Objective

Everywhere I find there are people with business impacting, and often cool problems to solve. Don't sell your skill-set. Sell a solution. This involves using the tools in your current skill-set, research into new technologies, and *most* importantly putting something useful in front of your customer's face that they are comfortable and happy with.

Through affinity and luck, I've worked on projects that touched all areas of the business, including Customer Relationship Management (CRM), Customer Information Systems (CIS), Business-To-Business (B2B), Master Data Management (MDM), Business Intelligence, and Energy Trading and Risk Management (ETRM).

EXPERIENCE

Vista Energy, Houston, Texas
Vice President, Technology

June 2012 – Present

Independent of project-work, day-to-day responsibilities include:

- Hold weekly meetings with leadership team to prioritize upcoming IT projects. Special meetings are held each quarter for new initiatives as well as operational projects (i.e. wants and needs) for the next quarter.
- Work with major vendors such as Microsoft for Windows Azure and mobile device management, Amazon for EC2 and AWS services. Others include CDW, B&H, Sync-Fusion, EC Infosystems, Gill Digital.

Sales Agent Tablet Application (Codename: *Courier*)

Technical Environment: .NET 4.5, Windows 8/RT, SQLite, WCF

In the WY / NE market, customers can only enroll through a special 3-week period in which all customers are eligible. Unique profiles are released to all parties, so suppliers compete by pricing all 200k customers and selling customized quotes.

In 6 weeks I worked closely with our Program Director to meet these challenges:

- Sync 200k customer records from the Utility's list. Up-to-date pricing and customer status needed to be downloaded daily
- Capture audio recordings of customer verification, geo-location, ink signature and PDF generation of Service Agreement forms. PDF documents needed to be locked and time-stamped at close of sale
- Provide web service using WCF that was fast, asynchronous, and *always-on*. All enrollment data, audio-files and PDF documents would go through this
- Provide real-time KPI dashboard of incoming enrollments so that our operations team could assist in custom sales and assist with disputes. This often required pulling audio-recordings and responding to the utility with same-day turnaround.

Aging Reconciliation

Technical Environment: SQL 2008, Excel VBA, SSRS

For the 2012 audit, we provided a dynamic Aging Report for **Gainer Donnelly LLP**. Vista previously attempted to provide an aging report that would receive sign-off by the auditors but never could due to lack of accuracy and the ability to verify it against the Aging Report provided by PG&E (Pacific Gas and Electric) Utility.

- Analysts could run customer aging as of any date and group AR transactions into chronological buckets over time.
- Auditors confirmed the accuracy by tying it directly with the Aging Report from PG&E, as well as comparing total invoices per period against supply-side revenue, and total payments against bank deposits.
- This new reporting capability has been augmented and used as a tool to rigorously manage our bad debt going forward.

Spark Energy, Houston, Texas
