 and used the proceeds to pay down a portion of its short-term debt obligations.

As discussed in Note 8, Variable Interest Entities, in June 2013, the SPEs formed by the Ohio Companies issued approximately $445 million of pass-through trust certificates supported by phase-in recovery bonds with a weighted average coupon of 2.48% to securitize the recovery of certain all electric customer heating discounts, fuel and purchased power regulatory assets. The phase-in recovery bonds were sold to a trust that concurrently sold a like aggregate amount of its pass through trust certificates to public investors. The proceeds were primarily used to redeem $410 million in existing taxable bonds of the Ohio Companies with a weighted average coupon of 5.71%, including $30 million of make-whole premiums. The securitization effectively allows for the recovery of the make-whole premiums and transactional costs through the imposition of non-bypassable phase-in recovery charges on retail electric customers of the Ohio Companies pursuant to Ohio law. The $410 million of redemption consisted of original maturities of $225 million due 2013, $150 million due 2015 and $35 million due 2020. The make-whole premiums paid are included in cash flows from operating activities in the Consolidated Statement of Cash Flows.

On November 15, 2013, AE Supply optionally redeemed $235 million of its 7.00% PCRBs due July 15, 2039 at 100% of the principal amount in connection with the deactivation of operations at Hatfield's Ferry.

On November 27, 2013, MP issued $400 million of 4.10% FMBs due April 15, 2024 and $600 million of 5.40% FMBs due December 15, 2043. Proceeds from this offering were used by MP to: (i) repay at maturity $300 million of its FMBs, 7.95% Series due December 15, 2013; (ii) redeem $120 million of its FMBs, 6.70% Series due June 15, 2014; (iii) repay a $572.7 million short-term promissory note originally issued on October 9, 2013 to its affiliate, AE Supply in connection with MP’s acquisition of the remaining ownership of the Harrison Power Station; and (iv) for working capital needs and other general corporate purposes.

During December of 2013, FE entered into an agreement to extend and amend its $150 million term loan agreement with a maturity date of December 31, 2014. The maturity of the loan was extended to December 31, 2015 and the principal amount was increased to $200 million. On December 26, 2013, PN redeemed $150 million of its 5.13% Senior Notes due April 1,2014 and ME redeemed $100 million of its 4.88% Senior Notes due April 1, 2014.

Cash Flows From Investing Activities

Cash used for investing activities in 2013 principally represented cash used for property additions. The following table summarizes investing activities for 2013, 2012 and 2011:

	For the Years Ended December 31,		
Cash Used for Investing Activities	**2013**	**2012**	**2011**
		(In millions)	
Property Additions:			
Regulated distribution	$ 1,272	$ 1,074	$ 868
Regulated transmission	461	507	390
Competitive energy services	827	1,014	778
Other and reconciling adjustments	78	83	93
Nuclear fuel	250	286	149
Cash received from Allegheny merger	—	—	(590)
Proceeds from asset sales	(4)	(17)	(840)
Investments	72	(62)	42
Asset removal costs	146	229	114
Other	(9)	43	(48)
	$ 3,093	$ 3,157	$ 956

Net cash used for investing activities during 2013 decreased by $64 million compared to 2012. The decrease was principally due to a decrease in property additions of $40 million, lower asset removal costs and nuclear fuel, partially offset by an increase in net purchases of investment securities and lower cash investments.

In 2012, FG acquired certain equity and other lessor interests in connection with the 1987 Bruce Mansfield Plant sale and leaseback transactions for approximately $262 million and in March of 2013, FG acquired the remaining interests for approximately $221 million. During 2013, NG purchased lessor equity interests in OE's existing sale and leaseback of Beaver Valley Unit 2 for $23 million. Additionally, in February 2014, NG purchased lessor equity interests in OE's existing sale and leaseback of Beaver Valley Unit 2 for approximately $94 million.

CONTRACTUAL OBLIGATIONS

As of December 31, 2013, our estimated cash payments under existing contractual obligations that we consider firm obligations are as follows:

Contractual Obligations	Total	2014	2015-2016	2017-2018	Thereafter
			(In millions)		
Long-term debt[1]	$ 17,005	$ 1,376	$ 2,305	$ 3,094	$ 10,230
Short-term borrowings	3,404	3,404	—	—	—
Interest on long-term debt[2]	10,965	881	1,658	1,424	7,002
Operating leases[3]	2,422	202	405	251	1,564
Fuel and purchased power[4]	22,292	2,485	4,111	2,971	12,725
Capital expenditures	2,516	1,099	775	453	189
Pension funding	1,087	—	717	229	141
Other[5]	279	75	82	65	57
Total	$ 59,970	$ 9,522	$ 10,053	$ 8,487	$ 31,908

(1) Excludes unamortized discounts and premiums, fair value accounting adjustments and capital leases.
(2) Interest on variable-rate debt based on rates as of December 31, 2013.
(3) See Note 6, Leases, of the Combined Notes to Consolidated Financial Statements.
(4) Amounts under contract with fixed or minimum quantities based on estimated annual requirements.
(5) Includes amounts for capital leases (see Note 6, Leases, of the Combined Notes to Consolidated Financial Statements) and contingent tax liabilities (see Note 5, Taxes, of the Combined Notes to Consolidated Financial Statements).

Excluded from the data shown above are estimates for the cash outlays from power purchase contracts entered into by most of the Utilities and under which they procure the power supply necessary to provide generation service to their customers who do not choose an alternative supplier. Although actual amounts will be determined by future customer behavior and consumption levels, management currently estimates these cash outlays will be approximately $2.9 billion in 2014, $0.7 billion of which are expected to relate to the Utilities' contracts with FES.

GUARANTEES AND OTHER ASSURANCES

FirstEnergy has various financial and performance guarantees and indemnifications which are issued in the normal course of business. These contracts include performance guarantees, stand-by letters of credit, debt guarantees, surety bonds and indemnifications. FirstEnergy enters into these arrangements to facilitate commercial transactions with third parties by enhancing the value of the transaction to the third party. The maximum potential amount of future payments FirstEnergy could be required to make under these guarantees as of December 31, 2013, was approximately $4.3 billion, as summarized below:

Guarantees and Other Assurances	Maximum Exposure
	(In millions)
FirstEnergy Guarantees on Behalf of its Subsidiaries	
Energy and Energy-Related Contracts[1]	$ 269
LOC (long-term debt) - interest coverage[2]	5
OVEC obligations	300
Deferred compensation arrangements	478
Other[3]	323
	1,375
Subsidiaries' Guarantees	
Energy and Energy-Related Contracts	66
LOC (long-term debt) - interest coverage[2]	3
FES' guarantee of NG's nuclear property insurance	88
FES' guarantee of FG's sale and leaseback obligations	2,030
Other	10
	2,197
Global Holding facility	350
Surety Bonds	264
LOCs[4]	128
	742
Total Guarantees and Other Assurances	$ 4,314

(1) Issued for open-ended terms, with a 10-day termination right by FirstEnergy.

(2) Reflects the interest coverage portion of LOCs issued in support of floating rate PCRBs with various maturities. The principal amount of floating-rate PCRBs of $809 million is reflected in currently payable long-term debt on FirstEnergy's consolidated balance sheets.

(3) Primarily includes guarantees of $125 million and $11 million for nuclear decommissioning funding assurances and $161 million supporting OE's sale and leaseback arrangement, and $20 million for railcar leases.

(4) Includes $7 million issued for various terms pursuant to LOC capacity available under FirstEnergy's revolving credit facilities, $96 million pledged in connection with the sale and leaseback of Beaver Valley Unit 2 by OE and $25 million pledged in connection with the sale and leaseback of Perry by OE.

FES' debt obligations are generally guaranteed by its subsidiaries, FG and NG, and FES guarantees the debt obligations of each of FG and NG. Accordingly, present and future holders of indebtedness of FES, FG, and NG would have claims against each of FES, FG, and NG, regardless of whether their primary obligor is FES, FG, or NG.

Collateral and Contingent-Related Features

In the normal course of business, FE and its subsidiaries routinely enter into physical or financially settled contracts for the sale and purchase of electric capacity, energy, fuel, and emission allowances. Certain bilateral agreements and derivative instruments contain provisions that require FE or its subsidiaries to post collateral. This collateral may be posted in the form of cash or credit support with thresholds contingent upon FE's or its subsidiaries' credit rating from each of the major credit rating agencies. The collateral and credit support requirements vary by contract and by counterparty. The incremental collateral requirement allows for the offsetting of assets and liabilities with the same counterparty, where the contractual right of offset exists under applicable master netting agreements.

Bilateral agreements and derivative instruments entered into by FE and its subsidiaries have margining provisions that require posting of collateral. Based on FES' power portfolio exposure as of December 31, 2013, FES has posted collateral of $142 million and AE supply has posted collateral of $8 million. The Regulated Distribution segment has posted collateral of $11 million.

These credit-risk-related contingent features stipulate that if the subsidiary were to be downgraded or lose its investment grade credit rating (based on its senior unsecured debt rating), it would be required to provide additional collateral. Depending on the volume of forward contracts and future price movements, higher amounts for margining could be required.

Subsequent to the occurrence of a senior unsecured credit rating downgrade to below S&P's BBB- and Moody's Baa3, or a "material adverse event," the immediate posting of collateral or accelerated payments may be required of FE or its subsidiaries. The following table discloses the additional credit contingent contractual obligations that may be required under certain events as of December 31, 2013:

Collateral Provisions	FES	AE Supply	Utilities	Total
		(In millions)		
Split Rating (One rating agency's rating below investment grade)	$ 496	$ 6	$ 53	$ 555
BB+/Ba1 Credit Ratings	$ 542	$ 6	$ 53	$ 601
Full impact of credit contingent contractual obligations	$ 777	$ 58	$ 88	$ 923

Excluded from the preceding chart are the potential collateral obligations due to affiliate transactions between the Regulated Distribution segment and Competitive Energy Services segment. As of December 31, 2013, neither FES nor AE Supply had any collateral posted with their affiliates. In the event of a senior unsecured credit rating downgrade to below S&P's BB- or Moody's Ba3, FES and AE Supply would be required to post $66 million and $2 million, respectively.

Other Commitments and Contingencies

FirstEnergy is a guarantor under a syndicated three-year senior secured term loan facility due October 18, 2015, under which Global Holding borrowed $350 million. Proceeds from the loan were used to repay Signal Peak's and Global Rail's maturing $350 million syndicated two-year senior secured term loan facility. In addition to FirstEnergy, Signal Peak, Global Rail, Global Mining Group, LLC and Global Coal Sales Group, LLC, each being a direct or indirect subsidiary of Global Holding, have also provided their joint and several guaranties of the obligations of Global Holding under the new facility.

In connection with the current facility, 69.99% of Global Holding's direct and indirect membership interests in Signal Peak, Global Rail and their affiliates along with FEV's and WMB Marketing Ventures, LLC's respective 33-1/3% membership interests in Global Holding, are pledged to the lenders under the current facility as collateral.

FirstEnergy, FEV and the other two co-owners of Global Holding, Pinesdale LLC, a Gunvor Group, Ltd. subsidiary, and WMB Marketing Ventures, LLC, have agreed to use their best efforts to refinance the new facility no later than July 20, 2015, which reflects the terms of an amendment dated August 14, 2013, on a non-recourse basis so that FirstEnergy's guaranty can be terminated and/or released. If that refinancing does not occur, FirstEnergy may require each co-owner to lend to Global Holding, on a pro rata basis, funds sufficient to prepay the new facility in full. In lieu of providing such funding, the co-owners, at FirstEnergy's option, may provide their several guaranties of Global Holding's obligations under the facility. FirstEnergy receives a fee for providing its guaranty, payable semiannually, which accrued at a rate of 4% through December 31, 2012, and accrues at a rate of 5% from January 1, 2013 through October 18, 2015, which amends the rate in the prior agreement, in each case based upon the average daily outstanding aggregate commitments under the facility for such semiannual period.

OFF-BALANCE SHEET ARRANGEMENTS

FES and certain of the Ohio Companies have obligations that are not included on their Consolidated Balance Sheets related to the Perry Unit 1, Beaver Valley Unit 2, and 2007 Bruce Mansfield Plant sale and leaseback arrangements, which are satisfied through operating lease payments. The total present value of these sale and leaseback operating lease commitments, net of trust investments, was approximately $1.1 billion as of December 31, 2013, of which approximately $1 billion relates to the 2007 Bruce Mansfield sale and leaseback arrangement expiring in 2040, and approximately $75 million relates to the Perry Unit 1 and Beaver Valley Unit 2 sale and leaseback arrangements expiring in 2016 and 2017, respectively. From time to time FirstEnergy and these companies enter into discussions with certain parties to the arrangements regarding acquisition of owner participant and other interests. However, FirstEnergy cannot provide assurance that any such acquisitions will occur on satisfactory terms or at all.

During the second quarter of 2013, in connection with the Perry sale and leaseback arrangement, OE provided notice to return the leased interests in the plant to the owner participants (representing an aggregate of approximately 103 MWs of the 1,268 MWs of total capacity of the Perry Plant) at the expiration of the lease (May 2016) in lieu of extending the lease or buying the interest at the then appraised FMV. During 2013, NG purchased lessor equity interests in OE's existing sale and leaseback of Beaver Valley Unit 2 for $23 million. Additionally, in February 2014, NG purchased lessor equity interests in OE's existing sale and leaseback of Beaver Valley Unit 2 for approximately $94 million.

MARKET RISK INFORMATION

FirstEnergy uses various market risk sensitive instruments, including derivative contracts, primarily to manage the risk of price and interest rate fluctuations. FirstEnergy’s Risk Policy Committee, comprised of members of senior management, provides general oversight for risk management activities throughout the company.

Commodity Price Risk

FirstEnergy is exposed to financial risks resulting from fluctuating commodity prices, including prices for electricity, natural gas, coal and energy transmission. FirstEnergy's Risk Management Committee is responsible for promoting the effective design and implementation of sound risk management programs and oversees compliance with corporate risk management policies and

established risk management practice. FirstEnergy uses a variety of derivative instruments for risk management purposes including forward contracts, options, futures contracts and swaps.

The valuation of derivative contracts is based on observable market information to the extent that such information is available. In cases where such information is not available, FirstEnergy relies on model-based information. The model provides estimates of future regional prices for electricity and an estimate of related price volatility. FirstEnergy uses these results to develop estimates of fair value for financial reporting purposes and for internal management decision making (see Note 9, Fair Value Measurements, of the Combined Notes to Consolidated Financial Statements). Sources of information for the valuation of net commodity derivative contracts assets and liabilities as of December 31, 2013 are summarized by year in the following table:

Source of Information- Fair Value by Contract Year	2014	2015	2016	2017	2018	Thereafter	Total
				(In millions)			
Prices actively quoted[1]	$ (6)	$ —	$ —	$ —	$ —	$ —	$ (6)
Other external sources[2]	(12)	(32)	(21)	(10)	—	—	(75)
Prices based on models	(5)	—	1	1	(9)	(15)	(27)
Total[3]	$ (23)	$ (32)	$ (20)	$ (9)	$ (9)	$ (15)	$ (108)

(1) Represents exchange traded New York Mercantile Exchange futures and options.
(2) Primarily represents contracts based on broker and ICE quotes.
(3) Includes $(202) million in non-hedge derivative contracts that are primarily related to NUG contracts. NUG contracts are generally subject to regulatory accounting and do not materially impact earnings.

FirstEnergy performs sensitivity analyses to estimate its exposure to the market risk of its commodity positions. Based on derivative contracts held as of December 31, 2013, a 10% adverse change in commodity prices would decrease net income by approximately $27 million during the next 12 months.

Equity Price Risk

As of December 31, 2013, the FirstEnergy pension plan assets were approximately allocated as follows: 18% in equity securities, 40% in fixed income securities, 23% in absolute return strategies, 6% in real estate and 13% in cash and short-term securities. A decline in the value of pension plan assets could result in additional funding requirements. FirstEnergy's funding policy is based on actuarial computations using the projected unit credit method. During the year ended December 31, 2013, FirstEnergy made no contributions to its qualified pension plans. See Note 3, Pensions and Other Postemployment Benefits, of the Combined Notes to Consolidated Financial Statements for additional details on FirstEnergy's pension plans and OPEB. In 2013, FirstEnergy's pension plan assets lost approximately (1.0)% as compared to an expected return on plan assets of 7.75%.

NDT funds have been established to satisfy NG's and other FirstEnergy subsidiaries' nuclear decommissioning obligations. As of December 31, 2013, approximately 77% of the funds were invested in fixed income securities, 15% of the funds were invested in equity securities and 8% were invested in short-term investments, with limitations related to concentration and investment grade ratings. The investments are carried at their market values of approximately $1,695 million, $316 million and $179 million for fixed income securities, equity securities and short-term investments, respectively, as of December 31, 2013, excluding $11 million of net receivables, payables and accrued income. A hypothetical 10% decrease in prices quoted by stock exchanges would result in a $32 million reduction in fair value as of December 31, 2013. Certain FirstEnergy subsidiaries recognize in earnings the unrealized losses on AFS securities held in its NDT as OTTI. A decline in the value of FirstEnergy's NDT or a significant escalation in estimated decommissioning costs could result in additional funding requirements. During 2013, FirstEnergy contributed approximately $5 million to the NDT.

Interest Rate Risk

FirstEnergy's exposure to fluctuations in market interest rates is reduced since a significant portion of debt has fixed interest rates, as noted in the table below. FirstEnergy is subject to the inherent interest rate risks related to refinancing maturing debt by issuing new debt securities. As discussed in Note 6, Leases of the Combined Notes to Consolidated Financial Statements, FirstEnergy's investments in capital trusts effectively reduce future lease obligations, also reducing interest rate risk.

Comparison of Carrying Value to Fair Value

Year of Maturity	2014	2015	2016	2017	2018	There-after	Total	Fair Value
				(In millions)				
Assets:								
Investments Other Than Cash and Cash Equivalents:								
Fixed Income	$ 16	$ 10	$ 5	$ 2		$ 1,914	$ 1,947	$ 1,949
Average interest rate	8.7%	8.8%	8.9%	8.8%		4.8%	4.9%	
Liabilities:								
Long-term Debt:								
Fixed rate	$ 566	$ 817	$ 668	$ 1,516	$ 679	$ 10,344	$ 14,590	$ 15,555
Average interest rate	4.9%	4.5%	5.5%	6.1%	6.8%	5.7%	5.7%	
Variable rate		$ 150			$ 656	$ 1,653	$ 2,459	$ 2,402
Average interest rate		1.7%			2.7%	2.2%	2.3%	

In 2013, in connection with certain debt redemptions, FirstEnergy recorded gains of approximately $17 million related to terminated interest rate swaps. In 2012, FirstEnergy terminated all forward starting swap agreements resulting in cash proceeds and a net gain, recorded as a reduction to interest expense, of approximately $6 million. As of December 31, 2013 and 2012, FirstEnergy had no forward starting swap agreements.

CREDIT RISK

Credit risk is defined as the risk that a counterparty to a transaction will be unable to fulfill its contractual obligations. FirstEnergy evaluates the credit standing of a prospective counterparty based on the prospective counterparty's financial condition. FirstEnergy may impose specified collateral requirements and use standardized agreements that facilitate the netting of cash flows. FirstEnergy monitors the financial conditions of existing counterparties on an ongoing basis. An independent risk management group oversees credit risk.

Wholesale Credit Risk

FirstEnergy measures wholesale credit risk as the replacement cost for derivatives in power, natural gas, coal and emission allowances, adjusted for amounts owed to, or due from, counterparties for settled transactions. The replacement cost of open positions represents unrealized gains, net of any unrealized losses, where FirstEnergy has a legally enforceable right of offset. FirstEnergy monitors and manages the credit risk of wholesale marketing, risk management and energy transacting operations through credit policies and procedures, which include an established credit approval process, daily monitoring of counterparty credit limits, the use of credit mitigation measures such as margin, collateral and the use of master netting agreements. FirstEnergy's portfolio of energy contracts has a current weighted average risk rating for energy contract counterparties of BBB (S&P).

Retail Credit Risk

FirstEnergy's principal retail credit risk exposure relates to its competitive electricity activities, which serve residential, commercial and industrial companies. Retail credit risk results when customers default on contractual obligations or fail to pay for service rendered. This risk represents the loss that may be incurred due to the nonpayment of customer accounts receivable balances, as well as the loss from the resale of energy previously committed to serve customers.

Retail credit risk is managed through established credit approval policies, monitoring customer exposures and the use of credit mitigation measures such as deposits in the form of LOCs, cash or prepayment arrangements.

Retail credit quality is affected by the economy and the ability of customers to manage through unfavorable economic cycles and other market changes. If the business environment were to be negatively affected by changes in economic or other market conditions, FirstEnergy's retail credit risk may be adversely impacted.

OUTLOOK

STATE REGULATION

Each of the Utilities' retail rates, conditions of service, issuance of securities and other matters are subject to regulation in the states in which it operates - in Maryland by the MDPSC, in Ohio by the PUCO, in New Jersey by the NJBPU, in Pennsylvania by the PPUC, in West Virginia by the WVPSC and in New York by the NYPSC. The transmission operations of PE in Virginia are subject to certain regulations of the VSCC. In addition, under Ohio law, municipalities may regulate rates of a public utility, subject to appeal to the PUCO if not acceptable to the utility.

As competitive retail electric suppliers serving retail customers primarily in Ohio, Pennsylvania, Illinois, Michigan, New Jersey and Maryland, FES and AE Supply are subject to state laws applicable to competitive electric suppliers in those states, including affiliate codes of conduct that apply to FES, AE Supply and their public utility affiliates. In addition, if FES, AE Supply or any of their subsidiaries were to engage in the construction of significant new generation facilities in any of those states, they would also be subject to state siting authority.

MARYLAND

PE provides SOS pursuant to a combination of settlement agreements, MDPSC orders and regulations, and statutory provisions. SOS supply is competitively procured in the form of rolling contracts of varying lengths through periodic auctions that are overseen by the MDPSC and a third party monitor. Although settlements with respect to residential SOS for PE customers expired on December 31, 2012, by statute, service continues in the same manner unless changed by order of the MDPSC. The settlement provisions relating to non-residential SOS have also expired; however, by MDPSC order, the terms of service remain in place unless PE requests or the MDPSC orders a change. PE recovers its costs plus a return for providing SOS.

The Maryland legislature in 2008 adopted a statute codifying the EmPOWER Maryland goals to reduce electric consumption by 10% and reduce electricity demand by 15%, in each case by 2015. PE's initial plan submitted in compliance with the statute was approved in 2009 and covered 2009-2011, the first three years of the statutory period. Expenditures were originally estimated to be approximately $101 million for the PE programs for the entire period of 2009-2015. Meanwhile, after extensive meetings with the MDPSC Staff and other stakeholders, on August 31, 2011, PE filed a new comprehensive plan for the second three year period, 2012-2014, that includes additional and improved programs. The 2012-2014 plan is expected to cost approximately $66 million out of the original $101 million estimate for the entire EmPOWER program. On December 22, 2011, the MDPSC issued an order approving PE's second plan with various modifications and follow-up assignments. PE continues to recover program costs subject to a five-year amortization. Maryland law only allows for the utility to recover lost distribution revenue attributable to energy efficiency or demand reduction programs through a base rate case proceeding, and to date such recovery has not been sought or obtained by PE.

Pursuant to a bill passed by the Maryland legislature in 2011, the MDPSC adopted rules, effective May 28, 2012, that create specific requirements related to a utility's obligation to address service interruptions, downed wire response, customer communication, vegetation management, equipment inspection, and annual reporting. The MDPSC will be required to assess each utility's compliance with the new rules, and may assess penalties of up to $25,000 per day, per violation. The new rules set utility-specific SAIDI and SAIFI targets for 2012-2015; prescribe detailed tree-trimming requirements, outage restoration and downed wire response deadlines; and impose other reliability and customer satisfaction requirements. PE has advised the MDPSC that compliance with the new rules is expected to increase costs by approximately $106 million over the period 2012-2015. On April 1, 2013, the Maryland electric utilities, including PE, filed their first annual reports on compliance with the new rules. The MDPSC conducted a hearing on August 20, 2013 to discuss the reports, after which an order was issued on September 3, 2013, which accepted PE's filing and the operational changes proposed therein.

Following a "derecho" storm through the region on June 29, 2012, the MDPSC convened a new proceeding to consider matters relating to the electric utilities' performance in responding to the storm. Hearings on the matter were conducted in September 2012. Concurrently, Maryland's governor convened a special panel to examine possible ways to improve the resilience of the electric distribution system. On October 3, 2012, that panel issued a report calling for various measures including: acceleration and expansion of some of the requirements contained in the reliability standards which had become final on May 28, 2012; selective increased investment in system hardening; creation of separate recovery mechanisms for the costs of those changes and investments; and penalties or bonuses on returns earned by the utilities based on their reliability performance. On February 27, 2013, the MDPSC issued an order (the February 27 Order) requiring the utilities to submit several reports over a series of months, relating to the costs and benefits of making further system and staffing enhancements in order to attempt to reduce storm outage durations. The order further requires the Staff of the MDPSC to report on possible performance-based rate structures and to propose additional rules relating to feeder performance standards, outage communication and reporting, and sharing of special needs customer information. PE has responded to the requirements in the order consistent with the schedule set forth therein. PE's final filing on September 3, 2013, discussed the steps needed to harden the utility's system in order to attempt to achieve various levels of storm response speed described in the February 27 Order, and projected that it would expect to make approximately $2.7 billion in infrastructure investments over 15 years to attempt to achieve the quickest level of response for the largest storm projected in the February 27 Order. The MDPSC has ordered that certain reports of its Staff relating to these matters be provided by May 1, 2014, and otherwise has not issued a schedule for further proceedings in this matter.

NEW JERSEY

JCP&L currently provides BGS for retail customers who do not choose a third party EGS and for customers of third party EGSs that fail to provide the contracted service. The supply for BGS, which is comprised of two components, is provided through contracts procured through separate, annually held descending clock auctions, the results of which are approved by the NJBPU. One BGS component and auction, reflecting hourly real time energy prices, is available for larger commercial and industrial customers. The other BGS component and auction, providing a fixed price service, is intended for smaller commercial and residential customers.

All New Jersey EDCs participate in this competitive BGS procurement process and recover BGS costs directly from customers as a charge separate from base rates.

On September 7, 2011, the Division of Rate Counsel filed a Petition with the NJBPU asserting that it has reason to believe that JCP&L is earning an unreasonable return on its New Jersey jurisdictional rate base. The Division of Rate Counsel requested that the NJBPU order JCP&L to file a base rate case petition so that the NJBPU may determine whether JCP&L's current rates for electric service are just and reasonable. In its written Order issued July 31, 2012, the NJBPU found that a base rate proceeding "will assure that JCP&L's rates are just and reasonable and that JCP&L is investing sufficiently to assure the provision of safe, adequate and proper utility service to its customers" and ordered JCP&L to file a base rate case using a historical 2011 test year. The rate case petition was filed on November 30, 2012. In the filing, JCP&L requested approval to increase its revenues by approximately $31.5 million and reserved the right to update the filing to include costs associated with the impact of Hurricane Sandy. The NJBPU transmitted the case to the New Jersey Office of Administrative Law for further proceedings and an ALJ has been assigned. On February 22, 2013, JCP&L updated its filing to request recovery of $603 million of distribution-related Hurricane Sandy restoration costs, resulting in increasing the total revenues requested to approximately $112 million. On June 14, 2013, JCP&L further updated its filing to: 1) include the impact of a depreciation study which had been directed by the NJBPU; 2) remove costs associated with 2012 major storms, consistent with the NJBPU orders establishing a generic proceeding to review 2011 and 2012 major storm costs (discussed below); and 3) reflect other revisions to JCP&L's filing. That filing represented an increase of approximately $20.6 million over the revenues produced by existing base rates. Testimony has also been filed in the matter by the Division of Rate Counsel and several other intervening parties in opposition to the base rate increase JCP&L requested. Specifically, the testimony of the Division of Rate Counsel's witnesses recommended that revenues produced by JCP&L's base rates for electric service be reduced by approximately $202.8 million (such amount did not address the revenue requirements associated with major storm events of 2011 and 2012, which are subject to review in the generic proceeding). JCP&L filed rebuttal testimony in response to the testimony of other parties on August 7, 2013. Hearings in the rate case have concluded. In the initial briefs of the parties filed on January 27, 2014, the Division of Rate Counsel recommended that base rate revenues be reduced by $214.9 million while the NJBPU Staff recommended a $207.4 million reduction (such amounts do not address the revenue requirements associated with the major storm events of 2011 and 2012). Reply briefs were filed on February 24, 2014.

On March 20, 2013, the NJBPU ordered that a generic proceeding be established to investigate the prudence of costs incurred by all New Jersey utilities for service restoration efforts associated with the major storm events of 2011 and 2012. The Order provided that if any utility had already filed a proceeding for recovery of such storm costs, to the extent the amount of approved recovery had not yet been determined, the prudence of such costs would be reviewed in the generic proceeding. On May 31, 2013, the NJBPU clarified its earlier order to indicate that the 2011 major storm costs would be reviewed expeditiously in the generic proceeding with the goal of maintaining the base rate case schedule established by the ALJ where recovery of such costs would be addressed. The NJBPU further indicated in the May 31 clarification that it would review the 2012 major storm costs in the generic proceeding and the recovery of such costs would be considered through a Phase II in the existing base rate case or through another appropriate method to be determined at the conclusion of the generic proceeding. On June 21, 2013, consistent with NJBPU's orders, JCP&L filed the detailed report in support of recovery of major storm costs with the NJBPU. On November 15, 2013, the Division of Rate Counsel filed testimony recommending that approximately $15 million of JCP&L’s costs be disallowed for recovery. Evidentiary hearings in this proceeding were scheduled for January 2014 but were subsequently adjourned by the NJBPU before their commencement. On February 24, 2014, a Stipulation was filed with the NJBPU by JCP&L, the Division of Rate Counsel and NJBPU Staff which will allow recovery of $736 million of JCP&L’s $744 million of costs related to the significant weather events of 2011 and 2012. As a result, FirstEnergy recorded a regulatory asset impairment charge of approximately $8 million (pre-tax) as of December 31, 2013, included in Amortization of regulatory assets, net within the Consolidated Statements of Income. The agreement, upon which no other party took a position to oppose or support, is now pending before the NJBPU. Recovery of 2011 storm costs will be addressed in the pending base rate case; recovery of 2012 storm costs will be determined by the NJBPU.

Pursuant to a formal Notice issued by the NJBPU on September 14, 2011, public hearings were held in September 2011 to solicit comments regarding the state of preparedness and responsiveness of New Jersey's EDCs prior to, during, and after Hurricane Irene, with additional hearings held in October 2011. Additionally, the NJBPU accepted written comments through October 28, 2011 related to this inquiry. On December 14, 2011, the NJBPU Staff filed a report of its preliminary findings and recommendations with respect to the electric utility companies' planning and response to Hurricane Irene and the October 2011 snowstorm. The NJBPU selected a consultant to further review and evaluate the New Jersey EDCs' preparation and restoration efforts with respect to Hurricane Irene and the October 2011 snowstorm, and the consultant's report was submitted to and subsequently accepted by the NJBPU on September 12, 2012. JCP&L submitted written comments on the report. On January 24, 2013, based upon recommendations in its consultant's report, the NJBPU ordered the New Jersey EDCs to take a number of specific actions to improve their preparedness and responses to major storms. The order includes specific deadlines for implementation of measures with respect to preparedness efforts, communications, restoration and response, post event and underlying infrastructure issues. On May 31, 2013, the NJBPU ordered that the New Jersey EDCs implement a series of new communications enhancements intended to develop more effective communications among EDCs, municipal officials, customers and the NJBPU during extreme weather events and other expected periods of extended service interruptions. The new requirements include making information regarding estimated times of restoration available on the EDC's web sites and through other technological expedients. JCP&L is implementing the required measures consistent with the schedule set out in the above NJBPU's orders.

OHIO

The Ohio Companies primarily operate under an ESP, which expires on May 31, 2014. The material terms of the ESP include:

- Generation supplied through a CBP;
- A load cap of no less than 80%, so that no single supplier is awarded more than 80% of the tranches, which also applies to tranches assigned post-auction;
- A 6% generation discount to certain low income customers provided by the Ohio Companies through a bilateral wholesale contract with FES (FES is one of the wholesale suppliers to the Ohio Companies);
- No increase in base distribution rates through May 31, 2014; and
- A new distribution rider, Rider DCR, to recover a return of, and on, capital investments in the delivery system.

The Ohio Companies also agreed not to recover from retail customers certain costs related to transmission cost allocations by PJM as a result of ATSI's integration into PJM for the longer of the five-year period from June 1, 2011 through May 31, 2016 or when the amount of costs avoided by customers for certain types of products totals $360 million, subject to the outcome of certain PJM proceedings. The Ohio Companies also agreed to establish a $12 million fund to assist low income customers over the term of the ESP and agreed to additional matters related to energy efficiency and alternative energy requirements.

On April 13, 2012, the Ohio Companies filed an application with the PUCO to essentially extend the terms of their ESP for two years. The ESP 3 Application was approved by the PUCO on July 18, 2012. Several parties timely filed applications for rehearing. The PUCO issued an Entry on Rehearing on January 30, 2013 denying all applications for rehearing. Notices of appeal to the Supreme Court of Ohio were filed by two parties in the case, Northeast Ohio Public Energy Council and the ELPC. While briefing has been completed, the matter has not yet been scheduled for oral argument.

As approved, the ESP 3 plan continues certain provisions from the current ESP including:

- Continuing the current base distribution rate freeze through May 31, 2016;
- Continuing to provide economic development and assistance to low-income customers for the two-year plan period at levels established in the existing ESP;
- A 6% generation rate discount to certain low income customers provided by the Ohio Companies through a bilateral wholesale contract with FES (FES is one of the wholesale suppliers to the Ohio Companies);
- Continuing to provide power to non-shopping customers at a market-based price set through an auction process; and
- Continuing Rider DCR that allows continued investment in the distribution system for the benefit of customers.

As approved, the ESP 3 plan provides additional provisions, including:

- Securing generation supply for a longer period of time by conducting an auction for a three-year period rather than a one-year period, in each of October 2012 and January 2013, to mitigate any potential price spikes for the Ohio Companies' utility customers who do not switch to a competitive generation supplier; and
- Extending the recovery period for costs associated with purchasing RECs mandated by SB221 through the end of the new ESP 3 period. This is expected to initially reduce the monthly renewable energy charge for all non-shopping utility customers of the Ohio Companies by spreading out the costs over the entire ESP period.

Under SB221, the Ohio Companies are required to implement energy efficiency programs that achieve a total annual energy savings equivalent of approximately 1,211 GWHs in 2012 (an increase of 416,000 MWHs over 2011 levels), 1,726 GWHs in 2013, 2,306 GWHs in 2014 and 2,903 GWHs for each year thereafter through 2025. The Ohio Companies were also required to reduce peak demand in 2009 by 1%, with an additional 0.75% reduction each year thereafter through 2018. On May 15, 2013, the Ohio Companies filed their 2012 Status Update Report in which they indicated compliance with 2012 statutory energy efficiency and peak demand reduction benchmarks.

In accordance with PUCO Rules and a PUCO directive, on July 31, 2012 the Ohio Companies filed their three-year portfolio plan for the period January 1, 2013 through December 31, 2015. Estimated costs for the three Ohio Companies' plans total approximately $250 million over the three-year period, which is expected to be recovered in rates to the extent approved by the PUCO. Hearings were held with the PUCO in October 2012. On March 20, 2013, the PUCO approved the three-year portfolio plan for 2013-2015. Applications for rehearing were filed by the Ohio Companies and several other parties on April 19, 2013. The Ohio Companies filed their request for rehearing primarily to challenge the PUCO's decision to mandate that they offer planned energy efficiency resources into PJM's base residual auction. On May 15, 2013, the PUCO granted the applications for rehearing for the sole purpose of further consideration of the matter. On July 17, 2013, the PUCO denied the Ohio Companies' application for rehearing, in part, but authorized the Ohio Companies to receive 20% of any revenues obtained from bidding energy efficiency and demand response reserves into the PJM auction. The PUCO also confirmed that the Ohio Companies can recover PJM costs and applicable penalties associated with PJM auctions, including the costs of purchasing replacement capacity from PJM incremental auctions, to the extent that such costs or penalties are prudently incurred. On August 16, 2013, ELPC and OCC filed applications for rehearing under the basis that the PUCO's authorization for the Ohio Companies to share in the PJM revenues was unlawful. The PUCO granted rehearing on September 11, 2013 for the sole purpose of further consideration of the issue.

On September 16, 2013, the Ohio Companies filed with the Supreme Court of Ohio a notice of appeal of the PUCO's July 17, 2013 Entry on Rehearing related to energy efficiency, alternative energy, and long-term forecast rules stating that the rules issued by the PUCO are inconsistent with and are not supported by statutory authority. On October 23, 2013, the PUCO filed a motion to dismiss

the appeal. The Ohio Companies' response was filed on November 4, 2013. The motion is still pending and additional briefing has followed. The Ohio Companies filed their merit brief with the Supreme Court of Ohio on February 24, 2014.

SB221 requires electric utilities and electric service companies in Ohio to serve part of their load from renewable energy resources measured by an annually increasing percentage amount through 2024. The Ohio Companies conducted RFPs in 2009, 2010 and 2011 to secure RECs to help meet the renewable energy requirements established under SB221. In September 2011, the PUCO opened a docket to review the Ohio Companies' alternative energy recovery rider through which the Ohio Companies recover the costs of acquiring these RECs and selected auditors to perform a financial and management audit. Final audit reports filed with the PUCO generally supported the Ohio Companies' approach to procurement of RECs, but also recommended the PUCO examine, for possible disallowance, certain costs associated with the procurement of in-state renewable obligations that the auditor characterized as excessive. Following the hearing, the PUCO issued an Opinion and Order on August 7, 2013 approving the Ohio Companies' acquisition process and their purchases of RECs to meet statutory mandates in all instances except for part of the purchases arising from one auction and directing the Ohio Companies to credit non-shopping customers in the amount of $43.3 million, plus interest, and to file tariff schedules reflecting the refund and interest costs within 60 days following the issuance of a final appealable order on the basis that the Ohio Companies did not prove such purchases were prudent. The Ohio Companies, along with other parties, timely filed applications for rehearing on September 6, 2013. On December 18, 2013, the PUCO denied all of the applications for rehearing. Based on the PUCO ruling, a regulatory charge of approximately $51 million, including interest, was recorded in the fourth quarter of 2013 included in Amortization of regulatory assets, net within the Consolidated Statement of Income. On December 24, 2013, the Ohio Companies filed a notice of appeal and a motion for stay of the PUCO's order with the Supreme Court of Ohio. On February 10, 2014, the Supreme Court of Ohio granted the Ohio Companies' motion for stay, which went into effect on February 14, 2014. On February 18, 2014, the Office of Consumers' Counsel and the Environmental Law and Policy Center also filed appeals of the PUCO's order.

In March 2012, the Ohio Companies conducted an RFP process to obtain SRECs to help meet the statutory benchmarks for 2012 and beyond. With the successful completion of this RFP, the Ohio Companies achieved their in-state solar compliance requirements for 2012. The Ohio Companies also held a short-term RFP process to obtain all state SRECs and both in-state and all state non-solar RECs to help meet the statutory benchmarks for 2012. The Ohio Companies recently reported that they met all of their annual renewable energy resource requirements for reporting year 2012. The Ohio Companies conducted an RFP in 2013 to cover their all-state SREC and their in-state and all-state REC compliance obligations.

The PUCO instituted a statewide investigation on December 12, 2012 to evaluate the vitality of the competitive retail electric service market in Ohio. The PUCO provided interested stakeholders the opportunity to comment on twenty-two questions. The questions posed are categorized as market design and corporate separation. The Ohio Companies timely filed their comments on March 1, 2013, and filed reply comments on April 5, 2013. On June 5, 2013, the PUCO requested additional comments and reply comments on the topics of market design and corporate separation, which the Ohio Companies timely filed on July 8, 2013 and July 22, 2013, respectively. The PUCO held a series of workshops throughout 2013, which included an en banc workshop on December 11, 2013. The PUCO Staff filed a report on January 16, 2014, which contained a limited discussion of the workshops and the PUCO Staff's recommendations. The Ohio Companies submitted comments on February 6, 2014 and Reply Comments on February 20, 2014.

PENNSYLVANIA

The Pennsylvania Companies currently operate under DSPs that expire on May 31, 2015, and provide for the competitive procurement of generation supply for customers that do not choose an alternative EGS or for customers of alternative EGSs that fail to provide the contracted service. The default service supply is currently provided by wholesale suppliers through a mix of long-term and short-term contracts procured through descending clock auctions, competitive requests for proposals and spot market purchases. On November 4, 2013, the Pennsylvania Companies filed a DSP that will provide the method by which they will procure the supply for their default service obligations for the period of June 1, 2015 through May 31, 2017. The Pennsylvania Companies proposed programs call for quarterly descending clock auctions to procure 3, 12, 24, and 48-month energy contracts, as well as, one RFP seeking 2-year contracts to secure SRECs for ME, PN, and Penn. Hearings on the plans are scheduled to be held March 4-7, 2014. The Pennsylvania Companies expect a decision from the PPUC by August 4, 2014.

The PPUC entered an Order on March 3, 2010 that denied the recovery of marginal transmission losses through the TSC rider for the period of June 1, 2007 through March 31, 2008, and directed ME and PN to submit a new tariff or tariff supplement reflecting the removal of marginal transmission losses from the TSC. Pursuant to a plan approved by the PPUC, ME and PN refunded those amounts to customers over a 29-month period that began in January of 2011. On appeal, the Commonwealth Court affirmed the PPUC's Order to the extent that it holds that line loss costs are not transmission costs and, therefore, the approximately $254 million in marginal transmission losses and associated carrying charges for the period prior to January 1, 2011, are not recoverable under ME's and PN's TSC riders. The Pennsylvania Supreme Court denied ME's and PN's Petition for Allowance of Appeal and the Supreme Court of the United States denied ME's and PN's Petition for Writ of Certiorari. ME and PN also filed a complaint in the U.S. District Court for the Eastern District of Pennsylvania to obtain an order that would enjoin enforcement of the PPUC and Pennsylvania court orders under a theory of federal preemption on the question of retail rate recovery of the marginal transmission loss charges. On September 30, 2013, the U.S. District Court granted the PPUC's motion to dismiss. As a result of the U.S. District Court's September 30, 2013 decision, FirstEnergy recorded a regulatory asset impairment charge of approximately $254 million (pre-tax) in the quarter ended September 30, 2013 included in Amortization of regulatory assets, net within the Consolidated Statement of Income. The balance of marginal transmission losses was fully refunded to customers by the second quarter of 2013.

On October 29, 2013, ME and PN filed a Notice of Appeal of the U.S. District Court's decision to dismiss the complaint with the United States Court of Appeals for the Third Circuit. On December 30, 2013, ME and PN filed a brief with the Third Circuit that explained why it was legal error for the U.S. District Court to dismiss the complaint. The PPUC filed its brief on February 3, 2014, and ME and PN filed a reply brief on February 21, 2014. Oral argument has been scheduled for April 9, 2014.

Pennsylvania adopted Act 129 in 2008 to address issues such as: energy efficiency and peak load reduction; generation procurement; time-of-use rates; smart meters; and alternative energy. Among other things, Act 129 required utilities to file with the PPUC an energy efficiency and peak load reduction plan (EE&C Plan) by July 1, 2009, setting forth the utilities' plans to reduce energy consumption by a minimum of 1% and 3% by May 31, 2011 and May 31, 2013, respectively, and to reduce peak demand by a minimum of 4.5% by May 31, 2013. Act 129 provides for potentially significant financial penalties to be assessed on utilities that fail to achieve the required reductions in consumption and peak demand. The Pennsylvania Companies submitted a report on November 15, 2011, in which they reported on their compliance with statutory May 31, 2011, energy efficiency benchmarks. ME, PN and Penn achieved the 2011 benchmarks; however WP did not. WP could be subject to a statutory penalty of between $1 and $20 million. On July 15, 2013, the Pennsylvania Companies filed their preliminary energy efficiency and demand reduction results for the period ending May 31, 2013, indicating that all Pennsylvania Companies are expected to meet their statutory obligations. On November 15, 2013, the Pennsylvania Companies submitted their energy efficiency and peak demand reduction report for the period ending May 31, 2013, in which they indicated that all of the Pennsylvania Companies met their statutory requirements.

Pursuant to Act 129, the PPUC was charged with reviewing the cost effectiveness of energy efficiency and peak demand reduction programs. The PPUC found the energy efficiency programs to be cost effective and in an Order entered on August 3, 2012, the PPUC directed all of the electric utilities in Pennsylvania to submit by November 15, 2012, a Phase II EE&C Plan that would be in effect for the period June 1, 2013 through May 31, 2016. The PPUC has deferred ruling on the need to create peak demand reduction targets until it receives more information from the EE&C statewide evaluator. Based upon information received, the PPUC has not included a peak demand reduction requirement in the Phase II plans. The Pennsylvania Companies filed their Phase II plans and supporting testimony in November 2012. On January 16, 2013, the Pennsylvania Companies reached a settlement with all but one party on all but one issue. The settlement provides for the Pennsylvania Companies to meet with interested parties to discuss ways to expand upon the EE&C programs and incorporate any such enhancements after the plans are approved, provided that these enhancements will not jeopardize the Pennsylvania Companies' compliance with their required targets or exceed the statutory spending caps. On February 6, 2013, the Pennsylvania Companies filed revised Phase II EE&C Plans to conform the plans to the terms of the settlement. Total costs of these plans are expected to be approximately $234 million. All such costs are expected to be recoverable through the Pennsylvania Companies reconcilable Phase II EE&C Plan C riders. The remaining issue, raised by a natural gas company, involved the recommendation that the Pennsylvania Companies include in their plans incentives for natural gas space and water heating appliances. On March 14, 2013, the PPUC approved the 2013-2016 EE&C plans of the Pennsylvania Companies, adopting the settlement, and rejecting the natural gas companies recommendations.

In addition, Act 129 required utilities to file a SMIP with the PPUC. On December 31, 2012, the Pennsylvania Companies filed their Smart Meter Deployment Plan. The Deployment Plan requests deployment of approximately 98.5% of the smart meters to be installed over the period 2013 to 2019, and the remaining meters in difficult to reach locations to be installed by 2022, with an estimated life cycle cost of about $1.25 billion. Such costs are expected to be recovered through the Pennsylvania Companies' PPUC-approved Riders SMT-C. Evidentiary hearings were held and briefs were submitted by the Pennsylvania Companies and the Office of Consumer Advocate. On November 8, 2013, the ALJ issued a Recommended Decision recommending that the Pennsylvania Companies' Deployment Plan be adopted with certain modifications, including, among other things, that the Pennsylvania Companies perform further benchmarking analyses on their costs and hire an independent consultant to perform further analyses on potential savings. On December 2, 2013, the Pennsylvania Companies submitted exceptions in which they challenged, among other things, certain recommendations in the ALJ's decision, and requested approval of a modification to the deployment schedule so as to allow the entire Penn smart meter system (170,000 meters) to be built by the end of 2015, instead of the original proposed installation of 60,000 meters by the end of 2016. The Office of Consumer Advocate took exception to one issue and both parties filed replies to exceptions on December 12, 2013. The case is now before the PPUC for consideration. A decision is expected during the first quarter of 2014.

In the PPUC Order approving the FirstEnergy and Allegheny merger, the PPUC announced that a separate statewide investigation into Pennsylvania's retail electricity market would be conducted with the goal of making recommendations for improvements to ensure that a properly functioning and workable competitive retail electricity market exists in the state. On April 29, 2011, the PPUC entered an Order initiating the investigation and requesting comments from interested parties on eleven directed questions concerning retail markets in Pennsylvania to investigate both intermediate and long term plans that could be adopted to further foster the competitive markets, and to explore the future of default service in Pennsylvania following the expiration of the upcoming DSPs on May 31, 2015. A final order was issued on February 15, 2013, providing recommendations on the entities to provide default service, the products to be offered, billing options, customer education, and licensing fees and assessments, among other items. Subsequently, the PPUC established five workgroups and one comment proceeding in order to seek resolution of certain matters and to clarify certain obligations that arose from that order.

The PPUC issued a Proposed Rulemaking Order on August 25, 2011, which proposed a number of substantial modifications to the current Code of Conduct regulations that were promulgated to provide competitive safeguards to the competitive retail electricity market in Pennsylvania. The proposed changes include, but are not limited to: an EGS may not have the same or substantially similar name as the EDC or its corporate parent; EDCs and EGSs would not be permitted to share office space and would need to

occupy different buildings; EDCs and affiliated EGSs could not share employees or services, except certain corporate support, emergency, or tariff services (the definition of "corporate support services" excludes items such as information systems, electronic data interchange, strategic management and planning, regulatory services, legal services, or commodities that have been included in regulated rates at less than market value); and an EGS must enter into a trademark agreement with the EDC before using its trademark or service mark. The Proposed Rulemaking Order was published on February 11, 2012, and comments were filed by the Pennsylvania Companies and FES on March 27, 2012. If implemented these rules could require a significant change in the ways FES and the Pennsylvania Companies do business in Pennsylvania, and could possibly have an adverse impact on their results of operations and financial condition. Pennsylvania's Independent Regulatory Review Commission subsequently issued comments on the proposed rulemaking on April 26, 2012, which called for the PPUC to further justify the need for the proposed revisions by citing a lack of evidence demonstrating a need for them. The House Consumer Affairs Committee of the Pennsylvania General Assembly also sent a letter to the Independent Regulatory Review Commission on July 12, 2012, noting its opposition to the proposed regulations as modified.

WEST VIRGINIA

MP and PE currently operate under a Joint Stipulation and Agreement of Settlement reached with the other parties and approved by the WVPSC in June 2010 that provided for:

- $40 million annualized base rate increases effective June 29, 2010;
- Deferral of February 2010 storm restoration expenses over a maximum five-year period;
- Additional $20 million annualized base rate increase effective in January 2011;
- Decrease of $20 million in ENEC rates effective January 2011, providing for deferral of related costs for later recovery in 2012; and
- Moratorium on filing for further increases in base rates before December 1, 2011, except under specified circumstances.

The WVPSC opened a general investigation into the June 29, 2012, derecho windstorm with data requests for all utilities. A public meeting for presentations on utility responses and restoration efforts was held on October 22, 2012 and two public input hearings have been held. The WVPSC issued an Order in this matter on January 23, 2013 closing the proceeding and directing electric utilities to file a vegetation management plan within six months and to propose a cost recovery mechanism. This Order also requires MP and PE to file a status report regarding improvements to their storm response procedures by the same date. On July 23, 2013, MP and PE filed their vegetation management plans, which provided for recovery of costs through a surcharge mechanism. A hearing was held on December 3, 2013, and briefing followed but the WVPSC has not yet issued an opinion in this matter.

MP and PE filed their Resource Plan with the WVPSC in August 2012 detailing both supply and demand forecasts and noting a substantial capacity deficiency. MP and PE filed a Petition for approval of a Generation Resource Transaction with the WVPSC in November 2012 that proposed a net ownership transfer of 1,476 MW of coal-fired generation capacity to MP. The proposed transfer involved MP's acquisition of the remaining ownership of the Harrison Power Station from AE Supply and the sale of MP's minority interest in the Pleasants Power Station to AE Supply. FERC authorized the transfers on April 23, 2013 and the financing on May 13, 2013. A Joint Settlement Agreement was filed by the majority of parties on August 21, 2013. On October 7, 2013, the WVPSC authorized the transaction, with certain conditions, and on October 9, 2013, the transaction closed resulting in MP recording a pre-tax impairment charge of approximately $322 million in the fourth quarter of 2013 to reduce the net book value of the Harrison Power Station to the amount that was permitted to be included in jurisdictional rate base. The charge is included in Impairment of long lived assets within the Consolidated Statement of Income. Concurrently, MP recognized a regulatory liability of approximately $23 million representing refunds to customers associated with the excess purchase price received by MP above the net book value of MP's minority interest in the Pleasants Power Station. The transaction resulted in AE Supply receiving net consideration of $1.1 billion and MP's assumption of a $73.5 million pollution control note. The $1.1 billion net consideration was originally financed by MP through an equity infusion from FE of approximately $527 million and a note payable to AE Supply of approximately $573 million. The note payable to AE Supply was paid in the fourth quarter of 2013. In accordance with the settlement, MP and PE will file a base rate case by April 30, 2014. On November 6, 2013, the WVCAG petitioned for appeal with the West Virginia Supreme Court. MP and PE filed their response to the WVCAG petition on December 27, 2013 and WVCAG filed its reply on January 16, 2014. Oral argument before the Supreme Court is scheduled for March 5, 2014.

RELIABILITY MATTERS

Federally-enforceable mandatory reliability standards apply to the bulk electric system and impose certain operating, record-keeping and reporting requirements on the Utilities, FES, AE Supply, FG, FENOC, ATSI and TrAIL. NERC is the ERO designated by FERC to establish and enforce these reliability standards, although NERC has delegated day-to-day implementation and enforcement of these reliability standards to eight regional entities, including RFC. All of FirstEnergy's facilities are located within the RFC region. FirstEnergy actively participates in the NERC and RFC stakeholder processes, and otherwise monitors and manages its companies in response to the ongoing development, implementation and enforcement of the reliability standards implemented and enforced by RFC.

FirstEnergy believes that it is in compliance with all currently-effective and enforceable reliability standards. Nevertheless, in the course of operating its extensive electric utility systems and facilities, FirstEnergy occasionally learns of isolated facts or circumstances that could be interpreted as excursions from the reliability standards. If and when such items are found, FirstEnergy

develops information about the item and develops a remedial response to the specific circumstances, including in appropriate cases “self-reporting” an item to RFC. Moreover, it is clear that the NERC, RFC and FERC will continue to refine existing reliability standards as well as to develop and adopt new reliability standards. Any inability on FirstEnergy's part to comply with the reliability standards for its bulk power system could result in the imposition of financial penalties that could have a material adverse effect on its financial condition, results of operations and cash flows.

FERC MATTERS

PJM Transmission Rates

PJM and its stakeholders have been debating the proper method to allocate costs for new transmission facilities. While FirstEnergy and other parties advocated for a traditional "beneficiary pays" (or usage based) approach, others advocate for “socializing” the costs on a load-ratio share basis - each customer in the zone would pay based on its total usage of energy within PJM. On August 6, 2009, the U.S. Court of Appeals for the Seventh Circuit found that FERC had not supported a prior FERC decision to allocate costs for new 500 kV and higher voltage facilities on a load ratio share basis and, based on that finding, remanded the rate design issue to FERC. In an order dated January 21, 2010, FERC set this matter for a “paper hearing” and requested parties to submit written comments. FERC identified nine separate issues for comment and directed PJM to file the first round of comments. PJM filed certain studies with FERC on April 13, 2010, which demonstrated that allocation of the cost of high voltage transmission facilities on a beneficiary pays basis results in certain LSEs in PJM bearing the majority of the costs. FirstEnergy and a number of other utilities, industrial customers and state utility commissions supported the use of the beneficiary pays approach for cost allocation for high voltage transmission facilities. Other utilities and state utility commissions supported continued socialization of these costs on a load ratio share basis. On March 30, 2012, FERC issued an order on remand reaffirming its prior decision that costs for new transmission facilities that are rated at 500 kV or higher are to be collected from all transmission zones throughout the PJM footprint by means of a postage-stamp (or socialized) rate based on the amount of load served in a transmission zone and concluding that such methodology is just and reasonable and not unduly discriminatory or preferential. On April 30, 2012, FirstEnergy requested rehearing of FERC's March 30, 2012 order and on March 22, 2013, FERC denied rehearing. On March 29, 2013, FirstEnergy filed its Petition for Review with the U.S. Court of Appeals for the Seventh Circuit, and the case subsequently was consolidated for briefing and disposition before that court. Briefing is complete, and the case will be scheduled for oral argument, with a decision currently expected in 2014.

Order No. 1000, issued by FERC on July 21, 2011, required the submission of a compliance filing by PJM or the PJM transmission owners demonstrating that the cost allocation methodology for new transmission projects directed by the PJM Board of Managers satisfied the principles set forth in the order. To demonstrate compliance with the regional cost allocation principles of the order, the PJM transmission owners, including FirstEnergy, submitted a filing to FERC on October 11, 2012, proposing a hybrid method of 50% beneficiary pays and 50% postage stamp to be effective for RTEP projects approved by the PJM Board of Managers on, and after, the effective date of the compliance filing. On January 31, 2013, FERC conditionally accepted the hybrid method to be effective on February 1, 2013, subject to refund and to a future order on PJM's separate Order No. 1000 compliance filing. On March 22, 2013, FERC granted final acceptance of the hybrid method. Certain parties have sought rehearing of parts of FERC's March 22, 2013 order. These requests for rehearing are pending before FERC. On July 10, 2013, the PJM transmission owners, including FirstEnergy, submitted filings to FERC setting forth the cost allocation method for projects that cross the borders between: (1) the PJM region and the NYISO region and; (2) the PJM region and the FERC-jurisdictional members of the SERTP region. These filings propose to allocate the cost of these interregional transmission projects based on the costs of projects that otherwise would have been constructed separately in each region. On the same date, also in response to Order No. 1000, the PJM transmission owners, including FirstEnergy, also submitted to FERC a filing stating that the cost allocation provisions for interregional transmission projects provided in the Joint Operating Agreement between PJM and MISO comply with the requirements of Order No. 1000. On December 30, 2013, FERC conditionally accepted the PJM/SERTP cross-border project cost allocation filing, subject to refund and future orders in PJM's and SERTP's related Order No. 1000 interregional compliance proceedings. The PJM/NYISO and PJM/MISO cross-border project cost allocation filings remain pending before FERC. On January 16, 2014, FERC issued an order regarding the effective date of PJM's separate Order No. 1000 compliance filing, noting that it would address the merits of the comments on and protests to that filing and related compliance filings in a future order.

Numerous parties, including ATSI, FES, TrAIL, OE, CEI, TE, Penn, JCP&L, ME, MP, PN, WP and PE, have sought judicial review of Order No. 1000 before the U.S. Court of Appeals for the D.C. Circuit. Briefing was completed in December 2013 and oral argument is scheduled for March 20, 2014.

The outcome of these proceedings and their impact, if any, on FirstEnergy cannot be predicted at this time.

RTO Realignment

On June 1, 2011, ATSI and the ATSI zone transferred from MISO to PJM. The move was performed as planned with no known operational or reliability issues for ATSI or for the wholesale transmission customers in the ATSI zone. While many of the matters involved with the move have been resolved, FERC denied recovery by means of ATSI's transmission rate for certain charges that collectively can be described as "exit fees" and certain other transmission cost allocation charges totaling approximately $78.8 million until such time as ATSI submits a cost/benefit analysis that demonstrates net benefits to customers from the move. On December 21, 2012, ATSI and other parties filed a proposed settlement agreement with FERC to resolve the exit fee and transmission

cost allocation issues. However, FERC subsequently rejected that settlement stating that its action is without prejudice to ATSI submitting a cost/benefit analysis demonstrating that the benefits of the RTO realignment decisions outweigh the exit fee and transmission cost allocation charges. On October 21, 2013, FirstEnergy filed a request for rehearing of FERC's order.

Separately, the question of ATSI's responsibility of certain costs for the “Michigan Thumb” transmission project continues to be disputed. Potential responsibility arises under the MISO MVP tariff, which has been litigated in complex proceedings in front of FERC and certain U.S. appellate courts. The MISO and its allied parties assert that the benefits to the ATSI zone for the Michigan Thumb project are roughly commensurate with the costs that MISO desires to charge to the ATSI zone, estimated to be as much as $16 million per year. ATSI has submitted evidence that the Michigan Thumb project provides no electric benefits to the ATSI zone and, on that basis, opposes the MISO’s efforts to impose these costs to the ATSI zone loads. The MISO and its allied parties also assert that certain language in the MISO Transmission Owners Agreement requires ATSI to pay these charges. In the event of a final non-appealable order that rules that ATSI must pay these charges, ATSI will seek recovery of these charges through its formula rate. While FERC proceedings regarding whether the MISO can charge ATSI for MVP costs remain pending, on February 24, 2014, the U.S. Supreme Court declined to hear appeals filed by FirstEnergy and other parties of the Seventh Circuit's June 2013 decision upholding FERC's acceptance of the MISO's generic MVP cost allocation proposal.

In the May 31, 2011 order, FERC ruled that the costs for certain "legacy RTEP" transmission projects in PJM could be charged to transmission customers in the ATSI zone. ATSI sought rehearing of the question of whether the ATSI zone should pay these legacy RTEP charges and, on September 20, 2012, FERC denied ATSI's request for rehearing. ATSI subsequently filed a petition for review with the U.S. Court of Appeals for the D.C. Circuit. The case thereafter was briefed and oral arguments took place on December 11, 2013. A decision currently is expected in the second quarter of 2014.

The outcome of those proceedings that address the remaining open issues related to ATSI's move into PJM cannot be predicted at this time.

California Claims Matters

In October 2006, several California governmental and utility parties presented AE Supply with a settlement proposal to resolve alleged overcharges for power sales by AE Supply to the California Energy Resource Scheduling division of the CDWR during 2001. The settlement proposal claims that CDWR is owed approximately $190 million for these alleged overcharges. This proposal was made in the context of mediation efforts by FERC and the U.S. Court of Appeals for the Ninth Circuit in several pending proceedings to resolve all outstanding refund and other claims, including claims of alleged price manipulation in the California energy markets, during 2000 and 2001. The Ninth Circuit had previously remanded one of those proceedings to FERC, which dismissed the claims of the California Parties in May 2011, and affirmed the dismissal in June 2012. On June 20, 2012, the California Parties appealed FERC's decision back to the Ninth Circuit. Briefing was completed before the Ninth Circuit on October 23, 2013. The timing of further action by the Ninth Circuit is unknown.

In another proceeding, in June 2009, the California Attorney General, on behalf of certain California parties, filed another complaint with FERC against various sellers, including AE Supply, again seeking refunds for transactions in the California energy markets during 2000 and 2001. The above-noted transactions with CDWR are the basis for including AE Supply in this complaint. AE Supply filed a motion to dismiss, which was granted by FERC in May 2011, and affirmed by FERC in June 2012. The California Attorney General has appealed FERC's dismissal of its complaint to the Ninth Circuit, which has consolidated the case with other pending appeals related to California refund claims, and stayed the proceedings pending further order.

FirstEnergy cannot predict the outcome of either of the above matters or estimate the possible loss or range of loss.

PATH Transmission Project

The PATH project was proposed to be comprised of a 765 kV transmission line from West Virginia through Virginia and into Maryland, modifications to an existing substation in Putnam County, West Virginia, and the construction of new substations in Hardy County, West Virginia and Frederick County, Maryland. PJM initially authorized construction of the PATH project in June 2007. On August 24, 2012, the PJM Board of Managers canceled the PATH project, which it had suspended in February 2011. As a result, approximately $62 million and approximately $59 million in costs incurred by PATH-Allegheny and PATH-WV, respectively, were reclassified from net property, plant and equipment to a regulatory asset for future recovery. On September 28, 2012, those companies requested authorization from FERC to recover the costs with a proposed return on equity of 10.9% (10.4% base plus 0.5% RTO membership) from PJM customers over the next five years. Several parties protested the request. On November 30, 2012, FERC issued an order denying the 0.5% return on equity adder for RTO membership and allowing the tariff changes enabling recovery of these costs to become effective on December 1, 2012, subject to settlement judge procedures and hearing if the parties do not agree to a settlement. The issues subject to settlement include the prudence of the costs, the base return on equity and the period of recovery. PATH-Allegheny and PATH-WV are currently engaged in settlement discussions with the other parties. Depending on the outcome of a possible settlement or hearing, if settlement is not achieved, PATH-Allegheny and PATH-WV may be required to refund certain amounts that have been collected under their formula rate.

PATH-Allegheny and PATH-WV have requested rehearing of FERC's denial of the 0.5% return on equity adder for RTO membership; that request for rehearing remains pending before FERC. In addition, FERC has consolidated for settlement judge procedures and

hearing purposes three formal challenges to the PATH formula rate annual updates submitted to FERC in June 2010, June 2011 and June 2012, with the September 28, 2012 filing for recovery of costs associated with the cancellation of the PATH project.

Hydroelectric Asset Sale

On September 4, 2013, certain of FirstEnergy's subsidiaries submitted filings with FERC for authorization to sell eleven hydroelectric power plant projects to subsidiaries of Harbor Hydro Holdings, LLC (Harbor Hydro), a subsidiary of LS Power Equity Partners II, LP (LS Power). The eleven hydroelectric projects are: the Seneca Pumped Storage Project, Allegheny Lock & Dam No. 5, Allegheny Lock & Dam No. 6, the Lake Lynn Project, the Millville Hydro Project, the Dam No. 4 Project, the Dam No. 5 Project, and four additional projects located in Shenandoah, Front Royal and Luray, Virginia. The eleven projects have a combined generating capacity of approximately 527 MW. On February 12, 2014, the sale of the hydroelectric power plants to LS Power closed for approximately $395 million. See Note 20, Discontinued Operations and Assets Held for Sale for additional information regarding the assets sold.

MISO Capacity Portability

On June 11, 2012, FERC issued a Notice of Request for Comments regarding whether existing rules on transfer capability act as barriers to the delivery of capacity between MISO and PJM. FERC is responding to suggestions from MISO and the MISO stakeholders that PJM's rules regarding the criteria and qualifications for external generation capacity resources be changed to ease participation by resources that are located in MISO in PJM's RPM capacity auctions. FirstEnergy submitted comments and reply comments in August 2012. In the fall of 2012, FirstEnergy participated in certain stakeholder meetings to review various proposals advanced by MISO. Although none of MISO's proposals attracted significant stakeholder support, in January 2013, MISO filed a pleading with FERC that renewed many of the arguments advanced in prior MISO filings and asked FERC to take expedited action to address MISO's allegations. FirstEnergy and other parties subsequently submitted filings arguing that MISO's concerns largely are without foundation and suggesting that FERC order that the remaining concerns be addressed in the existing stakeholder process that is described in the PJM/MISO Joint Operating Agreement. On April 2, 2013, FERC issued an order directing MISO and PJM to make presentations to FERC regarding ongoing regional efforts to address whether barriers to transfer capability exist between the MISO and PJM regions and the actions the FERC should take to address any such barriers. The RTOs presented their respective positions to FERC on June 20, 2013 and provided additional information regarding their stakeholder prioritization survey, in response to a FERC request on June 27, 2013. On September 26, 2013, the RTOs jointly submitted an informational filing providing a description of and schedule for their Joint and Common Market initiatives. On December 19, 2013, FERC issued an order directing that FERC staff are to attend the "joint and common market" stakeholder meetings for the purpose of monitoring progress on the initiatives described in the September 26, 2013 joint informational filing and establishing a new proceeding to reflect the broadened scope of issues contemplated by that filing and the RTOs' joint and common market initiatives. FERC has not acted on the presentations, and the RTOs and affected parties are working to address the MISO's proposal in stakeholder proceedings. Changes to the criteria and qualifications for participation in the PJM RPM capacity auctions could have a significant impact on the outcome of those auctions, including a negative impact on the prices at which those auctions would clear.

MOPR Reform

On December 7, 2012, PJM filed amendments to its tariff to revise the MOPR used in the RPM. PJM revised the MOPR to add two broad, categorical exemptions, eliminate an existing exemption, and to limit the applicability of the MOPR to certain capacity resources. The filing also included related and conforming changes to the RPM posting requirements and to those provisions describing the role of the Independent Market Monitor for the PJM Region. On May 2, 2013, FERC issued an order in large part accepting PJM's proposed reform of the MOPR, including the proposed exemptions and applicability but also requiring PJM to commit to future review and, if necessary, additional revisions to the MOPR to accommodate changing market conditions. On June 3, 2013, FirstEnergy submitted a request for rehearing of FERC's May 2, 2013 order. In its rehearing request, FirstEnergy referenced the results of the May 2013 PJM RPM capacity auction, and publicly-available data about the reasons for the unexpectedly low "rest-of-RTO" clearing price of $59 per MW-day, as supporting its contention that the MOPR reform depressed prices as predicted in FirstEnergy's December 28, 2012 and January 25, 2013 comments. FirstEnergy's request for rehearing is pending before FERC.

FTR Underfunding Complaint

In PJM, FTRs are a mechanism to hedge congestion and they operate as a financial replacement for physical firm transmission service. FTRs are financially-settled instruments that entitle the holder to a stream of revenues based on the hourly congestion price differences across a specific transmission path in the PJM Day-ahead Energy Market. FE also performs bilateral transactions for the purpose of hedging the price differences between the location of supply resources and retail load obligations. Due to certain language in the PJM tariff, the funds that are set aside to pay FTRs can be diverted to other uses, resulting in "underfunding" of FTR payments. Since June of 2010, FES and AE Supply have lost more than $65.5 million in revenues that they otherwise would have received as FTR holders to hedge congestion costs. FES and AE Supply expect to continue to experience significant underfunding.

On December 28, 2011, FES and AE Supply filed a complaint with FERC for the purpose of modifying certain provisions in the PJM tariff to eliminate FTR underfunding. On March 2, 2012, FERC issued an order dismissing the complaint. In its order, FERC ruled that it was not appropriate to initiate action at that time because of the unknown root causes of FTR underfunding. FERC directed

PJM to convene stakeholder proceedings for the purpose of determining the root causes of the FTR underfunding. FERC went on to note that its dismissal of the complaint was without prejudice to FES and AE Supply or any other affected entity filing a complaint if the stakeholder proceedings proved unavailing. FES and AE Supply sought rehearing of FERC's order and, on July 19, 2012, FERC denied rehearing. In April, 2012, PJM issued a report on FTR underfunding. However, the PJM stakeholder process proved unavailing as the stakeholders were not willing to change the tariff to eliminate FTR underfunding. Accordingly, on February 15, 2013, FES and AE Supply refiled their complaint with FERC for the purpose of changing the PJM tariff to eliminate FTR underfunding. Various parties filed responsive pleadings, including PJM. On June 5, 2013, FERC issued its order denying the new complaint. On July 5, 2013, FirstEnergy filed a request for rehearing of FERC's order. FES and AE Supply's request for rehearing, and all subsequent filings in the docket, are pending before FERC.

PJM RPM Tariff Amendments

In November 2013, PJM began to submit a series of amendments to its RPM capacity tariff in order to address certain problems that have been observed in recent auctions. These problems can be grouped into three categories: (i) Demand Response (DR); (ii) imports; and (iii) modeling of transmission upgrades in calculating geographic clearing prices. The purpose of PJM's tariff amendments is to ensure that resources that clear in the RPM auctions are available and able to satisfy all obligations under the PJM tariffs. In each of the affected dockets, FirstEnergy submitted comments as part of a coalition of utilities (generally including an affiliate of AEP, Duke and Dayton). The FirstEnergy/coalition position was that all of the PJM proposals should be accepted as proposed, and that the FERC should order PJM to take additional steps that should have the effect of eliminating additional distortions and flaws in the RPM market. FERC issued deficiency letters requesting additional information from PJM regarding the imports and modeling filings, and on January 30, 2014 accepted the DR filing as proposed. On February 18 and 21, 2014, respectively, PJM filed its responses to FERC's deficiency letters regarding the modeling and imports filings. PJM's compliance filings and all other filings in the dockets are pending before FERC.

