

Sandy Janick

Docket #

C-2019-3007661

Dear West Penn, and SMP Team

RECEIVED

Act 129

Section 701 Code

Docket No. M-2013-2341991 January 2016 Through Mid-2019

MAR 20 2019

PA PUBLIC UTILITY COMMISSION
SECRETARY'S BUREAU

Installation of solar panels with compliance of commission, and SMP, contains We have until mid-2019 to get the Smart meter installed. We would like to have a time extension to be able to get Smart meter and Solar Panels installed at Sametime. Grid Power Plan objective source engineer, need to contact that person. Time extension issued for the installation of now until then. Just need a few more months to figure out what needs to be done with the filing of this.

Hello, I am responding to the formal complaint, and or their dispute of Matter of New Case, There, fore or fact of.

I am working on trying to setup a Solar Panel System for the house to save on energy, and to do better of the energy consumption of family gathered collective of cost of living. It is not that, we are not complying with your rules and regulations that was passed back in 2008 and then confirmed in 2014. As it seems I am wondering that do I have to do or whom do I have to contact to get in ordinance of installing the solar panels and smart meters at the same time, or there of simultaneously Also, Does the state or commission have any Grants, or Is there any government grants to help with this Solar Panel Installation, or and their of Subsidies that can help with this process?

As the Act of 129 I would like to file and work with the ordinance to setup a installation Plan with the SMP and the commissioner's to Get the GRID Setup plan with The solar panel installation in compliance with Everyone, so we are all happy and are on good terms. We here at the Janick residence, are trying to go green and help the planet out. As a matter of fact, the planet and such is falling apart, and we have so much scientific evidence with EMF Radiation with 5g and 4g, along with the hacking and insane ideals of what is going on with the world today. We just want to be safe and protect our family to ensure the survival of us and our family Lineage, without any hazardous effect on our living condition and biological organic matter around the smart meter and radius of EMF Radiation. Not to mention its right beside my garden which has me very concerned.

Act 129 > The only way we want to get a smart meter is installed is when we put up our solar panels and we can make that happen before the scheduled overall finished operational factor of the compliance and ordinance of the laws at hand, We want to make sure we follow the Public Utility Code Commission regulations and orders. If we was to provide proof of our claims that Smart Meter are unhealthy, well the paper work for that would be outstanding and so much reading and paper would be used, it wouldn't be funny, along with all the data, and that's a lot of work that no one wants to do, and in the end, who would win? It's not about winning or losing, it's about doing the right thing in the end matter of fact to justify the means at the compliance with the ordnance at hand.

6. Denied, After reasonable investigation the company is without information or knowledge sufficient to form a belief regarding whether or not a protection from abuse order has been granted in favor of the complaint and demands proof thereof, if relevant at hearing.

6. Who is investigating what? Is it up to us to investigate whether the data is provable or not? Then if so, we request more time then to determine the stated consequences and facts to gather the supported evidence or non-thereof to be presented. Do we even know what this technology is capable of? Has the EPA, DOD or any other investigative case studies have been done? What all has been done to provide us the user of the devices, to determine whether the devices are safe or not. Who's job is it to provide and do the work as needed to determine the crisis at hand.

Then and if so, a case study needs to be done now. Since from the beginning of the installation of the devices, we need to submit a questionnaire to all the stated installies of the devices, and get their collective responses then to determine for case studies. We all know what new technology is, but we do not know the pros and cons of the devices. And usually in most cases to determine whether a new technology is deemed practical, usable, and reliable, takes time for the development of these case study's, case and effects, and a collage of other factors, that we don't need to get into. We need a complete Manuel and determination of what These smart meters are, and how smart they are. And or if then how dumb they can be. In a world like we have, Beware of the false prophets, as they say when thinking, always beware, like going to get a car and the used salesmen analogy.

We just want the proper understanding of what is going on, based on all the dis-information that is presented at hand, a full entire report would be induced before the Docket No. M-2013-2341991 January 2016 Though Mid-2019 installation requirement that is presented by law. Health Report, Scientific report, Case study report, anything and everything if prove whether or not this technology is safe or not, and then as if, we would feel safer to comply with the installation of the provided Smart Meter, Waiting until the last minute proved to be the safest conditional approach to new technologies at hand.

Sincerely,

The
Janick Family
