Litigation Involving Seller

Threatened Litigation

VALIDITY OF AGREEMENT BETWEEN THE MUNICIPAL AUTHORITY OF THE CITY OF MCKEESPORT AND THE ELIZABETH TOWNSHIP SANITARY AUTHORITY DATED JUNE 18, 2008

Pending/Recently Resolved Litigation

1. North Versailles Township Sanitary Authority and Frank Pearsol, Plaintiffs vs. The Municipal Authority of the City of McKeesport, et al., Defendants, Docket No. GD14-002075, In the Court of Common Pleas of Allegheny County, PA, Civil Division, Complaint - Declaratory Judgment

2. Galway Bay Corporation vs. The Municipal Authority of the City of McKeesport, In the Court of Common Pleas of Allegheny County, PA, Civil Division Docket Nos. GD14-8507, GD14-8508 and GD14-8509

3. Liberty Mutual Insurance Co. vs. The Municipal Authority of the City of McKeesport, No. 2015- In the United States District Court for the Western District of Pennsylvania

4. Michael Sprung vs. The Municipal Authority of the City of McKeesport, Docket No. MJ-05213-CV-196-2015

5. Notice of Appeal of the Municipal Authority of the City of McKeesport (MACM) for Alleged Violations of Pennsylvania Clean Streams Law, Act 394, Approved June 22, 1937, P.L. 1987, Section 201 and 2012, as Amended; Allegheny County Health Department Rules and Regulations, Article Xiv, "Sewage Management", Sections 1404.1 and 1404.2; And Part C(C)(2)(Ii)(C) Of NPDES Permit No. Pa 0026913 Issued To MACM On April 22, 2008, Contained In Correspondence From Allegheny County Health Department Dated November 14, 2014

6. The Authority has entered into a settlement offer and consent order with the U.S. Securities and Exchange Commission concerning claimed violations of the Authority's obligations to provide timely and transparent disclosure of Authority financial information to prospective purchasers of Authority bonds. The consent order recites that the Authority failed to affirmatively disclose its prior failures to provide timely disclosure in bond documents under its written continuing disclosure obligations per SEC rule. The consent order requires the Authority to undertake affirmative steps going forward to implement procedures to assure timely financial disclosure for bond offering purposes and to report its compliance activities to the SEC. There are no monetary penalties contained in the order. The Authority neither admits nor denies the violations described in the settlement offer and consent order.

The consent order resulted from the Authority's voluntary participation in the SEC's Municipalities Continuing Disclosure Cooperation (MCDC) Initiative."

PUBLIC UTILITY CODE (66 PA.C.S.) - VALUATION OF ACQUIRED WATER AND WASTEWATER SYSTEMS FOR RATEMAKING PURPOSES

Act of Apr. 14, 2016, P.L. 76, No. 12 Cl. 66
Session of 2016
No. 2016-12

HB1326

AN ACT

Amending Title 66 (Public Utilities) of the Pennsylvania Consolidated Statutes, in rates and distribution systems, providing for valuation of acquired water and wastewater systems for ratemaking purposes.

The General Assembly of the Commonwealth of Pennsylvania hereby enacts as follows:

Section 1. Title 66 of the Pennsylvania Consolidated Statutes is amended by adding a section to read:

§ 1329. Valuation of acquired water and wastewater systems.

(a) Process to establish fair market value of selling utility.--Upon agreement by both the acquiring public utility or entity and the selling utility, the following procedure shall be used to determine the fair market value of the selling utility:

(1) The commission will maintain a list of utility valuation experts from which the acquiring public utility or entity and selling utility will choose.

(2) Two utility valuation experts shall perform two separate appraisals of the selling utility for the purpose of establishing its fair market value.

(3) Each utility valuation expert shall determine fair market value in compliance with the Uniform Standards of Professional Appraisal Practice, employing the cost, market and income approaches.

(4) The acquiring public utility or entity and selling utility shall engage the services of the same licensed engineer to conduct an assessment of the tangible assets of the selling utility. The assessment shall be incorporated into the appraisal under the cost approach required under paragraph (3).

(5) Each utility valuation expert shall provide the completed appraisal to the acquiring public utility or entity and selling utility within 90 days of execution of the service contract.

(b) Utility valuation experts.--

(1) The utility valuation experts required under subsection (a) shall be selected as follows:

(i) one shall be selected by the acquiring public utility or entity; and

(ii) one shall be selected by the selling utility.

(2) The utility valuation experts shall not:

(i) derive any material financial benefit from the sale of the selling utility other than fees for services rendered; or

(ii) be an immediate family member of a director, officer or employee of either the acquiring public utility, entity or selling utility within a 12-month period of the date of hire to perform an appraisal.

(3) Fees paid to utility valuation experts may be included in the transaction and closing costs associated with acquisition by the acquiring utility or entity. Fees eligible for inclusion may be of an amount not exceeding 5% of the fair market value of the selling utility or a fee approved by the commission.

(c) Ratemaking rate base.--The following apply:

(1) The ratemaking rate base of the selling utility shall be incorporated into the rate base of:

(i) the acquiring public utility during the acquiring public utility's next base rate case; or

(ii) the entity in its initial tariff filing.

(2) The ratemaking rate base of the selling utility shall be the lesser of the purchase price negotiated by the acquiring public utility or entity and selling utility or the fair market value of the selling utility.

(d) Acquisitions by public utility.--The following apply:

(1) If the acquiring public utility and selling utility agree to use the process outlined in subsection (a), the acquiring public utility shall include the following as an attachment to its application for commission approval of the acquisition filed pursuant to section 1102 (relating to enumeration of acts requiring certificate):

(i) Copies of the two appraisals performed by the utility valuation experts under subsection (a).

(ii) The purchase price of the selling utility as agreed to by the acquiring public utility and selling utility.

(iii) The ratemaking rate base determined pursuant to subsection (c)(2).

(iv) The transaction and closing costs incurred by the acquiring public utility that will be included in its rate base.

(v) A tariff containing a rate equal to the existing rates of the selling utility at the time of the acquisition and a rate stabilization plan, if applicable to the acquisition.

(2) The commission shall issue a final order on an application submitted under this section within six months of the filing date of an application meeting the requirements of subsection (d)(1).

(3) If the commission issues an order approving the application for acquisition, the order shall include:

(i) The ratemaking rate base of the selling utility, as determined under subsection (c)(2).

(ii) Additional conditions of approval as may be required by the commission.

(4) The tariff submitted pursuant to subsection (d)(1)(v) shall remain in effect until such time as new rates are approved for the acquiring public utility as the result of a base rate case proceeding before the commission. The acquiring public utility may collect a distribution system improvement charge during this time, as approved by the commission under this chapter.

(5) The selling utility's cost of service shall be incorporated into the revenue requirement of the acquiring public utility as part of the acquiring utility's next base rate case proceeding. The original source of funding for any part of the water or sewer assets of the selling utility shall not be relevant to determine the value of said assets.

(e) Acquisitions by entity.--An entity shall provide all the information required by subsection (d)(1) to the commission as an attachment to its application for a certificate of public convenience filed pursuant to section 1102.

(f) Postacquisition projects.--The following apply:

(1) An acquiring public utility's postacquisition improvements that are not included in a distribution improvement charge shall accrue allowance for funds used during

construction after the date the cost was incurred until the asset has been in service for a period of four years or until the asset is included in the acquiring public utility's next base rate case, whichever is earlier.

(2) Depreciation on an acquiring public utility's postacquisition improvements that have not been included in the calculation of a distribution system improvement charge shall be deferred for book and ratemaking purposes.

(g) Definitions.--The following words and phrases when used in this section shall have the meanings given to them in this section unless the context clearly indicates otherwise:

"Acquiring public utility." A water or wastewater public utility subject to regulation under this title that is acquiring a selling utility as the result of a voluntary arm's-length transaction between the buyer and seller.

"Allowance of funds used during construction." An accounting practice that recognizes the capital costs, including debt and equity funds that are used to finance the construction costs of an improvement to a selling utility's assets by an acquiring public utility.

"Entity." A person, partnership or corporation that is acquiring a selling utility and has filed or whose affiliate has filed an application with the commission seeking public utility status pursuant to section 1102.

"Fair market value." The average of the two utility valuation expert appraisals conducted under subsection (a)(2).

"Ratemaking rate base." The dollar value of a selling utility which, for postacquisition ratemaking purposes, is incorporated into the rate base of the acquiring public utility or entity.

"Rate stabilization plan." A plan that will hold rates constant or phase rates in over a period of time after the next base rate case.

"Selling utility." A water or wastewater company located in this Commonwealth, owned by a municipal corporation or authority that is being purchased by an acquiring public utility or entity as the result of a voluntary arm's-length transaction between the buyer and seller.

"Utility valuation expert." A person hired by an acquiring public utility and selling utility for the purpose of conducting an economic valuation of the selling utility to determine its fair market value.

Section 2. This act shall take effect in 60 days.

APPROVED--The 14th day of April, A.D. 2016.

Public Utility Code 66 Section 1329

July 21, 2016

HARRISBURG – The Pennsylvania Public Utility Commission (PUC) today adopted a **Tentative Implementation Order** that addresses amendments to Chapter 13 of the Pennsylvania Public Utility Code (Code), which Governor Wolf signed into law April, as Act 12 of 2016. That legislation added a new section to the Code – Section 1329 – providing for significant changes in the way the Commission examines acquisitions of municipal and authority-owned water and wastewater systems by investor-owned utilities.

The Commission voted 4-0 to adopt tentative interim procedures and guidelines necessary to begin implementation of Section 1329, including a proposed timeline for adjudications. The Commission has also invited comments from interested parties regarding the tentative proposals, along with any additional recommendations. Comments are due within 20 days.

Section 1329 is intended to address concerns about previous mechanisms for valuing municipal or authority-owned property, and provides a process to determine the fair market value of a municipal or authority-owned water or wastewater system that is acquired by a public utility.

The Pennsylvania Public Utility Commission balances the needs of consumers and utilities; ensures safe and reliable utility service at reasonable rates; protects the public interest; educates consumers to make independent and informed utility choices; furthers economic development; and fosters new technologies and competitive markets in an environmentally sound manner.

For recent news releases and video of select Commission proceedings or more information about the PUC, visit our website at **www.puc.pa.gov**. Follow the PUC on Twitter – @PA_PUC for all things utility. "Like" Pennsylvania Public Utility Commission on Facebook for easy access to information on utility issues.

Implementation of Section 1329 of the Public Utility Code — M-2016-2543193

TENTATIVE IMPLEMENTATION ORDER

BY THE COMMISSION:

On April 14, 2016, Governor Wolf signed into law Act 12 of 2016, which amended Chapter 13 of the Pennsylvania Public Utility Code (Code) by adding a new Section 1329 to the Code and which became effective June 13, 2016. 66 Pa. C.S. § 1329.

