INFRASTRUCTURE REPLACEMENT PROJECT INFORMATION

Dear Valued SUEZ Customer:

Infrastructure replacement is ongoing at SUEZ as we endeavor to upgrade our water distribution systems serving portions of eight counties to enhance reliability. Your area of Upper Allen Township will benefit from a water infrastructure upgrade project that is set to begin on February 26, 2018, weather permitting.

SUEZ will invest over \$1.1 million to replace more than 9,400 feet of existing water main of varied diameter with new, larger diameter water main on portions of the following streets: Gettysburg Pike, Mallard Way, Herman Drive, Thornton Drive, Grantham Road. The project also involves installation of 80 replacement residential service connections.

During installation of the new water main and service connections, the water supply to your property will be **temporarily** disrupted in order to connect your house with the new main. This service disruption could last approximately 4-6 hours. You will be notified 24 hours prior to the interruption of water service. The company will make every effort to keep this inconvenience to a minimum.

Prior to the water service disruption, we encourage you to fill clean, food grade containers with water from your COLD water tap to help meet water use needs during the disruption time frame.

Project-related information will be posted on our website at mysuezwater.com where you must enter your zip code to be taken to the alert page.

After the connection work is completed, streets will be temporarily restored. Final restoration will be completed to conform with applicable municipal standards. If we need to perform work on your lawn, it will be restored at a later date when weather conditions permit. We encourage you to water restored areas.

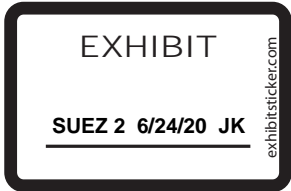

Installation of water meter pits will occur at each customer's water service connection. The meter pit assembly includes a backflow preventer. The backflow preventer will keep water from flowing back into the SUEZ water distribution system from the customer's property. Since the backflow preventer may increase the water pressure in the water system at your property, due to thermal expansion, SUEZ recommends that you examine the water system to determine if you need to install a thermal expansion tank or other device to protect the plumbing system within. Pressure from thermal expansion can cause leaks in the water system, including the hot water tank.

If you have questions regarding this project, please contact Construction Coordinator Devon Cook at 717-901-6330 or via email at devon.cook@suez-na.com. Thank you for your understanding and cooperation in association with this infrastructure replacement project benefiting your area.

Sincerely,

Robert Manbeck

Public Affairs Manager
