We include our latest estimates below. Note we are close to the low end of 5-7% CAGR guidance in '21 but rebounds to around midpoint in years after. We anticipate further gas related capex could improve the outlook further, but stress that with earned ROEs near authorized ranges (including for PA, which has historically under-earned of late), we see few clear-cut paths towards improvement. While MA Bay State gas biz sale appears *off the table* for now as mgmt has appeared to talk down this prospect from earlier media articles (cautious in our view given what this implies for core biz value/operations still); this is in spite of continued pressure from MA DPU. While '20 EPS guide is intact with Street, protracted rate case timeline and uncertain outlook for shares keeps us away from getting more constructive.

Table 4: NI EPS Estimates: still below Street on forecasted '21 * '21... see low-to-mid range of EPS outlook on *current* capex

NI SOTP Valuation

We include our SOTP Valuation with the latest peer multiple of 19.5x for gas and 19.1x for electric. We keep our premium on at 1.0x NIPSCO Electric given confidence that the NIPSCO rate case proceed with ownership opportunities. Our PO is $30.5/sh. We maintain Neutral given our sense of risk around Massachusetts – we have yet to be convinced the company will be approved of full recovery of expenses related to Merrimack given latest conversations with stakeholders.

Price objective basis & risk

NiSource Inc (NI)

Our $30.50 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2022 forward P/E multiples of 19.5x for gas utilities and 19.1x for electric utilities with a 1.0x premium to reflect NiSource's electric utility's strong growth rates and earned ROEs. We note that electric / gas peer P/E multiples are grossed up by 5% / 5.1% to reflect capital appreciation across the sector. We then subtract the value of excess holding company debt at the parent not supporting the utility opcos. This multiple is slightly below the LDC peer average but above the small-mid cap electric utility average. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its inline-ish multiple versus peers. We adjust gas utilities (including Columbia Gas of MA) to a -1.0x discount to reflect overhang of shares.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, financing plan updates, and challenging steel production economics in Indiana

iQmethod SM is the set of BofA Merrill Lynch standard measures that serve to maintain global consistency under three broad headings: Business Performance, Quality of Earnings, and validations. The key features of iQmethod are: A consistently structured, detailed, and transparent methodology. Guidelines to maximize the effectiveness of the comparative valuation process, and to identify some common pitfalls.

iQdatabase ® is our real-time global research database that is sourced directly from our equity analysts' earnings models and includes forecasted as well as historical data for income statements, balance sheets, and cash flow statements for companies covered by BofA Merrill Lynch.

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1517	50.30%	Buy	964	63.55%
Hold	680	22.55%	Hold	434	63.82%
Sell	819	27.16%	Sell	408	49.82%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Merrill Lynch clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including,

among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

Copyright and General Information:

Materials prepared by BofA Merrill Lynch Global Research personnel are based on public information. Facts and views presented in this material have not been reviewed by, and may not reflect information known to, professionals in other business areas of BofA Merrill Lynch, including investment banking personnel. BofA Merrill Lynch has established information barriers between BofA Merrill Lynch Global Research and certain business groups. As a result, BofA Merrill Lynch does not disclose certain client relationships with, or compensation received from, such issuers. To the extent this material discusses any legal proceeding or issues, it has not been prepared as nor is it intended to express any legal conclusion, opinion or advice. Investors should consult their own legal advisers as to issues of law relating to the subject matter of this material. BofA Merrill Lynch Global Research personnel's knowledge of legal proceedings in which any BofA Merrill Lynch entity and/or its directors, officers and employees may be plaintiffs, defendants, co-defendants or co-plaintiffs with or involving issuers mentioned in this material is based on public information. Facts and views presented in this material that relate to any such proceedings have not been reviewed by, discussed with, and may not reflect information known to, professionals in other business areas of BofA Merrill Lynch in connection with the legal proceedings or matters relevant to such proceedings.

This information has been prepared independently of any issuer of securities mentioned herein and not in connection with any proposed offering of securities or as agent of any issuer of any securities. None of BofAS any of its affiliates or their research analysts has any authority whatsoever to make any representation or warranty on behalf of the issuer(s). BofA Merrill Lynch Global Research policy prohibits research personnel from disclosing a recommendation, investment rating, or investment thesis for review by an issuer prior to the publication of a research report containing such rating, recommendation or investment thesis.

Any information relating to the tax status of financial instruments discussed herein is not intended to provide tax advice or to be used by anyone to provide tax advice. Investors are urged to seek tax advice based on their particular circumstances from an independent tax professional.

The information herein (other than disclosure information relating to BofA Merrill Lynch and its affiliates) was obtained from various sources and we do not guarantee its accuracy. This information may contain links to third-party websites. BofA Merrill Lynch is not responsible for the content of any third-party website or any linked content contained in a third-party website. Content contained on such third-party websites is not part of this information and is not incorporated by reference. The inclusion of a link does not imply any endorsement by or any affiliation with BofA Merrill Lynch. Access to any third-party website is at your own risk, and you should always review the terms and privacy policies at third-party websites before submitting any personal information to them. BofA Merrill Lynch is not responsible for such terms and privacy policies and expressly disclaims any liability for them.

All opinions, projections and estimates constitute the judgment of the author as of the date of publication and are subject to change without notice. Prices also are subject to change without notice. BofA Merrill Lynch is under no obligation to update this information and BofA Merrill Lynch's ability to publish information on the subject issuer(s) in the future is subject to applicable quiet periods. You should therefore assume that BofA Merrill Lynch will not update any fact, circumstance or opinion contained herein.

Subject to the quiet period applicable under laws of the various jurisdictions in which we distribute research reports and other legal and BofA Merrill Lynch policy-related restrictions on the publication of research reports, fundamental equity reports are produced on a regular basis as necessary to keep the investment recommendation current.

Certain outstanding reports or investment opinions relating to securities, financial instruments and/or issuers may no longer be current. Always refer to the most recent research report relating to an issuer prior to making an investment decision.

In some cases, an issuer may be classified as Restricted or may be Under Review or Extended Review. In each case, investors should consider any investment opinion relating to such issuer (or its security and/or financial instruments) to be suspended or withdrawn and should not rely on the analyses and investment opinion(s) pertaining to such issuer (or its securities and/or financial instruments) nor should the analyses or opinion(s) be considered a solicitation of any kind. Sales persons and financial advisors affiliated with BofAS or any of its affiliates may not solicit purchases of securities or financial instruments that are Restricted or Under Review and may only solicit securities under Extended Review in accordance with firm policies.

Neither BofA Merrill Lynch nor any officer or employee of BofA Merrill Lynch accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this information.

NiSource Inc (NI)

Recent Developments

- Estimate Change
- Target Price Change

- **Update of Merrimack Valley Spending:** Heading into Q3, we do not expect much of a change in the capex spending related to the Mass incident in the Q3 update.

- **No New Earnings Guidance Expected in Q3:** NiSource will likely reiterate its 5-7% annual growth rate, but it doesn't typically update EPS guidance during Q3.

- **NiSource Takeaways from NTSB Report** (link)**:** For NiSource, there were three recommendations, including two that were already addressed: (1) revise the engineering plan and constructability review process, and 2) review and ensure that all records and documentation of natural gas systems are traceable, reliable, and complete.) The outstanding item identified was as follows:

  "Review your protocols and training for responding to large-scale emergency events, including providing timely information to emergency responders, appropriately assigning NiSource emergency response duties, performing multi-jurisdictional training exercises, and participating cooperatively with municipal emergency management agencies."

- **Merrimack Valley Commission Order Inspection – Update with Q3 Release (If Not Sooner):** A few old pipes were not abandoned properly. The initial plan to go through the first 700 (out of 4900) service lines that were installed last year is complete, and 150 were found to be not properly abandoned. The next 2,200 lines are expected to be completed by November 15 (1/3 done already).

- **New Financing Plan:** The increasingly clarity on the incident's capex implications sets the stage for NiSource to update the market on its financing plans with the Q3 release. We expect the new financing plan to be rolled out this quarter and to consist of a mix of debt, common equity, and preferred equity. Below is the latest formal guidance, but we believe that up to $600M of incremental equity may be needed.

Non-Convertible Subordinated Debt or Preferred Equity	$900	TBD

Source: Citi Research

- **No New Earnings Guidance Expected in Q3:** NiSource will likely reiterate its 5-7% annual growth rate, but it does not typically update EPS guidance during the third quarter. The 5-7% is annual guidance, so NiSource is guiding that each year, it will hit 5% or greater growth.

- **To Sell or Not to Sell the Massachusetts Business:** NiSource continues to take action that would both improve the value of the business under the NI ownership or a third-party owner. The actions taken around inspections and investments would help the outcome with potential future rate cases regardless of the entity's ownership.

- **Pending Rate Case in Indiana with Partial Settlement:** The decision keeps getting delayed. The current expectation is a late-February or January decision.

- **Joint Venture Wind Project Announced Yesterday:** The 300MW project with tax equity partners is moving forward in Indiana. The project originally had cost estimates of $1,400/kw, but we assume that those costs moved closer to $300M for the construction. NiSource is expected to get rate-based recovery for its contribution to this project.

- **NTSB Report Filed – No Big Surprises:** It was filed on September 24 (link) and highlighted the finding of its study and several recommendations. The probable cause was determined to be over-pressurization of the natural gas distribution system, and the resulting fires/explosions were due to Columbia Gas' weak engineering management. Inadequate planning, review, sequence, and oversight the construction project led to the abandonment of a cast iron main without first relocating regulator sensing lines to the new polyethylene main. Inadequate overpressure protection also was deemed to contribute to the accident.

- **NiSource Takeaways from NTSB Report:** For NiSource, there were three recommendations, including two that were already addressed: (1) revise the engineering plan and constructability review process, and 2) review and ensure that all records and documentation of natural gas systems are traceable, reliable, and complete.) The outstanding item identified was as follows:

  "Review your protocols and training for responding to large-scale emergency events, including providing timely information to emergency responders, appropriately assigning NiSource emergency response duties, performing multi-jurisdictional training exercises, and participating cooperatively with municipal emergency management agencies."

NiSource Inc

Company description

NiSource Inc (NI) is primarily a regulated utility with an integrated network of gas distribution in the Northeast, Mid-Atlantic, and Midwest. NiSource also operates an electric utility in Northern Indiana. The company serves around 4 million customers across seven states through its two main business segments, including 1) Gas Distribution, which delivers natural gas in several states, and 2) Electric Operations, which consist of NiSource's regulated electric utility, Northern Indiana Public Service Company (NIPSCO).

Investment strategy

We rate the shares of NiSource (NI) Neutral (2). We believe that NI's long-term earnings are relatively stable due to diverse operations areas and constructive regulatory jurisdictions. Our estimates do not include 1) substantial industrial load growth at the utilities; 2) colder-than-normal weather and faster-than-average customer growth; or 3) slower-than-typical timeline in regulatory filing and approval process for new infrastructure projects and cost recovery mechanisms.

Valuation

We average multiple valuation methodologies to derive our $30 target price. Our NAV yields a value of $26. We value regulated assets at a multiple of 1.6x rate base. These values are partially offset by the company's net debt. Our DDM, which incorporates our rate base growth assumptions, values the company at $36 per share. Our P/E and EV/EBITDA analyses yield values of $30 and $28 per share, respectively.

Risks

The key risks to our investment thesis are as follows: (1) Rate Cases – We estimate that the company will receive rate relief at several of its utilities. Under- or over-estimation of relief could materially impact our estimates. (2) Weather – Changes in weather impact the stability of earnings. (3) Capital Investment Recovery — NI spends a substantial amount of capital to maintain and expand its distribution system. NI depends on rate increases from public utility commission to earn a fair return on this expansion. (4) Capital Markets — Access to cheap capital markets could be limited due to the size of the company. If the impact on the company from any of these factors proves to be greater/less than we anticipate, they may prevent the stock from achieving our target price or could cause the stock price to materially under/outperform our target. (5) There is a risk that there will be negative political, financial, and regulatory backlash from the recent events in New England.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

(the "Firm"), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a

conflict of interest that could affect the objectivity of this report, however investors should also note that the Firm has in place organisational and administrative arrangements to manage potential conflicts of interest of this nature.

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

Unless stated otherwise neither the Research Analyst nor any member of their team has viewed the material operations of the Companies for which an investment view has been provided within the past 12 months.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 30th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 30 Sep 2019	Buy	Hold	Sell	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	52%	36%	12%	15%	78%	7%
% of companies in each rating category that are investment banking clients	65%	63%	59%	68%	64%	68%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The target price is based on a 12 month time horizon. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock's fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc Ryan Levine

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

Regulations in various jurisdictions require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q3 2019 Buy 33% (72%), Hold 43% (65%), Sell 24% (57%), RV 0.6% (88%); Q2 2019 Buy 33% (72%), Hold 43% (64%), Sell 23% (56%), RV 0.6% (88%); Q1 2019 Buy 33% (70%), Hold 43% (64%), Sell 23% (57%), RV 0.8% (85%); Q4 2018 Buy 33% (69%), Hold 43% (62%), Sell 23% (59%), RV 0.6% (100%). For the purposes of disclosing recommendations other than for equity or high yield recommendations (whose definitions can be found in their corresponding disclosure sections), "Buy" means a positive directional trade idea; "Sell" means a negative directional trade idea; and "Relative Value" means any trade idea which does not have a clear direction to the investment strategy.

European regulations require a 5 year price history when past performance of a security is referenced. CitiVelocity's Charting Tool (https://www.citivelocity.com/cv2/#go/CHARTING_3_Equities) provides the facility to create customisable price charts including a five year option. This tool can be found in the Data & Analytics section under any of the asset class menus in CitiVelocity (https://www.citivelocity.com/). For further information contact CitiVelocity support (https://www.citivelocity.com/cv2/go/CLIENT_SUPPORT). The source for all referenced prices, unless otherwise stated, is DataCentral, which sources price information from Thomson Reuters. Past performance is not a guarantee or reliable indicator of future results. Forecasts are not a guarantee or reliable indicator of future performance.

Investors should always consider the investment objectives, risks, and charges and expenses of an ETF carefully before investing. The applicable prospectus and key investor information document (as applicable) for an ETF should contain this and other information about such ETF. It is important to read carefully any such prospectus before investing. Clients may obtain prospectuses and key investor information documents for ETFs from the applicable distributor or authorized participant, the exchange upon which an ETF is listed and/or from the applicable website of the applicable ETF issuer. The value of the investments and any accruing income may fall or rise. Any past performance, prediction or forecast is not indicative of future or likely performance. Any information on ETFs contained herein is provided strictly for illustrative purposes and should not be deemed an offer to sell or a solicitation of an offer to purchase units of any ETF either explicitly or implicitly. The opinions expressed are those of the authors and do not necessarily reflect the views of ETF issuers, any of their agents or their affiliates.

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 598 and ASIC Regulatory Guide 264, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and

these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Where a component of a published trade idea is subject to a restriction, the trade idea will be removed from any list of open trade ideas included in the Product. Upon the lifting of the restriction, the trade idea will either be re-instated in the open trade ideas list if the analyst continues to support it or it will be officially closed. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

NiSource Inc (NI)

New 2020 $500-$700M Equity Issuance Plan – Overhang or Opportunity?

- **Setup:** NiSource stock has been weak over the last few weeks on the expectations that an equity issuance was coming. We highlighted the potential for a $600M discrete equity issuance for 2020 in our note (Recent Developments), but believe by the time of the earnings call, it was largely expected.

- **Guided Offering Amount - $500 - $700M block offering for 2020 target:** In our view, the equity issuance overhang will likely remain until the offering is executed on and the overhang is removed. NiSource indicated that it is looking to raise the money by the end of 2020 to hit credit metric and rating agency targets and which gives it some flexibility. The Greater Lawrence costs for NiSource was ~$600M, net of insurance reimbursement. If the demand is there, NiSource will likely go to the equity forward market to remove the potential overhang on the stock. If not, NiSource may consider a more traditional equity block sale, in our view.

- **Is Management Worried? – Artificial Intelligent Sentiment Reading Tool Takeaways:** Not surprisingly, NiSource management had a negative tone when announcing its plan to raise $500 to $700M in 2020 in common equity. There was also a similar tone when discussing that it wasn't in the plan to recover Greater Lawrence related expense sooner than guided. The AI based analysis (see page 3) of management tone on the earnings call did not seem very supportive of the near term bull argument that these issues will be addressed favorably and quicker than expected.

- **Guidance Reiterated:** NiSource reiterated its 2019 EPS guidance of $1.27 to $1.33 and its 5 to 7% long term EPS growth rate as expected. We assume NI is trending towards the lower end of the long EPS growth range due to the equity issuance, and Greater Lawrence related costs, net of insurance.

Sentiment Reads

We used a tool that can read sentiment of the earnings call. For NiSource, it was interesting to see which parts of the earnings call had an objectively negative tone (in red below). Of management comments, three had a negative tone by management and several questioners had a similar negative tone.

Figure 1. Sentiment Read from NiSource's Q3 Earnings Call (Green is Positive, Red is Negative; Left is beginning of call and right is end of call)

Source: Aiera

1) NiSource reading about "some of the statements made during this presentation will be forward-looking".

2) **"The primary change to our financing plan is that we now expect a block equity issuance in the range of $500 million to $700 million in 2020."**

3) Management reiterating that NiSource isn't guiding to, at this point, an acceleration coming out of from a pension asset recovery or faster than expected insurance recoveries.

Financing Plan

NiSource stock has been weak over the last few weeks on the expectations that an equity issuance was coming. We highlighted the potential for a $600M discrete equity issuance for 2020 in our note (Recent Developments), but believe by the time of the earnings call, it was largely expected. Below are key takeaways:

- **Guided Offering Amount:** The $500 - $700M block offering for 2020 target.
- **Flexible Timing:** NiSource indicated that it is looking to raise the money by the end of 2020 to hit credit metric and rating agency targets and which gives it some flexibility. If the demand is there, NiSource will likely go to the equity forward market to remove the potential overhang on the stock. If not, NiSource may consider a more traditional equity block sale.

  Citi's View: The equity issuance overhang will likely remain until it is executed on and the overhang is removed.

Guidance

NiSource reiterated its 5 to 7% long term EPS growth rate as expected. We assume NI is trending towards the lower end of the range due to the equity issuance, and Greater Lawrence related costs, net of insurance.

NiSource Inc

Company description

NiSource Inc (NI) is primarily a regulated utility with an integrated network of gas distribution in the Northeast, Mid-Atlantic, and Midwest. NiSource also operates an electric utility in Northern Indiana. The company serves around 4 million customers across seven states through its two main business segments, including: 1) Gas Distribution, which delivers natural gas in several states; 2) Electric Operations, which consist of NiSource's regulated electric utility, Northern Indiana Public Service Company (NIPSCO).

Investment strategy

We rate the shares of NiSource (NI) Neutral (2). We believe NI's long-term earnings are relatively stable due to diverse operations areas and constructive regulatory jurisdictions. Our estimates do not include: 1) Substantial industrial load growth at the utilities; 2) Colder-than-normal weather and faster than average customer growth; or 3) Slower than typical timeline in regulatory filing and approval process for new infrastructure projects and cost recovery mechanisms.

Valuation

We average multiple valuation methodologies to derive our $30 target price. Our NAV yields a value of $28. We value regulated assets at a multiple of 1.6x rate base. These values are partially offset by the company's net debt. Our DDM, which incorporates our rate base growth assumptions, values the company at $33 per share. Our P/E and EV/EBITDA analyses yield values of $29 and $29 per share, respectively.

Risks

The key risks to our investment thesis are (1) Rate Cases – We estimate the company will receive rate relief at several of its utilities. Under- or over-estimation of relief could materially impact our estimates (2) Weather – Changes in weather impact the stability of earnings (3) Capital Investment Recovery — NI spends a substantial amount of capital to maintain and expand its distribution system. NI depends on rate increases from public utility commission to earn a fair return on this expansion. (4) Capital Markets — Access to cheap capital markets could be limited due to the size of the company. If the impact on the company from any of these factors proves to be greater/less than we anticipate, it may prevent the stock from achieving our target price or could cause the stock price to materially under/outperform our target. (5) There is a risk that there will be negative political, financial, and regulatory backlash from the recent events in New England.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Rating/target price changes above reflect Eastern Time

Due to Citi advising NiSource Inc (the 'Company') on the spin-off of off its pipeline & midstream assets into a publicly traded company,Columbia Pipeline Group,Citi Research suspended its rating and target price on 28 September 2014 (the 'Suspension Date'). Please note that the Company price chart that appears in this report and is available on Citi Research's disclosure website does not reflect that Citi Research did not have a rating or target price between the Suspension Date and 19 April 2015 when Citi Research resumed full coverage.

Within the past 12 months, Citigroup Global Markets Inc. or its affiliates has acted as manager or co-manager of an offering of securities of NiSource Inc.

Citigroup Global Markets Inc. owns a position of 1 million USD or more in the debt securities of NiSource Inc.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from NiSource Inc.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from NiSource Inc in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): NiSource Inc.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: NiSource Inc.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: NiSource Inc.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to NiSource Inc. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and recommendations stated here, are not within the scope of investment advisory activity. Investment advisory service is provided in accordance with a contract of engagement on investment advisory concluded between brokerage houses, portfolio management companies, non-deposit banks and clients. Comments and recommendations stated here rely on the individual opinions of the ones providing these comments and recommendations. These opinions may not fit to your financial status, risk and return preferences. For this reason, to make an investment decision by relying solely to this information stated here may not bring about outcomes that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the "Firm"), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a

conflict of interest that could affect the objectivity of this report, however investors should also note that the Firm has in place organisational and administrative arrangements to manage potential conflicts of interest of this nature.

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

Unless stated otherwise neither the Research Analyst nor any member of their team has viewed the material operations of the Companies for which an investment view has been provided within the past 12 months.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 30th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 30 Sep 2019	Buy	Hold	Sell	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	52%	36%	12%	15%	78%	7%
% of companies in each rating category that are investment banking clients	65%	63%	59%	68%	64%	68%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The target price is based on a 12 month time horizon. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock's fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc   Ryan Levine; Niki Whelan

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

Regulations in various jurisdictions require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q3 2019 Buy 33% (72%), Hold 43% (65%), Sell 24% (57%), RV 0.6% (88%); Q2 2019 Buy 33% (72%), Hold 43% (64%), Sell 23% (56%), RV 0.6% (88%); Q1 2019 Buy 33% (70%), Hold 43% (64%), Sell 23% (57%), RV 0.8% (85%); Q4 2018 Buy 33% (69%), Hold 43% (62%), Sell 23% (59%), RV 0.6% (100%). For the purposes of disclosing recommendations other than for equity or high yield recommendations (whose definitions can be found in their corresponding disclosure sections), "Buy" means a positive directional trade idea; "Sell" means a negative directional trade idea; and "Relative Value" means any trade idea which does not have a clear direction to the investment strategy.

European regulations require a 5 year price history when past performance of a security is referenced. CitiVelocity's Charting Tool (https://www.citivelocity.com/cv2/#go/CHARTING_3_Equities) provides the facility to create customisable price charts including a five year option. This tool can be found in the Data & Analytics section under any of the asset class menus in CitiVelocity (https://www.citivelocity.com/). For further information contact CitiVelocity support (https://www.citivelocity.com/cv2/go/CLIENT_SUPPORT). The source for all referenced prices, unless otherwise stated, is DataCentral, which sources price information from Thomson Reuters. Past performance is not a guarantee or reliable indicator of future results. Forecasts are not a guarantee or reliable indicator of future performance.

Investors should always consider the investment objectives, risks, and charges and expenses of an ETF carefully before investing. The applicable prospectus and key investor information document (as applicable) for an ETF should contain this and other information about such ETF. It is important to read carefully any such prospectus before investing. Clients may obtain prospectuses and key investor information documents for ETFs from the applicable distributor or authorized participant, the exchange upon which an ETF is listed and/or from the applicable website of the applicable ETF issuer. The value of the investments and any accruing income may fall or rise. Any past performance, prediction or forecast is not indicative of future or likely performance. Any information on ETFs contained herein is provided strictly for illustrative purposes and should not be deemed an offer to sell or a solicitation of an offer to purchase units of any ETF either explicitly or implicitly. The opinions expressed are those of the authors and do not necessarily reflect the views of ETF issuers, any of their agents or their affiliates.

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 598 and ASIC Regulatory Guide 264, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and

these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Where a component of a published trade idea is subject to a restriction, the trade idea will be removed from any list of open trade ideas included in the Product. Upon the lifting of the restriction, the trade idea will either be re-instated in the open trade ideas list if the analyst continues to support it or it will be officially closed. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

ADDITIONAL INFORMATION IS AVAILABLE UPON REQUEST

ARGUS®

NYSE: NI

NISOURCE INC

NiSource Inc. is an energy holding company whose subsidiaries are fully regulated natural gas and electric utility companies serving approximately 4.0 million customers in seven states. NiSource is one of the nation's largest natural gas distribution companies, as measured by number of customers. NiSource's principal subsidiaries include NiSource Gas Distribution Group Inc., a natural gas distribution holding company, and NIPSCO, a regulated gas and electric company. NiSource derives substantially all of its revenues and earnings from the operating results of these rate-regulated utilities.

Analyst's Notes

Analysis by Gary Hovis, November 18, 2019

ARGUS RATING: BUY

- Continued strong fundamentals
- Our rating on NiSource is BUY based on valuation and historical performance.
- Our 12-month target price of $32 implies a potential total return, including the dividend, of about 20% from current levels.
- NiSource has reaffirmed its 2019 operating EPS guidance range of $1.27-$1.33.
- Our 2019 operating EPS estimate is $1.32 and our 2020 estimate is $1.42.

INVESTMENT THESIS

Our rating on NiSource Inc. (NYSE: NI) is BUY based on valuation and historical performance. NiSource recently completed a corporate restructuring that resulted in the spinoff of its pipeline group subsidiary. The balance sheet appears stable and, in our view, able to support the current dividend, which yields about 3.0%. Our 12-month target price of $32 implies a potential total return, including the dividend, of about 20% from current levels.

Our long-term rating is also BUY.

RECENT DEVELOPMENTS

Over the past three months, NI shares have gained 12%, compared to an advance of 13% for the S&P 500. Over the past 52 weeks, the shares have risen 3%, compared to a 15% increase for the index. Over the last five years, NI shares have advanced 63%, versus a 64% gain for the S&P 500. The beta on NI is 0.09.

On October 30, NiSource Inc. reported a 3Q19 GAAP loss of $7.2 million or $0.02 per share, compared to a loss of $345.1 million or $0.95 per share in 3Q18. For the nine months ended September 30, GAAP net income was $481.0 million or $1.29 per share, compared to a loss of $45.8 million or $0.13 per share in 3Q18.

NiSource also reported a third-quarter non-GAAP net operating loss of $1.7 million or

Argus Recommendations

Twelve Month Rating	SELL	HOLD	**BUY**
Five Year Rating	SELL	HOLD	**BUY**
Sector Rating	Under Weight	**Market Weight**	Over Weight

Argus assigns a 12-month BUY, HOLD, or SELL rating to each stock under coverage.

- BUY-rated stocks are expected to outperform the market (the benchmark S&P 500 Index) on a risk-adjusted basis over the next year.
- HOLD-rated stocks are expected to perform in line with the market.
- SELL-rated stocks are expected to underperform the market on a risk-adjusted basis.

The distribution of ratings across Argus' entire company universe is: 65% Buy, 34% Hold, 0% Sell.

Analyst's Notes...Continued

breakeven on a per share basis, compared to operating earnings of \$35.3 million or \$0.10 per share in 3Q18. Nine-month operating earnings were \$325.1 million or \$0.87 per share, compared to \$321.4 million or \$0.91 per share in the same period a year earlier.

On the regulatory front, the company's Columbia Gas of Maryland's base rate case request remains pending before the Maryland Public Service Commission. Filed in May 2019, the request seeks to support the continued replacement of aging pipelines and the adoption of pipeline safety upgrades. If approved as filed, the request would increase annual revenues by \$3.7 million, including \$1.2 million of current infrastructure revenue. A commission order is expected by the end of 2019, with new rates likely to take effect in January 2020.

On August 28, the Public Utilities Commission of Ohio approved the company's Columbia Gas of Ohio application for the first annual adjustment to its Capital Expenditure Program (CEP) rider. The CEP rider, which was first approved by Ohio regulators in 2018, allows the company to recover capital investments and related deferred expenses. New rates took effect in September 2019.

On October 1, the company's Northern Indiana Public Service Co. subsidiary (NIPSCO) announced its next RFP for the development of new electric resources. The new RFP is consistent with NIPSCO's 2018 Integrated Resource Plan, which calls for the retirement of nearly 80% of its remaining coal-fired generation by 2023. All coal-fired generation is expected to be retired by 2028.

NIPSCO's electric base rate case remains pending before the Indiana Utilities Regulatory Commission (IURC). A partial settlement agreement filed on April 26 addresses the revenue requirement, federal tax reform and changes to the company's depreciation schedules related to the early retirement of coal fired generation mentioned above. If approved as filed, the settlement would establish a return on equity of 9.9%. The hearing concluded in August. An IURC order is expected by the end of 2019, with new rates effective in 1Q20.

NiSource is one of the largest fully regulated utilities in the U.S., serving approximately 3.5 million natural gas customers and 500,000 electric customers in seven states through its Columbia Gas and NIPSCO brands.

EARNINGS & GROWTH ANALYSIS

NiSource has reaffirmed its net operating non-GAAP EPS guidance range of \$1.27-\$1.33 for 2019. Our 2019 operating EPS estimate is \$1.32 and our 2020 estimate is \$1.42.

NiSource continues to rely on its utility infrastructure programs for earnings and dividend growth. The company's regulated gas and electric segments will primarily invest in pipelines and in transmission and distribution modernization programs, and should benefit from favorable regulation. In all, management expects the company to post operating earnings growth of 5%-7% annually from 2019 through 2022, resulting in total annual returns for shareholders of 6%-7%.

Analyst's Notes...Continued

NiSource could also become a buyout target, as larger utilities and private equity firms have purchased smaller utilities because of their stable earnings growth and above-average dividend yields.

FINANCIAL STRENGTH & DIVIDEND

NiSource expects to complete capital investments of $1.7-$1.8 billion in 2019. The company remains committed to maintaining its current investment-grade credit ratings with Fitch (BBB), Moody's (Baa2), and Standard & Poor's (BBB+). As of September 30, 2019, NiSource had $1.4 billion in net available liquidity, consisting of cash and available capacity under its credit facility and accounts receivable securitization programs.

We believe that NiSource has improved its balance sheet by selling noncore assets, recalibrating capital expenditures, and carefully managing operating expenses and working capital.

NiSource pays an annualized dividend of $0.80 per share, for a yield of about 3.0%. Our dividend estimates are $0.80 for 2019 and $0.84 for 2020.

MANAGEMENT & RISKS

The CEO of NiSource is Joseph Hamrock, 53, who assumed the position in July 2015. Mr. Hamrock, who joined NiSource in 2012, previously served as executive vice president and Group CEO for NiSource's Gas Distribution segment. He also has experience as an executive with American Electric Power. Donald E. Brown is the CFO.

Management is committed to electric and gas service expansion strategies in the company's regulated service territories, and to the expansion of its gas transmission and storage business. We think the company's platform for a return to growth is solid, and we are confident in management's ability to provide shareholders with increased value over the long term.

Key risks for stocks in our electric utility universe include fluctuations in interest rates and commodity prices, the effect of adverse weather on revenue, regulatory issues (especially involving construction cost recovery), and potential environmental and safety liabilities. In addition, the capital-intensive nature of the utility industry creates ongoing liquidity risk that must be actively managed by each company.

COMPANY DESCRIPTION

NiSource Inc. is an energy holding company whose subsidiaries are fully regulated natural gas and electric utility companies serving approximately 4.0 million customers in seven states. NiSource is one of the nation's largest natural gas distribution companies, as measured by number of customers. NiSource's principal subsidiaries include NiSource Gas Distribution Group Inc., a natural gas distribution holding company, and NIPSCO, a regulated gas and electric company. NiSource derives substantially all of its revenues and earnings from the operating results of these rate-regulated utilities.

VALUATION

We think that NI shares are favorably valued at current prices

Peer & Industry Analysis

The graphics in this section are designed to allow investors to compare NI versus its industry peers, the broader sector, and the market as a whole, as defined by the Argus Universe of Coverage.

- **The scatterplot shows how NI stacks up versus its peers on two key characteristics: long-term growth and value. In general, companies in the lower left-hand corner are more value-oriented, while those in the upper right-hand corner are more growth-oriented.**
- **The table builds on the scatterplot by displaying more financial information.**
- **The bar charts on the right take the analysis two steps further, by broadening the comparison groups into the sector level and the market as a whole. This tool is designed to help investors understand how NI might fit into or modify a diversified portfolio.**

near $26, toward the midpoint of the 52-week range of $24-$31. The shares trade at 18.4-times our 2020 EPS estimate, below the average of 21.7 for comparable electric and gas utilities. They are also trading at a price/book multiple of 2.3, close to the peer average of 2.4. The price/cash flow ratio is 16.1, above the peer average of 14.9. The shares trade near the midpoint of their historical range on P/E, price/book and price/cash flow. The dividend yield of 3.0% is slightly above the industry average of 2.8%. We are reiterating our BUY rating on NI with a 12-month target price of $32.

On November 18 at midday, BUY-rated NI traded at $26.52, up $0.02.

METHODOLOGY & DISCLAIMERS

About Argus

Argus Research, founded by Economist Harold Dorsey in 1934, has built a top-down, fundamental system that is used by Argus analysts. This six-point system includes Industry Analysis, Growth Analysis, Financial Strength Analysis, Management Assessment, Risk Analysis and Valuation Analysis.

Utilizing forecasts from Argus' Economist, the Industry Analysis identifies industries expected to perform well over the next one-to-two years.

The Growth Analysis generates proprietary estimates for companies under coverage.

In the Financial Strength Analysis, analysts study ratios to understand profitability, liquidity and capital structure.

During the Management Assessment, analysts meet with and familiarize themselves with the processes of corporate management teams.

Quantitative trends and qualitative threats are assessed under the Risk Analysis.

And finally, Argus' Valuation Analysis model integrates a historical ratio matrix, discounted cash flow modeling, and peer comparison.

THE ARGUS RESEARCH RATING SYSTEM

Argus uses three ratings for stocks: BUY, HOLD, and SELL. Stocks are rated relative to a benchmark, the S&P 500.

- A BUY-rated stock is expected to outperform the S&P 500 on a risk-adjusted basis over a 12-month period. To make this determination, Argus Analysts set target prices, use beta as the measure of risk, and compare expected risk-adjusted stock returns to the S&P 500 forecasts set by the Argus Market Strategist.
- A HOLD-rated stock is expected to perform in line with the S&P 500.
- A SELL-rated stock is expected to underperform the S&P 500.

BUSINESS: NiSource Inc. is a holding company for Northern Indiana Public Service Company (NIPSCO), which supplies electricity and gas to the northern third of Indiana. Customers: 472,000 electric in Indiana, 3.5 million gas in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland, Massachusetts through its Columbia subsidiaries. Revenue breakdown, 2018: electrical, 33%; gas, 67%; other, less than 1%. Generating sources, 2018: coal, 69.4%; purchased & other, 30.6%. 2018 reported depreciation rates: 2.9% electric, 2.2% gas. Has 8,087 employees. Chairman: Richard L. Thompson. President & Chief Executive Officer: Joseph Hamrock. Incorporated: Indiana. Address: 801 East 86th Ave., Merrillville, Indiana 46410. Tel.: 877-647-5990. Internet: www.nisource.com.

Since our August review, shares of NiSource have staged a bit of a correction. Over that time frame, the equity's price declined about 11%. This largely reflects the challenging operating environment in the second and third quarters.

The September-period results were mixed. On the upside, revenues climbed 4.1% on a year-over-year basis, to $931.5 million. This reflected rising contributions from the Gas Distribution and Corporate divisions. The Electric operations were also complementary to the business mix, but did fall about 2% versus last year. On the profitability front, margins were compressed due to rising depreciation and amortization, other taxes, and interest expense. On balance, the third-quarter bottom line fell precipitously to break-even levels. This was modestly below our call for earnings of $0.05 a share. Consequently, we have sliced a nickel off our 2019 earnings estimate, to $1.25 a share. This figure would represent a year-over-year downturn of approximately 4%.

We look for annual earnings to rebound in 2020. NiSource appears well positioned for an almost 4% rise in revenues next year, to $5.5 billion. This should be supported by an active capital expenditure budget. For example, the company's electric generation strategy in Indiana is progressing nicely, with the approval of the Rosewater wind project and its joint venture wind project known as Indiana Crossroads. In total, management has roughly $1.75 billion earmarked for growth initiatives next year. What's more, once approved, the Maryland base rate case is anticipated to add $3.7 million in incremental revenues. Elsewhere, the company's NIPSCO utility division has filed an electric base rate case that would generate a return on capital projects of almost 10%. All told, these factors may well equate to a 12% rise in earnings to $1.40 a share.

Shares of NiSource are not overly compelling at this juncture. The equity's quotation is trading inside our Target Price Range, suggesting that it offers limited upside potential for the pull to 2022-2024. In the near term, the stock is ranked to just mirror the broader market averages in the year ahead.

November 3, 2019

THE UTILITY TRADER

Utilities vs Market all tied up and heading to Game 7

- **Utilities and S&P 500 both up 21% through October; we think market wins**
  After a long headline-filled year, the S&P 500 broke out to new highs last month and caught up to utilities, both up a little over 21% through October. The market has climbed a wall of doubters, while our recent poll shows utilities continuing to gain investor support. From a contrarian standpoint, we take the market. Investors have been leaning defensive most of the year such that a typical year-end defensive trade seems unlikely. In fact, the defensive trade over the past few weeks has been to buy depressed value stocks and cyclicals. Utilities still trade at a 17% premium to the market and we would like to see them closer to the average to be more constructive.

- **PPL the top performer in Oct (been a long time); event issues hit other names**
  Utilities were the worst performing income sector other than MLPs last month falling 0.8% while the market rose 2%. Event risk hit several names. EIX/SRE were hurt by CA fire season fears, EXC faced increased fear over IL political risks, EVRG had the Sibley outcome and midstream exposure hurt DTE and CNP/ OGE. So who did well? PPL believe it or not. The FT article about potential merger talks with Ibedrola/AGR was the main driver. But the improving UK pound and views that Brexit was moving toward a more stable outcome also helped. High-quality utilities were middle of the pack for the month with the exception of NEE, which is now ahead of WEC and AWK for the year. We think NEE's position as an election trade into a potential Democrat win in 2020 is spurring incremental buyers. We still like NEP for this too.

- **Equity issuance in focus again…who's next?**
  With very successful equity/convert deals done by DTE and XEL last week, we are getting a lot of questions on who might be next for equity. NI is the clear one since they plan to do $500-$700M in 2020 beyond their $200-$300M ATM. Investors want them to get this done ASAP but they seem to prefer doing this during 2020. EIX needs another $500M assuming they get their 52% equity ratio request approved. This may be done through ATM though. Other possibilities seem more like 2020 events: AEP if they get more renewables approved and maybe CNP and DUK for balance sheets (we'll know after earnings this week).

- **Midstream: another bad month especially for MLPs**
  The AMZ fell 7.4% in October. Our Wolfe C-corp index beat the AMZ again but still declined 3.7%. Companies are hitting numbers so far in earnings season and guiding in line. However, we see investors increasingly focused on producer dynamics which raise concerns. This includes weaker production plans for 2020 at current price curves and some producers tenuous credit profile. Please see our last Weekly report on this topic (link). LNG remains a top idea less exposed to these trends.

- **Focus stocks – FE, D, AEE for now; EIX and EXC with patience**
  D had a very good earnings call and we think investors are starting to appreciate the story outside of ACP. FE reports tomorrow and we think the pure play turnaround story is intact and growth fears are misguided. AEE is a high-quality utility at a reasonable price. EIX and EXC have a lot of overhang to YE, but we see great value and better visibility in 2020.

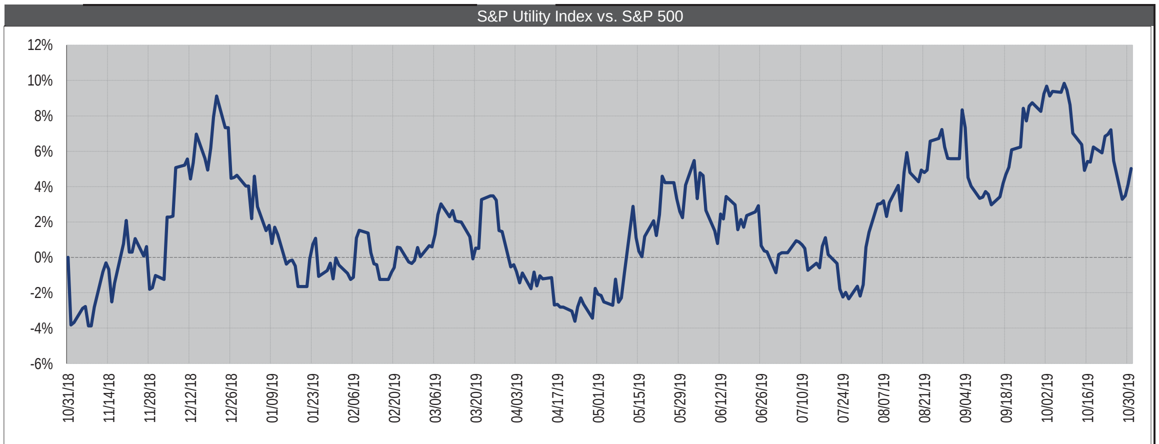
WOLFE RESEARCH

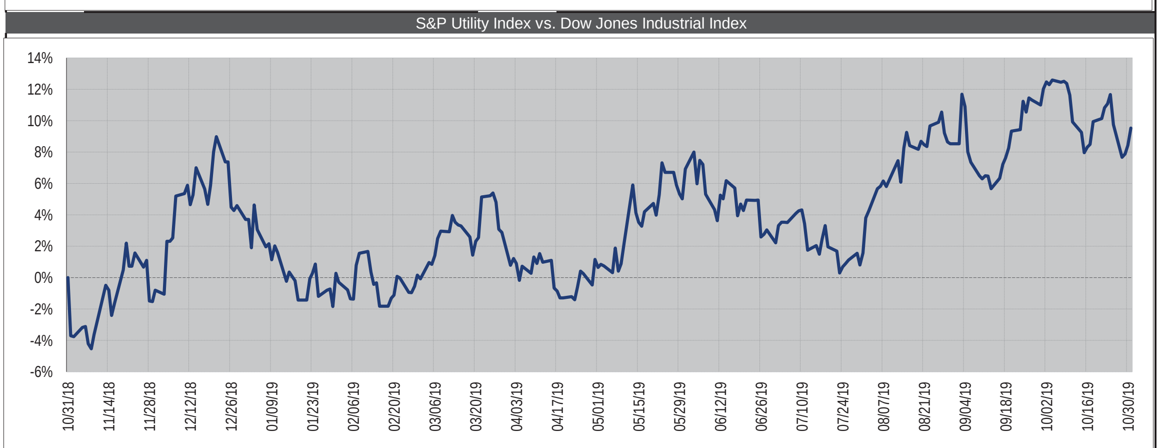
Table of Contents

WOLFE RESEARCH

S&P Utility Index vs Market

Utilities underperformed the S&P 500 by 285bps in October, bringing the group in-line with the market YTD. The utility sector was influenced by sharp movements in the 10-year yield during the month – starting at 1.70%, falling to 1.50% in the first few days, rising to 1.80% by mid-month, then ending at 1.68%. Also, despite the impact being limited to handful of companies, the California wildfires caused sentiment on the entire utility sector to wane a bit.

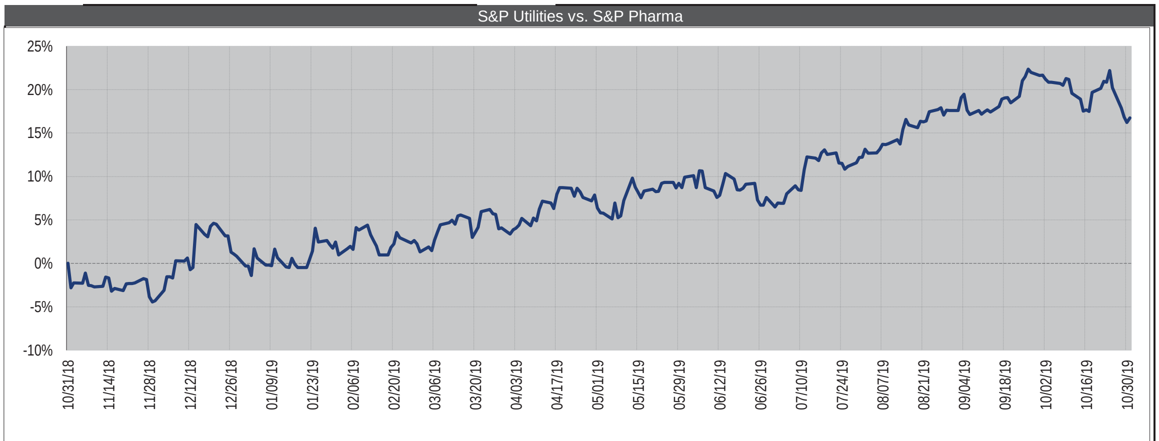


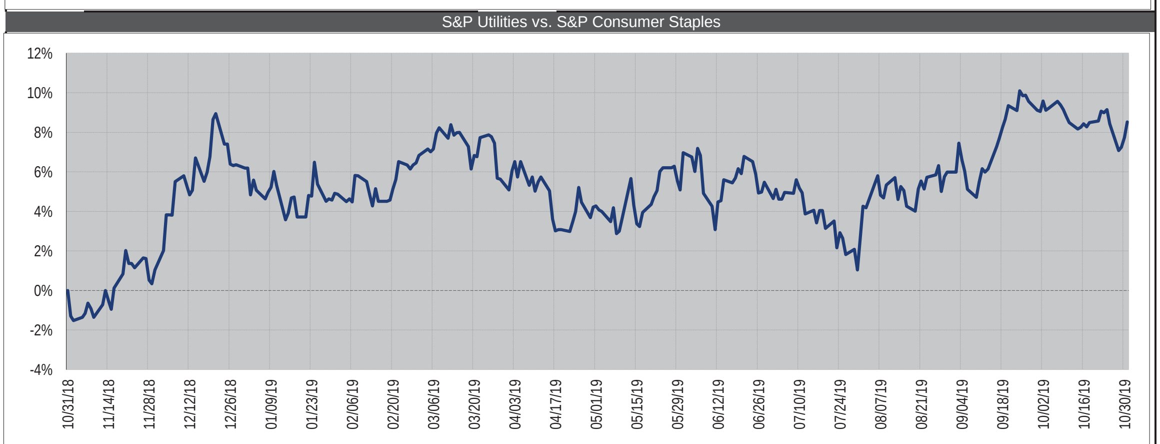


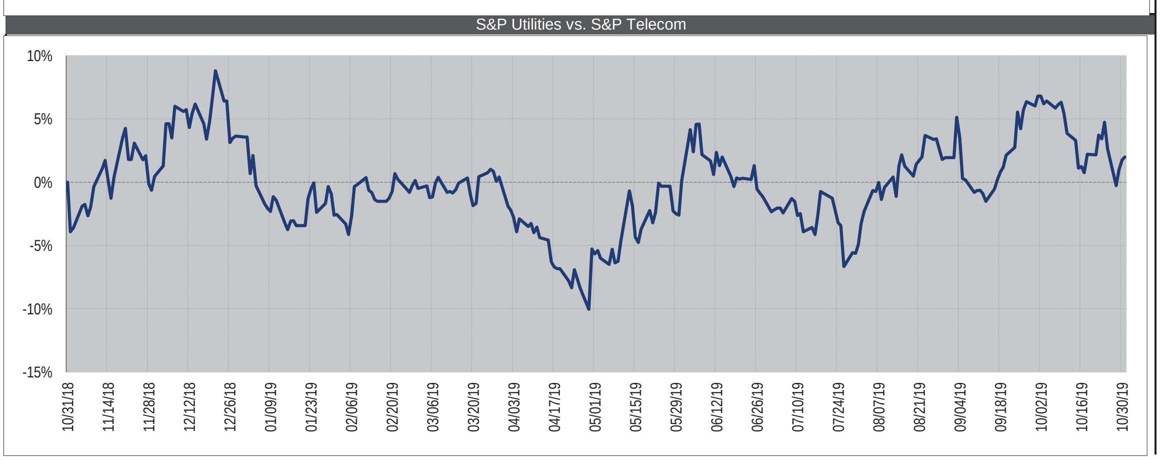
WOLFE RESEARCH

Utilities vs Other Sectors

Pharma (+4.0%) was the top performing income sector in October. Both Telecom (+1.2%) and Staples (-0.3%) fared better than Utilities.



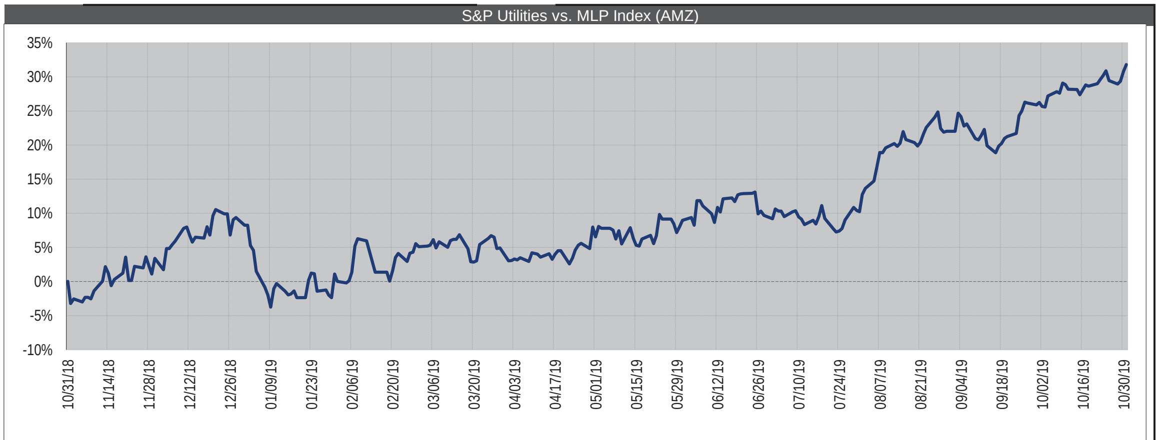


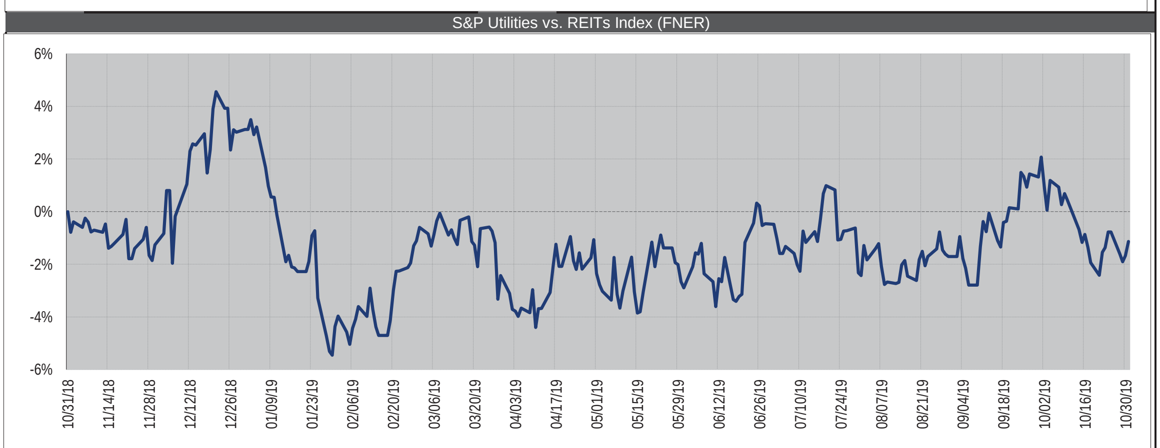


WOLFE RESEARCH

Utilities vs Other Sectors continued

Midstream struggled in October as the E&Ps commitment to decelerated production growth in 2020 began to materialize and investors tussled with midstream capex levels. The AMZ index turned negative for the year while the generally more defensive C-corps extended their YTD outperformance over the MLPs by an additional 3.6%.

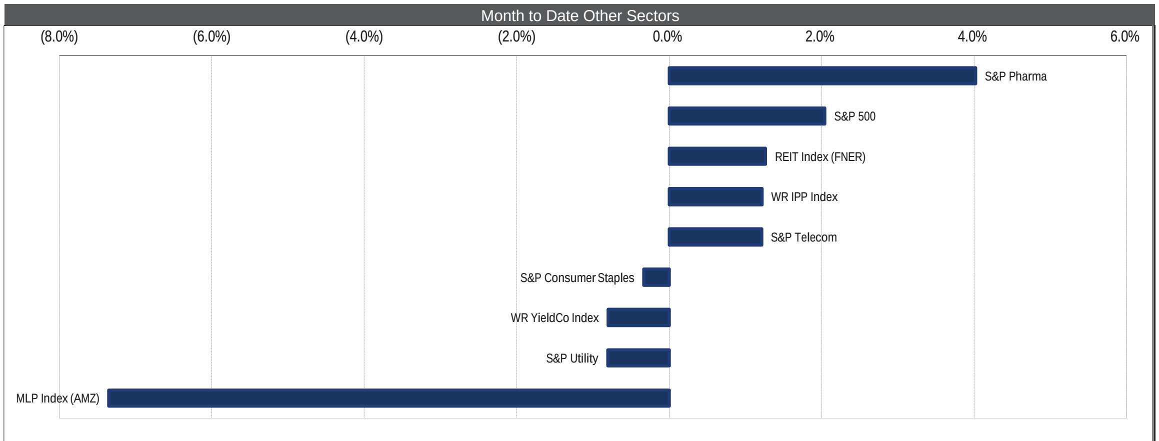


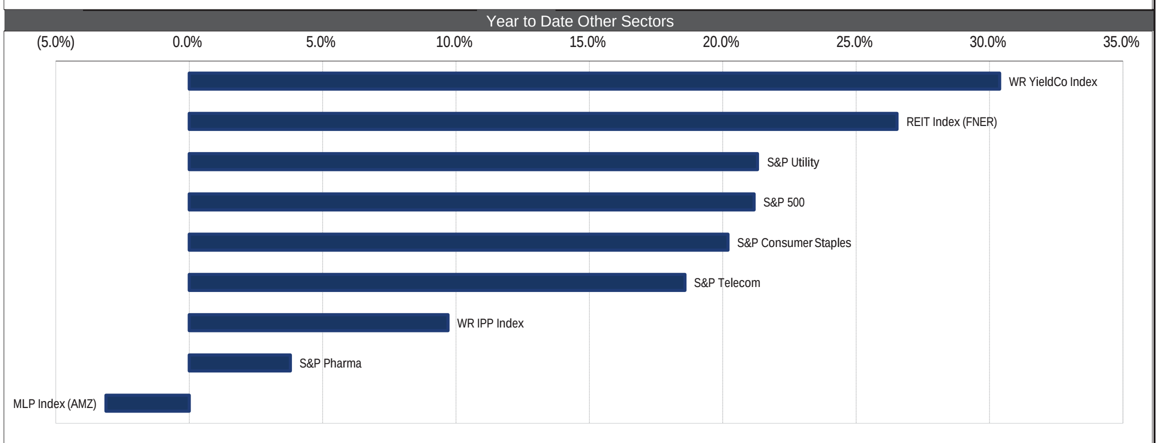


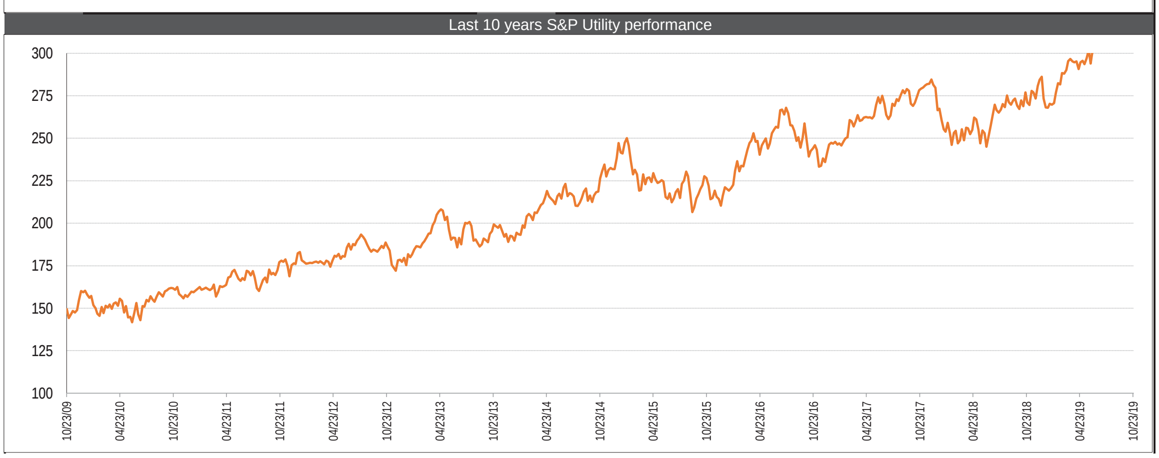
WOLFE RESEARCH

Month to Date and Year to Date performance of income sectors

The Yieldco group maintained its lead YTD, followed by REITS. Utilities and Staples are now trading in-line with the overall market. MLPs fell to the back of the pack on the year after falling 740bps in October.



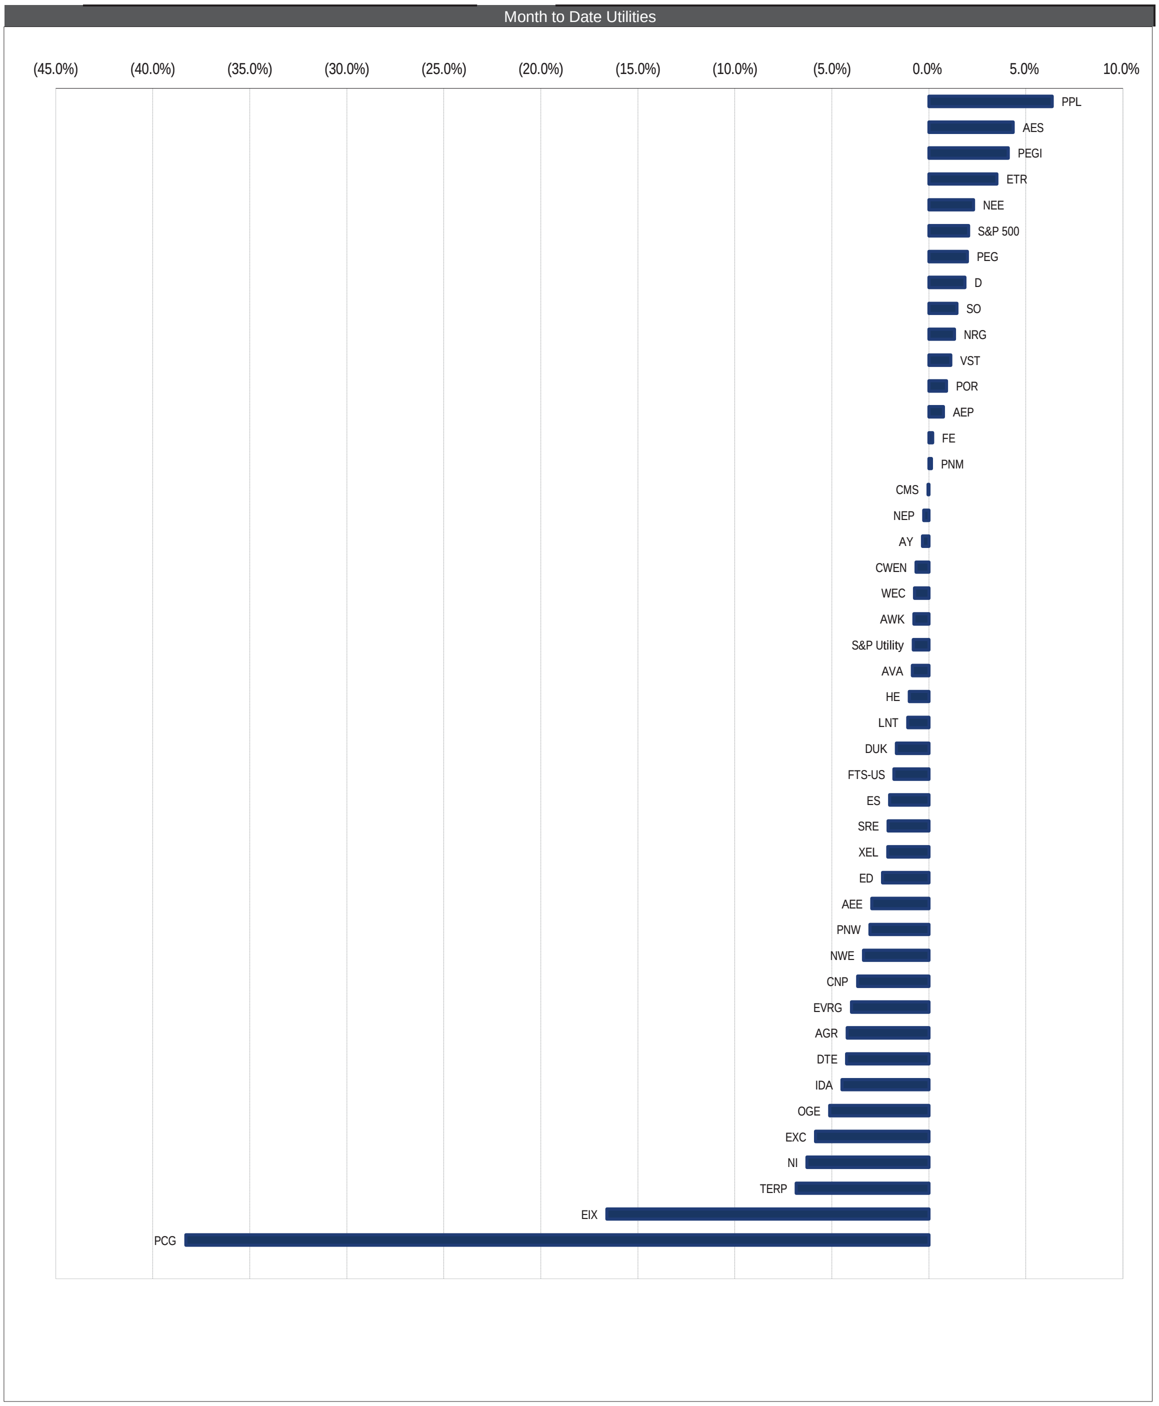




WOLFE RESEARCH

Month to Date performance of Utilities Group

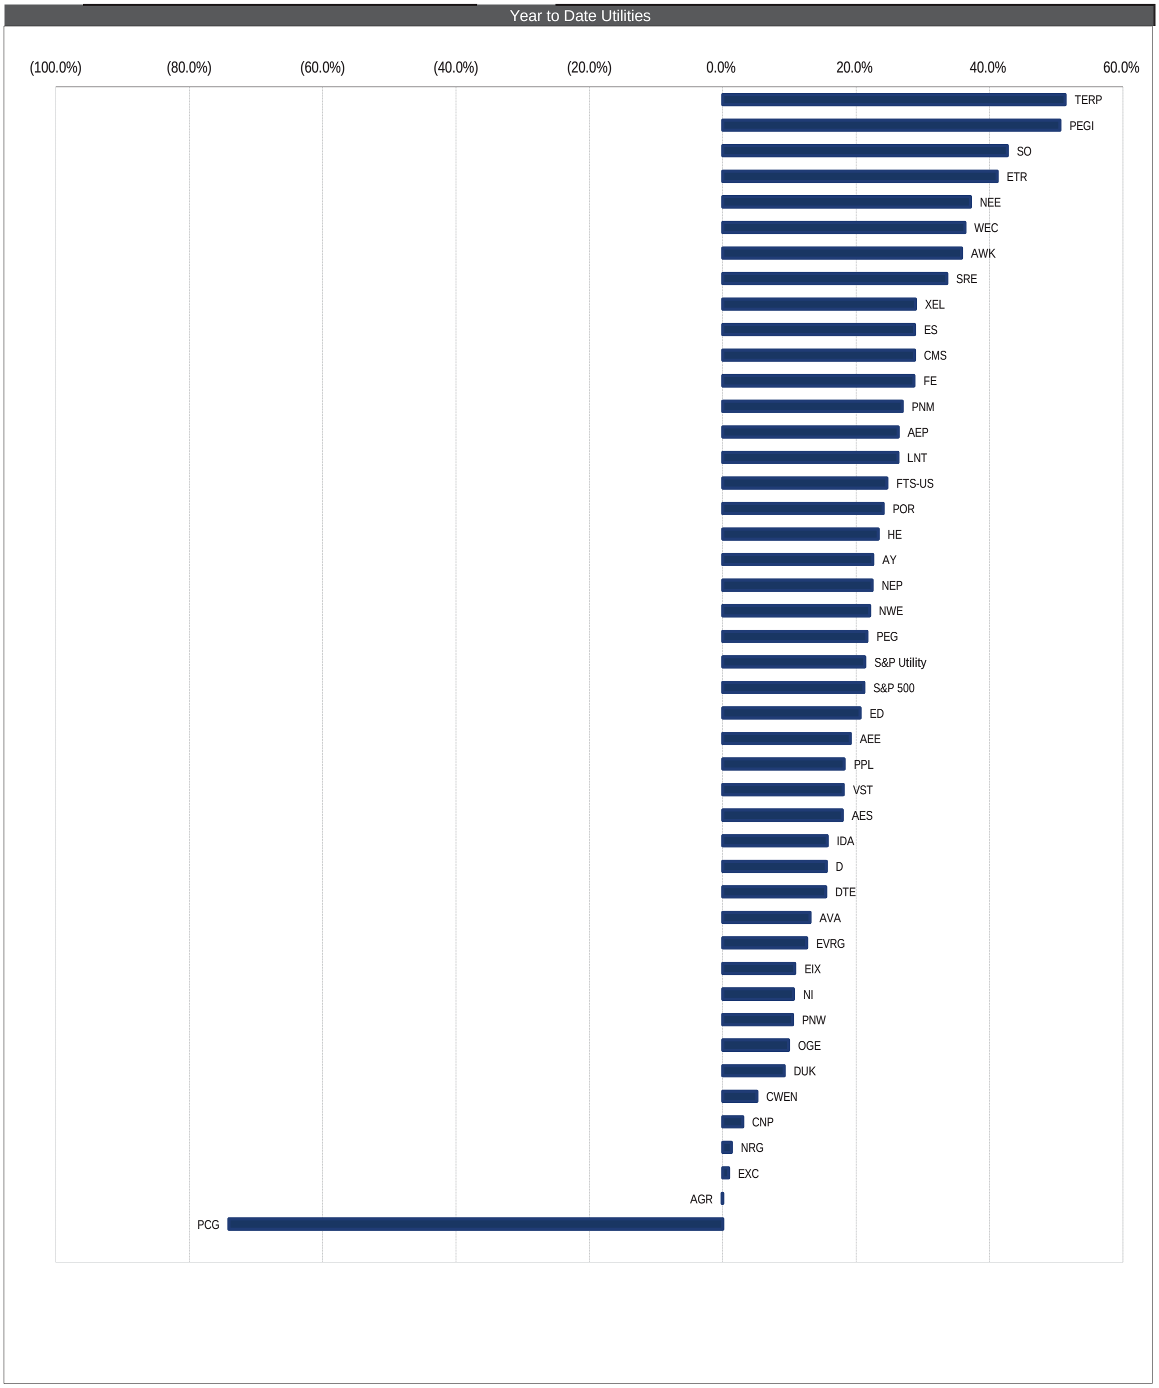
PPL was the top performer in October. The stock caught a bid possibly on rumors that Iberdrola/AGR were considering to acquire PPL. AES also fared well as management has done a nice job communicating that the company's LT growth targets are still intact despite potential pressures (e.g., Argentina). NEE continued its strong performance after a solid Q3 report where the company highlighted a record backlog of renewable projects. PCG was the worst performer by a wide margin; worst fears were realized during the month after several wildfires broke out, likely complicating the company's bankruptcy exit plans. EIX was down due to wildfires in its service territory too, though we believe the move was overdone. EXC was down due to IL political noise, which prompted utility head Anne Pramaggiore to resign.



WOLFE RESEARCH

Year to Date performance of Utilities Group

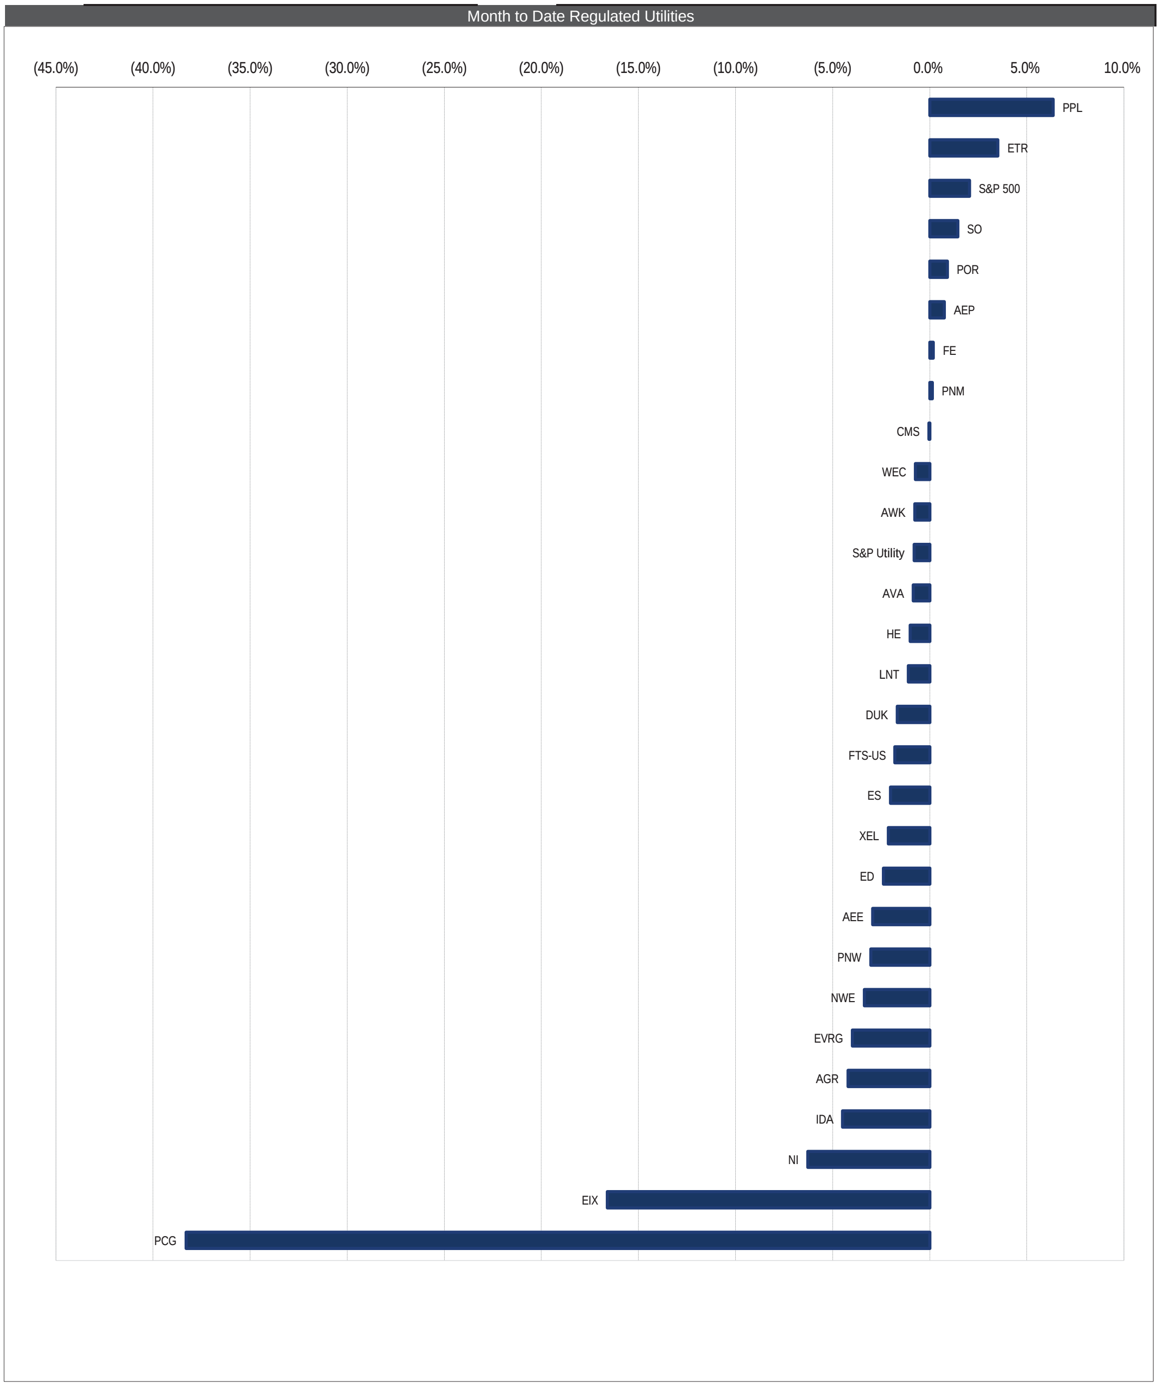
TERP is still leading YTD, despite weak performance in October. Fellow YieldCo, PEGI, is also a top performer. SO's strength has largely been tied to optimism for Vogtle's construction schedule. ETR's strong performance stems from a midyear guidance/capex raise. AWK and WEC remain top performers due to their high quality / safety characteristics. PCG remains at the back of the pack due to bankruptcy related issues. NRG's weakness stems from a lackluster power price environment earlier in the year. CNP and AGR weakness both stem from recent earnings disappointments, among other issues. EXC has been plagued by IL political noise, which recently prompted the head of Exelon utilities to resign.



WOLFE RESEARCH

Month to Date performance of Regulated Utilities

PPL was the top performing regulated in October. The stock caught a bid possibly on rumors that Iberdrola/AGR were considering to acquire PPL. ETR's momentum continued into October, where toward the month end, ETR reported a Q3 beat and raised 2019 guidance modestly. SO maintained its lead YTD given continued execution on Vogtle and after reporting a Q3 beat and 2019 guidance raise. PCG was the worst performer by a wide margin; worst fears were realized during the month after several wildfires broke out, likely complicating the company's bankruptcy exit plans. EIX was down due to wildfires in its service territory too, though we believe the move was overdone. AGR was also weak after yet another disappointing earnings report, which has become commonplace for the company.

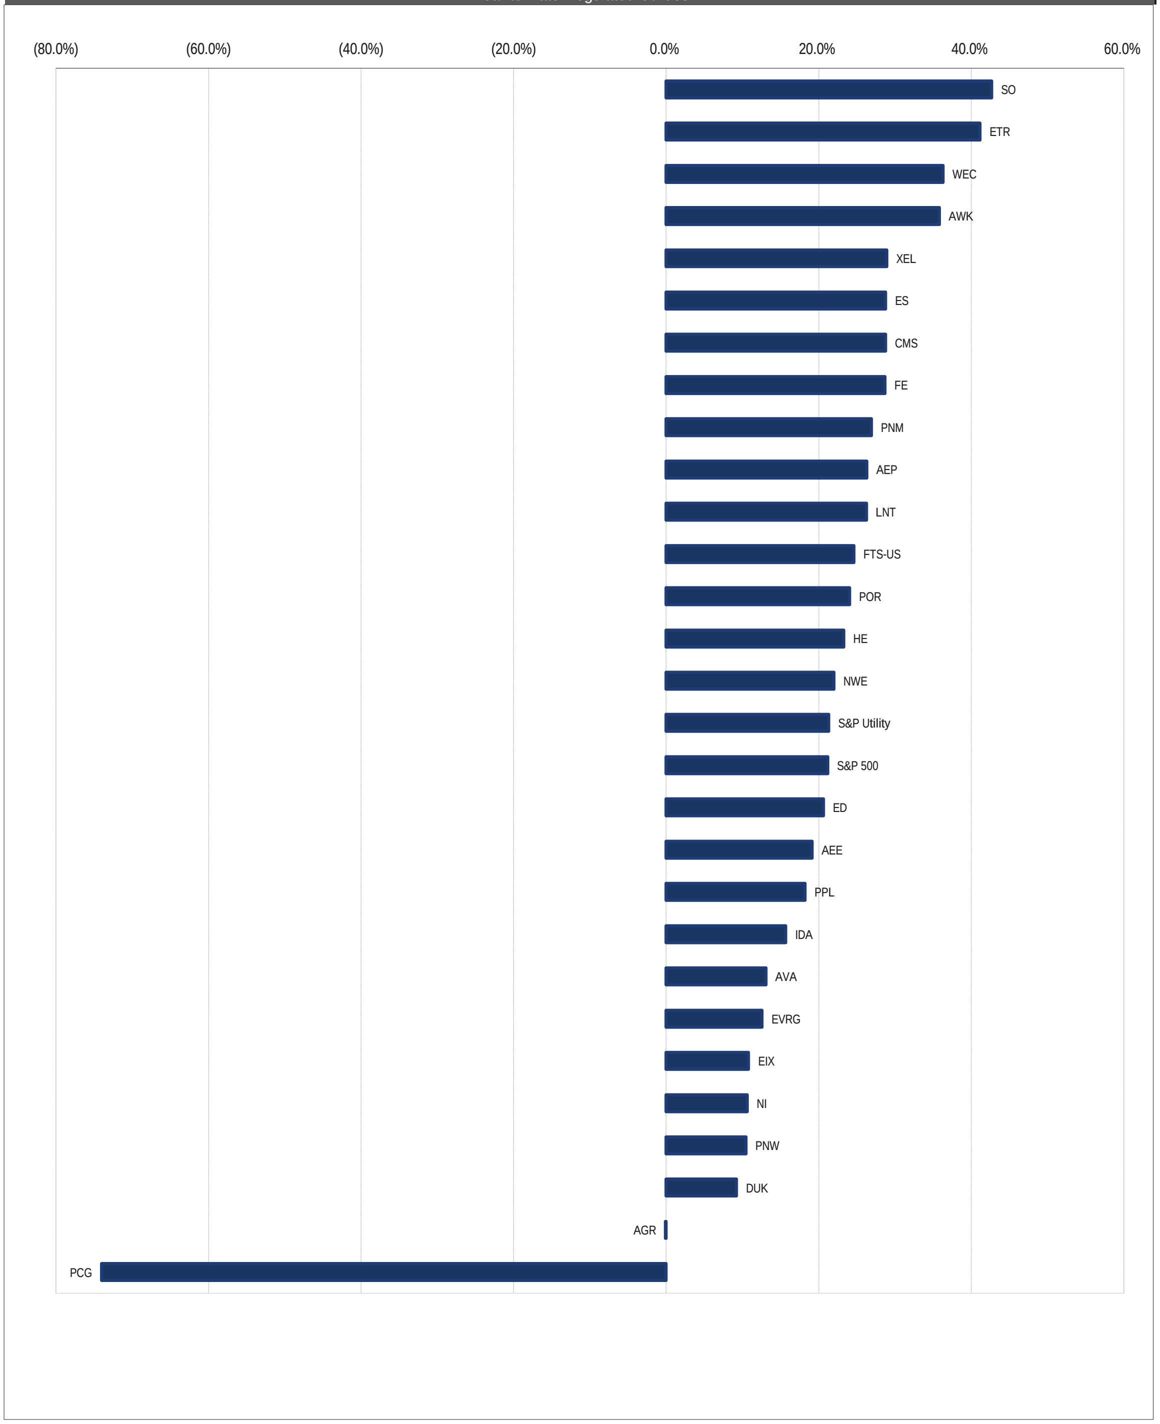


WOLFE RESEARCH

Year to Date performance of Regulated Utilities

SO maintained its lead YTD. SO's strength this year is largely tied to optimism on Vogtle's construction schedule as well as execution at its utilities. ETR has also fared well, sustaining momentum after raising EPS / capex guidance in July. High quality / low risk names like AWK and WEC are toward the top of the pack, due in part to macroeconomic tailwinds (e.g., low interest rates). PCG remains the worst performing regulated as the company continues to wrestle with issues tied to its bankruptcy. DUK has been mired by a number of issues, with ACP uncertainty and failed NC legislation being near the top of the list. AGR's weakness stems from the company's inability to execute on its financial targets the past four quarters, among other things (e.g., mega project risk).

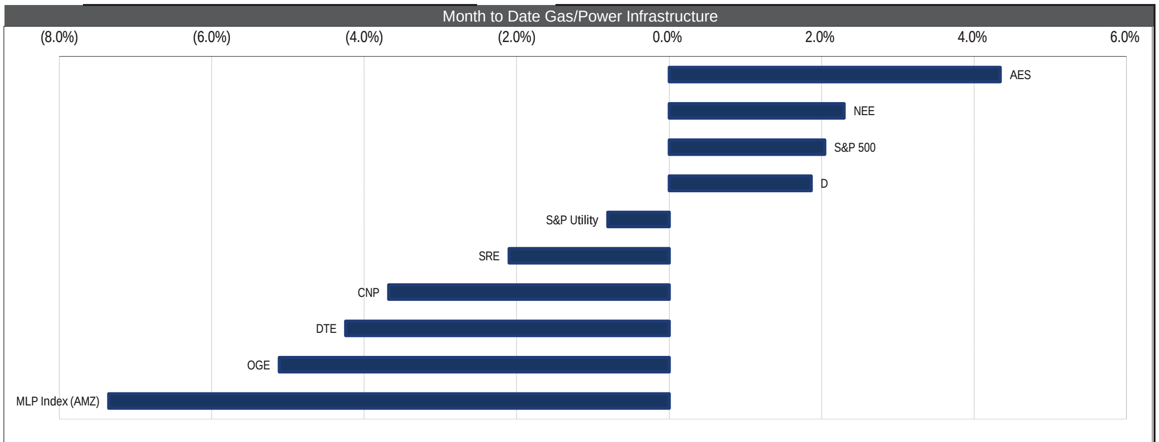
Year to Date Regulated Utilities

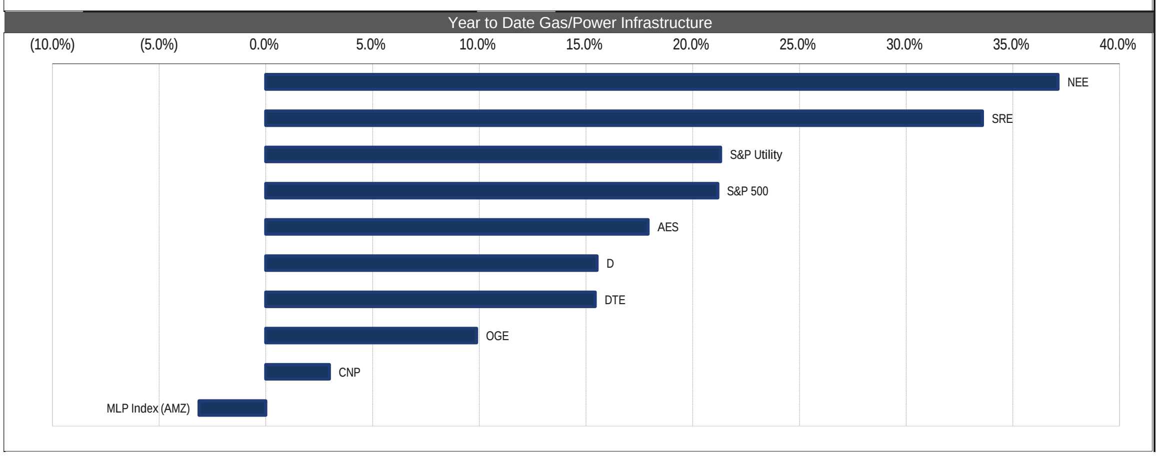


WOLFE RESEARCH

Month to Date and Year to Date performance of Gas/Power Infrastructure

AES was the top performer in October; management has done a nice job communicating that the company's LT growth targets are still intact despite potential pressures (e.g., Argentina). NEE continued its strong performance after a solid Q3 report where the company highlighted a record backlog of renewable projects. OGE was the worst performer, possibly on ENBL weakness (down 16% in the month). DTE was also weak on its recent acquisition of a Haynesville gas gathering system.

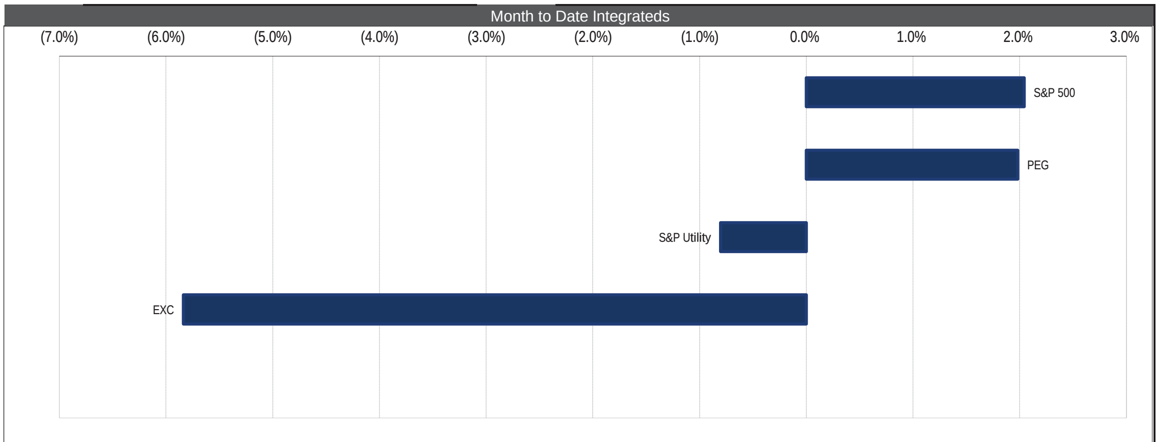


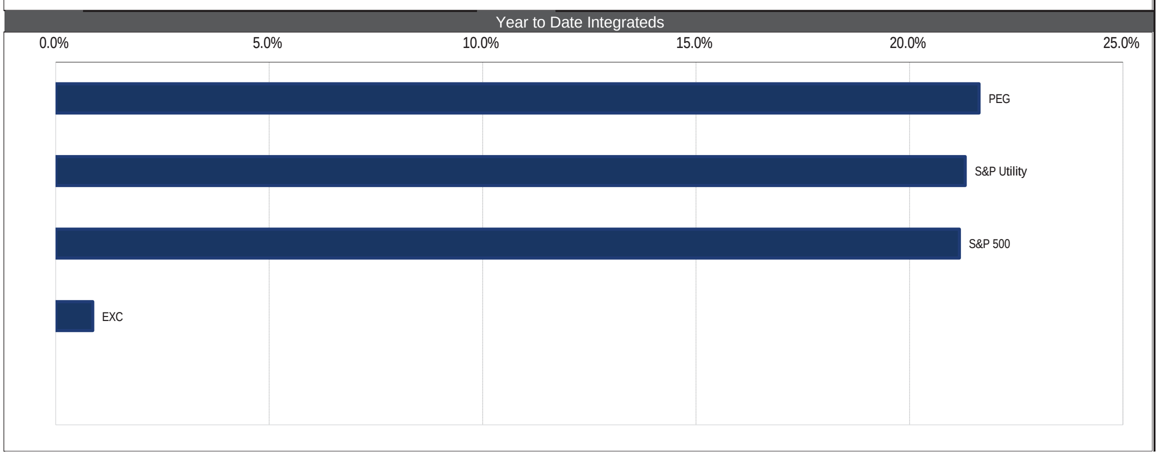


WOLFE RESEARCH

Month to Date and Year to Date performance of Integrateds

PEG outperformed lone integrated peer EXC by a decent margin in October. PEG likely caught a bid as EXC came under pressure after subpoenas in IL coming back into focus. Head of Exelon utilities, Anne Pramaggiore, resigned during the month due to the IL political situation, further causing investor consternation on EXC.

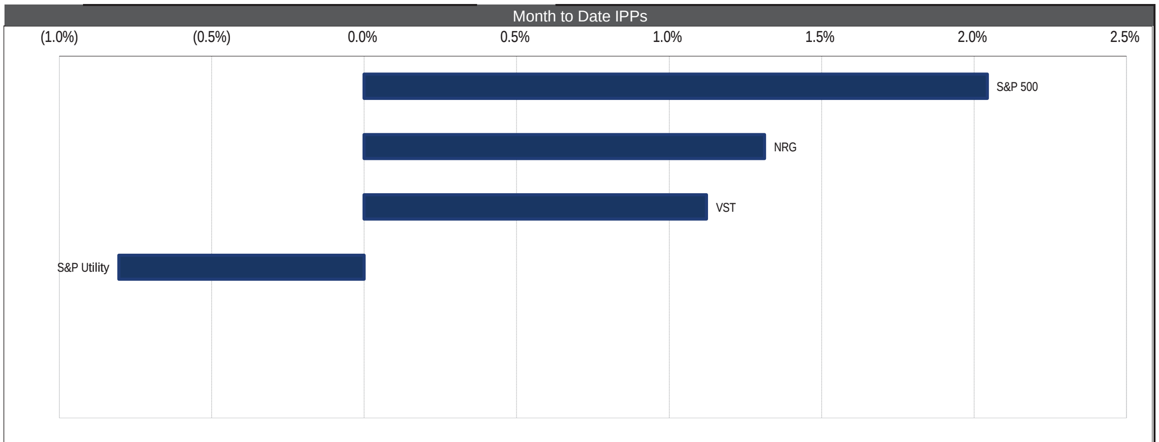


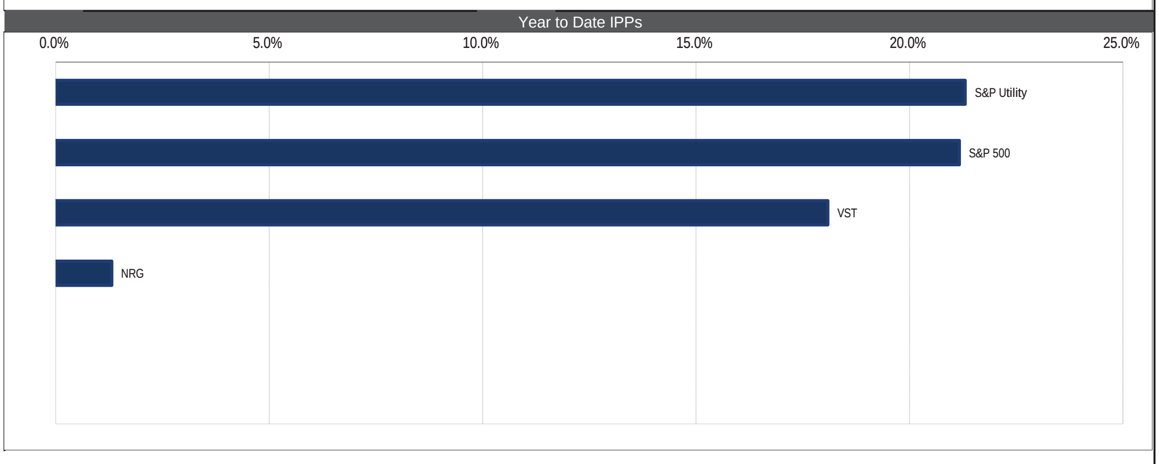


WOLFE RESEARCH

Month to Date and Year to Date performance of IPPs

NRG outperformed VST in October and both fared better than the utility average. News flow was relatively quiet for both names, but power prices moved in the right direction during the month. We expect both IPPs to provide solid 2020 guides along with their Q3 earnings.

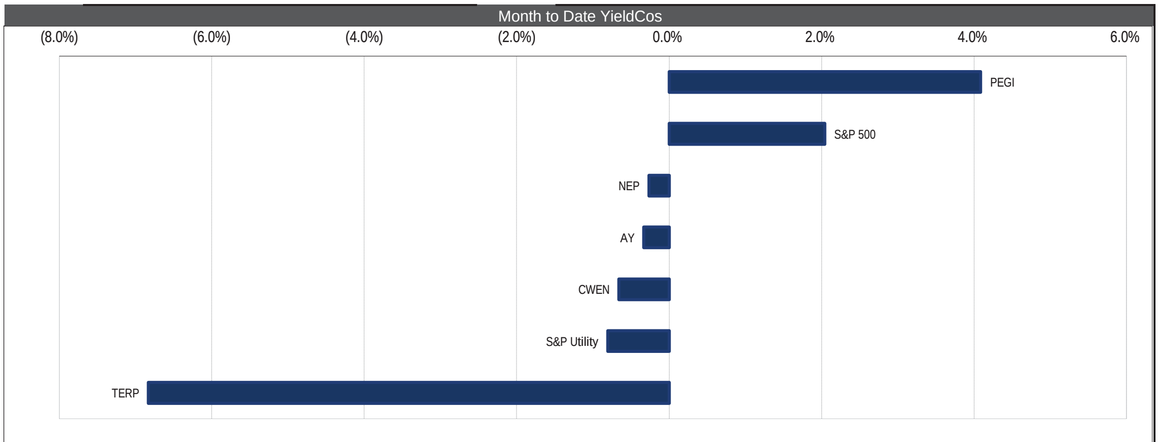


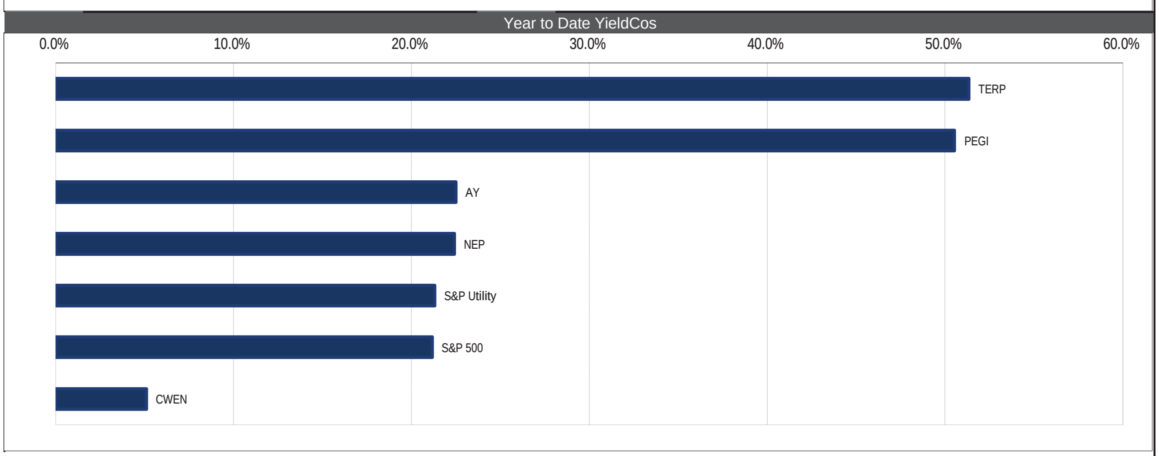


WOLFE RESEARCH

Month to Date and Year to Date performance of YieldCos

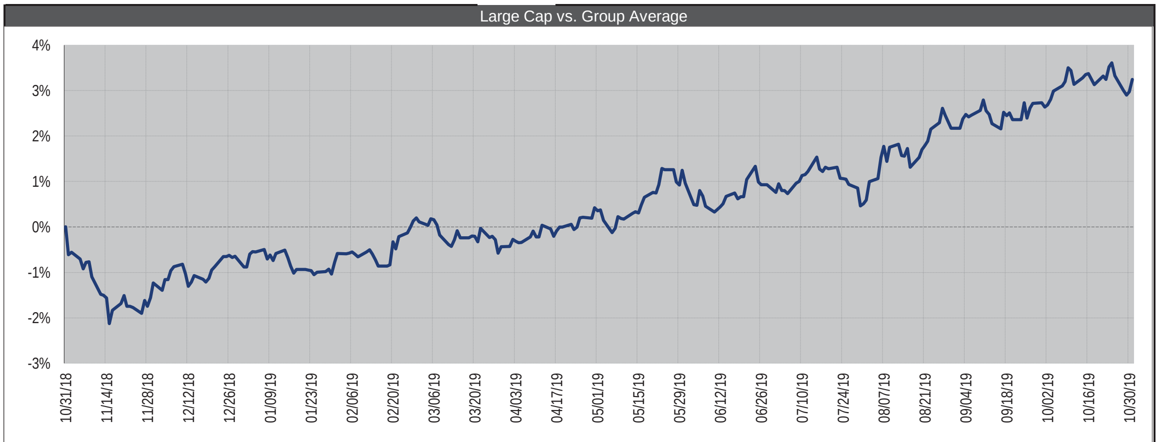
PEGI was the only YieldCo that finished in the green in October. During the month, PEGI announced a $260Mprivate placement of preferred stock to acquire two operating wind facilities in New Mexico. TERP underperformed its peers by a wide margin, falling over 500bps on the day the company announced a $250M common stock offering. CWEN was also weak due to concerns over key customer PCG; we downgraded CWEN to Peer Perform from Outperform during the month on fear that the PCG bankruptcy process would be elongated due to recent wildfires.

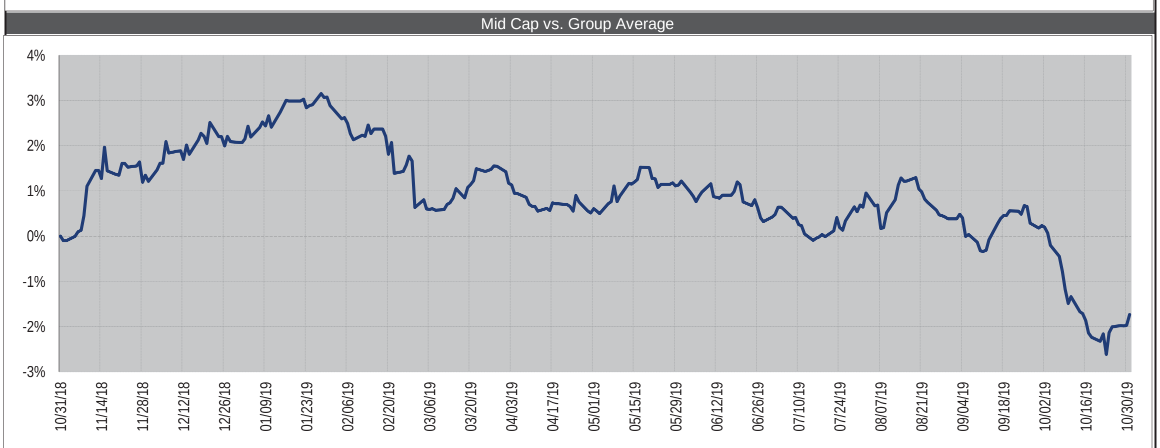


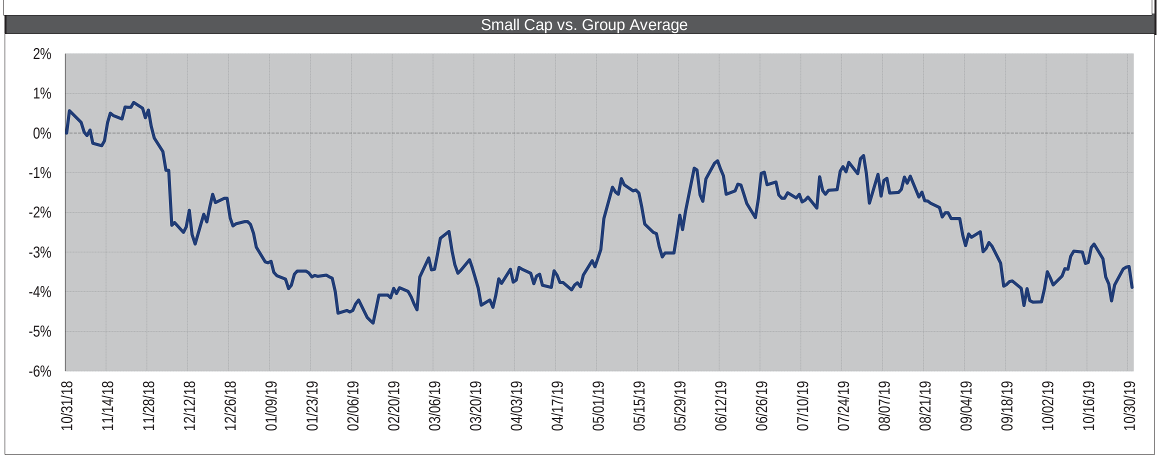


Utilities Performance by Market Cap

- Large-caps outperformed the broader utility group in October, led by PPL / NEE / SO
- Mid-caps underperformed the broader utility group in October, led by NI and AGR
- Small-caps finished in-line with the group average in October



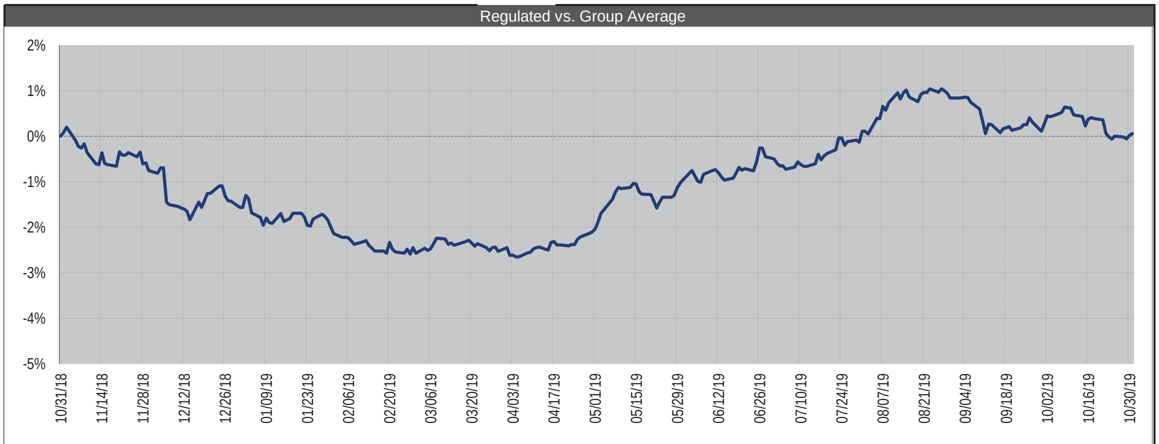


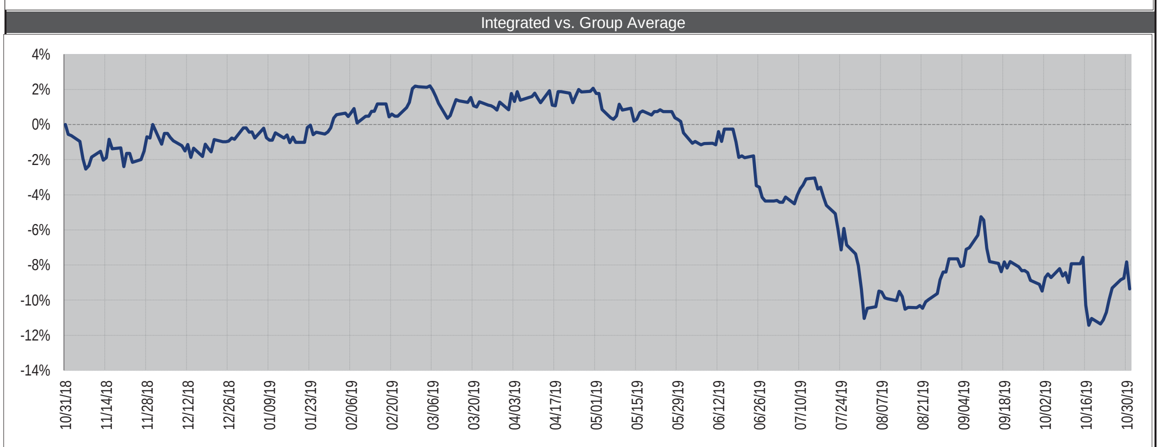


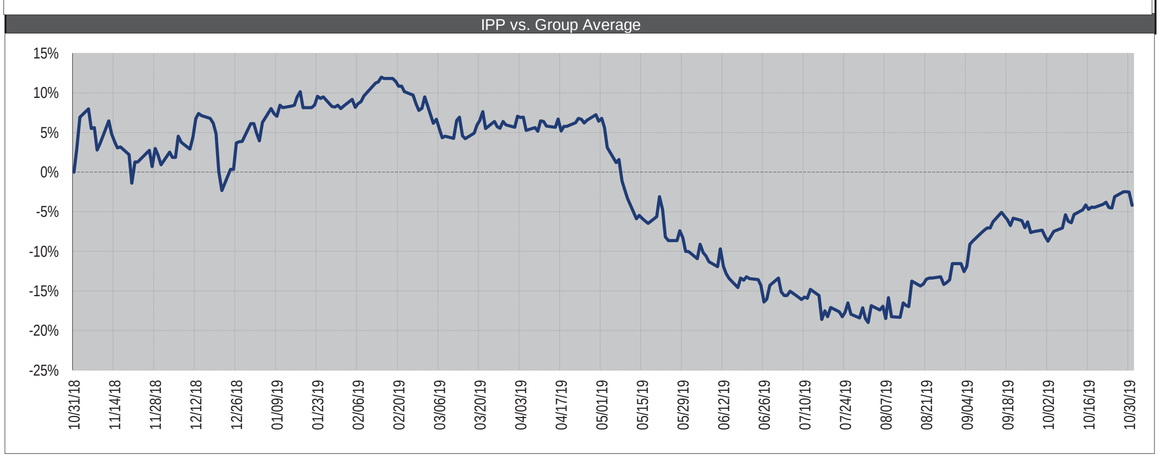
WOLFE RESEARCH

Utilities Performance by Segment

- Regulateds performed in-line with group average in October
- Integrateds finished in-line with the broader utility group in October, as PEG's performance largely offset the weakness from EXC
- The IPPs outperformed the group average for the second consecutive month; both VST and NRG outperformed the UTY during October



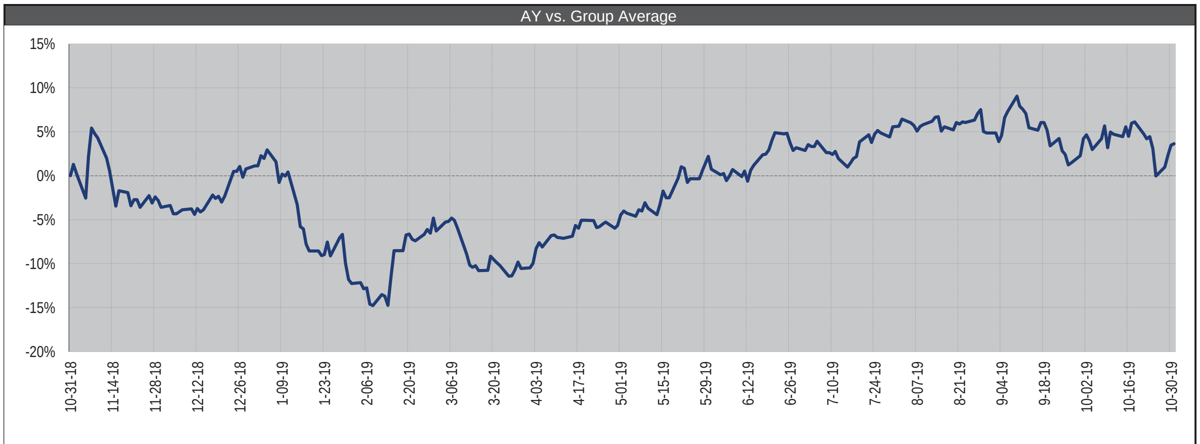


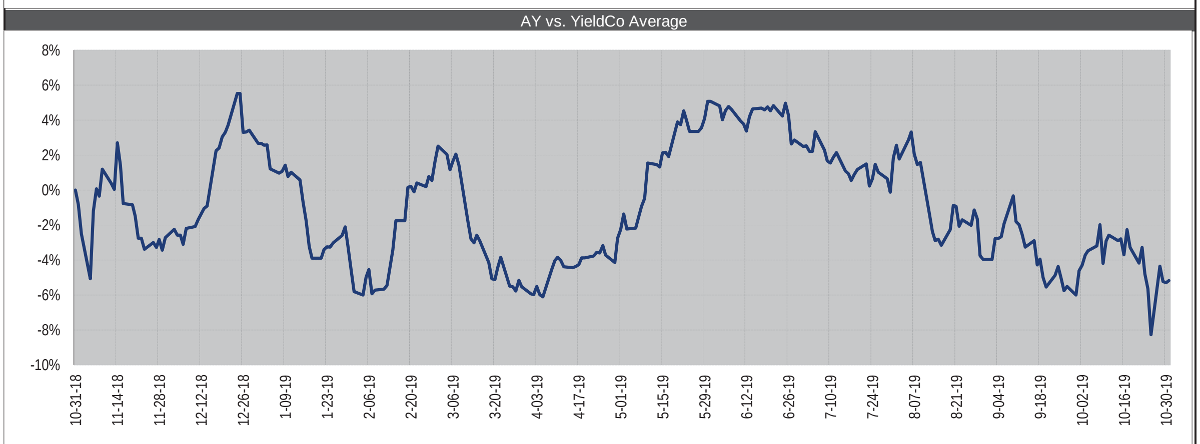


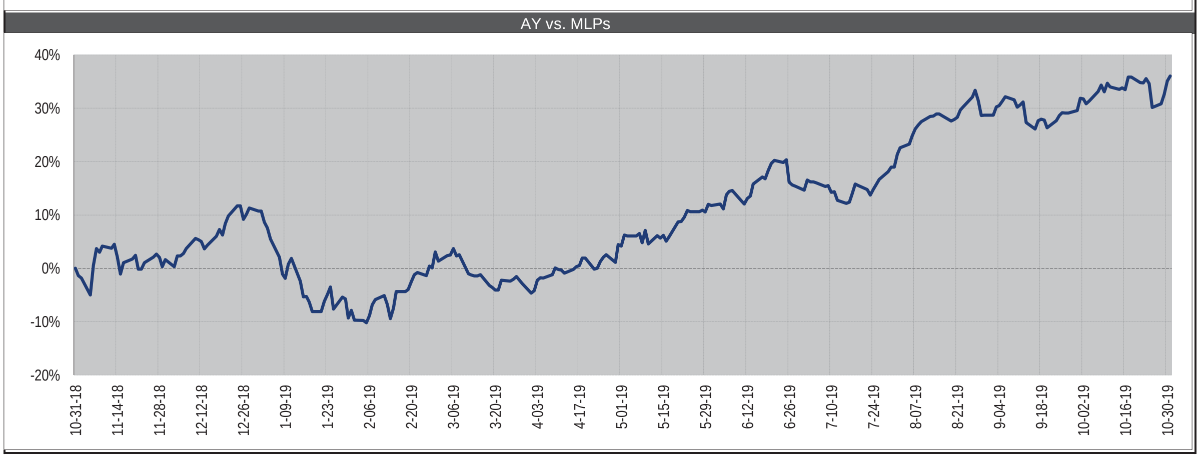
WOLFE RESEARCH

Atlantica Yield (AY) $24.01, NR

Atlantica Yield underperformed slightly in October with the stock seeing a lot of volatility in the last week of the month



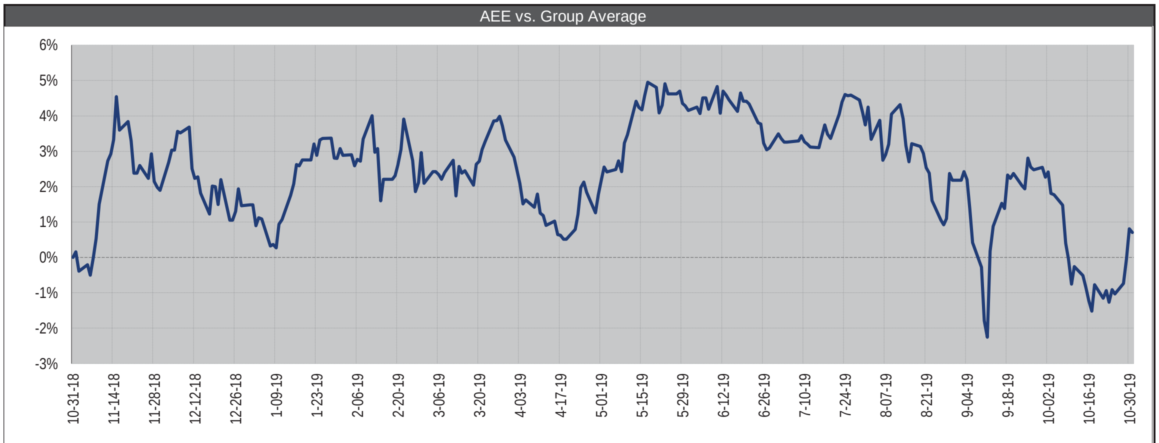


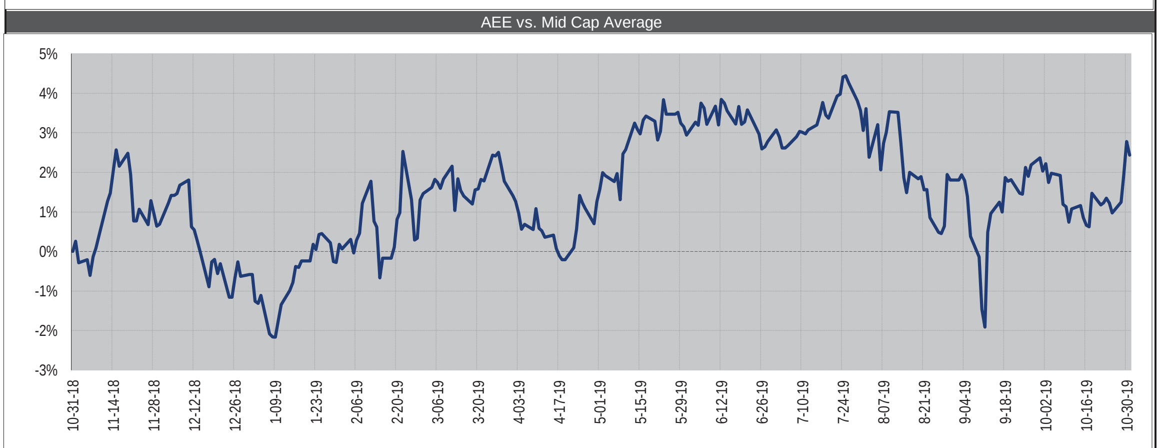


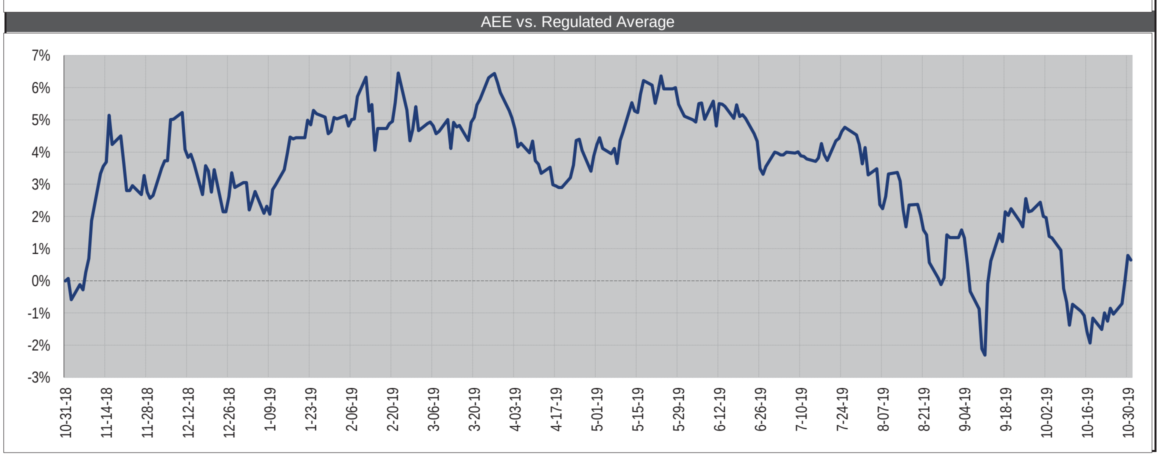
WOLFE RESEARCH

Ameren (AEE) $77.70, Outperform, $81 PT

AEE nearly set a 52-week relative low for a second consecutive month, but AEE rallied in second half of Oct, likely on the MoPSC suggesting the Sibley order is a one-off and the 30-yr UST yield off its lows.



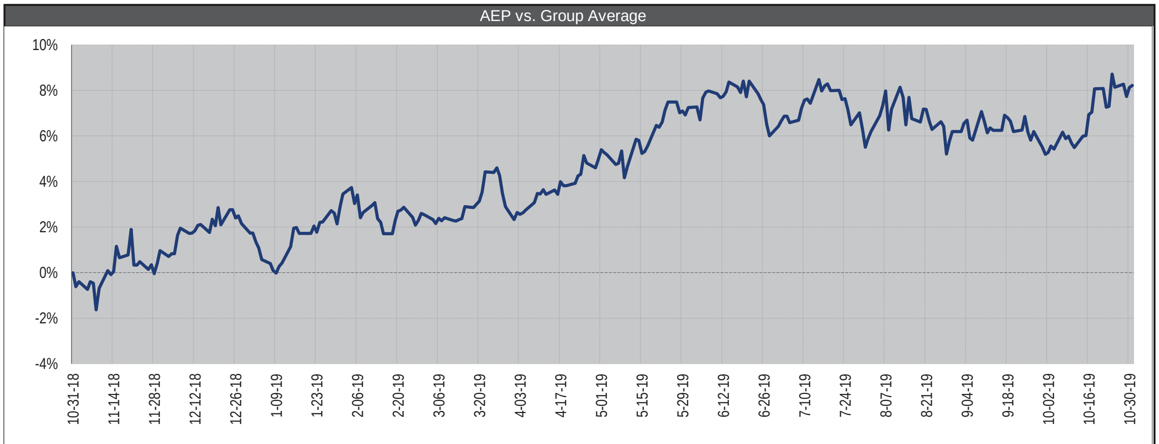


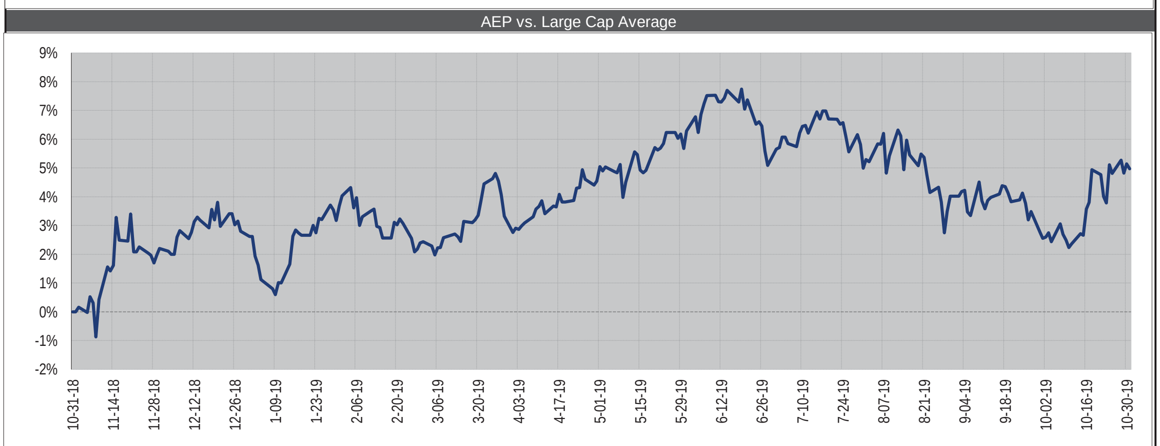


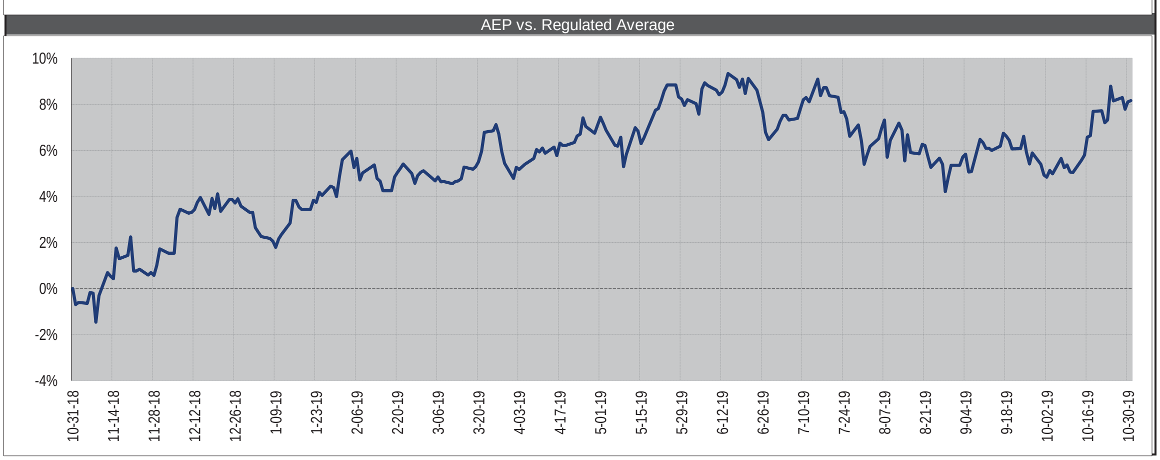
WOLFE RESEARCH

American Electric Power (AEP) $94.39, Outperform, $101 PT

AEP solidly outperformed regulateds in Oct, as the company continued to suggest it could meet growth targets despite weak load earlier in the year; AEP also settled its AR rate case.



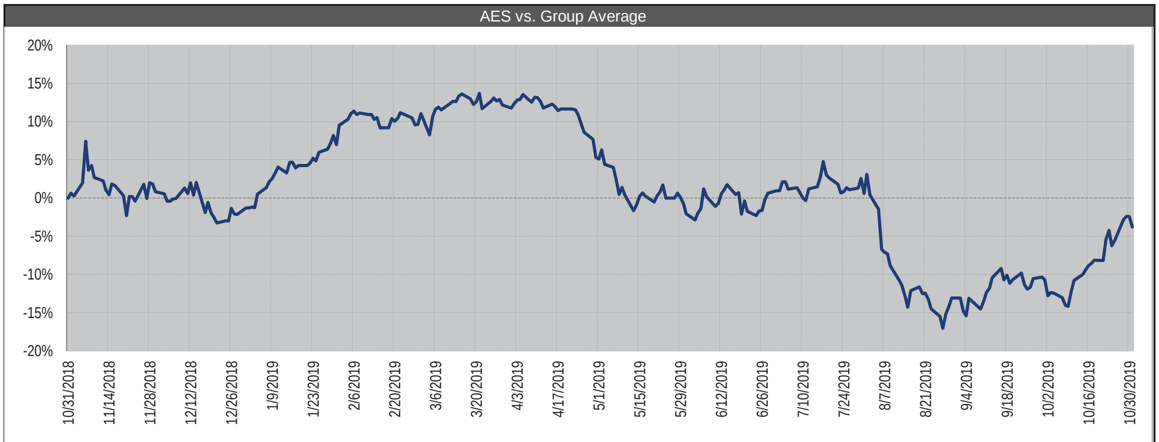


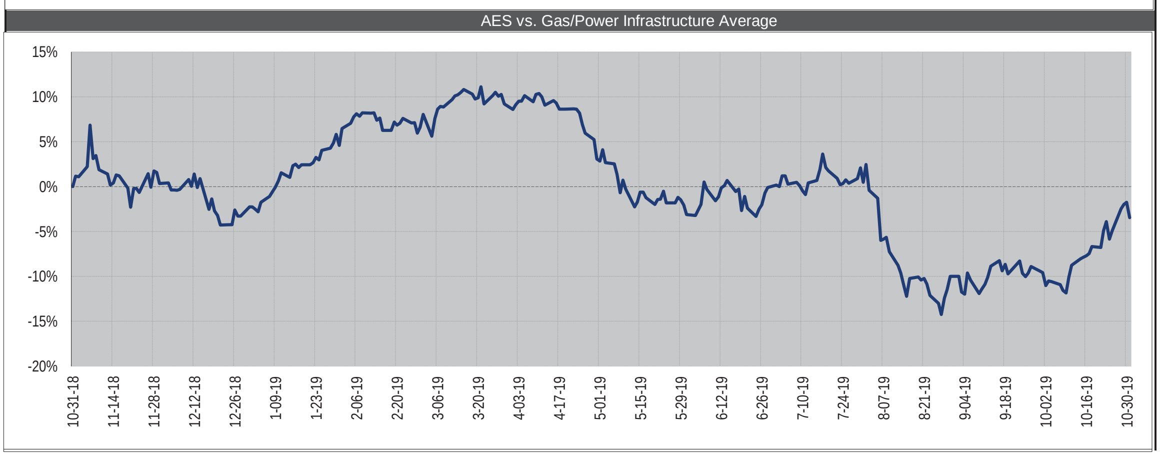


WOLFE RESEARCH

AES Corporation (AES) $17.05, Peer Perform, $17 PT

AES was one of the top performers in October. In recent meetings, management has expressed confidence in being able to offset pressures (e.g., Argentina) and still hit the company's growth targets. We think AES' recent performance (outperformed UTY by 550bps+ over last two months) reflects investors taking comfort in the company's ability to execute going forward.

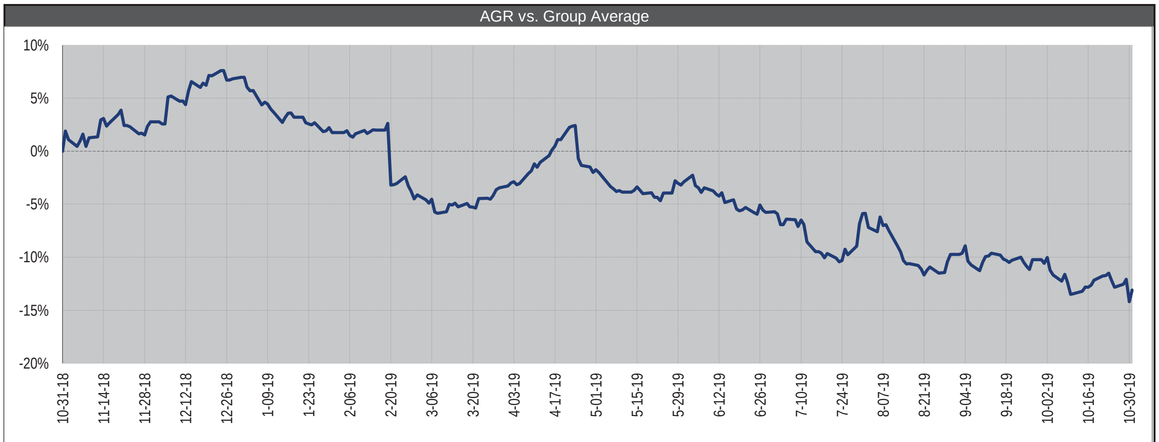


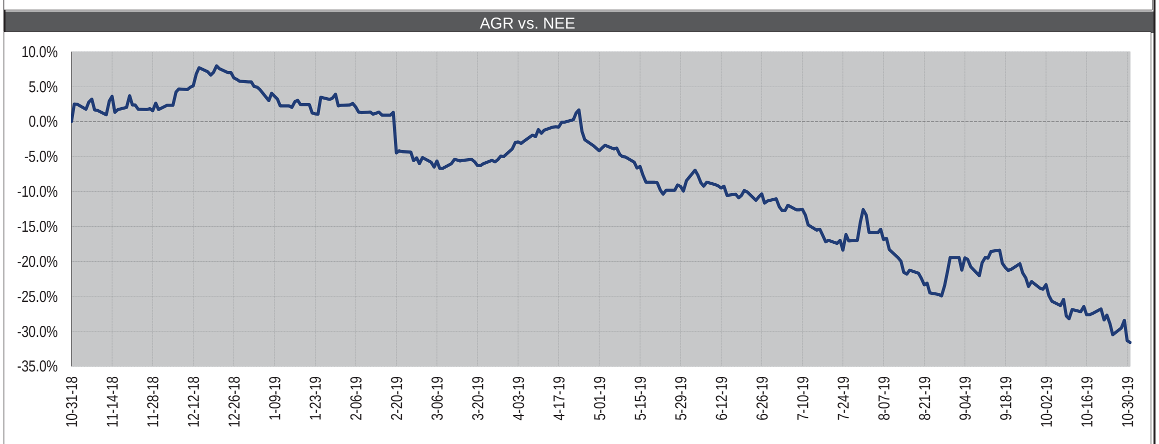


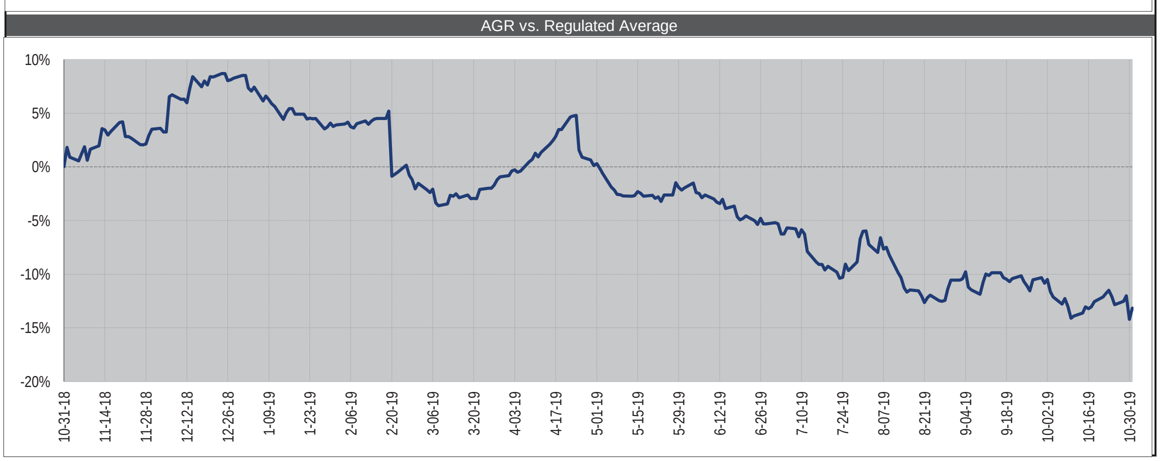
WOLFE RESEARCH

Avangrid (AGR) $50.05, Underperform, $47 PT

- AGR underperformed again in October and continues to hover near relative lows – it is also still the worst-performing regulated in 2019 (excluding PCG). AGR reported a Q3 miss with a low quality 2019 guidance reiteration that includes over $0.20/sh of asset sales. It's mega-projects – NECEC and Vineyard Wind – also continue to face delays. There were also reports of a potential merger between AGR and PPL during the month.