Market-Based Rate Authority, Triennial Update

OE, CEI, TE, Penn, JCP&L, ME, PN, MP, WP, PE, AE Supply, FES, FG, NG, FirstEnergy Generation Mansfield Unit 1 Corp., Buchanan Generation, LLC, and Green Valley Hydro, LLC each hold authority from FERC to sell electricity at market-based rates. One condition for retaining this authority is that every three years each entity must file an update with the FERC that demonstrates that each entity continues to meet FERC's requirements for holding market-based rate authority. On December 20, 2013, FESC submitted to FERC the most recent triennial market power analysis filing for each market-based rate holder for the current cycle of this filing requirement. That filing is pending before FERC.

ENVIRONMENTAL MATTERS

Various federal, state and local authorities regulate FirstEnergy with regard to air and water quality and other environmental matters. Compliance with environmental regulations could have a material adverse effect on FirstEnergy's earnings and competitive position to the extent that FirstEnergy competes with companies that are not subject to such regulations and, therefore, do not bear the risk of costs associated with compliance, or failure to comply, with such regulations.

CAA Compliance

FirstEnergy is required to meet federally-approved SO_2 and NOx emissions regulations under the CAA. FirstEnergy complies with SO_2 and NOx reduction requirements under the CAA and SIP(s) by burning lower-sulfur fuel, utilizing combustion controls and post-combustion controls, generating more electricity from lower or non-emitting plants and/or using emission allowances.

In July 2008, three complaints representing multiple plaintiffs were filed against FG in the U.S. District Court for the Western District of Pennsylvania seeking damages based on air emissions from the coal-fired Bruce Mansfield Plant. Two of these complaints also seek to enjoin the Bruce Mansfield Plant from operating except in a "safe, responsible, prudent and proper manner." One complaint was filed on behalf of twenty-one individuals and the other is a class action complaint seeking certification as a class with the eight named plaintiffs as the class representatives. FG believes the claims are without merit and intends to vigorously defend itself against the allegations made in these complaints, but, at this time, is unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In January 2009, the EPA issued an NOV to GenOn Energy, Inc. alleging NSR violations at the Keystone, Portland and Shawville coal-fired plants based on "modifications" dating back to the mid-1980s. JCP&L, as the former owner of 16.67% of the Keystone Station, ME, as a former owner and operator of the Portland Station, and PN as former owner and operator of the Shawville Station, are unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In January 2011, the U.S. DOJ filed a complaint against PN in the U.S. District Court for the Western District of Pennsylvania seeking injunctive relief against PN based on alleged "modifications" at the coal-fired Homer City generating plant during 1991 to 1994 without pre-construction NSR permitting in violation of the CAA's PSD and Title V permitting programs. The complaint was also filed against the former co-owner, NYSEG, and various current owners of Homer City, including EME Homer City Generation L.P. and affiliated companies, including Edison International. In addition, the Commonwealth of Pennsylvania and the states of New Jersey and New York intervened and filed separate complaints regarding Homer City seeking injunctive relief and civil penalties.

In October 2011, the Court dismissed all of the claims with prejudice of the U.S. DOJ and the Commonwealth of Pennsylvania and the states of New Jersey and New York against all of the defendants, including PN. In December 2011, the U.S., the Commonwealth of Pennsylvania and the states of New Jersey and New York all filed notices appealing to the Third Circuit Court of Appeals which affirmed the dismissal on August 21, 2013 and then denied petitions for rehearing on December 12, 2013. PN believes the claims are without merit and intends to vigorously defend itself against the allegations made in these complaints. The parties dispute the scope of NYSEG's and PN's indemnity obligation to and from Edison International. PN is unable to predict the outcome of this matter or estimate the loss or possible range of loss.

In August 2009, the EPA issued a Finding of Violation and NOV alleging violations of the CAA and Ohio regulations, including the PSD, NNSR and Title V regulations, at the Eastlake, Lakeshore, Bay Shore and Ashtabula coal-fired plants. The EPA's NOV alleges equipment replacements during maintenance outages dating back to 1990 triggered the pre-construction permitting requirements under the PSD and NNSR programs. In June 2011, EPA issued another Finding of Violation and NOV alleging violations of the CAA and Ohio regulations, specifically, opacity limitations and requirements to continuously operate opacity monitoring systems at the Eastlake, Lakeshore, Bay Shore and Ashtabula coal-fired plants. FG intends to comply with the CAA and Ohio regulations, but, at this time, is unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In August 2000, AE received an information request pursuant to section 114(a) of the CAA from the EPA requesting that it provide information and documentation relevant to the operation and maintenance of the following ten coal-fired plants, which collectively include 22 electric generation units: Albright, Armstrong, Fort Martin, Harrison, Hatfield's Ferry, Mitchell, Pleasants, Rivesville, R. Paul Smith and Willow Island to determine compliance with the NSR provisions under the CAA, which can require the installation of additional air emission control equipment when a major modification of an existing facility results in an increase in emissions. In September 2007, AE received an NOV from the EPA alleging NSR and PSD violations under the CAA, as well as Pennsylvania and West Virginia state laws at the coal-fired Hatfield's Ferry and Armstrong plants in Pennsylvania and the coal-fired Fort Martin and Willow Island plants in West Virginia. On June 29, 2012, January 31, 2013, and March 27, 2013, EPA issued additional CAA section 114 requests for the Harrison coal-fired plant seeking information and documentation relevant to its operation and maintenance, including capital projects undertaken since 2007. AE intends to comply with the CAA but, at this time, is unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In June 2005, the PA DEP and the Attorneys General of New York, New Jersey, Connecticut and Maryland filed suit against AE, AE Supply and the Allegheny Utilities in the U.S. District Court for the Western District of Pennsylvania alleging, among other things, that Allegheny performed major modifications in violation of the NSR provisions of the CAA and the Pennsylvania Air Pollution Control Act at the coal-fired Hatfield's Ferry, Armstrong and Mitchell Plants in Pennsylvania. A non-jury trial on liability only was held in September 2010. On February 6, 2014, the Court entered judgment for AE, AE Supply, and the Allegheny Utilities finding they had not violated the CAA or the Pennsylvania Air Pollution Control Act. This decision does not change the status of these plants which remain deactivated.

National Ambient Air Quality Standards

The EPA's CAIR requires reductions of NOx and SO_2 emissions in two phases (2009/2010 and 2015), ultimately capping SO_2 emissions in affected states to 2.5 million tons annually and NOx emissions to 1.3 million tons annually. In 2008, the U.S. Court of Appeals for the D.C. Circuit decided that CAIR violated the CAA but allowed CAIR to remain in effect to “temporarily preserve its environmental values” until the EPA replaces CAIR with a new rule consistent with the Court's decision. In July 2011, the EPA finalized CSAPR, to replace CAIR, requiring reductions of NOx and SO_2 emissions in two phases (2012 and 2014), ultimately capping SO_2 emissions in affected states to 2.4 million tons annually and NOx emissions to 1.2 million tons annually. CSAPR allows trading of NOx and SO_2 emission allowances between power plants located in the same state and interstate trading of NOx and SO_2 emission allowances with some restrictions. On December 30, 2011, CSAPR was stayed by the U.S. Court of Appeals for the D.C. Circuit and was ultimately vacated by the Court on August 21, 2012. The Court has ordered the EPA to continue administration of CAIR until it finalizes a valid replacement for CAIR. On January 24, 2013, EPA and intervenors' petitions seeking rehearing or rehearing en banc were denied by the U.S. Court of Appeals for the D.C. Circuit. On June 24, 2013, the Supreme Court of the United States agreed to review the decision vacating CSAPR and heard oral argument on December 10, 2013. Depending on the outcome of these proceedings and how any final rules are ultimately implemented, the future cost of compliance may be substantial and changes to FirstEnergy's and FES' operations may result.

Hazardous Air Pollutant Emissions

On December 21, 2011, the EPA finalized the MATS imposing emission limits for mercury, PM, and HCL for all existing and new coal-fired electric generating units effective in April 2015 with averaging of emissions from multiple units located at a single plant. Under the CAA, state permitting authorities can grant an additional compliance year through April 2016, as needed, including instances when necessary to maintain reliability where electric generating units are being closed. On December 28, 2012, the WVDEP granted a conditional extension through April 16, 2016 for MATS compliance at the Fort Martin, Harrison and Pleasants stations. On March 20, 2013, the PA DEP granted an extension through April 16, 2016 for MATS compliance at the Hatfield's Ferry and Bruce Mansfield stations. In addition, an EPA enforcement policy document contemplates up to an additional year to achieve compliance, through April 2017, under certain circumstances for reliability critical units. MATS has been challenged in the U.S. Court of Appeals for the D.C. Circuit by various entities, including FirstEnergy's challenge of the PM emission limit imposed on petroleum coke boilers, such as Bay Shore Unit 1. Oral arguments were heard on December 10, 2013. Depending on the outcome

of these proceedings and how the MATS are ultimately implemented, FirstEnergy's total cost of compliance with MATS is currently estimated to be approximately $465 million (Competitive Energy Services segment of $240 million and Regulated Distribution segment of $225 million).

As of September 1, 2012, Albright, Armstrong, Bay Shore Units 2-4, Eastlake Units 4-5, R. Paul Smith, Rivesville and Willow Island were deactivated. FG entered into RMR arrangements with PJM for Eastlake Units 1-3, Ashtabula Unit 5 and Lake Shore Unit 18 through the spring of 2015, when they are scheduled to be deactivated. In February 2014, PJM notified FG that Eastlake Units 1-3 and Lake Shore Unit 18 will be released from RMR status as of September 15, 2014. As of October 9, 2013, the Hatfield's Ferry and Mitchell stations were also deactivated.

FirstEnergy and FES have various long-term coal transportation agreements, some of which run through 2025 and certain of which are related to the plants described above. FE and FES have asserted force majeure defenses for delivery shortfalls under certain agreements, and are in discussion with the applicable counterparties. As to two agreements, FE and FES have settled monetary claims for damages for the failure to take minimum quantities for the calendar year 2012 by the payments of approximately $70 million, and agreed to pay liquidated damages for delivery shortfalls for 2013 and 2014. FE and FES recorded $67 million in liquidated damages in the fourth quarter of 2013, associated with estimated 2013 delivery shortfalls, which were paid in the first quarter of 2014. Additionally, in January 2014, FE and FES reached an agreement in principle with Mepco Holdings LLC to terminate a contract for future coal deliveries to Hatfield for $18 million, which was approved by the United States Bankruptcy Court on February 26, 2014. If FE and FES fail to reach a resolution with applicable counterparties for coal transportation agreements associated with the deactivated plants or unresolved aspects of the transportation agreements and it were ultimately determined that, contrary to their belief, the force majeure provisions or other defenses do not excuse delivery shortfalls, the results of operations and financial condition of both FirstEnergy and FES could be materially adversely impacted.

Climate Change

There are a number of initiatives to reduce GHG emissions under consideration at the state, federal and international level. Certain northeastern states are participating in the RGGI and western states led by California, have implemented programs to control emissions of certain GHGs. In his 2013 State of the Union address, President Obama called for Congressional action on GHG emissions indicating his administration will take action in the event Congress fails to act. In June 2013, the President's Climate Action Plan outlined Executive action to: (1) cut carbon pollution in America, including the EPA carbon pollution standards for both new and existing power plants by 17% by 2020 (from 2005 levels); (2) prepare the United States for the impacts of climate change; and (3) lead international efforts to combat global climate change and prepare for its impacts.

In September 2009, the EPA finalized a national GHG emissions collection and reporting rule that required the measurement and reporting of GHG emissions commencing in 2010. In December 2009, the EPA released its final “Endangerment and Cause or Contribute Findings for Greenhouse Gases under the Clean Air Act.” The EPA's finding concludes that concentrations of several key GHGs increase the threat of climate change and may be regulated as “air pollutants” under the CAA. In April 2010, the EPA finalized new GHG standards for model years 2012 to 2016 passenger cars, light-duty trucks and medium-duty passenger vehicles and clarified that GHG regulation under the CAA would not be triggered for electric generating plants and other stationary sources until January 2, 2011, at the earliest. In May 2010, the EPA finalized new thresholds for GHG emissions that define when NSR pre-construction permits would be required including an emissions applicability threshold of 75,000 tons per year of CO_2 equivalents for existing facilities under the CAA's PSD program. On April 13, 2012, the EPA proposed new source performance standards for GHG emissions from newly constructed fossil fuel generating units that are larger than 25 MW, which were ultimately withdrawn. On June 25, 2013, a Presidential memorandum directed the EPA to complete, in a timely fashion, proposed new source performance standards for GHG emissions from newly constructed fossil fuel generating units, starting with re-proposal by September 20, 2013. The memorandum further directed the EPA to propose by June 1, 2014 and complete by June 1, 2015, GHG emission standards for existing fossil fuel generating units. On September 20, 2013, the EPA proposed a new source performance standard of 1,000 lbs. CO_2/MWH for large natural gas fired units (> 850 mmBTU/hr), and 1,100 lbs. CO_2/MWH for other natural gas fired units (≤ 850 mmBTU/hr), and 1,100 lbs. CO_2/MWH for fossil fuel fired units which would require partial carbon capture and storage. On October 15, 2013, the U.S. Supreme Court agreed to review a June 2012 D.C. Circuit Court of Appeals decision upholding the EPA's May 2010 regulations to decide a single narrow question: "Whether EPA permissibly determined that its regulation of greenhouse gas emissions from new motor vehicles triggered permitting requirements under the CAA for stationary sources that emit greenhouse gases?" Oral argument was held on February 24, 2014. Depending on the outcome of these proceedings and how any final rules are ultimately implemented, the future cost of compliance may be substantial and changes to FirstEnergy's and FES' operations may result.

At the international level, the Kyoto Protocol, signed by the U.S. in 1998 but never submitted for ratification by the U.S. Senate, was intended to address global warming by reducing the amount of man-made GHG, including CO_2, emitted by developed countries by 2012. A December 2009 U.N. Climate Change Conference in Copenhagen did not reach a consensus on a successor treaty to the Kyoto Protocol, but did take note of the Copenhagen Accord, a non-binding political agreement that recognized the scientific view that the increase in global temperature should be below two degrees Celsius; includes a commitment by developed countries to provide funds, approaching $30 billion over three years with a goal of increasing to $100 billion by 2020; and establishes the “Green Climate Fund” to support mitigation, adaptation, and other climate-related activities in developing countries. To the extent that they have become a party to the Copenhagen Accord, developed economies, such as the European Union, Japan, Russia and the United States, would commit to quantified economy-wide emissions targets by 2020, while developing countries, including

Brazil, China and India, would agree to take mitigation actions, subject to their domestic measurement, reporting and verification. In December 2010, the U.N. Climate Change Conference in Cancun, Mexico resulted in an acknowledgment to reduce emissions from industrialized countries by 25 to 40 percent from 1990 emissions by 2020 and support enhanced action on climate change in the developing world. In December 2011 the U.N. Climate Change Conference in Durban, South Africa, established a negotiating process to develop a new post-2020 climate change protocol, called the “Durban Platform for Enhanced Action”. This negotiating process contemplates developed countries, as well as developing countries such as China, India, Brazil, and South Africa, to undertake legally binding commitments post-2020. In addition, certain countries agreed to extend the Kyoto Protocol for a second commitment period, commencing in 2013 and expiring in 2018 or 2020. In December 2012, the U.N. Climate Change Conference in Doha, Qatar, resulted in countries agreeing to a new commitment period under the Kyoto Protocol beginning in 2020. The new Doha Amendment to establish a second commitment period requires the ratification of three-quarters of the parties to the Kyoto Protocol before it becomes effective.

FirstEnergy cannot currently estimate the financial impact of climate change policies, although potential legislative or regulatory programs restricting CO_2 emissions, or litigation alleging damages from GHG emissions, could require significant capital and other expenditures or result in changes to its operations. The CO_2 emissions per KWH of electricity generated by FirstEnergy is lower than many of its regional competitors due to its diversified generation sources, which include low or non-CO_2 emitting gas-fired and nuclear generators.

Clean Water Act

Various water quality regulations, the majority of which are the result of the federal CWA and its amendments, apply to FirstEnergy's plants. In addition, the states in which FirstEnergy operates have water quality standards applicable to FirstEnergy's operations.

In 2004, the EPA established new performance standards under Section 316(b) of the CWA for reducing impacts on fish and shellfish from cooling water intake structures at certain existing electric generating plants. The regulations call for reductions in impingement mortality (when aquatic organisms are pinned against screens or other parts of a cooling water intake system) and entrainment (which occurs when aquatic life is drawn into a facility's cooling water system). In 2007, the U.S. Court of Appeals for the Second Circuit invalidated portions of the Section 316(b) performance standards and the EPA has taken the position that until further rulemaking occurs, permitting authorities should continue the existing practice of applying their best professional judgment to minimize impacts on fish and shellfish from cooling water intake structures. In April 2009, the U.S. Supreme Court reversed one significant aspect of the Second Circuit's opinion and decided that Section 316(b) of the CWA authorizes the EPA to compare costs with benefits in determining the best technology available for minimizing adverse environmental impact at cooling water intake structures. On March 28, 2011, the EPA released a new proposed regulation under Section 316(b) of the CWA to reduce fish impingement to a 12% annual average and determine site-specific controls, if any, to reduce entrainment of aquatic life following studies to be provided to permitting authorities. The period for finalizing the Section 316(b) regulation was extended to April 17, 2014 under a Settlement Agreement between EPA and certain NGOs. FirstEnergy is studying various control options and their costs and effectiveness, including pilot testing of reverse louvers in a portion of the Bay Shore power plant's water intake channel to divert fish away from the plant's water intake system. Depending on the results of such studies and the EPA's further rulemaking and any final action taken by the states exercising best professional judgment, the future costs of compliance with these standards may require material capital expenditures.

On April 19, 2013, the EPA proposed regulatory changes to the waste water effluent limitations guidelines and standards for the Steam Electric Power Generating category (40 CFR Part 423). The EPA proposed eight treatment options for waste water discharges from electric power plants, of which four are "preferred" by the Agency. The preferred options range from more stringent chemical and biological treatment requirements to zero discharge requirements. The EPA is required to finalize this rulemaking by May 22, 2014, under a consent decree entered by a U.S. District Court and the treatment obligations are proposed to phase-in as waste water discharge permits are renewed on a 5-year cycle from 2017 to 2022. Depending on the content of the EPA's final rule, the future costs of compliance with these standards may require material capital expenditures.

In October 2009, the WVDEP issued an NPDES water discharge permit for the Fort Martin Plant, which imposes TDS, sulfate concentrations and other effluent limitations for heavy metals, as well as temperature limitations. Concurrent with the issuance of the Fort Martin NPDES permit, WVDEP also issued an administrative order setting deadlines for MP to meet certain of the effluent limits that were effective immediately under the terms of the NPDES permit. MP appealed, and a stay of certain conditions of the NPDES permit and order have been granted pending a final decision on the appeal and subject to WVDEP moving to dissolve the stay. The Fort Martin NPDES permit could require an initial capital investment ranging from $150 million to $300 million in order to install technology to meet the TDS and sulfate limits, which technology may also meet certain of the other effluent limits. Additional technology may be needed to meet certain other limits in the Fort Martin NPDES permit. MP intends to vigorously pursue these issues but cannot predict the outcome of these appeals or estimate the possible loss or range of loss.

In December 2010, PA DEP submitted its CWA 303(d) list to the EPA with a recommended sulfate impairment designation for an approximately 68 mile stretch of the Monongahela River north of the West Virginia border. In May 2011, the EPA agreed with PA DEP's recommended sulfate impairment designation which requires the development of a TMDL limit for the river, a process that will take PA DEP approximately five years. Based on the stringency of the TMDL, MP may incur significant costs to reduce sulfate discharges into the Monongahela River if the NPDES permit for the coal-fired Fort Martin plant in West Virginia is required to be

modified or renewed to include more stringent effluent limitations for sulfate. However, the Hatfield's Ferry and Mitchell Plants in Pennsylvania that discharge into the Monongahela River were deactivated on October 9, 2013.

FirstEnergy intends to vigorously defend against the CWA matters described above but, except as indicated above, cannot predict their outcomes or estimate the possible loss or range of loss.

Regulation of Waste Disposal

Federal and state hazardous waste regulations have been promulgated as a result of the RCRA of 1976, as amended, and the Toxic Substances Control Act of 1976. Certain fossil-fuel combustion residuals, such as coal ash, were exempted from hazardous waste disposal requirements pending the EPA's evaluation of the need for future regulation.

In December 2009, in an advance notice of public rulemaking, the EPA asserted that the large volumes of coal combustion residuals produced by electric utilities pose significant financial risk to the industry. In May 2010, the EPA proposed two options for additional regulation of coal combustion residuals, including the option of regulation as a special waste under the EPA's hazardous waste management program which could have a significant impact on the management, beneficial use and disposal of coal combustion residuals. On April 19, 2013, the EPA stated it would "align" its proposed coal combustion residuals regulations with revised waste water discharge effluent limitations guidelines and standards for the Steam Electric Power Generating category (40 CFR Part 423) that were proposed on that date. On July 25, 2013, the House of Representatives passed H.R. 221 that would require CCRs to be regulated under Subtitle D of RCRA, as non-hazardous. On January 29, 2014, EPA agreed to take final action by December 19, 2014 on whether or not to pursue the proposed non-hazardous waste option for regulating CCRs in a Consent Decree to be filed in pending litigation. Depending on the content of the EPA's final effluent limitations rule, the specifics of any "alignment", whether EPA chooses to pursue the non-hazardous or hazardous waste option and the enactment of legislation, the future costs of compliance with such standards may require material capital expenditures.

On July 27, 2012, the PA DEP filed a complaint against FG in the U.S. District Court for the Western District of Pennsylvania with claims under the RCRA and Pennsylvania's Solid Waste Management Act regarding the LBR CCB Impoundment and simultaneously proposed a Consent Decree between PA DEP and FG to resolve those claims. On December 14, 2012, a modified Consent Decree that addresses public comments received by PA DEP was entered by the court, requiring FG to conduct monitoring studies and submit a closure plan to the PA DEP, no later than March 31, 2013, and discontinue disposal to LBR as currently permitted by December 31, 2016. The modified Consent Decree also requires payment of civil penalties of $800,000 to resolve claims under the Solid Waste Management Act. On February 1, 2013, FG submitted a Feasibility Study analyzing various technical issues relevant to the closure of LBR. On March 28, 2013, FG submitted to the PA DEP a Closure Plan Major Permit Modification Application which provides for placing a final cap over LBR that would require 15 years to fully implement following the closure of LBR. The estimated cost for the proposed closure plan is $234 million, including environmental and other post closure costs. On October 3, 2013, the PA DEP issued a technical deficiency letter citing four main deficiencies with the Closure Plan: (1) seeking to accelerate the 15 year period proposed by FG for closure activities to complete closure in 9 years by commencing closure activities prior to 2017 as proposed by FG; (2) seeking to extend bond closure and post closure activities beyond the 45 years proposed by FG; (3) seeking active dewatering of the CCBs in areas where there are seeps impacted by the Impoundment; and (4) seeking an abatement plan for groundwater impacted by arsenic. FG responded to the PA DEP on December 3, 2013, and as a result of the Closure Plan, FG increased its asset retirement obligation for LBR by $163 million in 2013. The Bruce Mansfield Plant is pursuing several options for its CCBs following December 31, 2016, and on January 23, 2013, announced a plan for beneficial use of its CCBs for mine reclamation in LaBelle, Pennsylvania. In June 2013, a complaint filed in the U.S. District Court for the Western District of Pennsylvania, alleges the LaBelle site is in violation of RCRA and state laws. In addition, on December 20, 2012, the Environmental Integrity Project and others served FG with a citizen suit notice alleging CWA and PA Clean Streams Law Violations at LBR.

On October 10, 2013 and December 5, 2013, complaints were filed on behalf of approximately 50 individuals against FE, FG and FES in the U.S. District Court for the Northern District of West Virginia and approximately 15 individuals against FG in the U.S. District Court for the Western District of Pennsylvania seeking damages for alleged property damage, bodily injury and emotional distress related to the LBR CCB Impoundment. The complaints state claims for private nuisance, negligence, negligence per se, reckless conduct and trespass related to alleged groundwater contamination and odors emanating from the Impoundment. FE, FG and FES believe the claims are without merit and intend to vigorously defend themselves against the allegations made in the complaints, but, at this time, are unable to predict the outcome of the above matter or estimate the possible loss or range of loss.

FirstEnergy's future cost of compliance with any coal combustion residuals regulations that may be promulgated could be substantial and would depend, in part, on the regulatory action taken by the EPA and implementation by the EPA or the states. Compliance with those regulations could have an adverse impact on FirstEnergy's results of operations and financial condition.

Certain of FirstEnergy's utilities have been named as potentially responsible parties at waste disposal sites, which may require cleanup under the CERCLA. Allegations of disposal of hazardous substances at historical sites and the liability involved are often unsubstantiated and subject to dispute; however, federal law provides that all potentially responsible parties for a particular site may be liable on a joint and several basis. Environmental liabilities that are considered probable have been recognized on the Consolidated Balance Sheet as of December 31, 2013 based on estimates of the total costs of cleanup, FE's and its subsidiaries' proportionate responsibility for such costs and the financial ability of other unaffiliated entities to pay. Total liabilities of approximately $128 million have been accrued through December 31, 2013. Included in the total are accrued liabilities of approximately $82 million

for environmental remediation of former manufactured gas plants and gas holder facilities in New Jersey, which are being recovered by JCP&L through a non-bypassable SBC. FirstEnergy or its subsidiaries could be found potentially responsible for additional amounts or additional sites, but the possible losses or range of losses cannot be determined or reasonably estimated at this time.

OTHER LEGAL PROCEEDINGS

Nuclear Plant Matters

Under NRC regulations, FirstEnergy must ensure that adequate funds will be available to decommission its nuclear facilities. As of December 31, 2013, FirstEnergy had approximately $2.2 billion invested in external trusts to be used for the decommissioning and environmental remediation of Davis-Besse, Beaver Valley, Perry and TMI-2. The values of FirstEnergy's NDT fluctuate based on market conditions. If the value of the trusts decline by a material amount, FirstEnergy's obligation to fund the trusts may increase. Disruptions in the capital markets and their effects on particular businesses and the economy could also affect the values of the NDT. FE maintains a $125 million parental guaranty relating to a potential shortfall in nuclear decommissioning funding for Beaver Valley Unit 1 and Perry. FE also maintains an $11 million parental guaranty in support of the decommissioning of the spent fuel storage facilities located at its Davis-Besse and Perry nuclear facilities. As required by the NRC, FirstEnergy annually recalculates and adjusts the amount of its parental guaranty, as appropriate.

On October 4, 2013, during a refueling outage for Beaver Valley Unit 1, FENOC conducted a planned visual examination of the interior containment liner and coatings. The containment design for Beaver Valley includes an interior steel liner that is surrounded by reinforced concrete. A penetration through the containment steel liner plate of approximately 0.4 inches by 0.28 inches was discovered. A detailed investigation was initiated, including laboratory analysis that has indicated that the degraded area was initiated by foreign material inadvertently left in the concrete during construction. An assessment has been performed which concluded that any postulated leakage through the affected area was within overall allowable limits for the containment building. The structural integrity of the containment building is not affected. Repair of the containment liner was completed and Unit 1 was returned to service on November 4, 2013.

In August 2010, FENOC submitted an application to the NRC for renewal of the Davis-Besse operating license for an additional twenty years, until 2037. An NRC ASLB granted a hearing on the Davis-Besse license renewal application to a group of petitioners. On July 9, 2012, the petitioners' proposed a contention on the environmental impacts of spent fuel storage in the Davis-Besse license renewal proceeding. In an order dated August 7, 2012, the NRC stated that it will not issue final licensing decisions until it has appropriately addressed the challenges to the NRC Waste Confidence Decision and Temporary Storage Rule and all pending contentions on this topic should be held in abeyance. The ASLB has suspended further consideration of the petitioners' proposed contention on the environmental impacts of spent fuel storage at Davis-Besse. The NRC Staff issued Waste Confidence Draft Generic Environmental Impact Statement and published a proposed rule on this subject in September of 2013. Other contentions proposed by the petitioners in this proceeding have been rejected by the ASLB. On February 18, 2014, Beyond Nuclear and Don't Waste Michigan, two of the petitioners in the Davis-Besse license renewal proceeding, requested that the NRC institute a rulemaking on the environmental impacts of high density spent fuel storage and mitigation alternatives. On February 27, 2014, these petitioners requested a suspension of the licensing decision in the Davis-Besse license renewal proceeding to allow the NRC to complete this rulemaking.

As part of routine inspections of the concrete shield building at Davis-Besse Nuclear Power Station in 2013, FENOC identified changes to the subsurface laminar cracking condition originally discovered in 2011. The shield building is a 2 1/2-foot thick reinforced concrete structure that provides biological shielding, protection from natural phenomena including wind and tornadoes and additional shielding in the event of an accident. FENOC then expanded its sample size to include all of the existing core bores in the shield building. These inspections, which are now complete, identified additional subsurface cracking that was determined to be pre-existing, but only now identified with the aid of improved inspection technology. These inspections also revealed that the cracking condition has propagated a small amount in select areas. Preliminary analysis of the inspections results confirm that the building continues to maintain its structural integrity, and its ability to safely perform all of its functions.

On February 1, 2014, the Davis-Besse Nuclear Power Station entered into an outage to install two new steam generators, replace about a third of the unit’s 177 fuel assemblies and perform numerous safety inspections and preventative maintenance activities. During the preliminary stages of the outage an area of concrete that was not filled to the expected thickness within the shield building wall was discovered at the top of the temporary construction opening that was created as part of the 2011 outage. The 2011 temporary construction opening was created to install the new reactor head. FENOC has assessed the as-found condition of the concrete and has determined the shield building would have performed its design functions. This condition within the shield building wall will be repaired during this outage to conform to its original design configuration. This condition is not expected to extend the outage.

On March 12, 2012, the NRC issued orders requiring safety enhancements at U.S. reactors based on recommendations from the lessons learned Task Force review of the accident at Japan's Fukushima Daiichi nuclear power plant. These orders require additional mitigation strategies for beyond-design-basis external events, and enhanced equipment for monitoring water levels in spent fuel pools. The NRC also requested that licensees including FENOC: re-analyze earthquake and flooding risks using the latest information available; conduct earthquake and flooding hazard walkdowns at their nuclear plants; assess the ability of current communications systems and equipment to perform under a prolonged loss of onsite and offsite electrical power; and assess plant staffing levels

needed to fill emergency positions. These and other NRC requirements adopted as a result of the accident at Fukushima Daiichi are likely to result in additional material costs from plant modifications and upgrades at FENOC's nuclear facilities.

ICG Litigation

On December 28, 2006, AE Supply and MP filed a complaint in the Court of Common Pleas of Allegheny County, Pennsylvania against ICG, Anker WV, and Anker Coal. Anker WV entered into a long term Coal Sales Agreement with AE Supply and MP for the supply of coal to the Harrison generating facility. Prior to the time of trial, ICG was dismissed as a defendant by the Court, which issue can be the subject of a future appeal. As a result of defendants' past and continued failure to supply the contracted coal, AE Supply and MP have incurred and will continue to incur significant additional costs for purchasing replacement coal. A non-jury trial was held from January 10, 2011 through February 1, 2011. At trial, AE Supply and MP presented evidence that they have incurred in excess of $80 million in damages for replacement coal purchased through the end of 2010 and will incur additional damages in excess of $150 million for future shortfalls. Defendants primarily claim that their performance is excused under a force majeure clause in the coal sales agreement and presented evidence at trial that they will continue to not provide the contracted yearly tonnage amounts. On May 2, 2011, the court entered a verdict in favor of AE Supply and MP for $104 million ($90 million in future damages and $14 million for replacement coal/interest). On August 25, 2011, the Allegheny County Court denied all Motions for Post-Trial relief and the May 2, 2011 verdict became final. On August 26, 2011, the defendants posted bond and filed a Notice of Appeal with the Superior Court. On August 13, 2012, the Superior Court affirmed the $14 million past damages award but vacated the $90 million future damages award. While the Superior Court found that the defendants still owed future damages, it remanded the calculation of those damages back to the trial court. The specific amount of those future damages is not known at this time, but they are expected to be calculated at a market price of coal that is significantly lower than the price used by the trial court. On August 27, 2012, AE Supply and MP filed an Application for Reargument En Banc with the Superior Court, which was denied on October 19, 2012. AE Supply and MP filed a Petition for Allowance of Appeal with the Pennsylvania Supreme Court on November 19, 2012. On July 2, 2013, the Petition for Allowance of Appeal was denied and in the second quarter of 2013 the now final past damage award of $15.5 million (including interest) was recognized. The case was sent back to the trial court to recalculate the future damages only and is currently in the discovery phase. A hearing is scheduled for May 13-14, 2014.

Other Legal Matters

In 2010, a lawsuit was filed in Allegheny County Court of Common Pleas by Michael Goretzka, for wrongful death and negligence after his wife was fatally electrocuted when she contacted a downed power line. The trial resulted in a verdict against WP and the parties settled this matter. WP's portion of the settlement was covered by insurance subject to the remainder of its deductible. On May 30, 2012, the PPUC's Bureau of Investigation and Enforcement (I&E) filed a Formal Complaint at the PPUC regarding this matter. On February 13, 2013, WP and I&E filed a Joint Petition for Full Settlement that includes, among other things, WP's agreement to conduct an infrared inspection of its primary distribution system, modify certain training programs, and pay an $86,000 civil penalty, which settlement is subject to PPUC approval. On August 29, 2013, the PPUC entered an Order granting the Goretzka family limited party status for the sole purpose of submitting comments to the settlement and issuing the settlement for comment by the parties. On September 16, 2013, the Goretzka family filed Limited Objections to the settlement. Reply comments were filed by WP on September 30, 2013. The PPUC entered an Opinion and Order on January 9, 2014 approving the Settlement with limited modifications regarding the frequency of refresher training and reporting obligations. WP filed a letter on January 17, 2014 accepting those modifications and noting its intent to begin implementation of the settlement terms.

There are various lawsuits, claims (including claims for asbestos exposure) and proceedings related to FirstEnergy's normal business operations pending against FirstEnergy and its subsidiaries. The loss or range of loss in these matters is not expected to be material to FirstEnergy or its subsidiaries. The other potentially material items not otherwise discussed above are described under Note 15, Regulatory Matters of the Combined Notes to Consolidated Financial Statements.

FirstEnergy accrues legal liabilities only when it concludes that it is probable that it has an obligation for such costs and can reasonably estimate the amount of such costs. In cases where FirstEnergy determines that it is not probable, but reasonably possible that it has a material obligation, it discloses such obligations and the possible loss or range of loss if such estimate can be made. If it were ultimately determined that FirstEnergy or its subsidiaries have legal liability or are otherwise made subject to liability based on any of the matters referenced above, it could have a material adverse effect on FirstEnergy's or its subsidiaries' financial condition, results of operations and cash flows.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

FirstEnergy prepares consolidated financial statements in accordance with GAAP. Application of these principles often requires a high degree of judgment, estimates and assumptions that affect financial results. FirstEnergy's accounting policies require significant judgment regarding estimates and assumptions underlying the amounts included in the financial statements. Additional information regarding the application of accounting policies is included in the Combined Notes to Consolidated Financial Statements.

Revenue Recognition

FirstEnergy follows the accrual method of accounting for revenues, recognizing revenue for electricity that has been delivered to customers but not yet billed through the end of the accounting period. The determination of electricity sales to individual customers is based on meter readings, which occur on a systematic basis throughout the month. At the end of each month, electricity delivered to customers since the last meter reading is estimated and a corresponding accrual for unbilled sales is recognized. The determination of unbilled sales and revenues requires management to make estimates regarding electricity available for retail load, transmission and distribution line losses, demand by customer class, applicable billing demands, weather-related impacts, number of days unbilled and tariff rates in effect within each customer class. See Note 1, Organization and Basis of Presentation for additional details.

Regulatory Accounting

FirstEnergy's regulated distribution and regulated transmission segments are subject to regulations that set the prices (rates) the Utilities, ATSI, TrAIL and PATH are permitted to charge customers based on costs that the regulatory agencies determine are permitted to be recovered. At times, regulators permit the future recovery through rates of costs that would be currently charged to expense by an unregulated company. This ratemaking process results in the recording of regulatory assets and liabilities based on anticipated future cash inflows and outflows. FirstEnergy regularly reviews these assets to assess their ultimate recoverability within the approved regulatory guidelines. Impairment risk associated with these assets relates to potentially adverse legislative, judicial or regulatory actions in the future. See Note 15, Regulatory Matters for additional information.

Pensions and OPEB Accounting

FirstEnergy provides noncontributory qualified defined benefit pension plans that cover substantially all of its employees and non-qualified pension plans that cover certain employees. The plans provide defined benefits based on years of service and compensation levels.

FirstEnergy provides some non-contributory pre-retirement basic life insurance for employees who are eligible to retire. Health care benefits and/or subsidies to purchase health insurance, which include certain employee contributions, deductibles and co-payments, may also be available upon retirement to certain employees, their dependents and, under certain circumstances, their survivors. FirstEnergy also has obligations to former or inactive employees after employment, but before retirement, for disability-related benefits.

FirstEnergy's pensions and OPEB funding policy is based on actuarial computations using the projected unit credit method. During the year ended December 31, 2013, FirstEnergy did not make any contributions to its qualified pension plan. The underfunded status of FirstEnergy's qualified and non-qualified pension and OPEB plans as of December 31, 2013 was $2.5 billion.

In selecting an assumed discount rate, FirstEnergy considers currently available rates of return on high-quality fixed income investments expected to be available during the period to maturity of the pension and OPEB obligations. The assumed discount rates for pensions were 5.00%, 4.25% and 5.00% as of December 31, 2013, 2012 and 2011, respectively. The assumed discount rates for OPEB were 4.75%, 4.00% and 4.75% as of December 31, 2013, 2012 and 2011, respectively.

FirstEnergy's assumed rate of return on pension plan assets considers historical market returns and economic forecasts for the types of investments held by the pension trusts. In 2013, FirstEnergy's qualified pensions and OPEB plan assets lost $(22) million or (0.3)% compared to amounts earned of $660 million, or 9.2% in 2012. The qualified pension and OPEB costs in 2013 and 2012 were computed using an assumed 7.75% rate of return for both years on plan assets which generated $535 million and $523 million of expected returns on plan assets, respectively. The expected return on pensions and OPEB assets is based on the trusts' asset allocation targets and the historical performance of risk-based and fixed income securities. The gains or losses generated as a result of the difference between expected and actual returns on plan assets will increase or decrease future net periodic pension and OPEB cost as the difference is recognized annually in the fourth quarter of each fiscal year or whenever a plan is determined to qualify for remeasurement.

Based on discount rates of 5.00% for pension, 4.75% for OPEB and an estimated return on assets of 7.75%, FirstEnergy expects its 2014 pre-tax net periodic postemployment benefit credits (including amounts capitalized) to be approximately $48 million (excluding any actuarial mark-to-market adjustments that would be recognized in 2014). The following table reflects the portion of pensions and OPEB costs that were charged to expense, including any pension and OPEB mark-to-market adjustments, in the three years ended December 31, 2013.

Postemployment Benefits Expense (Credits)	2013	2012	2011
		(In millions)	
Pensions	$ (134)	$ 596	$ 555
OPEB	(196)	(34)	(112)
Total	$ (330)	$ 562	$ 443

Health care cost trends continue to increase and will affect future OPEB costs. The 2013 composite health care trend rate assumptions were approximately 7.25-7.75%, compared to 7.5-8.0% in 2012, gradually decreasing to 5% in later years. In determining FirstEnergy's trend rate assumptions, included are the specific provisions of FirstEnergy's health care plans, the demographics and utilization rates of plan participants, actual cost increases experienced in FirstEnergy's health care plans, and projections of future medical trend rates. The effect on the pension and OPEB costs from changes in key assumptions are as follows:

Increase in Net Periodic Benefit Costs from Adverse Changes in Key Assumptions

Assumption	Adverse Change	Pensions	OPEB	Total
			(In millions)	
Discount rate	Decrease by .25%	250	19	$ 269
Long-term return on assets	Decrease by .25%	15	1	$ 16
Health care trend rate	Increase by 1.0%	N/A	24	$ 24

Please see Note 3, Pensions and Other Postemployment Benefits for additional information

Long-Lived Assets

FirstEnergy reviews long-lived assets, including regulatory assets, for impairment whenever events or changes in circumstances indicate that the carrying value of such assets may not be recoverable. The recoverability of a long-lived asset is measured by comparing its carrying value to the sum of undiscounted future cash flows expected to result from the use and eventual disposition of the asset. If the carrying value is greater than the undiscounted cash flows, impairment exists and a loss is recognized for the amount by which the carrying value of the long-lived asset exceeds its estimated fair value. See Note 11, Impairment of Long-Lived Assets for additional information.

Asset Retirement Obligations

FE recognizes an ARO for the future decommissioning of its nuclear power plants and future remediation of other environmental liabilities associated with all of its long-lived assets. The ARO liability represents an estimate of the fair value of FE's current obligation related to nuclear decommissioning and the retirement or remediation of environmental liabilities of other assets. A fair value measurement inherently involves uncertainty in the amount and timing of settlement of the liability. FE uses an expected cash flow approach to measure the fair value of the nuclear decommissioning and environmental remediation ARO. This approach applies probability weighting to discounted future cash flow scenarios that reflect a range of possible outcomes. The scenarios consider settlement of the ARO at the expiration of the nuclear power plant's current license, settlement based on an extended license term and expected remediation dates. The fair value of an ARO is recognized in the period in which it is incurred. The associated asset retirement costs are capitalized as part of the carrying value of the long-lived asset and are depreciated over the life of the related asset. ARO's as of December 31, 2013, are described further in Note 14, Asset Retirement Obligations.

Income Taxes

FirstEnergy records income taxes in accordance with the liability method of accounting. Deferred income taxes reflect the net tax effect of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts recognized for tax purposes. Investment tax credits, which were deferred when utilized, are being amortized over the recovery period of the related property. Deferred income tax liabilities related to temporary tax and accounting basis differences and tax credit carryforward items are recognized at the statutory income tax rates in effect when the liabilities are expected to be paid. Deferred tax assets are recognized based on income tax rates expected to be in effect when they are settled.

FirstEnergy accounts for uncertainty in income taxes recognized in its financial statements. We account for uncertain income tax positions using a benefit recognition model with a two-step approach, a more-likely-than-not recognition criterion and a measurement attribute that measures the position as the largest amount of tax benefit that is greater than 50% likely of being ultimately realized upon settlement. If it is not more likely than not that the benefit will be sustained on its technical merits, no benefit will be recorded. Uncertain tax positions that relate only to timing of when an item is included on a tax return are considered to have met the recognition threshold. The Company recognizes interest expense or income related to uncertain tax positions. That amount is computed by applying the applicable statutory interest rate to the difference between the tax position recognized and the amount previously taken or expected to be taken on the tax return. FirstEnergy includes net interest and penalties in the provision for income taxes. See Note 5, Taxes for additional information.

Goodwill

In a business combination, the excess of the purchase price over the estimated fair values of the assets acquired and liabilities assumed is recognized as goodwill. FirstEnergy evaluates goodwill for impairment annually on July 31 and more frequently if indicators of impairment arise. In evaluating goodwill for impairment, FirstEnergy first assesses qualitative factors to determine whether it is more likely than not (that is, likelihood of more than 50 percent) that the fair value of a reporting unit is less than its carrying value (including goodwill). If FirstEnergy concludes that it is not more likely than not that the fair value of a reporting unit is less than its carrying value, then no further testing is required. However, if FirstEnergy concludes that it is more likely than not that the fair value of a reporting unit is less than its carrying value, then the two-step goodwill impairment test is performed to identify a potential goodwill impairment and measure the amount of impairment to be recognized, if any.

FirstEnergy performed a qualitative assessment of the Regulated Distribution and Regulated Transmission segments as of July 31, 2013, and determined the fair values of these segments were, more likely than not, greater than their carrying values. Due to excess generation supply in the region, which has caused a period of protracted low power and capacity prices impacting Competitive operations, FirstEnergy performed a quantitative assessment of the Competitive Energy Services segment as of July 31, 2013. The fair value of the Competitive Energy Services segment was calculated using a discounted cash flow analysis which was dependent on subjective factors determined by FirstEnergy management. Assumptions used in the analysis include discount rates, future power and natural gas prices, projected operating and capital cash flows and the fair value of debt. The estimated fair value of the Competitive Energy Services segment exceeded its carrying amount (including goodwill) as of July 31, 2013. Estimates of future cash flows are based upon relevant data at a point in time, which are subject to change and could vary from actual results. Continued weak economic conditions, lower than forecasted power and capacity prices, and revised environmental requirements could have a negative impact on future goodwill assessments.

See Note 1, Organization and Basis of Presentation for additional details.

NEW ACCOUNTING PRONOUNCEMENTS

New accounting pronouncements not yet effective are not expected to have a material effect on the financial statements of FE or its subsidiaries.

MANAGEMENT REPORTS

Management's Responsibility for Financial Statements

The consolidated financial statements of FirstEnergy Corp. (Company) were prepared by management, who takes responsibility for their integrity and objectivity. The statements were prepared in conformity with accounting principles generally accepted in the United States and are consistent with other financial information appearing elsewhere in this report. PricewaterhouseCoopers LLP, an independent registered public accounting firm, has expressed an unqualified opinion on the Company's 2013 consolidated financial statements as stated in their audit report included herein.

The Company's internal auditors, who are responsible to the Audit Committee of the Company's Board of Directors, review the results and performance of operating units within the Company for adequacy, effectiveness and reliability of accounting and reporting systems, as well as managerial and operating controls.

The Company's Audit Committee consists of five independent directors whose duties include: consideration of the adequacy of the internal controls of the Company and the objectivity of financial reporting; inquiry into the number, extent, adequacy and validity of regular and special audits conducted by independent auditors and the internal auditors; and reporting to the Board of Directors the Committee's findings and any recommendation for changes in scope, methods or procedures of the auditing functions. The Committee is directly responsible for appointing the Company's independent registered public accounting firm and is charged with reviewing and approving all services performed for the Company by the independent registered public accounting firm and for reviewing and approving the related fees. The Committee reviews the independent registered public accounting firm's report on internal quality control and reviews all relationships between the independent registered public accounting firm and the Company, in order to assess the independent registered public accounting firm's independence. The Committee also reviews management's programs to monitor compliance with the Company's policies on business ethics and risk management. The Committee establishes procedures to receive and respond to complaints received by the Company regarding accounting, internal accounting controls, or auditing matters and allows for the confidential, anonymous submission of concerns by employees. The Audit Committee held nine meetings in 2013.

Management's Report on Internal Control Over Financial Reporting

Management is responsible for establishing and maintaining adequate internal control over financial reporting as defined in Rule 13a-15(f) of the Securities Exchange Act of 1934. Using the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission in *Internal Control — Integrated Framework* published in 1992, management conducted an evaluation of the effectiveness of the Company's internal control over financial reporting under the supervision of the Chief Executive Officer and the Chief Financial Officer. Based on that evaluation, management concluded that the Company's internal control over financial reporting was effective as of December 31, 2013. The effectiveness of the Company's internal control over financial reporting, as of December 31, 2013, has been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm, as stated in their report which appears herein.

Report of Independent Registered Public Accounting Firm

To the Stockholders and Board of Directors of FirstEnergy Corp.:

In our opinion, the accompanying consolidated balance sheets and the related consolidated statements of income, comprehensive income, common stockholders' equity, and cash flows, present fairly, in all material respects, the financial position of FirstEnergy Corp. and its subsidiaries at December 31, 2013 and 2012, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2013 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the index appearing under Item15(a)(2) presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2013, based on criteria established in Internal Control - Integrated Framework, published in 1992, by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements and financial statement schedule, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control Over Financial Reporting. Our responsibility is to express opinions on these financial statements, on the financial statement schedule, and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

COMBINED NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

1. ORGANIZATION AND BASIS OF PRESENTATION

Unless otherwise indicated, defined terms and abbreviations used herein have the meanings set forth in the accompanying Glossary of Terms.

FirstEnergy Corp. was organized under the laws of the State of Ohio in 1996. FirstEnergy's principal business is the holding, directly or indirectly, of all of the outstanding common stock of its principal subsidiaries: OE, CEI, TE, Penn (a wholly owned subsidiary of OE), JCP&L, ME, PN, FES and its principal subsidiaries (FG and NG), FESC and during 2013, AE and its principal subsidiaries (AE Supply, AGC, MP, PE, WP, FET and its principal subsidiaries (ATSI, TrAIL and PATH), and AESC). In addition, FirstEnergy holds all of the outstanding common stock of other direct subsidiaries including: FirstEnergy Properties, Inc., FEV, FENOC, FELHC, Inc., and GPU Nuclear, Inc. As of January 1, 2014, AE merged with and into FirstEnergy Corp., therefore, AE's direct subsidiaries, AE Supply, MP, PE, WP and FET, became direct subsidiaries of FirstEnergy Corp.

FirstEnergy follows GAAP and complies with the related regulations, orders, policies and practices prescribed by the SEC, FERC, and, as applicable, the PUCO, the PPUC, the MDPSC, the NYPSC, the WVPSC, the VSCC and the NJBPU. The preparation of financial statements in conformity with GAAP requires management to make periodic estimates and assumptions that affect the reported amounts of assets, liabilities, revenues, expenses and disclosure of contingent assets and liabilities. Actual results could differ from these estimates. The reported results of operations are not indicative of results of operations for any future period. FE and its subsidiaries have evaluated events and transactions for potential recognition or disclosure through the date the financial statements were issued.

FE and its subsidiaries consolidate all majority-owned subsidiaries over which they exercise control and, when applicable, entities for which they have a controlling financial interest. Intercompany transactions and balances are eliminated in consolidation unless certain regulatory restrictions and rules apply. FE and its subsidiaries consolidate a VIE when it is determined that it is the primary beneficiary (see Note 8, Variable Interest Entities). Investments in affiliates over which FE and its subsidiaries have the ability to exercise significant influence, but with respect to which they are not the primary beneficiary and do not exercise control, follow the equity method of accounting. Under the equity method, the interest in the entity is reported as an investment in the Consolidated Balance Sheets and the percentage share of the entity's earnings is reported in the Consolidated Statements of Income and Comprehensive Income. These Notes to the Consolidated Financial Statements are combined for FirstEnergy and FES.

Certain prior year amounts have been reclassified to conform to the current year presentation. These reclassifications include, but are not limited to, the classification of discontinued operations associated with our sale of hydro assets discussed in additional detail in Note 20, Discontinued Operations and Assets Held for Sale. Additionally, amounts collected in rates above actual charges related to asset removal have been reclassified as a regulatory liability which resulted in an increase to total assets and noncurrent liabilities of approximately $88 million.

ACCOUNTING FOR THE EFFECTS OF REGULATION

FirstEnergy accounts for the effects of regulation through the application of regulatory accounting to the Utilities, ATSI, PATH and TrAIL since their rates are established by a third-party regulator with the authority to set rates that bind customers, are cost-based and can be charged to and collected from customers.

FirstEnergy records regulatory assets and liabilities that result from the regulated rate-making process that would not be recorded under GAAP for non-regulated entities. These assets and liabilities are amortized in the Consolidated Statements of Income concurrent with the recovery or refund through customer rates. FirstEnergy believes that it is probable that its regulatory assets and liabilities will be recovered and settled, respectively, through future rates. FirstEnergy and the Utilities net their regulatory assets and liabilities based on federal and state jurisdictions.

The following table provides information about the composition of net regulatory assets as of December 31, 2013 and December 31, 2012, and the changes during the year ended December 31, 2013:

Regulatory Assets by Source	December 31, 2013	December 31, 2012	Increase (Decrease)
		(In millions)	
Regulatory transition costs	$ 266	$ 293	$ (27)
Customer receivables for future income taxes	518	505	13
Nuclear decommissioning and spent fuel disposal costs	(198)	(219)	21
Asset removal costs	(362)	(372)	10
Deferred transmission costs	112	352	(240)
Deferred generation costs	346	379	(33)
Deferred distribution costs	194	231	(37)
Contract valuations	260	463	(203)
Storm-related costs	455	469	(14)
Other	263	229	34
Total	$ 1,854	$ 2,330	$ (476)

Regulatory assets that do not earn a current return totaled approximately $477 million as of December 31, 2013 primarily related to storm damage costs.

As of December 31, 2013 and December 31, 2012, FirstEnergy had approximately $440 million and $480 million, respectively, of net regulatory liabilities that are primarily related to asset removal costs. Net regulatory liabilities are classified within Other noncurrent liabilities on the Consolidated Balance Sheets.

REVENUES AND RECEIVABLES

The Utilities' principal business is providing electric service to customers in Ohio, Pennsylvania, West Virginia, New Jersey and Maryland. FES' and AE Supply's principal business is supplying electric power to end-use customers through retail and wholesale arrangements, including affiliated company power sales to meet a portion of the POLR and default service requirements of the Ohio and Pennsylvania Companies and competitive retail sales to customers primarily in Ohio, Pennsylvania, Illinois, Michigan, New Jersey and Maryland. Retail customers are metered on a cycle basis.

Electric revenues are recorded based on energy delivered through the end of the calendar month. An estimate of unbilled revenues is calculated to recognize electric service provided from the last meter reading through the end of the month. This estimate includes many factors, among which are historical customer usage, load profiles, estimated weather impacts, customer shopping activity and prices in effect for each class of customer. In each accounting period, the Utilities, FES and AE Supply accrue the estimated unbilled amount receivable as revenue and reverse the related prior period estimate.

Receivables from customers include retail electric sales and distribution deliveries to residential, commercial and industrial customers for the Utilities, and retail and wholesale sales to customers for FES and AE Supply. There was no material concentration of receivables as of December 31, 2013 and 2012 with respect to any particular segment of FirstEnergy's customers. Billed and unbilled customer receivables as of December 31, 2013 and 2012 are shown below.

Customer Receivables	FirstEnergy	FES
	(In millions)	
December 31, 2013		
Billed	$ 1,010	$ 301
Unbilled	710	238
Total	$ 1,720	$ 539
December 31, 2012		
Billed	$ 893	$ 243
Unbilled	721	240
Total	$ 1,614	$ 483

EARNINGS PER SHARE OF COMMON STOCK

Basic earnings per share of common stock are computed using the weighted average number of common shares outstanding during the relevant period as the denominator. The denominator for diluted earnings per share of common stock reflects the weighted average of common shares outstanding plus the potential additional common shares that could result if dilutive securities and other agreements to issue common stock were exercised. The following table reconciles basic and diluted earnings per share of common stock:

Reconciliation of Basic and Diluted Earnings per Share of Common Stock	2013	2012	2011
	(In millions, except per share amounts)		
Income from continuing operations	$ 375	$ 755	$ 856
Less: Income attributable to noncontrolling interest	—	1	(16)
Income from continuing operations available to common shareholders	375	754	872
Discontinued operations (Note 20)	17	16	13
Earnings available to FirstEnergy Corp.	$ 392	$ 770	$ 885
Weighted average number of basic shares outstanding	418	418	399
Assumed exercise of dilutive stock options and awards[1]	1	1	2
Weighted average number of diluted shares outstanding	419	419	401
Earnings per share:			
Basic earnings per share:			
Continuing operations	$ 0.90	$ 1.81	$ 2.19
Discontinued operations (Note 20)	0.04	0.04	0.03
Net earnings per basic share	$ 0.94	$ 1.85	$ 2.22
Diluted earnings per share:			
Continuing operations	$ 0.90	$ 1.80	$ 2.18
Discontinued operations (Note 20)	0.04	0.04	0.03
Net earnings per diluted share	$ 0.94	$ 1.84	$ 2.21

(1) For the year ended December 31, 2013, 2 million shares were excluded from the calculation of diluted shares outstanding, as their inclusion would be antidilutive. The number of potentially dilutive securities not included in the calculation of diluted shares outstanding due to their antidilutive effect were not significant for the years ending December 31, 2012 or 2011.

PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment reflects original cost (net of any impairments recognized), including payroll and related costs such as taxes, employee benefits, administrative and general costs, and interest costs incurred to place the assets in service. The costs of normal maintenance, repairs and minor replacements are expensed as incurred. FirstEnergy recognizes liabilities for planned major maintenance projects as they are incurred. The cost of nuclear fuel is capitalized within Property, plant and equipment and charged to fuel expense using the specific identification method. Net plant in service balances as of December 31, 2013 and 2012 were as follows:

	December 31, 2013			December 31, 2012		
Property, Plant and Equipment	In Service	Accum. Depr.	Net Plant	In Service	Accum. Depr.	Net Plant
			(In millions)			
Regulated Distribution	$ 23,098	$ (6,514)	$ 16,584	$ 21,473	$ (6,146)	$ 15,327
Regulated Transmission	5,564	(1,511)	4,053	5,078	(1,451)	3,627
Competitive	15,206	(5,088)	10,118	16,338	(4,739)	11,599
Other/Corporate	360	(167)	193	321	(131)	190
Total	$ 44,228	$ (13,280)	$ 30,948	$ 43,210	$ (12,467)	$ 30,743

FirstEnergy provides for depreciation on a straight-line basis at various rates over the estimated lives of property included in plant in service. The respective annual composite rates for FirstEnergy's and FES' electric plant in 2013, 2012 and 2011 are shown in the following table:

	Annual Composite Depreciation Rate		
	2013	2012	2011
FirstEnergy	2.6%	2.5%	2.4%
FES	3.1%	3.1%	3.1%

Jointly Owned Plants

FE, through its subsidiary, AGC, owns an undivided 40% interest (1,200 MWs) in a 3,000 MW pumped storage, hydroelectric station in Bath County, Virginia, operated by the 60% owner, Virginia Electric and Power Company, a non-affiliated utility. Net Property, Plant and Equipment includes $672 million, excluding $28 million of CWIP, representing AGC's share in this facility as of December 31, 2013. AGC is obligated to pay its share of the costs of this jointly-owned facility in the same proportion as its ownership interest using its own financing. AGC's share of direct expenses of the joint plant is included in FE's operating expenses on the Consolidated Statement of Income.

Asset Retirement Obligations

FE recognizes an ARO for the future decommissioning of its nuclear power plants and future remediation of other environmental liabilities associated with all of its long-lived assets. The ARO liability represents an estimate of the fair value of FE's current obligation related to nuclear decommissioning and the retirement or remediation of environmental liabilities of other assets. A fair value measurement inherently involves uncertainty in the amount and timing of settlement of the liability. FE uses an expected cash flow approach to measure the fair value of the nuclear decommissioning and environmental remediation ARO. This approach applies probability weighting to discounted future cash flow scenarios that reflect a range of possible outcomes. The scenarios consider settlement of the ARO at the expiration of the nuclear power plant's current license, settlement based on an extended license term and expected remediation dates. The fair value of an ARO is recognized in the period in which it is incurred. The associated asset retirement costs are capitalized as part of the carrying value of the long-lived asset and are depreciated over the life of the related asset. AROs as of December 31, 2013, are described further in Note 14, Asset Retirement Obligations.

ASSET IMPAIRMENTS

Long-lived Assets

FirstEnergy reviews long-lived assets, including regulatory assets, for impairment whenever events or changes in circumstances indicate that the carrying value of such assets may not be recoverable. The recoverability of a long-lived asset is measured by comparing its carrying value to the sum of undiscounted future cash flows expected to result from the use and eventual disposition of the asset. If the carrying value is greater than the undiscounted cash flows, an impairment exists and a loss is recognized for the amount by which the carrying value of the long-lived asset exceeds its estimated fair value. FirstEnergy utilizes the income approach, based upon discounted cash flows to estimate fair value. Impairments of long-lived assets recognized for the year ended December 31, 2013, are described further in Note 11, Impairment of Long-Lived Assets.

Goodwill

In a business combination, the excess of the purchase price over the estimated fair values of the assets acquired and liabilities assumed is recognized as goodwill. FirstEnergy evaluates goodwill for impairment annually on July 31 and more frequently if indicators of impairment arise. In evaluating goodwill for impairment, FirstEnergy first assesses qualitative factors to determine whether it is more likely than not (that is, likelihood of more than 50 percent) that the fair value of a reporting unit is less than its carrying value (including goodwill). If FirstEnergy concludes that it is not more likely than not that the fair value of a reporting unit is less than its carrying value, then no further testing is required. However, if FirstEnergy concludes that it is more likely than not that the fair value of a reporting unit is less than its carrying value, then the two-step goodwill impairment test is performed to identify a potential goodwill impairment and measure the amount of impairment to be recognized, if any.

FirstEnergy's reporting units are consistent with its reportable segments and consist of Regulated Distribution, Regulated Transmission, Competitive Energy Services and Other/Corporate. Goodwill is allocated to these reportable segments based on the original purchase price allocation of acquisitions. Total goodwill recognized by segment in FirstEnergy's Consolidated Balance Sheet is as follows:

Goodwill	Regulated Distribution	Regulated Transmission	Competitive Energy Services	Other/ Corporate	Consolidated
			(In millions)		
Balance as of December 31, 2012	$ 5,025	$ 526	$ 896	$ —	$ 6,447
Classification to Assets Held for Sale[(1)]	—	—	(29)	—	(29)
West Virginia asset transfer	67	—	(67)	—	—
Balance as of December 31, 2013	$ 5,092	$ 526	$ 800	$ —	$ 6,418

(1) See Note 20, Discontinued Operations and Assets Held for Sale.

As of December 31, 2013 and 2012, total goodwill recognized by FES was $23 million and $24 million, respectively. Neither FirstEnergy nor FES has accumulated impairment charges as of December 31, 2013.

Annual impairment testing is conducted as of July 31 of each year and for 2013, 2012 and 2011, the analysis indicated no impairment of goodwill. FirstEnergy performed a qualitative assessment of the Regulated Distribution and Regulated Transmission segments as of July 31, 2013. FirstEnergy assessed economic, industry and market considerations in addition to overall financial performance of its Regulated Distribution and Regulated Transmission segments. It was determined that the fair values of these segments were, more likely than not, greater than their carrying values.

Due to excess generation supply in the region, which has caused a period of protracted low power and capacity prices impacting Competitive operations, FirstEnergy performed a quantitative assessment of the Competitive Energy Services segment as of July 31, 2013. The fair value of the Competitive Energy Services segment was calculated using a discounted cash flow analysis which included the effects of the potential sale of certain hydroelectric power stations and the West Virginia asset transfer. Assumptions used in the analysis include discount rates, market performance, projected operating and capital cash flows and the fair value of debt. The estimated fair value of the Competitive Energy Services segment exceeded its carrying amount (including goodwill) as of July 31, 2013. Continued weak economic conditions, lower than forecasted power and capacity prices, and revised environmental requirements could have a negative impact on future goodwill assessments.

In October of 2013, in connection with the closing of the West Virginia asset transfer, as discussed in Note 15, Regulatory Matters, FirstEnergy transferred approximately $67 million of goodwill, net from the Competitive Energy Services segment to the Regulated Distribution segment based on the relative fair value of the generating plants to the fair value of the respective segment.

Investments

At the end of each reporting period, FirstEnergy evaluates its investments for OTTI. Investments classified as AFS securities are evaluated to determine whether a decline in fair value below the cost basis is other than temporary. FirstEnergy first considers its intent and ability to hold an equity security until recovery and then considers, among other factors, the duration and the extent to which the security's fair value has been less than its cost and the near-term financial prospects of the security issuer when evaluating an investment for impairment. For debt securities, FirstEnergy considers its intent to hold the securities, the likelihood that it will be required to sell the securities before recovery of its cost basis and the likelihood of recovery of the securities' entire amortized cost basis. If the decline in fair value is determined to be other than temporary, the cost basis of the securities is written down to fair value.

Unrealized gains and losses on AFS securities are recognized in AOCI. However, unrealized losses held in the NDTs of FES, OE and TE are recognized in earnings since the trust arrangements, as they are currently defined, do not meet the required ability and intent to hold criteria in consideration of OTTI. In 2013, 2012 and 2011, FirstEnergy recognized $90 million, $16 million and $19 million, respectively, of OTTI. During the same periods, FES recognized OTTI of $79 million, $14 million and $17 million, respectively. The fair values of FirstEnergy’s investments are disclosed in Note 9, Fair Value Measurements.

INVENTORY

Materials and supplies inventory includes fuel inventory and the distribution, transmission and generation plant materials, net of reserve for excess and obsolete inventory. Materials are generally charged to inventory at weighted average cost when purchased and expensed or capitalized, as appropriate, when used or installed. Fuel inventory is accounted for at weighted average cost when purchased, and recorded to fuel expense when consumed.

NEW ACCOUNTING PRONOUNCEMENTS

New accounting pronouncements not yet effective are not expected to have a material effect on the financial statements of FE or its subsidiaries.

2. ACCUMULATED OTHER COMPREHENSIVE INCOME

The changes in AOCI, net of tax, for the years ended December 31, 2013, 2012 and 2011 for FirstEnergy and FES are shown in the following tables:

FirstEnergy

	Gains & Losses on Cash Flow Hedges	Unrealized Gains on AFS Securities	Defined Benefit Pension & OPEB Plans	Total
		(In millions)		
AOCI Balance, January 1, 2011	$ (54)	$ 7	$ 472	$ 425
Other comprehensive income (loss) before reclassifications	(9)	49	78	118
Amounts reclassified from AOCI	24	(37)	(104)	(117)
Net other comprehensive income (loss)	15	12	(26)	1
AOCI Balance, December 31, 2011	$ (39)	$ 19	$ 446	$ 426
Other comprehensive income before reclassifications	—	41	79	120
Amounts reclassified from AOCI	1	(45)	(117)	(161)
Net other comprehensive income (loss)	1	(4)	(38)	(41)
AOCI Balance, December 31, 2012	$ (38)	$ 15	$ 408	$ 385
Other comprehensive income before reclassifications	—	29	23	52
Amounts reclassified from AOCI	2	(35)	(120)	(153)
Net other comprehensive income (loss)	2	(6)	(97)	(101)
AOCI Balance, December 31, 2013	$ (36)	$ 9	$ 311	$ 284

FES

	Gains & Losses on Cash Flow Hedges	Unrealized Gains on AFS Securities	Defined Benefit Pension & OPEB Plans	Total
		(In millions)

[1] These AOCI components are included in the computation of net periodic pension cost. See Note 3, Pensions and Other Postemployment Benefits for additional details.

[2] Parenthesis represent credits to the Consolidated Statements of Income from AOCI.

3. PENSIONS AND OTHER POSTEMPLOYMENT BENEFITS

FirstEnergy provides noncontributory qualified defined benefit pension plans that cover substantially all of its employees and non-qualified pension plans that cover certain employees. The plans provide defined benefits based on years of service and compensation levels. In addition, FirstEnergy provides a minimum amount of noncontributory life insurance to retired employees in addition to optional contributory insurance. Health care benefits, which include certain employee contributions, deductibles and co-payments, are also available upon retirement to certain employees, their dependents and, under certain circumstances, their survivors. FirstEnergy recognizes the expected cost of providing pensions and OPEB to employees and their beneficiaries and covered dependents from the time employees are hired until they become eligible to receive those benefits. FirstEnergy also has obligations to former or inactive employees after employment, but before retirement, for disability-related benefits. On July 25, 2013, FirstEnergy announced that non-bargaining employees hired on or after January 1, 2014 will participate in a cash-balance defined benefit pension plan. The plan for existing employees will remain unchanged. Under the cash-balance pension plan, FirstEnergy will make contributions to eligible employee retirement accounts based on employee age and years of service. The balance of these accounts will be provided to employees when they leave the company.

FirstEnergy's pensions and OPEB funding policy is based on actuarial computations using the projected unit credit method. During the year ended December 31, 2013, FirstEnergy did not make any contributions to its qualified pension plan. Pension and OPEB costs are affected by employee demographics (including age, compensation levels and employment periods), the level of contributions made to the plans and earnings on plan assets. Pension and OPEB costs may also be affected by changes in key assumptions, including anticipated rates of return on plan assets, the discount rates and health care trend rates used in determining the projected benefit obligations for pension and OPEB costs. FirstEnergy uses a December 31 measurement date for its pension and OPEB plans. The fair value of the plan assets represents the actual market value as of the measurement date.

Obligations and Funded Status	Pensions		OPEB	
	2013	2012	2013	2012
		(In millions)		
Change in benefit obligation:				
Benefit obligation as of January 1	$ 8,975	$ 7,977	$ 1,076	$ 1,037

Rate of compensation increase	4.70%	5.20%	5.20%	N/A	N/A	N/A

[1] Excludes Pensions & OPEB mark-to-market adjustment.

In selecting an assumed discount rate, FirstEnergy considers currently available rates of return on high-quality fixed income investments expected to be available during the period to maturity of the pensions and OPEB obligations. The assumed rates of return on plan assets consider historical market returns and economic forecasts for the types of investments held by FirstEnergy's pension trusts. The long-term rate of return is developed considering the portfolio's asset allocation strategy.

The following tables set forth pension financial assets that are accounted for at fair value by level within the fair value hierarchy. See Note 9, Fair Value Measurements, for a description of each level of the fair value hierarchy. There were no significant transfers between levels during 2013 and 2012.

	December 31, 2013				Asset Allocation

[1] Excludes ($9) million and ($10) million as of December 31, 2013 and December 31, 2012, respectively, of receivables, payables, taxes and accrued income associated with financial instruments reflected within the fair value table.

The following table provides a reconciliation of changes in the fair value of OPEB trust investments classified as Level 3 in the fair value hierarchy during 2013 and 2012:

	Private Equity Funds	Real Estate Funds
	(in millions)	
Balance as of January 1, 2012	$ 3	$ 7
Actual return on plan assets:		
Unrealized losses	(1)	—
Realized gains (losses)	—	—
Purchases, sales and settlements	—	—
Transfers out	(2)	(2)
Balance as of December 31, 2012	$ —	$ 5
Balance as of December 31, 2013	$ —	$ 5

FirstEnergy follows a total return investment approach using a mix of equities, fixed income and other available investments while taking into account the pension plan liabilities to optimize the long-term return on plan assets for a prudent level of risk. Risk tolerance is established through careful consideration of plan liabilities, plan funded status and corporate financial condition. The investment portfolio contains a diversified blend of equity and fixed-income investments. Equity investments are diversified across U.S. and non-U.S. stocks, as well as growth, value, and small and large capitalization funds. Other assets such as real estate and private equity are used to enhance long-term returns while improving portfolio diversification. Derivatives may be used to gain market exposure in an efficient and timely manner; however, derivatives are not used to leverage the portfolio beyond the market value of the underlying investments. Investment risk is measured and monitored on a continuing basis through periodic investment portfolio reviews, annual liability measurements and periodic asset/liability studies.