In particular, Section 1329 of the Code addresses the valuation of the assets of municipally or authority-owned water and wastewater systems that are acquired by investor-owned water and wastewater utilities or entities. For ratemaking purposes, the valuation will be the lesser of the fair market value or the negotiated purchase price. Section 1329 also allows the acquiring entity's post-acquisition improvement costs not recovered through a distribution system improvement charge to be deferred for book and ratemaking purposes. This Tentative Implementation Order proposes the procedures and guidelines to address the application process and carry out the ratemaking provisions of

Section 1329 and shall be in effect in the interim until a Final Implementation Order is issued.

Background

Throughout the Commonwealth, there are a number of water and wastewater systems owned by municipal corporations or authorities. For these systems, sale to an investor-owned public utility or entity can facilitate necessary infrastructure improvements and ensure the continued provision of safe, reliable service to customers at reasonable rates. However, current law dictated by 66 Pa. C.S. § 1311(b) of the Code relating to the valuation of utility property discourages these acquisitions because the value of the property is defined as the original cost of construction less accumulated depreciation rather than the acquisition cost. Systems that are greatly depreciated or that were constructed using grants or contributions in aid of construction could have valuations so low that sales of the systems would be less advantageous or could cause financial hardships to the municipal corporations and authorities.

To remedy this situation, Section 1329 establishes an alternative process for ratemaking purposes for valuating certain water or wastewater systems. Section 1329 provides a process to determine the fair market value of a water or wastewater system of a municipality or authority that is acquired by a public utility or entity.

As such, Section 1329 provides for significant changes in the way the Commission examines and approves acquisitions of municipal and authority systems. This Tentative Implementation Order proposes the procedures and guidelines necessary to begin implementation of Section 1329. We invite interested parties to provide comment on our tentative proposals and to offer additional recommendations worth consideration.

Discussion

Section 1329 mitigates the risk that a utility will not be able to fully recover its investment when water and wastewater assets are acquired from a municipality or authority. Section 1329 enables a public utility or entity to utilize fair market valuation when acquiring water and wastewater systems located in the Commonwealth that are owned by a municipal corporation or authority. A fair market valuation is not tied to the original cost of construction minus the accumulated depreciation. Rather, a fair market valuation allows consideration of cost, market, and income approaches in valuing the system. Section 1329(a)(3). In sum, Section 1329 allows enhanced rate base adjustments based upon the lesser of fair market value of the acquired assets or the negotiated price. We shall address the subsections of Section 1329 *in seriatim.*

Section 1329(a) – Process to establish fair market value of selling utility

Section 1329(a) establishes a voluntary process whereby the acquiring public utility or entity (buyer) and the selling municipal corporation or authority (seller) may choose to have the fair market value of the assets established through independent appraisals conducted by a utility valuation expert (UVE). Section 1329(g) limits the term "selling utility" to a Pennsylvania water or wastewater company owned by a municipal corporation or authority. Specifically, Section 1329(a) provides:

> Upon agreement by both the acquiring public utility or entity and the selling utility, the following procedure shall be used to determine the fair market value of the selling utility:
>
> (1) The commission will maintain a list of utility valuation experts from which the acquiring public utility or entity and selling utility will choose.
>
> (2) Two utility valuation experts shall perform two separate appraisals of the selling utility for the purpose of establishing its fair market value.
>
> (3) Each utility valuation expert shall determine fair market value in compliance with the Uniform Standards of

> Professional Appraisal Practice, employing the cost, market and income approaches.
>
> (4) The acquiring public utility or entity and selling utility shall engage the services of the same licensed engineer to conduct an assessment of the tangible assets of the selling utility. The assessment shall be incorporated into the appraisal under the cost approach required under paragraph (3).
>
> (5) Each utility valuation expert shall provide the completed appraisal to the acquiring public utility or entity and selling utility within 90 days of execution of the service contract.

As stated previously, both the seller and buyer must agree to the fair market valuation procedure before it can be utilized. The Commission is directed to maintain a list of UVEs to be utilized by the buyer and the seller. The UVEs will each prepare an appraisal of the assets, and the average of those appraisals will be used as the fair market value of the asset. To this end, the Commission will invite interested persons and entities to file for consideration as a UVE, similar to our process for Conservation Service Providers.[1] Via Secretarial Letter dated July 21, 2016, at this docket number, prospective UVEs are directed to complete the Application Form for Registration as a Utility Valuation Expert, which is attached to this Tentative Implementation Order and is available on the Commission's website.

To be included on the Commission's registry, UVEs must establish their qualifications. Applicants must be able to demonstrate that they have the education and experience necessary for providing utility valuations. Applicants must also acknowledge a fiduciary duty to provide a thorough, objective, and fair valuation. Applicants will be expected to demonstrate compliance with Pennsylvania laws and to demonstrate their financial and technical fitness, such as professional licenses, technical certifications, and/or names of current or past clients with a description of dates and types of services

[1] *See Implementation of Act 129 of 2008 Phase 2 – Registry of Conservation Service Providers*, Docket No. M-2008-2074154 (Tentative Order entered April 9, 2015) (Final Order entered May 8, 2015).

provided by the Applicant,. In order to maintain a list of UVEs in good standing, the Commission will require applicants to renew their applications biennially. Consistent with the Commission's treatment of the registry of Conservation Service Providers, we shall establish a fee of $125 for initial UVE applications and a fee of $25 for renewal and/or updates.

The two UVEs shall perform two separate appraisals of the selling utility for the purpose of establishing its fair market value. Each UVE shall determine fair market value in compliance with the Uniform Standards of Professional Appraisal Practice, employing the cost, market and income approaches.

In addition, the buyer and seller shall engage the services of the same licensed engineer to conduct an assessment of the tangible assets of the selling utility. Section 1329(a)(4). The assessment shall be incorporated into the appraisal under the cost approach. The engineer's assessment must include the original cost, by year and major plant category, of used and useful plant in service and related accrued depreciation calculations pursuant to 66 Pa. C.S. § 1311.

Specifically, Section 1311(b) states:

> **(b) Method of valuation.**--The value of the property of the public utility included in the rate base shall be the original cost of the property when first devoted to the public service less the applicable accrued depreciation as such depreciation is determined by the commission.

The engineer's assessment shall be developed in accordance with Commission procedures and practices that conform with the National Association of Regulatory Utility Commissioners System of Accounts for water and wastewater systems. The approach shall consider the following to establish the cost assessment:

- An inventory of the used and useful utility plant assets to be transferred. Identify separately any utility plant that is held for future use.
- A list of all non-depreciable property such as land and rights-of-way.
- The inventory is to be developed from available records, maps, work orders, debt issue closing documents funding construction projects, and other sources to ensure an accurate listing of utility plant inventory by utility account.
- An estimate of years of construction or acquisition for the utility plant by year and account.
- The use of current prices restated as costs to the Original Cost price level including related accrued depreciation. Where cost data is not available, the use of appropriate cost trend indices in accordance with recognized industry practices.
- Costs for utility plant compiled by utility account by year of installation.
- A calculation of accumulated depreciation by estimated service life applicable for comparable utility plant.
- A report explaining the process for developing the cost assessment.

Section 1329(b) – Utility valuation experts

Section 1329(b) provides guidelines for the selection and fees to be paid to the aforementioned UVEs. Section 1329(b) provides:

> (1) The utility valuation experts required under subsection (a) shall be selected as follows:
>
> > (i) one shall be selected by the acquiring public utility or entity; and
> >
> > (ii) one shall be selected by the selling utility.
>
> (2) The utility valuation experts shall not:
>
> > (i) derive any material financial benefit from the sale of the selling utility other than fees for services rendered; or
> >
> > (ii) be an immediate family member of a director, officer or employee of either the acquiring public utility, entity or selling

utility within a 12-month period of the date of hire to perform an appraisal.

(3) Fees paid to utility valuation experts may be included in the transaction and closing costs associated with acquisition by the acquiring utility or entity. Fees eligible for inclusion may be of an amount not exceeding 5% of the fair market value of the selling utility or a fee approved by the commission.

Important in this subsection is the UVEs' fee limitation of 5% of the fair market value of the selling utility **or a fee approved by the Commission**. Applications will be required to contain ample justification both within the application itself as well as the direct testimony accompanying the application regarding how the UVEs' fee was derived. The Administrative Law Judge will make a recommendation on the fee based upon the record as a part of the adjudication.

Section 1329(c) – Ratemaking rate base

Section 1329(c) provides guidelines regarding the rate base of the selling utility and the acquiring utility/entity for ratemaking purposes. Generally, Section 1329(c) allows for the rate base of the selling utility to be incorporated into the rate base of the acquiring utility during the acquiring utility's next rate base rate case or the initial tariff filing of an entity. Specifically, Section 1329(c) provides:

(1) The ratemaking rate base of the selling utility shall be incorporated into the rate base of:

(i) the acquiring public utility during the acquiring public utility's next base rate case; or

(ii) the entity in its initial tariff filing.

(2) The ratemaking rate base of the selling utility shall be the lesser of the purchase price negotiated by the acquiring public utility or entity and selling utility or the fair market value of the selling utility.

As stated above, the rate base to be incorporated will be the lesser of the purchase price or the fair market value of the seller. The acquiring entity need not be a public utility. Under Section 1329(g), a person, partnership or corporation that is not currently a public utility may acquire a selling utility if the entity or its affiliate has filed an application for a certificate of public convenience (CPC) with the Commission. The application for a CPC may be filed simultaneously but no later than the same day as the application for Section 1329 acquisition.[2] Due to the compressed review period provided for the Section 1329 application, if a Section 1102 application is required, we strongly encourage that it be filed in advance of the Section 1329 application to the extent possible, and consolidated consideration will be given to the extent possible.

Section 1329(d) – Acquisitions by public utility

Section 1329(d) provides guidelines on acquisitions by public utilities as well as guidelines on the critical attachment to the Section 1102 application.[3] Once again, the acquiring public utility and the selling utility must agree to utilize the process outlined in the aforementioned Section 1329(a). Section 1329(d) provides:

> (1) If the acquiring public utility and selling utility agree to use the process outlined in subsection (a), the acquiring public utility shall include the following as an attachment to its application for commission approval of the acquisition filed pursuant to section 1102 (relating to enumeration of acts requiring certificate):
>
> > (i) Copies of the two appraisals performed by the utility valuation experts under subsection (a).
> >
> > (ii) The purchase price of the selling utility as agreed to by the acquiring public utility and selling utility.

---

[2] *See*, 66 Pa. C.S. § 1329(e). Filing requirements for obtaining a CPC as a water or wastewater public utility can be found at 52 Pa. Code § 3.501. The Commission has the necessary latitude to consolidate and concurrently adjudicate the Section 1102 CPC and Section 1329 Applications. *See also* 52 Pa. Code § 5.81 (consolidation of proceedings involving common question of law or fact).

[3] A Section 1102 application is addressed under Section 1102 of the Code, 66 Pa. C.S. § 1102, and pertains to the enumeration of acts requiring a certificate.

(iii) The ratemaking rate base determined pursuant to subsection (c)(2).

(iv) The transaction and closing costs incurred by the acquiring public utility that will be included in its rate base.

(v) A tariff containing a rate equal to the existing rates of the selling utility at the time of the acquisition and a rate stabilization plan, if applicable to the acquisition.

(2) The commission shall issue a final order on an application submitted under this section within six months of the filing date of an application meeting the requirements of subsection (d)(1).