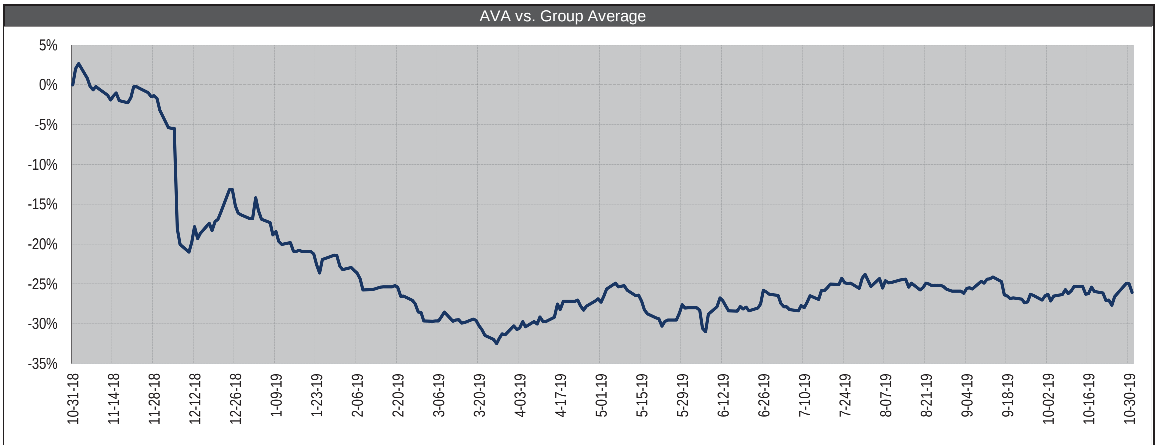


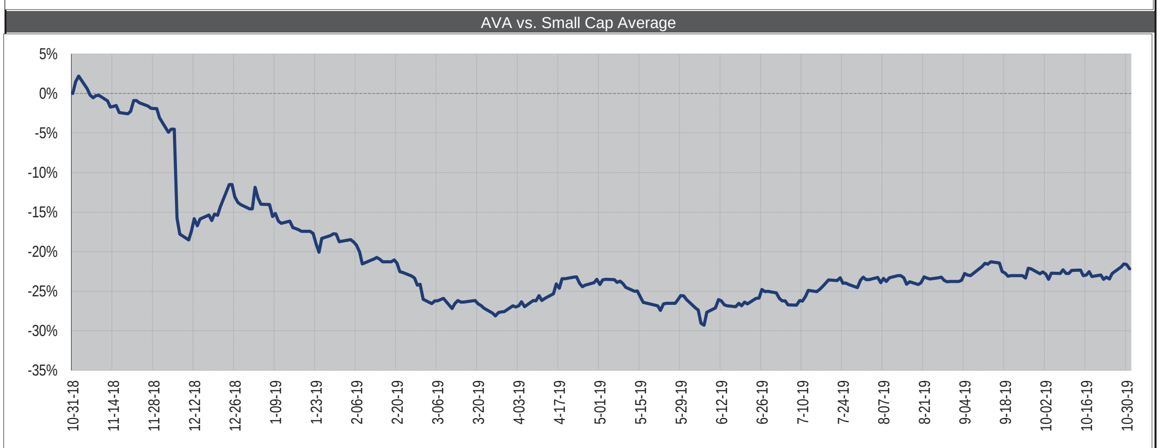


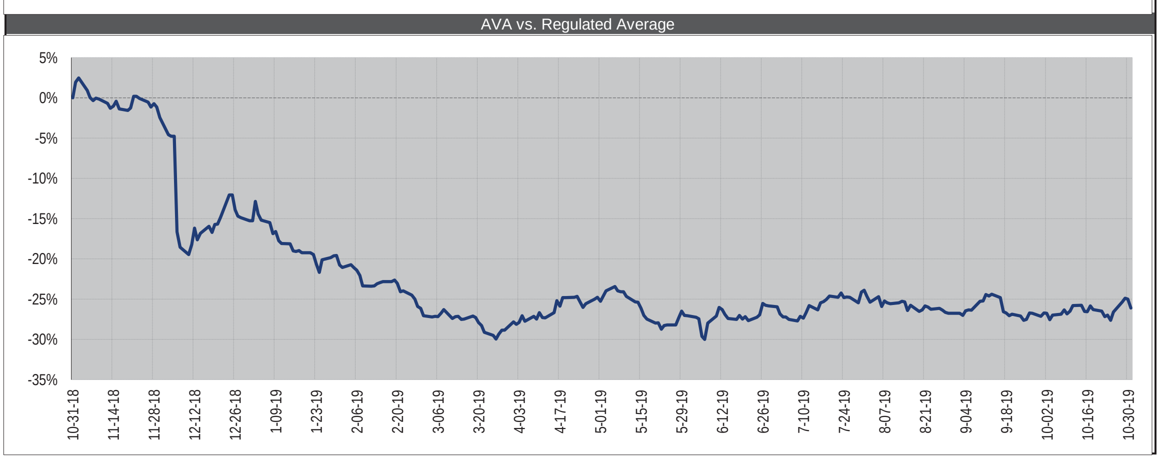


WOLFE RESEARCH

Avista Corporation (AVA) $48.03, NR



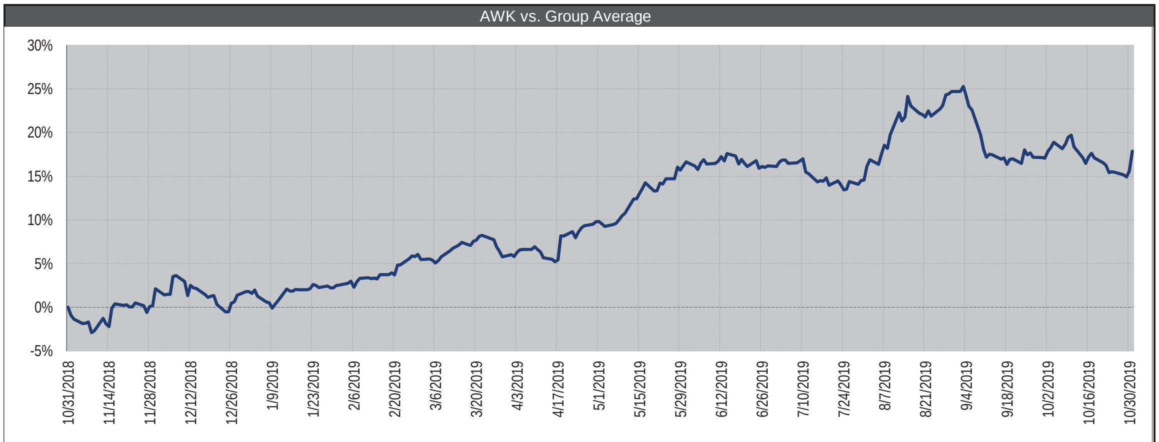


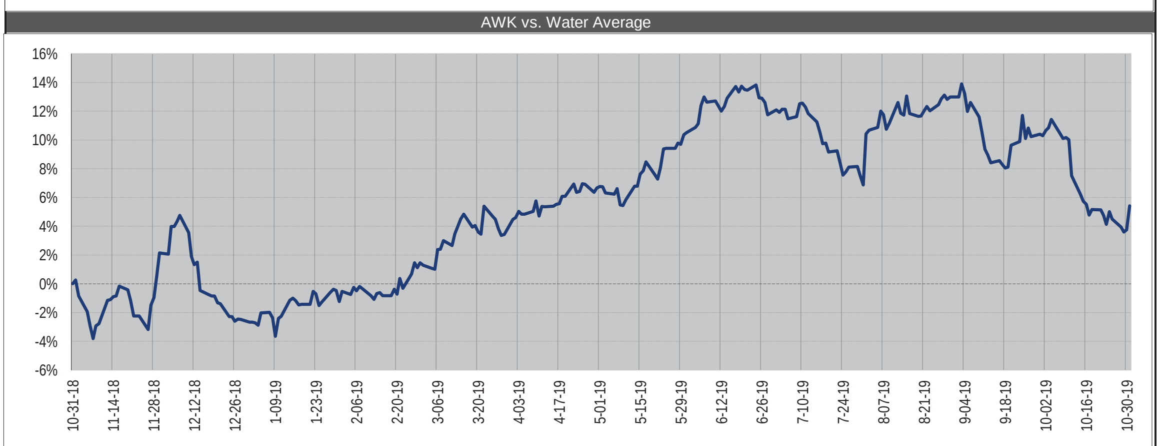


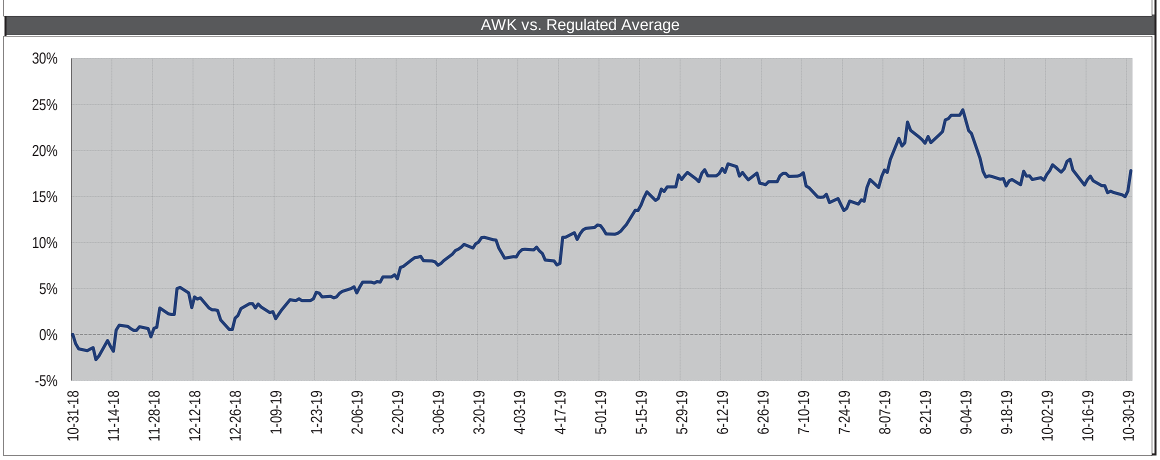
WOLFE RESEARCH

American Water Works (AWK) $123.27, Peer Perform, $126 PT

AWK finished in-line with the regulated average but underperformed its water peers in October. We believe most of AWK's performance during the month was influenced by macro factors – namely the 10-yr., which went a on roller coaster ride – starting at 1.70%, falling to 1.50% in the first few days, rising to 1.80% by mid-month, then ending at 1.68%.





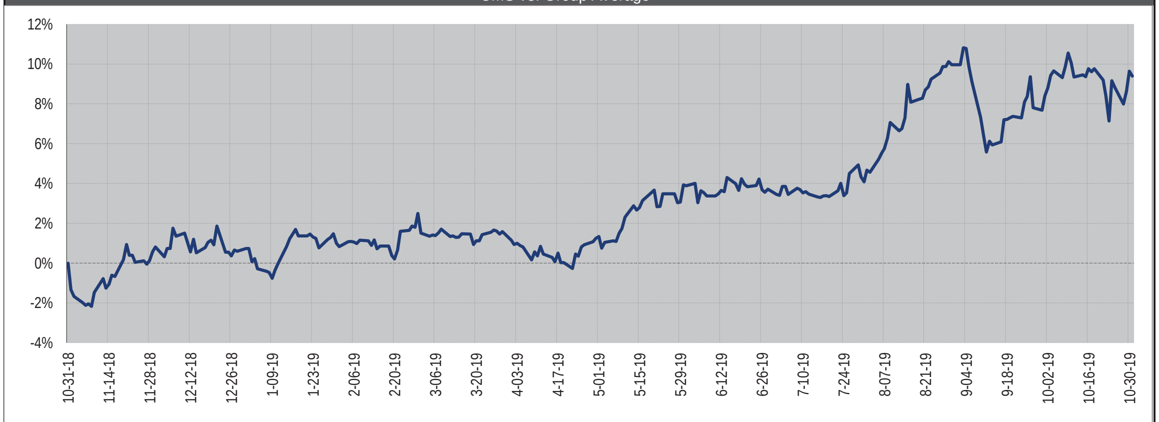


WOLFE RESEARCH

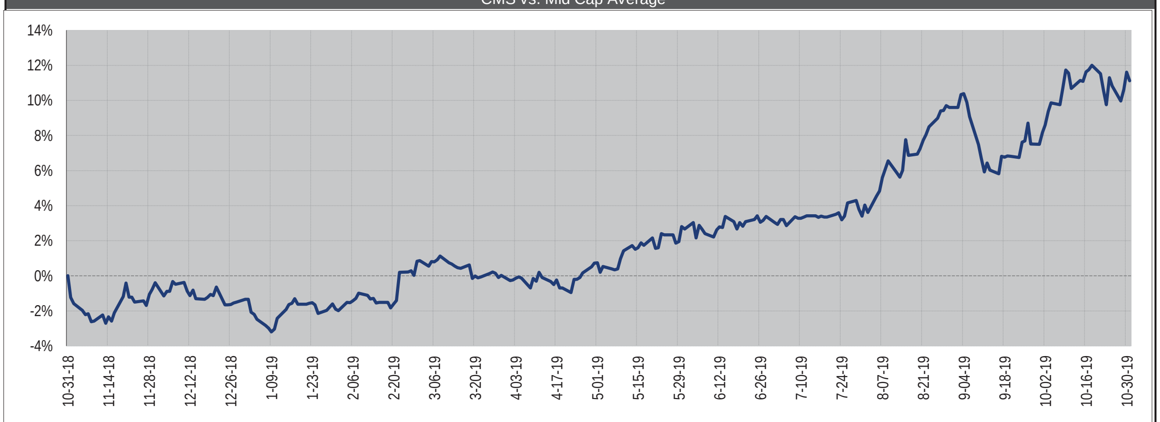
CMS Energy (CMS) $63.92, Peer Perform, $66 PT

- CMS outperformed in October and remains ahead of peers for the year. CMS reported a solid Q3 – beating consensus, reaffirming 2019 guidance, and initiating 2020 guidance – all consistent with its plan to grow earnings at 6-8% long-term. As part of the Q3 update, CMS also boosted its 10-year capex plan to $25B and hinted at potential upside.

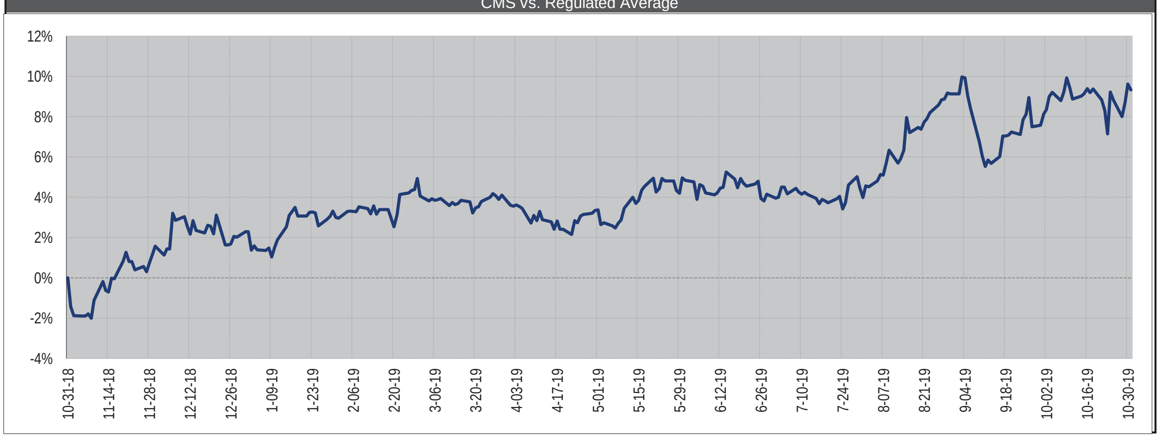
CMS vs. Group Average



CMS vs. Mid Cap Average



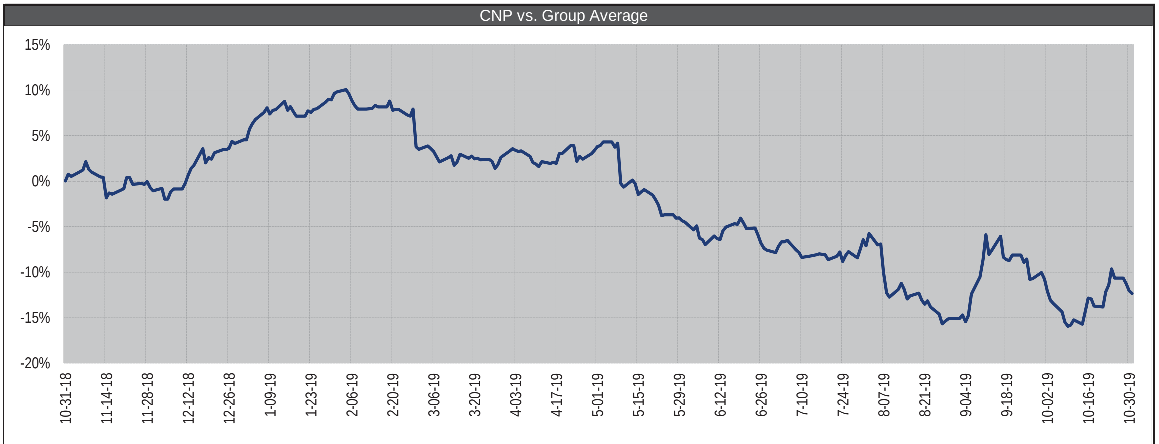
CMS vs. Regulated Average

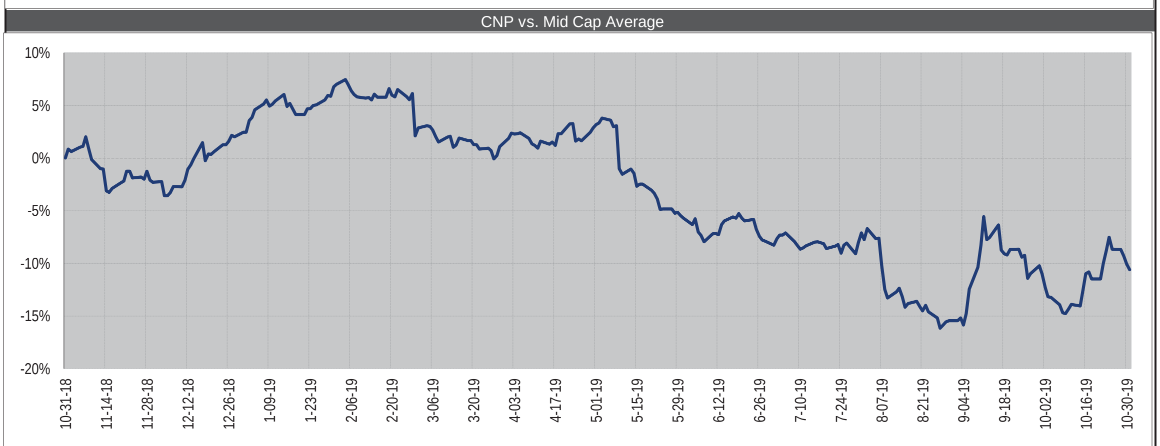


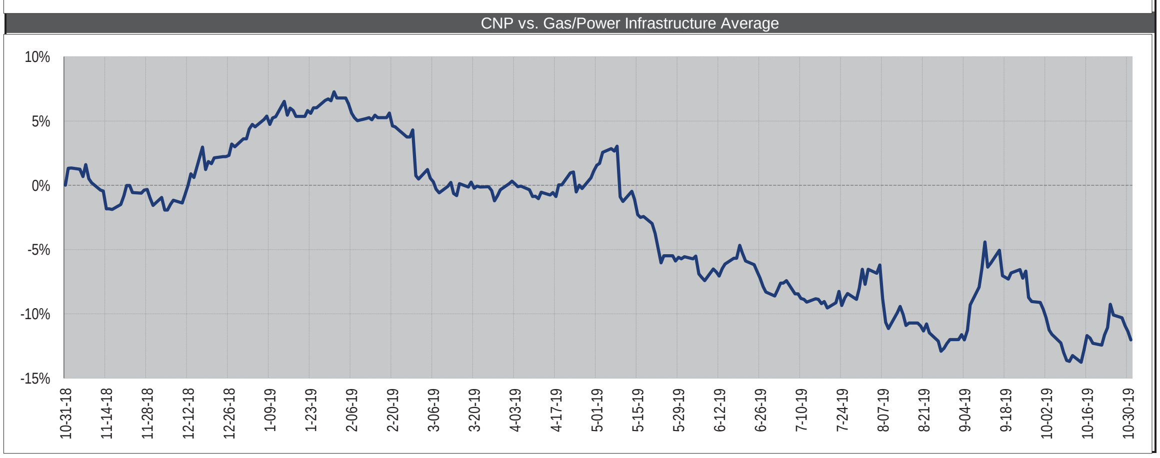
WOLFE RESEARCH

CenterPoint Energy (CNP) $29.07, Peer Perform, $32 PT

CNP underperformed the utility average in October. The stock went on a bit of a roller coaster ride – significantly underperforming in the 1H of the month after management voiced substantial frustration with the ALJ's rec in the company's TX rate case. However, the stock rallied in the 2H on news reports that CNP is considering a sale of its Infrastructure Services business.



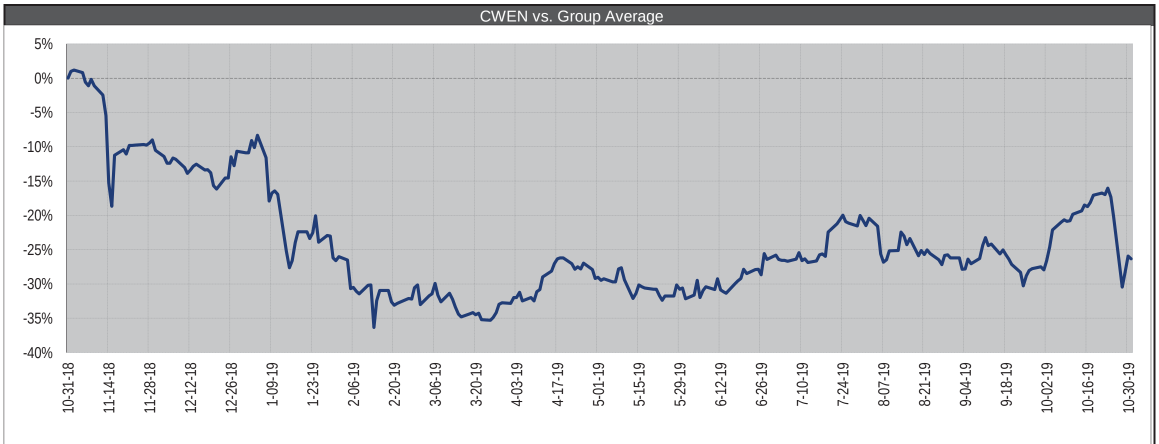


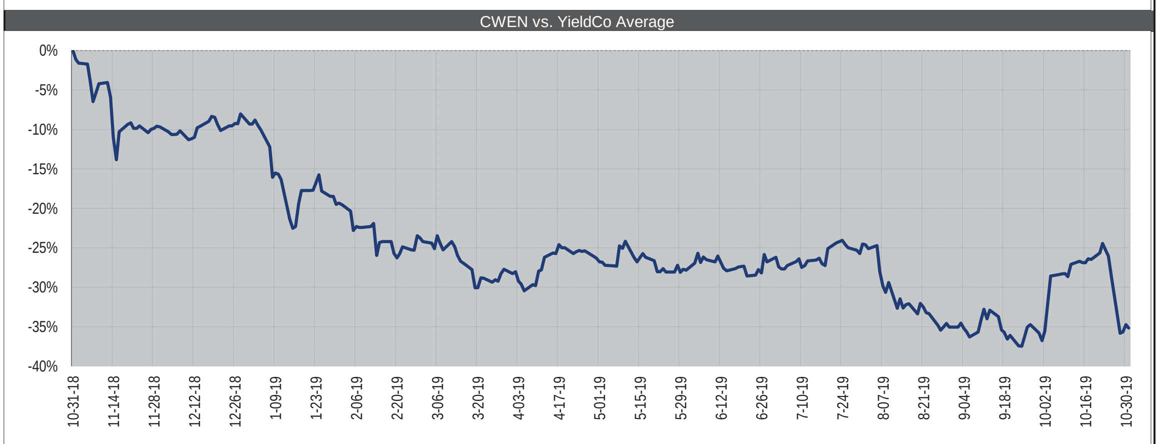


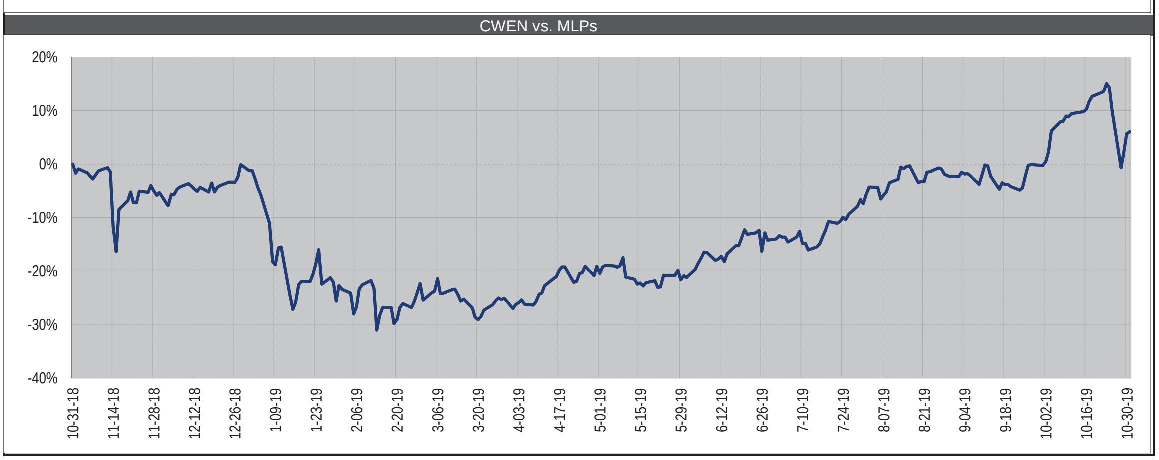
WOLFE RESEARCH

Clearway Energy (CWEN) $18.13, Peer Perform, $19 PT

CWEN underperformed slightly in October as key customer PCG saw risks from new fires that could complicate the exit from bankruptcy



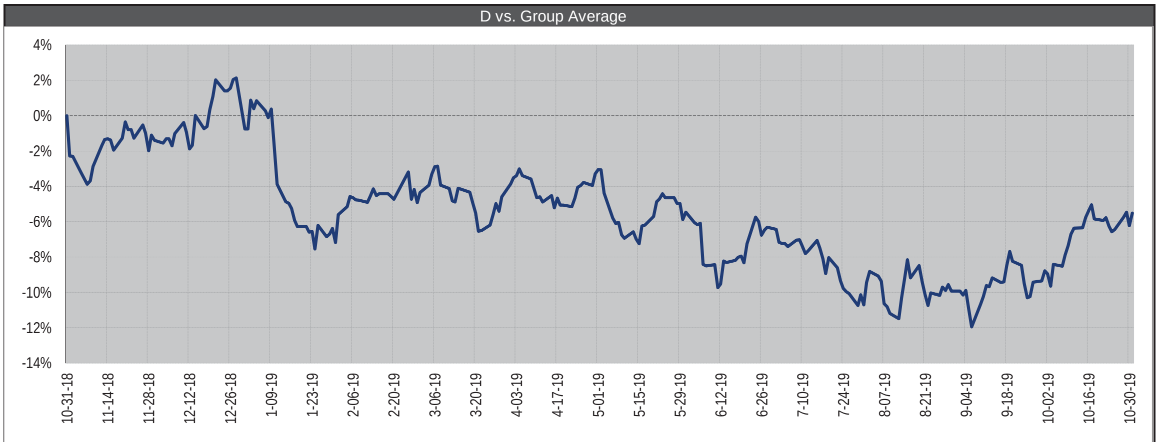


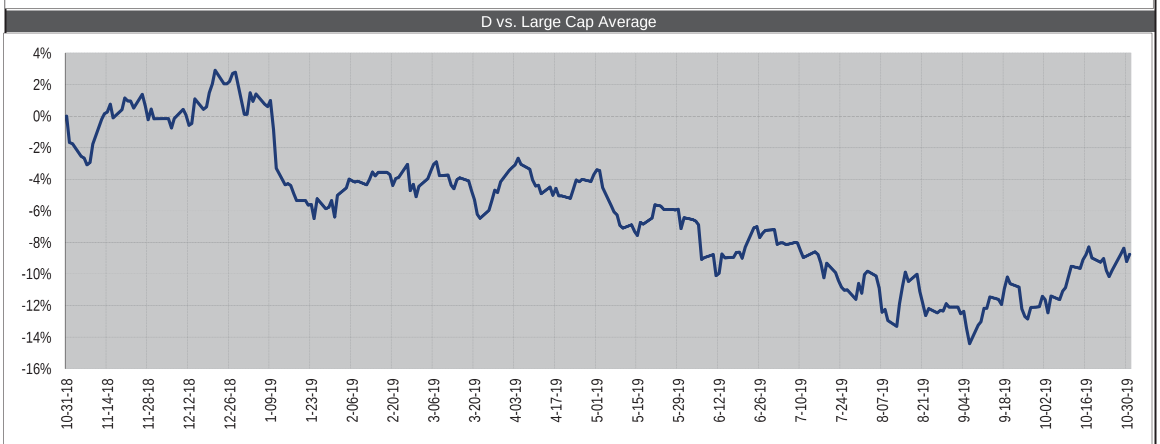


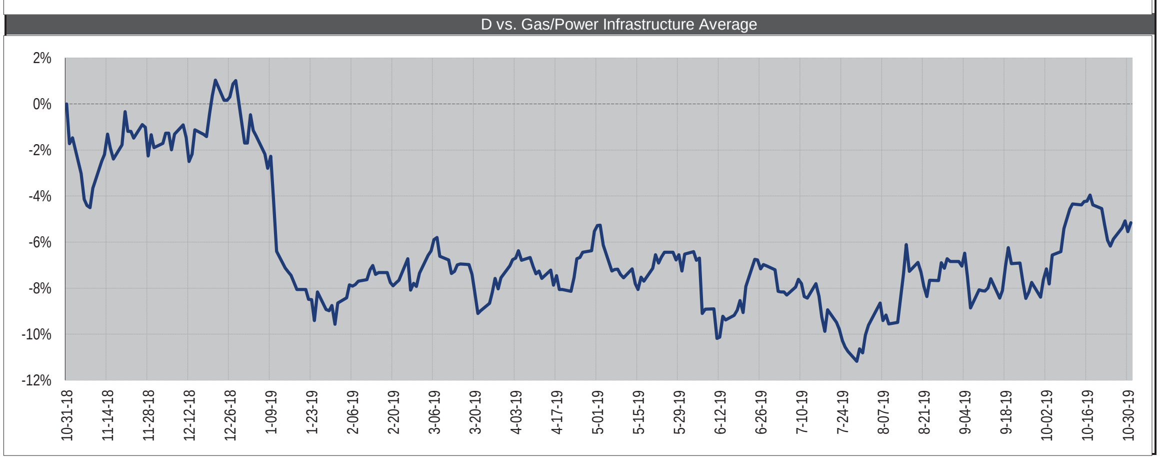
WOLFE RESEARCH

Dominion Resources (D) $82.55, Outperform, $92 PT

D outperformed the utility average in October. The stock jumped at the beginning of the month after the US Supreme Court granted cert to ACP's appeal of the 4th Circuit's decision regarding the Appalachian Trail crossing issue. D also sold a 25% stake in its Cove Point facility for $2B (~12x EBITDA), with proceeds being used to reduce future equity needs and reinvest at VEPCO.



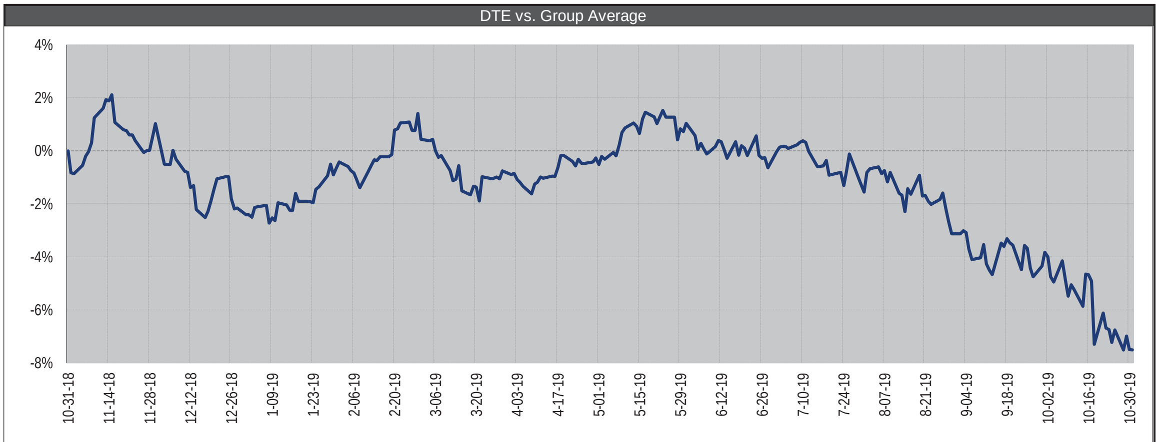


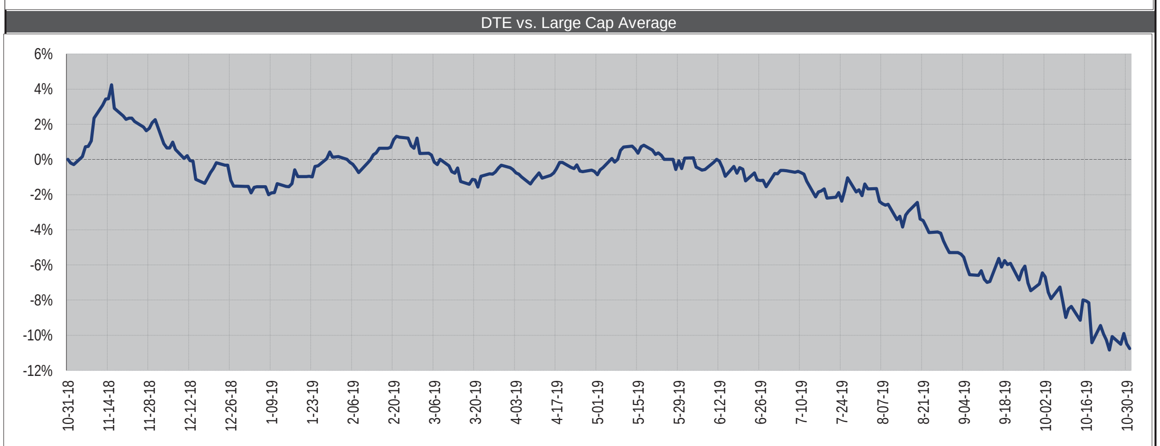


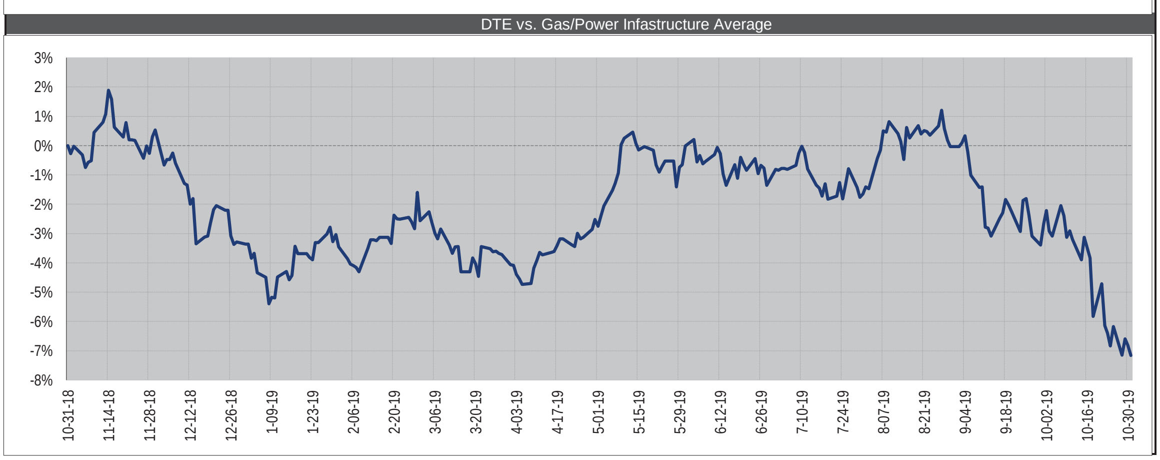
WOLFE RESEARCH

DTE Energy (DTE) $127.32, Peer Perform, $135 PT

- The stock continued its steady underperformance in October, which was exacerbated by the announcement of a $2.65B Haynesville gathering acquisition. The stock remains at relative lows and is underperforming most of the group in 2019. The Q3 print was mostly solid – upping 2019 guidance, initiating 2020 guidance at 7.5% growth, and re-basing the long-term 5-7% EPS growth rate higher off 2020. That said, there continues to be investor concerns around the midstream business and mgmt. will likely have to climb a wall of skepticism.



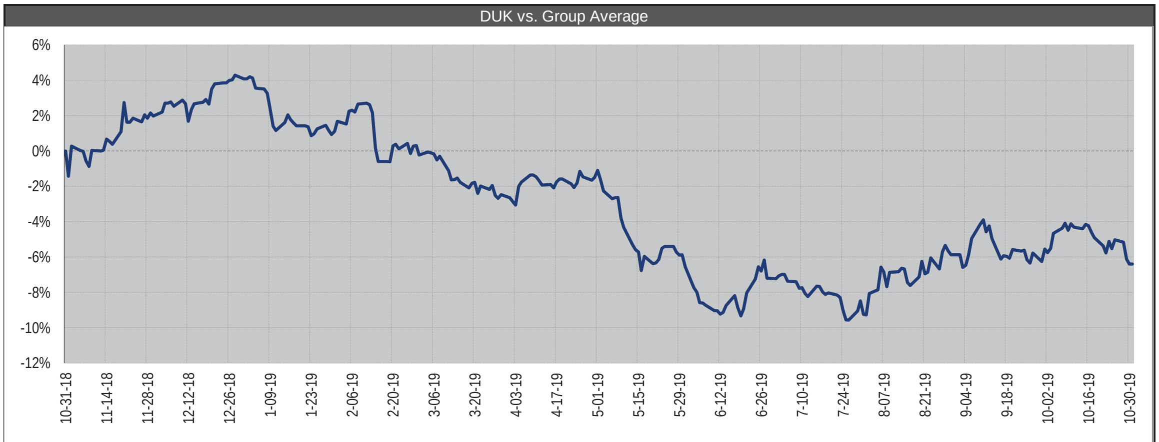


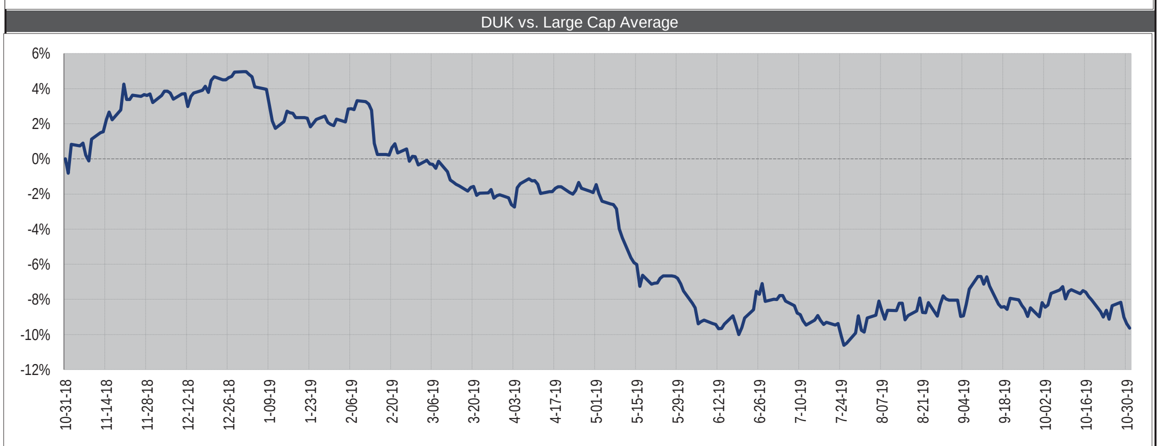


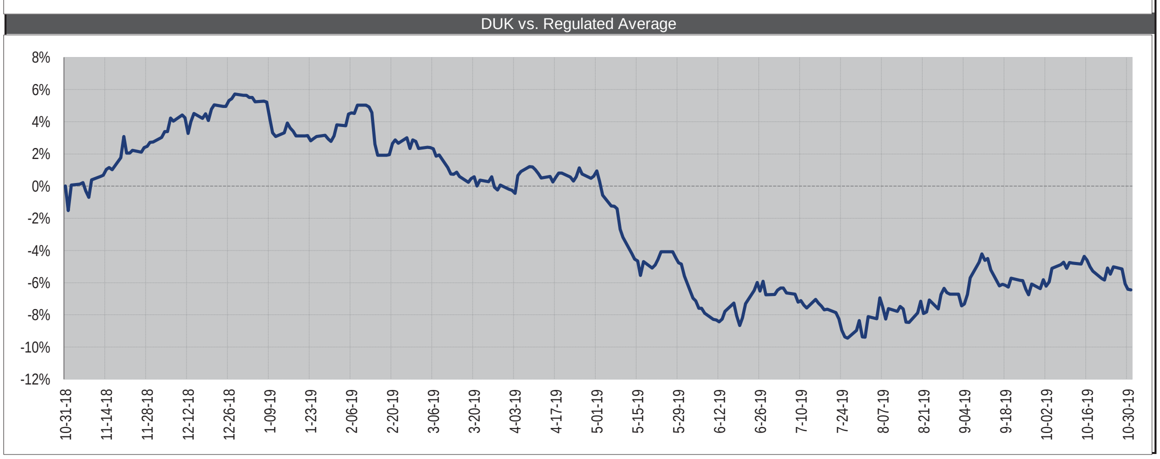
WOLFE RESEARCH

Duke Energy (DUK) $94.26, Peer Perform, $98 PT

DUK started Oct well, with NC legislation being resurrected, but the stock gave back relative gains by the end of the month, as key provisions of the legislation were removed.



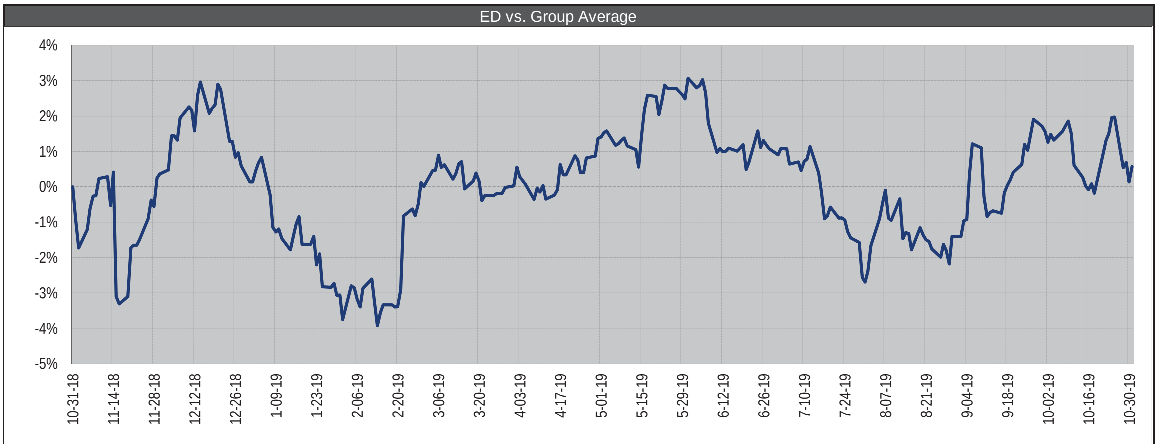


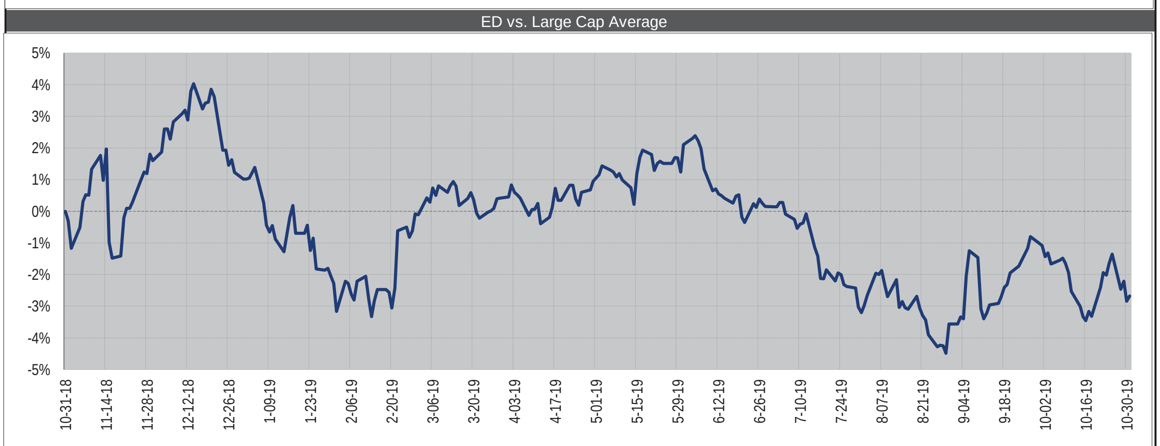


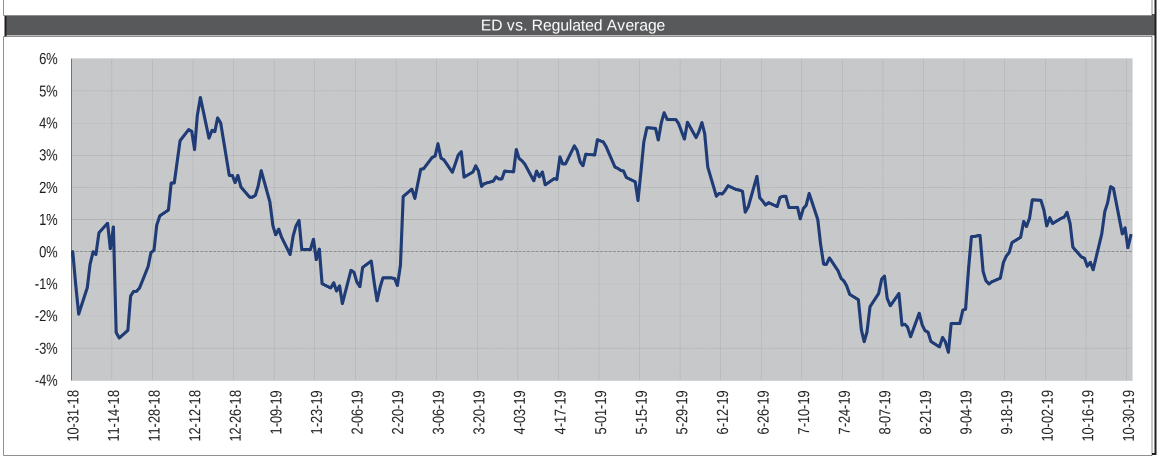
WOLFE RESEARCH

Consolidated Edison (ED) $92.22, Underperform, $90 PT

ED modestly underperformed the regulated average in October. The stock was underperforming more meaningfully up until CECONY's settlement details were made public. Our sense is that some investors were optimistic on ED's ability to earn well-above the allowed ROE of 8.80% via the proposed incentives. Simply removing the rate case overhang could explain some of the performance too.



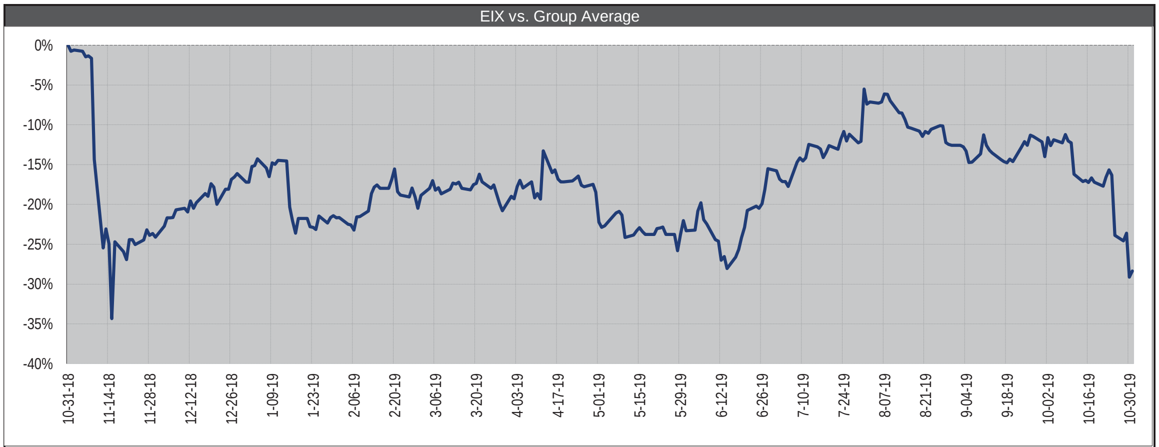


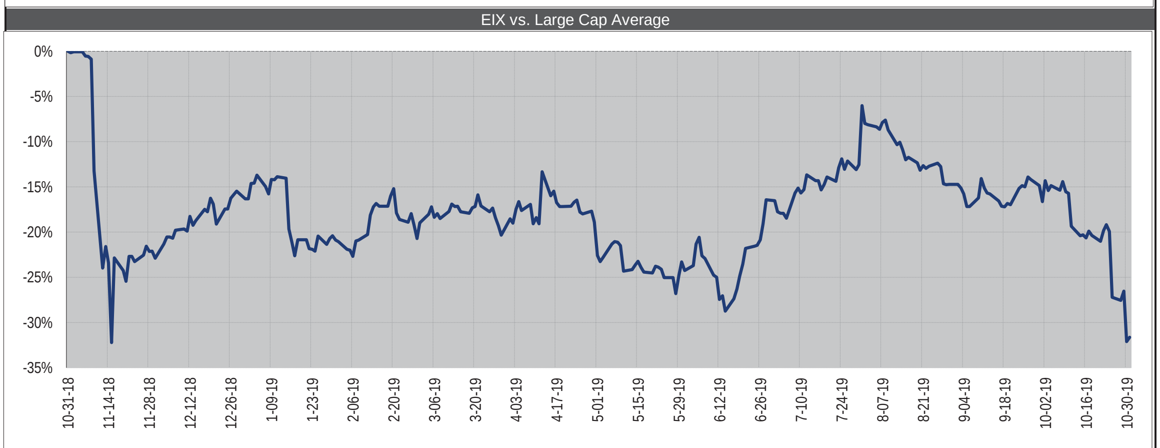


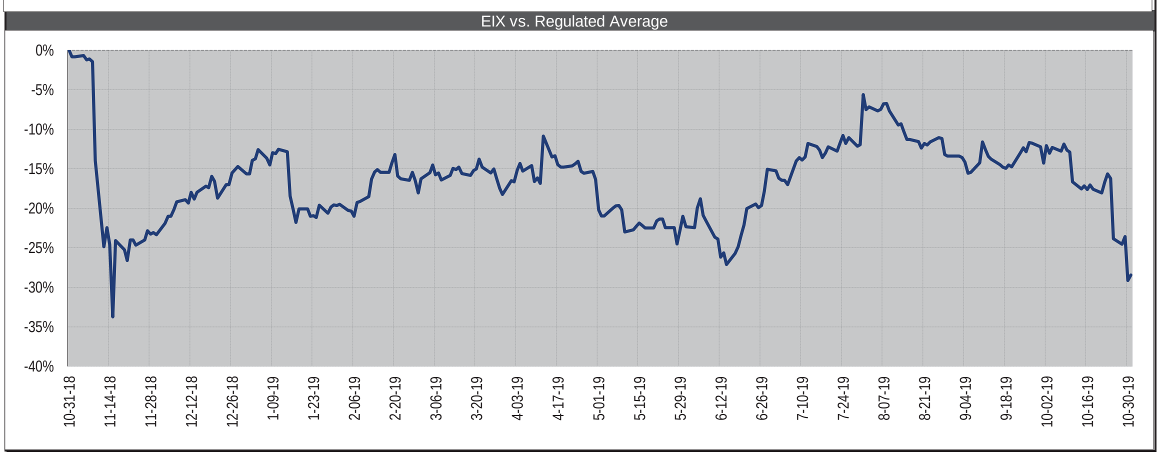
WOLFE RESEARCH

Edison International (EIX) $62.90, Outperform, $80 PT

EIX lost about 1,500bp relative to peers, as investors fled when fires broke out in mid-Oct and accelerated the last two weeks during the fiercest winds of the year; we see it as an overreaction.



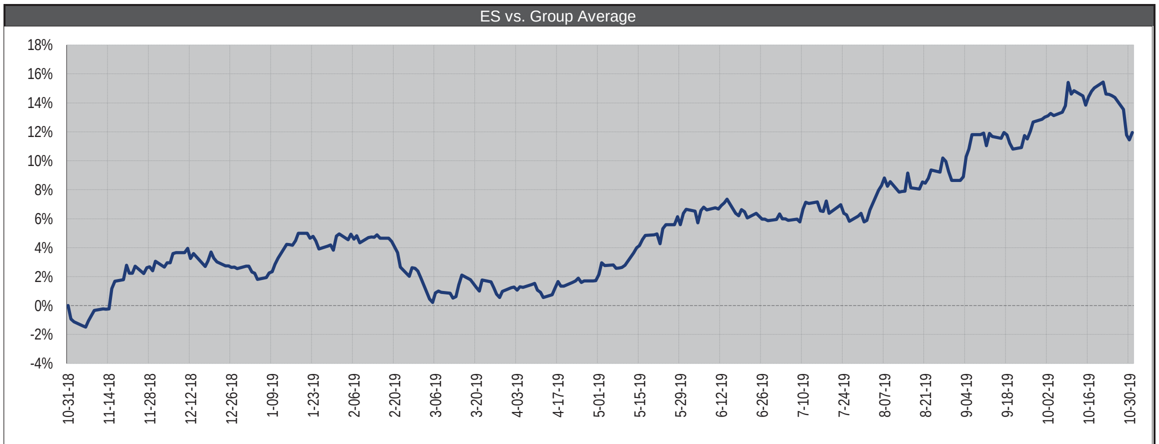


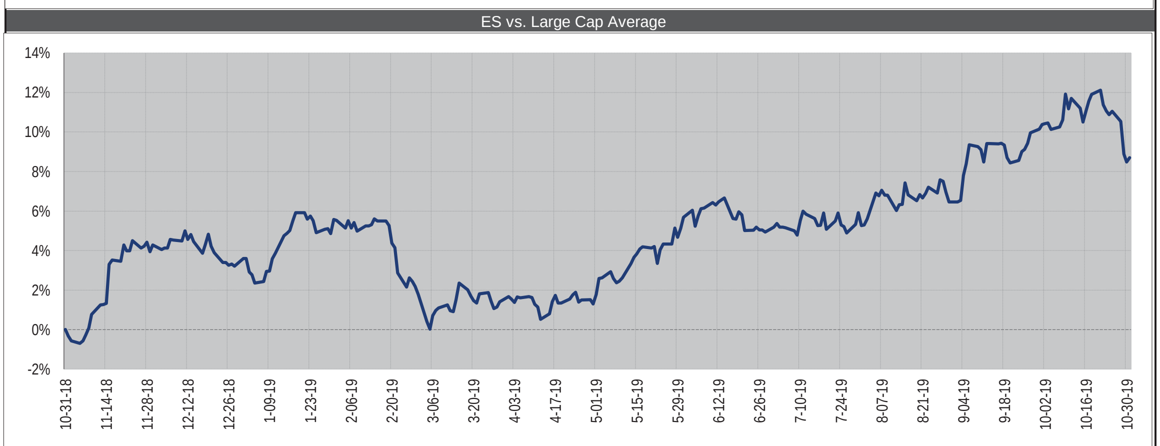


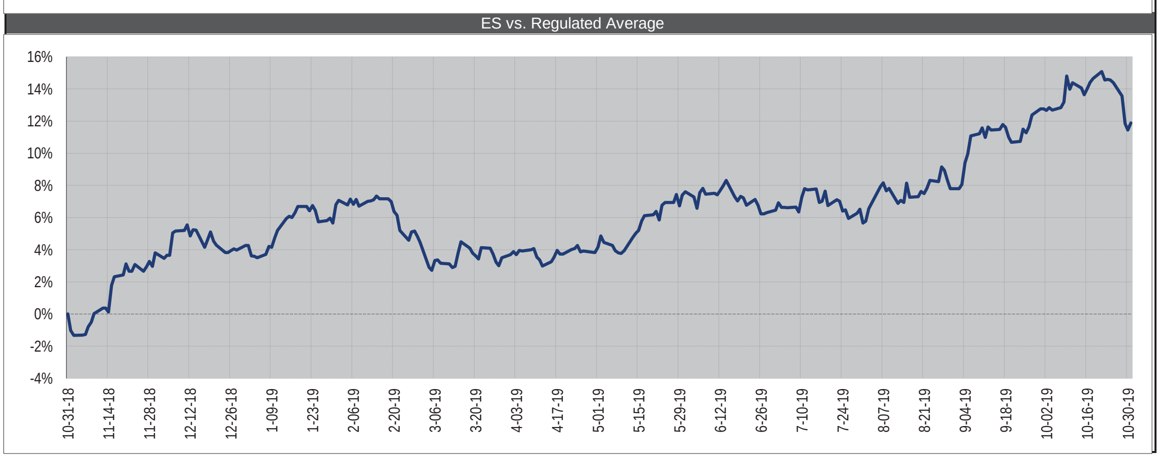
WOLFE RESEARCH

Eversource Energy (ES) $83.74, Outperform, $85 PT

ES rose over 200bp, hitting another 52-week relative high this month, but gave back all those gains after Orsted cut returns and capacity factors for offshore wind.



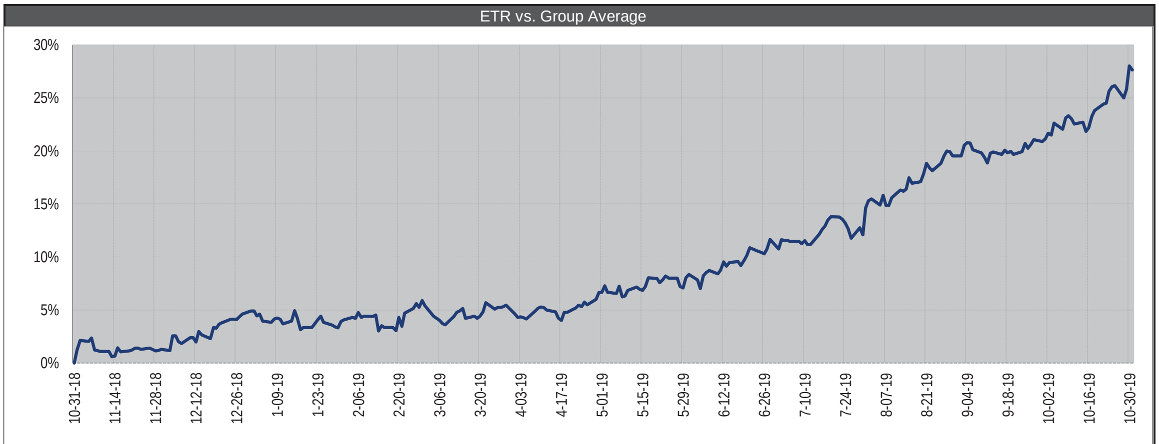


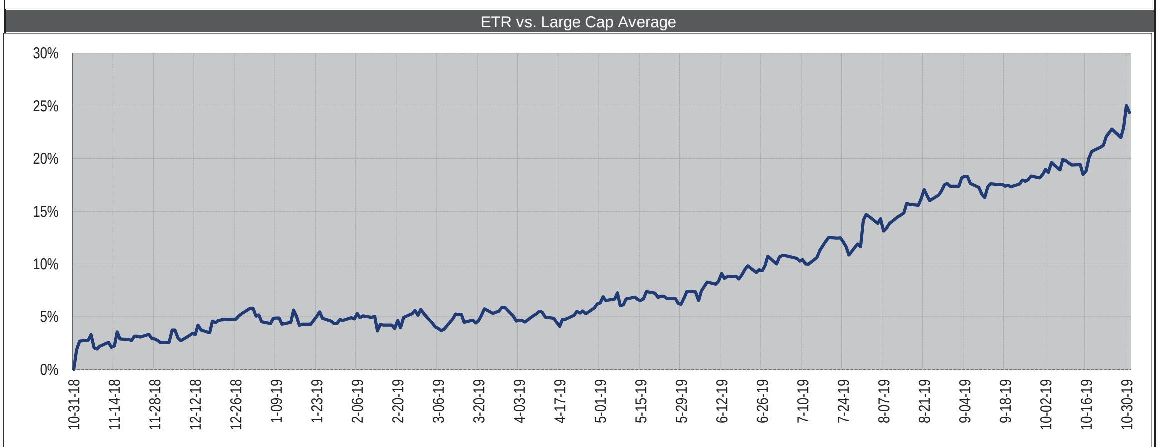


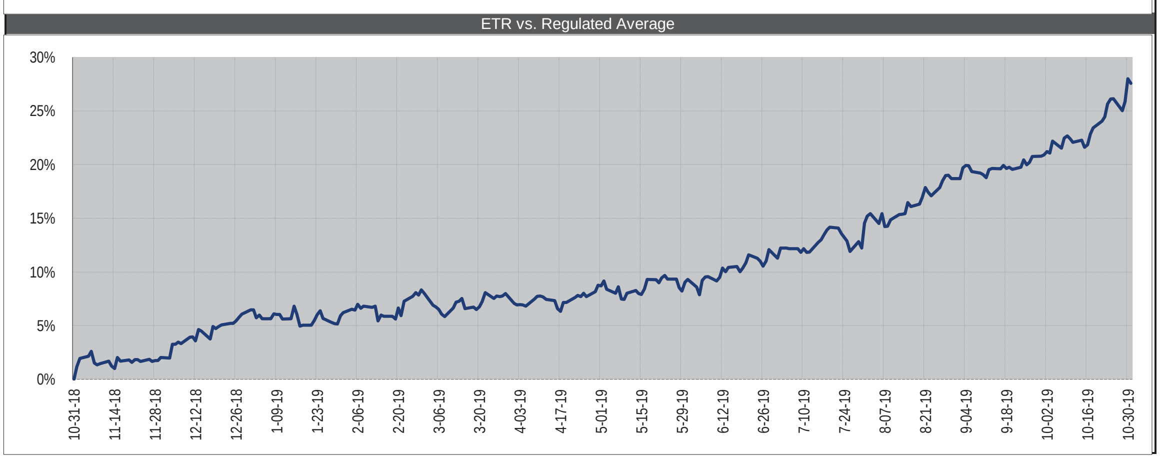
WOLFE RESEARCH

Entergy (ETR) $121.48, Peer Perform, $119 PT

ETR reached yet another 52-week relative high in Oct, following another solid earnings report.



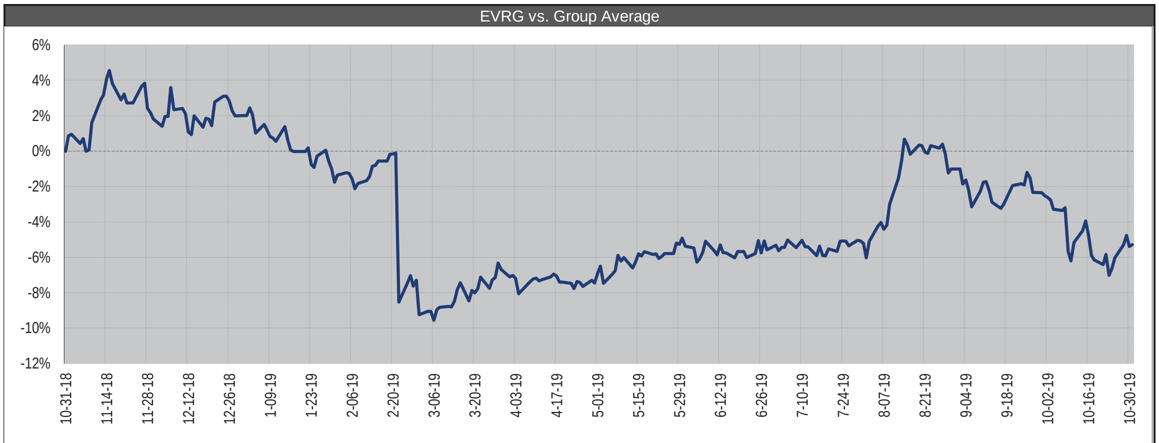


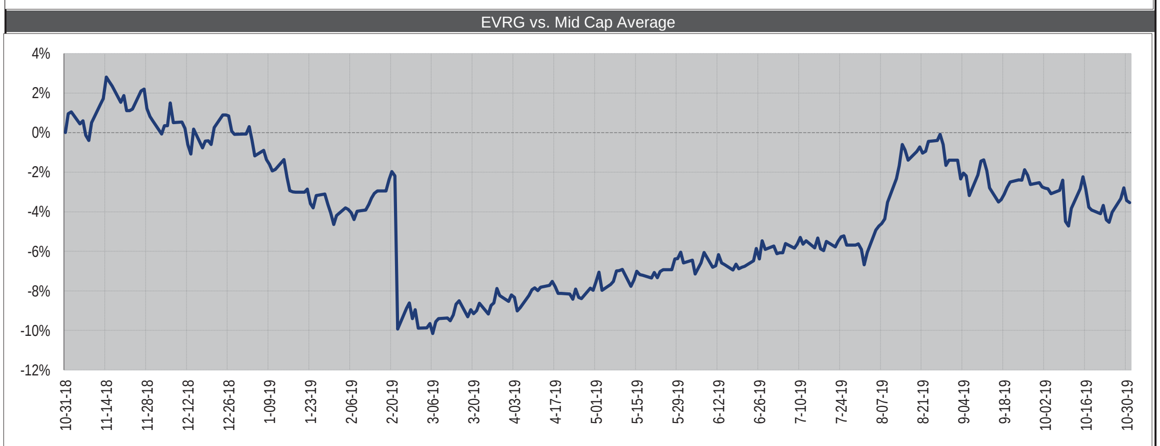


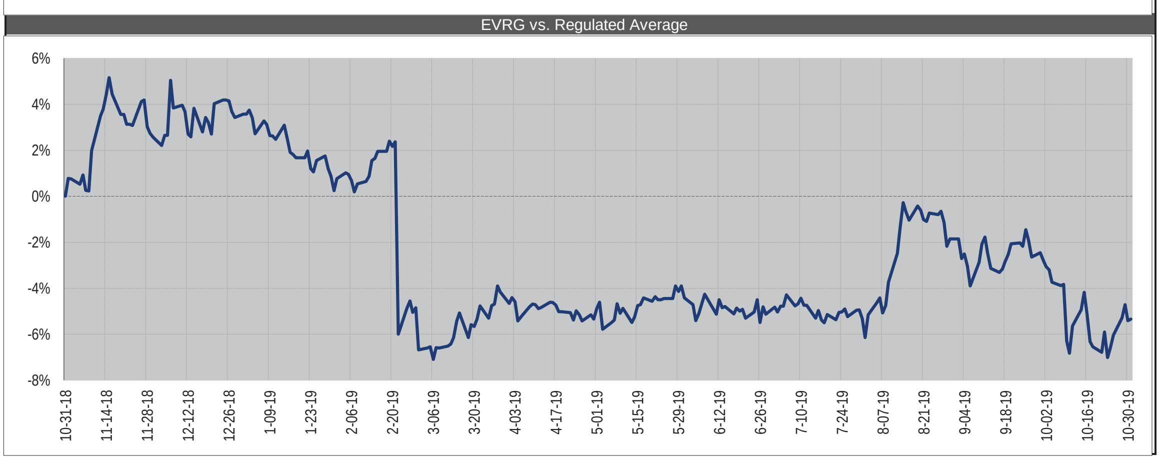
WOLFE RESEARCH

Evergy (EVRG) $63.91, Outperform, $68 PT

- EVRG underperformed most of the group in October, after the stock fell dramatically when the Missouri PSC initially indicated it would side with MECG/OPC (and against the company) in the Sibley accounting complaint. The stock then bounced some, before falling when the Missouri PSC confirmed its initial discussion by issuing a final order. EVRG filed for rehearing, which was ultimately denied, and now must decide what the deferral amount on the cost savings will be.



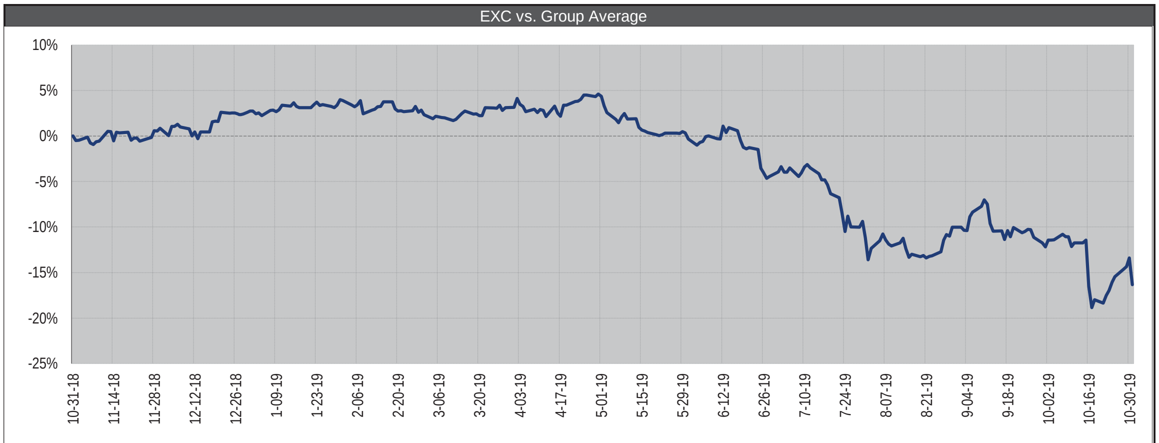


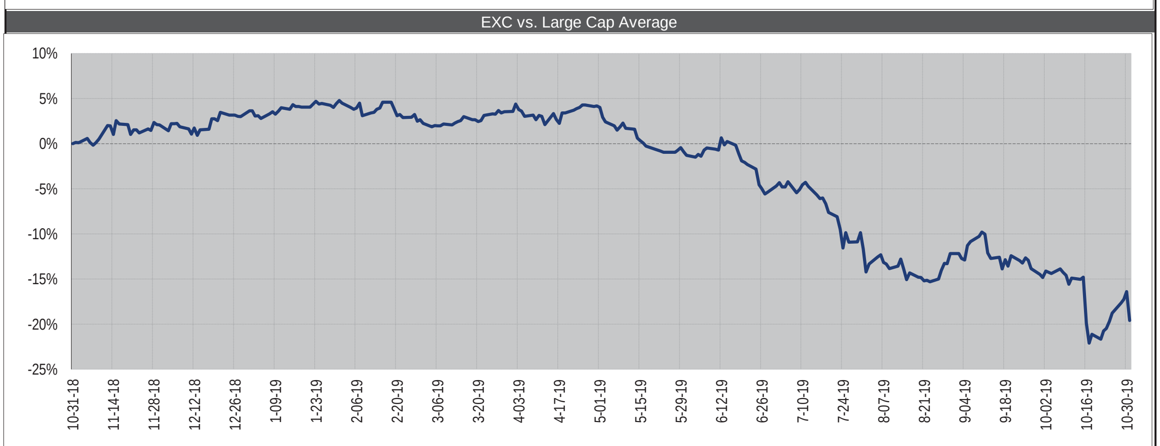


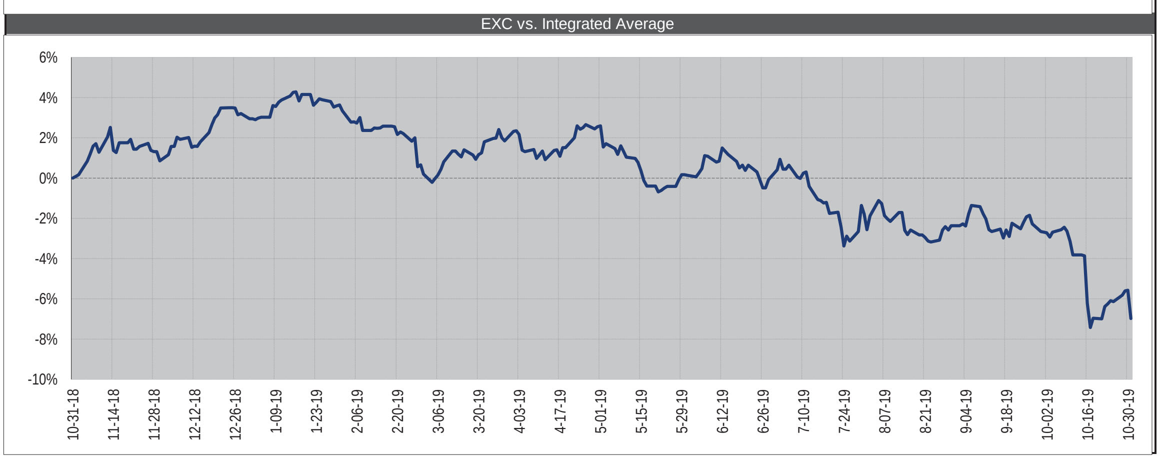
WOLFE RESEARCH

Exelon (EXC) $45.49, Outperform, $55 PT

The stock fell over 400bp, hitting another 52-week relative low vs peers in Oct, as federal investigations of IL lawmakers and lobbying have embroiled EXC, among other individuals/entities.



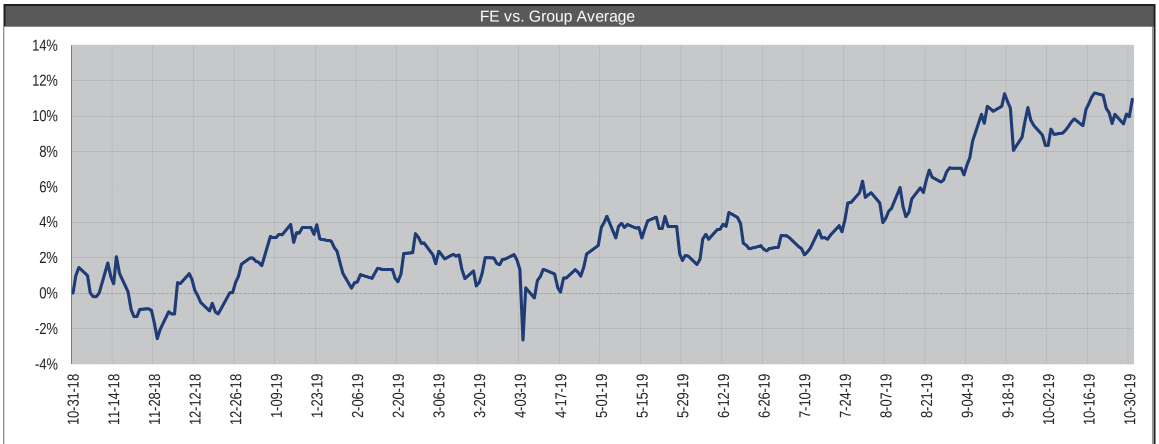


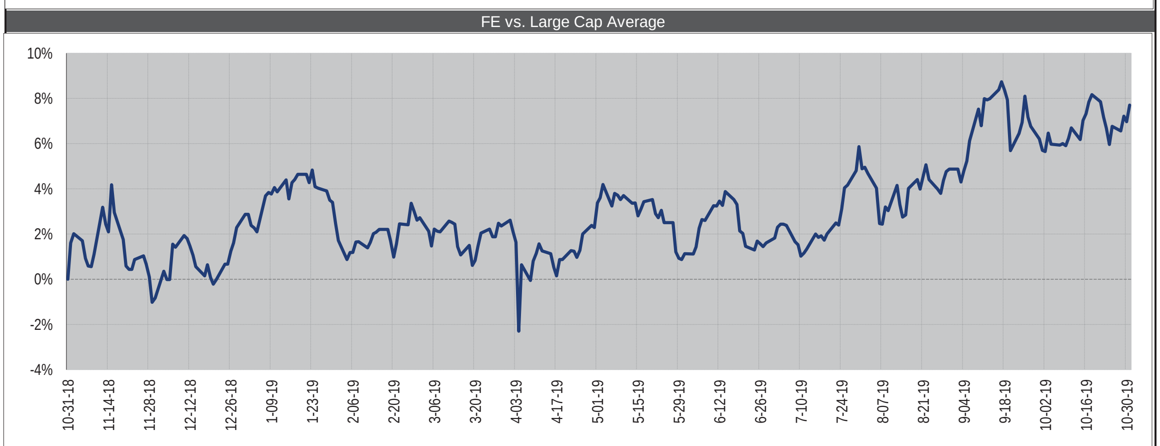


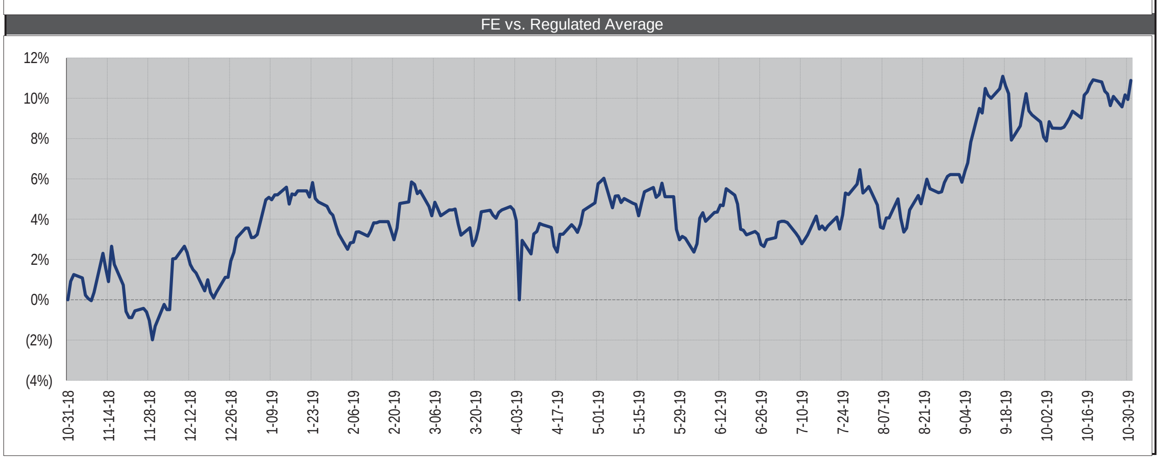
WOLFE RESEARCH

FirstEnergy (FE) $48.32, Outperform, $53 PT

- FE continued to outperform in October and is sitting near relative highs. The company saw two positive developments as it relates to FES – the bankruptcy court approved its plan of reorganization (leaving emergence on track for year-end) and HB6 in Ohio avoided a veto referendum (effectively locking in decoupling off a beneficial weather year in 2018.



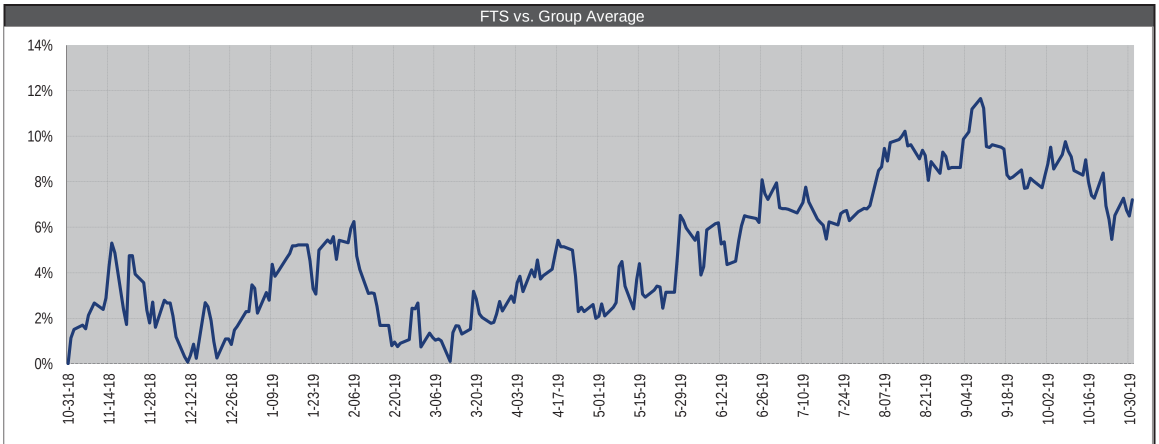


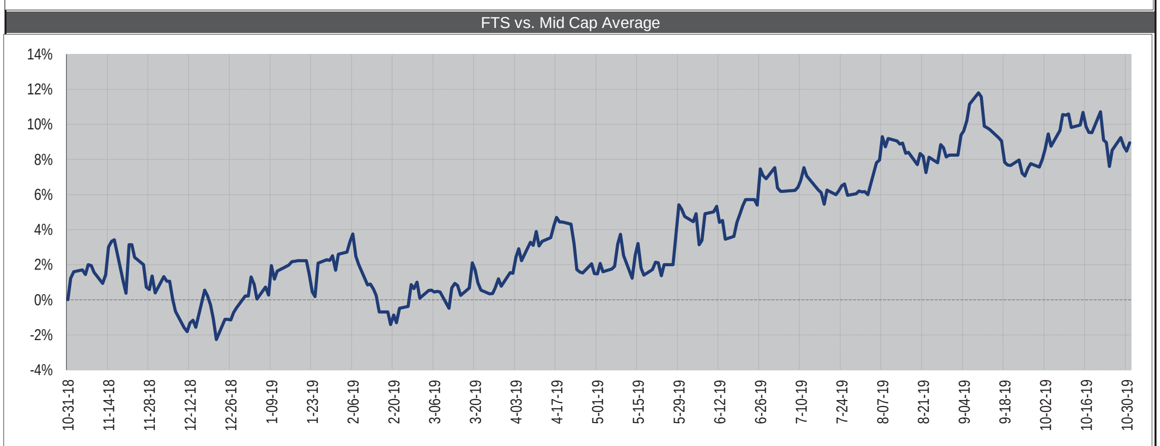


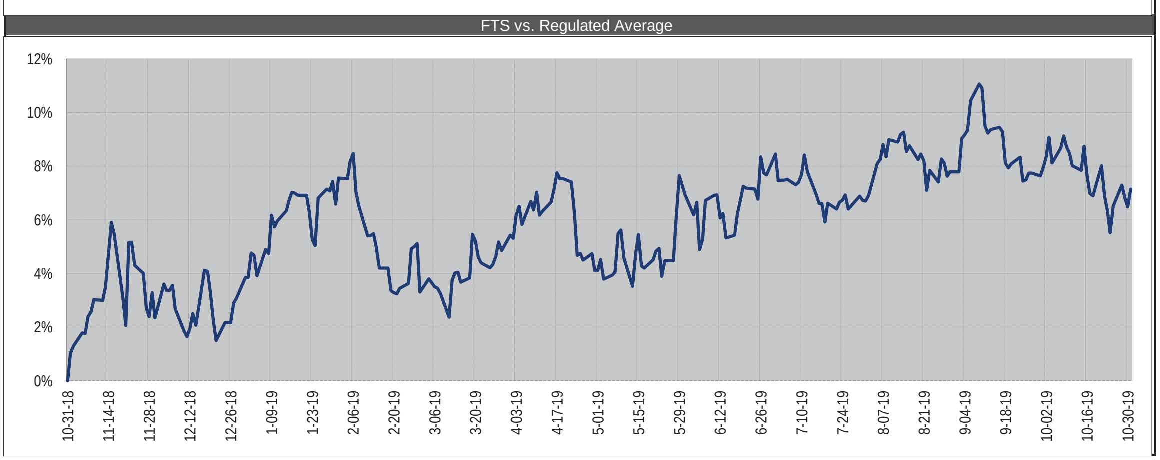
WOLFE RESEARCH

Fortis (FTS) $41.57, Peer Perform, $45 PT

- FTS modestly underperformed the group in October, but is still ahead of most peers for the year. We rolled out coverage with a Peer Perform rating on October 9. Later in the month, FTS received a relatively reasonable Staff recommendation in its Arizona rate case – an allowed ROE of 9.3% and equity ratio at 53% (versus 9.75% and 50% currently).



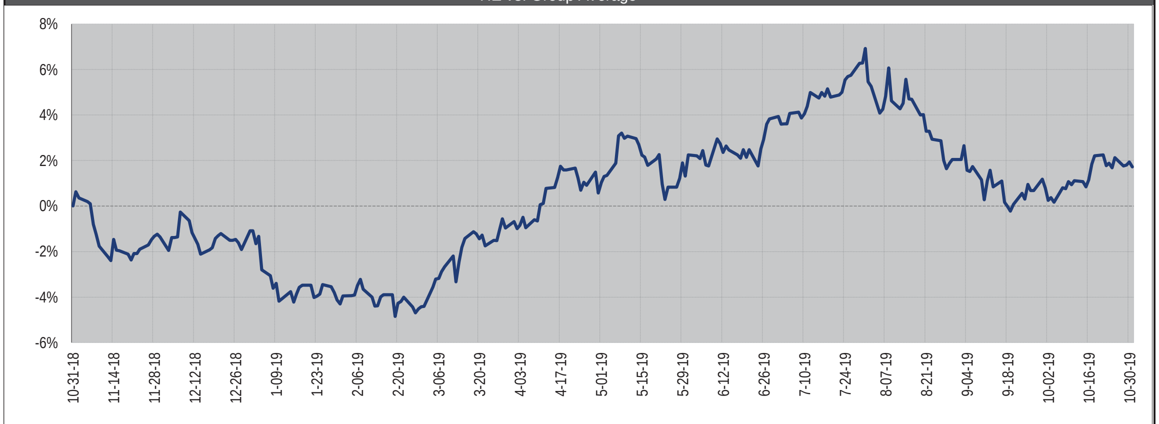




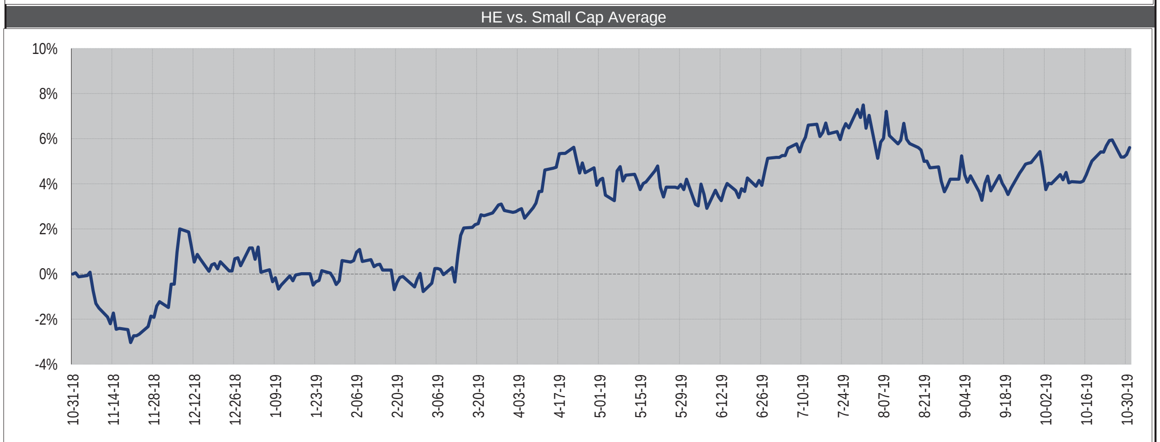
WOLFE RESEARCH

Hawaiian Electric (HE) $45.15, NR

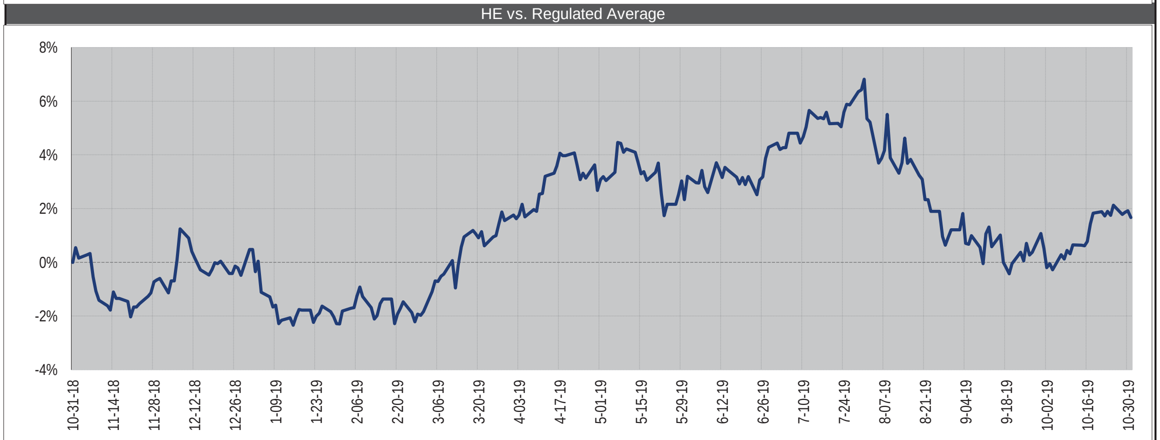
HE vs. Group Average



HE vs. Small Cap Average



HE vs. Regulated Average

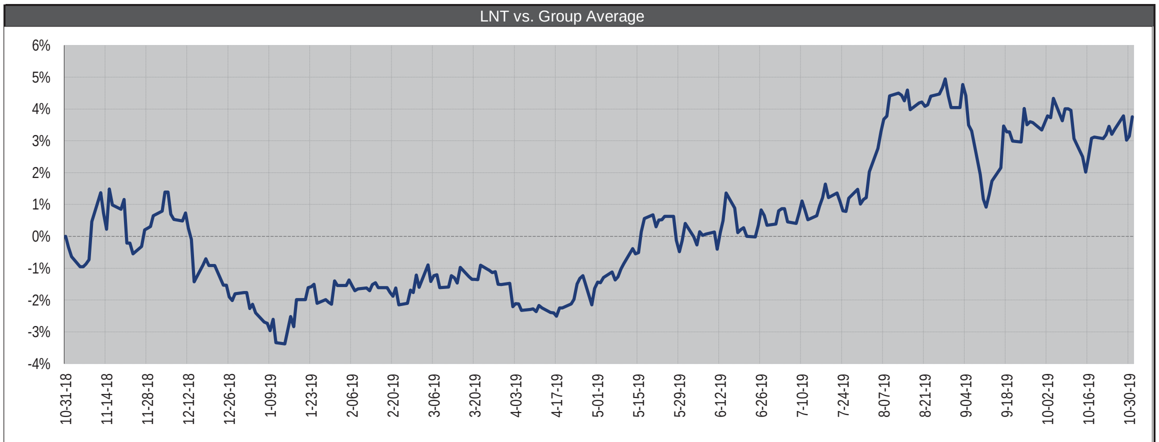


WOLFE RESEARCH

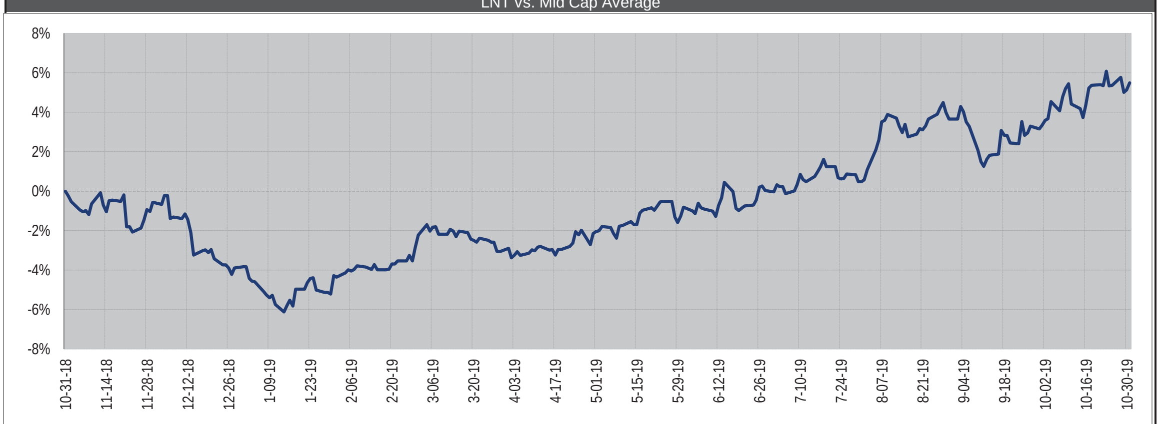
Alliant Energy (LNT) $53.34, Peer Perform, $53 PT

- For the second consecutive month – LNT underperformed significantly to start the month before making it all back into month-end. LNT also remains ahead of peers in 2019. The company reached constructive rate settlements in both its electric and gas cases in Iowa – notably preserving allowed ROEs around the mid-9%s, raising equity ratios to 51%, and obtaining a renewables rider.

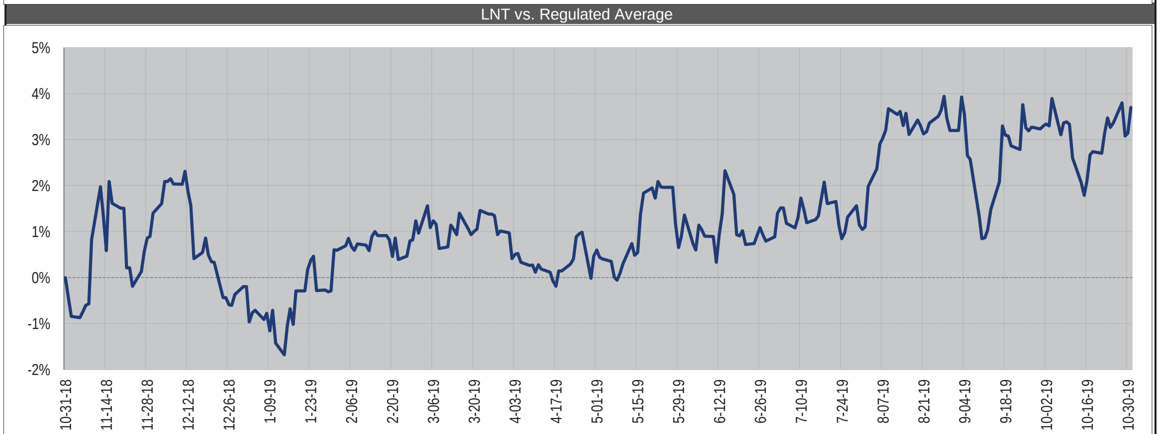
LNT vs. Group Average



LNT vs. Mid Cap Average



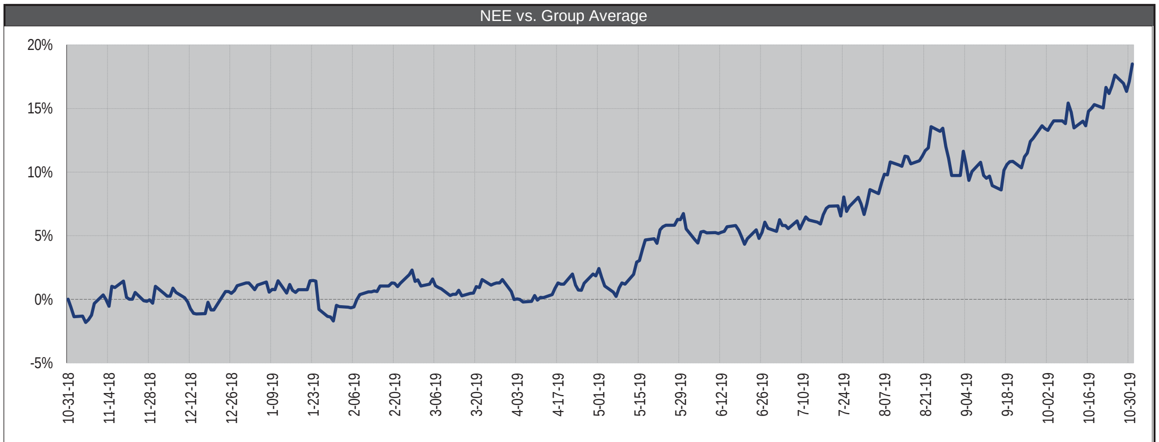
LNT vs. Regulated Average

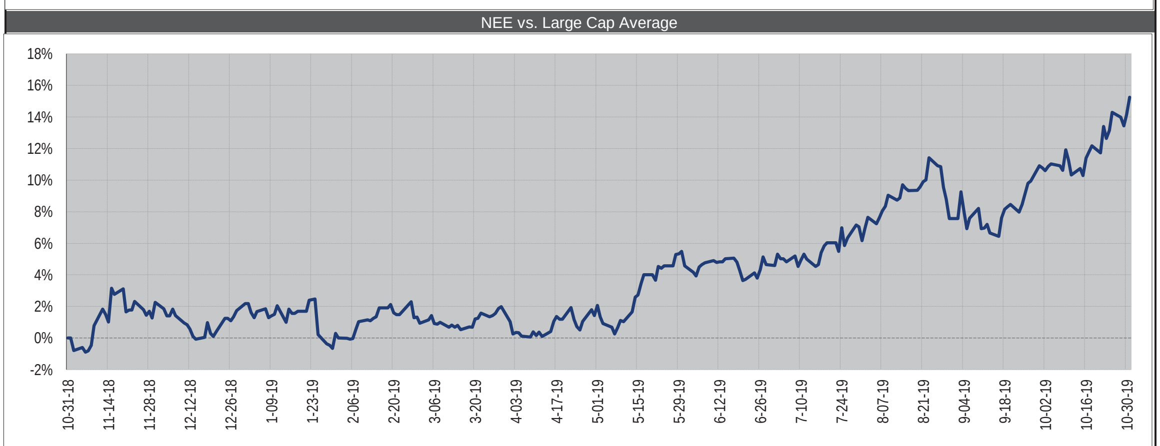


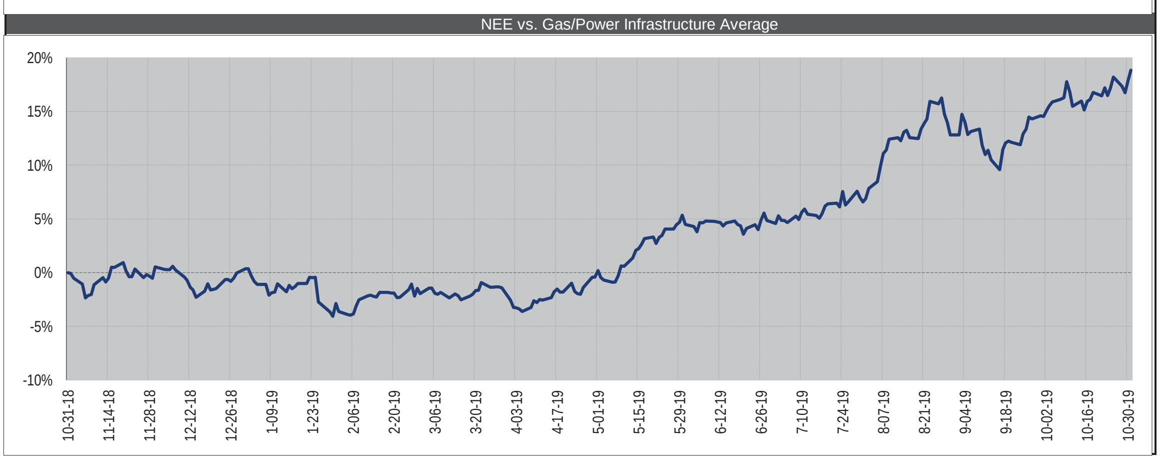
WOLFE RESEARCH

NextEra Energy (NEE) $238.34, Outperform, $240 PT

- NEE continued to outperform in October and is outperforming YTD as well. The company reported a solid Q3 – beating on earnings, reaffirming the 2019 guidance range, and reiterating 6-8% EPS growth long-term. The company is likely also benefitting from tailwinds tied to the 2020 election focus, where renewables players have caught a recent bid.

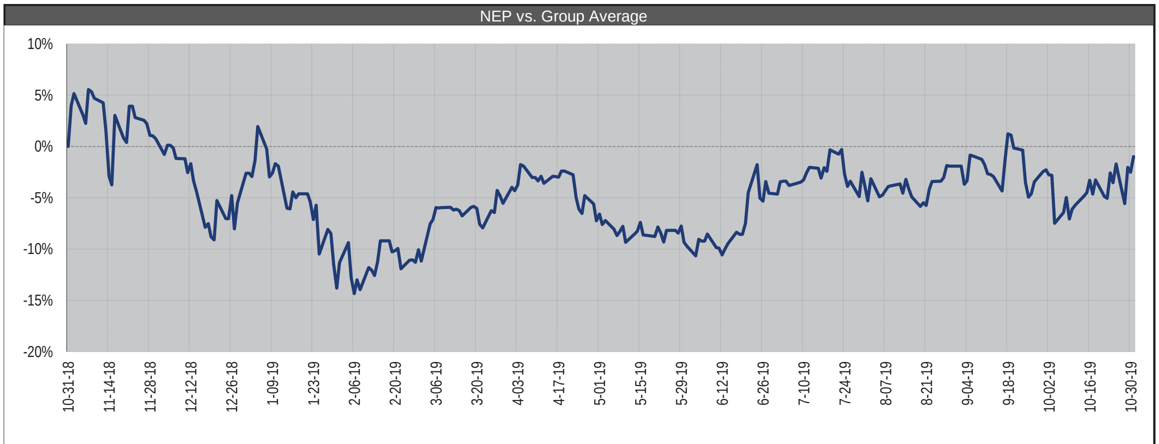


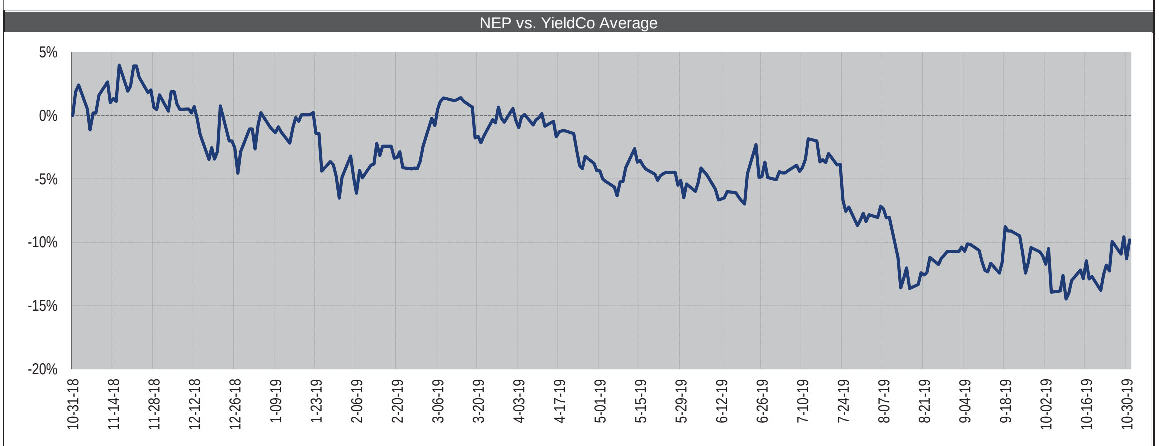


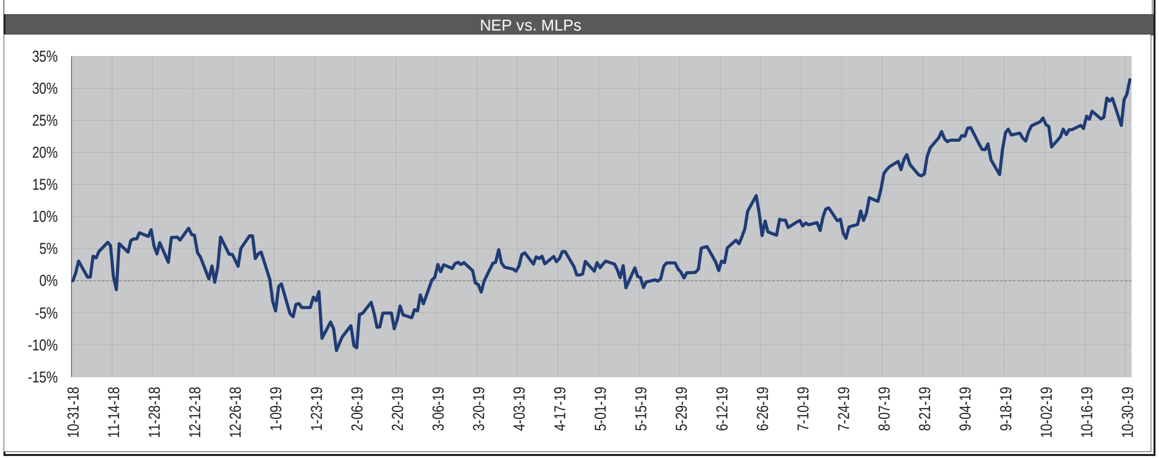


NextEra Energy Partners (NEP) $52.70, Outperform, $61 PT

- NEP experienced a choppy month of trading in October. Similar to NEE, the stock seemed to benefit from tailwinds related to the 2020 election trade (in the event a Democrat wins). However, fires in California in late-October brought renewed focus on NEP's exposure to PCG contracts at its renewables projects. That said, NEP has freed up $45M of cash traps at the Genesis project and has only $55M at Desert Sunlight. We still expect PCG to honor its PPAs.



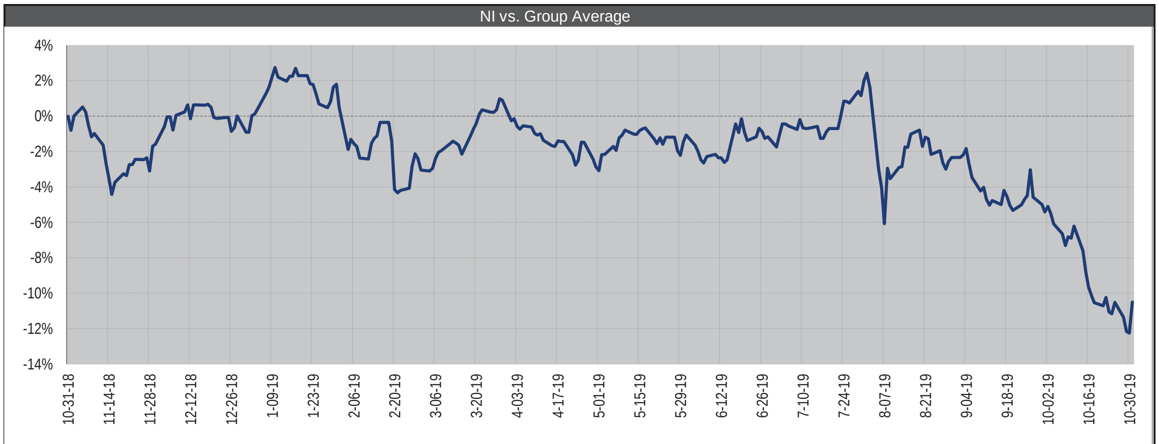


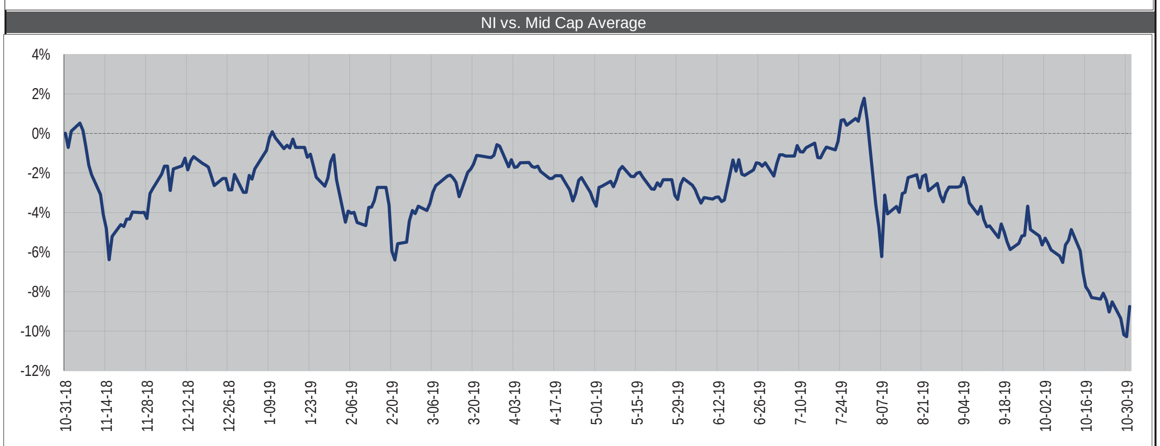


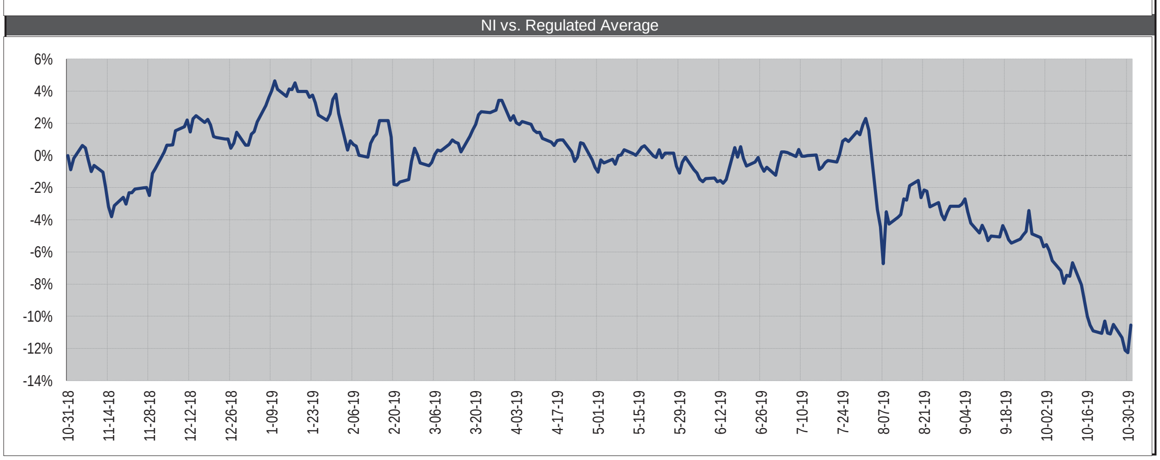
WOLFE RESEARCH

NiSource (NI) $28.04, Peer Perform, $29 PT

NI was a dog for most of October, underperforming every utility (ex PCG and EIX). We believe the weakness showed investor concern around NI's ability to operate safety (i.e., continued issues in Mass.). NI also messaged it needed incremental equity to pay for MA costs above its insurance heading into its Q3 earnings call.



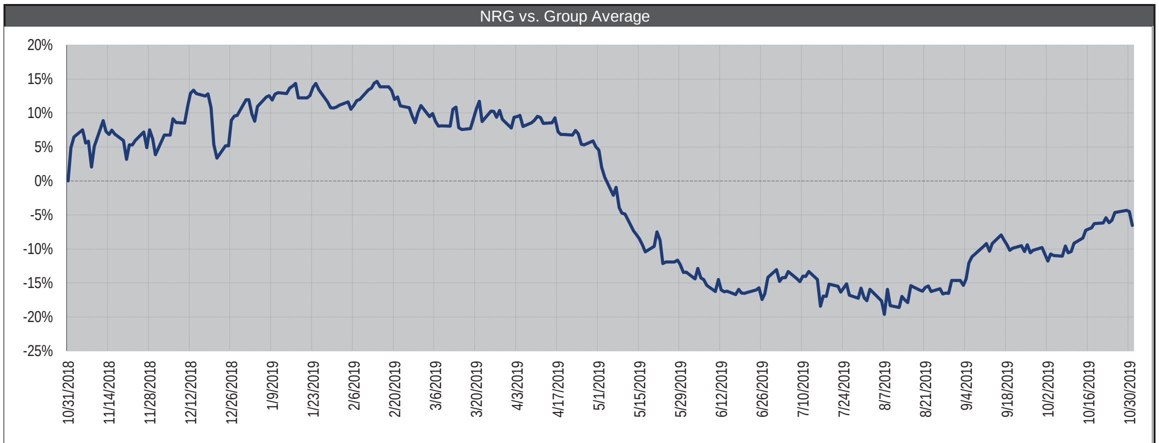


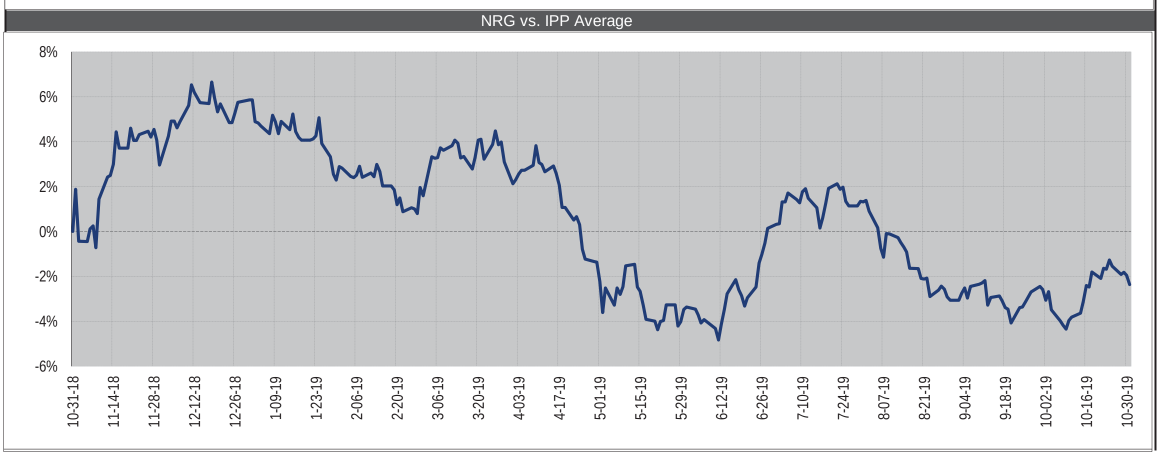


WOLFE RESEARCH

NRG Energy (NRG) $40.12, Outperform, $44 PT

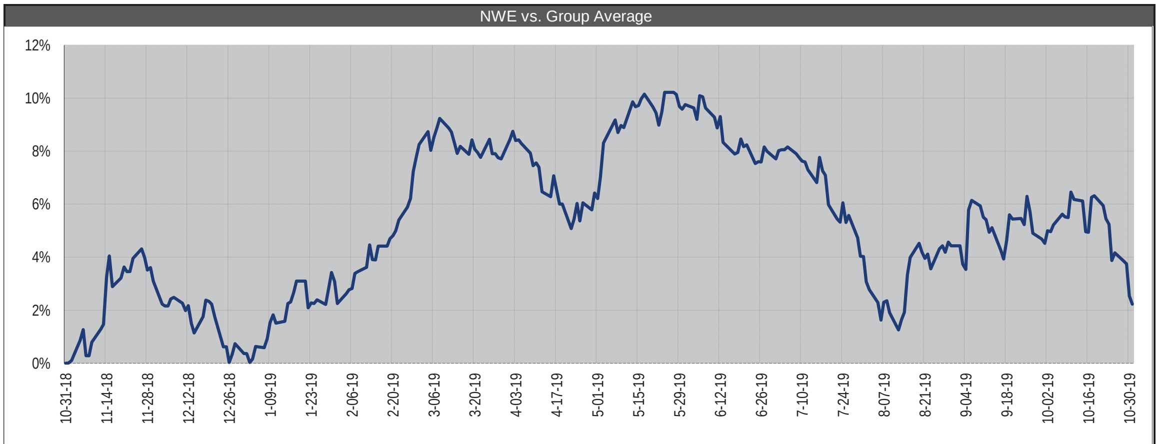
NRG was a middling performer in October in a relatively quiet month post summer as investor wait for 2020 guidance this month and eventually more disclosure on capital allocation plans.

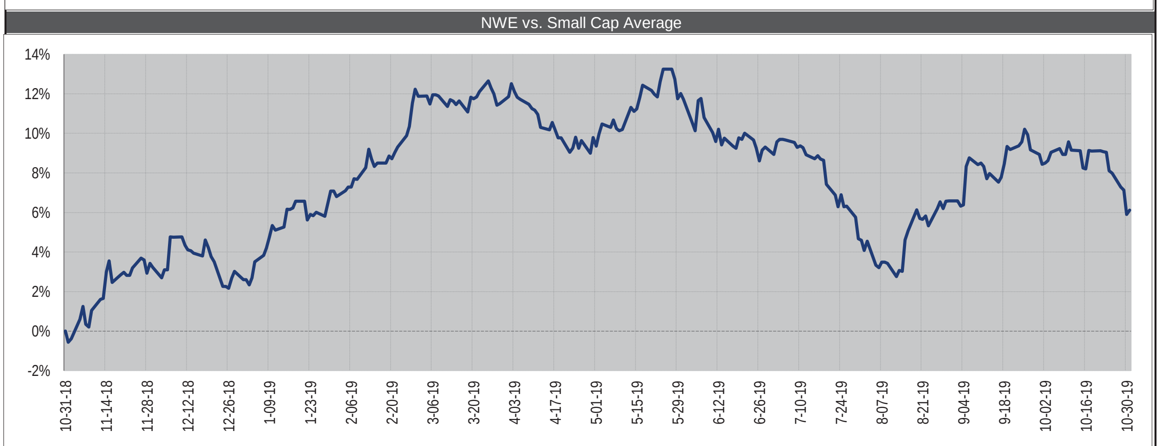


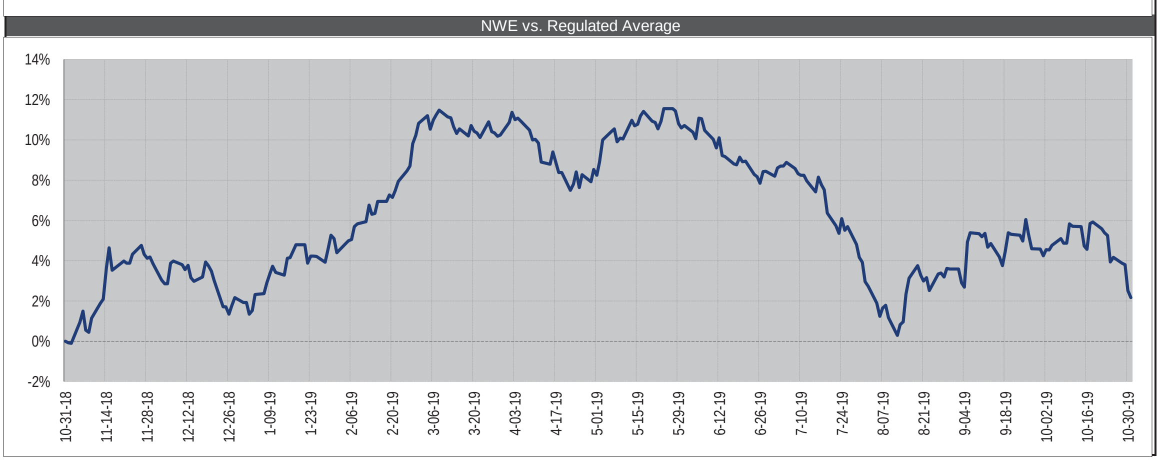


WOLFE RESEARCH

NorthWestern Corp (NWE) $72.52, NR



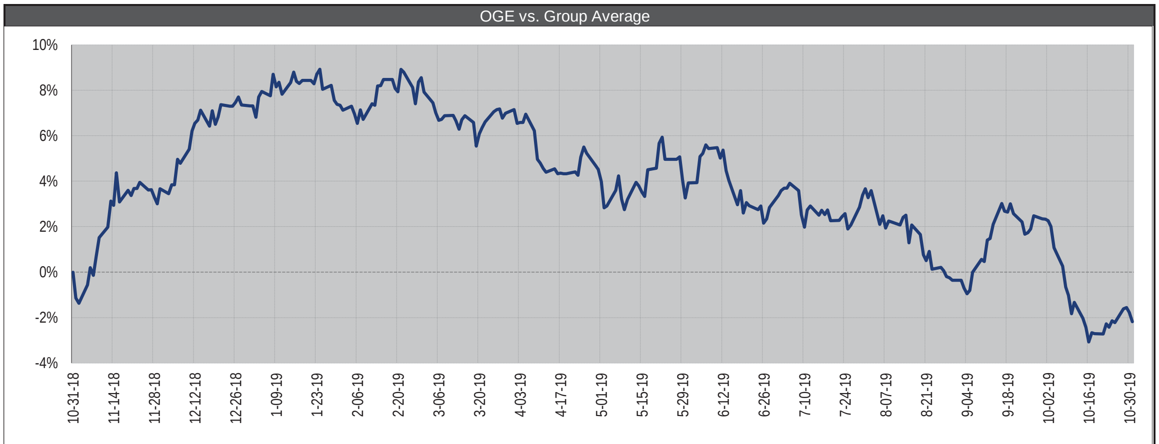


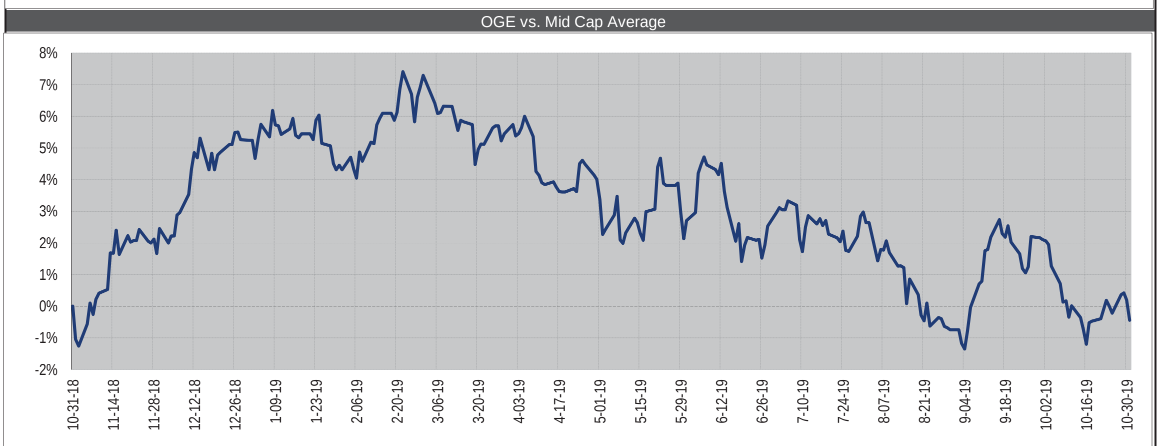


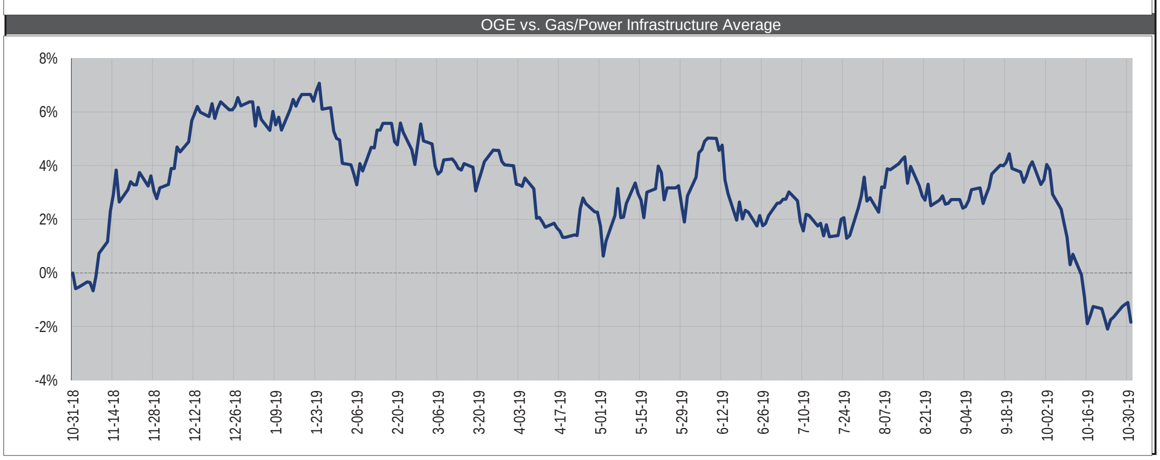
WOLFE RESEARCH

OGE Energy (OGE) $43.06, Peer Perform, $45 PT

OGE finished toward the back of the pack in October. Perhaps some of the underperformance was on expectations that OGE might raise its utility growth rate on its Q3 earnings call (management recently played the possibility down). ENBL also fell 16% in October, underperforming the AMZ 800bps+.



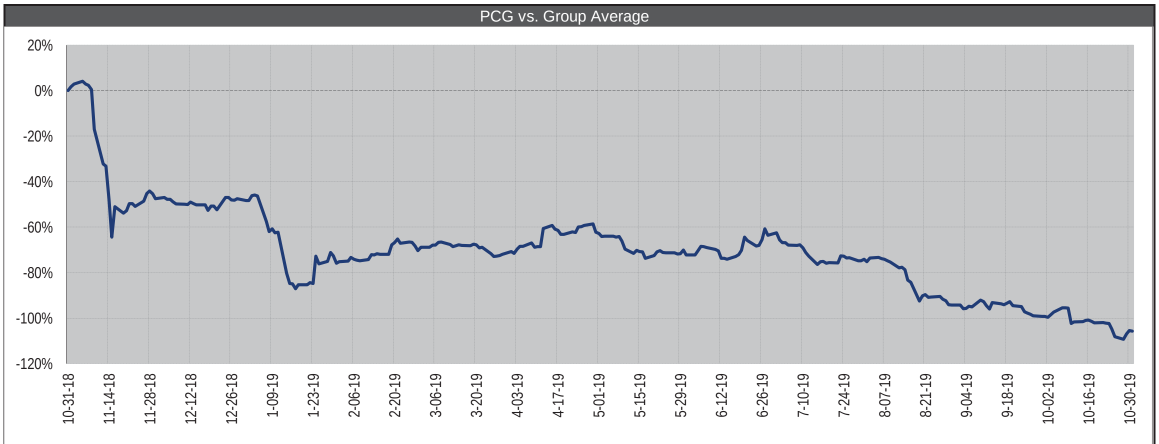


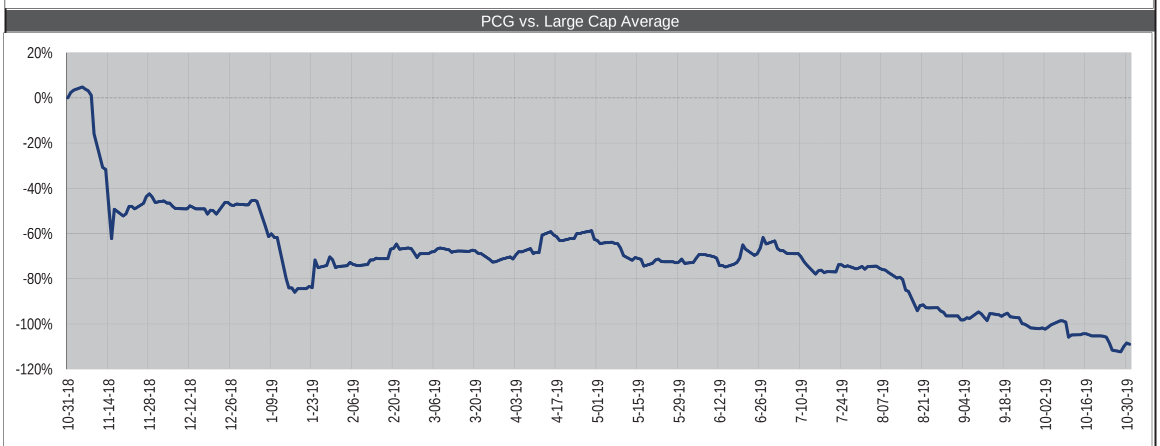


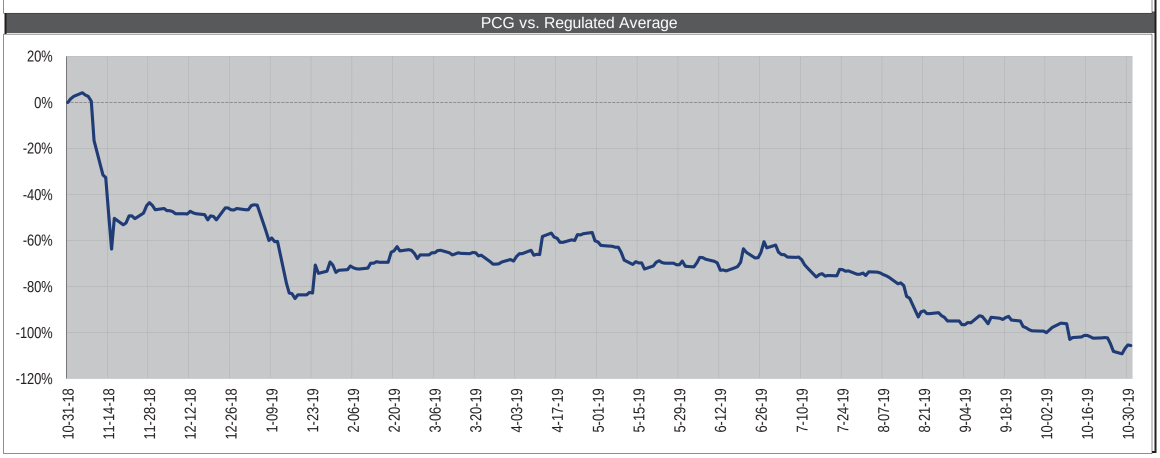
WOLFE RESEARCH

PG&E Corporation (PCG) $6.17, Peer Perform, $3 PT

PCG hit another 52-week relative low to peers in Oct, first due to creditors/torts being allowed to compete against PCG's BK exit plan, followed by the Kincade Fire; the stock staged a comeback after the BK judge appointed a mediator and progress was made on Kincade.



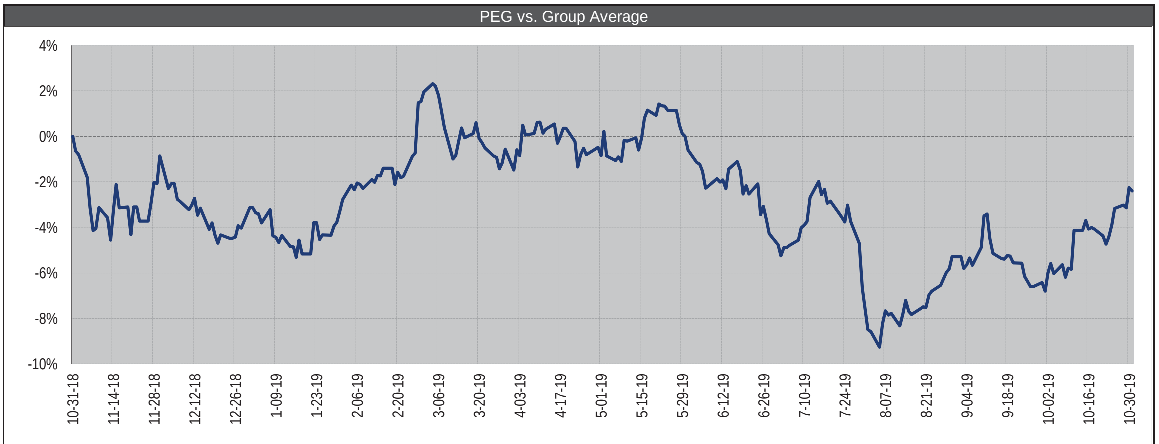


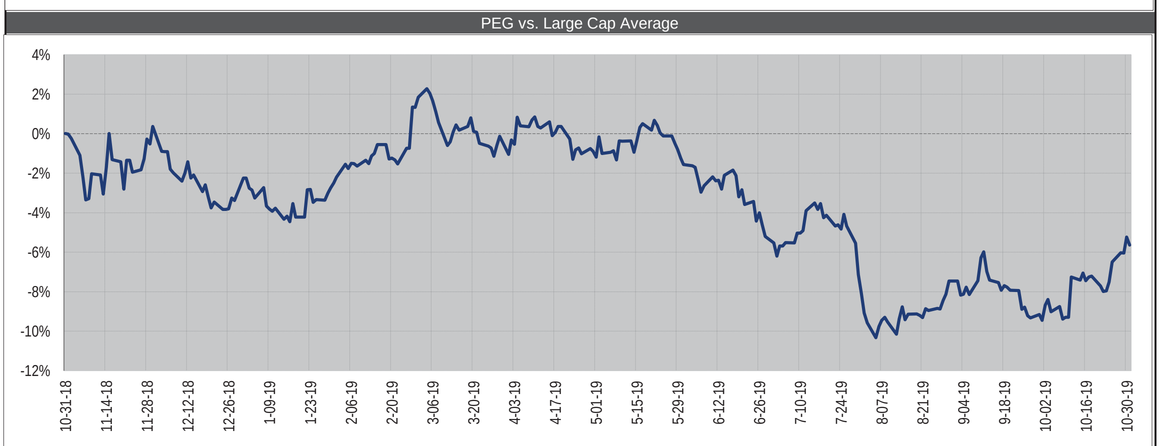


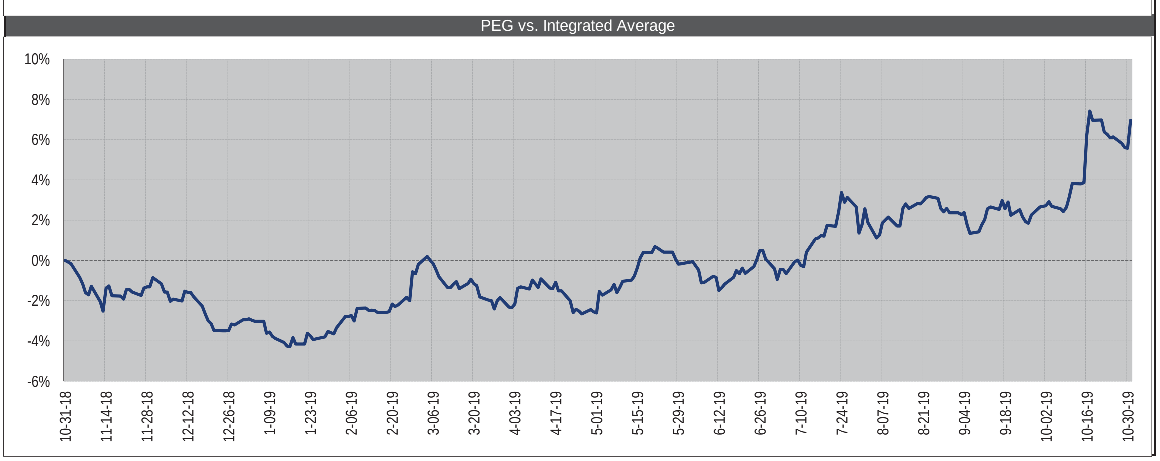
WOLFE RESEARCH

Public Service Enterprise Group (PEG) $63.31, Outperform, $69 PT

- The stock outperformed the group in October – likely catching a bid as its Integrated peer EXC came under pressure following subpoenas in IL coming back into focus. PEG reported earnings on the last day of the month – Q3 beat expectations and 2019 guidance was tightened at the midpoint.



