Re: Metropolitan Edison Company – General Base Rate Filing
Docket No. R-2014-2428745

Dear Secretary Chiavetta:

INTRODUCTION AND CONTENTS OF THE FILING

Pursuant to Section 1308 of the Pennsylvania Public Utility Code, 66 Pa.C.S. § 1308, enclosed for filing on behalf of Metropolitan Edison Company ("Met-Ed" or the "Company") is Met-Ed's Tariff Electric – Pa. P.U.C. No. 52 ("Tariff No. 52"), which has been marked for identification as Met-Ed Company Exhibit No. 1. Tariff No. 52 sets forth proposed rates designed to produce an increase in the Company's annual distribution revenue of $151.9 million based on data for a fully projected future test year ending April 30, 2016. Tariff No. 52 also contains revisions in, additions to, and deletions from, certain Rules and Regulations, rate schedules and riders in the Company's currently effective tariff. Tariff No. 52 bears an issue date of August 4, 2014, and an effective date of October 3, 2014.

Along with Tariff No. 52, the Company is filing all the supporting data required by the Pennsylvania Public Utility Commission's ("PUC" or "Commission") regulations at 52 Pa. Code §§ 53.52 – 53.53, including the written direct testimony of ten witnesses, who are identified in Met-Ed Exhibit No. CVF-2. A summary of the reasons for the proposed rate increase is set forth in the Company's Statement of Reasons, which is marked for identification as Met-Ed Exhibit No. CVF-1.

The Company is filing one complete hard copy and one electronic copy, on the enclosed CD, of its entire filing. An index cross-referencing the contents of the Company's supporting data and the Commission's filing requirements is attached as Appendix A to this transmittal letter.

TEST YEAR – WAIVER OF THE "120-DAY" RULE

As the Commission is aware, on June 24, 2014, Met-Ed requested permission to depart from the provision of 52 Pa. Code § 53.52(b)(2) limiting to 120 days the period between the end of a historic test year and the date on which an increase in base rates under Section 1308(d) of the Pennsylvania Public Utility Code (66 Pa.C.S. § 1308(d)) may be filed reflecting that historic test year. By letter dated June 30, 2014, the Commission granted the Company permission to file for a general base rate increase on or before August 14, 2014, employing a historic test year ended March 31, 2014. Accordingly, the Company is submitting supporting data for a historic test year ended on that date, a future test year ending March 31, 2015, and, as previously noted, a fully projected future test year ending April 30, 2016. In support of its proposed increase in distribution revenues, the Company is relying principally on data for the fully projected future test year.

USE OF ALTERNATIVE METHOD OF CUSTOMER NOTIFICATION

Met-Ed hereby advises the Commission that it has elected to use the alternative method of customer notification set forth in the Commission's regulations at 52 Pa. Code § 53.45(b)(4). Consequently, as required by that regulation, Met-Ed will notify its customers of the proposed rate increase through bill inserts along with paid advertisements in major local newspapers.[1] Met-Ed also agrees to extend from 60 to 90 days the minimum period within which the filing of a complaint places the burden of proof upon the Company with respect to proposed rates, pursuant to 52 Pa. Code § 53.45(b)(4)(vi).

REQUEST FOR CONSOLIDATION

This filing is being made contemporaneously with general rate increase filings by Met-Ed's Pennsylvania affiliates at the docket numbers identified below:

Pennsylvania Electric Company ("Penelec")	R-2014-2428743
Pennsylvania Power Company ("Penn Power")	R-2014-2428744
West Penn Power Company ("West Penn")	R-2014-2428742

Pursuant to 52 Pa. Code § 5.81, Met-Ed, by this transmittal letter, and Penelec, Penn Power and West Penn, in their respective transmittal letters, request that proceedings initiated with regard to their rate filings be formally consolidated by the Commission at the earliest possible opportunity. There is a fundamental commonality to virtually all of the components of the Companies' revenue requirements, rate designs and changes in various tariff provisions. Consequently, proceedings initiated by the Commission will involve a substantial number of common questions of law and fact. The resources of the Commission and all parties would be

[1] In addition, Met-Ed is posting notice of this filing at its Company headquarters pursuant to 52 Pa. Code § 53.45(b)(1), posting the filing to its website, and issuing a news release describing the proposed changes to local newspapers, radio and television stations pursuant to 52 Pa. Code § 53.45(b)(2).

used most efficiently and cost effectively, and administrative economy would be advanced, by formally consolidating the proceedings initiated with respect to all of the Companies' rate filings.

REQUEST FOR CONFIDENTIAL TREATMENT OF PROPRIETARY INFORMATION

Met-Ed Exhibit No. RAD-40 contains information that Met-Ed considers to be proprietary and confidential. These pages have been marked ***Highly Confidential,*** are enclosed in separate envelopes and have not been included in the electronic version of the filing.

Met-Ed requests that the copies of the material that have been marked ***Highly Confidential*** and are contained in the envelopes similarly marked ***Highly Confidential*** be treated confidentially by the Commission, including its various Offices and Bureaus. In particular, the Company requests that the ***Highly Confidential*** material be excluded from the Commission's public document folder and not otherwise be disclosed to the public. Met-Ed intends to request the entry of an appropriate Protective Order from the presiding Administrative Law Judge(s) to maintain the confidentiality of such material if it is to be provided to parties in this case.

COUNSEL OF RECORD AND SERVICE ON THE COMPANY

Met-Ed will be represented by the following counsel in this proceeding:

Tori L. Giesler
Lauren M. Lepkoski

DESCRIPTION OF TERRITORY

EASTON AREA

Bucks County - Borough of Riegelsville.
Townships of Bridgeton, Durham, Nockamixon and Tinicum.

Monroe County - Boroughs of Delaware Water Gap, East Stroudsburg and Stroudsburg
Townships of Chestnuthill, Hamilton, Middle Smithfield, Price, Ross, Smithfield and Stroud.

Northampton County - City of Easton.
Boroughs of Bangor, Bath, Chapman, East Bangor, Glendon, Nazareth, Pen Argyl, Portland, Roseto, Stockertown, West Easton, Wilson and Wind Gap.

Townships of Allen, Bethlehem, Bushkill, East Allen, Forks, Lehigh, Lower Mt. Bethel, Lower Nazareth, Moore, Palmer, Bplainfield, Upper Mt. Bethel, Upper Nazareth, Washington and Williams.

Pike County - Townships of Delaware, Dingman and Lehman.

READING AREA

Berks County - City of Reading.

Boroughs of Bally, Bechtelsville, Bernville, Birdsboro, Boyertown, Centerport, Fleetwood, Hamburg, Kenhorst, Kutztown, Laureldale, Leesport, Lenhartsville, Lyons, Mohnton, Mt. Penn, St. Lawrence, Shillington, Shoemakersville, Strausstown, Temple, Topton, West Reading and Wyomissing.

Townships of Albany, Alsace, Amity, Bern, Brecknock, Centre, Colebrookdale, Cumru, District, Douglass, Earl, Exeter, Greenwich, Hereford, Jefferson, Longswamp, Lower Alsace, Maidencreek, Maxatawny, Muhlenberg, North Heidelberg, Oley, Ontelaunee, Penn, Perry, Pike, Richmond, Robeson, Rockland, Ruscombmanor, Spring, Tilden, Union, Upper Bern, Washington and Windsor.

Chester County - Township of Warwick.

Lancaster County - Borough of Adamstown.
Township of Brecknock.

DESCRIPTION OF TERRITORY (continued)

READING AREA (continued)

Lehigh County - Townships of Lowhill, Lynn and Weisenberg.

Montgomery County - Townships of Douglass, Lower Pottsgrove, Upper Frederick, New Hanover and Upper Pottsgrove.

LEBANON AREA

Berks County - Borough of Womelsdorf.
Townships of Bethel, Jefferson, Marion, Tulpehocken, and Upper Tulpehocken.

Dauphin County - Borough of Middletown.
Townships of Conewago, Derry, East Hanover, Londonderry and Lower Swatara.

Lancaster County - Township of Conoy and West Donegal.

Lebanon County - City of Lebanon.

Boroughs of Cleona, Cornwall, Jonestown, Mt. Gretna, Myerstown, Richland and Palmyra.

Townships of Annville, Bethel, Cold Spring, East Hanover, Heidelberg, Jackson, North Annville, North Cornwall, North Lebanon, North Londonderry, South Annville, South Lebanon, South Londonderry, Swatara, Union, West Cornwall and West Lebanon.

YORK AREA

Adams County - Boroughs of Abbottstown, Arendtsville, Bendersville, Biglerville, Bonneauville, Carroll Valley, East Berlin, Fairfield, Gettysburg, Littlestown, McSherrystown, New Oxford and York Springs.

Townships of Berwick, Butler, Conewago, Cumberland, Franklin, Freedom, Germany, Hamilton, Hamiltonban, Highland, Huntington, Latimore, Menallen, Mt. Joy, Mt. Pleasant, Oxford, Reading, Straban, Tyrone and Union.

Cumberland County - Borough of Mt. Holly Springs.
Townships of Cooke, Dickinson, Monroe, South Middleton and Upper Allen.

DESCRIPTION OF TERRITORY (continued)

YORK AREA (continued)

Dauphin County - Township of Londonderry.

York County - City of York.
Boroughs of Cross Roads, Dallastown, Dillsburg, Dover, Fawn Grove, Felton, Franklintown, Glen Rock, Hallam, Hanover, Jacobus, Jefferson, Loganville, Manchester, Mount Wolf, New Freedom, New Salem, North York, Railroad, Red Lion, Seven Valleys, Shrewsbury, Spring Grove, Stewartstown, Wellsville, West York, Windsor, Winterstown, Wrightsville, Yoe, York Haven and Yorkana.

Townships of Carroll, Chanceford, Codorus, Conewago, Dover, East Hopewell, East Manchester, Fairview, Fawn, Franklin, Heidelberg, Hellam, Hopewell, Jackson, Lower Windsor, Manchester, Manheim, Monaghan, Newberry, North Codorus, North Hopewell, Paradise, Penn, Shrewsbury, Springettsbury, Springfield, Spring Garden, Warrington, Washington, West Manchester, West Manheim, Windsor and York.

GENERAL RULES AND REGULATIONS

GENERAL APPLICATION

This Tariff may be revised, amended, supplemented or otherwise changed from time to time by the Company in accordance with prevailing Commission regulations.

This Tariff sets forth the conditions under which various retail services shall be supplied by the Company. Unless stated specifically otherwise, this Tariff shall apply throughout the Company's entire service area.

This Tariff applies to the Company's provision of Delivery Service and various retail services that may be provided by the Company. Regardless of the type of service provided to Customers, all electric energy shall be alternating current, sixty (60) hertz frequency, at such standard nominal voltages and phases as may be available or specified by the Company from time to time. Electric service shall be delivered by the Company from overhead supply lines, except (i) in certain restricted areas where the Company elects to provide an underground network system of distribution and/or (ii) where other underground facilities are installed pursuant to specific provisions of this Tariff.

The rate schedules, rules and regulations governing electric service as herein contained, are subject to termination, change or modification by posting, filing, and publishing any subsequent rate schedule or supplement in accordance with the Public Utility Law or under order or by permission of the Pennsylvania Public Utility Commission. No agent, representative or employee of the Company has any right to modify or alter any provision of the Company's schedule of rates, rules and regulations.

DEFINITIONS

The following is a list of some of the most commonly used terms in this Tariff. All capitalized terms referenced in this Tariff shall be defined as set forth below or as otherwise defined in any particular Rule, Rate Schedule or other Provision hereof. In the event of a conflict between any of the definitions set forth below or those contained in a more specific provision of this Tariff, the definition contained in the more specific provision shall prevail.

Act 129 – Act 129 of 2008, amending Title 66 of the Pennsylvania Consolidated Statutes.

Advanced Metering - A Customer's billing meter as defined in 52 Pa. Code Chapter 57, Subchapter O. Advanced Meter Deployment.

GENERAL RULES AND REGULATIONS

Definition of Terms (continued)

Alternative Energy Portfolio Standards ("AEPS") – Standards requiring that a certain amount of electric energy sold from alternative energy sources be included as part of the sources of electric utilities within the Commonwealth of Pennsylvania in accordance with the Alternative Energy Portfolio Standards Act, 73 P.S. §1648.1 – 1648.8 ("AEPS Act") as may be amended from time to time.

Applicant - Any person, corporation or other entity that (i) desires to receive from the Company electric or any other service provided for in this Tariff, (ii) complies completely with all Company requirements for obtaining electric or any other service provided for in this Tariff, (iii) has filed and is awaiting Company approval of its application for service, and (iv) is not yet actually receiving from the Company any service provided for in this Tariff. For Residential Service, an Applicant is a natural person not currently receiving service who applies for Residential Service or any adult occupant whose name appears on the mortgage, deed or lease of the property for which the Residential Service is requested unless specifically stated otherwise in this Tariff, an Applicant shall become a Customer for purposes of this Tariff only after it actually starts receiving the applicable service(s) from the Company under this Tariff.

Basic Electric Supply – For purposes of the Company's Purchase of EGS Receivables Program, energy (including renewable energy) and renewable energy or alternative energy credits (RECs/AECs) procured by an EGS, provided that the RECs/AECs are bundled with the associated delivered energy. For residential Customers, Basic Electric Supply does not include early contract cancellation fees, late fees, or security deposits imposed by an EGS.

Black Start Service - The ability of a Generating Facility to go from a shutdown condition to an operating condition and start delivering power without assistance from the power system (i.e., the Company's electrical system).

Cash Advance - A refundable contribution in cash from an Applicant for those costs associated with a Line Extension, increased for applicable taxes, which is held by the Company in a non-interest bearing account.

GENERAL RULES AND REGULATIONS

Definition of Terms (continued)

Combined Billing - The aggregation of the billing determinants of two or more meters of the same Customer at the same location for billing purposes.

Commercial Customer Class – Rate Schedules GS-Small, GS-Medium, MS, Borderline Service, Street Lighting Service, Ornamental Street Lighting Service, LED Street Lighting Service, and Outdoor Lighting Service.

Commission - The Pennsylvania Public Utility Commission or any lawful successor thereto.

Community Association - A formal organization (including unit owners' associations) of persons, whether incorporated or unincorporated, having rights in a residential development; such organizations having been formed to provide services (including, but not limited to, street lighting services) to the residential development where such services are not provided by a municipality.

Company - Metropolitan Edison Company.

Competitive Energy Supply – The unbundled energy, capacity, market based transmission and ancillary services provided by an Electric Generation Supplier pursuant to the Customer Choice and Competition Act.

Connected Load - The sum of the horsepower, kilowatts or kilovolt ampere ratings of all the devices located on a Customer's premises that are connected to the Company's electric system, or which can be connected simultaneously by the insertion of fuses or by the closing of a switch. The manufacturer's nameplate rating may be used to determine the input rating of a particular device. In the absence of such manufacturer's rating, or whenever a Company test indicates improper rating of a device, the rating shall be determined on the basis of the kilovolt-amperes required for its operation.

Consolidated Billing –The issuance of a bill to the Customer by the Company that includes Delivery Service Charges and the charges imposed upon the Customer by an Electric Generation Supplier with whom the Customer has contracted for Competitive Energy Supply.

Contract Demand - The capacity required for operation of an Applicant's/Customer's equipment, as stated in any application or contract for service.

Contractor Costs - The amounts paid by the Company for work performed by a contractor retained by the Company.

GENERAL RULES AND REGULATIONS

Definition of Terms (continued)

Contributions in Aid of Construction ("CIAC") - A non-refundable contribution in cash from an Applicant for those costs associated with a Line Extension and/or tree trimming, brush clearance and related activities or those costs associated with Temporary Service or the relocation of Company facilities, increased for applicable taxes.

Customer(s) - Any person, partnership, association, corporation, or other entity (i) in whose name a service account is listed, (ii) who occupies or is the ratepayer for any premises, building, structure, etc. or (iii) is primarily responsible for payment of bills. For Residential Service, a Customer is a natural person in whose name a Residential Service account is listed and who is primarily responsible for payment of bills rendered for the service or any adult occupant whose name appears on the mortgage, deed, or lease of the property for which the Residential Service is being received. A Customer includes anyone taking Delivery Service under this Tariff.

Customer Choice and Competition Act - The Pennsylvania legislation known as the "Electricity Generation Customer Choice and Competition Act," 66 Pa. C. S. §§ 2801-2813 as implemented by the Default Service Regulations 52 Pa. C. S. §§52.181-52.189, and by Act 129 and as may be amended from time to time.

Default Service – Service provided pursuant to a Default Service Program to a Default Service Customer.

Default Service Customer – A Delivery Service Customer not receiving service from an EGS.

Delivery Service - Provision of distribution of electric energy and other services provided by the Company.

Delivery Service Charge - A charge that includes the Monthly Minimum Charge, Distribution Charge, and all charges and surcharges imposed under other applicable tariff provisions.

GENERAL RULES AND REGULATIONS

Definition of Terms (continued)

Delivery Service Customer - A Customer who takes Delivery Service.

Demand - The rate of use of electric energy during a specified time interval, expressed in kilowatts and reactive kilovolt-amperes.

Developer - The person or entity responsible for constructing and providing improvements in a Development, including, but not limited to, streets, sidewalks and utility-ready lots.

Development - A planned project which is developed by a Developer for electric service set out in a recorded plot plan of five (5) or more adjoining unoccupied lots for the construction of single-family residences, detached or otherwise, mobile homes, or one (1) or more five-unit apartment houses, all of which are intended for year-round occupancy, if electric service to such lots necessitates extending the Company's existing Distribution Lines.

Direct Labor Costs - The pay and expenses of Company employees directly attributable to work performed, excluding construction overheads or payroll taxes, workmen's compensation expenses or similar expenses.

Direct Material Costs - The purchase price of materials used, excluding related stores (i.e. warehousing) expenses. In computing Direct Material Costs, proper allowance shall be made for unused materials recovered from temporary structures, and for discounts allowed and realized in the purchase of materials.

Discontinuance of Service - The removal of a customer's meter and/or service wires or the de-energizing of a meter.

Distribution Charge - A charge designed to recover the costs the Company incurs in using its distribution system or local wires to deliver electricity to a Customer.

Distribution Line - An electric supply line and related equipment of 34,500 volt wye configured or lower voltage from which energy is delivered to one (1) or more Service Lines.

GENERAL RULES AND REGULATIONS

Definition of Terms (continued)

Electric Generation Supplier (EGS) - EGS shall have the meaning as set forth in the Customer Choice and Competition Act.

Energy Charge – A charge based upon kilowatt-hours of use.

Energy Efficiency and Conservation Charge – A reconcilable, non-by-passable charge applied to each Billing Unit during a billing month to Delivery Service Customers, with the exception of those served under Borderline Service, pursuant to the terms of the Phase II Energy Efficiency and Conservation Rider.

FERC – The Federal Energy Regulatory Commission

Generating Facility - Any equipment and/or facility that is electrically interconnected to the Company and is (i) capable of generating electrical energy for delivery into the PJM control area and (ii) is located on a single site within the Company's service territory. A single site with multiple generating units, each owned by a single entity, shall constitute one Generating Facility. The Company shall have the sole and exclusive right to determine if any particular equipment qualifies as a Generating Facility if the operating characteristics and/or circumstances relating to such equipment are different than described in this definition.

Hertz – A unit of frequency, equal to one cycle per second.

Horsepower (HP) – Unit of mechanical power representing rate of consumption of power and equivalent to 746 watts. As used herein, horsepower is computed as the equivalent of 750 watts.

Hourly Pricing Service Charges – For Customers served under Rate Schedules GS-Large, GP, TP, as well as GS-Small and GS-Medium Customers that elect this rate, the charges representing the Company's costs for providing energy, capacity, including the cost of complying with non-solar AEPS, transmission, and ancillary services for Default Service Customers.

GENERAL RULES AND REGULATIONS

Definition of Terms (continued)

Individualize Contract – Shall have the meaning ascribed to it in Rule 14.

Industrial Customer Class – Rate Schedules GS-Large, GP and TP.

Kilovar (KVAR) - 1,000 volt-amperes reactive.

Kilovolt-ampere (KVA) - 1,000 volt-amperes.

Kilowatt (KW or kW) - 1,000 watts.

Kilowatt-hour (KWH or kWh) - 1,000 watts for one (1) hour.

Line Extension - The extension of the Company's distribution system from the nearest suitable and available Distribution Line to the Service Line which will provide service to the Customer.

Monthly Minimum Charge – A charge designed to recover the costs the Company incurs in billing a Customer's account and providing other services.

Net Station Power - The quantity of electrical energy and/or capacity actually provided by the Company to the Generating Facility for Station Power during an applicable period after crediting the amount, if any, of electric energy during the applicable period (i) produced by the Generating Facility and delivered into the PJM control area or (ii) as permitted under "Station Power Energy Netting" as described in the applicable Rate Schedule.

Network Integration Transmission Service – Network Integration Transmission Service as set forth in the PJM Open Access Transmission Tariff and any direct Transmission Owner charged expense.

Network Service Peak Load (NSPL) – A Customer's one (1) coincident peak kW Network Service Peak Load in effect from time to time, as calculated by the Company in accordance with PJM rules and requirements.

GENERAL RULES AND REGULATIONS

Definition of Terms (continued)

Non-Profit Ambulance Service - Any nonprofit chartered corporation, association, or organization located in the Commonwealth of Pennsylvania which (i) is regularly engaged in the service of providing emergency medical care and transportation of patients, (ii) possesses all necessary legal authority in Pennsylvania to perform emergency medical care and transportation of patients and (iii) provides such services from a building or other structure located in the Company's service territory that constitutes a separately metered location for electric delivery purposes. The electric service used by the Non-Profit Ambulance Service shall be primarily to support its service. The Customer/Applicant shall provide all documentary and other evidence of its compliance with this provision if requested by the Company in its sole discretion.

Non-Profit Rescue Squad - Any nonprofit chartered corporation, association, or organization located in the Commonwealth of Pennsylvania which (i) is regularly engaged in providing rescue services, (ii) possesses all necessary legal authority in Pennsylvania to perform rescue services and (iii) provides such services from a building or other structure located in the Company's service territory that constitutes a separately metered location for electric delivery purposes. The electric service used by the Non-Profit Rescue Squad shall be primarily to support its service. The Customer/Applicant shall provide all documentary and other evidence of its compliance with this provision if requested by the Company in its sole discretion.

Non-Profit Senior Citizen Center - A separately metered service location comprised of a building or other structure used by senior citizens as a meeting or gathering facility for individuals or groups, and where services to senior citizens are provided. The Customer of record at this service location shall be an organization recognized by the Internal Revenue Service as non-profit and by the Department of Aging as an operator of a senior citizen center.

Non-Speculative Line Extension - A Line Extension for a Permanent Residential Customer under which the Company has taken into account various factors including, but not limited to, Customer location, rate classification, projected Company revenues, permanency of use, primary residence and prospect of use by future Customers, and has deemed the cost for the Line Extension to be reasonable for the Company to incur.

GENERAL RULES AND REGULATIONS

Definition of Terms (continued)

Non-Summer – The calendar months of October through May.

Non-Utility Generation Charge or NUG Charge – A reconcilable, non-by-passable charge or credit applied to each kWh delivered during a billing month to Delivery Service Customers pursuant to the terms of the Non-Utility Generation Charge Rider.

NUG - Non Utility Electric Generating Facility

On-Peak Hours – Hours to be considered as on-peak for billing purposes for energy and demand charges are 9:00 AM to 5:00 P.M or 10:00 AM to 6:00 P.M prevailing time, at the option of the Customer, Mondays to Fridays inclusive except New Year's Day, President's Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day.

Permanent Residential Customer - A Customer occupying a dwelling or mobile home on a permanent foundation which is the Customer's primary residence occupied year-round for normal living purposes and including: (i) electrical wiring conforming with the National Electrical Code and the Company's service installation policies; (ii) a permanently installed heating system; and (iii) permanently installed plumbing and sewage systems.

PJM - PJM Interconnection, L.L.C. or any successor organization/entity thereto.

Point of Delivery - The location at which the Company service connection terminates and the Customer's wiring and installation begins.

Power Factor - The ratio of the watts to the volt-amperes.

Price to Compare Default Service Charge – The cents per kWh rates representing the Company's costs for providing energy, capacity, including the cost of complying with non-solar AEPS, market based transmission and ancillary services for Customers who take Default Service.

Primary Voltage - Voltage greater than 600 volts.

Private Right-of-Way - The right-of-way or easement for electric facilities on, over, under, across and/or through real or other property owned by an individual or entity which is not a governmental, municipal or other public body to provide service.

GENERAL RULES AND REGULATIONS

Definition of Terms (continued)

Public Right-of-Way - The right-of-way or easement for electric facilities, subject to reasonable permitting, on, over, under, across and/or through real or other property owned by a governmental, municipal or other public body to provide service.

Purchase of EGS Receivables ("POR") Program - The Company will purchase the account receivables associated with EGS sales of Competitive Energy Supply. The Company will purchase only those receivables that are associated with Basic Electric Supply services and not receivables associated with charges for other products or services.

Rate Schedule - The specific set of terms and conditions (including prices) applicable to Customers and identified as such under this Tariff.

Real Time Hourly LMP - Shall have the meaning specified in the PJM Open Access Transmission Tariff.

Residential Customer - Customers using single phase service for residential lighting, appliance operation and general household purposes, or for the combined residential and incidental non-residential purposes.

Residential Customer Class – Rate Schedules RS and GS-Volunteer Fire Company, and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service.

Residential Service - Electric service under the Company's Residential Rate Schedules that is available to: (i) an individual dwelling unit, generally a house, mobile home or an individually metered apartment, where there is no more than 2,000 watts connected load associated with any commercial enterprise served as part of said dwelling unit, house, mobile home or individually metered apartment; (ii) a residential farm where the metered service includes service to an occupied dwelling unit; (iii) a camp or cottage served in the name of an individual and intended for part-time occupancy as a dwelling by a family or an individual; or (iv) multiple dwellings, where specified in any applicable Residential Rate Schedule. Residential Service does not include electric service to: (i) any facility not including an occupied dwelling unit, such as a separately metered garage, barn, water pump, etc.; and/or (ii) any facility served in the name of, or for the use of, a corporation, partnership, association, society, clubs, etc., not being used as a single dwelling unit.

GENERAL RULES AND REGULATIONS

Definition of Terms (continued)

Secondary Voltage - Voltage of 600 volts or less.

Service Line - An electric supply line from the Distribution Line to the Customer's metering point from which electric service is delivered to the Customer.

Smart Meter Technologies Charge Rider – A reconcilable, non-by-passable charge applied as a monthly Customer charge during each billing month to Delivery Service metered Customers, excluding Street Lighting Service, Ornamental Street Lighting Service, Outdoor Lighting Service, LED Street Lighting Service, and Borderline Service pursuant to the terms of the Smart Meter Technologies Charge Rider.

Solar Photovoltaic Requirements Charge or SPVRC – A reconcilable, non-by-passable charge applied to each kWh delivered during a billing month to Delivery Service Customers pursuant to the terms of the Solar Photovoltaic Requirement Charge Rider.

Speculative Line Extension - A Line Extension in which the Company has taken into account various factors including, but not limited to, Customer location, rate classification, projected Company revenues, permanency of use, primary residence and prospect of limited use by future Customers, and has deemed the cost of the Line Extension to be unreasonable for the Company to incur.

Station Power - The electrical energy used for operating the electric equipment on the site of a Generating Facility located in the PJM control area or for the heating, lighting, air-conditioning and office equipment needs of buildings on the site of such a Generating Facility that are used in the operation, maintenance, or repair of the facility. Station Power does not include any energy (i) used to power synchronous condensers, (ii) used for pumping at a pumped storage facility, (iii) used in association with restoration or Black Start Service or (iv) that is normally supplied to any buildings, structures, facilities, etc. on the site of such a Generating Facility that are metered separately and served directly from the Company's distribution system. Energy provided for the uses described in subparagraphs (i) - (iii) above constitute wholesale transactions, and energy provided for the uses described in subparagraph (iv) above are retail transactions which will continue to be billed under the applicable Rate Schedule.

Subdivider - The person or entity responsible for dividing a tract of land into building lots, to form a Subdivision, that are not to be sold as utility-ready lots.

GENERAL RULES AND REGULATIONS

Definition of Terms (continued)

Subdivision - A tract of land divided by a Subdivider into five (5) or more adjoining unoccupied lots for the construction of single-family residences, detached or otherwise, or apartment houses, all of which are intended for year-round occupancy, if electric service to such lots necessitates extending the Company's existing Distribution Lines.

Summary Billing – The summation of the charges for a Customer's multiple accounts and provision thereof to the Customer in a single bill.

Summer – The calendar months of June through September.

Temporary Electric Service - A Service Line, meter and/or other work supplied by the Company to the Customer for electric service over a defined period, usually less than one (1) year.

Tariff - This document, including, but not limited to, the Rules, Regulations and Rate Schedules and Riders contained herein, as filed with and approved by the Commission.

Transmission Voltage - Voltage equal to or greater than 34,500 volts delta.

Universal Service – Policies, protections and services that help residential low-income Customers maintain electric service. The term includes Customer assistance programs, termination of service protections and policies and services that help low-income Customers to reduce or manage energy consumption in a cost-effective manner.

Universal Service Charge – The charge developed and calculated in accordance with Rider C – Universal Service Cost Rider.

Volunteer Fire Company - A service location consisting of a building, sirens, a garage for housing vehicular firefighting equipment, or a facility certified by the Pennsylvania Emergency Management Agency (PEMA) for fire fighter training. The use of electric service at this service location shall be to support the activities of the Volunteer Fire Company. Any fund raising activities at this service location must be used solely to support volunteer fire fighting operations. The Customer of record at this service location must be predominately a Volunteer Fire Company recognized by the local municipality or PEMA as a provider of firefighting services.

GENERAL RULES AND REGULATIONS

HOW TO OBTAIN SERVICE/CHANGES TO SERVICE

1. Applications/Contracts

All Applicants desiring any type of service from the Company under this Tariff shall contact the Company and specifically request the type and nature of service.

If more than one Rate Schedule is available for any service, the Company will assist the Customer initially in selecting the Schedule which, on the basis of the Customer's advice to the Company regarding the anticipated service conditions, is most advantageous. If, as a result of a permanent change in the Customer's service conditions, another Rate Schedule becomes more advantageous to the Customer, the Company will, after written notice by the Customer of such change, recommend such other Rate Schedule.

A Non-Residential Applicant for any service under this Tariff may be required to sign an application and/or a contract for electric service. However, the Company may, in its sole discretion, accept an oral application from a Non-Residential Applicant.

The Company shall accept an oral application from a Residential Applicant, except that the Company may require a written application from a Residential Applicant if the Company believes that positive identification is necessary.

The Customer shall inform the Company in advance of any proposed additions to (or decreases in) the Customer’s connected electrical load. The Company may, in its sole discretion, require a written application and or contract for changes in load or services.

The minimum term of contracts for any type of electric service under this Tariff shall be as stated in the applicable Rate Schedule(s) or any other provisions of this Tariff. Unless otherwise specified in any particular Rate Schedule or any other provisions of this Tariff, the term of any contract for any type of electric service under this Tariff that requires a contract term of not less than one (1) year shall commence on the date specified by the Company and terminate on the Customer’s closest scheduled meter read date on or after twelve (12) months from the commencement date of such contract.

The Company may require, as a condition of the furnishing of service to an Applicant, the payment of any outstanding account (limited to the portion that was for regulated service provided by the Company) in the Applicant's name which accrued within the past four years or for any outstanding account for which the Applicant is determined to be legally responsible and for which the Applicant was properly billed.

GENERAL RULES AND REGULATIONS

Applications/Contracts (continued)

The Company may require an Applicant/Customer to make the payment of any outstanding balance or portion of an outstanding balance if the Applicant/Customer resided at the property for which service is requested during the time the outstanding balance accrued and for the time the Applicant/Customer resided at the property not to exceed four years. The Company may establish that an Applicant/Customer previously resided at a property through the use of mortgage, deed, lease information, a consumer credit reporting service, a Financial Summary that provides the names and income of adult occupants of a household, and a web-based tool such as "Accurint" to research Applicant/Customer information.

2. Deposits

Where an Applicant's/Customer's credit is not established or the credit of a Customer with the Company has, in the Company's judgment become impaired, or where the Company deems it necessary, a deposit or other guarantee satisfactory to the Company may be required to be supplied by the Applicant/Customer as security for the payment of future and final bills before the Company shall commence or continue to render any type of electric service to the Applicant/Customer. Deposits required by the Company for Tariff charges shall include unpaid EGS charges that are subject to the Company's POR.

The Company may request deposits from Customers taking service for a period of less than thirty (30) days, in an amount equal to the estimated bill for the cost of total services provided by the Company for such temporary period. Deposits may be required by the Company from all other Customers, in an amount that is equal to one-sixth (1/6) of the Applicant's/Customer's estimated annual bill at the time the Company determines a deposit is required. If the total of the Applicant's/Customer's bill in any two consecutive months exceeds the amount of the deposit, the Company may require that the deposit be proportionately increased.

Deposits for Residential Customers shall be returned to them in accordance with the provisions of the Responsible Utility Customer Protection Act (66 Pa. C.S. §§ 1401-1418) and the provisions of the Commission's Regulations at 52 Pa. Code Chapter 56, as amended from time to time. Deposits from all other Customers may be held by the Company, in its sole and exclusive judgment, until the Customer discontinues service or the Company determines that the Customer has established a satisfactory payment record. Upon discontinuance of all Company service and payment in full of all charges and financial guarantees, the Company shall refund the deposit or deduct any unpaid amounts from the deposit and refund the difference, if any, to the Customer. The deposit shall no longer accrue interest upon the discontinuance of service.

The interest rate on deposits will be calculated pursuant to 66 Pa. C.S. § 1404 as amended from time to time.

GENERAL RULES AND REGULATIONS

3. Right-of-Way

An Applicant (and/or any existing Customer seeking additional service) requesting service from the Company, at the Applicant's/Customer's own expense, shall provide and grant to the Company a right-of-way, easement and/or permits satisfactory and acceptable to the Company, which by the Applicant/Customer has been cleared of trees and any other vegetation, as may be necessary for the erection and maintenance of the poles, wires and appurtenances, together with such tree and vegetation trimming and removal privileges as required per the Company's vegetation management policies to provide and maintain service.

Such right-of-way, easement and/or permits shall be granted to the Company without charge and shall permit the Company to permanently erect and maintain facilities over, under, through, across and/or along the property owned or controlled by the Applicant/Customer in order to provide electric service to the Applicant/Customer, provided, however, that no new right-of-way, easement and/or permits shall be required if a valid and continuing right-of-way, easement and/or permits with equivalent rights and privileges has already been granted to the Company by such Applicant/Customer or any predecessor in interest.

The Company shall not be obligated to provide any electric service to an Applicant/Customer until the Company has received and/or obtained satisfactory and acceptable to the Company rights-of-way, easements and/or permits from, but not limited to, the Applicant/Customer, applicable Government agencies, railroad owners or other property owners. Any right-of-way, easement or permit fees, either initial or recurring, or other charges in connection with rights-of-way, easements or permits for providing service to an Applicant/Customer, shall be paid for by the Applicant/Customer.

4. Extension of Company Facilities: System Upgrades

The standard service provided by the Company for delivery of electric energy to a Customer under this Tariff, regardless of delivery voltage, shall be from overhead Distribution Lines, except as noted in any Rate Schedule or other applicable provision of this Tariff. Subject to the requirements of this Tariff, the Company shall extend its Distribution and Transmission Lines to Applicants. Any request for electric service that requires the extension, removal, relocation or change of the Company's existing Distribution Lines shall be provided as set forth in this Rule. Applicants requesting a Line Extension shall, at the Company's discretion, execute the Company's Line Extension contract. Any Customer served by a Line Extension completed before the effective date of this Rule 4 shall be subject to the terms and conditions of its existing Line Extension contract and the Company's then-applicable Line Extension tariff, rules and regulations.

GENERAL RULES AND REGULATIONS

a. Line Extensions

(1) Non-Speculative Single Phase Line Extension

Company Obligations

As used in this Rule 4, a span of conductor is approximately equal to 180 feet. The Company shall construct, own and maintain all Line Extensions. The Company shall provide an Applicant, at no charge, up to three (3) spans of conductor, three (3) poles and related material on Public Right-of-Way for each Line Extension, including the Service Line. The Company shall provide an Applicant, at no charge, one (1) span of conductor and related material on Private Right-of-Way for each Line Extension, including the Service Line, to serve a Permanent Residential Customer. The number of spans provided to an Applicant/Customer at no charge shall be referred to in this Rule 4 as the span allowance. The Company's engineering layout shall be the sole basis used for determining the design of the Line Extension and/or Service Line. Any additional Line Extension and/or Service Line costs in excess of those costs assumed by the Company under this Tariff shall be borne by the Applicant/Customer.

The Company shall not commence construction of a Line Extension and/or Service Line until completion of all of the following:

(a) The Company's receipt and acceptance of an application for electric service.

(b) Execution by the Company and the Applicant/Customer of appropriate agreements for electric service and/or Line Extensions, and the payment by the Applicant/Customer of any and all associated costs or charges.

(c) The Applicant/Customer requesting the Line Extension and/or Service Line has furnished to the Company rights-of-way, easements and/or permits on, over, across, under and/or through the Applicant's/Customer's property that are necessary for the construction, maintenance and operation of the Line Extension and/or Service Line in accordance with Rule 3 of this Tariff and which are in form and substance satisfactory and acceptable to the Company.

The Company shall be under no obligation to construct the Line Extension and/or Service Line in the event it is unable to acquire all necessary rights-of-way, easements and/or permits and other consents from any parties other than the Applicant/Customer, in such form and substance satisfactory and acceptable to the Company.

GENERAL RULES AND REGULATIONS

Rule 4 – Extension of Company Facilities: System Upgrades (continued)

Applicant Obligations

Where the Non-Speculative Line Extension and/or Service Line exceeds the span allowance, the Applicant/Customer shall make a CIAC or Cash Advance to the Company equivalent to the Company's estimated Direct Labor Costs and Direct Material Costs and/or Contractor Costs for construction of that portion of the Line Extension and/or Service Line which is in excess of the span allowance. All Line Extension and/or Service Line costs in excess of the span allowance shall be charged to the Applicant/Customer.

In the event that an Applicant/Customer makes a Cash Advance to the Company for construction costs in excess of the span allowance, refund(s) shall be made to the initial Line Extension Applicant/Customer for each new Permanent Residential Customer added to the initial Line Extension. The refund(s) shall be calculated by the average cost per foot of the Line Extension in excess of the span allowance. Refunds shall be made only for Customer additions made within five (5) years from completion of the initial Line Extension and the sum of any refund(s) shall never exceed the initial Line Extension Applicant's / Customer's Cash Advance. Any balance from the Cash Advance remaining after five (5) years shall be retained by the Company. In lieu of paying a Cash Advance to the Company, the Applicant/Customer may elect to pay a CIAC to the Company.

If the Applicant/Customer requests, and Company approves, Line Extensions and/or Service Lines may be installed underground. Where a Customer requests underground service from overhead distribution facilities, the Company shall install such service upon receipt of a contribution, in the form of a CIAC, from the Customer equal to the amount the underground service costs exceed the overhead service costs. These costs will not be part of any Cash Advance or refund to a Cash Advance. The Company shall own, operate and maintain such underground facilities. In such case, the Applicant/Customer shall provide all necessary conduit, conduit installation, trenching, excavation, backfilling and grading in accordance with Company specifications, and shall bear all costs thereof.

GENERAL RULES AND REGULATIONS

Rule 4 – Extension of Company Facilities: System Upgrades (continued)

The Applicant/Customer shall perform or arrange and pay for all Company-directed rough grading in accordance with the Company's specifications for underground lines and facilities, as said specifications shall be modified by the Company from time to time.

The Applicant/Customer shall pay the cost of all tree trimming, brush clearance and related activity associated with the establishment of the right-of-way, easement or permit for the Line Extension and/or Service Line.

If Applicant/Customer requests any deviation from the Company's specifications, the Company may, in its sole and exclusive discretion, approve such request. Any Company-approved deviations from its construction practices shall be at the Applicant's/Customer's sole expense.

(2) Underground Electric Service in New Residential Developments

Company Obligations

All Distribution Lines and Service Lines installed within a new residential Development shall be installed underground; shall conform to the Company's construction standards, the specifications set forth in the National Electric Safety Code (NESC), and shall be owned and maintained by the Company. The Company or its agent shall install the necessary service-related facilities that may include the installation of padmount transformers. The Company shall, at the request of the Developer, install underground street lighting lines at the time of the original request for service to the Development or thereafter within the same Development. All street lighting shall be provided in accordance with this Tariff.

The Company shall require for Developments which qualify under this Rule 4a(2) (Underground Electric Service in New Residential Developments) and Rule 4a(3), (Speculative Single Phase and All Three-Phase Line Extensions and Service Lines) a CIAC or Cash Advance from the Applicant covering the Company's total estimated direct and indirect costs associated with the Line Extension to the tract of land being developed or within 100 feet of the boundary of Development. After the connection of Customers, external to the Development, to the Line Extension, a refund of the Cash Advance shall be made to the Applicant in accordance with Rule 4a(3) (Speculative Single Phase and All Three-Phase Line Extensions and Service Lines).

GENERAL RULES AND REGULATIONS

Rule 4 – Extension of Company Facilities: System Upgrades (continued)

The Company shall have the right to perform its own excavating and backfilling. If the Company elects to perform its own excavating and backfilling, there shall be no other charges to the Developer or to any other utility sharing the same trench.

Developer Obligations

A Developer shall pay the cost of providing the Company with a copy of the recorded development plot plan identifying property boundaries and with rights-of-way, easements and/or permits satisfactory and acceptable to the Company for occupancy by distribution, service and street lighting lines and related facilities.

The Developer or its agent shall provide all conduit, conduit installation, excavating, rough grading and backfilling required by the Company and shall meet the Company's specifications as they may be in effect from time to time. The Company upon request shall provide copies of the specifications to the Developer.

A Developer shall pay the Company for any necessary and additional costs incurred by the Company as a result of the following:

(a) Installation of underground facilities that deviate from the Company's underground construction standards and specifications if such deviation is requested by the Developer and is acceptable to the Company.

GENERAL RULES AND REGULATIONS

Rule 4 – Extension of Company Facilities: System Upgrades (continued)

(b) A change in the plot plan by the Developer for electric service after the Company has completed engineering for the project and/or has commenced installation of its facilities.

(c) Physical characteristics such as, but not limited to, oversized lots or lots with extreme setback.

A Subdivision is not required to have underground service. However, should the lot owner or owners in a subdivision desire underground service, such service shall be provided by the Company if such lot owner or owners, at their option, either comply with Rule 4a(1) (Non-Speculative Single Phase Line Extensions) and 4a(3) (Speculative Single Phase and All Three Phase Line Extensions and Service Lines).

If as a result of a Line Extension or any other request that results in an expansion of the Company's facilities, an increase in the Company's facilities, construction of a system upgrade or any other change to or the modification of the Company's electric system, the Applicant/Customer shall pay all costs for such work as specified in this Rule 4.

(3) Speculative Single Phase and All Three-Phase Line Extensions and Service Lines

When the Company is requested to increase capacity, expand facilities or construct Speculative Single Phase Line Extensions and/or Service Lines or Three-Phase Line Extensions and/or Service Lines, the Company shall determine from the circumstances of each case the nature and level of financing and/or guarantee of revenue required of the Applicant/Customer prior to construction or installation of Company facilities. The Company shall employ a five (5) year revenue guarantee in order to offset the initial construction costs. The five (5) year revenue guarantee includes five (5) years of forecasted distribution revenues less certain incremental delivery costs including, but not limited to, distribution operation and maintenance expenses, depreciation expenses, gross receipts taxes, state and federal income taxes, and a reasonable return component. The Company shall require the Applicant/Customer to make (i) a CIAC equivalent to the Company's total estimated costs associated with the construction of facilities necessary to render service in excess of the amount not covered by the revenue guarantee or (ii) a Cash Advance for the total construction costs to render service. The Company shall refund all or a portion of a Cash Advance previously provided by the Applicant in the event that the Company's revenue analysis for any newly connected Non-Residential Customer indicates that there are revenues in excess of the costs to provide service to that newly connected Non-Residential Customer, within five (5) years from the completion of the initial Line Extension.

GENERAL RULES AND REGULATIONS

Rule 4 – Extension of Company Facilities: System Upgrades (continued)

Where an application for an overhead Line Extension for a tract of land being developed or proposed to be developed, in whole or in part, for residential, commercial or industrial purposes, not covered by Rule 4a(2), (Underground Electric Service in New Residential Developments) is received from an entity that is not expected to be a Customer, the Company, prior to construction, shall require payment of a CIAC or a Cash Advance from the Applicant covering the Company's total estimated costs associated with the construction of said overhead extension (i) to the tract of land being developed and (ii) within the boundary of the tract of land necessary to serve prospective Customers in the tract.

After the connection of a Non-Residential Customer to the Line Extension, a refund of the Cash Advance shall be made to the Applicant in accordance with this Rule 4a(3) (Speculative Single Phase and All Three-Phase Line Extensions and Service Lines).

Applications for Speculative or Three-Phase Line Extensions and/or Service Lines shall be subject to the provisions of this Tariff.

In addition to the Line Extension costs described above, Customers shall also provide, install and pay for conduit, conduit installation, cable, metering conduit associated with their underground installation, including the Service Line, and such other costs specified in the Company's prevailing handbook.

The Applicant/Customer shall pay all costs as required for compliance with Rule 3.

b. Temporary Service

Temporary installations for Residential and Non-Residential Customers, requiring special service, meter or other work are made at the expense of the customer and shall provide electric service for a defined period, usually less than one (1) year ("Temporary Service"). Temporary Service, such as for construction purposes or exhibits of short duration, etc. shall be installed and removed at the Applicant's/Customer's expense. The Company shall provide the Temporary Service upon application from an Applicant/Customer. The Company shall provide the Temporary Service, provided that the Applicant/Customer reimburses the Company for all costs of installing and removing the service installation, including both material and labor, less the salvage recovered from all materials and equipment removed after

GENERAL RULES AND REGULATIONS

Rule 4 – Extension of Company Facilities: System Upgrades (continued)

termination of service. In all such cases, the Applicant/Customer shall make an advance payment to the Company sufficient to cover the estimated charges for installation and removal of the Temporary Service.

For Temporary Service for residential single-unit house construction where both the temporary Service Line and meter can be transferred to the completed building, the Temporary Service shall be provided by the Company upon the Applicant's/Customer's payment of the Company's estimated costs to provide this service.

c. Relocation of, or Modification to, Company Facilities; Service Interruptions

If as a result of a Line Extension or any other request that results in an expansion of the Company's facilities, an increase in the Company's facilities, construction of a system upgrade or any other change to or the modification of the Company's electric system, the Applicant/Customer shall pay all costs for such work as specified in this Rule 4.

Company Obligations

The Company shall remove, relocate or change the Company's facilities or temporarily interrupt service to a Customer's premises, upon the Customer's request, where such removal, relocation, change or interruption is acceptable to the Company.

The Company shall provide the Residential Customer with an estimate of the costs of removing, relocating, changing or interrupting the Customer's service, and the Residential Customer shall pay that amount to the Company prior to performing the work.

The Company shall bill the Residential Customer based upon the Contractor Costs and/or Direct Labor and Direct Material Costs associated with the removal, relocation or change of distribution facilities or interruption, less an amount equal to any maintenance expenses avoided as a result of such work.

The Company may, in its sole discretion, request a Non-Residential Customer or other person or entity to pay to the Company in advance the estimated cost to perform such work. The Company shall bill Non-Residential Customers or other person or entity the total cost of the work, including the total direct and indirect costs.

GENERAL RULES AND REGULATIONS

Rule 4 – Extension of Company Facilities: System Upgrades (continued)

After completion of the work, the Company shall bill or refund to the Non-Residential Customer or other person or entity, the difference between the estimated cost and the total direct and indirect cost of such work.

Customer Obligations

A Customer desiring the removal, relocation or change of Company facilities or interruption shall submit a request to the Company.

The Company may accept or reject said request in its sole and exclusive discretion. If the Company accepts said request, the Customer shall pay in advance the Company's total estimated cost for any Customer requested temporary interruption in the Customer's service due to construction, maintenance or other activities.

All Customers or other parties that request the removal, relocation or change of Company facilities shall furnish, without expense to the Company, satisfactory and acceptable to the Company rights-of-way, easements and/or permits for the construction, maintenance and operation of the relocated facilities.

Non-Residential Property Owner

A non-residential property owner shall not be relieved or excused from paying all costs associated with the relocation or modification of the Company's facilities or temporarily interrupt electric service to a Non-Residential Customer's property under this Rule 4(c) if such relocation or modification of Company facilities or temporary service interruption is the result of any order, rule, regulation or other direction to said property owner from any governmental or public authority.

GENERAL RULES AND REGULATIONS

5. Taxes on Applicant/Customer Advances

Any Applicant/Customer advance or other like amount received from an Applicant/Customer under this Tariff, under any contract executed under this Tariff or any other prior tariff shall constitute taxable income to the Company as defined by the Internal Revenue Service and shall be increased to include a payment by the Applicant/Customer equal to the applicable taxes. Such payment for taxes associated with such Applicant/Customer advance shall provide for the effect of current tax obligations offset by the present value of future tax deductions associated with the facility(ies) to be provided by the Company. The discount rate to be used for present value calculations shall be the Company's Allowance for Funds Used During Construction ("AFUDC") rate adjusted to a net of tax basis. Payments for taxes associated with Applicant/Customer advances shall not be discounted since any refunds of Applicant/Customer advances shall include a pro rata refund of amounts previously collected for applicable taxes.

6. Proof of Inspection

The Company will not connect or furnish electric service to or for a residential building or the completed construction, addition, alteration or repair of such a building or electric service upgrade unless the Applicant provides written proof to the Company that the building or structure has passed the inspections specified by and required under the Uniform Construction Code, 35 P.S. §§ 7210.101, *et seq.* ("*Construction Code*") and the Permit and Inspection Process for Residential Buildings established in the regulations implementing the *Construction Code* at 34 Pa. Code. §§ 403.61-.66.

For purposes of this Rule 6, the following definitions shall apply:

Addition – An extension or increase in the floor area or height of a building or structure, as defined by the *Construction Code*, 35 P.S. § 7210.103.

Alteration – Any construction or renovation to an existing structure other than repair or addition, as defined by the *Construction Code*, 35 P.S. § 7210.103.

Repair – The reconstruction or renewal of any part of an existing building for purpose of its maintenance, as defined by the *Construction Code*, 35 P.S. § 7210.103.

Residential building – Detached one-family and two-family dwellings and multiple single-family dwellings which are not more than three (3) stories in height with a separate means of egress which includes accessory structures, as defined by the *Construction Code*, 35 P.S. § 7210.103.

GENERAL RULES AND REGULATIONS

CHARACTERISTICS OF SERVICE

7. Wiring, Apparatus and Inspection

Company Obligations

The Company, owns, maintains, furnishes and installs the meters, unless otherwise allowed by the Commission. In addition, the Company shall install and maintain the transformers and Service Lines it deems necessary to provide for secondary service, unless specified otherwise in an applicable, valid and binding agreement. All equipment/facilities supplied by the Company shall remain its exclusive property and may be removed, in the Company's sole discretion, after termination of service for whatever cause.

The Company shall extend only one service lateral to a Customer's premises and install one (1) meter except where, in the Company's sole judgment, special conditions warrant the installation of additional facilities. Any type of service supplied by the Company to the same Customer at other points of delivery shall be metered and billed separately.

The Company shall repair and maintain any facilities/property it has installed on a Customer's premises. However, the Customer shall pay the full cost of inspection, repairs and/or replacement of all such facilities/property that may be damaged due to a Customer's negligence. No one shall break any seals or perform any work on any Company facilities including, but not limited to, meters without first receiving the Company's consent and approval.

GENERAL RULES AND REGULATIONS

Rule 7 – Wiring, Apparatus and Inspection (continued)

Applicant/Customer Obligations

Electric service installations shall be in accordance with the National Electrical Code, and all applicable local, state and federal codes, statutes and regulations, except as modified by the Company's then-applicable handbooks, booklets or other documents covering such installations, as they may be amended by the Company from time to time. A copy of the Company's requirements for electric service installations is available on the Company's website. The Company shall not be responsible for any injury or damage which may result from defects in wiring or devices on the customer's premises, provided, however, the Company may, without the assumption of any liability, connect a Customer's installation upon the filing of a proper application for inspection with the authority having jurisdiction, specifically reserving the right to disconnect said service if the said installation, on final inspection, proves defective and the customer, after reasonable notice, shall fail or refuse to rectify the said defects. If, on existing installations, there is reasonable doubt as to the safety of existing electrical equipment or wiring, the Company shall require, as a condition to furnishing service, that the service be inspected and approved by a qualified inspector in accordance with the National Electrical Code.

In the event that the Company is required by any state, federal or local governmental or public authority to place or relocate all or any portion of its facilities, including, but not limited to, mains, wires or services, poles or underground feeders, the Applicant/Customer shall, without cost or expense to the Company, change the location of the Applicant's/Customer's point of delivery to a point specified by the Company.

Upon the Company designating a point of delivery at which its service line will terminate, the Applicant/Customer shall provide, at its sole cost and expense, a place suitable to the Company for the installation of metering and all other electric facilities needed for the supply of electric energy by the Company or an EGS. Meters shall be located on the outside wall of a building as near as possible to the service entrance or under certain circumstances, when approved by the Company, inside of a building.

The Company may refuse to connect with any Applicant's/Customer's installation or to make additions or alterations to the Company's service connection when such installation is not in accordance with the National Electrical Code, and all applicable local, state and federal codes, statutes and regulations, and where a certificate approving such installations, additions or alterations has not been issued by (i) an electrical inspection authority contained on a list of such authorities maintained by the Pennsylvania Department of Labor and Industry or (ii) any city or county inspection entity having exclusive authority to make electrical inspections in that area.

GENERAL RULES AND REGULATIONS

Rule 7 – Wiring, Apparatus and Inspection (continued)

When a Customer's facilities or use of equipment having operating characteristics that adversely affects or has the potential to adversely affect, in the Company's sole judgment, the Company's electric system, the Customer shall take corrective action at its sole expense as may be directed by the Company. Unless corrective action is taken, the Company is under no obligation to serve or to continue to serve such Customers.

Each Applicant/Customer shall provide to the Company such service information described in Rule 1 of this Tariff. The Applicant/Customer shall be responsible and liable to the Company for any damages resulting from the Customer's failure to provide such service information.

The Company will require the customer to maintain a Power Factor in the range of 85% to 100% for secondary, primary and subtransmission service and 90% to 100% for transmission service, coincident with the customers maximum monthly peak demand and to provide, at the Customer's expense, any corrective equipment necessary in order to do so. The Company may inspect the Customer's installed equipment and/or place instruments on the premises of the Customer in order to determine compliance with this requirement, as deemed appropriate by the Company. The Company may charge the Customer the Company's installation cost incurred for corrective devices necessary for compliance with this provision. The Company is under no obligation to serve, or to continue to serve, a Customer who does not maintain a Power Factor consistent with the parameters set forth in this provision.

8. Metering

Company Obligations

The Company owns, maintains, installs and operates a variety of meters, and related equipment designed to measure and record Customers' consumption and usage of all services provided under this Tariff. The Company may, in its sole and exclusive discretion, install such meters and related equipment it deems reasonable and appropriate to provide service to Customers under this Tariff. The Company may, in its sole and exclusive discretion, install such special metering equipment as may be requested by a Customer, subject to the Customer paying all of the Company's incremental material, labor, overheads and administrative and general expenses relating to such facilities. Where additional metering services and the associated costs for the additional metering services are contained within this Tariff, those costs shall also be applicable.

GENERAL RULES AND REGULATIONS

Rule 8 – Metering (continued)

The Company shall conduct inspections and tests of its meters in accordance with prudent electric practices and as otherwise prescribed by all applicable Commission regulations.

Customer Obligations

The Customer shall install metering equipment, other than meters, in accordance with the requirements specified by the Company as amended from time to time.

Any Customer requesting a test of its meter(s) shall pay such fee(s) as established or approved from time to time by the Commission. If a tested meter does not meet Commission accuracy standards, the fee shall be returned to the Customer and the meter shall be repaired or replaced.

If requested by a Customer, or Customer's designated agent, the Company may, in its sole discretion, elect to supply near real time communication of raw data directly from the meter in a format not provided from the Company's standard metering equipment. All costs for providing near real time communication of raw data directly from the meter in a format not provided by the Company's standard metering equipment shall be paid by the Customer. If a Customer's, or Customer's designated agent subsequent consumption of kilowatts, kilovars and/or kilowatt-hours increases as a result of interruptions in the supply of raw data in any format due to, among other things, power outages or equipment failure which prevents the supply of raw data in any format, the Company shall not be responsible or liable, in damages or otherwise, for resulting increases in the Customer's bill.

If requested by a Customer, the Company may, in its sole discretion, elect to provide metering to a service location other than what is presently installed or otherwise proposed to be installed by the Company at that location. All costs for special metering facilities provided by the Company, including, but not limited to, all material, labor, overheads and administrative and general expenses, shall be billed to and paid by the Customer.

If requested by a Customer, the Company will install a communicating point-to-point ("PTP") smart meter at a Customer's metered service location prior to the Company's system-wide deployment of smart meters. Prior to installation, the Customer shall pay $346.95 for a single phase PTP smart meter and $457.82 for a three phase PTP smart meter. Costs for Customer requests for a PTP smart meter at service locations without a functional public cellular network will be determined on a case by case basis and must be paid by the Customer prior to the commencement of Company work. Costs are charged individually for each metering point at each service location, and include the estimated incremental costs associated with a PTP smart meter, a communication cellular card, and connection fees. The Customer shall pay $36.00 for requests to remove a PTP smart meter prior to the Company's system-wide deployment of smart meters. All other costs and cost reconciliations associated with Customer requests for a PTP smart meter shall be collected from the associated customer class in the Smart Meter Technologies Charge Rider. The Customer is responsible for any repairs to

GENERAL RULES AND REGULATIONS

Rule 8 – Metering (continued)

Customer-owned equipment, such as meter socket repairs, prior to the installation of a PTP smart meter. The Company shall maintain ownership of all PTP smart meters.

The Company owns and installs the appropriate metering, along with an available metering communication technology, necessary to bill the Customer according to tariff provisions. Where the selected metering utilizes a communication technology not enabled by smart metering, the Customer is responsible for providing the communication link per the Company's specifications or shall pay the Company any and all expenses for providing communications.

GENERAL RULES AND REGULATIONS

BILLING CONSIDERATIONS

9. Access to Customer Premises

The Company shall have the right to construct, operate and/or maintain any and all facilities it deems necessary to render electric service (including, but not limited to, billing and meter reading) to the Customer upon, over, across and/or under lands owned or controlled by the Customer. Each Customer shall grant the Company's employees or agents access to their premises at all reasonable times for any and all purposes relating to the supply of electric energy including, but not limited to, reading meters, testing or inspecting the Customer's wiring and connected load, repairing, removing or exchanging any or all equipment belonging to the Company, and for the purpose of removing the Company's property and/or facilities upon the termination of any applicable contract or the discontinuance of service from whatever cause.

10. Meter Reading and Rendering of Bills

a. Meter Reading

(1) Meters shall be read and bills for service shall be rendered monthly by the Company based upon its meter reading and billing schedule, except as otherwise provided in this Tariff. The Company reserves the right to read meters in all or any part of its service area on bi-monthly or quarterly schedules, except as provided for under Chapter 56 of the Commission's regulations and to render standard bills for the recorded use of service based upon the time interval between meter readings. In addition, the Company may elect, in its sole discretion, to read meters in all or any part of its service area less frequently than on a quarterly schedule and to render standard bills for the recorded use of service based upon the time interval between meter readings for (i) General Service Customers with constant use patterns such as, but not limited to, billboards, traffic signals, and pumps, and (ii) Seasonal Customers such as, but not limited to, camps and cottages.

GENERAL RULES AND REGULATIONS

Rule 10 – Meter Reading and Rendering of Bills (continued)

(2) At a Customer's request, not more than one (1) time per calendar year, the Company shall provide at no cost to the Customer, the Customer's historical billing data for the most recent twelve (12) months for which such data is available. If a Customer requests billing data (i) for a period earlier than the most recent twelve (12) months for which the data is available or (ii) in greater detail than normally maintained by the Company and provided to Customers, the Company may, in its sole discretion, provide such additional data to the Customer, reserving the right to charge Customers an additional amount for historical billing beyond the most recent twelve (12) months to offset the costs of providing the service.

b. Rendering of Bills

(1) Estimated Bills

At its option, when meters are read on other than a monthly schedule, the Company may render estimated bills to Customers on a monthly basis for the periods when meter readings are not obtained, and such bills shall be due and payable by each Customer upon presentation by the Company, subject to the Company's standard payment terms.

Upon request, the Company shall provide to a Customer a card upon which the Customer can mark its meter readings for any interim month, mail it to the Company, and receive a bill for the month's service.

When interim monthly bills are not rendered by the Company, a Customer, at its option, may voluntarily pay the Company its own estimate of an interim monthly bill, and such payment shall be shown by the Company as a credit on the next standard bill rendered to that Customer.

In the event the Company is unable to gain access to the meter location to obtain readings, it may, at its option, estimate the amount of electric service supplied based upon the Customer's past usage or, if no prior Customer usage is available, the past usage at the service location, and render an appropriate bill, which shall be paid in accordance with the Company's payment terms specified in this Tariff. Any bills covering subsequent meter readings shall reflect any adjustment due to under- or over-estimation, or any unusual circumstances known to have affected the quantity of service used by the Customer or consumed at the premises.

GENERAL RULES AND REGULATIONS

Rule 10 – Meter Reading and Rendering of Bills (continued)

The Company shall bill a Customer for energy used when, during any current or prior periods, a Customer's meter fails to correctly register the amount of electricity consumed. The amount of the bill or adjustments to prior bills shall be estimated by the Company, giving due consideration to the amount of use for the periods preceding and subsequent to such defective registration(s) by the meter.

(2) Summary Billing

Upon a Customer's request and the Company's approval, a Customer with multiple accounts may receive Summary Billing. Summary Billing may be permitted by the Company in those cases where read and due dates of the multiple accounts allow for Summary Billing without adversely affecting the timely payment of bills and where Summary Billing does not have an adverse financial impact on the Company. The Company may, in its sole discretion, charge Customers an additional amount for Summary Billing to offset any actual or potential adverse financial impact on the Company. A single due date for accounts that are summary billed shall be established by the Company and provided to the Customer. Summary Billing shall not commence unless and until the Customer agrees to the due date established for such Summary Billing.

GENERAL RULES AND REGULATIONS

Rule 10 – Meter Reading and Rendering of Bills (continued)

(3) Special Billing

The Company shall consider all requests from Customers to deviate from the Company's standard billing practices and procedures ("Special Billing"), including those described in this Tariff. The Company may, in its sole discretion, agree to provide Special Billing to a Customer, subject to such terms and conditions as the Company may prescribe including, but not limited to, payment by the Customer of all costs associated with the Company providing such Special Billing.

(4) Equal Payment Plan

The Equal Payment Plan (EPP) for Residential Customers is designed to make monthly payments consistent throughout an entire year, leveling out seasonal highs and lows. At the request of a Delivery Service Residential Customer, the Company shall estimate the Customer's Delivery Service Charges for a twelve (12) month period. The EPP is calculated by adding the total of the dollars invoiced for the previous 355 days. This amount is divided by the number of days in the twelve-month invoice history, the result of which is then multiplied by 31. These amounts are reviewed every three months. Customer's EPP payment amounts are adjusted if the actual cost of service is lower or higher than the monthly estimated amount where: the percent difference is greater than or equal to 25% OR the dollar difference is greater than or equal to $10. The review process occurs automatically during the invoice process in the appropriate month. If the review results in a change of the EPP amount, the information will be placed on the invoice advising the customer of the new amount and the next month's invoice will reflect the new amount. During the twelfth month, the anniversary bill will be presented. An information box will be placed on the invoice advising the Customer of the new amount. The Customer is responsible for the current EPP charge plus the difference in the EPP plan. A resulting reconciliation amount exceeding One-Hundred Dollars ($100.00) will be amortized consistent with applicable regulations upon request of the Customer. If a credit exists at the true-up month, it will be cleared against the current month amount. If a Customer fails to pay an outstanding bill by the time its next monthly bill is rendered, the Company may, in its sole discretion, terminate that Customer's Equal Payment Plan arrangements.

The Company shall make available the Equal Payment Plan for Default Service Charges and Delivery Service Charges for Federal Department of Housing and Urban Development ("HUD") financed housing during the time that such housing is either owned by HUD or subject to a first mortgage held or guaranteed by that agency which is (i) master metered and (ii) has electrically heated multi-family dwelling units. All provisions specified in this Rule 10b(4) for Equal Payment Plans for Default Service and Delivery Service Residential Customers shall apply to such housing.

GENERAL RULES AND REGULATIONS

Rule 10 – Meter Reading and Rendering of Bills (continued)

(5) Combined Billing

Residential Customers with both metered Residential Service and private Outdoor Lighting Service may request to receive Combined Billing from the Company for the two services.

Combined Billing for Non-Residential Customers shall be restricted as stated in the applicable provisions of this Tariff.

(6) Consolidated Billing

A Delivery Service Customer that has contracted with an EGS shall receive Consolidated Billing from the Company unless the Customer requests bills only for Delivery Service Charges.

(7) Minimum Charge

Each Rate Schedule of this Tariff applicable to Residential and Non-Residential Customers shall specify the Minimum Charge applicable to all service and Customers taking service under such Rate Schedule.

(8) Transformer Losses Adjustment

The Company may, at its option, meter its service at Primary Voltage of Company-owned transformers or at the Secondary Voltage of Customer-owned transformers. In such cases, the applicable demand and energy charges shall be increased (in the case of metering at Secondary Voltage) or decreased (in the case of metering at Primary Voltage) by two and one-half percent (2.5%) to compensate for transformer losses.

GENERAL RULES AND REGULATIONS

Rule 10 – Meter Reading and Rendering of Bills (continued)

(9) Power Factor/ Kilovar Billing

Billing for Power Factor or Kilovars, whichever is applicable, shall be in accordance with the Customer's applicable Rate Schedule or other provisions of this Tariff. The Power Factor used for billing purposes shall be rounded to the next highest whole percent, unless otherwise stated in the Customer's applicable Rate Schedule or other provisions of this Tariff.

(10) Billing for Vandalism, Theft or Deception

In the event there is any evidence that the Company's meters or other equipment on the Customer's premises have been tampered or interfered with by any means whatsoever, resulting in improper or non-registration of service supplied, the Customer being supplied through such equipment shall pay to the Company the amount the Company estimates is due for service used but not registered on the Company's meter, and the cost of any repairs or replacements, inspections and investigations relating thereto including, but not limited to, all administrative expenses associated with the investigation(s) (e.g., Legal, Accounting/Billing, etc.). Under these circumstances, the Company may at its option terminate its service immediately and/or require the Customer to pay all costs correcting any and all unauthorized conditions at the premises. In the event service has been terminated under these circumstances it shall not be restored to the Customer's premises until: (i) the Customer has a certificate of compliance with the provisions of the National Electric Code and the regulations of the National Fire Protection Association has been issued by the municipal inspection bureau or by any Company-accepted inspection agency, (ii) the Customer has complied with all of the Company's requirements and (iii) the Customer pays the Company a reconnection fee and deposit.

In the event there is any evidence that a Customer knowingly and willfully obtained service for itself or for another by creating or reinforcing a false impression, statement or representation and fails to correct the same, the Company shall immediately correct the account information in question and issue an adjustment for all current or previous amounts. The Customer shall be required to show proof of identity and sign an agreement for payment of all electric service received, plus any and all costs and administrative expenses associated with any investigation(s) (i.e., Legal, Accounts/Billing, etc.) which shall be added to their account. The Customer shall have three (3) business days in which to provide proof of identity. The Company may, in its sole discretion, terminate a Customer's electric service if the Customer fails to provide such proof of identity within the aforementioned time period.

GENERAL RULES AND REGULATIONS

Rule 10 – Meter Reading and Rendering of Bills (continued)

(11) Billing Errors

When the Company provides billing for Competitive Energy Supply on behalf of an EGS, the Company shall not be responsible for billing errors resulting from incorrect price information received from an EGS.

11. Payment of Bills

Except as otherwise provided in the Tariff, bills for service shall be rendered monthly based upon the Company's read and billing schedule and are due and payable by the Customer to the Company upon presentation by the Company for service furnished during the preceding period.

Remittances mailed by the Customer for the amount(s) due shall be accepted by the Company as tendered within the period to avoid late payment charges if such payment is received by the Company no more than five (5) days after the due date of the bill.

These provisions shall also apply, as appropriate, to Customers receiving Consolidated Billing. However, it is limited to the Basic services portion of the consolidated bill. Basic services shall have the meaning as defined in 52 Pa. Code § 54.2. The applicability of this section is also subject to consumer protections ordered by the Commission.

a. Due Dates

For Residential Customers, bills are due and payable to the Company on or before twenty (20) days from the date of mailing of the bill to said Customer. Non-Residential Customers' bills are due and payable to the Company on or before fifteen (15) days from the date the bill is mailed to said Customer.

Upon the request of a Residential Customer sixty (60) years of age or older or a Residential Customer receiving Social Security or an equivalent monthly pension payment, the Company may extend the due date of such Customer's bill from twenty (20) days to thirty (30) days upon such verification of the Customer's eligibility for payments as the Company deems reasonably necessary.

The following shall be allowed thirty (30) days for payment of their bills at net rates (i) local governmental bodies (including school districts), (ii) the Commonwealth of Pennsylvania, and (iii) agencies of the Federal Government.

GENERAL RULES AND REGULATIONS

Rule 11 – Payment of Bills (continued)

A Customer's failure to receive a bill shall not be construed or deemed, under any circumstances, to be a waiver of any of the provisions of this Tariff. A Customer's bill shall be overdue when not paid on or before the due date indicated in the bill.

b. Late Payment Charges

Late payment charges shall be applied to Default Service Charges, EGS charges that are subject to the Company's POR and Delivery Service Charges. The Company will apply late payment charges to EGS charges that are not subject to the Company's POR at the EGS's request when it is performing billing services for the EGS.

A Residential Customer's overdue bill shall be subject to a late payment charge of one and one-half percent (1.5%) interest per month on the full unpaid and overdue balance of the bill. A Non-Residential Customer's overdue bill shall be subject to a late payment charge of two percent (2.0%) interest per month on the full unpaid and overdue balance of the bill. Interest charges shall be calculated by the Company on the overdue portions of the bill and shall not be charged against any sum that falls due during a current billing period.

c. Allocation of Payments

All payments made by or on behalf of a Customer shall be applied to a Customer's account in accordance with the Commission's payment posting rules and applicable Regulations including the Company's Electric Generation Supplier Coordination Tariff on file with the Commission.

d. Delinquent Accounts

A Customer's account is delinquent when not paid in full by the due date stated on the bill or otherwise agreed upon by the Customer and the Company. The Company shall pursue collections of outstanding residential delinquent account balances in accordance with applicable law and Commission regulations. Termination of service will occur only for non-payment of undisputed delinquent accounts associated with the Company's regulated charges, which shall include EGS charges subject to the Company's POR.

The Company will have the ability to terminate service to a Customer for the Customer's non-payment of EGS Basic Electric Supply charges incurred after January 1, 2011 in the same manner and to the same extent that the Company could terminate service to such a Customer for non-payment of EDC charges. Residential Customer's termination will be subject to the consumer protections included in Chapter 14 of the Public Utility Code, Chapters 55 and 56 of the Commission's regulations, 52 Pa. Code §§ 55.1 and 56.1 et. seq., and/or other applicable regulations as may change from time to time. The POR is only available as long as the Company is able to terminate service to Customers under Chapter 14 of the Public Utility Code and Chapters 55 and 56 of the Commission's regulations, 52 Pa. Code §§ 55.1 and 56.1 et. seq., and/or other applicable regulations as may change from time to time.

GENERAL RULES AND REGULATIONS

Rule 11 – Payment of Bills (continued)

In the case of non-payment of a Customer's delinquent bill applicable to the Company's charges, the Company may, in its sole discretion, terminate its electric service and remove its equipment in accordance with applicable law and Commission regulations. The Company shall condition restoration of service on payment of EGS charges subject to the Company's POR.

A Residential Customer who has elected to receive Combined Billing for metered Residential Service and Outdoor Lighting Service shall be subject to 52 Pa. Code, Chapter 56 of the Commission's regulations and be treated as a single residential account.

e. Winter Termination – Determining Income Eligibility for Winter Termination

To determine if a Customer exceeds the 250% federal poverty level threshold, the Company will utilize financial information provided by the Customer. The Company may elect to send to the Customer an income verification form for completion and return.

12. Administrative Charges

a. Service Charges

Every Applicant or Customer, new or succession, who has its Delivery Service initiated or reconnected shall pay a service charge of Twelve Dollars and Fifty Cents ($12.50) to the Company.

b. Dishonorable Tender Charges

If a check or electronic transfer of funds received by the Company in payment of a Customer's account is returned unpaid or denied to the Company by the Customer's bank, a Fifteen Dollar ($15.00) charge for the returned check shall be added by the Company to the Customer's account and the Customer shall pay this amount to the Company in addition to all other applicable charges. A repeated cancellation by the Customer of electronic transfers or payments in the same twelve month period may, in the Company's discretion, result in revocation of rights to pay by electronic means.

c. Reconnect Charges

A Residential Customer who requests a disconnection and reconnection of service at the same location within a twelve (12) month period shall pay the Company a reconnect charge equivalent to the monthly minimum charge stated in the Customer's applicable Rate Schedule or other Tariff provision multiplied by the number of months between the disconnect and reconnect period, or the minimum reconnect charge stated in this Rule 12c, whichever is greater.

GENERAL RULES AND REGULATIONS

Rule 12 - Administrative Charges (continued)

Every Residential Customer that requests a connection or a reconnection shall pay the Company a fee of Thirty-Six Dollars ($36.00).

Every Non-Residential Customer shall pay the Company a reconnection fee/charge that is the higher of (i) the Residential Customer reconnect fees/charges specified in this Rule 12c or (ii) the Company's actual cost for reconnection of that particular Non-Residential Customer.

13. Determination of Demand

A Customer's active and/or reactive demand (if applicable) shall be measured by a meter acceptable to the Company registering the rate of use of energy and reactive energy during a specified time interval during each billing period. If, for any reason, the Company is unable to supply the Customer kilowatt or kilovar meters, the Company may, at its option, determine the Customer's use by means of periodic kilowatt or kilovar tests or estimates.

INDIVIDUALIZED SERVICES

14. Individualized Contracts

The Company, at its sole discretion, may enter into an Individualized Contract with a Non-Residential Applicant/Customer. If requested by the Company, the Non-Residential Applicant/Customer shall provide to the Company, or at the Company's option, to an agent representing the Company, all information and records necessary to evaluate the request for an Individualized Contract. All costs billed by the agent to the Company shall be paid by and the responsibility of the Non-Residential Applicant/Customer.

GENERAL RULES AND REGULATIONS

Rule 14 – Individualized Contracts (continued)

The terms and conditions of Delivery Service in each Individualized Contract shall be as mutually agreed upon between the Company and the Non-Residential Applicant/Customer. When fully executed, the Company may, in its sole discretion, request Commission approval thereof. The effective date of an Individualized Contract, filed with the Commission, shall be no less than ninety (90) days after the date of its filing with the Commission. The rates for each Individualized Contract shall be (i) established mutually by the Company and Non-Residential Applicant/Customer on a case by case basis and (ii) designed to recover at a minimum all of the Company's appropriate incremental costs of the service and a contribution to its fixed costs.

The Individualized Contract shall contain all service terms and conditions and the rates and charges to be paid for service rendered.

The Company may require the Non-Residential Applicant/Customer to provide the Company or its agent with a recent energy audit of the Non-Residential Applicant's/Customer's facilities and a list of all energy conservation and load management activities which have occurred in the past five (5) years, along with a list of all ongoing energy conservation and load management activities or proposed activities.

The Individualized Contract may be terminated by the Company if an eligible Non-Residential Customer's bills are not paid when due as specified in this Tariff.

In the event that any Individualized Contract is terminated by the Company or Non-Residential Applicant/Customer under the conditions specified in the contract, the Non-Residential Applicant/Customer shall subsequently be eligible for service under the standard Tariff Rate Schedule for which it qualifies.

The Company may modify or discontinue the provisions of this Rule 14 at any time, subject to any orders of the Commission. Unless otherwise ordered by the Commission, any Individualized Contracts in effect prior to any such modification or discontinuance of this Rule 14 shall remain in effect under the term and conditions specified in the applicable contract.

GENERAL RULES AND REGULATIONS

Rule 14 – Individualized Contracts (continued)

All applicable riders are chargeable to a Customer with an Individualized Contract and will be calculated and billed to the Customer using the same formula that would otherwise be applied under the Customer's applicable standard tariff rate schedule.

15. Company Facilities, Services and Products

The Company may furnish, at its sole discretion and upon an Applicant's/Customer's request, special, substitute, emergency repairs or additional facilities, services or products to such Applicant/Customer. When the Company provides facilities, services or products not normally supplied to an Applicant/Customer, or when the estimated or actual cost of such individualized, substitute, or additional facilities, services or products exceeds the estimated costs of the standard facilities, services or products that normally would be supplied by the Company without special charge, the Company may require the Applicant/Customer to enter into special agreement(s) ("Specialized Contracts") and may establish minimum charges and facilities charges. The Company may offer to Customers additional services or products that may be applicable to more than one Customer. At a minimum, charges under this Rule 15 shall be established by the Company on a case by case basis and shall be sufficient to recover all of its appropriate incremental costs of the service and a contribution to its fixed costs.

The Company may modify or discontinue the provisions of this Rule 15 at any time, subject to any Commission orders. Unless otherwise ordered by the Commission, any Specialized Contracts in effect prior to any such modification or discontinuance of this Rule 15 shall remain in effect under the term and conditions specified in the contract.

GENERAL RULES AND REGULATIONS

16. Auxiliary Power Sources and Readiness to Serve

Service to a Customer, any part of whose electric requirements are provided by other than Company-owned facilities, and where the Company supply can be substituted for that of the Customer, will be supplied only under the provisions of this rule.

The maximum demand in kilowatt and power factor which the Company is obligated to supply shall be determined by agreement between Customer and Company.

In case the maximum demand in kilovolt-amperes which the Company is obligated to supply is less than the Customer's maximum demand as estimated by the Company, the Company may require the Customer to limit his demand to the load which the Company is obligated to supply by means of a load limiter to be furnished, installed, and maintained by the Customer, approved, set, and sealed by the Company.

The Customer shall not at any instant operate any source of supply in parallel with the Company's service without written permission from the Company.

Monthly billing will be under the provisions of the rates in conjunction with which this rule is employed.

The Customer shall reimburse the Company for all loss or damage sustained by the Company as a result of the Customer's use of the Company's service under the provisions of this rule.

17. Interconnection, Safety & Reliability Requirements

In order to assure the integrity and safe operation of the Company’s system and to permit the continuation of reliable service to other Customers, the following requirements and standards apply to all types of Generating Facilities, including customer owned generation, desiring to interconnect with the Company’s system.

GENERAL RULES AND REGULATIONS

Rule 17 – Interconnection, Safety & Reliability Requirements (continued)

All generation operations shall be performed in a safe, reasonable and competent manner in accordance with prudent electric practices in order to, among other things, preserve and protect the Company's electric system.

All Generating Facilities shall submit a written application to the Company for acceptance of interconnected operation of their facilities with the Company's system prior to engaging in such interconnected operations. The Company may require, among other things, the following as part of any application submitted by an Applicant/Customer for service under this Rule 17:

a. Plans, specifications and location of the proposed installation.

b. Single line diagrams and details of the proposed protection schemes.

c. Instruction manuals for all protective components.

d. Component specifications and internal wiring diagrams of protective components, if not provided in instruction manuals.

e. Generator data required to analyze fault contributions and load current flows including, but not limited to, equivalent impedances, time constants and harmonic distortions.

f. The rating of all protective equipment if not provided in instruction manuals.

g. All such other information that may be required by the Company.

Paralleling Customer generation with the Company's system shall be permitted only upon the written consent of the Company.

GENERAL RULES AND REGULATIONS

EMERGENCY CONDITIONS

18. Load Control

Whenever the demands for electric power on all or part of the Company's system exceed or threaten to exceed the capacity then actually and lawfully available to supply such demands, or whenever system instability or cascading outages could result from actual or expected transmission overloads or other contingencies, or whenever such conditions exist in the system of another public utility or PJM control area with which the Company's system is interconnected and cause a reduction in the capacity available to the Company from that source or threaten the integrity of the Company's system or when communicated by PJM per established policies and standards, a load emergency situation exists. In such case(s), the Company shall take such reasonable steps as the time available permits or as directed by PJM to bring the demands within the then-available capacity or otherwise control load. Such steps shall include, but shall not be limited to, reduction or interruption of service to one or more Customers, in accordance with the Company's procedures for controlling load.

19. Energy Conservation

Whenever events occur which actually result or, in the judgment of the Company or PJM, threaten to result in a restriction of the fuel supplies available to generators that supply energy to the PJM markets, such that the amount of electric energy which the Company is able to supply is or shall be adversely affected, an emergency energy conservation situation exists.

In the event of an emergency energy conservation situation, the Company shall take such reasonable measures as it believes necessary and proper to conserve available fuel supplies. Such measures may include, but shall not be limited to, reduction, interruption, or suspension of electric service to one or more of its Customers or classes of Customers in accordance with the Company's procedures for emergency energy conservation.

GENERAL RULES AND REGULATIONS

MISCELLANEOUS PROVISIONS

20. Discontinuance

The Company may, at its sole option, terminate any service provided under this Tariff and remove its equipment on (i) required notice in case of a Customer's non-payment of a delinquent bill or a violation of the provisions of this Tariff or (ii), without notice, in situations which endanger or may endanger the safety of any person or property or may prove harmful to the Company's energy delivery system. Failure by the Company at any time to exercise its rights shall not be deemed a waiver thereof. Termination of service will occur for non-payment of undisputed delinquent bills associated with the Company's regulated charges, which shall include EGS charges subject to the Company's POR.

For Residential Customers, the Company may terminate service under any of the following circumstances (i) unauthorized use of the service delivered on or about the affected dwelling (ii) fraud or material misrepresentation of the Customer's identity for purpose of obtaining service (iii) tampering with the Company's meters or other equipment (iv) violating the Tariff provisions in a manner that endangers the safety of a person or the integrity or operation of the Company's facilities.

Where a Residential Customer has elected to receive Combined Billing for metered Residential Service and Outdoor Lighting Service, both services shall be subject to the Commission's Standards and Billing Practices for Residential Utility Service, 52 Pa. Code, Chapter 56, as a single residential account for all purposes including, but not limited to, discontinuance of service.

The Company may discontinue the supply of service to a particular Customer to the extent (and as may be) required to comply with any governmental rule, regulation, statute, order or directive. Verbal or written orders of police, fire, public health or similar officers, given in the performance of their duties, shall also permit the discontinuance of service under this Rule 20.

The Company may at any other time suspend the supply of electrical energy to any Customer for the purpose of making repairs, changes or improvements on any part of its system. When such suspension is planned in advance, prior notice of the cause and expected duration of the suspension shall be given to the extent practicable to Customers who may be affected.

GENERAL RULES AND REGULATIONS

21. Service Continuity: Limitation on Liability for Service Interruptions and Variations

The Customer, by accepting service from the Company, assumes responsibility for the safety and adequacy of the wiring and equipment installed by the Customer. The Customer agrees to indemnify and save harmless the Company from any liability which may arise as a result of the presence or use of the Company's electric service or property, defects in wiring or devices on the Customer's premises, or the Customer's failure to comply with the National Electrical Code.

The Company does not guarantee a continuous, uninterrupted, or regular supply of electric service. The Company may, without liability, interrupt or limit the supply of electric service for the purpose of making repairs, changes, or improvements in any part of its system for the general good of the service or the safety of the public or for the purpose of preventing or limiting any actual or threatened instability or disturbance of the system. The Company shall not be liable for any damages due to accident, strike, storm, lightning, riot, fire, flood, legal process, state or municipal interference, or any other cause beyond the Company's control.

In all other circumstances, unless caused by the willful and/or wanton misconduct of the Company, the liability of the Company to Customers or third parties for all injuries and damages, direct or consequential, including damage to computers and other electronic equipment and appliances, or loss of business, profit or production caused by variations or interruptions in electric supply, high or low voltage, spikes, surges, single phasing, phase failure or reversal, stray voltage, neutral to earth voltage, equipment failure or malfunction, response time to electric outages or emergencies, or the non-functioning or malfunctioning of street lights or traffic control signals and devices shall be limited to Five Hundred Dollars ($500) for residential customers and Two Thousand Dollars ($2,000) for commercial and industrial customers. In no case shall the Company's aggregate liability for multiple claims arising from a single alleged negligent act, incident, event, or omission exceed Two Hundred Thousand ($200,000). The Company's actions that are in conformance with electric system design, the National Electrical Safety Code, or electric industry operation practices shall be conclusively deemed not to be negligent. A variety of protective devices and alternate power supply equipment that may prevent or limit such damages are available. Due to the sensitive nature of computers and other electronically controlled equipment, the Customer, especially three-phase Customers, should provide protection against variations in supply.

GENERAL RULES AND REGULATIONS

Rule 21 – Service Continuity: Limitation on Liability for Service (continued)

To the extent applicable under the Uniform Commercial Code or on any theory of contract or products liability, the Company disclaims and shall not be liable to any Customer or third party for any claims involving and including, but not limited to, strict products liability, breach of contract, and breach of actual or implied warranties of merchantability or fitness for an intended purpose.

If the Company becomes liable under Section 2806(g) or 2809(c) of the Public Utility Code, 66 Pa. C.S. §§ 2806(g) and 2809(f), for Pennsylvania state taxes not paid by an Electric Generation Supplier (EGS), the non-compliant EGS shall indemnify the Company for the amount of additional state tax liability imposed upon the Company by the Pennsylvania Department of Revenue due to the failure of the EGS to pay or remit to the Commonwealth the tax imposed on its gross receipts under Section 1101 of the Tax Report Code of 1971 or Chapter 28 of Title 66.

22. Transfer of Electric Generation Supplier

Company shall change Customer’s electric supplier only upon receipt of electronic notification from the chosen electric supplier in accordance with the Pa P.U.C. Rules and Regulations as described in the Final Orders on Standards for Electronic Data Transfer and Exchange Electric Distribution Companies and Electric Generation Suppliers, Docket No. M-00960890F0015 and on Establishing Standards for Changing a Customer's Electric Supplier, Docket No. L-00970121. Changes in Customer's electric Supplier shall only be effective with Customer's normal meter reading date, regardless of whether the meter reading is actual or estimated.

RATE SCHEDULES

RATE RS
RESIDENTIAL SERVICE RATE

AVAILABILITY:

This Rate is available to Residential Customers using the Company's standard, single phase service through a single meter including not more than 2,000 watts of non-residential connected load served through the same meter.

All of the following general monthly charges are applicable to Delivery Service Customers:

GENERAL MONTHLY CHARGES:

Distribution Charge

$13.29 per month (Customer Charge), plus
4.103 cents per kWh for all kWh

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B – Storm Damage Charge
Rider C – Universal Service Cost Rider
Rider F – Phase II Energy Efficiency and Conservation Charge
Rider G - Smart Meter Technologies Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

RATE SCHEDULES

Rate RS (continued)

DEFAULT SERVICE CHARGES:

For Customers receiving Default Service from the Company, Rider H – Price to Compare Default Service Rate Rider, Residential Customer Class rate applies.

MINIMUM CHARGE:

The monthly Minimum Charge shall be $13.29 plus distribution energy charges and any charges related to applicable riders.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

EQUAL PAYMENT PLAN:

As per Rule 10b(4), Equal Payment Plan.

SPECIAL MONTHLY CHARGES

LOADS IN EXCESS OF 25 KILOWATTS: The Company shall install a suitable demand meter to determine the maximum 15-minute integrated demand when (i) a Customer's service requires the installation of an individual transformer, (ii) a Customer's total monthly consumption exceeds 10,000 kilowatt-hours for two (2) consecutive months, or (iii) when the Customer's service entrance requirements exceed 600 amperes.

If the demand so determined under this provision exceeds twenty-five (25) kilowatts, a monthly distribution demand charge of Two Dollars ($2.00) per kW for all kW shall apply to such excess as set forth in this Provision A, in addition to the General Monthly Charges. In no event shall the demand charge be based upon less than seventy-five percent (75%) of the highest excess demand during the preceding eleven (11) months.

RATE SCHEDULES

Rate RS (continued)

GENERAL PROVISIONS:

A. SERVICE TO EXISTING STRUCTURES CONVERTED FOR MULTIPLE OCCUPANCY: May be supplied through a single meter at the Company's option provided that the Company's prior consent has been obtained. This provision shall be limited to no more than eight (8) apartments or dwelling units continually served as such prior to September 18, 1978 and no more than two (2) apartments or dwelling units after September 18, 1978.

B. CUSTOMER ASSISTANCE PROGRAM: Customers who are enrolled in the Company's Customer Assistance Program may make payments to the Company in accordance with the Customer Assistance Program provided that electricity consumption limits and other requirements contained in the Customer Assistance Program are satisfied. Customer Assistance Program benefits shall be portable.

C. RESIDENTIAL FARM CUSTOMERS: Customers using the Company's service to a farm residence for residential purposes and, at the Customer's option, using such service for associated incidental "general farm uses" (including milk production) outside the dwelling unit shall be considered Residential Farm Customers. Where the Company has made a commitment to existing Customers prior to January 13, 1986, electric service through the farm residence meter may be used for "specialized farm operations" such as broiler raising, egg-laying houses, hatcheries, mushroom growing, greenhouses and similar specialized operations which produce items for sale, or produce items for others on a contract basis. Those Customers who choose an EGS and then return to the Company for their energy supply shall be billed under the appropriate General Service Rate. Electric service used in storing, processing, preparing or distributing products not raised on that farm shall not be considered as Residential Service and shall be separately metered and billed on the applicable Rate GS Rate Schedules.

Rules and Regulations:

The Company's Standard Rules and Regulations shall apply to the installation and use of electric service. Motors and equipment served under this rate schedule shall have electrical characteristics so as not to interfere with service supplied to other customers of the Company.

RATE SCHEDULES

RATE GS
VOLUNTEER FIRE COMPANY AND NON-PROFIT AMBULANCE SERVICE, RESCUE SQUAD AND SENIOR CENTER SERVICE RATE

AVAILABILITY:

This Rate Schedule is restricted to Volunteer Fire Companies, Non-Profit Ambulance Services, Non-Profit Rescue Squads and Non-Profit Senior Citizen Centers that sign a one (1) year contract.

All of the following general monthly charges are applicable to Delivery Service Customers:

GENERAL MONTHLY CHARGES:

Distribution Charge

$13.29 per month (Customer Charge), plus
4.103 cents per kWh for all kWh

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B - Storm Damage Charge
Rider C – Universal Service Cost Charge
Rider F - Phase II Energy Efficiency and Conservation Charge
Rider G - Smart Meter Technologies Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

RATE SCHEDULES

Rate GS (continued)

DEFAULT SERVICE CHARGES:

For Customers receiving Default Service from the Company, Rider H – Price to Compare Default Service Rate Rider, Residential Customer Class rate applies.

MINIMUM CHARGE:

The monthly Minimum Charge shall be $13.29 plus energy-related distribution charges and any applicable riders.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

SPECIAL MONTHLY CHARGES

LOADS IN EXCESS OF 25 KILOWATTS: The Company shall install a suitable demand meter to determine the maximum 15-minute integrated demand when (i) a Customer's service requires the installation of an individual transformer, or (ii) a Customer's total monthly consumption exceeds 10,000 kilowatt-hours for two (2) consecutive months or (iii) when the Customer's service entrance requirements exceed 600 amperes. If the demand so determined under this provision exceeds twenty-five (25) kilowatts, a monthly distribution demand charge of Two Dollars ($2.00) per kW for all kW shall apply to such excess as set forth in this provision, in addition to the General Monthly Charges. In no event shall the demand charge be based upon less than seventy-five percent (75%) of the highest excess demand during the preceding eleven (11) months.

Rules and Regulations:

The Company's Standard Rules and Regulations shall apply to the installation and use of electric service. Motors and equipment served under this rate schedule shall have electrical characteristics so as not to interfere with service supplied to other customers of the Company.

RATE SCHEDULES

RATE GS-SMALL
GENERAL SERVICE SECONDARY RATE – NON DEMAND METERED

AVAILABILITY:

Available to non-Residential Customers without demand meters that use electric service through a single delivery location for lighting, heating and/or power service. Secondary voltage shall be supplied to Customers at a single transformer location when load does not require transformer capacity in excess of 2,500 KVA. Upon a Customer's request, the Company may, at its option, provide transformers having a capacity of greater than 2,500 KVA.

If an existing Customer's total consumption exceeds 1,500 KWH per month for two (2) consecutive months, the Customer shall no longer be eligible for service under this Rate Schedule GS-Small. Based upon the Company's then estimate of the Customer's new demand, the Customer shall be placed on Rate Schedule GS-Medium or such other Rate Schedule for which such Customer most qualifies.

All of the following general monthly charges are applicable to Delivery Service Customers:

GENERAL MONTHLY CHARGES:

Distribution Charge

$16.53 per month for single phase (Customer Charge), plus

3.082 cents per kWh for all billed kWh

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B - Storm Damage Charge
Rider F - Phase II Energy Efficiency and Conservation Charge
Rider G - Smart Meter Technologies Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

RATE SCHEDULES

Rate GS-Small (continued)

DEFAULT SERVICE CHARGES:

For Customers receiving Default Service from the Company, Rider H - Price to Compare Default Service Rate Rider, Commercial Customer Class rate applies unless the Customer elects to receive Default Service from the Company under Rider I – Hourly Pricing Default Service Rider.

MINIMUM CHARGE:

The monthly Minimum Charge shall be $16.53.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

TERM OF CONTRACT

Each Customer shall be required to enter into a Delivery Service contract with the Company for a minimum one (1) year term. If the Delivery Service contract is terminated by the Customer prior to its expiration, the Minimum Charge provisions of this Rate Schedule shall apply. If the Customer's capacity or service requirements increase, the Company, in its sole and exclusive judgment, may at any time require the Customer to enter into a new Delivery Service contract.

RATE SCHEDULES

Rate GS-Small (continued)

SPECIAL PROVISION:

FIXED USAGE:

The Company may, in its sole and exclusive discretion, permit Customers to take service under this Special Provision. For Customers permitted by the Company to take service under this Special Provision, the Company may, in its sole and exclusive discretion, impute a level of energy and demand for that Customer based upon the Customer's projected load and hours of use for that load.

Rules and Regulations:

The Company's Standard Rules and Regulations shall apply to the installation and use of electric service. Motors and equipment served under this rate schedule shall have electrical characteristics so as not to interfere with service supplied to other customers of the Company.

RATE SCHEDULES

RATE GS-MEDIUM
GENERAL SERVICE SECONDARY RATE – DEMAND METERED

AVAILABILITY:

Available to non-Residential Customers that use electric service through a single delivery location for lighting, heating and/or power service up to 400 kW demand. Secondary voltage shall be supplied to Customers at a single transformer location when load does not require transformer capacity in excess of 2,500 KVA. Upon a Customer's request, the Company may, at its option, provide transformers having a capacity of greater than 2,500 KVA.

New Customers requiring transformer capacity in excess 2,500 KVA and existing Customers whose load increases such that a transformer change is required (over 2,500 KVA) shall be required to take untransformed service.

If an existing Customer's total consumption is less than 1,500 KWH per month for twelve (12) consecutive months, the Customer may no longer be eligible for service under this Rate Schedule GS-Medium. Based upon the Company's then estimate of the Customer's usage, the Customer shall be placed on Rate Schedule GS-Small or such other Rate Schedule for which such Customer most qualifies.

If an existing Customer's billing demand exceeds 400 kW for more than two (2) consecutive months in any 12-month period, then the Customer may no longer be eligible for service under this Rate Schedule GS-Medium, and shall be placed on Rate Schedule GS-Large or such other Rate Schedule for which such Customer most qualifies.

All of the following general monthly charges are applicable to Delivery Service Customers:

GENERAL MONTHLY CHARGES:

Distribution Charge

$19.01 per month for single phase (Customer Charge),
or
$34.39 per month for three phase (Customer Charge), plus

Demand

$5.22 per kW for all billing kW

$0.20 for each rkVA of Reactive Billing Demand

Energy

0.000 cents per kWh for all kWh

RATE SCHEDULES

Rate GS-Medium (continued)

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B - Storm Damage Charge
Rider F - Phase II Energy Efficiency and Conservation Charge
Rider G - Smart Meter Technologies Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

RATE SCHEDULES

Rate GS-Medium (continued)

DEFAULT SERVICE CHARGES:

For Customers receiving Default Service from the Company, Rider H – Price to Compare Default Service Rate Rider, Commercial Customer Class rate applies unless the Customer elects to receive Default Service from the Company under Rider I – Hourly Pricing Default Service Rider.

DETERMINATION OF BILLING DEMAND:

The Company shall install suitable demand meters to determine the maximum 15-minute integrated demand when (i) the connected load being served equals fifteen (15) kilowatts or more, or (ii) the Company estimates that a demand greater than five (5) kilowatts will be established. The Company may install a demand meter on new or upgraded electric services.

A determination of connected load or estimated demand may be made by the Company at any time and shall be made when the Customer's total consumption exceeds 1,500 KWH per month for two (2) consecutive months.

A Customer's demand shall be measured by indicating or recording instruments. Demands shall be integrated over 15-minute intervals. The billing demand in the current month shall be the greatest of: (i) the maximum measured demand established in the month during On-peak hours, as stated herein, (ii) forty percent (40%) of the maximum measured demand established in the month during Off-peak hours, or (iii) contract demand.

REACTIVE BILLING DEMAND:

For installations metered with reactive energy metering, the reactive billing demand in rkVA for the month shall be determined by multiplying the Billing Demand by the ratio of the measured lagging reactive kilovoltamperes hours to the measured kWh by the following formula: rkVA = Billing Demand X (measured lagging reactive kilovoltampere hours ÷ rate measured kWh). For all other installations, the Reactive Billing Demand shall be the integrated reactive demand occurring coincident with the Billing Demand.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

TERM OF CONTRACT:

Each Customer shall be required to enter into a Delivery Service contract with the Company for a minimum one (1) year term. If the Delivery Service contract is terminated by the Customer prior to its expiration, the Minimum Charge provisions of this Rate Schedule shall apply. If the Customer's capacity or service requirements increase, the Company, in its sole and exclusive judgment, may at any time require the Customer to enter into a new Delivery Service contract.

RATE SCHEDULES

Rate GS-Medium (continued)

MINIMUM CHARGE:

No bill shall be rendered by the Company for less than,

$19.01 per month for single phase,
or
$34.39 per month for three phase, plus

The demand charges at current rate levels times the Billing Demand, plus any distribution energy charges, and any charges stated in or calculated by any applicable Rider.

COMBINED BILLING: THIS PROVISION HAS BEEN RESTRICTED TO PRESENT LOCATIONS SINCE SEPTEMBER 18, 1978. Only one standard single phase metered service and one standard three-phase metered service, each in excess of five (5) KW measured demand for each service, shall be supplied at one contract location, and when so supplied the energy and demand registrations of the separate meters shall be determined separately and may be added for billing purposes when the use of capacity on each service will remain in excess of five (5) KW for each month of the contract year.

Each separate and non-contiguous point of delivery or service installation shall be considered a contract location and shall be metered and billed under a separate service contract.

SERVICE AT PRIMARY VOLTAGE: Customers served at Primary Voltage shall have the option to be billed under this Rate GS-Medium for any of the following conditions:

1. A Customer with an estimated maximum demand of 1,000 KW or less, and requiring Primary Service at a voltage less than the nearest available Primary Voltage System.

2. Customer's maximum billing demand does not exceed 100 KW for more than two (2) consecutive months in any 12-month period and service is supplied through a Customer-owned transformer at the nearest available Primary Voltage System.

Rules and Regulations:

The Company's Standard Rules and Regulations shall apply to the installation and use of electric service. Motors and equipment served under this rate schedule shall have electrical characteristics so as not to interfere with service supplied to other customers of the Company.

RATE SCHEDULES

RATE GS-LARGE
GENERAL SERVICE SECONDARY - TIME-OF-DAY RATE

AVAILABILITY:

This Rate is available to non-Residential Customers using electric service through a single delivery location for lighting, heating and/or power service whose registered demand is equal to or greater than 400 KW in two (2) consecutive months. Secondary voltage shall be supplied to Customers at a single transformer location when load does not require transformer capacity in excess of 2,500 KVA. Upon a Customer's request, the Company may, at its option, provide transformers having a capacity of greater than 2,500 KVA.

New Customers requiring transformer capacity in excess 2,500 KVA and existing Customers whose load increases such that a transformer change is required (over 2,500 KVA) shall be required to take untransformed service.

All of the following general monthly charges are applicable to Delivery Service Customers:

GENERAL MONTHLY CHARGES:

Distribution Charge

$93.87 per month (Customer Charge), plus

$3.63 per kW for all billing kW

$0.20 for each rkVA of Reactive Billing Demand

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B - Storm Damage Charge
Rider F - Phase II Energy Efficiency and Conservation Charge
Rider G - Smart Meter Technologies Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

RATE SCHEDULES

Rate GS-Large (continued)

DEFAULT SERVICE CHARGES:

For Customers receiving Default Service from the Company, the Hourly Pricing Default Service Rider, Rider I, rates apply.

DETERMINATION OF BILLING DEMAND:

A Customer's demand shall be measured by indicating or recording instruments. Demands shall be integrated over 15-minute intervals. The billing demand in the current month shall be the greatest of: (i) the maximum measured demand established in the month during On-peak hours, as stated herein, (ii) forty percent (40%) of the maximum measured demand established in the month during Off-peak hours, (iii) contract demand or (iv) fifty percent (50%) of the highest billing demand established during the preceding eleven (11) months.

RATE SCHEDULES

Rate GS-Large (continued)

REACTIVE BILLING DEMAND:

For installations metered with reactive energy metering, the reactive billing demand in rkVA for the month shall be determined by multiplying the Billing Demand by the ratio of the measured lagging reactive kilovoltamperes hours to the measured kWh by the following formula: rkVA = Billing Demand X (measured lagging reactive kilovoltampere hours ÷ rate measured kWh). For all other installations, the Reactive Billing Demand shall be the integrated reactive demand occurring coincident with the Billing Demand.

MINIMUM CHARGE:

No bill shall be rendered by the Company for less than,

$93.87 per month plus,

The demand charges at current rate levels times the Billing Demand, plus distribution energy charges, and any charges stated in or calculated by any applicable Rider.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

TERM OF CONTRACT:

Each Customer shall be required to enter into a Delivery Service contract with the Company for a minimum one (1) year term. If the Delivery Service contract is terminated by the Customer prior to its expiration, the Minimum Charge provisions of this Rate Schedule shall apply. If the Customer's capacity or service requirements increase, the Company, in its sole and exclusive judgment, may at any time require the Customer to enter into a new Delivery Service contract.

Rules and Regulations:

The Company's Standard Rules and Regulations shall apply to the installation and use of electric service. Motors and equipment served under this rate schedule shall have electrical characteristics so as not to interfere with service supplied to other customers of the Company.

RATE SCHEDULES

RATE GP
GENERAL SERVICE – PRIMARY RATE

AVAILABILITY/APPLICABILITY:

Available to non-Residential Customers using electric power and/or lighting service through a single delivery location at 2,400 volts or higher. Choice of voltage shall be at the option of the Company. All substation and transformer equipment required for utilization of the delivery voltage shall be owned and maintained by the Customer. As described more fully in the next paragraph, this Rate Schedule shall be applicable to the owner of any Generating Facility whose Generating Facility is interconnected to the Company's electric system, if the Company believes, in its sole and exclusive discretion, that the provisions of this Rate Schedule are otherwise available to the Generating Facility.

The Company shall determine the applicability of this Rate Schedule to Generating Facility owners in its sole and exclusive discretion. If and when the Company determines that the owner of a Generating Facility interconnected to the Company's system has not previously entered into Tariff or other arrangements satisfactory to the Company allowing it to charge and receive payment of Delivery Service Charges, Default Service Charges and/or Net Station Power, as applicable, the Company will assign the Generating Facility to this Rate Schedule if the Company believes, the provisions of this Rate Schedule are otherwise available to the Generating Facility. For any hour in which the Company has determined the Generating Facility receives energy or capacity, as metered at or near such facility, the Generating Facility owner shall be responsible for paying to the Company all Delivery Service charges and/or Default Service Charges, applicable, based upon the metered energy and demand. In addition, the Generating Facility owner shall be responsible for paying to the Company all charges associated with Net Station Power for each applicable billing period based upon the Default Service rates specified in this Rate Schedule.

Minimum billing demand shall not be less than twenty-five (25) KW

All of the following general monthly charges are applicable to Delivery Service Customers:

RATE SCHEDULES

Rate GP (continued)

GENERAL MONTHLY CHARGES:

Distribution Charge

$308.19 per month, plus

Demand
$3.35 per kW for all billed kW

$0.20 for each rkVA of Reactive Billing Demand

Energy
0.000 cents per kWh for all kWh

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B - Storm Damage Charge
Rider F - Phase II Energy Efficiency and Conservation Charge
Rider G - Smart Meter Technologies Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

DEFAULT SERVICE CHARGES:

For Customers receiving Default Service from the Company, the Hourly Pricing Default Service Rider, Rider I, rates apply.

RATE SCHEDULES

Rate GP (continued)

DETERMINATION OF BILLING DEMAND:

The Customer's demand shall be measured by indicating or recording instruments. Demand shall be integrated over 15-minute intervals or as otherwise determined by the Company. The billing demand in the current month shall be the greatest of: (i) twenty-five (25) KW, (ii) the maximum measured demand established in the month during On-peak hours, as stated herein, (iii) forty percent (40%) of the maximum measured demand established in the month during Off-peak hours, (iv) contract demand or (v) fifty percent (50%) of the highest billing demand established during the preceding eleven (11) months.

REACTIVE BILLING DEMAND:

For installations metered with reactive energy metering, the reactive billing demand in rkVA for the month shall be determined by multiplying the Billing Demand by the ratio of the measured lagging reactive kilovoltamperes hours to the measured kWh by the following formula: rkVA = Billing Demand X (measured lagging reactive kilovoltampere hours ÷ rate measured kWh). For all other installations, the Reactive Billing Demand shall be the integrated reactive demand occurring coincident with the Billing Demand.

For the purposes of determining the demand for Net Station Power of a Generating Facility under this Rate Schedule, registered demand during any hour cannot be netted, offset or credited against capacity from that Generating Facility in any other hour or from registered capacity from any other Generating Facility in any other hour.

RATE SCHEDULES

Rate GP (continued)

STATION POWER ENERGY NETTING:

If applicable PJM rules and procedures for determining Net Station Power are in effect, all Net Station Power shall be determined solely by PJM and provided to the Company for billing purposes under this Rate Schedule. If the Applicant self-supplies Net Station Power, the Applicant shall be responsible for obtaining all related transmission service. If no such applicable PJM rules and procedures for determining Net Station Power are in effect or PJM is unable for any reason to determine Net Station Power, the Company shall determine Net Station Power for any relevant period in its sole discretion.

MINIMUM CHARGE:

No bill shall be rendered by the Company for less than,

$308.19 per month, plus

the higher of (i) the demand charges at current rate levels times the Billing Demand, plus any distribution energy charges, and any charges stated in or calculated by any applicable Rider.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

TERM OF CONTRACT:

Each Customer shall be required to enter into a Delivery Service contract with the Company for a minimum one (1) year term. If the Delivery Service contract is terminated by the Customer prior to its expiration, the Minimum Charge provisions of this Rate Schedule shall apply. If the Customer's capacity or service requirements increase, the Company, in its sole and exclusive judgment, may at any time require the Customer to enter into a new Delivery Service contract.

Rules and Regulations:

The Company's Standard Rules and Regulations shall apply to the installation and use of electric service. Motors and equipment served under this rate schedule shall have electrical characteristics so as not to interfere with service supplied to other customers of the Company.

RATE SCHEDULES

RATE TP
TRANSMISSION POWER RATE

AVAILABILITY/APPLICABILITY:

This Rate Schedule is available to non-Residential Customers using electric power and/or lighting service through a single delivery location and at a single delivery voltage at available nominal transmission voltages whose registered demand is equal to or greater than 5,000 KW in two (2) consecutive months. Choice of voltage shall be at the option of the Company. All substation, transformer, voltage regulating, and other equipment required for utilization of the delivery voltage shall be owned and maintained by the Customer. Existing Rate TP Customers at existing locations, irrespective of their current service voltage or substation ownership, may remain on Rate TP unless their load level does not meet the requirements of Rate TP. However, if the Customer's load level increases and requires the Company's substation or voltage level to change, the Company may require the Customer to provide their own substation and take service at a voltage level under which the Customer qualifies for service under this Rate Schedule. As described more fully in the next paragraph, this Rate Schedule shall be applicable to the owner of any Generating Facility whose Generating Facility is interconnected to the Company's electric system, if the Company believes, in its sole and exclusive discretion, that the provisions of this Rate Schedule are otherwise available to the Generating Facility.

The Company shall determine the applicability of this Rate Schedule to Generating Facility owners in its sole and exclusive discretion. If and when the Company determines that the owner of a Generating Facility interconnected to the Company's system has not previously entered into Tariff or other arrangements satisfactory to the Company allowing it to charge and receive payment of Delivery Service Charges, Default Service Charges and/or Net Station Power, as applicable, the Company will assign the Generating Facility to this Rate Schedule if the Company believes the provisions of this Rate Schedule are otherwise available to the Generating Facility. For any hour in which the Company has determined the Generating Rate Facility receives energy or capacity, as metered at or near such facility, the Generating Facility owner shall be responsible for paying to the Company all Delivery Service Charges and/or Default Service Charges, as applicable, based upon the metered energy and demand. In addition, the Generating Facility owner shall be responsible for paying to the Company all charges associated with Net Station Power for each applicable billing period based upon the Default Service rates specified in this Rate Schedule.

Minimum billing demand shall not be less than 5,000 KW.

All of the following general monthly charges are applicable to Delivery Service Customers:

RATE SCHEDULES

Rate TP (continued)

GENERAL MONTHLY CHARGES:

Distribution Charge

$1,149.15 per month (Customer Charge), plus

$1.03 per kW for all billed kW

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B - Storm Damage Charge
Rider F - Phase II Energy Efficiency and Conservation Charge
Rider G - Smart Meter Technologies Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

RATE SCHEDULES

Rate TP (continued)

DEFAULT SERVICE CHARGES:

For Customers receiving Default Service from the Company, the Hourly Pricing Default Service Rider, Rider I, rates apply.

DETERMINATION OF BILLING DEMAND:

The Customer's demand shall be measured by indicating or recording instruments. Demand shall be integrated over 15-minute intervals or as otherwise determined by the Company. The billing demand in the current month shall be the greater of: (i) 5,000 KW, (ii) the maximum measured demand established in the month during On-peak hours, adjusted for Power Factor as stated herein, (iii) forty percent (40%) of the maximum measured demand established in the month during Off-peak hours, (iv) contract demand (v) fifty percent (50%) of the highest billing demand established during the preceding eleven (11) months.

For purposes of determining the demand for Net Station Power of a Generating Facility under this Rate Schedule, registered demand during any hour cannot be netted, offset or credited against capacity from that Generating Facility in any other hour or from registered capacity from any other Generating Facility in any other hour.

STATION POWER ENERGY NETTING:

If applicable PJM rules and procedures for determining Net Station Power are in effect, all Net Station Power shall be determined solely by PJM and provided to the Company for billing purposes under this Rate Schedule. If the Applicant self-supplies Net Station Power, the Applicant shall be responsible for obtaining all related transmission service. If no such applicable PJM rules and procedures for determining Net Station Power are in effect or PJM is unable for any reason to determine Net Station Power, the Company shall determine Net Station Power for any relevant period in its sole discretion.

RATE SCHEDULES

Rate TP (continued)

MINIMUM CHARGE:

No bill shall be rendered by the Company for less than,

$1,149.15 per month, plus

the demand charges at current rate levels times the Billing Demand, plus any distribution energy charges, and any charges stated in or calculated by any applicable Riders.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

TERM OF CONTRACT:

Each Customer shall be required to enter into a Delivery Service contract with the Company for a minimum one (1) year term. If the Delivery Service contract is terminated by the Customer prior to its expiration, the Minimum Charge provisions of this Rate Schedule shall apply. If the Customer's capacity or service requirements increase, the Company, in its sole and exclusive judgment, may at any time require the Customer to enter into a new Delivery Service contract.

RATE SCHEDULES

Rate TP (continued)

GENERAL PROVISIONS:

A. VOLTAGE DISCOUNT - 115 KV OR GREATER:

If the Company, in its sole discretion, elects to serve a Customer at 115 KV or greater, the demand charge shall be decreased as set forth below:

Credit for:	Demand Dollars/KW
Distribution	$0.31

Rules and Regulations:

The Company's Standard Rules and Regulations shall apply to the installation and use of electric service. Motors and equipment served under this rate schedule shall have electrical characteristics so as not to interfere with service supplied to other customers of the Company.

RATE SCHEDULES

RATE MS
MUNICIPAL SERVICE RATE

AVAILABILITY (RESTRICTED):

THE AVAILABILITY OF THIS RATE SCHEDULE TO CUSTOMERS HAS BEEN RESTRICTED SINCE OCTOBER 19, 1983.

Municipal lighting, and/or power and/or heating service used by counties, cities, boroughs, townships and public school districts for public purposes only and not applicable to service where counties, cities, boroughs, townships or public school districts are compensated in any form (other than admissions collected by such bodies) for the use of any of the facilities for which service is supplied.

Secondary Voltage: Secondary voltage will be supplied by the Company to Customers at a single transformer location when load does not require transformer capacity in excess of 2,500 KVA.

Primary Voltage: New Customers requiring transformer capacity in excess of 2,500 KVA and existing Customers whose load increases such that a transformer change is required (over 2,500 KVA) shall be required to take untransformed service.

All of the following general monthly charges are applicable to Delivery Service Customers:

GENERAL MONTHLY CHARGES:

Distribution Charge

$34.34 per month (Customer Charge), plus
4.448 cents per kWh for all kWh

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B - Storm Damage Charge
Rider F - Phase II Energy Efficiency and Conservation Charge
Rider G - Smart Meter Technologies Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

RATE SCHEDULES

Rate MS (continued)

DEFAULT SERVICES CHARGES:

For Customers receiving Default Service from the Company, Rider H – Price to Compare Default Service Rate Rider, Commercial Customer Class rate applies.

MINIMUM CHARGE:

The monthly Minimum Charge shall be $34.34 plus all distribution energy charges and any charges stated in or calculated by any applicable Riders.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

TERM OF CONTRACT:

Each Customer shall be required to enter into a Delivery Service contract with the Company for a minimum one (1) year term. If the Delivery Service contract is terminated by the Customer prior to its expiration, the Minimum Charge provisions of this Rate Schedule shall apply. If the Customer's capacity or service requirements increase, the Company, in its sole and exclusive judgment, may at any time require the Customer to enter into a new Delivery Service contract.

Rules and Regulations:

The Company's Standard Rules and Regulations shall apply to the installation and use of electric service. Motors and equipment served under this rate schedule shall have electrical characteristics so as not to interfere with service supplied to other customers of the Company.

SERVICES

BORDERLINE SERVICE

AVAILABILITY:

Borderline Service is available to public utility companies for resale in adjacent service territory to the Company under reciprocal agreements between the Company and other public utility companies, subject to the following conditions:

A. A request shall be made in writing for each point of supply where service is desired.

B. Borderline service may be supplied in the Company's sole and exclusive discretion when it has available adequate capacity to serve the requested location(s).

C. When such service is supplied, energy shall be supplied at sixty (60) cycle alternating current, at such potential and of such phase as may be mutually agreed upon.

All of the following general monthly charges are applicable to Delivery Service Customers.

GENERAL MONTHLY CHARGES:

Distribution Charge

2.251 cents per kWh for all kWh

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B - Storm Damage Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

SERVICES

Borderline Service (continued)

DEFAULT SERVICE CHARGES:

For Customers receiving Default Service from the Company, Rider H – Price to Compare Default Service Rate Rider, Commercial Customer Class rate applies.

INVESTMENT CHARGE:

One percent (1%) on the Company's investment in facilities necessary to deliver and meter the service.

The energy may be metered at the point of supply or at the nearest suitable point, or the energy may be estimated from the sum of the meter readings of purchaser's customers, plus an agreed upon correction to cover transformation and the line losses from the point of supply.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

TERM OF CONTRACT:

A contract shall be written for a period of not less than five (5) years.

Rules and Regulations:

The Company's Standard Rules and Regulations shall apply to the installation and use of electric service. Motors and equipment served under this rate schedule shall have electrical characteristics so as not to interfere with service supplied to other customers of the Company.

SERVICES

STREET LIGHTING SERVICE

AVAILABILITY:

This Service is applicable to overhead or underground street lighting service to municipal, local, state and federal governmental bodies, community associations and to public authorities for lighting of streets, highways, parks and similar places for the safety and convenience of the public. This Service supersedes Rate SV, Rate MH, Rate MV-1, Rate MV-2, Rate SL and Rate OSL, excepting Rate OSL, Provision A - Post Top Series Incandescent Street Lighting.

TYPE OF SERVICE:

The Company will provide unmetered energy, at the rate herein provided, when the Customer furnishes, installs, owns and maintains (including lamp and photocell) the entire lighting system consisting of, but not limited to, lamps, luminaries, controls, brackets, ballasts, conductors, and poles. Lighting units will operate from dusk to dawn, which is approximately 4,200 hours per year. The Company will supply electricity at mutually agreed upon delivery points for the operation of the lights. The Company may, at any time, inspect and/or test the Customer's equipment to verify or measure actual load. This service is limited to installations of contiguous Metal Halide street lighting units located in an area previously approved by the Company or limited to Sodium Vapor, Mercury Vapor or Incandescent street light units also served under General Provision A or General Provision D of this Service.

GENERAL MONTHLY CHARGES:

Demand and Energy Charges for common lamp sizes:

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B - Storm Damage Charge
Rider F - Phase II Energy Efficiency and Conservation Charge
Rider G - Smart Meter Technologies Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

SERVICES

Street Lighting Service (continued)

DEFAULT SERVICE CHARGES:

The Price to Compare Default Service Charge shall be determined using the applicable Monthly kWh usage, from the preceding chart, multiplied by the Price to Compare Default Service Rate Rider, Rider H, Commercial Customer Class rate.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

TERM OF CONTRACT:

Provision of this Service requires a contract with the Company. The initial term of contract shall be not less than ten (10) years, subject to renewal for successive one (1) year terms, unless other terms shall be provided in the contract. When replacement with different type luminaire is requested by the Customer of an existing luminaire during the initial ten (10) year term of contract, the Customer shall pay the cost of removal in addition to the depreciable life of the fixture for the remainder of the contract term (to be determined by the Company). Under Provision B, the term of contract may be less than ten (10) years, but not less than one (1) year.

GENERAL PROVISIONS:

A. COMPANY OPERATION AND MAINTENANCE OF CONVENTIONAL LUMINAIRE: The Company will operate and maintain conventional (non-ornamental) Sodium Vapor, Mercury Vapor and Incandescent lighting units consisting of lamps, luminaries, controls, brackets and ballasts approved by the Company. These units will be installed on wood poles at mounting heights not to exceed forty-five (45) feet and in a manner acceptable to the Company. The Company will operate and maintain and replace the photocell controls and lamps as necessary to the extent hereinafter expressly provided at the following monthly rates and charges:

SERVICES

Street Lighting Service (continued)

	Charge Per Month Per Light
1. Sodium Vapor Lamps	$2.21
2. Mercury Vapor Lamps	$0.91
3. Incandescent Lamps	$2.48

Where, at the Company's option and upon Customer request, the Company has converted existing Mercury Vapor and Incandescent lights to High Pressure Sodium Vapor lights or has installed on existing poles a Company-owned standard Sodium Vapor luminaire, the Company will operate and maintain said luminaire at the rates and charges listed under Street Lighting Service this, General Provision A, provided the Customer has made a contribution, to be calculated annually.

B. COMPANY OWNERSHIP OF CONVENTIONAL LUMINAIRE FACILITIES: The Company will furnish and install and own its standard Sodium Vapor, Mercury Vapor and Incandescent conventional (non-ornamental) street lighting units consisting of lamps, luminaries, controls, brackets and ballasts, mounted on the Company's wood poles and utilizing the Company's overhead distribution system. For each light, the Company will furnish without added charge up to 300 feet of overhead line on existing suitable poles. At its option, the Company may install additional wood poles, provided that a street lighting unit is then installed on each dedicated pole.

The type of lighting units and fixtures currently being furnished by the Company at the time service is contracted for under this Service will be installed at the rates herein provided.

1. Charges Per Month Per Light:	$2.12
2. Charges Per Month Per Dedicated Pole:	$8.83

Street Lighting Service (continued)

INCANDESCENT LIGHTS SERVED UNDER THIS PROVISION ARE RESTRICTED TO PRESENT CUSTOMERS AND NO ADDITIONAL LIGHTS WILL BE INSTALLED, RELOCATED OR INCREASED IN SIZE HEREUNDER (FORMERLY RESTRICTED ON STREET LIGHTING SERVICE AS OF OCTOBER 22, 1968).

C. UNDERGROUND FEED TO STREET LIGHTS: This provision is for the installation of new facilities at new locations or the conversion of facilities at existing locations. Where the Company furnishes an underground electrical source, there shall be billed charges in addition to the other charges specified in this Service per light as follows:

Demand and Energy Charges for common lamp sizes:

Sodium Vapor:

Nominal Watts	Monthly kWh	Distribution	Monthly Minimum Charge
70	32	0.08	0.12
100	46	0.12	0.12
150	66	0.17	0.12

0.218	0.12

*cents per kWh

The Company will provide and charge for NUG Charges to Customers taking Delivery Service in accordance with the provisions of Rider P – NUG Rider, which charge shall apply to all kWh billed under this Rate Schedule.

SERVICES

Street Lighting Service (continued)

DEFAULT SERVICE CHARGES:

The Price to Compare Default Service Charge shall be determined using the applicable Monthly kWh usage, from the preceding chart, multiplied by the Price to Compare Default Service Rate Rider, Rider H, Commercial Customer Class rate.

INCANDESCENT LIGHTS SERVED UNDER THIS PROVISION ARE RESTRICTED TO EXISTING CUSTOMERS AND NO ADDITIONAL LIGHTS WILL BE INSTALLED HEREUNDER OR RELOCATED OR INCREASED IN SIZE (FORMERLY RESTRICTED ON ORNAMENTAL STREET LIGHTING SERVICE AS OF OCTOBER 19, 1983).

The cost of trenching and backfilling, including breaking and replacement of concrete and other surfacing, and the provision and installation of duct or conduit (concrete encased where specified by the Company), where duct or conduit is required by the Company, shall be borne by the Customer. The cost of foundations required for support of standards shall be borne by the Customer, except that the Company will supply foundation bolts and conduit required for the installation in foundations. The Customer shall make such installations or contract with the Company or with others to do so, all to be in compliance with the Company's specifications. All installations made by (or for) the Customer shall be maintained by the Customer, except as next stated herein.

Upon mutual agreement with the Company, the Customer may transfer to the Company the ownership of such installations (except where an integral part of the Customer's property), and in the event of such transfer of ownership, the Company will thereafter maintain such equipment, and there shall be no change in the charges stated in the Rate Per Month of this Street Lighting Service, General Provisions D., E. and F.

D. COMPANY OPERATION & MAINTENANCE OF ORNAMENTAL LUMINARIES: The Company will operate and maintain ornamental Sodium Vapor, Mercury Vapor and Incandescent lighting units consisting of lamps, luminaire controls, brackets and ballasts approved by the Company and served from the Company's distribution system.

SERVICES

Street Lighting Service (continued)

These units will be installed on ornamental standards and in a manner acceptable to the Company. The Company will operate and maintain and replace the photocell controls and lamps as necessary to the extent hereinafter expressly provided at the following rates and charges:

	Charge Per Month Per Light
1. Sodium Vapor Lamps	$2.64
2. Mercury Vapor Lamps	$1.49
3. Incandescent Lamps	$2.60

Where, at the Company's option and upon Customer request, the Company has converted existing Mercury Vapor and Incandescent lights to High Pressure Sodium Vapor lights or has installed on a Company-owned standard a Company-owned standard Sodium Vapor luminaire, the Company will operate and maintain said luminaire at the rates and charges listed under Street Lighting Service, General Provision D., provided the Customer has made a contribution, to be calculated annually.

E. COMPANY OWNERSHIP OF ORNAMENTAL LUMINAIRE: Where at the approval of the Company, the Customer owns, installs and maintains the cable and ducts (or conduit) and the standards and foundation therefore and the Company owns, installs, and maintains its standard Sodium Vapor, Mercury Vapor or Incandescent Ornamental street light units consisting of only the lamp, ballast, control, luminaire (and its interior wiring), the Luminaire Charge per month for ornamental lights, not to exceed thirty-five (35) foot mounting height, will be as follows:

Luminaire Charge: $5.02 Per Light Per Month

F. COMPANY OWNERSHIP OF ORNAMENTAL STANDARDS: Where, at the Company's option and upon Customer request, the Company has installed on a Company-owned standard a Company-owned and Company-approved standard Sodium Vapor, Mercury Vapor or Incandescent ornamental luminaire, the Company will own, operate, and maintain said standard at the following rate:

$9.47 Standard Charge Per Month

Where, at the Company's option and upon Customer request, the Company has converted existing Mercury Vapor and Incandescent lights to High Pressure Sodium Vapor lights or has installed on a Company-owned standard a Company-owned standard Sodium Vapor luminaire, the Company will operate and maintain said luminaire at the following rates and charges provided the Customer has made a contribution, to be calculated annually.

$3.20 Standard Charge Per Month

SERVICES

Street Lighting Service (continued)

G. ALTERNATIVE TECHNOLOGY LIGHTING: The Alternative Technology Lighting charges shall apply to lighting facilities owned and maintained by the Customer which utilize Induction, Solid State, or Plasma Lighting technologies, or such additional alternative technology as may be specified by the Company. The Alternative Technology Lighting must be certified by an Edison Testing Laboratories "ETL" (or equivalent) to verify the actual consumption of the fixture. In addition and in order to certify the safe operation, the fixture must be Underwriters Laboratories "UL" (or equivalent) listed. Provisions A, B, D, E, and F shall not apply in the case of service provided under this General Provision G.

For purposes of the Provision G, the following definitions shall apply:

Induction Lighting – Discharge lamps, where mercury or other atoms are energized to elevate their energy level, then discharge a photon as they fall back to their normal state.

Solid State Lighting – Technology using semi-conducting materials to convert electricity into light. Solid State Lighting is an umbrella term encompassing both light-emitting diodes (LEDs) and organic light-emitting diodes (OLEDs).

Plasma Lighting – Plasma lamps are a family of light sources that generate light by exciting a plasma inside a closed transparent burner or bulb using a radio frequency (RF) power. Typically, such lamps use a noble gas or a mixture of these gases and additional materials such as metal halides, sodium, mercury, or sulfur. A waveguide is used to constrain and focus the electrical field into the plasma. In operation the gas is ionized and free electrons, accelerated by the electrical field collide with gas and metal atoms. Some electrons circling around the gas and metal atoms are excited by these collisions, bringing them to a higher energy state. When the electron falls back to its original state, it emits a photon, resulting in visible light or ultraviolet radiation depending on the fill materials.

Alternative Technology Lighting shall be applied to each kilowatt-hour delivered during a billing month to all Customers served under this specific provision, determined to the nearest one-hundredth of a cent per kilo-watt hour. In addition, the wattage of the Alternative Technology Lighting shall be rounded to the nearest 25 Watt. The Alternative Technology Lighting wattage will then be converted into kWh in accordance with the formula set forth below:

SERVICES

Street Lighting Service (continued)

$$kWh = \frac{(System\ Watt \times 350)}{1{,}000}$$

Where:

System Watt = Total Watts used (drawn) by the entire luminaire fixture.

RIDERS:

Bills rendered by the Company under this Service shall be subject to the charges stated in any applicable Rider. Rates identified in this Service include all charges developed and calculated in accordance with all applicable Riders in this Tariff, except for Rider A – Tax Adjustment Surcharge.

SERVICES

ORNAMENTAL STREET LIGHTING SERVICE

AVAILABILITY (RESTRICTED):

AVAILABLE ONLY AS A FULL SERVICE OPTION.

THIS SERVICE IS RESTRICTED TO EXISTING CUSTOMERS AND NO ADDITIONAL LIGHTS WILL BE INSTALLED HEREUNDER, OR INCREASED IN SIZE, EFFECTIVE OCTOBER 19, 1983. ANY CUSTOMER PRESENTLY SERVED UNDER THIS ORNAMENTAL STREET LIGHTING SERVICE AND ELECTS TO TERMINATE THIS SERVICE, SHALL NOT BE PERMITTED TO RETURN AS A ORNAMENTAL STREET LIGHTING SERVICE CUSTOMER.

Available for ornamental street lighting service and street lighting service for underpasses and bridges. Applicable only to municipal or other governmental bodies. Incandescent street lights may be relocated provided Customer pays Company the cost of such relocation, except that such lights will be installed only in areas already lighted predominantly by incandescent lights.

TYPE OF SERVICE:

The following conditions are applicable to all lights served and to all equipment supplied under this Service:

1. Lamps will be lighted from dusk to dawn, which is approximately 4,200 hours per year.

2. The lumen rating, where stated, is the manufacturers' stated nominal rating of lamps.

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B - Storm Damage Charge
Rider F - Phase II Energy Efficiency and Conservation Charge
Rider G - Smart Meter Technologies Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

SERVICES

Ornamental Street Lighting Service (continued)

DEFAULT SERVICE CHARGES:

The Price to Compare Default Service Charge shall be determined using the applicable Monthly kWh usage, from the preceding chart, multiplied by the Price to Compare Default Service Rate Rider, Rider H, Commercial Customer Class rate.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

TERM OF CONTRACT:

Service supplied under this classification shall be for a period of not less than one (1) year.

SERVICES

Ornamental Street Lighting Service (continued)

GENERAL PROVISION:

POST TOP SERIES INCANDESCENT STREET LIGHTING (RESTRICTED): Where the Customer elects to take street lighting service from series incandescent street lighting facilities and the Company furnishes and maintains the entire street lighting systems, the monthly charge shall be as specified below:

Nominal Initial Rate Lamp Lumens:	2,500	6,000
Lamp Charge Per Month	$43.96	$34.68

SERVICES

LED STREET LIGHTING SERVICE

AVAILABILITY:

This Service is applicable to Company owned overhead or underground Light Emitting Diode (LED) street lighting service to municipal, local, state and federal governmental bodies, community associations and to public authorities for lighting of streets, highways, parks and similar places for the safety and convenience of the public.

A minimum installation of 12 LED lights per customer per individual order is required.

GENERAL MONTHLY CHARGES:

Demand and Energy Charges for common lamp sizes:

Charges Per Month Per Light:

Cobra Head

Nominal Watts	Monthly kWh	Distribution
50	18	$6.87
90	32	$8.61
130	46	$9.15
260	91	$14.14

Colonial

Nominal Watts	Monthly kWh	Distribution
50	18	$10.96
90	32	$12.05

Acorn

Nominal Watts	Monthly kWh	Distribution
50	18	$18.19
90	32	$19.22

SERVICES

LED Street Lighting Service (continued)

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B - Storm Damage Charge
Rider F - Phase II Energy Efficiency and Conservation Charge
Rider G - Smart Meter Technologies Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

DEFAULT SERVICE CHARGES:

The Price to Compare Default Service Charge shall be determined using the applicable Monthly kWh usage, from the preceding chart, multiplied by the Price to Compare Default Service Rate Rider, Rider H, Commercial Customer Class rate.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

TERM OF CONTRACT:

Provision of this Service requires a contract with the Company. The initial term of contract shall be not less than ten (10) years, subject to renewal for successive one (1) year terms, unless other terms shall be provided in the contract. When replacement of existing lighting is requested by the Customer of an existing luminaire during the initial ten (10) year term, the Customer shall pay the cost of removal in addition to the depreciable life of the fixture for the remainder of the term (to be determined by the Company).

GENERAL PROVISIONS:

A. The Company shall furnish, install, and maintain at the above rates all necessary street lighting facilities consisting of but not limited to lamps, luminaries, brackets, and other supporting materials.

B. The Company will install lighting fixtures on an approved existing pole. All additional and new lighting equipment, consisting of but not limited to poles, brackets, wiring, transformation, etc., not provided for herein, installed by the Company at the request of the customer, shall be the property of the Company and be paid for by the customer prior to the customer taking service.

SERVICES

LED Street Lighting Service (continued)

C. Costs associated with activities related to the replacement, relocation, alteration, repair, or removal of existing street lighting equipment are not included as part of normal maintenance and will be the responsibility of the customer. Examples of such activities include, but are not limited to, the replacement of an existing fixture, removal or relocation of a lamp, luminaire, bracket, and/or pole, or installation of a luminaire shield.

D. All lamps shall be unmetered and will operate from dusk to dawn each and every night, or for approximately 4,200 hours per year.

E. If a Customer requests an underground system, it will be installed where service is supplied from an existing underground distribution system. Additional cost shall be borne by the Customer.

F. All service and necessary maintenance will be performed only during regular working hours of the Company. If service and necessary maintenance cannot be performed during regular working hours of the Company, for reasons beyond the Company's control, the incremental costs of performing such work shall be borne by the customer.

SERVICES

OUTDOOR AREA LIGHTING SERVICE

AVAILABILITY:

Available for lighting of outdoor areas and roadways from dusk to dawn, served from Company's existing overhead wood pole distribution system where 120-volt service is available and where the Company's sole determination that street lighting service is not appropriate. INSTALLATION OF MERCURY VAPOR LIGHTS UNDER THIS SERVICE IS RESTRICTED TO EXISTING LIGHTS AT PRESENT LOCATIONS AS OF OCTOBER 19, 1983.

THIS SERVICE SHALL BE FURTHER RESTRICTED TO EXISTING CUSTOMERS AT EXISTING LOCATIONS AS OF AUGUST 1, 2012.

RATE PER MONTH:

Watt	Monthly kWh	Distribution
175-Watt mercury vapor lamp	70	6.26
Sodium Vapor		
100-Watt sodium vapor lamp (Area Lighting)		
08/01/2012 through 5/31/2013	46	10.21
06/01/2013 through 5/31/2014	46	11.63
06/01/2014 through 5/31/2015	46	13.19
06/01/2015 through 5/31/2016	46	18.31
Effective 06/01/2016	46	18.31
250-Watt sodium vapor lamp (Flood Lighting)		
08/01/2012 through 5/31/2013	98	6.17
06/01/2013 through 5/31/2014	98	7.40
06/01/2014 through 5/31/2015	98	7.40
06/01/2015 through 5/31/2016	98	9.92
Effective 06/01/2016	98	9.92
400-Watt sodium vapor lamp (Flood Lighting**)**		
08/01/2012 through 5/31/2013	156	4.76
06/01/2013 through 5/31/2014	156	4.76
06/01/2014 through 5/31/2015	156	4.76
06/01/2015 through 5/31/2016	156	6.38
Effective 06/01/2016	156	6.38

SERVICES

Outdoor Area Lighting Service (continued)

RIDERS

Bills rendered under this schedule are subject to the following applicable Rider Charges:

Rider A – Tax Adjustment Surcharge
Rider B - Storm Damage Charge
Rider F - Phase II Energy Efficiency and Conservation Charge
Rider G - Smart Meter Technologies Charge
Rider J - Default Service Support Charge
Rider N - Solar Photovoltaic Requirements Charge
Rider P – Non-Utility Generation Charge

DEFAULT SERVICE CHARGES:

The Price to Compare Default Service Charge shall be determined using the applicable Monthly kWh usage, from the preceding chart, multiplied by the Price to Compare Default Service Rate Rider, Rider H, Commercial Customer Class rate.

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

TERM OF CONTRACT:

The initial term of contract shall be not less than three (3) years when installed on existing poles or not less than five (5) years when either a pole is installed for supporting the light or secondary facilities are installed to serve the light.

GENERAL PROVISIONS:

A. All facilities necessary for service under this schedule shall be owned and maintained by the Company, except that at its option the Company may install the light on a pole owned by another utility company, or on a farm center pole owned or used by the Customer. If a light is installed on a farm center pole, the Company may require a satisfactory written agreement releasing the Company of damage claims and to indemnify the Company against claims by others

SERVICES

Outdoor Area Lighting Service (continued)

B. No change in height of existing poles in primary distribution lines shall be made, nor shall additional poles be installed in such lines, for the purpose of installing a light unless Customer elects to pay the Company the cost of such change. If requested by a Customer, Company may, at its option, install a pole for supporting a light, and external secondary facilities to such pole, and in such cases there shall be a charge of Six Dollars and Ninety-Two Cents ($6.92) per pole and secondary facilities per month. Not more than two (2) one-pole extensions, or one (1) two-pole extension, may be made per Customer at any single premises. In either case, the extensions may be made only if a light is installed on each pole installed. If requested by a Customer, the Company may, at its option, install secondary

C. Facilities to serve a light, and in such cases, there shall be a charge issued to the Customer by the Company of Six Dollars and Ninety-Two Cents ($6.92) per light per month. As an alternative to the charges stated herein, the Customers may pay to the Company the cost of furnishing and installing the required facilities. For facilities to be installed hereunder, the Customer shall grant such right-of-way as is required, in accordance with the Provisions of this Tariff of this Tariff. The Customer shall obtain satisfactory written approval from the appropriate public authorities for lights to be located on public thorough-fares.

D. The lamp, luminaire with open refractor, and bracket not over four (4) feet in length adopted by the Company as standard for this type of service shall be used. Lamps shall be lighted from dusk to dawn by automatic control furnished by Company and burning hours of the light shall be approximately 4,200 hours per year. Lamp renewals shall be made during normal weekday working hours, ordinarily within forty-eight (48) hours of notification by the Customer, such renewals not to be made on Saturdays, Sundays or holidays.

E. Lights and poles shall be placed only at locations accessible for installation and maintenance by Company’s mechanized equipment.

A mercury vapor light fixture that becomes inoperable will be replaced with an equivalent lumen output sodium vapor light fixture to comply with the Federal Energy Policy Act of 2005 that prohibits the import or manufacture of mercury vapor ballasts. When such replacement occurs, sodium vapor rates will apply based on the Company’s current electric service Tariff.

RIDERS

RIDER A
TAX ADJUSTMENT SURCHARGE RIDER

After the addition of the charges provided in other applicable Riders, a Tax Adjustment Surcharge of (0.00%) shall be applied effective for service rendered on and after October 3, 2014 in addition to all other billings calculated under the provisions of this Tariff.

The Tax Adjustment Surcharge will be recomputed using the elements prescribed by the Commission in its regulations at 52 Pa. Code §69.51, et seq. and at 52 Pa. Code §54.91, et seq.:

1. on December 21 of each year until the surcharge is rolled into base rates, or

2. whenever the Company experiences a material change in any of the taxes used in calculation of the surcharge due to any changes in its state tax liability arising under 66 Pa. C.S. §§ 2806(g), 2809(c) or 2810.

The recalculation will be submitted to the Commission within ten (10) days after the occurrence of the event which occasions such recomputation or as prescribed in the Commission's regulations at 52 Pa. Code §54.91, et seq. If the recomputed surcharge is less than the one in effect, the Company will, or if the recomputed surcharge is more than the one in effect the Company may, submit with such recomputation a tariff or supplement to reflect such recomputed surcharge. The effective date of such tariff or supplement shall be ten (10) days after the filing or as prescribed in the Commission's regulations at 52 Pa. Code §54.91, et seq.

RIDERS

RIDER B
STORM DAMAGE CHARGE RIDER

A Storm Damage Charge ("SDC") shall be applied to each kilowatt-hour ("kWh") delivered during a billing month to all retail Customers served under this Tariff determined to the nearest one-thousandth of a cent per kWh. The SDC shall be non-bypassable.

The SDC charge per Customer Class is as follows:

SDC Customer Class 1 (Rate RS and Rate GS-Volunteer Fire Company, and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service)

0.000 cents per kWh

SDC Customer Class 2 (Rate GS-Small, Rate GS-Medium, Rate GS-Large, Rate MS, Borderline Service, Street Lighting Service, Ornamental Street Lighting Service, LED Street Lighting Service and Outdoor Lighting Service)

0.000 cents per kWh

SDC Customer Class 3 (Rate GP)

0.000 cents per kWh

SDC Customer Class 4 (Rate TP)

0.000 cents per kWh

The SDC shall be calculated in accordance with the formula set forth below:

$$SDC = \{[SDC_{CCA} \times (SD_C - SD_B - E)] / S_C\} \times [1/(1-T)]$$

Where:

SDC = The Customer Class charge in mills per kWh to be applied to each kWh of retail sales for the Customer Class, delivered to retail Customers served under this Tariff.

SDC_{CCA} = The SDC Customer Class Allocation Factors set forth in Table 1 of this rider.

RIDERS

RIDER B (continued)

SD_C = Storm Damage Costs, which are the direct, indirect and administrative costs (including wages and administration) incurred by the Company to provide storm damage restoration for the SDC Reconciliation Year, for the following activities and work:

- Pole replacements
- Line reconstruction
- All other services and equipment necessary to be performed and/or installed by the Company and/or its contractors to restore service to Customers following a storm.

SDC Customer Class Allocation Factors will be determined based on the Company's most recent Cost of Service Study.

SD_B = The amount of Storm Damage Costs currently reflected in the Company's most recent base rate case.

E = The over or under-collection of Storm Damage Costs that result from the billing of the SDC during the SDC Reconciliation Year (an over-collection is denoted by a positive E and an under-collection by a negative E) including applicable interest. Interest shall be computed monthly, based upon 41. P. S. § 202, the legal rate of interest, from the month the over or under-collection occurs to the month that the over-collection is refunded to or the under-collection is recovered from Customers.

S_C = The Company's projected Customer Class retail kWh sales for the projected SDC billing period.

T = The Pennsylvania gross receipts rate in effect during the billing month expressed in decimal form as reflected in the Company's base rates.

Table 1

SDC Customer Class	Allocation Factors
SDC Customer Class 1	.70992
SDC Customer Class 2	.20031
SDC Customer Class 3	.07900
SDC Customer Class 4	.01077

RIDERS

RIDER B (continued)

All capitalized terms not otherwise defined in this Rider shall have the definitions specified in Definition of Terms section of this Tariff. For purposes of this Rider, the following additional definitions shall apply:

1. SDC Computational Year - the 12 month period from January 1 through December 31 of each calendar year.

2. SDC Reconciliation Year - the period from November 1 through October 31 immediately preceding the SDC Computational Year.

3. SDC Interim Period – the period from the effective date of this rider through October 31, 2015.

The SDC shall be filed with the Commission by December 1 of each year. The SDC shall become effective the following January 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that the SDC charges, if left unchanged, would result in material over or under-collection of all Storm Damage Costs incurred or expected to be incurred during the current 12-month period ending December 31, the Company may request the Commission for interim revisions to the SDC to become effective thirty (30) days from the date of filing, unless otherwise ordered by the Commission.

At the conclusion of the period that this rider is in effect, the Company shall be authorized to recover or refund any reconciliations to be applied to Customer's bills under such mechanism the Commission may approve.

The SDC shall be subject to review and audit by the Commission.

RIDERS

RIDER C
UNIVERSAL SERVICE COST RIDER

Universal Service Charge ("USC") shall be applied to each kilowatt-hour delivered during a billing month to all Customers served under residential retail rate schedules under this Tariff, determined to the nearest one-thousandth of a cent per kilowatt-hour. The USC shall be non-bypassable.

For services rendered January 1, 2014 through December 31, 2014 the USC shall be equal to .339 cents per kWh for all kWh. The USC shall be included in the distribution charges of the monthly bill.

The USC shall be calculated in accordance with the formula set forth below:

$$USC = [(US_C/S_{Res}) - (E/S_{Res})] \text{ X } [1/(1-T)]$$

Where:

USC = The charge in mills per kilowatt-hour to be applied to each kilowatt-hour delivered to all Customers served under residential retail rate schedules under this Tariff.

US_C = Universal Service Program Costs, which are the estimated direct, indirect and administrative costs to be incurred by the Company to provide Universal Service to Customers for the USC Computational Year for the following programs ("Universal Service Programs"):

- Customer Assistance and Referral for Evaluation of Services ("CARES") Program
- Customer Assistance Program ("CAP")
- Fuel Fund Administration
- Gatekeeper Program
- WARM (formerly LIURP) Program
- Any other replacement or Commission-mandated Universal Service Programs.

S_{Res} = The Company's projected retail kilowatt-hour sales for the projected USC billing period for Customers served under residential retail rate schedules under this Tariff.

RIDERS

Rider C (continued)

E = The over or under-collection of Universal Service Program costs that result from the billing of the USC during the USC Reconciliation Year (an over-collection is denoted by a positive E and an under-collection by a negative E), including applicable interest. Interest shall be computed monthly as provided for in 41 P.S. § 202, the legal statutory interest rate, from the month the over or under-collection occurs to the month that the over-collection is refunded to or the under-collection is recovered from Customers.

T = The Pennsylvania gross receipts rate in effect during the billing month expressed in decimal form as reflected in the Company's base rates.

All capitalized terms not otherwise defined in this Rider shall have the definitions specified in Section 2 of this Tariff. For purposes of this Rider, the following additional definitions shall apply:

1. USC Computational Year - the 12 month period from January 1 through December 31 of each calendar year.

2. USC Reconciliation Year - the period from November 1 through October 31 immediately preceding the USC Computational Year.

The USC shall be filed with the Commission by December 1 of each year. The USC shall become effective the following January 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that the USC rates, if left unchanged, would result in material over or under-collection of all Universal Service Program Costs incurred or expected to be incurred during the current 12-month period ending December 31, the Company may request the Commission for interim revisions to the USC to become effective thirty (30) days from the date of filing, unless otherwise ordered by the Commission.

The Company shall file a report of collections under the USC within forty-five (45) days following the conclusion of each Computational Year quarter.

The USC shall be subject to review and audit by the Commission.

RIDERS

RIDER D
NET METERING RIDER

PURPOSE:

This Rider sets forth the eligibility, terms and conditions applicable to Customers with installed qualifying renewable customer-owned generation using a net metering system.

APPLICABILITY:

This Rider applies to renewable customer-generators served under Rate Schedules RS, GS-Volunteer Fire Company and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate, GS-Small, GS-Medium, GS-Large, GP, TP and MS who install a device or devices which are, in the Company's judgment, subject to Commission review, a bona fide technology for use in generating electricity from qualifying Tier I or Tier II alternative energy sources pursuant to Alternative Energy Portfolio Standards Act No. 2004-213 (Act 213) or Commission regulations and which will be operated in parallel with the Company's system. This Rider is available to installations where any portion of the electricity generated by the renewable energy generating system offsets part or all of the customer-generator's requirements for electricity. A renewable customer-generator is a non-utility owner or operator of a net metered generation system with a nameplate capacity of not greater than 50 kilowatts if installed at a residential service (Rate RS) or not larger than 3,000 kilowatts at other customer service locations (Rate GS-Volunteer Fire Company and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate ,GS-Small, GS-Medium, GS-Large, GP, TP and MS), except for Customers whose systems are above 3 megawatts and up to 5 megawatts who make their systems available to operate in parallel with the Company during grid emergencies as defined by the regional transmission organization or where a microgrid is in place for the purpose of maintaining critical infrastructure such as homeland security assignments, emergency services facilities, hospitals, traffic signals, wastewater treatment plants or telecommunications facilities provided that technical rules for operating generators interconnected with facilities of the Company have been promulgated by the Institute of Electrical and Electronic Engineers ("IEEE") and the Commission.

Qualifying renewable energy installations are limited to Tier I and Tier II alternative energy sources as defined by Act 213 and Commission Regulations. The Customer's equipment must conform to the Commission's Interconnection Standards and Regulations pursuant to Act 213. This Rider is not applicable to Customers served under Borderline Service, Partial Service, Rate Schedule QF, any Lighting Rate Schedules or any Customers utilizing Station Power Energy Netting.

RIDERS

Rider D (continued)

Service under this Rider is available upon request to renewable customer-generators on a first come, first served basis so long as the total rated generating capacity installed by renewable customer-generator facilities does not adversely impact service to other Customers and does not compromise the protection scheme(s) employed on the Company's electric distribution system.

A Customer may select one of the following metering options in conjunction with service under applicable Rate Schedule RS, GS-Volunteer Fire Company and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate, GS-Small, GS-Medium, GS-Large, GP, TP and MS.

1. A customer-generator facility used for net metering shall be equipped with a single bi-directional meter that can measure and record the flow of electricity in both directions at the same rate. A dual meter arrangement may be substituted for a single bi-directional meter at the Company's expense.

2. If the customer-generator's existing electric metering equipment does not meet the requirements under option (1) above, the Company shall install new metering equipment for the customer-generator at the Company's expense. Any subsequent metering equipment change necessitated by the customer-generator shall be paid for by the customer-generator. The customer-generator has the option of utilizing a qualified meter service provider to install metering equipment for the measurement of generation at the customer-generator's expense.

Additional metering equipment for the purpose of qualify customer-generator. The Company shall take title to the alternative energy credits produced by a customer-generator where the customer-generator has expressly rejected title to the credits. In the event that the Company takes title to the alternative energy credits, the Company will pay for and install the necessary metering equipment to qualify the alternative energy credits. The company shall, prior to taking title to any alternate energy credits, fully inform the customer-generator of the potential value of those credits and options available to the customer–generator for their disposition.

RIDERS

Rider D (continued)

3. Meter aggregation on properties owned or leased and operated by a customer-generator shall be allowed for purposes of net metering. Meter aggregation shall be limited to meters located on properties within two (2) miles of the boundaries of the customer-generator's property. Meter aggregation shall only be available for properties located within the Company's service territory. Physical meter aggregation shall be at the customer-generator's expense. The Company shall provide the necessary equipment to complete physical aggregation. If the customer-generator requests virtual meter aggregation, it shall be provided by the Company at the customer-generator's expense. The customer-generator shall be responsible only for any incremental expense entailed in processing his account on a virtual meter aggregation basis.

BILLING PROVISIONS:

The following billing provisions apply to customer-generators in conjunction with service under applicable Rate Schedule RS, GS-Volunteer Fire Company and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate, GS-Small, GS-Medium, GS-Large, GP, TP and MS.

1. The customer-generator will receive a credit for each kilowatt-hour received by the Company up to the total amount of electricity delivered to the Customer during the billing period at the full retail rate, consistent with Commission regulations. On an annual basis, the Company will compensate the customer-generator for kilowatt-hours received from the customer-generator in excess of the kilowatt hours delivered by Company to the customer-generator during the preceding year at the "full retail value for all energy produced" consistent with Commission regulations. The customer-generator is responsible for the distribution charge, demand charge and other applicable charges under the applicable Rate Schedule.

2. If the Company supplies more kilowatt-hours of electricity than the customer-generator facility feeds back to the Company's system during the billing period, all charges of the appropriate rate schedule shall be applied to the net kilowatt-hours of electricity that the Company supplied. The customer-generator is responsible for the distribution charge, demand charge and other applicable charges under the applicable Rate Schedule.

RIDERS

Rider D (continued)

3. For customer-generators involved in virtual meter aggregation programs, a credit shall be applied first to the meter through which the generating facility supplies electricity to the distribution system, then through the remaining meters for the customer-generator's account equally at each meter's designated rate. Virtual meter aggregation is the combination of readings and billing for all meters regardless of rate class on properties owned or leased and operated by a customer-generator by means of the Company's billing process, rather than through physical rewiring of the customer-generator's property for a physical, single point of contact. The customer-generators are responsible for the distribution charge, demand charge and other applicable charges under the applicable Rate Schedule.

4. If a net metering Customer served on Rate GS-Volunteer Fire Company and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate, GS-Small, GS-Medium, GS-Large, GP, TP and MS generates electricity such that the self-generation results in a 10% or more reduction in the customer's purchase of electricity through the Company's transmission and distribution network for any calendar year when compared to the calendar year immediately prior to the installation of the generation, the net metering Customer shall be responsible for its share of stranded costs to prevent interclass or intraclass cost shifting. The Company, upon determination that the customer has or will exceed the 10% limitation, will rebill the customer for NUG Charges, in an amount equal to the charges in the calendar year immediately prior to the installation of the generation. Such rebilling of NUG Charges will be at the otherwise applicable NUG Charge rate.

APPLICATION:

Customer-generators seeking to receive service under the provisions of this Rider must submit a written application to the Company demonstrating compliance with the Net Metering Rider provisions and quantifying the total rated generating capacity of the customer-generator facility.

RIDERS

Rider D (continued)

MINIMUM CHARGE:

The Minimum Charges under Rate Schedule RS, GS-Volunteer Fire Company and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate, GS–Small, GS-Medium, GS-Large, GP, TP and MS apply for installations under this Rider.

RIDERS:

Bills rendered by the Company under this Rider shall be subject to charges stated in any other applicable Rider

RIDERS

RIDER E
EMERGENCY ENERGY CONSERVATION RIDER

PURPOSE:

This Rider is applicable to Customers in conjunction with Tariff Rule 18, relating to Load Control. It provides for deviation from and modifications to the charges and practices otherwise applicable to certain Customers as a result of compliance with or non-compliance with emergency energy conservation levels ordered under conditions resulting from actual or potential shortage of fuel for electric generation.

APPLICABILITY:

Applicable to individual electric Customer accounts served under Rate Schedules GP and TP with measured demand of 2,000 KW or higher, in a recent twelve (12) month period prior to the order for emergency energy conservation. Customers designated by the provisions of Tariff Rule 19 and by the Pennsylvania Public Utility Commission will be exempt from the Provisions of this Rider.

PROVISIONS:

Base period energy use - The base energy use for a weekly period shall be determined by the Company for each applicable electric Customer account based upon a consideration of the Customer's actual past or current electric consumption and the Customer's existing operations.

Energy use level target - The energy use level target for each applicable Customer shall be that percentage of base period energy use ordered pursuant to the emergency energy conservation procedures provided by Tariff Rule 19 or other percentage as result of the order of appropriate governmental authority.

Current energy use - Current period use will be monitored on a weekly basis commencing no later than seventy-two (72) hours after the emergency is declared.

Compliance - When the energy consumption in any weekly period during the period of the emergency energy conservation condition is equal to or less than the energy use level target, the Customer will be deemed to have complied.

RIDERS

Rider E (continued)

Non-compliance - When the energy consumption in any weekly period during the period of emergency energy conservation condition exceeds the energy use target level, the Customer will be deemed in non-compliance.

In the event of continued non-compliance, the Company, upon notice to the Commission, may discontinue service.

Billing - During the period of emergency energy conservation condition, billing will be based on meter readings especially made to identify the demand established and energy used during the current energy use period. Customers in compliance with conservation orders will be excused from minimum bills and historical or contract demand or ratchet provisions and will be billed instead on the basis of current consumption and demand whenever the normal calculation method would produce a greater bill.

These Customers will be individually notified of this special billing provision prior to the implementation of the emergency energy conservation procedure.

RIDERS

RIDER F
PHASE II ENERGY EFFICIENCY AND CONSERVATION CHARGE RIDER

A Phase II Energy Efficiency and Conservation Charge ("Phase II EE&C-C") shall be applied to each Billing Unit during a billing month to Customers served under this Tariff, with the exception of those served under Borderline Service rates. Billing Units are defined as follows:

Residential, Non-profit, Commercial, and Street Lighting Customer Classes:	Per kWh
Industrial Customer Class:	Per kW PLC

Residential, Non-profit, Commercial, and Street Lighting Customer Class rates will be calculated to the nearest one-thousandth of a cent per kWh. Industrial Customer Class rates will be calculated to the nearest one-hundredth of a dollar per kW PLC. The Phase II EE&C-C rates shall be calculated separately for each Customer Class according to the provisions of this rider. For Residential Customers, the Phase II EE&C-C shall be included in the distribution charges of the monthly bill. For all other Customers, the Phase II EE&C-C shall be listed as a separate charge on the monthly bill.

For service rendered June 1, 2014 through May 31, 2015 the Phase II EE&C-C rates billed by Customer Class are as follows:

Residential Customer Class (Rate RS):

0.242 cents per kWh.