(3) If the commission issues an order approving the application for acquisition, the order shall include:

(i) The ratemaking rate base of the selling utility, as determined under subsection (c)(2).

(ii) Additional conditions of approval as may be required by the commission.

(4) The tariff submitted pursuant to subsection (d)(1)(v) shall remain in effect until such time as new rates are approved for the acquiring public utility as the result of a base rate case proceeding before the commission. The acquiring public utility may collect a distribution system improvement charge during this time, as approved by the commission under this chapter.

(5) The selling utility's cost of service shall be incorporated into the revenue requirement of the acquiring public utility as part of the acquiring utility's next base rate case proceeding. The original source of funding for any part of the water or sewer assets of the selling utility shall not be relevant to determine the value of said assets.

Section 1329(d)(2) requires the Commission to issue a final order on an application submitted under Section 1329 within six months of the filing date of an application meeting the requirements of subsection (d)(1). For the Commission to meet the six-month deadline, normal time lines must be compressed. A table establishing the necessarily compressed time line is provided below.

Applications will not be accepted until they are shown to be complete. To assist applicants in the preparation of a full and complete filing, an Application Filing Checklist, which shall be attached to the completed application, may be found at the Commission's website and is attached to this Tentative Implementation Order.[4] Applications must be verified by an officer of the filing entity or entities pursuant to 52 Pa. Code § 1.36. Both the Application Filing Checklist and the previously discussed Application Form for Registration as a Utility Valuation Expert may be changed as the Commission deems necessary.

As noted on the Application Filing Checklist, applications are to contain the required two appraisals performed by separate UVEs and quantification of transaction and closing costs incurred by the acquiring public utility to be included in the rate base of the acquiring public utility. Section 1329(d)(1)(iv). Applications must address the plant in service and include a map of the service area. Applications must include information about the customers, utility plant in service, and the current safety, adequacy, reasonableness and efficiency of the system in accordance with the statutory requirements of Section 1501. 66 Pa. C.S. § 1501 .

Applications must address rates and provide a proposed tariff. Applications must address cost of service, including copies of the seller's most recently audited financial statements. Applications must include proof of compliance with applicable design, construction, and operation standards of the Department of Environmental Protection and/or the county health department. Applications also shall include a copy of the signed Asset Purchase Agreement. Each of these items is necessary to enable the Commission to make an informed decision regarding the merits of the application.

---

[4] The Application Filing Checklist – Water/Wastewater may be accessed from the Commissions website at http://www.puc.state.pa.us/filing_resources/water_online_forms.aspx and http://www.puc.pa.gov/filing_resources/issues_laws_regulations/section1329_applications.aspx as well as at this docket number.

In addition, due to the compressed six-month time frame for ruling on the application, written direct testimony must accompany the application. The testimony shall address and support the acquisition, the UVEs' appraisals, the UVEs' fee, and the purchase price. The testimony shall also describe the acquired system, explain the public interest served by the acquisition, and provide such other facts as may be relevant to the Commission's consideration of the application.

Upon review of the Section 1329 application and staff's determination that the filing is perfected and in full compliance with all items on the Application Filing Checklist, the Commission will notify the applicants of the actual accepted filing date, which will then commence the six-month time frame for the proceeding. Due process considerations require notification to the affected customers. When the application is published in a newspaper, the publication shall note that the period for filing protests shall be as soon as possible but no later than the last day of the protest period set forth in the *Pennsylvania Bulletin*. Accordingly, within seven (7) days of filing the application, the applicant shall file with the Commission: (1) proof of newspaper publication of the notification of the filing; and (2) a copy of the bill insert notifying the selling utility's customers of the proposed acquisition. The Secretary may impose additional notice requirements as may be warranted.

Section 1329(e) – Acquisitions by Entity

Section 1329(e) relates to acquisitions by an entity. An entity, defined as a person, partnership or corporation, can acquire a selling utility if it has requested from the Commission public utility status pursuant to Section 1102. An affiliate of an entity can also request public utility status pursuant to Section 1102. Importantly, the entity or its affiliate must file the Section 1329 application as an attachment to a Section 1102 application seeking public utility status. Acquisition applications filed by entities that have not yet filed a Section 1102 application for public utility status will be considered incomplete and will not be accepted until a complete Section 1102 application has been

received and accepted. If a Section 1102 application is required, we strongly encourage that it be filed in advance of the Section 1329 application to the extent possible, and consolidated consideration will be given to the extent possible. We also clarify that that the entity's initial tariff filing should contain rates "equal to the existing rates of the selling utility at the time of the acquisition" consistent with Section 1329(d)(1)(v) and Section 1329(e).

We acknowledge that there is some ambiguity in Section 1329. First, subsection (c)(1)(ii) could be construed to require that the "ratemaking rate base" be immediately incorporated into the entity's initial rates. However, subsections (e) and (d)(1)(v) could be construed together to require entities to file a tariff with rates equal to the existing rates of the selling utility. In the interest of equity, the Commission tentatively proposes that entities be required to file tariffs consistent with (d)(1)(v). This shall in no way inhibit the right of a newly certificated utility to incorporate the ratemaking rate base into its tariff via a Section 1308 proceeding.

The proponent of a rule or order in any Commission proceeding has the burden of proof, 66 Pa. C.S. § 332, and therefore, the applicant has the burden of proving that it is entitled to have the acquisition approved and must do so by a preponderance of the evidence, or evidence which is more convincing than the evidence presented by the other parties. *Se-Ling Hosiery v. Margulies*, 364 Pa. 45, 70 A.3d 854 (1950); *Samuel J. Lansberry, Inc. v. Pa. Public Utility Commission*, 578 A.2d 600 (Pa. Cmwlth. 1990).

Section 1329(f) – Post-acquisition projects

Section 1329(f) addresses the parameters of post-acquisition project accounting for ratemaking purposes. Specifically, Section 1329(f) provides:

> (1) An acquiring public utility's post-acquisition improvements that are not included in a distribution improvement charge shall accrue allowance for funds used during construction after the date the cost was incurred until the asset has been in service for a period of four

years or until the asset is included in the acquiring public utility's next base rate case, whichever is earlier.

(2) Depreciation on an acquiring public utility's post-acquisition improvements that have not been included in the calculation of a distribution system improvement charge shall be deferred for book and ratemaking purposes.

In our view, any of the acquiring utility's post-acquisition improvements that are not recovered through the distribution system improvement charge will be eligible for inclusion through an allowance for funds used during construction. The acquiring utility may accrue an allowance for funds used during construction until the asset has been in service for four years or until the asset is included in the acquiring utility's next rate base case, whichever is earlier.[5] Additionally, depreciation on the acquiring utility's post-acquisition improvements that has not been included in the calculation of a distribution system improvement charge will be deferred for book and ratemaking purposes. The acquiring utility will be required to keep proper accounting in separately and appropriately recording these amounts in its business records.

Section 1329(g) – Definitions

Section 1329(g) provides the following definitions:

"**Acquiring public utility.**" A water or wastewater public utility subject to regulation under this title that is acquiring a selling utility as the result of a voluntary arm's-length transaction between the buyer and seller.

"**Allowance of funds used during construction.**" An accounting practice that recognizes the capital costs, including debt and equity funds that are used to finance the construction costs of an improvement to a selling utility's assets by an acquiring public utility.

"**Entity.**" A person, partnership or corporation that is acquiring a selling utility and has filed or whose affiliate has filed an application

[5] We note that, upon issuance of a certificate of public convenience following a Section 1102 application, the "entity" will become a "public utility." Therefore, the Commission believes that the same subsequent rate treatment applicable to an acquiring public utility in this section should apply to acquiring entities.

with the commission seeking public utility status pursuant to section 1102.

"Fair market value." The average of the two utility valuation expert appraisals conducted under subsection (a) (2).

"Ratemaking rate base." The dollar value of a selling utility which, for post-acquisition ratemaking purposes, is incorporated into the rate base of the acquiring public utility or entity.

"Rate stabilization plan." A plan that will hold rates constant or phase rates in over a period of time after the next base rate case.

"Selling utility." A water or wastewater company located in this Commonwealth, owned by a municipal corporation or authority that is being purchased by an acquiring public utility or entity as the result of a voluntary arm's-length transaction between the buyer and seller.

"Utility valuation expert." A person hired by an acquiring public utility and selling utility for the purpose of conducting an economic valuation of the selling utility to determine its fair market value.

Time Line

Due to the six-month time line required by Section 1329, normal time lines must be compressed. In an effort to allow more time for drafting briefs, the exception period necessarily must be shortened. The table below shows the time line the Commission intends to use as a guideline and assumes that the last public meeting before the six-month deadline is 15 days prior to that deadline. Actual time required may be slightly more or less depending upon applicable circumstances, such as the proximity of the filing date of the application and prehearing conference notice in the *Pennsylvania Bulletin*, the availability of hearing dates and the complexity/length of the hearing, the intervention of weekends and holidays, the availability of scheduled public meetings, and any unforeseen or other events that impact due consideration of the application within the six-month period.

Application & Direct Testimony/Supporting Documentation Filed	Model Timeline
Application Accepted as Complete	Filing Date
Application and Prehearing Conference Notice Sent to Pennsylvania Bulletin	No Later than Day 5
Proof of Newspaper Publication and Copy of Bill Insert Notification Protest are due no later than Day 32	Day 7
Pennsylvania Bulletin Publication	Day 16
Protests Due	Day 32
Prehearing Conference	Day 34
Direct Testimony of Other parties	Day 36
Rebuttal Testimony	Day 41
Surrebuttal Testimony	Day 44
Evidentiary Hearings	Days 47 and 48
Receipt of Transcript	Day 49
Main Briefs and Reply Briefs	Day 50-79
Close of record	Day 79
ALJ Recommended Decision	Day 116
Exceptions	Day 126
Replies to Exceptions	Day 136
Order Preparation, Commission consideration & action	Day 137-166
Preparation and entry of Final Commission Order	Days 167-181
End of six months deadline	Day 182

At the time of filing, the applicant shall cause a complete copy of the application with exhibits and supporting material to be served by registered or certified mail, return receipt requested, upon:

(1) Each city, borough, town, township county and related planning office which is included, in whole or in part, in the proposed service area.

(2) A water or wastewater utility, municipal corporation or authority which provides water or wastewater collection, treatment or disposal service to the public and whose service area abuts or is within 1 mile of the service area proposed in the application.

(3) The statutory advocates and DEP's central and applicable regional offices. 52 Pa. Code § 3.501(f).

If proprietary information is included in the application, it shall be noted in the Application Filing Checklist. If a protective order is desired, it shall be requested prior to the filing of the application. The acquiring utility and other parties remain free, however, to exchange proprietary information at the outset of the proceeding pursuant to a non-disclosure agreement.

Conclusion

Section 1329 of the Code addresses the valuation of the assets of the water and wastewater systems of municipalities or authorities that are acquired by investor-owned water and wastewater utilities. For ratemaking purposes, the valuation will be the lesser of the fair market value or the negotiated purchase price. Section 1329 also allows the acquiring public utility's post-acquisition improvement costs not recovered through a distribution system improvement charge to be deferred for book and ratemaking purposes. The purpose of this Tentative Implementation Order is to have provisional procedures and guidelines in place for the near term and to solicit public comment on these provisional procedures. Upon review of those comments, the Commission will issue a final implementation order addressing any necessary changes to the provisional procedures and guidelines.