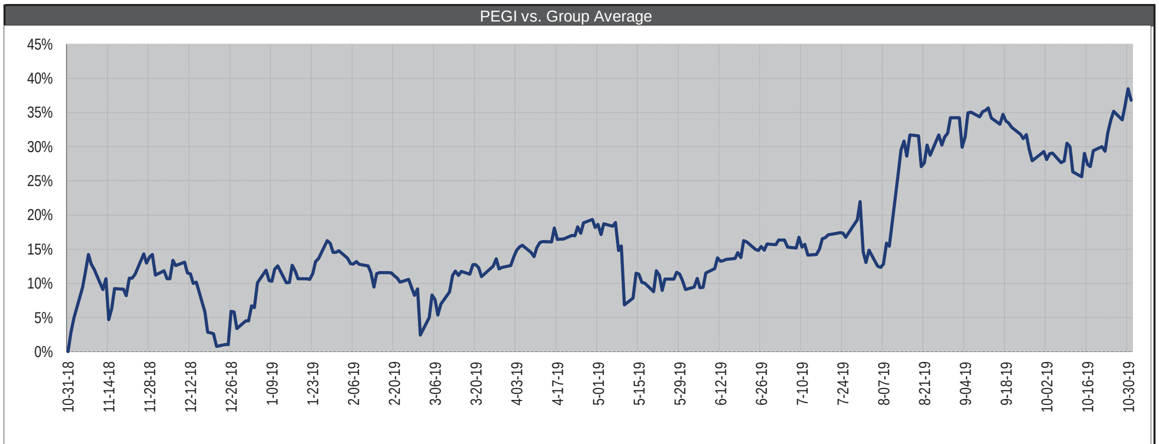


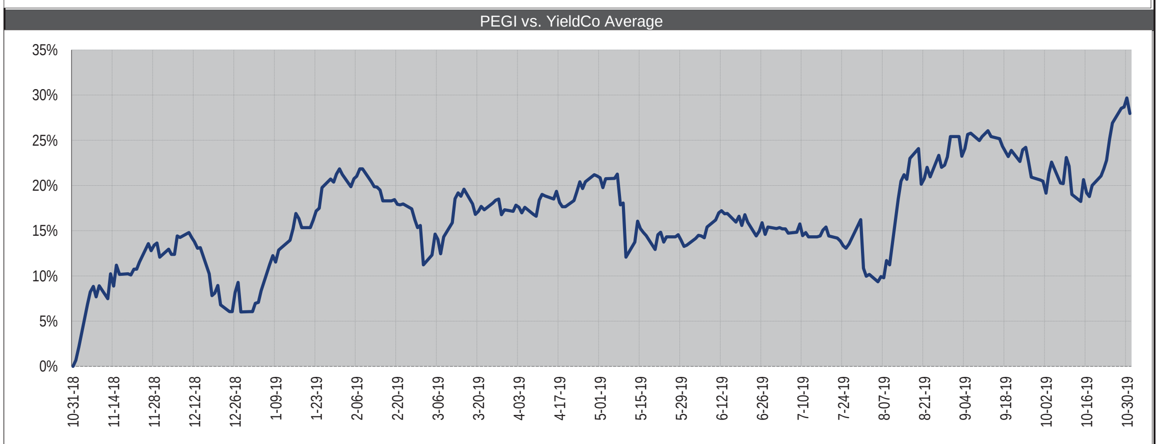


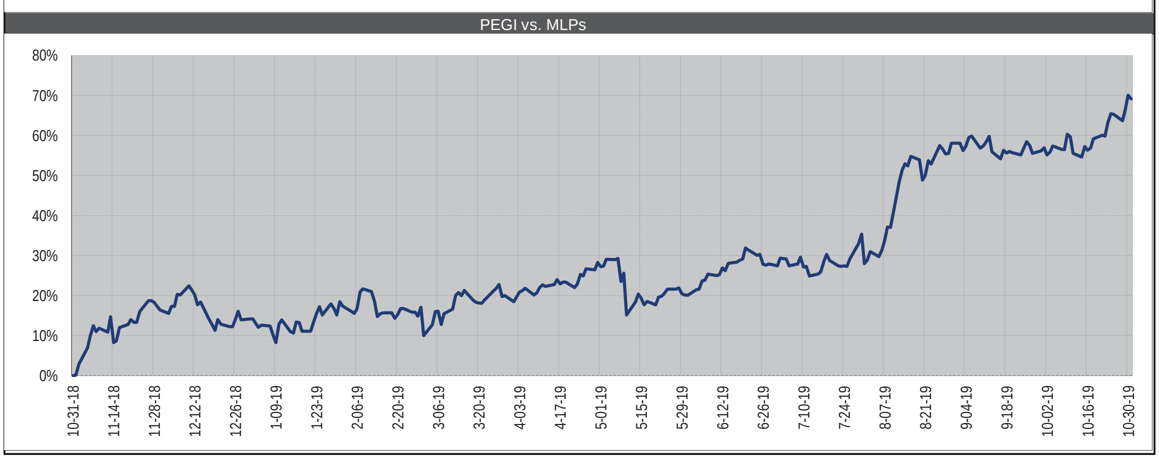
WOLFE RESEARCH

Pattern Energy (PEGI) $28.03, NR

Pattern had a strong October and is now up over 50% YTD. The stock did well in the second half of October alongside updated reports on the strategic review that could result in the sale of the company.

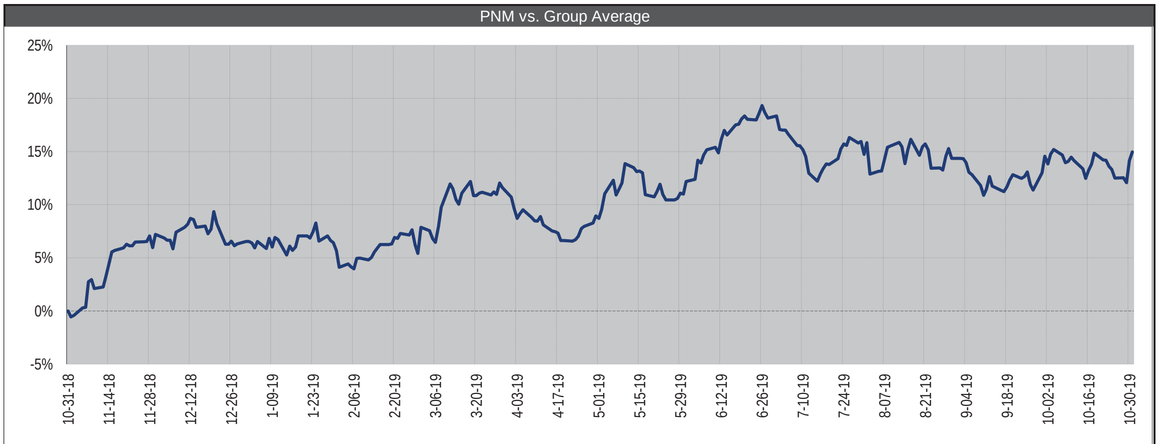


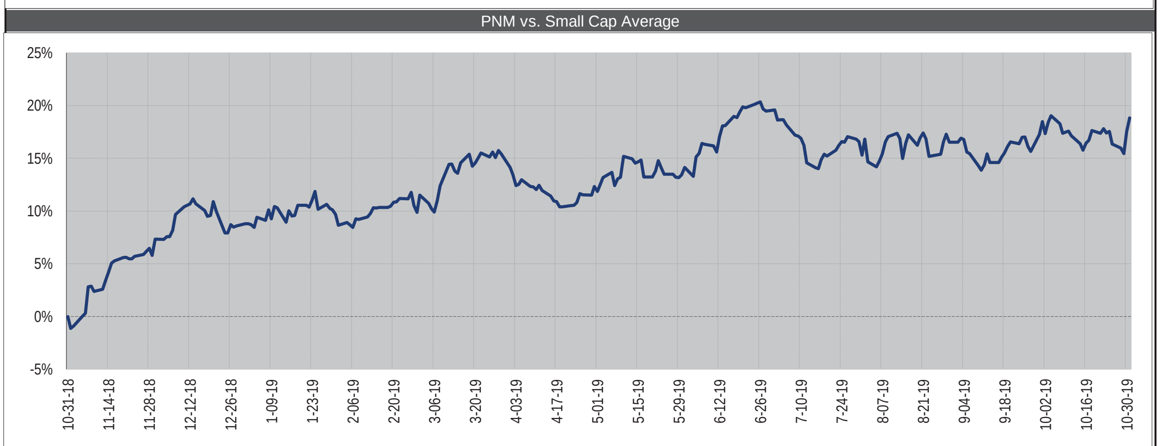


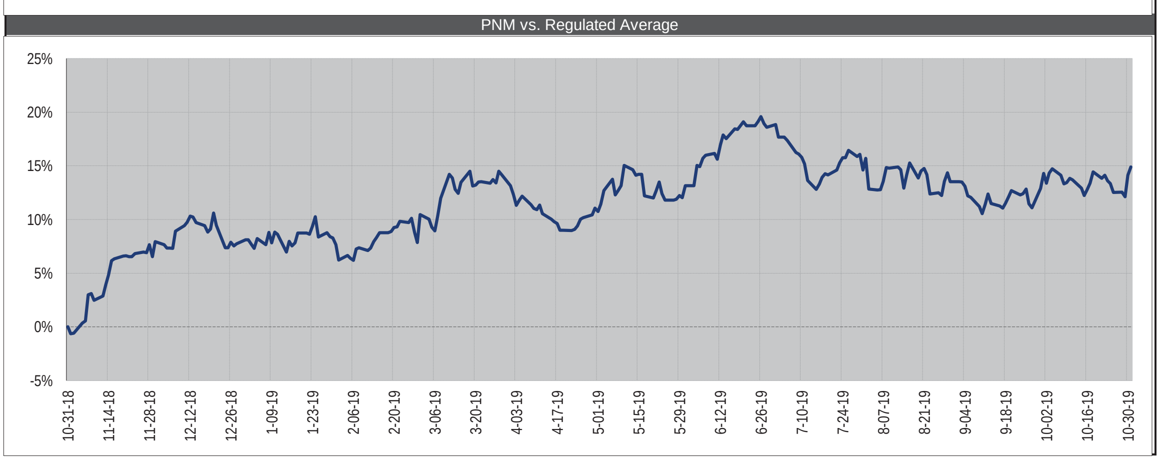


WOLFE RESEARCH

PNM Resources (PNM) $52.15, NR



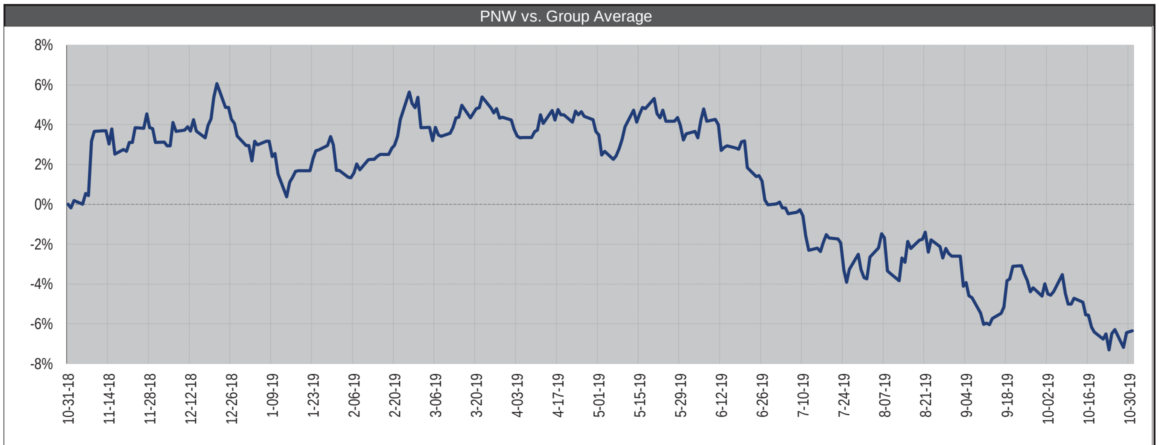


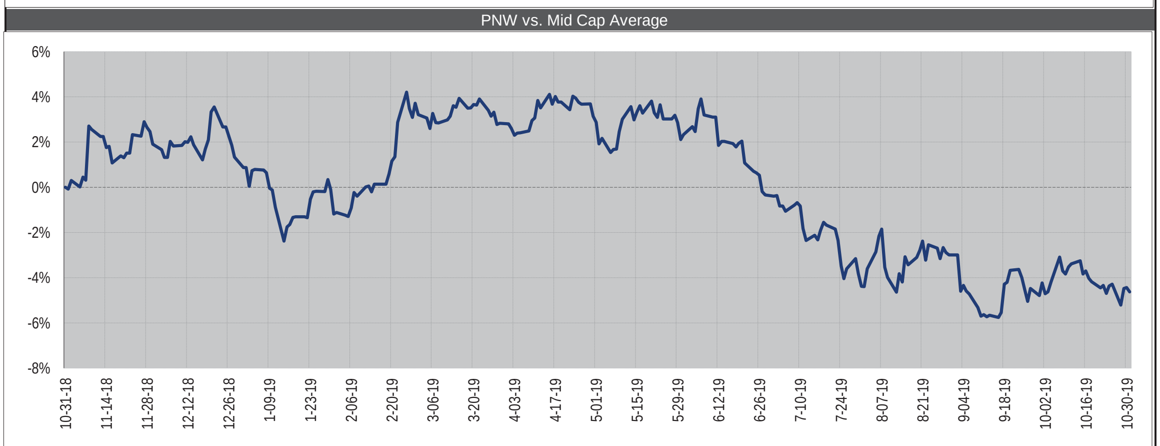


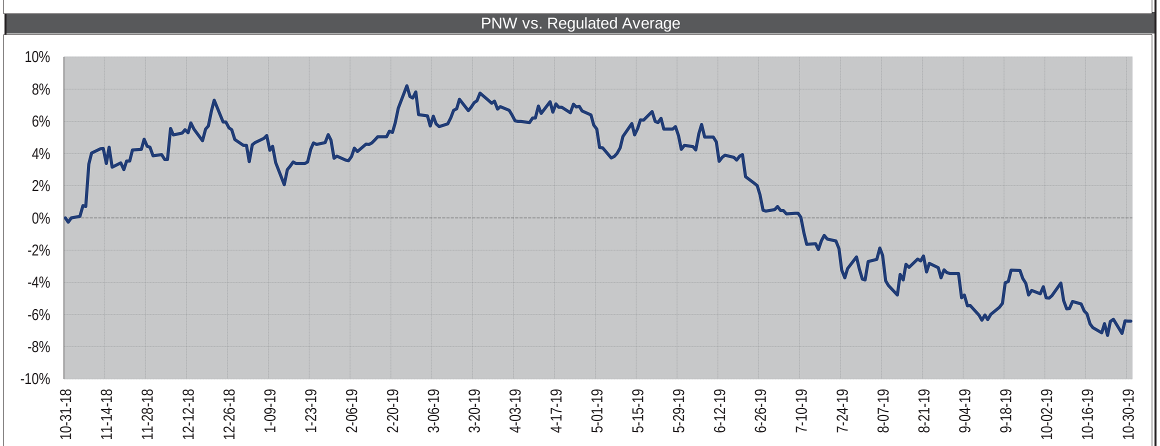
WOLFE RESEARCH

Pinnacle West Capital (PNW) $94.12, Underperform, $94 PT

PNW underperformed the utility average in October. There was little news during the month. Our best sense is that the underperformance is explained by uncertainty associated with APS' highly anticipated rate case which was filed on the final day of the month.

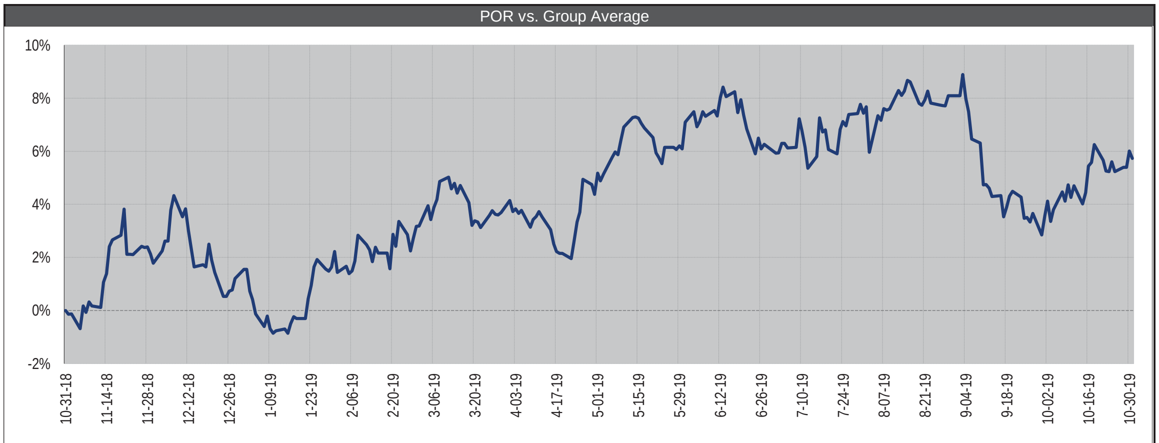


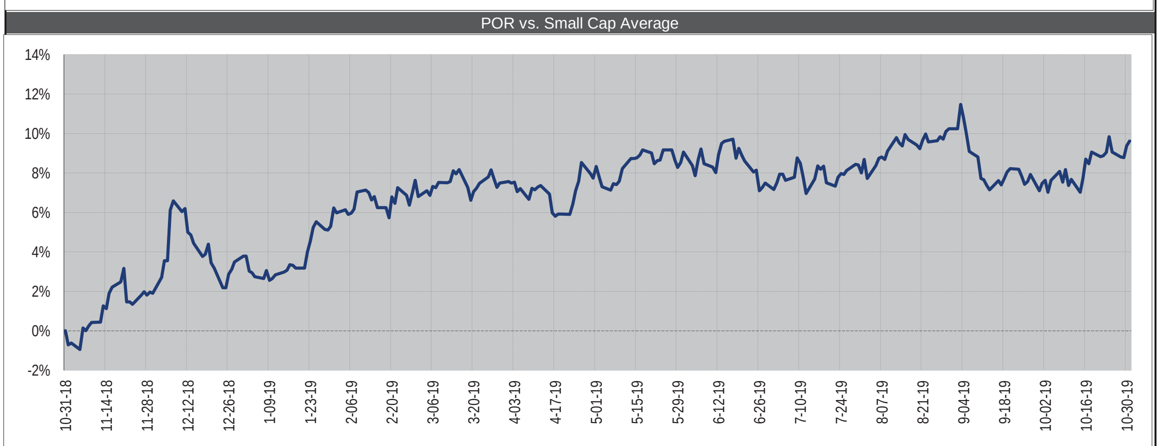


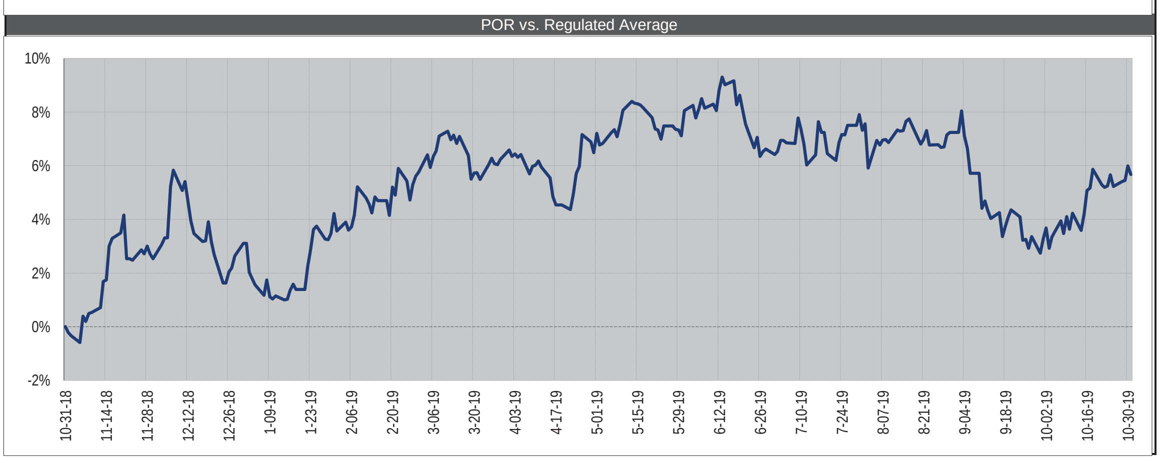


Portland General (POR) $56.88, Underperform, $55 PT

POR outperformed the utility average in October. During the month, OR PUC Staff provided initial comments on POR's IRP plans. The stock fared well despite PUC staff highlighting several major concerns with the company's action plan to add 450 MW of renewables by 2023.



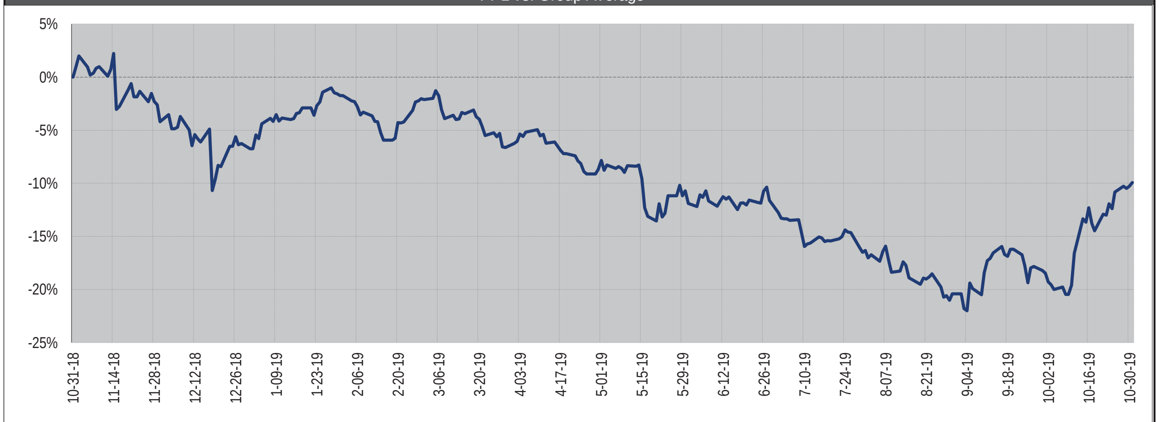




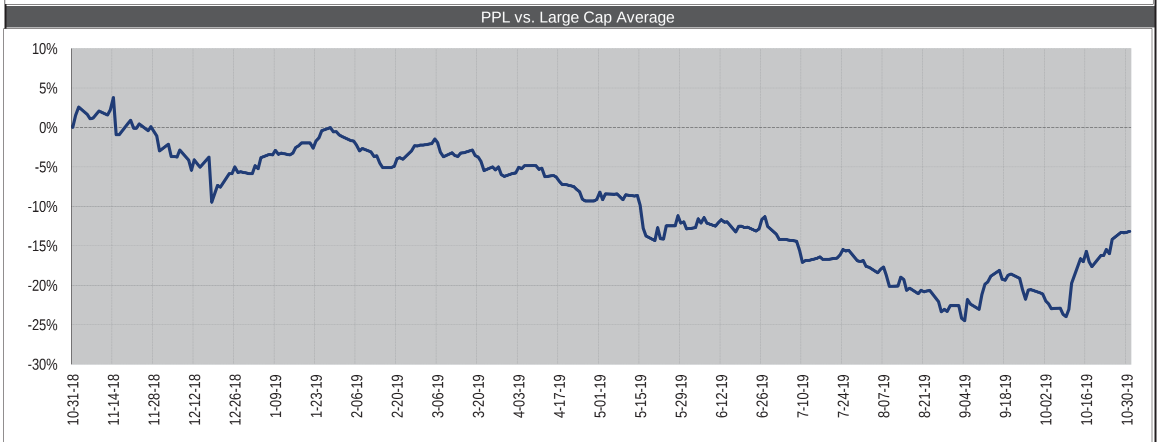
PPL Corporation (PPL) $33.49, Outperform, $36 PT

PPL gained over 800bp relative to peers in Oct, as the FT reported AGR-PPL had talks about a deal (though no confirmation of ongoing talks) and as the GBP stabilizes with Brexit possibly nearing a resolution (though with an election expected in Dec)

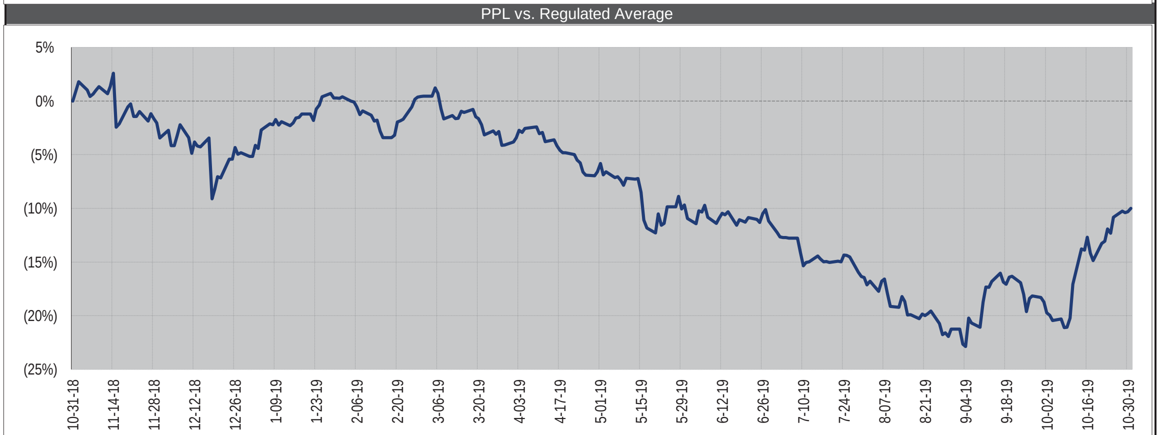
PPL vs. Group Average



PPL vs. Large Cap Average



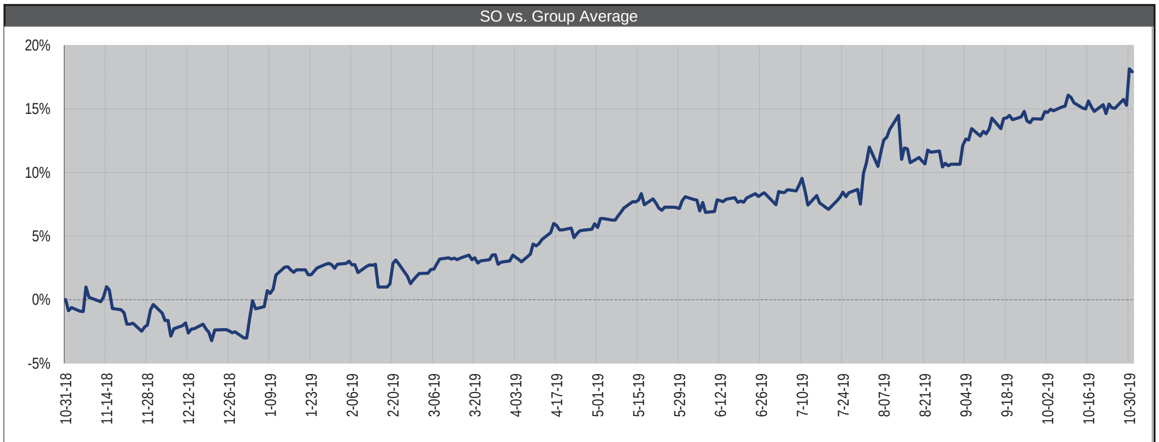
PPL vs. Regulated Average

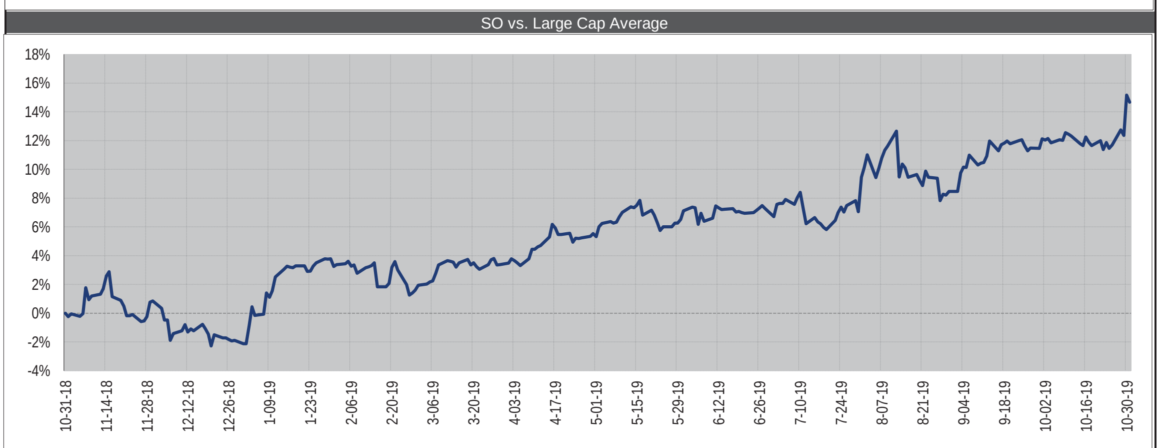


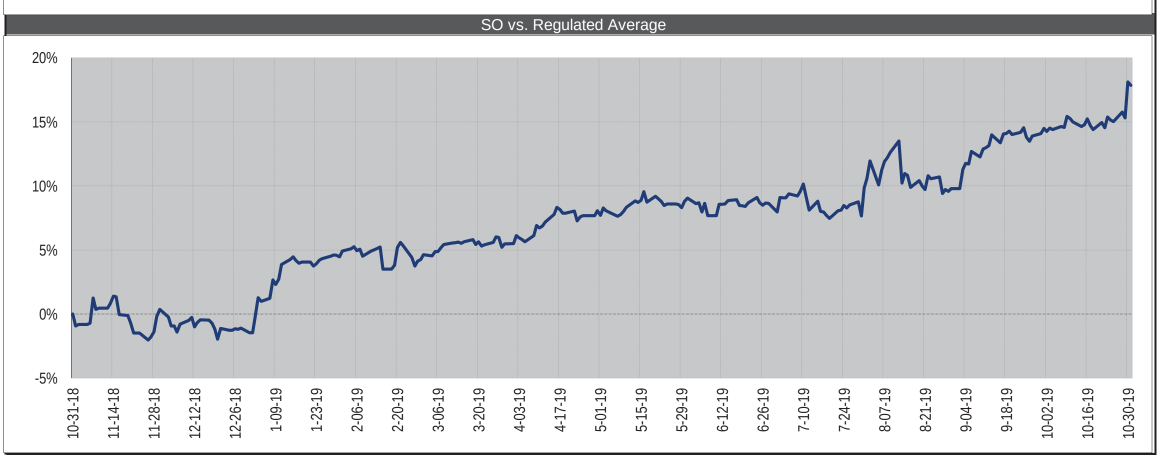
WOLFE RESEARCH

Southern Company (SO) $62.66, Underperform, $62 PT

The stock reached another 52-week high relative to peers on the last day of the month – when SO reported a solid Q3 earnings report with no surprises from Vogtle; SO is the best performing stock under coverage YTD with a 42% gain and is beating the UTY by over 2,000bp.



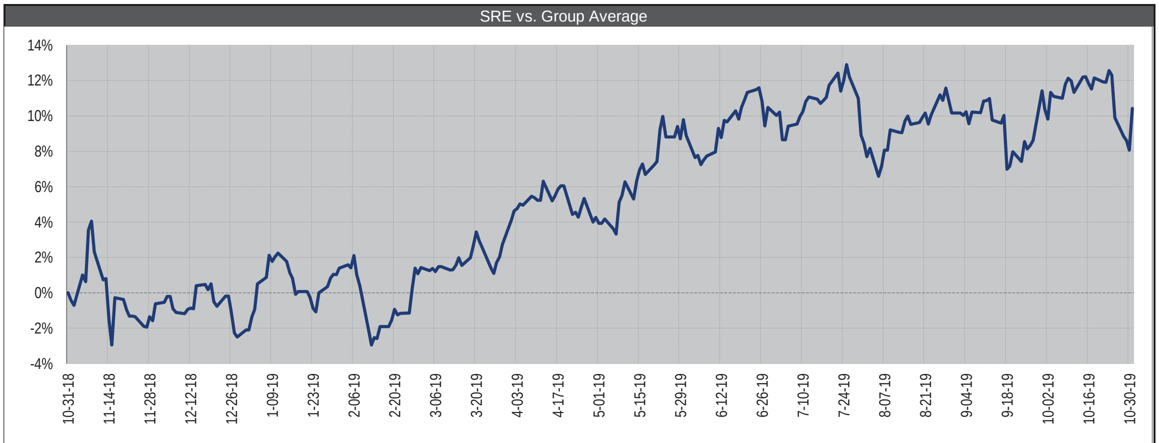


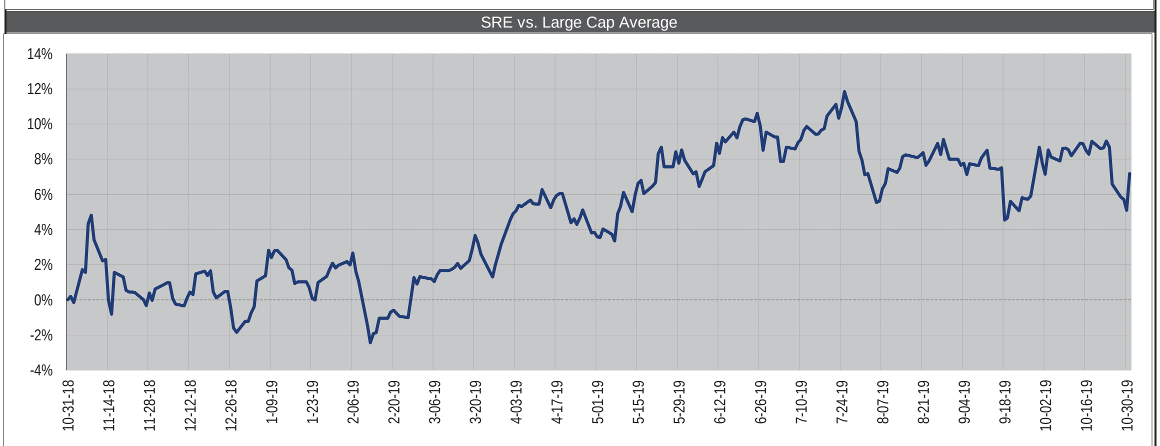


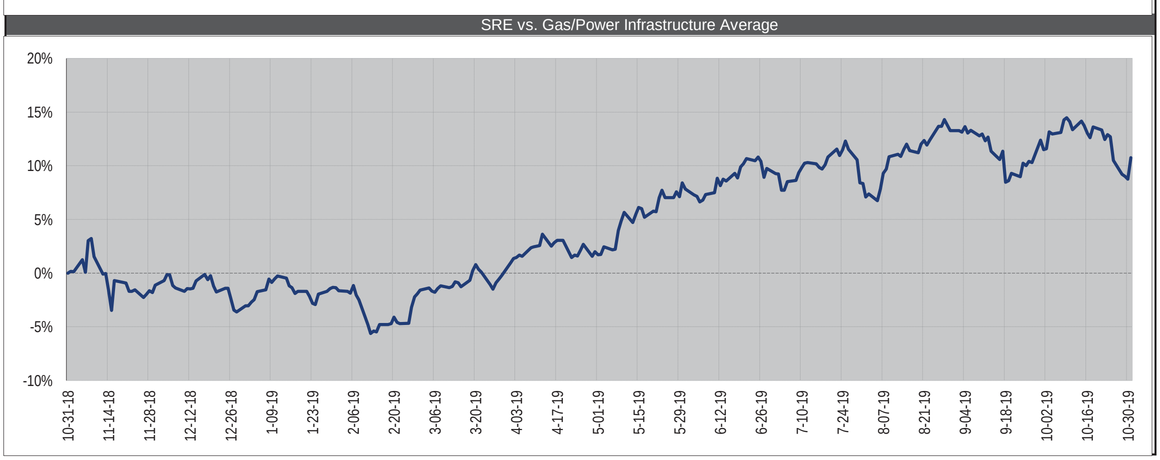
WOLFE RESEARCH

Sempra Energy (SRE) $144.51, Outperform, $149 PT

Sempra fell a little over 2% in October, about middle of the pack in the gas/power infrastructure group; it remains the second best performer in the group YTD after NEE. October featured the very strong sale of the Chilean utility assets, which drove total proceeds from the South American utility sale to $4.6B (net of tax), as well as the announcement of an MOU with Mitsui on ECA LNG export and a Cameron expansion.





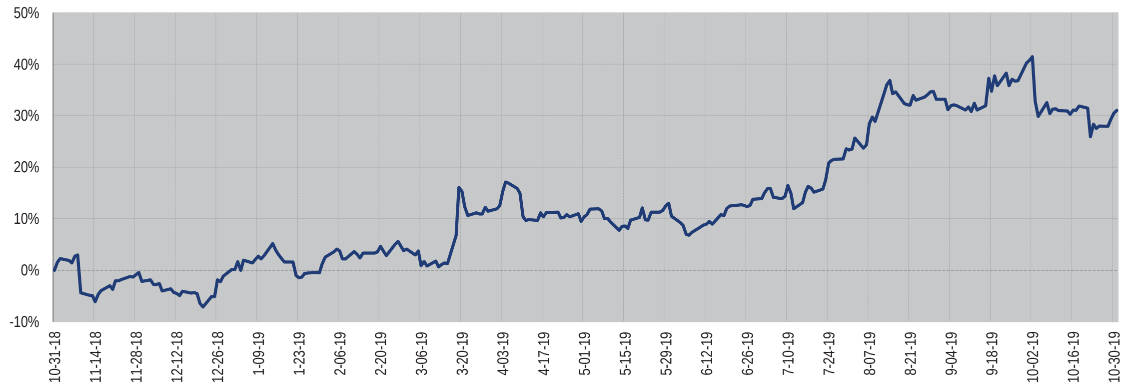


WOLFE RESEARCH

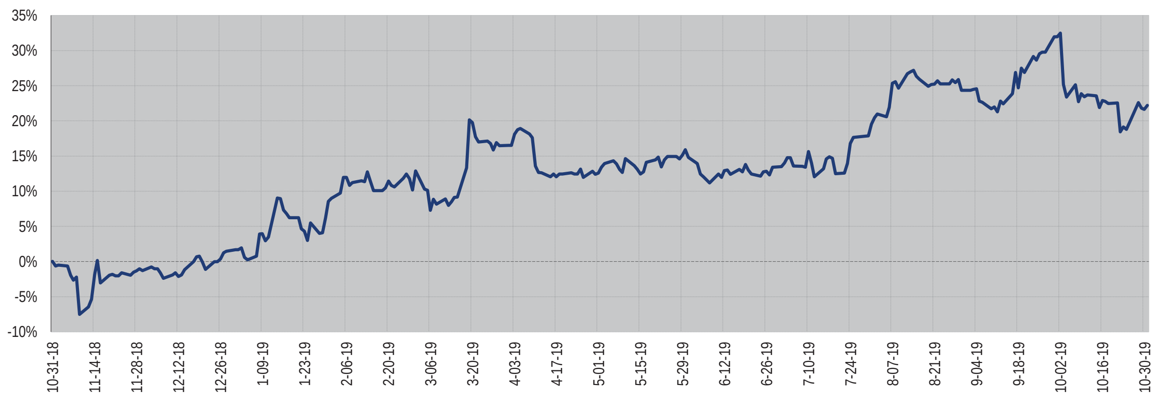
TerraForm Power (TERP) $16.98, NR

TERP had a bad October and underperformed, although the stock still leads the YieldCo group YTD with over a 50% return. TERP fell early in the month alongside a $250M public equity offering.

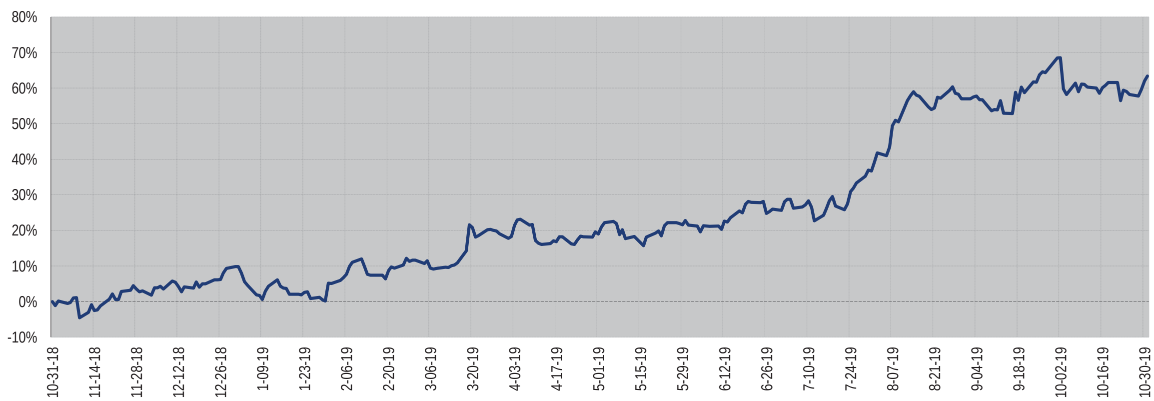
TERP vs. Group Average



TERP vs. YieldCo Average



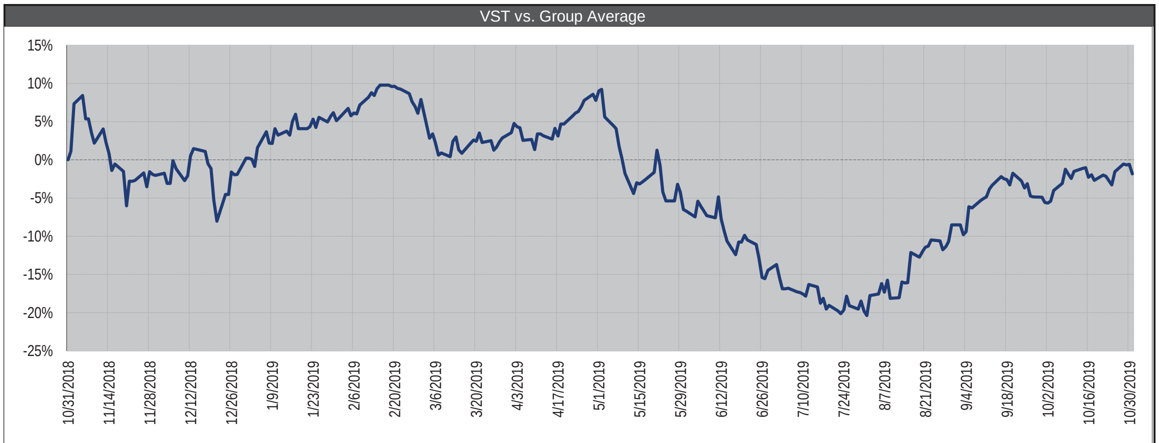
TERP vs. MLPs

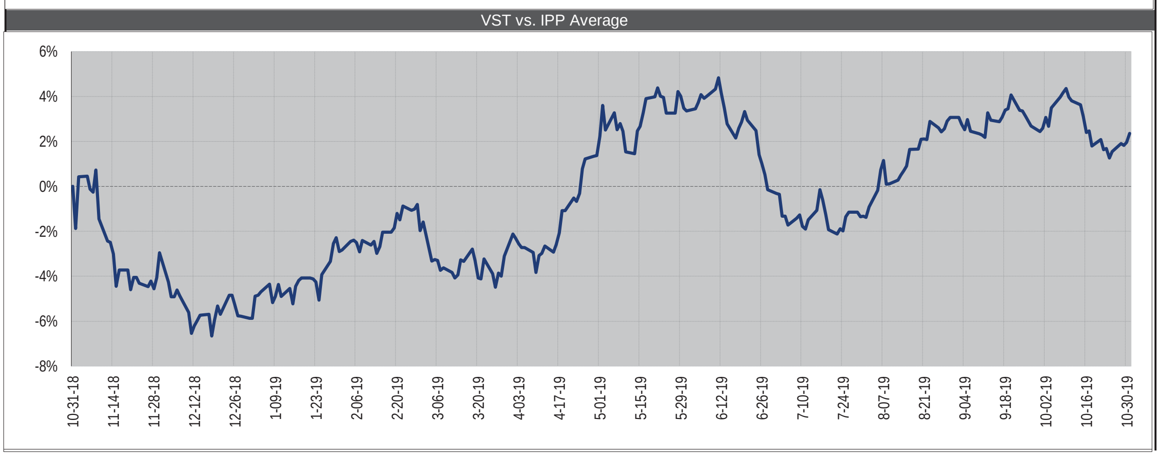


WOLFE RESEARCH

Vistra Energy (VST) $27.03, Outperform, $34 PT

- VST outperformed in October – continuing its rally that started in late-summer. The stock has climbed all the way from towards the bottom of the YTD standings to the middle of the pack. News flow in October was relatively quiet for once, though we expect a generally constructive Q3 update – 2019 guidance tightened at the midpoint, 2020 guidance above consensus, and a long-term view that alleviates fears around the sustainability of financial performance without the contribution of out of favor coal assets.

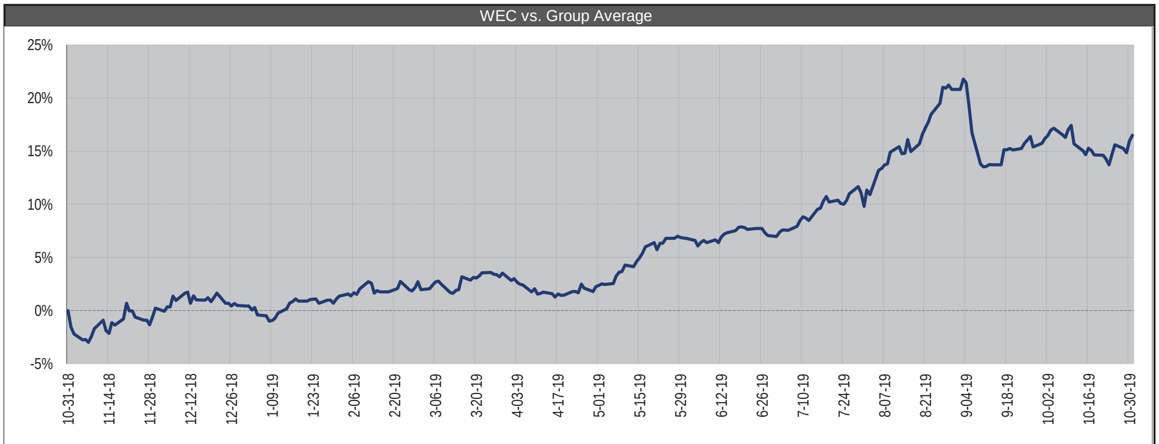


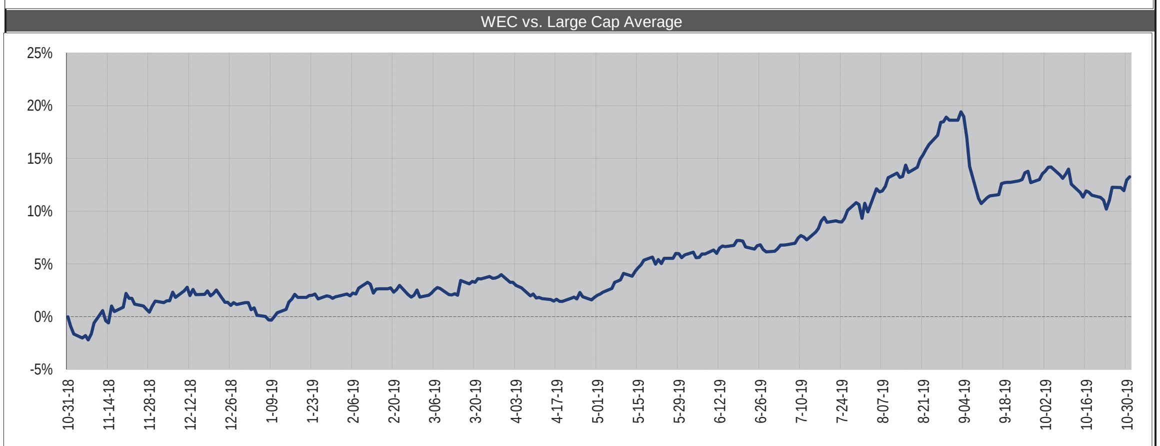


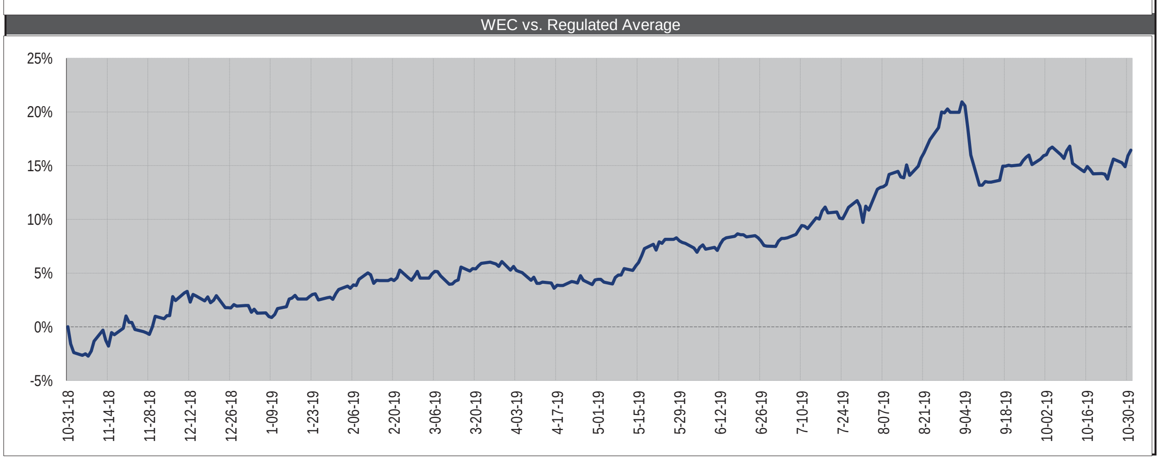
WOLFE RESEARCH

WEC Energy Group (WEC) $94.40, Underperform, $92 PT

- WEC traded in-line with the group in October and is still one of the best performers in 2019.

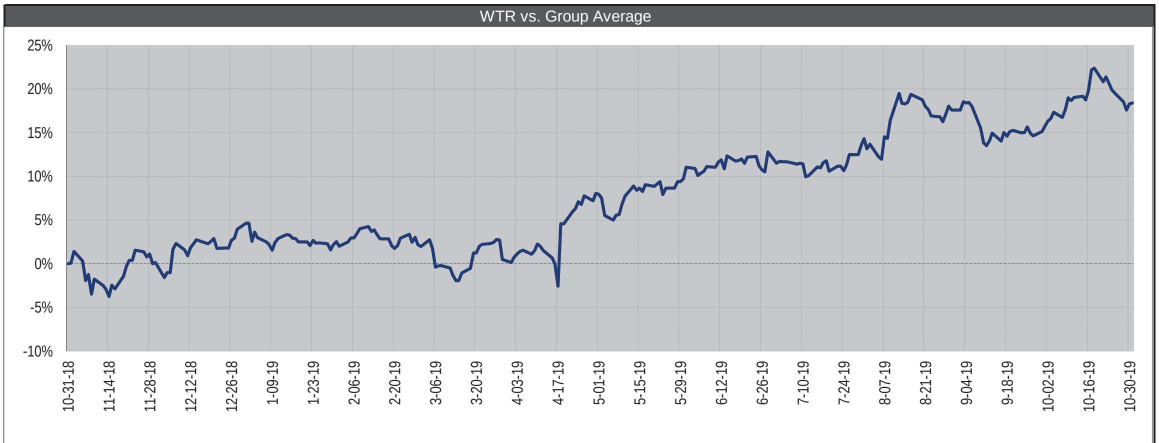


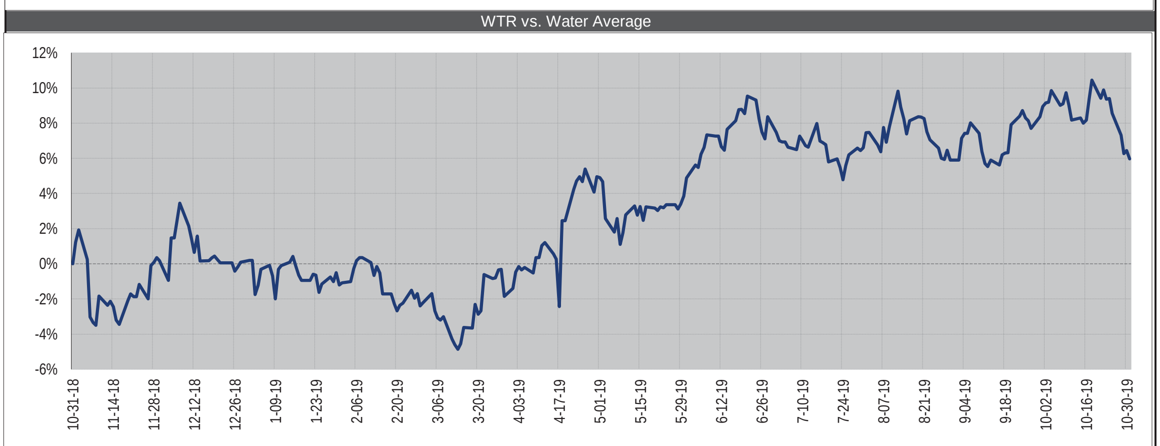


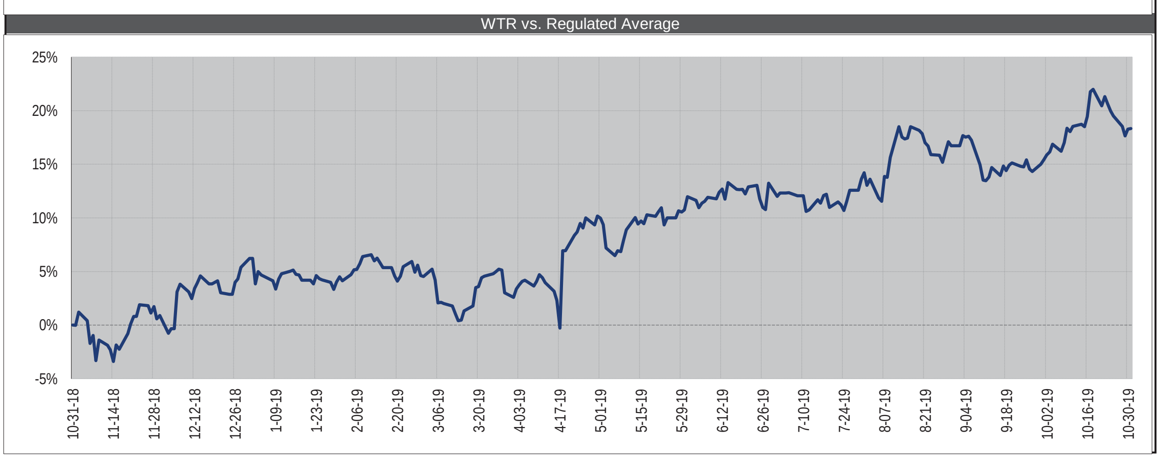


WOLFE RESEARCH

Aqua America (WTR) $45.33, NR







WOLFE RESEARCH

Xcel Energy (XEL) $63.51, Peer Perform, $65 PT

XEL finished in-line with the regulated average in October. XEL reported a solid update along with 3Q earnings, but it was overshadowed by the decision to purchase Mankato as an unregulated asset. Concerns of the company's PPA buyout strategy were abated at month end after the MPUC approved XEL's proposal to rate base the Longroad wind acquisition. XEL also announced a $750M equity forward offering toward month end, which priced at no discount.

COVID-19 Likely to Pressure NiSource’s C&I Sales and Capital Investment

Updated Forecasts and Estimates from 30 Mar 2020

Charles Fishman, CFA
Equity Analyst
Morningstar

Business Strategy and Outlook 30 Mar 2020

NiSource completed its separation from Columbia Pipeline Group in 2015 and now derives all of its operating revenue from its regulated electric and natural gas distribution utilities. About 60% of operating income comes from its six natural gas distribution utilities. The remaining 40% comes from its electric utility business in Indiana.

NiSource's utilities have regulatory frameworks that include the automatic rate tracker mechanisms, with almost 80% of planned capital expenditures, providing recovery of investments in less than 18 months. As a result of the favorable regulation, we expect NiSource to step up its capital expenditures to almost $2 billion per year over the next five years. This is an investment level almost double the previous five years.

Over the next 20 years, NiSource plans to invest about $30 billion in infrastructure improvements. Over 50% of these investments are modernization programs for replacing steel and cast-iron pipe with plastic at its natural gas distribution utilities. Almost all of these investments receive rate tracker treatment. This allows NiSource to earn returns on these investments near allowed returns and consistently above its cost of capital.

In September 2018, a natural gas explosion killed one person north of Boston on NiSource's Columbia Gas of Massachusetts system. Insurance should cover roughly one half of the almost $2 billion of claims, penalties and other expenses, but the event was a public relations nightmare. On Feb. 27, 2020, NiSource announced the sale of the Massachusetts utility for $1.1 billion. The transaciton will avoid a planned $500 million block equity issuances.

Although the economic impact from the COVID-19 pandemic will pressure earnings in 2020 and 2021 due in part to NiSource's high percentage of commercial and industrial customers, we expect a rebound in EPS to near the top end of management's 5%-7% target from 2022 to 2024. Dividend growth will likely lag EPS growth due to the lingering impact of COVID-19 and the capital investment acceleration.

Profile

NiSource is one of the nation's largest natural gas distribution companies with approximately 3.5 million customers in Indiana, Kentucky, Maryland, Ohio, Pennsylvania, and Virginia. NiSource’s electric utility transmits and distributes electricity in northern Indiana to about 500,000 customers. The regulated electric utility also owns more than 3,000 megawatts of generation capacity, most of which is now coal-fired but is being replaced by natural gas and renewables.

Morningstar Analysis

NISource's Heavy C&I Customer Exposure Increases Impact Of COVID-19 30 Mar 2020

We are reducing our fair value estimate to $27 per share from $27.50 for NiSource due to the impact of COVID-19 on earnings and capital investment. On Feb. 28, NiSource pulled earnings guidance following the agreement to sell its troubled Columbia Gas of Massachusetts unit. However, management expressed confidence it could achieve 5%-7% EPS growth off a new 2021 base when guidance was reestablished.

We expect earnings growth to rebound to near the top end of guidance from 2022-2024. However, COVID-19 changes our estimate of the 2021 EPS base, which we lowered by $0.08, to $1.35.

Supply chain disruptions and staffing issues will make it difficult for NiSource to fully execute our five-year, $10 billion capital expenditures estimate and we reduced it by 5%, or $500 million. Less investment translates into lower-rate base growth and earnings.

Northern Indiana Public Service Company, contributing about 40% of earnings and heavily dependent on commercial and industrial, or C&I, customers, will experience significantly reduced sales following Indiana's stay-at-home order. In 2019, C&I customers represented about 78% of retail electric sales.

NiSource's gas utilities, about 60% of earnings, will also be affected by stay-at-home orders in Ohio, Pennsylvania, and Indiana. In 2019, C&I sales represented about 70% of sales and transportation volumes.

Bad debt/uncollectible expense will also pressure near-term earnings. On March 19, the Edison Electric Institute announced that all members have suspended electricity disconnections. NiSource is a member of EEI.

Operating expenses will increase as safety measures are instituted. Maintaining minimum staffing levels could be challenging and the increase in overtime costs. We expect most, but not necessarily all, expenses related to COVID-19 to eventually be recovered in rates. If COVID-19 costs become significant, regulators might allow cost-recovery deferrals or securitization, similar to large weather-related expenses.

Fair Value & Profit Drivers 30 Mar 2020

We reduced our fair value estimate to $27 per share from $27.50 due to the impact of COVID-19 on earnings and capital investment. On Feb. 28, NiSource pulled earnings guidance following the agreement to sell its troubled Columbia Gas of Massachusetts unit. However, management expressed confidence it could achieve 5%-7% EPS growth off a new 2021 base when guidance was re-established.

We expect earnings growth to rebound to near the top end of guidance from 2022-24. However, COVID-19 changes our estimate of the 2021 EPS base, which we lowered by $0.08, to $1.35.

Supply chain disruptions and staffing issues will make it difficult for NiSource to fully execute our five-year, $10 billion capital expenditure estimate, and we reduced it by 5%, or $500 million. Less investment translates into lower rate base growth and earnings.

Northern Indiana Public Service Company, contributing about 40% of earnings and heavily dependent on commercial and industrial customers, will experience significantly reduced sales following Indiana's stay-at-home order. In 2019, C&I customers represented about 78% of retail electric sales.

NiSource's gas utilities, about 60% of earnings, will also be

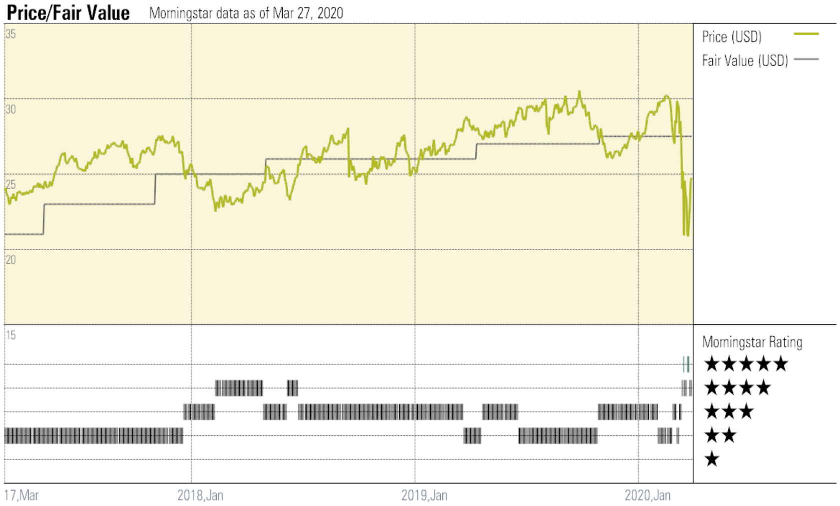
Price/Fair Value Morningstar data as of Mar 27, 2020



impacted by stay-at-home orders in Ohio, Pennsylvania, and Indiana. In 2019, C&I sales represented about 70% of sales and transportation volumes.

We use a 6% cost of capital in our discounted cash flow valuation, which incorporates a 7.5% cost of equity. Our cost of equity is lower than the 9% rate of return we expect investors will demand of a diversified equity portfolio. We believe our cost of equity reflects the risk associated with regulated electric and natural gas distribution utilities operating in states that have average to above-average regulatory frameworks.

Our pretax cost of debt assumption is 5.8%, as we incorporate a normalized long-term real rate environment and normalized credit spreads. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Our fair value estimate implies a 20 times multiple on 2021 earnings. This is in line with market valuations for peer combination electric and gas distribution utilities in late March.

Scenario Analysis

Our uncertainty rating is low. If we assume capital expenditures are 25% lower than our estimate during the next five years, then our annual EPS growth would decline about 5% and our fair value estimate would decrease approximately $3 per share. We believe it is unlikely that capital expenditures will materially exceed our estimate.

A 50-basis-point change in our cost of equity assumption changes our fair value estimate by $3 per share.

Economic Moat

Service territory monopolies and efficient scale advantages are the primary moat sources for NiSource's regulated utilities. State and federal regulators typically grant regulated utilities exclusive rights to charge customers rates that allow the utilities to earn a fair return on and return of the capital they invest to build, operate, and maintain their infrastructure. In exchange for regulated utilities' service territory monopolies, state and federal regulators set returns at levels that aim to minimize customer costs while offering fair returns for capital providers.

This implicit contract between regulators and capital providers should, on balance, allow NiSource's regulated utilities to achieve at least their costs of capital, though observable returns might vary in the short run based on demand trends, investment cycles, operating costs, and access to financing.

NiSource derives roughly 60% of its operating earnings from the regulated distribution of natural gas. For natural gas distribution service, regulators set distribution rates and the commodity price for customers purchasing natural gas from NiSource. NiSource recovers its costs for natural gas that it sells with a pass-through charge to customers. Thus, NiSource has no commodity price risk that could weaken its moat. Customers may elect to purchase natural gas from independent retail energy suppliers and use and pay for

NiSource Inc NI (NYSE) | ★★★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
25.60 USD	27.00 USD	Low	Narrow	Stable	Standard	Utilities - Regulated

distribution services only. NiSource exited the no-moat retail energy supply business in 2010.

Electricity generation, which contributes about 40% of operating earnings, is from operations in Indiana and is also regulated. The rates for this service are combined with regulated customer rates for transmission and distribution service. In exchange for its monopoly position, state and federal regulators set NiSource's electric rates.

Moat Trend

We believe NiSource's moat trend is stable. We do not foresee a long-term change to the firm's business as a monopoly provider of natural gas and electricity, nor do we see changes to its compact with regulators. All operating earnings are from FERC-regulated electric transmission and state-regulated natural gas and electric utilities. We think it is unlikely that the FERC or the state regulatory frameworks will change. As with almost all regulated utilities, we believe regulatory caps on revenue and returns preclude NiSource from establishing a wide economic moat.

25.60 USD	27.00 USD	Low	Narrow	Stable	Standard	Utilities - Regulated

Bulls Say/Bears Say

Bulls Say

- We expect annual dividend growth to average near 5% from 2020 to 2024.
- We believe the separation of the Columbia Pipeline Group from NiSource was good shareholder stewardship, as the market valued the individual businesses more highly at the time of the separation.
- New legislation has improved the regulatory framework in Indiana for NiSource's electric and natural gas distribution utilities.

Bears Say

- Industrial customers account for over half of NiSource's electric sales, higher than most utilities. Industrial sales are more sensitive to the economy than residential and commercial sales.
- NiSource's electric and natural gas distribution businesses have substantial commercial and industrial customer exposure, increasing the impact of the COVID-19 pandemic.
- NiSource issued almost $2 billion of common and preferred shares in 2018 and 2019. The additional shares will be a headwind to EPS growth.

Financial Strength

NiSource issued over $1 billion of common and $880 million of preferred shares in 2018 and 2019 because of infrastructure investments, the negative impact of tax reform on its balance sheet, and the Boston tragedy. These issuances strengthened the debt/capital ratio of NiSource's balance sheet to about 61% versus almost 68% at year-end 2017.The company was planning to issue $500 million of equity in 2020, but the sale of the Columbia Gas of Massachusetts eliminated the need for the block equity transaction. We now project that the ratio will remain near 60% over the next five years, owing in large part to the annual at-the-market and employee plan equity issuances of about $300 million and cash from operating earnings. We expect NiSource's EBIT/interest expense ratio will recover to over 3 times over the next five years after sinking to only 0.4 in 2018 because of the impact of the Boston tragedy. This is still slightly below the industry average, but we view it as sufficient, given that NiSource's diversified regulated operations provide fairly consistent earnings and cash flow.NiSource began increasing its dividend in 2012; this marked the first increase in 10 years, following a 2003 dividend cut to strengthen its balance sheet after the Columbia Energy Group acquisition. NiSource reduced its common dividend to $0.62 per share annualized following the separation from CPG, but this represented an 8% total increase for shareholders when combined with the CPG dividend.The company raised its dividend in mid-2016 by 6.5% and again by 6.1% in the first quarter of 2017. NiSource rewarded shareholders with an 11.4% increase in 2018. In 2019, following the Boston gas explosion, the annual increase was only 2.6%. The increase in first-quarter 2020 was 5% and we expect annual increases near this level for the foreseeable future.

Risk & Uncertainty

Regulatory risk remains the key uncertainty; however, NiSource's regulatory exposure is diversified, owing to

operations in seven states and its federal-regulated electric transmission system. NiSource has reduced some of the regulatory uncertainty related to its planned natural gas distribution and electric utilities investments by securing preapprovals and favorable rate mechanisms that provide for automatic rate increases as infrastructure investments are made.In 2018, NiSource announced it would eliminate all coal-fired generation from its power plant fleet within 10 years. This transition will require signing power purchase agreements for renewable energy; building new gas-fired power plants and solar and wind farms; and making modifications to its electric grid. There is a modest amount of execution risk to this dramatic transition from coal.

Stewardship 30 Mar 2020

We assign NiSource a Standard stewardship rating. We think management's decision to form Columbia Pipeline Partners and execute CPG's tax-free separation exhibited exemplary stewardship of shareholder capital. However, the CEO who probably drove those decisions left NiSource to go with CPG before he retired.

The National Transportation Safety Board found NiSource responsible for the tragic gas explosion north of Boston. The incident had a negative effect on shareholder value and has been a public relations nightmare. The good news is that management found a buyer for the utility at an attractive purchase price for NiSource shareholders. We expect the transaction to close in the second-half of 2020.

Joe Hamrock became CEO following the separation. He has been with NiSource since 2012 and previously ran the natural gas distribution business. Before joining NiSource, he was with American Electric Power. CFO Donald Brown joined NiSource in April 2015. Previously, he was with UGI Utilities and Constellation Energy. These individuals have significant utility experience, and we believe they will not stray from the strategy that has benefited shareholders.

Most of the members of NiSource's board of directors were involved in the separation of CPG and oversight of investment decisions. Given this, we are confident that the solid stewardship of shareholder capital is likely to continue.

Analyst Notes

NISource's Heavy C&I Customer Exposure Increases Impact Of COVID-19 30 Mar 2020

We are reducing our fair value estimate to $27 per share from $27.50 for NiSource due to the impact of COVID-19 on earnings and capital investment. On Feb. 28, NiSource pulled earnings guidance following the agreement to sell its troubled Columbia Gas of Massachusetts unit. However, management expressed confidence it could achieve 5%-7% EPS growth off a new 2021 base when guidance was reestablished.

We expect earnings growth to rebound to near the top end of guidance from 2022-2024. However, COVID-19 changes our estimate of the 2021 EPS base, which we lowered by $0.08, to $1.35.

Supply chain disruptions and staffing issues will make it difficult for NiSource to fully execute our five-year, $10 billion capital expenditures estimate and we reduced it by 5%, or $500 million. Less investment translates into lower-rate base growth and earnings.

Northern Indiana Public Service Company, contributing about 40% of earnings and heavily dependent on commercial and industrial, or C&I, customers, will experience significantly reduced sales following Indiana's stay-at-home order. In 2019, C&I customers represented about 78% of retail electric sales.

NiSource's gas utilities, about 60% of earnings, will also be affected by stay-at-home orders in Ohio, Pennsylvania, and Indiana. In 2019, C&I sales represented about 70% of sales and transportation volumes.

Bad debt/uncollectible expense will also pressure near-term earnings. On March 19, the Edison Electric Institute announced that all members have suspended electricity disconnections. NiSource is a member of EEI.

Operating expenses will increase as safety measures are instituted. Maintaining minimum staffing levels could be challenging and the increase in overtime costs. We expect most, but not necessarily all, expenses related to COVID-19 to eventually be recovered in rates. If COVID-19 costs become significant, regulators might allow cost-recovery deferrals or securitization, similar to large weather-related expenses.

Trouble For U.S. Gas Utilities Has Been Simmering; New York Just Made it Worse 29 Mar 2020

Policymakers--not COVID-19 or global energy markets--are becoming the biggest threat for gas distribution utilities.

Earlier this month, New York regulators asked the state's utilities to review ways to reduce or eliminate gas infrastructure. Areas of California have banned new gas service. If anti-gas policies like these spread, it could hurt the industry's long-term growth.

Total returns for U.S. utilities with sizable gas operations are down 19% during the last six months, compared with 14% down for the Morningstar U.S. utilities index. New Jersey Resources, CenterPoint Energy, Atmos Energy, NiSource, and DTE Energy recently traded well below our fair value estimates.

We think states with aggressive clean energy policies are most likely to push customers away from gas. Sixteen states have 100% clean energy targets. We expect renewable energy to grow 8% annually during the next decade.

We believe New Jersey Resources faces the most risk since the bulk of its earnings come from residential gas service in a state with aggressive clean energy policy. New Jersey policymakers support gas use for now, but we anticipate

NiSource Inc NI (NYSE) | ★★★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
25.60 USD	27.00 USD	Low	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

that could change in the next decade. We recently cut our long-term growth rate assumption for NJR to 3% from 4%, lowering our fair value estimate to $37 per share from $39.

New York City's Consolidated Edison and California utilities Sempra Energy and PG&E also face risk but have larger electric distribution businesses that could benefit from electric growth. We think there is less risk for gas utilities in the Southeast and Midwest where Republicans in five states have proposed legislation that would prohibit gas bans.

Acquisition premiums that had inflated gas utilities' valuations also have faded. Eversource Energy recently paid 24 times earnings for Columbia Gas. This is still rich but below deal values for Piedmont (30 P/E), Peoples Gas (30 P/E), and WGL (26 P/E). M&A premiums don't affect our fair value estimates.

COVID-19 Could Slow Utilities' Near-Term Growth but Long-Term Outlook Still Bright 26 Mar 2020

After assessing COVID-19 data and commentary from utilities this week, we still believe the sector offers buying opportunities for defensive, income-seeking investors. U.S. utilities trade at a median 10% discount to our fair value estimates and 3.5% yield even after rallying 23% on March 24-26.

Although some utilities reaffirmed their outlooks this week, we think 2020 earnings for many utilities will be at the low end or below management guidance ranges due to COVID-19 issues. We expect near-term lower commercial and industrial energy demand, tighter financing, growth project delays, and higher expenses. We are reaffirming our moat and moat trend ratings.

Utilities with a large share of C&I customers, usage-based rates, and less-adaptive ratemaking have the most near-term risk. Among these are Southern Company, Entergy, American Electric Power, Duke Energy, Evergy, and Ameren. Utilities with non-utility businesses such as DTE Energy, CenterPoint, and OGE also could face weaker near-term earnings. Our updates led to 2%-5% fair value estimate cuts.

Utilities with more residential customers, usage-decoupled rates, and forward-looking rate structures are less at risk. These include Edison International, Eversource Energy, NextEra Energy, and American Water Works.

We expect most utilities to shift 5%-10% of their 2020 growth investments into 2021-22 due to tight capital and labor markets. In general, this shift has little or no impact on our fair value estimates or long-term outlooks. We don't believe COVID-19 will impact utilities' policy-based investments in safety, clean energy, and grid modernization that support our long-term growth outlooks.

COVID-19 shutdowns might reduce U.S. C&I electricity demand more than the record 5.5% drop in mid-2009. In China, government data suggests electricity demand is down more than 8% year to date. European countries reported 2%-7% drops in electricity use last week. C&I demand is about 60% of total U.S. electricity use.

With New York City now the epicenter of the COVID-19 outbreak, we cut Consolidated Edison's fair value estimate to $80 per share from $84. We reduced our 2020-24 capital expenditures forecast by 10%, to $18.9 billion, and cut our 2020 EPS estimate to $4.00 from $4.43 after incorporating our expectations for lower C&I electricity use and higher expenses for bad debt, uncollectibles, additional employee safety measures, and extra staffing costs. Con Ed has a strong balance sheet, and we believe its dividend is secure but now expect it to grow only 1%-3% annually for the next

NiSource Inc NI (NYSE) | ★★★★

25.60 USD	27.00 USD	Low	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

few years.

Our $58 per share fair value estimate for Southern Company is down from $60 after making a 5% cut in our 2020-24 capital investment assumption and a 5% cut in our 2020 earnings estimate due to slack C&I sales, which represent two thirds of Southern's sales. We still consider Southern an attractive buying opportunity at current prices due to its strong balance sheet, secure dividend, and constructive regulation. Its headline project, the Vogtle nuclear plant expansion, continues to move forward with extra COVID-19 precautions, according to comments from CEO Tom Fanning in news reports this week.

We cut our fair value estimate to $105 per share from $110 for Entergy due to the impact of COVID-19 on earnings, investment, and rate base growth.

We cut our fair value estimate for Evergy to $55 per share from $59 based on our assumption of lower C&I demand, which represented 63% of Evergy's retail electric sales in 2019, higher expenses with limited rate recovery until 2022-23 rate cases, and less growth investment. We think Evergy's recently announced $1.5 billion acceleration of its investment plan will be difficult to achieve and now estimate 3% rate base growth, at the low end of management's guidance.

We cut our fair value estimates for both Michigan utilities, CMS Energy and DTE Energy, in part due to their non-utility businesses. Our $114 per share fair value estimate for DTE Energy is down from $123 based on a likely slowdown in its gas storage and pipeline segment earnings. For CMS Energy, weaker bank earnings and lower commercial demand led to our 4% fair value estimate cut to $46 per share.

Other utilities with recent fair value estimate cuts due primarily to lower C&I sales include Sempra Energy ($128 to $125), Duke Energy ($99 to $95), American Electric Power ($86 to $83), WEC Energy ($80 to $79), Alliant Energy ($48 to $47), and Ameren ($74 to $72).

We recently reaffirmed our $70 per share fair value estimate for Edison International, one of our top picks. Despite California's shelter-in-place mandates, we expect Edison's residential-heavy customer base, usage-decoupled rates, and forward-looking rate structures to mitigate any COVID-19 impacts. Most of Edison's growth is based on California's clean energy policies, which we don't expect to change based on COVID-19. We expect California regulators to approve most of its $5 billion annual investment plan later this year. Edison secured its 2020 financing needs with an $800 million term loan on March 20.

With many states declaring emergency precautions, we expect many utilities will seek regulatory approval to recover most, if not all, COVID-19-related costs in future customer rates. If COVID-19 costs become significant, regulators might allow cost recovery deferrals or securitization, similar to treatment for costs related to severe weather events. This would reduce the impact on shareholder value.

We Like NiSource's Decision to Sell Columbia Gas of Massachusetts 28 Feb 2020

We are reaffirming our $27.50 per share fair value estimate after narrow-moat NiSource reported solid 2019 operating EPS, announced the sale of Columbia Gas of Massachusetts, and pulled its 2020 earnings guidance. Eversource Energy is acquiring the Massachusetts gas distribution utility for $1.1 billion, a price we estimate is roughly 24 times normalized earnings and in line with recent natural gas distribution transactions.

However, we doubt the utility has come anywhere near this level of earnings contribution following the tragic natural gas explosion that killed one person north of Boston in

NiSource Inc NI (NYSE) | ★★★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
25.60 USD	27.00 USD	Low	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

September 2018. The incident has resulted in close to $2 billion of claims, penalties and other expenses (roughly one-half of the costs should be covered by insurance) and has been a significant distraction for management and a public relations nightmare.

In our opinion, the decision to sell the Massachusetts utility was good stewardship of shareholder capital as regulatory, political and customer relationships would likely be strained for years. The roughly $1 billion of proceeds will allow NiSource to forgo a $500 million block equity issuance that had been planned for later this year.

Although pulling earnings guidance, management was confident that the company could return to its long-term target of 5%-7% EPS growth, off a new 2021 earnings base, following the completion of the transaction. Our revised earnings estimates result in approximately 6% EPS growth from 2021-2024.

On January 31, NiSource increased its dividend by 5% and we expect increases in line with EPS growth for the foreseeable future. In our opinion, the dividend is secure and provides a yield of approximately 3% at the February 27 market closing price.

Boston Gas Explosion Costs Finally Firm; Increasing NiSource's Fair Value Estimate 30 Oct 2019
We are increasing our fair value estimate to $27.50 per share from $27 after narrow-moat NiSource reported break even 2019 third-quarter operating EPS, initiated 2020 earnings guidance in line with our estimate, and modestly increased the lower end of its 2020-22 capital expenditure guidance.

The financial impact from the tragic natural gas explosion north of Boston in September 2018 appears to be quantified and was one of the drivers for the $0.50 per share increase in our fair value estimate. For the first time since the tragedy, the estimate of total costs related to the event were unchanged versus last quarter. We reduced our estimate of the costs, net of insurance recovery, to $850 million from our previous estimate of $1 billion.

The increase in our capital expenditure estimate also had a positive impact on our fair value estimate. The $100 million bump in the lower end of the three-year annual capital expenditure guidance range, to $1.7 billion-$2.0 billion, increases our confidence in our estimates that were already above the midpoint of management's previous guidance. We increased our average annual capital expenditures over the next three years by approximately $30 million, to an average of $1.93 billion per year.

We have a high level of confidence that these investments will achieve returns above our 6% estimate of NiSource's weighted average cost of capital since approximately 78% are covered by rate trackers and reflected in rates in 12 months or less after the investment. This favorable regulatory framework reduces regulatory lag, improving returns on invested capital.

The third quarter is normally weak since about two thirds of NiSource's earnings are from natural gas distribution. NiSource's break even third-quarter results compare with $0.10 per share in the same period last year. NiSource reaffirmed its 2019 EPS guidance range of $1.27-$1.33, and our estimate of $1.30 is unchanged.

The Next Battle Royale: Natural Gas Generation vs. Renewable Energy 07 Oct 2019
We are reaffirming our fair value estimates and moat ratings for all U.S. utilities after updating our 2020-30 U.S. power generation forecast.

NiSource Inc NI (NYSE) | ★★★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
25.60 USD	27.00 USD	Low	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

Our forecast shows natural gas generation expanding its leading market share in the U.S. power generation market through 2030. But our forecast also shows renewable energy moving into second place, overtaking coal, nuclear, and hydropower generation.

We think this sets up a "bloody" fight for market share by the end of the next decade: natural gas vs. renewable energy. Renewable energy has policy momentum and its costs are now competitive with natural gas generation even at today's low gas prices and without tax subsidies. But gas generators offer grid reliability, a key competitive advantage.

We forecast U.S. renewable energy will top 1,000 terawatt-hours by 2030, or 22% of U.S. electricity generation, excluding hydropower. The ramp down in solar and wind tax credits during the next five years won't slow growth as much as others assume. Our 8% CAGR in 2018-30 is higher than global growth rate forecasts and higher than the most recent U.S. Energy Information Administration reference case.

State renewable energy portfolio standards and corporate purchases will fill in any growth gaps related to tax roll-offs. We estimate 32 of the 38 states with renewable energy targets have not met their marks. New York (70% by 2030) and California (60% by 2030) represent one-third of our renewable energy growth forecast.

We forecast natural gas generation will grow 2% annually between 2019 and 2030, reaching 41% of U.S. generation. Coal and nuclear will each fall to 15% market share.

Utilities with large renewable energy investment plans like NextEra Energy and Xcel Energy will continue to benefit from our higher renewable energy growth forecast. We think the market overlooks renewable energy growth potential from wide- and narrow- moat utilities like CMS Energy, NiSource, Edison International, Alliant Energy, and Dominion Energy.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. We believe this bottom-up, long-term, fundamentally based approach allows our analysts to focus on long-term business drivers, which have the greatest valuation impact, rather than short-term market noise.

Morningstar's equity research group (“we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at an uncertainty-adjusted discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define excess economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

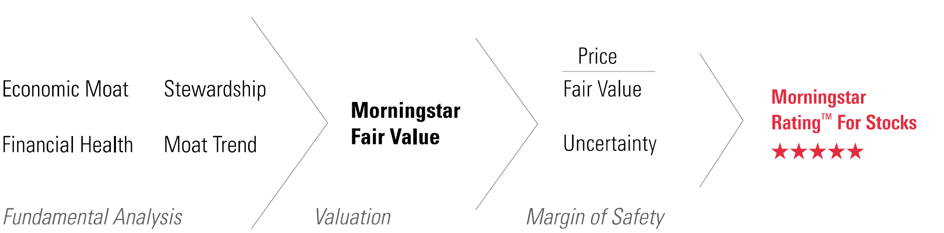
To assess the direction of the underlying competitive advantages, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

All the moat and moat trend ratings undergo periodic review and any changes must be approved by the Morningstar Economic Moat Committee, comprised of senior members of Morningstar's equity research department.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies



Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes, or EBI, and the net new investment, or NNI, to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital, or RONIC, and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until the perpetuity stage is reached. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term market-value weights.

Research Methodology for Valuing Companies

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the fair value estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- Low–margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- Medium–margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- High–margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- Very High–margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- Extreme–margin of safety for 5-star rating is a 75% discount and for 1-star rating is 300% premium.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed, which we believe is a reliable source.

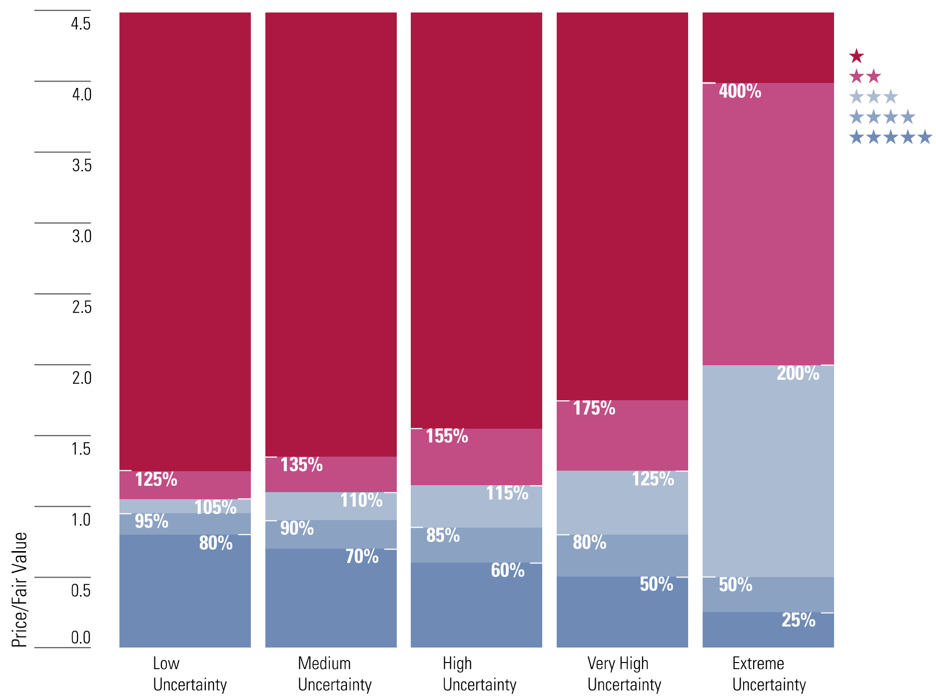
Morningstar Equity Research Star Rating Methodology



Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. The current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. The market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Research Methodology for Valuing Companies

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ► Undervalued: Last Price is below Morningstar's quantitative fair value estimate.
- ► Fairly Valued: Last Price is in line with Morningstar's quantitative fair value estimate.
- ► Overvalued: Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

General Disclosure

The analysis within this report is prepared by the person(s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc.performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

Unless otherwise provided in a separate agreement, recipients accessing this report may only use it in the country in which the Morningstar distributor is based. Unless stated otherwise, the original distributor of the report is Morningstar Research Services LLC, a U.S.A. domiciled financial institution.

This report is for informational purposes only and has no regard to the specific investment objectives, financial situation or particular needs of any specific recipient. This publication is intended to provide information to assist institutional investors in making their own investment decisions, not to provide investment advice to any specific investor. Therefore, investments discussed and recommendations made herein may not be suitable for all investors: recipients must exercise their own independent judgment as to the

Utilities

Seeing Value in 'Two Yutes'; Upgrade NI & SWX to Buy

March 18, 2020

Key Takeaway

Covered utilities came under considerable pressure as COVID-19 fears spread, economic repercussions expanded, and indiscriminate selling took hold. We believe many are now attractive as balance sheets are in great shape, liquidity is sufficient, secured, and long-dated, and rate-regulated models insulate earnings/cash flows from economic volatility. We tweak forecasts for all and upgrade NI ($28 PT) & SWX ($72 PT) to Buy, from Hold.

COVID-19 & oil price effects. We expect minimal impact to gas & electric distribution operations stemming from the spread of COVID-19 and various self-quarantine responses adopted in response to it. While winter weather has been mild, most rate designs feature decoupling mechanisms which insulate profits from volumetric impacts. Should the crisis deepen and/or extend longer than we project, utilities may experience elevated bad debt expense, less favorable regulatory outcomes, and higher pension costs resulting from poor asset performance & lower discount rates; however, across our coverage, balance sheets are strong, liquidity is robust, and maturity schedules are long-dated. Moreover, the dramatic decline in crude & product prices should aid fleet vehicle expenses, mild weather eases winter/spring working conditions, and dividend yields are even more attractive in light of the Fed's rate cuts.

NFG. We account for lower oil prices, improved natural gas prices given reduced 'associated' volumes, drilling program changes, and a mild F2Q in PA. Our F20-F21 EPS ests. are $2.94 & $2.74, from $2.88 & $2.94, and our SOP & DCF-derived PT is reduced to $48, from $51; we maintain our Buy rating. NFG has a BBB credit rating, ~$650mm in liquidity, its first debt maturity in Dec. 2021, and offers a 4.3% dividend yield.

NI. We update for 4Q results, the anticipated 3Q sale of Bay State Gas ($1.1B gross proceeds), recent Greater Lawrence related fines, insurance recoveries, regulatory proceedings, and updated funding projections. Our '20-21 EPS forecasts are $1.35 & $1.40, from $1.38 & $1.45, and our PT is maintained at $28; however, we upgrade shares to Buy, from Hold. NI has a BBB+ credit rating, $1.41B in liquidity, a 3.7% dividend yield, and 5-7% LT annual EPS & DPS growth.

OGS. We reflect 4Q results, regulatory updates, and financing plans; our '20-21 EPS ests. are $3.63 & $3.77, from $3.59 & $3.71, and we trim our PT to $80, from $83, due largely to reduced peer multiples. OGS is an A rated credit, has $750mm in liquidity, its earliest maturity is in 2024, and shares offer a 2.9% yield with 5-7% EPS & 6-8% DPS growth.

SWX. We account for 4Q results, '20 guidance, regulatory updates, and financing plans; our '20-21 EPS forecasts (ex-COLI) are $3.66 & $4.11, from $3.71 & $4.10. We trim our PT to $72, from $78, but upgrade to Buy, from Hold. SWX is an BBB+ rated credit, has $410mm in liquidity, and shares offer a 4.1% yield.

UGI. We reflect F1Q results, extremely warm F2Q conditions, and regulatory updates. Our F20-21 EPS ests. are $2.20 & $2.89, from $2.60 & $2.90, and our PT is trimmed to $48, from $54; we maintain our Buy rating. UGI has >$1B in liquidity, shares yield 4.9%, and mgmt guides 6-10% EPS & 4% DPS growth.

FY P/E	12.0x	14.1x	15.1x
EV/EBITDA	7.4x	7.5x	7.6x

The Long View

Scenarios

Base Case

- Appalachian drilling to grow production & reserves over next several years, California to provide free cash flow
- Midstream growth projects to add incremental Utica/ Marcellus takeaway capacity, aiding in-basin firm sale contracts in enabling Seneca production growth
- SOP, which utilizes EV/EBITDA multiples for business segments and reserve valuation for E&P & DCF analysis. F21 EPS: $2.74; F21 EBITDA: $787mm; PT $48

Upside Scenario

- Additional midstream opportunities are secured and progress successfully through regulatory approvals, driving meaningful takeaway options for Seneca and cementing a sustainably profitable net-back
- Stronger than anticipated proved reserve growth and continued improvements in drilling & completion activities, which aid Seneca's profit profile
- Sharp & sustained increase in natural gas and crude oil prices, limited basis issues. Utility experiences sustained cold weather in its PA service territory.
- SOP, which utilizes EV/EBITDA multiples for business segments and reserve valuation for E&P & DCF analysis. F21 EPS: $3.30; F21 EBITDA: $950; PT: $60

Downside Scenario

- Expansion projects in execution encounter cost overruns & time delays; NYSDEC's appeals of recent Northern Access victories are supported, permanently impairing Northern Access
- Production & reserve growth trails our expectations; drilling & completion efficiency gains do not materialize and Seneca's margins are minimized
- Sharp & sustained reduction in oil and natural gas prices, adverse basis differentials hinder realizations
- Mild weather, adverse rate case decisions
- SOP, which utilizes EV/EBITDA multiples for business segments and reserve valuation for E&P & DCF analysis. F21 EPS: $2.40; F21 EBITDA: $700; PT: $30

Investment Thesis / Where We Differ

- Appalachian drilling to grow production & reserves over next several years, California to provide free cash flow
- Midstream growth projects to add incremental Utica/ Marcellus takeaway capacity, aiding in-basin firm sale contracts in enabling Seneca production growth
- SOP, which utilizes EV/EBITDA multiples for business segments and reserve valuation for E&P & DCF analysis. F21 EPS: $2.74; F21 EBITDA: $787mm; PT $48

Catalysts

- Continued action by NFG in the wake of the FERC's decision to rule in favor of NFG as it relates to the NYSDEC waiving its certification authority under section 401 of the Clean Water Act; NYSDEC can appeal against the decision
- Execution of midstream projects & any additional expansions; Transco Zone 6 expected in 2021
- Narrowing of NE basis differentials and the disclosure of additional favorably priced firm sales agreements

The Long View

Scenarios

Base Case

- Infrastructure modernization programs to generate steady growth & returns across all segments for several decades
- Premium asset footprints and favorable regulatory climates, continuation on tracked infrastructure investments punctuated by rate case activity.
- ~5.4% dividend CAGR from 2019-24; ~4.3% EPS CAGR from 2019-24
- Combination of Target P/E, Target Yield, DDM, and DCF Analysis. 2021 Adj. EPS: $1.40; 2021 dividend: $0.88/ share; PT $28

Upside Scenario

- Customer growth grows faster than projected ~0.5% per year assumption and alternative source of regulated revenues are secured
- NI spends above the high-end of its guidance range, growing rate base faster than anticipated
- Cash flow outperformance yields reduced debt load, generating interest cost savings
- Combination of Target P/E, Target Yield, DDM, and DCF Analysis. 2021 Adj. EPS: $1.70; 2021 dividend: $0.91/ share; PT $30

Downside Scenario

- Customer growth is slower than projected ~0.5% per year assumption, or negative
- NI spends below the low-end of its guidance range, and rate base growth is slower than anticipated
- Cost overruns and rising debt loads weigh on EPS
- Adverse regulatory and rate case outcomes
- Combination of Target P/E, Target Yield, DDM, and DCF Analysis. 2021 Adj. EPS: $0.85; 2021 dividend: $0.45/ share; PT $15

Investment Thesis / Where We Differ

- Infrastructure modernization programs to generate steady growth & returns across all segments for several decades
- Premium asset footprints and favorable regulatory climates, continuation on tracked infrastructure investments punctuated by rate case activity.
- ~5.4% dividend CAGR from 2019-24; ~4.3% EPS CAGR from 2019-24
- Combination of Target P/E, Target Yield, DDM, and DCF Analysis. 2021 Adj. EPS: $1.40; 2021 dividend: $0.88/ share; PT $28

Catalysts

- Continued regulatory progress and reduction in regulatory lag could improve earnings growth
- Extension or expansion of modernization programs across any/all service territories
- Increased revenue-normalization efforts and reduction in volumetric sensitivities
- Sale of Columbia Gas of Mass. & removal of the overhang that comes with the Greater Lawrence Incident; NI remains liable for additional costs incurred

FY P/E	24.2x	23.4x	22.5x

The Long View

Scenarios

Base Case

- Customer growth continues at ~1.0% CAGR for several years
- Annual capex spend remains ~$500mm, delivering rate base growth broadly consistent with mgmt's expectations
- OGS continues to earn historical rate increases in KS & annual GRIP filings in TX
- Weather conditions revert to normal for consecutive years.
- Equal-weight valuation using DCF, DDM, Target P/E, and Target Yield methodologies; 2021 EPS: $3.77, 1Q21 DPS: $0.58; Target Yield: 2.8%; PT $80

Upside Scenario

- Customer growth grows faster than projected ~1.0% per year assumption and alternative sources of regulated revenue are secured
- OGS spends at or above the high-end of its guidance range growing its rate base faster than projected
- Mgmt employs cost cutting mechanisms which realizing an ROE closer to the top end of its authorized amount
- Equal-weight valuation using DCF, DDM, Target P/E, and Target Yield methodologies; 2021 EPS: $4.75, 1Q21 DPS: $0.60; Target Yield: ~2.5%; PT $95

Downside Scenario

- Customer growth is slower than projected ~1.0% per year assumption
- OGS spends at or below the low-end of its guidance range, thus its rate base ramp is slower than forecast
- Cost overruns occur and crimp allowed ROE in out-years
- Mild weather occurs in service areas where weather normalization provisions do not exist
- Equal-weight valuation using DCF, DDM, Target P/E, and Target Yield methodologies, 2021 EPS: $3.15, 1Q21 DPS: $0.48; Target Yield: ~3.2%; PT $60

Investment Thesis / Where We Differ

- Customer growth continues at ~1.0% CAGR for several years
- Annual capex spend remains ~$500mm, delivering rate base growth broadly consistent with mgmt's expectations
- OGS continues to earn historical rate increases in KS & annual GRIP filings in TX
- Weather conditions revert to normal for consecutive years.
- Equal-weight valuation using DCF, DDM, Target P/E, and Target Yield methodologies; 2021 EPS: $3.77, 1Q21 DPS: $0.58; Target Yield: 2.8%; PT $80

Catalysts

- Annual true-up regulatory filings across all three states
- With a low interest debt maturity in 2019, increased interest rates could act as a negative catalyst

EV/EBITDA	8.8x	8.1x	7.4x
FY P/E	16.4x	16.2x	14.5x

The Long View

Scenarios

Base Case

- Customer growth continues at a ~1.7%+ annual rate through 2024 and dynamics of natural gas supply and demand trends remain supportive
- Centuri grows as utilities seek to replace & modernize aging infrastructure.
- SWX's regulatory outcomes are generally favorable and its LNG facility begins to contribute to earnings over the course of 2020.
- Equal-weighted DCF, DDM, SOP, and Target Yield approaches. 2Q21E Dividend: 59¢, Target Yield 2.85%, Projected 5-year Dividend CAGR 3.7%, PT $72

Upside Scenario

- Customer accounts grow faster than our baseline forecast and the economies of the AZ, NV, and CA service territories grow faster than anticipated.
- Rate activity is favorable and the LNG facility ramps up quicker than anticipated reaching above forecast utilization
- Centuri growth & profitability is better and Nueco acquisition is more accretive than anticipated, while Centuri's project backlog deepens
- Equal-weighted DCF, DDM, SOP, and Target Yield approaches. 2Q21E Dividend: 60¢, Target Yield 2.5%, Projected 5-year Dividend CAGR 6.5%, PT $95

Downside Scenario

- Weak economic conditions prompt slower than anticipated growth in customer accounts and an uptick in inactive meters
- Adverse future rate case outcomes & LNG facility contribution lower than anticipated
- Centuri backlog wanes & contract bidding becomes more competitive, crimping its growth & profitability
- Treasury yields widen, hindering capital costs
- Equal-weighted DCF, DDM, SOP, and Target Yield approaches. 2Q21E Dividend: 50¢, Target Yield 4.5%, Projected 5-year Dividend CAGR 0%, PT $40

Investment Thesis / Where We Differ

- Customer growth continues at a ~1.7%+ annual rate through 2024 and dynamics of natural gas supply and demand trends remain supportive
- Centuri grows as utilities seek to replace & modernize aging infrastructure.
- SWX's regulatory outcomes are generally favorable and its LNG facility begins to contribute to earnings over the course of 2020.
- Equal-weighted DCF, DDM, SOP, and Target Yield approaches. 2Q21E Dividend: 59¢, Target Yield 2.85%, Projected 5-year Dividend CAGR 3.7%, PT $72

Catalysts

- Dividend raises each Feb; expect a 3.7% 5-yr CAGR
- Additional sector consolidation (value read-through) and/or an accretive acquisition of its own
- Faster than expected increases in interest rates or a reduction of allowed ROEs act as negative catalysts
- Material change in the Arizona PUC with respect to favorable rate case outcomes; decision by the Nevada PUC on the rate case presented to them

The Long View

Scenarios

Base Case

- PennEast pipeline experiences no further delays & is put into service in F1Q22.
- Continued conversion of fuel oil customers
- Normal weather conditions across all regions
- Additional midstream projects are secured and successfully executed upon at a 5-6x multiple
- Equal-weighted DCF, SOP, and Target Yield approaches. F2Q21E Dividend: 33.75¢, Target Yield 3%, Projected 5-year Dividend CAGR 6.2%, PT $48

Upside Scenario

- Projects completed early and under-budget, with utilization ramp faster than anticipated
- Fuel oil customer conversions accelerate in the US and Europe; significantly colder-than-normal winter weather conditions pervade all operating regions
- Additional high-quality midstream projects come into service earlier than expected, at accretive multiples, and backed by long-term fee-based agreements
- Equal-weighted DCF, SOP, and Target Yield approaches. F2Q21E Dividend: 35¢, Target Yield 2.35%, Projected 5-year Dividend CAGR 9.0%, PT $60

Downside Scenario

- Recent NE gathering acquisition doesn't lend itself to the 5-6x bolt-on projects, making the transaction more expensive than originally anticipated
- Projects delayed further and experience cost overruns due to operational issues and drag on total UGI results
- Customer conversions across all delivery platforms slow and European acquisitions dry up
- Significantly warmer than normal temps afflict all operating regions during the winter heating season
- Equal-weighted DCF, SOP, and Target Yield approaches. F2Q21E Dividend: 32.5¢, Target Yield 4.75%, Projected 5-year Dividend CAGR 0%, PT $20

Investment Thesis / Where We Differ

- PennEast pipeline experiences no further delays & is put into service in F1Q22.
- Continued conversion of fuel oil customers
- Normal weather conditions across all regions
- Additional midstream projects are secured and successfully executed upon at a 5-6x multiple
- Equal-weighted DCF, SOP, and Target Yield approaches. F2Q21E Dividend: 33.75¢, Target Yield 3%, Projected 5-year Dividend CAGR 6.2%, PT $48

Catalysts

- Additional M&A in its NE Midstream business as well as announcements regarding expansion projects
- Unusually warm/cold winter weather in PA, due to the lack of weather normalization provisions
- Announcements regarding Penn East progress have the potential to act as a positive catalyst if the regulatory and construction processes are successfully navigated, but also have the potential to act as a negative catalyst if there are further delays in the regulatory and/or construction processes
- International M&A as UGI looks to expand the international propane business

Please see important disclosure information on pages 20 - 27 of this report.

Company Description

National Fuel Gas Company

National Fuel Gas Company (NYSE: NFG) is a diversified energy holding company which operates in five business segments: Utility, Pipeline & Storage, Gathering, Exploration & Production, and Energy Marketing. The Utility operations are conducted by NFG Distribution Corp., which sells natural gas and provides natural gas and transportation services to ~750,200 customers in western New York and northwestern Pennsylvania. The Pipeline & Storage operations are carried out by NFG Supply Corp. and Empire Pipeline, Inc., which provide interstate natural gas transportation & storage services for affiliated and nonaffiliated companies. The Exploration & Production operates via Seneca Resources Corp., which is engaged in the exploration, development and purchase of natural gas and oil reserves primarily in California and in the Appalachian region. National Fuel Gas was founded on December 8, 1902, is incorporated under the laws of the state of New Jersey, and is headquartered in Williamsville, NY.

NiSource Inc.

NiSource, Inc. (NYSE: NI) is a diversified energy holding company whose subsidiaries provide natural gas, electricity, and other energy products & services to nearly 4mm US customers. The Company operates two business segments: Gas Distribution and Electric. The Gas Distribution operations provide natural gas service and transportation to ~3.5mm residential, commercial and industrial customers in Ohio, Pennsylvania, Virginia, Kentucky, Maryland, Indiana and Massachusetts. The Electric Operations segment provides electric service to ~472,000 customers across 20 counties in the northern part of Indiana. NiSource was founded in 1987, is incorporated under the laws of the state of Delaware, and is headquartered in Merrillville, IN.

ONE Gas Inc.

ONE Gas Inc. (NYSE: OGS) is a Local Distribution Company (LDC), that provides natural gas distribution services to 2.2mm customers and, despite the LDC market being categorized as an extremely fragmented industry, is the largest natural gas distributor in Oklahoma and Kansas and is the third largest in Texas, in terms of customers. OGS is the successor of a company founded in 1906 as Oklahoma Natural Gas Company and is 100% regulated. OGS's customer base includes residential, commercial & industrial, wholesale & public authority, and transportation. OGS has three divisions, Oklahoma Natural Gas, Kansas Gas Service, and Texas Gas Service, that distribute natural gas to ~88%, ~72%, and ~13% of the natural gas distribution customers in Oklahoma, Kansas and Texas, respectively.

Southwest Gas

Southwest Gas Holdings, Inc. (NYSE:SWX) is a holding company with business interests in two major business segments -- Natural Gas Operations and Utility Infrastructure Services. Southwest Gas Corporation purchases, distributes, and transports natural gas in the states of Arizona, Nevada, and California to residential, commercial, and industrial users. It is the largest natural gas distributor in Arizona and Nevada, providing service to the Phoenix, Tucson, and Las Vegas metropolitan regions among others. Southwest Gas also owns Paiute Pipeline Company, which owns and operates an interstate pipeline system that extends from the Idaho-Nevada border to the California-Nevada state line near the north and south ends of Lake Tahoe. Paiute also operates a peak shaving LNG storage facility near Lovelock, Nevada. Centuri Construction Group, Inc. is a comprehensive utility infrastructure services enterprise dedicated to meeting the growing demands of North American utilities, energy, and industrial markets. The Company was founded in March 1931, is incorporated under the laws of the State of California, and is headquartered in Las Vegas, NV.

UGI Corporation

UGI Corporation (NYSE: UGI) is a holding company that, through subsidiaries, distributes, stores, transports and markets energy products and services. UGI distributes natural gas and electricity to approximately 642,000 customers in eastern PA, operates merchant power and midstream assets in the Mid-Atlantic, and has LPG distribution operations in France and Eastern Europe. The company was founded in 1882, is organized under the laws of the state of Pennsylvania, and is headquartered in King of Prussia, PA. In F4Q19, UGI closed the acquisition of all publicly-held APU common units, rendering APU a wholly-owned UGI subsidiary.

Company Valuation/Risks

National Fuel Gas Company

Our $48 PT and Buy recommendation are derived via DCF and SOP, which includes an E&P reserve valuation & EBITDA multiples for all other segments. Risks: Deviations in reserve growth, commodity prices, interest rates, and midstream expansions.

NiSource Inc.
Our $28 PT and Buy recommendation are derived via Target P/E, Target Yield, DCF, and DDM approaches. Unexpected regulatory outcomes, deviations in customer growth, and project execution present risks to our estimates & PT.

ONE Gas Inc.
Our $80 PT and Hold rating are derived via Target P/E, Target Yield, DCF, and DDM approaches. Risks to our PT include: slower than expected annual customer growth, capex spend below the low-end of the guided range, slowing rate base growth, cost overruns crimping allowed ROE in future years and non-normal weather in service areas impacting top line results.

Southwest Gas
Our $72 PT and Buy recommendation are derived via DCF, DDM, SOP, and Target Yield approaches. Unexpected regulatory outcomes, contracting & execution risk, SW economic conditions, and interest rates all pose risks to our EPS & dividend projections and to our price target.

UGI Corporation
Our $48 PT and Buy recommendation are derived via a combination of DCF, SOP, and Target Yield approaches. Risks include non-normal weather, severe & rapid LPG price fluctuations, project execution, and interest rates.

Analyst Certification:

I, Christopher Sighinolfi, CFA, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.
I, Vikram Bagri, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.
I, Ryan Conlin, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.
As is the case with all Jefferies employees, the analyst(s) responsible for the coverage of the financial instruments discussed in this report receives compensation based in part on the overall performance of the firm, including investment banking income. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgement.

Investment Recommendation Record

(Article 3(1)e and Article 7 of MAR)

Recommendation Published	March 17, 2020 , 19:43 ET.
Recommendation Distributed	March 18, 2020 , 00:00 ET.

Company Specific Disclosures

Jefferies Group LLC makes a market in the securities or ADRs of ONE Gas Inc.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.
Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.
Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.
CS - Coverage Suspended. Jefferies has suspended coverage of this company.
NC - Not covered. Jefferies does not cover this company.
Restricted - Describes issuers where, in conjunction with Jefferies engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.
Monitor - Describes securities whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Valuation Methodology

Jefferies' methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.

Risks which may impede the achievement of our Price Target

This report was prepared for general circulation and does not provide investment recommendations specific to individual investors. As such, the financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions based upon their specific investment objectives and financial situation utilizing their own financial advisors as they deem necessary. Past performance of the financial instruments recommended in this report should not be taken as an indication or guarantee of future results. The price, value of, and income from, any of the financial instruments mentioned in this report can rise as well as fall and may be affected by changes in economic, financial and political factors. If a financial instrument is denominated in a currency other than the investor's home currency, a change in exchange rates may adversely affect the price of, value of, or income derived from the financial instrument described in this report. In addition, investors in securities such as ADRs, whose values are affected by the currency of the underlying security, effectively assume currency risk.

Other Important Disclosures

Jefferies does business and seeks to do business with companies covered in its research reports, and expects to receive or intends to seek compensation for investment banking services among other activities from such companies. As a result, investors should be aware that Jefferies may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

Jefferies Equity Research refers to research reports produced by analysts employed by one of the following Jefferies Group LLC ("Jefferies") group companies:

United States: Jefferies LLC which is an SEC registered broker-dealer and a member of FINRA (and distributed by Jefferies Research Services, LLC, an SEC registered Investment Adviser, to clients paying separately for such research).

United Kingdom: Jefferies International Limited, which is authorized and regulated by the Financial Conduct Authority; registered in England and Wales No. 1978621; registered office: 100 Bishopsgate, London EC2N 4JL; telephone +44 (0)20 7029 8000; facsimile +44 (0)20 7029 8010.

Hong Kong: Jefferies Hong Kong Limited, which is licensed by the Securities and Futures Commission of Hong Kong with CE number ATS546; located at Suite 2201, 22nd Floor, Cheung Kong Center, 2 Queen's Road Central, Hong Kong.

Singapore: Jefferies Singapore Limited, which is licensed by the Monetary Authority of Singapore; located at 80 Raffles Place #15-20, UOB Plaza 2, Singapore 048624, telephone: +65 6551 3950.

Japan: Jefferies (Japan) Limited, Tokyo Branch, which is a securities company registered by the Financial Services Agency of Japan and is a member of the Japan Securities Dealers Association; located at Tokyo Midtown Hibiya 30F Hibiya Mitsui Tower, 1-1-2 Yurakucho, Chiyoda-ku, Tokyo 100-0006; telephone +813 5251 6100; facsimile +813 5251 6101.

India: Jefferies India Private Limited (CIN - U74140MH2007PTC200509), licensed by the Securities and Exchange Board of India for: Stock Broker (NSE & BSE) INZ000243033, Research Analyst INH000000701 and Merchant Banker INM000011443, located at 42/43, 2 North Avenue, Maker Maxity, Bandra-Kurla Complex, Bandra (East), Mumbai 400 051, India; Tel +91 22 4356 6000.

Australia: Jefferies (Australia) Securities Pty Limited (ACN 610 977 074), which holds an Australian financial services license (AFSL 487263) and is located at Level 22, 60 Martin Place, Sydney NSW 2000; telephone +61 2 9364 2800.

This report was prepared by personnel who are associated with Jefferies (Jefferies International Limited, Jefferies Hong Kong Limited, Jefferies Singapore Limited, Jefferies (Japan) Limited, Tokyo Branch, Jefferies India Private Limited), Jefferies (Australia) Pty Ltd; or by personnel who are associated with both Jefferies LLC and Jefferies Research Services LLC ("JRS"). Jefferies LLC is a US registered broker-dealer and is affiliated with JRS, which is a US registered investment adviser. JRS does not create tailored or personalized research and all research provided by JRS is impersonal. If you are paying separately for this research, it is being provided to you by JRS. Otherwise, it is being provided by Jefferies LLC. Jefferies LLC, JRS, and their affiliates are collectively referred to below as "Jefferies". Jefferies may seek to do business with companies covered in this research report. As a result, investors should be aware that Jefferies may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only one of many factors in making their investment decisions. Specific conflict of interest and other disclosures that are required by FINRA and other rules are set forth in this disclosure section.

* * *

If you are receiving this report from a non-US Jefferies entity, please note the following: Unless prohibited by the provisions of Regulation S of the U.S. Securities Act of 1933, as amended, this material is distributed in the United States by Jefferies LLC, which accepts responsibility for its contents in accordance with the provisions of Rule 15a-6 under the US Securities Exchange Act of 1934, as amended. Transactions by or on behalf of any US person may only be effected through Jefferies LLC. In the United Kingdom and European Economic Area this report is issued and/or approved for distribution by Jefferies International Limited ("JIL") and is intended for use only by persons who have, or have been assessed as having, suitable professional experience and expertise, or by persons to whom it can be otherwise lawfully distributed.

JIL allows its analysts to undertake private consultancy work. JIL's conflicts management policy sets out the arrangements JIL employs to manage any potential conflicts of interest that may arise as a result of such consultancy work. Jefferies LLC, JIL and their affiliates, may make a market or provide liquidity in the financial instruments referred to in this report; and where they do make a market, such activity is disclosed specifically in this report under "company specific disclosures".

For Canadian investors, this material is intended for use only by professional or institutional investors. None of the investments or investment services mentioned or described herein is available to other persons or to anyone in Canada who is not a "Designated

Institution" as defined by the Securities Act (Ontario). In Singapore, Jefferies Singapore Limited ("JSL") is regulated by the Monetary Authority of Singapore. For investors in the Republic of Singapore, this material is provided by JSL pursuant to Regulation 32C of the Financial Advisers Regulations. The material contained in this document is intended solely for accredited, expert or institutional investors, as defined under the Securities and Futures Act (Cap. 289 of Singapore). If there are any matters arising from, or in connection with this material, please contact JSL, located at 80 Raffles Place #15-20, UOB Plaza 2, Singapore 048624, telephone: +65 6551 3950. In Japan, this material is issued and distributed by Jefferies (Japan) Limited to institutional investors only. In Hong Kong, this report is issued and approved by Jefferies Hong Kong Limited and is intended for use only by professional investors as defined in the Hong Kong Securities and Futures Ordinance and its subsidiary legislation. In the Republic of China (Taiwan), this report should not be distributed. The research in relation to this report is conducted outside the People's Republic of China ("PRC"). This report does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. In India, this report is made available by Jefferies India Private Limited. In Australia, this report is issued and/or approved for distribution by, or on behalf of, Jefferies (Australia) Securities Pty Ltd. It is directed solely at wholesale clients within the meaning of the Corporations Act 2001 of Australia (the "Corporations Act"), in connection with their consideration of any investment or investment service that is the subject of this report. This report may contain general financial product advice. Where this report refers to a particular financial product, you should obtain a copy of the relevant product disclosure statement or offer document before making any decision in relation to the product. Recipients of this document in any other jurisdictions should inform themselves about and observe any applicable legal requirements in relation to the receipt of this document.

This report is not an offer or solicitation of an offer to buy or sell any security or derivative instrument, or to make any investment. Any opinion or estimate constitutes the preparer's best judgment as of the date of preparation, and is subject to change without notice. Jefferies assumes no obligation to maintain or update this report based on subsequent information and events. Jefferies, and their respective officers, directors, and employees, may have long or short positions in, or may buy or sell any of the securities, derivative instruments or other investments mentioned or described herein, either as agent or as principal for their own account. This material is provided solely for informational purposes and is not tailored to any recipient, and is not based on, and does not take into account, the particular investment objectives, portfolio holdings, strategy, financial situation, or needs of any recipient. As such, any advice or recommendation in this report may not be suitable for a particular recipient. Jefferies assumes recipients of this report are capable of evaluating the information contained herein and of exercising independent judgment. A recipient of this report should not make any investment decision without first considering whether any advice or recommendation in this report is suitable for the recipient based on the recipient's particular circumstances and, if appropriate or otherwise needed, seeking professional advice, including tax advice. Jefferies does not perform any suitability or other analysis to check whether an investment decision made by the recipient based on this report is consistent with a recipient's investment objectives, portfolio holdings, strategy, financial situation, or needs.

By providing this report, neither JRS nor any other Jefferies entity accepts any authority, discretion, or control over the management of the recipient's assets. Any action taken by the recipient of this report, based on the information in the report, is at the recipient's sole judgment and risk. The recipient must perform his or her own independent review of any prospective investment. If the recipient uses the services of Jefferies LLC (or other affiliated broker-dealers), in connection with a purchase or sale of a security that is a subject of these materials, such broker-dealer may act as principal for its own accounts or as agent for another person. Only JRS is registered with the SEC as an investment adviser; and therefore neither Jefferies LLC nor any other Jefferies affiliate has any fiduciary duty in connection with distribution of these reports.

The price and value of the investments referred to herein and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This report may contain forward looking statements that may be affected by inaccurate assumptions or by known or unknown risks, uncertainties, and other important factors. As a result, the actual results, events, performance or achievements of the financial product may be materially different from those expressed or implied in such statements.

This report has been prepared independently of any issuer of securities mentioned herein and not as agent of any issuer of securities. No Equity Research personnel have authority whatsoever to make any representations or warranty on behalf of the issuer(s). Any comments or statements made herein are those of the Jefferies entity producing this report and may differ from the views of other Jefferies entities.

This report may contain information obtained from third parties, including ratings from credit ratings agencies such as Standard & Poor's. Reproduction and distribution of third party content in any form is prohibited except with the prior written permission of the related third party. Jefferies does not guarantee the accuracy, completeness, timeliness or availability of any information, including ratings, and is not responsible for any errors or omissions (negligent or otherwise), regardless of the cause, or for the results obtained from the use of such content. Third-party content providers give no express or implied warranties, including, but not limited to, any warranties of merchantability or fitness for a particular purpose or use. Neither Jefferies nor any third-party content provider shall be liable for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including lost income or profits and opportunity costs) in connection with any use of their content, including ratings. Credit ratings are statements of opinions and are not statements of fact or recommendations to purchase, hold or sell securities. They do not address the suitability of securities or the suitability of securities for investment purposes, and should not be relied on as investment advice.

Jefferies research reports are disseminated and available electronically, and, in some cases, also in printed form. Electronic research is simultaneously made available to all clients. This report or any portion hereof may not be reprinted, sold or redistributed without the written consent of Jefferies. Neither Jefferies nor any of its respective directors, officers or employees, is responsible for guaranteeing the financial success of any investment, or accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this report or its contents. Nothing herein shall be construed to waive any liability Jefferies has under applicable U.S. federal or state securities laws.

We are Upgrading PEG and SRE to OW from EW, Upgrading OGE to EW from UW, downgrading DUK, NI and PNW to EW from OW and downgrading WEC to UW from EW: As a result of recent price performance, shifting our valuation framework to 2022 from 2021 estimates and an adjustment to our valuation framework, we believe our ratings changes were merited. We reiterate our overweight ratings on AEP, D, EXC, LNT and FE. We reiterate our underweight ratings on ED, NWE and POR

The macro valuation for the group is attractive to the US 10-year treasury and relative to the S&P500 based on the last 10 years: Based on expectations for slowing growth from the Covid-19 virus along with the anticipation of cuts to the Fed funds rate, the macro setup for the next 3-6 months supports current utility valuations. We reiterate our Neutral Industry View on the North America Power & Utilities sector. For additional context on the sector amidst the volatility, see our note *Taking a Step Back to Gain Perspective*, published March 9, 2020.

We have updated our models to include 2022 estimates and adjusted our valuation framework modestly: Our valuations are still based on our 3 legs of the stool + disruptors. The regulatory (updated ranking included) and geography (updated ranking included) aspects remain unchanged in application. As long-term growth continues to be one of the largest value differentiators, we now apply a discount/premium of up to -/+ 10%. We also apply specific premiums for ESG and significant renewable opportunity (offshore wind or state law changes that are visible but will not hit the forecast period).

2020 Backdrop: Other than the obvious potential impact of the Coronavirus (Covid-19) and the 2020 election process, we see 2020 as a significant year for idiosyncratic issues getting to or near resolution as compared to past years. We believe that many of the names trading at a discount to the group average (or to what we see as their intrinsic value) do so based on idiosyncratic risks, many of which that have persisted over the years. Examples of these risks are: nuclear construction risk (SO), bankruptcy company or subsidiary (PCG, FE), permitting issues for pipelines (D, DUK, NEE), FERC transmission policy, state's rights for compensation for generation attributes (EXC, PEG), market reform proposals (D, PNW) among other issues.

PLEASE SEE ANALYST CERTIFICATION(S) AND IMPORTANT DISCLOSURES BEGINNING ON PAGE 40.

Group Valuation

The utility group valuation to the relative to the 10 Year Treasury (Figure 1) is at one of the largest discounts observed over the past 20 years. With Coronavirus fears, global rates and likely impacts to GDP, we see the likelihood of a sustained period of low 10 Year rates supporting the current level of utility valuations.

The utility group continues to appreciate and trade to what appears to be a near all-time high relative valuation to the S&P500 (Figure 2). The trend shows this revaluation began approximately a decade ago and has been a steady march to higher relative valuations for the utility group. Additionally, most company estimates for the S&P500 have not been revised to reflect the impact of the Coronavirus. Expectations continue to be for some level of economic disruption which would likely result in lower earnings, meaning that at current levels the p/e ratio of the S&P500 is likely understated making the utility relative valuation seem higher than it actually is.

While the utility group has had an extended period of positive relative performance as compared to the broader market, we expect utilities to maintain their current premium during the predicted Fed easing along with the broad uncertainty of Coronavirus and the pending 2020 elections. The dividend yield, low beta, and comparatively stable and predictable earnings growth for utilities, provides a favourable risk return relative to bonds or the broad market.

Ratings Changes

We have updated price targets to reflect 2022 eps and our calculated premiums and discounts for each name under coverage. Based on expected 12-month total returns we are upgrading PEG and SRE to Overweight from Equal Weight, and upgrading OGE to Equal Weight from Underweight. Also we are downgrading DUK, NI and PNW from Overweight to Equal Weight and downgrading WEC to Underweight from Equal Weight. A brief overview of each rating change follows.

We reiterate our Overweight ratings on AEP, D, EXC, FE and LNT and reiterate our Underweight ratings on ED, NWE, and POR.

We note that names like WEC, ES and NEE which trade at premiums above the 20%, typically seen as the high end of sustainable, can see continued premiums based on momentum and flows.

We also note that our ratings reflect a value bias that has provided middling results at best given the momentum the market observed for the better part of 2019 through the recent correction. Most value names are trading at a discount based on some idiosyncratic issue. 2020 could be the inflection point for many of these names as either issue resolution or enhanced visibility/clarity of the issue is likely prior to year-end. Figure 3 notes the issues we see as driving discounted valuations and likely events in 2020 that may help resolve these issues.

Upgrades

Public Service Enterprise Group (PEG) – We are upgrading our rating on PEG from Equal Weight to Overweight on valuation. We see value even with the uncertainty surrounding a potential lower ROE on transmission at some point in the future as well as the potential for lower capital investment for the Clean Energy Future program. We use a 5% premium for the utility earnings in our valuation methodology rather than the 10% we previously used to account for the probability of lower regulated earnings. We have also lowered our Power valuation from a 7x EV/EBITDA to a 6x EV/EBITDA to address uncertainty on capacity prices and if the NJ nuclear plants clear, that said the BGS auction has reduced the volatility of Power's earnings as compared to other merchant power companies. We view the quality of the company and the adjustments to our valuation as providing a risk/reward that is more attractive than many of the current utilities.

Sempra Energy (SRE) – We are upgrading SRE to Overweight from Equal Weight as we see the regulated utility opportunity in California and Texas as being even more attractive than previously appreciated following strong outcomes at SDG&E and SoCalGas and capex / rate base guidance revisions higher (details to come at Investor Day). We acknowledge risk around potential equity needs to fund the robust capital program, but still see the regulated growth opportunity as outweighing risks given current valuation. We also see heightened concerns around gas markets and SRE's LNG opportunity as overstated given the relatively small contribution to our SOTP framework. We now conservatively assume an 8.5% WACC for LNG (from 7.5%) and lower the probability of future FIDs to arrive at a $25 price target contribution. We continue to assume a group average multiple for SDG&E (would be higher but for wildfire risk), a 10% premium at SoCalGas, and a 10% premium for Oncor and other TX utility operations. We also conservatively apply a 10% premium to the group average multiple to parent expenses and still see upside to the present valuation.

Downgrades

Duke Energy (DUK) – We are lowering our rating on DUK from Overweight to Equal Weight. While we view the characteristics of DUK as attractive in the current low interest rate environment, we believe the valuation has increased on a relative basis to a fair level. The concerns surrounding the potential outcomes in the DEC and DEP rate cases along with the uncertainty on timing and cost of the Atlantic Coast Pipeline move us to the sidelines. If the DEC and DEP cases are resolved favourably and ACP is completed, we would see upside to our current valuation. If these issues have negative outcomes, we would expect the shares to come under pressure.

WEC Energy, Inc. (WEC) – We are downgrading WEC to Underweight from Equal Weight on valuation. We have updated our estimates and price target to reflect information disclosed on the Q4 call. WEC trades at a premium to names with similar avenues for growth and consistent earnings quality. WEC has expanded beyond what we believe is reasonable, even given strong growth prospects, best in class balance sheet and relatively constructive regulatory environment. While we do not characterize inherent business risks going forward as probable, and we still believe WEC is a premium name, our call is premised on a relocation of WEC valuation closer to that of the other "comfort" names, such as XEL, CMS, AEE.

Risks to WEC share price include earnings changes driven by potential revisions to the Qualified Infrastructure Plant rider in Illinois and a final outcome of the FERC MISO order undermining ATC earnings, which assume a 10.3% ROE going forward. We see continued flight to safety and momentum driving flows to the "comfort" names as a potential risk to our call that could inhibit downside valuation correction. Other risks to our call include continued investments in nonregulated renewable assets that could provide higher than regulated returns, potential upside to the current capital forecast, and additional cost savings opportunities coming to fruition.

NiSource, Inc. (NI) – We are downgrading NI to Equal Weight from Overweight on valuation. We have updated our estimates to reflect information disclosed on the Q4 call, including slightly lower earnings expectations. We had previously seen NI as undervalued given the overhang from Greater Lawrence Event penalties and costs, which we anticipated would have a minimal impact. Since then, Greater Lawrence Event-related fallout has been put in the rearview as criminal investigations conclude and the sale of Columbia Gas of MA to Eversource is expected to close in Q3. NI is now trading more in line with expectations relative to peers, thus we downgrade to Equal Weight. Risks to the call include the successful recovery of the pending $300m property insurance claim, the ability to maintain fair ratemaking treatment and cost recovery, as well as the ability to execute on cost controls and recover organizational synergies lost with the Columbia Gas of MA divestiture.

Pinnacle West Corp. (PNW) – We are downgrading PNW to Equal Weight from Overweight on valuation. We have updated our estimates and price target to reflect information disclosed on the Q4 call. We had previously seen PNW as undervalued given the attractive risk reward presented by near-term regulatory uncertainty and strong long-term growth opportunities. PNW is now trading more in line with our expectations, reducing the potential upside to valuation, thus the downgrade to Equal Weight.

Uncertainty left on the table comes from regulatory treatment of investments made to further APS' clean energy plan, the possibility of retail competition in AZ and the outcome of the rate case filed on October 31, 2019 (Docket D-E-01345A-19-0236). We see low odds of Arizona implementing retail competition given the arduous process of valuing incumbent assets and implementing the policy. We look to ACC workshops on resource planning, renewables standards, and EE and EV plans as an indication of the commission's willingness to support APS' clean energy plan, which includes 300-500 MW of renewables additions per year. We believe that population growth and the proposed capital budget provide a solid growth profile once regulatory issues are settled.

Valuation

Current price targets are premised upon each company's premium/discount to the 2022 group average PE multiple of 19x applied to each company's 2022 Barclays EPS estimate.

Previous price targets were premised upon each company's premium/discount to the then prevailing 2021 group average PE multiple of 19.5x applied to each company's 2021 Barclays EPS estimate. Companies where we changed valuation methodology are broken out in more detail below.

Upside/downside to current price targets on a price and total return basis are shown in Figure 3.

American Electric Power (AEP)

Our current $107 price target is premised upon a 12.5% premium applied to the 2022 utility group average PE multiple applied to the Barclays 2022 eps estimate. Our 2020-2022 eps estimates include earnings from the North Central Wind acquisition and associated financing.

Our previous $101 price target was premised upon a 10% premium applied to the 2021utility group average PE multiple applied to the Barclays 2021 eps estimate. Our previous estimates did not include the estimated impact of the North Central Wind acquisition.

CenterPoint Energy (CNP)

Our current $20 price target is premised upon a group average multiple applied to the 2022 utility group average PE multiple against a pro forma Barclays 2022 EPS estimate. Our pro forma 2022 adjustment assumes a downside scenario for ENBL enterprise value where we assume incremental equity needs to finance a $2.4bn write-down for CNP's stake in ENBL and its $1.2bn internal note. We acknowledge that the assumption could be viewed as overly-conservative but do not expect the ENBL overhang to clear in the near term, thus resulting in a more conservative approach to the valuation framework.

Our previous $27 price target was derived using a SOTP framework. We assumed a group average P/E applied to the 2021 utility group average multiple applied to the Barclays 2021 utility EPS estimate of $1.13. We assumed a $1 contribution from Infrastructure and Energy Services businesses (now sold most). We applied a $10/unit value for ENBL, contributing $3.84 to our price target.

Dominion Energy (D)

We moderately alter our framework for D to reflect the enhanced disclosure by business segment. We assign a 10% premium P/E to VEPCO and the Gas LDC business and a 5% premium to the South Carolina segment. We assign a 9.3x EV/EBITDA for D's GT&S segment, which we acknowledge may screen as far too aggressive given recent midstream turmoil, but we note D's 'demand pull' profile where a majority of its pipeline assets are contracted with affiliated end-use utilities and see little incentive to change those contracts given a longer-than-average remaining life on contracts. We assign a 6.9x EV/EBITDA for the contracted generation business, which represents a ~1 turn premium to merchant generation given D's contract with Connecticut EDCs for 50% of Millstone capacity at $49.99 / MWh and the highly-valued PPA contracts for solar. We conservatively apply a 10% premium P/E to parent level drag (highest multiple of all SOTP contributors though debt is allocated across all segments.

Our previous $91 price target was premised on a 10% P/E premium at VEPCO and parent interest, a 5% P/E premium for South Carolina, a 10.5x EV/EBITDA for DEGH, and an 8.8x EV/EBITDA for the contracted generation business.

Consolidated Edison (ED)

Our new price target of $83 is premised upon our updated 2022 EPS estimate of $4.77 applied to a 10% discount to the 2022 group average PE estimate of 19x. We add $1.31 of NPV for recovery of tax equity treatment post-Sempra deal.

Our previous price target of $88 was premised upon our previous 2021 EPS estimate of $4.69 applied to a 5% discount to the 2021 group average PE estimate of 19.5x. We add $1.31 of NPV for recovery of tax equity treatment post-Sempra deal.

Edison International (EIX)

Our $68 price target is premised on a 15% discount to the 2022 group average PE multiple applied to our 2022 pro forma earnings estimate after reducing EIX's updated accounting charge for 2017/2018 wildfire liabilities.

Our previous price target was also premised on a 15% discount, but against the prior 2017/2018 wildfire liability and against our 2021 net income estimate and group average PE multiple.

Eversource (ES)

Our new price target of $96 is premised upon our updated 2022 EPS estimate of $4.23 applied to a 20% premium to the 2022 group average PE estimate of 19x.

Our previous price target of $83 was premised upon our previous 2021 EPS estimate of $3.86 applied to a 10% premium to the 2021 group average PE estimate of 19.5x.

Exelon (EXC)

Our current $50 price target is premised upon a 10% premium applied to the 2022 utility group average PE multiple applied to the Barclays 2022 utility net parent eps estimate, resulting in a $46 valuation for the utility. It should be noted that we assume a 30Year Treasury yield of 130bps which is why our 2022 utility net parent EPS of $2.21 is below the guidance provided by EXC. We then use a 5x EV/EBITDA multiple on 2022 generation EBITDA applied to 75% of the Barclays 2022 generation EBITDA estimate as capacity prices and or fixed resource requirement options in IL are unknown at this time. The generation valuation is $4 combining this with the $46 for the utility results in a $50 sum of the parts valuation.

Our previous $54 price target was premised upon a 10% premium applied to the 2021utility group average PE multiple applied to the Barclays 2021 utility net parent eps estimate, resulting in a $43.50 valuation for the utility. We then used a 6x EV/EBITDA multiple on 2021 generation EBITDA applied to the Barclays 2021 generation EBITDA resulting in a generation valuation is $10.50 combining this with the $43.50 for the utility resulted in a $54 sum of the parts valuation.

NextEra Energy (NEE)

Our new price target of $269 is premised upon a SOTP with our updated 2022 FL utility EPS estimate and a 15% premium to the 2022 group average PE estimate of 19x and a 12x 22E EV/EBITDA for the NEER business – similar to multiples seen by ESG-focused companies like Orsted. We then add $13 for NEP as we take Barclays' $64 NEP price target and flow it through to represent NEE's ownership.

Our previous price target of $242 was premised upon our previous 2021 EPS estimate applied to a 20% premium to the 2021 group average PE estimate of 19.5x.

NiSource (NI)

Our new price target of $31 is premised upon our updated 2022 EPS estimate of $1.51 applied to a 10% premium to the 2022 group average PE estimate of 19x.

Our previous price target of $31 was premised upon our previous 2021 EPS estimate of $1.46 applied to a 10% premium to the 2021 group average PE estimate of 19.5x.