Non-profit Customer Class (Rate GS – Volunteer Fire Company, and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate and Rate MS):

0.774 cents per kWh.

Commercial Customer Class (Rate GS-Small, Rate GS-Medium, and Outdoor Lighting Service):

0.086 cents per kWh.

Street Lighting Customer Class (Street Lighting Service, LED Street Lighting Service and Ornamental Street Lighting Service):

0.017 cents per kWh.

Industrial Customer Class (Rate GS-Large, Rate GP, and Rate TP):

$ 0.19 per kW PLC.

RIDERS

Rider F (continued)

The Phase II EE&C-C rates by Customer Class shall be calculated in accordance with the formula set forth below:

$$EEC\text{-}C = [(EEC_C - E) / S] \text{ X } [1 / (1 - T)]$$

$$EEC_C = EEC_{Exp1} + EEC_{Exp2} + EEC_{Exp3} + EEC_{Exp4}$$

Where:

EEC-C = The charge in cents or dollar per Billing Unit by Customer Class as defined by this rider applied to each Billing Unit for the Rate Schedules identified in this rider.

EEC_C = The Energy Efficiency and Conservation Costs by Customer Class incurred and projected to be incurred by the Company for the Phase II EE&C-C Computational Period calculated in accordance with the formula shown above.

EEC_{Exp1} = Costs incurred and projected to be incurred associated with the Customer Class specific Phase II EE&C Programs as approved by the Commission for the Phase II EE&C-C Computational Period by Customer Class. These costs also include an allocated portion of any indirect costs incurred associated with all the Company's Phase II EE&C Programs for the Phase II EE&C-C Computational Period. Such costs shall be allocated to each Customer Class based on the ratio of class-specific approved budgeted program costs to total approved budgeted program costs.

EEC_{Exp2} = An allocated portion of incremental administrative start-up costs incurred by the Company through May 31, 2013 in connection with the development of the Company's Phase II EE&C Programs in response to the Commission's orders and guidance at Docket Nos. M-2012-2289411 and M-2008-2069887. These costs to design, create, and obtain Commission approval for the Company's Phase II EE&C Programs include, but are not limited to, consultant costs, legal fees, and other direct and indirect costs associated with the development and implementation of the Company's Phase II EE&C Programs in compliance with Commission directives. Such costs shall be allocated to each Customer Class based on the ratio of class-specific approved budgeted program costs to total approved budgeted program costs.

RIDERS

Rider F (continued)

EEC_{Exp3} = An allocated portion of the costs the Company incurs and projects to incur to fund the Commission's statewide evaluator contract which shall be excluded in the final determination of the Act 129 limitation on the Company's Phase II EE&C Programs costs. Such costs shall be allocated to each Customer Class based on the ratio of class-specific approved budgeted program costs to total approved budgeted program costs.

EEC_{Exp4} = An allocated portion of any costs the Company incurs and projects to incur to fund any future Commission-approved demand response programs, or successor demand response programs. Such costs shall be allocated to each Customer Class based on the ratio of class-specific approved budgeted program costs to total approved budgeted program costs.

E = The cumulative over or under-collection of Phase II EE&C costs by Customer Class that results from the billing of the Phase II EE&C-C rates (an over-collection is denoted by a positive E and an under-collection by a negative E).

S = The Company's projected Billing Units (kWh sales delivered to all Customers in the specific Customer Class or kW PLC demand for the Industrial Customer Class).

T = The Pennsylvania gross receipts tax rate in effect during the billing month expressed in decimal form as reflected in the Company's base rates.

All capitalized terms not otherwise defined in this rider shall have the definitions specified in the Definitions of Terms section of this Tariff. For the purpose of this Rider, the following additional definitions shall apply:

RIDERS

Rider F (continued)

1. Phase II EE&C-C Computational Period – The 12-month period from June 1, 2013 through May 31, 2014.

2. Phase II EE&C-C Initial Reconciliation Period – June 1, 2013 through March 31, 2014 for the initial period of the rider.

3. Phase II EE&C-C Reconciliation Period – The 12-month period ending March 31 each year thereafter, except for the Initial Reconciliation Period, for the duration of this rider.

4. Peak Load Contribution ("PLC") – A Customer's contribution to the Company's transmission zone normalized summer peak load, as estimated by the Company in accordance with PJM rules and requirements.

The Company will submit to the Commission by May 1 of each year starting May 1, 2014: (1) a reconciliation between actual Phase II EE&C-C revenues and actual Phase II EE&C-C costs through March of that year, as adjusted for removal of gross receipts tax; (2) any adjustment to the forecasted Phase II EE&C-C revenues anticipated to be billed during April through May of that year, as adjusted for removal of gross receipts tax; (3) any adjustment to the Phase II EE&C costs based upon actual costs incurred through March and any revised estimates for future months (including, but not limited to, re-evaluation or re-design of Phase II EE&C Programs and re-allocation of Phase II EE&C Program Costs to the designated Rate Schedules), subject to the amount permitted to be recovered under 66 Pa.C.S. § 2806.1; (4) the subsequent effect of the EE&C cost adjustment, Billing Unit forecast update, and reconciliation to the Phase II EE&C-C rates adjusted for gross receipts tax, and levelized over the period of the upcoming June 1 and continuing through the following May 31; (5) the Phase II EE&C budget estimate for the forthcoming annual calculation period (June 1 through May 31) by rate class; and (6) any other changes or adjustments approved by the Commission pertaining to the implementation of the Phase II EE&C Plan. There shall also be a final reconciliation of amounts to be collected or refunded after May 31, 2016.

Upon determination that the Phase II EE&C-C rates, if left unchanged, would result in material over or under-collection of all recoverable costs incurred or expected to be incurred by Customer Class, the Company may request that the Commission approve one or more interim revisions to the Phase II EE&C-C rates to become effective thirty (30) days from the date of filing, unless otherwise ordered by the Commission.

RIDERS

Rider F (continued)

The Company shall file an annual report of collections under this rider by June 30th of each year starting June 30, 2014 until the conclusion of this rider.

At the conclusion of the duration of this rider, the Company is authorized to recover or refund any remaining amounts not reconciled at that time under such mechanism as approved by the Commission.

Application of the Phase II EE&C-C rates shall be subject to annual review and audit by the Commission.

RIDERS

RIDER G
SMART METER TECHNOLOGIES CHARGE RIDER

A Smart Meter Technologies ("SMT") Charge ("SMT-C") shall be applied as a monthly Customer charge during each billing month to metered Customers served under this Tariff, with the exception of those served under Borderline Service rates, determined to the nearest cent. The SMT-C rates shall be calculated separately for each Customer Class according to the provisions of this rider. For all Customers, the SMT-C shall be included in the distribution charges of the monthly bill.

For service rendered July 1, 2014 through December 31, 2014 the SMT-C rates billed by Customer Class are as follows:

Residential Customer Class (Rate RS and Rate GS – Volunteer Fire Company, and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate):

$2.40 per month.

Commercial Customer Class (Rate GS-Small, Rate GS-Medium, and Rate MS):

$2.36 per month.

Industrial Customer Class (Rate GS-Large, Rate GP, and Rate TP):

$2.33 per month

RIDERS

Rider G (continued)

The SMT-C rates by Customer Class shall be calculated in accordance with the formula set forth below:

$$SMT\text{-}C = [((SMT_C - E) / ACCC) / 12] \text{ X } [1 / (1 - T)]$$

$$SMT_C = SMT_{Exp1} + SMT_{Exp2}$$

Where:

SMT-C = The monthly charge by Customer Class as defined by this rider applied to each Customer billed under the Rate Schedules identified in this rider.

SMT_C = The Smart Meter Technologies Costs by Customer Class projected to be incurred by the Company for the SMT-C Computational Year calculated in accordance with the formula shown above.

SMT_{Exp1} = A projection of costs to be incurred associated with the Customer Class specific Smart Meter Technology Procurement and Installation Plan ("Plan") as approved by the Commission for the SMT-C Computation Year by Customer Class including carrying charges on capital costs, depreciation expense, and operational and maintenance expenses. These costs would also include an allocated portion of any projected indirect costs to be incurred benefiting all Customer Classes of the Company's Plan for the SMT-C Computational Year. Any reduction in operating expenses or avoided capital expenditures due to the Smart Metering Program will be deducted from the incremental costs of the Smart Meter Program to derive the net incremental cost of the Program that is recoverable. Such reductions shall include any reductions in the Company's current meter and meter reading costs.

RIDERS

Rider G (continued)

SMT_{Exp2} = An allocated portion of incremental administrative start-up costs incurred by the Company through July 31, 2010 in connection with the development of the Company's Plan. These costs to design, create, and obtain Commission approval for the Company's Plan include, but are not limited to, consultant costs, legal fees, and other direct and indirect costs associated with the development and implementation of the Company's Plan in compliance with Commission directives. These costs shall be amortized over the 5-month period ending December 31, 2010. Interest will be calculated monthly on the average of the beginning and end of month cumulative balance of these costs as incurred and included in the determination of the monthly amortized amount. The interest shall be computed based on the legal rate determined pursuant to 41 P.S. § 202.

E = The over or under-collection of SMT costs by Customer Class that results from the billing of the SMT-C rates during the SMT Reconciliation Year (an over-collection is denoted by a positive E and an under-collection by a negative E), including applicable interest. Interest shall be computed monthly at the legal rate determined pursuant to 41 P.S. § 202, from the month the over or under-collection occurs to the month that the over-collection is refunded or the under-collection is recovered from Customers in the specific Customer Class. Any reduction in operating expenses or avoided capital expenditures due to the Smart Metering Program will be deducted from the incremental costs of the Smart Meter Program to derive the net incremental cost of the Program that is reconciled to the billed SMT-C rates during the SMT Reconciliation Year. Such reductions shall include any reductions in the Company's current meter and meter reading costs.

RIDERS

Rider G (continued)

ACCC= The Company's projected Average Customer Class Count for the specific Customer Class for the SMT-C Computational Year.

T = The Pennsylvania gross receipts tax rate in effect during the billing month expressed in decimal form as reflected in the Company's base rates.

All capitalized terms not otherwise defined in this rider shall have the definitions specified in the Definitions of Terms section of this tariff. For the purpose of this rider, the following additional definitions shall apply:

1. SMT-C Computational Year – The 12-month period from January 1 through the following December 31 with the exception of the initial SMT-C Computational Year that will be the 5-month period from August 1, 2010 through December 31, 2010.

2. SMT-C Reconciliation Year – The 12-month period ending June 30 immediately preceding the SMT-C Computational Year.

The initial SMT-C rates pursuant to this rider shall be effective August 1, 2010 through December 31, 2010. Subsequent SMT-C rates shall be filed with the Commission by August 1 of each year and the SMT-C rates shall become effective the following January 1, unless otherwise ordered by the Commission, and shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determination that the SMT-C rates, if left unchanged, would result in material over or under-collection of all recoverable costs incurred or expected to be incurred during the then-current SMT-C Computational Year, the Company may request that the Commission approve one or more interim revisions to the SMT-C rates to become effective thirty (30) days from the date of filing, unless otherwise ordered by the Commission.

RIDERS

Rider G (continued)

The Company shall file an annual report of collections under this rider within thirty (30) days following the conclusion of each SMT-C Reconciliation Year.

At the conclusion of the duration of this reconciliation rider, the Company is authorized to recover or refund any remaining amounts not reconciled at that time under such mechanism as approved by the Commission.

Application of the SMT-C rates shall be subject to annual review and audit by the Commission

RIDERS

RIDER H
PRICE TO COMPARE DEFAULT SERVICE RATE RIDER

A Price to Compare Default Service Rate ("$PTC_{Default}$") shall be applied to each kWh of Default Service that Met-Ed delivers to Customers under this rider as determined to the nearest one-thousandth of a cent per kWh. The $PTC_{Default}$ rate shall be billed to Customers receiving Default Service from the Company under this rider. The rates shall be calculated according to the provisions of this rider.

For service rendered September 1, 2014 through November 30, 2014 the $PTC_{Default}$ rates billed by Customer Class are as follows:

Commercial Customer Class (Rate GS-Small, Rate GS-Medium, Rate MS, Borderline Service, Street Lighting Service, Ornamental Street Lighting, LED Street Lighting Service and Outdoor Lighting Service):

$0.06715 per kWh.

Residential Customer Class (Rate RS, Rate RT, and Rate GS – Volunteer Fire Company, Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate):

$0.07362 per kWh

RIDERS

Rider H (continued)

The $PTC_{Default}$ rates by Commercial or Residential Customer Class will be calculated at the end of each Default Service Quarter (three months ending March 31st, June 30th, September 30th, and December 31st) to be effective for the three-month period beginning on the first day of the third calendar month following the end of that Default Service Quarter (June 1st, September 1st, December 1st, and March 1st). The $PTC_{Default}$ rate shall be calculated by Customer Class in accordance with the formula set forth
below:

$$PTC_{Default} = [(PTC_{Current} + E)] \text{ X } [1 / (1 - T)]$$

$$PTC_{Current} = (PTC_{Current\ Cost\ Component} \text{ X } PTC\ Loss_{Current}) + PTC_{Adm} + PTC_{NITS}$$

$$E = [((DS_{Exp1} + DS_{Exp2}) - PTC_{Rev} + DS_{Int})/DS_{Sales}] \quad (C)$$

Where:

$PTC_{Current}$ = The current cost component of the $PTC_{Default}$ rate grossed up for line losses calculated by Commercial or Residential Customer Class determined to the nearest one-thousandth of a cent per kWh to be applied to each kWh of Default Service delivered to Retail Customers under this rider.

The computation of the $PTC_{Current}$ component of the $PTC_{Default}$ rate by Commercial or Residential Customer Class will use the following procedures:

$PTC_{Current\ Cost\ Component}$ = The current cost component of the $PTC_{Default}$ rate calculated by Customer Class determined to the nearest one-thousandth of a cent per kWh to be applied to each kWh of Default Service delivered to Retail Customers under this rider. This rate will be determined, by Customer Class, using the projected weighted cost of Default Service supply acquired by the Company to serve Default Service load and will include any AEPS expenses that may be incurred by the Company related to amendments to the AEPS Act that may occur subsequent to the effective date of the Supplier Master Agreement for the Default Service Supply Plan. The cost of Default Service supply will include the costs the Company incurs from any block and spot purchases as required by the terms of the Default Service Supply Plan.

RIDERS

Rider H (continued)

PTC $Loss_{Current}$ = Distribution line losses for energy that are determined by the applicable Loss Factors specified below:

Customer Class	Loss Factor
Commercial Customer Class	1.0515
Residential Customer Class	1.0515

PTC_{Adm} = An administrative fee for applicable administration costs by Customer Class determined to the nearest one-thousandth of a cent per kWh to be applied to each kWh of Default Service delivered to Retail Customers under this rider.

PTC_{NITS} = For the Residential Customer Class only, a Network Integration Transmission Service charge for block energy purchases, determined to the nearest one-thousandth of a cent per kWh to be applied to each kWh of Default Service delivered to Retail Customers under this rider.

E = The Price to Compare Default Service Reconciliation Rate component by Customer Class. The rate determined to the nearest one-thousandth of a cent per kWh by Customer Class shall be applied to each kWh of Default Service delivered to retail Customers by Customer Class under this rider.

RIDERS

Rider H (continued)

DS_{Exp1} = An allocated portion of the incremental start-up costs incurred by the Company through May 31, 2013 in connection with the Company's Default Service Supply Plan to provide Default Service amortized over the twenty-four (24) month period ending May 31, 2015, including but not limited to:

- Incremental start-up administrative costs including metering and billing costs incurred and other costs as necessary to provide service to retail Default Service Customers
- Other start-up costs incurred to develop and implement the competitive bid process for the retail Default Service Supply Plan for retail Default Service including legal, customer notice, and consultant fees
- The incremental administrative start-up costs associated with the portfolio procurements of the supply needed from block and spot purchases

Interest will be calculated monthly on the average of the beginning and the end of month balances of these costs and included in the determination of the monthly amortized amount. The monthly interest rate will be based upon the 41 P.S. § 202 statutory rate.

DS_{Exp2} = The cumulative costs to provide Default Service incurred by the Company for the respective Customer Class through the end of the previous Default Service Quarter, including but not limited to the following:

RIDERS

Rider H (continued)

- Payments made to winning bidders
- Any net energy costs associated with the portfolio procurements of the supply needed from block and spot purchases. These net energy costs will reflect the net proceeds from sales in the wholesale energy market of any excess energy purchased by the Company to provide Default Service that exceeds actual energy used.).
- Any PJM related charges including capacity, operating reserve, transmission-related costs other than Non-Market Based Services Transmission Charges, and ancillary services associated with the portfolio procurements of the supply needed from block and spot purchases.
- An allocated portion of administrative costs associated with the portfolio procurements of the supply needed from block and spot purchases.
- An allocated portion of incremental administrative costs including metering and billing costs incurred and other costs as necessary to provide service to retail Default Service Customers.
- All contingency plan implementation costs incurred during the supply period.
- An allocated portion of other costs incurred to develop and implement the competitive bid process for Retail Default Service including legal, customer notice, and consultant fees.
- AEPS expenses incurred by the Company related to amendments to the AEPS Act occurring subsequent to the effective date of the Supplier Master Agreement for the Default Service Supply Plan excluding such costs that are recovered through the Company's Solar Photovoltaic Requirements Charge Rider.

RIDERS

Rider H (continued)

- The net AEPS expenses incurred by the Company associated with the portfolio procurements of the supply needed from block and spot purchases. These net AEPS expenses will reflect the net proceeds of sales of AEPS credits purchased that exceed the AEPS credits needed to meet AEPS requirements.
- The cost of credit when the Company is considered by PJM to be the load serving entity

PTC_{Rev} = The cumulative revenues billed to Retail Customers by Customer Class for Default Service under the Default Service Supply Plan, excluding applicable Pennsylvania gross receipts tax, through the end of the most recent Default Service Quarter billed under the respective Customer Class $PTC_{Default}$ rates.

DS_{Int} = The cumulative amount of carrying charges calculated on a monthly basis through the end of the most recent Default Service Quarter by Customer Class. Interest will be calculated monthly on the average balance of 1) the respective month's beginning balance of prior months' cumulative over or under collection of PTC_{Rev} compared to the sum of the amortized portion of DS_{Exp1} costs and DS_{Exp2} costs incurred to date including

RIDERS

Rider H (continued)

cumulative interest calculated thereon through the beginning of the month; and 2) the respective month's ending balance of cumulative over or under collection of PTC_{Rev} compared to the amortized portion of DS_{Exp1} costs and DS_{Exp2} costs incurred to date including cumulative interest calculated thereon through the beginning of the month. The monthly interest rate will be based upon the 41 P.S. § 202 statutory annual rate for under collections and based upon the 41 P.S. § 202 statutory annual rate plus two percent for (over) collections.

DS_{Sales} = The Company's projected Default Service kWh sales to Retail Customers by Customer Class for the three-month billing period that the E rate component of the $PTC_{Default}$ rate will be in effect.

T = The Pennsylvania gross receipts tax rate in effect during the billing month expressed in decimal form as reflected in the Company's base rates.

Each change in the $PTC_{Default}$ rates will be filed with the Commission thirty (30) days prior to the effective date of the rate changes. The Company shall file details in support of the revised $PTC_{Default}$ rates.

At the conclusion of the duration of this reconciliation rider, the Company is authorized to recover or refund any remaining amounts not reconciled at that time under such mechanism as approved by the Commission.

Application of the $PTC_{Default}$ rates shall be subject to annual review and audit by the Commission.

RIDERS

RIDER I
HOURLY PRICING DEFAULT SERVICE RIDER

AVAILABILITY:

The charges billed under this rider are applicable to all Customers on Rate Schedules GS-Large, GP, and TP who elect to take Default Service from the Company. These charges are also applicable to Customers on Rate Schedules GS-Small and GS-Medium on a voluntary basis who meet the metering requirements of this rider. Rates shall be billed under this rider on the next scheduled meter reading date after electing Default Service.

All GS-Small and GS-Medium Customers electing service under this rider must have Smart Meter technology installed as part of the Company's Smart Meter Plan filed with and approved by the Commission.

Hourly Pricing Service Charges:

Customers participating in the Hourly Pricing Default Service Rider will be billed for usage based on the following calculation:

Hourly Pricing Service Charges = ($HP_{\text{Energy Charge}} + HP_{\text{Cap-AEPS-Other Charge}} + HP_{\text{Administrative Charge}} + HP_{\text{Unc}} + HP_{\text{Reconciliation Charge}}$) X [1 / (1-T)]

HP Energy Charge per kWh:

$$HP_{\text{Energy Charge}} = \sum_{t=1}^{n} (kWh_t \times (LMP_t + HP_{Anc}) \times HP_{\text{Loss Multiplier}})$$

Where:

n = Total number of hours in the billing period

t = An hour in the billing period

LMP = the "Real Time" PJM load-weighted average Locational Marginal Price for the ME Transmission Zone.

HP_{Anc} = $0.00200 per kWh for ancillary services

RIDERS

Rider I (continued)

HP Loss Multipliers:	GS-Small	1.0515
	GS-Medium	1.0515
	GS-Large	1.0515
	GP	1.0171
	TP	1.0007

These HP Loss Multipliers exclude transmission losses.

HP Cap-AEPS-Other Charge:

$0.01846 per kWh representing the costs paid by the Company to the Supplier for Capacity, AEPS costs, and any other costs incurred by the Supplier multiplied by the HP Loss Multipliers. This charge is subject to quarterly adjustments.

HP Administrative Charge:

$0.00004 per kWh representing the administrative costs incurred by the Company associated with providing Hourly Pricing Service.

HP Uncollectibles Charge:

$0.00001 per kWh representing the generation-related unbundled uncollectible accounts expense associated with Hourly Pricing Default Service. This charge is subject to annual adjustment on June 1 of each year.

RIDERS

Rider I (continued)

HP Reconciliation Charge:

The HP Reconciliation Charge Rate ("E_{HP}") shall be applied to each kWh of Default Service that Met-Ed delivers to Customers under this rider as determined to the nearest one-thousandth of a cent per kWh. The E_{HP} rate shall be included as a non-bypassable component billed to Customers receiving Default Service from the Company under this rider. The rate shall be calculated according to the provisions of this rider.

For service rendered September 1, 2014 through November 30, 2014, the E_{HP} rate is as follows:

HP Reconciliation Charge Rate = $0.02859 per kWh

The E_{HP} rate will be calculated at the end of each Default Service Quarter (three months ending March 31st, June 30th, September 30th, and December 31st) to be effective for the three-month period beginning on the first day of the third calendar month following the end of that Default Service Quarter (June 1st, September 1st, December 1st, and March 1st). The E_{HP} rate shall be calculated in accordance with the formula set forth below:

$$E_{HP} = ((DS_{HPExp1} + DS_{HPExp2}) - PTC_{HPRev} + DS_{HPInt})/DS_{HPSales}$$

Where:

E_{HP} = The rate determined to the nearest one-thousandth of a cent per kWh to be applied to each kWh of Default Service delivered to Customers under this rider.

DS_{HPExp1} = An allocated portion of the incremental start-up costs incurred by the Company through May 31, 2013 in connection with the Company's Default Service Supply Plan to provide Default Service amortized over the twenty-four (24) month period ending May 31, 2015 including but not limited to:

RIDERS

Rider I (continued)

- Incremental start-up administrative costs including metering and billing costs incurred and other costs as necessary to provide service to Retail Default Service Customers
- Other start-up costs incurred to develop and implement the competitive bid process for the Retail Default Service Supply Plan including legal, customer notice, and consultant fees.

Interest will be calculated monthly on the average of the beginning and the end of month balances of these costs and included in the determination of the monthly amortized amount. The monthly interest rate will be based upon the 41 P.S. § 202 statutory rate.

DS_{HPExp2} = The cumulative costs to provide Hourly Pricing Default Service incurred by the Company through the end of the previous Default Service Quarter including but not limited to the following:

- Payments made to winning bidders
- AEPS expenses incurred by Met-Ed related to amendments to the AEPS Act and/or related laws or regulations occurring subsequent to the effective date of the Supplier Master Agreement for the Default Service Supply Plan excluding such costs recovered through the Company's Solar Photovoltaic Requirements Charge Rider
- An allocated portion of incremental administrative costs including metering and billing costs incurred and other costs as necessary to provide service to retail Default Service Customers
- All contingency plan implementation costs incurred during the supply period
- An allocated portion of other costs incurred to develop and implement the competitive bid process for retail Default Service including legal, customer notice, and consultant fees.
- The cost of credit when the Company is considered by PJM to be the load serving entity

RIDERS

Rider I (continued)

PTC_{HPRev} = The cumulative revenues, excluding any revenues associated with the HP Uncollectibles Charge and applicable Pennsylvania gross receipts tax, through the end of the most recent Default Service Quarter billed to Hourly Pricing Default Service Customers under this rider including the applicable E_{HP} rates.

DS_{HPInt} = The cumulative amount of carrying charges calculated on a monthly basis through the end of the most recent Default Service Quarter. Interest will be calculated monthly on the average balance of 1) the respective month's beginning balance of prior months' cumulative over or under collection of PTC_{HPRev} compared to the sum of the amortized portion of DS_{HPExp1} costs and DS_{HPExp2} costs incurred to date including cumulative interest calculated thereon through the beginning of the month; and 2) the respective month's ending balance of cumulative over or under collection of PTC_{HPRev} compared to the amortized portion of DS_{HPExp1} costs and DS_{HPExp2} costs incurred to date including cumulative interest calculated thereon through the beginning of the month. The monthly interest rate will be based upon the 41 P.S. § 202 statutory annual rate for under collections and the 41 P.S. § 202 statutory annual rate plus two percent for (over) collections.

$DS_{HPSales}$ = The Company's projected Hourly Pricing Default Service kWh sales to Retail Customers for the three-month billing period that the E_{HP} rate will be in effect.

Gross Receipts Tax:

T = The Pennsylvania gross receipts tax rate in effect during the billing month expressed in decimal form as reflected in the Company's base rates.

RIDERS

Rider I (continued)

General:

Each change in the E_{HP} rate as well as other rates within this rider will be filed with the Commission thirty (30) days prior to the effective date of the rate changes. The Company shall file details in support of the revised
rates.

At the conclusion of the duration of this reconciliation rider, the Company is authorized to recover or refund any remaining amounts not reconciled at that time under such mechanism as approved by the Commission.

Application of the E_{HP} rate shall be subject to annual review and audit by the Commission.

Adjustment for Meter Location:

Where the Company meters distribution secondary voltage service on the primary side of the transformers, the demand and energy registrations shall each be reduced by two and one-half percent (2.5%). Where the Company meters service supplied at voltages higher than the distribution secondary voltage on the secondary side of the transformers, either compensating - metering equipment will be used to correct for transformer losses or the demand and energy meter registration shall each be increased by two and one-half percent (2.5%).

Metering:

The Customer is responsible for providing a working dedicated telephone line for metering purposes at each metering point or shall pay the Company any and all expenses for providing communications to the interval equipment at the Customer's location(s). Maintenance of the meter(s) will be the responsibility of the Company, which will own the meter(s).

RIDERS

RIDER J
DEFAULT SERVICE SUPPORT RIDER

A Default Service Support ("DSS") rate shall be applied to DSS Sales delivered by the Company to Delivery Service Customers under this rider as determined to the nearest one-thousandth of a cent per kWh or dollar per kW NSPL, as applicable. The DSS rate shall be billed to Customers receiving Delivery Service from the Company under this rider. The DSS rates shall be calculated according to the provisions of this rider. The DSS Rider shall be non-bypassable.

For service rendered during the DSS Initial Computational Period and thereafter, the DSS Computational Year, the DSS rates billed by Rate Schedule are as follows:

Rate Schedule	**DSS Rates**
Rate Schedule RT & GS Volunteer Fire Company and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate – Time-of-Day	(0.266)
Rate Schedule RS & GS Volunteer Fire Company and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate - Non-Time-of-Day	(0.329)
Rate Schedule GS – Small	(0.393)
Rate Schedule GS – Medium	(0.393)
Rate Schedule GS – Large	(0.376)
Rate Schedule GP	(0.353)
Rate Schedule TP	(0.337)
Rate Schedule MS	(0.360)
Rate Schedule OAL	(0.247)
Rate Schedule STLT	(0.248)
Rate Schedule LED Street Lighting Service	(0.248)
Rate Schedule BRD	(0.355)

RIDERS

Rider J (continued)

The DSS rates by rate schedule shall be calculated annually in accordance with the formula set forth below:

$$\text{DSS rate} = [UE + TSC_1 + NMB + RE + CEC] \text{ X } [1 / (1\text{-}T)]$$

The components of the formula are defined below:

Default Service Related Uncollectibles

UE = A default service-related unbundled uncollectible accounts expense charge, determined by Customer Class and stated to the nearest one-thousandth of a cent per kWh, to be applied to DSS Sales delivered by the Company to residential and commercial Delivery Service Customers under this rider. The UE reflects the default service-related portion of the uncollectible account expense based on revenues in the Company's 2014 distribution base rate case and the additional uncollectible accounts expense incurred by the Company as a result of providing Default Service under this tariff. This component of the DSS rate in this non-bypassable rider is non-reconcilable.

The unbundled uncollectible accounts expense associated with Default Service and a purchase of receivables program allocated to Delivery Service Customers on a non-bypassable, non-reconcilable basis will be Customer Class specific and will be adjusted annually on June 1 of each year based on the projected price of Default Service. Adjustments, if necessary, will be made to the uncollectible percentage in a future distribution base rate case or the start of the next Default Service Program, whichever occurs earlier.

The unbundled default service related uncollectibles as determined in the Company's 2014 base rate, combined with the calculated incremental uncollectible accounts expense based on the projected price of Default Service, represents the appropriate fully unbundled non-reconcilable uncollectible accounts expense to be recovered in DSS rates. The calculated incremental uncollectible expense is based on the relationship of uncollectible accounts expense to total revenues for the twelve months ended April 30, 2016, utilizing the income statement in the 2014 distribution base rate case. This ratio is applied to the change in the Company's revenues that would result from the change experienced in default service prices. Incremental uncollectible accounts expense divided by the projected DSS Sales yields an adjustment to the retail price of Default Service supply to be included in DSS rates.

RIDERS

Rider J (continued)

The UE charges by Customer Class to be included in DSS rates are as follows:

Commercial Customer Class (Rate GS-Small, Rate GS-Medium, Rate MS, Borderline Service, Street Lighting Service, Ornamental Street Lighting, LED Street Lighting, and Outdoor Lighting Service):

0.018 cents per kWh

Residential Customer Class (Rate RS, Rate RT, and Rate GS – Volunteer Fire Company, Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate):

0.139 cents per kWh

2006 Deferred Transmission Service Charges

$TSC_1 = [(TSCD – E) / S] X$ Rate Schedule Adjustment Factor

Where:

TSC_1 = The charge to be applied to Delivery Service Customers under this rider to recover the 2006 Transmission Service Charge Deferral ("TSCD"), including carrying charges, which was approved by the Commission in its final order at Docket No. R-00061366, authorizing the Company to amortize such deferral over a 10 year period beginning January 11, 2007 and ending on December 31, 2016. The 10 year amortization of the 2006 TSCD that was not fully recovered under the Transmission Service Charge Rider is being recovered under this DSS Rider which replaced the TSC Rider. The TSC_1 rate will be adjusted on June 1 of each year based on the Company's latest sales forecast available at the time.

TSCD = The balance of the 2006 TSCD including carrying charges, that, as of March 31, 2013 remains to be amortized over the remaining months of the amortization period

RIDERS

Rider J (continued)

E = The over or under-collection of the TSCD that results from billing the TSC_1 during the DSS Reconciliation Year (an over-collection is denoted by a positive E and an under-collection by a negative E), including applicable interest. Interest shall be computed monthly at the legal statutory interest rate stated in 41 P.S. § 202 from the month the over or under-collection occurs to the month that the over-collection is refunded to or the under-collection is recovered from Delivery Service Customers.

S= The Company's total DSS Sales to Delivery Service Customers projected for the DSS Computational Year.

Non-Market Based Services Transmission Charges

$$NMB = (NMB_C - E) / S$$

Where:

NMB = The charge to be applied to Delivery Service Customers served under this rider for Non-Market Based Services Transmission Charge costs incurred by the Company.

NMB_C = Forecasted NMB costs applicable to the Company's DSS Sales. Forecasted NMB costs shall include FERC approved costs for PJM Regional Transmission Enhancement Plan charges, PJM Expansion Cost Recovery, as well as any other FERC-approved PJM transmission charges billed to the Company by PJM that will not be reconciled through the Company's Price To Compare Default Service Rate Rider and/or Hourly Pricing Default Service Rider and are approved by the Commission for recovery under this rider. Forecasted NMB costs are allocated to each Customer Class based upon each Customer Class's contribution to the total Company Network Service Peak Load.

E = The over or under-collection of the NMB_C that results from billing of the NMB during the DSS Reconciliation Year, including applicable interest. An over-collection is denoted by a positive E and an under-collection by a negative E. Interest shall be computed monthly at the legal statutory interest rate stated in 41 P.S. § 202, from the month the over or under-collection occurs to the month that the over-collection is refunded to or the under-collection is recovered from Delivery Service Customers.

S = The Company's total DSS Sales per Customer Class to Delivery Service Customers projected for the DSS Computational Year.

RIDERS

Rider J (continued)

The NMB rates billed to Customers by Rate Schedule are shown below. The TSC_1 rates billed to Customers shall be adjusted by the following Rate Schedule Adjustment Factors shown below:

Rate Schedule	**Rate Schedule Adjustment Factors**	**TSC_1 Rate**	**NMB Rate**
Rate Schedule RT & GS Volunteer Fire Company and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate – TOD	0.9086	0.123	0.087
Rate Schedule RS & GS Volunteer Fire Company and Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate – Non-TOD	1.0759	0.145	0.087
Rate Schedule GS – Small	1.0560	0.143	0.100
Rate Schedule GS – Medium	1.0560	0.143	0.100
Rate Schedule GS – Large	0.9939	$0.726	$0.483
Rate Schedule GP	0.9332	$0.681	$0.483
Rate Schedule TP	0.8911	$0.651	$0.483
Rate Schedule MS	0.9702	0.131	0.100
Rate Schedule OL	0.6712	0.091	0.100
Rate Schedule ST	0.6721	0.091	0.100
Rate Schedule LED	0.6721	0.091	0.100
Rate Schedule BRD	0.9550	0.129	0.100

The above rates are listed as a cent per kWh, with the exception of Rate Schedules GS – Large, GP and TP which are listed as a dollar per kW NSPL

RIDERS

Rider J (continued)

Retail Enhancements

$$RE = [(RE_c – E) / S]$$

Where:

RE = The charge to be applied to Delivery Service Customers served under this rider for the Retail Enhancement Costs incurred by the Company.

REc = The Retail Enhancement Costs incurred by the Company to cover programming expenses and implementation costs associated with competitive market enhancements approved by the Commission.

E = The over or under-collection of the RE_C that results from billing of the RE during the DSS Reconciliation Year, including applicable interest. An over-collection is denoted by a positive E and an under-collection by a negative E. Interest shall be computed monthly at the legal statutory interest rate stated in 41 P.S. § 202, from the month the over or under-collection occurs to the month that the over-collection is refunded to or the under-collection is recovered from Delivery Service Customers.

S = The Company's total DSS Sales per Customer Class to Delivery Service Customers projected for the DSS Computational Year.

The RE rates by Customer Class to be included in DSS rates are as follows:

Industrial Customer Class (Rate GS – Large, GP and Rate TP):

$0.000 per kW NSPL

Commercial Customer Class (Rate GS-Small):

0.004 cents per kWh

Residential Customer Class (Rate RS and Rate GS – Volunteer Fire Company, Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate):

0.006 cents per kWh

RIDERS

Rider J (continued)

Customer Education Charges

$$CEC = (CEC_C - E) / S$$

Where:

CEC = The charge to be applied to Delivery Service Customers served under this rider for Customer Education Charges incurred by the Company.

CEC_C = Customer Education costs for the specific Customer Class to cover customer education costs associated with competitive market enhancements approved by the Commission.

E = The over or under-collection of the CEC_C that results from the billing of the CEC during the DSS Reconciliation Year, including applicable interest. An over-collection is denoted by a positive E and an under-collection by a negative E. Interest shall be computed monthly at the legal statutory interest rate stated in 41 P.S. § 202 from the month the over or under-collection occurs to the month that the over-collection is refunded to or the under-collection is recovered from Delivery Service Customers.

S = The Company's total DSS Sales per Customer Class to Delivery Service Customers projected for the DSS Computational Year.

The CEC rates by Customer Class to be included in DSS rates are as follows:

Industrial Customer Class (Rate GS – Large, GP and Rate TP):

$0.000 per kW NSPL

Commercial Customer Class (Rate GS-Small):

0.044 cents per kWh

Residential Customer Class (Rate RS and Rate GS – Volunteer Fire Company, Non-Profit Ambulance Service, Rescue Squad and Senior Center Service Rate):

0.006 cents per kWh

RIDERS

Rider J (continued)

Gross Receipts Tax

T = The Pennsylvania gross receipts tax rate in effect during the billing month expressed in decimal form as reflected in the Company's base rates.

All capitalized terms not otherwise defined in this Rider shall have the definitions specified in Section 2 of this Tariff. For purposes of this Rider, the following additional definitions shall apply:

1. DSS Sales – The kWh or kW NSPL delivered during a billing month to all Delivery Service Customers, as applicable to each Rate Schedule billed under the DSS Rider.

2. DSS Computational Year – The 12-month period from June 1 through the following May 31.

3. DSS Reconciliation Year – The 12-month period ending March 31 immediately preceding the DSS Computational Year.

4. DSS Initial Computational Period – the period from October 3, 2014 through May 31, 2015 that the DSS Rider is in effect. Thereafter, the DSS Computational Year will be in effect.

The Company shall recalculate its DSS Rates annually and, based on that recalculation, shall file with the Commission, by May 1st of each year, revised Rates to become effective on June 1st of the same year unless the Commission orders otherwise. The revised DSS rates shall remain in effect for a period of one year, unless revised on an interim basis subject to the approval of the Commission. Upon determining that its DSS rates, if left unchanged, would result in material over or under-collection of all costs incurred, or expected to be incurred, for DSS during the then current DSS Reconciliation Year, the Company may request that the Commission approve one or more interim revisions to its DSS rates to become effective thirty (30) days from the date of filing, unless the Commission orders otherwise.

At the conclusion of the period during which this DSS Rider is in effect, the Company shall be authorized to recover or refund at any time, any remaining differences between recoverable costs and revenues billed under this rider by charges or credits to be applied to customer's bills under such mechanism the Commission may approve, but uncollectibles, which are non-reconcilable under the terms of this rider, shall not be included in the final reconciliation.

Application of the DSS rates shall be subject to annual review and audit by the Commission.

RIDERS

RIDER K
TIME-OF-USE DEFAULT SERVICE RIDER

Availability

Time-Of-Use ("TOU") default service ("$TOU_{Default}$") is available under this Rider, upon the terms and conditions set forth herein, to the Residential Customer Class that: (1) have had smart meters installed pursuant to the Met-Ed Smart Meter Technology Procurement and Installation Plan following approval of that plan by the Commission; and (2) affirmatively elect to receive service under this Rider and comply with its enrollment procedures. Customers that apply for service under this Rider must agree, as a condition of service hereunder, to allow the Company to share their Customer information as defined in the Company's Electric Generation Supplier Coordination Tariff with the EGS(s) that provides $TOU_{Default}$, subject to the requirements, restrictions and limitations, if any, of the Commission's applicable regulations dealing with the release of Customer information.

Rates

Summer Period of service rendered June 1 – August 31:

On-Peak Rate shall be determined as follows:

$TOU_{Default\ On\text{-}Peak}$ = Residential Customer Class $PTC_{Default}$ Rate X 1.28

Off-Peak Rate shall be determined as follows:

$TOU_{Default\ Off\text{-}Peak}$ = Residential Customer Class $PTC_{Default}$ Rate X 0.82

Non-Summer Period:

$TOU_{Default}$ = Residential Customer Class $PTC_{Default}$ Rate

RIDERS

Rider K (continued)

TOU$_{Default}$

Qualifying Customers that are enrolled to receive service under this Rider will obtain TOU default service from a Commission-certified EGS contracted to provide TOU default service pursuant to the terms and conditions of this Rider.

Each enrolled Customer must execute, and will receive service pursuant to, a Commission-approved consumer contract and disclosure statement with an EGS selected to furnish TOU default service until such time as Customer selects another option from the EGS, selects another EGS, or requests a return to Default Service consistent with existing switching rules or until the Commission orders changes to the TOU Default Service Rider. The consumer contract and disclosure statement will set forth terms of service specified by the EGS that are in addition to, but may not conflict with, the rates, terms and conditions of service set forth in this Rider.

The rates for TOU default service set forth in this Rider will be calculated at the end of each Default Service Quarter (three months ending June 30th, September 30th, December 31st, and March 31st) to be effective for the three-month period beginning on the first day of the third month following the end of the Default Service Quarter (September 1st, December 1st, March 1st, and June 1st).

On-Peak and Off-Peak Hours

The rates for TOU default service are different for On-Peak Hours and Off-Peak Hours during the months of June, July and August, and billed on a service rendered basis. The TOU default service rate for all other months will not reflect an On-Peak or Off-Peak differential. On-Peak Hours are all hours beginning 8:00 AM (800 hours) Eastern Standard Time and ending 8:00 PM (2000 hours) Eastern Standard Time each day from Monday through Friday excluding Independence Day. Off-Peak Hours are all hours not identified as On-Peak Hours.

Enrollment

Enrollment will occur consistent with the switching rules provided in the Company's Electric Generation Supplier Coordination Tariff.

RIDERS

Rider K (continued)

Customer Switching

A Customer that has enrolled in the TOU default service program remains eligible to return to standard Default Service. A Customer that has enrolled in the TOU default service program may, at any time, elect to receive another product from any EGS, including non-TOU default service from the EGS providing TOU default service to the Customer pursuant to this Rider.

Commission's Failure to Approve an EGS Contract and Alternative Rates

In the event the Commission does not approve a standard contract for use between the Company and participating EGSs or no EGS elects to provide TOU default service, Customers enrolled, or electing to enroll,, in the TOU default service program will receive service under the terms and conditions of the Company's Price To Compare Default Service Rate Rider, and the $TOU_{Default}$ rates shall be the rates set forth in such Price to Compare Default Service Rate Rider (including, without limitation, "E" Factor of such rates). During the Summer Period, the $PTC_{Default}$ rate will be multiplied by 1.28 to establish the $TOU_{Default\ On\text{-}Peak}$ rate during On-Peak Hours and multiplied by 0.82 to establish the $TOU_{Default\ Off\text{-}Peak}$ rate during Off-Peak Hours.

EGS Withdrawal From Providing TOU Default Service

In the event an EGS providing service through the TOU Default Service Rider elects to withdrawal from providing such service, the Company may randomly reassign the Customers receiving TOU default service from such EGS to the remaining EGSs that are providing TOU default service on behalf of the Company.

Annual Review and Audit

The application of the $TOU_{Default}$ rates under this Rider shall be subject to annual review and audit by the Commission.

RIDERS

RIDER L
PARTIAL SERVICES RIDER

AVAILABILITY/APPLICABILITY:

This Rider applies to general service customers having on-site non-synchronous generation equipment or synchronous equipment that does not qualify for Net Metering Rider capable of supplying a portion of their power requirements for other than emergency purposes. Electricity sold under this Rider may not be resold; nor may it be used to operate the auxiliary loads of the generating facilities while those facilities are generating electricity for sale.

All of the following general monthly charges are applicable to Delivery Service Customers.

GENERAL MONTHLY CHARGES:

Seventy-Nine Dollars and Twenty-Eight Cents ($79.28)/per month, plus the charges listed below, depending upon the voltage at which the Customer is being served and the services (i.e., Backup Demand and/or Maintenance Demand) selected by the Customer:

Distribution Charge	**Backup Demand** (Dollars/KW)	**Maintenance Demand** (Dollars/KW)
Secondary Voltage	$2.72	$2.18
Primary Voltage	$2.51	$2.01
Transmission Voltage	$0.54	$0.43

RIDERS

Rider L (Continued)

PAYMENT TERMS:

As per Rule 11, Payment of Bills.

TERM OF CONTRACT:

Each Customer shall be required to enter into a Delivery Service contract with the Company for a minimum one (1) year term. If the Delivery Service contract is terminated by the Customer prior to its expiration, the Minimum Charge provisions of this Rate Schedule shall apply. If the Customer's capacity or service requirements increase, the Company, in its sole and exclusive judgment, may at any time require the Customer to enter into a new Delivery Service contract.

TERMS AND CONDITIONS:

A. Except where modified by this RIDER L, the Customer shall be subject to the terms and conditions of the Rate Schedule that would otherwise apply to the Customer.

B. Service under this RIDER L shall be supplied only at locations where, in the Company's sole and exclusive discretion, there exists lines and equipment of sufficient capacity to supply the service requested by the Customer.

C. The Customer's total combined capacity for the Backup and Maintenance Service shall not exceed the capacity of the generator(s) or other source of power to the Customer that is experiencing the outage.

D. The Customer's generators or other source of supply shall not be operated in parallel with the Company's lines except upon written consent of the Company or as defined under the contractual arrangements.

E. The periods of the year to be considered peak periods are from December 15 through March 15 and May 31 through September 15. Non-peak periods shall be the remaining periods of the year. Peak and non-peak periods may be changed from time to time by the Company after giving notice to the Customer.

F. For purposes of this RIDER L, the On-peak hours shall be defined as 9 a.m. - 9 p.m. weekdays with Off-peak hours encompassing all other hours.

RIDERS

Rider L (continued)

G. The Company may, at its option, require the Customer to install metering equipment sufficient to verify the performance of the Customer's generating equipment.

GENERAL PROVISIONS:

A. BACKUP SERVICE:

1. Following the written request of the Customer indicating the amount of Backup Service required, the Company shall supply such service each month at the charges listed under General Monthly Charges.

2. During any billing period in which the Customer's generating equipment or other source of power experiences a forced or unscheduled outage which requires the Company to provide backup energy, the Customer shall be required to pay the Company for (i) the backup capacity at the charges listed in this Rate QF, General Monthly Charges, (ii) all capacity in excess of the specified capacity as Supplemental Service, and (iii) all energy purchased at the charges and applicable riders set forth in the Rate Schedule that would otherwise apply to said Customer.

3. During any billing period in which the Company is not required to provide energy to "backup" the Customer's generating equipment or other source of power, the Customer shall pay to the Company the charges listed under General Monthly Charges for backup capacity.

RIDERS

RIDER L (continued)

4. Backup Service at the charges listed in this Rate QF, General Monthly Charges is limited to fifteen percent (15%) of the On-peak hours and fifteen percent (15%) of the Off-peak hours during any and all consecutive twelve-month billing periods. Backup Service beyond fifteen percent (15%) of the time during a particular consecutive twelve-month period shall be billed to the Customer by the Company as Supplement Service at the Rate Schedule that would otherwise apply to said Customer.

5. The Customer shall permit the Company to install metering on the customers generation at the customers expense (phone line) or the Customer is required to notify the Company of the failure of its generating equipment in order to invoke RIDER L Paragraph A2 of the Backup Service provision. The Company shall not be required to rebill the Customer if the Company is not notified of the equipment failure prior to the Company's scheduled billing date of the Customer's account.

6. Back-up Service Billing Demand shall be the Contract Demand for Back-up Service.

7. The Back-up Service Measured Demand shall equal the lesser of a) the difference between the generating capability of the Customer's generator less the actual amount generated in a 30 minute period as measured by Company's metering located on the Customer Generator, or as provided with documentation acceptable to the Company by the Customer, or b) the Back-up Service Billing Demand.

B. MAINTENANCE SERVICE:

1. At the option of the Company, Customers may schedule their maintenance outages at any and all hours, during the periods from March 15 to May 31, September 15 to December 15, July 4 and Labor Day. Customers may also schedule their maintenance outages during Off-peak hours of the remainder of the year. For purposes of this RIDER L, On-peak shall be defined as 9 a.m. - 9 p.m. weekdays, with all Off-peak hours being all other hours.

2. Customers who schedule their maintenance outages as set forth in RIDER L Paragraph B1 and who request maintenance service in accordance with RIDER L Paragraph B7, shall be billed by the Company at the charges listed under General Monthly Charges for the additional demands created during the scheduled outage up to the amount of requested maintenance power. In addition, the Customer shall be billed by, and pay to, the Company normal monthly charges including, but not limited to, the Monthly Minimum Charges, Demand Charges, Backup and Energy Charges at the Rate Schedule(s) that would otherwise apply to said Customer.

RIDERS

Rider L (continued)

3. The additional demands, subject to maintenance charges, created during the scheduled outage shall not exceed the specified Maintenance Service capacity. Maintenance Service at the charges listed under General Monthly Charges shall be limited to twenty-five percent (25%) of the time (i.e., hours) during any and all consecutive twelve (12) month periods. Maintenance Service beyond twenty-five percent (25%) of the time during a particular consecutive twelve (12) month period shall be billed by the Company at the Rate Schedule that would otherwise apply to said Customer.

4. When the Customer's scheduled maintenance outage of the generating facility cannot be scheduled in accordance with Rate QF Paragraph B1, the demand established shall be subject to the charges and conditions set forth in the applicable Rate Schedule that would otherwise apply to said Customer.

5. The Company may, at its option, allow a Customer to extend the maintenance outages into On-peak periods provided that the length of extension into these periods does not exceed five (5) days. The demands established during these periods shall be billed by the Company at the charges specified in General Monthly Charges.

6. The Customer shall provide thirty (30) days written advance notice to the Company of a scheduled maintenance outage and specify the amount of maintenance power required. The Company shall make the Maintenance Service available within (30) days before or after the Customer's requested maintenance outage.

C Supplement Service

1. All electric energy consumed in excess of Backup Service Measured Demand and or Maintenance Service Measured Demand shall be considered Supplemental Service. Supplemental Service shall be provided and billed under that rates, terms and conditions of the otherwise determined rate schedule

RIDERS

Rider L (continued)

2. Customers who wish to schedule their maintenance outages during periods other than those described in RIDER L Paragraph B1, may at the sole and exclusive discretion of the Company, do so on an interruptible basis. The Company may request that a Customer interrupt their scheduled maintenance outage during periods of system constraint, system emergency, or during periods of high cost energy purchases. When the Customer requests a scheduled interruptible maintenance outage, a non-interruptible Maintenance Service requirement, not to exceed one percent (1%) of the requested maintenance capacity, shall be specified. When the Company requests a Maintenance Service interruption, the Customer shall reduce its Maintenance Service requirements to the pre-determined non-interruptible base level within thirty (30) minutes of notification by the Company. Failure to do so shall result in the Company issuing a bill to the Customer for the demand established during the requested interruption in excess of the non-interruptible base at the demand charges set forth in the Rate Schedule that would otherwise apply to said Customer. The Company shall notify the Customer when a particular Maintenance Service Interruption is terminated.

RIDERS:

Bills rendered by the Company under this Rate Schedule are subject to the charges stated in any applicable Rider.

RIDERS

RIDER M

COGENERATION & SMALL POWER PRODUCTION
QUALIFYING FACILITY SERVICE RIDER
(Applicable to All Service Classifications)

Electricity produced by a "Qualifying Facility" ("QF"), as defined in § 210 of the Public Utility Regulatory Policies Act of 1978 (PURPA), with generating capacity of 500 KW or less shall be purchased by the Company in accordance with the terms of this Rider. Facilities with more than 500 KW of generating capacity or facilities that do not meet Federal Energy Regulatory Commission ("FERC") certification requirements under § 210 of PURPA shall apply for specific contract terms. All energy or energy and capacity credits utilized in A. and B. of this Rider shall be determined in accordance with applicable Commission and FERC regulations.

A. ENERGY PURCHASES BY COMPANY:

1. The purchase price for all Net Electric Energy not under the Net Metering Rider, supplied to the Company from the QF will be at Avoided Cost.
2. Avoided Cost shall be defined as the Real Time Location Marginal Price ("LMP") and as utilized in Paragraph 2 hereof shall mean the Real Time LMP for each hour at the Met-Ed zone aggregate hourly integrated market marginal clearing price for all Net Electric Energy as specified on the PJM Interconnection, L.L.C. or successor's website, which is currently www.pjm.com multiplied by seventy-five percent (75%).

3. Within sixty (60) days of the meter reading date, the Company shall render payment and furnish a written statement indicating the amount of energy received by the Company and the calculation of payment at applicable rates unless the QF has not delivered at least 5,000 KWH to the Company. In this instance, a statement will be rendered annually or within sixty (60) days of the meter reading that indicates at least 5,000 KWH has been delivered to the Company since the last statement. Each statement shall reflect the Company's Twenty-Five Dollars ($25.00) administrative charge. The Customer has thirty-five (35) days from the date of the payment to dispute a payment calculation. If after thirty-five (35) days from the date of the payment, the Customer has not contacted the Company, the payment and calculation shall be considered correct and accepted by the Customer

4 QFs with less than fifty (50) KW of generating capacity may select Net Energy Billing in accordance with the Company Policy set forth in B - Net Energy Billing Policy.

RIDERS

Rider M (continued)

B. NET ENERGY BILLING POLICY:

1. Where the potential for energy delivery to the Company is very small, the Company shall encourage the QF to interconnect with the Company's system and not sell surplus energy to the Company. Under these circumstances, the QF will avoid the cost of installing a second meter base since the Company will replace the normal KWH meter with a KWH meter with detent.

2. Where the QF elects to sell surplus energy to the Company, installation of a second meter base by the QF shall be required. The Company shall install two (2) KWH meters with detent. One (1) meter will record energy delivered from the Company to the Customer and supply the monthly billing determinants. The second meter will record energy delivered from the QF to the Company for the determination of the payment to the QF at a rate based upon the Company's average projected energy costs for the year ending December 31 of each filing year, as determined to the nearest 0.1¢ per KWH. Payment to the QF for energy delivered to the Company will be made annually, and a Twenty-Five Dollar ($25.00) administrative charge, by the Company shall be reflected therein.

C. INTERCONNECTION COSTS:

1. QF shall pay any incremental, i.e., additional, interconnection costs above the costs to service the Customer's electrical load which the Company incurs in order to purchase power from the QF. These incremental interconnection costs shall not include site specific costs such as, but not limited to, line extensions, facilities changes, special facilities, and right-of-way costs.

2. Payments for the incremental interconnection costs may, at the option of the QF, be made either as (i) a lump sum payment, or (ii) time payments spread over a mutually agreeable period of five (5) years or less. When the QF chooses to spread the payment over a mutually agreeable time period, the payments to the Company shall include an interest payment equal to the Company's allowed rate of return on common equity as last approved by the Commission as of the date the payment agreement is consummated.

3. After the QF installs the necessary interconnection equipment, the Company may require an inspection prior to making the interconnection. The Company shall have this inspection conducted within 20 days of notice by the QF that the installation has been completed and shall provide the QF with the results of this inspection within five (5) working days.

RIDERS

Rider M (Continued)

D. SAFETY AND RELIABILITY

1. Interconnection with the Company's system requires the installation of projective equipment which, in the Company's judgment, provides safety for personnel, affords adequate protection against damage to the Company's system or to its Customer's property, and prevents interference with the Company's supply of service to others. After installation and at any time this rate is in effect, the Company shall have the right to inspect the facilities and their operation, and to inspect and test all protective equipment.

2. Parallel operation must cease immediately and automatically during system outages and other emergency or abnormal conditions specified by the Company. The QF must cease parallel operation upon notification by the Company if such operation is determined to be unsafe, interferes with the supply of service to others, or interferes with system maintenance or operation. The Company is not liable for and accepts no responsibility whatsoever for any loss, cost, expense, damage or injury to any person or property resulting from the use or presence of electric current or potential which originates from a QF's generation facilities, or is caused by failure of the QF to operate in compliance with Company requirements.

3. The QF generation equipment must be equipped with a Company-controlled manually operable disconnecting device capable of being locked in the open position. This device will allow isolation of the QF's generator from the Company system and may be located at the interconnection point or at the QF's generator Interlocks must be provided to preclude paralleling the generator through any point other than the designated interconnection point.

4. Automatic reclosing shall not be installed on the interconnection disconnecting device.

5. Customer equipment must be equipped with a Company-approved overcurrent protective device and necessary relaying to interrupt generator fault current due to fault on the Company system.

6. The Customer may be required to install current limiting reactors to limit the magnitude of Customer-owned generator fault current.

RIDERS

Rider M (Continued)

E. PURCHASE AGREEMENT: No contract is required for QFs 500 kW or less who elect to receive the actual avoided cost at the time of the sale to the Company. In addition, those QFs of 50 kW or less that elect to have net energy billing do not require a written agreement. Those QFs greater than 500 kW wishing to use projections or levelized projections to sell power to the Company shall be required to sign a letter of agreement or other contract stating the terms of the transaction. No purchase will be made by the Company without such contract.

RIDERS

RIDER N
SOLAR PHOTOVOLTAIC REQUIREMENTS CHARGE RIDER

A Solar Photovoltaic Requirements Charge ("SPVRC"), determined to the nearest one-thousandth of a cent per kWh, shall be applied to each kWh delivered during a billing month to all Delivery Service Customers not qualifying for Solar Photovoltaic ("SPV") self-generation exclusion. The SPVRC shall be non-bypassable.

For service rendered June 1, 2014 through May 31, 2015, the SPVRC shall be equal to 0.014 cents per kWh for all kWh.

The SPVRC shall be calculated annually in accordance with the formula set forth below:

$$SPVRC = [(SPVRC_C - E) / S] X [1 / (1 - T)]$$

$$SPVRC_C = SPVRC_{Exp1} + SPVRC_{Exp2} + SPVRC_{Exp3} + SPVRC_{Exp4}$$

Where:

SPVRC = The charge in cents per kWh to be applied to each kWh delivered to Delivery Service Customers served under this tariff.

$SPVRC_C$ = Solar Photovoltaic Requirements Charge Costs calculated in accordance with the formula shown above.

E = The over or under-collection of SPVRC costs that results from billing the SPVRC during the SPVRC Reconciliation Year (an over-collection is denoted by a positive E and an under-collection by a negative E), including applicable interest. The E rate shall be applied to each kWh delivered to Delivery Service Customers. Interest shall be computed monthly at the legal rate determined pursuant to 41 P.S. § 202, from the month in which the over or under-collection occurs to the month in which the over-collection is refunded to or the under-collection is recovered from all Delivery Service Customers.

$SPVRC_{Exp1}$ = A projection of the costs incurred to acquire the Solar Photovoltaic Alternative Energy Credits ("SPAECs") to be retired during the SPVRC Computational Year obtained from winning bidders selected in the competitive procurement process to fulfill the Company's SPV obligations imposed by the AEPS Act and related laws and regulations, as the same may be amended from time to time ("AEPS Laws And Regulations").

RIDERS

Rider N (continued)

$SPVRC_{Exp2}$ = Administrative costs projected for the SPVRC Computational Year associated with the competitive procurement process implemented to fulfill the Company's SPV obligations imposed by the AEPS Laws And Regulations. These administrative costs include, but are not limited to, consultant costs and other direct and indirect costs associated with the Company's administration of the competitive procurement process and compliance with the SPV obligations imposed by the AEPS Laws And Regulations.

$SPVRC_{Exp3}$ = Incremental start-up costs incurred by the Company through May 31, 2013 in connection with the Company's compliance with the SPV obligations imposed by the AEPS Laws And Regulations, which shall be amortized over the twenty-four (24) month period ending May 31, 2015. These administrative costs include, but are not limited to, consultant costs and other direct and indirect costs associated with the Company's administration of the competitive procurement process and compliance with the SPV obligations imposed by the AEPS Laws And Regulations. Interest will be calculated monthly on the average of the beginning of the month and the end-of-month balances of these costs and included in the determination of the monthly amortized amount. The interest shall be computed monthly at the legal rate determined pursuant to 41 P.S. § 202.

$SPVRC_{Exp4}$ = The net of: 1) proceeds resulting from the sale into the market of excess, unused SPAECs procured by the Company in the competitive procurement process; 2) the cost of any additional or supplemental SPAECs purchased by the Company in the market outside of the competitive bid process, as needed to meet its SPV obligations under the AEPS Laws And Regulations; and 3) the carrying cost of banked SPAECs, computed and compounded monthly at the legal rate determined pursuant to 41 P.S. § 202 based upon the cost to acquire the banked SPAECs.

S = The Company's projected kWh sales to Delivery Service Customers for the SPVRC Computational Year less Excluded Sales.

RIDERS

Rider N (continued)

Excluded Sales = Projected net Delivery Service kWh sales for the SPVRC Computational Year to qualifying SPV self generating Customers, which shall be excluded from the SPVRC for the SPVRC Computational Year if the SPV self generating Customer satisfies the criteria set forth in "Qualifications for exclusion from SPVRC for Self Generation" as set forth below.

T = The Pennsylvania gross receipts tax rate in effect during the billing month expressed in the same decimal form used to express the Pennsylvania gross receipts tax rate that is employed in the Company's base rates.

All capitalized terms not otherwise defined in this Rider shall have the definitions specified in the Definitions of Terms section of this tariff. For purposes of this rider, the following additional definitions shall apply:

1. SPVRC Computational Year – The 12-month period from June 1 through the following May 31.

2. SPVRC Reconciliation Year – The 12-month period ending March 31 immediately preceding the SPVRC Computational Year.

The SPVRC shall be filed with the Commission by May 1st of each year. Changes to the SPVRC shall become effective on June 1 of each year unless otherwise ordered by the Commission, and shall remain in effect for a period of one (1) year, unless revised on an interim basis subject to the approval of the Commission. Upon determining that the SPVRC, if left unchanged, would result in material over or under-collection of all costs recoverable under the SPVRC Rider incurred or expected to be incurred during the then current SPVRC Computational Year, the Company may request that the Commission approve one or more interim revisions to the SPVRC to become effective thirty (30) days from the date of filing, unless otherwise ordered by the Commission.

RIDERS

Rider N (continued)

Qualifications for exclusion from SPVRC for providing SPAECs to the Company from a Customer owned SPV generator:

1. The exclusion is available to Customers served on Rate Schedules GS Large, GP, and TP.

2. Customer must submit an application to the Company in advance of the SPVRC Computational Year requesting a waiver of the SPVRC. As part of the initial application, the Customer must have an executed interconnection agreement with the Company pursuant to applicable interconnection regulations, must have installed qualifying SPV panels in an amount adequate to cover the SPAEC requirements for the Customer's expected net Delivery Service kWh, and must have installed qualifying metering on site to record the cumulative electricity production from its qualifying SPV panels in order to verify the SPAEC value determined pursuant to Act 213, Section 3 (A)(3)(e)(3). Upon the Company's approval of the Customer's application, this Rider shall not be applicable as long as the Customer continues to meet the qualifications for exclusion.

3. The Company will make an estimate of the Customer's SPAECs to be transferred to the Company based on the Company's determination of the Customer's most recent 12 months of net Delivery Service kWh. The amount of SPAECs will be rounded up to the nearest whole number. This value will be communicated to the Customer before the SPVRC Computational Year.

4. After the close of the SPVRC Computational Year, the Company will bill the Customer for the SPAECs necessary to extinguish the Customer's obligation. No later than 45 days after the end of the SPVRC Computational Year, the Customer must transfer the specified self generated SPAECs into the Company's GATS account to demonstrate compliance for the recently completed SPVRC Computational Year.

5. Upon receipt of all required SPAECs, the Company will continue to exclude the qualifying Customer from being billed the SPRVC.

RIDERS

Rider N (continued)

Penalty for non-compliance from Customers who qualify for the exclusion

If the Customer fails to meet the obligation spelled out in Paragraph 4, then the Customer shall pay to the Company, the market cost incurred by the Company to replace the SPAECs not delivered by the Customer.

The Company shall file an annual report of collections under this Rider within sixty (60) days following the conclusion of each SPVRC Reconciliation Year.

At the conclusion of the period during which this Rider is in effect, the Company shall be authorized to recover or refund any remaining amounts not reconciled at that time under such mechanism as approved by the Commission.

Application of this non-bypassable SPVRC shall be subject to annual review and audit by the Commission.

RIDERS

RIDER P
NON-UTILITY GENERATION CHARGE RIDER

A Non-Utility Generation ("NUG") Charge ("NUG-C") determined to the nearest one-thousandth of 1 mill per kWh, shall be applied to each kilowatt-hour ("kWh") delivered during a billing month to all Delivery Service Customers, and will be calculated at the end of each NUG Reconciliation Quarter (three months ending January 31st, April 30th, July 31st, and October 31st) to be effective for the NUG Billing Quarter (three-month period at the beginning on the first day of the second month following the end of the NUG Reconciliation Quarter). The NUG-C shall be non-bypassable for all customers.

The NUG-C rates shall be calculated in accordance with the formula set forth below and will be billed at the rates set forth in Table 1 of this rider.

$$NUG\text{-}C = [(NUG\text{-}C_{Delta\ Market} \times NUG\ Rate\ Group\ Allocation\ Factor) - E + NUG\ Balance_{Amort}] / S \times [1/(1-T)]$$

$$NUG\text{-}C_{Delta\ Market} = NUG\ Cost - NUG\ Market\ Value$$

$$E = [(NUG\text{-}C_{Delta\ Marketactual} + NUG\ Balance_{AmortActual}) + (- NUG\text{-}C_{Rev} - NUG\ Trust_{Withdactual})]$$

Where:

$NUG\text{-}C_{Delta\ Market}$	=	The difference between NUG Cost and NUG Market Value for the NUG Billing Quarter.
NUG Rate Group Allocation	=	The allocation of the $NUG\text{-}C_{Delta\ Market}$ to specific rate groups based on the NUG Rate Group Allocation Factors set forth in Table 1 of this rider.
NUG Cost	=	The estimated total cost to be incurred by the Company under contracts to purchase generation from non-utility generators during the NUG Billing Quarter.
NUG Market Value	=	The estimated market valuation for the NUG Billing Quarter of the Company's purchases from non-utility generators including the estimated Market Value of AEPS Credits to which the Company is entitled because of its contracts with non-utility generators.

RIDERS

Rider P (continued)

E	=	The cumulative over or under-collection of NUG Cost that results from billing the NUG-C through the end of the most recently completed NUG Reconciliation Quarter (an over-collection is denoted by a positive E and an under-collection by a negative E). This balance shall be determined by NUG Rate Group.
NUG Balance $_{Amort}$	=	A NUG Rate Group's NUG Balance at December 31, 2010 that shall be recovered through the NUG-C by amortizing such balance ratably from January 1, 2011 through May 31, 2013.
NUG-C$_{Delta\ MarketActual}$	=	The cumulative difference between actual NUG cost incurred and NUG market value received through the sale of energy, capacity and AEPS credits through the end of the NUG Reconciliation Quarter. This amount shall be maintained by NUG Rate Group.
NUG Balance $_{AmortActual}$	=	The cumulative actual NUG Balance for each NUG Rate Group at December 31, 2010 that shall be recovered through the NUG-C by amortizing such balance ratably from January 1, 2011 through May 31, 2013.
NUG Trust $_{WithdActual}$	=	The cumulative amount of actual withdrawals from the NUG Trust Fund, by NUG Rate Group, as previously determined by the Company in its sole discretion, through the end of the NUG Reconciliation Quarter.
NUG-C$_{Rev}$	=	The cumulative revenues billed to Retail Customers by NUG Rate Group under this Rider, excluding Pennsylvania gross receipts tax, through the end of the NUG Reconciliation Quarter

RIDERS

Rider P (continued)

S = The Company's total Delivery Service kWh sales by NUG Rate Group projected for the NUG Billing Quarter that the NUC-C rates will be in effect

T = The Pennsylvania gross receipts tax rate in effect during the billing month, expressed in the same decimal form used to express the Pennsylvania gross receipts tax rate that is employed in the Company's base rates.

Table 1

NUG Rate Group	**NUG Rate Group Allocation Factors**	**NUG Rate By Group In Cents per kWh**
NUG Rate Group 1 - Rate Schedule RS	.38194	(0.027)
NUG Rate Group 2 - Rate Schedule GS Volunteer Fire Company Non-Profit Ambulance Service, Rescue Squad and Senior Center Service , GS – Small, GS – Medium, GS Large, MS, OAL, STLT, LED, and BRD	.28698	(0.019)
NUG Rate Group 3 - Rate Schedule GP	.21474	(0.022)
NUG Rate Group 4 - Rate Schedule TP	.11634	(0.024)

All capitalized terms not otherwise defined in this Rider shall have the definitions specified in Section 2 of this Tariff.

The NUG-C rates shall be filed quarterly with the Commission 10 days prior to the effective date of the rate changes.

The Non-Utility Generation Charge Rider shall be subject to review and audit by the Commission

RIDERS

RIDER Q
RENEWABLE ENERGY DEVELOPMENT RIDER

PURPOSE:

This Rider allows Customers to install and operate renewable energy generation.

APPLICABILITY:

This Rider applies to Customers served under Rate Schedules RS, GS-Small and GS-Medium with single phase, secondary voltage service who install a device or devices not exceeding ten (10) KW which are, in the Company's sole judgment, a bona fide technology for use in generating electricity from qualifying renewable energy installations, and which will be operated in parallel with the Company's system. Qualifying renewable energy installations are limited to solar panels, wind, biomass, methane field and fuel cell generation. The Customer's equipment must conform to the Company's "Relay and Control Requirements for Parallel Operation of Nonutility Generation" and, as appropriate, IEEE Standard 929-1988 and UL Publication 1741 ("Power Conditioning Units for Use in Residential Photovoltaic Power Systems"). This Rider is not applicable when the source of supply is service purchased from a neighboring electric utility under Borderline Service.

The Company will modify its distribution facilities, as necessary, to interconnect with the Customer at a single point of delivery. For all modification, additions or facilities necessary to interconnect with the Customer at a single point, the Company will charge the Customer the cost of such modifications, additions or facilities in excess of One Thousand Dollars ($1000). In addition, the Company will charge a processing fee for applications under this Rider of Three Hundred Dollars ($300) for non-photovoltaic installations and a fee of One Hundred Dollars ($100) for photovoltaic installations.

RIDERS

Rider Q (continued)

METERING AND BILLING PROVISIONS:

A Customer may select one of the following metering options in conjunction with service under applicable Rate Schedule RS, GS-Small or GS-Medium.

1. For Rate Schedules RS only, one non-detented, bi-directional meter may be installed. This meter will record the net energy sales to the Customer which will be billed under the applicable Rate Schedule. If the Customer's renewable energy installation generates more energy than the Customer uses in any billing month, the Company will not charge the Customer for any energy usage or pay the Customer for the excess energy delivered by the Customer to the Company.

2. Two (2) detented meters may be installed. One meter will measure the energy delivered by the Company to the Customer. The other meter will measure energy delivered to the Company by the Customer which is generated by the Customer's qualified renewable energy installation.

3. The Company may provide Qualified Meters on terms approved by the Commission.

Under Options 2. or 3. above, the Customer shall pay the Company for the amount of energy delivered by the Company to the Customer under the applicable Rate Schedule. The Company shall pay the Customer monthly for any energy delivered by the Customer to the Company at the Real Time Hourly LMP for the Met-Ed Zone, provided the Customer is authorized to sell energy to the Company under applicable law.

RIDERS

Rider Q (continued)

METERING CHARGE:

In addition to distribution facility and processing fees, the Customer shall compensate the Company for the estimated additional fully allocated cost of installing, maintaining and reading any additional or nonstandard metering required for installations under metering Option 3. of this Rider. There is no additional metering charge under metering Options 1. or 2. The sum of the meter readings from the two (2) meters in metering Options 2. and 3. will be used to calculate any applicable Transmission and Distribution Charges under the applicable Rate Schedule.

MINIMUM CHARGE:

The Minimum Charges under Rate Schedule RS, GS-Small, and GS-Medium apply for installations under this Rider.

RIDERS:

Bills rendered by the Company under this Rider shall be subject to charges stated in any other applicable Rider.

DIRECT TESTIMONY
OF
KIMBERLIE L. BORTZ

I. INTRODUCTION AND PURPOSE OF TESTIMONY

Q. Please state your name and business address.

A. My name is Kimberlie L. Bortz, and my business address is 2800 Pottsville Pike, Reading, PA 19612.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company as a Rates Advisor - Rates and Regulatory Affairs - Pennsylvania. The Pennsylvania Rate Department provides regulatory support for Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power") and West Penn Power Company ("West Penn") (collectively, the "Companies"). I am responsible to the Director - Rates and Regulatory Affairs - Pennsylvania for tariff interpretation, tariff filings and the design of rates.

Q. Please describe your educational background and professional experience.

A. I have a Bachelor of Science degree in Accounting from the University of Maryland, and I am a Certified Public Accountant in Pennsylvania. I have twenty-five years of professional experience, over twenty of which have been in the utility business. My educational background and work experience are more fully described in Appendix A to this statement.

Q. What is the purpose of your direct testimony?

A. As I explain below, Met-Ed, Penelec, Penn Power and West Penn are each filing new tariffs to replace their existing Pennsylvania Public Utility Commission ("Commission")-approved retail electric tariffs. In addition to setting forth the Companies' proposed distribution base rates, the new tariffs reflect changes designed to: (1) standardize the rules and regulations that will be applied by all of the Companies; (2) eliminate or modify various riders that are not applicable for "unbundled" electric service or are no longer in use for other reasons; and (3) introduce two new riders – specifically, Storm Damage Charge Riders ("Storm Riders"), which are included in all of the Companies' proposed tariffs, and a Universal Service Cost Rider ("USC Rider") applicable to West Penn's residential retail classes, which is included in West Penn's proposed tariff, to align with comparable riders already in effect for the other Companies. Accordingly, the purpose of my direct testimony is threefold. First, I explain the changes between the Companies' existing and proposed tariffs that are being made to establish standardized rules and regulations. Second, I identify the riders that have been eliminated or modified in the proposed tariffs and briefly summarize the reasons for doing so. Finally, I describe the proposed Storm Riders and West Penn's USC Rider and explain why adoption of these riders is appropriate.

Q. Are you sponsoring exhibits to accompany your testimony?

A. Yes. I am sponsoring portions of Exhibit 1 for each of the Companies and portions of West Penn Company Exhibit 2.[1] Each Company's Exhibit 1 is a copy of that Company's proposed electric service tariff that was filed with the Commission, together with applicable supporting data, proposing increases and changes in rates. The portions of each Company's Exhibit 1 that I prepared and am sponsoring consist of the following:

- **Rules and Regulations of the Companies' Exhibits 1 and West Penn Company Exhibit 2**.
- **Rider B of Companies' Exhibits 1 and West Penn Company Exhibit 2** – the proposed Storm Damage Charge Rider for each Company.
- **Rider C of West Penn Company Exhibit 1** - the USC Rider applicable to residential rate schedules being proposed by West Penn.

Additionally, I have prepared and am sponsoring Met-Ed, Penelec, Penn Power, West Penn and West Penn/PSU Exhibit KLB-1 and West Penn Exhibit KLB-2. Exhibit KLB-1 provides responses to filing requirements IV-B-1, IV-B-2 and IV-B-3. West Penn Exhibit KLB-2 consists of a schedule setting forth: (1) the normalized annual costs, shown separately for each component of West Penn's Universal Service Program, that West Penn proposes to recover during the first year that the USC Rider is in effect; and (2) the computation of the proposed Universal Service Charge (in cents per kWh) for that period.

[1] West Penn currently has two retail electric service tariffs. Tariff Electric-Pa. P.U.C. No. 39 contains the rates and terms of service for retail electric service furnished in the entirety of West Penn's service territory with the exception of Pennsylvania State University ("PSU"). Tariff Electric-Pa. P.U.C. No. 37 contains the rates and terms of service for retail electric service furnished to PSU, which is the only customer served on that tariff ("West Penn/PSU Tariff"). In the current rate filing, West Penn is proposing two tariffs – West Penn Company Exhibits 1 and 2 – that correspond to, and would replace, Tariff No. 39 and the West Penn/PSU Tariff, respectively.

II. THE PROPOSED ELECTRIC SERVICE TARIFFS

Q. Why are the Companies filing new tariffs rather than supplements to their existing tariffs?

A. As I previously explained, the Companies are proposing changes to standardize their Rules and Regulations and to eliminate or modify riders that are inconsistent with the provision of unbundled electric service or are no longer applicable for other reasons. It would have been administratively unwieldy – both for the Companies and for the Commission – and confusing for readers and reviewers if the Companies made those revisions by changing individual pages of their existing tariffs, as they would have to do in submitting tariff supplements. Additionally, by submitting new tariffs, the Companies have established a more uniform format and pagination for the Rules and Regulations contained in their respective proposed tariffs.

Q. Why are the Companies proposing to standardize their Rules and Regulations?

A. As a result of the FirstEnergy Corp. ("FirstEnergy")/GPU, Inc. ("GPU") merger in 2001, Met-Ed and Penelec joined Penn Power as subsidiaries of FirstEnergy. With the merger of FirstEnergy and Allegheny Energy, Inc. ("Allegheny") in 2011, West Penn also became a FirstEnergy subsidiary. As members of a single corporate family that each provide electric distribution and default electricity supply service in the Commonwealth subject to the Commission's regulatory jurisdiction, many of the Companies' business activities are operated consistently with a uniform set of processes. This standardization of various processes,

procedures and operating systems across all of the Companies, as appropriate and consistent with furnishing safe and reliable electric service, has helped the Companies capture the economies of scale and realize the synergies expected from the FirstEnergy/GPU and FirstEnergy/Allegheny mergers. As Mr. Fullem explains in Met-Ed/Penelec/Penn Power/West Penn Statement No. 1, those merger-related benefits, as well as efficient management and concerted efforts to control operating and maintenance costs, allowed the Companies to extend the period between their prior base rate cases and the instant rate filings. Consequently, the Companies have determined that their generally applicable tariffs (that is, excluding the West Penn/PSU Tariff) should, as appropriate, reflect their common business processes. Establishing uniform Rules and Regulations will extend to the Companies' tariffs and tariff administration a level of standardization that will help create a uniform customer experience across the Companies' service territories; streamline the Companies' practices to the benefit of the Commission and non-customer parties such as customer advocates and electric generation suppliers ("EGSs"); and help to control the Companies' administration costs.

Q. Are the Companies also standardizing the terms of their respective rate schedules?

A. Yes. In general, as Mr. Siedt explains in Met-Ed/Penelec/Penn Power/West Penn Statement No. 4, the Companies' proposed rates would move toward standard rate designs, but the Companies are not proposing to standardize all of their rate designs in these proceedings.

A. Rules And Regulations

Q. How are the general provisions, including the Rules and Regulations, organized in each of the Companies' currently effective tariffs?

A. Each of the current generally applicable tariffs contains a table of contents followed by a description of the territory each Company serves. For Met-Ed and Penelec, the territory description is followed immediately by their "General Rules and Regulations." Rule 1 for each of those Companies explains that their tariff is filed with the Commission, is available for public inspection and may be accessed on the Company's website. Rule 1 also explains generally the purpose of the tariff and the forms of service to which it applies. Met-Ed's and Penelec's Rule 2 sets forth definitions of terms used in their tariffs. The remaining rules go on to explain the various terms of service, including those related to billing, installation of new service, application for service, metering, and other such provisions. The Penn Power and West Penn tariffs do not contain provisions comparable to Met-Ed's and Penelec's Rule 1, and they set forth the definition of terms as a general introductory section that is not part of their Rules and Regulations. Like the Met-Ed and Penelec tariffs, the Penn Power and West Penn tariffs move on from the definition of terms to discuss the various substantive terms and conditions of service in successive rules.

Q. Are the Companies proposing changes to the general provisions and to existing Met-Ed/Penelec Rules 1 and 2?

A. Yes, they are. Each of the proposed generally applicable tariffs will contain the equivalent of Rule 1 of the current Met-Ed and Penelec tariffs. However, it will

appear as a general provision preceding the Rules and Regulations. Additionally, in each of the proposed generally applicable tariffs the "Definition of Terms" appears as the second general provision immediately preceding the Rules and Regulations.

Q. Have the proposed "Definition of Terms" been modified from the comparable sections in the Companies' existing tariffs?

A. Yes, they have been modified in two respects. First, they have been expanded or reduced to either include terms that were not defined in all of the Companies' current tariffs or to eliminate those terms that are no longer used or relevant. Second, some terms that, for certain Companies, are defined elsewhere in their tariffs have been moved to the Definition of Terms. The goal was to identify commonly used terms that appear throughout each tariff and provide uniform definitions in the Definition of Terms.

Q. Please identify the major differences among the Rules and Regulations in each of the Company's currently effective generally applicable tariffs.

A. The current tariffs of Met-Ed and Penelec are similar to each other. Each has twenty-four rules comprising its General Rules and Regulations, which include Rules 1 and 2 that, as I previously explained, will become general provisions preceding the Rules and Regulations in the proposed tariffs. Penn Power's tariff and the tariff for service throughout West Penn's service territory, on the other hand, have historically included more rules in their Rules and Regulations (forty-five for Penn Power and forty-three for West Penn). However, many of the

additional rules in the Penn Power and West Penn tariffs simply repeat, paraphrase or incorporate by reference Commission regulations already set forth in Title 52 of the Pennsylvania Code. Repeating, paraphrasing or incorporating by reference the Commission's regulations makes the Rules and Regulations needlessly long and redundant. It also creates risks that a rule paraphrasing or summarizing a Commission regulation will not accurately capture that regulation's meaning or that subsequent revisions to the regulation will make the Rules and Regulations inconsistent with current regulatory requirements.

Q. Do the Rules and Regulations contained in the West Penn/PSU Tariff differ from those of West Penn's generally applicable tariff?

A. Yes. Because of the specific nature of the West Penn/PSU Tariff, the Rules and Regulations in that tariff are more limited in scope. The existing West Penn/PSU Tariff consists of a Definitions section followed by a General Rules and Regulations section containing ten rules.

Q. How do the proposed tariffs for Penn Power and West Penn address the concerns you noted above?

A. Rules that simply repeat, paraphrase or incorporate Commission regulations have been eliminated, which is the principal reason that the number of rules in the proposed tariffs are fewer than those in the current Penn Power and West Penn tariffs.

Q. What general approach was employed in developing the Rules and Regulations in the proposed tariffs?

A. The Rules and Regulations in the Met-Ed and Penelec tariffs were used as the model for the standardized tariffs. The Companies determined that, with few modifications (such as moving Rules 1 and 2 to initial general provisions), the Met-Ed and Penelec Rules and Regulations provide a clear, concise explanation of the terms of service that are important to customers. Additionally, the Met-Ed and Penelec tariffs were the latest that the Commission and various parties had an opportunity to review, which occurred in the 2006 base rate cases for those Companies. Also, given that the format of the Met-Ed and Penelec tariffs already mirrored one another, the Companies believed these tariffs to be a more efficient starting point. However, due to the limited and customer-specific nature of the West Penn/PSU Tariff, fewer modifications, based upon the existing Met-Ed and Penelec tariffs, were made to that proposed tariff.

Q. Can you summarize, by rule, the subjects covered in the Rules and Regulations in each of the proposed generally applicable tariffs?

A. Yes. That summary is provided below[2]:

- **Rule 1 – Applications/Contracts** describes the process for initiating service and requesting changes to existing service.

[2] In the summary of rules, I have capitalized terms that are defined in the Definition of Terms of the proposed tariffs (e.g., "Applicant" and "Customer"), but did not continue to do so in the balance of my direct testimony.

- **Rule 2 – Deposits** sets forth the criteria that will be used to determine when a deposit will be required as a condition of service, specifies how the amount of a Customer Deposit is determined and the terms on which deposits are held and returned.

- **Rule 3 – Right-of-Way** sets forth the requirements for an Applicant for service or Customer to provide a right-of-way, easement or permits to access the Customer's property in order for service to be furnished.

- **Rule 4 – Extension of Company Facilities: System Upgrades** sets forth the terms and conditions for the extension of Company facilities to serve an Applicant or Customer; the institution of temporary service; and the relocation of, or modification to, Company facilities at the request of a customer or to accommodate a service request.

- **Rule 5 – Taxes on Applicant/Customer Advances** explains how income taxes are to be calculated for the purpose of "grossing up" Customer Advances for applicable state and federal income taxes.

- **Rule 6 – Proof of Inspection** sets forth the requirement that a Customer or Applicant provide to the Company proof of inspection under the Uniform Construction Code before the Company will initiate or upgrade service to a residential building.

- **Rule 7 – Wiring, Apparatus and Inspection** sets forth: (a) the installation, maintenance, repair and replacement obligations of the

Company and the Customer for facilities that each is required to install to initiate and maintain service; (b) inspection requirements under the National Electric Code and other applicable codes that must be satisfied for the Company to connect its facilities to the Customer's installation; and (c) the Customer's obligation to install corrective equipment, and furnish associated service information, to deal with high instantaneous demands and power factors below 85% (lagging).

- **Rule 8 – Metering** sets forth the obligations and requirements imposed on the Company and the Customer, respectively, for the installation and maintenance of metering equipment and payment of the associated costs.

- **Rule 9 – Access to Customer Premises** sets forth the Company's right to have access to equipment located on a Customer's premises.

- **Rule 10 – Meter Reading and Rendering of Bills** sets forth the terms for reading Customer meters and rendering bills; providing billing data at the Customer's request; issuing estimated bills; summary billing; special billing; the residential Equal Payment Plan; combined billing for Residential and Outdoor Lighting service; consolidated billing for a Customer that has contracted with an EGS; minimum charges; transformer loss adjustment; power factor and kilovar billing; billing for vandalism, theft or deception; and billing errors.

- **Rule 11 – Payment of Bills** sets forth provisions relating to the determination of applicable due dates, late payment charges, allocation of

payments, delinquent accounts (including collection of outstanding residential account balances), and winter termination rules.

- **Rule 12 – Administrative Charges** sets forth the three principal administrative charges the Company may impose, namely, initiation/reconnection service charges, dishonored check/electronic transfer charges, and disconnection/reconnection charges.

- **Rule 13 – Determination of Demand** addresses the measurement of a Customer's active and, if applicable, reactive demand.

- **Rule 14 – Individualized Contracts** provides the terms and conditions for entering into individualized contracts with non-Residential Applicants or Customers.

- **Rule 15 – Company Facilities, Services and Products** sets forth the terms and conditions, including Customer payment obligations, for the Company to provide, at an Applicant's or Customer's request, special, substitute, or emergency repairs or additional or non-standard facilities, services or products.

- **Rule 16 – Auxiliary Power Sources and Readiness to Serve** sets forth the terms and conditions of service to a Customer whose electric requirements are provided in whole or in part from sources other than Company-owned facilities and where the Company's supply can be substituted for that of the Customer.

- **Rule 17 – Interconnection, Safety & Reliability Requirements** sets forth the requirements and standards that apply to all types of Generating Facilities, including Customer owned Generating Facilities, that must be satisfied before such Generating Facilities may be interconnected with the Company's system.

- **Rule 18 – Load Control** defines the conditions that can give rise to a load emergency situation and sets forth the actions the Company may take to bring demands within the then-available capacity or to otherwise control load.

- **Rule 19 – Energy Conservation** deals with restrictions on the fuel supplies available to Company energy vendors that may adversely affect the supply of electric energy to Customers, such that an emergency energy conservation situation would be created. It also authorizes the Company to take reasonable measures that it believes are necessary and proper during such emergency situations to conserve available fuel supplies, including reducing, interrupting or suspending Customer service.

- **Rule 20 – Discontinuance** sets forth the terms and conditions for discontinuing service to a Customer for, among other reasons: non-payment of delinquent bills; violating provisions of the Company's tariff; to avoid endangering the safety of persons or property, including the Company's system; to comply with government rules, regulations,

statutes, orders and directives; and to make necessary repairs, changes or improvements to the Company's system.

- **Rule 21 – Service Continuity: Limitation on Liability for Service Interruptions and Variations** sets forth: (a) the Customer's responsibility for the safety and adequacy of the wiring and equipment it installs; (b) the terms of indemnification of the Company by the Customer for liability resulting from a Customer's use of electric service furnished by the Company, for defects on a Customer's premises, and for a Customer's failure to comply with the National Electrical Code; (c) the qualification that the Company does not guarantee a continuous, uninterrupted or regular supply of electric service, that it may interrupt service, and that it will not be liable for force majeure-like events; and (d) limitations of the Company's liability.

- **Rule 22 Transfer of Electric Generation Supplier** sets forth the terms and conditions for processing requests by a Customer to initiate, terminate or change its EGS.

Q. Are there any significant substantive differences between the Rules and Regulations in the proposed tariffs and the General Rules and Regulations in the current Met-Ed and Penelec tariffs on which the proposed generally applicable tariffs are modeled?

A. Yes. In addition to moving the existing Rules 1 and 2 to introductory general provisions, the Companies have edited several of the Rules and are proposing the

following changes: (1) removing existing Rule 18 – Backup and Maintenance Service from the Rules and Regulations and replacing it with the proposed Partial Service Rider, as further described by Mr. Siedt in Met-Ed/Penelec/Penn Power/West Penn Statement No. 4; (2) adopting proposed Rule 16 – Auxiliary Power Sources and Readiness to Serve from the currently effective West Penn General Rules and Regulations, which sets forth the terms and conditions of service for a customer whose electric requirements are provided in whole or in part from sources other than Company-owned facilities and where the Company's supply can be substituted for that of the Customer; (3) adding to the description of the Purchase of EGS Receivables ("POR") Program language that expressly incorporates costs incurred pursuant to the POR Program in calculating customer deposits (Rule 2), late payment charges and delinquent accounts (Rule 11); and (4) removing language pertaining to Advanced Payment Billing from Rule 10 because that provision terminated by its terms as of January 11, 2007. All other rules are similar in all substantive respects to the General Rules and Regulations in the existing Met-Ed and Penelec tariffs.

Q. Are there any substantive differences between the Rules and Regulations in the proposed West Penn/PSU Tariff and the General Rules and Regulations in the current West Penn/PSU Tariff?

A. Yes. West Penn has eliminated or changed certain rules in the proposed West Penn/PSU Tariff, as follows:

- **Rule 1** – Continuity of Service was edited to be consistent with comparable provisions of the Companies' generally applicable tariffs.

- **Rule 2** – Metering was modified to remove the section that addresses EGS-provided advanced metering because, as I will explain later in connection with the Companies' generally applicable tariffs, this provision is inconsistent with the Commission-approved Smart Meter Deployment Plan that requires the Companies to install smart meters for all customers.

- **Rule 8** – Interim Code of Conduct and Rule 9 – GENCO Code of Conduct were removed because both have been superseded by subsequently adopted regulations and, as explained previously, rules that repeat, paraphrase or summarize existing regulations are redundant and create risks that they will misstate that regulation's meaning or that subsequent revisions to the regulation will make the Rules and Regulations in the Companies' tariffs inconsistent with current regulatory requirements.

- **Rule 10** – State Tax was eliminated. The Company's liability to pay state taxes not paid by an EGS is more appropriately addressed in its supplier tariff.

B. Changes To Existing Tariff Riders

Q. Please summarize the riders in the Companies' current tariffs that will not be included in their proposed tariffs.

A. The proposed tariffs will eliminate or relocate five existing riders in the current tariffs of Met-Ed and Penelec, five existing riders in the current Penn Power tariff, eleven existing riders in the current generally applicable tariff of West Penn, and three existing riders in the current West Penn/PSU Tariff.

Q. Please identify the riders being eliminated from or relocated within the existing Met-Ed and Penelec tariffs.

A. The five existing riders being eliminated from or relocated within the Met-Ed and Penelec tariffs and the reasons for doing so are as follows:

- **Rider B – Cogeneration and Small Power Production Qualifying Facility Service Rider:** Rider B deals with the terms on which the Companies purchase electricity produced by a Qualifying Facility ("QF"), as defined in § 210 of the Public Utility Regulatory Policies Act of 1978 ("PURPA"), with generating capacity of 500 KW or less. The matters covered by Rider B will be addressed in new Rider L – Partial Service and new Rider M – Cogeneration and Small Power Production Qualifying Facility Service.

- **Rider F – Metering and Billing Credit Rider:** Rider F provides customers monthly Distribution Charge credits if a Commission-licensed EGS, rather than the Company, were to provide customer metering, meter

reading or billing and collection service. Rider F was intended to facilitate the installation of recording demand meters and other forms of "smart" meter technology by EGSs. The rider became effective in 1999, but has not been used since it was introduced. Moreover, the Commission has approved a Smart Meter Deployment Plan for the Companies pursuant to Section 2807(f) of the Public Utility Code.3 Under the Smart Meter Deployment Plan, the Companies will install advanced metering infrastructure and will provide smart meters for all customers. Consequently, the rationale for Rider F – namely, that non-utility suppliers could furnish smart meters for which Customers should receive a bill credit – has been eliminated by the addition of Section 2807(f) to the Public Utility Code.

- **Rider H – Short Term Demand Utilization**: Rider H is a legacy of "bundled" service dealing principally with generation demand costs. Specifically, it allowed large commercial and industrial customers to increase their demand, with advance notice, for limited periods of time, without ratcheting up their billing demand for all purposes. Following the restructuring of the electric industry in Pennsylvania, generation is no longer a "bundled" service and instead is provided by third-party suppliers. Accordingly, the service that Rider H offers is not consistent with the current unbundled rate environment. Large commercial and industrial customers seeking the kind of flexible demand option that Rider

[3] 66 Pa.C.S. § 2807(f).

H provided in the bundled rate environment can now shop for similar generation service options from EGSs. If such customers choose to remain on default service, they can obtain a similar form of service under the Hourly Price to Compare Default Service Rider.

- **Rider J – Consumer Education Program:** Rider J provides for the recovery of costs incurred by the Companies to implement their Consumer Education Plans approved by the Commission at Docket Nos. M-2008-2032261 and M-2008-2032262. The Companies' Consumer Education Plans have run their course and are no longer in effect. Therefore, the rider is no longer being used to recover those costs.

- **Rider K – Voluntary Prepayment Plan:** The Voluntary Prepayment Plan Rider offered an optional service to mitigate the anticipated rate impact of the transition to market-based electric generation supply rates when generation rate caps expired. For a period of time before generation rate caps expired, customers could pay monthly amounts exceeding their billing obligations. Those payments were summed and maintained as individualized customer balances that accrued interest and were credited to customers' bills during the period April 1, 2009 through December 31, 2010. This program has expired. Therefore, Rider K should be eliminated.

Q. Please identify the riders being eliminated from Penn Power's tariff.

A. The five existing riders being eliminated from Penn Power's proposed tariff and the reasons for eliminating them are as follows:

- **Consumer Education Program Cost Recovery Rider:** This rider is comparable to Met-Ed's and Penelec's Rider J and is being eliminated from Penn Power's proposed tariff for the same reason Rider J is being eliminated from the Met-Ed and Penelec proposed tariffs, as previously explained.

- **Residential Service Optional Controlled Service Rider, General Service – Secondary Voltages Optional Controlled Service Rider, and Commercial and Industrial Optional Heating Rate:** Like Rider H – Short Term Demand Utilization for both Met-Ed and Penelec, these riders are vestiges of the bundled rate environment that were designed to provide either interruptible generation service or discounted generation service for electric heating and process heating applications. With the advent of full unbundling, generation service is now provided by third-party suppliers and customers seeking the kinds of rate options for generation service offered by these riders should obtain them from EGSs. Any future interruptible programs offered by the Companies would be made available only as part of a Commission-approved Energy Efficiency and Conservation Plan.

- **Facility and Financing Assistance Arrangement Rider:** This rider, which is part of the Community and Customer Partnership Program, is being eliminated because it has not been used by customers for at least the last five years. One of the objectives of the program was to improve energy efficiency, which Penn Power currently does through its Energy Efficiency and Conservation Plan filed with, and approved by, the Commission pursuant to Section 2806.1 of the Pennsylvania Public Utility Code.

Q. Please identify the riders being eliminated from West Penn's existing generally applicable tariff.

A. The eleven existing riders being eliminated from West Penn's generally applicable tariff and the reasons for eliminating them are as follow:

- **Consumer Education Charge:** This rider is comparable to Met-Ed's and Penelec's Rider J and is being eliminated from West Penn's generally applicable proposed tariff for the same reason Rider J is being eliminated from the Met-Ed and Penelec proposed tariffs, as previously explained.

- **FirstEnergy Merger Credit:** This rider provided a credit to residential customers for net savings resulting from the FirstEnergy/Allegheny merger. The credit terminated as of April 25, 2014; therefore, the rider is no longer in use and should be eliminated.

- **Alternative Generation Rider:** This rider is comparable to Met-Ed's and Penelec's Rider B and is being eliminated from West Penn's generally applicable proposed tariff for the same reason Rider B is being eliminated from the Met-Ed and Penelec proposed tariffs, as previously explained.

- **Opportunity Power Rider, Curtailment Service Rider, Experimental Shoulder-Peak Rider, and Experimental Saturday and Holiday Load Option Rider:** Like Rider H – Short Term Demand Utilization for both Met-Ed and Penelec, each of these riders is a vestige of the bundled rate environment. Each rider was designed to allow large commercial and industrial customers to use electricity without incurring the full amount of otherwise applicable demand charges either because the customer's usage would be interruptible or curtailable, or because energy usage would occur during non-peak or shoulder-peak periods. These riders were designed for use at a time when EDCs were providing bundled generation service. With the advent of full unbundling, generation service is now provided by third-party suppliers and customers seeking the kinds of rate options for generation service offered by these riders can obtain them from EGSs. If such customers choose to remain on default service, they can obtain a similar form of service under the Hourly Price to Compare Default Service Rider.

- **Surge Suppression Service:** This is a voluntary rider that allowed customers to purchase surge suppression equipment from the Company. The Commission approved Met-Ed's and Penelec's elimination of a

similar program in 2006, and West Penn is eliminating this rider from its proposed tariff to maintain consistency with the service offerings of the other Companies.

- **Wind Energy Service Rider**: This is a voluntary rider that allowed customers to purchase Wind Energy Blocks for the purpose of promoting the development of wind energy. The rider was approved for a limited time and, by its terms, expired on December 31, 2010. Renewable resources can now be purchased from EGSs and are also supplied in accordance with the Renewable Portfolio Standards established by Act 213 of 2004. Therefore, this rider is no longer effective or necessary.

- **Critical Peak Rebate and Critical Peak Pricing Default Service Riders:** These riders were introduced as part of the West Penn Power Energy Efficiency and Conservation Plan at Docket M-2009-2093218. The Critical Peak Rebate program was available to residential customers through funding created by West Penn's Energy Efficiency and Conservation charge. The program terminated on May 31, 2013, with the conclusion of Phase One of West Penn's Energy Efficiency and Conservation Plan. The Critical Peak Pricing Default Service Rider provided commercial customers an alternative default service option during Summer Periods, defined as June 1, 2012 through September 20, 2012. Customers were offered lower rates per kWh in exchange for agreeing to pay higher rates per kWh during designated Critical Peak periods. The program was designed to shift load from the on-peak to the

off-peak period as part of the Energy Efficiency and Conservation Plan, but was superseded when West Penn's Hourly Pricing Default Service Rider was made available to commercial customers beginning in June of 2013. Consequently, these riders are being eliminated.

Q. Please describe the riders being eliminated from the West Penn/PSU Tariff.

A. West Penn is proposing to eliminate the FirstEnergy Merger Credit, the Consumer Education Charge, and the Wind Service Rider from the West Penn/PSU Tariff for the same reasons those riders are being removed from the generally applicable West Penn tariff.

Q. In addition to the changes noted above, are you sponsoring modifications to any other of the Companies' existing riders?

A. Yes. Penn Power's existing USC Rider contains provisions that: (1) impose a ceiling on the amount of administrative expenses that may be spent on its Customer Assistance Program ("CAP"); and (2) refer to the application of an annual credit to actual expenses for each Reconciliation Year. These provisions are being removed in order to make Penn Power's USC Rider consistent with those of Met-Ed and Penelec. The provisions being eliminated were originally added to Penn Power's USC Rider because Penn Power implemented its USC Rider outside of a base rate proceeding and, therefore, the recovery of certain costs previously included in base rates might, as a consequence, be affected. The provisions are no longer necessary because all such costs and their recovery will be properly aligned as part of this proceeding.

Q. Are the riders you describe above as being eliminated, relocated or modified the only changes to the Companies' existing riders being made by the proposed tariffs?

A. No, they are not. As explained by Mr. Siedt in Met-Ed/Penelec/Penn Power/West Penn Statement No. 4, Time-Of-Use Default Service Riders are being added to the proposed tariffs of Met-Ed and Penelec similar to comparable Commission-approved provisions in Penn Power's Time of Use Default Service Rider and West Penn's Time of Use Rider. Additionally, as explained by Laura W. Gifford in Met-Ed/Penelec/Penn Power/West Penn Statement No. 7, an uncollectible accounts component is being added to the Default Service Support Rider for West Penn, accompanied by a corresponding reduction in the uncollectible accounts expense recovered in base rates to make West Penn's uncollectible expense treatment consistent with the other Companies.

C. New Proposed Tariff Riders

Q. Are any new riders being proposed for addition to the Companies' tariffs?

A. Yes. As, as I previously noted, the Companies are proposing to add a Storm Rider to each of their tariffs, including the West Penn/PSU Tariff, and West Penn is proposing to adopt a USC Rider, comparable to the ones already in effect for Met-Ed, Penelec and Penn Power, to be included in its generally applicable tariff. Both new riders are described below.

1. Storm Rider

Q. What is the purpose of the proposed Storm Rider?

A. The proposed Storm Rider would add to the Companies' tariffs an adjustment clause, under Section 1307(a) of the Pennsylvania Public Utility Code,[4] to impose a charge or credit on Customers' bills to reflect the difference, on an annual basis, between the respective storm damage expenses recovered in the Companies' base rates and the actual storm damage expenses incurred by the Companies. The Storm Riders would provide for timely recovery of actual storm damage expenses -- neither more nor less. In that way, the proposed riders will eliminate the risk created by recovering such costs only in base rates that a Company could recover too much or too little, or that recovery could be unreasonably delayed. Storm damage expenses are appropriate for recovery under a Section 1307 adjustment clause because they are valid operating expenses, can be clearly identified, are volatile (exhibit substantial variability from year to year), are outside a utility's control, are material in amount, and are likely to escape full recovery if a Section 1308 base rate proceeding were the only way to reflect such costs in customer rates.

Q. What level of storm damage expenses is recovered in the Companies' base rates?

A. Consistent with prior Commission practice, the Companies' base rates have been designed to recover only a normal level of storm damage expenses. Stated another way, base rates are not designed to reflect experience that deviates

[4] 66 Pa.C.S. § 1307(a).

materially from a historically derived baseline of "normal" storm damage expenses. As a consequence, if a low level of storm activity occurs in a given year, base rates may reflect more than actual costs. On the other hand, the costs of extraordinary weather events, such as major storms, are not reflected in the level of expenses recovered in base rates. Historically, when utilities experienced extraordinary storm damage expenses, they have petitioned the Commission for approval to defer those expenses for accounting purposes and to request recovery in a subsequent base rate case. As a consequence, where such approval is granted, the costs identified as extraordinary are recorded in a deferred account and not recorded as a charge against income in the year they are incurred.

Q. How is a normal level of storm damage expenses to be recovered in base rates determined?

A. As I explained above, extraordinary storm damage expenses are generally recorded in a deferred account, with the Commission's prior approval. The non-deferred amounts represent the level of expenses that are not extraordinary and, therefore, form the basis for determining a normalized level of storm damage expense. To illustrate, Met-Ed, in this proceeding, has claimed for recovery in base rates a normal level of storm damage expense for the fully projected future test year of $6.6 million, as shown in Met-Ed Exhibit RAD-63 and described in greater detail by Richard A. D'Angelo in Met-Ed/Penelec/Penn Power/West Penn Statement No. 2. The Company's claim approximates the historical average of Met-Ed's actual storm damage costs, as shown on Met-Ed Exhibit RAD-63, less the amounts deferred with prior Commission approval, as shown on Met-Ed

Exhibit RAD-2 at page 24, line 5. The fully projected future test year claims for storm damage expense to be recovered in base rates are set forth in Exhibits RAD-63 for each of the Companies, and the deferred storm damage costs are set forth on page 24 of Exhibit RAD-2 for each of the Companies.

Q. What are the relevant terms of the proposed Storm Riders?

A. All of the terms of the proposed Storm Riders are contained in Rider B for each Company, which is set forth in the portions of the Companies' proposed tariffs that I specifically identified in Section I of my testimony. The Storm Rider provides a formula for calculating a charge or credit to customers' bills on a per-kWh basis. The heart of the formula is the difference between the amount of annual storm damage expense reflected in a Company's base rates and the amount of storm damage expense incurred during the preceding calendar year for the categories of costs identified in the rider. Additionally, in each successive year, the computation will include an "E" factor reflecting the over or under-collection of actual storm damage costs that result from billing the Storm Damage Charge during the Reconciliation Year (November 1 through October 31, as appropriately adjusted for the first year the rider is in effect). In other words, the Storm Rider will be fully reconciled each year. The costs, derived in the manner I described, are divided by projected retail sales and grossed-up for gross receipts tax.

The Storm Damage Charge is to be calculated separately for each of four Rate Classes that are defined as follows: (1) Rate Class 1 consists of the residential rate schedules for each Company; (2) Rate Class 2 consists of commercial and

industrial customers served on rate schedules primarily used by those customers served at secondary voltages; (3) Rate Class 3 consists of customers receiving service on rate schedules requiring that they take service at primary voltage; and (4) Rate Class 4 consists of customers served on rate schedules primarily used by customers served at transmission voltage. The Company-specific rate schedules included in each rate class are included in each Company's specific Rider F in its proposed tariff(s).

Total costs for each Company are to be allocated among Rate Classes in accordance with applicable allocation factors derived from a Company's cost of service study in a contemporaneous or last prior base rate case. Similarly, retail sales (the divisor in the formula) are to be developed by Rate Class.

The Computation Year for Rider F is the twelve months ending December 31 (with appropriate adjustment for the first year the riders are in effect). The Reconciliation Year is, as noted above, the twelve months ending October 31 (with appropriate adjustment for the first year the riders are in effect). Each annual calculation of the Storm Damage Charge is to be filed with the Commission by December 1 of each year to become effective on January 1. The riders authorize interim adjustments to be filed on thirty days' notice if the charge, left unchanged, would result in a material over or under-collection. Additionally, the operation of the Storm Damage Charge Riders will be subject to Commission supervision, review and audit.

Q. Met-Ed and Penelec proposed a Storm Damage Rider in their 2006 base rate cases at Docket Nos. R-00061366 and R-00061367 before the Commission. What was the disposition of their proposed riders at that time?

A. Their proposals were opposed by various parties. The Administrative Law Judges ("ALJs") in that consolidated proceeding recommended that the proposed Storm Damage Riders not be approved. No party took exception to the ALJs' recommendation, which the Commission, therefore, adopted in its Final Order issued on January 11, 2007.

Q. Has anything occurred since the Commission issued its Final Order in the Met-Ed/Penelec 2006 base rate cases that indicates Commission support for an adjustment clause to recover storm damage expenses?

A. Yes. In its December 28, 2012 Final Order in PPL Electric Utilities Corporation's ("PPL") base rate case at Docket No. R-2012-2290597, the Commission directed PPL to "file a rider for storm damage expense recovery within ninety days of the entry of this Opinion and Order," and also directed PPL to meet with the parties to that proceeding to discuss the terms of such a rider. Following those discussions, on March 28, 2013, PPL filed a proposed Storm Damage Expense Rider. After receiving comments from the parties, the Commission entered an order on April 3, 2014 approving PPL's Storm Damage Expense Rider subject to certain modifications. In that order, the Commission found that storm damage expenses were appropriate for recovery under a Section 1307 adjustment clause. In particular, the Commission found that "there can be little reasonable debate over the fact that the Commonwealth has, as of late, experienced weather phenomena

of increased frequency, power, and duration" (p. 15). The Commission's finding is consistent with the Companies' experience, as evidenced by the pattern and levels of annual storm damage expense shown in Exhibit RAD-63 for each of the Companies. In the same vein, Met-Ed and Penelec each had made a single request for deferral of extraordinary storm damage expenses prior to 2006. However, since that time, the Companies have experienced major summer and winter storms and, as a result, have submitted three petitions for deferral of extraordinary storm expenses over a four-year period, each of which were granted.

Q. Did the Commission make any additional findings in the PPL order regarding recovery of storm damage expenses under a Section 1307 adjustment clause?

A. Yes, it did. In that order, the Commission also found that:

- Storm damage expenses are not within the control of a utility ("Nature is the primary director of the scale and scope of these matters – not utility management.") (p. 22);

- Storm damage expenses are recoverable utility expenses that can be readily identified ("In addition, storm damage expense is unquestionably above-the-line expense. Storm damage expenses, properly isolated from costs flowing into base rates, are easily identified expenses.") (p. 23);

- Storm damage expenses are variable (p. 21) and difficult to project for purposes of prospective recovery in base rates ("Similarly, projecting the vagaries of weather in a future test year is fraught with the potential for error: utilities may recover too much too soon or too little, too late.") (p. 15);

- Storm damage expenses represent "a significant imposition on the opportunity to earn an approved rate of return" (p. 23); and
- Recent storm activity warrants the adoption of a storm cost recovery rider ("We believe that the benefit of implementing the SDER is particularly appropriate given the size of recent storm events and our increasing emphasis on enhanced system reliability . . .") (p. 23).

2. West Penn's USC Rider

Q. Please describe the Companies' Universal Service programs.

A. Each of the Companies has in place the following Universal Service programs: (a) the Customer Assistance Referral and Evaluation Services Program ("CARES"); (b) CAP; (c) Dollar Energy Fund; (d) Gatekeeper; and (e) WARM (the Companies' Low Income Usage Reduction Program ("LIURP")). These programs allow the Companies to serve the needs of low-income customers through case management, referrals to other human service programs, monthly bill subsidies and discounts, debt forgiveness credits, payment counseling, cash assistance grants, weatherization measures, and energy conservation education.

Q. How are the Companies currently recovering Universal Service costs?

A. Met-Ed, Penelec and Penn Power each have a USC Rider in their respective tariffs that provides a reconcilable adjustment clause as the means of recovering these costs. West Penn currently recovers Universal Service program costs through base rates.

Q. Is West Penn proposing a USC Rider to recover Universal Service program costs?

A. Yes. West Penn proposes to adopt a USC Rider, which will make the form of its cost recovery consistent with Met-Ed, Penelec and Penn Power. In fact, West Penn's USC Rider is modeled after the Commission-approved USC Riders that are already in effect for Met-Ed and Penelec. Consequently, approving the proposed USC Rider will extend to West Penn the same form of cost recovery that has been used successfully, with Commission approval, by the other Companies for a number of years.

West Penn's proposed USC Rider, which is included in its proposed generally applicable tariff in this case, will provide for full and timely recovery of Universal Service program costs. In that way, the proposed rider will enable West Penn to increase expenditures and enhance existing programs in response to changes in economic conditions in the communities it serves and to make changes in those programs that the Commission or other agencies may determine are necessary to properly assist West Penn's low-income customers. Thus, the USC Rider will remove the obstacle created by limiting available funding to what base rates

recover, which constrains West Penn's ability to respond promptly to economic hardships that may arise unexpectedly within its service area.

Q. Has West Penn's Universal Service cost recovery been adequate?

A. No. West Penn has not consistently recovered its Universal Service program costs in the past and is not doing so currently. During 2013, West Penn's CAP and WARM programs were overspent by almost 62%, or $4.9 million more than the $7.9 million provided under the terms of the 1998 Settlement of West Penn's restructuring proceeding, which established its initial level of base rate cost recovery for Universal Service programs.

Q. Do the per-customer benefits provided under West Penn's Universal Service programs need to be expanded to match the benefit levels being provided by the other Companies?

A. Yes, they do. West Penn's portfolio of Universal Service programs is a vital safety net for low-income customers and should be adequately funded. To that end, West Penn would support modifying its Universal Service programs to align with the other Companies programs, provided its form of cost recovery is also revised to conform with the form of cost recovery already in place for those Companies.

Q. What level of annual expense would West Penn incur if its Universal Service programs were modified to provide the per-customer benefit levels offered by comparable programs at the other Companies?

A. Modifying West Penn's Universal Service programs to match the benefit levels of the programs in place at the other Companies would cause West Penn to incur an annual expense of $29,521,027. The specific program components and the costs associated with each component at benefit levels that align with those of the other Companies are set forth in West Penn Exhibit KLB-2.

The indicative increases shown in West Penn Exhibit KLB-2 for West Penn's Customer Assistance Program (CAP) and Customer Assistance Referral and Evaluation Services Program (CARES) would result from: (1) lowering the percent-of-income requirements for CAP participants to align with the CAPs of the other Companies, which will reduce eligible customers' bill burden and could increase the annual CAP benefit expense borne by West Penn; and (2) increasing the maximum amount of bill subsidies to align with the other Companies' Universal Service programs, which would increase the annual CAP benefit expense West Penn incurs for the participants who currently receive the maximum levels but, nonetheless, need additional assistance. The increases in expense associated with the LIURP and WARM program shown in West Penn Exhibit KLB-2 would be needed to allow West Penn's program to mirror the level of per-customer benefits provided by the same programs at the other Companies.

Q. Is West Penn seeking to recover from customers the entire amount of $29.5 million in annual expense shown in West Penn Exhibit KLB-2?

A. No, it is not, for reasons that relate to the terms of the Commission-approved Joint Petition for Partial Settlement in the proceeding for approval of the FirstEnergy/Allegheny merger at Docket Nos. A-2010-2176520 and A-2010-2176732 ("Merger Settlement"). Specifically, under Paragraph Nos. 20 and 22, West Penn agreed to increase its level of spending for Universal Service programs by $750,000 per year for CAP and $1,800,000 in Year 5 for LIURP and to not recover those increased levels of expenditures from customers during the five-year period after the consummation of the FirstEnergy/Allegheny merger. The merger closed on February 25, 2011, consequently, the fifth calendar year following the consummation of the merger is the twelve months ending December 31, 2015. The Universal Service program costs used to calculate the first year charge are for the twelve months ending April 30, 2016. Consequently, I have reduced the total expense level of $29,521,027 by $1,700,000 to reflect a pro rata portion of the amounts not recoverable under the terms of the Merger Settlement for May 2015 to December 2015 ($2,550,000 x 8/12 of 2015). Therefore, West Penn is claiming $27,821,027 for recovery from customers the first year the USCR would be in effect, which would begin on May 1, 2015.

Q. Please describe the relevant terms of West Penn proposed USC Rider.

A. Rider C of West Penn Company Exhibit 1 is West Penn's proposed USC Rider, which contains all of the terms for calculating and applying the Universal Service Charge ("USC"). I will summarize the relevant terms.

The USC Rider develops a USC based upon an estimate of the costs to be incurred by the Company to administer and provide benefits under West Penn's Universal Service programs for the Computational Year, which, except for the first year of effectiveness, is the period January 1 through December 31. The various program components for which costs are to be recovered under the USC Rider are CARES, CAP, Dollar Energy Fund Administration, Gatekeeper, and WARM. The USC will be applied on a per-kWh basis only to Residential distribution service sales under the Company's tariff.

Costs and revenues under the USC Rider will be reconciled each year, and an over or under collection, as applicable, including interest at the statutory rate, will be included in the "E" factor of the charge. The USCR will also be subject to review and audit by the Commission.

Q. What is the USC West Penn proposes to bill effective May 1, 2015?

A. Based on a forecast of normalized Universal Service program costs for the twelve months ending April 30, 2016, West Penn proposes to bill $0.00406 per kWh to residential rate classes. Details of the computations are set forth in West Penn Exhibit KLB-2.

Q. Why is West Penn proposing to recover Universal Service costs only from Residential classes?

A. In the Met-Ed and Penelec 2006 base rate cases, those Companies were authorized to implement USCRs that would impose a USC only on Residential

customers. The Commission's determination in those cases was consistent with its final order in the proceeding captioned *Customer Assistance Program Funding Levels and Cost Recovery Mechanisms*, which was entered on December 18, 2006 at Docket No. M-00051923. Additionally, Penn Power was authorized to implement a USC to be billed only to Residential customers by the Commission's final order at Docket Nos. R-0072347 and M-00072023 entered on April 11, 2008. Consistent with the Commission's decisions in those cases, West Penn is proposing to recover all Universal Service program costs only from residential customers.

Q. If the USC Rider is not adopted by the Commission, what alternative approach for recovery of Universal Service costs are you proposing?

A. If the Commission determines that the USC Rider is not the appropriate mechanism for recovering Universal Service costs, those costs would need to be included in the Company's operating expenses for the fully projected future test year to be recovered in base rates. West Penn Exhibit KLB-2 at line 5, column 3, shows the expense claim of $27,821,027. Grossed up for gross receipt tax, the revenue requirement would be $29,565,378 ($27,821,027 x 1.062699), which should be included in operating expenses to be recovered in West Penn's base rates. If the USC Rider is not approved, the Company will limit funding for Universal Service programs to the amounts it is authorized to recover in base rates.

Q. Does this conclude your direct testimony?

A. Yes, it does.

Resume: Education and Experience of Kimberlie L. Bortz

Education:

Bachelor of Science Degree in Accounting - University of Maryland

Professional Certification:

Certified Public Accountant - Pennsylvania

Experience:

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT IV-B-1:

"Provide a description of changes proposed for the new tariff:

1. For each rate schedule proposed to be modified."

FILING REQUIREMENT IV-B-2:

"Provide a description of changes proposed for the new tariff:

2. For each rate schedule proposed to be deleted."

FILING REQUIREMENT IV-B-3:

"Provide a description of changes proposed for the new tariff:

2. For each new rate schedule proposed to be added."

RESPONSES:

The information responsive to these filing requirements is contained in Tariff Electric PaPUC No. 52. Refer to the testimony and exhibits in Statement No. 1, the direct testimony of Charles V. Fullem; Statement No. 3, the direct testimony of Kimberlie L. Bortz; Statement No. 4, the direct testimony of Kevin M. Siedt; and Statement No. 7, the direct testimony of Laura W. Gifford which presents all of the changes proposed in the new tariffs.

Direct Testimony
of
Christopher D. Ciccone

List of Topics Addressed

LED Street Lighting

DIRECT TESTIMONY
OF
CHRISTOPHER D. CICCONE

Q. Please state your name and business address.

A. My name is Christopher D. Ciccone. My business address is 2800 Pottsville Pike, Reading, Pennsylvania 19612.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company as an Analyst II in the Rates and Regulatory Affairs Department – Pennsylvania.

Q. And what are your responsibilities as an Analyst II?

A. Generally, the Rates and Regulatory Affairs Department provides regulatory support for Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power"), and West Penn Power Company ("West Penn") (collectively, the "Companies"). I report to the Manager – Rates and Regulatory Affairs – Pennsylvania and I am responsible for the development and preparation of the Companies' accounting and financial data in support of rate-related matters before the Pennsylvania Public Utility Commission and New York Public Service Commission including the preparation of statements and reports addressing, among other things, energy costs, shopping statistics and other customer matters. Also, I am responsible for the administration of the Companies' retail tariffs, the development of retail electric rates and the promulgation of rules and regulations ensuring uniform tariff administration and

interpretation. My work experience and educational background are more fully described in Appendix A attached to this testimony.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is to outline proposed tariff provisions to allow the Companies to implement new light emitting diode ("LED") street lighting services. I will first describe the lighting service and then explain how the Companies propose to recover the costs associated with the offering.

Q. Mr. Ciccone, have you prepared exhibits to accompany your testimony?

A. Yes. The following exhibits or portions of exhibits were prepared by me and are described in detail in my testimony: Met-Ed/Penelec/Penn Power/West Penn CDC-1; Exhibits CDC-2 for each of the Companies; pp. 100-102 of Met-Ed Company Exhibit 1; pp. 103-105 of Penelec Company Exhibit 1; pp. 96-98 of Penn Power Company Exhibit 1; and pp. 149-151 of West Penn Company Exhibit 1 (collectively, "Companies' Exhibits 1").

Q. What is the purpose of the proposed new LED street lighting offerings?

A. The offerings were developed in response to customer requests for additional LED street lighting options. Met-Ed and Penelec have each previously introduced tariff provisions offering customer owned and maintained LED lighting.[1] In light of continued customer interest in LED lighting, the Companies would now like to offer Company owned and

[1] Metropolitan Edison Company. Electric Pa. P.U.C. No. 51. Street Lighting Service - Provision G. Page 130. Pennsylvania Electric Company. Electric Pa. P.U.C. No. 80. Municipal Street Lighting Service – Provision G (4). Page 139.

maintained LED street lighting. These proposed new offerings are outlined in the schedules found in Companies' Exhibits 1 at the following pages: pp. 100-102 (Met-Ed); pp. 103-105 (Penelec); pp. 96-98 (Penn Power); and pp. 149-151 (West Penn).

Q. What customers will be eligible for this offering?

A. As a general matter, municipalities, local, state and federal governmental bodies, community associations, and public authorities will be eligible. On a Company-specific basis, eligibility is as follows:

Met-Ed: open to any customer currently receiving service under a street lighting schedule interested in updating their Street Lighting Service or Ornamental Street Lighting Service.

Penelec: open to any customer currently receiving service under a street lighting schedule interested in updating their High Pressure Sodium Vapor Street Lighting Service or Municipal Street Lighting Service.

Penn Power: open to any customer currently receiving service under a street lighting schedule interested in updating their Street Lighting Service (Sodium Vapor), Street Lighting Service (Sodium Vapor – Divided Ownership), or Street Lighting Service (Mercury Vapor).

West Penn Power: open to any customer currently receiving service under a street lighting schedule interested in updating their Street Lighting Service – Schedule 51, Street and Area Lighting – Schedule 53, Street Lighting Service – Schedule 54, Street

Lighting Service – Customer-Owned Equipment – Schedule 56, Outdoor Lighting Equipment and Maintenance Service – Schedule 57, or Mercury Vapor Street and Highway Lighting Service – Schedule 71.

Q. Will a contract be necessary to sign up for this offering?

A. Yes, the initial term for all contracts will be ten years. Contracts may then be renewed for successive one year terms.

Q. Will participating customers be able to choose an alternative electric generation supplier?

A. Yes. Participating customers will be free to shop for their generation and market based transmission services.

Q. What type of fixture heads will be available under these offerings?

A. The Companies propose to offer Cobra, Acorn, and Colonial styled fixture heads. The minimum number of fixture heads required for any installation will be twelve.

Q. Why do the Companies propose offering group installations?

A. Offering group installations of twelve or more is more cost effective as compared to installing single fixtures.

Q. After installation, who is responsible for the maintenance of these lights?

A. Once installed, the Companies will own and maintain the light fixtures.

Q. What is the forecasted impact on revenues due to the introduction of LED street lighting?

A. Since this is a new product offering and the level of customer participation is uncertain, it is difficult to quantify any impact on revenues at this point in time and would be speculative. Therefore, a revenue analysis cannot be completed.

Q. How are the Companies proposing to recover costs associated with the LED street lighting offering?

A. The Companies propose to recover costs through a fixed monthly charge for each LED fixture. The proposed monthly charges, by fixture and by Company, are provided in Met-Ed/Penelec/Penn Power/West Penn Exhibit CDC-1.

Q. How did the Companies calculate the fixed charges?

A. Exhibits CDC-2 contain all of the supporting calculations and data used to determine the monthly fixture cost for each light offered. Page 1 contains the cost of service for this new offering. Pages 2 thru 9 display the Levelized Payment calculations for the eight fixtures offered. Page 10 shows the installation cost for each fixture. Page 11 contains supporting data for the Other Distribution Plant Factor and Other Distribution O&M Factor. Page 12 displays supporting details for the General Property Factor. Page 13 contains supporting details for the Customer Expense Factor. Page 14 shows supporting work for the Property Tax Factor. Page 15 contains the details for the Overall Rate of Return. Page 16 displays a table of tax depreciation rates based on the Modified Accelerated Cost Recovery System (MACRS).

Q. Why did the Companies perform a separate cost of service study for the LED street lighting instead of incorporating the new offerings into the Cost of Service Study sponsored by Hillary Stewart in Met-Ed/Penelec/Penn Power West Penn Power Statement No. 5?

A. The Companies are requiring ten-year contracts for all new LED street lighting services, and therefore wanted to use a levelized fixed charge rate approach instead of the traditional net plant approach incorporated in the Cost of Service Study sponsored by Ms. Stewart. By using the levelized fixed charge rate approach, the costs of LED streetlights are spread over the ten-year period and the resulting customer charges are more affordable in the early years as opposed to a net plant approach. In addition, by requiring a ten-year commitment for the new fixtures, the Companies are protected against stranded cost risk. For these reasons, I believe the levelized fixed charge rate cost support is more appropriate in that it benefits both customers and the Companies.

Q. Is the monthly fixture charge the only cost to participating customers?

A. No. All Riders applicable to the Companies' existing lighting services will also apply to the LED Street Lighting Services, as detailed in the proposed tariff schedules provided in the previously-referenced excerpts to Companies' Exhibits 1. In addition, if a customer wishes to replace their current lighting during the initial ten year term with Company-owned LED lighting under one of the LED Street Lighting Services, the customer will be responsible for any remaining costs of the customer-owned lighting as well as any early termination or removal fees that may apply.

Q. How were the fixed kWh usages in the proposed tariff schedules determined for this unmetered service?

A. The lighting units will operate from dusk to dawn, which results in approximately 4,200 hours of operation per year. The respective lamp wattage is multiplied by the 4,200 hours of operation per year, divided by twelve months, and then divided by 1,000 to be converted into kilowatt-hours. This calculation establishes the fixed monthly kWh usage for each fixture.

Q. Does this conclude your direct testimony?

A. Yes, it does.

Resume: Education and Experience of Christopher D. Ciccone

Education:

2010	Bachelor of Science Degree in Economics – Pennsylvania State University, State College, Pennsylvania
2012 – Present	Various utility industry conferences and seminars (e.g., EEI Advanced Rates Course, PJM 101: The Basics)

Experience:

5/10 – 8/10	House Republican Appropriation Committee Intern – Harrisburg, PA
9/10 – 1/12	Guest Services – Hotel State College & Company – State College, PA
2/12 – Present	State Regulatory Analyst – Rates & Regulatory Affairs – Pennsylvania – FirstEnergy Service Corporation

Assisted in development and preparation of in the following rate-related proceedings:

DIRECT TESTIMONY
OF
RICHARD A. D'ANGELO

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is Richard A. D'Angelo. My business address is 2800 Pottsville Pike Reading, Pennsylvania 19605.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company as Manager – Rates and Regulatory Affairs – Pennsylvania.

Q. Please describe your responsibilities as Manager – Rates and Regulatory Affairs – Pennsylvania.

A. Generally, the Rates and Regulatory Affairs Department provides regulatory support for Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power") and West Penn Power Company ("West Penn") (each of which may be referred to as "Company" or collectively as the "Companies"). I am responsible to the Director of Rates & Regulatory Affairs for the development, coordination, preparation and presentation of the Companies' accounting and financial data in all their rate-related matters before the Pennsylvania Public Utility Commission ("PUC" or "Commission") and the Federal Energy Regulatory Commission ("FERC"), as well as the preparation of statements and reports addressing, among other things,

energy costs, non-utility generation ("NUG") costs, quarterly earnings, and other financial matters. Also, I am responsible for the administration of the Companies' retail and wholesale tariffs, the development of retail electric rates, and the promulgation of rules and regulations ensuring uniform tariff administration and interpretation.

Q. What is your educational and professional background?

A. I obtained a Masters Degree in Business Administration from Pace University in 1976. I am also a graduate of Brooklyn College where I received a Bachelor of Science degree with a major in Economics. I have over thirty-eight years of experience with FirstEnergy Service Company and GPU Energy. My work experience is more fully described in Appendix A.

Q. Have you previously testified in regulatory proceedings?

A. Yes. As set forth in Appendix A, I have previously testified before the Commission, as well as the New Jersey Board of Public Utilities, the New York State Public Service Commission and, at the federal level, before FERC.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying in this proceeding on behalf of Met-Ed, Penelec, Penn Power and West Penn. My testimony equally applies to all of the Companies, unless otherwise stated.

Q. Please describe the purpose of your direct testimony.

A. The general purpose of my testimony is to describe and support: (i) various accounting, rate case, and other financial data that are being submitted in response to the filing requirements for an electric utility base rate case proceeding; (ii) the budget level of capital and operation and maintenance ("O&M") expenses; (iii) ratemaking adjustments to the budgeted test year rate base and operating income statement; (iv) the rolling into base rates of smart meter costs; (v) the removal of universal service costs for West Penn and their proposed recovery through a new reconciliation rider; (vi) the proposed treatment of deferred storm damage expenses and recovery of ongoing storm damage costs; and (viii) capital and O&M costs associated with the Commission's directive that electric distribution companies ("EDCs") accelerate customer switching of electric generation suppliers ("EGSs").

Q. Have you prepared exhibits to accompany your testimony?

A. Yes. Met-Ed Exhibits RAD-1 through RAD-64, Penelec Exhibits RAD-1 through RAD-64, Penn Power Exhibits RAD-1 through RAD-64 and West Penn Exhibits RAD-1 through RAD-64 (collectively, Exhibits RAD-1 through RAD-64) were prepared by me or under my supervision. Of these, my testimony will focus primarily on Exhibit RAD-1, which sets forth each Company's proposed rate base at April 30, 2016, i.e., the end of the fully projected future test year ("FPFTY") being utilized in this proceeding, and RAD-2, which provides a detailed income statement and support for certain normalization and annualization adjustments to

the budgeted FPFTY data. The remaining exhibits, for the most part, comprise responses to those Commission base rate filing requirements for which I am responsible.

Q. Please identify those witnesses whose testimony relates to and supports your testimony and exhibits.

A. Kimberlie L. Bortz (Met-Ed/Penelec/Penn Power/West Penn Statement No. 3) describes and supports the Storm Damage Recovery Riders proposed for all four Companies and the Universal Service Cost ("USC") Rider proposed for West Penn.

Kevin M. Siedt (Met-Ed/Penelec/Penn Power/West Penn Statement No. 4) supports the pro forma levels of energy sales and normalized revenues utilized to determine the Companies' need for rate relief. Mr. Siedt also details the Companies' proposed rate design and various rider modifications.

Hillary E. Stewart (Met-Ed/Penelec/Penn Power/West Penn Statement No. 5) explains the cost of service study she performed along with how various cost of service components (e.g., rate base, expenses) attributable to FERC jurisdictional service were identified and removed from the determination of the Companies' distribution revenue requirement.

Patricia M. Larkin (Met-Ed/Penelec/Penn Power/West Penn Statement No. 6) supports the Companies' cash working capital requirements.

Laura W. Gifford (Met-Ed/Penelec/Penn Power/West Penn Statement No. 7) describes and supports the normalization of uncollectible accounts expense, the unbundling of West Penn's generation uncollectible accounts expense, and the proposed roll-in to base rates of smart meter capital and O&M expenses.

Michael J. Vilbert (Met-Ed/Penelec/Penn Power/West Penn Statement No. 9) develops a range of the cost of equity capital to be utilized in the calculation of the Companies' overall rates of return.

Steven R. Staub (Met-Ed/Penelec/Penn Power/West Penn Statement No. 10) presents the Companies' proposed capital structure ratios and weighted average costs of long-term debt. In addition, he supports the Companies' requested return on common equity of 10.9%.

II. ACCOUNTING AND FINANCIAL DATA

Q. Do the Companies adhere to a system of accounts prescribed by the Commission?

A. Yes. The Companies' accounting records are maintained in accordance with the Commission's regulations at 52 Pa. Code Sec. § 57.41 *et seq.* and in conformity with the Uniform System of Accounts prescribed by the FERC and adopted by the Commission.

Q. Are the Companies' accounting records audited?

A. Yes. The Companies' financial records are audited at least annually by an independent certified public accounting firm. In addition, the FERC conducts

periodic compliance audits to confirm that the Companies are keeping their accounts in conformity with the Uniform System of Accounts. In addition to conducting its own audits, the staff of the PUC reviews the findings of FERC's audits. Other independent agencies also have the authority to audit the Companies' records on a recurring basis, including the Internal Revenue Service ("IRS") and the Securities and Exchange Commission ("SEC"). In addition, the PUC audit staff and the Pennsylvania Department of Revenue staff perform annual audits of the cost recovery rider mechanisms and sales and use tax filings.

Q. Have original cost determinations been made of the Companies' utility plant?

A. Yes. For Met-Ed, an original cost determination was made as of December 31, 1944, for which approval orders were issued by the PUC on December 11, 1945 at EOC Docket No. 27 and for Edison Light and Power Company (which was subsequently merged with Met-Ed) on November 12, 1946 at Docket No. 11. In 1948, the Company filed with the Commission a basic plan for maintaining its continuing property records. The PUC accepted and approved that plan on April 19, 1948.

For Penelec, an original cost determination was made as of December 31, 1943, by Commission Order dated January 15, 1945 at Docket Nos. EOC 32, MGOC 17, EOC 7, EOC 13, EOC 14, EOC 22 and EOC 44. Original cost determinations were also made for the following major companies which were later merged into Penelec: Pennsylvania Edison Company at Docket Nos. EOC 31 and MGOC 16

by Order dated November 1, 1946 approving balances at July 2, 1946; Northern Pennsylvania Power Company at Docket No. EOC 29 by Order dated January 2, 1946 approving balances at December 31, 1944; and Home Electric Company at Docket No. EOC 21 by Order dated August 20, 1945 approving balances at January 1, 1938.

For Penn Power, an original cost determination was approved by the Commission in the mid-1940's. A subsequent original cost determination was made as part of the Commission's April 6, 1984 Order in Penn Power's base rate proceeding at Docket No. R-832409 (58 PaPUC 305, 60 PUR 4th 593). In that case, the Commission, at the recommendation of the Office of Trial Staff, directed Penn Power to develop its revenue requirement on the basis of its book reserve for depreciation and to convert to the average remaining life method of depreciation and, in so doing, established depreciated original cost plant values to be utilized henceforth.

For West Penn, an original cost determination was made as of December 31, 1943, by Order of this Commission dated July 10, 1945 at Docket No. 50.

The Companies have, since the dates noted above, maintained their continuing property records in accordance with the approved plans.

III. BUDGETS

Q. Mr. D'Angelo, are you familiar with the process by which Met-Ed, Penelec, Penn Power and West Penn budget future capital expenditures, revenues and operating expenses?

A. Yes, I am. In general, the Companies' budgeting process involves: (1) the establishment of documented and well-supported goals, objectives and guidelines; (2) intensive reviews and refinements by all levels of management and functional staffs; and (3) careful scrutiny and ultimate approval by appropriate senior management.

Q. How were those budgets utilized to develop the Companies' claimed revenue requirements in these proceedings?

A. They provided the starting point for determining the Companies' claimed rate base at April 30, 2016 and operating income for the twelve months ending that date. Specifically, I consolidated budgeted monthly data for the months of May through December from the 2015 forecast and the months of January through April from the 2016 forecast to develop the "Per Budget" amounts set forth in Column 1 of Exhibits RAD-1 and RAD-2.

Q. Did you update any of the budgeted data for purposes of these rate filings?

A. Yes. Since the completion of the capital budget, certain revisions were made to the forecasted capital structures of the Companies and those changes have been reflected by Mr. Staub in his testimony and exhibits. Also, the Companies made certain changes to the test year for: (1) updated tax depreciation (Exhibits RAD-

33); (2) the provision for deferred income taxes (Exhibits RAD-41); and (3) accumulated deferred income taxes (Exhibits RAD-35).

Q. What opinion, if any, do you have as to the budgeted levels of capital and expense?

A. In my opinion, the budgeted levels of capital and expense are reasonable estimates of what Met-Ed, Penelec, Penn Power and West Penn can expect to experience during the FPFTY prior to recognition of the appropriate ratemaking adjustments reflected in Exhibits RAD-1 and RAD-2.

IV. RATEMAKING ADJUSTMENTS TO BUDGETED TEST YEAR DATA

A. Rate Base at April 30, 2016 (Exhibits RAD-1)

Q. Please generally describe Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-1.

A. These exhibits, which are essentially identical in format, set forth, for each Company, its proposed overall distribution rate base and smart meter rate base at April 30, 2016. Column 1 on page 1 of Exhibits RAD-1 provides budgeted amounts; column 2 adjusts various components; and column 3 reflects the adjusted rate base. The remaining columns on page 1 break the adjusted rate base into separate distribution and smart meter rate base elements.

The adjustments to the budgeted rate base data, along with a detailed explanation of each adjustment, are contained on pages 2 through 11 of Met-Ed, Penelec, and

West Penn, and Penn Power Exhibits RAD-1 and are referenced on page 1 by adjustment number. The adjustments are designed to accomplish the following:

- Remove FERC gross plant and depreciation reserves (Met-Ed, Penelec and West Penn);
- Reflect adjusted depreciation reserves applicable to rate base;
- Eliminate American Transmission Systems, Inc. ("ATSI") plant and depreciation reserves in accordance with the settlement at Docket No. A-110450F0016 (Penn Power);
- Eliminate plant held for future use;
- Reflect the roll-in to base rates of smart meter investment and related depreciation reserves;
- Reflect cash working capital requirements;
- Reflect material and supplies ("M&S") inventories;
- Reflect unamortized deferred storm damage expenses as an addition to rate base (Met-Ed, Penelec and West Penn);
- Reflect the transfer of unrecovered legacy meter investment from plant in service to a regulatory asset account;
- Adjust accumulated deferred income taxes – liberalized depreciation; and
- Adjust operating reserves, net of tax, to remove FERC jurisdictional allocations (Met-Ed, Penelec and West Penn).

Q. Please describe Adjustment No. 1 to Electric Plant in Service.

A. This adjustment eliminates from plant in service accounts: (1) Asset Retirement Costs ("ARC"); (2) FERC Transmission Plant, including allocated portions of Intangible and General Plant, based on the results of a separations study described by Ms. Stewart in Met-Ed/Penelec/Penn Power/West Penn Statement No. 5; (3) legacy meters, as directed by the Commission in the Final Order in the Companies' Smart Meter Deployment Plan at Docket Nos. M-2013-2341990 (Met-Ed), M-2013-2341991 (Penelec), M-2013-2341993 (Penn Power), and M-2013-2341994 (West Penn); and (4) in the case of Penn Power, ATSI plant in accordance with the settlement at Docket No. A-110450F0016.

Q. What are ARC costs?

A. An ARC applies to all legal obligations associated with the retirement of long-lived assets that result from construction under Financial Account Standards Board Statement No. 143 ("FAS-143)." FAS-143 requires that the fair value of a liability for an asset's retirement obligation ("ARO") be recognized in the period in which it is incurred. The associated ARC is capitalized as part of the carrying amount of the long-lived assets. An ARC increases the carrying amount of a long-lived asset when a liability for an ARO is recognized and is depreciated over the life of the asset. The ARC and related depreciation reserve are excluded from rate base, while the associated depreciation expense is excluded from the income statement. This treatment is in accordance with 18 CFR Chapter 1 § 35.18, Asset Retirement Obligations.

Q. What is the Companies' position on Plant Held for Future Use?

A. Historically, the Companies claimed in rate base those investments in Plant Held for Future Use that were expected to be utilized within ten years of the test period. The ten-year window reflected the Commission's prior policy of allowing such investments where definitive plans for utilizing the investment within the ten-year period existed. Under current Commission policy, investments in Plant Held for Future Use are excluded from rate base, but allowed to accrue carrying charges provided they satisfy the ten-year test. Adjustment No. 2 is designed to comply with that policy.

Q. Please describe Adjustment No. 3 to Depreciation Reserve - Electric Plant in Service.

A. This adjustment removes from the budgeted depreciation reserve those portions attributable to the plant eliminated in Adjustment No. 1.

Q. What is the purpose of Adjustment No. 4?

A. This adjustment includes the Companies' cash working capital requirements described by Ms. Larkin in Met-Ed/Penelec/Penn Power/West Penn Statement No. 6 and computed by her in Met-Ed, Penelec, Penn Power and West Penn Exhibits PML-1.

Q. Please describe Adjustment No. 5 to M&S inventories.

A. This adjustment includes each Company's allocated portion of the materials and supplies inventory maintained by the FirstEnergy Service Company at March 31,

2014. The historic test year-end balance was used because the Companies do not budget M&S inventories. Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-13 provide a monthly breakdown of M&S inventories for the thirteen months ended March 31, 2014.

Q. What is the purpose of Adjustment No. 6?

A. Adjustment No. 6 includes in claimed rate base certain storm damage costs, the recognition of which has been deferred in accordance with Commission order. The specific costs deferred, and citations to the Commission orders approving their deferral, are provided for Met-Ed, Penelec, and West Penn on page 7 of the exhibits.

Q. Please describe the adjustment for legacy meters.

A. In its March 6, 2014 Order at Docket Nos. M-2013-2341990, et al., approving the Companies' Smart Meter Deployment Plans, the Commission directed that the cost of removing legacy meters (i.e., meters to be replaced by the installation of smart meters) be charged to the regulatory asset account containing the legacy meters and recovered, along with the unrecovered investment in those meters, over the remaining lives of those meters. As noted previously, Adjustment No. 1 transfers the investment in legacy meters that will remain unrecovered as of April 30, 2016, to a regulatory asset account. Adjustment No. 7 adds back to rate base the regulatory asset account, net of accrued depreciation, plus the estimated cost of removal.

Q. Please describe the adjustment of Accumulated Deferred Income Taxes – Liberalized Depreciation.

A. Adjustment No. 8 adjusts the budgeted deferred tax balances for liberalized depreciation, excluding the impact of Statement of Financial Accounting Standards ("SFAS") No. 109 deferrals, to eliminate: (1) deferred income taxes associated with Three Mile Island Unit No. 2 (Met-Ed and Penelec); (2) deferred income taxes associated with other generation (Met-Ed); (3) other excludable items (capital leases); (4) remaining state income tax deferrals including the benefit of those income taxes; and (5) an allocated portion of the remaining federal deferred income taxes associated with FERC Transmission Plant (Met-Ed, Penelec and West Penn).

Q. Please describe the adjustment proposed to operating reserves.

A. Adjustment No. 9 adjusts operating reserves, net of accumulated deferred income taxes, to eliminate an allocated portion associated with FERC transmission operations (Met-Ed, Penelec and West Penn).

Q. After taking into account the foregoing adjustments, what is Met-Ed's claimed distribution rate base?

A. Met-Ed's claimed distribution rate base equals $1,412,965,000, of which $28,109,000 represents the roll-in of smart meter investment.

Q. What is Penelec's claimed distribution rate base?

A. Penelec's claimed distribution rate base equals $1,540,298,000, of which $30,884,000 represents the roll-in of smart meter investment.

Q. What is Penn Power's claimed distribution rate base?

A. Penn Power's claimed distribution rate base equals $358,929,000, of which $24,326,000 represents the roll-in of smart meter investment.

Q. What is West Penn's claimed distribution rate base?

A. West Penn's claimed distribution rate base equals $1,287,287,000, of which $87,918,000 represents the roll-in smart meter investment.

Q. What is contained on page 11 of Exhibits RAD-l?

A. This page sets forth, for each Company, its claimed overall rate of return, including its proposed capital structure ratios, weighted average cost of long-term debt and requested return on common equity. Those findings, which are presented and supported by Mr. Staub and Dr. Vilbert, are summarized below:

1. Met-Ed	Capital Structure Ratio	Cost Rate	Weighted Cost Rate
Long-Term Debt	50.0%	5.21%	2.60%
Preferred Stock	0.0%	---	---
Common Equity	50.0%	10.9%	5.45%
	100.0%		8.05%

2. Penelec	Capital Structure Ratio	Cost Rate	Weighted Cost Rate
Long-Term Debt	50.1%	5.72%	2.87%
Preferred Stock	---	---	---
Common Equity	49.9%	10.9%	5.44%
	100.0%		8.31%

3. Penn Power	Capital Structure Ratio	Cost Rate	Weighted Cost Rate
Long-Term Debt	49.9%	6.12%	3.05%
Preferred Stock	---	---	---
Common Equity	50.1%	10.9%	5.46%
	100.0%		8.51%

4. West Penn	Capital Structure Ratio	Cost Rate	Weighted Cost Rate
Long-Term Debt	49.9%	5.38%	2.68%
Preferred Stock	---	---	---
Common Equity	50.1%	10.9%	5.46%
	100.0%		8.14%

B. Statement of Operating Income For the 12 Months Ending April 30, 2016 (Exhibits RAD-2)

Q. What is contained in Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-2?

A. Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-2 contain the budgeted and pro forma statements of net utility operating income for the FPFTY ending April 30, 2016. The first three pages summarize the budgeted and adjusted results of operations at present and proposed rates; the next five pages break down each Company's revenue requirement by component part (e.g., distribution, smart meter roll-in); and the remaining pages, starting at page 9, document the specific adjustments made to normalize and annualize the budgeted data.

The adjustments are designed to accomplish the following:

- Annualize number of customers, usage and sales at end-of-test-year levels;

- Roll into base rates revenues associated with the State Tax Adjustment Surcharge ("STAS");

- Eliminate non-jurisdictional "Other Operating Revenues," as applicable;

- Annualize payroll and employee benefit costs to reflect anticipated employee levels and benefits;

- Calculate net negative salvage based on a five-year average of actual net salvage, consistent with Commission practice;

- Normalize pension expense to reflect a ten-year average of cash contributions consistent with the approach approved by the Commission in prior proceedings;

- Normalize other post-employment benefits ("OPEBs") to reflect the actual ongoing level of service costs charged to expense consistent with the approach used in the past with Commission approval;

- Normalize depreciation accruals to reflect utility plant in service as of the end of the FPFTY;

- Normalize rate case expenses to reflect a two-year cost recovery period;

- Eliminate non-jurisdictional O&M expenses;

- Normalize O&M expenses associated with serving new customers;

- Eliminate the Universal Service program costs included in West Penn's budget, as such costs will be recovered through West Penn's proposed USC Rider;

- Amortize the unrecovered investment in "legacy" meters being replaced by smart meters over a five-year period;

- Amortize deferred storm damage O&M expenses over a three-year period (Met-Ed, Penelec and West Penn);

- Amortize West Penn's residual merger credit balance to residential customers over two years;

- Remove default service-related uncollectible accounts expense from distribution revenue requirement (West Penn); and

- Adjust taxes other than income including, for Penn Power, rolling the 5.9% Gross Receipts Tax ("GRT") into base rates and all of its applicable cost recovery riders.

Q. What level of GRT has been collected in Penn Power's base rates and its various cost recovery riders?

A. The Commonwealth of Pennsylvania requires Penn Power to pay GRT at the statutory rate of 5.9%. However, Penn Power has been recovering GRT in base rates and cost recovery riders at a 4.4% tax rate and has been recovering the remaining 1.5% of the statutory rate in its STAS.

Q. How does rolling the STAS into base rates impact the Penn Power's various cost recovery riders?

A. Rolling the STAS into Penn Power's base rates requires each of the Company's cost recovery riders to recover fully that rider's GRT revenue requirement. Consequently, each cost recovery rider reflects a shortfall in its GRT recovery, which is made up through an applicable increase in revenue requirements shown on page 2 of Penn Power Exhibit RAD-2. However, the revenue requirements for the Price-To-Compare ("PTC"), USC, Energy Efficiency Conservation Charge ("EE&C-C"), Default Service Support, and Solar Photovoltaic Requirements Charge ("SPVRC") Riders will be updated. Specifically, the actual rates to be imposed under the various cost recovery riders will have their respective GRT component updated as part of the Penn Power compliance filing at the time new base rates approved in this proceeding are implemented. Because the SMT-C

Rider is being rolled into base rates, its revenue requirement will reflect GRT at the statutory 5.9% rate.

Q. Are the Companies seeking to recover any acquisition premium or other transaction costs associated with the FirstEnergy/GPU or FirstEnergy/Allegheny mergers as part of the revenue requirements in this case?

A. No. There is no provision in the budget for, nor has any adjustment been made to include, an amortization of acquisition premiums or other transaction costs associated with either of those mergers.

Q. Please describe Adjustment No. 1.

A. This is an adjustment to base operating revenues to: (1) annualize changes in number of customers; (2) roll-in STAS revenues; (3) normalize the sales and revenue effects of energy efficiency measures implemented or to be implemented under the Companies' Energy Efficiency and Conservation Plans and to reflect behind-the-meter generation; (4) normalize Other Revenue (Met-Ed, Penn Power, and West Penn); (5) street lighting (Penelec); and (6) eliminate unbilled revenue. Parts (1) through (5) of this adjustment are discussed in detail by Mr. Siedt in Met-Ed/Penelec/Penn Power/West Penn Statement No. 4. I address item (6). By way of background, unbilled revenue has been included in the budget projection to reflect revenues for service rendered but not billed as of the end of each accounting period. Items that produce unbilled revenue include such things as increases in rates and increases in the number of customers. In developing pro

forma revenues for ratemaking purposes, separate adjustments are being made to annualize and normalize the revenue effect of such factors. Therefore, to eliminate any duplication of revenue for ratemaking purposes, unbilled revenue must be eliminated, which is done in Adjustment No. 1.

Q. Please describe Adjustment No. 2.

A. This adjustment eliminates revenues projected to be billed under the Companies' STAS Riders. Because all state taxes are included in distribution base rate revenue requirement, no revenues will be billed under the STAS Rider. As the Companies did not forecast any charge under their STAS Rider, the adjustment is zero.

Q. Please describe Adjustment No. 3.

A. This adjustment eliminates non-jurisdictional FERC transmission revenues from electric revenues projected for the FPFTY.

Q. What is the purpose of Adjustment No. 4 to Distribution Expense?

A. This adjustment: (1) normalizes each of the Companies' and FirstEnergy Service Company's payroll expense to reflect year-end wage and employee levels; (2) eliminates non-jurisdictional transmission expenses; and (3) excludes the transmission portion of the amortization of gains or losses to reacquire debt, where applicable, based on the results of the separations study described by Ms. Stewart in Met-Ed/Penelec/Penn Power/West Penn Statement No. 5.

Supporting Schedule No. 1 develops the payroll expense to reflect year end wage and employee levels for both Company and FirstEnergy Service Company employees. The O&M payroll expense for each Company and FirstEnergy Service Company is then allocated to individual Price to Compare, Transmission, Distribution, Customer Accounts, Customer Service and Administrative and General components. These amounts are later utilized in subsequent adjustments.

Q. Please describe Adjustment No. 5 to Customer Accounts Expense.

A. Customer Accounts expense is adjusted to reflect year end wage and employee levels for each Company and FirstEnergy Service Company personnel (developed in Adjustment No. 4), increased costs associated with added new customers and interest on customer deposits.

Supporting Schedule No. 1 develops the Other O&M expenses associated with serving new customers reflected in Adjustment No. 1. The Commission has previously approved an adjustment to customer accounts expense in recognition of this increased cost. This cost is estimated by determining the ratio of non-payroll customer account expense to distribution revenues from customers and applying this ratio to the additional revenue received from increased customers.

Supporting Schedule No. 1 also captures the cost of interest the Companies are required to pay on customer deposits since the customer deposits are deducted from rate base.

Q. What is the purpose of Adjustment No. 6 to Customer Service and Informational Expense?

A. Customer Service and Informational Expense is adjusted to reflect year end wage and employee levels for each Company and FirstEnergy Service Company that were developed in Adjustment No. 4, Supporting Schedule No. 1.

Q. Please describe Adjustment No. 7 to Administrative and General Expense.

A. Administrative and General Expense is adjusted to reflect: (1) year-end wage and employee levels for each Company and FirstEnergy Service Company that were developed in Adjustment No. 4, Supporting Schedule No. 1; (2) OPEBs at the service cost level; (3) pension expense at the ten-year average cash contribution level; (4) employee benefit expense at year-end personal and wage levels; (5) the elimination of non-jurisdictional administrative and general expenses based on the results of the separations study sponsored by Ms. Stewart (Met-Ed/Penelec/Penn Power/West Penn Statement No. 5); (6) inclusion of rate case expenses incurred in the current proceeding normalized over a two-year period; (7) the elimination of budgeted rate case expenses; and (8) the amortization of costs to allow for accelerated, three day, customer switching from one supplier to another based upon information contained in Exhibits RAD-64.

Supporting Schedule No. 1 adjusts the budgeted level of OPEB expenses to the service cost level. The budgeted OPEB expense consists of the current service cost, adjustments to prior years' service costs, and the financing component. The service cost represents the actuarial present value of benefit liabilities accrued

under the plan benefit formula for services rendered during the test year. Inclusion of the service cost in rates provides for recovery of the current cost of benefits earned by plan participants. Any excess or shortfall related to the expected return on plan assets is excluded because its inclusion would artificially reduce or increase total costs and result in the recovery of more or less than the normal ongoing cost of service. The adjustment to restate OPEB expense at the current service cost level was adopted by the Commission at Docket Nos. R-00061366 and R-00061367.

Supporting Schedule No. 2 normalizes the budgeted level of pension expense to appropriately reflect a ten-year historical average level of actual cash contributions to the pension plan under the methodology that was adopted by the Commission at Docket Nos. R-00061366 and R-00061367.

Supporting Schedule No. 3 uses the O&M payroll expense developed in Adjustment No. 4, Supporting Schedule No. 1 to normalize the employee benefits costs charged to Administrative and General expense.

Q. Please describe Adjustment No. 8 to Depreciation Expense.

A. Budgeted Depreciation Expense is adjusted: (1) to reflect the application of average remaining life depreciation rates to claimed plant in service; (2) to remove depreciation expense attributable to non-jurisdictional assets; (3) to restate the cost of removal/salvage expense on a five-year average basis consistent

with Commission practice; and (4) to amortize the unrecovered investment in legacy meters at April 30, 2016 over five years.

Q. Please describe Adjustment No. 9.

A. This adjustment increases expenses to amortize storm damage expenses that have been deferred with the Commission's prior approval. The specific costs deferred, and a citation to the Commission Order approving their deferral, is provided for each Company on page 24 of the exhibits. This adjustment also eliminates credits that were budgeted in this account for rate case expenses and legacy meters. The underlying expenses were inadvertently budgeted to Administrative and General Expense but were removed from the budget in Adjustment No. 7.

Q. Please describe Adjustment No. 10.

A. Taxes Other Than Income Taxes included in the budget were adjusted to: (1) eliminate non-jurisdictional payroll taxes: (2) reflect GRT at 5.9% for normalized sales revenues; (3) eliminate non-jurisdictional expense portions of Capital Stock Tax, the Public Utility Reality Tax, and other real estate taxes; and (4) adjust payroll tax expense based on annualized payroll and employee levels.

The adjustments to remove the non-jurisdictional portion of payroll taxes, the Capital Stock Tax, Public Utility Reality Tax, and other real estate taxes are based on the results of the separation study performed by Ms. Stewart.

Supporting Schedule No. 1 shows the calculation of Federal Insurance Contributions Act ("FICA") tax associated with the annualized O&M payroll expense developed in Adjustment No. 4.

Q. Please describe briefly the computation of federal and state income taxes as reflected in Adjustment No. 11.

A. This schedule begins with the computation of the $57,147,000 net operating income before income taxes from data shown on page 1 of Met-Ed Exhibit RAD-2 (line 5 less line 14 of column 3 on page 1); $100,404,000 net operating income before income taxes from data shown on page 1 of Penelec Exhibit RAD-2 (line 5 less line 14 of column 3 on page 1); $22,637,000 net operating income before income taxes from data shown on page 1 of Penn Power Exhibit RAD-2 (line 5 less line 14 of column 3 on page 1), and $67,368,000 net operating income before income taxes from data shown on page 1 of West Penn Exhibit RAD-2 (line 5 less line 14 of column 3 on page 1). The revenues and expenses used to calculate the federal and state income taxes in Adjustment No. 11 are divided into columns corresponding to the components shown on pages 1-3 of these exhibits (Distribution, PTC, USC, EE&C-C, Smart Meter Technologies Charge Rider, DSS Rider, SPVRC, NUG and Storm Cost Recovery Rider) to derive net operating income before income taxes. From that amount, interest was deducted. Interest was calculated by multiplying the adjusted rate base by the weighted average cost of long-term debt. The resulting figure is net income before income taxes a shown on line 10.

Two adjustments (lines 11 and 14) were made to increase taxable income. The first reflects the five-year amortization of net salvage. The second increases net income by adding back the cash pension contribution included in pro forma O&M expenses, which is not a current deduction for tax purposes.

The remaining two adjustments (lines 12 and 13) are deductions from taxable income. The first adjusts depreciation to reflect accelerated depreciation, where permitted, on eligible property as of April 30, 2016. The second reflects cost of removal ($6,080,000 for Met-Ed; $8,872,000 for Penelec; $527,000 for Penn Power; $4,938,000 for West Penn) that may be claimed as a current deduction for tax purposes. The net amount of these adjustments is included in the net income before federal and state income taxes to determine the income subject to state income tax. The state and federal income tax calculations then follow. The state and federal income taxes are computed at the statutory rates of 9.99% and 35%, respectively.