The contact persons for this proceeding are Stanley E. Brown, stabrown@pa.gov, Assistant Counsel in the Commission's Law Bureau, and Jani Tuzinski, jtuzinski@pa.gov, Manager-Water/Wastewater Section of the Commission's Bureau of Technical Utility Services; **THEREFORE,**

IT IS ORDERED:

1. That procedures and guidelines for implementation of Section 1329, are tentatively adopted, as set forth herein.

2. That any interested party may submit comments regarding this Tentative Implementation Order within twenty (20) days of entry of this Order.

3. That all pleadings, comments, or other filings shall be filed in Microsoft Word-compatible format with the Commission's Secretary Bureau at Docket No. M-2016-2543193.

4. That a copy of this Tentative Implementation Order shall be published in the *Pennsylvania Bulletin* and posted on the Commission's website at www.puc.pa.gov.

5. That a copy of this Tentative Implementation Order be served on all jurisdictional water and wastewater companies, the National Association of Water Companies – Pennsylvania Chapter, the Pennsylvania State Association of Township Supervisors, the Pennsylvania State Association of Boroughs, the Pennsylvania Municipal Authorities Association, the Pennsylvania Rural Water Association, the Commission's Bureau of Investigation and Enforcement, the Office of Consumer Advocate, and the Office of Small Business Advocate.

By Michael D. Klein, Esq.

Michael D. Klein is a member in the Harrisburg, PA, and Washington D.C. offices of Cozen O'Connor. Michael practices in the areas of utility and environmental law. He can be reached at mklein@cozen.com and 717-703-5903. This column is intended to be a discussion of legal issues in the water industry. It is not intended to be legal advice, or to establish any attorney-client relationships. Before making any legal decisions regarding anything discussed in this column you should always consult with an attorney.

Investor-owned water and wastewater systems have been constrained with respect to the pricing of acquisitions of municipal and authority systems. The main constraint has been that, with few exceptions, they have not been able to recover in rates any premium paid over the original cost, less depreciation of the acquired system. Also, excluded has been the recovery of any amount paid for property that had been contributed to the selling municipality or authority. A new Pennsylvania law will change this.

On Thursday, April 14, 2016, Pennsylvania Governor Tom Wolf signed Act 12 of 2016 (Act 12) into law.[1] Among other things, Act 12 revises Chapter 13 of the Pennsylvania Public Utility Code (the Code) to provide a framework for valuing, for ratemaking purposes, water and wastewater systems that are owned by a municipal corporation or authority (seller) and that are to be acquired by another entity that is or will be regulated by the Pennsylvania Public Utility Commission (Commission) as a public utility (buyer). The Act's provisions will be codified in new Section 1329 of the Code.

Act 12 is applicable only where the seller is a "water or wastewater company located in this Commonwealth, owned by a municipal corporation or authority that is being purchased ... as the result of a voluntary arm's-length transaction." As such, the provisions of the Act do not apply to the acquisition of an investor-owned water or wastewater utility. Moreover, the valuation framework is voluntary in nature; that is, both the seller and buyer must agree to the valuation procedure before it can be utilized.

If both parties to the transaction agree, then the seller and the buyer will each select a "utility valuation expert" from a list to be selected and maintained by the Commission. The utility valuation experts will each perform an independent appraisal of the seller for the purpose of establishing its fair market value. The appraisals will employ cost, market and income approaches. Additionally, the seller and the buyer will select one licensed engineer to conduct an assessment of the tangible assets of the seller.[2] The engineer's assessment will be incorporated into the appraisals.

The utility valuation experts have 90 days from their date of hire to complete and provide a copy of their valuation. Act 12 provides that the "fair market value of the selling utility is the average of the two utility valuation expert appraisals."

Of note, the source of funding for any part of the water or sewer assets of the seller shall not be considered when determining the value of the assets. Accordingly, contributed assets, and assets paid for with grant money may be valued at their market value.

Act 12 allows for the rate base of the seller to be incorporated into the rate base of the buyer during the buyer's next base rate case or its initial tariff filing. The rate base to be incorporated will be the lesser of the purchase price or the fair market value of the seller. If the seller and buyer do not both agree to use the Act 12 valuation process, the buyer must continue to use the traditional depreciated original cost valuation process for ratemaking purposes.

PA Water Law *Continued from page 6*

Act 12 requires that, if the seller and buyer agree to use the Act 12 valuation framework, then the buyer's application for a Certificate of Public Convenience from the Commission under Section 1102 of the Code, 66 Pa. C.S. § 1102, must include: (i) copies of the two appraisals; (ii) the purchase price; (iii) the ratemaking rate base; (iv) the transaction and closing costs incurred by the acquiring public utility that will be included in its rate base; and, (v) a tariff containing a rate equal to the existing rates of the selling utility at the time of the acquisition and a rate stabilization plan, if applicable. The Act defines a rate stabilization plan as a "plan that will hold rates constant or phase rates in over a period of time after the next base rate case." Under Act 12, the Commission "shall" issue a final order on such an application within six months of the application filing date. The Commission order approving an acquisition must set forth the ratemaking rate base of the seller and any additional conditions of approval that the Commission may require.

Act 12 also addresses certain aspects of post-acquisition project accounting. The buyer's post-acquisition improvements that "are not included in a distribution improvement charge shall accrue allowance for funds used during construction after the date the cost was incurred until the asset has been in service for a period of four years or until the asset is included in the acquiring public utility's next base rate case, whichever is earlier."[3] Act 12 further provides that "depreciation on an acquiring public utility's post acquisition improvements that have not been included in the calculation of a distribution system improvement charge shall be deferred for book and ratemaking purposes." I would like to acknowledge the contributions of my colleagues, David Zambito and Troy Sellars in the preparation of this article.

In every major crisis, especially politically charged ones, criminal indictments can be expected. Well, on April 20th the Michigan attorney general filed criminal charges against three government officials, two from the state environmental agency and the other being Flint's utilities manager. The various charges include the tampering with evidence contained in reports on lead levels in city water, distorting the results by directing residents to run their water before it was tested, and failing to collect samples from some houses they were required to test. Some of the charges are felonies and carry prison terms. One of those indicted is charged with signing a document falsely certifying that the homes in Flint used to test tap water under the federal lead and copper rule all had lead service lines. No senior officials have yet been charged, but prosecutors have indicated that the three indictments are only the beginning.

And yes, yet another class-action lawsuit has been filed, this one by the NAACP. This civil lawsuit accuses the state officials, city officials, and certain of their consulting engineering firms of negligence, inflicting emotional distress and violating the Safe Drinking Water Act.

HOUSE BILL NO. 1326 PRINTERS NO. 2396 PRIME SPONSOR: Godshall

COST/(SAVINGS)

FUND	FY 2015/16	FY 2016/17
General Fund	$0	$0

SUMMARY: House Bill 1326, Printer's Number 2396, amends Title 66 to establish a process for the determination of the fair market value of an acquired water or wastewater system.

ANALYSIS: This bill amends Title 66 (Public Utilities) to create a new section establishing a process to be used, at the discretion of the buying and selling water and wastewater utilities, to determine the fair market value of the selling utility for ratemaking purposes.

The valuation process used to determine the fair market value of the selling utility would be based upon the agreement of both the acquiring public utility and the selling utility and would require the following: the commission will maintain a list of utility valuation experts from which an acquiring utility or entity and selling utility will choose; appraisals shall be conducted by utility valuation experts; appraisal process shall be conducted in compliance with the Uniform Standards of Professional Appraisal Practice; value of tangible assets of selling utility will be determined through an assessment by a licensed engineer; and the appraisal must be completed within 60 days of execution of the service contract.

Upon entry of a commission order approving the acquisition, the ratemaking rate base of the selling utility shall be incorporated into the rate base of the acquiring public utility. The ratemaking base of the selling utility shall be the lesser of the purchase price negotiated by the acquiring public utility or the fair market value of the selling utility.

The buying utility shall include all of the following information in its application seeking approval of the acquisition filed with the Public Utility Commission, including copies of the two appraisals; the purchase price of the selling utility, as agreed to by the buying and selling utilities; the recommended ratemaking rate base of the selling utility; the transaction and closing costs incurred by the buying utility that will be included in its ratemaking rate base; a tariff containing the rates or rate division of the buying utility into which the selling utility will be incorporated.

If the commission approves the acquisition, its order shall include: the ratemaking rate base of the selling utility and the approved rates or rate division of the buying utility that will be

PRINTER'S NO. 1787

THE GENERAL ASSEMBLY OF PENNSYLVANIA

HOUSE BILL

No. 1326 Session of 2015

INTRODUCED BY GODSHALL, MILLARD, PICKETT, ROZZI, HARHART, KILLION, MURT, DAVIS AND EVANKOVICH, JUNE 11, 2015

REFERRED TO COMMITTEE ON CONSUMER AFFAIRS, JUNE 11, 2015

AN ACT

Amending Title 66 (Public Utilities) of the Pennsylvania Consolidated Statutes, in rates and distribution systems, providing for valuation of acquired water and wastewater systems for ratemaking purposes.

The General Assembly of the Commonwealth of Pennsylvania hereby enacts as follows:

Section 1. Title 66 of the Pennsylvania Consolidated Statutes is amended by adding a section to read:

§ 1329. Valuation of acquired water and wastewater systems.

(a) Process to establish fair market value of selling utility.--Upon agreement by both the acquiring public utility and the selling utility, the following procedure shall be used to determine the fair market value of the selling utility:

(1) Two utility valuation experts shall perform two separate appraisals of the selling utility for the purpose of establishing its fair market value.

(2) Each utility valuation expert shall determine fair market value in compliance with the Uniform Standards of Professional Appraisal Practice, employing the cost, market

and income approaches.

(3) Each utility valuation expert shall engage the services of a licensed engineer to conduct an assessment of the tangible assets of the selling utility. The assessment shall be incorporated into the appraisal under the cost approach required under paragraph (2).

(4) Each utility valuation expert shall provide the completed appraisal to the acquiring public utility and selling utility within 60 days of execution of the service contract.

(b) Utility valuation experts.--

(1) The utility valuation experts required under subsection (a) shall be selected as follows:

(i) one shall be selected by the acquiring public utility; and

(ii) one shall be selected by the selling utility.

(2) The utility valuation experts shall not:

(i) derive any material financial benefit from the sale of the selling utility other than fees for services rendered; or

(ii) be an immediate family member of a director, officer or employee of either the acquiring public utility or selling utility within a 12-month period of the date of hire to perform an appraisal.

(3) Fees paid to utility valuation experts may be included in the transaction and closing costs associated with acquisition by the acquiring utility, however, fees may not exceed the greater of:

(i) thirty thousand dollars; or

utility's next base rate case proceeding. The original source of funding for any part of the water or sewer assets of the selling public utility shall not be relevant to determining the value of said assets.