Public Service Enterprise Group (PEG)

Our current $60 price target is premised upon a 5% premium applied to the 2022 utility group average PE multiple applied to the Barclays 2022 utility net parent eps estimate, resulting in a $57 valuation for the utility. We then use a 6x EV/EBITDA multiple on 2022 generation EBITDA applied to the Barclays 2022 generation EBITDA estimate as capacity prices and or fixed resource requirement options in IL are unknown at this time. The generation valuation is $3 combining this with the $57 for the utility results in a $60 sum of the parts valuation.

Our previous $65 price target was premised upon a 10% premium applied to the 2021utility group average PE multiple applied to the Barclays 2021 utility net parent eps estimate, resulting in a $59.50 valuation for the utility. We then used a 7x EV/EBITDA multiple on 2021 generation EBITDA applied to the Barclays 2021 generation EBITDA resulting in a generation valuation is $5.50 combining this with the $59.50 for the utility resulted in a $65 sum of the parts valuation.

Sempra Energy (SRE)

We continue to assign a $152 price target for SRE, but with changes to the contributors. We update our LNG assumptions to reflect an 8.5% WACC versus 7.5% to reflect a challenging LNG contracting environment as global gas prices remain under pressure. We also change the probability of ECA Phase 1 to 75% (from 50%) given management commentary for a Q1 FID. We *lower* the probability of ECA phase 2 and Cameron Phase 2 to 25% from 33% to reflect the contracting environment, while maintaining Port Arthur FID at 50% (conservative relative to management commentary for a 3Q20 FID). We maintain a group average P/E multiple for SDG&E, a 10% premium for SoCalGas and Texas, and a group average multiple for the parent drag (high multiple given lower valuations outside of regulated utilities). We update our Ienova contribution to reflect Barclays' $103 price target and spot USDMXN to reflect forex translation.

Southern Company (SO)

Our $68 price target is premised on a 5% discount to the 2022 group average PE multiple applied to our 2022 earnings estimate and then add the NPV of the Vogtle earnings uplift of $0.20 and apply the same 5% discount to the group average 2022. We believe including the future Vogtle earnings discounted to 2022 is appropriate given the 5% discount is used to account for Vogtle risk.

Our previous $64 price target was premised on a 10% discount to the 2021 group average PE multiple applied to our 2021 earnings estimate and then add the NPV of the Vogtle earnings uplift of $0.20 and apply the same 10% discount to the group average 2021. We believed including the future Vogtle earnings discounted to 2021 was appropriate given the 10% discount is used to account for Vogtle risk.

WEC Energy (WEC)

Our new price target of $97 is premised upon our updated 2022 EPS estimate of $4.24 applied to a 20% premium to the 2022 group average PE estimate of 19x.

Our previous price target of $92 was premised upon our previous 2021 EPS estimate of $3.95 applied to a 20% premium to the 2021 group average PE estimate of 19.5x.

Price (11-Mar-2020)	**USD 51.59**
Price Target	**USD 60.00**

Why Overweight? We assign an Overweight to LNT given our view that 15% premium to the 22E group average multiple provides significant upside for a name with less than expected equity needs and an improving regulatory profile.

Upside case — **USD 65.00**

Our upside case assumes a 25% premium to the group average 2022 utility P/E multiple, which we believe can be realized if LNT realizes additional renewable capex approval, translate rate base growth to EPS growth more efficiently, or consistently beat guidance for 4-6 quarters.

Downside case — **USD 52.00**

Our downside case assumes a group average multiple, which we believe will occur if LNT runs into renwable project approval delays or future capex and rate base growth does not meet expectations.

Why Equal Weight? AEE is a quality name with 5-7% growth that is visible for an extended period of time and see the name deserving of a 15% premium to the group. As the name is trading near our expected premium we see the shares as fairly valued.

Upside case — **USD 89.00**

Our upside case reflects a 25% premium to the 2021 group average P/E multiple applied to our 2022 EPS estimate.

Downside case — **USD 74.00**

Our downside case reflects the 2022 group average P/E multiple applied to our 2022 EPS estimate.

Price (11-Mar-2020)	**USD 89.72**
Price Target	**USD 107.00**

Why Overweight? We assign an Overweight rating as we believe AEP should trade at a 12.5% premium to the average regulated utility multiple. This is supported by top-tier EPS growth target of 5-7% with a bias towards the high end.

Upside case **USD 119.00**

Our upside case reflects a 20% premium to the utility group average P/E multiple , applied to higher earnings driven by additional rate base growth and a favorable rate case outcomes.

Downside case **USD 91.00**

Our downside case reflects a 5% discount to the utility group average P/E multiple, applied to lower earnings driven by slower rate base growth and unfavorable rate outcomes

Price (11-Mar-2020)	USD 17.66
Price Target	USD 20.00

Why Equal Weight? We see concerns surrounding a writedown and equity need from ENBL , updates on the VVC merger integration and costs to achieve, a distribution cut from Enable and a likely need for equity beyond 2020, resulting in a fair valuation.

Upside case **USD 26.00**

Our upside case for CNP values the company's Utility business on a 15% premium to the group average multiple for 2022 and utilitzes the Barclays MLP upside case for ENBL.

Downside case **USD 16.00**

Our downside case for CNP values the Utility business on a 20% discount to the group average multiple for 2022. We use the Barclays MLP team's downside case for ENBL.

Price (11-Mar-2020)	USD 63.25
Price Target	USD 67.00

Why Equal Weight? CMS deserves a 15% premium valuation to peers given a constructive regulatory jurisdiction, a 10-year capex backlog, and above-average earnings/dividend growth. However, we believe these qualities are fairly reflected in shares at present.

Upside case — **USD 73.00**

Our upside case values CMS at a 25% premium to the regulated utility average multiple applied to our 2022 EPS estimate.

Downside case — **USD 61.00**

Our downside case values CMS at a 5% premium to the regulated utility average multiple applied to our 2022 EPS estimate.

Price (11-Mar-2020)	USD 86.50
Price Target	USD 83.00

Why Underweight? We rate ED Underweight as we believe the current valuation is stretched based on a lack luster rate outcome for CECONY which drives a lower growth profile. We see the lower than group average growth as driving a 10% discount to the 2022 group average multiple.

Upside case USD 91.00

Our upside case reflects the utility group average P/E multiple to portray potentially higher earnings from additional rate base growth and a favorable O&R rate case outcome.

Downside case USD 77.00

Our downside case reflects a 15% discount to the regulated group to reflect potentially lower earnings driven by lower sales growth and investment because of REV.

Regulated (%)	N/A	N/A	N/A	N/A	N/A

Price (11-Mar-2020)	USD 78.95
Price Target	USD 93.00

Why Overweight? We believe D's highly-regulated earnings base and strong long-term growth outlook driven by renewable development (namely highly-valuable offshore wind in rate base) is being obscured by overly-punitive near-term overhangs. We view this as an attractive entry point given strong dividend support and potential for valuation spread tightening.

Upside case — **USD 101.00**

Our upside case assigns a 15% premium to VEPCO, LDC operations, and South Carolina. We apply a premium EBITDA multiple to the GT&S and LNG segment as well. We also apply a 20% premium to Dominion's contracted generation business.

Downside case — **USD 85.00**

Our downside case gives no premium to VEPCO (unlikely) and the gas LDC businesses. We also apply a 10% discount to the GT&S and LNG EBITDA multiple to account for increased ACP risk. It also applies a 10% discount to the contracted generation business.

Price (11-Mar-2020)	USD 90.94
Price Target	USD 104.00

Why Equal Weight? We view DUK as a solid regulated company with a credible long-term investment plan. We see earnings growth rebounding back to the 4-6% range by 2020 and improving thereafter. However, we see risk around ACP and other regulatory determinations balancing the risk/reward and see shares as appropriately valued on a relative basis.

Upside case — **USD 114.00**

Our upside case uses a 10% premium to the 2022 group average P/E multiple applied to our 2022 EPS estimate.

Downside case — **USD 88.00**

Our downside case uses a 15% discount to the 2022 group average P/E multiple applied to our 2022 estimate.

Price (11-Mar-2020)	USD 59.74
Price Target	USD 68.00

Why Equal Weight? We assign an Equal Weight rating as we believe questions around Wildfire capex securitization, final net 17/18 liability risk, implementation of improved cost recovery parameters, and equity issuance mean EIX likely continues to trade at 10% discount for next 12 months.

Upside case USD 95.00

The upside case applies a group average 2022 P/E multiple and assumes zero wildfire liability for 2017 / 2018 fires.

Downside case USD 59.00

Our downside case assumes $3.7bn net 2017 / 2018 wildfire liability and a 20% discount to the group average P/E multiple.

Price (11-Mar-2020)	USD 87.79
Price Target	USD 96.00

Why Equal Weight? We believe ES's diverse, high quality regulated business will grow base earnings at the midpoint of its 5-7% target through the forecast period. We apply a 20% valuation premium to reflect the above average growth, reasonable regulatory mechanisms that are in place, allowing the company to earn a prompt return on its regulatory investing.

Upside case — **USD 108.00**

We believe there are a number of large projects that could boost ES's earnings power and growth rate in the medium to long term. Offshore wind projects and grid modernization programs would provide lift to earnings, and comined with elevated ESG fund flows, justify a 35% premium.

Downside case — **USD 84.00**

An adverse change in regulation or legislation, while not expected, could result in a discount valuation for ES. We impute a 5% group premium to arrive at our downside case valuation.

Price (11-Mar-2020)	USD 39.81
Price Target	USD 50.00

Why Overweight? We believe that utility growth of 6-8% is achievable and will be funded by cash flow from the generation company even with the current forward curves. We also believe that the nuclear plants not achieving cash flow neutrality will be closed.

Upside case USD 59.00

Our upside case assumes a 20% premium to the 2022 group average P/E multiple applied to our 2022 utility net parent EPS estimate with the addition of Exgen EBITDA valued at 7x.

Downside case USD 40.00

Our downside case assumes a 10% discount to the 2022 group average P/E multiple applied to our 2022 utility net parent EPS estimate with the addition of 3/4 Exgen EBITDA valued at 4x.

Price (11-Mar-2020)	**USD 43.13**
Price Target	**USD 54.00**

Why Overweight? We assign a 5% premium to the 22E average P/E to reflect a complete separation from FirstEnergy Solutions merchant generation portfolio and diversified and improving fully-regulated operations. We see FE's fully-regulated profile and long-term rate base growth trajectory as deserving of a premium, despite tired concerns on potential equity needs.

Upside case **USD 58.00**

We apply a 15% premium to the group average 22E PE multiple to arrive at $56 in an upside scenario.

Downside case **USD 43.00**

We assume $2.50 22E EPS and a 10% discount to the group average multiple in our downside price scenario.

Price (11-Mar-2020)	USD 241.26
Price Target	USD 269.00

Why Equal Weight? Top industry growth combined with an above-average regulatory environment drive the 15% premium utility valuation. Above-average growth provides for a larger increase to our expected price target, providing a compelling opportunity, however we see shares as fairly priced given outperformance.

Upside case	USD 307.00

Our upside case applies a 20% premium multiple to the 2022 EPS estimates for the regulated utilities and a 15x EV/EBITDA for NEER.

Downside case	USD 229.00

Our downside case applies an industry average multiple to 2022E earnings and a 10x EV/EBITDA for NEER.

Price (11-Mar-2020)	**USD 27.10**
Price Target	**USD 31.00**

Why Equal Weight? We view NI as a quality utility with a well-defined rate base growth strategy from gas and electric infrastructure modernization, which we see as relatively low risk. However, because of premium valuation we do not see material upside to our price target.

Upside case | **USD 37.00**

Our upside case reflects a 25% premium to the 2022 utility group average P/E multiple applied to higher earnings driven by additional rate base growth and favorable rate case outcomes.

Downside case | **USD 26.00**

Our downside case reflects a 5% premium to the 2022 utility group average P/E multiple applied to lower earnings driven by slower rate base growth and unfavorable Maryland and Pennsylvania rate case outcomes.

Price (11-Mar-2020)	**USD 70.96**
Price Target	**USD 73.00**

Why Underweight? We believe a group average multiple is appropriate given below average growth and regulatory (although regulatory is improving). This results in the shares appearing overvalued on a relative basis resulting in our Underweight rating.

Upside case — **USD 84.00**

Our upside case assumes a 15% premium to the group average regulated utility multiple assuming a positive shift in regulatory framework and significant improvement to ratebase growth and visibility driven by self build of generation in support of capacity needs.

Downside case — **USD 62.00**

Our downside case assumes a 15% discount to the group average regulated utility multiple if regulatory issues persist and capacity needs are filled via purchased power contracts and not self build.

Price (11-Mar-2020)	USD 34.03
Price Target	USD 38.00

Why Equal Weight? The combination of Enable Midstream and Oklahoma Gas and Electric, while synergistic from a utility financing standpoint, is ultimately dilutive to the corporate growth rate. Fair and timely regulatory recovery remains a risk as OG&E's earned returns show a meaningful regulatory lag.

Upside case USD 44.00

Our upside case factors in a 10% utility P/E premium based on 2019 utility EPS combined with ENBL valued at $17/share ($9 equity value to OGE).

Downside case USD 33.00

Our downside case factors in a 20% discount to the group average at the utility, for higher regulatory risk and uncertainty. We value ENBL at $13 ($7 equity value to OGE).

Price (11-Mar-2020)	USD 12.04
Price Target	USD 15.00

Why Equal Weight? We continue to believe that any investment at this point is likely to involve significant risk. There are numerous potential paths to finalize Chapter 11 that result in significant equity value or very little equity value depending on final dilution.

Upside case — **USD 20.00**

Our upside case uses the same valuation framework but assumes a 14.5x issuance multiple and a $7.5bn individual claimant settlement (PG&E's accounting charge taken to date).

Downside case — **USD 11.00**

Our downside case assumes a $14.5bn tort settlement (settlement reached between tort and bondholder group) and a 12.0x equity issuance multiple.

Price (11-Mar-2020)	USD 89.55
Price Target	USD 103.00

Why Equal Weight? We rate PNW as Equal Weight based on current relative value within our regulated utility group. The price target is based on the group average multiple 2022 EPS.

Upside case **USD 114.00**

A 10% premium to the group P/E multiple attributed to potential for above-average earnings and dividend growth, pending regulatory outcomes and economic conditions.

Downside case **USD 83.00**

A 20% discount to the group P/E premised on lower-than-expected load growth combined with sub-optimal rate case, rooftop solar, and retail competition outcomes.

Price (11-Mar-2020)	**USD 45.65**
Price Target	**USD 52.00**

Why Equal Weight? We expect average to above-average earnings/dividend growth through 2022, but believe the stock is fairly valued at its current premium (on 2022E EPS) based on our valuation framework.

Upside case — **USD 56.00**

Our upside case assumes that growth proceeds at a faster pace and the regulatory and/or economic landscape in NM improves. PNM could trade at a 15% premium in this environment.

Downside case — **USD 45.00**

Our downside case assumes that growth proceeds at a slower pace and the regulatory and/or economic landscape in NM does not improve. PNM could trade down to a 5% discount in this environment.

Price (11-Mar-2020) **USD 54.09**
Price Target **USD 55.00**

Why Underweight? Although we see potential for increased capital deployment, the current valuation based on a 2021 group average multiple provides for a price below the current stock valuation.

Upside case **USD 57.00**

Our upside case reflects a 10% premium to the 2021 utility group average P/E multiple, applied to higher 2021 estimates driven by generation capital deployment opportunities.

Downside case **USD 47.00**

Our downside case reflects a 10% discount to the 2021 group average multiple applied to lower 2021 EPS based on no capital investment beyond the current company forecasts.

Price (11-Mar-2020)	USD 48.75
Price Target	USD 60.00

Why Overweight? PEG is a quality company that should be able to support 6%+ utility growth based on current capital expenditure projections. The merchant arm while facing low energy prices and uncertain capacity prices for their NJ nuclear plants stands to benefit from offshore wind development going forward.

Upside case USD 73.00

This a 20% premium to the 22 group average PE applied to our 22 eps estimate and a 7.5x EBITDA multiple applied to our 22 Power EBITDA

Downside case USD 54.00

This a 10% disount to the 22 group average PE applied to our 22 eps estimatediscounted to reflect lower transmission ROE and lower capital spending approved by the BPUestimate and a 6.0x EBITDA multiple applied to our 22 Power EBITDA

Price (11-Mar-2020)	USD 122.95
Price Target	USD 152.00

Why Overweight? We think SRE represents an attractive thematic investment opportunity to invest with a top-tier management team with exposure to the best parts of the North American energy story. We also see the CA utilities' rate case outcomes as constructive to support utility growth and stability. We believe recent sensitivity to weak global LNG prices is overdone.

Upside case USD 177.00

Our upside case assumes all LNG projects are FID'd and applies a 10% premium to SDG&E, and increases the SoCalGas premium to 15%.

Downside case USD 117.00

Our downside case assumes no future LNG projects are FID'd, and lowers SDG&E to a 20% discount, SoCalGas and Texas to a 10% and 15% discount, respectively.

Price (11-Mar-2020)	USD 58.18
Price Target	USD 68.00

Why Equal Weight? Southern is a high quality company with an above-average dividend, which based on execution of large projects (Kemper and Vogtle) has traded to a discount. With schedule and cost risks still lessening but not gone, we see SO as an Equal Weight investment .

Upside case USD 75.00

We apply a 10% premium to group average 2022 P/E multiple on our 2022 EPS estimate while including the 2022 Vogtle earnings upon completion discounted back to 2022

Downside case USD 54.00

We apply a 15% discount to the 2022 group average multiple applied to our 2022 EPS estimate.

Price (11-Mar-2020)	**USD 97.45**
Price Target	**USD 97.00**

Why Underweight? We rate WEC as Underweight on its group high valuation, though meaningful dividend growth, significant free cash flow, and steady ratebase growth in a constructive regulatory jurisdiction provide a lower risk profile.

Upside case **USD 105.00**

Our upside case assumes a 30% premium to the 2021 group average P/E multiple applied to our 2022 EPS estimate.

Downside case **USD 89.00**

Our downside case assumes a 10% premium the group average multiple on our 2022 EPS estimate.

Price (11-Mar-2020)	USD 66.82
Price Target	USD 70.00

Why Equal Weight? We rate XEL as Equal Weight as XEL is a well-run core large-cap utility whose mix of businesses and locations, coupled with solid operating results and visible growth, supports a 17.5% premium to the group average 2022 P/E multiple. XEL has rerated close to our expected premium.

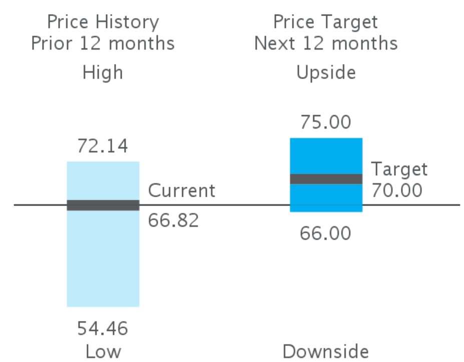
Upside case USD 75.00

We use a 25% premium to the 2022 group average multiple applied to our 2022 EPS estimate.

Downside case USD 66.00

We use a 10% premium to the 2022 group average multiple applied to our 2022 EPS estimate.

Upside/Downside scenarios



Source: Company data, Bloomberg, Barclays Research
Note: FY End Dec

Valuation Methodology and Risks

North America Power & Utilities

Alliant Energy Corporation (LNT)

Valuation Methodology: We utilize a relative target P/E multiple to value LNT shares. We apply a 15% premium to the 19x group average 2022 P/E multiple to reflect LNT's strong track record for execution, visible earnings growth above the group average, attractive rate base growth driven by renewable generation that limit customer bill inflation, and constructive regulatory oversight.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Upside risks to our estimates and price target include better-than-expected regulatory outcomes, defensive equity flows, and increased M&A activity. Downside risks include inflation (commodity and PCE- leading to higher interest rates), adverse regulatory outcomes, project execution issues, or broad economic slowdown in LNT's service territories.

Ameren Corp. (AEE)

Valuation Methodology: Our $85 price target is derived by applying a 15% premium to the group average multiple of 19x to our 2022 EPS estimate of $3.90/share. We believe a premium multiple is appropriate at this time given that favorable regulatory structures AEE operates under in its primary jurisdictions of Missouri and Illinois.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major company risks are: broad economic impact slowing sales growth, inability to gain fair and timely regulatory recovery, Gubernatorial and commission changes impacting regulation and legislation, FERC ROEs, legislation altering the Qualified Infrastructure Plant rider and ability to control costs in order to manage customer bill impacts.

American Electric Power Company, Inc. (AEP)

Valuation Methodology: We use a 12.5% premium to the 2022 group average multiple of 19x applied to our 2022 estimate of $5.02 to reflect above average regulatory and long term growth.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the company are: fair and timely rate recovery, regional economic impacts resulting in lower-than-expected usage, execution on cost controls to manage customer bill impacts.

CenterPoint Energy, Inc. (CNP)

Valuation Methodology: Our current $20 price target is premised upon a group average multiple applied to the 2022 utility group average PE multiple against a pro forma Barclays 2022 EPS estimate. Our pro forma 2022 adjustment assumes a downside scenario for ENBL enterprise value where we assume incremental equity needs to finance a $2.4bn write-down for CNP's stake in ENBL and its $1.2bn internal note. We acknowledge that the assumption could be viewed as overly-conservative but do not expect the ENBL overhang to clear in the near term, thus resulting in a more conservative approach to the valuation framework.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Equity needs and earnings visibility from ENBL, realizing capex opportunities in IN remain as material upside/downside risks. Broader items that could also impact the shares: 1) economic growth impacting sales growth, 2) constructive gubernatorial and commission changes benefiting regulation and legislation, and 3) cost control to manage customer bill impacts.

CMS Energy Corporation (CMS)

Valuation Methodology: Our $67 price target is derived by applying a 15% premium to the group average multiple of 19x to our 2022 EPS estimate of $3.07. CMS has a constructive regulatory relationship in Michigan and above-average earnings/dividend growth forecast.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major company risks are: broad economic impact slowing sales growth, inability to gain fair and timely regulatory recovery, gubernatorial and commission changes impacting regulation and legislation, Ability to control costs in order to manage customer bill impacts.

Consolidated Edison, Inc. (ED)

Valuation Methodology: We use a -10% discount to the 2022 group average P/E multiple of 19x applied to our 2022 EPS estimate of $4.77 to reflect an average regulatory environment, a more challenged earnings outlook, and low-risk profile. We add $1.31 of NPV for recovery of tax equity treatment post-Sempra deal.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the upside are: ED being able to achieve the full allowed ROE at CECONY, competition for growing NY transmission opportunities, and competition for behind-the-meter infrastructure based on REV.

Dominion Energy (D)

Valuation Methodology: We arrive at our $93 price target using a sum of the parts valuation framework that assigns a 10% premium to D's VEPCO operating subsidiary and parent ops, a 15% premium to the contracted generation business, a 10% premium EV/EBITDA to the gas transmission and storage segment, and a 5% premium to the Southeast Carolina Group.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Material downside risks include further delays or a cancellation announcement of ACP or adverse regulatory outcomes in Virginia. D will also underperform the broader market if interest rates rise faster than expected (dividend yield and cost of capital impact), credit ratings agencies do not view D's credit strengthening measures as sufficient (unlikely in our view) and downgrade D parent debt, or natural gas market dynamics reduce production in the Marcellus/Utica region.

Duke Energy Corporation (DUK)

Valuation Methodology: We derive our $104 price target for DUK by applying a 5% discount to the group average multiple of 19x to 2022E regulated utility earnings for DUK of $5.75 per share. We believe a discount to the group average multiple is appropriate given the lack of

Valuation Methodology and Risks

earnings growth historically.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the company are: the ability to obtain fair and timely rate recovery,and recovery of coal ash costs. Completion of ACP is a key issue as well as the ability to maintain credit metrics in order to avoid equity needs, regional economic impacts driving lower-than-expected usage, and legal and regulatory challenges resulting in delays to pipeline projects.

Edison International (EIX)

Valuation Methodology: Our $68 price target is based on a 15% discount to the 2022 group average multiple of 19x applied to an adjusted, post wildfire liability and additional funding for 22E EPS estimate of $4.18. The 15% discount is based upon implementation risk of AB 1054 cost recovery standards and a general perception of wildfire risk in the state.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major upside/downside risks to the company are: final wildfire liability for 17/18 fires, ultimate legislation on inverse condemnation, and regulatory outcomes in pending and future rate cases.

Eversource Energy (ES)

Valuation Methodology: We derive our $96 price target by applying a 20% premium to the group average P/E multiple of 19x, to our 2022 earnings estimate of $4.23 per share. We believe a premium multiple is appropriate at this time given the nature of ES's growth profile, regulatory relationships, accretion from the Columbia Gas of MA acquisition and recovery mechanisms.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The primary risk to our investment thesis is a change in regulation. We don't expect significant regulatory change in any of ES's jurisdictions at this time.

Exelon Corporation (EXC)

Valuation Methodology: Our $50 price target is derived using a sum-of-the-parts methodology. We value the regulated utilities on a P/E multiple basis and the competitive generation business on an EV/EBITDA basis. Our estimate for utility earnings, net of parent, in 2022 is $2.21 per share. Applying a 10% premium to group average 19x P/E multiple yields $46 of value. Generation is valued $4 per share using 5x 75% of 2022E f EBITDA less debt. Combining both values yields our $50 price target.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major company risks are: power price and capacity price volatility, sales growth, ability to get fair and timely regulatory recovery, and ability to manage O&M costs to keep customer bill impacts acceptable. Currently the 30 year Treasury yield (assumed to be 1.3% longer term is weighing on ComEd earnings. IL legislation on clean energy is a key risk driver.

FirstEnergy Corp. (FE)

Valuation Methodology: Our $54 price target for FE is based on a 5% premium to the group average 2022 multiple of 19x applied to our FY22 EPS estimate. The 5% premium is based on above-average regulatory attributes, below-average geographic attributes, improving long-term growth visibility, and an improving subjective rating based on a complete transition of the business model (fully regulated).

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major company risks are: regulatory recovery in pending and future cases as well as prudency of spending associated with rate riders and formulaic rates; the ability to finance and execute on capital investment plans; broad economic impacts driving customer usage trends; and cost control execution to manage customer bill increases.

NextEra Energy, Inc. (NEE)

Valuation Methodology: We use a 15% premium to the 2021 group average multiple of 19x with an additional $13 per share added to reflect ownership of NEP units (valued @ $64/unit). The 15% premium is used to reflect above-average regulatory exposure and long-term growth.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major company risks are: ability to achieve fair and timely rate recovery, competition for renewable energy projects at NEER, federal legislation impacting profitability or competition of renewable generation, and regional economic impacts resulting in lower-than-expected usage.

NiSource, Inc. (NI)

Valuation Methodology: Our $31 price target is derived using a 10% premium to the 2022 regulated utility group average P/E of 19x applied to our 2022 EPS estimate of $1.51. The premium reflects our view that NiSource is a quality utility with a well-defined rate base growth strategy from low-risk gas and electric infrastructure modernization.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the company are: the ability to obtain fair and timely rate recovery, regional economic impacts driving lower-than-expected usage, cost controls to manage customer rates, and material penalties related to ongoing regulatory investigations

NorthWestern Corporation (NWE)

Valuation Methodology: Our $73 price target is derived using the 2022 regulated utility group average P/E of 19x applied to our 2022 EPS estimate of $3.87. We believe favorable geographic attributes of the state are outweighed by regulatory challenges and uncertainties in Montana.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the company are: fair and timely rate recovery; regional economic impacts; potential ability to manage customer bill impacts. Upside risks include positive regulatory outcomes and potential for new build of capacity resources in Montana

OGE Energy Corp. (OGE)

Valuation Methodology: We derive our $38 price target by applying a 5% discount to the group average multiple of 19.5x applied to our 2022 utility earnings estimate combined with the current ENBL price unit price of $5 applied to the 111 units that OGE owns. We expect the company to deliver average EPS growth with higher-than-average dividend growth through 2022.

Valuation Methodology and Risks

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: OGE's capital plans impute less than 5% rate base growth. This is lower than the group average and is indicative of a below average regulatory jurisdiction. The upside is that as most companies grow earnings at or below the rate base growth level, OGE has the opportunity to grow regulated earnings in the 4-6% level on solid customer growth combined with potential to close the earned to allowed ROE gap that exists. The key (upside and downside risk) to enhancing growth lies in gaining rider approvals in Oklahoma. As significant generation and environmental spending is winding down, grid modernization, reliability, resiliency and technology are the next set of major spending programs.

PG&E Corporation (PCG)

Valuation Methodology: Our $15 price target is derived from PG&E's equity backstop financing agreement. We assume equity issuance of $12bn at 12x effective P/E multiple to arrive at pro forma EPS. We then apply a 20% discount to the 21E group average P/E multiple and subtract the NPV of ongoing wildfire fund contributions to arrive at our price target.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: There are significant downside risks related to regulatory proceedings that could leave equity value significantly lower than current market value. There is significant upside risk if new equity transacts above a 12x issuance multiple. There is additional downside risk if capital structure changes lead to additional equity, future wildfires occur, or earnings are negatively impacted by regulatory outcomes.

Pinnacle West Capital Corporation (PNW)

Valuation Methodology: Our $103 price target is derived by applying the group average multiple of 19x to our 2022 EPS estimate of $5.44. We expect the company to deliver average EPS and above-average dividend growth through 2022. In our view, the regulatory, geography and long-term growth attributes justify a group average P/E multiple on a 2022 utility earnings.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major company risks to the downside include: 1) poor regulatory outcome of current APS rate case, 2) economic impact of lower sales growth, 3) ability to control costs in order to manage customer bill impacts and potential to allow retail choice.

PNM Resources, Inc. (PNM)

Valuation Methodology: Our $52 price target is derived using a 10% premium to the 2022 regulated utility group average P/E of 19x applied to our PNM 2022 EPS estimate of $2.49. We see average to slightly above average earnings growth, a pickup in the New Mexico economy and signs of real improvement in New Mexico regulation via approved and pending legislation.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Events and outcomes that could result in under performance are: lower than anticipated load growth, a negative outcome in the San Juan abandonment securitization, or negative regulatory reaction to PNM's plan for SJGS replacement power.

Portland General Electric Company (POR)

Valuation Methodology: Our price target is based on a group average 2022 P/E multiple of 19x applied to our 2022 EPS estimate, which assumes additional capital opportunities beyond the base plan provided. The average multiple is based on average regulatory ranking, above-average geographic attribute ranking, average long-term growth visibility, average subjective ranking, and average investor attribute ranking.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Outcomes and events that could drive out-performance in the shares are: POR wins significant capacity or renewable contracts via upcoming RFP process, legislation is introduced that provides capital opportunities, O&M savings exceed expectations and guidance, or there is an acceleration of load growth above current guidance.

Public Service Enterprise Group (PEG)

Valuation Methodology: We use a sum of the parts methodology, where we use a 5% premium to the 2022 group average PE multiple of 19x applied to our 2022 EPS estimate for the utility and parent earnings of $3.01 and apply a 6X EBITDA multiple to the 2022 genco earnings.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Volatility in power prices, changes to the structure of the PJM, NYISO of NEPOOL capacity or energy markets. FERC ROE changes, or NJ BPU approval or changes to the Clean Energy Future capital spending plans.

Sempra Energy (SRE)

Valuation Methodology: We utilize a sum of the parts valuation framework for SRE. We apply a relative P/E multiple to the North American utility businesses using a base of 19x for the group average (15% premium for Texas, 10% for SoCalGas, group average for SDG&E). We utilize the Barclays Ienova Price Target and adjust for SRE ownership and Barclays spot USDMXN for Peso translation. We utilize a probability-weighted DCF approach for the LNG business depending on where each facility is on securing contracting for export capacity.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Risks include incremental equity needs, FIDs at LNG projects, construction problems, and negative regulatory outcomes.

The Southern Company (SO)

Valuation Methodology: We derive our $68 price target by applying a 5% discount to the group average P/E multiple of 19x to our 2022 EPS estimate of $3.60 for SO and then add back the discounted value of Vogtle uplift of $0.20 in 2023 to 2022. The 5% discount is driven by the uncertainty associated with plant Vogtle (the earnings uplift from Vogtle is added back to avoid a using a 5% discount on a 2022 number that does not include the Vogtle uplift)

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the company are: Adverse regulatory outcomes for Vogtle or the upcoming Georgia rate case; additional, unexpected delays to the plant Vogtle schedule; economic impacts that would drive lower electric usage; competition for renewable and contract generation impacting Southern Power's growth; and

Valuation Methodology and Risks

ability to drive O&M lower in order to earn the allowed ROE in each jurisdiction.

WEC Energy Group, Inc. (WEC)

Valuation Methodology: Our price target of $97 represents a 20% premium valuation relative to the utility peer group P/E multiple of 19x on our 2022 EPS estimate of $4.24. We believe this premium valuation is justified by the strong performance record the company has achieved and our belief that its forward growth goals are both realistic and achievable.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Risks to the upside are: Continued load growth; higher than regulated returns from nonregulated renewable investments; ability to get fair and timely rate recovery; execution on cost controls; continued flight to safety and flows into the "comfort" group of utilities.

Xcel Energy Inc. (XEL)

Valuation Methodology: Our $70 price target is based on a 17.5% premium to the group average multiple of 19x applied to our 2022 EPS estimate of $3.15. We believe this premium valuation fairly reflects the quality, strength, and potential endurance of the company's growth.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the company are: ability to obtain fair and timely rate recovery, execution on coal to renewable generation transformation, ability to maintain credit metrics while financing its long-term capital plan, and execution on cost control to manage customer bill impact.

Availability of Disclosures:

Where any companies are the subject of this research report, for current important disclosures regarding those companies please refer to https://publicresearch.barclays.com or alternatively send a written request to: Barclays Research Compliance, 745 Seventh Avenue, 13th Floor, New York, NY 10019 or call +1-212-526-1072.

The analysts responsible for preparing this research report have received compensation based upon various factors including the firm's total revenues, a portion of which is generated by investment banking activities, the profitability and revenues of the Markets business and the potential interest of the firm's investing clients in research with respect to the asset class covered by the analyst.

Analysts regularly conduct site visits to view the material operations of covered companies, but Barclays policy prohibits them from accepting payment or reimbursement by any covered company of their travel expenses for such visits.

Barclays Research Department produces various types of research including, but not limited to, fundamental analysis, equity-linked analysis, quantitative analysis, and trade ideas. Recommendations contained in one type of Barclays Research may differ from those contained in other types of Barclays Research, whether as a result of differing time horizons, methodologies, or otherwise.

In order to access Barclays Statement regarding Research Dissemination Policies and Procedures, please refer to https://publicresearch.barcap.com/S/RD.htm. In order to access Barclays Research Conflict Management Policy Statement, please refer to: https://publicresearch.barcap.com/S/CM.htm.

Disclosure Legend:

A: Barclays Bank PLC and/or an affiliate has been lead manager or co-lead manager of a publicly disclosed offer of securities of the issuer in the previous 12 months.

B: An employee or non-executive director of Barclays PLC is a director of this issuer.

CD: Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by this issuer.

CE: Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by this issuer.

D: Barclays Bank PLC and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

E: Barclays Bank PLC and/or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer within the next 3 months.

FA: Barclays Bank PLC and/or an affiliate beneficially owns 1% or more of a class of equity securities of this issuer, as calculated in accordance with US regulations.

FB: Barclays Bank PLC and/or an affiliate beneficially owns a long position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.

FC: Barclays Bank PLC and/or an affiliate beneficially owns a short position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.

FD: Barclays Bank PLC and/or an affiliate beneficially owns 1% or more of a class of equity securities of this issuer, as calculated in accordance with South Korean regulations.

GD: One of the Research Analysts on the fundamental credit coverage team (or a member of his or her household) has a long position in the common equity securities of this issuer.

GE: One of the Research Analysts on the fundamental equity coverage team (or a member of his or her household) has a long position in the common equity securities of this issuer.

H: This issuer beneficially owns more than 5% of any class of common equity securities of Barclays PLC.

I: Barclays Bank PLC and/or an affiliate is party to an agreement with this issuer for the provision of financial services to Barclays Bank PLC and/or an affiliate.

J: Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities of this issuer and/or in any related derivatives.

K: Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from this issuer within the past 12 months.

L: This issuer is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an affiliate.

M: This issuer is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

N: This issuer is, or during the past 12 months has been, a non-investment banking client (non-securities related services) of Barclays Bank PLC and/or an affiliate.

O: Not in use.

P: A partner, director or officer of Barclays Capital Canada Inc. has, during the preceding 12 months, provided services to the subject company for remuneration, other than normal course investment advisory or trade execution services.

Q: Barclays Bank PLC and/or an affiliate is a Corporate Broker to this issuer.

R: Barclays Capital Canada Inc. and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

S: This issuer is a Corporate Broker to Barclays PLC.

T: Barclays Bank PLC and/or an affiliate is providing equity advisory services to this issuer.

U: The equity securities of this Canadian issuer include subordinate voting restricted shares.

V: The equity securities of this Canadian issuer include non-voting restricted shares.

Risk Disclosure(s)

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors

IMPORTANT DISCLOSURES CONTINUED

should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

North America Power & Utilities

Alliant Energy Corporation (LNT)	Ameren Corp. (AEE)	American Electric Power Company, Inc. (AEP)
Brookfield Infrastructure Partners LP (BIP)	Brookfield Infrastructure Partners LP (BIP_u.TO)	CenterPoint Energy, Inc. (CNP)
CMS Energy Corporation (CMS)	Consolidated Edison, Inc. (ED)	Dominion Energy (D)
DTE Energy (DTE)	Duke Energy Corporation (DUK)	Edison International (EIX)
Eversource Energy (ES)	Exelon Corporation (EXC)	FirstEnergy Corp. (FE)
NextEra Energy, Inc. (NEE)	NiSource, Inc. (NI)	NorthWestern Corporation (NWE)
OGE Energy Corp. (OGE)	PG&E Corporation (PCG)	Pinnacle West Capital Corporation (PNW)
PNM Resources, Inc. (PNM)	Portland General Electric Company (POR)	Public Service Enterprise Group (PEG)
Sempra Energy (SRE)	The Southern Company (SO)	WEC Energy Group, Inc. (WEC)
Xcel Energy Inc. (XEL)		

Distribution of Ratings:

Barclays Equity Research has 1619 companies under coverage.

45% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 49% of companies with this rating are investment banking clients of the Firm; 74% of the issuers with this rating have received financial services from the Firm.

37% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 42% of companies with this rating are investment banking clients of the Firm; 68% of the issuers with this rating have received financial services from the Firm.

16% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 30% of companies with this rating are investment banking clients of the Firm; 62% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

Types of investment recommendations produced by Barclays Equity Research:

In addition to any ratings assigned under Barclays' formal rating systems, this publication may contain investment recommendations in the form

BofA SECURITIES

NiSource Inc

Beantown update: Tweaking ests to better reflect dis-synergies & LT uptick

Reiterate Rating: BUY | PO: 31.00 USD | Price: 29.63 USD

Reflecting the latest guide: Offsetting some dissynergies

We revisit our estimates following our Boston Conference, as mgmt. provided more guidance around estimates after it pulled its guidance and announced Columbia Gas of Mass (CMA) sale (to close this 3Q20). More specifically, mgmt. articulated dissynergies from losing overheard and other shared costs between gas subsidiaries could be up to -8c in '21. As such, we tweak down our '20-'22 estimates -1c to -2c. Note that our EPS revisit still assumes NI can trigger a cost savings initiative and work to mitigate some of this -8c penalty; for example, if '21 was the midpoint of the earning floor ($1.38/sh) with -8c of dissynergies baked in – it would take +3c of cost savings to get to our new estimate of $1.41/sh. Recall that '20 guidance still has not been provided and '21 guidance continues to be an earnings floor of the previous '20 guide of $1.36-1.40/sh. We continue to anticipate an EPS guidance refresh to come late this summer or into fall - perhaps through an Analyst Day, wrapped into EEI, or wrapped into the 3Q call. Note NI will base its 5-7% EPS CAGR off of the new '21 EPS (we model growth off of $1.40/sh - the top of the '21 floor), and we think it is likely that NI extends the CAGR through at least '24 (potentially '25) to capture the 1x step up in '24 estimates coming from NIPSCO's renewable ownership opportunities (as projects will commission year-end '23). Finally, we acknowledge that NI may be higher than its 5-7% range for '24 as it benefits from the rate base increase – and we bake this into our numbers (a $1.74/sh '24 estimate – over the $1.72/sh 7% CAGR off $1.40/sh in '21). We MTM the peer multiple and remove the -1x discount on gas utes, finding a $31/sh PO. Reiterate Buy.

Indiana RFP and credit discussions forthcoming

We expect NI's updated guide to bake in NIPSCO electric's request for proposals (RFPs). As such, we factor in NI and a tax equity partner securing half of the awarded capacity (6-7c of earnings for NI in '24). We also note that NI will likely meet with rating agencies this April to discuss its plans around financing the renewable investments, closing up the coal plants, and meeting both earnings and credit commitments. Our equity assumes NI executes its ATM and stock options, and adds $488mn of equity in '23 to fund the RFP project purchases (indicating $707mn debt); this increases shares by 17.6mn.

Company Sector

Natural Gas-Local Distribution Companies

Company Description

NiSource Inc. (NI) is a fully-regulated utility company serving approximately 3.5mn natural gas customers and 500,000 electric customers across seven states through its local Columbia Gas and NIPSCO brands. NI generates substantially all of its operating income through these rate-regulated businesses.

Investment Rationale

NI's positives including 5-7% earnings/dividend growth via $30bn of infrastructure investments over the next 20+ years and fully regulated subsidiaries with earned ROEs consistently near the allowed. We are starting to see resolution of overhang from the MA incident as the recent DPU Order provides a bookend of potential costs of the state's investigation. Bottom line, given the discount of shares, resolving MA issues, and ratebase upside in NI, we rate NI Buy.

Stock Data

Average Daily Volume	3,880,727

Quarterly Earnings Estimates

	2018	2019
Q1	0.77A	0.82E
Q2	0.08A	0.05E
Q3	0.10A	0E
Q4	0.38A	0.45E

Estimates

We update our estimates to fully bake the RFP in NIPSCO into the electric subsidiary, and we reflect our assumed equity needs in the consolidated shares outstanding as well. Our 41% equity assumption (based off of our FFO assumptions from the NI and D&A gained) indicates a need of $488mn of equity in '23. We also highlight that we include a new EPS growth CAGR below, with guidance of 5-7% off of a $1.40/sh '21 base. We track the 7% CAGR for most years, but are above the range in '24 once the RFP projects would be fully reflected in rate base (as they commission year-end '23 indicating NI would purchase them at that time). We believe that mgmt. update by 3Q/EEI could very well reflect further capex beyond what is in our outlook today including further TDISC-related capex under its Indiana electric rider, extended last year.

Table 1: NI EPS estimates – slightly lower in '21, but see '24 EPS target as increasingly the key to above 5-7%

Other key take aways from the conference

Existing Massachusetts

Two key milestones were reached recently around Merrimack: The criminal case resolution and the announcement of the sale of Columbia Gas of Massachusetts (CMA) to Eversource (ES). As for remaining items pertaining to Merrimack, NI still is in discussions with the Mass Department of Public Utilities (DPU) and the Attorney General on the process to close the ES deal. It expects the final order on the class action lawsuit from impacted citizens in the next ~week. The DPU has yet to come to the conclusion of its internal investigation, for which we expect roughly a $100mn fine. Finally, NI is awaiting the outcome around its property insurance; NI filed for $255mn, which is not baked into the plan (i.e. if any proceeds were received, they would come back to NI). Settlement timing on insurance is unclear, and could take beyond year-end if litigated. As for moving forward, NI continues to expect its six utilities to operate well and continue to have a ~10-11% rate base growth.

Legislative framework: Could it lead to incremental opportunity beyond '22?

NI has identified it is evaluating grid mod opportunities that we interpret might be incremental to current estimates. Whether or not incremental capex is possible is still yet to be determined - but we see this as a key opportunity that also would help limit lag given that the mechanism of recovery would be through an enhanced TDSIC tracker. The company also looks to explore technological advancements on the natural gas side (e.g. methane detectors, automatic shut-off safety enhancement devices) - and has noted it looks to explore how customers with both gas and electric in the NIPSCO territory could benefit from the same investments (e.g. fiber to benefit electric and gas). While the investment opportunity is not yet known, we would expect any upside to spans 5-10 years and with a potential up-front acceleration of capital.

Gas biz in an ESG world: Working on the combined angle

While some states like New York have implemented gas moratoriums, NI does not expect its jurisdictions to see the same level of gas push back. Even so, we expect NI (along with many other institutions) to at least start exploring the cost-benefit of renewable natural gas (RNG) in an increasingly ESG-conscious investor environment. We also expect it to at least weight the strategic benefits of the NIPSCO subsidiary around electric and gas convergence work (i.e. exploring the benefits of serving the two together). For example, consumers in the future may wish to switch to electric heating yet have a reliable gas back up for extremely cold days; or perhaps consumers will opt to pay a premium for more methane-responsible gas. We stay tuned on this topic, but note discussions seem to be only in early phases.

Valuation

We update the peer multiple to 18.3x (previously 19.9x) for gas and 19.7x (previously 19.1x) for electric. We remove our -1x discount on gas names given the resolved risk around Columbia Gas of MA and expectation that the peer multiple reflects the discount relative to electric already. We find a $31/sh PO. Reiterate Buy.

Table 2: NI SOTP Valuation

NI SOP Valuation	Metric	P/E Multiple					Equity Value

Price objective basis & risk

NiSource Inc (NI)

Our $31 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2022 forward P/E multiples of 18.3x for gas utilities and 19.7x for electric utilities with an inline mult for gas utilities and a 2.0x premium for the electric utility's strong growth rates and earned ROEs. We note that electric / gas peer P/E multiples are grossed up by 5% / 5.1% to reflect capital appreciation across the sector. We strip value from Columbia Gas of MA given the pending sale to close in 3Q20. We subtract the value of excess holding company debt at the parent not supporting the utility opcos. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its discounted multiple versus peers.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, financing plan updates, unforeseen costs associated with the MA incident, and challenging steel production economics in Indiana.

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including,

among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Securities entities located outside of the United Kingdom.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

Copyright and General Information:

Materials prepared by BofA Global Research personnel are based on public information. Facts and views presented in this material have not been reviewed by, and may not reflect information known to, professionals in other business areas of BofA Securities, including investment banking personnel. BofA Securities has established information barriers between BofA Global Research and certain business groups. As a result, BofA Securities does not disclose certain client relationships with, or compensation received from, such issuers. To the extent this material discusses any legal proceeding or issues, it has not been prepared as nor is it intended to express any legal conclusion, opinion or advice. Investors should consult their own legal advisers as to issues of law relating to the subject matter of this material. BofA Global Research personnel's knowledge of legal proceedings in which any BofA Securities entity and/or its directors, officers and employees may be plaintiffs, defendants, co-defendants or co-plaintiffs with or involving issuers mentioned in this material is based on public information. Facts and views presented in this material that relate to any such proceedings have not been reviewed by, discussed with, and may not reflect information known to, professionals in other business areas of BofA Securities in connection with the legal proceedings or matters relevant to such proceedings.

This information has been prepared independently of any issuer of securities mentioned herein and not in connection with any proposed offering of securities or as agent of any issuer of any securities. None of BofAS any of its affiliates or their research analysts has any authority whatsoever to make any representation or warranty on behalf of the issuer(s). BofA Global Research policy prohibits research personnel from disclosing a recommendation, investment rating, or investment thesis for review by an issuer prior to the publication of a research report containing such rating, recommendation or investment thesis.

Any information relating to the tax status of financial instruments discussed herein is not intended to provide tax advice or to be used by anyone to provide tax advice. Investors are urged to seek tax advice based on their particular circumstances from an independent tax professional.

The information herein (other than disclosure information relating to BofA Securities and its affiliates) was obtained from various sources and we do not guarantee its accuracy. This information may contain links to third-party websites. BofA Securities is not responsible for the content of any third-party website or any linked content contained in a third-party website. Content contained on such third-party websites is not part of this information and is not incorporated by reference. The inclusion of a link does not imply any endorsement by or any affiliation with BofA Securities. Access to any third-party website is at your own risk, and you should always review the terms and privacy policies at third-party websites before submitting any personal information to them. BofA Securities is not responsible for such terms and privacy policies and expressly disclaims any liability for them.

All opinions, projections and estimates constitute the judgment of the author as of the date of publication and are subject to change without notice. Prices also are subject to change without notice. BofA Securities is under no obligation to update this information and BofA Securities ability to publish information on the subject issuer(s) in the future is subject to applicable quiet periods. You should therefore assume that BofA Securities will not update any fact, circumstance or opinion contained herein.

Subject to the quiet period applicable under laws of the various jurisdictions in which we distribute research reports and other legal and BofA Securities policy-related restrictions on the publication of research reports, fundamental equity reports are produced on a regular basis as necessary to keep the investment recommendation current.

Certain outstanding reports or investment opinions relating to securities, financial instruments and/or issuers may no longer be current. Always refer to the most recent research report relating to an issuer prior to making an investment decision.

In some cases, an issuer may be classified as Restricted or may be Under Review or Extended Review. In each case, investors should consider any investment opinion relating to such issuer (or its security and/or financial instruments) to be suspended or withdrawn and should not rely on the analyses and investment opinion(s) pertaining to such issuer (or its securities and/or financial instruments) nor should the analyses or opinion(s) be considered a solicitation of any kind. Sales persons and financial advisors affiliated with BofAS or any of its affiliates may not solicit purchases of securities or financial instruments that are Restricted or Under Review and may only solicit securities under Extended Review in accordance with firm policies.

Neither BofA Securities nor any officer or employee of BofA Securities accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this information.

Goldman Sachs | Equity Research

2 March 2020 | 6:50AM EST

NiSource Inc. (NI): Remain Buy on attractive valuation

We remain Buy-rated on NiSource (NI) as we continue to view the current ~2x P/2021E discount versus smid-cap peers as unwarranted and see multiple expansion potential. NI currently trades at 19.1x on 2021E compared to smid-cap peers at 20.7x, despite a robust regulated investment pipeline that supports 7% operating income CAGR through 2022 and 5-7% EPS CAGR on a normalized basis. Beyond 2022, we see higher growth potential at NIPSCO Electric from potential ownership of incremental renewable generation similar to the current wind JV on Rosewater/Indiana Crossroad (400 MW - expected in rate base in 2023). Management expects the results from the recent Request for Proposal (RFP) later this year.

Columbus Gas of Massachusetts (CMA) announced sale could change financing needs. Management announced that the $1.1bn proposed CMA sale to Eversource (ES, Neutral) would eliminate the need for the previously-announced $500-$700mn of bulk equity in 2020, although they look to continue issuing $200-$300mn in annual ATM/DRIP equity. Our model continues to embed CMA's utility operations coupled with $1bn of equity in 2020 (including $300mn of ATM), resulting in 14.3%/14.6% FFO/debt in 2021/2022, respectively, above the Moody's threshold of 14%. We do not take a view on the likelihood of a successful completion of the sale.

We adjust our 2020-2021 EPS estimates to $1.36/$1.43 from $1.41/$1.48 and initiate 2022 estimate of $1.51. This reflects several changes to our model, including 1) 4Q2019/2019 actuals, 2) updates to trackers/base rate increases, 3) updated capital spending plans and 4) increase in O&M expense assumption to reflect some shared costs associated with the MA gas utility; our estimates reflect 1.5% O&M CAGR from 2020-2022. Finally, we now incorporate the announced $53mn federal penalty (assumed in 3Q2020) associated with the Merrimack incident, in addition to the $50mn penalty (we currently assume in 4Q2020 but pending investigation conclusion) by the Massachusetts utility commission.

Our $31 12-month target price (from $32 prior) is derived from an electric/gas blended 21.9x P/E multiple on 2021E EPS, which reflects a 16% total return versus 7% for Regulated Utilities. Key risks include (1) legal and regulatory risks, (2) system damages related to the recent MA natural gas incident, (3) higher than expected

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

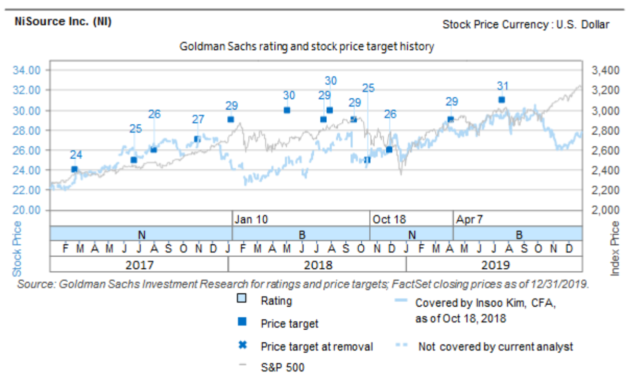
Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	44%	40%	16%	63%	57%	51%

As of January 1, 2020, Goldman Sachs Global Investment Research had investment ratings on 3,054 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage groups and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Price target and rating history chart(s)



The price targets shown should be considered in the context of all prior published Goldman Sachs research, which may or may not have included price targets, as well as developments relating to the company, its industry and financial markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at https://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs.

A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Instruction 598 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Instruction 598, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each region's Investment Review Committee manages Regional Conviction lists, which represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Ombudsman Goldman Sachs Brazil: 0800 727 5764 and / or ouvidoriagoldmansachs@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Ouvidoria Goldman Sachs Brasil: 0800 727 5764 e/ou ouvidoriagoldmansachs@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by either Goldman Sachs Canada Inc. or Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.fiadocumentation.org/fia/regulatory-disclosures_1/fia-uniform-futures-and-options-on-futures-risk-disclosures-booklet-pdf-version-2018. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by the Global Investment Research division of GS may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

BUSINESS: NiSource Inc. is a holding company for Northern Indiana Public Service Company (NIPSCO), which supplies electricity and gas to the northern third of Indiana. Customers: 472,000 electric in Indiana, 3.5 million gas in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland, Massachusetts through its Columbia subsidiaries. Revenue breakdown, 2018: electrical, 33%; gas, 67%; other, less than 1%. Generating sources, 2018: coal, 69.4%; purchased & other, 30.6%. 2018 reported depreciation rates: 2.9% electric, 2.2% gas. Has 8,087 employees. Chairman: Richard L. Thompson. President & Chief Executive Officer: Joseph Hamrock. Incorporated: Indiana. Address: 801 East 86th Ave., Merrillville, Indiana 46410. Tel.: 877-647-5990. Internet: www.nisource.com.

Since our November review, shares of NiSource have risen nicely. Over that time frame, the equity's price advanced more than 16%. We think this recovery reflected investors taking advantage of the near-term weakness in the stock's price.

That said, the public utilities holding company will probably register mixed financial results for 2019. *Note: NiSource was expected to release its fourth-quarter and year-end financials shortly after this report went to press.* On the plus side, solid contributions from the Gas Distribution, Corporate, and Electric operations likely equated to a mid-single-digit revenue gain last year. However, cost overruns, margin compression, and stock issuances probably resulted in a roughly 4% downturn in share net, to $1.25.

We continue to look for earnings to rebound this year. NiSource appears poised to post a roughly 4% rise in revenues in 2020, to $5.5 billion. The primary driver here should be a large chunk of capital expenditures slated to come on line. The company has multiple wind projects and joint ventures in the works in Indiana. Those growth initiatives represent about $1.75 billion in investments. At the same time, once approved, the Maryland base-rate case should add $3.7 million to the top line. Another base-rate case has been filed for NIPSCO electricity, and should help that unit generate about 10% on recent capital improvement projects. These factors may well drive earnings 12% higher, to $1.40 a share. Finally, we have introduced our 2021 top- and bottom-line estimates at $5.7 billion and $1.55 a share, respectively.

The balance sheet is in decent shape. At the end of the third quarter, the last period for which financial information was available, NI's cash reserves sat at $28 million and the long-term debt load represented 57% of total capital.

On balance, these shares do not stand out at this juncture. The recent uptick in NI's quotation places it just inside our Target Price Range, leaving the stock with below-average capital appreciation potential for the pull to 2023-2025. Meanwhile, our Timeliness Ranking System suggests this equity will just mirror the broader market averages in the coming year.

	Outperform	$30.21	$32.00	9%

Initiating Coverage at Outperform and $32 Target; Gearing Up for March Madness

Bottom Line: We are initiating coverage of NiSource Inc. (ticker: NI) with an Outperform rating and a target price of $32 per share. Our five-year forecast (2019-23) supports consolidated EPS growth in line with the midpoint of the company's current 5-7% EPS CAGR, but we think this could be biased to the upside. Our estimates are 2020 — $1.40; 2021 — $1.48; 2022 — $1.56; and 2023 — $1.65.

Key Points

NiSource's mid-2015 spin-off of its midstream unit returned NiSource to a pure-play utility story that is two-thirds natural gas distribution and one-third integrated electric utility (by rate base). For the next three years, NI outperformed its utility peers by more than 25% given its premium asset mix and lower-risk growth prospects. Unfortunately, in September 2018 the over-pressurization of distribution lines at its Massachusetts subsidiary and the resulting explosion and fire damage created what has now been a 15-month overhang on the stock.

Concerns over the company's liability to the incident and the associated regulatory uncertainty were compounded by further operational issues in 2019 as well as balance sheet concerns. This has left NI shares trading at a discount not only to the electric group (~2%) but also to the traditionally higher-multiple gas LDC group (~4%). We believe this discount is now unwarranted, and our $32 target price suggests a 9% total return potential in the name. Given clarifying regulatory orders in Massachusetts and Indiana in December, we see a light at the end of this tunnel over the next several months that should enable the stock to move higher.

Our current forecast (2019-23) has consolidated EPS growing at just under 6.0% and only partially reflects the upside in renewables spending given this contribution is late in 2023. With only a 61% payout, our DPS estimate is growing in line with EPS and supporting the slightly higher-than-average 2.8% current yield. We believe that with very visible above-average EPS and DPS growth, as investors gain clarity across the regulatory, financing, and growth sides of the story, the company can easily re-rate back to the 5-10% premium it previously carried.

New Scenarios

Valuation

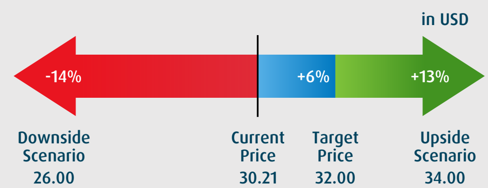
Our $32 target price is the product of a P/E-based sum of the parts. We utilize a regulated average multiple using 2022E EPS as base valuation and then make specific adjustments to reflect our current view of the fundamental outlook. For NI, we have removed EPS for its MA gas business from our P/E valuation and instead include only the asset value (1x equity rate base) in our SOTP framework.

Upside Scenario 34.00

Our upside scenario reflects continued multiple expansion associated with the company's premium and above-average earnings and dividend growth profile.

Downside Scenario 26.00

Our downside scenario reflects the macro risk of a change in the interest rate environment. The retrenchment of the US 10-year Treasury back to the 2.5% level could compress utility multiples to the 17.0x area.



Key Catalysts

Initial indicative pricing in its second renewable RFP in IN in the February/March time frame. Completing the company's stated equity issuance of $500-700mm in 2020. Potentially, capital spending and growth-rate update in 2H20 given clarity in the aforementioned RFP and recent rate orders in MA and IN.

Company Description

NiSource, Inc. is a regulated utility holding company, serving approximately 3.5 million natural gas customers and 500,000 electric customers across seven states. Through its Columbia Gas and NIPSCO brands, it provides natural gas, electricity, and other products and services. The company was founded in 1987 and is headquartered in Merrillville, Indiana.

NI-NYSE Research

Glossary

Company Models

BMO Capital Markets

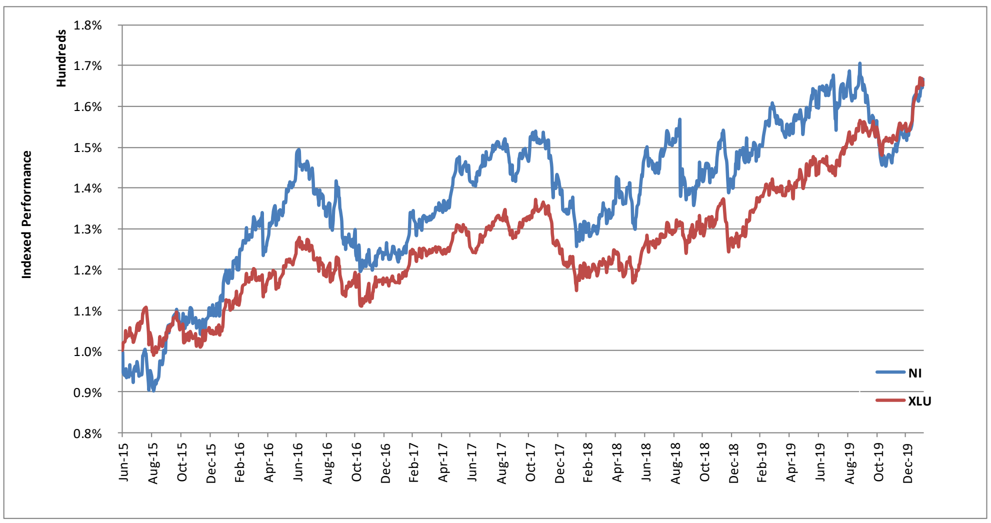
Initiating Coverage of NI at Outperform and $32 Target; Gearing Up for March Madness

We are initiating coverage of NiSource Inc. (ticker: NI) with an Outperform rating and a target price of $32 per share. Our five-year forecast (2019-23) supports consolidated EPS growth in line with the midpoint of the company's current 5-7% EPS CAGR, but we think this could be biased to the upside. Our estimates are 2020 — $1.40; 2021 — $1.48; 2022 — $1.56; and 2023 — $1.65.

Investment Thesis: Above-Average Growth at a Discount Plus Catalysts

NiSource's mid-2015 spin-off of its midstream unit, Columbia Pipeline Group, returned NiSource to a pure-play utility story that is two-thirds natural gas distribution and one-third integrated electric utility (by rate base). For the next three years, post-split, NI outperformed its utility peers by more than 25% given its premium asset mix and lower-risk growth prospects (Exhibit 1).

Exhibit 1: NiSource Relative Price Performance



Source: BMO Capital Markets Research, FactSet

Unfortunately, in September 2018 the over-pressurization of distribution lines at its Massachussets subsidary and the resulting explosion and fire damage created what has now been a 15-month overhang on the stock. Concerns over the company's liablity to the incident and the associated regulatory uncertainty were compounded by further operational issues in 2019 as well as balance sheet concerns. This has left NI shares trading at a discount not only to the electric group (2-3%) but also to the traditionally higher-multiple gas LDC group (~4%). We believe this discount is now unwarranted, and our $32 target price suggests a 9% total return in the name. Given clarifying regulatory orders in Massachusetts and Indiana in December, we see a light at the end of this tunnel over the next several months that should enable the stock to move higher.

The IURC adoption of two settlements in December removes rate case risk in the name (ROE declined only 25 bps) and adds necessary clarity to system capacity needs (via the adoption of Rate 831), which will be important to the company's coal replacement strategy. Likewise, we believe that in initially defining only three to four discrete incidents, the December Massachusetts Department of Public Utilities (DPU) order helped remove some of the downside tail risk to the assessment of penalties in the over-pressurization investigation. This clarity, along with the refreshed financials that come with 4Q19

BMO Capital Markets

reporting, could allow the company to come to market with its widely anticipated $500-700mm of equity financing (4-6% of S/O) sooner rather than later, removing one of the remaining overhangs in the name.

At the same time, we could also get initial indicative pricing in NIPSCO's second renewable RFP that is being conducted to help replace the forecast shutdowns of its remaining coal plants by the end of 2028. We believe there is a high probability that the competitive renewables pricing environment will favor the execution of another build-own-transfer agreement for NIPSCO, which would add clarity around the company's growth into 2024. This should put management in a good position to potentially address its growth guidance beyond its current 2020-22 timeframe later in the year. With an already healthy inventory of gas infrastructure projects, the potential addition of another $1,100-1,200mm of renewables spending should extend, if not be additive to, the company's current 5-7% growth rate.

Our current forecast (2019-23) has consolidated EPS growing at just under 6.0% and only partially reflects the upside in renewables spending given that its contribution is late in 2023. With only a 61% payout, our DPS is growing in line with EPS and supporting the slightly higher-than-average 2.8% current yield. We believe that with very visible above-average EPS and DPS growth, as investors gain clarity across the regulatory, financing, and growth sides of the story, the company can easily re-rate back to the 5-10% premium it previously carried.

We understand there are a lot of questions regarding the multiple compression witnessed in the gas LDC space and this could clearly pose a risk to our re-rating thesis. That said, with NI trading at discount to the gas LDC average on 2021E and at worst closer to a flat multiple on 2022E, we think it could be more of a headwind versus a downside risk. Moreover, we think the catalysts for the name make it more of an idiosyncratic call, and the addition of the renewables growth and shrinking carbon footprint make it differentiated from its gas LDC peers.

Decarbonizing Indiana — Gearing Up for March Madness

NIPSCO's October 2018 integrated resource plan (IRP) includes plans to retire nearly 80% of its coal-fired generation by 2023 and the other 20% by the end of 2028. The 1,625MW Schahfer plant is scheduled to be decommissioned later in 2023 and its 469MW Michigan City plant in 2028. Its replacement options have focused on cleaner and lower-cost resources beginning with wind. The company's initial RFP resulted in two build-own-transfer JV agreements with EDP Renewables, including the 100MW Rosewater Wind project and the 302MW Crossroads Wind project. NIPSCO received approval for Rosewater in August 2019 and requested approval for Crossroads in February 2020.

The company launched its second RFP in October 2019, adding solar and storage to mix with the company seeking bids for 1,300MW of solar and another 300MW of wind resource. The bids are expected to be available in the February/March timeframe. Given the scale of this RFP and the recent precedent for aggressive IRRs, we expect the pricing to be a compelling replacement for retiring coal resources. Although the EPS impact of these assets will not be a large contributor to our current forecast given a back-half 2023 assumption, we do believe there is high probability that NiSource ultimately will own 50% of the capacity under a build-own-transfer model. In total we see a $1,100-1,200mm capital opportunity for NIPSCO.

We believe the IURC's December order approving the settlement with industrial customers on the application of Rate 831 is important to the company's system capacity planning, including its coal replacement strategy. With an already deep inventory of gas infrastructure projects, this incremental line of sight on the electric side enhances the story and could put management in a position to extend its long-term growth rate beyond its 2022. This would put it more on par with the higher-quality/higher-multiple utilities in the sector. **The upcoming RFP pricing is therefore an important catalyst for the company** as it could both extend clarity for investors and "clean up" the overall profile of the company,

BMO Capital Markets

which will become be a completely "non-coal" gas and electric utility. At its current 2-3% discount to the utility group, a 12-13% discount to high-quality electric comps, and even a 2-4% discount to the gas LDC average, we think the risk/return in the name is very favorable, especially with its known catalysts.

Gaining Clarity on Greater Lawrence

In September 2018, excessive pressure in the natural gas lines owned by NiSource's subsidiary, Columbia Gas of Massachusetts, caused a series of explosions in 40 individual homes, 80 individual fires, and one fatality. Residents were asked to evacuate as service to more than 8,000 homes, as well as some electric service to mitigate further ignition risk, was shut off. Governor Baker declared a state of emergency and appointed local utility Eversource to oversee management and restoration efforts as the National Transpiration Safety Board (NTSB) began its root-cause investigation and later the Massachusetts DPU launched its own investigation into the accident.

The ultimate costs to NI of the incident rose steadily throughout the first six to eight months after the accident as liabilities related to property damage, personal injury, infrastructure damage, and mutual aid payments (other utilities) were tallied. As of 9/30/19, NiSource estimates the event costs to be in the $1,680-1,720mm range (see Exhibit 2) before any fines or penalties. To this latter point, the Massachusetts DPU investigation is still ongoing, although in December 2019 the DPU did add some procedural clarity to the proceeding by breaking the incident into distinct events that could help frame potential penalties:

- Event 1. 9/13/18 incident and Bay State's response
- Event 2: Phase 1 restoration (9/21/18–12/16/18)
- Event 3: Improperly abandon services (Grade 1 gas leak on 9/27/19)

The DPU also left the door open to a fourth event related to post-12/16/18 restoration and repair work, as well as additional events pending further investigation. While this proceeding is still ongoing, the narrowing of the "events" is incrementally positive as it allows a more educated estimate of what the penalties liability could total. Management's current view is that precedent suggests a maximum $22mm cost cap with the incident being treated as one event or one series of events. While the final outcome may not be known until 4Q20, we believe we have captured the magnitude of any final assessment in our forecast and valuation given the following: 1) we assume the high end of the company's $500-700mm equity issuance in 2020, which is partially done in support of the gap between claims and insurance coverage; and 2) we assume a rate-base-only valuation for the Massachusetts assets based on our view that the company will have a hard time selling the property or investing any meaningful amount of growth capital given the political current environment. In sum we ascribe ~$1/share of value to these assets.

BMO Capital Markets

Gas Pains

With coal all but dead, the fight against climate change has turned its sights squarely on natural gas. In June 2019, Berkeley, California, became the first city in the U.S. to ban natural gas in new construction projects starting in 2020. Similar movements have occurred in Massachusetts (due in part to NiSource's Greater Lawrence event) and recently in New Jersey where the issue was discussed in the state's Energy Master Plan. As the drum beats louder, investors are wondering if this has contributed to multiple compression in the pure-play gas LDC stocks (see Exhibit 3). While there could be many factors, as discussed in our sector initiation report, we see natural gas LDC capital expenditures geared primarily toward safety and reliability, including the replacement of miles and miles of sometimes century-old cast iron and, yes, even wooden distribution lines. Most utilities have project inventories that could take one to two decades to complete with labor generally the largest governor. So, while we do not worry about much of this capital being deployed, but we do worry about investor aversion to these business lines (thematically). Regarding our Outperform rating, we believe the company's current discount to both electric and gas utilities, solid catalysts, and decarbonization profile improvement give investors a sufficient margin of safety.

Valuation

Our $32 target price is derived from our sum-of-the-parts valuation consistent with our valuation of the companies in our coverage universe in the diversified utility segment. Our valuation work is highlighted in Exhibit 4. Our base case valuation is derived by our sum-of-the-parts valuation. Our valuation utilizes a 19.9x base P/E multiple to our 2022 earnings estimate from NiSource's electric utility operations. We apply a modestly lower 19.7x base multiple to our 2022 earnings per share estimate from NiSource's gas distribution utilities, which does not include ~$0.10/share for its Massachusetts gas distribution operations. To reflect this in the valuation we use a rate base of $990mm, apply a 47% equity layer, and use a 1x multiple to generate the equity value associated with this subsidiary, which is then divided by 2022E shares to yield a $1/share value to NiSource.

Risks to Our Target Price and Rating

Downside Risks

We believe that downside risks to our $32 target price and rating for NI include greater-than-expected fines from the Massachusetts DPU than we have incorporated in our model. NiSource has utility operations in seven states. This subjects it to numerous ongoing regulatory and rate matters, and an adverse outcome for the company's utility operations would cause us to reevaluate our target price and estimates.

Upside Risks

Greater-than-expected capital expenditure forecast beyond 2020. The ability for the company to sell its Massachusetts gas LDC for a price that is greater than 1x the rate base.

IMPORTANT DISCLOSURES

Analyst's Certification

I, James M. Thalacker, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Analysts who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Capital Markets and their affiliates, which includes the overall profitability of investment banking services. Compensation for research is based on effectiveness in generating new ideas and in communication of ideas to clients, performance of recommendations, accuracy of earnings estimates, and service to clients.

Analysts employed by BMO Nesbitt Burns Inc. and/or BMO Capital Markets Limited are not registered as research analysts with FINRA. These analysts may not be associated persons of BMO Capital Markets Corp. and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Company Specific Disclosures

Disclosure 9B: BMO Capital Markets makes a market in NiSource Inc in United States.

Methodology and Risks to Target Price/Valuation for NiSource Inc (NI-NYSE)

Methodology: Our $32 target price is the product of a P/E-based sum-of-the-parts (SOTP) analysis of the company's primary regulated operating companies. We utilize a regulated group-average multiple based on 2022E EPS as our initial basis for valuation and then make adjustments specific to each jurisdiction to reflect our current view of the fundamental outlook. For NI specifically, we have removed the earnings contribution of its Massachusetts gas distribution business from our P/E valuation and instead include only the asset value (1x equity rate base) in our SOTP framework.

Risks: NI's regulated profile exposes the company to business risk including but not limited to federal and state regulatory risk, federal and state political risk, environmental policy, interest rate risk, access to capital markets, construction risk, changes in customer demand trends, changes in customer affordability, extreme weather, natural disaster, and equipment failure.

Ratings Key (as of October 2016)

We use the following ratings system definitions:
OP = Outperform - Forecast to outperform the analyst's coverage universe on a total return basis;
Mkt = Market Perform - Forecast to perform roughly in line with the analyst's coverage universe on a total return basis;
Und = Underperform - Forecast to underperform the analyst's coverage universe on a total return basis;
(S) = Speculative investment;
Spd = Suspended - Coverage and rating suspended until coverage is reinstated;
NR = No Rated - No rating at this time; and
R = Restricted - Dissemination of research is currently restricted.

BMO Capital Markets' seven Top 15 lists guide investors to our best ideas according to different objectives (CDN Large Cap, CDN Small Cap, US Large Cap, US Small Cap, Income, CDN Quant, and US Quant have replaced the Top Pick rating).

Bulls Say

- We expect annual dividend growth to average 6% from 2020 to 2023.
- We believe the separation of the Columbia Pipeline Group from NiSource was good shareholder stewardship, as the market valued the individual businesses more highly at the time of the separation.
- New legislation has improved the regulatory framework in Indiana for NiSource's electric and natural gas distribution utilities.

Bears Say

- Industrial customers account for over half of NiSource's electric sales, higher than most utilities. Industrial sales are more sensitive to the economy than residential and commercial sales.
- Liabilities and fines from the September natural gas explosion in Massachusetts are likely to exceed the amounts covered by insurance and also strain regulatory relationships.
- NiSource's common shares increased 15% and it issued about $900 million of preferred shares in 2017 and 2018. The additional shares will be a headwind to EPS growth.

Boston Gas Explosion Costs Finally Firm; Increasing NiSource's Fair Value Estimate

Business Strategy and Outlook

Charles Fishman, CFA, Eq. Analyst, 30 October 2019

NiSource completed its separation from Columbia Pipeline Group in 2015 and now derives all of its operating revenue from its regulated electric and natural gas distribution utilities. About two thirds of operating income comes from its seven natural gas distribution utilities. The remaining third comes from its electric utility business in Indiana.

NiSource's utilities have regulatory frameworks that include automatic rate tracker mechanisms for over 75% of planned capital expenditures, providing recovery of investments in less than 12 months. As a result of the favorable regulation, NiSource has stepped up its capital expenditures to almost $2 billion per year over the next five years. This is an investment level almost double the previous five years.

Over the next 20 years, NiSource plans to invest about $30 billion in infrastructure improvements. Over 50% of these investments are modernization programs for replacing steel and cast-iron pipe with plastic at its natural gas distribution utilities. Almost all of these investments receive rate tracker treatment. This allows NiSource to earn returns on these investments near allowed returns and consistently above its cost of capital.

In September 2018, a natural gas explosion killed one person north of Boston on NiSource's Columbia Gas of Massachusetts system. Although the incident was caused by a contractor, the National Transportation Safety Board concluded at a September 2019 hearing that the ultimate responsibility for the incident rests with NiSource. Insurance should cover a significant portion of the costs, but the event was a public-relations nightmare and did have a negative effect on 2018 and 2019 earnings. Still, we expect annual earnings growth to be back to 6% by 2020.

NiSource cut its dividend in 2015 to $0.62 per share annualized after the separation from CPG. The company increased its dividend by 9.4% in 2017 and 11.4% in 2018. However, in part due to the Boston tragedy, dividend growth was only 2.6% in 2019. As earnings recover, we expect 6% annual dividend increases through 2023, at the midpoint of management's target of 5%-7%.

Analyst Note

Charles Fishman, CFA, Eq. Analyst, 30 October 2019

We are increasing our fair value estimate to $27.50 per share from $27 after narrow-moat NiSource reported break even 2019 third-quarter operating EPS, initiated 2020 earnings guidance in line with our estimate, and modestly increased the lower end of its 2020-22 capital expenditure guidance.

The financial impact from the tragic natural gas explosion north of Boston in September 2018 appears to be quantified and was one of the drivers for the $0.50 per share increase in our fair value estimate. For the first time since the tragedy, the estimate of total costs related to the event were unchanged versus last quarter. We reduced our estimate of the costs, net of insurance recovery, to $850 million from our previous estimate of $1 billion.

The increase in our capital expenditure estimate also had a positive impact on our fair value estimate. The $100 million bump in the lower end of the three-year annual capital expenditure guidance range, to $1.7 billion-$2.0 billion, increases our confidence in our estimates that were already above the midpoint of management's previous guidance. We increased our average annual capital expenditures over the next three years by approximately $30 million, to an average of $1.93 billion per year.

We have a high level of confidence that these investments will achieve returns above our 6% estimate of NiSource's weighted average cost of capital since approximately 78% are covered by rate trackers and reflected in rates in 12 months or less after the investment. This favorable regulatory framework reduces regulatory lag, improving returns on invested capital.

The third quarter is normally weak since about two thirds of NiSource's earnings are from natural gas distribution. NiSource's break even third-quarter results compare with

NiSource Inc NI (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★	29.79 USD	27.50 USD	1.08	2.73	2.82	11.13	Utilities - Regulated Gas	Standard
03 Feb 2020 22:39, UTC	03 Feb 2020	30 Oct 2019 19:51, UTC		03 Feb 2020	03 Feb 2020	03 Feb 2020		

Close Competitors	Currency (Mil)	Market Cap	TTM Sales	Operating Margin	TTM/PE
WEC Energy Group Inc WEC	USD	31,824	7,652	19.05	28.17
CMS Energy Corp CMS	USD	19,438	6,879	17.12	28.65
Alliant Energy Corp LNT	USD	14,306	3,641	19.93	26.67

$0.10 per share in the same period last year. NiSource reaffirmed its 2019 EPS guidance range of $1.27-$1.33, and our estimate of $1.30 is unchanged.

Economic Moat

Charles Fishman, Eq. Analyst, 30 October 2019

Service territory monopolies and efficient scale advantages are the primary moat sources for NiSource's regulated utilities. State and federal regulators typically grant regulated utilities exclusive rights to charge customers rates that allow the utilities to earn a fair return on and return of the capital they invest to build, operate, and maintain their infrastructure. In exchange for regulated utilities' service territory monopolies, state and federal regulators set returns at levels that aim to minimize customer costs while offering fair returns for capital providers.

This implicit contract between regulators and capital providers should, on balance, allow NiSource's regulated utilities to achieve at least their costs of capital, though observable returns might vary in the short run based on demand trends, investment cycles, operating costs, and access to financing.

NiSource derives roughly two thirds of its operating earnings from the regulated distribution of natural gas. For natural gas distribution service, regulators set distribution rates and the commodity price for customers purchasing natural gas from NiSource. NiSource recovers its costs for natural gas that it sells with a pass-through charge to customers. Thus, NiSource has no commodity price risk that could weaken its moat. Customers may elect to purchase natural gas from independent retail energy suppliers and use and pay for distribution services only. NiSource exited the no-moat retail energy supply business in 2010.

Electricity generation, which contributes about one third of operating earnings, is from operations in Indiana and is also regulated. The rates for this service are combined with regulated customer rates for transmission and distribution service. In exchange for its monopoly position, state and federal regulators set NiSource's electric rates.

Fair Value & Profit Drivers

Charles Fishman, Eq. Analyst, 30 October 2019

We increased our fair value estimate to $27.50 per share from $27 after NiSource reported third-quarter earnings, initiated 2020 earnings guidance in line with our estimate, and modestly increased the lower end of 2020-22 capital expenditure guidance.

The financial impact from the tragic natural gas explosion north of Boston in September 2018 appear now to be quantified and was one of the drivers for the $0.50 per share increase in our fair value estimate. For the first time since the tragedy, the estimate of total costs related to the event were unchanged versus last quarter. We reduced our estimate of the costs, net of insurance recovery, to $850 million from our previous estimate of $1 billion.

The increase in our capital expenditure estimate also had a positive impact on our fair value estimate. The $100 million bump in the lower end of management's three-year annual capital expenditure guidance range, to $1.7 billion-$2 billion, increases our confidence in our estimates that were already above the midpoint of previous guidance. We increased our average annual capital expenditures over the next three years by approximately $30 million, to an average of $1.93 billion per year.

We have a high level of confidence that these investments will achieve returns above our 6% estimate of NiSource's weighted average cost of capital since approximately 78% are covered by rate trackers and reflected in rates in 12 months or less after the investment. This favorable regulatory framework reduces regulatory lag, improving returns on investment.

We use a 6% cost of capital in our discounted cash flow valuation, which incorporates a 7.5% cost of equity. Our cost of equity is lower than the 9% rate of return we expect investors will demand of a diversified equity portfolio. We believe our cost of equity reflects the risk associated with regulated electric and natural gas distribution utilities operating in states that have average to above-average regulatory frameworks.

Our pretax cost of debt assumption is 5.8%, as we incorporate a normalized long-term real rate environment

NiSource Inc NI (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★	29.79 USD	27.50 USD	1.08	2.73	2.82	11.13	Utilities - Regulated Gas	Standard
03 Feb 2020 22:39, UTC	03 Feb 2020	30 Oct 2019 19:51, UTC		03 Feb 2020	03 Feb 2020	03 Feb 2020		

and normalized credit spreads. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Our fair value estimate implies a 20 times multiple on 2020 earnings. This is a discount to market valuations for peer combination electric and gas distribution utilities that we think are overvalued as of late October.

Risk & Uncertainty

Charles Fishman, Eq. Analyst, 30 October 2019

Regulatory risk remains the key uncertainty; however, NiSource's regulatory exposure is diversified, owing to operations in seven states and its federal-regulated electric transmission system. NiSource has reduced some of the regulatory uncertainty related to its planned natural gas distribution and electric utilities investments by securing preapprovals and favorable rate mechanisms that provide for automatic rate increases as infrastructure investments are made.

In 2018, NiSource announced it would eliminate all coal-fired generation from its power plant fleet within 10 years. This transition will require signing power purchase agreements for renewable energy; building new gas-fired power plants and solar and wind farms; and making modifications to its electric grid. There is a modest amount of execution risk to this dramatic transition from coal.

Stewardship

Charles Fishman, Eq. Analyst, 30 October 2019

We assign NiSource a Standard stewardship rating. We think management's decision to form Columbia Pipeline Partners and execute CPG's tax-free separation exhibited exemplary stewardship of shareholder capital. However, the CEO who probably drove those decisions left NiSource to go with CPG before he retired.

The National Transportation Safety Board found NiSource responsible for the tragic gas explosion north of Boston. The incident had a negative effect on shareholder value and has been a public relations nightmare. The good news is that Massachusetts represents less than 10% of operating earnings.

Joe Hamrock became CEO following the separation. He has been with NiSource since 2012 and previously ran the natural gas distribution business. Before joining NiSource, he was with American Electric Power. CFO Donald Brown joined NiSource in April 2015. Previously, he was with UGI Utilities and Constellation Energy. These individuals have significant utility experience, and we believe they will not stray from the strategy that has benefited shareholders.

Most of the members of NiSource's board of directors were involved in the separation of CPG and oversight of investment decisions. Given this, we are confident that the solid stewardship of shareholder capital is likely to continue.

The Next Battle Royale: Natural Gas Generation vs. Renewable Energy

Travis Miller, Strategist, 07 October 2019

We are reaffirming our fair value estimates and moat ratings for all U.S. utilities after updating our 2020-30 U.S. power generation forecast.

Our forecast shows natural gas generation expanding its leading market share in the U.S. power generation market through 2030. But our forecast also shows renewable energy moving into second place, overtaking coal, nuclear, and hydropower generation.

We think this sets up a "bloody" fight for market share by the end of the next decade: natural gas vs. renewable energy. Renewable energy has policy momentum and its costs are now competitive with natural gas generation even at today's low gas prices and without tax subsidies. But gas generators offer grid reliability, a key competitive advantage.

We forecast U.S. renewable energy will top 1,000 terawatt-hours by 2030, or 22% of U.S. electricity generation, excluding hydropower. The ramp down in solar and wind tax credits during the next five years won't slow growth as much as others assume. Our 8% CAGR in 2018-30 is higher than global growth rate forecasts and higher than the most recent U.S. Energy Information Administration reference case.

State renewable energy portfolio standards and corporate purchases will fill in any growth gaps related to tax roll-offs. We estimate 32 of the 38 states with renewable energy targets have not met their marks. New York (70% by 2030) and California (60% by 2030) represent one-third of our renewable energy growth forecast.

We forecast natural gas generation will grow 2% annually between 2019 and 2030, reaching 41% of U.S. generation. Coal and nuclear will each fall to 15% market share.

Utilities with large renewable energy investment plans like NextEra Energy and Xcel Energy will continue to benefit from our higher renewable energy growth forecast. We think the market overlooks renewable energy growth potential from wide- and narrow- moat utilities like CMS Energy, NiSource, Edison International, Alliant Energy, and Dominion Energy.

Boston Gas Explosion Costs Finally Firm; Increasing NiSource's Fair Value Estimate

Charles Fishman, Eq. Analyst, 30 October 2019

We are increasing our fair value estimate to $27.50 per share from $27 after narrow-moat NiSource reported break even 2019 third-quarter operating EPS, initiated 2020 earnings guidance in line with our estimate, and modestly increased the lower end of its 2020-22 capital expenditure guidance.

The financial impact from the tragic natural gas explosion north of Boston in September 2018 appears to be quantified and was one of the drivers for the $0.50 per share increase in our fair value estimate. For the first time since the tragedy, the estimate of total costs related to the event were unchanged versus last quarter. We reduced our estimate of the costs, net of insurance recovery, to $850 million from our previous estimate of $1 billion.

The increase in our capital expenditure estimate also had a positive impact on our fair value estimate. The $100 million bump in the lower end of the three-year annual capital expenditure guidance range, to $1.7 billion-$2.0 billion, increases our confidence in our estimates that were already above the midpoint of management's previous guidance. We increased our average annual capital expenditures over the next three years by approximately $30 million, to an average of $1.93 billion per year.

We have a high level of confidence that these investments will achieve returns above our 6% estimate of NiSource's weighted average cost of capital since approximately 78% are covered by rate trackers and reflected in rates in 12 months or less after the investment. This favorable regulatory framework reduces regulatory lag, improving returns on invested capital.

The third quarter is normally weak since about two thirds of NiSource's earnings are from natural gas distribution. NiSource's break even third-quarter results compare with $0.10 per share in the same period last year. NiSource reaffirmed its 2019 EPS guidance range of $1.27-$1.33, and our estimate of $1.30 is unchanged.

Company Profile

NiSource is one of the nation's largest natural gas distribution companies with approximately 3.5 million customers in Indiana, Kentucky, Maryland, Massachusetts, Ohio, Pennsylvania, and Virginia. NiSource's electric utility transmits and distributes electricity in northern Indiana to about 500,000 customers. The regulated electric utility also owns more than 3,000 megawatts of generation capacity, most of which is now coal-fired but is being replaced by natural gas and renewables.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. We believe this bottom-up, long-term, fundamentally based approach allows our analysts to focus on long-term business drivers, which have the greatest valuation impact, rather than short-term market noise.

Morningstar's equity research group (“we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at an uncertainty-adjusted discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define excess economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

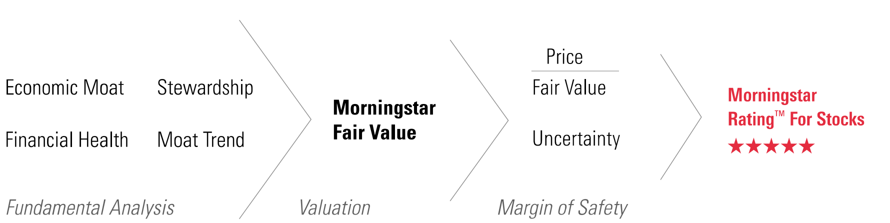
To assess the direction of the underlying competitive advantages, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

All the moat and moat trend ratings undergo periodic review and any changes must be approved by the Morningstar Economic Moat Committee, comprised of senior members of Morningstar's equity research department.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies



Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes, or EBI, and the net new investment, or NNI, to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital, or RONIC, and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until the perpetuity stage is reached. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term market-value weights.

Research Methodology for Valuing Companies

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the fair value estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

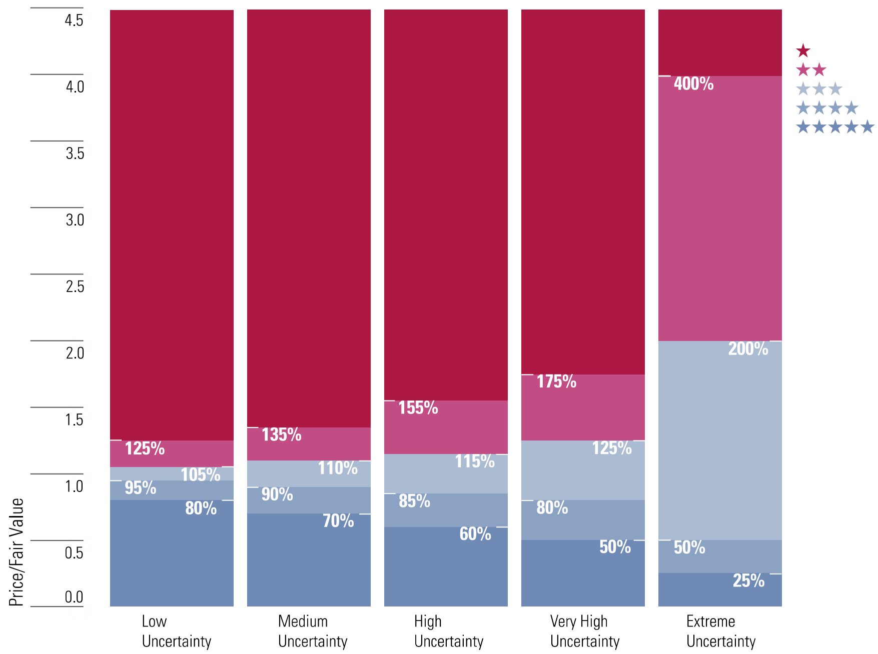
- Low–margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- Medium–margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- High–margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- Very High–margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- Extreme–margin of safety for 5-star rating is a 75% discount and for 1-star rating is 300% premium.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed, which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com.

Morningstar Equity Research Star Rating Methodology



Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open.

Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. The current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. The market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Research Methodology for Valuing Companies

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ► Undervalued: Last Price is below Morningstar's quantitative fair value estimate.
- ► Fairly Valued: Last Price is in line with Morningstar's quantitative fair value estimate.
- ► Overvalued: Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview

The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings

Morningstar's quantitative equity ratings consist of:
(i) Quantitative Fair Value Estimate
(ii) Quantitative Star Rating
(iii) Quantitative Uncertainty
(iv) Quantitative Economic Moat
(v) Quantitative Financial Health
(collectively the "Quantitative Ratings").

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. (""Morningstar," "we," "our") calculates Quantitative Ratings for companies whether it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the quantitative fair value estimate using a statistical model derived from the fair value estimate Morningstar's equity analysts assign to companies. Please go to https://shareholders.morningstar.com for information about fair value estimates Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ► Narrow: assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ► Wide: assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ► None: assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as 1-Star, 2-Star, 3-Star, 4-Star, and 5-Star.

★: the stock is overvalued with a reasonable margin of safety.
Log (Quant FVE/Price)<–1*Quantitative Uncertainty

★★: the stock is somewhat overvalued.
Log (Quant FVE/Price) between (–1*Quantitative Uncertainty, –0.5*Quantitative Uncertainty)

★★★: the stock is approximately fairly valued.
Log (Quant FVE/Price) between (–0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)

★★★★: the stock is somewhat undervalued.
Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)

★★★★★: the stock is undervalued with a reasonable margin of safety. Log (Quant FVE/Price) >1*Quantitative Uncertainty

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the quantitative fair value estimate. Generally, the lower the quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rating is expressed as Low, Medium, High, Very High, and Extreme.

- ► Low: the interquartile range for possible fair values is less than 10%.
- ► Medium: the interquartile range for possible fair values is less than 15% but greater than 10%.
- ► High: the interquartile range for possible fair values is less than 35% but greater than 15%.
- ► Very High: the interquartile range for possible fair values is less than 80% but greater than 35%.
- ► Extreme: the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- ► Weak: assigned when Quantitative Financial Health <0.2
- ► Moderate: assigned when Quantitative Financial Health is between 0.2 and 0.7
- ► Strong: assigned when Quantitative Financial Health >0.7

Research Methodology for Valuing Companies

Other Definitions

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ► Undervalued: Last Price is below Morningstar's quantitative fair value estimate.
- ► Fairly Valued: Last Price is in line with Morningstar's quantitative fair value estimate.
- ► Overvalued: Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning
Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions.

A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit http://global.morningstar.com/equitydisclosures.

The analysis within this report is prepared by the person(s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc. performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

Rebalancing Our Stock Recommendations & Waving The Yellow Flag On Valuation

We are rolling out '22 EPS forecasts, updating 12-month targets.

Upgrading CNP, DTE and NI From In Line To Outperform. SRE, FE, EXC, AES, VST, and NRG remain Outperform-rated.

Upgrading PNW from Underperform To In Line.

Downgrading CMS, NEE from Outperform To In Line.

Downgrading ES, WEC From In Line To Underperform. HE remains Underperform-rated.

Waving the "yellow flag" on electric utility group valuations: Regulated utility stocks now look fully priced to expensive in all of our valuation models. The "best-in-class" earnings and dividend growth compounders in particular are trading at big premiums on top of the already robust average group valuation. We are consciously tilting to value over quality on the margin in our stock selection.

Absolute valuations on FactSet NTM consensus are at an all-time high; relative valuations vs. the S&P 500 remain elevated. For our regulated universe, P/Es are 22.3x NTM FactSet consensus, an all-time high, and vs. 21.2x at YE '19. The FactSet relative P/E remains elevated at 1.20x and higher than the 1.17x posted at YE '19, though below the max risk-off level of 1.3x+ we saw in December '18, when the market was pricing in recession risk. So for utilities to go higher on a relative basis, the market would have to go incrementally "risk-off."

Our dividend discount model explains assumptions that support the group's robust absolute valuation. If we assume current rate base growth trends are sustainable and authorized ROEs decline, but at a modest rate of change with interest rates continuing to be subdued, one can justify a group valuation of 19.5-20x '22 EPS and even understand the 22-25x '22 EPS valuation accorded to the "best-in-class" companies. But that is increasingly pricing in perfection. We discuss our DDM methodology in detail in this report. We concede that they could stay at these elevated valuations until perspectives on the future levels of interest rates and inflation change (higher) or the perspective on ROE trends changes (lower). However, it is hard to see a lot of upside on either an absolute or a relative valuation basis vs. the market, unless we go to pre-recession "risk-off" levels.

Our bond regression model shows the group is fully priced to the current low level of Treasury and Corporate bond yields. At 1/24/20, the 10yr yield was 1.74% and the Moody's Baa yield was 3.74%. Our bond model reading was 3.7% expensive on '20 dividend yields and 1.6% inexpensive on 12 month out (expected '21) dividend yields. The model discounts corporates at ~3.8% a year out and the 10yr yield at ~1.59%, assuming a historic average spread of 222bp. Every 25 basis points of change in our target corporate bond yield assumptions—all things equal—impacts valuation by a little over half a turn on the P/E multiple.

Regulated Utilities: 1/27/20—YELLOW FLAG ON VALUATION

Today We Roll Out '22 EPS Estimates, Update Target Prices & Are Rebalancing Ratings.

We Are Upgrading CNP, DTE, NI To Outperform From In Line. SRE, FE, EXC & AES (As Well As NRG and VST) Remain Rated Outperform.

We Are Upgrading PNW To In Line From Underperform.

We Are Downgrading CMS & NEE To In Line From Outperform.

We Are Downgrading ES & WEC to Underperform From In Line. HE Rated Underperform.

Waving The Valuation Yellow Flag! *The Group Is Now Very Full In All Our Models.*

Average Absolute P/E Valuation Is ~22.3x NTM FactSet Consensus, A Peak. Relative P/E Vs. The SP500 Is 1.20x.

Our DDM Shows That Current Valuations Price In The Current Growth / Return Profile Of The Sector With Very Little Downside Risk, Despite Some Fraying On The ROE Front.

In Our Bond Model They Are Fully Priced But Not Overvalued, Given Current Treasury & Corporate Bond Yields. 12-Months Out They Are Discounting A Moody's Baa Corporate Bond Yield Of 3.81% And A 10 Year T-Bond Yield Of 1.59%.

Our Universe: We Cover 26 Regulated Utilities, 3 Diversified Utilities, 2 IPPs

- **Utilities are trading at risk-off P/E multiples, above what we saw in '16 / '17 / '18.**
- **P/E multiples average 22.3x '20, 20.9x '21, and 19.8x '22 EPS.**
  - **All of those P/E multiple averages remove the extreme discounts of three stocks: EIX, PCG, and PPL.**
- **The group peaked in '18 on 12/13/18 at 20.9x '18, 19.7x '19, 18.5x '20.**
- **The group peaked in '17 on 11/14/17 at 21.8x '17, 20.4x '18, and 18.8x '19.**
- **The post-Brexit July '16 highs were 20.5x '16, 19.5x '17 and 18.5x '18.**

- **Within the Regulated Universe, the companies that are considered the safest (the best earnings and dividend growth compounders) are now trading at particularly high absolute and relative valuations.**
  - **Our downgrades of NEE and CMS to IL from OP and ES and WEC from IL to UP don't reflect a view that their fundamental ability to compound returns has changed, but more that they are increasingly fully / over-valued relative to those attributes.**
  - **Our upgrades: We concede that CNP, NI, DTE are cheaper because they are more complex / are seen as more risky but see opportunity. EXC is also a somewhat binary special situation. AES is transforming in to a lower risk more consistent EPS growth vehicle. We see FE as a good relative value vs. other higher priced regulated names. SRE remains—in our view—a differentiated total return story that is under-appreciated.**

Summary Of Rating & Price Target Changes

- **We believe the group is very fully valued. But we set our target prices on a "market agnostic" basis, which means we are using an anchor P/E multiple of ~19.5x '22 EPS so investors can better see where we see good relative value.**
  - **Based on our updated 12-month target prices, the average utility (excluding PCG) should post a total return of 4.8%.**
  - **Our Outperform-rated stocks are expected to post a 12-month total return of 10.5%.**
  - **Our Underperform-rated stocks are expected to post a 12-month total return of (3.6%).**
- **We discuss rating changes over the following pages.**

Company	Rating			Target Price			Dividend	Price	Total

Upgrading CNP, NI, DTE to Outperform From In Line

CNP – Outperform, TP: $28, ETR: 10.5%: We are raising CNP to Outperform from In Line. CenterPoint has underperformed significantly over the past year, with developments in the Houston Electric rate case plus lower expected results at Enable midstream adding to the balance sheet issues created by CNP overpaying for the Vectren acquisition. The company has said it will provide a "reboot" of its financial outlook and financing plan with its Q4 results. CNP may or may not sell their unregulated businesses (per news reports) which while it would be EPS dilutive could improve its quality of earnings, enhance its risk profile and reduce equity needs because they have to shore up the balance sheet. We expect the company to issue guidance for '20 EPS of $1.50, and $1.45 is not out of the question. Off that reset, we believe they could grow EPS 6% annually through '22 after a repairing of the balance sheet due to above-average rate base growth at the utilities. Our $28 target price is 16.5x our '22 EPS estimate of $1.70 a 16.5% discount to peers at 19.8X '20 EPS which is warranted given midstream exposure and parent leverage.

NI – Outperform, TP: $31, ETR: 9.5%: We are raising NI to Outperform from In Line. NiSource stock has significantly underperformed the last two years and the stock now trades at a discount to peers. The company appears to have (finally) put a firm band around total costs for the Greater Lawrence incident, the cause of that underperformance. There is still some uncertainty regarding fines and penalties with Massachusetts investigations (e.g. Mass. DPU) but potential upside to cash flow with property insurance not included in the plan. Equity issuance announcement is behind them and they still expect to now deliver 5-7% annual EPS growth going forward. We derive a 9% estimated total return from our sum-of-the-parts analysis where, for the electric utility, we assign a 5% premium multiple to our base P/E target multiple of 19.5x '22 EPS. We assign a 5% discount multiple to comparable LDC's for the gas utilities. Our target price of $31 implies a 20X P/E multiple of '22 EPS.

DTE – Outperform, TP: $139, ETR: 7.8%: We are raising DTE to Outperform from In Line. We are upgrading our rating on DTE to Outperform from In Line and raising our price target to $139 from $128. That target price is 18.4X '22 EPS, a 7% discount to peers. DTE is trading at an 11% discount to peers on '22 EPS. We concede that due to DTE's business mix--which is +/-70% utilities but 30% pipeline/midstream, power and industrials, trading--that many investors will argue the stock is not cheap on a "sum of the parts" basis. However, we have heard that before, and DTE has a long history of overcoming that skepticism by over delivering on financial targets and we believe this will continue, with our expectation that DTE will deliver toward the upper end of its 5-7% EPS growth plan, with growth at the utilities and gas storage and pipeline business offsetting the next roll off of Reduced Emissions Fuel Credits in 2022. We expect outperformance over the coming months as investors get more comfortable with DTE's latest gas midstream acquisition and as the company potentially outperforms financial targets Our 2019 and 2020 estimates remain $6.24 and $6.65, respectively. We are lowering our 2021E by a dime to $7.00 and introducing a 2022E of $7.55.

Source: FactSet, Evercore ISI Research

Additional Outperform-Rated Stocks

AES – Outperform, TP: $23, ETR: 15.8%: We are increasing our 12-month target price to $23/sh from $18.5/sh. Rating remains Outperform. The stock currently trades at only ~12x our '22 EPS forecast of $1.70/sh. Given the progress AES is making towards firming up its EPS and FCF growth outlook and improving credit quality, we think the stock deserves a higher valuation albeit it should still trade at a material discount vs. the traditional U.S. utilities. Also their investment in Fluence (a battery JV with Siemens) could be a hidden upside as it is growing rapidly while not contributing to EPS. Our $23/sh target price is ~13.5X our '22 estimate vs. a 19.5x target for the U.S. utility peer group. International utility holding companies like Iberdrola trade at ~15.6X '22 consensus EPS.

EXC – Outperform, TP: $52.5, ETR: 13.4%: There is a lot of risk priced in to EXC shares. The stock is being weighed down by the lack of consideration of IL energy legislation in '19 and the Federal corruption investigation in which EXC has been issued several Grand Jury subpoenas, the first disclosed in a 7/15/19 8K. Investors should also note that ComEd's franchise agreement with the city of Chicago is set to expire at YE '20 and needs to be renewed, which poses another risk. This situation remains unpalatable near term given the uncertain direction and timeline for resolution of this investigation, but we think the risk is more than priced in. At a peer average multiple EXC's core utility business is worth between $42-$48/share at their '22 EPS guidance of $2.15-$2.45/share. We put EXC's utility value at ~$43/share, meaning you are buying ExGen for +/-$4.5/share which is the equivalent of ~4.5x EV/EBITDA, ~2.6X debt/EBITDA, generating cash at a ~20% unlevered FCF yield before any assumption of upside from IL legislation or closing money losing plants. Alternatively if you think ExGen is worth 6X EV/EBITDA you are paying ~17.5x '22 EPS for the utilities. There is over a ~$3.3bn valuation gap. If the IL legislature takes up and passes their energy policy agenda in 2020 that means there is a lot of upside.

FE – Outperform, TP: $53, ETR: 8.2%: Our 12-month target price is $53/sh which is ~19.2x our '22 UPO forecast of $2.75/sh. That is a ~2% discount vs. the average target multiple of 19.5x '22 EPS for our regulated utility coverage universe. Our valuation uses a sum of the parts methodology that takes in to account a risk adjustment for parent leverage and credit metrics being below the average for our coverage universe. For the distribution business, we apply a 19.0x multiple – a ~3% discount vs. what we view fair value for an average utility. For the transmission business, we apply 20.5x multiple, a ~5% premium to the 19.5x multiple that we view as fair value for an average utility due to the transmission segment's higher than average authorized ROE, formula rates, and higher earnings growth profile. The result is a consolidated P/E multiple target of ~19.2x, a slight discount to our group average target multiple. FE is a good investment alternative relative to some of the stocks in our universe trading at more exorbitant premiums currently.

Source: FactSet, Evercore ISI Research

Additional Outperform-Rated Stocks

SRE – Outperform, TP: $170, ETR: 9.2%: We see SRE as a core holding for the next several years as we think they have repositioned the company to exceed consensus EPS growth expectations short to medium term and have significant opportunities to enhance LT value through there LNG export business. We are raising our price target to $170/sh from $160/sh as part of our model rollforward. Our target price puts a 50% weighting on our base and bull case valuations, which results in a target P/E multiple on '22 EPS of 20.1x. Our bull case target price is $177/sh and incorporates some upside from SRE's incremental LNG projects. Our base case target of $163/sh only assumes Cameron trains 1-3 enter service.

- Base case: For SDG&E we apply a 5% premium to the anchor 19.5x multiple on '22 EPS for regulated electrics. Historically, we think investors accorded SRE's California utilities a premium P/E multiple due to their consistent growth outcomes and achieved returns on equity but due to wildfire liability issues associated with inverse condemnation that premium has melted out of the stock price. We value SoCalGas at a 5% discount to the trading value of a group of comparable pure play gas distribution companies. We use the 5% discount because we think the average pure play LDC multiple includes an implied takeover premium. For Oncor we use a 21.5x multiple which is a 10% premium to our base 19.5x multiple, due to the state's strong load growth and stable regulatory environment. For Cameron LNG we use a DCF approach to value ~$12bn in cash distributions over the next 20 years using a 7% discount rate to come up with a current equity value of ~$19/sh. We value IEnova based on SRE's percent ownership (66.5%) of the company's current market value. At the parent we use our "50/50" valuation method to average a P/E multiple approach against parent interest expense and deducting the per share value of parent leverage at YE '22.

- Bull case: We include potential uplift from Cameron trains 4 and 5 (~8 Mtpa) which they have signed an MOU with Total for significant capacity, but not from ECA or Port Arthur. However, using the same rough valuation math that we use for Cameron trains 4 and 5 Port Arthur could be worth ~$8.5/sh too, so our upside case assumptions are fungible as long as SRE executes on a portion of its LNG export growth ambitions. Given the constructive legislative outcome with the passage of the AB 1054 and related legislation in CA, the potential for multiple expansion on the component of SRE's EPS that comes from its CA utilities becomes much more probable, in addition to the upside from other areas of the business.

Source: FactSet, Evercore ISI Research

Downgrading CMS, NEE to In Line From Outperform

CMS – In Line, TP: $69, ETR: 4.8%: We are lowering CMS to In Line from Outperform. We continue to view CMS as a high-quality regulated utility with a top-tier management team and an impressive track record, particularly from an earnings execution standpoint. We also continue to expect CMS to deliver EPS CAGR of 7% through 2022 (well above average for a regulated utility) and at the midpoint of their targeted 6-8% CAGR. However, we expect it will be harder for the company to keep up this level of growth beyond our modeling time horizon. We expect rate base growth to slow as it becomes harder to offset growing depreciation and the anticipated retirement of coal plants (Karn 1 and 2 will retire in 2023 resulting in the loss of $660m in rate base and others could follow), and we also see the risk that authorized ROEs come down further in Michigan, making it harder for the utility to deliver premium earned returns at the electric business in particular. They could offset these headwinds by earning higher incentive based revenues and investing outside the core utilities. But even assuming that the stock is no longer cheap. The stock up almost 7% YTD after being up just under 30% in 2019, we cannot continue to support an Outperform Rating. As a result, we are downgrading our rating on CMS to In Line even as we raise our PT to $69 from $64.50 on a rolled forward and new 2022 EPS estimate of $3.08. This reflects a 22.4x P/E multiple (a 15% premium to our target regulated utility multiple of 19.5x). Meanwhile, our 2019E of $2.50 is up a penny and our 2020 and 2021 EPS forecasts are unchanged at $2.68 and $2.88, respectively.

NEE – In Line, TP: $263, ETR: 2.2%: We are lowering NEE to In Line from Outperform. NextEra is a "best in class" earnings and dividend growth compounder with a lot of visibility for continued growth. The core utility business (FPL) offers a strong rate base and earnings growth profile with significant capex opportunities in a historically stable regulatory environment. NEER is the largest renewable energy developer in the country with a robust backlog of development opportunities that bolsters EPS growth visibility. NEE has been successfully implementing its "playbook" at Gulf Power, driving operating costs lower and rate base higher, setting NextEra up for meaningful accretion this year and next. We have confidence NEE will grow at or near the top end of their long-term 6-8% EPS CAGR guidance through '22. However, it is hard to see material upside in the shares from here with the stock at a ~25x multiple on '22 EPS expectations. So while we have utmost confidence in their ability to deliver on financial results our 12-month total return profile of 2% determined using our sum-of-the-parts supports an In Line rating and comes despite assigning premium multiples across the business lines. We also have to consider there is some risk rate case filings at FPL and Gulf Power (possibly combined) in 2021 and the ongoing need to recycle a lot of capital at NEER to continue driving earnings growth in the renewable energy businesses.

Source: FactSet, Evercore ISI Research

Upgrading PNW to In Line From Underperform

PNW – In Line, TP: $97, ETR: 3.3%: We are raising PNW to In Line from Underperform. PNW has underperformed significantly over the past several months in the midst of a challenging regulatory environment. The APS rate case is likely to extend beyond the November 2020 election of two new commissioners. We acknowledge it is early to tell if there could be a change in the make-up (and tone) of the Arizona commission. That being said, we assume a conservative, below-consensus $5.00 EPS estimate for ’21 which we derive using the Staff position in the pending Tucson Electric rate case. From our conservative ’21 estimate, we assume a return to normal EPS growth and $5.30/share of EPS in ‘22. Our $97/share target price is ~18.3x our ’22 EPS estimate which is a 7% discount to peers. We know there is a long timeline of uncertainty here in the pending rate case and with an election pending but we can no longer justify an Underperform rating at this valuation.

Source: FactSet, Evercore ISI Research

Downgrading ES, WEC To Underperform From In Line

ES – Underperform, TP: $89, ETR: -0.4%: We are lowering ES to Underperform from In Line. ES is up over 7% YTD after rising 34% in 2019, and is now trading at 22.7x 2022 EPS, a 14% premium to the regulated utility group. While we believe ES merits a premium given an ESG friendly business mix, limited rate case related risk, above-average largely T&D driven EPS growth, and an impressive management team execution track record over many years we also worry that the stock has run up too much and too fast and is now already pricing in upside from planned offshore wind investments. That is despite what is still a long road ahead before the projects start generating power and cash flow the current valuation may overly minimize risks in that segment related to permitting and construction. This rating change also has much to do with frothy overall valuations in the regulated utility sector and what we see as an overextended premium being paid for best in class earnings and dividend growth compounders like ES. As a result, we are downgrading our rating to Underperform from In Line even as we raise our price target to $89 from $83.50. We maintain our 2019, 2020, 2021, and 2022 EPS estimates of $3.45, $3.65, $3.85, and $4.05.

WEC – Underperform, TP: $95, ETR: -1.3%: We are lowering WEC to Underperform from In Line. We are downgrading our rating on WEC to Underperform from In Line. While we believe WEC will deliver on targeted EPS growth, very likely at the upper end of their 5-7% range, with the benefit of a highly constructive rate plan in WI (finalized last year and running two years) and no equity needs, we also see the stock as more than pricing in these positive fundamentals, and see more risk of downside than upside, largely from a valuation perspective. WEC is currently trading at a 23.3x P/E multiple on 2022 EPS, representing a 17% premium to the group. We are raising our price target with this note to $95 from $91, as we roll forward our valuation to 2022 and capture another year of above average EPS growth. That said, we still see 4% downside risk (excluding the dividend yield) at our new target. This rating change has much to do with frothy overall valuations in the regulated utility sector and what we see as an overextended premium being paid for best in class earnings and dividend growth compounders like WEC. We maintain our 2019, 2020, 2021 EPS estimates of $3.53, $3.75, and $4.05 and are introducing a 2022E of $4.25.

Source: FactSet, Evercore ISI Research

Additional Underperform-Rated Stocks

HE – Underperform, TP: $43, ETR: -8.6%: We are raising our price target to $43 from $41 as part of our model rollforward. Our target price is based on a SOTP valuation: for the utility we use an 18.7x P/E multiple on our '22 EPS (a ~4% discount to our '22 P/E multiple for the regulated peer group of 19.5x), and apply the same multiple for earnings from Pacific Current (which will technically not reside at the utility). We utilize an equal-weighted methodology on P/E and P/TBV based on a set of comparable banks to derive our ASB valuation, which is ~$12/sh. Although we expect that the structural earned ROE lag at the utilities to diminish over time as HE continues to progress to their triennial rate case cycle, they still face regulatory risk from the ultimate outcome of the performance-based regulation (PBR) proceeding that is currently in Phase II. While the expected Decision and Order from PBR Phase I appeared to be relatively straightforward, and the full PBR proceeding is now expected to be completed in December '20 (after the 1/1/20 deadline laid out by SB 2939), it does appear that the ultimate outcome of the PBR proceeding may be more constructive than we had originally contemplated. However, we continue to believe that the market has taken an overly optimistic view on the PBR proceedings' ultimate impact on the future financial benefits for HE's utilities. At ASB, we expect NIM compression due to headwinds from the low interest rate environment, though this will be partly offset by low-to-mid single digit earning asset growth.

Source: FactSet, Evercore ISI Research

Yellow Flag! The Group Looks Pretty Fully Priced On Most Measures

- YTD regulated utilities are up 5.1%, outperforming the SP500, which is up 2.0%.
    - The top 10 excluding PCG are up 8.1%.
    - The bottom 10 are up 2% excluding VST and NRG.
- On 1/24/20, the FactSet consensus NTM absolute P/E was 22.31x, above the prior all-time high of 21.76x, reached on 9/29/19.
        - The peaks prior to June '19 were 12/3/17 at 20.84x and 7/15/16 (Post Brexit) at 19.93x.
        - Since '06 the average NTM absolute P/E is 15.89x. Since '95 it is 14.35x.
- On 1/24/20, the FactSet consensus NTM relative P/E to the SP500 was 1.20x,
    - Post Brexit vote that number was 1.17x, which we hit again mid-Nov '18.
    - Since '06 the average relative P/E has been 1.09x. Since '95 it has been 0.93x.
    - FactSet consensus NTM relative P/E to the SP500 peaked on 12/13/18 at 1.31x. On 5/1/19 it was 1.17x.
        - So we only likely go higher on relative P/E if the market goes increasingly risk off.
- Utilities are now discounting a ~1.59% UST 10yr yield and a ~3.81% corporate bond yield when looking at expected dividend yields in '21 (one year out).
    - So they are fully priced to bond yields staying low.
- Based on our DDM framework they also seem increasingly priced to perfection.

Utilities Stock Performance: Several Utes Laggards From ’18 Outpaced the Market In ‘19

- Utilities underperformed the SP500 in FY 2019 (up 26.5% vs. up 28.9%). However 13 of the 26 stocks in our regulated universe did beat the SP500 return for FY ’19. YTD in ’20, utilities have outperformed the SP500 (up 5.1% vs. up 2.0%).

- Stock selection matters!
  - In FY ’19 the top 5 best regulated performers were up 43.4% whilst the bottom 5 were up 7.7% (excluding PCG). PEG was up 17.1%, EXC was up 4.3%. VST was up 2.6% and NRG was up 0.7%.
  - In terms of group leadership in ‘19, only 4 were top 10 performers in ’18: ETR, NEE, WEC, FE.
  - The regulated names in the top 10 in ‘19 that were index or worse performers in ’18: SO, SRE, EIX, ES, PPL, XEL.

Yellow Flag! The Group Is Expensive On P/E Multiples & Fully Priced In Our Bond Regression Model

- **Up +/-5% since YE ’19, utilities are now trading at 19.8x ’22 EPS. above the ’22 multiple that we think is fair value in our dividend discount model *if* one risk adjusts for potentially rising interest rates and/or lower ROEs along with a risk adjustment for L-T growth assumptions.**

- **But we also understand what the market is discounting when it decides to pay 19.5x+ ’22 EPS for the average utility stock in our coverage universe.**
  - **1) It is pricing in resiliency of rate base growth outlooks, given a persistent lack of inflation in the utility business model.**
  - **2) It is pricing in a modest pace of declining authorized ROEs despite persistently low rates, driving a very attractive return over the cost of equity.**

- **If one adjusts our DDM inputs to capitalize the above-mentioned factors as sustainable longer term, you can justify P/E multiples at current levels and also see why the perceived best-in-class earnings and dividend growth compounders trade at premiums on top of that already-robust valuation.**
  - **But the group is increasingly priced to perfection.**
  - **We consider these factors in greater detail on pages 20-21 of this note.**

- **Our bond regression model tells us that utilities look 3.7% expensive on ’20 dividend yields and 1.6% undervalued on 12 month out / ’21 dividend yields.**
  - **On 12/31/19 the group was 2.0% expensive on ’20 dividend yields and 3.4% inexpensive on ‘21 dividend yields**
    - **The 10yr yield was 1.91% and the Moody’s Baa was 3.90%.**
  - **On 1/24/20 the group was 3.7% expensive on ’20 dividend yields and 1.6% inexpensive on ‘21 dividend yields**
    - **The 10yr yield was 1.74% and the Moody’s Baa was 3.74%.**

- **A bit over a year ago, on 12/3/18 (just before the peak on 12/13/18) we said that our bond regression model told us that regulated utilities were 23.2% expensive on then current yields and 18.3% expensive 12 months out assuming rates remained unchanged.**
  - **That elevated reading was just below the readings we saw prior to the ’08 recession when the group looked ~25% overvalued.**
  - **At YE ’18, we had rolled our bond yield to dividend yield regression model to reflect updated current and forward dividend yield expectations. So our model began to run off of ’19-’20 div. yields for current and 12 month forward valuations vs ’18-’19 before that. The roll forward lowered the group valuation vs. bonds by ~5%, all things equal, given estimated annual dividend growth.**

- **We have now rolled our model forward again to use ’20-’21 dividend yields.**
  - **~11% of the decline in valuation from 12/3/18 to today is due in part to rolling our model forward to ’20 / ’21 from ’18 / 19.**
  - **~24% of the decline in valuation is from the Baa moving from 5.29% on 12/3/18 to 3.74% today.**
  - **These were offset ~16% by *an increase* in group valuations.**
- **HERE IS OUR DDM BACKTEST GOING BACK TO 1/1/07 SHOWING WHERE GROUP VALUATION IS TODAY IN OUR BOND REGRESSION MODEL**

If rates stay unchanged for the next 12 months, regulated utilities now look 1.6% cheap

- **As we pointed out on the prior page, utilities are still trading at elevated valuations looking at absolute and relative P/E.**
- **They are above the levels we saw at the YE '18 valuation peak.**
- **We are close to fair value in the bond model assuming rates are flat to down over the next 12 months.**
- **Utilities are discounting corporate bond yields at 3.81% 12 months out, implying a 1.59% 10-yr UST yield if corporates and treasuries traded to their historic 222bp spread.**

Updated as of 1/24/20 close

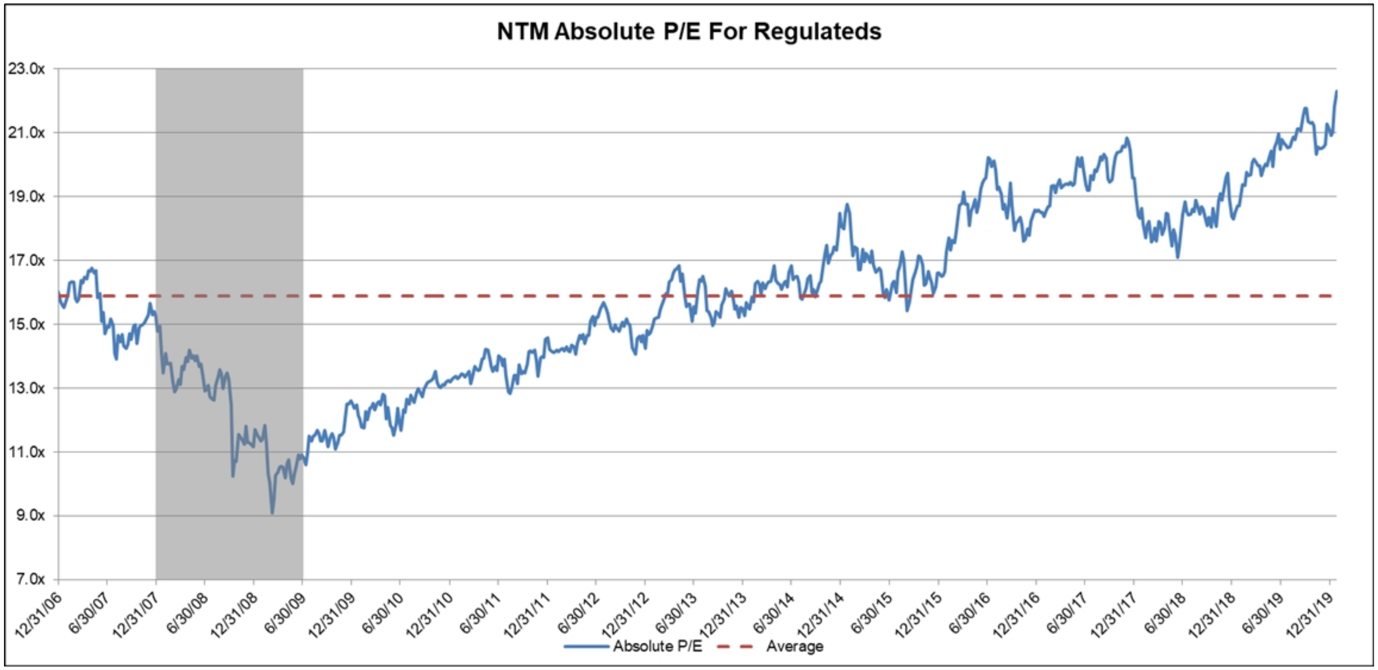
Yellow Flag! NTM FactSet Consensus P/E Has Marched On To New Highs

- On 1/24/20, NTM absolute P/E was 22.31x using FactSet consensus, rising above the prior absolute peak of 21.76x on 9/29/19. Before that, the NTM absolute P/E had peaked on 12/3/17 at 20.84x and on 7/15/16 (post-Brexit) at 19.93x.
- Since '06 the average NTM absolute P/E is 15.89x. Since '95 it is 14.37x.



Updated as of 1/24/20 close

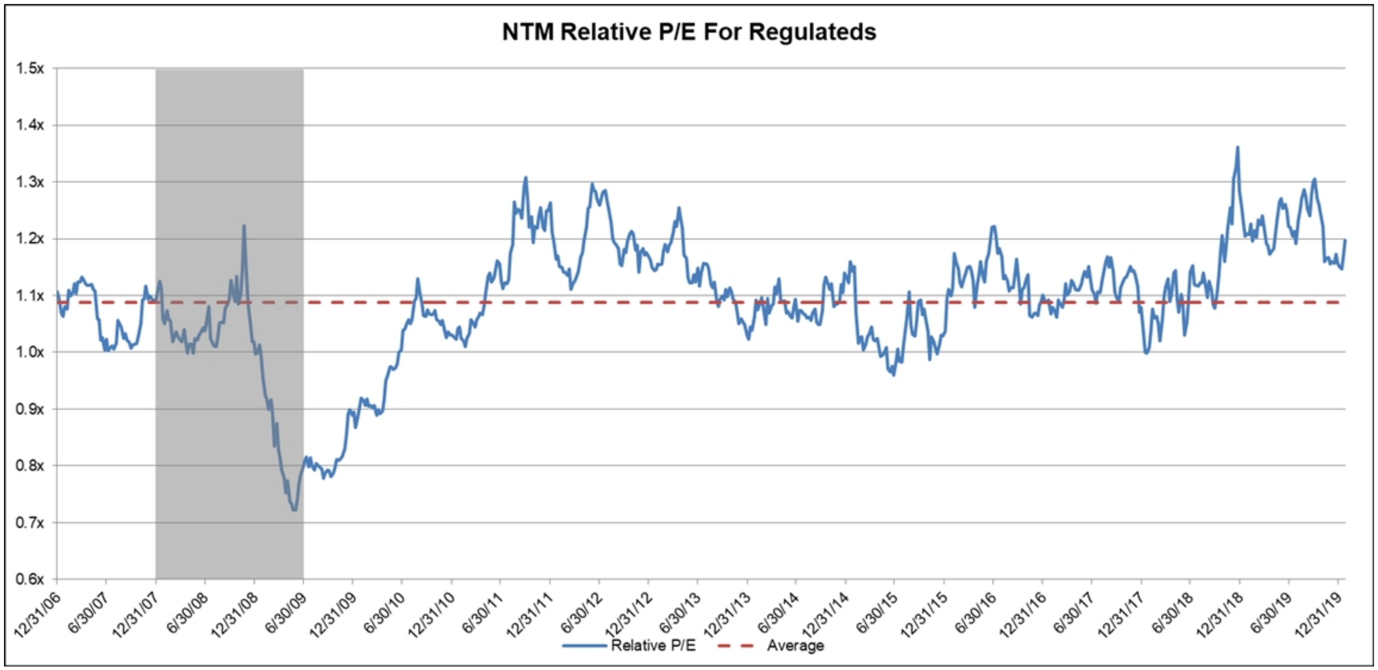
NTM FactSet Relative P/E Remains Elevated But Below All-Time Highs

- The average relative P/E since 2006 is 1.09x. Since ’95 it is 0.93x.
- On 1/24/20, the relative P/E was 1.20x, slightly above the 1.17x level at our YE ’19 update.
- The relative P/E post Brexit vote was 1.17x, which we hit again in mid November ’18.
- It was 1.36x on 12/23/18 when we were pricing in recession risk at a high probability.
- So relative P/E going higher would likely require a further “risk-off” move in the market.



Updated as of 1/24/20 close

Source: FactSet, Evercore ISI Research

Regulated Group P/E Valuations In '20 Remain At A Pretty Robust Multiple

- With the increase in P/E valuations since our last update at YE '19, the group is trading above the defensive P/E premium we saw in the extreme risk-off environments of 7/16 (post Brexit) 11/17, and 12/18. Bond yields were much lower in the first two instances, higher in the third. Remember looking below that the average P/E multiple is really a turn higher when you exclude the low P/E multiples of PPL, EIX and PCG.
- Looking at 12/13/18—the most recent valuation peak—the 10-year was 2.91% and the Moody's Baa yield average was 5.16% -- a 225bp spread.
  - The utilities were 18.6% expensive on '19 yields and 13.3% on '20 yields if bond yields remain unchanged in our bond regression model.
- **On 1/24/20, the 10-year bond yield was 1.74% and the Moody's Baa corporate bond yield average was 3.74% – a 200bp spread.**
  - **In our bond regression model the group now looks 3.7% expensive based on the expected '20 dividend yield.**
  - **They are 1.6% cheap on '21 dividend yields (a year out) if bond yields remain unchanged in our bond regression model.**
- The "breakeven" Baa yield at 12 months from now is ~3.81%, implying a 1.59% 10-year yield at an avg. historic spread of 222bp.
- We understand the argument that the way these stocks are trading in the regression model and vs. our DDM might discount a view that the long end of the curve will be held down by a persistent lack of global inflation and central bank easing. Also there is a pretty good medium-term total return profile for utilities vs. history due to low inflation, and the decline of authorized ROEs at a measured pace. Perhaps a scarcity premium for defensive stocks, as other traditionally-defensive sectors succumb to new competitive pressures is also a factor. But even after taking these factors into account, the group looks priced at close to perfection. On the ROE front, we are starting to see signs that the direction of travel is lower at a faster rate (CNP, the FERC MISO decision).

Based On Our Dividend Discount Model Utilities Look Prices Pretty Close To Perfection.

- **The forward P/E multiple that utility investors are willing to pay is highly influenced by ROE and cost of capital assumptions, as well as the sustainability of rate base growth, which we can measure and calculate the value of in our proprietary DDM.**
  - **Up until 9/19 we had been defending the idea that utility stocks are trading above fair value, which we thought closer to ~17.5x '22 EPS. We had been making risk adjustments for potentially declining authorized ROEs, rising rates (a tightening ROE to cost of equity spread) and risk adjustments regarding the sustainability of rate base growth. Those assumptions have proven too conservative.**
  - **Disinflationary trends in the "cost +" framework by which utility rates are set have continued to drive bill headroom. That has extended the runway for capital spending at rates that supported rate base growth expectations for longer than we would have thought feasible. However, we are starting to hear, on the margin, that cost cutting opportunities may be dwindling for some companies, mainly a few who are mostly T&D infrastructure. The integrated companies that still have large fossil fuel and nuclear fleets seem to still have more headroom.**
  - **While authorized ROEs have been steadily declining, up until now they were not declining a rapid pace and interest rates have stayed low. However, the recent proposed decision in CNP's pending TX rate case (9.25% ROE, 40% equity ratio), and the FERC's decision in the MISO complaint case to lower the base ROE to 9.88% could be the "canaries in the coal mine" that the direction of travel on authorized ROE's is finally accelerating lower. CNP settled at 9.4%/42.5% and FERC is rehearing the MISO decision.**
- **If we continue to assume authorized ROEs decline but at a modest rate of change, and interest rates continue to be subdued and rise slower than our prior base case, then it is easy to justify the ~19.5x P/E multiples around where the group is currently trading.**
- **And on top of that, if you think both authorized ROEs and growth rates stay at "status quo" levels for longer, our DDM model generates valuation outcomes that support the 22-25x P/E multiples at which the perceived "best in class" earnings and dividend growth compounders trade (WEC, NEE, CMS, ES, XEL).**
- **However we now sit here today with the group trading at pretty close to perfection on these assumptions. So we concede they could stay at these elevated valuations until perspectives on the future level of interest rates and inflation change (higher) or the perspective on ROE trends changes (lower) but it is hard to see a lot of upside on an absolute valuation basis or on a relative valuation basis vs. the market unless we go to pre-recession "risk-off" levels.**

Source: Evercore ISI Research

Our DDM Shows Utilities Are Trading At Pretty Full Valuations. It Is Hard To See Big Upside

- **Our historic base case ("case 1") assumed an orderly transition to higher interest rates, with authorized ROEs falling to 9.25% from 9.75%, and 10- year Treasury yields rising over the next several years, resulting at the end in a 2.25% spread between the return on equity and the calculated cost of equity.**
- **When you look at the current valuation of 19.8x '22 it is closer to our "case 2" scenario, which means we are discounting a longer period of low interest rates without a change in the expected direction of travel of authorized ROEs (i.e. they continue to decline but at a modest pace). As we said on the prior page, those assumptions may be fraying around the edges but a clear negative move has been averted so far (in TX and at FERC).**
- **The perceived "best in class" earnings compounders (WEC, NEE, CMS, ES, XEL) trade a multiple that discounts both a more or less status quo authorized ROE regime and a longer runway for sustained rate base growth. That is "case 3".**
- **In our "case 4" scenario we assume authorized ROEs moderate and interest rates rise more rapidly, resulting in a more meaningful near-term reduction in profitability, along with a steeper decline in rate base growth, which drives utilities back to a P/E multiple that is closer to long-term historic averages. This looks unlikely.**
- **We believe the group is very fully valued. But we set our target prices on a "market agnostic" basis, which means we are using an anchor P/E multiple of ~19.5x '22 EPS so investors can better see where we see good relative value.**

DDM Model Summary	Case 1	Case 2	Case 3	Case 4

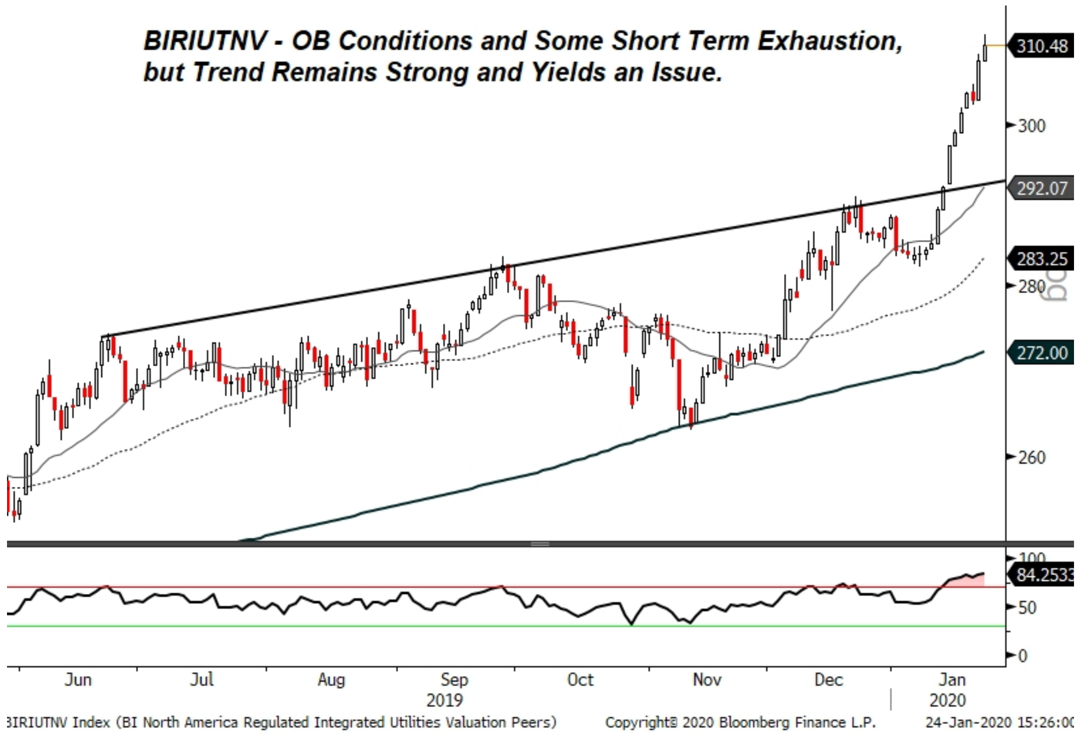
EVRISI Technical Analyst Rich Ross On Utilities: Not Clear They Will Reverse Soon

- BIRIUTNV - While the presence of extreme overbought conditions and a modicum of short term exhaustion along with the broader market suggest and inflection lower might be nearing, both trend and pattern remain strong and the ongoing decline in yields an issue for the sector. RSI is like the technicians Valuation, which is to suggest that in isolation it is a poor timing tool and we need to see corroborative evidence from price both in Utes and Yields before we play too aggressively for a countertrend move down.