Q. Please describe Adjustment No. 12.

A. This adjustment eliminates from the budgeted Provision for Deferred Income Taxes all deferred taxes except the federal deferred taxes associated with liberalized depreciation. Additionally, federal deferred taxes for liberalized depreciation are adjusted to reflect plant in service as of the end of the FPFTY. Detailed calculations of the federal deferrals are provided in Exhibits RAD-41.

The computation for post-1969 through 1980 “expansion” property is based on the difference between accelerated depreciation (calculated using the Sum of the Years Digits (“SYD”) method and taxable lives based on the Asset Depreciation Range (“ADR”)) and straight-line depreciation using “guideline” lives. The computation for 1981 and subsequent property begins by determining the difference between tax depreciation using the Accelerated Cost Recovery System (“ACRS”) and the Modified Accelerated Cost Recovery System (“MACRS”) and straight line depreciation (using book rates and tax basis).

The federal tax rate of 35% was applied to the amounts calculated in the manner described above and compared to the tax to be booked during the test year to determine the adjustment to deferred taxes.

The state deferred taxes associated with liberalized depreciation pertain only to FERC jurisdictional property and have been eliminated. The deferred taxes associated with other miscellaneous items have been eliminated because the associated income has not been included in the calculation of taxable income used to compute federal and state taxes included in each Company’s revenue requirement.

Q. Please describe Adjustment No. 13.

A. This adjustment eliminates the non-jurisdictional portion of investment tax credits based on the results of the separation study performed by Ms. Stewart.

Q. What is Met-Ed's claimed additional distribution revenue requirement?

A. Reflecting all of the adjustments to the budget data discussed above, Met-Ed's net utility operating income for the FPFTY at present rates is $29,730,000 (page 1, column 13, line 23). This amount, compared to the $113,767,000 shown on page 3, column 33, line 23, shows that $84,037,000 in additional return is required for Met-Ed to achieve an overall return of 8.05% on its distribution rate base. This translates into an additional base rate revenue requirement, or revenue deficiency under existing rates, of $152,643,000, as shown on page 2, column 23, line 1.

Q. What is Penelec's claimed additional distribution revenue requirement?

A. Reflecting all of the adjustments to the budget data discussed above, Penelec's net utility operating income for the FPFTY at present rates is $61,695,000 (page 1, column 14, line 23), after excluding ($726,000) allocated to the New York jurisdiction. This amount, compared to the $127,934,000 shown on page 3, column 34, line 23, shows that $66,239,000 in additional return is required for Penelec to achieve an overall return of 8.31% on its Pennsylvania jurisdictional distribution rate base. This translates into an additional base rate revenue requirement, or revenue deficiency under existing rates, of $120,316,000, as shown on page 2, column 24, line 1.

Q. What is Penn Power's claimed additional distribution revenue requirement?

A. Reflecting all of the adjustments to the budget data discussed above, Penn Power's net utility operating income for the FPFTY at present rates is $14,278,000 (page 1, column 13, line 23). This amount, compared to the $30,550,000 shown on

page 3, column 33, line 23, shows that $16,272,000 in additional return is required for Penn Power to achieve an overall return of 8.51% on its distribution rate base. This translates into an additional base rate revenue requirement, or revenue deficiency under existing rates, of $29,557,000, as shown on page 2, column 23, line 1.

Q. What is West Penn's claimed additional distribution revenue requirement?

A. Reflecting all of the adjustments to the budget data discussed above, West Penn's net utility operating income for the FPFTY at present rates is $61,502,000 (page 1, column 11, line 23). This amount, compared to the $104,785,000 shown on page 3, column 27, line 23, shows that $43,283,000 in additional return is required for West Penn to achieve an overall return of 8.14% on its distribution rate base. This translates into an additional base rate revenue requirement, or revenue deficiency under existing rates, of $78,619,000, as shown on page 2, column 19, line 1.

Q. What is contained in Exhibits RAD-3, RAD-4, RAD-5 and RAD-6?

A. Exhibits RAD-3 and RAD-5 set forth each Company’s rate base at March 31, 2015 and 2014, respectively. Exhibits RAD-4 and RAD-6 set forth each Company’s operating income statements with normalizing adjustments for the future test year (twelve months ended March 31, 2015) and the historic test year (twelve months ending March 31, 2014), respectively.

While the specific numbers differ, these two sets of exhibits are identical in format and concept to Exhibits RAD-1 and RAD-2 and the description of the filing format in my testimony applies equally to them.

V. REGULATORY TREATMENT OF STORM DAMAGE COSTS

Q. How has the Commission historically treated storm damage costs for ratemaking purposes?

A. As in the case of other operating expenses, utilities have been allowed to include a normal, ongoing level of storm damage costs in their base rate revenue requirement. In addition, utilities have been permitted to request authorization to defer, for accounting purposes, extraordinary storm damage costs, with the understanding that rate recovery of the deferred costs would be addressed in a future base rate proceeding. In accordance with that policy and prior rulings by the Commission, the Companies have included in their FPFTY revenue requirement a normalized level of storm damage costs and, in the case of Met-Ed, Penelec and West Penn, rate recovery of previously authorized deferrals (see Exhibits RAD-1, p. 7 and Exhibits RAD-2, p. 24).

Q. Are the Companies proposing any changes to the recovery of storm damage expense in this filing?

A. Yes. The Companies are proposing to institute a Storm Damage Recovery Rider to provide for the annual true-up of actual storm damage O&M expenses. The Riders would impose either a charge, if actual storm damage expenses exceeded the base rate amount, or a credit if actual storm damage expenses were less than

the base rate amount. Ms. Bortz, in Met-Ed/Penelec/Penn Power/West Penn Statement No. 3, describes the Storm Damage Recovery Riders proposed by the Companies.

Q. What is the normalized, ongoing amount of storm damage O&M expense budgeted for the twelve months ending April 30, 2016?

A. Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-63 set forth budgeted storm damage expense for the twelve months ending April 30, 2016, and the twelve months ending March 31, 2015, and actual storm damage expense for the twelve months ended March 31, 2014, along with three additional historical calendar years. The level of storm damage O&M expense to be recovered through base rates is $6,625,000 at Met-Ed, $5,111,000 at Penelec, $657,000 at Penn Power, and $5,276,000 at West Penn.

VI. COSTS ASSOCIATED WITH IMPLEMENTATION OF ACCELERATED CUSTOMER SWITCHING

Q. You noted previously that the Commission had ordered EDCs to accelerate the processing of supplier switching requests. What led to this directive?

A. Weather conditions earlier this year were unusually harsh and resulted in unanticipated fluctuations in wholesale and retail energy prices. Customers with variable rate supply contracts were adversely impacted by these developments and, in response, the Commission launched a Rulemaking with the goal of ensuring that customers could quickly switch electric suppliers to mitigate their exposure to the types of price fluctuations they had experienced.

Q. How did the Commission proceed with the Rulemaking?

A. On March 18, 2014 at Docket No. L-2014-2409383, the Commission issued a Secretarial Letter informing EDCs, the Office of Consumer Advocate and the Office of Small Business Advocate of a proposed Rulemaking to amend existing Regulations at 52 Pa. Code, Chapter 57. The Rulemaking directed EDCs to take the necessary steps to permit retail customers to switch suppliers within three days or less. The Commission recognized the proposed changes were significant and provided for a comment period.

Q. What was the outcome of the Commission's Rulemaking at Docket No. L-2014-2409383?

A. The Commission revised its regulations to facilitate accelerated customer switching in its Order at Docket No. L-2014-2409383, entered April 3, 2014. The Rulemaking Order ensures customers may easily and quickly switch electric suppliers in an effort to mitigate potential price impacts related to variable priced contracts and fluctuations in the wholesale and retail energy markets. The Rulemaking Order also allows for the recovery in an EDC's next base rate proceeding of the cost incurred to comply with the accelerated switching requirements.

Q. What is contained in the Companies' respective Exhibits RAD-64?

A. Exhibits RAD-64 identify the incremental O&M expenses and capital expenditures to be incurred by each Company to comply with the Commission's three-day switching requirement. Those costs are then added to each Company's

revenue requirement through an adjustment to Administrative and General expense on page 18 of Exhibits RAD-2. As indicated on page 1 of Exhibits RAD-64, the Companies are proposing that the additional capital expenditures be amortized over five years.

VII. OTHER FILING REQUIREMENTS

Q. Would you briefly describe Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-7 through RAD-62?

A. Yes. 52 Pa. Code § 53.53 contains the data requirements to be filed in a major rate case. Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-7 through RAD-60 contain the Companies' responses to various data requests assigned to me. Each exhibit cites the specific filing requirement to which it is responding and is followed by the Companies' response.

Met-Ed, Penelec, Penn Power, and West Penn Exhibits RAD-61 list the types of advertising included in expenses for the test year and the immediately preceding year, in accordance with Section 1316(c) of the Public Utility Code, 66 Pa. Code Sec. § 1316(c). Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-62 respond to the PUC Statement of Policy at 52 Pa. Code § 69.36, entitled "Performance criteria regarding energy supply alternatives." This Statement of Policy identifies six areas for review in rate proceedings pertaining to an electric utility's efforts to encourage the development of cost effective energy supply alternatives. Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-62

address five of the six identified areas. Mr. Siedt addresses the remaining area in Met-Ed/Penelec/Penn Power/West Penn Statement No. 4.

VIII. CONCLUSION

Q. Please summarize your testimony and recommendations.

A. Inclusive of the roll-in of smart meter costs, Met-Ed has supported an increase in base rate revenue requirements of $152,643,000; Penelec an increase of $120,316,000; Penn Power an increase of $29,557,000; and West Penn an increase of $78,620,000 (including the separate USC Rider).

In addition, West Penn is proposing a separate reconciling cost recovery rider for universal service costs as explained by Ms. Bortz in Met-Ed/Penelec/Penn Power/West Penn Statement No. 3. If the USC Rider is not adopted by the Commission, an additional revenue requirement of $29,565,000 (see West Penn Exhibit RAD-2, page 7) would need to be reflected in West Penn's base distribution rates.

Finally, and as previously discussed, the Companies are proposing to implement Storm Damage Recovery Riders to provide for the recovery of storm damage expenses in excess of – or the crediting of storm damage expenses falling below – a normalized level of storm damage costs reflected in base distribution rates. Ms. Bortz describes these Riders in Met-Ed/Penelec/Penn Power/West Penn Statement No. 3.

Q. Mr. D’Angelo, does this complete your direct testimony?

A. Yes, it does.

Resume: Education and Experience of Richard A. D'Angelo

Education:

1972	Bachelor of Science Degree in Economics - Brooklyn College
1976	Master of Business Administration Degree in Finance - Pace University

Experience:

9/72 - 11/76	Accountant and Supervisor - Bankers Trust Company
11/76 - 2/81	Employed as Accountant within Regulatory Accounting Area - Metropolitan Edison Company ("Met-Ed")
2/81 - 2/82	Senior Accountant within Regulatory Accounting Area with special emphasis on rate-related matters (Met-Ed)
2/82 - 2/83	Supervisor - Rates and Financing (Met-Ed)
2/83 - 3/95	Manager - Rate Revenue Requirements within the Rate Department (Met-Ed)
3/95 - 8/96	Manager - Regulatory Liaison within the Regulatory Affairs and Pricing Department (Met-Ed/Penelec)
8/96 – 11/01	Manager - Rate Activity within the Rate Department (GPU Energy)
11/01 – Present	Manager – Rates & Regulatory Affairs- Pennsylvania (FirstEnergy Service Company)

METROPOLITAN EDISON COMPANY
Normalization Adjustment No. 1
($000)

Adjustment of Electric Plant in Service

To adjust the budgeted gross plant in service to (1) eliminate the Asset Retirement Cost ("ARC") An asset retirement cost ("ARC") increases the carrying amount of a long-lived asset when a liability for an asset retirement obligation ("ARO") is recognized. The ARC is depreciated over the life of the asset. The ARC and related reserve are excluded from Rate Base, while the associated depreciation expense is excluded from the Income Statement. This treatment is in accordance with 18 CFR Chapter 1 § 35.18 Asset retirement obligations; (2) remove FERC Transmission Plant which is non-jurisdictional; (3) remove an allocated portion of Intangible Plant that supports FERC Transmission Plant; (4) remove an allocated portion of General Plant that supports FERC Transmission Plant; and (5) remove legacy meters as ordered in the Final Order on the Smart Meter Deployment Plan at Docket No. M-2013-2341990.

Line No.		Adjustments	Plant in Service	Cross Reference
		(1)	(2)	(3)
1	Budgeted Plant in Service at 4/30/2016		$ 2,935,437	Met-Ed Exhibit RAD-46, Attach. B, p. 1 and 2
	Normalizing adjustments:			
2	Eliminate ARC	$ (95,358)		Met-Ed Exhibit RAD-46, Attach. B, p. 1 and 2

7	Normalization adjustment		(669,581)	
8	Plant in Service at 4/30/2016, as adjusted		$ 2,265,856	Met-Ed Exhibit RAD-46, Attach. B, p. 1 and 2

METROPOLITAN EDISON COMPANY
Normalization Adjustment No. 2
($000)

Adjustment of Plant Held for Future Use

To adjust Plant Held for Future Use. As an alternative to rate base treatment, the Company is requesting the allowance of deferred carrying charges on any current or future investments in Plant Held for Future Use with definitive plans of utilization within a ten-year period. This is consistent with long-standing Commission policy.

Line No.		Amount (1)

Metropolitan Edison Company
Normalization Adjustment No. 1
$000

Adjustment of Base Operating Revenues

To adjust base operating revenues for (1) changes in the number of customers, (2) to roll in State Tax Adjustment Surcharge ("STAS") revenues into base rates, (3) to adjust for energy efficiency and behind the meter generation, (4) to adjust for other revenues and (5) to eliminate unbilled revenues. The adjustment for unbilled revenues is supported by Mr. R. A. D'Angelo. Adjustments (1) through (4) are supported by Mr. K. M. Siedt.

Line No.	Description	Amount (1)	Amount (2)
1	Base revenues per budget for the 12 months ending 4/30/16		$ 656,675
	Normalizing adjustments:		
2	Customers - increase to yr end level	$ 502

Adjustment of Other O&M Costs Associated with Serving New Customers

In association with the additional revenues from added customers reflected in Adjustment No. 1, there is also a cost associated with serving those customers. The Commission has previously recognized this and approved an adjustment to customer accounts expense for this increased cost. This cost is estimated by determining the ratio of non-payroll customer account expense to distribution revenues from customers and applying this ratio to the additional revenue received from increased customers. The distribution revenues are supported by Mr. K. M. Siedt.

Adjustment for OPEB Expense

Budgeted OPEB expense consists of the current service cost, adjustments to prior years' service costs, and the financing component. This schedule adjusts the total budgeted expense amounts to the service cost. The service cost represents the actuarial present value of benefit liabilities accrued under the plan benefit formula for services rendered during the test year. Inclusion of the service cost in rates provides for recovery of the current cost of benefits earned by plan participants. Any excess or shortfall related to the expected return on plan assets are not included because their inclusion would artificially reduce or increase total costs and result in the recovery of more or less than the actual normal cost of service. The adjustment for OPEB expense to the current service cost amount was adopted by the Commission at Docket Nos. R-00061366 and R-00061367.

Line No.	Description	O&M (1)	Capital (2)	Total (3)
1	O&M - Capital allocation ratios	39.67%	60.33%	100.00%
2	Company OPEB expense included in budget	$ (1,962)	$ (2,984)	$ (4,946)

Normalization Adjustment No. 1
($000)

Adjustment of Electric Plant in Service

To adjust the budgeted gross plant in service to (1) eliminate the Asset Retirement Cost ("ARC"). An asset retirement cost ("ARC") increases the carrying amount of a long-lived asset when a liability for an asset retirement obligation ("ARO") is recognized. The ARC is depreciated over the life of the asset. The ARC and related reserve are excluded from Rate Base, while the associated depreciation expense is excluded from the Income Statement. This treatment is in accordance with 18 CFR Chapter 1 § 35.18 Asset retirement obligations; (2) remove FERC Transmission Plant which is non-jurisdictional; (3) remove an allocated portion of Intangible Plant that supports FERC Transmission Plant; (4) remove an allocated portion of General Plant that supports FERC Transmission Plant; and (5) remove legacy meters as ordered in the Final Order on the Smart Meter Deployment Plan at Docket No. M-2013-2341990.

Line No.		Adjustments	Plant in Service	Cross Reference
		(1)	(2)	(3)

Metropolitan Edison Company
Normalization Adjustment No. 1
$000

Adjustment of Base Operating Revenues

To adjust base operating revenues (1) for changes in the number of customers, (2) to roll in State Tax Adjustment Surcharge ("STAS") revenues into base rates, (3) to adjust for energy efficiency and behind the meter generation, (4) to adjust for other revenues and (5) to eliminate unbilled revenues. The adjustment for unbilled revenues is supported by Mr. R. A. D'Angelo. Adjustments (1) through (4) are supported by Mr. K. M. Siedt.

Line No.	Description	Amount (1)	Amount (2)
1	Base revenues per budget for the 12 months ending 3/31/15		$ 675,063
	Normalizing adjustments:		
2	Customers - increase to yr end level	$ 394	
	Specific adjustments		
3	Roll-in of STAS	-	
4	Adjust for Energy Efficiency and Behind the Meter Generation	(2,232)	
5	Adjust for Other Revenues	42	
6	Eliminate unbilled revenues	1,763	
7	Total	$ (427)	
8	Normalizing adjustment (Lines 2+7)		(32)
9	Base revenues per budget for the 12 months ending 3/31/2015, as adjusted		$ 675,031

Metropolitan Edison Company
Normalization Adjustment No. 2
$000

Adjustment of State Tax Adjustment Surcharge Revenues

To remove state tax adjustment surcharge ("STAS") revenues. Normalized STAS revenues are being rolled into base rates.

Line No.	Description	Amount (1)
1	STAS revenue per budget for the 12 months ending 3/31/2015	$ -
2	Eliminate per budget STAS	-
3	Other operating revenue per budget for the 12 months ending 3/31/2015, as adjusted	$ -

Metropolitan Edison Company
Normalization Adjustment No. 3
$000

Adjustment of Other Operating Revenues

To adjust other operating revenue to eliminate non-jurisdictional transmission revenues.

Line No.	Description	Amount (1)
1	Other operating revenue per budget for the 12 months ending 3/31/2015	$ 72,494
2	Eliminate non-jurisdictional transmission revenues	(55,476)
3	Other operating revenue per budget for the 12 months ending 3/31/2015, as adjusted	$ 17,017

Metropolitan Edison Company
Normalization Adjustment No. 4
$000

Adjustment of Distribution Expense

To adjust distribution payroll expense to reflect year end wage and employee levels, to adjust service company distribution payroll expense to reflect year end wage and employee levels, eliminate non-jurisdictional transmission expense and to include the distribution portion of the amortization of gains or losses to reacquired debt. The plant and labor allocation factors used in this normalization adjustment are supported by Ms. H. E. Stewart.

Line No.	Description	Amount (1)	Amount (2)
1	Distribution expense per budget for the 12 months ending 3/31/2015		$ 53,448
2	Distribution payroll expense adjustment to reflect year end employee levels, and ongoing wage and salary rates, (Supporting Schedule No. 1, Line 14, Column 1)	$ 298	
3	Service Company Distribution payroll expense adjustment allocated to Met-Ed to reflect year end employee levels, and ongoing wage and salary rates (Supporting Schedule No. 1, Line 26, Column 1)	100	
4	Eliminate non-jurisdictional transmission expense	(8,911)	
5	Amortization of (gain) or loss on reacquired debt	$ 400	
6	Allocation ratio based on distribution plant	77.70%	
7	Distribution portion of (gain) or loss	$ 311	
8	Total normalizing adjustment (Lines 2 + 3 + 4 + 7)		(8,202)
9	Distribution expense per budget for the 12 months ending 3/31/2015, as adjusted		$ 45,246

Metropolitan Edison Company
Supporting Schedule No. 1 to Normalizing Adjustment No. 4
($000)

Adjustment to Payroll Expense to Reflect Year End Employee Levels and Wage Rates

Line No.	Description		Amount (1)	Amount (2)
1	Total payroll per budget for the 12 months ending 3/31/2015 (Exhibit RAD-27)			$ 59,762

Adjustment of Other O&M Costs Associated with Serving New Customers

In association with the additional revenues from added customers reflected in Adjustment No. 1, there is also a cost associated with serving those customers. The Commission has previously recognized this and approved an adjustment to customer accounts expense for this increased cost. This cost is estimated by determining the ratio of non-payroll customer account expense to distribution revenues from customers and applying this ratio to the additional revenue received from increased customers. The distribution revenues are supported by Mr. K. M. Siedt.

Adjustment for OPEB Expense

Budgeted OPEB expense consists of the current service cost, adjustments to prior years' service costs, and the financing component. This schedule adjusts the total budgeted expense amounts to the service cost. The service cost represents the actuarial present value of benefit liabilities accrued under the plan benefit formula for services rendered during the test year. Inclusion of the service cost in rates provides for recovery of the current cost of benefits earned by plan participants. Any excess or shortfall related to the expected return on plan assets are not included because their inclusion would artificially reduce or increase total costs and result in the recovery of more or less than the actual normal cost of service. The adjustment for OPEB expense to the current service cost amount was adopted by the Commission at Docket Nos. R-00061366 and R-00061367

Line No.	Description	O&M	Capital	Total

Normalization Adjustment No. 1
($000)

Adjustment of Electric Plant in Service

To adjust the budgeted gross plant in service to (1) eliminate the Asset Retirement Cost ("ARC"). An asset retirement cost ("ARC") increases the carrying amount of a long-lived asset when a liability for an asset retirement obligation ("ARO") is recognized. The ARC is depreciated over the life of the asset. The ARC and related reserve are excluded from Rate Base, while the associated depreciation expense is excluded from the Income Statement. This treatment is in accordance with 18 CFR Chapter 1 § 35.18 Asset retirement obligations; (2) remove FERC Transmission Plant which is non-jurisdictional; (3) remove an allocated portion of Intangible Plant that supports FERC Transmission Plant; (4) remove an allocated portion of General Plant that supports FERC Transmission Plant; and (5) remove legacy meters as ordered in the Final Order on the Smart Meter Deployment Plan at Docket No. M-2013-2341990.

Line No.		Adjustments	Plant in Service	Cross Reference
		(1)	(2)	(3)
1	Actual Plant in Service at March 31, 2014		$ 2,699,281	Met-Ed Exhibit RAD-48, Attach. B, p. 1 and 2
	Normalizing adjustments:			
2	Eliminate ARC	$ (95,358)		Met-Ed Exhibit RAD-48, Attach. B, p. 1 and 2
3	Remove FERC transmission plant	(397,455)		Met-Ed Exhibit RAD-48, Attach. B, p. 1 and 2

Metropolitan Edison Company
Normalization Adjustment No. 1
$000

Adjustment of Base Operating Revenues

To adjust base operating revenues (1) for changes in the number of customers, (2) to roll in State Tax Adjustment Surcharge ("STAS") revenues into base rates, (3) to adjust for energy efficiency and behind the meter generation, (4) to adjust for other revenues and (5) to eliminate unbilled revenues. The adjustment for unbilled revenues is supported by Mr. R. A. D'Angelo. Adjustments (1) through (4) are supported by Mr. K. M. Siedt.

Line No.	Description	Amount (1)	Amount (2)
1	Base revenues per books for the 12 months ending 3/31/2014		$ 741,232
	Normalizing adjustments:		
2	Customers - increase to yr end level	$ 677	
	Specific adjustments		
3	Roll-in of STAS		
4	Adjust for Energy Efficiency and Behind the Meter Generation	(10,018)	
5	Adjust for Other Revenues	-	
6	Eliminate unbilled revenues	(3,212)	
7	Total	$ (13,230)	
8	Normalizing adjustment (Lines 2+7)		(12,553)
9	Base revenues per books for the 12 months ending 3/31/2014, as adjusted		$ 728,679

Metropolitan Edison Company
Normalization Adjustment No. 2
$000

Adjustment of State Tax Adjustment Surcharge Revenues

To remove state tax adjustment surcharge ("STAS") revenues. Normalized STAS revenues are being rolled into base rates.

Line No.	Description	Amount (1)
1	STAS revenue per books for the 12 months ended 3/31/2014	$ (2,123)
2	Eliminate per budget STAS	2,123
3	Other operating revenue per books for the 12 months ended 3/31/2014, as adjusted	$ -

Metropolitan Edison Company
Normalization Adjustment No. 3
$000

Adjustment of Other Operating Revenues

To adjust other operating revenue to eliminate non-jurisdictional transmission revenues.

Line No.	Description	Amount (1)
1	Other operating revenue per books for the 12 months ended 3/31/2014	$ 70,921
2	Eliminate non-jurisdictional transmission revenues	(56,257)
3	Other operating revenue per books for the 12 months ended 3/31/2014, as adjusted	$ 14,664

Metropolitan Edison Company
Normalization Adjustment No. 4
$000

Adjustment of Distribution Expense

To adjust distribution payroll expense to reflect year end wage and employee levels, to adjust service company distribution payroll expense to reflect year end wage and employee levels, eliminate non-jurisdictional transmission expense and to include the distribution portion of the amortization of gains or losses to reacquired debt. The plant and labor allocation factors used in this normalization adjustment are supported by Ms. H. E. Stewart.

Line No.	Description	Amount (1)	Amount (2)
1	Distribution expense per books for the 12 months ended 3/31/2014		$ 67,795
2	Distribution payroll expense adjustment to reflect year end employee levels, and ongoing wage and salary rates (Supporting Schedule No. 1, Line 12, Column 1)	$ 285	
3	Service Company Distribution payroll expense adjustment allocated to Met-Ed to reflect year end employee levels, and ongoing wage and salary rates (Supporting Schedule No. 1, Line 21, Column 1)	97	
4	Eliminate non-jurisdictional transmission expense	(9,174)	
5	Amortization of (gain) or loss on reacquired debt	$ 2,671	
6	Allocation ratio based on distribution plant	77.70%	
7	Distribution portion of (gain) or loss	$ 2,075	
8	Total normalizing adjustment (Lines 2 + 3 + 4 + 7)		(6,717)
9	Distribution expense per books for the 12 months ended 3/31/2014, as adjusted		$ 61,078

Adjustment of Customer Accounts Expense

To adjust customer account expense to reflect year end wage and employee levels, increased costs associated with added customers, and interest on customer deposits.

Line No.	Description	Amount (1)	Amount (2)
1	Customer Account expense per books for the 12 months ended 3/31/2014		$ 24,842
2	Customer Account payroll expense adjustment to reflect year end employee levels and ongoing wage & salary rates (Normalizing Adjustment No. 4, Supporting Schedule No. 1, Line 13, Column 1)	$ 100	
3	Service Company customer account payroll expense adjustment allocated to Met-Ed to reflect year end employee levels and ongoing wage & salary rates (Normalizing Adjustment No. 4, Supporting Schedule No. 1, Line 22, Column 1)	136	
4	Increased O&M costs associated with increased number of customers in normalized revenue levels (Supporting Schedule 1, Line 10)	12	
5	Interest on customer deposits (Supporting Schedule 2, Line 3)	1,287	
6	Total normalizing adjustment (Lines 2 + 3 + 4 + 5)		1,536
7	Customer Account expense per books for the 12 months ended 3/31/2014, as adjusted		$ 26,378

Metropolitan Edison Company
Supporting Schedule No. 1 to Normalizing Adjustment No. 5
($000)

Adjustment of Other O&M Costs Associated with Serving New Customers

In association with the additional revenues from added customers reflected in Adjustment No. 1, there is also a cost associated with serving those customers. The Commission has previously recognized this and approved an adjustment to customer accounts expense for this increased cost. This cost is estimated by determining the ratio of non-payroll customer account expense to distribution revenues from customers and applying this ratio to the additional revenue received from increased customers. The distribution revenue is supported by Mr. K. M. Siedt.

Adjustment for OPEB Expense

Budgeted OPEB expense consists of the current service cost, adjustments to prior years' service costs, and the financing component. This schedule adjusts the total budgeted expense amounts to the service cost. The service cost represents the actuarial present value of benefit liabilities accrued under the plan benefit formula for services rendered during the test year. Inclusion of the service cost in rates provides for recovery of the current cost of benefits earned by plan participants. Any excess or shortfall related to the expected return on plan assets are not included because their inclusion would artificially reduce or increase total costs and result in the recovery of more or less than the actual normal cost of service. The adjustment for OPEB expense to the current service cost amount was adopted by the Commission at Nos. Docket R-00061366 and R-00061367

Line No.	Description	O&M (1)	Capital (2)	Total (3)
1	O&M - Capital allocation ratios	39.67%	60.33%	100.00%

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-A-1:

"Provide a schedule showing the test year rate base and rates of return at original cost less accrued depreciation under present rates and under proposed rates. Claims made on this schedule should be cross-referenced to appropriate supporting schedules."

RESPONSE:

See Met-Ed Exhibit RAD-1 for the fully projected future test year.

See Met-Ed Exhibit RAD-3 for the future test year.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-A-2:

"If the schedule provided in response to item 1, is based upon a future test year, provide a similar schedule which is based upon actual data for the 12-month period immediately prior to the test year."

RESPONSE:

See Met-Ed Exhibit RAD-5 for the historical test year.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-A-3:

"When a utility files a tariff stating a new rate based in whole or in part on the cost of construction, as defined in 66 Pa.C.S. § 1308(f) (relating to voluntary changes in rates), of an electric generating unit, the utility shall identify:

(a) The total cost of the generating unit
(b) The following costs:
    (1) The cost and quantity of each category of major equipment, such as switchgear, pumps or diesel generators and the like.
    (2) The cost and quantity of each category of bulk materials, such as concrete, cable and structural steel and the like. .
    (3) Manual labor. .
    (4) Direct and indirect costs of architect/engineering services. .
    (5) Direct and indirect costs of subcontracts or other contracts involving major components or systems such as turbines, generators, nuclear steam supply systems, major structures and the like.
    (6) Distributed costs.
(c) A cost increase of $5 million or more, including AFUDC, over the original utility estimates provided under 66 Pa.C.S. § 515(a) (relating to construction cost of electric generating units) and its causes.
(d) Compliance with subsections (a) and (b) will be identical in format and substance as that provided under 52 Pa. Code § 57.103 (relating to estimate of construction costs) for original cost estimates submitted under 66 Pa.C.S. § 515(a)."

RESPONSE:

Not applicable.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-B-1:

"If a claim is made for plant held for future use, supply the following:

a. A description of the plant or land site and its cost and any accumulated depreciation.
b. The expected date of use for each item claimed.
c. An explanation as to why it is necessary to acquire each item in advance of its date of use.
d. The data when each item was acquired.
e. The date when each item was placed in plant held for future use."

RESPONSE:

There is no rate base claim being made in this proceeding for plant held for future use.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-B-2:

> "If a claim is made for construction work in progress, provide a supporting schedule which sets forth separately, revenue-producing and nonrevenue producing amounts, and include, for each category a summary of all work orders, amounts expended at the end of the test year and anticipated in service dates. Indicate if the construction work in progress will result in insurance recoveries, reimbursements, or retirements of existing facilities. Describe in exact detail the necessity of each project claimed if not detailed on the summary page from the work order. Include final completion dates and estimated total amounts to be spent on each project."

RESPONSE:

Met-Ed is not making any rate base claim for construction work in progress.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-B-3:

"If a claim is made for materials and supplies or fuel inventory provide a supporting schedule for each claim showing the latest actual 13 monthly balances and showing in the case of fuel inventory claims, the type of fuel, and location, as in station, and the quantity and price claimed."

RESPONSE:

METROPOLITAN EDISON COMPANY

13 Month Book Balance of Materials and Supplies

Line No.	Month	Amount *(in thousands)*

14	13 Period Average	$ 14,779,172

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-B-4:

> "If a claim is made for cash working capital provide a supporting schedule setting forth the method and all detailed data utilized to determine the cash working capital requirement. If not provided in the support data provide a lead-lag study of working capital, completed no more than 6 months prior to the rate increase filing."

RESPONSE:

See the Direct Testimony of Patricia Larkin, Met-Ed/Penelec/Penn Power/West Penn Statement No. 6.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-B-6:

"Explain in detail by statement or exhibit the appropriateness of additional claims or the use of a method not previously mentioned, in the claimed rate base."

RESPONSE:

The supporting schedules included in Met-Ed Exhibit RAD-1 explain the appropriateness of various items claimed in the rate base. Items not explained in supporting schedules to Met-Ed Exhibit RAD-1, or not mentioned in other responses to filing requirements are explained below:

1. Customer Deposits

Customer deposits are deducted from the rate base as they represent a source of non-investor supplied capital. Appropriate interest on such deposits has been included as a normalizing adjustment to the income statement.

2. Customer Advances for Construction

In accordance with the practice followed in prior rate filings and accepted by Commission Orders, the Company reduces rate base by the amount of customer advances for construction at the end of the test year.

3. Operating Reserves

The Company has adopted a partial self-insurance concept for general and automotive liability insurance, property insurance and a long-term disability plan. The Company has also established an operating reserve for the purpose of providing a pension fund in addition to the normal funded plan. These operating reserves, net of applicable deferred taxes, reduce the Company's total rate base claim.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-C-1:

"Prepare a Statement of Income including:

(a) The book, or budgeted, statement for the test year.
(b) Adjustments to annualize and normalize under present rates, including an elimination of the effects on income of the energy cost rate and state tax adjustment surcharge.
(c) The income statement under present rates after adjustment.
(d) The adjustment for the revenue requested.
(e) The income statement under requested rates after adjustment.
(f) Each adjustment, including those relating to adjustment clauses, shall contain an explanation in sufficient clarifying detail to allow a reasonably informed person to understand the method and rationale of the adjustment."

RESPONSE:

Fully Projected Future Test Year

(a – f): See Met-Ed Exhibit RAD-2. Regarding part (b) pertaining to the annualization and normalization of revenues including applicable surcharges and tariff riders, these adjustments are supported in the Direct Testimony of Met-Ed Witness Kevin M. Siedt, Met-Ed Statement No. 4 and Met-Ed Exhibit KMS-1 Attachment A which accompanies his Direct Testimony.

Future Test Year

(a – f) See Met-Ed Exhibit RAD-4. Regarding part (b) pertaining to the annualization and normalization of revenues including applicable surcharges and tariff riders, these adjustments are supported in the Direct Testimony of Met-Ed Witness Kevin M. Siedt, Met-Ed Statement No. 4 and Met-Ed Exhibit KMS-1, Attachment B which accompanies his Direct Testimony.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-C-2:

"If the schedule provided in Filing Requirement II-C-1 is based upon budgeted data for a future test year, provide a similar schedule which is based upon actual data for the 12-month period immediately prior to the test year."

FILING REQUIREMENT II-C-1:

"Prepare a Statement of Income including:

(a) The book, or budgeted, statement for the test year.
(b) Adjustments to annualize and normalize under present rates, including an elimination of the effects on income of the energy cost rate and state tax adjustment surcharge.
(c) The income statement under present rates after adjustment.
(d) The adjustment for the revenue requested.
(e) The income statement under requested rates after adjustment.
(f) Each adjustment, including those relating to adjustment clauses, shall contain an explanation in sufficient clarifying detail to allow a reasonably informed person to understand the method and rationale of the adjustment."

RESPONSE:

(a – f): See Met-Ed Exhibit RAD-6. Regarding part (b) pertaining to the annualization and normalization of revenues including applicable surcharges and tariff riders, these adjustments are supported in the Direct Testimony of Met-Ed Witness Kevin M. Siedt, Met-Ed Statement No. 4 and Met-Ed Exhibit KMS-1, Attachment C which accompanies his Direct Testimony.

FILING REQUIREMENT II-D-1

"Provide a schedule showing all revenues and expenses for the test year and for the 12-month period immediately prior to the test year, together with an explanation for major variances between test year revenues and expenses and those for the previous 12-month period. Revenues and expenses shall be summarized by the major account categories listed below. If budgeted data for a future test year is not readily available by these categories, an analysis of the data for the 12-month period immediately prior to the future test year or for the most recent available calendar year may serve as the basis for ratably allocating the budgeted data into the account categories as follows:

OPERATING REVENUES

	Electric Revenues:
	Residential Sales
	Commercial Sales
	Industrial Sales
400	Public Street & Highway
	Lighting Sales
	Sales for Resale
	Total Other Electric Revenues
	Other Electric Revenues:
	Late Payment Charges
	Miscellaneous Service Revenues
	Rent from Electric Property
	Other Electric Revenues
	Total Other Electric Revenues
	Total Operating Revenues

OPERATING EXPENSES

	Operation and Maintenance Expenses
	Power Production Expenses:
	Fuel
401-2	Net Interchange
	Deferred Energy Costs
	Other
	Transmission Expenses
	Distribution Expenses
	Customer Service & Informational Expense
	Sales Expenses

	Administrative and General Expenses
	Total Operation & Maintenance Expenses
403	Depreciation Expenses
	Amortization of Net Salvage
	Nuclear Decommissioning Expense
407	Amortization of Property Losses
	Taxes Other Than Income Taxes
408	Total Operating Expenses Prior To Federal & State Income Taxes

OPERATING EXPENSES

	Operating Income Prior To Federal and State Income Taxes

FEDERAL AND STATE INCOME TAXES

	Federal Income Taxes

431	Other Interest Expense
432	Allowance for Borrowed Funds Used During Construction—Credit
	Net Interest Charges
	Income Before Extraordinary Items
	Extraordinary Items After Taxes
	Net Income "

RESPONSE:

See Exhibit RAD-18 Attachment A which provides the requested comparative operating statements. Set forth below are explanations of the causes of major variances.

OPERATING REVENUES

Residential Sales (Variation ($8,122))

The variance is due primarily to decreases of $16.2 million in the Hourly Pricing Service revenue and $1.5 million in the NUG Rider Energy charge offset by increases of $7.2 million in the Universal Service Charge and $1.6 million in the Smart Meter Technology revenues.

Commercial Sales (Variation ($10,927))

The variance is due primarily to decreases of $11.7 million in the Hourly Pricing Service revenue and $0.9 million in the NUG Rider Energy charge offset by increases of $1.0 million in the Smart Meter Technology revenues.

Sales for Resale (Variation ($8,398))

The variance is due primarily to an $8.0 million decrease to PJM Spot market energy revenues.

OPERATING EXPENSES

Operation and Maintenance expense Account 401-2 (Variance ($43,104))

The variance is primarily due to decreases of $44.5 million in purchased power, and $3.5 million in customer assistance expenses. These decreases were partially offset by increases of $4.1 million in distribution expenses, and $3.3 million in administrative & general expenses.

Account 403 Depreciation expense (Variance $2,829)

The variance is due primarily to a $2.8 million increase in depreciation on assets offset by $0.1 million decrease in depreciation cost of removal.

Account 404-5 Amortization and depletion of utility plant (Variance $2,029)

The variance is due primarily to a $2.0 million increase in amortization and depletion on assets.

Account 407.3 Regulatory debits (Variance ($1,490))

This variance is due primarily to a $3.8 million decrease in the NUG deferral offset partly by a $1.3 increase in the DSSR deferral and a $1.0 increase in the 2006 PJM Transmission deferral.

Account 407.4 Regulatory credits (Variance $26,856)

This variance is due primarily to increases of $13.8 million in the Price to Compare deferral, $10.6 million in the Universal Service deferral, $1.7 million in the Energy Efficiency deferral, and $1.5 million in the Smart Meter deferral.

Account 408.1 Taxes other than income taxes (Variance ($1,086)

This variance is due primarily to a decrease of $1.2 million in the PA gross receipts tax.

.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-2:

"Provide a summary of test year adjustments which sets forth the effect of the adjustment upon the following: operating revenues, operating expenses, taxes other than income taxes, operating income before income taxes, State income tax, Federal income tax and income available for return. In addition, test year adjustments shall be presented on the basis of the major account categories set out at II-D-1."

RESPONSE:

See Met-Ed Exhibit RAD-19 Attachment A.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-3:

"List and explain all nonrecurring or extraordinary expenses incurred in the test year and all expenses included in the test year which do not occur yearly but are of a nature that they do occur over an extended period of years, for example, nonyearly maintenance programs, and the like."

RESPONSE:

The test year ending 4/30/16 does not include any non-recurring or extraordinary expenses.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-4:

"As a separate item, list extraordinary property losses related to property previously included in cost of service when the gain or loss on this property has occurred or is likely to occur in the future test year. The proposed ratemaking treatment of extraordinary gains and losses must also be disclosed. Sufficient supporting data must be provided."

RESPONSE:

There are no extraordinary property losses.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-5:

"Provide the amount of accumulated reserve for uncollectible accounts, method and rate of accrual, amounts accrued and amounts written off in each of the last 3 calendar years."

RESPONSE:

The future estimate of uncollectible accounts is based on a historically determined average of net write-offs to sales for each utility company. For the Uncollectible Customer Reserve, the regulated utility companies at FirstEnergy determine a 3-year rolling average of net write-offs to sales (36 months of net write-offs/ 36 months of sales). This percentage is then multiplied by the latest 6 months of sales to arrive at a reserve.

Beginning in 2013, the Uncollectible Customer Reserve includes a reserve for the Purchase of Receivables program (POR). This is determined by using a percentage of Non- POR Uncollectible Customer Reserve to Non- POR Customer Receivable Arrears (Uncollectible Customer Receivable Reserve/Non-Current Customer Receivable Arrears). This percentage is then multiplied by the POR Non-Current Customer Receivable Arrears to arrive at a reserve.

The Utility may record additional uncollectible customer reserve amounts as deemed necessary to fairly value Accounts Receivable.

The accruals, net write-offs and balance in FERC Account No. 144.1 Accumulated Reserve for Uncollectible Accounts for the last three calendar years are as follows:

Line No.	Description	Amount
1	**Balance, January 1, 2011**	$ (3,867,730)
2	Accruals	$ (11,522,378)
3	Write-offs (Net)	$ 12,374,770
4	**Balance, December 31, 2011**	$ (3,015,338)
5	Accruals	$ (12,841,208)
6	Write-offs (Net)	$ 12,833,226
7	**Balance, December 31, 2012**	$ (3,023,320)
8	Accruals	$ (14,333,240)
9	Write-offs (Net)	$ 10,315,484
10	**Balance, December 31, 2013**	$ (7,041,076)

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-6:

"Supply detailed calculations to support the total claim for rate case expense, including supporting data for outside service rendered. Provide the items comprising the estimated rate case expense claim for the current rate case."

RESPONSE:

The claim in the current rate case proceeding for rate case expenses, shown on Met-Ed Exhibit RAD-2 page 18, is based on the following total estimated expenses proposed to be amortized for ratemaking purposes over two years:

	Amount ($000)
Legal Expenses	$ 275
Expert Witnesses	33
Other	187
Total	$ 495

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-7:

"Submit schedules for the test year and for the 12-month period immediately prior to the test year showing by major components, if included in claimed test year expenses, the expenses incurred in each of the following expense categories:

(a) Miscellaneous general expenses, including account 930.
(b) Outside service expenses.
(c) Regulatory commission expenses.
(d) Advertising expenses, including advertising engaged in by trade associations whenever the utility has claimed a contribution to the trade association as a ratemaking claim - provide explanation of types and purposes of such advertising.
(e) Research and development expenses – provide a listing of major projects.
(f) Charitable and civic contributions, by recipient and amount.

Explain major variances between the test year expenses and those expenses for the prior 12-month period."

RESPONSE:

(a) – (d) See Page 2 of 3
(e) – (f) See Page 3 of 3

SERVICE AGREEMENT

This Service Agreement ("Agreement") is entered into as of the 25th day of February, 2011, by and between each of the associate companies listed on the signature page hereto (each a "Client Company"), and FirstEnergy Service Company, an Ohio corporation ("Service Company").

WHEREAS, Service Company is a direct wholly-owned subsidiary of FirstEnergy Corp., a holding company under the Public Utility Holding Company Act of 2005, as amended (the "Act");

WHEREAS, Service Company has been formed for the purpose of providing administrative, management and other services to FirstEnergy Corp. and its associate companies, including Client Company (together, the "Client Companies"); and

WHEREAS, Client Company believes that it is in its interest to enter into an arrangement whereby Client Company may agree to purchase such administrative, management and other services from Service Company as Client Company may choose at cost as determined in accordance with this Agreement and the Act;

NOW, THEREFORE, in consideration of the mutual covenants contained herein and other valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties hereto, intending to be legally bound, hereby agree as follows:

1. DESCRIPTION OF SERVICES.

Service Company agrees to provide certain administrative, management or other services (the "Services") to Client Company similar to those supplied to other Client Companies of Service Company. Such services are and will be provided to Client Company only at the request of Client Company. Exhibit A hereto lists and describes all of the Services that are available from Service Company.

2. PERSONNEL.

In order to provide the Services, Service Company will employ executive officers, accountants, financial advisers, technical advisers, attorneys and other persons with the necessary qualifications. If necessary, Service Company may also arrange for the services of nonaffiliated experts, consultants and attorneys in connection with the performance of any of the Services provided under this Agreement.

3. COMPENSATION AND ALLOCATION.

As and to the extent required by law, Service Company provides and will provide such services at fully allocated cost, determined in accordance with the Act. Exhibit A hereof contains rules for determining and allocating such costs.

4. TERMINATION AND MODIFICATION.

Either party to this Agreement may terminate this Agreement by providing 60 days written notice of such termination to the other party. This Agreement is subject to termination or modification at any time to the extent its performance may conflict with the provisions of the Act or with any rule, regulation or order of the Federal Regulatory Energy Commission (the "Commission") adopted before or after the making of this Agreement. This Agreement shall be subject to the approval of any state commission or other state regulatory body whose approval is, by the laws of said state, a legal prerequisite to the execution and delivery or the performance of this Agreement.

5. SERVICE REQUESTS.

Client Company and Service Company will prepare a Service Request on or before September 30th of each year listing Services to be provided to Client Company by Service Company and any special arrangements related to the provision of such Services for the coming year, based on Services provided during the preceding year. Client Company and Service Company may supplement the Service Request during the year to reflect any additional or special Services that Client Company wishes to obtain from Service Company, and the arrangements relating thereto.

6. BILLING AND PAYMENT.

Unless otherwise set forth in a Service Request, payment for Services provided by Service Company shall be by making remittance of the amount billed or by making appropriate accounting entries on the books of Client Company and Service Company. Billing will be made on a monthly basis, with the bill to be rendered as soon as practicable after the close of the month, and remittance or accounting entries completed within 30 days of billing. Any amount remaining unpaid after 30 days following receipt of the bill shall bear interest thereon from the due date of the bill until payment at a rate equal to the prime rate on the due date.

7. NOTICE.

Where written notice is required by this Agreement, all notices, consents, certificates, or other communications hereunder shall be in writing and shall be deemed given when mailed by United States registered or certified mail, postage prepaid, return receipt requested, addressed as follows:

To Client Company: c/o President
76 South Main St.
Akron, Ohio 44308

To Service Company: c/o Vice President and Controller
76 South Main Street
Akron, Ohio 44308

8. GOVERNING LAW.

This Agreement shall be governed by and construed in accordance with the laws of the State of Ohio, without regard to its conflict of laws provisions.

9. MODIFICATION.

No amendment, change or modification to this Agreement shall be valid, unless made in writing and signed by both parties hereto.

10. ENTIRE AGREEMENT.

This Agreement, together with its exhibits, constitutes the entire understanding and agreement of the parties with respect to its subject matter, and effective upon the execution of this Agreement by the respective parties hereof, any and all prior agreements, understandings or representations with respect to this subject matter are hereby terminated and canceled in their entirety and are of no further force and effect, except to the extent transactions thereunder have taken place prior to such effective date in which case such agreements will govern the terms of such transactions.

11. WAIVER.

No waiver by either party hereto of a breach of any provision of this Agreement shall constitute a waiver of any preceding or succeeding breach of the same or any other provision hereof.

12. ASSIGNMENT.

This Agreement shall inure to the benefit and shall be binding upon the parties and their respective successors and assigns. No assignment of this Agreement or either party's rights, interests or obligations hereunder may be made without the other party's consent, which shall not be unreasonably withheld, delayed or conditioned.

13. SEVERABILITY.

If any provision or provisions of this Agreement shall be held by a court of competent jurisdiction to be invalid, illegal, or unenforceable, the validity, legality, and enforceability of the remaining provisions shall in no way be affected or impaired thereby.

IN WITNESS WHEREOF, the parties have caused this Agreement to be duly executed effective as of the 25th day of February, 2011. This Agreement supercedes any previous agreement between the Service Company and the Client Companies.

EXHIBIT A
DESCRIPTION OF SERVICES AND ALLOCATION METHODOLOGY

1. Description Of Services

Overview

This Exhibit provides a description of all services provided by Service Company departments and the cost allocation methodologies to be used in connection therewith. All products and services are subject to Service Level Standards as negotiated between the Service Company department and Client Company. Each Client Company is classified as either a "Utility Subsidiary" or a "Non-Utility Subsidiary".

2. Cost Allocation Methodology

Overview

The costs of services provided by Service Company will be directly assigned, distributed or allocated by activity, project, program, work order or other appropriate basis. The primary basis for charges to affiliates is the direct charge method. The methodologies listed below pertain to all other costs which are not directly assigned but which make up the fully allocated cost of providing the product or service. The costs of product and services provided by the ServeCo that cannot be charged directly to the Subsidiary receiving the product or service will be allocated among the associate companies by utilizing one of the methods described below that most accurately distributes the costs. The method of cost allocation varies based on the department rendering the service. The allocation methods used by Service Company are as follows:

a. **"Multiple Factor – All"** - For the Indirect Costs for products or services benefiting the entire FirstEnergy system, FirstEnergy and all Subsidiaries will bear a fair and equitable portion of such costs. FirstEnergy will bear 5% of these Indirect Costs. The remaining Indirect Costs will be allocated among the Utility Subsidiaries and the Non-Utility Subsidiaries benefiting from the services provided based on FirstEnergy's equity investment in the respective groups. A subsequent allocation step will then occur. Among the Utility Subsidiaries, allocations will be based upon the **"Multiple Factor - Utility"** method. Among the Non-Utility Subsidiaries, allocations will be based upon the **"Multiple Factor - Non-Utility"** method.

b. **"Multiple Factor – Utility"** - For the Indirect Costs for a product or service solely benefiting one or more of the Utility Subsidiaries, each such Utility Subsidiary so benefiting will be charged a portion of the Indirect Costs based on the sum of the weighted averages of the following factors:

1. Gross transmission and/or distribution plant
2. Operating and maintenance expense excluding purchase power and fuel costs

3. Transmission and/or distribution revenues, excluding transactions with affiliates

These three (3) factors have been determined to be the most appropriate for the Utility Subsidiaries in the FirstEnergy system. Each factor will be weighted equally so that no one facet of the electric utility operations inordinately influences the distribution of Indirect Costs.

c. **"Multiple Factor - Non-Utility"** - For the Indirect Costs for products or services solely benefiting the Non-Utility Subsidiaries, each Non-Utility Subsidiary so benefiting receiving the product or service will be charged a proportion of the Indirect Costs based upon the total assets of each Non-Utility Subsidiary, including the generating assets under operating leases from the Utility Subsidiaries.

d. **"Multiple Factor - Utility and Non-Utility"** - For the Indirect Costs for a product or service benefiting one or more of the Utility and Non-Utility Subsidiaries, each such Subsidiary so benefiting is first assigned a distribution ratio that is in proportion to the Indirect Costs based on FirstEnergy's equity investment in such Subsidiaries. Following this distribution, a subsequent allocation step will then occur. Among the Utility Subsidiaries, allocations will be based upon the **"Multiple Factor-Utility."** Among the Non-Utility Subsidiaries, allocations will be based upon **"Multiple Factor - Non-Utility"**

e. **"Direct Charge Ratio"** - The ratio of direct charges for a particular product or service to an individual Subsidiary as a percentage of the total direct charges for a particular product or service to all Subsidiaries benefiting from such services. Indirect Costs are then allocated to each Subsidiary based on the calculated ratios.

f. **"Number of Customers Ratio"** - For costs of products and services driven by the number of Utility customers, the allocation method that will be used will be the number of Utility customers for the respective Utility Subsidiary receiving the product or service divided by the total number of utility customers.

g. **"Number of Shopping Customers Ratio"** - A "shopping customer" is defined as a Utility customer who has selected a competitive electric generation supplier. For costs of products and services driven by the number of shopping customers, the allocation method that will be used will be the number of shopping customers for the respective Utility Subsidiary receiving the product or service divided by the total number of shopping customers.

h. "Number of Participating Employees – General" - For costs of products and services driven by all participating employees within the FirstEnergy system, the allocation method that will be used will be the number of participating employees for the respective Subsidiary receiving the product or service divided by the total number of participating employees.

i. "Number of Participating Employees - Utility and Non-Utility" - For costs of products and services driven by participating employees who work for the Utility and Non-Utility Subsidiaries, the Subsidiaries receiving the product or service are first assigned a distribution ratio that is in proportion to the Indirect Costs based on FirstEnergy's equity investment in the respective groups. Costs are further allocated by using the number of participating employees for the respective Subsidiary divided by the total number of participating FirstEnergy employees.

j. "Gigabytes Used Ratio" - Number of gigabytes utilized by a Subsidiary receiving the product or service divided by the total number of gigabytes used by the FirstEnergy system companies applicable to that respective product or service.

k. "Number of Computer Workstations Ratio" - Number of computer workstations utilized by a Subsidiary receiving the product or service divided by the total number of computer workstations in use by the FirstEnergy system companies applicable to that respective product or service.

l. "Number of Billing Inserts Ratio" - Number of billing inserts performed for a Subsidiary receiving the product or service divided by the total number of billing inserts performed for the FirstEnergy system companies applicable to that respective product or service.

m. "Number of Invoices Ratio" - Number of invoices processed for a Subsidiary receiving the product or service divided by the total number of invoices processed for the FirstEnergy system companies applicable to that respective product or service.

n. "Number of Payments Ratio" - Number of monthly payments processed for a Subsidiary divided by the total monthly number of payments processed for the FirstEnergy system companies applicable to that respective product or service. This will not be utilized until some historical information is available out of our new automated system.

o. "Daily Print Volume" - Average daily print volume performed for a Subsidiary receiving the service divided by the total average daily print volume performed for the entire FirstEnergy system.

p. "Number of Intel Servers" - Number of Intel servers utilized by a Subsidiary receiving the product or service divided by the total number of Intel servers utilized by the FirstEnergy system.

q. "Application Development Ratio" - Number of application development hours budgeted for a Subsidiary receiving the service divided by the total number of budgeted application development hours for the year.

r. "Server Support Composite" - The average ratio of unix gigabytes, SAP gigabytes and Intel number of servers for a Subsidiary receiving the service.

3. Descriptions of Products and Services

CALL CENTER

Product or Service	Product / Service Description	Indirect Allocation Methods
Field All Inbound Regulated Calls	Field calls related to billing, credit, new service, service order completion, outages, and other miscellaneous activities.	Multiple Factor – Utility and Non-Utility
Field All Inbound Unregulated Calls	Field calls related to billing, credit, new service, service order completion, outages, and other miscellaneous activities.	Multiple Factor – Utility and Non-Utility

CUSTOMER SERVICE

Product or Service	Product / Service Description	Indirect Allocation Methods
Supplier Services	Provide customer services support to electric generation suppliers, administer and maintain Electronic Data Interface (EDI) functions and invoice suppliers.	Number of Shopping Customers Ratio
Regulatory Interface and Process Improvement: Supplier	Liaison to ensure Customer Choice requirements and develop and execute plans to improve supplier services processes.	Number of Shopping Customers Ratio
Market Support Generation (MSG) Administration	Administer and support MSG supplier functions.	Number of Shopping Customers Ratio
Regulatory Interface and Process Improvement: Regulatory	Respond to regulatory complaints from customers and develop and execute plans to improve regulatory compliance processes.	Number of Customers Ratio
Compliance	Work with regions to communicate and ensure regulatory requirements.	Multiple Factor – Utility
Power Billing	Provide billing functions for large commercial/industrial contract customers.	Number of Customers Ratio
Revenue Reporting	Perform and manage revenue reporting functions.	Number of Customers Ratio
Billing Exception Processing	Process billing exceptions.	Number of Customers Ratio
Remittance Processing	Process customer payments and deposit funds.	Number of Payments Ratio
Human Services	Coordinate and administer the various social services programs.	Number of Customers Ratio

Arrears Management/ Outsourcing Services Incorporated (OSI) Administration	Coordinate and perform arrears, credit and bankruptcy functions. Manage outside collections agencies' performance and OSI credit activities.	Number of Customers Ratio
Revenue Protection Administration	Perform revenue reporting and compliance functions.	Number of Customers Ratio
Metrics and Budget/ Customer Satisfaction Measurement	Manage Customer Services and Call Center Departments' budgets and measure performance and customer satisfaction results.	Number of Customers Ratio
Policy/Procedures Development and Documentation	Develop, document and communicate Customer Services policies and procedures.	Number of Customers Ratio
Bill Administration/ Forms Administration	Design standardized customer bills, envelopes, and forms.	Number of Customers Ratio
Meter Reading Support	Coordinate Meter Reading schedules and routing activities.	Number of Customers Ratio
Customer Information System (CIS) Control	Operate and maintain CIS.	Number of Customers Ratio

ECONOMIC DEVELOPMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
Economic Development Services	Foster economic development to encourage capital investment in FirstEnergy's service areas.	Multiple Factor – Utility

TRANSMISSION & DISTRIBUTION TECHNICAL SERVICES

Product or Service	Product / Service Description	Indirect Allocation Methods
Forestry	Provide forestry services.	Multiple Factor – Utility
Distribution Reliability and Asset Records	Services include Joint User contracts, public works coordination, reliability reporting to regions and Public Utility Commissions, mutual assistance coordination, PowerOn support, cable locate ticket screening and tariff support.	Multiple Factor – Utility

Design Standards	Services include line material and construction standards, distribution line and underground maintenance practices and support, new business process support, and service practices.	Multiple Factor – Utility
Substation Services Support	Services include Substation maintenance plan coordination, practices and support, mobile substation administration and planning, and environmental compliance support.	Multiple Factor – Utility
Equipment Repair/Testing Services	Services include the maintenance, installation, maintenance, testing and repair of utility equipment.	Multiple Factor – Utility
Fleet Services	Develop fleet strategy, and perform fleet maintenance practices and support.	Multiple Factor – Utility
Financial Services	Identify revenue enhancements and cost reductions.	Multiple Factor – Utility
Substation Design and Transmission-Line Maintenance Support	Perform substation and transmission line design and project management and transmission line and substation design and material standards, right-of-way and survey services, transmission line maintenance plan coordination, practices and support, FAA activity coordination.	Multiple Factor – Utility
Planning and Protection	Perform planning and protection support for subtransmission system and overall radial system capacity planning overview, and interconnection coordination for distributed technology applications on distribution system.	Multiple Factor – Utility
Capital Budget and Equipment Support	Capital budget development and support, and major equipment specifications and procurement/repair activities for major equipment.	Multiple Factor – Utility

WORKFORCE DEVELOPMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
Transmission and Distribution Skills Training	Develop and facilitate technical and safety training for workers associated with distribution activities, including line, substation, meter, fleet, warehouse, field engineering, and dispatch. Provide support through equipment evaluation, training analyses, job assessments, and project coordination.	Number of Participating Employees – General
Customer Service Skills Training	Develop and facilitate skills training for customer service groups.	Multiple Factor – Utility
External Learning Opportunities Through the Power Systems Institute	Develop educational partnerships with colleges to offer two-year degrees in electric utility technology.	Multiple Factor – Utility

ADMINISTRATIVE SERVICES

Product or Service	Product / Service Description	Indirect Allocation Methods
Provide Administrative Support Services	Provides services in production printing, document imaging, graphic services, food services, corporate mailroom and corporate courier.	Multiple Factor – Utility and Non-Utility or Multiple Factor Utility*
Provide Records Management Services	Provides services in records storage, records retrieval, records retention, records planning and engineering records.	Multiple Factor – Utility and Non-Utility or Multiple Factor Utility*
Provide Business Services	Provides services in convenience copiers, fax machines, pagers, printers, and business information center.	Multiple Factor – Utility and Non-Utility or Multiple Factor Utility*

* For services rendered only to the utilities.

EXECUTIVE

Product or Service	Product / Service Description	Indirect Allocation Methods
Executive Management	Consultation and services in management and administration of all aspects of the business.	Multiple Factor – All

COMMUNICATIONS

Product or Service	Product / Service Description	Indirect Allocation Methods
Public Relations	Provides services in media relations, financial communications, annual reports, executive presentation, public relations counsel, corporate writing, internet support and special projects.	Multiple Factor – All
Employee Communications	Provides services with update, retirees, satellite broadcast, human resource-related communications and special projects.	Number of Participating Employees – Utility and Non-Utility
Production	Provides services related to display, photography, Corporate ID, video and employee merchandise.	Multiple Factor – All
Sponsorship	Provides services related to sports marketing, university support and special projects.	Multiple Factor – All
Non-Utility Advertising	Provides services related to broadcast/print, collateral, direct mail, internet/intranet, display/merchandise, yellow/white pages, production/agency support and special projects.	Multiple Factor – Non-Utility
Utility Advertising	Provides services related to TV, radio, print, outdoors, Internet/Intranet, special projects, production, agency support and creative media placement.	Multiple Factor – Utility
Utility Bill Inserts	Provides services developing regulated bill service to Ohio, Pennsylvania and New Jersey.	Multiple Factor – Utility
Utility : Yellow / White Pages	Provides services with regulated yellow/white pages.	Multiple Factor – Utility
Utility: Research	Provides research services.	Multiple Factor – Utility
Ohio Consumer Education	Provides services related to Ohio Consumer Education statewide and locally.	Multiple Factor – Utility

REAL ESTATE

Product or Service	Product / Service Description	Indirect Allocation Methods
Facilities Management	Management and maintenance of office facilities.	Multiple Factor – All or Multiple Factor Utility*
Facilities Planning and Project Management	Manage office design services, furniture, project management and other capital improvements.	Multiple Factor – All or Multiple Factor Utility*
Management of Real Estate Assets	Support internal and external inquiries regarding the acquisition, divestiture and management of real estate assets	Multiple Factor – All or Multiple Factor Utility*
Manage/Administer Security Programs	Administer physical security, special investigations, security audits, security consultation and contract guard services.	Multiple Factor – All or Multiple Factor Utility*

* For services rendered only to the utilities.

FIRSTENERGY TECHNOLOGIES

Product or Service	Product / Service Description	Indirect Allocation Methods
Strategic Technologies	Develop, support and implement EPRI programs, industry initiatives, research and development programs, collaboratives and activities with universities, labs and the Department of Energy.	Multiple Factor – Utility
New Technology Assessment	Perform assessment activities for strategic technology pilots, technology assessments, marketing tests, customer pilots and due diligence reviews.	Multiple Factor – Utility and Non-Utility
Technical Application and Product Innovation	Develop, analyze and support strategic alliances, joint ventures, strategic startups, direct investments and Portfolio initiatives.	Multiple Factor – Utility and Non-Utility
New Technology and Product Market Deployment	Develop, support and implement the following initiatives: tailored solutions with existing products, commercial packages, operational efficiencies and business area solutions.	Multiple Factor – Utility and Non-Utility
Demand Response Initiatives	Provide support for corporate demand response initiatives.	Multiple Factor – Utility and Non-Utility
Renewable Energy Program and Strategy	Provide support for various corporate and regulatory initiatives to develop and implement renewable energy programs and products.	Multiple Factor – Utility

Regulated Programs and Services	Develop, support and implement programs and strategies to meet corporate initiatives and regulatory mandates and commitments related to Comprehensive Resource Assessment(CRA), customer end-use. technology, distributed generation and load management.	Multiple Factor – Utility
Project Implementation Management Services	Develop and implement end-use and distributed generation technology-based products and services.	Multiple Factor – Utility and Non-Utility

TECHNOLOGY & SUPPORT SERVICES

Product or Service	Product / Service Description	Indirect Allocation Methods
Provide Network Services	Provide Internal Network Services.	Multiple Factor – Utility and Non-Utility
Maintain wireless cell sites and fiber optics network	Maintain internal wireless cell sites and fiber optic network; provide engineering, procurement, and installation services.	Multiple Factor – Utility and Non-Utility

INFORMATION TECHNOLOGY

Product or Service	Product / Service Description	Indirect Allocation Methods
Application Development	Create new or enhance existing applications; including analysis design coding, testing, system integration, and implementation, as well as any required technical writing or project manual development.	Directly Billed
Development Supervision and Tool Support	Supervision of application development employees and the support of development software tools.	Application Development Ratio
Server Support (Unix, SAP)	Create and support the network and server infrastructure to accommodate unix and SAP client server applications.	Gigabytes Used Ratio
Client Server Storage Support	Support of storage requirements for all server applications.	Server Support Composite Ratio
Server Support (Intel)	Create and support the network and server infrastructure to accommodate windows and NT client server applications.	Number of Intel Servers Ratio
Mainframe Processing and Storage Support	Execute mainframe applications, including an appropriate portion of support, started tasks, mainframe backups and microfiche services.	Gigabytes Used Ratio

Desktop Support	Help desk email and end-user tools, remote access, repair services, and general workstation support.	Number of Computer Workstations Ratio
Network Services	Includes voice, data, EMS and radio access.	Direct Charge Ratio
Inserting Services	Provide document bursting, inserting and mailing.	Number of Billing Inserts Ratio
Printing Services	Provide mainframe and client server printing services at the data center.	Daily Print Volume Ratio
Technical Consulting	Provide consulting support to departments and end-users to enable them to leverage their IT capabilities. Provide advice and consultation regarding desktop setups and configurations.	Directly Billed
Training	Provide IT training.	Multiple Factor – Utility and Non-Utility
Business Application Support	Support business application related software licenses and / or hardware maintenance provided by an outside vendor.	Directly Billed
Data Security	Disaster recovery and data security services.	Multiple Factor – Utility and Non-Utility
Project Management Office	Oversee technology projects through benefit.	Multiple Factor – Utility and Non-Utility
Provide Telecommunication Services	Provide telecommunication services and equipment.	Direct Charge Ratio
Portal Support	Support the infrastructure to accommodate internet and infranet application access.	Multiple Factor – Utility and Non-Utility

PERFORMANCE PLANNING

Product or Service	Product / Service Description	Indirect Allocation Methods
Performance Planning Services	Develop, support and execute performance planning services.	Multiple Factor – All

SUPPLY CHAIN

Product or Service	Product / Service Description	Indirect Allocation Methods
Strategic Planning, Demand management and Procurement Projects	Provide assistance in materials and services planning (demand management) and performs special procurement projects.	Multiple Factor – Utility and Non-Utility
Goods and services procurement	Procure material, equipment and contractor services. Establish, manage and administer programs, which allow internal customers to obtain goods without having to process the need through Procurement. Develop specifications, construction standards, schedules, and bills of materials.	Multiple Factor – Utility and Non-Utility
Materials Management Support	Maintain the computerized purchasing and materials management systems, and material related modules; maintain and/or modify select management reports. Analyze Supply Chain processes and measure performance. Monitor and forecast demand to ensure a continuous supply of materials.	Multiple Factor – Utility and Non-Utility
Investment Recovery Projects	Develop and implement plans for disposition of surplus assets.	Multiple Factor – Utility and Non-Utility
Process, Refurbish and Sell Materials	Perform recovery processing, investment recovery processing, refurbishing and selling materials.	Multiple Factor – Utility and Non-Utility
Provide Warehousing Services - Non-nuclear	Receive and place material into stock, insure quality requirements are met at receipt, maintain inventory counts, and update information systems. Fill customer requests for material from stock.	Multiple Factor – Utility and Non-Utility
Provide Warehousing Services - Nuclear	Receive and place material into stock, insure quality requirements are met at receipt, maintain inventory counts, and update information systems. Fill customer requests for material from stock.	None (All direct charged)
Warehousing Space Charge	Provide warehousing space to internal customers.	Multiple Factor – Utility and Non-Utility

CONTROLLERS

Product or Service	Product / Service Description	Indirect Allocation Methods
Accounting Research	Provide accounting research and consulting to ensure compliance with existing and proposed financial reporting, and regulatory accounting requirements.	Multiple Factor - All
Accounts Payable	Nonpayroll corporate disbursement services including account distribution to the general ledger. Resolve problems associated with invoice processing and maintain the accounts payable system.	Multiple Factor - All
Billing Services	Prepare non-retail electric billings.	Multiple Factor Utility
Infrastructure and Corporate Reporting, Accounting and Budgeting	Prepare Corporate Sustaining reports, subsidiary accounting and corporate budgeting, which includes reporting and support of the ledger, property records and SAP system.	Multiple Factor - All
Due Diligence	Assist value centers to determine whether proposed business acquisitions/combinations and similar transactions are desirable from a financial perspective; extensive review/analysis following preliminary review and firm intent to proceed with transaction through commitment and closing phases.	None (All direct charged)
Value Center Accounting and Budgeting	Maintain the property accounting system and provide value center accounting such as management reporting.	Multiple Factor – Utility and Non-Utility
Property Record Maintenance	Maintain corporate continuing property records.	Multiple Factor – Utility and Non-Utility or Multiple Factor Utility*
Tax Consulting and Research	Conduct tax research and tax consulting to assure compliance with statues, while evaluating alternative tax strategies within the constraints of regulations that provide additional shareholder value to the company. In addition, provide tax-consulting advice to the value centers on tax compliance and reporting issues, which includes business "start-up" support to organizations requiring assistance.	Multiple Factor – All

* For services rendered only to the utilities.

Tax Compliance	Prepare and process all schedules and information associated with corporate and subsidiary tax returns, audits, and tax litigation, assuring compliance with tax regulations and statues.	Multiple Factor – All or Multiple Factor Utility*

* For services rendered only to the utilities.

CREDIT MANAGEMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
Credit Analysis and Supporting Functions	Provide detailed written credit analysis issuing recommendations on counterparty creditworthiness and assigning credit limits.	Multiple Factor – Utility and Non-Utility
Credit Policies and Procedures	Develop and support credit policies and procedures for managing credit risk. Implement and support standardized credit approval processes.	Multiple Factor – Utility and Non-Utility
Credit Management Information System	Develop and support credit management reports and calculate credit exposure on a corporate wide basis.	Multiple Factor - All

ENTERPRISE RISK MANAGEMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
General Risk Management	Develop and maintain an enterprise risk management system.	Multiple Factor - All

INSURANCE SERVICES

Product or Service	Product / Service Description	Indirect Allocation Methods
Insurance Policies	Manage and support insurance policies for all the business units .	Multiple Factor – Utility and Non-Utility
Loss Control Services	Manage and support property inspections to prevent losses.	Multiple Factor – Utility and Non-Utility
Surety Bonds	Manage and support Surety Bonds.	Multiple Factor – Utility and Non-Utility
Risk Transfer and Risk Mitigation Services	Manage and support risk transfer and risk mitigation services.	Multiple Factor – Utility and Non-Utility
Ancillary Coverages	Manage and support ancillary coverages.	None (All direct charged)

INTERNAL AUDIT

Product or Service	Product / Service Description	Indirect Allocation Methods
Audit Services	Perform the following internal audit services based on risk levels and / or requests: financial, performance analysis, safeguarding of assets, computer- related and fraud investigations.	Multiple Factor – All or Multiple Factor – Utility*

INVESTMENT MANAGEMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
Qualified and Non-qualified Pension and Savings Plan	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	Number of Participating Employees – Utility and Non–Utility
FirstEnergy Foundation	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	Multiple Factor - All
Voluntary Employee Benefit Association (VEBA) Trust	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	Number of Participating Employees – Utility and Non–Utility
Nuclear Decommissioning	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	None (All direct charged)
Non-Utility Generator Trust	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	Multiple Factor – Non-Utility
Spent Nuclear Fuel	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	None (All direct charged)
Low-Income Housing Tax Credit Partnership	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	Multiple Factor - All

INVESTOR RELATIONS

Product or Service	Product / Service Description	Indirect Allocation Methods
Investor Information	Compile and communicate information to investors.	Multiple Factor – Utility* or Direct Charge to Holding Co.
Investor Education	Target and educate potential investors to promote FirstEnergy's valuation characteristics and business strategy.	None (All Direct Charge to Holding Co.)

* For services rendered only to the utilities.

Regulations Compliance	Ensure compliance with SEC Fair Disclosure regulations.	Multiple Factor - All

FirstEnergy Management Education	Provide education to management of business concerns and valuation issues of analyst/investors	Multiple Factor – All
FirstEnergy Employee Education	Actively promote understanding of financial and investor relations' issues.	Multiple Factor – All

RATES AND REGULATORY AFFAIRS

Product or Service	Product / Service Description	Indirect Allocation Methods
Regulatory Activities and Consulting	Manage regulatory activities and interfaces, including tariff development and interpretation. Monitor and participate in regulatory affairs at the local, state and federal levels.	Multiple Factor – Utility
Customer Pricing and Contracting	Develop pricing programs for regulated electric service for retail and wholesale customers, including "unbundled" costs and prices for generation, transmission and distribution service and support justification to regulators. Provide support in developing pricing for special-purpose customer programs and non-regulated energy services (e.g. prepayment, economic development, interruptible load, conjunctive-billing electric service programs).	Multiple Factor – Utility
Billing Support	Provide assistance calculating customer (external and internal) invoices and operate and maintain systems to render, collect and account for these invoices.	Multiple Factor – Utility
Sales and Load Forecasting	Develop short-term and long-term sales forecast, peak load projections and customer counts	Multiple Factor – Utility and Non-Utility

TREASURY

Product or Service	Product / Service Description	Indirect Allocation Methods
Capital Structure Management and Administration	Perform all activities related to acquiring capital and establish and administer funding, legal documentation, and record-keeping activities associated with finance programs	Multiple Factor – All
Corporate Funds Management	Plan, manage, and operate the corporate "cash-flow-cycle."	Multiple Factor – All
Corporate Forecasting	Provide regulatory support, strategy support, financial modeling and forecasting, financial and economic analysis and development of annual corporate KPI target.	Multiple Factor – All

Capital Project Evaluation and Support	Provide analytical support in the areas of financing, profitability, capital structure and cash flow.	Multiple Factor – Utility and Non-Utility
Investor Relations Activities	Provide institutional and retail security holder, buy and sell-side analysts, rating agencies, and other key members of the financial community with qualitative and quantitative information.	Multiple Factor – All

BUSINESS DEVELOPMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
Mergers and Acquisitions Support	Support, evaluate and assist in the management of merger, asset acquisition and asset disposition activities.	None (All direct charged)
Internal Consulting	Perform strategic analysis/business fit, and economic analysis. Provide integration and transitional management services as needed.	None (All direct charged)

GOVERNMENTAL AFFAIRS

Product or Service	Product / Service Description	Indirect Allocation Methods
Federal Governmental Affairs Support	Activities associated with developing and maintaining relationships with federal government institutions; includes lobbying, and other support activities.	None (All direct charged)
State Governmental Affairs Support	Activities associated with developing and maintaining relationships with state government institutions; includes lobbying, and other support activities.	None (All direct charged)

LEGAL

Product or Service	Product / Service Description	Indirect Allocation Methods
Provide Governmental Affairs Support	Activities associated with developing and maintaining relationships with government institutions; includes lobbying, litigation, and other support activities.	None (All direct charged)
Nuclear Legal Consultation and Case Management	Provide legal advice for federal and state nuclear matters.	None (All direct charged)
Human Resources Legal Consultation & Case Management	Provide legal advice for human resource matters (including workers compensation, union negotiations, arbitrations, class action lawsuits, etc.).	Multiple Factor – Utility and Non-Utility

Product or Service	Product / Service Description	Indirect Allocation Methods
Employee Benefits Legal Consultation & Case Management	Provide legal advice for employee benefits matters (including health and welfare benefits, tax-qualified and non-tax qualified benefit plans and programs, pension administration, etc.).	Number of Participating Employees – Utility and Non-Utility
Tax Legal Consultation & Case Management	Provide legal advice for tax matters including federal, state & local tax matters (land tax, sales & use tax, IRS, etc.).	Multiple Factor – All
Bankruptcy Legal Consultation & Case Management	Provide legal advice for bankruptcy matters.	Multiple Factor – Utility and Non-Utility
International Legal Consultation & Case Management	Provide legal advice for international matters– contract negotiations, sale/lease agreements.	None (All direct charged)
Non-Utility Legal Consultation & Case Management	Provide legal advice on federal and state matters to Non-Utility Subsidiaries.	Multiple Factor – Non-Utilities
Regulatory Legal Consultation & Case Management	Provide legal advice for federal and state regulatory matters.	Multiple Factor – Utility
Environmental Legal Consultation & Case Management	Provide legal advice for environmental matters (other than PCB – related matters) - federal (EPA) and state (EPA), regulatory/legislative compliance issues.	None (All direct charged)
PCB Environmental Legal Consultation & Case Management	Provide legal advice for PCB-related matters - federal (EPA) and state (EPA), regulatory/legislative compliance issues.	Multiple Factor – Utility
Real Estate Legal Consultation & Case Management	Provide legal advice for real estate matters.	Multiple Factor – Utility and Non-Utility
Corporate Legal Consultation & Case Management	Provide legal advice for general corporate and transactional matters (including SEC filings, Board of Directors matters, PUHCA, Financings, Securities Matters, Intellectual Property, Technology, General Counsel matters, etc.).	Multiple Factor – All
Claims Legal Consultation & Case Management	Provide legal advice for Claims matters.	Multiple Factor – All

CLAIMS

Product or Service	Product / Service Description	Indirect Allocation Methods

Process Receivable Claims	Provide management, supervision, and performance of tasks associated with the resolution and chargeback of receivable claims.	Multiple Factor - All
Provide Corporate Support	Claims support in evaluating claims, and procuring appropriate external/internal legal resources.	Multiple Factor - All

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-8:

"Provide an analysis by function of charges by affiliates, for the test year and the 12-month period immediately prior to the test year, for services rendered included in the operating expenses of the filing company. Explain the nature of the service and the basis on which charges or allocations are made, including a copy of an applicable contract. Also, explain major variances between the charges for the test year and the corresponding charges for the prior 12-month period."

RESPONSE:

See Met-Ed Exhibit RAD-25 Attachment A for a summary of charges budgeted to be billed to Met-Ed by First Energy Service Company for the twelve months ending April 30, 2016 and the 12 months ending March 31, 2015. Met-Ed Exhibit RAD-25 Attachment A also shows the charges billed to Met-Ed by First Energy Service Company for the twelve months ended March 31, 2014.

Also included is a copy of the Service Agreement between the operating subsidiary Metropolitan Edison Company and FirstEnergy Service Company (FE Service) outlining the services to be provided by FE Service and the basis on which charges are to be billed. See Met-Ed Exhibit RAD-25 Attachment B.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-9:

"Prepare a detailed schedule for the test year showing types of social and service organization memberships paid for, the cost thereof, the accounting treatment and whether included in claimed test year expenses."

Rates for both motor vehicles/trailers & other equipment leases are fixed based on 200 BPS plus Bloomberg Avg Life swap rate (2.5 years for 60 month term, 4 years for 96 month term and 5.5 years for 120 month term).	$3,642

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-12:

"Submit a statement of past and anticipated changes, since the previous rate case, in major accounting procedures, explain any differences between the basis or procedure used in allocations of revenues, expenses, depreciation and taxes in the current rate case and that used in the prior rate cases, and list all internal and independent audit reports for the most recent 2 year period."

RESPONSE:

A list of all internal audit reports performed by the Internal Audit Department from April 2012 through March 2014 appears on pages 3 through 6.

A list of all independent audits performed from April 2012 thru March 2014 appears on page 6.

The following is a list of major changes in accounting procedures adopted since the previous rate case:

1. In 2006, the Company adopted SFAS 158 (ASC 715), *Accounting for Defined Benefits.* This statement requires employers to recognize an asset or liability for the overfunded or underfunded status of their pension and other postretirement benefit plans (OPEB). For a pension plan, the asset or liability is the difference between the fair value of the plan's assets and the projected benefit obligation. For any other postretirement benefit plan, the asset or liability is the difference between the fair value of the plan's assets and the accumulated postretirement benefit obligation. The Statement required employers to recognize all unrecognized prior service costs and credits and unrecognized actuarial gains and losses in accumulated other comprehensive income (AOCI), net of tax. Such amounts will be adjusted as they are subsequently recognized as components of net periodic benefit cost or income pursuant to the current recognition and amortization provisions.

2. In 2007, the Company adopted FIN 48, *Accounting for Uncertainly in Income Taxes,* which provides guidance for accounting for uncertainty in income taxes in a company's financial statements in accordance with SFAS 109 (ASC 740), *Accounting for Income Taxes.* This interpretation prescribes a financial statement recognition threshold and measurement attribute for tax positions taken or

expected to be taken on a company's tax return. FIN 48 also provides guidance on derecognition, classification, interest, penalties, accounting in interim periods, disclosure and transition. The evaluation of a tax position in accordance with this interpretation is a two-step process. The first step is to determine if it is more likely than not that a tax position will be sustained upon examination, based on the merits of the position, and should therefore be recognized. The second step is to measure a tax position that meets the more likely than not recognition threshold to determine the amount of income tax benefit to recognize in the financial statements.

FIN 48 also requires companies to recognize interest expense or income related to uncertain tax positions. That amount is computed by applying the applicable statutory interest rate to the difference between the tax position recognized in accordance with FIN 48 and the amount previously taken or expected to be taken on the tax return. The Company includes net interest and penalties in the provision for income taxes, consistent with its policy prior to implementing FIN 48.

3. In 2011, the Company changed its method of recognizing actuarial gains and losses for its defined benefit pension and OPEB plans. Previously, the Company recognized the net actuarial gains and losses as a component of AOCI and amortized the gains and losses into income over future periods.

   The Company, with this accounting change, elected to immediately recognize the change in fair value of plan assets and actuarial gains and losses annually in the fourth quarter of each year. The Company retroactively applied immediate recognition of gains and losses for its defined benefit pension and OPEB plans to each year, from 1986 through 2010.

Internal Audits Performed During – April through December 31, 2012

Compliance:

1. Audit of the IBM Consulting Services' Pennsylvania "Smart Meter Implementation and Procurement" Plan Development as of February 10, 2012
2. Limited Scope Review of US Bank Travel Card as of July 27, 2012
3. Audit of Substation Safety/Security Inspection and Corrective Maintenance as of October 3, 2012

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-19:

> "Explain how the Federal corporate graduated tax rates have been reflected for rate case purposes. If the Pennsylvania jurisdictional utility is part of a multi-corporate system, explain how the tax savings are allocated to each member of the system."

RESPONSE:

Met-Ed is not entitled to a Federal graduated tax rate. Met-Ed files as a member of a Consolidated group and its taxable income exceeds where graduated rates apply. Therefore, the Company uses a flat 35% Federal income tax rate in this filing.

FirstEnergy allocates its current federal consolidated income tax liability, pursuant to an agreement approved by the Securities and Exchange Commission, in accordance with the Energy Policy Act of 2005.

Members of the FirstEnergy consolidated group follow the allocation rules under the IRS Regulations under Code Section 1552. The consolidated group is treated as one taxpayer for federal income tax. Each member is required to compute its separate company taxable income. The members with positive taxable income (Paying Members) pay the consolidate tax liability based on an allocation of its separate company income. The aggregate of all amounts paid by Members of the consolidated, as a result of the excess of each Members' Separate Return Tax liability, (as determined under Section 1.1552-1(a)(2)(ii) of the IRS Regulations) over the amount allocated to such Member as its share of the Consolidated Tax Liability under Code Section 1552 (i.e., the Tax Benefit Amount) is paid by FirstEnergy to the other Members (the "Loss Members") which had tax deductions, losses and credits to which such payments by the Paying Members are attributable. The apportionment of such payments among Loss Members is allocated among the group Members pursuant to IRS Regulations Section 1.1502-21(b).

However, the Tax Benefit Amount allocated to FirstEnergy and paid to FirstEnergy as a result of its being a Loss Member is limited to its Tax Benefit Amount determined by multiplying it total loss benefit amount by a fraction, the numerator of which is FirstEnergy's interest deduction attributable to Acquisition Indebtedness, and the denominator of which is the sum of all of FirstEnergy's deductions. The portion of FirstEnergy's Tax Benefit Amount which cannot be allocated and paid to FirstEnergy due to the operation of this limitation is reallocated to Paying Members of the Consolidated Group other than FirstEnergy in accordance with the method described in Sections 1.1502-33(d)(3) and 1.1552-1(a)(2) of the IRS Regulations.

The general effect of the method is to first allocate the consolidated tax liability among the Members of the Consolidated Group on the basis of the percentage of the total consolidated tax which the tax of such Member, if computed on a separate return basis would bear to the total amount of the taxes for all Members of the group so computed. Then the method allocates an additional amount (the "Tax Benefit Amount") to each Member up to, but not greater than, the excess, if any, of its Separate Return Tax liability, over the amount allocated to such Member in the previous sentence. The total of the Tax Benefit Amounts allocated to Members results in payments to the Members who had items of deduction, loss or credits to which such Tax Benefit Amount is attributable.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-20:

"Explain the treatment given to costs of removal in the income tax calculation and the basis for such treatment."

RESPONSE:

On property acquired from 1971 to 1980, the company utilizes the A.D.R. Tax Depreciation Method.

Under those regulations, when an asset is retired, the cost of dismantling, demolishing, or removing is deductible as a current year's expense.

In June, 1977, Metropolitan Edison Company filed with the Internal Revenue Service an application for a change in accounting for cost of removal on pre-1971 property to conform with treatment for book and regulatory purposes. The Internal Revenue Service's acceptance of this application was dated October 19, 1977.

On property acquired in 1981 and subsequent thereto, the company (in accordance with ACRS and MACRS regulations) elected to use Cost of Removal in the calculation of gain or loss on retirements of 1981 and subsequent property.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-21:

"Show income tax loss/gain carryovers from previous years. Show loss/gain carryovers by years of origin and amounts remaining by years at the beginning of the test year."

RESPONSE:

See Met-Ed Exhibit RAD-38 Attachment A for the Net Operating Loss ("NOL") Carryforward schedule.

Metropolitan Edison Company
Net Operating Loss Carryforwards - Federal & State
Cumulative Balance at 12-31-14

	2011	2012	2013	2014	Total

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-22:

"State whether the company eliminates tax savings by the payment of actual interest on construction work in progress not in rate base claim. If response is affirmative:

(a) Set forth amount of construction claimed in this tax savings reduction, and explain the basis for this amount
(b) Explain the manner in which the debt portion of this construction is determined for purposes of the deferral calculations.
(c) State the interest rate used to calculate interest on this construction debt portion, and the manner in which it is derived.
(d) Provide details of calculation to determine tax savings reduction, and state whether State taxes are increased to reflect the construction interest elimination."

RESPONSE:

One of the revisions made to the Internal Revenue Code (IRC) by the Tax Reform Act of 1996 was the elimination of the current deduction for construction period interest. The IRC now requires construction period interest to be capitalized for tax purposes using an avoided cost methodology. This methodology results in a similar required capitalized interest amount for tax purposes than the debt component of AFUDC. Therefore, there are no current tax savings to eliminate.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-23:

"Under section 1552 of the Internal Revenue Code (26 U.S.C.A. § 1552) and 26 CFR 1.1552-1 (1983), if applicable, a parent company, in filing a consolidated income tax return for the group, must choose one of four options by which it must allocate total income tax liability of the group to the participating members to determine each member's tax liability to the Federal government (if this interrogatory is not applicable, so state):

(a) State what option has been chosen by the group.
(b) Provide, in summary form, the amount of tax liability that has been allocated to each of the participating members in the consolidated income tax return for the test year and the most recent 3 years for which data is available.
(c) Provide a schedule, in summary form, of contributions, which were determined on the basis of separate tax return calculations, made by each of the participating members to the tax liability indicated in the consolidated group tax return. Provide total amounts of actual payments to the tax depository for the tax year, as computed on the basis of separate returns of members.
(d) Provide the most recent annual income tax return for the group.
(e) Provide details of the amount of the net operating losses of any member allocated to the income tax returns of each of the members of the consolidated group for the test year and the 3 most recent years for which data is available, together with a summary of the actual tax payments for those years.
(f) Provide details of the amount of net negative income taxes, after all tax credits are accounted for, of any member allocated to the income tax return of each of the members of the consolidated group for the test year and the 3 most recent years for which data is available, together with a summary of the actual tax payments for those years."

RESPONSE:

(a) The option used is Reg. §1.1552-1(a)(2) – the tax liability of the group is allocated based on the percentage of total tax computed on a separate basis for each member over the total amount of tax for all members of the group so computed.

(b) See Met-Ed Exhibit RAD-40, Attachment A[1], page 1, for the amount of the tax liability that has been allocated to each of the participating members in the Consolidated Federal income tax return for the most recent three years.

(c) See Met-Ed Exhibit RAD-40, Attachment A, pages 7 – 39, for the payments and refunds made for the most recent filed returns for years 2010, 2011, and 2012 as computed on the basis of separate returns of members.

(d) See Met-Ed Exhibit RAD-40, Attachment A, pages 2 – 6, for a copy of the U.S. Corporation Income Tax Return (Form 1120) as filed by FirstEnergy Corp. and Subsidiaries for the year 2012.

(e) See Met-Ed Exhibit RAD-40, Attachment A, pages 2 - 39.

(f) See Met-Ed Exhibit RAD-40, Attachment A, pages 2 - 39.

[1] Attachment A to Met-Ed Exhibit RAD-40 is **Highly Confidential** and is being provided to the Commission in hard copy only.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-24:

"Provide detailed computations by vintage year showing State and Federal deferred income taxes resulting from the use of accelerated tax depreciation associated with post-1969 public utility property, ADR rates, and accelerated tax depreciation associated with post-1980 public utility property under the Accelerated Cost Recovery System (ACRS).

(a) Reconcile and explain any differences in the base used to calculate State and Federal deferred income taxes.

(b) State whether tax depreciation is based on all rate base items claimed as of the end of the test year, and whether it is the annual tax depreciation at the end of the test year.

(c) Reconcile differences between the deferred tax balance, as shown as a reduction to rate base, and the deferred tax balance as shown on the balance sheet."

RESPONSE:

(a) See Met-Ed Exhibit RAD-41 Attachment A. No basis difference, however, there is a timing difference due to PA disallowance in year one of the 50% Federal Bonus Depreciation.

(b) See Met-Ed Exhibit RAD-41 Attachment A. Tax depreciation for the future test year is based on all electric plant in service claimed as of 4/30/16 and the annual tax depreciation is based on the same plant.

(c) See Met-Ed Exhibit RAD-41 Attachment B.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-25:

"Submit a schedule showing a breakdown of accumulated and unamortized investment tax credits, by vintage year and percentage rate, together with calculations supporting the amortized amount claimed as a reduction to pro forma income taxes. Provide details of methods used to write-off the unamortized balances."

RESPONSE:

Investment Tax Credit Balances, Provision and Amortization
($000)

	4% and 10%
Balance 3/31/13	$ 5,919
12 Months ended 3/31/14 Amortization	(398)
Balance 3/31/14	$ 5,521
12 Months ending 3/31/15 Amortization	(364)
Balance 3/31/15	$ 5,157
Amortization 1 month ending 4/30/15	(31)
Balance 4/30/15	$ 5,126
12 Months ending 4/30/16 Amortization	(364)
Balance 4/30/16	$ 4,762

Investment Tax Credit

Met-Ed is amortizing the deferred credit previously created by a ratable flow-through to income over the useful life of the property. On March 9, 1972, General Public Utilities Corporation (former parent company of respondent) filed with the District Director of Internal Revenue, Manhattan District, on behalf of its affiliated companies (Met-Ed being one of the affiliates), an election under paragraph (2) of Section 46(e) of the Internal Revenue Code of 1954, as amended, for allowance, with respect to public utility property, of the credit allowed by Section 38 of the Code. Such an election provides (a) to reduce the cost of service for ratemaking purposes or in its regulated books of account by no more than ratable portion of the credit allowable by Section 38, and (b) not to reduce the base to which its rate of return is applied for ratemaking purposes by any portion of the credit allowable by Section 38.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-26:

"Explain in detail by statement or exhibit the appropriateness of claiming any additional items, not otherwise specifically explained and supported in the statement of operating income."

RESPONSE:

The appropriateness of claiming the various items included in the statement of operating income is explained in the supporting schedules to Met-Ed Exhibit RAD-2 and the testimony and exhibits of the Company's witnesses.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-27:

"If the utility's operations include non-jurisdictional activities, provide a schedule which demonstrates the manner in which rate base and operating income date have been adjusted to develop the jurisdictional test year claim."

RESPONSE:

The Company does not maintain its books based on jurisdictional divisions. An allocation for PaPUC jurisdictional purposes will be supported by Met-Ed witness Hillary E. Stewart, Met-Ed Statement No. 5 through the cost of service study.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-E-1:

"Supply a copy of any budget utilized as a basis for any test year claim, and explain the utility's budgeting process."

RESPONSE:

The FirstEnergy budget guidelines details the items required for the preparation of the construction and operating budgets. See Met-Ed RAD-45 Attachment A for a review of the guidelines.

Beginning in 2014, FirstEnergy implemented a new budget and long-term planning application, UI Planner. See Met-Ed Exhibit RAD-45 Attachment B for an explanation of FirstEnergy's budget process.

A copy of the budget utilized for the test year claim is contained in Met-Ed Exhibit RAD-18.

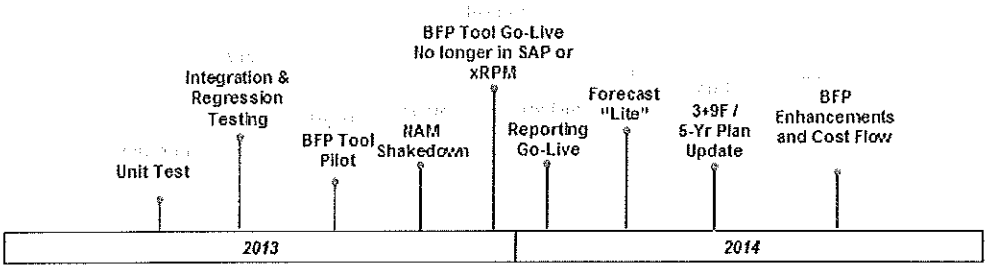
Responsible Direct Cost O&M Reporting 29

CHAPTER 1: INTRODUCTION

The integrated business planning process is critical to the success of FirstEnergy. A key component of this process is the annual budget which provides a method to quantify and report the current year's expectations and helps drive the enterprise toward achieving both short-term and long-term financial and operational objectives. The budget also helps facilitate the efficient usage of the Company's financial resources and allows us to measure actual performance against projections.



The guidelines in this booklet are intended to assist persons responsible for direct input of data into the SAP system as they prepare the 2014 annual budget. The 2014 budget should be based on your business unit's business plans and should align with Executive Council's expectations.

Business Unit Income Statements will be produced using the Profit Center Accounting module in SAP. Budget details will be developed and input using the various SAP cost collectors (i.e. cost centers, internal orders and WBSs). Through system mapping within SAP, these cost collectors are assigned to Profit Centers. Once data input is completed and the SAP system is closed, Business Unit Income Statements will be available for review. The Profit Center Hierarchy (PC0001B) serves as the source for the structure of Business Unit Income Statements). Earnings Driver reports which measure the impact and contribution of key items to the financial performance of each Business Unit will also be produced. Any questions concerning these statements should be directed to Mike Kreighbaum (825-2556) or Carrie Wokaty (825-6005).

Please Note: ***For the 2014 Forecast and the 2014 Annual Budget we will follow the same process as last year in SAP.*** *However, as part of the Financial Transformation project, we will be implementing the new Cost Accountability Model and begin doing our forecasting and budget inputs into a new financial tool, UIPlanner. Separate documentation and training for the tool will be provided through the FiT team. Below is a high level summary of the upcoming implementation timeline.*

Financial Transformation Project

Path to Implementation

Resource Activities	Date	Time Commitment
Training	August 20 – 22	~ 24 hours
BFP Pilot	Sept 2 – Oct 28	~ 10/week
Acct Model Shakedown	Sept 9 – Oct 28	~ 16/week
Train the Organization	November	~ 24 hours
Update End-User Queries	November - December	Varies
Assist with rollout	Dec - Jan	Varies

Note: 2014 budget documentation can be found in U:\Public\Budget Info\2014 Budget

Overview For Budget Input

Planning Must Be Done For The Following:
➢ Gross Payroll (Dollars)
➢ Staffing Level (Headcount) – Coordinate with IBP-Business Services and Workforce Planning
➢ Other – Than – Labor (OTL)
➢ Activity Input Planning (Hours to Cost Centers, WBSs and Internal Orders)
Versions
Annual Budget: ➢ 2014 Budget detail planning will be **input** in Version 20 ➢ 2014 Final Closed detail budget will be in Version 12 unless otherwise noted

Calendar of Events

The 2014 Forecast Schedule

Activity	Completion Date
➢ **SAP 2014 V20 Opens**	7/29/2013
➢ **Complete Headcount & Gross Payroll**	8/30/2013
➢ **All Revenues & Expenses updated to calculate deferrals**	9/6/2013
➢ **Lock SAP V20 @ 5 p.m.**	9/13/2013
➢ **IBP/Gen Accounting process 2014 Budget V13**	9/16 – 9/20/2013
➢ **Business Units to begin validation of results**	9/20/2013

Dates for the final budget will be announced after the forecast is completed.

The 2014 Budget Schedule

Activity: Business Units enter 2014 Detail Budgets	Completion Date
➢ **Gross Payroll Input Complete**	TBD
➢ **Headcount Input Complete**	TBD
➢ **HR Benefits Complete**	TBD
➢ **Revenues/Expenses Impacting Deferrals & Amortizations (Including Inter-Company Transactions)**	TBD
➢ **Transmission Revenues & Expenses**	TBD
➢ **Inter-company Transactions Input Complete**	TBD
➢ **Lockdown of SAP system**	TBD

THESE DATES ARE SUBJECT TO CHANGE

Throughout the budget cycle you should expect to receive communications as needed to ensure the schedule is met. The purpose of these communications will be to help individuals manage budgeting activities, ensure mid-process completion goals are met, and address any issues that arise during the budget entry period.

CHAPTER 2: LABOR

Straight Time Payroll

Straight time payroll for the 2014 Budget will be developed and input by the Business Units. The budget is based on projected staffing levels and estimated employee salaries based on a regular weekly schedule of 40 hours per week per full-time employee
Adjustments should be made for changes in payroll due to attrition, retirements, promotions, demotions, and all salary adjustments including general wage rate increases. **Annual wage rate increases need to be applied by the Business Units, based on the appropriate rate change and timing.** The assumed wage rate for non-bargaining employees is 3.0%. The non-bargaining WRI should be assumed to be effective September 1, 2014. For bargaining unit employees, the bargaining unit WRI is based on the terms of each union contract.

The monthly spread of straight time labor should be based on the number of pay weeks in each month according to the Payroll Calendar. Distribution key(s) for the monthly distribution of payroll are noted below for bi-weekly payroll and in the Reference Material Section for the weekly payroll. Keep in mind, the distribution keys are only used to spread the monthly data and **do not** increase the yearly or monthly totals for the wage rate increases. The budget preparer needs to calculate the annual payroll and inflate it for any expected WRI, then use the appropriate distribution key to spread the payroll. **Payroll must be spread by month, not summed and input into one month.**

The appropriate general ledger accounts/cost elements for Straight Time Labor:

Straight Time Payroll

520010	Payroll - Straight Time - Bargaining
520050	Payroll - Straight Time - Non-Bargaining
520051	Payroll - Straight Time - Temporary Help
520062	Payroll - Straight Time Coop Students
520063	Payroll - Straight Time-Part Time-Non-Barg
520064	Payroll - Straight Time-Part Time-Bargaining

NOTE: If a Business Unit(s) has a question about developing its straight time payroll estimates or the input of the dollars into SAP (including the appropriate spreads and wage rate increases), please contact Corporate Budgets and Forecasts before the Gross Payroll entry deadline. (See Key Contacts page 27)

Payroll Calendar Information:

2014 Bi-Weekly payroll

	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	Total
Weeks	4	4	6	4	4	4	4	6	4	4	4	4	52
Hours	160	160	240	160	160	160	160	240	160	160	160	160	2080

Distribution Keys **P14S and P14B** both use this spread pattern. The P13B Distribution Key assumes a 3% March wage increase, while **P14S** assumes a 3% wage increase in September.

2014 Weekly payroll

	Jan	Feb	Mar	Apr	May	June	July	Aug	Sep	Oct	Nov	Dec	Total
Weeks	4	4	5	4	5	4	4	5	4	4	5	4	52
Hours	160	160	200	160	200	160	160	200	160	160	200	160	2080

For weekly payroll, refer to the list of Distribution Keys in the Reference Material Section (Chapter 7) for the distribution key that spreads payroll based on the effective month of the WRI. If additional distribution keys are needed, contact Corporate Budgets and Forecasts.

Overtime Payroll

Costs associated in a given pay week for work exceeding 40 hours. The addition of overtime dollars to the budget should be planned and approved accordingly. Planning for all overtime will be completed by the business units using the appropriate cost elements:

520110 Payroll - Overtime Bargaining
520150 Payroll - Overtime Non Bargaining
520151 Payroll - Overtime Temporary Help
520162 Payroll - Overtime Co-Op Student
520163 Payroll - Overtime Part Time Non Barg
520164 Payroll - Overtime Part Time Bargaining

Payroll Overheads

Payroll Overheads – Employee Benefits, Incentive Comp and Payroll Taxes will be applied as an overhead during the closing process. The rates will be determined by General Accounting and input into the SAP costing sheets after final payroll is determined and all gross benefit costs (medical, dental, prescription drug etc.) are input into the HR benefit cost centers.

Employee Benefits – Benefit costs *will be developed by Human Resources/Corp Budgets & Forecasts* and input into the Special Purpose Ledger (SPL) in HR benefit cost centers using the appropriate primary cost elements. Pension and OPEB costs are not included in the Employee Benefits overhead calculation but are applied to capital work as specific capital overheads.

The secondary cost element 850070 – Payroll Overhead Benefits – Straight Time will be used to apply the Benefit overhead on straight time payroll during the budget closing process.

Payroll Taxes - *will be budgeted by Corporate Budgets and Forecasts* and input into the SPL in Special Tax cost centers.

The secondary cost element 850080 – Payroll Overhead – Taxes will be used to apply the Payroll Tax overhead on straight time and overtime payroll during the closing process.

Incentive Comp - *will be budgeted by Human Resources/Corp Budgets and Forecasts* and input into the SPL in Special Incentive Comp cost centers.

The secondary cost element 850090 – Incentive Comp will be used to apply the Incentive Comp overhead on straight time and overtime payroll during the closing process.

Payroll Related Items

Other payroll related general ledger accounts/cost elements:

520019 Payroll Retention Bonuses – Budgeted by the Business Unit granting the bonus
520165 Payroll Accrual (Budgeted only by General Accounting)
520250 Payroll Bonuses - Represents annual bonuses and other bonuses awarded throughout the year for special circumstances and are the responsibility of the Business Units
520260 Payroll Additional Comp – MGRK (Budgeted by Business Units where appropriate)
520300 Payroll Restricted Stock (Budgeted only by HR/Corporate Budgets and Forecasts)
520400 Payroll Severance – (Budget only by HR/Corporate Budgets and Forecasts)
520500 Payroll Adjustments to Gross - Examples include retro pay, grievance settlements, remote reporting costs, and relocation expenses not covered by HR (See Relocation Policy found on the Services & Support section of the FirstPlace Portal).

SAP INPUT – TRANSACTIONS OVERVIEW for GROSS PAYROLL
Set Planner Profile => Transaction KP04
Profile = FE-CO01
Planning Input => Transaction KP06
Layout = CC Primary No Excel or CC Prime – Y4

Note: Under no circumstance, should any of the payroll-related costs listed, including straight time, overtime, or bonuses be budgeted directly in the SPL via Transaction GP12N. Transaction KP06 should be used.

Staffing

Staffing levels (Headcount) **must be input by month**, by individual Cost Center, using Statistical Key Figures (SKFs) – transaction KP46. Budget all full-time, part-time, and temporary FE employees on SAP Payroll. **New employees should be budgeted in the month in which they will start.** Do not include contractor/non-FE employees and do not assume all hires begin the month of January. The following SKFs should be used:

	Bargaining	Non-Bargaining
Full-Time	EMPFTB	EMPFTN
Part-Time	EMPPTB	EMPPTN
Temporary	EMPTPB	EMPTPN
Student Intern	EMPSIB	EMPSIN

SAP INPUT – TRANSACTIONS OVERVIEW for STATISTICAL KEY FIGURES
Set Planner Profile => Transaction KP04
Profile = FE-CO01
Planning Input => Transaction KP46
Layout = CCTR STAT Key Fig PL or SKF – Y4

Budget Tip: After input of staffing levels and payroll dollars is complete, check that the monthly payroll totals are consistent with the monthly headcount projections.

Activity Input Planning (Hours)

Payroll costs can be moved from the employee or responsible cost centers to a target or receiving cost collector (Cost Center, Order or WBS element) by planning productive hours by activity type. The activity price associated with each cost center/activity type combination is calculated and input by Corporate Budgets and Forecasts. These activity prices are then used to produce the standard labor activity allocations.

Unproductive Time – Planning for unproductive time (i.e. sick time, safety meetings, union business, etc.) is not required. These costs remain in the responsible cost center and the unproductive hours and associated costs are incorporated in the calculation of the activity prices.

SAP INPUT – TRANSACTIONS OVERVIEW for ACTIVITY INPUT PLANNING (HOURS)

Set Planner Profile => Transaction KP04
Profile for Hrs charged to Cost Centers = FE-CO01
Profile for Hrs charged to Int. Order = FE-CO01
Profile for Hrs charged to WBS Elem = TD-PS01 or GEN-FRMF or GEN-FRMN

Planning Input =>
Cost Centers => Transaction KP06
Layout = CC Act Inp No Excel or CC – Act – Y4
Int. Orders => Transaction KPF6
Layout = OR Act Inp No Excel or OR – Act- Y4
WBS Elem => Transaction CJR2
Layout = Act Input or WBS – Act – Y4

CHAPTER 3: OTHER THAN LABOR (OTL)

All input into the SAP system for non-labor items is entered in Special Purpose Ledger Z9 using transaction GP12N – Change Plan Data - Special Purpose Ledger.

All transactions for non-labor items must contain:

Responsible Cost Center
Cost Element
Target Cost Collector – Cost Center, Order, Network or WBS element
Target Cost Collector Type – (KS, OR, PR)
Cost Type (Capital, O&M, Other)

Responsible Cost Center for Other-Than-Labor is defined as the Cost Center with budget responsibility for the expenditure.

All OTL input into the Special Ledger must be entered as company SC00.

Cost Types are defined as follows:

Type 1 Capital - Capital is planned to WBS Elements. WBS Elements are defined as Cost Type 1 if they settle to:

107XXX Construction Work In Progress
108XXX Retirement Work In Progress
Capitalized Nuclear Fuel Accounts
CWIP and RWIP for Non-Utility assets

Type 2 O&M (Income Statement Accounts)

Type 2 is any cost that settles to a Cost Center and becomes part of the Income Statement (predominately O&M but includes revenues, interest income, depreciation etc.)

Type 3 Other

Type 3 charges are any costs that settle to Balance Sheet accounts and are not considered Capital.

SAP INPUT – TRANSACTIONS OVERVIEW FOR OTL
Set Planner Profile => Transaction GLPLSET
Profile = ZZSPL902
Planning Input => Transaction GP12N
Layout = ZZSPL90 or ZZSPL90 – Y4

Guidelines for General Business Items:

Office Supplies – Cost Element 540100
Stationary type items purchased through Staples or similar vendor, e.g., annual planners and calendars, etc. The budget should be at the department/plant level rather than the cost center level to maintain consistency and control within the business unit.

Telecommunications Equipment and Service – Cost Element 590000
Costs associated with Company approved/provided cellular telephone equipment and associated monthly cellular charges are to be budgeted by cellular user's business unit.

- Basic cellular voice/text service - $50 monthly per telephone.
- Smartphone (iPhone) - $100 monthly per telephone.
- Cellular broadband data service (laptop and MiFi's/HotSpot) - $55 monthly per device.

Business Units should refer to the Computer Peripherals Price List (page 11) to budget for costs associated with purchase of the cellular equipment.

Copies/Multi-functional devices (MFD), Printers, Faxes
Copier/MFD and printer equipment along with maintenance and supplies for general office use are budgeted by IT. Plotter purchase/lease, specialty copiers or printers, fax machines, and associated service/supply costs are to be budgeted by the responsible Business Unit. For special projects, short-term needs, and plant outages the cost for copy, fax, and print devices are to be budgeted by the responsible Business Unit. Contact IT to determine if existing devices may be redeployed for short term needs.
Budget printer equipment to G/L 580020, supplies to 560200, and maintenance to 550300.
Budget copier equipment to G/L 570052, supplies and maintenance to 560200.
Budget fax equipment and supplies to G/L 560200, maintenance to 550300.

Employee Expenses – Cost Element 540000
Miscellaneous expenses as a result of conducting company business not captured in other cost elements and reimbursed through an employee expense report.

Employee Meals – Cost Element 540010
Expensed meals as a result of company business.

Emergency Employee Expense / No Meals – Cost Element 540015
Miscellaneous expenses that were incurred unexpectedly (call-outs, storms, and outages).

Travel Expenses – Cost Element 540101
Expenses incurred while traveling on company business that are not reimbursed through employee expense reports. Each business unit should budget for use of the corporate jet by their employees at the rate of $220 per "one way trip". Example: For one person flying from Akron to Morristown, $220 is charged to the employee's responsible cost center. Persons budgeting for Executive travel will be provided more detailed information separately from these guidelines.

Per Diem – Cost Element 540102
Fixed rate for change in work location, outages, etc. Often used in lieu of meals and possibly other related employee expenses.

Travel Expenses – Corp Jet – Cost Element 540106
Costs associated with use of corporate jet. This cost element is used exclusively by the Flight Operations Group.

Employee Expense – Training – Cost Element 540020
External seminar fees and associated external training expenses.

Training Student Expenses – Cost Element 540103
Student training fees for internal courses coordinated by Human Resources.

Postage – Cost Element 650100
All non-customer mailings/billings, including large packages (UPS, FedEx, Overnight Express, etc) should be budgeted by each Business Unit. Postage for customer related mailings and billings should be budgeted by the Customer Service bill production cost centers.

Other Items:

Application Software Maintenance – Business application software maintenance will be budgeted by IT Business Unit Support. Portfolio Managers will be contacting your department to coordinate budget information and ensure that all maintenance fees are captured.

Banked Vacation – The payout of banked vacation ***should not be budgeted*** by the individual cost centers. It is budgeted by Human Resources/Corp Budgets/Forecasts.

Claims (Payable and Receivable) – The ED Operating Companies should budget for (payable) claims and lawsuits related to distribution facilities (including personal injury, property damage, and vegetation management claims), fleet vehicle accidents, and environmental injuries (such as asbestos) for historical ownership of generating plants, as well as the legal fees and other administrative costs to defend against such claims and lawsuits. The ED Operating Companies should also budget for damages caused to their respective distribution facilities by outside parties; applying offsets by taking into consideration historical recovery amounts achieved through (receivable) claims activities. Generating Plants should budget for anticipated (payable) claims and lawsuits related to their facilities, as well as the legal fees and other administrative costs to defend against such claims and lawsuits.

Company Facilities – Real Estate and Facilities will budget for the maintenance and service contracts for Corporate, FENOC and Fossil. Energy Delivery will budget for all Utility Company facilities. The WBS structure will be utilized for both budgeting and tracking of O&M spend. Budgets will be established using a WBS and WBS Element / Service Categories:

- Landscaping
- Janitorial
- Building Maintenance
- Waste Removal
- Paving repairs
- Elevators
- HVAC
- Roof repairs
- Electrical
- Mechanical Equipment
- Fire Protection
- Construction
- Fences
- Plumbing
- Painting
- Pest Control
- Utilities
- Snow Removal

- Costs will be segregated by line of business (Corporate, FENOC, Fossil, and ED Operating Company)
- Monthly reporting of actuals will include the WBS, the Service Category and Building Cost Center
- This will allow for a direct comparison of Budget to actual spend enabling a monthly view of actuals versus budget.

Real Estate will budget for all building and land leases.

Corporate membership dues and fees, contributions and donations – It is the Company's policy to enter into and maintain Corporate memberships in organizations deemed necessary to maintain

professional expertise in various aspects of the Company's operations and to establish and maintain relationships with selected organizations with whom we share common interests.
Corporate memberships will be budgeted and processed through the Contributions Department. The company should not pay dues for an employee's individual membership unless the membership is held at the Company's specific request. When this is the case, the dues and any fees or assessments associated with membership should be budgeted in the employee's administrative cost center. Contributions will also be budgeted through the Contributions Department, working with Operating Company management and the Corporate Affairs staff.

Desktop Computer Hardware and Software – Standard PC workstations and laptops are budgeted in IT Client Support based on a fixed replacement cycle (5 years for desktops, 3 years for laptops). **Peripheral equipment is not budgeted in IT.** All peripheral equipment requires director approval, will be ordered by the business unit (not IT) using a specific web site, **and should be budgeted as a purchase in the requesting business unit cost center**. Listed below are some commonly requested peripherals with pricing where applicable.

Computer Peripherals Price List:

Display Options	Description	Vendor / Model	Approximate Cost
For Laptops	Monitors not provided for laptops		n/a
For Desktops	17 inch CRT provided for desktops upon failure of previous unit	See HP or SHI catalog on portal for options.	
Cellular	**Description**	**Vendor / Model**	**Approximate Cost**
Cellular voice/text	Basic cellular handset and standard accessories.	First Communications	$30
iPhone	iPhone and standard accessories.	AT&T, Sprint, Verizon Wireless	$150
Data – MiFi/Hot Spot	Data device.	AT&T, Sprint, Verizon Wireless	$80 - $130
Laptop Options	**Description**	**Vendor / Model**	**Approximate Cost**
Port Replicator for nc8440p/8540p/8460/8470	Part # A7E34AA#ABA	HP	$130
Plotters	**Description**	**Vendor / Model**	**Approximate Cost**
Standard HP Plotter Purchase	Wide Format plotter/printer purchase and install	HP	$6,800
Standard HP Plotter Service	Annual service for HP Plotter	Print Service Provider	$1,654

Educational Assistance – Human Resources/Corp Budgets/Forecasts will budget for these expenses.

Environmental Fees – Permit and environmental reporting fees should be budgeted by each location. The Environmental Dept. will budget for all software maintenance fees associated with the ESC CEM data acquisition systems. The Environmental Department will also budget for all stack and CEM RATA testing including labor, materials and outside test contractors. Questions should be directed to **Brittany Cannato 879-6442.**

EPRI – Business Units should budget for EPRI expenses based on approved programs as well as approved participation in Tailored Collaboration Projects, Co Funding Projects, or Billable Service Agreements (Supplemental Agreements that are in addition to membership selections). Item numbers for EPRI subscriptions will be available from FE Technologies . Subscription payments should be budgeted monthly. Business Units who budget for EPRI should contact **Stephen B. Briggs 825-3870**, for further information.

Fuel – Nuclear: The nuclear fuel expense budget is developed and entered by the Nuclear Fuels group based on generation plans provided by each nuclear unit. Auxiliary boiler and diesel generator fuel is budgeted by each nuclear site and entered by the Nuclear Generation Business Services. Capital nuclear fuel purchases will be budgeted by the Nuclear Fuels group, to appropriate WBS elements.
Fossil: Coal, Oil (light-off and peaking), natural gas, SO2 allowances, NOX allowances, and reagent

requirements will be modeled by the FES Planning & Analysis Group and budgeted by the Fuel Supply Dept., using the plant/unit specific FERC cost centers.

Insurance – Property and liability insurance will be budgeted by Risk Management.

Internal Use of Electricity – The costs of electricity for buildings and power plants owned by FE legal entities within the Competitive Services Unit and Corporate Support Unit, for both generation and non-generation components will be budgeted by **William Shonk (825-5472)** of General Accounting Services in coordination with Customer Service, Retail Tariff Analysis & Forecasting and Facilities Management.

Inter-company Building Rent Revenue/Expense – The inter-company revenue and expense for building rent invoiced between companies will be budgeted by **Richard Snyder (500-6807)** of General Accounting Services and will be based upon building related operation and maintenance costs budgeted by others.

Materials and Equipment – Material costs for direct purchases and stores issues are budgeted directly in the cost center, order or WBS element along with the responsible cost center. An M&S overhead will be applied to stores issues. The Controller's Group will enter the rates into the costing sheets and the system will generate the M&S overheads as part of the budget closing process.

Professional Contractors & Outside Services – Contracted work from professional and outside services vendors should be accounted for using the categories and cost elements established by Business Unit. Please refer to the tables in Chapter 7 for further details.

Revenues – Budgeted revenues must be entered as **negative** numbers.

Sales Tax – Business Units should include sales taxes incurred as part of the purchase price of taxable items in their cost centers.

Medical Surveillance Testing – Occupational Health -The outside vendor costs for employees participating in the FirstEnergy Medical Surveillance Program (Regulatory required) should be budgeted in the individual employee's responsible Cost Center. Each Plant and Operating Company should account for these costs (i.e., regulatory required respirator fitness exams, hearing tests, asbestos and lead physicals, etc.). The Industrial Relations-Health & Safety section will provide specific cost information related to this activity, contact **Timothy Walter 825-1706 or Chuck Fabo 825-5162.**

Drug & Alcohol Testing Program – CDL/DOT, Maritime, Safety Sensitive, Ohio State Project Work, New Hires- The outside vendor costs for employees participating in FirstEnergy's Drug & Alcohol Testing Program (Company and Regulatory required) should be budgeted in the individual employee's responsible Cost Center. Each Plant and Operating Company should account for these costs in 2014. The Industrial Relations-Health & Safety section will provide specific cost information related to this activity, contact **Timothy Walter 825-1706 or Chuck Fabo 825-5162.**

Industrial Hygiene (IH) Assessments – The outside vendor costs associated with OSHA required routine IH monitoring, including associated laboratory analyses and processing costs, should be budgeted in the individual employee's responsible cost center. Routine monitoring (OSHA required) includes periodic assessment of the following hazards: Noise, Asbestos, Inorganic-arsenic, Lead, Personal Protective Equipment, Confined Space Entry, etc. The Industrial Relations–Health & Safety section will continue to support and budget for special, complex or unique IH assessment needs. Specific cost information related to this budgeting activity will be provided by the Industrial Relations-Health & Safety section, contact **Timothy Walter 825-1706 or Martin Duffy 825-3814.**

Satellite Airtime – The infrastructure cost to provide the service will be paid by IT Network Services. The usage is not an IT cost and should, therefore, be budgeted by the business units at these rates:

BTV broadcasts $800 /hour (Bandwidth 3.0Mb/hr)

Severance – Each Executive Council member is contacted by HR to determine the appropriate level of severance to be budgeted. Cost of severance payments, as determined by HR, will be entered into the SAP system by HR/Corp Budgets/Forecasts.

Supply Chain/Inventory Items – Inventory Adjustments - Each plant and Operating Company should budget for its own storeroom's inventory adjustments. Assets No Longer Used or Useful – Obsolete Inventory - Each location should budget for its own obsolete inventory write-offs. With market value of these items being unknown, it is recommended that Business Units not budget for proceeds from obsolete inventory sales. Assets Other Than Inventory - Investment recovery proceeds from the sale of items will be given to the Business Unit that provided the items. We will use the accounting the Business Unit provides.

Training – Business unit cost centers should budget for on-site classes that support company-wide, employee, or department-specific programs. **The Learning and Development Department (L&D) will budget for the New Supervisor/Manager program. However, the business unit cost centers should budget for associated travel and lodging expense.** Questions should be addressed to **Jacqueline Roth 825-7890.**

The Information Technology Dept (IT) will budget for on-site classes that support company-wide software applications. Business unit cost centers should budget for on-site classes that support department-specific software applications.

Training – External – The cost of external training and seminars, as well as the travel and lodging expenses will be budgeted in the cost center requesting the training.

Transportation – Energy Delivery Transportation costs will be manually planned to appropriate cost collectors using the cost element 545099 – Fleet usage manual plan. The responsible cost center used on the SPL is the appropriate Operating Company transportation contra cost center.

COMPANY	CONTRA COST CENTER	DESCRIPTION
Toledo Edison	416001	Transportation Costs Undist-TE-Wstrn Reg
CEI	426001	Transportation Costs Undist-CE-Nrth Reg
Ohio Edison	406001	Transportation Costs Undist-OE-Cntrl Reg
Ohio Edison	406005	Transportation Costs Undist-OE-Sthrn Reg
Ohio Edison	406003	Transportation Costs Undist-OE-Estrn Reg
Penn Power	436001	Transportation Costs Undist-PP-Estrn Reg
Penelec	456001	Transportation Costs Undist-PN-W PA Reg
Met Ed	446001	Transportation Costs Undist-ME-E PA Reg
JCP&L	466003	Transportation Costs Undist-JC-Nrth Reg
JCP&L	466001	Transportation Costs Undist-JC-Cntrl Reg
West Penn Power	492001	Transportation Costs Undistrib- WP01
Mon Power	470201	Transportation Costs Undistrib - MP01
Potomac Edison	483001	Transportation Costs Undistrib - PE10

The Operating Companies must also plan a credit to the contra cost center in the amount planned out to the cost collectors using the same Responsible Cost Center. The contra cost center should be used as the target cost center for these credits.

Vehicle Leases & Licenses –
Vehicle lease payments should be budgeted, using G/L account 570050 for all Operating Leases and 570075 for all Capital Leases, for the following:

- Fleet Services cost center for Operating Company vehicles, (it is no longer necessary to budget by each department in the Operating Company using the vehicle).
- Each fossil generation plant, each nuclear generation plant, environmental, generation technical services.
- Each non-Operating Company or non-plant department using a vehicle. This would include (but is not limited to): IT, Corporate Transportation, Workforce Development, Administrative Services, T&D Technical Services.

Vehicle licenses should be budgeted, using G/L account 650300, for the following:

- Fleet Services cost center for Operating Company vehicles.
- Each fossil generation plant, each nuclear generation plant, environmental, generation technical services.
- Each non-Operating Company or non-plant department using a vehicle. This would include (but is not limited to): IT, Corporate Transportation, Workforce Development, Administrative Services, T&D Technical Services.

All requests for vehicles and/or power operated equipment should be directed to the Fleet Manager (see below) responsible for the area where the vehicle and/or equipment will be assigned. The Fleet Manager will work with Corporate Fleet Services directly to place the order, etc. Any questions related to this matter should be directed to **Lisa Pfeifer 824-5090.**

Company	Fleet Services Manager	Internal Phone	External Phone
CEI	Bryan Komlos	824-5060	216-295-5060
Toledo Edison	Jeff Burgoon	883-5938	419-249-5938
Ohio Edison/Penn Power	Robert Pyles	835-4099	330-436-4099
West Penn Power	Mike Geitner	365-2020	724-743-2020
Penelec	Wally Cunningham	430-8803	814-868-8803
Met Ed	Frank Cummins	500-6573	610-921-6573
Mon Power	Forrest Miller	324-1211	304-284-1211
Potomac Edison	Jasan Hileman	300-5227	301-582-5227
JCP&L	Nick Dello Russo	210-2237	973-989-2237

Personal Computer Hardware Items that require direct funding by the Business Units:

Unique, non-standard PC configurations. IT budgets each year for standard notebook and desktop models and configurations. At the time IT approaches a client group to plan for the retirement / replacement of their existing computers, the client group will need to provide the funds to cover any cost above the standard model cost. Funding by the client will be required for special features such as:

- RAM (memory) above the standard configuration
- Higher CPU speeds or multiple CPU's
- Tower model
- Floppy drive (no longer provided on new PCs)
- Video graphic cards

- Extra network interface cards
- Optical or wireless mice or special trackball configurations
- Ergonometric keyboards
- Larger internal or external storage drives or memory sticks
- Port replicators or docking stations
- Second batteries for notebook PCs
- Glare shields
- DC power converters or adapters
- Monitors for notebooks (If you presently have one with your notebook, when it fails, it will not be replaced without business unit funding.)
- Local printer (all printer requests must be forwarded to **David A. Zeigler** for review).

Process related PCs. IT budgets each year for rollover of **20%** of the office desktop PCs and **33%** of the office notebook PCs. PCs that are not typically used by employees, but rather dedicated to a process are not funded out of the PC capital budget. Funding must be provided either within a capital project when these systems are upgraded, or by the business unit. Examples of process PCs include:

- AFSO and MRMS (TPP)
- EMS Consoles
- GMS Consoles
- HVAC controls
- Plant control systems
- Badge readers
- Field equipment testing or data logging PCs
- Special printer, scanner or plotter interfaces
- Cache PCs (pseudo servers)

Off-cycle (premature) replacement PCs. As mentioned earlier, IT budgets each year for rollover of 20% of the office desktop PCs and 33% of the office notebook PCs. The scheduling of replacements is determined by the local Desktop Support team. Should any department require a notebook PC to be replaced sooner than every 3 years, or a desktop model to be replaced sooner than every 5 years, the client group must fund the complete cost of the replacement.

Off-cycle upgrade of a desktop unit to a notebook unit. If an employee, because of their job responsibilities, requires switching from a desktop PC to a notebook PC, the full cost of the new notebook PC must be borne by the business unit if their desktop is not scheduled to be replaced. The exception to this rule is if the business unit still has un-deployed notebook PCs in its annual replacement allotment, the business unit leadership may elect to redirect a yet-to-be-deployed notebook from its pool to the employee in need, at the sacrifice of another employee within the business unit. That impacted employee would then be given the notebook recipient's existing desktop PC.

On-cycle upgrade of a desktop unit to a notebook unit. If an employee, because of their job responsibilities, requires switching from a desktop PC to a notebook PC, and the timing of this need coincides with our replacement schedule, IT will cover the higher cost of the notebook PC. New or replacement notebooks will require director level review and approval. There must be a valid business case for using a notebook model.

Second PCs. If an employee requires more than one PC to perform their job, the full cost of the additional PCs must be borne by the business unit. This includes instances where a hot-standby PC must be provided for a critical function. The exceptions to this rule are console-based PCs, such as those in plant control rooms or regional dispatch centers where 2-3 PCs and/or monitors are part of the console and required for the operator to perform their work. This second PC will be an asset managed and maintained by IT, following the same standards and practices used for IT-funded PCs.

<u>Moves, Adds, Changes (MACs) of Employee Services and Devices at Company Facilities –</u> For all locations other than Shared Services' workspace in Akron General Office and the Reading General Office - Business Units will be responsible for budgeting for their planned moves, adds and changes described below:

- Non-computer equipment, such as telephone sets, headsets, speakerphones etc.
- Install and terminate voice cabling to workstations.
- Creation of the workstations in the telephone system database.
- Cross-connected and install telephone instruments.
- Move telephones to existing or new jack locations.
- Install, terminate, and test data cabling to the workstations.
- Activate data jacks by patching through to data switches.
- Install, terminate, and test inside fiber optic cabling.
- Install and terminate coax cabling for applications such as Satellite for IDL.

This does not include maintenance or repair responsibilities for these items. Normally the moves, adds, and changes are considered an O&M cost, unless they are associated with a major project.

The usual way to schedule moves, adds and changes is to contact your local facilities management team. This team will contact IT Field Operations to arrange for the approved vendors to make your requested changes. MACs that do not require Facilities involvement can be requested by calling the IT Service Desk. Please adjust your 2014 budget to include your facilities plan.

CHAPTER 4: CAPITAL MANAGEMENT PROCESS

FE's capital investments are integral in helping the company achieve operational excellence and financial success. The capital expenditures, are necessary to ensure the reliable generation and distribution of electricity, and compliance with regulatory requirements.

The Capital Planning & Management Process is a formalized process that provides the platform for capital discussions and allocation decisions at all levels of the organization. The process helps senior management to effectively understand competing uses for FE's cash, funding requirements for capital investments, and to allocate capital dollars across various business units (ED, FENOC, Fossil, Corporate). Ref. Capital Planning & Management Corporate Policy CP-TPR-6101 and FE 5-year Capital Portfolio Development and Capital Management Procedure (FirstPlace Portal/About FirstEnergy/Policies and Practices/Overview/Capital Management Procedure.pdf)

Capital Categories:

Mandatory - Non-discretionary investment required by law, regulatory order, or duty to serve customers (e.g. new business). Other required investment to meet externally driven regulatory commitment.

Maintain - Discretionary investment to support and sustain existing infrastructure at existing performance levels. Specific operational performance and financial tracking support these projects (e.g. SAIDI, CAIDI, EFOR).

Improve - Discretionary investment to improve existing infrastructure or performnace levels beyond existing business plan key performance metric commitments. Improvement in specific operational performance and financial benchmark targets support these projects (e.g. SAIDI, EFOR, ROI).

Value - Discretionary, non-recurring investment for a defined initiative which improves or expands existing infrastructure or creates new business opportunities and drives improved economic value.

Capital questions contact:

Business Area	Business Area Contact	Capital Support
Corporate Services - IT	Debbie Luttner (350.6934)	Megan Gallagher (825.5821) Scott McBride (825.4888)
	Dave McGaha (850.2167)	
Corporate Services - Facilities	Bob Grosjean (825.6393)	
	Tom Yanks (825. 5926)	
Corporate Services - Other	Business Area Management	
FE Utilities/Transmission	Mark Myers (825.7961)	
	Marcus Geise (825.2542)	
Fossil Generation	Joe Walko (350.5722)	
	Denise Bracken (850.7237)	
FENOC	Jay Morris (879.5425)	
	Don Jacobson (879.7605)	
FES - Other	Ollie Pannell (850.6868)	
	Brandon Fedor (850.7226)	

Capital Projects – Only budget capital projects to the level of spending identified in Executive Council guidance

Work Breakdown Structures (WBS) - Labor is budgeted through Activity Input Planning using transaction CJR2. Loaded labor costs, which include overheads, are moved from the employee or sending cost center to a WBS element by planning productive hours by activity type. Instructions for Activity Input Planning are located in Chapter 2 - Labor. All 'Other than Labor' costs are input into the SPL using transaction GP12N and must include the cost element and the appropriate responsible cost center. Instructions for input are found in Chapter 3 – OTL.

If new WBSs are created, all master data fields (i.e., costing sheets, project type, interest profiles, settlement rules, etc.) must be entered into SAP. **(See Key Contact appendix, page 26, for names to set up the WBS Master Data.) In all cases, it is critical that the WBS and WBS element start and finish dates be accurate and the WBS should be established at the Company which will own the assets. Departments which complete work for other Companies should cross charge the other Company WBS. Planning must never be entered in months beyond the finish date.** These dates are used by Property Accounting Services to compute and input AFUDC and depreciation and in reporting, including rate cases. All WBSs with settlement rules to asset accounts (CWIP, RWIP & OWIP) require an AFUDC element regardless if the project would qualify for AFUDC.

The status of WBSs must be TECO (Technically Complete), when the project is ready for service. The TECO date is passed to PowerPlant and the project is placed in-service. If a project is suspended or ceases construction the WBS elements should be locked and the status of the project is changed to "suspended" in PowerPlant. This will shut off the AFUDC calculation. If a project is cancelled existing charges should be transferred to expense, the AFUDC should be reversed and once the charges have been removed from the WBS, the WBS should be 'business closed". **It is important to update the status to TECO on a timely basis since it directly reflects the calculation of AFUDC and the beginning of depreciation in PowerPlant.**

Construction Indirects (Supervisory, Engineering, Administrative and General Overheads) – Capital costs should be direct charged to the related WBS whenever possible. However, in those cases where certain costs have a proven relationship to construction, an assessment or allocation will be made from predefined cost centers to Operating Company construction indirect cost centers (Supervision, Engineering, and A&G). An example of this would be supervision of an engineering group that supports capital projects overall. A portion of those supervision costs will be allocated to capital using the prescribed process. Rates will be calculated by General Accounting Services for each Operating Company and overhead category and will be applied on the labor and contractor portion of the budgeted WBS elements.

PowerPlant Property Unit Catalog – The PowerPlant Property Unit Catalog should be used to determine what items or activities are capital. Assistance in using the Property Unit Catalog or questionable items should be directed to **Tim Clyde (825-5863)**, Property Accounting Services, prior to inclusion of an item in the budget as capital.

Small Tools and Equipment - Only small tools and equipment greater than $1,000 should be capitalized.

Corporate Facilities will budget for all facility-related Mandatory and Maintain capital project work across FirstEnergy. Each Business Unit will budget for any Value Added or Improve facility related capital work. If there are questions on definition, please refer to the Capital Definitions section.

Vehicles/Power Operated Equipment
When acquiring the equipment identified below, the acquisition should be coordinated with the Corporate Fleet Services Department. The Corporate Fleet Services Department will determine with Treasury whether to purchase or lease the equipment. If the decision is to purchase the equipment, Corporate Fleet Services will purchase the equipment and charge the appropriate capital WBS. The equipment will also be given a vehicle number and tracked in the M5 Fleet System.

All requests for vehicles and/or power operated equipment should be directed to the Fleet Manager (see below) responsible for the area where the vehicle and/or equipment will be assigned. The Fleet Manager will work with Corporate Fleet Services directly to place the order, etc. Any questions related to this matter should be directed to **Lisa Pfeifer 824-4090.**

Company	Fleet Services Manager	Internal Phone	External Phone
CEI	Bryan Komlos	824-5060	216-295-5060
Toledo Edison	Jeff Burgoon	883-5938	419-249-5938
Ohio Edison/Penn Power	Robert Pyles	835-4099	330-436-4099
West Penn Power	Mike Geitner	365-2020	724-743-2020
Penelec	Wally Cunningham	430-8803	814-868-8803
Met Ed	Frank Cummins	500-6573	610-921-6573
Mon Power	Forrest Miller	324-1211	304-284-1211
Potomac Edison	Jasan Hileman	300-5227	301-582-5227
JCP&L	Nick Dello Russo	210-2237	973-989-2237

Asset Class	Vehicle Type
1	Light Duty - primarily downsize pickups, mini vans, passenger cars & units impacted by EPAct
2	Medium Duty - includes full size pickups, vans, substation vehicles, small stake body trucks, etc
3	Heavy Duty - includes heavy trucks other than aerial units, digger derricks or crane trucks
4	Aerial Trucks - includes all manlift capabilities regardless of size
5	Digger Derrick Trucks - includes all digger derricks
6	Crane Trucks - includes all trucks with cranes mounted on them and licensed. Off road cranes are included in construction equipment
7	Trailers - includes all trailers regardless of size
8	Construction Equipment - includes backhoes, loaders, excavators, off-road cranes, dozers, etc
9	Forklifts, Mowers, Misc - includes forklifts, riding sweepers, scrubbers, snow removal equipment, mowers, ATV's & other.

Office Furniture – The Real Estate and Facilities Department manages and budgets all capital expenditures for furniture as well as maintains an inventory of existing furniture items. The Facilities Section has developed the Workspace Guidelines Policy and receives substantial discounted pricing on all furniture used by the Company.

All requests for furniture should be directed to **Kathy Tatman, Supervisor, Asset Planning** through an e-mail notification. Please base your request on budgeted new hire positions and/or replacement requirements for worn, damaged or obsolete furniture. Any purchases of furniture made outside of this arrangement will not be approved.

Software Costs - The following guidelines should be used for capitalizing computer software costs:

New Computer Software Costs:

- designed as a complete system
- has a life greater than 1 year
- capitalized cost is greater than **$5,000**

Preliminary study costs, data conversions, and training are expensed when installing computer software.

Upgrades and Enhancements of Existing Software:

Upgrades and enhancements of existing software are expensed unless additional functionality is added and the cost is greater than **$5,000** and is a significant upgrade or enhancement.

Questions concerning capitalization of Computer Software items should be discussed with **Tim Clyde (825-5863)**, Property Accounting Services, prior to inclusion in the budget.

Generation Employee Training Costs – All employee training costs should be expensed, **except for Yards Creek.**

IT Projects – Activity allocate appropriate labor charges to IT managed projects that require Business Unit support. *All IT projects created under SC00 WBSs that are for the benefit of other Companies should have settlement rules that settle these costs to other company WBSs*. IT Department should coordinate these projects with the appropriate Business Services group.

Depreciation – The computation and application of depreciation will be the responsibility of Property Accounting Services.

Major Retirements of Plant – For retirements of plant, in which the estimated original cost exceeds $5 million, the following information is required: the month the item is being retired, the estimated original cost, and a short description of the item being retired. For all other retirements, a historical average will be used by Property Accounting Services. Retirements related to replacement WBSs should be made at the time the WBS is placed in service.

Generation Cost of Removal and Salvage – The budgeting of cost of removal and salvage will be performed by Generation. Generation cost of removal is expensed, **except for Yards Creek.**

Energy Delivery (Distribution and Transmission) Cost of Removal and Salvage – The budgeting of distribution and transmission cost of removal and salvage will be performed by Energy Delivery. For Met-Ed, Penelec, and JCP&L, the cost of removal and salvage will be expensed as a component of the depreciation expense in accordance with the current rate making. The planned cost of removal and salvage will settle to Account 403, Depreciation Expense.

Note: Cost Type is a required input field when entering the plan into the SPL (SAP Transaction GP12N). Changing the settlement rule on the WBS master data does not change the Cost Type in the plan. It is important that the WBS master data and the Cost Type are reviewed for accuracy

and consistency prior to input (Cost Type 1 is for Capital, 2 is for O&M and all other P&L items including Depreciation account 403, and 3 is for Balance Sheets accounts not considered capital).

CHAPTER 5: INTERCOMPANY TRANSACTIONS

Unless given approval by Corporate Budgets and Forecasts, General Accounting Services working with Corporate Budgets and Forecasts, will enter the budget estimates for all inter-company expenses and revenues. Corporate Budgets and Forecasts **(Mike Kreighbaum 825-2556)** will coordinate this effort. Unless approved for entry by the Business Units, inter-company expenses or revenues must be forwarded to General Accounting Services or Corporate Budgets and Forecasts for entry into the system. The required information to be forwarded includes:

- Inter-company G/L Accounts (Assoc. Company wording is typically included in the account description)
- Cost Centers
- Monthly Budget Amounts
- Description of transaction and the Cost Centers and G/L Accounts used for the offsetting revenues or expenses (if known)

Some examples of inter-company transactions include:

- Purchased Power and Revenues including RFP and POLR sales
- Interest Income or Expense from Associated Companies
- Leases including ATSI ground lease
- Internal Use of Company Electricity
- Billings between subsidiaries (Bayshore Power, FE Properties, etc.)

CHAPTER 6: FIRSTENERGY SERVICE COMPANY

Service Company Cost Centers – Budgeting Guidelines:

Direct Charging
When preparing your budget and incurring actual expenditures, it is important to consider who the beneficiary of your services is. Direct charging of time and expenses to the entity for which the services are being rendered is the preferred approach, where possible. To the extent that costs can be readily identified and associated with a specific transaction, the charging of those costs should be directed to the company(ies) receiving the goods or services, even when there is more than one receiving company.

Indirect Charging
Indirect charging through the Service Company assessment process supplements the direct charging of costs. Assessments are used to allocate the costs that were not direct charged from a cost center. Frequently, costs can not be direct charged because the recipient cannot be readily identified, or excessive administrative expense would result. Indirect charging employs the use of one of FirstEnergy's approved assessment methods. An approved assessment method is assigned to each Service Company cost center. The assessment methodology and the targeted legal entities for the Service Company cost centers can be provided by General Accounting upon request.

Service Company Assessments
Any desired change to organizational structure or revisions to the methodology used to allocate expenses from a Service Company cost center to the other legal entities must be reviewed and approved by **Joseph Mulpas, Assistant Controller (825-4049)**, prior to the change being implemented. This review process in necessary to insure that inter-company service agreements remain current and valid and that all regulatory requirements are being satisfied.

CHAPTER 7: BUDGETING REFERENCE MATERIAL

Primary Distribution Keys Used for Monthly Spreads

NOTE: Distribution Keys **do not** perform the wage escalation of your planned labor dollars. You need to plan your total gross payroll. The distribution keys are used to allocate your planned gross payroll to the appropriate months in accordance with that year's payroll calendar and wage escalation assumptions.

Please contact Mke Kreighbaum (825-2556) to request set up of new distribution keys.

2014	Distribution Key	Description
	P14S	NonBarg Bi-Weekly Pay 3.00% WRI Sep 2014
	P14B	Payroll BiWeekly 2014 3% March
	P14W	Payroll Weekly 2014 3.25% March
	PBM4	Barg Weekly Pay 2014 March 3% Inc
	PMH4	Barg Weekly Pay 2014 March 2.5% Inc
	PBW4	2014 Bi Wkly with 3.75% WRI Mar 2014
	PMY4	2014 Barg/Wkly Pay - with 3.00% WRI MAY
	P14M	Payroll BiWeekly 2014 3% May
	PMB4	2014 Bi-Weekly PR with 2.0% WRI MAY

Other Monthly / Quarterly Distributions

Distribution Key	Description
1	Equal Distribution January - December
QMO	Quarterly - Last Month of Quarter - Mar, Jun, Sep, Dec
QTRM	Quarterly - Middle Month of Quarter - Feb, May, Aug, Nov
H1SP	First Half of Year - spreads evenly over Jan - Jun
H2SP	Second Half of Year - spreads evenly over Jul - Dec
Q1SP	First Quarter Distribution - Spread evenly over Jan - Mar
Q2SP	Second Quarter Distribution - Spread evenly over Apr - Jun
Q3SP	Third Quarter Distribution - Spread evenly over Jul - Sep
Q4SP	Fourth Quarter Distribution - Spread evenly over Oct - Dec
JAN	January Only
FEB	February Only
MAR	March Only
APR	April Only
MAY	May Only
JUN	June Only
JUL	July Only
AUG	August Only

Key Terms & Concepts

Activity Price
The price calculated for an activity type – used for charging labor hours and transportation usage to cost collectors.

Allocations
Used to: assess shared services costs; move charges to correct legal entity; and/or assign to capital where appropriate.

Assessments
Transactions that allocate costs from Cost Centers to receiver cost objects.

Cost Allocation
Distribution of costs from one collector to another to reflect actual usage or predefined rates.

Costing Sheet
Defines an overhead calculation. Contains the percentages to be applied to the base amount and the collector to be credited.

CREWS (Customer Request Work Scheduling)
Used to estimate and schedule Transmission and Distribution projects.

Customer Care Services (CCS)
The SAP R/3 software module for utility customer information.

EC-CS (Enterprise Controlling – Consolidation System)
The consolidation module of SAP R/3 used for legal consolidation reports.

Financial Accounting Module (FI)
SAP R/3's grouping of financial data required for external reporting purpose such as balance sheet, P&L statements, cash flows, and retained earnings.

Overhead Rate
A surcharge, expressed as a percentage, used to spread indirect costs over a defined base.

Project System (PS) SAP R/3 Module
Module is used to manage large projects. Accounting data used to manage WBS Elements are also located in this module.

Profit Center
Organizational unit that reflects a management-oriented structure for the purpose of internal control and reporting.

Profit Center Accounting (PCA)
A module of SAP used to manage the business by segregating costs and revenues by business units. Measures profitability by profit center or high-level business unit.

Settlement
The SAP process of allocating costs from temporary cost collectors such as orders or WBSs to other cost collectors such as FERC cost centers.

Settlement Rule
Set of instructions that define distribution of costs incurred on a temporary cost object such as an order or WBS.

Special Purpose Ledger (SPL)
A stand-alone ledger within SAP that maintains detail without creating additional master data. Used by FE to track costs by Responsible Cost Center.

Financial Accounting Module (FI)
SAP R/3's grouping of financial data required for external reporting purpose such as balance sheet, P&L statements, cash flows, and retained earnings.

Key Contacts

By Department:

Area	Key Contact	Responsibility
Corporate Budgets and Forecasts	• Gina Caskey • Mike Kreighbaum • Carrie Wokaty • Mark Dudley	• SAP specific budget system preparations • Activity prices • Communicating the dates and times for budget input • Oversight and management of the annual budgeting and forecast processes • Tracking budget status and ensuring completion of key budget mid-point deliverables • Ad-hoc budget related reporting • PCA
Business Services and Corporate Business Planning	• Gina Caskey • Mark Dudley • Carrie Wokaty	• Corporate Shared Services – budget and forecast coordination and support • HR Benefits and Special Item budgets and forecasts
Capital Management	• Megan Gallagher • Scott McBride	• Capital Management Processes
Controllers Department	• Denis Dorward • Mike Strozak • Diane McVey • Rich Snyder	• Processing/Closing of SAP Plan • Develop and input Costing sheets (overheads) • System Maintenance – Versions, SPL, CO • Accounting Issues
Business Planning & Strategy	• Paul Mallue	• Running of production cost modeling
Competitive Retail Group	• Trevor Fernandez	• Budget and forecasting of competitive retail sales, load & revenue
Rates	• Brad Eberts • Bill Moll/Rich Faschan	• Development of the Load, MWH Sales, and Wires Forecast • Forecasting of regulated revenue for budgeting
Supply Chain	• David Zeigler	• Personal Printer requests

FirstEnergy

Utilities International Planner
UIPlanner - Budget Advanced

February 2004

Ground Rules

- Please turn all cell phones and pagers off, or to silent setting
- Respect those speaking and asking questions by keeping side discussions to a minimum
- Please do not interrupt the person speaking
- All unanswered questions will be placed in the "Parking Lot" and answers will be distributed later
- Have fun and enjoy the opportunity to contribute to FirstEnergy's future success!

Financial Accountability Model

Financial Accountability Model

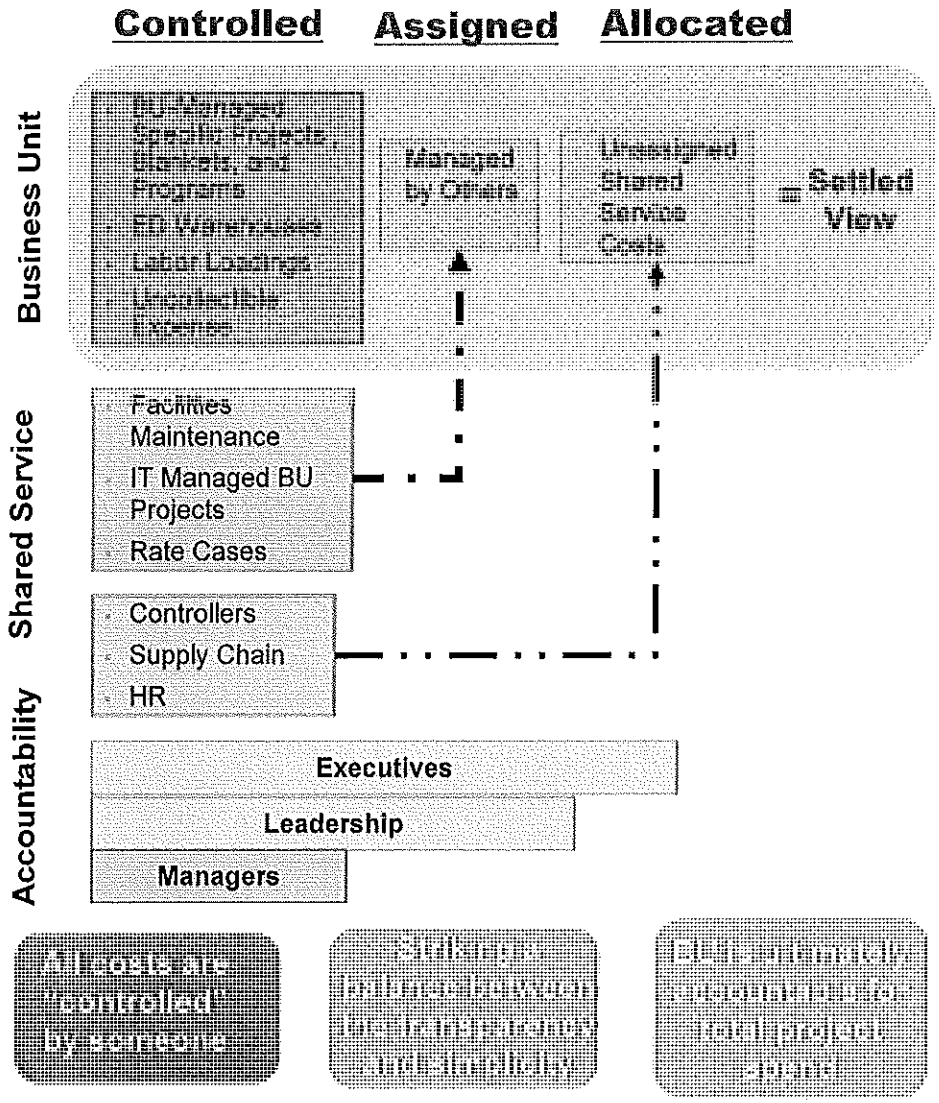
Vision – Establish a transparent financial view using standard SAP functionality

Why?

- Establishes "one source of the truth" for management reporting
- Increases accountability for total costs spent
- Reduces cost of ownership and customization of SAP

Conceptual Review

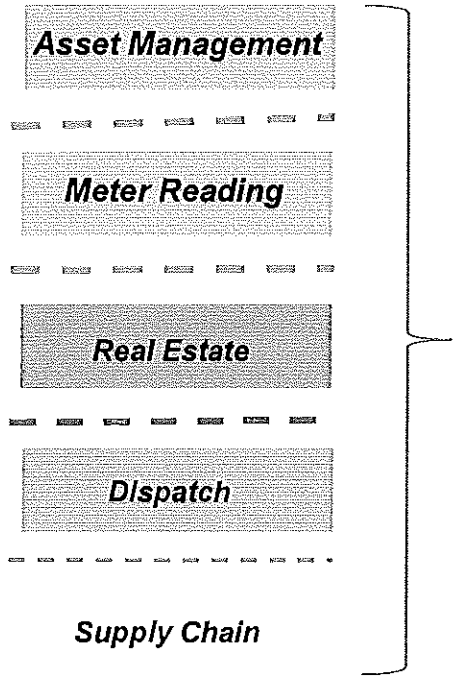
What is it?



- Consistent financial view
- Establishes ownership for every dollar spent

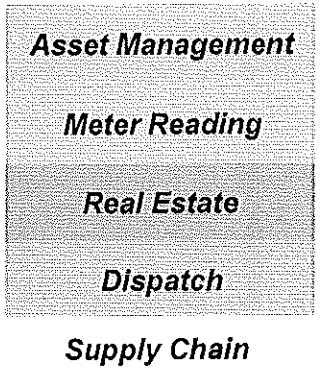
Key Changes

- **Shift** accountability to **total spend**
- Changes in **roles and responsibilities** within budgeting process
- Changes in **level of reporting** and **reporting views**
- Changes in **target setting** within the business



Business Impacts

- **People:**
  - Single owner accountable for total project spend, regardless of where costs originate
  - Increased roles and responsibilities for Project Owners
- **Process:**
  - Coordinate, manage, track budget and explain variances
  - Collaborate outside own organization
  - Reporting will be in alignment with the Accountability Model



Total Project Ownership

Today

Individual ownership of pieces of a project budget

Post-Transformation

Single ownership of project budget

Outcomes

- ***One budget input for the total project including Labor & OTL***
- ***Required collaboration across the organization***
- ***Driving more comprehensive and consistent budget practices***

Roles & Responsibilities

- **Project Owners are responsible for:**
  - Developing, monitoring and updating budgeted and forecasted costs and revenues
  - Measuring and monitoring actual results, including explaining variances from budgets.
  - Collaborating with others when establishing their budgets, updating their forecasts, analyzing their actuals, and explaining variances between budget, forecast, and actual results
- **The responsibility for entering budgets and forecasts vary by Business Unit**
- **Standard financial management reports exist to support Cost Owners**

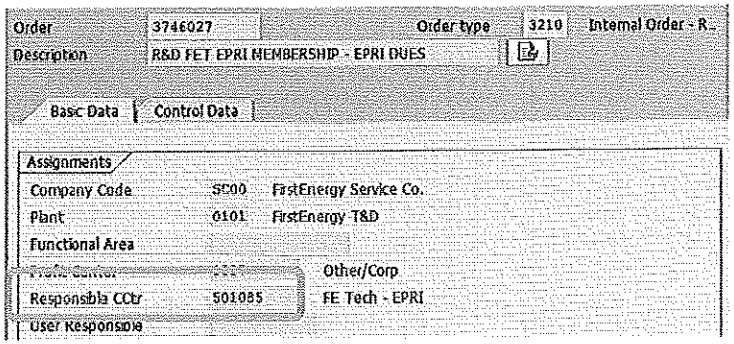
Business Unit Costs will be managed in one of two ways:

(1) Cost Owner Managed

- The labor, other-than-labor, and revenues will be assigned a specific owner (a cost center) in SAP
- Owners will be specific to each BU and each work type (e.g. blankets, programs, etc.)
- Includes Controlled, Assigned, and Allocated costs
  - *For a list of owners, by work type, by Business Unit, refer to the Financial Accountability Model policy on the FirstEnergy Today portal at: Communities>Finance>Policies and Procedures>FiT folder.*

(2) Line Item Managed

- Specific income statement line items not included above (i.e. interest expense, fuel, purchased power, etc.) will be centrally managed by defined group(s)
- This ownership is not assigned in the system but is implied based on the management of those revenues and costs



Illustrative Income Statement

How is Cost Ownership Assigned?

- **Representatives from each Business Unit were involved in assigning cost ownership to cost collectors**
  - Cost Owner field is a field on the SAP cost collectors called "Responsible Cost Center"
  - A Cost Owner is required on all cost collectors

- **A new cost center hierarchy, ZBWCAM0000, drives Standard Financial Management Reporting**
  - The hierarchy will provide line-of-sight into Controlled, Assigned, and Allocated costs

ZBWCAM0000 Accountability Model - CstCtr Hierarchy

- ZBWCAM1000 FEU
  - ZBWCAM1001 AYE Utilities
  - ZBWCAM1002 AYE Fed Reg Transm Segment
  - ZBWCAM1004 Compliance & Regulated Services
  - ZBWCAM1007 Customer Service
  - ZBWCAM1034 Distribution Support
  - ZBWCAM1068 ED and CS Senior VP
  - ZBWCAM1069 ED Safety Admin and Planning
  - ZBWCAM1070 Energy Efficiency Group
  - ZBWCAM1076 FE Utilities Admin
  - ZBWCAM1077 FERC - FE Utilities
  - ZBWCAM1098 Special Items - FEU
  - ZBWCAM1113 Transmission
  - ZBWCAM1127 Transmission Facilities Agreement
  - ZBWCAM1131 Utility Operations
- ZBWCAM2000 FES/FEG
  - ZBWCAM2001 FE Solutions
  - ZBWCAM3001 FE Generation
- ZBWCAM4000 Shared Services
  - ZBWCAM4001 AYE Other/Corp
  - ZBWCAM4002 Executive Administration
  - ZBWCAM4006 Finance Group
  - ZBWCAM4043 Human Resources Group
  - ZBWCAM4055 Legal and External Affairs
  - ZBWCAM4081 Special Items - Shared Services
  - ZBWCAM4085 Strategic Planning and Operations
- ZBWCAM9000 Unused

Benefits of Financial Accountability Model

- Identifies a single, accountable owner regardless of where costs originated
- Provides transparency and visibility into our financial statements
- Promotes an understanding of total spend by the work completed instead of a view by department
- Reduces customization and ad-hoc reporting
- Facilitates standard financial management reporting

Leadership Feedback:

- Overwhelming support for moving to one financial view
- Requires clearly defined guidelines
- Governance is required for sustainability

Q1) What is a 'Cost Owner'?

A. A Cost Owner is a cost center in SAP (not a specific individual) assigned to each and every cost collector.

Q2) How were Cost Owners determined for each cost?

A. A review was completed with each of the Business Services organizations to determine the appropriate Cost Owner for each dollar spent. Activities included:

- Validation of Cost Owner assignment to each cost collector
- Verification that Cost Owner hierarchy supports management reporting
- Comparison of "as-is" with "to-be" reporting and explanation of differences in reporting and accountability throughout the business
- Reconciliation of new reports to the existing internal reports/financial statements

Q3) Who are the Cost Owners?

A. Refer to the Financial Accountability Model policy, available effective January 1, 2014, for a list of work types and associated Cost Owners by Business Unit. The policy can be found on the FirstEnergy Today portal under Communities >Finance >Policies >FiT.

Q4) What if the Cost Owner disagrees with costs from another department?

A. The Cost Owner should discuss costs with the originating department. Changes to Cost Owners must be carefully controlled and are not permitted without prior approval. A process exists to request and receive approval for Cost Owner changes.