FirstEnergy's target asset allocations for its pensions and OPEB trust portfolios for 2013 and 2012 are shown in the following table:

	Target Asset Allocations	
	2013	2012
Equities	26%	20%
Fixed income	40%	51%
Absolute return strategies	22%	21%
Real estate	5%	5%
Private equity	1%	—%
Cash	6%	3%
	100%	100%

Assumed health care cost trend rates have a significant effect on the amounts reported for the health care plans. A one-percentage-point change in assumed health care cost trend rates would have the following effects:

	1-Percentage-Point Increase	1-Percentage-Point Decrease
	(in millions)	
Effect on total of service and interest cost	$ 1	$ (1)
Effect on accumulated benefit obligation	$ 26	$ (23)

Taking into account estimated employee future service, FirstEnergy expects to make the following benefit payments from plan assets and other payments, net of participant contributions:

		OPEB	
	Pensions	Benefit Payments	Subsidy Receipts
		(in millions)	
2014	$ 449	$ 129	$ (4)
2015	466	67	(4)
2016	484	67	(4)
2017	500	67	(4)
2018	524	65	(4)
Years 2019-2023	2,867	382	(17)

FES' share of the net pensions and OPEB liability as of December 31, 2013 and 2012, was as follows:

	Pensions		OPEB	
	2013	2012	2013	2012
		(In millions)		
Net Liability	$ (149)	$ (180)	$ (8)	$ (36)

FES' share of the net periodic pensions and OPEB costs for the three years ended December 31, 2013 was as follows:

	Pensions			OPEB		
	2013	2012	2011	2013	2012	2011
			(In millions)			
Net Periodic Costs	$ (30)	$ 78	$ 80	$ (40)	$ (11)	$ (21)

4. STOCK-BASED COMPENSATION PLANS

FirstEnergy has four stock-based compensation plans - ICP, 401(k) Savings Plan, EDCP and DCPD, as described further below.

ICP

The ICP includes four forms of stock-based compensation — restricted stock, restricted stock units, stock options and performance shares.

Under the ICP, total issuances cannot exceed 29 million shares of common stock or their equivalent. Stock options, restricted stock and restricted stock units have currently been designated to pay out in common stock, with vesting periods ranging from eight months to ten years. Performance share awards are currently designated to be paid in cash unless the recipient elects to defer the award, in which case, the award may be paid in stock depending upon the duration of the deferral. Shares available under the ICP are also used for bonuses earned under FirstEnergy's Short-Term Incentive Program that are, at the election of the participant, deferred through the EDCP and paid in shares under the ICP. As of December 31, 2013, approximately 3.0 million shares were available for future issuance plus any shares that become available again under the ICP due to cancellations, forfeitures, cash settlements or other similar circumstances with respect to outstanding awards.

FirstEnergy records the compensation costs for stock-based compensation awards over the vesting period based on the fair value on the grant date, less estimated forfeitures. FirstEnergy records the actual tax benefit realized from tax deductions when awards are exercised or distributed. Realized tax benefits during the years ended December 31, 2013, 2012 and 2011 were $13 million, $22 million and $14 million, respectively. The excess of the deductible amount over the recognized compensation cost is recorded as a component of stockholders' equity and reported as an other financing activity on the Consolidated Statements of Cash Flows.

Restricted Stock and Restricted Stock Units

Restricted common stock (restricted stock) and restricted stock units (stock units) activity for the year ended December 31, 2013, was as follows:

Outstanding as of January 1, 2013	2,180,422
Granted	952,137
Vested	(815,851)
Forfeited	(100,099)
Outstanding as of December 31, 2013	2,216,609

The 952,137 shares of restricted stock and stock units granted during the year ended December 31, 2013, includes 212,211 stock units related to previous grants due to over-achievement of performance metrics, and had a grant-date fair value of $39.97 and a weighted-average vesting period of 3.02 years.

Eligible employees receive awards of FE restricted stock or stock units subject to restrictions that lapse over a defined period of time or upon achieving performance results. Dividends are received on the restricted stock and are reinvested in additional shares. Restricted stock grants under the ICP were as follows:

	2013	2012	2011
Restricted stock granted	27,561	263,771	297,859
Weighted average market price	$ 42.53	$ 44.82	$ 38.44
Weighted average vesting period (years)	3.68	3.09	2.27
Dividends restricted	Yes	Yes	Yes

Vesting activity for restricted stock during 2013 was as follows (forfeitures were not material):

Restricted Stock	Number of Shares	Weighted Average Grant-Date Fair Value
Nonvested as of January 1, 2013	551,678	$ 46.73
Nonvested as of December 31, 2013	417,464	$ 45.46
Granted in 2013	27,561	$ 42.53
Vested in 2013[(1)]	167,751	$ 37.10

[(1)] Includes 23,446 shares for dividends earned during vesting period

FirstEnergy grants two types of stock unit awards: discretionary-based and performance-based. The discretionary-based awards grant the right to receive, at the end of the period of restriction, a number of shares of common stock equal to the number of stock units set forth in each agreement. Performance-based awards grant the right to receive, at the end of the period of restriction, a number of shares of common stock equal to the number of stock units set forth in the agreement subject to adjustment based on FirstEnergy's performance relative to financial and operational performance targets.

	2013	2012	2011
Restricted stock units granted	924,576	652,120	617,195
Weighted average vesting period (years)	3.00	3.00	3.00

Vesting activity for stock units during 2013 was as follows:

Restricted Stock Units	Number of Shares	Weighted Average Grant-Date Fair Value
Nonvested as of January 1, 2013	1,628,744	$ 41.10
Nonvested as of December 31, 2013	1,799,145	$ 40.86
Granted in 2013	924,576	$ 39.90
Forfeited in 2013	82,629	$ 41.38
Vested in 2013 [(1)]	792,113	$ 40.74

[(1)] Includes dividend equivalents of 120,567 earned during vesting period

As of December 31, 2013, there was $35 million of total unrecognized compensation cost related to non-vested share-based compensation arrangements granted for restricted stock and restricted stock units; that cost is expected to be recognized over a period of approximately 2 years.

Stock Options

Stock options were granted to eligible employees allowing them to purchase a specified number of common shares at a fixed grant price over a defined period of time. Stock option activity during 2013 was as follows:

Stock Option Activity	Number of Shares	Weighted Average Exercise Price
Balance, January 1, 2013 (2,348,469 options exercisable)	2,910,269	$ 40.33
Options exercised	(546,408)	30.37
Options forfeited	(4,735)	71.21
Balance, December 31, 2013 (1,997,969 options exercisable)	2,359,126	$ 42.59

Options outstanding and range of exercise prices as of December 31, 2013, were as follows:

	Options Outstanding		
Range of Exercise Prices	Shares	Weighted Average Exercise Price	Remaining Contractual Life (in years)
$20.02-$35.44	66,125	$ 22.83	0.47
$35.45-$38.75	1,143,389	$ 36.78	6.28
$38.76-$53.04	835,039	$ 38.81	0.19
$53.05-$81.19	314,573	$ 77.85	3.56
Total	2,359,126	$ 42.59	3.60

Cash received from the exercise of stock options in 2013, 2012 and 2011 was $19 million, $50 million and $32 million, respectively. The total intrinsic value of options exercised during 2013 was $6 million.

Performance Shares

Performance shares are share equivalents and do not have voting rights. The shares track the performance of FE's common stock over a three-year vesting period. During that time, dividend equivalents accrue and at vesting are converted into additional performance shares. The final account value may be adjusted based on the ranking of FE stock performance to a composite of peer companies. During 2013, 2012 and 2011, no cash was paid to settle performance shares due to the criteria not being met for the previous three-year vesting period.

401(k) Savings Plan

In 2013, 2012 and 2011, shares of FE common stock were purchased on the market and contributed to participants' accounts.

EDCP

Under the EDCP, covered employees can direct a portion of their compensation, including annual incentive awards and/or long-term incentive awards, into unfunded FE stock accounts to receive vested stock units or into an unfunded retirement cash account. Dividends are calculated quarterly on stock units outstanding and are credited in the form of additional stock units. Upon withdrawal, stock units are converted to FE shares. Payout of the stock accounts typically occurs three years from the date of deferral; however, an election can be made in the year prior to payout to further defer shares into a retirement stock account that will pay out in cash upon retirement. Interest is calculated on the cash allocated to the cash account and the total balance will pay out in cash upon retirement.

DCPD

Under the DCPD, members of the Board of Directors can elect to allocate all or a portion of their equity retainers to deferred stock and their cash retainers, meeting fees and chair fees to deferred stock or deferred cash accounts. The net liability recognized for DCPD of approximately $7 million and $6 million as of December 31, 2013 and December 31, 2012, respectively, is included in the caption "Retirement benefits" on the Consolidated Balance Sheets.

Of the approximately 1.7 million shares authorized under the EDCP and DCPD, approximately 845,000 shares were available for future issuance as of December 31, 2013. The shareholder approved pools for the EDCP and DCPD terminate in May 2014.

Stock-based Compensation Expense

Pre-tax stock-based compensation costs, tax benefit associated with stock-based compensation expense, and the amount of stock-based compensation expense capitalized related to FirstEnergy and FES plans are included in the following tables:

FirstEnergy	Years ended December 31,		
Stock-based Compensation Plan	**2013**	**2012**	**2011**
		(In millions)	
Restricted Stock and Restricted Stock Units	$ 42	$ 42	$ 29
Stock Options	—	1	1
Performance Shares	(10)	5	3
401(k) Savings Plan	25	37	31
EDCP	(2)	—	6
DCPD	5	4	4
Total	$ 60	$ 89	$ 74
Stock-based compensation costs capitalized	$ 20	$ 29	$ 21

FES	Years ended December 31,		
Stock-based Compensation Plan	**2013**	**2012**	**2011**
		(In millions)	
Restricted Stock and Restricted Stock Units	$ 6	$ 6	$ 4
Performance Shares	(1)	1	1
401(k) Savings Plan	4	6	5
EDCP	—	—	1
Total	$ 9	$ 13	$ 11
Stock-based compensation costs capitalized	$ 1	$ 1	$ —

Tax benefits associated with stock based compensation plan expense was $23 million, $11 million and $10 million (FES - $1 million, $2 million and $2 million) for the years ended 2013, 2012 and 2011, respectively.

5. TAXES

FirstEnergy records income taxes in accordance with the liability method of accounting. Deferred income taxes reflect the net tax effect of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts recognized for tax purposes. Investment tax credits, which were deferred when utilized, are being amortized over the recovery period of the related property. Deferred income tax liabilities related to temporary tax and accounting basis differences and tax credit carryforward items are recognized at the statutory income tax rates in effect when the liabilities are expected to be paid. Deferred tax assets are recognized based on income tax rates expected to be in effect when they are settled.

As discussed in Note 11, on July 8, 2013, officers of FirstEnergy and AE Supply committed to deactivating two coal-fired generating plants. As a result of the decision, FirstEnergy determined that it is more likely than not that certain state and local NOL carryforwards will not be realized through future operations or through the reversal of existing temporary differences. As a result, FirstEnergy recorded a valuation reserve of approximately $20 million against carryforwards in 2013.

On July 9, 2013, Pennsylvania House Bill 465 (HB 465) was enacted, adopting new market-based sourcing rules for certain items of income as well as increasing the Pennsylvania NOL deduction credit for tax years beginning after December 31, 2013 and 2014 to the greater of 25% or $4 million of taxable income and 30% or $5 million of taxable income, respectively. Based on income projections, Pennsylvania NOL valuation reserves were reduced by approximately $8 million in 2013.

During 2013, FirstEnergy made changes to state apportionment factors in certain jurisdictions based on sales sourcing rules for electricity, which reduced deferred tax liabilities by approximately $9 million. Furthermore, based on an assessment of business operations, FirstEnergy determined that income from certain subsidiaries should not be apportioned to certain tax jurisdictions due to the absence of business nexus. This assessment resulted in a reduction to deferred tax liabilities of approximately $22 million.

In 2012, a $50 million valuation allowance was established for two unregulated subsidiaries of FirstEnergy based on current judgment as to the realization of certain state deferred tax assets, as impacted by changes in the business and the applicability of certain

state law limitations on the long-term utilization of NOL carryforwards. The results of operations in 2012 for those companies decreased accumulated deferred income tax liabilities by approximately $50 million.

In December 2012, two subsidiaries of FES, FG and NG, completed a conversion from corporations to limited liability companies (LLCs). For income tax purposes, these LLCs are treated as divisions (*i.e.*, disregarded entities) of their parent company, FES. The LLC conversions, in combination with anticipated future taxable income, will contribute to the realization of certain state deferred tax assets. In 2011, an unregulated subsidiary of FirstEnergy converted to an LLC which, based on anticipated future taxable income, resulted in the partial reversal of a valuation allowance, reducing income tax expense in 2011 by $27 million.

During 2012, certain FirstEnergy operating companies adopted a new federal tax accounting method (effective for the 2011 consolidated federal tax return) for the deductibility of expenses for repairs to transmission and distribution assets, pursuant to IRS safe harbor guidance. In accordance with the IRS guidance, a cumulative adjustment was made on the 2011 consolidated federal tax return, increasing tax deductions and decreasing taxable income by approximately $417 million. The increased federal tax deductions created a corresponding state tax benefit that reduced FirstEnergy's effective tax rate by approximately $12 million in 2012. The IRS has agreed that the new method of accounting is compliant with the IRS guidance.

FES and the Utilities are party to an intercompany income tax allocation agreement with FirstEnergy and its other subsidiaries that provides for the allocation of consolidated tax liabilities. Net tax benefits attributable to FirstEnergy, excluding any tax benefits derived from interest expense associated with acquisition indebtedness from the merger with GPU, are reallocated to the subsidiaries of FirstEnergy that have taxable income. That allocation is accounted for as a capital contribution to the company receiving the tax benefit.

The following tables provide a reconciliation of federal income tax expense at the federal statutory rate to the total provision for income taxes for the three years ended December 31, 2013:

	FirstEnergy	FES
	(In millions)

FirstEnergy accounts for uncertainty in income taxes recognized in its financial statements. Accounting guidance prescribes a recognition threshold and measurement attribute for financial statement recognition and measurement of tax positions taken or expected to be taken on a company's tax return. As of December 31, 2013 and 2012, FirstEnergy's total unrecognized income tax benefits were approximately $48 million and $43 million, respectively. All $48 million of unrecognized income tax benefits as of December 31, 2013, would impact the effective tax rate if ultimately recognized in future years. As of December 31, 2013, it is

reasonably possible that approximately $35 million of unrecognized tax benefits may be resolved during 2014 as a result of the statute of limitations expiring, all of which would affect FirstEnergy's effective tax rate.

During 2013, the AE companies reduced reserves for unrecognized tax benefits related to various tax positions, with a total reduction to the effective tax rate of approximately $5 million.

During 2013, FirstEnergy settled a claim with the IRS for approximately $1.0 billion of additional accelerated (bonus) depreciation deductions for certain generation property for the 2010 taxable year, which resulted in a carryback refund of approximately $110 million, an increase in the NOL carryfoward of approximately $65 million, with a corresponding increase to accumulated deferred income taxes for this temporary tax item and an overall decrease to FirstEnergy's effective tax rate of approximately $2 million for adjustments to interest resulting from the settlement.

During 2012, FirstEnergy reached a settlement with state authorities related to state apportionment factors in Pennsylvania on an intercompany asset sale, which reduced FirstEnergy's effective tax rate by $3 million. During 2012, based on further IRS guidance related to the tax accounting for costs to repair and maintain fixed assets, the AE companies reduced their amount of unrecognized tax benefits by $21 million, with a corresponding adjustment to accumulated deferred income taxes for this temporary tax item, with no resulting impact to the effective tax rate.

During the fourth quarter of 2012, FirstEnergy reached a settlement with the IRS on deductions for prior year costs to repair generation assets, permitting the reduction of unrecognized tax benefits by approximately $34 million, with a corresponding adjustment to accumulated deferred income taxes for this temporary tax item, and an overall decrease to FirstEnergy's effective tax rate of approximately $10 million for adjustments to potential interest expense resulting from the settlement. Also during the fourth quarter of 2012, the AE companies reduced reserves for unrecognized tax benefits related to various tax positions, including the IRS's agreement on AE's deduction of merger-related expenses, with a total reduction to the effective tax rate of approximately $7 million.

The following table summarizes the changes in unrecognized tax positions for the years ended 2013, 2012 and 2011:

	FirstEnergy	FES
	(In millions)	
Balance, January 1, 2011	$ 45	$ 41
Increase due to merger with AE	97	—
Prior years increases	10	8
Prior years decreases	(35)	(4)
Balance, December 31, 2011	$ 117	$ 45
Current year increases	2	—
Current year decreases	(7)	—
Prior years increases	6	6
Prior years decreases	(37)	(13)
Decrease for settlements	(38)	(35)
Balance, December 31, 2012	$ 43	$ 3
Prior years increases	10	—
Prior years decreases	(5)	—
Balance, December 31, 2013	$ 48	$ 3

FirstEnergy recognizes interest expense or income related to uncertain tax positions. That amount is computed by applying the applicable statutory interest rate to the difference between the tax position recognized and the amount previously taken or expected to be taken on the federal income tax return. FirstEnergy includes net interest and penalties in the provision for income taxes. FirstEnergy's reversal of accrued interest associated with unrecognized tax benefits was immaterial to FirstEnergy's effective tax rate in 2013 and reduced the 2012 effective tax rate by approximately $4 million. The interest associated with the 2011 settlement of a claim favorably affected FirstEnergy's effective tax rate by $7 million in 2011.

The following table summarizes the net interest expense (income) for the three years ended December 31, 2013 and the cumulative net interest payable as of December 31, 2013 and 2012:

	Net Interest Expense (Income) For the Years Ended December 31,			Net Interest Payable As of December 31,	
	2013	2012	2011	2013	2012
		(In millions)		*(In millions)*	
FirstEnergy	$ 1	$ (4)	$ (5)	$ 9	$ 8
FES	—	(4)	1	1	1

FirstEnergy has tax returns that are under review at the audit or appeals level by the IRS (2011-2013) and state tax authorities. FirstEnergy's tax returns for all state jurisdictions are open from 2009-2012. The IRS completed its audit of the 2011 tax year in December 2013 and is in the process of preparing the final audit report. Tax years 2012-2013 are under review by the IRS. In August 2013 the IRS completed its audit of AE for tax years 2009 and 2010 and the final federal tax return for the period January-February 2011. For the remainder of the 2011 taxable year and future years, the AE companies are part of the FirstEnergy federal consolidated group. State tax returns for tax years 2010 through 2012 remain subject to review in Pennsylvania, West Virginia, Maryland and Virginia for certain subsidiaries of AE.

FirstEnergy has recorded as deferred income tax assets the effect of NOLs and tax credits that will more likely than not be realized through future operations and through the reversal of existing temporary differences. As of December 31, 2013, the deferred income tax assets, before any valuation allowances, consisted of $1.1 billion of federal NOL carryforwards that expire from 2025 to 2033, federal AMT credits of $25 million that have an indefinite carryforward period, and $418 million of state and local NOL carryforwards that begin to expire in 2014.

The table below summarizes pre-tax NOL carryforwards for state and local income tax purposes of approximately $9.8 billion for FirstEnergy, of which approximately $6.3 billion is expected to be utilized based on current estimates and assumptions. The ultimate utilization of these NOLs may be impacted by statutory limitations on the use of NOLs imposed by state and local tax jurisdictions, changes in statutory tax rates, and changes in business which, among other things, impact both future profitability and the manner in which future taxable income is apportioned to various state and local tax jurisdictions.

6. LEASES

FirstEnergy leases certain generating facilities, office space and other property and equipment under cancelable and noncancelable leases.

In 1987, OE sold portions of its ownership interests in Perry Unit 1 and Beaver Valley Unit 2 and entered into operating leases on the portions sold for basic lease terms of approximately 29 years. In that same year, CEI and TE also sold portions of their ownership interests in Beaver Valley Unit 2 and Bruce Mansfield Units 1, 2 and 3 and entered into similar operating leases for lease terms of approximately 30 years. During the terms of their respective leases, OE, CEI and TE are responsible, to the extent of their leasehold interests, for costs associated with the units including construction expenditures, operation and maintenance expenses, insurance, nuclear fuel, property taxes and decommissioning. They have the right, at the expiration of the respective basic lease terms, to renew their respective leases. They also have the right to purchase the facilities at the expiration of the basic lease term or any renewal term at a price equal to the fair market value of the facilities. The basic rental payments are adjusted when applicable federal tax law changes.

In 2007, FG completed a sale and leaseback transaction for its 93.825% undivided interest in Bruce Mansfield Unit 1 and entered into operating leases for basic lease terms of approximately 33 years. FES has unconditionally and irrevocably guaranteed all of FG's obligations under each of the leases.

During 2008, NG purchased 56.8 MW of lessor equity interests in the OE 1987 sale and leaseback of the Perry Plant and approximately 43.5 MW of lessor equity interests in the OE 1987 sale and leaseback of Beaver Valley Unit 2. In addition, NG purchased 158.5 MW of lessor equity interests in the TE and CEI 1987 sale and leaseback of Beaver Valley Unit 2. The Ohio Companies continue to lease these MW under their respective sale and leaseback arrangements and the related lease debt remains outstanding.

During 2012, NG repurchased 70.1 MW of lessor equity interests in OE's existing sale and leaseback of Beaver Valley Unit 2 for $129 million and FG acquired 441.9 MW of certain equity and other lessor interests in connection with the 1987 Bruce Mansfield Plant sale and leaseback transactions for approximately $262 million. In March of 2013, FG acquired the remaining lessor interests in the Bruce Mansfield sale and leaseback transaction for approximately $221 million. During 2013, NG purchased 12.2 MW of lessor equity interests in OE's existing sale and leaseback of Beaver Valley Unit 2 for $23 million. Additionally, in February 2014, NG purchased 47.7 MW of lessor equity interests in OE's existing sale and leaseback of Beaver Valley Unit 2 for approximately $94 million.

Established by OE in 1996, PNBV purchased a portion of the lease obligation bonds issued on behalf of lessors in OE's Perry Unit 1 and Beaver Valley Unit 2 sale and leaseback transactions. Similarly, CEI and TE established Shippingport in 1997 to purchase the lease obligation bonds issued on behalf of lessors in their Bruce Mansfield Units 1, 2 and 3 sale and leaseback transactions. During 2013, the investments held at Shippingport were liquidated. The PNBV arrangements effectively reduce lease costs related to those transactions (see Note 8, Variable Interest Entities).

As of December 31, 2013, FirstEnergy's leasehold interest was 8.11% of Perry Unit 1 and 93.83% of Bruce Mansfield Unit 1. After NG's purchase in February 2014, as discussed above, FirstEnergy's leasehold interest was 2.60% of Beaver Valley Unit 2.

Operating lease expense for 2013, 2012 and 2011, is summarized as follows:

(In millions)	2013	2012	2011
FirstEnergy	$ 224	$ 291	$ 319
FES	97	140	154

The future minimum capital lease payments as of December 31, 2013 are as follows:

Capital leases	FirstEnergy	FES
	(In millions)	
2014	$ 40	$ 6
2015	38	6
2016	34	5
2017	30	5
2018	23	2

2018	126	—	126
Years thereafter	1,564	—	1,564
Total minimum lease payments	$ 2,526	$ 104	$ 2,422

FES' future minimum operating lease payments as of December 31, 2013, are as follows:

Operating Leases	Lease Payments
	(In millions)
2014	$ 143
2015	142
2016	130
2017	82
2018	101
Years thereafter	1,480
Total minimum lease payments	$ 2,078

7. INTANGIBLE ASSETS

As of December 31, 2013, intangible assets classified in Other Deferred Charges on FirstEnergy's Consolidated Balance Sheet, include the following:

	Intangible Assets			Amortization Expense						
				Actual	Estimated					
(In millions)	Gross	Accumulated Amortization	Net	2013	2014	2015	2016	2017	2018	Thereafter
NUG contracts[1][2]	$ 124	$ 15	$ 109	$ 5	$ 5	$ 5	$ 5	$ 5	$ 5	$ 84
OVEC[1]	54	5	49	2	2	2	2	2	2	39
Coal contracts[1][3]	556	222	334	62	55	51	51	45	30	49
FES customer contracts	147	52	95	17	17	17	17	17	14	13
Energy contracts[1]	136	135	1	14	1	—	—	—	—	—
	$ 1,017	$ 429	$ 588	$ 100	$ 80	$ 75	$ 75	$ 69	$ 51	$ 185

(1) Fair value measurements of intangible assets recorded in connection with the Allegheny merger (see Note 21, Merger).
(2) NUG contracts are subject to regulatory accounting and their amortization does not impact earnings.
(3) A gross amount of $102 million ($53 million, net) of the coal contracts was recorded with a regulatory offset and the amortization does not impact earnings.

FES acquired certain customer contract rights which were capitalized as intangible assets. These rights allow FES to supply electric generation to customers, and the recorded value is being amortized ratably over the term of the related contracts.

8. VARIABLE INTEREST ENTITIES

FirstEnergy performs qualitative analyses to determine whether a variable interest gives FirstEnergy a controlling financial interest in a VIE. This analysis identifies the primary beneficiary of a VIE as the enterprise that has both the power to direct the activities of a VIE that most significantly impact the entity's economic performance and the obligation to absorb losses of the entity that could potentially be significant to the VIE or the right to receive benefits from the entity that could potentially be significant to the VIE. FirstEnergy consolidates a VIE when it is determined that it is the primary beneficiary.

VIEs included in FirstEnergy's consolidated financial statements are: FEV's joint venture in the Signal Peak mining and coal transportation operations, a portion of which was sold on October 18, 2011, and resulted in deconsolidation; the PNBV and Shippingport capital trusts that were created to refinance debt originally issued in connection with sale and leaseback transactions; wholly-owned limited liability companies of the Ohio Companies (as described below); wholly owned limited liability companies of JCP&L created to sell transition bonds to securitize the recovery of JCP&L's bondable stranded costs and special purpose limited liability companies created to issue environmental control bonds that were used to construct environmental control facilities (see Note 12, Capitalization for additional details).

The caption noncontrolling interest within the consolidated financial statements is used to reflect the portion of a VIE that FirstEnergy consolidates, but does not own. The change in noncontrolling interest within the Consolidated Balance Sheets during the year ended December 31, 2013, was primarily due to $7 million of distributions to owners. As of December 31, 2013, the caption noncontrolling interest on the consolidated Balance Sheets was primarily related to PNBV.

In order to evaluate contracts for consolidation treatment and entities for which FirstEnergy has an interest, FirstEnergy aggregates variable interests into the following categories based on similar risk characteristics and significance.

Ohio Securitization

In September 2012, the Ohio Companies formed CEI Funding LLC, OE Funding LLC and TE Funding LLC, respectively, as separate, wholly-owned limited liability SPEs. Each SPE is a bankruptcy-remote, special purpose limited liability company that is restricted to activities necessary to issue phase-in recovery bonds and perform other functions in connection with the bond issuance. Creditors of FirstEnergy and the Ohio Companies have no recourse to any assets or revenues of the SPEs. The phase-in recovery bonds issued by these SPEs are payable only from, and secured by, phase-in recovery property held by the SPEs (i.e. the right to impose, charge and collect irrevocable non-bypassable usage-based charges payable by retail electric customers in the service territories of the Ohio Companies) and the bondholder has no recourse to the general credit of FirstEnergy or any of the Ohio Companies. The SPEs are considered VIEs and each one is consolidated into its applicable utility. In June 2013, the SPEs formed by the Ohio Companies issued approximately $445 million of pass-through trust certificates supported by phase-in recovery bonds with a weighted average coupon of 2.48% to securitize the recovery of certain all electric customer heating discounts, fuel and purchased power regulatory assets. The phase-in recovery bonds were sold to a trust that concurrently sold a like aggregate amount of its pass through trust certificates to public investors. The proceeds were primarily used to redeem $410 million in existing taxable bonds of the Ohio Companies with a weighted average coupon of 5.71%, including $30 million of make-whole premiums. The

securitization effectively allows for the recovery of the make-whole premiums and transactional costs through the imposition of non-bypassable phase-in recovery charges on retail electric customers of the Ohio Companies pursuant to Ohio law. The $410 million of redemption consisted of original maturities of $225 million due 2013, $150 million due 2015 and $35 million due 2020. The make-whole premiums paid are included in cash flows from operating activities in the Consolidated Statement of Cash Flows.

Mining Operations

In 2008, FEV entered into a joint venture in the Signal Peak mining and coal transportation operations near Roundup, Montana. FEV made equity investments totaling $134 million in exchange for a 50% economic interest in the joint venture. On October 18, 2011, Pinesdale LLC, a subsidiary of Gunvor Group, Ltd., purchased a one-third interest in the Signal Peak joint venture in which FEV held a 50% interest. As part of the transaction, FirstEnergy received $258 million in proceeds and retained a 33-1/3% equity ownership in Global Holding, the holding company for the joint venture. The sale resulted in a pre-tax gain of approximately $569 million ($370 million after-tax), which included $379 million from the remeasurement of FEV's retained investment. The gain attributed to the retained investment remeasurement is being amortized as coal is extracted from the mine on a units of production method.

Prior to the sale, FirstEnergy consolidated this joint venture since FEV was determined to be the primary beneficiary of the VIE. As a result of the sale, FEV was no longer determined to be the primary beneficiary and its retained 33-1/3%% interest is subject to the equity method of accounting.

Trusts

FirstEnergy's consolidated financial statements include PNBV and Shippingport. FirstEnergy used debt and available funds to purchase the notes issued by PNBV and Shippingport for the purchase of lease obligation bonds. Ownership of PNBV includes a 3% equity interest by an unaffiliated third party and a 3% equity interest held by OES Ventures, a wholly owned subsidiary of OE. During 2013, the investments held at Shippingport were liquidated.

PATH-WV

PATH is a series limited liability company that is comprised of multiple series, each of which has separate rights, powers and duties regarding specified property and the series profits and losses associated with such property. A subsidiary of AE owns 100% of the Allegheny Series (PATH-Allegheny) and 50% of the West Virginia Series (PATH-WV), which is a joint venture with a subsidiary of AEP. FirstEnergy is not the primary beneficiary of PATH-WV, as it does not have control over the significant activities affecting the economics of the portion of the PATH project that was to be constructed by PATH-WV.

On August 24, 2012, PJM removed the PATH project from its long-range expansion plans. See Note 15, Regulatory Matters, for additional information on the abandonment of PATH.

Power Purchase Agreements

FirstEnergy evaluated its power purchase agreements and determined that certain NUG entities may be VIEs to the extent that they own a plant that sells substantially all of its output to the applicable utilities and the contract price for power is correlated with the plant’s variable costs of production. FirstEnergy maintains 21 long-term power purchase agreements with NUG entities that were entered into pursuant to PURPA. FirstEnergy was not involved in the creation of, and has no equity or debt invested in, any of these entities.

FirstEnergy has determined that for all but two of these NUG entities, it does not have variable interests in the entities or the entities do not meet the criteria to be considered a VIE. FirstEnergy may hold variable interests in the remaining two entities; however, it applied the scope exception that exempts enterprises unable to obtain the necessary information to evaluate entities.

Because FirstEnergy has no equity or debt interests in the NUG entities, its maximum exposure to loss relates primarily to the above-market costs incurred for power. FirstEnergy expects any above-market costs incurred to be recovered from customers. Purchased power costs related to the contracts that may contain a variable interest were $185 million and $253 million during the years ended December 31, 2013 and 2012, respectively.

In 1998 the PPUC issued an order approving a transition plan for WP that disallowed certain costs, including an estimated amount for an adverse power purchase commitment related to the NUG entity wherein WP may hold a variable interest, for which WP has taken the scope exception. On November 20, 2012, WP entered into an agreement to terminate the adverse power purchase commitment and accrued a pre-tax loss of $17 million. WP terminated the adverse commitment on January 1, 2013. WP's liability for this adverse purchase power commitment was $60 million, which included the $17 million accrual and was paid in January 2013.

Sale and Leaseback

FirstEnergy has variable interests in certain sale and leaseback transactions. FirstEnergy is not the primary beneficiary of these interests as it does not have control over the significant activities affecting the economics of the arrangements. See Note 6, Leases for additional details.

FES, and other FE subsidiaries are exposed to losses under their applicable sale and leaseback agreements upon the occurrence of certain contingent events. The maximum exposure under these provisions represents the net amount of casualty value payments due upon the occurrence of specified casualty events. Net discounted lease payments would not be payable if the casualty loss payments were made. The following table discloses each company's net exposure to loss based upon the casualty value provisions as of December 31, 2013:

	Maximum Exposure	Discounted Lease Payments, net[1]	Net Exposure
		(In millions)	
FES	$ 1,274	$ 1,063	$ 211
Other FE subsidiaries	752	289	463

[1] The net present value of FirstEnergy's consolidated sale and leaseback operating lease commitments is $1.1 billion.

9. FAIR VALUE MEASUREMENTS

RECURRING FAIR VALUE MEASUREMENTS

Authoritative accounting guidance establishes a fair value hierarchy that prioritizes the inputs used to measure fair value. This hierarchy gives the highest priority to Level 1 measurements and the lowest priority to Level 3 measurements. The three levels of the fair value hierarchy and a description of the valuation techniques are as follows:

Level 1 - Quoted prices for identical instruments in active market

Level 2 - Quoted prices for similar instruments in active market
- Quoted prices for identical or similar instruments in markets that are not active
- Model-derived valuations for which all significant inputs are observable market data

Models are primarily industry-standard models that consider various assumptions, including quoted forward prices for commodities, time value, volatility factors and current market and contractual prices for the underlying instruments, as well as other relevant economic measures.

Level 3 - Valuation inputs are unobservable and significant to the fair value measurement

FirstEnergy produces a long-term power and capacity price forecast annually with periodic updates as market conditions change. When underlying prices are not observable, prices from the long-term price forecast, which has been reviewed and approved by FirstEnergy's Risk Policy Committee, are used to measure fair value. A more detailed description of FirstEnergy's valuation process for FTRs, NUGs and LCAPPs are as follows:

FTRs are financial instruments that entitle the holder to a stream of revenues (or charges) based on the hourly day-ahead congestion price differences across transmission paths. FTRs are acquired by FirstEnergy in the annual, monthly and long-term RTO auctions and are initially recorded using the auction clearing price less cost. After initial recognition, FTRs' carrying values are periodically adjusted to fair value using a mark-to-model methodology, which approximates market. The primary inputs into the model, which are generally less observable than objective sources, are the most recent RTO auction clearing prices and the FTRs' remaining hours. The model calculates the fair value by multiplying the most recent auction clearing price by the remaining FTR hours less the prorated FTR cost. Generally, significant increases or decreases in inputs in isolation could result in a higher or lower fair value measurement. See Note 10, Derivative Instruments, for additional information regarding FirstEnergy's FTRs.

NUG contracts represent purchase power agreements with third-party non-utility generators that are transacted to satisfy certain obligations under PURPA. NUG contract carrying values are recorded at fair value and adjusted periodically using a mark-to-model methodology, which approximates market. The primary unobservable inputs into the model are regional power prices and generation MWH. Pricing for the NUG contracts is a combination of

market prices for the current year and next three years based on observable data and internal models using historical trends and market data for the remaining years under contract. The internal models use forecasted energy purchase prices as an input when prices are not defined by the contract. Forecasted market prices are based on ICE quotes and management assumptions. Generation MWH reflects data provided by contractual arrangements and historical trends. The model calculates the fair value by multiplying the prices by the generation MWH. Generally, significant increases or decreases in inputs in isolation could result in a higher or lower fair value measurement.

LCAPP contracts are financially settled agreements that allow eligible generators to receive payments from, or make payments to, JCP&L, pursuant to an annually calculated load-ratio share of the capacity produced by the generator based upon the annual forecasted peak demand as determined by PJM. LCAPP contracts are recorded at fair value and adjusted periodically using a mark-to-model methodology, which approximates market. The primary unobservable input into the model is forecasted regional capacity prices. Pricing for the LCAPP contracts is a combination of PJM RPM capacity auction prices and internal models using historical trends and market data for the remaining years under contract. Capacity prices beyond the 2016/2017 delivery year are developed through a simulation of future PJM RPM auctions. The capacity price forecast assumes a continuation of the current PJM RPM market design and is reflective of the regional peak demand growth and generation fleet additions and retirements that underlie FirstEnergy's long-term energy price forecast. Generally, significant increases or decreases in inputs in isolation could result in a higher or lower fair value measurement. During the fourth quarter of 2013, all LCAPP contracts were terminated. See Note 10, Derivative Instruments for additional information.

FirstEnergy primarily applies the market approach for recurring fair value measurements using the best information available. Accordingly, FirstEnergy maximizes the use of observable inputs and minimizes the use of unobservable inputs. There were no changes in valuation methodologies used as of December 31, 2013, from those used as of December 31, 2012. The determination of the fair value measures takes into consideration various factors, including but not limited to, nonperformance risk, counterparty credit risk and the impact of credit enhancements (such as cash deposits, LOCs and priority interests). The impact of these forms of risk was not significant to the fair value measurements.

Transfers between levels are recognized at the end of the reporting period. There were no transfers between levels during the years ended December 31, 2013 and 2012. The following tables set forth the recurring assets and liabilities that are accounted for at fair value by level within the fair value hierarchy:

FirstEnergy

Recurring Fair Value Measurements	December 31, 2013				December 31, 2012			
	Level 1	Level 2	Level 3	Total	Level 1	Level 2	Level 3	Total

(1) NDT funds hold equity portfolios whose performance is benchmarked against the Alerian MLP Index or the Wells Fargo Hybrid and Preferred Securities REIT index.

(2) Primarily consists of short-term cash investments.

(3) Excludes $9 million and $94 million as of December 31, 2013 and December 31, 2012, respectively, of receivables, payables, taxes and accrued income associated with financial instruments reflected within the fair value table.

Rollforward of Level 3 Measurements

The following table provides a reconciliation of changes in the fair value of FTRs held by FES and classified as Level 3 in the fair value hierarchy for the periods ended December 31, 2013 and December 31, 2012:

	Derivative Asset FTRs	Derivative Liability FTRs	Net FTRs
		(In millions)	
January 1, 2012 Balance	$ 1	$ (7)	$ (6)
Unrealized gain (loss)	4	(4)	—
Purchases	9	(7)	2
Settlements	(8)	12	4
December 31, 2012 Balance	$ 6	$ (6)	$ —
Unrealized loss	—	(2)	(2)
Purchases	5	(12)	(7)
Settlements	(8)	9	1
December 31, 2013 Balance	$ 3	$ (11)	$ (8)

Level 3 Quantitative Information

The following table provides quantitative information for FTRs held by FES that are classified as Level 3 in the fair value hierarchy for the period ended December 31, 2013:

	Fair Value, Net (In millions)	Valuation Technique	Significant Input	Range	Weighted Average	Units
FTRs	$ (8)	Model	RTO auction clearing prices	($2.80) to $5.20	$0.50	Dollars/MWH

INVESTMENTS

All temporary cash investments purchased with an initial maturity of three months or less are reported as cash equivalents on the Consolidated Balance Sheets at cost, which approximates their fair market value. Investments other than cash and cash equivalents include held-to-maturity securities, AFS securities and notes receivable.

At the end of each reporting period, FirstEnergy evaluates its investments for OTTI. Investments classified as AFS securities are evaluated to determine whether a decline in fair value below the cost basis is other than temporary. FirstEnergy first considers its intent and ability to hold an equity security until recovery and then considers, among other factors, the duration and the extent to which the security's fair value has been less than its cost and the near-term financial prospects of the security issuer when evaluating an investment for impairment. For debt securities, FirstEnergy considers its intent to hold the securities, the likelihood that it will be required to sell the securities before recovery of its cost basis and the likelihood of recovery of the securities' entire amortized cost basis. If the decline in fair value is determined to be other than temporary, the cost basis of the securities is written down to fair value.

Unrealized gains and losses on AFS securities are recognized in AOCI. However, unrealized losses held in the NDTs of FES, OE and TE are recognized in earnings since the trust arrangements, as they are currently defined, do not meet the required ability and intent to hold criteria in consideration of OTTI.

The investment policy for the NDT funds restricts or limits the trusts' ability to hold certain types of assets including private or direct placements, warrants, securities of FirstEnergy, investments in companies owning nuclear power plants, financial derivatives, securities convertible into common stock and securities of the trust funds' custodian or managers and their parents or subsidiaries.

AFS Securities

FirstEnergy holds debt and equity securities within its NDT, nuclear fuel disposal and NUG trusts. These trust investments are considered AFS securities, recognized at fair market value. FirstEnergy has no securities held for trading purposes.

The following table summarizes the amortized cost basis, unrealized gains (there were no unrealized losses) and fair values of investments held in NDT, nuclear fuel disposal and NUG trusts as of December 31, 2013 and December 31, 2012:

	December 31, 2013[1]			December 31, 2012[2]		
	Cost Basis	Unrealized Gains	Fair Value	Cost Basis	Unrealized Gains	Fair Value
	(In millions)					
Debt securities						
FirstEnergy	$ 1,881	$ 33	$ 1,914	$ 1,827	$ 34	$ 1,861
FES	918	17	935	778	14	792
Equity securities						
FirstEnergy	$ 308	$ 9	$ 317	$ 293	$ 16	$ 309
FES	207	—	207	281	13	294

(1) Excludes short-term cash investments: FE Consolidated - $204 million; FES - $135 million.
(2) Excludes short-term cash investments: FE Consolidated - $326 million; FES - $196 million.

Proceeds from the sale of investments in AFS securities, realized gains and losses on those sales, OTTI and interest and dividend income for the three years ended December 31, 2013, 2012 and 2011 were as follows:

December 31, 2013	Sale Proceeds	Realized Gains	Realized Losses	OTTI	Interest and Dividend Income
			(In millions)		
FirstEnergy	$ 2,047	$ 92	$ (46)	$ (90)	$ 101
FES	940	70	(21)	(79)	60

December 31, 2012	Sale Proceeds	Realized Gains	Realized Losses	OTTI	Interest and Dividend Income
			(In millions)		
FirstEnergy	$ 2,980	$ 179	$ (83)	$ (16)	$ 70
FES	1,464	124	(59)	(14)	39

December 31, 2011	Sale Proceeds	Realized Gains	Realized Losses	OTTI	Interest and Dividend Income
			(In millions)		
FirstEnergy	$ 4,207	$ 229	$ (71)	$ (19)	$ 82
FES	1,843	80	(29)	(17)	47

Held-To-Maturity Securities

The following table provides the amortized cost basis, unrealized gains (there were no unrealized losses) and approximate fair values of investments in held-to-maturity securities as of December 31, 2013 and December 31, 2012:

	December 31, 2013			December 31, 2012		
	Cost Basis	Unrealized Gains	Fair Value	Cost Basis	Unrealized Gains	Fair Value
			(In millions)			
Debt Securities						
FirstEnergy	$ 33	$ 2	$ 35	$ 54	$ 30	$ 84

Investments in emission allowances, employee benefit trusts and cost and equity method investments, including FirstEnergy's investment in Global Holding, totaling $636 million as of December 31, 2013, and $644 million as of December 31, 2012, are excluded from the amounts reported above.

LONG-TERM DEBT AND OTHER LONG-TERM OBLIGATIONS

All borrowings with initial maturities of less than one year are defined as short-term financial instruments under GAAP and are reported as Short-term borrowings on the Consolidated Balance Sheets at cost. Since these borrowings are short-term in nature, FirstEnergy believes that their costs approximate their fair market value. The following table provides the approximate fair value and related carrying amounts of long-term debt and other long-term obligations, excluding capital lease obligations and net unamortized premiums and discounts:

	December 31, 2013		December 31, 2012	
	Carrying Value	Fair Value	Carrying Value	Fair Value
		(In millions)		
FirstEnergy	$ 17,049	$ 17,957	$ 16,957	$ 19,460
FES	3,001	3,073	4,194	4,524

The fair values of long-term debt and other long-term obligations reflect the present value of the cash outflows relating to those securities based on the current call price, the yield to maturity or the yield to call, as deemed appropriate at the end of each respective period. The yields assumed were based on securities with similar characteristics offered by corporations with credit ratings similar to those of FirstEnergy and its subsidiaries. FirstEnergy classified short-term borrowings, long-term debt and other long-term obligations as Level 2 in the fair value hierarchy as of December 31, 2013 and December 31, 2012.

10. DERIVATIVE INSTRUMENTS

FirstEnergy is exposed to financial risks resulting from fluctuating interest rates and commodity prices, including prices for electricity, natural gas, coal and energy transmission. To manage the volatility relating to these exposures, FirstEnergy's Risk Policy Committee, comprised of senior management, provides general management oversight for risk management activities throughout FirstEnergy. The Risk Policy Committee is responsible for promoting the effective design and implementation of sound risk management programs and oversees compliance with corporate risk management policies and established risk management practice. FirstEnergy also uses a variety of derivative instruments for risk management purposes including forward contracts, options, futures contracts and swaps.

FirstEnergy accounts for derivative instruments on its Consolidated Balance Sheets at fair value unless they meet the normal purchases and normal sales criteria. Derivatives that meet those criteria are accounted for under the accrual method of accounting, and their effects are included in earnings at the time of contract performance. Changes in the fair value of derivative instruments that qualified and were designated as cash flow hedge instruments are recorded in AOCI. Changes in the fair value of derivative instruments that are not designated as cash flow hedge instruments are recorded in net income on a mark-to-market basis. FirstEnergy has contractual derivative agreements through 2020.

Cash Flow Hedges

FirstEnergy has used cash flow hedges for risk management purposes to manage the volatility related to exposures associated with fluctuating commodity prices and interest rates. The effective portion of gains and losses on a derivative contract is reported as a component of AOCI with subsequent reclassification to earnings in the period during which the hedged forecasted transaction affects earnings.

Total net unamortized gains included in AOCI associated with instruments previously designated to be in a cash flow hedging relationship totaled $2 million and $10 million as of December 31, 2013 and December 31, 2012, respectively. Since the forecasted transactions remain probable of occurring, these amounts will be amortized into earnings over the life of the hedging instruments. Approximately $10 million is expected to be amortized to income during the next twelve months.

FirstEnergy has used forward starting swap agreements to hedge a portion of the consolidated interest rate risk associated with anticipated issuances of fixed-rate, long-term debt securities of its subsidiaries. These derivatives were treated as cash flow hedges, protecting against the risk of changes in future interest payments resulting from changes in benchmark U.S. Treasury rates between the date of hedge inception and the date of the debt issuance. Total unamortized losses included in AOCI associated with prior interest rate cash flow hedges totaled $59 million and $70 million as of December 31, 2013 and December 31, 2012, respectively. Based on current estimates, approximately $9 million will be amortized to interest expense during the next twelve months.

As of December 31, 2013 and December 31, 2012, no commodity or interest rate derivatives were designated as cash flow hedges.

Refer to Note 2, Accumulated Other Comprehensive Income, for reclassifications from AOCI during the years ended December 31, 2013 and 2012.

Fair Value Hedges

FirstEnergy has used fixed-for-floating interest rate swap agreements to hedge a portion of the consolidated interest rate risk associated with the debt portfolio of its subsidiaries. These derivative instruments were treated as fair value hedges of fixed-rate, long-term debt issues, protecting against the risk of changes in the fair value of fixed-rate debt instruments due to lower interest rates.

Unamortized gains included in long-term debt associated with prior fixed-for-floating interest rate swap agreements totaled $44 million and $79 million as of December 31, 2013 and December 31, 2012, respectively. Based on current estimates, approximately $12 million will be amortized to interest expense during the next twelve months. Reclassifications from long-term debt into interest expense totaled approximately $19 million and $22 million during the years ended December 31, 2013 and 2012, respectively. In connection with the redemptions of senior notes by FES, PN, and ME and taxable bonds by CEI and OE, unamortized gains associated with fixed for floating interest rate swap agreements of $17 million were included in the Loss on debt redemptions in the Consolidated Statements of Income for the year ended December 31, 2013. Refer to Note 12, Capitalization, for additional information regarding FirstEnergy's debt redemptions during the year ended December 31, 2013. In 2012, FirstEnergy terminated all forward starting swap agreements resulting in cash proceeds and a net gain, recorded as a reduction to interest expense, of approximately $6 million.

As of December 31, 2013 and December 31, 2012, no commodity or interest rate derivatives were designated as fair value hedges.

Commodity Derivatives

FirstEnergy uses both physically and financially settled derivatives to manage its exposure to volatility in commodity prices. Commodity derivatives are used for risk management purposes to hedge exposures when it makes economic sense to do so, including circumstances where the hedging relationship does not qualify for hedge accounting.

Electricity forwards are used to balance expected sales with expected generation and purchased power. Natural gas futures are entered into based on expected consumption of natural gas primarily for use in FirstEnergy's combustion turbine units. Derivative instruments are not used in quantities greater than forecasted needs.

As of December 31, 2013, FES' net asset position under commodity derivative contracts was $102 million. Under these commodity derivative contracts, FES posted $29 million of collateral. Certain commodity derivative contracts include credit risk related contingent features that would require FES to post $1 million of additional collateral if the credit rating for its debt were to fall below investment grade.

Based on commodity derivative contracts held as of December 31, 2013, an adverse change of 10% in commodity prices would decrease net income by approximately $27 million during the next twelve months.

NUGs

As of December 31, 2013, FirstEnergy's net liability position under NUG contracts was $202 million representing contracts held at JCP&L, ME and PN. NUG contracts represent purchased power agreements with third-party non-utility generators that are transacted to satisfy certain obligations under PURPA. Changes in the fair value of NUG contracts are subject to regulatory accounting treatment and do not impact earnings.

LCAPP

The LCAPP law was enacted in New Jersey during 2011 to promote the construction of qualified electric generation facilities. JCP&L maintained two LCAPP contracts, which are financially settled agreements that allow eligible generators to receive payments from, or make payments to, JCP&L pursuant to an annually calculated load-ratio share of the capacity produced by the generator based upon the annual forecasted peak demand as determined by PJM. JCP&L expected to recover from its customers payments made to the generators and give credit to customers for payments from the generators under these contracts. As a result, the projected future obligations for the LCAPP contracts are considered derivative liabilities with a corresponding regulatory asset. Since the LCAPP contracts were subject to regulatory accounting, changes in their fair value did not impact earnings. On October 11, 2013, the U.S. District Court for the District of New Jersey declared that the LCAPP is preempted by the FPA and unconstitutional. On October 22, 2013, the Superior Court of New Jersey Appellate Division dismissed two consolidated appeals which had been taken from the final order of the NJBPU which accepted and adopted the recommendation of the NJBPU's Agent regarding implementation of the LCAPP law. Dismissal of the consolidated appeals, along with pending matters currently on remand to the NJBPU, was without prejudice subject to the parties exercising their appellate rights in the federal courts. The parties filed an appeal with the U.S. Court of Appeals for the Third Circuit with briefing by the parties to be completed by March 5, 2014. Consistent with the provisions of the LCAPP contracts, the U.S District Court's ruling is a termination event. During the fourth quarter of 2013, JCP&L issued termination notices to the counterparties and reversed the derivative liability and corresponding regulatory asset on its Consolidated Balance Sheet.

FTRs

As of December 31, 2013, FirstEnergy's and FES' net liability position under FTRs was $8 million and FES posted $5 million of collateral. FirstEnergy holds FTRs that generally represent an economic hedge of future congestion charges that will be incurred in connection with FirstEnergy's load obligations. FirstEnergy acquires the majority of its FTRs in an annual auction through a self-scheduling process involving the use of ARRs allocated to members of an RTO that have load serving obligations and through the direct allocation of FTRs from the PJM RTO. The PJM RTO has a rule that allows directly allocated FTRs to be granted to LSEs in zones that have newly entered PJM. For the first two planning years, PJM permits the LSEs to request a direct allocation of FTRs in these new zones at no cost as opposed to receiving ARRs. The directly allocated FTRs differ from traditional FTRs in that the ownership of all or part of the FTRs may shift to another LSE if customers choose to shop with the other LSE.

The future obligations for the FTRs acquired at auction are reflected on the Consolidated Balance Sheets and have not been designated as cash flow hedge instruments. FirstEnergy initially records these FTRs at the auction price less the obligation due to the RTO, and subsequently adjusts the carrying value of remaining FTRs to their estimated fair value at the end of each accounting period prior to settlement. Changes in the fair value of FTRs held by FES and AE Supply are included in other operating expenses as unrealized gains or losses. Unrealized gains or losses on FTRs held by FirstEnergy's utilities are recorded as regulatory assets or liabilities. Directly allocated FTRs are accounted for under the accrual method of accounting, and their effects are included in earnings at the time of contract performance.

FirstEnergy records the fair value of derivative instruments on a gross basis. The following table summarizes the fair value and classification of derivative instruments on FirstEnergy's Consolidated Balance Sheets:

Derivative Assets			Derivative Liabilities		
	Fair Value			Fair Value	
	December 31, 2013	December 31, 2012		December 31, 2013	December 31, 2012
	(In millions)			*(In millions)*	
Current Assets - Derivatives			**Current Liabilities - Derivatives**		
Commodity Contracts	$ 162	$ 153	Commodity Contracts	$ (102)	$ (119)
FTRs	4	7	FTRs	(9)	(7)
	166	160		(111)	(126)
			Noncurrent Liabilities - Adverse Power Contract Liability		
			NUGs	(222)	(290)
Deferred Charges and Other Assets - Other			LCAAP	—	(144)
			Noncurrent Liabilities - Other		
Commodity Contracts	53	99			
FTRs	—	1	Commodity Contracts	(11)	(36)
NUGs	20	36	FTRs	(3)	(2)
	73	136		(236)	(472)
Derivative Assets	$ 239	$ 296	Derivative Liabilities	$ (347)	$ (598)

FirstEnergy enters into contracts with counterparties that allow for net settlement of derivative assets and derivative liabilities. Certain of these contracts contain margining provisions that require the use of collateral to mitigate credit exposure between FirstEnergy and these counterparties. In situations where collateral is pledged to mitigate exposures related to derivative and non-derivative instruments with the same counterparty, FirstEnergy allocates the collateral based on the percentage of the net fair value of derivative instruments to the total fair value of the combined derivative and non-derivative instruments. The following tables summarize the fair value of derivative instruments on FirstEnergy's Consolidated Balance Sheets and the effect of netting arrangements and collateral on its financial position:

		Amounts Not Offset in Consolidated Balance Sheet		
December 31, 2013	Fair Value	Derivative Instruments	Cash Collateral (Received)/Pledged	Net Fair Value
		(In millions)		
Derivative Assets				
Commodity contracts	$ 215	$ (106)	$ (9)	$ 100
FTRs	4	(4)	—	—
NUG contracts	20	—	—	20
	$ 239	$ (110)	$ (9)	$ 120
Derivative Liabilities				
Commodity contracts	$ (113)	$ 106	$ 7	$ —
FTRs	(12)	4	5	(3)
NUG contracts	(222)	—	—	(222)
	$ (347)	$ 110	$ 12	$ (225)

December 31, 2012	Fair Value	Amounts Not Offset in Consolidated Balance Sheet		Net Fair Value
		Derivative Instruments	Cash Collateral (Received)/Pledged	
		(In millions)		
Derivative Assets				
Commodity contracts	$ 252	$ (142)	$ (5)	$ 105
FTRs	8	(8)	—	—
NUG contracts	36	—	—	36
	$ 296	$ (150)	$ (5)	$ 141
Derivative Liabilities				
Commodity contracts	$ (155)	$ 142	$ 12	$ (1)
FTRs	(9)	8	1	—
NUG contracts	(290)	—	—	(290)
LCAPP contracts	(144)	—	—	(144)
	$ (598)	$ 150	$ 13	$ (435)

The following table summarizes the volumes associated with FirstEnergy's outstanding derivative transactions as of December 31, 2013:

	Purchases	Sales	Net	Units
		(In millions)		
Power Contracts	34	37	(3)	MWH
FTRs	43	—	43	MWH
NUGs	11	—	11	MWH
Natural Gas	77	3	74	mmBTU

The effect of derivative instruments not in a hedging relationship on the Consolidated Statements of Income during 2013 and 2012 are summarized in the following tables:

	Year Ended December 31			
	Commodity Contracts	FTRs	Interest Rate Swaps	Total
	(In millions)			
2013				
Unrealized Gain (Loss) Recognized in:				
Other Operating Expense	$ 11	$ (8)	$ —	$ 3
Realized Gain (Loss) Reclassified to:				
Revenues	$ 46	$ 21	$ —	$ 67
Purchased Power Expense	(38)	—	—	(38)
Other Operating Expense	—	(36)	—	(36)
Fuel Expense	(2)	—	—	(2)
2012				
Unrealized Gain Recognized in:				
Other Operating Expense	$ 89	$ 13	$ —	$ 102
Realized Gain (Loss) Reclassified to:				
Revenues	$ 302	$ 22	$ —	$ 324
Purchased Power Expense	(277)	—	—	(277)
Other Operating Expense	—	(61)	—	(61)
Fuel Expense	5	—	—	5
Interest Expense	—	—	6	6

The unrealized and realized gains (losses) on FirstEnergy's derivative instruments subject to regulatory accounting during 2013 and 2012 are summarized in the following table:

	Year Ended December 31			
Derivatives Not in a Hedging Relationship with Regulatory Offset	NUGs	LCAPP	Regulated FTRs	Total
	(In millions)			
2013				
Unrealized Gain (Loss) on Derivative Instrument	$ (23)	$ (22)	$ 1	$ (44)
Realized Gain (Loss) on Derivative Instrument	75	166	(1)	240
2012				
Unrealized Gain (Loss) on Derivative Instrument	$ (201)	$ (144)	$ 1	$ (344)
Realized Gain on Derivative Instrument	240	—	7	247

The following table provides a reconciliation of changes in the fair value of certain contracts that are deferred for future recovery from (or credit to) customers during 2013 and 2012:

Derivatives Not in a Hedging Relationship with Regulatory Offset	Year Ended December 31			
	NUGs	LCAPP	Regulated FTRs	Total
		(In millions)		
Outstanding net liability as of January 1, 2013	$ (254)	$ (144)	$ —	$ (398)
Additions/Change in value of existing contracts	(23)	(22)	1	(44)
Settled contracts	75	166	(1)	240
Outstanding net liability as of December 31, 2013	$ (202)	$ —	$ —	$ (202)
Outstanding net liability as of January 1, 2012	$ (293)	$ —	$ (8)	$ (301)
Additions/Change in value of existing contracts	(201)	(144)	1	(344)
Settled contracts	240	—	7	247
Outstanding net liability as of December 31, 2012	$ (254)	$ (144)	$ —	$ (398)

11. IMPAIRMENT OF LONG-LIVED ASSETS

FirstEnergy reviews long-lived assets, including regulatory assets, for impairment whenever events or changes in circumstances indicate that the carrying value of such assets may not be recoverable. The recoverability of a long-lived asset is measured by comparing its carrying value to the sum of undiscounted future cash flows expected to result from the use and eventual disposition of the asset. If the carrying value is greater than the undiscounted cash flows, an impairment exists and a loss is recognized for the amount by which the carrying value of the long-lived asset exceeds its estimated fair value. FirstEnergy utilizes the income approach, based upon discounted cash flows to estimate fair value.

West Virginia Asset Transfer - 2013

On October 9, 2013, MP sold its approximate 8% share of Pleasants at its fair market value of $73 million to AE Supply, and AE Supply sold its approximate 80% share of Harrison to MP at its book value of $1.2 billion. The transaction resulted in AE Supply receiving net consideration of $1.1 billion and MP's assumption of a $73.5 million pollution control note. The $1.1 billion net consideration was originally financed by MP through an equity infusion from FE of approximately $527 million and a note payable to AE Supply of approximately $573 million. The note payable to AE Supply was repaid in the fourth quarter of 2013. In connection with the closing, in the fourth quarter of 2013, MP recorded a pre-tax impairment charge of approximately $322 million to reduce the net book value of the Harrison Power Station to the amount that was permitted to be included in jurisdictional rate base. Additionally, MP recognized a regulatory liability of approximately $23 million in the fourth quarter of 2013 representing refunds to customers associated with the excess purchase price received by MP above the net book value of MP's minority interest in the Pleasants Power Station.

Generating Plant Retirements - 2013

On July 8, 2013, officers of FirstEnergy and AE Supply committed to deactivating the following generating units by October 9, 2013:

Generating Units	MW Capacity	Location
Hatfield's Ferry, Units 1-3	1,710	Masontown, Pennsylvania
Mitchell, Units 2-3	370	Courtney, Pennsylvania

As a result of this decision, in the second quarter of 2013, FirstEnergy recorded a pre-tax impairment of approximately $473 million to continuing operations, which also includes pre-tax impairments of $13 million related to excessive inventory at these facilities. The impairment charge is included within the results of the Competitive Energy Services segment. On October 9, 2013, Hatfield's Ferry Units 1-3 and Mitchell Units 2-3 were deactivated.

Approximately 240 plant employees and generation related positions were affected by these plant deactivations. FirstEnergy recorded approximately $6 million (pre-tax) severance related expenses that were recognized in Other operating expenses in the Consolidated Statements of Income during the year ended 2013.

AE Supply has obligations, such as fuel supply, that could be affected by the plant deactivations and management is currently unable to reasonably estimate potential costs, or a range thereof, that could be incurred.

Generating Plant Retirements - 2011

On January 26, 2012 and February 8, 2012, FG, MP and AE Supply announced the deactivation by September 1, 2012 (subject to a reliability review by PJM) of nine coal-fired power plants (Albright, Armstrong, Ashtabula, Bay Shore except for generating unit 1, Eastlake, Lakeshore, R. Paul Smith, Rivesville and Willow Island) with a total capacity of 3,349 MW due to MATS and other environmental regulations. As a result of this decision, FirstEnergy recorded a pre-tax impairment of $334 million to continuing

operations during the year ended 2011. This impairment consisted of a $311 million write down of the carrying value of the plant assets, approximately $5 million in excessive SO_2 emission allowances and an $18 million charge for excessive or obsolete inventory at these facilities. On April 25, 2012, PJM concluded its initial analysis of the reliability impacts from the previously announced plant deactivations and requested RMR arrangements for Eastlake Units 1-3, Ashtabula Unit 5 and Lake Shore Unit 18 through the spring of 2015. In February 2014, PJM notified FirstEnergy that Eastlake Units 1-3 and Lake Shore Unit 18 will be released from RMR status as of September 15, 2014. On July 10, 2012, and as amended on October 31, 2012, FirstEnergy filed with FERC, for informational purposes, the compensation arrangements for these units which will remain in effect for as long as these generating units continue to operate. As of September 1, 2012, Albright, Armstrong, Bay Shore (except for generating unit 1), Eastlake Units 4-5, R. Paul Smith, Rivesville and Willow Island were deactivated. During the year ended December 31, 2012, FirstEnergy recognized pre-tax severance expense of approximately $14 million ($10 million by FES) as a result of the deactivations. These costs are included in "other operating expenses" in the Consolidated Statements of Income.

In addition to the emission allowance impairments in connection with the plant closures, FirstEnergy recorded during 2011, pre-tax impairment charges of approximately $6 million ($1 million for FES and $5 million for AE Supply) for NOx emission allowances that were expected to be obsolete after 2011 and approximately $16 million ($13 million for FES and $3 million for AE Supply) for excess SO_2 emission allowances in inventory that it expected will not be consumed in the future.

Fremont Energy Center

On March 11, 2011, FirstEnergy and American Municipal Power, Inc., entered into an agreement for the sale of Fremont Energy Center, which included two natural gas combined-cycle combustion turbines and a steam turbine capable of producing 544 MW of load-following capacity and 163 MW of peaking capacity. The execution of this agreement triggered a need to evaluate the recoverability of the carrying value of the assets associated with the Fremont Energy Center. The estimated fair value of the Fremont Energy Center was based on the purchase price outlined in the sale agreement with American Municipal Power, Inc. The result of this evaluation indicated that the carrying cost of the Fremont Energy Center was not fully recoverable. As a result of the recoverability evaluation, FirstEnergy recorded an impairment charge of $11 million to operating income in the first quarter of 2011. On July 28, 2011, FirstEnergy completed the sale of Fremont Energy Center to American Municipal Power, Inc.

Peaking Facilities

During 2011, FirstEnergy assessed the carrying values of certain peaking facilities that were to be sold or disposed of before the end of their useful lives. The estimated fair values were based on estimated sales prices quoted in an active market and indicated that the carrying costs of the peaking facilities were not fully recoverable. FirstEnergy recorded impairment charges of $23 million during 2011 and on October 18, 2011, FirstEnergy closed on the sale of the Richland and Stryker peaking facilities.

12. CAPITALIZATION

COMMON STOCK

Retained Earnings and Dividends

As of December 31, 2013, FirstEnergy's unrestricted retained earnings were $2.6 billion. Dividends declared in 2013 were $1.65 per share, which included dividends of $0.55 per share paid in the second, third and fourth quarters of 2013. Dividends declared in 2012 were $2.20 per share, which included dividends of $0.55 per share paid in the second, third and fourth quarter of 2012 and dividends of $0.55 per share paid in the first quarter of 2013. The amount and timing of all dividend declarations are subject to the discretion of the Board of Directors and its consideration of business conditions, results of operations, financial condition and other factors. On January 21, 2014 the Board of Directors declared a quarterly dividend of $0.36 per share to be paid in the first quarter of 2014.

In addition to paying dividends from retained earnings, OE, CEI, TE, Penn, JCP&L, ME and PN have authorization from the FERC to pay cash dividends to FirstEnergy from paid-in capital accounts, as long as their FERC-defined equity to total capitalization ratio remains above 35%. In addition, TrAIL and AGC have authorization from the FERC to pay cash dividends to FE from paid-in capital accounts, as long as their FERC-defined equity to total capitalization ratio remains above 50% and 45%, respectively. The articles of incorporation, indentures, regulatory limitations and various other agreements relating to the long-term debt of certain FirstEnergy subsidiaries contain provisions that could further restrict the payment of dividends on their common stock. None of these provisions materially restricted FirstEnergy's subsidiaries' abilities to pay cash dividends to FirstEnergy as of December 31, 2013.

SIP/DRIP Program

On September 25, 2013, FE filed a registration statement with the SEC to register 4 million shares of common stock to be issued to registered shareholders and its employees and the employees of its subsidiaries under its Stock Investment Plan. In addition, during December 2013, FE began fulfilling certain share-based benefit plan obligations through the issuance of authorized but unissued common stock.

PREFERRED AND PREFERENCE STOCK

FirstEnergy and the Utilities were authorized to issue preferred stock and preference stock as of December 31, 2013, as follows:

	Preferred Stock		Preference Stock	
	Shares Authorized	Par Value	Shares Authorized	Par Value
FirstEnergy	5,000,000	$ 100		
OE	6,000,000	$ 100	8,000,000	no par
OE	8,000,000	$ 25		
Penn	1,200,000	$ 100		
CEI	4,000,000	no par	3,000,000	no par
TE	3,000,000	$ 100	5,000,000	$ 25
TE	12,000,000	$ 25		
JCP&L	15,600,000	no par		
ME	10,000,000	no par		
PN	11,435,000	no par		
MP	940,000	$ 100		
PE	10,000,000	$ 0.01		
WP	32,000,000	no par		

As of December 31, 2013, and 2012, there were no preferred or preference shares outstanding.

LONG-TERM DEBT AND OTHER LONG-TERM OBLIGATIONS

The following tables present outstanding long-term debt and capital lease obligations for FirstEnergy and FES as of December 31, 2013 and 2012:

	As of December 31, 2013		As of December 31	
(Dollar amounts in millions)	**Maturity Date**	**Interest Rate**	**2013**	**2012**
FirstEnergy:				
FMBs	2014 - 2043	3.340% - 9.740%	$ 3,166	$ 2,587
Secured notes - fixed rate	2017 - 2037	6.150% - 7.880%	1,804	2,113
Secured notes - variable rate			—	50
Total secured notes			1,804	2,163
Unsecured notes - fixed rate	2014 - 2039	3.500% - 7.350%	11,076	11,145
Unsecured notes - variable rate	2014 - 2015	0.020% - 1.665%	959	959
Total unsecured notes			12,035	12,104
Capital lease obligations			188	176
Unamortized debt premiums			9	45
Unamortized fair value adjustments			44	103
Currently payable long-term debt			(1,415)	(1,999)
Total long-term debt and other long-term obligations			$ 15,831	$ 15,179
FES:				
Secured notes - fixed rate	2015 - 2017	5.150% - 12.000%	$ 188	$ 689
Secured notes - variable rate			—	50
Total secured notes			188	739
Unsecured notes - fixed rate	2014 - 2039	2.150% - 6.800%	2,077	2,769
Unsecured notes - variable rate	2014 - 2015	0.130% - 0.160%	736	686
Total unsecured notes			2,813	3,455
Capital lease obligations			22	27
Unamortized debt discounts			(1)	(1)
Currently payable long-term debt			(892)	(1,102)
Total long-term debt and other long-term obligations			$ 2,130	$ 3,118

On March 5, 2013, FE issued in aggregate $1.5 billion of senior unsecured notes in two series: $650 million of 2.75% senior notes due March 15, 2018 and $850 million of 4.25% senior notes due March 15, 2023. The stated interest rates are subject to adjustments based upon changes in the credit ratings of FirstEnergy but will not decrease below the issued rates. The proceeds were used to repay short-term borrowings and to invest in the money pool for FES and AE Supply's use in funding a portion of their concurrent tender offers.

On March 28, 2013, pursuant to tender offers launched in February 2013, FES and AE Supply repurchased $369 million and $294 million, respectively, of outstanding senior notes with interest rates ranging from 5.75% to 6.8%. The $369 million of FES repurchases consisted of original maturities of $252 million due 2021 and $117 million due 2039. The $294 million of AE Supply repurchases consisted of original maturities of $194 million due 2019 and $100 million due 2039. FES and AE Supply paid $67 million and $43 million, respectively, in tender premiums to repurchase the tendered senior notes. FirstEnergy recorded a loss on debt redemption of $119 million (FES - $71 million), including such premiums and other related expenses. The tender premiums paid are included in cash flows from financing activities in the Consolidated Statement of Cash Flows.

In March 2013, ME issued $300 million of 3.50% senior unsecured notes due March 15, 2023. Proceeds from this offering were used to repay $150 million of ME 4.95% senior unsecured notes that matured in March 2013 and short-term borrowings.

On April 15, 2013, FES redeemed $400 million of its 4.80% senior notes due 2015 and recorded a loss on debt redemption of $32 million including $31 million of make-whole premiums paid. The make-whole premiums paid are included in cash flows from operating activities in the Consolidated Statement of Cash Flows.

On May 8, 2013, FE, FES, AE Supply and FE's other borrowing subsidiaries entered into extensions and amendments to the three existing multi-year syndicated revolving credit facilities. Each facility was extended until May 2018, unless the lenders agree, at the request of the applicable borrowers, to an additional one-year extension. The FE Facility was amended to increase the lending

banks' commitments under the facility by $500 million to a total of $2.5 billion and to increase the individual borrower sub-limits for FE by $500 million to a total of $2.5 billion and for JCP&L by $175 million to a total of $600 million.

On June 3, 2013, FG exercised a mandatory put option and repurchased approximately $235 million of PCRBs due 2023, which FG is currently holding for remarketing subject to future market and other conditions.

As discussed in Note 8, Variable Interest Entities, in June 2013, the SPEs formed by the Ohio Companies issued approximately $445 million of pass-through trust certificates supported by phase-in recovery bonds with a weighted average coupon of 2.48% to securitize the recovery of certain all electric customer heating discounts, fuel and purchased power regulatory assets. The phase-in recovery bonds were sold to a trust that concurrently sold a like aggregate amount of its pass through trust certificates to public investors. The proceeds were primarily used to redeem $410 million in existing taxable bonds of the Ohio Companies with a weighted average coupon of 5.71%, including $30 million of make-whole premiums. The securitization effectively allows for the recovery of the make-whole premiums and transactional costs through the imposition of non-bypassable phase-in recovery charges on retail electric customers of the Ohio Companies pursuant to Ohio law. The $410 million of redemption consisted of original maturities of $225 million due 2013, $150 million due 2015 and $35 million due 2020. The make-whole premiums paid are included in cash flows from operating activities in the Consolidated Statement of Cash Flows.