Source: Bloomberg, Evercore ISI Research

EVRISI Technical Analyst Rich Ross On The 10YR UST: Supportive Of Utility Valuation

- 10 Yr. - While I do not expect an outright collapse in yield, they nevertheless remain weak as they test tenuous support after failing into resistance within a downtrend (which is not great). While the recent weakness may be partially attributed to an ephemeral defensive shift in response to the Wuhan virus, we nevertheless cannot pound the table in terms of calling a top in Utes until Yields, Crude and the Dollar (too strong) find some semblance of stabilization.

Global Monetary Easing Is Supporting Our Macro / Policy Teams' Outlook

EVRISI's overall macro and policy call was cautiously bullish in '19 and continues into '20. Since our regulated update in mid-July '19, our thesis continues to be validated, with the Fed cutting rates in July and October '19 amidst continued trade tensions. In our last regulated update, we continued to note that indicators of dovish monetary policy globally could be a bullish tailwind. <u>Those dovish indicators have continued to materialize post the October '19 interest rate cut</u>. The market continues to grapple with a lower rate environment, as well as the recent uncertainty in China with the coronavirus outbreak. Our macro and policy experts opine on these developments:

While reports of the potential dire impact of the coronavirus on China's GDP are likely suppressing yields, investors should beware of headline-amplified narratives, cautions our Portfolio Strategist Dennis DeBusschere. We do not yet have enough information to declare the coronavirus an epidemic and we cannot know the effect on GDP yet. The MSCI Emerging Markets index has fallen -2.7% since Monday, but tailwinds to EM performance remain. Regional flash PMIs suggest the global PMI will rise to about 51. Almost every major constituent increased M/M. Don't look to rates for a signal. China's PMI isn't out yet, but (as noted on the next page by Ed) the EVRISI Sales to China survey continues to move off of its lows. The coronavirus will likely impact consumption around the Lunar New Year, but the extent to which it is affected is unknown. Currently, the EVRISI Survey Team's work suggests consumption is healthy going into the holiday. <u>We caution investors from overreacting to the move lower in rates, especially with an exogenous X-factor like the coronavirus likely impacting rates as well.</u>

Global Monetary Easing Is Supporting Our Macro / Policy Teams' Outlook

According to our Chief Economist Ed Hyman, with global short rates declining significantly over the past year, a synchronized global expansion now appears to be unfolding. Over the past six months, there have been 71 EM central bank easings, including most recently by Turkey, South Africa, and Malaysia. Individually, each is relatively unimportant. But as a package, they have been a significant part of the Global Easing Cycle that started about a year ago. Focusing on China, the source of the recent coronavirus impact, our survey of 21 multinationals indicated that China sales has improved over the past six weeks by +2.0, but still to just 42.7. This survey will be a useful gauge of the coronavirus impact, particularly with the Lunar New Year limiting eco data availability. Back in the US, there are a number of positive indicators: consumer confidence surveys indicate remarkable strength and unemployment claims have declined -24k over the past five weeks back into record-low territory; they may be at their lowest possible frictional level.

The Fed is gravitating towards a risk-friendly strategy of low interest rates for longer for inflation purposes, according to our Global Policy Strategist Krishna Guha. In our view, as the FOMC grows more confident that it has done enough to offset trade and global headwinds to growth – which we interpret as depressing the short-run neutral rate of interest consistent with growth around potential – the Committee is increasingly refocusing on the need to re-center inflation and inflation expectations that have slipped uncomfortably below its 2% target after serial undershooting over the past decade. Under this approach the Fed will enter an extended strategic hold and will likely keep rates at their current levels for a long time – through to late-2021 in the base case and quite plausibly beyond that date. We are not expecting any more cuts in the base case. The basic takeaway is that if we are right the emerging Fed approach will be very risk-friendly – a rare occasion on which can plausibly have their cake and eat it, i.e. get confirmation that the expansion phase of the business cycle is continuing, but keep low rates in nominal and in particular real (inflation-adjusted) terms.

Authorized ROEs Have Come Down, But Much Slower Than Interest Rates, So Far

- **The spread between authorized ROEs and interest rates remains very wide, which has been impacted by the recent interest rate cuts.**
- **But authorized ROEs are starting to reflect lower interest rates, both at the state level and at FERC (see next few pages).**

Authorized ROEs Look Highly Correlated With Baa Yields

- **ROE risk is definitely a risk to flag regarding longer-term earnings power.**
- **Based on the long-term linear relationship between Baa yields and authorized electric ROEs, the current Baa of 3.74% would imply a "correct" ROE of 9.17%, 45bp lower than the LTM average of 9.62%.**
  - **That is slightly below where the TX PUC was proposing to set the ROE in the still pending CNP rate case!**
  - **In VA and New Orleans, ROEs were also recently set in the low 9% range (see next page).**
- **But that could understate the risk, as the relationship as measured captures the decades-long widening of spreads between authorized ROEs and the cost of capital.**

FERC Adopted A Revised Methodology And Lowered ROEs For MISO Transmission Owners

On 11/21/19, the FERC adopted a revised methodology for setting electric transmission returns, setting a new base ROE for Midcontinent ISO (MISO) transmission owners of 9.88%. On 1/21/20 the FERC issued a boilerplate order granting rehearing in the MISO transmission ROE dockets. We see the order as another example that the direction of travel for ROEs is down in the US utility industry. The ROE outcome is lower than the 10.32% approved by the FERC in 2016 (the initial order in the same proceeding) and below the 12.38% originally approved well over a decade ago. The average MISO transmission owner will still be able to earn in the mid 10% range with incentive ROE adders, suggesting the FERC is still trying to keep ROEs above those approved at the state level (trending closer to 9.5%-9.6% in the last 12 months, but with CNP looking at a 9.25% ROE in its pending TX case). The decision is notably lower than what FERC was considering at this time last year (around 10.3% base for MISO and 10.4% for NE). The recent rehearing order was expected, with the FERC widely seen by stakeholders as having made errors in judgment in the original November order in the case, because the methodology approved (discussed below) could lead to significantly lower ROEs for all FERC-regulated transmission owners.

Two models instead of four: The new methodology relies on Discounted Cash Flow (DCF) and Capital Asset Pricing (CAPM) Models. This is a departure from and less constructive than the proposed methodology introduced in October 2018. That methodology relied on four models: DCF, CAPM, Expected Earnings, and Risk Premium. The latter two, which were removed from the final product, resulted in higher ROEs.

Incentive cap now at 12.24%. FERC's new methodology results in a zone of reasonableness of 7.52%-12.24%. This means that MISO transmission owners should be able to take advantage of incentive ROE adders. The effective date of the new cap and ROE is Sep. '16.

Most directly relevant for AEE and WEC in our coverage. We see a potential $0.03/sh negative impact to AEE's 2020/2021 EPS. This assumes AEE's transmission ROE will fall from 10.82% (10.32% base + 50 bp adder) to 10.38% (9.88% + 50 bp adder). WEC's long-term forecast for ATC actually assumes a 10.2% ROE so we see this order (implying 10.38% with incentives) as in line to slightly positive (less than a penny of upside to EPS).

Decision now pending for New England ROE. FERC did not issue a decision in the outstanding New England transmission ROE case as Commissioner Glick has recused himself, and the commission can't vote with only two commissioners. We estimate this suggests the new ROE in NE could end up in the high 9s as well, with a cap of ~12.5%. This could imply downside of $0.03/sh to ES 2020/2021 EPS (assumes ROE goes from 11.5% to 11.25% all in) and $0.02-$0.03/sh to AGR EPS.

PEG has the highest exposure, but they haven't been called in yet: PSEG's transmission operates under a formula rate plan, with an authorized ROE of 11.68% (including a 50bp incentive adder). Their rate has not been challenged, but we see that as a real risk. PEG's '21 EPS would be $0.15 lower if their FERC ROE was lowered to 9.88% before incentives.

Sensitizing Our Earnings Estimates To Potential ROE Changes – Near-Term Exposures Measured

- **Below we show regulatory risk by estimating the EPS impact of a 25bp change in authorized/earned ROEs for all utility holding companies that have subsidiaries that are currently undergoing a rate case across our coverage universe.**

- **With interest rates staying pinned at these low levels, we think this persistent lower interest rate environment is becoming a bigger risk as it relates to the potential for lower ROEs in pending rate cases.**

Near-Term Impact Of A 25bp Change In ROEs

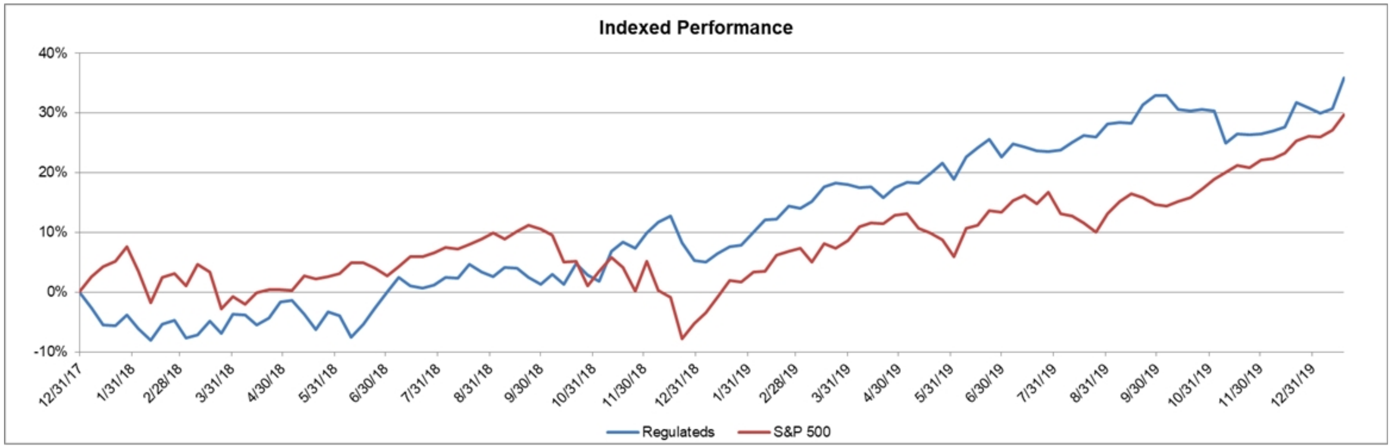
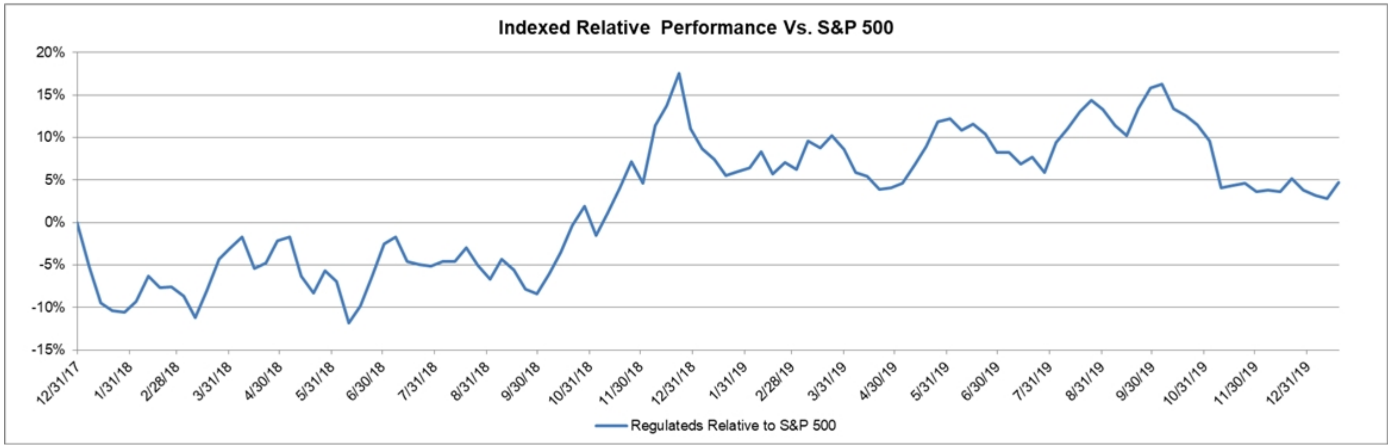
Utility Stock Price Performance vs. SP500 From YE '17 To Present



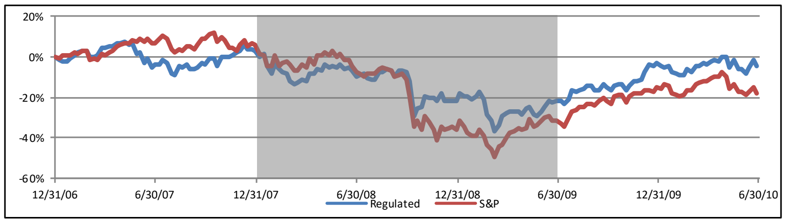


Updated as of 1/24/20 close, compounded return, 7 day intervals

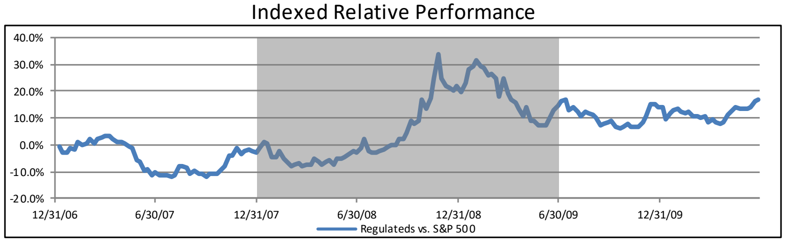
Source: FactSet, Evercore ISI Research

History Lesson: Utilities Outperformed Before The Last Recession, During The Credit Crisis, And Out The Back End

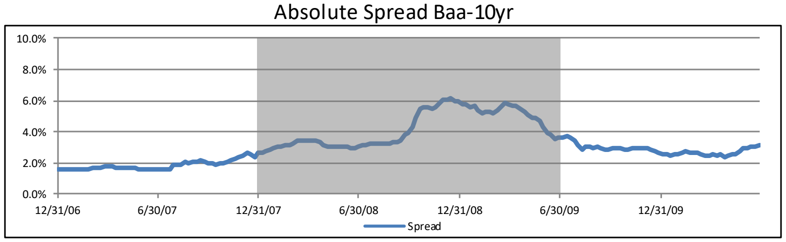
Indexed Performance



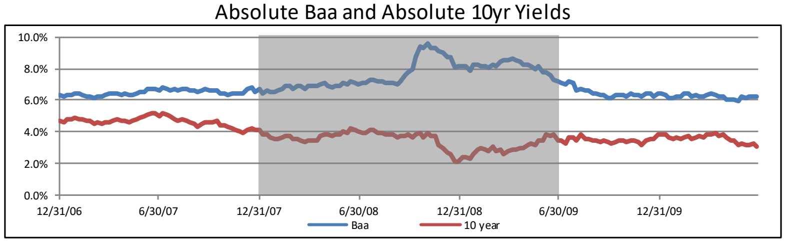
Indexed Relative Performance



Absolute Spread Baa-10yr



Absolute Baa and Absolute 10yr Yields

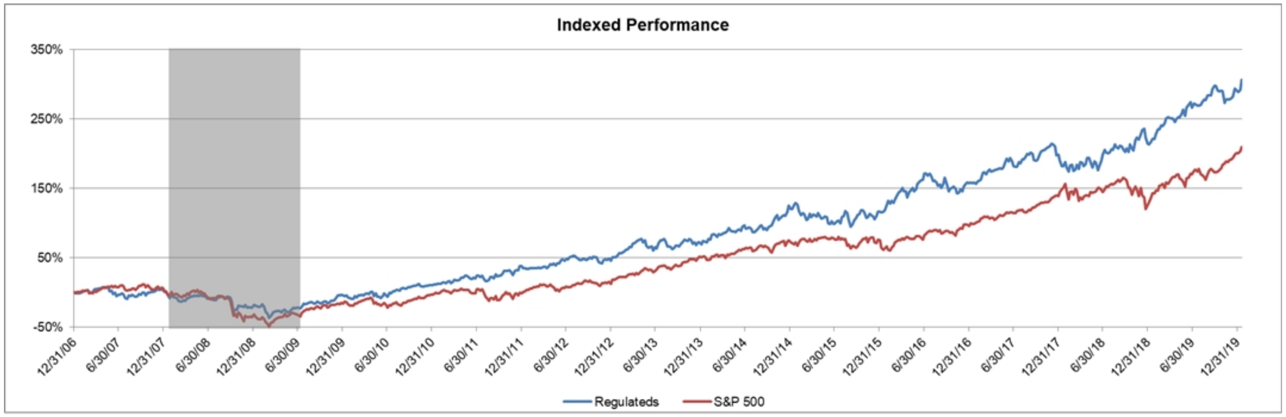


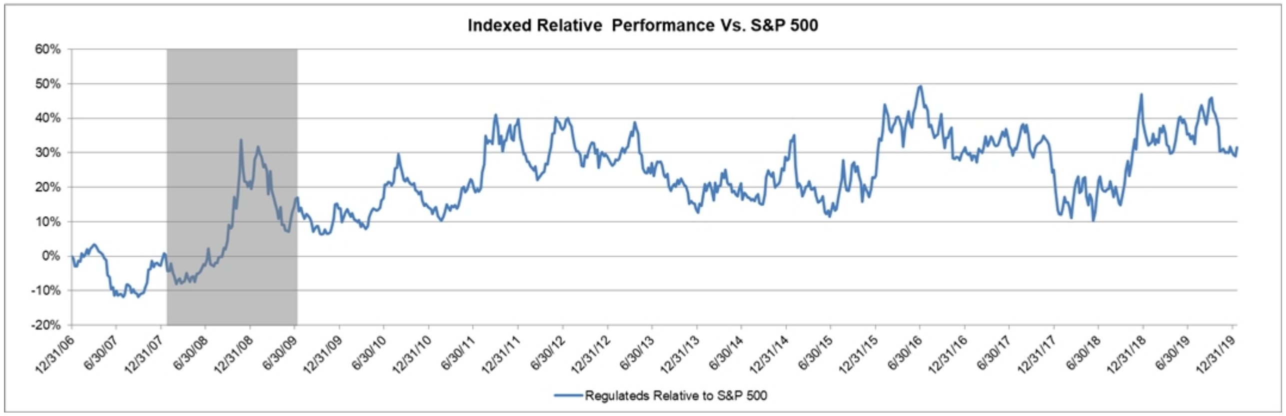
- On the charts to the left we show that regulated utilities outperformed the market in the latter half of '07 when they first peaked in valuation in our bond model (see page 15).
- From 6/30/07 through 12/31/07 utilities were up 6.3% vs. -1.4% for the SP500.
- Then performance tracked somewhat tight to the SP500 until the credit crisis hit a crescendo in late '08 / early '09 and utilities significantly outperformed, hitting very high valuations again in the bond model due to the blowout in Baa Yields (see page 15).
- During the '08 recession (from 12/31/07 until 6/30/09) regulated utility stocks delivered a total return of -23.4% vs. -35.0% for the SP500.
- In the year subsequent to the recession utilities returned 19.9% vs. 14.4% for the SP500.

Source: FactSet, Evercore ISI Research

History Lesson: Utility Stock Price Performance vs. SP500 From 2006 To Present

- This shows the performance of regulated utilities vs. the SP500 from YE ‘06, through the recession, until present.
- Assuming compounding returns and dividends reinvested, utilities are up 307% vs. 209% for the SP500 from YE ‘06 to present.





Updated as of 1/24/20 close

Source: FactSet, Evercore ISI Research

Regulated Dividend Yields vs. 10Y UST and Baa Yields Since 2006

- Below we show the dividend yield on regulated utility stocks as compared to the 10-year US Treasury yield and also as compared to the Moody's Baa Corporate Bond Yield Average. The narrowing spread between the utility dividend yields and bond yields is indicative of a moderating valuation due to the perceived risk of a recession / prolonged market downturn. Hence the less expensive reading in our bond regression model.

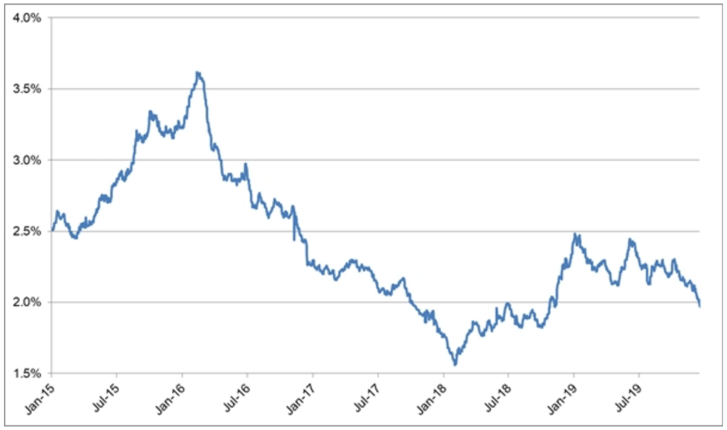
The Spread Between Corporates And Treasuries Has Narrowed

- The spread between corporates and Treasuries has averaged 222bp since 1970.
- At the beginning of 2015 the 10-year was ~2.2% and corporates were 4.7%, a spread of 250bp.
- The wide spread between US Treasuries and corporates was the key factor that made utilities look fully priced in our bond model from October 2015 through early April 2016.
- That spread peaked last at 363bp on 2/16/16, with the 10-year yield at 1.74% and corporate bond yield average at 5.37%.
- The tightening spread between corporates and Treasuries in the back half of 2016 was a key factor that allowed utilities to maintain value post the election despite rising inflation expectations.
- On 12/13/18 the spread was 228bp. On 12/31/18 the spread was 245bp. On 1/24/20, the spread was 200bp.

The Spread Between Baa Corporate Bond Yields and the 10 YR Treasury Yield Compressed In 2019

Daily Moody's Baa / 10 Year Spread



Monthly Moody's BAA / 10 Year Spread

ANALYST CERTIFICATION

The analysts, Jeffrey Qiu, Tulkin Niyazov, Michael Lonegan, Caroline Bone, Greg Gordon, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group L.L.C. ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and Evercore ISI International Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Inc. ("Evercore"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore's Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group L.L.C., Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore and its affiliates, and I or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore and its affiliates may have, or have had, business relationships with the companies mentioned in this report.

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform- the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line- the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform- the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy- the total forecasted return is expected to be greater than 10%
Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%

Sell -the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Evercore ISI rating (as of 01/26/2020)

Coverage Universe			**Investment Banking Services I Past 12 Months**		
Ratings	**Count**	**Pct.**	**Ratings**	**Count**	**Pct.**

In compliance with the European Securities and Markets Authority's Market Abuse Regulation, a list of all Evercore ISI recommendations disseminated in the preceding 12 months for the subject companies herein, may be found at the following site: https://evercoreisi.mediasterling.com/disclosure.

WOLFE RESEARCH

UTILITIES & POWER

Regulateds – Market Underweight
Gas/Power Infrastructure – Market Overweight

January 14, 2020

NISOURCE

(NI US Equity – $28.18 – Peer Perform)

Looking past Mass in 2020; upgrade to Outperform

- **Same call, one year later; upgrade to Outperform with $31 PT.** We thought NI could get past the 2018 Mass. gas explosion last year, but more operational concerns and lingering regulatory and B/S issues got in the way. We like the risk/reward here and see 2020 as a de-risking year for NI as it removes equity overhang and resolves lingering MA reviews. But it's not just de-risking – we think NI has upward bias to its 5-7% EPS growth rate long-term, with visibility on renewables opportunities at NIPSCO coming into view later this year. NI currently trades at a full turn discount to the electric average; we see potential to re-rate closer to its historic 5-10% premium as these catalysts play out.

- **De-risking investment story with identifiable catalysts.** We see a big improvement in the risk profile of NI as it moves toward a resolution in MA. The scoping memo of the DPU's investigation was helpful in providing a manageable cap on fines. We sense NI will likely take equity off the table soon, rather than waiting for its property insurance claim to fully resolve. We see the current 5-7% growth rate intact, with an upward bias in the future as NI looks to replace all of its coal with renewables in Indiana across 2023-2028.

- **Risks – decarbonization, hiccup in MA or another safety event.** We see a debate over what the market wants to pay for gas businesses as decarbonization becomes a broader investor focus. Historically LDCs have traded at big premiums to electrics, but the gap has narrowed recently. This is the furthest from anyone's mind in NI's core Midwestern states though, and NI's gas utilities are simply low-risk other than MA. Another risk would be the situation in MA getting worse before it gets better; we expect that the public hearings will be noisy, but manageable given the bookend on fines. Finally, the probability of another major safety event is scary but unlikely given the company's complete overhaul / focus on its safety practices.

- **Raising PT to $31; big disparity in LDC comp group.** We are raising our PT by $2 to $31. We ascribe a 21x multiple on our 2021E – a premium for NI's electric utility and average on its gas LDCs. After digging through the LDC comp universe, we found a big disparity in multiples due to business mix differences. Premium pure-play names trading at 22-24x, discount diversified names at 18-20x – we think NI deserves something in between.

Company description

NiSource, headquartered in Merrillville, Indiana, operates two separate business lines: electric utility and gas distribution LDCs. The electric utility serves just under 500,000 customers in northern Indiana and owns 3,300 MW of generation. The gas LDC serves 3.5 million customers in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland and Massachusetts.

Investment Thesis

We see above-average rate base and earnings growth potential for NiSource relative to other electric and natural gas distribution utilities. NI has a $30B backlog of capital investment with recovery largely through trackers in mostly constructive regulatory environments. We see NI as a de-risking story in 2020 with an upward bias on rate base / EPS growth due to renewable investment opportunities at NIPSCO Electric.

Valuation

Our $31 price target is derived using a P/E multiple of 21x on our 2021E. This reflects a premium for NI's electric utility and an average for its gas LDCs Risks for NiSource are 1) further issues in MA 2) bad regulatory outcomes and 3) pipeline safety incidents. Upsides are 1) additional growth projects and 2) customer growth

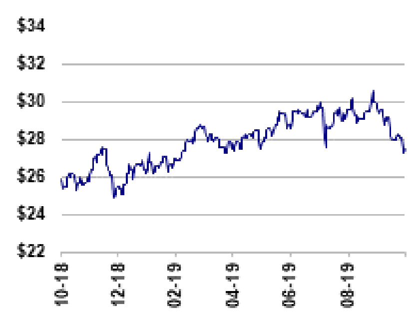
Exhibit 4. Performance Chart



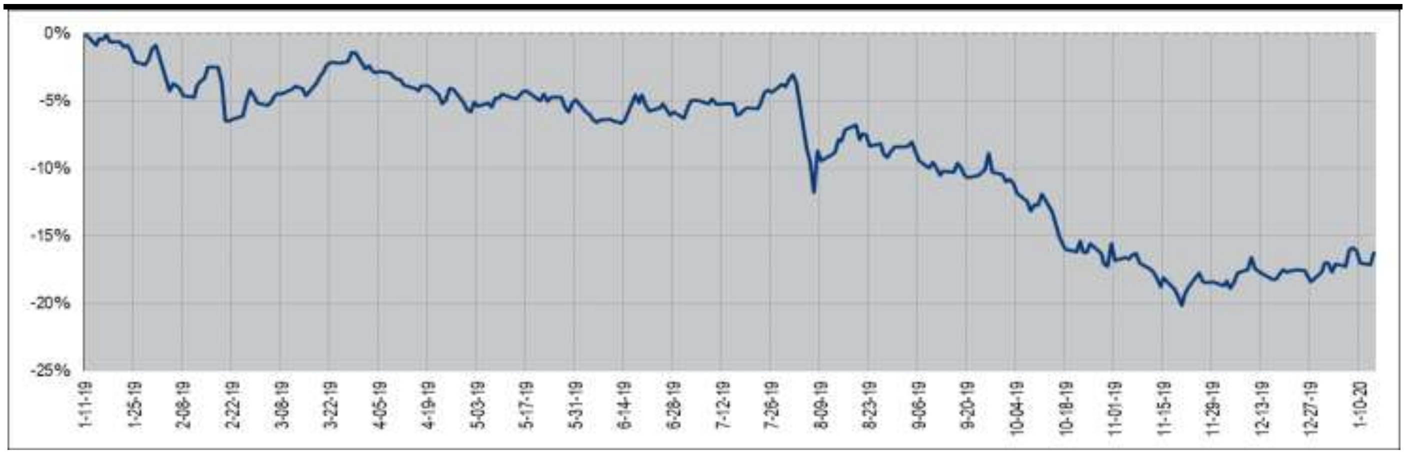
Source: FactSet

Path to return to a premium multiple in 2020

The Merrimack Valley explosion in Sept. 2018 was a tough event for NI and the company is still working to fully recover from it. We had hoped a turnaround would happen in 2019, but we downgraded the stock in early August 2019 as more operational concerns arose, the Mass investigations extended and our hope for an exit from the business did not play out. Since then, NI stock has underperformed significantly (see Ex 5 below) but has shown some signs of stabilizing. Despite the MA overhangs, NI made good regulatory progress in its states in 2019 and has made a lot of progress on safety improvements too.

We think the stock is ready to turn the page in 2020. We see a path for NI to creep back to the historical 5-10% premium (vs electric average) that the company enjoyed prior to the Merrimack Valley event. We see a material improvement in the risk profile of the company given the safety overhaul and as NI moves toward a resolution in MA – the recent scoping memo from the DPU was helpful in providing a manageable cap on the level of fines. **At NI's core, the company is a pure-play regulated utility with low business risk**. This has been overshadowed by the MA subsidiary, which only comprises 5-10% of the total company. We ultimately see NI as a de-risking story in 2020 with an upward bias on rate base / EPS growth as opportunities for renewables investment at NIPSCO Electric appear significant across 2023-2028.

Exhibit 5: NI vs the Regulated Average



Source: Wolfe Research, FactSet

Identifiable catalysts in 2020

Equity overhang, but likely not for long. We sense that NI will likely remove its $500-700M equity overhang sometime in the first half of the year. We do not believe the company will wait to see the outcome of its property insurance filing, which is still a quarter or two away. Any cash benefit from the property filing could then be reflected by tempering its ~$300M/yr. of ATM / DRIP equity. Once the equity overhang is removed, the market can then focus on the company's de-risking story as the investigations in MA are closer to being resolved.

Upward bias to rate base / EPS growth rate. NI currently targets 5-7% annual EPS growth – this is supported by ~5% rate base growth at NIPSCO Electric and ~10% rate base growth at its gas LDCs. We believe there is an upward bias to rate base growth at NIPSCO Electric as it works to replace its coal generation with renewables across 2023-2028. While this will require incremental external funding, we expect that the rate base investment opportunity is significant enough for NI to be well within its current consolidated EPS growth range with maybe a chance to move the range to 6-8%.

NI's recent rate case outcome in Indiana allows the company to execute on its generation strategy by guaranteeing full recovery of its early coal retirements. NI's Schaefer units will physically retire in 2023 and Michigan City in 2028 – at which time, the company will be coal-free. The Indiana Utility Regulatory Commission's (IURC) approval of NI's JV and ownership agreement for Rosewater Wind (102 MW, ~$90M of capex) was a good sign for future renewable ownership opportunities. NI has another pending request with the IURC for a BoT agreement for the Indiana Crossroads project (302 MW). We expect that these projects will be reflected in NI's capex forecast once it rolls forward through 2023. Through subsequent RFPs, we anticipate that NI will seek to procure significant solar / solar + storage capacity to come online in unison with its coal retirements as detailed in its most recent IRP.

What is still left to play out in Massachusetts

DPU Investigations
The Massachusetts DPU will hold two public hearings on Jan. 29th and Feb. 10th concerning its investigations into Columbia Gas for the Merrimack Valley gas explosions. The two investigations are for 1) Columbia's role in and responsibility for the incident as well as its restoration efforts following the incident; and 2) Columbia's preparation for the gas incident and the company's implementation of its emergency response plan. For the scope of the 2nd investigation, the DPU intends to focus on three distinct time frames, with the possibility of a fourth. MA law allows for up to a maximum fine of $20M per time frame. We believe the $80M cap (four time frames) would be manageable.

Criminal Investigation
Both NI and Columbia Gas are subject to a criminal investigation related to the Merrimack Valley incident which is being conducted by the U.S. Attorney's Office for the District of Massachusetts. We believe the criminal investigation has a high bar set to find the company guilty – proof of knowing and willful criminal intent. The NTSB reports did not show anything close to this. While a concern, we hope the investigation is something that can be resolved quietly or settled out of court.

Possible exit?
This was part of our original thesis when sticking with our Outperform rating immediately following the event in MA. We ultimately believe there is a path for NI to exit the state but think there are still issues that need to be cleaned up prior to a sale occurring. The investigations listed above are the most identifiable. A third-party audit report of the gas pipeline replacement work as part of the Merrimack Valley restoration is likely to be available by late Q1 / early Q2. Presumably a clean audit report would give a potential buyer piece-of-mind that the new system was installed / operating correctly.

Risks to our Outperform rating

The natural gas debate. In recent months, we have seen investors focus more on decarbonization and the potential effects on coal, and increasingly gas businesses. Nat gas will likely be a hot debate in 2020 on this topic. We have seen gas LDC multiples compress a bit with this as a potential reason. A few states – CA, NY, MA – have seen towns and municipalities limit new gas service. While we worry on this for all gas businesses, NI is likely one of the least exposed given its large Midwestern footprint where this issue is far from anyone's mind. NI's only higher risk state is MA which is very small and may go away anyway. Bottom line, NI has low-risk pure play utility businesses other than MA and the key issue is keeping them that way by good, safe operations.

Another major safety event. We believe that the probability of this is unlikely given company's complete overhaul / focus on its safety practices. NI's Safety Management System (SMS) is expected to be fully in place around midyear and we have been encouraged by recent Board appointments (e.g. former NTSB chair). If another major event was to occur, we think there would be the potential for major corporate changes at the company that would help limit any downside potential.

Things get worse before they get better in Massachusetts. Given the number of missteps that NI has had since the initial incident, another hiccup in MA would be very bothersome. While we expect that the public hearings will be noisy, the DPU's scoping memo was helpful in providing a bookend on the level of fines NI may ultimately face. We also think the company's focus on safety, as mentioned above, make the possibility of another misstep in MA unlikely.

Big valuation disparity amongst gas LDCs

We dug through the gas LDC comp universe and found a big disparity in trading multiples due to business mix differences. In exhibit 6 below, we have now separated our LDC comp table to distinguish between pure-play regulated companies and those with diversified (i.e., non-regulated) businesses. The pure-play gas LDC average is 23x whereas the diversified average is 19x on 2021 earnings – we believe NI's LDCs deserve a multiple in the middle (21x) for now. We believe the most comparable LDCs to NI are Atmos Energy (ATO) and ONE Gas (OGS). Both of these are high-quality, high-growth pure plays. We think it is possible that NI's embedded LDC multiple can re-rate higher over time, closer toward ATO (22.5x) and OGS (24x) as its safety practices and track record become more seasoned.

Exhibit 6: Gas LDC Comparables

UTILITIES & POWER

Top 10 things to watch for 2020

1) **Following a tough 2019, history says utilities may do better in 2020…**The sector trailed the 2019 bull market by 500bps and has ping-ponged between out- and under-performing 6 years in a row, suggesting a bounce may be due in 2020. In years after large market rallies, utilities tend to meet or beat the market the following year.

2) **…but valuations are still high…**Utilities are trading at an 11% premium to the market, which is still well above the 4% average. They trade at nearly 20x 2021 earnings, an all-time high. While 5-6% EPS growth is decent, current valuations are still highly dependent on a low growth, low rate environment.

3) **...and the Presidential election really matters.** We believe the election will dominate investor attention during 2020 and will be the key driver for utility performance. A Democrat win would be a huge relative win for utilities (and particularly renewables) as most other sectors could face new risks and overhangs. A Trump re-election would likely be viewed as a relief for the market relative to utilities.

4) **ESG goes viral; renewables, electrification in focus; nat gas debate.** We see ESG going from mainstream to viral in 2020 and utilities could net benefit. Electricity is the fuel of choice for the new economy. Renewables growth and carbon reduction are accelerating. Coal is largely over and the debate has moved to the future of natural gas. NEE and AWK have been the winners so far, ES could be next.

5) **Renewables – 2020 will be the best year ever**. Wind additions will hit a new peak, solar backlog is accelerating and offshore wind growth is huge on the east coast. NEE/NEP remain the best ways to play it.

6) **De-risking stories the focus for value opportunities – FE, EXC, D, EIX.** Valuation dispersion in utilities has narrowed from the peak but is still quite wide providing opportunities for discount companies that are de-risking their business mix. Our DUTY portfolio (Dogs of the UTY) is another way to play this theme.

7) **California recovery continues in 2020.** The wildfire fund law combined with better regulatory stability (ROE, cap structure, GRC outcomes) sets the stage for a continued CA recovery in 2020. Resolving PCG's bankruptcy will be a key event. We see less chance of a market freak-out in 2020 fire season – it proved wrong in 2019.

8) **ROEs back in focus – key rate cases to watch in 2020.** With low rates and high stock prices, ROEs have crept lower and remain a risk in 2020. Key cases to watch include AGR, AWK, DUK and PNW. Transmission ROEs are also a potential risk as FERC updated its methodology.

9) **Balance sheets and credit remain a key focus; more equity coming.** We thought equity issuance would tail off in 2019 but it stayed flat at $19B. 2020 deals to come include CNP, NI, AEP and of course PCG. Overall, balance sheets look stable.

10) **Power at a crossroads.** After a disappointing 2019, there are more questions than answers. Will investors appreciate IPPs huge free cash flow? What is the future of PJM's capacity market? How will each state react? With the integrateds more regulated and IPPs struggling to find new investors – will this be a public sector?

2020 outlook – staying underweight utilities, but election key

Following a tough year for utilities in 2019 vs the market, utilities appear due for a defensive bounce especially given how far the market ran over the past year and past decade. But 2020 will be all about the Presidential election. Utilities look like one of the only relative winners if a Democrat is elected with several key sectors of the economy being clear losers in that scenario (health care, tech, financials, energy). On the other hand, there will be little need to own utilities in a Trump re-election scenario.

Utilities valuations are still well above average, an 11% relative premium vs the 4% historic average. We think this valuation already assumes a sustained low rate, low growth environment continuing. We still believe utilities can be helpful as defensive ballast to a portfolio but buying them at a large premium is an offensive bet on a weak environment, not playing defense. We would be more interested in the sector if it gets closer to a market multiple.

Performance Review: 2019

Utilities ended 2019 up 22.2%, a great year on an absolute basis but nothing special in 2019. The S&P 500 ended up 28.9% beating utilities by over 500bps on a total return basis. A unique aspect of 2019 was that utilities underperformed the market despite long-term interest rates falling nearly 100bps. As shown in Exhibit 2, this broke the relationship we have seen between interest rate moves and utilities relative performance. In retrospect, utilities moved ahead of bonds with their strong move in late 2018 and thus had less room to run in 2019.

Exhibit 2: Utilities vs. 10-yr Treasury

Source: FactSet, Wolfe Research

As shown in Exhibit 3, all the large income sectors underperformed the market in 2019, not surprising amidst a tech-driven bull market. The one exception was Yieldcos which benefitted from better sponsors and increasing investor appetite for renewables. Staples and REITs also slightly beat utilities while Telecom and Pharma trailed. Midstream was all over the map with Midstream C-corps slightly beating utilities for the year, but MLPs trailing all income sectors by a wide margin.

Exhibit 3: Utilities vs. Other Income Sectors

Sector	2019 Price Performance
WR YieldCo Index	30.7%
S&P 500	28.9%
S&P Consumer Staples	24.0%
REIT Index (FNER)	23.9%
Wolfe Midstream C-corp basket	22.8%
S&P Utility	**22.2%**
S&P Telecom	20.1%
S&P Pharma	12.0%
XLE Index	4.7%
WR IPP Index	0.4%
MLP Index (AMZ)	(2.0%)

Source: FactSet, Wolfe Research

Performance Review: long-term

After the weak relative performance in 2019, the long-term utility performance data looks a lot worse than a year ago. Utilities are now underperforming the market on a 1-yr, 3-yr, 5-yr and 10-yr basis. See Exhibit 4 below.

Exhibit 4: Utilities Trailing 1/3/5/10-Year Performance – Price and Total Return

Trailing Performance	Utilities - Price	S&P 500 - Price	Relative - Price	Utilities - TR	S&P 500 - TR	Relative - TR
1 Year	22.2%	28.9%	**-6.6%**	26.3%	31.5%	**-5.1%**
3 Year	33.0%	44.3%	**-11.3%**	47.5%	53.2%	**-5.7%**
5 Year	36.7%	56.9%	**-20.2%**	63.2%	73.9%	**-10.7%**
10 Year	107.8%	189.7%	**-81.9%**	205.3%	256.7%	**-51.3%**

Source: FactSet, Wolfe Research

1) History says utilities may be due for a bounce, but…

Will the ping-pong performance continue?

This was the 6th year in a row that utilities have performed opposite the prior year, ping-ponging between outperforming and underperforming the market (see Exhibit 5 on following page). If this track record continues, utilities are due to outperform in 2020.

While it may not feel like it to investors, utility deviation versus the market has tightened the last five years with no year seeing more than a 1000bp performance deviation.

Exhibit 5: Utilities Deviation from the Market since 2007 – Total Return

Year	Utility Performance During Year	S&P 500 Performance During Year	Relative Performance
2007	19.4%	5.5%	**13.9%**
2008	-29.0%	-37.0%	**8.0%**
2009	11.9%	26.5%	**-14.6%**
2010	5.5%	15.1%	**-9.6%**
2011	20.0%	2.1%	**17.9%**

How do utilities perform after big stock market rallies?

Given the 29% move in the S&P 500 last year, we thought it would be interesting to look at how utilities perform the year following large market rallies. We looked at every period where the market rose over 25% and how utilities performed the following year. On the surface, the data in Exhibit 6 below shows a mixed bag but the only years where utilities did poorly were during the 1990 tech bubble. Excluding this, utilities have consistently performed in line or better than the market in years following large rallies. This seems to bode well for 2020 performance.

Exhibit 6: Utilities Relative Performance Post Market Up Over 25%

Year Where Market Rose +25%	Utility Performance Following Year	S&P 500 Performance Following Year	Relative Performance
2019	?	?	**?**
2013	24.3%	11.4%	**12.9%**
2003	19.6%	9.0%	**10.6%**
1998	-12.8%	19.5%	**-32.4%**
1997	10.0%	26.7%	**-16.6%**
1995	0.2%	20.3%	**-20.1%**
1991	5.3%	4.5%	**0.9%**
1989	-6.5%	-6.6%	**0.0%**
1985	23.3%	14.6%	**8.7%**
1980	9.2%	-9.7%	**18.9%**
Average			**-1.9%**

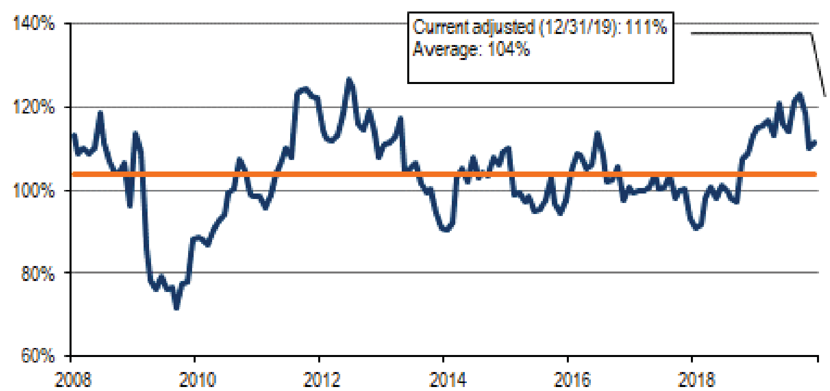
*Prior to 1995, Utilities = DUK, ED, EIX, EXC, FE, PCG, PPL, SO

Source: FactSet, Wolfe Research

2) Valuation Review – still at a decent premium

Utility valuations at 11% premium to market
Even after a pullback in Q4, utility relative P/E ended the year at an 11% premium to the market. This is down from over 20% at YE 2018 but still well above the 4% average premium we have seen post the financial crisis. Utilities have swung between a 9% discount in June 2018 to a 25% premium in mid 2019 – the volatility is pretty insane depending on macro conditions. We would be patient and wait for utilities to get closer to an average relative multiple or discount to buy them.

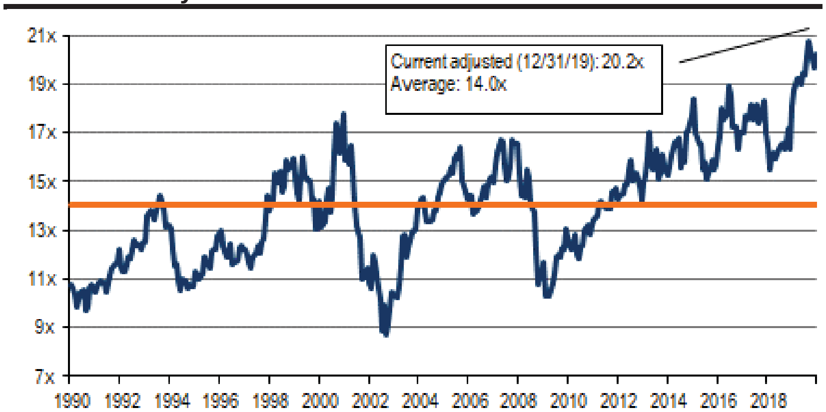
Exhibit 7: Utility Sector Forward P/E Relative to the S&P 500



Source: FactSet, Wolfe Research

Absolute valuations also near all-time highs
The current forward P/E of the sector is over 20x forward earnings. This is just below all-time highs. Given that the current is well above the L-T average of 14x and toward the higher end of the recent range, we view current valuations as highly dependent on sustaining the current low rate and strong stock market environment.

Exhibit 8: Utility Sector Forward P/E



Source: FactSet, Wolfe Research

Yield valuations

Finally, we show yield valuations in Ex. 9 and 10 below. Utilities still look cheap to Treasuries as an income play (what doesn't!). Compared to the S&P 500, utilities look expensive on a yield basis at only 126bps above the S&P yield vs a historic average of 225bp. Many high-quality utilities now have yields below 3% these days.

Short interest

One of our favorite contrarian indicators for utilities from a near-term trading standpoint continues to be short interest in the Utility ETF (XLU). When it's high, we view it as contrarian bullish. When it's low, we view it as a contrarian bearish signal. Today, the reading is as contrarian bearish as we have seen in the last 5 years with short interest at lows.

Investor poll results

We conducted our yearend investor poll in mid-December. The responses painted a decidedly different sentiment for utilities vs six months prior – 51% think utilities will underperform the market in 2020 (was 29%) and only 26% think utilities will outperform (was 53%). Sentiment jives with the fact that the vast majority (92%) see interest rates staying flat or moving higher. It could also be reflective of expectations for the presidential election – 77% believe President Trump will be re-elected, likely suggesting a belief that the economy will continue to do decent and keep the bull market running. Interestingly, the preference is still to be overweight Regulateds (53%); Power is underweight (59%) for the first time in a while; YieldCos can't seem to catch a bid (60% underweight) despite how well they have performed in 2019.

EXC was the consensus favorite by a lot and we agree. 65% believe EXC will get IL legislation done this year. AEP was also a top long, which we view as a safe pick. shorts were the usual suspects – SO, DUK and ED – though SO more than doubled DUK for the top spot. Consensus' view on Vogtle 3 meeting the Nov. 2021 deadline were unchanged six months later, 75% still believe SO will miss the deadline.

The view on the CA utes was largely unchanged – 54% see them as value traps. This is despite fire season being over and recent constructive outcomes in rate cases. Consensus' view is still that MVP will get done (79%, up from 77%) but less people believe ACP will be completed (46%, down from 55%). Our first polling of Gas vs Electric and which deserves a higher multiple was interesting – 57% believe Electrics should trade higher. Europe's focus on decarbonization seems to be having an impact in the US.

Exhibit 12: 2020 Outlook Survey Results

	2020 Outlook Poll		
1) Top pick for 2020?	1) EXC 2) AEP 3) D / CNP / EIX		
2) Top short/underweight for 2020?	1) SO 2) DUK 3) ED		
3) Best non-consensus idea for 2020?	Long 1) NI 2) CNP 3) EXC	Short/Underweight 1) SO 2) D / ES / NEE	
4) How will utilities perform vs the market for 2020?	Outperform Underperform In-line	26% 51% 23%	
5) Do you prefer utilities or midstream in 2020?	Utilities Midstream	49% 51%	
6) Subsector views:	 Power Regulateds YieldCos	Overweight 41% 53% 40%	Underweight 59% 47% 60%
7) Interest rates - 10-yr yields at the end of 2020?	1.5% or less 1.5-2.0% 2.0-2.5% 2.5% or more	6% 54% 38% 2%	
8) California utilities - value plays or value traps?	Value plays Value traps	46% 54%	
9) Best activist candidate?	1) CNP 2) DUK 3) NI		
10) IPPs - do you prefer NRG or VST?	NRG VST	63% 37%	
11) Which company is the best / worst on ESG?	Best 1) NEE 2) AWK	Worst 1) DUK 2) WEC

	2020 Outlook Poll	
12) Do MVP and ACP get completed?	Both	36%
	Neither	11%
	MVP but not ACP	43%
	ACP but not MVP	10%
13) Does EXC get IL clean energy legislation done in 2020?	Yes in 2020	65%
	No	35%
14) Does SO get Vogtle 3 done by November 2021 regulatory deadline?	Yes	25%
	No	75%
15) Who wins the presidential election?	Republican	77%
	Democrat	23%
16) Gas Utilities vs. Electric Utilities - which should trade at a higher multiple?	Gas	43%
	Electric	57%
17) Offshore wind - bullish or bearish?	Bullish	52%
	Bearish	48%

Note: These comments have been reproduced in their original form and have not been edited. Poll comments are not necessarily representative of the overall market, should not be attributed to Wolfe Research and are not representative of its views. We received 79 responses for our 2020 outlook poll.

3) Presidential election is The Event of 2020

We keep coming back to the Presidential election as the key event for 2020 and the key determinant of whether utilities will outperform or underperform the market. The differences between the Republicans and Democrats have widened (even moderates like Biden) to the point where the outcome likely makes a big difference to the market overall and which sectors outperform and underperform.

If a Democrat wins, most key sectors of the economy are likely viewed as net losers. Healthcare has increased cost exposures, Tech has anti-trust issues, Financials have renewed regulatory pressure, and Energy has a negative bias, at least conventional energy. The risk of tax rates rising, especially if Dems also win the Senate, could also be a huge pressure on the market and most sectors. Utilities seem to be relatively neutral to a Dem winning the White House and risk of tax increases. This makes them a big relative winner vs the market and other sectors if a Dem wins the White House. In fact, some utilities could be flat-out beneficiaries such as renewables plays (NEE/NEP), offshore wind (ES), and carbon free power such as nuclear if the Dems pursue climate change actions (EXC).

If Trump wins, not much changes. There would likely be a relief rally in the market especially for areas like health care and financials that are most exposed to Democrat win. Utilities would not be directly hurt, but could be left behind rallies in these other sectors and thus are a relative loser. For renewables plays, the current Administration is at worst neutral. In fact, Congress just passed extension of wind tax credits and offshore wind credits late last year

Other key events to watch in 2020

In exhibits 14 (below) and 15 (following page), we detail a full list of important events by company for 2020. Some highlights include:

AGR / ES – BOEM is expected to release a supplemental study on offshore wind during Q1; important for both AGR/ES. BOEM expected to rule on permit for Vineyard Wind in Q2; key for AGR.

CNP – Expected to re-issue 2020 guidance and provide an updated growth outlook on YE19 call.

D – VA's legislative session runs from Jan. through mid-March. Legislation to support D's offshore wind plans could be introduced.

DUK – Outcomes of its two NC rate cases around midyear will be key for stock.

D / DUK – ACP's fate should be known by mid-year; oral arguments at the SCOTUS will take place on Feb. 24th, with a final decision due by the end of June. The FWS' biological opinion should be re-issued by the end of Q1 and any challenges should be known by the June timeframe.

EXC – IL legislation potentially supporting state's nuclear and clean energy expected to be proposed in Q2 after primaries; it could slip into veto session in Q4.

NI – The MA DPU's investigation into Columbia Gas was launched last year in October and is expected to last about a year. By fall, we should know the outcome of the investigation and possibly NI's strategy for MA going forward.

PCG – Could emerge from bankruptcy by 6/30 and participate in the CA Wildfire Fund. A large equity issuance to emerge from BK could occur in Q2.

PNW – Staff's initial testimony in APS' rate case is due in May, with the commission hoping for a recommended decision by late November. 3 of the 5 seats at the ACC are up for re-election in the fall.

PPL – Possible Brexit in Q1; Ofgem's RIIO-ED2 sector specific methodologies are expected this summer.

SO – The gap between the company and GaPSC Staff on Vogtle timeline still remains wide; progress in 1H20 will be key.

Exhibit 14: 2020 Key Events

Ticker	Event	Timing
AEE	MO rate case decision	By June
	MO wind acquisitions	Late 2020
AEP	TX rate case decision	January
	IN/MI rate case decisions	By 2Q20
	North Central Wind decisions	2Q20
AES	Possible DP&L rate case filing	1H20
AGR	New York / Maine rate case decisions	1Q20
	BOEM supplemental study on offshore wind	1Q20
	BOEM permit decision on Vineyard Wind	2Q20
AWK	File Pennsylvania rate case	unknown
	File Missouri rate case	unknown
CMS	Electric/gas rate case decisions	2H20
CNP	Final order in CEHE rate case	1/16/2020
	New 2020 guidance	YE19 call

Exhibit 15: 2020 Key Events (cont.)

Ticker	Event	Timing
D	Virginia legislative session (offshore wind)	1/9/20-mid March
	File rate case for Dominion Energy South Carolina (SCANA)	1Q20
	ACP; biological opinion reissued by Fish & Wildlife Service	1H20
	ACP; oral arguments at US Supreme Court regarding App. Trail crossing	2/24/2020
	ACP; final decision on App. Trail crossing issue	By June 30th
DTE	Electric rate case decision	2Q20
	Gas rate case decision	2H20
DUK	NC rate case decisions	3Q20
	ACP; biological opinion reissued by Fish & Wildlife Service	1H20
	ACP; oral arguments at US Supreme Court regarding App. Trail crossing	2/24/2020
	ACP; final decision on App. Trail crossing issue	By June 30th
EIX	2021-23 GRC decision	possible by YE20
ES	BOEM supplemental study on offshore wind	1Q20
	FERC decision on NEISO transmission ROE	unknown
ETR	TX rate case decision	unknown
	Extension of LA rate plan	unknown
EXC	IL legislation	2Q20 or 4Q20
	Federal investigation	unknown
	PJM Capacity Auction 2022-2023	2H20
FE	FES Bankruptcy emergence	February
	Ohio legislative session - PUCO reform	7/12/2020
FTS	Arizona rate case decision	2Q20
	Alberta transmission decision	1Q20
LNT	Wisconsin rate case decision	2H20
	Wisconsin solar CPCN decision	2H20
NI	File Pennsylvania rate case	unknown
	Expected outcome of DPU's investigation in Mass.	September-October
NRG	ERCOT Summer	July-September
	PJM Capacity Auction 2022-2023	2H20
OGE	File application for grid mod rider in Oklahoma	1Q20
PCG	Possible Equity issuance	2Q20
	Possible emergence from BK	2Q20
PEG	Clean Energy Future Filing	March
PNW	Staff/intervenor initial testimony due in APS rate case (tent.)	5/27/2020
	Arizona Corporation Commission elections (3 of 5 seats open)	11/3/2020
	Recommended opinion and order filed in APS rate case (tent.)	11/25/2020
POR	Oregon PUC decision on 2019 IRP	2/20/2017
PPL	Possible Brexit (hard or soft)	1Q20
	UK RIIO-ED2 sector methodologies	Summer
SO	Vogtle update filing	February
	Vogtle cold hydro testing	Apr-Jun
	Vogtle hot functional testing	Jun-Jul
SRE	Targeted FID of Energia Costa Azul	1Q20
	Sempra Analyst Day	3/24/2020
	Targeted FID of Port Arthur	2Q20
VST	ERCOT Summer	July-September
	PJM Capacity Auction 2022-2023	2H20
XEL	File electric rate case for NSP-MN	November

4) ESG goes viral; electrification, renewables in focus; the nat gas debate

Last year, we thought ESG focused investing would go from niche to mainstream. We think this clearly played out in 2019. As we enter 2020, we sense that ESG focus will be taken up another notch. We have mixed feelings about this as we think ESG is moving to more of a ratings-based approach that will be subject to a lot of biases. In utilities, for example, the inclination is to focus solely on the “E” and not pay as much attention to the “S” and the “G”. Coal is bad no matter how much you have and renewables are good even if you way overpay for them.

That said, we have always been focused on management quality and business sustainability as key drivers to begin with and we hope the ESG trend will only further emphasize this. We also see opportunities to get ahead of the ESG “crowd” by trying to anticipate where they go next. In utilities, NEE and AWK have clearly been the focus names and they trade at the highest premium values in the sector today. We view ES as likely to be the next beneficiary given their long-term track record, T&D focus, lack of coal, and early mover in offshore wind together with ESG darling Ørsted.

In the context of the broader industrial and energy space, we think the utility sector has a good ESG story to tell. Electricity is on the favorable side of the long-term energy trends, especially as decarbonization becomes a bigger focus in more progressive areas like the UK, Europe and states like CA, NY and MA. Electrification of transportation and even home heating are huge long-term opportunities. Utilities are very focused on carbon reduction commitments for their fleet with many targeting 80%+ carbon reduction by 2050. The transition to renewables from conventional energy can provide a growth driver for many utilities as it drives ratebase growth.

In the latter part of 2019, we saw an increasing debate over how natural gas fits into an ESG friendly future. Some view gas as the next to be exposed to the decarbonization trend and thus an ESG risk. Many view natural gas as a critical piece of reducing coal and oil dependence and the most cost effective way to transition to lower carbon future. We have seen gas utility premium values compress from their prior levels and in our recent survey more investors said electrics should trade at a premium to gas utilities than vice versa. We expect this natural gas debate to be a key focus in 2020.

5) Renewables best year ever in 2020 – wind, solar and offshore wind

We expect 2020 to be another banner year for renewables. Wind additions are likely to hit a record peak as developers work to get projects across the line to get the maximum PTC by YE 2020. Solar additions will grow as well but the big story in solar will be backlog acceleration as developers have the full ITC in place through 2023. Finally, offshore wind backlog will continue to grow rapidly, but it will be important to get better visibility on BOEM permitting rules and timing.

Wind and Solar

As we noted in our annual Power Supply report (link), wind and solar additions over the next five years combined to be 63.3 GW – over 20 GW higher than our fall 2018 outlook and easily a record for our annual studies. This is almost triple the amount of forecasted gas new build over the same period. Even more, this is highly likely to be an underestimation given the limited visibility on projects more than 2-3 years out in the future. Most wind and solar farms can be built in under a year, such that the ramp time is much quicker. While tax credits remain a driver, technology improvements have gotten to the point where renewables are economic on their own. Couple that with advancements in storage, renewables are highly competitive with new natural gas.

Exhibit 16: Forecasted Wind Additions by Year and Region (MWs)

Offshore Wind

Offshore wind remains a nascent industry in the US, but there has been a consistent push in this direction from policymakers in the Northeast. The waters off the coast are said to be the best suited for this type of technology and we saw RFPs pop up regularly the past two years.

Offshore wind obviously only impacts a few of our coastal utilities under coverage, but it has gotten a lot of attention, given the size of the investments and earnings potential. The mostly blue-dominated states along the East Coast have set strict renewables/emissions targets while restricting new gas infrastructure, facilitating offshore wind development. States with offshore wind targets through 2035 want over 21,000 MW of new offshore wind. Awards from RFPs to date total less than a third. More RFPs are expected in the future. We generally are wary large project risks. But we believe offshore wind could lead to supplemental earnings growth for those that are disciplined on price and able to manage construction risks.

The US players: US utilities with offshore wind under consideration or development include AGR, D, ES, and PEG. All have teamed up with foreign offshore wind developers, who have years of experience globally, namely Ørsted and Copenhagen Infrastructure Partners. There are a couple of other developers, Equinor and Shell/EDP Renewables who have won some RFPs.

AGR: CIP with AGR through their Vineyard Wind JV currently have 1,604 MW planned for 2022-2025 in CT and MA.

ES: Ørsted has a JV with ES, and they currently have about 1,700 MW of offshore wind projects planned for 2022-24 in CT, NY and RI.

PEG: PEG has an option to take a 25% stake in Ørsted's Ocean Wind project in NJ.

D: D teamed up with Ørsted on a 12 MW project in VA, which has received federal permits from BOEM and should be operational by summer 2020. However, D is eyeing over 2,600 MW of offshore wind development for the mid-2020s, with the investment being proposed for rate base. VA Gov Northam (D) has made offshore wind a priority.

The growth: The companies have been hesitant on specifying the investment in offshore wind, given the competitive nature of the business. However, D believes the opportunity would be $8B of capex (all in rate base). That's more than D's total enterprise wide annual capex. ES suggests earnings growth could rise from 5-7% to high single digits when its projects fully come online. ES also sees mid-teens ROEs from offshore wind. Investment tax credits support the pending projects, and those were recently extended a year.

The risks: Offshore wind has been successfully deployed in Europe, Asia and other parts of the world. However, it is a relatively nascent industry in the US. Although state policymakers and regulators have been supportive thus far, there are still concerns over impacts to certain constituencies (e.g., fishermen) and to delays/overruns. The Bureau of Ocean Energy Management is currently conducting a supplemental study on offshore wind projects, which could be released this quarter. BOEM is then anticipated to issue a decision on Vineyard Wind's request for permit, likely in 2Q20. This will be a harbinger for the other pending offshore wind projects. And then there is price. The two most recent auction winners have been by bidders who proclaimed their price (i.e., revenue) was the lowest to date in the US or North America. AGR said last month after the release of the latest CT RFP results that its bid "offered at a price lower than any other publicly announced offshore wind project in North America." Earlier last year Shell/EDP made similar comments after their Mayflower project won the latest MA RFP. Below are prices for offshore wind projects (where available):

Exhibit 18: Summary of offshore wind projects and corresponding price data

Developer	Project	MW	Nominal	Levelized	Year	State
Ørsted	Skipjack	120	$171	$132	2022	MD
Ørsted / Eversource	South Fork	130	$137		2022	NY
Avangrid / Copenhagen	Vineyard Wind	800	$65/$74	$65	2022/2023	MA
Ørsted / Eversource	Revolution	400	$98	$74	2023	RI
Ørsted / Eversource	Revolution	300			2023	CT
Ørsted	Ocean Wind	1,100	$98	$86	2024	NJ
Equinor	Empire Wind	816		$87	2024	NY
Ørsted / Eversource	Sunrise	880	$110	$80	2024	NY
Shell/EDP Renewables	Mayflower	800	<$84		2025	MA
Avangrid / Copenhagen	Vineyard Wind	804	lowest price		2025	CT
Dominion	Coastal Virgina	2,640			2024-2026	VA

Source: Wolfe Utilities & Power Research, Company Reports, Department of Energy

1) South Fork starting prices are $160 for 90 MW and $86 for 40 MW; wtd average = $137; escalator averages 2%over 20 yrs

2) Vineyard Wind nominal is $65 for 400 MW and $74 for 400 MW in MA

3) NY Sunrise/Empire levelized is based on $83.36 average between two projects

4) Companies said "long term prices below the original price cap of $84.23/MWh"

5) Vineyard said CT bid "offered at a price lower than any other publicly announced offshore wind project in North America"; no deadline

6) De-risking stories the focus for value opportunities

While the valuation dispersion within the sector has come in from its peak, it is still fairly bifurcated, particularly amongst the companies trading at a discount. In exhibits 19-21 below, we sort the sector on 2021 P/E and show characteristics of each companies such as growth rate, business mix, balance sheet data and unique risks (or lack thereof). Business mix issues and unique project/regulatory risk are clearly the most influential factors that determine where a company trades relative to the sector average.

Within the discount utilities, we see opportunities for certain companies to re-rate higher – FE, EXC, D and EIX. A common theme amongst these companies is an improving / de-risking business mix. For FE, once FES emerges from bankruptcy (February), we believe its relative valuation should improve as investors can fully focus on FE's low-risk T&D utility story. For EXC, we believe there is a good chance for IL legislation to pass in 2020 which could provide L-T certainty to the earnings of the company's merchant nuclear fleet; EXC should also experience a natural re-rating over time as its utilities become a bigger part of its business mix. We hope that the market will start to appreciate the steps D has taken to de-risk its business mix once ACP's fate is known around mid-year. The AB 1054 Wildfire Fund provides downside protection for EIX, and we believe 2020 will be a year of stabilization for the CA utilities.

Exhibit 19: Utilities Trading at a Premium

Company Name	2021 P/E Multiple	Market Cap ($M)	EPS Growth Rate	FFO/debt (2021E)	Pure Plays	Project/Regulatory Risk

The 2020 DUTY Portfolio – Dogs of the UTY

Keeping with our theme over the past couple of years, we have compiled a DUTY portfolio for 2020 which comprises some of the worst performers in 2019. Our thesis behind the DUTY portfolio is to buy a basket of the most beaten-up stocks from the prior year on the premise that risks can often be over-discounted by the market, creating value opportunities for investors. The 2020 DUTY portfolio includes the following names: CNP, EXC, AGR, PNW, DUK and NI. Of these names, we like EXC best as we see significant re-valuation potential if IL nuke legislation gets done in 2020. We are still cautious on AGR and PNW – AGR due to a lot of execution risks and PNW due to a very tough rate case and regulatory environment.

Exhibit 22: 2020 DUTY Portfolio

Ticker	2019 Performance
AGR	2.1%
CNP	-3.4%
DUK	5.7%
EXC	1.1%
NI	9.8%
PNW	5.6%
Average	3.5%
S&P Utilities	22.2%
Relative Performance	**-18.8%**

Source: Wolfe Utilities & Power Research

In exhibits 23 and 24 below, we show the performance of our 2019 and 2018 DUTY portfolios. The 2019 DUTY portfolio outperformed the utilities index by 550bps, led by strong years from SO (top performer in the sector), EIX and PPL. The 2018 DUTY portfolio, when excluding the CA utilities due to the historic wildfires, similarly outperformed but by over 1500bps; AES and FE were two of the top four performers in the sector in 2018.

Exhibit 23: 2019 DUTY Portfolio

Ticker	2019 Performance
D	15.9%
ED	18.3%
EIX	32.9%
PPL	26.7%
SO	45.0%
Average	27.8%
S&P Utilities	22.2%
Relative Performance	**5.5%**

Exhibit 24: 2018 DUTY Portfolio

Ticker	2018 Performnace
AES	33.5%
EIX	-10.2%
FE	22.6%
PCG	-47.0%
PPL	-8.5%
DUTY Average	-1.9%
S&P Utilities	0.5%
Relative Performance	**-2.4%**
Relative Performance (ex Cali)	***15.4%***

7) California – we finally see stabilization in 2020

As we entered into 2019, multiyear wildfire liabilities had led CA's biggest utility (PCG) into bankruptcy and threatened junk credit ratings for the other two CA utilities. But by summer the state had enacted wildfire legislation (AB 1054) that provided downside protection for participating utilities: EIX and SRE made an initial contribution into the AB 1054 Wildfire Fund, and PCG plans to once it emerges from bankruptcy; the deadline for PCG is 6/30. The 2019 fire season was the first test under the post-AB 1054 environment. And there was clear overreaction in EIX's stock price to the Oct-Nov fires. But the stock fully recovered by year's end. It also certainly helped to see a constructive rate case decision for SRE, a reasonable outcome in the cost of capital proceeding, and an extension of future rate plans to four from three years; all of which are reflective of the new CPUC leadership. And as 2019 closed, PCG settled a CPUC investigation into 2017-18 wildfires and its 2020-22 GRC.

So the question is, after several years of volatility, can we see stabilization in CA stocks in 2020. We believe yes for EIX and SRE. The CA Gov will determine how PCG trades in the near term, but we ultimately think PCG can stabilize once we learn who will lead the BK exit. We will be watching a few items here…

1) **Gov support for plan to emerge from bankruptcy** – Gov Newsom rejected PCG's POR in December, which included settlements with victims (Torts) and insurers (Subros), both of which were approved in December. He has made several demands, including an option for a state takeover under certain circumstances. The Ad Hoc Noteholders, led by Elliott Management, continue to push their POR for PCG, including meeting Gov Newsom's governance demands and takeover option. But the Gov has yet to side with either proposed plan. To benefit under AB 1054, PCG must emerge from bankruptcy by 6/30/20 deadline. With the CPUC needing several months to review and approve any BK exit plan, we believe the Gov will likely indicate a preference of one plan over another soon.

2) **PCG equity offering** – Regardless of who leads it out of BK, PCG will likely need to issue a significant amount of external equity. We believe the capital will follow once there is certainty on the exit plan. We expect PCG to ramp up an investor outreach throughout 1Q20, with an offering potentially in 2Q20. We will be gauging the investor interest in the offering. If we see traditional utility investors come back to PCG, then we will view that positively for CA names. Once PCG emerges from BK, the AB 1054 Wildfire Fund will have $21B of funding with capacity for more.

3) **Seasonality trade** – The CA utilities have been the ultimate in seasonal trading stocks. The risk profile of owning the stocks today, when there is no fire season, is lower since you can just focus on the fire claims that have already occurred for EIX and the bankruptcy for PCG. On the other hand, despite the Wildfire Fund, it becomes harder to own these stocks into the next fire season given risk of up to nearly $3B of shareholder exposure to new fires (over a three-year period). This was evident last fall. But we are heartened by the ability of EIX stock to recover completely from the Oct-Nov fires by yearend. We think this seasonal trade should moderate over time.

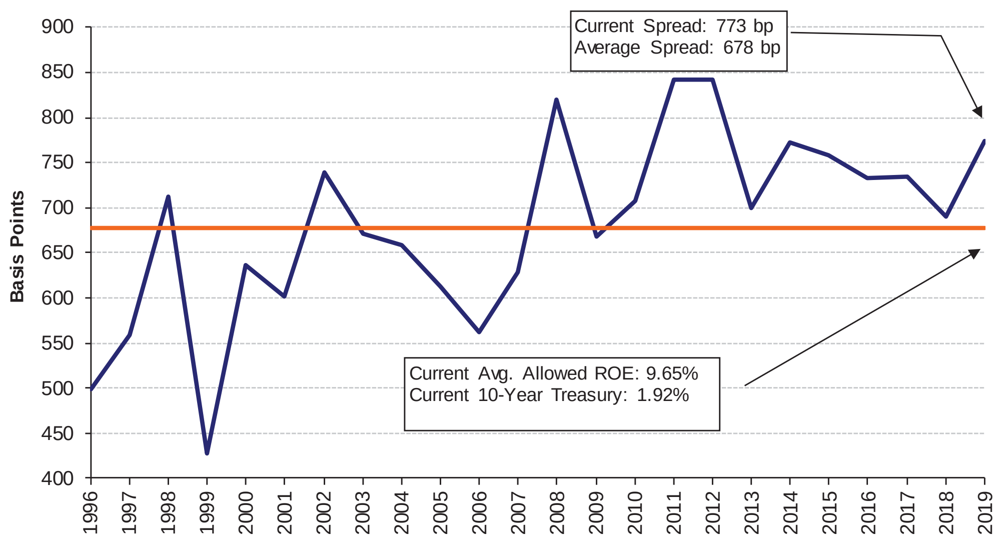
4) **EIX specific items** – EIX still is facing claims from 2017-18 fires. We believe EIX has time on its side to winnow down the gross claims. Given its position, we could see a settlement in past fire claims sometime this year, which would likely be viewed favorably. Regarding EIX's GRC, we expect a reasonable outcome, with a possible settlement by yearend, as we saw with PCG last month. Even without a settlement, we believe SRE's constructive GRC outcome is a positive indicator. Under the CPUC's new leadership, it is evident that proceedings will no longer be unduly delayed, providing regulatory certainty at a time when the state is trying to attract new investment for its clean energy goals.

By the end of 2020, we expect it will have been year of stabilization for CA, with the volatility largely being centered around PCG's BK exit/financing in 1H20.

8) Low rates puts ROEs back in focus

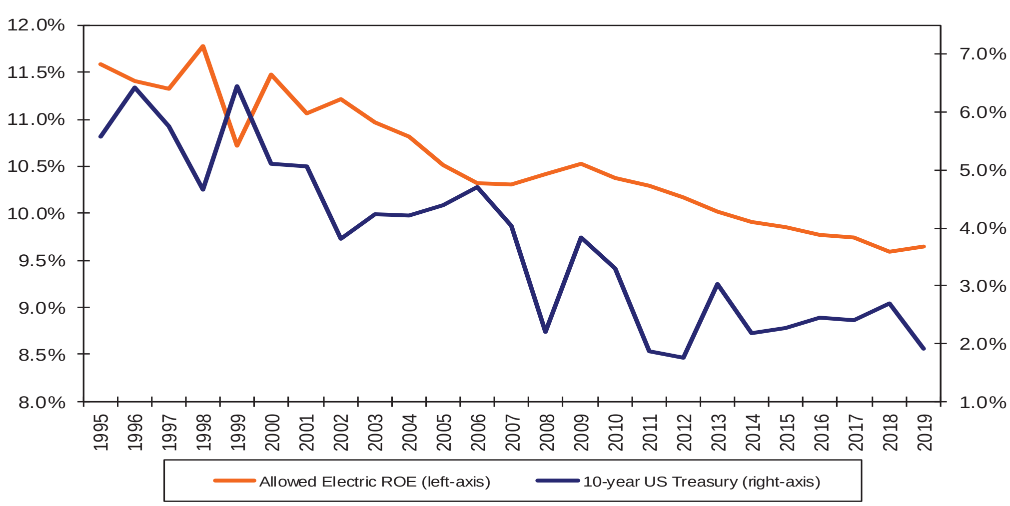
For the past several years, ROEs at the state level have been relatively sticky despite Treasury yields that have fluctuated. Typically, the spread between these two data points has trended directionally in tandem, though currently it sits near recent highs. This comes as allowed ROEs have averaged ~9.6% for the past 3 years in a row now (See Exhibits 25-26 on the follow page). That said, there have been some recent rate case scares that show this may be changing sooner rather than later. ED saw its allowed ROE fall below 9% in New York and XEL saw an allowed ROE decline of over 50bps in Colorado. The CNP and SO rate cases were other potential examples last year, but CNP is now working through settlement discussions, and SO's final order ended up being constructive. Meanwhile, at the FERC level, the new methodology put forth in November, leaves open the possibility of ROEs moving lower formulaically and setting a blueprint for similar action elsewhere. It's possible FERC and state commissions continue to work the data in such a way that more gradualism is employed, but we are increasingly mindful of this risk.

Exhibit 25: Spread between Allowed Electric Utility ROEs and 10-year Treasury Yields



Source: Wolfe Utilities & Power Research; SNL; FactSet

Exhibit 26: Allowed Electric ROE v. 10-year Treasury Yields



Source: Wolfe Utilities & Power Research; SNL; FactSet

In Exhibit 27 below, we review near-term rate case risk across our coverage. This includes ROE sensitivities and percentage of rate base by jurisdiction. Some of the companies below file on a fairly regular-basis and have been successful in settlements or otherwise constructive outcomes (LNT, CMS, DTE) – thus we view these cases as less risky. Regulatory situations where we are wary include PNW in Arizona and DUK in the Carolinas. PNW's regulatory situation has fallen apart amidst what has become a hostile situation between the company and commissioners. DUK has big Carolinas and Indiana cases. Looking at this another way, we're finding comfort in some of the names that have minimal rate case risk near-term. Amongst our Outperform-rated names, this includes: FE, ES, EVRG. Peer Perform-rated OGE and PEG also fit the bill.

We also recently reviewed the new FERC transmission ROE methodology set forth in the November MISO decision. This has garnered a lot of interest, as it may open the door to unintended consequences like future ROE complaints. At the time, FERC and many others, thought this issue would finally be put to bed, but the decision was based on stale 2015 data. Taking into account the continued run in utility valuations, this would undoubtedly pressure future ROE calculations – dividend yields have decreased, earnings growth rates are increased. We attempted to replicate FERC's methodology that unexpectedly shifted to just using DCF and CAPM to determine if the ROE fell outside a zone around the midpoint. We found that ROEs could be headed further south (Transmission ROE Calculator). For this reason, we believe virtually every party filed for rehearing in the MISO transmission case. FERC also has a pending New England transmission complaint that requires another Commissioner (Glick is recused) to decide. At the same time, there is also the broader notice of inquiry (NOI) pending on ROEs. Ultimately, we believe the latter may be the avenue where FERC decides to try and settle this issue once and for all. Our view is that FERC doesn't intend to lower transmission ROEs below nearly every state in the country and also would like to avoid a high frequency of future complaints. How this all plays out will be in focus in 2020.

Exhibit 28: Wolfe Estimate of MISO Transmission ROE on Current Data

DCF Lower	6.41%	DCF Lower - Mid Quartile	8.07%

*On AEP, the transmission earnings are only for its Transco. There are other FERC transmission earnings embedded in some of its utility subsidiaries.
**FE base ROE is weighted average
***Some of the utilities in Exhibit 3 do not disclose transmission earnings. We have estimated those based on projected rate base and earned/allowed transmission ROEs.

9) Balance sheets and credit remain a key focus; more equity coming

We recently published our annual utility financial metrics review (here) which provides insights on utility balance sheets and cash flow metrics. With M&A and no ceiling in sight for utility capital plans, we continue to see a wide differentiation among balance sheets in the sector. In 2019, we saw a large number of utilities back in the market with sizable equity deals ($19B+ in total). This was despite a similar amount of equity completed in 2018 to combat tax reform.

Exhibit 30 below is a summary of the key metrics (unadjusted) that we project for our utility group in 2021. We project the key utility metric, FFO/debt, to stay steady around 17% through 2021. For the first time, we included EV-to-rate base for our coverage and see it at 1.6x in 2021. On average, we see the percentage of regulated earnings rising 1% to 87% through 2021. For companies with material improvement on this front, we view it constructively given that regulated utilities tend to trade at a premium vs the group average.

Exhibit 30: 2021 Summary credit metrics – 2021E (alphabetical order)

Credit metrics stabilized, but companies still living on the edge

Over the past two years, utilities have taken action to help stabilize their credit metrics – equity issuances, cost controls, proactive discussions with regulators to help offset lost cash flow. Recognizing this, Moody's moved its outlook for the sector to Stable from Negative toward the tail-end of 2019. In exhibit 31 below we show that average FFO/debt is projected to remain steady over the next couple of years at 17%. That said, many utilities are still living on the edge of their downgrade thresholds. This could become problematic given the capital-intensive nature of the sector and propensity (at least historically) for M&A.

Line of sight to more big equity deals

We counted over $19B of equity issuance in the sector during 2019. We continue to be amazed at how accessible the equity market is for utilities, pricing deals at very little discounts and often upsizing from the original deal size. We have a line of sight for more big equity deals in 2020 – PCG, CNP and NI to name a few, with PCG being the mother of all deals. For most companies, our projections (see exhibit 32 below) reflect ATM / DRIP equity which is used to help fund growing capex plans.

Exhibit 32: Projected equity needs

10) Power at a crossroads – what now?

After a strong two-year run over 2017-2018, the power rally hit a road block in 2019. NRG, VST, and EXC all essentially finished the year right where they started – while the market went up almost 30% and the utilities sector went up over 20%. Fundamentally, 2019 was as strong as ever – both VST and NRG are well on track to hit numbers, while proving out their capital allocation flexibility. For VST, the selling shareholder issue was just too much to overcome – exacerbated by Brookfield's 21M share unloading in early-December. NRG may have simply been due for a breather. As we stand at the beginning of 2020, the IPPs have been focused on proving out the sustainability of true terminal value, particularly in a low carbon future. There is a solid case for this. But is anyone listening? Increased investor sponsorship without an obvious identifiable catalyst will be critical.

Commodities pricing in 2019 was mixed. Most regional power prices weakened considerably alongside natural gas. ERCOT was the exception – seeing improvement further out on the curve, after tight summer conditions validated that there could be price spikes if intermittent wind failed to show. Entering 2020, ERCOT summer will once again be in focus, as the IPPs are more levered to energy pricing in this region than anywhere else.

PJM capacity market hanging in the balance. Watching state action. At long last, FERC finally ruled in December on the PJM auction and how it will handle subsidized bidding going forward. As expected, the MOPR (minimum offer price rule) was strict, but this is now just the first step in the process. Attention now shifts to the state level, namely Illinois, where legislative efforts will be put forth to employ the FRR (fixed resource requirement) method to procure capacity outside of the traditional PJM construct. If this is unsuccessful, EXC will likely close its nuclear plants. If successful, Illinois/ComEd seems primed to leave the PJM capacity market – leaving questions about what this means for the residual market. There could be a domino effect where New Jersey and Ohio follow suit, given their offshore wind goals and nuclear support respectively. Generators will undoubtedly put up a fight. PJM seems to be stuck in super-limbo at this point. Everything could look very different a year from now. Not to mention that there should be another auction by year-end to determine 2022-2023 revenues over one-year behind schedule, but forecasting that outcome seems impossible at the moment.

More nuclear ZECs potential? This has been going on for a while now, as each year a new state seems to pass legislation that is supportive for nuclear units. Last year it was OH, with FES' two nuclear plants benefitting. PA came up short, but could try again in 2020 (or move closer joining RGGI). More broadly, a potential Democrat President could renew the call for carbon pricing/taxing to address this issue on a larger scale.

Will there be a public power sector left? We highlighted this in our Weekly Mark yesterday. With the IPPs finishing up 2019 lost and forgotten, we wonder how much patience these companies will have with the public markets. The fundamentals remain attractive, but a complicated sector of 2 is proving to be a difficult selling point. We believe in the sustainability of EBITDA and Free Cash Flow, as the companies did a particularly good job of proving out their resiliency with Q3 calls. However, if they continue to trade at high-teens free cash flow yields, this ultimately should become a private equity story. The returns are simply too attractive. Meanwhile, the Integrateds also wrapped up a lukewarm 2019, with investors most receptive to their increasing percentage of regulated earnings. PEG probably should have sold its fossil fleet when it had the chance, and EXC is looking to move toward either a primarily contracted-like structure with its nukes or simply shutting them.

Power supply/demand now all about intermittent renewables. Our annual power supply study wasn't nearly as bullish as a year ago from a pure capacity perspective. But not all capacity is created equal. Baseload supply is effectively decreasing (coal and nuclear shuts continue to offset gas additions), while renewables supply continues to explode. The year-end budget bill featured a one-year wind tax credit extension that should only further bolster the next decade as the "Golden Age of Renewables" takes hold. We summarize our market outlook in Exhibit 33 below. ERCOT is bearing the brunt of the heavy renewables build-out, but as we saw last summer, this intermittent supply can't always be counted on. Reserve margins are still low double-digits, such that if the wind doesn't blow during late-August heat, we could see price spikes to the $9,000/MWh cap once again. In PJM, we'll be monitoring whether any CCGT new builds are able to move forward despite the continued delays in the capacity auction. In New England, we'll be monitoring the build-out of offshore wind in the coming years given the ambitious state goals, and what that means for reliability and pricing.

Exhibit 33: Net Capacity Additions by Fuel Type, ISO over 2019-2023 (MWs)

Source: Wolfe Research Utilities & Power Research

Investment Theses, Catalysts, and Valuations for Buy-rated Stocks

American Electric Power (AEP): The wind at its back to exceed growth target

- **Investment Thesis**. Base EPS and dividend growth of 5-7%, mostly from low-risk T&D investments. North Central Wind project would put growth above 7% by YE22 even with likely equity needs.
- **Catalysts**. Approval of North Central Wind in 1H20. Continuing to execute on T&D investments.
- **Valuation**. Stock trades in-line with regulated peers but warrants premium of 1.5x, given low-risk T&D growth and North Central Wind.

Ameren (AEE): High quality trading at a reasonable price

- **Investment Thesis**. Low risk EPS growth of 6-8%, mostly from investments in jurisdictions with little to no regulatory lag. ROE risk is manageable, with IL electric returns (20% of rate base) directionally proportionate to the 30-year UST bond yield.
- **Catalysts**. MO rate case decision by 2Q20, with a potential settlement in 1Q20. Maintaining above-average EPS growth on Feb earnings call. Continuing to execute on high-single digits rate base growth.
- **Valuation**. Stock trades at a 4% premium to regulated average but warrants a multiple in line with high-quality, low-risk utilities, which trade at 7-16% premiums.

Dominion Energy (D): Attractive with or without Atlantic Coast Pipeline

- **Investment Thesis**. We believe ACP-related overhangs have overshadowed the good work D has done recently to de-risk its business. Further, we believe the stock is attractive with or without ACP and note that D's balance sheet would remain intact even in an abandonment scenario. D also has a unique offshore wind opportunity in Virginia – $8B of potential regulated capex, most of which is outside the current 5-year plan and would help fuel robust rate base growth throughout the decade.
- **Catalysts**. A hearing at the SCOTUS on the App. Trail crossing issue is in late Feb., with a final decision by the end of June; by June, any appeals on the new biological opinion should be known – we should know ACP's fate by mid-year. Virginia's legislative session (Jan. through mid-March) could include legislation that provides a concrete path forward for D's offshore wind plans.
- **Valuation**. We use an equal-weighted scenario analysis around ACP (with and without the project in numbers). We then apply the regulated group average to arrive at our price target.

Edison International (EIX): To live and buy in LA

- **Investment Thesis**. With capped downside to future wildfires and with 2019 fire season relatively much less destructive than 2017-18, stock is a value play as EIX's rate base growth should continue to grow above industry average. Cost of capital certainty and improving CA regulation are positives.
- **Catalysts**. Resolution of wildfire damages from 2017-18. GRC outcome, possibly by yearend. Start of fire season in the fall – despite downside protection, the stock likely will be seasonal, with low utility-caused fire risk in Jan-Aug but higher risk in Sep-Dec.
- **Valuation**. Stock trades at a 4x discount, but that reflects more than both the past 2017-18 net fire damages and the capped potential future fire damages. Discount of 2x is reasonable.

Evergy (EVRG): Avoiding ROE risk in low-rate environment

- **Investment Thesis**. One of the few companies in our coverage that has 3+ years of regulatory certainty across its jurisdictions, following base rate freeze agreements in Kansas and Missouri. Particularly amidst lower interest rates, mitigates potential ROE risk. Company is growing rate base at a below average clip, but there is potential capex upside in MO from PISA and incremental merger savings opportunities are achievable. All of this while the share repurchase program continues through mid-2020.
- **Catalysts**. Year-end 2019 call should feature update on incremental capex potential, of which the company has already added $150M in Missouri. EVRG also has the opportunity to continue overachieving on merger synergies execution, as it has been tracking ahead of plan thus far.
- **Valuation**. Using slight premium to group average multiple on 2021 EPS given potential for incremental capex and continued technical support from share repurchase program.

Eversource Energy (ES): Solid core growth supplemented by offshore wind, well positioned for ESG

- **Investment Thesis**. Core utility holding, as we see earnings growth of 5-7% on ES' base capital plan, before incremental earnings from offshore wind in the mid-20s. The name is also well positioned for ESG, behind NEE and AWK.
- **Catalysts**. Updated capital plan on YE19 earnings call in Feb. BOEM supplemental study on offshore wind projects in 1Q20 and ultimately approval of permits for ES' projects.
- **Valuation**. Could see stock at one of the highest multiples given core growth, supplemental offshore wind growth and demand for top ESG names.

Exelon (EXC): All about Illinois

- **Investment Thesis**. Regulated investments provide stable predictable utility growth. However, EXC's generation business in IL needs legislative support. The pending federal investigations into IL lawmakers and lobbying activities, including with EXC/ComEd, has been an overhang. But stakeholders in IL have been supportive of capacity market reform.
- **Catalysts**. IL legislation on capacity markets possibly by 5/30 (or in the fall veto session).
- **Valuation**. An average regulated P/E on utility earnings. Plus a 7.5x EBITDA for the merchant business. IL legislation is a cheap option in EXC stock.

FirstEnergy (FE): Full appreciation for fully regulated T&D story

- **Investment Thesis**. Risk/reward skew attractive given discount multiple with minimal risks. High visibility on 5-7% EPS growth outlook through 2023, with dividend growth expected to track closely. FES emergence ends all ties with competitive generation business. Now focused on pure transmission and distribution operations with low-risk capital plan and lack of rate case overhang, particularly in Ohio where there is certainty beyond 2024.
- **Catalysts**. FES emergence from bankruptcy expected in February. Implementation of decoupling in Ohio, which starts in 2020. Any potential incremental capital projects.
- **Valuation**. Using a regulated average multiple on 2020 EPS. While the low-risk T&D operations are attractive, this is somewhat offset by a weaker balance sheet.

NextEra Energy (NEE): Premier renewables play into election year; high-growth utility, ESG darling

- **Investment Thesis.** Combination of a best in class high-growth utility in a balanced regulatory environment, the dominant renewable development operation in the country, and the capital recycling advantages of NEP. Also has one of the strongest balance sheets in the sector with unused capacity for future value enhancing actions.
- **Catalysts.** Santee Cooper sale process and FP&L/Gulf Power integration. Potential Democratic victory in Presidential election. Continued development of renewables backlog at NEE, as wind PTC has been extended another year.
- **Valuation.** Sum of parts – using premium multiple on the utility operations and a YieldCo valuation of the potential dropdown backlog to NEP.

NextEra Energy Partners (NEP): Best total return and renewables play, particularly in low rate environment

- **Investment Thesis.** NEP remains the best positioned YieldCo with high visibility on 15% distribution growth at least through 2024 supported by a parent that continues to add to its dropdown backlog. No need for external equity or drop-downs until at least next year.
- **Catalysts.** Resolution of PCG bankruptcy could free trapped cash at Desert Sunlight project. Potential Democratic victory in Presidential election. Continued development of renewables backlog at NEE, as wind PTC has been extended another year.
- **Valuation**. Combination of near-term yield and long-term DCF approaches.

NRG Energy (NRG): Cash flow machine offers very strong value

- **Investment Thesis.** NRG has an incumbent generation / retail business that generates relatively steady results and a very attractive mid to high teens FCF yield. The balance sheet is strong and NRG has significant financial flexibility even after paying the stepped-up 3%+ dividend yield.
- **Catalysts.** Specific 2020 capital allocation plans, Texas summer power prices, potential retail acquisitions, PJM and Northeast capacity auctions.
- **Valuation**. Combination of a target 8x EV/EBITDA multiple applied to our 2021E and a target 12% FCF yield.

PPL Corp (PPL): Finally in a position of strength

- **Investment Thesis**. UK regulation and political uncertainty pummeled PPL from mid-2017. But the stock had a solid run at the end of 2019, as the threat from Labour renationalization has been removed and Brexit nears finality. Potential long-term benefits from UK policy on electrification.
- **Catalysts**. Ofgem's frameworks for Electric Distribution Networks on RIIO-2 this summer.
- **Valuation**. Despite a solid run, PPL still trades at a 5.5x discount to the average regulated utility P/E, second lowest after PCG. A 4x discount is reasonable.

Sempra Energy (SRE): Solid growth visibility

- **Investment Thesis**. Growth comes from SRE's utility business (CA and TX) and gas infrastructure investments, including LNG. Cameron online in 2020/21. Growth upsides from ECA, Port Arthur and Cameron Phase in later years.
- **Catalysts**. Anticipate higher utility capex at March 2020 Analyst Day.
- **Valuation**. Sum-of-the-parts values (i) utility segment at $122 using a 10% premium to group utility P/E, (ii) LNG at $26 using 13x EBITDA, and (iii) stake in IEnova at $15. Total value is $164.

Vistra Energy (VST): Cash generation and allocation story remains compelling

- **Investment Thesis**. Attractive valuation coupled with a compelling capital allocation plan. Strong EBITDA generation ($3B+/year) and conversion to Free Cash Flow (60%+) that drives capital allocation opportunities – debt paydown (2.5x Net Debt / EBITDA by 2020), a dividend policy (2% yield plus 6-8% growth), and share repurchases. Free Cash Flow yield is 20%+ right now.
- **Catalysts**. Another tight summer from a reserve margin perspective in ERCOT with potential for price spikes / curve improvement. Future of PJM auction remains in the balance as it relates to state level proceedings on subsidized unit supply (namely Illinois nuclear). Potential investment grade rating by year-end.
- **Valuation**. Price Target derived using an average of a 12% FCF yield target and 7.5x EV/EBITDA multiple.

Upgrade to Buy: Mass bookend with an Indiana renewables kicker

Rating Change: BUY | PO: 31.00 USD | Price: 27.39 USD

Rerating opportunity as Mass reaching pivot point: Buy

We see a discount to shares entering into 2020 as we see key items in MA and IN start to be resolved. We perceive the stock as undervalued and upgrade to Buy from Neutral: NI vs. the IXU Index is at a 5% premium now (versus 10-20% earlier in '19), which is supported by our view that gas utilities' growth prospects remain intact in the 2020s even though in '19 we saw gas sector valuations at near parity with electric. Further, pertinent to NI's story is the latest de-risking in the quantum of incidents around Merrimack: we see the DPU's recent Order as providing a bookend for state fines forthcoming year-end. Gaining clarity here (as well as through the recently settled NIPSCO ratecase) is critical in providing NI with confidence to determine the amount and timing of its proposed $500-700mn block. We expect the raise in 1H20 as early as end of February and we see this articulation of equity timing as a constructive factor not only an important catalyst but also another reason in support of our rating change given ensuing confidence from mgmt. in what it implies.

Potential upside from gen spend coming with large IRP

Amidst the focus on MA, we think the market underappreciates the largest solar & wind RFP in the Midwest with ratebase opportunity a further upside angle as capex is awarded (none of the awards and/or future awards are in the budget today). We estimate $0.06/sh of EPS from net build-own-transfer (BoT) once projects are dropped into ratebase by '23; this factors in 1.3GW of BOT renewables in RFP 2 on top of the 402MW of wind from RFP 1, as well as tax equity having a 50% stake in this project upon drop and an increase of depreciation from the last ratecase. This brings our '20-'24E CAGR to 6.3% (still squarely in the 5-7% range upon a roll-forward at a future Analyst Day). We raise our PO from $30/sh to $31/sh based on an updated 19.3x / 18.9x gas & electric peer multiple (to which we apply -1x gas / +1x electric premium as well as 1x RAB to $0.750Bn MA utility net of ~$ 80M fine). We see the potential for an investor day in 2H to help articulate this LT earnings power; this could roll forward guidance to '24 (now thru '22) to help roll out updates..

Company Sector

Natural Gas-Local Distribution Companies

Company Description

NiSource Inc. (NI) is a fully-regulated utility company serving approximately 3.5mn natural gas customers and 500,000 electric customers across seven states through its local Columbia Gas and NIPSCO brands. NI generates substantially all of its operating income through these rate-regulated businesses.

Investment Rationale

NI's positives including 5-7% earnings/dividend growth via $30bn of infrastructure investments over the next 20+ years and fully regulated subsidiaries with earned ROEs consistently near the allowed. We are starting to see resolution of overhang from the MA incident as the recent DPU Order provides a bookend of potential costs of the state's investigation. Bottom line, given the discount of shares, confidence on MA costs and thus NI's forthcoming block, and ratebase upside in NI, we rate NI Buy.

Stock Data

Average Daily Volume	3,809,007

Quarterly Earnings Estimates

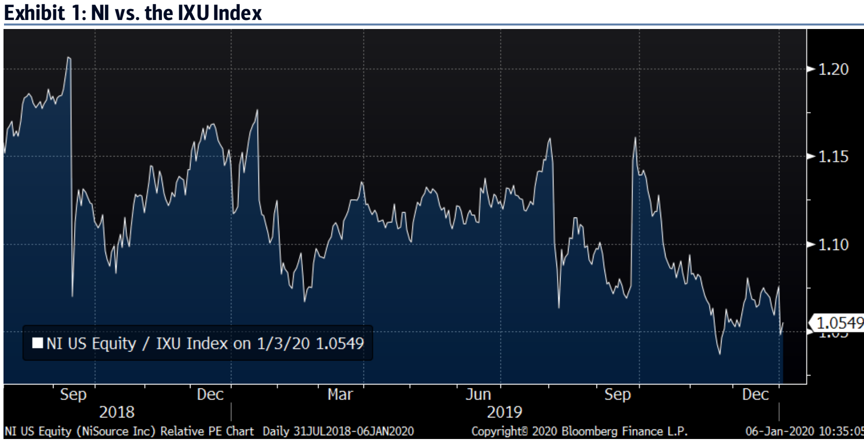
	2018	2019
Q1	0.77A	0.82E
Q2	0.08A	0.05E
Q3	0.10A	0E
Q4	0.38A	0.45E

De-risking with renewables upside this year too

We see shares trading at a discount as unwarranted given the de-risking of the final MA cost as well as the strong LT EPS growth opportunity supported by NIPSCO's renewable RFPs to replace coal coming off line in the 2020s. We perceive mgmt's renewed sense of confidence in its total equity raise as critical alongside our growing confidence in owning gas utilities overall. While the uncertainty from Mass is still likely protracted, we reflect both the fine in our estimates as well as only a RAB valuation at 1x on its core $750 Mn (a sober assessment on both) alongside a full $700 mn of further equity and still find shares at a sizable discount. We stress that a sale of the MA business not only likely given the backdrop of a potentially noisy rate case but would help put finality to a lingering and largely negligible earnings contributor to the company overall.

Moreover, we stress our latest stakeholder discussions reflect our growing confidence that NIPSCO could be among few companies in the state able to avoid confrontation with the key coal lobbyists and pursue its solar/wind procurement (given it has already agreed with interveners to accelerate depreciation and retire its *non*-Indiana coal burning generation station at Schaefer). Moreover, it has already been working with the local community to mitigate the tax & jobs impacts and as such perceive less headline risk (although we expect continued headlines throughout the year as NI's peers in the state face challenges still, including principally AES and CNP). Below we include NI vs. the IXU Index – highlighting today's 5% premium versus the 10-20% premium from earlier in 2019 and 2018. While we admittedly could be early as investors are concerned about shares through the course of a likely still noisy 2020, we perceive a wider bid for gas utilities in 2020 alongside a bid for NI with increasing resolution to its MA backdrop and forthcoming Analyst Day as all accruing relatively favorably. Bottom line, we believe financial clarity in 1H should pivot to capex upside in 2H and in turn, an earnings pivot off consistently reduced estimates. We upgrade to Buy.

Exhibit 1: NI vs. the IXU Index



Source: Bloomberg

Massachusetts

NI still has fines outstanding due to the Merrimack incident in 2019; Massachusetts (MA) policy has cost caps associated with events of the like – and after EEI stakeholders did not have a clear view of how many 'events' the Department of Public Utilities (DPU) would be able to argue fit NI's incident. Clarity was gained at the end of 2019, however, as the MA DPU issued a procedural order to characterize Merrimack as at least three events (giving itself the flexibility to determine one or two more in the future).

The DPU Order

The December 23, 2019 order broke the Merrimack incident into at least three 'events': The initial event (i.e. Sept 13, 2018 incident and Bay State response), the Phase I Restoration (i.e. Sept 21 - Dec 16, 2018), and the Improperly Abandoned Services (i.e. Sept 27, 2019 Grade 1 Gas Leak). It directed NI to file the third time frame (i.e. Sept 27,

2019) as a separate event report. It also detailed the scope of investigation, in which the DPU indicated it may investigate a fourth time frame, i.e. the "continued restoration and related repair work that took place after Dec 16, 2018". The commission also gave itself flexibility to add additional events beyond the four aforementioned "should further emergency events related to the restoration and reconstruction…occur".

NI view

NiSource (NI) affirmed and re-affirmed at and after EEI its confidence that the two formal Massachusetts (MA) Department of Public Utilities (DPU) Merrimack investigations should have a maximum $22mn cost cap. Recall NI's $22mn cost cap expectation (split between $2mn for the incident and $20mn for the emergency response) was formed by NI's expectation that the full Merrimack incident would be defined as one "event" or one "series of events". NI used past precedent of electrical outages in helping form its interpretation: Storms damaging multiple poles or causing electrical outages in multiple homes are grouped into a series of events rather than individual events that results in a fine for each individual damage. *We assume four such events in our SOTP; we perceive that this interpretation and total fine could still be negotiated from the most punitive approach we've adopted for the purpose of our SOTP.*

Our view: We assume $700mn of equity forward helps resolve balance sheet uncertainties at last around Mass

While the final DPU decision on the investigations remains outstanding, we see the Order quantifying the 3-5 events positively because it provides more clarity around the maximum fines NI would be responsible for at the state level. NI has been waiting for clarification on a few outstanding items before providing more details on timing and amount of its $500-700mn block expected in 2020 (others include insurance recovery and the federal criminal investigation). With clarification of two major items (a bookend for these DPU fines as well as the NIPSCO ratecase in Indiana), we perceive the company is growing more confident in its equity needs. As such, we anticipate the company enters the market for the block in 1H20, and as early as end of February (since the company is in blackout until its 4Q earnings release). We factor in $700mn of the range into our estimates via a forward – and we factor in $500mn of dilution in 4Q20 and the remaining $200mn in 1Q21. Note that we are still within NI's guidance of 5-7% YOY EPS growth. Bottom line: We find this DPU order as constructive in starting to determine final costs and expect a rerating of shares as this helps de-risk the recovery process.

What's next? Still expecting noise, but greater certainty around all the financial risks as best we can tell

We expect more clarity around state fines only with the DPU investigation resolution – which isn't expected until 3Q/4Q 2020 at the most aggressive of timelines (and potentially pushed out to '21). Note there is still potential this is merged with a ratecase filing. Also note the final number of events will likely be a negotiation topic between NI and the DPU as it works out the investigation and expected ratecase filing. While we await final details on the remaining insurance recovery, we expect this largely to go according to expectations or even provide upside: NI filed for $130mn from casualty coverage (which NI assumes it will receive as it has in other instances) as well as $260mn from property insurance (which NI has not yet factored into assumptions, meaning that receiving this would be upside to guidance). Finally, we highlight that a third party is conducting an independent audit of the system, but this is with regards to a previous MA DPU order and we doubt will result in substantial costs given NI's work ensuring proper abandonment.

Indiana

Factoring in the block equity in 4Q20/1Q21, the Street is paying close attention to NI's roll-forward of EPS and if the company can maintain its 5-7% trajectory. We see NI able to maintain strong long-term earnings – particularly due to the renewable ownership opportunity in Indiana. When including this opportunity, our CAGR rolling forward ’20 into ’24 is 6.3% – higher than Consensus’ 5.7%.

Round 2 RFP: Building on Rosewater techniques

Following the first round of RFPs, in which NIPSCO secured two build-own-transfer (BOT) wind projects (the 100MW Rosewater and 302MW Crossroads), we see a prime opportunity for NI to own more renewables through its second round of RFPs. This round 2 targets at least 2.6GW of renewable capacity (300MW wind and 1.3GW solar – some with storage) and is ongoing, with details on bids likely to be available this upcoming February. We anticipate these are highly competitive and provide NI with a strong opportunity to replace its retiring coal facilities (Schahfer in ’23 and Michigan City in ‘28) with ratebase-able renewables. Given success in receiving commission approval to own Rosewater in round 1, we anticipate roughly half of the 2.6GW is build-own-transfer projects – in which NI will own 1% of the project originally, buy out the developer’s 49% project stake in year 2023 when the company goes in for a ratecase, and then buy out the tax equity (TE) provider’s 50% stake upon the tax equity flip (usually around year 7 or 10 for solar or wing projects – once the TE provider makes a 6-7% return).

While the financials & math is not exactly ‘normal’ for ratebase given the tax equity nuance – and admittedly we do not yet know how much will be awarded to management in terms of RFP quantum – we stress this remains a potential upside to many across the Street.

Modeling in upside

As noted above, we assume NI is able to own roughly half of the second RFP (i.e. 1.3GW of the 2.6GW total) via build-own-transfer agreements with projects starting to be added to ratebase in ’23. However, we note that the tax equity provider will have a 50% stake in projects in ’23, reducing NI’s ownership opportunity in ’23 to 650MW. We find $0.06/sh of *net* upside associated with ratebasing these additional projects after we factor out about 50mn of annual increased depreciation (of existing ratebase) from the last ratecase to the next. Note that without this increased depreciation assumption, there would be total $0.08/sh of upside associated with the BOT projects added to ratebase in ’23 (factoring in 50% tax equity stake). We include our EPS estimates below – which factors in debt and equity assumptions – as well as our table of assumptions.

Table 1: Renewables Rate Base, via Build-Own-Transfer: 402MW wind from Round 1, and we expect 1.3GW from Round 2 (tax equity has 50% stake)

Source: BofA Global Research estimates, company report

Below we include our assumptions. We reiterate that in year 2023 when NI buys the project developer's stake, the tax equity provider still has a 50% stake. As such, we show NI owning half of the RFP 1 opp (201MW of the 100MW Rosewater and 302MW Crossroads) and half of the RFP 2 opp (650MW of the 1.3GW BOT opp – most of which we anticipate is solar). We caution that NIPSCo's procurement will be among the first solar ratebase constructs with meaningful tax equity employed; we anticipate a meaningful further bump in ratebase earnings upon eventual flip.

Table 2: Assumptions

Assumptions (note TE owns 50% until flip at yr 7-10 when NI would then own 100%)	
Wind BOT Capacity Online (MW)	351
Existing Awards	201
New RFP2 Awards in BOT form	150
Wind ($1,500/kW implied) + 6% buy-out premium	558
Solar BOT Capacity Online (MW) = All from RFP2, some w/ storage	500
Solar ($1,200/kW implied) + 6% buy-out premium	636
Total Capacity	851
Total Capex	1,194
Equity Ratio	50%
ROE	9.750%
Leverage Multiple (Maintain 15%)	6.7x
Share Price	$27.67
Incremental Shares	**17.6**

Estimates

We update our estimates below, updating our block equity issuance total to $700mn, diluting shares in 4Q20 and 1Q21 as well as including the net renewable ownership opportunities in NIPSCO electric hitting in '23 (making sure to account for increase in depreciation since the last ratecase). We stress the uplift through '24 of the full net uplift from the IRP appears to be $0.06 net of the acceleration depreciation and net of the full tax equity impacts. Bottom line, we see a clear cut ability to roll forward the EPS CAGR off '20 and then push to '24 and keep the full 5-7%. Admittedly, using a '19 base would prove at or below the low end of the earlier 5-7% range given the diluted impact of the base year in '20 (this could be yet another factor in accelerating equity; meanwhile we continue to see a forward settlement).

Valuation

Below we include our SOTP Valuation for NI. We break out MA from the rest of the gas utilities and value the subsidiary based on its ratebase. note this contributes less than $1/sh of value to the total price objective. We update the gas and electric peer multiple to 19.3x and 18.9x gas. To this, we apply a 5.1% / 5% CAGR for growth. We continue to apply a -1x gas discount to subsidiaries, but award the NIPSCO Electric subsidiary a +1x premium to reflect the coal retirement and owned renewable replacement opportunity. We arrive at a $31/sh PO and upgrade to Buy based on a 16% potential total return.

We also net out a $80 Mn fine for the purposes of our SOTP as well given the latest developments.

Table 4: NI SOTP Valuation

NI SOP Valuation	Metric			P/E Multiple				Equity Value

Price objective basis & risk

NiSource Inc (NI)

Our $31 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2022 forward P/E multiples of 19.3x for gas utilities and 18.9x for electric utilities with a -1.0x discount for gas utilities and a 1.0x premium for the electric utility's strong growth rates and earned ROEs. We note that electric / gas peer P/E multiples are grossed up by 5% / 5.1% to reflect capital appreciation across the sector. We now value Columbia gas of MA using a ratebase methodology to reflect the discounted ratebase of the subsidiary following Merrimack in 2018 and subsequent costs. We subtract the value of excess holding company debt at the parent not supporting the utility opcos. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its discounted multiple versus peers.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, financing plan updates, unforeseen costs associated with the MA incident, and challenging steel production economics in Indiana.

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including,

among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Securities entities located outside of the United Kingdom.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

UTILITIES & POWER

Regulateds – Market Underweight
Integrateds – Market Overweight
IPPs – Market Overweight
Gas/Power Infrastructure – Market Overweight

January 5, 2020

THE UTILITY TRADER

The 2019 recap; introducing the 2020 DUTY portfolio

- **Utilities play ping pong vs the market for 6th year in a row**
  Utilities ended 2019 up 22.2%, a great year on an absolute basis but nothing special in 2019. The S&P 500 ended up 28.9% beating utilities by over 500bps, including dividends. Utilities now trail the market on a 1-yr, 3-yr, 5-yr and 10-yr basis which may be surprising to some. This is the 6th year in a row that utilities have ping-ponged between outperforming and underperforming the S&P 500, highlighting the shifting risk-on, risk-off trade amidst an underlying bull market. A unique aspect to 2019 was the breakdown between utilities relative performance and L-T interest rates. Utilities underperformed despite rates falling almost 100bps. In retrospect, utilities moved ahead of bonds with their strong move in late 2018 and thus had less room to run. While there is a lot to worry on in 2020, including the election, we remain underweight utilities and wait for the current 11% premium to get closer to its historic 4% average.

- **Utilities vs other income sectors – middle of the pack**
  All the large income sectors underperformed the market in 2019 (exhibit 1 on right), not surprising amidst a tech-driven bull market. The one exception was Yieldcos which benefitted from better sponsors and increasing investor appetite for renewables. Staples and REITs also slightly beat utilities while Telecom and Pharma trailed. Midstream was all over the map with Midstream C-corps slightly beating utilities for the year, but MLPs trailing all income sectors by a wide margin.

- **What worked in 2019 – barbell of value and high quality, plus renewables**
  2019 was a year where both low P/E value names and quality premium utilities worked. Low P/E names mainly worked by de-risking – SO, SRE, ETR, AES, EIX, FE, and PPL. High quality names saw multiple expansion on consistent execution and in some cases ESG halo – NEE, AWK, WEC, ES, LNT, XEL, CMS. Renewables exposure benefited the Yieldcos and utility leaders NEE, AES and ES (offshore).

- **What didn't work in 2019 – power, midstream, EPS re-basers, regulatory risk**
  The power names were all near the bottom – NRG, VST, EXC and PEG – as the PJM market overhang and renewables fears offset summer Texas price spikes. Midstream exposed names also performed poorly as investors worried about weaker fundamentals and project risks – CNP, OGE, DTE, and D. Companies that re-based their earnings CAGRs early in the year never caught up – CNP, AGR, DUK, NI, EVRG. Finally, regulatory and event risks became big issues for certain names PNW in AZ, EXC in IL, NI in Mass, and CNP in TX.

- **2019 DUTY outperformed; introducing 2020 DUTY portfolio**
  Our DUTY (Dogs of the UTY) comprises the worst performing utilities of the prior year. The 2019 DUTY portfolio (ex PCG) outperformed by 550bps led by strong years from SO, EIX, and PPL. The 2020 DUTY portfolio includes the following names: CNP, EXC, AGR, PNW, DUK and NI. Of these names, we like EXC best as we see significant revaluation potential if IL nuke legislation gets done in 2020. We are still cautious on AGR and PNW – AGR due to a lot of execution risks and PNW due to a very tough rate case and regulator.

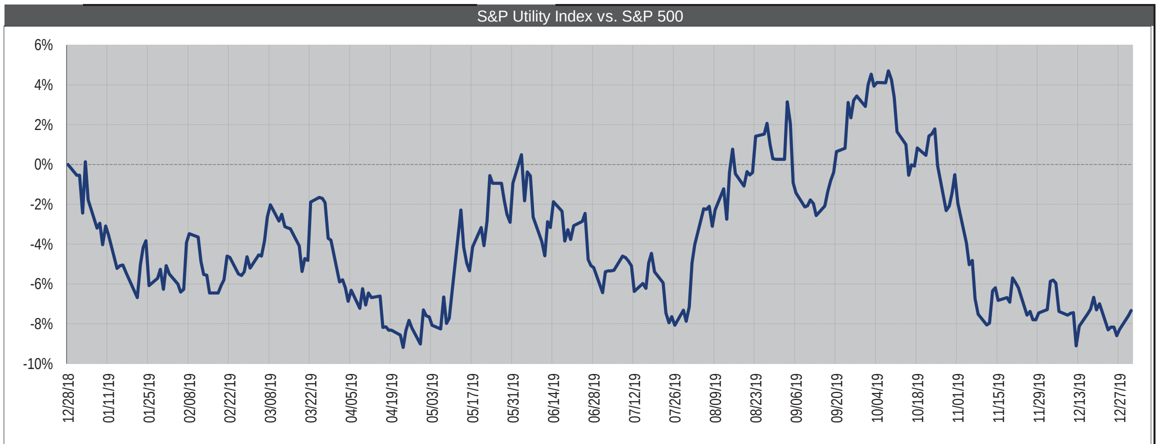
WOLFE RESEARCH

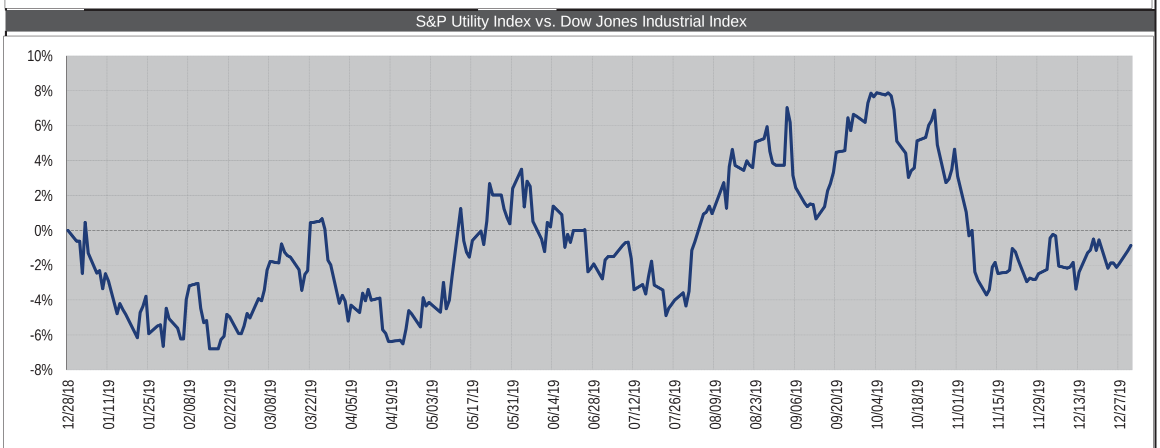
Table of Contents

WOLFE RESEARCH

S&P Utility Index vs Market

Utilities underperformed the S&P 500 by 665bps in 2019. It was a bit of a seesaw battle during the year, with overall market sentiment largely driven by US/China trade headlines. In late summer, the 2-yr and 10-yr yield briefly inverted, prompting a big utility rally which brought the group ahead of the market by the end of September. The market went on to beat utilities in each of the final three months, due in part to a phase 1 trade resolution with China. Signs of declining allowed returns and a return of large equity deals also caused sentiment on the utility sector to wane.

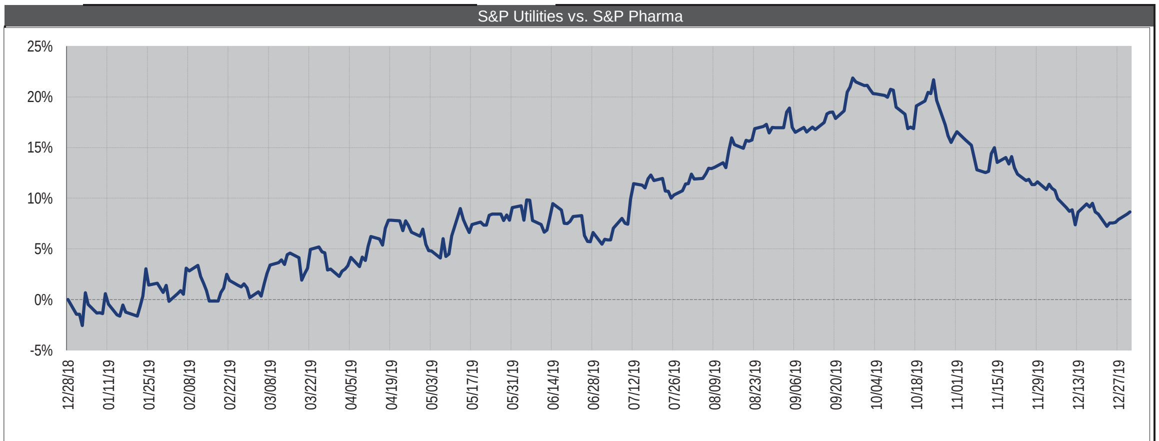


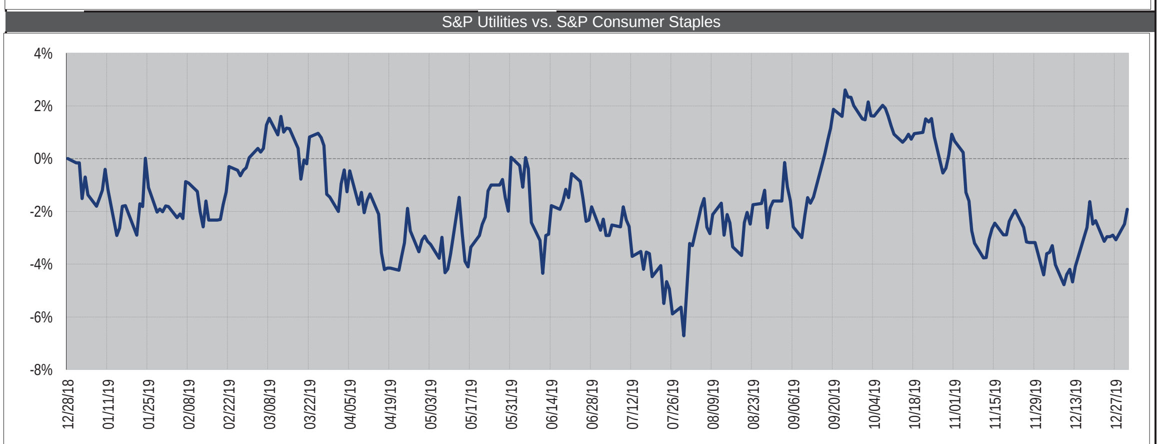


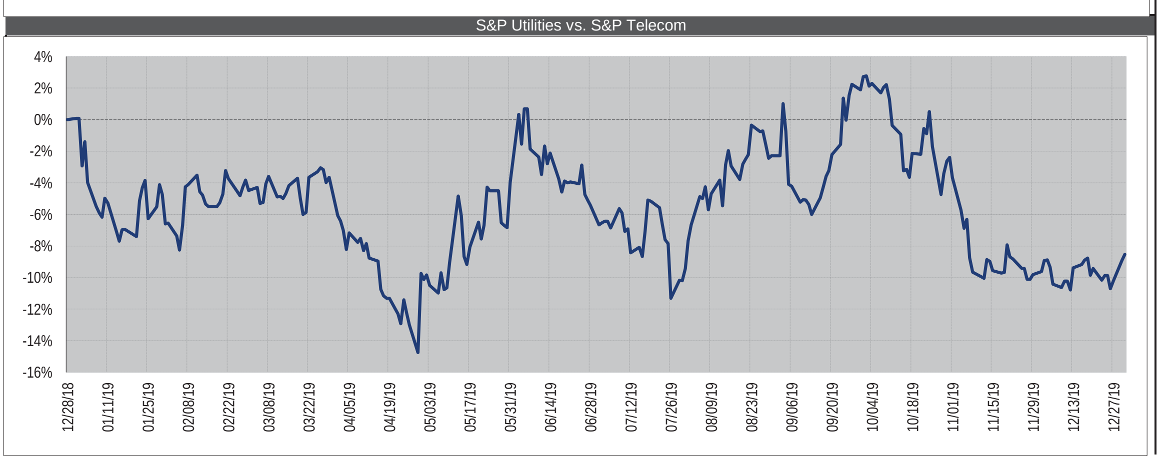
WOLFE RESEARCH

Utilities vs Other Sectors

Pharma (+6.2%) were one of the top performing income sectors in December. Telecom (+2.9%) and Staples (+2.0%) both underperformed utilities during the month.



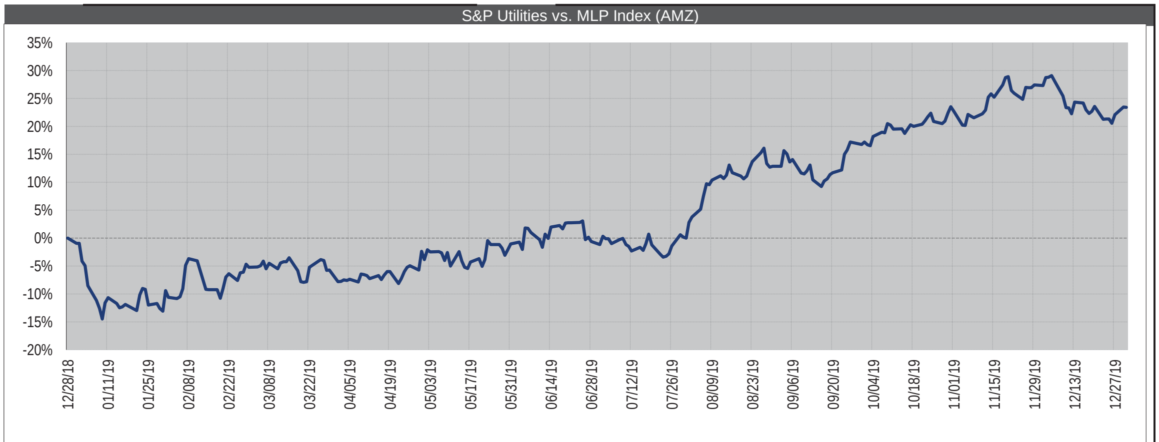


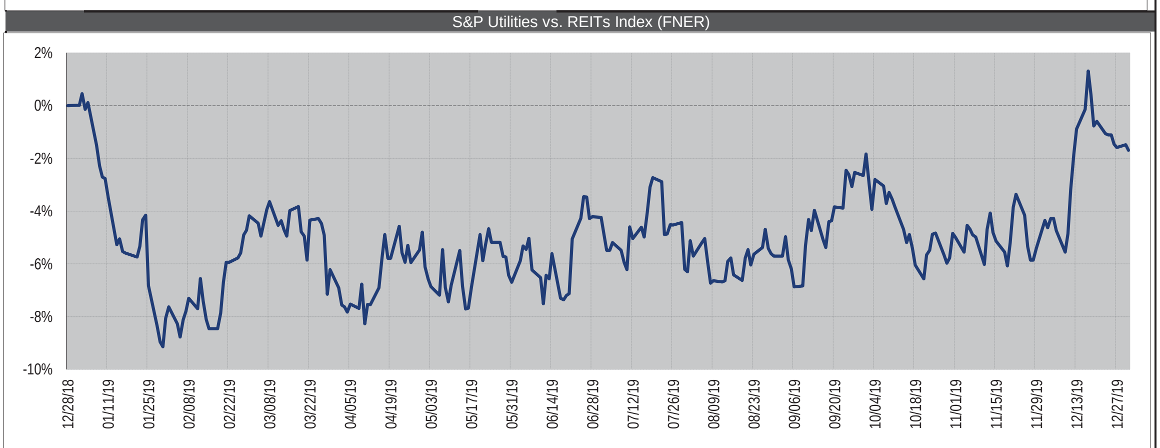


WOLFE RESEARCH

Utilities vs Other Sectors continued

The MLPs led midstream in December for a change as this year's MLP "Santa" rally led to an 8.4% rebound in the AMZ Index and cut the year's losses to 2.1%. More broadly, midstream stock performance in 2019 was largely characterized by the persistent outperformance by the C-corps, which closed the year outperforming the MLPs by 24.9% on a price-return basis, as structural concerns over the historically preferred MLP structure remain an overhang into 2020.

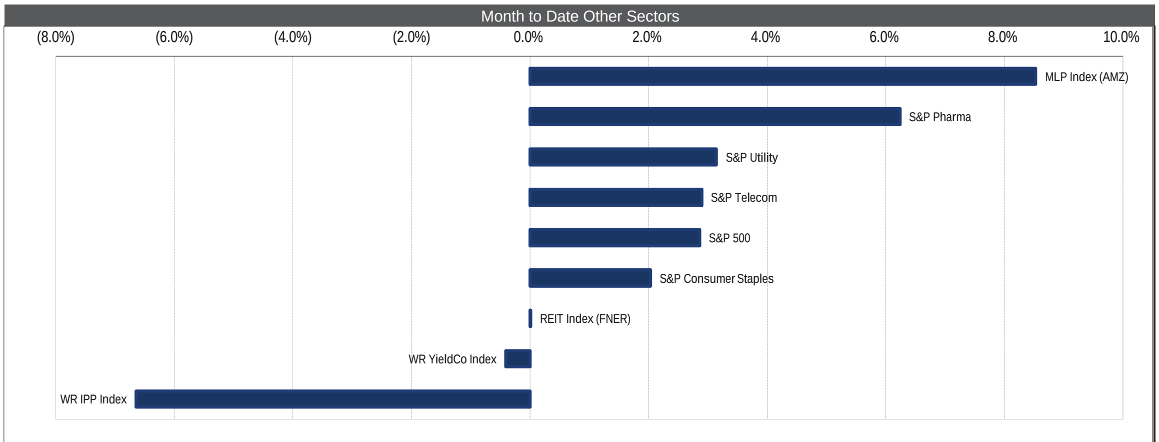


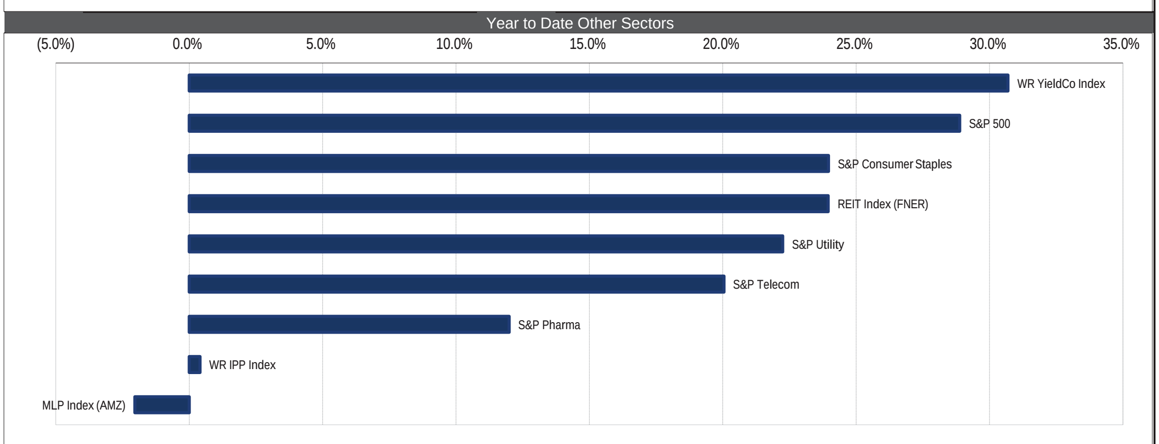


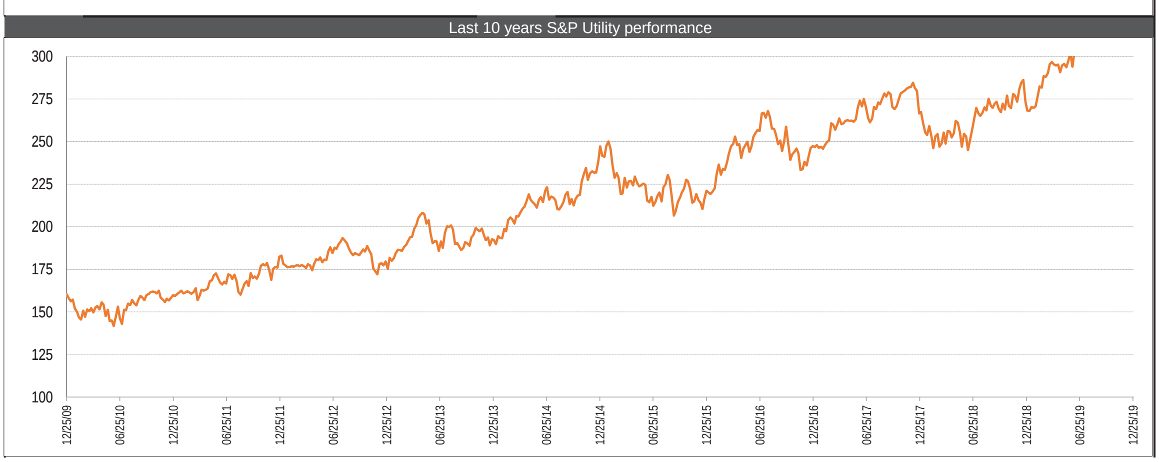
WOLFE RESEARCH

Month to Date and Year to Date performance of income sectors

The Yieldco group finished as the top performing income sector in 2019, edging out the S&P 500 by 200bps. MLPs were the only income sector to finish in the red in 2019 (-2.1%) and were well off Pharma (+12%) which finished second-to-last.