Refer to the Financial Accountability Model policy on the FirstEnergy Today portal at Communities>Finance>Policies and Procedures>FiT for more information.

Q5) When will the Financial Accountability Model be implemented?

A. It will form the foundation of all Reporting and Budget, Forecast, Planning activities beginning January, 1 2014.

Q6) The direct view (z8/z9) is going away. What do I use for my project or cost center reporting?

- Refer to chapter 2, Standard Financial Management reporting, of this training to understand the cost and labor reports available to you.

UIPlanner Software Overview

UIPlanner Overview

- Utilities International, Inc. is the leading provider of integrated planning solutions for utilities and related businesses

- UIPlanner (UIP) is a multi-user database system that supports Accounting and Finance functions

Planning
- Financial plans
- Strategic plans
- Regulatory plans

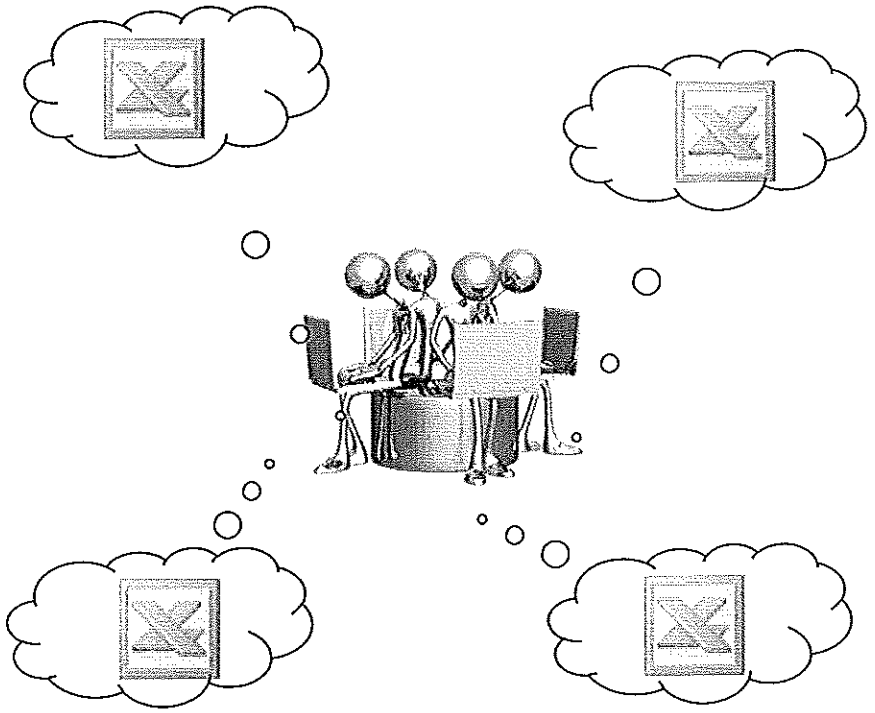
Treasury
- Daily forecasts
- Monthly forecasts
- Financing strategy

Tax
- Tax plans
- Tax strategies
- Actual taxes

Accounting
- Allocations
- Variance analysis
- Financial reporting

Budget Admin.
- Consolidation
- Administration
- Rolling forecasts

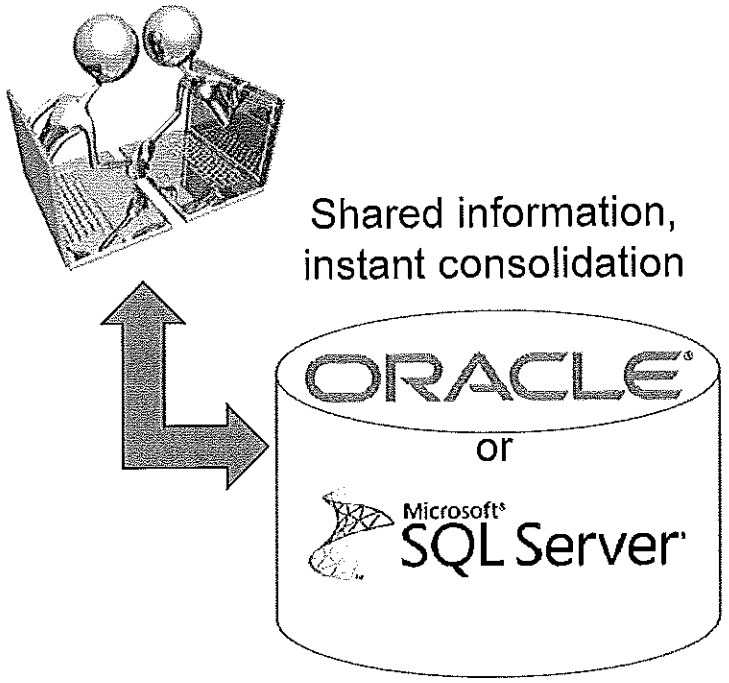
Regulatory
- Cost of service
- Rate design
- Clauses / riders



Customer Service
- Bill forecasts
- Analytics
- Energy Efficiency

Budget Users
- Unit-based budgeting
- Labor planning
- Project forecasts

Business Analyst
- Project evaluation
- Commitment tracking
- Performance analysis

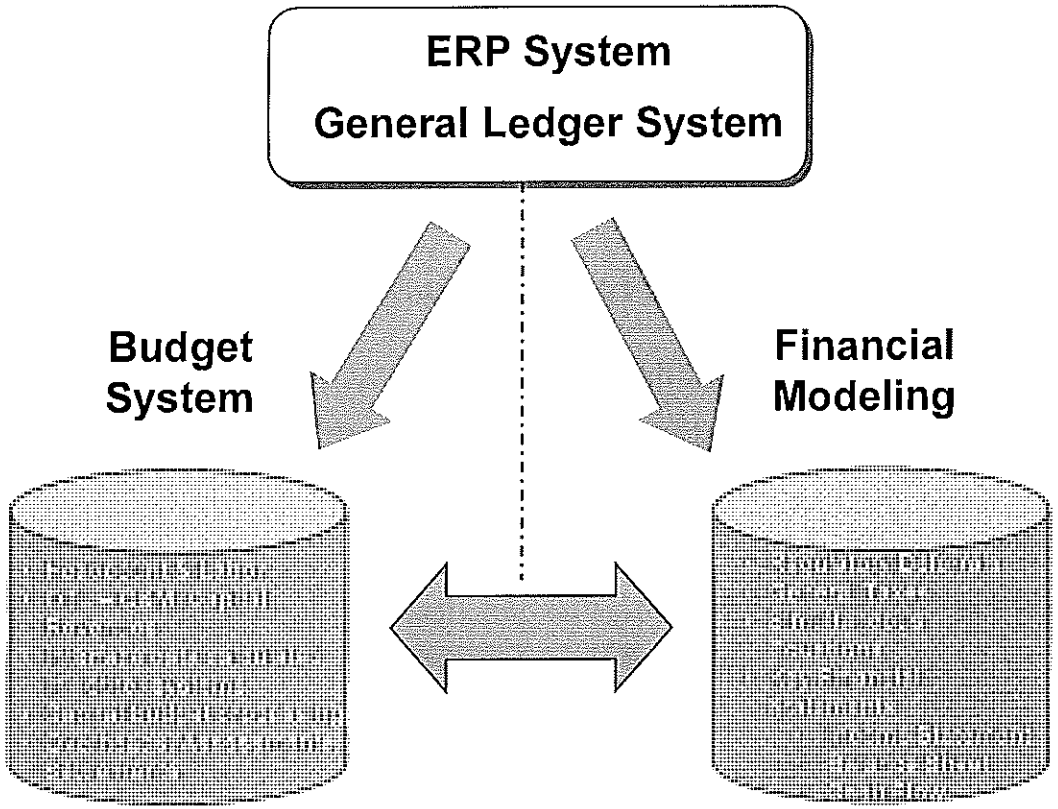


UIPlanner Overview

Individual Spreadsheets

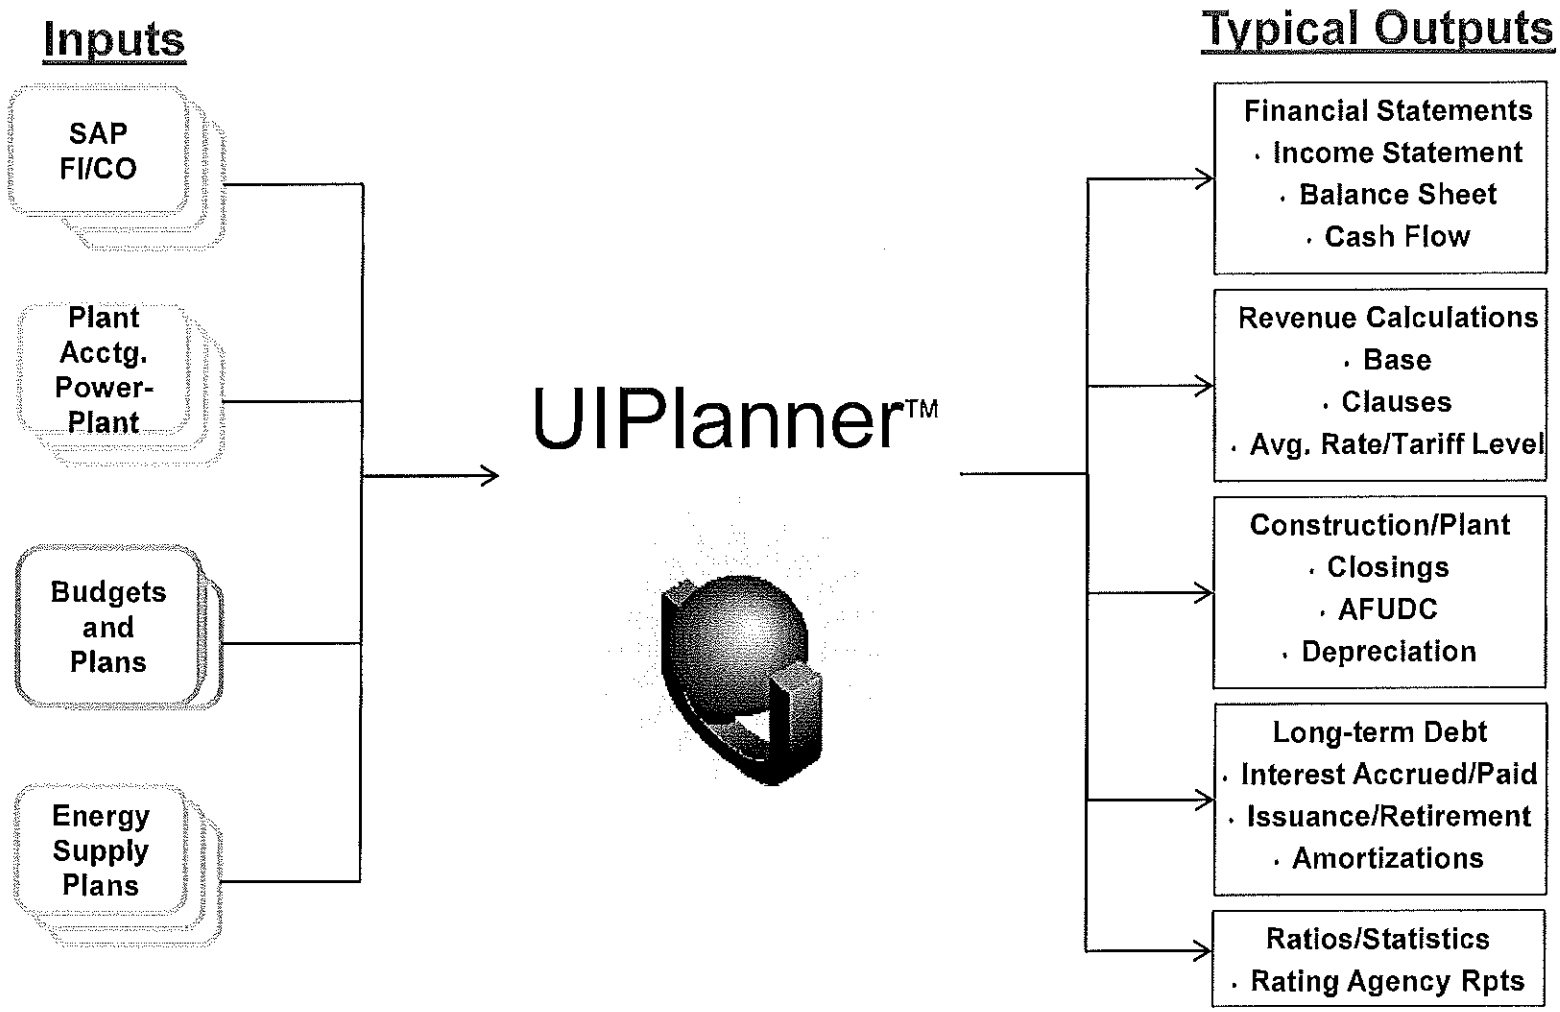
Relies on manual processes to share and consolidate data

Integrated UIPlanner



More productive, efficient, and less prone to error

UIPlanner Overview



- UIPlanner can interface budget, forecast, plan results directly from a Company's ERP or General Ledger System to either the UIP Budget System or Financial Model

- Many Utilities utilize the Financial Modeling tool to manage their financial planning and regulatory outcomes

UIPlanner Overview

UIPlanner integrates data from multiple sources

UIPlanner Overview

Process Improvements

Move to multi-year forecasts

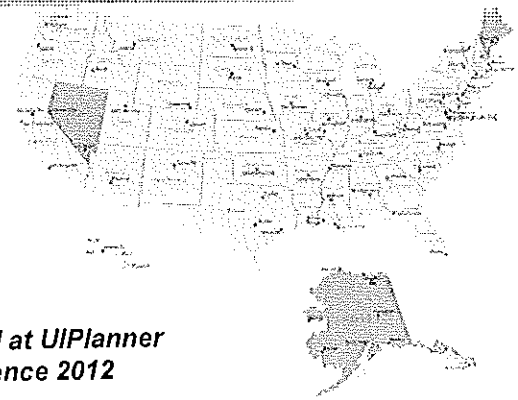
- Expand beyond current year
- Unlimited planning horizon (e.g. 5, 10, 20 year)
- Budget process practices

Improve variance explanation process

- Focus on business drivers
- Avoid unknown variances
- Shorten the cycle time to explain and respond

System Improvements

Technology for multi year forecasts



- Merge actuals with forecast
- Lock months of actuals
- Refer to prior forecasts

Technology for variance explanation

- Drilldown into logic and data
- Ability to add comments to reports by department/cost center

UIPlanner integrates all aspects of the budgeting and planning process

UIPlanner Overview

- **The 30 largest U.S. Utilities using the UIPlanner financial modeling tool – *not all clients shown are utilizing the UIPlanner budget entry system***
- **Proven across jurisdictions – regulatory calculations in 47 states**

Client list presented at UIPlanner Users Conference 2012

Exelon ✓ | Pacific Gas and Electric Company ✓ | AES ✓ | ✓ Sempra Energy | Ameren ✓

Duke Energy ✓ | Edison International ✓ | ppl ✓ | PSEG | Bonneville Power Administration

AEP ✓ | Dominion It all starts here ✓ | Progress Energy ✓ | elpaso | Los Angeles Department of Water & Power ✓

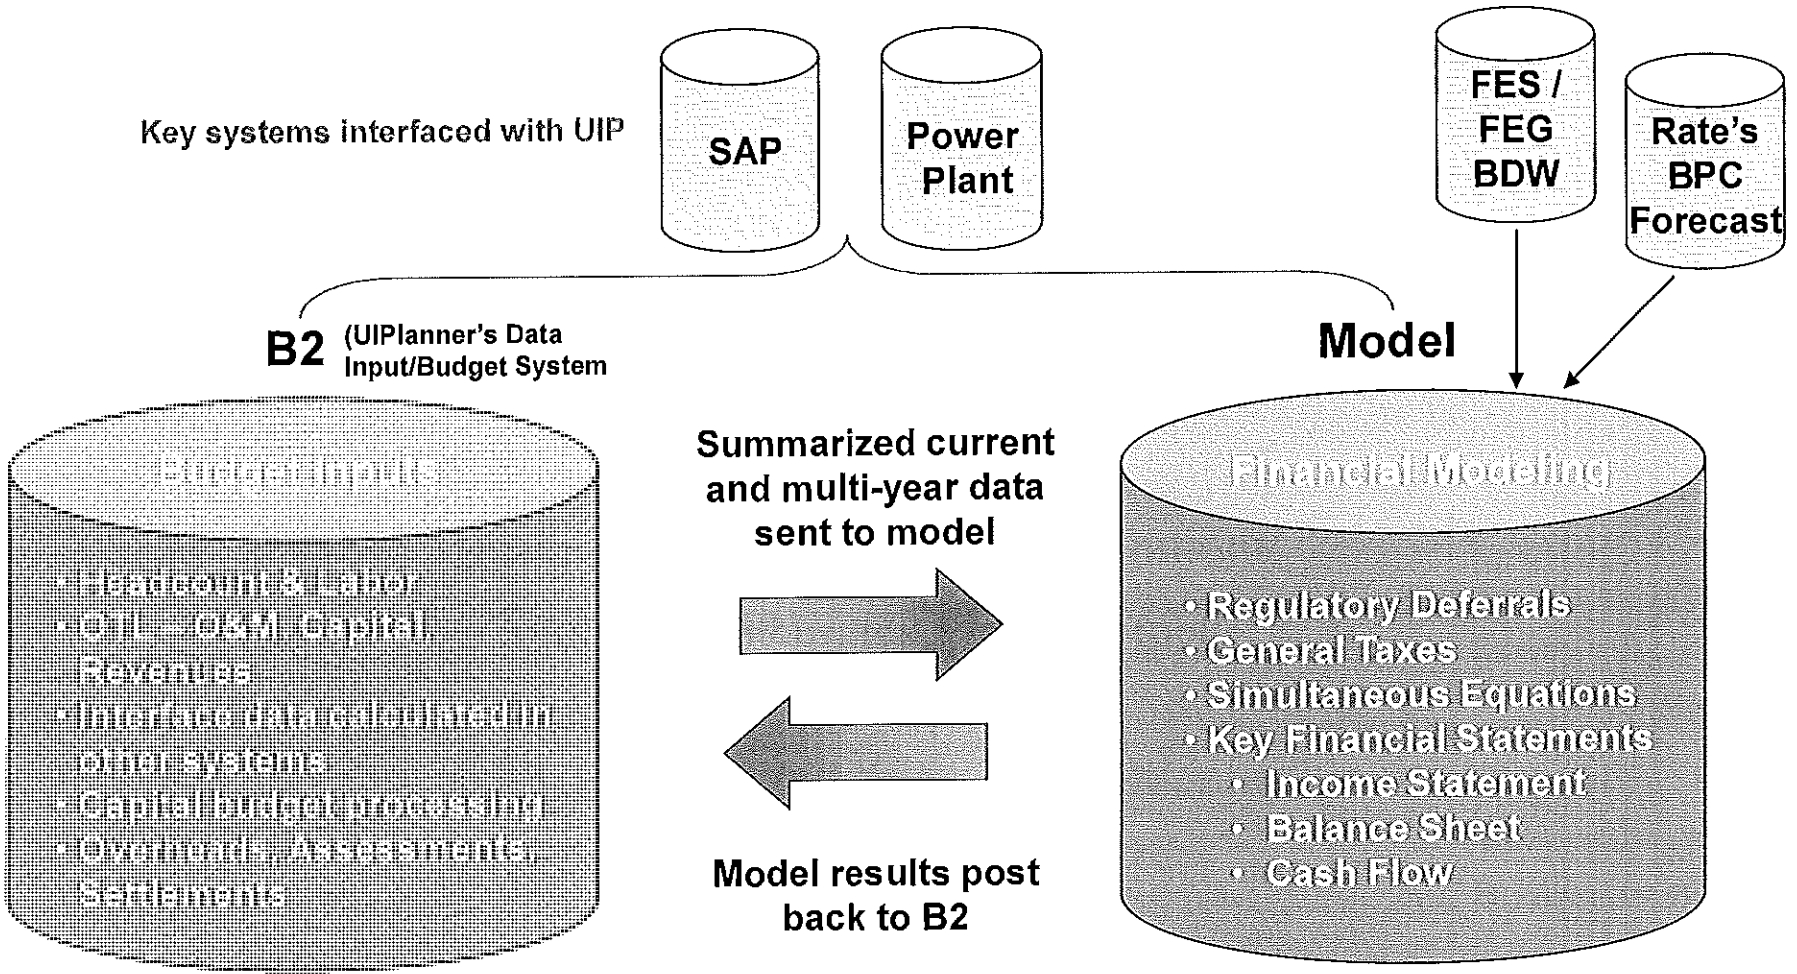
✓ = Client ✓ = Not client; attended conference

Budget Forecast Plan Key Process Overview

Key Process Changes

- Budget entry and analysis will not be managed in SAP. UIPlanner will now perform all budget related functions.

- Long-term planning (5 year) will be integrated with current year budget and forecast processes
  - Current year monthly and quarterly multi-year forecasting process is being implemented
  - Actuals will be interfaced to UIPlanner on a monthly basis
    - Cost collector, cost element and GL level
  - Transaction detail will not be interfaced to UIPlanner but will be available in the Common Data Source (CDS)
- Budget close processing performed within UIPlanner for all years entered
- Close process for actuals continues in SAP
- UIPlanner replaces xRPM as the Corporate capital planning tool and FES/FEG One List



Key Process Benefits

- Consistent approach for budget, forecast, and plan; standard and efficient processes with integrated software tools
- Automated interfaces to source data reducing manual data manipulation
- Reduced cycle time to close budget
- UIPlanner replaces Midas (FE's current financial modeling tool) which is no longer supported by the vendor
- Monthly processing eliminates pencil changes and captures adjustments each forecast run
- Enhancement of integrated forward-looking scenario analysis for the company

The current year annual budget and forecast process provides the Company with a method to quantify and report the current year's expectations and help drive the Company toward achieving financial and operational objectives. The budget and forecast process also assists with facilitating the efficient usage of the Company's financial resources and allows the measurement of actual performance against projections.

Budget, Forecast, Plan Environment

UIPlanner Integrated Planning Tool
Current and Multi Year

Budget, Forecast, Plan Process

Today

Three separate processes for budget, forecast, and plan

Annual Budget

- Current year annual projection of staffing (employee headcounts), revenues, and expenses (Income Statement, Capital and Other)

Current Year Forecast

- Revised projection of the current year annual budget. Revisions to the current year annual budget (e.g. 3+9, 6+6, 9+3)

Multi Year Plan

- Two or more years of projected financials. Also referred to as the multi-year plan

Post FiT

Migrating to an integrated budget, forecast and plan process

A **Annual Budget / Multi Year Plan**

- Current year (year 1) annual projection of staffing (employee headcounts), revenues, and expenses (Income Statement, Capital and Other)
- Includes multi year plan (years 2-5) identifying business initiatives and primary business drivers

B **Current and Multi Year Forecast**

- Revised projection of the current year annual budget. Monthly revisions to the current year annual budget (e.g. 3+9, 4+8, 5+7, 6+6, etc.) and multi year plan with formal multi year reporting on the quarter close

Process Steps and Key Activities

A Annual Budget / Multi Year Plan

B Current and Multi Year Forecast

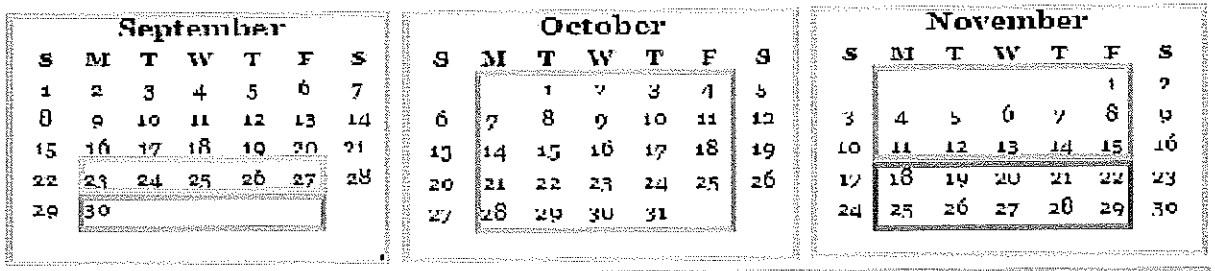
1 Maintain UIPlanner System & Process
- Create New Scenario (annual/monthly)
- Run Applicable Interfaces
- Develop / Update Budget, Forecast Plan Guidelines
- Create Annual Activity Prices
- Perform Other System Functions

2 System Entry
- Employee Labor
- Allocate Labor and Non Labor
- Create/Maintain Budget Group Budget Items
- Project Planning and Tracking
- Validation Reporting
- Business Unit/Department Center Locking

3 System Administrator Activities
- Validation Reporting, Center Locking, Budget/Forecast Close, Derive FERC

4 Financial Modeling
- Move B2 Results to Model
- Move Model Results to B2

5 Reporting
- Move Processed Financial Results to Common Data Source
- Standard Reporting



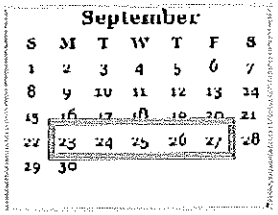
Annual Budget / Multi-Year Plan Process

Annual Budget / Multi-Year Plan Process

A Annual Budget / Multi Year Plan Process

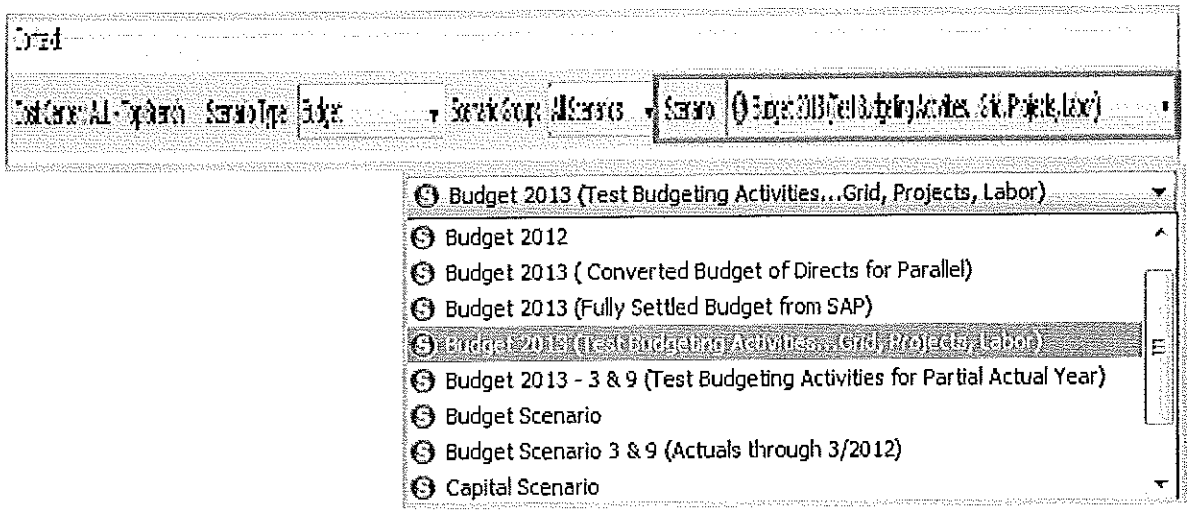
- Traditionally starts late third quarter each year
- Results available for November Board Meeting – approval of five year plan

Year 1



Years 2 - 5

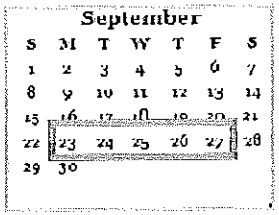
- **Key Activities**
  - Create New Scenario (annual)
  - Run Applicable Interfaces
  - Develop Budget, Forecast, Plan Guidelines
  - Calculate Annual Activity Prices
  - Perform Other System Activities
  - Employee Labor
  - Allocate Labor and Non Labor
  - Create/Maintain Budget Group Budget Items
  - Project Planning and Tracking
  - Validation Reporting
  - Business Unit/Department Center Locking
  - System Administrator Functions
    - Validation Reporting, Center Locking, Budget Close, Derive FERC
  - Move B2 Results to Model
  - Move Model Results to B2
  - Move Processed Financial Results to Common Data Source
  - Standard Reporting



Annual Budget / Multi-Year Plan Process

1 Create New Scenario

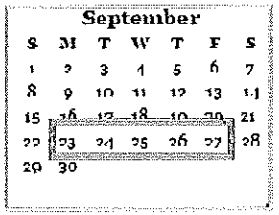
Scenarios are similar to versions in SAP. UIPlanner will manage all the different scenarios needed throughout the year for the budget, forecast, and plan process



- A new scenario will be created for the annual budget process and for each monthly forecast update
- Additional scenarios can be created based on management's request
- Available scenarios will be listed via drop down box on the main menu

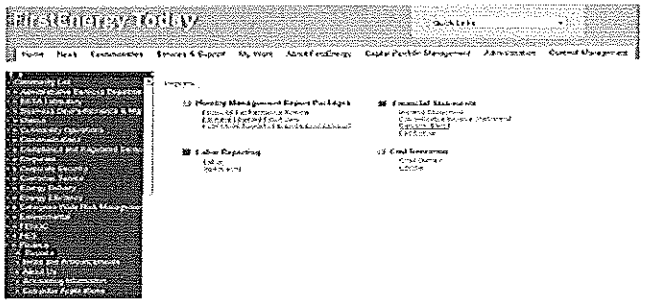
Annual Budget / Multi-Year Plan Process

2 Run Applicable Interfaces

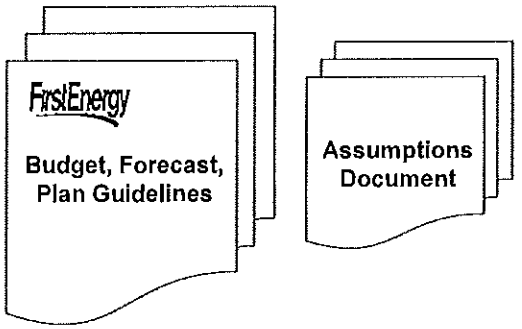


SAP will interface data to UIPlanner near real time, nightly and monthly

Near Real Time	Nightly	Monthly
• Cost Centers • Orders • Projects *(WBS project definition and WBS elements)* • Cost Elements • General Ledger Accounts • Profit Centers	• Activity Types • Companies • All related trees	• Controlling Actuals • General Ledger Actuals • Overheads • Assessments • Settlements • FERC • HR employee data • Power Plant
• Users will continue to create and manage master data in SAP • Near real time approximately every 30 minutes • On demand available	• Individual data fields available near real time – actual tree update will occur nightly	• Actuals loaded to support monthly processing • Budget close performed in UIPlanner • On demand available

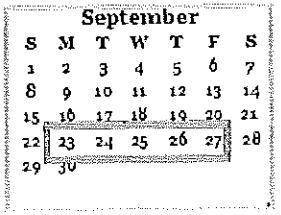


Annual Budget / Multi-Year Plan Process



3 Develop Annual Budget, Forecast, Plan Guidelines

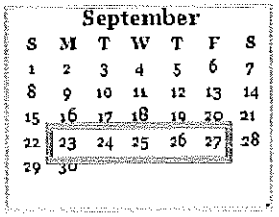
Guidelines will be developed and maintained to assist persons responsible with the direct input of data into UIPlanner as they prepare the annual, budget, forecast and plan



- Guidelines will cover the annual process along with the current year and multi year forecast process. Items included will cover annual calendar of events, plan assumptions, timing, person responsible and applicable targets
- Related processes such as creating and maintaining master data, financial accountability model guidelines, and reporting will be included (other FiT linked processes)
- A common data repository will be available on the FE Portal under the Finance Community. Key documents will be stored to facilitate the budget, forecast, plan process. Available in 2014
- Guidelines will be updated throughout the year, if needed, to reflect major changes as part of the monthly/quarterly forecast process

Annual Budget / Multi-Year Plan Process

4 Calculate Annual Activity Rates

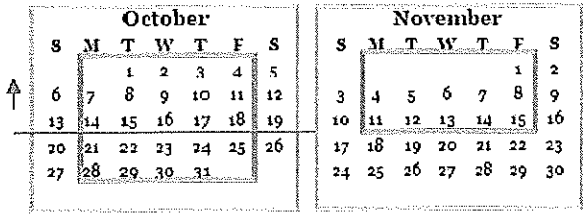


Annual activity rates will be calculated in UIPlanner prior to the start of the annual budget process. SAP HR employee data will be interfaced to UIPlanner to support this process

- **Run HR interface**
  - Import Employee data containing employee salaries, vacation, PAD, holiday, etc,
- **Calculate employee loaded salary**
  - Labor additives (benefits, incentive compensation, payroll taxes)
  - Update union and non union wage schedules
- **Calculate productive hours by employee**
  - Vacation, PAD, holiday, meetings, and other non productive
- **Calculate activity rates**
  - Total dollars / total hours
  - Rates will be automatically calculated for the plan horizon

Annual Budget / Multi-Year Plan Process

6 Perform Other System Functions

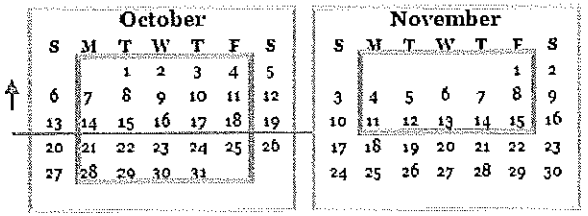


Other activities include administering user security, maintaining global assumptions, ensure system validations are current, publishing datasets and reports, etc.

- **Administer user security**
  - Add, edit, delete
  - Maintain FERC code of conduct and required reporting
- **Maintain global system assumptions**
  - Update related datasets
- **System Validations**
  - Maintain rules and validations for appropriate screens
  - Maintain interfaces
- **Other Miscellaneous**
  - Publish standard reports
  - Trouble shoot system problems
  - General system maintenance

Annual Budget / Multi-Year Plan Process

6 Employee Labor

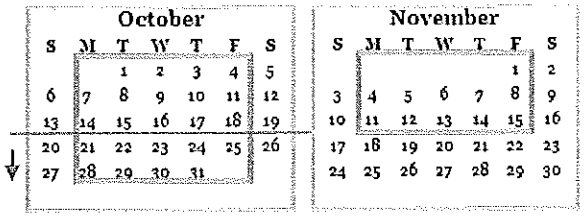


View and verify SAP HR interfaced employee data

- SAP HR data will be interfaced to UIPlanner initially for calculation of activity prices but also monthly to show employee changes and unproductive time usage
- Verify employee data - employee names, cost centers, etc.
- View/update labor data at the individual employee or summary cost center level
- Additional employee information such as vacation eligibility, available payroll hours, etc will be summarized to help facilitate building of the labor budget and monthly forecast process
- Access to the labor screens will be secured based on role and business unit/department
- User will be presented with hours and dollars at the individual employee level and summary level by Company, Cost Center, Pay Calendar, Personnel Subarea, Activity Type

Annual Budget / Multi-Year Plan Process

6 Employee Labor *(continued)*

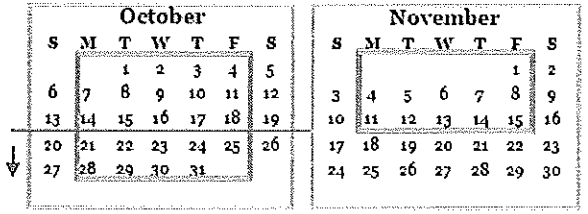


Determine number of headcounts, FTE's, vacation and PAD allocation, total hours, and total dollars by either individual employee or summary level

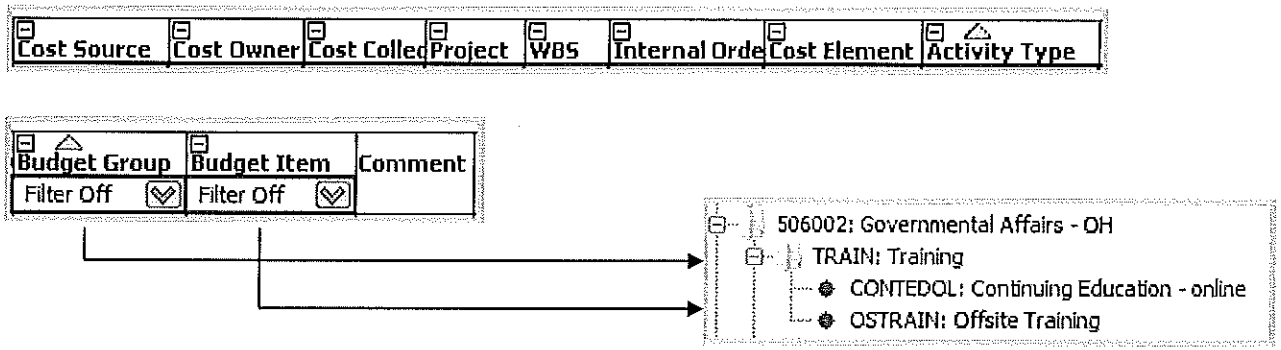
- Verify employee data - employee names, cost centers, etc.
- Update staffing - headcounts and FTE's
  - Additions
  - Exits (planned retirements)
  - Internal transfers
- Allocation of unproductive time - PAD, vacation, deferred vacation
- Manual salary adjustments - promotions, non ICP bonuses
- Determine overtime hours or dollars
- Note: Other than labor entry can also occur in conjunction with developing employee labor
- Cost Center Labor Hours and Dollars Available to budget in grid

7 Allocate Labor and Non Labor

Allocate hours and dollars to the various cost collectors (cost center, internal order, WBS) for capital and noncapital

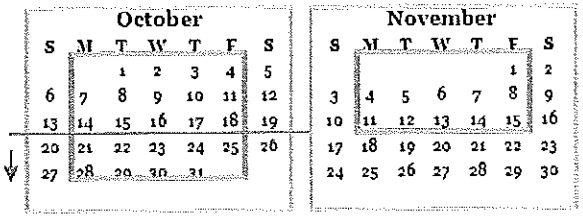


- System design follows the Financial Accountability Model where each cost collector has one owner
- Cost collector owners will be responsible for budgeting and forecasting all other than labor
- Master Data guidelines will be in place to ensure consistency across the Company
- Cost collector combinations are entered into UIPlanner via a budget grid or Excel upload
  - Budget records will be displayed for the active department or cost center selected
  - An additional project screen available to further define budget inputs
- Both hours and dollars available on grid
- Contractor hours/dollars calculation available to assist users with developing their other than labor budgets



8 Create / Maintain Budget Group Budget Item

Budget groups and budget items will be utilized as part of the budget grid entry to further categorize data inputs. Utilized to assist with budget/forecast approvals. Data fields are optional

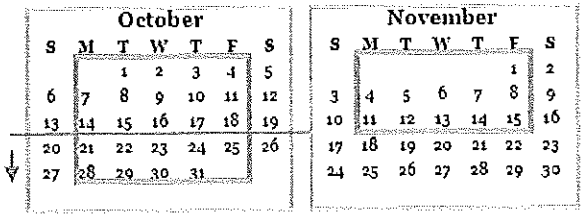


- Budget groups and budget items can be assigned to any node in the cost center tree
- The availability for use will depend on the assignment and level in the cost center tree
  - If a budget group budget item is assigned to an individual cost center then it will only be available for use with a grid combination for that particular cost center
  - Budget group and budget items set at the "all node" or top level will be available for all users

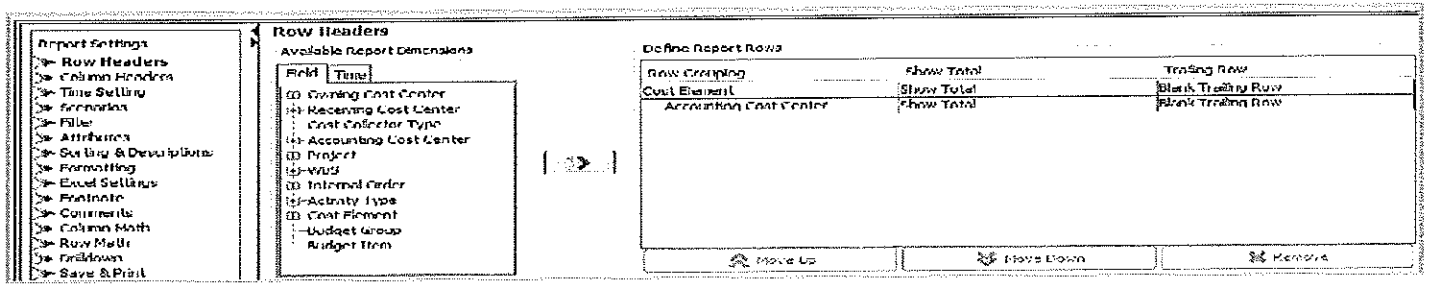
Annual Budget / Multi-Year Plan Process

9 Project Planning and Tracking

A separate project screen is available where users can house additional project information in one common place. Planning projects can be created in UIPlanner to assist with long term planning



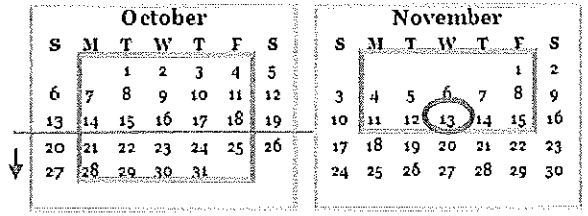
- Users will input additional project information such as project description, project sponsor, project status, etc for both SAP projects and UI Planning Projects
- Project attributes will be both required and optional
- UIPlanner will allow users to create projects for multiyear planning without having to create the project definition and WBS elements in SAP
- "Project Templates" will be interfaced and utilized from SAP as a starting point
  - Allows the project attribute values of the SAP project to be applied to the new Planning Project (project definition and WBS element level)
  - Mirroring the SAP project to the UI Planning Project ensures important attributes such as the costing sheet data is applied accurately
- When planning projects are approved during the budget year, the project definition and WBS elements will be created in SAP and interfaced in UIPlanner



Annual Budget / Multi-Year Plan Process

10 Validation Reporting

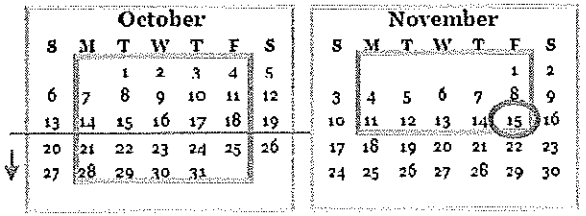
System validation reports will be available to check user entry for budget and forecast inputs



- UIPlanner reports will be available to validate system entry
- Multiple ways to view data
  - **View Reports -** standard reports by major category
  - **Create Reports** - on-the-fly reporting - menu driven. Ability to edit report rows and columns, add and delete fields, subtotal and total, formatting
  - **Report Administration** - enables user to create reports you want to quickly rerun, distribute, or edit in the future
- Certain data fields will be derived through reporting such as cost type, company code, profit center, etc.

Business Unit / Department Center Locking

Business Unit/Department approval will be required. Select users will be able to lock the cost centers for their respective areas prior to the final budget close



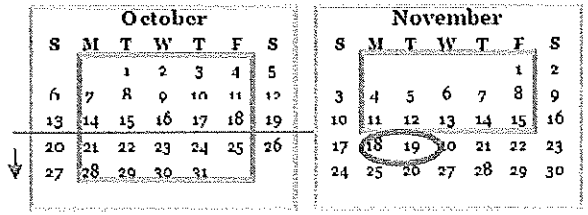
- Select users will be granted access to lock their individual business unit/department cost centers or entire group/department once the Business Unit Controller/Department Head has reviewed and approved the results
- Center locking will be considered an approval and signifies to the System Administrator that the group has completed their work and is ready for final processing
- Center locking is date stamped and identifies who locked and at what time

Annual Budget / Multi-Year Plan Process

12 System Administrator Activities

System Administrator will perform additional activities to finalize the budget/forecast process

- **Validation Reporting**
  - Verify all areas are locked
  - Review miscellaneous reports



- **Administrator Center Locking**
  - Once the Business Unit/Department locks their individual groups, the System Administrator can perform an administrative lock over the entire cost center tree which signifies the scenario has been locked
  - System Administrator has the authority to open up individual centers for a particular user in the event a budget correction is needed

- **Budget / Forecast Close Process**
  - The Budget Close will be processed in UIPlanner and System Administrator will run the budget close at different intervals of the process giving the user insight into the final settled numbers
  - The close will process all years in scenario
  - A schedule will be published as part of the budget guidelines allowing users to plan accordingly
  - Budget close processing time is expected to be significantly shorter than FE's current process. Exact time for compiling and run time is not yet known
  - FERC will be derived as part of the close process

Annual Budget / Multi-Year Plan Process

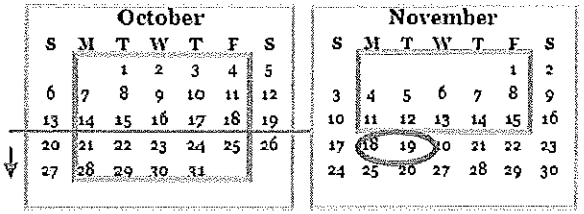
13 Move B2 Results to Financial Model

Select budget entry items will be migrated from B2 to the Financial Model for further processing

- Dependent data items (interest, deferrals / riders, income taxes, general taxes) are calculations that will be automated in the model

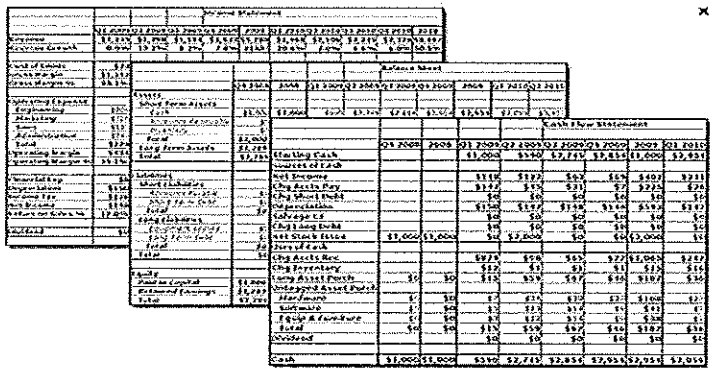
- The model "links" the calculation of dependent data
  - Eliminates the need for manual handoffs
  - Allows for quick turnaround of changes

- New process will generate integrated financials, not just an Income Statement
  - Better insight on cash impacts
  - Monitor key financial drivers including regulated entities rate base



- Separate model security limits access to data
  - Not all B2 users will have access to the financial model

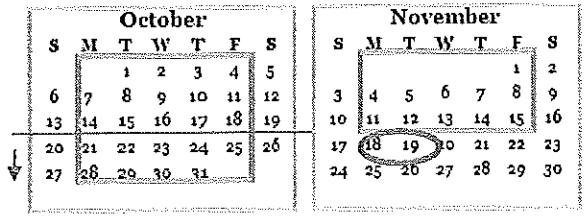
- Additional Model activities
  - Creating scenarios and "what if" analysis
  - Target setting and financial metrics



⇒ *Develop internal multi-year financial guidance and targets*

14 Move Financial Model Results to B2

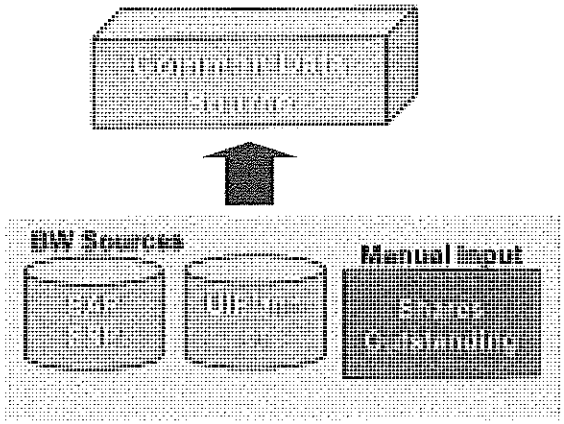
Once model processing occurs, results will be posted back to B2 for users to view. Level of details and posting method is still under development



- Results from the data calculations within the model will be posted back to the B2 environment
- Calculated results will be available to view within a dataset and report
- Owners will review and validate results as part of process
- The key financial statements (income statement, cash flow, balance sheet) will also be generated as part of model processing
- Internal income statement results will be available for users to view in B2

Annual Budget / Multi-Year Plan Process

15 Move Processed Financial Results to Common Data Source



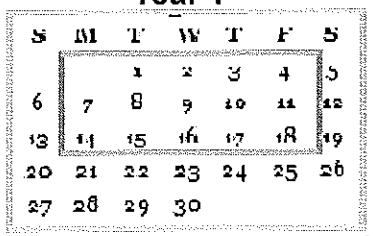
Provide standard management reporting sourced from a single, common database. Standard reporting available to ensure results are viewed consistently across the organization

- **Final processed results will be moved to the Common Data Source**
  - Separate Summary Cube allows faster report processing
  - Separate Detailed Cube simplifies variance analysis
  - Multi-year forecast data will not be sent to the BW

- **FiT Available Reports**
  - Financial Statements,
  - Monthly Management Reports
  - Cost Reporting
  - Employee Labor Reporting

Source Systems

Current and Multi-Year Forecast Process



Current and Multi-Year Forecast Process

B

Current and Multi-Year Forecast Process

- Recast current month and remaining months in current year
- Update of multi-year plan
- Standard reporting will be utilized with fixed timing (FiT Reporting)
- Forecast results available each month to manage current and multi year

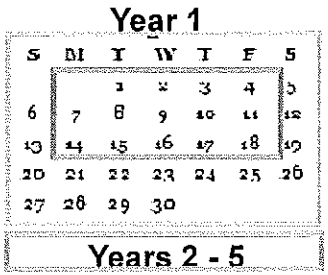
Year 1

Years 2 - 5

- **Key Activities**

1
- Create New Scenario (monthly)
- Run Applicable Interfaces (monthly)
  - Update Budget, Forecast, Plan guidelines
  - *Calculate annual activity prices (N/A)*
- Perform Other System Activities (if needed)
  - *Move B2 Results to Model*
  - *Move Model Results to B2*
  - *Move Processed Financial Results to Common Data Source*
  - *Standard Reporting*

2
- Employee Labor
- Allocate Labor and Non Labor
- Create/Maintain Budget Group Budget Items
- Project Planning and Tracking



→ Reflect labor and non labor changes

  - *Validation Reporting*
  - *Business Unit/Department Center Locking*
- *System Administrator Activities*
  - *Reporting, Center Locking, Budget Close, Derive FERC*

Current and Multi-Year Forecast Process

1 Maintain UIPlanner System & Process

The current and multi-year forecast process will follow the same steps as the annual budget/multi-year plan process with several activities being modified to reflect monthly versus annual

- Create New Scenario
  - Create new version to capture recast
- Run Applicable Interfaces
  - Interface SAP monthly actuals (budget level)
  - Interface HR employee data
- Update Budget, Forecast Plan Guidelines
  - Update scenario assumptions (if needed)

Actuals load to UIP ***Recast remaining months and multi year***

Amount Type	2013					
	2013 - Jan	2013 - Feb	2013 - Mar	2013 - Apr	2013 - May	2013 - Jun
Dollars	$35	$35	$35			
Hours	1.0	1.0	1.0			

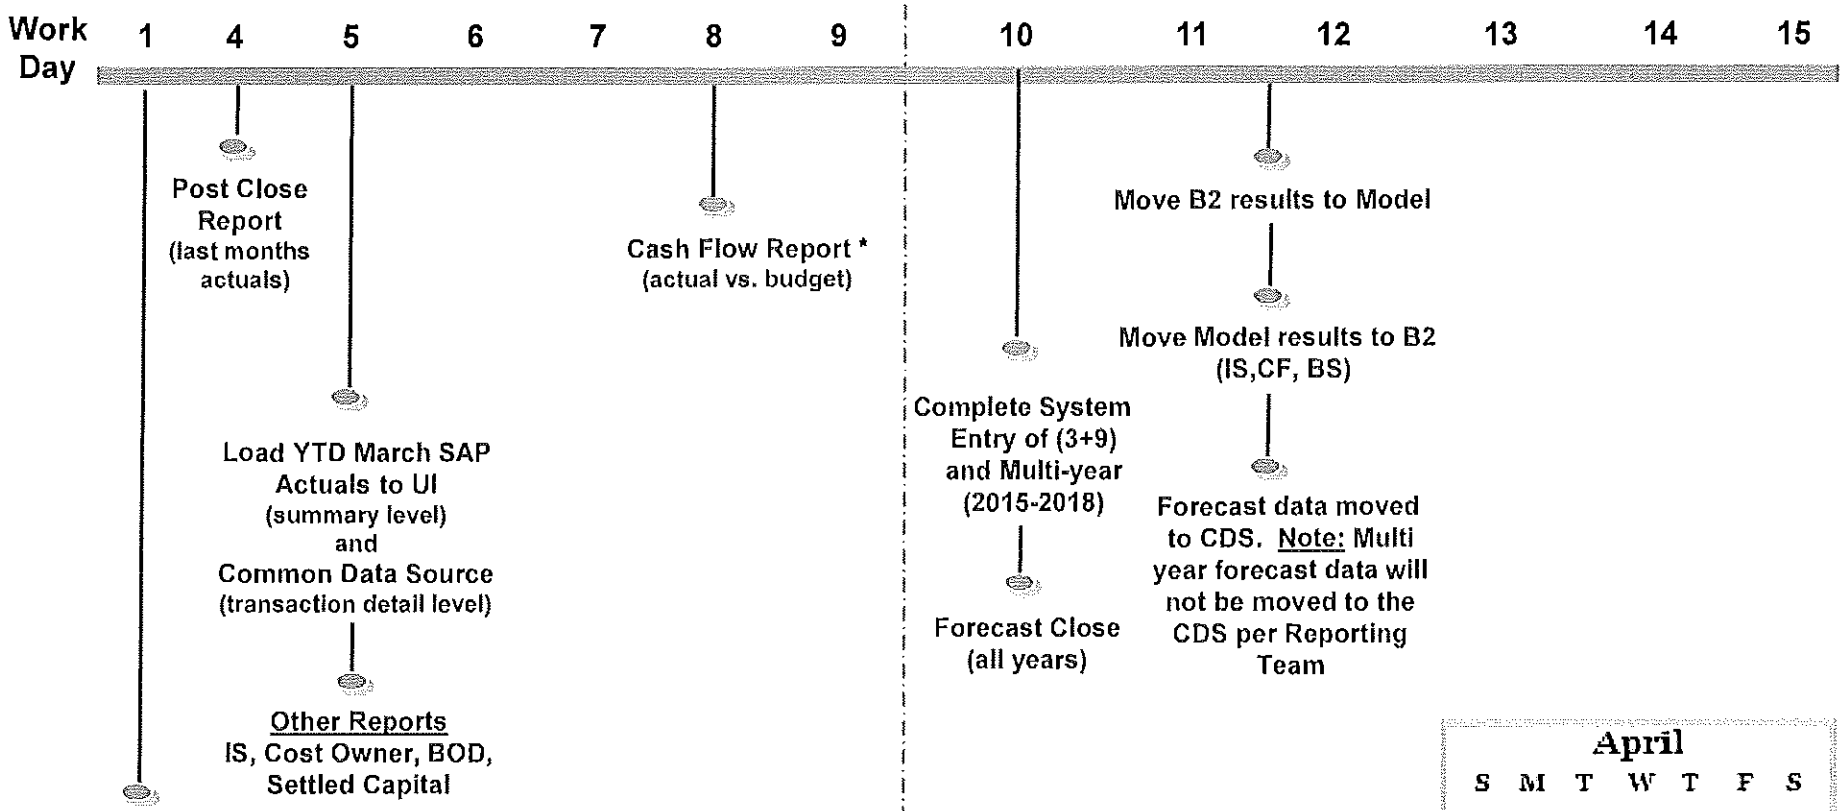
Reference row available to compare values from previous scenarios

Amount	2013	2014	2015	2016	2017	2018
Type	2013 Total	2014 Total	2015 Total	2016 Total	2017 Total	2018 Total
Dollars	$0	$0	$0	$0	$0	$0
Hours	0.0	0.0	0.0	0.0	0.0	0.0

Current and Multi-Year Forecast Process

2 System Entry

Users will identify changes and reflect labor and other than labor changes



- Employee Labor
  - SAP HR data will be interfaced to UIPlanner initially for calculation of activity prices, but also monthly to reflect employee changes such as pay adjustments, vacation and PAD usage
  - Interface will automatically run the first workday each month
  - Labor balances should be reviewed as part of the forecast process
- Allocate Labor and Non Labor
  - Adjust cost collector dollars/hours for remaining months
- Create/Maintain Budget Group Budget Items (optional)
  - Create new budget groups budget items to capture new cost collector additions
- Project Planning and Tracking
  - Identify new projects
  - Identify project changes and status

Current and Multi-Year Forecast Process

Illustrative

- Schedule included with annual guidelines
- Standard reports will be utilized to manage results

- New scenario created for 3+9. System open for entry
  (scenario can be created in previous month)
- Run applicable interfaces (e.g. monthly HR data)

Specific calendar days will utilize standard reports

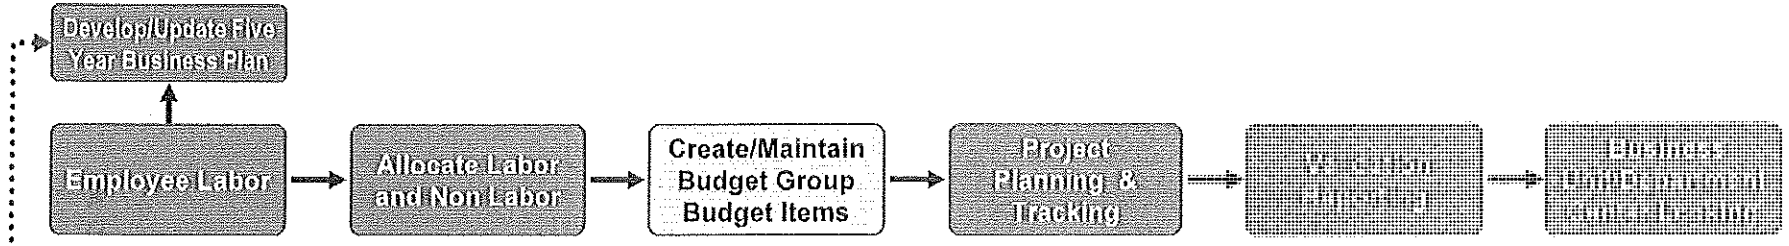
- System generated cash flow reports will not be available until BPC go-live 5/9/14. Actual to budget/forecast cash variance reporting will continue to be created using the current process

April

S	M	T	W	T	F	S
		1	2	3	4	5
6	7	8	9	10	11	12
13	14	15	16	17	18	19
20	21	22	23	24	25	26
27	28	29	30			

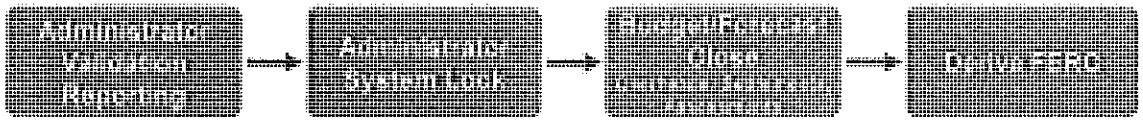
- **Multi-Year Plan / Forecast**
  - Performed in conjunction with the annual and monthly forecast process
  - Multi year approach
    - Focus on one year out (year 2) – identification of known key events and business unit initiatives
    - Years 3 - 5 identification of primary business drivers
  - Allow users the ability to develop a detailed forecast or adjust at a summary level
  - Budget close will process all years in scenario

Build and refine forecast data for detailed annual budget
Ability to align earnings and cash projections with long-term strategy

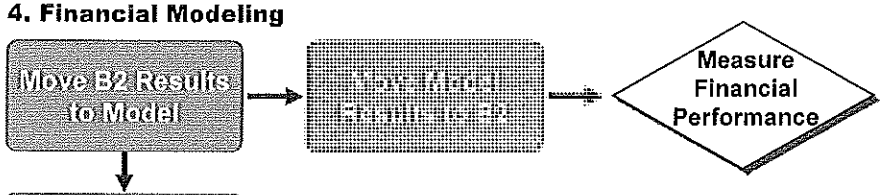


Year 1 (current year)	Year 2	Year 3	Year 4	Year 5
Annual Budget	**Multi-Year Plan / Forecast**			
Current Year Forecast				
• Cost center level details • Identification of specific capital and noncapital projects • Identified strategies • Execute and monitor performance	• Known key events • Business Unit Initiatives	• Primary Business Drivers		
	Key Variable Inputs			
	• *Load* • *Special programs (e.g. forestry, energy efficiency)* • *Transmission* • *Regulatory strategy* • *Power prices* • *Plant outages* • *Fuel*	• *Human Resources special items* • *Tax strategies* • *Treasury activities* • *Accounting treatment* • *Business development strategies*		

Budget, Forecast, Plan Process Summary

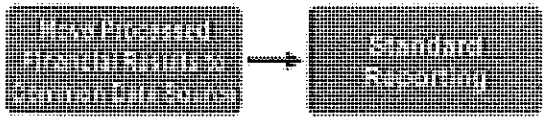


1. Maintain UIPlanner System & Process



2. System Entry

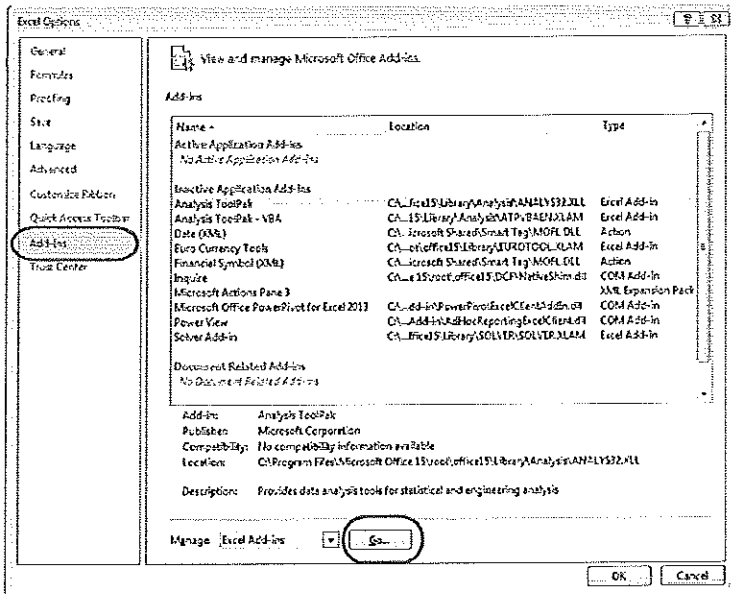
3. System Administrator Activities



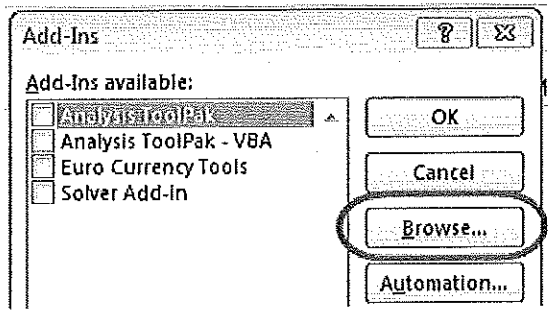
4. Financial Modeling

- *Improve decision making with what-if analysis*
- *Identify and implement financial initiatives and strategic alternatives*
- *Develop internal multi-year financial guidance and targets*

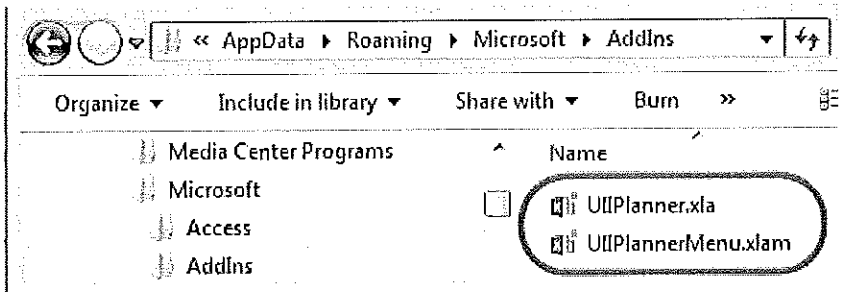
5. Reporting



UIPlanner Log In Process



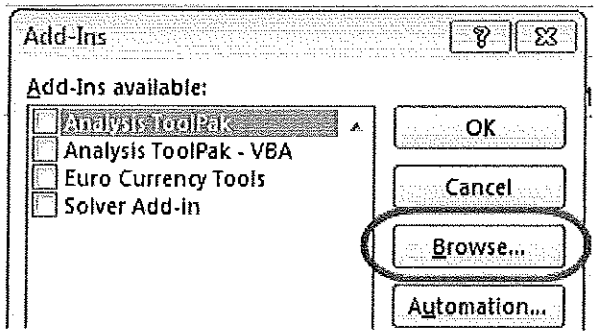
Install Excel Add-Ins

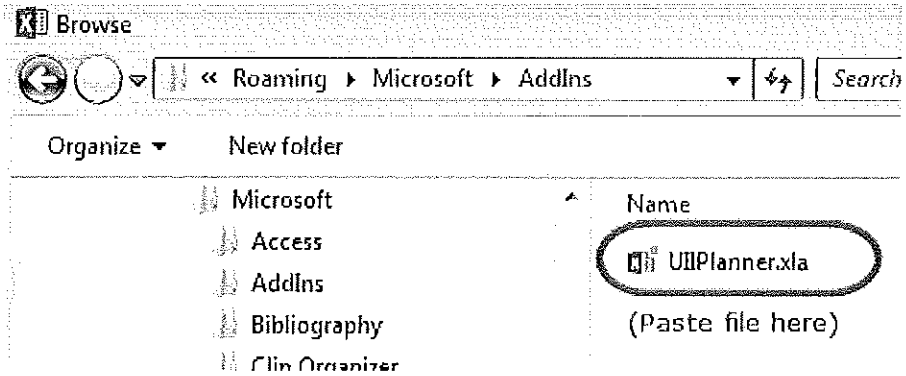


- **UIPlanner Excel Add-Ins are used for Excel upload / download functionality**
- **Add-Ins are User ID and computer specific**
- **Follow these steps to copy the Add-Ins files to your Excel session on the computer you will use to access UI Planner**
  - **Step 1 – Locate the files to be copied**
    - Open Windows Explorer, navigate to the U: shared drive to your appropriate group folder and leave this window open.
      - U:\FE\Competitive - FES\FiT Project\UIPlanner\Excel Add Ins
      - U:\FE\EnerAff\FiT Project\UIPlanner\Excel Add Ins
      - U:\FE\RegEnt\FiT Files\UIPlanner\Excel Add Ins
      - U:\FE\ShrSvc\FiT\UIPlanner\Excel Add Ins
  - **Step 2 – Copy the files from the U drive to your C drive through Excel**
    - Follow the instructions pertaining to your version of Excel (see next slides)
    - Excel will direct you to where the files should be copied
  - **Step 3 – Confirm the Add-In was installed**
    - Follow the instructions pertaining to your version of Excel (see next slides)

Excel Add-Ins – Step 2

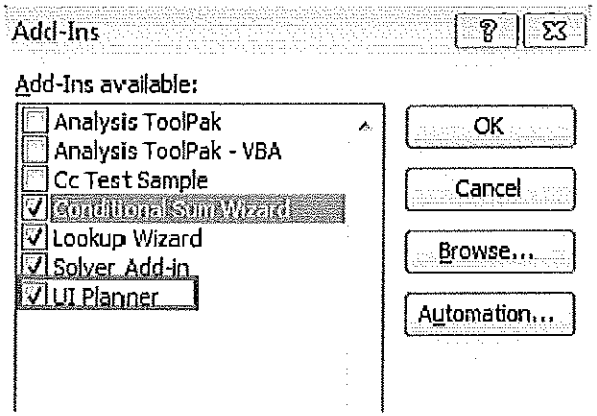
- **For Excel version 2010 or 2013**
  1. Open Excel (version 2010 or 2013)
  2. Click File > Options
  3. From the Excel Options window, select **Add Ins** then click **GO**
  4. From the Add Ins pop up, click **Browse**
  5. Excel will take you to the location where the files should be (It will be empty)
  6. Navigate to your Windows Explorer session and copy the two Add-In files
  7. Navigate to your Excel session and paste the two files into the 'AddIns' folder Excel has selected for you

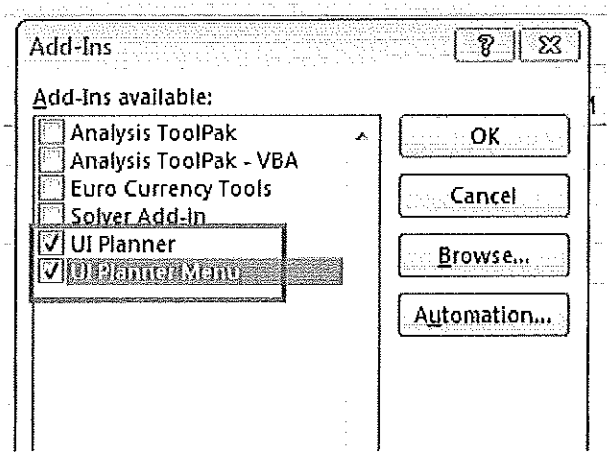




Excel Add-Ins – Step 2 (continued)

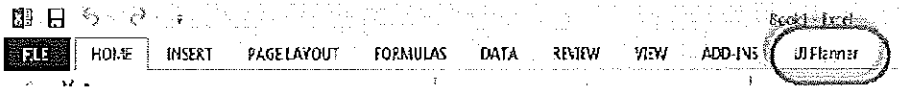
- **For Excel version 2003 or 2007**
  1. Open Excel
  2. From the menu bar, select Tools > **Add Ins**
  3. From the Add Ins pop up, click **Browse**
  4. Excel will take you to the location where the files should be (It will be empty)
  5. Navigate to your Windows Explorer session and copy one Add In file UIPlanner.xla
  6. Navigate to your Excel session and paste the file into the 'AddIns' folder Excel has selected for you





Excel Add-Ins – Step 3

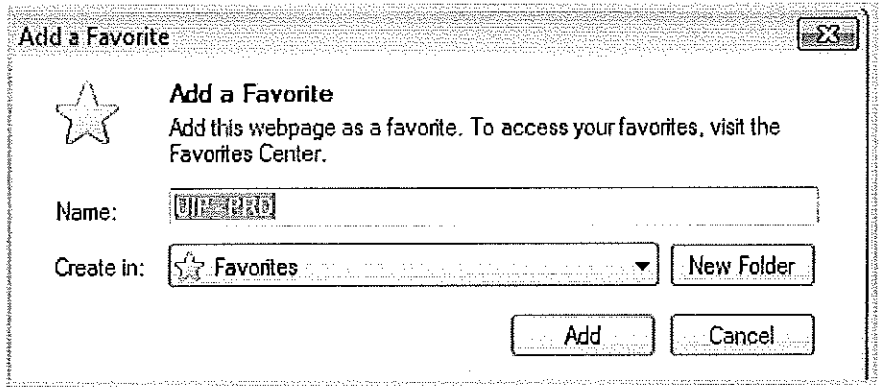
Confirm the Add-In was installed



- ***For Excel 2003 or 2007***
  - Click 'Tools' menu
  - Select 'Add-Ins'
  - Confirm 'UI Planner' is checked

- ***For Excel 2010 or 2013***
  - Click File > Options > Add-Ins > GO
  - Confirm 2 UIPlanner Add-In files are checked

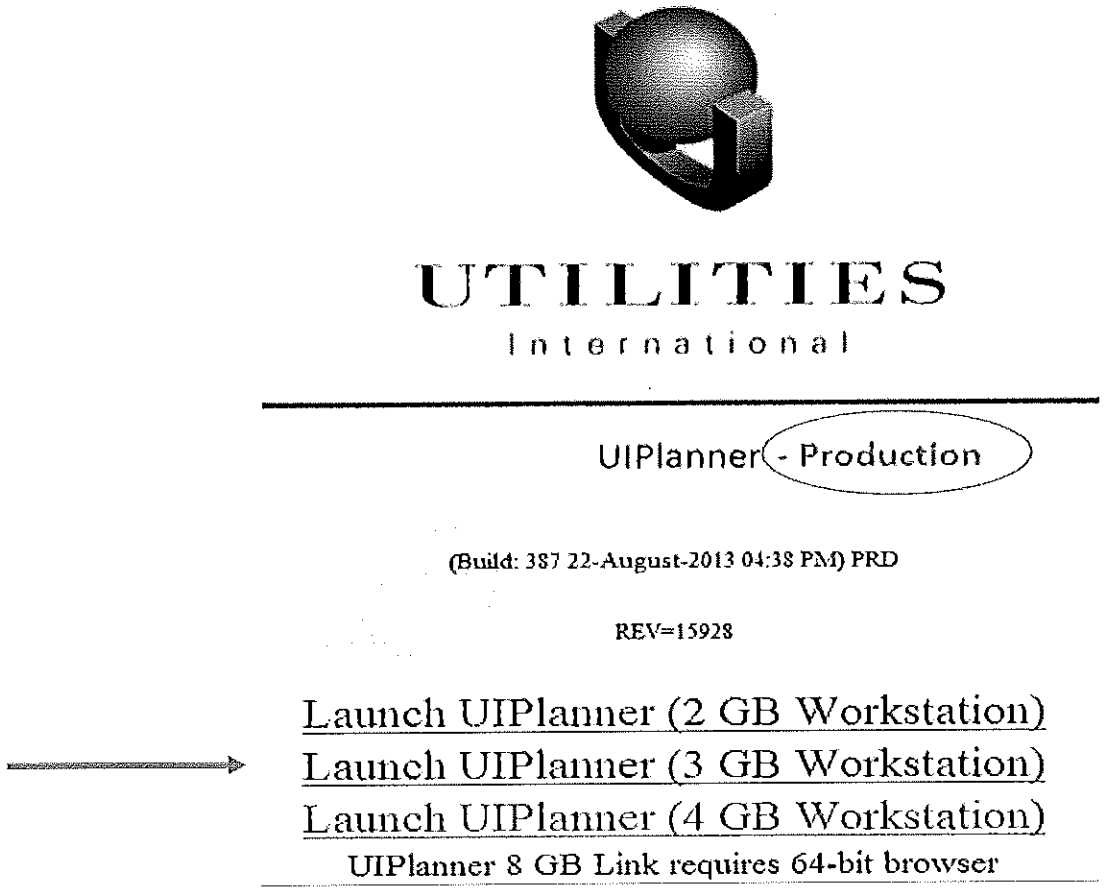
  - New 'UI Planner' Menu option appears



UIPlanner Log In

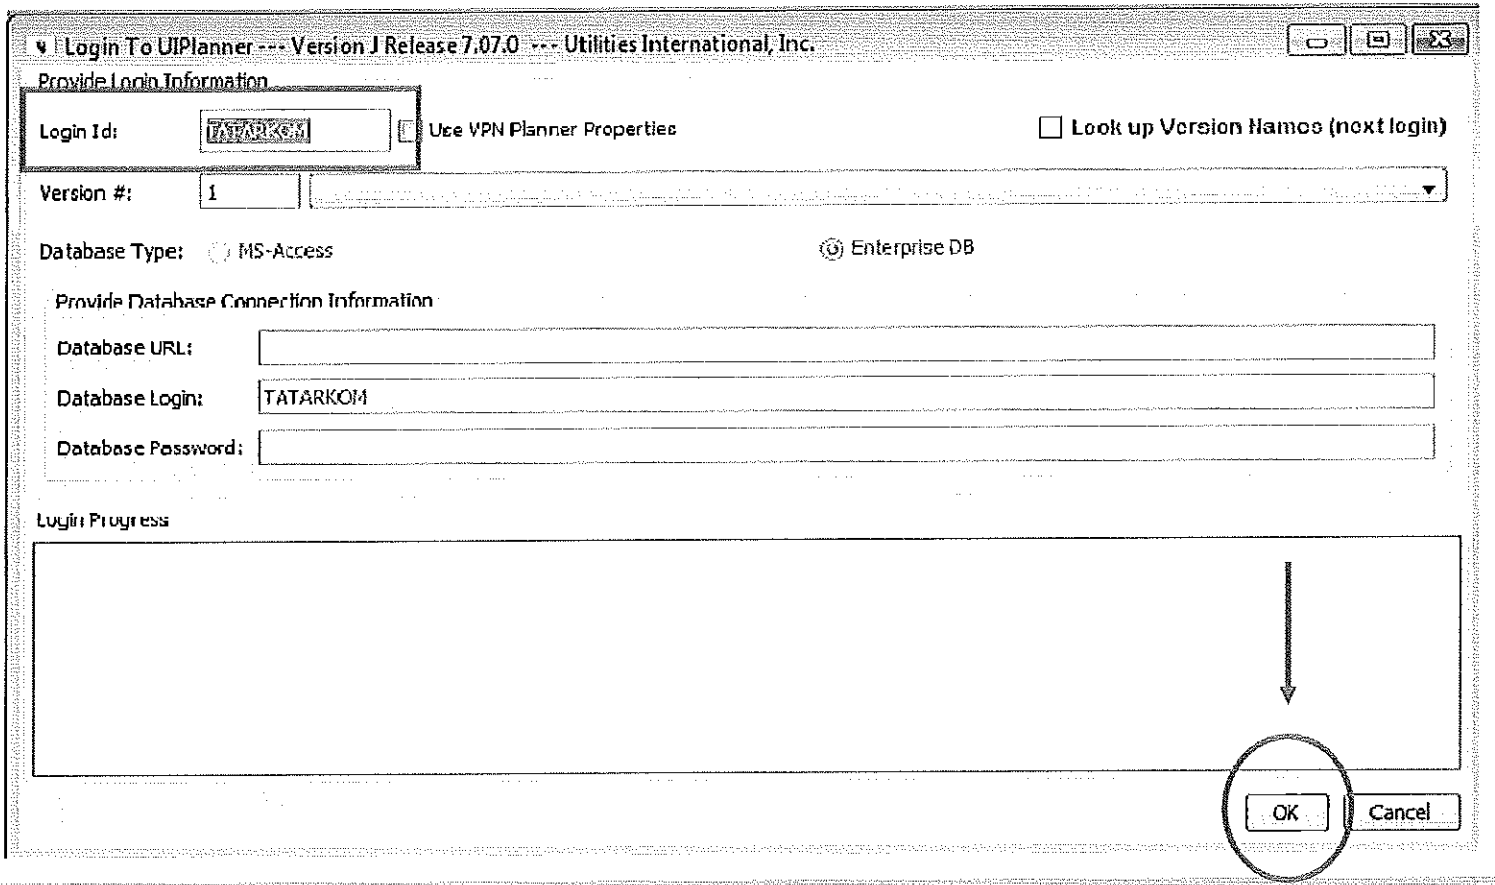
1. • Enter the link on the browser line
   - http://wuiplanner01d:8080/planner/ - Development
   - http://wuiplanner01t:8080/planner/ - Test
   - http://wuiplanner01p:8080/planner/ - Production

- Add to Favorites



UIPlanner Log In

2



- After entering the link, the UIPlanner software main screen will display
- Click on (3 GB or 4 GB Workstation)

UIPlanner Log In

4

- User Login ID will display
  - UIPlanner has single sign on capability and authenticates on your network login ID
- Click OK

UIPlanner Security

UIPlanner Security

- UIPlanner security will be established using the Financial Accountability Model hierarchy (ZBWCAM0000) and granted at the node level within each business unit/department

- Multiple roles or levels of security will be granted

  - **Budget Security**
    - Controls access to Budget-specific features and data
    - Includes Application Rights, which control access to screens and tools, and Cost Center Rights which limit access to data based on the user's context within a "Center" hierarchy

  - **Model Security**
    - Controls access to create and delete system-wide model related objects (e.g. Entities, Attributes) and administrative tools (e.g. Manage Menus, Archive)

Key UIPlanner Security Roles

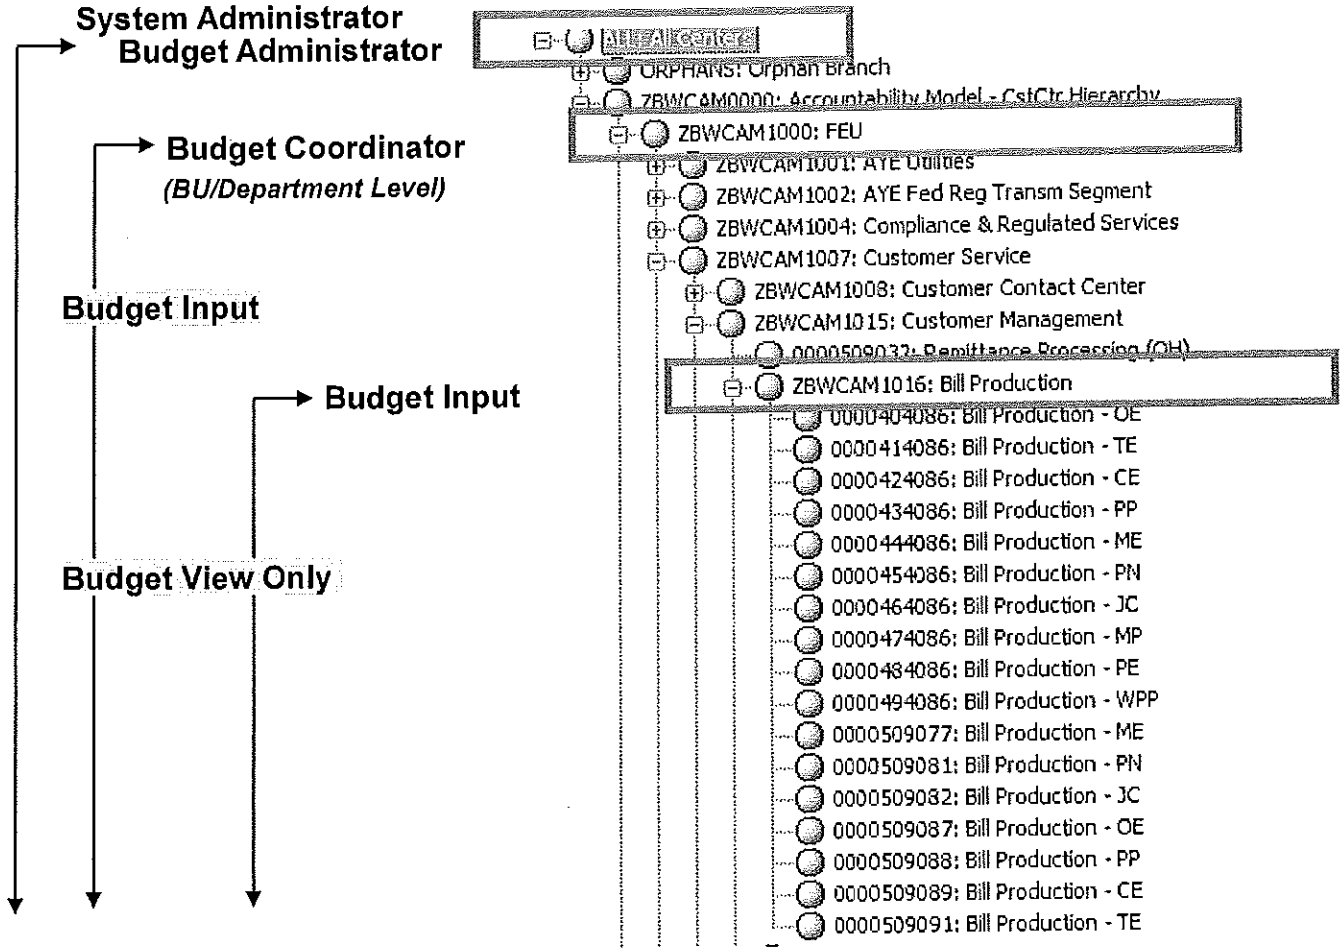
- **System Administrator:**
  - Centralized group that will manage and maintain both B2 and Financial Model
  - Individuals will have all rights to system and can perform functions the average user can not, such as: system configuration, bounce server, deploy new releases

- **Budget Administrator**
  - Centralized group that will manage and maintain B2 system
  - Individuals will have rights to system and can perform all system, business and process functions
    Examples include creating budget scenarios, running interfaces, process budget/forecast close, administer security, system admin locking, maintaining datasets, global assumptions, etc.

- **Budget Coordinator**
  - Individuals having rights to their entire business unit or department
  - Access to all user functions such as viewing and validating individual employee labor data, allocating labor and non labor, project planning, create budget group budget items, budget approval/center locking, and publish reports for their respective areas

- **Budget Input**
  - Individuals having rights to either their entire business unit or department or a specific group or center
  - Individuals will be granted access to all basic budget functions but will not be able to view individual employee labor data, create budget group budget items, and center lock

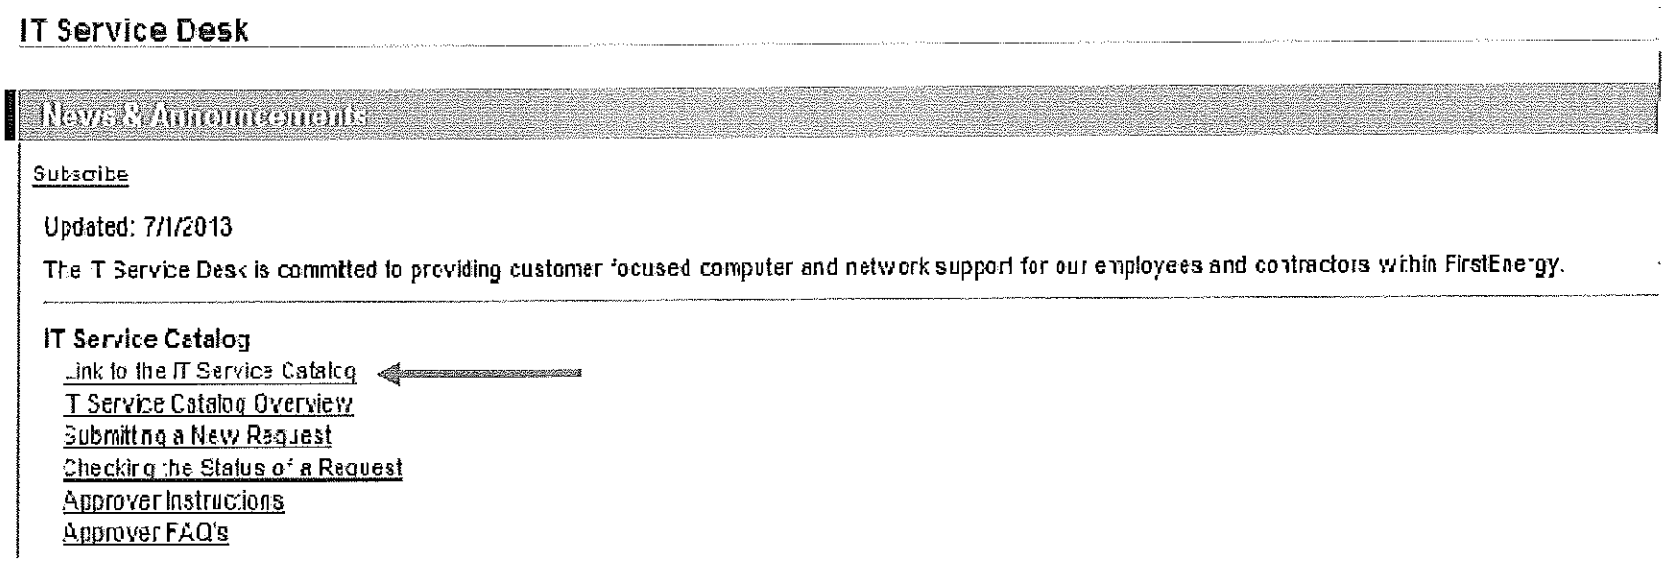
- **Budget View Only**
  - Individuals can only view published results and view reports



Key UIPlanner Security Roles

- **Budget Coordinator / Model Input**
  - Individuals responsible for both managing labor and other than labor functions for their area and has responsibility for key model inputs

- **Model Administrator**
  - Individuals having rights to the financial model and can perform all model functions

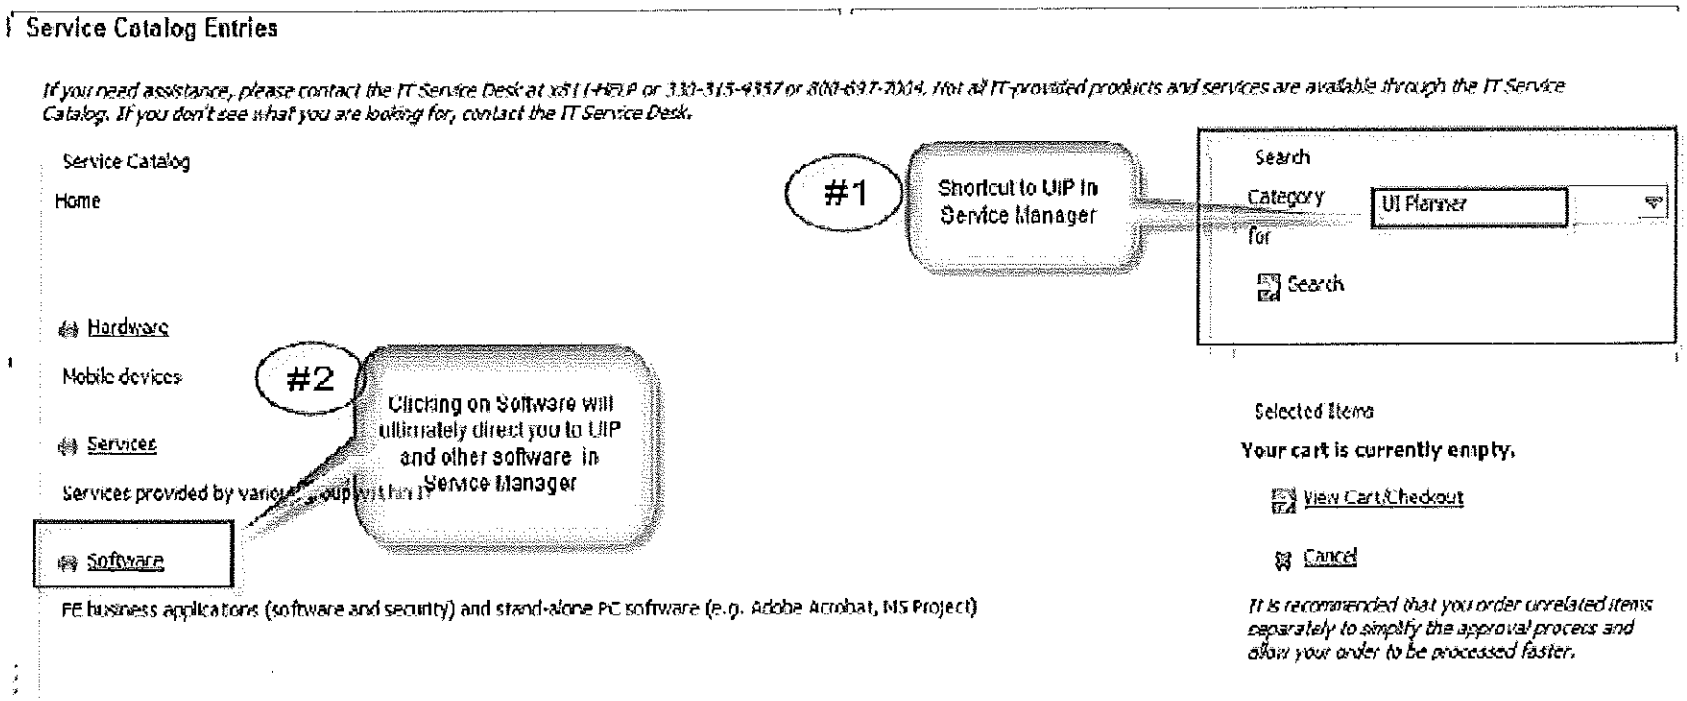


Cost Center Hierarchy and Security

- Budget Security will be established using the Financial Accountability Model hierarchy and granted at the node level within each business unit/department
- Multiple roles or levels of security will be granted

UIPlanner Security Requests

- **UIPlanner Security requests will be managed via the IT Service Catalog**
  - Security requests include: establishing new security, changing security, and removing security for either data collection or financial modeling
  - This process is used for both employees and contractors
- **The IT Service Catalog can be accessed in one of two ways via the portal:**
  1. Path: Services and Support>Work Related>IT Service Desk>Link to the IT Service Catalog
  2. IT Service Catalog can also be accessed by typing 'ITcatalog' into the Internet Explorer Address Bar



How to Request UIPlanner Security

- **To request UIPlanner security for data collection or financial modeling perform the following processes once in the IT Service Catalog:**
  - Search for UIPlanner by selecting "UIPlanner" in the Category field of the Search (see #1 below)

    OR

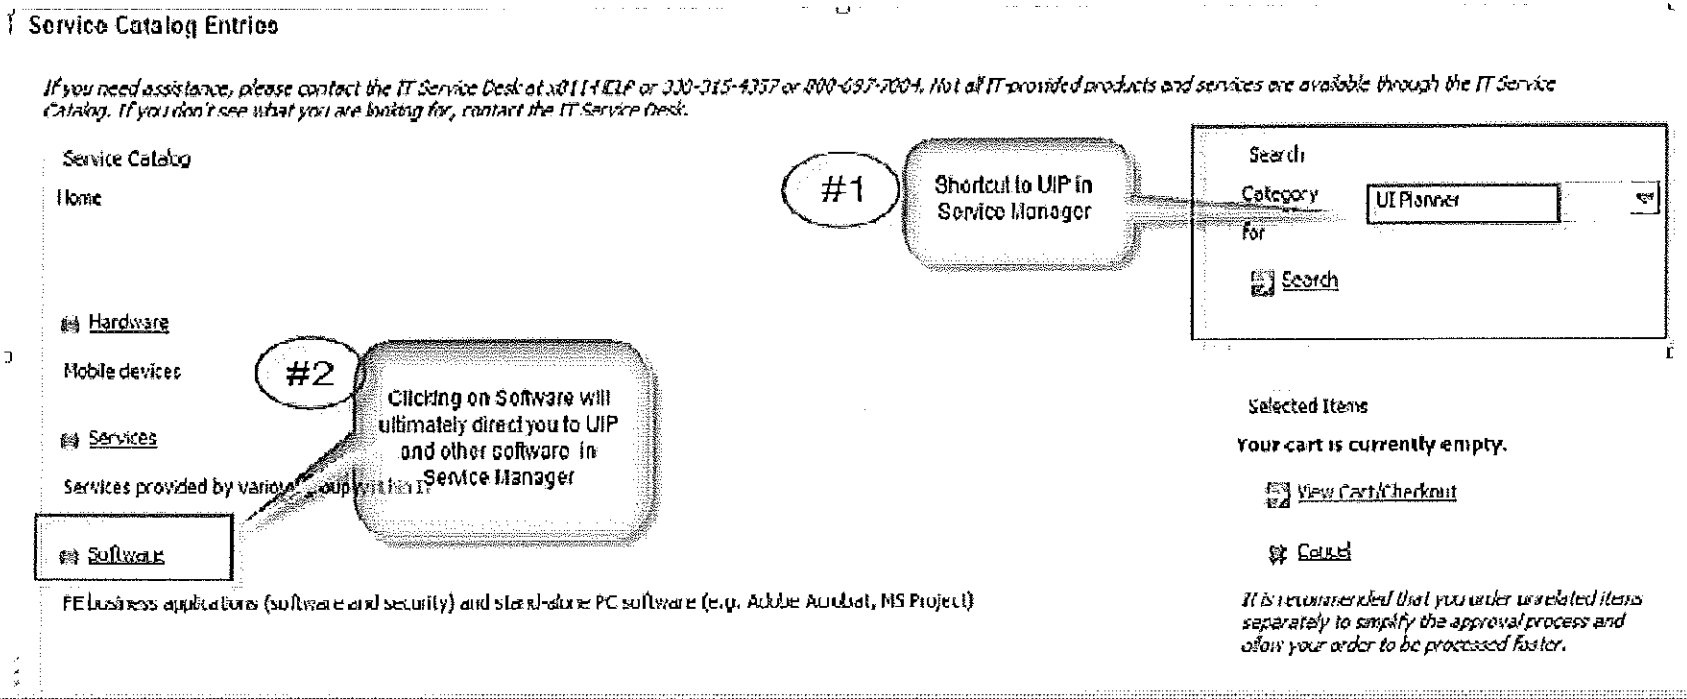
    Navigate to

    Software>FE Business Applications>Corporate Business Applications>Finance Business Applications>UIPlanner
  - Select UIPlanner – Add/Change Access (see #2 below)
  - Follow instructions on form
  - For further information on UIPlanner security, refer to the UIPlanner Security Management Policy located at: Portal >Communities> Finance> Policies> FiT

Requesting or Changing User Security

After completing the form

1. Click "add to cart". A message box will appear that it has been added.
2. Click "view cart/checkout" when finished.
3. The request will be routed for approval.
4. To view the status of the request, follow the links on the left of the screen



Removing UIPlanner Security

- **To Remove UIPlanner security for data entry and/or financial modeling perform the following process:**
  - Search for UIPlanner by selecting "UIPlanner" in the Category field of the Search (see #1 below)

    OR

    Navigate to

    Software>FE Business Applications>Corporate Business Applications>Finance Business Applications>UIPlanner (see #2 below)
  - Select UIPlanner – Remove Access
  - Follow instructions on form
  - For further information on UIPlanner security, refer to the UIPlanner Security Management Policy located at: Portal >Communities> Finance> Policies> FiT

Removing UIPlanner Security

After completing the form

1. Click "add to cart"
2. The request will be routed for approval.
3. To view the status of the request, follow the links on the left of the screen

Obtaining Help

- **IT Service Catalog help is available on the on the IT Service Desk Portal page as well as contacting the IT Service Desk**

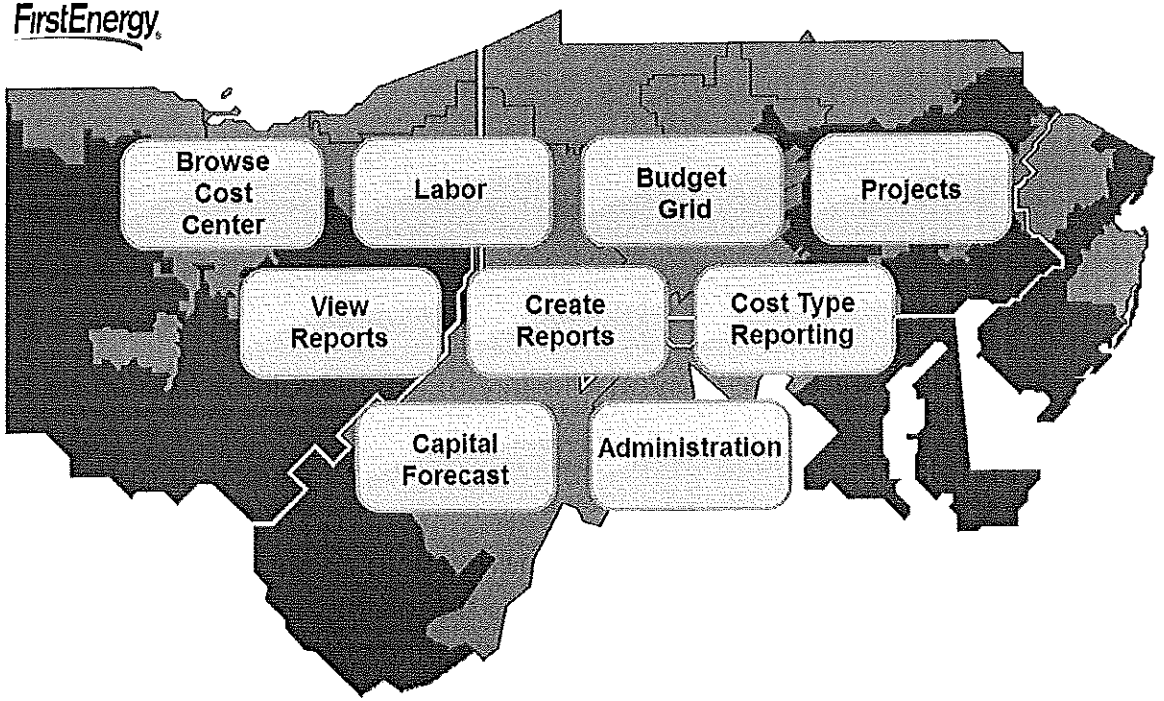
Navigating in UIPlanner — Browse Cost Center

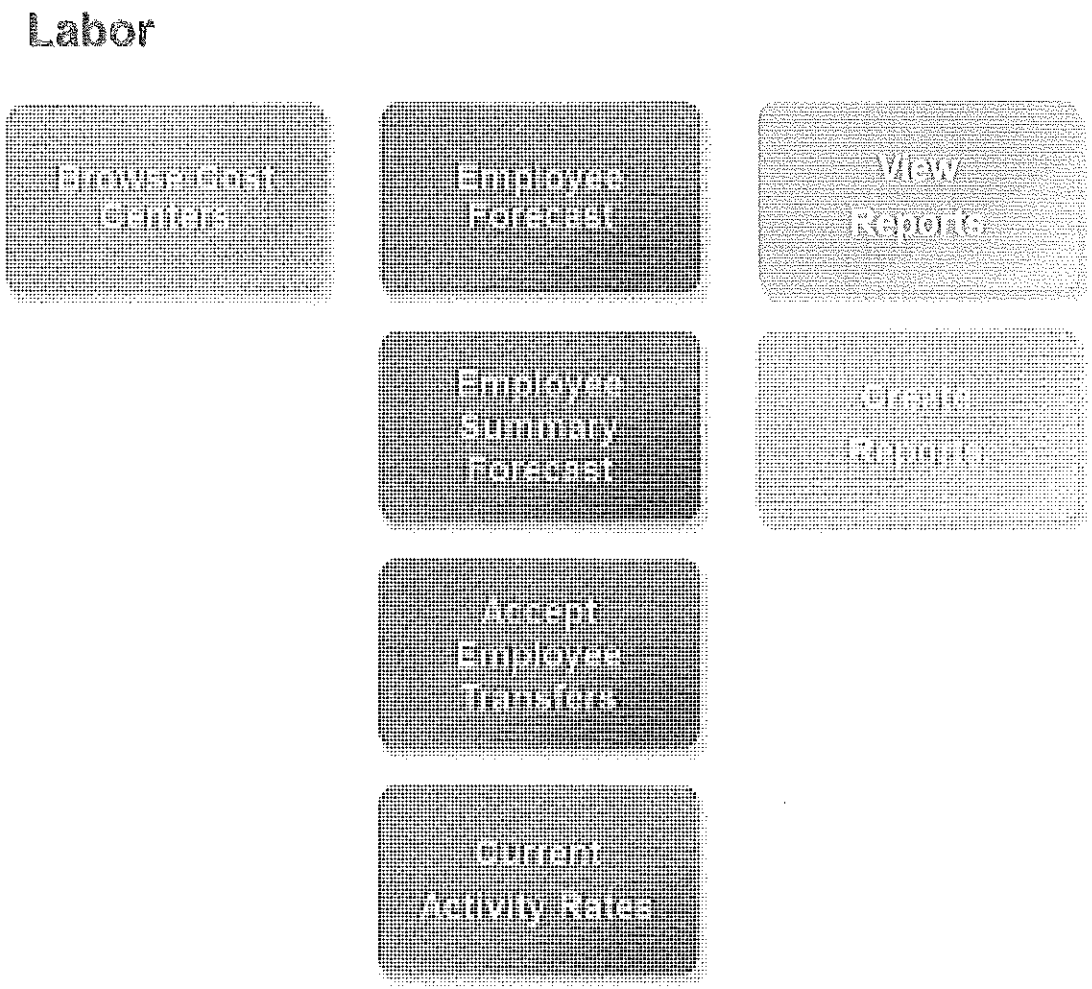
Navigating in UIPlanner



1. • Select Budget
   • Click Switchboard

2. • Select Main Switchboard-Pilot

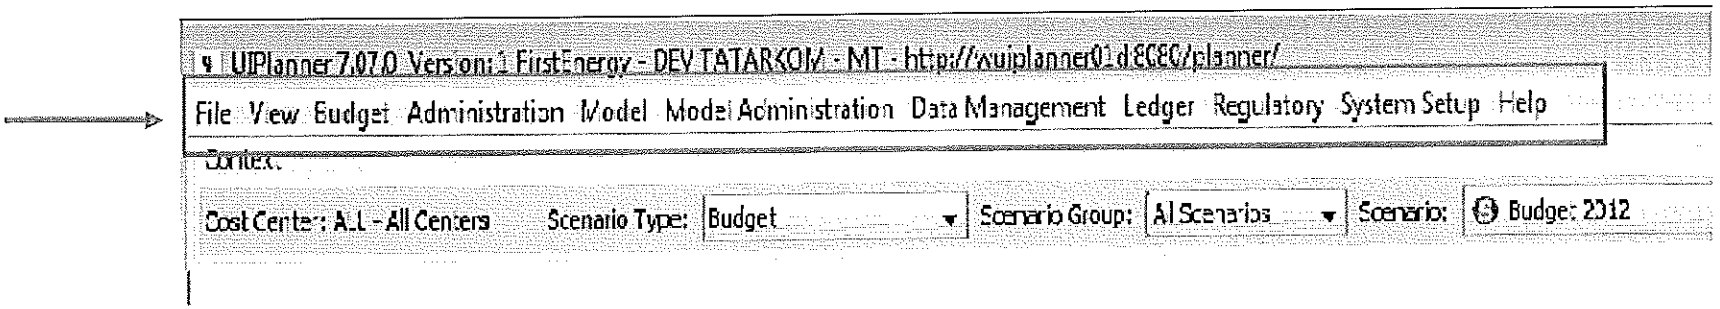
- Switchboards allow users to visually navigate through various screens
- User can map processes and features to a diagram created in Power Point or Visio
- Hot-spotted areas on a switchboard can open menu items, run reports, open files, and open other switchboards
- Switchboards will be maintained by the System Administrator



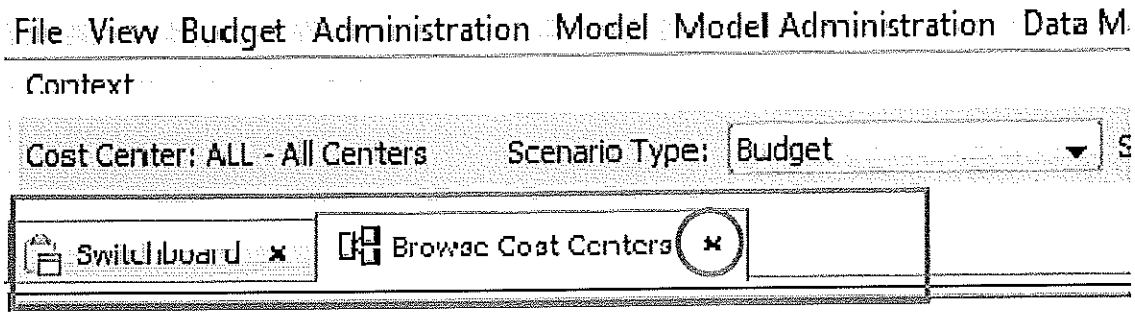
Navigating in UIPlanner

Secondary switchboards exist for the following screens/activities:

- Labor
- Budget Grid
- Projects
- Import Projects
- Cost Type Reporting
- Capital Forecast
- Administration
- Labor Administration



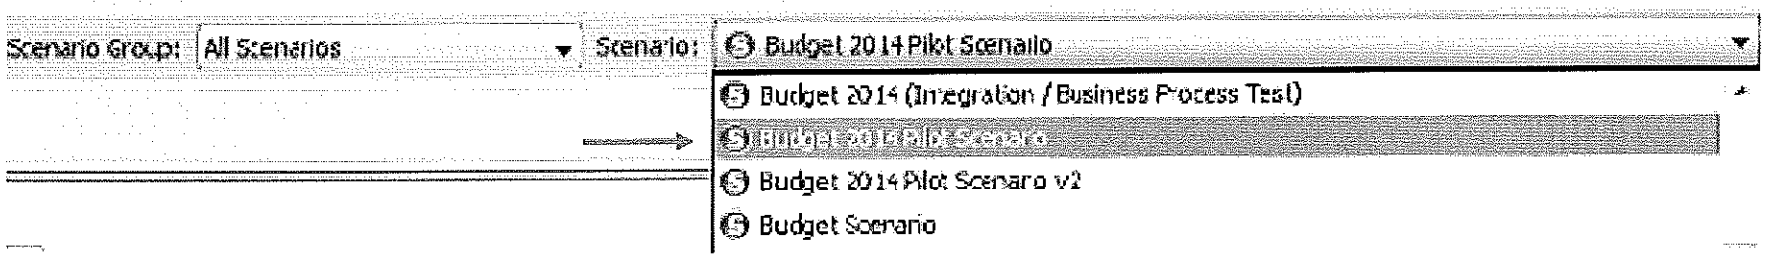
Example of Labor switchboard:



Navigating In UIPlanner

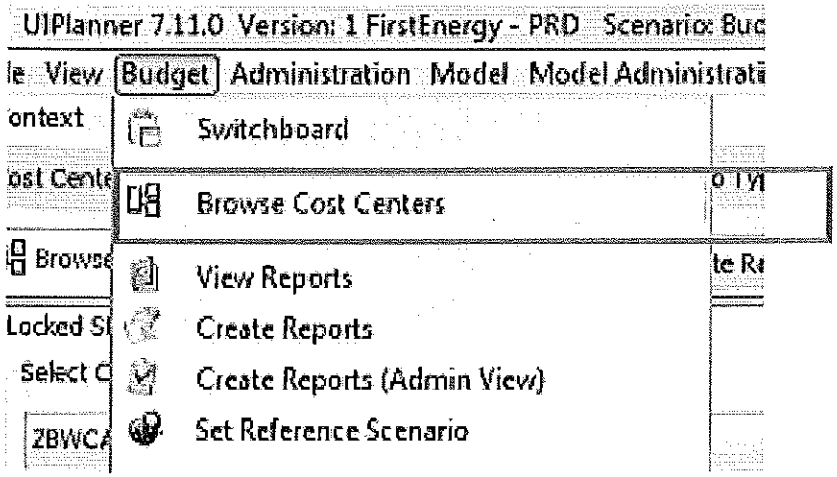
3

- Once logged into UIPlanner, menu options will appear across the screen
- Depending on your security, certain menu items may not be available

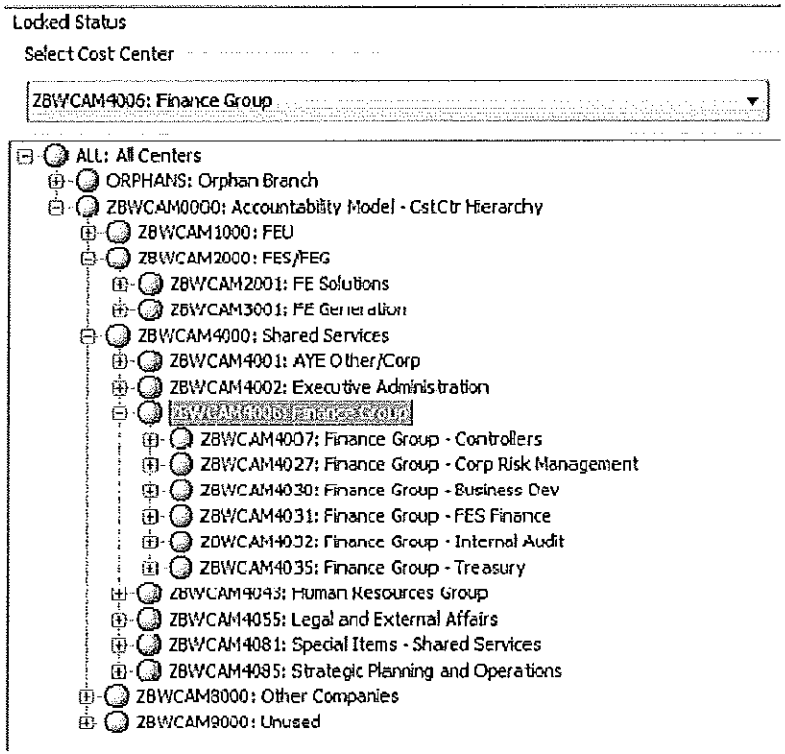


- As menu items are opened, the tab for each menu item will stack across the screen
- Menu items can be closed by clicking the X

Navigating in UIPlanner

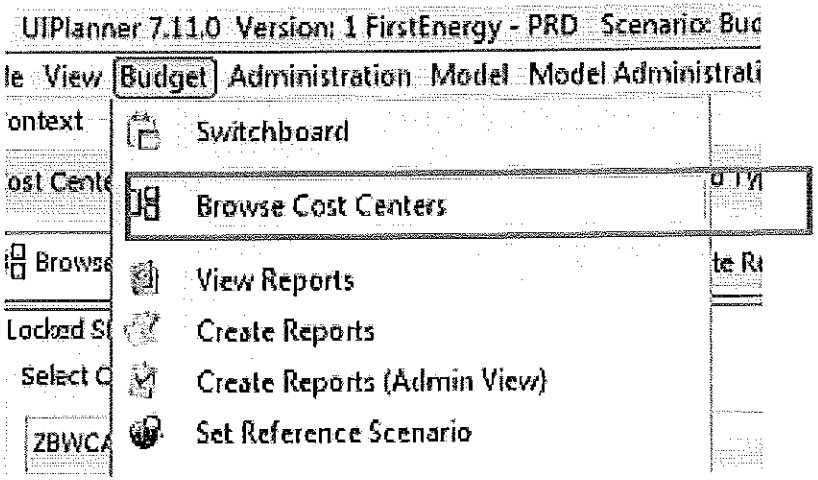


4

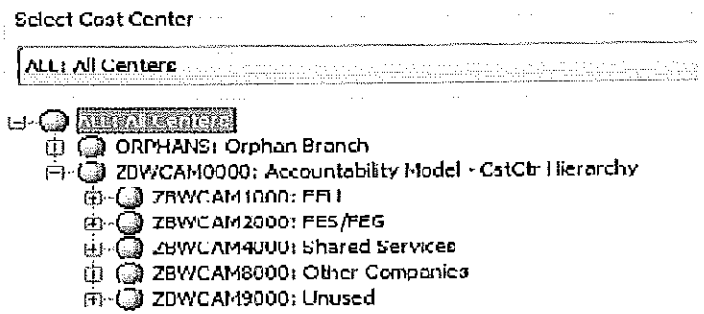


- UIPlanner categories determine the environment to administer the budget, forecast and plan
  - Cost Center: Displays the Cost Center or Cost Center group level selected
  - Scenario Type: Budget or Model
    - Select Budget
  - Scenario Group: Grouping of like scenarios for either Budget or Model
    - Select All Scenarios
  - Scenario: Various iterations and versions of the budget, forecast and plan such as the 3+9, 2013 annual budget, etc. Scenarios will be available within the Scenario drop down box. Scenarios will be created and managed in B2
    - Select Budget 2014 Pilot Scenario

Browse Cost Center Overview

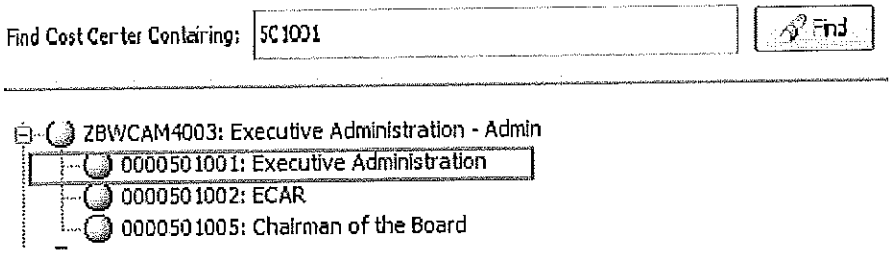


- The Browse Cost Centers function is used throughout UIPlanner to view data for budget, forecast and plan activities
- The Select Center screen is used to select a cost center or department, manage status and monitor changes within UIPlanner
- The Cost Center or Cost Center node selected is carried forward as a filter on department to all budget screens



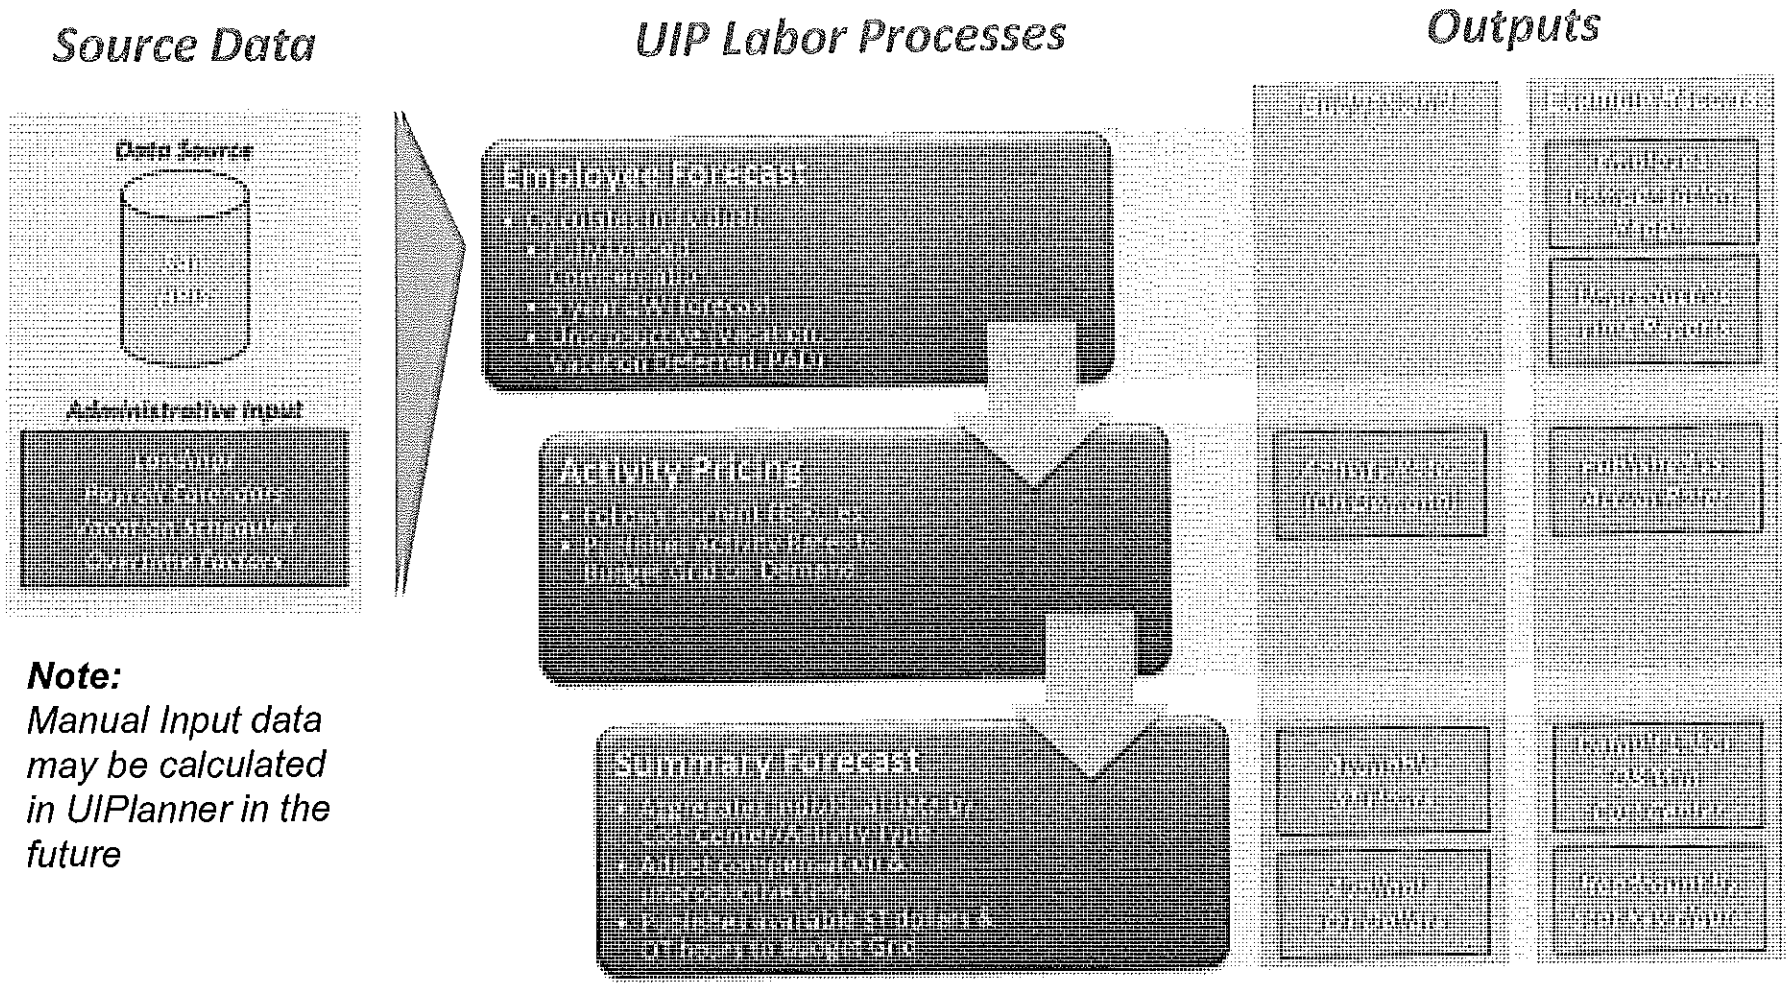
Browse Cost Center

5 • Select **Budget**
• Click **Browse Cost Centers**



- The Finanical Accountability Model hierarchy is available in UIPlanner and SAP
  - SAP transaction KSH3 – ZBWCAM0000
- Hierarchy is based on cost ownership
- The responsible cost center hierarchy will no longer be available starting 2014

6 • Expand Hierarchy by clicking ⊕



7 • Search Cost Centers in the Hierarchy
• Enter Cost Center or Cost Center description and Click **Find**

Labor Overview

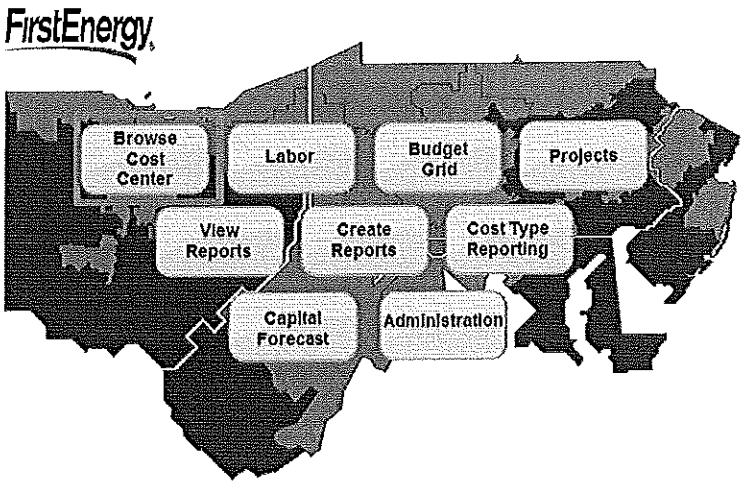
UIPlanner Labor Schematic

Note:
Manual Input data may be calculated in UIPlanner in the future

The new Labor process ensures that activity rates will be available prior to the budget process while enhancing data security and transparency

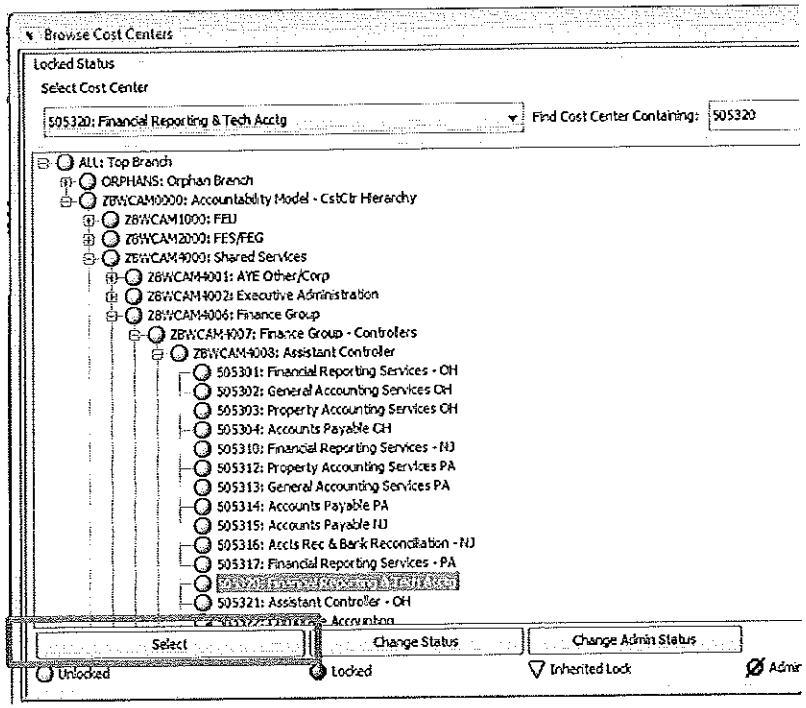
System Entry - Budget Grid Functions

Budget Grid Overview



- The Budget Grid is where users enter their Labor and Other-Than-Labor (OTL) budget, forecast, and plan data by the various cost collectors.
- Used only for ALLOCATING hours and dollars --- use "View Reports" to see complete Cost Center view
- Specific budget grid fields comprise the code block combinations necessary to validate system entry

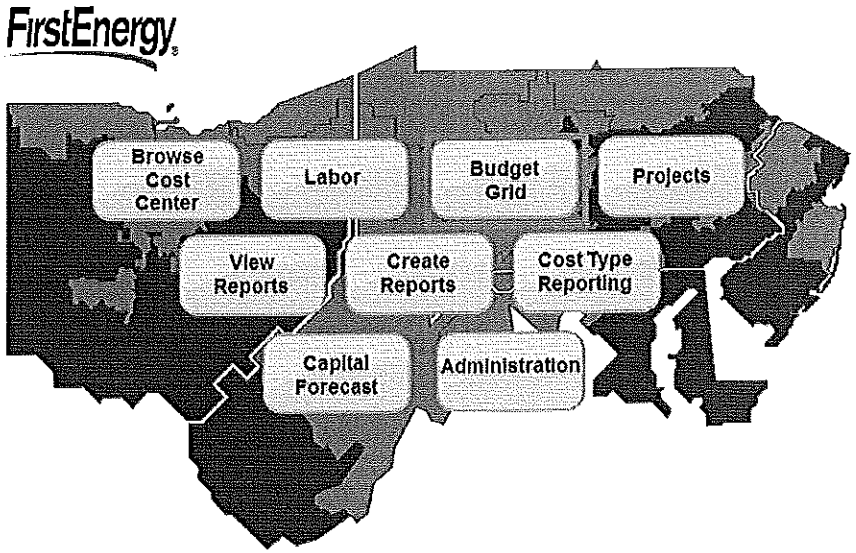
Budget Grid Data Fields



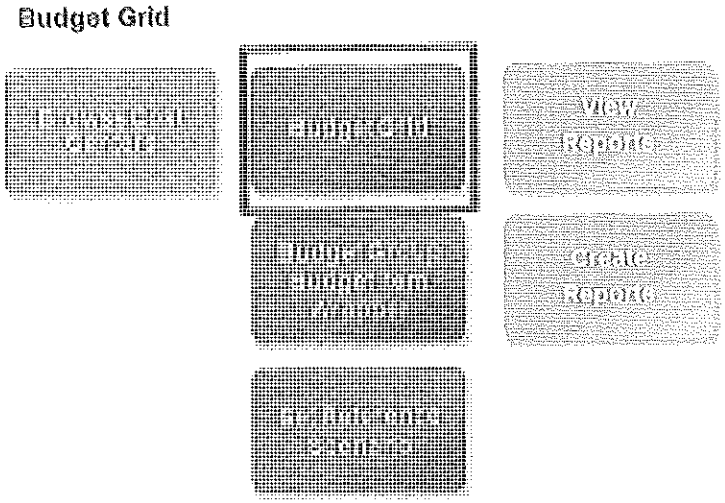
Field	Input vs. Derived	Notes
Cost Source	Input	Cost Source is the Cost Center where employee labor resides. Available Cost Centers will be limited based on user security
Cost Owner	Input	Cost collector owner. When budgeting Labor, this will be the Cost Center being billed for the Labor. When budgeting OTL, Cost Owner and Cost Source will be the same
Cost Collector Type	Input	Types : Cost Center, Internal Orders and WBS
Planning Project	Input	Project Definition of either SAP WBS or the UI Planning Project being budgeted
Planning WBS Element	Input	SAP WBS Elements or the UI Planning Project Elements
Internal Order	Input	Valid and budgetable internal orders
Activity Type	Input	Required only for Labor. Should be set to 'OTL' when budgeting OTL.
Cost Element	Input	Valid and budgetable cost elements
Budget Group	Input	Allows user to apply more detail to the budget. Budget Groups might include Travel or Office Supplies
Budget Item	Input	Allows user to apply more detail to the budget. Budget Items might include Airfare, Hotel and Meals for the Budget Group of Travel.
Comment	Input	Text field. Used for additional notes
Input Type	Derived	Hours if Labor and Dollars if OTL

Budget Grid Startup

1. Defining a Context Cost Center
   - Open the **FE Main Switchboard**
   - Click on **Browse Cost Center**

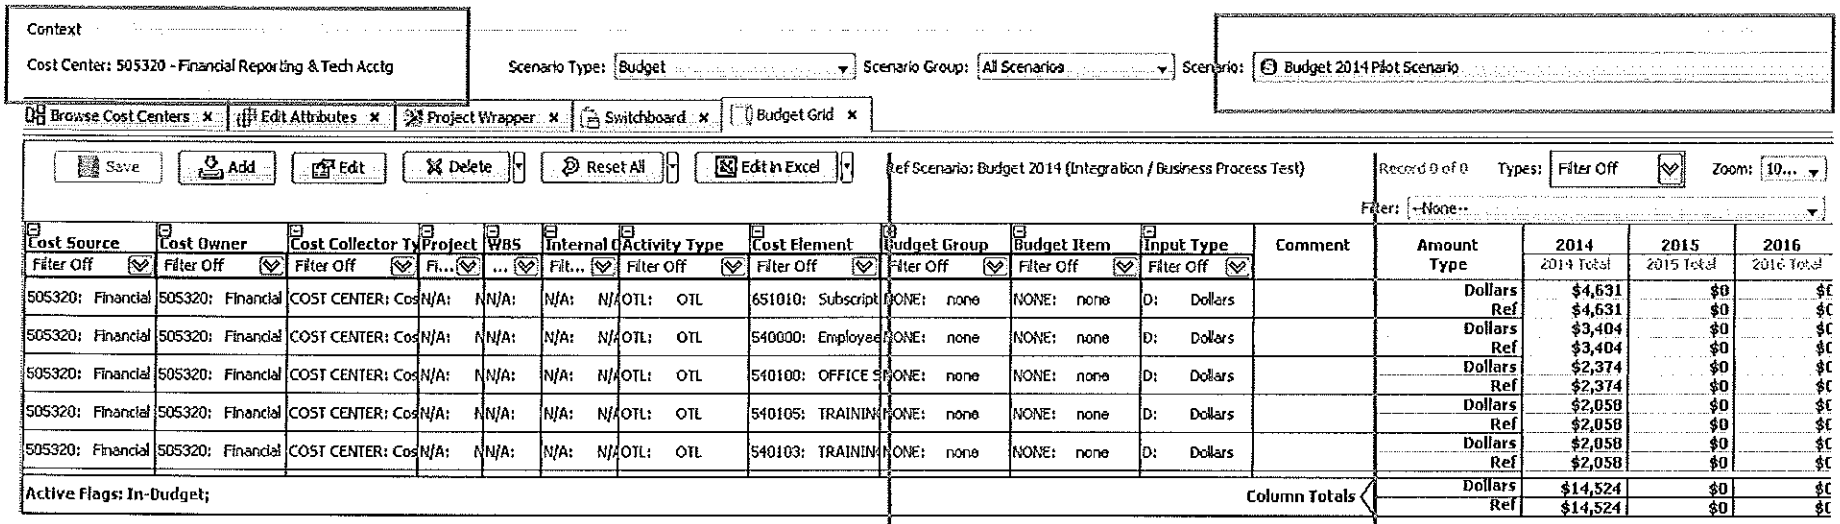


2. • Select a Cost Center (either double-click on or highlight a Cost Center and click the **Select** button at the bottom of screen)



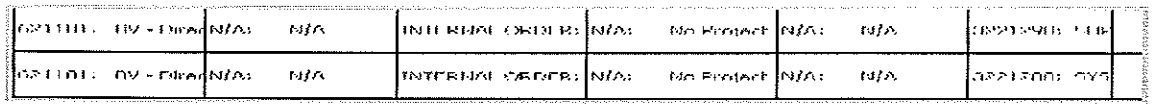
3 Opening the Budget Grid

- Open the **FE Main Switchboard**
- Click on **Budget Grid**



4 • Click **Budget Grid**

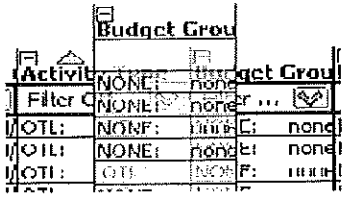
Budget Grid Layout Overview



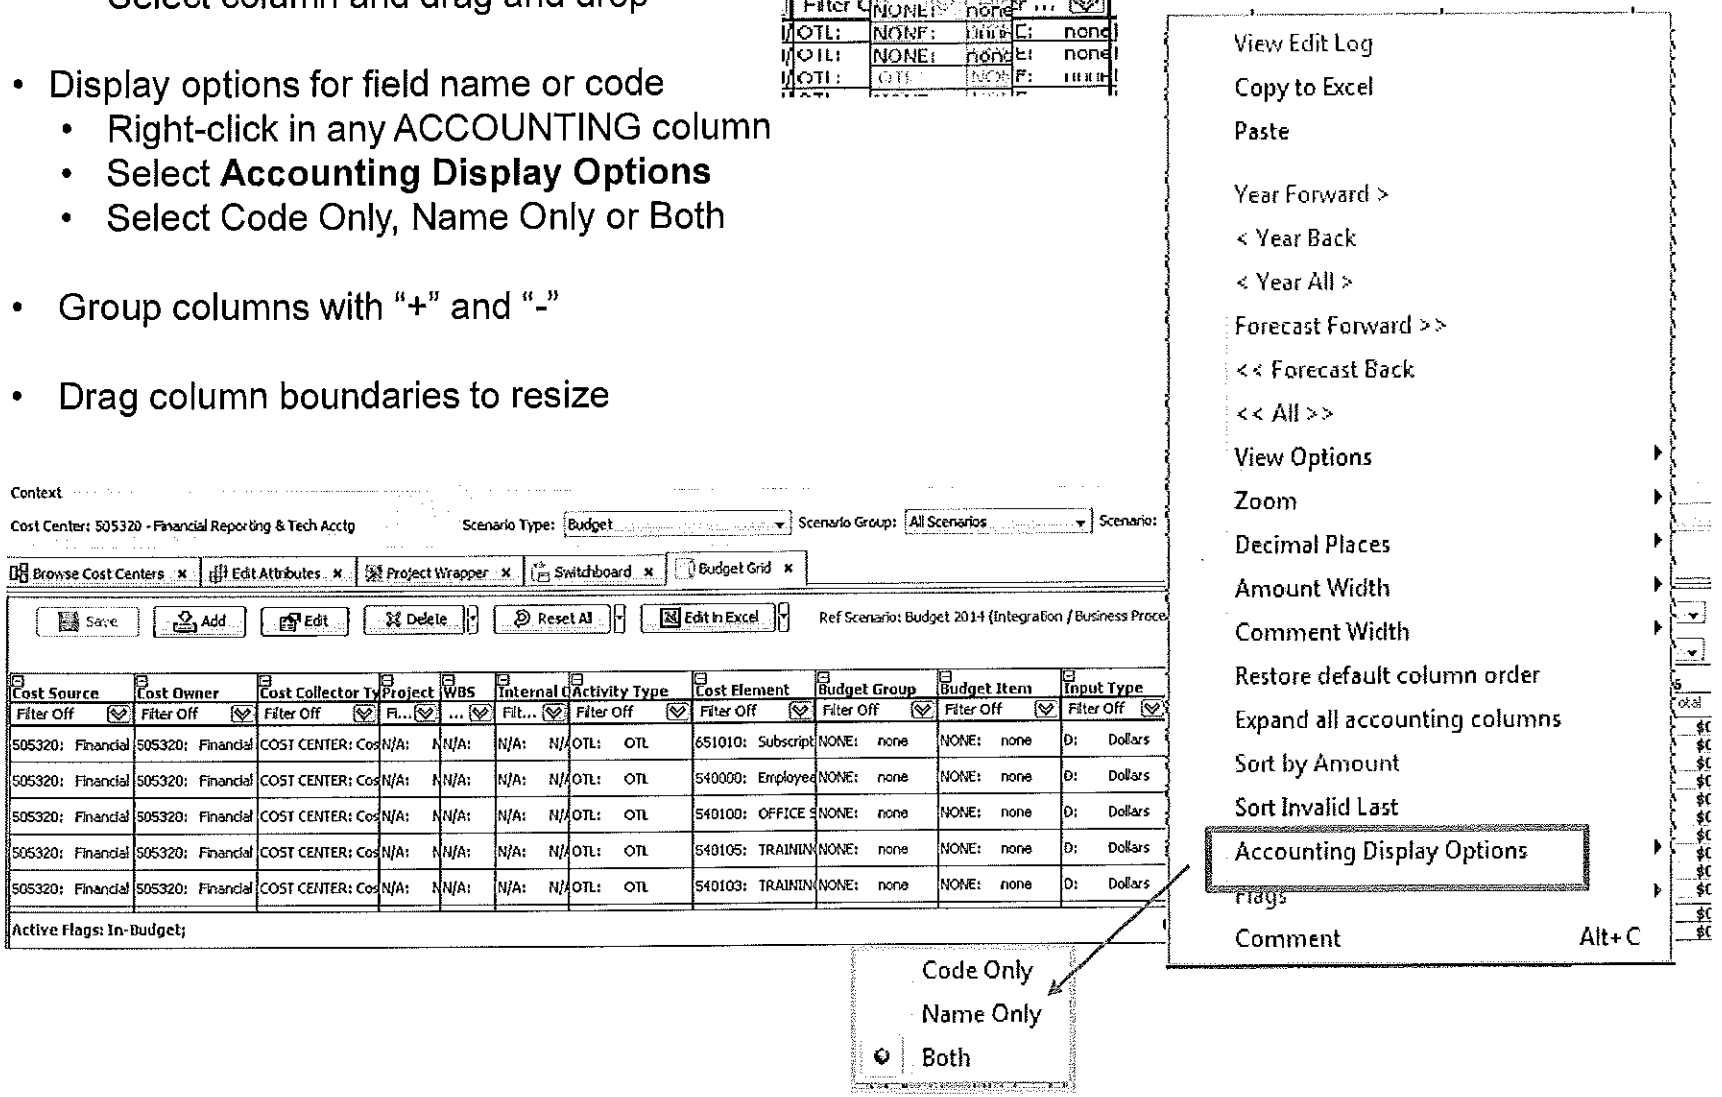
- The Budget Grid consists of required and optional entries
- User can customize grid and maintain user preferences
- Attributes are listed on the left hand side (Accounting) of the Grid
- Data entry takes place on the right hand side of the Grid

Codeblock combinations align with SAP actuals

User defined fields to facilitate budget, forecast, plan preparation and approvals



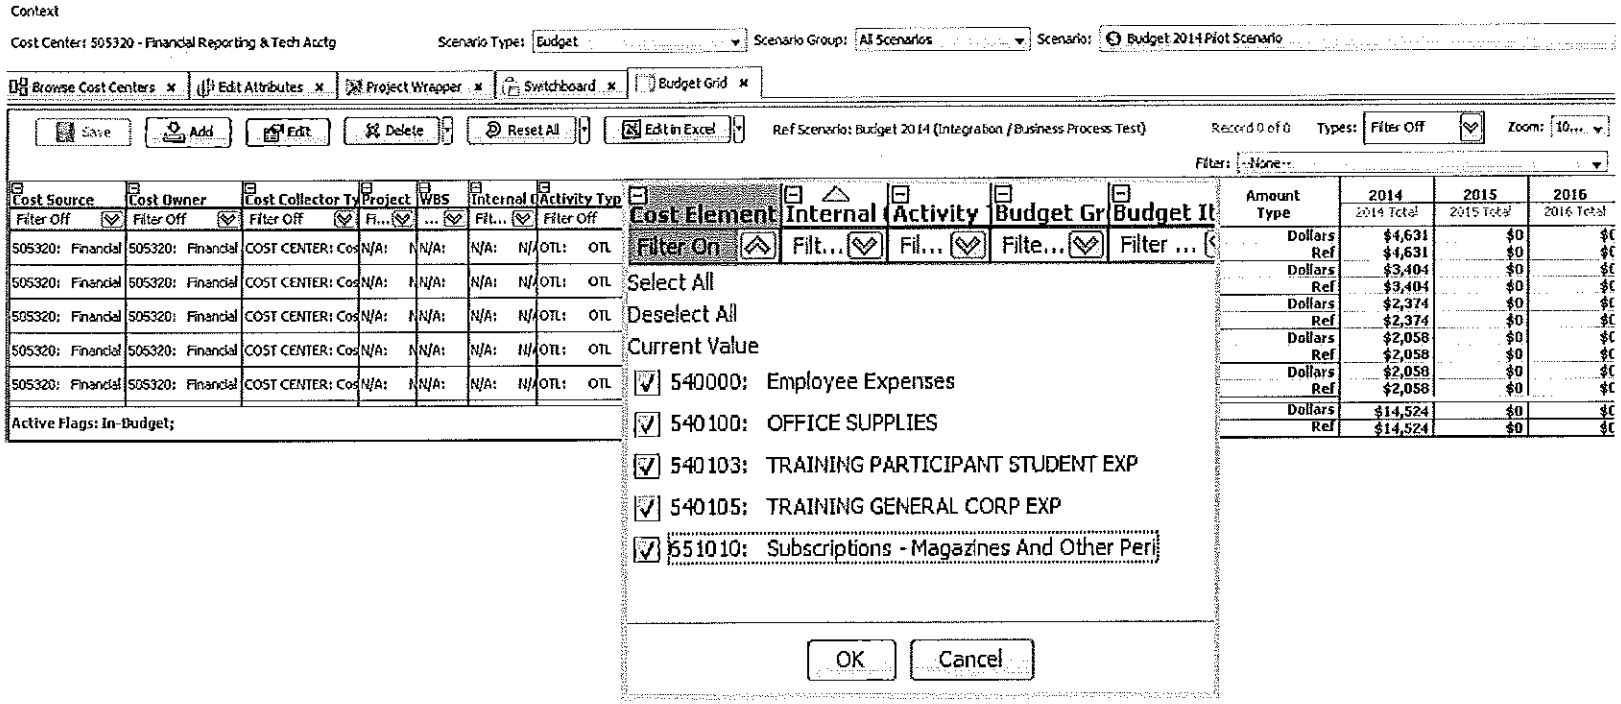
Rows displayed in red denote invalid combinations. Would occur if system validations were changed. User will not be able to enter invalid codeblock



Budget Grid Functions - Display Options

5

- Column ordering
  - Select column and drag and drop
- Display options for field name or code
  - Right-click in any ACCOUNTING column
  - Select **Accounting Display Options**
  - Select Code Only, Name Only or Both
- Group columns with "+" and "-"
- Drag column boundaries to resize



Budget Grid Functions - Filters

6

- Column filtering (e.g. cost element, activity type, etc)
  - All columns have filtering available
  - Select a column to filter
  - Click on filter (column heading turns red when filter is on)
  - Drop down available to select options

Budget Grid Functions - Data Display

- Monthly or annual view of data
  - Click on the year header to toggle between monthly and annual data

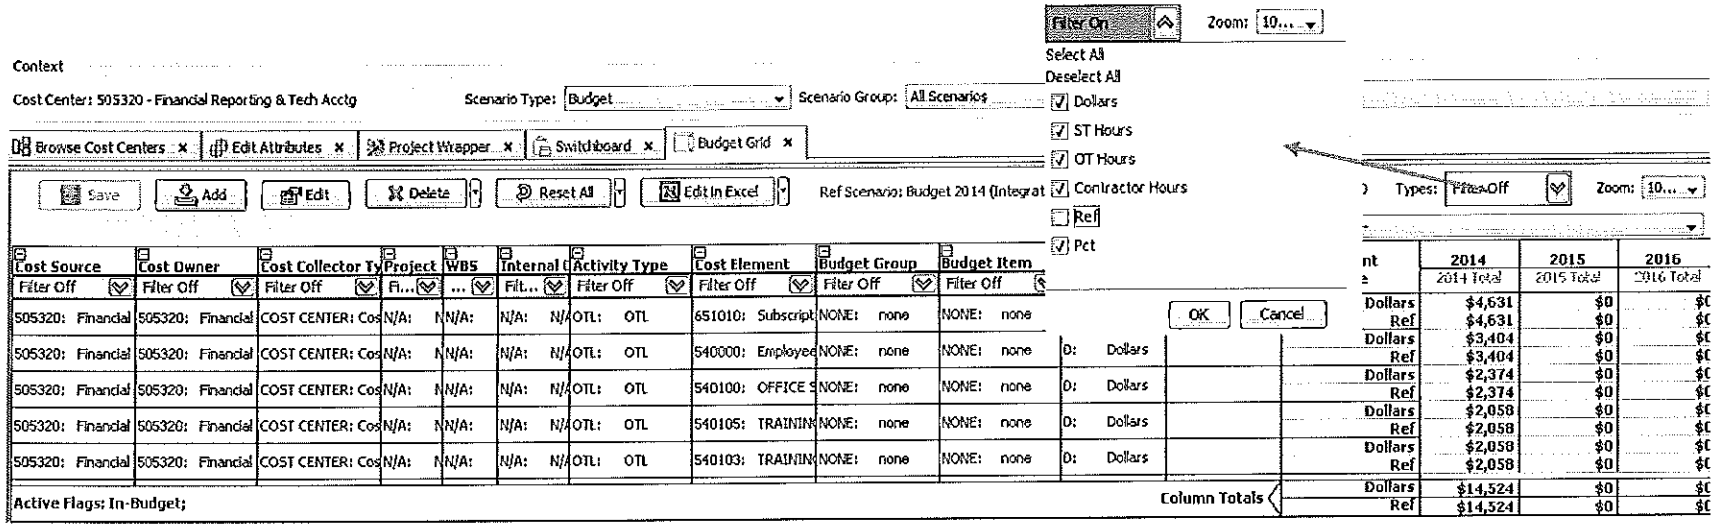
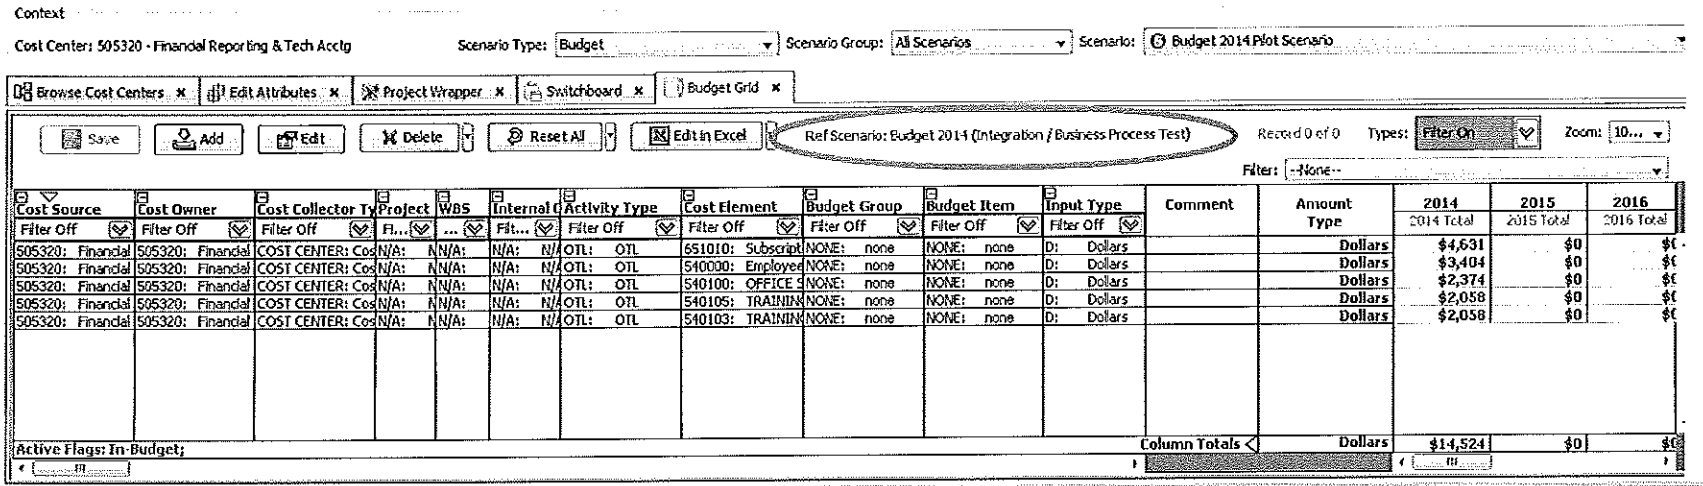
Budget Grid Functions - Forecasting Options

- Year Forward - Year Back
  - Year Forward - Copy value from one month to remaining months in year
  - Forecast Forward - Copy value in current year to outer year

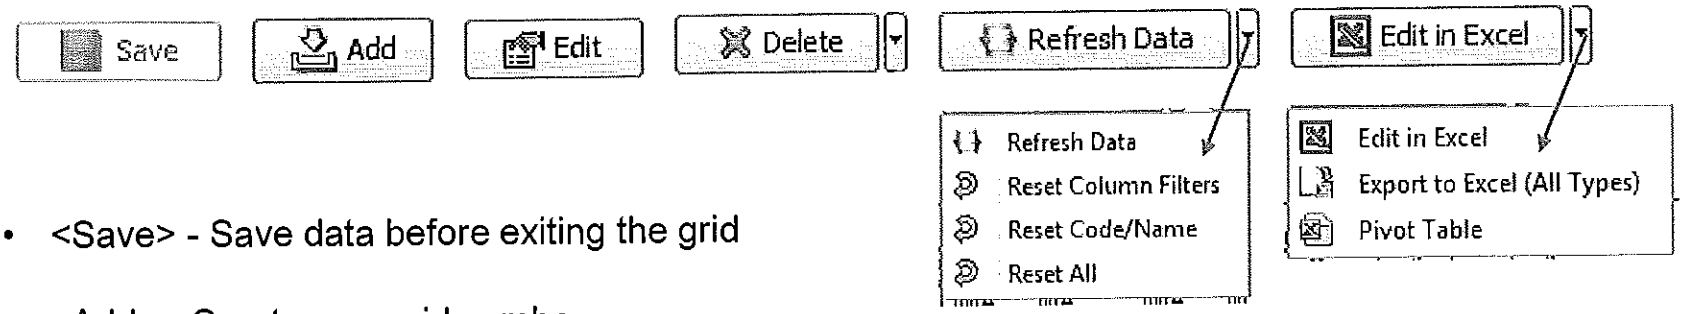




2013	2014				
2013 Total	2014 - Jan	2014 - Feb	2014 - Mar	2014 - Apr	2014 - May
$4,631	$100	$100	$100	$100	$100
$3,404	$0	$0	$0	$0	$0
$2,374	$0	$0	$0	$0	$0
$2,058	$0	$0	$0	$0	$0
$2,058	$0	$0	$0	$0	$0

Dollar value copies to remaining months

Budget Grid Functions - Reference Scenario



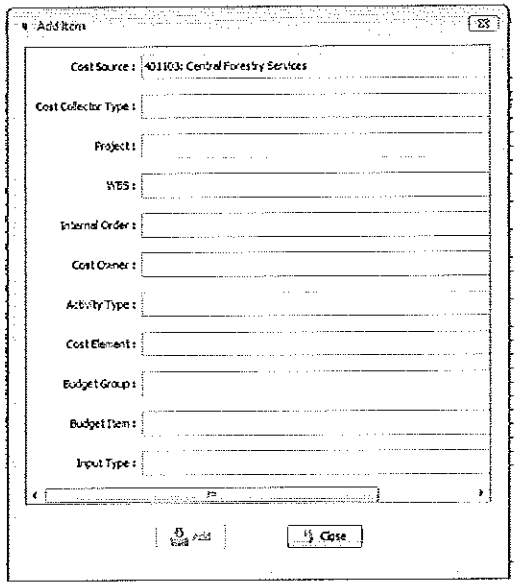
- UIP Grid allows for direct comparisons between scenarios (called "Reference Scenarios")
- Reference Scenarios are set by System Administrator
- Toggle by clicking on "Type" filter and selecting/deselecting "Ref"

12

- Basic Functions

- <Save> - Save data before exiting the grid
- <Add> - Create new grid combo
- <Edit> - Change a cost collector combo
- <Delete> - Remove a cost collector combo
- <Refresh Data> - Update grid with most recent changes/data
- <Reset Column Filters>
- <Reset Code/Name>
- <Reset All>

  } - Restores accounting data columns to original settings

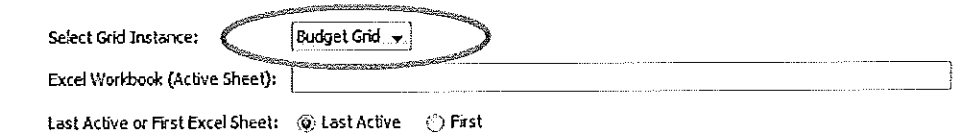


- <Edit in Excel> - Copies Grid data (Directs) to Excel for editing and then pastes it back into UIP.
- <Export to Excel (All Types)> - Sends ALL Budget Grid data to Excel to SAVE (can be imported).
- <Pivot Table> - Sends Budget Grid data to Excel and sets it up in Pivot Table format.