During August, the Ohio Companies redeemed an additional $660 million of long-term debt with interest rates ranging from 5.65% to 7.25% and paid approximately $120 million of make-whole premiums which were deferred as a regulatory asset and will be amortized over the original life of the redeemed debt. The make-whole premiums paid are included in cash flows from operating activities in the Consolidated Statement of Cash Flows. Additionally, during August, JCP&L issued $500 million of 4.7% unsecured notes due April 2024 and used the proceeds to pay down a portion of its short-term debt obligations.

On November 15, 2013, AE Supply optionally redeemed $235 million of its 7.00% PCRBs due July 15, 2039 at 100% of the principal amount in connection with the deactivation of operations at Hatfield's Ferry.

On November 27, 2013, MP issued $400 million of 4.10% FMBs due April 15, 2024 and $600 million of 5.40% FMBs due December 15, 2043. Proceeds from this offering were used by MP to: (i) repay at maturity $300 million of its FMBs, 7.95% Series due December 15, 2013; (ii) redeem $120 million of its FMBs, 6.70% Series due June 15, 2014; (iii) repay a $572.7 million short-term promissory note originally issued on October 9, 2013 to its affiliate, AE Supply in connection with MP’s acquisition of the remaining ownership of the Harrison Power Station; and (iv) for working capital needs and other general corporate purposes.

During December of 2013, FE entered into an agreement to extend and amend its $150 million term loan agreement with a maturity date of December 31, 2014. The maturity of the loan was extended to December 31, 2015 and the principal amount was increased to $200 million. On December 26, 2013, PN redeemed $150 million of its 5.13% Senior Notes due April 1,2014 and ME redeemed $100 million of its 4.88% Senior Notes due April 1, 2014.

See Note 6, Leases for additional information related to capital leases.

Securitized Bonds

Environmental Control Bonds

The consolidated financial statements of FirstEnergy include environmental control bonds issued by two bankruptcy remote, special purpose limited liability companies that are indirect subsidiaries of MP and PE. Proceeds from the bonds were used to construct environmental control facilities. The special purpose limited liability companies own the irrevocable right to collect non-bypassable environmental control charges from all customers who receive electric delivery service in MP's and PE's West Virginia service territories. Principal and interest owed on the environmental control bonds is secured by, and payable solely from, the proceeds of the environmental control charges. The right to collect environmental control charges is not included as an asset on FirstEnergy's consolidated balance sheets. Creditors of FirstEnergy, other than the special purpose limited liability companies, have no recourse to any assets or revenues of the special purpose limited liability companies. As of December 31, 2013 and 2012, $472 million and $493 million of environmental control bonds were outstanding, respectively.

Transition Bonds

The consolidated financial statements of FirstEnergy and JCP&L include the accounts of JCP&L Transition Funding and JCP&L Transition Funding II, wholly owned limited liability companies of JCP&L. In June 2002, JCP&L Transition Funding sold transition bonds to securitize the recovery of JCP&L’s bondable stranded costs associated with the previously divested Oyster Creek Nuclear Generating Station. In August 2006, JCP&L Transition Funding II sold transition bonds to securitize the recovery of deferred costs associated with JCP&L’s supply of BGS. JCP&L did not purchase and does not own any of the transition bonds, which are included as long-term debt on FirstEnergy’s and JCP&L’s Consolidated Balance Sheets. The transition bonds are the sole obligations of JCP&L Transition Funding and JCP&L Transition Funding II and are collateralized by each company’s equity and assets, which consist primarily of bondable transition property. As of December 31, 2013 and 2012, $207 million and $243 million of the transition bonds were outstanding, respectively.

Bondable transition property represents the irrevocable right under New Jersey law of a utility company to charge, collect and receive from its customers, through a non-bypassable TBC, the principal amount and interest on transition bonds and other fees and expenses associated with their issuance. JCP&L sold its bondable transition property to JCP&L Transition Funding and JCP&L Transition Funding II and, as servicer, manages and administers the bondable transition property, including the billing, collection and remittance of the TBC, pursuant to separate servicing agreements with JCP&L Transition Funding and JCP&L Transition Funding II. For the two series of transition bonds, JCP&L is entitled to aggregate annual servicing fees of up to $628 thousand that are payable from TBC collections.

Phase-In Recovery Bonds

In June 2013, the SPEs formed by the Ohio Companies issued approximately $445 million of pass-through trust certificates supported by phase-in recovery bonds with a weighted average coupon of 2.48% to securitize the recovery of certain all electric customer heating discounts, fuel and purchased power regulatory assets. The phase-in recovery bonds were sold to a trust that concurrently sold a like aggregate amount of its pass through trust certificates to public investors.

Other Long-term Debt

The Ohio Companies, Penn, FG and NG each have a first mortgage indenture under which they can issue FMBs secured by a direct first mortgage lien on substantially all of their property and franchises, other than specifically excepted property.

Based on the amount of FMBs authenticated by the respective mortgage bond trustees as of December 31, 2013, the sinking fund requirement for all FMBs issued under the various mortgage indentures amounted to payments of $7 million in 2013, all of which relate to Penn. Penn expects to meet its 2013 annual sinking fund requirement with a replacement credit under its mortgage indenture.

As of December 31, 2013, FirstEnergy's currently payable long-term debt included approximately $809 million (FES — $736 million) of variable interest rate PCRBs, the bondholders of which are entitled to the benefit of irrevocable direct pay bank LOCs. The interest rates on the PCRBs are reset daily or weekly. Bondholders can tender their PCRBs for mandatory purchase prior to maturity with the purchase price payable from remarketing proceeds, or if the PCRBs are not successfully remarketed, by drawings on the irrevocable direct pay LOCs. The subsidiary obligor is required to reimburse the applicable LOC bank for any such drawings or, if the LOC bank fails to honor its LOC for any reason, must itself pay the purchase price.

The following table presents scheduled debt repayments for outstanding long-term debt, excluding capital leases, fair value purchase accounting adjustments and unamortized debt discounts and premiums, for the next five years as of December 31, 2013. PCRBs that can be tendered for mandatory purchase prior to maturity are reflected in 2014.

Year	FirstEnergy	FES
	(In millions)	
2014	$ 1,376	$ 887
2015	1,264	391
2016	1,041	417
2017	1,641	163
2018	1,453	266

The following table classifies the outstanding fixed rate put PCRBs and variable rate PCRBs by year, excluding unamortized debt discounts and premiums, for the next five years based on the next date on which the debt holders may exercise their right to tender their PCRBs.

Year	FirstEnergy	FES
	(In millions)	
2014	$ 835	$ 762
2015	313	313
2016	391	391
2017	130	130
2018	125	125

Obligations to repay certain PCRBs are secured by several series of FMBs. Certain PCRBs are entitled to the benefit of irrevocable bank LOCs, to pay principal of, or interest on, the applicable PCRBs. To the extent that drawings are made under the LOCs, FG, NG and the applicable Utilities are entitled to a credit against their obligation to repay those bonds. FG, NG and the applicable Utilities pay annual fees based on the amounts of the LOCs to the issuing banks and are obligated to reimburse the banks or insurers, as the case may be, for any drawings thereunder. The insurers hold FMBs as security for such reimbursement obligations.

The amounts and annual fees for PCRB-related LOCs for FirstEnergy and FES as of December 31, 2013, are as follows:

	Aggregate LOC Amount	Annual Fees
	(In millions)	
FirstEnergy	$ 818	1.65% to 3.30%
FES	744	1.65% to 3.30%

Debt Covenant Default Provisions

FirstEnergy has various debt covenants under certain financing arrangements, including its revolving credit facilities. The most restrictive of the debt covenants relate to the nonpayment of interest and/or principal on such debt and the maintenance of certain financial ratios. The failure by FirstEnergy to comply with the covenants contained in its financing arrangements could result in an event of default, which may have an adverse effect on its financial condition. As of December 31, 2013, FirstEnergy and FES remain in compliance with all debt covenant provisions.

Additionally, there are cross-default provisions in a number of the financing arrangements. These provisions generally trigger a default in the applicable financing arrangement of an entity if it or any of its significant subsidiaries default under another financing arrangement in excess of a certain principal amount, typically $100 million. Although such defaults by any of the Utilities, ATSI or TrAIL would generally cross-default FirstEnergy financing arrangements containing these provisions, defaults by any of AE Supply, FES, FG or NG would generally not cross-default to applicable financing arrangements of FirstEnergy. Also, defaults by FirstEnergy would generally not cross-default applicable financing arrangements of any of FirstEnergy's subsidiaries. Cross-default provisions are not typically found in any of the senior notes or FMBs of FirstEnergy, FG, NG or the Utilities.

13. SHORT-TERM BORROWINGS AND BANK LINES OF CREDIT

FirstEnergy had $3,404 million and $1,969 million of short-term borrowings as of December 31, 2013 and December 31, 2012, respectively. FirstEnergy's available liquidity as of January 31, 2014, was as follows:

Borrower(s)	Type	Maturity	Commitment	Available Liquidity
			(In millions)	
FirstEnergy[(1)]	Revolving	May 2018	$ 2,500	$ 224
FES / AE Supply	Revolving	May 2018	2,500	2,489
FET[(2)]	Revolving	May 2018	1,000	—
		Subtotal	$ 6,000	$ 2,713
		Cash	—	48
		Total	$ 6,000	$ 2,761

(1) FE and the Utilities
(2) Includes FET, ATSI and TrAIL as subsidiary borrowers

Revolving Credit Facilities

FirstEnergy, FES/AE Supply and FET Facilities

FE and certain of its subsidiaries participate in three five-year syndicated revolving credit facilities with aggregate commitments of $6.0 billion (Facilities). The Facilities consist of a $2.5 billion aggregate FirstEnergy Facility, a $2.5 billion FES/AE Supply Facility and a $1.0 billion FET Facility, that are each available until May 2018, unless the lenders agree, at the request of the applicable borrowers, to an additional one-year extension. Generally, borrowings under each of the Facilities are available to each borrower separately and mature on the earlier of 364 days from the date of borrowing or the commitment termination date, as the same may be extended.

On May 8, 2013, FE, FES, AE Supply and FE's other borrowing subsidiaries entered into extensions and amendments to the three existing multi-year syndicated revolving credit facilities. Each facility was extended until May 2018, unless the lenders agree, at the request of the applicable borrowers, to an additional one-year extension. The FE Facility was amended to increase the lending banks' commitments under the facility by $500 million to a total of $2.5 billion and to increase the individual borrower sub-limits for FE by $500 million to a total of $2.5 billion and for JCP&L by $175 million to a total of $600 million.

On October 31, 2013, FE amended its existing $2.5 billion multi-year syndicated revolving credit facility to exclude certain after-tax, non-cash write-downs and non-cash charges of approximately $1.4 billion (primarily related to Pension and OPEB mark-to-market adjustments, impairment of long-lived assets and regulatory charges) from the debt to total capitalization ratio calculations incurred through September 30, 2013. Additionally, the amendment provides for a future allowance of approximately $1.35 billion for after-tax, non-cash write-downs and non-cash charges over the remaining life of the facility. Similarly, the FES/AE Supply $2.5 billion revolving credit facility was also amended to exclude certain similar after-tax, non-cash write-downs and non-cash charges of $785.7 million incurred through September 30, 2013 from the debt to total capitalization ratio calculations. As of December 31, 2013, the borrowers were in compliance with the applicable debt to total capitalization ratios under the respective Facilities.

The following table summarizes the borrowing sub-limits for each borrower under the Facilities, the limitations on short-term indebtedness applicable to each borrower under current regulatory approvals and applicable statutory and/or charter limitations, as of December 31, 2013:

Borrower	Revolving Credit Facility Sub-Limits	Regulatory and Other Short-Term Debt Limitations
	(In millions)	
FE	$ 2,500	$ — [1]
FES	1,500	— [2]
AE Supply	1,000	— [2]
FET	1,000	— [1]
OE	500	500 [3]
CEI	500	500 [3]
TE	500	500 [3]
JCP&L	600	850 [3]
ME	300	500 [3]
PN	300	300 [3]
WP	200	200 [3]
MP	150	500 [3]
PE	150	150 [3]
ATSI	100	500 [3]
Penn	50	50 [3]
TrAIL	200	400 [3]

(1) No limitations.
(2) No limitation based upon blanket financing authorization from the FERC under existing market-based rate tariffs.
(3) Excluding amounts which may be borrowed under the regulated companies' money pool.

The entire amount of the FES/AE Supply Facility, $700 million of the FirstEnergy Facility and $225 million of the FET Facility, subject to each borrower's sub-limit, is available for the issuance of LOCs (subject to borrowings drawn under the Facilities) expiring up to one year from the date of issuance. The stated amount of outstanding LOCs will count against total commitments available under each of the Facilities and against the applicable borrower's borrowing sub-limit.

The Facilities do not contain provisions that restrict the ability to borrow or accelerate payment of outstanding advances in the event of any change in credit ratings of the borrowers. Pricing is defined in "pricing grids," whereby the cost of funds borrowed under the Facilities is related to the credit ratings of the company borrowing the funds, other than the FET Facility, which is based on its subsidiaries' credit ratings. Additionally, borrowings under each of the Facilities are subject to the usual and customary provisions for acceleration upon the occurrence of events of default, including a cross-default for other indebtedness in excess of $100 million.

Term Loan

During December of 2013, FE entered into an agreement to extend and amend its $150 million term loan agreement with a maturity date of December 31, 2014. The maturity of the loan was extended to December 31, 2015 and the principal amount was increased to $200 million.

FirstEnergy Money Pools

FirstEnergy's regulated companies also have the ability to borrow from each other and the holding company to meet their short-term working capital requirements. A similar but separate arrangement exists among FirstEnergy's unregulated companies. FESC administers these two money pools and tracks surplus funds of FirstEnergy and the respective regulated and unregulated subsidiaries, as well as proceeds available from bank borrowings. Companies receiving a loan under the money pool agreements must repay the principal amount of the loan, together with accrued interest, within 364 days of borrowing the funds. The rate of interest is the same for each company receiving a loan from their respective pool and is based on the average cost of funds available through the pool. The average interest rate for borrowings during 2013 was 0.67% per annum for the regulated companies' money pool and 1.34% per annum for the unregulated companies' money pool.

Weighted Average Interest Rates

The weighted average interest rates on short-term borrowings outstanding, including borrowings under the FirstEnergy Money Pools, as of December 31, 2013 and 2012, were as follows:

	2013	2012
FirstEnergy	1.80%	1.97%

14. ASSET RETIREMENT OBLIGATIONS

FirstEnergy has recognized applicable legal obligations for AROs and their associated cost primarily for nuclear power plant decommissioning, reclamation of sludge disposal ponds, closure of coal ash disposal sites, underground and above-ground storage tanks, wastewater treatment lagoons and transformers containing PCBs. In addition, FirstEnergy has recognized conditional retirement obligations, primarily for asbestos remediation.

The ARO liabilities for FES primarily relate to the decommissioning of the Beaver Valley, Davis-Besse and Perry nuclear generating facilities. FES uses an expected cash flow approach to measure the fair value of their nuclear decommissioning AROs.

FirstEnergy and FES maintain NDTs that are legally restricted for purposes of settling the nuclear decommissioning ARO. The fair values of the decommissioning trust assets as of December 31, 2013 and 2012 were as follows:

	2013	2012
	(In millions)	
FirstEnergy	$ 2,201	$ 2,204
FES	$ 1,276	$ 1,283

Conditional retirement obligations associated with tangible long-lived assets are recognized at fair value in the period in which they are incurred if a reasonable estimate can be made, even though there may be uncertainty about timing or method of settlement. When settlement is conditional on a future event occurring, it is reflected in the measurement of the liability, not in the recognition of the liability.

The following table summarizes the changes to the ARO balances during 2013 and 2012:

ARO Reconciliation	FirstEnergy	FES
	(In millions)	
Balance, January 1, 2012	$ 1,497	$ 904
Liabilities settled	(2)	(1)
Accretion	104	62
Balance, December 31, 2012	$ 1,599	$ 965
Liabilities settled	(18)	(18)
Accretion	115	71
Revisions in estimated cash flows	(18)	(3)
Balance, December 31, 2013	$ 1,678	$ 1,015

During 2013, revisions to estimated cash flows as a result of increased cost estimates for the closure of LBR increased the associated ARO liability of FES by $163 million. The revised cost estimates were the result of a Closure Plan submitted to the PA DEP by FG on March 28, 2013, which provides for placing a final cap over LBR, and a response to a technical deficiency letter issued by the PA DEP on October 3, 2013. See Note 16, Commitments, Guarantees, and Contingencies for additional information related to the closure of LBR.

During the third quarter of 2013, studies were completed to update the estimated cost of asbestos remediation for FES and TE. The cost studies resulted in a revision to the estimated cash flows associated with the ARO liabilities of FES and TE and increased the liability for FES and TE by approximately $5 million and $7 million, respectively.

During the fourth quarter of 2013, revisions to estimated nuclear decommissioning cash flows associated with the ARO liability of FES, OE and TE decreased the liability by $171 million, $15 million and $7 million, respectively. The revision in estimates for the ARO balances is the result of a decommissioning study that was completed by a third-party in connection with Davis-Besse's license renewal that was submitted to the NRC in February 2014. The most significant revision from this study was related to accelerating the expected date when the DOE would begin to accept spent fuel, to be more in line with the industry assumptions. Additionally, FirstEnergy also updated and revised its estimates for Perry and Beaver Valley Units 1 and 2, in a consistent manner.

15. REGULATORY MATTERS

STATE REGULATION

Each of the Utilities' retail rates, conditions of service, issuance of securities and other matters are subject to regulation in the states in which it operates - in Maryland by the MDPSC, in Ohio by the PUCO, in New Jersey by the NJBPU, in Pennsylvania by the PPUC, in West Virginia by the WVPSC and in New York by the NYPSC. The transmission operations of PE in Virginia are subject to certain regulations of the VSCC. In addition, under Ohio law, municipalities may regulate rates of a public utility, subject to appeal to the PUCO if not acceptable to the utility.

As competitive retail electric suppliers serving retail customers primarily in Ohio, Pennsylvania, Illinois, Michigan, New Jersey and Maryland, FES and AE Supply are subject to state laws applicable to competitive electric suppliers in those states, including affiliate codes of conduct that apply to FES, AE Supply and their public utility affiliates. In addition, if FES, AE Supply or any of their subsidiaries were to engage in the construction of significant new generation facilities in any of those states, they would also be subject to state siting authority.

MARYLAND

PE provides SOS pursuant to a combination of settlement agreements, MDPSC orders and regulations, and statutory provisions. SOS supply is competitively procured in the form of rolling contracts of varying lengths through periodic auctions that are overseen by the MDPSC and a third party monitor. Although settlements with respect to residential SOS for PE customers expired on December 31, 2012, by statute, service continues in the same manner unless changed by order of the MDPSC. The settlement provisions relating to non-residential SOS have also expired; however, by MDPSC order, the terms of service remain in place unless PE requests or the MDPSC orders a change. PE recovers its costs plus a return for providing SOS.

The Maryland legislature in 2008 adopted a statute codifying the EmPOWER Maryland goals to reduce electric consumption by 10% and reduce electricity demand by 15%, in each case by 2015. PE's initial plan submitted in compliance with the statute was approved in 2009 and covered 2009-2011, the first three years of the statutory period. Expenditures were originally estimated to be approximately $101 million for the PE programs for the entire period of 2009-2015. Meanwhile, after extensive meetings with the MDPSC Staff and other stakeholders, on August 31, 2011, PE filed a new comprehensive plan for the second three year period, 2012-2014, that includes additional and improved programs. The 2012-2014 plan is expected to cost approximately $66 million out of the original $101 million estimate for the entire EmPOWER program. On December 22, 2011, the MDPSC issued an order approving PE's second plan with various modifications and follow-up assignments. PE continues to recover program costs subject to a five-year amortization. Maryland law only allows for the utility to recover lost distribution revenue attributable to energy efficiency or demand reduction programs through a base rate case proceeding, and to date such recovery has not been sought or obtained by PE.

Pursuant to a bill passed by the Maryland legislature in 2011, the MDPSC adopted rules, effective May 28, 2012, that create specific requirements related to a utility's obligation to address service interruptions, downed wire response, customer communication, vegetation management, equipment inspection, and annual reporting. The MDPSC will be required to assess each utility's compliance with the new rules, and may assess penalties of up to $25,000 per day, per violation. The new rules set utility-specific SAIDI and SAIFI targets for 2012-2015; prescribe detailed tree-trimming requirements, outage restoration and downed wire response deadlines; and impose other reliability and customer satisfaction requirements. PE has advised the MDPSC that compliance with the new rules is expected to increase costs by approximately $106 million over the period 2012-2015. On April 1, 2013, the Maryland electric utilities, including PE, filed their first annual reports on compliance with the new rules. The MDPSC conducted a hearing on August 20, 2013 to discuss the reports, after which an order was issued on September 3, 2013, which accepted PE's filing and the operational changes proposed therein.

Following a "derecho" storm through the region on June 29, 2012, the MDPSC convened a new proceeding to consider matters relating to the electric utilities' performance in responding to the storm. Hearings on the matter were conducted in September 2012. Concurrently, Maryland's governor convened a special panel to examine possible ways to improve the resilience of the electric distribution system. On October 3, 2012, that panel issued a report calling for various measures including: acceleration and expansion of some of the requirements contained in the reliability standards which had become final on May 28, 2012; selective increased

investment in system hardening; creation of separate recovery mechanisms for the costs of those changes and investments; and penalties or bonuses on returns earned by the utilities based on their reliability performance. On February 27, 2013, the MDPSC issued an order (the February 27 Order) requiring the utilities to submit several reports over a series of months, relating to the costs and benefits of making further system and staffing enhancements in order to attempt to reduce storm outage durations. The order further requires the Staff of the MDPSC to report on possible performance-based rate structures and to propose additional rules relating to feeder performance standards, outage communication and reporting, and sharing of special needs customer information. PE has responded to the requirements in the order consistent with the schedule set forth therein. PE's final filing on September 3, 2013, discussed the steps needed to harden the utility's system in order to attempt to achieve various levels of storm response speed described in the February 27 Order, and projected that it would expect to make approximately $2.7 billion in infrastructure investments over 15 years to attempt to achieve the quickest level of response for the largest storm projected in the February 27 Order. The MDPSC has ordered that certain reports of its Staff relating to these matters be provided by May 1, 2014, and otherwise has not issued a schedule for further proceedings in this matter.

NEW JERSEY

JCP&L currently provides BGS for retail customers who do not choose a third party EGS and for customers of third party EGSs that fail to provide the contracted service. The supply for BGS, which is comprised of two components, is provided through contracts procured through separate, annually held descending clock auctions, the results of which are approved by the NJBPU. One BGS component and auction, reflecting hourly real time energy prices, is available for larger commercial and industrial customers. The other BGS component and auction, providing a fixed price service, is intended for smaller commercial and residential customers. All New Jersey EDCs participate in this competitive BGS procurement process and recover BGS costs directly from customers as a charge separate from base rates.

On September 7, 2011, the Division of Rate Counsel filed a Petition with the NJBPU asserting that it has reason to believe that JCP&L is earning an unreasonable return on its New Jersey jurisdictional rate base. The Division of Rate Counsel requested that the NJBPU order JCP&L to file a base rate case petition so that the NJBPU may determine whether JCP&L's current rates for electric service are just and reasonable. In its written Order issued July 31, 2012, the NJBPU found that a base rate proceeding "will assure that JCP&L's rates are just and reasonable and that JCP&L is investing sufficiently to assure the provision of safe, adequate and proper utility service to its customers" and ordered JCP&L to file a base rate case using a historical 2011 test year. The rate case petition was filed on November 30, 2012. In the filing, JCP&L requested approval to increase its revenues by approximately $31.5 million and reserved the right to update the filing to include costs associated with the impact of Hurricane Sandy. The NJBPU transmitted the case to the New Jersey Office of Administrative Law for further proceedings and an ALJ has been assigned. On February 22, 2013, JCP&L updated its filing to request recovery of $603 million of distribution-related Hurricane Sandy restoration costs, resulting in increasing the total revenues requested to approximately $112 million. On June 14, 2013, JCP&L further updated its filing to: 1) include the impact of a depreciation study which had been directed by the NJBPU; 2) remove costs associated with 2012 major storms, consistent with the NJBPU orders establishing a generic proceeding to review 2011 and 2012 major storm costs (discussed below); and 3) reflect other revisions to JCP&L's filing. That filing represented an increase of approximately $20.6 million over the revenues produced by existing base rates. Testimony has also been filed in the matter by the Division of Rate Counsel and several other intervening parties in opposition to the base rate increase JCP&L requested. Specifically, the testimony of the Division of Rate Counsel's witnesses recommended that revenues produced by JCP&L's base rates for electric service be reduced by approximately $202.8 million (such amount did not address the revenue requirements associated with major storm events of 2011 and 2012, which are subject to review in the generic proceeding). JCP&L filed rebuttal testimony in response to the testimony of other parties on August 7, 2013. Hearings in the rate case have concluded. In the initial briefs of the parties filed on January 27, 2014, the Division of Rate Counsel recommended that base rate revenues be reduced by $214.9 million while the NJBPU Staff recommended a $207.4 million reduction (such amounts do not address the revenue requirements associated with the major storm events of 2011 and 2012). Reply briefs were filed on February 24, 2014.

On March 20, 2013, the NJBPU ordered that a generic proceeding be established to investigate the prudence of costs incurred by all New Jersey utilities for service restoration efforts associated with the major storm events of 2011 and 2012. The Order provided that if any utility had already filed a proceeding for recovery of such storm costs, to the extent the amount of approved recovery had not yet been determined, the prudence of such costs would be reviewed in the generic proceeding. On May 31, 2013, the NJBPU clarified its earlier order to indicate that the 2011 major storm costs would be reviewed expeditiously in the generic proceeding with the goal of maintaining the base rate case schedule established by the ALJ where recovery of such costs would be addressed. The NJBPU further indicated in the May 31 clarification that it would review the 2012 major storm costs in the generic proceeding and the recovery of such costs would be considered through a Phase II in the existing base rate case or through another appropriate method to be determined at the conclusion of the generic proceeding. On June 21, 2013, consistent with NJBPU's orders, JCP&L filed the detailed report in support of recovery of major storm costs with the NJBPU. On November 15, 2013, the Division of Rate Counsel filed testimony recommending that approximately $15 million of JCP&L’s costs be disallowed for recovery. Evidentiary hearings in this proceeding were scheduled for January 2014 but were subsequently adjourned by the NJBPU before their commencement. On February 24, 2014, a Stipulation was filed with the NJBPU by JCP&L, the Division of Rate Counsel and NJBPU Staff which will allow recovery of $736 million of JCP&L’s $744 million of costs related to the significant weather events of 2011 and 2012. As a result, FirstEnergy recorded a regulatory asset impairment charge of approximately $8 million (pre-tax) as of December 31, 2013, included in Amortization of regulatory assets, net within the Consolidated Statements of Income. The agreement, upon which no other party took a position to oppose or support, is now pending before the NJBPU. Recovery of 2011 storm costs will be addressed in the pending base rate case; recovery of 2012 storm costs will be determined by the NJBPU.

Pursuant to a formal Notice issued by the NJBPU on September 14, 2011, public hearings were held in September 2011 to solicit comments regarding the state of preparedness and responsiveness of New Jersey's EDCs prior to, during, and after Hurricane Irene, with additional hearings held in October 2011. Additionally, the NJBPU accepted written comments through October 28, 2011 related to this inquiry. On December 14, 2011, the NJBPU Staff filed a report of its preliminary findings and recommendations with respect to the electric utility companies' planning and response to Hurricane Irene and the October 2011 snowstorm. The NJBPU selected a consultant to further review and evaluate the New Jersey EDCs' preparation and restoration efforts with respect to Hurricane Irene and the October 2011 snowstorm, and the consultant's report was submitted to and subsequently accepted by the NJBPU on September 12, 2012. JCP&L submitted written comments on the report. On January 24, 2013, based upon recommendations in its consultant's report, the NJBPU ordered the New Jersey EDCs to take a number of specific actions to improve their preparedness and responses to major storms. The order includes specific deadlines for implementation of measures with respect to preparedness efforts, communications, restoration and response, post event and underlying infrastructure issues. On May 31, 2013, the NJBPU ordered that the New Jersey EDCs implement a series of new communications enhancements intended to develop more effective communications among EDCs, municipal officials, customers and the NJBPU during extreme weather events and other expected periods of extended service interruptions. The new requirements include making information regarding estimated times of restoration available on the EDC's web sites and through other technological expedients. JCP&L is implementing the required measures consistent with the schedule set out in the above NJBPU's orders.

OHIO

The Ohio Companies primarily operate under an ESP, which expires on May 31, 2014. The material terms of the ESP include:

- Generation supplied through a CBP;
- A load cap of no less than 80%, so that no single supplier is awarded more than 80% of the tranches, which also applies to tranches assigned post-auction;
- A 6% generation discount to certain low income customers provided by the Ohio Companies through a bilateral wholesale contract with FES (FES is one of the wholesale suppliers to the Ohio Companies);
- No increase in base distribution rates through May 31, 2014; and
- A new distribution rider, Rider DCR, to recover a return of, and on, capital investments in the delivery system.

The Ohio Companies also agreed not to recover from retail customers certain costs related to transmission cost allocations by PJM as a result of ATSI's integration into PJM for the longer of the five-year period from June 1, 2011 through May 31, 2016 or when the amount of costs avoided by customers for certain types of products totals $360 million, subject to the outcome of certain PJM proceedings. The Ohio Companies also agreed to establish a $12 million fund to assist low income customers over the term of the ESP and agreed to additional matters related to energy efficiency and alternative energy requirements.

On April 13, 2012, the Ohio Companies filed an application with the PUCO to essentially extend the terms of their ESP for two years. The ESP 3 Application was approved by the PUCO on July 18, 2012. Several parties timely filed applications for rehearing. The PUCO issued an Entry on Rehearing on January 30, 2013 denying all applications for rehearing. Notices of appeal to the Supreme Court of Ohio were filed by two parties in the case, Northeast Ohio Public Energy Council and the ELPC. While briefing has been completed, the matter has not yet been scheduled for oral argument.

As approved, the ESP 3 plan continues certain provisions from the current ESP including:

- Continuing the current base distribution rate freeze through May 31, 2016;
- Continuing to provide economic development and assistance to low-income customers for the two-year plan period at levels established in the existing ESP;
- A 6% generation rate discount to certain low income customers provided by the Ohio Companies through a bilateral wholesale contract with FES (FES is one of the wholesale suppliers to the Ohio Companies);
- Continuing to provide power to non-shopping customers at a market-based price set through an auction process; and
- Continuing Rider DCR that allows continued investment in the distribution system for the benefit of customers.

As approved, the ESP 3 plan provides additional provisions, including:

- Securing generation supply for a longer period of time by conducting an auction for a three-year period rather than a one-year period, in each of October 2012 and January 2013, to mitigate any potential price spikes for the Ohio Companies' utility customers who do not switch to a competitive generation supplier; and
- Extending the recovery period for costs associated with purchasing RECs mandated by SB221 through the end of the new ESP 3 period. This is expected to initially reduce the monthly renewable energy charge for all non-shopping utility customers of the Ohio Companies by spreading out the costs over the entire ESP period.

Under SB221, the Ohio Companies are required to implement energy efficiency programs that achieve a total annual energy savings equivalent of approximately 1,211 GWHs in 2012 (an increase of 416,000 MWHs over 2011 levels), 1,726 GWHs in 2013, 2,306 GWHs in 2014 and 2,903 GWHs for each year thereafter through 2025. The Ohio Companies were also required to reduce peak demand in 2009 by 1%, with an additional 0.75% reduction each year thereafter through 2018. On May 15, 2013, the Ohio Companies filed their 2012 Status Update Report in which they indicated compliance with 2012 statutory energy efficiency and peak demand reduction benchmarks.

In accordance with PUCO Rules and a PUCO directive, on July 31, 2012 the Ohio Companies filed their three-year portfolio plan for the period January 1, 2013 through December 31, 2015. Estimated costs for the three Ohio Companies' plans total approximately $250 million over the three-year period, which is expected to be recovered in rates to the extent approved by the PUCO. Hearings were held with the PUCO in October 2012. On March 20, 2013, the PUCO approved the three-year portfolio plan for 2013-2015. Applications for rehearing were filed by the Ohio Companies and several other parties on April 19, 2013. The Ohio Companies filed their request for rehearing primarily to challenge the PUCO's decision to mandate that they offer planned energy efficiency resources into PJM's base residual auction. On May 15, 2013, the PUCO granted the applications for rehearing for the sole purpose of further consideration of the matter. On July 17, 2013, the PUCO denied the Ohio Companies' application for rehearing, in part, but authorized the Ohio Companies to receive 20% of any revenues obtained from bidding energy efficiency and demand response reserves into the PJM auction. The PUCO also confirmed that the Ohio Companies can recover PJM costs and applicable penalties associated with PJM auctions, including the costs of purchasing replacement capacity from PJM incremental auctions, to the extent that such costs or penalties are prudently incurred. On August 16, 2013, ELPC and OCC filed applications for rehearing under the basis that the PUCO's authorization for the Ohio Companies to share in the PJM revenues was unlawful. The PUCO granted rehearing on September 11, 2013 for the sole purpose of further consideration of the issue.

On September 16, 2013, the Ohio Companies filed with the Supreme Court of Ohio a notice of appeal of the PUCO's July 17, 2013 Entry on Rehearing related to energy efficiency, alternative energy, and long-term forecast rules stating that the rules issued by the PUCO are inconsistent with and are not supported by statutory authority. On October 23, 2013, the PUCO filed a motion to dismiss the appeal. The Ohio Companies' response was filed on November 4, 2013. The motion is still pending and additional briefing has followed. The Ohio Companies filed their merit brief with the Supreme Court of Ohio on February 24, 2014.

SB221 requires electric utilities and electric service companies in Ohio to serve part of their load from renewable energy resources measured by an annually increasing percentage amount through 2024. The Ohio Companies conducted RFPs in 2009, 2010 and 2011 to secure RECs to help meet the renewable energy requirements established under SB221. In September 2011, the PUCO opened a docket to review the Ohio Companies' alternative energy recovery rider through which the Ohio Companies recover the costs of acquiring these RECs and selected auditors to perform a financial and management audit. Final audit reports filed with the PUCO generally supported the Ohio Companies' approach to procurement of RECs, but also recommended the PUCO examine, for possible disallowance, certain costs associated with the procurement of in-state renewable obligations that the auditor characterized as excessive. Following the hearing, the PUCO issued an Opinion and Order on August 7, 2013 approving the Ohio Companies' acquisition process and their purchases of RECs to meet statutory mandates in all instances except for part of the purchases arising from one auction and directing the Ohio Companies to credit non-shopping customers in the amount of $43.3 million, plus interest, and to file tariff schedules reflecting the refund and interest costs within 60 days following the issuance of a final appealable order on the basis that the Ohio Companies did not prove such purchases were prudent. The Ohio Companies, along with other parties, timely filed applications for rehearing on September 6, 2013. On December 18, 2013, the PUCO denied all of the applications for rehearing. Based on the PUCO ruling, a regulatory charge of approximately $51 million, including interest, was recorded in the fourth quarter of 2013 included in Amortization of regulatory assets, net within the Consolidated Statement of Income. On December 24, 2013, the Ohio Companies filed a notice of appeal and a motion for stay of the PUCO's order with the Supreme Court of Ohio. On February 10, 2014, the Supreme Court of Ohio granted the Ohio Companies' motion for stay, which went into effect on February 14, 2014. On February 18, 2014, the Office of Consumers' Counsel and the Environmental Law and Policy Center also filed appeals of the PUCO's order.

In March 2012, the Ohio Companies conducted an RFP process to obtain SRECs to help meet the statutory benchmarks for 2012 and beyond. With the successful completion of this RFP, the Ohio Companies achieved their in-state solar compliance requirements for 2012. The Ohio Companies also held a short-term RFP process to obtain all state SRECs and both in-state and all state non-solar RECs to help meet the statutory benchmarks for 2012. The Ohio Companies recently reported that they met all of their annual renewable energy resource requirements for reporting year 2012. The Ohio Companies conducted an RFP in 2013 to cover their all-state SREC and their in-state and all-state REC compliance obligations.

The PUCO instituted a statewide investigation on December 12, 2012 to evaluate the vitality of the competitive retail electric service market in Ohio. The PUCO provided interested stakeholders the opportunity to comment on twenty-two questions. The questions posed are categorized as market design and corporate separation. The Ohio Companies timely filed their comments on March 1, 2013, and filed reply comments on April 5, 2013. On June 5, 2013, the PUCO requested additional comments and reply comments on the topics of market design and corporate separation, which the Ohio Companies timely filed on July 8, 2013 and July 22, 2013, respectively. The PUCO held a series of workshops throughout 2013, which included an en banc workshop on December 11, 2013. The PUCO Staff filed a report on January 16, 2014, which contained a limited discussion of the workshops and the PUCO Staff's recommendations. The Ohio Companies submitted comments on February 6, 2014 and Reply Comments on February 20, 2014.

PENNSYLVANIA

The Pennsylvania Companies currently operate under DSPs that expire on May 31, 2015, and provide for the competitive procurement of generation supply for customers that do not choose an alternative EGS or for customers of alternative EGSs that fail to provide the contracted service. The default service supply is currently provided by wholesale suppliers through a mix of long-term and short-term contracts procured through descending clock auctions, competitive requests for proposals and spot market purchases. On November 4, 2013, the Pennsylvania Companies filed a DSP that will provide the method by which they will procure the supply for their default service obligations for the period of June 1, 2015 through May 31, 2017. The Pennsylvania Companies proposed programs call for quarterly descending clock auctions to procure 3, 12, 24, and 48-month energy contracts, as well as, one RFP seeking 2-year contracts to secure SRECs for ME, PN, and Penn. Hearings on the plans are scheduled to be held March 4-7, 2014. The Pennsylvania Companies expect a decision from the PPUC by August 4, 2014.

The PPUC entered an Order on March 3, 2010 that denied the recovery of marginal transmission losses through the TSC rider for the period of June 1, 2007 through March 31, 2008, and directed ME and PN to submit a new tariff or tariff supplement reflecting the removal of marginal transmission losses from the TSC. Pursuant to a plan approved by the PPUC, ME and PN refunded those amounts to customers over a 29-month period that began in January of 2011. On appeal, the Commonwealth Court affirmed the PPUC's Order to the extent that it holds that line loss costs are not transmission costs and, therefore, the approximately $254 million in marginal transmission losses and associated carrying charges for the period prior to January 1, 2011, are not recoverable under ME's and PN's TSC riders. The Pennsylvania Supreme Court denied ME's and PN's Petition for Allowance of Appeal and the Supreme Court of the United States denied ME's and PN's Petition for Writ of Certiorari. ME and PN also filed a complaint in the U.S. District Court for the Eastern District of Pennsylvania to obtain an order that would enjoin enforcement of the PPUC and Pennsylvania court orders under a theory of federal preemption on the question of retail rate recovery of the marginal transmission loss charges. On September 30, 2013, the U.S. District Court granted the PPUC’s motion to dismiss. As a result of the U.S. District Court's September 30, 2013 decision, FirstEnergy recorded a regulatory asset impairment charge of approximately $254 million (pre-tax) in the quarter ended September 30, 2013 included in Amortization of regulatory assets, net within the Consolidated Statement of Income. The balance of marginal transmission losses was fully refunded to customers by the second quarter of 2013. On October 29, 2013, ME and PN filed a Notice of Appeal of the U.S. District Court’s decision to dismiss the complaint with the United States Court of Appeals for the Third Circuit. On December 30, 2013, ME and PN filed a brief with the Third Circuit that explained why it was legal error for the U.S. District Court to dismiss the complaint. The PPUC filed its brief on February 3, 2014, and ME and PN filed a reply brief on February 21, 2014. Oral argument has been scheduled for April 9, 2014.

Pennsylvania adopted Act 129 in 2008 to address issues such as: energy efficiency and peak load reduction; generation procurement; time-of-use rates; smart meters; and alternative energy. Among other things, Act 129 required utilities to file with the PPUC an energy efficiency and peak load reduction plan (EE&C Plan) by July 1, 2009, setting forth the utilities' plans to reduce energy consumption by a minimum of 1% and 3% by May 31, 2011 and May 31, 2013, respectively, and to reduce peak demand by a minimum of 4.5% by May 31, 2013. Act 129 provides for potentially significant financial penalties to be assessed on utilities that fail to achieve the required reductions in consumption and peak demand. The Pennsylvania Companies submitted a report on November 15, 2011, in which they reported on their compliance with statutory May 31, 2011, energy efficiency benchmarks. ME, PN and Penn achieved the 2011 benchmarks; however WP did not. WP could be subject to a statutory penalty of between $1 and $20 million. On July 15, 2013, the Pennsylvania Companies filed their preliminary energy efficiency and demand reduction results for the period ending May 31, 2013, indicating that all Pennsylvania Companies are expected to meet their statutory obligations. On November 15, 2013, the Pennsylvania Companies submitted their energy efficiency and peak demand reduction report for the period ending May 31, 2013, in which they indicated that all of the Pennsylvania Companies met their statutory requirements.

Pursuant to Act 129, the PPUC was charged with reviewing the cost effectiveness of energy efficiency and peak demand reduction programs. The PPUC found the energy efficiency programs to be cost effective and in an Order entered on August 3, 2012, the PPUC directed all of the electric utilities in Pennsylvania to submit by November 15, 2012, a Phase II EE&C Plan that would be in effect for the period June 1, 2013 through May 31, 2016. The PPUC has deferred ruling on the need to create peak demand reduction targets until it receives more information from the EE&C statewide evaluator. Based upon information received, the PPUC has not included a peak demand reduction requirement in the Phase II plans. The Pennsylvania Companies filed their Phase II plans and supporting testimony in November 2012. On January 16, 2013, the Pennsylvania Companies reached a settlement with all but one party on all but one issue. The settlement provides for the Pennsylvania Companies to meet with interested parties to discuss ways to expand upon the EE&C programs and incorporate any such enhancements after the plans are approved, provided that these enhancements will not jeopardize the Pennsylvania Companies' compliance with their required targets or exceed the statutory spending caps. On February 6, 2013, the Pennsylvania Companies filed revised Phase II EE&C Plans to conform the plans to the terms of the settlement. Total costs of these plans are expected to be approximately $234 million. All such costs are expected to be recoverable through the Pennsylvania Companies reconcilable Phase II EE&C Plan C riders. The remaining issue, raised by a natural gas company, involved the recommendation that the Pennsylvania Companies include in their plans incentives for natural gas space and water heating appliances. On March 14, 2013, the PPUC approved the 2013-2016 EE&C plans of the Pennsylvania Companies, adopting the settlement, and rejecting the natural gas companies recommendations.

In addition, Act 129 required utilities to file a SMIP with the PPUC. On December 31, 2012, the Pennsylvania Companies filed their Smart Meter Deployment Plan. The Deployment Plan requests deployment of approximately 98.5% of the smart meters to be installed over the period 2013 to 2019, and the remaining meters in difficult to reach locations to be installed by 2022, with an estimated life cycle cost of about $1.25 billion. Such costs are expected to be recovered through the Pennsylvania Companies'

PPUC-approved Riders SMT-C. Evidentiary hearings were held and briefs were submitted by the Pennsylvania Companies and the Office of Consumer Advocate. On November 8, 2013, the ALJ issued a Recommended Decision recommending that the Pennsylvania Companies' Deployment Plan be adopted with certain modifications, including, among other things, that the Pennsylvania Companies perform further benchmarking analyses on their costs and hire an independent consultant to perform further analyses on potential savings. On December 2, 2013, the Pennsylvania Companies submitted exceptions in which they challenged, among other things, certain recommendations in the ALJ's decision, and requested approval of a modification to the deployment schedule so as to allow the entire Penn smart meter system (170,000 meters) to be built by the end of 2015, instead of the original proposed installation of 60,000 meters by the end of 2016. The Office of Consumer Advocate took exception to one issue and both parties filed replies to exceptions on December 12, 2013. The case is now before the PPUC for consideration. A decision is expected during the first quarter of 2014.

In the PPUC Order approving the FirstEnergy and Allegheny merger, the PPUC announced that a separate statewide investigation into Pennsylvania's retail electricity market would be conducted with the goal of making recommendations for improvements to ensure that a properly functioning and workable competitive retail electricity market exists in the state. On April 29, 2011, the PPUC entered an Order initiating the investigation and requesting comments from interested parties on eleven directed questions concerning retail markets in Pennsylvania to investigate both intermediate and long term plans that could be adopted to further foster the competitive markets, and to explore the future of default service in Pennsylvania following the expiration of the upcoming DSPs on May 31, 2015. A final order was issued on February 15, 2013, providing recommendations on the entities to provide default service, the products to be offered, billing options, customer education, and licensing fees and assessments, among other items. Subsequently, the PPUC established five workgroups and one comment proceeding in order to seek resolution of certain matters and to clarify certain obligations that arose from that order.

The PPUC issued a Proposed Rulemaking Order on August 25, 2011, which proposed a number of substantial modifications to the current Code of Conduct regulations that were promulgated to provide competitive safeguards to the competitive retail electricity market in Pennsylvania. The proposed changes include, but are not limited to: an EGS may not have the same or substantially similar name as the EDC or its corporate parent; EDCs and EGSs would not be permitted to share office space and would need to occupy different buildings; EDCs and affiliated EGSs could not share employees or services, except certain corporate support, emergency, or tariff services (the definition of "corporate support services" excludes items such as information systems, electronic data interchange, strategic management and planning, regulatory services, legal services, or commodities that have been included in regulated rates at less than market value); and an EGS must enter into a trademark agreement with the EDC before using its trademark or service mark. The Proposed Rulemaking Order was published on February 11, 2012, and comments were filed by the Pennsylvania Companies and FES on March 27, 2012. If implemented these rules could require a significant change in the ways FES and the Pennsylvania Companies do business in Pennsylvania, and could possibly have an adverse impact on their results of operations and financial condition. Pennsylvania's Independent Regulatory Review Commission subsequently issued comments on the proposed rulemaking on April 26, 2012, which called for the PPUC to further justify the need for the proposed revisions by citing a lack of evidence demonstrating a need for them. The House Consumer Affairs Committee of the Pennsylvania General Assembly also sent a letter to the Independent Regulatory Review Commission on July 12, 2012, noting its opposition to the proposed regulations as modified.

WEST VIRGINIA

MP and PE currently operate under a Joint Stipulation and Agreement of Settlement reached with the other parties and approved by the WVPSC in June 2010 that provided for:

- $40 million annualized base rate increases effective June 29, 2010;
- Deferral of February 2010 storm restoration expenses over a maximum five-year period;
- Additional $20 million annualized base rate increase effective in January 2011;
- Decrease of $20 million in ENEC rates effective January 2011, providing for deferral of related costs for later recovery in 2012; and
- Moratorium on filing for further increases in base rates before December 1, 2011, except under specified circumstances.

The WVPSC opened a general investigation into the June 29, 2012, derecho windstorm with data requests for all utilities. A public meeting for presentations on utility responses and restoration efforts was held on October 22, 2012 and two public input hearings have been held. The WVPSC issued an Order in this matter on January 23, 2013 closing the proceeding and directing electric utilities to file a vegetation management plan within six months and to propose a cost recovery mechanism. This Order also requires MP and PE to file a status report regarding improvements to their storm response procedures by the same date. On July 23, 2013, MP and PE filed their vegetation management plans, which provided for recovery of costs through a surcharge mechanism. A hearing was held on December 3, 2013, and briefing followed but the WVPSC has not yet issued an opinion in this matter.

MP and PE filed their Resource Plan with the WVPSC in August 2012 detailing both supply and demand forecasts and noting a substantial capacity deficiency. MP and PE filed a Petition for approval of a Generation Resource Transaction with the WVPSC in November 2012 that proposed a net ownership transfer of 1,476 MW of coal-fired generation capacity to MP. The proposed transfer involved MP's acquisition of the remaining ownership of the Harrison Power Station from AE Supply and the sale of MP's minority interest in the Pleasants Power Station to AE Supply. FERC authorized the transfers on April 23, 2013 and the financing on May 13, 2013. A Joint Settlement Agreement was filed by the majority of parties on August 21, 2013. On October 7, 2013, the WVPSC

authorized the transaction, with certain conditions, and on October 9, 2013, the transaction closed resulting in MP recording a pre-tax impairment charge of approximately $322 million in the fourth quarter of 2013 to reduce the net book value of the Harrison Power Station to the amount that was permitted to be included in jurisdictional rate base. The charge is included in Impairment of long lived assets within the Consolidated Statement of Income. Concurrently, MP recognized a regulatory liability of approximately $23 million representing refunds to customers associated with the excess purchase price received by MP above the net book value of MP's minority interest in the Pleasants Power Station. The transaction resulted in AE Supply receiving net consideration of $1.1 billion and MP's assumption of a $73.5 million pollution control note. The $1.1 billion net consideration was originally financed by MP through an equity infusion from FE of approximately $527 million and a note payable to AE Supply of approximately $573 million. The note payable to AE Supply was paid in the fourth quarter of 2013. In accordance with the settlement, MP and PE will file a base rate case by April 30, 2014. On November 6, 2013, the WVCAG petitioned for appeal with the West Virginia Supreme Court. MP and PE filed their response to the WVCAG petition on December 27, 2013 and WVCAG filed its reply on January 16, 2014. Oral argument before the Supreme Court is scheduled for March 5, 2014.

RELIABILITY MATTERS

Federally-enforceable mandatory reliability standards apply to the bulk electric system and impose certain operating, record-keeping and reporting requirements on the Utilities, FES, AE Supply, FG, FENOC, ATSI and TrAIL. NERC is the ERO designated by FERC to establish and enforce these reliability standards, although NERC has delegated day-to-day implementation and enforcement of these reliability standards to eight regional entities, including RFC. All of FirstEnergy's facilities are located within the RFC region. FirstEnergy actively participates in the NERC and RFC stakeholder processes, and otherwise monitors and manages its companies in response to the ongoing development, implementation and enforcement of the reliability standards implemented and enforced by RFC.

FirstEnergy believes that it is in compliance with all currently-effective and enforceable reliability standards. Nevertheless, in the course of operating its extensive electric utility systems and facilities, FirstEnergy occasionally learns of isolated facts or circumstances that could be interpreted as excursions from the reliability standards. If and when such items are found, FirstEnergy develops information about the item and develops a remedial response to the specific circumstances, including in appropriate cases “self-reporting” an item to RFC. Moreover, it is clear that the NERC, RFC and FERC will continue to refine existing reliability standards as well as to develop and adopt new reliability standards. Any inability on FirstEnergy's part to comply with the reliability standards for its bulk power system could result in the imposition of financial penalties that could have a material adverse effect on its financial condition, results of operations and cash flows.

FERC MATTERS

PJM Transmission Rates

PJM and its stakeholders have been debating the proper method to allocate costs for new transmission facilities. While FirstEnergy and other parties advocated for a traditional "beneficiary pays" (or usage based) approach, others advocate for “socializing” the costs on a load-ratio share basis - each customer in the zone would pay based on its total usage of energy within PJM. On August 6, 2009, the U.S. Court of Appeals for the Seventh Circuit found that FERC had not supported a prior FERC decision to allocate costs for new 500 kV and higher voltage facilities on a load ratio share basis and, based on that finding, remanded the rate design issue to FERC. In an order dated January 21, 2010, FERC set this matter for a “paper hearing” and requested parties to submit written comments. FERC identified nine separate issues for comment and directed PJM to file the first round of comments. PJM filed certain studies with FERC on April 13, 2010, which demonstrated that allocation of the cost of high voltage transmission facilities on a beneficiary pays basis results in certain LSEs in PJM bearing the majority of the costs. FirstEnergy and a number of other utilities, industrial customers and state utility commissions supported the use of the beneficiary pays approach for cost allocation for high voltage transmission facilities. Other utilities and state utility commissions supported continued socialization of these costs on a load ratio share basis. On March 30, 2012, FERC issued an order on remand reaffirming its prior decision that costs for new transmission facilities that are rated at 500 kV or higher are to be collected from all transmission zones throughout the PJM footprint by means of a postage-stamp (or socialized) rate based on the amount of load served in a transmission zone and concluding that such methodology is just and reasonable and not unduly discriminatory or preferential. On April 30, 2012, FirstEnergy requested rehearing of FERC's March 30, 2012 order and on March 22, 2013, FERC denied rehearing. On March 29, 2013, FirstEnergy filed its Petition for Review with the U.S. Court of Appeals for the Seventh Circuit, and the case subsequently was consolidated for briefing and disposition before that court. Briefing is complete, and the case will be scheduled for oral argument, with a decision currently expected in 2014.

Order No. 1000, issued by FERC on July 21, 2011, required the submission of a compliance filing by PJM or the PJM transmission owners demonstrating that the cost allocation methodology for new transmission projects directed by the PJM Board of Managers satisfied the principles set forth in the order. To demonstrate compliance with the regional cost allocation principles of the order, the PJM transmission owners, including FirstEnergy, submitted a filing to FERC on October 11, 2012, proposing a hybrid method of 50% beneficiary pays and 50% postage stamp to be effective for RTEP projects approved by the PJM Board of Managers on, and after, the effective date of the compliance filing. On January 31, 2013, FERC conditionally accepted the hybrid method to be effective on February 1, 2013, subject to refund and to a future order on PJM's separate Order No. 1000 compliance filing. On March 22, 2013, FERC granted final acceptance of the hybrid method. Certain parties have sought rehearing of parts of FERC's March 22, 2013 order. These requests for rehearing are pending before FERC. On July 10, 2013, the PJM transmission owners, including

FirstEnergy, submitted filings to FERC setting forth the cost allocation method for projects that cross the borders between: (1) the PJM region and the NYISO region and; (2) the PJM region and the FERC-jurisdictional members of the SERTP region. These filings propose to allocate the cost of these interregional transmission projects based on the costs of projects that otherwise would have been constructed separately in each region. On the same date, also in response to Order No. 1000, the PJM transmission owners, including FirstEnergy, also submitted to FERC a filing stating that the cost allocation provisions for interregional transmission projects provided in the Joint Operating Agreement between PJM and MISO comply with the requirements of Order No. 1000. On December 30, 2013, FERC conditionally accepted the PJM/SERTP cross-border project cost allocation filing, subject to refund and future orders in PJM's and SERTP's related Order No. 1000 interregional compliance proceedings. The PJM/NYISO and PJM/MISO cross-border project cost allocation filings remain pending before FERC. On January 16, 2014, FERC issued an order regarding the effective date of PJM's separate Order No. 1000 compliance filing, noting that it would address the merits of the comments on and protests to that filing and related compliance filings in a future order.

Numerous parties, including ATSI, FES, TrAIL, OE, CEI, TE, Penn, JCP&L, ME, MP, PN, WP and PE, have sought judicial review of Order No. 1000 before the U.S. Court of Appeals for the D.C. Circuit. Briefing was completed in December 2013 and oral argument is scheduled for March 20, 2014.

The outcome of these proceedings and their impact, if any, on FirstEnergy cannot be predicted at this time.

RTO Realignment

On June 1, 2011, ATSI and the ATSI zone transferred from MISO to PJM. The move was performed as planned with no known operational or reliability issues for ATSI or for the wholesale transmission customers in the ATSI zone. While many of the matters involved with the move have been resolved, FERC denied recovery by means of ATSI's transmission rate for certain charges that collectively can be described as "exit fees" and certain other transmission cost allocation charges totaling approximately $78.8 million until such time as ATSI submits a cost/benefit analysis that demonstrates net benefits to customers from the move. On December 21, 2012, ATSI and other parties filed a proposed settlement agreement with FERC to resolve the exit fee and transmission cost allocation issues. However, FERC subsequently rejected that settlement stating that its action is without prejudice to ATSI submitting a cost/benefit analysis demonstrating that the benefits of the RTO realignment decisions outweigh the exit fee and transmission cost allocation charges. On October 21, 2013, FirstEnergy filed a request for rehearing of FERC's order.

Separately, the question of ATSI's responsibility of certain costs for the “Michigan Thumb” transmission project continues to be disputed. Potential responsibility arises under the MISO MVP tariff, which has been litigated in complex proceedings in front of FERC and certain U.S. appellate courts. The MISO and its allied parties assert that the benefits to the ATSI zone for the Michigan Thumb project are roughly commensurate with the costs that MISO desires to charge to the ATSI zone, estimated to be as much as $16 million per year. ATSI has submitted evidence that the Michigan Thumb project provides no electric benefits to the ATSI zone and, on that basis, opposes the MISO’s efforts to impose these costs to the ATSI zone loads. The MISO and its allied parties also assert that certain language in the MISO Transmission Owners Agreement requires ATSI to pay these charges. In the event of a final non-appealable order that rules that ATSI must pay these charges, ATSI will seek recovery of these charges through its formula rate. While FERC proceedings regarding whether the MISO can charge ATSI for MVP costs remain pending, on February 24, 2014, the U.S. Supreme Court declined to hear appeals filed by FirstEnergy and other parties of the Seventh Circuit's June 2013 decision upholding FERC's acceptance of the MISO's generic MVP cost allocation proposal.

In the May 31, 2011 order, FERC ruled that the costs for certain "legacy RTEP" transmission projects in PJM could be charged to transmission customers in the ATSI zone. ATSI sought rehearing of the question of whether the ATSI zone should pay these legacy RTEP charges and, on September 20, 2012, FERC denied ATSI's request for rehearing. ATSI subsequently filed a petition for review with the U.S. Court of Appeals for the D.C. Circuit. The case thereafter was briefed and oral arguments took place on December 11, 2013. A decision currently is expected in the second quarter of 2014.

The outcome of those proceedings that address the remaining open issues related to ATSI's move into PJM cannot be predicted at this time.

California Claims Matters

In October 2006, several California governmental and utility parties presented AE Supply with a settlement proposal to resolve alleged overcharges for power sales by AE Supply to the California Energy Resource Scheduling division of the CDWR during 2001. The settlement proposal claims that CDWR is owed approximately $190 million for these alleged overcharges. This proposal was made in the context of mediation efforts by FERC and the U.S. Court of Appeals for the Ninth Circuit in several pending proceedings to resolve all outstanding refund and other claims, including claims of alleged price manipulation in the California energy markets, during 2000 and 2001. The Ninth Circuit had previously remanded one of those proceedings to FERC, which dismissed the claims of the California Parties in May 2011, and affirmed the dismissal in June 2012. On June 20, 2012, the California Parties appealed FERC's decision back to the Ninth Circuit. Briefing was completed before the Ninth Circuit on October 23, 2013. The timing of further action by the Ninth Circuit is unknown.

In another proceeding, in June 2009, the California Attorney General, on behalf of certain California parties, filed another complaint with FERC against various sellers, including AE Supply, again seeking refunds for transactions in the California energy markets

during 2000 and 2001. The above-noted transactions with CDWR are the basis for including AE Supply in this complaint. AE Supply filed a motion to dismiss, which was granted by FERC in May 2011, and affirmed by FERC in June 2012. The California Attorney General has appealed FERC's dismissal of its complaint to the Ninth Circuit, which has consolidated the case with other pending appeals related to California refund claims, and stayed the proceedings pending further order.

FirstEnergy cannot predict the outcome of either of the above matters or estimate the possible loss or range of loss.

PATH Transmission Project

The PATH project was proposed to be comprised of a 765 kV transmission line from West Virginia through Virginia and into Maryland, modifications to an existing substation in Putnam County, West Virginia, and the construction of new substations in Hardy County, West Virginia and Frederick County, Maryland. PJM initially authorized construction of the PATH project in June 2007. On August 24, 2012, the PJM Board of Managers canceled the PATH project, which it had suspended in February 2011. As a result, approximately $62 million and approximately $59 million in costs incurred by PATH-Allegheny and PATH-WV, respectively, were reclassified from net property, plant and equipment to a regulatory asset for future recovery. On September 28, 2012, those companies requested authorization from FERC to recover the costs with a proposed return on equity of 10.9% (10.4% base plus 0.5% RTO membership) from PJM customers over the next five years. Several parties protested the request. On November 30, 2012, FERC issued an order denying the 0.5% return on equity adder for RTO membership and allowing the tariff changes enabling recovery of these costs to become effective on December 1, 2012, subject to settlement judge procedures and hearing if the parties do not agree to a settlement. The issues subject to settlement include the prudence of the costs, the base return on equity and the period of recovery. PATH-Allegheny and PATH-WV are currently engaged in settlement discussions with the other parties. Depending on the outcome of a possible settlement or hearing, if settlement is not achieved, PATH-Allegheny and PATH-WV may be required to refund certain amounts that have been collected under their formula rate.

PATH-Allegheny and PATH-WV have requested rehearing of FERC's denial of the 0.5% return on equity adder for RTO membership; that request for rehearing remains pending before FERC. In addition, FERC has consolidated for settlement judge procedures and hearing purposes three formal challenges to the PATH formula rate annual updates submitted to FERC in June 2010, June 2011 and June 2012, with the September 28, 2012 filing for recovery of costs associated with the cancellation of the PATH project.

Hydroelectric Asset Sale

On September 4, 2013, certain of FirstEnergy’s subsidiaries submitted filings with FERC for authorization to sell eleven hydroelectric power plant projects to subsidiaries of Harbor Hydro Holdings, LLC (Harbor Hydro), a subsidiary of LS Power Equity Partners II, LP (LS Power). The eleven hydroelectric projects are: the Seneca Pumped Storage Project, Allegheny Lock & Dam No. 5, Allegheny Lock & Dam No. 6, the Lake Lynn Project, the Millville Hydro Project, the Dam No. 4 Project, the Dam No. 5 Project, and four additional projects located in Shenandoah, Front Royal and Luray, Virginia. The eleven projects have a combined generating capacity of approximately 527 MW. On February 12, 2014, the sale of the hydroelectric power plants to LS Power closed for approximately $395 million. See Note 20, Discontinued Operations and Assets Held for Sale for additional information regarding the assets sold.

MISO Capacity Portability

On June 11, 2012, FERC issued a Notice of Request for Comments regarding whether existing rules on transfer capability act as barriers to the delivery of capacity between MISO and PJM. FERC is responding to suggestions from MISO and the MISO stakeholders that PJM's rules regarding the criteria and qualifications for external generation capacity resources be changed to ease participation by resources that are located in MISO in PJM's RPM capacity auctions. FirstEnergy submitted comments and reply comments in August 2012. In the fall of 2012, FirstEnergy participated in certain stakeholder meetings to review various proposals advanced by MISO. Although none of MISO's proposals attracted significant stakeholder support, in January 2013, MISO filed a pleading with FERC that renewed many of the arguments advanced in prior MISO filings and asked FERC to take expedited action to address MISO's allegations. FirstEnergy and other parties subsequently submitted filings arguing that MISO's concerns largely are without foundation and suggesting that FERC order that the remaining concerns be addressed in the existing stakeholder process that is described in the PJM/MISO Joint Operating Agreement. On April 2, 2013, FERC issued an order directing MISO and PJM to make presentations to FERC regarding ongoing regional efforts to address whether barriers to transfer capability exist between the MISO and PJM regions and the actions the FERC should take to address any such barriers. The RTOs presented their respective positions to FERC on June 20, 2013 and provided additional information regarding their stakeholder prioritization survey, in response to a FERC request on June 27, 2013. On September 26, 2013, the RTOs jointly submitted an informational filing providing a description of and schedule for their Joint and Common Market initiatives. On December 19, 2013, FERC issued an order directing that FERC staff are to attend the “joint and common market” stakeholder meetings for the purpose of monitoring progress on the initiatives described in the September 26, 2013 joint informational filing and establishing a new proceeding to reflect the broadened scope of issues contemplated by that filing and the RTOs' joint and common market initiatives. FERC has not acted on the presentations, and the RTOs and affected parties are working to address the MISO's proposal in stakeholder proceedings. Changes to the criteria and qualifications for participation in the PJM RPM capacity auctions could have a significant impact on the outcome of those auctions, including a negative impact on the prices at which those auctions would clear.

MOPR Reform

On December 7, 2012, PJM filed amendments to its tariff to revise the MOPR used in the RPM. PJM revised the MOPR to add two broad, categorical exemptions, eliminate an existing exemption, and to limit the applicability of the MOPR to certain capacity resources. The filing also included related and conforming changes to the RPM posting requirements and to those provisions describing the role of the Independent Market Monitor for the PJM Region. On May 2, 2013, FERC issued an order in large part accepting PJM's proposed reform of the MOPR, including the proposed exemptions and applicability but also requiring PJM to commit to future review and, if necessary, additional revisions to the MOPR to accommodate changing market conditions. On June 3, 2013, FirstEnergy submitted a request for rehearing of FERC's May 2, 2013 order. In its rehearing request, FirstEnergy referenced the results of the May 2013 PJM RPM capacity auction, and publicly-available data about the reasons for the unexpectedly low "rest-of-RTO" clearing price of $59 per MW-day, as supporting its contention that the MOPR reform depressed prices as predicted in FirstEnergy's December 28, 2012 and January 25, 2013 comments. FirstEnergy's request for rehearing is pending before FERC.

FTR Underfunding Complaint

In PJM, FTRs are a mechanism to hedge congestion and they operate as a financial replacement for physical firm transmission service. FTRs are financially-settled instruments that entitle the holder to a stream of revenues based on the hourly congestion price differences across a specific transmission path in the PJM Day-ahead Energy Market. FE also performs bilateral transactions for the purpose of hedging the price differences between the location of supply resources and retail load obligations. Due to certain language in the PJM tariff, the funds that are set aside to pay FTRs can be diverted to other uses, resulting in “underfunding” of FTR payments. Since June of 2010, FES and AE Supply have lost more than $65.5 million in revenues that they otherwise would have received as FTR holders to hedge congestion costs. FES and AE Supply expect to continue to experience significant underfunding.

On December 28, 2011, FES and AE Supply filed a complaint with FERC for the purpose of modifying certain provisions in the PJM tariff to eliminate FTR underfunding. On March 2, 2012, FERC issued an order dismissing the complaint. In its order, FERC ruled that it was not appropriate to initiate action at that time because of the unknown root causes of FTR underfunding. FERC directed PJM to convene stakeholder proceedings for the purpose of determining the root causes of the FTR underfunding. FERC went on to note that its dismissal of the complaint was without prejudice to FES and AE Supply or any other affected entity filing a complaint if the stakeholder proceedings proved unavailing. FES and AE Supply sought rehearing of FERC's order and, on July 19, 2012, FERC denied rehearing. In April, 2012, PJM issued a report on FTR underfunding. However, the PJM stakeholder process proved unavailing as the stakeholders were not willing to change the tariff to eliminate FTR underfunding. Accordingly, on February 15, 2013, FES and AE Supply refiled their complaint with FERC for the purpose of changing the PJM tariff to eliminate FTR underfunding. Various parties filed responsive pleadings, including PJM. On June 5, 2013, FERC issued its order denying the new complaint. On July 5, 2013, FirstEnergy filed a request for rehearing of FERC's order. FES and AE Supply's request for rehearing, and all subsequent filings in the docket, are pending before FERC.

PJM RPM Tariff Amendments

In November 2013, PJM began to submit a series of amendments to its RPM capacity tariff in order to address certain problems that have been observed in recent auctions. These problems can be grouped into three categories: (i) Demand Response (DR); (ii) imports; and (iii) modeling of transmission upgrades in calculating geographic clearing prices. The purpose of PJM’s tariff amendments is to ensure that resources that clear in the RPM auctions are available and able to satisfy all obligations under the PJM tariffs. In each of the affected dockets, FirstEnergy submitted comments as part of a coalition of utilities (generally including an affiliate of AEP, Duke and Dayton). The FirstEnergy/coalition position was that all of the PJM proposals should be accepted as proposed, and that the FERC should order PJM to take additional steps that should have the effect of eliminating additional distortions and flaws in the RPM market. FERC issued deficiency letters requesting additional information from PJM regarding the imports and modeling filings, and on January 30, 2014 accepted the DR filing as proposed. On February 18 and 21, 2014, respectively, PJM filed its responses to FERC's deficiency letters regarding the modeling and imports filings. PJM's compliance filings and all other filings in the dockets are pending before FERC.

Market-Based Rate Authority, Triennial Update

OE, CEI, TE, Penn, JCP&L, ME, PN, MP, WP, PE, AE Supply, FES, FG, NG, FirstEnergy Generation Mansfield Unit 1 Corp., Buchanan Generation, LLC, and Green Valley Hydro, LLC each hold authority from FERC to sell electricity at market-based rates. One condition for retaining this authority is that every three years each entity must file an update with the FERC that demonstrates that each entity continues to meet FERC’s requirements for holding market-based rate authority. On December 20, 2013, FESC submitted to FERC the most recent triennial market power analysis filing for each market-based rate holder for the current cycle of this filing requirement. That filing is pending before FERC.

16. COMMITMENTS, GUARANTEES AND CONTINGENCIES

NUCLEAR INSURANCE

The Price-Anderson Act limits the public liability which can be assessed with respect to a nuclear power plant to $13.6 billion (assuming 104 units licensed to operate) for a single nuclear incident, which amount is covered by: (i) private insurance amounting to $375 million; and (ii) $13.2 billion provided by an industry retrospective rating plan required by the NRC pursuant thereto. Under such retrospective rating plan, in the event of a nuclear incident at any unit in the United States resulting in losses in excess of private insurance, up to $127 million (but not more than $19 million per unit per year in the event of more than one incident) must be contributed for each nuclear unit licensed to operate in the country by the licensees thereof to cover liabilities arising out of the incident. Based on their present nuclear ownership and leasehold interests, FirstEnergy's maximum potential assessment under these provisions would be $509 million (OE-$44 million, NG-$442 million, and TE-$23 million) per incident but not more than $76 million (OE-$7 million, NG-$66 million, and TE-$3 million) in any one year for each incident.

In addition to the public liability insurance provided pursuant to the Price-Anderson Act, FirstEnergy has also obtained insurance coverage in limited amounts for economic loss and property damage arising out of nuclear incidents. FirstEnergy is a member of NEIL, which provides coverage (NEIL I) for the extra expense of replacement power incurred due to prolonged accidental outages of nuclear units. Under NEIL I, FirstEnergy's subsidiaries have policies, renewable yearly, corresponding to their respective nuclear interests, which provide an aggregate indemnity of up to approximately $2 billion (OE-$168 million, NG-$1.7 billion, TE-$90 million) for replacement power costs incurred during an outage after an initial 20-week waiting period. Members of NEIL I pay annual premiums and are subject to assessments if losses exceed the accumulated funds available to the insurer. FirstEnergy's present maximum aggregate assessment for incidents at any covered nuclear facility occurring during a policy year would be approximately $14 million (OE-$1.2 million, NG-$12 million and TE-$0.6 million).

FirstEnergy is insured as to its respective nuclear interests under property damage insurance provided by NEIL to the operating company for each plant. Under these arrangements, up to $2.75 billion of coverage for decontamination costs, decommissioning costs, debris removal and repair and/or replacement of property is provided. FirstEnergy pays annual premiums for this coverage and is liable for retrospective assessments of up to approximately $79 million (OE-$7 million, NG-$68 million, TE-$3 million and ME-$1 million).

FirstEnergy intends to maintain insurance against nuclear risks as described above as long as it is available. To the extent that replacement power, property damage, decontamination, decommissioning, repair and replacement costs and other such costs arising from a nuclear incident at any of FirstEnergy's plants exceed the policy limits of the insurance in effect with respect to that plant, to the extent a nuclear incident is determined not to be covered by FirstEnergy's insurance policies, or to the extent such insurance becomes unavailable in the future, FirstEnergy would remain at risk for such costs.