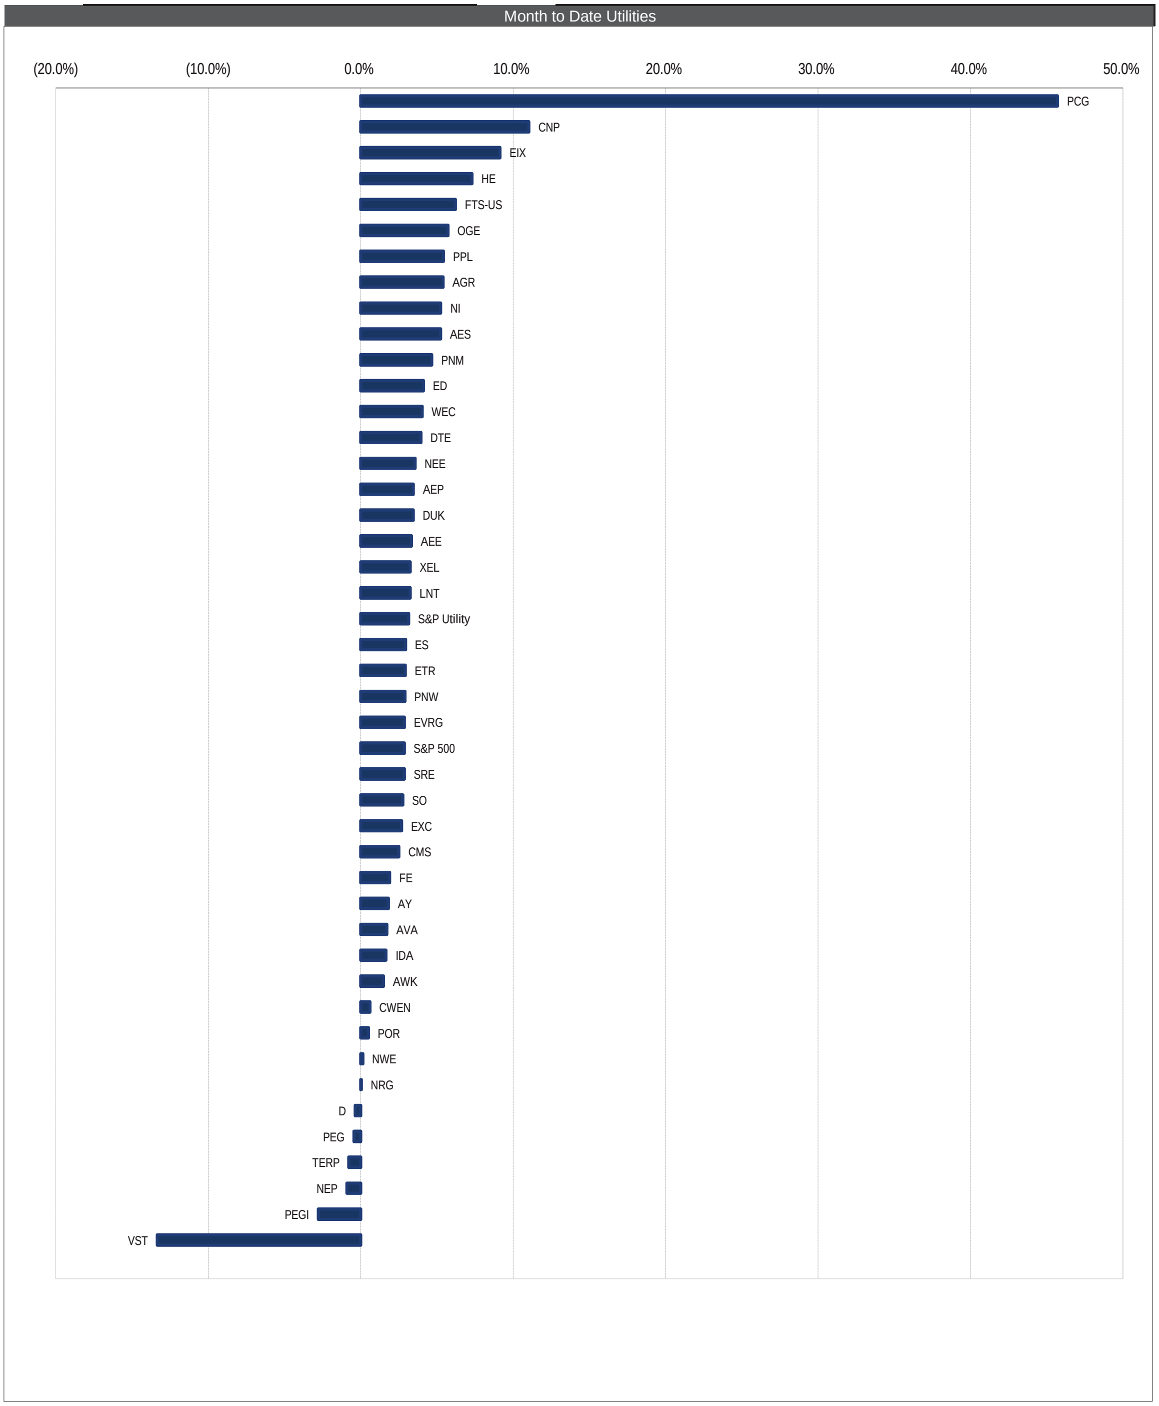






Month to Date performance of Utilities Group

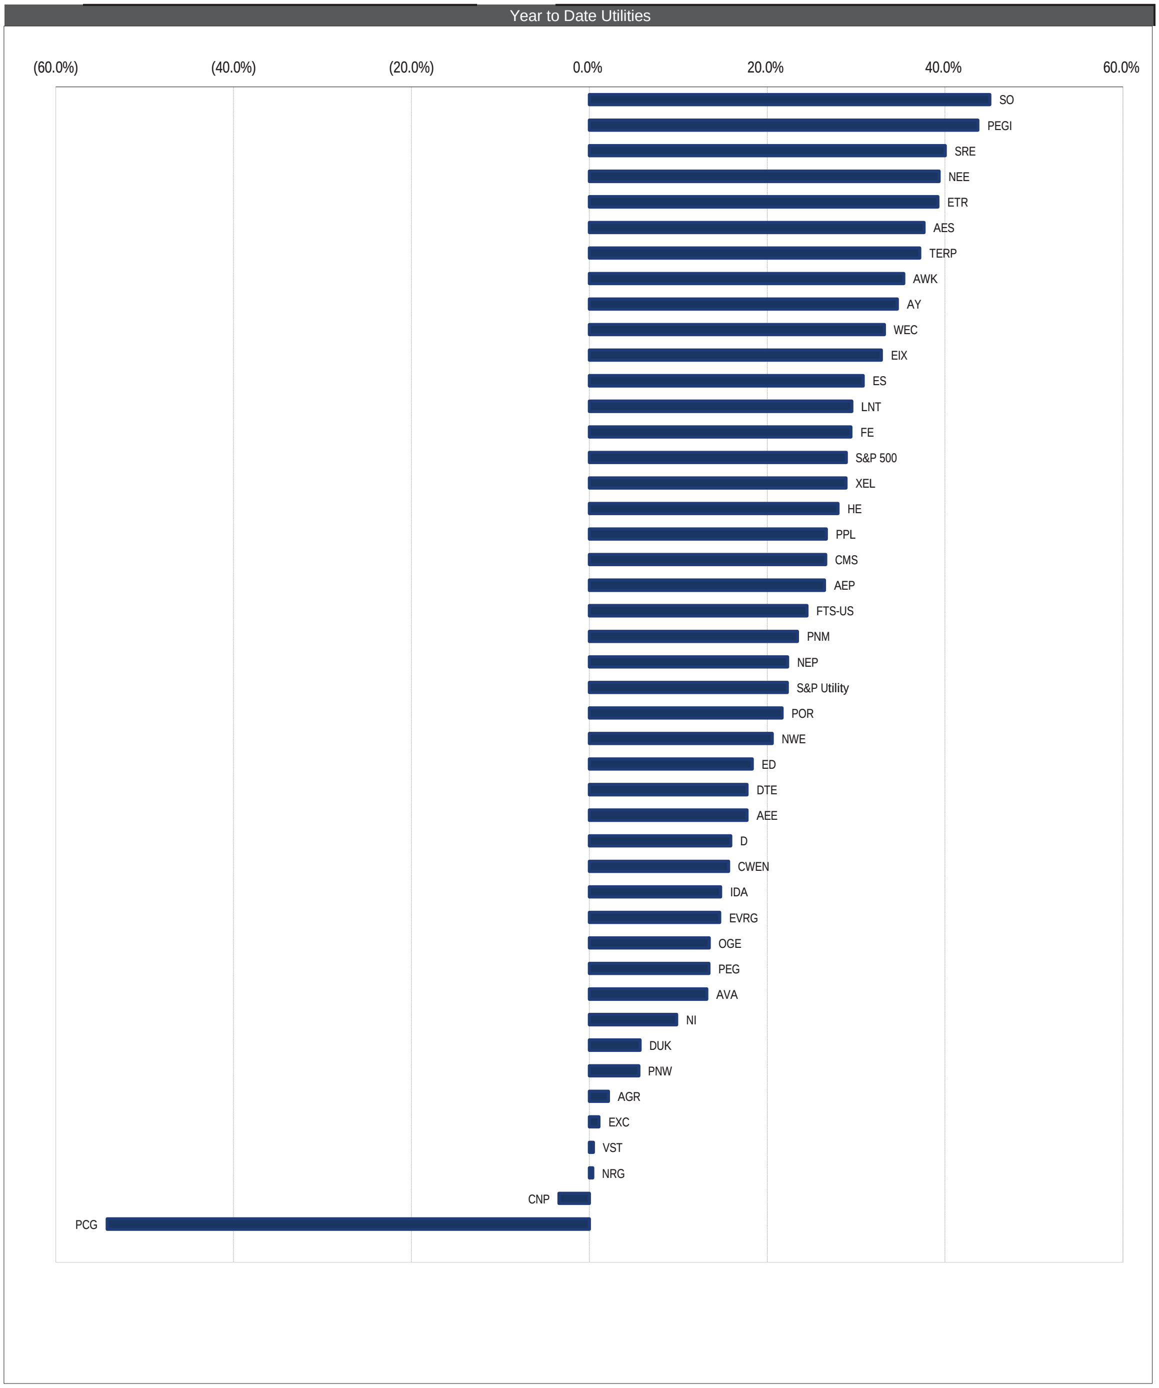
PCG was the top performer in December. PCG's bankruptcy judge approved settlements between the company and fire victims / insurers; the ruling was a major victory for PCG, putting it back in the driver seat in the bankruptcy process. CNP was also a top performer after the company's TX rate case took a turn for the better – at the PUCT's direction, CNP and key intervenors were able to reach a settlement. EIX fared well as fire season is now in the rearview; the CPUC also finalized the CA cost of capital proceeding where EIX got a 400bps bump in equity layer (in-line w/ other CA utes). VST was the worst performer, coming under pressure at the beginning of the month after Brookfield (top holder) sold over 20M shares (1/3 of its position). Another bearish ERCOT CDR report also aided in VST's weakness (NRG as well). D was weak, likely due to an unexpected $800M perpetual preferred offering early in the month. PEG also underperformed, possibly a reaction to FERC's ruling on PJM's capacity market construct.



WOLFE RESEARCH

Year to Date performance of Utilities Group

SO was the top performer in 2019. SO's strength last year was largely tied to optimism for Vogtle's construction schedule throughout the year. SO also received a constructive outcome in its recent GA Power rate case. PEGI was also a top performer; PEGI announced a sale of the company to the Canada Pension Plan Investment Board late in November. SRE executed very well throughout the year on LNG projects, asset sales and the integration of Oncor. ETR's strong performance stems from a midyear guidance/capex raise. Despite a strong finish to the year, PCG was the worst performer by a wide margin due to bankruptcy related issues. CNP and AGR weakness both stem from earnings disappointments, among other issues. EXC was plagued by political issues in Illinois. Both IPPs, NRG and VST, were out of favor – VST struggled with selling shareholder issues and NRG perhaps just took a breather after a strong 2017 & 2018.

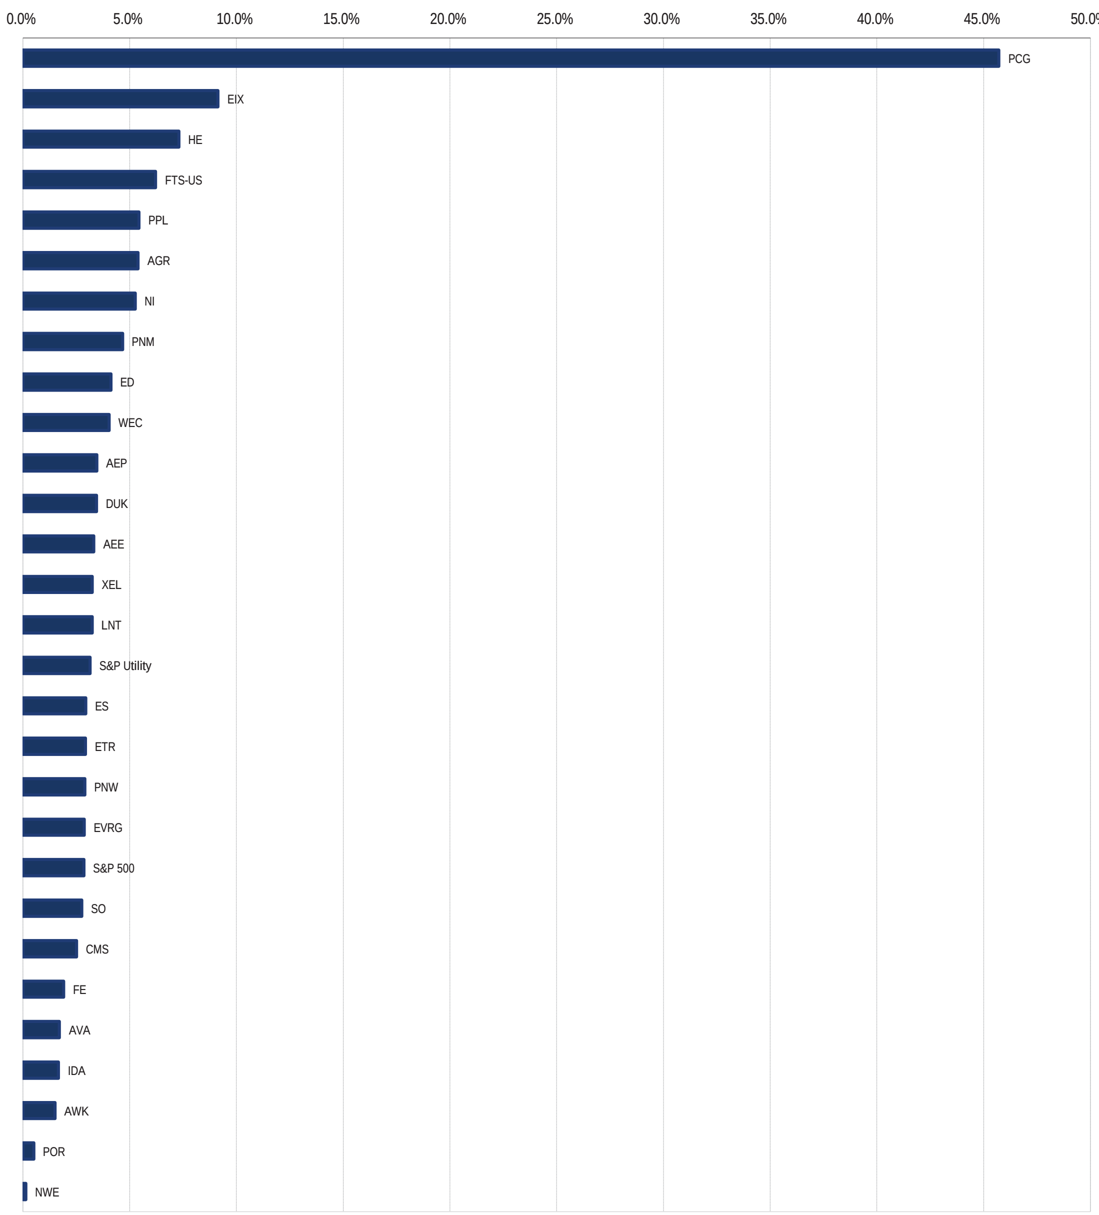


WOLFE RESEARCH

Month to Date performance of Regulated Utilities

PCG was the top performing regulated utility in December. PCG's bankruptcy judge approved settlements between the company and fire victims / insurers; the ruling was a major victory for PCG, putting it back in the driver seat in the bankruptcy process. EIX fared well as fire season is now in the rearview. FTS bounced back after a challenging November. AGR also caught a bid, possibly on investors positioning for a rebound in 2020 as 2019 was a bad year for the stock. POR was one of the worst performing regulateds after OPUC Staff filed unsupportive final comments for the company's 2019 IRP. AWK was weak after issuing disappointing 2020 guidance; well-liked CEO Susan Story also announced her retirement. SO underperformed largely due to uncertainty in its GA Power rate case after failing to reach a full settlement (these fears proved overdone as the company ultimately received a constructive outcome).

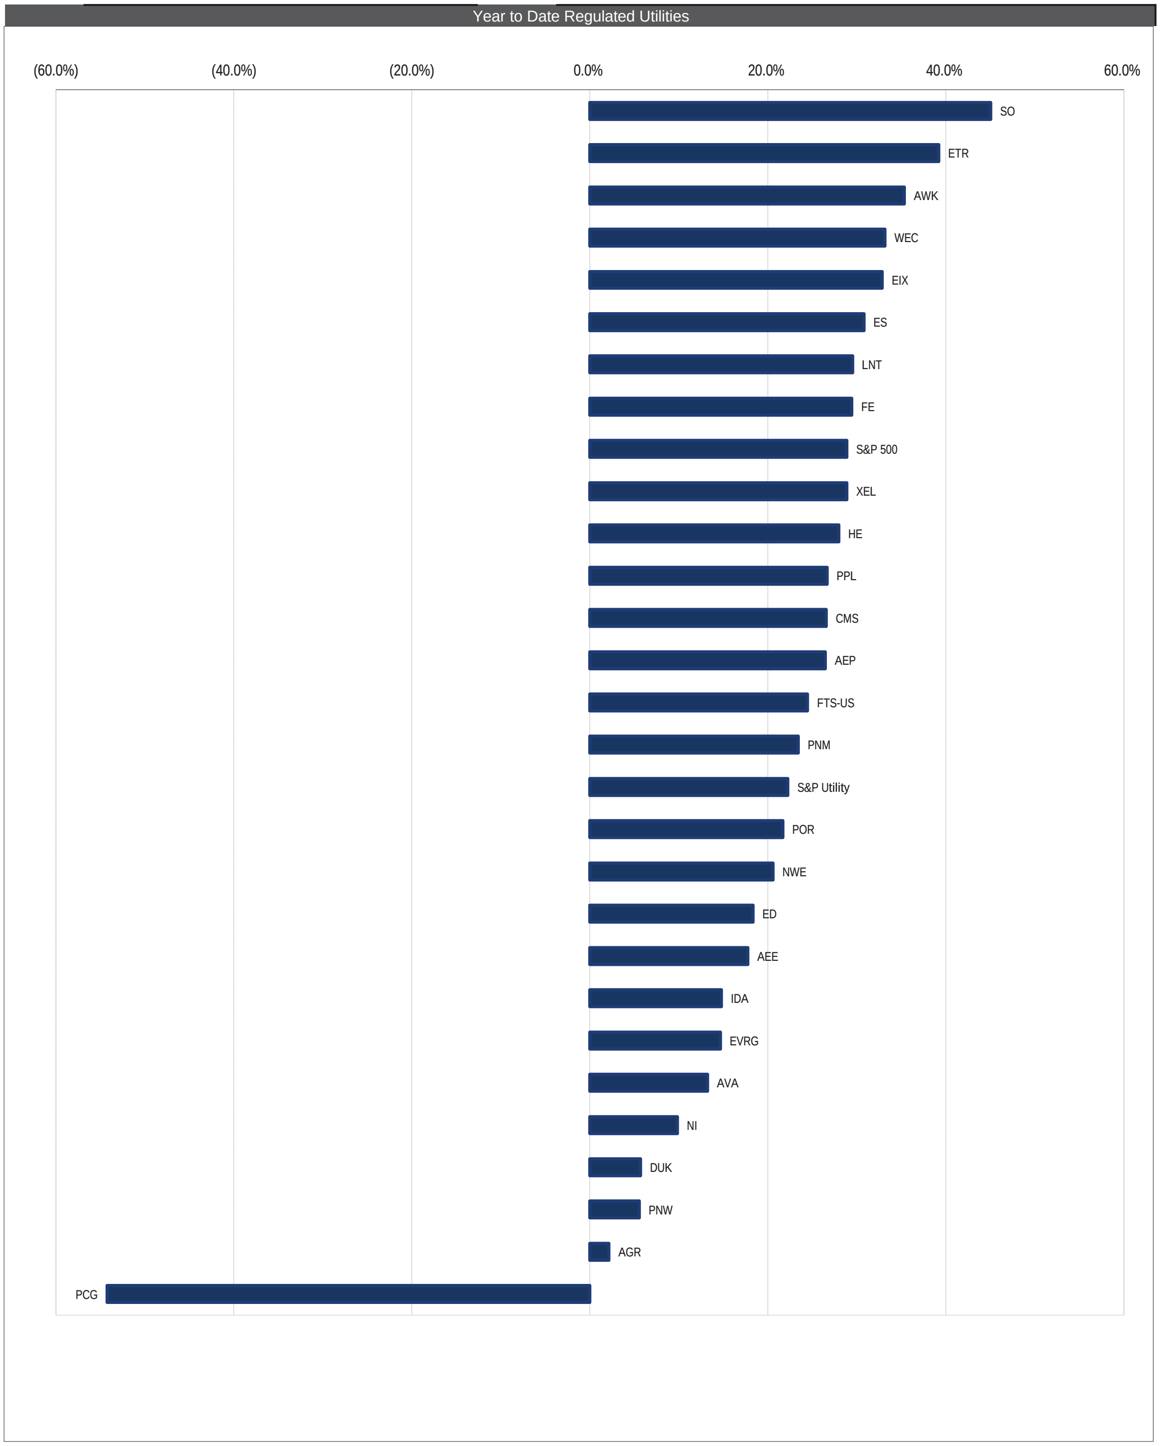
Month to Date Regulated Utilities



WOLFE RESEARCH

Year to Date performance of Regulated Utilities

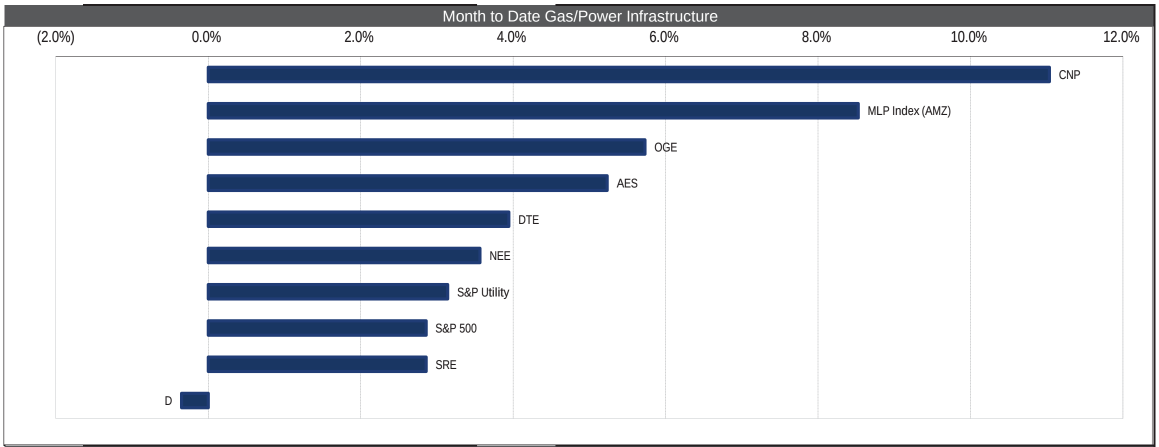
SO finished as the top regulated in 2019. SO's strength last year was largely tied to optimism on Vogtle's construction schedule as well as execution at its utilities. ETR also fared well, sustaining momentum throughout the 2H of the year after raising EPS / capex guidance in July. High quality / low risk names like AWK and WEC finished toward the top of the pack, due in part to macroeconomic tailwinds (e.g., low interest rates). PCG was the worst performing regulated as the company wrestled with issues tied to its bankruptcy. DUK was mired by a number of issues, incremental equity needs and failed NC legislation being near the top of the list. AGR's weakness stemmed from the company's inability to execute on its financial targets the past four quarters, among other things. PNW was weak due to a tough regulatory environment in Arizona.

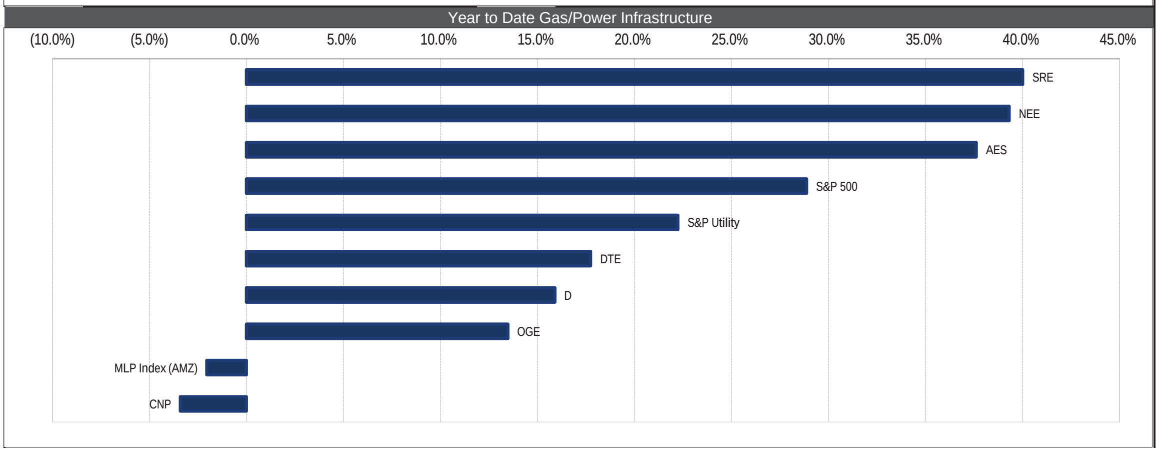


WOLFE RESEARCH

Month to Date and Year to Date performance of Gas/Power Infrastructure

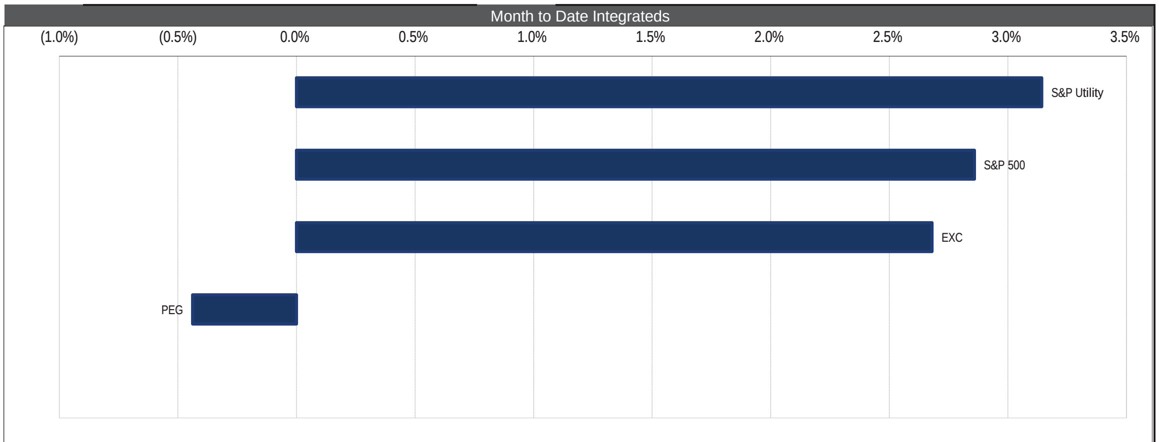
CNP was the top performer in December after the company's TX rate case took a turn for the better – at the PUCT's direction, CNP and key intervenors were able to reach a settlement. OGE also fared well despite no notable news; ENBL finished the month up over 8% alongside the MLP rally, potentially explaining some of OGE's performance. AES' momentum from previous months carried forward into December and the stock finished as a top performer in 2019. D was the worst performer in the group in December. We sense most of the weakness stemmed from the company's surprise $800M perpetual preferred offering at the beginning of the month.

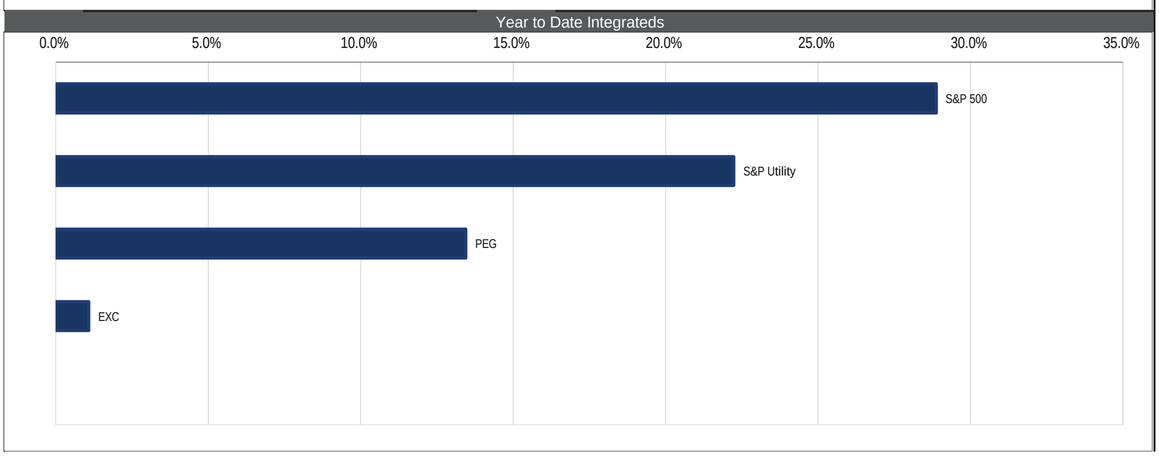




Month to Date and Year to Date performance of Integrateds

EXC outperformed lone integrated peer PEG, but both trailed the utility average in December. We believe EXC's outperformance is due to FERC's order on the PJM market auction construct and the likelihood that it prompts IL to pass legislation that would support EXC's merchant nukes. PEG was weak, potentially related to concerns with PEG Power following FERC's order.

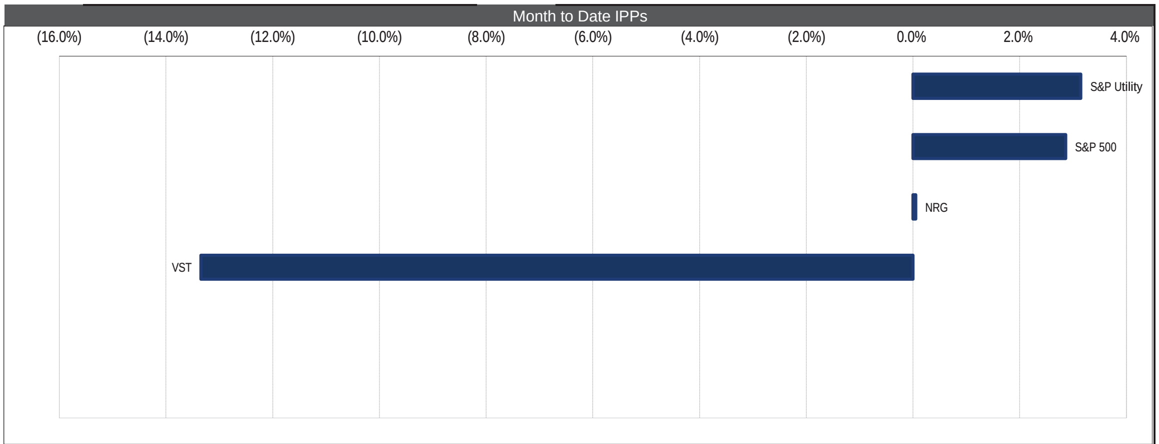


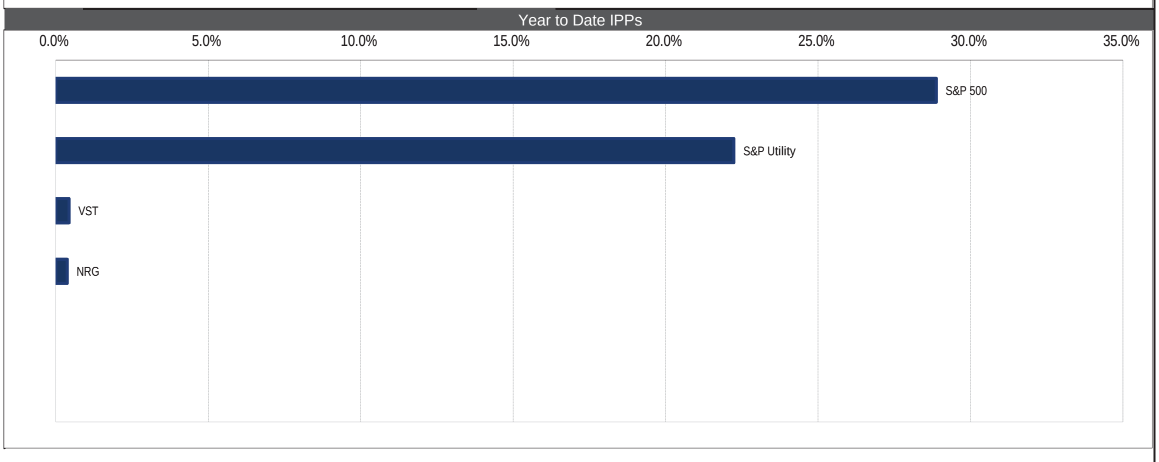


WOLFE RESEARCH

Month to Date and Year to Date performance of IPPs

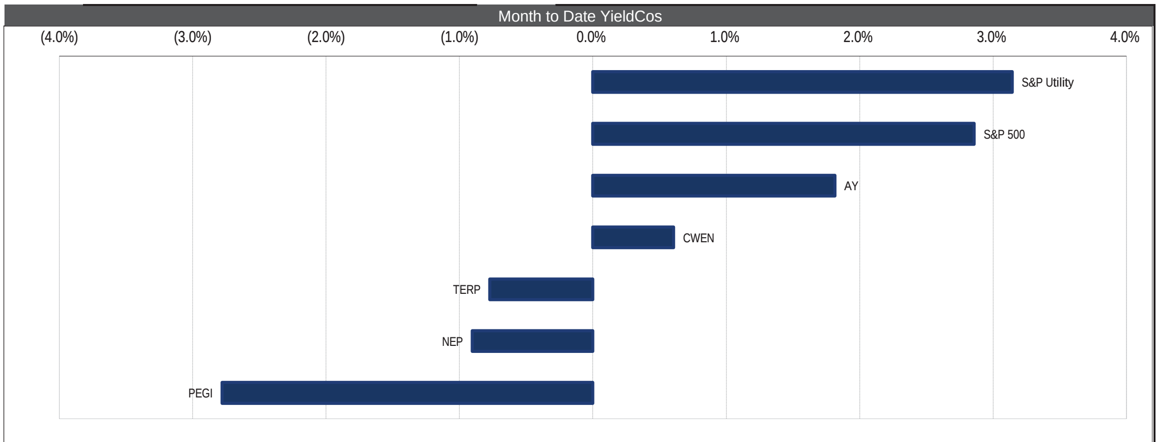
NRG outperformed VST by a wide margin, but both trailed the utility average and overall market during December. VST came under significant pressure at the beginning of the month after Brookfield (top holder) sold over 20M shares (1/3 of its position). Another bearish ERCOT CDR report released during the month hurt both IPPs.

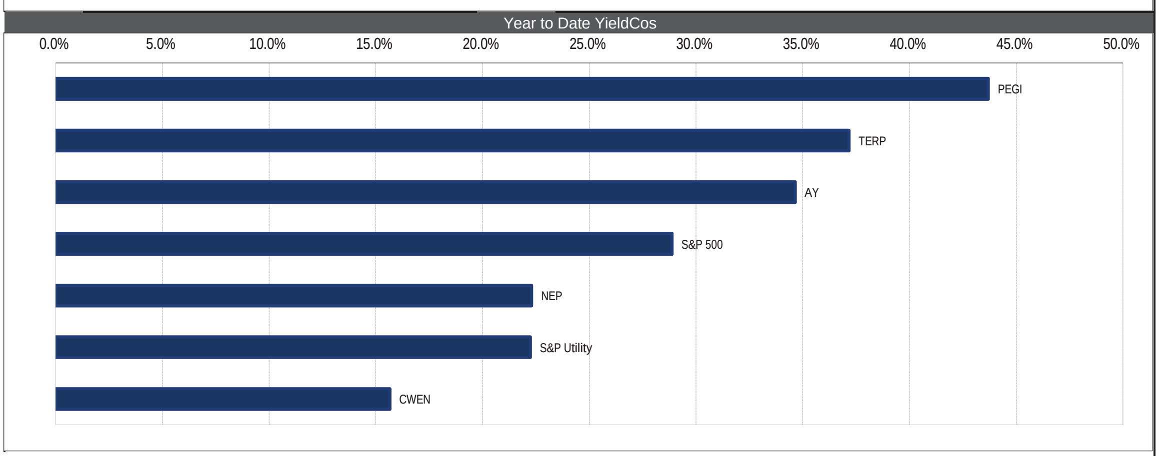




Month to Date and Year to Date performance of YieldCos

AY was the top performing Yieldco in December, but the entire group trailed both the utility index and overall market. PEGI fell during December but finished as the top performer on the year; for PEGI, 2019 culminated with the November announcement that the company was being sold to the Canada Pension Plan Investment Board. CWEN was the lone Yieldco to underperform the utility average in 2019 as key customer PCG's bankruptcy led to a 40% dividend cut early in the year.

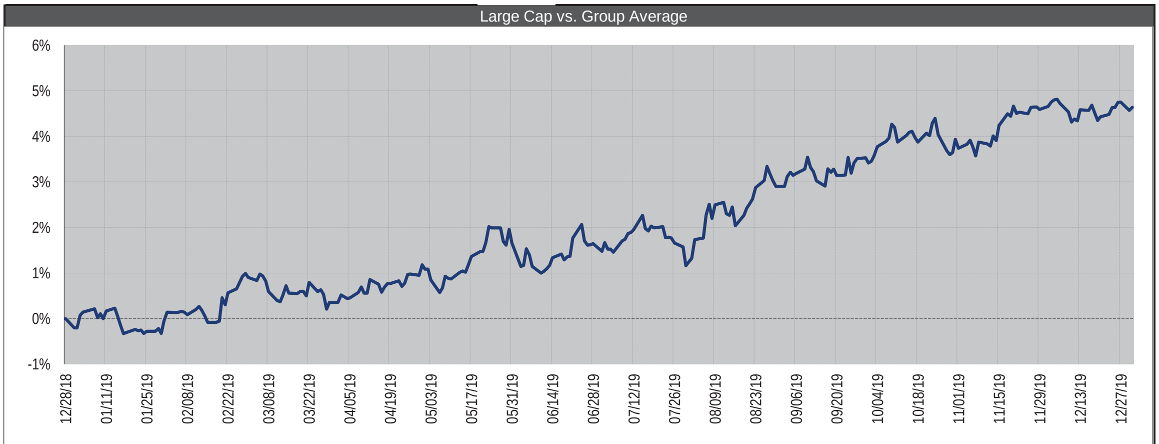


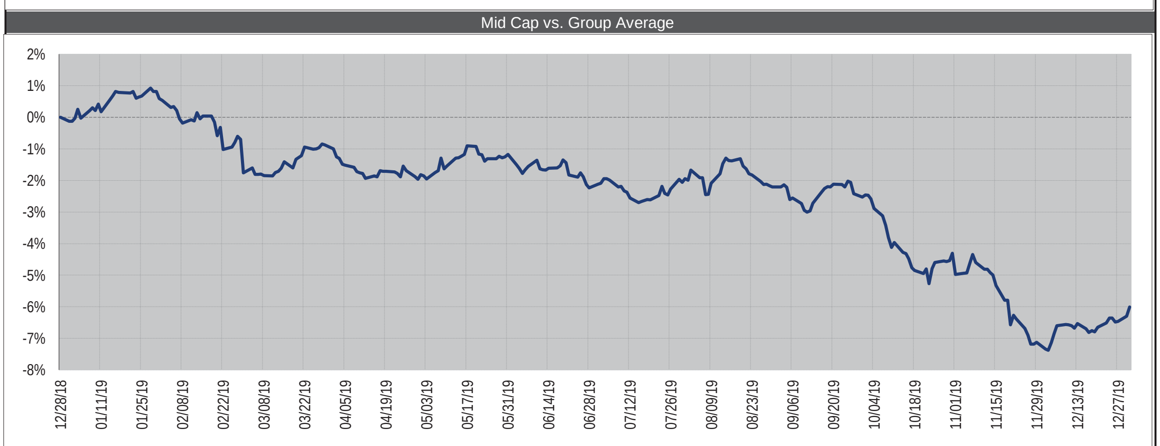


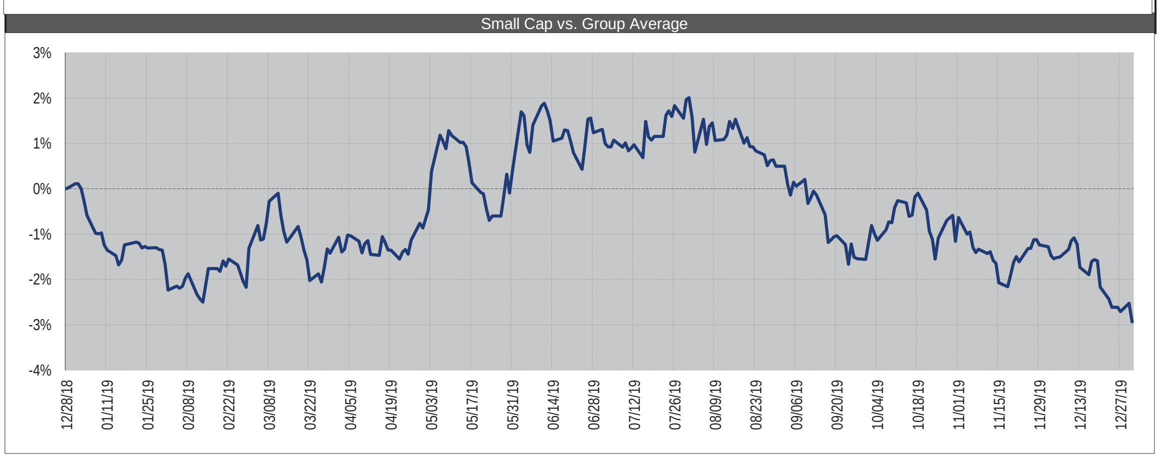
WOLFE RESEARCH

Utilities Performance by Market Cap

•Large-caps outperformed the broader utility group in December and finished near the group's 52-week high
•Mid-caps outperformed the broader utility group in December, led by a sharp rebound from CNP
•Small-caps underperformed the group average in December as NWE, POR and AVA were three of the five worst performing regulateds during the month



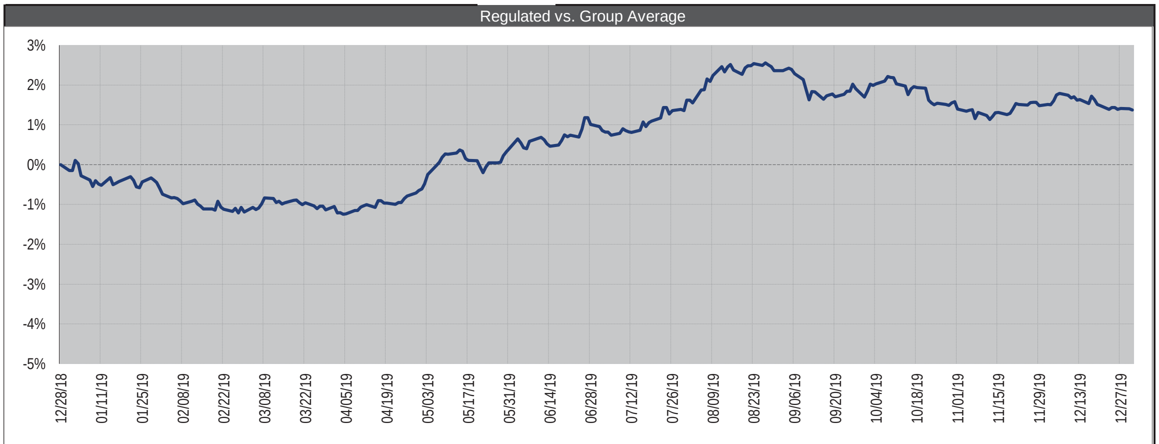


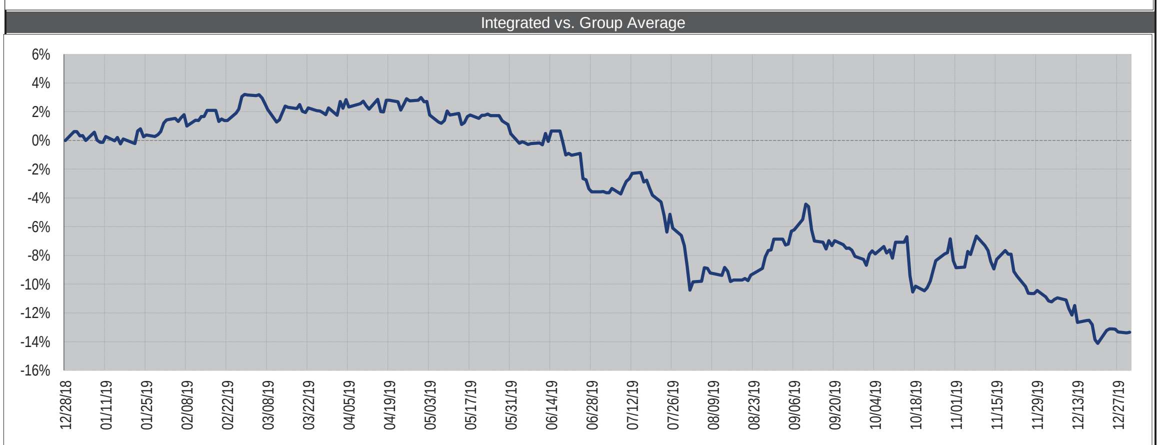


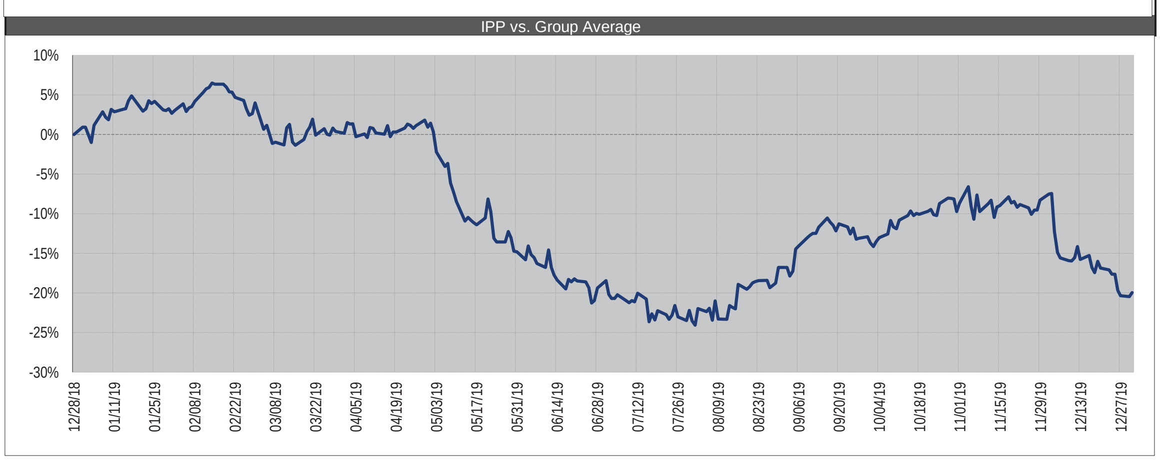
WOLFE RESEARCH

Utilities Performance by Segment

•Regulateds performed in-line with group average in December
•Integrateds underperformed the broader utility group in December
•The IPPs performed underperformed the utility average in December



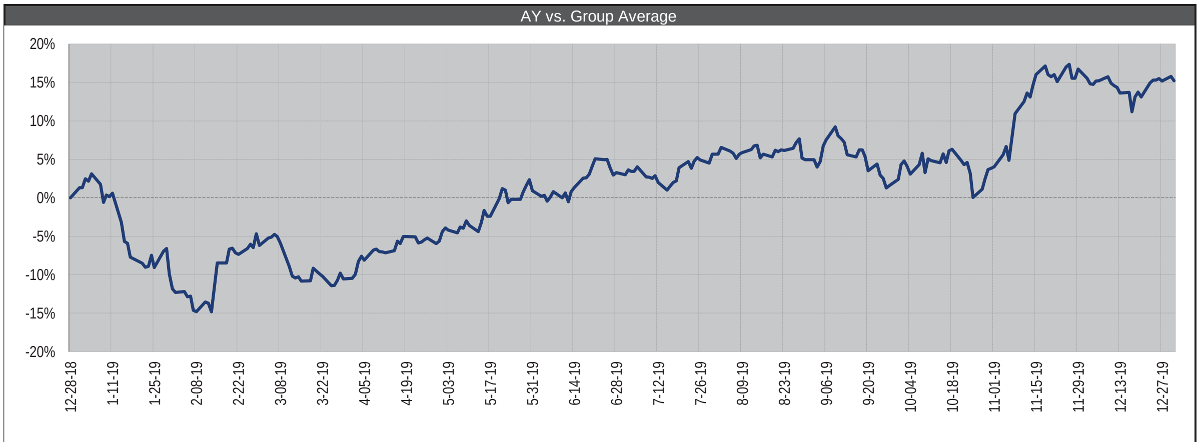


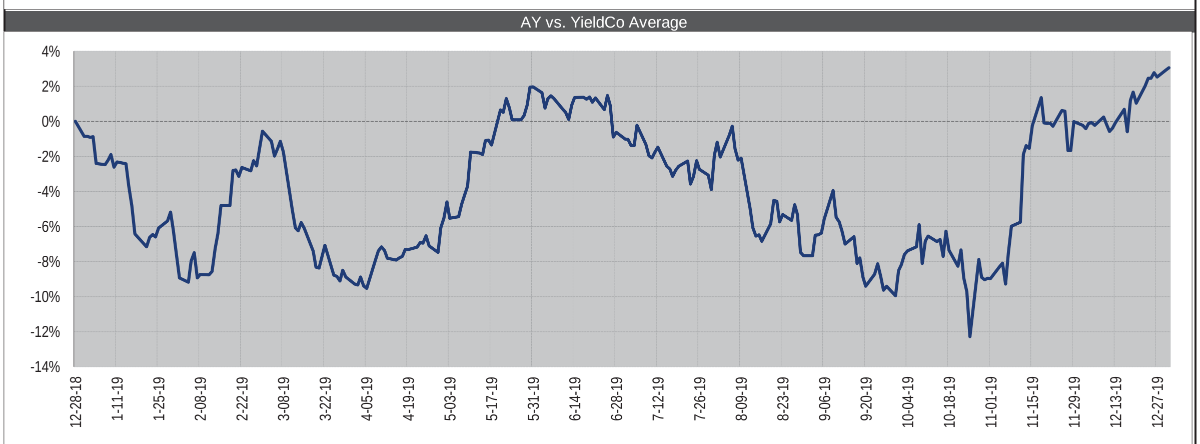


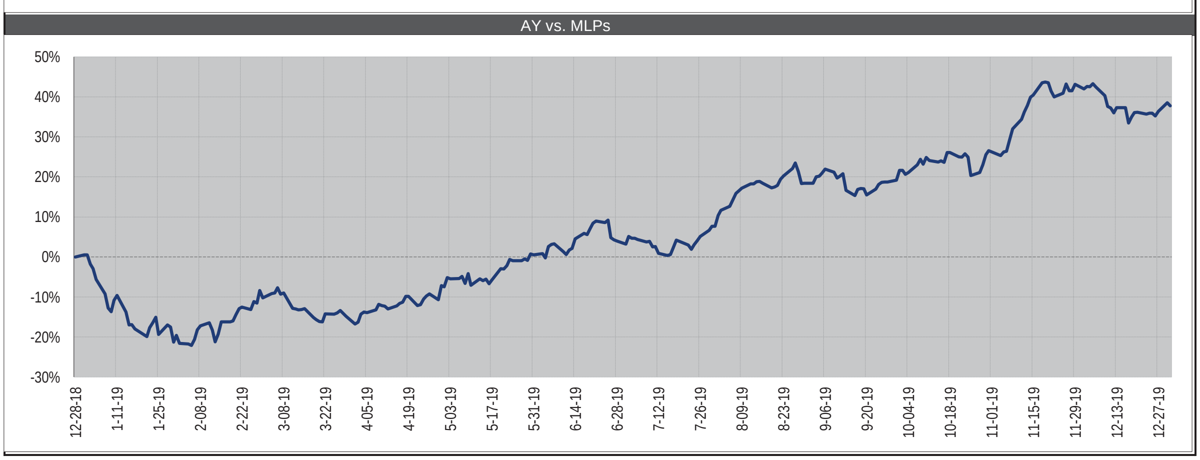
WOLFE RESEARCH

Atlantica Yield (AY) $26.39, NR

Atlantica Yield had a decent December and a good 2019 as the stock outperformed the market by about 5% for the year.



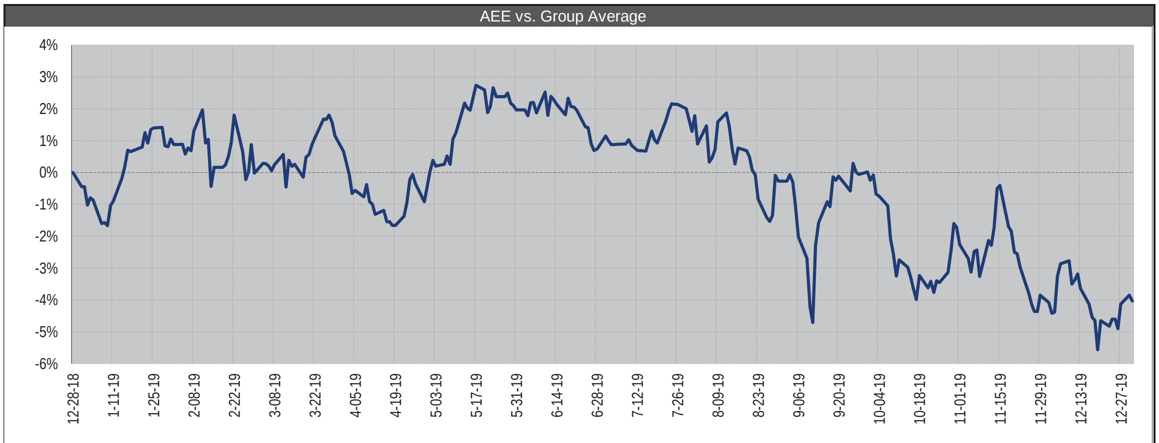


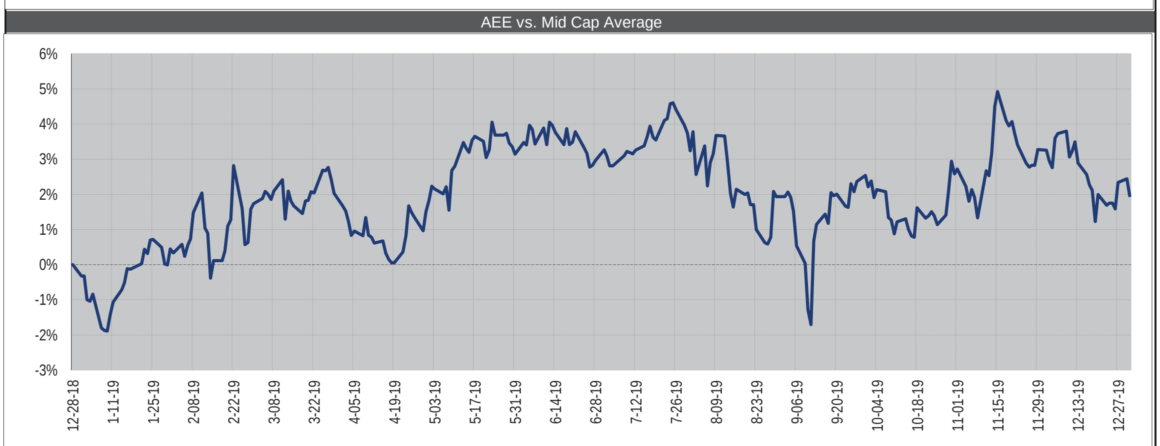


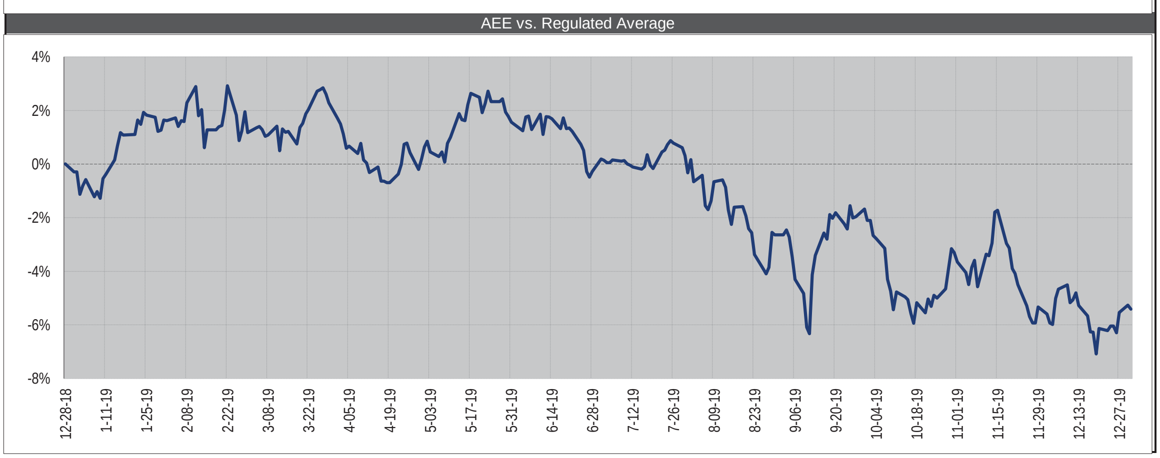
WOLFE RESEARCH

Ameren (AEE) $76.80, Outperform, $78 PT

AEE modestly outperformed regulateds in Dec but ended the year trailing them, as some investors focused on potential 2020 earnings miss, pending MO rate case, impact from lower FERC ROEs and a 30-yr UST yield implying low 8% ROEs in IL. We see the underperformance as overdone.





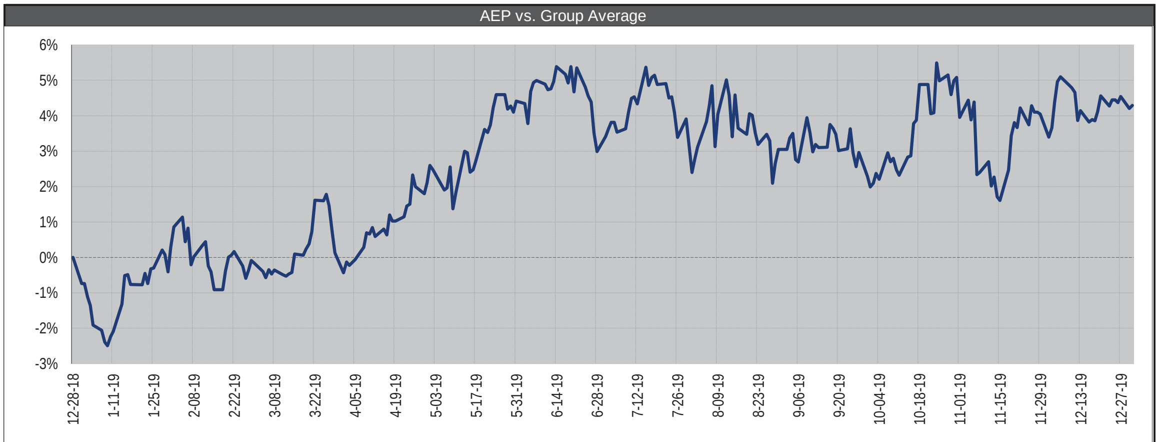


WOLFE RESEARCH

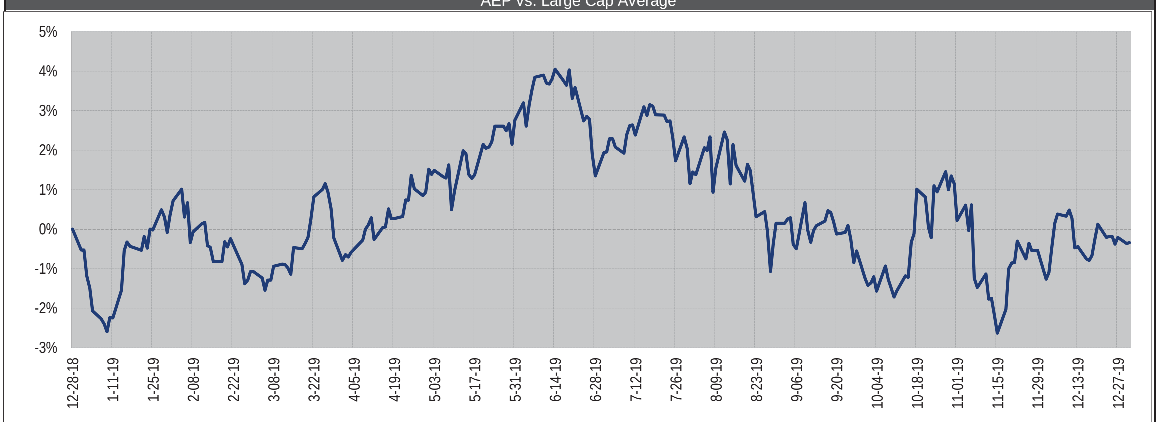
American Electric Power (AEP) $94.51, Outperform, $101 PT

AEP slightly outperformed regulateds in Dec, and modestly outperformed them for the year, as EPS growth was affirmed at 5-7%, with potential to hit top end even without a $2B North Central wind project, which looks likely.

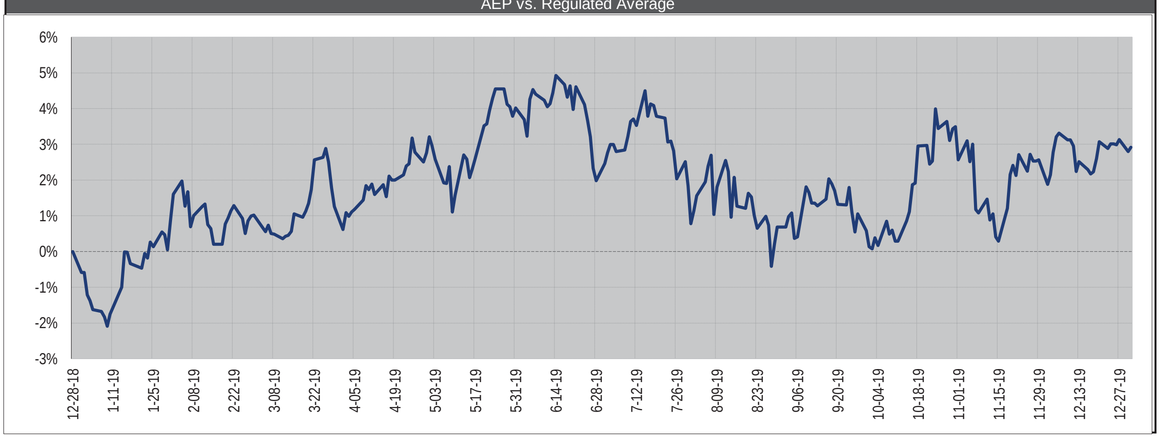
AEP vs. Group Average



AEP vs. Large Cap Average



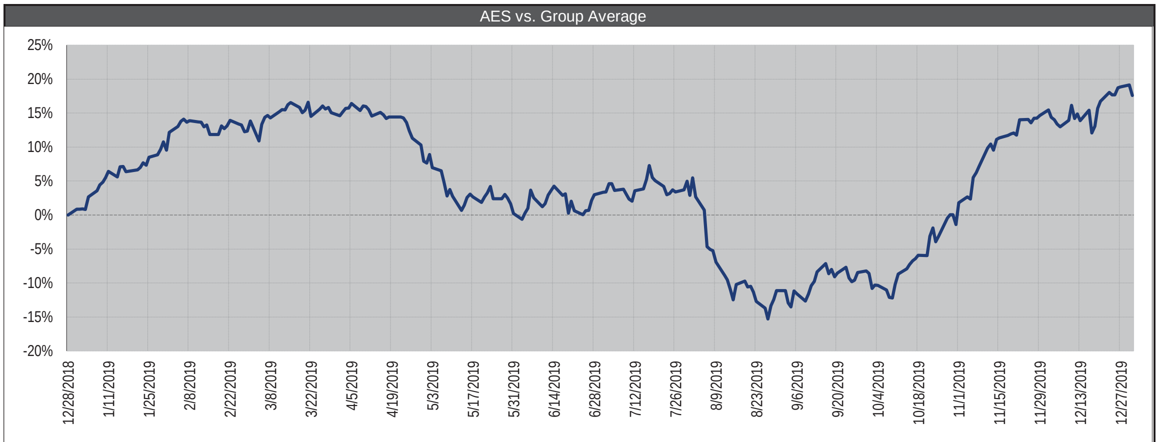
AEP vs. Regulated Average

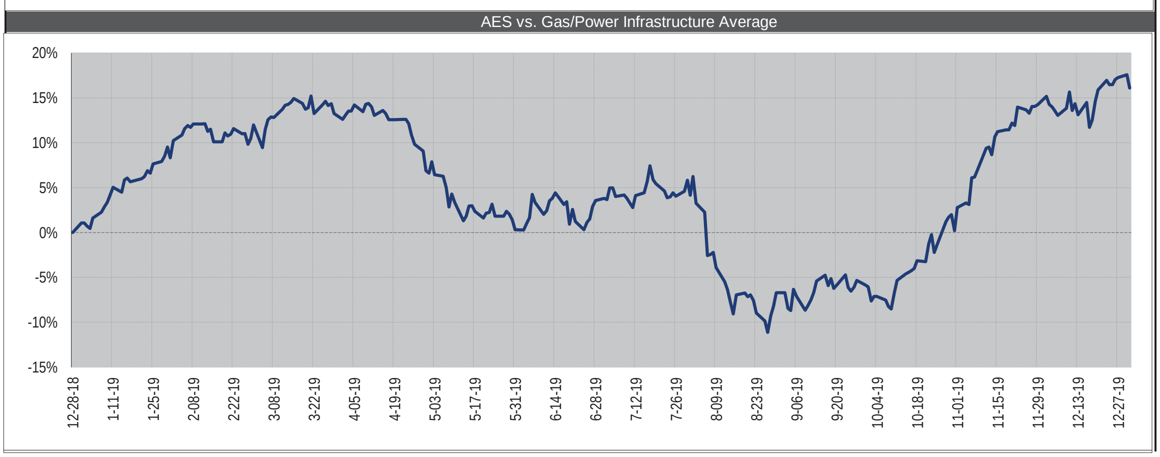


WOLFE RESEARCH

AES Corporation (AES) $19.90, Peer Perform, $18 PT

AES was one of the top performers in 2019. The company's focus on – 1) deleveraging; 2) renewables development; 3) simplifying the business / selling non-core assets – has continued to resonate well with the market. AES' ability to execute on its financial targets recently has allowed the market to overlook issues this year that might have derailed its stock performance in the past (Argentina, DPL's DMR).

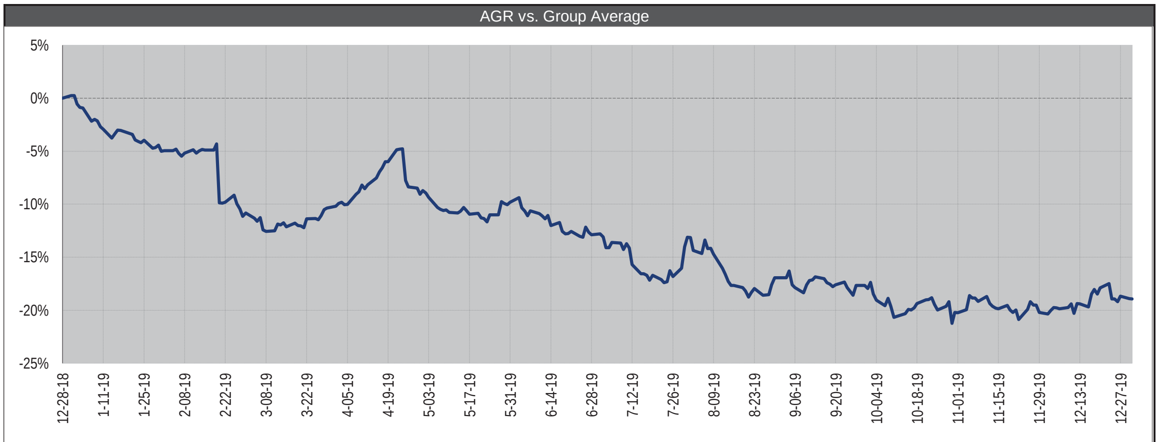


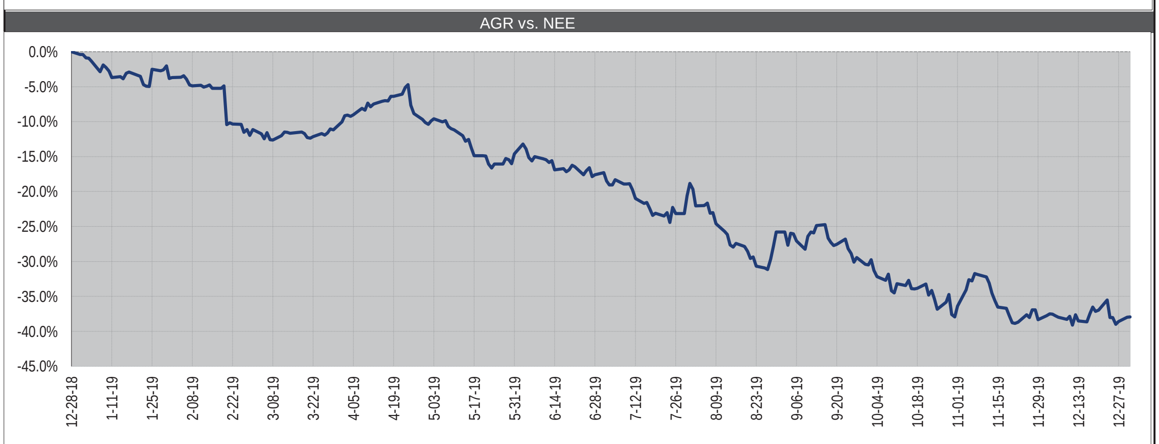


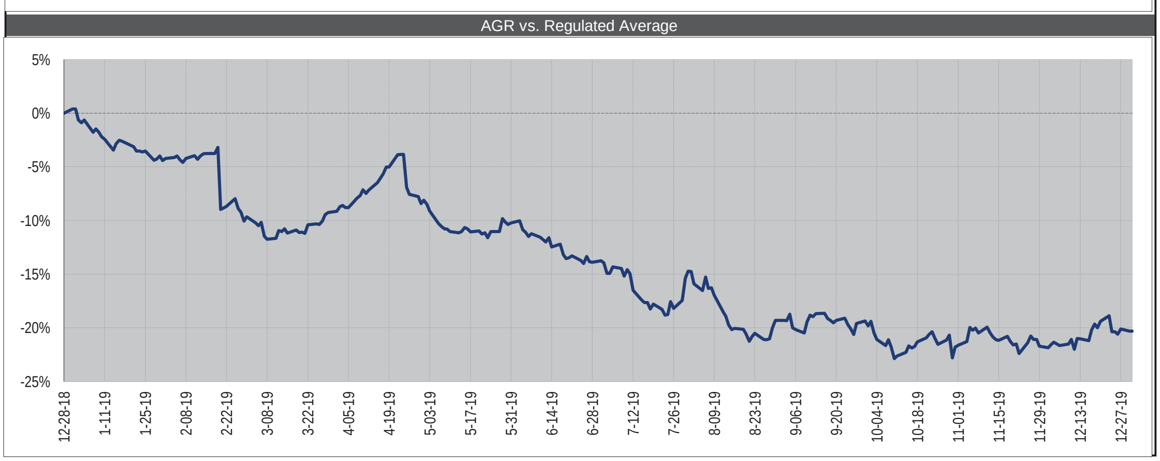
WOLFE RESEARCH

Avangrid (AGR) $51.16, Underperform, $47 PT

- AGR finished 2019 in an upswing, after what was a very disappointing year. It was the worst-performing regulated in 2019 (excluding PCG), as hitting financial targets and project execution have continued to be a problem. AGR was announced as the winner of the latest Connecticut offshore wind RFP in early-December.



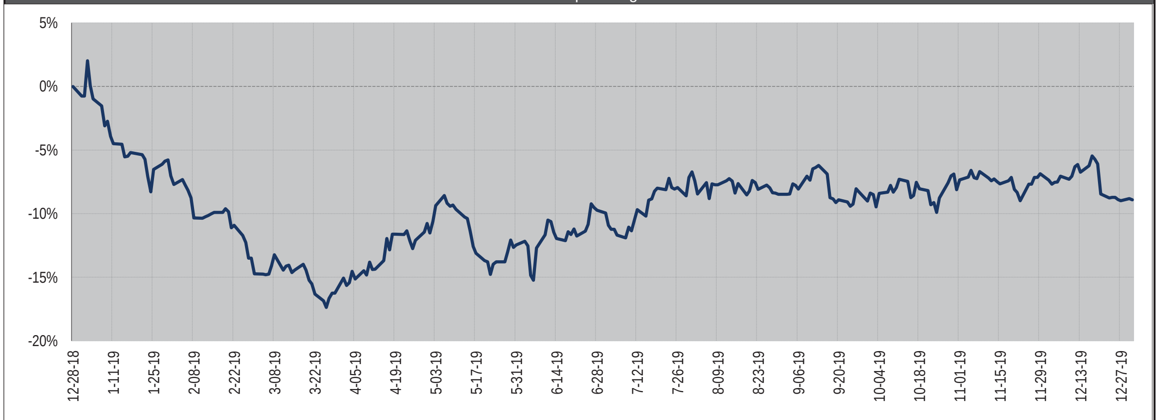




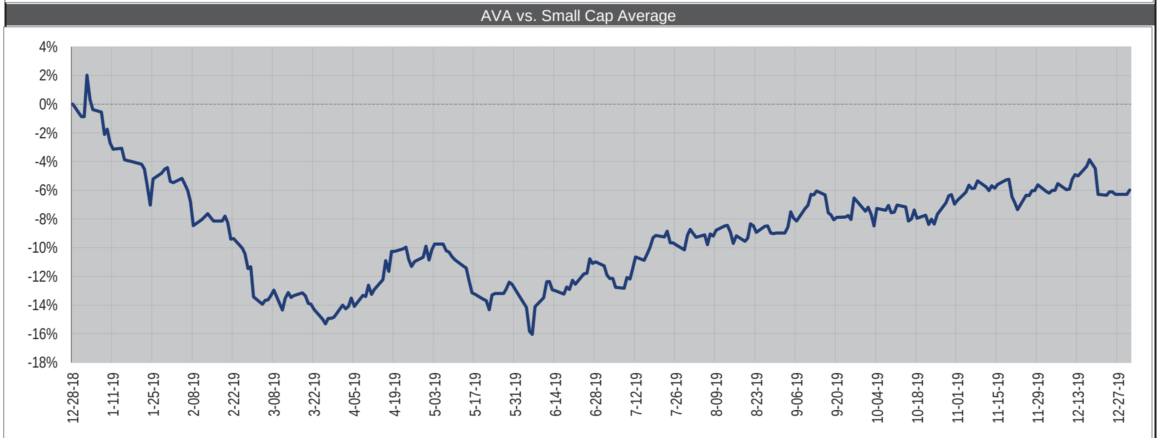
WOLFE RESEARCH

Avista Corporation (AVA) $48.09, NR

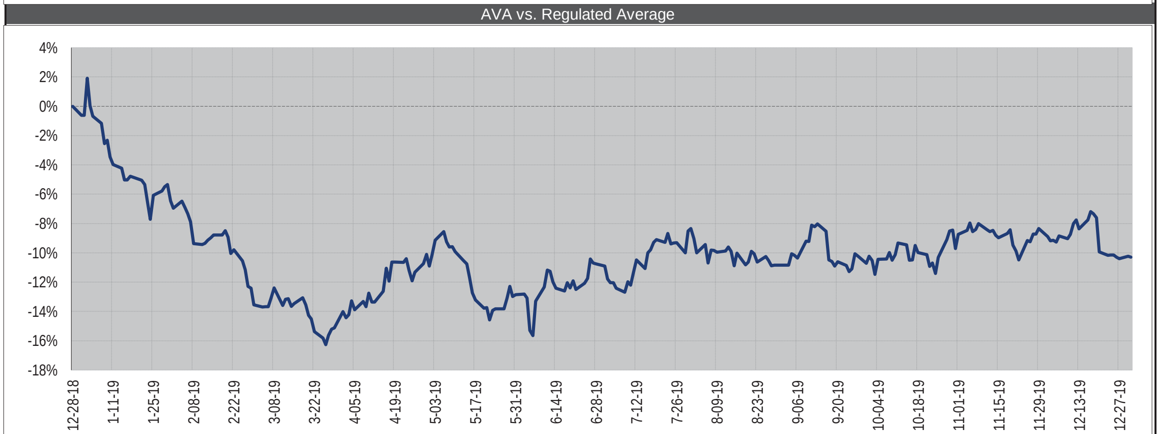
AVA vs. Group Average



AVA vs. Small Cap Average



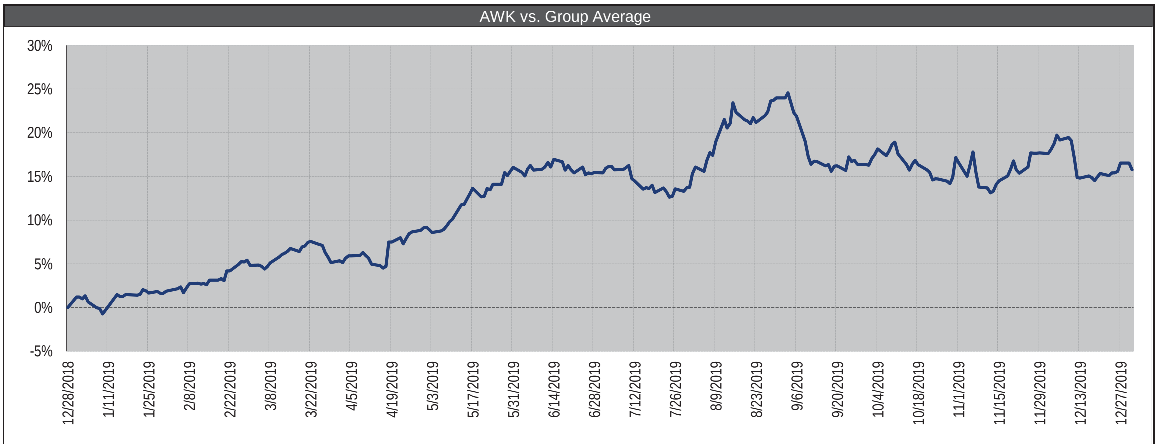
AVA vs. Regulated Average

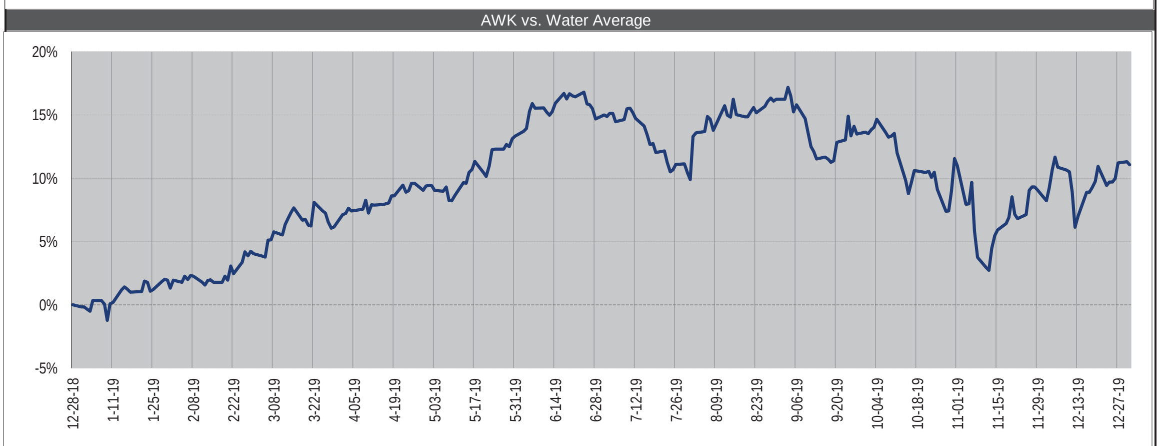


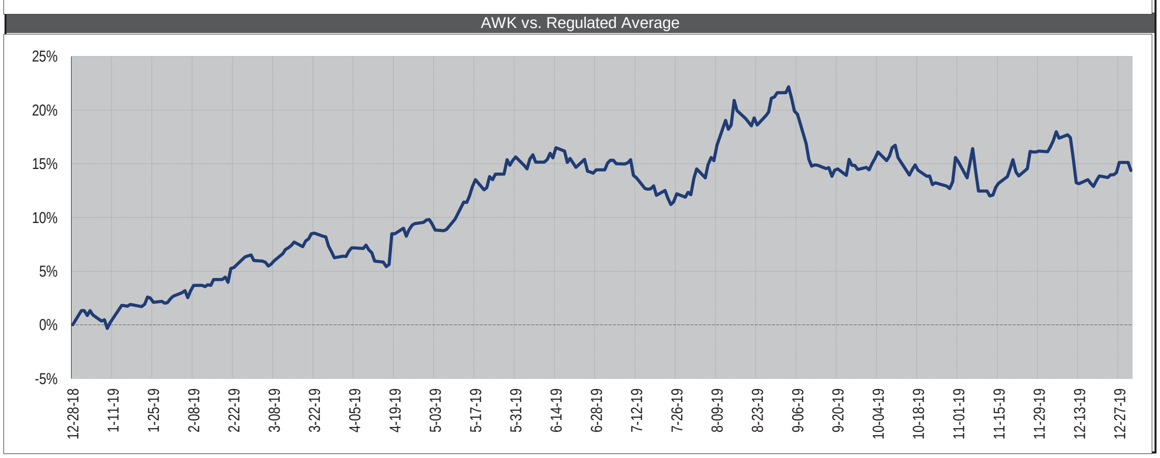
WOLFE RESEARCH

American Water Works (AWK) $122.85, Peer Perform, $121 PT

AWK was one of the top performing regulated names in 2019. AWK was a primary beneficiary of the high-quality trade that worked for most of the year within the sector. The company is also a favorite of ESG investors, which is a thematic that continues gain momentum. In December, AWK held its annual Analyst Day, which featured a disappointing 2020 guide and the announcement that well-liked CEO Susan Story would retire 4/1/20.



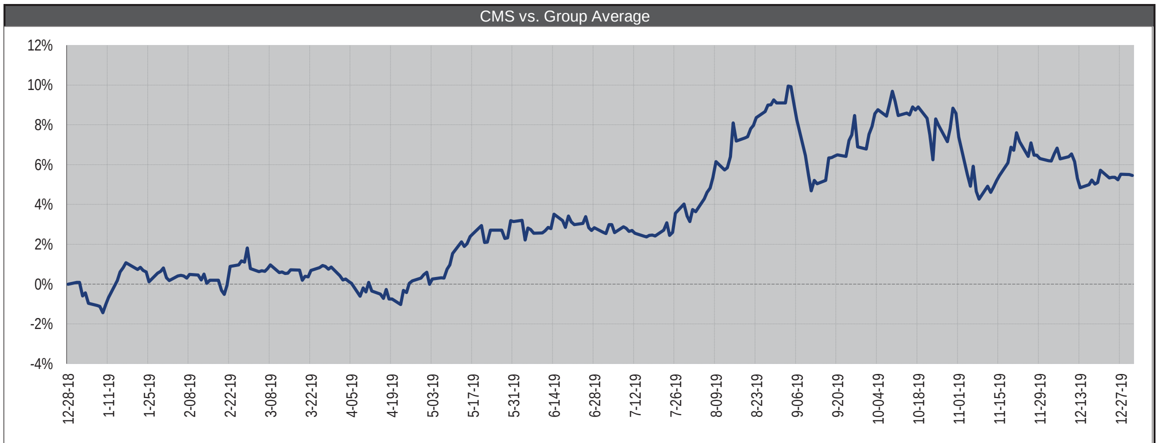


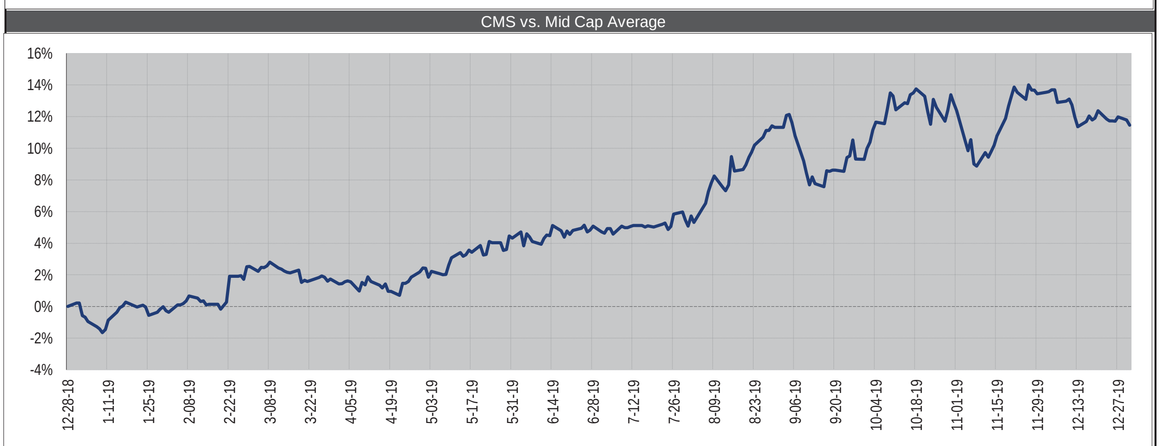


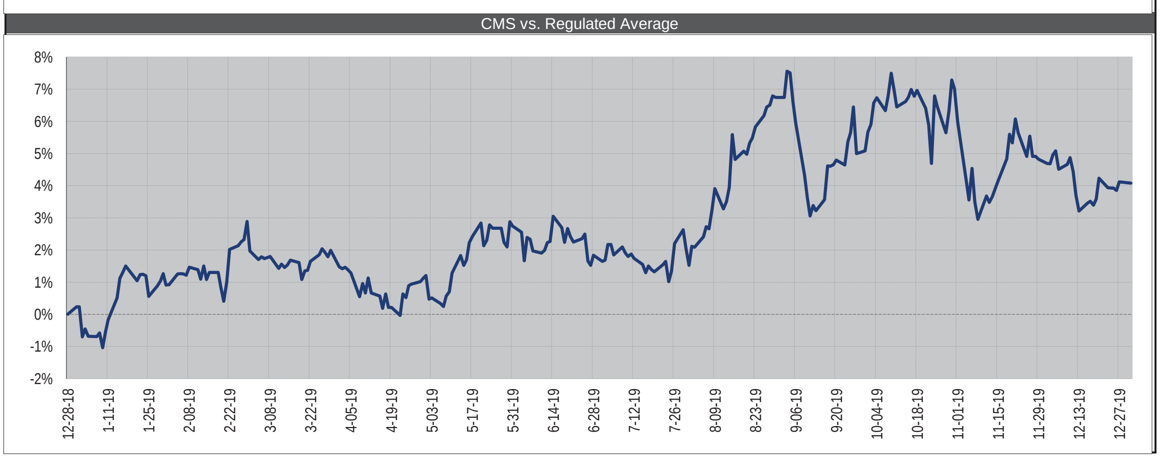
WOLFE RESEARCH

CMS Energy (CMS) $62.84, Peer Perform, $66 PT

- CMS underperformed slightly to close the year, but still finished ahead of peers for 2019. CMS filed its latest gas rate case in mid-December, but otherwise has been quiet.



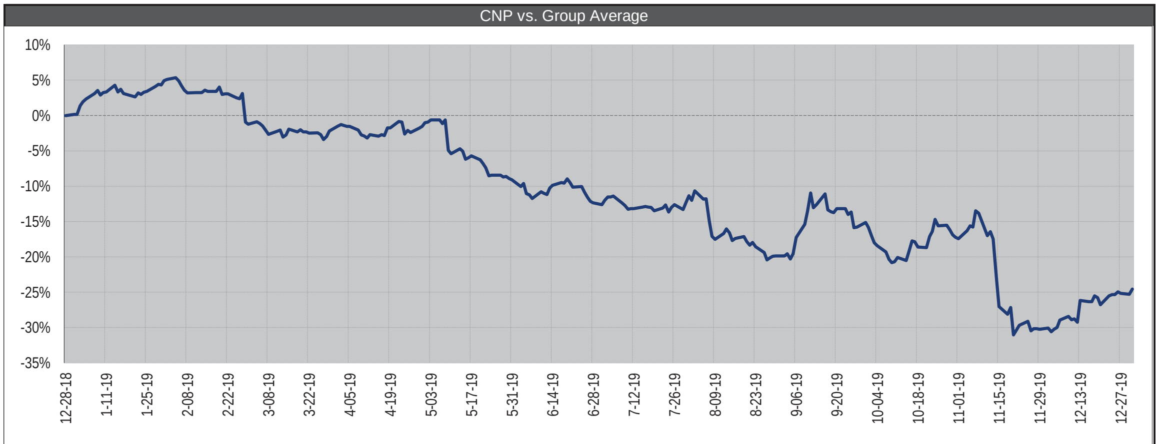


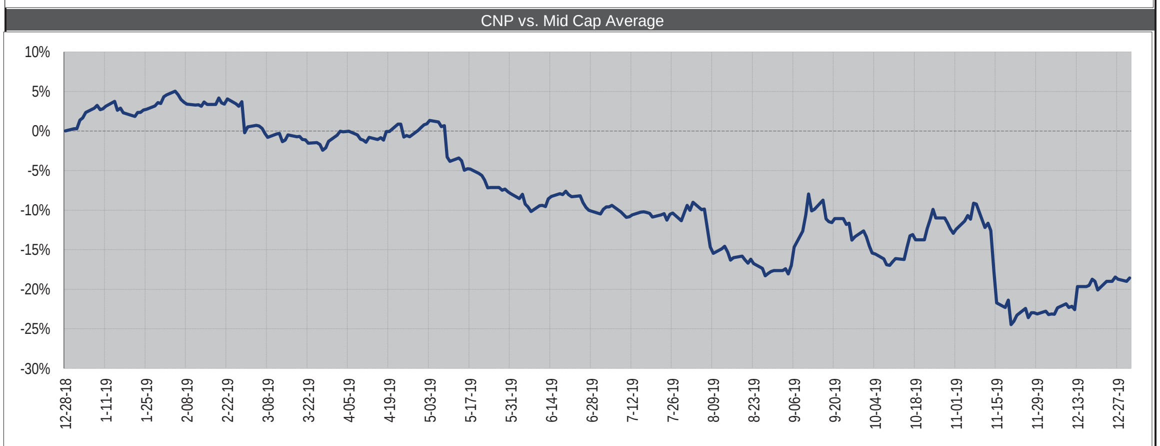


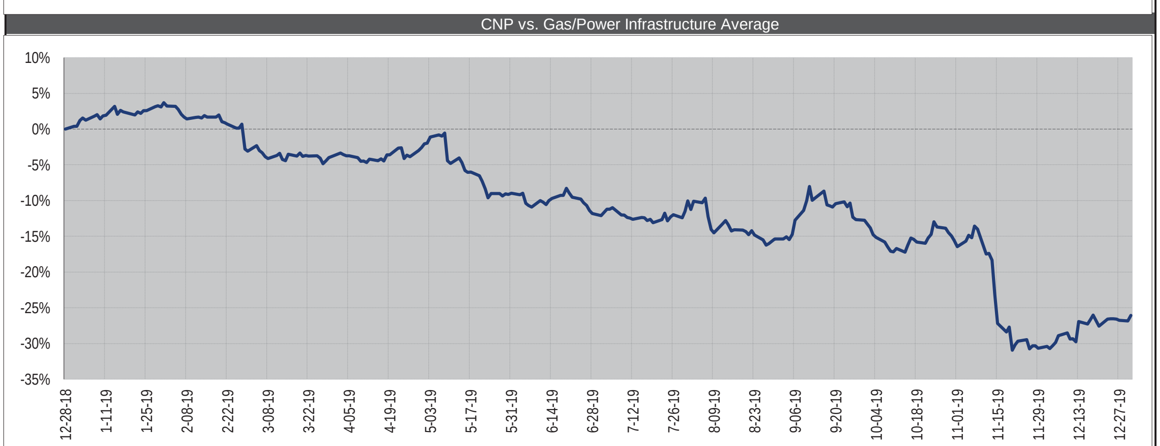
WOLFE RESEARCH

CenterPoint Energy (CNP) $27.27, Peer Perform, $27 PT

CNP was the worst performer in the utility group in 2019 (ex PCG). The underperformance was due to several earnings disappointments, uncertainty associated with its TX rate case and a realization that the company needed a significant amount of equity in 2020 to stabilize its balance sheet. Fortunately, in December, CNP notified the PUCT that it had reached a settlement with parties in its TX rate case.



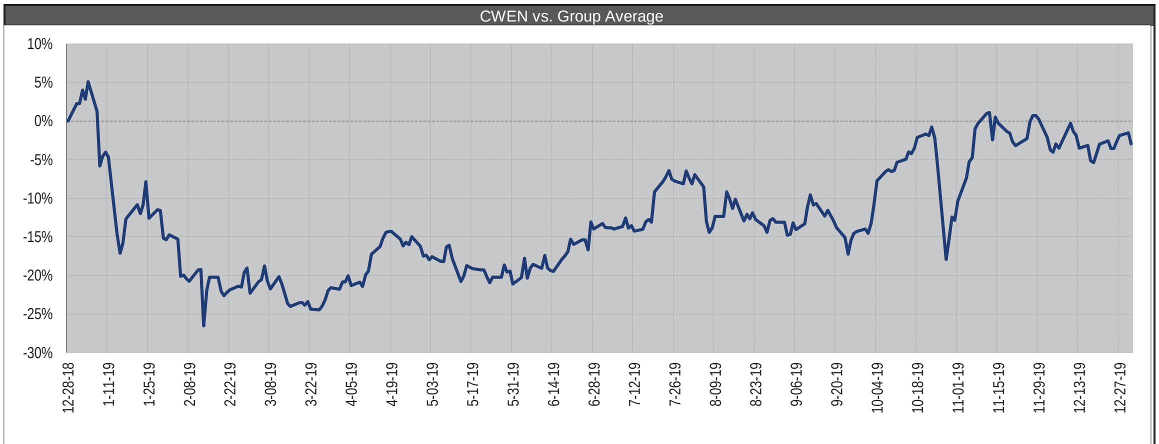


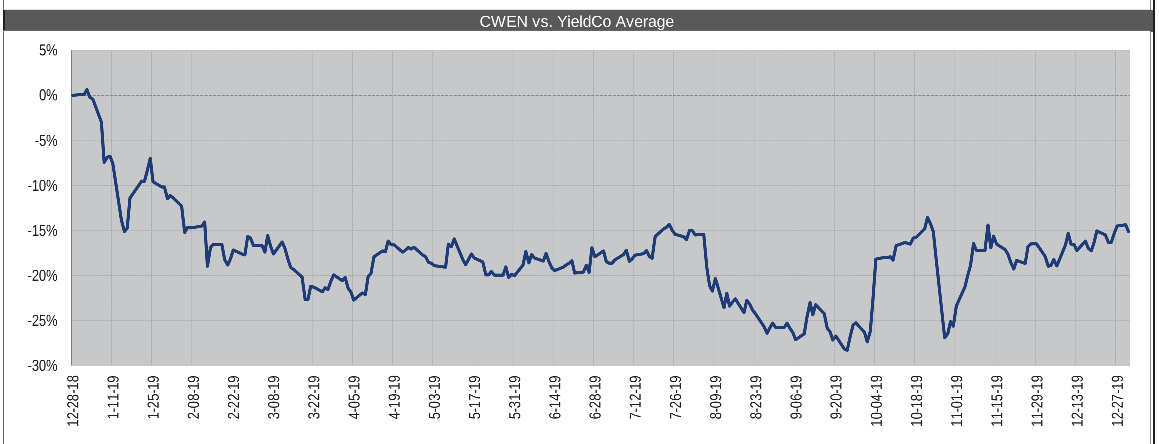


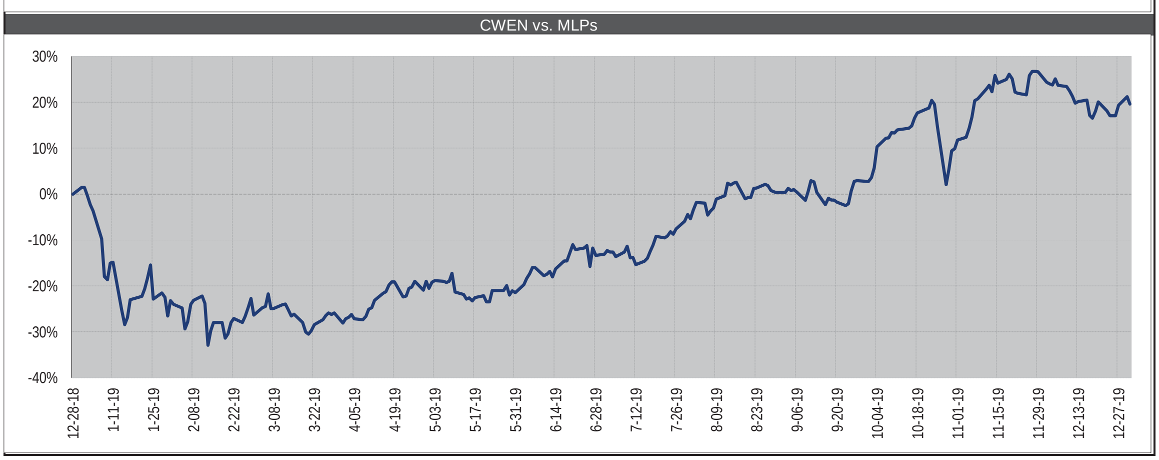
WOLFE RESEARCH

Clearway Energy (CWEN) $19.95, Peer Perform, $19 PT

Clearway outperformed YieldCo peers slightly in December but was the worst performing YieldCo on the year rising by 16%. 2019 was all about key customer PG&E whose bankruptcy drove a 40% dividend cut by CWEN in February and continued uncertainty for much of the year. That said, there have been no signs that contracts with PG&E will be broken and CWEN seems poised for a better 2020 if and when PG&E emerges.



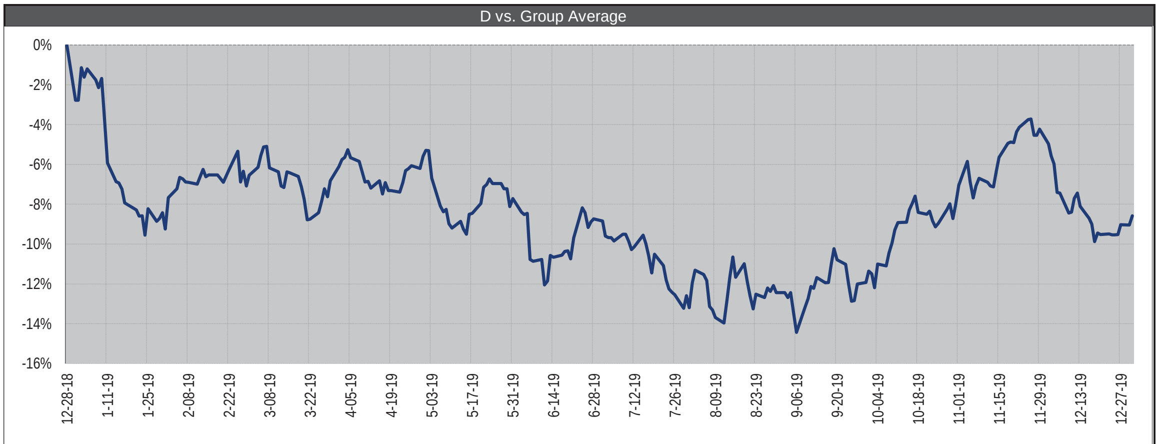


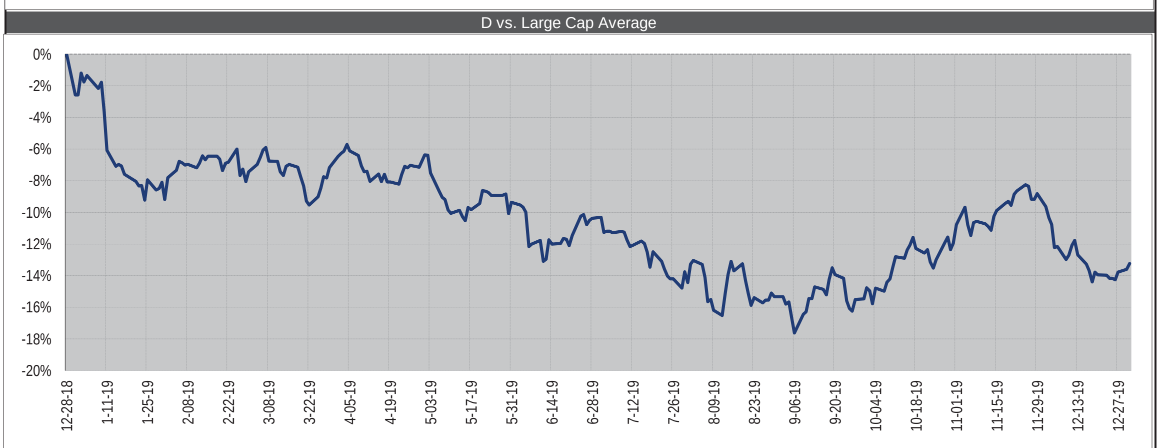


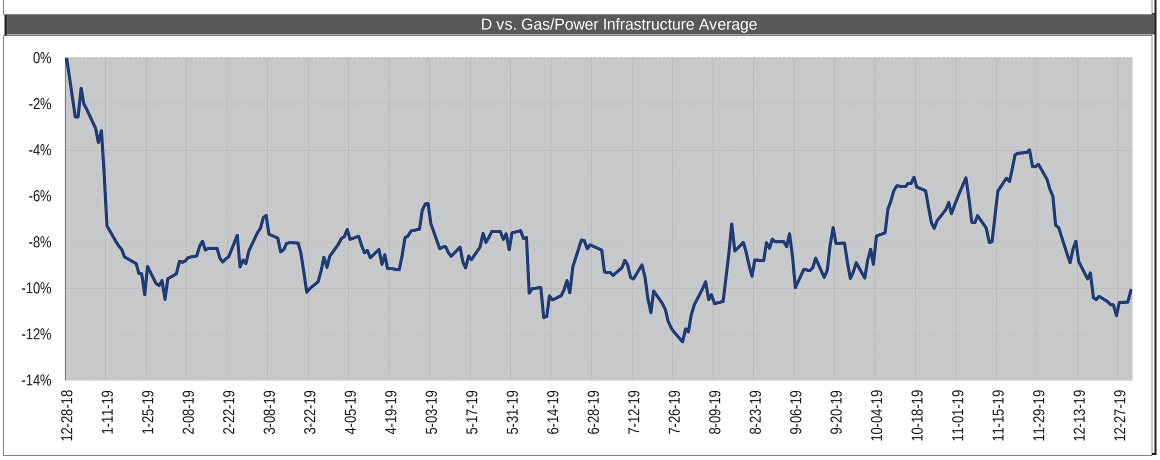
WOLFE RESEARCH

Dominion Resources (D) $82.82, Outperform, $90 PT

D was one of the worst performers in the group during December. We sense most of the weakness stemmed from the company's surprise $800M perpetual preferred offering at the beginning of the month. D also made a $500M pension contribution using its common stock toward month end. D underperformed most of its large-cap peers in 2019 largely due to ACP related overhangs; we continue to believe D is attractive with or without ACP.



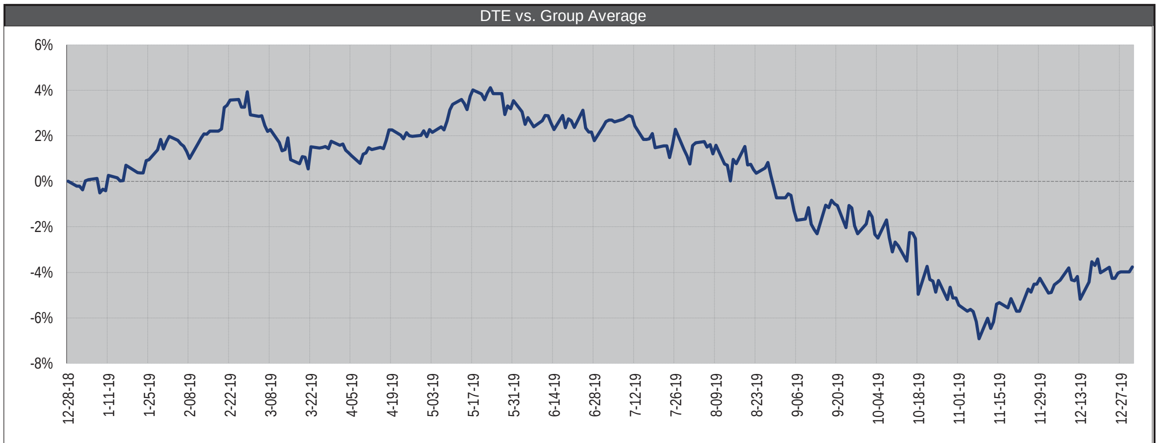


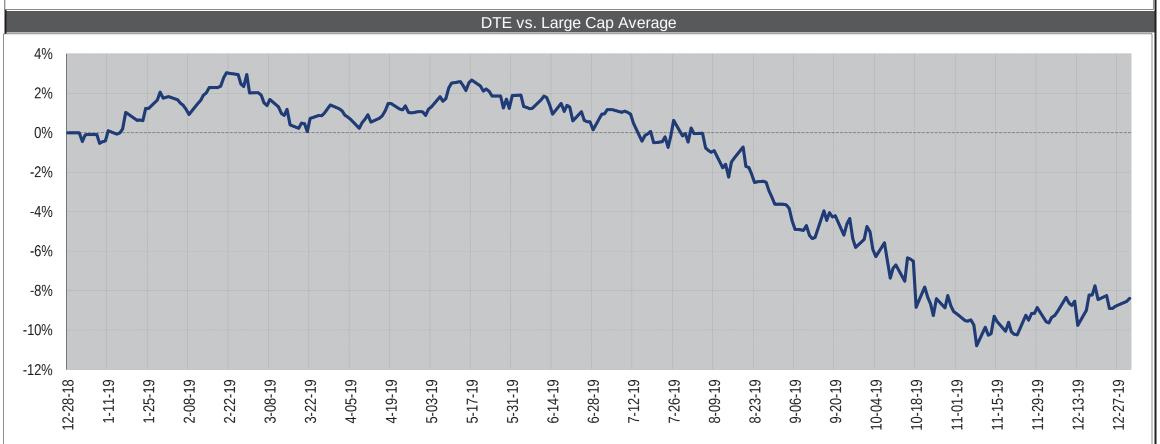


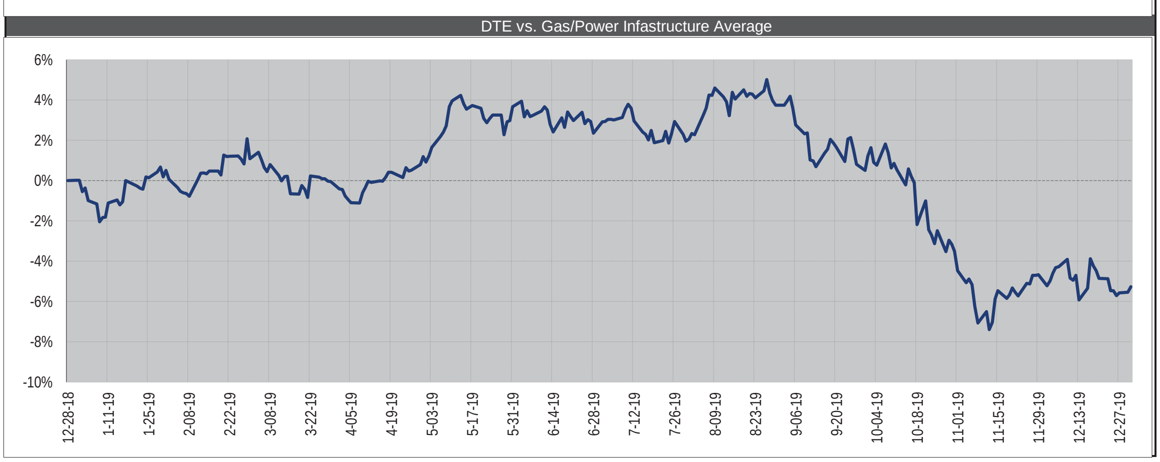
WOLFE RESEARCH

DTE Energy (DTE) $129.87, Peer Perform, $135 PT

- DTE traded sideways for most of December, to close out what was a disappointing year for stock performance. While the company continues to plan conservatively and hit numbers, the market took a bearish stance on DTE's midstream business – whether it be exposure to the Appalachia were growth has been limited or the big Haynesville gathering deal that caught many by surprise.



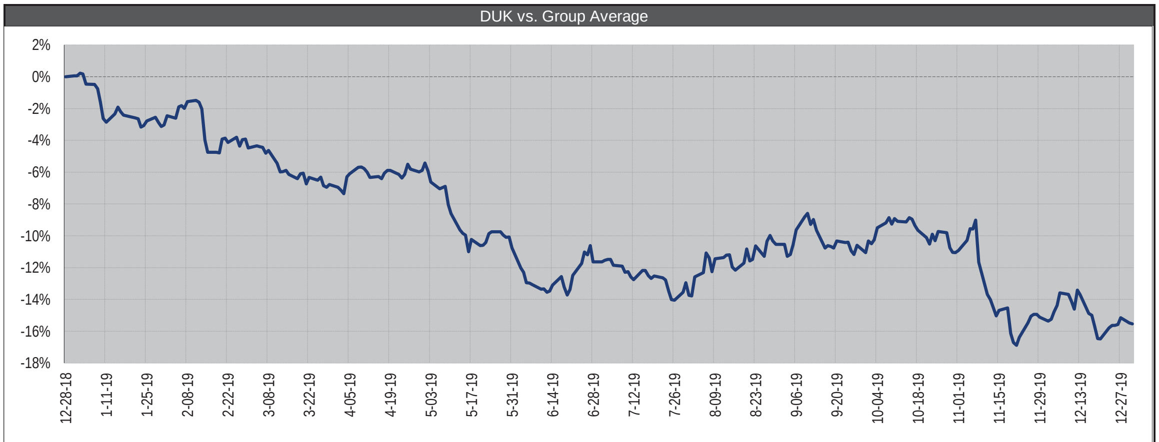


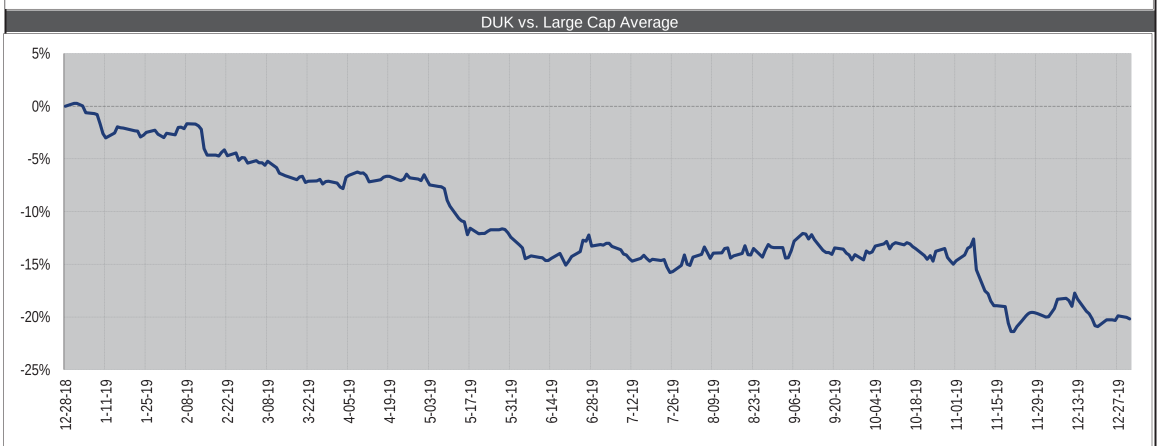


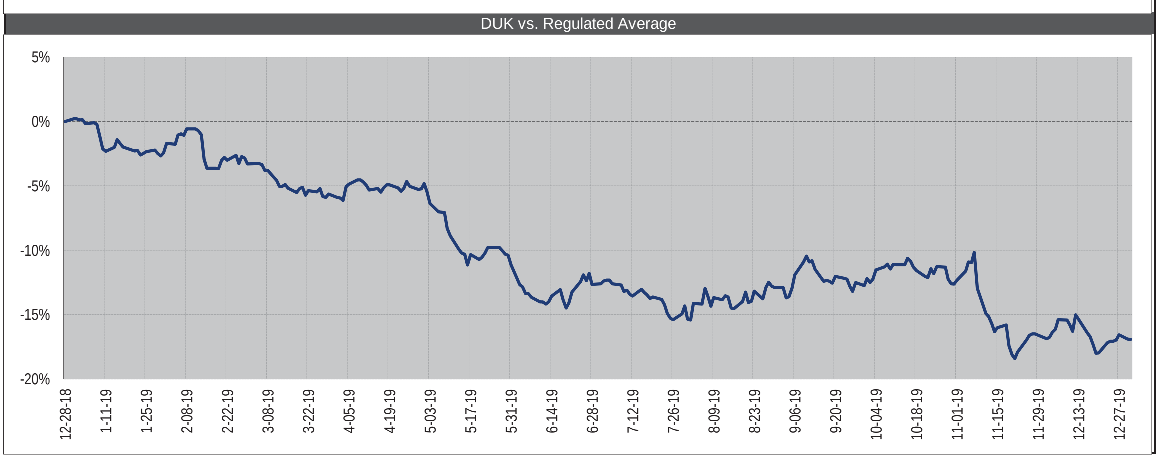
WOLFE RESEARCH

Duke Energy (DUK) $91.21, Peer Perform, $92 PT

DUK was in line with peers in Dec but was among the worst performing regulateds in 2019, as ACP was delayed, $2.5B of new equity was surprisingly announced, and other factors.



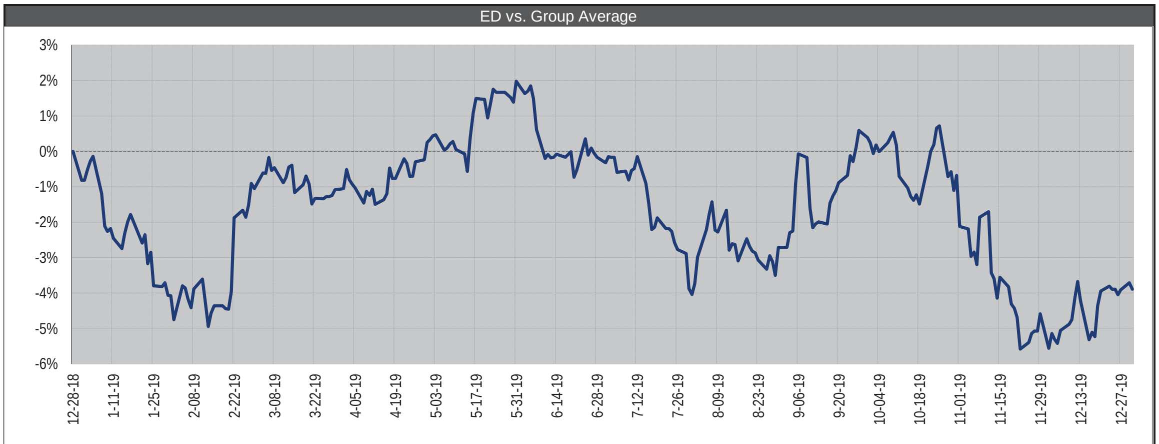


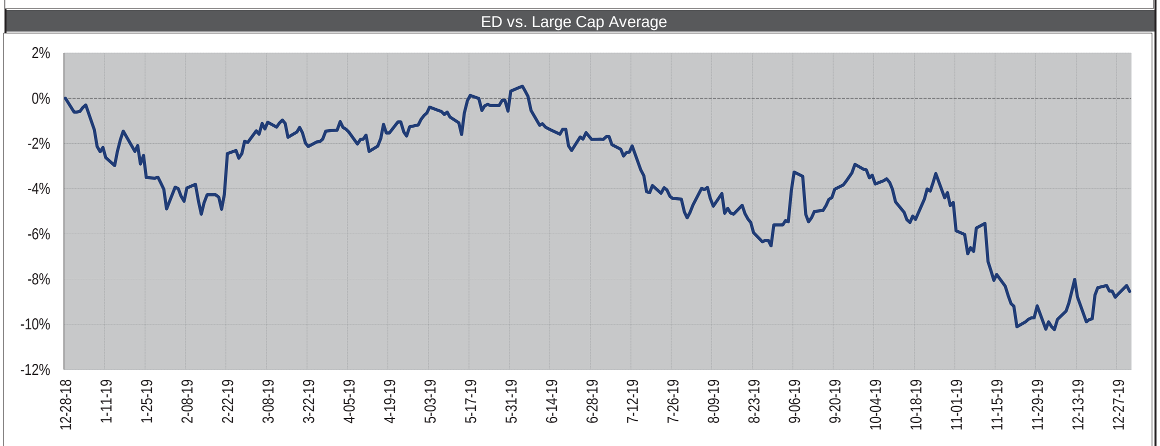


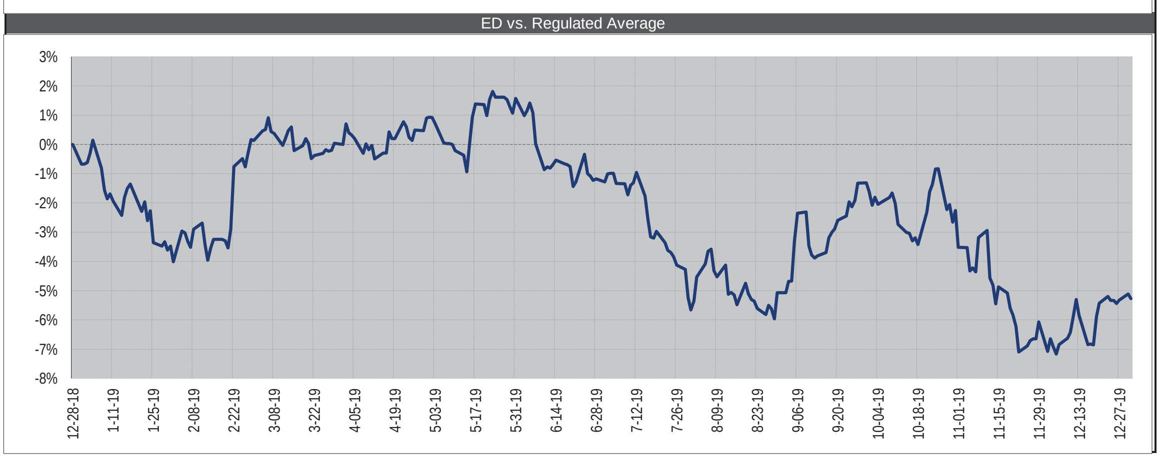
WOLFE RESEARCH

Consolidated Edison (ED) $90.47, Underperform, $87 PT

ED modestly outperformed the regulated average and its large-cap peers in December; we saw no notable news during the month. ED underperformed most of its regulated peers in 2019 as CECONY's rate case acted as an overhang for much of the year. ED ultimately reached a settlement which featured an 8.80% ROE, the lowest in the country for a major utility.





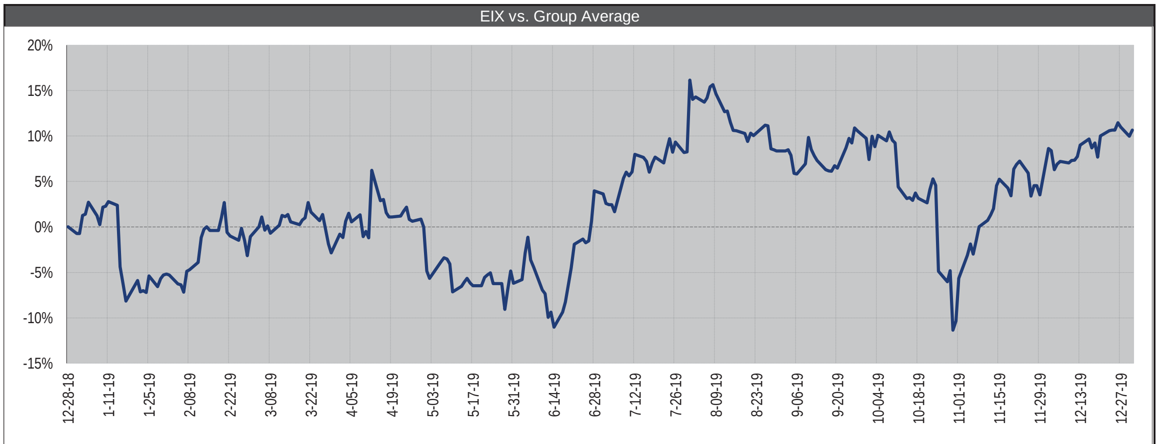


WOLFE RESEARCH

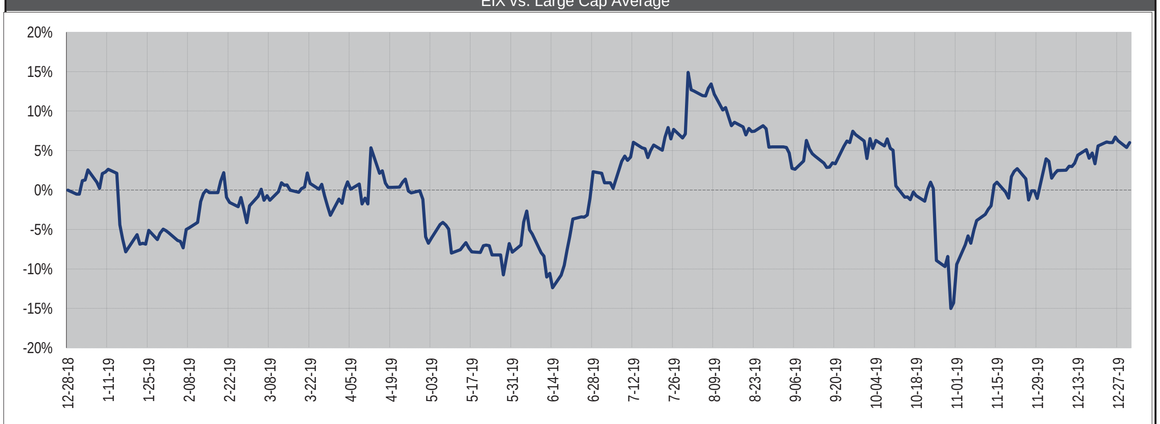
Edison International (EIX) $75.41, Outperform, $80 PT

For a second straight month, EIX solidly outperformed peers, beating them by roughly 2,000bp since hitting a 52-week low on 10/31 after an overreaction to several SoCal fires; and for 2019, EIX beat regulateds by nearly 1,000bp despite new equity and wildfires.

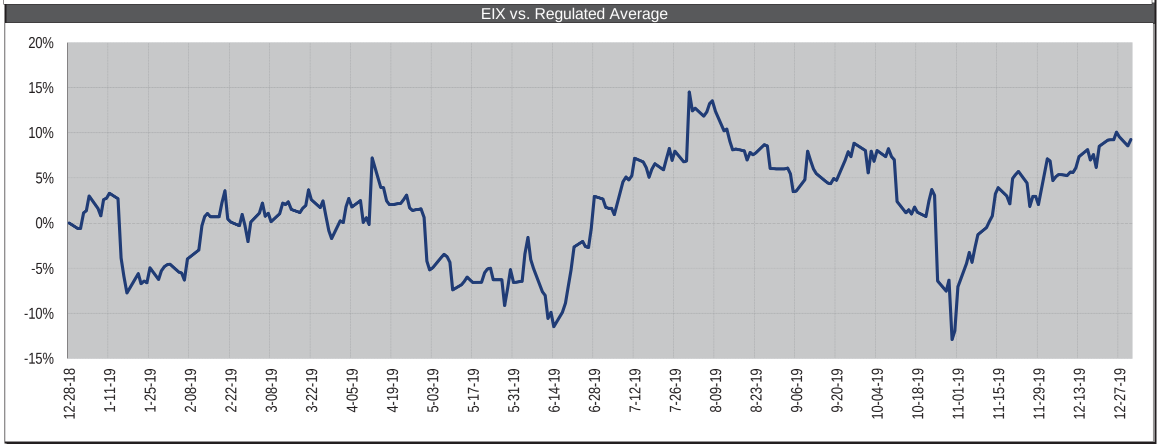
EIX vs. Group Average



EIX vs. Large Cap Average



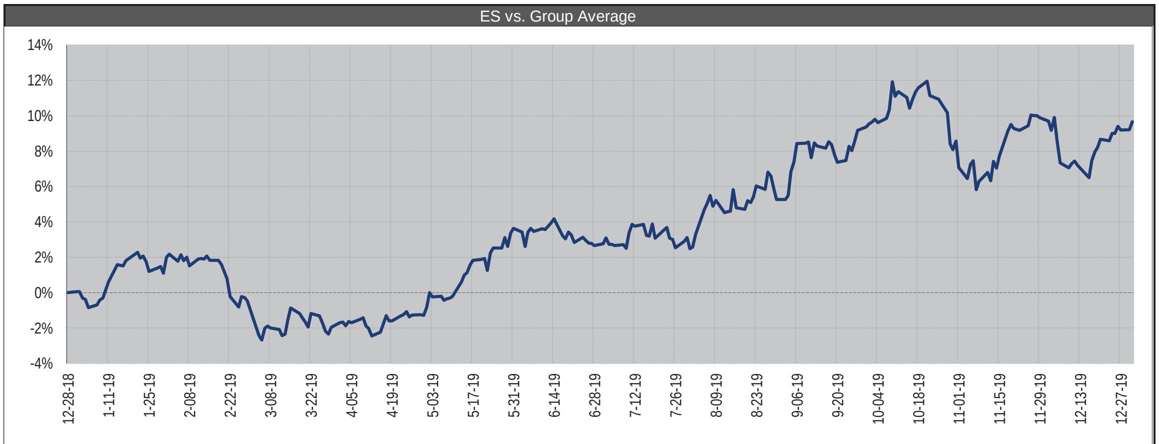
EIX vs. Regulated Average

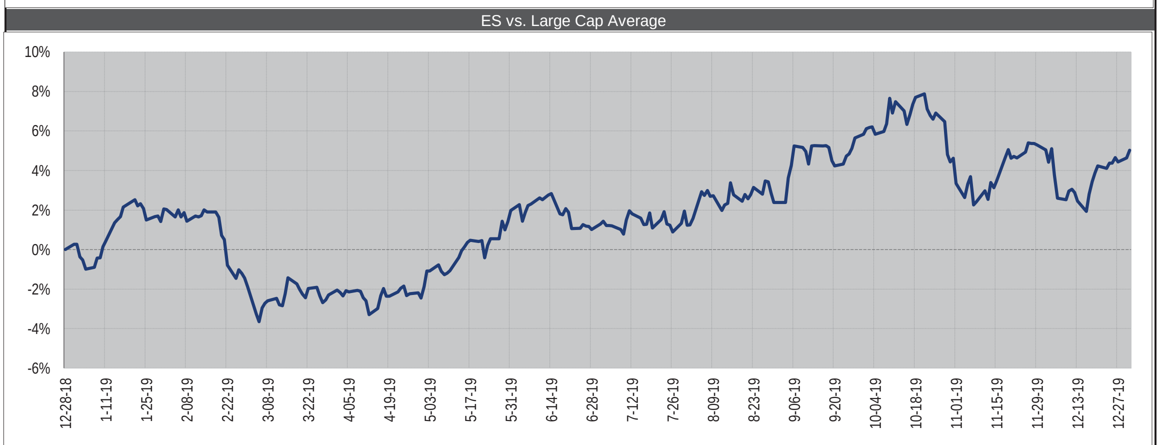


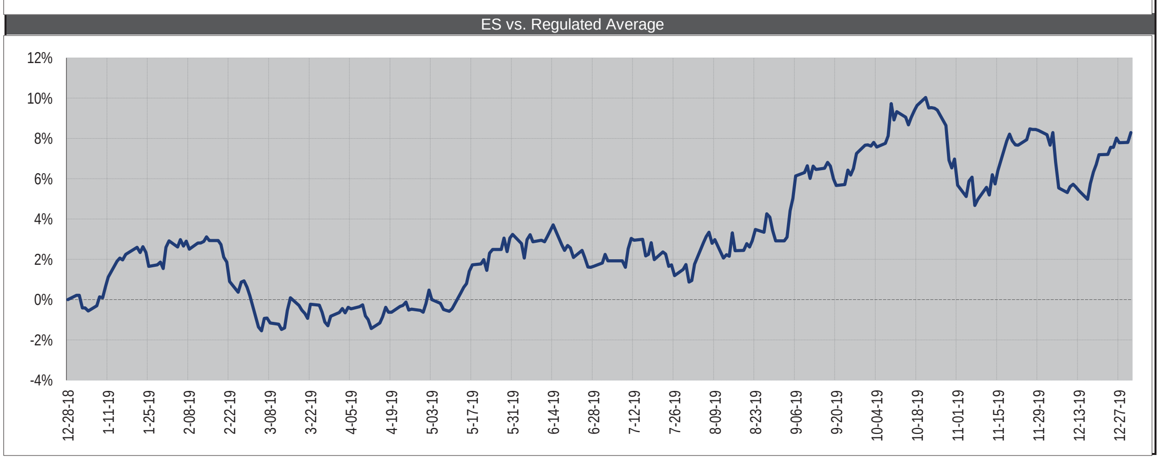
WOLFE RESEARCH

Eversource Energy (ES) $85.07, Outperform, $85 PT

ES was in line with peers in Dec but had a good 2019, beating regulateds by around 800bp, given 5-7% growth from the base business, incremental offshore wind opportunities, and increasingly ESG focus.



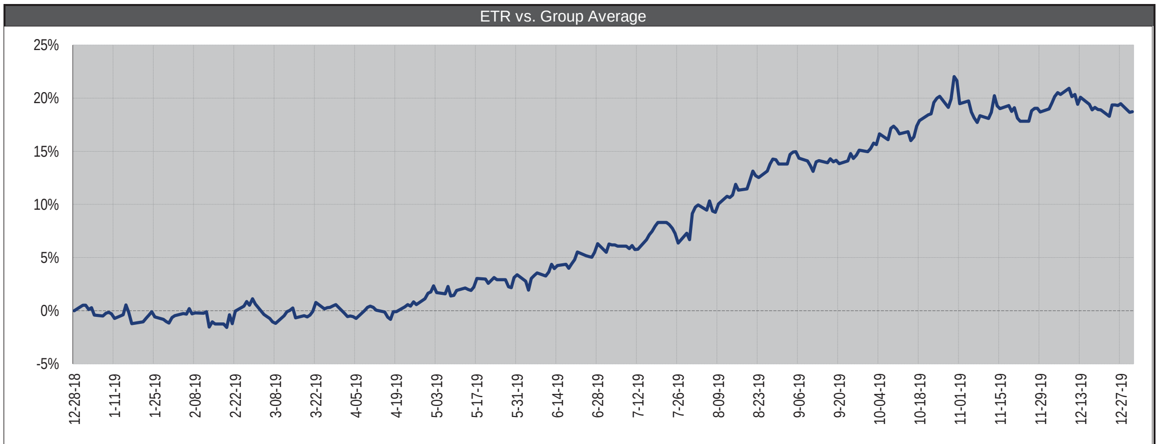


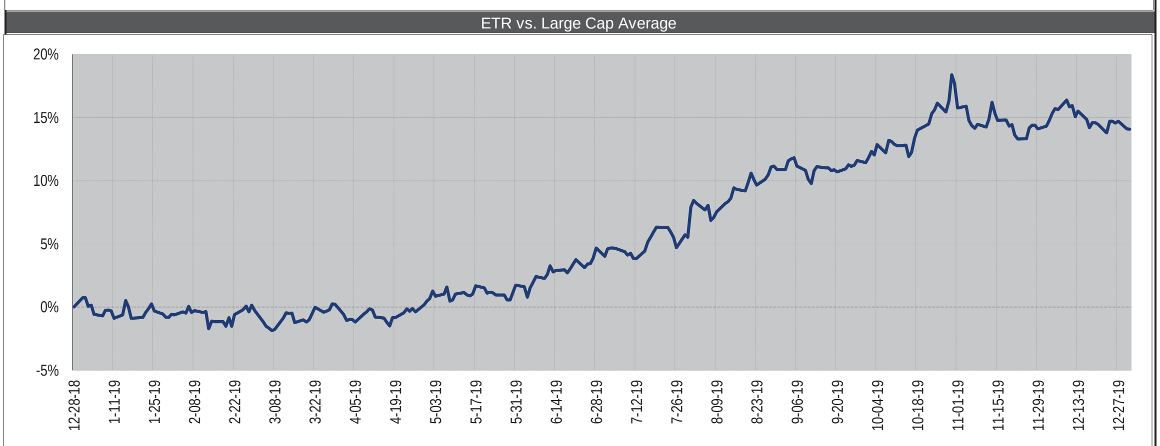


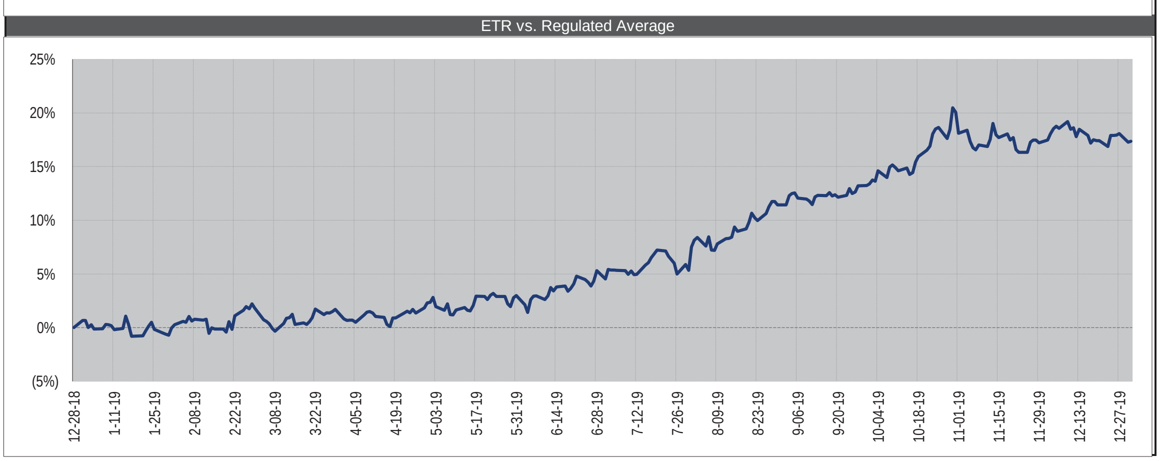
WOLFE RESEARCH

Entergy (ETR) $119.80, Peer Perform, $119 PT

ETR was in line with peers in Dec but had a stellar 2019, trailing only SO among the best performing regulateds; ETR raised LT guidance midyear and plans to raise its dividend in line with EPS by 2021.