Add Budget Grid Data Overview

Multiple ways to enter data to the Grid

Add button with Edit Combo drop down



Edit in Excel or
Right Click in grid and
select *"Copy to Excel"*

	A	B	C
1			
2	Cost Center	Receiving Cost Center	Cost Collector Type
3	0000401001: Central Reg	0000401001: Central Regi	COST CENTER: Cost Ce
4	0000401001: Central Reg	0000401001: Central Regi	COST CENTER: Cost Ce
5	0000401001: Central Reg	0000401001: Central Regi	COST CENTER: Cost Ce
6	0000401001: Central Reg	0000401001: Central Regi	COST CENTER: Cost Ce

To import saved data return to Browse Cost Center screen and right click – select *"Import" (file must be on C: drive)*

All entries are validated prior to save to ensure accurate values were selected

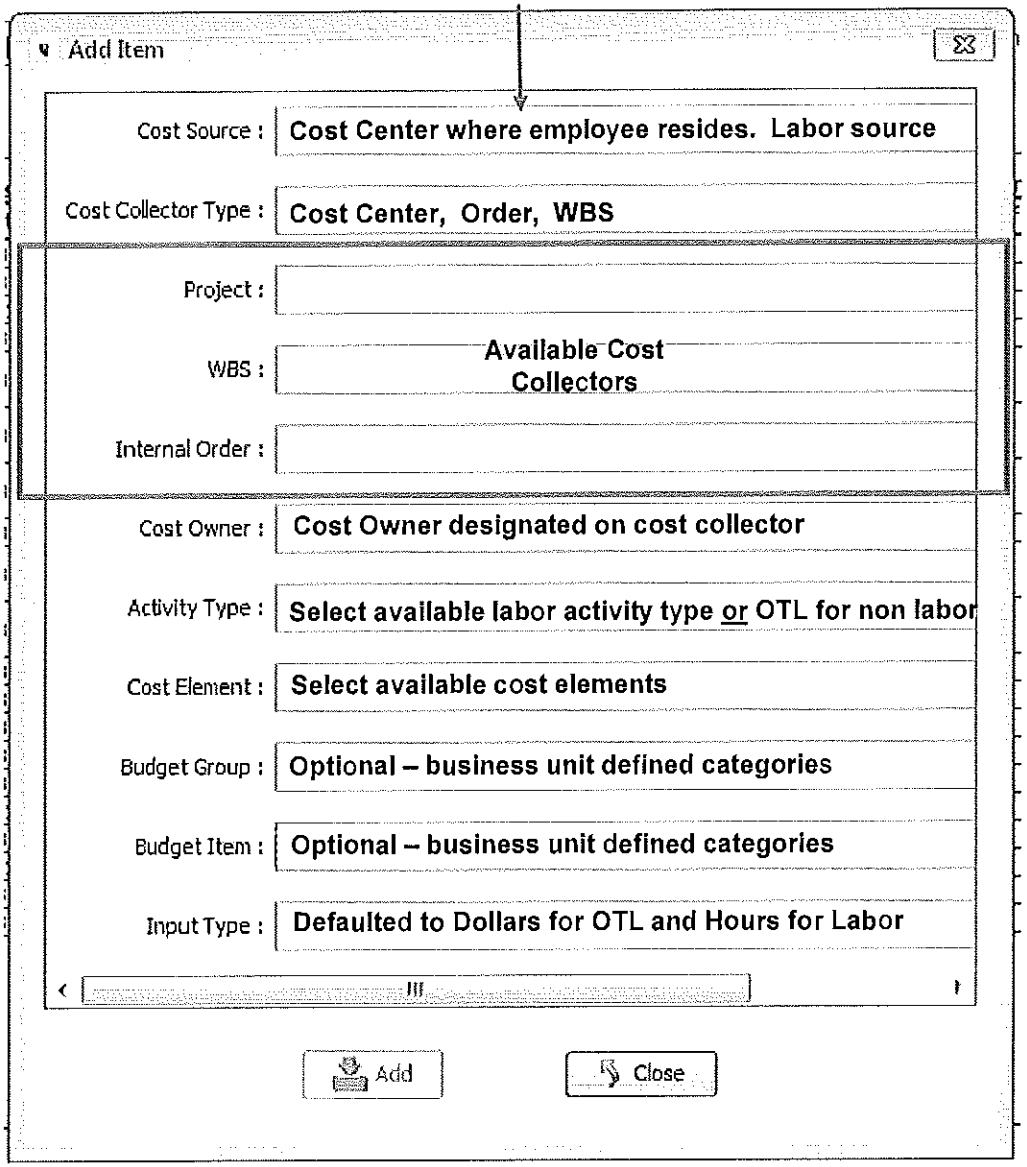
Add Budget Grid Combination

Right click in box to either select value or enter directly

1. <Add> button with drop down

Cost Centers will be limited based on the user security →

Cost Collector defaults "N/A" if Cost Collector Type not selected. A drop down of valid cost collectors for owner selected will display →

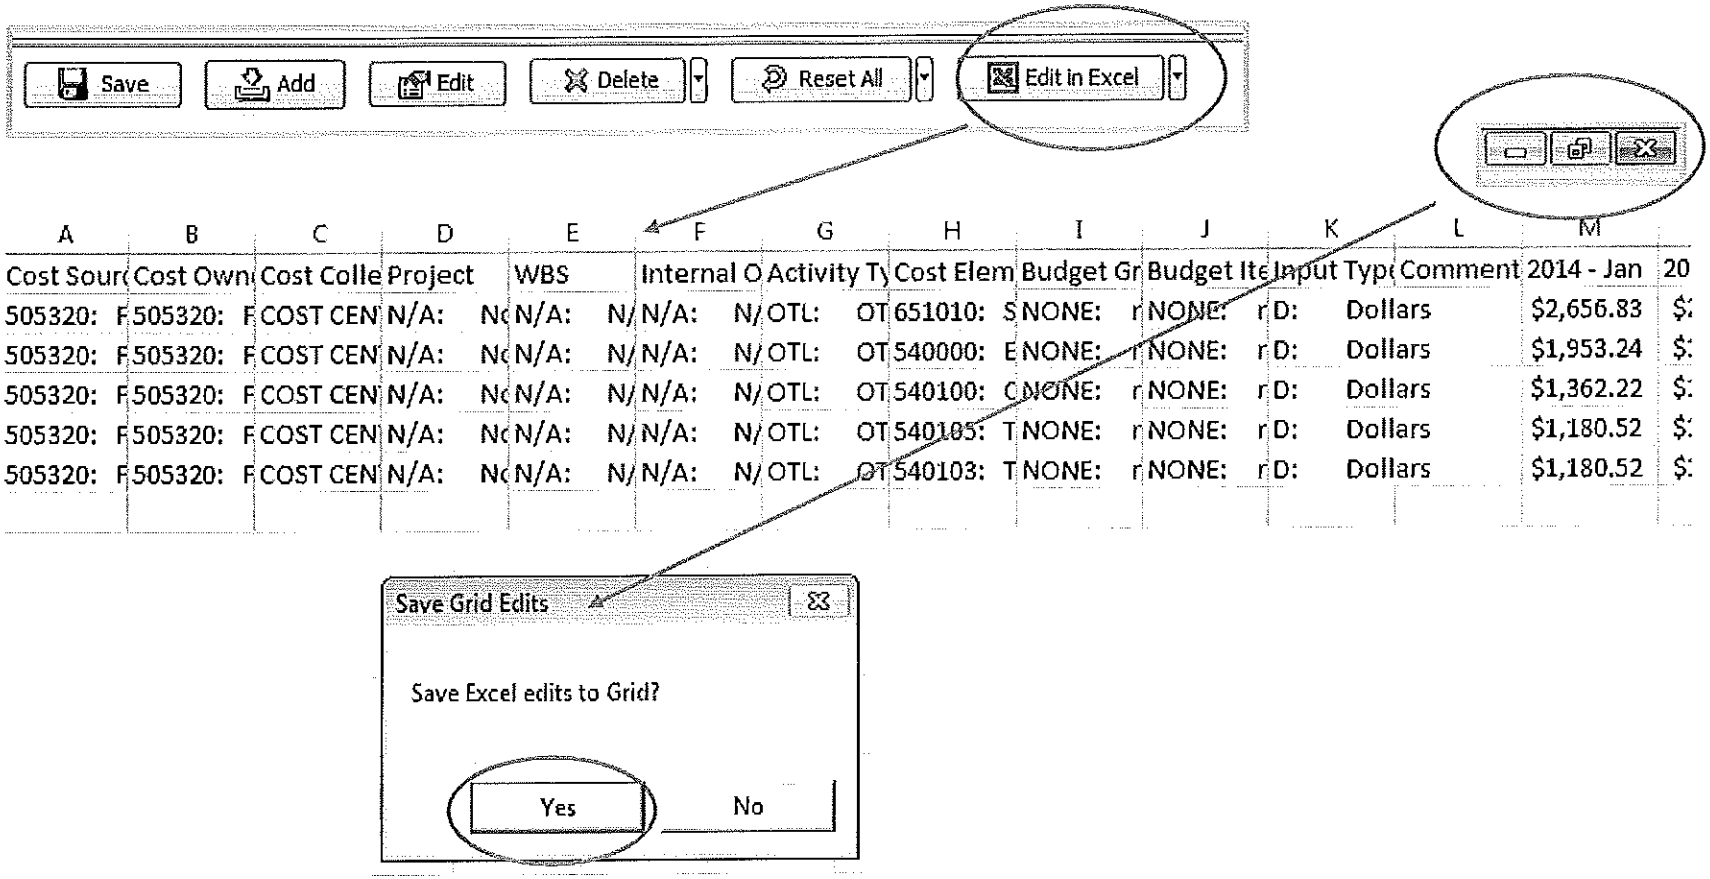


When budgeting Labor, this will be the Cost Center being billed for the Labor.
When budgeting OTL, this will be the same as the Cost Source →

Will be required only for Labor. Should be set to 'OTL' when budgeting OTL. Contractor hours and dollar value available →

Appropriate cost elements display (labor or OTL or Contractor/Prof Services). Ability to lock cost elements →

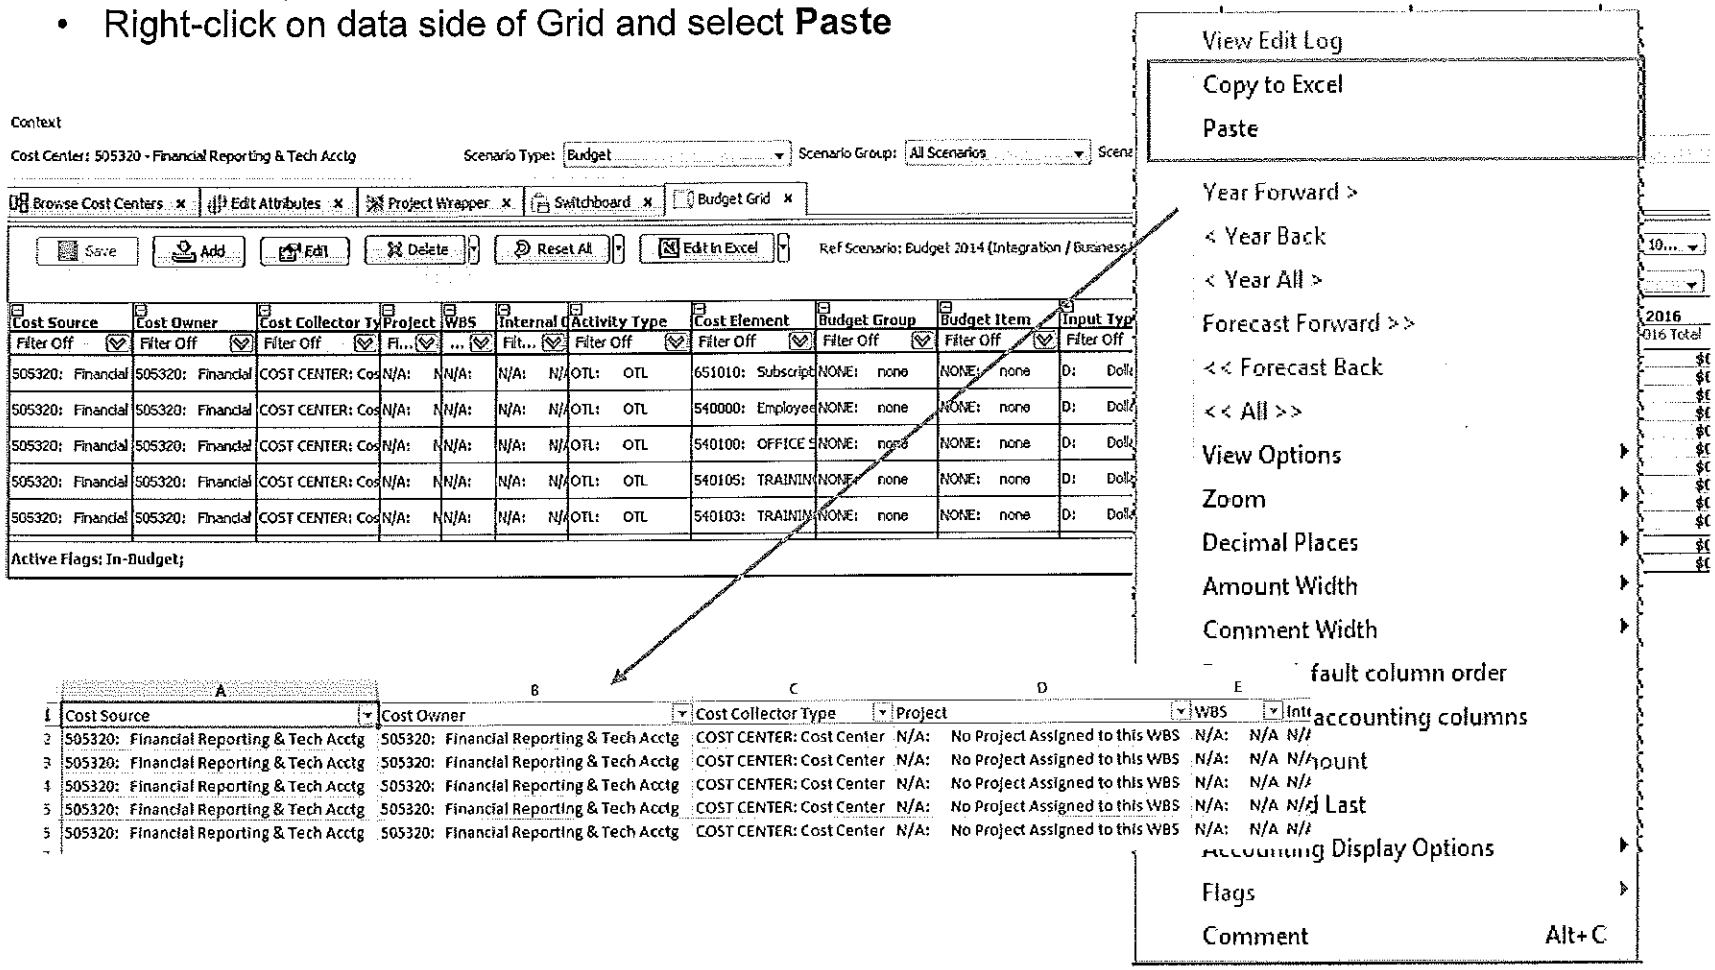
Allows user to apply more detail to the budget. Budget Groups might include Travel or Office Supplies. →



Allows user to apply more detail to the budget. Budget Items might include Airfare, Hotel and Meals for the Budget Group of Travel. →

Add Budget Grid Combination

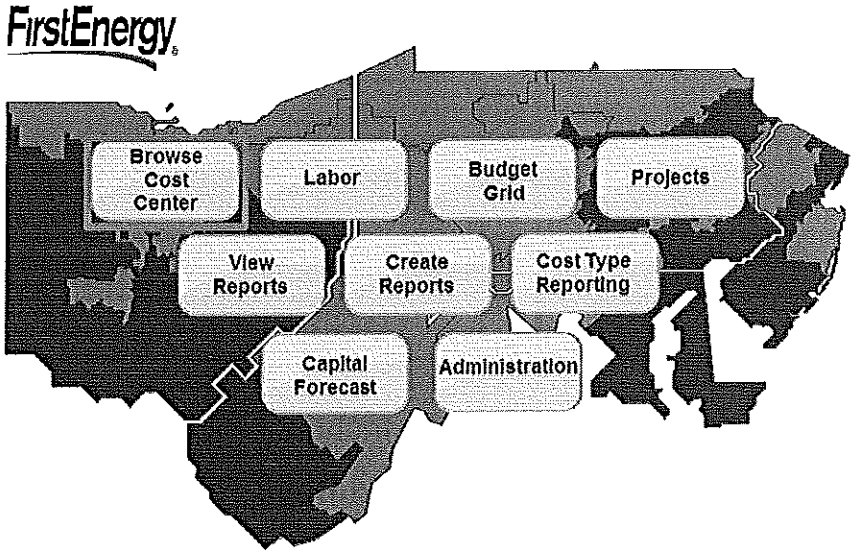
2 Edit in Excel



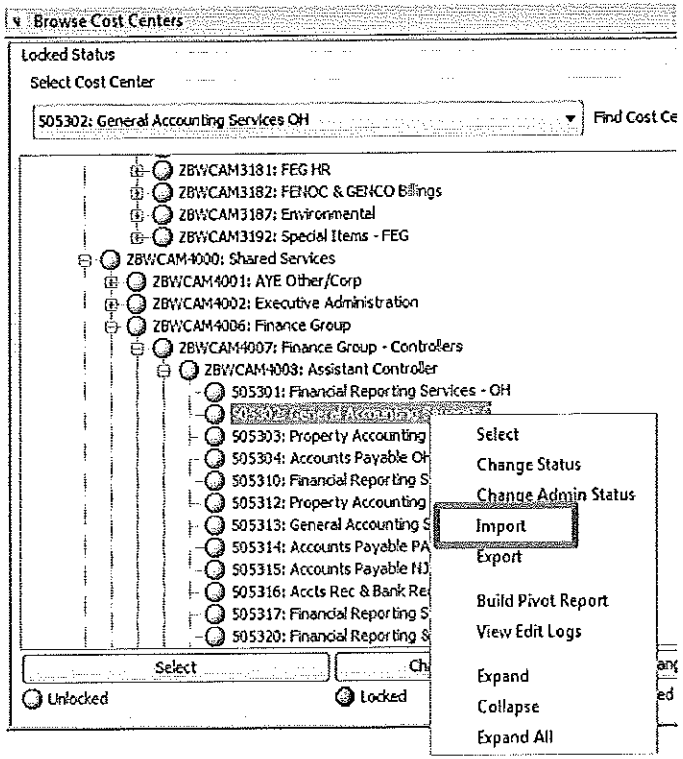
- Select **Edit in Excel** button
- When Excel opens, enter values in desired cells' dollars or make adjustments to existing values
- Click the "X" button to save back to the grid

Add Budget Grid Combination

3 Copy to Excel



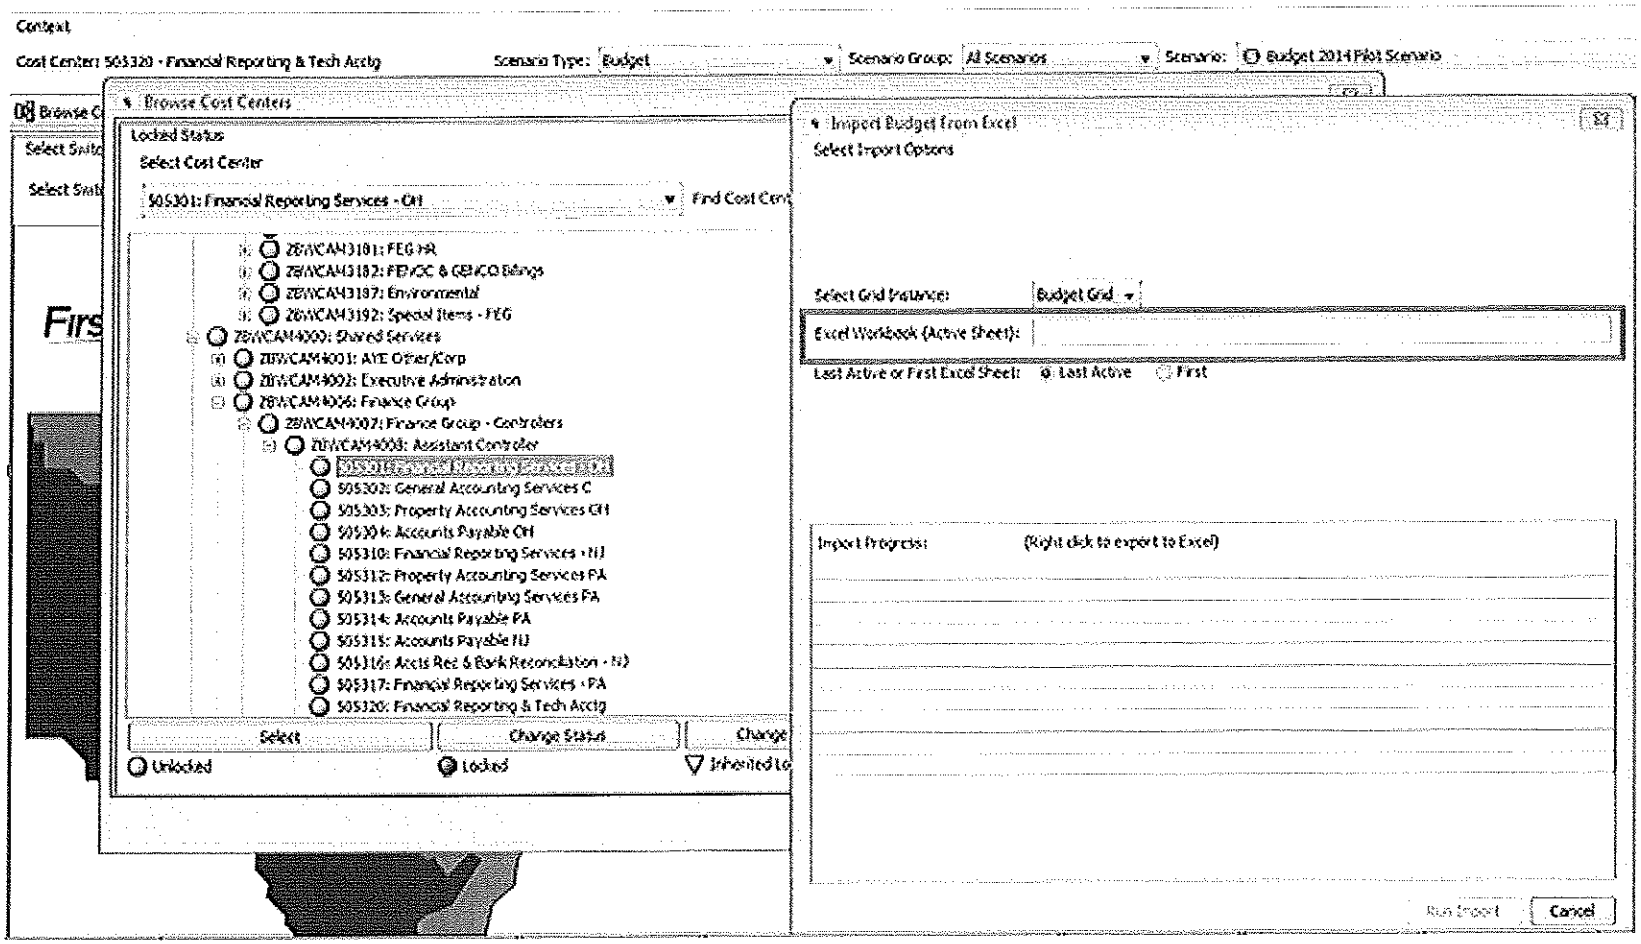
- Right-click on data side of Grid and select **Copy to Excel**
- Enter values in desired cells
- When completed, highlight sheet, select "copy"
- Right-click on data side of Grid and select **Paste**



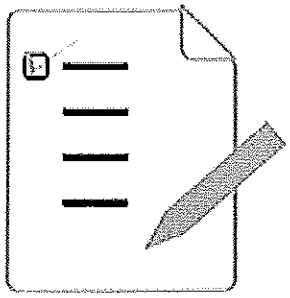
Add Budget Grid Combination

4 Import Budget Grid Data

- Open **FE Switchboard**
- Click **Browse Cost Center**
- Right click on any Cost Center
- Select "Import" from the menu window



Note: This method is primarily used for data imports. Users should select the **Edit in Excel** button or **Copy to Excel** option for basic budget grid entry



Add Budget Grid Combination

continued

4. Click in the "Excel Workbook (Active Sheet)" window
   - Browse through "C:/" drive to find import spreadsheet
   - NOTE: Spreadsheet must have all the same fields as displayed on the budget grid

Exercise #1 – Budget Grid Entry and Functionality

- Customize your Grid
- Add a budget grid combination by using the Add button
- Export the budget Grid to Excel and make additional changes. Populate multi-year. Copy back to Grid
- Perform other grid functions
- Add an existing Budget Group and Budget Item for a selected Cost Center
- Add comments to various Grid combinations
- Create a new Budget Group and Budget Item for a selected Cost Center
- Start developing your Budget Group and Budget Item categories for the 2014 budget process. *Users should complete their list on paper before creating in UIPlanner to ensure consistency and avoid duplication*

Project Planning and Tracking

Project Planning and Tracking Overview

- SAP Projects and WBS elements will be used for all current year projects
  - Project/WBS list from SAP will be refreshed every 60 minutes along with all attributes
- Planning Projects (conceptual projects) will be created and managed in UIPlanner for multi-year forecasts
  - Create Planning Projects using templates
  - UIPlanner will derive key attributes - user can populate remaining attributes
  - Some attributes will be required fields
- There is a process for when a Planning Project becomes "real", i.e., is in SAP
- Current list of attributes is on the next slide. Ability to create additional attributes

Current Year	Multi-Year
SAP Projects	**UI Planning Projects**
• Approved projects in the current year • Project definition and WBS elements exists in SAP • Ability to track actuals vs. budget	• Unapproved Projects in the queue • Planning projects (project definition and WBS elements) mirror real SAP structures but utilize UIP naming conventions • SAP project templates utilized as starting point

- Mirroring the SAP project to the UI Planning Project ensures important attributes such as the Costing Sheet data are applied accurately and automatically
- Budget close will work in the same manner for the multi-year planning process

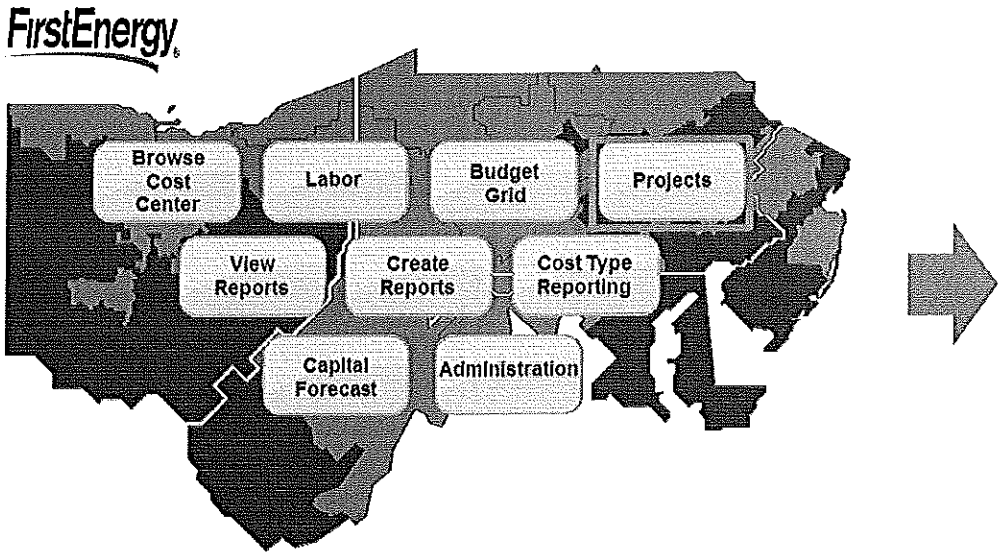
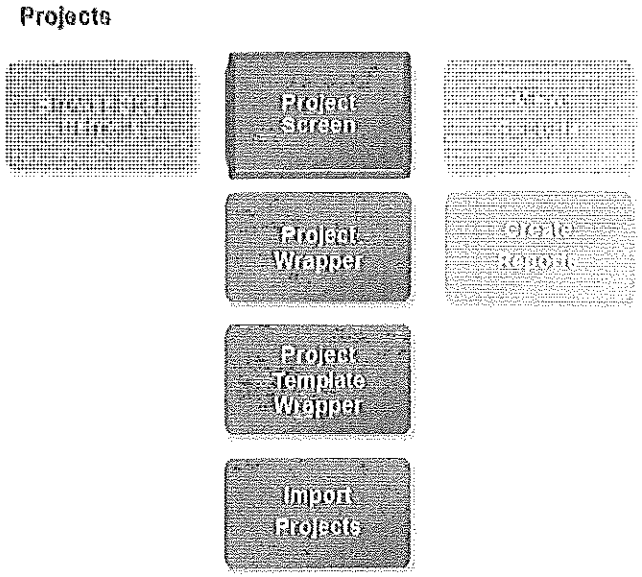
Project Planning and Tracking Startup

1. Define a Context Cost Center
   - Open the **FE Switchboard**
   - Click **Browse Cost Center**

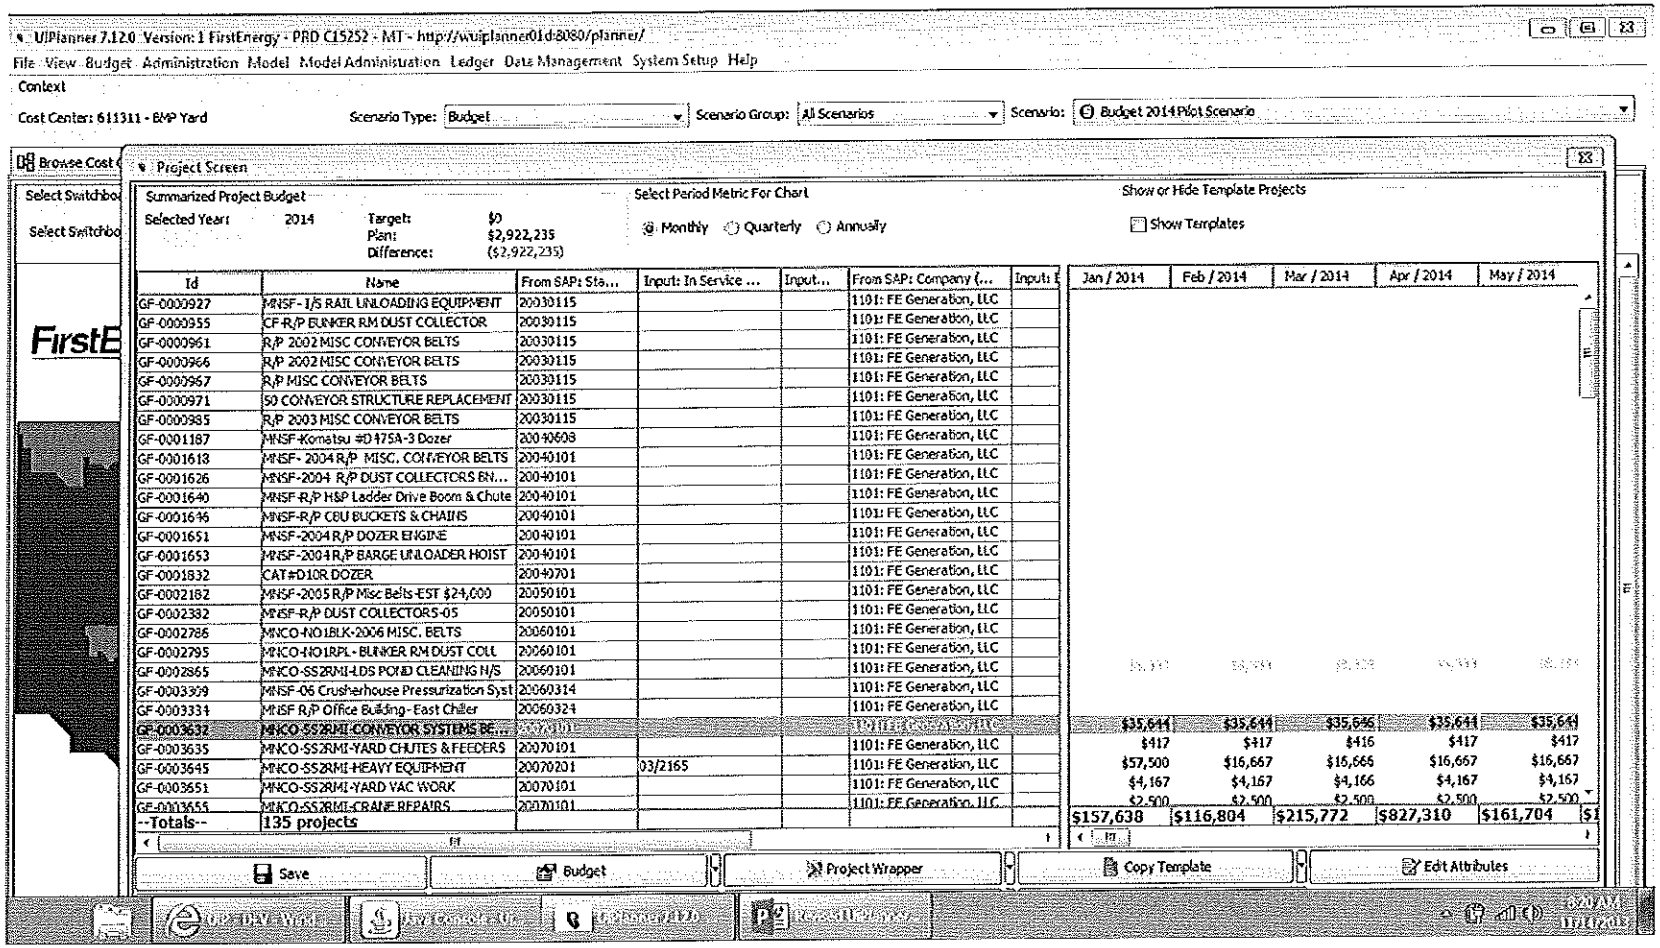


2.
   - Select a Cost Center (either double-click Cost Center or highlight Cost Center and click the **Select** button on the bottom of screen)
   - **Note:** Select the ALL node to view a full list of projects



Project Planning and Tracking Startup

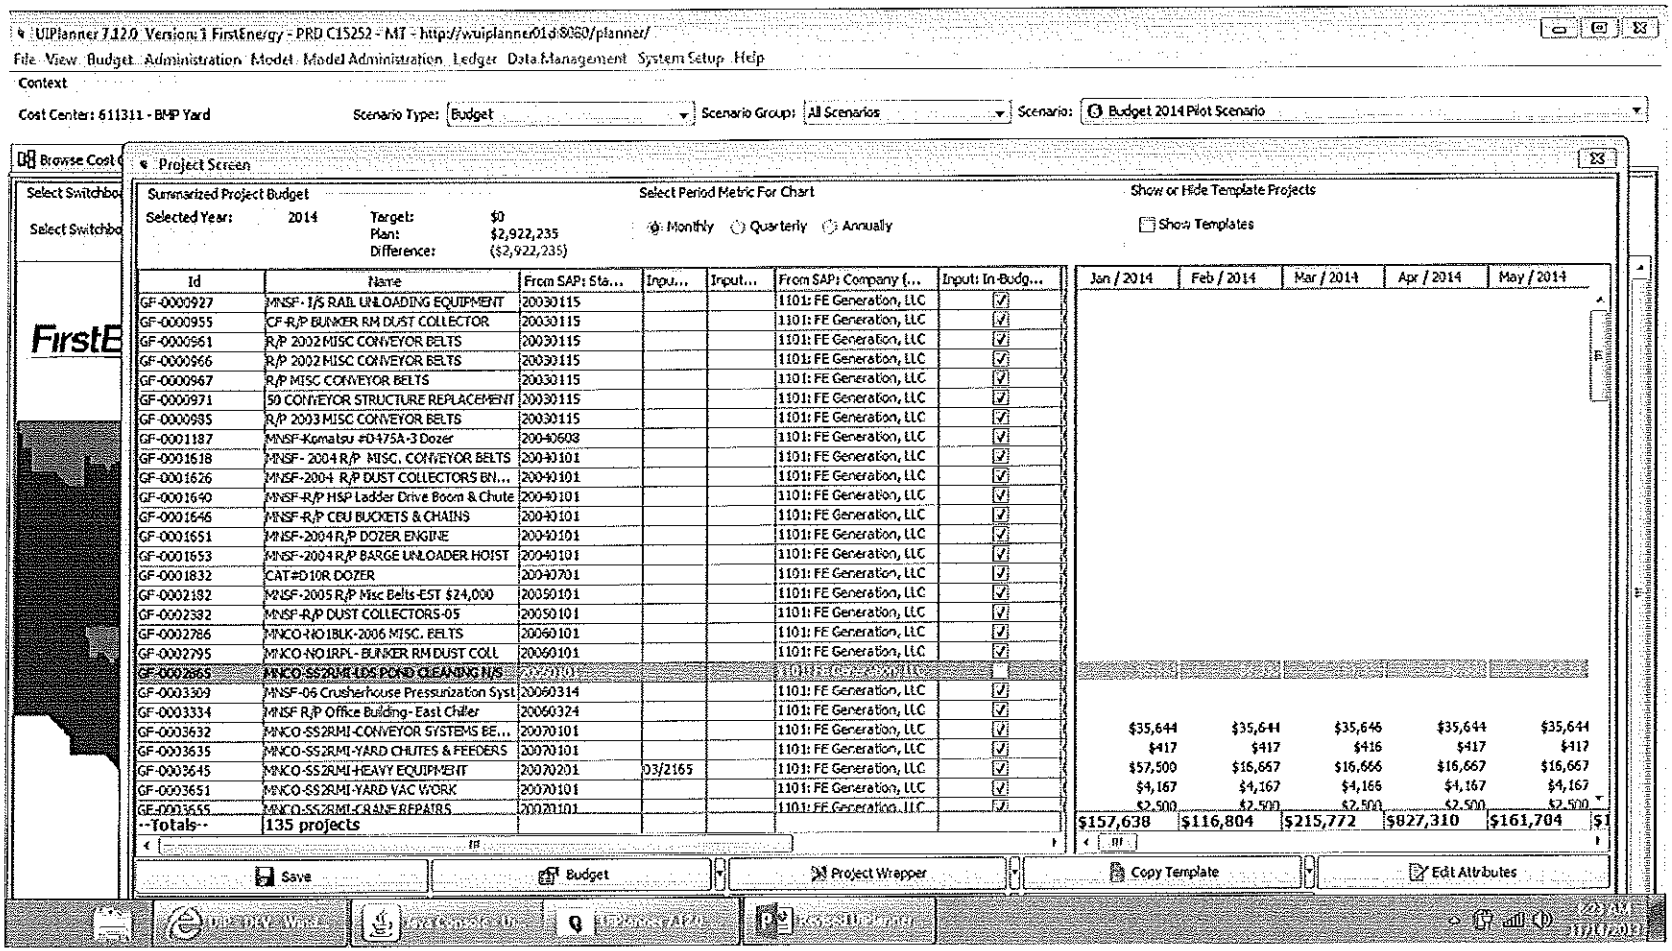
3 Open Project Screen
- Return to the **FE Switchboard**
- Click on the **Projects** button



4
- Click **Project Screen** menu item

Project Planning and Tracking Screen Navigation

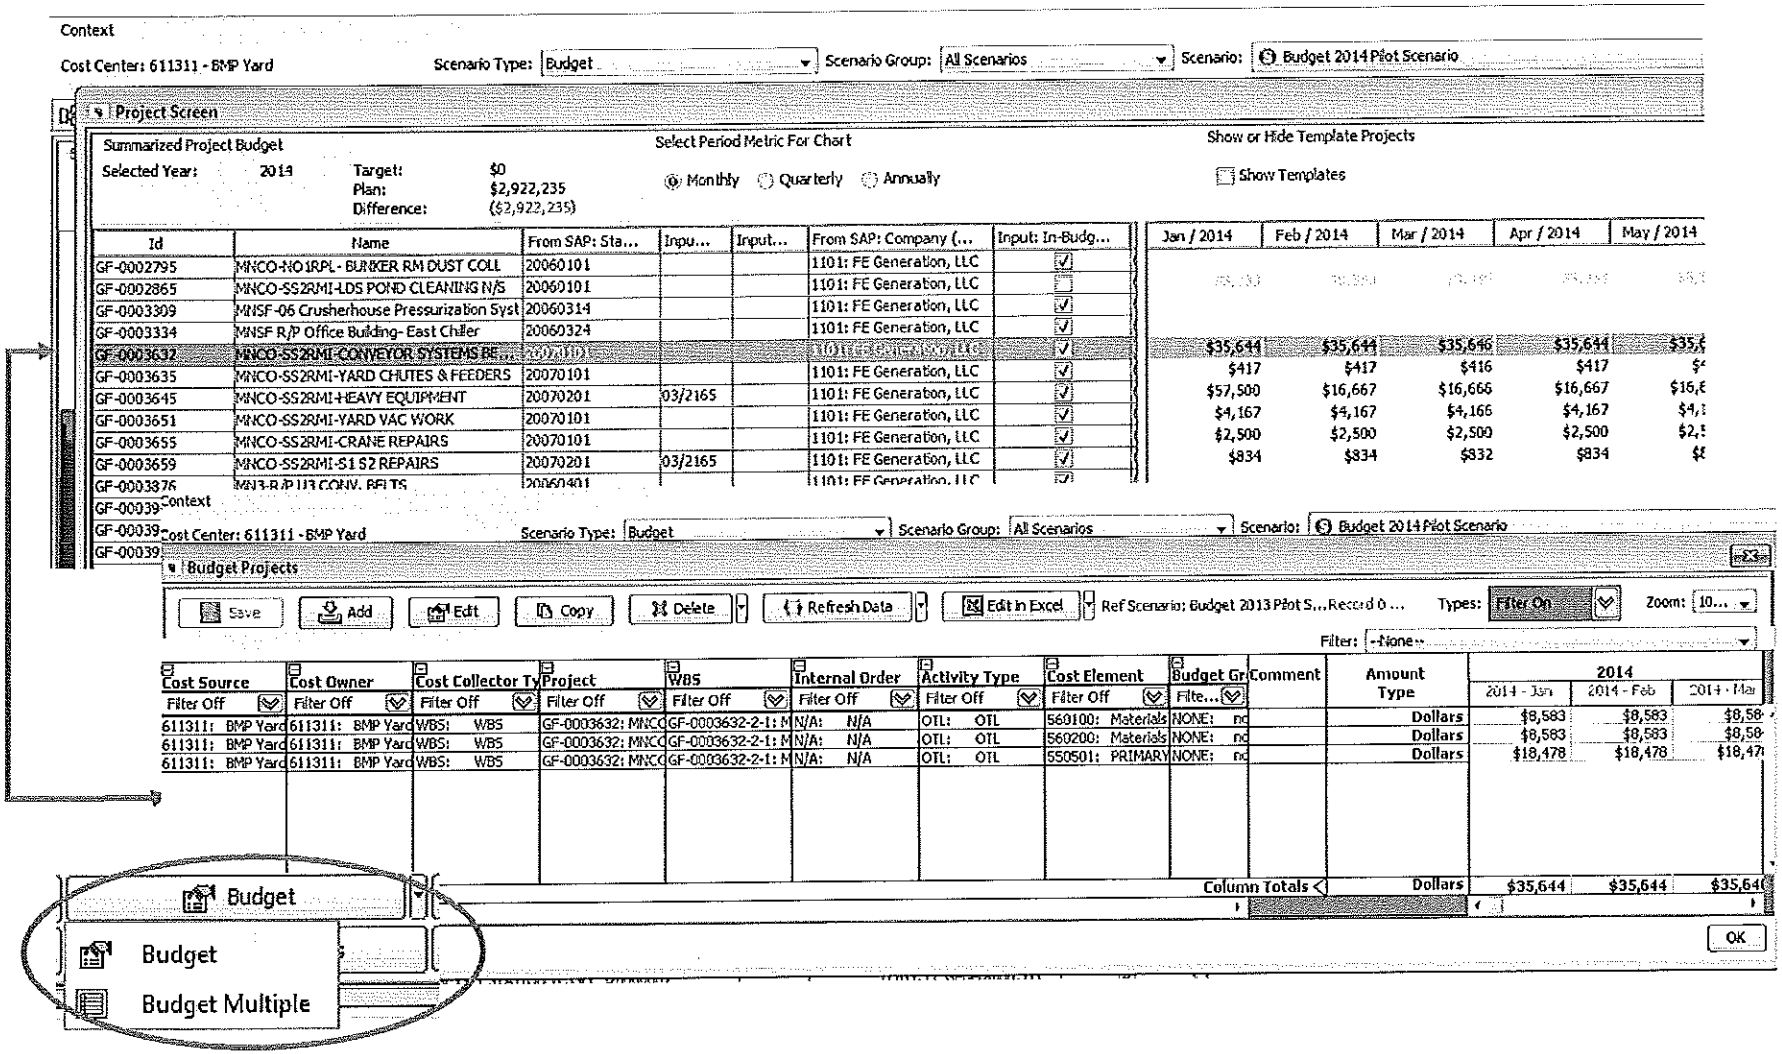
5



- Move projects from year to year
  - Select dollar amount for a given project and drag to a different year
  - Changes will automatically update Grid keeping the Project Screen and Budget Grid in sync
  - Note: you cannot drag projects that have already started (i.e. have amounts in actuals months)
- Change the column display (Monthly, Quarterly, or Annual)

Project Planning and Tracking Screen Navigation

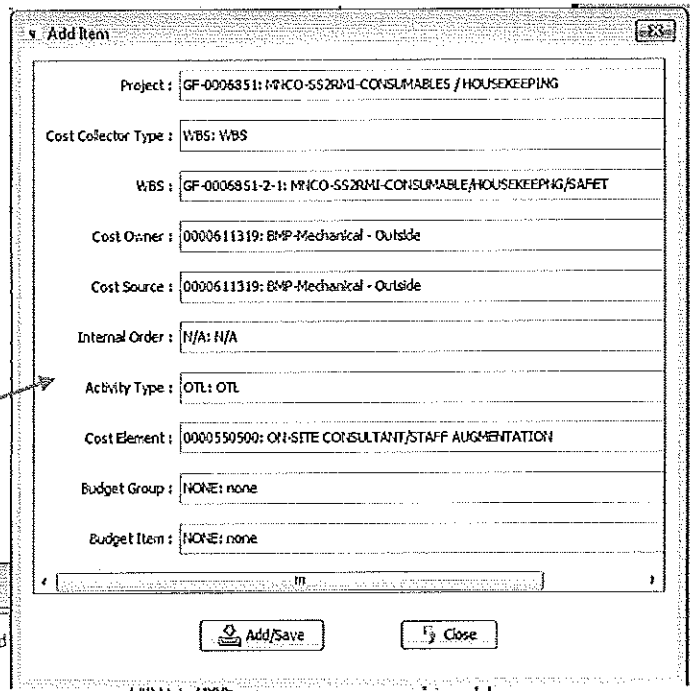
6



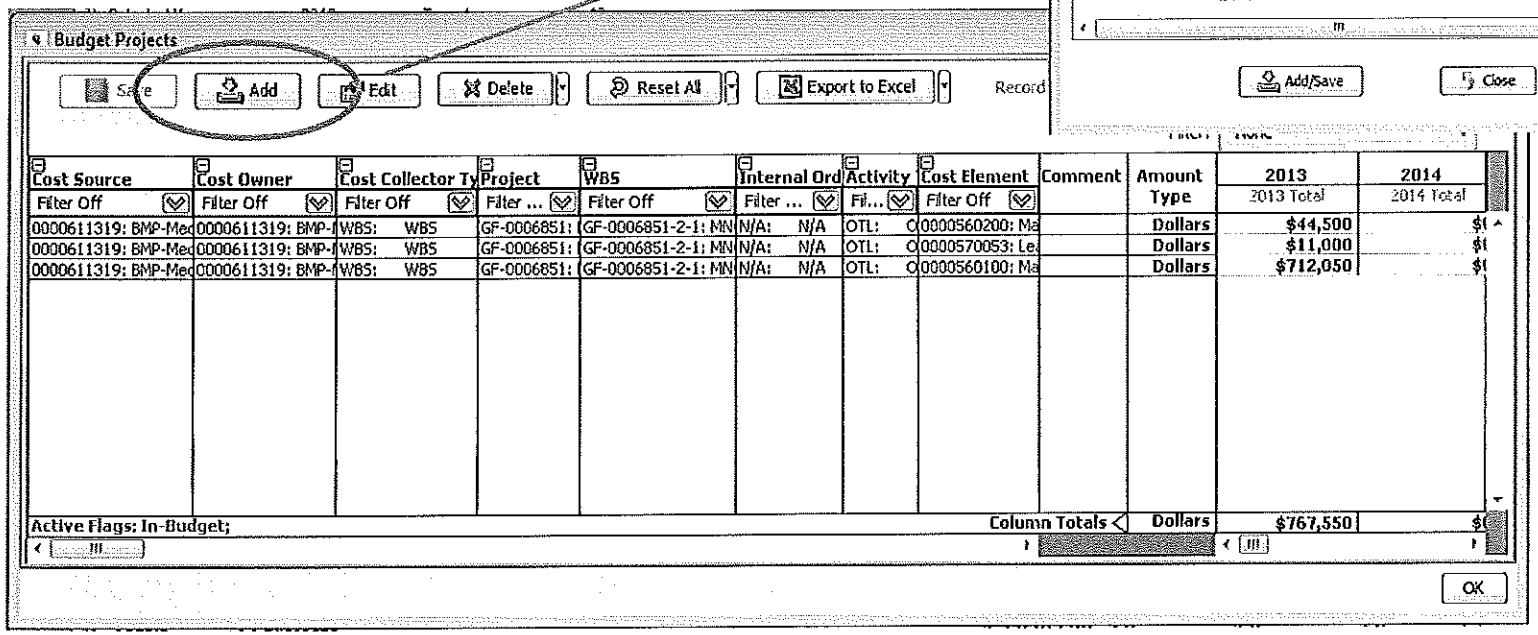
- Turn projects on and off (using the In-Budget flag)
  - The project spending will be grayed out
  - It will be excluded from the totals
  - Click on a column, and the top of the screen shows the totals against the target for that year

Project Planning and Tracking Budgeting

7

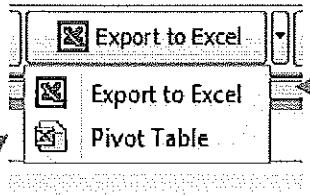


- Select Budget button on bottom of screen to view projects in the budget grid
- Use the droplist on the side of the button to choose whether to budget one project or multiple projects



Project Planning and Tracking - Add Combo

8



- Budget Grid - Project View
  - All Grid functionality
    - Dollars, Hours
    - Enter or paste from Excel
    - Monthly, Annual
    - Grouping and filters
    - Right-click options
  - Add Combos
    - Project Validations - fills in the available choices for the next field
    - Some fields are prepopulated

Project Planning and Tracking – Export to Excel / Pivot Table

9 • Select **Export to Excel/Pivot** button on bottom of screen to send the screen contents to Excel
  • Select the dropdown on the right of the button to choose raw Excel or a Pivot table

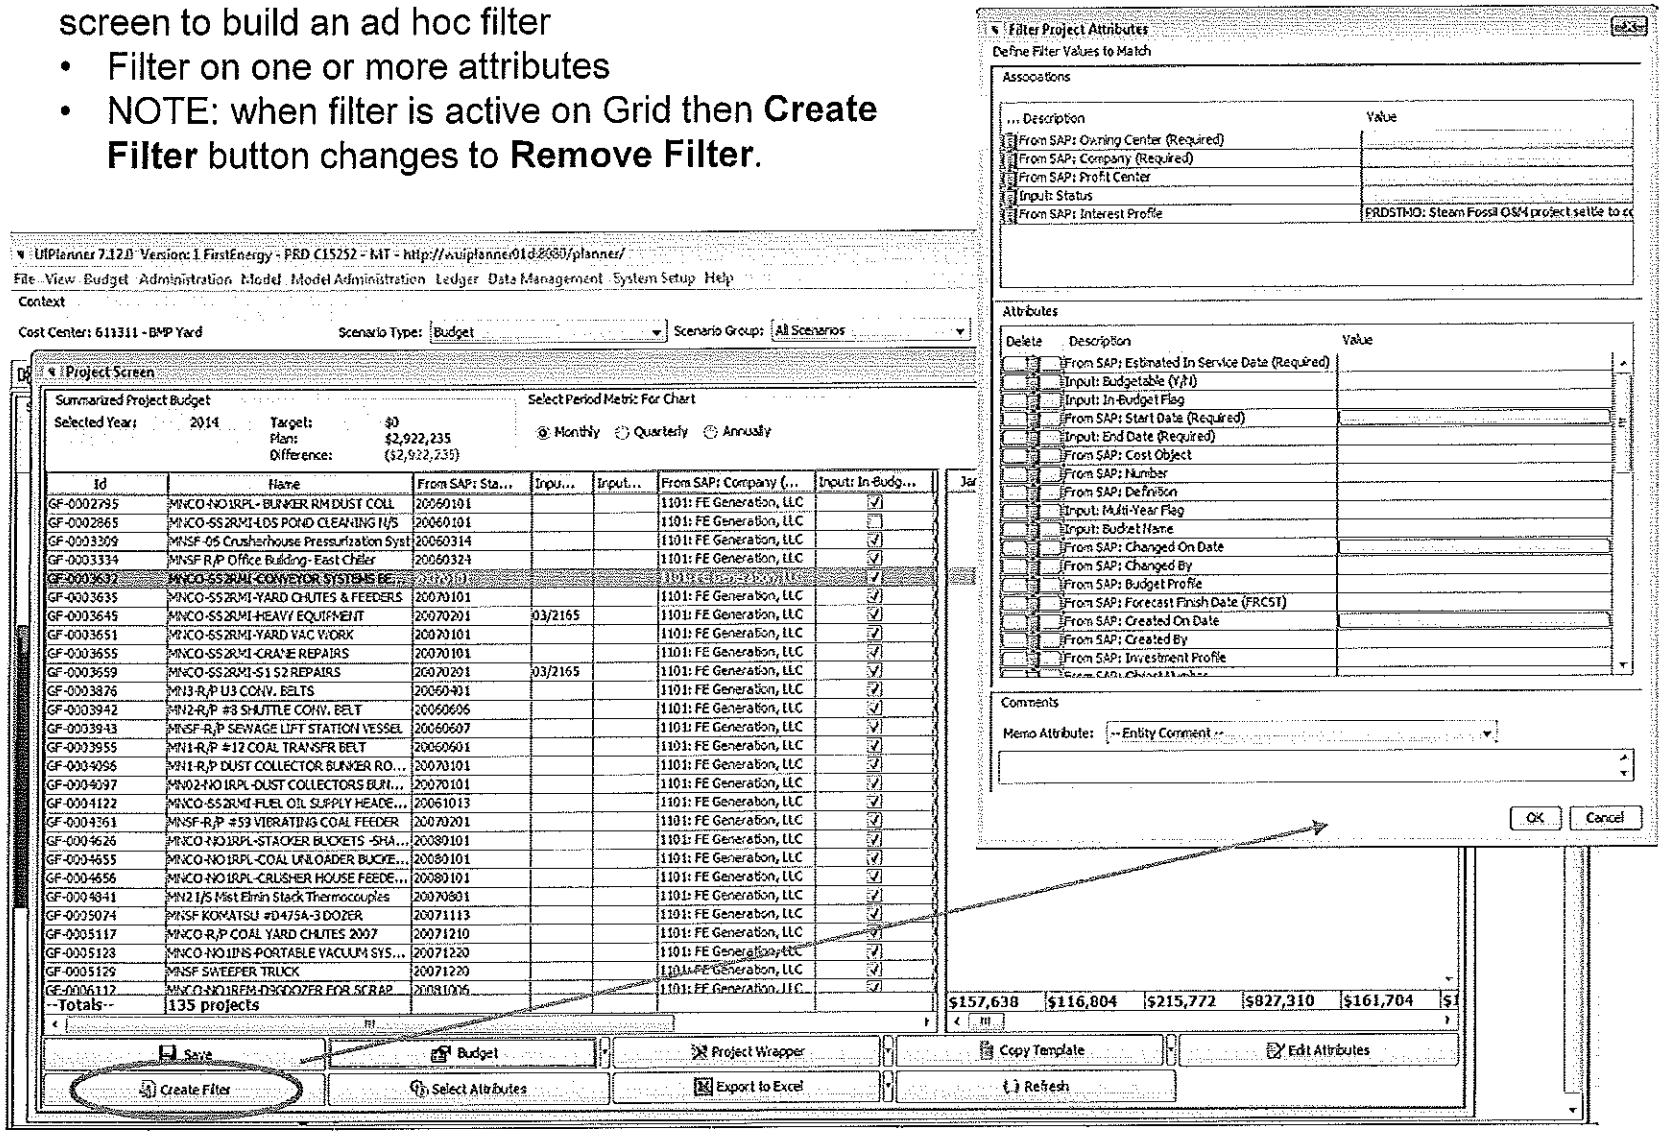
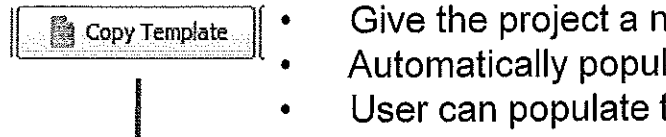
Project Planning and Tracking - Select Attributes

10

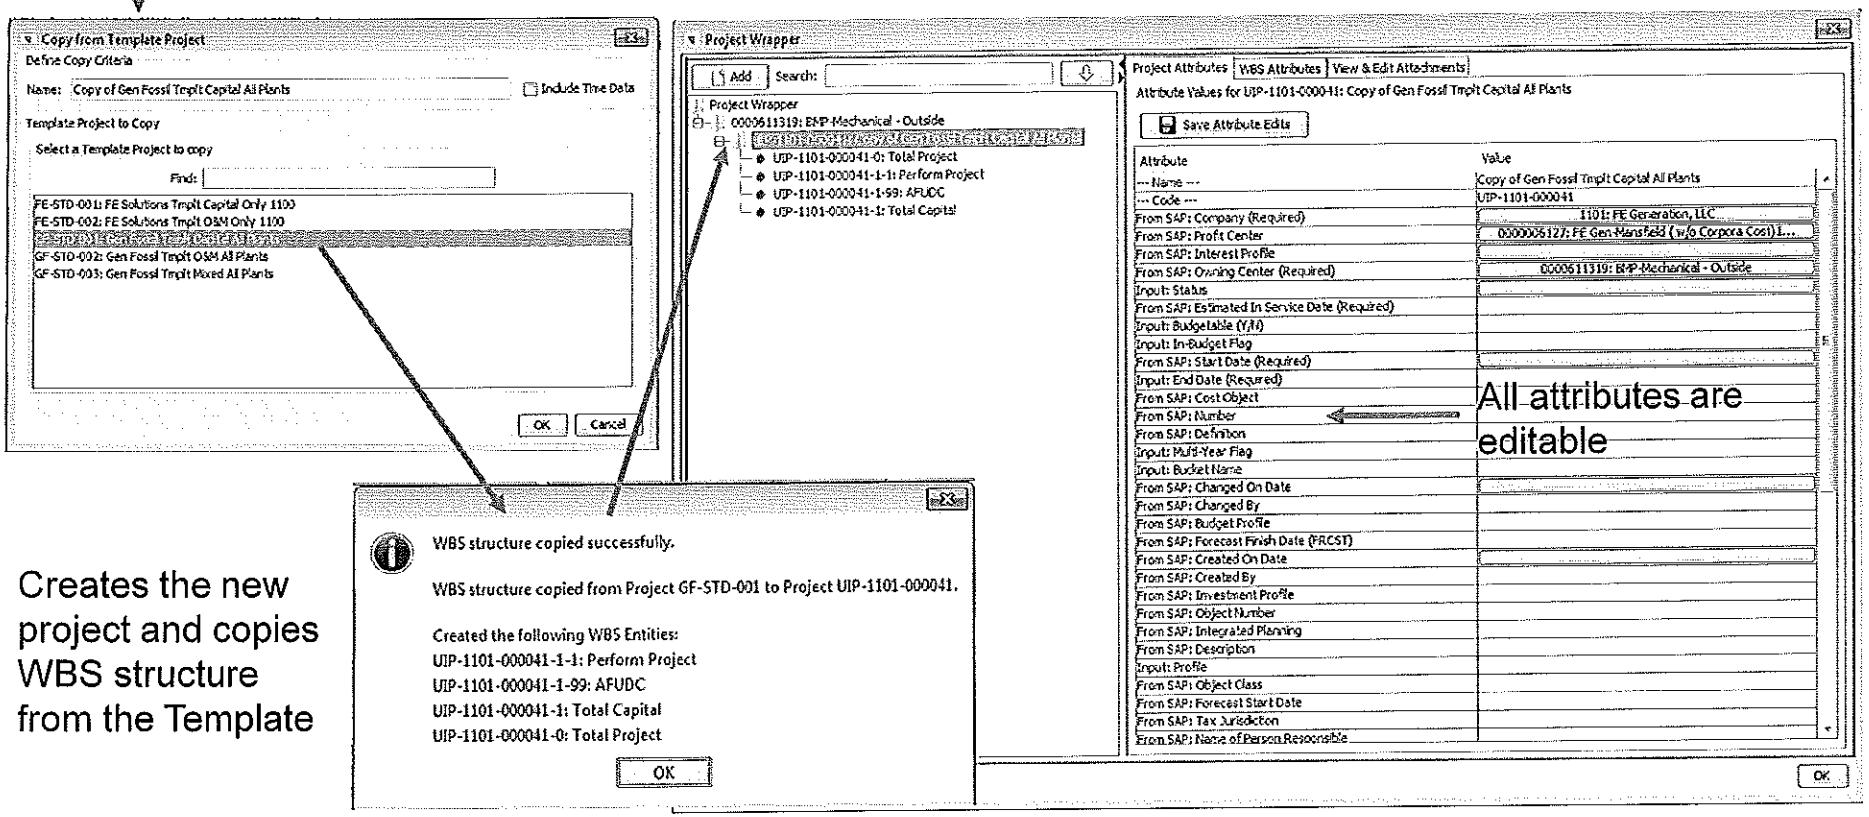


- Users can customize the project screen and view project attributes
- Select the **Select Attributes** button on bottom of screen
- Click on/off attributes you want to display
- Attributes can be sorted

- View only - attributes are edited on the Project Wrapper
  - In-Budget Flag can be changed right on the Project Screen)



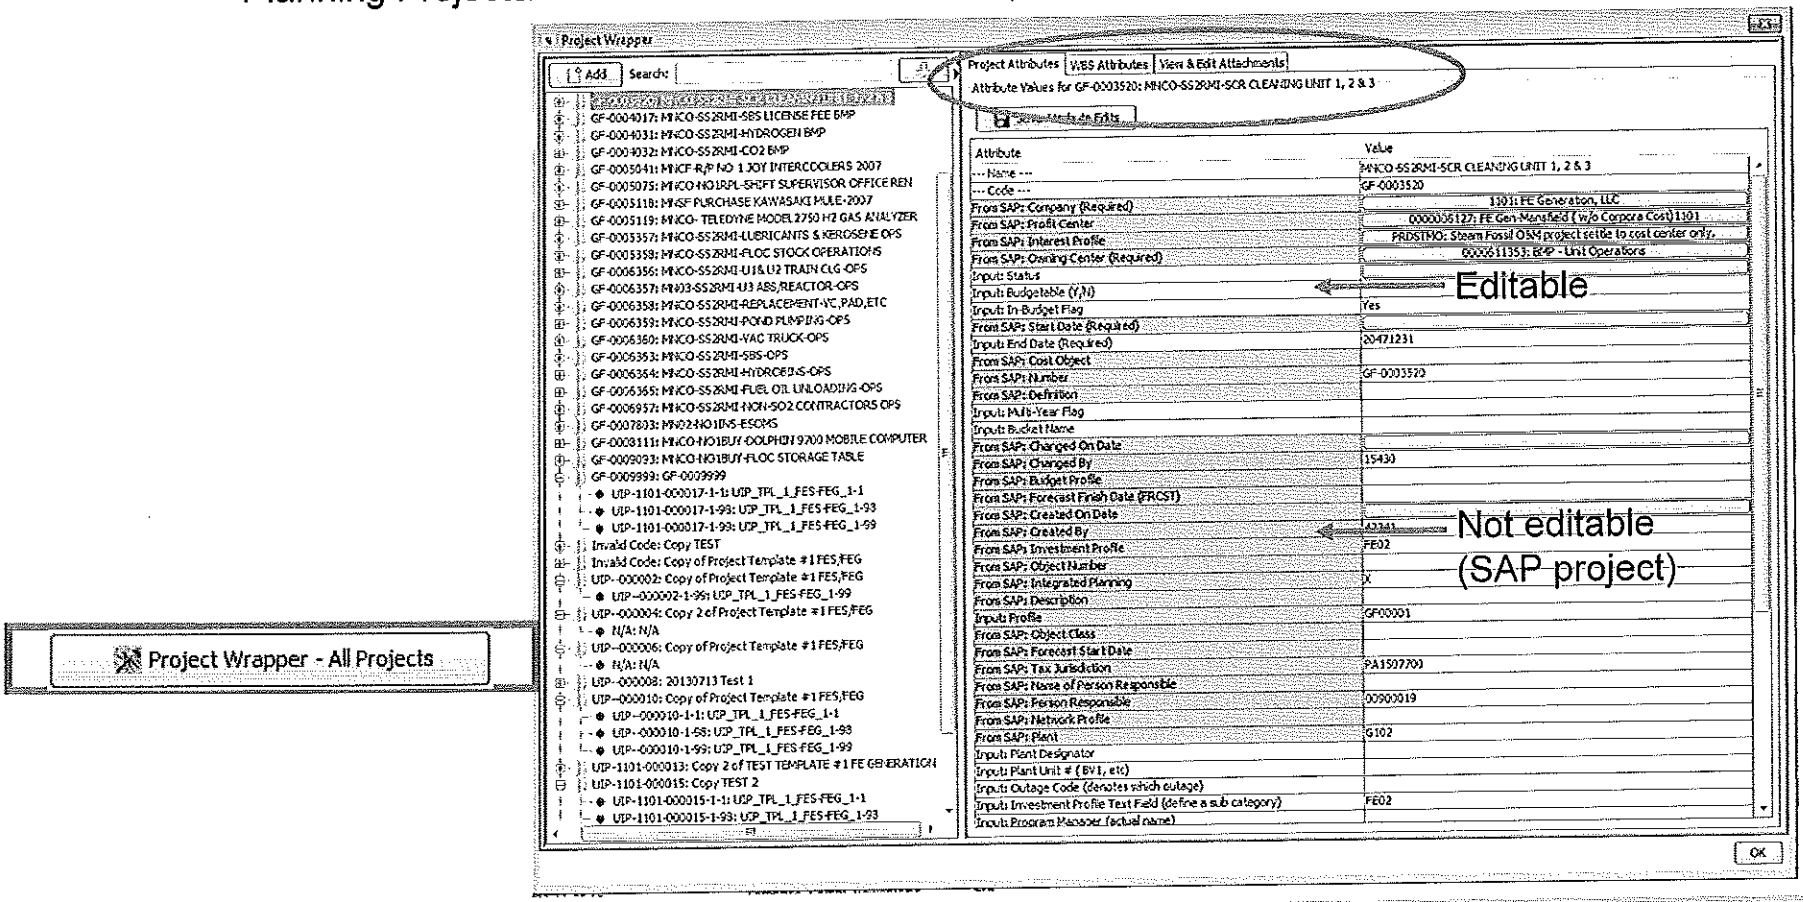
Project Planning and Tracking - Filters



- Select the **Create Filter** button on the bottom of the screen to build an ad hoc filter
  - Filter on one or more attributes
  - NOTE: when filter is active on Grid then **Create Filter** button changes to **Remove Filter**.

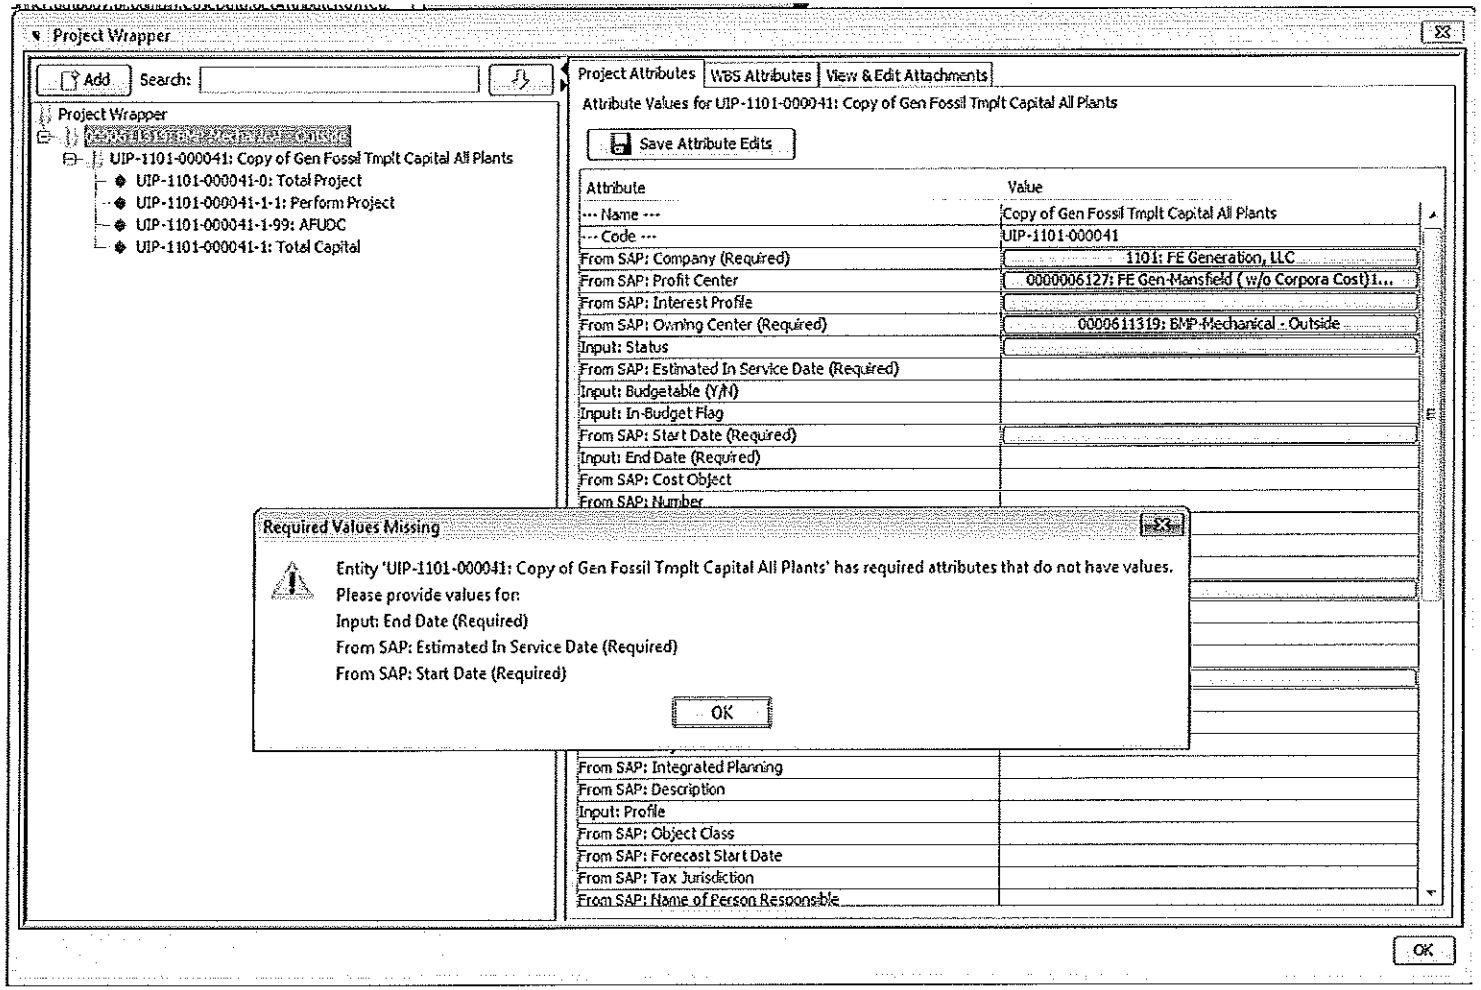
Project Planning and Tracking - Create New Project

12 • Create Planning Project / WBS
  - Planning Projects/WBS will be created in UIPlanner
  - Based on Template Projects brought in from SAP
  - Hit the Copy Template button at the bottom of the Project Screen
    - Select a template from the list (templates are at rollup CC; available to CC under)
    - Give the project a name (starts with a default Copy of . . . .)
    - Automatically populates key elements (Company, Cost Center, Project, etc.)
    - User can populate the rest. All attributes are editable in the Project Wrapper



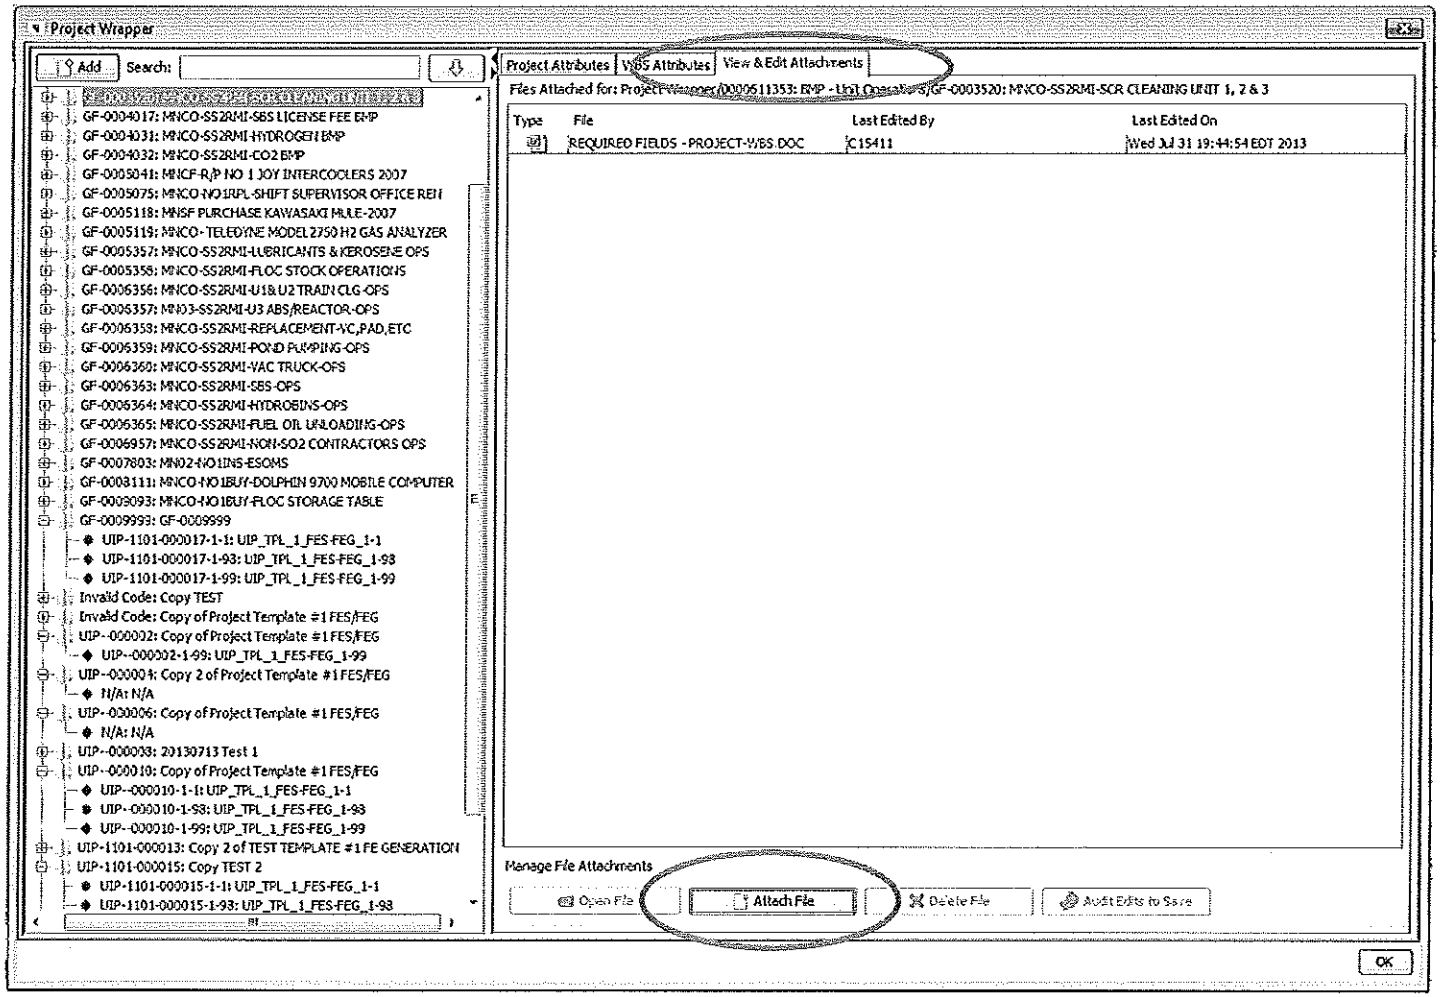
Creates the new project and copies WBS structure from the Template

Project Planning and Tracking - Project Wrapper



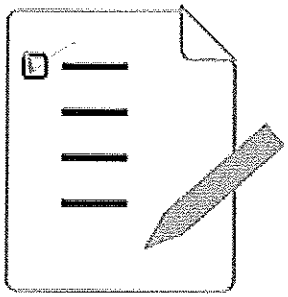
13

- Select the Project Wrapper button to open the Project Wrapper
  - Separate tabs for Project attributes and WBS attributes
  - Shows all attributes
    - Grayed out if you can not edit them
  - Rules for what can be edited and what cannot
    - Projects/WBS from SAP - attributes brought over and cannot be edited
    - Planning Projects/WBS - can edit all attributes (except ones populated by UIPlanner)



Project Planning and Tracking - Create New Project

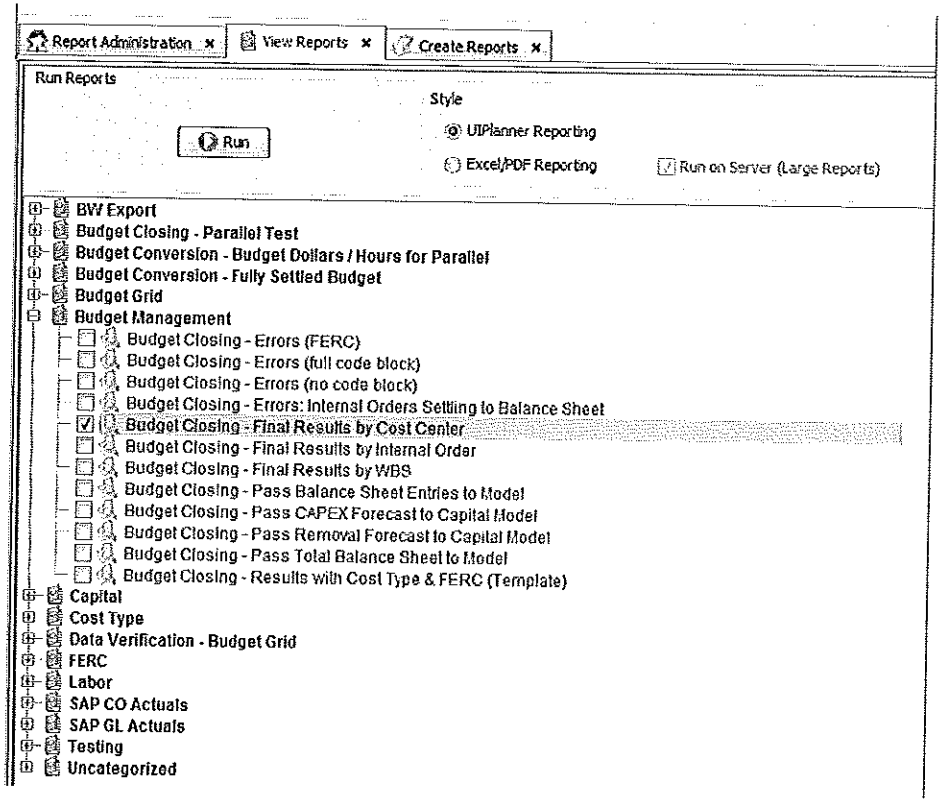
14 • Certain fields for Projects and WBS are required
  - Needed in order to perform key calculations (closings, assessments, etc.)
  - Already populated for Projects/WBS from SAP
  - Need to make sure these are populated when you create a Planning Project



Project Planning and Tracking - Project/WBS Element Attachments

15 • Project Wrapper - Attachments
  - Select the View and Edit Attachment Tab
  - You can attach any document (DOC, XLS, etc.) to the project
  - Stored in the database and archived

Exercise #2 – Project Budget and Tracking

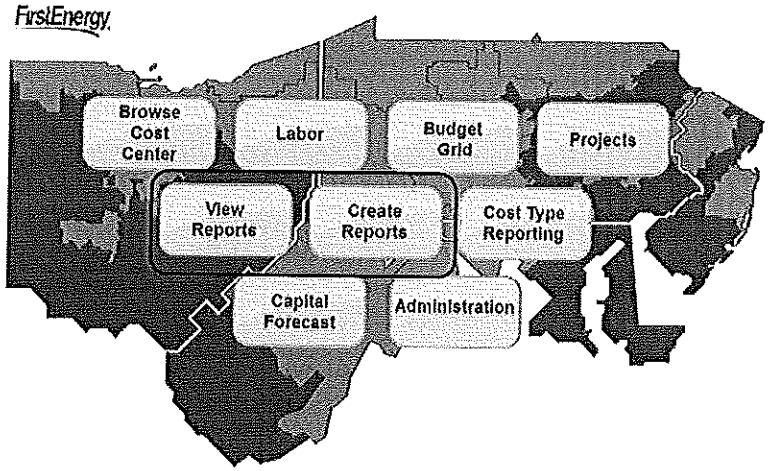


- Customize your Project Screen
  - Select attributes you would like to view
- Open the Budget Grid and make changes for a specific project
- Open Project Wrapper and view/edit project and WBS element attributes
- Export project to Excel pivot
- Create planning project using template

Reporting – Development and Usage

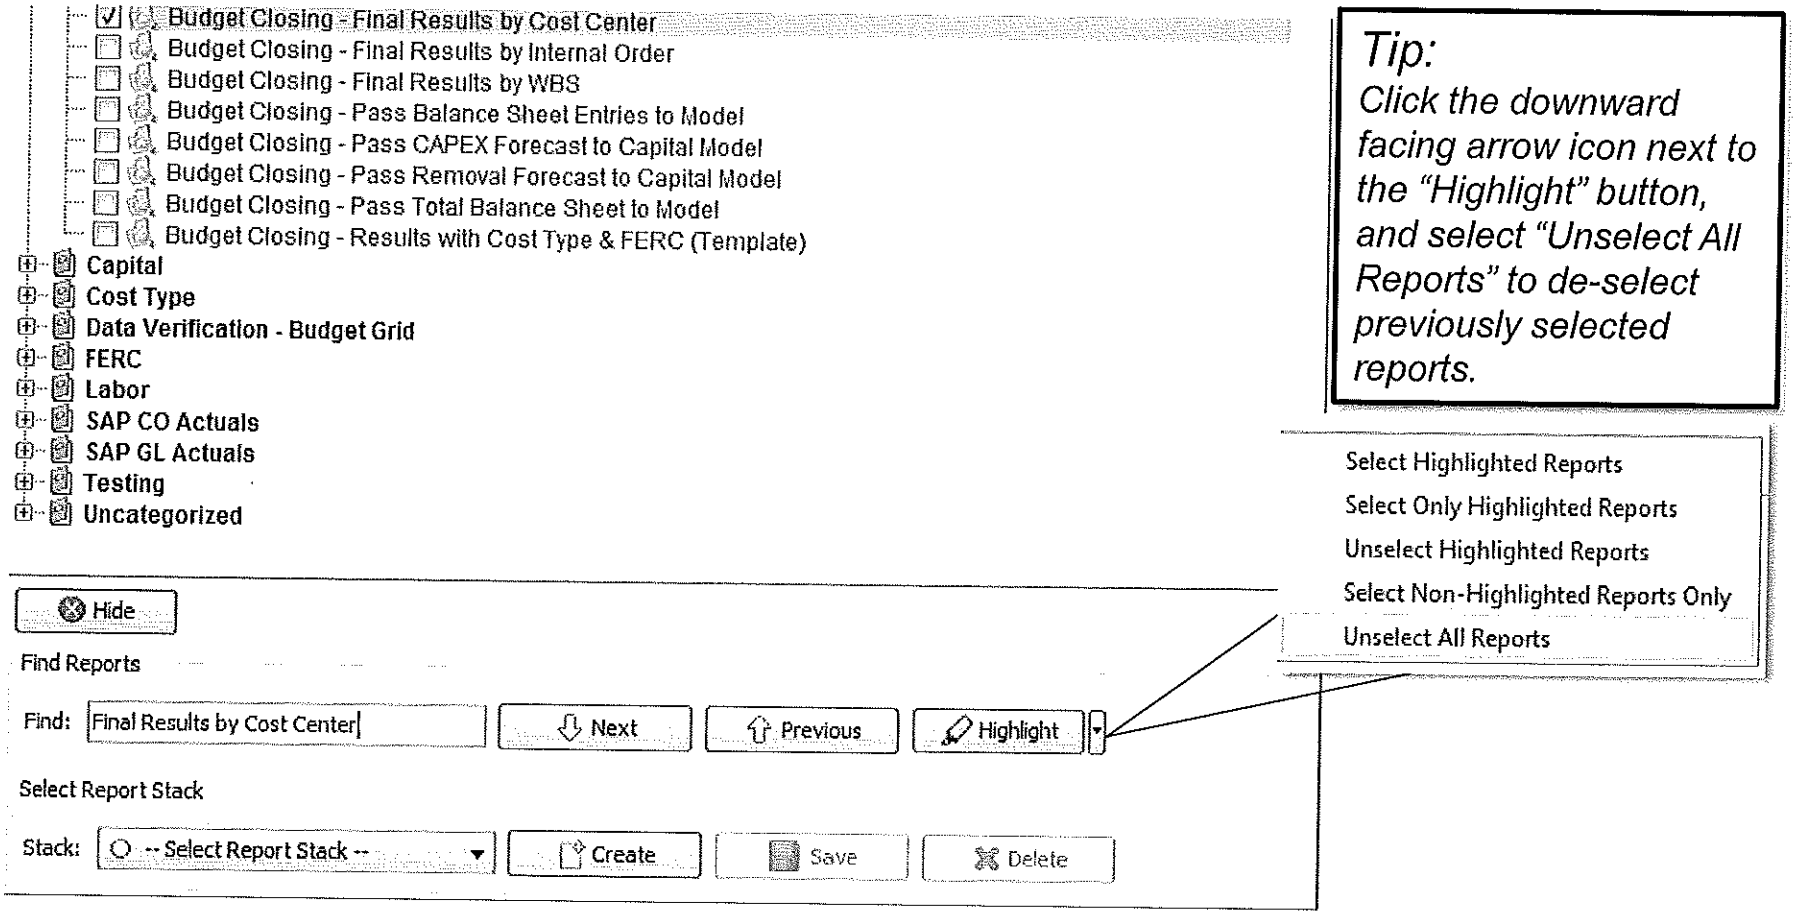
View Reports Screen

- Access View Reports screen by pressing Ctrl+F12 and typing "View Reports" or through a Report link from a Switchboard



- Reports are published into thematic sections which can be expanded or collapsed by clicking on the +/- icon next to the section titles

View Reports screen

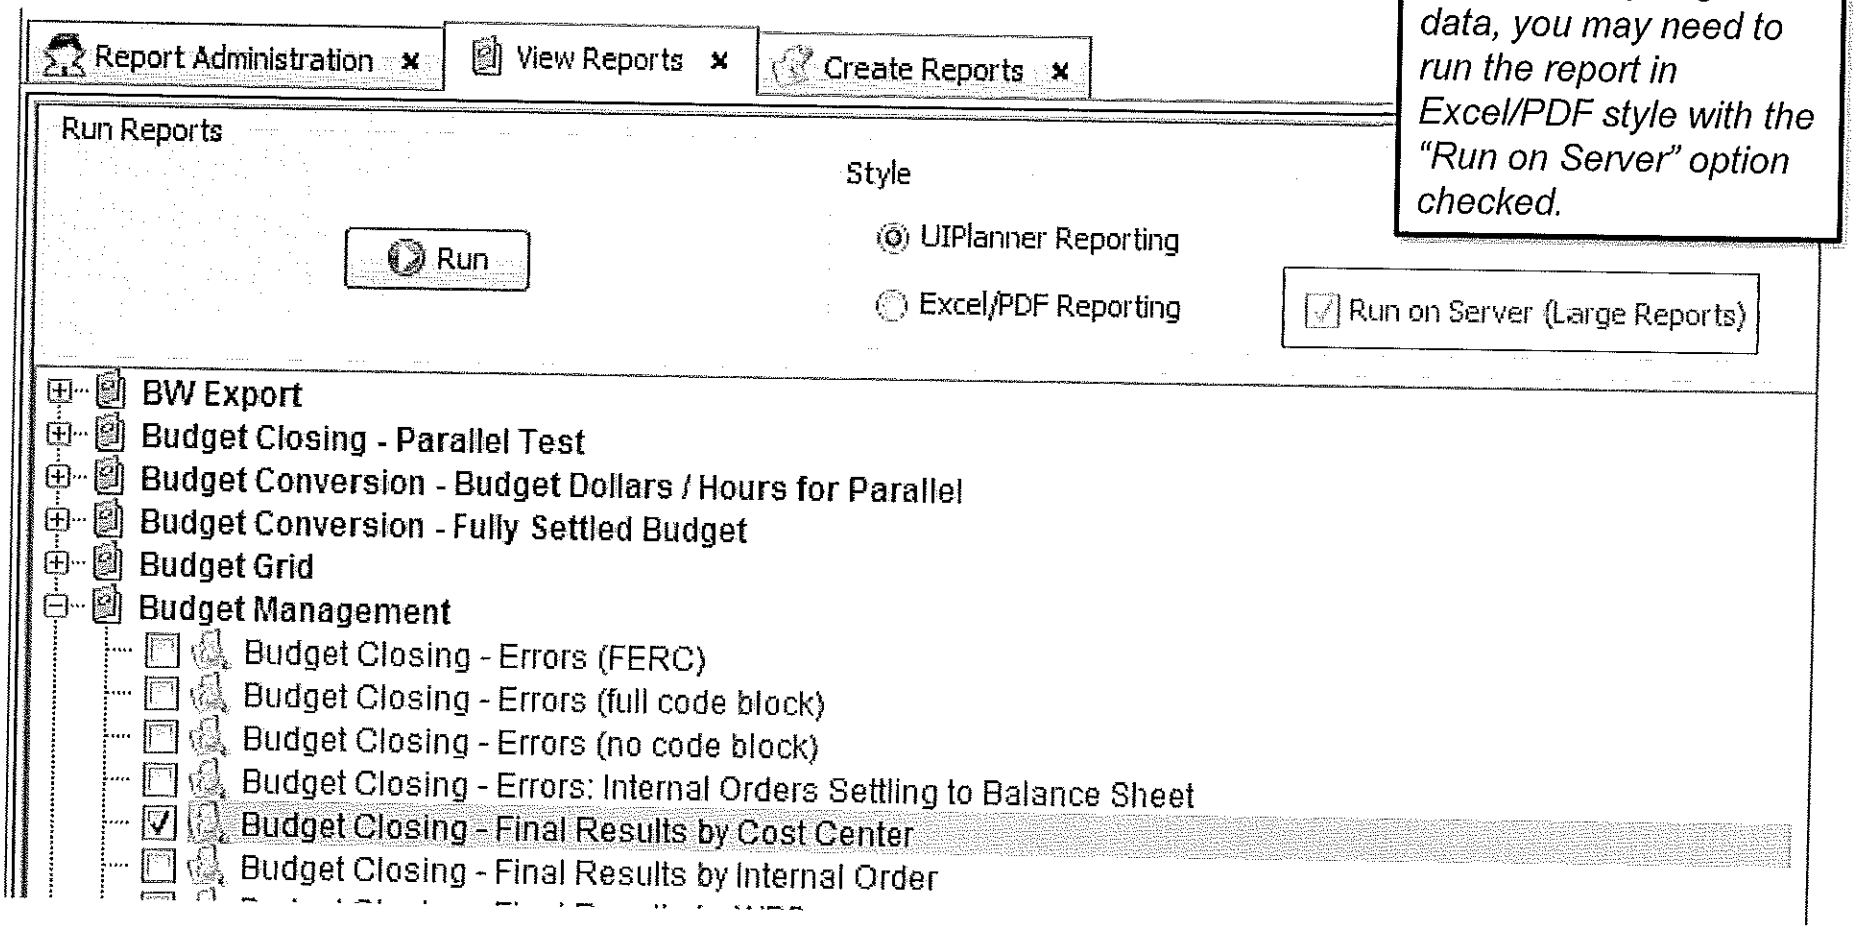


Tip:
Make sure that you have selected the correct Scenario before running reports.

Switchboard Reports

Finding Your Report

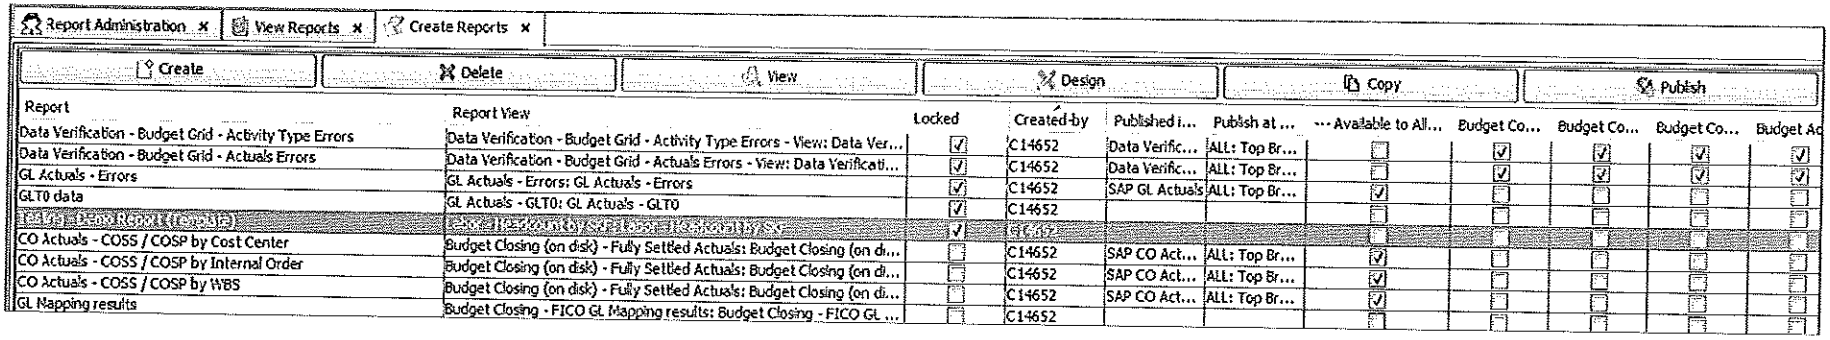
- Open Search controls by clicking the Search button at the bottom of the screen.
- Search by typing the name of your report. You can perform a "wildcard" search by adding "*" to your search terms. E.g. "*cost center*" will find any report that contains the phrase "cost center" within its name.
- Press the "Next" and "Previous" buttons to jump back and forth to the next results.



Tip:
Click the downward facing arrow icon next to the "Highlight" button, and select "Unselect All Reports" to de-select previously selected reports.

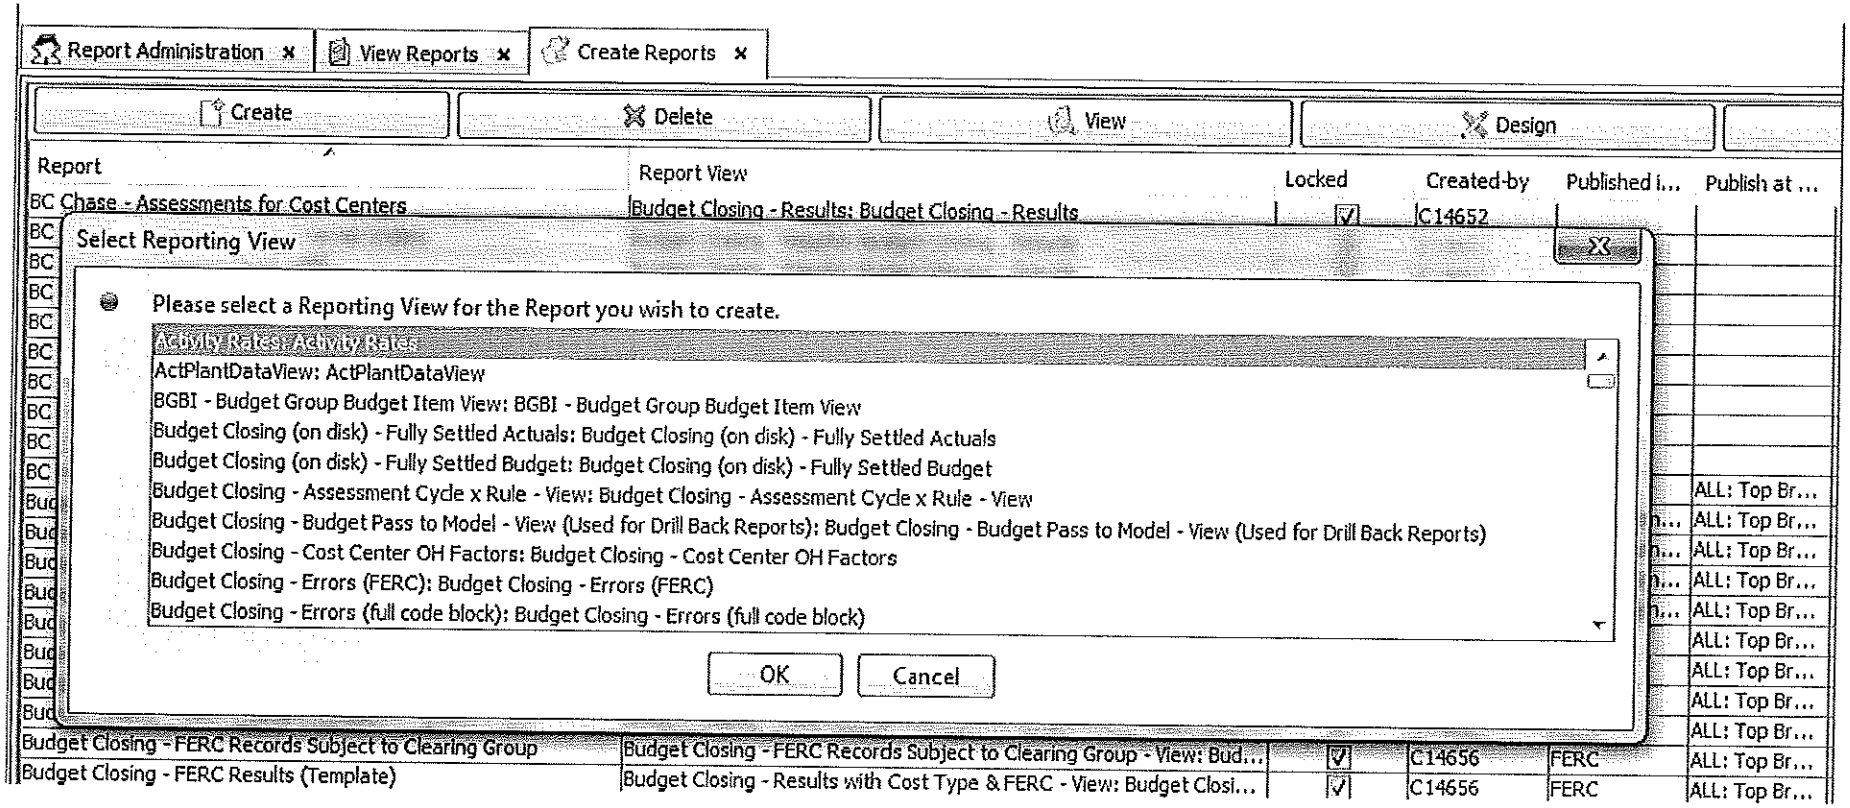
Running a Report from View Reports Screen

- Select the report style by checking the box next to the report and click Run
- Report Styles:
  - Excel/PDF for printing, saving locally, or if the data is too large.
  - UIPlanner style for the fully featured UIPlanner reporting screen



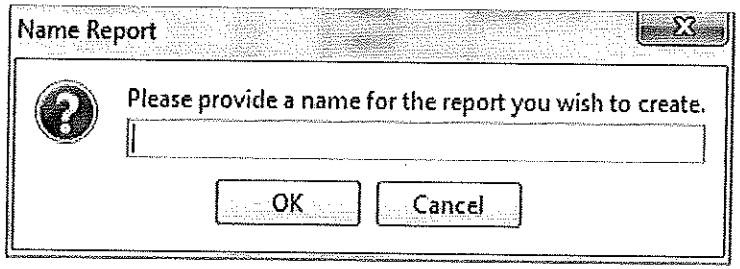
Tip:
For extremely large data, you may need to run the report in Excel/PDF style with the "Run on Server" option checked.

Create Reports Screen



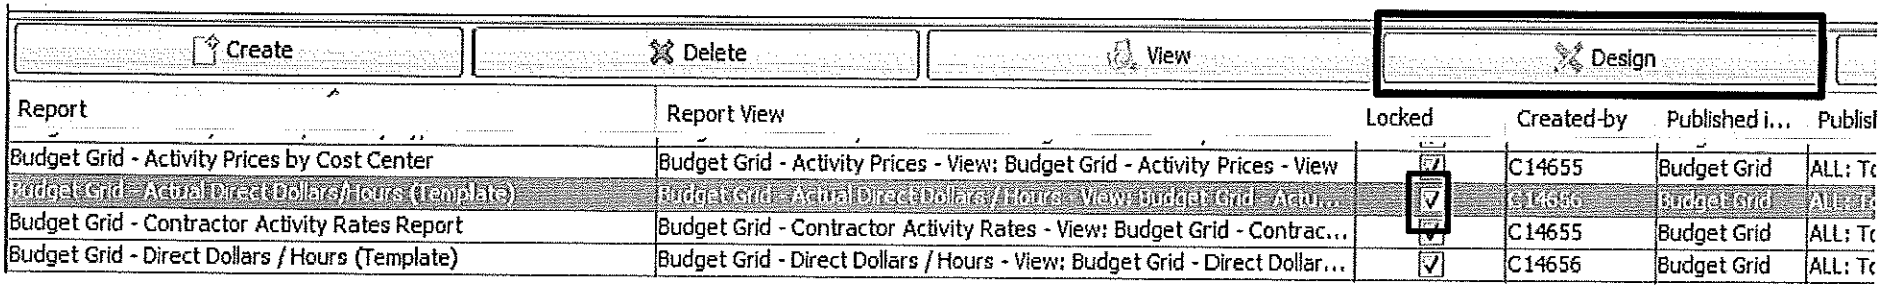
- The Create Reports screen is more flexible than the View Reports screen and allows for greater functionality enabling the user to develop and save versions of reports using these views.
- A Report Administrator can create a View on a set of data and enable features.
- Users can create, delete, view, design, copy, lock, and publish reports to reporting sections by User Role.

Create Reports screen



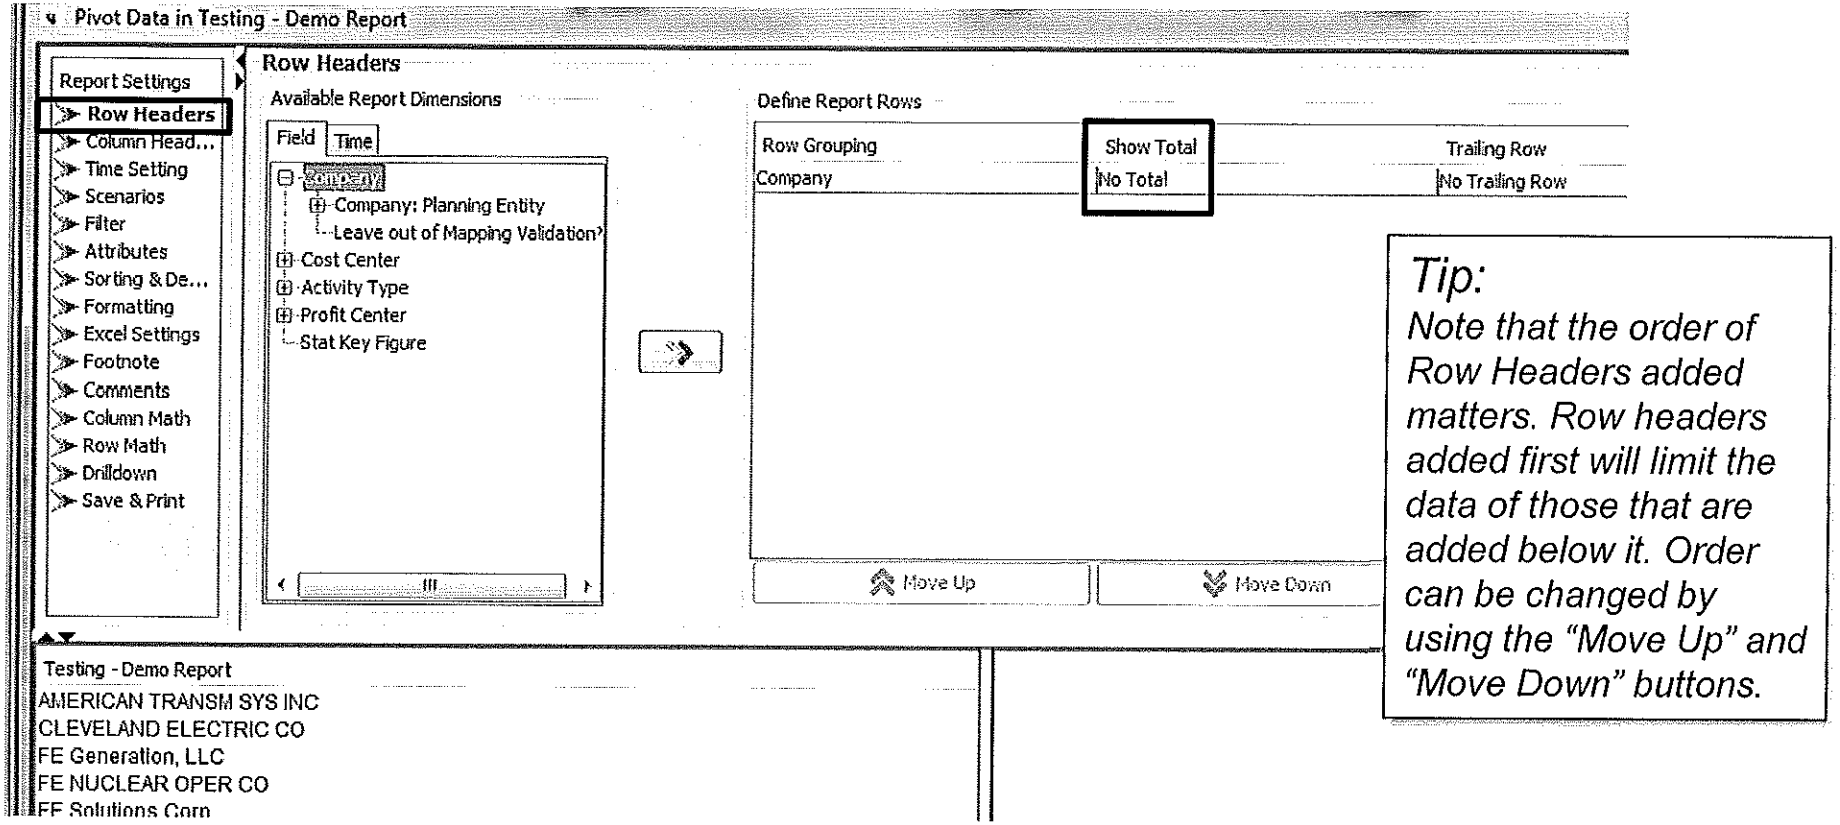
Create Reports Screen – Creating a Report from Scratch

- Click the "Create" button, you will be prompted to select the dataset View on which you wish to build a report.



- Give your report a name but pay close attention to the preferred naming conventions to help organize your report.

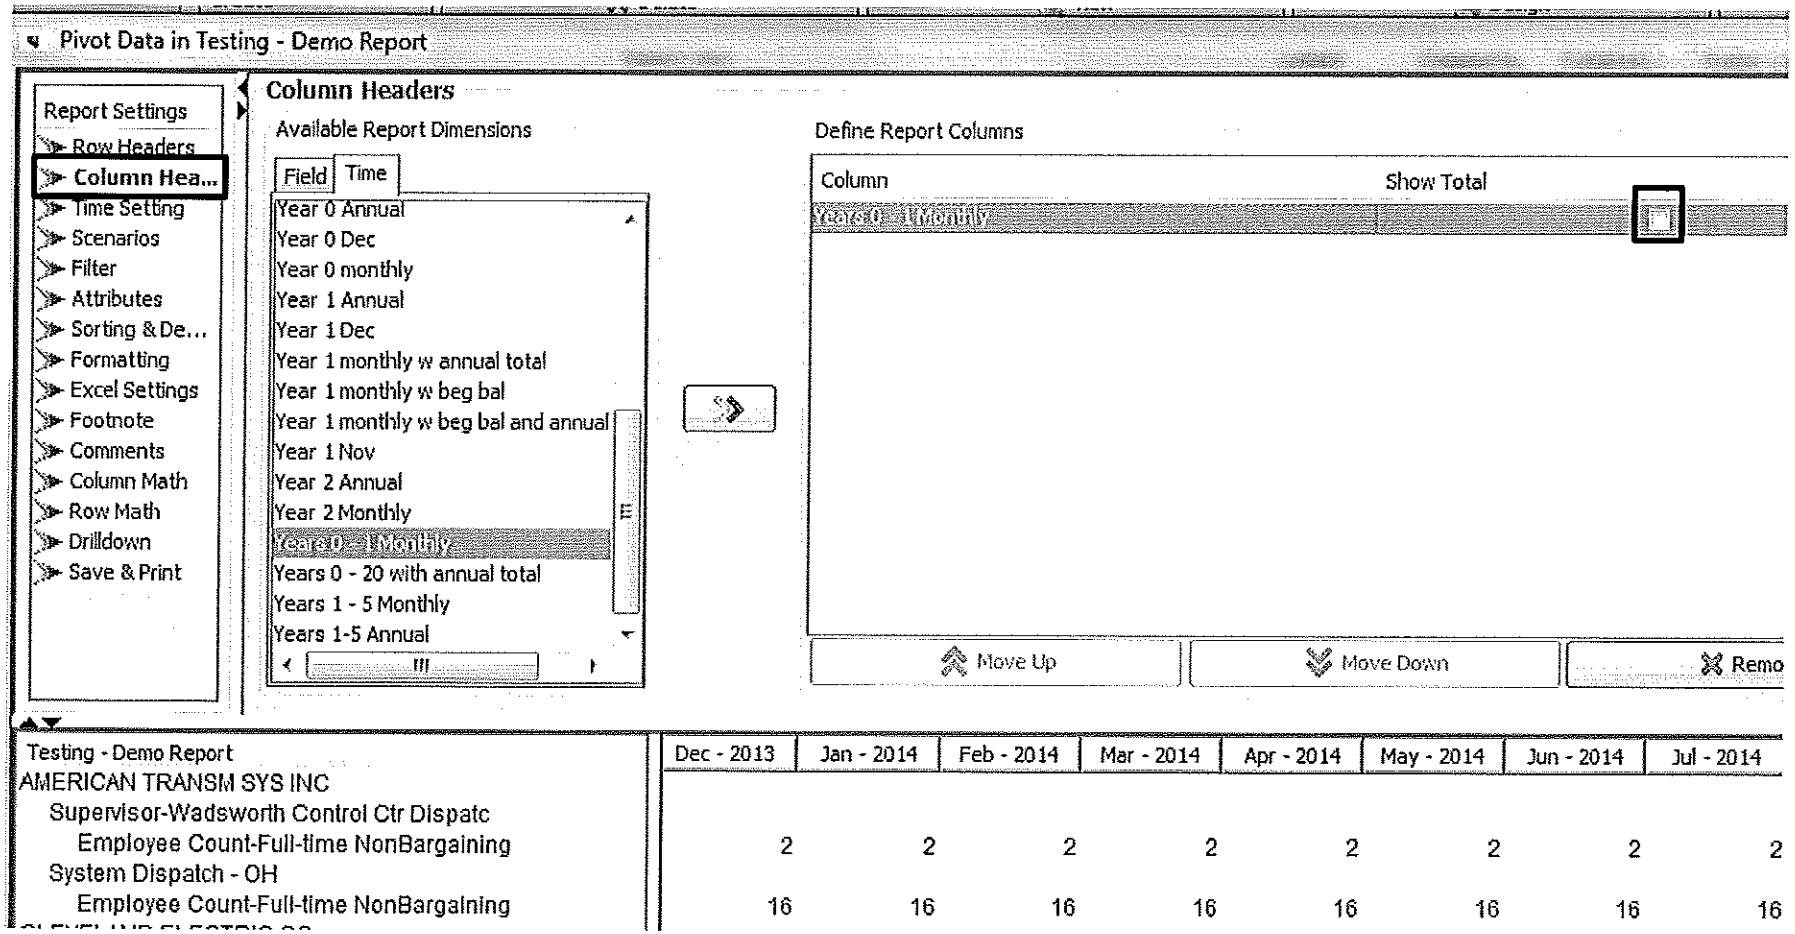
Create Reports Screen - Creating a Report from a Template



- Select the report from the list on the Create Report screen; should have "(Template)" in the name.
- Note that the Locked checkbox should be checked to prevent someone from accidentally saving their changes to the template itself.
- Press the Design button to bring up the report in design mode, which limits the data being returned to 200 records and allows for faster edits.
- The View button will return ALL records, which can be slow for very large datasets.

Report	Report View	Locked	Created-by	Published i...	Publisl
Budget Grid - Activity Prices by Cost Center	Budget Grid - Activity Prices - View: Budget Grid - Activity Prices - View	☑	C14655	Budget Grid	ALL: Tc
Budget Grid - Actual Direct Dollars/Hours (Template)	Budget Grid - Actual Direct Dollars / Hours - View: Budget Grid - Actu...	☑	C14656	Budget Grid	ALL: Tc
Budget Grid - Contractor Activity Rates Report	Budget Grid - Contractor Activity Rates - View: Budget Grid - Contrac...	☑	C14655	Budget Grid	ALL: Tc
Budget Grid - Direct Dollars / Hours (Template)	Budget Grid - Direct Dollars / Hours - View: Budget Grid - Direct Dollar...	☑	C14656	Budget Grid	ALL: Tc

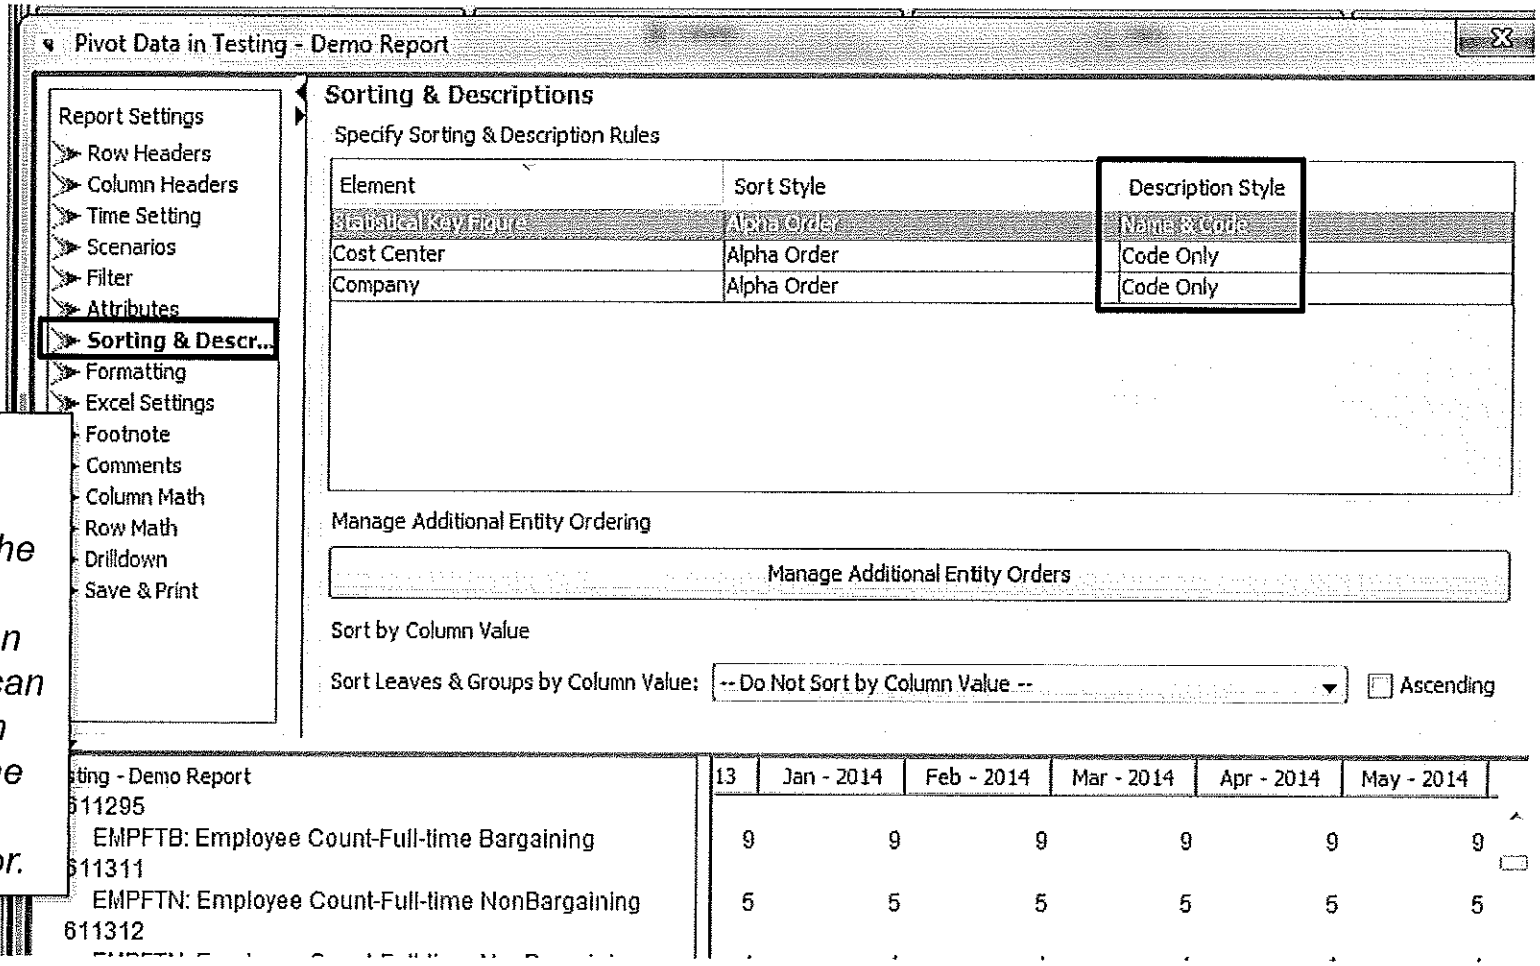
Create Reports Screen – Adding Row Headers



- Select "Row Headers" chevron from the "Report Settings" column to view available fields within the data set view. Highlight the field name and click the Arrow button to add the header to the report.
- You can expand some headers to select a header's attributes to be added. (e.g. Company Planning Entity)
- There is an option to add subtotals and trailing rows to each row added to the report by clicking the text under "Show Total" and "Trailing Row" labels.

Tip:
Note that the order of Row Headers added matters. Row headers added first will limit the data of those that are added below it. Order can be changed by using the "Move Up" and "Move Down" buttons.

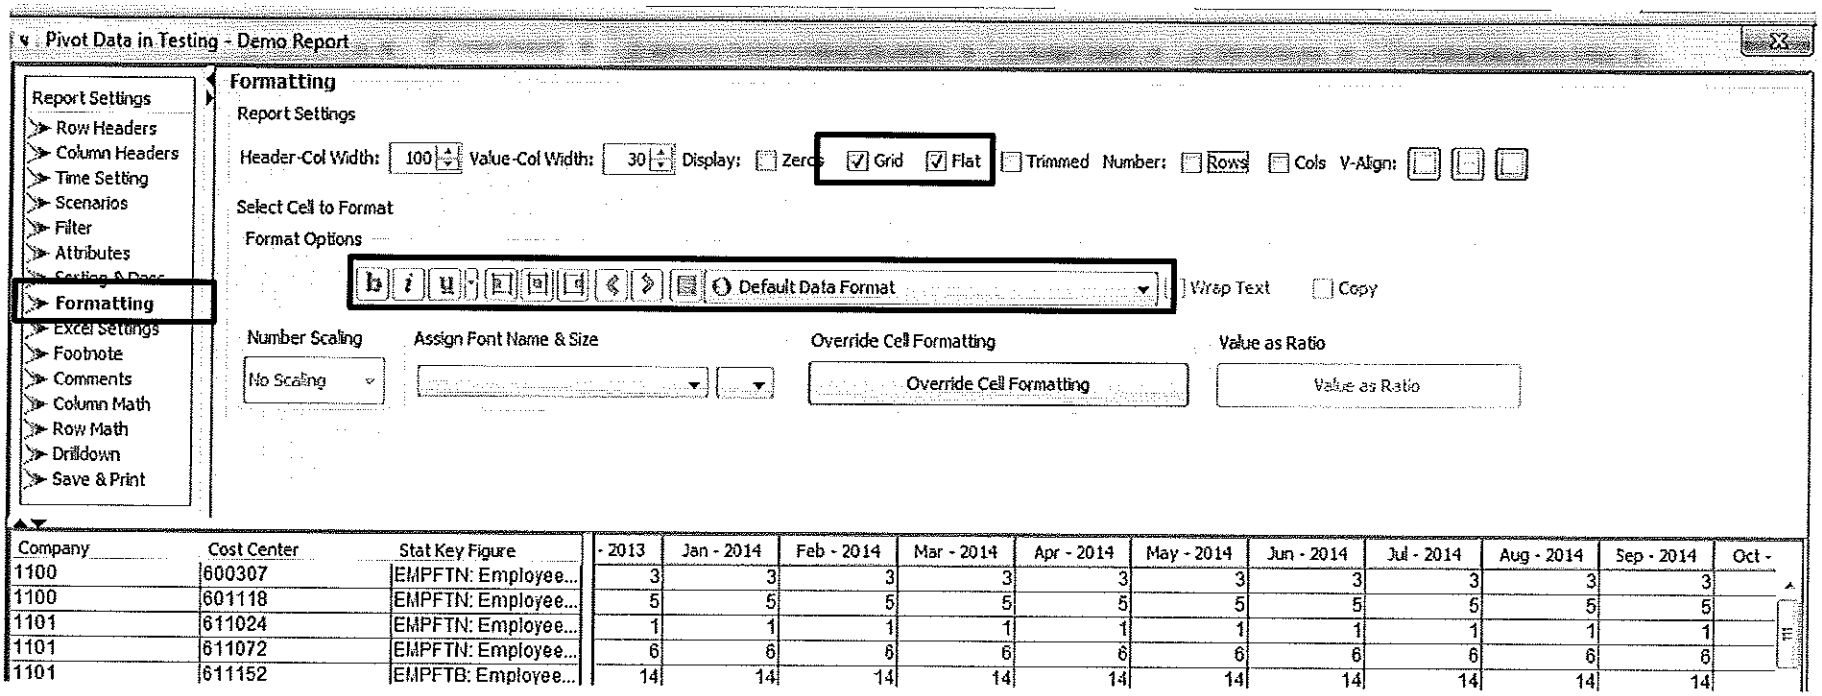
Create Reports Screen – Adding Column Headers



- Add Column Headers to view the time data.
- You can add additional columns to total the time period by checking the "Show Total" box.

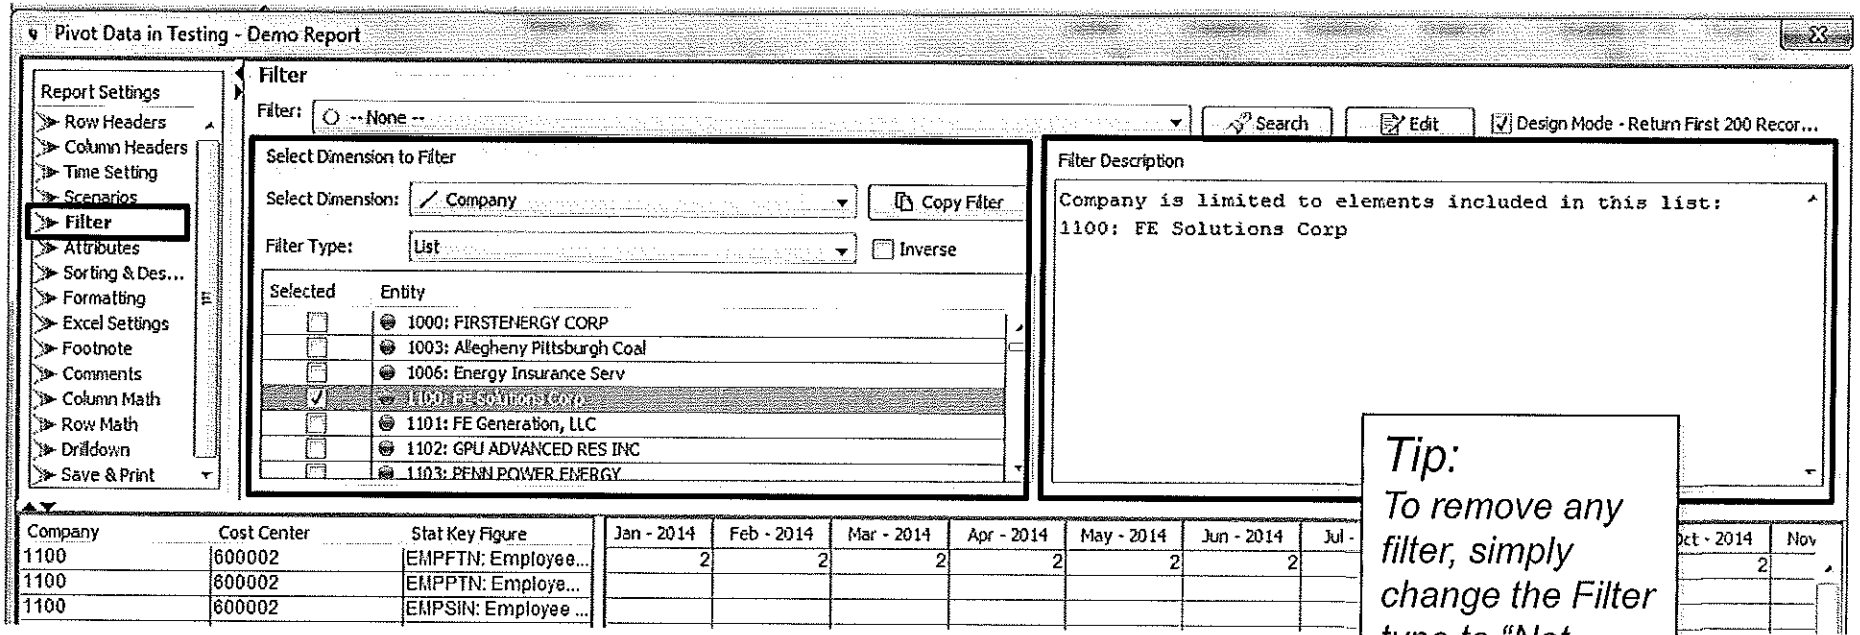
Create Reports Screen – Changing Row Value Descriptions

- From the "Sorting and Descriptions" chevron, you can toggle a row header to display the "Name," "Code," or both values. E.g. The company code named "FE Solutions Corp" has a code of 1100, and either or both values can be displayed.



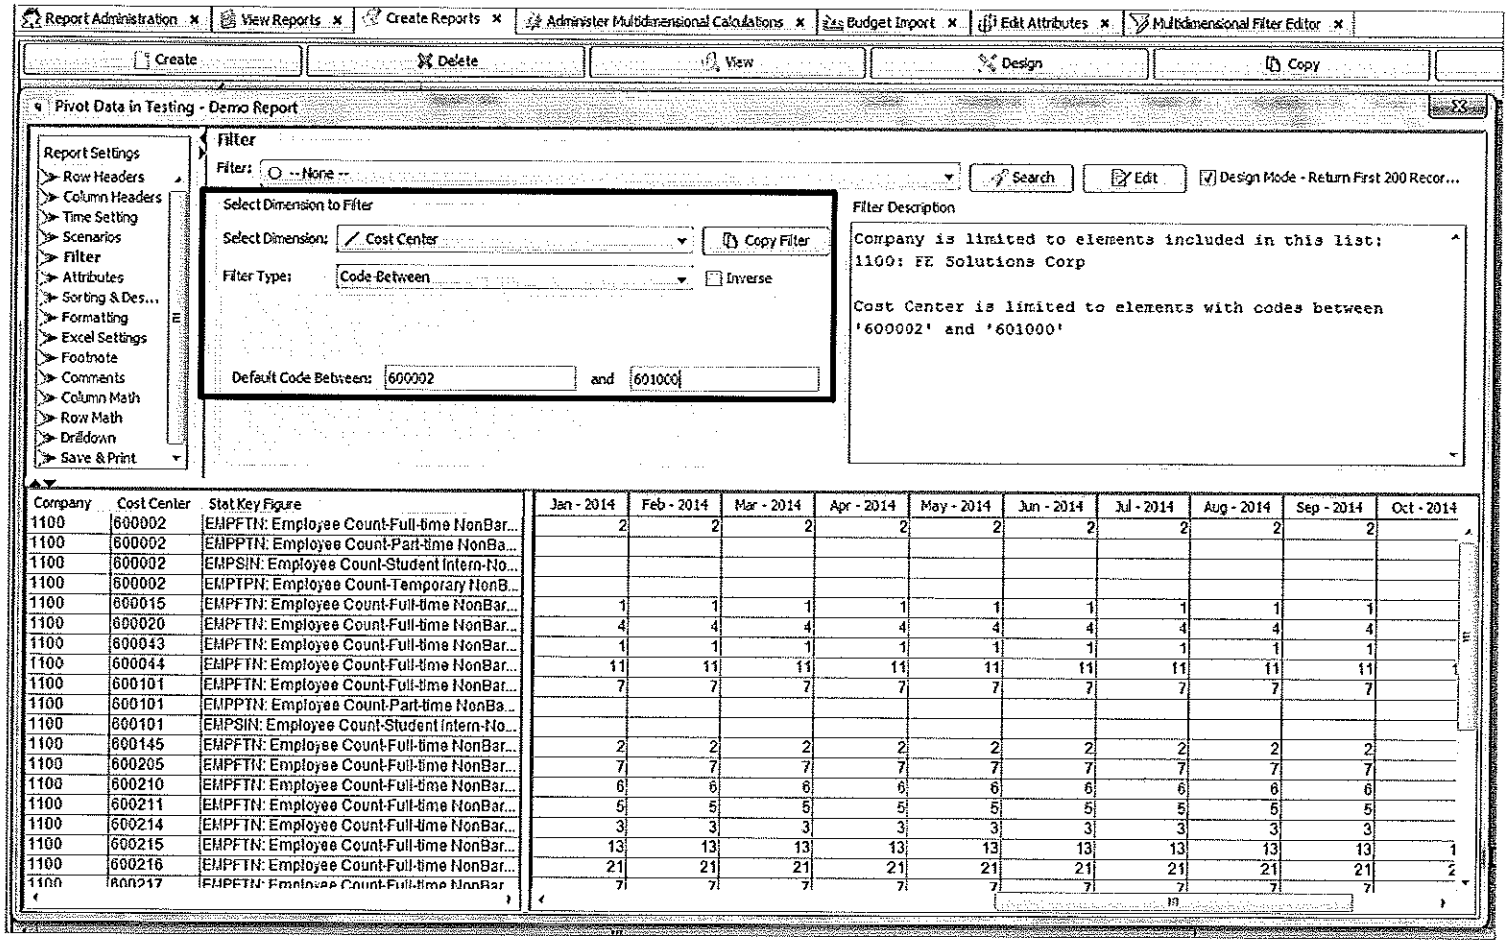
- The Filters in the following section work off of the "Code" values.

Tip:
All of the features in the Report Configuration (chevrons) can be turned on and off by the Report Administrator.



Create Reports Screen – Changing Formatting

- You can change the formatting to add grid lines, flatten out the row headers, etc...
- You can change the level of precision on the time data by clicking on a cell and changing the menu from "Default Data Format" to the desired format.

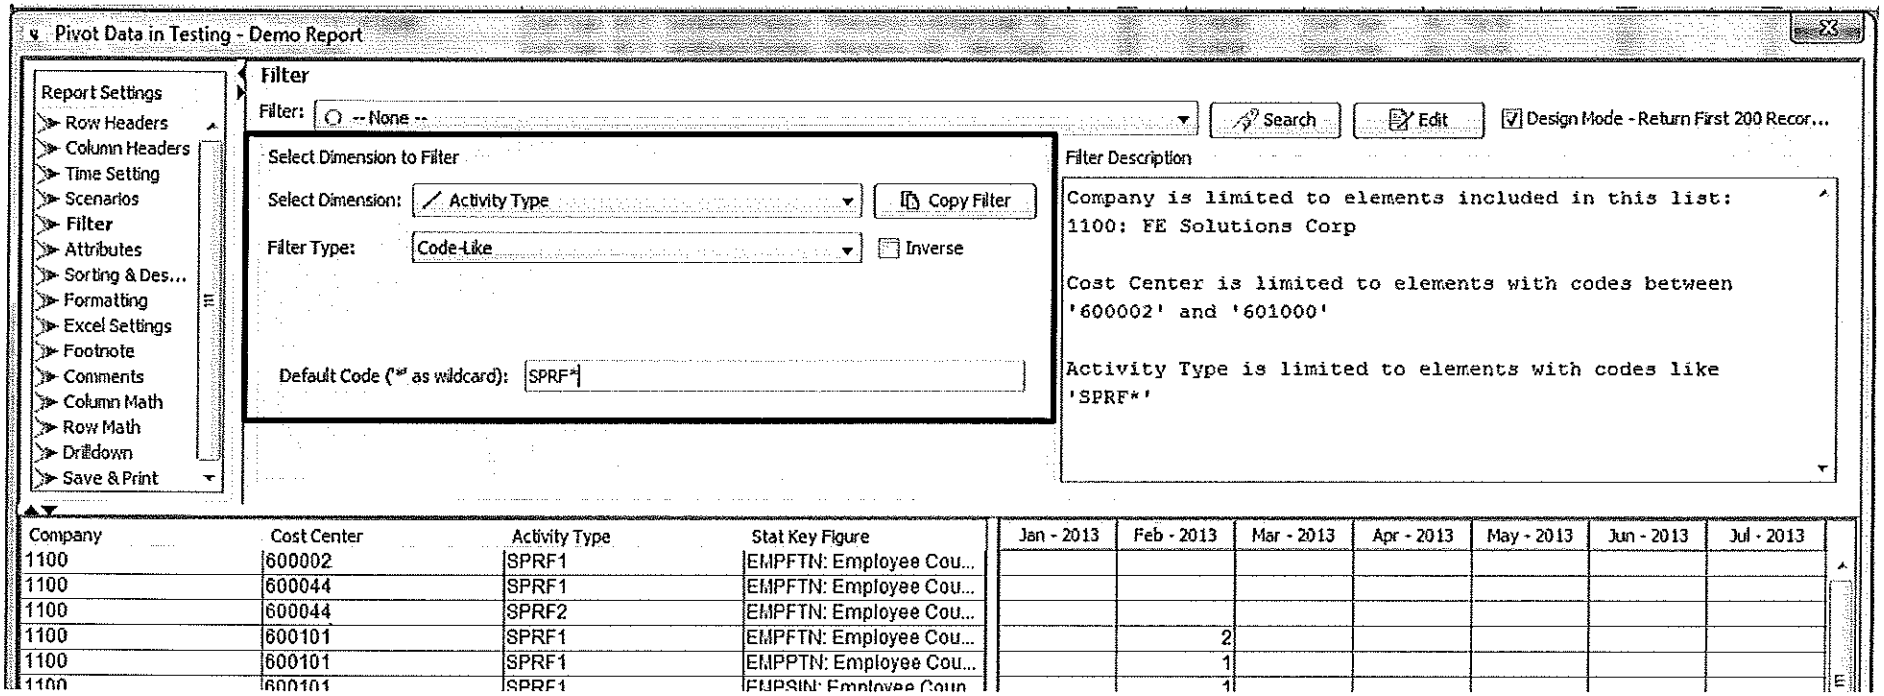


Create Reports Screen – Adding Filters (List Type Example)

- The Filter menu is for selecting Named Filters defined in the "Multidimensional Filter Editor" screen.
- There is a simple filter editor that allows you to select a dimension (one of the row headers) and select a filter type (list, tree, attribute, range, code-between, and code-like).
- The example pictured is an example of a List type filter on Company. Company 1100 is selected from the list and is described in the Filter Description box.

Create Reports Screen – Adding Filters (Code-Between Type Example)

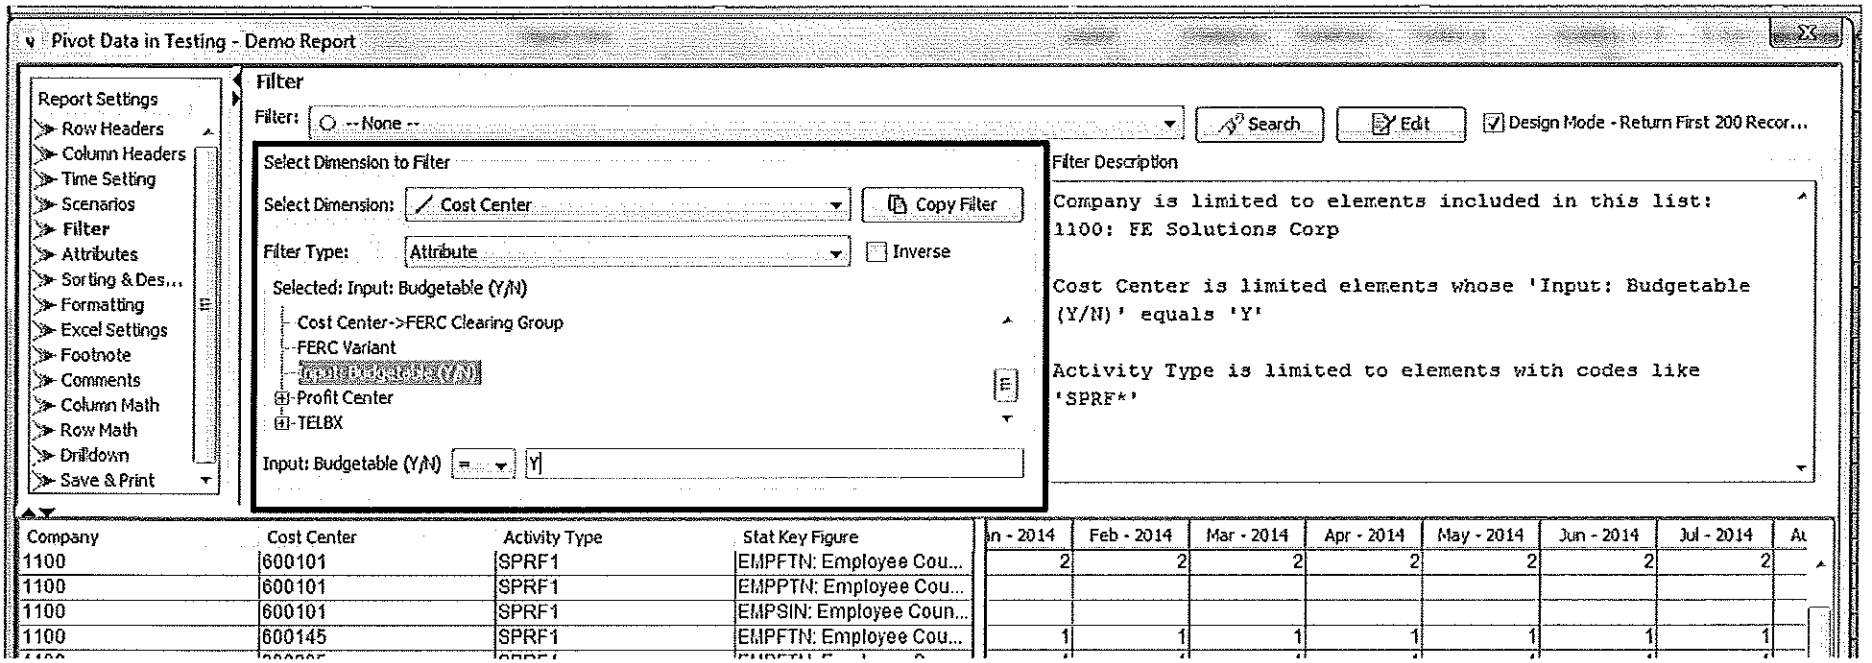
- The example pictured is an example of a Code-Between type filter on Cost Center range. Cost Center Ranges from 600002 to 601000 is filtered.
- Note that the previous Company List type filter is still being applied



Tip:
The Filter Description window will show which filters are being applied.

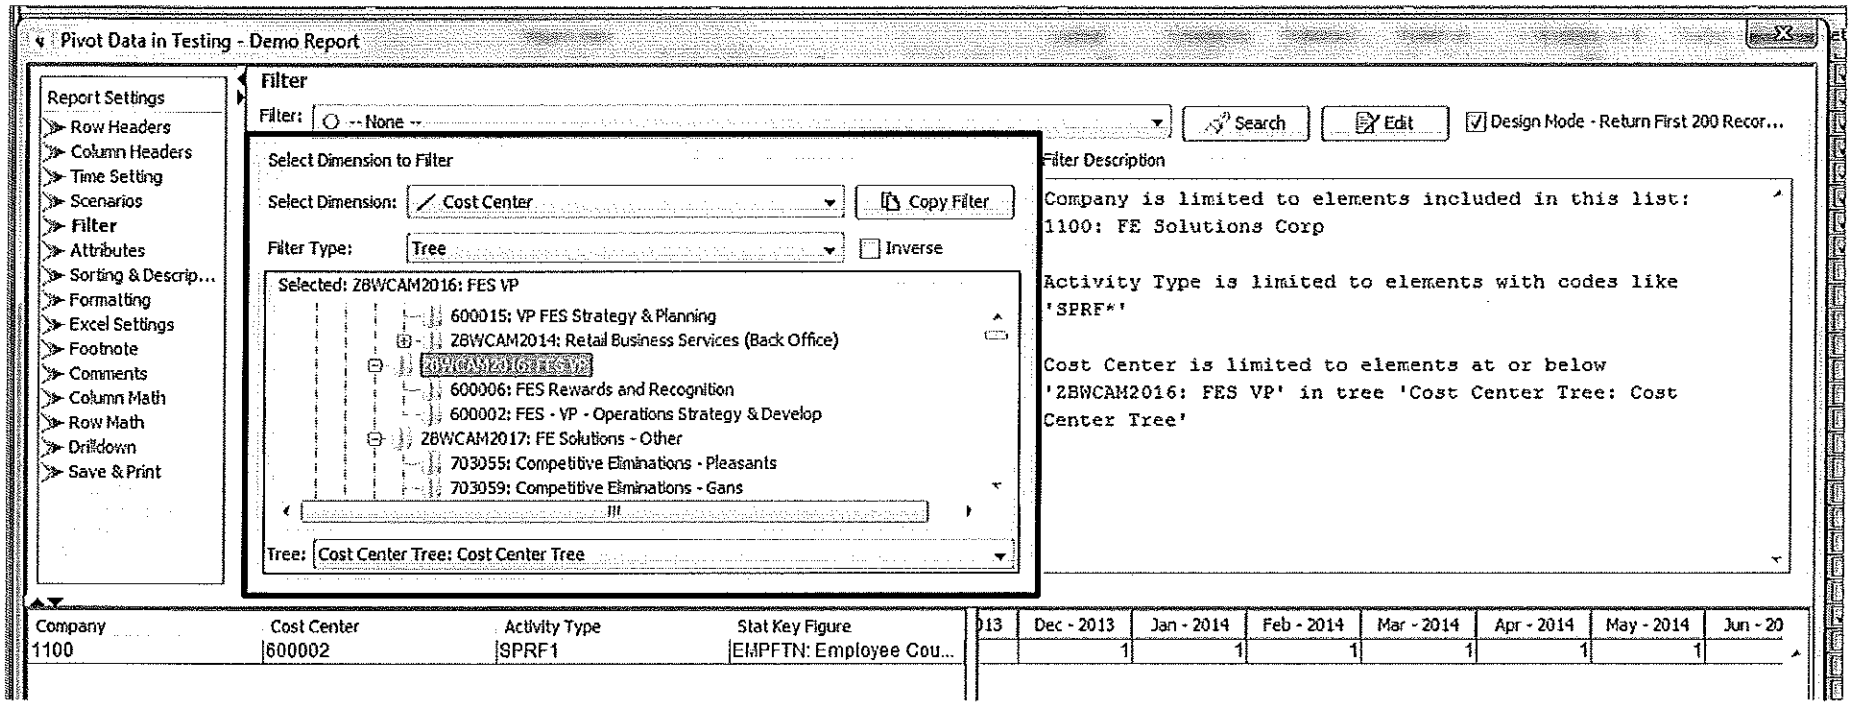
Create Reports Screen – Adding Filters (Code-Like Type Example)

- The example pictured is an example of a Code-Like type filter on Activity Type range. Activity Types matching the pattern "SPRF*" are filtered.



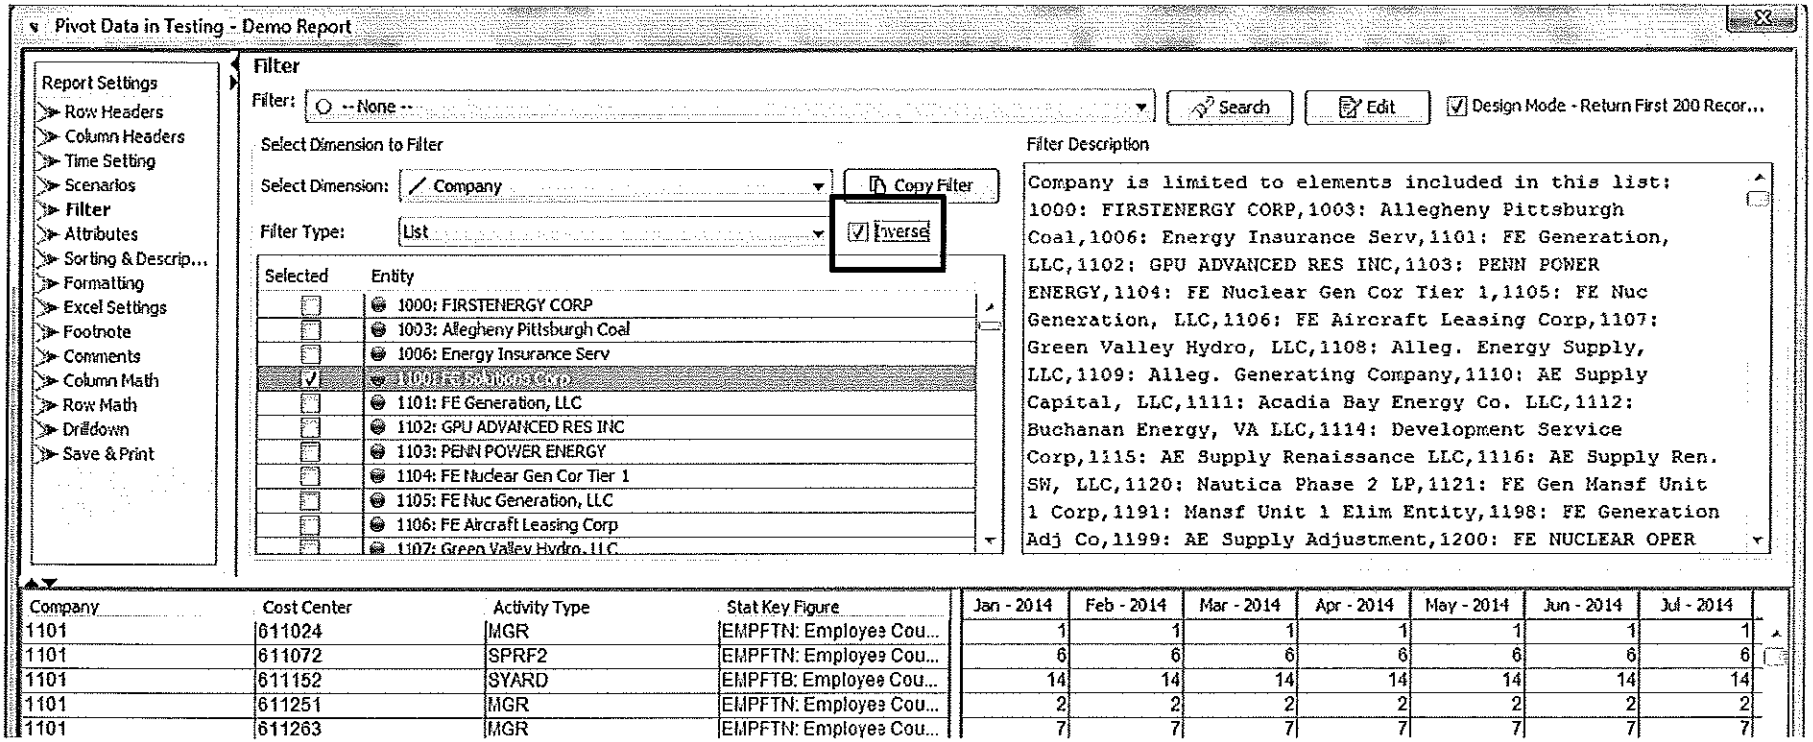
- The wildcard "*" denotes that any characters that <u>follow</u> "SPRF" will match the pattern. "SPRF1" and "SPRF2" match the pattern. "SPFR" would not match nor would "123SPFR" due to the placement of the wildcard character.

Create Reports Screen – Adding Filters (Attribute Type Example)



- The example pictured is an example of an Attribute type filter on Cost Center. The filter is checking against the value of the Cost Center's "Budgetable (Y/N)" attribute to only include Cost Centers where this attribute = "Y" It is also possible to use other operators such as >, >=, <, <=, or <> (not equal)

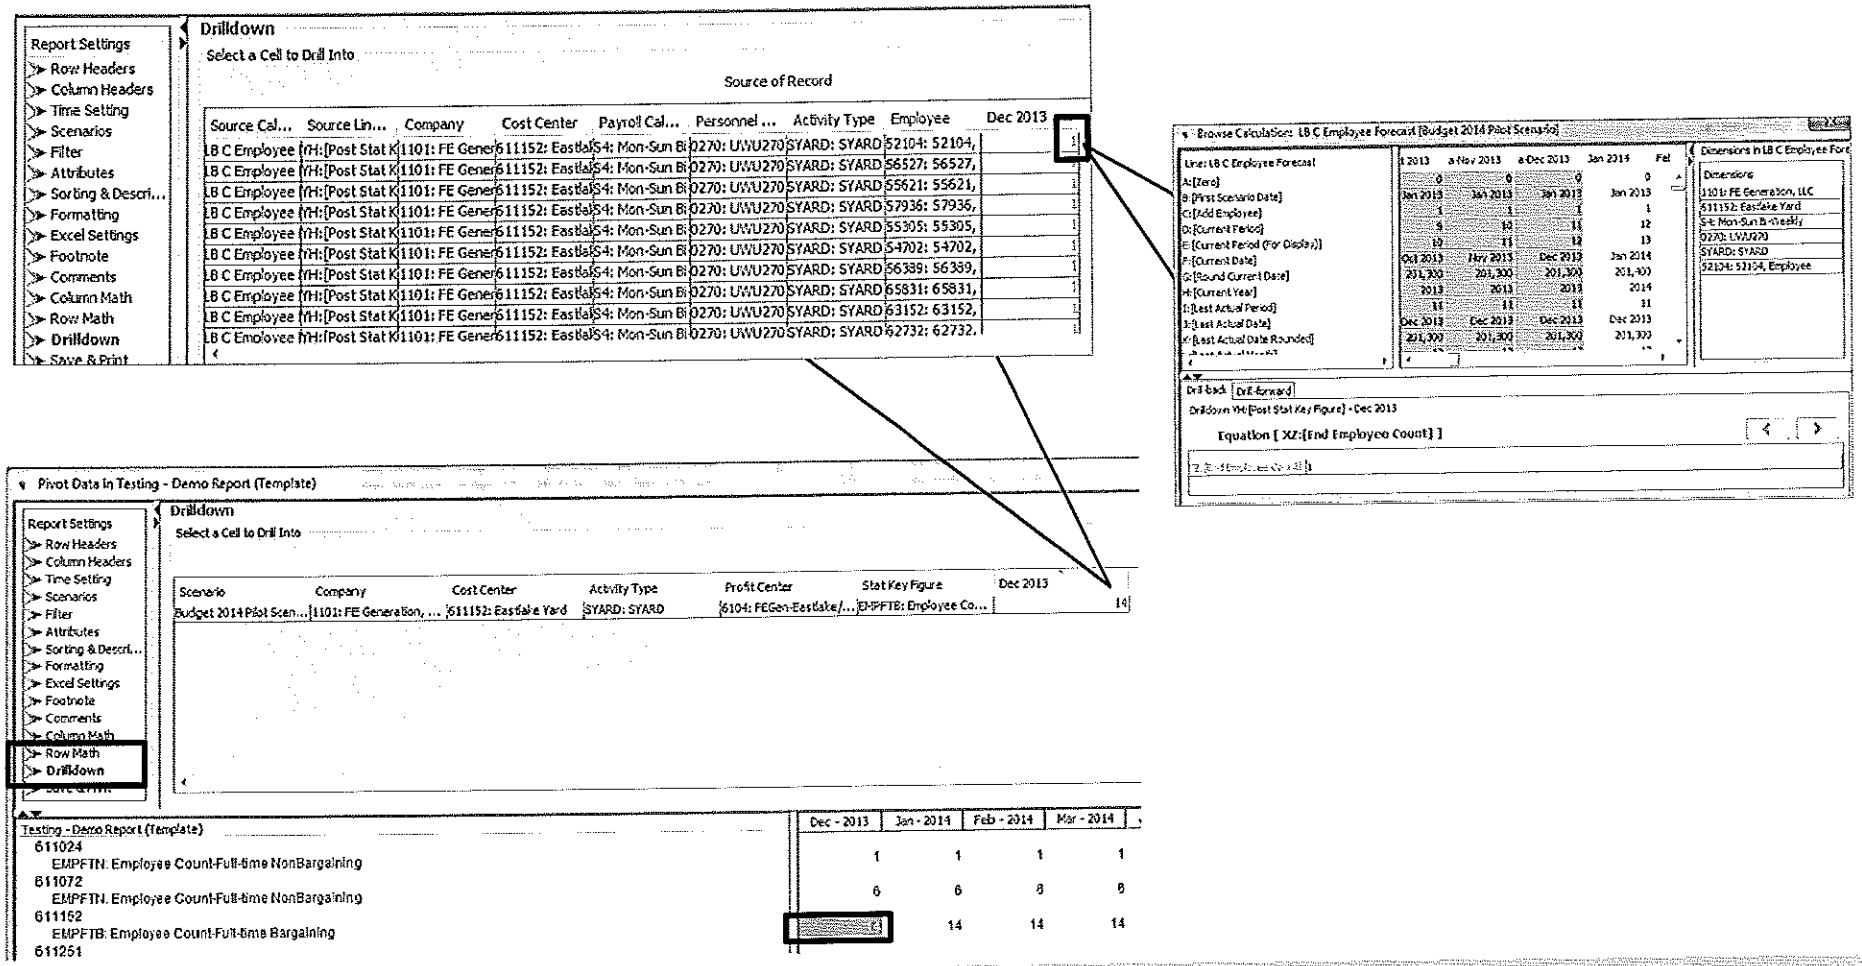
- Note that although the previous filters are still being applied, the Attribute filter on Cost Center has replaced the Cost Center Range type filter.



Create Reports Screen – Adding Filters (Tree Type Example)

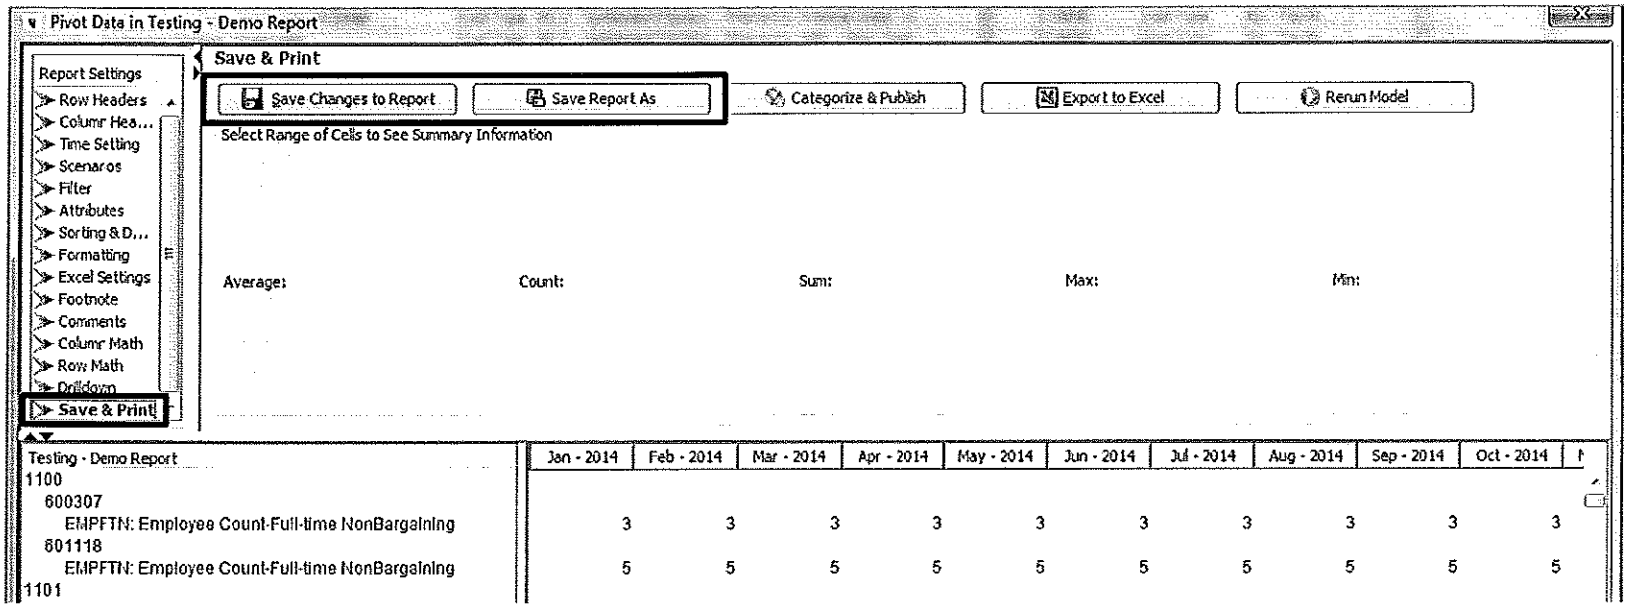
- Tree filters can only be used on hierarchical elements like Cost Centers. The filter will include any element that appears at or below the selected node on the tree structure.
- Note that although the previous filters are still being applied, the Tree filter on Cost Center has replaced any other Cost Center filters.