(e) Postacquisition projects.--The following apply:

(1) Any postacquisition improvements made by the acquiring public utility that are not eligible to be collected through a distribution system improvement charge shall be eligible for inclusion in allowance for funds used during construction after the date the expense was incurred.

(2) An acquiring public utility may collect allowance for funds used during construction, through rates, until the improved asset has been in service for a period of four years or until the asset is included in the acquiring public utility's next base rate case, whichever is earlier.

(3) For ratemaking purposes, any postacquisition improvements made to the selling utility's assets by the acquiring public utility shall not be subject to depreciation from the date the expense was incurred until such time as the improved asset has been in service for a period of four years or until the asset is included in the acquiring public utility's next base rate case, whichever is earlier.

(f) Definitions.--The following words and phrases when used in this section shall have the meanings given to them in this section unless the context clearly indicates otherwise:

"Acquiring public utility." An investor-owned water or wastewater public utility subject to regulation under this title for a period of at least five years that is acquiring a selling utility as the result of a voluntary arm's-length transaction

between the buyer and seller.

"Allowance of funds used during construction." An accounting practice that recognizes the capital costs, including debt and equity funds that are used to finance the construction costs of an improvement to a selling utility's assets by an acquiring public utility.

"Fair market value." The average of the two utility valuation expert appraisals conducted under subsection (a)(1).

"Ratemaking rate base." The dollar value of a selling utility which, for postacquisition ratemaking purposes, is incorporated into the rate base of the acquiring public utility.

"Selling utility." A water or wastewater company located in this Commonwealth, owned by a public utility, municipal corporation or authority that is being purchased by an acquiring public utility as the result of a voluntary arm's-length transaction between the buyer and seller.

"Utility valuation expert." A person hired by an acquiring public utility and selling utility for the purpose of conducting an economic valuation of the selling utility to determine its fair market value.

Section 2. This act shall take effect in 60 days.

New PA Law Gives Boost to Investor-Owned Acquisitions of Municipal Water and Wastewater Systems

May 2016 (No. 1)

Environmental and Public Utilities

SERVICES
Environmental

PROFESSIONALS
Christopher A. Lewis

Michael L. Krancer

Thomas M. Duncan

Action Item: A new Pennsylvania law makes the Commonwealth a much friendlier place for investor-owned water utilities to acquire municipally-owned water and wastewater facilities. Act 12 of 2016 mitigates the risk that the investor-owned utilities would be unable to recover their investments when assets acquired are in need of physical upgrade by allowing enhanced rate base adjustments for needed upgrades. The new law also mitigates post-acquisition "rate shock" to consumers.

Recognizing that municipalities often struggle to finance necessary maintenance and upgrades of municipal infrastructure, Pennsylvania recently enacted Act 12 of 2016, 66 Pa. C.S. § 1329 ("Act 12"), to help municipalities sell their aging water and wastewater systems to private sector investor-owned entities. The new law takes effect on June 13, 2016, and allows utilities to value the acquired assets for rate-making purposes at the lesser of fair market value or the negotiated purchase price, instead of the depreciated original cost dictated by 66 Pa. C.S. § 1311(b). The new valuation option means that utilities can now offer municipalities higher prices for the assets, unlocking the value that had been trapped by the lower rate base.

Today, many municipally-owned water and wastewater utilities in the Commonwealth have infrastructure that is urgently in need of repair or replacement and would require those utilities to make extraordinary investments that would ultimately be borne by their customers. Many of these utilities welcome the prospect of selling their systems to a larger investor-owned utility which would facilitate necessary system improvements and promote the continued provision of safe, reliable service at reasonable rates. Prior to the enactment of Act 12, however, larger utilities have been reluctant to pursue these acquisitions due to the risk that the utility would be unable to recover its investment. Act 12 is intended to address that concern.

Act 12 is voluntary, and both the buyer and seller must agree to use it. Under Act 12, the buyer and seller each select a valuation expert from a list maintained by the Public Utility Commission ("PUC"). The experts each prepare an appraisal of the assets, and the average of those appraisals is used as the fair market value of the assets. Act 12 then allows for the seller's rate base to be incorporated into the buyer's rate base during the buyer's next rate base case or initial tariff filing. The seller's rate base will equate to the lesser of the fair market value or the negotiated purchase price. The seller's rates are frozen until new rates are approved for the buyer during its next rate base case. The buyer and seller can also seek PUC approval of a rate stabilization plan to hold rates constant or phase rates in over time to help mitigate the impact of future rate increases and avoid rate shock to consumers.

Any of the buyer's post-acquisition improvements that are not recovered through a distribution system improvement charge will be eligible for inclusion in allowance of funds used during construction. The buyer may collect allowance of funds used during construction through rates until the asset has been in service for four years or until the asset is included in the buyer's next rate base case, whichever is earlier. Further, depreciation on the buyer's post-acquisition improvements that have not been included in the calculation of a distribution system improvement charge will be deferred for book and ratemaking purposes.

System Improvement Charges Distribution and Collection

Defining System Improvement Charges

Based on experience in the water industry, the Pennsylvania Public Utility Commission (PUC) urges the use of system improvement charges to allow natural gas and electric companies (distribution system improvement charge – DSIC) and wastewater companies (collection system improvement charge – CSIC) to use a surcharge on customers' bills to accelerate the replacement of existing aging facilities that otherwise will occurr if the utility must wait until the completion of a rate case to begin receiving a return on its investment. System improvement charges reduce the frequency and the associated costs of base rate cases while maintaining a high level of customer protections.

System improvement charges are designed to provide ratepayers with improved service quality; greater rate stability; fewer main breaks; fewer service interruptions; increased safety; and lower levels of unaccounted for energy or wastewater. In light of today's difficult financial markets, system improvement charges are the type of innovative regulatory policies expected as rating agencies tighten ratings benchmarks and are a key element in maintaining access to capital markets on reasonable terms.

Section 1307 of the Public Utility Code authorizes the PUC to prescribe a mandatory system for automatic adjustment of a utility's rates by means of a sliding scale of rates. In 1997, the Public Utility Code was amended to add Section 1307(g), which specifically provided for an adjustment clause for the recovery of costs related to distribution system improvement projects designed to enhance water quality, fire protection reliability and long-term system viability.

The Commission cannot authorize a system improvement charge for natural gas, electric or wastewater improvements without authority from the General Assembly.

How It Works

A sytem improvement charge would appear as a surcharge on customers' bills. The surcharge amount is expressed as a percentage and applied to the total amount billed to customers under the company's otherwise applicable rates and charges, excluding amounts billed for public fire protection service and the State Tax Adjustment Surcharge.

The system improvement charge would be an automatic adjustment charge revised quarterly that enables natural gas, electric or wastewater companies to:

- Accelerate its investment in new utility plant to replace aging distribution infrastructure;
- Recover fixed costs (depreciation and pre-tax return) of certain non-revenue producing, non-expense reducing infrastructure improvement costs placed into service between base rate cases;
- Reduce the number of base rate cases and the associated expenses, resulting in a more gradual increases in rates for consumers;
- Better absorb increases in other categories of costs for a longer period of time, particularly during times of relatively low interest rates;
- Facilitate compliance with evolving regulatory requirements; and
- Implement solutions to regional supply problems.

Eligible additions are limited to revenue neutral projects, consisting principally of replacement investments. The costs of extending facilities to serve new customers would not be recoverable through the sytem improvement charge.

Checks and Balance

A number of consumer protections are built into system improvement charges, including the existing water-industry structure such as:

- A cap on the rate;
- An annual reconciliation of recoverable costs and revenues associated the charge by the PUC;
- An annual reconciliation hearing in accordance with Section 1307(e) of the Public Utility Code;
- Customer-notice requirements of changes in the system improvement charge;
- A reset to zero if the company's quarterly or annual earnings reports – subject to review by the PUC – show that the company earnings are exceeding the allowable rate of return used to calculate fixed costs under the system improvement charge;
- PUC audits to make certain the money is spent on DSIC-eligible projects; and
- A reset to zero as of the effective date of new base rates that provide prospective recovery of annual costs that had been recovered under the system improvement charge.

Why a System Improve Charge?

The state's aging infrastructure is an important issue. The main features of a system improvement charge are that it is:

- Pro-environmental as it significantly decreases line loss;
- Promotes a major objective of this Administration and this Legislature which is to fix Pennsylvania's aging infrastructure;
- Provides cost benefits to consumers including reduction in the loss of the commodity and of costs associated with base rate cases; and
- Promotes economic development as it creates and maintains hundreds of jobs.

The existing water-industry DSIC has;

- Been in use since 1997, with the average monthly costs to ratepayers ranging from a few cents to about $2.75 a month.
- Had a substantial impact on accelerating infrastructure remediation; and
- Increased a main replacement schedule from 30 miles of main a year to 80 miles, which more closely matches the actual service life of the mains; and
- Never had a complaint filed against a DSIC charge or during a DSIC proceeding.

DSIC as a "Best Practice"

DSIC is one of the most important regulatory tools of the past decade and is a "best-practices" regulatory tool created in Pennsylvania. Seven other states have adopted similar mechanisms. Due to DSIC and other innovative regulatory mechanisms, the PUC was recognized for effectively encouraging water company investment by Standard & Poor's.

DSIC also has been recognized nationally in a resolution by the National Association of Regulatory Utility Commissioners endorsing it for its significance as a regulatory tool. The Council of State governments included DSIC as model legislation.

May 4, 2016

Pennsylvania's New Law for Valuing Acquired Municipal/Authority Water and Wastewater Systems

Authors

Michael D. [redacted]

David P. Zambito

Related Practices

Energy, Environmental & Public Utilities

On Thursday, April 14, 2016, Pennsylvania Governor Tom Wolf signed Act 12 of 2016 (Act 12) into law.[1] Among other things, Act 12 revises Chapter 13 of the Pennsylvania Public Utility Code (the Code) to provide a framework for valuing, for ratemaking purposes, water and wastewater systems that are owned by a municipal corporation or authority (seller) and that are to be acquired by another entity that is or will be regulated by the Pennsylvania Public Utility Commission (Commission) as a public utility (buyer). The Act's provisions will be codified in new Section 1329 of the Code.

Valuation Framework

Act 12 is applicable only where the seller is a "water or wastewater company located in this Commonwealth, owned by a municipal corporation or authority that is being purchased ... as the result of a voluntary arm's-length transaction." As such, the provisions of the Act do not apply to the acquisition of an investor-owned water or wastewater utility. Moreover, the valuation framework is voluntary in nature; that is, both the seller and buyer must agree to the valuation procedure before it can be utilized.

If both parties to the transaction agree, then the seller and the buyer will each select a "utility valuation expert" from a list to be selected and maintained by the Commission. The utility valuation experts will each perform an independent appraisal of the seller for the purpose of establishing its fair market value. The appraisals will employ cost, market and income approaches. Additionally, the seller and the buyer will select one licensed engineer to conduct an assessment of the tangible assets of the seller.[2] The engineer's assessment will be incorporated into the appraisals.

The utility valuation experts have 90 days from their date of hire to complete and provide a copy of their valuation. Act 12 provides that the "fair market value of the selling utility is the average of the two utility valuation expert appraisals."