The NRC requires nuclear power plant licensees to obtain minimum property insurance coverage of $1.06 billion or the amount generally available from private sources, whichever is less. The proceeds of this insurance are required to be used first to ensure that the licensed reactor is in a safe and stable condition and can be maintained in that condition so as to prevent any significant risk to the public health and safety. Within 30 days of stabilization, the licensee is required to prepare and submit to the NRC a cleanup plan for approval. The plan is required to identify all cleanup operations necessary to decontaminate the reactor sufficiently to permit the resumption of operations or to commence decommissioning. Any property insurance proceeds not already expended to place the reactor in a safe and stable condition must be used first to complete those decontamination operations that are ordered by the NRC. FirstEnergy is unable to predict what effect these requirements may have on the availability of insurance proceeds.

GUARANTEES AND OTHER ASSURANCES

FirstEnergy has various financial and performance guarantees and indemnifications which are issued in the normal course of business. These contracts include performance guarantees, stand-by letters of credit, debt guarantees, surety bonds and indemnifications. FirstEnergy enters into these arrangements to facilitate commercial transactions with third parties by enhancing the value of the transaction to the third party.

As of December 31, 2013, outstanding guarantees and other assurances aggregated approximately $4.3 billion, consisting of parental guarantees ($1,375 million), subsidiaries' guarantees ($2,197 million) and other guarantees ($742 million).

Of this amount, substantially all relates to guarantees of wholly-owned consolidated entities. FES' debt obligations are generally guaranteed by its subsidiaries, FG and NG, and FES guarantees the debt obligations of each of FG and NG. Accordingly, present and future holders of indebtedness of FES, FG, and NG would have claims against each of FES, FG, and NG, regardless of whether their primary obligor is FES, FG, or NG.

COLLATERAL AND CONTINGENT-RELATED FEATURES

In the normal course of business, FE and its subsidiaries routinely enter into physical or financially settled contracts for the sale and purchase of electric capacity, energy, fuel, and emission allowances. Certain bilateral agreements and derivative instruments contain provisions that require FE or its subsidiaries to post collateral. This collateral may be posted in the form of cash or credit support with thresholds contingent upon FE's or its subsidiaries' credit rating from each of the major credit rating agencies. The collateral and credit support requirements vary by contract and by counterparty. The incremental collateral requirement allows for the offsetting of assets and liabilities with the same counterparty, where the contractual right of offset exists under applicable master netting agreements.

Bilateral agreements and derivative instruments entered into by FE and its subsidiaries have margining provisions that require posting of collateral. Based on FES' power portfolio exposure as of December 31, 2013, FES has posted collateral of $142 million and AE supply has posted collateral of $8 million. The Regulated Distribution segment has posted collateral of $11 million.

These credit-risk-related contingent features stipulate that if the subsidiary were to be downgraded or lose its investment grade credit rating (based on its senior unsecured debt rating), it would be required to provide additional collateral. Depending on the volume of forward contracts and future price movements, higher amounts for margining could be required.

Subsequent to the occurrence of a senior unsecured credit rating downgrade to below S&P's BBB- and Moody's Baa3, or a "material adverse event," the immediate posting of collateral or accelerated payments may be required of FE or its subsidiaries. The following table discloses the additional credit contingent contractual obligations that may be required under certain events as of December 31, 2013:

Collateral Provisions	FES	AE Supply	Utilities	Total
		(In millions)		
Split Rating (One rating agency's rating below investment grade)	$ 496	$ 6	$ 53	$ 555
BB+/Ba1 Credit Ratings	$ 542	$ 6	$ 53	$ 601
Full impact of credit contingent contractual obligations	$ 777	$ 58	$ 88	$ 923

Excluded from the preceding chart are the potential collateral obligations due to affiliate transactions between the Regulated Distribution segment and Competitive Energy Services segment. As of December 31, 2013, neither FES nor AE Supply had any collateral posted with their affiliates. In the event of a senior unsecured credit rating downgrade to below S&P's BB- or Moody's Ba3, FES and AE Supply would be required to post $66 million and $2 million, respectively.

OTHER COMMITMENTS AND CONTINGENCIES

FirstEnergy is a guarantor under a syndicated three-year senior secured term loan facility due October 18, 2015, under which Global Holding borrowed $350 million. Proceeds from the loan were used to repay Signal Peak's and Global Rail's maturing $350 million syndicated two-year senior secured term loan facility. In addition to FirstEnergy, Signal Peak, Global Rail, Global Mining Group, LLC and Global Coal Sales Group, LLC, each being a direct or indirect subsidiary of Global Holding, have also provided their joint and several guaranties of the obligations of Global Holding under the new facility.

In connection with the current facility, 69.99% of Global Holding's direct and indirect membership interests in Signal Peak, Global Rail and their affiliates along with FEV's and WMB Marketing Ventures, LLC's respective 33-1/3% membership interests in Global Holding, are pledged to the lenders under the current facility as collateral.

FirstEnergy, FEV and the other two co-owners of Global Holding, Pinesdale LLC, a Gunvor Group, Ltd. subsidiary, and WMB Marketing Ventures, LLC, have agreed to use their best efforts to refinance the new facility no later than July 20, 2015, which reflects the terms of an amendment dated August 14, 2013, on a non-recourse basis so that FirstEnergy's guaranty can be terminated and/or released. If that refinancing does not occur, FirstEnergy may require each co-owner to lend to Global Holding, on a pro rata basis, funds sufficient to prepay the new facility in full. In lieu of providing such funding, the co-owners, at FirstEnergy's option, may provide their several guaranties of Global Holding's obligations under the facility. FirstEnergy receives a fee for providing its guaranty, payable semiannually, which accrued at a rate of 4% through December 31, 2012, and accrues at a rate of 5% from January 1, 2013 through October 18, 2015, which amends the rate in the prior agreement, in each case based upon the average daily outstanding aggregate commitments under the facility for such semiannual period.

ENVIRONMENTAL MATTERS

Various federal, state and local authorities regulate FirstEnergy with regard to air and water quality and other environmental matters. Compliance with environmental regulations could have a material adverse effect on FirstEnergy's earnings and competitive position to the extent that FirstEnergy competes with companies that are not subject to such regulations and, therefore, do not bear the risk of costs associated with compliance, or failure to comply, with such regulations.

CAA Compliance

FirstEnergy is required to meet federally-approved SO_2 and NOx emissions regulations under the CAA. FirstEnergy complies with SO_2 and NOx reduction requirements under the CAA and SIP(s) by burning lower-sulfur fuel, utilizing combustion controls and post-combustion controls, generating more electricity from lower or non-emitting plants and/or using emission allowances.

In July 2008, three complaints representing multiple plaintiffs were filed against FG in the U.S. District Court for the Western District of Pennsylvania seeking damages based on air emissions from the coal-fired Bruce Mansfield Plant. Two of these complaints also seek to enjoin the Bruce Mansfield Plant from operating except in a "safe, responsible, prudent and proper manner." One complaint

was filed on behalf of twenty-one individuals and the other is a class action complaint seeking certification as a class with the eight named plaintiffs as the class representatives. FG believes the claims are without merit and intends to vigorously defend itself against the allegations made in these complaints, but, at this time, is unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In January 2009, the EPA issued an NOV to GenOn Energy, Inc. alleging NSR violations at the Keystone, Portland and Shawville coal-fired plants based on “modifications” dating back to the mid-1980s. JCP&L, as the former owner of 16.67% of the Keystone Station, ME, as a former owner and operator of the Portland Station, and PN as former owner and operator of the Shawville Station, are unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In January 2011, the U.S. DOJ filed a complaint against PN in the U.S. District Court for the Western District of Pennsylvania seeking injunctive relief against PN based on alleged “modifications” at the coal-fired Homer City generating plant during 1991 to 1994 without pre-construction NSR permitting in violation of the CAA's PSD and Title V permitting programs. The complaint was also filed against the former co-owner, NYSEG, and various current owners of Homer City, including EME Homer City Generation L.P. and affiliated companies, including Edison International. In addition, the Commonwealth of Pennsylvania and the states of New Jersey and New York intervened and filed separate complaints regarding Homer City seeking injunctive relief and civil penalties. In October 2011, the Court dismissed all of the claims with prejudice of the U.S. DOJ and the Commonwealth of Pennsylvania and the states of New Jersey and New York against all of the defendants, including PN. In December 2011, the U.S., the Commonwealth of Pennsylvania and the states of New Jersey and New York all filed notices appealing to the Third Circuit Court of Appeals which affirmed the dismissal on August 21, 2013 and then denied petitions for rehearing on December 12, 2013. PN believes the claims are without merit and intends to vigorously defend itself against the allegations made in these complaints. The parties dispute the scope of NYSEG's and PN's indemnity obligation to and from Edison International. PN is unable to predict the outcome of this matter or estimate the loss or possible range of loss.

In August 2009, the EPA issued a Finding of Violation and NOV alleging violations of the CAA and Ohio regulations, including the PSD, NNSR and Title V regulations, at the Eastlake, Lakeshore, Bay Shore and Ashtabula coal-fired plants. The EPA's NOV alleges equipment replacements during maintenance outages dating back to 1990 triggered the pre-construction permitting requirements under the PSD and NNSR programs. In June 2011, EPA issued another Finding of Violation and NOV alleging violations of the CAA and Ohio regulations, specifically, opacity limitations and requirements to continuously operate opacity monitoring systems at the Eastlake, Lakeshore, Bay Shore and Ashtabula coal-fired plants. FG intends to comply with the CAA and Ohio regulations, but, at this time, is unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In August 2000, AE received an information request pursuant to section 114(a) of the CAA from the EPA requesting that it provide information and documentation relevant to the operation and maintenance of the following ten coal-fired plants, which collectively include 22 electric generation units: Albright, Armstrong, Fort Martin, Harrison, Hatfield's Ferry, Mitchell, Pleasants, Rivesville, R. Paul Smith and Willow Island to determine compliance with the NSR provisions under the CAA, which can require the installation of additional air emission control equipment when a major modification of an existing facility results in an increase in emissions. In September 2007, AE received an NOV from the EPA alleging NSR and PSD violations under the CAA, as well as Pennsylvania and West Virginia state laws at the coal-fired Hatfield's Ferry and Armstrong plants in Pennsylvania and the coal-fired Fort Martin and Willow Island plants in West Virginia. On June 29, 2012, January 31, 2013, and March 27, 2013, EPA issued additional CAA section 114 requests for the Harrison coal-fired plant seeking information and documentation relevant to its operation and maintenance, including capital projects undertaken since 2007. AE intends to comply with the CAA but, at this time, is unable to predict the outcome of this matter or estimate the possible loss or range of loss.

In June 2005, the PA DEP and the Attorneys General of New York, New Jersey, Connecticut and Maryland filed suit against AE, AE Supply and the Allegheny Utilities in the U.S. District Court for the Western District of Pennsylvania alleging, among other things, that Allegheny performed major modifications in violation of the NSR provisions of the CAA and the Pennsylvania Air Pollution Control Act at the coal-fired Hatfield's Ferry, Armstrong and Mitchell Plants in Pennsylvania. A non-jury trial on liability only was held in September 2010. On February 6, 2014, the Court entered judgment for AE, AE Supply, and the Allegheny Utilities finding they had not violated the CAA or the Pennsylvania Air Pollution Control Act. This decision does not change the status of these plants which remain deactivated.

National Ambient Air Quality Standards

The EPA's CAIR requires reductions of NOx and SO_2 emissions in two phases (2009/2010 and 2015), ultimately capping SO_2 emissions in affected states to 2.5 million tons annually and NOx emissions to 1.3 million tons annually. In 2008, the U.S. Court of Appeals for the D.C. Circuit decided that CAIR violated the CAA but allowed CAIR to remain in effect to "temporarily preserve its environmental values" until the EPA replaces CAIR with a new rule consistent with the Court's decision. In July 2011, the EPA finalized CSAPR, to replace CAIR, requiring reductions of NOx and SO_2 emissions in two phases (2012 and 2014), ultimately capping SO_2 emissions in affected states to 2.4 million tons annually and NOx emissions to 1.2 million tons annually. CSAPR allows trading of NOx and SO_2 emission allowances between power plants located in the same state and interstate trading of NOx and SO_2 emission allowances with some restrictions. On December 30, 2011, CSAPR was stayed by the U.S. Court of Appeals for the D.C. Circuit and was ultimately vacated by the Court on August 21, 2012. The Court has ordered the EPA to continue administration of CAIR until it finalizes a valid replacement for CAIR. On January 24, 2013, EPA and intervenors' petitions seeking rehearing or rehearing en banc were denied by the U.S. Court of Appeals for the D.C. Circuit. On June 24, 2013, the Supreme Court of the United States agreed to review the decision vacating CSAPR and heard oral argument on December 10, 2013. Depending on the outcome of these proceedings and how any final rules are ultimately implemented, the future cost of compliance may be substantial and changes to FirstEnergy's and FES' operations may result.

Hazardous Air Pollutant Emissions

On December 21, 2011, the EPA finalized the MATS imposing emission limits for mercury, PM, and HCL for all existing and new coal-fired electric generating units effective in April 2015 with averaging of emissions from multiple units located at a single plant. Under the CAA, state permitting authorities can grant an additional compliance year through April 2016, as needed, including instances when necessary to maintain reliability where electric generating units are being closed. On December 28, 2012, the WVDEP granted a conditional extension through April 16, 2016 for MATS compliance at the Fort Martin, Harrison and Pleasants stations. On March 20, 2013, the PA DEP granted an extension through April 16, 2016 for MATS compliance at the Hatfield's Ferry and Bruce Mansfield stations. In addition, an EPA enforcement policy document contemplates up to an additional year to achieve compliance, through April 2017, under certain circumstances for reliability critical units. MATS has been challenged in the U.S. Court of Appeals for the D.C. Circuit by various entities, including FirstEnergy's challenge of the PM emission limit imposed on petroleum coke boilers, such as Bay Shore Unit 1. Oral arguments were heard on December 10, 2013. Depending on the outcome of these proceedings and how the MATS are ultimately implemented, FirstEnergy's total cost of compliance with MATS is currently estimated to be approximately $465 million (Competitive Energy Services segment of $240 million and Regulated Distribution segment of $225 million).

As of September 1, 2012, Albright, Armstrong, Bay Shore Units 2-4, Eastlake Units 4-5, R. Paul Smith, Rivesville and Willow Island were deactivated. FG entered into RMR arrangements with PJM for Eastlake Units 1-3, Ashtabula Unit 5 and Lake Shore Unit 18 through the spring of 2015, when they are scheduled to be deactivated. In February 2014, PJM notified FG that Eastlake Units 1-3 and Lake Shore Unit 18 will be released from RMR status as of September 15, 2014. As of October 9, 2013, the Hatfield's Ferry and Mitchell stations were also deactivated.

FirstEnergy and FES have various long-term coal transportation agreements, some of which run through 2025 and certain of which are related to the plants described above. FE and FES have asserted force majeure defenses for delivery shortfalls under certain agreements, and are in discussion with the applicable counterparties. As to two agreements, FE and FES have settled monetary claims for damages for the failure to take minimum quantities for the calendar year 2012 by the payments of approximately $70 million, and agreed to pay liquidated damages for delivery shortfalls for 2013 and 2014. FE and FES recorded $67 million in liquidated damages in the fourth quarter of 2013, associated with estimated 2013 delivery shortfalls, which were paid in the first quarter of 2014. Additionally, in January 2014, FE and FES reached an agreement in principle with Mepco Holdings LLC to terminate a contract for future coal deliveries to Hatfield for $18 million, which was approved by the United States Bankruptcy Court on February 26, 2014. If FE and FES fail to reach a resolution with applicable counterparties for coal transportation agreements associated with the deactivated plants or unresolved aspects of the transportation agreements and it were ultimately determined that, contrary to their belief, the force majeure provisions or other defenses do not excuse delivery shortfalls, the results of operations and financial condition of both FirstEnergy and FES could be materially adversely impacted.

Climate Change

There are a number of initiatives to reduce GHG emissions under consideration at the state, federal and international level. Certain northeastern states are participating in the RGGI and western states led by California, have implemented programs to control emissions of certain GHGs. In his 2013 State of the Union address, President Obama called for Congressional action on GHG emissions indicating his administration will take action in the event Congress fails to act. In June 2013, the President's Climate Action Plan outlined Executive action to: (1) cut carbon pollution in America, including the EPA carbon pollution standards for both new and existing power plants by 17% by 2020 (from 2005 levels); (2) prepare the United States for the impacts of climate change; and (3) lead international efforts to combat global climate change and prepare for its impacts.

In September 2009, the EPA finalized a national GHG emissions collection and reporting rule that required the measurement and reporting of GHG emissions commencing in 2010. In December 2009, the EPA released its final "Endangerment and Cause or Contribute Findings for Greenhouse Gases under the Clean Air Act." The EPA's finding concludes that concentrations of several

key GHGs increase the threat of climate change and may be regulated as “air pollutants” under the CAA. In April 2010, the EPA finalized new GHG standards for model years 2012 to 2016 passenger cars, light-duty trucks and medium-duty passenger vehicles and clarified that GHG regulation under the CAA would not be triggered for electric generating plants and other stationary sources until January 2, 2011, at the earliest. In May 2010, the EPA finalized new thresholds for GHG emissions that define when NSR pre-construction permits would be required including an emissions applicability threshold of 75,000 tons per year of CO_2 equivalents for existing facilities under the CAA's PSD program. On April 13, 2012, the EPA proposed new source performance standards for GHG emissions from newly constructed fossil fuel generating units that are larger than 25 MW, which were ultimately withdrawn. On June 25, 2013, a Presidential memorandum directed the EPA to complete, in a timely fashion, proposed new source performance standards for GHG emissions from newly constructed fossil fuel generating units, starting with re-proposal by September 20, 2013. The memorandum further directed the EPA to propose by June 1, 2014 and complete by June 1, 2015, GHG emission standards for existing fossil fuel generating units. On September 20, 2013, the EPA proposed a new source performance standard of 1,000 lbs. CO_2/MWH for large natural gas fired units (> 850 mmBTU/hr), and 1,100 lbs. CO_2/MWH for other natural gas fired units (≤ 850 mmBTU/hr), and 1,100 lbs. CO_2/MWH for fossil fuel fired units which would require partial carbon capture and storage. On October 15, 2013, the U.S. Supreme Court agreed to review a June 2012 D.C. Circuit Court of Appeals decision upholding the EPA's May 2010 regulations to decide a single narrow question: "Whether EPA permissibly determined that its regulation of greenhouse gas emissions from new motor vehicles triggered permitting requirements under the CAA for stationary sources that emit greenhouse gases?" Oral argument was held on February 24, 2014. Depending on the outcome of these proceedings and how any final rules are ultimately implemented, the future cost of compliance may be substantial and changes to FirstEnergy's and FES' operations may result.

At the international level, the Kyoto Protocol, signed by the U.S. in 1998 but never submitted for ratification by the U.S. Senate, was intended to address global warming by reducing the amount of man-made GHG, including CO_2, emitted by developed countries by 2012. A December 2009 U.N. Climate Change Conference in Copenhagen did not reach a consensus on a successor treaty to the Kyoto Protocol, but did take note of the Copenhagen Accord, a non-binding political agreement that recognized the scientific view that the increase in global temperature should be below two degrees Celsius; includes a commitment by developed countries to provide funds, approaching $30 billion over three years with a goal of increasing to $100 billion by 2020; and establishes the “Green Climate Fund” to support mitigation, adaptation, and other climate-related activities in developing countries. To the extent that they have become a party to the Copenhagen Accord, developed economies, such as the European Union, Japan, Russia and the United States, would commit to quantified economy-wide emissions targets by 2020, while developing countries, including Brazil, China and India, would agree to take mitigation actions, subject to their domestic measurement, reporting and verification. In December 2010, the U.N. Climate Change Conference in Cancun, Mexico resulted in an acknowledgment to reduce emissions from industrialized countries by 25 to 40 percent from 1990 emissions by 2020 and support enhanced action on climate change in the developing world. In December 2011 the U.N. Climate Change Conference in Durban, South Africa, established a negotiating process to develop a new post-2020 climate change protocol, called the “Durban Platform for Enhanced Action”. This negotiating process contemplates developed countries, as well as developing countries such as China, India, Brazil, and South Africa, to undertake legally binding commitments post-2020. In addition, certain countries agreed to extend the Kyoto Protocol for a second commitment period, commencing in 2013 and expiring in 2018 or 2020. In December 2012, the U.N. Climate Change Conference in Doha, Qatar, resulted in countries agreeing to a new commitment period under the Kyoto Protocol beginning in 2020. The new Doha Amendment to establish a second commitment period requires the ratification of three-quarters of the parties to the Kyoto Protocol before it becomes effective.

FirstEnergy cannot currently estimate the financial impact of climate change policies, although potential legislative or regulatory programs restricting CO_2 emissions, or litigation alleging damages from GHG emissions, could require significant capital and other expenditures or result in changes to its operations. The CO_2 emissions per KWH of electricity generated by FirstEnergy is lower than many of its regional competitors due to its diversified generation sources, which include low or non-CO_2 emitting gas-fired and nuclear generators.

Clean Water Act

Various water quality regulations, the majority of which are the result of the federal CWA and its amendments, apply to FirstEnergy's plants. In addition, the states in which FirstEnergy operates have water quality standards applicable to FirstEnergy's operations.

In 2004, the EPA established new performance standards under Section 316(b) of the CWA for reducing impacts on fish and shellfish from cooling water intake structures at certain existing electric generating plants. The regulations call for reductions in impingement mortality (when aquatic organisms are pinned against screens or other parts of a cooling water intake system) and entrainment (which occurs when aquatic life is drawn into a facility's cooling water system). In 2007, the U.S. Court of Appeals for the Second Circuit invalidated portions of the Section 316(b) performance standards and the EPA has taken the position that until further rulemaking occurs, permitting authorities should continue the existing practice of applying their best professional judgment to minimize impacts on fish and shellfish from cooling water intake structures. In April 2009, the U.S. Supreme Court reversed one significant aspect of the Second Circuit's opinion and decided that Section 316(b) of the CWA authorizes the EPA to compare costs with benefits in determining the best technology available for minimizing adverse environmental impact at cooling water intake structures. On March 28, 2011, the EPA released a new proposed regulation under Section 316(b) of the CWA to reduce fish impingement to a 12% annual average and determine site-specific controls, if any, to reduce entrainment of aquatic life following studies to be provided to permitting authorities. The period for finalizing the Section 316(b) regulation was extended to April 17, 2014 under a Settlement Agreement between EPA and certain NGOs. FirstEnergy is studying various control options and their

costs and effectiveness, including pilot testing of reverse louvers in a portion of the Bay Shore power plant's water intake channel to divert fish away from the plant's water intake system. Depending on the results of such studies and the EPA's further rulemaking and any final action taken by the states exercising best professional judgment, the future costs of compliance with these standards may require material capital expenditures.

On April 19, 2013, the EPA proposed regulatory changes to the waste water effluent limitations guidelines and standards for the Steam Electric Power Generating category (40 CFR Part 423). The EPA proposed eight treatment options for waste water discharges from electric power plants, of which four are "preferred" by the Agency. The preferred options range from more stringent chemical and biological treatment requirements to zero discharge requirements. The EPA is required to finalize this rulemaking by May 22, 2014, under a consent decree entered by a U.S. District Court and the treatment obligations are proposed to phase-in as waste water discharge permits are renewed on a 5-year cycle from 2017 to 2022. Depending on the content of the EPA's final rule, the future costs of compliance with these standards may require material capital expenditures.

In October 2009, the WVDEP issued an NPDES water discharge permit for the Fort Martin Plant, which imposes TDS, sulfate concentrations and other effluent limitations for heavy metals, as well as temperature limitations. Concurrent with the issuance of the Fort Martin NPDES permit, WVDEP also issued an administrative order setting deadlines for MP to meet certain of the effluent limits that were effective immediately under the terms of the NPDES permit. MP appealed, and a stay of certain conditions of the NPDES permit and order have been granted pending a final decision on the appeal and subject to WVDEP moving to dissolve the stay. The Fort Martin NPDES permit could require an initial capital investment ranging from $150 million to $300 million in order to install technology to meet the TDS and sulfate limits, which technology may also meet certain of the other effluent limits. Additional technology may be needed to meet certain other limits in the Fort Martin NPDES permit. MP intends to vigorously pursue these issues but cannot predict the outcome of these appeals or estimate the possible loss or range of loss.

In December 2010, PA DEP submitted its CWA 303(d) list to the EPA with a recommended sulfate impairment designation for an approximately 68 mile stretch of the Monongahela River north of the West Virginia border. In May 2011, the EPA agreed with PA DEP's recommended sulfate impairment designation which requires the development of a TMDL limit for the river, a process that will take PA DEP approximately five years. Based on the stringency of the TMDL, MP may incur significant costs to reduce sulfate discharges into the Monongahela River if the NPDES permit for the coal-fired Fort Martin plant in West Virginia is required to be modified or renewed to include more stringent effluent limitations for sulfate. However, the Hatfield's Ferry and Mitchell Plants in Pennsylvania that discharge into the Monongahela River were deactivated on October 9, 2013.

FirstEnergy intends to vigorously defend against the CWA matters described above but, except as indicated above, cannot predict their outcomes or estimate the possible loss or range of loss.

Regulation of Waste Disposal

Federal and state hazardous waste regulations have been promulgated as a result of the RCRA of 1976, as amended, and the Toxic Substances Control Act of 1976. Certain fossil-fuel combustion residuals, such as coal ash, were exempted from hazardous waste disposal requirements pending the EPA's evaluation of the need for future regulation.

In December 2009, in an advance notice of public rulemaking, the EPA asserted that the large volumes of coal combustion residuals produced by electric utilities pose significant financial risk to the industry. In May 2010, the EPA proposed two options for additional regulation of coal combustion residuals, including the option of regulation as a special waste under the EPA's hazardous waste management program which could have a significant impact on the management, beneficial use and disposal of coal combustion residuals. On April 19, 2013, the EPA stated it would "align" its proposed coal combustion residuals regulations with revised waste water discharge effluent limitations guidelines and standards for the Steam Electric Power Generating category (40 CFR Part 423) that were proposed on that date. On July 25, 2013, the House of Representatives passed H.R. 221 that would require CCRs to be regulated under Subtitle D of RCRA, as non-hazardous. On January 29, 2014, EPA agreed to take final action by December 19, 2014 on whether or not to pursue the proposed non-hazardous waste option for regulating CCRs in a Consent Decree to be filed in pending litigation. Depending on the content of the EPA's final effluent limitations rule, the specifics of any "alignment", whether EPA chooses to pursue the non-hazardous or hazardous waste option and the enactment of legislation, the future costs of compliance with such standards may require material capital expenditures.

On July 27, 2012, the PA DEP filed a complaint against FG in the U.S. District Court for the Western District of Pennsylvania with claims under the RCRA and Pennsylvania's Solid Waste Management Act regarding the LBR CCB Impoundment and simultaneously proposed a Consent Decree between PA DEP and FG to resolve those claims. On December 14, 2012, a modified Consent Decree that addresses public comments received by PA DEP was entered by the court, requiring FG to conduct monitoring studies and submit a closure plan to the PA DEP, no later than March 31, 2013, and discontinue disposal to LBR as currently permitted by December 31, 2016. The modified Consent Decree also requires payment of civil penalties of $800,000 to resolve claims under the Solid Waste Management Act. On February 1, 2013, FG submitted a Feasibility Study analyzing various technical issues relevant to the closure of LBR. On March 28, 2013, FG submitted to the PA DEP a Closure Plan Major Permit Modification Application which provides for placing a final cap over LBR that would require 15 years to fully implement following the closure of LBR. The estimated cost for the proposed closure plan is $234 million, including environmental and other post closure costs. On October 3, 2013, the PA DEP issued a technical deficiency letter citing four main deficiencies with the Closure Plan: (1) seeking to accelerate the 15 year period proposed by FG for closure activities to complete closure in 9 years by commencing closure activities prior to 2017 as

proposed by FG; (2) seeking to extend bond closure and post closure activities beyond the 45 years proposed by FG; (3) seeking active dewatering of the CCBs in areas where there are seeps impacted by the Impoundment; and (4) seeking an abatement plan for groundwater impacted by arsenic. FG responded to the PA DEP on December 3, 2013, and as a result of the Closure Plan, FG increased its asset retirement obligation for LBR by $163 million in 2013. The Bruce Mansfield Plant is pursuing several options for its CCBs following December 31, 2016, and on January 23, 2013, announced a plan for beneficial use of its CCBs for mine reclamation in LaBelle, Pennsylvania. In June 2013, a complaint filed in the U.S. District Court for the Western District of Pennsylvania, alleges the LaBelle site is in violation of RCRA and state laws. In addition, on December 20, 2012, the Environmental Integrity Project and others served FG with a citizen suit notice alleging CWA and PA Clean Streams Law Violations at LBR.

On October 10, 2013 and December 5, 2013, complaints were filed on behalf of approximately 50 individuals against FE, FG and FES in the U.S. District Court for the Northern District of West Virginia and approximately 15 individuals against FG in the U.S. District Court for the Western District of Pennsylvania seeking damages for alleged property damage, bodily injury and emotional distress related to the LBR CCB Impoundment. The complaints state claims for private nuisance, negligence, negligence per se, reckless conduct and trespass related to alleged groundwater contamination and odors emanating from the Impoundment. FE, FG and FES believe the claims are without merit and intend to vigorously defend themselves against the allegations made in the complaints, but, at this time, are unable to predict the outcome of the above matter or estimate the possible loss or range of loss.

FirstEnergy's future cost of compliance with any coal combustion residuals regulations that may be promulgated could be substantial and would depend, in part, on the regulatory action taken by the EPA and implementation by the EPA or the states. Compliance with those regulations could have an adverse impact on FirstEnergy's results of operations and financial condition.

Certain of FirstEnergy's utilities have been named as potentially responsible parties at waste disposal sites, which may require cleanup under the CERCLA. Allegations of disposal of hazardous substances at historical sites and the liability involved are often unsubstantiated and subject to dispute; however, federal law provides that all potentially responsible parties for a particular site may be liable on a joint and several basis. Environmental liabilities that are considered probable have been recognized on the Consolidated Balance Sheet as of December 31, 2013 based on estimates of the total costs of cleanup, FE's and its subsidiaries' proportionate responsibility for such costs and the financial ability of other unaffiliated entities to pay. Total liabilities of approximately $128 million have been accrued through December 31, 2013. Included in the total are accrued liabilities of approximately $82 million for environmental remediation of former manufactured gas plants and gas holder facilities in New Jersey, which are being recovered by JCP&L through a non-bypassable SBC. FirstEnergy or its subsidiaries could be found potentially responsible for additional amounts or additional sites, but the possible losses or range of losses cannot be determined or reasonably estimated at this time.

OTHER LEGAL PROCEEDINGS

Nuclear Plant Matters

Under NRC regulations, FirstEnergy must ensure that adequate funds will be available to decommission its nuclear facilities. As of December 31, 2013, FirstEnergy had approximately $2.2 billion invested in external trusts to be used for the decommissioning and environmental remediation of Davis-Besse, Beaver Valley, Perry and TMI-2. The values of FirstEnergy's NDT fluctuate based on market conditions. If the value of the trusts decline by a material amount, FirstEnergy's obligation to fund the trusts may increase. Disruptions in the capital markets and their effects on particular businesses and the economy could also affect the values of the NDT. FE maintains a $125 million parental guaranty relating to a potential shortfall in nuclear decommissioning funding for Beaver Valley Unit 1 and Perry. FE also maintains an $11 million parental guaranty in support of the decommissioning of the spent fuel storage facilities located at its Davis-Besse and Perry nuclear facilities. As required by the NRC, FirstEnergy annually recalculates and adjusts the amount of its parental guaranty, as appropriate.

On October 4, 2013, during a refueling outage for Beaver Valley Unit 1, FENOC conducted a planned visual examination of the interior containment liner and coatings. The containment design for Beaver Valley includes an interior steel liner that is surrounded by reinforced concrete. A penetration through the containment steel liner plate of approximately 0.4 inches by 0.28 inches was discovered. A detailed investigation was initiated, including laboratory analysis that has indicated that the degraded area was initiated by foreign material inadvertently left in the concrete during construction. An assessment has been performed which concluded that any postulated leakage through the affected area was within overall allowable limits for the containment building. The structural integrity of the containment building is not affected. Repair of the containment liner was completed and Unit 1 was returned to service on November 4, 2013.

In August 2010, FENOC submitted an application to the NRC for renewal of the Davis-Besse operating license for an additional twenty years, until 2037. An NRC ASLB granted a hearing on the Davis-Besse license renewal application to a group of petitioners. On July 9, 2012, the petitioners' proposed a contention on the environmental impacts of spent fuel storage in the Davis-Besse license renewal proceeding. In an order dated August 7, 2012, the NRC stated that it will not issue final licensing decisions until it has appropriately addressed the challenges to the NRC Waste Confidence Decision and Temporary Storage Rule and all pending contentions on this topic should be held in abeyance. The ASLB has suspended further consideration of the petitioners' proposed contention on the environmental impacts of spent fuel storage at Davis-Besse. The NRC Staff issued Waste Confidence Draft Generic Environmental Impact Statement and published a proposed rule on this subject in September of 2013. Other contentions proposed by the petitioners in this proceeding have been rejected by the ASLB. On February 18, 2014, Beyond Nuclear and Don't Waste Michigan, two of the petitioners in the Davis-Besse license renewal proceeding, requested that the NRC institute a rulemaking

on the environmental impacts of high density spent fuel storage and mitigation alternatives. On February 27, 2014, these petitioners requested a suspension of the licensing decision in the Davis-Besse license renewal proceeding to allow the NRC to complete this rulemaking.

As part of routine inspections of the concrete shield building at Davis-Besse Nuclear Power Station in 2013, FENOC identified changes to the subsurface laminar cracking condition originally discovered in 2011. The shield building is a 2 1/2-foot thick reinforced concrete structure that provides biological shielding, protection from natural phenomena including wind and tornadoes and additional shielding in the event of an accident. FENOC then expanded its sample size to include all of the existing core bores in the shield building. These inspections, which are now complete, identified additional subsurface cracking that was determined to be pre-existing, but only now identified with the aid of improved inspection technology. These inspections also revealed that the cracking condition has propagated a small amount in select areas. Preliminary analysis of the inspections results confirm that the building continues to maintain its structural integrity, and its ability to safely perform all of its functions.

On February 1, 2014, the Davis-Besse Nuclear Power Station entered into an outage to install two new steam generators, replace about a third of the unit’s 177 fuel assemblies and perform numerous safety inspections and preventative maintenance activities. During the preliminary stages of the outage an area of concrete that was not filled to the expected thickness within the shield building wall was discovered at the top of the temporary construction opening that was created as part of the 2011 outage. The 2011 temporary construction opening was created to install the new reactor head. FENOC has assessed the as-found condition of the concrete and has determined the shield building would have performed its design functions. This condition within the shield building wall will be repaired during this outage to conform to its original design configuration. This condition is not expected to extend the outage.

On March 12, 2012, the NRC issued orders requiring safety enhancements at U.S. reactors based on recommendations from the lessons learned Task Force review of the accident at Japan's Fukushima Daiichi nuclear power plant. These orders require additional mitigation strategies for beyond-design-basis external events, and enhanced equipment for monitoring water levels in spent fuel pools. The NRC also requested that licensees including FENOC: re-analyze earthquake and flooding risks using the latest information available; conduct earthquake and flooding hazard walkdowns at their nuclear plants; assess the ability of current communications systems and equipment to perform under a prolonged loss of onsite and offsite electrical power; and assess plant staffing levels needed to fill emergency positions. These and other NRC requirements adopted as a result of the accident at Fukushima Daiichi are likely to result in additional material costs from plant modifications and upgrades at FENOC's nuclear facilities.

ICG Litigation

On December 28, 2006, AE Supply and MP filed a complaint in the Court of Common Pleas of Allegheny County, Pennsylvania against ICG, Anker WV, and Anker Coal. Anker WV entered into a long term Coal Sales Agreement with AE Supply and MP for the supply of coal to the Harrison generating facility. Prior to the time of trial, ICG was dismissed as a defendant by the Court, which issue can be the subject of a future appeal. As a result of defendants' past and continued failure to supply the contracted coal, AE Supply and MP have incurred and will continue to incur significant additional costs for purchasing replacement coal. A non-jury trial was held from January 10, 2011 through February 1, 2011. At trial, AE Supply and MP presented evidence that they have incurred in excess of $80 million in damages for replacement coal purchased through the end of 2010 and will incur additional damages in excess of $150 million for future shortfalls. Defendants primarily claim that their performance is excused under a force majeure clause in the coal sales agreement and presented evidence at trial that they will continue to not provide the contracted yearly tonnage amounts. On May 2, 2011, the court entered a verdict in favor of AE Supply and MP for $104 million ($90 million in future damages and $14 million for replacement coal/interest). On August 25, 2011, the Allegheny County Court denied all Motions for Post-Trial relief and the May 2, 2011 verdict became final. On August 26, 2011, the defendants posted bond and filed a Notice of Appeal with the Superior Court. On August 13, 2012, the Superior Court affirmed the $14 million past damages award but vacated the $90 million future damages award. While the Superior Court found that the defendants still owed future damages, it remanded the calculation of those damages back to the trial court. The specific amount of those future damages is not known at this time, but they are expected to be calculated at a market price of coal that is significantly lower than the price used by the trial court. On August 27, 2012, AE Supply and MP filed an Application for Reargument En Banc with the Superior Court, which was denied on October 19, 2012. AE Supply and MP filed a Petition for Allowance of Appeal with the Pennsylvania Supreme Court on November 19, 2012. On July 2, 2013, the Petition for Allowance of Appeal was denied and in the second quarter of 2013 the now final past damage award of $15.5 million (including interest) was recognized. The case was sent back to the trial court to recalculate the future damages only and is currently in the discovery phase. A hearing is scheduled for May 13-14, 2014.

Other Legal Matters

In 2010, a lawsuit was filed in Allegheny County Court of Common Pleas by Michael Goretzka, for wrongful death and negligence after his wife was fatally electrocuted when she contacted a downed power line. The trial resulted in a verdict against WP and the parties settled this matter. WP's portion of the settlement was covered by insurance subject to the remainder of its deductible. On May 30, 2012, the PPUC's Bureau of Investigation and Enforcement (I&E) filed a Formal Complaint at the PPUC regarding this matter. On February 13, 2013, WP and I&E filed a Joint Petition for Full Settlement that includes, among other things, WP's agreement to conduct an infrared inspection of its primary distribution system, modify certain training programs, and pay an $86,000 civil penalty, which settlement is subject to PPUC approval. On August 29, 2013, the PPUC entered an Order granting the Goretzka family limited party status for the sole purpose of submitting comments to the settlement and issuing the settlement for comment

by the parties. On September 16, 2013, the Goretzka family filed Limited Objections to the settlement. Reply comments were filed by WP on September 30, 2013. The PPUC entered an Opinion and Order on January 9, 2014 approving the Settlement with limited modifications regarding the frequency of refresher training and reporting obligations. WP filed a letter on January 17, 2014 accepting those modifications and noting its intent to begin implementation of the settlement terms.

There are various lawsuits, claims (including claims for asbestos exposure) and proceedings related to FirstEnergy's normal business operations pending against FirstEnergy and its subsidiaries. The loss or range of loss in these matters is not expected to be material to FirstEnergy or its subsidiaries. The other potentially material items not otherwise discussed above are described under Note 15, Regulatory Matters of the Combined Notes to Consolidated Financial Statements.

FirstEnergy accrues legal liabilities only when it concludes that it is probable that it has an obligation for such costs and can reasonably estimate the amount of such costs. In cases where FirstEnergy determines that it is not probable, but reasonably possible that it has a material obligation, it discloses such obligations and the possible loss or range of loss if such estimate can be made. If it were ultimately determined that FirstEnergy or its subsidiaries have legal liability or are otherwise made subject to liability based on any of the matters referenced above, it could have a material adverse effect on FirstEnergy's or its subsidiaries' financial condition, results of operations and cash flows.

17. TRANSACTIONS WITH AFFILIATED COMPANIES

FES' operating revenues, operating expenses, investment income and interest expenses include transactions with affiliated companies. These affiliated company transactions include affiliated company power sales agreements between FirstEnergy's competitive and regulated companies, support service billings, interest on affiliated company notes including the money pools and other transactions.

FirstEnergy's competitive companies at times provide power through affiliated company power sales to meet a portion of the Utilities' POLR and default service requirements. The primary affiliated company transactions for FES during the three years ended December 31, 2013 are as follows:

FES	2013	2012	2011
	(In millions)		
Revenues:			
Electric sales to affiliates	$ 652	$ 515	$ 752
Other	6	16	80
Expenses:			
Purchased power from affiliates	486	451	242
Fuel	—	2	37
Support services	619	570	655
Investment Income:			
Interest income from FE	2	2	2
Interest Expense:			
Interest expense to affiliates	4	10	8
Interest expense to FE	6	1	1

FirstEnergy does not bill directly or allocate any of its costs to any subsidiary company. Costs are allocated to FES and the Utilities from FESC, AESC and FENOC. The majority of costs are directly billed or assigned at no more than cost. The remaining costs are for services that are provided on behalf of more than one company, or costs that cannot be precisely identified and are allocated using formulas developed by FESC, AESC and FENOC. The current allocation or assignment formulas used and their bases include multiple factor formulas: each company's proportionate amount of FirstEnergy's aggregate direct payroll, number of employees, asset balances, revenues, number of customers, other factors and specific departmental charge ratios. Management believes that these allocation methods are reasonable. Intercompany transactions are generally settled under commercial terms within thirty days. FES purchases the entire output of the generation facilities owned by FG and NG, and may purchase the uncommitted output of AE Supply, as well as the output relating to leasehold interests of OE and TE in certain of those facilities that are subject to sale and leaseback arrangements, and pursuant to full output, cost-of-service PSAs.

FES and the Utilities are parties to an intercompany income tax allocation agreement with FirstEnergy and its other subsidiaries that provides for the allocation of consolidated tax liabilities. Net tax benefits attributable to FirstEnergy are generally reallocated to the subsidiaries of FirstEnergy that have taxable income. That allocation is accounted for as a capital contribution to the company receiving the tax benefit (see Note 5, Taxes).

18. SUPPLEMENTAL GUARANTOR INFORMATION

In 2007, FG completed a sale and leaseback transaction for its undivided interest in Bruce Mansfield Unit 1. FES has fully and unconditionally and irrevocably guaranteed all of FG's obligations under each of the leases. The related lessor notes and pass through certificates are not guaranteed by FES or FG, but the notes are secured by, among other things, each lessor trust's undivided interest in Unit 1, rights and interests under the applicable lease and rights and interests under other related agreements, including FES' lease guaranty. This transaction is classified as an operating lease for FES and FirstEnergy and as a financing lease for FG.

The Condensed Consolidating Statements of Income (Loss) and Comprehensive Income (Loss) for the years ended December 31, 2013, 2012, and 2011, Condensed Consolidating Balance Sheets as of December 31, 2013 and December 31, 2012, and Condensed Consolidating Statements of Cash Flows for the years ended December 31, 2013, 2012, and 2011, for FES (parent and guarantor), FG and NG (non-guarantor) are presented below. Investments in wholly owned subsidiaries are accounted for by FES using the equity method. Results of operations for FG and NG are, therefore, reflected in FES' investment accounts and earnings as if operating lease treatment was achieved. The principal elimination entries eliminate investments in subsidiaries and intercompany balances and transactions and the entries required to reflect operating lease treatment associated with the 2007 Bruce Mansfield Unit 1 sale and leaseback transaction.

19. SEGMENT INFORMATION

Financial information for each of FirstEnergy's reportable segments is presented in the tables below. FES does not have separate reportable operating segments.

The Regulated Distribution segment distributes electricity through FirstEnergy's ten utility operating companies, serving approximately six million customers within 65,000 square miles of Ohio, Pennsylvania, West Virginia, Maryland, New Jersey and New York, and purchases power for its POLR, SOS, SSO and default service requirements in Ohio, Pennsylvania, New Jersey and Maryland. This segment also includes regulated electric generation facilities in West Virginia and New Jersey that MP and JCP&L, respectively, own or contractually control. Its results reflect the commodity costs of securing electric generation and the deferral and amortization of certain fuel costs. This business segment currently controls approximately 3,780 MWs of generation capacity, including the net transfer to Regulated Distribution of 1,476 MWs of capacity associated with the Harrison and Pleasants asset swap which occurred on October 9, 2013.

The Regulated Transmission segment transmits electricity through transmission facilities owned and operated by ATSI, TrAIL, and certain of FirstEnergy's utilities (JCP&L, ME, PN, MP, PE and WP) and the regulatory asset associated with the abandoned PATH project. The segment's revenues are primarily derived from rates that recover costs and provide a return on transmission capital investment. Except for the recovery of the PATH abandoned project regulatory asset, these revenues are derived from transmission services provided pursuant to the PJM open access transmission tariff to LSEs. Its results also reflect the net transmission expenses related to the delivery of electricity on FirstEnergy's transmission facilities.

The Competitive Energy Services segment, through FES and AE Supply, supplies electricity to end-use customers through retail and wholesale arrangements, including competitive retail sales to customers primarily in Ohio, Pennsylvania, Illinois, Michigan, New Jersey and Maryland, and the provision of partial POLR and default service for some utilities in Ohio, Pennsylvania and Maryland, including the Utilities. This business segment currently controls approximately 14,000 MWs of capacity, including 885 MWs of capacity subject to RMR arrangements with PJM and excluding 1,476 MWs of generation capacity transferred to Regulated Distribution in connection with the Harrison and Pleasants asset swap that occurred on October 9, 2013. This segment also purchases electricity to meet sales obligations. The segment's net income is primarily derived from electric generation sales less the related costs of electricity generation, including fuel, purchased power and net transmission (including congestion) and ancillary costs charged by PJM to deliver energy to the segment's customers.

The Other/Corporate Segment contains corporate items and other businesses that are below the quantifiable threshold for separate disclosure as a reportable segment. Reconciling adjustments primarily consist of elimination of intersegment transactions.

20. DISCONTINUED OPERATIONS AND ASSETS HELD FOR SALE

On September 4, 2013, certain of FirstEnergy's subsidiaries applied for authorization from the FERC to sell eleven hydroelectric power stations in Pennsylvania, Virginia and West Virginia to subsidiaries of Harbor Hydro, a subsidiary of LS Power. The asset purchase agreement was entered into on August 23, 2013, and amended and restated as of September 4, 2013. On February 12, 2014, the sale of the hydroelectric power plants to LS Power closed for approximately $395 million.

As of December 31, 2013, FirstEnergy classified the hydroelectric power stations, with a carrying value of $235 million (FES - $122 million) as Assets held for sale in the Consolidated Balance Sheets. Included in the carrying value of the assets held for sale is goodwill of $29 million (FES - $1 million) which was allocated to the hydroelectric plants to be sold. Pre-tax income for the hydroelectric facilities of $26 million, $24 million and $21 million (FES - $22 million, $22 million and $13 million) for the years ended December 31, 2013, 2012 and 2011, respectively, are reported in FirstEnergy's and FES' Consolidated Statement of Income as discontinued operations. Revenues for the hydroelectric facilities of $33 million, $30 million and $42 million (FES - $31 million, $24 million and $24 million) for years ended December 31, 2013, 2012 and 2011, respectively, are reported in FirstEnergy's and FES' Consolidated Statement of Income as discontinued operations. In the first quarter of 2014, FirstEnergy expects to recognize a pre-tax gain of approximately $145 million (FES - $177 million).

21. MERGER

Purchase Price Allocation

On February 25, 2011, the merger between FE and AE closed. Pursuant to the terms of the Agreement and Plan of Merger among FE, Merger Sub and AE, Merger Sub merged with and into AE, with AE continuing as the surviving corporation and becoming a wholly owned subsidiary of FE. As part of the merger, AE shareholders received 0.667 of a share of FE common stock for each share of AE common stock outstanding as of the date the merger was completed, and all outstanding AE equity-based employee compensation awards were converted into FE equity-based awards on the same basis.

The total consideration in the merger was based on the closing price of a share of FE common stock on February 24, 2011, the day prior to the date the merger was completed, and was calculated as follows (in millions, except per share data):

Shares of AE common stock outstanding on February 24, 2011	$	170
Exchange ratio		0.667
Number of shares of FirstEnergy common stock issued		113
Closing price of FirstEnergy common stock on February 24, 2011		38.16
Fair value of shares issued by FirstEnergy		4,327
Fair value of replacement share-based compensation awards relating to pre-merger service		27
Total consideration transferred	$	4,354

The allocation of the total consideration transferred in the merger to the assets acquired and liabilities assumed includes adjustments for the fair value of Allegheny coal contracts, energy supply contracts, emission allowances, unregulated property, plant and equipment, derivative instruments, goodwill, intangible assets, long-term debt and accumulated deferred income taxes. The allocation of the purchase price was as follows:

(In millions)		
Current assets	$	1,493
Property, plant and equipment		9,660
Investments		138
Goodwill		872
Other noncurrent assets		1,353
Current liabilities		(718)
Noncurrent liabilities		(3,450)
Long-term debt and other long-term obligations		(4,994)
	$	4,354

The allocation of purchase price in the table above reflects refinements made since the merger date in the determination of the fair values of income tax benefits, certain coal contracts and an adverse purchase power contract. This primarily resulted in an increase to property, plant and equipment, other noncurrent assets and current liabilities of approximately $4 million, $91 million and $4 million, respectively, and decreases to current assets and goodwill of $16 million and $80 million. The impact of the refinements on the amortization of purchase accounting adjustments recorded during 2011 was not significant.

The estimated fair values of the assets acquired and liabilities assumed have been determined based on the accounting guidance for fair value measurements under GAAP, which defines fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

The excess of the purchase price over the estimated fair values of the assets acquired and liabilities assumed was recognized as goodwill. The Allegheny delivery, transmission and unregulated generation businesses have been assigned to the Regulated Distribution, Regulated Transmission and Competitive Energy Services segments, respectively. The goodwill from the merger of $872 million has been assigned to the Competitive Energy Services segment based on expected synergies from the merger. The goodwill is not deductible for tax purposes.

The valuation of the additional intangible assets and liabilities recorded as a result of the merger is as follows:

(In millions)	Preliminary Valuation	Weighted Average Amortization Period
Above market contracts:		
Energy contracts	$ 189	10 years
NUG contracts	124	25 years
Coal supply contracts	516	8 years
	829	
Below market contracts:		
NUG contracts	143	13 years
Coal supply contracts	83	7 years
Transportation contract	35	8 years
	261	
Net intangible assets	$ 568	

The fair value measurements of intangible assets and liabilities were based on significant unobservable inputs and thus represent level 3 measurements.

The fair value of Allegheny's energy, NUG and gas transportation contracts, both above-market and below-market, were estimated based on the present value of the above/below market cash flows attributable to the contracts based on the contract type, discounted by a current market interest rate consistent with the overall credit quality of the contract portfolio. The above/below market cash flows were estimated by comparing the expected cash flow based on existing contracted prices and expected volumes with the cash flows from estimated current market contract prices for the same expected volumes. The estimated current market contract prices were derived considering current market prices, such as the price of energy and transmission, miscellaneous fees and a normal profit margin. The weighted average amortization period was determined based on the expected volumes to be delivered over the life of the contract.

The fair value of coal supply contracts was determined in a similar manner as the energy, NUG and gas transportation contracts, based on the present value of the above/below market cash flows attributable to the contracts. The fair value adjustments for these contracts are being amortized based on expected deliveries under each contract. See Note 7, Intangible Assets for additional information related to Intangible assets.

In connection with the merger, FirstEnergy recorded merger transaction costs, which included change in control and other benefit payments to AE executives, of approximately $2 million ($1 million net of tax), $1 million ($1 million net of tax), $91 million ($73 million net of tax) during 2013, 2012 and 2011, respectively. These costs are included in "Other operating expenses" in the Consolidated Statements of Income.

FirstEnergy also recorded approximately $6 million ($13 million net of tax) and $93 million ($91 million net of tax) in merger integration costs during 2012 and 2011, respectively, including an inventory valuation adjustment in 2011. In connection with the merger, FirstEnergy reviewed its inventory levels as a result of combining the inventory of both companies. Following this review, FirstEnergy management determined that the combined inventory stock contained excess and duplicative items. FirstEnergy management also adopted a consistent excess and obsolete inventory practice for the combined entity. Application of the revised practice, in conjunction with those items identified as excess and duplicative, resulted in an inventory valuation adjustment of $67 million ($42 million net of tax) in the first quarter of 2011.

Revenues and earnings of Allegheny included in FirstEnergy's Consolidated Statements of Income for the periods beginning on the February 25, 2011, merger date are as follows:

(In millions, except per share amounts)	February 25 - December 31, 2011	Year Ended December 31, 2012	Year Ended December 31, 2013
Total revenues	$ 3,966	$ 4,410	$ 4,331
Earnings (Losses) Available to FirstEnergy Corp.[(1)]	$ 147	$ 356	$ (31)
Basic Earnings (Losses) Per Share	$ 0.37	$ 0.85	$ (0.07)
Diluted Earnings (Losses) Per Share	$ 0.37	$ 0.85	$ (0.07)

(1) Includes Allegheny's after-tax merger costs of $58 million, $1 million and $1 million during 2011, 2012 and 2013, respectively.

Pro Forma Financial Information

The following unaudited pro forma financial information reflects the consolidated results of operations of FirstEnergy as if the merger with AE had taken place on January 1, 2010. The unaudited pro forma information was calculated after applying FirstEnergy's accounting policies and adjusting Allegheny's results to reflect the depreciation and amortization that would have been charged assuming fair value adjustments to property, plant and equipment, debt and intangible assets had been applied on January 1, 2010, together with the consequential tax effects.

FirstEnergy and Allegheny both incurred merger-related costs that have been included in the pro forma earnings presented below. Combined pre-tax transaction costs incurred were approximately $91 million in the year ended 2011. In addition, during 2011, $93 million of pre-tax merger integration costs and $36 million of pre-tax charges from merger settlements approved by regulatory agencies were recognized.

The unaudited pro forma financial information has been presented below for illustrative purposes only and is not necessarily indicative of results of operations that would have been achieved had the merger been completed on January 1, 2010, or the future consolidated results of operations of the combined company.

(Pro forma amounts in millions, except per share amounts)	**2011**
Revenues	$ 17,449
Earnings available to FirstEnergy	$ 979
Basic Earnings Per Share	$ 2.34
Diluted Earnings Per Share	$ 2.33

SHAREHOLDER SERVICES

TRANSFER AGENT AND REGISTRAR

American Stock Transfer & Trust Company, LLC (AST), acts as the Transfer Agent and Registrar. Shareholders wanting to transfer stock, or who need assistance or information, can send their stock certificate(s) or write to FirstEnergy Corp., c/o American Stock Transfer & Trust Company, LLC, P.O. Box 2016, New York, NY 10272-2016. Shareholders also can call toll-free at 1-800-736-3402, between 8:00 a.m. and 8:00 p.m. Eastern time, Monday through Friday. For Internet access to general shareholder and account information, visit the AST website at www.amstock.com/company/firstenergy.asp.

STOCK INVESTMENT PLAN

Registered shareholders and employees of the company can participate in the Stock Investment Plan. To learn more about the company's Stock Investment Plan, visit AST's website at www.amstock.com/company/firstenergy.asp or contact AST toll-free at 1-800-736-3402.

DIRECT DIVIDEND DEPOSIT

Shareholders can have their dividend payments automatically deposited to checking, savings or credit union accounts at any financial institution that accepts electronic direct deposits. Using this free service ensures that payments will be available to you on the payment date, eliminating the possibility of mail delay or lost checks. Contact AST toll-free at 1-800-736-3402 to receive a Direct Dividend Deposit Authorization Agreement.

STOCK LISTING AND TRADING

The common stock of FirstEnergy is listed on the New York Stock Exchange under the symbol FE.

FORM 10-K ANNUAL REPORT

The Annual Report on Form 10-K, as filed with the Securities and Exchange Commission, including the financial statements and financial statement schedules, will be sent to you without charge upon written request to Rhonda S. Ferguson, Vice President and Corporate Secretary, FirstEnergy Corp., 76 South Main Street, Akron, Ohio 44308-1890. You also can view the Form 10-K by visiting the company's website at www.firstenergycorp.com/financialreports.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-F-3:

> "State what coverage requirements or capital structure ratios are required in the most restrictive of applicable indentures/charter tests and how these measures have been computed."

RESPONSE:

a.) Senior Note Indenture dated July 1, 1999

There are no coverage or capital structure ratio requirements in Metropolitan Edison's Senior Note Indenture. The Indenture does contain limitation on liens and limitations on sale leaseback transactions which are defined in the Indenture

b.) Amended and Restated Articles of Incorporation

The Board of Directors may adopt an amendment to these Articles of Incorporation determining, in whole or in part, the express terms, within the limits set forth in these Articles of Incorporation or the Pennsylvania Business Corporation Law, of any class of shares before the issuance of any shares of that class, or of one or more series within a class before the issuance of shares of that series; including, without limitation, division of shares into classes or into series within any class or classes, determination of the designation and the number of shares of any class or series, and the determination of the relative voting rights, preferences, limitations, rights to dividends, conversion rights, redemption rights, stated value, and other special rights of the shares of any class or series.

No Preferred Stock is currently outstanding.

c.) Credit Agreement, dated June 11, 2011, as amended on May 8, 2012, May 8, 2013, October 31, 2013 and March 31, 2014 among FirstEnergy Corp., The Cleveland Electric Illuminating Company, Metropolitan Edison Company, Ohio Edison Company, Pennsylvania Power Company, The Toledo Edison Company, Jersey Central Power & Light Company, Monongahela Power Company, Pennsylvania Electric Company, The Potomac Edison Company and West Penn Power Company as borrowers.

Metropolitan Edison is a borrower under the Credit Agreement and must maintain a Debt to Capitalization Ratio of no more than 0.65 to 1.00 (determined as of the last day of each fiscal quarter). The calculation is defined in the Credit Agreement. The relevant definition are shown in Attachment A.

"***Debt to Capitalization Ratio***" means, for any Borrower, the ratio of Consolidated Debt of such Borrower to Total Capitalization of such Borrower.

"***Consolidated Debt***" means, with respect to any Borrower at any date of determination the aggregate Indebtedness of such Borrower and its Consolidated Subsidiaries determined on a consolidated basis in accordance with GAAP, but shall not include (i) Nonrecourse Indebtedness of such Borrower and any of its Subsidiaries, (ii) obligations under leases that shall have been or should be, in accordance with GAAP, recorded as operating leases in respect of which such Borrower or any of its Consolidated Subsidiaries is liable as a lessee, (iii) the aggregate principal and/or face amount of Attributable Securitization Obligations of such Borrower and its Consolidated Subsidiaries and (iv) the aggregate principal amount of Trust Preferred Securities and Junior Subordinated Deferred Interest Obligations not exceeding 15% of the Total Capitalization of such Borrower and its Consolidated Subsidiaries (determined, for purposes of such calculation, without regard to the amount of Trust Preferred Securities and Junior Subordinated Deferred Interest Debt Obligations outstanding of such Borrower); *provided* that the amount of any mandatory principal amortization or defeasance of Trust Preferred Securities or Junior Subordinated Deferred Interest Debt Obligations prior to the Termination Date shall be included in this definition of Consolidated Debt.

"***Indebtedness***" of any Person means at any date, without duplication, (i) all obligations of such Person for borrowed money, or with respect to deposits or advances of any kind, or for the deferred purchase price of property or services other than trade accounts payable, (ii) all obligations of such Person evidenced by bonds, debentures, notes or similar instruments, (iii) all obligations of such Person upon which interest charges are customarily paid, (iv) all obligations under leases that shall have been or should be, in accordance with GAAP, recorded as capital leases in respect of which such Person is liable as lessee, (v) withdrawal liability incurred under ERISA by such Person or any of its affiliates to any Multiemployer Plan, (vi) reimbursement obligations of such Person (whether contingent or otherwise) in respect of letters of credit, bankers acceptances, surety or other bonds and similar instruments, (vii) all Indebtedness of others secured by a Lien on any asset of such Person, whether or not such Indebtedness is assumed by such Person and (viii) obligations of such Person under direct or indirect guaranties in respect of, and obligations (contingent or otherwise) to purchase or otherwise acquire, or otherwise to assure a creditor against loss in respect of, indebtedness or obligations of others of the kinds referred to above.

"***Nonrecourse Indebtedness***" means, with respect to any Borrower and its Subsidiaries, (i) any Indebtedness that finances the acquisition, development, construction or improvement of an asset in respect of which the Person to which such Indebtedness is owed has no recourse whatsoever to such Borrower or any of its

Affiliates and (ii) any Indebtedness existing on the date of this Agreement that finances the ownership or operation of an asset in respect of which the Person to which such Indebtedness is owed has no recourse whatsoever to such Borrower or any of its Affiliates, in each case of clauses (i) and (ii), other than:

(A) recourse to the named obligor with respect to such Indebtedness (the "***Debtor***") for amounts limited to the cash flow or net cash flow (other than historic cash flow) from the asset; and

(B) recourse to the Debtor for the purpose only of enabling amounts to be claimed in respect of such Indebtedness in an enforcement of any security interest or lien given by the Debtor over the asset or the income, cash flow or other proceeds deriving from the asset (or given by any shareholder or the like in the Debtor over its shares or like interest in the capital of the Debtor) to secure the Indebtedness, but only if the extent of the recourse to the Debtor is limited solely to the amount of any recoveries made on any such enforcement; and

(C) recourse to the Debtor generally or indirectly to any Affiliate of the Debtor, under any form of assurance, undertaking or support, which recourse is limited to a claim for damages (other than liquidated damages and damages required to be calculated in a specified way) for a breach of an obligation (other than a payment obligation or an obligation to comply or to procure compliance by another with any financial ratios or other tests of financial condition) by the Person against which such recourse is available.

"***Total Capitalization***" means, with respect to any Borrower at any date of determination the sum, without duplication, of (i) Consolidated Debt of such Borrower, (ii) the capital stock (but excluding treasury stock and capital stock subscribed and unissued) and other equity accounts (including retained earnings and paid in capital but excluding accumulated other comprehensive income and loss) of such Borrower and its Consolidated Subsidiaries, (iii) consolidated equity of the preference stockholders of such Borrower and its Consolidated Subsidiaries, and (iv) the aggregate principal amount of Trust Preferred Securities and Junior Subordinated Deferred Interest Debt Obligations of such Borrower and its Consolidated Subsidiaries; *provided*, *however*, that, commencing with the fiscal quarter ended September 30, 2013 and for each fiscal quarter ending thereafter, '***Total Capitalization***' shall be determined subject to the following adjustments:

(A) as applicable, for the respective Borrowers, there shall be excluded in such determination the following after-tax effects resulting from non-cash write-downs and non-cash charges occurring and recognized for the periods indicated below as reflected in the consolidated financial statements of the applicable Borrowers for such periods:

(1) in respect of pension and other postemployment benefits occurring and recognized in fiscal years 2011 and 2012, which shall not exceed in the aggregate $691,600,000 for all Borrowers (without duplication but allowing for, as applicable, consolidation);

(2) in respect of asset impairments attributable to the Albright, Rivesville and Willow Island Plants owned by MP, the Armstrong and R. Paul Plants owned by AESC, and the Bay Shore (Units 2-4 only), Eastlake (Units 4-5 only), Fremont and Richland Plants owned by FirstEnergy Generation, LLC occurring and recognized in fiscal year 2011, which shall not exceed in the aggregate $255,400,000 for all Borrowers (without duplication but allowing for, as applicable, consolidation); and

(3) in respect of asset impairments attributable to the Hatfield's Ferry Power Station and the Mitchell Power Station owned by AESC occurring and recognized in fiscal year 2013 through September 30, 2013, which shall not exceed in the aggregate $317,300,000 for all Borrowers (without duplication but allowing for, as applicable, consolidation); and

(B) in addition to the adjustments described in clause (A) above, for the respective Borrowers there shall be excluded in such determination the after-tax effects resulting from non-cash write-downs and non-cash charges attributable or relating to the following: (1)(i) pension and other postemployment benefits, (ii) impairment of regulatory and other long-lived assets, (iii) disallowance of regulatory assets, and (iv) goodwill impairment, in each case, occurring and recognized during the fiscal quarter ending December 31, 2013 and in any fiscal quarter ending thereafter as reflected in the consolidated financial statements of the respective Borrowers for such periods, and (2) disallowance of regulatory assets consisting of marginal transmission line losses of Met-Ed and Penelec occurring during the period from January 11, 2007 through December 31, 2010 as described in the PPUC Order, in each case, occurring and recognized during the fiscal quarter ended September 30, 2013 as reflected in the consolidated financial statements of the respective Borrowers for such period, but such adjustments shall not exceed in the aggregate $1,500,000,000 for all Borrowers (without duplication but allowing for, as applicable, consolidation).

"***Trust Preferred Securities***" means any securities, however denominated, (i) issued by any Borrower or any Consolidated Subsidiary of any Borrower, (ii) that are not subject to mandatory redemption or the underlying securities, if any, of which are not subject to mandatory redemption, (iii) that are perpetual or mature no less than 30 years from the date of issuance, (iv) the indebtedness issued in connection with which, including any guaranty, is subordinate in right of payment to the unsecured and unsubordinated indebtedness of the issuer of such indebtedness or guaranty, and

(v) the terms of which permit the deferral of the payment of interest or distributions thereon to a date occurring after the Termination Date.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-F-4:

"A schedule of comparative financial data shall be supplied for the test year, the most immediately available annual historical period, prior to the test year, and the 2 calendar years most immediately preceding the test year. Changes in Moody's/S&P ratings, noted on this schedule, shall be accompanied by the Moody's/S&P write up of such change, if available. The following financial data and ratios shall be supplied for the utility's parent, where applicable, if not available for the utility.

a. Times interest earned ratio – pre-tax and post-tax basis
b. Preferred stock dividend coverage ratio—post-tax basis.
c. Times fixed charges earned ratio—pre-tax basis.
d. Earnings per share.
e. Dividend per share.
f. Average dividend yield (52-week high/low common stock price).
g. Average book value per share.
h. Average market price per share.
i. Market price-book value ratio.
j. Earnings-book value ratio (per share basis, average book value).
k. Dividend payout ratio.
l. AFUDC as a % of earnings available for common equity.
m. Construction work in progress as a % of net utility plant.
n. Effective income tax rate.
o. Internal cash generations as a % of total capital requirements."

RESPONSE:

[3] FE Corp. and Met-Ed do not have Preferred Stock Dividend Requirements

On July 15, 2014, Moody's made the following ratings actions on PA utilities:

- Upgraded Met-Ed's senior unsecured and issuer rating to Baa1 from Baa2.
- Upgraded Penn Power's issuer rating to Baa1 from Baa2; senior secured to A2 from A3.
- Upgraded West Penn Power's issuer rating to Baa1 from Baa2; senior secured to A2 from A3.
- Affirmed Penelec's Baa2 senior unsecured and issuer rating

Other than the changes above, no ratings changes have been made at the Pennsylvania utilities since 2011 other than removal of certain ratings that were no longer applicable due to:

- Met-Ed's senior secured rating was removed in 2011 after its $13.69M FMB was redeemed in April 2011.
- Penelec's senior secured rating was removed after its' FMB indenture was terminated in December 2010.
- West Penn's senior unsecured rating was removed in April 2012 after maturity of an $80M medium term note.

IV. FERC JURISDICTIONAL SEPARATION STUDIES 17

DIRECT TESTIMONY
OF
HILLARY E. STEWART

I. INTRODUCTION, QUALIFICATIONS AND PURPOSE OF TESTIMONY

Q. Please state your name and business address.

A. My name is Hillary E. Stewart. My business address is 76 South Main Street, Akron, Ohio 44308.

Q. By whom are you employed and in what capacity?

A. I am a Rates Analyst in the Rates and Regulatory Affairs Department of FirstEnergy Service Company.

Q. What are your duties as a Rates Analyst?

A. My direct responsibilities involve analyzing customer behavior by performing various studies and surveys and, as part of this overall role, developing Cost of Service Studies ("COSSs") for submission in utility regulatory proceedings.

Q. What is your educational and professional background?

A. My educational and professional background is described in Appendix A of this testimony.

Q. On whose behalf are you testifying?

A. I am testifying on behalf of Metropolitan Edison Company (Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power"), and West Penn Power Company ("West Penn") (collectively, the

"Companies") for whom I prepared, and am sponsoring, COSSs for the fully projected future test year ending April 30, 2016. My testimony and accompanying COSSs are being submitted in support of the Companies' filings with the Pennsylvania Public Utility Commission ("Commission") to increase their distribution base rates.

Q. What is the purpose of your testimony in this proceeding?

A. I will explain the cost of service principles underlying the COSSs that I performed, the methods and procedures employed to perform those studies and the results those studies produced. To assure a common understanding of technical terms germane to the COSSs, I have provided a glossary of commonly used terms as Appendix C to my testimony. Terms defined in the glossary are denoted in the testimony with an asterisk (*). I will also provide the results of a jurisdictional separation study that was prepared under my supervision.

Q. What exhibits are you sponsoring in this proceeding?

A. I am sponsoring Exhibits HES-1 and HES-2 for each of the Companies, which consist of the following:

Exhibits HES – 1 contain the COSS for each Company using the Non-coincident Peak Demand* allocation method. These studies were performed using the revenue requirements for the fully projected future test year and revenues at both existing and proposed revenues. They also provide details of the Federal Energy Regulatory Commission's ("FERC")

Uniform System of Accounts that were employed to record, by account, the components of revenue requirement that formed the basis for the studies.

Exhibits HES – 2 contain the supporting studies for functionalizing costs and developing allocation factors used in the COSSs. An explanation of the supporting studies is contained within Exhibits HES-2, and I provide an overview of those studies later in my testimony.

II. GENERAL DESCRIPTION OF COSS PROCESS

Q. Describe briefly the steps employed in performing a COSS.

A. Typically, a COSS follows the three basic steps prescribed in the *Electric Utility Cost Allocation Manual* published by the National Association of Regulatory Commissioners ("NARUC") for arranging accounting data into a format that facilitates assigning the total cost of service to individual rate schedules or service classifications within an electric utility's rate structure. These steps consist of the following:

1. **Functionalization** is the process of identifying the functions (e.g., generation, transmission, distribution) associated with a company's assets used, and expenses incurred, to furnish utility service in order to determine the particular rate schedules that should share responsibility for each of those assets and expenses. Within the distribution function, it may be

necessary to separate costs into sub-functions, as I explain later in my testimony.

2. **Classification** is the process of classifying costs as customer-related, demand-related, or energy-related in order to facilitate assigning such costs to rate schedules in accordance with identifiable characteristics. The way costs are classified will determine the manner in which they should be allocated to the rate schedules. Some facilities may serve more than one classification and, if so, the costs recorded in those accounts are divided between classifications accordingly.

3. **Allocation** is the process of assigning costs to rate schedules based upon measurable characteristics. For example, customer costs generally vary on the basis of the number of customers (or customer accounts) and, therefore, are allocated based on the number of customers (or customer accounts). In some cases, costs can be traced in company records in sufficient detail to directly assign them to a particular rate schedule. Street lighting fixtures are an example of a cost that can be directly assigned.