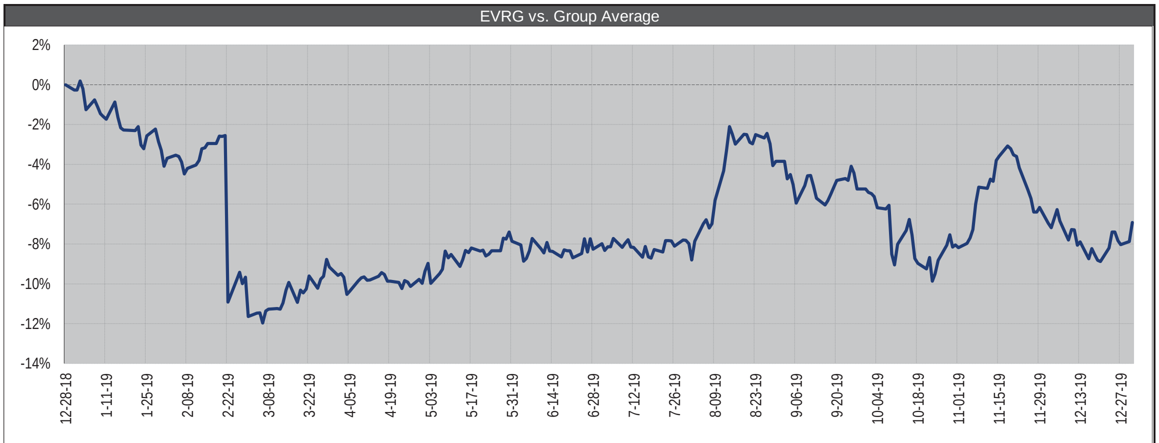


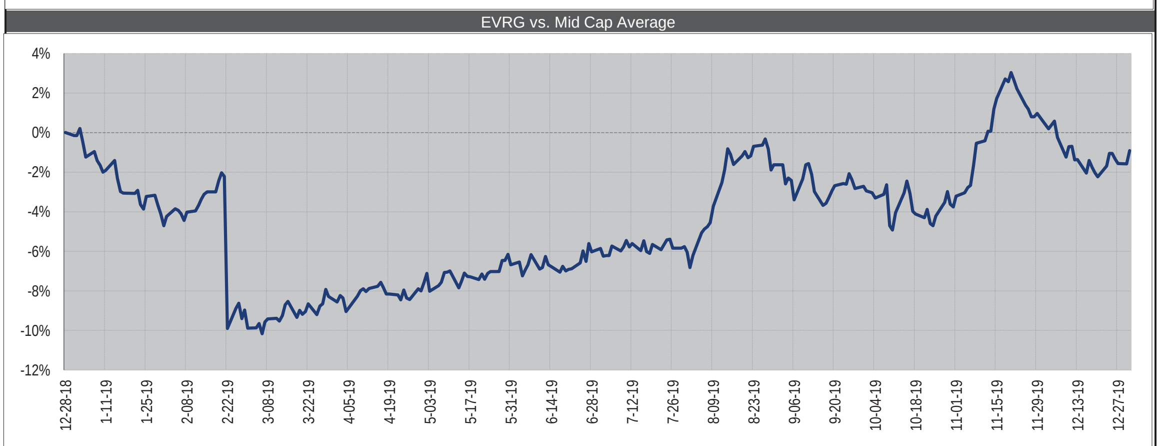


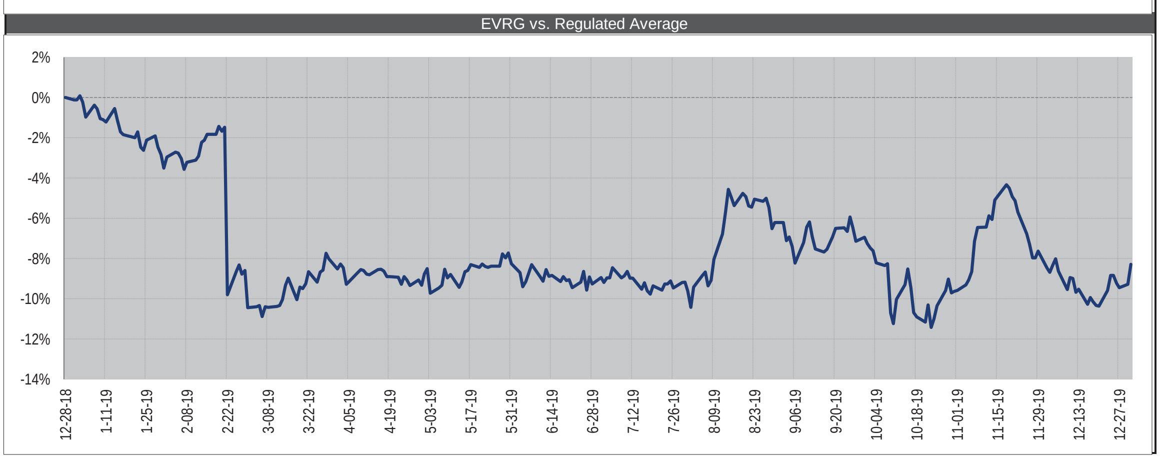
WOLFE RESEARCH

Evergy (EVRG) $65.09, Outperform, $68 PT

- EVRG continued its late-November underperformance into December and has now completely round-tripped since the positive Q3 update. News has been quiet, as we await incremental updates on capital plan upsides and completion of the buyback program in 2020. For 2019, EVRG underperformed most of its peers.

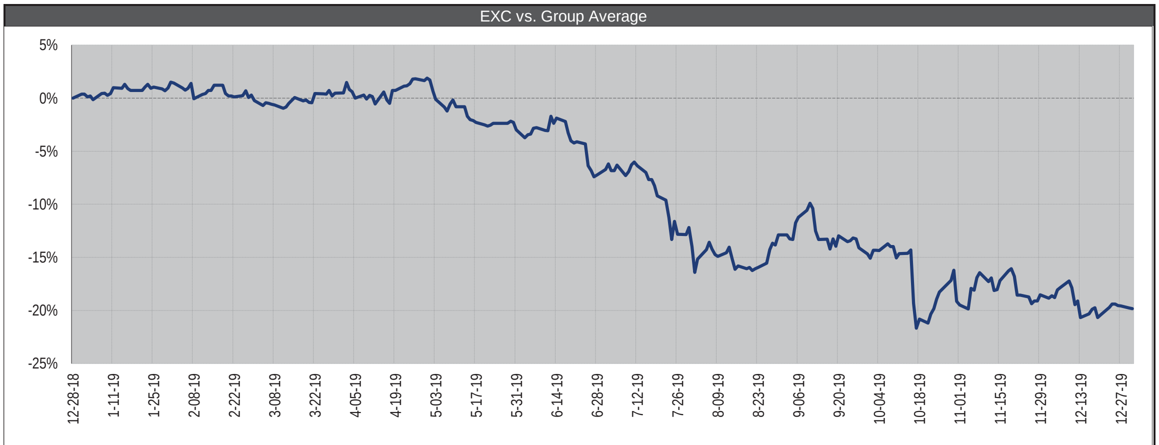


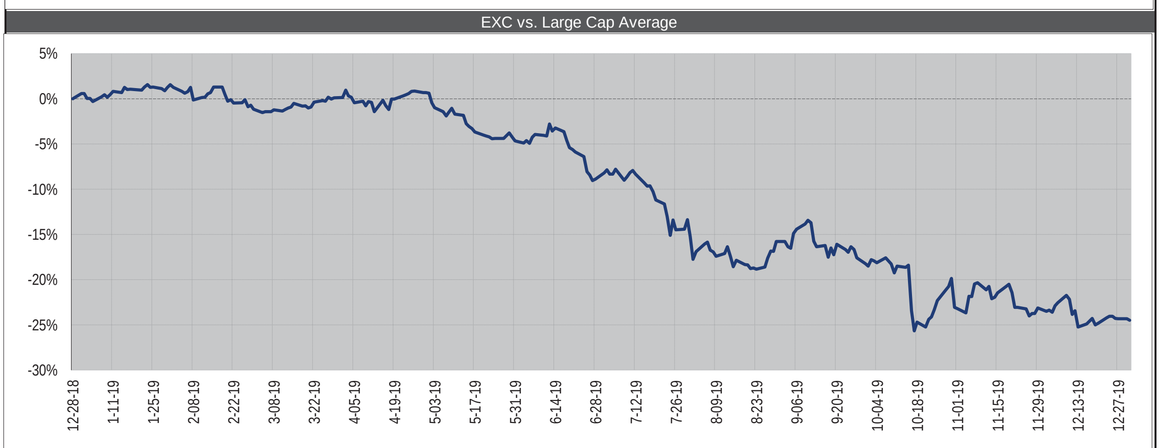


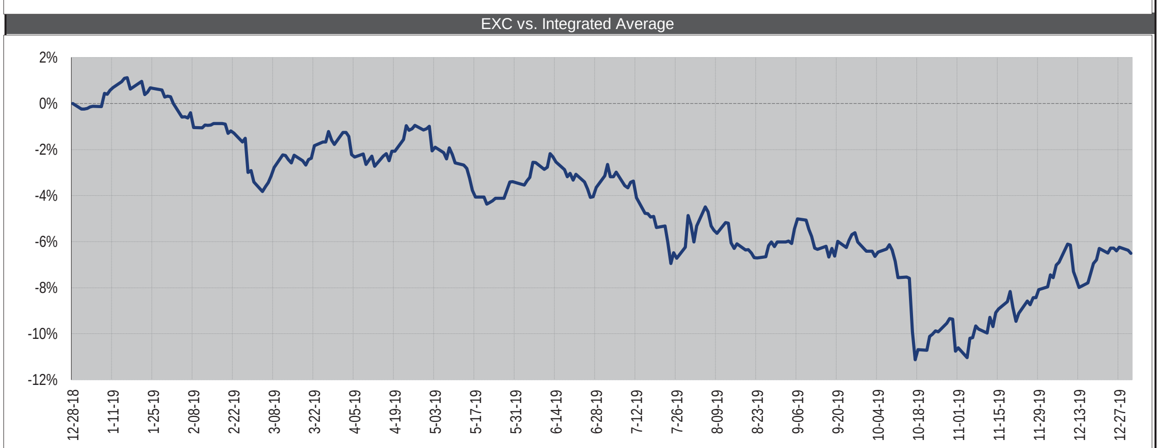


Exelon (EXC) $45.59, Outperform, $55 PT

EXC trailed the wider utility group and large caps but bested its only integrated peer (PEG) in Dec. For the year, however, EXC stock was buffeted by federal investigations into IL lawmakers and lobbying activities.



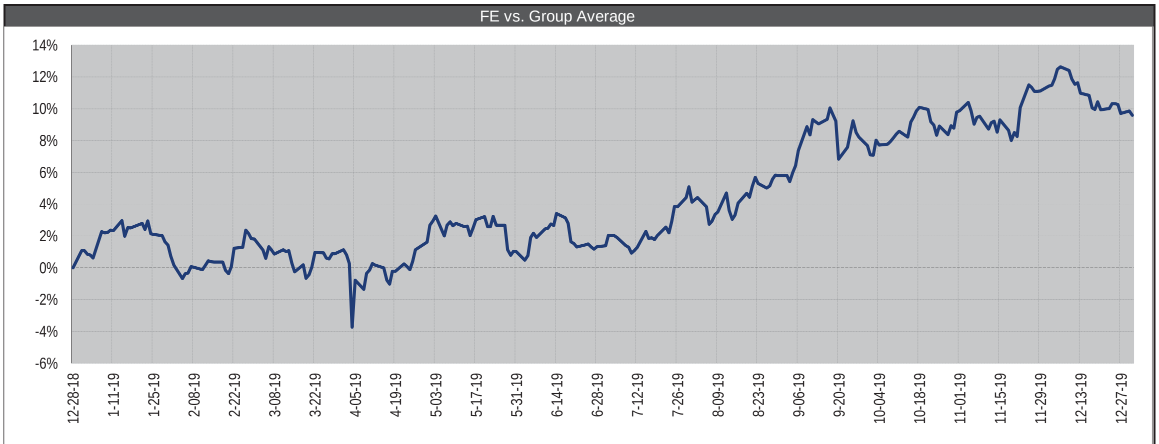


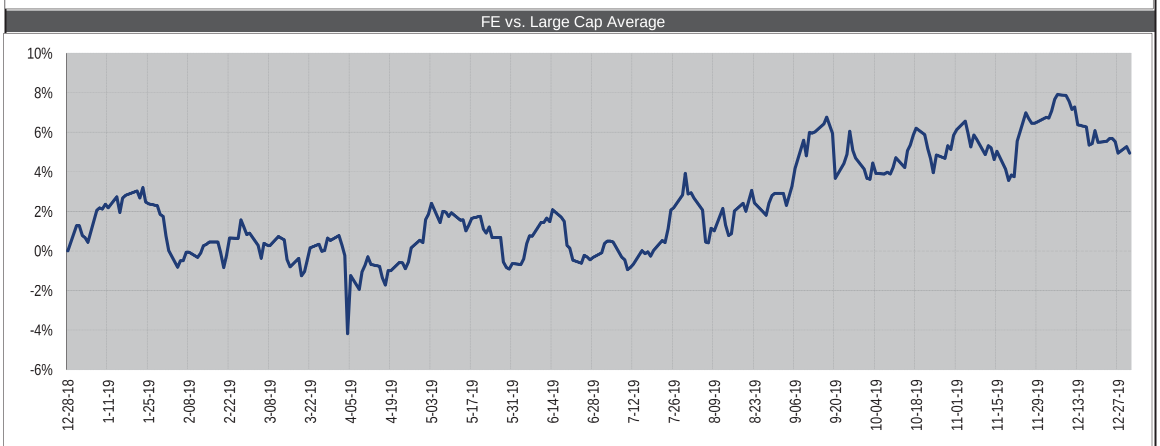


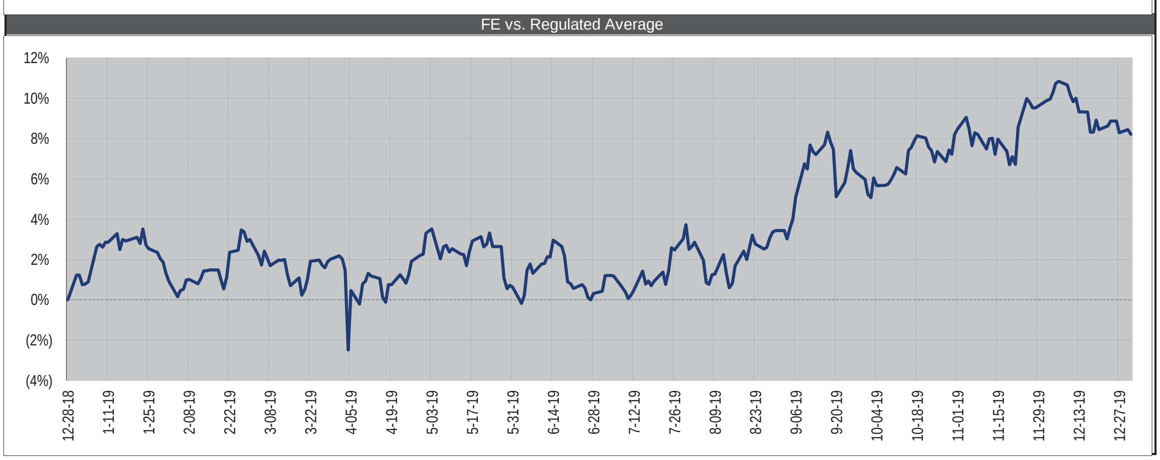
WOLFE RESEARCH

FirstEnergy (FE) $48.60, Outperform, $53 PT

- FE underperformed most of the group in December, but still finished the year ahead of peers. The company remains focused on its low-risk T&D story, with FES (Energy Harbor) bankruptcy emergence expected in January – fully completing the separation from merchant generation.



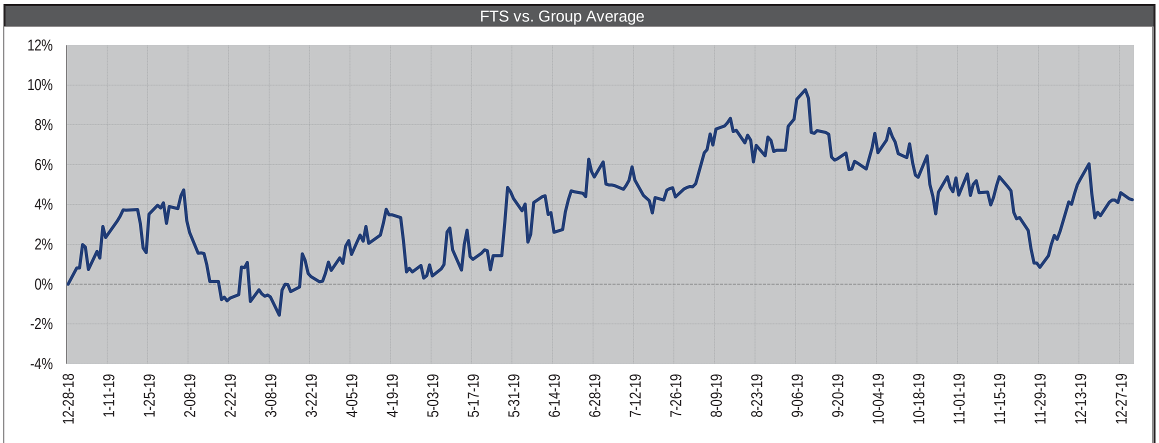


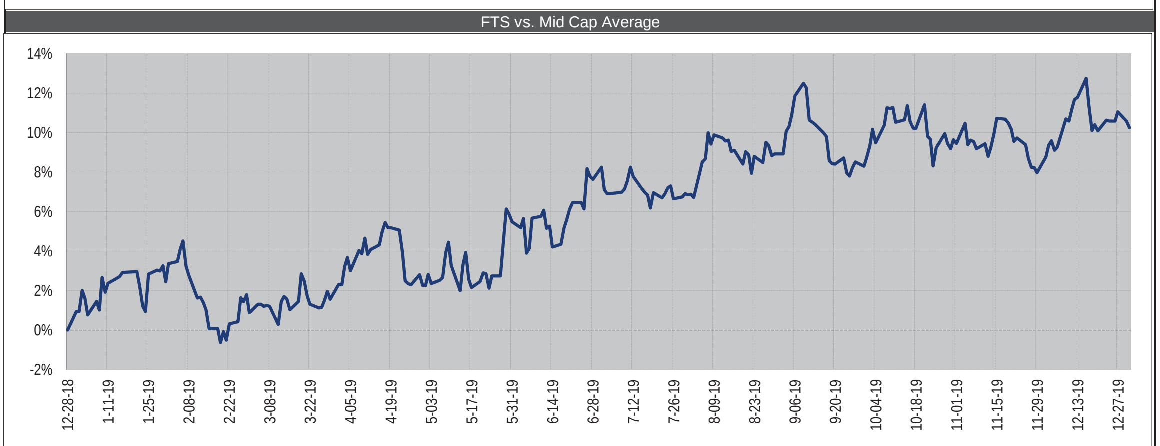


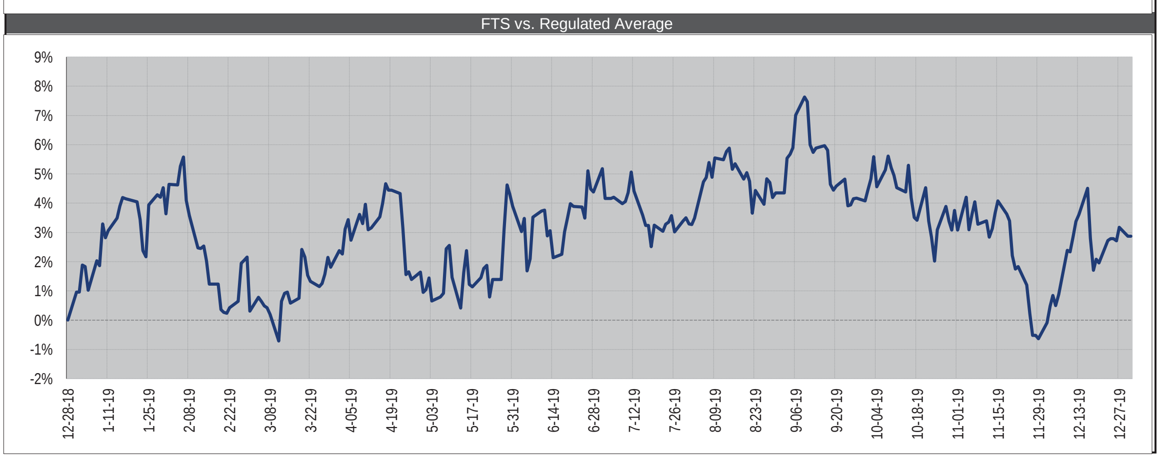
WOLFE RESEARCH

Fortis (FTS) $41.52, Peer Perform, $41 PT

- FTS bounced back in December after a difficult November – finishing the year in-line with the group. While FERC's ruling on transmission ROEs provided some certainty, the new methodology opens the door to potential future complaints and most parties are now challenging the decision.



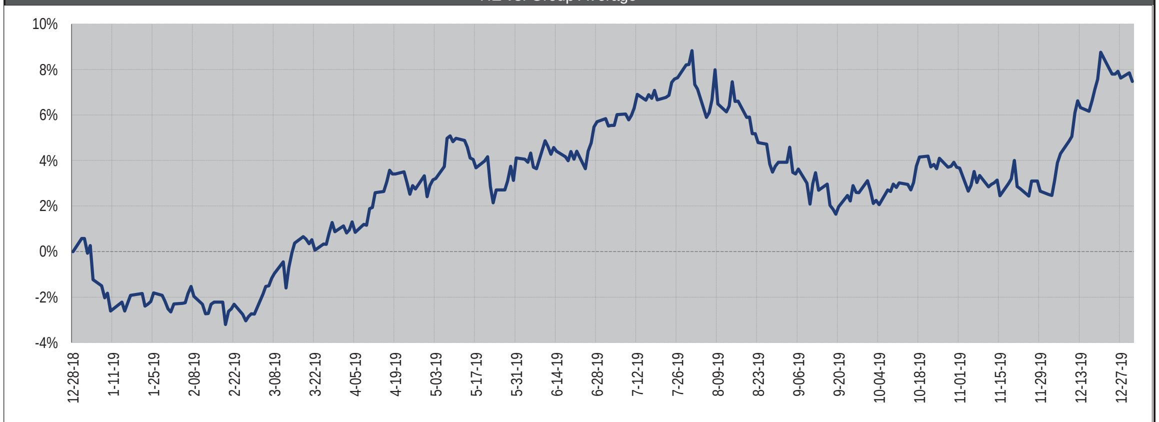




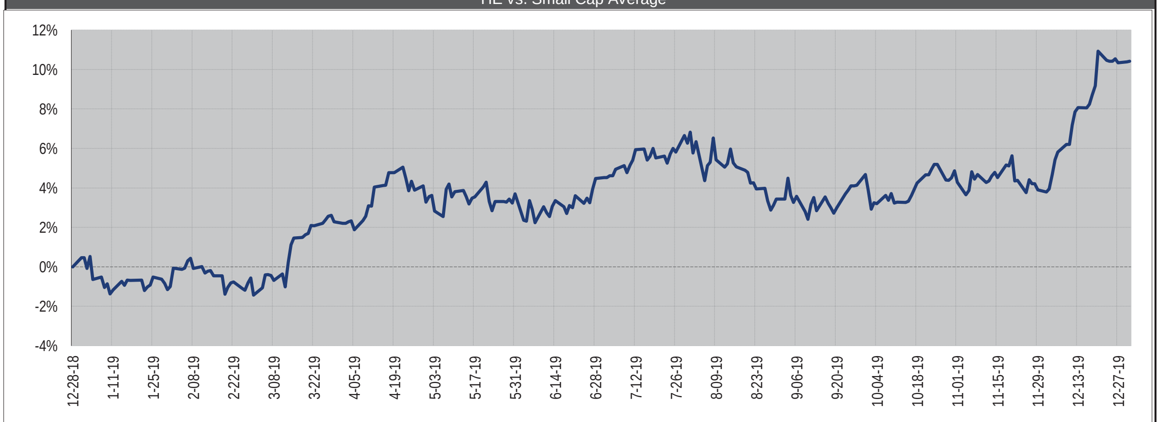
WOLFE RESEARCH

Hawaiian Electric (HE) $46.86, NR

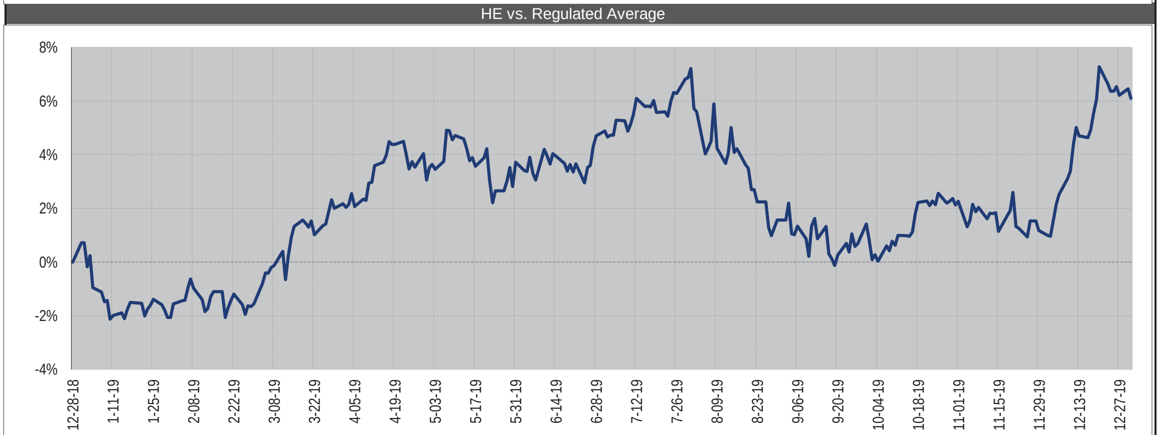
HE vs. Group Average



HE vs. Small Cap Average

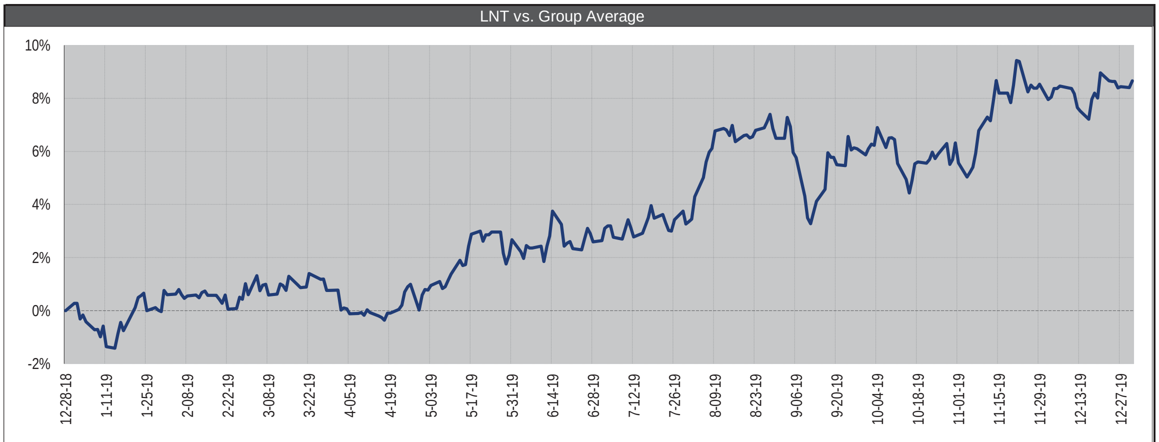


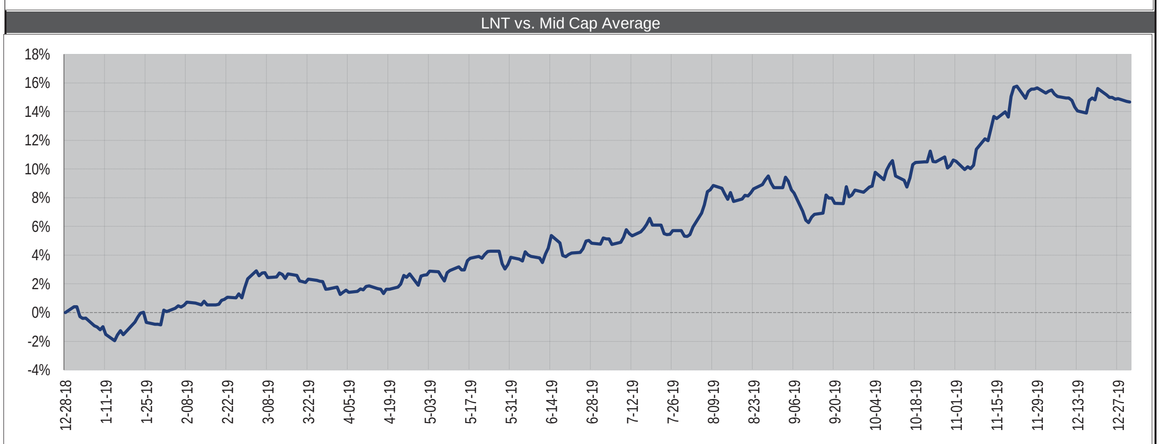
HE vs. Regulated Average

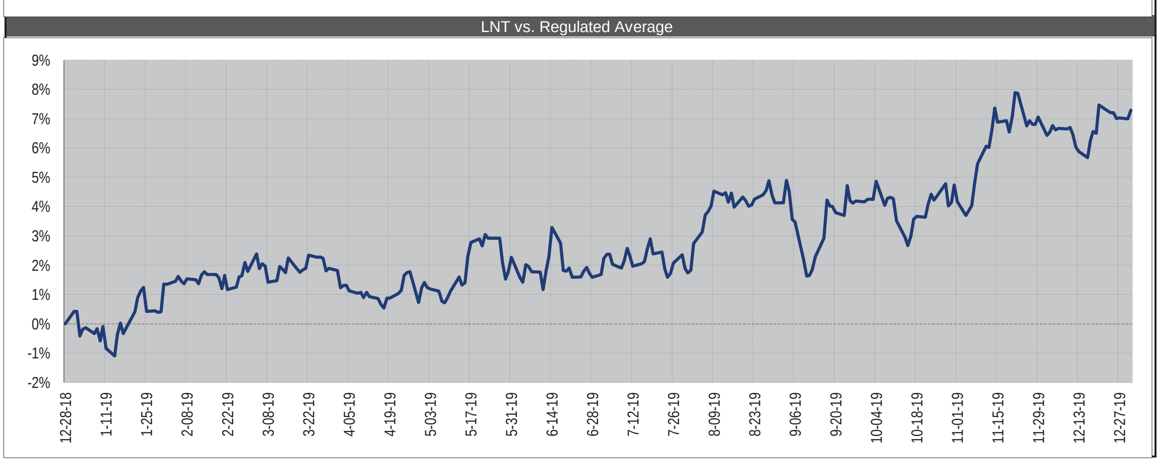


Alliant Energy (LNT) $54.72, Peer Perform, $53 PT

- LNT traded sideways in December, but still finished 2019 as an outperformer. The company was once again able to achieve constructive regulatory outcomes in Iowa in 2019, while executing at the high-end of its earnings targets.



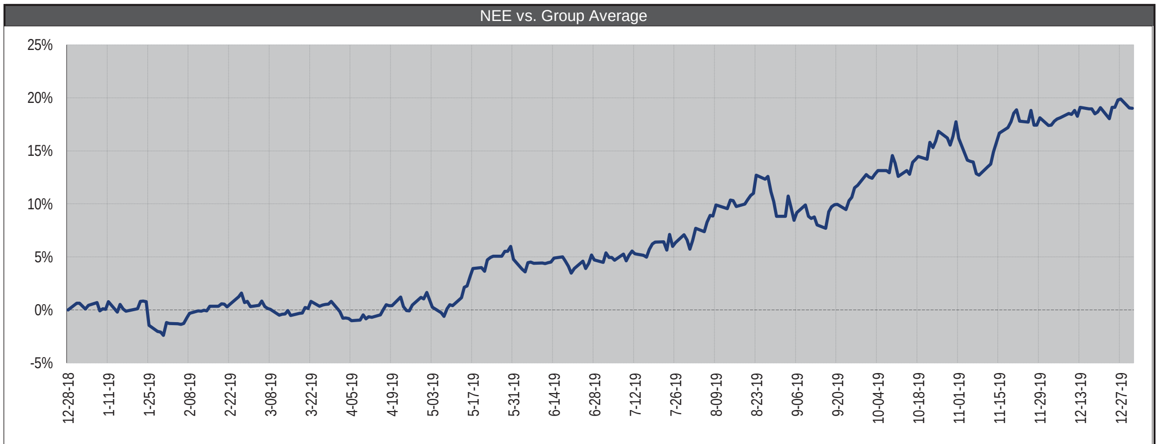


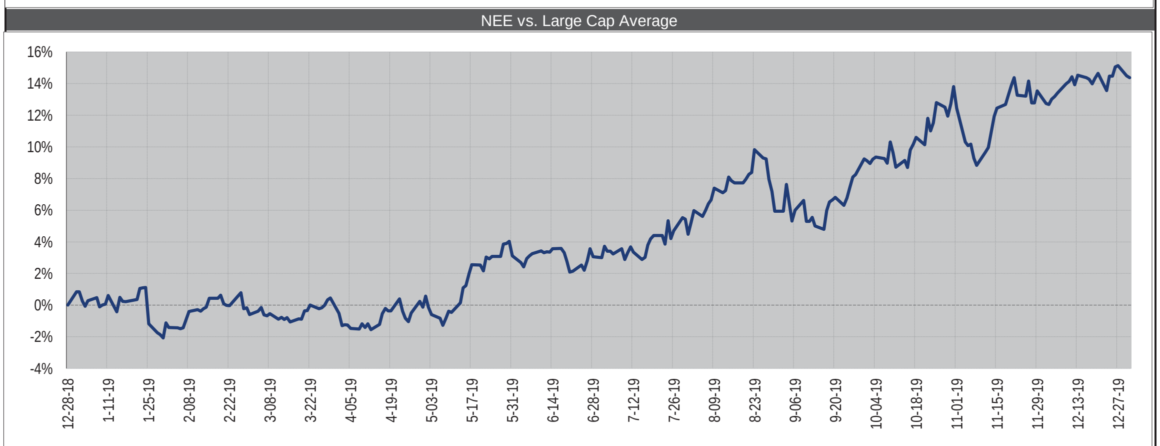


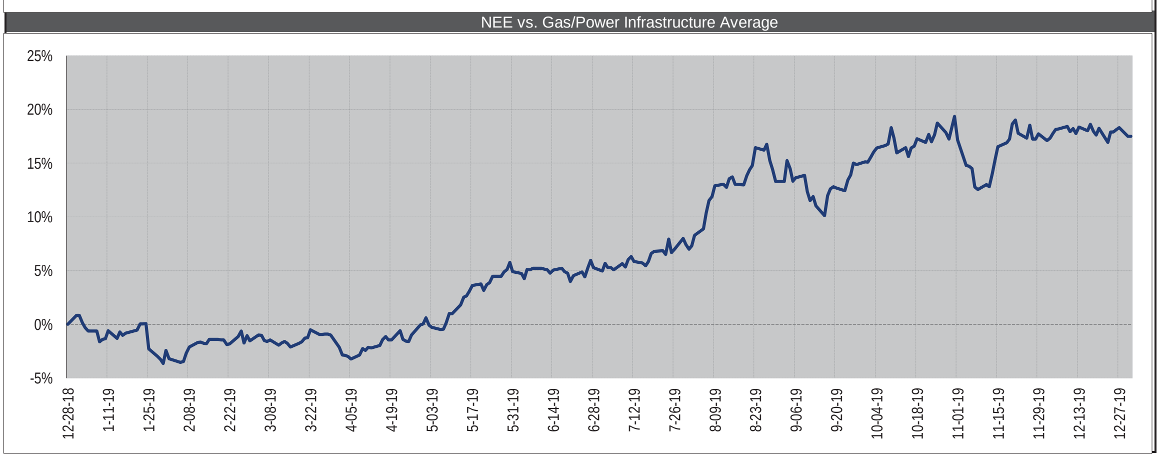
WOLFE RESEARCH

NextEra Energy (NEE) $242.16, Outperform, $240 PT

- NEE outperformed in December and was one of the top-performers in the sector for 2019. The company furthered its position as the dominant renewables player in the world, as investors increasingly became focused on the potential for cleaner energy policy in the U.S. Disappointingly, the JEA sale process of which NEE was interested, looks to have gotten waylaid for the time being.



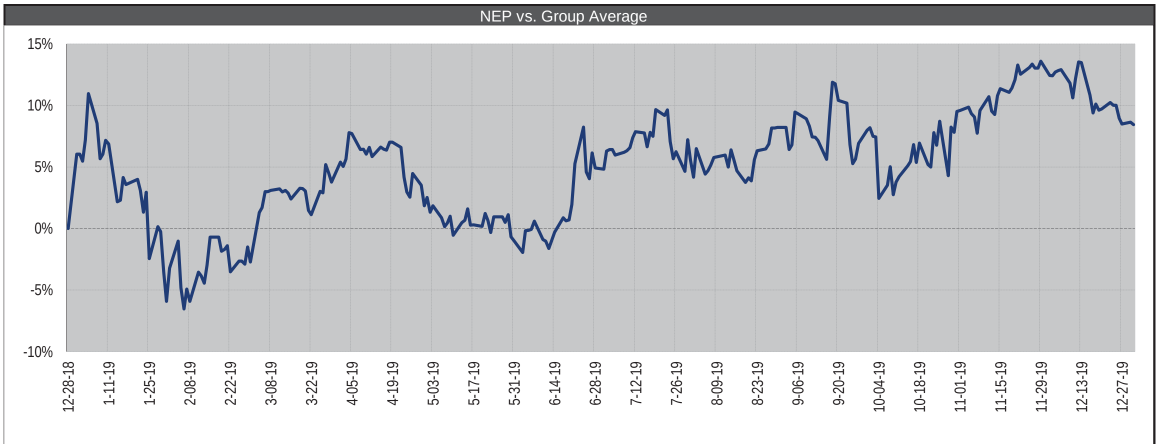


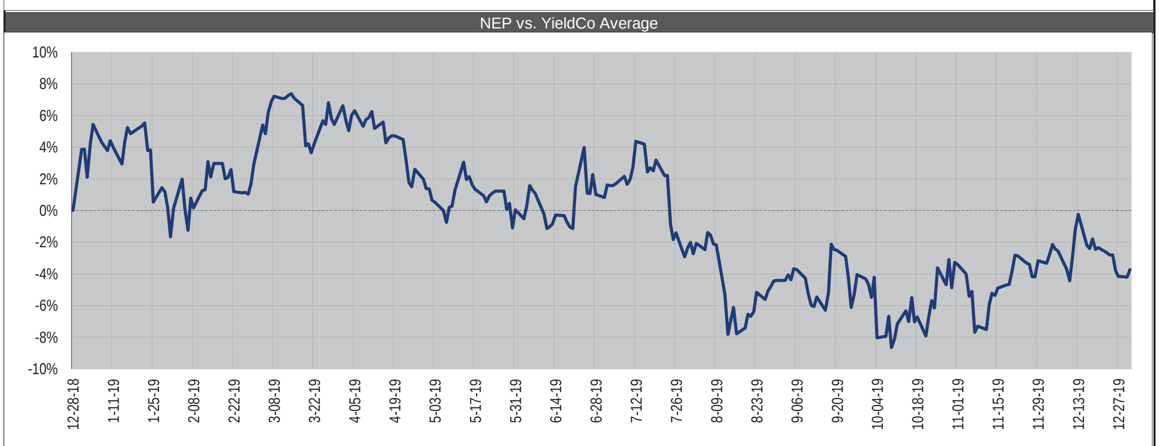


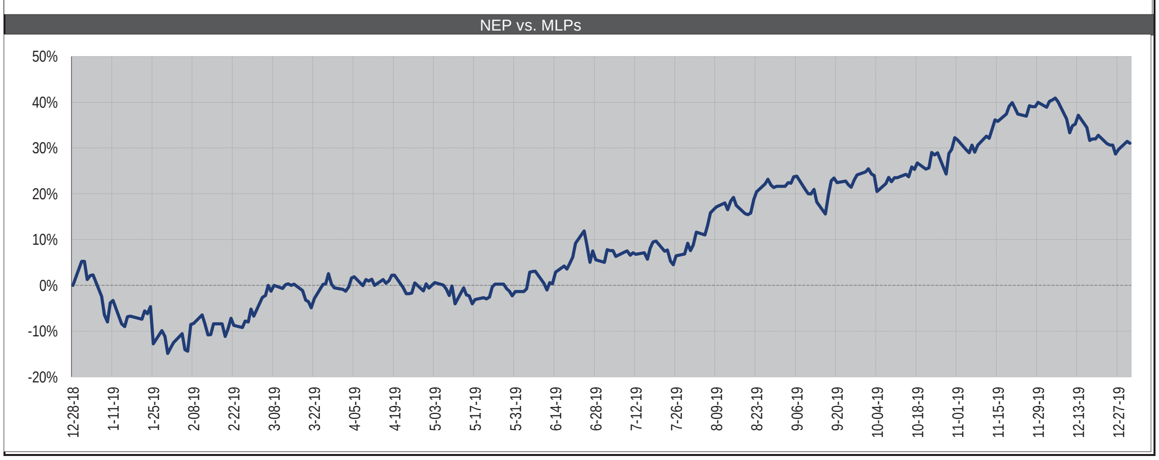
WOLFE RESEARCH

NextEra Energy Partners (NEP) $52.65, Outperform, $61 PT

- NEP underperformed in December on little news, while also trailing most YieldCo peers in 2019. NEP continues to benefit from premier sponsor NEE, but the latest pipeline deal and portfolio financings may have given some investors pause.



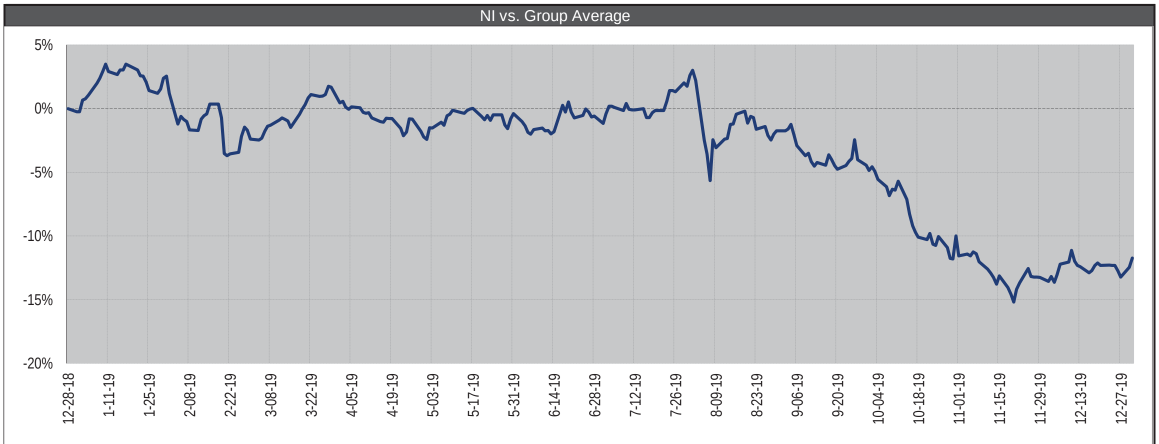


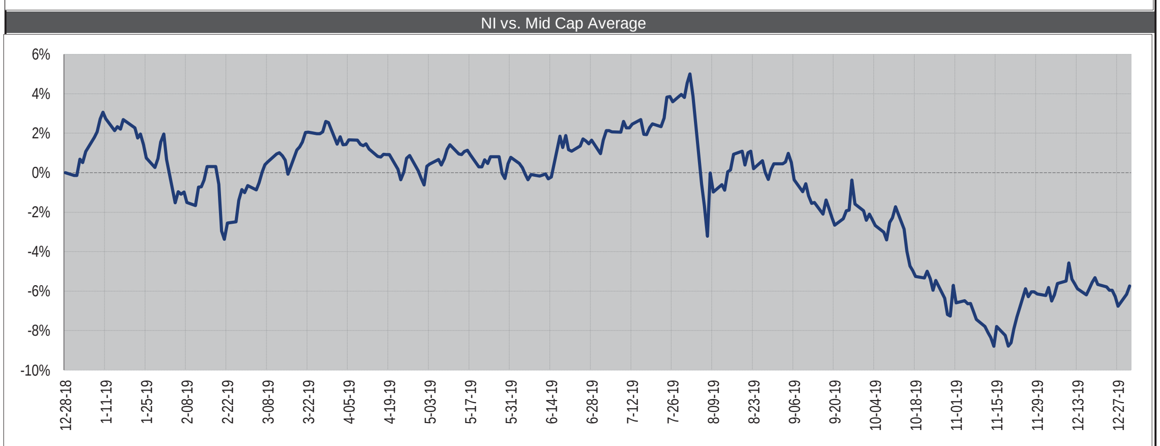


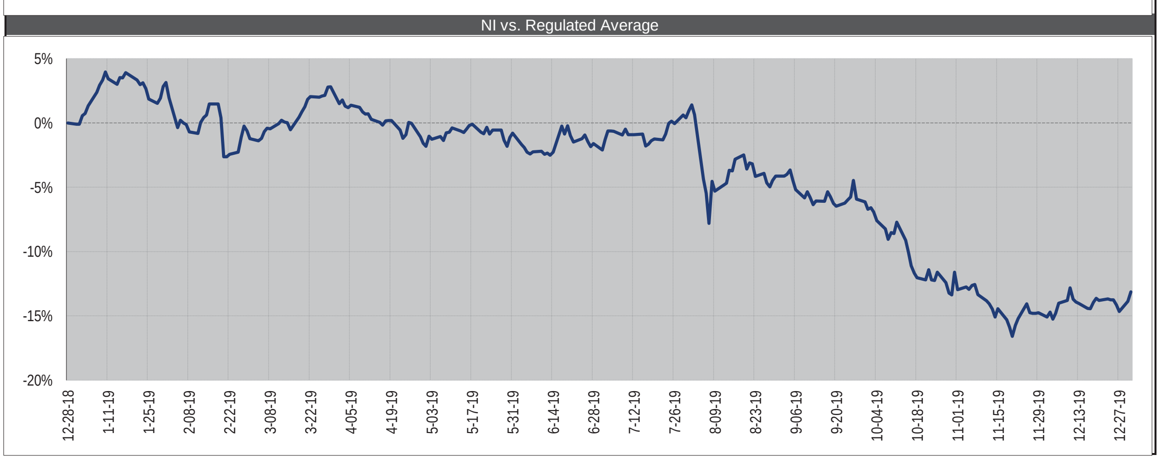
WOLFE RESEARCH

NiSource (NI) $27.84, Peer Perform, $29 PT

NI was one of the worst performing utilities in 2019. The stock traded up and down in the 1H of the year due to a couple surprise cost estimate increases in MA. The stock then fell apart in August after the company experienced another gas explosion, this time in PA. Additional issues related to MA led to continued pressure on the stock through November until the stock saw a bit of a bounce in December.





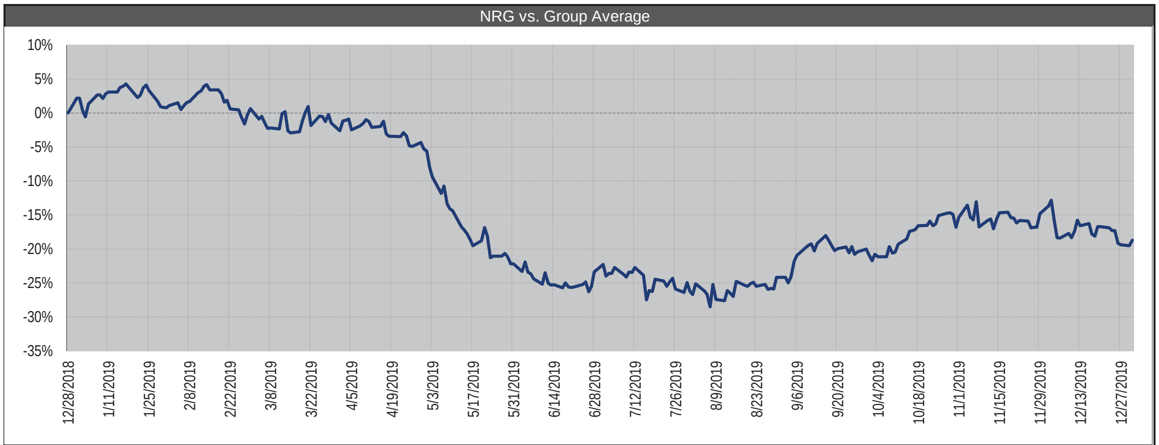


WOLFE RESEARCH

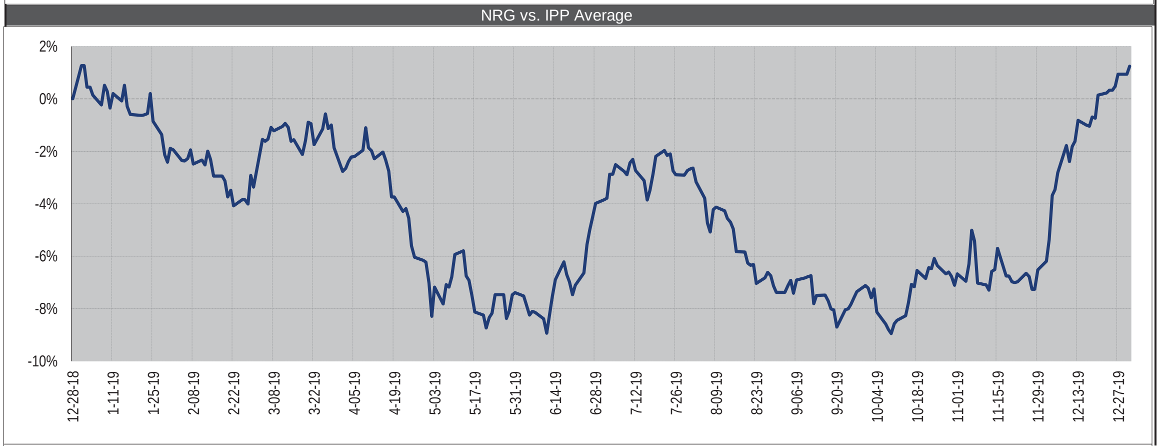
NRG Energy (NRG) $39.75, Outperform, $44 PT

NRG was flattish in December and underperformed the market, although it significantly outperformed VST which had a terrible month. It was another big year for NRG as the company repurchased $1.5B of stock and jacked up its dividend to a 3% yield plus 7-9%/yr growth. Nonetheless, the stock was flattish for the year and greatly underperformed the market in 2019 after more than 200% outperformance over the 2017-18 period.

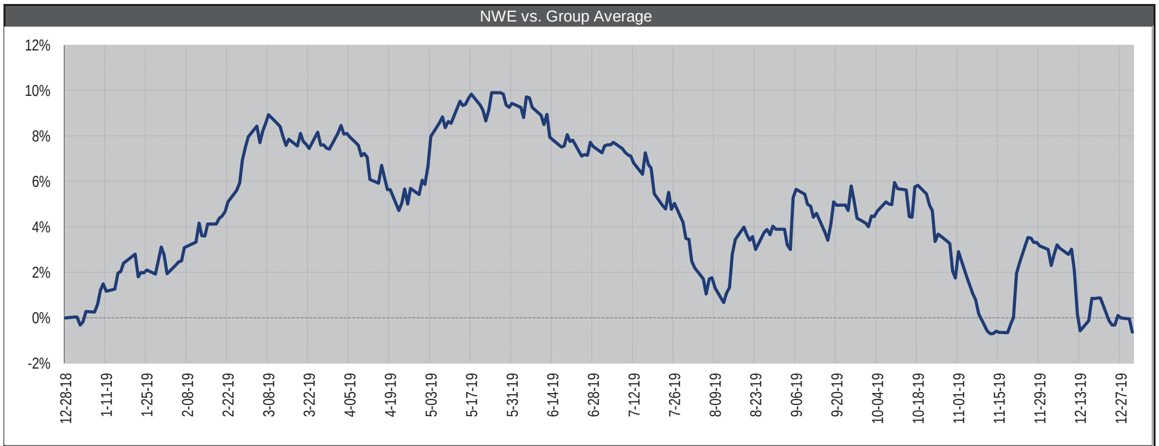
NRG vs. Group Average

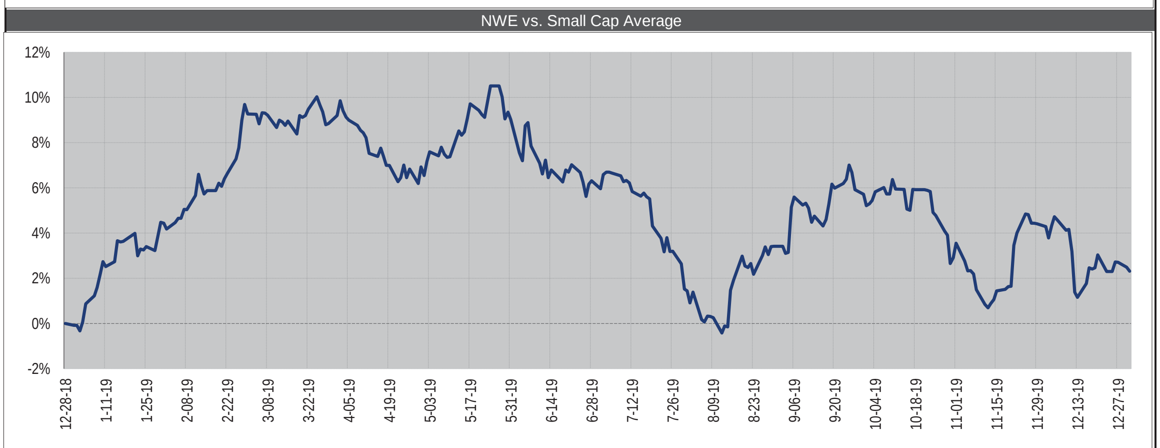


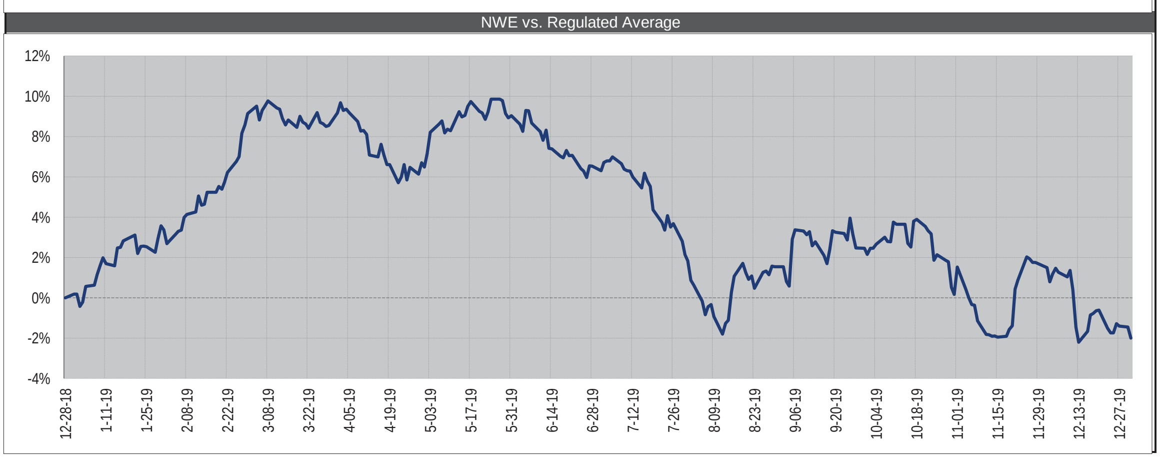
NRG vs. IPP Average



NorthWestern Corp (NWE) $71.67, NR



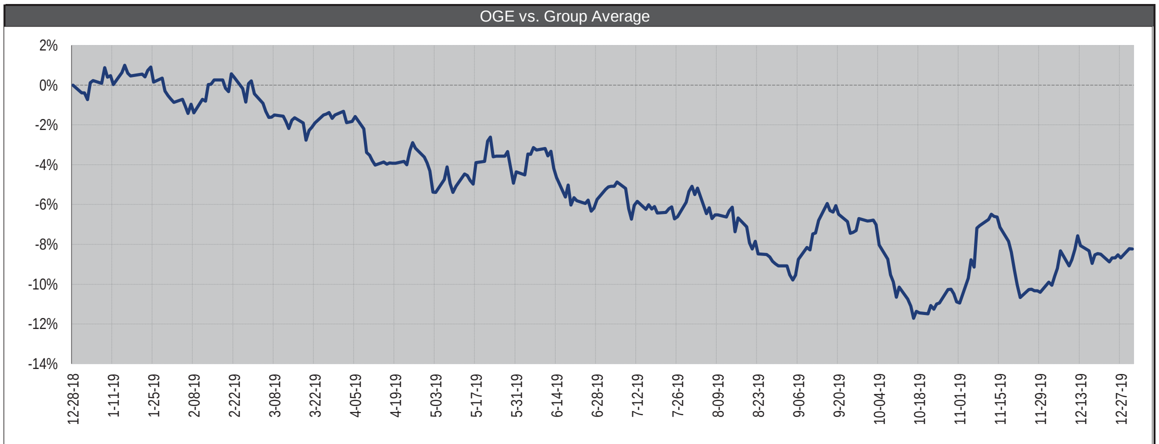


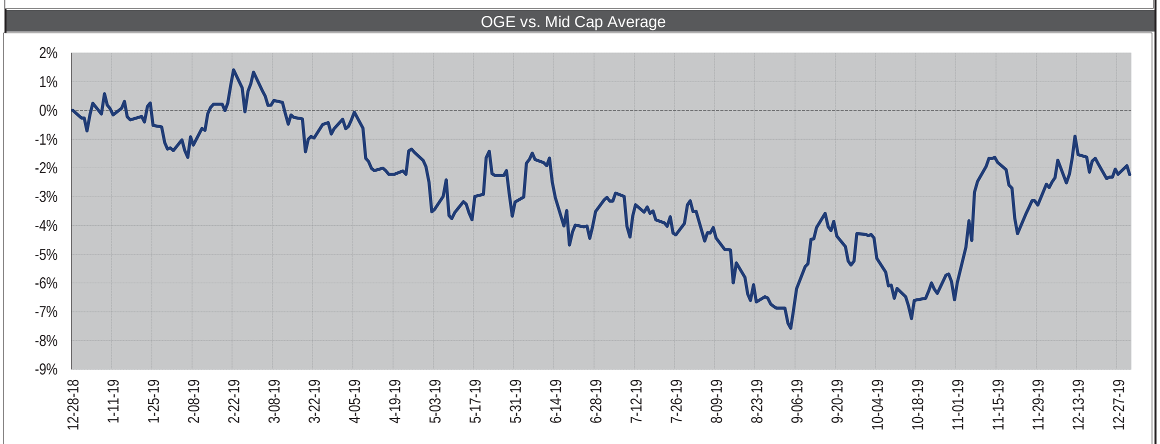


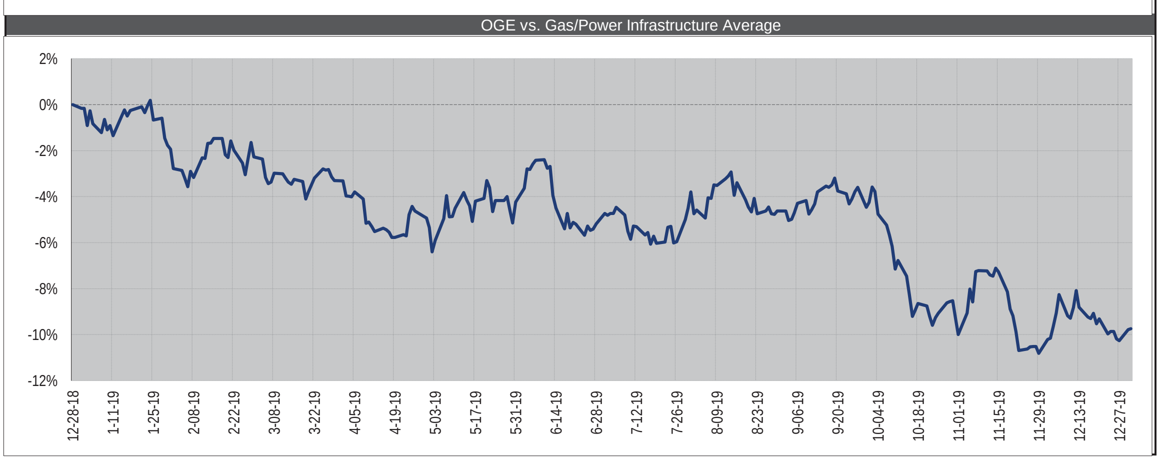
WOLFE RESEARCH

OGE Energy (OGE) $44.47, Peer Perform, $42 PT

After a strong 2018, OGE underperformed the utility average by a decent margin in 2019. OG&E's Oklahoma rate case acted as a bit of an overhang in the 1H of the year. However, parties were able to reach a settlement which was approved without modifications – another supportive data point for an improving regulatory construct in OK. We believe that most of the OGE's weakness was due to the company's business mix and exposure to ENBL, which finished the year down 25%.



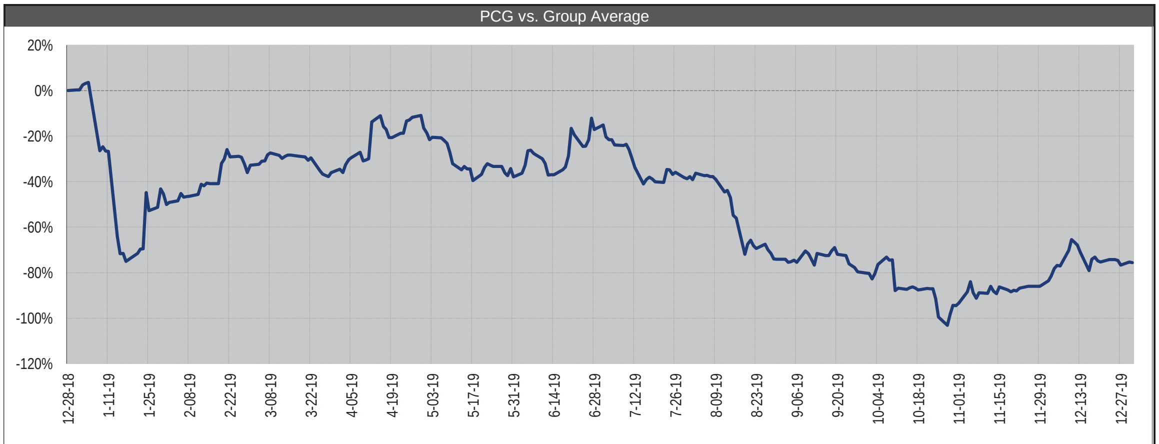


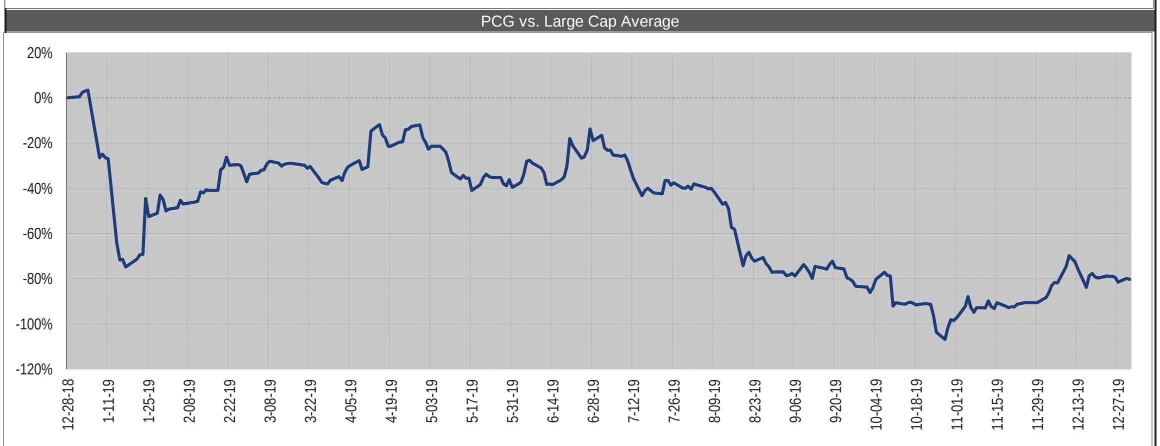


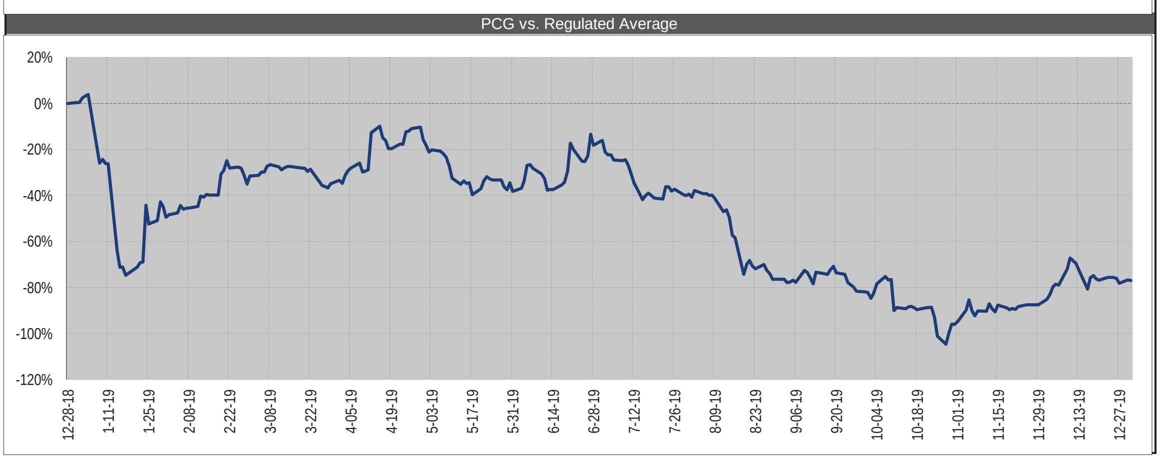
WOLFE RESEARCH

PG&E Corporation (PCG) $10.87, Peer Perform, $12 PT

PCG was the best performing utility stock in Dec on favorable court rulings, and an end to 2019 fire season; but for the year, the stock was the worst performer given its Jan bankruptcy filing.



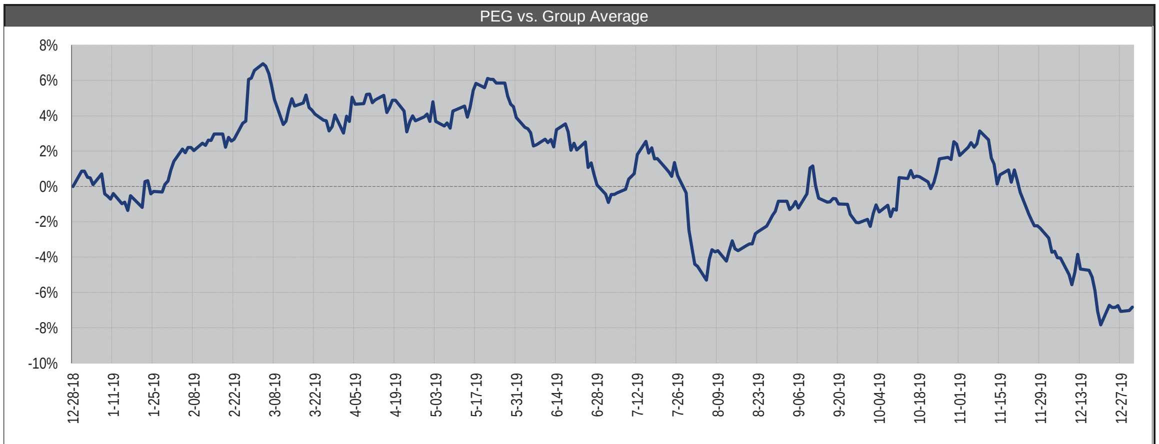


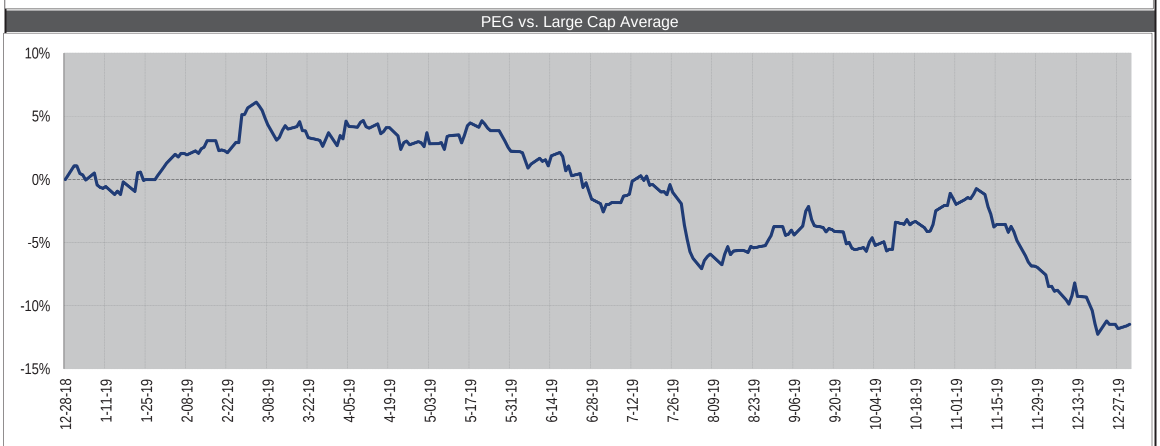


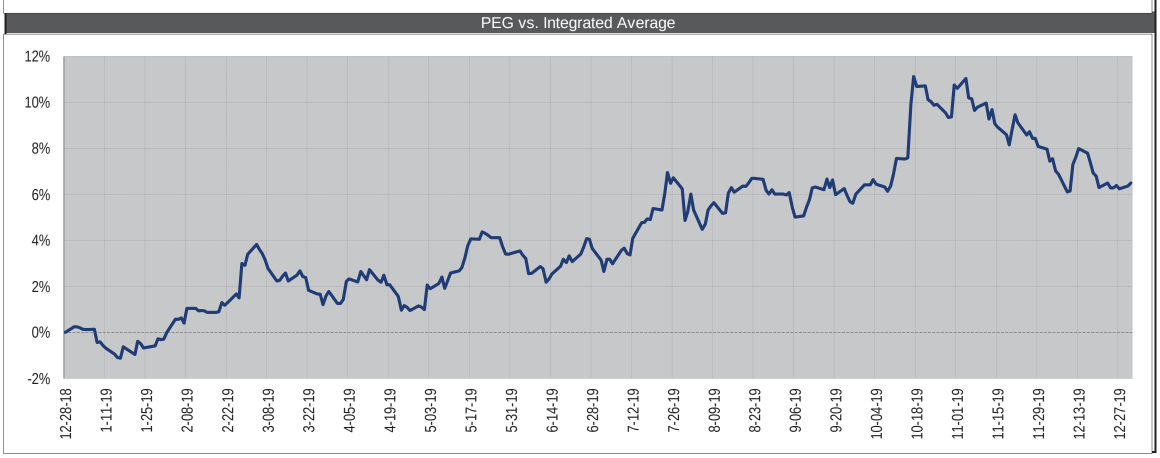
WOLFE RESEARCH

Public Service Enterprise Group (PEG) $59.05, Peer Perform, $64 PT

PEG underperformed nearly the entire sector in December in what turned out to be a disappointing year. The utility business continued to perform well and New Jersey BPU passed ZECs, but investor sentiment on PEG Power continued to sour. There were some concerns on FERC's recent PJM auction order and its implications for PEG's fleet, but the company seems confident its nukes can get a unit-specific exemption.

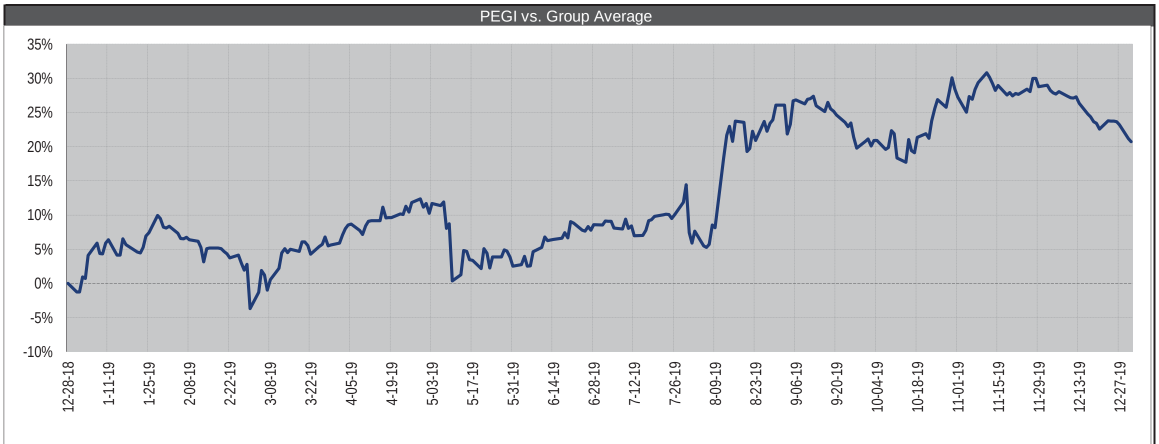


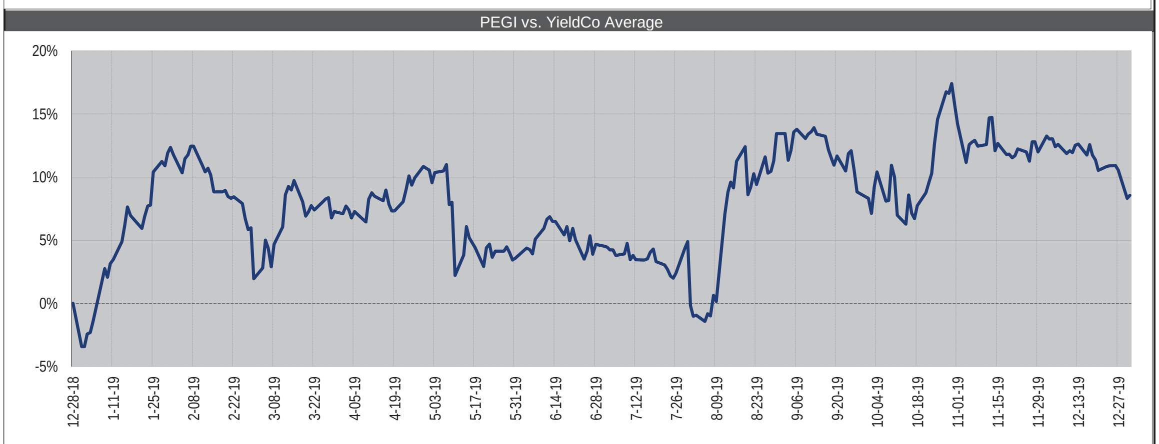


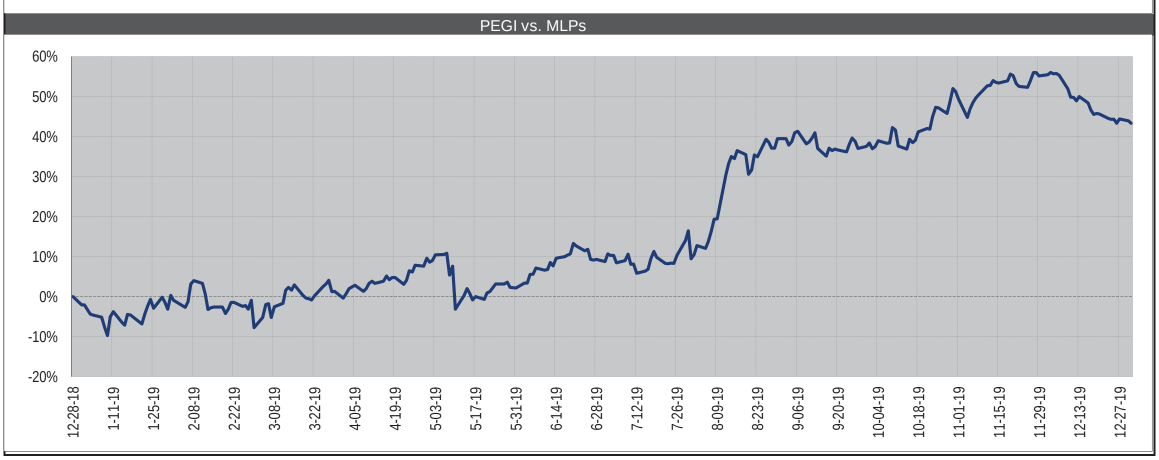


Pattern Energy (PEGI) $26.76, NR

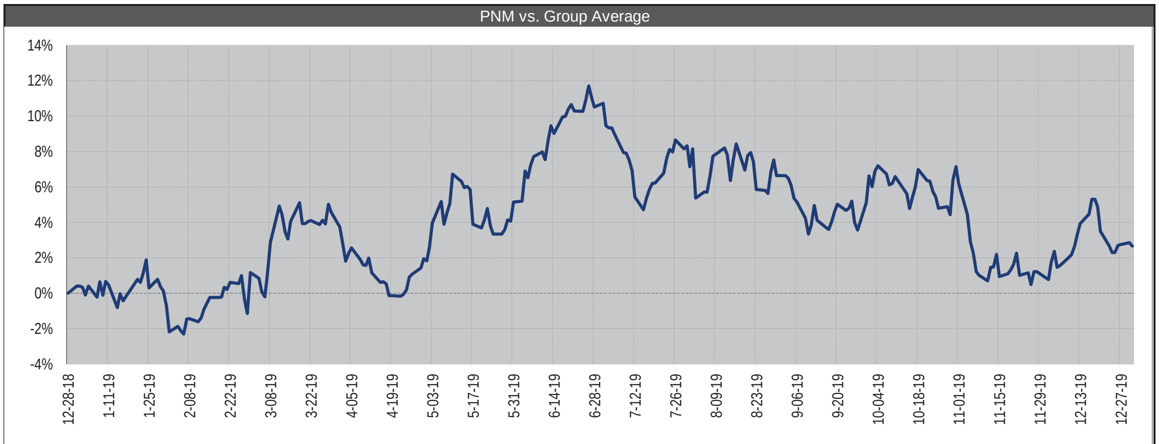
Pattern had a weak December but still closed out 2019 as the top performing YieldCo, rising by 44%. The year culminated with the announced sale of the company in November to the Canada Pension Plan Investment Board.

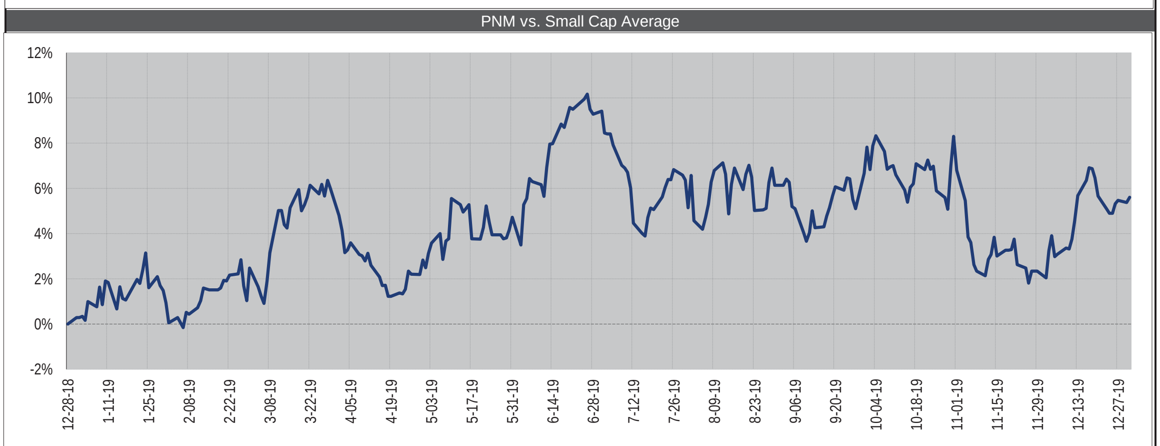


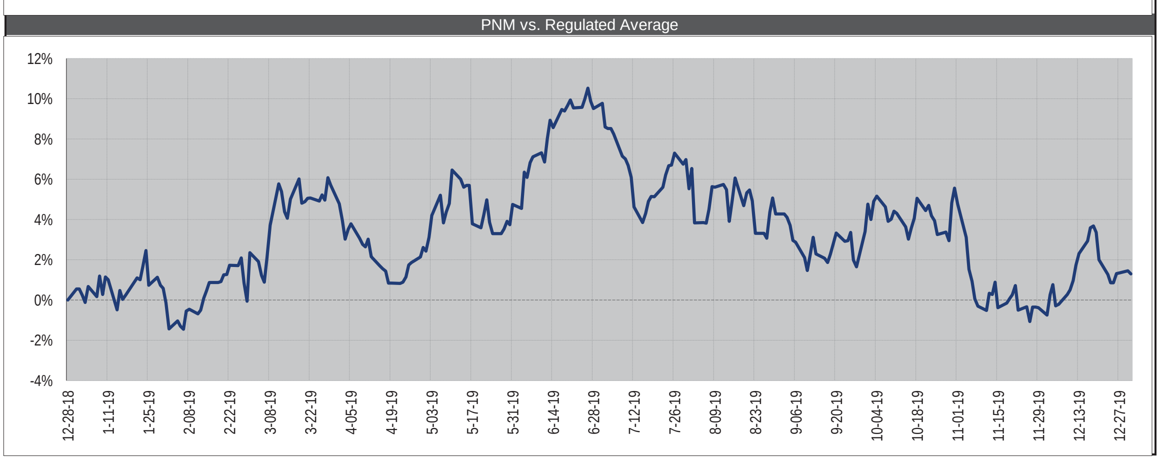




PNM Resources (PNM) $50.71, NR



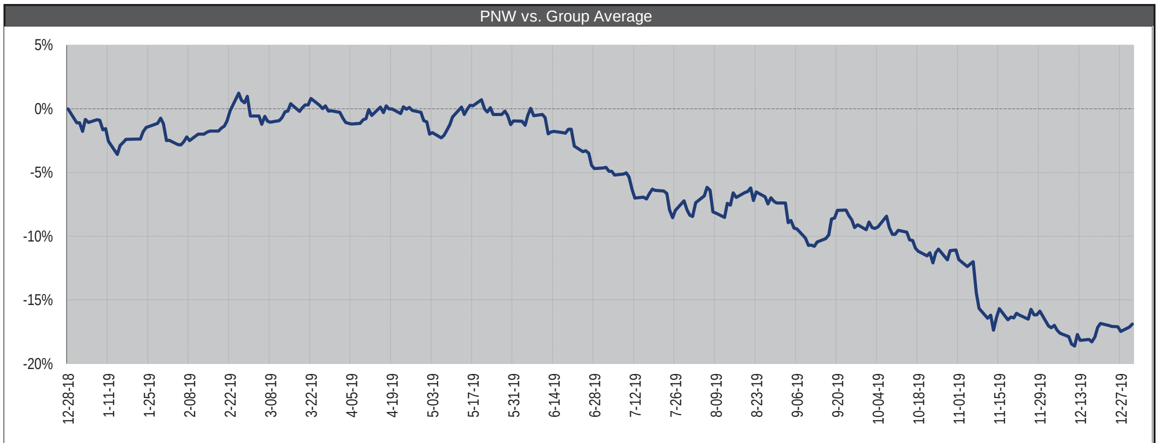


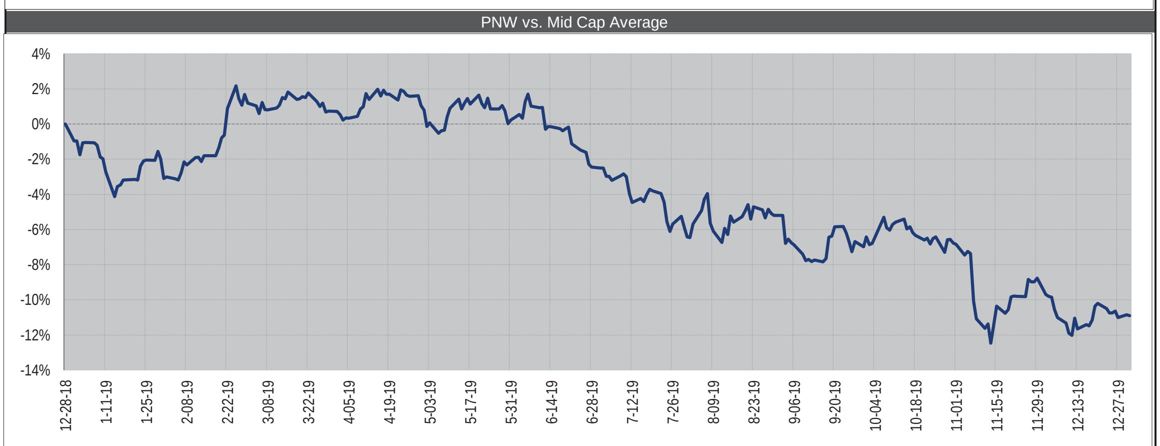


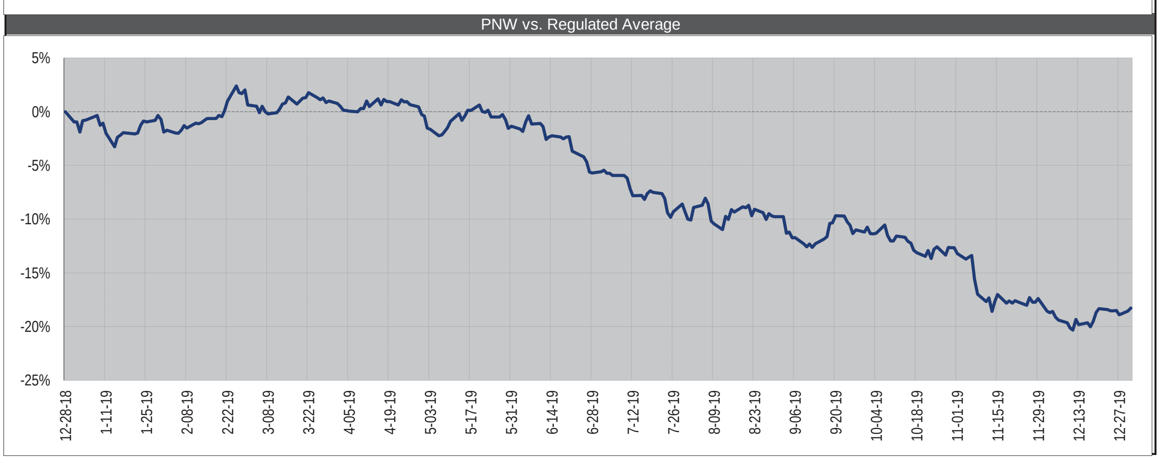
WOLFE RESEARCH

Pinnacle West Capital (PNW) $89.93, Underperform, $87 PT

PNW was one of the worst performing regulated utilities in 2019. The year was marked by a deterioration of the regulatory environment in Arizona, which ultimately led to the company being called in for a rate case; PNW also dealt with various other issues at the ACC throughout the course of the year. From a financial perspective, the company disclosed on its 3Q call that it did not anticipate meeting its 2019 guidance range, largely due to weather.



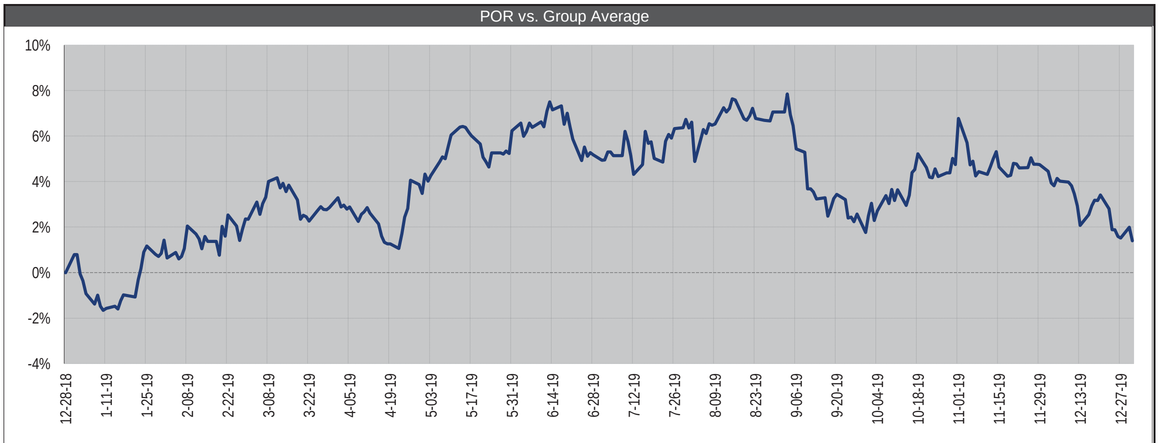


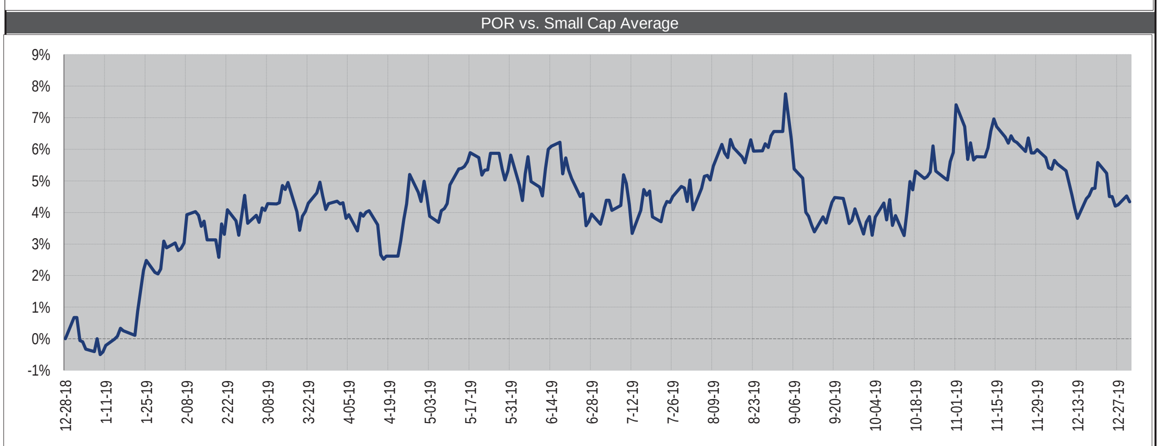


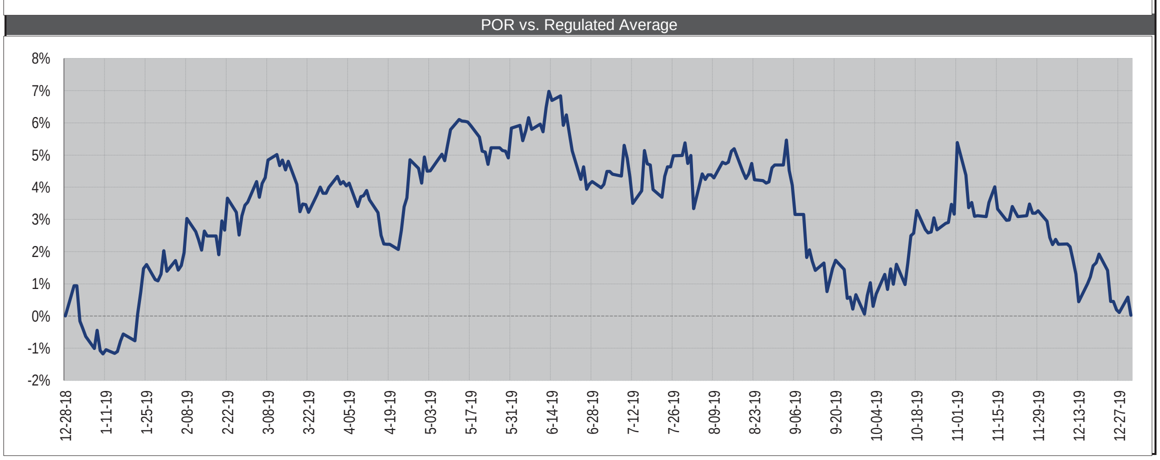
WOLFE RESEARCH

Portland General (POR) $55.79, Underperform, $55 PT

POR underperformed the utility average and its small-cap peers in December. During the month, OPUC Staff filed final comments on the company's 2019 IRP and found that the proposed renewable/capacity actions were not justified by the company's analysis. For the year, POR finished nearly identical to the utility average.



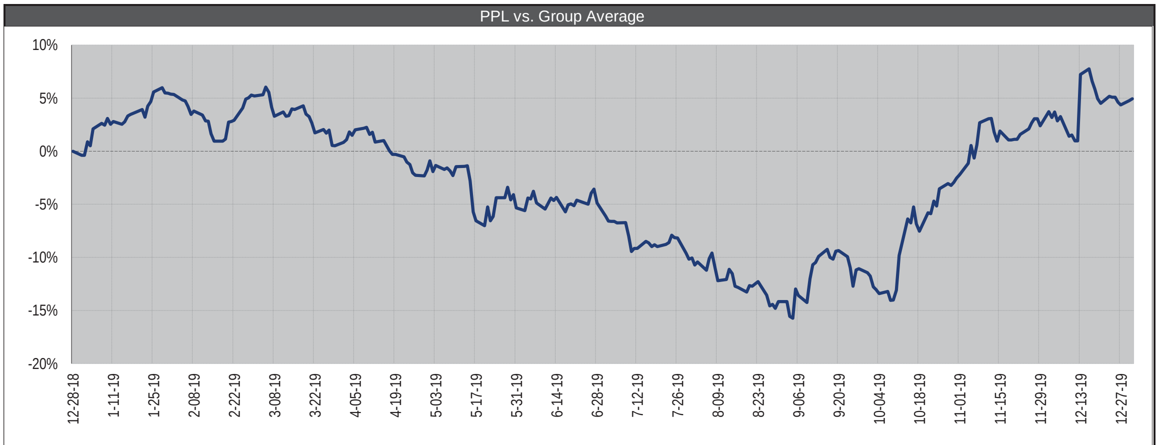


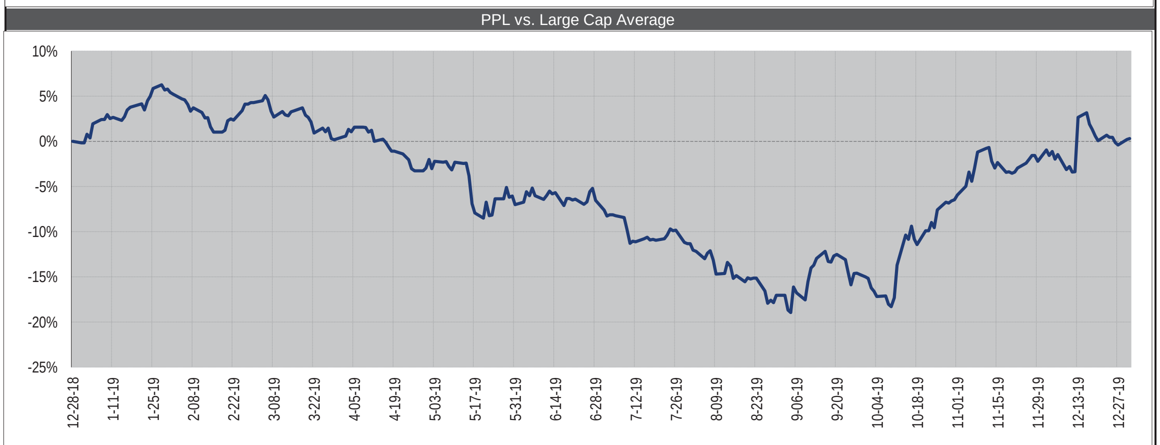


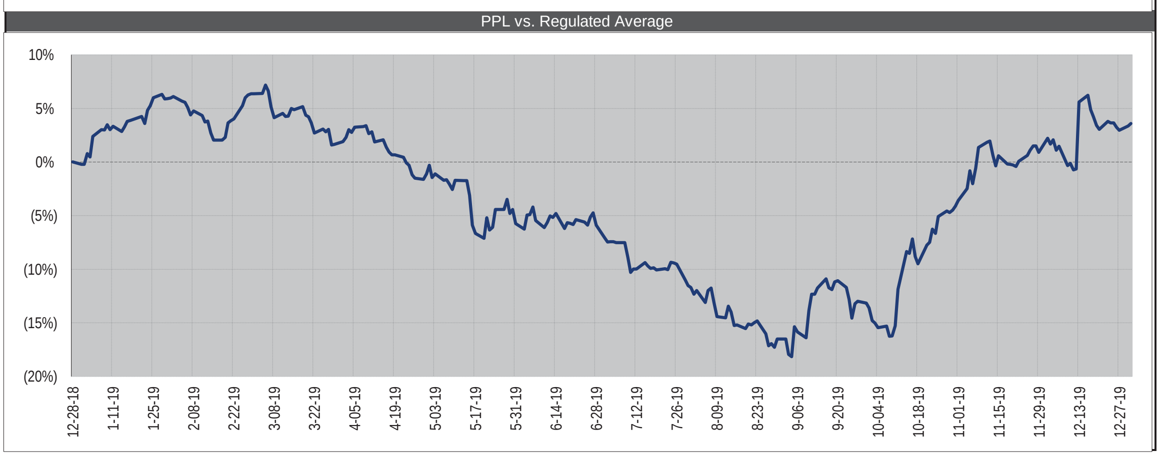
WOLFE RESEARCH

PPL Corporation (PPL) $35.88, Outperform, $37 PT

PPL continued to strongly outperform peers, likely on the Conservatives victory over Labour (the latter threatened to renationalize utilities). And in what seems like the first year in sometime, PPL relatively outperformed (albeit modestly) regulated peers in 2019.



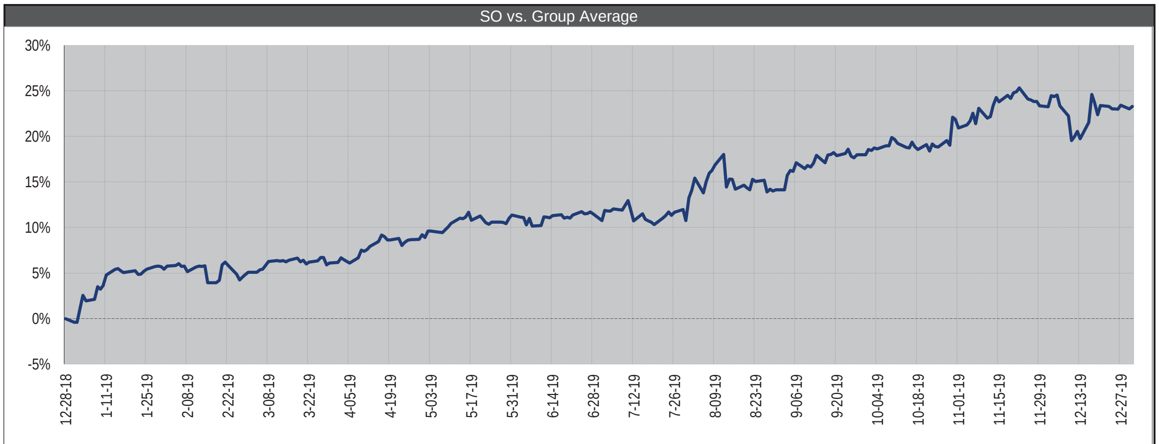


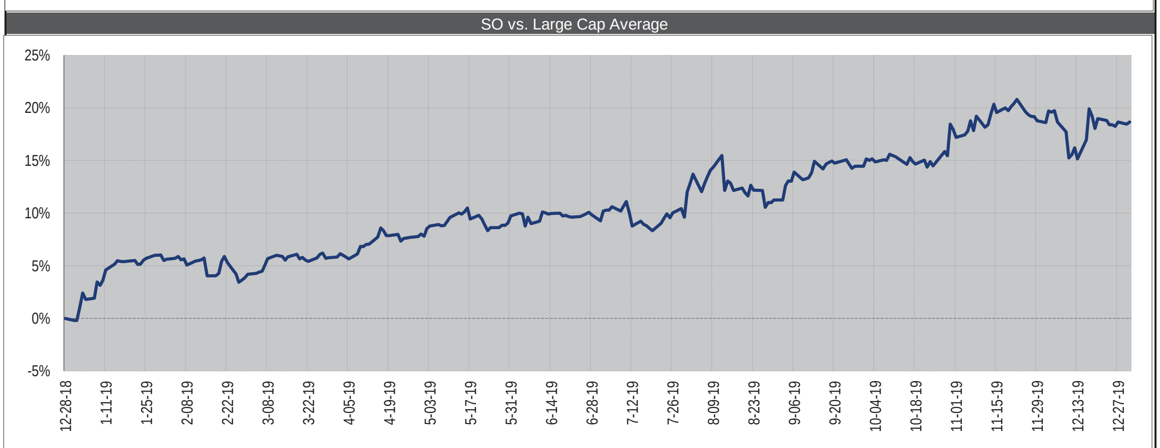


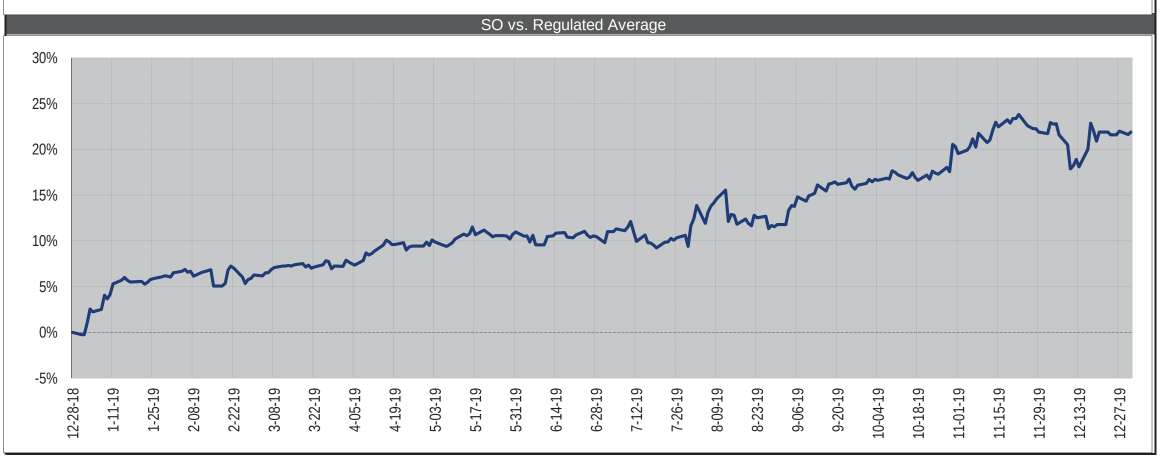
WOLFE RESEARCH

Southern Company (SO) $63.70, Underperform, $62 PT

Even with a middling Dec, SO had the best calendar year performance among regulateds, rising 45% and besting peers by about 22 percentage points, as progress was made on Vogtle and GA rate case outcome was constructive.



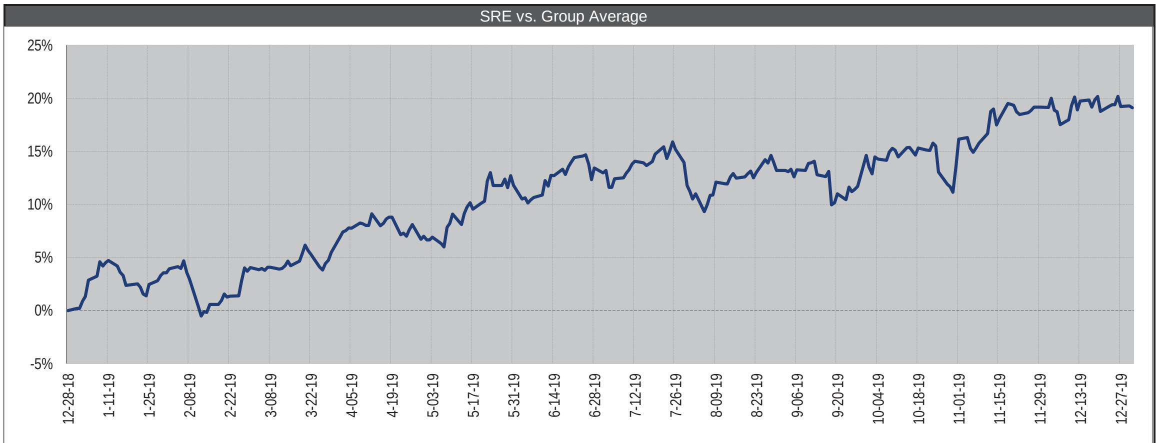


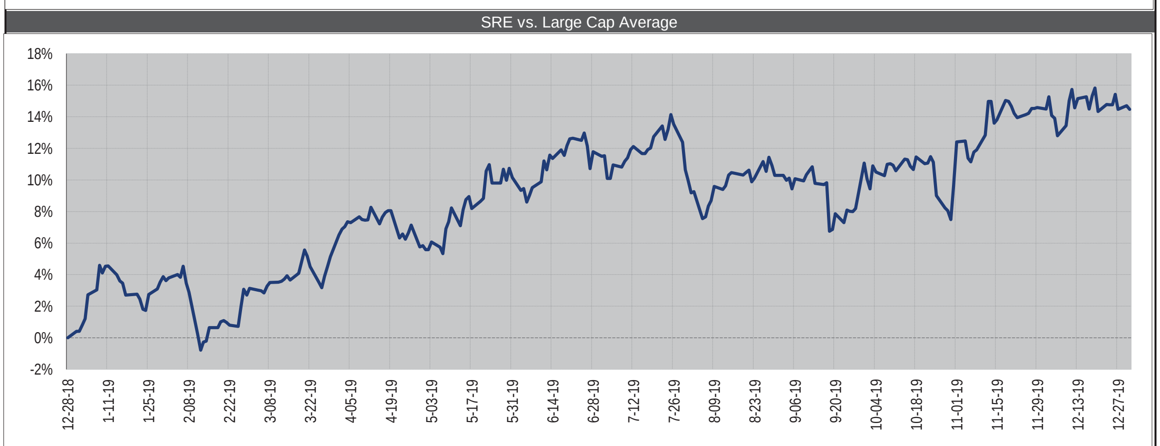


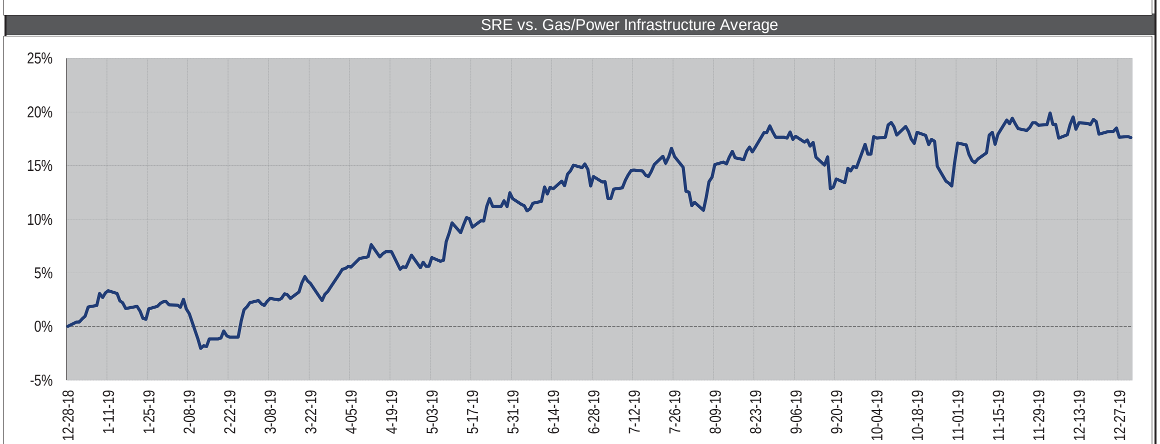
WOLFE RESEARCH

Sempra Energy (SRE) $151.48, Outperform, $164 PT

SRE rose nearly 3% in December, the second worst performer in the month in the gas/power infrastructure group. However for the year it rose just under 40% and was the group's best performer for the year. This was mainly on the solid execution on the strategy in 2019 including a constructive California rate case outcome, better than expected prices on the South American asset sales, continued upside on rate base growth in Texas, and the startup of Cameron 1.



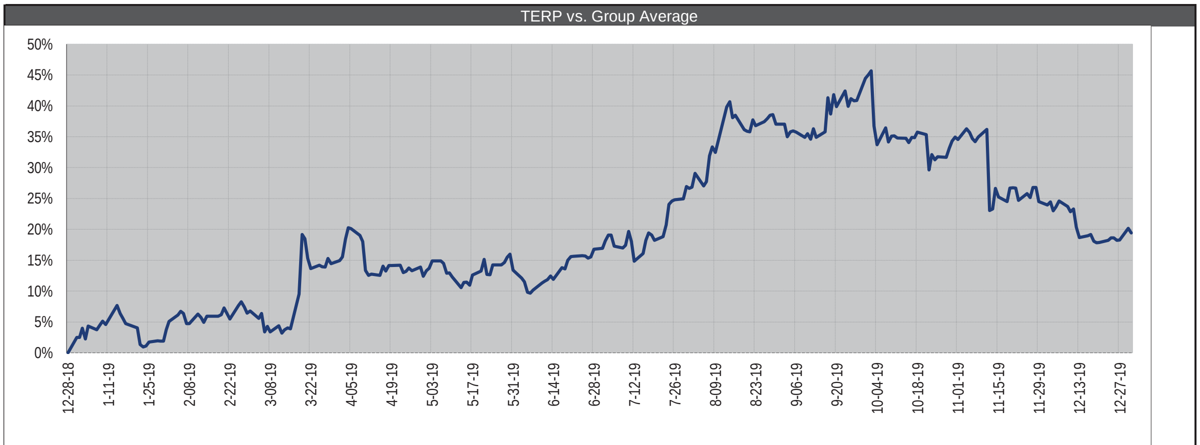


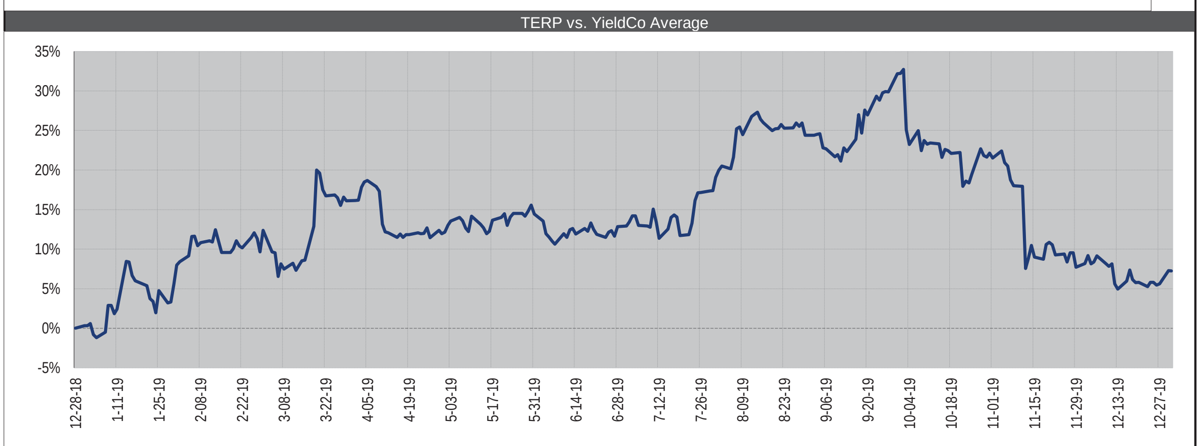


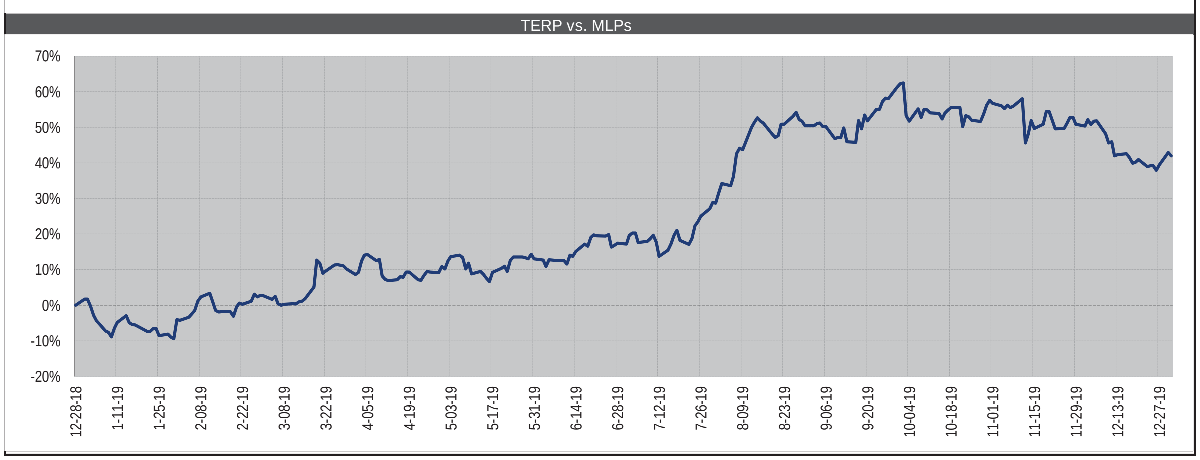
WOLFE RESEARCH

TerraForm Power (TERP) $15.39, NR

TerraForm Power underperformed in December but still had a very strong 2019 in which the stock nicely outperformed the market. During the year there were news reports that TERP's sponsor Brookfield was interested in acquiring TERP's competitor PEGI and merging the companies.



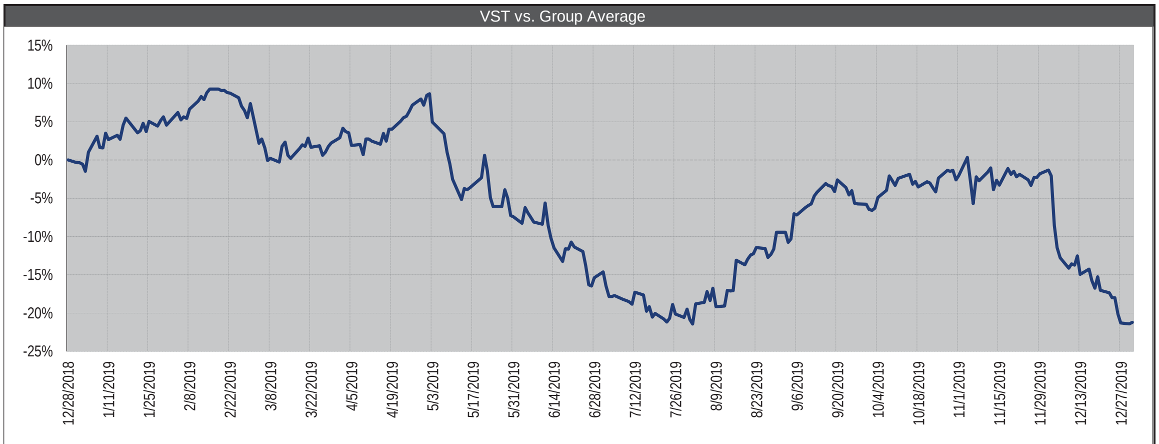


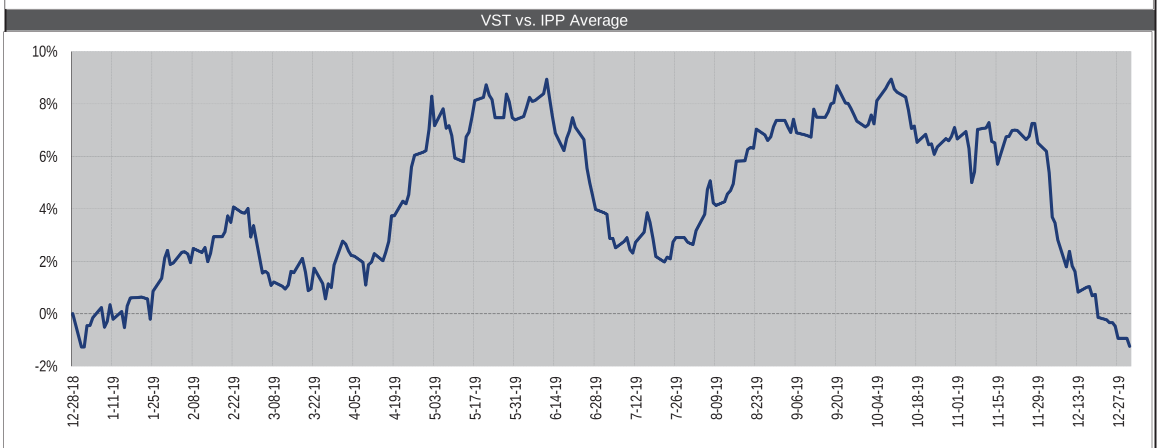


WOLFE RESEARCH

Vistra Energy (VST) $22.99, Outperform, $34 PT

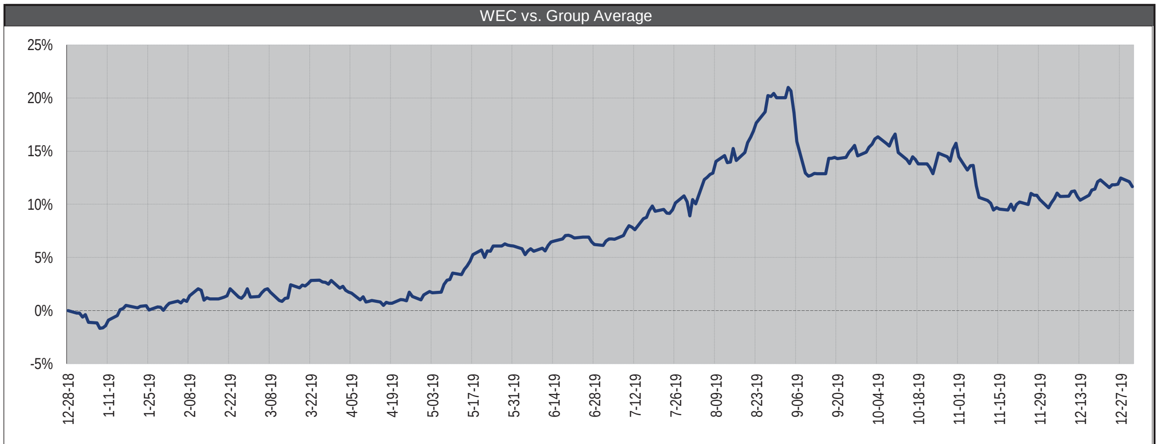
- VST closed the year with a whimper – significantly underperforming the entire sector and lagging the majority of the group for 2019. The company's top-holder dumped one-third of its position (~21M shares) in early December and the stock traded poorly thereafter. Despite hitting numbers, improving its balance sheet, and seeing tight supply/demand conditions play out in Texas – overcoming exiting shareholders (first Apollo and Oaktree, then Brookfield) ultimately proved to be too much.

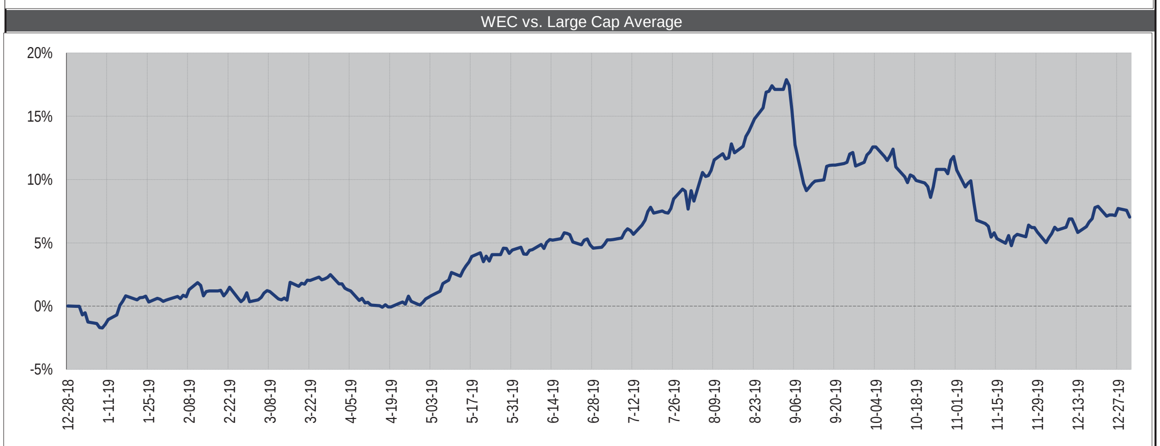


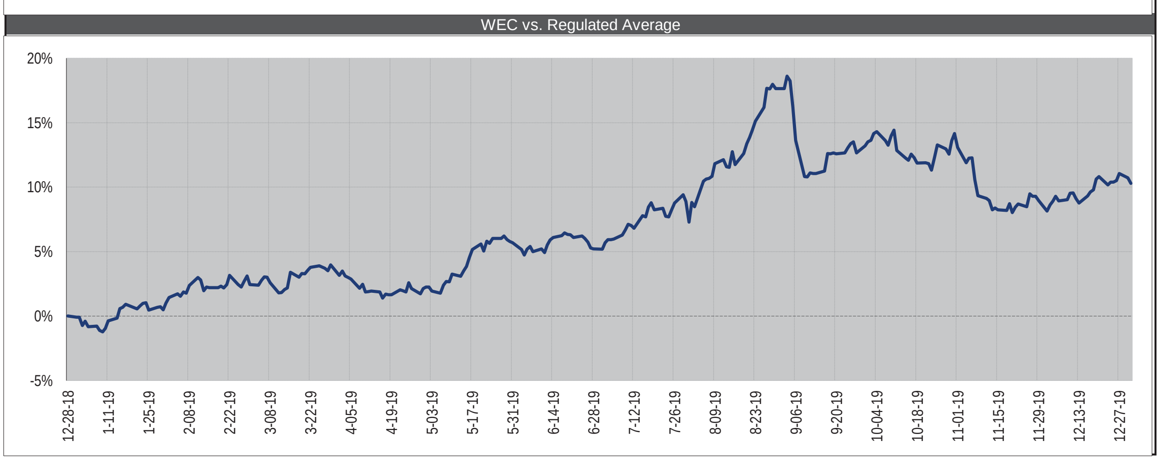


WEC Energy Group (WEC) $92.23, Underperform, $90 PT

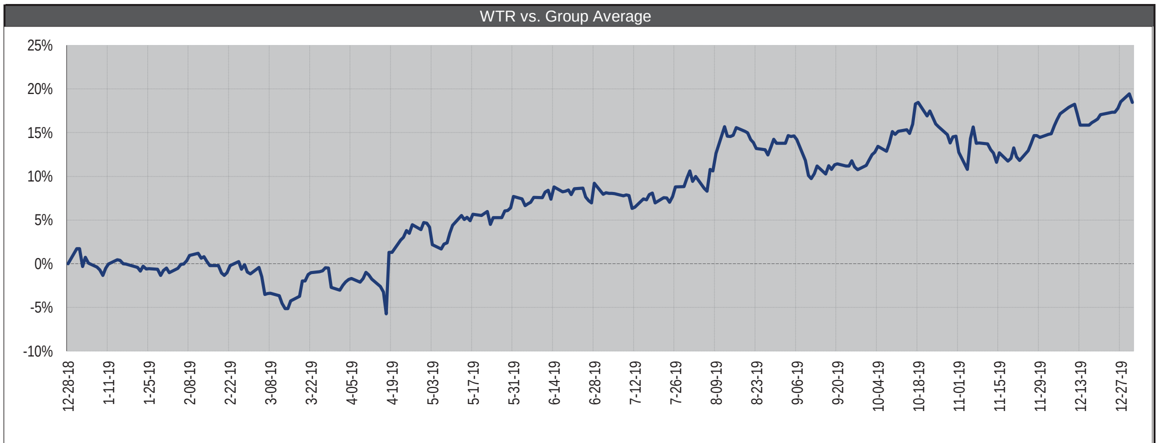
- WEC outperformed in December to finish off a strong 2019. The company beat numbers as always, while also achieved a constructive settlement in its important Wisconsin rate cases.

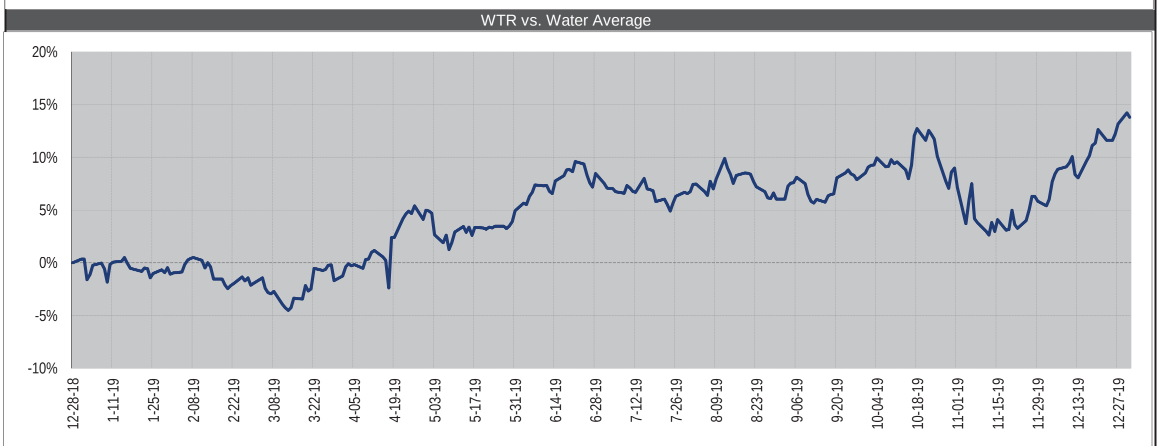


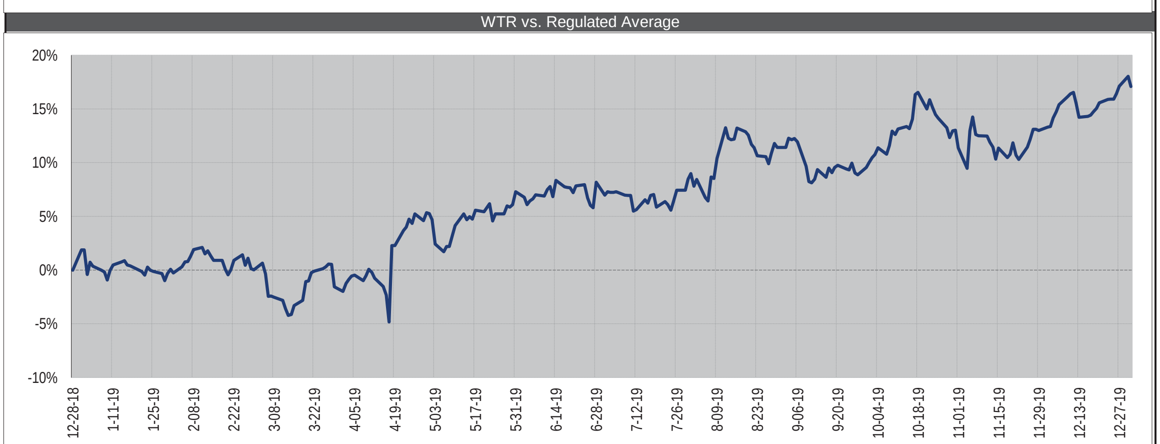




Aqua America (WTR) $46.94, NR







WOLFE RESEARCH

Xcel Energy (XEL) $63.49, Peer Perform, $65 PT

XEL finished in-line with the regulated average and its large-cap peers in December. XEL received somewhat of a disappointing final order in its CO rate case – the 50bps decrease in ROE was more than expected, but the test-year was an improvement from what historically had been awarded. On the year, XEL outperformed most of its regulated peers largely due to the high-quality trade seen across the sector.

NI: Too Soon To Tell

Stock Rating/Industry View: Equal Weight/Neutral
Price Target: USD 28.00
Price (05-May-2020): USD 24.53
Potential Upside/Downside: 14%
Tickers: NI

NI reported Q1 earnings and did not reinstate 2020 or 2021 guidance that was pulled at the time of the Columbia Gas of Massachusetts sale announcement. We reiterate our Equal Weight position and $28 price target given the magnitude of the uncertainty that lies ahead.

- NI reported Q1 adj EPS of $0.76, slightly below consensus of $0.81.
- NI expects to initiate 2021 guidance and restate the 5-7% LT growth rate for EPS and dividend growth at the close of the Columbia Gas of MA sale. The sale is expected to be complete by the end of Q3, but some delays are possible due to COVID-19 working arrangements. To date, management sees no risk to LT growth drivers, but noted that given COVID-19 impact, it is too

early to restate the expectation that 2021 will be flat or above original 2020 guidance.

- Management states that Q1 results do not reflect a meaningful COVID-19 impact on load, and April trends are still being calculated. Management does expect to see some impact to load and bad debt, but notes that Q2 is a shoulder period. Historically, ~85% of annual EPS comes from Q1 and Q4 (~60% in Q1).

- NI reduced the 2020 capex plan by $100 million (now $1.7-$1.8 billion) in order to shore up cash flow due to the near term impact of COVID-19. The $100 million will be deferred, but it is too soon to tell in what year that will come back into plans.

- On ESG, NI sets a target of 90% GHG emission reduction (below 2005 levels) by 2030. As of 2020, NI emissions are 48% below 2005 levels. Further emissions reduction will come from the complete retirement of the coal generation portfolio by 2028. About 50% of replacement power will be owned through JV structures, with the rest through PPAs. Replacement power for the 2023 RM Schahfer Generating Station retirement could provide incremental capex opportunities in 2022 and 2023. NIPSCO will begin replacement power filings in 2020 and 2021.

- Currently, VA and MD have orders to defer COVID-19 related expenses, including bad debt, for later recovery.

- Negotiations with bidders in the IN RFP are expected to wrap up in late summer or around the date of Q2 earnings. There will be a mix of PPAs and JV tax equity structures.

- Management believes current $1.3 billion liquidity position will be sufficient for the next 12-24 months with limited additional capital market needs.

- **Reported 1Q20 in-Line at $0.76 vs CS** $0.77, below cons $0.81, (below 1Q19 $0.82), due mostly to unfavorable mild weather. Minimal impact from COVID19 in Q1. Recall that 2020 guidance of $1.36-$1.40 was pulled in 4Q19 given the pending sale of Columbia Gas of Mass. We estimate that the Mass utility earns ~$0.08 EPS and view the sale as slightly EPS accretive to prior 2021 expectations (including a few pennies improvement in Mass) when including the elimination of a planned block equity sale this year.
- **Capex Reduced.** The company **lowered its capital investment plan by $100M** to **$1.7-$1.8B** for 2020 to conserve cash in order to maintain liquidity.
- **COVID-19 impact to Load**. Management expects lower sales volumes from commercial and industrial customers, partially offset by a potential increase in residential sales volume. Increased bad debt expenses (although recent orders in MD, VA allow for deferring the COVID-related expenses and bad debt), and sustained customer attrition. The company's sensitivity analysis projects that a +/- 1% change in annual sales volumes will affect pre-tax operating earnings from electric residential and commercial customer classes by $3.9M each and industrial by $2.3M and gas residential customer class by $3.8M, commercial by $2.4M and industrial by $1.2M.
- **We previously reduced our 2020 estimate $0.02 to $1.32 vs consensus $1.34 for lower commercial/industrial load from COVID19 pandemic response**. Our 2021 and 2022 estimates are unchanged. Mostly a gas utility system, NI should be less affected from COVID19 load reduction in 2/3Q than its more electric peers.
- **Equity needs: No block equity needed in 2020, nor any going forward,** with unchanged plans for $200-$300M annual ATM and $35-$60M employee plan equity (no plans for use of convertible or hybrid financing). NI is targeting FFO/Debt ~14%-15%. Recall that on the 4Q19 call, prior guidance for $500-$700M block equity guidance for 2020 was pulled out after the announced sale of Columbia Gas of Mass to Eversource (ES). Incremental LT debt for 2020 is estimated to be $1,000M.
- **Current Debt Level is now $9.9B** (as of March 31st). Long term debt is unchanged at ~$7.7B. Weighted average maturity ~17 years and weighted average interest rate is 4.4% as of 3/31. **Net Available Liquidity unchanged at ~$1.3B** as of Mar 31st. Total debt/capitalization is now 63.2% vs 61.7% in 2019
- **NI is in a rare period now with no significant rate activity.** The next major rate filing will probably be in Pennsylvania as there was none in 2019 and this is typically an annual affair. The company received a final order in the Indiana electric ratecase with a 9.75% (vs prior 9.9%) and a new rate structure for industrial customers that allows the utility to manage market purchases in order to keep track of capacity requirements (reduces risk of stranded assets).
- **See our recent reports:** 5/5 1Q20 Earnings Preview, 2/28 Raise to Outperform on Sale of Mass, Elimination of Block Equity Plan, 1/17 2020 Earnings Preview, 2020 Outlook –

** Asterisk signifies initiation or assumption of coverage.*

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.
Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.
Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European (excluding Turkey) ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin America, Turkey and Asia (excluding Japan and Australia), stock ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark (India - S&P BSE Sensex Index); prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.
Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.
Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:
Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.
Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.
Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Goldman Sachs & Co. LLC

NiSource (NI, Buy) reported 1Q20 operating EPS of $0.76 below both GS/FactSet consensus at $0.84/$0.81. We attribute the bulk of the miss versus our estimate to unfavorable weather (16% warmer than normal). NI did not provide any update on 2020 EPS expectation; we note NI withdrew its 2020 guidance of $1.36-$1.40 last quarter given the pending MA gas utility sale to Eversource (ES). Our estimate of $1.30 compares to consensus of $1.34. Finally, the company lowered its 2020 capital investment plan by $100mn to increase liquidity in light of COVID-19. Per our recent note, we see potential near-term earnings pressure for NI given its commercial/industrial exposure for its electric utilities business.