Of note, the source of funding for any part of the water or sewer assets of the seller shall not be considered when determining the value of the assets. Accordingly, contributed assets may be valued at their market value.

Use of Fair Market Value

Act 12 allc e rate base of the seller to be incorporated into the rate base of th uring the buyer's next base rate case or its initial tariff filing. The rate base to be incorporated will be the lesser of the purchase price or the fair market value of the seller. If the seller and buyer do not both agree to use the Act 12 valuation process, the buyer must continue to use the traditional depreciated original cost valuation process for ratemaking purposes.

Acquisition Approval

Act 12 requires that, if the seller and buyer agree to use the Act 12 valuation framework, then the buyer's application for a Certificate of Public Convenience from the Commission under Section 1102 of the Code, 66 Pa. C.S. § 1102, must include: (i) copies of the two appraisals; (ii) the purchase price; (iii) the ratemaking rate base; (iv) the transaction and closing costs incurred by the acquiring public utility that will be included in its rate base; and, (v) a tariff containing a rate equal to the existing rates of the selling utility at the time of the acquisition and a rate stabilization plan, if applicable. The Act defines a rate stabilization plan as a "plan that will hold rates constant or phase rates in over a period of time after the next base rate case." Under Act 12, the Commission "shall" issue a final order on such an application within six months of the application filing date. The Commission order approving an acquisition must set forth the ratemaking rate base of the seller and any additional conditions of approval that the Commission may require.

Post-Acquisition Projects

Act 12 also addresses certain aspects of post-acquisition project accounting. The buyer's post-acquisition improvements that "are not included in a distribution improvement charge shall accrue allowance for funds used during construction after the date the cost was incurred until the asset has been in service for a period of four years or until the asset is included in the acquiring public utility's next base rate case, whichever is earlier."[3] Act 12 further provides that "depreciation on an acquiring public utility's post-acquisition improvements that have not been included in the calculation of a distribution system improvement charge shall be deferred for book and ratemaking purposes."

Public Utility Code 66 Section 1329

If you would like to learn more about the impact of Act 12, please contact the Energy, Environmental and Utility Practice Group at Cozen O'Connor.

---

[1] Act 12 will become effective on June 13, 2016.

[2] Act 12 is silent regarding the method for selecting the licensed engineer to conduct the asset assessment. The Commission will likely develop a process for the selection.

[3] Act 12's reference to a "distribution improvement charge" is presumed to be a reference to a "distribution system improvement charge" as defined by Section 1351 of the Code. 66 Pa. C.S. § 1351.

Pennsylvania Extends Life and Applicability of Chapter 14 of the Public Utility Code [Energy, Environmental & Utilities Alert]

11/18/201

On October 22, 2014, Governor Corbett signed Act 155 into law. The Act will go into effect 60 days from the date the governor signed it or approximately December 21, 2014. Among other things, this Act revises Section 510 and Chapter 14 of the Pennsylvania Public Utility Code to implement funding changes for the Public Utility Commission (the Commission), expands the types of entities subject to the "responsible utility customer protection[s]" contained within Chapter 14 and extends Chapter 14's expiration through 2024. These changes will be discussed in more detail below.

FAIR MARKET VALUATION AS OF DECEMBER 31, 2016

Table of Contents

MUNICIPAL AUTHORITY OF THE CITY OF MCKEESPORT
SANITARY SEWER SYSTEM
FAIR MARKET VALUATION AS OF DECEMBER 31, 2016

EXECUTIVE SUMMARY

Based on our review of the supporting documents, discussions with Authority Staff and professional advisors, the reported and observed condition of the Municipal Authority of the City of McKeesport Sanitary Sewer System (MACM SSS), planned capital projects and an evaluation of the system revenues; we concluded that a fair market value for the system is **$207,010,000***.

Consistent with the Uniform Standards of Professional Appraisal Practice (USPAP), HRG employed the cost, market and income approaches in arriving at the fair market value as summarized below.

Cost Approach	$ 202,410,000
Market Approach	190,130,000
Income Approach	228,480,000
Average Fair Market Value*:	**$ 207,010,000**

Courts have held "market value may be determined in many ways and does not exclusively depend upon application of the market data approach."[1] HRG believes that each of these approaches has merits and each should be given weight in estimating fair market value as required by the Pennsylvania Public Utility Commission's (PUC) Final Implementation Order relative to Act 12 of 2016. (HRG is obliged to follow the requirements of Act 12 and PUC's Final Implementation Order.)

PURPOSE OF VALUATION

The purpose of this report is to establish the fair market value of the MACM SSS as of December 31, 2016 for the purpose of acquisition of the system by Pennsylvania American Water Company, Inc. (PAWC) pursuant to the agreement between the Municipal Authority of the City of McKeesport (Authority) and Herbert, Rowland & Grubic, Inc. (HRG) dated October 10, 2016.

HRG's valuation is governed by the requirements of Section 1329 of the Pennsylvania Public Utility Code (Code) that became effective June 13, 2016, applicable to the valuation of municipally or authority owned water and wastewater utilities acquired by investor-owned utilities. The purpose of Section 1329 is to establish a process for determining the fair market value.

[1] Andrew H. Schuster, Valuation of Public Utilities (Matthew Bender & Co., Inc., 1991) §14A.01[3]

MUNICIPAL AUTHORITY OF THE CITY OF MCKEESPORT
SANITARY SEWER SYSTEM
FAIR MARKET VALUATION AS OF DECEMBER 31, 2016

SYSTEM DESCRIPTION

The Authority currently provides waste collection and sewage treatment services for the City of McKeesport, City of Duquesne, White Oak Borough, Port Vue Borough, Liberty Borough, East McKeesport Borough, Dravosburg Borough, Glassport Borough, Lincoln Borough, Versailles Borough, Elizabeth Township, and North Versailles Township, serving approximately 22,000 customers.

The Authority owns and operates three wastewater treatment facilities located in the City of McKeesport, the City of Duquesne and Dravosburg Borough, when combined are designed to process 15.5 million gallons per day at normal flow. The entire collection system consists of approximately 144 miles of interceptor and transmission lines, eight pump stations and other related wastewater facilities.

FAIR MARKET VALUATION

Fair market value is defined as "the value established in a public market by exchanges between willing sellers and willing buyers" not under duress.[2] Such a market would imply substantial availability of data for comparable property exchanges. However because sales and purchase price data of comparable utilities is limited, other considerations should be given weight for purposes of estimating a fair market value.

Section 1329 (a) provides that both the buyer and seller will each choose a utility valuation expert (UVE) to "prepare an appraisal of assets, and the average of those appraisals will be used as the fair market value of the asset."[3] The Order further states that "a fair market valuation allows consideration of cost, market and income approaches in valuing the system." A Distribution System Improvement Charge (DSIC) was not considered in the valuation because the projected eligible collection system improvements did not amount to significant capital expenditures.

[3] *Implementation of Section 1329 of the Public Utility Code,* Docket No. M-2016-2543193 (Tentative Order entered July 21, 2016) (Final Order entered October 27, 2016).

HRG has addressed each of these considerations in the following appraisal of the MACM SSS to estimate the fair market value.

COST APPROACH

An engineering assessment prepared by KLH Engineers, Inc. (KLH) of the MACM SSS utility was provided to HRG as the basis for developing the cost appraisal of the wastewater system. The listing of the inventory as provided by KLH is included as Exhibit 1. The assessment included an inventory of assets, year the asset was placed in service and account number based upon the National Association of Regulatory Utility Commissions (NARUC) accounting system. A listing of anticipated future construction of utility plant for the next five years was provided by the Authority and is included on Schedule P of the Appendix.

MACM SSS does not maintain records of utility plant costs. For purposes of developing costs of utility plant, HRG relied on a detailed report prepared by Industrial Appraisal Company (IAC) dated as of October 5, 2015. The purpose of the IAC appraisal was to develop a fixed asset record in accordance with Generally Accepted Accounting Principles. HRG compared the KLH inventory with the IAC appraisal as an overview verification of the inventory.

The IAC appraisal provided the underlying cost data used by HRG to compute the costs of treatment, pumping and disposal facilities to a current price level of December 31, 2016. HRG assigned service lives consistent with comparable utility plant. To calculate the reproduction costs of collection system mains, manholes and outfall structures, HRG used construction costs based on recent bids for similar wastewater facilities located in Western Pennsylvania. IAC certified that their appraisal was performed in accordance with the USPAP.

KLH's assessment did not include the condition of assets or the costs for the utility plant. HRG representatives visited the facilities on January 31, 2017 and based on observation of the facilities being transferred, concluded that the utility plant is well maintained and in sound operating condition. Sample photographs of the MACM SSS facilities are included as Exhibit 2.

There are several measures of cost depending on the intended purpose of the study. For example, a valuation for rate purposes is different than a valuation for tax, condemnation or for insurance purposes.

Cost measures that are commonly used include Original Cost, Replacement Cost and Reproduction Cost. These measures are discussed in the following paragraphs.

Original Cost – Original Cost is the cost of utility plant when initially dedicated to public service and is derived from work orders, construction contracts and other documents. Original Cost is the standard normally used for ratemaking purposes and forms the basis for determining the annual depreciation and return that are components of the cost of service for a regulated utility. An inventory of assets of the MACM SSS utility plant by category was provided in the KLH appraisal and provided the data for the Original Costs used in the IAC Property Inventory and Cost Accounting Report, as previously noted.

In order to determine value, the loss in service life expressed in terms of depreciation, is deducted from the cost. Depreciation is the loss in service value of depreciable utility plant not restored by current maintenance that occurs as a result of wear and tear and action of the elements. HRG calculated annual and accrued depreciation by assigning estimated service lives for each category of utility plant based on experience of comparable wastewater utility systems and deducted the accumulated depreciation from the Original Cost to derive the value.

For a regulated utility, the objective of depreciation is the cost recovery of the plant cost over the useful life from those customers receiving service at the time that the facilities are in service. In other words to match the cost recovery from those customers benefiting from the facilities in service, thus avoiding subsidizing future customers at the expense of customers receiving utility service currently.

Annual depreciation for the MACM SSS was calculated on a straight-line basis by dividing the Original Cost by the service life to obtain the annual write off over the useful life of the utility plant. Accumulated depreciation was calculated by multiplying the annual depreciation for each category by the age. The calculation of annual depreciation, accrued depreciation and Original Cost less depreciation is shown on Schedule B of the Appendix.

The Authority's anticipated capital projects over the next five years are replacements of existing assets. Therefore, the costs associated with future projects are excluded from the Original Cost approach. Original Cost is the standard normally used for rate making purposes with the exception of valuations for municipal acquisitions as provided for in Section 1329 of the Code.

MUNICIPAL AUTHORITY OF THE CITY OF MCKEESPORT
SANITARY SEWER SYSTEM
FAIR MARKET VALUATION AS OF DECEMBER 31, 2016

A summary of Original Cost and calculated accumulated depreciation, including a provision for going value, as shown on Schedule B of the Appendix is summarized as follows:

Original Cost	$ 92,830,000	
Less Accumulated Depreciation	18,490,000	
Depreciated Original Cost	74,340,000	
Plus Provision for Going Value (See Schedule O)	17,300,000	(1)
Original Cost Value	**$ 91,640,000**	

(1) Refer to page 12 of the report for an explanation of going value.