Create Reports Screen – Inverse Filters



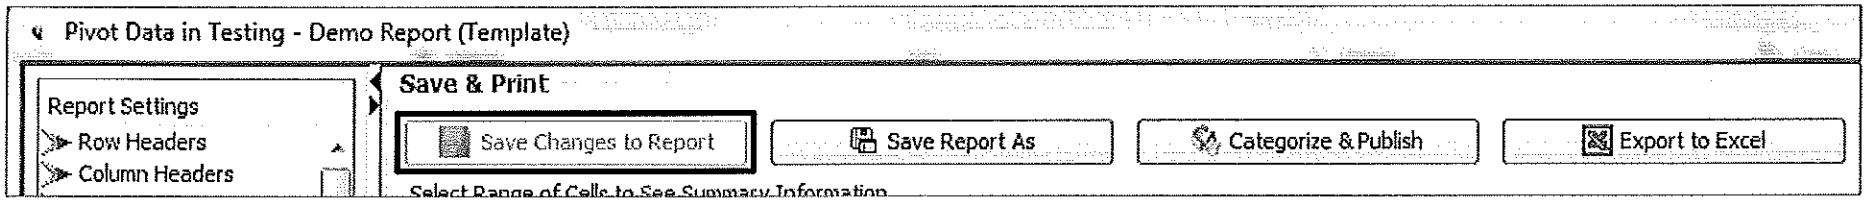
- For any Filter type, you can inverse the filter logic by checking the "Inverse" box. E.g. By inversing a Company List filter type set to "1100 - FE Solutions Corp", the results will include every company in the data set EXCEPT the company selected.

Create Reports Screen – Using Drill Down



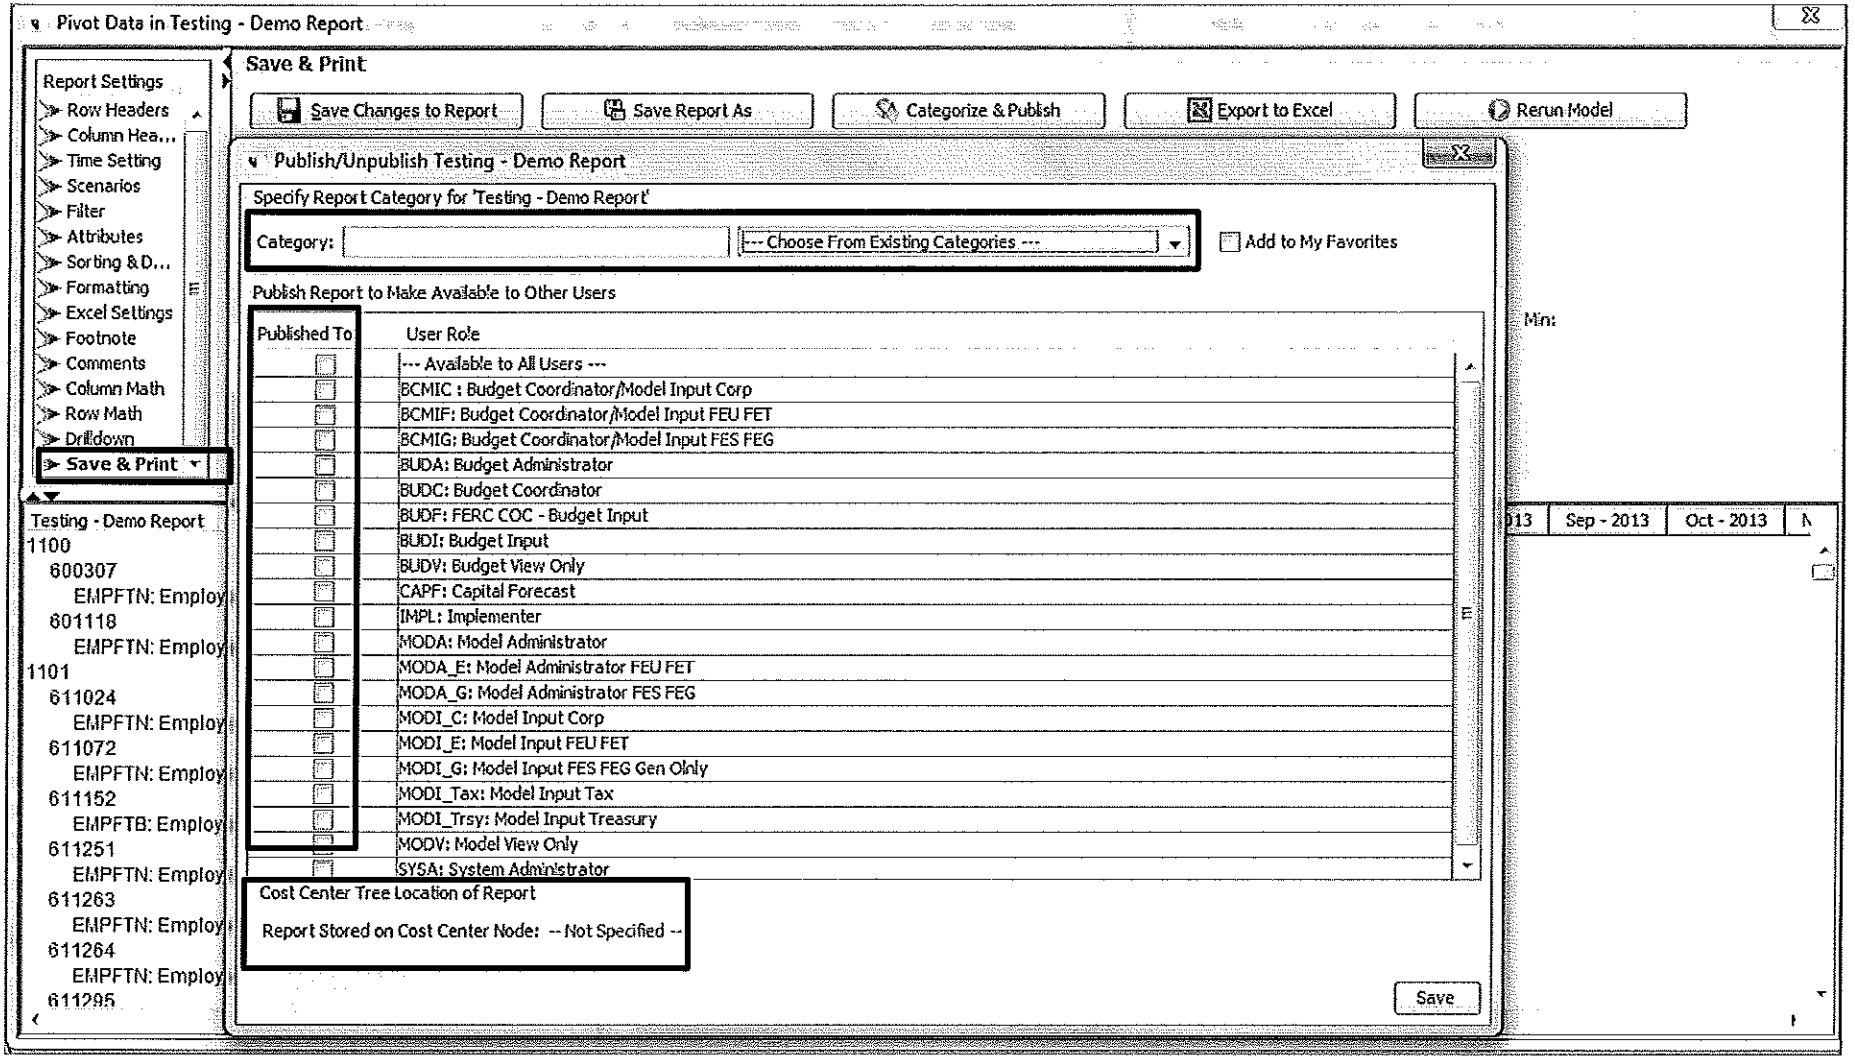
- By selecting the Drill Down chevron, you can drill down into the data and trace the data back to the calculation, formula applied, and constituent data.

- Highlight the data cell and click the linked values to keep drilling back to the data source.

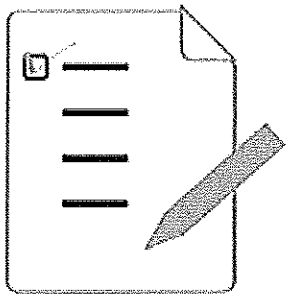


Create Reports Screen – Save and Print Screen

- If you are editing a previously configured report, you can save changes provided that the report is not locked and the "Save" function is enabled by the Report Administrator.



- If you are editing a locked "Template," use the "Save Report As." The "Save" button should be disabled for all Locked reports.

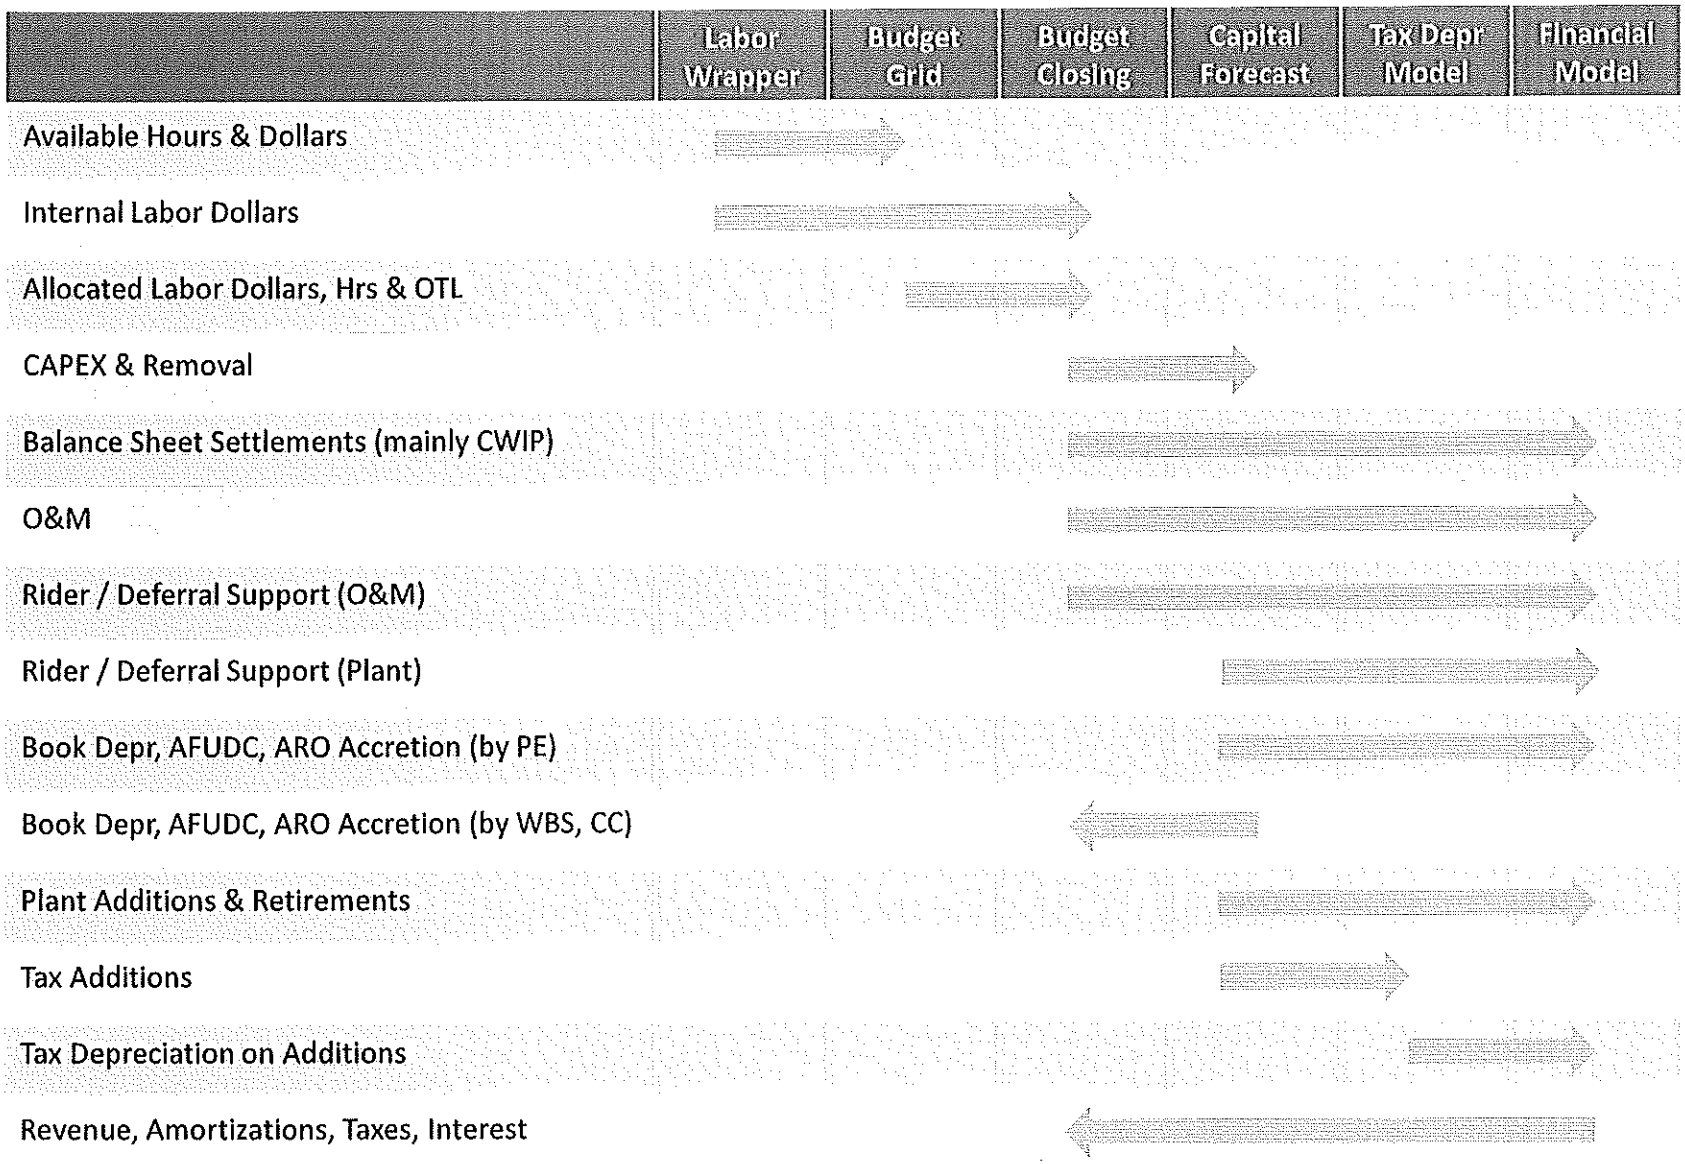


- Some reports will be Read-Only and all Save functionality will be disabled by the Report Administrators.

Create Reports Screen – Publishing Reports

- Push the "Categorize & Publish" button, and select or create a Category.
- Before saving, select the User Role checkboxes that should have access to the report.
- Be aware of your Cost Center Tree Context since your report will inherit it.

Exercise #3 – Reporting



- Select View Reports and a category
  - Run various reports and review the output for selected areas

- Select Create Reports
  - Select dataset view
  - Create report name
  - Select the various reporting chevrons and customize your report
    - Add column headers
    - Change row value descriptions
    - Change formatting
    - Add a filter
    - Publish report

Multi-Year Plan / Forecast

Multi-Year Plan / Forecast Overview

Multi-Year Forecast Requirements

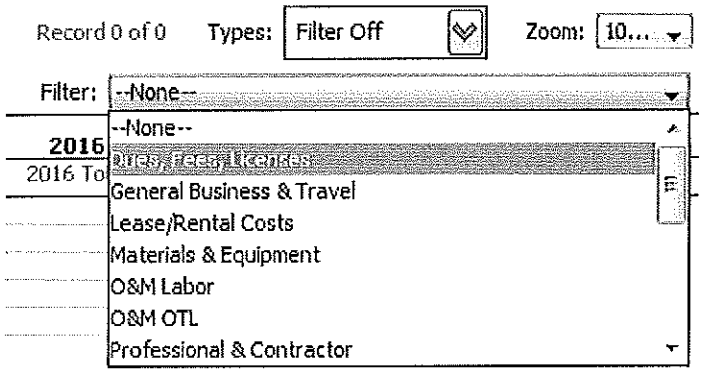
- Ability to properly run the budget close process for years 1-5 (cost collector detail needed for this to occur)
- Allows users the ability to develop a detailed forecast or adjust at a summary level
- Ability for System Administrator to set global assumptions

Filters available to target specific areas to change

A. Filter on common categories (e.g. Cost Element groupings, O&M other than labor, Labor, etc.)
B. Filter on dollars or hours
C. Grid filters for each code block data field (specific Cost Elements, specific Cost Source, etc)

Multi-Year Plan / Forecast Options

Available options to perform multi-year plan/forecast



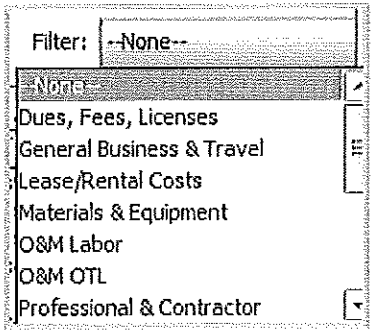
Detailed

- Labor automatically calculates for planning horizon
- Copy current year grid to Excel for entire group or specific Cost Centers (years 1-5)
- Make detailed adjustments at any level in Excel
- Copy data back to grid (grid validates)
- User can then use the "column total" feature in the grid to adjust the forecast

Summary

- Labor automatically calculates for planning horizon
- Utilize available filters
  - Using the cost element hierarchy, users can easily select the cost element node and then make adjustments to the related code block (e.g. O&M non-capital) or create filters based on the income statement groups
- User can then use the "column total" feature in the grid to adjust the forecast

Users can view filters in the Budget Grid by using the drop down to select a group



Current and Multi-Year Forecast Filters

Current and Multi-Year Forecast Filters

- Grid filters are available to assist with the current and multi-year forecast process
- Filters utilize various nodes within the internal income statement cost element hierarchy
  - The cost element hierarchy is maintained in SAP
  - Transaction KAH3 – Cost Element Group = ZBWIIS0000
- Additional filters include leveraging attributes on master data
  - Projects and WBS Elements
- When a grid filter is selected, only the data that matches the filter will display
  - Example: Labor – only displays grid combinations that contain labor cost elements

- Budget Grid
  - Select a grid filter
  - Edit on screen or Excel

Roles and Responsibilities

Roles and Responsibilities

HRIS – (B2) 1

- Create HR information file for interface

IBP – (B2) 2

- Create scenario/cases
- Maintenance of hierarchy trees
- Monitoring/validation of UIPlanner interfaces (on-demand)
  - Master data
  - Companies
  - Power Plant

Business Services / Planning & Anaysis / Operations – (B2) 3

- Input controlled and assigned labor (overtime), OTL and Capital dollars into UIP
- Labor pool validation

General Acct (PA) – (B2) 4

- Update of costing sheets (OH)
- Create cost center assessments, variants and cycles

IBP – (B2) 5

- Application of overheads
- Execution of settlements (Plan vs. Actual)
- Update variants in UIP (provided by GA-PA)
- Execution of assessments
- Run data validation reports
- Run financial reports
- Execution of FERC process
- Run FERC derivation validation reports

FEU Long Term Planning – (Model) 6

- Run Rider/Deferral reports
- Validate results and review with Acctg.

Property Accounting – (Model) 7

- Powerplant interface validation
- Existing plant depreciation calculation validation
- Existing plant AFUDC calculation validation
- Plant addition depreciation/AFUDC calculation validation

Treasury – Debt/Interest (Model) 8

- Update debt transactions, debt amortizations and reacquired debt projections

Tax Planning (Model) 9

- Validation of apportionment factor interface
- Unitary tax calculation validation
- Schedule M item confirmation
- Existing and additions tax depreciation and deferred tax calculation validation
- Tax sharing agreements

Roles and Responsibilities – Labor Planning

- Labor pool preparation – gross payroll, unproductive/productive hours and activity pricing will be developed within UIPlanner
- Finalize labor pool – shift differentials, headcount adjustments
- Labor pool validation – balance labor among capital and cost center, lock budget node

	Labor Pool Prep	Finalize Labor Pool	Develop & Enter Labor for Cost Center	Develop Labor for to Blankets	Enter Labor for Blankets	Develop Labor for Specifics & Programs	Enter Labor for Specifics & Programs	Final Labor Pool Validation

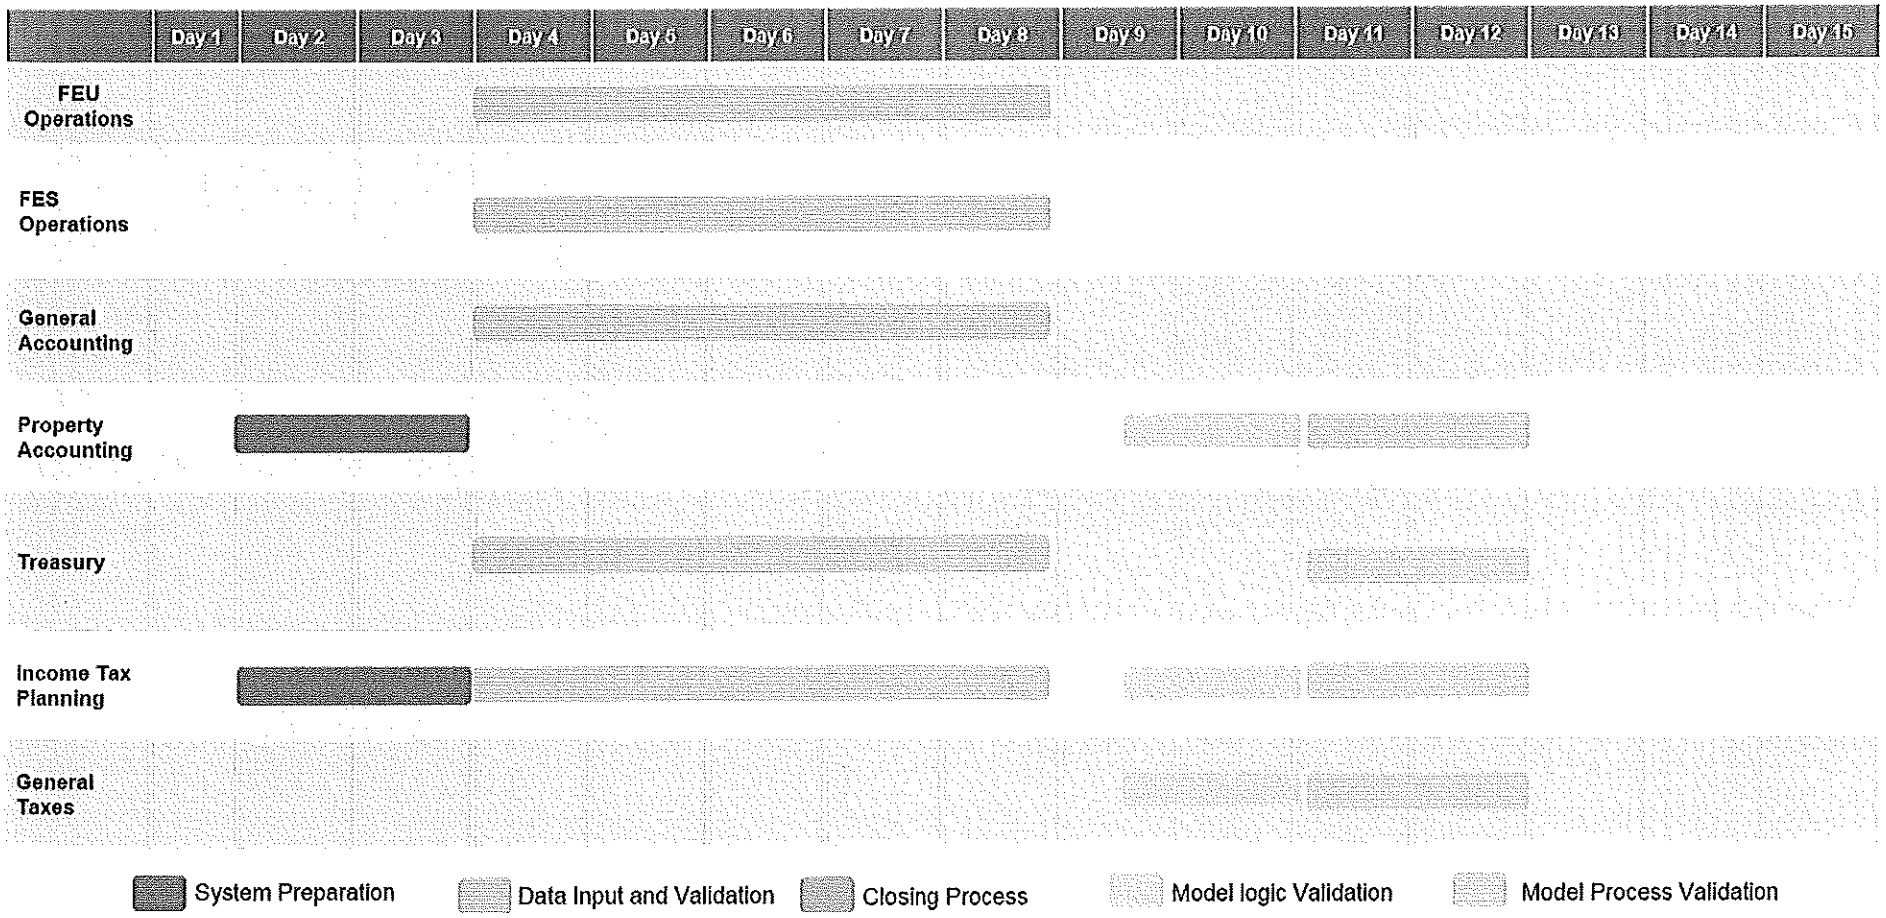
Operations							FES, FEU/FET	

Roles and Responsibilities – OTL Planning



- Reference – users will review previous forecast and actual data within UIPlanner to aid in the development of current forecast
- Development and Validation – users will utilize budget templates or UIPlanner directly for creating and executing reports to ensure data is correctly entered

	Reference Actuals / Prior Forecasts	Develop and Enter Cost Center OTL	Develop Blankets & Outage OTL	Enter Blankets & Outage OTL	Develop Specific & Program OTL	Enter Specific & Program OTL	Final OTL Validation

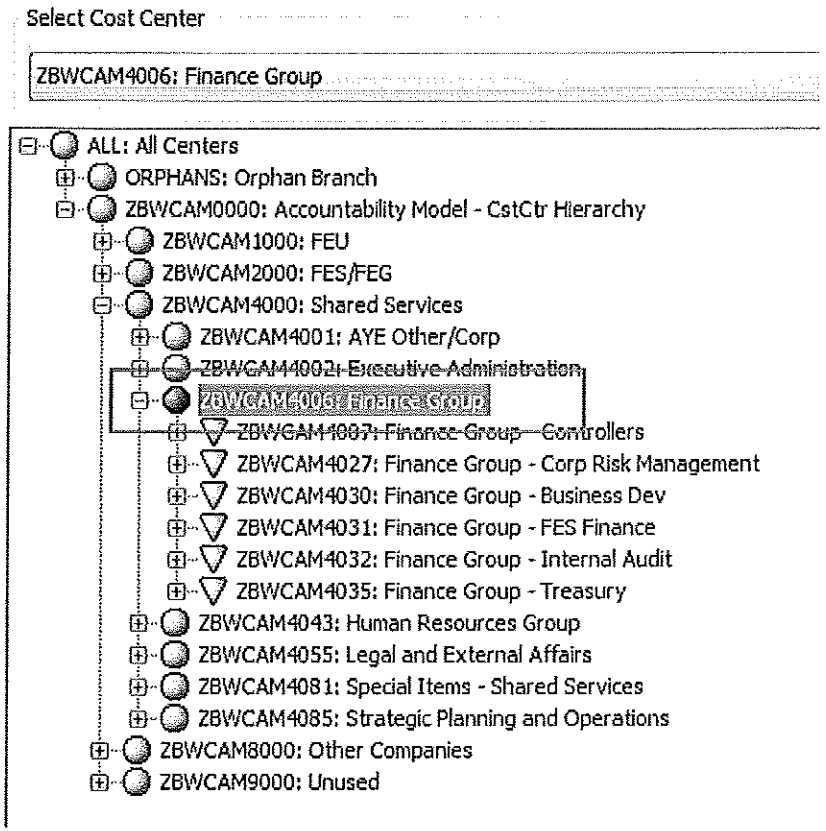
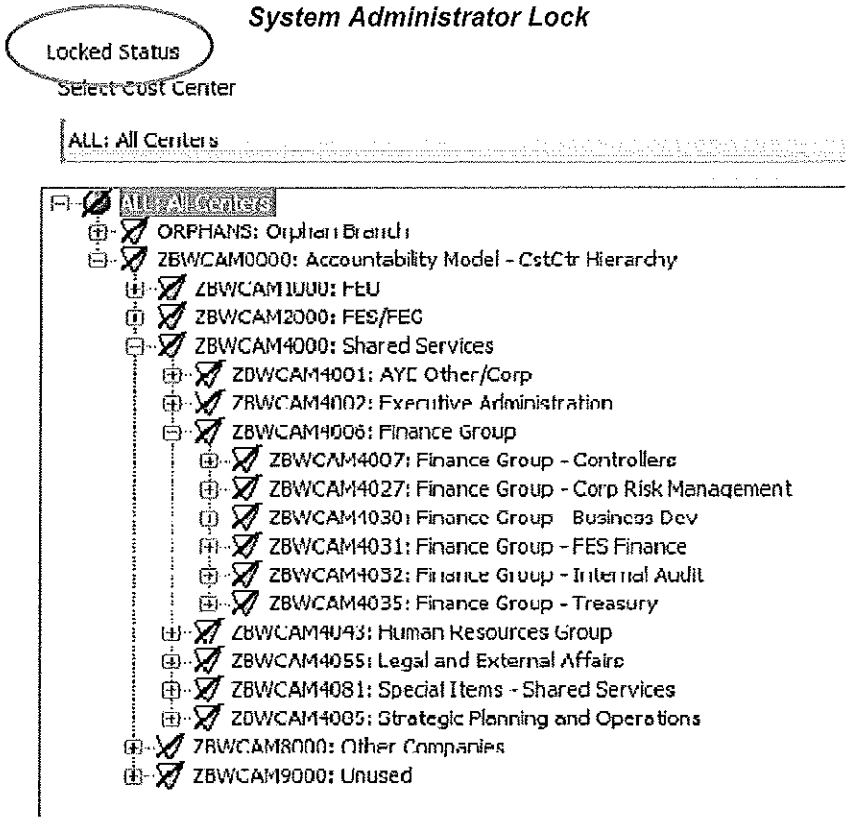
UIP Work Flow Schedule

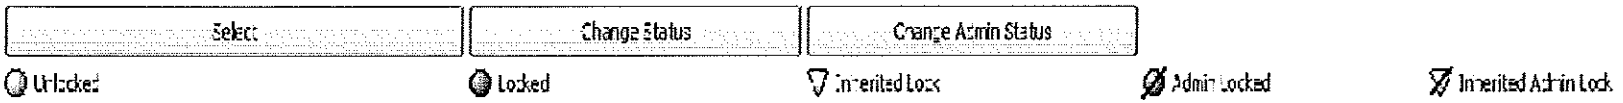
UIP Work Flow Schedule



Cost Center Locking



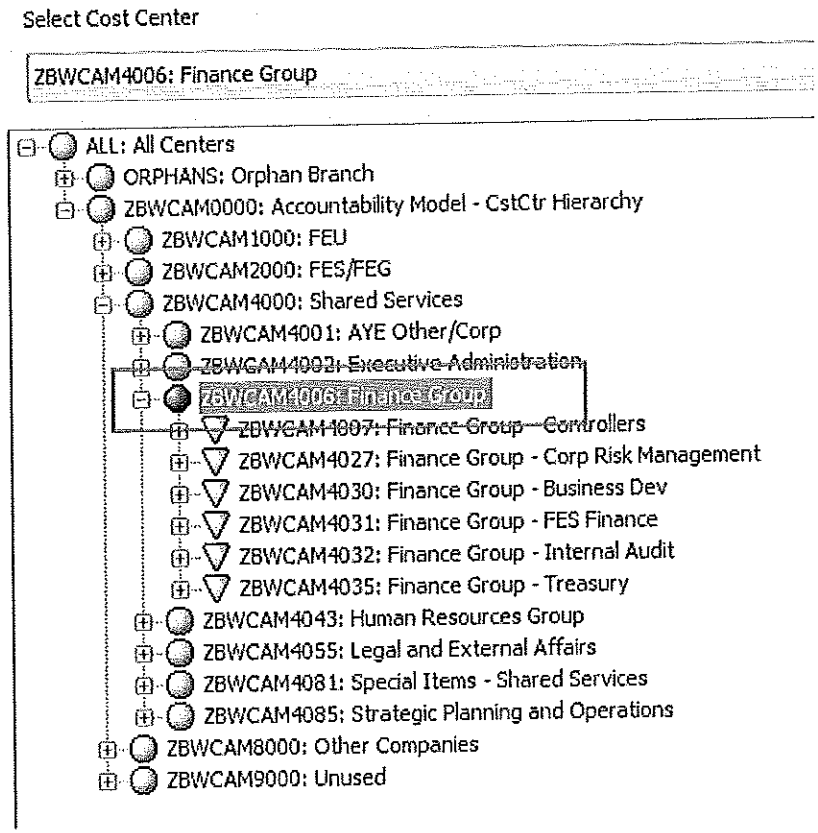
Cost Center Locking Overview

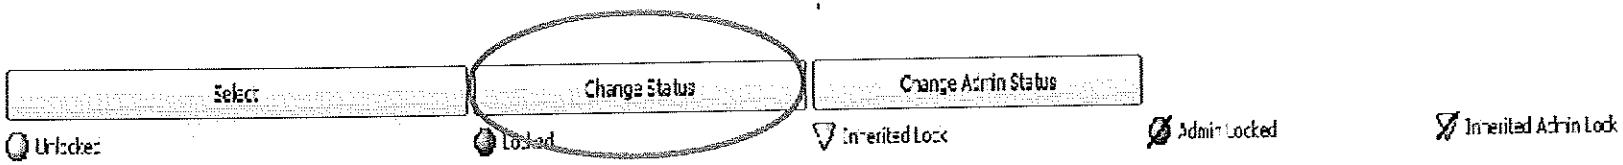


- Budget Administrators can lock their cost centers prior to system processing
- Cost Center locking will serve as part of the budget, forecast and plan approval process
- System Administrator can view user status and perform a global cost center lock
- Cost Center locking also prevents users from entering data to the grid

Budget Owner/Budget Administrator Lock

System Administrator Lock





Cost Center Locking

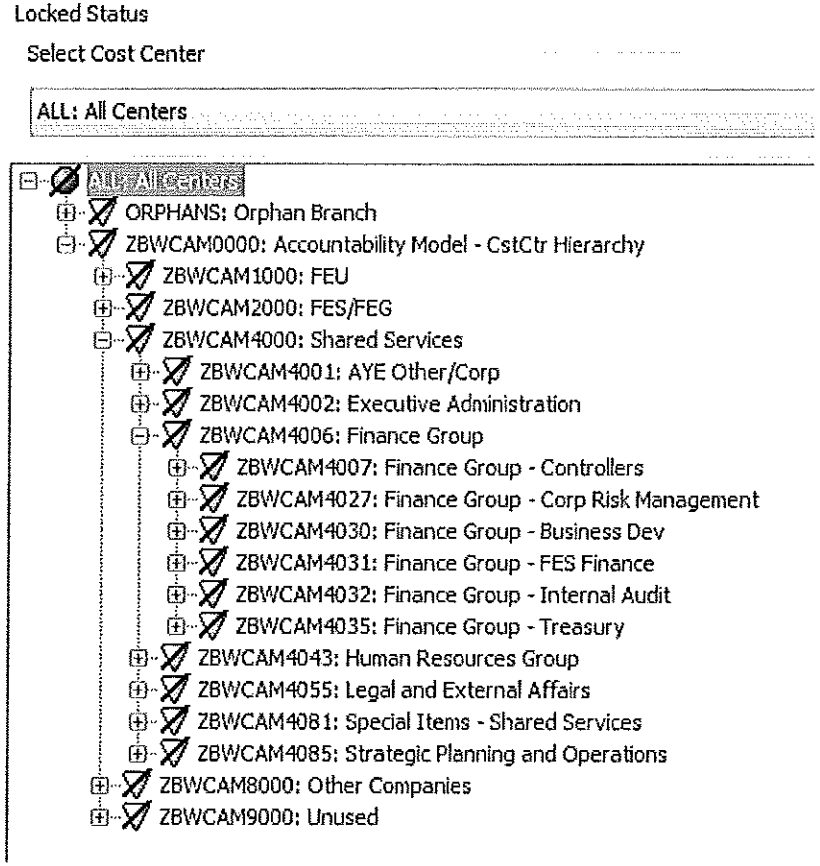
1. Highlight the cost center or cost center node you want to lock
2. Click **Change Status** button on bottom of screen
3. The selected group will lock at the node level (red circle) and perform an inherit lock for all cost centers under that node. Click **Change Status** again to unlock
4. Cost center locking can also be done at the individual cost center level
5. WHEN TRAINING, PLEASE DO NOT LEAVE ANY COST CENTERS LOCKED

Budget Coordinator Lock

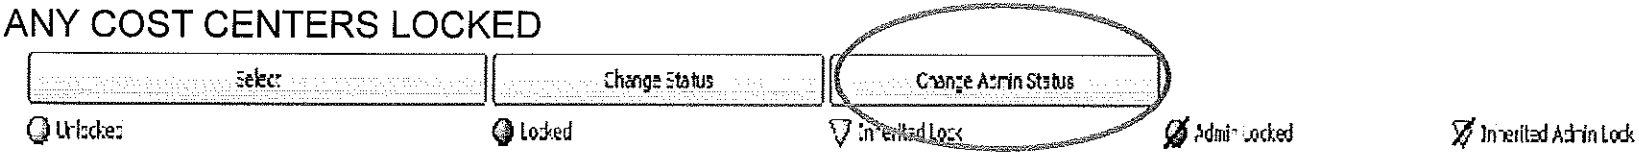
Cost Center Locking

- The System Administrator will have the ability to lock the entire system (scenario). This action would typically be done once the budget or forecast is ready to close and process

- Highlight the cost center or cost center node you want to lock

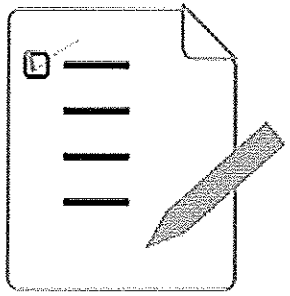


- Click **Change Admin Status** button on bottom of screen. A strike will be appear across the circle and triangles. Click **Change Admin Status** again to unlock



- The selected group will lock at the node level (red circle) and perform an inherit lock for all cost centers under that node. Cost center admin locking can also be done at the individual cost center level

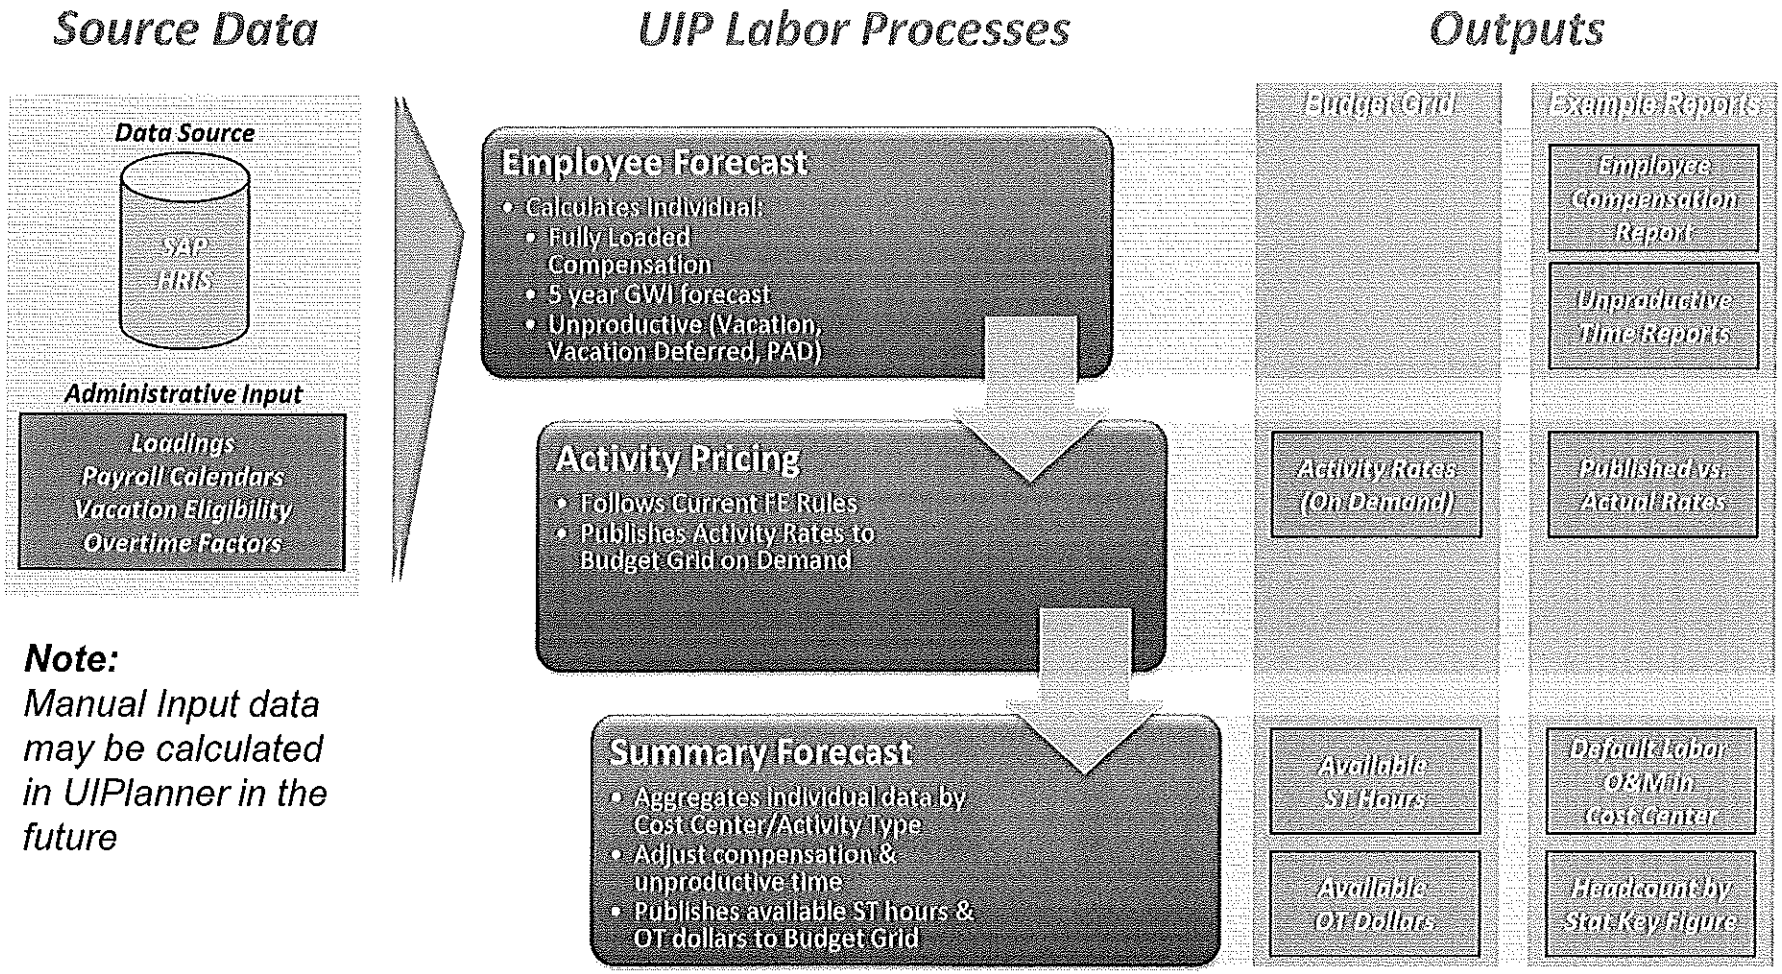
- Your security level may not allow you to do a system lock



- WHEN TRAINING, PLEASE DO NOT LEAVE ANY COST CENTERS LOCKED

System Administrator Lock

Exercise #4 – Browse Cost Center and Center Locking



Use the previous slides to perform the following tasks

- Review the new cost center hierarchy for your Business Unit/Department
- Expand and collapse the hierarchy
- Search a cost center
- Perform a cost center lock for an individual cost center or group
  - Remember to unlock all cost centers before exiting the screen

Employee Labor

UIPlanner Labor Schematic

Note:
Manual Input data may be calculated in UIPlanner in the future

The new Labor process ensures that activity rates will be available prior to the budget process while enhancing data security and transparency

Employee Labor Overview - Benefits

Edit Forecasts at Multiple Levels

- Interact with labor data and edit forecasts at the individual employee or cost center level

Activity Prices Prior to Budgeting

- UIPlanner will calculate activity prices prior to the start of the annual budget process. In addition, SAP HR data will be interfaced to UIPlanner monthly

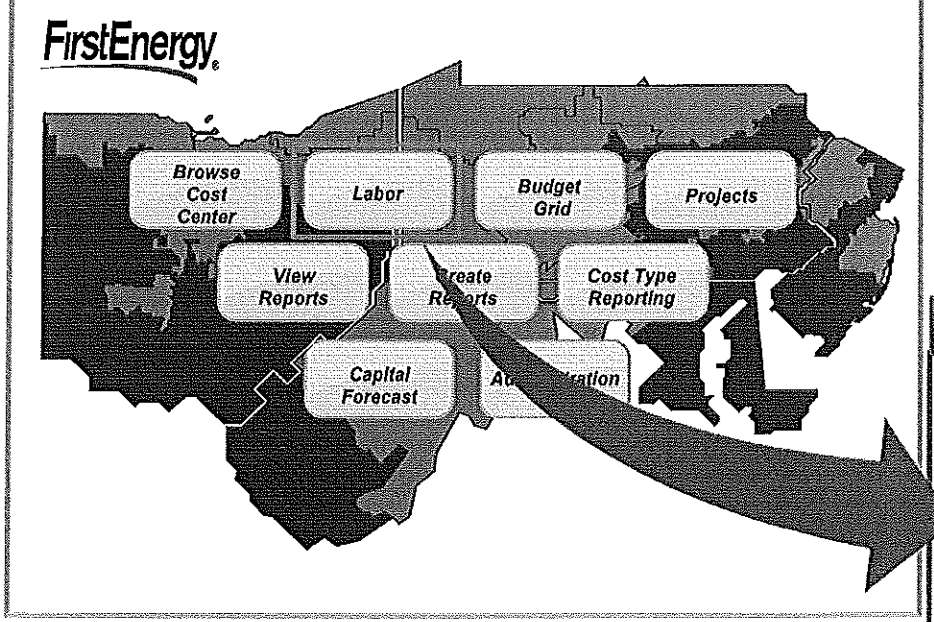
Calendars & Loadings Auto Calculated

- Additional employee information such as vacation eligibility, available payroll hours, etc… will be summarized to help facilitate building of the labor budget

Enhanced Data Security

- Access to the labor screens will be secured based on user role and business unit/department

Automated 5 Year Labor Forecast



- The correct business rules are applied producing calculated results across the planning horizon for each employee

Labor Attributes Imported from SAP

- *Employee Number*
- *Employee Name*
- *Company*
- *Organization*

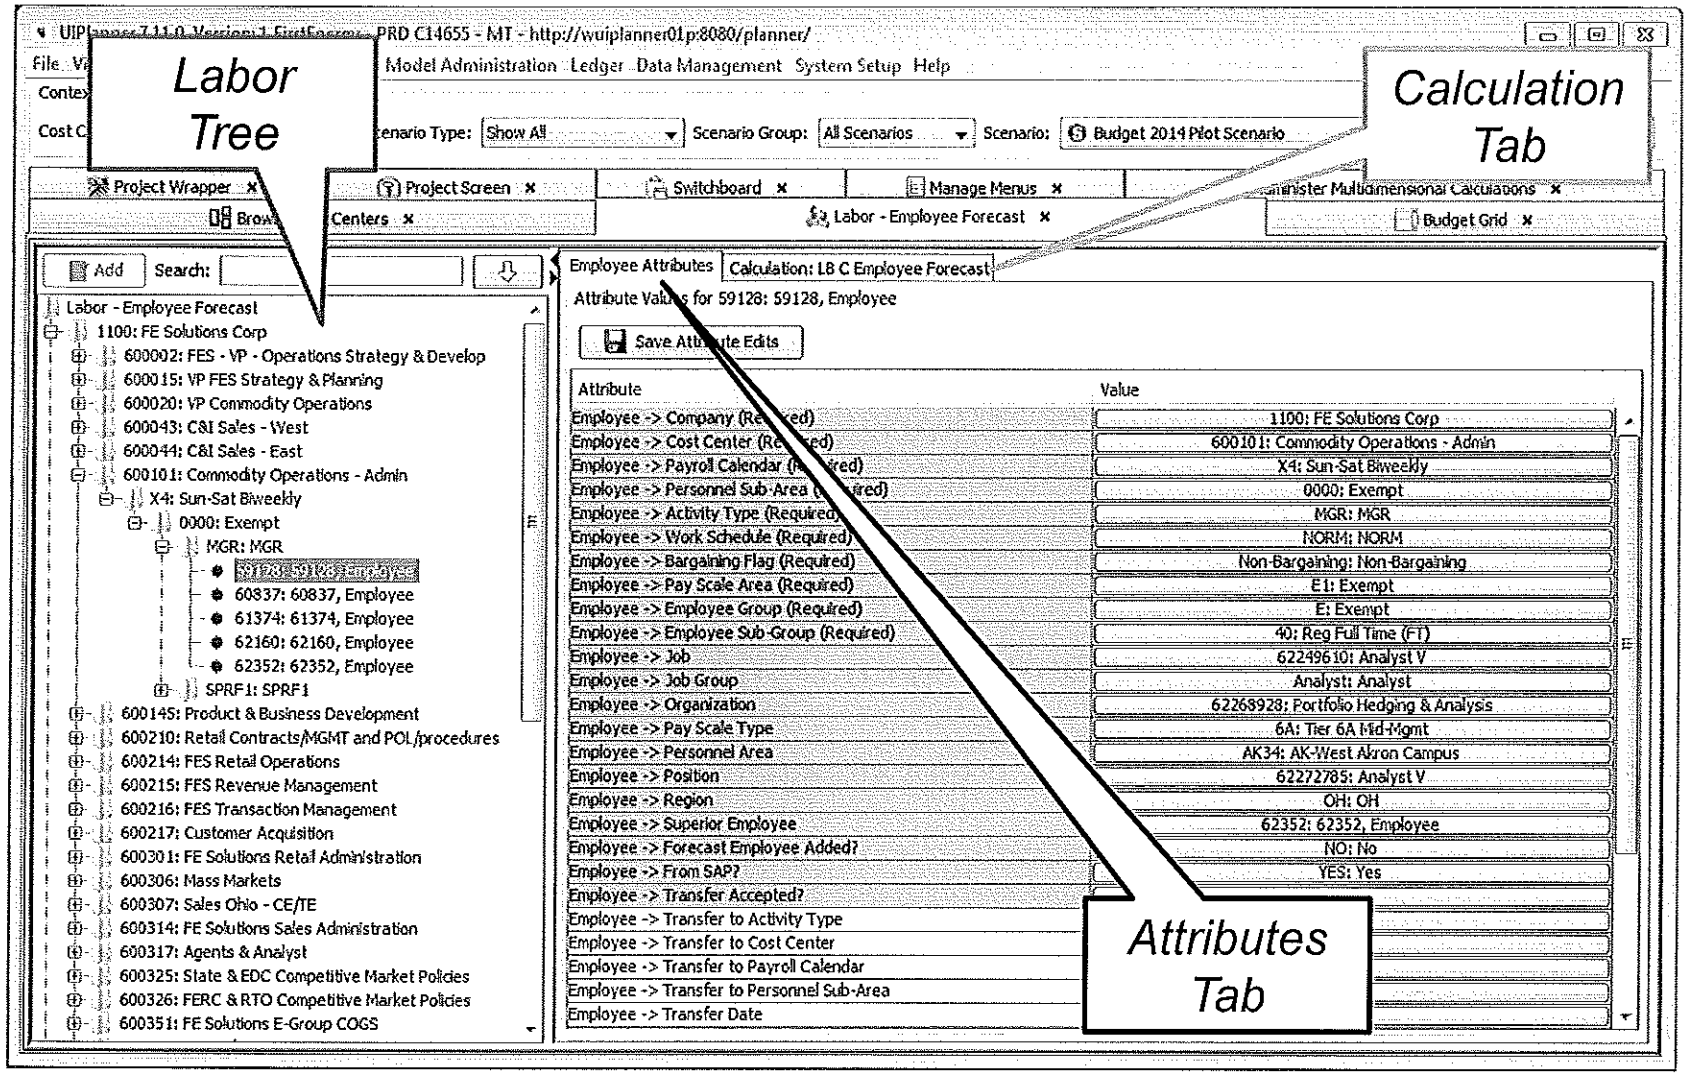
Employee Labor Overview - Navigation

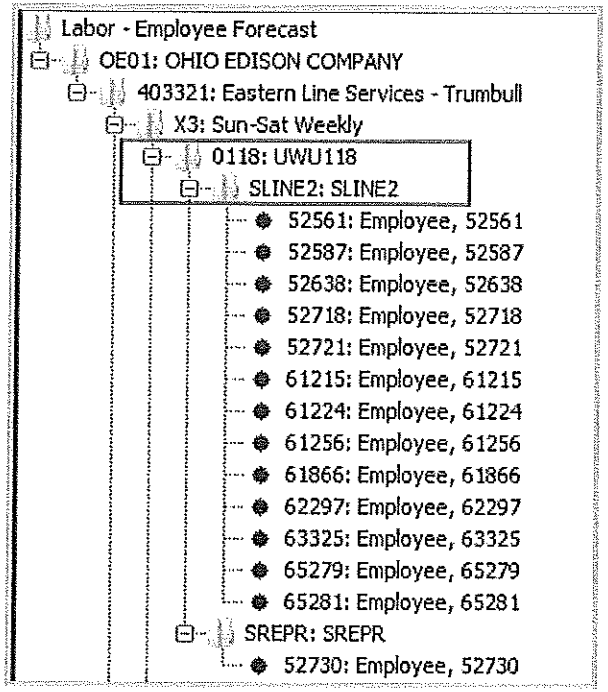
Home Switchboard

1. Click the "Labor" button to open the Labor Switchboard



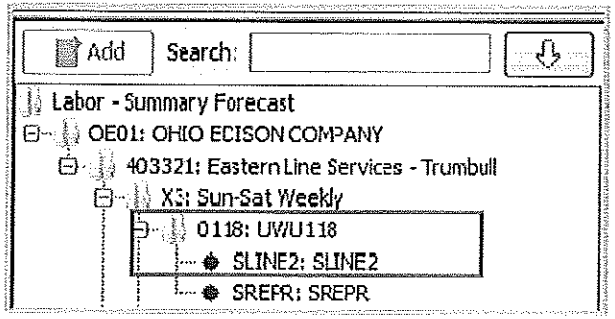
Labor Switchboard

2. Select "Browse Cost Centers" to select the center you wish to view/edit
3. Then click "Employee Forecast"
4. Then click "Summary Forecast"

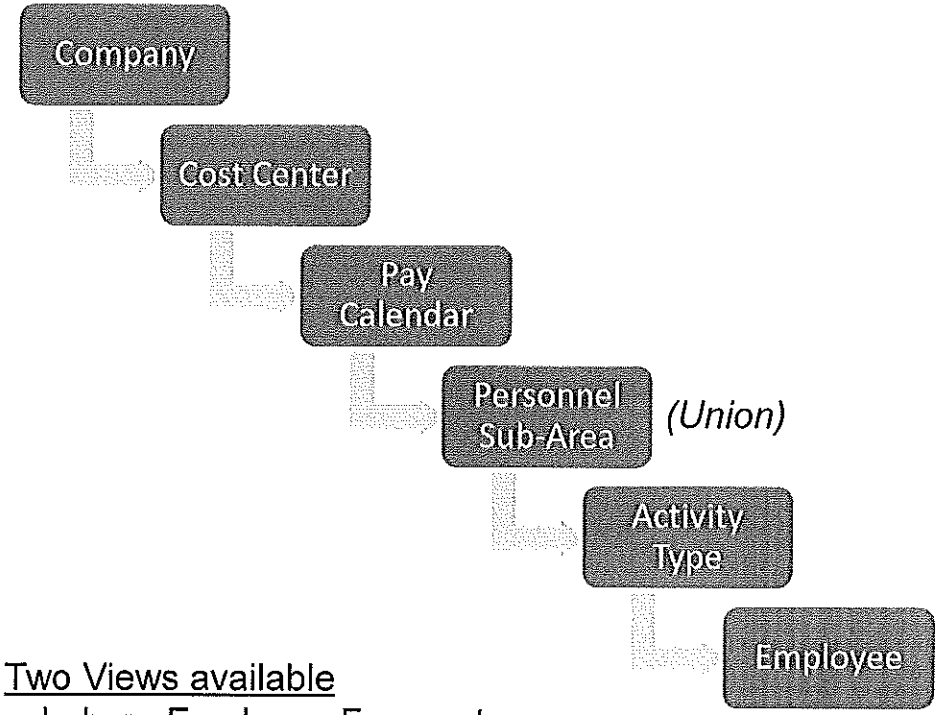


Employee Labor Overview - Wrappers

The Two Labor Wrappers have Three Main Sections



Employee Labor Overview - Trees



Employee Forecast

Summary Forecast

Labor data will be organized and presented in a tree format by:

Two Views available

- Labor - Employee Forecast
- Labor - Summary forecast

To View Data

- **Employee Forecast:** Open tree to employee level and click on an employee
- **Summary Forecast:** Open tree to activity type level and click on an activity type

Employee Labor Overview – Attributes Tab

The Employee Attributes tab contains a list of each employee's attributes including imported SAP and those that can be set by users

Three Types of Inputs

Attributes: *Opens a dropdown list of attributes*

Dates: *UIPlanner date fields open in a pop-up calendar in MM/YYYY format*

Numbers: *Numbers in UIPlanner can be entered freeform. Note SAP dates in UIPlanner are entered as numbers in YYYYMMDD format*

Employee Labor – Forecasting Headcount Changes

Employee Labor – Add a Forecast Employee

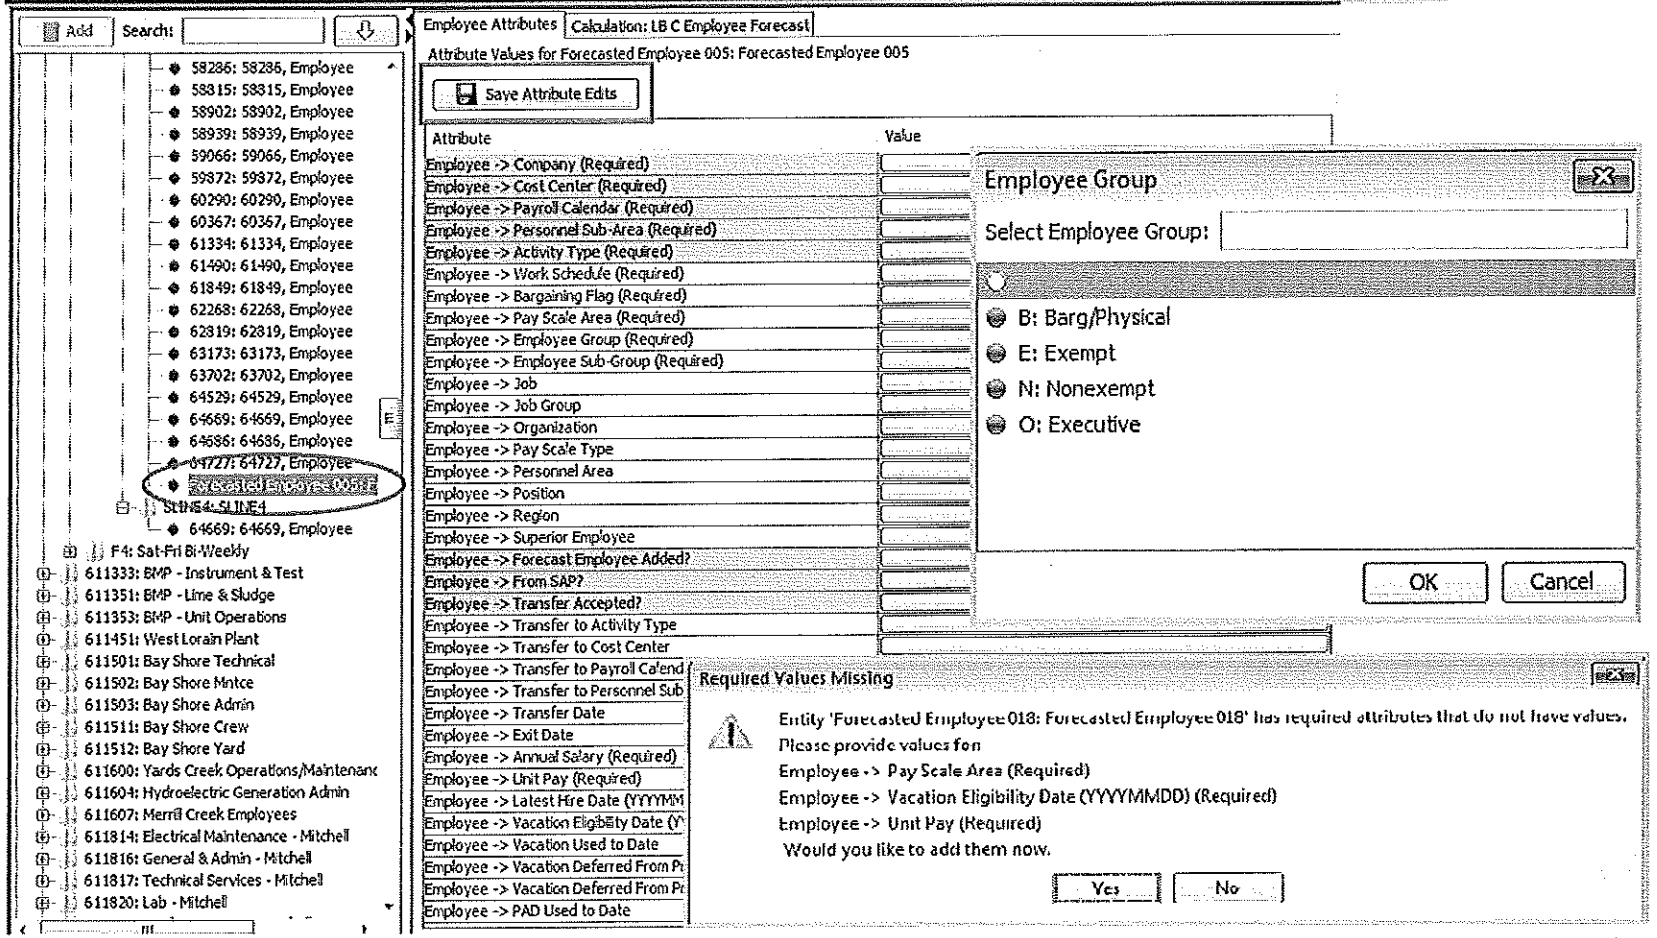
Forecast Employees are employee entities which can be added to the labor forecast to forecast new employees in a department. Forecast Employees should be used when either: ***1.) the position has been filled and the employee has not started yet, or 2.) the Cost Center/Activity Type does not exist within FE.***

Process: To add Forecast Employee

- Highlight the activity type
- Click the **Add** button
- Select a forecast employee to add
- Fill in required attributes

Required Attributes

- Company
- Cost Center
- Payroll Calendar
- Personnel Sub-Area
- Activity Type
- Work Schedule
- Pay Scale Area
- Employee Group
- Employee Sub-Group



Required Inputs

- Annual Salary
- Unit Pay
- Latest Hire Date (YYYYMMDD)
- Vacation Eligibility Date (YYYYMMDD)

Employee Labor – Add a Forecast Employee

- **Enter all required fields**
  - Searchable drop boxes appear for attributes
  - Monthly Calendars appear for UIPlanner Date fields
  - Type directly into number fields (including SAP date formats – YYYYMMDD)
- Select **Save Attribute Edits** when complete

  Note: An error message will occur if required fields are left blank

Employee Labor – Add a Forecast Employee

- Select the **Calculation: LB C Employee Forecast** tab
- View auto populated data

Employee Labor – Activity Pricing in UIPlanner

Employee Labor – Activity Pricing

Activity Rates are used to allocate labor to projects, orders, and cost centers other than the employees' home center.

Note: Some Companies use a company-wide activity rate which aggregates certain activity type across the whole company

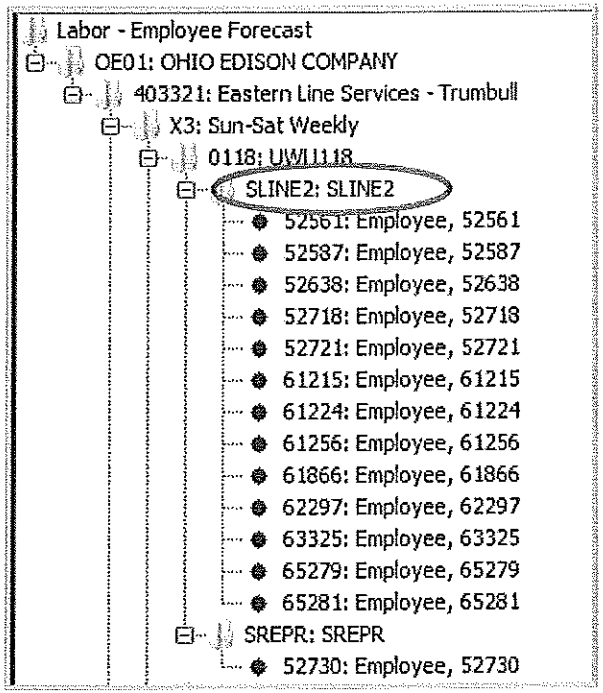
Activity Pricing FAQ

Does Forecasting Vacation Use Affect Activity Rates?

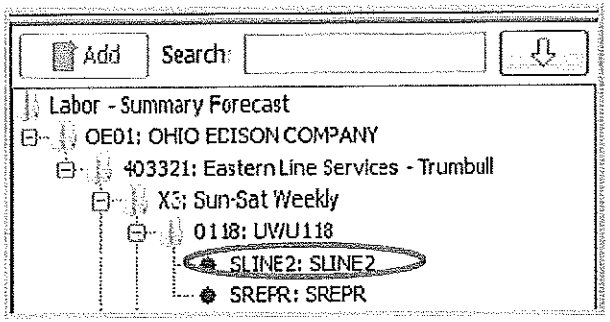
No. The unproductive time in the Activity Pricing Calculation uses assumptions for unproductive time including assumed meeting hours and utilization of all vacation & PAD earned in a year.

Does Adding Compensation Affect Activity Rates?

It depends. If a future raise or promotion for an employee is known, it could be added to the employee prior to the activity pricing process. However, forecast compensation changes made during the annual budget process or reforecasting will not affect rates



Does Adding an Employee Affect Activity Rates?

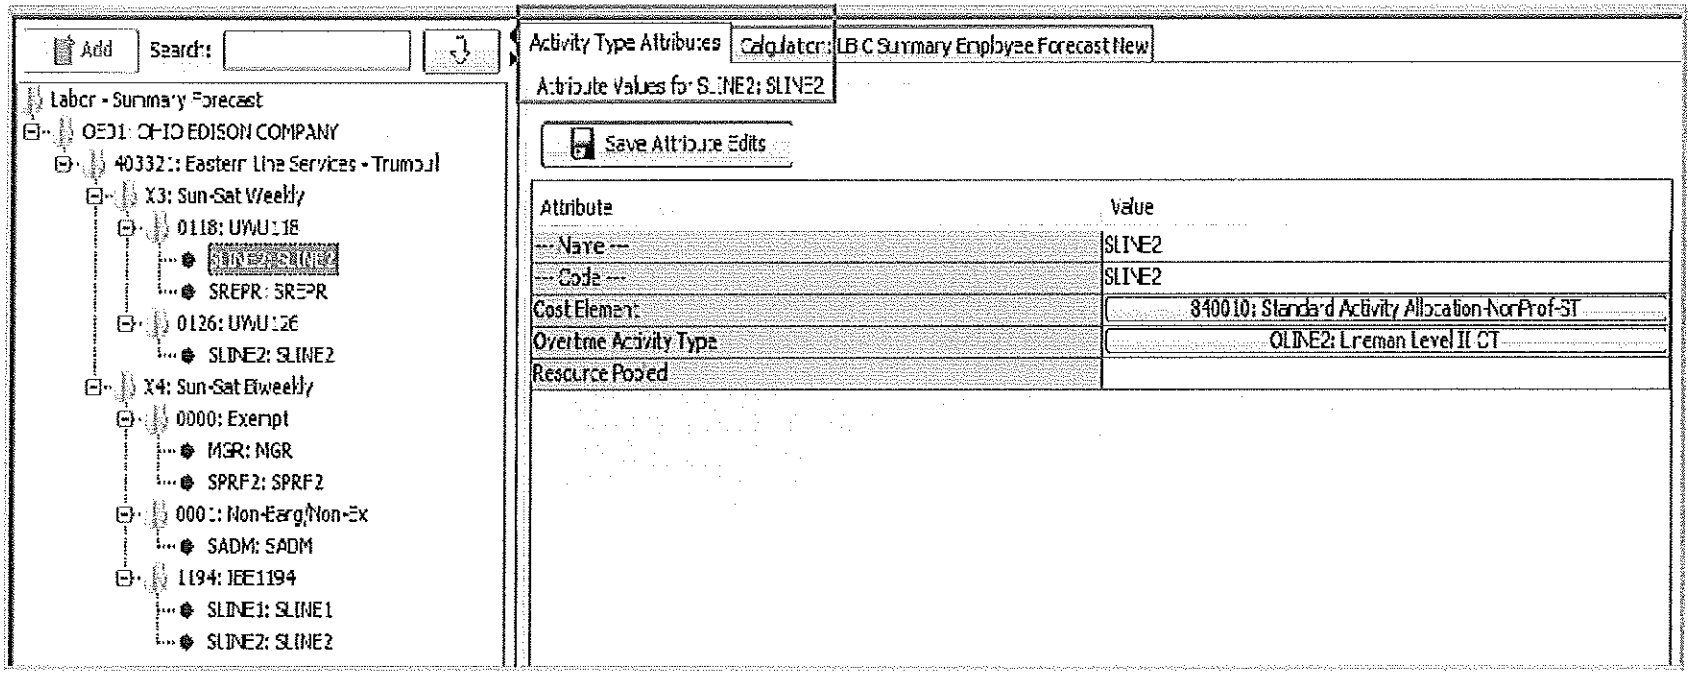


No. Activity Rates are set and published prior to users being able to edit and add employees

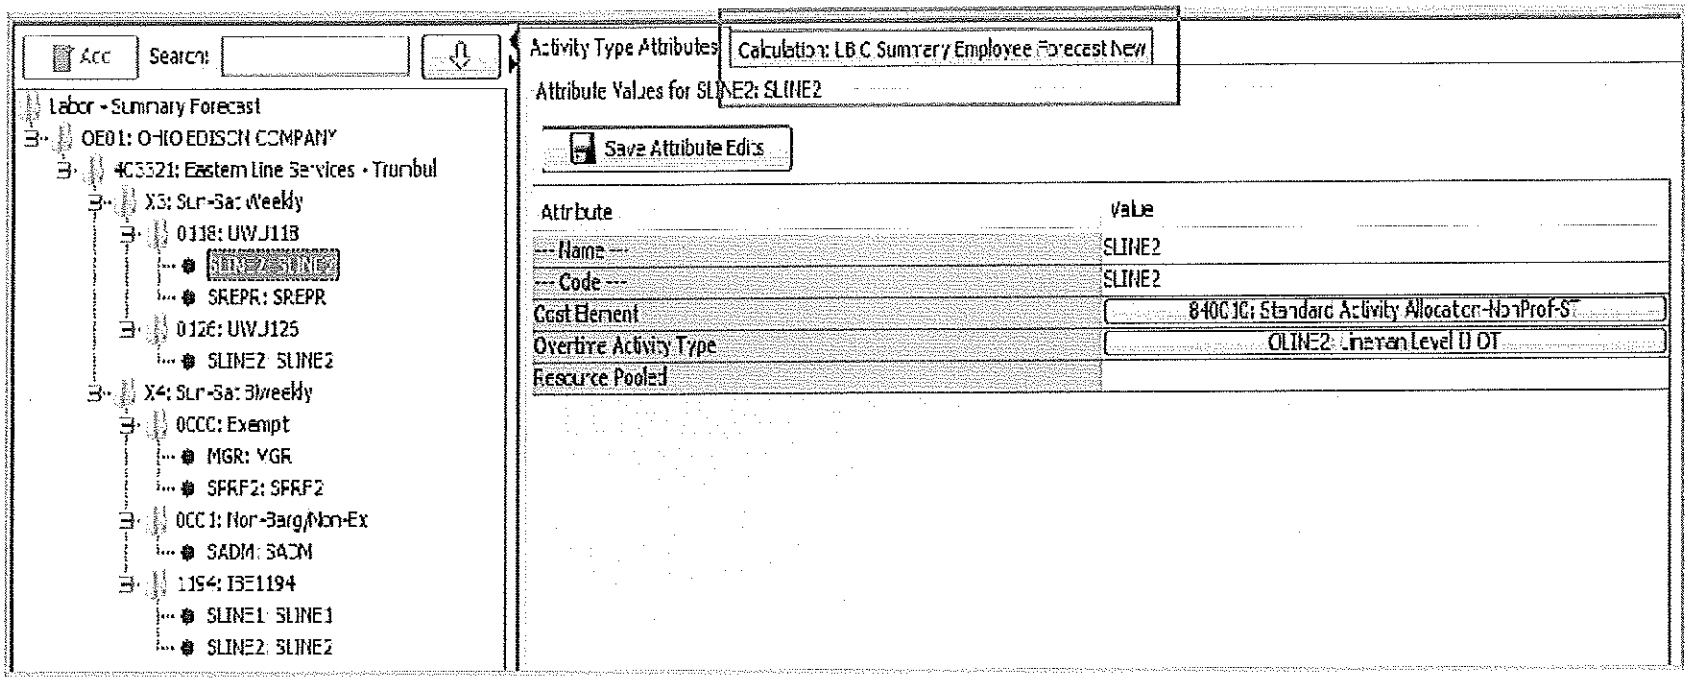
Employee Labor – Summary Forecast

Employee Labor – Summary Forecast

Employee Summary wrapper summarizes individual employee information to the cost center activity type level for each cost center



Information related to SLINE2 activity type is summarized in the Employee Summary wrapper



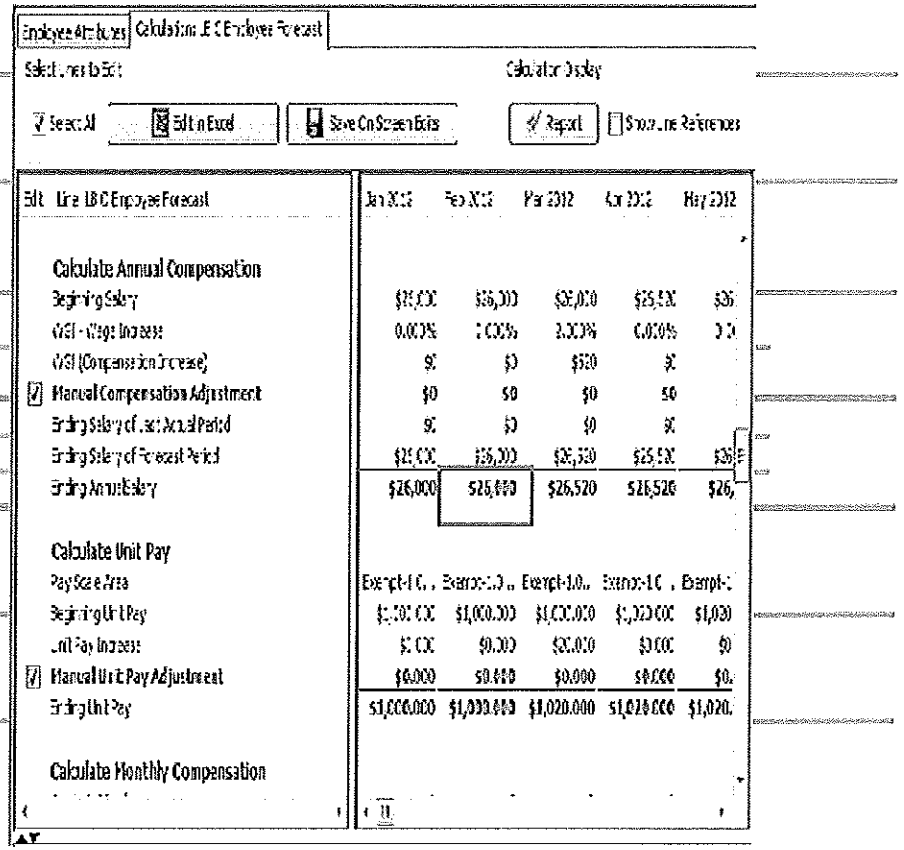
Employee Labor – Summary Forecast

- Select **Activity Type Attributes**
- Information auto populated

Employee Summary

Select **Summary Employee Forecast**

To add a new activity type to a cost center either:



- Add a forecast employee with the desired Cost Center/Activity Type combination
- **Transfer an employee into the Cost Center/Activity Type combination (if the new combo occurs as a result of a transfer)**

Employee Summary – Calculations (Overview)

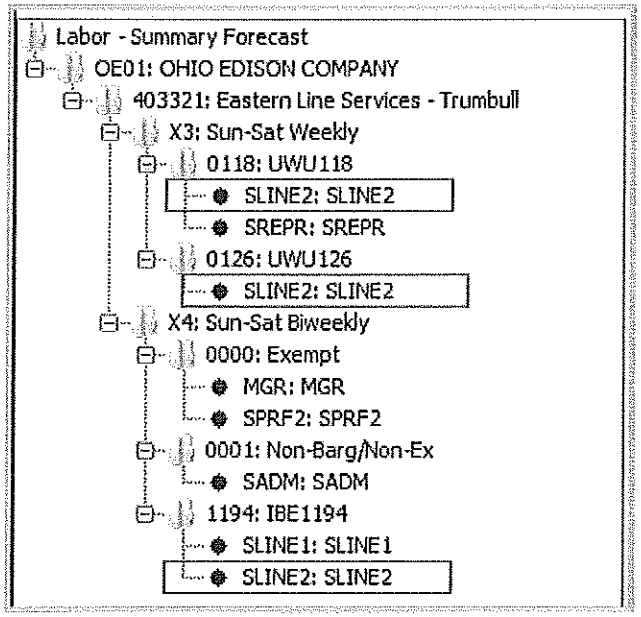
Employee Summary – Wrapper Reports

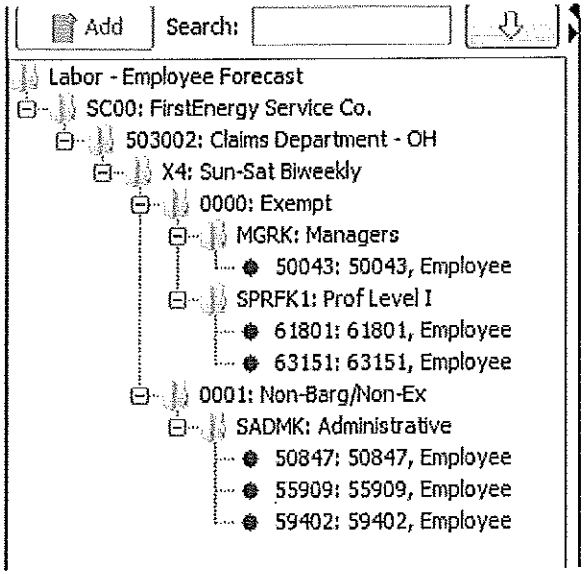


- View total hours and dollars by activity type at the cost center level
- Report will be view only

Employee Summary to Budget Grid

- The grid is used to allocate hours and dollars
- If labor is not activity allocated, then labor dollars will not show on the grid. Information is available via report

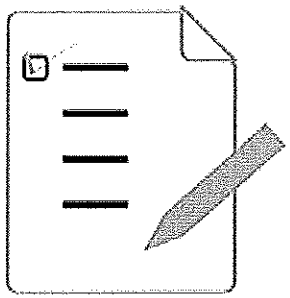
Cost Source	Cost Owner	Cost Collector Ty	Project	WBS	Internal Order	Activity Type	Cost Element	Comment	Amount Type	2013
Filter Off	Filter Off	Filter Off	Filter Off	...	Filter Off	Filter On	Filter Off			2013 - Jan
403321: Eastern L	401221: Centra	WBS	WBS	OE-900083: N-Line	OE-9000	N/A: N/A	SLINE: Lineman-a	840010: Stand		
									Dollars	$5,193
									Hours	95.0



Column Totals	Dollars	$247,939
	Hours	4,583.8
Available Amounts	Available Hours	0.0

- Subtotal for SLINE2 will display and total on the available amounts row
- As hours are activity allocated out the available hours row will adjust

Budget Grid - How to Handle Labor Dollars/Hours



After the labor pool has been built:

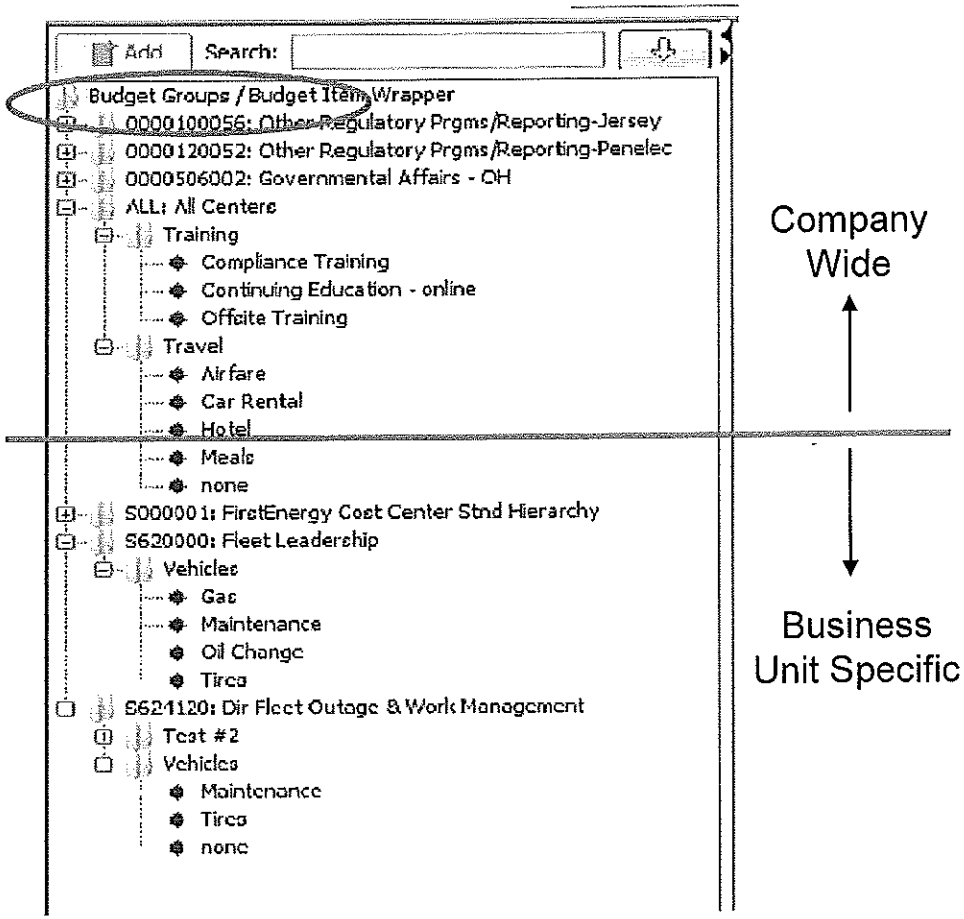
- View the labor and hour report which will show the total calculated hours and dollars by activity type for each cost center
- Open the Budget Grid:
  - If labor has been allocated from your cost center, verify that the total labor pool matches the pool calculated in the **Summary Forecast**
  - Next users can start activity allocating labor hours and dollars.

Note: The Budget Grid is only for allocating hours and dollars. It will not show the labor dollars and hours allocated to the primary cost center.

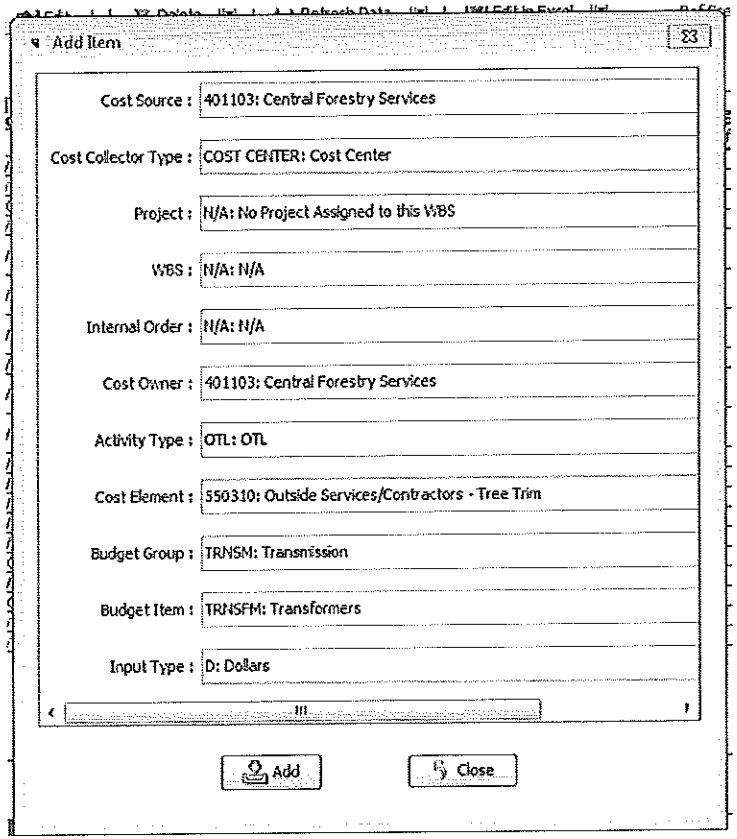
Exercise #5 – Employee Labor

- Select a cost center and review an individual employee labor profile

- Under the Employee Attribute tab:
  - Transfer an employee
  - Exit an employee



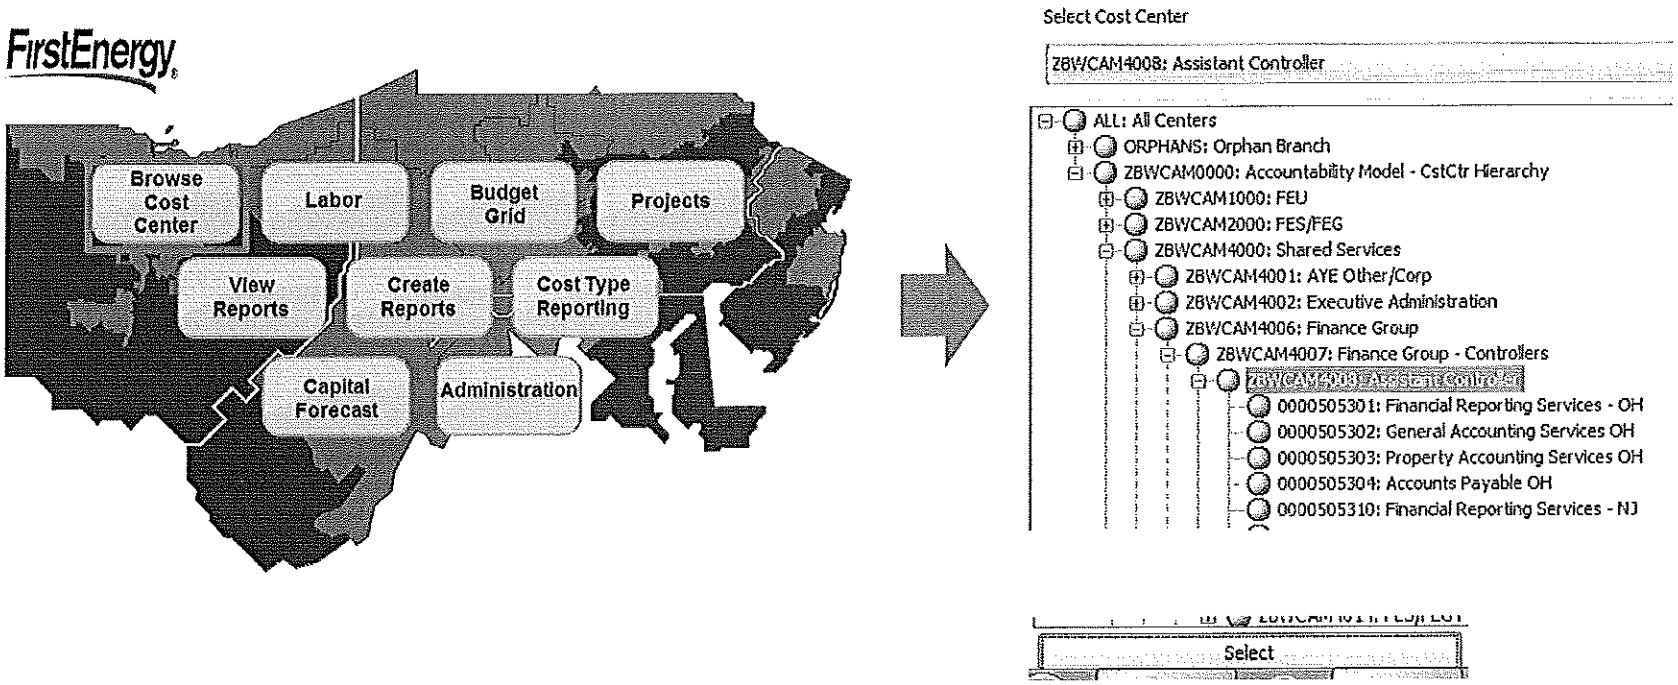
- Under the Calculation: Labor Budget Employee Forecast
  - Add a salary adjustment on the screen
  - Enter vacation and PAD allocations



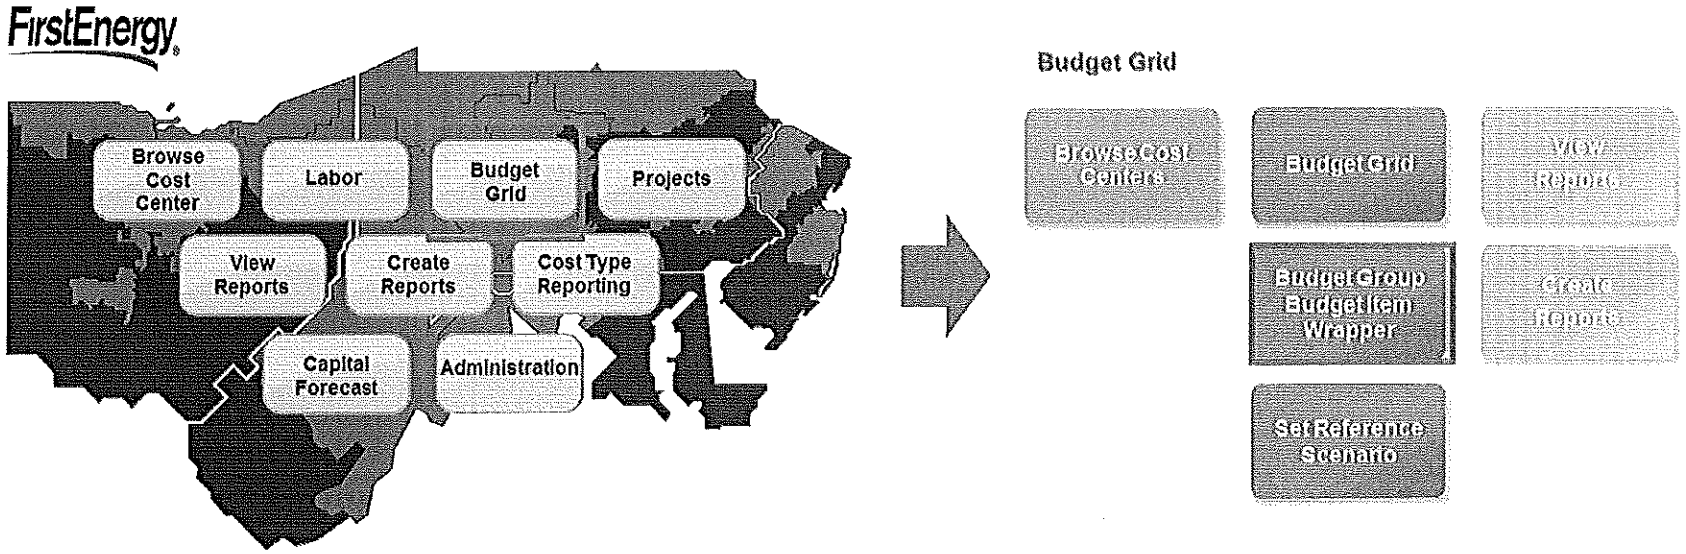
- View Summary Wrapper
  - Add a salary adjustment on the screen
  - Enter vacation and PAD allocations

Budget Group / Budget Item Wrapper

Budget Group / Budget Item Wrapper Overview



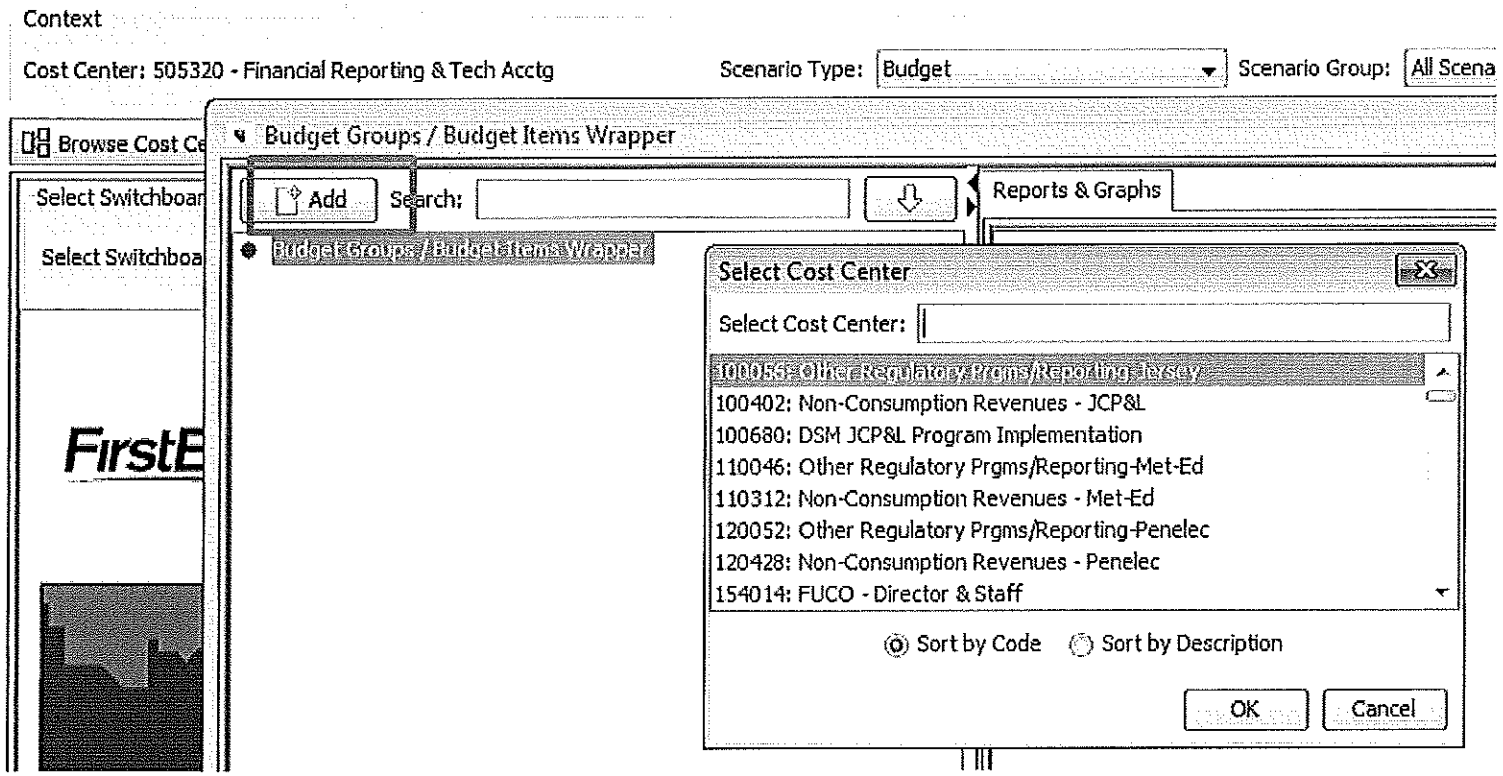
- Standard Budget Group and Budget Item groupings will be made available for all users
- Specific business unit budget groups and items can easily be created
- Ability to create Budget Group and Budget Item at the Cost Center level
- Business Unit/Department Budget Coordinators will create and maintain Budget Groups and Budget Items for their areas



Budget Group / Budget Item Wrapper Startup

1. Using the Budget Group/Budget Item Wrapper
   - Open **FE Main Switchboard**
   - Select a Cost Center using **Browse Cost Centers** (either double-click a Cost Center or highlight Cost Center and click the Select button at the bottom of the screen)
   - NOTE: Any Budget Group/Budget Item assigned to a rollup node will be available for use for any Cost Center children of this node

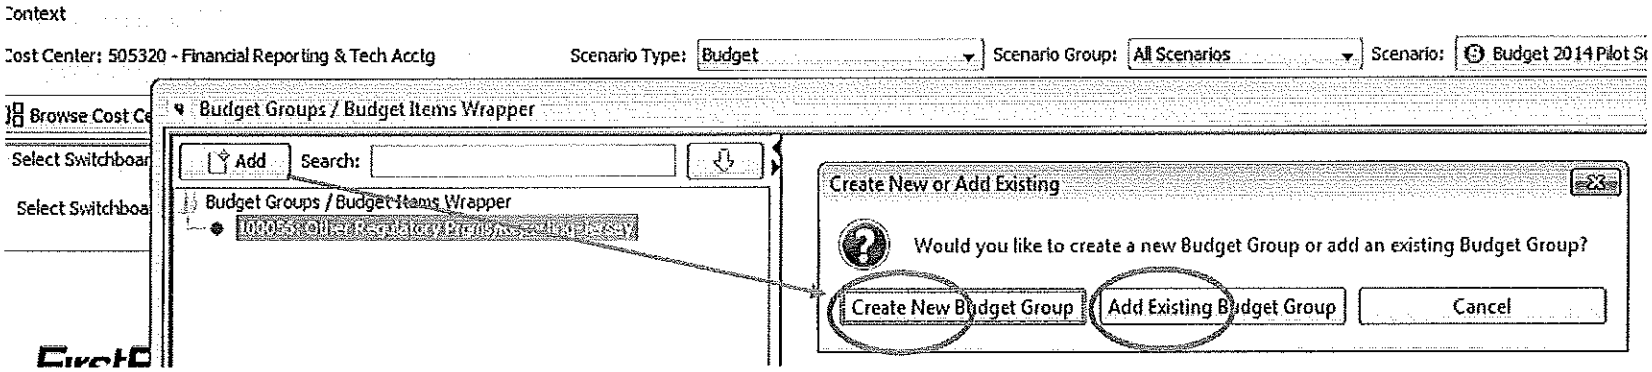
Budget Group / Budget Item Wrapper Startup



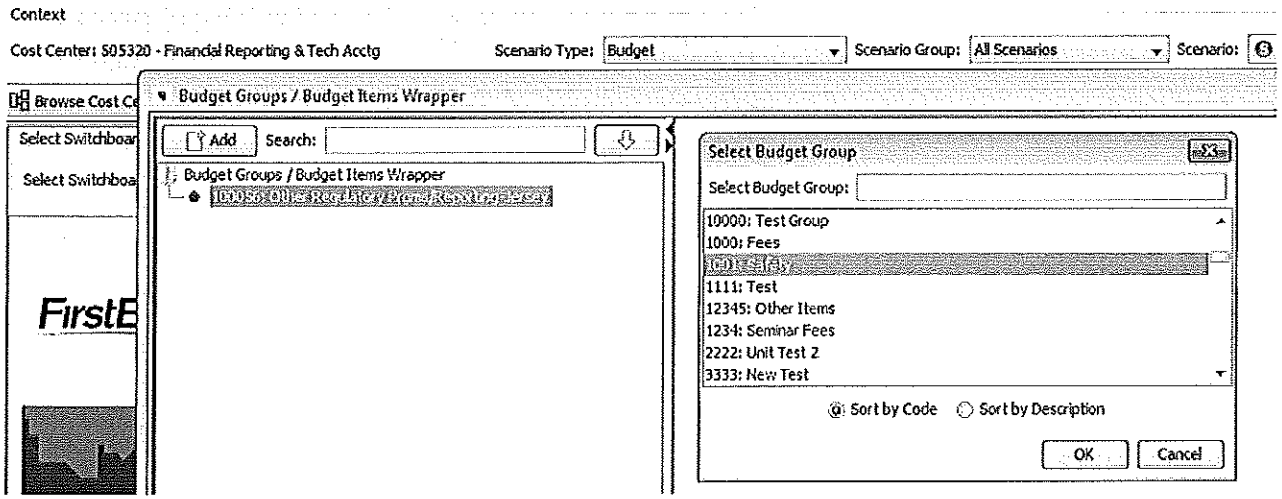
2
- Return to the **FE Main Switchboard**
- Click **Budget Grid**
- Click **Budget Group Budget Item Wrapper**

Adding a Cost Center

3



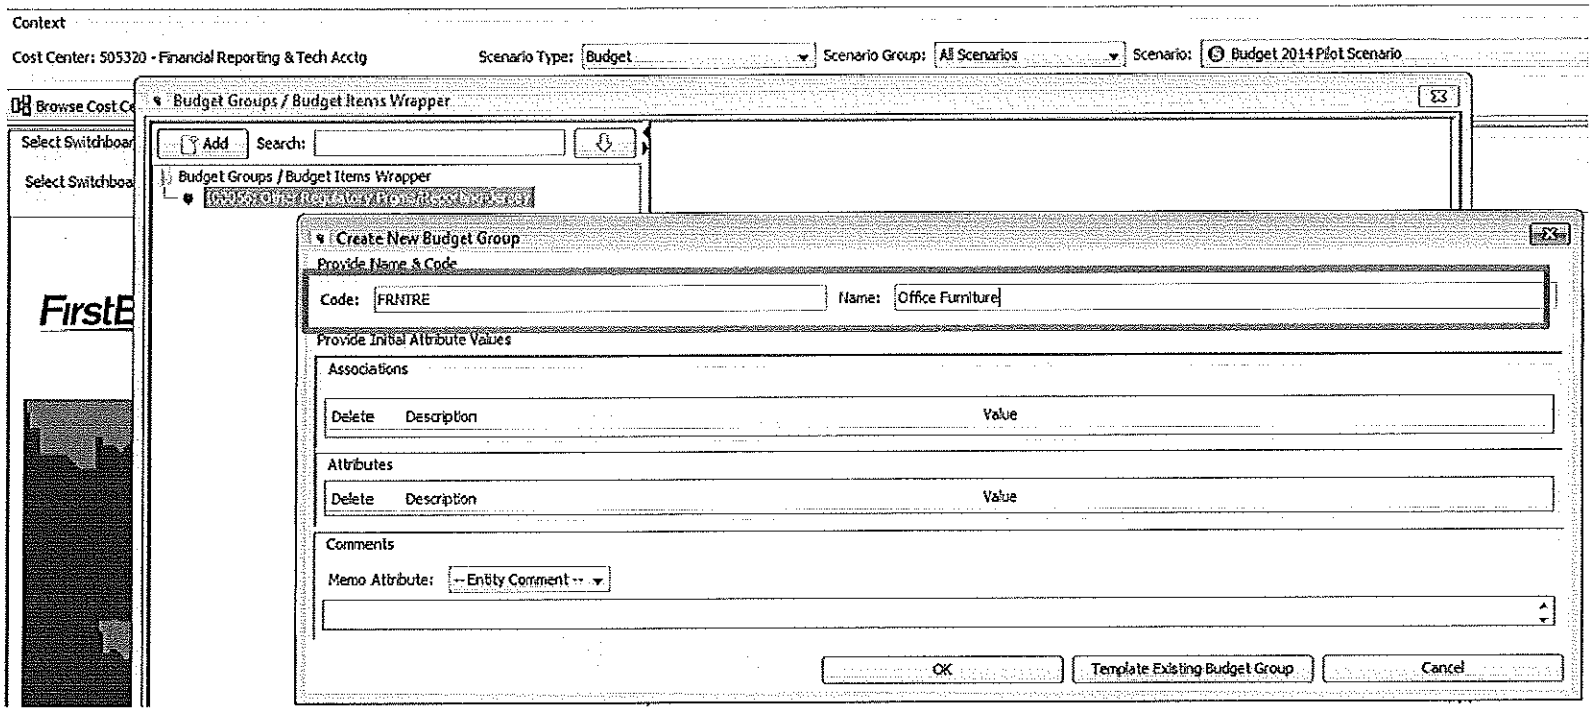
- If the Wrapper Tree is empty and no Cost Center is readily available, select "Budget Groups / Budget Items Wrapper" and click on the Click the **Add** button.
- Scroll through the list of Cost Centers and select one (use Select Cost Center window to search). Click **OK** when finished.



Add Existing Budget Group

4

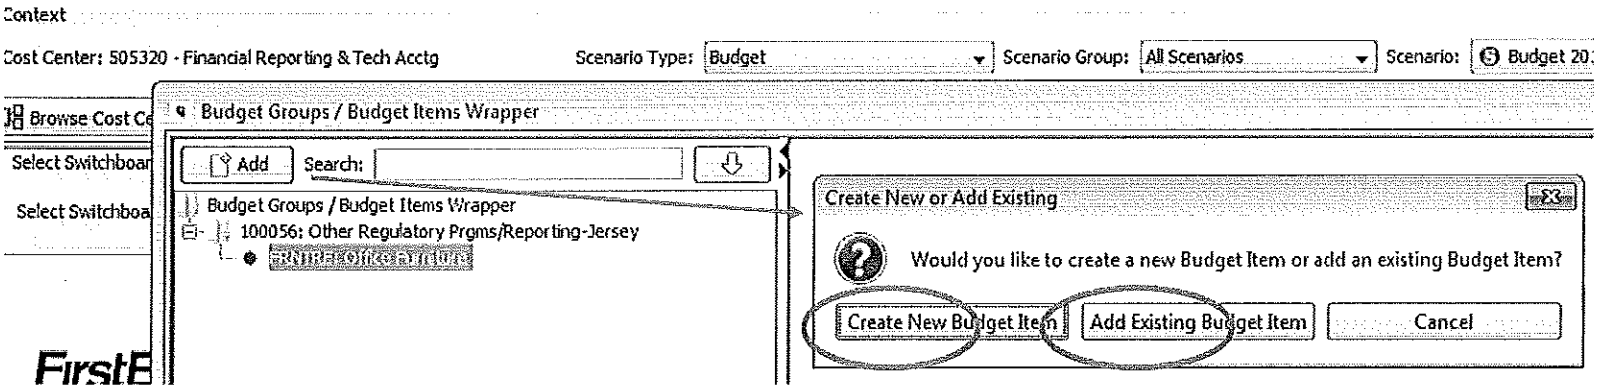
- Select the Cost Center where a Budget Group and its associated Budget Item will be added and click **Add** button.
- Select either "Create New" or "Add Existing" Budget Group.



- If adding an existing Budget Group, simply select from the popup window and click **OK**.

Create a New Budget Group

4



- Enter a unique Budget Group Code using process as defined by FE.
- Enter Name of Budget Group (MAX length = 80 characters)
- Click **OK**.

Adding / Creating Budget Items

5

- Follow a similar process for creating or adding Budget Items
- NOTE: Budget Items must have an associated Budget Group

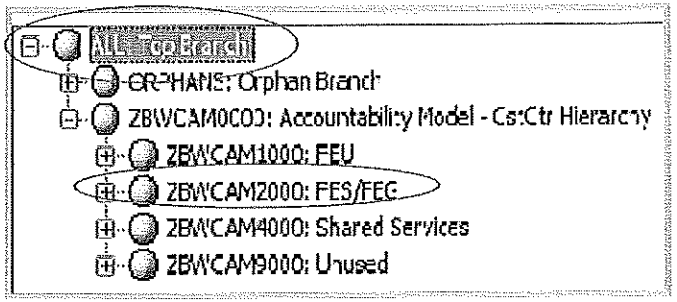
Budget Group / Budget Item Guidelines

- Budget Coordinators will have the ability to create Budget Groups Budget and Items for their respective areas

Guidance on codes and names

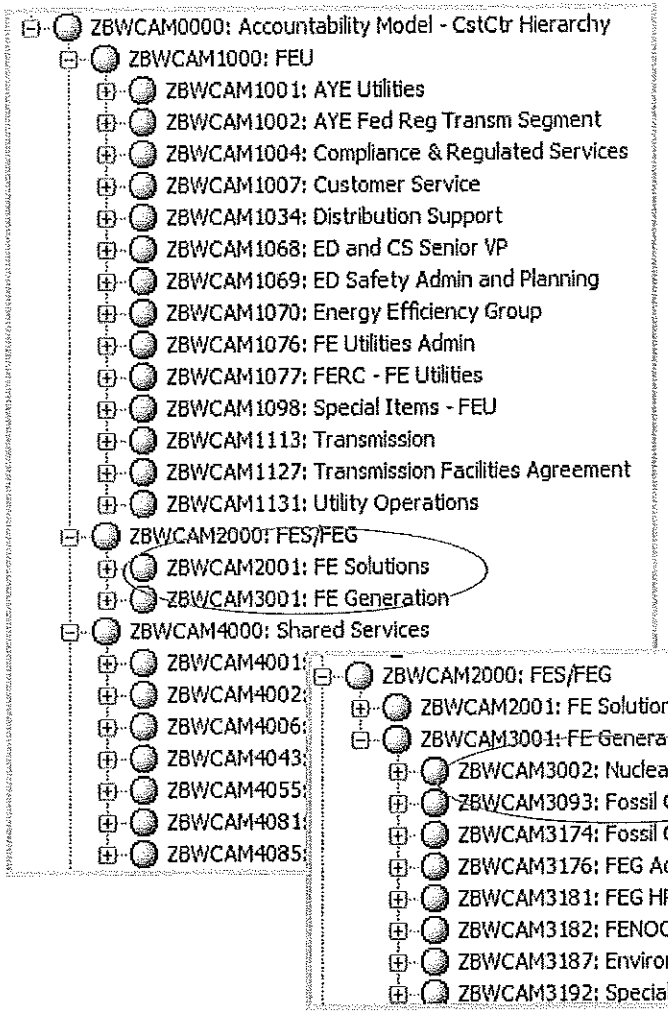
• **Budget Group Budget Item Codes**	• **ALL CAPS** • **Up to 12 alpha characters**
• **Budget Group Budget Item Descriptions**	• **Upper and lower case** • **Up to 80 characters in length**

Example



Budget Group	• **TRAIN**	**Training**
Budget Items	• SAFETY	Safety
	• COMPL	Compliance
	• OPER	Operations
	• CONTEDU	Continuing Education

Avoid creating similar Budget Groups and Budget Items



- Codes should be meaningful so when the accounting name is turned off on the Budget Grid the user can easily identify the Budget Group and Budget Item

Budget Group / Budget Item Guidelines

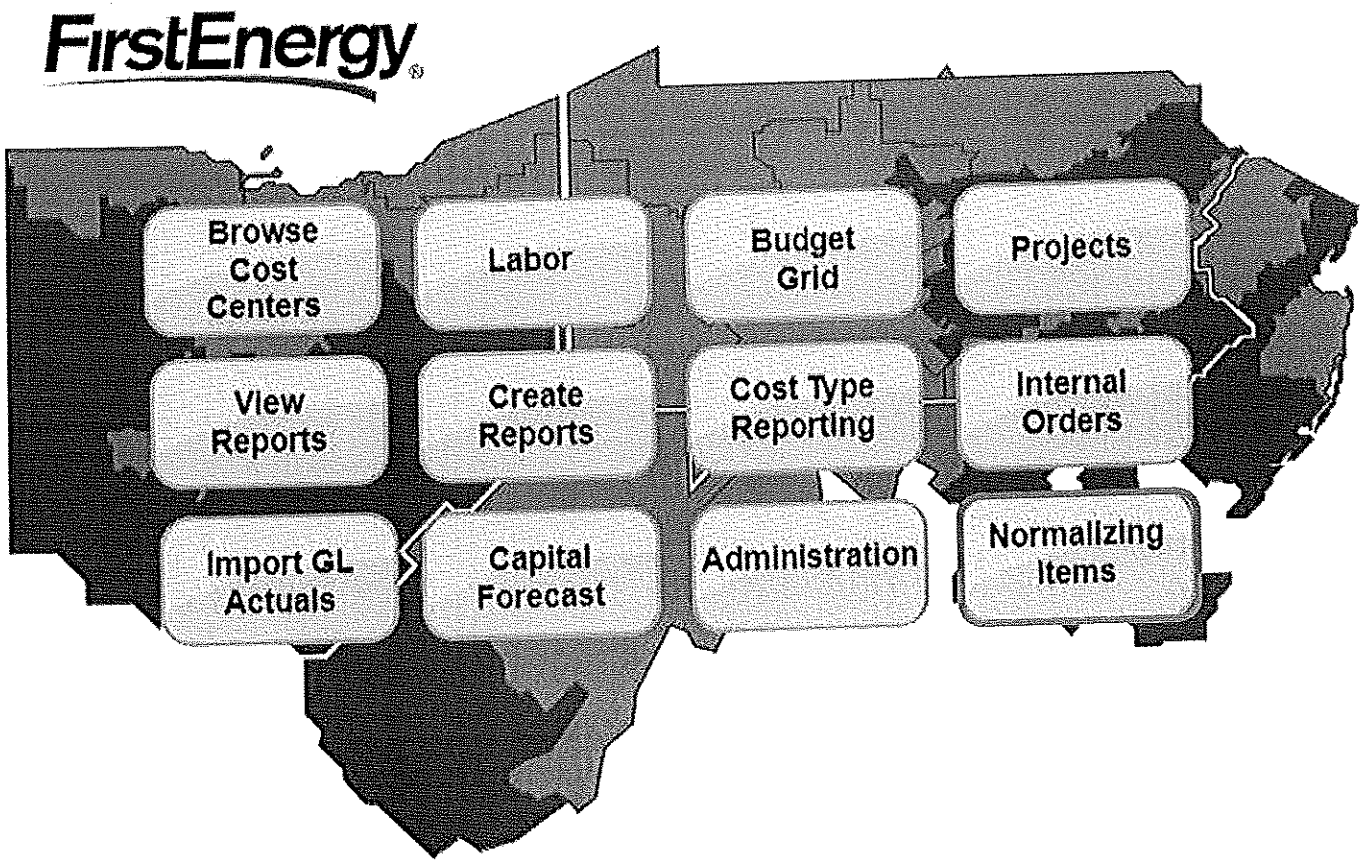
1. Budget Group / Budget Items will be created at the ALL NODE (created by Budget Administrator) and the Business Unit level (created by the Budget Coordinator)

2. Budget Groups / Budget Items can also be created at the <u>second</u> and <u>third</u> levels of the cost center tree

Note:

- **<u>DO NOT</u>** create budget groups and budget items at the cost center level

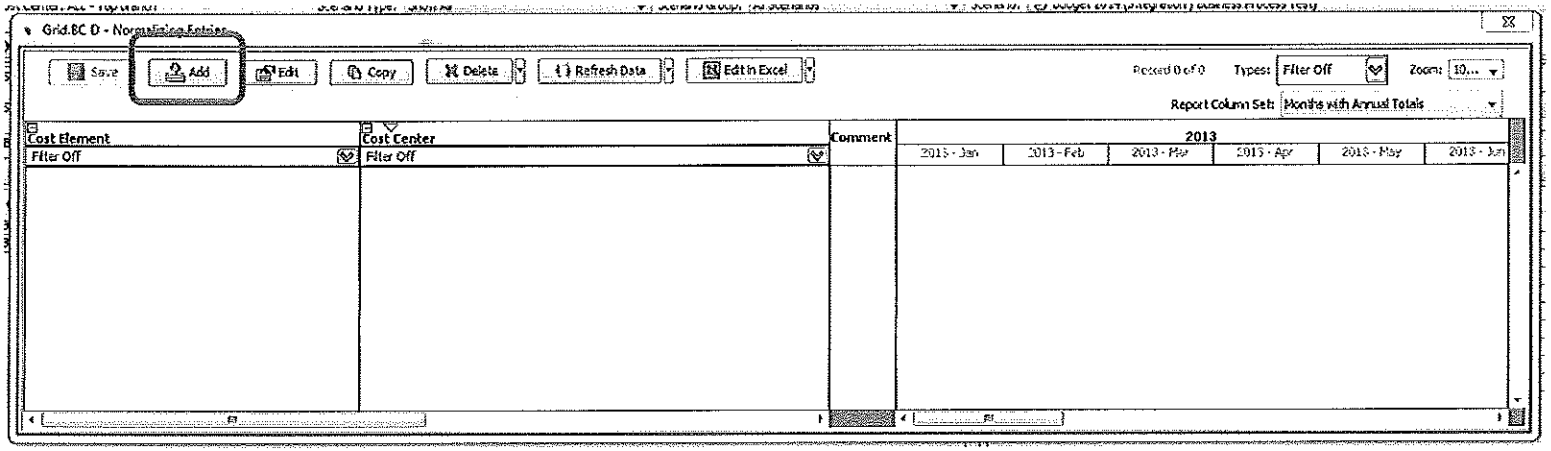
Normalizing Entries



Normalizing Items

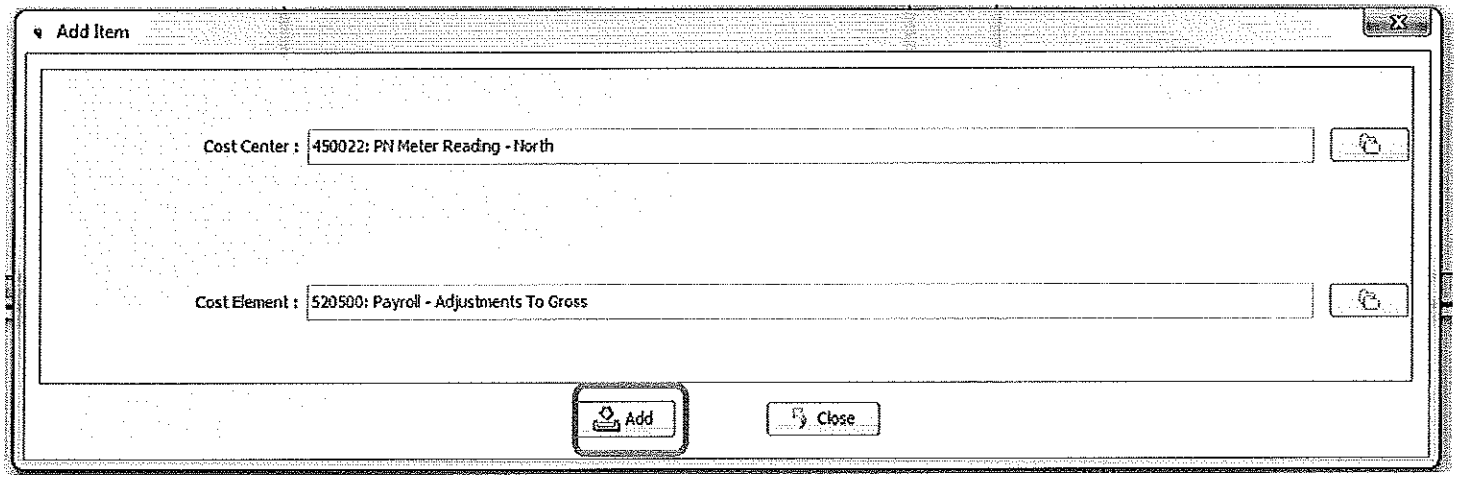
- **Normalizing Items**
  - Separate grid for normalized items
  - Normalized items will be applied to budget <u>after</u> closing process
  - GAAP budget and normalized items will be sent to the model, taxes will then be calculated by the model
  - Normalized budget will then be sent to BW

Note: The new budget entry process in UIP will be on a GAAP basis



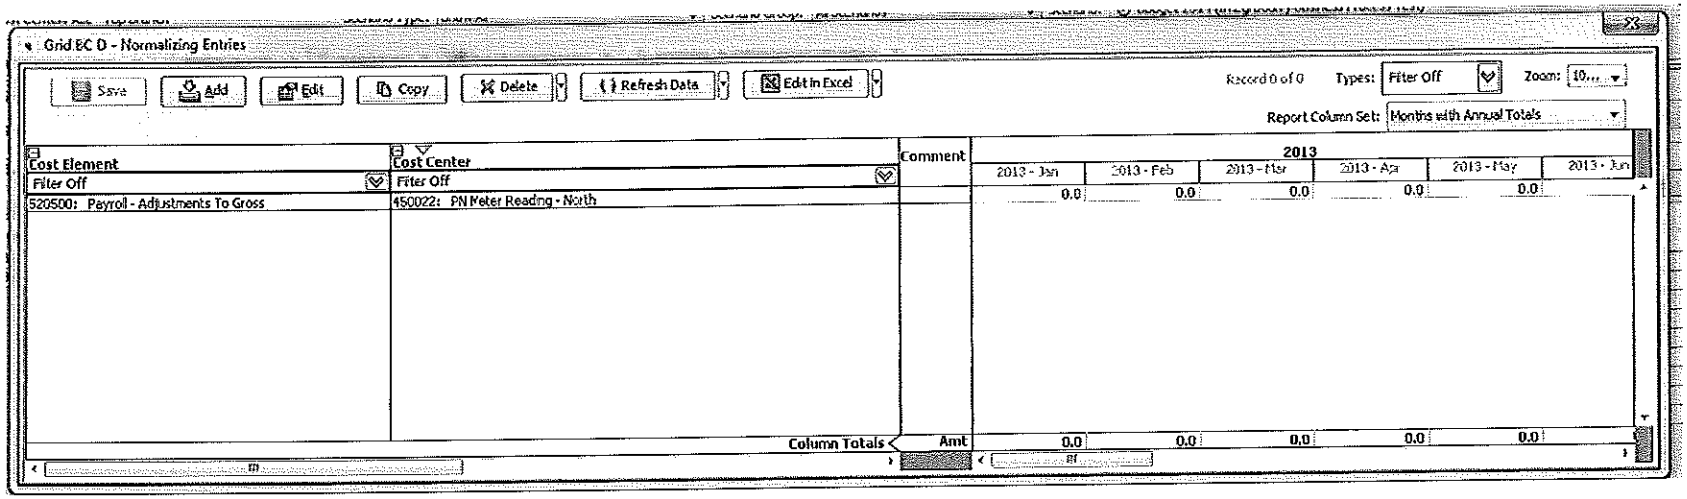
Normalizing Items

- From the Switchboard, select 'Normalizing Items'



Normalizing Items

- The window below will open from the switchboard. Click Add to assign the code block.



- Users can assign the Cost Center and Cost Element. Then click Add to save to grid.

Normalizing Items

- The new code block combination will be applied to the grid
- User can then update dollars in grid for entries

- Or, users can Edit in Excel to add rows…just like the usual grid.

Reference Materials

Commonly Used Terms in UIPlanner

Attribute
- Facts about an entity. Attributes are assigned to the Entity Group. Attribute data is then entered for each entity

B2
- The internal name given to the multidimensional calculation budget system when it was first developed (UIPlanner's second generation budget system)

Codeblock
- Codeblock consists of the budget grid data fields (cost source, cost owner, cost collector type, cost element, activity type, etc.)

Combo
- A budget data entry, comprised of the required code block elements

Cost Owner
- Owning cost center of the cost collector

Cost Source
- Cost Center where employee labor resides

Entities
- Building blocks for structured data within UIPlanner. Entities are specific elements of an Entity Group. Example: Generation plants are "Entities" in the Generation Entity Group

Commonly Used Terms in UIPlanner

Financial Model
- UIPlanner's modeling tool. Generates the key financial statements (income statement, balance sheet, cash flow)

Grid
- Budget Grid where users can allocate labor and other than labor. The Grid requires valid codeblock for entry

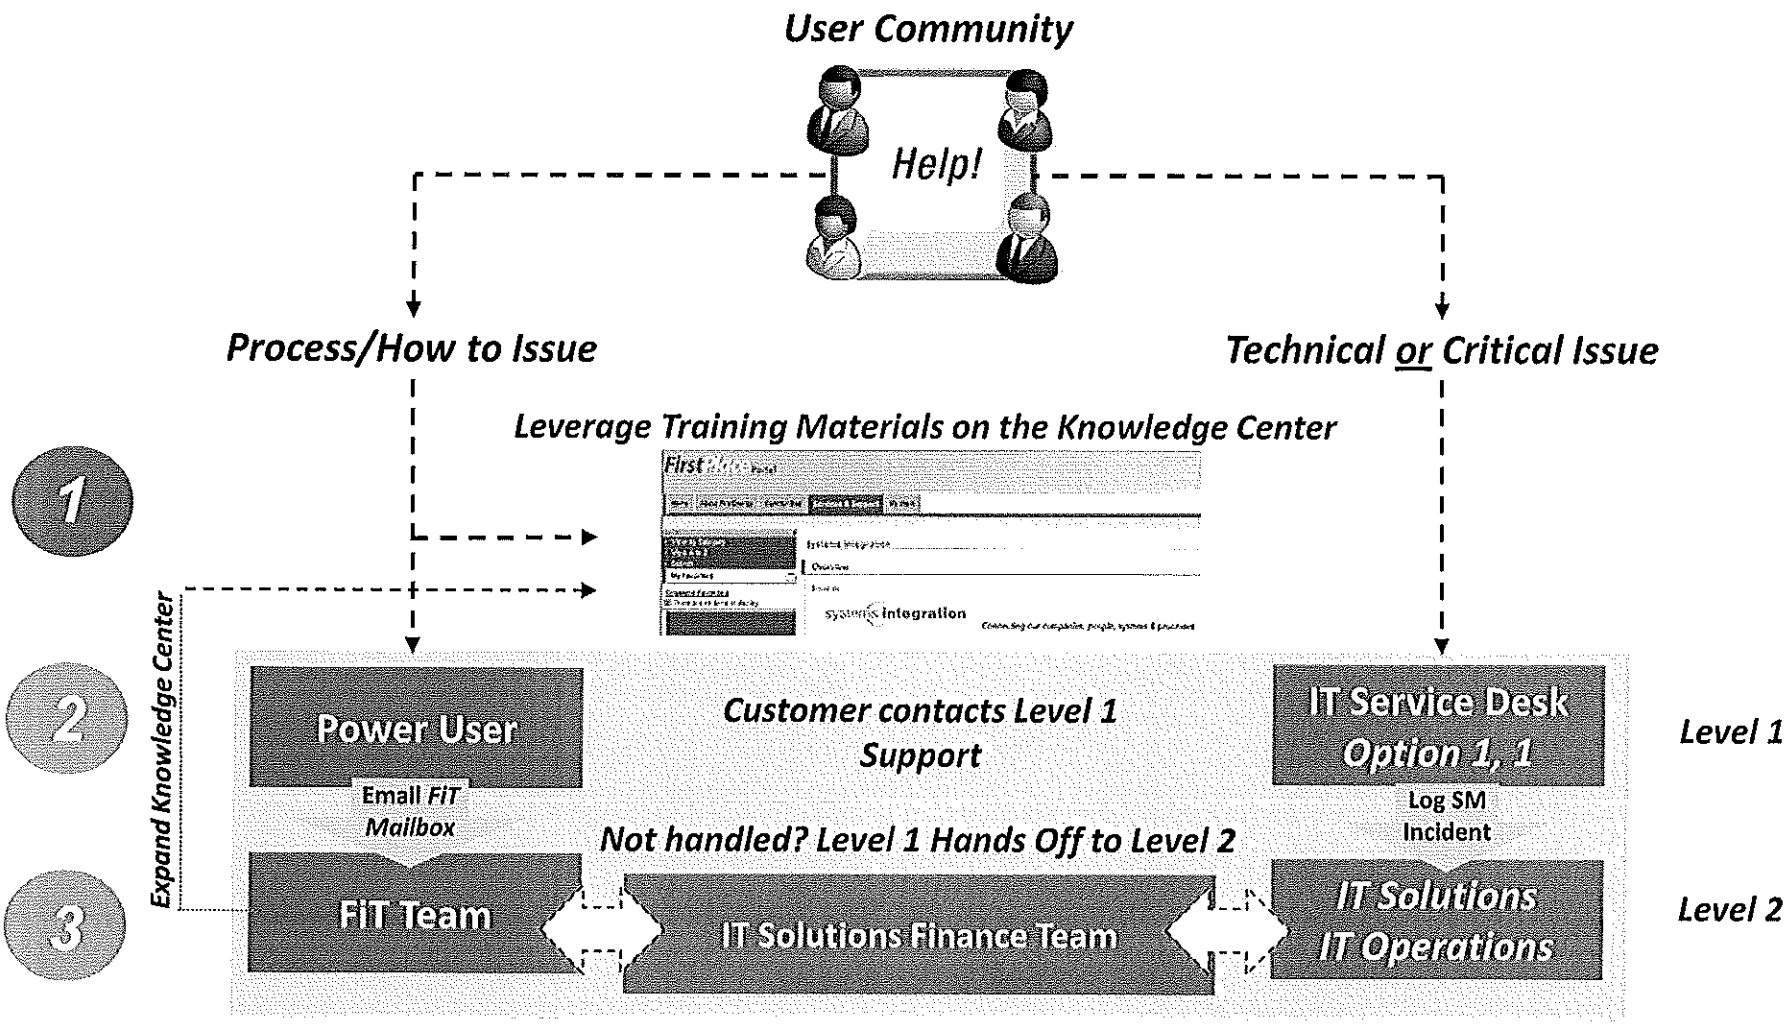
Java Console
- Java window that echoes back information about the user's UIPlanner session, including java error messages. Also known as the Stack Trace

Menu Item
- Row at the top of the UIPlanner screen contains menu items. Each menu item contains a drop list of screens or options

Scenario
- Scenarios are essentially collections of cases. Similar to SAP versions (V20, V12, etc.), but can be in various formats (Name, Description, etc.)

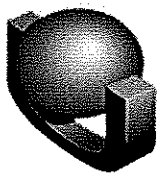
Switchboard
- Graphical object with hotspots that invoke actions in UIPlanner. Hot-spott areas on a switchboard and can open menu items, run reports, open files, and open other switchboards

Commonly Used Terms in UIPlanner



UIPlanner Add In

- **UIPlanner utilizes an Excel Add In function**



Wrapper

- **An interface that is built to present a calculation to the end user in a more user-friendly fashion**

Where do I go for help?

METROPOLITAN EDISON COMPANY

Original Cost of Plant, Reserves and Accruals by Functions for Fully Projected Future Test Year Ending 4/30/2016

FILING REQUIREMENT V-A-1:

"Provide schedules supporting claimed amounts for Electric Plant in Service by function and by account if available."

FILING REQUIREMENT V-A-2:

"Provide a comparison of calculated depreciation reserve versus book reserve at the end of the test year. Provide this comparison by functional group and by account if available."

FILING REQUIREMENT V-B-1:

"Provide a comparison of calculated depreciation accruals versus book accruals by function and by account if available."

FILING REQUIREMENT V-D-1:

"Provide the surviving original cost plant at the appropriated test year date or dates by account and functional property group and include claimed depreciation reserves. Provide annual depreciation accruals where appropriate. These calculations should be provided for plant in service as well as other categories of plant, including but not limited to, contributions in aid of construction, customers' advances for construction and anticipated retirements associated with construction work in progress claims, if applicable."

RESPONSE:

Met-Ed Exhibit RAD-46 Attachment A satisfies the filing requirements cited above. The accruals shown on Met-Ed Exhibit RAD-46 Attachment A are claimed remaining life accruals for booking.

Met-Ed Exhibit RAD-46 Attachment B provides original cost activity at detail account levels for plant and reserves, updating this information from 4/30/15 through 4/30/16, the fully projected future test year-end. Additionally, this exhibit shows the affected balances after net adjustments made for rate case purposes, and the affected balances after net adjustments. This information is in support of Met-Ed Exhibit RAD-46 Attachment A as follows:

Pages 1-2 Company claim basis for Electric Plant in Service reflecting projected plant at 4/30/16 and net adjustments thereto.

Pages 3-4 Company claim basis of book reserves for Electric Plant in Service at 4/30/16 and net adjustments thereto.

Pages 5 Informational calculated reserves at 4/30/16 for Electric Plant in Service and net adjustments thereto.

Metropolitan Edison Company
Accrual Expense Computation after Adjustments
At Future Year from May 2015 to April 2016

METROPOLITAN EDISON COMPANY

Original Cost of Plant, Reserves and Accruals by Functions for Future Test Year Ending 3/31/2015

FILING REQUIREMENT V-A-1:

"Provide schedules supporting claimed amounts for Electric Plant in Service by function and by account if available."

FILING REQUIREMENT V-A-2:

"Provide a comparison of calculated depreciation reserve versus book reserve at the end of the test year. Provide this comparison by functional group and by account if available."

FILING REQUIREMENT V-B-1:

"Provide a comparison of calculated depreciation accruals versus book accruals by function and by account if available."

FILING REQUIREMENT V-D-1:

"Provide the surviving original cost plant at the appropriated test year date or dates by account and functional property group and include claimed depreciation reserves. Provide annual depreciation accruals where appropriate. These calculations should be provided for plant in service as well as other categories of plant, including but not limited to, contributions in aid of construction, customers' advances for construction and anticipated retirements associated with construction work in progress claims, if applicable."

RESPONSE:

Met-Ed Exhibit RAD-47 Attachment A satisfies the filing requirements cited above. The accruals shown on Met-Ed Exhibit RAD-47 Attachment A are claimed remaining life accruals for booking.

Met-Ed Exhibit RAD-47 Attachment B provides original cost activity at detail account levels for plant and reserves, updating this information from 3/31/14 through 3/31/15, the future test year-end. Additionally, this exhibit shows the affected balances after net adjustments made for rate case purposes, and the affected balances after net adjustments. This information is in support of Met-Ed Exhibit RAD-47 Attachment A as follows:

Pages 1-2 Company claim basis for Electric Plant in Service reflecting projected plant at 3/31/15 and net adjustments thereto.

Pages 3-4 Company claim basis of book reserves for Electric Plant in Service at 3/31/15 and net adjustments thereto.

Pages 5 Informational calculated reserves at 3/31/15 for Electric Plant in Service and net adjustments thereto.

Metropolitan Edison Company
Accrual Expense Computation after Adjustments
At Future Year from April 2014 to March 2015

METROPOLITAN EDISON COMPANY

Original Cost of Plant, Reserves and Accruals by Functions for Historical Test Year Ended 3/31/2014

FILING REQUIREMENT V-A-1:

"Provide schedules supporting claimed amounts for Electric Plant in Service by function and by account if available."

FILING REQUIREMENT V-A-2:

"Provide a comparison of calculated depreciation reserve versus book reserve at the end of the test year. Provide this comparison by functional group and by account if available."

FILING REQUIREMENT V-B-1:

"Provide a comparison of calculated depreciation accruals versus book accruals by function and by account if available."

FILING REQUIREMENT V-D-1:

"Provide the surviving original cost plant at the appropriated test year date or dates by account and functional property group and include claimed depreciation reserves. Provide annual depreciation accruals where appropriate. These calculations should be provided for plant in service as well as other categories of plant, including but not limited to, contributions in aid of construction, customers' advances for construction and anticipated retirements associated with construction work in progress claims, if applicable."

RESPONSE:

Met-Ed Exhibit RAD-48 Attachment A satisfies the filing requirements cited above. The accruals shown on Met-Ed Exhibit RAD-48 Attachment A are claimed remaining life accruals for booking.

Met-Ed Exhibit RAD-48 Attachment B provides original cost activity at detail account levels for plant and reserves, updating this information from 3/31/13 through 3/31/14, the historical test year-end. Additionally, this exhibit shows the affected balances after net adjustments made for rate case purposes, and the affected balances after net adjustments. This information is in support of Met-Ed Exhibit RAD-48 Attachment A as follows:

Pages 1-2 Company claim basis for Electric Plant in Service reflecting projected plant at 3/31/14 and net adjustments thereto.

Pages 3-4 Company claim basis of book reserves for Electric Plant in Service at 3/31/14 and net adjustments thereto.

Pages 5 Informational calculated reserves at 3/31/14 for Electric Plant in Service and net adjustments thereto.

Metropolitan Edison Company
Accrual Expense Computation after Adjustments
At Future Year from April 2013 to March 2014
($000)

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT V-A-3:

"Provide supporting schedules which indicate the procedures and calculations employed to develop the original cost plant and applicable reserves to the test year end as submitted in the current proceeding."

RESPONSE:

Met-Ed Exhibit RAD- 49 Attachment A presents the example showing the methodology used to update original cost plant and reserves from 3/31/13 to 3/31/14 (the historic test year-end) and to 3/31/15 (the future test year-end) and to 4/30/2016 (the fully future test year). The procedure applied is the same as has been used and found acceptable in prior base rate cases for projecting the future year original cost plant related data.

The example depicts a mass property remaining life investment set, Account 373, Street Lighting and Signal Systems.

Original Cost Plant and Reserve and Accrual Rate Adjustments for Rate Case Purposes
(Fully Projected Future Test Year)

FILING REQUIREMENT V-A-4:

"Provide a schedule showing details of rate case adjustments."

RESPONSE:

This response provides original cost plant and reserve adjustments for rate case purposes at 4/30/16, the fully projected future test year-ended. This information is in support of Met-Ed Exhibit RAD-46 Attachment B.

The following provide detail for plant and reserve adjustment items:

1. Asset Retirement Costs: No claim is being made for the Asset Retirement Costs related to the implementation of Statement of Financial Accounting Standards Statement 143, Accounting for Asset Retirement Obligations or FIN 47, Accounting for Conditional Asset Retirement Obligations. The Plant in Service was reduced by $95,358,364; book reserves were reduced by $95,344,166; and calculated reserves were reduced by $22,949.

2. FERC Transmission Plant was removed because it is non-jurisdictional. Transmission Plant in Service was reduced by $454,163,285 and the budgeted book and calculated reserve accruals were reduced by $155,934,333 and $130,390,153 respectively.

3. A portion of Intangible Plant associated with the FERC Transmission Plant was removed. Intangible Plant in Service was reduced by $9,694,591; Intangible Plant book reserves were reduced by $6,012,241; and Intangible Plant calculated reserves were reduced by $7,444,387.

4. A portion of General Plant associated with FERC Transmission Plant was removed. General Plant in Service was reduced by $43,569,748; General Plant book reserves were reduced by $30,270,230; and General Plant calculated reserves were reduced by $25,593,811.

5. Legacy meters were removed. Meter plant in service was reduced by $66,794,533; meter book reserves were reduced by $16,631,748; and meter calculated reserves were reduced by $16,672,615.

METROPOLITAN EDISON COMPANY

Original Cost Plant and Reserve and Accrual Rate Adjustments for Rate Case Purposes
(Future Test Year)

FILING REQUIREMENT V-A-4:

"Provide a schedule showing details of rate case adjustments."

RESPONSE:

This response provides original cost plant and reserve adjustments for rate case purposes at 3/31/15, the future test year-ended. This information is in support of Met-Ed Exhibit RAD-47 Attachment B.

The following provide detail for plant and reserve adjustment items:

1. Asset Retirement Costs: No claim is being made for the Asset Retirement Costs related to the implementation of Statement of Financial Accounting Standards Statement 143, Accounting for Asset Retirement Obligations or FIN 47, Accounting for Conditional Asset Retirement Obligations. The Plant in Service was reduced by $95,358,364; book reserves were reduced by $95,343,344; and calculated reserves were reduced by $22,190.

2. FERC Transmission Plant was removed because it is non-jurisdictional. Transmission Plant in Service was reduced by $433,209,181 and the budgeted book and calculated reserve accruals were reduced by $151,083,591 and $125,510,429 respectively.

3. A portion of Intangible Plant associated with the FERC Transmission Plant was removed. Intangible Plant in Service was reduced by $6,968,446; Intangible Plant book reserves were reduced by $5,488,712; and Intangible Plant calculated reserves were reduced by $6,292,334.

4. A portion of General Plant associated with FERC Transmission Plant was removed. General Plant in Service was reduced by $43,409,672; General Plant book reserves were reduced by $28,831,646; and General Plant calculated reserves were reduced by $23,934,946.

5. Legacy meters were removed. Meter plant in service was reduced by $66,794,533; meter book reserves were reduced by $14,727,733; and meter calculated reserves were reduced by $13,647,379.

METROPOLITAN EDISON COMPANY

Original Cost Plant and Reserve and Accrual Rate Adjustments for Rate Case Purposes
(Historical Test Year)

FILING REQUIREMENT V-A-4:

"Provide a schedule showing details of rate case adjustments."

RESPONSE:

This response provides original cost plant and reserve adjustments for rate case purposes at 3/31/14, the historic test year-ended. This information is in support of Met-Ed Exhibit RAD-48 Attachment B.

The following provide detail for plant and reserve adjustment items:

1. Asset Retirement Costs: No claim is being made for the Asset Retirement Costs related to the implementation of Statement of Financial Accounting Standards Statement 143, Accounting for Asset Retirement Obligations or FIN 47, Accounting for Conditional Asset Retirement Obligations. The Plant in Service was reduced by $95,358,364; book reserves were reduced by $95,342,585; and calculated reserves were reduced by $22,190.

2. FERC Transmission Plant was removed because it is non-jurisdictional. Transmission Plant in Service was reduced by $397,455,541 and the budgeted book and calculated reserve accruals were reduced by $148,795,864 and $123,277,074 respectively.

3. A portion of Intangible Plant associated with the FERC Transmission Plant was removed. Intangible Plant in Service was reduced by $6,478,107; Intangible Plant book reserves were reduced by $5,092,397; and Intangible Plant calculated reserves were reduced by $5,427,721.

4. A portion of General Plant associated with FERC Transmission Plant was removed. General Plant in Service was reduced by $42,590,158; General Plant book reserves were reduced by $27,687,278; and General Plant calculated reserves were reduced by $22,770,157.

5. Legacy Meters were removed. Meter plant in service was reduced by $66,794,533; meter book reserves were reduced by $12,084,587; and meter calculated reserves were reduced by $10,848,688.

METROPOLITAN EDISON COMPANY

Annual Depreciation Review on Capital Plant Investments

FILING REQUIREMENT V-B-2

"Supply a schedule by account or by depreciable group showing the survivor curve or interim survivor curve or interim survivor curse and annual accrual rate estimated to be appropriate:

a. For the purpose of this filing
b. For the purposes of the most recent filing prior to the current proceeding.
c. Supply an explanation for any major change in annual accrual rate by account or by depreciable group
d. Supply a comprehensive statement of major changes in depreciation methods, procedures and techniques and the effect of the changes upon accumulated and annual depreciation, if any."

FILING REQUIREMENT V-C

"Where the retirement rate actuarial method of mortality is utilized, set forth representative examples including charts depicting the observed and estimated survivor curves and a tabular presentation of the observed and estimated life tables plotted on the chart. Other analysis results shall be subject to request."

FILING REQUIREMENT V-D Item 2

"Provide representative examples of detail calculations by vintage at account or at a more detailed level, as performed for those purposes. Other vintage detail calculations shall be subject to request."

FILING REQUIREMENT V-E

"Provide a description of depreciation methods utilized in calculating annual depreciation amounts and depreciation reserves, together with a discussion of significant factors which were considered in arriving at estimates of service life and forecast retirements by facilities, accounts or sub-accounts as applicable."

RESPONSE:

V-B-2:

See Met-Ed Exhibit RAD-53 Attachment A, Pages 1-2 for the fully projected future test year. See Met-Ed Exhibit RAD-53 Attachment A, Pages 3-4 for the future test year. See Met-Ed Exhibit RAD-53 Attachment A, pages 5-6 for the historical test year.

See Met-Ed Exhibit RAD-53 Attachment B for the 2014 Annual Depreciation Report.

V-C:

See Met-Ed Exhibit RAD-53 Attachment C.

V-D Item 2:

See Met-Ed Exhibit RAD-53 Attachment D for Annual Depreciation Report details.

V-E:

See Met-Ed Exhibit RAD-53 Attachment B for the 2014 Annual Depreciation Report.

To the Pennsylvania Public Utility Commission
Per Reference No. M-110300F2013ADR

June 2014

METROPOLITAN EDISON COMPANY

2014 Annual Depreciation Report
Based on Data at 12/31/2013

Index

Executive Summary

- Introduction
- Depreciation Method
- Explanation of Extraordinary Events
- Plant and Reserve Activity
- Net Salvage Analysis
- Three Year Table of Original Cost, Book Reserve and Calculated Annual Depreciation Accrual

Schedule 1 – Depreciation Calculation Summary by Account and Functional Property Group Levels

- Original Cost at 12/31/13
- Book Reserve at 12/31/13
- Net Original Cost at 12/31/13
- Average Service Life and Survivor Curve
- Average Remaining Life
- Annual Accrual
- Annual Accrual Rate

Schedule 2 – Retirement Summary by Account and Functional Property Group Levels

- Original Cost Balance at 12/31/12 and 12/31/13
- Original Cost of Additions and Retirements during the year
- Adjustments to Original Cost
- Percent of beginning of year Original Cost Retired

Schedule 3 – Book Reserve Summary by Account and Functional Property Group Levels

- Book Reserve at 12/31/12 and 12/31/13
- Annual Accrual and Retirements during the year
- Gross Salvage and Cost of Removal
- Adjustments to Book Reserve
- Book Reserve as a percentage of Original Cost

Schedule 4 – Cost of Removal and Salvage

- Cost of Removal and Gross Salvage for 2013
- Net Salvage for 2013
- Five year average calculation of Cost of Removal and Gross Salvage
- Five year average calculation of Net Salvage

METROPOLITAN EDISON COMPANY
2014 ANNUAL DEPRECIATION REPORT
YEAR ENDED DECEMBER, 31, 2013
EXECUTIVE SUMMARY

Introduction

In accordance with 52 Pa. Code, Chapter 73, the attached report provides the following:

- A summary of plant transactions, including the 2013 retirements expressed as a percent of the beginning plant balance
- A summary of depreciation reserve activity, including the reserve as a percent of the plant balance
- The calculation of remaining life depreciation accrual rates as of December 31, 2013
- A summary of cost of removal, gross and net salvage.

Metropolitan Edison Company (Met-Ed) is requesting the Pennsylvania Public Utility Commission (PaPUC) to approve this filing, for accounting purposes only, so that the new depreciation rates can be implemented effective January 1, 2014 to be consistent across all FirstEnergy Pennsylvania Operating Companies.

The annual accrual rate calculations are based on a depreciation service life study of Transmission, Distribution and General Plant data filed with the PaPUC in 2010 that included data through the year ended 2009. The annual accrual rate calculations were based on the same service life and survivor curve estimates and also on the same group procedures and basis as those submitted to the PaPUC in 2010.

Included with this Executive Summary is a table that sets forth a comparison of the original cost, book reserve and calculated annual depreciation accruals by function at December 31, 2011; December 31, 2012; and December 31, 2013. The annual accrual amounts, as summarized, are presented as a percent of original cost for each function and for the total Company. The overall composite depreciation accrual rate related to depreciable electric plant in service decreased from 2.09 percent in 2012 to 2.08 percent for 2013.

Depreciation Method

For most plant accounts, depreciation accruals and accrued depreciation were calculated using the straight line remaining life method and the average service life broad group (ASL-BG) procedure for all vintages.

The depreciation calculations were based on the attained ages and estimated service life characteristics for each depreciable group of electric plant. For certain general plant accounts, the amortization amounts, annual and accrued, were based on the age of the vintage and the selected amortization period.

The service life study filed with the PaPUC in 2010 determined the appropriate service life and survivor curves utilized in the accrual rate calculations as explained further below.

Service Life

The method of estimating service life consisted of compiling the service life history of the plant accounts, sub-accounts or depreciable groups through 2009. The history was then reduced to trends through the use of acceptable actuarial techniques. Lastly, the trend of survivors for each depreciable group was forecasted on the basis of interpretations of past trends and consideration of Company plans for the future. The combination of the historical trend and the estimated future trend developed a complete pattern of life characteristics from which the average service life was derived.

Survivor Curves

Iowa type survivor curves were used to reflect the expected dispersion of retirements, thus providing a consistent method of estimating service lives and depreciation for mass property. For life span groups, the estimate of life characteristics is consistent because the calculated lives of the units within a group are obtained by employing a single probable retirement date for the entire group.

Plant and Reserve Activity

Schedule 1 provides the net original cost balance at December 31, 2013, the average service life and the Iowa Survivor Curve for each account along with the average remaining life, annual depreciation accrual and accrual rate. The functional plant level accrual rates for 2013 did not change significantly from 2012.

Schedule 2 provides the plant activity during 2013 by account and functional group. It sets forth the original cost at the beginning of the year, January 1, 2013; additions; retirements; transfers or adjustments; the balance at the end of the year, December 31, 2013; and the retirements expressed as a percent of the beginning plant balance.

Schedule 3 summarizes the reserve activity during 2013 by account and functional group. It includes the book depreciation reserve balance at the beginning of the year, January 1, 2013; annual accruals; retirements; gross salvage; cost of removal; transfers or adjustments; the balance at the end of the year, December 31, 2013; and the book reserve as a percent of the ending plant balance.

Net Salvage Analysis

Schedule 4 reports the 2013 and a five year rolling average for Cost of Removal, Gross and Net Salvage. The five-year rolling average is based on 2009 through 2013 experience. Since this report relates primarily to Pennsylvania rate regulation practices, no adjustments for expected net salvage were made to either the annual depreciation accrual or the calculated accrued depreciation for individual accounts. Met-Ed, in general, records cost of removal and salvage directly to expense (Account 403, Depreciation Expense) in the year the transactions occur rather than to the depreciation reserve account (Account 108, Accumulated Depreciation).

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT I-A-4:

> "Whenever a major generating plant is placed in operating service or removed from operating service the utility shall separately indicate the effect of the plant addition or removal from service upon rate base, revenue, expense, tax, income and revenue requirement as it affects the test year."

RESPONSE:

This base rate case filing requirement is not applicable to the Company's filing.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT I-B-2:

"Provide a description of the property of the utility and an explanation of the system's operation, and supply the following, using available projections if actual data is unavailable

a. A schedule of generating capability showing for the test year, and for the two consecutive 12-month periods prior to the test year, net dependable capacity in KW by unit, plant capacity factor by unit, and total fuel consumption by type and cost for each unit, if available, or for each station, and operation and maintenance expenses by station.

b. A schedule showing for the test year and for the 12-month period immediately prior to the test year the scheduled and unscheduled outages—in excess of 48 hours—for each station, the equipment or unit involved, the date the outage occurred, duration of the outage, maintenance expenses incurred for each outage, if available, and amounts reimbursable from suppliers or insurance companies.

c. A schedule for each unit retired during the test year or subsequent to the end of the test year, which shows the unit's KW capacity, hours of operation during the test year, net output generated, cents/KWH of maintenance and fuel expenses, and date of retirement

d. A schedule showing latest projections of capacity additions and retirements—costs and KW—and reserve capacity at the time of peak for at least 10 years beyond the test year, including the inservice dates—actual or expected—and AFDC cutoff dates—if different from inservice dates—for all new generating units coming on line during or subsequent to the test year, if claimed."

RESPONSE:

This base rate case filing requirement is not applicable to the Company's filing.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT III-B-5:

"Describe long-term debt reacquisition by issue by Company and Parent as follows:

a. Reacquisition by issue by year.
b. Total gain or loss on reacquisitions by issue by year.
c. Accounting for gain or loss for income tax and book purposes.
d. Proposed treatment of gain or loss on such reacquisition for ratemaking purposes."

RESPONSE:

a. Please see Met-Ed Exhibit RAD-60 Attachment A.
b. Please see Met-Ed Exhibit RAD-60 Attachment A.

c. *Tax Accounting:*

Gains attributable to the reacquisition of long-term debt are recognized on the same basis recorded for book purposes.

Losses on the reacquisition of long-term debt are deducted currently for income tax purposes in the year of reacquisition, which creates book-tax temporary differences. As a result of these temporary differences, the Company records deferred income taxes by means of debits to Account 410.1, Provision for Deferred Income Taxes, Utility Operating Income, with corresponding credits to Account 283, Accumulated Deferred Income Taxes – Other. Amounts recorded in Account 283 are reversed over the remaining life of the respective security issue consistent with book amortization of the loss by means of credits to Account 411.1, Provision for Deferred Income Taxes – Credit, Utility Operating Income.

Book Accounting:

In accordance with General Instruction 17 of the Uniform System on Accounts, gains on reacquired debt are placed in Account No. 257 "Unamortized Gain on Reacquired Debt". The gains are then amortized to Account No. 429.1 "Amortization of Gain on Reacquired Debt-Credit" over the remaining lives of the respective issues (old original debt).

In accordance with General Instruction 17 of the Uniform System of Accounts, losses on reacquired debt are placed in Account No. 189 "Unamortized Loss on Reacquired Debt". The losses are then amortized to Account No 428.1 Amortization of Loss on Reacquired Debt" over the remaining lives of the respective issues (old original debt).

d. The amortization of gain or loss on long term debt reacquisition for ratemaking purposes is addressed on RAD-2, page 12.

METROPOLITAN EDISON COMPANY

"Filing of information and materials – Whenever a public utility proposes a change in rates under section 1308 (relating to voluntary changes in rates), the public utility shall file with the commission a listing of each type of advertising prepared, distributed or presented by the pubic utility or to be prepared, distributed or presented during the test year utilized by the public utility in discharging its burden of proof, and a listing of each type of advertising prepared, distributed or presented by the utility during the year immediately preceding the test year, as well as an accounting of the expenditures by the public utility for such advertising, to the extent such advertising is proposed to be included as operating expense for ratemaking purposes. The filing requirements imposed by this subsection shall not be construed to limit the right of any party to discovery under this or any other provision of law."

Summary of Advertising Expenses

Section 1316 of Title 66, Pa. Consolidated Statutes, addresses recovery of advertising expenses. In accordance with the filing requirements specified in § 1316(c), following is a listing of the types of advertising comprising the total advertising expenses for the fully future test year and the immediately preceding 2 years.