Q. Please describe the software you used in performing the Companies' COSSs.

A. The COSSs were prepared using a model developed internally by FirstEnergy Service Company employing Microsoft Excel as the underlying platform for manipulating the cost of service data and reporting the results of the COSSs.

Q. How are the results of the COSSs intended to be used in developing proposed rates?

A. As explained by Kevin M. Siedt in Met-Ed/Penelec/Penn Power/West Penn Statement No. 4, the COSS provides the starting point for the development of the Companies' Rate Design.* A COSS allocates a company's total cost of service to each of its rate schedules. The cost of service for each rate schedule is compared to the revenues produced, or projected to be produced, under existing rates. For purposes of my COSSs, pro forma revenues for the fully projected future test year were furnished by Mr. Siedt. From these inputs, the earnings level, typically expressed in the form of a class rate of return or Unitized Return,* is calculated for each rate schedule. These data indicate, based on a snapshot at a single point in time, whether a particular rate schedule is providing revenue that is less than, equal to, or more than the cost to furnish service to customers on that rate schedule.

As Mr. Siedt explains, the rate designer uses the results of the COSS along with various other factors and the exercise of professional judgment to determine the portion of the total revenue increase assigned to each rate schedule. Once the revenue increases, by rate schedule, are determined, the COSS is used to calculate the resulting rates of return, by rate schedule, under proposed rates. Comparing the results of the COSS under existing and proposed rates provides an indication of whether, and to what extent, the proposed increases move each rate schedule closer to its cost of service. Also, because the COSS provides a breakdown of costs by classification (e.g., customer-related or demand-related) for each rate

schedule, the results of the COSS are used to identify the level of costs that should be recovered in each component of a rate (e.g., customer charge or demand charge).

Q. What allocation method was used in the COSSs to allocate demand-related costs among rate schedules?

A. The Non-coincident Peak Demand* allocation method was used to allocate costs classified as demand-related. As its name implies, this method allocates demand costs among rate schedules in proportion to their Non-coincident Peak Demands. As employed by the Companies, this method allocates demand costs for certain large distribution plant accounts based on the Non-coincident Peak Demands of three groups of customers served by the Companies.

The first group, identified as "PRI" in the COSS, consists of customers that receive service at primary voltage and, therefore, use only the Primary Distribution* system. The second group, identified as "SEC" in the COSS, consists of those customers that receive service at secondary voltage but use both Primary Distribution* and Secondary Distribution* plant assets to obtain that service. The third group, identified as "PRI_SEC" in the COSS, consists of all customers using the distribution system or, in other words, the aggregate of the PRI and SEC groups. The manner in which these groupings are used to allocate sub-functionalized costs is discussed later in my testimony.

Q. Have you prepared a diagram that illustrates how customers in each of the three groups discussed above and the facilities serving them were identified?

A. Yes. Appendix B to my testimony is a realistic representation of a portion of a distribution system showing how primary and secondary facilities are used to serve each of the three groups of customers. As Appendix B shows: (1) portions of the Primary Distribution system serve only primary voltage customers; (2) portions of the Primary Distribution system serve both primary and secondary voltage customers; and (3) portions of the Primary Distribution system are used only to deliver power to the Secondary Distribution system and, therefore, serve only secondary voltage customers. Appendix B also shows that the Secondary Distribution system serves only secondary voltage customers.

III. DETAILED DESCRIPTION OF THE COSS PRESENTED IN THIS CASE

Q. Please describe Exhibits HES-1.

A. Exhibits HES-1 are divided into two sections, as follows:

Section 1 contains the COSS based on revenues at existing rates. Page 1 shows the calculation of each rate schedule's rate of return. The remainder of Section 1 shows in detail how each FERC account associated with the line items on page 1 was functionalized and how each functionalized cost was allocated among rate schedules.

Section 2 shows the results of the COSS based on revenues at proposed rates, as well at the revenues required for each rate schedule to produce a rate of return

equal to the applicable Company's claimed overall rate of return. Page 1 shows the calculation of each rate schedule's rate of return at proposed rates, and page 2 shows the calculation at rates of return equal to the applicable Company's claimed overall rate of return. Associated income taxes are also shown on each page.

Q. Please describe each Companies' Exhibit HES-2.

A. Exhibits HES-2 contain the supporting studies used to develop the COSS. A brief description of each supporting study is provided below. A more detailed description of each supporting schedule is provided in Exhibits HES-2.

Study No.	Title	Description
1	Demand Allocators	This study develops the allocation factors for distribution plant.
2	Plant Functionalization (Accounts 301-303, 389-398)	This study shows how General Plant was functionalized.
3	Customer Deposits Allocation	This study allocates among rate schedules customer deposits, which are treated as a rate base deduction in developing revenue requirement.
4	Customer Account and Information Expenses Allocation	This study allocates expenses in the applicable accounts to rate schedules based on straight or weighted customer counts.
5	Labor (O&M)	This study identifies the labor component of operation and maintenance expenses by FERC account.
6	Meter Plant Allocation (Account 370)	This study allocates the cost of metering equipment to rate schedules.
7	Minimum Grid and Primary/Secondary Studies	Two studies are set forth in this portion of Exhibit HES-2. The minimum grid study determines the cost of minimum-sized distribution facilities recorded in FERC Plant Accounts* 364-368. The primary/secondary study shows how the cost of distribution assets recorded in

		FERC Plant Accounts 364-367 was divided into two parts corresponding to: (1) the cost of distribution plant used to furnish service to customers that use only Primary Distribution facilities; and (2) the cost distribution plant used to furnish service to customers that use both Primary Distribution and Secondary Distribution facilities.
8	Street Lighting Study	This study allocates the costs recorded in FERC Plant Accounts 364 (distribution poles) to street lighting customers.
9	Allocation of Other Revenue	This study functionalizes Other Revenues.
10	Line Losses	This study shows the line losses that are stated in each Company's Supplier Tariff.

Q. Please describe the function(s) included in the COSSs.

A. Following the restructuring of the electric industry in Pennsylvania, the Companies ceased to own or operate generating facilities used to provide jurisdictional retail service in the state. Additionally, the transmission facilities of Met-Ed, Penelec and West Penn (Penn Power has no FERC jurisdictional transmission facilities) are subject to FERC jurisdiction and are under the operational control of PJM Interconnection LLC, which is the FERC-approved regional transmission organization for each Company's control area. Accordingly, the generation and transmission functions are excluded from the Pennsylvania jurisdictional costs that are used to determine the Companies' distribution rates. Therefore, the only function that is relevant for functionalizing costs for distribution service in the COSS is "distribution," which comprises the rate base and operating and maintenance expenses of the Companies' distribution systems, customer premises facilities and customer accounting, billing and information systems. All of the costs functionalized as distribution were derived

from the costs recorded in accounts that the Companies maintain in accordance with the FERC's Uniform System of Accounts.

Q. Was there a need to further divide the distribution function into sub-functions?

A. Yes. The functionalized distribution plant data did not provide adequate detail because customers take service at different voltage levels. Therefore, it was necessary to sub-functionalize distribution plant costs recorded in FERC Plant Accounts 361 – 368 based on voltage peak responsibility to properly allocate such costs among rate schedules. As previously mentioned, Supporting Study No. 7 includes the study conducted to sub-functionalize those accounts. This study sub-divided the plant accounts into amounts to be apportioned between primary service voltage rate schedules included in the PRI and SEC groups. The following table shows how cost responsibility is shared among the three groups I previously identified with respect to each of the aforementioned plant accounts:

ACCOUNT	DESCRIPTION	GROUP
361	Structures	PRI_SEC
362	Station Equipment	PRI_SEC
364P	Poles-Primary	PRI
364S	Poles-Secondary	SEC
364Z	Poles-Streetlight	SEC
365P	Primary Overhead Conductor	PRI
365S	Secondary Overhead Conductor	SEC
366P	Primary Underground Conduit	PRI
366S	Secondary Underground Conduit	SEC

367P	Primary Underground Conductor	PRI
367S	Secondary Underground Conductor	SEC
368	Transformers	SEC

Q. How was the sub-functionalization performed?

A. As more fully explained in Supporting Study No. 7, the sub-functionalization was done by tracing distribution circuits from primary power customers back to the substations that serve them and identifying the portions of the primary distribution facilities that are used by such primary power customers. The remainder of the primary distribution system, which is not used by these customers, serves only secondary voltage load.

Q. Please describe classification, which is the second step in the development of the COSS.

A. The Companies adhered to, and followed, the NARUC Cost Allocation Manual and the cost of service principles set forth therein to classify their distribution assets and operating costs. The NARUC Cost Allocation Manual (pp. 96-98) states that an electric utility's distribution-related facilities are, from a design and operational perspective, sized to meet the maximum kW load (demand) requirements of customers. In addition, the NARUC Cost Allocation Manual (p. 89) states that all distribution costs should be classified as either customer or demand related, or as a combination of those two factors. In accordance with NARUC's recommendations, the Companies sub-functionalized their facilities into primary and secondary voltage level components as discussed previously

and, with respect to distribution mass property accounts (Plant Accounts 364-369), identified the customer and demand-related components.

Q. How were the customer and demand components determined?

A. As the NARUC Cost Allocation Manual also recommends, the customer component was determined by a minimum grid study, which is set forth in Supporting Study No. 7. A minimum grid study identifies the costs of poles, conductors, transformers, and service drops of the minimum size that would be required to serve a customer. The remainder of the costs recorded in each account therefore comprise the demand component. The customer component is allocated to rate schedules based on the number of customer accounts. The demand component is allocated on the basis of Non-coincident Peak Demands.

Q. Please describe the process of allocation, which is the third step in the development of the COSS.

A. Sub-functionalized, classified costs are allocated among rate schedules based upon measurable characteristics. The method used to allocate costs in each account included in the COSSs is shown in Section No. 1 of each Company's Exhibit HES-1 on pages 40-43 for Met-Ed, pages 35-38 for Penelec, pages 42-46 for Penn Power and pages 34-37 for West Penn. In some cases, the allocation factor for a particular account is a factor developed by aggregating the allocation of a group of other accounts, which is referred to as a "pattern group." This is done when the account being allocated exhibits characteristics that are a blend of the various characteristics of each account in the pattern group. In some

instances, allocation is not used because the Companies have recorded costs in sufficient detail to be able to directly assign those costs to one or more rate schedules. This is the case with Plant Account 373, which is directly assigned to street lighting customers because the facilities represented by costs recorded in that account serve street lighting customers exclusively.

Q. Why was the Non-coincident Peak Demand method used to allocate demand-related distribution costs?

A. Load diversity affects system design and, therefore, consistent with cost-causation principles, it also influences how costs are allocated among rate schedules. At the very highest voltage levels of the electric grid – specifically, the bulk transmission portion – individual customer and customer class loads are consolidated within the totality of energy moving on the system. At this level, load is considered to be the most diverse because the peak loads of any individual customer or class are most likely occurring at times that do not coincide with the overall system peak. Moving down the delivery system from bulk transmission to the distribution of electricity to a customer location, load becomes less diverse; that is, the peak for total load on the distribution facilities is much more likely to coincide with customers' peak load. In other words, because distribution facilities serve load that is much more localized than the consolidated loads served at the bulk transmission level, distribution facilities must be sized to meet maximum demands that can be, and often are, imposed on them at any time of the year, not just at the time of the system coincident peak. This characteristic of the distribution system and the loads it carries warrants the use of Non-coincident

Peak Demand to allocate demand-related costs, as the NARUC Cost Allocation Manual (p. 97) expressly provides:

> Local area loads are the major factors in sizing distribution equipment. Consequently, customer-class noncoincident demands (NCPs) and individual customer maximum demands are the load characteristics that are normally used to allocate the demand component of distribution facilities.

Q. How did the Companies determine Non-coincident Peak Demands?

A. The Load Data* available to the Companies make it possible for them to identify with reasonable accuracy the maximum Non-coincident Peak Demands of each rate schedule.

Q. How were costs allocated for Accounts 360, 369, 370, 371 and 373?

A. Costs recorded in Account 360 – Land and Land Rights were allocated using the distribution plant accounts 361 to 369 as a pattern group. That is, the costs in that account were allocated in proportion to the totality of those other plant costs. Costs recorded in Account 369 – Services were allocated on a customer basis to all secondary customers because each secondary customer has a service. Costs recorded in Account 370 were allocated based on a meter-cost weighting of the number of customers, as explained in more detail in Supporting Study No. 6. Costs recorded in Account 371 and 372 were directly assigned to the area lighting rate schedule. Costs recorded in Account 373 were directly assigned to the street lighting rate schedules, as I previously noted.

Q. Why were Met-Ed Rate Schedule TP (Transmission Power), Penelec Rate Schedule LP (Large Primary Power) and West Penn Rate Schedule PP (Primary Power) 40 assigned primary distribution costs?

A. Customers served under the terms and conditions of these rate schedules can take service at either distribution voltages or transmission voltages. Only the loads of those customers receiving primary distribution service were included in the demand allocation factors for these rate schedules.

Q. How were distribution costs assigned or allocated to Rate Schedules TP, LP, and PP40?

A. Met-Ed Rate Schedule TP was divided into sub-rate schedules TP_P and TP_A. Penelec Rate Schedule LP was divided into sub-rate schedules LP_P and LP_A. Sub-classes TP_P and LP_P formed the basis for allocating distribution plant to customers on Rate Schedules TP and LP that take service at distribution (primary) voltage. Sub-classes TP_A and LP_A formed the basis for allocating expenses and distribution plant used by both primary and transmission customers taking service under Rate Schedules TP or LP. Cost allocated to sub-classes TP_A and LP_A include, for example, Customer Account and Information expenses and Meters and associated expenses. The same approach was used for West Penn Rate Schedule PP40.

Q. Does Penelec provide retail electric service to customers located outside Pennsylvania?

A. Yes, it provides retail electric service to customers located in the Waverly District of New York. Penelec provides service in New York under and subject to the jurisdiction of the New York Public Service Commission.

Q. Were appropriate portions of Penelec's expenses and asset costs allocated to customers in the Waverly District?

A. Yes, they were. Penelec allocated expenses and plant assets to those customers in the same manner it allocated such costs to its customers in the Commonwealth of Pennsylvania. The Penelec COSS includes Waverly District rate schedules in the proper rate schedule groupings to ensure costs are allocated accurately across all customers with similar characteristics. The revenues, expenses, assets and other operating costs associated with Penelec's service to Waverly District customers were eliminated from Penelec's Pennsylvania jurisdictional revenue requirement developed by Richard A. D'Angelo as discussed in Met-Ed/Penelec/Penn Power/West Penn Statement No. 2.

Q. Please summarize the results of the COSS.

A. The rates of return and Unitized Returns for each rate schedule of each of the Companies at existing and proposed rates are summarized in the charts below:

Distribution Rates of Return												
COSS Rates of Return			COSS Rates of Return - Unitized			COSS Rates of Return			COSS Rates of Return - Unitized

IV. FERC JURISDICTIONAL SEPARATION STUDIES

Q. Did you prepare separation studies for the purpose of identifying the portions of the plant in service and labor expenses of each of the Companies that relate to the provision of FERC jurisdictional transmission service?

A. Yes. Under my supervision, Met-Ed, Penelec and West Penn performed detailed analyses of their non-jurisdictional labor expenses and plant in service similar to the analyses performed for purposes of Met-Ed's and Penelec's 2006 base rate cases to identify the portions of each Companies' O&M expenses and plant costs that relate to FERC-jurisdictional service. A separation study is not required for Penn Power because it does not provide FERC jurisdictional transmission service and, therefore, all of its assets and operating costs are associated with Pennsylvania jurisdictional service. For Met-Ed, Penelec and West Penn, the percentage allocations to FERC jurisdictional service are shown below:

	Labor Allocation	Plant Allocation
Met-Ed	10.43%	22.30%
Penelec	4.83%	23.60%
West Penn	9.00%	19.58%

Q. Does this conclude your direct testimony?

A. Yes, it does.

SUMMARY

I am a rate analyst in Forecasting & Load Evaluation, where I have been responsible for developing and preparing the load and revenue forecast for Meted, Penelec, and Penn Power. Additionally, I have been responsible for several projects related to customer behavior, regulatory financial analysis, load research and forecasting, and energy efficiency.

Glossary of Terms

Allocation Method – A theoretical basis for apportioning a cost that is incurred to provide service to all customers or a sub-set of customers.

Annual Average Demand – the kWh of a rate schedule or group of rate schedules divided by 8,760 (the number of hours in a year).

Coincident Peak Demand – the demand of a rate schedule at the time of the Company's maximum hourly demand.

Load Data –Typically expressed is Megawatt Hours or Kilowatt Hours, this represents the amount of peak demand or total energy consumption imposed on a utility system by a customer group or rate schedule.

Load Factor - As used in this COSS, load factor is the ratio of the Company's annual average demand divided by the Company's maximum hourly demand.

Non-coincident Peak Demand – the maximum demand of a rate schedule at any time. This demand may or may not be at the time of the coincident peak demand.

Plant Account –A component of the accounting system under which property used to provide utility service is grouped for accounting purposes according to a defined set of common characteristics.

Primary Distribution – The portion of the electric distribution system that consists of conductors, poles, transformers and associated plant that distributes service at voltage levels lower than transmission facilities and higher than secondary distribution facilities.

Rate Design – The development of tariff rates that, when applied to billing determinants, produce a total authorized revenue requirement.

Sales Forecast –A projection of future levels of demand and energy consumption by customers on a Megawatt Hour or Kilowatt Hour basis for a given period of time.

Secondary Distribution – The portion of the electric distribution system that consists of conductors, poles, transformers and associated plant that distributes service at voltage levels lower than Primary Distribution Facilities.

Standard Filing Requirements –The data filed by a public utility pursuant to the Pennsylvania Public Utility Commission regulations specifying the supporting data required in rate change filings.

Appendix C

Glossary of Terms

Unitized Return – The ratio of the individual rate schedule rate of the return to the Company overall rate of return.

Voltage Peak Demand – the maximum hourly demand of a group of rate schedules being served by the voltages specified for the group.

Customer Accounting & Information

FERC Customer Accounting Analysis

Metropolitan Edison Company

Year Ending December 2013

FERC 902 Meter Reading Expenses

Overview

The allocation methodology required a two-step process. First, a weighting factor was calculated for each rate class based on the number of meters in that rate class and the read time for those meters. Then, these weight factors were used to determine the allocation of the FERC balance across the rate classes.

Source of Data

FERC 902 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

A Brio query was run from EDW to obtain the number of meters in each rate category by Customer Service Systems.

Read times for each meter by rate class was obtained from Customer Service Analytics. Streetlights were excluded from the calculations as a majority of those accounts are not metered.

Allocation Methodology

- The average number of customers (a) for each rate category is based on the FERC form 1.
- The weighted factor (b) is based on the read time for each rate category and represents the minutes per meter to obtain a reading.
- The Weighted Customer Count (c) is the Customer Count (a) X Weighted factor (b)
- Total $ by Rate (d) was calculated by taking the Weighted Customer Count by rate class (c) divided by Total Weighted Customer Count X Total FERC Balance equals FERC balance by rate class.

Example:

Customers By Rate Class	Average Number of Customers (a)	Weighted Factor (b)	Weighted Customer Count (c) = (a) * (b)	Total $ by Rate (d)
Residential				
Rate RS	444,991	1.04388	464,517	$2,973,472
Rate RT	42,713	1.59968	68,327	$437,377
Rate GSV	270	2.22220	600	$3,841

FERC 903 Customer Records Collection Expenses

Overview

The 2013 FERC Form 1 average number of customers was used to calculate a weighted distribution of the FERC 903.

Source of Data

FERC 903 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

Allocation Methodology

The weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the average number of customers from the FERC Form 1 (a) in each rate category compared to the total customers. This factor (b) was then multiplied by the combined FERC 903 balance to determine the distribution of dollars across the rate classes (c).

Example:

Title of Rate Schedule	Average Number Customers (a)	Factor (b)	$ Total by Rate (c)
Residential			
Rate RS	444,991	0.8024	$5,020,433
Rate RT	42,713	0.0770	$481,892
Rate GSV	270	0.0005	$3,046
Total Residential	**487,974**	**0.8799**	**$5,505,372**
Commercial			
Rate GSS	40,198	0.0725	$453,518
Rate GSM	23,722	0.0428	$267,634
Rate MS	142	0.0003	$1,602
Rate OL	1,095	0.0020	$12,354
Total Commercial	**65,157**	**0.1175**	**$735,108**
Industrial			
Rate GST	350	0.0006	$3,949
Rate GP	502	0.0009	$5,664
Rate TP	23	0.0000	$259
Total Industrial	**875**	**0.0016**	**$9,872**
Public St & Highway Lighting			
Public St & Highway Lighting	590	0.0011	$6,656
Total Public St & Highway Lighting	**590**	**0.0011**	**$6,656**
Total	**554,596**		**$6,257,008**

FERC 904 Uncollectible Accounts

Overview

The 2013 FERC Form 1 average number of customers was used to calculate a weighted distribution of the FERC 904.

Source of Data

FERC 904 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

Allocation Methodology

The weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the average number of customers from the FERC Form 1 (a) in each rate category compared to the total customers. This factor (b) was then multiplied by the combined FERC 904 balance to determine the distribution of dollars across the rate classes (c).

Example:

Title of Rate Schedule	Average Number Customers (a)	Factor (b)	$ Total by Rate (c)
Residential			
Rate RS	444,991	0.8024	$11,500,557
Rate RT	42,713	0.0770	$1,103,895
Rate GSV	270	0.0005	$6,978
Total Residential	**487,974**	**0.8799**	**$12,611,430**
Commercial			
Rate GSS	40,198	0.0725	$1,038,896
Rate GSM	23,722	0.0428	$613,083
Rate MS	142	0.0003	$3,670
Rate OL	1,095	0.0020	$28,300
Total Commercial	**65,157**	**0.1175**	**$1,683,948**
Industrial			
Rate GST	350	0.0006	$9,046
Rate GP	502	0.0009	$12,974

Total Industrial	**875**	**0.0016**	**$22,614**
Public St & Highway Lighting			
Public St & Highway Lighting	590	0.0011	$15,248
Total Public St & Highway Lighting	**590**	**0.0011**	**$15,248**
Total	**554,596**		**$14,333,240**

FERC 905 Miscellaneous Customer Accounts Expenses

Overview

The 2013 FERC Form 1 average number of customers was used to calculate a weighted distribution of the FERC 905.

Source of Data

FERC 905 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

Allocation Methodology

The weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the average number of customers from the FERC Form 1 (a) in each rate category compared to the total customers. This factor (b) was then multiplied by the combined FERC 905 balance to determine the distribution of dollars across the rate classes (c).

Example:

Title of Rate Schedule	Average Number Customers (a)	Factor (b)	$ Total by Rate (c)
Residential			
Rate RS	444,991	0.8024	$191,086
Rate RT	42,713	0.0770	$18,342
Rate GSV	270	0.0005	$116
Total Residential	**487,974**	**0.8799**	**$209,544**
Commercial			
Rate GSS	40,198	0.0725	$17,262
Rate GSM	23,722	0.0428	$10,187
Rate MS	142	0.0003	$61
Rate OL	1,095	0.0020	$470
Total Commercial	**65,157**	**0.1175**	**$27,979**
Industrial			
Rate GST	350	0.0006	$150
Rate GP	502	0.0009	$216
Rate TP	23	0.0000	$10

Public St & Highway Lighting			
Public St & Highway Lighting	590	0.0011	$253
Total Public St & Highway Lighting	**590**	**0.0011**	**$253**
Total	**554,596**		**$238,152**

FERC 450 & 451 Forfeited Discounts and Miscellaneous Service Revenues

Overview

The 2013 FERC Form 1 average number of customers was used to calculate a weighted distribution of the FERC 450 and 451 expenses.

Source of Data

FERC 450 and 451 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

Allocation Methodology

The weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the average number of customers from the FERC Form 1 (a) in each rate category compared to the total customers. This factor (b) was then multiplied by the combined FERC 450 and 451 balance to determine the distribution of dollars across the rate classes (c).

Example:

Title of Rate Schedule	Average Number Customers (a)	Factor (b)	$ Total by Rate (c)
Residential			
Rate RS	444,991	0.8024	($4,728,372)
Rate RT	42,713	0.0770	($453,858)
Rate GSV	270	0.0005	($2,869)
Total Residential	**487,974**	**0.8799**	**($5,185,099)**
Commercial			
Rate GSS	40,198	0.0725	($427,135)
Rate GSM	23,722	0.0428	($252,064)
Rate MS	142	0.0003	($1,509)
Rate OL	1,095	0.0020	($11,635)
Total Commercial	**65,157**	**0.1175**	**($692,343)**
Industrial			
Rate GST	350	0.0006	($3,719)
Rate GP	502	0.0009	($5,334)

Total Industrial	**875**	**0.0016**	**($9,298)**
Public St & Highway Lighting			
Public St & Highway Lighting	590	0.0011	($6,269)
Total Public St & Highway Lighting	**590**	**0.0011**	**($6,269)**
Total	**554,596**		**($5,893,009)**

FERC 908 Customer Assistance Expenses

Overview

Expenses for PA Act 129 charges were excluded from the FERC 908 account balance for 2013. The remaining FERC 908 account balance for 2013 was allocated over RS and RT rate class based on Factors calculated from total number of customers participating in low income programs

Source of Data

FERC 908 account balance for 2013 excluding PA Act 129 charges

Brio Reports run from EDW by Human Services

Allocation Methodology

- RT and RS factors were calculated by dividing the number of customers in each rate (a) by the sum of total customers (b)
- The RS and RT factors were applied to the total FERC balances to determine balances by rate (d & e)

Example:

Company	Balance	RS Balance (d)	RT Balance (e)
Met-Ed	26,388,455	$25,239,093	$1,149,361

Calculations

Customer Count RS (a)	Customer Count RT (a)	Customer Count (b)	RS Factor	RT Factor
17,238	785	18,023	0.956445	0.043555

FERC 910 Miscellaneous Customer Service and Information Expenses

Overview

FERC 910 account balances were distributed based on actual call volume for 2013. Ratios for rate class call volumes were calculated based on call volume and FERC Form 1 Customer Count and then applied to the total FERC balance to distribute the dollars across the rate classes.

Source of Data

FERC 910 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

Call Volumes from the IVR Calls by Call Report for 2013

Allocation Methodology

- Cost Allocations by Call Category was done by multiplying the FERC Form 910 Costs by the Percentage of Calls in each category (Residential, Commercial & Industrial, and Streetlight) compared to the total Call Volume. Since commercial and industrial call cannot be broken out, a percentage was established for commercial and for industrial based on the FERC Form 1 average number of customers. This percentage was then applied in order to allocate costs to each of the categories.

Example:

Calls by Customer Category	Count	Percentage	$
Residential	1,691,461	97.99%	$5,070,279
Commercial & Industrial	33,558	1.94%	$100,593
Commercial (Based on Customer Count)[1]	-	*98.67%*	*$99,260*
Industrial (Based on Customer Count)[2]	-	*1.33%*	*$1,333*
Public St & Highway Lighting	1,052	0.06%	$3,153
Total Calls	**1,726,071**	**100.00%**	**$5,174,025**

[1]Commercial (Based on Customer Count) = Total Commercial Customers/Total Commercial & Industrial Customers OR 65,157 / 66,032

[2]Industrial (Based on Customer Count) = Total Industrial Customers / Total Commercial & Industrial Customers OR 875 / 66,032

- To calculate the distribution of dollars across the rate classes (c) the percentage of customer in each rate category was established (b) based on the average number of customers from the FERC Form 1 (a). This percentage was then multiplied by the dollars allocated to each Call Category (Residential, Commercial, Industrial, and Streetlight) established above to determine the dollars

Example:

Customers By Rate Class	Average Number of Customers (a)	Percentage (b)	Total $ by Rate (c)
Residential			
Rate RS	444,991	91.19%	$4,623,665
Rate RT	42,713	8.75%	$443,808
Rate GSV	270	0.06%	$2,805
Total Residential	**487,974**	**100.00%**	**$5,070,279**
Commercial			
Rate GSS	40,198	61.69%	$61,237
Rate GSM	23,722	36.41%	$36,138
Rate MS	142	0.22%	$216
Rate OL	1,095	1.68%	$1,668
Total Commercial	**65,157**	**100.00%**	**$99,260**
Industrial			
Rate GST	350	40.00%	$533
Rate GP	502	57.37%	$765
Rate TP	23	2.63%	$35
Total Industrial	**875**	**100.00%**	**$1,333**

FERC Customer Accounting Analysis

Pennsylvania Electric Company

Year Ending December 2013

FERC 902 Meter Reading Expenses

Overview

Once an adjustment was made for NY customers, the remaining costs were allocated based on a two-step process. First, a weighting factor was calculated for each rate class based on the number of meters in that rate class and the read time for those meters. Then, these weight factors were used to determine the allocation of the FERC balance across the rate classes.

Source of Data

FERC 902 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

A Brio query was run from EDW to obtain the number of meters in each rate category by Customer Service Systems.

Read times for each meter by rate class was obtained from Customer Service Analytics. Streetlights were excluded from the calculations as a majority of those accounts are not metered.

Allocation Methodology

Example:

- The average number of customers (a) for each rate category is based on the FERC form 1.
- The weighted factor (b) is based on the read time for each rate category and represents the minutes per meter to obtain a reading.
- The Weighted Customer Count (c) is the Customer Count (a) X Weighted factor (b)
- Total $ by Rate (d) was calculated by taking the Weighted Customer Count by rate class (c) divided by Total Weighted Customer Count X Total FERC Balance equals FERC balance by rate class.

Example:

Customers By Rate Class	Average Number of Customers (a)	Weighted Factor (b)	Weighted Customer Count (c) = (a) * (b)	Total $ by Rate (d)
Residential				
Rate RS	479,015	1.15929	555,319	$3,078,713
Rate RT	20,627	1.68852	34,829	$193,094
Rate GSV	675	1.80891	1,221	$6,769
Total Residential (Excluding NY)	**500,317**		**591,370**	**$3,278,577**
Commercial				
Rate GSS	52,550	1.74938	91,930	$509,663
Rate GSM	28,501	2.08613	59,457	$329,631
Rate H	152	2.22328	338	$1,874
Rate OL	2,458	-	-	-
Total Commercial (Excluding NY)	**83,661**		**151,725**	**$841,167**
Industrial				
Rate GST	419	2.01755	845	$4,687
Rate GP	431	2.01086	867	$4,805
Rate LP	50	2.08942	104	$579
Total Industrial (Excluding NY)	**900**		**1,817**	**$10,071**
Public St & Highway Lighting				
Rate SV	765	-	-	-
Public St & Highway Lighting (Excluding NY)	**765**		-	-
PA Subtotal	**585,643**		**744,911**	**$4,129,815**
NY				
Residential, Commercial, & Industrial	3,757	1.16550	4,379	$24,276
Public St & Highway Lighting	2	-	-	-
NY Subtotal	**3,759**		**4,379**	**$24,276**
Total	**589,402**		**749,289**	**$4,154,091**

FERC 903 Customer Records and Collection Expenses

Overview

Once NY customers were excluded from the FERC 903 balance, the remaining balance was distribute to the rate categories based on the average number of customers from the FERC form 1.

Source of Data

FERC 903 account balance for 2013

2013 FERC Form 1 data was used for average number of customers

Allocation Methodology

- To calculate the dollars that should be excluded for Waverly, NY, a percentage was established for Waverly Customers and PA Customers based on the FERC Form 1 average number of customers. This percentage was then applied in order to allocate the cost amount to be adjusted out.

Example:

Customers by Category	Average Number of Customers	Percentage	$
Residential	**503,617**	**85.45%**	**$5,663,092**
PA	*500,317*	*99.34%*	*$5,625,984*
NY	*3,300*	*0.66%*	*$37,108*
Commercial	**84,117**	**14.27%**	**$945,882**
PA	*83,661*	*99.46%*	*$940,754*
NY	*456*	*0.54%*	*$5,128*
Industrial	**901**	**0.15%**	**$10,132**
PA	*900*	*99.89%*	*$10,120*
NY	*1*	*0.11%*	*$11*
Public St & Highway Lighting	**767**	**0.13%**	**$8,625**
PA	765	*99.74%*	*$8,602*
NY	2	*0.26%*	*$22*
Total	**589,402**		**$6,627,730**

- Once NY expenses were excluded, the weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the customer counts from the FERC Form 1 (a) in each rate category compared to the total customers. This factor (b) was then multiplied by the FERC 903 account balance to determine the distribution of dollars across the rate classes (c).

Example:

Customers By Rate Class	Average Number of Customers (a)	Factor (b)	Total $ by Rate (c)
Residential			
Rate RS	479,015	0.8179	$5,386,446
Rate RT	20,627	0.0352	$ 231,947
Rate GSV	675	0.0012	$ 7,590
Total Residential (Excluding NY)	**500,317**	**0.8543**	**$5,625,984**
Commercial			
Rate GSS	52,550	0.0897	$ 590,916
Rate GSM	28,501	0.0487	$ 320,489
Rate H	152	0.0003	$ 1,709
Rate OL	2,458	0.0042	$ 27,640
Total Commercial (Excluding NY)	**83,661**	**0.1429**	**$940,754**
Industrial			
Rate GST	419	0.0007	$ 4,712
Rate GP	431	0.0007	$ 4,847
Rate LP	50	0.0001	$ 562
Total Industrial (Excluding NY)	**900**	**0.0015**	**$10,120**
Public St & Highway Lighting			
Rate SV	765	0.0013	$ 8,602
Public St & Highway Lighting (Excluding NY)	**765**	**0.0013**	**8,602**
Grand Total (Excluding NY)	**585,643**		**$6,585,461**

FERC 904 Uncollectible Accounts

Overview

Once NY customers were excluded from the FERC 904 balance, the remaining balance was distribute to the rate categories based on the average number of customers from the FERC form 1.

Source of Data

FERC 904 account balance for 2013

2013 FERC Form 1 data was used for average number of customers

Allocation Methodology

- To calculate the dollars that should be excluded for Waverly, NY, a percentage was established for Waverly Customers and PA Customers based on the FERC Form 1 average number of customers. This percentage was then applied in order to allocate the cost amount to be adjusted out.

Example:

Customers by Category	Average Number of Customers	Percentage	$
Residential	**503,617**	**85.45%**	**$9,973,877**
PA	*500,317*	*99.34%*	*$9,908,522*
NY	*3,300*	*0.66%*	*$65,355*
Commercial	**84,117**	**14.27%**	**$1,665,894**
PA	*83,661*	*99.46%*	*$1,656,863*
NY	*456*	*0.54%*	*$9,031*
Industrial	**901**	**0.15%**	**$17,844**
PA	*900*	*99.89%*	*$17,824*
NY	*1*	*0.11%*	*$20*
Public St & Highway Lighting	**767**	**0.13%**	**$15,190**
PA	*765*	*99.74%*	*$15,150*
NY	*2*	*0.26%*	*$40*
Total	**589,402**		**$11,672,805**

- Once NY expenses were excluded, the weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the customer counts from the FERC Form 1 (a) in each rate category compared to the total customers. This factor (b) was then multiplied by the FERC 904 account balance to determine the distribution of dollars across the rate classes (c).

Example:

Customers By Rate Class	Average Number of Customers (a)	Factor (b)	Total $ by Rate (c)
Residential			
Rate RS	479,015	0.8179	$9,486,647
Rate RT	20,627	0.0352	$408,507
Rate GSV	675	0.0012	$13,368
Total Residential (Excluding NY)	**500,317**	**0.8543**	**$9,908,522**
Commercial			
Rate GSS	52,550	0.0897	$1,040,726
Rate GSM	28,501	0.0487	$564,448
Rate H	152	0.0003	$3,010
Rate OL	2,458	0.0042	$48,679
Total Commercial (Excluding NY)	**83,661**	**0.1429**	**$1,656,863**
Industrial			
Rate GST	419	0.0007	$8,298
Rate GP	431	0.0007	$8,536
Rate LP	50	0.0001	$990
Total Industrial (Excluding NY)	**900**	**0.0015**	**$17,824**
Public St & Highway Lighting			
Rate SV	765	0.0013	$15,150
Public St & Highway Lighting (Excluding NY)	**765**	**0.0013**	**$15,150**
Grand Total (Excluding NY)	**585,643**		**$11,598,360**

FERC 905 Miscellaneous Customer Accounts Expenses

Overview

Once NY customers were excluded from the FERC 905 balance, the remaining balance was distribute to the rate categories based on the average number of customers from the FERC form 1.

Source of Data

FERC 905 account balance for 2013

2013 FERC Form 1 data was used for average number of customers

Allocation Methodology

- To calculate the dollars that should be excluded for Waverly, NY, a percentage was established for Waverly Customers and PA Customers based on the FERC Form 1 average number of customers. This percentage was then applied in order to allocate the cost amount to be adjusted out.

Example:

Customers by Category	Average Number of Customers	Percentage	$
Residential	**503,617**	**85.45%**	**$270,484**
PA	*500,317*	*99.34%*	*$268,712*
NY	*3,300*	*0.66%*	*$1,772*
Commercial	**84,117**	**14.27%**	**$45,178**
PA	*83,661*	*99.46%*	*$44,933*
NY	*456*	*0.54%*	*$245*
Industrial	**901**	**0.15%**	**$484**
PA	*900*	*99.89%*	*$483*
NY	*1*	*0.11%*	*$1*
Public St & Highway Lighting	**767**	**0.13%**	**$412**
PA	765	*99.74%*	*$411*
NY	2	*0.26%*	*$1*
Total	**589,402**		**$316,558**

- Once NY expenses were excluded, the weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the customer counts from the FERC Form 1 (a) in each rate category compared to the total customers. This factor (b) was then multiplied by the FERC 905 account balance to determine the distribution of dollars across the rate classes (c).

Example:

Customers By Rate Class	Average Number of Customers (a)	Factor (b)	Total $ by Rate (c)
Residential			
Rate RS	479,015	0.8179	$ 257,271
Rate RT	20,627	0.0352	$ 11,078
Rate GSV	675	0.0012	$ 363
Total Residential (Excluding NY)	**500,317**	**0.8543**	**$268,712**
Commercial			
Rate GSS	52,550	0.0897	$ 28,224
Rate GSM	28,501	0.0487	$ 15,307
Rate H	152	0.0003	$ 82
Rate OL	2,458	0.0042	$ 1,320
Total Commercial (Excluding NY)	**83,661**	**0.1429**	**$44,933**
Industrial			
Rate GST	419	0.0007	$ 225
Rate GP	431	0.0007	$ 231
Rate LP	50	0.0001	$ 27
Total Industrial (Excluding NY)	**900**	**0.0015**	**$483**
Public St & Highway Lighting			
Rate SV	765	0.0013	$ 411
Public St & Highway Lighting (Excluding NY)	**765**	**0.0013**	**411**
Grand Total (Excluding NY)	**585,643**		**$314,539**

FERC 450 & 451 Forfeited Discounts and Miscellaneous Service Revenues

Overview

Once NY customers were excluded from the FERC 450 and 451 balance, the remaining balance was distribute to the rate categories based on the average number of customers from the FERC form 1.

Source of Data

FERC 450 and 451 account balance for 2013

2013 FERC Form 1 data was used for average number of customers

Allocation Methodology

- To calculate the dollars that should be excluded for Waverly, NY, a percentage was established for Waverly Customers and PA Customers based on the FERC Form 1 average number of customers. This percentage was then applied in order to allocate the cost amount to be adjusted out.

Example:

Customers by Category	Average Number of Customers	Percentage	$
Residential	**503,617**	**85.45%**	**($4,295,932)**
PA	*500,317*	*99.34%*	*($4,267,782)*
NY	*3,300*	*0.66%*	*($28,150)*
Commercial	**84,117**	**14.27%**	**($717,531)**
PA	*83,661*	*99.46%*	*($713,641)*
NY	*456*	*0.54%*	*($3,890)*
Industrial	**901**	**0.15%**	**($7,686)**
PA	*900*	*99.89%*	*($7,677)*
NY	*1*	*0.11%*	*($9)*
Public St & Highway Lighting	**767**	**0.13%**	**($6,543)**
PA	765	*99.74%*	*($6,526)*
NY	2	*0.26%*	*($17)*
Total	**589,402**		**($5,027,691)**

- Once NY expenses were excluded, the weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the customer counts from the FERC Form 1 (a) in each rate category compared to the total customers. This factor (b) was then multiplied by the FERC 450 and 451 account balances to determine the distribution of dollars across the rate classes (c).

Example:

Customers By Rate Class	Average Number of Customers (a)	Factor (b)	Total $ by Rate (c)
Residential			
Rate RS	479,015	0.8179	($4,086,073)
Rate RT	20,627	0.0352	($175,952)
Rate GSV	675	0.0012	($5,758)
Total Residential (Excluding NY)	**500,317**	**0.8543**	**($4,267,782)**
Commercial			
Rate GSS	52,550	0.0897	($448,260)
Rate GSM	28,501	0.0487	($243,118)
Rate H	152	0.0003	($1,297)
Rate OL	2,458	0.0042	($20,967)
Total Commercial (Excluding NY)	**83,661**	**0.1429**	**($713,641)**
Industrial			
Rate GST	419	0.0007	($3,574)
Rate GP	431	0.0007	($3,676)
Rate LP	50	0.0001	($427)
Total Industrial (Excluding NY)	**900**	**0.0015**	**($7,677)**
Public St & Highway Lighting			
Rate SV	765	0.0013	($6,526)
Public St & Highway Lighting (Excluding NY)	**765**	**0.0013**	**($6,526)**
Grand Total (Excluding NY)	**585,643**		**($4,995,626)**

FERC 908 Customer Assistance Expenses

Overview

Expenses for PA Act 129 charges were excluded from the FERC 908 account balance for 2013. The remaining FERC 908 account balance for 2013 was allocated over RS and RT rate class based on Factors calculated from total number of customers participating in low income programs

Source of Data

FERC 908 account balance for 2013 excluding PA Act 129 charges

Brio Reports run from EDW by Human Services

Allocation Methodology

- RT and RS factors were calculated by dividing the number of customers in each rate (a) by the sum of total customers (b)
- The RS and RT factors were applied to the total FERC balances to determine balances by rate (d & e)

Example:

Company	Balance	RS Balance (d)	RT Balance (e)
Penelec	29,339,935	$28,510,896	$829,039

Calculations

Customer Count RS (a)	Customer Count RT (a)	Customer Count (b)	RS Factor	RT Factor
24,142	702	24,844	0.971744	0.028256

FERC 910 Miscellaneous Customer Service and Information Expenses

Overview

FERC 910 account balances were distributed based on actual call volume for 2013. Ratios for rate class call volumes were calculated based on call volume and FERC Form 1 Customer Count and then applied to the total FERC balance to distribute the dollars across the rate classes.

Source of Data

FERC 910 account balance for 2013

Customer Counts from FERC Form 1 for 2013

Call Volumes from the IVR Calls by Call Report for 2013

Allocation Methodology

- Cost Allocations by Call Category was done by multiplying the FERC Form 910 Costs by the Percentage of Calls in each category (Residential, Commercial & Industrial, and Streetlight) compared to the total Call Volume. Since commercial and industrial call cannot be broken out, a percentage was established for commercial and for industrial based on the FERC Form 1 customer counts. This percentage was then applied in order to allocate costs to each of the categories.

Example:

Calls by Customer Category	Count	Percentage	$
Residential	2,220,204	98.19%	$5,455,737
Commercial & Industrial	38,964	1.72%	$95,747
Commercial (Based on Customer Count)1	-	*98.94%*	*$94,728*
Industrial (Based on Customer Count)2	-	*1.06%*	*$1,019*
Public St & Highway Lighting	1,880	0.08%	$4,620
Total Calls	**2,261,048**	**100.00%**	**$5,556,104**

[1]Commercial (Based on Customer Count) = Total Commercial Customers/Total Commercial & Industrial Customers OR 84,117 / 85,018

[2]Industrial (Based on Customer Count) = Total Industrial Customers / Total Commercial & Industrial Customers OR 901 / 85,018

- To calculate the dollars that should be excluded for Waverly, NY, a percentage was established for Waverly Customers and PA Customers based on the FERC Form 1 customer counts. This percentage was then applied in order to allocate the cost amount to be adjusted out.

Example:

Calls by Customer Category	Count	Percentage	$
Residential	2,220,204	98.19%	$5,455,737
PA (Based on Customer Count)[3]		*99.34%*	*$5,419,752*
NY (Based on Customer Count)[4]	-	*0.66%*	*$35,985*
Commercial & Industrial	38,964	1.72%	$95,747
Commercial (Based on Customer Count)	-	*98.94%*	*$94,728*
PA (Based on Customer Count)[5]	-	*99.45%*	*$94,211*
NY (Based on Customer Count)[6]	-	*0.55%*	*$516*
Industrial (Based on Customer Count)	-	*1.06%*	*$1,019*
PA (Based on Customer Count)[7]	-	*99.89%*	*$1,018*
NY (Based on Customer Count)[8]	-	*0.11%*	*$1*
Public St & Highway Lighting	1,880	0.08%	$4,620
PA (Based on Customer Count)[9]	-	99.74%	$4,608
NY (Based on Customer Count)[10]	-	0.26%	$12
Total Calls	**2,261,048**	**100.00%**	**$5,556,104**

[3]PA (Based on Customer Count) = Total PA Residential Customers/Total Penelec Residential Customers OR 500,317/ 503,617

[4]NY (Based on Customer Count) = Total NY Residential Customers/Total Penelec Residential Customers OR 3,300 / 503,617

[5]PA (Based on Customer Count) = Total PA Commercial Customers/Total Penelec Commercial Customers OR 83,661 / 84,117

[6]NY (Based on Customer Count) = Total NY Commercial Customers/Total Penelec Commercial Customers OR 456 / 84,117

[7]PA (Based on Customer Count) = Total PA Industrial Customers/Total Penelec Industrial Customers OR 900 / 901

[8]NY (Based on Customer Count) = Total NY Industrial Customers/Total Penelec Industrial Customers OR 1 / 901

[9]PA (Based on Customer Count) = Total PA Streetlight Customers/Total Penelec Streetlight Customers OR 765 / 767

[10]NY (Based on Customer Count) = Total NY Streetlight Customers/Total Penelec Streetlight Customers OR 2 / 767

- To calculate the distribution of dollars across the rate classes (c) the percentage of customer in each rate category was established (b) based on the customer counts from the FERC Form 1 (a). This percentage was then multiplied by the dollars allocated to each Call Category (Residential, Commercial, Industrial, and Streetlight) established above to determine the dollars

Example:

Customers By Rate Class	Average Number of Customers (a)	Percentage (b)	Total $ by Rate (c)
Residential			
Rate RS	479,015	95.74%	$5,188,996
Rate RT	20,627	4.12%	$223,445
Rate GSV	675	0.13%	$7,312
Total Residential (Excluding NY)	**500,317**	**100.00%**	**$5,419,752**
Commercial

FERC Customer Accounting Analysis

Pennsylvania Power Company

Year Ending December 2013

FERC 902 Meter Reading Expenses

Overview

The allocation methodology required a two-step process. First, a weighting factor was calculated for each rate class based on the number of meters in that rate class and the read time for those meters. Then, these weight factors were used to determine the allocation of the FERC balance across the rate classes.

Source of Data

FERC 902 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

A Brio query was run from EDW to obtain the number of meters in each rate category by Customer Service Systems.

Read times for each meter by rate class was obtained from Customer Service Analytics. Streetlights were excluded from the calculations as a majority of those accounts are not metered.

Allocation Methodology

- The average number of customers (a) for each rate category is based on the FERC form 1.
- The weighted factor (b) is based on the read time for each rate category and represents the minutes per meter to obtain a reading.
- The Weighted Customer Count (c) is the Customer Count (a) X Weighted factor (b)
- Total $ by Rate (d) was calculated by taking the Weighted Customer Count by rate class (c) divided by Total Weighted Customer Count X Total FERC Balance equals FERC balance by rate class.

Example:

Customers By Rate Class	Average Number of Customers (a)	Weighted Factor (b)	Weighted Customer Count (c) = (a) * (b)	Total $ by Rate (d)
Residential				
RS-Residential	121,511	0.88604	107,664	$911,935
RH-Residential Heating	13,612	1.30710	17,792	$150,705
WH-Water Heating	5,868	0.55404	3,251	$27,538
GSPNP-Gen. Service Public or Non-Profit	69	1.57950	109	$923
Total Residential	**141,060**		**128,816**	**$1,091,101**
Commercial

FERC 903 Customer Records and Collection Expenses

Overview

The 2013 FERC Form 1 average number of customers was used to calculate a weighted distribution of the FERC 903 account balances.

Source of Data

FERC 903 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

Allocation Methodology

The weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the average number of customers from the FERC Form 1 (a) in each rate category compared to the total customers. This factor (b) was then multiplied by the combined FERC 903 balance to determine the distribution of dollars across the rate classes (c).

Example:

Title of Rate Schedule	Average Number Customers (a)	Factor (b)	$ Total by Rate (c)
Residential			
RS-Residential	121,511	0.7528	$1,394,017
RH-Residential Heating	13,612	0.0843	$156,162

FERC 904 Uncollectible Accounts

Overview

The 2013 FERC Form 1 average number of customers was used to calculate a weighted distribution of the FERC 904 account balances.

Source of Data

FERC 904 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

Allocation Methodology

The weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the average number of customers from the FERC Form 1 (a) in each rate category compared to the total customers. This factor (b) was then multiplied by the combined FERC 904 balance to determine the distribution of dollars across the rate classes (c).

Example:

Title of Rate Schedule	Average Number Customers (a)	Factor (b)	$ Total by Rate (c)
Residential			
RS-Residential	121,511	0.7528	$1,274,405
RH-Residential Heating	13,612	0.0843	$142,762
WH-Water Heating	5,868	0.0364	$61,543
GSPNP-Gen. Service Public or Non-Profit	69	0.0004	$724
Total Residential	**141,060**	**0.8739**	**$1,479,434**
Commercial			
WH-Water Heating	46	0.0003	$482

FERC 908 Customer Assistance Expenses

Overview

Expenses for PA Act 129 charges were excluded from the FERC 908 account balance for 2013. FERC 908 account balance for 2013 was allocated to RS as that was the only rate schedule with customers receiving assistance.

Source of Data

FERC 908 account balance for 2013 excluding PA Act 129 charges

Allocation Methodology

- The FERC 908 account balance was allocated to RS Rate (a)

Example:

Company	Balance	RS Balance (a)
Penn Power	7,570,549	$7,570,549

FERC 910 Miscellaneous Customer Service and Information Expenses

Overview

FERC 910 account balances were distributed based on actual call volume for 2013. Ratios for rate class call volumes were calculated based on call volume and FERC Form 1 Customer Count and then applied to the total FERC balance to distribute the dollars across the rate classes.

Source of Data

FERC 910 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

Call Volumes from the IVR Calls by Call Report for 2013

Allocation Methodology

- Cost Allocations by Call Category was done by multiplying the FERC Form 910 Costs by the Percentage of Calls in each category (Residential, Commercial & Industrial, and Streetlight) compared to the total Call Volume. Since commercial and industrial call cannot be broken out, a percentage was established for commercial and for industrial based on the FERC Form 1 average number of customers. This percentage was then applied in order to allocate costs to each of the categories.

Example:

Calls by Customer Category	Count	Percentage	$
Residential	455,622	98.12%	$1,456,551
Commercial & Industrial	8,358	1.80%	$26,719
Commercial (Based on Customer Count) [1]	-	*99.26%*	*$26,521*
Industrial (Based on Customer Count) [2]	-	*0.74%*	*$198*
Public Street & Highway Lighting	355	0.08%	$1,135
Total Calls	**464,335**	**100.00%**	**$1,484,405**

[1]Commercial (Based on Customer Count) = Total Commercial Customers/Total Commercial & Industrial Customers OR 20,119 / 20,269

[2]Industrial (Based on Customer Count) = Total Industrial Customers / Total Commercial & Industrial Customers OR 150 / 20,269

- To calculate the distribution of dollars across the rate classes (c) the percentage of customer in each rate category was established (b) based on the average number of customers from the FERC Form 1 (a). This percentage was then multiplied by the dollars allocated to each Call Category (Residential, Commercial, Industrial, and Streetlight) established above to determine the dollars.

Example:

Customers By Rate Class	Average Number of Customers (a)	Percentage (b)	Total $ by Rate (c)
Residential			
RS-Residential	121,511	86.14%	$1,254,693
RH-Residential Heating	13,612	9.65%	$140,554
WH-Water Heating	5,868	4.16%	$60,592
GSPNP-Gen. Service Public or Non-Profit	69	0.05%	$712
Total Residential	**141,060**	**100.00%**	**$1,456,551**
Commercial			
WH-Water Heating	46	0.23%	$61
PLS - Private Outdoor Lighting	831	4.13%	$1,095
GS-Gen. Service-Small	17,787	88.41%	$23,447
GSPNP-Gen. Service Public or Non-Profit	92	0.46%	$121
GM-Gen. Service-Medium	1,363	6.77%	$1,797
Total Commercial	**20,119**	**100.00%**	**$26,521**
Industrial			
GP-Gen. Service - Prim. Voltage	110	73.33%	$145
GT-Gen. Service Trans Voltage	40	26.67%	$53
Total Industrial	**150**	**100.00%**	**$198**
Public St & Highway Lighting			
Public Street & Highway Lighting	86	100.00%	$1,135
Total Public St & Highway Lighting	**86**	**100.00%**	**$1,135**
Total	**161,415**		**$1,484,405**

FERC Customer Accounting Analysis

West Penn Power Company

Year Ending December 2013

FERC 902 Meter Reading Expenses

Overview

The allocation methodology required a two-step process. First, a weighting factor was calculated for each rate class based on the number of meters in that rate class and the read time for those meters. Then, these weight factors were used to determine the allocation of the FERC balance across the rate classes.

Source of Data

FERC 902 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

A Brio query was run from EDW to obtain the number of meters in each rate category by Customer Service Systems.

Read times for each meter by rate class was obtained from Customer Service Analytics. Streetlights were excluded from the calculations as a majority of those accounts are not metered.

Allocation Methodology

- The average number of customers (a) for each rate category is based on the FERC form 1.
- The weighted factor (b) is based on the read time for each rate category and represents the minutes per meter to obtain a reading.
- The Weighted Customer Count (c) is the Customer Count (a) X Weighted factor (b)
- Total $ by Rate (d) was calculated by taking the Weighted Customer Count by rate class (c) divided by Total Weighted Customer Count X Total FERC Balance equals FERC balance by rate class.

Example:

Customers By Rate Class	Average Number of Customers (a)	Weighted Factor (b)	Weighted Customer Count (c) = (a) * (b)	Total $ by Rate (d)
Residential				
10 - R - Residential	615,369	1.22084	751,269	$6,751,091

FERC 903 Customer Records and Collection Expenses

Overview

The 2013 FERC Form 1 average number of customers was used to calculate a weighted distribution of the FERC 903 account balances.

Source of Data

FERC 903 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

Allocation Methodology

The weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the average number of customers from the FERC Form 1 (a) in each rate category compared to the total customers. This factor (b) was then multiplied by the FERC 903 account balance to determine the distribution of dollars across the rate classes (c).

Example:

Customers By Rate Class	Average Number Customers (a)	Factor (b)	$ Total by Rate (c)
Residential			
10 - R - Residential	615,369	0.85719	$7,659,902
20 - General Service	85	0.00012	$1,058
22 - Church & School	1	0.00000	$12
51 - Street Lighting Service	2	0.00000	$25
52 - Outdoor Lighting Service	2,718	0.00379	$33,833
53 - Street Lighting Service	13	0.00002	$162
57 - Outdoor Lighting Service - EMU	1,341	0.00187	$16,692
58 - Outdoor Lighting	1	0.00000	$12
59 - Outdoor Lighting - EM	1	0.00000	$12
Total Residential	**619,531**	**0.86298**	**$7,711,709**
Commercial			
20 - General Service	80,301	0.11186	$999,559
22 - Church & School	1,342	0.00187	$16,705
23 - Athletic Field Service	20	0.00003	$249
24 - Fair & Carnival Service	8	0.00001	$100
30 - General Power Service	1,696	0.00236	$21,111
40 - Primary Power Service	22	0.00003	$274
51 - Street Lighting Service	42	0.00006	$523
52 - Outdoor Lighting Service	666	0.00093	$8,290
53 - Street Lighting Service	99	0.00014	$1,232
57 - Outdoor Lighting Service - EMU	435	0.00061	$5,415
58 - Outdoor Lighting Service - MU	11	0.00002	$137
59 - Outdoor Lighting Service - EM	11	0.00002	$137
37 - Penn State University	1	0.00000	$12
Total Commercial	**84,654**	**0.11792**	**$1,053,744**

FERC 904 Uncollectible Accounts

Overview

The 2013 FERC Form 1 average number of customers was used to calculate a weighted distribution of the FERC 904 account balances.

Source of Data

FERC 904 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

Allocation Methodology

The weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the average number of customers from the FERC Form 1 (a) in each rate category compared to the total

customers. This factor (b) was then multiplied by the FERC 904 account balance to determine the distribution of dollars across the rate classes (c).

Example:

Customers By Rate Class	Average Number Customers (a)	Factor (b)	$ Total by Rate (c)
Residential			
10 - R - Residential	615,369	0.85719	$8,382,790

FERC 905 Miscellaneous Customer Accounts Expenses

Overview

The 2013 FERC Form 1 average number of customers was used to calculate a weighted distribution of the FERC 905 account balances.

Source of Data

FERC 905 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

Allocation Methodology

The weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the average number of customers from the FERC Form 1 (a) in each rate category compared to the total

customers. This factor (b) was then multiplied by the FERC 905 account balance to determine the distribution of dollars across the rate classes (c).

Example:

Customers By Rate Class	Average Number Customers (a)	Factor (b)	$ Total by Rate (c)
Residential			
10 - R - Residential	615,369	0.85719	$108,513

FERC 450 & 451 Forfeited Discounts and Miscellaneous Service Revenues

Overview

The 2013 FERC Form 1 average number of customers was used to calculate a weighted distribution of the FERC 450 and 451 expenses.

Source of Data

FERC 450 and 451 account balance for 2013

2013 FERC Form 1 data was used for the average number of customers

Allocation Methodology

The weighted factor (b) used to distribute the dollars for each rate classes was calculated based on the average number of customers from the FERC Form 1 (a) in each rate category compared to the total

customers. This factor (b) was then multiplied by the combined FERC 450 and 451 balance to determine the distribution of dollars across the rate classes (c).

Example:

Customers By Rate Class	Average Number Customers (a)	Factor (b)	$ Total by Rate (c)
Residential			
10 - R - Residential	615,369	0.85719	($3,568,389)

FERC 908 Customer Assistance Expenses

Overview

Expenses for PA Act 129 charges were excluded from the FERC 908 account balance for 2013. FERC 908 account balance for 2013 was allocated to RS as that was the only rate schedule with customers receiving assistance.

Source of Data

FERC 908 account balance for 2013 excluding PA Act 129 charges

Allocation Methodology

- The FERC 908 account balance was allocated to RS Rate (a)

Example:

Company	Balance	RS Balance (a)
West Penn Power	6,490,065	$6,490,065

FERC 910 Miscellaneous Customer Service and Information Expenses

Overview

FERC 910 account balances were distributed based on actual call volume for 2013. Ratios for rate class call volumes were calculated based on call volume and FERC Form 1 Customer Count and then applied to the total FERC balance to distribute the dollars across the rate classes.

Source of Data

FERC 910 account balance for 2013

Customer Counts from FERC Form 1 for 2013

Call Volumes from the IVR Calls by Call Report for 2013

Allocation Methodology

- Cost Allocations by Call Category was done by multiplying the FERC Form 910 Costs by the Percentage of Calls in each category (Residential, Commercial & Industrial, and Streetlight) compared to the total Call Volume. Since commercial and industrial call cannot be broken out, a percentage was established for commercial and for industrial based on the FERC Form 1 customer accounts. This percentage was then applied in order to allocate costs to each of the categories.

Example:

Calls by Customer Category	Count	Percentage	$
Residential	2,115,346	98.34%	$439,159
Commercial & Industrial	32,930	1.53%	$6,836
Commercial (Based on Customer Count)[1]	-	*86.55%*	*$5,917*
Industrial (Based on Customer Count)[2]	-	*13.45%*	*$919*
Public St & Highway Lighting	2,874	0.13%	$597
Total Calls	**2,151,150**	**100.00%**	**$446,592**

[1]Commercial (Based on Customer Count) = Total Commercial Customers/Total Commercial & Industrial Customers OR 84,654 / 97,804

[2]Industrial (Based on Customer Count) = Total Industrial Customers / Total Commercial & Industrial Customers OR 13,150 / 97,804

- To calculate the distribution of dollars across the rate classes (c) the percentage of customer in each rate category was established (b) based on the customer counts from the FERC Form 1 (a). This percentage was then multiplied by the dollars allocated to each Call Category (Residential, Commercial, Industrial, and Streetlight) established above to determine the dollars

Example:

Customers By Rate Class	Average Number Customers (a)	Percentage (b)	Total $ by Rate (c)
Residential			
10 - R - Residential	615,369	99.33%	$436,209

SCOPE

This report looks at two concepts, the allocation of certain distribution plant accounts to a customer cost (aka "minimum grid") or demand costs, here after referred to as the Customer Cost Study, and the allocation of certain distribution costs to customers served as primary voltage accounts. NARUC describes the basics of Customer Costs Studies in their publication "Electric Utility Cost Allocation Manual[1]," but the basics of these studies are to serve the purpose of allocating utility costs and/or asset values to different classes of customers.

Customer Cost Study

The Customer Cost Study is designed to separate the asset values into component costs, as follows;

- Customer Related Costs
- Demand Related Costs
- Energy Related Costs

The costs of the distribution system are primarily impacted by demand and the number of customers, so this study serves the purpose of allocating utility costs and/or asset values to those two cost components[2]. The plant accounts considered in this study are:

- FERC Account 364 – POLES, TOWERS, AND FIXTURES
- FERC Account 365 – OVERHEAD CONDUCTORS & DEVICES
- FERC Account 367 – UNDERGROUND C ONDUCTORS & DEVICES
- FERC Account 368 – LINE TRANSFORMERS

Primary/Secondary Customer Cost Study

The primary/secondary customer cost study is aimed at determining the portion of the distribution assets that are used to serve primary voltage customers; for example, the distribution transformer, secondary conductor, and service conductor types of distribution plant are not used to serve these customers. Similarly some accounts have limited assets that are used to provide service to these primary service customers; the Primary/Secondary Customer Cost Study is designed to determine the extent of each of those accounts used by the Primary Voltage Customer[3]. The accounts considered in this study are:

- FERC Account 364 – POLES, TOWERS, AND FIXTURES
- FERC Account 365 – OVERHEAD CONDUCTORS & DEVICES

DEFINTIONS AND TERMS

A number of large data bases house the information used in the preparation of this report. The following definitions and terms describe: those systems and applications, from which data was extracted; the software tools used to extract, analyze, and summarize that information; and finally references are provided to any external data sources used.

Company Computer Systems, Data and Processes

The Company has a number of computer systems that house data used for this study. As utilities have grown, so has the size and complexity of these systems leading to the need to use software tools like SQL queries to analyze data sets that can no-longer be effectively analyzed using common desktop tools like Excel.

CCS

The Company's CCS or "Customer Care System" is the customer accounting and billing system. With data contained in this system the Company is able to tell the type of customer; the customer's customer rate code. The GIS and CCS customer records are connected though connection object database keys, which enable the Company to determine where, on the geographically represented system, each customer, and customer type, is connected. The CCS is a sub-system of SAP (see SAP below).

CREWS

CREWS is FirstEnergy's work management system, used by the Operating Companies to perform engineering estimates for construction work.

GIS

The Company's GIS or "Geographical Information System" is the computer system providing a geographically referenced, asset database of the installed distribution plant information, including information on poles, primary conductors, fuses, transformers, and switches, and how those pieces of the electric distribution system are electrically interconnected from the substation to the customer. The GIS is used primarily for mapping and detailing the distribution system aiding engineering design, planning and troubleshooting tasks.

SAP

SAP[4] offers bundles of applications and services to enable companies to manage their businesses. These applications can include customer care systems (CCS), billing, financial, purchasing, inventory, and human resources functions.

Software Tools

SQL

Structured Query Language (SQL)[5] is a special programming language designed to manage and extract data held in a relational data base management system (RDBS), like Oracle, Sybase, MySQL, or, Microsoft SQL Server. Most of the Company's data bases, used for the preparation of this report, are Oracle RDBSs.

Brio

Hyperion Intelligence Designer, by Hyperion Solutions Corporation (now owned by Oracle), or BRIO, as it is known within the Company, is a general purpose SQL query and reporting tool that allow the Company to perform and produce Excel-like analysis and reports on data sets too large or complex to handle within Microsoft Excel.

Perl

Perl, by ActiveState[6], is a high-level, general-purpose, scripting language, typically operated in an interpreted (not compiled) form. Perl is used primarily as a tool to encapsulate and run raw SQL queries, and may be used to provide some additional summarization for the purposes of reporting.

External Data Sources

Handy-Whitman Index

The *Handy-Whitman Index of Public Utility Construction*[7] provides asset price indexes and the capital book value against a benchmark year. Handy-Whitman Index numbers serve as a yardstick to estimate the impact of fluctuations in the value of material and labor costs, allowing assets of a known age to be reflected in other years. Average prices and cost trends are used to develop the Handy-Whitman Index. This Index is commonly used by utilities and regulators in

their calculations of rate base for rate cases and in their valuations of property for insurance purposes.

Electric Utility Cost Allocation Manual[8]

The Electric Utility Cost Allocation Manual, by NARUC**,** was written by a team of utility, public utility commission, and FERC representatives and provides frameworks for costs of service studies. Section II of this Manual contains five chapters that explain the dominant method of cost allocation - the embedded cost study, which is based upon historical or known utility costs. Areas covered are production costs, transmission costs, distribution costs and the classification and allocation of customer-related costs and investments.

[8] National Association of Regulatory Utility Commissions (NARUC). *Electric Utility Cost Allocation Manual*, 1992.

FERC Account 364 – POLES, TOWERS, AND FIXTURES

This plant distribution account is predominately made up of the various wood distribution poles used to support primary and secondary distribution conductors.

Assumptions and Method

- The Company's GIS was used to determine the number of wood distribution poles, by size and install year. In the analysis, these poles were replaced by the minimum size wood distribution poles that have seen common use within the study territory; 35-foot poles for those supporting primary conductors without joint use underbuild.
    - Poles without an install year were omitted
    - Poles with install years < 1914 were omitted
    - Only poles supporting primary conductor were included (i.e., street-light and secondary only poles were omitted).
    - Only poles where POLE_MAT in (D, L, M, N, P, R, W, Z) were considered … the other materials are fiberglass, steel, concrete, aluminum, etc. materials that are unlikely for "distribution" poles.
    - Only poles where HEIGHT in (25, 30, 35, 40, 45, 50, 55, 60, 65, 70, 75, 80, 85, 90, & 95) were considered, the other pole heights typically indicate either street-light only poles, i.e., HEIGHT in (12, 15, 16, 17, 20, 27) or may reflect erroneous data.
- The current installed cost for each size pole was obtained from CREWS, and trended by size to build a list of costs by pole length for each size wood pole.
- The install years were used to age the current costs for the actual size and minimum size transformers using Handy-Whitman indices, and extended by the number of poles in service for each year, then summed to develop the customer component for this plant account.
- The percentage of minimum size cost (Customer Cost), of the Total Plant Value was calculated as the portion represented by the cost of the minimum sized units, 35 foot poles, as previously defined. The percentage of the demand costs for the account is the remainder, after the customer cost component was removed.
- This study was repeated for each Operating Company.

FERC Account 365 - OVERHEAD CONDUCTORS AND DEVICES

This plant distribution account is predominately made up of the various overhead distribution line conductors, operating at either primary or secondary voltage. This study considered primary conductors only, the Company's GIS data is not sufficient to perform a similar analysis on the costs of secondary, service, and/or street-light conductors. The Company's GIS data is not sufficient to perform a Handy-Whitman analysis of the install date for primary conductors.

Assumptions and Method

- The Company's GIS was used to determine the wire miles of overhead distribution primary distribution line conductors, by size. These conductors were categorized into and two sizes, large and small.
  - Conductors with a blank or unknown conductor type/size were omitted
- The current installed cost for each category of primary line conductor was obtained and used to cost out the currently installed system, if rebuilt using one of those two sizes.
- The minimum grid cost was developed using only the cost of the smaller conductor.
- The percentage of minimum size cost (Customer Cost), of the Total Plant Value was calculated as the portion represented by the cost of the system, built with the minimum sized conductor.

FERC Account 367 - UNDERGROUND CONDUCTORS AND DEVICES

This plant distribution account is predominately made up of the various underground distribution line conductors, operating at either primary or secondary voltage. This study considered primary conductors only, the Company's GIS data is not sufficient to perform a similar analysis on the costs of secondary and/or service conductors.

Assumptions and Method

- The Company's GIS was used to determine the wire miles of underground distribution primary distribution line conductors, by size. These conductors were categorized into and two sizes, large and small.
    - Conductors with a blank or unknown conductor type/size were omitted
    - Conductor segments greater than 2,500' were considered data errors and omitted
- The current installed cost for each category of primary line conductor was obtained and used to cost out the currently installed system, if rebuilt using one of those two sizes.
- The minimum grid cost was developed using only the cost of the smaller conductor.
- The percentage of minimum size cost (Customer Cost), of the Total Plan Value was calculated as the portion represented by the cost of the system, built with the minimum sized conductor.

FERC Account 368 - LINE TRANSFORMERS

This plant distribution account is predominately made up of the various distribution transformers used to step the distribution voltage down to the service-voltage level delivered to the customer. This account includes both overhead and pad-mounted transformers.

Assumptions and Method

- The Company's GIS system was used to determine the number of overhead and pad-mounted distribution transformers, by size and install year, to be replaced by the minimum size (25 KVA) overhead line transformer that is in common use within the study territory.
- The current installed cost for each size line transformer was obtained from CREWS, and trended by size to build a list of costs by size for each size overhead and pad-mounted distribution transformer.
- The install years were used to age the current costs for the actual size and minimum size transformers using Handy-Whitman indices, and extended by the number of transformers in service for each year, then summed to develop the customer component for this plant account.
- Transformers missing install year, construction type, or kVA were omitted.
- The percentage of minimum size cost, of the calculated current cost was calculated as the portion represented by the cost of the minimum sized units.

FERC Account 368 LINE TRANSFOMERS SPLIT OF PLANT					
Company	Total Plant Value	Customer Costs		Demand Costs	
		Percent	Value	Percent	Value

FERC Account 364 – POLES, TOWERS, AND FIXTURES

This plant distribution account is predominately made up of the various wood distribution poles used to support primary and secondary distribution conductors.

Assumptions and Method

Using data from the Company's GIS, the wood pole plant was separated by poles which have both primary and secondary attached facilities, poles with secondary attached facilities, poles with secondary attached facilities and wood poles with street-lighting facilities. To divide up the value of the account, the raw pole counts were calculated as well as a weighting based upon the cost to install a pole in today dollars.

The Company's pole data allows for the identification of the total wood poles plant, and wood poles with primary facilities attached, but does not allow for the identification of poles with private-outdoor lighting facilities, street-light facilities or secondary facilities. The poles serving primary service customers are allocated to primary rate customers, all other poles will need to be split between all rate classes, except primary service customers.