Replacement Cost - For purposes of this appraisal, Replacement Cost has not been used. Replacement Cost would allow the cost to replace an asset with some other asset capable of preforming the same function, but the cost of the replacement could be substantially different than the asset that is in service and would allow disputes among the parties of what is a legitimate replacement. Furthermore, a replacement asset may not be the same asset that is being transferred.

Reproduction Cost – Reproduction Cost is the cost of utility plant stated at a current price level. For purposes of this assessment, a date certain of December 31, 2016 was used. By definition, Reproduction Cost is the cost of replacing the same facilities (in kind) that are being transferred in the sale.

The Reproduction Cost was derived by restating the Original Cost of depreciable utility plant to a current price level as of December 31, 2016. There are several methods of restating costs to a current price level. In this case, Engineering News Record (ENR) cost trend indices were used. A cost trend index number measures the relative price as of a stated date. From ENR, the ratio of the index number as of December 31, 2016 to the index number as of the date of service for each asset was calculated and multiplied by the Original Cost to calculate the Reproduction Cost for all utility plant with the exception of collection system mains, based on construction costs of regional wastewater systems.

Attached Schedules D, E, F, G, H and I present the supporting cost data of feet of main and unit costs for each service area. The unit costs were derived from an analysis of recent construction costs including labor, material and overhead costs.

Annual depreciation and accrued depreciation were calculated by HRG using the same process as used for the Original Cost and using the same service lives that were used in the Original Cost calculation with the exception of annual and accrued depreciation for collection system mains. For collection system mains, annual and accrued depreciation was calculated as a percentage based on the Original Cost calculations.

The Authority's anticipated capital projects over the next five years are replacements of existing assets. Therefore, the costs associated with future projects are excluded from the Reproduction Cost approach. A provision for going value was added as explained in a subsequent section of this report.

For purposes of acquisition of the MACM SSS by PAWC, the Reproduction Cost measure is used as one approach for estimating fair market value. Section 1329 of the Code states "a fair market valuation is not tied to the original cost of construction minus accumulated depreciation."[4] HRG used the Reproduction Cost as the measure of the cost approach.

A summary of Reproduction Cost and the calculated accumulated depreciation, including a provision for going value, as shown on Schedule C of the Appendix is summarized as follows:

Reproduction Cost	$ 261,280,000	
less Accumulated Depreciation	76,170,000	
Depreciated Reproduction Cost	185,110,000	
Plus Provision for Going Value (See Schedule O)	17,300,000	(1)
Reproduction Cost Value	**$ 202,410,000**	

(1) Refer to page 12 of the report for an explanation of going value.

MARKET APPROACH

As previously stated, market value is defined as the value established in a public market by exchanges between willing sellers and willing buyers not under duress. Developing a sound basis to determine the

[4] *Implementation of Section 1329 of the Public Utility Code,* Docket No. M-2016-2543193 (Tentative Order entered July 21, 2016) (Final Order entered October 27, 2016).

market value would require comparisons of comparable systems to establish a true market. Although there have been utility acquisitions in recent years, no two utilities are comparable in that each system is subject to different circumstances.

Utilities are comprised of different treatment facilities, are different ages, are located in different service areas with different terrain characteristics, subject to different physical conditions and are comprised of different customer mixes. All such factors impact the operations, worth and relative appeal to a potential purchaser.

For example, a system that is in a dilapidated condition requiring substantial repairs and upgrades would be less attractive and a buyer would seek a substantial discounted purchase price for such a system over a system that is in good repair. Conversely, a system that has potential for growth may command a premium. Due to the difficulty of compiling purchase prices of comparable systems, a comparison of several wastewater system costs were used by HRG to estimate the market value.

Comparison of Other Wastewater System Acquisitions - HRG used a sample of recent municipal wastewater acquisitions to approximate the value on a per customer basis and then averaged the findings to develop an average cost of $8,661 per customer. The average system purchase price was then multiplied by the number of projected MACM SSS customers over the twenty year period of the analysis. The total number of connections at the end of the projection period are estimated to be 21,953. HRG arrived at this total by assuming no growth in the customer base over the projection period. The resulting estimated value based on a cost per customer is $190,130,000 as shown on Schedule J of the Appendix.

As one consideration of Fair Market Valuation, HRG finds a value of: $ 190,130,000

INCOME APPROACH

HRG used a cash flow method and a utility method to develop the income value of the MACM SSS. The cash flow method is derived from discounting future earnings derived from revenues less expenditures less taxes to calculate available cash flow. The utility method develops a net income (cash flow) based on annual depreciation and return.

Typically, the cash method is used by municipal entities that must meet debt and other operating obligations on an annual basis from available cash flow. The utility basis is applicable for a regulated utility (investor owned utility) and allows a more equitable recovery of capital costs from customers over time since utility plant has a long useful service life. An investor owned utility has access to equity funds from investors as a source of capital.

In place of principle and interest payments required by municipal systems, investors receive a return on their investment based on the depreciated cost of the utility plant times a fair rate of return. For purposes of developing the income value, HRG has averaged the calculated market value as discussed in the following paragraphs.

Cash Flow Present Value Analysis

Earnings value of a property is the present worth of its probable future net earnings, based on expenses, earnings and the business outlook which are discounted to a present day price level. The projection includes a provision for estimated income taxes applicable to regulated wastewater operations that would be incurred by PAWC. Net income after tax has been projected over a twenty year period and was discounted to a present value. Schedule K summarizes the Authority's actual revenues and expenditures for 2016 and budgeted revenues and expenditures for 2017.

Schedule L presents a projection of revenues, expenditures and cash flow for a twenty year period. The present value of cash flows and a summary of the components on which the market value was determined are also shown on Schedule L. Customer growth and rate increase assumptions applicable to revenues and variable treatment expenses are also shown on this schedule. Schedule L is adjusted to incorporate operational savings that would be realized under PAWC's ownership. The percentage of savings is calculated on a per customer basis for those expenses where savings can be achieved through economies of scale. An explanation of assumed revenue increases is shown in the following paragraphs.

It is assumed that current user rates will remain frozen for three years, therefore revenue for years 2017 through 2019 is based on the Authority's presently effective rates. Provision for income taxes is based on a consolidated tax rate of 38.9%. It is assumed that PAWC will increase rates and will recover the full cost of service by phasing in rate increases over future rate filings.

Recent rate practice has distributed rate increases over PAWC's customer base and not necessarily by each utility system or service area. That means that some service areas may receive greater increases than others, conversely, other service areas may receive lesser increases. For purposes of this valuation, the revenue increase that could be justified is in the magnitude of 120% of the existing revenue for McKeesport customers or approximately $18,154,000. The traditional approach to avoid excessive rate increases to a single service area has been to distribute the rate increase over the overall customer base. As a practical matter, the McKeesport wastewater system represents a significant proportion of the overall PAWC wastewater system and recovery of the entire shortfall from the customer base presents a substantial increase in a single rate filing. For purposes of this appraisal, the shortfall is recovered incrementally over several rate increases assuming 50% of the shortfall in the first rate filing projected in 2020, 25% in 2023 and 20% in 2026. Subsequent increases on a three year interval are projected at 10% to recover inflationary pressures.

For years between rate increases, a provision for erosion of cash flow is deducted. Consideration of DSIC revenue was not included in the cash flow analysis because the projected eligible collection system improvements do not amount to significant capital expenditures. Schedule N presents a calculation to estimate the earnings erosion.

For the acquisition of the MACM SSS the following assumptions have been incorporated into determining the revenue requirement:

50% rate increase, effective January 1, 2020,
25% rate increase, effective January 1, 2023,
20% rate increase, effective January 1, 2026,
10% rate increase, effective January 1, 2029, 2032 and 2035

The following explanation provides support for increased revenue to PAWC resulting from the purchase of the MACM SSS. We are aware that PUC may not allow PAWC to fully recover the purchase price in order to achieve a level of rate stability for MACM SSS customers. It is assumed that PAWC will file for a system-wide rate increase to recover the full cost of service by phasing in rate increases over

several rate filings. The estimated cost of service* of the MACM SSS as a regulated utility is significantly above the revenue at existing MACM SSS rates as shown below, based on 2020, the year PAWC rates become effective.

O&M Expense (See Schedule L)	$ 6,090,000
Plus Annual Depreciation	8,322,000
Plus Estimated Income Taxes	5,453,000
Plus Return	13,234,000
Cost of Service in 2020 (Regulated Utility)	**33,099,000**
Less MACM SSS Revenue Current Rates	14,945,000
Revenue Shortfall	**$ 18,154,000**

The indicated increase to recover the full cost of service from MACM SSS customers would be approximately 120%. As indicated, the shortfall of $18,154,000 would be recovered over the PAWC customer base over several rate filings, as previously explained.

Estimated Value based on Present Value of Cash Flow $ 211,340,000

Estimated Rate Base/Rate of Return Present Value Analysis

The present value (present worth) for a regulated utility is a function of the depreciation and return as presented on Schedule M. Years 2017, 2018 and 2019 are based on the cash flow approach because PAWC will not recover depreciation and return until it receives a rate increase which is projected for 2020 as calculated on Schedule M. Subsequent years from 2021 through 2036 assume a regulated utility basis of depreciation and return.

Annual depreciation has been calculated using estimated service lives for comparable wastewater utility systems. Development of annual accrued depreciation and depreciated cost has been described in the cost approach section of this report. An estimated rate of return on the depreciated cost of 7.5% has been used to calculate return based on PAWC's estimated weighted cost of capital. Available cash as stated is the sum of annual depreciation plus return on the rate base. For purposes of calculating available cash

*Cost of Service for a regulated utility is the sum of O&M expenses, annual depreciation, taxes and return (see Schedule M).

under the utility basis, income taxes are not reflected in the utility approach on Schedule M, because return is calculated after taxes.

The estimated market value is equal to annual depreciation and return discounted to a present value at a rate of 2.5% to reflect the estimated impact of annual inflation. An additional adjustment is made to reflect the impact of erosion on return in years when there is no rate increase as shown on Schedule N. In addition, a provision for going value is added to the present value to reflect the estimated market value. Consideration of DSIC revenue was not included in the utility present worth analysis because the projected eligible collection system improvements do not amount to significant capital expenditures. An explanation of going value is described in the following section.

Estimated Value based on Rate Base/Rate of Return **$ 245,620,000**

For purposes of estimating the fair market value of the MACM SSS, the two market values as determined by the income approach are averaged.

Value based on Present Value of Cash Flows:	$ 211,340,000
Value based on Rate Base/Rate of Return:	245,620,000
Estimated Fair Market Value – Income Approach:	$ 228,480,000

As one consideration of Fair Market Valuation, HRG finds a value of: $ 228,480,000

GOING VALUE

It is readily apparent that an established enterprise has an incremental value in excess of the cost value of the physical facilities. A wastewater system requires a substantial investment in collection, treatment and disposal plant, a component of the value. In addition, an entity must acquire a customer base, hire employees, develop an accounting and record keeping process and develop operating and management policies and procedures. This process takes time and the entity will incur losses during initial years.