Metropolitan Edison Company

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT TITLE 52, SECTION 69.36

"The Pennsylvania Public Utility Commission intends to examine specific factors in rate proceedings of electric and gas utilities regarding the action or failure to act to encourage development of cost effective energy supply alternatives. Specifically, the Commission will review utilities' efforts to meet the criteria in this section when determining just and reasonable rates in future rate proceedings and may consider those efforts in other proceedings instituted by the Commission

(1) *Information.* At least twice annually utilities should provide customers with information on specific means of utilizing their energy services more effectively and efficiently. Topic areas should include insulation, lighting efficiencies, appliance efficiencies, conservation practices, load management techniques or other relevant information that informs the customer of the efficient use of energy.

(2) *Energy surveys.* Class A utilities should offer onsite energy surveys to the residential, commercial and industrial classes on an ongoing basis. Surveys should be conducted by trained personnel and the results of the survey, upon written request of the customer, be delivered in writing with a clear explanation of the resulting components.

(3) *Cogeneration and small power production.* Electric utilities for which a need for capacity is projected should establish effective programs to explore and encourage the development of additional cogeneration and small power production facilities within their respective service territories.

(4) *Least cost planning.* Gas and electric utilities should actively pursue a least-cost strategy by acquiring and developing the resources necessary to effectively meet their customers' future energy needs, consistent with established availability and reliability criteria. Utilities should make a reasonable effort to promote the utilization of practical and economical energy conservation and demand management through cost effective programs.

(5) *Evaluation.* Class A utilities should demonstrate progressive work regarding development of a reliable customer data base, including, but not limited to:

(i) End-use applications for each class of customer in terms of energy and demand.
(ii) Customer behavior with regard to the decision-making process.

(iii) The impact of program decisions or strategies and how they effect the overall planning process.

6) *Natural gas co-firing.* Electric utilities should explore the potential for increasing capacity and output at coal-fired generating stations through gas co-firing"

RESPONSE:

1) Customer service representatives discuss these "Energy Efficient" topics with customers by referring to the "Energy Decision Maker Brochure" which provides energy saving information for most household electrical appliances and equipment. Representatives offer to mail a copy of the brochure to customers and if appropriate, discuss the Time of Day Rate. The Company's interactive voice response unit also provides this brochure through the "Literature Request" option. These "Energy Efficient" topics are also fully described and available 24/7 on the FirstEnergy website under the "Customer Care" section at the following location:

http://www.firstenergycorp.com/customercare/engine?s=com.firstenergycorp.customercare.www.Home&p=%2F

In addition, on October 15, 2008, Governor Rendell signed HB 2200 into law as Act 129 of 2008[1], with an effective date of November 14, 2008. The Act imposes requirements on electric distribution companies (EDCs), with the overall goal of reducing energy consumption and demand. Act 129 directed all EDCs with at least 100,000 customers to develop and file an energy efficiency and conservation plan. The Company has filed and obtained approval for an Energy Efficiency and Conservation (EE&C) Plan that complies with Commission Orders[2]. The EE&C plan contains numerous programs that are designed to achieve energy efficiency and conservation across all customer segments. Essential to the success of these programs is a concurrent marketing and educational campaign. As part of this, the Company has an outreach effort that: (i) builds awareness and interest in the programs; (ii) communicates ways that customers may participate; and (iii) explains expected benefits and reasons for participating. Information about the EE&C programs available to customers is provided using a number of marketing channels such as via bill inserts, advertisements as well as through the Company's website at:

http://www.firstenergycorp.com/save_energy/save_energy_pennsylvania.html

2) Residential home energy surveys are conducted at no additional cost for income-eligible customers as part of the Low Income Usage Reduction Program known as

[1] 66 Pa.C.S. §§ 2806.1 and 2806.2
[2] Docket Nos. M-2009-2092222 and M-2012-2334387

WARM (Chapter 58). Met-Ed income eligible customers who have lived at their residence at least 6 months are eligible for WARM. The WARM program home energy survey addresses ways to save electricity for customers who have electric heat, electric water hear, air conditioning or base load use. These surveys are conducted by Building Performance Institute Certified contractors hired by Met-Ed. The program is open to both homeowners and renters with landlord agreement. As part of the home energy survey, contractors may perform pressure diagnostic testing using a blower door and manometers to determine where there is air leakage in the home. They also test ducts, conduct combustion safety testing and monitor electricity use of various appliances such as refrigerators and freezers for possible replacement. A personalized partnership agreement and energy-saving strategy for the home and occupants are provided as part of the program.

In addition, residential customers may also participate in the Company's Act 129 energy audit program. Under this program, home energy audits are conducted by trained local contractors hired by the Company's Conservation Service Provider for a fee of $350. Customers who participate in this program receive a comprehensive home energy audit which is designed to provide information on how to reduce their energy usage and increase their home's comfort and energy efficiency. Participating customer's qualify for up to $250 in rebates towards the cost of a comprehensive residential energy audit and qualified retrofits.

Residential customers can also complete the Company's Home Energy Analyzer online tool at http://www.firstenergycorp.com/content/customer/save_energy/save_energy_pennsylvania/for_your_home/pa_home_energy_analyzer.html to save energy and money. The tool enables customers to gain a better understanding of their household energy use and identify ways to improve their efficiency.

The Company also promotes detailed energy audits for commercial and industrial customers under the Company's Act 129 programs. Customers who implement recommended building and/or system improvements are eligible for incentives towards the cost of the third party audit and qualifying audit recommended improvements.

Similar to residential customers, business customers can complete the Business Energy Analyzers online tool at https://www.firstenergycorp.com/content/customer/save_energy/save_energy_pennsylvania/for_your_business/pennsylvania_businessenergyanalyzer.html. The tool will enable business customers to gain a better understanding of their energy use and identify ways to improve their efficiency.

3) Met-Ed's Rider H- Renewable Energy Development Rider is currently available to residential and non-residential customers. This rider encourages the installation and

operation of qualifying renewable energy generation projects to operate in parallel with the Company's electrical system.

4) All capacity requirements are secured through Commission approved default service plans.

5) See the direct testimony of Kevin M. Siedt, Met-Ed Statement No. 4.

6) This filing requirement is not applicable to the Company's filing.

Met-Ed/Penelec/Penn Power/West Penn
Costs of Compliance with Docket No. L-2014-2409383

This exhibit contains the expenditures and operations and maintenance ("O&M") costs associated with implementation of the Commission's three day switching requirement introduced at Docket No. L-2014-2409383 entered April 3, 2014. The exhibit contain incremental O&M expenses plus a five year amortization of additional capital expenditures to implement 3-5 day switches.

Phase I is an eight month project commencing May 1, 2014 with anticipated implementation by the end of December 2014. Phase I will enable the Companies to allow for one customer switch to be accomplished per individual customer account that has no other pending orders. The first phase of the project is a capital effort requiring the labor of 12 full time equivalent ("FTE"), working during Phase I development. Phase I development costs are expected to be $1,382,000.

Phase II is the on-going effort to modify the existing systems in order to implement multiple customer switches per month and ensure customers on payment programs can be accommodated. Phase II development would commence after Phase I is completed with anticipated implementation by the end of June 2015. The Phase II development costs are expected to be $850,000.

In addition, the Companies would need to add to existing staff 6 FTE's in Customer Service and Information Technology plus the cost of mailing letters to customers of multiple switches of $455,000 plus $227,500 for labor related overheads for a total of $682,500 on ongoing O&M costs.

Line No.	Description	Amount
1.	Phase I Capital Costs	$1,382,000
2.	Phase II Capital Costs	850,000
3.	Total	$2,232,000
4.	Five Year Recovery	$ 446,400
5.	On-going O&M expenses	682,500
6.	Total to be recovered annually	$1,128,900

DIRECT TESTIMONY
OF
RICHARD A. D'ANGELO

I. INTRODUCTION AND PURPOSE

Q. Please state your name and business address.

A. My name is Richard A. D'Angelo. My business address is 2800 Pottsville Pike Reading, Pennsylvania 19605.

Q. By whom are you employed and in what capacity?

A. I am employed by FirstEnergy Service Company as Manager – Rates and Regulatory Affairs – Pennsylvania.

Q. Please describe your responsibilities as Manager – Rates and Regulatory Affairs – Pennsylvania.

A. Generally, the Rates and Regulatory Affairs Department provides regulatory support for Metropolitan Edison Company ("Met-Ed"), Pennsylvania Electric Company ("Penelec"), Pennsylvania Power Company ("Penn Power") and West Penn Power Company ("West Penn") (each of which may be referred to as "Company" or collectively as the "Companies"). I am responsible to the Director of Rates & Regulatory Affairs for the development, coordination, preparation and presentation of the Companies' accounting and financial data in all their rate-related matters before the Pennsylvania Public Utility Commission ("PUC" or "Commission") and the Federal Energy Regulatory Commission ("FERC"), as well as the preparation of statements and reports addressing, among other things,

energy costs, non-utility generation ("NUG") costs, quarterly earnings, and other financial matters. Also, I am responsible for the administration of the Companies' retail and wholesale tariffs, the development of retail electric rates, and the promulgation of rules and regulations ensuring uniform tariff administration and interpretation.

Q. What is your educational and professional background?

A. I obtained a Masters Degree in Business Administration from Pace University in 1976. I am also a graduate of Brooklyn College where I received a Bachelor of Science degree with a major in Economics. I have over thirty-eight years of experience with FirstEnergy Service Company and GPU Energy. My work experience is more fully described in Appendix A.

Q. Have you previously testified in regulatory proceedings?

A. Yes. As set forth in Appendix A, I have previously testified before the Commission, as well as the New Jersey Board of Public Utilities, the New York State Public Service Commission and, at the federal level, before FERC.

Q. On whose behalf are you testifying in this proceeding?

A. I am testifying in this proceeding on behalf of Met-Ed, Penelec, Penn Power and West Penn. My testimony equally applies to all of the Companies, unless otherwise stated.

Q. Please describe the purpose of your direct testimony.

A. The general purpose of my testimony is to describe and support: (i) various accounting, rate case, and other financial data that are being submitted in response to the filing requirements for an electric utility base rate case proceeding; (ii) the budget level of capital and operation and maintenance ("O&M") expenses; (iii) ratemaking adjustments to the budgeted test year rate base and operating income statement; (iv) the rolling into base rates of smart meter costs; (v) the removal of universal service costs for West Penn and their proposed recovery through a new reconciliation rider; (vi) the proposed treatment of deferred storm damage expenses and recovery of ongoing storm damage costs; and (viii) capital and O&M costs associated with the Commission's directive that electric distribution companies ("EDCs") accelerate customer switching of electric generation suppliers ("EGSs").

Q. Have you prepared exhibits to accompany your testimony?

A. Yes. Met-Ed Exhibits RAD-1 through RAD-64, Penelec Exhibits RAD-1 through RAD-64, Penn Power Exhibits RAD-1 through RAD-64 and West Penn Exhibits RAD-1 through RAD-64 (collectively, Exhibits RAD-1 through RAD-64) were prepared by me or under my supervision. Of these, my testimony will focus primarily on Exhibit RAD-1, which sets forth each Company's proposed rate base at April 30, 2016, i.e., the end of the fully projected future test year ("FPFTY") being utilized in this proceeding, and RAD-2, which provides a detailed income statement and support for certain normalization and annualization adjustments to

the budgeted FPFTY data. The remaining exhibits, for the most part, comprise responses to those Commission base rate filing requirements for which I am responsible.

Q. Please identify those witnesses whose testimony relates to and supports your testimony and exhibits.

A. Kimberlie L. Bortz (Met-Ed/Penelec/Penn Power/West Penn Statement No. 3) describes and supports the Storm Damage Recovery Riders proposed for all four Companies and the Universal Service Cost ("USC") Rider proposed for West Penn.

Kevin M. Siedt (Met-Ed/Penelec/Penn Power/West Penn Statement No. 4) supports the pro forma levels of energy sales and normalized revenues utilized to determine the Companies' need for rate relief. Mr. Siedt also details the Companies' proposed rate design and various rider modifications.

Hillary E. Stewart (Met-Ed/Penelec/Penn Power/West Penn Statement No. 5) explains the cost of service study she performed along with how various cost of service components (e.g., rate base, expenses) attributable to FERC jurisdictional service were identified and removed from the determination of the Companies' distribution revenue requirement.

Patricia M. Larkin (Met-Ed/Penelec/Penn Power/West Penn Statement No. 6) supports the Companies' cash working capital requirements.

Laura W. Gifford (Met-Ed/Penelec/Penn Power/West Penn Statement No. 7) describes and supports the normalization of uncollectible accounts expense, the unbundling of West Penn's generation uncollectible accounts expense, and the proposed roll-in to base rates of smart meter capital and O&M expenses.

Michael J. Vilbert (Met-Ed/Penelec/Penn Power/West Penn Statement No. 9) develops a range of the cost of equity capital to be utilized in the calculation of the Companies' overall rates of return.

Steven R. Staub (Met-Ed/Penelec/Penn Power/West Penn Statement No. 10) presents the Companies' proposed capital structure ratios and weighted average costs of long-term debt. In addition, he supports the Companies' requested return on common equity of 10.9%.

II. ACCOUNTING AND FINANCIAL DATA

Q. Do the Companies adhere to a system of accounts prescribed by the Commission?

A. Yes. The Companies' accounting records are maintained in accordance with the Commission's regulations at 52 Pa. Code Sec. § 57.41 *et seq.* and in conformity with the Uniform System of Accounts prescribed by the FERC and adopted by the Commission.

Q. Are the Companies' accounting records audited?

A. Yes. The Companies' financial records are audited at least annually by an independent certified public accounting firm. In addition, the FERC conducts

periodic compliance audits to confirm that the Companies are keeping their accounts in conformity with the Uniform System of Accounts. In addition to conducting its own audits, the staff of the PUC reviews the findings of FERC's audits. Other independent agencies also have the authority to audit the Companies' records on a recurring basis, including the Internal Revenue Service ("IRS") and the Securities and Exchange Commission ("SEC"). In addition, the PUC audit staff and the Pennsylvania Department of Revenue staff perform annual audits of the cost recovery rider mechanisms and sales and use tax filings.

Q. Have original cost determinations been made of the Companies' utility plant?

A. Yes. For Met-Ed, an original cost determination was made as of December 31, 1944, for which approval orders were issued by the PUC on December 11, 1945 at EOC Docket No. 27 and for Edison Light and Power Company (which was subsequently merged with Met-Ed) on November 12, 1946 at Docket No. 11. In 1948, the Company filed with the Commission a basic plan for maintaining its continuing property records. The PUC accepted and approved that plan on April 19, 1948.

For Penelec, an original cost determination was made as of December 31, 1943, by Commission Order dated January 15, 1945 at Docket Nos. EOC 32, MGOC 17, EOC 7, EOC 13, EOC 14, EOC 22 and EOC 44. Original cost determinations were also made for the following major companies which were later merged into Penelec: Pennsylvania Edison Company at Docket Nos. EOC 31 and MGOC 16

by Order dated November 1, 1946 approving balances at July 2, 1946; Northern Pennsylvania Power Company at Docket No. EOC 29 by Order dated January 2, 1946 approving balances at December 31, 1944; and Home Electric Company at Docket No. EOC 21 by Order dated August 20, 1945 approving balances at January 1, 1938.

For Penn Power, an original cost determination was approved by the Commission in the mid-1940's. A subsequent original cost determination was made as part of the Commission's April 6, 1984 Order in Penn Power's base rate proceeding at Docket No. R-832409 (58 PaPUC 305, 60 PUR 4th 593). In that case, the Commission, at the recommendation of the Office of Trial Staff, directed Penn Power to develop its revenue requirement on the basis of its book reserve for depreciation and to convert to the average remaining life method of depreciation and, in so doing, established depreciated original cost plant values to be utilized henceforth.

For West Penn, an original cost determination was made as of December 31, 1943, by Order of this Commission dated July 10, 1945 at Docket No. 50.

The Companies have, since the dates noted above, maintained their continuing property records in accordance with the approved plans.

III. BUDGETS

Q. Mr. D'Angelo, are you familiar with the process by which Met-Ed, Penelec, Penn Power and West Penn budget future capital expenditures, revenues and operating expenses?

A. Yes, I am. In general, the Companies' budgeting process involves: (1) the establishment of documented and well-supported goals, objectives and guidelines; (2) intensive reviews and refinements by all levels of management and functional staffs; and (3) careful scrutiny and ultimate approval by appropriate senior management.

Q. How were those budgets utilized to develop the Companies' claimed revenue requirements in these proceedings?

A. They provided the starting point for determining the Companies' claimed rate base at April 30, 2016 and operating income for the twelve months ending that date. Specifically, I consolidated budgeted monthly data for the months of May through December from the 2015 forecast and the months of January through April from the 2016 forecast to develop the "Per Budget" amounts set forth in Column 1 of Exhibits RAD-1 and RAD-2.

Q. Did you update any of the budgeted data for purposes of these rate filings?

A. Yes. Since the completion of the capital budget, certain revisions were made to the forecasted capital structures of the Companies and those changes have been reflected by Mr. Staub in his testimony and exhibits. Also, the Companies made certain changes to the test year for: (1) updated tax depreciation (Exhibits RAD-

33); (2) the provision for deferred income taxes (Exhibits RAD-41); and (3) accumulated deferred income taxes (Exhibits RAD-35).

Q. What opinion, if any, do you have as to the budgeted levels of capital and expense?

A. In my opinion, the budgeted levels of capital and expense are reasonable estimates of what Met-Ed, Penelec, Penn Power and West Penn can expect to experience during the FPFTY prior to recognition of the appropriate ratemaking adjustments reflected in Exhibits RAD-1 and RAD-2.

IV. RATEMAKING ADJUSTMENTS TO BUDGETED TEST YEAR DATA

A. Rate Base at April 30, 2016 (Exhibits RAD-1)

Q. Please generally describe Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-1.

A. These exhibits, which are essentially identical in format, set forth, for each Company, its proposed overall distribution rate base and smart meter rate base at April 30, 2016. Column 1 on page 1 of Exhibits RAD-1 provides budgeted amounts; column 2 adjusts various components; and column 3 reflects the adjusted rate base. The remaining columns on page 1 break the adjusted rate base into separate distribution and smart meter rate base elements.

The adjustments to the budgeted rate base data, along with a detailed explanation of each adjustment, are contained on pages 2 through 11 of Met-Ed, Penelec, and

West Penn, and Penn Power Exhibits RAD-1 and are referenced on page 1 by adjustment number. The adjustments are designed to accomplish the following:

- Remove FERC gross plant and depreciation reserves (Met-Ed, Penelec and West Penn);
- Reflect adjusted depreciation reserves applicable to rate base;
- Eliminate American Transmission Systems, Inc. ("ATSI") plant and depreciation reserves in accordance with the settlement at Docket No. A-110450F0016 (Penn Power);
- Eliminate plant held for future use;
- Reflect the roll-in to base rates of smart meter investment and related depreciation reserves;
- Reflect cash working capital requirements;
- Reflect material and supplies ("M&S") inventories;
- Reflect unamortized deferred storm damage expenses as an addition to rate base (Met-Ed, Penelec and West Penn);
- Reflect the transfer of unrecovered legacy meter investment from plant in service to a regulatory asset account;
- Adjust accumulated deferred income taxes – liberalized depreciation; and
- Adjust operating reserves, net of tax, to remove FERC jurisdictional allocations (Met-Ed, Penelec and West Penn).

Q. Please describe Adjustment No. 1 to Electric Plant in Service.

A. This adjustment eliminates from plant in service accounts: (1) Asset Retirement Costs ("ARC"); (2) FERC Transmission Plant, including allocated portions of Intangible and General Plant, based on the results of a separations study described by Ms. Stewart in Met-Ed/Penelec/Penn Power/West Penn Statement No. 5; (3) legacy meters, as directed by the Commission in the Final Order in the Companies' Smart Meter Deployment Plan at Docket Nos. M-2013-2341990 (Met-Ed), M-2013-2341991 (Penelec), M-2013-2341993 (Penn Power), and M-2013-2341994 (West Penn); and (4) in the case of Penn Power, ATSI plant in accordance with the settlement at Docket No. A-110450F0016.

Q. What are ARC costs?

A. An ARC applies to all legal obligations associated with the retirement of long-lived assets that result from construction under Financial Account Standards Board Statement No. 143 ("FAS-143)." FAS-143 requires that the fair value of a liability for an asset's retirement obligation ("ARO") be recognized in the period in which it is incurred. The associated ARC is capitalized as part of the carrying amount of the long-lived assets. An ARC increases the carrying amount of a long-lived asset when a liability for an ARO is recognized and is depreciated over the life of the asset. The ARC and related depreciation reserve are excluded from rate base, while the associated depreciation expense is excluded from the income statement. This treatment is in accordance with 18 CFR Chapter 1 § 35.18, Asset Retirement Obligations.

Q. What is the Companies' position on Plant Held for Future Use?

A. Historically, the Companies claimed in rate base those investments in Plant Held for Future Use that were expected to be utilized within ten years of the test period. The ten-year window reflected the Commission's prior policy of allowing such investments where definitive plans for utilizing the investment within the ten-year period existed. Under current Commission policy, investments in Plant Held for Future Use are excluded from rate base, but allowed to accrue carrying charges provided they satisfy the ten-year test. Adjustment No. 2 is designed to comply with that policy.

Q. Please describe Adjustment No. 3 to Depreciation Reserve - Electric Plant in Service.

A. This adjustment removes from the budgeted depreciation reserve those portions attributable to the plant eliminated in Adjustment No. 1.

Q. What is the purpose of Adjustment No. 4?

A. This adjustment includes the Companies' cash working capital requirements described by Ms. Larkin in Met-Ed/Penelec/Penn Power/West Penn Statement No. 6 and computed by her in Met-Ed, Penelec, Penn Power and West Penn Exhibits PML-1.

Q. Please describe Adjustment No. 5 to M&S inventories.

A. This adjustment includes each Company's allocated portion of the materials and supplies inventory maintained by the FirstEnergy Service Company at March 31,

2014. The historic test year-end balance was used because the Companies do not budget M&S inventories. Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-13 provide a monthly breakdown of M&S inventories for the thirteen months ended March 31, 2014.

Q. What is the purpose of Adjustment No. 6?

A. Adjustment No. 6 includes in claimed rate base certain storm damage costs, the recognition of which has been deferred in accordance with Commission order. The specific costs deferred, and citations to the Commission orders approving their deferral, are provided for Met-Ed, Penelec, and West Penn on page 7 of the exhibits.

Q. Please describe the adjustment for legacy meters.

A. In its March 6, 2014 Order at Docket Nos. M-2013-2341990, et al., approving the Companies' Smart Meter Deployment Plans, the Commission directed that the cost of removing legacy meters (i.e., meters to be replaced by the installation of smart meters) be charged to the regulatory asset account containing the legacy meters and recovered, along with the unrecovered investment in those meters, over the remaining lives of those meters. As noted previously, Adjustment No. 1 transfers the investment in legacy meters that will remain unrecovered as of April 30, 2016, to a regulatory asset account. Adjustment No. 7 adds back to rate base the regulatory asset account, net of accrued depreciation, plus the estimated cost of removal.

Q. Please describe the adjustment of Accumulated Deferred Income Taxes – Liberalized Depreciation.

A. Adjustment No. 8 adjusts the budgeted deferred tax balances for liberalized depreciation, excluding the impact of Statement of Financial Accounting Standards ("SFAS") No. 109 deferrals, to eliminate: (1) deferred income taxes associated with Three Mile Island Unit No. 2 (Met-Ed and Penelec); (2) deferred income taxes associated with other generation (Met-Ed); (3) other excludable items (capital leases); (4) remaining state income tax deferrals including the benefit of those income taxes; and (5) an allocated portion of the remaining federal deferred income taxes associated with FERC Transmission Plant (Met-Ed, Penelec and West Penn).

Q. Please describe the adjustment proposed to operating reserves.

A. Adjustment No. 9 adjusts operating reserves, net of accumulated deferred income taxes, to eliminate an allocated portion associated with FERC transmission operations (Met-Ed, Penelec and West Penn).

Q. After taking into account the foregoing adjustments, what is Met-Ed's claimed distribution rate base?

A. Met-Ed's claimed distribution rate base equals $1,412,965,000, of which $28,109,000 represents the roll-in of smart meter investment.

Q. What is Penelec's claimed distribution rate base?

A. Penelec's claimed distribution rate base equals $1,540,298,000, of which $30,884,000 represents the roll-in of smart meter investment.

Q. What is Penn Power's claimed distribution rate base?

A. Penn Power's claimed distribution rate base equals $358,929,000, of which $24,326,000 represents the roll-in of smart meter investment.

Q. What is West Penn's claimed distribution rate base?

A. West Penn's claimed distribution rate base equals $1,287,287,000, of which $87,918,000 represents the roll-in smart meter investment.

Q. What is contained on page 11 of Exhibits RAD-l?

A. This page sets forth, for each Company, its claimed overall rate of return, including its proposed capital structure ratios, weighted average cost of long-term debt and requested return on common equity. Those findings, which are presented and supported by Mr. Staub and Dr. Vilbert, are summarized below:

1. Met-Ed	Capital Structure Ratio	Cost Rate	Weighted Cost Rate
Long-Term Debt	50.0%	5.21%	2.60%
Preferred Stock	0.0%	---	---
Common Equity	50.0%	10.9%	5.45%
	100.0%		8.05%

2. Penelec	Capital Structure Ratio	Cost Rate	Weighted Cost Rate
Long-Term Debt	50.1%	5.72%	2.87%
Preferred Stock	---	---	---
Common Equity	49.9%	10.9%	5.44%
	100.0%		8.31%

3. Penn Power	Capital Structure Ratio	Cost Rate	Weighted Cost Rate
Long-Term Debt	49.9%	6.12%	3.05%
Preferred Stock	---	---	---
Common Equity	50.1%	10.9%	5.46%
	100.0%		8.51%

4. West Penn	Capital Structure Ratio	Cost Rate	Weighted Cost Rate
Long-Term Debt	49.9%	5.38%	2.68%
Preferred Stock	---	---	---
Common Equity	50.1%	10.9%	5.46%
	100.0%		8.14%

B. Statement of Operating Income For the 12 Months Ending April 30, 2016 (Exhibits RAD-2)

Q. What is contained in Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-2?

A. Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-2 contain the budgeted and pro forma statements of net utility operating income for the FPFTY ending April 30, 2016. The first three pages summarize the budgeted and adjusted results of operations at present and proposed rates; the next five pages break down each Company's revenue requirement by component part (e.g., distribution, smart meter roll-in); and the remaining pages, starting at page 9, document the specific adjustments made to normalize and annualize the budgeted data.

The adjustments are designed to accomplish the following:

- Annualize number of customers, usage and sales at end-of-test-year levels;

- Roll into base rates revenues associated with the State Tax Adjustment Surcharge ("STAS");

- Eliminate non-jurisdictional "Other Operating Revenues," as applicable;

- Annualize payroll and employee benefit costs to reflect anticipated employee levels and benefits;

- Calculate net negative salvage based on a five-year average of actual net salvage, consistent with Commission practice;

- Normalize pension expense to reflect a ten-year average of cash contributions consistent with the approach approved by the Commission in prior proceedings;

- Normalize other post-employment benefits ("OPEBs") to reflect the actual ongoing level of service costs charged to expense consistent with the approach used in the past with Commission approval;

- Normalize depreciation accruals to reflect utility plant in service as of the end of the FPFTY;

- Normalize rate case expenses to reflect a two-year cost recovery period;

- Eliminate non-jurisdictional O&M expenses;

- Normalize O&M expenses associated with serving new customers;

- Eliminate the Universal Service program costs included in West Penn's budget, as such costs will be recovered through West Penn's proposed USC Rider;

- Amortize the unrecovered investment in "legacy" meters being replaced by smart meters over a five-year period;

- Amortize deferred storm damage O&M expenses over a three-year period (Met-Ed, Penelec and West Penn);

- Amortize West Penn's residual merger credit balance to residential customers over two years;

- Remove default service-related uncollectible accounts expense from distribution revenue requirement (West Penn); and

- Adjust taxes other than income including, for Penn Power, rolling the 5.9% Gross Receipts Tax ("GRT") into base rates and all of its applicable cost recovery riders.

Q. What level of GRT has been collected in Penn Power's base rates and its various cost recovery riders?

A. The Commonwealth of Pennsylvania requires Penn Power to pay GRT at the statutory rate of 5.9%. However, Penn Power has been recovering GRT in base rates and cost recovery riders at a 4.4% tax rate and has been recovering the remaining 1.5% of the statutory rate in its STAS.

Q. How does rolling the STAS into base rates impact the Penn Power's various cost recovery riders?

A. Rolling the STAS into Penn Power's base rates requires each of the Company's cost recovery riders to recover fully that rider's GRT revenue requirement. Consequently, each cost recovery rider reflects a shortfall in its GRT recovery, which is made up through an applicable increase in revenue requirements shown on page 2 of Penn Power Exhibit RAD-2. However, the revenue requirements for the Price-To-Compare ("PTC"), USC, Energy Efficiency Conservation Charge ("EE&C-C"), Default Service Support, and Solar Photovoltaic Requirements Charge ("SPVRC") Riders will be updated. Specifically, the actual rates to be imposed under the various cost recovery riders will have their respective GRT component updated as part of the Penn Power compliance filing at the time new base rates approved in this proceeding are implemented. Because the SMT-C

Rider is being rolled into base rates, its revenue requirement will reflect GRT at the statutory 5.9% rate.

Q. Are the Companies seeking to recover any acquisition premium or other transaction costs associated with the FirstEnergy/GPU or FirstEnergy/Allegheny mergers as part of the revenue requirements in this case?

A. No. There is no provision in the budget for, nor has any adjustment been made to include, an amortization of acquisition premiums or other transaction costs associated with either of those mergers.

Q. Please describe Adjustment No. 1.

A. This is an adjustment to base operating revenues to: (1) annualize changes in number of customers; (2) roll-in STAS revenues; (3) normalize the sales and revenue effects of energy efficiency measures implemented or to be implemented under the Companies' Energy Efficiency and Conservation Plans and to reflect behind-the-meter generation; (4) normalize Other Revenue (Met-Ed, Penn Power, and West Penn); (5) street lighting (Penelec); and (6) eliminate unbilled revenue. Parts (1) through (5) of this adjustment are discussed in detail by Mr. Siedt in Met-Ed/Penelec/Penn Power/West Penn Statement No. 4. I address item (6). By way of background, unbilled revenue has been included in the budget projection to reflect revenues for service rendered but not billed as of the end of each accounting period. Items that produce unbilled revenue include such things as increases in rates and increases in the number of customers. In developing pro

forma revenues for ratemaking purposes, separate adjustments are being made to annualize and normalize the revenue effect of such factors. Therefore, to eliminate any duplication of revenue for ratemaking purposes, unbilled revenue must be eliminated, which is done in Adjustment No. 1.

Q. Please describe Adjustment No. 2.

A. This adjustment eliminates revenues projected to be billed under the Companies' STAS Riders. Because all state taxes are included in distribution base rate revenue requirement, no revenues will be billed under the STAS Rider. As the Companies did not forecast any charge under their STAS Rider, the adjustment is zero.

Q. Please describe Adjustment No. 3.

A. This adjustment eliminates non-jurisdictional FERC transmission revenues from electric revenues projected for the FPFTY.

Q. What is the purpose of Adjustment No. 4 to Distribution Expense?

A. This adjustment: (1) normalizes each of the Companies' and FirstEnergy Service Company's payroll expense to reflect year-end wage and employee levels; (2) eliminates non-jurisdictional transmission expenses; and (3) excludes the transmission portion of the amortization of gains or losses to reacquire debt, where applicable, based on the results of the separations study described by Ms. Stewart in Met-Ed/Penelec/Penn Power/West Penn Statement No. 5.

Supporting Schedule No. 1 develops the payroll expense to reflect year end wage and employee levels for both Company and FirstEnergy Service Company employees. The O&M payroll expense for each Company and FirstEnergy Service Company is then allocated to individual Price to Compare, Transmission, Distribution, Customer Accounts, Customer Service and Administrative and General components. These amounts are later utilized in subsequent adjustments.

Q. Please describe Adjustment No. 5 to Customer Accounts Expense.

A. Customer Accounts expense is adjusted to reflect year end wage and employee levels for each Company and FirstEnergy Service Company personnel (developed in Adjustment No. 4), increased costs associated with added new customers and interest on customer deposits.

Supporting Schedule No. 1 develops the Other O&M expenses associated with serving new customers reflected in Adjustment No. 1. The Commission has previously approved an adjustment to customer accounts expense in recognition of this increased cost. This cost is estimated by determining the ratio of non-payroll customer account expense to distribution revenues from customers and applying this ratio to the additional revenue received from increased customers.

Supporting Schedule No. 1 also captures the cost of interest the Companies are required to pay on customer deposits since the customer deposits are deducted from rate base.

Q. What is the purpose of Adjustment No. 6 to Customer Service and Informational Expense?

A. Customer Service and Informational Expense is adjusted to reflect year end wage and employee levels for each Company and FirstEnergy Service Company that were developed in Adjustment No. 4, Supporting Schedule No. 1.

Q. Please describe Adjustment No. 7 to Administrative and General Expense.

A. Administrative and General Expense is adjusted to reflect: (1) year-end wage and employee levels for each Company and FirstEnergy Service Company that were developed in Adjustment No. 4, Supporting Schedule No. 1; (2) OPEBs at the service cost level; (3) pension expense at the ten-year average cash contribution level; (4) employee benefit expense at year-end personal and wage levels; (5) the elimination of non-jurisdictional administrative and general expenses based on the results of the separations study sponsored by Ms. Stewart (Met-Ed/Penelec/Penn Power/West Penn Statement No. 5); (6) inclusion of rate case expenses incurred in the current proceeding normalized over a two-year period; (7) the elimination of budgeted rate case expenses; and (8) the amortization of costs to allow for accelerated, three day, customer switching from one supplier to another based upon information contained in Exhibits RAD-64.

Supporting Schedule No. 1 adjusts the budgeted level of OPEB expenses to the service cost level. The budgeted OPEB expense consists of the current service cost, adjustments to prior years' service costs, and the financing component. The service cost represents the actuarial present value of benefit liabilities accrued

under the plan benefit formula for services rendered during the test year. Inclusion of the service cost in rates provides for recovery of the current cost of benefits earned by plan participants. Any excess or shortfall related to the expected return on plan assets is excluded because its inclusion would artificially reduce or increase total costs and result in the recovery of more or less than the normal ongoing cost of service. The adjustment to restate OPEB expense at the current service cost level was adopted by the Commission at Docket Nos. R-00061366 and R-00061367.

Supporting Schedule No. 2 normalizes the budgeted level of pension expense to appropriately reflect a ten-year historical average level of actual cash contributions to the pension plan under the methodology that was adopted by the Commission at Docket Nos. R-00061366 and R-00061367.

Supporting Schedule No. 3 uses the O&M payroll expense developed in Adjustment No. 4, Supporting Schedule No. 1 to normalize the employee benefits costs charged to Administrative and General expense.

Q. Please describe Adjustment No. 8 to Depreciation Expense.

A. Budgeted Depreciation Expense is adjusted: (1) to reflect the application of average remaining life depreciation rates to claimed plant in service; (2) to remove depreciation expense attributable to non-jurisdictional assets; (3) to restate the cost of removal/salvage expense on a five-year average basis consistent

with Commission practice; and (4) to amortize the unrecovered investment in legacy meters at April 30, 2016 over five years.

Q. Please describe Adjustment No. 9.

A. This adjustment increases expenses to amortize storm damage expenses that have been deferred with the Commission's prior approval. The specific costs deferred, and a citation to the Commission Order approving their deferral, is provided for each Company on page 24 of the exhibits. This adjustment also eliminates credits that were budgeted in this account for rate case expenses and legacy meters. The underlying expenses were inadvertently budgeted to Administrative and General Expense but were removed from the budget in Adjustment No. 7.

Q. Please describe Adjustment No. 10.

A. Taxes Other Than Income Taxes included in the budget were adjusted to: (1) eliminate non-jurisdictional payroll taxes: (2) reflect GRT at 5.9% for normalized sales revenues; (3) eliminate non-jurisdictional expense portions of Capital Stock Tax, the Public Utility Reality Tax, and other real estate taxes; and (4) adjust payroll tax expense based on annualized payroll and employee levels.

The adjustments to remove the non-jurisdictional portion of payroll taxes, the Capital Stock Tax, Public Utility Reality Tax, and other real estate taxes are based on the results of the separation study performed by Ms. Stewart.

Supporting Schedule No. 1 shows the calculation of Federal Insurance Contributions Act ("FICA") tax associated with the annualized O&M payroll expense developed in Adjustment No. 4.

Q. Please describe briefly the computation of federal and state income taxes as reflected in Adjustment No. 11.

A. This schedule begins with the computation of the $57,147,000 net operating income before income taxes from data shown on page 1 of Met-Ed Exhibit RAD-2 (line 5 less line 14 of column 3 on page 1); $100,404,000 net operating income before income taxes from data shown on page 1 of Penelec Exhibit RAD-2 (line 5 less line 14 of column 3 on page 1); $22,637,000 net operating income before income taxes from data shown on page 1 of Penn Power Exhibit RAD-2 (line 5 less line 14 of column 3 on page 1), and $67,368,000 net operating income before income taxes from data shown on page 1 of West Penn Exhibit RAD-2 (line 5 less line 14 of column 3 on page 1). The revenues and expenses used to calculate the federal and state income taxes in Adjustment No. 11 are divided into columns corresponding to the components shown on pages 1-3 of these exhibits (Distribution, PTC, USC, EE&C-C, Smart Meter Technologies Charge Rider, DSS Rider, SPVRC, NUG and Storm Cost Recovery Rider) to derive net operating income before income taxes. From that amount, interest was deducted. Interest was calculated by multiplying the adjusted rate base by the weighted average cost of long-term debt. The resulting figure is net income before income taxes a shown on line 10.

Two adjustments (lines 11 and 14) were made to increase taxable income. The first reflects the five-year amortization of net salvage. The second increases net income by adding back the cash pension contribution included in pro forma O&M expenses, which is not a current deduction for tax purposes.

The remaining two adjustments (lines 12 and 13) are deductions from taxable income. The first adjusts depreciation to reflect accelerated depreciation, where permitted, on eligible property as of April 30, 2016. The second reflects cost of removal ($6,080,000 for Met-Ed; $8,872,000 for Penelec; $527,000 for Penn Power; $4,938,000 for West Penn) that may be claimed as a current deduction for tax purposes. The net amount of these adjustments is included in the net income before federal and state income taxes to determine the income subject to state income tax. The state and federal income tax calculations then follow. The state and federal income taxes are computed at the statutory rates of 9.99% and 35%, respectively.

Q. Please describe Adjustment No. 12.

A. This adjustment eliminates from the budgeted Provision for Deferred Income Taxes all deferred taxes except the federal deferred taxes associated with liberalized depreciation. Additionally, federal deferred taxes for liberalized depreciation are adjusted to reflect plant in service as of the end of the FPFTY. Detailed calculations of the federal deferrals are provided in Exhibits RAD-41.

The computation for post-1969 through 1980 “expansion” property is based on the difference between accelerated depreciation (calculated using the Sum of the Years Digits (“SYD”) method and taxable lives based on the Asset Depreciation Range (“ADR”)) and straight-line depreciation using “guideline” lives. The computation for 1981 and subsequent property begins by determining the difference between tax depreciation using the Accelerated Cost Recovery System (“ACRS”) and the Modified Accelerated Cost Recovery System (“MACRS”) and straight line depreciation (using book rates and tax basis).

The federal tax rate of 35% was applied to the amounts calculated in the manner described above and compared to the tax to be booked during the test year to determine the adjustment to deferred taxes.

The state deferred taxes associated with liberalized depreciation pertain only to FERC jurisdictional property and have been eliminated. The deferred taxes associated with other miscellaneous items have been eliminated because the associated income has not been included in the calculation of taxable income used to compute federal and state taxes included in each Company’s revenue requirement.

Q. Please describe Adjustment No. 13.

A. This adjustment eliminates the non-jurisdictional portion of investment tax credits based on the results of the separation study performed by Ms. Stewart.

Q. What is Met-Ed's claimed additional distribution revenue requirement?

A. Reflecting all of the adjustments to the budget data discussed above, Met-Ed's net utility operating income for the FPFTY at present rates is $29,730,000 (page 1, column 13, line 23). This amount, compared to the $113,767,000 shown on page 3, column 33, line 23, shows that $84,037,000 in additional return is required for Met-Ed to achieve an overall return of 8.05% on its distribution rate base. This translates into an additional base rate revenue requirement, or revenue deficiency under existing rates, of $152,643,000, as shown on page 2, column 23, line 1.

Q. What is Penelec's claimed additional distribution revenue requirement?

A. Reflecting all of the adjustments to the budget data discussed above, Penelec's net utility operating income for the FPFTY at present rates is $61,695,000 (page 1, column 14, line 23), after excluding ($726,000) allocated to the New York jurisdiction. This amount, compared to the $127,934,000 shown on page 3, column 34, line 23, shows that $66,239,000 in additional return is required for Penelec to achieve an overall return of 8.31% on its Pennsylvania jurisdictional distribution rate base. This translates into an additional base rate revenue requirement, or revenue deficiency under existing rates, of $120,316,000, as shown on page 2, column 24, line 1.

Q. What is Penn Power's claimed additional distribution revenue requirement?

A. Reflecting all of the adjustments to the budget data discussed above, Penn Power's net utility operating income for the FPFTY at present rates is $14,278,000 (page 1, column 13, line 23). This amount, compared to the $30,550,000 shown on

page 3, column 33, line 23, shows that $16,272,000 in additional return is required for Penn Power to achieve an overall return of 8.51% on its distribution rate base. This translates into an additional base rate revenue requirement, or revenue deficiency under existing rates, of $29,557,000, as shown on page 2, column 23, line 1.

Q. What is West Penn's claimed additional distribution revenue requirement?

A. Reflecting all of the adjustments to the budget data discussed above, West Penn's net utility operating income for the FPFTY at present rates is $61,502,000 (page 1, column 11, line 23). This amount, compared to the $104,785,000 shown on page 3, column 27, line 23, shows that $43,283,000 in additional return is required for West Penn to achieve an overall return of 8.14% on its distribution rate base. This translates into an additional base rate revenue requirement, or revenue deficiency under existing rates, of $78,619,000, as shown on page 2, column 19, line 1.

Q. What is contained in Exhibits RAD-3, RAD-4, RAD-5 and RAD-6?

A. Exhibits RAD-3 and RAD-5 set forth each Company’s rate base at March 31, 2015 and 2014, respectively. Exhibits RAD-4 and RAD-6 set forth each Company’s operating income statements with normalizing adjustments for the future test year (twelve months ended March 31, 2015) and the historic test year (twelve months ending March 31, 2014), respectively.

While the specific numbers differ, these two sets of exhibits are identical in format and concept to Exhibits RAD-1 and RAD-2 and the description of the filing format in my testimony applies equally to them.

V. REGULATORY TREATMENT OF STORM DAMAGE COSTS

Q. How has the Commission historically treated storm damage costs for ratemaking purposes?

A. As in the case of other operating expenses, utilities have been allowed to include a normal, ongoing level of storm damage costs in their base rate revenue requirement. In addition, utilities have been permitted to request authorization to defer, for accounting purposes, extraordinary storm damage costs, with the understanding that rate recovery of the deferred costs would be addressed in a future base rate proceeding. In accordance with that policy and prior rulings by the Commission, the Companies have included in their FPFTY revenue requirement a normalized level of storm damage costs and, in the case of Met-Ed, Penelec and West Penn, rate recovery of previously authorized deferrals (see Exhibits RAD-1, p. 7 and Exhibits RAD-2, p. 24).

Q. Are the Companies proposing any changes to the recovery of storm damage expense in this filing?

A. Yes. The Companies are proposing to institute a Storm Damage Recovery Rider to provide for the annual true-up of actual storm damage O&M expenses. The Riders would impose either a charge, if actual storm damage expenses exceeded the base rate amount, or a credit if actual storm damage expenses were less than

the base rate amount. Ms. Bortz, in Met-Ed/Penelec/Penn Power/West Penn Statement No. 3, describes the Storm Damage Recovery Riders proposed by the Companies.

Q. What is the normalized, ongoing amount of storm damage O&M expense budgeted for the twelve months ending April 30, 2016?

A. Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-63 set forth budgeted storm damage expense for the twelve months ending April 30, 2016, and the twelve months ending March 31, 2015, and actual storm damage expense for the twelve months ended March 31, 2014, along with three additional historical calendar years. The level of storm damage O&M expense to be recovered through base rates is $6,625,000 at Met-Ed, $5,111,000 at Penelec, $657,000 at Penn Power, and $5,276,000 at West Penn.

VI. COSTS ASSOCIATED WITH IMPLEMENTATION OF ACCELERATED CUSTOMER SWITCHING

Q. You noted previously that the Commission had ordered EDCs to accelerate the processing of supplier switching requests. What led to this directive?

A. Weather conditions earlier this year were unusually harsh and resulted in unanticipated fluctuations in wholesale and retail energy prices. Customers with variable rate supply contracts were adversely impacted by these developments and, in response, the Commission launched a Rulemaking with the goal of ensuring that customers could quickly switch electric suppliers to mitigate their exposure to the types of price fluctuations they had experienced.

Q. How did the Commission proceed with the Rulemaking?

A. On March 18, 2014 at Docket No. L-2014-2409383, the Commission issued a Secretarial Letter informing EDCs, the Office of Consumer Advocate and the Office of Small Business Advocate of a proposed Rulemaking to amend existing Regulations at 52 Pa. Code, Chapter 57. The Rulemaking directed EDCs to take the necessary steps to permit retail customers to switch suppliers within three days or less. The Commission recognized the proposed changes were significant and provided for a comment period.

Q. What was the outcome of the Commission's Rulemaking at Docket No. L-2014-2409383?

A. The Commission revised its regulations to facilitate accelerated customer switching in its Order at Docket No. L-2014-2409383, entered April 3, 2014. The Rulemaking Order ensures customers may easily and quickly switch electric suppliers in an effort to mitigate potential price impacts related to variable priced contracts and fluctuations in the wholesale and retail energy markets. The Rulemaking Order also allows for the recovery in an EDC's next base rate proceeding of the cost incurred to comply with the accelerated switching requirements.

Q. What is contained in the Companies' respective Exhibits RAD-64?

A. Exhibits RAD-64 identify the incremental O&M expenses and capital expenditures to be incurred by each Company to comply with the Commission's three-day switching requirement. Those costs are then added to each Company's

revenue requirement through an adjustment to Administrative and General expense on page 18 of Exhibits RAD-2. As indicated on page 1 of Exhibits RAD-64, the Companies are proposing that the additional capital expenditures be amortized over five years.

VII. OTHER FILING REQUIREMENTS

Q. Would you briefly describe Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-7 through RAD-62?

A. Yes. 52 Pa. Code § 53.53 contains the data requirements to be filed in a major rate case. Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-7 through RAD-60 contain the Companies' responses to various data requests assigned to me. Each exhibit cites the specific filing requirement to which it is responding and is followed by the Companies' response.

Met-Ed, Penelec, Penn Power, and West Penn Exhibits RAD-61 list the types of advertising included in expenses for the test year and the immediately preceding year, in accordance with Section 1316(c) of the Public Utility Code, 66 Pa. Code Sec. § 1316(c). Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-62 respond to the PUC Statement of Policy at 52 Pa. Code § 69.36, entitled "Performance criteria regarding energy supply alternatives." This Statement of Policy identifies six areas for review in rate proceedings pertaining to an electric utility's efforts to encourage the development of cost effective energy supply alternatives. Met-Ed, Penelec, Penn Power and West Penn Exhibits RAD-62

address five of the six identified areas. Mr. Siedt addresses the remaining area in Met-Ed/Penelec/Penn Power/West Penn Statement No. 4.

VIII. CONCLUSION

Q. Please summarize your testimony and recommendations.

A. Inclusive of the roll-in of smart meter costs, Met-Ed has supported an increase in base rate revenue requirements of $152,643,000; Penelec an increase of $120,316,000; Penn Power an increase of $29,557,000; and West Penn an increase of $78,620,000 (including the separate USC Rider).

In addition, West Penn is proposing a separate reconciling cost recovery rider for universal service costs as explained by Ms. Bortz in Met-Ed/Penelec/Penn Power/West Penn Statement No. 3. If the USC Rider is not adopted by the Commission, an additional revenue requirement of $29,565,000 (see West Penn Exhibit RAD-2, page 7) would need to be reflected in West Penn's base distribution rates.

Finally, and as previously discussed, the Companies are proposing to implement Storm Damage Recovery Riders to provide for the recovery of storm damage expenses in excess of – or the crediting of storm damage expenses falling below – a normalized level of storm damage costs reflected in base distribution rates. Ms. Bortz describes these Riders in Met-Ed/Penelec/Penn Power/West Penn Statement No. 3.

Q. Mr. D’Angelo, does this complete your direct testimony?

A. Yes, it does.

Resume: Education and Experience of Richard A. D'Angelo

Education:

1972	Bachelor of Science Degree in Economics - Brooklyn College
1976	Master of Business Administration Degree in Finance - Pace University

Experience:

9/72 - 11/76	Accountant and Supervisor - Bankers Trust Company
11/76 - 2/81	Employed as Accountant within Regulatory Accounting Area - Metropolitan Edison Company ("Met-Ed")
2/81 - 2/82	Senior Accountant within Regulatory Accounting Area with special emphasis on rate-related matters (Met-Ed)
2/82 - 2/83	Supervisor - Rates and Financing (Met-Ed)
2/83 - 3/95	Manager - Rate Revenue Requirements within the Rate Department (Met-Ed)
3/95 - 8/96	Manager - Regulatory Liaison within the Regulatory Affairs and Pricing Department (Met-Ed/Penelec)
8/96 – 11/01	Manager - Rate Activity within the Rate Department (GPU Energy)
11/01 – Present	Manager – Rates & Regulatory Affairs- Pennsylvania (FirstEnergy Service Company)

Prepared and presented testimony in the following rate-related cases:

Normalization Adjustment No. 1
($000)

Adjustment of Electric Plant in Service

To adjust the budgeted gross plant in service to (1) eliminate the Asset Retirement Cost ("ARC") An asset retirement cost ("ARC") increases the carrying amount of a long-lived asset when a liability for an asset retirement obligation ("ARO") is recognized. The ARC is depreciated over the life of the asset. The ARC and related reserve are excluded from Rate Base, while the associated depreciation expense is excluded from the Income Statement. This treatment is in accordance with 18 CFR Chapter 1 § 35.18 Asset retirement obligations; (2) remove FERC Transmission Plant which is non-jurisdictional; (3) remove an allocated portion of Intangible Plant that supports FERC Transmission Plant; (4) remove an allocated portion of General Plant that supports FERC Transmission Plant; and (5) remove legacy meters as ordered in the Final Order on the Smart Meter Deployment Plan at Docket No. M-2013-2341990.

Line No.		Adjustments	Plant in Service	Cross Reference
		(1)	(2)	(3)
1	Budgeted Plant in Service at 4/30/2016		$ 2,935,437	Met-Ed Exhibit RAD-46, Attach. B, p. 1 and 2
	Normalizing adjustments:			
2	Eliminate ARC	$ (95,358)		Met-Ed Exhibit RAD-46, Attach. B, p. 1 and 2
3	Remove FERC Transmission Plant	(454,163)		Met-Ed Exhibit RAD-46, Attach. B, p. 1 and 2
4	Remove allocated portion of Intangible Plant associated with FERC Transmission Plant	(9,695)		Met-Ed Exhibit RAD-46, Attach. B, p. 1 and 2
5	Remove allocated portion of General Plant associated with FERC Transmission Plant	(43,570)		Met-Ed Exhibit RAD-46, Attach. B, p. 1 and 2
6	Remove legacy meters	(66,795)		Met-Ed Exhibit RAD-46, Attach. B, p. 1 and 2
7	Normalization adjustment		(669,581)	
8	Plant in Service at 4/30/2016, as adjusted		$ 2,265,856	Met-Ed Exhibit RAD-46, Attach. B, p. 1 and 2

METROPOLITAN EDISON COMPANY
Normalization Adjustment No. 2
($000)

Adjustment of Plant Held for Future Use

To adjust Plant Held for Future Use. As an alternative to rate base treatment, the Company is requesting the allowance of deferred carrying charges on any current or future investments in Plant Held for Future Use with definitive plans of utilization within a ten-year period. This is consistent with long-standing Commission policy.

Line No.		Amount (1)
1	Per budget Plant Held for Future Use at 4/30/2016	$ 596
	Normalizing adjustment:	
2	Eliminate Plant Held for Future Use	(596)
3	Plant Held for Future Use at 4/30/2016, as adjusted	$ -

Metropolitan Edison Company
Normalization Adjustment No. 1
$000

Adjustment of Base Operating Revenues

To adjust base operating revenues for (1) changes in the number of customers, (2) to roll in State Tax Adjustment Surcharge ("STAS") revenues into base rates, (3) to adjust for energy efficiency and behind the meter generation, (4) to adjust for other revenues and (5) to eliminate unbilled revenues. The adjustment for unbilled revenues is supported by Mr. R. A. D'Angelo. Adjustments (1) through (4) are supported by Mr. K. M. Siedt.

Line No.	Description	Amount (1)	Amount (2)
1	Base revenues per budget for the 12 months ending 4/30/16		$ 656,675
	Normalizing adjustments:		
2	Customers - increase to yr end level	$ 502	
	Specific adjustments		
3	Roll-in of STAS	-	
4	Adjust for Energy Efficiency and Behind the Meter Generation	(457)	
5	Adjust for Other Revenues	41	
6	Eliminate unbilled revenues	(61)	
7	Total	$ (477)	
8	Normalizing adjustment (Lines 2+7)		25
9	Base revenues per budget for the 12 months ending 4/30/2016, as adjusted		$ 656,700

Metropolitan Edison Company
Normalization Adjustment No. 2
$000

Adjustment of State Tax Adjustment Surcharge Revenues

To remove state tax adjustment surcharge ("STAS") revenues. Normalized STAS revenues are being rolled into base rates.

Line No.	Description	Amount (1)
1	STAS revenue per budget for the 12 months ending 4/30/2016	$ -
2	Eliminate per budget STAS	-
3	Other operating revenue per budget for the 12 months ending 4/30/2016, as adjusted	$ -

Metropolitan Edison Company
Normalization Adjustment No. 3
$000

Adjustment of Other Operating Revenues

To adjust other operating revenue to eliminate non-jurisdictional transmission revenues.

Line No.	Description	Amount (1)
1	Other operating revenue per budget for the 12 months ending 4/30/2016	$ 72,265
2	Eliminate non-jurisdictional transmission revenues	(55,404)
3	Other operating revenue per budget for the 12 months ending 4/30/2016, as adjusted	$ 16,861

Metropolitan Edison Company
Normalization Adjustment No. 4
$000

Adjustment of Distribution Expense

To adjust distribution payroll expense to reflect year end wage and employee levels, to adjust service company distribution payroll expense to reflect year end wage and employee levels, eliminate non-jurisdictional transmission expense and to include the distribution portion of the amortization of gains or losses to reacquired debt. The plant and labor allocation factors used in this normalization adjustment are supported by Ms. H. E. Stewart.

Line No.	Description	Amount (1)	Amount (2)
1	Distribution expense per budget for the 12 months ending 4/30/2016		$ 56,647
2	Distribution payroll expense adjustment to reflect year end employee levels, and ongoing wage and salary rates (Supporting Schedule No. 1, Line 12, Column 1)	$ 263	
3	Service Company Distribution payroll expense adjustment allocated to Met-Ed to reflect year end employee levels, and ongoing wage and salary rates (Supporting Schedule No. 1, Line 21, Column 1)	66	
4	Eliminate non-jurisdictional transmission expense	(9,140)	
5	Amortization of (gain) or loss on reacquired debt	$ 104	
6	Allocation ratio based on distribution plant	77.70%	
7	Distribution portion of (gain) or loss	$ 81	
8	Total normalizing adjustment (Lines 2 + 3 + 4 + 7)		(8,731)
9	Distribution expense per budget for the 12 months ending 4/30/2016, as adjusted		$ 47,916

Metropolitan Edison Company

Metropolitan Edison Company
Normalization Adjustment No. 5
$000

Adjustment of Customer Accounts Expense

To adjust customer account expense to reflect year end wage and employee levels, service company year end wage and employee levels, increased costs associated with added customers, and interest on customer deposits.

Line No.	Description	Amount (1)	Amount (2)
1	Customer Account expense per budget for the 12 months ending 4/30/2016		$ 23,271
2	Customer Account payroll expense adjustment to reflect year end employee levels and ongoing wage & salary rates (Normalizing Adjustment No. 4, Supporting Schedule No. 1, Line 13, Column 1)	$ 92	
3	Service Company customer account payroll expense adjustment allocated to Met-Ed to reflect year end employee levels and ongoing wage & salary rates (Normalizing Adjustment No. 4, Supporting Schedule No. 1, Line 22, Column 1)	99	
4	Increased O&M costs associated with increased number of customers in normalized revenue levels (Supporting Schedule 1, Line 10)	10	
5	Interest on customer deposits (Supporting Schedule 2, Line 3)	1,256	
6	Total normalizing adjustment (Lines 2 + 3 + 4 + 5)		1,457
7	Customer Account expense per budget for the 12 months ending 4/30/2016, as adjusted		$ 24,728

Metropolitan Edison Company
Supporting Schedule No. 1 to Normalizing Adjustment No. 5
($000)

Adjustment of Other O&M Costs Associated with Serving New Customers

In association with the additional revenues from added customers reflected in Adjustment No. 1, there is also a cost associated with serving those customers. The Commission has previously recognized this and approved an adjustment to customer accounts expense for this increased cost. This cost is estimated by determining the ratio of non-payroll customer account expense to distribution revenues from customers and applying this ratio to the additional revenue received from increased customers. The distribution revenues are supported by Mr. K. M. Siedt.

Line No.	Description	Amount (1)
	Customer Account Expense Excluding Labor and Uncollectible	
1	Customer Account expense per budget for the 12 months ending 4/30/2016	$ 23,271
2	Less: uncollectible expense	(12,136)
3	Less: Labor expense	(5,879)
4	Customer Account expense excluding labor and uncollectible expense	$ 5,256
	Total Base Revenue	
5	Distribution revenues per budget	$ 250,602
6	Late payment charges per budget	3,229
7	Total	$ 253,831
8	Ratio of customer account expense to distribution revenue (Line 4 / Line 7)	2.07%
9	Revenue from added customers (Adjustment No. 1, Line 2)	$ 502
10	Additional expense from added customers (Line 8 X Line 9)	$ 10

Metropolitan Edison Company
Supporting Schedule No. 2 to Normalizing Adjustment No. 5
($000)

Adjustment to Allow for Interest Expense on Customer Deposits

Customer deposits are included in rate base as a deduction, since these are funds supplied by customers to the company. Interest paid to customers on these deposits correspondingly has been recognized by the Commission as a expense when setting rates.

Line No.	Description	Amount (1)
1	Customer deposits included in rate base (Exhibit RAD-1 Column 1, Line 14)	$ 20,925
2	Interest rate on deposits	6%
3	Interest expense on customer deposits	$ 1,256

Metropolitan Edison Company
Normalization Adjustment No. 6
$000

Adjustment of Customer Service and Information Expense

To adjust customer service and information expense to reflect year end wage and employee levels.

Line No.	Description	Amount (1)	Amount (2)
1	Customer Service expense per budget for the 12 months ending 4/30/2016		$ 40,721
2	Customer Service payroll expense adjustment to reflect year end employee levels and ongoing wage & salary rates, (Normalization Adjustment No. 4, Supporting Schedule No. 1, Line 14, Column 1)	$ 44	
3	Total normalizing adjustment		44
4	Customer Service expense per budget for the 12 months ending 4/30/2016, as adjusted		$ 40,765

Metropolitan Edison Company
Normalization Adjustment No. 7
$000

Adjustment of Administrative and General Expense

To adjust Administrative and General expenses to reflect year end wage and employee levels, service company year end wage and employee levels, OPEB expense at the service cost level, pension expense to the ten year cash level, employee benefits expenses at year end personnel and wage levels, the elimination of non-jurisdictional administrative and general expenses, normalization of rate case expenses, eliminate legacy meters from the budget, and include costs to update computer system to allow accelerated (3 day) switching from one supplier to another. Hillary Stewart supports the non-jurisdictional expense allocation factor.

Line No.	Description	Amount (1)	Amount (2)
1	Administrative & general expense per budget for the 12 months ending 4/30/2016		$ 41,116
2	Administrative & general expenses related to EE&C	$ (24,313)	
3	Administrative & general expenses related to Smart Meters	(8,684)	
4	Adjustment to administrative & general expenses	(32,997)

Adjustment for OPEB Expense

Budgeted OPEB expense consists of the current service cost, adjustments to prior years' service costs, and the financing component. This schedule adjusts the total budgeted expense amounts to the service cost. The service cost represents the actuarial present value of benefit liabilities accrued under the plan benefit formula for services rendered during the test year. Inclusion of the service cost in rates provides for recovery of the current cost of benefits earned by plan participants. Any excess or shortfall related to the expected return on plan assets are not included because their inclusion would artificially reduce or increase total costs and result in the recovery of more or less than the actual normal cost of service. The adjustment for OPEB expense to the current service cost amount was adopted by the Commission at Docket Nos. R-00061366 and R-00061367.

Line No.	Description	O&M (1)	Capital (2)	Total (3)

Normalization Adjustment No. 1
($000)

Adjustment of Electric Plant in Service

To adjust the budgeted gross plant in service to (1) eliminate the Asset Retirement Cost ("ARC"). An asset retirement cost ("ARC") increases the carrying amount of a long-lived asset when a liability for an asset retirement obligation ("ARO") is recognized. The ARC is depreciated over the life of the asset. The ARC and related reserve are excluded from Rate Base, while the associated depreciation expense is excluded from the Income Statement. This treatment is in accordance with 18 CFR Chapter 1 § 35.18 Asset retirement obligations; (2) remove FERC Transmission Plant which is non-jurisdictional; (3) remove an allocated portion of Intangible Plant that supports FERC Transmission Plant; (4) remove an allocated portion of General Plant that supports FERC Transmission Plant; and (5) remove legacy meters as ordered in the Final Order on the Smart Meter Deployment Plan at Docket No. M-2013-2341990.

Line No.		Adjustments	Plant in Service	Cross Reference
		(1)	(2)	(3)
1	Budgeted Plant in Service at March 31, 2015		$ 2,818,193	Met-Ed Exhibit RAD-47, Attach. B, p. 1 and 2
	Normalizing adjustments:			
2	Eliminate ARC	$ (95,358)		Met-Ed Exhibit RAD-47, Attach. B, p. 1 and 2
3	Remove FERC Transmission Plant	(433,209)		Met-Ed Exhibit RAD-47, Attach. B, p. 1 and 2
4	Remove allocated portion of Intangible Plant associated with FERC Transmission Plant	(6,968)		Met-Ed Exhibit RAD-47, Attach. B, p. 1 and 2
5	Remove allocated portion of General Plant associated with FERC Transmission Plant	(43,410)		Met-Ed Exhibit RAD-47, Attach. B, p. 1 and 2
6	Remove legacy meters	(66,795)		Met-Ed Exhibit RAD-47, Attach. B, p. 1 and 2
7	Normalization adjustment		(645,740)	
8	Plant in Service at 3/31/2015, as adjusted		$ 2,172,453	Met-Ed Exhibit RAD-47, Attach. B, p. 1 and 2

METROPOLITAN EDISON COMPANY
Normalization Adjustment No. 2
($000)

Adjustment of Plant Held for Future Use

To adjust Plant Held for Future Use. As an alternative to rate base treatment, the Company is requesting the allowance of deferred carrying charges on any current or future investments in Plant Held for Future Use with definitive plans of utilization within a ten-year period. This is consistent with long-standing Commission policy.

Line No.		Amount (1)
1	Per budget Plant Held for Future Use at 3/31/2015	$ 596
2	Eliminate Plant Held for Future Use	(596)
3	Plant Held for Future Use at 3/31/2015, as adjusted	$ -

Adjustment of Depreciation Reserves - Plant In Service

To adjust the budgeted plant in service depreciation reserves to (1) eliminate the Asset Retirement Cost ("ARC") reserves. An asset retirement cost ("ARC") increases the carrying amount of a long-lived asset when a liability for an asset retirement obligation ("ARO") is recognized. The ARC is depreciated over the life of the asset. The ARC and related reserve are excluded from Rate Base, while the associated depreciation expense is excluded from the Income Statement. This treatment is in accordance with 18 CFR Chapter 1 § 35.18 Asset retirement obligations; (2) remove FERC Transmission Plant reserves which are non-jurisdictional; (3) remove an allocated portion of Intangible Plant reserves that support FERC Transmission Plant; (4) remove an allocated portion of General Plant reserves that support FERC Transmission Plant; (5) and remove legacy meters as ordered in the Final Order on the Smart Meter Deployment Plan at Docket No. M-2013-2341990.

Metropolitan Edison Company
Normalization Adjustment No. 1
$000

Adjustment of Base Operating Revenues

To adjust base operating revenues (1) for changes in the number of customers, (2) to roll in State Tax Adjustment Surcharge ("STAS") revenues into base rates, (3) to adjust for energy efficiency and behind the meter generation, (4) to adjust for other revenues and (5) to eliminate unbilled revenues. The adjustment for unbilled revenues is supported by Mr. R. A. D'Angelo. Adjustments (1) through (4) are supported by Mr. K. M. Siedt.

Line No.	Description	Amount (1)	Amount (2)
1	Base revenues per budget for the 12 months ending 3/31/15		$ 675,063
	Normalizing adjustments:		
2	Customers - increase to yr end level	$ 394	
	Specific adjustments		
3	Roll-in of STAS	-	
4	Adjust for Energy Efficiency and Behind the Meter Generation	(2,232)	
5	Adjust for Other Revenues	42	
6	Eliminate unbilled revenues	1,763	
7	Total	$ (427)	
8	Normalizing adjustment (Lines 2+7)		(32)
9	Base revenues per budget for the 12 months ending 3/31/2015, as adjusted		$ 675,031

Metropolitan Edison Company
Normalization Adjustment No. 2
$000

Adjustment of State Tax Adjustment Surcharge Revenues

To remove state tax adjustment surcharge ("STAS") revenues. Normalized STAS revenues are being rolled into base rates.

Line No.	Description	Amount (1)
1	STAS revenue per budget for the 12 months ending 3/31/2015	$ -
2	Eliminate per budget STAS	-
3	Other operating revenue per budget for the 12 months ending 3/31/2015, as adjusted	$ -

Metropolitan Edison Company
Normalization Adjustment No. 3
$000

Adjustment of Other Operating Revenues

To adjust other operating revenue to eliminate non-jurisdictional transmission revenues.

Line No.	Description	Amount (1)
1	Other operating revenue per budget for the 12 months ending 3/31/2015	$ 72,494
2	Eliminate non-jurisdictional transmission revenues	(55,476)
3	Other operating revenue per budget for the 12 months ending 3/31/2015, as adjusted	$ 17,017

Metropolitan Edison Company
Normalization Adjustment No. 4
$000

Adjustment of Distribution Expense

To adjust distribution payroll expense to reflect year end wage and employee levels, to adjust service company distribution payroll expense to reflect year end wage and employee levels, eliminate non-jurisdictional transmission expense and to include the distribution portion of the amortization of gains or losses to reacquired debt. The plant and labor allocation factors used in this normalization adjustment are supported by Ms. H. E. Stewart.

Line No.	Description	Amount (1)	Amount (2)
1	Distribution expense per budget for the 12 months ending 3/31/2015		$ 53,448
2	Distribution payroll expense adjustment to reflect year end employee levels, and ongoing wage and salary rates, (Supporting Schedule No. 1, Line 14, Column 1)	$ 298	
3	Service Company Distribution payroll expense adjustment allocated to Met-Ed to reflect year end employee levels, and ongoing wage and salary rates (Supporting Schedule No. 1, Line 26, Column 1)	100	
4	Eliminate non-jurisdictional transmission expense	(8,911)	
5	Amortization of (gain) or loss on reacquired debt	$ 400	
6	Allocation ratio based on distribution plant	77.70%	
7	Distribution portion of (gain) or loss	$ 311	
8	Total normalizing adjustment (Lines 2 + 3 + 4 + 7)		(8,202)
9	Distribution expense per budget for the 12 months ending 3/31/2015, as adjusted		$ 45,246

7	Customer Account expense per budget for the 12 months ending 3/31/2015, as adjusted		$ 26,814

Metropolitan Edison Company
Supporting Schedule No. 1 to Normalizing Adjustment No. 5
($000)

Adjustment of Other O&M Costs Associated with Serving New Customers

In association with the additional revenues from added customers reflected in Adjustment No. 1, there is also a cost associated with serving those customers. The Commission has previously recognized this and approved an adjustment to customer accounts expense for this increased cost. This cost is estimated by determining the ratio of non-payroll customer account expense to distribution revenues from customers and applying this ratio to the additional revenue received from increased customers. The distribution revenues are supported by Mr. K. M. Siedt.

Line No.	Description	Amount
		(1)
	Customer Account Expense Excluding Labor and Uncollectible	
1	Customer Account expense per budget for the 12 months ending 3/31/2015	$ 25,286

Metropolitan Edison Company
Supporting Schedule No. 1 to Normalizing Adjustment No. 7
$000

Adjustment for OPEB Expense

Budgeted OPEB expense consists of the current service cost, adjustments to prior years' service costs, and the financing component. This schedule adjusts the total budgeted expense amounts to the service cost. The service cost represents the actuarial present value of benefit liabilities accrued under the plan benefit formula for services rendered during the test year. Inclusion of the service cost in rates provides for recovery of the current cost of benefits earned by plan participants. Any excess or shortfall related to the expected return on plan assets are not included because their inclusion would artificially reduce or increase total costs and result in the recovery of more or less than the actual normal cost of service. The adjustment for OPEB expense to the current service cost amount was adopted by the Commission at Docket Nos. R-00061366 and R-00061367

Line No.	Description	O&M	Capital	Total

Adjustment to Employee Benefit Expense to Reflect Year End Employee Levels and Ongoing Wage Rates

Normalization Adjustment No. 4, Supporting Schedule No. 1, Line 10 increases the O&M payroll expense. Associated with that increase are employee benefits charged to Administrative and General expense. This adjustment computes the added benefit costs on a normalized basis.

Employee benefits applicable to operating expenses:

Line No.		Effective Rate (a)	Payroll Adjustment		Benefit Adjustment
		(1)	(2)		(3) = (1) X (2)
1	Workers compensation	0.716%	$ 592	(b)	$ 4
2	Pension costs	40.873%	$ 592	(b)	242
3	OPEB costs	1.089%	$ 592	(b)	6
4	Life insurance	0.166%	$ 592	(b)	1
5	Medical insurance	9.081%	$ 592	(b)	54
6	Savings Plan	3.748%	$ 592	(b)	22
7	Other	2.651%	$ 592	(b)	16
8	Total increase due to payroll adjustment				$ 345

(a) Summary of effective employee benefit rates based on total payroll for the 12 months ending 3/31/15

	Total Amount	Total Payroll	Effective Rate
Workers compensation	$ 428	$ 59,762	0.716%
Pension costs - normalized basis	24,427	59,762	40.873%
OPEB costs - service cost	651	59,762	1.089%
Life Insurance (Exhibit RAD-27)	99	59,762	0.166%
Medical insurance	5,427	59,762	9.081%
Savings Plan	2,240	59,762	3.748%
Other	1,584	59,762	2.651%

Normalization Adjustment No. 1
($000)

Adjustment of Electric Plant in Service

To adjust the budgeted gross plant in service to (1) eliminate the Asset Retirement Cost ("ARC"). An asset retirement cost ("ARC") increases the carrying amount of a long-lived asset when a liability for an asset retirement obligation ("ARO") is recognized. The ARC is depreciated over the life of the asset. The ARC and related reserve are excluded from Rate Base, while the associated depreciation expense is excluded from the Income Statement. This treatment is in accordance with 18 CFR Chapter 1 § 35.18 Asset retirement obligations; (2) remove FERC Transmission Plant which is non-jurisdictional; (3) remove an allocated portion of Intangible Plant that supports FERC Transmission Plant; (4) remove an allocated portion of General Plant that supports FERC Transmission Plant; and (5) remove legacy meters as ordered in the Final Order on the Smart Meter Deployment Plan at Docket No. M-2013-2341990.

Normalization Adjustment No. 2
($000)

Adjustment of Plant Held for Future Use

To adjust Plant Held for Future Use. As an alternative to rate base treatment, the Company is requesting the allowance of deferred carrying charges on any current or future investments in Plant Held for Future Use with definitive plans of utilization within a ten-year period. This is consistent with long-standing Commission policy.

Line No.		Amount (1)
1	Actual Plant Held for Future Use at 3/31/2014	$ 596
	Normalizing adjustment:	
2	Eliminate Plant Held for Future Use	(596)
3	Plant Held for Future Use at 3/31/2014, as adjusted	$ -

METROPOLITAN EDISON COMPANY
Normalization Adjustment No. 3
($000)

Adjustment of Depreciation Reserves - Plant In Service

To adjust the budgeted plant in service depreciation reserves to (1) eliminate the Asset Retirement Cost ("ARC") reserves. An asset retirement cost ("ARC") increases the carrying amount of a long-lived asset when a liability for an asset retirement obligation ("ARO") is recognized. The ARC is depreciated over the life of the asset. The ARC and related reserve are excluded from Rate Base, while the associated depreciation expense is excluded from the Income Statement. This treatment is in accordance with 18 CFR Chapter 1 § 35.18 Asset retirement obligations; (2) remove FERC Transmission Plant reserves which are non-jurisdictional; (3) remove an allocated portion of Intangible Plant reserves that support FERC Transmission Plant; (4) remove an allocated portion of General Plant reserves that support FERC Transmission Plant; (5) and remove legacy meters as ordered in the Final Order on the Smart Meter Deployment Plan at Docket No. M-2013-2341990.

Line No.		Adjustments	Depreciation Reserves Plant in Service	Cross Reference
		(1)	(2)	(3)
1	Actual plant in Service depreciation reserves at 3/31/2014		$ 959,316	Met-Ed Exhibit RAD-46, Attach. B, p. 3 and 4
	Normalizing adjustments:			
2	Eliminate ARC	$ (95,342)		Met-Ed Exhibit RAD-46, Attach. B, p. 3 and 4
3	Remove FERC Transmission Plant	(148,796)		Met-Ed Exhibit RAD-46, Attach. B, p. 3 and 4
4	Remove allocated portion of Intangible Plant associated with FERC Transmission Plant	(5,092)		Met-Ed Exhibit RAD-46, Attach. B, p. 3 and 4
5	Remove allocated portion of General Plant associated with FERCTransmission Plant	(27,687)		Met-Ed Exhibit RAD-46, Attach. B, p. 3 and 4
6	Remove legacy meters	(12,085)		Met-Ed Exhibit RAD-46, Attach. B, p. 3 and 4
7	Normalization Adjustment		(289,003)	
8	Plant in Service depreciation reserves at 3/31/2014, as adjusted		$ 670,313

Adjustment of Accumulated Deferred Income Taxes - Liberalized Depreciation

This adjustment adjusts the budgeted deferred tax balances for liberalized depreciation (excluding the impact of SFAS No. 109 deferrals) to (1) eliminate the deferred income taxes - liberalized depreciation balances associated with TMI-2; (2) eliminate deferred income taxes - liberalized depreciation associated with other generation; (3) eliminate other excludable items (capital leases); (4) eliminate remaining state deferred taxes - liberalized depreciation balances including the federal benefit of those taxes; and (5) eliminate an allocated portion of the remaining federal deferred income taxes - liberalized depreciation balance associated with FERC Transmission Plant.

Line No.		Adjustments (1)	Accum Reserve for Deferred Taxes - Liberalized Depreciation (2)
1	Deferred taxes per books - liberalized depreciation at 3/31/2014		$ 478,696
	Normalizing adjustments:		
2	Eliminate deferred income taxes - liberalized depreciation associated with TMI-2 (federal and state)	$ 2,954	
3	Eliminate deferred income taxes - liberalized depreciation associated with other generation (federal and state)	(97)	
4	Eliminate other excludable items - capital leases (federal and state)	(17,014)	
5	Eliminate remaining state deferred taxes - liberalized depreciation including the federal benefit of those taxes	(15,904)	
6	Eliminate an allocated portion of the remaining federal deferred income taxes - liberalized depreciation associated with FERC Transmission Plant	(100,046)	
7	Normalization Adjustment		(130,107)
8	Deferred taxes - liberalized depreciation at 3/31/2014, as adjusted		$ 348,589

METROPOLITAN EDISON COMPANY

Normalization Adjustment No. 9
($000)

Adjustment of Operating Reserves

To adjust operating reserves (net of accumulated deferred income taxes) to eliminate an allocated portion associated with FERC Transmission operations.

Line No.		Amount
1	Operating reserves, net of taxes, per books at 3/31/2014	$ 653
2	Eliminate portion of operating reserves associated with FERC Transmission operations	(146)
3	Operating reserves, net of taxes at 3/31/2014, as adjusted	$ 508

METROPOLITAN EDISON COMPANY

Metropolitan Edison Company
Normalization Adjustment No. 1
$000

Adjustment of Base Operating Revenues

To adjust base operating revenues (1) for changes in the number of customers, (2) to roll in State Tax Adjustment Surcharge ("STAS") revenues into base rates, (3) to adjust for energy efficiency and behind the meter generation, (4) to adjust for other revenues and (5) to eliminate unbilled revenues. The adjustment for unbilled revenues is supported by Mr. R. A. D'Angelo. Adjustments (1) through (4) are supported by Mr. K. M. Siedt.

Line No.	Description	Amount (1)	Amount (2)
1	Base revenues per books for the 12 months ending 3/31/2014		$ 741,232
	Normalizing adjustments:		
2	Customers - increase to yr end level	$ 677	
	Specific adjustments		
3	Roll-in of STAS		
4	Adjust for Energy Efficiency and Behind the Meter Generation	(10,018)	
5	Adjust for Other Revenues	-	
6	Eliminate unbilled revenues	(3,212)	
7	Total	$ (13,230)	
8	Normalizing adjustment (Lines 2+7)		(12,553)
9	Base revenues per books for the 12 months ending 3/31/2014, as adjusted		$ 728,679

Metropolitan Edison Company
Normalization Adjustment No. 2
$000

Adjustment of State Tax Adjustment Surcharge Revenues

To remove state tax adjustment surcharge ("STAS") revenues. Normalized STAS revenues are being rolled into base rates.

Line No.	Description	Amount (1)
1	STAS revenue per books for the 12 months ended 3/31/2014	$ (2,123)
2	Eliminate per budget STAS	2,123
3	Other operating revenue per books for the 12 months ended 3/31/2014, as adjusted	$ -

Metropolitan Edison Company
Normalization Adjustment No. 3
$000

Adjustment of Other Operating Revenues

To adjust other operating revenue to eliminate non-jurisdictional transmission revenues.

Line No.	Description	Amount (1)
1	Other operating revenue per books for the 12 months ended 3/31/2014	$ 70,921
2	Eliminate non-jurisdictional transmission revenues	(56,257)
3	Other operating revenue per books for the 12 months ended 3/31/2014, as adjusted	$ 14,664

Metropolitan Edison Company
Normalization Adjustment No. 4
$000

Adjustment of Distribution Expense

To adjust distribution payroll expense to reflect year end wage and employee levels, to adjust service company distribution payroll expense to reflect year end wage and employee levels, eliminate non-jurisdictional transmission expense and to include the distribution portion of the amortization of gains or losses to reacquired debt. The plant and labor allocation factors used in this normalization adjustment are supported by Ms. H. E. Stewart.

Line No.	Description	Amount (1)	Amount (2)
1	Distribution expense per books for the 12 months ended 3/31/2014		$ 67,795
2	Distribution payroll expense adjustment to reflect year end employee levels, and ongoing wage and salary rates (Supporting Schedule No. 1, Line 12, Column 1)	$ 285	
3	Service Company Distribution payroll expense adjustment allocated to Met-Ed to reflect year end employee levels, and ongoing wage and salary rates (Supporting Schedule No. 1, Line 21, Column 1)	97	
4	Eliminate non-jurisdictional transmission expense	(9,174)	
5	Amortization of (gain) or loss on reacquired debt	$ 2,671	
6	Allocation ratio based on distribution plant	77.70%	
7	Distribution portion of (gain) or loss	$ 2,075	
8	Total normalizing adjustment (Lines 2 + 3 + 4 + 7)		(6,717)
9	Distribution expense per books for the 12 months ended 3/31/2014, as adjusted		$ 61,078

Adjustment of Customer Accounts Expense

To adjust customer account expense to reflect year end wage and employee levels, increased costs associated with added customers, and interest on customer deposits.

Line No.	Description	Amount (1)	Amount (2)
1	Customer Account expense per books for the 12 months ended 3/31/2014		$ 24,842
2	Customer Account payroll expense adjustment to reflect year end employee levels and ongoing wage & salary rates (Normalizing Adjustment No. 4, Supporting Schedule No. 1, Line 13, Column 1)	$ 100	
3	Service Company customer account payroll expense adjustment allocated to Met-Ed to reflect year end employee levels and ongoing wage & salary rates (Normalizing Adjustment No. 4, Supporting Schedule No. 1, Line 22, Column 1)	136	
4	Increased O&M costs associated with increased number of customers in normalized revenue levels (Supporting Schedule 1, Line 10)	12	
5	Interest on customer deposits (Supporting Schedule 2, Line 3)	1,287	
6	Total normalizing adjustment (Lines 2 + 3 + 4 + 5)		1,536
7	Customer Account expense per books for the 12 months ended 3/31/2014, as adjusted		$ 26,378

Metropolitan Edison Company
Supporting Schedule No. 1 to Normalizing Adjustment No. 5
($000)

Adjustment of Other O&M Costs Associated with Serving New Customers

In association with the additional revenues from added customers reflected in Adjustment No. 1, there is also a cost associated with serving those customers. The Commission has previously recognized this and approved an adjustment to customer accounts expense for this increased cost. This cost is estimated by determining the ratio of non-payroll customer account expense to distribution revenues from customers and applying this ratio to the additional revenue received from increased customers. The distribution revenue is supported by Mr. K. M. Siedt.

Line No.	Description	Amount
		(1)
	Customer Account Expense Excluding Labor and Uncollectible	
1	Customer Account expense per books for the 12 months ended 3/31/2014	$ 24,842

Metropolitan Edison Company
Supporting Schedule No. 1 to Normalizing Adjustment No. 7
$000

Adjustment for OPEB Expense

Budgeted OPEB expense consists of the current service cost, adjustments to prior years' service costs, and the financing component. This schedule adjusts the total budgeted expense amounts to the service cost. The service cost represents the actuarial present value of benefit liabilities accrued under the plan benefit formula for services rendered during the test year. Inclusion of the service cost in rates provides for recovery of the current cost of benefits earned by plan participants. Any excess or shortfall related to the expected return on plan assets are not included because their inclusion would artificially reduce or increase total costs and result in the recovery of more or less than the actual normal cost of service. The adjustment for OPEB expense to the current service cost amount was adopted by the Commission at Nos. Docket R-00061366 and R-00061367

Line No.	Description	O&M (1)	Capital (2)	Total (3)
1	O&M - Capital allocation ratios	39.67%	60.33%	100.00%
2	Company OPEB expense included on books	$ (8,758)	$ (13,320)	$ (22,078)

Metropolitan Edison Company
Normalization Adjustment No. 8
$000

Adjustment of Depreciation Expense

To adjust budgeted depreciation expense to reflect average remaining life rates on adjusted rate base, to eliminate non-jurisdictional expense, and to adjust cost of removal/ salvage expense to a five year average amount, according to prior commission practice and the adjustment of legacy meters. The plant allocation factor used in this normalization adjustment are supported by Ms. H. E. Stewart.

Line No.	Description	Amount (1)	(2)	(3)	(4)
1	Depreciation expense per books for the 12 months ended 3/31/2014				$ 58,193
2	Cost of removal/salvage expense per budget for the 12 months ending 3/31/2014 (Exhibit RAD-30)		$ 10,222		
3	Depreciation accrual per books (Line 1 - Line 2)		$ 47,971		
4	Jurisdictional depreciation expense accrual on adjusted rate base at average remaining life rates (Exhibit RAD-53, page 2)		44,820		
5	Adjustment for average remaining life accrual for jurisdictional plant, (Line 4 - Line 3).			(3,151)	
6	Cost of removal/salvage expense per budget for the 12 months ending 3/31/2014 (Exhibit RAD-30)		$ 10,222		
	Cost of removal and salvage (Exhibit RAD-30)				
7	4/1/2009 - 3/31/2010	$ 17,539			
8	4/1/2010 - 3/31/2011	7,101			
9	4/1/2011 - 3/31/2012	17,511			
10	4/1/2012 - 3/31/2013	28,248

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-A-1:

"Provide a schedule showing the test year rate base and rates of return at original cost less accrued depreciation under present rates and under proposed rates. Claims made on this schedule should be cross-referenced to appropriate supporting schedules."

RESPONSE:

See Met-Ed Exhibit RAD-1 for the fully projected future test year.

See Met-Ed Exhibit RAD-3 for the future test year.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-A-2:

"If the schedule provided in response to item 1, is based upon a future test year, provide a similar schedule which is based upon actual data for the 12-month period immediately prior to the test year."

RESPONSE:

See Met-Ed Exhibit RAD-5 for the historical test year.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-A-3:

"When a utility files a tariff stating a new rate based in whole or in part on the cost of construction, as defined in 66 Pa.C.S. § 1308(f) (relating to voluntary changes in rates), of an electric generating unit, the utility shall identify:

(a) The total cost of the generating unit
(b) The following costs:
    (1) The cost and quantity of each category of major equipment, such as switchgear, pumps or diesel generators and the like.
    (2) The cost and quantity of each category of bulk materials, such as concrete, cable and structural steel and the like. .
    (3) Manual labor. .
    (4) Direct and indirect costs of architect/engineering services. .
    (5) Direct and indirect costs of subcontracts or other contracts involving major components or systems such as turbines, generators, nuclear steam supply systems, major structures and the like.
    (6) Distributed costs.
(c) A cost increase of $5 million or more, including AFUDC, over the original utility estimates provided under 66 Pa.C.S. § 515(a) (relating to construction cost of electric generating units) and its causes.
(d) Compliance with subsections (a) and (b) will be identical in format and substance as that provided under 52 Pa. Code § 57.103 (relating to estimate of construction costs) for original cost estimates submitted under 66 Pa.C.S. § 515(a)."

RESPONSE:

Not applicable.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-B-1:

"If a claim is made for plant held for future use, supply the following:

a. A description of the plant or land site and its cost and any accumulated depreciation.
b. The expected date of use for each item claimed.
c. An explanation as to why it is necessary to acquire each item in advance of its date of use.
d. The data when each item was acquired.
e. The date when each item was placed in plant held for future use."

RESPONSE:

There is no rate base claim being made in this proceeding for plant held for future use.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-B-2:

> "If a claim is made for construction work in progress, provide a supporting schedule which sets forth separately, revenue-producing and nonrevenue producing amounts, and include, for each category a summary of all work orders, amounts expended at the end of the test year and anticipated in service dates. Indicate if the construction work in progress will result in insurance recoveries, reimbursements, or retirements of existing facilities. Describe in exact detail the necessity of each project claimed if not detailed on the summary page from the work order. Include final completion dates and estimated total amounts to be spent on each project."

RESPONSE:

Met-Ed is not making any rate base claim for construction work in progress.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-B-3:

"If a claim is made for materials and supplies or fuel inventory provide a supporting schedule for each claim showing the latest actual 13 monthly balances and showing in the case of fuel inventory claims, the type of fuel, and location, as in station, and the quantity and price claimed."

RESPONSE:

METROPOLITAN EDISON COMPANY

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-B-4:

> "If a claim is made for cash working capital provide a supporting schedule setting forth the method and all detailed data utilized to determine the cash working capital requirement. If not provided in the support data provide a lead-lag study of working capital, completed no more than 6 months prior to the rate increase filing."

RESPONSE:

See the Direct Testimony of Patricia Larkin, Met-Ed/Penelec/Penn Power/West Penn Statement No. 6.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-B-6:

"Explain in detail by statement or exhibit the appropriateness of additional claims or the use of a method not previously mentioned, in the claimed rate base."

RESPONSE:

The supporting schedules included in Met-Ed Exhibit RAD-1 explain the appropriateness of various items claimed in the rate base. Items not explained in supporting schedules to Met-Ed Exhibit RAD-1, or not mentioned in other responses to filing requirements are explained below:

1. Customer Deposits

Customer deposits are deducted from the rate base as they represent a source of non-investor supplied capital. Appropriate interest on such deposits has been included as a normalizing adjustment to the income statement.

2. Customer Advances for Construction

In accordance with the practice followed in prior rate filings and accepted by Commission Orders, the Company reduces rate base by the amount of customer advances for construction at the end of the test year.

3. Operating Reserves

The Company has adopted a partial self-insurance concept for general and automotive liability insurance, property insurance and a long-term disability plan. The Company has also established an operating reserve for the purpose of providing a pension fund in addition to the normal funded plan. These operating reserves, net of applicable deferred taxes, reduce the Company's total rate base claim.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-C-1:

"Prepare a Statement of Income including:

(a) The book, or budgeted, statement for the test year.
(b) Adjustments to annualize and normalize under present rates, including an elimination of the effects on income of the energy cost rate and state tax adjustment surcharge.
(c) The income statement under present rates after adjustment.
(d) The adjustment for the revenue requested.
(e) The income statement under requested rates after adjustment.
(f) Each adjustment, including those relating to adjustment clauses, shall contain an explanation in sufficient clarifying detail to allow a reasonably informed person to understand the method and rationale of the adjustment."

RESPONSE:

Fully Projected Future Test Year

(a – f): See Met-Ed Exhibit RAD-2. Regarding part (b) pertaining to the annualization and normalization of revenues including applicable surcharges and tariff riders, these adjustments are supported in the Direct Testimony of Met-Ed Witness Kevin M. Siedt, Met-Ed Statement No. 4 and Met-Ed Exhibit KMS-1 Attachment A which accompanies his Direct Testimony.

Future Test Year

(a – f) See Met-Ed Exhibit RAD-4. Regarding part (b) pertaining to the annualization and normalization of revenues including applicable surcharges and tariff riders, these adjustments are supported in the Direct Testimony of Met-Ed Witness Kevin M. Siedt, Met-Ed Statement No. 4 and Met-Ed Exhibit KMS-1, Attachment B which accompanies his Direct Testimony.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-C-2:

"If the schedule provided in Filing Requirement II-C-1 is based upon budgeted data for a future test year, provide a similar schedule which is based upon actual data for the 12-month period immediately prior to the test year."

FILING REQUIREMENT II-C-1:

"Prepare a Statement of Income including:

(a) The book, or budgeted, statement for the test year.
(b) Adjustments to annualize and normalize under present rates, including an elimination of the effects on income of the energy cost rate and state tax adjustment surcharge.
(c) The income statement under present rates after adjustment.
(d) The adjustment for the revenue requested.
(e) The income statement under requested rates after adjustment.
(f) Each adjustment, including those relating to adjustment clauses, shall contain an explanation in sufficient clarifying detail to allow a reasonably informed person to understand the method and rationale of the adjustment."

RESPONSE:

(a – f): See Met-Ed Exhibit RAD-6. Regarding part (b) pertaining to the annualization and normalization of revenues including applicable surcharges and tariff riders, these adjustments are supported in the Direct Testimony of Met-Ed Witness Kevin M. Siedt, Met-Ed Statement No. 4 and Met-Ed Exhibit KMS-1, Attachment C which accompanies his Direct Testimony.

FILING REQUIREMENT II-D-1

"Provide a schedule showing all revenues and expenses for the test year and for the 12-month period immediately prior to the test year, together with an explanation for major variances between test year revenues and expenses and those for the previous 12-month period. Revenues and expenses shall be summarized by the major account categories listed below. If budgeted data for a future test year is not readily available by these categories, an analysis of the data for the 12-month period immediately prior to the future test year or for the most recent available calendar year may serve as the basis for ratably allocating the budgeted data into the account categories as follows:

OPERATING REVENUES

	Electric Revenues:
	Residential Sales
	Commercial Sales
	Industrial Sales
400	Public Street & Highway
	Lighting Sales
	Sales for Resale
	Total Other Electric Revenues
	Other Electric Revenues:
	Late Payment Charges
	Miscellaneous Service Revenues
	Rent from Electric Property
	Other Electric Revenues
	Total Other Electric Revenues
	Total Operating Revenues

OPERATING EXPENSES

	Operation and Maintenance Expenses
	Power Production Expenses:
	Fuel
401-2	Net Interchange
	Deferred Energy Costs
	Other
	Transmission Expenses
	Distribution Expenses
	Customer Service & Informational Expense
	Sales Expenses

	Administrative and General Expenses
	Total Operation & Maintenance Expenses
403	Depreciation Expenses
	Amortization of Net Salvage
	Nuclear Decommissioning Expense
407	Amortization of Property Losses
	Taxes Other Than Income Taxes
408	Total Operating Expenses Prior To Federal & State Income Taxes

OPERATING EXPENSES

	Operating Income Prior To Federal and State Income Taxes

FEDERAL AND STATE INCOME TAXES

	Federal Income Taxes
409	State Income Taxes
409	Deferred Federal Income Taxes
	Deferred State Income Taxes
	Investment Tax Credit Adjustments
411	Deferrals
	Amortization—Credit
	Other Income Tax Credits & Charges
	Total Federal and State Income Taxes
	Operating Income After Federal and State Income Taxes

OTHER INCOME AND DEDUCTIONS
OTHER INCOME

415-18	Non-utility Operating Income
419	Interest and Dividend Income
419	Allowance for Other Funds Used During Construction
421	Gain on Disposition of Property
421	Other Miscellaneous Non-operating Income
	Total Other Income

OTHER INCOME DEDUCTIONS

421	Loss on Disposition of Property
425	Miscellaneous Amortization
426	Miscellaneous
	Total Other Income Deductions

TAXES APPLICABLE TO OTHER INCOME AND DEDUCTIONS

408	Taxes Other Than Income Taxes
409	Federal Income Tax

409	State Income Tax
	Total Taxes Applicable to Other Income and Deductions
	Income Before Interest Charges

INTEREST CHARGES

427	Interest on Long-Term Debt
428	Amortization of Debt Discount and Expense
429	Amortization of Premium on Debt
431	Other Interest Expense
432	Allowance for Borrowed Funds Used During Construction—Credit
	Net Interest Charges
	Income Before Extraordinary Items
	Extraordinary Items After Taxes
	Net Income "

RESPONSE:

See Exhibit RAD-18 Attachment A which provides the requested comparative operating statements. Set forth below are explanations of the causes of major variances.

OPERATING REVENUES

Residential Sales (Variation ($8,122))

The variance is due primarily to decreases of $16.2 million in the Hourly Pricing Service revenue and $1.5 million in the NUG Rider Energy charge offset by increases of $7.2 million in the Universal Service Charge and $1.6 million in the Smart Meter Technology revenues.

Commercial Sales (Variation ($10,927))

The variance is due primarily to decreases of $11.7 million in the Hourly Pricing Service revenue and $0.9 million in the NUG Rider Energy charge offset by increases of $1.0 million in the Smart Meter Technology revenues.

Sales for Resale (Variation ($8,398))

The variance is due primarily to an $8.0 million decrease to PJM Spot market energy revenues.

OPERATING EXPENSES

Operation and Maintenance expense Account 401-2 (Variance ($43,104))

The variance is primarily due to decreases of $44.5 million in purchased power, and $3.5 million in customer assistance expenses. These decreases were partially offset by increases of $4.1 million in distribution expenses, and $3.3 million in administrative & general expenses.

Account 403 Depreciation expense (Variance $2,829)

The variance is due primarily to a $2.8 million increase in depreciation on assets offset by $0.1 million decrease in depreciation cost of removal.

Account 404-5 Amortization and depletion of utility plant (Variance $2,029)

The variance is due primarily to a $2.0 million increase in amortization and depletion on assets.

Account 407.3 Regulatory debits (Variance ($1,490))

This variance is due primarily to a $3.8 million decrease in the NUG deferral offset partly by a $1.3 increase in the DSSR deferral and a $1.0 increase in the 2006 PJM Transmission deferral.

Account 407.4 Regulatory credits (Variance $26,856)

This variance is due primarily to increases of $13.8 million in the Price to Compare deferral, $10.6 million in the Universal Service deferral, $1.7 million in the Energy Efficiency deferral, and $1.5 million in the Smart Meter deferral.

Account 408.1 Taxes other than income taxes (Variance ($1,086)

This variance is due primarily to a decrease of $1.2 million in the PA gross receipts tax.

.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-2:

"Provide a summary of test year adjustments which sets forth the effect of the adjustment upon the following: operating revenues, operating expenses, taxes other than income taxes, operating income before income taxes, State income tax, Federal income tax and income available for return. In addition, test year adjustments shall be presented on the basis of the major account categories set out at II-D-1."

RESPONSE:

See Met-Ed Exhibit RAD-19 Attachment A.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-3:

"List and explain all nonrecurring or extraordinary expenses incurred in the test year and all expenses included in the test year which do not occur yearly but are of a nature that they do occur over an extended period of years, for example, nonyearly maintenance programs, and the like."

RESPONSE:

The test year ending 4/30/16 does not include any non-recurring or extraordinary expenses.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-4:

"As a separate item, list extraordinary property losses related to property previously included in cost of service when the gain or loss on this property has occurred or is likely to occur in the future test year. The proposed ratemaking treatment of extraordinary gains and losses must also be disclosed. Sufficient supporting data must be provided."

RESPONSE:

There are no extraordinary property losses.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-5:

"Provide the amount of accumulated reserve for uncollectible accounts, method and rate of accrual, amounts accrued and amounts written off in each of the last 3 calendar years."

RESPONSE:

The future estimate of uncollectible accounts is based on a historically determined average of net write-offs to sales for each utility company. For the Uncollectible Customer Reserve, the regulated utility companies at FirstEnergy determine a 3-year rolling average of net write-offs to sales (36 months of net write-offs/ 36 months of sales). This percentage is then multiplied by the latest 6 months of sales to arrive at a reserve.

Beginning in 2013, the Uncollectible Customer Reserve includes a reserve for the Purchase of Receivables program (POR). This is determined by using a percentage of Non- POR Uncollectible Customer Reserve to Non- POR Customer Receivable Arrears (Uncollectible Customer Receivable Reserve/Non-Current Customer Receivable Arrears). This percentage is then multiplied by the POR Non-Current Customer Receivable Arrears to arrive at a reserve.

The Utility may record additional uncollectible customer reserve amounts as deemed necessary to fairly value Accounts Receivable.

The accruals, net write-offs and balance in FERC Account No. 144.1 Accumulated Reserve for Uncollectible Accounts for the last three calendar years are as follows:

Line No.	Description	Amount
1	**Balance, January 1, 2011**	$ (3,867,730)
2	Accruals	$ (11,522,378)
3	Write-offs (Net)	$ 12,374,770
4	**Balance, December 31, 2011**	$ (3,015,338)
5	Accruals	$ (12,841,208)
6	Write-offs (Net)	$ 12,833,226
7	**Balance, December 31, 2012**	$ (3,023,320)
8	Accruals	$ (14,333,240)
9	Write-offs (Net)	$ 10,315,484
10	**Balance, December 31, 2013**	$ (7,041,076)

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-6:

"Supply detailed calculations to support the total claim for rate case expense, including supporting data for outside service rendered. Provide the items comprising the estimated rate case expense claim for the current rate case."

RESPONSE:

The claim in the current rate case proceeding for rate case expenses, shown on Met-Ed Exhibit RAD-2 page 18, is based on the following total estimated expenses proposed to be amortized for ratemaking purposes over two years:

	Amount ($000)
Legal Expenses	$ 275
Expert Witnesses	33
Other	187
Total	$ 495

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-7:

"Submit schedules for the test year and for the 12-month period immediately prior to the test year showing by major components, if included in claimed test year expenses, the expenses incurred in each of the following expense categories:

(a) Miscellaneous general expenses, including account 930.
(b) Outside service expenses.
(c) Regulatory commission expenses.
(d) Advertising expenses, including advertising engaged in by trade associations whenever the utility has claimed a contribution to the trade association as a ratemaking claim - provide explanation of types and purposes of such advertising.
(e) Research and development expenses – provide a listing of major projects.
(f) Charitable and civic contributions, by recipient and amount.

Explain major variances between the test year expenses and those expenses for the prior 12-month period."

RESPONSE:

(a) – (d) See Page 2 of 3
(e) – (f) See Page 3 of 3

Line No.	Description	12 Months Ending April 30 2016	March 31 2015	March 31 2014

SERVICE AGREEMENT

This Service Agreement ("Agreement") is entered into as of the 25th day of February, 2011, by and between each of the associate companies listed on the signature page hereto (each a "Client Company"), and FirstEnergy Service Company, an Ohio corporation ("Service Company").

WHEREAS, Service Company is a direct wholly-owned subsidiary of FirstEnergy Corp., a holding company under the Public Utility Holding Company Act of 2005, as amended (the "Act");

WHEREAS, Service Company has been formed for the purpose of providing administrative, management and other services to FirstEnergy Corp. and its associate companies, including Client Company (together, the "Client Companies"); and

WHEREAS, Client Company believes that it is in its interest to enter into an arrangement whereby Client Company may agree to purchase such administrative, management and other services from Service Company as Client Company may choose at cost as determined in accordance with this Agreement and the Act;

NOW, THEREFORE, in consideration of the mutual covenants contained herein and other valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties hereto, intending to be legally bound, hereby agree as follows:

1. DESCRIPTION OF SERVICES.

Service Company agrees to provide certain administrative, management or other services (the "Services") to Client Company similar to those supplied to other Client Companies of Service Company. Such services are and will be provided to Client Company only at the request of Client Company. Exhibit A hereto lists and describes all of the Services that are available from Service Company.

2. PERSONNEL.

In order to provide the Services, Service Company will employ executive officers, accountants, financial advisers, technical advisers, attorneys and other persons with the necessary qualifications. If necessary, Service Company may also arrange for the services of nonaffiliated experts, consultants and attorneys in connection with the performance of any of the Services provided under this Agreement.

3. COMPENSATION AND ALLOCATION.

As and to the extent required by law, Service Company provides and will provide such services at fully allocated cost, determined in accordance with the Act. Exhibit A hereof contains rules for determining and allocating such costs.

4. TERMINATION AND MODIFICATION.

Either party to this Agreement may terminate this Agreement by providing 60 days written notice of such termination to the other party. This Agreement is subject to termination or modification at any time to the extent its performance may conflict with the provisions of the Act or with any rule, regulation or order of the Federal Regulatory Energy Commission (the "Commission") adopted before or after the making of this Agreement. This Agreement shall be subject to the approval of any state commission or other state regulatory body whose approval is, by the laws of said state, a legal prerequisite to the execution and delivery or the performance of this Agreement.

5. SERVICE REQUESTS.

Client Company and Service Company will prepare a Service Request on or before September 30th of each year listing Services to be provided to Client Company by Service Company and any special arrangements related to the provision of such Services for the coming year, based on Services provided during the preceding year. Client Company and Service Company may supplement the Service Request during the year to reflect any additional or special Services that Client Company wishes to obtain from Service Company, and the arrangements relating thereto.

6. BILLING AND PAYMENT.

Unless otherwise set forth in a Service Request, payment for Services provided by Service Company shall be by making remittance of the amount billed or by making appropriate accounting entries on the books of Client Company and Service Company. Billing will be made on a monthly basis, with the bill to be rendered as soon as practicable after the close of the month, and remittance or accounting entries completed within 30 days of billing. Any amount remaining unpaid after 30 days following receipt of the bill shall bear interest thereon from the due date of the bill until payment at a rate equal to the prime rate on the due date.

7. NOTICE.

Where written notice is required by this Agreement, all notices, consents, certificates, or other communications hereunder shall be in writing and shall be deemed given when mailed by United States registered or certified mail, postage prepaid, return receipt requested, addressed as follows:

To Client Company: c/o President
76 South Main St.
Akron, Ohio 44308

To Service Company: c/o Vice President and Controller
76 South Main Street
Akron, Ohio 44308

8. GOVERNING LAW.

This Agreement shall be governed by and construed in accordance with the laws of the State of Ohio, without regard to its conflict of laws provisions.

9. MODIFICATION.

No amendment, change or modification to this Agreement shall be valid, unless made in writing and signed by both parties hereto.

10. ENTIRE AGREEMENT.

This Agreement, together with its exhibits, constitutes the entire understanding and agreement of the parties with respect to its subject matter, and effective upon the execution of this Agreement by the respective parties hereof, any and all prior agreements, understandings or representations with respect to this subject matter are hereby terminated and canceled in their entirety and are of no further force and effect, except to the extent transactions thereunder have taken place prior to such effective date in which case such agreements will govern the terms of such transactions.

11. WAIVER.

No waiver by either party hereto of a breach of any provision of this Agreement shall constitute a waiver of any preceding or succeeding breach of the same or any other provision hereof.

12. ASSIGNMENT.

This Agreement shall inure to the benefit and shall be binding upon the parties and their respective successors and assigns. No assignment of this Agreement or either party's rights, interests or obligations hereunder may be made without the other party's consent, which shall not be unreasonably withheld, delayed or conditioned.

13. SEVERABILITY.

If any provision or provisions of this Agreement shall be held by a court of competent jurisdiction to be invalid, illegal, or unenforceable, the validity, legality, and enforceability of the remaining provisions shall in no way be affected or impaired thereby.

IN WITNESS WHEREOF, the parties have caused this Agreement to be duly executed effective as of the 25th day of February, 2011. This Agreement supercedes any previous agreement between the Service Company and the Client Companies.

EXHIBIT A
DESCRIPTION OF SERVICES AND ALLOCATION METHODOLOGY

1. Description Of Services

Overview

This Exhibit provides a description of all services provided by Service Company departments and the cost allocation methodologies to be used in connection therewith. All products and services are subject to Service Level Standards as negotiated between the Service Company department and Client Company. Each Client Company is classified as either a "Utility Subsidiary" or a "Non-Utility Subsidiary".

2. Cost Allocation Methodology

Overview

The costs of services provided by Service Company will be directly assigned, distributed or allocated by activity, project, program, work order or other appropriate basis. The primary basis for charges to affiliates is the direct charge method. The methodologies listed below pertain to all other costs which are not directly assigned but which make up the fully allocated cost of providing the product or service. The costs of product and services provided by the ServeCo that cannot be charged directly to the Subsidiary receiving the product or service will be allocated among the associate companies by utilizing one of the methods described below that most accurately distributes the costs. The method of cost allocation varies based on the department rendering the service. The allocation methods used by Service Company are as follows:

a. **"Multiple Factor – All"** - For the Indirect Costs for products or services benefiting the entire FirstEnergy system, FirstEnergy and all Subsidiaries will bear a fair and equitable portion of such costs. FirstEnergy will bear 5% of these Indirect Costs. The remaining Indirect Costs will be allocated among the Utility Subsidiaries and the Non-Utility Subsidiaries benefiting from the services provided based on FirstEnergy's equity investment in the respective groups. A subsequent allocation step will then occur. Among the Utility Subsidiaries, allocations will be based upon the **"Multiple Factor - Utility"** method. Among the Non-Utility Subsidiaries, allocations will be based upon the **"Multiple Factor - Non-Utility"** method.

b. **"Multiple Factor – Utility"** - For the Indirect Costs for a product or service solely benefiting one or more of the Utility Subsidiaries, each such Utility Subsidiary so benefiting will be charged a portion of the Indirect Costs based on the sum of the weighted averages of the following factors:

1. Gross transmission and/or distribution plant
2. Operating and maintenance expense excluding purchase power and fuel costs

3. Transmission and/or distribution revenues, excluding transactions with affiliates

These three (3) factors have been determined to be the most appropriate for the Utility Subsidiaries in the FirstEnergy system. Each factor will be weighted equally so that no one facet of the electric utility operations inordinately influences the distribution of Indirect Costs.

c. **"Multiple Factor - Non-Utility"** - For the Indirect Costs for products or services solely benefiting the Non-Utility Subsidiaries, each Non-Utility Subsidiary so benefiting receiving the product or service will be charged a proportion of the Indirect Costs based upon the total assets of each Non-Utility Subsidiary, including the generating assets under operating leases from the Utility Subsidiaries.

d. **"Multiple Factor - Utility and Non-Utility"** - For the Indirect Costs for a product or service benefiting one or more of the Utility and Non-Utility Subsidiaries, each such Subsidiary so benefiting is first assigned a distribution ratio that is in proportion to the Indirect Costs based on FirstEnergy's equity investment in such Subsidiaries. Following this distribution, a subsequent allocation step will then occur. Among the Utility Subsidiaries, allocations will be based upon the **"Multiple Factor-Utility."** Among the Non-Utility Subsidiaries, allocations will be based upon **"Multiple Factor - Non-Utility"**

e. **"Direct Charge Ratio"** - The ratio of direct charges for a particular product or service to an individual Subsidiary as a percentage of the total direct charges for a particular product or service to all Subsidiaries benefiting from such services. Indirect Costs are then allocated to each Subsidiary based on the calculated ratios.

f. **"Number of Customers Ratio"** - For costs of products and services driven by the number of Utility customers, the allocation method that will be used will be the number of Utility customers for the respective Utility Subsidiary receiving the product or service divided by the total number of utility customers.

g. **"Number of Shopping Customers Ratio"** - A "shopping customer" is defined as a Utility customer who has selected a competitive electric generation supplier. For costs of products and services driven by the number of shopping customers, the allocation method that will be used will be the number of shopping customers for the respective Utility Subsidiary receiving the product or service divided by the total number of shopping customers.

h. "Number of Participating Employees – General" - For costs of products and services driven by all participating employees within the FirstEnergy system, the allocation method that will be used will be the number of participating employees for the respective Subsidiary receiving the product or service divided by the total number of participating employees.

i. "Number of Participating Employees - Utility and Non-Utility" - For costs of products and services driven by participating employees who work for the Utility and Non-Utility Subsidiaries, the Subsidiaries receiving the product or service are first assigned a distribution ratio that is in proportion to the Indirect Costs based on FirstEnergy's equity investment in the respective groups. Costs are further allocated by using the number of participating employees for the respective Subsidiary divided by the total number of participating FirstEnergy employees.

j. "Gigabytes Used Ratio" - Number of gigabytes utilized by a Subsidiary receiving the product or service divided by the total number of gigabytes used by the FirstEnergy system companies applicable to that respective product or service.

k. "Number of Computer Workstations Ratio" - Number of computer workstations utilized by a Subsidiary receiving the product or service divided by the total number of computer workstations in use by the FirstEnergy system companies applicable to that respective product or service.

l. "Number of Billing Inserts Ratio" - Number of billing inserts performed for a Subsidiary receiving the product or service divided by the total number of billing inserts performed for the FirstEnergy system companies applicable to that respective product or service.

m. "Number of Invoices Ratio" - Number of invoices processed for a Subsidiary receiving the product or service divided by the total number of invoices processed for the FirstEnergy system companies applicable to that respective product or service.

n. "Number of Payments Ratio" - Number of monthly payments processed for a Subsidiary divided by the total monthly number of payments processed for the FirstEnergy system companies applicable to that respective product or service. This will not be utilized until some historical information is available out of our new automated system.

o. "Daily Print Volume" - Average daily print volume performed for a Subsidiary receiving the service divided by the total average daily print volume performed for the entire FirstEnergy system.

p. "Number of Intel Servers" - Number of Intel servers utilized by a Subsidiary receiving the product or service divided by the total number of Intel servers utilized by the FirstEnergy system.

q. "Application Development Ratio" - Number of application development hours budgeted for a Subsidiary receiving the service divided by the total number of budgeted application development hours for the year.

r. "Server Support Composite" - The average ratio of unix gigabytes, SAP gigabytes and Intel number of servers for a Subsidiary receiving the service.

3. Descriptions of Products and Services

CALL CENTER

Product or Service	Product / Service Description	Indirect Allocation Methods
Field All Inbound Regulated Calls	Field calls related to billing, credit, new service, service order completion, outages, and other miscellaneous activities.	Multiple Factor – Utility and Non-Utility
Field All Inbound Unregulated Calls	Field calls related to billing, credit, new service, service order completion, outages, and other miscellaneous activities.	Multiple Factor – Utility and Non-Utility

CUSTOMER SERVICE

Product or Service	Product / Service Description	Indirect Allocation Methods
Supplier Services	Provide customer services support to electric generation suppliers, administer and maintain Electronic Data Interface (EDI) functions and invoice suppliers.	Number of Shopping Customers Ratio
Regulatory Interface and Process Improvement: Supplier	Liaison to ensure Customer Choice requirements and develop and execute plans to improve supplier services processes.	Number of Shopping Customers Ratio
Market Support Generation (MSG) Administration	Administer and support MSG supplier functions.	Number of Shopping Customers Ratio
Regulatory Interface and Process Improvement: Regulatory	Respond to regulatory complaints from customers and develop and execute plans to improve regulatory compliance processes.	Number of Customers Ratio
Compliance	Work with regions to communicate and ensure regulatory requirements.	Multiple Factor – Utility
Power Billing	Provide billing functions for large commercial/industrial contract customers.	Number of Customers Ratio
Revenue Reporting	Perform and manage revenue reporting functions.	Number of Customers Ratio
Billing Exception Processing	Process billing exceptions.	Number of Customers Ratio
Remittance Processing	Process customer payments and deposit funds.	Number of Payments Ratio
Human Services	Coordinate and administer the various social services programs.	Number of Customers Ratio

Arrears Management/ Outsourcing Services Incorporated (OSI) Administration	Coordinate and perform arrears, credit and bankruptcy functions. Manage outside collections agencies' performance and OSI credit activities.	Number of Customers Ratio
Revenue Protection Administration	Perform revenue reporting and compliance functions.	Number of Customers Ratio
Metrics and Budget/ Customer Satisfaction Measurement	Manage Customer Services and Call Center Departments' budgets and measure performance and customer satisfaction results.	Number of Customers Ratio
Policy/Procedures Development and Documentation	Develop, document and communicate Customer Services policies and procedures.	Number of Customers Ratio
Bill Administration/ Forms Administration	Design standardized customer bills, envelopes, and forms.	Number of Customers Ratio
Meter Reading Support	Coordinate Meter Reading schedules and routing activities.	Number of Customers Ratio
Customer Information System (CIS) Control	Operate and maintain CIS.	Number of Customers Ratio

ECONOMIC DEVELOPMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
Economic Development Services	Foster economic development to encourage capital investment in FirstEnergy's service areas.	Multiple Factor – Utility

TRANSMISSION & DISTRIBUTION TECHNICAL SERVICES

Product or Service	Product / Service Description	Indirect Allocation Methods
Forestry	Provide forestry services.	Multiple Factor – Utility
Distribution Reliability and Asset Records	Services include Joint User contracts, public works coordination, reliability reporting to regions and Public Utility Commissions, mutual assistance coordination, PowerOn support, cable locate ticket screening and tariff support.	Multiple Factor – Utility

Design Standards	Services include line material and construction standards, distribution line and underground maintenance practices and support, new business process support, and service practices.	Multiple Factor – Utility
Substation Services Support	Services include Substation maintenance plan coordination, practices and support, mobile substation administration and planning, and environmental compliance support.	Multiple Factor – Utility
Equipment Repair/Testing Services	Services include the maintenance, installation, maintenance, testing and repair of utility equipment.	Multiple Factor – Utility
Fleet Services	Develop fleet strategy, and perform fleet maintenance practices and support.	Multiple Factor – Utility
Financial Services	Identify revenue enhancements and cost reductions.	Multiple Factor – Utility
Substation Design and Transmission-Line Maintenance Support	Perform substation and transmission line design and project management and transmission line and substation design and material standards, right-of-way and survey services, transmission line maintenance plan coordination, practices and support, FAA activity coordination.	Multiple Factor – Utility
Planning and Protection	Perform planning and protection support for subtransmission system and overall radial system capacity planning overview, and interconnection coordination for distributed technology applications on distribution system.	Multiple Factor – Utility
Capital Budget and Equipment Support	Capital budget development and support, and major equipment specifications and procurement/repair activities for major equipment.	Multiple Factor – Utility

WORKFORCE DEVELOPMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
Transmission and Distribution Skills Training	Develop and facilitate technical and safety training for workers associated with distribution activities, including line, substation, meter, fleet, warehouse, field engineering, and dispatch. Provide support through equipment evaluation, training analyses, job assessments, and project coordination.	Number of Participating Employees – General
Customer Service Skills Training	Develop and facilitate skills training for customer service groups.	Multiple Factor – Utility
External Learning Opportunities Through the Power Systems Institute	Develop educational partnerships with colleges to offer two-year degrees in electric utility technology.	Multiple Factor – Utility

ADMINISTRATIVE SERVICES

Product or Service	Product / Service Description	Indirect Allocation Methods
Provide Administrative Support Services	Provides services in production printing, document imaging, graphic services, food services, corporate mailroom and corporate courier.	Multiple Factor – Utility and Non-Utility or Multiple Factor Utility*
Provide Records Management Services	Provides services in records storage, records retrieval, records retention, records planning and engineering records.	Multiple Factor – Utility and Non-Utility or Multiple Factor Utility*
Provide Business Services	Provides services in convenience copiers, fax machines, pagers, printers, and business information center.	Multiple Factor – Utility and Non-Utility or Multiple Factor Utility*

* For services rendered only to the utilities.

EXECUTIVE

Product or Service	Product / Service Description	Indirect Allocation Methods
Executive Management	Consultation and services in management and administration of all aspects of the business.	Multiple Factor – All

COMMUNICATIONS

Product or Service	Product / Service Description	Indirect Allocation Methods
Public Relations	Provides services in media relations, financial communications, annual reports, executive presentation, public relations counsel, corporate writing, internet support and special projects.	Multiple Factor – All
Employee Communications	Provides services with update, retirees, satellite broadcast, human resource-related communications and special projects.	Number of Participating Employees – Utility and Non-Utility
Production	Provides services related to display, photography, Corporate ID, video and employee merchandise.	Multiple Factor – All
Sponsorship	Provides services related to sports marketing, university support and special projects.	Multiple Factor – All
Non-Utility Advertising	Provides services related to broadcast/print, collateral, direct mail, internet/intranet, display/merchandise, yellow/white pages, production/agency support and special projects.	Multiple Factor – Non-Utility
Utility Advertising	Provides services related to TV, radio, print, outdoors, Internet/Intranet, special projects, production, agency support and creative media placement.	Multiple Factor – Utility
Utility Bill Inserts	Provides services developing regulated bill service to Ohio, Pennsylvania and New Jersey.	Multiple Factor – Utility
Utility : Yellow / White Pages	Provides services with regulated yellow/white pages.	Multiple Factor – Utility
Utility: Research	Provides research services.	Multiple Factor – Utility
Ohio Consumer Education	Provides services related to Ohio Consumer Education statewide and locally.	Multiple Factor – Utility
Ohio Deregulation Education	Provides service related to Deregulation Education.	Multiple Factor – Utility

CORPORATE AFFAIRS AND COMMUNITY INVOLVEMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
Corporate Affairs Activities	Provide administrative support through oversight of the business practices and planning and implementation of staff, senior management and related meetings. Serves as community liaison.	Multiple Factor – Utility
Direct Community Involvement Initiatives	Provides direction in employee volunteerism, supports viable community partnerships and educational initiatives.	Multiple Factor – Utility
Energy Efficiency Programs	Directing and coordinating Ohio Weatherization and Energy Efficiency Programs for Low Income Customers.	Multiple Factor – Utility
Community Initiatives Consulting Services	Consults to regional operations and other business units and client managers for the various community programs.	Multiple Factor – Utility
Contributions Management	Directs, coordinates, monitors, and manages contributions.	Multiple Factor – Utility

CORPORATE

Product or Service	Product / Service Description	Indirect Allocation Methods
Investor Services	Stock administration, perform recordkeeping, transfer agent, registrar, paying agent, reinvestment plan administration and other services for shareholders.	None (All Direct Charge to Holding Co.)
Board of Directors Support	Support and administration of Board of Directors meetings and director compensation.	None (All Direct Charge to Holding Co.)
Annual Meeting Coordination	Coordinate the Annual Meeting of Shareholders, including the preparation and mailing of proxy materials and annual reports and the tabulation of proxies.	None (All Direct Charge to Holding Co.).
Indenture Compliance	Administer the company's indentures	Multiple Factor – Utility

HUMAN RESOURCES

Product or Service	Product / Service Description	Indirect Allocation Methods
Manage Employee Executive Compensation and Benefits	Provide management and supervision for employee and executive compensation and benefits.	Number of Participating Employees – General
Manage Workers Compensation and Disability Management	Provide management and supervision for workers compensation and disability programs.	Number of Participating Employees – General
Provide and Coordinate Human Resources Training	Design, prepare and conduct training.	Number of Participating Employees – General
Provide Employment Services	Provide staffing, relocation and employment expertise.	Number of Participating Employees – General
Provide HRIS Services.	Provide and maintain Human Resources information.	Number of Participating Employees – General
Provide Diversity Management Services	Manage Affirmative Action programs, provide EEO/AA consulting services, and respond to charges.	Number of Participating Employees – General
Manage/ Administer Medical Services and Wellness Programs	Establish compliance, develop, implement, and administer medical and wellness programs.	Number of Participating Employees – General

INDUSTRIAL RELATIONS

Product or Service	Product / Service Description	Indirect Allocation Methods
Provide Labor Contract Negotiations	Provide contract negotiation services for all labor agreements.	Number of Participating Employees – General
Provide Labor Consulting Services	Provide labor consulting services.	Number of Participating Employees – General
Manage/Administer Safety Programs	Develop, implement and administer occupational safety programs.	Number of Participating Employees – General

REAL ESTATE

Product or Service	Product / Service Description	Indirect Allocation Methods
Facilities Management	Management and maintenance of office facilities.	Multiple Factor – All or Multiple Factor Utility*
Facilities Planning and Project Management	Manage office design services, furniture, project management and other capital improvements.	Multiple Factor – All or Multiple Factor Utility*
Management of Real Estate Assets	Support internal and external inquiries regarding the acquisition, divestiture and management of real estate assets	Multiple Factor – All or Multiple Factor Utility*
Manage/Administer Security Programs	Administer physical security, special investigations, security audits, security consultation and contract guard services.	Multiple Factor – All or Multiple Factor Utility*

* For services rendered only to the utilities.

FIRSTENERGY TECHNOLOGIES

Product or Service	Product / Service Description	Indirect Allocation Methods
Strategic Technologies	Develop, support and implement EPRI programs, industry initiatives, research and development programs, collaboratives and activities with universities, labs and the Department of Energy.	Multiple Factor – Utility
New Technology Assessment	Perform assessment activities for strategic technology pilots, technology assessments, marketing tests, customer pilots and due diligence reviews.	Multiple Factor – Utility and Non-Utility
Technical Application and Product Innovation	Develop, analyze and support strategic alliances, joint ventures, strategic startups, direct investments and Portfolio initiatives.	Multiple Factor – Utility and Non-Utility
New Technology and Product Market Deployment	Develop, support and implement the following initiatives: tailored solutions with existing products, commercial packages, operational efficiencies and business area solutions.	Multiple Factor – Utility and Non-Utility
Demand Response Initiatives	Provide support for corporate demand response initiatives.	Multiple Factor – Utility and Non-Utility
Renewable Energy Program and Strategy	Provide support for various corporate and regulatory initiatives to develop and implement renewable energy programs and products.	Multiple Factor – Utility

Regulated Programs and Services	Develop, support and implement programs and strategies to meet corporate initiatives and regulatory mandates and commitments related to Comprehensive Resource Assessment(CRA), customer end-use. technology, distributed generation and load management.	Multiple Factor – Utility
Project Implementation Management Services	Develop and implement end-use and distributed generation technology-based products and services.	Multiple Factor – Utility and Non-Utility

TECHNOLOGY & SUPPORT SERVICES

Product or Service	Product / Service Description	Indirect Allocation Methods
Provide Network Services	Provide Internal Network Services.	Multiple Factor – Utility and Non-Utility
Maintain wireless cell sites and fiber optics network	Maintain internal wireless cell sites and fiber optic network; provide engineering, procurement, and installation services.	Multiple Factor – Utility and Non-Utility

INFORMATION TECHNOLOGY

Product or Service	Product / Service Description	Indirect Allocation Methods
Application Development	Create new or enhance existing applications; including analysis design coding, testing, system integration, and implementation, as well as any required technical writing or project manual development.	Directly Billed
Development Supervision and Tool Support	Supervision of application development employees and the support of development software tools.	Application Development Ratio
Server Support (Unix, SAP)	Create and support the network and server infrastructure to accommodate unix and SAP client server applications.	Gigabytes Used Ratio
Client Server Storage Support	Support of storage requirements for all server applications.	Server Support Composite Ratio
Server Support (Intel)	Create and support the network and server infrastructure to accommodate windows and NT client server applications.	Number of Intel Servers Ratio
Mainframe Processing and Storage Support	Execute mainframe applications, including an appropriate portion of support, started tasks, mainframe backups and microfiche services.	Gigabytes Used Ratio

Desktop Support	Help desk email and end-user tools, remote access, repair services, and general workstation support.	Number of Computer Workstations Ratio
Network Services	Includes voice, data, EMS and radio access.	Direct Charge Ratio
Inserting Services	Provide document bursting, inserting and mailing.	Number of Billing Inserts Ratio
Printing Services	Provide mainframe and client server printing services at the data center.	Daily Print Volume Ratio
Technical Consulting	Provide consulting support to departments and end-users to enable them to leverage their IT capabilities. Provide advice and consultation regarding desktop setups and configurations.	Directly Billed
Training	Provide IT training.	Multiple Factor – Utility and Non-Utility
Business Application Support	Support business application related software licenses and / or hardware maintenance provided by an outside vendor.	Directly Billed
Data Security	Disaster recovery and data security services.	Multiple Factor – Utility and Non-Utility
Project Management Office	Oversee technology projects through benefit.	Multiple Factor – Utility and Non-Utility
Provide Telecommunication Services	Provide telecommunication services and equipment.	Direct Charge Ratio
Portal Support	Support the infrastructure to accommodate internet and infranet application access.	Multiple Factor – Utility and Non-Utility

PERFORMANCE PLANNING

Product or Service	Product / Service Description	Indirect Allocation Methods
Performance Planning Services	Develop, support and execute performance planning services.	Multiple Factor – All

SUPPLY CHAIN

Product or Service	Product / Service Description	Indirect Allocation Methods
Strategic Planning, Demand management and Procurement Projects	Provide assistance in materials and services planning (demand management) and performs special procurement projects.	Multiple Factor – Utility and Non-Utility
Goods and services procurement	Procure material, equipment and contractor services. Establish, manage and administer programs, which allow internal customers to obtain goods without having to process the need through Procurement. Develop specifications, construction standards, schedules, and bills of materials.	Multiple Factor – Utility and Non-Utility
Materials Management Support	Maintain the computerized purchasing and materials management systems, and material related modules; maintain and/or modify select management reports. Analyze Supply Chain processes and measure performance. Monitor and forecast demand to ensure a continuous supply of materials.	Multiple Factor – Utility and Non-Utility
Investment Recovery Projects	Develop and implement plans for disposition of surplus assets.	Multiple Factor – Utility and Non-Utility
Process, Refurbish and Sell Materials	Perform recovery processing, investment recovery processing, refurbishing and selling materials.	Multiple Factor – Utility and Non-Utility
Provide Warehousing Services - Non-nuclear	Receive and place material into stock, insure quality requirements are met at receipt, maintain inventory counts, and update information systems. Fill customer requests for material from stock.	Multiple Factor – Utility and Non-Utility
Provide Warehousing Services - Nuclear	Receive and place material into stock, insure quality requirements are met at receipt, maintain inventory counts, and update information systems. Fill customer requests for material from stock.	None (All direct charged)
Warehousing Space Charge	Provide warehousing space to internal customers.	Multiple Factor – Utility and Non-Utility

CONTROLLERS

Product or Service	Product / Service Description	Indirect Allocation Methods
Accounting Research	Provide accounting research and consulting to ensure compliance with existing and proposed financial reporting, and regulatory accounting requirements.	Multiple Factor - All
Accounts Payable	Nonpayroll corporate disbursement services including account distribution to the general ledger. Resolve problems associated with invoice processing and maintain the accounts payable system.	Multiple Factor - All
Billing Services	Prepare non-retail electric billings.	Multiple Factor Utility
Infrastructure and Corporate Reporting, Accounting and Budgeting	Prepare Corporate Sustaining reports, subsidiary accounting and corporate budgeting, which includes reporting and support of the ledger, property records and SAP system.	Multiple Factor - All
Due Diligence	Assist value centers to determine whether proposed business acquisitions/combinations and similar transactions are desirable from a financial perspective; extensive review/analysis following preliminary review and firm intent to proceed with transaction through commitment and closing phases.	None (All direct charged)
Value Center Accounting and Budgeting	Maintain the property accounting system and provide value center accounting such as management reporting.	Multiple Factor – Utility and Non-Utility
Property Record Maintenance	Maintain corporate continuing property records.	Multiple Factor – Utility and Non-Utility or Multiple Factor Utility*
Tax Consulting and Research	Conduct tax research and tax consulting to assure compliance with statues, while evaluating alternative tax strategies within the constraints of regulations that provide additional shareholder value to the company. In addition, provide tax-consulting advice to the value centers on tax compliance and reporting issues, which includes business "start-up" support to organizations requiring assistance.	Multiple Factor – All

* For services rendered only to the utilities.

Tax Compliance	Prepare and process all schedules and information associated with corporate and subsidiary tax returns, audits, and tax litigation, assuring compliance with tax regulations and statues.	Multiple Factor – All or Multiple Factor Utility*

* For services rendered only to the utilities.

CREDIT MANAGEMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
Credit Analysis and Supporting Functions	Provide detailed written credit analysis issuing recommendations on counterparty creditworthiness and assigning credit limits.	Multiple Factor – Utility and Non-Utility
Credit Policies and Procedures	Develop and support credit policies and procedures for managing credit risk. Implement and support standardized credit approval processes.	Multiple Factor – Utility and Non-Utility
Credit Management Information System	Develop and support credit management reports and calculate credit exposure on a corporate wide basis.	Multiple Factor - All

ENTERPRISE RISK MANAGEMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
General Risk Management	Develop and maintain an enterprise risk management system.	Multiple Factor - All

INSURANCE SERVICES

Product or Service	Product / Service Description	Indirect Allocation Methods
Insurance Policies	Manage and support insurance policies for all the business units .	Multiple Factor – Utility and Non-Utility
Loss Control Services	Manage and support property inspections to prevent losses.	Multiple Factor – Utility and Non-Utility
Surety Bonds	Manage and support Surety Bonds.	Multiple Factor – Utility and Non-Utility
Risk Transfer and Risk Mitigation Services	Manage and support risk transfer and risk mitigation services.	Multiple Factor – Utility and Non-Utility
Ancillary Coverages	Manage and support ancillary coverages.	None (All direct charged)

INTERNAL AUDIT

Product or Service	Product / Service Description	Indirect Allocation Methods
Audit Services	Perform the following internal audit services based on risk levels and / or requests: financial, performance analysis, safeguarding of assets, computer- related and fraud investigations.	Multiple Factor – All or Multiple Factor – Utility*

INVESTMENT MANAGEMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
Qualified and Non-qualified Pension and Savings Plan	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	Number of Participating Employees – Utility and Non–Utility
FirstEnergy Foundation	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	Multiple Factor - All
Voluntary Employee Benefit Association (VEBA) Trust	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	Number of Participating Employees – Utility and Non–Utility
Nuclear Decommissioning	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	None (All direct charged)
Non-Utility Generator Trust	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	Multiple Factor – Non-Utility
Spent Nuclear Fuel	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	None (All direct charged)
Low-Income Housing Tax Credit Partnership	Establish and implement investment policy and asset allocation strategy and monitor investment performance.	Multiple Factor - All

INVESTOR RELATIONS

Product or Service	Product / Service Description	Indirect Allocation Methods
Investor Information	Compile and communicate information to investors.	Multiple Factor – Utility* or Direct Charge to Holding Co.
Investor Education	Target and educate potential investors to promote FirstEnergy's valuation characteristics and business strategy.	None (All Direct Charge to Holding Co.)

* For services rendered only to the utilities.

Regulations Compliance	Ensure compliance with SEC Fair Disclosure regulations.	Multiple Factor - All

FirstEnergy Management Education	Provide education to management of business concerns and valuation issues of analyst/investors	Multiple Factor – All
FirstEnergy Employee Education	Actively promote understanding of financial and investor relations' issues.	Multiple Factor – All

RATES AND REGULATORY AFFAIRS

Product or Service	Product / Service Description	Indirect Allocation Methods
Regulatory Activities and Consulting	Manage regulatory activities and interfaces, including tariff development and interpretation. Monitor and participate in regulatory affairs at the local, state and federal levels.	Multiple Factor – Utility
Customer Pricing and Contracting	Develop pricing programs for regulated electric service for retail and wholesale customers, including "unbundled" costs and prices for generation, transmission and distribution service and support justification to regulators. Provide support in developing pricing for special-purpose customer programs and non-regulated energy services (e.g. prepayment, economic development, interruptible load, conjunctive-billing electric service programs).	Multiple Factor – Utility
Billing Support	Provide assistance calculating customer (external and internal) invoices and operate and maintain systems to render, collect and account for these invoices.	Multiple Factor – Utility
Sales and Load Forecasting	Develop short-term and long-term sales forecast, peak load projections and customer counts	Multiple Factor – Utility and Non-Utility

TREASURY

Product or Service	Product / Service Description	Indirect Allocation Methods
Capital Structure Management and Administration	Perform all activities related to acquiring capital and establish and administer funding, legal documentation, and record-keeping activities associated with finance programs	Multiple Factor – All
Corporate Funds Management	Plan, manage, and operate the corporate "cash-flow-cycle."	Multiple Factor – All
Corporate Forecasting	Provide regulatory support, strategy support, financial modeling and forecasting, financial and economic analysis and development of annual corporate KPI target.	Multiple Factor – All

Capital Project Evaluation and Support	Provide analytical support in the areas of financing, profitability, capital structure and cash flow.	Multiple Factor – Utility and Non-Utility
Investor Relations Activities	Provide institutional and retail security holder, buy and sell-side analysts, rating agencies, and other key members of the financial community with qualitative and quantitative information.	Multiple Factor – All

BUSINESS DEVELOPMENT

Product or Service	Product / Service Description	Indirect Allocation Methods
Mergers and Acquisitions Support	Support, evaluate and assist in the management of merger, asset acquisition and asset disposition activities.	None (All direct charged)
Internal Consulting	Perform strategic analysis/business fit, and economic analysis. Provide integration and transitional management services as needed.	None (All direct charged)

GOVERNMENTAL AFFAIRS

Product or Service	Product / Service Description	Indirect Allocation Methods
Federal Governmental Affairs Support	Activities associated with developing and maintaining relationships with federal government institutions; includes lobbying, and other support activities.	None (All direct charged)
State Governmental Affairs Support	Activities associated with developing and maintaining relationships with state government institutions; includes lobbying, and other support activities.	None (All direct charged)

LEGAL

Product or Service	Product / Service Description	Indirect Allocation Methods
Provide Governmental Affairs Support	Activities associated with developing and maintaining relationships with government institutions; includes lobbying, litigation, and other support activities.	None (All direct charged)
Nuclear Legal Consultation and Case Management	Provide legal advice for federal and state nuclear matters.	None (All direct charged)
Human Resources Legal Consultation & Case Management	Provide legal advice for human resource matters (including workers compensation, union negotiations, arbitrations, class action lawsuits, etc.).	Multiple Factor – Utility and Non-Utility

Product or Service	Product / Service Description	Indirect Allocation Methods
Employee Benefits Legal Consultation & Case Management	Provide legal advice for employee benefits matters (including health and welfare benefits, tax-qualified and non-tax qualified benefit plans and programs, pension administration, etc.).	Number of Participating Employees – Utility and Non-Utility
Tax Legal Consultation & Case Management	Provide legal advice for tax matters including federal, state & local tax matters (land tax, sales & use tax, IRS, etc.).	Multiple Factor – All
Bankruptcy Legal Consultation & Case Management	Provide legal advice for bankruptcy matters.	Multiple Factor – Utility and Non-Utility
International Legal Consultation & Case Management	Provide legal advice for international matters– contract negotiations, sale/lease agreements.	None (All direct charged)
Non-Utility Legal Consultation & Case Management	Provide legal advice on federal and state matters to Non-Utility Subsidiaries.	Multiple Factor – Non-Utilities
Regulatory Legal Consultation & Case Management	Provide legal advice for federal and state regulatory matters.	Multiple Factor – Utility
Environmental Legal Consultation & Case Management	Provide legal advice for environmental matters (other than PCB – related matters) - federal (EPA) and state (EPA), regulatory/legislative compliance issues.	None (All direct charged)
PCB Environmental Legal Consultation & Case Management	Provide legal advice for PCB-related matters - federal (EPA) and state (EPA), regulatory/legislative compliance issues.	Multiple Factor – Utility
Real Estate Legal Consultation & Case Management	Provide legal advice for real estate matters.	Multiple Factor – Utility and Non-Utility
Corporate Legal Consultation & Case Management	Provide legal advice for general corporate and transactional matters (including SEC filings, Board of Directors matters, PUHCA, Financings, Securities Matters, Intellectual Property, Technology, General Counsel matters, etc.).	Multiple Factor – All
Claims Legal Consultation & Case Management	Provide legal advice for Claims matters.	Multiple Factor – All

CLAIMS

Product or Service	Product / Service Description	Indirect Allocation Methods

Process Receivable Claims	Provide management, supervision, and performance of tasks associated with the resolution and chargeback of receivable claims.	Multiple Factor - All
Provide Corporate Support	Claims support in evaluating claims, and procuring appropriate external/internal legal resources.	Multiple Factor - All

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-8:

"Provide an analysis by function of charges by affiliates, for the test year and the 12-month period immediately prior to the test year, for services rendered included in the operating expenses of the filing company. Explain the nature of the service and the basis on which charges or allocations are made, including a copy of an applicable contract. Also, explain major variances between the charges for the test year and the corresponding charges for the prior 12-month period."

RESPONSE:

See Met-Ed Exhibit RAD-25 Attachment A for a summary of charges budgeted to be billed to Met-Ed by First Energy Service Company for the twelve months ending April 30, 2016 and the 12 months ending March 31, 2015. Met-Ed Exhibit RAD-25 Attachment A also shows the charges billed to Met-Ed by First Energy Service Company for the twelve months ended March 31, 2014.

Also included is a copy of the Service Agreement between the operating subsidiary Metropolitan Edison Company and FirstEnergy Service Company (FE Service) outlining the services to be provided by FE Service and the basis on which charges are to be billed. See Met-Ed Exhibit RAD-25 Attachment B.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-9:

"Prepare a detailed schedule for the test year showing types of social and service organization memberships paid for, the cost thereof, the accounting treatment and whether included in claimed test year expenses."

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-11:

"Describe costs relative to leasing equipment, including computer rentals, and office space, including terms and conditions of the leases. State method for calculating monthly or annual payments."

RESPONSE:

Line No.	Name of Lessor	Basic Detail of Lease	12 Months Ended April 30, 2016 *(In thousands)*
1	GE Capital Commercial Inc. (successor-in-interest to BLC Corporation)	Motor Vehicles & Trailers – Base term 36-120 months with fixed rate & maximum expected residual of 25% and unguaranteed residual of 13%. At end of base term, option for renewal exists for up to 24 months at 474 BPS plus federal 2 year swap rate. At end of renewal term, option to continue to rent for monthly fee equivalent of 1/12 of 1% of acquisition cost until unit is sold or returned to Lessor. Other Equipment – Base term of 36-120 months with a fixed rate & maximum expected residual of 20% with unguaranteed residual of 13%. At end of base term, option for renewal exists for up to 24 months at 474 BPS plus federal 2 year swap rate. At end of renewal term, option to continue to rent for monthly fee equivalent of 1/12 of 1% of acquisition cost until unit is sold or returned to Lessor.	$955

2	RBS Asset Finance, Inc.	Motor Vehicles & Trailers – Base term 60 months for light and medium duty vehicles, 96 months for heavy duty high use trouble trucks and 120 months for all other heavy duty vehicles & trailers with a $1 buy out at end of term for all. Other Equipment – Base term 96 months for miscellaneous equipment like ATVs, sweeper/scrubbers, etc. and 120 months for construction equipment & forklifts with a $1 buy out at end of term for all. Rates for both motor vehicles/trailers & other equipment leases are fixed based on 200 BPS plus Bloomberg Avg Life swap rate (2.5 years for 60 month term, 4 years for 96 month term and 5.5 years for 120 month term).	$3,642

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-12:

"Submit a statement of past and anticipated changes, since the previous rate case, in major accounting procedures, explain any differences between the basis or procedure used in allocations of revenues, expenses, depreciation and taxes in the current rate case and that used in the prior rate cases, and list all internal and independent audit reports for the most recent 2 year period."

RESPONSE:

A list of all internal audit reports performed by the Internal Audit Department from April 2012 through March 2014 appears on pages 3 through 6.

A list of all independent audits performed from April 2012 thru March 2014 appears on page 6.

The following is a list of major changes in accounting procedures adopted since the previous rate case:

1. In 2006, the Company adopted SFAS 158 (ASC 715), *Accounting for Defined Benefits.* This statement requires employers to recognize an asset or liability for the overfunded or underfunded status of their pension and other postretirement benefit plans (OPEB). For a pension plan, the asset or liability is the difference between the fair value of the plan's assets and the projected benefit obligation. For any other postretirement benefit plan, the asset or liability is the difference between the fair value of the plan's assets and the accumulated postretirement benefit obligation. The Statement required employers to recognize all unrecognized prior service costs and credits and unrecognized actuarial gains and losses in accumulated other comprehensive income (AOCI), net of tax. Such amounts will be adjusted as they are subsequently recognized as components of net periodic benefit cost or income pursuant to the current recognition and amortization provisions.

2. In 2007, the Company adopted FIN 48, *Accounting for Uncertainly in Income Taxes,* which provides guidance for accounting for uncertainty in income taxes in a company's financial statements in accordance with SFAS 109 (ASC 740), *Accounting for Income Taxes.* This interpretation prescribes a financial statement recognition threshold and measurement attribute for tax positions taken or

expected to be taken on a company's tax return. FIN 48 also provides guidance on derecognition, classification, interest, penalties, accounting in interim periods, disclosure and transition. The evaluation of a tax position in accordance with this interpretation is a two-step process. The first step is to determine if it is more likely than not that a tax position will be sustained upon examination, based on the merits of the position, and should therefore be recognized. The second step is to measure a tax position that meets the more likely than not recognition threshold to determine the amount of income tax benefit to recognize in the financial statements.

FIN 48 also requires companies to recognize interest expense or income related to uncertain tax positions. That amount is computed by applying the applicable statutory interest rate to the difference between the tax position recognized in accordance with FIN 48 and the amount previously taken or expected to be taken on the tax return. The Company includes net interest and penalties in the provision for income taxes, consistent with its policy prior to implementing FIN 48.

3. In 2011, the Company changed its method of recognizing actuarial gains and losses for its defined benefit pension and OPEB plans. Previously, the Company recognized the net actuarial gains and losses as a component of AOCI and amortized the gains and losses into income over future periods.

   The Company, with this accounting change, elected to immediately recognize the change in fair value of plan assets and actuarial gains and losses annually in the fourth quarter of each year. The Company retroactively applied immediate recognition of gains and losses for its defined benefit pension and OPEB plans to each year, from 1986 through 2010.

Internal Audits Performed During – April through December 31, 2012

Compliance:

1. Audit of the IBM Consulting Services' Pennsylvania "Smart Meter Implementation and Procurement" Plan Development as of February 10, 2012
2. Limited Scope Review of US Bank Travel Card as of July 27, 2012
3. Audit of Substation Safety/Security Inspection and Corrective Maintenance as of October 3, 2012
4. Review of Purchasing Card Usage – Severed Employees as of December 12, 2012

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-19:

> "Explain how the Federal corporate graduated tax rates have been reflected for rate case purposes. If the Pennsylvania jurisdictional utility is part of a multi-corporate system, explain how the tax savings are allocated to each member of the system."

RESPONSE:

Met-Ed is not entitled to a Federal graduated tax rate. Met-Ed files as a member of a Consolidated group and its taxable income exceeds where graduated rates apply. Therefore, the Company uses a flat 35% Federal income tax rate in this filing.

FirstEnergy allocates its current federal consolidated income tax liability, pursuant to an agreement approved by the Securities and Exchange Commission, in accordance with the Energy Policy Act of 2005.

Members of the FirstEnergy consolidated group follow the allocation rules under the IRS Regulations under Code Section 1552. The consolidated group is treated as one taxpayer for federal income tax. Each member is required to compute its separate company taxable income. The members with positive taxable income (Paying Members) pay the consolidate tax liability based on an allocation of its separate company income. The aggregate of all amounts paid by Members of the consolidated, as a result of the excess of each Members' Separate Return Tax liability, (as determined under Section 1.1552-1(a)(2)(ii) of the IRS Regulations) over the amount allocated to such Member as its share of the Consolidated Tax Liability under Code Section 1552 (i.e., the Tax Benefit Amount) is paid by FirstEnergy to the other Members (the "Loss Members") which had tax deductions, losses and credits to which such payments by the Paying Members are attributable. The apportionment of such payments among Loss Members is allocated among the group Members pursuant to IRS Regulations Section 1.1502-21(b).

However, the Tax Benefit Amount allocated to FirstEnergy and paid to FirstEnergy as a result of its being a Loss Member is limited to its Tax Benefit Amount determined by multiplying it total loss benefit amount by a fraction, the numerator of which is FirstEnergy's interest deduction attributable to Acquisition Indebtedness, and the denominator of which is the sum of all of FirstEnergy's deductions. The portion of FirstEnergy's Tax Benefit Amount which cannot be allocated and paid to FirstEnergy due to the operation of this limitation is reallocated to Paying Members of the Consolidated Group other than FirstEnergy in accordance with the method described in Sections 1.1502-33(d)(3) and 1.1552-1(a)(2) of the IRS Regulations.

The general effect of the method is to first allocate the consolidated tax liability among the Members of the Consolidated Group on the basis of the percentage of the total consolidated tax which the tax of such Member, if computed on a separate return basis would bear to the total amount of the taxes for all Members of the group so computed. Then the method allocates an additional amount (the "Tax Benefit Amount") to each Member up to, but not greater than, the excess, if any, of its Separate Return Tax liability, over the amount allocated to such Member in the previous sentence. The total of the Tax Benefit Amounts allocated to Members results in payments to the Members who had items of deduction, loss or credits to which such Tax Benefit Amount is attributable.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-20:

"Explain the treatment given to costs of removal in the income tax calculation and the basis for such treatment."

RESPONSE:

On property acquired from 1971 to 1980, the company utilizes the A.D.R. Tax Depreciation Method.

Under those regulations, when an asset is retired, the cost of dismantling, demolishing, or removing is deductible as a current year's expense.

In June, 1977, Metropolitan Edison Company filed with the Internal Revenue Service an application for a change in accounting for cost of removal on pre-1971 property to conform with treatment for book and regulatory purposes. The Internal Revenue Service's acceptance of this application was dated October 19, 1977.

On property acquired in 1981 and subsequent thereto, the company (in accordance with ACRS and MACRS regulations) elected to use Cost of Removal in the calculation of gain or loss on retirements of 1981 and subsequent property.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-21:

"Show income tax loss/gain carryovers from previous years. Show loss/gain carryovers by years of origin and amounts remaining by years at the beginning of the test year."

RESPONSE:

See Met-Ed Exhibit RAD-38 Attachment A for the Net Operating Loss ("NOL") Carryforward schedule.

Metropolitan Edison Company
Net Operating Loss Carryforwards - Federal & State

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-22:

"State whether the company eliminates tax savings by the payment of actual interest on construction work in progress not in rate base claim. If response is affirmative:

(a) Set forth amount of construction claimed in this tax savings reduction, and explain the basis for this amount
(b) Explain the manner in which the debt portion of this construction is determined for purposes of the deferral calculations.
(c) State the interest rate used to calculate interest on this construction debt portion, and the manner in which it is derived.
(d) Provide details of calculation to determine tax savings reduction, and state whether State taxes are increased to reflect the construction interest elimination."

RESPONSE:

One of the revisions made to the Internal Revenue Code (IRC) by the Tax Reform Act of 1996 was the elimination of the current deduction for construction period interest. The IRC now requires construction period interest to be capitalized for tax purposes using an avoided cost methodology. This methodology results in a similar required capitalized interest amount for tax purposes than the debt component of AFUDC. Therefore, there are no current tax savings to eliminate.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-23:

"Under section 1552 of the Internal Revenue Code (26 U.S.C.A. § 1552) and 26 CFR 1.1552-1 (1983), if applicable, a parent company, in filing a consolidated income tax return for the group, must choose one of four options by which it must allocate total income tax liability of the group to the participating members to determine each member's tax liability to the Federal government (if this interrogatory is not applicable, so state):

(a) State what option has been chosen by the group.
(b) Provide, in summary form, the amount of tax liability that has been allocated to each of the participating members in the consolidated income tax return for the test year and the most recent 3 years for which data is available.
(c) Provide a schedule, in summary form, of contributions, which were determined on the basis of separate tax return calculations, made by each of the participating members to the tax liability indicated in the consolidated group tax return. Provide total amounts of actual payments to the tax depository for the tax year, as computed on the basis of separate returns of members.
(d) Provide the most recent annual income tax return for the group.
(e) Provide details of the amount of the net operating losses of any member allocated to the income tax returns of each of the members of the consolidated group for the test year and the 3 most recent years for which data is available, together with a summary of the actual tax payments for those years.
(f) Provide details of the amount of net negative income taxes, after all tax credits are accounted for, of any member allocated to the income tax return of each of the members of the consolidated group for the test year and the 3 most recent years for which data is available, together with a summary of the actual tax payments for those years."

RESPONSE:

(a) The option used is Reg. §1.1552-1(a)(2) – the tax liability of the group is allocated based on the percentage of total tax computed on a separate basis for each member over the total amount of tax for all members of the group so computed.

(b) See Met-Ed Exhibit RAD-40, Attachment A[1], page 1, for the amount of the tax liability that has been allocated to each of the participating members in the Consolidated Federal income tax return for the most recent three years.

(c) See Met-Ed Exhibit RAD-40, Attachment A, pages 7 – 39, for the payments and refunds made for the most recent filed returns for years 2010, 2011, and 2012 as computed on the basis of separate returns of members.

(d) See Met-Ed Exhibit RAD-40, Attachment A, pages 2 – 6, for a copy of the U.S. Corporation Income Tax Return (Form 1120) as filed by FirstEnergy Corp. and Subsidiaries for the year 2012.

(e) See Met-Ed Exhibit RAD-40, Attachment A, pages 2 - 39.

(f) See Met-Ed Exhibit RAD-40, Attachment A, pages 2 - 39.

[1] Attachment A to Met-Ed Exhibit RAD-40 is **Highly Confidential** and is being provided to the Commission in hard copy only.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-24:

"Provide detailed computations by vintage year showing State and Federal deferred income taxes resulting from the use of accelerated tax depreciation associated with post-1969 public utility property, ADR rates, and accelerated tax depreciation associated with post-1980 public utility property under the Accelerated Cost Recovery System (ACRS).

(a) Reconcile and explain any differences in the base used to calculate State and Federal deferred income taxes.

(b) State whether tax depreciation is based on all rate base items claimed as of the end of the test year, and whether it is the annual tax depreciation at the end of the test year.

(c) Reconcile differences between the deferred tax balance, as shown as a reduction to rate base, and the deferred tax balance as shown on the balance sheet."

RESPONSE:

(a) See Met-Ed Exhibit RAD-41 Attachment A. No basis difference, however, there is a timing difference due to PA disallowance in year one of the 50% Federal Bonus Depreciation.

(b) See Met-Ed Exhibit RAD-41 Attachment A. Tax depreciation for the future test year is based on all electric plant in service claimed as of 4/30/16 and the annual tax depreciation is based on the same plant.

(c) See Met-Ed Exhibit RAD-41 Attachment B.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-25:

"Submit a schedule showing a breakdown of accumulated and unamortized investment tax credits, by vintage year and percentage rate, together with calculations supporting the amortized amount claimed as a reduction to pro forma income taxes. Provide details of methods used to write-off the unamortized balances."

RESPONSE:

Investment Tax Credit Balances, Provision and Amortization
($000)

	4% and 10%
Balance 3/31/13	$ 5,919
12 Months ended 3/31/14 Amortization	(398)
Balance 3/31/14	$ 5,521
12 Months ending 3/31/15 Amortization	(364)
Balance 3/31/15	$ 5,157
Amortization 1 month ending 4/30/15	(31)
Balance 4/30/15	$ 5,126
12 Months ending 4/30/16 Amortization	(364)
Balance 4/30/16	$ 4,762

Investment Tax Credit

Met-Ed is amortizing the deferred credit previously created by a ratable flow-through to income over the useful life of the property. On March 9, 1972, General Public Utilities Corporation (former parent company of respondent) filed with the District Director of Internal Revenue, Manhattan District, on behalf of its affiliated companies (Met-Ed being one of the affiliates), an election under paragraph (2) of Section 46(e) of the Internal Revenue Code of 1954, as amended, for allowance, with respect to public utility property, of the credit allowed by Section 38 of the Code. Such an election provides (a) to reduce the cost of service for ratemaking purposes or in its regulated books of account by no more than ratable portion of the credit allowable by Section 38, and (b) not to reduce the base to which its rate of return is applied for ratemaking purposes by any portion of the credit allowable by Section 38.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-26:

"Explain in detail by statement or exhibit the appropriateness of claiming any additional items, not otherwise specifically explained and supported in the statement of operating income."

RESPONSE:

The appropriateness of claiming the various items included in the statement of operating income is explained in the supporting schedules to Met-Ed Exhibit RAD-2 and the testimony and exhibits of the Company's witnesses.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-D-27:

"If the utility's operations include non-jurisdictional activities, provide a schedule which demonstrates the manner in which rate base and operating income date have been adjusted to develop the jurisdictional test year claim."

RESPONSE:

The Company does not maintain its books based on jurisdictional divisions. An allocation for PaPUC jurisdictional purposes will be supported by Met-Ed witness Hillary E. Stewart, Met-Ed Statement No. 5 through the cost of service study.

METROPOLITAN EDISON COMPANY

FILING REQUIREMENT II-E-1:

"Supply a copy of any budget utilized as a basis for any test year claim, and explain the utility's budgeting process."

RESPONSE:

The FirstEnergy budget guidelines details the items required for the preparation of the construction and operating budgets. See Met-Ed RAD-45 Attachment A for a review of the guidelines.

Beginning in 2014, FirstEnergy implemented a new budget and long-term planning application, UI Planner. See Met-Ed Exhibit RAD-45 Attachment B for an explanation of FirstEnergy's budget process.

A copy of the budget utilized for the test year claim is contained in Met-Ed Exhibit RAD-18.

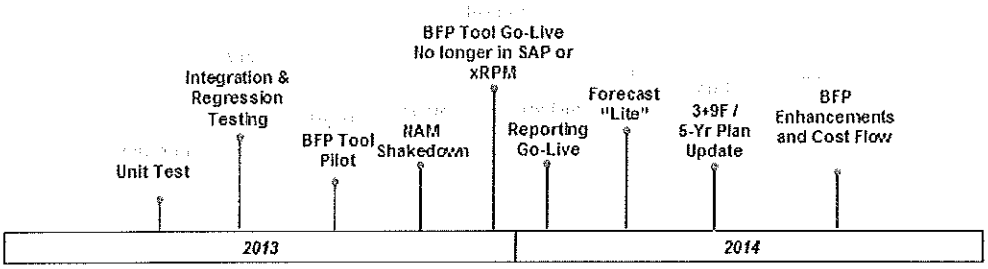
CHAPTER 1: INTRODUCTION

The integrated business planning process is critical to the success of FirstEnergy. A key component of this process is the annual budget which provides a method to quantify and report the current year's expectations and helps drive the enterprise toward achieving both short-term and long-term financial and operational objectives. The budget also helps facilitate the efficient usage of the Company's financial resources and allows us to measure actual performance against projections.



The guidelines in this booklet are intended to assist persons responsible for direct input of data into the SAP system as they prepare the 2014 annual budget. The 2014 budget should be based on your business unit's business plans and should align with Executive Council's expectations.