A list of primary accounts was extracted from the CCS and used as the starting point for traces in the GIS system. From these traces in GIS, for each of the primary accounts and their associated Connection Object were reviewed to determine if multiple primary customers shared primary circuit routes to ensure facilities allocated to primary rate customers were only counted once.

- Only poles supporting primary and secondary conductor were included (i.e., street-light only poles were omitted).
- Only poles where POLE_MAT in (D, L, M, N, P, R, W, Z) were considered … the other materials are fiberglass, steel, concrete, aluminum, etc. materials that are unlikely for "distribution" poles.
- Only poles where HEIGHT in (15, 20, 25, 30, 35, 40, 45, 50, 55, 60, 65, 70, 75, 80, 85, 90, & 95) were considered, the other pole heights typically indicate either street-light only poles, i.e., HEIGHT in (12, 15, 16, 17, 20, 27) or may reflect erroneous data.

FERC Account 364 POLES, TOWERS, AND FIXTURES SPLIT OF PLANT					
Company	Total Plant Value	Primary Customers		Secondary and Street Light Customers	
		Percent	Value	Percent	Value
Met-Ed	$346,857,645[21]	5.4%	$18,616,460	94.6%	$328,241,185

FERC Account 365 – OVERHEAD CONDUCTORS & DEVICES

This plant distribution account is predominately made up of the various overhead distribution line conductors, operating at either primary or secondary voltage. This study considered primary conductors only, the Company's GIS data is not sufficient to perform a similar analysis on the costs of secondary and/or service conductors.

Assumptions and Method

The primary conductors are allocated to both primary and secondary rates. To simplify the summations the conductors were divided into two sizes: large and small. The unique conductor paths, avoiding the duplicate counting of conductors, were calculated for all the primary customers back to the breaker on each circuit. The primary conductors were separated into small and large size conductors.

The conductor length of unique primary conductor feet is obtained by obtaining the span length of each primary line segment and then, by segment, multiplying by the number of conductors, and summing to obtain the total primary conductor feet used to serve primary customers. The same process is used for determining the total conductor feet for all primary conductors in the system.

A weighting is then used to account for the differences in cost to install a foot of large vs. small conductor. The weighted conductor length for primary conductors feeding primary rate customers is then compared to the weighted total conductor length of all conductors to obtain the percentage of primary conductor used by the primary rate customers.

FERC Account 365 OVERHEAD CONDUCTORS AND DEVICES SPLIT OF PLANT

[28] Per West Penn Power Company, FERC Form No. 1, Year/Period of Report, End of 2013/Q4, Account 365, Balance at End of Year, pg. 207.

FERC Account 367 – UNDERGROUND CONDUCTORS & DEVICES

This plant distribution account is predominately made up of the various underground distribution line conductors, operating at either primary or secondary voltage. This study considered primary conductors only, the Company's GIS data is not sufficient to perform a similar analysis on the costs of secondary and/or service conductors.

Assumptions and Method

The primary conductors are allocated to both primary and secondary rates. To simplify the summations the conductors were divided into two sizes: large and small. The unique conductor paths, avoiding the duplicate counting of conductors, were calculated for all the primary customers back to the breaker on each circuit. The primary conductors were separated into small and large size conductors.

- Conductors with a blank or unknown conductor type/size were omitted
- Conductor segments greater than 2,500' were considered data errors and omitted

The conductor length of unique primary conductor feet is obtained by obtaining the span length of each primary line segment and then, by segment, multiplying by the number of conductors, and summing to obtain the total primary conductor feet used to serve primary customers. The same process is used for determining the total conductor feet for all primary conductors in the system.

A weighting is then used to account for the differences in cost to install a foot of large vs. small conductor. The weighted conductor length for primary conductors feeding primary rate customers is then compared to the weighted total conductor length of all conductors to obtain the percentage of primary conductor used by the primary rate customers.

FERC Account 367 UNDERGROUND CONDUCTORS AND DEVICES SPLIT OF PLANT					
Company	Total Plant Value	Primary Customers		Secondary Customers	
		Percent	Value	Percent	Value
Met-Ed	$201,130,561[29]	8.9%	$17,852,958	91.1%	$183,277,603
Penelec	$149,308,187[30]	4.5%	$6,733,754	95.5%	$142,574,433
PennPower	$54,917,890[31]	2.2%	$1,213,117	97.8%	$53,704,773
West Penn Power	$128,876,860[32]	0.9%	$1,193,379	99.1%	$127,683,481

When a device or structure serves multiple primary customers, it is only counted one time in the results. See Figure 1 for a simplified graphical.

FERC Account 366 – UNDERGROUND CONDUIT

Conduit systems are used to supply both the primary rate and secondary rate customers. The majority of the conduit system is used to protect primary cable (which can be used to serve both primary customers, and secondary customers via transformation), and of that majority, the bulk of the primary conduit system is installed to protect large primary cables. Said another way, where majority of the large-sized primary cables are installed in conduit, and the majority of the small-sized primary cables are direct buried. The majority of secondary cables are direct buried.

Assumptions and Method

The circuit length of unique large sized, underground primary conductor feet is obtained by obtaining the span length of each primary line segment, and summing to obtain the total primary circuit feet used to serve primary customers. The same process is used for determining the total circuit feet for all large primary conductors in the system.

- Conductors with a blank or unknown conductor type/size were omitted
- Conductor segments greater than 2,500' were considered data errors and omitted

The circuit length for large primary conductors, serving primary rate customers, is then compared to the total large primary circuit length to obtain the percentage of conduit systems used by the primary rate customers.

FERC Account 365 OVERHEAD CONDUCTORS AND DEVICES SPLIT OF PLANT					
Company	Total Plant Value	Primary Customers		Secondary Customers	
		Percent	Value	Percent	Value

Supporting Study No. 8
Streetlighting Poles

Streetlights

FERC Account 364 – POLES, TOWERS, AND FIXTURES

FERC Account 364 – POLES, TOWERS, AND FIXTURES

This plant distribution account is predominately made up of the various wood distribution poles used to support primary and secondary distribution conductors.

Assumptions and Method

- The Company's GIS was used to determine the number of street lights on distribution poles, by size and install year of the pole.
  - The count of poles does not identify if the pole is used for anything other than streetlights. (i.e. distribution primary or secondary conductors)
  - Streetlights attached to joint use poles were not included.
- The current installed cost for each size pole was obtained from CREWS, and trended by size to build a list of costs by pole length for each size wood pole.
- The install years were used to age the current costs for the actual size poles using Handy-Whitman indices, and extended by the number of poles in service for each year, then summed to develop the streetlight component for this plant account.
- This study was repeated for each Operating Company.

Company	Total Plant Value	Streetlight Costs	
		Percent	Value
Met-Ed	$346,857,645[1]	3.0%	$10,469,426
Penelec	$475,757,653[2]	1.3%	$6,207,726
PennPower	$94,038,905[3]	4.8%	$4,485,972
West Penn Power	$323,422,350[4]	2.8%	$14,976,450

Supporting Study No. 10

Line Losses

The attached schedule supporting the Company's line loss factors is:

Met-Ed, Penelec, and Penn Power: Section 6.3 (page 24)

West Penn Power: Company Line Loss Factor Rider (page 57)

of the Company's Supplier Tariff, on file with the Pennsylvania Public Utility Commission.

Met-Ed

6.3 Line Losses. For purposes of EGS load calculations in Sections 6 and 7 of this Supplier Coordination Tariff, the combined transmission and distribution line losses shall be calculated by multiplying hourly kWh sales delivered to Customer(s) served pursuant to the specified rates by the applicable line loss factor. The applicable line loss factors are:

LOSS FACTORS

ENERGY	MET-ED
Rate Schedule TP	1.0210
GP	1.0374
All other rate schedules	1.0718

The Company reserves the right to file to revise these factors from time to time to reflect changes in system line losses.

Penelec

6.3 Line Losses. For purposes of EGS load calculations in Sections 6 and 7 of this Supplier Coordination Tariff, the combined transmission and distribution line losses shall be calculated by multiplying hourly kWh sales delivered to Customer(s) served pursuant to the specified rates by the applicable line loss factor. The applicable line loss factors are:

LOSS FACTORS

ENERGY	PENELEC
Rate Schedule LP	1.0407
GP	1.0606
All other rate schedules	1.0945

The Company reserves the right to file to revise these factors from time to time to reflect changes in system line losses.

Penn Power

6.3 Distribution Real Power Losses for Energy. Losses will be calculated by multiplying the retail Customer(s) load times the applicable real power loss factor specified below:

Service Voltage Level	Cumulative Loss Factor
23 kV to < 69 kV	0.1%
4.1 kV to < 23 kV	3.0%
4.1 kV	6.2%

The Company will revise these line loss factors if PJM imposes or changes any separate charges on its transmission Customers for the level of line losses that is included in these factors. Any such revision will be filed with the FERC and the Commission, provided to EGSs via electronic mail and posting on the Company's website, and become effective thirty (30) days after filing unless otherwise ordered by the Commission or the FERC (or concurrently with any change in or imposition of separate PJM line loss charges, whichever is later). The Company will make a good faith effort to advise EGSs of any change in these loss factors more than thirty (30) days in advance of a change when warranted.

West Penn

WEST PENN POWER COMPANY

COMPANY LINE LOSS FACTOR RIDER

For purposes of calculating daily load estimates and energy reconciliation in Rules 6, 7 and 8 of the EGS Tariff, the combined real power transmission losses and distribution line losses for Secondary, Primary, Subtransmission with transformer charges, Subtransmission and Transmission voltage levels shall be calculated by multiplying hourly kWh sales delivered to Customer(s) served at these voltage levels by the applicable line loss factor. Line loss factors are time-differentiated as on-peak and off-peak for each voltage classification. The on-peak line loss factors apply to the hours ended 8 a.m. to 11 p.m. Monday through Saturday. The off-peak line loss factors apply to all remaining hours. The applicable on-peak and off-peak line loss factors are:

Voltage served	On-peak line losses	Off-peak line losses
Secondary	9.434%	8.537%
Primary	6.383	5.482
Subtransmission w/ transformer charges	4.282	3.992
Subtransmission	3.578	3.277
Transmission	2.184	1.938

The Company will make available the mapping of the voltage line loss factors to the respective EDC Tariff rate schedules and rate codes on the Company website. The Company reserves the right to file to revise these factors from time to time to reflect changes in system line losses. Any such revision will be filed with the FERC (if required) and the PUC, provided to Registered EGSs via Internet electronic mail and posted on the Company's website, and become effective thirty (30) days after filing unless otherwise ordered by the PUC or the FERC. The Company will make a good faith effort to advise Registered EGSs of any change in these line loss factors more than thirty (30) days in advance of a change when warranted.

DIRECT TESTIMONY
OF
MICHAEL J. VILBERT

I. INTRODUCTION AND SUMMARY

Q. Please state your name and address for the record.

A. My name is Michael J. Vilbert. My business address is The Brattle Group, 201 Mission Street, Suite 2800, San Francisco, CA 94105, USA.

Q. Please summarize your background and experience.

A. I am a Principal of The Brattle Group ("Brattle"), an economic, environmental and management consulting firm with offices in Cambridge, Washington, London, San Francisco, Madrid, Rome, and New York City. My work concentrates on financial and regulatory economics. I hold a B.S. from the U.S. Air Force Academy and a Ph.D. in finance from the Wharton School of Business at the University of Pennsylvania. Appendix A provides more detail on my qualifications.

Q. What is the purpose of your testimony in this proceeding?

A. I have been asked by Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power"), and West Penn Power Company ("West Penn") (together the "Companies") to estimate the cost of capital for the Companies. Specifically, I provide return on equity ("ROE") estimates derived from a sample of comparable risk, regulated electric utility companies ("electric utilities"). I also consider the relative risk of the Companies' proposed capital structure ratios to arrive at my recommended range for allowed ROE.

Q. Are you sponsoring any exhibits?

A. Yes, I am sponsoring Met-Ed/Penelec/Penn Power/West Penn Exhibit MJV-1 which includes the following tables:

Table No.	Description
MJV-1	Table of Contents
MJV-2	Classification of Companies by Assets
MJV-3	Market Value of the Electric Sample
MJV-4	Capital Structure Summary of the Electric Sample
MJV-5	Estimated Growth Rates of the Electric Sample
MJV-6	DCF Cost of Equity of the Electric Sample
MJV-7	Overall DCF Cost of Capital of the Electric Sample
MJV-8	DCF Cost of Equity at the Companies' Proposed Capital Structures
MJV-9	Interest Rate Forecasts
MJV-10	Risk Positioning Cost of Equity of the Electric Sample
MJV-11	Overall Risk Positioning Cost of Capital of the Electric Sample
MJV-12	Risk Positioning Cost of Equity at the Companies' Proposed Capital Structures

Q. Were these exhibits and schedules prepared by you or under your direction?

A. Yes, they were.

Q. Can you summarize the parts of your background and experience that are particularly relevant to your testimony on these matters?

A. *Brattle's* specialties include financial economics, regulatory economics, and the gas, water and electric industries. I have worked in the areas of cost of capital, investment

risk and related matters for many industries, regulated and unregulated alike, in many forums. A partial list of the regulators before which I have testified or filed cost of capital testimony include the Arizona Corporation Commission, the Pennsylvania Public Utility Commission, the Public Service Commission of West Virginia, the Public Utilities Commission of Ohio, the Tennessee Regulatory Authority, the Public Service Commission of Wisconsin, the South Dakota Utilities Commission, the California Public Utilities Commission, the Michigan Public Service Commission, and the Federal Energy Regulatory Commission ("FERC"). I have also testified in Canada before the Canadian National Energy Board, the Alberta Energy and Utilities Board, the Ontario Energy Board, the Quebec Régie de l'énergie, and the Labrador & Newfoundland Board of Commissioners of Public Utilities. Appendix A contains more information on my professional qualifications.

Q. What are the steps in your analysis?

A. To estimate the Companies' cost of capital, I analyzed a sample of electric utilities, identified as being in the same line of business as Met-Ed, Penelec, Penn Power, and West Penn, specifically the regulated electric utility business. I estimate the ROE for each sample company using both the risk positioning and the discounted cash flow ("DCF") approaches. The risk positioning approach consists of analyses based upon the Capital Asset Pricing Model ("CAPM") and the Empirical CAPM ("ECAPM"). The ROE estimates from both models are then combined with the market value capital structure information and the market costs of debt and preferred stock for each sample company to compute each firm's overall cost of capital, i.e., its after-tax weighted-average cost of capital ("ATWACC").

Q. What is the result of the cost of capital estimation process?

A. The result of this process is a sample average ATWACC for each cost of equity estimation method. I then report the cost of equity consistent with the sample's average estimated ATWACC as if the sample's average market-value capital structure had been one with a 50.0 percent equity ratio, which closely approximates the equity ratios Met-Ed, Penelec, Penn Power, and West Penn have proposed in this case. This procedure results in a ROE that is consistent with the financial risk inherent in the Companies' proposed capital structures and the market-determined information on the sample's average overall cost of capital.

Q. How does the ongoing uncertainty in the financial markets affect the cost of capital for a regulated utility?

A. The equity risk premium (or the premium of the cost of equity capital over the cost of debt) remains higher than it was before the start of the financial crisis in about mid-2008. Although economic conditions have improved substantially since the height of the crisis, some uncertainty remains in the capital markets due, in part, to the disappointing rate of economic growth, not only in the U.S., but also worldwide. Economic growth in Europe remains anemic with the ongoing fallout from the sovereign debt crisis. There is increasing uncertainty of the effects of the conflict in the Ukraine and in Iraq, and there are also concerns about the sustainability of credit growth in China. A persistently high rate of unemployment and contracting fiscal spending has led the Federal Reserve Bank ("Fed") to continue purchasing Treasury bonds and agency securities, as announced at the FOMC meeting in June 2014, the

subsequent aspects of which I will discuss later in *Section III*.[1] Although long-term government bond yields have increased over the past year, they remain at low levels by historical standards as shown in Figure 2 below.

As a result, there has been a substantial increase in yield spreads,2 both for riskier assets as well as for less risky investments such as investment grade-rated utility debt. Although the capital market indices have returned to their pre-crisis levels, the recovery remains fragile and could easily stall if any of the fears mentioned above come to pass. I discuss the effect of the credit crisis on the cost of capital and its various components, including the long-term risk-free interest rate, in more detail in *Section III* below.

This uncertainty in the financial markets also affects the results of the estimation models, because both the risk positioning model and the DCF model are based upon the assumption that economic conditions are stable. That assumption is not currently met, so estimating the cost of capital under current conditions is more complicated than it would normally be.

Q. Do you adjust your analyses to account for the remaining market uncertainty?

A. Yes. Because the uncertainty in the financial markets affects the cost of capital for all companies, including regulated utilities such as Met-Ed, Penelec, Penn Power, and West Penn, I modified the parameters of the risk positioning model to recognize the

[1] FOMC June 19, 2014 Press Release, The Board of Governors of the Federal Reserve System, Accessed at: http://www.federalreserve.gov/newsevents/press/monetary/20140618a.htm, on July 18, 2014.

[2] The yield spread in this case is the difference between the yield on a risky security and the yield on U.S. Treasury debt of comparable maturity.

effect of the increased volatility in the capital markets as well as the overall decline in long-term risk-free interest rates on the cost of capital. Specifically, I analyzed scenarios using two different estimates of the market risk premium ("MRP") and risk-free interest rate for use in the risk positioning model. These scenarios are discussed in more detail below. Further, given the current economic uncertainty and the downward bias it creates in the CAPM model results, I also place more weight than I normally would on the results of the DCF analyses in determining the range of reasonableness for the ROE, for reasons explained later in this testimony.

Q. Can you summarize your findings about the electric sample's costs of capital?

A. The sample ROE estimates range from a low of 8.7 percent to a high of 10.9 percent, but I believe that the estimates at the lower end of the range are not reliable because they do not consider the effect of the current uncertainty in the financial markets and the downward pressure on the risk-free interest rate. Conversely, the estimates at the upper end of the range reflect the adjustment for the ongoing uncertainty in the capital market and are more reliable. For an electric utility company of average business risk and with an equity ratio of approximately 50 percent the best estimate of the range for the cost of equity is from 9.3 percent to 10.9 percent.

Q. What ROE are the Companies requesting in this proceeding?

A. Mr. Staub testifies that the Companies are requesting an ROE of 10.9 percent. This is within the range 9.3 percent to 10.9 percent that I recommend for electric utilities of Metropolitan Edison Company's, Pennsylvania Electric Company's, Pennsylvania Power Company's, and West Penn Power Company's financial and business risk.

Q. How is your testimony organized?

A. *Section II* formally defines the cost of capital and touches on the principles relating to estimating the cost of capital and the effect of capital structure on the cost of equity. *Section III* discusses the impact of the fragile recovery from the credit crisis on the cost of capital. *Section IV* discusses the selection of the electric sample, and *Section V* presents the methods used to estimate the cost of capital for the sample; provides the associated numerical analyses; and explains the basis of my conclusions for the sample's overall costs of capital (ATWACC). *Section VI* concludes my testimony. The calculations supporting my analyses are provided in Exhibit MJV-1.

II. COST OF CAPITAL THEORY

A. Cost of Capital and Risk

Q. How is the "cost of capital" formally defined?

A. The cost of capital is defined as the expected rate of return in capital markets on alternative investments of equivalent risk. In other words, it is the rate of return investors require based on the risk-return alternatives available in competitive capital markets. The cost of capital is a type of opportunity cost: it represents the rate of return that investors could expect to earn elsewhere without bearing more risk. "Expected" is used in the statistical sense: the mean of the distribution of possible outcomes. The terms "expect" and "expected," as in the definition of the cost of capital itself, refer to the probability-weighted average over all possible outcomes.

The definition of the cost of capital recognizes a tradeoff between risk and return that can be represented by the "security market risk-return line," or "Security Market

Line" for short. This line is depicted in Figure 1. The higher the risk, the higher the cost of capital required.

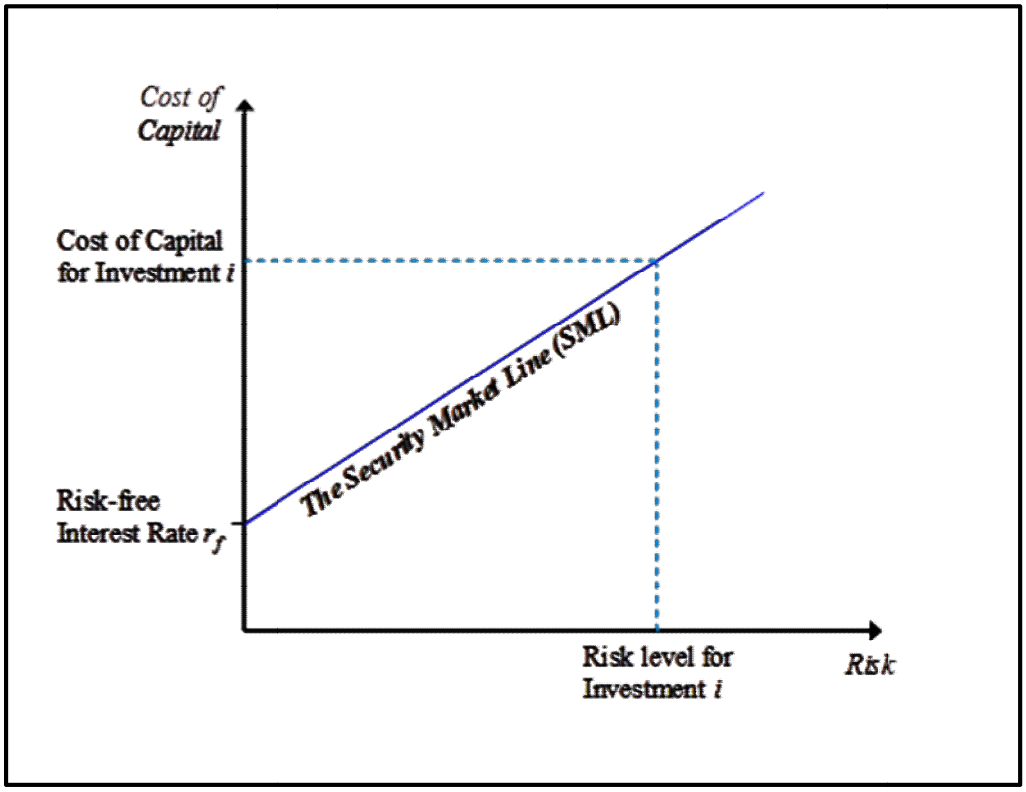

Figure 1: The Security Market Line

Q. Why is the cost of capital relevant in rate regulation?

A. It has become routine in U.S. rate regulation to accept the "cost of capital" as the right expected rate of return on utility investments.[3] That practice is viewed as consistent with the U.S. Supreme Court's opinions in *Bluefield Water Works & Improvement Co. v. Public Service Commission of West Virginia*, 262 U.S. 679 (1923), and *Federal Power Commission v. Hope Natural Gas Co.*, 320 U.S. 591 (1944).

[3] A formal link between the cost of capital as defined by financial economics and the right expected rate of return for utilities is set forth by Stewart C. Myers, *Application of Finance Theory to Public Utility Rate Cases, Bell Journal of Economics & Management Science* 3:58-97 (1972).

From an economic perspective, rate levels that give investors a fair opportunity to earn the cost of capital are the lowest levels that compensate investors for the risks they bear. Over the long run, an expected return above the cost of capital makes customers overpay for service. Regulatory commissions normally try to prevent such outcomes unless there are offsetting benefits (*e.g.*, from incentive regulation that reduces future costs). At the same time, an expected return below the cost of capital does a disservice not just to investors but, importantly, to customers as well. Such a return denies the company the ability to attract capital, to maintain its financial integrity, and to expect a return commensurate with that of other enterprises attended by corresponding risks and uncertainties.

More important for customers, however, are the broader economic consequences of providing an inadequate return to the company's investors. In the short run, deviations from the expected rate of return on the rate base from the cost of capital may seemingly create a "zero-sum game"—investors gain if customers are overcharged, and customers gain if investors are shortchanged. But in fact, in the short run, such actions may adversely affect the utility's ability to provide stable and favorable rates because some potential efficiency investments may be delayed or because the company is forced to file more frequent rate cases. Moreover, in the long run, inadequate returns are likely to cost customers—and society generally—far more than may be saved in the short run. Inadequate returns lead to inadequate investment, whether for maintenance or for new plant and equipment. Without access to investor capital, the company may be forced to forgo opportunities to maintain, upgrade, and expand its systems and facilities in ways that decrease long run costs. Indeed, the

cost to consumers of an undercapitalized industry can be far greater than any short-run gains from shortfalls in the cost of capital. This is especially true in capital-intensive industries (such as the electric utility industry), which feature systems that take a long time to decay. Such long-lived infrastructure assets cannot be repaired or replaced overnight, because of the time necessary to plan and construct the facilities. Thus, it is in the customers' interest not only to make sure the return investors expect does not exceed the cost of capital, but also to make sure that the return does not fall short of the cost of capital.

Of course, the cost of capital cannot be estimated with perfect certainty, and other aspects of the way the revenue requirement is set may mean investors expect to earn more or less than the cost of capital, even if the allowed rate of return equals the cost of capital exactly. However, a commission that sets rates so investors expect to earn the cost of capital on average treats both customers and investors fairly, and acts in the long-run interests of both groups.

B. Relationship between Capital Structure and the Cost of Equity

Q. What did you mean by the "ATWACC" mentioned earlier?

A. The ATWACC is calculated as the weighted average of the after-tax cost of debt capital and the cost of equity. Specifically, the following equation pertains:[4]

$$ATWACC = r_D \times (1 - T_C) \times \%\ D + r_E \times \%\ E \qquad (1)$$

[4] The equation is shown with only debt and common equity. If the capital structure has preferred equity, add the following term ($r_P \times \%\ P$) to the right-hand side of the equation.

where r_D = market cost of debt,
r_E = market cost of equity,
T_C = corporate income tax rate,
%*D* = percent debt in the capital structure, and
%*E* = percent equity in the capital structure

The ATWACC is commonly referred to as the WACC in financial textbooks and is used in investment decisions.[5] The return on equity consistent with the sample's overall cost of capital estimate (the ATWACC), the market cost of debt, the corporate income tax rate, and the amount of debt and common equity in the capital structure can be determined by solving equation (1) for r_E. Alternatively, if r_E is given and the capital structure is not, one can solve for %*E* instead. Having determined the ATWACC for the sample companies, I can apply that same ATWACC or an ATWACC adjusted for risk differences to the regulated entity, in this case Met-Ed, Penelec, Penn Power, and West Penn.[6]

Q. Why is the ATWACC relevant to these proceedings?

A. The ATWACC is one of several procedures in my analysis; it is important because it allows a comparison between the sample companies' costs of capital estimates and the cost of capital for Met-Ed, Penelec, Penn Power, and West Penn. Two otherwise identical companies with different capital structures will typically have different costs of equity because the risks to equity holders depend on the financial leverage (i.e., the amount of debt in the capital structure of the company). This makes it difficult to

[5] See, for example, Brealey, Myers and Allen (2011), *Principles of Corporate Finance, 10th Edition*, McGraw-Hill Irwin, New York, pp. 471-486.

[6] I refer to the ATWACC to distinguish it from the WACC used in regulatory proceedings which is the weighted-average of the after-tax cost of equity and the *pre-tax* cost of debt instead of the after-tax cost of debt.

compare cost-of-equity estimates among companies that have different capital structures. The effect of varying financial leverage on the risk-return tradeoffs of companies means that simply averaging individual cost-of-equity estimates across a sample generally does not provide meaningful information about an appropriate representative cost of capital for the industry. Thus it is generally incorrect to compute a sample average return on equity when estimating the cost of capital. However, two otherwise identical companies with different capital structures will generally have comparable ATWACC values. The "apples to apples" comparability of ATWACC across companies with different capital structures makes it a consistent measure of the representative cost of capital in an industry.

Q. How does the ATWACC approach differ from procedures where the cost of equity and the regulatory capital structure are determined separately?

A. The ATWACC approach avoids inconsistencies that could arrive from estimating the cost of equity for each of the sample firms without explicit consideration of the financial risk inherent in the market-value capital structure underlying those costs. If the sample's average cost of equity is used to estimate the cost of equity for the company in question, inconsistencies are likely to arise, because this method makes no adjustment for any differences among the capital structures of the sample firms used to estimate the cost of equity and the regulatory capital structure used to set rates. Consequently, the sample's estimated return on equity does not necessarily correspond to the financial risk faced by investors in the subject companies, in this case Met-Ed, Penelec, Penn Power, and West Penn. If the sample's estimated cost of

equity were adopted without consideration of differences in financial risk, it could lead to an unjust and inappropriate rate of return.

Q. Why is it necessary to consider the sample companies' capital structures as well as the regulatory capital structure in your analysis?

A. Briefly, the cost of equity and the capital structure are inextricably entwined in that the use of debt increases the financial risk of the company and therefore increases the cost of equity. The more debt, the higher is the cost of equity for a given level of business risk. Rate regulation has in the past often focused on the individual components of the cost of capital. In particular, it has treated as separate questions what the "right" cost of equity capital and "right" capital structure should be. The cost of capital depends primarily on the business the firm is in, while the costs of the debt and equity components depend not only on the business risk, but also on the distribution of revenues between debt and equity. The cost of capital is thus the more basic concept. Although the overall cost of capital is constant (ignoring taxes and costs of excessive debt), the distribution of the costs among debt and equity is not. Reporting the average cost of equity estimates from the sample without consideration of the differences in financial risk may result in material errors in the allowed return for Met-Ed, Penelec, Penn Power, and West Penn.

Q. What is the basis for the development of the ATWACC method?

A. Computing the ATWACC—called the weighted-average cost of capital in textbooks—is the fundamental method used by financial economists to measure the cost of capital. It is a standard topic taught in graduate level courses in corporate

finance and is based upon the work of Professors Franco Modigliani and Merton Miller. Each separately won the Nobel Prize in Economics, in part, for developing the theories underlying the method. It is critical to keep in mind that the ATWACC method is one useful tool to assist in the analysis of the cost of capital. All cost of capital witnesses estimate the cost of equity using the DCF or the risk positioning models, and all must interpret the results relative to the risk of the regulated company at issue. The purpose of the ATWACC method is to allow an "apples to apples" comparison of the results of the sample companies by adjusting for differences in financial risk due to differences in capital structure. The ATWACC is sometimes mischaracterized in regulatory proceedings and incorrectly criticized, possibly because the critics do not like the method's results, but it is the standard methodology in finance. It is consistent with the use of rate base measured on the basis of book value, and does not require a regulator to "rubber stamp" the current market value of the regulated company's stock as is sometimes asserted.

III. IMPACT OF THE RECENT ECONOMIC UNCERTAINTY

Q. What is the topic of this section of your testimony?

A. This section addresses the effect of the current economic situation on the cost of capital and the adjustments to my standard procedures required to estimate the cost of capital more accurately.

Q. Do you believe that capital markets are "back to normal"?

A. No. Although the volatility in the financial markets has lessened and economic conditions have improved markedly, I do not believe that capital markets (and the broader economy) are back to normal as compared to their pre-crisis status.

Q. What are the major remaining uncertainties?

A. Although unemployment has been declining, it remains high by historic standards and in fact it would be much higher except that the labor force participation rate[7] has declined from 66.1 percent in January 2004 to 63.4 percent recently.[8] This low level of labor force participation has not been observed since 1978, and may reflect the fact that many people who would otherwise be counted as unemployed have become discouraged and given up looking for work.

Additionally, while the Fed has begun scaling back (i.e., "tapering") its asset purchasing program, it is doing so gradually. Specifically, the Fed reduced purchases to $75 billion per month in January of 2014,[9] and announced a further reduction to $35 billion starting in July 2014.[10] This still represents a high level of continuing purchases of financial assets, and although the rate of accumulation is slowing, the Fed is still actively increasing its already massive inventory. Not only must the Fed

[7] Labor force participation is the percentage of the working age population with a job or seeking one.

[8] See Bureau of Labor Statistics, Labor Force Statistics from Current Population Survey, data extracted July 18, 2014.

[9] Federal Reserve Bank of New York, "Statement Regarding Purchases of Treasury Securities and Agency Mortgage-Backed Securities," December 18, 2013.

[10] Federal Reserve Bank of New York, "Statement Regarding Purchases of Treasury Securities and Agency Mortgage-Backed Securities," June 18, 2014.

reduce its ongoing purchases, but it must also reduce this inventory of Treasury bonds and agency mortgage backed securities, which it accumulated in an effort to stimulate capital markets and keep interest rates low. The Fed's inventory of bonds increased from less than $869 billion in August 2007 to over $4 trillion at the end of 2013.[11] Unwinding this position will be a gradual process, and substantial effects of the taper on capital markets and interest rates will not (and have not) materialize overnight.

Furthermore, budget deficits at all levels of government are at high and unsustainable levels, and the potential exists for higher inflation as a result of deficit spending by the U.S. government and further liquidity injected into the capital markets by the Fed.

Q. What is the purpose of the Fed's asset purchases?

A. The Fed purchases bonds and other financial assets to stimulate the economy, reassure the capital markets, and keep interest rates low. The primary purpose of the asset purchase program was to drive down long-term interest rates, and in this regard it has been successful. The effectiveness of this policy is evidenced by the fact that U.S. Treasury Bond yields remain low by historical standards. Long-term and short-term interest rates were driven to historic lows[12] before beginning to increase with the start of tapering. The goal of the programs was to spur economic activity by making it cheaper to borrow funds for new investment or to purchase durable assets such as houses and automobiles.

[11] *Bloomberg News*, "Fed Assets Reach Record $4 Trillion on Unprecedented Bond Buying," by Jeff Kearns, December 19, 2013.

[12] See for example, the "long term stock, bond, interest rate and consumption data" provided at Professor Robert Shiller's website: http://www.econ.yale.edu/~shiller/data.htm

Q. What effects did the Fed's purchases have on equity and other markets?

A. During the crisis and its aftermath, the Fed's purchases supported the stock market by depressing the expected returns to bond investors. In times of economic uncertainty (such as the financial crisis), investors seek to reduce their exposure to market risk. This precipitates a so-called "flight to safety," wherein demand for low-risk government bonds rises at the expense of demand for stocks. If yields on bonds are extraordinarily low, however, any investor seeking a higher expected return must choose alternative investments such as stocks, real estate, or gold or collectibles. Of course, all of these investments are riskier than government bonds, and investors still demand a risk premium (perhaps an especially high one in times of economic uncertainty) for investing in them. But short of accepting meager returns, investors simply have few alternatives to returning to the stock market. Thus, the Fed's bond purchases somewhat mitigate the effect of the "flight to safety" on equities and other investments. Utility stocks in particular benefit from this phenomenon because of their dividends. Emerging market countries benefited too, as investors sought higher returns. Sales of houses also improved because of record low mortgage rates, and automobile sales have been at high levels as well.

Q. What has been the effect of the start of tapering?

A. Interest rates have increased since the possibility of tapering was first discussed in June 2013. (See Figure 2 below.) However, the pace of that increase slowed toward the end of last year, and rates have decreased only slightly so far in 2014. This may indicate that bond markets have adjusted somewhat to the Fed's reduced rate of purchases. Although they have recovered somewhat from their lows in 2012 and

early 2013, long-term U.S. treasury yields remain well below their pre-crisis and long-term average levels.

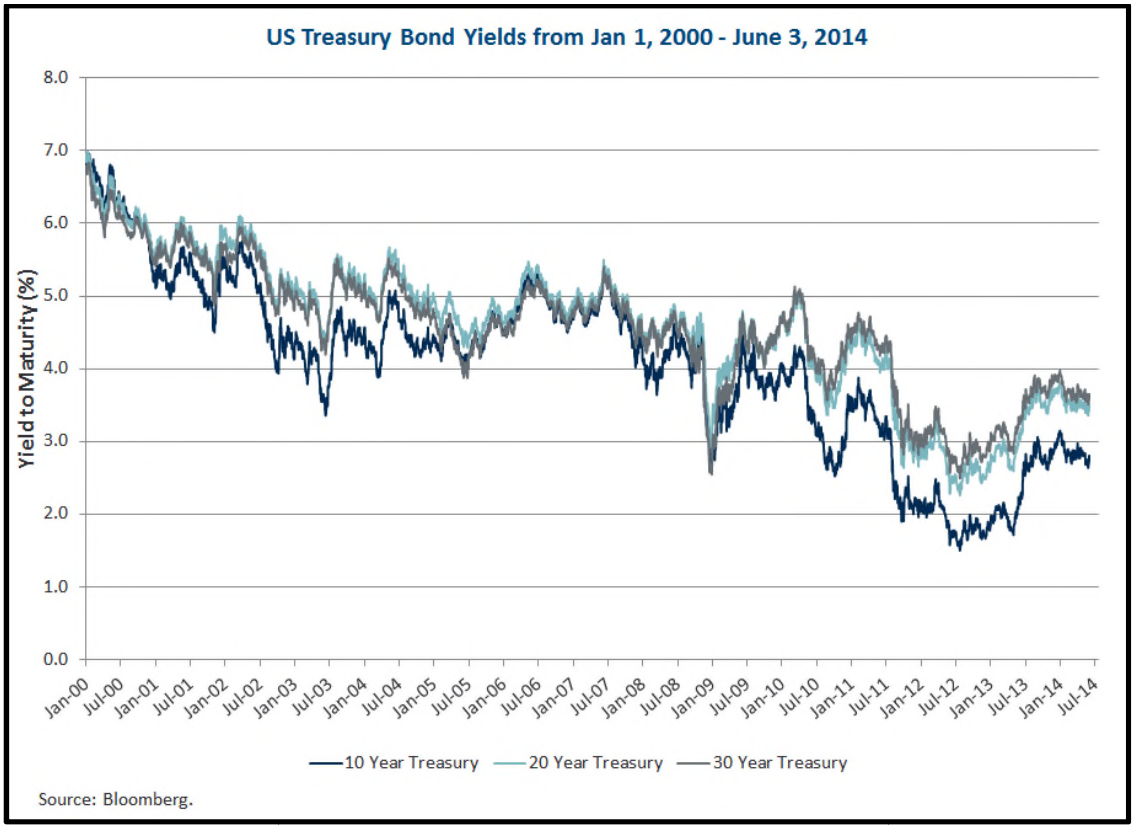

Figure 2

Investor uncertainty is illustrated by the flow of funds into and out of mutual funds. (See Figure 5, later in my testimony.) Transfers out of bond mutual funds spiked when the Fed first discussed tapering, and stayed high through the end of 2013. This was likely driven by the possibility of rising interest rates, which would lead to falling bond prices. However, the half of 2014 saw positive and increasing net flows into bond funds, reflecting a shift in expectations about interest rates: market participants are less convinced that rates will rise in the near term. Flows into equity mutual funds, meanwhile, have been somewhat erratic, with recent outflows suggesting that investors may not have fully regained their appetite for risky stock investments.

Q. Has the yield spread between government and utility bonds changed since the start of the credit crisis?

A. Yes. Although the yield on utility bonds had declined somewhat from the height of the crisis (and has decreased since the start of the taper), it has been higher during most of the past two years than it was prior to the credit crisis. As shown in Figure 3 below, since the last major peak in November 2008 the spread between the yield on BBB-rated 20-year utility bonds and the yield on 20-year government bonds has ranged from a low of 138 basis points to a high of 418 basis points, compared to a historical average of approximately 150 basis points.[13]

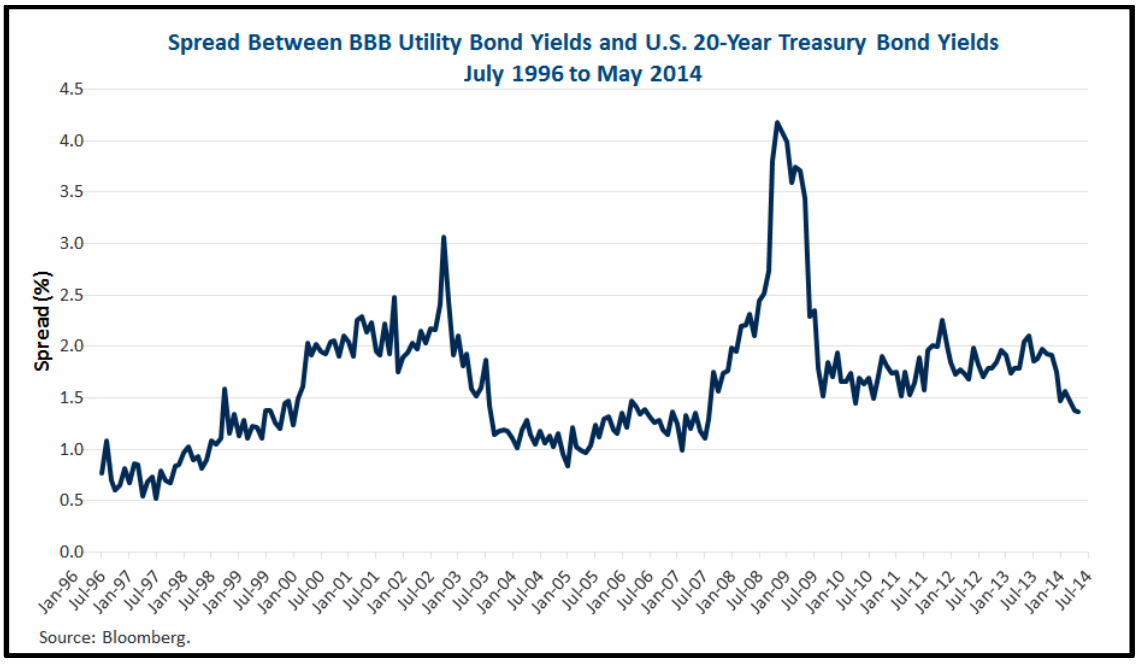

Figure 3

[13] For the 10-year period ending October 31, 2008, the average spread was 161 basis points and for the 10-year period ending October 31, 2007, the average spread was 148 basis points.

Table 1 below presents the yield spreads for 20-year utility bonds over several historical periods. Yield spreads have begun to increase again in the most recent period compared to the long-term pre-crisis average measured from 1991-2007.

Spreads between US Utility Bond (20 year maturity) and US Treasury Bond (20 year maturity) - %			
Periods	A-Rated Utility and Treasury	BBB-Rated Utility and Treasury	Notes
Period 1 - Average April 1991 - 2007	0.93	1.23	[1]
Period 2 - Average Aug-2008 - May-2014	1.58	2.07	[2]
Period 3 - Average May-2014	1.04	1.57	[3]
Period 4 - Average 15-Day (May 13, 2014 to Jun 03, 2014)	1.18	1.44	[4]
Spread Increase between Period 2 and Period 1	0.65	0.84	[5] = [2] - [1].
Spread Increase between Period 3 and Period 1	0.11	0.34	[6] = [3] - [1].
Spread Increase between Period 4 and Period 1	**0.25**	**0.21**	[7] = [4] - [1].
Sources and Notes:			
Spreads for the periods are calculated from Bloomberg's yield data.			
Average monthly yields for the indices were retrieved from Bloomberg as of June 3, 2014.			

Table 1

Q. What is the implication of higher than normal yield spreads?

A. A higher than normal yield spread is one indication of the higher risk premium prevailing in the capital markets. Investors consider a risk-return tradeoff (like the one displayed in Figure 1 above) and select investments based upon the desired level of risk. Higher yield spreads reflect the fact that the return on corporate debt (i.e., the cost of debt) is higher relative to government bond yields than is normally the case, even for regulated utilities. Because debt is less risky than equity, this means that the cost of equity must also be higher relative to government bond yields than is usually observed. If this fact is not recognized, then the traditional cost of capital estimation models will underestimate the cost of capital prevailing in the capital markets.

Q. Are the higher than normal yield spreads an indication of investors' "flight to safety"?

A. Yes. When investors become concerned about the economy, they frequently seek to reduce their exposure to investment risk. U.S. government debt is generally considered the least risky available investment—in effect it is regarded as the closest thing to a risk-free asset. Thus U.S. government debt is in high demand during times of economic uncertainty. This implies in turn that the yields on U.S. government bonds are likely to be relatively lower during periods of economic turmoil. Moreover, the U.S. Fed's continued bond purchase programs have further increased the demand for medium- and long-term U.S. government bonds, thus depressing the yields on those bonds.

Q. What evidence can you provide that U.S. medium- and long-term government bond yields are currently depressed?

A. Over the past few years, the annual yields on long-term U.S. government bonds have dropped dramatically and remain depressed. For instance, the historical average of annual yields on long-term government bonds was 5.16 percent from 1926 to 2012, but long-term government bond yields were 2.48 percent in 2011 and 2.41 percent in 2012.[14] However, the easing of the pace of Fed bond purchases and some recent outflows from bond funds have translated to a modest rise in bond yields. As a result, the current yield is up slightly from the recent lows, at 3.10 percent (based on the 15-

[14] 2013 Ibbotson Associates, Stocks Bonds Bills (SBBI) and Inflation monthly paper reports.

day average of long-term government bond yields as of June 3, 2014).[15] But this is still substantially below the long-term historical average.

Forecasted medium-term yields also suggest that current yields are depressed. *Blue Chip Economic Indicators* dated March 10, 2014 reports the consensus economic projections for the yield on 10-year U.S. Treasury notes to be 4.1 percent in 2016 and 4.5 percent in 2017. These consensus forecasts suggest that 10-year Treasury note yields will trend upward to 4.6 percent on average for 2016-2020 and 4.8 percent on average for 2021-2025.[16] These forecasts are substantially higher than the recent 2.5 percent average yield on 10-year U.S. government notes,[17] and highlight the fact that current long-term and medium-term U.S. government bond yields are low both relative to historical levels, as well as compared to consensus forecasts of future rates. The currently depressed level of long-term government bond yields must be considered when evaluating the results of the risk-positioning model, because the downward bias in the long-term risk-free interest rate will inappropriately lower the sample companies' ROE estimates that would result from mechanically calculating the CAPM.

Q. Do regulated companies benefit from the flight to safety?

A. Yes, to some degree. Regulated companies are of lower relative risk than the average company in the market, and so investors may prefer to invest in them rather than in

[15] See Table No. MJV-9.

[16] See *Blue Chip Economic Indicators*, dated March 10, 2014, page 15.

[17] As of June 3, 2014, See Table No. MJV-9.

riskier companies during bad times. However, the required return for *all* types of risky investments, including regulated utilities, increases during a time of flight to safety, since corporate and (especially) "risk free" government bonds are in turn much less risky than even the equity of regulated companies. This was borne out amidst the recent turmoil: prices of regulated companies fell along with the broader market, although not as much in percentage terms as the market, but that is to be expected because regulated companies are of lower risk. The risk-positioning models predict that companies with lower betas, i.e., companies with lower relative risk, will move with the market, but with lower volatility. The prices of regulated companies recovered faster than the market, in part because of the flight to safety, but have now been surpassed by the general market, again as expected by the predictions of the risk-positioning models.

Q. Why is it important to consider the stock market's volatility?

A. Academic research finds that investors expect a higher risk premium during more volatile periods. The higher the risk premium, the higher is the required return on equity. For example, French, Schwert, and Stambaugh (1987) find a positive relationship between the expected market risk premium ("MRP") and volatility:

> We find evidence that the expected market risk premium (the expected return on a stock portfolio minus the Treasury bill yield) is positively related to the predictable volatility of stock returns. There is also evidence that unexpected stock returns are negatively related to the unexpected change in the volatility of stock returns. This negative

relation provides indirect evidence of a positive relation between expected risk premiums and volatility.[18]

One implication of this finding is that the MRP tends to increase when market volatility is up, even when investors' level of risk aversion remains unchanged. Recently, market expectations for the volatility of the S&P 500 index have been lower than their long-term average of approximately 20 percent.[19] However, as can be seen in Figure 4, the variability in monthly stock market volatility has itself been quite high over the past 6 months, with occasional spikes indicating periods of increased uncertainty about likely market outcomes.

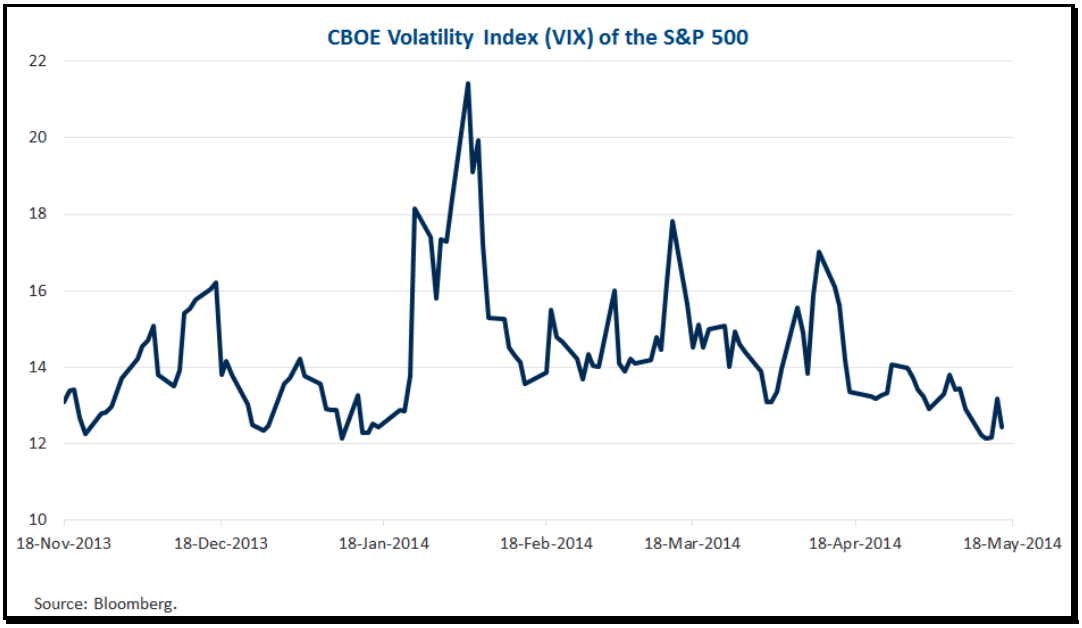

Figure 4

[18] K. French, W. Schwert and R. Stambaugh (1987), "Expected Stock Returns and Volatility," *Journal of Financial Economics*, Vol. 19, p. 3.

[19] As measured by the CBOE Volatility Index (VIX) which measures market expectations for (annualized) 30-day volatility of the S&P 500 stock index based on implied volatility of options on the S&P 500. The average closing index value for the VIX from January 2004 to May 2014 was 20.0. See http://www.cboe.com/micro/vix/historical.aspx.

Q. What do you mean by the term "risk aversion"?

A. Risk aversion is the recognition that investors dislike risk, which means that for any given level of risk, investors must expect to earn a higher return to be induced to invest. An increase in risk aversion means that investors require an even greater return for a given level of risk.

Q. Do you have any evidence that the return premium demanded by investors for taking risk is higher than it was prior to the crisis?

A. Yes. In response to the crisis, investors began allocating much larger shares of their portfolios to lower risk investments. In fact, many investors have left their money in cash or low-yielding Treasuries rather than investing in stocks. For example, Figure 5 below compares monthly net new mutual fund flows into U.S. domestic equities versus total net flows into bonds. Figure 5 shows that net cash flow into domestic equities was predominantly negative from mid-2010 through the end of 2012, reaching almost $30 billion in outflows in July 2011. On the other hand, net flows into bonds were consistently positive throughout the crisis and its aftermath, with monthly inflows reaching nearly $35 billion at several points in 2012 and early 2013.

As discussed above, the latter trend reversed sharply in the second half of 2013—likely in response to the Fed's announcement in June 2013 regarding the tapering of its quantitative easing program.[20] This announcement led to a dramatic global bond sell-off, headlined by $60 billion in outflows from U.S. bond mutual funds as of June

[20] "Fed message gets through to markets, sort of", Alister Bull, July 16, 2013, *Reuters*.

2013.[21] Through the latter half of 2013, bond yields climbed as demand for bonds dipped,[22] reflecting expectations that interest rates would finally rise after remaining so low for so long. At the start of 2014, many traders held short positions in U.S. Treasury bonds—effectively betting that government bond prices would fall as the interest rates rose in response to a growing economy. However, these expectations failed to materialize. Instead, the first five months of 2014 saw a rally in bond buying (see Figure 5). By the end of May, Treasury yields were trading near their lowest levels since before the Fed's June 2013 tapering announcement.[23] This bond rally has surprised many market observers, since U.S. economic indicators have shown modest improvement and most forecasters continue to expect higher interest rates in the medium term.[24] Nevertheless, investors who bet against bonds at the end of 2013 moved back into safe debt investments when predicted interest rate rises failed to materialize.

Additionally, U.S. Treasury bonds are especially appealing in 2014 when compared to European sovereign debt, for which yields are being driven down by slow economic growth and resulting monetary stimulus from the European Central Bank ("ECB"). In June of 2014, the ECB made history by establishing a negative bank deposit rate—effectively charging banks money for depositing their money in the

[21] *Ibid.*

[22] Bond yields rise when prices fall, since face value and coupon payments are fixed.

[23] "Treasurys Rally, Sending 10-yr Yield to 2014 Low", Cynthia Lin, May 28, 2014, *The Wall Street Journal.*

[24] See, for example, *Consensus Forecasts*® June, 2014 survey, which predicts 10-Year Treasury Bond yields will increase from 2.6% as of the survey to 4.1% by the end of 2015.

central bank rather than lending it to consumers and businesses.[25] This accommodative stance by the ECB reflects a low interest rate outlook for European markets, perhaps driving bond investors to seek potential upside in the U.S. debt market.

The U.S. stock market has generally performed well in 2013 and 2014, but net flows for U.S. equity mutual funds have not exhibited a consistent trend. Although the uniform outflows observed in the early part of this decade are no longer manifest, there is not a clear indication in the data that investors are ready to move their money back into equities. Indeed, the short term trend of increasing outflows observed in April and May of 2014 (see Figure 6)—together with the increased demand for bonds—suggests that a clear preference for lower-risk assets currently prevails in financial markets.

In general, these trends are consistent with my observation that the average investor's risk aversion remains elevated. Additionally, the particular circumstances leading to the current low bond yields may be short-term phenomena, suggesting that current yields may underestimate the long-term risk-free interest rate. As discussed in greater detail below, a higher-than-normal equity risk premium and an underestimated risk-free rate may lead to a downward bias in cost of capital estimates based on the CAPM and ECAPM.

[25] "ECB Unveils Rate Cuts, Lending Package", June 5, 2014, *The Wall Street Journal.*

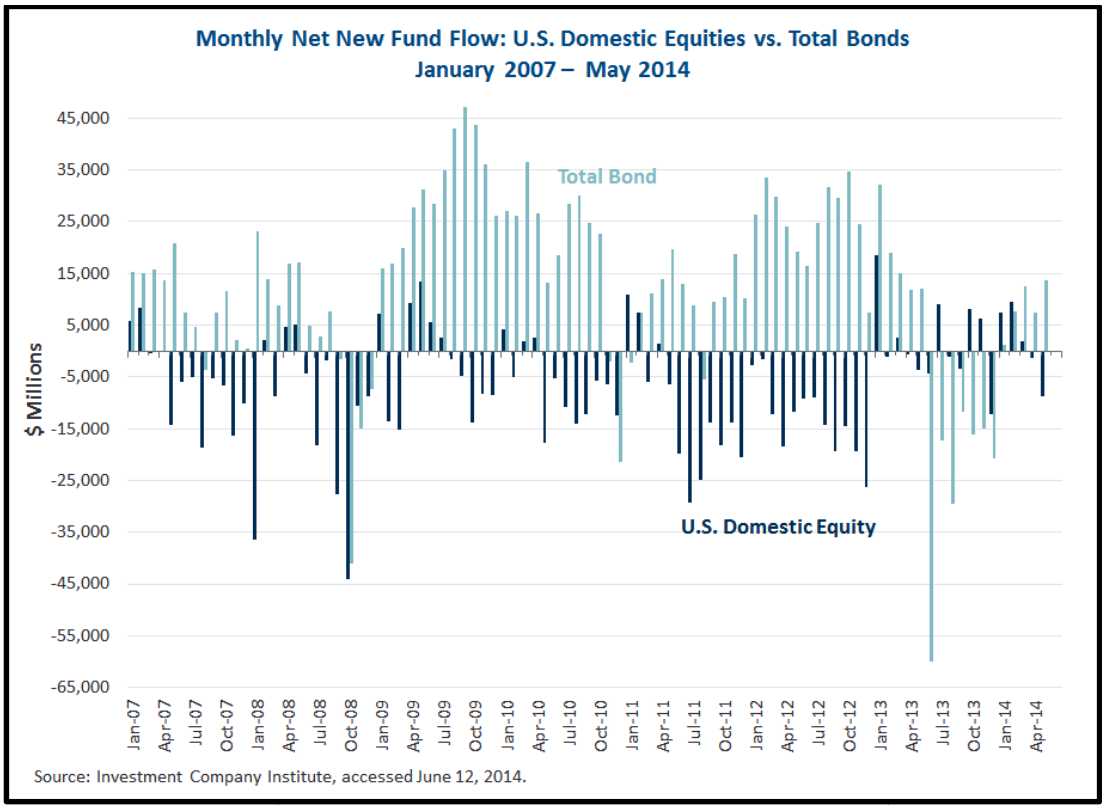

Figure 5

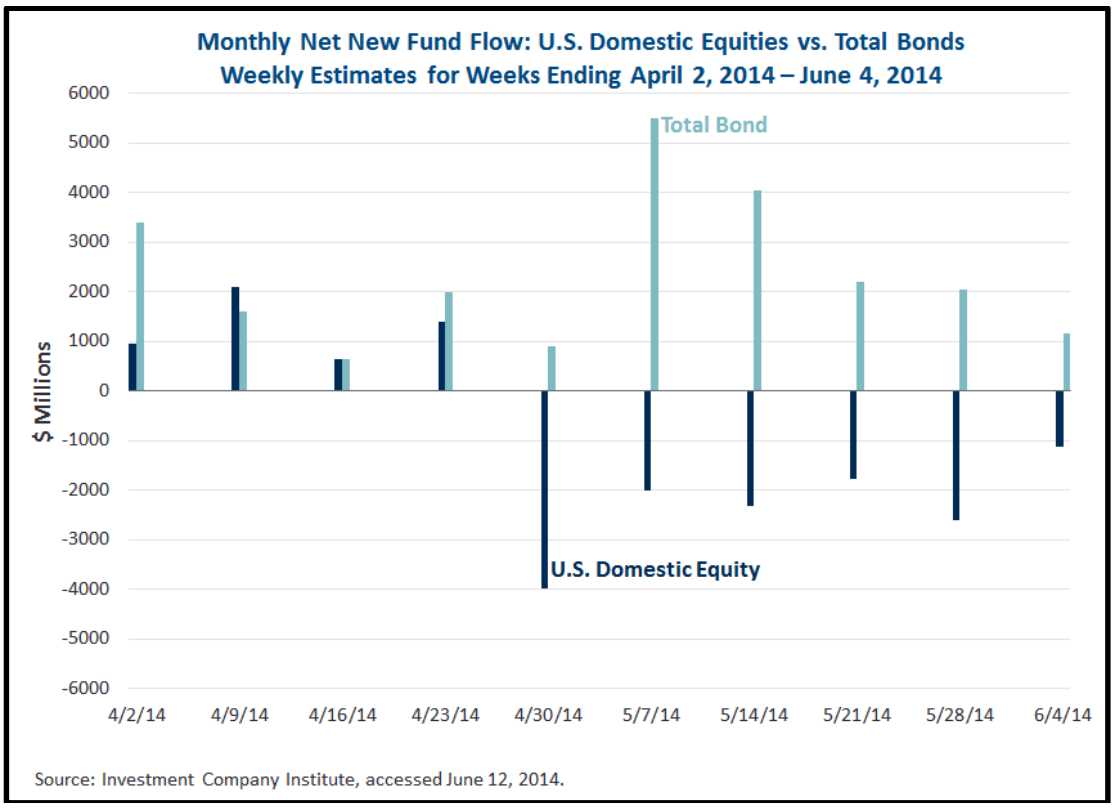

Figure 6

Q. Do you believe that the increase in the market risk premium is a short-term or a long-term phenomenon?

A. I believe that it is a long-term phenomenon. Even when market conditions return to normal, investors' risk aversion is likely to remain higher until their confidence fully returns, which is likely to be well into the recovery period. It could easily be years before investors regain the level of confidence that prevailed prior to the crisis. For a sizable group of investors, the stock market collapse of 2008-2009 has had a much more fundamental impact than wiping out a large part of their savings. In fact, it changed their perception of risk and their appetites for taking on risk again. For many investors, it changed their lifestyle. Some cannot retire as soon as expected, and others have had to sell their homes in a down market, or have lost their homes. This negative shock to investors' confidence and risk preferences is likely to have a sustained impact on their portfolio allocation choices and may persist for some time. If investors have fundamentally changed their attitude towards risk as the evidence suggests, then the required reward for investing in the stock market, i.e., the MRP, must have gone up and is likely to stay at a higher-than-normal level for the foreseeable future. An increase in the MRP results in an increase in the cost of capital for all risky investments including regulated utilities.

Q. Given that much of the economic crisis was rooted in the housing market, has the housing market in the U.S. fully recovered?

A. No. Figure 7 demonstrates that while nation-wide housing prices have begun to recover, they remain lower than they were pre-crisis.

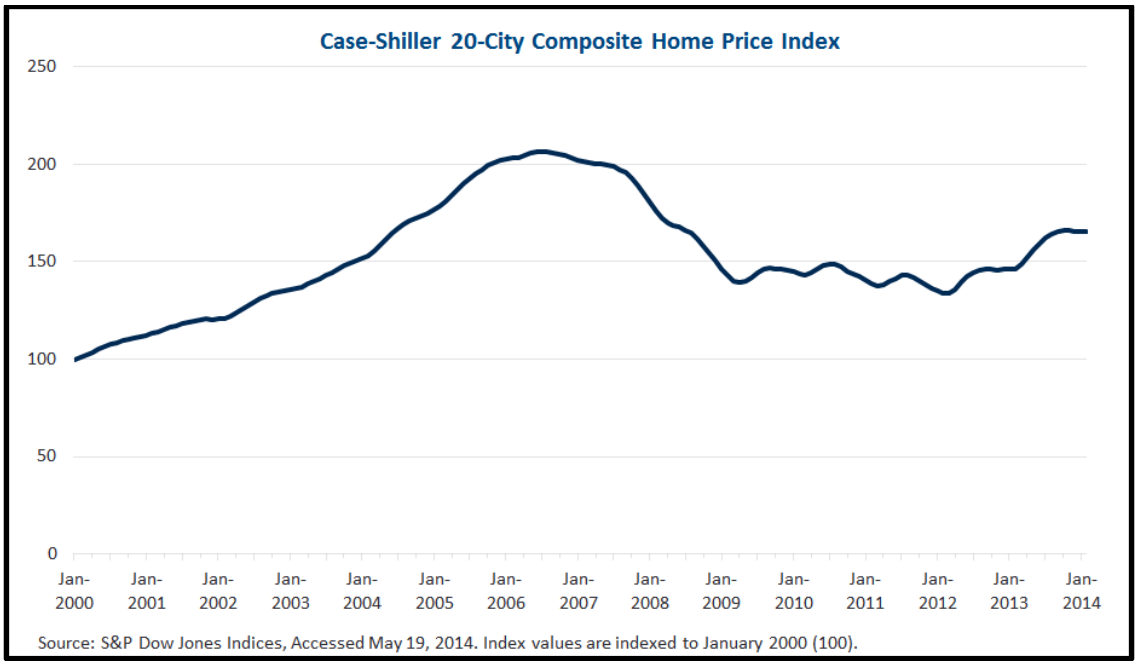

Figure 7

The decline in housing prices, which started in 2006, was a leading indicator of the decline in the financial markets because so much of the economy is dependent on the housing sector. Not only do individuals have a substantial amount of their wealth tied up in their homes, but financial institutions also have significant exposure to mortgage-backed securities. Accordingly, falling prices for homes affect much of the rest of the economy. As of the first quarter of 2013, more than 25 percent of the population had home equity value that was negative,[26] and as shown in figure 6, national home prices have not improved substantially since that time. Throughout most of the country, home prices remain far below pre-crisis levels, despite the recent improvements. As a result, borrowing and household consumption remain constrained.

[26] "Millions Remain Trapped by 'Effective' Negative Equity in Q1, Even if They're Not Underwater," Zillow Real Estate Research, Accessed August 8, 2013.

Q. What do other macroeconomic indicators suggest about the status of the recovery?

A. Unemployment is also an important issue for the health of the overall economy since it affects consumer spending and consumer confidence. Figure 8 below displays the national unemployment rate from 1990 to today. It is clear that unemployment has declined materially from its peak (around 10 percent) during the crisis and is following a sustained downward trend. However, the national unemployment rate remained at approximately 6.3 percent in May 2014,[27] which is higher than it has been since the early 1990s. Even though the unemployment rate is declining, the number of jobs created in the private sector has still been below expectations. Labor force participation remains at its lowest level since the 1970s, suggesting that many discouraged workers without jobs may not even be counted in the current unemployment rate. Overall, the U.S. labor market appears stronger than during the crisis, but does not suggest consumer and investor confidence are truly "back to normal."

[27] http://research.stlouisfed.org/fred2/graph/?id=UNRATE

Figure 8

Q. What are your thoughts on the possible effect of the budget deficit on the economy?

A. In dollar terms, the federal budget deficit was $680 billion in fiscal year 2013, down substantially from more than $1 trillion in fiscal year 2012. This improvement may result partially from the budget sequestration that went into effect in early 2013. However, the 2013 fiscal year deficit was still approximately 50 percent higher than that of 2008 and well above the average level in the years leading up to the crisis. The U.S. Congressional Budget Office estimates that the budget deficit will represent approximately 3 percent of the Gross Domestic Product ("GDP") in 2014 and will

remain high relative to economic output over the foreseeable future (see Figure 9 below).[28]

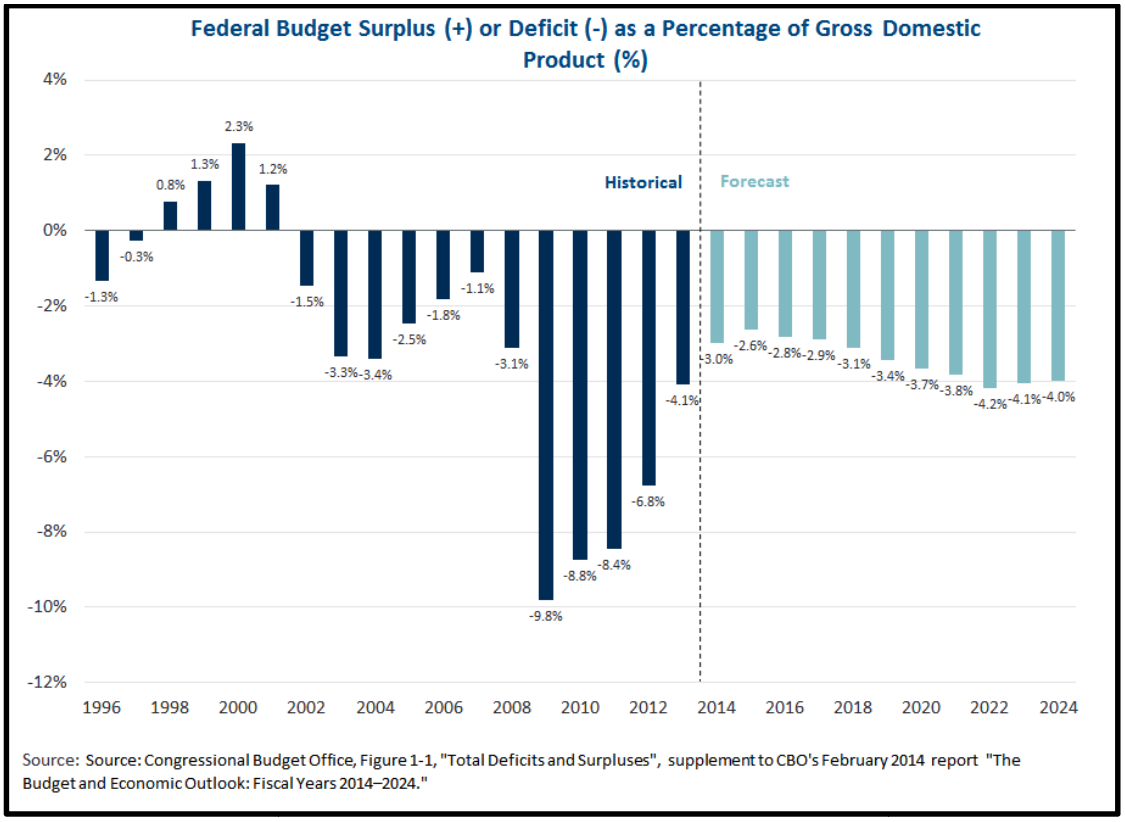

Figure 9

Maintaining such a high deficit is unsustainable, especially if buyers of U.S. debt lose confidence in the U.S. economy and demand higher interest rates in return. This suggests that going forward, the U.S. will have to be more fiscally conservative, and limit the stimulus funds it provides to the economy. Although inflation is not currently an issue, it is also quite likely that the magnitude of the federal budget deficit will affect U.S. inflation going forward. The Fed now holds approximately

[28] Congressional Budget Office: http://www.cbo.gov/.

$1,656 billion in mortgage-backed securities.[29] It is unclear how the unwinding of these positions will affect financial markets, which creates additional uncertainty.

Q. Can you summarize how the economic developments discussed above have affected the return on equity and debt that investors require?

A. Companies such as Met-Ed, Penelec, Penn Power, and West Penn rely on investors in capital markets to support efficient business operations. These investors have been dramatically affected by the credit crisis, and while there have been material improvements in capital markets and the macro-economy since the height of the financial crisis, there is evidence that investors' confidence remains low and their risk aversion remains elevated relative to pre-crisis periods.

Many lost their jobs, their homes or their savings in the crisis; many cannot retire as early as hoped or planned. Even though the economy is improving, the speed and duration of that recovery remains highly uncertain. Likewise, the effects of the federal budget deficit and the Fed's unwinding of its involvement in providing credit may have substantial but uncertain effects on the economy and financial markets. Finally, due to increased risk-aversion on the part of investors, as well as continued bond-purchase programs initiated by the Fed, long-term U.S. government bond yields (along with forecasts of future interest rates) have been pushed down to extremely low levels by historical standards. As a result, yield spreads on utility debt, including top-rated instruments, have remained elevated. The evidence presented above demonstrates that the equity risk premium is higher today than it was prior to the

[29] Federal Reserve Statistical Release as of May 22, 2014. (http://www.federalreserve.gov/releases/h41/).

crisis for all risky investments. This is true even for investments of lower-than-average risk, such as the equity of regulated utilities.

Q. How do you adjust your cost of capital estimation methods to correct for current economic conditions?

A. I make no adjustment to the DCF method, for two reasons. First, the DCF method is based on forward-looking inputs and so is less likely to be biased by estimated parameters from time periods that do not reflect current market sentiment. Second, it is difficult to make an appropriate adjustment.

For the risk positioning method, I recognize the unusually large yield spreads on utility debt by adding a "yield spread adjustment" to the current long-term risk-free rate. This has the effect of increasing the intercept of the Security Market Line displayed in Figure 1 above. I also present results from the risk positioning model by increasing the MRP over the 6.5 percent that I normally use. This has the effect of increasing the slope of the Security Market Line displayed in Figure 1. I present sensitivity tests of the effect of an increase in the MRP to 7.5 percent and yield spread adjustments to the risk-free rate of 25 basis points ("bps"). Table 4 below lists the parameters of these two scenarios.