As a component of the value of an enterprise, the cumulative losses should be considered in addition to the cost of the facilities for acquisition purposes. A calculation of an estimate of the going value to reflect the cumulative losses is presented in Schedule O of the Appendix. The calculation assumes

operations under the MACM SSS over five year period to develop the current customer base and operating expenses as shown on the schedule.

Annual losses for 2017, 2018 and 2019 are restated to a present value. The cumulative losses are discounted at a discount factor of 2.5% to reflect the estimated impact of annual inflation which results in an estimated going value of $17,300,000 that is added to the applicable approaches for valuing the MACM SSS.

CONCLUSION

As previously stated, HRG developed three approaches to estimate the fair market value of the MACM SSS based on the requirements of Section 1329 of the Code. The approaches incorporate expectations of future events and assumptions and represent a good faith attempt to develop the fair market value based on information available and informed judgement of wastewater systems.

Each of the approaches incorporates assumptions and no one approach can be assumed to be superior. For this reason, HRG believes that equal weightings should be given to each. A summary of the approaches and HRG's finding of value is presented as follows:

Cost Approach	$ 202,410,000
Market Approach	190,130,000
Income Approach	228,480,000
Average Fair Market Value:	$ 207,010,000

Based on HRG's analysis and investigations HRG finds the Fair Market Value for the MACM SSS as of December 31, 2016 to be: $ 207,010,000

Supporting Schedules

SCHEDULE: A

CERTIFICATE OF MARKET VALUATION

for

Municipal Authority of the City of McKeesport

as of

December 31, 2016

Based on analysis, investigations, professional judgement and experience of wastewater valuations and considering several approaches for determining fair market value, HRG finds in their professional opinion that the fair market value of the Municipal Authority of the City of McKeesport Sanitary Sewer System as of December 31, 2016 is:

$207,010,000

Municipal Authority of the City of McKeesport **SCHEDULE: B**

Cost Approach

Collection System Assets

* See Schedules D through I of the Appendix for the Reproduction Cost breakdown of Sewer System Piping, Force Collection Mains and CSO Structures for the four wastewater treatment plants.

** The future capital projects listed on Schedule P are replacements of existing assets, therefore the costs are excluded from the Cost Approach.

Municipal Authority of the City of McKeesport

SCHEDULE: J

Market Approach

Comparison of Other Wastewater System Acquisitions

Approx. Date	Buyer	Seller	County	Total Purchase Price	Number of Total Customers	Market Value
Apr-14	Aqua PA	Penn Township	Chester	$ 5,700,000	801	**$ 7,116**
Dec-15	PA American Water	Fairview Township	York	$ 30,800,000	3,912	**$ 7,873**
Aug-16	Aqua PA	New Garden Twp. SA	Chester	$ 29,500,000	2,106	**$ 14,008**
Oct-16	PA American Water	New Cumberland Borough	Cumberland	$ 25,000,000	3,100	**$ 8,065**
Dec-16	PA American Water	Scranton Sewer Authority	Lackawanna	$ 195,000,000	31,229	**$ 6,244**

Average Market Value per Customer: $ 8,661

Average Market Value per Customer*	$	8,661
Number of MACM Customers		21,953
Estimated Market Value:	**$**	**190,130,000**

* The average market value per customer has been used for this approach to calculate the market value for the MACM Sanitary Sewer System. It is believed that the average per customer from the sample is more representative because it weights each system of comparable size to the MACM Sanitary Sewer System. An overall weighted average approach would not be representative of the fair market value per customer given the Scranton Sewer Authority purchase price was much higher than the other system sales and would result in an undue weighting of a very large system.

Present Value of Cash Flows:

Rate of Inflation/Discount Rate:	2.500%	
Resulting Present Value		$ 194,970,000
Plus Provision for Going Value*		$ 17,300,000
Less Provision for Erosion of Cash Flow**		$ (930,000)
Total Estimated Market Value:		**$ 211,340,000**

Assumptions

[1] Assumes PAWC's O&M expenses less variable expenses are 16.80% less than McKeesport's (2017 reflects savings for only 6 months).

[2] Includes sludge removal, grit removal, water and electric at treatment plants and pump stations.

[3] Assumes Authority funds WWTP projects through a bond issue and the remaining projects from operations (See Schedule P).

[4] Assumes annual renewals and replacements are equal to 0.50% of the original cost of assets.

[5] Assumes state (6%) and federal (35%) taxes at a consolidated rate of 38.9%.

[6] Additional revenue generated from rate increases will be distributed to all PAWC customer base.

*See Schedule O of the Appendix.

**See Schedule N of the Appendix.

Present Value Discount Rate: **2.50%**

Resulting Market Value: **$229,250,000**

Present Value of Cash Flows:

Resulting Present Value	$ 229,250,000
Plus Provision for Going Value*	$ 17,300,000
Less Provision for Erosion of Return**	$ (930,000)
Total Estimated Market Value:	**$ 245,620,000**

Assumptions

[1] Based on project listing provided by the Authority (See Schedule P).

[2] We assume the same cash flow projections as determined in the Income Approach - Cash Flow Basis as outlined in Appendix L for years 2017 through 2019 until PAWC fles for a general rate increase.

*See Schedule O of the Appendix.

**See Schedule N of the Appendix.

Note: Assumed 2.50% for discount factor to reflect the impact of inflation.

Assumes renewals and replacements offset retirements with no charge to original cost.

2036	0%	9,040,687	226,017	-	226,017	138,096

Discount Rate: **2.50%**

Total Estimated Erosion on Return: **$930,000**

Assumptions

[1] Assumes that PAWC will receive rate increases incrementally over several rate filings to recover the full cost of service as discussed in the report.

Assumes that PAWC receives the full revenue requirement at the time of each rate increase. For each year after a rate increase, the return will be offset by the inflation for that year until the next rate increase. As taxable income increases, there will be an offsetting decrease in taxes at the consolidated tax rate of 38.9% (1.000-0.611)*100%.

Note: Assumed 2.50% for discount factor to reflect the impact of inflation.

Municipal Authority of the City of McKeesport

SCHEDULE: O

Provision for Going Value

Definition of Going Value:

Going Value is that element of value of an assembled and established plant, doing business and earning money, over one that is not that advanced" **[1]**.

Going value represents an estimate of funds needed to cover expenditures until the system is self sustaining as calculated below:

OPERATING EXPENSES					
	2017	**2018**	**2019**	**2020**	**2021**
Variable Operating Expenses					
WW Treatment	90,000	92,250	94,556	96,920	99,343
Sludge Removal	200,000	205,000	210,125	215,378	220,763
Purchased Power	700,000	717,500	735,438	753,823	772,669
Fuel for Power Production	35,000	35,875	36,772	37,691	38,633
Chemicals	75,000	76,875	78,797	80,767	82,786
Total Variable Operating Expenses:	**1,100,000**	**1,127,500**	**1,155,688**	**1,184,580**	**1,214,194**
Based on Start-Up Operations					
Assumed Annual Percent Increase	10%	15%	20%	25%	30%
Cumulative Percent Increase	10%	25%	45%	70%	100%
Prorated Variable Operating Expense Increase:	**110,000**	**281,875**	**520,059**	**829,206**	**1,214,194**
Fixed Operating Expenses Net of Capital Projects					
Total Annual Operating Expenses (MACM Operation)	6,575,000	6,739,375	6,907,859	7,080,556	7,257,570
Less Variable Operating Expenses	(1,100,000)	(1,127,500)	(1,155,688)	(1,184,580)	(1,214,194)
Total Fixed Operating Expenses:	**5,475,000**	**5,611,875**	**5,752,172**	**5,895,976**	**6,043,376**
Based on Start-Up Operations					
Assumed Annual Percent Growth*	60%	70%	80%	90%	100%
Prorated Variable Operating Expense Increase:	**3,285,000**	**3,928,313**	**4,601,738**	**5,306,379**	**6,043,376**
Estimated Total Annual Start-Up Expenses:	**3,395,000**	**4,210,188**	**5,121,797**	**6,135,584**	**7,257,570**

DEBT SERVICE						
Debt Service Assumptions						
Cost of Utility Plant at Current Price	261,280,290					
Funding: 50% Grant / 50% Bond						
Bond Amount:	130,640,145					
Bond Interest Rate:	3.50%					
Bond Term (Years):	30					
Approximated Annual Debt Service:	**7,103,079**					
Debt Service Based on Fixed Cost Annual Growth Percentage:	**4,261,847**	**4,972,155**	**5,682,463**	**6,392,771**	**7,103,079**	

REVENUE					
2017 Projected Revenue	**14,945,000**				
Cumulative Percent Increase	10%	25%	45%	70%	100%
Assumed 5 Year Annual Revenue Buildout	**1,494,500**	**3,736,250**	**6,725,250**	**10,461,500**	**14,945,000**

GOING VALUE					
Net Income	**(6,162,347)**	**(5,446,093)**	**(4,079,010)**	**(2,066,855)**	**584,352**
Discounted Value of Net Income [2]:	**(6,012,046)**	**(5,313,261)**	**(3,979,522)**	**(2,016,444)**	**570,099**
Going Value Based on Years of Negative Income:	**(17,321,273)**				

For the purpose of determining market value under the Cost and Income Approaches, we assume Going Value is estimated at:	**$17,300,000**

**The increase in fixed operating expenses as customers connect is indirectly a function of customer growth or flows. In order to render service, it is necessary to have collection, treatment and disposal facilities available. Such facilities require labor to operate and maintain the facilities as well as insurance expenditures and such other expenses necessary to operate the system.*

January 27, 2017

Municipal Authority of the City of Mckeesport
Mckeesport, Pennsylvania

The Industrial Appraisal Company is pleased to submit the updated Property Inventory and Accounting Cost Record Report for the properties associated with Municipal Authority of the City of Mckeesport.

This update includes property classifications of land, site improvements and property in the open, buildings, furnishings, machinery and equipment in varying sub-asset classes.

Acquisition Cost as reflected in this report is intended to be the original cost of the asset as of the date of the construction or installation

Depreciation applies to all assets over the cut-off value assigned by the client, and is calculated up to the current valuation date.

Although capitalized, land costs have not been depreciated. All property in the open at each location is capitalized and depreciated as exhaustible assets for accounting purposes.

The costing and depreciation analysis applies to assets exceeding the $5,000.00 unit Acquisition Cost threshold.

Depreciation has been calculated as of December 31, 2016 on a straight line current basis, utilizing the half-year convention with consideration given to Salvage Value.

The complete report is comprised of the following sections:

- **Index** of building codes, floor and room codes assigned to each building, asset code listing, and department codes if applicable.
- A fixed asset **Detail** of Values reflected by building/location with applicable indexes categorizing asset and location coding; all descriptions of assets will appear in this report, but items under the cutoff of $5,000 will be suppressed.
- A detailed listing of fixed asset items **Acquired** and **Deleted** during the current valuation year.
- A **Recaps Summaries Section** reflecting recapitulation separated by asset class.