Business Unit Income Statements will be produced using the Profit Center Accounting module in SAP. Budget details will be developed and input using the various SAP cost collectors (i.e. cost centers, internal orders and WBSs). Through system mapping within SAP, these cost collectors are assigned to Profit Centers. Once data input is completed and the SAP system is closed, Business Unit Income Statements will be available for review. The Profit Center Hierarchy (PC0001B) serves as the source for the structure of Business Unit Income Statements). Earnings Driver reports which measure the impact and contribution of key items to the financial performance of each Business Unit will also be produced. Any questions concerning these statements should be directed to Mike Kreighbaum (825-2556) or Carrie Wokaty (825-6005).

Please Note: ***For the 2014 Forecast and the 2014 Annual Budget we will follow the same process as last year in SAP.*** *However, as part of the Financial Transformation project, we will be implementing the new Cost Accountability Model and begin doing our forecasting and budget inputs into a new financial tool, UIPlanner. Separate documentation and training for the tool will be provided through the FiT team. Below is a high level summary of the upcoming implementation timeline.*

Financial Transformation Project

Path to Implementation

Resource Activities	Date	Time Commitment
Training	August 20 – 22	~ 24 hours
BFP Pilot	Sept 2 – Oct 28	~ 10/week
Acct Model Shakedown	Sept 9 – Oct 28	~ 16/week
Train the Organization	November	~ 24 hours
Update End-User Queries	November - December	Varies
Assist with rollout	Dec - Jan	Varies

Note: 2014 budget documentation can be found in U:\Public\Budget Info\2014 Budget

Overview For Budget Input

Planning Must Be Done For The Following:
➢ Gross Payroll (Dollars)
➢ Staffing Level (Headcount) – Coordinate with IBP-Business Services and Workforce Planning
➢ Other – Than – Labor (OTL)
➢ Activity Input Planning (Hours to Cost Centers, WBSs and Internal Orders)
Versions
Annual Budget: ➢ 2014 Budget detail planning will be **input** in Version 20 ➢ 2014 Final Closed detail budget will be in Version 12 unless otherwise noted

Calendar of Events

The 2014 Forecast Schedule

Activity	Completion Date
➢ **SAP 2014 V20 Opens**	7/29/2013
➢ **Complete Headcount & Gross Payroll**	8/30/2013
➢ **All Revenues & Expenses updated to calculate deferrals**	9/6/2013
➢ **Lock SAP V20 @ 5 p.m.**	9/13/2013
➢ **IBP/Gen Accounting process 2014 Budget V13**	9/16 – 9/20/2013
➢ **Business Units to begin validation of results**	9/20/2013

Dates for the final budget will be announced after the forecast is completed.

The 2014 Budget Schedule

Activity: Business Units enter 2014 Detail Budgets	Completion Date
➢ **Gross Payroll Input Complete**	TBD
➢ **Headcount Input Complete**	TBD
➢ **HR Benefits Complete**	TBD
➢ **Revenues/Expenses Impacting Deferrals & Amortizations (Including Inter-Company Transactions)**	TBD
➢ **Transmission Revenues & Expenses**	TBD
➢ **Inter-company Transactions Input Complete**	TBD
➢ **Lockdown of SAP system**	TBD

THESE DATES ARE SUBJECT TO CHANGE

Throughout the budget cycle you should expect to receive communications as needed to ensure the schedule is met. The purpose of these communications will be to help individuals manage budgeting activities, ensure mid-process completion goals are met, and address any issues that arise during the budget entry period.

CHAPTER 2: LABOR

Straight Time Payroll

Straight time payroll for the 2014 Budget will be developed and input by the Business Units. The budget is based on projected staffing levels and estimated employee salaries based on a regular weekly schedule of 40 hours per week per full-time employee
Adjustments should be made for changes in payroll due to attrition, retirements, promotions, demotions, and all salary adjustments including general wage rate increases. **Annual wage rate increases need to be applied by the Business Units, based on the appropriate rate change and timing.** The assumed wage rate for non-bargaining employees is 3.0%. The non-bargaining WRI should be assumed to be effective September 1, 2014. For bargaining unit employees, the bargaining unit WRI is based on the terms of each union contract.

The monthly spread of straight time labor should be based on the number of pay weeks in each month according to the Payroll Calendar. Distribution key(s) for the monthly distribution of payroll are noted below for bi-weekly payroll and in the Reference Material Section for the weekly payroll. Keep in mind, the distribution keys are only used to spread the monthly data and **do not** increase the yearly or monthly totals for the wage rate increases. The budget preparer needs to calculate the annual payroll and inflate it for any expected WRI, then use the appropriate distribution key to spread the payroll. **Payroll must be spread by month, not summed and input into one month.**

The appropriate general ledger accounts/cost elements for Straight Time Labor:

Straight Time Payroll

520010	Payroll - Straight Time - Bargaining
520050	Payroll - Straight Time - Non-Bargaining
520051	Payroll - Straight Time - Temporary Help
520062	Payroll - Straight Time Coop Students
520063	Payroll - Straight Time-Part Time-Non-Barg
520064	Payroll - Straight Time-Part Time-Bargaining

NOTE: If a Business Unit(s) has a question about developing its straight time payroll estimates or the input of the dollars into SAP (including the appropriate spreads and wage rate increases), please contact Corporate Budgets and Forecasts before the Gross Payroll entry deadline. (See Key Contacts page 27)

Payroll Calendar Information:

2014 Bi-Weekly payroll

	Jan	Feb	Mar	Apr	May	June	July	Aug	Sept	Oct	Nov	Dec	Total
Weeks	4	4	6	4	4	4	4	6	4	4	4	4	52
Hours	160	160	240	160	160	160	160	240	160	160	160	160	2080

Distribution Keys **P14S and P14B** both use this spread pattern. The P13B Distribution Key assumes a 3% March wage increase, while **P14S** assumes a 3% wage increase in September.

2014 Weekly payroll

	Jan	Feb	Mar	Apr	May	June	July	Aug	Sep	Oct	Nov	Dec	Total
Weeks	4	4	5	4	5	4	4	5	4	4	5	4	52
Hours	160	160	200	160	200	160	160	200	160	160	200	160	2080

For weekly payroll, refer to the list of Distribution Keys in the Reference Material Section (Chapter 7) for the distribution key that spreads payroll based on the effective month of the WRI. If additional distribution keys are needed, contact Corporate Budgets and Forecasts.

Overtime Payroll

Costs associated in a given pay week for work exceeding 40 hours. The addition of overtime dollars to the budget should be planned and approved accordingly. Planning for all overtime will be completed by the business units using the appropriate cost elements:

520110 Payroll - Overtime Bargaining
520150 Payroll - Overtime Non Bargaining
520151 Payroll - Overtime Temporary Help
520162 Payroll - Overtime Co-Op Student
520163 Payroll - Overtime Part Time Non Barg
520164 Payroll - Overtime Part Time Bargaining

Payroll Overheads

Payroll Overheads – Employee Benefits, Incentive Comp and Payroll Taxes will be applied as an overhead during the closing process. The rates will be determined by General Accounting and input into the SAP costing sheets after final payroll is determined and all gross benefit costs (medical, dental, prescription drug etc.) are input into the HR benefit cost centers.

Employee Benefits – Benefit costs *will be developed by Human Resources/Corp Budgets & Forecasts* and input into the Special Purpose Ledger (SPL) in HR benefit cost centers using the appropriate primary cost elements. Pension and OPEB costs are not included in the Employee Benefits overhead calculation but are applied to capital work as specific capital overheads.

The secondary cost element 850070 – Payroll Overhead Benefits – Straight Time will be used to apply the Benefit overhead on straight time payroll during the budget closing process.

Payroll Taxes - *will be budgeted by Corporate Budgets and Forecasts* and input into the SPL in Special Tax cost centers.

The secondary cost element 850080 – Payroll Overhead – Taxes will be used to apply the Payroll Tax overhead on straight time and overtime payroll during the closing process.

Incentive Comp - *will be budgeted by Human Resources/Corp Budgets and Forecasts* and input into the SPL in Special Incentive Comp cost centers.

The secondary cost element 850090 – Incentive Comp will be used to apply the Incentive Comp overhead on straight time and overtime payroll during the closing process.

Payroll Related Items

Other payroll related general ledger accounts/cost elements:

520019 Payroll Retention Bonuses – Budgeted by the Business Unit granting the bonus
520165 Payroll Accrual (Budgeted only by General Accounting)
520250 Payroll Bonuses - Represents annual bonuses and other bonuses awarded throughout the year for special circumstances and are the responsibility of the Business Units
520260 Payroll Additional Comp – MGRK (Budgeted by Business Units where appropriate)
520300 Payroll Restricted Stock (Budgeted only by HR/Corporate Budgets and Forecasts)
520400 Payroll Severance – (Budget only by HR/Corporate Budgets and Forecasts)
520500 Payroll Adjustments to Gross - Examples include retro pay, grievance settlements, remote reporting costs, and relocation expenses not covered by HR (See Relocation Policy found on the Services & Support section of the FirstPlace Portal).

SAP INPUT – TRANSACTIONS OVERVIEW for GROSS PAYROLL
Set Planner Profile => Transaction KP04
Profile = FE-CO01
Planning Input => Transaction KP06
Layout = CC Primary No Excel or CC Prime – Y4

Note: Under no circumstance, should any of the payroll-related costs listed, including straight time, overtime, or bonuses be budgeted directly in the SPL via Transaction GP12N. Transaction KP06 should be used.

Staffing

Staffing levels (Headcount) **must be input by month**, by individual Cost Center, using Statistical Key Figures (SKFs) – transaction KP46. Budget all full-time, part-time, and temporary FE employees on SAP Payroll. **New employees should be budgeted in the month in which they will start.** Do not include contractor/non-FE employees and do not assume all hires begin the month of January. The following SKFs should be used:

	Bargaining	Non-Bargaining
Full-Time	EMPFTB	EMPFTN
Part-Time	EMPPTB	EMPPTN
Temporary	EMPTPB	EMPTPN
Student Intern	EMPSIB	EMPSIN

SAP INPUT – TRANSACTIONS OVERVIEW for STATISTICAL KEY FIGURES
Set Planner Profile => Transaction KP04
Profile = FE-CO01
Planning Input => Transaction KP46
Layout = CCTR STAT Key Fig PL or SKF – Y4

Budget Tip: After input of staffing levels and payroll dollars is complete, check that the monthly payroll totals are consistent with the monthly headcount projections.

Activity Input Planning (Hours)

Payroll costs can be moved from the employee or responsible cost centers to a target or receiving cost collector (Cost Center, Order or WBS element) by planning productive hours by activity type. The activity price associated with each cost center/activity type combination is calculated and input by Corporate Budgets and Forecasts. These activity prices are then used to produce the standard labor activity allocations.

Unproductive Time – Planning for unproductive time (i.e. sick time, safety meetings, union business, etc.) is not required. These costs remain in the responsible cost center and the unproductive hours and associated costs are incorporated in the calculation of the activity prices.

SAP INPUT – TRANSACTIONS OVERVIEW for ACTIVITY INPUT PLANNING (HOURS)

Set Planner Profile => Transaction KP04
Profile for Hrs charged to Cost Centers = FE-CO01
Profile for Hrs charged to Int. Order = FE-CO01
Profile for Hrs charged to WBS Elem = TD-PS01 or GEN-FRMF or GEN-FRMN

Planning Input =>
Cost Centers => Transaction KP06
Layout = CC Act Inp No Excel or CC – Act – Y4
Int. Orders => Transaction KPF6
Layout = OR Act Inp No Excel or OR – Act- Y4
WBS Elem => Transaction CJR2
Layout = Act Input or WBS – Act – Y4

CHAPTER 3: OTHER THAN LABOR (OTL)

All input into the SAP system for non-labor items is entered in Special Purpose Ledger Z9 using transaction GP12N – Change Plan Data - Special Purpose Ledger.

All transactions for non-labor items must contain:

Responsible Cost Center
Cost Element
Target Cost Collector – Cost Center, Order, Network or WBS element
Target Cost Collector Type – (KS, OR, PR)
Cost Type (Capital, O&M, Other)

Responsible Cost Center for Other-Than-Labor is defined as the Cost Center with budget responsibility for the expenditure.

All OTL input into the Special Ledger must be entered as company SC00.

Cost Types are defined as follows:

Type 1 Capital - Capital is planned to WBS Elements. WBS Elements are defined as Cost Type 1 if they settle to:

107XXX Construction Work In Progress
108XXX Retirement Work In Progress
Capitalized Nuclear Fuel Accounts
CWIP and RWIP for Non-Utility assets

Type 2 O&M (Income Statement Accounts)

Type 2 is any cost that settles to a Cost Center and becomes part of the Income Statement (predominately O&M but includes revenues, interest income, depreciation etc.)

Type 3 Other

Type 3 charges are any costs that settle to Balance Sheet accounts and are not considered Capital.

SAP INPUT – TRANSACTIONS OVERVIEW FOR OTL
Set Planner Profile => Transaction GLPLSET
Profile = ZZSPL902
Planning Input => Transaction GP12N
Layout = ZZSPL90 or ZZSPL90 – Y4

Guidelines for General Business Items:

Office Supplies – Cost Element 540100
Stationary type items purchased through Staples or similar vendor, e.g., annual planners and calendars, etc. The budget should be at the department/plant level rather than the cost center level to maintain consistency and control within the business unit.

Telecommunications Equipment and Service – Cost Element 590000
Costs associated with Company approved/provided cellular telephone equipment and associated monthly cellular charges are to be budgeted by cellular user's business unit.

- Basic cellular voice/text service - $50 monthly per telephone.
- Smartphone (iPhone) - $100 monthly per telephone.
- Cellular broadband data service (laptop and MiFi's/HotSpot) - $55 monthly per device.

Business Units should refer to the Computer Peripherals Price List (page 11) to budget for costs associated with purchase of the cellular equipment.

Copies/Multi-functional devices (MFD), Printers, Faxes
Copier/MFD and printer equipment along with maintenance and supplies for general office use are budgeted by IT. Plotter purchase/lease, specialty copiers or printers, fax machines, and associated service/supply costs are to be budgeted by the responsible Business Unit. For special projects, short-term needs, and plant outages the cost for copy, fax, and print devices are to be budgeted by the responsible Business Unit. Contact IT to determine if existing devices may be redeployed for short term needs.
Budget printer equipment to G/L 580020, supplies to 560200, and maintenance to 550300.
Budget copier equipment to G/L 570052, supplies and maintenance to 560200.
Budget fax equipment and supplies to G/L 560200, maintenance to 550300.

Employee Expenses – Cost Element 540000
Miscellaneous expenses as a result of conducting company business not captured in other cost elements and reimbursed through an employee expense report.

Employee Meals – Cost Element 540010
Expensed meals as a result of company business.

Emergency Employee Expense / No Meals – Cost Element 540015
Miscellaneous expenses that were incurred unexpectedly (call-outs, storms, and outages).

Travel Expenses – Cost Element 540101
Expenses incurred while traveling on company business that are not reimbursed through employee expense reports. Each business unit should budget for use of the corporate jet by their employees at the rate of $220 per "one way trip". Example: For one person flying from Akron to Morristown, $220 is charged to the employee's responsible cost center. Persons budgeting for Executive travel will be provided more detailed information separately from these guidelines.

Per Diem – Cost Element 540102
Fixed rate for change in work location, outages, etc. Often used in lieu of meals and possibly other related employee expenses.

Travel Expenses – Corp Jet – Cost Element 540106
Costs associated with use of corporate jet. This cost element is used exclusively by the Flight Operations Group.

Employee Expense – Training – Cost Element 540020
External seminar fees and associated external training expenses.

Training Student Expenses – Cost Element 540103
Student training fees for internal courses coordinated by Human Resources.

Postage – Cost Element 650100
All non-customer mailings/billings, including large packages (UPS, FedEx, Overnight Express, etc) should be budgeted by each Business Unit. Postage for customer related mailings and billings should be budgeted by the Customer Service bill production cost centers.

Other Items:

Application Software Maintenance – Business application software maintenance will be budgeted by IT Business Unit Support. Portfolio Managers will be contacting your department to coordinate budget information and ensure that all maintenance fees are captured.

Banked Vacation – The payout of banked vacation ***should not be budgeted*** by the individual cost centers. It is budgeted by Human Resources/Corp Budgets/Forecasts.

Claims (Payable and Receivable) – The ED Operating Companies should budget for (payable) claims and lawsuits related to distribution facilities (including personal injury, property damage, and vegetation management claims), fleet vehicle accidents, and environmental injuries (such as asbestos) for historical ownership of generating plants, as well as the legal fees and other administrative costs to defend against such claims and lawsuits. The ED Operating Companies should also budget for damages caused to their respective distribution facilities by outside parties; applying offsets by taking into consideration historical recovery amounts achieved through (receivable) claims activities. Generating Plants should budget for anticipated (payable) claims and lawsuits related to their facilities, as well as the legal fees and other administrative costs to defend against such claims and lawsuits.

Company Facilities – Real Estate and Facilities will budget for the maintenance and service contracts for Corporate, FENOC and Fossil. Energy Delivery will budget for all Utility Company facilities. The WBS structure will be utilized for both budgeting and tracking of O&M spend. Budgets will be established using a WBS and WBS Element / Service Categories:

- Landscaping
- Janitorial
- Building Maintenance
- Waste Removal
- Paving repairs
- Elevators
- HVAC
- Roof repairs
- Electrical
- Mechanical Equipment
- Fire Protection
- Construction
- Fences
- Plumbing
- Painting
- Pest Control
- Utilities
- Snow Removal

- Costs will be segregated by line of business (Corporate, FENOC, Fossil, and ED Operating Company)
- Monthly reporting of actuals will include the WBS, the Service Category and Building Cost Center
- This will allow for a direct comparison of Budget to actual spend enabling a monthly view of actuals versus budget.

Real Estate will budget for all building and land leases.

Corporate membership dues and fees, contributions and donations – It is the Company's policy to enter into and maintain Corporate memberships in organizations deemed necessary to maintain

professional expertise in various aspects of the Company's operations and to establish and maintain relationships with selected organizations with whom we share common interests.
Corporate memberships will be budgeted and processed through the Contributions Department. The company should not pay dues for an employee's individual membership unless the membership is held at the Company's specific request. When this is the case, the dues and any fees or assessments associated with membership should be budgeted in the employee's administrative cost center. Contributions will also be budgeted through the Contributions Department, working with Operating Company management and the Corporate Affairs staff.

Desktop Computer Hardware and Software – Standard PC workstations and laptops are budgeted in IT Client Support based on a fixed replacement cycle (5 years for desktops, 3 years for laptops). **Peripheral equipment is not budgeted in IT.** All peripheral equipment requires director approval, will be ordered by the business unit (not IT) using a specific web site, **and should be budgeted as a purchase in the requesting business unit cost center**. Listed below are some commonly requested peripherals with pricing where applicable.

Computer Peripherals Price List:

Display Options	Description	Vendor / Model	Approximate Cost
For Laptops	Monitors not provided for laptops		n/a
For Desktops	17 inch CRT provided for desktops upon failure of previous unit	See HP or SHI catalog on portal for options.	
Cellular	**Description**	**Vendor / Model**	**Approximate Cost**
Cellular voice/text	Basic cellular handset and standard accessories.	First Communications	$30
iPhone	iPhone and standard accessories.	AT&T, Sprint, Verizon Wireless	$150
Data – MiFi/Hot Spot	Data device.	AT&T, Sprint, Verizon Wireless	$80 - $130
Laptop Options	**Description**	**Vendor / Model**	**Approximate Cost**
Port Replicator for nc8440p/8540p/8460/8470	Part # A7E34AA#ABA	HP	$130
Plotters	**Description**	**Vendor / Model**	**Approximate Cost**
Standard HP Plotter Purchase	Wide Format plotter/printer purchase and install	HP	$6,800
Standard HP Plotter Service	Annual service for HP Plotter	Print Service Provider	$1,654

Educational Assistance – Human Resources/Corp Budgets/Forecasts will budget for these expenses.

Environmental Fees – Permit and environmental reporting fees should be budgeted by each location. The Environmental Dept. will budget for all software maintenance fees associated with the ESC CEM data acquisition systems. The Environmental Department will also budget for all stack and CEM RATA testing including labor, materials and outside test contractors. Questions should be directed to **Brittany Cannato 879-6442.**

EPRI – Business Units should budget for EPRI expenses based on approved programs as well as approved participation in Tailored Collaboration Projects, Co Funding Projects, or Billable Service Agreements (Supplemental Agreements that are in addition to membership selections). Item numbers for EPRI subscriptions will be available from FE Technologies . Subscription payments should be budgeted monthly. Business Units who budget for EPRI should contact **Stephen B. Briggs 825-3870**, for further information.

Fuel – Nuclear: The nuclear fuel expense budget is developed and entered by the Nuclear Fuels group based on generation plans provided by each nuclear unit. Auxiliary boiler and diesel generator fuel is budgeted by each nuclear site and entered by the Nuclear Generation Business Services. Capital nuclear fuel purchases will be budgeted by the Nuclear Fuels group, to appropriate WBS elements.
Fossil: Coal, Oil (light-off and peaking), natural gas, SO2 allowances, NOX allowances, and reagent

requirements will be modeled by the FES Planning & Analysis Group and budgeted by the Fuel Supply Dept., using the plant/unit specific FERC cost centers.

Insurance – Property and liability insurance will be budgeted by Risk Management.

Internal Use of Electricity – The costs of electricity for buildings and power plants owned by FE legal entities within the Competitive Services Unit and Corporate Support Unit, for both generation and non-generation components will be budgeted by **William Shonk (825-5472)** of General Accounting Services in coordination with Customer Service, Retail Tariff Analysis & Forecasting and Facilities Management.

Inter-company Building Rent Revenue/Expense – The inter-company revenue and expense for building rent invoiced between companies will be budgeted by **Richard Snyder (500-6807)** of General Accounting Services and will be based upon building related operation and maintenance costs budgeted by others.

Materials and Equipment – Material costs for direct purchases and stores issues are budgeted directly in the cost center, order or WBS element along with the responsible cost center. An M&S overhead will be applied to stores issues. The Controller's Group will enter the rates into the costing sheets and the system will generate the M&S overheads as part of the budget closing process.

Professional Contractors & Outside Services – Contracted work from professional and outside services vendors should be accounted for using the categories and cost elements established by Business Unit. Please refer to the tables in Chapter 7 for further details.

Revenues – Budgeted revenues must be entered as **negative** numbers.

Sales Tax – Business Units should include sales taxes incurred as part of the purchase price of taxable items in their cost centers.

Medical Surveillance Testing – Occupational Health -The outside vendor costs for employees participating in the FirstEnergy Medical Surveillance Program (Regulatory required) should be budgeted in the individual employee's responsible Cost Center. Each Plant and Operating Company should account for these costs (i.e., regulatory required respirator fitness exams, hearing tests, asbestos and lead physicals, etc.). The Industrial Relations-Health & Safety section will provide specific cost information related to this activity, contact **Timothy Walter 825-1706 or Chuck Fabo 825-5162.**

Drug & Alcohol Testing Program – CDL/DOT, Maritime, Safety Sensitive, Ohio State Project Work, New Hires- The outside vendor costs for employees participating in FirstEnergy's Drug & Alcohol Testing Program (Company and Regulatory required) should be budgeted in the individual employee's responsible Cost Center. Each Plant and Operating Company should account for these costs in 2014. The Industrial Relations-Health & Safety section will provide specific cost information related to this activity, contact **Timothy Walter 825-1706 or Chuck Fabo 825-5162.**

Industrial Hygiene (IH) Assessments – The outside vendor costs associated with OSHA required routine IH monitoring, including associated laboratory analyses and processing costs, should be budgeted in the individual employee's responsible cost center. Routine monitoring (OSHA required) includes periodic assessment of the following hazards: Noise, Asbestos, Inorganic-arsenic, Lead, Personal Protective Equipment, Confined Space Entry, etc. The Industrial Relations–Health & Safety section will continue to support and budget for special, complex or unique IH assessment needs. Specific cost information related to this budgeting activity will be provided by the Industrial Relations-Health & Safety section, contact **Timothy Walter 825-1706 or Martin Duffy 825-3814.**

Satellite Airtime – The infrastructure cost to provide the service will be paid by IT Network Services. The usage is not an IT cost and should, therefore, be budgeted by the business units at these rates:

BTV broadcasts $800 /hour (Bandwidth 3.0Mb/hr)

Severance – Each Executive Council member is contacted by HR to determine the appropriate level of severance to be budgeted. Cost of severance payments, as determined by HR, will be entered into the SAP system by HR/Corp Budgets/Forecasts.

Supply Chain/Inventory Items – Inventory Adjustments - Each plant and Operating Company should budget for its own storeroom's inventory adjustments. Assets No Longer Used or Useful – Obsolete Inventory - Each location should budget for its own obsolete inventory write-offs. With market value of these items being unknown, it is recommended that Business Units not budget for proceeds from obsolete inventory sales. Assets Other Than Inventory - Investment recovery proceeds from the sale of items will be given to the Business Unit that provided the items. We will use the accounting the Business Unit provides.

Training – Business unit cost centers should budget for on-site classes that support company-wide, employee, or department-specific programs. **The Learning and Development Department (L&D) will budget for the New Supervisor/Manager program. However, the business unit cost centers should budget for associated travel and lodging expense.** Questions should be addressed to **Jacqueline Roth 825-7890.**

The Information Technology Dept (IT) will budget for on-site classes that support company-wide software applications. Business unit cost centers should budget for on-site classes that support department-specific software applications.

Training – External – The cost of external training and seminars, as well as the travel and lodging expenses will be budgeted in the cost center requesting the training.

Transportation – Energy Delivery Transportation costs will be manually planned to appropriate cost collectors using the cost element 545099 – Fleet usage manual plan. The responsible cost center used on the SPL is the appropriate Operating Company transportation contra cost center.

COMPANY	CONTRA COST CENTER	DESCRIPTION
Toledo Edison	416001	Transportation Costs Undist-TE-Wstrn Reg
CEI	426001	Transportation Costs Undist-CE-Nrth Reg
Ohio Edison	406001	Transportation Costs Undist-OE-Cntrl Reg
Ohio Edison	406005	Transportation Costs Undist-OE-Sthrn Reg
Ohio Edison	406003	Transportation Costs Undist-OE-Estrn Reg
Penn Power	436001	Transportation Costs Undist-PP-Estrn Reg
Penelec	456001	Transportation Costs Undist-PN-W PA Reg
Met Ed	446001	Transportation Costs Undist-ME-E PA Reg
JCP&L	466003	Transportation Costs Undist-JC-Nrth Reg
JCP&L	466001	Transportation Costs Undist-JC-Cntrl Reg
West Penn Power	492001	Transportation Costs Undistrib- WP01
Mon Power	470201	Transportation Costs Undistrib - MP01
Potomac Edison	483001	Transportation Costs Undistrib - PE10

The Operating Companies must also plan a credit to the contra cost center in the amount planned out to the cost collectors using the same Responsible Cost Center. The contra cost center should be used as the target cost center for these credits.

Vehicle Leases & Licenses –
Vehicle lease payments should be budgeted, using G/L account 570050 for all Operating Leases and 570075 for all Capital Leases, for the following:

- Fleet Services cost center for Operating Company vehicles, (it is no longer necessary to budget by each department in the Operating Company using the vehicle).
- Each fossil generation plant, each nuclear generation plant, environmental, generation technical services.
- Each non-Operating Company or non-plant department using a vehicle. This would include (but is not limited to): IT, Corporate Transportation, Workforce Development, Administrative Services, T&D Technical Services.

Vehicle licenses should be budgeted, using G/L account 650300, for the following:

- Fleet Services cost center for Operating Company vehicles.
- Each fossil generation plant, each nuclear generation plant, environmental, generation technical services.
- Each non-Operating Company or non-plant department using a vehicle. This would include (but is not limited to): IT, Corporate Transportation, Workforce Development, Administrative Services, T&D Technical Services.

All requests for vehicles and/or power operated equipment should be directed to the Fleet Manager (see below) responsible for the area where the vehicle and/or equipment will be assigned. The Fleet Manager will work with Corporate Fleet Services directly to place the order, etc. Any questions related to this matter should be directed to **Lisa Pfeifer 824-5090.**

Company	Fleet Services Manager	Internal Phone	External Phone
CEI	Bryan Komlos	824-5060	216-295-5060
Toledo Edison	Jeff Burgoon	883-5938	419-249-5938
Ohio Edison/Penn Power	Robert Pyles	835-4099	330-436-4099
West Penn Power	Mike Geitner	365-2020	724-743-2020
Penelec	Wally Cunningham	430-8803	814-868-8803
Met Ed	Frank Cummins	500-6573	610-921-6573
Mon Power	Forrest Miller	324-1211	304-284-1211
Potomac Edison	Jasan Hileman	300-5227	301-582-5227
JCP&L	Nick Dello Russo	210-2237	973-989-2237

Personal Computer Hardware Items that require direct funding by the Business Units:

Unique, non-standard PC configurations. IT budgets each year for standard notebook and desktop models and configurations. At the time IT approaches a client group to plan for the retirement / replacement of their existing computers, the client group will need to provide the funds to cover any cost above the standard model cost. Funding by the client will be required for special features such as:

- RAM (memory) above the standard configuration
- Higher CPU speeds or multiple CPU's
- Tower model
- Floppy drive (no longer provided on new PCs)
- Video graphic cards

- Extra network interface cards
- Optical or wireless mice or special trackball configurations
- Ergonometric keyboards
- Larger internal or external storage drives or memory sticks
- Port replicators or docking stations
- Second batteries for notebook PCs
- Glare shields
- DC power converters or adapters
- Monitors for notebooks (If you presently have one with your notebook, when it fails, it will not be replaced without business unit funding.)
- Local printer (all printer requests must be forwarded to **David A. Zeigler** for review).

Process related PCs. IT budgets each year for rollover of **20%** of the office desktop PCs and **33%** of the office notebook PCs. PCs that are not typically used by employees, but rather dedicated to a process are not funded out of the PC capital budget. Funding must be provided either within a capital project when these systems are upgraded, or by the business unit. Examples of process PCs include:

- AFSO and MRMS (TPP)
- EMS Consoles
- GMS Consoles
- HVAC controls
- Plant control systems
- Badge readers
- Field equipment testing or data logging PCs
- Special printer, scanner or plotter interfaces
- Cache PCs (pseudo servers)

Off-cycle (premature) replacement PCs. As mentioned earlier, IT budgets each year for rollover of 20% of the office desktop PCs and 33% of the office notebook PCs. The scheduling of replacements is determined by the local Desktop Support team. Should any department require a notebook PC to be replaced sooner than every 3 years, or a desktop model to be replaced sooner than every 5 years, the client group must fund the complete cost of the replacement.

Off-cycle upgrade of a desktop unit to a notebook unit. If an employee, because of their job responsibilities, requires switching from a desktop PC to a notebook PC, the full cost of the new notebook PC must be borne by the business unit if their desktop is not scheduled to be replaced. The exception to this rule is if the business unit still has un-deployed notebook PCs in its annual replacement allotment, the business unit leadership may elect to redirect a yet-to-be-deployed notebook from its pool to the employee in need, at the sacrifice of another employee within the business unit. That impacted employee would then be given the notebook recipient's existing desktop PC.

On-cycle upgrade of a desktop unit to a notebook unit. If an employee, because of their job responsibilities, requires switching from a desktop PC to a notebook PC, and the timing of this need coincides with our replacement schedule, IT will cover the higher cost of the notebook PC. New or replacement notebooks will require director level review and approval. There must be a valid business case for using a notebook model.

Second PCs. If an employee requires more than one PC to perform their job, the full cost of the additional PCs must be borne by the business unit. This includes instances where a hot-standby PC must be provided for a critical function. The exceptions to this rule are console-based PCs, such as those in plant control rooms or regional dispatch centers where 2-3 PCs and/or monitors are part of the console and required for the operator to perform their work. This second PC will be an asset managed and maintained by IT, following the same standards and practices used for IT-funded PCs.

<u>Moves, Adds, Changes (MACs) of Employee Services and Devices at Company Facilities –</u> For all locations other than Shared Services' workspace in Akron General Office and the Reading General Office - Business Units will be responsible for budgeting for their planned moves, adds and changes described below:

- Non-computer equipment, such as telephone sets, headsets, speakerphones etc.
- Install and terminate voice cabling to workstations.
- Creation of the workstations in the telephone system database.
- Cross-connected and install telephone instruments.
- Move telephones to existing or new jack locations.
- Install, terminate, and test data cabling to the workstations.
- Activate data jacks by patching through to data switches.
- Install, terminate, and test inside fiber optic cabling.
- Install and terminate coax cabling for applications such as Satellite for IDL.

This does not include maintenance or repair responsibilities for these items. Normally the moves, adds, and changes are considered an O&M cost, unless they are associated with a major project.

The usual way to schedule moves, adds and changes is to contact your local facilities management team. This team will contact IT Field Operations to arrange for the approved vendors to make your requested changes. MACs that do not require Facilities involvement can be requested by calling the IT Service Desk. Please adjust your 2014 budget to include your facilities plan.

CHAPTER 4: CAPITAL MANAGEMENT PROCESS

FE's capital investments are integral in helping the company achieve operational excellence and financial success. The capital expenditures, are necessary to ensure the reliable generation and distribution of electricity, and compliance with regulatory requirements.

The Capital Planning & Management Process is a formalized process that provides the platform for capital discussions and allocation decisions at all levels of the organization. The process helps senior management to effectively understand competing uses for FE's cash, funding requirements for capital investments, and to allocate capital dollars across various business units (ED, FENOC, Fossil, Corporate). Ref. Capital Planning & Management Corporate Policy CP-TPR-6101 and FE 5-year Capital Portfolio Development and Capital Management Procedure (FirstPlace Portal/About FirstEnergy/Policies and Practices/Overview/Capital Management Procedure.pdf)

Capital Categories:

Mandatory - Non-discretionary investment required by law, regulatory order, or duty to serve customers (e.g. new business). Other required investment to meet externally driven regulatory commitment.

Maintain - Discretionary investment to support and sustain existing infrastructure at existing performance levels. Specific operational performance and financial tracking support these projects (e.g. SAIDI, CAIDI, EFOR).

Improve - Discretionary investment to improve existing infrastructure or performnace levels beyond existing business plan key performance metric commitments. Improvement in specific operational performance and financial benchmark targets support these projects (e.g. SAIDI, EFOR, ROI).

Value - Discretionary, non-recurring investment for a defined initiative which improves or expands existing infrastructure or creates new business opportunities and drives improved economic value.

Capital Projects – Only budget capital projects to the level of spending identified in Executive Council guidance

Work Breakdown Structures (WBS) - Labor is budgeted through Activity Input Planning using transaction CJR2. Loaded labor costs, which include overheads, are moved from the employee or sending cost center to a WBS element by planning productive hours by activity type. Instructions for Activity Input Planning are located in Chapter 2 - Labor. All 'Other than Labor' costs are input into the SPL using transaction GP12N and must include the cost element and the appropriate responsible cost center. Instructions for input are found in Chapter 3 – OTL.

If new WBSs are created, all master data fields (i.e., costing sheets, project type, interest profiles, settlement rules, etc.) must be entered into SAP. **(See Key Contact appendix, page 26, for names to set up the WBS Master Data.) In all cases, it is critical that the WBS and WBS element start and finish dates be accurate and the WBS should be established at the Company which will own the assets. Departments which complete work for other Companies should cross charge the other Company WBS. Planning must never be entered in months beyond the finish date.** These dates are used by Property Accounting Services to compute and input AFUDC and depreciation and in reporting, including rate cases. All WBSs with settlement rules to asset accounts (CWIP, RWIP & OWIP) require an AFUDC element regardless if the project would qualify for AFUDC.

The status of WBSs must be TECO (Technically Complete), when the project is ready for service. The TECO date is passed to PowerPlant and the project is placed in-service. If a project is suspended or ceases construction the WBS elements should be locked and the status of the project is changed to "suspended" in PowerPlant. This will shut off the AFUDC calculation. If a project is cancelled existing charges should be transferred to expense, the AFUDC should be reversed and once the charges have been removed from the WBS, the WBS should be 'business closed". **It is important to update the status to TECO on a timely basis since it directly reflects the calculation of AFUDC and the beginning of depreciation in PowerPlant.**

Construction Indirects (Supervisory, Engineering, Administrative and General Overheads) – Capital costs should be direct charged to the related WBS whenever possible. However, in those cases where certain costs have a proven relationship to construction, an assessment or allocation will be made from predefined cost centers to Operating Company construction indirect cost centers (Supervision, Engineering, and A&G). An example of this would be supervision of an engineering group that supports capital projects overall. A portion of those supervision costs will be allocated to capital using the prescribed process. Rates will be calculated by General Accounting Services for each Operating Company and overhead category and will be applied on the labor and contractor portion of the budgeted WBS elements.

PowerPlant Property Unit Catalog – The PowerPlant Property Unit Catalog should be used to determine what items or activities are capital. Assistance in using the Property Unit Catalog or questionable items should be directed to **Tim Clyde (825-5863)**, Property Accounting Services, prior to inclusion of an item in the budget as capital.

Small Tools and Equipment - Only small tools and equipment greater than $1,000 should be capitalized.

Corporate Facilities will budget for all facility-related Mandatory and Maintain capital project work across FirstEnergy. Each Business Unit will budget for any Value Added or Improve facility related capital work. If there are questions on definition, please refer to the Capital Definitions section.

Vehicles/Power Operated Equipment
When acquiring the equipment identified below, the acquisition should be coordinated with the Corporate Fleet Services Department. The Corporate Fleet Services Department will determine with Treasury whether to purchase or lease the equipment. If the decision is to purchase the equipment, Corporate Fleet Services will purchase the equipment and charge the appropriate capital WBS. The equipment will also be given a vehicle number and tracked in the M5 Fleet System.

All requests for vehicles and/or power operated equipment should be directed to the Fleet Manager (see below) responsible for the area where the vehicle and/or equipment will be assigned. The Fleet Manager will work with Corporate Fleet Services directly to place the order, etc. Any questions related to this matter should be directed to **Lisa Pfeifer 824-4090.**

Company	Fleet Services Manager	Internal Phone	External Phone
CEI	Bryan Komlos	824-5060	216-295-5060
Toledo Edison	Jeff Burgoon	883-5938	419-249-5938
Ohio Edison/Penn Power	Robert Pyles	835-4099	330-436-4099
West Penn Power	Mike Geitner	365-2020	724-743-2020
Penelec	Wally Cunningham	430-8803	814-868-8803
Met Ed	Frank Cummins	500-6573	610-921-6573
Mon Power	Forrest Miller	324-1211	304-284-1211
Potomac Edison	Jasan Hileman	300-5227	301-582-5227
JCP&L	Nick Dello Russo	210-2237	973-989-2237

Asset Class	Vehicle Type
1	Light Duty - primarily downsize pickups, mini vans, passenger cars & units impacted by EPAct
2	Medium Duty - includes full size pickups, vans, substation vehicles, small stake body trucks, etc
3	Heavy Duty - includes heavy trucks other than aerial units, digger derricks or crane trucks
4	Aerial Trucks - includes all manlift capabilities regardless of size
5	Digger Derrick Trucks - includes all digger derricks
6	Crane Trucks - includes all trucks with cranes mounted on them and licensed. Off road cranes are included in construction equipment
7	Trailers - includes all trailers regardless of size
8	Construction Equipment - includes backhoes, loaders, excavators, off-road cranes, dozers, etc
9	Forklifts, Mowers, Misc - includes forklifts, riding sweepers, scrubbers, snow removal equipment, mowers, ATV's & other.

Office Furniture – The Real Estate and Facilities Department manages and budgets all capital expenditures for furniture as well as maintains an inventory of existing furniture items. The Facilities Section has developed the Workspace Guidelines Policy and receives substantial discounted pricing on all furniture used by the Company.

All requests for furniture should be directed to **Kathy Tatman, Supervisor, Asset Planning** through an e-mail notification. Please base your request on budgeted new hire positions and/or replacement requirements for worn, damaged or obsolete furniture. Any purchases of furniture made outside of this arrangement will not be approved.

Software Costs - The following guidelines should be used for capitalizing computer software costs:

New Computer Software Costs:

- designed as a complete system
- has a life greater than 1 year
- capitalized cost is greater than **$5,000**

Preliminary study costs, data conversions, and training are expensed when installing computer software.

Upgrades and Enhancements of Existing Software:

Upgrades and enhancements of existing software are expensed unless additional functionality is added and the cost is greater than **$5,000** and is a significant upgrade or enhancement.

Questions concerning capitalization of Computer Software items should be discussed with **Tim Clyde (825-5863)**, Property Accounting Services, prior to inclusion in the budget.

Generation Employee Training Costs – All employee training costs should be expensed, **except for Yards Creek.**

IT Projects – Activity allocate appropriate labor charges to IT managed projects that require Business Unit support. *All IT projects created under SC00 WBSs that are for the benefit of other Companies should have settlement rules that settle these costs to other company WBSs*. IT Department should coordinate these projects with the appropriate Business Services group.

Depreciation – The computation and application of depreciation will be the responsibility of Property Accounting Services.

Major Retirements of Plant – For retirements of plant, in which the estimated original cost exceeds $5 million, the following information is required: the month the item is being retired, the estimated original cost, and a short description of the item being retired. For all other retirements, a historical average will be used by Property Accounting Services. Retirements related to replacement WBSs should be made at the time the WBS is placed in service.

Generation Cost of Removal and Salvage – The budgeting of cost of removal and salvage will be performed by Generation. Generation cost of removal is expensed, **except for Yards Creek.**

Energy Delivery (Distribution and Transmission) Cost of Removal and Salvage – The budgeting of distribution and transmission cost of removal and salvage will be performed by Energy Delivery. For Met-Ed, Penelec, and JCP&L, the cost of removal and salvage will be expensed as a component of the depreciation expense in accordance with the current rate making. The planned cost of removal and salvage will settle to Account 403, Depreciation Expense.

Note: Cost Type is a required input field when entering the plan into the SPL (SAP Transaction GP12N). Changing the settlement rule on the WBS master data does not change the Cost Type in the plan. It is important that the WBS master data and the Cost Type are reviewed for accuracy

and consistency prior to input (Cost Type 1 is for Capital, 2 is for O&M and all other P&L items including Depreciation account 403, and 3 is for Balance Sheets accounts not considered capital).

CHAPTER 5: INTERCOMPANY TRANSACTIONS

Unless given approval by Corporate Budgets and Forecasts, General Accounting Services working with Corporate Budgets and Forecasts, will enter the budget estimates for all inter-company expenses and revenues. Corporate Budgets and Forecasts **(Mike Kreighbaum 825-2556)** will coordinate this effort. Unless approved for entry by the Business Units, inter-company expenses or revenues must be forwarded to General Accounting Services or Corporate Budgets and Forecasts for entry into the system. The required information to be forwarded includes:

- Inter-company G/L Accounts (Assoc. Company wording is typically included in the account description)
- Cost Centers
- Monthly Budget Amounts
- Description of transaction and the Cost Centers and G/L Accounts used for the offsetting revenues or expenses (if known)

Some examples of inter-company transactions include:

- Purchased Power and Revenues including RFP and POLR sales
- Interest Income or Expense from Associated Companies
- Leases including ATSI ground lease
- Internal Use of Company Electricity
- Billings between subsidiaries (Bayshore Power, FE Properties, etc.)

CHAPTER 6: FIRSTENERGY SERVICE COMPANY

Service Company Cost Centers – Budgeting Guidelines:

Direct Charging
When preparing your budget and incurring actual expenditures, it is important to consider who the beneficiary of your services is. Direct charging of time and expenses to the entity for which the services are being rendered is the preferred approach, where possible. To the extent that costs can be readily identified and associated with a specific transaction, the charging of those costs should be directed to the company(ies) receiving the goods or services, even when there is more than one receiving company.

Indirect Charging
Indirect charging through the Service Company assessment process supplements the direct charging of costs. Assessments are used to allocate the costs that were not direct charged from a cost center. Frequently, costs can not be direct charged because the recipient cannot be readily identified, or excessive administrative expense would result. Indirect charging employs the use of one of FirstEnergy's approved assessment methods. An approved assessment method is assigned to each Service Company cost center. The assessment methodology and the targeted legal entities for the Service Company cost centers can be provided by General Accounting upon request.

Service Company Assessments
Any desired change to organizational structure or revisions to the methodology used to allocate expenses from a Service Company cost center to the other legal entities must be reviewed and approved by **Joseph Mulpas, Assistant Controller (825-4049)**, prior to the change being implemented. This review process in necessary to insure that inter-company service agreements remain current and valid and that all regulatory requirements are being satisfied.

CHAPTER 7: BUDGETING REFERENCE MATERIAL

Primary Distribution Keys Used for Monthly Spreads

NOTE: Distribution Keys **do not** perform the wage escalation of your planned labor dollars. You need to plan your total gross payroll. The distribution keys are used to allocate your planned gross payroll to the appropriate months in accordance with that year's payroll calendar and wage escalation assumptions.

Please contact Mke Kreighbaum (825-2556) to request set up of new distribution keys.

2014	Distribution Key	Description
	P14S	NonBarg Bi-Weekly Pay 3.00% WRI Sep 2014

Key Terms & Concepts

Activity Price
The price calculated for an activity type – used for charging labor hours and transportation usage to cost collectors.

Allocations
Used to: assess shared services costs; move charges to correct legal entity; and/or assign to capital where appropriate.

Assessments
Transactions that allocate costs from Cost Centers to receiver cost objects.

Cost Allocation
Distribution of costs from one collector to another to reflect actual usage or predefined rates.

Costing Sheet
Defines an overhead calculation. Contains the percentages to be applied to the base amount and the collector to be credited.

CREWS (Customer Request Work Scheduling)
Used to estimate and schedule Transmission and Distribution projects.

Customer Care Services (CCS)
The SAP R/3 software module for utility customer information.

EC-CS (Enterprise Controlling – Consolidation System)
The consolidation module of SAP R/3 used for legal consolidation reports.

Financial Accounting Module (FI)
SAP R/3's grouping of financial data required for external reporting purpose such as balance sheet, P&L statements, cash flows, and retained earnings.

Overhead Rate
A surcharge, expressed as a percentage, used to spread indirect costs over a defined base.

Project System (PS) SAP R/3 Module
Module is used to manage large projects. Accounting data used to manage WBS Elements are also located in this module.

Profit Center
Organizational unit that reflects a management-oriented structure for the purpose of internal control and reporting.

Profit Center Accounting (PCA)
A module of SAP used to manage the business by segregating costs and revenues by business units. Measures profitability by profit center or high-level business unit.

Settlement
The SAP process of allocating costs from temporary cost collectors such as orders or WBSs to other cost collectors such as FERC cost centers.

Settlement Rule
Set of instructions that define distribution of costs incurred on a temporary cost object such as an order or WBS.

Special Purpose Ledger (SPL)
A stand-alone ledger within SAP that maintains detail without creating additional master data. Used by FE to track costs by Responsible Cost Center.

Financial Accounting Module (FI)
SAP R/3's grouping of financial data required for external reporting purpose such as balance sheet, P&L statements, cash flows, and retained earnings.

Fossil – Professional & Contractor Services Guidelines (pgs. 30-31)

GL	GL Short Name	GL Long Name	General Description	Fossil Description/Examples
550100	OutContrctProNonLeg	Outside Services/Contractors - Professional Non-Legal	Labor outside of the plants possessing skills/knowledge that the plant does not have.	Examples include: NDE testing, Divers, Hydrochem (hydro blasting), Training Vendors (providing training on and off site), Guest Speakers, Inspection Services, Lab testing/services, Calibration, Non-repair/non-refurbishment of equipment, Welding Inspectors (x-ray team), Screening Systems International, David C Kissig Enterprises Inc., Turbine Services Incorporated, Structural Integrity Associates, Janx, Surveying, Schedulers, Ardmore, Gas line maintenance.
550105	OutsideSrvsContFees	Outside Srvs/Contractors - Profess Conting	Contingency Fees (jefferson wells for example)	Contingency and incentive fees paid to vendors.
550200	OutContractProLegal	Outside Services/Contractors - Professional Legal	Legal Fees/Legal Expenses	FERC relicensing (primarily used by CT/Hydro plants)
550210	OutContractEngineer	Outside Services/Contractors - Engineering	Contractors asked to provide engineering analysis/studies, project support, or technical development that cannot be completed with in-house engineering staff.	Examples include: Monitoring wells, Marland, RE Warner Consultants helping with outages, GE Energy, Kleinschmidt, Alstom, Siemens, Middough, Door maintenance (CT/Hydro).
550300	OutContract-Other	Outside Services/Contractors - Other	Facilities related work	Examples include: Scrap Removal, Janitorial work, Lawn care, Snow removal, Garbage and Sewage removal, HVAC/ Non-Plant Equipment, Sirens maintenance, Building and structures maintenance, General Pest Control, Elevator repairs, Grounds and roads maintenance, Auto Repair, Laundry Services, Fence Repairs, US Coast Guard, Fire Inspections, Vegetation Management.

FirstEnergy®

Utilities International Planner
UIPlanner - Budget Advanced

February 2014

Ground Rules

- Please turn all cell phones and pagers off, or to silent setting
- Respect those speaking and asking questions by keeping side discussions to a minimum
- Please do not interrupt the person speaking
- All unanswered questions will be placed in the "Parking Lot" and answers will be distributed later
- Have fun and enjoy the opportunity to contribute to FirstEnergy's future success!

Table of Contents

Financial Accountability Model

Financial Accountability Model

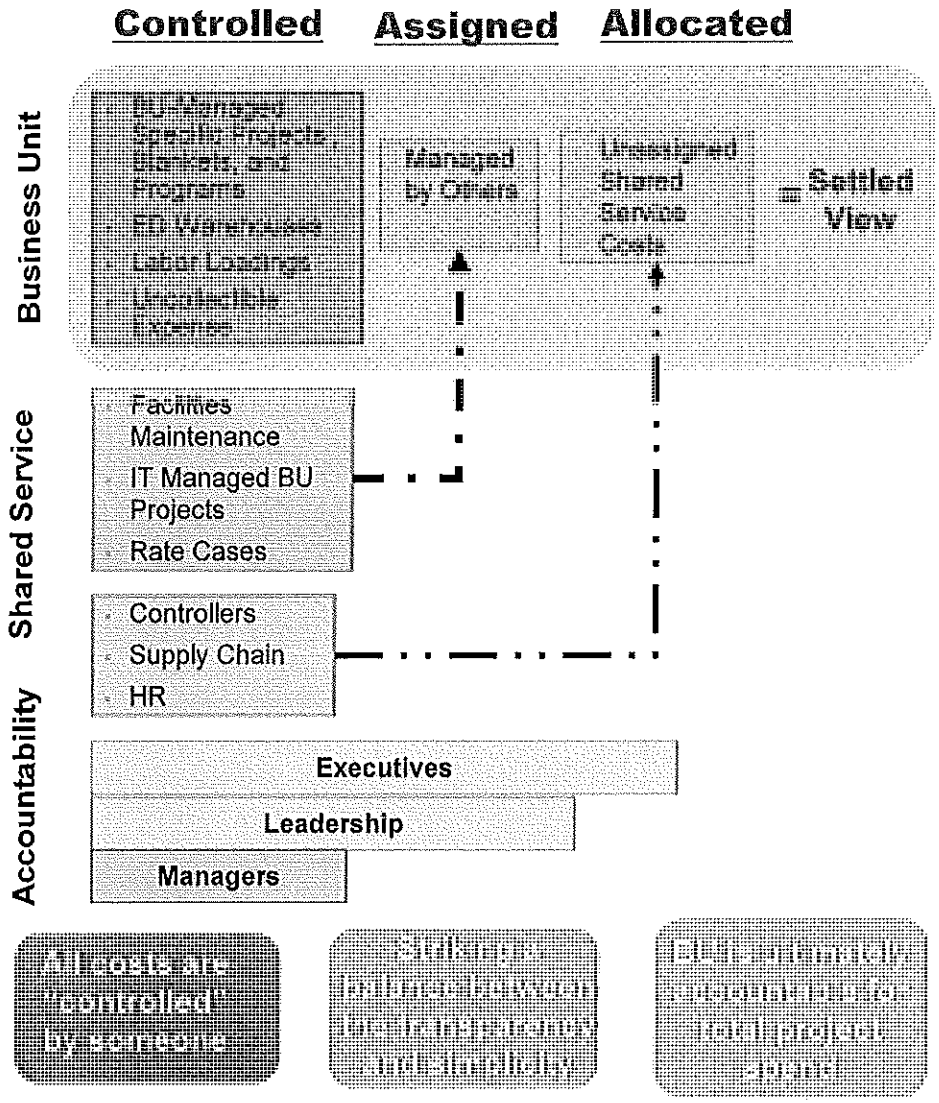
Vision – Establish a transparent financial view using standard SAP functionality

Why?

- Establishes "one source of the truth" for management reporting
- Increases accountability for total costs spent
- Reduces cost of ownership and customization of SAP

Conceptual Review

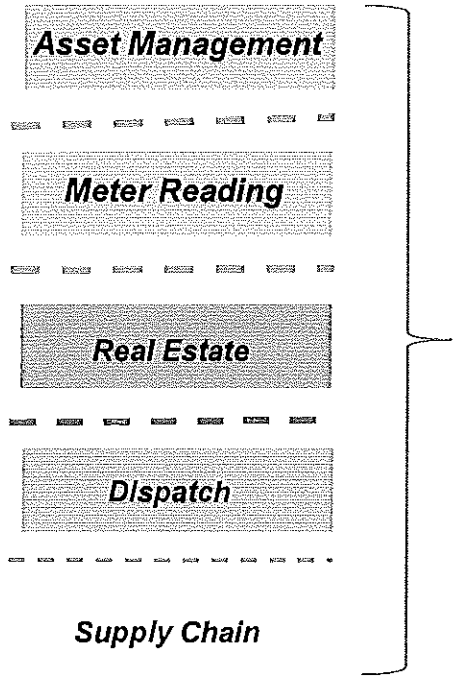
What is it?



- Consistent financial view
- Establishes ownership for every dollar spent

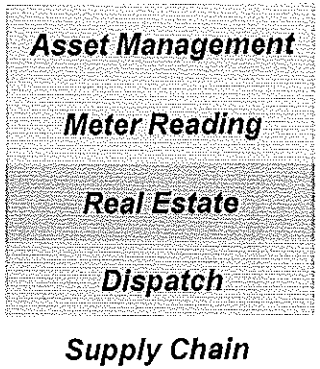
Key Changes

- **Shift** accountability to **total spend**
- Changes in **roles and responsibilities** within budgeting process
- Changes in **level of reporting** and **reporting views**
- Changes in **target setting** within the business



Business Impacts

- **People:**
  - Single owner accountable for total project spend, regardless of where costs originate
  - Increased roles and responsibilities for Project Owners
- **Process:**
  - Coordinate, manage, track budget and explain variances
  - Collaborate outside own organization
  - Reporting will be in alignment with the Accountability Model



Total Project Ownership

Today

Individual ownership of pieces of a project budget

Post-Transformation

Single ownership of project budget

Outcomes

- ***One budget input for the total project including Labor & OTL***
- ***Required collaboration across the organization***
- ***Driving more comprehensive and consistent budget practices***

Roles & Responsibilities

- **Project Owners are responsible for:**
  - Developing, monitoring and updating budgeted and forecasted costs and revenues
  - Measuring and monitoring actual results, including explaining variances from budgets.
  - Collaborating with others when establishing their budgets, updating their forecasts, analyzing their actuals, and explaining variances between budget, forecast, and actual results
- **The responsibility for entering budgets and forecasts vary by Business Unit**
- **Standard financial management reports exist to support Cost Owners**

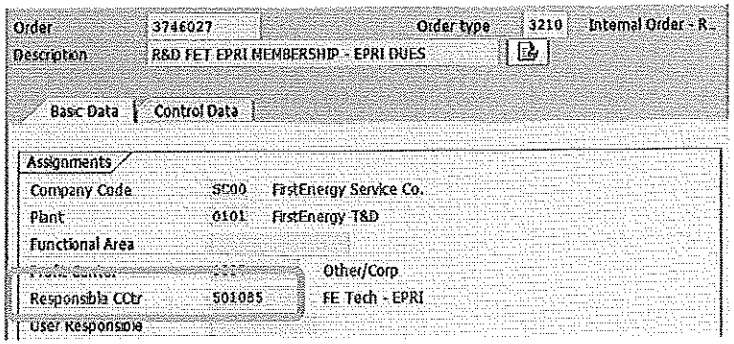
Business Unit Costs will be managed in one of two ways:

(1) Cost Owner Managed

- The labor, other-than-labor, and revenues will be assigned a specific owner (a cost center) in SAP
- Owners will be specific to each BU and each work type (e.g. blankets, programs, etc.)
- Includes Controlled, Assigned, and Allocated costs
  - *For a list of owners, by work type, by Business Unit, refer to the Financial Accountability Model policy on the FirstEnergy Today portal at: Communities>Finance>Policies and Procedures>FiT folder.*

(2) Line Item Managed

- Specific income statement line items not included above (i.e. interest expense, fuel, purchased power, etc.) will be centrally managed by defined group(s)
- This ownership is not assigned in the system but is implied based on the management of those revenues and costs



Illustrative Income Statement

Legend	
Controlled Costs + Settlements & Assessments	
Line Item Controlled	
Allocated	

How is Cost Ownership Assigned?

- **Representatives from each Business Unit were involved in assigning cost ownership to cost collectors**
  - Cost Owner field is a field on the SAP cost collectors called "Responsible Cost Center"
  - A Cost Owner is required on all cost collectors

- **A new cost center hierarchy, ZBWCAM0000, drives Standard Financial Management Reporting**
  - The hierarchy will provide line-of-sight into Controlled, Assigned, and Allocated costs

ZBWCAM0000 Accountability Model - CstCtr Hierarchy

- ZBWCAM1000 FEU
  - ZBWCAM1001 AYE Utilities
  - ZBWCAM1002 AYE Fed Reg Transm Segment

  - ZBWCAM4055 Legal and External Affairs
  - ZBWCAM4081 Special Items - Shared Services
  - ZBWCAM4085 Strategic Planning and Operations
- ZBWCAM9000 Unused

Benefits of Financial Accountability Model

- Identifies a single, accountable owner regardless of where costs originated
- Provides transparency and visibility into our financial statements
- Promotes an understanding of total spend by the work completed instead of a view by department
- Reduces customization and ad-hoc reporting
- Facilitates standard financial management reporting

Leadership Feedback:

- Overwhelming support for moving to one financial view
- Requires clearly defined guidelines
- Governance is required for sustainability

Q1) What is a 'Cost Owner'?

A. A Cost Owner is a cost center in SAP (not a specific individual) assigned to each and every cost collector.

Q2) How were Cost Owners determined for each cost?

A. A review was completed with each of the Business Services organizations to determine the appropriate Cost Owner for each dollar spent. Activities included:

- Validation of Cost Owner assignment to each cost collector
- Verification that Cost Owner hierarchy supports management reporting
- Comparison of "as-is" with "to-be" reporting and explanation of differences in reporting and accountability throughout the business
- Reconciliation of new reports to the existing internal reports/financial statements

Q3) Who are the Cost Owners?

A. Refer to the Financial Accountability Model policy, available effective January 1, 2014, for a list of work types and associated Cost Owners by Business Unit. The policy can be found on the FirstEnergy Today portal under Communities >Finance >Policies >FiT.

Q4) What if the Cost Owner disagrees with costs from another department?

A. The Cost Owner should discuss costs with the originating department. Changes to Cost Owners must be carefully controlled and are not permitted without prior approval. A process exists to request and receive approval for Cost Owner changes.

Refer to the Financial Accountability Model policy on the FirstEnergy Today portal at Communities>Finance>Policies and Procedures>FiT for more information.

Q5) When will the Financial Accountability Model be implemented?

A. It will form the foundation of all Reporting and Budget, Forecast, Planning activities beginning January, 1 2014.

Q6) The direct view (z8/z9) is going away. What do I use for my project or cost center reporting?

- Refer to chapter 2, Standard Financial Management reporting, of this training to understand the cost and labor reports available to you.

UIPlanner Software Overview

UIPlanner Overview

- Utilities International, Inc. is the leading provider of integrated planning solutions for utilities and related businesses

- UIPlanner (UIP) is a multi-user database system that supports Accounting and Finance functions

Planning
- Financial plans
- Strategic plans
- Regulatory plans

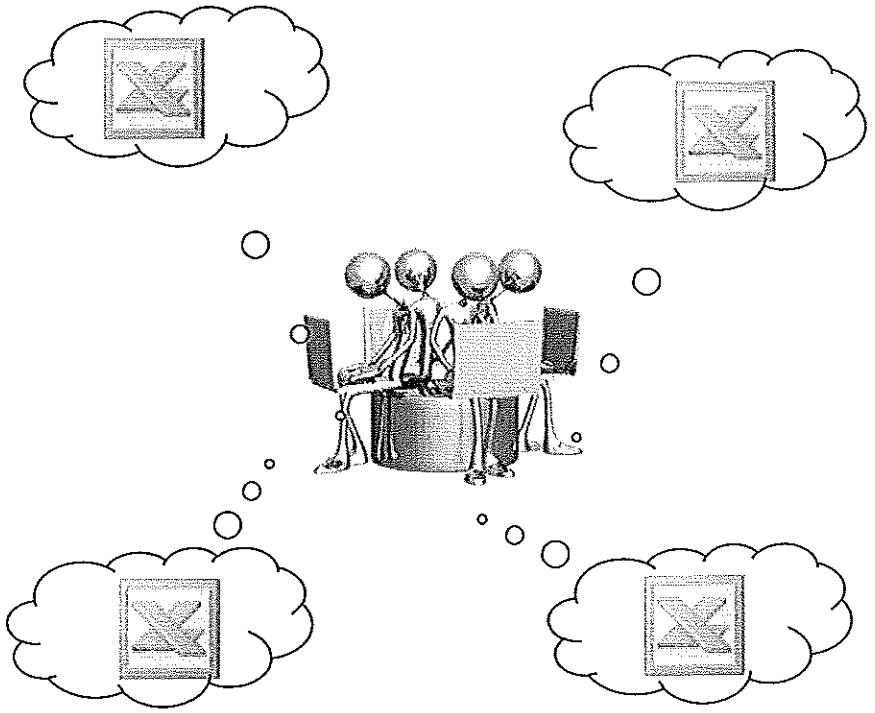
Treasury
- Daily forecasts
- Monthly forecasts
- Financing strategy

Tax
- Tax plans
- Tax strategies
- Actual taxes

Accounting
- Allocations
- Variance analysis
- Financial reporting

Budget Admin.
- Consolidation
- Administration
- Rolling forecasts

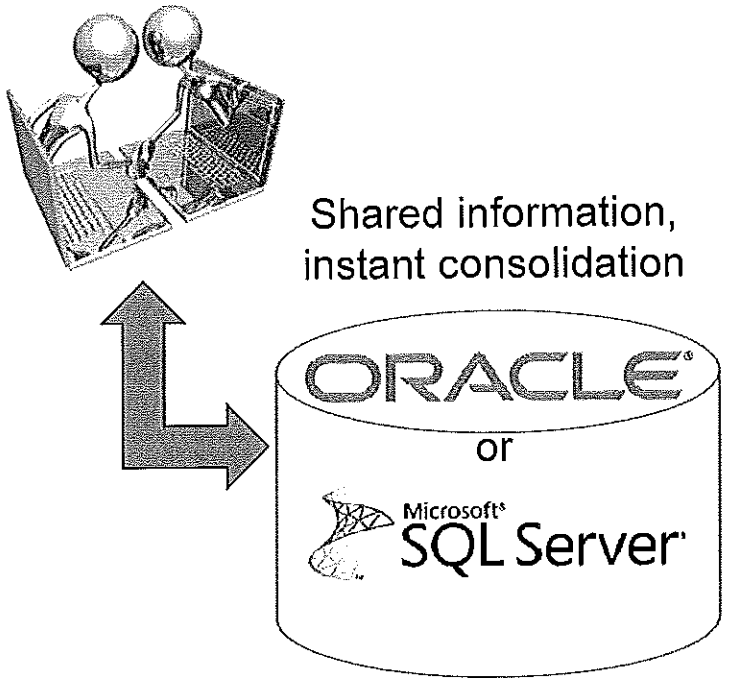
Regulatory
- Cost of service
- Rate design
- Clauses / riders



Customer Service
- Bill forecasts
- Analytics
- Energy Efficiency

Budget Users
- Unit-based budgeting
- Labor planning
- Project forecasts

Business Analyst
- Project evaluation
- Commitment tracking
- Performance analysis

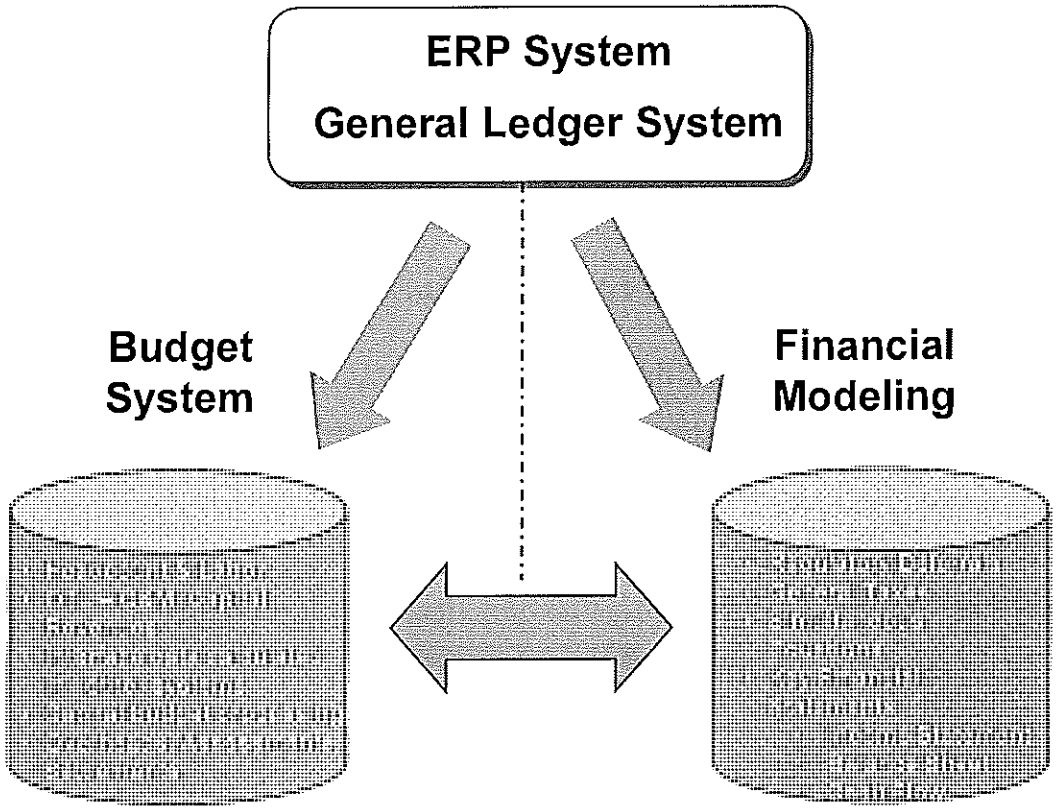


UIPlanner Overview

Individual Spreadsheets

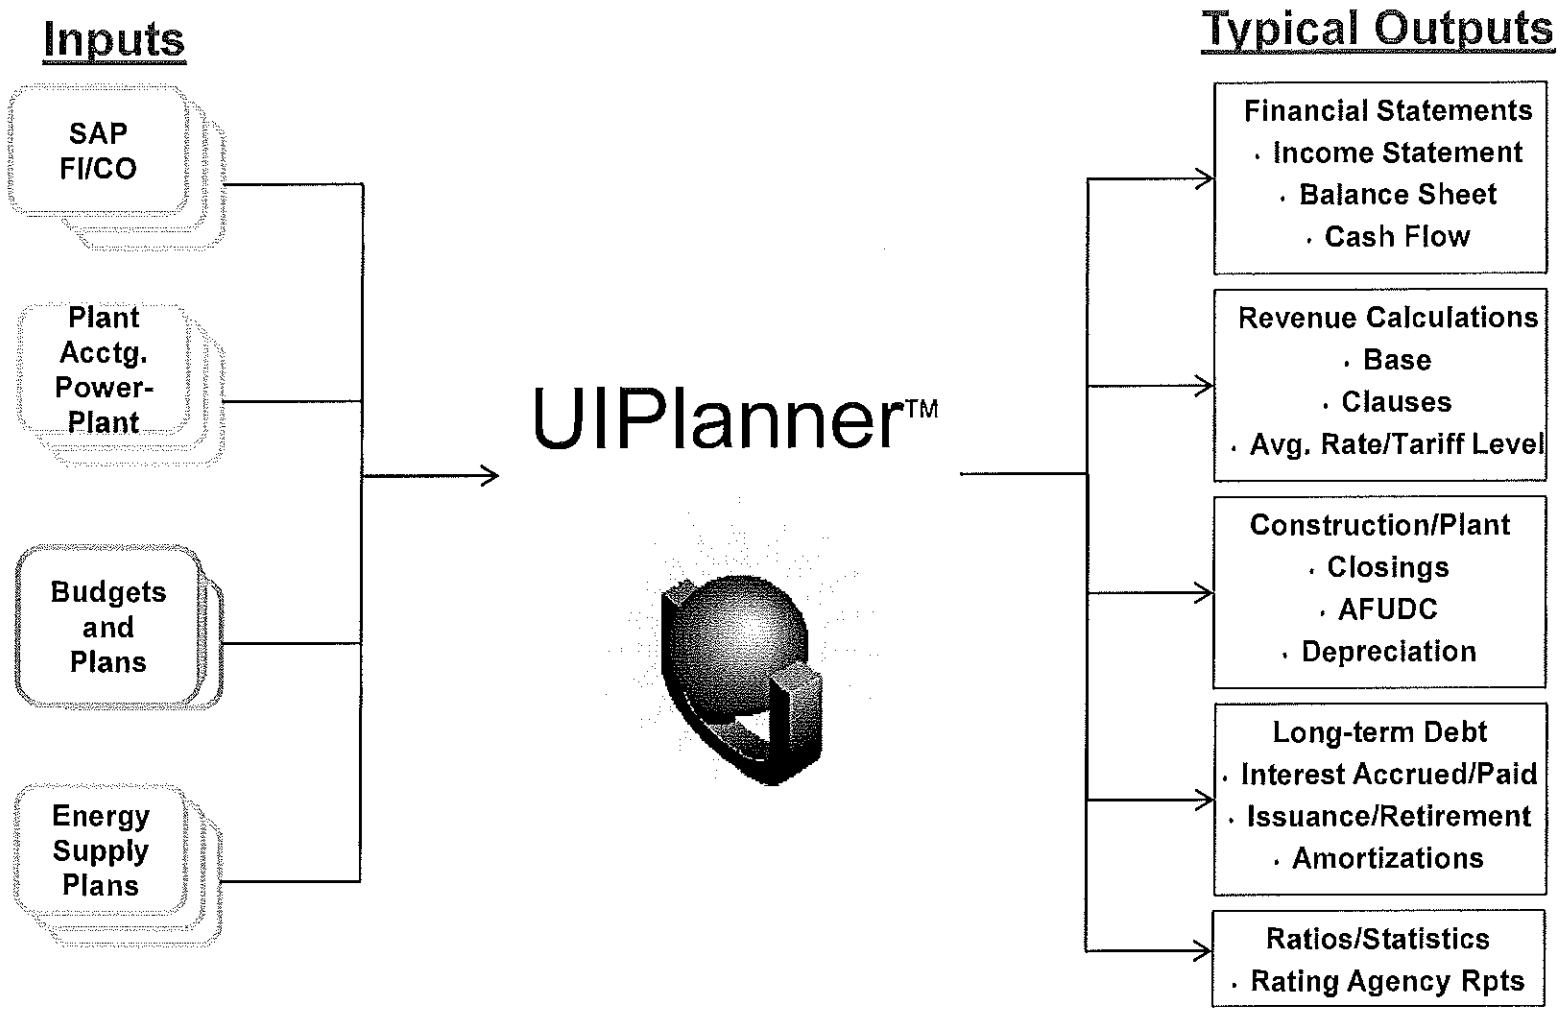
Relies on manual processes to share and consolidate data

Integrated UIPlanner



More productive, efficient, and less prone to error

UIPlanner Overview



- UIPlanner can interface budget, forecast, plan results directly from a Company's ERP or General Ledger System to either the UIP Budget System or Financial Model

- Many Utilities utilize the Financial Modeling tool to manage their financial planning and regulatory outcomes

UIPlanner Overview

UIPlanner integrates data from multiple sources

UIPlanner Overview

Process Improvements

Move to multi-year forecasts

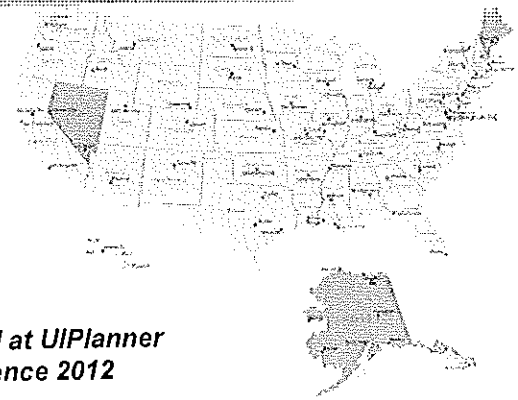
- Expand beyond current year
- Unlimited planning horizon (e.g. 5, 10, 20 year)
- Budget process practices

Improve variance explanation process

- Focus on business drivers
- Avoid unknown variances
- Shorten the cycle time to explain and respond

System Improvements

Technology for multi year forecasts



- Merge actuals with forecast
- Lock months of actuals
- Refer to prior forecasts

Technology for variance explanation

- Drilldown into logic and data
- Ability to add comments to reports by department/cost center

UIPlanner integrates all aspects of the budgeting and planning process

UIPlanner Overview

- **The 30 largest U.S. Utilities using the UIPlanner financial modeling tool – *not all clients shown are utilizing the UIPlanner budget entry system***
- **Proven across jurisdictions – regulatory calculations in 47 states**

Client list presented at UIPlanner Users Conference 2012

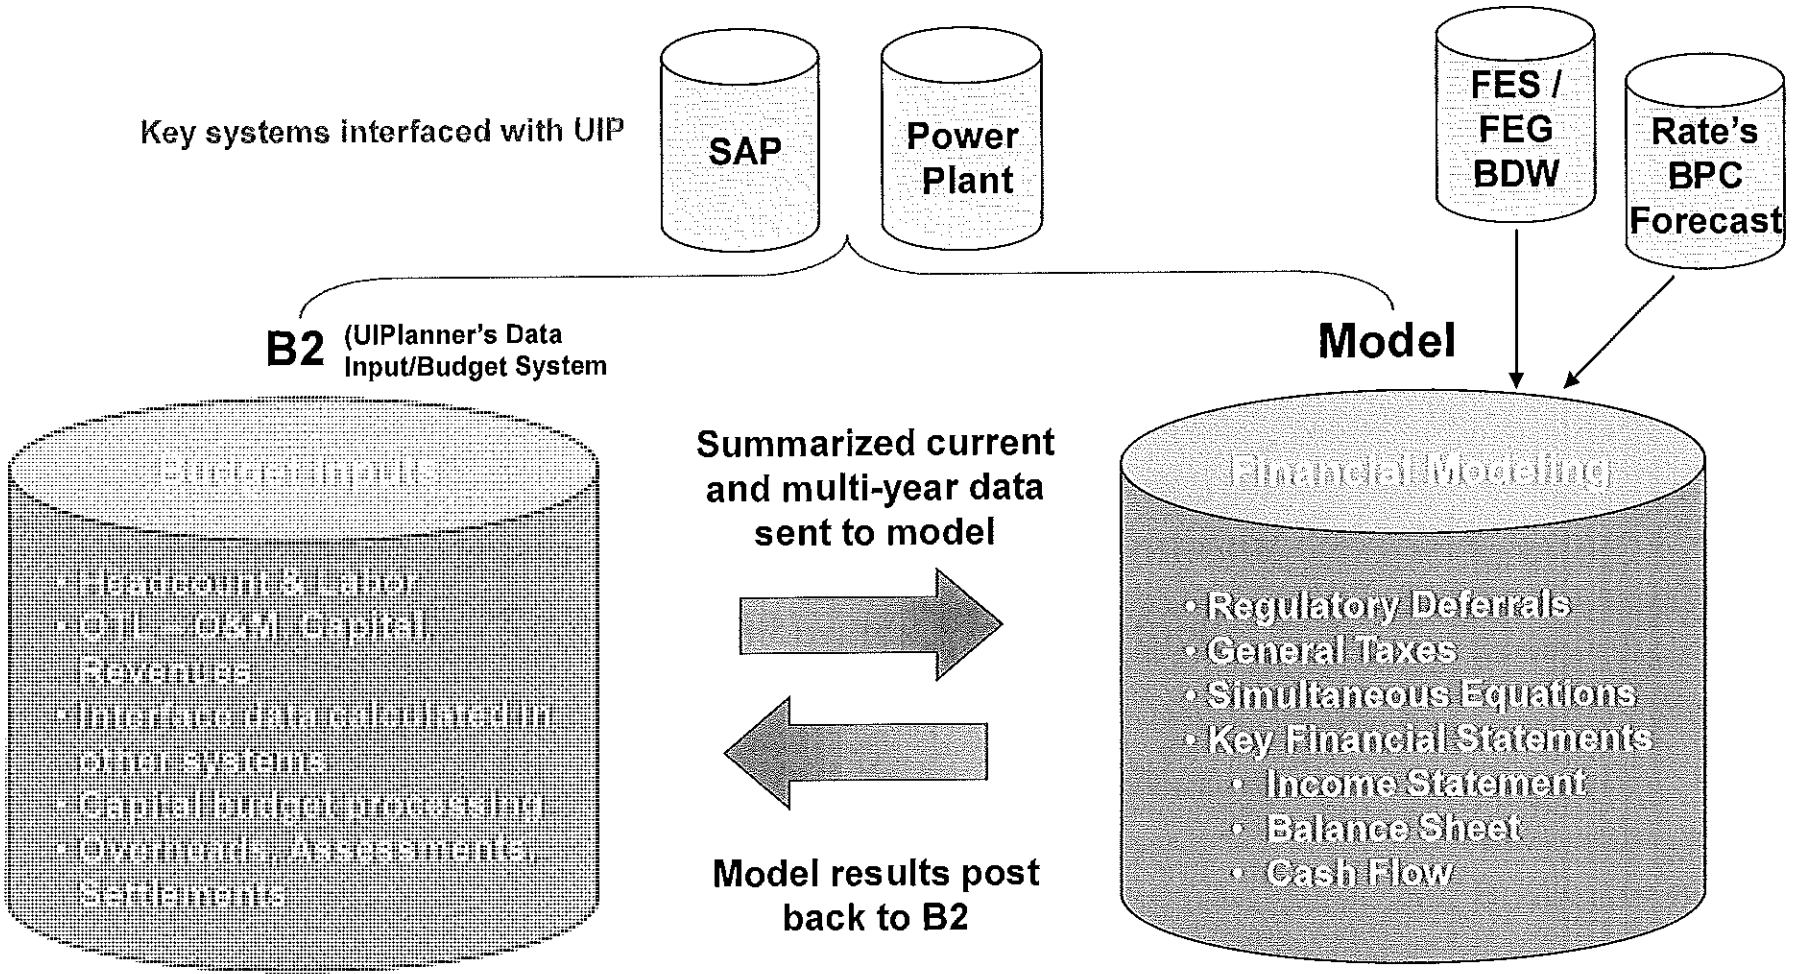
✓ = Client ✓ = Not client; attended conference

Budget Forecast Plan Key Process Overview

Key Process Changes

- Budget entry and analysis will not be managed in SAP. UIPlanner will now perform all budget related functions.

- Long-term planning (5 year) will be integrated with current year budget and forecast processes
  - Current year monthly and quarterly multi-year forecasting process is being implemented
  - Actuals will be interfaced to UIPlanner on a monthly basis
    - Cost collector, cost element and GL level
  - Transaction detail will not be interfaced to UIPlanner but will be available in the Common Data Source (CDS)
- Budget close processing performed within UIPlanner for all years entered
- Close process for actuals continues in SAP
- UIPlanner replaces xRPM as the Corporate capital planning tool and FES/FEG One List



Key Process Benefits

- Consistent approach for budget, forecast, and plan; standard and efficient processes with integrated software tools
- Automated interfaces to source data reducing manual data manipulation
- Reduced cycle time to close budget
- UIPlanner replaces Midas (FE's current financial modeling tool) which is no longer supported by the vendor
- Monthly processing eliminates pencil changes and captures adjustments each forecast run
- Enhancement of integrated forward-looking scenario analysis for the company

The current year annual budget and forecast process provides the Company with a method to quantify and report the current year's expectations and help drive the Company toward achieving financial and operational objectives. The budget and forecast process also assists with facilitating the efficient usage of the Company's financial resources and allows the measurement of actual performance against projections.

Budget, Forecast, Plan Environment

UIPlanner Integrated Planning Tool
Current and Multi Year

Budget, Forecast, Plan Process

Today

Three separate processes for budget, forecast, and plan

Annual Budget

- Current year annual projection of staffing (employee headcounts), revenues, and expenses (Income Statement, Capital and Other)

Current Year Forecast

- Revised projection of the current year annual budget. Revisions to the current year annual budget (e.g. 3+9, 6+6, 9+3)

Multi Year Plan

- Two or more years of projected financials. Also referred to as the multi-year plan

Post FiT

Migrating to an integrated budget, forecast and plan process

A **Annual Budget / Multi Year Plan**

- Current year (year 1) annual projection of staffing (employee headcounts), revenues, and expenses (Income Statement, Capital and Other)
- Includes multi year plan (years 2-5) identifying business initiatives and primary business drivers

B **Current and Multi Year Forecast**

- Revised projection of the current year annual budget. Monthly revisions to the current year annual budget (e.g. 3+9, 4+8, 5+7, 6+6, etc.) and multi year plan with formal multi year reporting on the quarter close

Process Steps and Key Activities

A Annual Budget / Multi Year Plan

B Current and Multi Year Forecast

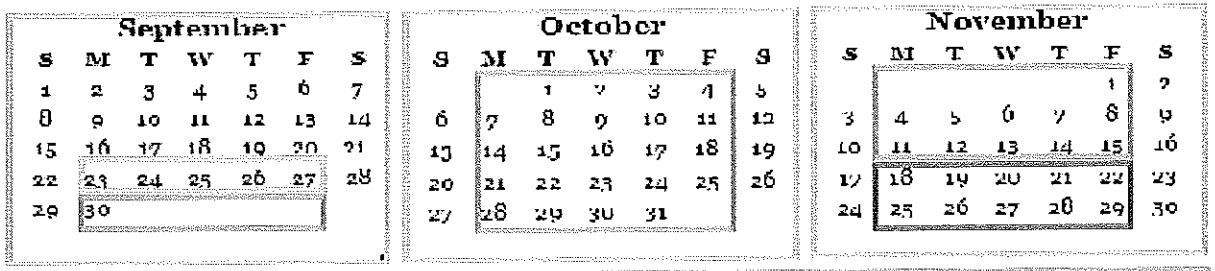
1 Maintain UIPlanner System & Process
- Create New Scenario (annual/monthly)
- Run Applicable Interfaces
- Develop / Update Budget, Forecast Plan Guidelines
- Create Annual Activity Prices
- Perform Other System Functions

2 System Entry
- Employee Labor
- Allocate Labor and Non Labor
- Create/Maintain Budget Group Budget Items
- Project Planning and Tracking
- Validation Reporting
- Business Unit/Department Center Locking

3 System Administrator Activities
- Validation Reporting, Center Locking, Budget/Forecast Close, Derive FERC

4 Financial Modeling
- Move B2 Results to Model
- Move Model Results to B2

5 Reporting
- Move Processed Financial Results to Common Data Source
- Standard Reporting



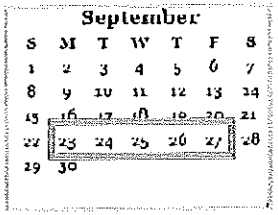
Annual Budget / Multi-Year Plan Process

Annual Budget / Multi-Year Plan Process

A Annual Budget / Multi Year Plan Process

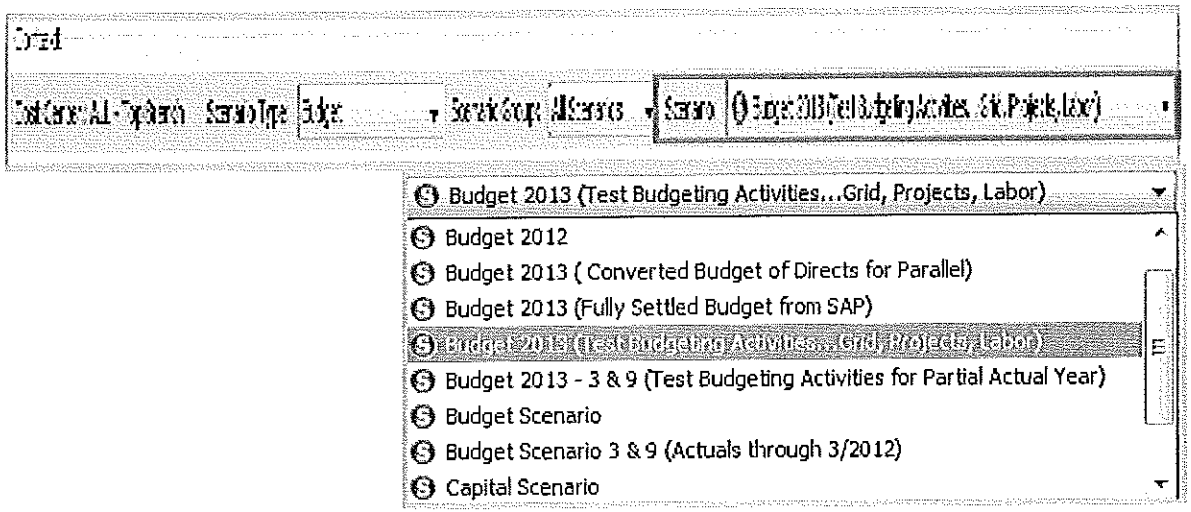
- Traditionally starts late third quarter each year
- Results available for November Board Meeting – approval of five year plan

Year 1



Years 2 - 5

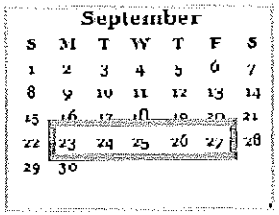
- **Key Activities**
  - Create New Scenario (annual)
  - Run Applicable Interfaces
  - Develop Budget, Forecast, Plan Guidelines
  - Calculate Annual Activity Prices
  - Perform Other System Activities
  - Employee Labor
  - Allocate Labor and Non Labor
  - Create/Maintain Budget Group Budget Items
  - Project Planning and Tracking
  - Validation Reporting
  - Business Unit/Department Center Locking
  - System Administrator Functions
    - Validation Reporting, Center Locking, Budget Close, Derive FERC
  - Move B2 Results to Model
  - Move Model Results to B2
  - Move Processed Financial Results to Common Data Source
  - Standard Reporting



Annual Budget / Multi-Year Plan Process

1 Create New Scenario

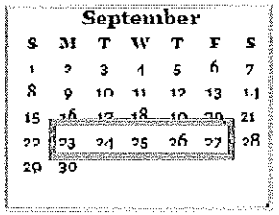
Scenarios are similar to versions in SAP. UIPlanner will manage all the different scenarios needed throughout the year for the budget, forecast, and plan process



- A new scenario will be created for the annual budget process and for each monthly forecast update
- Additional scenarios can be created based on management's request
- Available scenarios will be listed via drop down box on the main menu

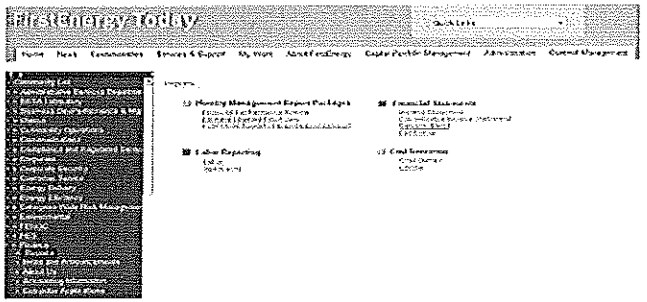
Annual Budget / Multi-Year Plan Process

2 Run Applicable Interfaces

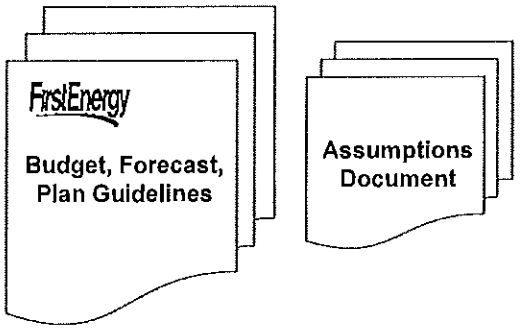


SAP will interface data to UIPlanner near real time, nightly and monthly

Near Real Time	Nightly	Monthly
• Cost Centers • Orders • Projects *(WBS project definition and WBS elements)* • Cost Elements • General Ledger Accounts • Profit Centers	• Activity Types • Companies • All related trees	• Controlling Actuals • General Ledger Actuals • Overheads • Assessments • Settlements • FERC • HR employee data • Power Plant
• Users will continue to create and manage master data in SAP • Near real time approximately every 30 minutes • On demand available	• Individual data fields available near real time – actual tree update will occur nightly	• Actuals loaded to support monthly processing • Budget close performed in UIPlanner • On demand available

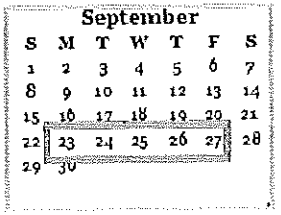


Annual Budget / Multi-Year Plan Process



3 Develop Annual Budget, Forecast, Plan Guidelines

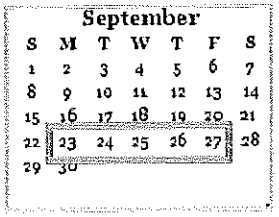
Guidelines will be developed and maintained to assist persons responsible with the direct input of data into UIPlanner as they prepare the annual, budget, forecast and plan



- Guidelines will cover the annual process along with the current year and multi year forecast process. Items included will cover annual calendar of events, plan assumptions, timing, person responsible and applicable targets
- Related processes such as creating and maintaining master data, financial accountability model guidelines, and reporting will be included (other FiT linked processes)
- A common data repository will be available on the FE Portal under the Finance Community. Key documents will be stored to facilitate the budget, forecast, plan process. Available in 2014
- Guidelines will be updated throughout the year, if needed, to reflect major changes as part of the monthly/quarterly forecast process

Annual Budget / Multi-Year Plan Process

4 Calculate Annual Activity Rates

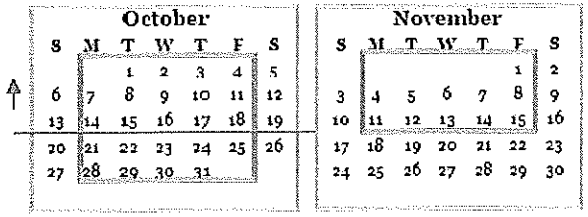


Annual activity rates will be calculated in UIPlanner prior to the start of the annual budget process. SAP HR employee data will be interfaced to UIPlanner to support this process

- **Run HR interface**
  - Import Employee data containing employee salaries, vacation, PAD, holiday, etc,
- **Calculate employee loaded salary**
  - Labor additives (benefits, incentive compensation, payroll taxes)
  - Update union and non union wage schedules
- **Calculate productive hours by employee**
  - Vacation, PAD, holiday, meetings, and other non productive
- **Calculate activity rates**
  - Total dollars / total hours
  - Rates will be automatically calculated for the plan horizon

Annual Budget / Multi-Year Plan Process

6 Perform Other System Functions

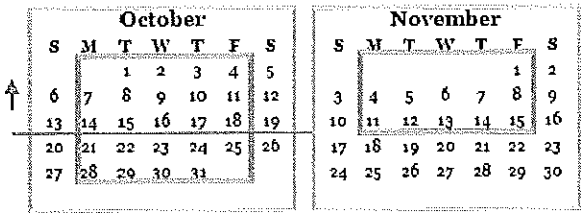


Other activities include administering user security, maintaining global assumptions, ensure system validations are current, publishing datasets and reports, etc.

- **Administer user security**
  - Add, edit, delete
  - Maintain FERC code of conduct and required reporting
- **Maintain global system assumptions**
  - Update related datasets
- **System Validations**
  - Maintain rules and validations for appropriate screens
  - Maintain interfaces
- **Other Miscellaneous**
  - Publish standard reports
  - Trouble shoot system problems
  - General system maintenance

Annual Budget / Multi-Year Plan Process

6 Employee Labor

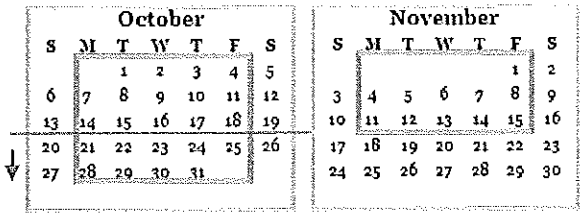


View and verify SAP HR interfaced employee data

- SAP HR data will be interfaced to UIPlanner initially for calculation of activity prices but also monthly to show employee changes and unproductive time usage
- Verify employee data - employee names, cost centers, etc.
- View/update labor data at the individual employee or summary cost center level
- Additional employee information such as vacation eligibility, available payroll hours, etc will be summarized to help facilitate building of the labor budget and monthly forecast process
- Access to the labor screens will be secured based on role and business unit/department
- User will be presented with hours and dollars at the individual employee level and summary level by Company, Cost Center, Pay Calendar, Personnel Subarea, Activity Type

Annual Budget / Multi-Year Plan Process

6 Employee Labor *(continued)*

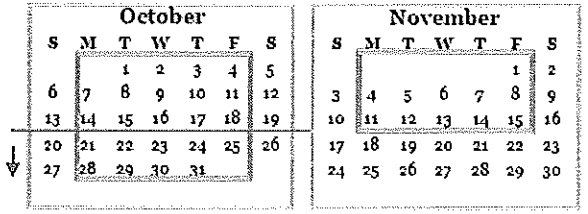


Determine number of headcounts, FTE's, vacation and PAD allocation, total hours, and total dollars by either individual employee or summary level

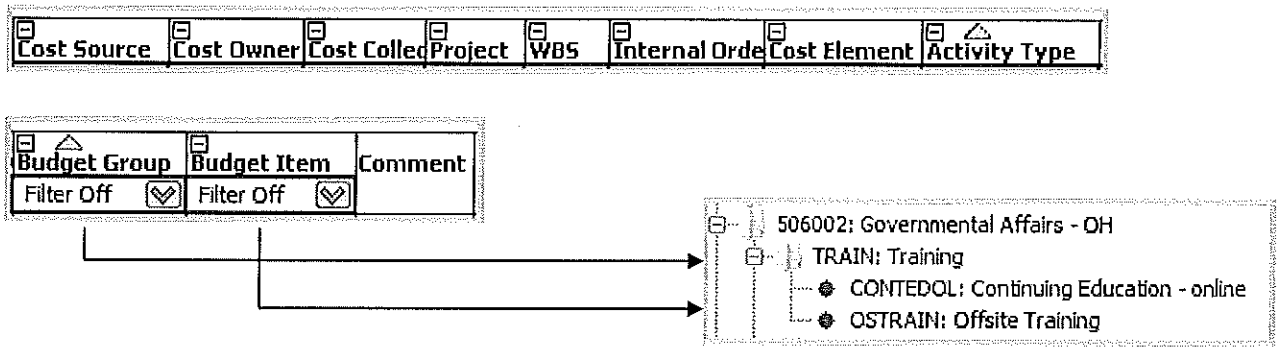
- Verify employee data - employee names, cost centers, etc.
- Update staffing - headcounts and FTE's
  - Additions
  - Exits (planned retirements)
  - Internal transfers
- Allocation of unproductive time - PAD, vacation, deferred vacation
- Manual salary adjustments - promotions, non ICP bonuses
- Determine overtime hours or dollars
- Note: Other than labor entry can also occur in conjunction with developing employee labor
- Cost Center Labor Hours and Dollars Available to budget in grid

7 Allocate Labor and Non Labor

Allocate hours and dollars to the various cost collectors (cost center, internal order, WBS) for capital and noncapital

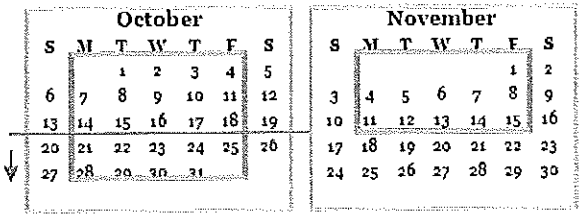


- System design follows the Financial Accountability Model where each cost collector has one owner
- Cost collector owners will be responsible for budgeting and forecasting all other than labor
- Master Data guidelines will be in place to ensure consistency across the Company
- Cost collector combinations are entered into UIPlanner via a budget grid or Excel upload
  - Budget records will be displayed for the active department or cost center selected
  - An additional project screen available to further define budget inputs
- Both hours and dollars available on grid
- Contractor hours/dollars calculation available to assist users with developing their other than labor budgets



8 Create / Maintain Budget Group Budget Item

Budget groups and budget items will be utilized as part of the budget grid entry to further categorize data inputs. Utilized to assist with budget/forecast approvals. Data fields are optional

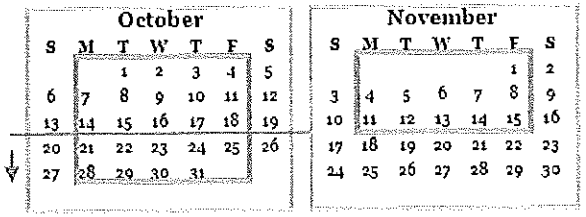


- Budget groups and budget items can be assigned to any node in the cost center tree
- The availability for use will depend on the assignment and level in the cost center tree
  - If a budget group budget item is assigned to an individual cost center then it will only be available for use with a grid combination for that particular cost center
  - Budget group and budget items set at the "all node" or top level will be available for all users

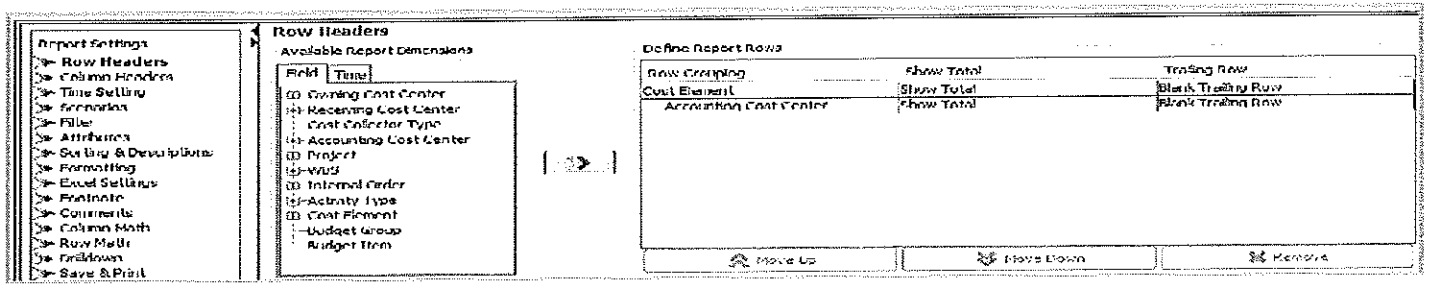
Annual Budget / Multi-Year Plan Process

9 Project Planning and Tracking

A separate project screen is available where users can house additional project information in one common place. Planning projects can be created in UIPlanner to assist with long term planning



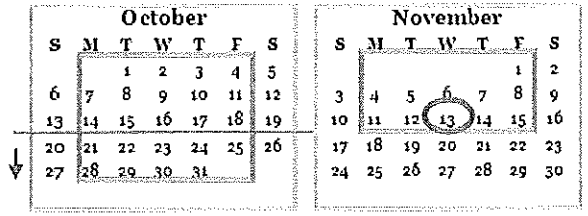
- Users will input additional project information such as project description, project sponsor, project status, etc for both SAP projects and UI Planning Projects
- Project attributes will be both required and optional
- UIPlanner will allow users to create projects for multiyear planning without having to create the project definition and WBS elements in SAP
- "Project Templates" will be interfaced and utilized from SAP as a starting point
  - Allows the project attribute values of the SAP project to be applied to the new Planning Project (project definition and WBS element level)
  - Mirroring the SAP project to the UI Planning Project ensures important attributes such as the costing sheet data is applied accurately
- When planning projects are approved during the budget year, the project definition and WBS elements will be created in SAP and interfaced in UIPlanner



Annual Budget / Multi-Year Plan Process

10 Validation Reporting

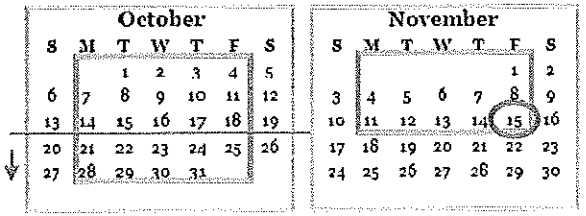
System validation reports will be available to check user entry for budget and forecast inputs



- UIPlanner reports will be available to validate system entry
- Multiple ways to view data
  - **View Reports -** standard reports by major category
  - **Create Reports** - on-the-fly reporting - menu driven. Ability to edit report rows and columns, add and delete fields, subtotal and total, formatting
  - **Report Administration** - enables user to create reports you want to quickly rerun, distribute, or edit in the future
- Certain data fields will be derived through reporting such as cost type, company code, profit center, etc.

Business Unit / Department Center Locking

Business Unit/Department approval will be required. Select users will be able to lock the cost centers for their respective areas prior to the final budget close



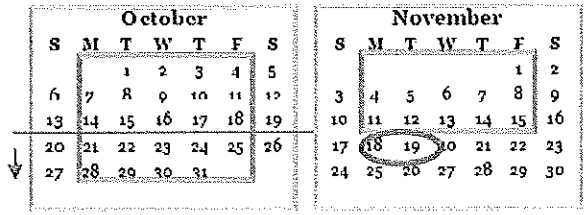
- Select users will be granted access to lock their individual business unit/department cost centers or entire group/department once the Business Unit Controller/Department Head has reviewed and approved the results
- Center locking will be considered an approval and signifies to the System Administrator that the group has completed their work and is ready for final processing
- Center locking is date stamped and identifies who locked and at what time

Annual Budget / Multi-Year Plan Process

12 System Administrator Activities

System Administrator will perform additional activities to finalize the budget/forecast process

- **Validation Reporting**
  - Verify all areas are locked
  - Review miscellaneous reports



- **Administrator Center Locking**
  - Once the Business Unit/Department locks their individual groups, the System Administrator can perform an administrative lock over the entire cost center tree which signifies the scenario has been locked
  - System Administrator has the authority to open up individual centers for a particular user in the event a budget correction is needed

- **Budget / Forecast Close Process**
  - The Budget Close will be processed in UIPlanner and System Administrator will run the budget close at different intervals of the process giving the user insight into the final settled numbers
  - The close will process all years in scenario
  - A schedule will be published as part of the budget guidelines allowing users to plan accordingly
  - Budget close processing time is expected to be significantly shorter than FE's current process. Exact time for compiling and run time is not yet known
  - FERC will be derived as part of the close process

Annual Budget / Multi-Year Plan Process

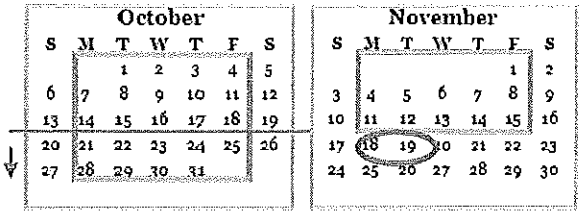
13 Move B2 Results to Financial Model

Select budget entry items will be migrated from B2 to the Financial Model for further processing

- Dependent data items (interest, deferrals / riders, income taxes, general taxes) are calculations that will be automated in the model

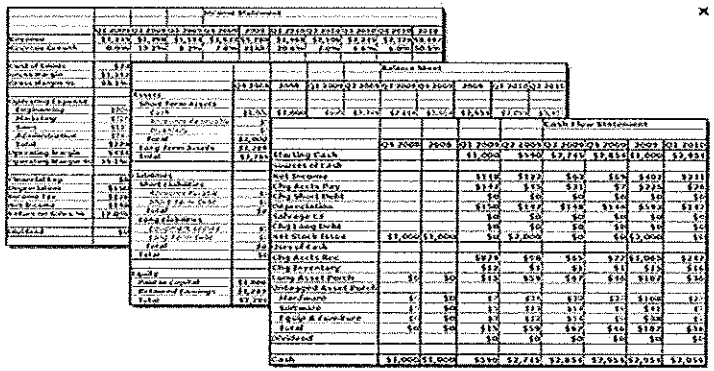
- The model "links" the calculation of dependent data
  - Eliminates the need for manual handoffs
  - Allows for quick turnaround of changes

- New process will generate integrated financials, not just an Income Statement
  - Better insight on cash impacts
  - Monitor key financial drivers including regulated entities rate base



- Separate model security limits access to data
  - Not all B2 users will have access to the financial model

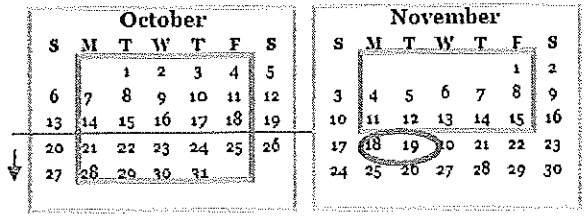
- Additional Model activities
  - Creating scenarios and "what if" analysis
  - Target setting and financial metrics



⇒ *Develop internal multi-year financial guidance and targets*

14 Move Financial Model Results to B2

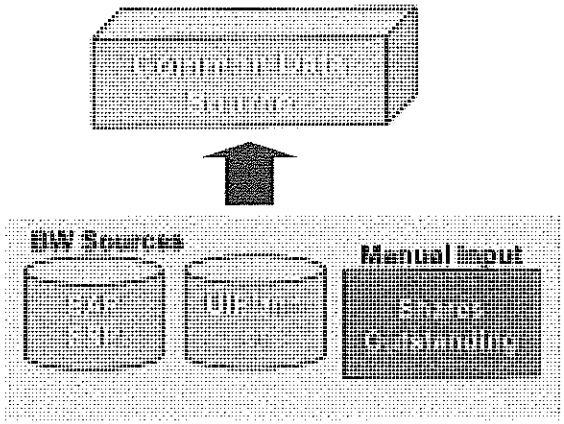
Once model processing occurs, results will be posted back to B2 for users to view. Level of details and posting method is still under development



- Results from the data calculations within the model will be posted back to the B2 environment
- Calculated results will be available to view within a dataset and report
- Owners will review and validate results as part of process
- The key financial statements (income statement, cash flow, balance sheet) will also be generated as part of model processing
- Internal income statement results will be available for users to view in B2

Annual Budget / Multi-Year Plan Process

15 Move Processed Financial Results to Common Data Source



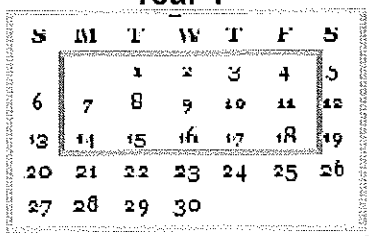
Provide standard management reporting sourced from a single, common database. Standard reporting available to ensure results are viewed consistently across the organization

- **Final processed results will be moved to the Common Data Source**
  - Separate Summary Cube allows faster report processing
  - Separate Detailed Cube simplifies variance analysis
  - Multi-year forecast data will not be sent to the BW

- **FiT Available Reports**
  - Financial Statements,
  - Monthly Management Reports
  - Cost Reporting
  - Employee Labor Reporting

Source Systems

Current and Multi-Year Forecast Process



Current and Multi-Year Forecast Process

B

Current and Multi-Year Forecast Process

- Recast current month and remaining months in current year
- Update of multi-year plan
- Standard reporting will be utilized with fixed timing (FiT Reporting)
- Forecast results available each month to manage current and multi year

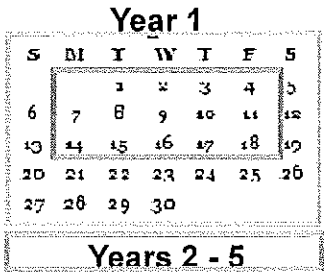
Year 1

Years 2 - 5

- **Key Activities**

1
- Create New Scenario (monthly)
- Run Applicable Interfaces (monthly)
  - Update Budget, Forecast, Plan guidelines
  - *Calculate annual activity prices (N/A)*
- Perform Other System Activities (if needed)
  - *Move B2 Results to Model*
  - *Move Model Results to B2*
  - *Move Processed Financial Results to Common Data Source*
  - *Standard Reporting*

2
- Employee Labor
- Allocate Labor and Non Labor
- Create/Maintain Budget Group Budget Items
- Project Planning and Tracking



→ Reflect labor and non labor changes

  - *Validation Reporting*
  - *Business Unit/Department Center Locking*
- *System Administrator Activities*
  - *Reporting, Center Locking, Budget Close, Derive FERC*

Current and Multi-Year Forecast Process

1 Maintain UIPlanner System & Process

The current and multi-year forecast process will follow the same steps as the annual budget/multi-year plan process with several activities being modified to reflect monthly versus annual

- Create New Scenario
  - Create new version to capture recast
- Run Applicable Interfaces
  - Interface SAP monthly actuals (budget level)
  - Interface HR employee data
- Update Budget, Forecast Plan Guidelines
  - Update scenario assumptions (if needed)

Actuals load to UIP ***Recast remaining months and multi year***

Amount Type	2013					
	2013 - Jan	2013 - Feb	2013 - Mar	2013 - Apr	2013 - May	2013 - Jun
Dollars	$35	$35	$35			
Hours	1.0	1.0	1.0			

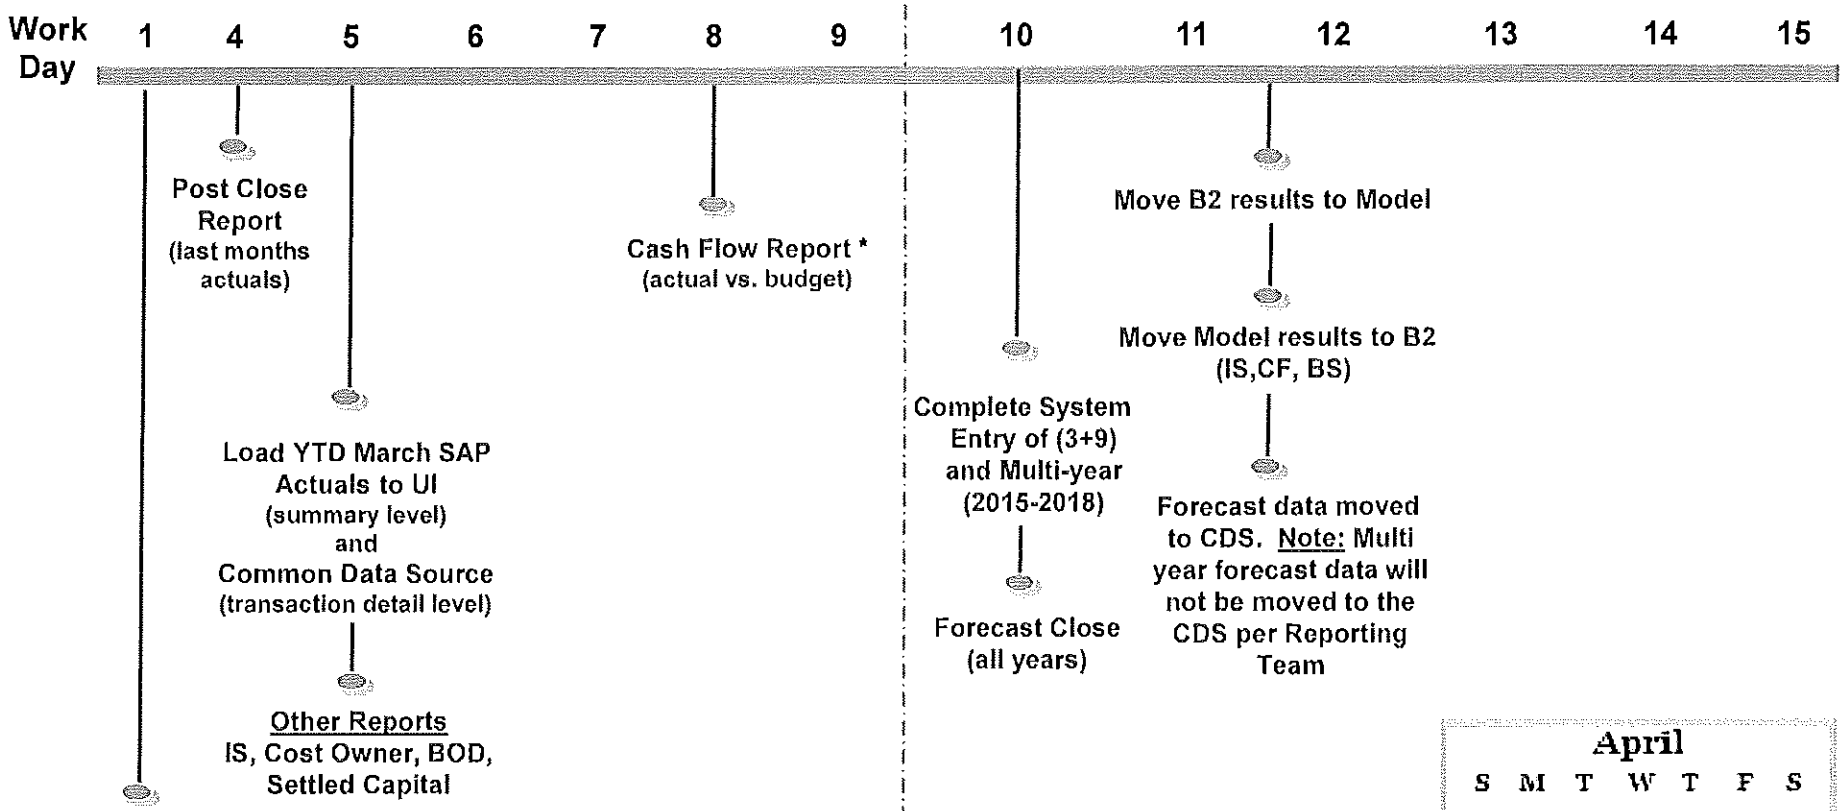
Reference row available to compare values from previous scenarios

Amount	2013	2014	2015	2016	2017	2018
Type	2013 Total	2014 Total	2015 Total	2016 Total	2017 Total	2018 Total
Dollars	$0	$0	$0	$0	$0	$0
Hours	0.0	0.0	0.0	0.0	0.0	0.0

Current and Multi-Year Forecast Process

2 System Entry

Users will identify changes and reflect labor and other than labor changes



- Employee Labor
  - SAP HR data will be interfaced to UIPlanner initially for calculation of activity prices, but also monthly to reflect employee changes such as pay adjustments, vacation and PAD usage
  - Interface will automatically run the first workday each month
  - Labor balances should be reviewed as part of the forecast process
- Allocate Labor and Non Labor
  - Adjust cost collector dollars/hours for remaining months
- Create/Maintain Budget Group Budget Items (optional)
  - Create new budget groups budget items to capture new cost collector additions
- Project Planning and Tracking
  - Identify new projects
  - Identify project changes and status

Current and Multi-Year Forecast Process

Illustrative

- Schedule included with annual guidelines
- Standard reports will be utilized to manage results

- New scenario created for 3+9. System open for entry
  (scenario can be created in previous month)
- Run applicable interfaces (e.g. monthly HR data)

Specific calendar days will utilize standard reports

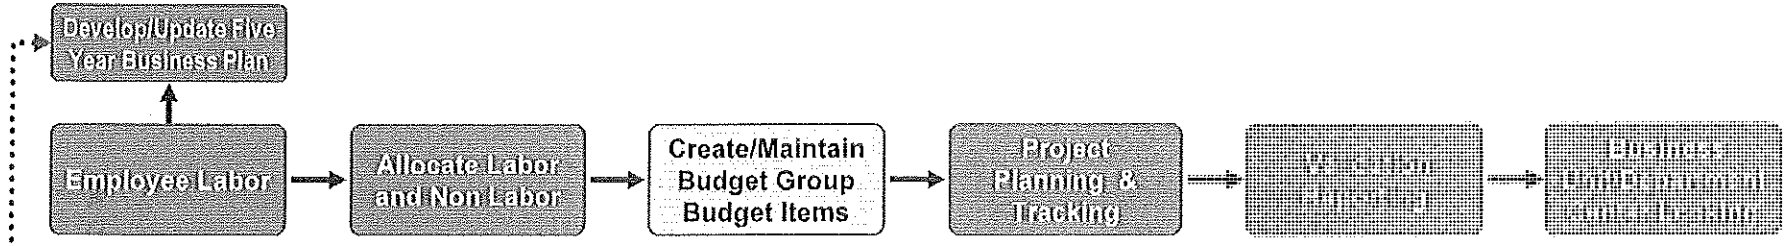
- System generated cash flow reports will not be available until BPC go-live 5/9/14. Actual to budget/forecast cash variance reporting will continue to be created using the current process

April

S	M	T	W	T	F	S
		1	2	3	4	5
6	7	8	9	10	11	12
13	14	15	16	17	18	19
20	21	22	23	24	25	26
27	28	29	30			

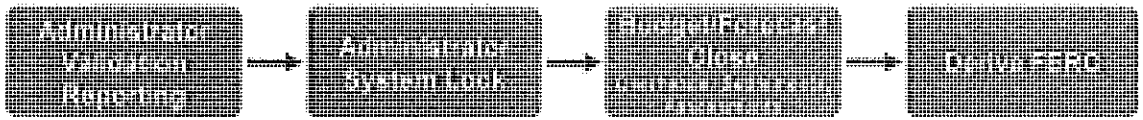
- **Multi-Year Plan / Forecast**
  - Performed in conjunction with the annual and monthly forecast process
  - Multi year approach
    - Focus on one year out (year 2) – identification of known key events and business unit initiatives
    - Years 3 - 5 identification of primary business drivers
  - Allow users the ability to develop a detailed forecast or adjust at a summary level
  - Budget close will process all years in scenario

Build and refine forecast data for detailed annual budget
Ability to align earnings and cash projections with long-term strategy

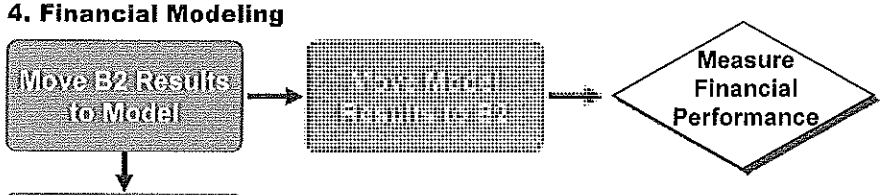


Year 1 (current year)	Year 2	Year 3	Year 4	Year 5
Annual Budget	**Multi-Year Plan / Forecast**			
Current Year Forecast				
• Cost center level details • Identification of specific capital and noncapital projects • Identified strategies • Execute and monitor performance	• Known key events • Business Unit Initiatives	• Primary Business Drivers		
	Key Variable Inputs			
	• *Load* • *Special programs (e.g. forestry, energy efficiency)* • *Transmission* • *Regulatory strategy* • *Power prices* • *Plant outages* • *Fuel*	• *Human Resources special items* • *Tax strategies* • *Treasury activities* • *Accounting treatment* • *Business development strategies*		

Budget, Forecast, Plan Process Summary

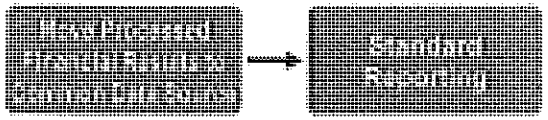


1. Maintain UIPlanner System & Process



2. System Entry

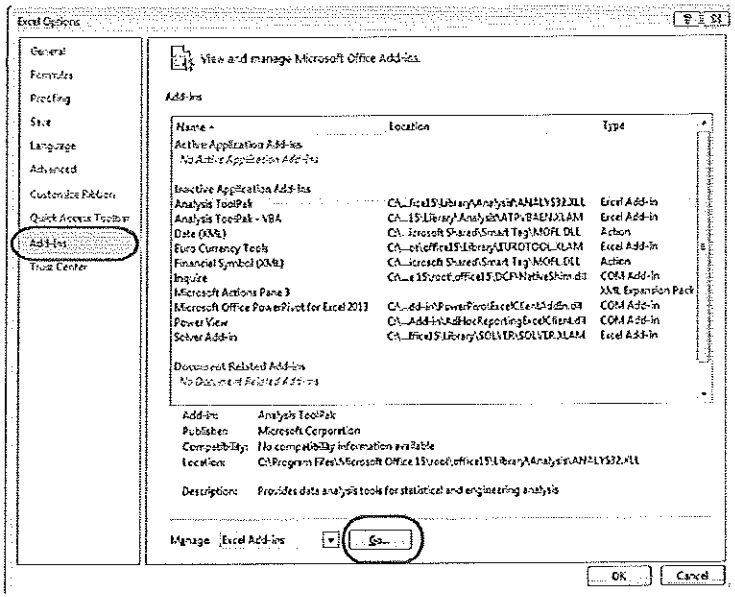
3. System Administrator Activities



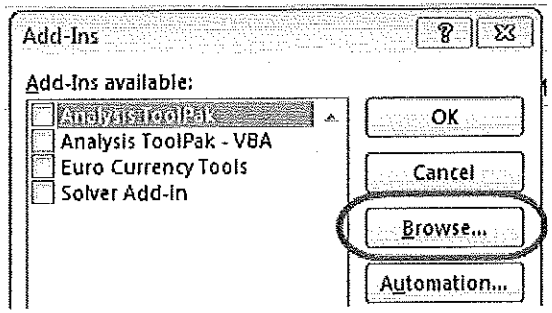
4. Financial Modeling

- *Improve decision making with what-if analysis*
- *Identify and implement financial initiatives and strategic alternatives*
- *Develop internal multi-year financial guidance and targets*

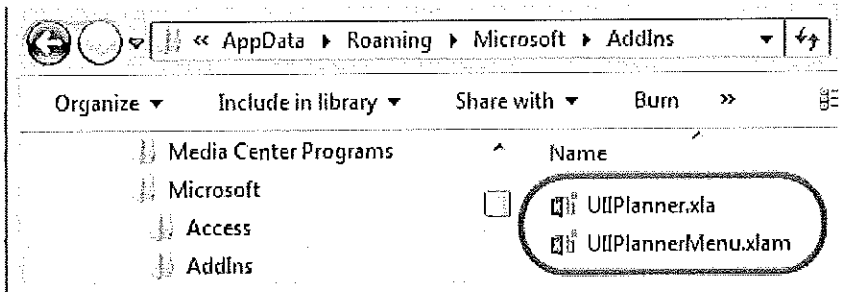
5. Reporting



UIPlanner Log In Process



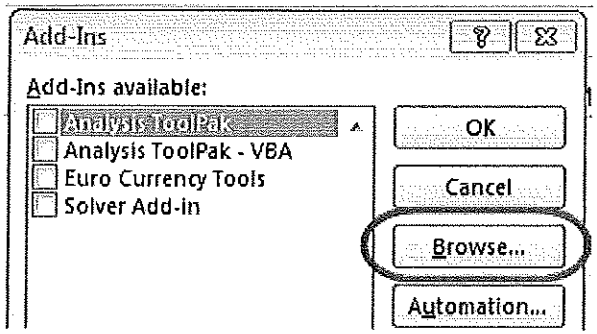
Install Excel Add-Ins

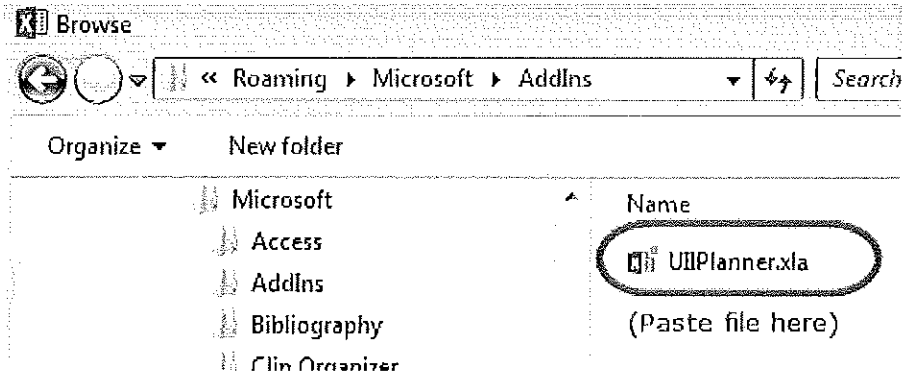


- **UIPlanner Excel Add-Ins are used for Excel upload / download functionality**
- **Add-Ins are User ID and computer specific**
- **Follow these steps to copy the Add-Ins files to your Excel session on the computer you will use to access UI Planner**
  - **Step 1 – Locate the files to be copied**
    - Open Windows Explorer, navigate to the U: shared drive to your appropriate group folder and leave this window open.
      - U:\FE\Competitive - FES\FiT Project\UIPlanner\Excel Add Ins
      - U:\FE\EnerAff\FiT Project\UIPlanner\Excel Add Ins
      - U:\FE\RegEnt\FiT Files\UIPlanner\Excel Add Ins
      - U:\FE\ShrSvc\FiT\UIPlanner\Excel Add Ins
  - **Step 2 – Copy the files from the U drive to your C drive through Excel**
    - Follow the instructions pertaining to your version of Excel (see next slides)
    - Excel will direct you to where the files should be copied
  - **Step 3 – Confirm the Add-In was installed**
    - Follow the instructions pertaining to your version of Excel (see next slides)

Excel Add-Ins – Step 2

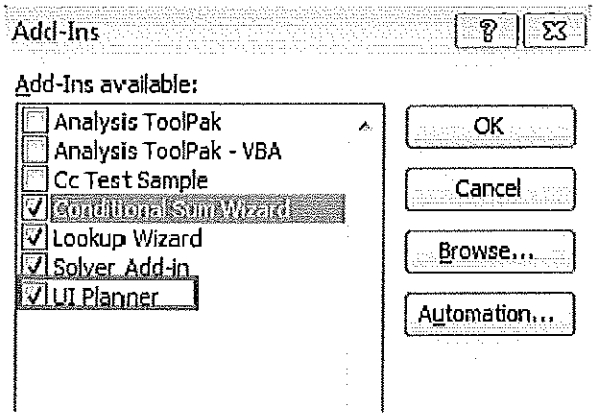
- **For Excel version 2010 or 2013**
  1. Open Excel (version 2010 or 2013)
  2. Click File > Options
  3. From the Excel Options window, select **Add Ins** then click **GO**
  4. From the Add Ins pop up, click **Browse**
  5. Excel will take you to the location where the files should be (It will be empty)
  6. Navigate to your Windows Explorer session and copy the two Add-In files
  7. Navigate to your Excel session and paste the two files into the 'AddIns' folder Excel has selected for you

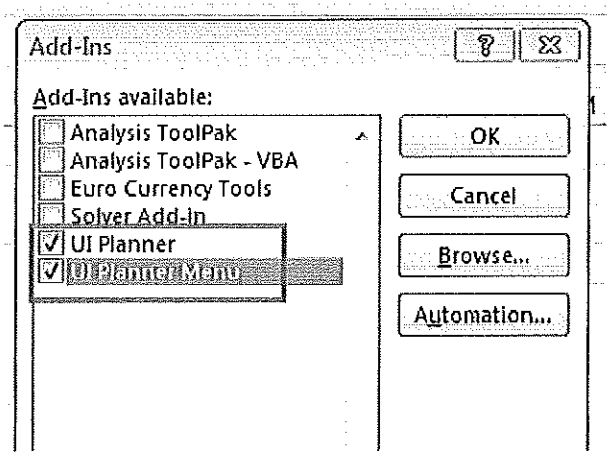




Excel Add-Ins – Step 2 (continued)

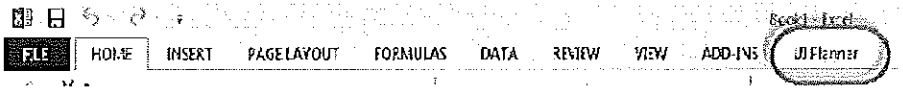
- **For Excel version 2003 or 2007**
  1. Open Excel
  2. From the menu bar, select Tools > **Add Ins**
  3. From the Add Ins pop up, click **Browse**
  4. Excel will take you to the location where the files should be (It will be empty)
  5. Navigate to your Windows Explorer session and copy one Add In file UIPlanner.xla
  6. Navigate to your Excel session and paste the file into the 'AddIns' folder Excel has selected for you





Excel Add-Ins – Step 3

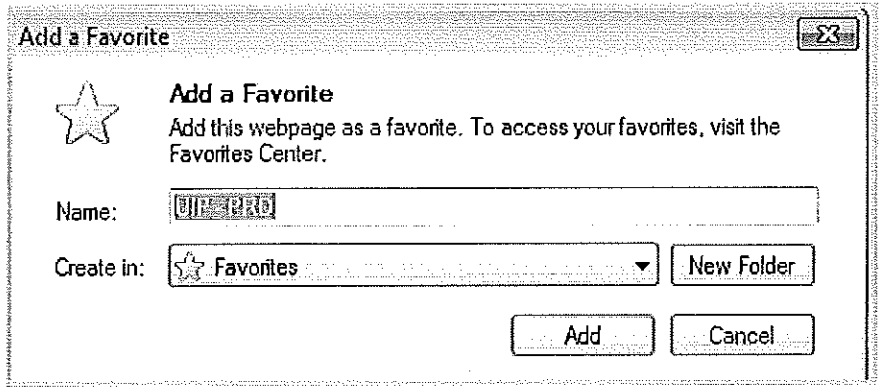
Confirm the Add-In was installed



- ***For Excel 2003 or 2007***
  - Click 'Tools' menu
  - Select 'Add-Ins'
  - Confirm 'UI Planner' is checked

- ***For Excel 2010 or 2013***
  - Click File > Options > Add-Ins > GO
  - Confirm 2 UIPlanner Add-In files are checked

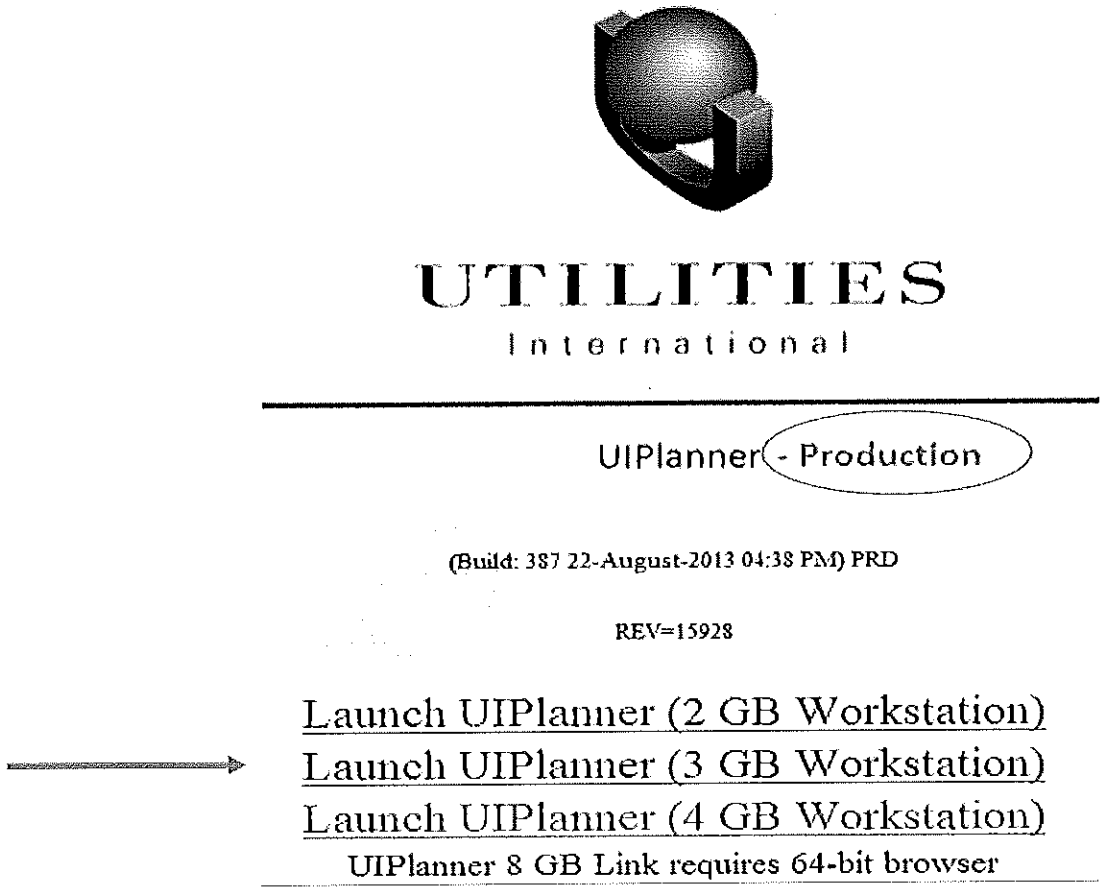
  - New 'UI Planner' Menu option appears



UIPlanner Log In

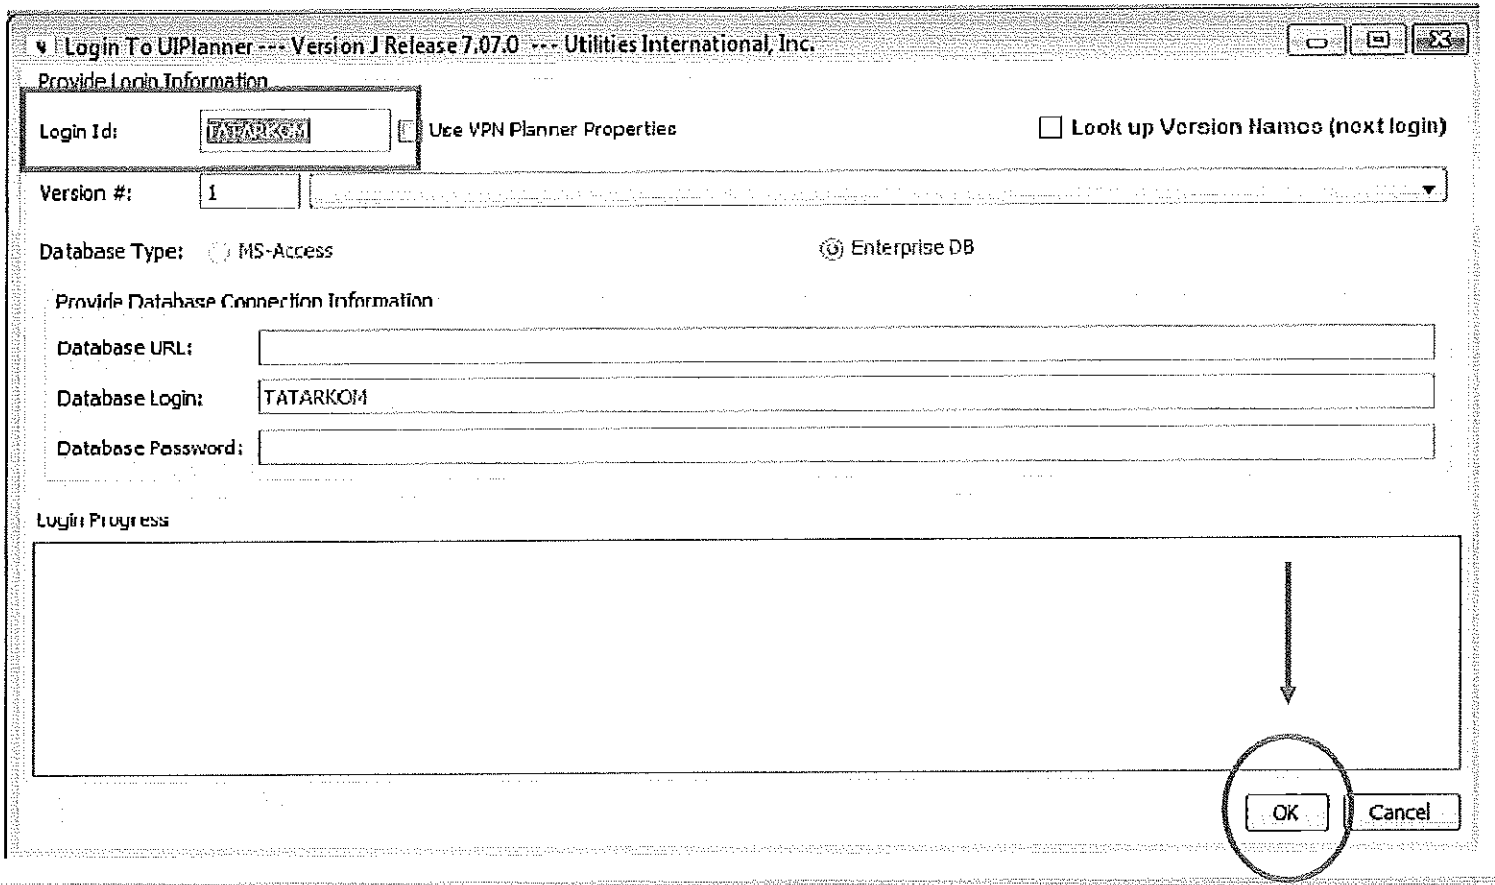
1. • Enter the link on the browser line
   - http://wuiplanner01d:8080/planner/ - Development
   - http://wuiplanner01t:8080/planner/ - Test
   - http://wuiplanner01p:8080/planner/ - Production

- Add to Favorites



UIPlanner Log In

2



- After entering the link, the UIPlanner software main screen will display
- Click on (3 GB or 4 GB Workstation)

UIPlanner Log In

4

- User Login ID will display
  - UIPlanner has single sign on capability and authenticates on your network login ID
- Click OK

UIPlanner Security

UIPlanner Security

- UIPlanner security will be established using the Financial Accountability Model hierarchy (ZBWCAM0000) and granted at the node level within each business unit/department

- Multiple roles or levels of security will be granted

  - **Budget Security**
    - Controls access to Budget-specific features and data
    - Includes Application Rights, which control access to screens and tools, and Cost Center Rights which limit access to data based on the user's context within a "Center" hierarchy

  - **Model Security**
    - Controls access to create and delete system-wide model related objects (e.g. Entities, Attributes) and administrative tools (e.g. Manage Menus, Archive)

Key UIPlanner Security Roles

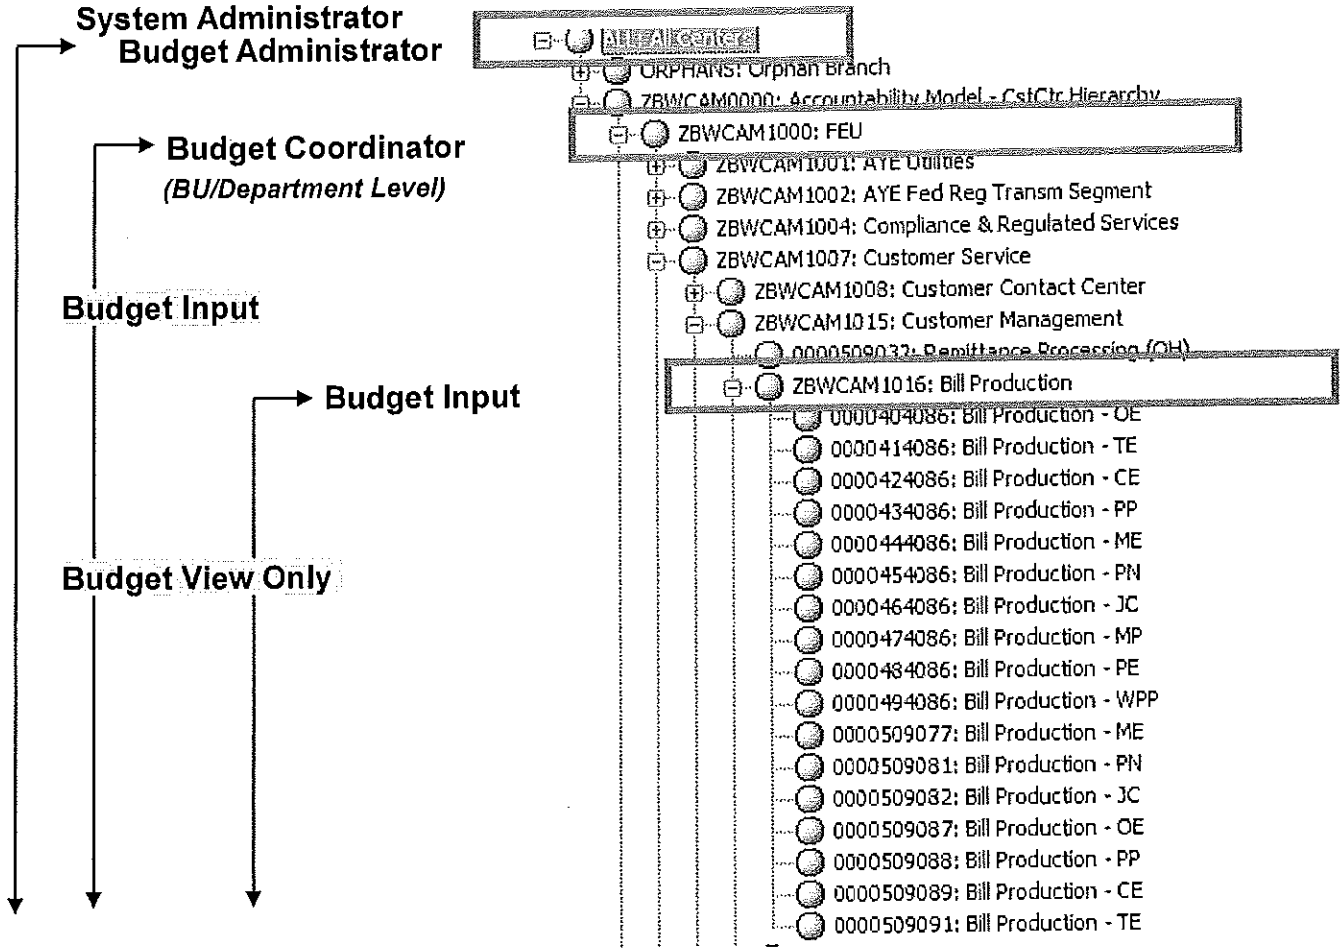
- **System Administrator:**
  - Centralized group that will manage and maintain both B2 and Financial Model
  - Individuals will have all rights to system and can perform functions the average user can not, such as: system configuration, bounce server, deploy new releases

- **Budget Administrator**
  - Centralized group that will manage and maintain B2 system
  - Individuals will have rights to system and can perform all system, business and process functions
    Examples include creating budget scenarios, running interfaces, process budget/forecast close, administer security, system admin locking, maintaining datasets, global assumptions, etc.

- **Budget Coordinator**
  - Individuals having rights to their entire business unit or department
  - Access to all user functions such as viewing and validating individual employee labor data, allocating labor and non labor, project planning, create budget group budget items, budget approval/center locking, and publish reports for their respective areas

- **Budget Input**
  - Individuals having rights to either their entire business unit or department or a specific group or center
  - Individuals will be granted access to all basic budget functions but will not be able to view individual employee labor data, create budget group budget items, and center lock

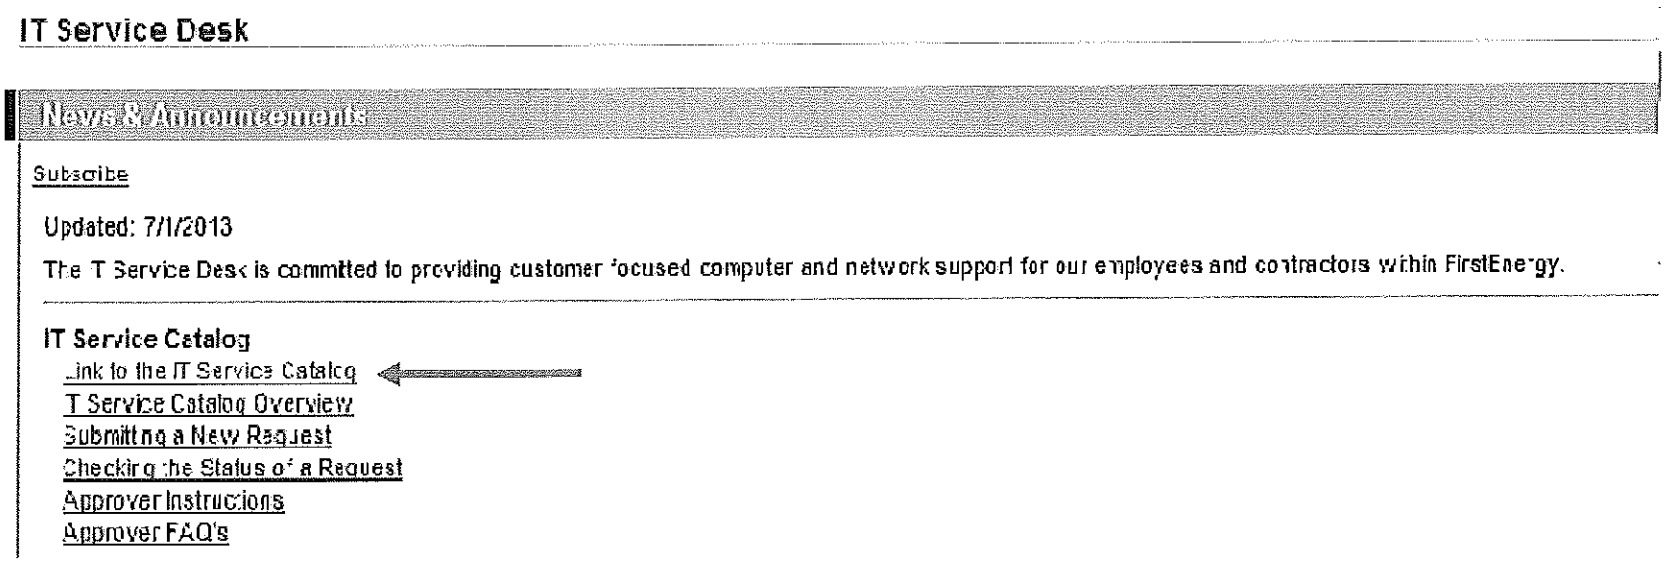
- **Budget View Only**
  - Individuals can only view published results and view reports



Key UIPlanner Security Roles

- **Budget Coordinator / Model Input**
  - Individuals responsible for both managing labor and other than labor functions for their area and has responsibility for key model inputs

- **Model Administrator**
  - Individuals having rights to the financial model and can perform all model functions

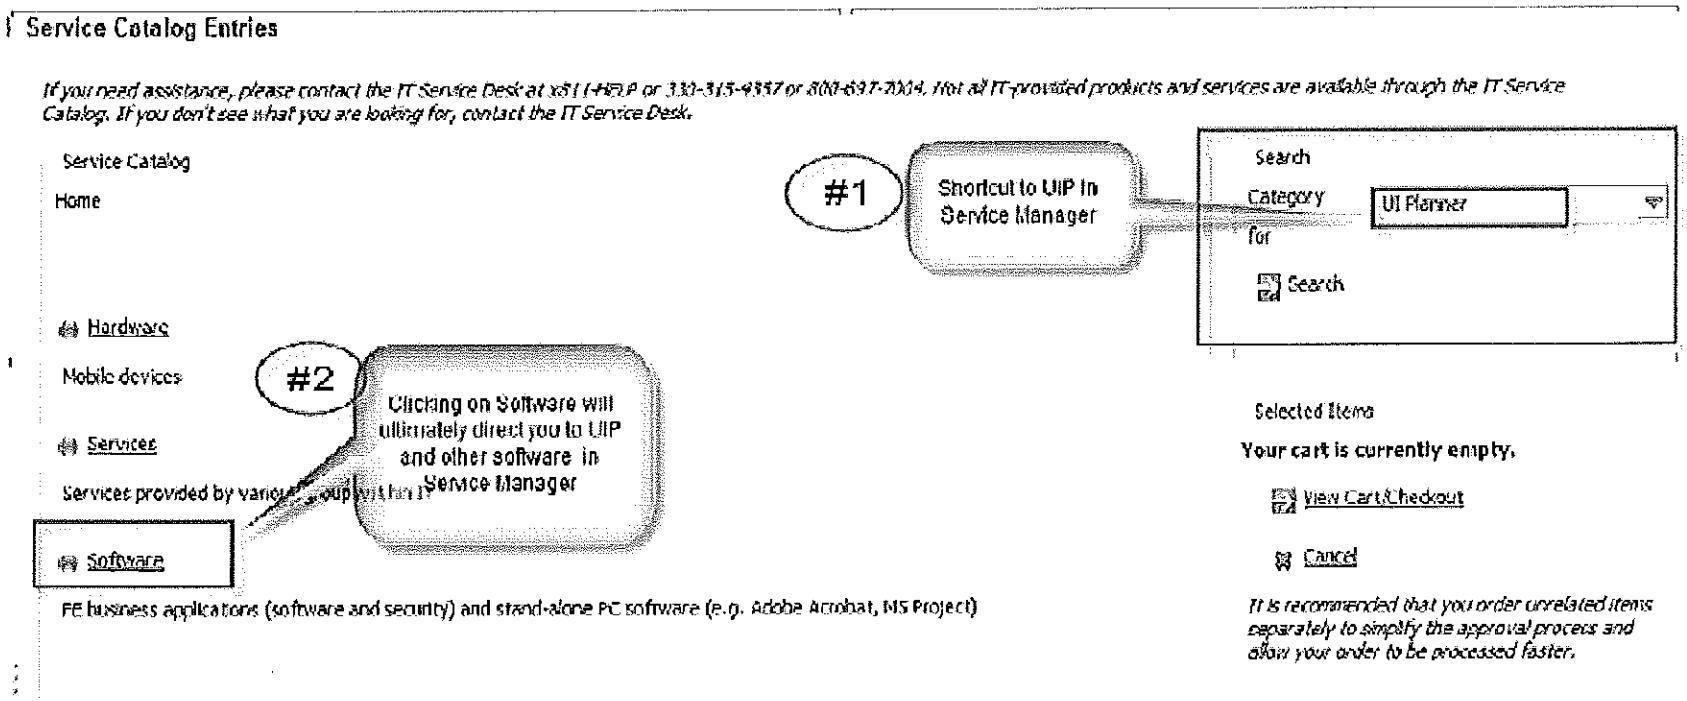


Cost Center Hierarchy and Security

- Budget Security will be established using the Financial Accountability Model hierarchy and granted at the node level within each business unit/department
- Multiple roles or levels of security will be granted

UIPlanner Security Requests

- **UIPlanner Security requests will be managed via the IT Service Catalog**
  - Security requests include: establishing new security, changing security, and removing security for either data collection or financial modeling
  - This process is used for both employees and contractors
- **The IT Service Catalog can be accessed in one of two ways via the portal:**
  1. Path: Services and Support>Work Related>IT Service Desk>Link to the IT Service Catalog
  2. IT Service Catalog can also be accessed by typing 'ITcatalog' into the Internet Explorer Address Bar



How to Request UIPlanner Security

- **To request UIPlanner security for data collection or financial modeling perform the following processes once in the IT Service Catalog:**
  - Search for UIPlanner by selecting "UIPlanner" in the Category field of the Search (see #1 below)

    OR

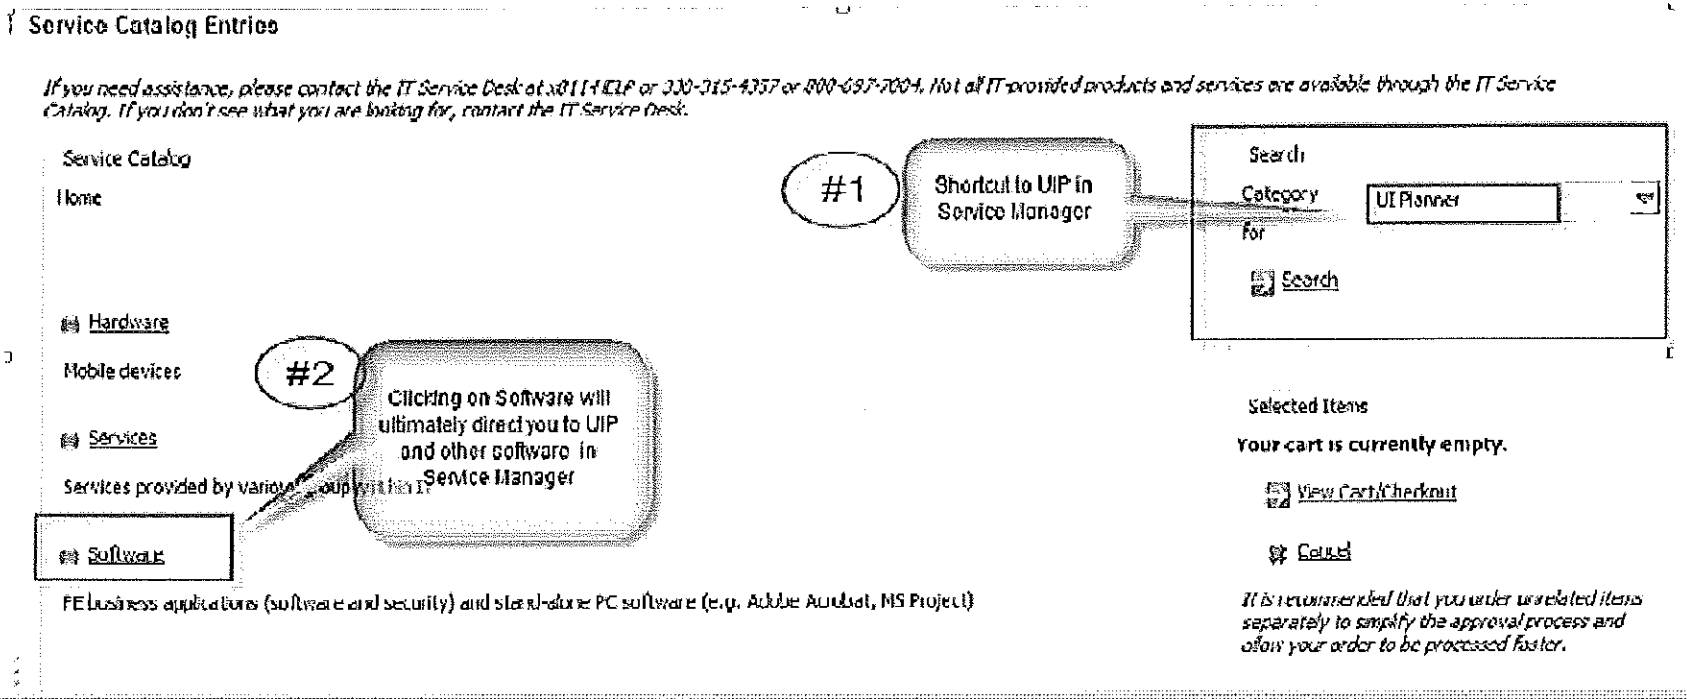
    Navigate to

    Software>FE Business Applications>Corporate Business Applications>Finance Business Applications>UIPlanner
  - Select UIPlanner – Add/Change Access (see #2 below)
  - Follow instructions on form
  - For further information on UIPlanner security, refer to the UIPlanner Security Management Policy located at: Portal >Communities> Finance> Policies> FiT

Requesting or Changing User Security

After completing the form

1. Click "add to cart". A message box will appear that it has been added.
2. Click "view cart/checkout" when finished.
3. The request will be routed for approval.
4. To view the status of the request, follow the links on the left of the screen



Removing UIPlanner Security

- **To Remove UIPlanner security for data entry and/or financial modeling perform the following process:**
  - Search for UIPlanner by selecting "UIPlanner" in the Category field of the Search (see #1 below)

    OR

    Navigate to

    Software>FE Business Applications>Corporate Business Applications>Finance Business Applications>UIPlanner (see #2 below)
  - Select UIPlanner – Remove Access
  - Follow instructions on form
  - For further information on UIPlanner security, refer to the UIPlanner Security Management Policy located at: Portal >Communities> Finance> Policies> FiT

Removing UIPlanner Security

After completing the form

1. Click "add to cart"
2. The request will be routed for approval.
3. To view the status of the request, follow the links on the left of the screen

Obtaining Help

- **IT Service Catalog help is available on the on the IT Service Desk Portal page as well as contacting the IT Service Desk**