Q. How do you estimate the increase in MRP needed to adjust for the increased cost of capital stemming from the current market turmoil?

A. Estimating the MRP is always imprecise and controversial. Measuring the change in MRP due to the current economic situation is likely to be no different, but it is still necessary to estimate the MRP as carefully as possible given the change in economic

conditions. Fortunately, there is a way to provide a quantitative benchmark for the required increase in MRP based upon a paper by Edwin J. Elton, et al., which documents that the yield spread on corporate bonds is normally a combination of a default premium, a tax premium, and a systematic risk premium.[30] As displayed in Table 1 above, the yield spreads for A-rated and BBB-rated utility debt have increased substantially compared to the average for the period 1991-2007.

Q. How do you use the information concerning the increase in yield spreads to estimate the increase in the MRP?

A. Table 1 above shows that yield spread for A-rated has increased by about 25 bps for 20-year maturities. This means that investors require a higher return on investment grade utility debt relative to the return on U.S. Government debt than before the credit crisis. Some of the increase in yield spread for A-rated debt may be due to an increase in default risk, but this is more likely to be a factor for BBB-rated utility bond yields.[31] The increase in the default risk premium for A-rated debt is undoubtedly very small because A-rated utility debt has not been at the center of the wave of defaults based upon collateralized mortgage debt. This means that the vast majority—if not all—of the increase in A-rated yield spreads is due to a combination of the increased systematic risk premium and the downward pressure on the yields of government debt caused by the flight to safety. In other words, either the market risk premium has increased or the risk-free rate is underestimated, or both. Therefore, I

[30] "Explaining the Rate Spread on Corporate Bonds," Edwin J. Elton, Martin J. Gruber, Deepak Agarwal, and Christopher Mann, *The Journal of Finance*, February 2001, pp. 247-277.

[31] Although there is no increase in tax premium due to coupon payments, there may be some increase due to a small tax effect resulting from the probability of increased capital gains taxes when the debt matures.

consider possible allocations of the 25 bps increase in A-rated utility spreads between an increase in the MRP (which drives the increase in systematic risk premium on A-rated debt), or downward pressure on the risk-free rate.

Q. How do you allocate the increase in the yield spread to the increase in systematic risk or to the under estimation of the risk-free rate due to downward pressure on government bond yields?

A. There is no precise way to allocate the increase in yield spread between the increase in systematic risk and the underestimation of the risk-free rate arising from downward pressure on government bond yields. However, assuming a beta of 0.25 for A-rated debt[32] means that an increase in the MRP of one percentage point translates into a ¼ percentage point increase in the risk premium on A-rated debt (i.e. 0.25 (beta) times 1 percentage point (increase in MRP) = ¼ percentage point increase in yield spread). The relationship among the increased yield spread for A-rated utilities ($\Delta\, spread$), the underestimation of the risk-free rate (Δr_f), and the required adjustment to the market risk premium ($\Delta\, MRP$) can be represented as follows.

$$\Delta\, spread - \Delta r_f = 0.25 \cdot\ \Delta\, MRP$$

A 25 bps increase in the yield spread is therefore consistent with a 1 percentage point increase in the MRP if there is no underestimation of the risk-free rate (i.e., 25 bps – 0 bps = 25 bps/.25 = 1.0). Alternatively, the 25 bps increase in the yield spread could

[32] Elton, *et al*. estimates the average beta on BBB-rated corporate debt as 0.26 over the period of their study, and A-rated debt will have a slightly lower beta than BBB-rated debt.

be consistent with a ¼ percentage point underestimation of the risk-free rate, with no adjustment to the MRP required (i.e., 25 bps less 25 bps = 0 bps/.25 = 0.0).

The greater the increase in yield spread assumed to be attributed to an increase in systematic risk, the larger must be the corresponding increase in the MRP and the smaller the assumed effect of downward pressure on the risk-free rate. As illustrated above, if all of the non-default increase in the yield spread were due to the increase in systematic risk, then the MRP would have to increase by 1.0 percentage point to explain the 25 bps change. Alternatively, a 25 bps increase in the yield spread is also consistent with a 25 bps underestimation of the risk-free rate, assuming that none of the change in yield spread is driven by an increase in systematic risk. These are the two scenarios I implement in my analyses.[33] The former (labeled "Scenario 2") attributes the increased yield spread entirely to an increase in systematic risk and an attendant increase in the premium required by investors for taking market risk (i.e., the MRP). Meanwhile, the latter ("Scenario 1") attributes the entire yield spread increase to the temporarily depressed government bond yields caused by the actions of the Fed and the "flight to safety" in the wake of the financial crisis.

Q. Would the estimate of the effect of an increase in the MRP be different if the estimate of the beta of an A-rated bond were different?

A. Yes. If the beta of an A-rated bond were higher, then the increase in the systematic risk premium in the yield spread for each one percentage point increase in the MRP

[33] See Exhibit MJV-1. Results for the two scenarios are presented in Panels A ("Scenario 1") and B ("Scenario 2") of Table No. MJV-10 and Table No. MJV-11. The results for both scenarios are summarized in Table No. MJV-12.

would be smaller and vice versa. However, I believe that a beta estimate of 0.25 for A-rated utility debt is reasonable, because the debt of any company is less risky than its equity. A beta estimate of 0.25 for A-rated utility debt is likely quite conservative, especially when compared to an average estimated beta of 0.78 (*Value Line* betas) for the equity of the full electric sample, given that equity is much riskier than debt. (See Table 3 later in my testimony for the estimated betas of the electric sample). Moreover, the average estimated beta for BBB-rated debt was 0.26 at the time of the Elton, et al. study, which should be higher than the estimated beta for A-rated debt, given that lower rated debt is naturally more sensitive to market risk. Even if the average beta for BBB-rated debt is higher today than at the time of the Elton, et al. study, it is likely that an estimate of 0.25 for A-rated debt is on the high end of a reasonable range. Such an estimate is also conservative in the sense that a relatively higher estimate of beta allows the increased yield spread to be explained by a relatively smaller increase in the systematic risk premium.

Q. Would you provide a graph of how the scenarios you consider affect the Security Market Line?

A. Yes, see Figure 10 below. Scenario 1 attributes the entire increase in the yield spread on A-rated utility debt to underestimation of the risk free rate by shifting the Security Market line up in parallel fashion by 25 bps ($R_1^F - R_0^F$). Scenario 2 attributes the entire increase in the yield spread to an increase in the market risk premium by increasing the slope of the line by 1.0 percentage point ($\Delta\, MRP$).

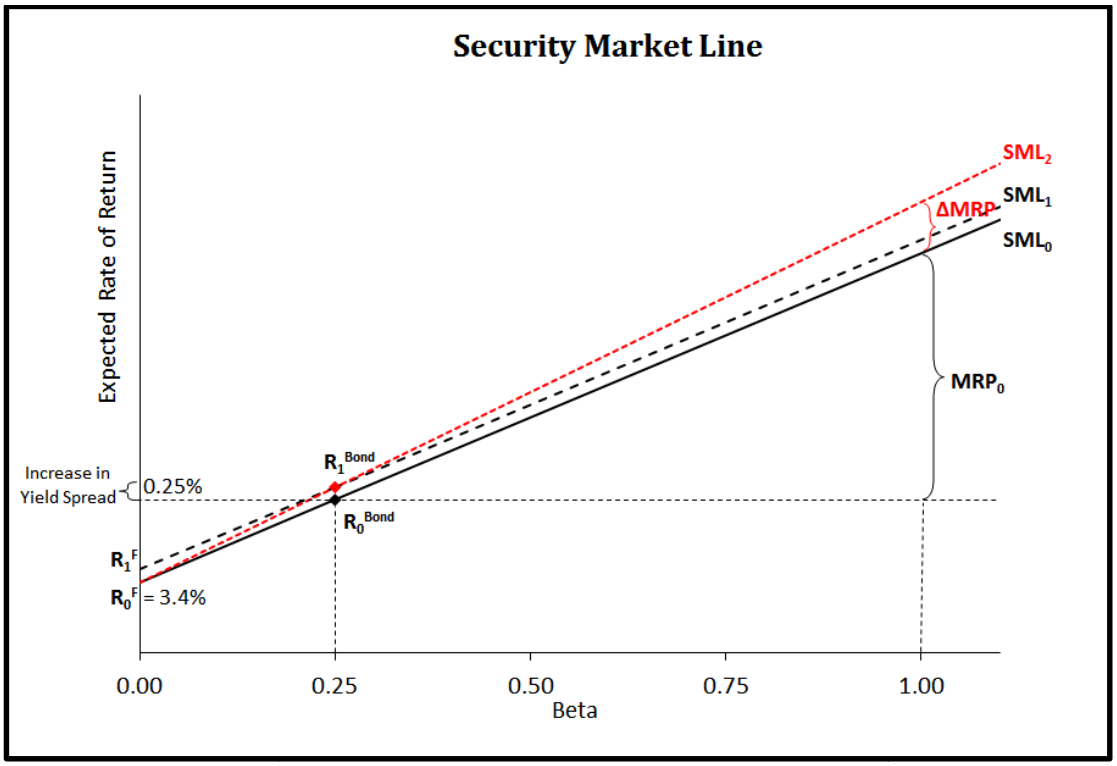

Figure 10

Q. Can you summarize your thoughts with regard to the MRP and the financial crisis?

A. Yes. There remain serious concerns of a very slow growth recovery. Banks continue to fail or are stressed in countries around the world, in an increasingly global economy. It defies logic to believe that the MRP has not increased from its level in more normal times, whether there is any particular agreed model for how to calculate the increase or not.

In light of these circumstances and the calculations described above, I submit that a 100 bps increase in the MRP presents a reasonable adjustment that might be made. As discussed in the Empirical CAPM estimation below, I have two scenarios with alternative adjustments to the risk-free rate and the MRP. These scenarios recognize

the simple reality that while the financial uncertainty and interventions by the Fed and the U.S. government have made it more difficult to measure the cost of equity accurately, the required return on equity has not decreased as much as mechanical implementation of the models might suggest.

IV. SAMPLE SELECTION

A. The Electric Sample

Q. What factors do you consider in selecting a proxy group?

A. The cost of capital for any part of a company depends on the risk of the lines of business in which the *part* is engaged, *not* on the overall risk of the parent company on a consolidated basis. According to financial theory, the overall risk of a diversified company equals the market-value weighted average of the risks of its components, so selecting a sample concentrated in the regulated company's line of business is important. Met-Ed, Penelec, Penn Power, and West Penn are regulated electric companies, and there is currently available a relatively large sample of publicly-traded electric utilities whose primary business is in the regulated electric industry under cost of service regulation.

Q. Can you summarize how you selected the electric sample?

A. I formed the sample from the universe of publicly traded electric utilities as classified by the *Value Line Investment Survey Plus Edition*.[34] This resulted in an initial group of 51 companies. I then eliminated companies by applying additional selection

[34] The 51 companies are from *Value Line Investment Analyzer*, Accessed as of June 3, 2014.

criteria designed to remove companies with unique circumstances which may bias the cost of capital estimates.

Q. What additional selection criteria did you apply?

A. The companies must own substantial regulated assets, must not exhibit any signs of financial distress, and must not be involved in any substantial merger and acquisition ("M&A") activities[35] that could bias the estimation process. In general, this requires that companies have an investment grade credit rating, a high percentage of regulated electric assets (greater than 50 percent),[36] no significant merger activity in the past five years (dated from the point of analysis), no dividend cuts during the past five years, and no other activity that could cause the growth rates or beta estimates to be biased. I also require that each of the sample companies has more than $300 million in reported revenue in the past year (dated from the end of fiscal quarter used for capital structure data). Finally, I require that data from S&P or Moody's, *Value Line*, and Bloomberg—each widely known and utilized by investors—be available for all sample companies.

[35] This includes pending (but announced) M&A activity, but adjusts for M&A activity that does not appear to bias the beta estimates substantively, (such as small, spaced-out transactions, transactions involving multiple parties or parent drop-downs).

[36] I use the Edison Electric Institute's classification of electric utilities as Regulated (greater than 80 percent of total assets are regulated), Mostly Regulated (50 to 80 percent of total assets are regulated) or Diversified (less than 50% of total assets are regulated). My sample includes only electric utilities classified by EEI as Regulated or Mostly Regulated.

Q. Do any of the companies in your electric sample have a revenue decoupling mechanism?

A. Yes. Several of the companies in my comparable sample have a decoupling mechanism in place.[37] This means that these companies benefit from regulatory provisions allowing them to recover their fixed costs independently of volumetric charges: if the utilities' customers use less electricity than was forecast, the decoupling mechanism ensures that the utilities can recover their cost despite the decrease in variable revenues.

B. Characteristics of the Electric Sample Companies

Q. What are the characteristics of the sample of electric utility companies you have chosen?

A. The electric sample is comprised of regulated companies whose primary source of revenues and majority of assets are in the regulated portion of the electric industry. The final sample consists of the 33 electric utilities listed in Table 2 below.

Q. How does the sample compare to Met-Ed, Penelec, Penn Power, and West Penn?

A. The Table 2 below reports the sample companies' total annual revenues in 2013 and the percentage of their assets devoted to regulated electric operations according to EEI's classifications of electric utilities as being either regulated ("R"), having greater than 80 percent regulated electric assets or mostly regulated ("MR"), having 50-80 percent regulated electric assets. Table 2 also displays the Market Capitalization, the

[37] See Edison Electric Institute, "Alternative Regulation for Evolving Utility Challenges: An Updated Survey," January 2013 for a compilation of decoupling mechanisms by company and state.

S&P Credit Rating in 2014, and the average long-term (5-year) earnings growth rate estimate from Bloomberg for all of the companies in the electric sample.

The Companies averaged revenue of approximately $1.1 billion in 2013.[38] In comparison, the average sample company had $6.6 billion in revenue in 2013; the median company in the sample had $4.5 billion in revenue.[39] Met-Ed, Penelec, Penn Power, and West Penn's parent company, FirstEnergy Corp., had $14.9 billion in revenue for 2013. Thus, while the Companies individually are somewhat smaller than the average sample company, their status as subsidiaries of a larger firm mitigates any additional risk of financial distress that their size might otherwise pose relative to the sample.

FirstEnergy Corp., Met-Ed, Penelec, Penn Power, and West Penn all have S&P credit ratings of BBB-, which is slightly lower than the sample's average credit rating.[40]

[38] Ibid.

[39] The revenue figures in **Error! Reference source not found.** are the reported annual revenue in the calendar year ending December 31st, 2013.

[40] Table 2 reports the credit rating without the +/- designation that S&P assigns to some companies.

Table 2

Like many of the sample companies, Met-Ed, Penelec, Penn Power, and West Penn benefit from certain regulatory policies that reduce regulatory lag, including a quarterly adjustment and true-up mechanism for default service power prices.[41] The Companies, for the most part, are not permitted to include construction work in progress (CWIP) in rate base,[42] but have received approval from the PUC for a dedicated Smart Meter Technologies Charge to recover capital expenditures associated with the mandatory installation of advanced metering infrastructure (AMI) within their service territories.[43] Cost-tracking mechanisms such as these also have precedents in states affecting several of the sample companies.[44] However, unlike some of the sample companies, Met-Ed, Penelec, Penn Power, and West Penn do not have revenue decoupling mechanisms or lost revenue adjustment mechanisms (LRAM) in place; nor do they operate in a jurisdiction that employs "fixed variable" pricing for rate design, as some sample companies do.[45]

Q. How does the business risk of Met-Ed, Penelec, Penn Power, and West Penn compare to that of the sample companies?

A. Like the sample companies, the Companies' business is concentrated in regulated electric service, and Met-Ed, Penelec, Penn Power, and West Penn also have some

[41] SNL Regulatory Research Associates

[42] Edison Electric Institute, "Alternative Regulation for Evolving Utility Challenges: An Updated Survey," January 2013.

[43] SNL Regulatory Research Associates

[44] Edison Electric Institute, "Alternative Regulation for Evolving Utility Challenges: An Updated Survey," January 2013.

[45] Ibid.

regulatory mechanisms in place that are comparable to those of the proxy group companies.

The Companies' operations focus predominantly on electric distribution, and unlike many of the sample companies, Met-Ed, Penelec, Penn Power, and West Penn do not own generation assets. However, since their distribution service is cost-of-service regulated, and they are permitted to true-up their purchase power costs, they are of similar business risk to the sample.

In terms of risk factors that increase the Companies' business risks relative to the sample, I have already noted that all have S&P corporate credit ratings of BBB-, below the median of 'BBB' for the sample, indicating an elevated credit risk. I have likewise noted that Met-Ed, Penelec, Penn Power, and West Penn are individually smaller—both in terms of revenue and assets—than the average sample company. Smaller companies typically have a higher cost of capital, even after adjusting for their level of systematic market risk (as measured by beta in the CAPM and ECAPM).

Regulatory policy also plays a role in the business risk of the Companies. In the current environment of low electric demand growth, the fact that Met-Ed, Penelec, Penn Power, and West Penn do not have a revenue decoupling mechanism or a fixed variable pricing policy places them at increased risk of under-recovering their cost of service relative to some sample companies that benefit from such mechanisms. This risk is especially acute for the Companies because Pennsylvania allows competitive retail choice, which could potentially decrease the variable revenues of electric

distribution companies such as Met-Ed, Penelec, Penn Power, and West Penn. Pennsylvania also has Energy Efficiency Resource Standards that require electric distribution utilities to reduce energy consumption by 2.3 percent cumulatively over the 2014-2016 period.[46] Thus, to the extent that the Companies recover some of their fixed costs through per-kWh charges to their customers (i.e., do not benefit from decoupling or fixed-variable pricing), they will be at substantial risk for under-recovery.

In consideration of these and other factors, I believe Met-Ed, Penelec, Penn Power, and West Penn are of somewhat higher than average business risk relative to the sample companies.

C. Capital Structure

Q. What regulatory capital structure are the Companies requesting in this proceeding?

A. Met-Ed, Penelec, Penn Power, and West Penn have each proposed a regulatory capital structure consisting of approximately 50 percent equity and 50 percent debt,[47] as further explained by Mr. Steven R. Staub in Met-Ed/Penelec/Penn Power/ West Penn Statement No. 10. This capital structure is consistent with the book value capital structures of my sample companies. The sample averages about 49 percent equity and 51 percent debt on a book basis. The highest percentage of book equity for the companies in the sample is 60 percent equity (MGE Energy Inc.) and the

[46] American Council for an Energy-Efficient Economy State and Local Policy Database. http://database.aceee.org/state/pennsylvania

[47] By regulatory capital structure, I mean the capital structure used to set rates in this proceeding.

lowest is 31 percent equity (CMS Energy Corp.). My recommended range for ROE is a function of the requested capital structure, the sample average ATWACC estimates and the relative risk of the Companies compared to the sample.

V. COST OF CAPITAL ESTIMATES

Q. How do you estimate the sample companies' costs of equity?

A. As noted earlier, I apply two general methodologies—risk positioning and DCF—both of which are standard ways of estimating a company's cost of equity. For my CAPM (risk positioning) based estimates, I consider a range of sensitivities to reflect well-documented empirical deficiencies in the CAPM when used in conjunction with an equity market index. These sensitivities are called the Empirical CAPM. I also report results generated by two versions of the DCF approach: the single-stage and the multistage DCF models.

A. The CAPM-Based Estimates

Q. Can you explain the CAPM?

A. Modern models of capital market equilibrium express the cost of equity as the sum of a risk-free rate and a market risk premium. The CAPM is the longest-standing and most widely used of these theories. To implement the model requires specification of (1) the current values of the benchmarks that determine the Security Market Line (see Figure 1 above); (2) the relative risk of a security or investment; and (3) how the benchmarks combine to produce the Security Market Line. Given these specifications, the company's cost of capital can be calculated based on its relative

risk. Specifically, the CAPM states that the cost of capital for an investment, *S* (e.g., a particular common stock), is given by the following equation:

$$r_S = r_f + \beta_S \times MRP \qquad (2)$$

where r_s is the cost of capital for investment *S*; r_f is the risk-free rate; β_S is the beta risk measure for the investment *S*; and *MRP* is the market risk premium. The CAPM relies on the empirical fact that investors price risky securities to offer a higher expected rate of return than safe securities. It says that the Security Market Line starts at the risk-free interest rate (that is the return on a zero-risk security, the y-axis intercept in Figure 1, equals the risk-free interest rate). Further, it says that the risk premium of a security over the risk-free rate equals the product of the beta of that security and the risk premium on a value-weighted portfolio of all investments, which by definition has average risk.

1. The Risk-free Interest Rate

Q. What interest rates do your procedures require?

A. Modern capital market theories of risk and return (e.g., the theoretical version of the CAPM as originally developed) use the short-term risk-free rate of return as the starting benchmark, but regulatory bodies frequently use a version of the risk positioning model that is based upon the long-term risk-free rate. In this proceeding, I rely upon the long-term version of the risk positioning model. Accordingly, the implementation of my procedures requires use of long-term U.S. Treasury bond interest rates. I obtain this information from the 15-day average yield on long-term Treasury bonds as reported by Bloomberg for the period ending June 3, 2014.

Q. Why didn't you use the version of the CAPM that relies on the short-term risk-free rate in this proceeding?

A. Short-term Treasury bill yields remain at artificially low levels due to the efforts of the Fed to stimulate the economy. As a result, the risk positioning required ROE estimates using the short-term Treasury bill yields as the risk-free interest rate are unreasonably low. For example, the estimates are sometimes less than the corresponding company's current market cost of debt, which is unreasonable. A company's equity is always riskier than its debt and requires a higher return, because debt holders are always paid before equity holders in the event of bankruptcy or other financial distress.

2. The Market Risk Premium

Q. Why is a risk premium necessary?

A. Experience (e.g., the recent credit crisis in stock markets worldwide and the U.S. market's October Crash of 1987) demonstrates that shareholders, even well diversified shareholders, are exposed to enormous risks. By investing in stocks instead of risk-free government Treasury bills, investors subject themselves not only to the risk of earning a return well below that which they expected in any year but also to the risk that they might lose much of their initial capital. This is fundamentally why investors demand a risk premium.

Q. Has the estimate of the MRP been controversial over the recent past?

A. Yes. Historically, it was generally accepted that the appropriate method to estimate the MRP was to consider the historical average realized return on the market minus

the return on a risk-free asset over as long a series of time as possible; however, this procedure came under attack during the period of time generally referred to as the "tech bubble" when the stock markets in the U.S. reached very high valuation levels relative to traditional metrics of value. The period of the tech bubble also resulted in the average realized return on the market increasing to a very high level. Attempts to explain the high stock market valuation levels centered on the hypothesis that the MRP must be dramatically lower than previously believed, but this hypothesis conflicted with the fact that realized returns over the period were very high. The result was an academic debate on the level of the forward-looking MRP and how best to estimate it—a debate that has still not been fully resolved. As discussed in *Section III*, the effects of the recession still affect investors' required returns through a MRP that remains higher than the historical average realized return on the market minus the return on the risk-free asset prior to the crisis.

Q. How do these factors affect the cost of capital for the Companies?

A. The Companies invest in long-lived assets which cannot be easily liquidated (they are hard physical assets that once put in place cannot be moved). Investment is a voluntary activity, and investors generally require a return that is consistent with the risk they take on; therefore, it could damage the ability to access capital if investors view the allowed rate of return as lower than the required rate of return. The problem is not avoided for companies that are 100 percent owned subsidiaries because the parent company must consider the opportunity cost of capital when making investments. Investors expect managers to invest in projects which provide expected returns at least equal to the cost of capital.

Q. What is your conclusion regarding the MRP?

A. Historically, much of the controversy over market risk premium centered on various reasons that it may not be as high as frequently estimated. Although none of the arguments was completely persuasive in and of itself, I generally gave some weight to these issues in past testimony and reduced my estimate of the MRP. Conversely, recent events have strongly suggested an increase in the MRP from its previous levels. I would typically consider an MRP of 6.5 percent over the long-bond rate as reasonable based on my review of the relevant academic literature. However, current market conditions suggest that a value of 7.5 percent could be more appropriate at this time. Therefore, I include two analyses: one using an MRP of 6.5 and the other using an MRP of 7.5 percent.

3. Beta

Q. Can you more fully explain beta?

A. The basic idea behind beta is that risks that cannot be diversified away in large portfolios matter more than those that can be eliminated by diversification. Beta is a measure of the risks that cannot be eliminated by diversification. That is, it measures the "systematic" risk of a stock—the extent to which a stock's value fluctuates more or less than average when the market fluctuates.

Diversification is a vital concept in the study of risk and return. (Harry Markowitz won a Nobel Prize for work showing just how important it was.) Over the long run, the rate of return on the stock market has a very high standard deviation, on the order

of 20 percent per year.[48] Many individual stocks have much higher standard deviations than this. The stock market's standard deviation is "only" about 15-20 percent because when stocks are combined into portfolios, some of the risk of individual stocks is eliminated by diversification. Some stocks go up when others go down, and the average portfolio return—whether positive or negative—is usually less extreme than that of many individual stocks within it. The fact that the market's actual annual standard deviation is so large means that, in practice, the returns on stocks are positively correlated with one another, and to a material degree. The reason is that many factors that make a particular stock go up or down also affect other stocks. Examples include the state of the economy, the balance of trade, and inflation. Thus some risk is "non-diversifiable" in that even a well-diversified portfolio of stocks will experience changes in value caused by these shared risk factors. Single-factor equity risk premium models (such as the CAPM) are based upon the assumption that all of the systematic factors that affect stock returns can be considered simultaneously, through their impact on one factor: the market portfolio. Other models derive somewhat less restrictive conditions under which several factors might be individually relevant.

Again, the basic idea behind all of these models is that risks that cannot be diversified away in large portfolios matter more than those that can be eliminated by diversification, because there are a large number of large portfolios whose managers

[48] See Brealey, Myers and Allen (2011), *Principles of Corporate Finance, 10th Edition*, McGraw-Hill Irwin, New York, p. 166.

actively seek the best risk-reward tradeoffs available. (Of course, undiversified investors would like to get a premium for bearing diversifiable risk, but they cannot.)

Q. What does a particular value of beta signify?

A. By definition, a stock with a beta equal to 1.0 has average non-diversifiable risk: it goes up or down by 10 percent on average when the market goes up or down by 10 percent. Stocks with betas above 1.0 exaggerate the swings in the market: stocks with betas of 2.0 tend to fall 20 percent when the market falls 10 percent, for example. Stocks with betas below 1.0 are less volatile than the market. A stock with a beta of 0.5 will tend to rise 5 percent when the market rises 10 percent.

Q. How is beta measured?

A. The usual approach to calculating beta is a statistical comparison of the sensitivity of a stock's (or a portfolio's) return to the market's return. Many investment services report betas, including Bloomberg and the *Value Line Investment Survey*. Betas are not always calculated in precisely the same way, and therefore must be used with a degree of caution. However, the basic principle that a high beta indicates a risky stock has long been widely accepted by both financial theorists and investment professionals, and is universally reflected in all calculations of beta. In my analyses for these proceedings, I present results using the beta estimates reported by *Value Line*.

Q. What are the betas that you used for the sample companies?

A. Table 3 below lists the *Value Line* betas I used to calculate my risk-positioning estimates of the cost of capital for the sample of regulated electric utilities.

Table 3

4. The Empirical CAPM

Q. What other equity risk premium model do you use?

A. Empirical research has long shown that the CAPM tends to overstate the actual sensitivity of the cost of capital to beta: low-beta stocks tend to have higher risk premiums than predicted by the CAPM and high-beta stocks tend to have lower risk premiums than predicted. A number of variations on the original CAPM theory have been proposed to explain this finding, but the observation itself can also be used to estimate the cost of capital directly, using beta to measure relative risk by making a direct empirical adjustment to the CAPM.

This second model makes use of these empirical findings. It estimates the cost of capital with the equation,

$$r_S = r_f + \alpha + \beta_S \times (MRP - \alpha) \qquad (3)$$

where α is the "alpha" adjustment of the risk-return line, a constant, and the other symbols are defined as above. I label this model the Empirical Capital Asset Pricing Model, or "ECAPM." The alpha adjustment has the effect of increasing the intercept but reducing the slope of the Security Market Line in Figure 1 earlier in my testimony which results in a Security Market Line that more closely matches the results of empirical tests. In other words, the ECAPM produces more accurate predictions of eventual realized risk premiums than does the CAPM.

Q. Why is it appropriate to use the Empirical CAPM?

A. The CAPM has not generally performed well as an empirical model, but its shortcomings are directly addressed by the ECAPM. Specifically, the ECAPM recognizes the consistent empirical observation that the CAPM underestimates (overestimates) the cost of capital for low (high) beta stocks. In other words, the ECAPM is based on recognizing that the actual observed risk-return line is flatter and has a higher intercept than that predicted by the CAPM. The alpha parameter (α) in the ECAPM adjusts for this fact, which has been established by repeated empirical tests of the CAPM. The difference between the CAPM and the type of relationship identified in the empirical studies is depicted in Figure 11 below.

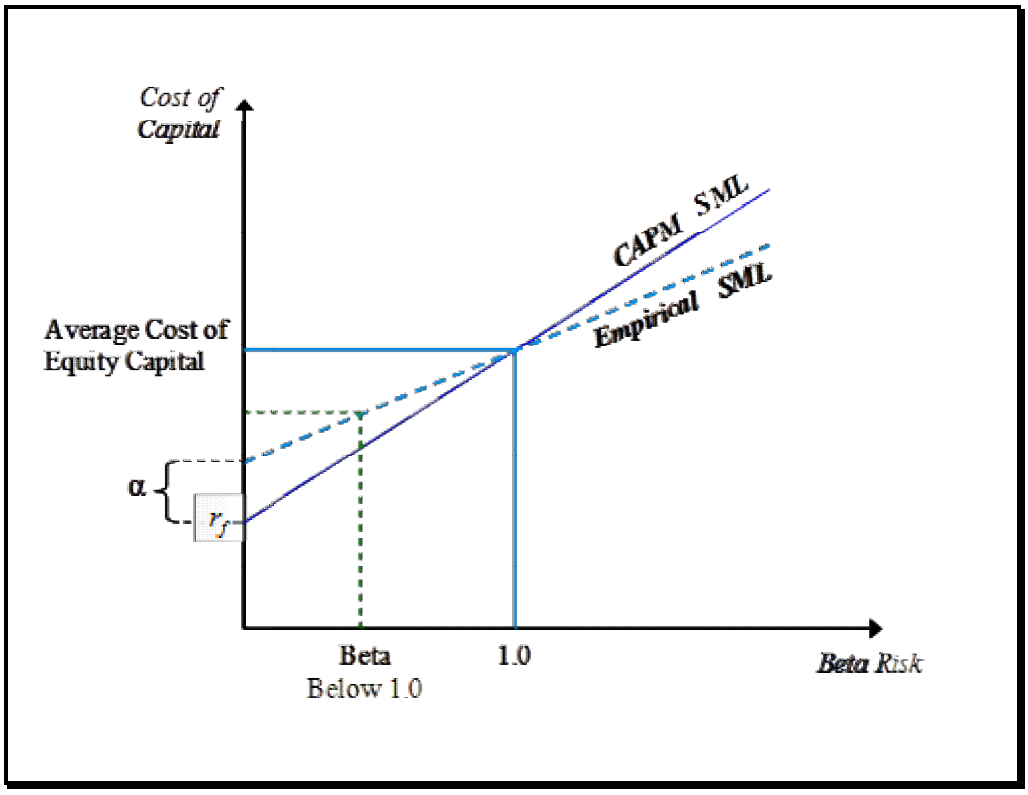

Figure 11: The Empirical Security Market Line

Q. What are the parameters of the two scenarios you considered in your risk positioning analyses?

A. The parameters for the two scenarios are displayed in Table 4 below. The motivation for the scenarios is the empirical observation that the yield spread is higher than normal. The increased yield spread could be the result of an increase in the MRP or downward pressure on the yield of risk-free bonds due to a flight to quality or a combination of the two factors. Therefore, I reduce the risk-free rate for use with a higher estimate of the MRP as illustrated in Table 4**.** In other words, the approximately 25 bps increase in the yield spread is allocated between an increase in the MRP and the downward pressure on the risk-free rate according to the method described above. The more of the bps increase in yield spread that is allocated to the under estimation of the risk-free rate, the less that the MRP is increased and vice versa.

Parameters for Scenarios in Risk Positioning Analyses

	Scenario 1	Scenario 2
Risk-Free Interest Rate	3.35%	3.10%
Market Risk Premium	6.50%	7.50%

Table 4

Q. Can you summarize the results from applying the CAPM and ECAPM methodologies to the sample?

A. The results of the risk positioning analyses (the CAPM and the ECAPM) are presented in Table 5 using *Value Line's* estimated betas for the sample of electric companies. (The underlying calculations are also presented in Exhibit MJV-1.) For the ECAPM, there are two sensitivities: $\alpha = 0.5$ percent and $\alpha = 1.5$ percent. The

columns display the scenario results for MRP estimates of 6.5, and 7.5 percent. The long-term risk-free interest rate as of June 3, 2014 was 3.10 percent before adjustments for the downward pressure on government yields due to the flight to safety. The ROE estimates in Table 5 reflect the ATWACC estimates adjusted for differences in capital structure between the sample companies and the Companies. Specifically, the ROE associated with each method and a capital structure with 50 percent equity is displayed in Table 5.

Return on Equity Summary and Sensitivity Analysis
Using Value Line Betas

Estimated Return on Equity	Scenario 1 [1]	Scenario 2 [2]
Full Sample		
CAPM	8.7%	9.2%
ECAPM (α = 0.5%)	8.8%	9.3%
ECAPM (α = 1.5%)	9.0%	9.6%

Sources and Notes:
Scenario 1: Long-Term Risk Free Rate of 3.35%, Long-Term Market Risk Premium of 6.50%.
Scenario 2: Long-Term Risk Free Rate of 3.10%, Long-Term Market Risk Premium of 7.50%.

Table 5

Q. What conclusions do you draw from the equity risk premium results (i.e., CAPM and ECAPM)?

A. Of the equity risk premium results, the CAPM values deserve the least weight, because this method does not adjust for the empirical finding that the cost of capital is less sensitive to beta than predicted by the CAPM (which my testimony and exhibits consider by using the ECAPM). Conversely, the ECAPM numbers deserve more weight, because this method adjusts for the empirical findings. The results for

Scenario 1 do not fully adjust for the still-elevated market risk premium in the capital markets and deserve less weight than those for Scenario 2. Focusing on the ECAPM results for the sample, the results range from 8.8 percent to 9.6 percent.

B. The DCF Based Estimates

Q. Can you describe the discounted cash flow approach to estimating the cost of equity?

A. The DCF model takes the first approach to cost of capital estimation described above, i.e., to attempt to estimate the cost of capital in one step instead of estimating the cost of capital for the entire market and then determining the cost of capital for an individual investment. The DCF method assumes that the market price of a stock is equal to the present value of the dividends that its owners expect to receive. The method also assumes that this present value can be calculated by the standard formula for the present value of a cash flow stream:

$$P = \frac{D_1}{(1+r)} + \frac{D_2}{(1+r)^2} + \frac{D_3}{(1+r)^3} + \cdots + \frac{D_T}{(1+r)^T} \qquad (4)$$

where "*P*" is the market price of the stock; "D_i" is the dividend cash flow expected at the end of period *i*; "*r*" is the cost of capital; and "*T*" is the last period in which a dividend cash flow is to be received. The formula just says that the stock price is equal to the sum of the expected future dividends, each discounted for the time and risk between now and the time the dividend is expected to be received.

Most DCF applications go even further, and make very strong assumptions that yield a simplification of the standard formula, which then can be rearranged to estimate the

cost of capital. Specifically, if investors expect a dividend stream that will grow *forever* at a steady rate, then the market price of the stock will be given by a very simple formula,

$$P = \frac{D_1}{(r - g)} \qquad (5)$$

where "D_1" is the dividend expected at the end of the first period, "g" is the perpetual growth rate, and "P" and "r" are the market price and the cost of capital, as before. Equation (5) is a simplified version of equation (4) that can be solved to yield the well-known "DCF formula" for the cost of capital:

$$\begin{aligned} r &= \frac{D_1}{P} + g \\ &= \frac{D_0 \times (1+g)}{P} + g \end{aligned} \qquad (6)$$

where "D_0" is the current dividend, which investors expect to increase at rate g by the end of the next period, and the other symbols are defined as before. Equation (6) says that if equation (5) holds, the cost of capital equals the expected dividend yield plus the (perpetual) expected future growth rate of dividends. I refer to this as the simple DCF model. Of course, the "simple" model is simple because it relies on very strong assumptions.[49]

Q. Are there other versions of the DCF models in addition to the "simple" one?

A. Yes. One such alternative version is the multistage DCF model. In its "simple" or constant growth rate formulation, the DCF model requires that dividends and earnings

[49] In this context "strong" means assumptions that are unlikely to reflect reality but that also are not expected to have a large effect on the estimate.

grow at a constant rate for companies that earn their cost of capital on average.[50] It is inconsistent with the theory on which this formulation is based to have varying growth rates in earnings and dividends. If, however, the growth rates for dividends and earnings were expected to vary over some number of years before settling down into a constant growth period, then it would be appropriate to utilize a multistage DCF model. In the multistage model, earnings and dividends can grow at different rates, but must grow at the same rate in the final, constant growth rate period.

Q. What is your assessment of the DCF model?

A. The DCF approach is grounded in solid finance theory. It is widely accepted by regulatory commissions and provides useful insight regarding the cost of capital based on forward-looking metrics. DCF estimates of the cost of capital complement those of the CAPM and the ECAPM because the two methods rely on different inputs and assumptions. The DCF method is particularly valuable in the current economic environment, because of the effects on capital market conditions of the Fed's efforts to maintain interest rates at historically low levels which bias the CAPM and ECAPM estimates downward.

However, I recognize that the DCF model, like most models, relies upon assumptions that do not always correspond to reality. For example, the DCF approach assumes

[50] Why must the two growth rates be equal in a steady-growth DCF model? Think of earnings as divided between reinvestment, which funds future growth, and dividends. If dividends grow faster than earnings, then there is less investment and slower growth each year. Sooner or later dividends will equal earnings. At that point, growth is zero because nothing is being reinvested (dividends are constant). If dividends grow more slowly than earnings, each year a bigger fraction of earnings are reinvested. That makes for ever faster growth. Both scenarios contradict the steady-growth assumption. So if you observe a company with different expectations for dividend and earnings growth, you know the company's stock price and its dividend growth forecast are inconsistent with the assumptions of the steady-growth DCF model.

that the variant of the present value formula that is used matches the variations in investor expectations for the growth of dividends, and that the growth rate(s) used in that formula match current investor expectations. Less frequently noted conditions, such as the value of real options incorporated in a company's market price, may create issues that the DCF model does not incorporate. Nevertheless, under current economic conditions, because of its forward looking nature, the strengths of the DCF method far outweigh any weaknesses the method may have.

Q. What growth rate information do you use?

A. The first step in my DCF analysis (either constant growth or multistage formulations) is to examine a sample of investment analysts' forecasted earnings growth rates from Bloomberg and from *Value Line* for companies in the electric sample. For the long-term growth rate for the final, constant-growth stage of the multistage DCF estimates, I use the most recent long-run GDP growth forecast from Blue Chip Economic Indicators.[51]

Q. How do these growth rates correspond to the theoretical criteria you discuss above?

A. The constant-growth formulation of the DCF model, in principle, requires forecasted growth rates, but it is also necessary that the growth rates used go far enough out into the future so that it is reasonable to believe that investors expect a stable growth path afterwards. Under current economic conditions, I believe the forecasted growth rates of investment analysts provide the best available representation of the longer term, steady-state growth rate expectations of investors. Therefore, I feel these growth

[51] Blue Chip Economic Indicators, March 10, 2014.

parameters available to apply to the simple, constant-growth DCF model provide useful estimates of the cost of capital.

Q. Does the multistage DCF improve upon the simple DCF?

A. Potentially, but the multistage method assumes a particular smoothing pattern and a long-term growth rate afterwards. These assumptions may not be a more accurate representation of investor expectation than those of the simple DCF. The smoother growth pattern, for example, might be not be representative of investor expectations, in which case the multistage model would not increase the accuracy of the estimates. Indeed, amidst uncertainty in capital markets, assuming a simple constant growth rate may be preferable to attempting to model growth patterns in greater detail over multiple stages. While it is difficult to determine which set of assumptions comprises a closer approximation of the actual conditions of capital markets, I believe both forms of the DCF model provide useful information about the cost of capital.

Q. What are the relative strengths and weaknesses of the DCF and risk-positioning methodologies?

A. Current market conditions affect all cost of capital estimation models to some degree, but the DCF model has at least one advantage over the risk positioning models. Specifically, the DCF model reflects current market conditions more quickly because the market price of a company's stock changes daily. Dividend yields increase when market prices fall and reflect the increased cost of capital. The challenge for the DCF model is that the model requires forecasts of earnings growth rates that are based upon stable economic conditions which are required to satisfy the constant dividend

growth rate assumption. Although the dividend yield quickly reacts to changes in the market, the growth rate estimates may be less precise during times of market uncertainty because future growth rates may be more volatile. Nevertheless, because dividend yields and forecast growth rates change quickly, the DCF model is likely to better reflect investors' current cost of capital expectations than the CAPM and ECAPM which relies upon 5 years of historical data.

Q. What are the DCF estimates for the sample?

A. The corresponding DCF estimates for the sample are presented in Table 6. The ROE estimate is 10.9 percent for the single-stage model and 9.8 percent for the multistage model.

DCF Return on Equity Summary		
	DCF	
	Simple	Multi-stage
Full Sample		
Cost of Equity	10.9%	9.8%

Table 6

Q. What conclusions do you draw from the DCF analysis?

A. Although I made no adjustment for the current market turmoil for the DCF model, the DCF estimates are slightly higher than the upper end of the range of estimates from the risk positioning model displayed above in Table 5. (Recall that the ECAPM risk positioning estimates range from 8.8 percent to 9.6 percent when using *Value Line's* estimated betas). At this time, I believe that the DCF estimates indicate that the

estimates from Scenario 2 for the risk positioning model are more reliable than those from Scenario 1.

VI. CONCLUSIONS

Q. Can you summarize the evidence from the sample regarding the ROE for an electric utility of average risk?

A. Table 5 and Table 6 summarize the results of the analyses for the risk positioning and DCF models for the sample of electric utilities. The results from the CAPM are less reliable than the results from the ECAPM because they do not consider the consistent empirical evidence that the CAPM underestimates the cost of capital for low beta companies, such as Met-Ed, Penelec, Penn Power, and West Penn. Similarly, the results for Scenario 1 are not as reliable as those for Scenario 2 because Scenario 1 ignores the increased MRP resulting from the ongoing uncertainty in the capital markets. Based on the sample's cost of capital estimates, I believe a company of the Companies' business and financial risk should have an allowed ROE in the range 9.3 percent to 10.9 percent.

Q. What is your recommendation range of the ROE for the Companies?

A. For companies of comparable risk to Met-Ed, Penelec, Penn Power, and West Penn at a capital structure with approximately 50 percent equity, the cost of equity falls in the range of 9.3 percent to 10.9 percent. Because the upper end of the range is established by the estimates from the DCF model, I believe that the upper end of the range is more reliable at this time.

Q. Why doesn't your recommended range for the samples cover all of the estimates displayed in Table 5 and Table 6?

A. I provide an estimate of a reasonable range of required ROE for the sample, and the range of uncertainty is based upon all of the analyses I have done, placing relatively more weight on more reliable methodologies and estimates. I do not try to include all of the resulting estimates in the range because I regard some of the estimates as more reliable than others. For example, the estimates based upon the CAPM are not as reliable as those based upon the ECAPM because the CAPM estimates do not account for the empirical observation that low beta stocks have higher costs of capital than estimated by the CAPM, high beta stocks have lower costs of capital. Nor is it likely that the lowest estimates in the tables are as reliable as those in the upper end of the range because those estimates do not adequately consider the continued uncertainty in the financial markets.

Q. Is there any other reason to support an allowed ROE in the upper end of the 9.3 percent to 10.9 percent range?

A. Yes. It is important to maintain Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company's access to capital, and maintaining a solid credit rating and outlook is one important aspect to maintaining access to capital. Credit rating agencies are concerned about cash flows. A reduction in the allowed return on equity would signal a likely reduction in cash flow and put downward pressure on Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company's credit metrics, which are already on the borderline of investment

grade.[52] Maintaining a strong credit rating is particularly critical during a period forecast to have substantial capital investment for infrastructure. In addition, as the Fed continues to taper its bond purchases, one can expect that the cost of capital will increase although the pace of such an increase cannot be predicted with certainty. This means that estimates at the upper end of the range are more representative of the cost of capital expected over the next three years.

Q. Does this conclude your direct testimony?

A. Yes, it does.

[52] Metropolitan Edison Company, Pennsylvania Electric Company, Pennsylvania Power Company, and West Penn Power Company are rated Baa3 by Moodys, BBB by Fitch, and BBB- by S&P. These are the corporate (S&P) / issuer (Moody's and Fitch) credit ratings for the Companies.

APPENDIX A:

QUALIFICATIONS OF MICHAEL J. VILBERT

Dr. Michael J. Vilbert is Office Director of The Brattle Group's San Francisco office and has 20 years of experience as an economic consultant. He is an expert in cost of capital, financial planning and valuation who has advised clients on these matters in the context of a wide variety of investment and regulatory decisions. In the area of regulatory economics, he has testified or submitted testimony on the cost of capital for regulated companies in the water, electric, natural gas and petroleum industries in the U.S. and Canada. His testimony has addressed the effect of regulatory policies such as decoupling or must-run generation on a regulated company's cost of capital and the appropriate way to estimate the cost of capital for companies organized as Master Limited Partnerships. He analyzed issues associated with situations imposing asymmetric risk on utilities, the prudence of purchased power contracts, the economics of energy conservation programs, the appropriate incentives for investment in electric transmission assets and the effect of long-term purchased power agreements on the financial risk of a company. He has served as a neutral arbitrator in a contract dispute and analyzed the effectiveness of a company's electric power supply auction. He has also estimated economic damages and analyzed the business purpose and economic substance of tax related transactions, valued assets in arbitration for purchase at the end of the contract, estimated the stranded costs of resulting from the deregulation of electric generation and from the municipalization of an electric utility's distribution assets and addressed the appropriate regulatory accounting for depreciation and goodwill.

He received his Ph.D. in Financial Economics from the Wharton School of the University of Pennsylvania, an MBA from the University of Utah, an M.S. from the Fletcher School of Law and Diplomacy, Tufts University, and a B.S. degree from the United States Air Force Academy. He joined The Brattle Group in 1994 after a career as an Air Force officer, where he served as a fighter pilot, intelligence officer, and professor of finance at the Air Force Academy. .

REPRESENTATIVE CONSULTING EXPERIENCE

- Dr. Vilbert served as the consulting expert in several cases for the U.S. Department of Justice and the Internal Revenue Service regarding the business purpose and economic substance of a series of tax related transactions. These projects required the analysis of a complex series of financial transactions including the review of voluminous documentary evidence and required expertise in financial theory, financial market as well as accounting and financial statement analysis.

- In a securities fraud case, Dr. Vilbert designed and created a model to value the private placement stock of a drug store chain as if there had been full disclosure of the actual financial condition of the firm. He analyzed key financial data and security analysts''

reports regarding the future of the industry in order to recreate pro forma balance sheet and income statements under a variety of scenarios designed to establish the value of the firm.

- For pharmaceutical companies rebutting price-fixing claims in antitrust litigation, Dr. Vilbert was a member of a team that prepared a comprehensive analysis of industry profitability. The analysis replicated, tested and critiqued the major recent analyses of drug costs, risks and returns. The analyses helped develop expert witness testimony to rebut allegations of excess profits.

- For an independent electric power producer, Dr. Vilbert created a model that analyzed the reasonableness of rates and costs filed by a natural gas pipeline. The model not only duplicated the pipeline's rates, but it also allowed simulation of a variety of "what if" scenarios associated with cost recovery under alternative time patterns and joint cost allocations. Results of the analysis were adopted by the intervenor group for negotiation with the pipeline.

- For the CFO of an electric utility, Dr. Vilbert developed the valuation model used to support a stranded cost estimation filing. The case involved a conflict between two utilities over the responsibility for out-of-market costs associated with a power purchase contract between them. In addition, he advised and analyzed cost recovery mechanisms that would allow full recovery of the stranded costs while providing a rate reduction for the company's rate payers.

- Dr. Vilbert has testified as well as assisted in the preparation of testimony and the development of estimation models in numerous cost-of-capital cases for natural gas pipeline, water utility and electric utility clients before the Federal Energy Regulatory Commission ("FERC") and state regulatory commissions. These have spanned standard estimation techniques (e.g., Discounted Cash Flow and Risk Positioning models). He has also developed and applied more advanced models specific to the industries or lines of business in question, e.g., based on the structure and risk characteristics of cash flows, or based on multi-factor models that better characterize regulated industries.

- Dr. Vilbert has valued several large, residual oil-fired generating stations to evaluate the possible conversion to natural gas or other fuels. In these analyses, the expected pre- and post-conversion station values were computed using a range of market electricity and fuel cost conditions.

- For a major western electric utility, Dr. Vilbert helped prepare testimony that analyzed the prudence of QF contract enforcement. The testimony demonstrated that the utility had not been compensated in its allowed cost of capital for major disallowances stemming from QF contract management.

- Dr. Vilbert analyzed the economic need for a major natural gas pipeline expansion to the Midwest. This involved evaluating forecasts of natural gas use in various regions of the United States and the effect of additional supplies on the pattern of natural gas pipeline

use. The analysis was used to justify the expansion before the FERC and the National Energy Board of Canada.

- For a Public Utility Commission in the Northeast, Dr. Vilbert analyzed the auction of an electric utility's purchase power agreements to determine whether the outcome of the auction was in the ratepayers' interest. The work involved the analysis of the auction procedures as well as the benefits to ratepayers of transferring risk of the PPA payments to the buyer.

- Dr. Vilbert led a team tasked to determine whether bridge tolls were "just and reasonable" for a non-profit port authority. Determination of the cost of service for the authority required estimation of the value of the authority's assets using the trended original cost methodology as well as evaluation of the operations and maintenance budgets. Investment costs, bridge traffic information and inflation indices covering a 75 year period were utilized to estimate the value of four bridges and a passenger transit line valued in excess of $1 billion.

- Dr. Vilbert helped a recently privatized railroad in Brazil develop an estimate of its revenue requirements, including a determination of the railroad's cost of capital. He also helped evaluate alternative rate structures designed to provide economic incentives to shippers as well as to the railroad for improved service. This involved the explanation and analysis of the contribution margin of numerous shipper products, improved cost analysis and evaluation of bottlenecks in the system.

- For a utility in the Southeast, Dr. Vilbert quantified the company's stranded costs under several legislative electric restructuring scenarios. This involved the evaluation of all of the company's fossil and nuclear generating units, its contracts with Qualifying Facilities and the prudence of those QF contracts. He provided analysis concerning the impact of securitizing the company's stranded costs as a means of reducing the cost to the ratepayers and several alternative designs for recovering stranded costs.

- For a recently privatized electric utility in Australia, Dr. Vilbert evaluated the proposed regulatory scheme of the Australian Competition and Consumer Commission for the company's electric transmission system. The evaluation highlighted the elements of the proposed regulation which would impose uncompensated asymmetric risks on the company and the need to either eliminate the asymmetry in risk or provide additional compensation so that the company could expect to earn its cost of capital.

- For an electric utility in the Southwest, Dr. Vilbert helped design and create a model to estimate the stranded costs of the company's portfolio of Qualifying Facilities and Power Purchase contracts. This exercise was complicated by the many variations in the provisions of the contracts that required modeling in order to capture the effect of changes in either the performance of the plants or in the estimated market price of electricity.

- Dr. Vilbert helped prepare the testimony responding to a FERC request for further

comments on the appropriate return on equity for electric transmission facilities. In addition, Dr. Vilbert was a member of the team that made a presentation to the FERC staff on the expected risks of the unbundled electric transmission line of business.

- Dr. Vilbert and Mr. Frank C. Graves, also of The Brattle Group, prepared testimony evaluating an innovative Canadian stranded cost recovery procedure involving the auctioning of the output of the province's electric generation plants instead of the plants themselves. The evaluation required the analysis of the terms and conditions of the long-term contracts specifying the revenue requirements of the plants for their entire forecasted remaining economic life and required an estimate of the cost of capital for the plant owners under this new stranded cost recovery concept.

- Dr. Vilbert served as the neutral arbitrator for the valuation of a petroleum products tanker. The valuation required analysis of the Jones Act tanker market and the supply and demand balance of the available U.S. constructed tanker fleet.

- Dr. Vilbert evaluated the appropriate "bareboat" charter rate for an oil drilling platform for the renewal period following the end of a long-term lease. The evaluation required analysis of the market for oil drilling platforms around the world including trends in construction and labor costs and the demand for platforms in varying geographical environments.

TESTIMONY

Direct and rebuttal testimony before the Alberta Energy and Utilities Board on behalf of TransAlta Utilities Corporation in the matter of an application for approval of its 1999 and 2000 generation tariff, transmission tariff, and distribution revenue requirement, Docket U99099, October 1998.

Direct testimony before the Federal Energy Regulatory Commission on behalf of Central Maine Power in Docket No. ER00-982-000, December 1999.

Direct testimony before the Alberta Energy and Utilities Board on behalf of TransAlta Utilities Corporation for approval of its 2001 transmission tariff, May 2000.

Direct testimony before the Federal Energy Regulatory Commission on behalf of Mississippi River Transmission Corporation in Docket No. RP01-292-000, March 2001.

Written evidence, rebuttal, reply and further reply before the National Energy Board in the matter of an application by TransCanada PipeLines Limited for orders pursuant to Part I and Part IV of the *National Energy Board Act*, Order AO-1-RH-4-2001, May 2001, Nov. 2001, Feb. 2002.

Written evidence before the Public Utility Board on behalf of Newfoundland & Labrador Hydro - Rate Hearings, October 2001, Order No. P.U.7 (2002-2003), dated June 2002.

Direct testimony (with William Lindsay) before the Federal Energy Regulatory Commission on behalf of DTE East China, LLC in Docket No. ER02-1599-000, April 2002.

Direct and rebuttal reports before the Arbitration Panel in the arbitration of stranded costs for the City of Casselberry, FL, Case No. 00-CA-1107-16-L, July 2002.

Direct reports before the Arbitration Board for Petroleum products trade in the Arbitration of the Military Sealift Command vs. Household Commercial Financial Services, fair value of sale of the Darnell, October 2002.

Direct testimony and hearing before the Arbitration Panel in the arbitration of stranded costs for the City of Winter Park, FL, In the Circuit Court of the Ninth Judicial Circuit in and for Orange County, FL, Case No. C1-01-4558-39, December 2002.

Direct testimony before the Federal Energy Regulatory Commission on behalf of Florida Power Corporation, dba Progress Energy Florida, Inc. in Docket No. SC03-1-000, March 2003.

Direct report before the Arbitration Panel in the arbitration of stranded costs for the Town of Belleair, FL, Case No. 000-6487-C1-007, April 2003.

Direct and rebuttal reports before the Alberta Energy and Utilities Board in the matter of the Alberta Energy and Utilities Board Act, R.S.A. 2000, c. A-17, and the Regulations under it; in the matter of the Gas Utilities Act, R.S.A. 2000, c. G-5, and the Regulations under it; in the matter of the Public Utilities Board Act, R.S.A. 2000, c. P-45, as amended, and the Regulations under it; and in the matter of Alberta Energy and Utilities Generic Cost of Capital Hearing, Application No. 1271597, July 2003, November 2003, Decision 2004-052, dated July 2004.

Written evidence before the National Energy Board in the matter of the National Energy Board Act, R.S.C. 1985, c. N−7, as amended, (Act) and the Regulations made under it; and in the matter of an application by TransCanada PipeLines Limited for orders pursuant to Part IV of the *National Energy Board Act*, for approval of Mainline Tolls for 2004, RH-2-2004, January 2004.

Direct and rebuttal testimony before the Public Service Commission of West Virginia, on Cost of Capital for West Virginia-American Water Company, Case No 04-0373-W-42T, May 2004.

Direct and rebuttal testimony before the Federal Energy Regulatory Commission on Energy Allocation of Debt Cost for Incremental Shipping Rates for Edison Mission Energy, Docket No. RP04-274-000, December 2004 and March 2005.

Direct testimony before the Arizona Corporation Commission, Cost of Capital for Paradise Valley Water Company, a subsidiary of Arizona-American Water Company, Docket No. WS-01303A-05, May 2005.

Written evidence before the Ontario Energy Board, Cost of Capital for Union Gas Limited, Inc., Docket No. EB-2005-0520, January 2006.

Direct and rebuttal testimony before the Pennsylvania Public Utility Commission, Return on Equity for Metropolitan Edison Company, Docket No. R-00061366 and Pennsylvania Electric Company,
Docket No. R-00061367, April 2006 and August 2006.

Expert report in the United States Tax Court, Docket No. 21309-05, 34th Street Partners, DH Petersburg Investment, LLC and Mid-Atlantic Finance, Partners Other than the Tax Matters Partner, Petitioner, v. Commissioner of Internal Revenue, Respondent, July 28, 2006.

Direct and supplemental testimony before the Federal Energy Regulatory Commission, Docket No. ER06-427-003, on behalf of Mystic Development, LLC on the Cost of Capital for Mystic 8 and 9 Generating Plants Operating Under Reliability Must Run Contract, August 2006 and September 2006.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. ER07-46-000, on behalf of Northwestern Corporation on the Cost of Capital for Transmission Assets, October 2006.

Direct and rebuttal testimony before the Tennessee Regulatory Authority, Case No. 06-00290, on behalf of Tennessee American Water Company, on the Cost of Capital, November, 2006 and April 2007.

Direct and rebuttal testimony before the Public Service Commission of Wisconsin, Docket No. 5-UR-103, on behalf of Wisconsin Energy Corporation, on the Cost of Capital for Wisconsin Electric Power Company and Wisconsin Gas LLC, May 2007 and October 2007.

Rebuttal testimony before the California Public Utilities Commission, Docket No. A. 07-01-036-39, on behalf of California-American Water Company, on the Cost of Capital, May 2007.

Direct testimony before the Public Utilities Commission of the State of South Dakota, Docket No. NG-07-013, on behalf of NorthWestern Corporation, on the Cost of Capital for NorthWestern Energy Company's natural gas operations in South Dakota, June 2007.

Direct, supplemental and rebuttal testimony before the Public Utilities Commission of Ohio, Case No. 07-551-EL-AIR, Case No. 07-552-EL-ATA, Case No. 07-553-EL-AAM, and Case No. 07-554-EL-UNC, on behalf of Ohio Edison Company, The Toledo Edison Company, and The Cleveland Electric Illuminating Company, on the cost of capital for the FirstEnergy Company's Ohio electric distribution utilities, June 2007, January 2008 and February 2008.

Direct testimony before the Public Service Commission of West Virginia, Case No. 07-0998-W-42T, on behalf of West Virginia American Water Company on cost of capital, July 2007.

Direct and rebuttal testimony before the State Corporation Commission of Virginia, Case No. PUE-2007-00066, on behalf of Virginia Electric and Power Company on the cost of capital for its southwest Virginia coal plant, July 2007 and December 2007.

Direct and Supplemental testimony before the Public Utilities Commission of Ohio, Case No. 07-829-GA-AIR, Case No. 07-830-GA-ALT, and Case No. 07-831-GA-AAM, on behalf of Dominion East Ohio Company, on the rate of return for Dominion East Ohio's natural gas distribution operations, September 2007 and June 2008.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. ER08-92-000 to Docket No. ER08-92-003, on behalf of Virginia Electric and Power Company, on the Cost of Capital for Transmission Assets, October 2007.

Direct and rebuttal testimony before the California Public Utilities Commission, Docket No. A. 07-01-022, on behalf of California-American Water Company, on the Effect of a Water Revenue Adjustment Mechanism on the Cost of Capital, October 2007 and November 2007.

Written direct and reply evidence before the National Energy Board in the matter of the National Energy Board Act, R.S.C. 1985, c. N−7, as amended, and the Regulations made thereunder; and in the matter of an application by Trans Québec & Maritimes PipeLines Inc. ("TQM") for orders pursuant to Part I and Part IV of the *National Energy Board Act*, for determining the overall fair return on capital for tolls charged by TQM, December 2007 and September 2008, Decision RH-1-2008, dated March 2009.

Comments in support of The Interstate Natural Gas Association of America's Additional Initial Comments on the FERC's Proposed Policy Statement with regard to the Composition of Proxy Companies for Determining Gas and Oil Pipeline Return on Equity, Docket No. PL07-2-000, December, 2007.

Direct and rebuttal testimony on the Cost of Capital before the Tennessee Regulatory Authority, Case No. 08-00039, on behalf of Tennessee American Water Company, March and August 2008.

Post-Technical Conference Affidavit on behalf of The Interstate Natural Gas Association of America in response to the Reply Comments of the State of Alaska with regard the FERC's Proposed Policy Statement on to the Composition of Proxy Companies for Determining Gas and Oil Pipeline Return on Equity, Docket No. PL07-2-000, March, 2008

Direct and rebuttal testimony before the California Public Utilities Commission, Docket No. A.08-05-003, on behalf of California-American Water Company, concerning Cost of Capital, May 2008 and August 2008.

Rebuttal testimony on the financial risk of Purchased Power Agreements, before the Public Utilities Commission of the State of Colorado, Docket No. 07A-447E, in the matter of the application of Public Service Company of Colorado for approval of its 2007 Colorado Resource Plan, June 2008.

Direct and rebuttal testimony before the Federal Energy Regulatory Commission, Docket No. RP08-426-000, on behalf of El Paso Natural Gas Company, on the Cost of Capital for Natural Gas Transmission Assets, June 2008 and August 2009.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. ER08-1207-000, on behalf of Virginia Electric and Power Company, on the incentive Cost of Capital for investment in New Electric Transmission Assets, June 2008
Direct testimony before the Federal Energy Regulatory Commission, Docket No. ER08-1233-000, on behalf of Public Service Electric and Gas Company, on the Cost of Capital for Electric Transmission Assets, July 2008.

Direct and rebuttal testimony before the Public Service Commission of West Virginia, Case No. 08-0900-W-42t, on behalf of West Virginia-American Water Company concerning the Cost of Capital for Water Utility assets, July 2008 and November 2008.

Direct and rebuttal testimony before the Public Utilities Commission of Ohio, Case No. 08-935-EL-SSO, on behalf of Ohio Edison Company, The Toledo Edison Company, and The Cleveland Electric Illuminating Company, with regard to the test to determine Significantly Excessive Earnings within the context of Senate Bill No. 221, September 2008 and October 2008.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. ER09-249-000, on behalf of Public Service Electric and Gas Company, on the incentive Cost of Capital for Mid-Atlantic Power Pathway Electric Transmission Assets, November 2008.

Direct and rebuttal testimony before the Public Service Commission of West Virginia, Case No. 08-1783-G-PC, on behalf of Dominion Hope Gas Company concerning the Cost of Capital for Gas Local Distribution Company assets, November 2008 and May 2009.

Written Evidence before the Alberta Utilities Commission in the matter of the Alberta Utilities Commission Act, S.A. 2007, c. A-37.2, as amended, and the regulations made thereunder; and IN THE MATTER OF the Gas Utilities Act, R.S.A. 2000, c. G-5, as amended, and the regulations made thereunder; and IN THE MATTER OF the Public Utilities Act, R.S.A. 2000, c. P-45, as amended, and the regulations made thereunder; and IN THE MATTER OF Alberta Utilities Commission 2009 Generic Cost of Capital Hearing, Application No. 1578571/Proceeding No. 85. 2009 Generic Cost of Capital Proceeding on behalf of NGTL, November 2008.

Written and Reply Evidence before the Alberta Utilities Commission in the matter of the Alberta Utilities Commission Act, S.A. 2007, c. A-37.2, as amended, and the regulations made thereunder; and IN THE MATTER OF the Gas Utilities Act, R.S.A. 2000, c. G-5, as amended, and the regulations made thereunder; and IN THE MATTER OF the Public Utilities Act, R.S.A. 2000, c. P-45, as amended, and the regulations made thereunder; and IN THE MATTER OF Alberta Utilities Commission 2009 Generic Cost of Capital Hearing, Application No. 1578571/Proceeding No. 85. 2009 Generic Cost of Capital Proceeding on behalf of AltaGas Utilities Inc., November 2008 and May 2009.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. ER09-548-000, on behalf of ITC Great Plains, LLC, on the Cost of Capital for Electric Transmission Assets, January 2009.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. ER09-681-000, on behalf of Green Power Express, LLP, on the Cost of Capital for Electric Transmission Assets, February 2009.
Written evidence before the Régie de l'Énergie on behalf of Gaz Métro Limited Partnership, Cause Tarifaire 2010, R-3690-2009, on the Cost of Capital for natural gas transmission assets, May 2009.

Direct and rebuttal testimony before the Public Service Commission of Wisconsin, Docket No. 6680-UR-117, on behalf of Wisconsin Power and Light Company, on the cost of capital for electric and natural gas distribution assets, May 2009 and September 2009.

Direct and rebuttal testimony before the State of New Jersey Board of Public Utilities in the Matter of the Petition of Public Service Electric and Gas Company for Approval of an Increase in Electric and Gas Rates and for Changes in the Tariffs for Electric and Gas Service, B.P.U.N.J. No. 14 Electric and B.P.U.N.J No. 14 Gas Pursuant to N.J.S.A. 48:2-21 and N.J.S.A. 48:2-21.1 and for Approval of a Gas Weather Normalization Clause; a Pension Expense Tracker and for other Appropriate Relief BPU Docket No. GR09050422, June 2009 and December 2009.

Rebuttal testimony before the Florida Public Service Commission in re: Petition for Increase in Rates by Progress Energy Florida, Inc., Docket No. 090079-EI, August 2009.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. ER10-159-000, on behalf of Public Service Electric and Gas Company, on the incentive Cost of Capital for the Branchburg-Roseland-Hudson 500 kV Line electric transmission project ("BRH Project"), October 2009.

Direct and Rebuttal Testimony before the California Public Utilities Commission regarding cost of service for San Joaquin Valley crude oil pipeline on behalf of Chevron Products Company, Docket Nos. A.08-09-024, C.08-03-021, C.09-02-007 and C.09-03-027, December 2009 and April 2010.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. ER10-516-000, on behalf of South Caroline Gas and Electric Company, on the Cost of Capital for Electric Transmission Assets, December 2009.

Direct testimony before the Oklahoma Corporation Commission, Cause No. PUD 201000050, on behalf of Public Service Company of Oklahoma, regarding cost of service for a regulated electric utility, June 2010.

Direct testimony before the Michigan Public Service Commission, Case No. U-16400, on behalf of Michigan Consolidated Gas Company, regarding cost of service for natural gas distribution assets, July 15, 2010

Direct testimony before the Public Utilities Commission of Ohio, Case No. 10-1265-EL-UNC, In the Matter of the Determination of the Existence of Significantly Excessive Earnings for 2009 Under the Electric Security Plan of Ohio Edison Company, The Cleveland Electric Illuminating Company, and The Toledo Edison Company, September 2010.

Direct and rebuttal testimony before the Federal Energy Regulatory Commission, Docket No. RP10-1398-000, on behalf of El Paso Natural Gas Company, on the Cost of Capital for Natural Gas Transmission Assets, September 2010 and September 2011.

Direct and rebuttal testimony before the Michigan Public Service Commission, In the matter of the application of The Detroit Edison Company, for authority to increase its rates, amend its rate schedules and rules governing the distribution and supply of electric energy, and for miscellaneous accounting authority, Case No. U-16472, October 2010 and April 2011.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. RP11-1566-000, on behalf Tennessee Gas Pipeline Company, on the Cost of Capital for Natural Gas Transmission Assets, November 2010.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. ER11-013-000, on behalf of the Atlantic Wind Connection Companies, on the Cost of Capital and Cost of Capital incentive adders for Electric Transmission Assets, December 2010.

Direct and rebuttal testimony before the Public Utilities Commission of the State of California, Docket No. A.11-05-001, on behalf of California Water Service Company, on the Cost of Capital for Water Distribution Assets, April 2011 and September 2011.

Rebuttal testimony before the Public Utilities Commission of the State of California, Docket No. A.10-09-018, on behalf of California American Water Company, on Application of California American Water Company (U210W) for Authorization to Implement the Carmel River Reroute and San Clemente Dam Removal Project and to Recover the Costs Associated with the Project in Rates, June 2011.

Initial testimony before the Public Utilities Commission of Ohio, Case No. 11-4553-EL-UNC, In the Matter of the Determination of the Existence of Significantly Excessive Earnings for 2010 Under the Electric Security Plan of Ohio Edison Company, The Cleveland Electric Illuminating Company, and The Toledo Edison Company, July 2011.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. PA10-13-000, on behalf of ITC Holdings Corp. in response to FERC Staff, Office of Enforcement, Division of Audits, Draft Report on the appropriate accounting for goodwill for the acquisition of ITC Midwest assets from Interstate Power and Light Company, July 2011.

Written direct and reply evidence before the National Energy Board in the matter of the National Energy Board Act, R.S.C. 1985, c. N−7, as amended, and the Regulations made thereunder; and in the matter of an application by TransCanada PipeLines Limited for orders pursuant to Part I and Part IV of the *National Energy Board Act*, for determining the overall fair return on capital in the business and services restructuring and Mainline 2012 – 2013 toll application, RH-003-2011, September 2011 and May 2012.

Report before the Arbitrator on behalf of Canadian National Railway Company in the matter of a Submission by Tolko Marketing and Sales LTD for Final Offer Arbitration of the Freight Rates and Conditions Associated with Respect to the Movement of Lumber by Canadian National Railway Company from High Level, Alberta to Various Destinations in the Vancouver, British Columbia Area, October, 2011.

Rebuttal Evidence before the National Energy Board in the matter of AltaGas Utilities Inc., 2010-2012 GRA Phase I, Application No. 1606694; Proceeding I.D. 904, October, 2011.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. ER12-296-000, on behalf of Public Service Electric and Gas Company on the Cost of Capital and for Incentive Rate Treatment for the Northeast Grid Reliability Transmission Project, October 2011.

Rebuttal testimony before the Florida Public Service Commission, Docket No. 110138-EL, on behalf of Gulf Power, a Southern Company, on the method to adjust the return on equity for differences in financial risk, November 2011.

Direct testimony before the Federal Energy Regulatory Commission, Docket No. PA10-13-000, on behalf of ITC Holdings Corp. regarding a rehearing for FERC Staff, Office of Enforcement, Division of Audits, Report on the appropriate accounting for goodwill for the acquisition of ITC Midwest assets from Interstate Power and Light Company, February 2012.

Direct and rebuttal testimony before the Michigan Public Service Commission, Case No. U-16999, on behalf of Michigan Consolidated Gas Company, regarding cost of service for natural gas distribution assets, April 2012 and October 2012.

Deposition testimony in *Primex Farms, LLC, Plaintiff, v. Roll International Corporation, Westside Mutual Water Company, LLC, Paramount Farming Company, LLC, Defendants*, April 2012.

Deposition testimony in *Tahoe City Public Utility District, Plaintiff vs. Case No. SCV 27283 Tahoe Park Water Company, Lake Forest Water Company, Defendants*, May 2012.