Key takeaways from NI's release include:

- **1Q20 performance miss driven largely by weather-** NI's gas segment reported operating income of $391.6mn vs GS at $414.7mn while electric segment reported operating income of $80.0mn vs GS at $84.2mn. NI's Corp/Other segment reported operating income of ($8.9)mn vs GS at $6.7mn driven by unfavorable insurance reserve adjustments and unrealized losses on the cash surrender value of corporate owned life insurance investments.
- **The company lowered its capital investment plan by $100mn in the light of COVID-19** and now expects to make investments of $1.7 to $1.8 billion in 2020 compared to $1.8-$1.9bn previously disclosed in 4Q2019.
- **Equity issuance plan remains unchanged at $200-$300mn of ATM equity in 2020**. Our model currently assumes $1bn of block/ATM equity issuance in 2020. The company plans to issue around $1bn of long-term debt in 2020 compared to $500mn previously disclosed.
- **NI continues to expect its pending MA gas utility sale to close in Q3 2020** with proceeds anticipated to be used to pay down debt. We note the estimated range for third-party claims, fines, penalties, and settlements remain unchanged at ~$1.04bn-$1.07bn, as well as current insurance recoveries of $800mn through March 2020.
- **Recent orders in MD, VA allow for deferral of COVID-related expenses and bad debt.** Columbia Gas of Maryland and Columbia Gas of Virginia each received orders from their respective state regulatory commissions allowing the utilities to defer incremental COVID-related expenses and bad debt for recovery at a later

date.

- **The 1Q20 presentation also mentions a possible delay in the Rosewater wind project (100MW)**, currently 2020 COD; we note this build-transfer joint venture is not expected to contribute to earnings for NI until the later years of the asset life, given terms of the ownership structure.

Key topics to monitor on NI's earnings call include (1) additional details on the potential magnitude of electric demand impact by customer class, (2) updates on the MA commission investigation regarding 2018 gas incident, (3) O&M growth expectations in 2020 and beyond, including the portion related to gas safety and COVID-10, and (4) updated view on incremental regulated investment opportunities, including potential upside from replacement generation opportunities in Indiana.

We derive our 12-month target price of $28 using a 20.0x blended P/E multiple on 2021E EPS. Key risks include (1) legal and regulatory risks, (2) system damages related to the 2018 MA natural gas incident, (3) higher than expected O&M, (4) electricity demand and customer growth, and (5) financing.

Jefferies

EQUITY RESEARCH
NiSource Inc. (NI)

NiSource Inc.
Financial Flexibility Fortified Following Feeble 1Q

May 6, 2020

Key Takeaway

NI adj 1Q EPS of 76¢ missed our 82¢ forecast & the 80¢ Street mean est.; the miss was driven by weakness in all divisions as Gas posted below-forecast Op Margin, Electric encountered higher than expected costs, and Corp. faced unrealized COLI value decline (unquantified). NI trimmed 2020 capex $100mm, to $1.7B, and expects COVID-19 to result in lower sales, higher bad debt, and sustained customer attrition; the sale of Bay State Gas remains on-track for 3Q.

1Q results. Respective 1Q Adj. EPS & EBITDA of 76¢ and $652mm missed our 82¢ and $699mm forecasts due to a combination of weaker margins (Gas), higher operating costs (Electric) and unfavorable insurance reserves & COLI value declines (Corp.). OCF of $370mm was ~$100mm short of our projection due entirely to a larger WC draw and, with higher period capex ($452mm vs. $370mm JEFe), 1Q net debt was ~$200mm above our forecast. Gas & Electric customer counts grew 0.8% & 0.9% y/y, respectively, though warmer weather and early COVID impacts prompted ~8.3% & 3.5% y/y declines in sales volumes; NI's non-GAAP results adjust for non-normal weather.

Financing & Liquidity. To bolster its financial flexibility, NI announced a $100mm reduction in 2020 capex, to $1.7-$1.8B, and, in April issued $1.0B of 3.6% senior notes due 2030; net proceeds from the debt raise will be used for capital investments, additions to working capital, and to repay existing debt. In addition, NI refinanced its $850mm term loan agreement with a new maturity date of March 31st, 2021; proceeds from the sale of CG of MA later this year are expected to repay the term loan. NI remains committed to its IG credit rating, had ~$1.3B of liquidity at period-end ($1.1B in available capacity & $200mm in cash) and exited 1Q with total debt/capital of 63.2%; currently just ~$64mm of long-term debt maturities exist in 2020-21. Mgmt still anticipates $235-$360mm of 2020 equity through its ATM, ESPP, and 401K programs and continues to target long-term AFFO/Debt of 14-15%.

Regulatory update. In April, CPA filed a base rate increase requesting a $100.4mm annual revenue increase to modernize & fortify the safety of its system; new rates are expected in Jan. 2021. Also in April, the PUCO approved COH's annual IRP tracker adjustment, allowing the company to begin recovery of ~$234mm of infrastructure investments made in 2019; rates are effective this month. COH also filed its latest annual adjustment to its CEP rider which seeks to begin recovery of ~$185mm in capital invested in 2019; an order is expected in Aug. 2020. Separately, construction is underway on both the Rosewater and Jordan Creek wind projects, which are expected to be in-service by YE, however, mgmt flagged that Rosewater could experience delays due to COVID-19.

COVID-19 impacts. NI anticipates lower sales volumes (commercial & industrial), higher bad debt expense, and sustained customer attrition due to COVID-19. Bad debt is primarily covered in base rates and additional mechanisms exist in several states on gas/fuel recovery; recent orders in MD & VA allow deferral of COVID-related expenses & bad debt.

Exhibit 1 offers greater detail on 1Q performance.

Company Description

NiSource Inc.

NiSource, Inc. (NYSE: NI) is a diversified energy holding company whose subsidiaries provide natural gas, electricity, and other energy products & services to nearly 4mm US customers. The Company operates two business segments: Gas Distribution and Electric. The Gas Distribution operations provide natural gas service and transportation to ~3.5mm residential, commercial and industrial customers in Ohio, Pennsylvania, Virginia, Kentucky, Maryland, Indiana and Massachusetts. The Electric Operations segment provides electric service to ~472,000 customers across 20 counties in the northern part of Indiana. NiSource was founded in 1987, is incorporated under the laws of the state of Delaware, and is headquartered in Merrillville, IN.

Company Valuation/Risks

NiSource Inc.

Our $28 PT and Hold recommendation are derived via Target P/E, Target Yield, DCF, and DDM approaches. Unexpected regulatory outcomes, deviations in customer growth, and project execution present risks to our estimates & PT.

Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgement.

Investment Recommendation Record

(Article 3(1)e and Article 7 of MAR)

Recommendation Published	May 6, 2020 , 09:27 ET.
Recommendation Distributed	May 6, 2020 , 09:27 ET.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.

Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.

CS - Coverage Suspended. Jefferies has suspended coverage of this company.

NC - Not covered. Jefferies does not cover this company.

J.P. Morgan Securities LLC

- **1Q20 EPS misses JPMe/Street.** NiSource's 1Q20 operating EPS of $0.76 missed the $0.83/$0.81 JPM/Street median estimates. Gas Distribution Operation operating earnings remained approximately flat YoY while Electric Operation declined due to lower industrial revenue from a new service structure and lower industrial use. Corporate and Other Operations earnings also declined YoY due to unfavorable insurance reserve adjustments and unrealized losses on the cash surrender value of corporate-owned life insurance investments.

- **2020 capex lowered $100MM in early response to COVID-19.** NI now anticipates 2020 capital investments to total $1.7-1.8Bn, down $100MM from the company's prior plan, as part of initial steps taken in response to COVID-19 impacts. While decreased C&I sales, increased bad debt expense, and customer attrition are all expected to impact 2020 results, we note that NI withdrew its 2020 guidance on 4Q following the announcement of its Columbia Gas of Massachusetts sale. NI's 2021+ outlook remains in focus, and we expect particular attention on management commentary around changes to expectations due to COVID-19, including from capital plan revisions. 2020 planned equity financing since 4Q is unchanged, with expected incremental LT debt revised +$500MM to $1Bn.

- **Conference call details.** NiSource will host a conference call to discuss 1Q20 earnings on Wednesday, May 6, at 9:00 AM EDT. Dial-in: 833-714-0869; PIN: 6268986.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

Coverage Universe: Sunderland III, Richard W: AES Corp. (AES), Algonquin Power & Utilities Corp. (AQN.TO), Allete Inc. (ALE), American Water Works Company, Inc. (AWK), Avangrid, Inc (AGR), Emera Inc. (EMA.TO), Fortis Inc. (FTS.TO), NiSource Inc. (NI), PG&E Corp. (PCG), SJW Group (SJW), South Jersey Industries (SJI), Southwest Gas Holdings Inc. (SWX), Spire Inc (SR)

J.P. Morgan Equity Research Ratings Distribution, as of April 04, 2020

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage	46%	40%	14%
IB clients*	52%	49%	37%
JPMS Equity Research Coverage	44%	42%	14%
IB clients*	75%	68%	57%

*Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months. Please note that the percentages might not add to 100% because of rounding.
For purposes only of FINRA ratings distribution rules, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

NiSource Inc.

1Q20 EPS Miss; Capex Reduced by $100MM

Sensitivity to Changes in Sales Volumes; Liquidity for the Next 12-24 Months

NI reported 1Q20 EPS miss and noted only minimal impact from COVID-19 on 1Q. Notably, NI reduced its 2020 capex guidance by $100MM to $1.7-$1.8B, with the new midpoint of $1.75B below UBSe of $1.8B. NI hasn't provided 2020 EPS guidance but noted that due to COVID-19, management expects lower sales volumes to C&I customers (potential for an increase in residential sales), increase in bad debt expenses and sustained customer attrition. On slide 14, NI provided detailed analysis of the sensitivity to changes in sales volumes by customer type and highlighted fixed % of rates for both gas and electric customers. We see limited impact to gas utility earnings; however, if the COVID-19 lockdown continues into summer months it could impact electric utility as C&I customers represent ~60% of the customer mix. +/-1% change in annual sales to residential/commercial/industrial customers could drive change in op earnings of $3.9MM/$3.9MM/$2.3MM. Roughly 55% of large industrial customer margin is based on fixed rate which we view as a positive. At the end of 1Q20 NI had $1.3B of liquidity and on April 1st NI issued $1B of notes maturing in 2030 and refinanced $850MM of term loan maturing in 2021 which added incremental liquidity. NI estimates that it has liquidity for 12-24 months of operations with limited capital market needs which we view as a positive. Additionally, the sale of Columbia Gas of MA is on track for closing in 3Q20. Overall, we expect investors will remain cautious ahead of summer due to the risk of impact from COVID-19 on 2Q-3Q20.

Results: 1Q20 EPS Below UBSe/Consensus

NI reported 1Q20 EPS of $0.76 below UBSe of $0.82 and Consensus of $0.81. Gas distribution segment op. income was 3.4% below UBSe and Electric Operations segment op. income was 15% below UBSe due to the $12.5MM revenue decline related to the new industrial service structure approved in the last rate case.

Lowering Estimates

To reflect 1Q20 results and lower 2020 capex, we are lowering our 2020/2021 EPS estimates by 3%/2% to $1.27/$1.35, respectively.

Valuation:

We maintain Neutral rating and $27 PT.

Valuation Method and Risk Statement

Risks include, but are not limited to, the following: changes to the regulatory environment, ability to achieve favorable returns on investment projects, and ability to continue to reinvest in the business for growth. We use comparable company multiples in our sum-of-the-parts EV/EBITDA and P/E valuations. Our price target is derived using an average of sum-of-the-parts EV/EBITDA and P/E valuations and DDM.

NI: Shares Falter On COVID-19 Uncertainty – Buy On Weakness

Overweight/$27

Natural Gas LDCs

Price Target Change

- **Summary.** There were more questions than answers on NI's Q1 call as mgmt. looks to get a better handle on COVID-19 impacts. Mgmt. did not reiterate comments from the YE call that 2021 EPS guidance would be "at or above" the previously withdrawn 2020 range of $1.36-1.40. Mgmt. also noted Q1 weakness in electric load including a 6.5% decline in industrial sales. Lastly, NI lowered 2020 capex by $100mm to conserve cash. In response, shares fell 5.7% (intraday 5/6) vs. the S&P utilities down 2.0%. Despite the lack of near-term visibility, mgmt. is not seeing anything that would impact the long-term outlook. We lower our '20-22E EPS to/from $1.26/1.32, $1.37/1.40 & $1.48/1.50 reflecting near-term sales pressure and lingering regulatory lag. We reiterate our Overweight rating as we continue to view the core utility franchise favorably given constructive regulatory treatment and a long capex runway. Further, valuation appears very reasonable with shares trading at discounts to blended Gas/Electric Utility peers of 1% on '21E and 5% on '22E. We lower our forward price target to $27/sh (19.4X our '21E EPS) from $30/sh primarily based on lower peer group multiples.
- **Grappling with COVID-19.** Mgmt. is working to get a better understanding of the financial implications of the pandemic and economic fallout. The company should have more insight as they close the books on April this week, though mgmt. noted that it is a shoulder month, which may not translate to the full year; for context, Q2 has represented ~5% of NI's full-year EPS over the past five years. As the company grapples with the financial impact, mgmt. acknowledged that there could be some slippage in 2020 and possibly into 2021. As such, NI did not back prior comments regarding 2021 EPS guidance, but did affirm the 5-7% EPS growth target off the 21E base. The company also took $100mm (5%) out of the 2020 capex plan to manage the cash flow impacts of COVID-19, noting that the capital would likely be deployed in future years.
- **Looking Ahead.** On the positive side, there could be upside to 2022 & 2023 capex related to generation resources needed to replace retiring coal capacity in IN including 1,600 MW in 2023. NI is in discussions with bidders for the pending all resource RFP with regulatory filings on new projects expected throughout 2020 and 2021 – roughly half of the capacity is targeted to be owned by NI (JV structure with tax equity). Previously approved projects (400 MW Jordan Creek + 100 MW Rosewater) are underway, though Rosewater could be subject to COVID-related delays. Other events on the horizon include (1) closing the sale of Columbia Gas of MA – on track for Q3'20, (2) regulatory discussions regarding COVID-related costs – deferral orders approved in MD and VA, (3) PA rate case – $100.4mm rate request with order expected January 2021, and (4) ongoing property insurance claims – no update.

Price Target

Price Target: $27 from $30

Our price target is based on a P/E multiple analysis (apply a 5% premium to the blended gas/electric peer group multiple of ~18.5X on our '21E EPS) in concert with EV/EBITDA, residual income and dividend discount methodologies. Risks include lower than expected sales growth, unfavorable regulatory developments, and unexpected cost pressures.

Investment Thesis

We rate shares Overweight. We are attracted to NI's robust long-term infrastructure growth opportunities and supportive regulatory treatment.

Company Description

Based in Merrillville, Indiana, NiSource, Inc. is a holding company with regulated gas (64%) and electric (36%) utility operations across seven states. The company's Gas Distribution Operations serve 3.5 million customers in Indiana, Kentucky, Maryland, Massachusetts, Ohio, Pennsylvania, and Virginia. The Electric Operations consist of a vertically-integrated utility serving approximately 500 thousand customers in northern Indiana. On July 1, 2015, NiSource completed the separation of Columbia Pipeline Group (CPG) from NiSource via the distribution of one share of CPG common stock for every share of NI common stock.

NiSource

NI-NYSE	Rating	Price: May-6	Target	Total Rtn
	Outperform	$22.92	$31.00	39%

You Can't Always Get What You Want

Bottom Line: NI shares trailed the sector by 3.2% today as investors didn't find the additional clarity they were looking for regarding the current demand and cost trends impacting the company and its forward earnings outlook. With data still coming in, Management felt it was too early to back a 2021 outlook given the potential impact of the COVID-19. Without guidance for 2021 as an anchor for valuation and forward EPS growth we would expect NI shares could struggle until the company rolls out its revised 2021 EPS in Late 3Q20.

Key Points

We do not get the sense that anything material has changed in managements previous view for its earning power beyond 2020. In fact management continues to be very confident in their 5-7% growth outlook. Instead we believe management is taking an conservative approach to its projections given the uncertain duration and evolving impacts of COVID-19 and a more limited OVERALL contingency buffer post the Greater Merrimack Incident (GMI).

Although management deferred $100M of capital spending for 2020 ($1,700-1,800M) to bolster credit and help mitigate cash flows impacts from COVID-19, the company's forward capital program and associated earnings power remains in place. With the renewable RFPs in hand, management confirmed it's plan to own ~50% of the renewable assets replacing NIPSCOs remaining coal fleet and adding visibility beyond 2022. We believe this will be an important driver behind their 5-7% objective and should allow the company to roll their outlook to 2024 at the same time they re-initiate 2021 guidance which will be the new base year for their LT CAGR.

While the company did not provide detailed assumptions for load trends, like most utilities they do expect a decrease in commercial and industrial sales partially offset with higher residential load. We do not see material exposure for NI's gas operations which has peak demand in 1Q/4Q and a 1c impact for each 1% annualized for resi and other. NI's electric operations however have minimal smoothing mechanisms and C&I represents ~75% of the volumes with an average impact of 1c for each 1% vs residential at 1C but only 25% of volumes.

We reiterate our Buy rating and $31 target price. With the recent pull back in the stock, NI now trades at an attractive 5%/10% discount to the electric and gas LDC group, respectively.

Please refer to pages 4 to 7 for Important Disclosures, including Analyst's Certification.

Scenarios

Valuation

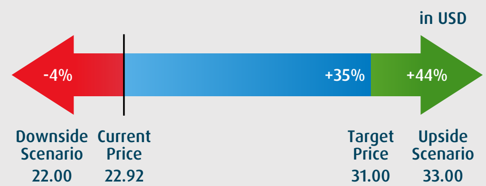
Our $31 target price is the product of a P/E-based sum of the parts. We utilize a regulated average multiple using 2022E EPS as base valuation and then make specific adjustments to reflect our current view of the fundamental outlook. For NI, we have removed EPS for its MA gas business from our P/E valuation and instead include only the asset value (1x equity rate base) in our SOTP framework.

Upside Scenario 33.00

Our upside scenario reflects continued multiple expansion associated with the company's premium and above-average earnings and dividend growth profile.

Downside Scenario 22.00

Our downside scenario reflects a tightening monetary policy and a deceleration of the company's rate base growth.



Key Catalysts

Initial indicative pricing in its second renewable RFP in IN. Completing the sale of Columbia Gas of Massachusetts to Eversource. Potentially, capital spending and growth rate update in 2H20 given clarity in the aforementioned RFP and recent rate orders in MA and IN.

Company Description

NiSource, Inc. is a regulated utility holding company, serving approximately 3.5 million natural gas customers and 500,000 electric customers across seven states. Through its Columbia Gas and NIPSCO brands, it provides natural gas, electricity, and other products and services. The company was founded in 1987 and is headquartered in Merrillville, Indiana.

IMPORTANT DISCLOSURES

Analyst's Certification

I, James M. Thalacker, hereby certify that the views expressed in this report accurately reflect my personal views about the subject securities or issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Analysts who prepared this report are compensated based upon (among other factors) the overall profitability of BMO Capital Markets and their affiliates, which includes the overall profitability of investment banking services. Compensation for research is based on effectiveness in generating new ideas and in communication of ideas to clients, performance of recommendations, accuracy of earnings estimates, and service to clients.

Analysts employed by BMO Nesbitt Burns Inc. and/or BMO Capital Markets Limited are not registered as research analysts with FINRA. These analysts may not be associated persons of BMO Capital Markets Corp. and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account.

Company Specific Disclosures

Disclosure 9B: BMO Capital Markets makes a market in NiSource Inc in United States.

Methodology and Risks to Target Price/Valuation for NiSource Inc (NI-NYSE)

Methodology: Our $31 target price is the product of a P/E-based sum-of-the-parts (SOTP) analysis of the company's primary regulated operating companies. We utilize a regulated group-average multiple based on 2022E EPS as our initial basis for valuation and then make adjustments specific to each jurisdiction to reflect our current view of the fundamental outlook.

Risks: NI's regulated profile exposes the company to business risk including but not limited to federal and state regulatory risk, federal and state political risk, environmental policy, interest rate risk, access to capital markets, construction risk, changes in customer demand trends, changes in customer affordability, extreme weather, natural disaster, and equipment failure.

Source: FactSet

Stock Slips, Trips and Falls on Q1 Results

Lowering target to $28 from $29/sh. Rating remains Outperform.

NiSource reported a Q1'20 EPS miss and lowered '20 capex. NI posted $0.76 in Q1'20 operating EPS vs. consensus of $0.80 and Q1'19 of $0.82. All segments (gas, electric, corporate) reported lower YoY operating earnings for the quarter even though NI saw minimal COVID impacts in the results. NiSource reduced its '20 capex guidance by $100mm to $1.7-1.8Bn to mitigate cash impacts in this environment and did not comment on capex in '21-'22, which was previously expected to be $1.7-2.0Bn per year. NI did say that it expects incremental capex in '22-'23 in electric generation, given its plan to own half of the generation portfolio needed to replace its retiring coal plants. NiSource still did not issue '20 EPS guidance. The company still expects to issue $200-300mm of ATM equity this year plus $35-65mm of employee equity.

NI did not restate its expectation for '21 EPS given COVID uncertainty, raising questions if growth will not return until at least '22. Recall that following the announced sale of Mass., NiSource rescinded its '20 EPS guidance of $1.36-1.40. When the deal closes (still expected in Q3), NI still expects to issue '21 EPS guidance but did not restate its original expectation for '21 EPS to be at or above the withdrawn '20 outlook. The company said it was too early to restate this level of expected EPS amid COVID uncertainty. Off of an uncertain '21 base, NiSource still said it then expects to return to 5-7% EPS growth per year over the long term. NI has struggled with EPS growth since the Massachusetts incident, and on our and consensus estimates, this year could be the second consecutive year of very little growth (1.5% CAGR in '18-'20). Now, '21 EPS remains a question mark. With that said we view the risk reward as relatively attractive here and continue to view NI as a re rate story post asset sales and COVID with an above average long-term growth rate bolstered by capital needs from replacing coal based generation.

We are maintaining our '20-'22 EPS estimates for now. Our '20-'22 forecast remains $1.33 / $1.42 / $1.51. At NIPSCO electric, we assume the company earns its allowed 9.75% ROE over the forecast period. In the gas businesses, we assume NI earns a blended allowed ROE of 10.2% absent Massachusetts over the same time period.

COVID positioning OK: NiSource's sensitivity to load is partly mitigated by fixed rate designs and revenue decoupling/normalization mechanisms but would rank average to above-average sensitivity in our coverage. NI's pension plan is well-funded and benefits from trackers in MA and deferrals in OH and PA. Its bad debt is primarily recovered in base rates, and Columbia Gas of MD and VA each received orders in April to defer incremental COVID expenses and bad debt for later recovery. The $1.1Bn of MA sale proceeds is expected to come in Q3'20. NI says its liquidity is sufficient for 12-24 months. It has no large debt maturities this year.

COVID-19 Exposure

Sales: NiSource's sensitivity to load is partly mitigated by fixed rate designs and revenue decoupling/normalization mechanisms.

In electric, a 1% change in load results in a total of $10.1mm impact to earnings, which rounds to $0.03 in EPS. Specifically, in residential electric, a 1% change in load impacts earnings by $3.9mm, which rounds to $0.01 in EPS. In commercial electric, a 1% change in load also impacts earnings by $3.9mm, which rounds to $0.01 in EPS. In industrial electric, a 1% change in load impacts earnings by $2.3mm, which rounds to $0.01 in EPS.

In gas, a 1% change in load results in a $7.4mm impact to earnings. Specifically, in residential gas, a 1% change in load impacts earnings by $3.8mm, which rounds to $0.01 in EPS. In commercial gas, a 1% change in load impacts earnings by $2.4mm, which rounds to $0.01 in EPS. In industrial gas, a 1% change in load impacts earnings by $1.2mm, which rounds to $0.00 in EPS.

Note that these sensitivities are not linear for large or prolonged volume changes.

Pension: NI's pension plan was 98% funded as of year-end 2019 with expected $3 mm in contributions this year. The company's pension expense is not impacted until the pension plans are re-measured, which is not expected until year-end 2020. Every 50 basis point change in the discount rate is expected to impact the expense by $1mm. Every $100 mm change in asset valuation is expected to impact expense by $7mm. NiSource benefits from pension trackers in Massachusetts and deferrals in Ohio and Pennsylvania.

Bad debt expense: NiSource bad debt is primarily recovered in base rates. The company has additional tracker mechanisms (quarterly, semi-annual or annual) across its gas jurisdictions but not in electric.

Liquidity and financing: NiSource still expects to issue $200-300mm of ATM equity this year and $35-65mm of employee equity programs. The company does not anticipate any changes to its dividend. As of March 31st, the company had $1.3Bn of net liquidity, including $237mm of commercial paper outstanding. On April 1st, NI refinanced an $850mm term loan. On April 13th, NiSource issued $1.0Bn of 10-year notes that is expected to satisfy long-term debt needs for 2020 and 2021. In both years, NiSource does not have significant debt maturities. Lastly, the $1.1Bn of cash proceeds from the sale of Columbia Gas of Massachusetts is expected to come in Q3'20.

COVID-specific regulatory items: Columbia Gas of Maryland and Columbia Gas of Virginia each received orders from their respective state regulatory commissions in April granting the companies authority to defer incremental COVID-related expenses and bad debt for recovery at a later date. NiSource said it is currently working with regulators in other states to address COVID-related financial impacts.

Estimates and Price Target Derivation

We are maintaining our '20-'22 EPS estimates for now. Our '20-'22 forecast is $1.33 / $1.42 / $1.51. We assume the Columbia Gas of Massachusetts (~$25mm in net income) sale closes the end of Q3'20, as the company expects it to. We model '20 capex at the midpoint of lowered guidance of $1.7-1.8mm and '21-'22 capex of $1.85bn per year. We expect annual issuances of $250mm of ATM equity, $47.5m of employee program equity, and zero block equity. This is the amount of equity that should enable NiSource to achieve its adjusted FFO/debt target of 14-15% over the long term. At NIPSCO Electric, we assume the company earns its allowed 9.75% ROE over the forecast period. In the gas segment, we assume NI earns a blended allowed ROE of 10.2% absent Massachusetts over the same timeframe.

Lowering our price target to $28 from $29/share. To arrive at our $28/share price target, we use a Sum-of-the-Part analysis. On NI's electric EPS we assign a 5% premium to our anchor '22 P/E target multiple of 17.5x. For the gas segment, we apply a 18.1x P/E multiple, a 5% discount to current LDC trading multiples. Gas utilities warrant a premium given a more attractive L-T rate base growth outlook. But the discount for NI's gas utilities reflects its recent operating problems and an adjustment out of an M&A premium that we think inflates the valuation of the gas peer group. Our NI target price derives a consolidated multiple of 18.2x.

Exhibit 2: SOTP Valuation

Valuation using 5% Discount on Gas and 5% premium on Electric	'22 EPS	P/E	Val/Shr
Gas EPS	$1.19	18.1x	$21.53
Electric EPS	$0.62	18.4x	$11.45
Parent/Other	($0.30)	18.2x	($5.41)
Consolidated 2020 EPS	**$1.51**	18.2x	**$27.56**

Source: EVRISI Research

Recent Developments

Gas Distribution Operations

- **Columbia Gas of Massachusetts asset sale is still expected to close in Q3'20.** In February, NiSource announced the sale of Columbia Gas of Massachusetts to ES for $1.1bn and subsequently withdrew '20 EPS guidance ($1.36-1.40/share) and says it no longer expects to need to issue $500-700mm of common equity block this year. The transaction is expected to close by the end of Q3'20.

- **On April 24th, NiSource filed a base rate case in its Columbia Gas of Pennsylvania jurisdiction,** requesting a $100 mm revenue increase with a 10.95% ROE and 54.19% equity ratio on a rate base of $2.4 billion with a 12/31/21 test year. Columbia Gas of Pennsylvania is currently NI's third largest jurisdiction at $1.9 billion of year-end 2019 rate base, behind Northern Indiana electric ($4.7 billion) and Columbia Gas of Ohio ($3.2 billion). We expect Columbia Gas of PA contribute ~$0.27 of EPS this year, or roughly 20% of our consolidated $1.33 EPS estimate. We believe utilities in rate cases could be more at risk right now for a negative outcome than would otherwise be expected. It is possible that with the 10-year yield now well below 1%, it could be increasingly difficult for utilities to justify maintaining ROEs. Further, regulators could face pressure from consumers to keep bills as low as possible amid COVID-19, which could also pressure ROEs and result in more O&M or rate base disallowances. While this is a risk to consider, we do not view this as a major one given our expectations that the regulators will look for a balanced outcome for both the utility companies and customers during the economic downturn. We note that Pennsylvania is generally considered a constructive regulatory environment. A final decision is expected by year-end 2020. The docket number is D-R-2020-3018835.

- **On April 24th, also in Pennsylvania, NI filed a petition with the PUC requesting authority to implement a temporary program that would make grants to residential customers who are experiencing a loss of income due to COVID, but are not eligible to participate in the company's existing assistance programs.** The company proposed to use a portion of pipeline penalty credits that the PUC has previously approved for hardship funds, matched by a contribution from the NiSource Charitable Foundation, to fund the grants.

- **On April 22nd, the PUC of Ohio approved NiSource's annual IRP tracker adjustment**, and new rates went into effect this month. This order allows the company to begin recovery of $234mm in safety and infrastructure investments made in 2019. This pipeline replacement program, authorized through 2022, covers replacement of priority mainline pipe and targeted customer service lines.

- **On February 28th, also in Ohio, NiSource its latest annual application for adjustment to its Capital Expenditure Program (CEP) rider**. The CEP rider, which was first approved by the PUCO in 2018, allows the company to recover capital investments and related deferred expenses that are not recovered through its IRP. The adjustment application seeks to begin recovery of $185mn in capex in 2019. A final order is expected in August 2020.

- **NIPSCO's application for a six-year extension of its long-term gas infrastructure modernization program remains pending before the Indiana commission**. The proposal includes nearly $950 mm in capital investments through 2025, to be recovered through semi-annual adjustments to the existing gas Transmission, Distribution and Storage Improvement Charge (TDSIC) tracker. The existing gas TDSIC program has been in place since 2014. An final order is expected in July 2020.

- **Columbia Gas of Maryland and Columbia Gas of Virginia each received orders from their respective state regulatory commissions in April granting the companies authority to defer incremental COVID-related expenses and bad debt for recovery at a later date**.

Electric Operations

- **NIPSCO continues to have discussions with a number of commercial bidders who responded to its latest all-source RFP to consider potential resources to meet future electric needs**. The RFP results were consistent with NIPSCO's 2018 IRP, which outlines plans to retire nearly 80% of its remaining coal generation by 2023, and retire all coal by 2028. The plan is expected to drive a 90% reduction in NiSource's greenhouse gas emissions by 2030, and is expected to save NIPSCO electric customers more than $4 billion over 30 years. NIPSCO is considering all sources in the RFP process and is expecting to obtain adequate resources to facilitate the retirement of the R.M. Schahfer Generating Station in 2023. Currently, half of the capacity in the replacement plan is targeted to be owned by joint ventures that will include NIPSCO and unrelated financial investors as the members. The remaining new capacity is expected to be primarily in the form of purchase power agreements. NIPSCO expects to begin regulatory compliance filings related to the new capacity as agreements are finalized with counterparties in 2020 and 2021. The planned replacement in 2023 of 1,600 MW of retiring coal could provide incremental NiSource capex opportunities for 2022 and 2023.

- **Construction is underway on both the Rosewater and Jordan Creek wind projects, which are expected to be in service by the end of this year. The company is monitoring any potential impact that COVID may have on the expected completion dates of these projects**. The Rosewater project could experience a construction delay due to COVID. The IURC on February 19th approved NIPSCO's application for another wind project, Indiana Crossroads, a joint venture with EDP Renewables North America LLC. Indiana Crossroads will have an aggregate nameplate capacity of 302 MW, and is expected to be in operation in Q4'21.

NI – 1Q20 Miss, Conservative Bend Taken on 2021 Messaging; No Restatement Despite Noncommitment

Key Message: NiSource reported 1Q20 earnings, missing our and consensus estimates. Due to the COVID-19 crisis, mgmt. is pulling back expected capital spend for 2020 to conserve cash. While mgmt.'s noncommitment around 2021 expectations was disconcerting to us, especially after providing some guidance and visibility into next year on the prior YE call, we believe NI was taking a conservative bend towards messaging given past events in MA and COVID-19 (discussed in-depth below). Assuming COVID-19 is not a protracted macro event, we believe management would still be on pace to guide closer to a flattish ’21 EPS range vs. the prior ‘20 guide w/5-7% growth off the ‘21 base — our updated estimates reflect this scenario and it is supported by our call with NI. Therefore, we do not view mgmt. as walking back prior disclosed expectations despite today’s optics. We are lowering our PT to $27 (from $29) given lower EPS estimates; remain BUY on value and muted expectations.

2021: Noncommittal? Yes. Restatement? No. We had a chance to catch up with NI following its earnings call. While it is disappointing that mgmt. deferred and was somewhat noncommittal around 2021 guidance/early outlook, we believe there are other factors at play that may not be structural in nature. As background, on the 4Q call, mgmt. removed 2020 guidance given the pending sale of Columbia Gas of MA, which introduced several moving parts (i.e. interplay with removal of equity needs, sale of an earnings-generating utility, dis-synergies, cost-cutting opportunities, among other moving parts). However, despite the MA asset sale, mgmt. highlighted that 2021 expectations should be flat (or hopefully better) w/the prior removed 2020 EPS guidance range of $1.36-$1.40 on the YE earnings call. But, on today’s earnings call, management balked at supporting or even committing to their prior ’21 early outlook presented at the YE call, which appears to be the key reason why shares materially underperformed today (by ~300bps vs. UTY). While some may believe that something more structural in nature is at play for their reluctance around discussing 2021 fundamentals, following our call with NI, we attribute mgmt.’s more tempered messaging as taking a more conservative and sensitive tone while COVID-19 plays out. In other words, in a scenario where COVID impact on the macro backdrop is not protracted, we would expect management to guide around 2021 still being flattish to the prior removed 2020 EPS guidance range of 1.36-1.40 in a base case — consistent to what was discussed on the February YE earnings call. That said, in a more protracted COVID scenario, 2021 fundamentals could become impacted until NI could file rate cases and get reprieve from lower sales volumes with various customer classes. At this juncture, nothing leads us to believe the latter scenario will be the case. We will need to monitor the COVID situation as we will with most utilities under our coverage. Mgmt. stated it remains committed to providing 2021 EPS guidance, capex updates and growth through 2022 and beyond at the 3Q call.

NI reported earnings that missed our and Street estimates and lowered its expected 2020 capital spend by $100M. NI reported 1Q20 NOEPS of $0.76 vs. our estimate at $0.80 and Consensus at $0.80. Updating our model for 1Q20 actuals, we are lowering our FY20 EPS estimate to $1.36 from $1.40. We are also lowering our 2021-2023 EPS estimates to $1.37/$1.47/$1.57 from $1.48/$1.56/$1.67. Our estimates now reflect slightly lower O&M levers in the outer years as mgmt. recognizes more in the NT to mitigate a weaker-than-expected macro backdrop as a result of COVID-19. As a reminder, O&M levers were already expected to be used to offset dis-synergies related to the sale of Columbia Gas of MA – i.e., our estimated O&M levers and contingencies are more front-end loaded given NT drags including the COVID-19 macro backdrop and MA asset sale. Mgmt. reaffirmed LT EPS growth of 5-7% off a 2021 base given increased electric generation spend — consistent with our updated estimates.

See pages 4 - 5 for analyst certification and important disclosures.

In consideration of the COVID-19 crisis, management is lowering FY20 expected capital spend by $100M to $1.7B-$1.8B. The decision to pull back on spending is to help mitigate cash flow impacts from an expected increase in bad debt expense and lower C&I load. A majority of the deferred spend is likely longer-term maintenance/other, which is recovered through periodic rate cases. For 2020, focus will be on spending that is recovered through trackers, etc., and is recoverable within 18 months. **Mgmt. provided earnings sensitivities around a 1% change in annual sales volume for each segment.** For the residential, commercial, and industrial electric segments, a 1% change in annual sales volume would impact earnings by $3.9M, $3.9M, and $2.3M, respectively. For the residential, commercial, and industrial gas segments, a 1% change in annual sales volume would impact earnings by $3.8M, $2.4M, and $1.2M, respectively. Mgmt. expects lower demand from C&I customers but noted the potential for residential demand to increase (**we have seen a similar dynamic with other utilities under our coverage — see our note HERE**). Mgmt. also expects higher bad debt expense, which is, for the most part, recovered in base rates. MD and VA Commissions have recently allowed for deferral of COVID-related expenses and bad debt.

Negotiations with bidders in the IN RFP is ongoing – continue to target 50% ownership. NI is working through negotiations with developers and potential tax equity partners for generation build consistent with the 2018 IRP. Mgmt. continues to target a 50/50 mix of build-transfer and PPA. Tax equity partners would allow for incremental rate base as those partners would divest after recapture period. Mgmt. expects to get through that phase in the coming months and could provide an update as early as the 2Q call followed by the longer-term capex and growth profile that will likely be addressed on the 3Q call.

Liquidity shored up for 12-24 months — limited capital market needs. As of March 31, NI had ~$1.3B in net available liquidity, ~$1.9B in revolving credit facility, and ~$0.5B in accounts receivable securitization facilities. On April 1, NI refinanced their $850M 364-term loan, and on April 13, issued $1B of notes due in 2030 (an increase from the ~$500M in LT debt NI expected to issue at YE). NI LT debt stands at ~$7.7B with no meaningful maturities until 2022. NI still expects to issue $200M-$300M in ATM equity in 2020. Mgmt. reiterated its commitment to an IG credit rating.

NISOURCE

(NI US Equity – $22.92 – Outperform)

A Cinco de Mayo hangover

- **Noncommittal on 2021, vague on COVID-19 impacts**. NI reported Q1 EPS of $0.76, missing consensus at $0.80 (WRe $0.78). The stock underperformed the utility average by 300bps on the day, primarily due to management's messaging on 2021 EPS – declining to reaffirm the expectation to be at or above prior 2020 guidance of $1.36-1.40 which was pulled on CMA sale announcement. NI also refrained from providing color on sales trends during April, making it tough to handicap an expectation for the full year. Comments about long-term customer attrition likely point to sales pressures spilling over from this year into next as well. NI does have levers to pull on O&M to help offset some sales degradation, but to what degree is a bit unclear.
- **Cutting estimates; remain Outperform.** We are reducing our estimates across the board (see table). We take a more conservative tack on 2021 and now estimate NI to be in the lower half of the prior 2020 guidance. Our new 2021E of $1.36 reflects a spillover of some COVID pressures that we expect are partially offset by cost cuts as well as the $100M capex reduction from 2020. On the capex reduction, we assume this is layered back in over time. Beyond 2021, we see EPS growing toward the top end of NI's 5-7% target. We lower our PT to by $3 to $26 on our lower estimates and lower group multiples. We remain Outperform on the view that the L-T fundamentals remain solid, with big capex upside at NIPSCO electric as opportunities become clearer throughout the year.
- **Meaningful capex upside potential from renewables.** Discussions with bidders from the recent RFP are still ongoing. NI noted that is targeting ownership of about half of the generation needed to replace its retiring Schahfer coal units, most of which is likely renewables. This presents a total opportunity set that could be north of 3 GW of renewable additions by 2023 given the capacity credits (~20% for wind, ~40% for solar). The dramatic shift in generation mix and fact that NI will be coal-free by 2028 is helpful from an ESG perspective. A full capex rollforward / refresh is targeted for the Q3 call.
- **CMA sale on track.** NI still expects the sale of Columbia Gas MA to close in Q3. We still view NI's transition out of MA as an important turning point for the company that meaningfully de-risks the overall business.

Source: Wolfe Utilities & Power Research

Company description

NiSource, headquartered in Merrillville, Indiana, operates two separate business lines: electric utility and gas distribution LDCs. The electric utility serves just under 500,000 customers in northern Indiana and owns 3,300 MW of generation. The gas LDC serves 3.5 million customers in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland and Massachusetts.

Investment Thesis

We see above-average rate base and earnings growth potential for NiSource relative to other electric and natural gas distribution utilities. NI has a $30B backlog of capital investment with recovery largely through trackers in mostly constructive regulatory environments. We see NI as a de-risking story in 2020 with an upward bias on rate base / EPS growth due to renewable investment opportunities at NIPSCO electric.

Valuation

Our $26 price target is derived using a P/E multiple of 17.5x on our 2022E. This reflects a full-turn premium for NI's electric utility and an average for its gas LDCs. Risks for NiSource are 1) bad regulatory outcomes and 2) pipeline safety incidents. Upsides are 1) additional growth projects and 2) customer growth

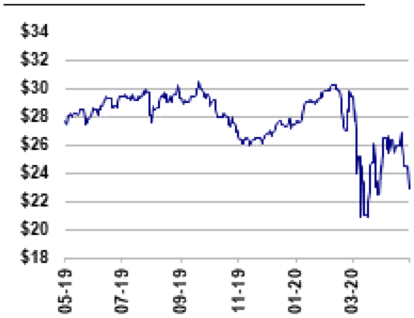
Exhibit 4. Performance Chart



Source: FactSet

WOLFE RESEARCH

NiSource

May 6, 2020

Investment Conclusion

We are Outperform rated on NiSource. The company's $30B capital investment backlog should drive its 5-7% annual earnings target over the long term. Most of the company's annual capex (~80%) is recovered with minimal lag via tracking mechanisms and the company has built a constructive track record with most of its state regulators. We see exiting from Massachusetts as an inflection point for the stock that should allow NI to re-rate closer to its historic 5-10% premium over time. Further, we see an upward bias on NI's 5-7 EPS growth rate long-term due to renewable opportunities at NIPSCO electric which should come into view later this year.

NiSource Inc

Cautiously weighing Covid impact amid cost reduction drive

Maintain Rating: NEUTRAL | PO: 27.00 USD | Price: 22.92 USD

Too soon to tell how sales impacted, *even April unclear*

NI mgmt. offered a decidedly cautious update with its Q1 report, notably *not reaffirming its previous 2021 earnings floor of $1.36-1.40/sh*, while maintaining an expectation of 5-7% growth over the long term off unknown 2021 serving as base year. The company acknowledges that sales will be affected by Covid stay-at-home orders, but declined to quantify expectations citing limited data (even Apr was not disclosed) and different re-opening trajectories across the six states that make up its territory. Mgmt. cautioned against using 2008-09 declines as a read-through given different factors in place in the current situation (e.g. shifts in customer mix & industrial rate structure particularly after Rate 831; recovery may be uneven across sectors & geographies). Recall in our recent downgrade of NI we reduced '21 to the bottom end of the earnings floor, see more here.

Cost cuts – how much extra latitude to offset sales?

Mgmt. still expects to close the CMA sale in Q3, on track with previous guidance. As cost cutting was already included in the plan to adjust for dis-synergies of the transaction, Covid thus has potential to create a further headwind on 2020 results. Accordingly we see NI as having relatively less room to make further O&M cuts to offset lost sales and higher expenses including bad debt (both acknowledged on the call but not quantified) – a contrast to utility peers such as WEC who included confident cost cutting outlooks as part of their quarterly update. While specific targets were not included, the company asserts that reducing costs in response to Covid is an additional (& available) short-term lever under review – in contrast to asset sale-related cost reductions which are envisioned as more permanent in nature, cuts in response to lost sales would entail altering the timing of scheduled maintenance and related items. While mgmt. remained light on specifics we perceive latitude here for mitigating short-term impacts.

Lack of disclosure is unique among peers

We see lack of sales details & specifics on cost cuts as concerning given more specific programs from peers already (despite admittedly less exposure given ~half gas LDC). We also voice concern on PA rate case filing against current economic backdrop. Our ests (prev reduced to reflect Covid) and $27 PO remain unchanged. Maintain Neutral rating given discount vs peers.

Company Sector

Natural Gas-Local Distribution Companies

Company Description

NiSource Inc. (NI) is a fully-regulated utility company serving approximately 3.5mn natural gas customers and 500,000 electric customers across seven states through its local Columbia Gas and NIPSCO brands. NI generates substantially all of its operating income through these rate-regulated businesses.

Investment Rationale

NI's positives include 5-7% earnings/dividend growth via $30bn of infrastructure investments over the next 20+ years and fully regulated subsidiaries. We have factored in resolution of overhang from the MA incident as the company will likely sell 3Q. However, NI has C&I demand risk from COVID, which will be difficult to offset with O&M cuts due to promises already around cost cuts to balance CMA sale. We see shares valued appropriately and rate Neutral.

Stock Data

More unknowns in the near term than most

With shares underperforming the XLU by several percentage points following the Q1 call, we perceive investor anxiety around quantifying several known unknowns in the 2020-21 timeframe as NI balances its CMA disposition, Covid response, and preparing to set a baseline for its long-term outlook. Below we summarize the key debates emerging from the Q1 call:

- **April sales trends remain unclear.** We stress that NI is an outlier among utilities in our coverage that have reported so far in that mgmt. did not provide a specific update on sales in the month of April. Electric sales have broadly shown residential sales up mid-to-high single digits with commercial and industrial sales down by double digits – albeit individual utilities' results vary by specific geography and composition of the customer base. As such, we perceive investors were surprised by a lack of an update on this front. With April historically a shoulder month for natural gas sales this is admittedly less of an area of focus. Mgmt. highlighted that Q1 sales (largely unaffected by Covid) were down 6.5% y/y for industrial customers largely because of a rate structure change whereby energy intensive customers purchase directly via the wholesale market.

- **Will 2021 base remain at $1.36-1.40?** In lieu of 2020 earnings guidance resulting from the pending CMA sale, mgmt. had established an "earnings floor" of $1.36-1.40 for 2021 which would serve as the baseline for the long-term 5-7% earnings forecast**.** Mgmt. asserted that it remains early days in terms of measuring the Covid impact on its sales in 2020 and the company continues to assess the earnings and cash flow fallout. Given the ongoing uncertainties mgmt. did not reaffirm the 2021 floor, targeting Q3 for a long-term update including its capex plan beyond 2022.

- **Can capex inflect post-2020?** Mgmt. framed the $100m capex reduction in 2020 as a cash flow management effort in light of the unfolding Covid situation. While long-term spending plans are still being developed and are not expected to be released until Q3 at the earliest, mgmt. stopped short of affirming that the $100m will be delayed into subsequent years. o Given lack of clarity on future years' capex, we keep the prior guidance from 3Q19 in our numbers ($1.7bn - $2.0bn annually for '21-'22 that we extend for future years as well). Recall our FFO/debt reconciliation for '20 and years beyond is in the 13-15% range, slightly lower than the previously targeted 14-15% in the next few years. We see this as a potential sensitivity the company will have to address in future calls as well.

Bottom line: NI mgmt. indicated less clarity into its 2020 earnings (and 2021 guidance) than many utility peers. We don't see this as particularly surprising given the additional consideration of an asset sale and ongoing litigation – though we sense investors are clamoring for sales disclosures covering the first weeks of the Covid shut down at a minimum, in line with those provided by peers. We maintain our Neutral rating.

Price objective basis & risk

NiSource Inc (NI)

Our $27 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2022 forward P/E multiples of 17.8x for gas utilities and 17.2x for electric utilities with an inline mult for gas utilities with just weather normalization, a 0.5x prem for gas utes with revenue normalization (prev 0x), and a 1.0x premium for the electric utility's strong growth rates (we factor in BOT in '24 EPS) but acknowledgement of industrial risk (prev 2x). We note that electric / gas peer P/E multiples are grossed up by 5% / 5.1% to reflect capital appreciation across the sector. We strip value from Columbia Gas of MA given the pending sale to close in 3Q20. We subtract the value of excess holding company debt at the parent not supporting the utility opcos. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its discounted multiple versus peers.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, financing plan updates, unforeseen costs associated with the MA incident, and challenging steel production economics in Indiana.

Bulls Say

- We expect annual dividend growth to average near 5% from 2022 to 2024 after the impact of COVID-19 fades.
- We believe the separation of the Columbia Pipeline Group from NiSource was good shareholder stewardship, as the market valued the individual businesses more highly at the time of the separation.
- New legislation has improved the regulatory framework in Indiana for NiSource's electric and natural gas distribution utilities.

Bears Say

- Industrial customers account for over half of NiSource's electric sales, higher than most utilities. Industrial sales are more sensitive to the economy than residential and commercial sales.
- NiSource's electric and natural gas distribution businesses have substantial commercial and industrial customer exposure, increasing the impact of the COVID-19 pandemic.
- NiSource issued almost $2 billion of common and preferred shares in 2018 and 2019. The additional shares will be a headwind to EPS growth.

Safety-Related O&M, COVID-19, and Weak Industrial Demand Pressure NiSource's Earnings Growth

Business Strategy and Outlook

Charles Fishman, CFA, Eq. Analyst, 07 May 2020

NiSource completed its separation from Columbia Pipeline Group in 2015 and now derives all of its operating revenue from its regulated electric and natural gas distribution utilities. About 60% of operating income comes from its six natural gas distribution utilities. The remaining 40% comes from its electric utility business in Indiana.

NiSource's utilities have regulatory frameworks that include the automatic rate tracker mechanisms, with almost 80% of planned capital expenditures, providing recovery of investments in less than 18 months. As a result of the favorable regulation, we expect NiSource to step up its capital expenditures to almost $2 billion per year over the next five years. This is an investment level almost double the previous five years.

Over the next 20 years, NiSource plans to invest about $30 billion in infrastructure improvements. Over 50% of these investments are modernization programs for replacing steel and cast-iron pipe with plastic at its natural gas distribution utilities. Almost all of these investments receive rate tracker treatment. This allows NiSource to earn returns on these investments near allowed returns and consistently above its cost of capital.

In September 2018, a natural gas explosion killed one person north of Boston on NiSource's Columbia Gas of Massachusetts system. Insurance should cover roughly one half of the almost $2 billion of claims, penalties and other expenses, but the event was a public relations nightmare. On Feb. 27, 2020, NiSource announced the sale of the Massachusetts utility for $1.1 billion. The transaciton will avoid a planned $500 million block equity issuances.

Although the economic impact from the COVID-19 pandemic will pressure earnings in 2020 and 2021 due in part to NiSource's high share of commercial and industrial customers, we expect a rebound in EPS to near the midpoint of management's 5%-7% target from 2022 to 2024. We estimate 5% dividend growth from 2022-24 after the impact of COVID-19 and higher saftey-related O&M costs are incorporated in rates.

Analyst Note

Charles Fishman, CFA, Eq. Analyst, 07 May 2020

We are reducing our fair value estimate to $26 per share from $27 after NiSource reported 2020 first-quarter operating EPS of $0.76 versus $0.82 last year, reduced its 2020 capital expenditure forecast by $100 million, and made comments less supportive of future earnings growth.

The weak results were due in large part to higher safety-related operating and maintenance costs, mild weather, and weaker industrial electricity demand. COVID-19-related costs were not material in the recently ended quarter.

In March, we reduced our five-year capital expenditure estimate by $500 million, approximately 5%, to $9.5 billion due to our assumption of the impact of COVID-19 on investment. Driven by the lower 2020 guidance and our assumption of the continuing impact of COVID-19, we reduced our five-year investment forecast by another $250 million, to approximately $9.25 billion.

Although NiSource had previously indicated earnings guidance would not be provided until after the closing of the Columbia of Massachusetts transaction later this year, it was disappointing that management declined to support previous comments that 2021 operating earnings would be at least equal to the lower end of the previous range for 2020, or $1.36 per share.

Driven by lower capital investment and our assumption that higher O&M and weak industrial electricity demand will drag into next year, we reduced our 2021 EPS estimate to $1.30 from $1.35. Management did reaffirm that when 2021 guidance is established later this year, it will be the base for long-term annual EPS growth of 5%-7%. We estimate annual EPS growth of 6% from our new 2021 estimate, in line with this guidance.

However, starting from a lower 2021 earnings base

NiSource Inc NI (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship

Alliant Energy Corp LNT	USD	11,322	3,648	21.32	19.80

reduces our annual earnings growth for 2019-24 to 3.3% from our previous estimate of 4.8%. This lower earnings growth was the primary driver for our lower fair value estimate.

Economic Moat

Charles Fishman, CFA, Eq. Analyst, 07 May 2020

Service territory monopolies and efficient scale advantages are the primary moat sources for NiSource's regulated utilities. State and federal regulators typically grant regulated utilities exclusive rights to charge customers rates that allow the utilities to earn a fair return on and return of the capital they invest to build, operate, and maintain their infrastructure. In exchange for regulated utilities' service territory monopolies, state and federal regulators set returns at levels that aim to minimize customer costs while offering fair returns for capital providers.

This implicit contract between regulators and capital providers should, on balance, allow NiSource's regulated utilities to achieve at least their costs of capital, though observable returns might vary in the short run based on demand trends, investment cycles, operating costs, and access to financing.

NiSource derives roughly 60% of its operating earnings from the regulated distribution of natural gas. For natural gas distribution service, regulators set distribution rates and the commodity price for customers purchasing natural gas from NiSource. NiSource recovers its costs for natural gas that it sells with a pass-through charge to customers. Thus, NiSource has no commodity price risk that could weaken its moat. Customers may elect to purchase natural gas from independent retail energy suppliers and use and pay for distribution services only. NiSource exited the no-moat retail energy supply business in 2010.

Electricity generation, which contributes about 40% of operating earnings, is from operations in Indiana and is also regulated. The rates for this service are combined with regulated customer rates for transmission and distribution service. In exchange for its monopoly position, state and federal regulators set NiSource's electric rates.

Fair Value & Profit Drivers

Charles Fishman, CFA, Eq. Analyst, 07 May 2020

We are reducing our fair value estimate to $26 per share from $27 after NiSource reported 2020 first-quarter operating EPS of $0.76 versus $0.82 last year, reduced its 2020 capital expenditure forecast by $100 million, and made comments less supportive of future earnings growth.

In March, we reduced our five-year capital expenditure estimate by $500 million, approximately 5%, to $9.5 billion due to our assumption of the impact of COVID-19 on investment. Driven by the lower 2020 guidance and our assumption of the continuing impact of COVID-19, we reduced our five-year forecast by another $250 million, to approximately $9.25 billion.

Although NiSource had previously indicated earnings guidance would not be provided until after the closing of the CMA transaction later this year, it was disappointing that management declined to support previous comments that 2021 operating earnings would be at least equal to the lower end of the previous range for 2020, or $1.36 per share.

Driven by lower capital investment and our assumption that higher O&M and weak industrial electricity demand will drag into next year, we reduced our 2021 EPS estimate to $1.30 from $1.35. Management did reaffirm that when 2021 guidance is established later this year, it will be the base for long-term annual EPS growth of 5%-7%. We estimate annual EPS growth of 6% from our new 2021 estimate, in line with this guidance.

However, starting from a lower 2021 earnings base reduces our annual earnings growth for 2019-24 to 3.3% from our previous estimate of 4.8%. This lower earnings growth was the primary driver for our lower fair value estimate.

We use a 5.9% cost of capital in our discounted cash flow valuation, which incorporates a 7.5% cost of equity. Our cost of equity is lower than the 9% rate of return we expect investors will demand of a diversified equity portfolio. We believe our cost of equity reflects the risk associated with regulated electric and natural gas distribution utilities operating in states that have average to above-average

NiSource Inc NI (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★★★ 06 May 2020 21:49, UTC	22.92 USD 06 May 2020	26.00 USD 07 May 2020 13:19, UTC	0.88	3.58 06 May 2020	3.66 06 May 2020	8.77 06 May 2020	Utilities - Regulated Gas	Standard

regulatory frameworks.

Our pretax cost of debt assumption is 5.8%, as we incorporate a normalized long-term real rate environment and normalized credit spreads. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Our fair value estimate implies a 20 times multiple on 2021 earnings. This is in line with market valuations for peer combination electric and gas distribution utilities in early May.

Risk & Uncertainty

Charles Fishman, CFA, Eq. Analyst, 07 May 2020

Regulatory risk remains the key uncertainty; however, NiSource's regulatory exposure is diversified, owing to operations in seven states and its federal-regulated electric transmission system. NiSource has reduced some of the regulatory uncertainty related to its planned natural gas distribution and electric utilities investments by securing preapprovals and favorable rate mechanisms that provide for automatic rate increases as infrastructure investments are made.

In 2018, NiSource announced it would eliminate all coal-fired generation from its power plant fleet within 10 years. This transition will require signing power purchase agreements for renewable energy; building new gas-fired power plants and solar and wind farms; and making modifications to its electric grid. There is a modest amount of execution risk to this dramatic transition from coal.

Stewardship

Charles Fishman, CFA, Eq. Analyst, 07 May 2020

We assign NiSource a Standard stewardship rating. We think management's decision to form Columbia Pipeline Partners and execute CPG's tax-free separation exhibited exemplary stewardship of shareholder capital. However, the CEO who probably drove those decisions left NiSource to go with CPG before he retired.

The National Transportation Safety Board found NiSource responsible for the tragic gas explosion north of Boston. The incident had a negative effect on shareholder value and has been a public relations nightmare. The good news is that management found a buyer for the utility at an attractive purchase price for NiSource shareholders. We expect the transaction to close in late 2020.

Joe Hamrock became CEO following the separation. He has been with NiSource since 2012 and previously ran the natural gas distribution business. Before joining NiSource, he was with American Electric Power. CFO Donald Brown joined NiSource in April 2015. Previously, he was with UGI Utilities and Constellation Energy. These individuals have significant utility experience, and we believe they will not stray from the strategy that has benefited shareholders.

Most of the members of NiSource's board of directors were involved in the separation of CPG and oversight of investment decisions. Given this, we are confident that the solid stewardship of shareholder capital is likely to continue.

Analyst Notes Archive

We Like NiSource's Decision to Sell Columbia Gas of Massachusetts

Charles Fishman, CFA, Eq. Analyst, 28 February 2020

We are reaffirming our $27.50 per share fair value estimate after narrow-moat NiSource reported solid 2019 operating EPS, announced the sale of Columbia Gas of Massachusetts, and pulled its 2020 earnings guidance. Eversource Energy is acquiring the Massachusetts gas distribution utility for $1.1 billion, a price we estimate is roughly 24 times normalized earnings and in line with recent natural gas distribution transactions.

However, we doubt the utility has come anywhere near this level of earnings contribution following the tragic natural gas explosion that killed one person north of Boston in September 2018. The incident has resulted in close to $2 billion of claims, penalties and other expenses (roughly one-half of the costs should be covered by insurance) and has been a significant distraction for management and a public relations nightmare.

In our opinion, the decision to sell the Massachusetts utility was good stewardship of shareholder capital as regulatory, political and customer relationships would likely be strained for years. The roughly $1 billion of proceeds will allow NiSource to forgo a $500 million block equity issuance that had been planned for later this year.

Although pulling earnings guidance, management was confident that the company could return to its long-term target of 5%-7% EPS growth, off a new 2021 earnings base, following the completion of the transaction. Our revised earnings estimates result in approximately 6% EPS growth from 2021-2024.

On January 31, NiSource increased its dividend by 5% and we expect increases in line with EPS growth for the foreseeable future. In our opinion, the dividend is secure and provides a yield of approximately 3% at the February 27 market closing price.

COVID-19 Could Slow Utilities' Near-Term Growth but Long-Term Outlook Still Bright

Travis Miller, Strategist, 26 March 2020

After assessing COVID-19 data and commentary from utilities this week, we still believe the sector offers buying opportunities for defensive, income-seeking investors. U.S. utilities trade at a median 10% discount to our fair value estimates and 3.5% yield even after rallying 23% on March 24-26.

Although some utilities reaffirmed their outlooks this week, we think 2020 earnings for many utilities will be at the low end or below management guidance ranges due to COVID-19 issues. We expect near-term lower commercial and industrial energy demand, tighter financing, growth project delays, and higher expenses. We are reaffirming our moat and moat trend ratings.

Utilities with a large share of C&I customers, usage-based rates, and less-adaptive ratemaking have the most near-term risk. Among these are Southern Company, Entergy, American Electric Power, Duke Energy, Evergy, and Ameren. Utilities with non-utility businesses such as DTE Energy, CenterPoint, and OGE also could face weaker near-term earnings. Our updates led to 2%-5% fair value estimate cuts.

Utilities with more residential customers, usage-decoupled rates, and forward-looking rate structures are less at risk. These include Edison International, Eversource Energy, NextEra Energy, and American Water Works.

We expect most utilities to shift 5%-10% of their 2020 growth investments into 2021-22 due to tight capital and labor markets. In general, this shift has little or no impact on our fair value estimates or long-term outlooks. We don't believe COVID-19 will impact utilities' policy-based investments in safety, clean energy, and grid modernization that support our long-term growth outlooks.

COVID-19 shutdowns might reduce U.S. C&I electricity demand more than the record 5.5% drop in mid-2009. In China, government data suggests electricity demand is down more than 8% year to date. European countries reported 2%-7% drops in electricity use last week. C&I demand is about 60% of total U.S. electricity use.

Trouble For U.S. Gas Utilities Has Been Simmering; New York Just Made it Worse

Travis Miller, Strategist, 29 March 2020

Policymakers--not COVID-19 or global energy markets--are becoming the biggest threat for gas distribution utilities.

Earlier this month, New York regulators asked the state's

NiSource Inc NI (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★★★	22.92 USD	26.00 USD	0.88	3.58	3.66	8.77	Utilities - Regulated Gas	Standard
06 May 2020 21:49, UTC	06 May 2020	07 May 2020 13:19, UTC		06 May 2020	06 May 2020	06 May 2020		

utilities to review ways to reduce or eliminate gas infrastructure. Areas of California have banned new gas service. If anti-gas policies like these spread, it could hurt the industry's long-term growth.

Total returns for U.S. utilities with sizable gas operations are down 19% during the last six months, compared with 14% down for the Morningstar U.S. utilities index. New Jersey Resources, CenterPoint Energy, Atmos Energy, NiSource, and DTE Energy recently traded well below our fair value estimates.

We think states with aggressive clean energy policies are most likely to push customers away from gas. Sixteen states have 100% clean energy targets. We expect renewable energy to grow 8% annually during the next decade.

We believe New Jersey Resources faces the most risk since the bulk of its earnings come from residential gas service in a state with aggressive clean energy policy. New Jersey policymakers support gas use for now, but we anticipate that could change in the next decade. We recently cut our long-term growth rate assumption for NJR to 3% from 4%, lowering our fair value estimate to $37 per share from $39.

New York City's Consolidated Edison and California utilities Sempra Energy and PG&E also face risk but have larger electric distribution businesses that could benefit from electric growth. We think there is less risk for gas utilities in the Southeast and Midwest where Republicans in five states have proposed legislation that would prohibit gas bans.

Acquisition premiums that had inflated gas utilities' valuations also have faded. Eversource Energy recently paid 24 times earnings for Columbia Gas. This is still rich but below deal values for Piedmont (30 P/E), Peoples Gas (30 P/E), and WGL (26 P/E). M&A premiums don't affect our fair value estimates.

NiSource's Heavy C&I Customer Exposure Increases Impact Of COVID-19

Charles Fishman, CFA, Eq. Analyst, 30 March 2020

We are reducing our fair value estimate to $27 per share from $27.50 for NiSource due to the impact of COVID-19 on earnings and capital investment. On Feb. 28, NiSource pulled earnings guidance following the agreement to sell its troubled Columbia Gas of Massachusetts unit. However, management expressed confidence it could achieve 5%-7% EPS growth off a new 2021 base when guidance was reestablished.

We expect earnings growth to rebound to near the top end of guidance from 2022-2024. However, COVID-19 changes our estimate of the 2021 EPS base, which we lowered by $0.08, to $1.35.

Supply chain disruptions and staffing issues will make it difficult for NiSource to fully execute our five-year, $10 billion capital expenditures estimate and we reduced it by 5%, or $500 million. Less investment translates into lower-rate base growth and earnings.

Northern Indiana Public Service Company, contributing about 40% of earnings and heavily dependent on commercial and industrial, or C&I, customers, will experience significantly reduced sales following Indiana's stay-at-home order. In 2019, C&I customers represented about 78% of retail electric sales.

NiSource's gas utilities, about 60% of earnings, will also be affected by stay-at-home orders in Ohio, Pennsylvania, and Indiana. In 2019, C&I sales represented about 70% of sales and transportation volumes.

Bad debt/uncollectible expense will also pressure near-term earnings. On March 19, the Edison Electric Institute announced that all members have suspended electricity disconnections. NiSource is a member of EEI.

Operating expenses will increase as safety measures are instituted. Maintaining minimum staffing levels could be challenging and the increase in overtime costs. We expect most, but not necessarily all, expenses related to COVID-19 to eventually be recovered in rates. If COVID-19 costs become significant, regulators might allow cost-recovery deferrals or securitization, similar to large weather-related expenses.

Coronavirus and Utilities: Listening For Answers

Andrew Bischof, Sr. Eq. Analyst, 22 April 2020

Utilities' first-quarter earnings rarely offer much excitement, but this year will be different. We expect lively coronavirus commentary from utilities starting this week. We are maintaining our fair value estimates, moats, and moat trends.

NiSource Inc NI (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★★★	22.92 USD	26.00 USD	0.88	3.58	3.66	8.77	Utilities - Regulated Gas	Standard
06 May 2020 21:49, UTC	06 May 2020	07 May 2020 13:19, UTC		06 May 2020	06 May 2020	06 May 2020		

We expect to hear commentary from management teams on numerous COVID-19 concerns. Utilities with large commercial-industrial customers could see record-breaking demand drops. Rate structures are critical, and we expect earnings cuts for utilities with usage-based rates. Utilities have issued a surge of debt in March, providing plenty of near-term liquidity, but investors will look to see if it is enough to get them through the year. Dividends appear secure throughout the sector and offer good income value relative to fixed-income alternatives. Capital programs are key drivers for utility growth amid stalled supply chains, workforce shortages, or financing. Renewable energy programs are the least at risk in our view. Finally, higher operating costs will likely affect utilities. The key will be which regulators adapt their natural disaster recovery programs for COVID-19 costs.

We highlight two lists of utilities that investors should watch this earnings season, value and quality. Atypical volatility among utilities stocks during the last month has created a wide spread between the overloved and the underloved. Value stocks could get an outsize lift if management commentary pushes the market toward our more positive outlook. We highlight AES, Edison International, Duke Energy, Vistra Energy, and First Solar as value stocks to watch.

We expect the most consistency from high-quality utilities; if the market were to turn down, like in mid-March, investors should be ready to pounce. We think high-quality Dominion Energy, NextEra Energy, Southern Co., and WEC Energy Group are the best positioned to weather COVID-19.

Safety-Related O&M, COVID-19, and Weak Industrial Demand Pressure NiSource's Earnings Growth

Charles Fishman, CFA, Eq. Analyst, 07 May 2020

We are reducing our fair value estimate to $26 per share from $27 after NiSource reported 2020 first-quarter operating EPS of $0.76 versus $0.82 last year, reduced its 2020 capital expenditure forecast by $100 million, and made comments less supportive of future earnings growth.

The weak results were due in large part to higher safety-related operating and maintenance costs, mild weather, and weaker industrial electricity demand. COVID-19-related costs were not material in the recently ended quarter.

In March, we reduced our five-year capital expenditure estimate by $500 million, approximately 5%, to $9.5 billion due to our assumption of the impact of COVID-19 on investment. Driven by the lower 2020 guidance and our assumption of the continuing impact of COVID-19, we reduced our five-year investment forecast by another $250 million, to approximately $9.25 billion.

Although NiSource had previously indicated earnings guidance would not be provided until after the closing of the Columbia of Massachusetts transaction later this year, it was disappointing that management declined to support previous comments that 2021 operating earnings would be at least equal to the lower end of the previous range for 2020, or $1.36 per share.

Driven by lower capital investment and our assumption that higher O&M and weak industrial electricity demand will drag into next year, we reduced our 2021 EPS estimate to $1.30 from $1.35. Management did reaffirm that when 2021 guidance is established later this year, it will be the base for long-term annual EPS growth of 5%-7%. We estimate annual EPS growth of 6% from our new 2021 estimate, in line with this guidance.

However, starting from a lower 2021 earnings base reduces our annual earnings growth for 2019-24 to 3.3% from our previous estimate of 4.8%. This lower earnings growth was the primary driver for our lower fair value estimate.

Company Profile

NiSource is one of the nation's largest natural gas distribution companies with approximately 3.5 million customers in Indiana, Kentucky, Maryland, Ohio, Pennsylvania, and Virginia. NiSource's electric utility transmits and distributes electricity in northern Indiana to about 500,000 customers. The regulated electric utility also owns more than 3,000 megawatts of generation capacity, most of which is now coal-fired but is being replaced by natural gas and renewables.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. We believe this bottom-up, long-term, fundamentally based approach allows our analysts to focus on long-term business drivers, which have the greatest valuation impact, rather than short-term market noise.

Morningstar's equity research group (“we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at an uncertainty-adjusted discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define excess economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

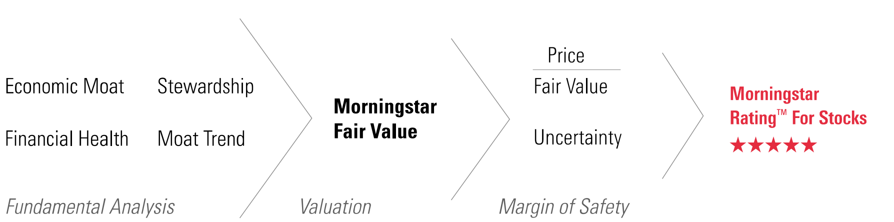
To assess the direction of the underlying competitive advantages, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

All the moat and moat trend ratings undergo periodic review and any changes must be approved by the Morningstar Economic Moat Committee, comprised of senior members of Morningstar's equity research department.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies



Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes, or EBI, and the net new investment, or NNI, to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital, or RONIC, and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until the perpetuity stage is reached. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term market-value weights.

Research Methodology for Valuing Companies

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the fair value estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

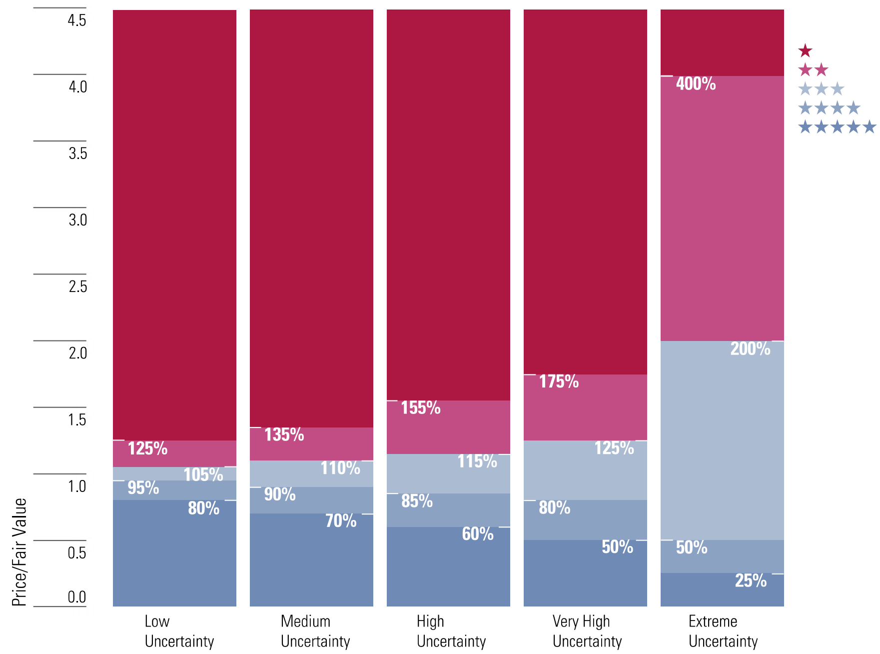
- ► Low–margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- ► Medium–margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- ► High–margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- ► Very High–margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- ► Extreme–margin of safety for 5-star rating is a 75% discount and for 1-star rating is 300% premium.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed, which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com.

Morningstar Equity Research Star Rating Methodology



Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open.
Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. The current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. The market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Research Methodology for Valuing Companies

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ► Undervalued: Last Price is below Morningstar's quantitative fair value estimate.
- ► Fairly Valued: Last Price is in line with Morningstar's quantitative fair value estimate.
- ► Overvalued: Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview

The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings

Morningstar's quantitative equity ratings consist of:
(i) Quantitative Fair Value Estimate
(ii) Quantitative Star Rating
(iii) Quantitative Uncertainty
(iv) Quantitative Economic Moat
(v) Quantitative Financial Health
(collectively the "Quantitative Ratings").

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. (""Morningstar," "we," "our") calculates Quantitative Ratings for companies whether it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the quantitative fair value estimate using a statistical model derived from the fair value estimate Morningstar's equity analysts assign to companies. Please go to https://shareholders.morningstar.com for information about fair value estimates Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ► Narrow: assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ► Wide: assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ► None: assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as 1-Star, 2-Star, 3-Star, 4-Star, and 5-Star.

★: the stock is overvalued with a reasonable margin of safety.
Log (Quant FVE/Price)<–1*Quantitative Uncertainty

★★: the stock is somewhat overvalued.
Log (Quant FVE/Price) between (–1*Quantitative Uncertainty, –0.5*Quantitative Uncertainty)

★★★: the stock is approximately fairly valued.
Log (Quant FVE/Price) between (–0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)

★★★★: the stock is somewhat undervalued.
Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)

★★★★★: the stock is undervalued with a reasonable margin of safety. Log (Quant FVE/Price) >1*Quantitative Uncertainty

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the quantitative fair value estimate. Generally, the lower the quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rating is expressed as Low, Medium, High, Very High, and Extreme.

- ► Low: the interquartile range for possible fair values is less than 10%.
- ► Medium: the interquartile range for possible fair values is less than 15% but greater than 10%.
- ► High: the interquartile range for possible fair values is less than 35% but greater than 15%.
- ► Very High: the interquartile range for possible fair values is less than 80% but greater than 35%.
- ► Extreme: the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- ► Weak: assigned when Quantitative Financial Health <0.2
- ► Moderate: assigned when Quantitative Financial Health is between 0.2 and 0.7
- ► Strong: assigned when Quantitative Financial Health >0.7

Research Methodology for Valuing Companies

Other Definitions

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- Undervalued: Last Price is below Morningstar's quantitative fair value estimate.
- Fairly Valued: Last Price is in line with Morningstar's quantitative fair value estimate.
- Overvalued: Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions.

A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit http://global.morningstar.com/equitydisclosures.

General Disclosure

The analysis within this report is prepared by the person (s) noted in their capacity as an analyst for Morningstar's equity research group. The equity research group consists of various Morningstar, Inc. subsidiaries ("Equity Research Group)". In the United States, that subsidiary is Morningstar Research Services LLC, which is registered with and governed by the U.S. Securities and Exchange Commission.

The opinions expressed within the report are given in good faith, are as of the date of the report and are subject to change without notice. Neither the analyst nor Equity Research Group commits themselves in advance to whether and in which intervals updates to the report are expected to be made. The written analysis and Morningstar Star Rating for stocks are statements of opinions; they are not statements of fact.

The Equity Research Group believes its analysts make a reasonable effort to carefully research information contained in the analysis. The information on which the analysis is based has been obtained from sources believed to be reliable such as, for example, the company's financial statements filed with a regulator, company website, Bloomberg and any other the relevant press sources. Only the information obtained from such sources is made available to the issuer who is the subject of the analysis, which is necessary to properly reconcile with the facts. Should this sharing of information result in considerable changes, a statement of that fact will be noted within the report. While the Equity Research Group has obtained data, statistics and information from sources it believes to be reliable, neither the Equity Research Group nor Morningstar, Inc. performs an audit or seeks independent verification of any of the data, statistics, and information it receives.

General Quantitative Disclosure

The Quantitative Equity Report ("Report") is derived from data, statistics and information within Morningstar, Inc.'s database as of the date of the Report and is subject to change without notice. The Report is for informational purposes only, intended for financial professionals and/or sophisticated investors ("Users") and should not be the sole piece of information used by such Users or their clients in making an investment decision. The quantitative equity ratings noted the Report are provided in good faith, are as of the date of the Report and are subject to change. While Morningstar has obtained data, statistics and information from sources it believes to be reliable, Morningstar does not perform an audit or seeks independent verification of any of the data, statistics, and information it receives.

The quantitative equity ratings are not a market call, and do not replace the User or User's clients from conducting their own due-diligence on the security. The quantitative equity rating is not a suitability assessment; such assessments take into account may factors including a person's investment objective, personal and financial situation, and risk tolerance all of which are factors the quantitative equity rating statistical model does not and did not consider.

Prices noted with the Report are the closing prices on the last stock-market trading day before the publication date stated, unless another point in time is explicitly stated.

Goldman Sachs & Co. LLC

We reiterate our Buy rating on NiSource (NI) as we view favorably the companies' majority gas utility profile (~65% of consolidated operating income) with constructive regulatory mechanisms, which could help mitigate further demand impacts as we head into low gas/high electric usage months. While we recognize the potential near-term earnings pressure from its electric operations, we expect the company's robust investment pipeline to support largely unchanged 2022 earnings power versus prior to the current COVID-19 environment.

Indiana renewable projects could bolster LT growth. Beyond 2022, we see higher growth potential at NIPSCO Electric from potential ownership of replacement generation — largely renewables — that could bolster NI's 5-7% EPS growth rate. Management forecasts up to 50% ownership of 1.6 GW of capacity required by 2023, which could contribute over $0.10 (or ~8% based on 2022E) of incremental EPS assuming $1,000/kW construction cost. We expect additional clarity on potential ownership levels later this year.

We revise our 2020-2022 EPS estimates to $1.27/$1.38/$1.49 from $1.30/$1.39/$1.50. Our changes reflect 1) 1Q20 actuals, 2) lower capex in 2020 (~$1.8bn), and 3) timing of O&M management, but reflecting ~1% CAGR through 2022. We continue to embed our estimated electric demand impacts from 2020-2022 while not assuming any meaningful changes to gas demand. Finally, our model includes the MA gas utility operations coupled with $1bn of equity in 2020 (including $300mn of ATM), resulting in 14.1%/14.5% FFO/debt in 2021/2022, respectively (versus Moody's stated Baa2 threshold of 14%). Note that the company has recently announced the sale of its MA gas utility operations to Eversource.

Our $28 12-month price target (unchanged) embeds 20x our revised 2021 EPS estimate of $1.38. Our target reflects a 26% total return, with the stock currently trading at a 1.5x P/E discount to smid-cap peers, which we believe is unwarranted. Key risks include (1) legal and regulatory risks, (2) earnings/cash impact due to COVID-19, (3) higher than expected O&M, (4) electricity demand and customer growth, and (5) financing.

ARGUS®

NYSE: NI

NISOURCE INC

Report created Jun 1, 2020 **Page 1 OF 5**

NiSource Inc. is an energy holding company whose subsidiaries are fully regulated natural gas and electric utility companies serving approximately 4.0 million customers in seven states. NiSource is one of the nation's largest natural gas distribution companies, as measured by number of customers. NiSource's principal subsidiaries include NiSource Gas Distribution Group Inc., a natural gas distribution holding company, and NIPSCO, a regulated gas and electric company. NiSource derives substantially all of its revenues and earnings from the operating results of these rate-regulated utilities.

Analyst's Notes

Analysis by Gary Hovis, May 29, 2020

ARGUS RATING: BUY

- Sharply discounted NI shares offer value
- On March 27, NiSource agreed to sell its Columbia Gas of Massachusetts assets to Eversource for $1.1 billion in a transaction expected to close by the end of 3Q20. With the transaction pending, NiSource withdrew its 2020 operating EPS guidance of $1.36-$1.40.
- After the completion of the transaction, the company expects to issue 2021 operating EPS guidance and establish a 5%-7% long-term growth rate with 2021 as the base year.
- On May 6, NiSource posted 1Q20 operating earnings (non-GAAP) of $290.9 million, or $0.76 per share, compared to $307.7 million, or $0.82 per share, for the same period in 2019.
- Our EPS estimates are $1.42 for 2020 and $1.50 for 2021. The company will report 2Q20 EPS on July 29.

INVESTMENT THESIS

Our rating on NiSource Inc. (NYSE: NI) is BUY based on valuation and historical performance. Focusing on its regulated electric and gas utilities, NiSource recently completed a corporate restructuring that resulted in the spinoff of its nonregulated pipeline group. The company keeps a tight rein on expenses as well as capital spending. The shares trade near the midpoint of their historical range on P/E, price/book and price/cash flow. The balance sheet appears stable and, in our view, able to support the current dividend, which yields 3.6%. We think the yield would be attractive to income-oriented investors and are reiterating our BUY rating on NI with a 12-month target price of $32.

Our long-term rating is also BUY.

RECENT DEVELOPMENTS

On May 6, NiSource Inc. (NYSE: NI) announced, on a GAAP basis, net income for 1Q20 of $61.8 million or $0.16 per share, compared with $205.1 million or $0.55 per share in 1Q19. NiSource also posted net operating earnings (non-GAAP) of $290.9 million

Analyst's Notes...Continued

or $0.76 per share in 1Q20, compared to $307.7 million or $0.82 per share in 1Q19.

NiSource's 1Q20 GAAP results include a $280.2 million loss due to the re-classification of Columbia Gas of Massachusetts' assets as held for sale resulting from the previously announced sale to Eversource Energy. This pending sales transaction remains on track to close by the end of 3Q20. Note that much of the 1Q20 played out prior to COVID-19 reaching crisis proportions in the U.S. Since then, additional steps have been taken which should position NiSource to manage through the pandemic.

The continued spread of COVID-19 has resulted in impacts on the company' service territory economy and could lead to reduced kilowatt hour sales to commercial and industrial customers. In any case, the company continues to evaluate the range of potential impacts of the pandemic on its natural gas and electric businesses and on its future operating results and liquidity.

After the completion of the transaction, the company expects to issue 2021 operating EPS guidance and establish a 5%-7% long-term growth rate with 2021 as the base year. This new guidance is expected to include significant investments in electric generation and natural gas distribution.

EARNINGS & GROWTH ANALYSIS

Our EPS estimates are $1.42 for 2020 and $1.50 for 2021. The company will report 2Q20 EPS on July 29.

NiSource continues to rely on its utility infrastructure programs for earnings and dividend growth. The company's regulated gas and electric segments will primarily invest in pipelines and in electric transmission projects as well as distribution modernization programs, and we believe the company will benefit from favorable regulation. In all, management expects the company to post operating earnings growth of 5%-7% annually from 2020 through 2023, resulting in total annual returns for shareholders of 6%-7%.

NiSource could also become a buyout target, as larger utilities and private equity firms have purchased smaller utilities because of their stable earnings growth and above-average dividend yields.

FINANCIAL STRENGTH & DIVIDENDS

We believe that NiSource has improved its balance sheet by selling noncore assets, recalibrating capital expenditures, and carefully managing operating expenses and working capital.

NiSource remains committed to maintaining its current investment-grade credit ratings. The company has investment-grade ratings with Fitch Ratings (BBB), Moody's (Baa2) and Standard & Poor's (BBB+). As of March 31, 2020, NiSource had approximately $1.3 billion in net available liquidity, consisting of cash and available capacity under its credit facility and accounts receivable securitization programs.

NiSource recently took a pair of actions to reduce financing risk and increase liquidity. On April 13, the company issued $1 billion of 3.6% notes due 2030, with the net proceeds to be used for general corporate purposes, including financing capital investments, additions to working capital and to repay existing

Analyst's Notes...Continued

debt.

On April 1, NiSource refinanced its $850 million term loan agreement with a new maturity date of March 31, 2021. Debt associated with the term loan is anticipated to be repaid with proceeds of the Columbia Gas of Massachusetts asset sale.

NiSource pays an annualized dividend of $0.84 per share, for a yield of about 3.6%. Our dividend estimates are $0.84 for 2020 and $0.88 for 2021.

MANAGEMENT & RISKS

The CEO of NiSource is Joseph Hamrock, 53, who assumed the position in July 2015. Mr. Hamrock, who joined NiSource in 2012, previously served as EVP and Group CEO for NiSource's Gas Distribution segment. He also has experience as an executive with American Electric Power. Donald E. Brown is the CFO.

Management is committed to electric and gas service expansion strategies in the company's regulated service territories, and to the expansion of its gas transmission and storage business. We think the company's platform for a return to growth is solid, and we are confident in management's ability to provide shareholders with increased value over the long term.

Key risks for stocks in our electric utility universe include fluctuations in interest rates and commodity prices, the effect of adverse weather on revenue, regulatory issues (especially involving construction cost recovery), and potential environmental and safety liabilities. In addition, the capital-intensive nature of the utility industry creates ongoing liquidity risk that must be actively managed by each company.

COMPANY DESCRIPTION

NiSource Inc. is an energy holding company whose subsidiaries are fully regulated natural gas and electric utility companies serving approximately 4.0 million customers in seven states. NiSource is one of the nation's largest natural gas distribution companies, as measured by number of customers. NiSource's principal subsidiaries include NiSource Gas Distribution Group Inc., a natural gas distribution holding company, and NIPSCO, a regulated gas and electric company. NiSource derives substantially all of its revenues and earnings from the operating results of these rate-regulated utilities.

VALUATION

We think that NI shares are favorably valued at current prices near $23-$24, toward the low end of their 52-week range of $20-$31. The shares trade at 16-times our 2021 EPS estimate, below the average P/E of 21.4 for comparable electric and gas utilities. They are also trading at a price/book multiple of 2.2, close to the peer average of 2.3. The price/cash flow ratio is 16.2, below the peer average of 19.5. The shares trade near the midpoint of their historical range on P/E, price/book and price/cash flow. The dividend yield of 3.6% is above the industry average of 2.8%. We are reiterating our BUY rating on NI with a 12-month target price of $32.

Peer & Industry Analysis

The graphics in this section are designed to allow investors to compare NI versus its industry peers, the broader sector, and the market as a whole, as defined by the Argus Universe of Coverage.

- **The scatterplot shows how NI stacks up versus its peers on two key characteristics: long-term growth and value. In general, companies in the lower left-hand corner are more value-oriented, while those in the upper right-hand corner are more growth-oriented.**
- **The table builds on the scatterplot by displaying more financial information.**
- **The bar charts on the right take the analysis two steps further, by broadening the comparison groups into the sector level and the market as a whole. This tool is designed to help investors understand how NI might fit into or modify a diversified portfolio.**

On May 29, BUY-rated NI closed at $23.25, up $0.08.

About Argus

Argus Research, founded by Economist Harold Dorsey in 1934, has built a top-down, fundamental system that is used by Argus analysts. This six-point system includes Industry Analysis, Growth Analysis, Financial Strength Analysis, Management Assessment, Risk Analysis and Valuation Analysis.

Utilizing forecasts from Argus' Economist, the Industry Analysis identifies industries expected to perform well over the next one-to-two years.

The Growth Analysis generates proprietary estimates for companies under coverage.

In the Financial Strength Analysis, analysts study ratios to understand profitability, liquidity and capital structure.

During the Management Assessment, analysts meet with and familiarize themselves with the processes of corporate management teams.

Quantitative trends and qualitative threats are assessed under the Risk Analysis.

And finally, Argus' Valuation Analysis model integrates a historical ratio matrix, discounted cash flow modeling, and peer comparison.

THE ARGUS RESEARCH RATING SYSTEM

Argus uses three ratings for stocks: BUY, HOLD, and SELL. Stocks are rated relative to a benchmark, the S&P 500.

- A BUY-rated stock is expected to outperform the S&P 500 on a risk-adjusted basis over a 12-month period. To make this determination, Argus Analysts set target prices, use beta as the measure of risk, and compare expected risk-adjusted stock returns to the S&P 500 forecasts set by the Argus Market Strategist.
- A HOLD-rated stock is expected to perform in line with the S&P 500.
- A SELL-rated stock is expected to underperform the S&P 500.

Power & COVID impact: ERCOT recovery & PJM markets

We had previously highlighted signs of a gradual turnaround in U.S. load, with total load bottoming out at -10% vs. pre-COVID expectations and then gradually improving to -8% vs. expectations, with ERCOT in particular showing meaningful growth from its lows after reversal of lockdowns in the state. In recent days, we have seen even further improvement, specifically in ERCOT with a 30% rally in the Jul-Aug '20 contract over the last two days. While this may have been partially driven by shifts in market sentiment around load trends, we *also* highlight weather as driving some of this upward movement. Separately, PJM recently stated it has over 187 GW of installed generation capacity available, relative to its forecast summer peak demand of 148 GW. This forecast compares to PJM's peak demand in 2019 of over 151 GW (i.e. '20 forecast is ~2% lower v. last year). PJM has seen load decline by ~10% as of mid-March due to COVID-related restrictions. We see the trends in ERCOT as only further affirming underlying positive load trends, especially in this the Central region which have proven consistently more resilient.

NI: '21 outlook updated: we see this implying ~$1.35

Seeing mgmt had already announced mitigation efforts to offset the loss of the MA biz largely (and seemingly affirmed), we effectively see the full impact. These are the variances from the last plan – and when at that time it was roughly ~$1.40 in '21 (higher end of $1.36-1.40 range was achievable in '21). Now, you have up to 10c Covid-related impacts off this $1.40, offset by *incremental* cost savings suggest $1.35. The NI load recovery is well under way and seemingly ahead of earlier plan. The 10c impact of Covid impacts appear *half from load degradation* (permanent/long ramp in C&I) as well as incremental expenses (reconnection fees, Covid-related mitigation costs). We see the mitigation efforts as *not entirely* different from the existing mitigation efforts already under way to offset loss of earnings from MA biz sale (principally dis-synergies from allocated SG&A). We note the wide range of expectations may prove offputting to investors upon initial look (albeit the wide range is perhaps the caution, *we* see this as roughly implying $1.35 likely *in-line with the reduced EPS expectations already and close our reduced $1.36 estimate already)*. The critical point is that Covid pressures are entirely under-earning related and should normalize out over time with future rate cases (this is not any reduction in '21 capex for instance after a slight earlier tweak to '20). We note this is the first update across the sector to provide an update on load expectations and cost reductions. <u>We also expect this load update on '21 to kickstart further moderation of EPS ests into next year across the sector.</u> We expect companies to continue to talk *up* the ongoing recovery in load in forthcoming meetings given numerous sellside meetings hosted in coming days (including our own mini-conference tomorrow).

LNT: acquired 675MW solar portfolio: executing against the expected buildout.. now it's time to watch WI approval

LNT announced to acquire 675MW solar portfolio at a purchase consideration of $900m of which tax equity partner would sponsor 35-40% of the investment outlay with the rest being financed by LNT's Wisconsin subsidiary. The company indicated to purchase tax equity's ownership in the projects within 10 years of operation. LNT expects to file an application with the PUC on the acquisition and anticipates a decision by 1H21. We note that LNT already signed purchase and sale agreements with the developers, subject to pending approval from the regulators, however, none of the projects are currently under construction. The company anticipates 425MW to be placed in service by 2022 and 250MW in 2023. Notably, last week the company announced early retirement of its Edgewater coal facility in Sheboygan in 2022. The latest development is no real surprise to us, given it is part of LNT's stated Clean Energy Blueprint plant for 1GW of solar in Wisconsin and in-line with its previous commentary on accelerating coal retirement with renewables installation to avoid hundreds of millions in long-term costs. Maintain Buy on LNT. *We note positive early indications from stakeholders in the state on regulatory approval prospects.*

Overall, the portfolio is comprised of six solar projects that include 200MW project developed by NEE sub NEER, a 150MW and 75MW facilities in Sheboygan County and Jefferson County, respectively, and developed by Ranger Power, a 150MW and a 50MW solar projects developed by Savion, owned by Macquarie Group Ltd.'s Green Investment Group and located in Wood County and Richland County, respectively, and a 50-MW facility in Rock County developed by National Grid's Geronimo Energy.

NI: rolled out details on COVID impact on EPS; No 20/21 EPS guidance still

NI rolled out supplementary details on COVID impact. While the slides include granular details on COVID 19 impact on operating EPS as well as mitigation measures to offset some of the pandemic impact, however, neither did the company provide 2020 EPS guidance (Recall they pulled it when MASS Sale to ES Was announced) nor did they reiterate 2021 EPS guidance. Specifically, the company quantified the impact to be ($0.15) – ($0.20) for 2020 and ($0.00)-($0.10) for 2021on NI's base case assumptions. However, the company expects mitigation measures initiated in April would likely offset $0.10-$0.15 and $0.05-$0.10 for 2020 and 2021, respectively.

Table 1: COVID 19 impact on net Operating EPS ($) for 2020/2021

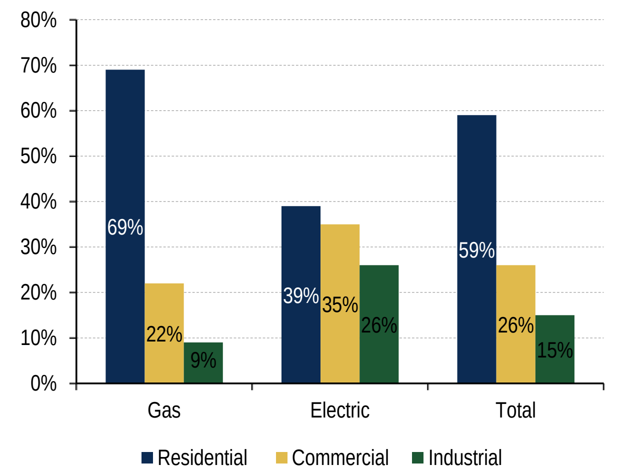
$	2020E	2021E
COVID-19 Impact on EPS Base Case	($0.15)-($0.20)	($0.00)-($0.10)
Mitigation Efforts - Initiated in April	$0.10-$0.15	$0.05-$0.10
Estimated Net NOEPS Impact	($0.00)-($0.10)	($0.00)-($0.10)

Source: BofA Global Research, Company report

While the company stressed on non-safety related savings in O&M, recovery for COVID related impacts and improving organization efficiencies by addressing dis-synergies, however, they did not quantify anticipated O&M savings to combat the COVID losses.

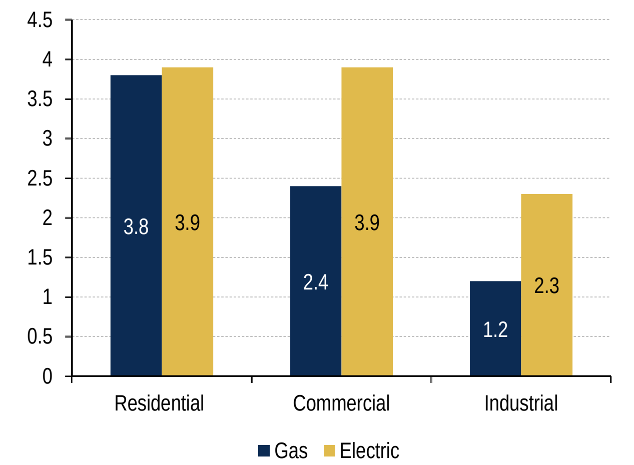
Meanwhile, NI outlined the detail on retail margins by customer class, in-addition to providing pre-tax operating earnings sensitivity to 1% change in annual sales volume both by customer class and by segment, besides noting out the COVID 19 impact on weather normalized April 2020 sales volumes as compared to April 2019 (4%/26% decline in Gas Distribution and Electric Operations). $8.1m margin loss booked in April 2020 reflecting the mitigation efforts initiated by the company.

Chart 1: Retail Margins by customer class and by segment



Source: BofA Global Research, Company report

Chart 2: Pre-tax operating income sensitivity to +/- 1% change in sales volumes ($M)



Source: BofA Global Research, Company report

However, the company did mention mid to late May trend in volumes indicated a recovery from April lows. While the company expects a rise in bad debt expense, however, reiterated rate design and availability of bad debt recovery mechanisms in certain states. The company requested IN IURC to create a bad debt tracker, besides deferring bad debt expenses much in-line with the states like MD, VA, and PA, which already allowed deferral of COVID related expenses and bad debt.

Critically, where many co's can use O&M savings to balance impacts, we see this as a greater challenge to NI as it promised it would pursue a program of cost savings to mitigate NT impacts of the CMA sale to ES this 3Q. With 2020 guidance having already been pulled related to the CMA sale, we only have an adj 2021 guide of a $1.36-1.40/sh 'earnings floor' (see this as risk). We previously downgraded NiSource to Neutral from Buy due to our concerns around absorbing lower demand from COVID.

Delaware BK court approved Longview's prepackaged reorganization plan

The U.S. Bankruptcy Court for the District of Delaware has confirmed Longview Power's prepackaged reorganization plan filed in April, effectively transferring company's equity ownership to its senior secured debt holders offsetting its $350m existing debt. The company would receive $40m as term loan to fund its working capital and capex program for next five years upon emergence from bankruptcy. We note the reorganization plan has no impact on the creditors as well as its employees.

NEE: Gulf Power requested FL PSC to allow deferral of bad debt/safety costs

Given anticipation of continuous rise in bad debt expense and safety costs associated with COVID, NEE subsidiary Gulf Power Co. requested Florida PSC (Florida PSC Docket No. 20200151-EI) to allow the company to defer bad debt expenses and safety costs associated with COVID as regulated asset that can be recovered later or to provide any other relief much in-line with states that have already ordered to create some sort of recovery mechanisms either through deferral of bad debt, creation of a regulatory asset, or by recording and tracking costs related to COVID-19. The utility proposed regulators to determine eligibility for bad debt to be deferred as regulated asset by taking the difference between the bad debt expense for a month in 2020 and the average bad debt expense for last three years, besides deferring safety costs by taking actual spending on safety measures related to COVID and as guided by the U.S. Centers for Disease Control and Prevention and the Florida Department of Health.

Price objective basis & risk

Alliant Energy Corporation (LNT)

Our $52 PO is based on a sum of the parts analysis employing relative premium and discounts to the large cap regulated peer multiple of 16.3x 2022E P/E. While our PO is on a 1 year basis we note the 2022 P/E multiple reflects a discount back to 2019. We note that electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector.

We apply a 2.0x P/E premium on IPL as we see the ratecase overhang being resolved. We apply a 3.0x P/E premium on Eastern Wisconsin Electric Company reflecting 1) low risk investment nature of the state, 2) above average ROEs, 3) higher than average growth runway for investments, and 4) bad debt deferral. At ATC, we reflect a 2.0 x P/E premium on LNT's 16% share in the transmission company. Growth expectations for this segment are high, paired with above average ROEs that we believe face less downward pressure vs. regulated state distribution ROEs. We apply an in line multiple at the parent to account for the blend of numerous businesses some which benefit from long term stable PPAs via intercompany generation.

Risks to our price objective are: 1) adverse rate case outcomes, 2) further equity dilution beyond our estimates, 3) interest rate risk, 4) natural disasters, and 5) lower allowed ROE's

NextEra Energy (NEE)

Our $258 PO is derived using a SOTP approach, with the utilities and parent segment valued on a 2022E P/E basis, and the generation segment valued on a 2022E EV/EBITDA basis. In addition, we include NEE's ownership stake in NextEra Energy Partners (NEP) as well as the value of IDRs (DCF, at 7% disc rate). We assign peer multiple of 17.0x (and gross this up by 5% to reflect capital appreciation across the sector) with disc/prem to the assets that reflect the growth/risk profile of the businesses. We provide value for possible regulated M&A announced as one strategy of capital redeployment, albeit weighted at 50% to reflect execution risk. Our valuation reflects the drag from the $5.1bn in new debt. For NEER, we apply a peer EV/EBITDA multiple of 8x, which we adjust depending on asset type. Give contracted renewables 6x prem given fuel type and contracted nature. We apply 2x discount to merchant nuclear (aside from Seabrook), and value contracted nuclear on a DCF approach using a 10% discount rate. We apply a 3x prem multiple to pipelines (2x for MVP), 1x discount to gas infrastructure and 2x discount for supply and trading given lower asset quality, line multiple for contracted gas peakers and 1x discount for merchant peakers (other), again based on asset quality. Downside risks: 1) unfavorable regulatory outcomes in Florida which could negatively affect ability to earn authorized ROE or lower authorized ROE, 2) higher interest rates, 3) changes in commodity prices.

NiSource Inc (NI)

Our $27 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2022 forward P/E multiples of 17.8x for gas utilities and 17.2x for electric utilities with an inline mult for gas utilities with just weather normalization, a 0.5x prem for gas utes with revenue normalization (prev 0x), and a 1.0x premium for the electric utility's strong growth rates (we factor in BOT in '24 EPS) but acknowledgement of industrial risk (prev 2x). We note that electric / gas peer P/E multiples are grossed up by 5% / 5.1% to reflect capital appreciation across the sector. We strip value from Columbia Gas of MA given the pending sale to close in 3Q20. We subtract the value of excess holding company debt at the parent not supporting the utility opcos. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its discounted multiple versus peers.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, financing plan updates, unforeseen costs associated with the MA incident, and challenging steel production economics in Indiana.

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.

This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.

Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Securities entities located outside of the United Kingdom.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

Copyright and General Information:

Materials prepared by BofA Global Research personnel are based on public information. Facts and views presented in this material have not been reviewed by, and may not reflect information known to, professionals in other business areas of BofA Securities, including investment banking personnel. BofA Securities has established information barriers between BofA Global Research and certain business groups. As a result, BofA Securities does not disclose certain client relationships with, or compensation received from, such issuers. To the extent this material discusses any legal proceeding or issues, it has not been prepared as nor is it intended to express any legal conclusion, opinion or advice. Investors should consult their own legal advisers as to issues of law relating to the subject matter of this material. BofA Global Research personnel's knowledge of legal proceedings in which any BofA Securities entity and/or its directors, officers and employees may be plaintiffs, defendants, co-defendants or co-plaintiffs with or involving issuers mentioned in this material is based on public information. Facts and views presented in this material that relate to any such proceedings have not been reviewed by, discussed with, and may not reflect information known to, professionals in other business areas of BofA Securities in connection with the legal proceedings or matters relevant to such proceedings.

This information has been prepared independently of any issuer of securities mentioned herein and not in connection with any proposed offering of securities or as agent of any issuer of any securities. None of BofAS any of its affiliates or their research analysts has any authority whatsoever to make any representation or warranty on behalf of the issuer(s). BofA Global Research policy prohibits research personnel from disclosing a recommendation, investment rating, or investment thesis for review by an issuer prior to the publication of a research report containing such rating, recommendation or investment thesis.

Any information relating to the tax status of financial instruments discussed herein is not intended to provide tax advice or to be used by anyone to provide tax advice. Investors are urged to seek tax advice based on their particular circumstances from an independent tax professional.

The information herein (other than disclosure information relating to BofA Securities and its affiliates) was obtained from various sources and we do not guarantee its accuracy. This information may contain links to third-party websites. BofA Securities is not responsible for the content of any third-party website or any linked content contained in a third-party website. Content contained on such third-party websites is not part of this information and is not incorporated by reference. The inclusion of a link does not imply any endorsement by or any affiliation with BofA Securities. Access to any third-party website is at your own risk, and you should always review the terms and privacy policies at third-party websites before submitting any personal information to them. BofA Securities is not responsible for such terms and privacy policies and expressly disclaims any liability for them.

All opinions, projections and estimates constitute the judgment of the author as of the date of publication and are subject to change without notice. Prices also are subject to change without notice. BofA Securities is under no obligation to update this information and BofA Securities ability to publish information on the subject issuer(s) in the future is subject to applicable quiet periods. You should therefore assume that BofA Securities will not update any fact, circumstance or opinion contained herein.

Subject to the quiet period applicable under laws of the various jurisdictions in which we distribute research reports and other legal and BofA Securities policy-related restrictions on the publication of research reports, fundamental equity reports are produced on a regular basis as necessary to keep the investment recommendation current.

Certain outstanding reports or investment opinions relating to securities, financial instruments and/or issuers may no longer be current. Always refer to the most recent research report relating to an issuer prior to making an investment decision.

In some cases, an issuer may be classified as Restricted or may be Under Review or Extended Review. In each case, investors should consider any investment opinion relating to such issuer (or its security and/or financial instruments) to be suspended or withdrawn and should not rely on the analyses and investment opinion(s) pertaining to such issuer (or its securities and/or financial instruments) nor should the analyses or opinion(s) be considered a solicitation of any kind. Sales persons and financial advisors affiliated with BofAS or any of its affiliates may not solicit purchases of securities or financial instruments that are Restricted or Under Review and may only solicit securities under Extended Review in accordance with firm policies.

Neither BofA Securities nor any officer or employee of BofA Securities accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this information.

1Q20 Earnings Preview

Natural Gas | Decrease Target Price

NI

Target price (12M, US$)
27.00
Outperform

- **We are expecting a modest 1Q20 miss** at $0.77 vs cons $0.81 due mostly to unfavorably mild weather.
- **We are reducing our 2020 estimate $0.02 to $1.32 vs consensus $1.34 for lower commercial/industrial load from COVID19 pandemic response**. Our 2021 and 2022 estimates are unchanged. Mostly a gas utility system, NI should be less affected from COVID19 load reduction in 2/3Q than its more electric peers. Recall that 2020 guidance of $1.36-$1.40 was pulled in 4Q19 given the pending sale of Columbia Gas of Mass. We estimate that the Mass utility earns ~$0.08 EPS and view the sale as slightly EPS accretive to prior 2021 expectations (including a few pennies improvement in Mass) when including the elimination of a planned block equity sale this year. However, roughly -$0.05 of corporate disynergies are still expected to hit EPS in 2021 that make the full set of planned actions this year overall dilutive to prior expectations (we previously reduced our earlier estimate of $1.46 to $1.42), although management intends to work to reduce or eliminate these costs over time.
- **Equity needs: No block equity needed in 2020, nor any going forward,** with unchanged plans for $200-$300M annual ATM and $35-$60M employee plan equity (no plans for use of convertible or hybrid financing). NI is targeting FFO/Debt ~14%-15%.
- **Valuation:** We are reducing our TP $4 to $27, primarily for lower peer 2021 electric and gas utility P/Es within a SoTP valuation. We continue to apply a 1.5x premium to the gas utilities for favorable regulatory jurisdictions and lower operational risk since the explosive incident in Lawrence Mass in 2018. We continue to value the electric operation in Indiana at a 1.5x premium for excellent operations and supportive regulation. Risks include 1) ROE risk related to the ongoing ratecases, 2) continued approvals relating to infrastructure replacement/grid modernization programs, 3) commodity risk, 4) interest rate risk, 5) derivative risk, 6) load growth risk particularly in the non-decoupled jurisdictions, 7) weather risk, 8) environmental and climate change risk, 9) physical infrastructure and cybersecurity risk, 10) continued improvement to gas system operations safety, 11) COVID19 pandemic response load reduction, particularly at the electric utility.

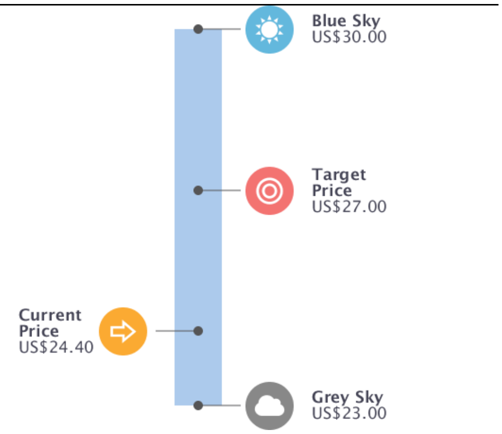
Company Background

NiSource Inc. is energy holding company whose subsidiaries provide natural gas, electricity & other products & services. It operates in 3 segments: Gas Distribution Operations; Gas Transmission & Storage Operations, & Electric Operations.

Blue/Grey Sky Scenario



Our Blue Sky Scenario (US$) **(from 34.00) 30.00**

In our blue sky scenario we assume favorable regulatory outcomes across NI's jurisdictions, successful execution of their capital plan, and growth of infrastructure replacement program backlog. We assume that capex is at the high end of the $1.8-$1.9B and that NI is able to grow ratebase at the high end of their 8-10% range and grow earnings at the high end of their 5-7% range. We assume a 3.0x premium to the average peer 2021 P/E multiples.

Our Grey Sky Scenario (US$) **(from 26.00) 23.00**

In our grey sky scenario we assume unfavorable regulatory outcomes across NI's jurisdictions, only partial execution of their capital plan, and a decline in the infrastructure replacement program backlog. We assume that capex is at the low end of the $1.8-$1.9B and that NI is able to grow ratebase at the low end of their 8-10% range and grow earnings at the low end of their 5-7% range. We assume a -1.5x discount to the average peer 2021 P/E mult.

Additional Commentary

- **See our recent reports:** 2/28 Raise to Outperform on Sale of Mass, Elimination of Block Equity Plan, 1/17 2020 Earnings Preview, 2020 Outlook – Getting Meaner and Less Defensive, 11/14 EEI 2019 Financial Conference: Full Takeaways, 11/1 New Growth Trajectory after Equitizing, 10/30 3Q Miss with 2020 Guidance a Bit Light, 8/7 Downgrade to Neutral on Gas Operations Risk
- **Equity needs: No block equity needed in 2020, nor any going forward,** with unchanged plans for $200-$300M annual ATM and $35-$60M employee plan equity (no plans for use of convertible or hybrid financing) with management targeting FFO/Debt ~14%-15%. Recall that on the 4Q19 call, prior guidance for $500-$700M block equity guidance for 2020 was pulled out after the announced sale of Columbia Gas of Mass to Eversource (ES). This is in addition to the annual $200-$300M through its ATM program to help fund Lawrence, MA incident expense. ATM for 2019 was $229M. This comes on top of ongoing and unchanged plans for $200-$300M annual ATM and $35-$60M employee plan equity (no plans for use of convertible or hybrid financing) with management targeting FFO/Debt ~14%-15%. Recall also that management had previously stated that they do not need to issue equity in early 2020 to hit their metrics, choosing first to wait for recovery of insurance policies which have a combined limit of $1.1B (Casualty/Property $800m/$300M). Company still expects to make capital investments of $1.8B-$1.9N in 2020.
- **Pension & OPEB. ~98% funded as of yearend 2019, with 52% of pension plan assets in equities (45% of OPEB assets).** A 50 bps decline in the discount rate is expected to result in a $97.7M increase in projected pension obligation and a $31.8M increase in OPEB obligation, as well as a $2.6M increase in net plan expense. For a 50 bps decline in expected long-term rate of return on pension and OPEB plan assets, net expenses are expected to increase $10.1M
- **Decoupling.** Full decoupling in OH, MA, MD, VA. Weather normalization in KY, MD, VA, PA.
- **Bad debt handling.** Clauses for bad debt in KY, OH, MD, PA, VA, MA & IN.
- **Stimulus bill impacts:** management is still evaluating the potential benefits from NOLs and AMT credits.
- **A federal guilty plea and the sale of Columbia Gas of Mass.** On Wednesday, 2/26, the US Department of Justice announced that NI will plead guilty to a criminal violation of the federal Natural Gas Pipeline Safety Act and pay a $53M fine in connection with the Sept 2018 gas explosion incident in Merrimack Valley, Massachusetts. NI has also agreed to sell its operations in Massachusetts to ES for $1.1B and will forfeit any profit earned from the sale (none expected, so retaining the whole $1.1B). A plea hearing has not yet been scheduled. The plea is on a corporate level; no individual officers or employees of the company were charged.
- **Sale of Columbia Gas of Massachusetts to Eversource for $1.1B - with no gains allowed (or expected).** NI has also agreed to sell its operations in Massachusetts to ES and will forfeit any profit earned from the sale. We calculate that ES is purchasing at a 1.0x multiple of ratebase, or 19.7x 2021 P/E at the allowed 9.55% ROE – in line with the group average. However, the elimination of a planned $500-$700M block equity issuance this year brings the combined effect to about breakeven to a modest $0.01 accretion to 2021 expectations before accounting for -$0.05 corporate dissynergies. Among our assumptions illustrated in the figure above: Value for the $1,100M ratebase utility of ~$1,074M at 19.2x 2021 EPS is below ~$1,400 book value. We expect speedier regulatory approvals than is normally the case given the demonstrated desire of state and federal officials for a transfer of ownership. The transaction will require approval from the Massachusetts Department of Public Utilities and the U.S. Justice Department under the Hart-Scott-Rodino Act. "ES and

Columbia Gas intend to engage with key regulatory stakeholders and consumer advocates over the next 30 days to review the investments needed to operate the system, to minimize rate impacts and review key benefits for customers." Expect the transaction to close by the end of 3Q20.

- **Additional potential penalties – we assume ~$50M later this year in our valuation.** In addition to this latest action, the NTSB issued its final report on the incident in Oct 2019 and two additional investigations are ongoing at the Mass Department of Public Utilities (DPU). Specifically, the DPU is authorized to assess civil penalties up to $219k for a violation of federal pipeline safety regulations up to a maximum $2.2M for a series of violations, as well as $250k per day for violations of its emergency response plan up to a maximum $20M. Furthermore, as a result of the Governor's declaration of emergency, the DPU may also assess a penalty of $1M per violation of the regulator's operational directives during restoration efforts – without any maximum.

- **Higher capex for gas and electric transmission.** Management now guides to annual infrastructure investment $1.8B-$1.9B for 2020 vs prior 2020 update of $1.7B-$1.8B provided in Q3. Capex for 2019 was ~$1.9B vs guided $1.7-$1.8B. Spending categories include gas pipeline transmission capital (Ohio) and higher spending for electric transmission in Indiana to support future renewables. Information Technology upgrades for grid modernization are also included. >75% of capex begins earnings in under 18 months.

- **Current Debt Level is now $9.643B** vs 9.480B in Q3. Long term debt is unchanged at ~$7.7B. Weighted average maturity ~17 years and weighted average interest rate is 4.4% as of 12/31. **Net Available Liquidity unchanged at ~$1.4B** as of Dec 31st. ~$0.4B in accounts receivable securitization facilities as of 12/31 vs ~$0.3B in Q3. **Financing Targets for Adj. FFO/Total Debt still at ~14-15%.**

- **NI is in a rare period now with no significant rate activity.** The next major rate filing will probably be in Pennsylvania as there was none in 2019 and this is typically an annual affair. The company received a final order in the Indiana electric ratecase with a 9.75% (vs prior 9.9%) and a new rate structure for industrial customers that allows the utility to manage market purchases in order to keep track of capacity requirements (reduces risk of stranded assets). Accelerated coal retirement and book value recovery to 2032 was also approved. Orders were also recently issued in MD and KY. We do not expect a filing in Mass until 2021 at the earliest, after two remaining Greater Lawrence investigations at the Department of Public Utilities (DPU) wrap up.

- **Valuation.** We are reducing our TP $4 to $27, primarily for lower peer 2021 electric and gas utility P/Es within a SoTP valuation. We continue to apply a 1.5x premium to the gas utilities for favorable regulatory jurisdictions and lower operational risk since the explosive incident in Lawrence Mass in 2018. We continue to value the electric operation in Indiana at a 1.5x premium for excellent operations and supportive regulation. Risks include 1) ROE risk related to the ongoing ratecases, 2) continued approvals relating to infrastructure replacement/grid modernization programs, 3) commodity risk, 4) interest rate risk, 5) derivative risk, 6) load growth risk particularly in the non-decoupled jurisdictions, 7) weather risk, 8) environmental and climate change risk, 9) physical infrastructure and cybersecurity risk, 10) continued improvement to gas system operations safety, 11) COVID19 pandemic response load reduction, particularly at the electric utility.

** Asterisk signifies initiation or assumption of coverage.*

As of December 10, 2012 Analysts' stock rating are defined as follows:
Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.
Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.
Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European (excluding Turkey) ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin America, Turkey and Asia (excluding Japan and Australia), stock ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark (India - S&P BSE Sensex Index); prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.

Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:

Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.

Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.

Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	49%	(33% banking clients)
Neutral/Hold*	38%	(26% banking clients)
Underperform/Sell*	12%	(22% banking clients)
Restricted	1%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Target Price and Rating
Valuation Methodology and Risks: (12 months) for NiSource Inc. (NI.N)

Method: We arrive at our $27 target price for NI by applying a 1.5x premium to the gas segment peer 2021 P/E to reflect the constructive regulatory environments with capex trackers in place in the jurisdictions that NI operates. We also apply a 1.5x premium to the average peer electric utility 2021 P/E multiple for NIPSCO Electric utility in Indiana to reflect the favorable ratebase growth profile and regulatory environment in the state. Our OUTPERFORM rating reflects a forecasted total return that is equal the group average.

Risk: Risks to our $27 target price and OUTPERFORM rating are: 1) ROE risk related to the ongoing ratecases 2) continued approvals relating to infrastructure replacement/grid modernization programs 3) commodity risk, 4) interest rate risk, 5) derivative risk, 6) load growth risk particulary in the non-decoupled jurisdictions, 7) weather risk, and 8) environmental and climate change risk, 9) physical infrastructure and cybersecurity risk, 10) continued improvement to gas system operations safety after the 2018 explosion incident in Mass. 11) COVID19 load reductions

Please refer to the firm's disclosure website at https://rave.credit-suisse.com/disclosures/view/selectArchive for the definitions of abbreviations typically used in the target price method and risk sections.

Quantifying sensitivities: Reduce EPS -4c and downgrade

We downgrade NiSource to Neutral from Buy due to our concerns around absorbing lower demand from COVID and lower our PO to $27 from $28. With peers starting to report neg impacts from at-home data and NI's -3%/-10% drop in commercial/industrial gas sales from '08 to '09 (-2%/-17% for electric), we see impacts as understated. *Critically, where many co's can use O&M savings to balance impacts, we see this as a greater challenge to NI as it promised it would pursue a program of cost savings to mitigate NT impacts of the CMA sale* to ES this 3Q. With 2020 guidance having already been pulled related to the CMA sale, we only have an adj 2021 guide of a $1.36-1.40/sh 'earnings floor' (see this as risk). To reflect sales impacts we reduce our ests -4c in '20 to $1.29/sh and '21 to $1.36/sh (*now to the bottom of the '21 floor*). This equates to a modest -2% change in annual sales volumes for electric and gas C&I, +1% change in electric and gas resi and no further O&M cuts. The impact into '21 reflects commercial billing structure (typically 12-month trailing) and our view revenue will likely be impacted in '21 as well. We have the co recovering through '22 and '23, fully back to normal by '24 – when it should have EPS support from NIPSCO renewable BOTs case. We MtM the peer mult (17.8x gas / 17.2x electric) and update premiums: Electric now 1x (from 2x) to reflect C&I exposure but BOT opp, and OH, VA and MD now 0.5x (from 0x) to reflect revenue normalization. At a $27/sh PO, we see balanced risks; downgrade to Neutral.

Recognizing potential COVID impacts on rate structure

Our ests shift factors in NI's sensitivity, which asserts that a 1% change in demand for electric resi/ C&I and for gas resi/ commercial would each result in a 1c EPS impact. We acknowledge that in NI's favor, a number of subs are revenue decoupled or normalized, that all gas subs have bad debt trackers, that peak winter gas use was before COVID, and that NIPSCO Electric already shed itself of largest industrial cust's through Rate 831. However, there are still some key pressure points that cause our concern: NIPSCO gas and electric are not normalized; KY and PA are only weather normalized for resi (KY for commercial); commercial bills have a lower fixed component (25% electric / 45% gas) compared to resi (20% / 75%); tough timing of the PA rate case in the midst of COVID with a 10.95% ROE ask; and Industrial cust's still represent 26% of Electric margins.

Company Sector

Natural Gas-Local Distribution Companies

Company Description

NiSource Inc. (NI) is a fully-regulated utility company serving approximately 3.5mn natural gas customers and 500,000 electric customers across seven states through its local Columbia Gas and NIPSCO brands. NI generates substantially all of its operating income through these rate-regulated businesses.

Investment Rationale

NI's positives include 5-7% earnings/dividend growth via $30bn of infrastructure investments over the next 20+ years and fully regulated subsidiaries. We have factored in resolution of overhang from the MA incident as the company will likely sell 3Q. However, NI has C&I demand risk from COVID, which will be difficult to offset with O&M cuts due to promises already around cost cuts to balance CMA sale. We see shares valued appropriately and rate Neutral.

Stock Data

Average Daily Volume	3,492,787

Quarterly Earnings Estimates

	2019	2020
Q1	0.82A	0.75E
Q2	0.05A	0.79E
Q3	0A	0.02E
Q4	0.45A	-0.11E

How we see the shares

We show NI vs the IXU index below, recognizing that since the end of last year, the company has re-rated ~5%. We stress renewed risks that while split between its gas and electric utility exposure its latest disclosures on rate sensitivity highlight an unusually high gross sensitivity across both businesses vs. peers to changes in load – and more critically – continue to see exposure to the electric side of the business regardless of the heating season closing for its gas businesses. While partially moderated we perceive challenges to finding *additional* cost offsets to the already ambitious cost mitigation efforts (seemingly 8c of SG&A cost allocation need to be overcome with the sale). While management implicitly announced this with the 4Q results recently, we stress the need to find further cuts remains potentially elusive. As such, we could see management shift lower its guidance on '21 (below that it was seeking of a flat guide vs. earlier '20 guide, which was pulled at the time of its sale).

Remember that the SG&A cost allocation issue is one that is trued-up in future rate cases – and should provide more meaningful EPS growth in future years through the subsequent cycle of cases. Further pressures anticipated on the electric side from Covid should conceivably be addressed in the next rate case, but given the already more meaningful hike implemented on (principally residential and commercial) customers in the last case due to re-allocation of customer tariffs we find timeline as likely protracted for recovery: subsequent NIPSCO electric case is still likely tied to future renewable investments. We have seen Indiana as a jurisdiction becoming more difficult in recent periods given outspoken coal interest groups among others and the potential need for further relief to true-up rates could yet add to our concerns (this appears even more painful of a reality for CNP).

While we still see the longer-term story improving, the impact of Covid related costs could not come at a more acute point in time given significant cost cutting effort launched (to be released presumably later this year for NI). The extent of its cautious setup around Covid *only recently* became evident with the disclosure of greater load sensitivities and with further confirmation from adjacent peers (the likes of CMS, DTE, etc) of even more material declines than initial feared (sales have decelerated sharply in the April timeframe overall, in contrast to March).

Net-net, the appeal for a company that remains thoughtful in its approach to both rate cases and broaching renewable rate base additions, we see its premium as adequate.

Why we're cautious with the name

- **2008 performance**: In the tables below, we show revenues ($mn), sales and transportation (MMDth), weather, and customers for both gas and electric distribution operations from 2007 to 2010 from NI's 2009 and 2010 10K's – broken down by class. We calculate simple YoY changes to demonstrate that from '08 to '09 in the last financial crisis, NI gas revenues were impacted -32% in total (but largely -23% for resi, commercial and industrial), and gas sales were impacted -10% in total (-5% for resi, -3% for commercial, and -10% for industrial). For electric from '08 into '09, revenues were impacted -10% in total (-2% for resi, +1% for commercial, and -14% for industrial), and electric sales were impacted -11% in total (-3% for resi, -2% for commercial, and -17% for industrial). Customers stayed largely the same (1-2% less for industrial during this time). Also note that there were 3% fewer heating degree days for gas and 27% fewer cooling degree days for electric. We point out this data and argue that our adjustment downward in estimates (-4c in '20 and '21 based on a 1c per 1% sales change and expectation increase in resi balances decrease in C&I) could be considered conservative.

- **EPS sensitivities**: NI has a decently sized EPS sensitivity for the gas and electric commercial and electric industrial classes. In its last slide deck, NI published that each category (the three above, as well as gas and electric resi classes) are subject to a 1% EPS impact if there is a 1% change in sales volumes (annually, although NI noted this is not linear).

- **O&M cost cuts already**: NI already promised O&M cuts to balance the impact of the Massachusetts subsidiary sale (expected this 3Q). We see this as limiting the degree to which *more* cuts are possible. We make this point because some peers were expecting a YoY *increase* in expenses, and we see names with these increases as having more room to make cuts in 2020. We listen closely to this point in the 1Q call.

Source: BofA Global Research estimates, company report

- **Rate case activity**: NI previously indicated there could be potential rate case filings in PA and MD in 2020, given the 12-18 month tenor of states' rate case filings. As we saw at the end of last week, NI filed a case in Pennsylvania for a $100.4mn annual revenue request at a 10.95% ROE (a 17-18% resi bill increase & 13-16% C&I bill increase) to be effective 2021. We do acknowledge that PA is only weather normalized rather than revenue normalized so could benefit from a rate case, but we see the timing ultimately challenging given it is in the midst of the pandemic. Note we could see a rate case in MD as well; timing has not been conveyed yet here.

- **Electric bad debt recovery**: Unlike the gas subsidiaries, NIPSCO Electric does not have a bad debt tracker. We wonder how this will impact the company particularly as it just received the result of the last rate case, indicating that it might be difficult to go in sooner to recover.

- **Rate 831 good, but still industrial exposure**: Rate 831 approved in NIPSCO electric's last rate case did shed the company of large industrial risk as these cust's are now purchasing directly from MISO. However, not all industrial exposure was shed. As indicated in NI's last slide deck, mid-sized industrial customers still make up 26% of electric margins.

The ways we see NI as overcoming some challenges

- **Gas use in winter *pre-stay-at-home***: As NI is a gas-heavy name, we admit a benefit being that peak-use during the winter was already largely over before COVID caused many states to issue shut downs. Indeed a mild winter, but NI is largely weather normalized, so weather is not a driver for non-GAAP earnings. Further, gas is mostly residential (i.e. 69% of margins), which indicates some resilience for the company as negative demand impacts are largely at the C&I level (although this limits the positive counterbalance as resi gas is 75% fixed).

- **Quarterly bad debt recovery**: We point out that NI subsidiaries generally have more frequent bad debt recovery than peers. Specifically for NIPSCO Gas, PA, VA, MD, and KY, there are quarterly recoveries. Other subs have annual or semi-annual recoveries, which helps reduce tenor of impact instead of waiting like others for recovery through a rate case.

- **Pension**: At year-end 2019, pension was 98% funded and just 31% equity. Compared to peers, we see NI less exposed to pension concerns.

Estimates

In the estimates below, we adjust our expectations around under-earning versus authorized ROEs. We point out that we discount the utilities without decoupling or revenue normalization (PA, NIPSCO, KY) more than those with it (OH, VA, MD) in '20 and '21.

Table 3: Earned vs Authorized ROE expectations

Earned ROEs	Authorized	2020E	2021E	2022E	2023E	2024E	2025E
Gas Utilities							
Columbia Gas of OH	10.39%	9.89%	9.89%	9.89%	10.14%	10.14%	10.14%
Columbia Gas of PA	10.00%	8.75%	8.75%	9.25%	9.50%	9.75%	9.75%
NIPSCO Gas	9.85%	8.60%	8.60%	8.85%	9.35%	9.60%	9.60%
Columbia Gas of MA	9.55%	1.05%					
Columbia Gas of VA	10.00%	9.25%	9.25%	9.50%	9.50%	9.50%	9.50%
Columbia Gas of KY	9.50%	8.25%	8.25%	8.75%	9.00%	9.25%	9.25%
Columbia Gas of MD	9.70%	8.95%	8.95%	9.45%	9.45%	9.45%	9.45%
Electric Utilities							
NIPSCO Electric	9.75%	9.00%	9.00%	9.25%	9.25%	9.75%	9.75%

Source: BofA Global Research estimates, company report

We find that estimates shift -4c for '20 and '21, -3c in '22, and -1c in '23 before returning to normal in '24 and '25. Our '24 estimates include assumptions for BOT build in NIPSCO Electric associated with round 1 and 2 of build-own-transfers, a key reason why we are higher than Consensus in these outer years.

Valuation

Below we MtM the peer multiple to 17.x8 for gas and 17.2x for electric (17.0x / 17.2x prior). We also adjust our premium assumptions. For Electric, we move the premium down from 2x to 1x because of the underlying sensitivities for both commercial and industrial demand and lack of decoupling. We still award the 1x because of the ratebase opportunity for build-own-transfer projects associated with the RFPs that are not yet factored into long-term guidance. We also shift up premiums from 0x to 0.5x for gas utilities in OH, VA, and MD because of the decoupling and revenue normalization the subs have; our other gas subs keep the 0x premium as they are more sensitive to COVID impacts on demand, although note that the hefty demand portion of 1H20 is already behind us (winter).

With these adjustments, we find just a 7.5% return at a $25/sh PO and we downgrade NI to Neutral from Buy.

Price objective basis & risk

NiSource Inc (NI)

Our $27 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2022 forward P/E multiples of 17.8x for gas utilities and 17.2x for electric utilities with an inline mult for gas utilities with just weather normalization, a 0.5x prem for gas utes with revenue normalization (prev 0x), and a 1.0x premium for the electric utility's strong growth rates (we factor in BOT in '24 EPS) but acknowledgement of industrial risk (prev 2x). We note that electric / gas peer P/E multiples are grossed up by 5% / 5.1% to reflect capital appreciation across the sector. We strip value from Columbia Gas of MA given the pending sale to close in 3Q20. We subtract the value of excess holding company debt at the parent not supporting the utility opcos. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its discounted multiple versus peers.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, financing plan updates, unforeseen costs associated with the MA incident, and challenging steel production economics in Indiana.

Analyst Certification

I, Julien Dumoulin-Smith, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

iQmethod[SM] is the set of BofA Global Research standard measures that serve to maintain global consistency under three broad headings: Business Performance, Quality of Earnings, and validations. The key features of iQmethod are: A consistently structured, detailed, and transparent methodology. Guidelines to maximize the effectiveness of the comparative valuation process, and to identify some common pitfalls.

iQdatabase® is our real-time global research database that is sourced directly from our equity analysts' earnings models and includes forecasted as well as historical data for income statements, balance sheets, and cash flow statements for companies covered by BofA Global Research.

Equity Investment Rating Distribution: Global Group (as of 31 Mar 2020)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1602	52.15%	Buy	1005	62.73%
Hold	713	23.21%	Hold	463	64.94%
Sell	757	24.64%	Sell	382	50.46%

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Midstream & Refining
Unusual Winter: Heat Stroke & COVID

April 24, 2020

Key Takeaway

Covered utilities came under considerable pressure as COVID-19 fears spread in March, economic repercussions expanded, and indiscriminate selling took hold. We capitalized on that dislocation with select upgrades, but as the group has now sharply recovered, we downgrade NI ($28 PT) & SWX ($72 PT) to Hold, from Buy. We believe the group's rate-regulated model insulates earnings & cash flows from the economic contraction, but it does not provide total immunity.

COVID-19 impacts to be a focus on 1Q calls. Relative to other areas of our coverage (Refining & Midstream), we expect modest impacts to gas & electric distribution operations stemming from the spread of COVID-19 and various self-quarantine responses adopted in response to it. However, we do not anticipate the utilities will be completely unscathed as the economic toll resulting from such actions will hit demand and customer creditworthiness. For example, data indicates weather-adjusted power demand is off 8-9% in some US markets, with harder-hit regions such as NYC down roughly 16%, though the power load has simultaneously seen a sharp shift from coal to gas-fired generation. Should the crisis deepen and/or extend longer than we project, utilities may experience elevated bad debt expense, less favorable regulatory outcomes, and higher pension costs resulting from poor asset performance & lower discount rates; however, across our coverage, balance sheets are strong, liquidity is robust, and maturity schedules are long dated. Moreover, the dramatic decline in crude and product prices should aid fleet vehicle expenses, mild weather eases winter/spring working conditions, and dividend yields are even more attractive in light of the Fed's rate cuts. We look forward to company-specific updates as each company reports results.

1Q US temperatures ~14% warmer y/y. Under normal weather conditions, 1Q accounts for roughly one-half of annual Heating Degree Days (HDDs) and, nationwide, in 1Q20, HDDs were 14% lower y/y and ~10% below long-term 1Q averages, with only the southwest seeing colder conditions y/y (Chart 1). The proliferation of weather normalization clauses mute the impact of weather variations on profits; however, warmer y/y temperatures present a headwind to those operating volumetric businesses delivering energy services to satisfy space heating loads. UGI publishes weather specific to its various businesses and noted warmer than normal conditions everywhere: vs. normal APU -9%; France -15%, Energy Services -19%, and PA utility -20%.

Downgrading NI & SWX to Hold. Amid the market's indiscriminate sell-off last month, we raised our outlook on NI and SWX to Buy; however, each has rallied sharply off its respective mid-month lows and we no longer see the >15% TR required for a JEF Buy rating. We maintain a $28 price target for NI and a $72 target price for SWX; both are achieved via a combination of SOP, DCF, DDM, and Target Yield approaches. We look forward to 1Q calls for more color on how COVID and economic headwinds are affecting their respective operations.

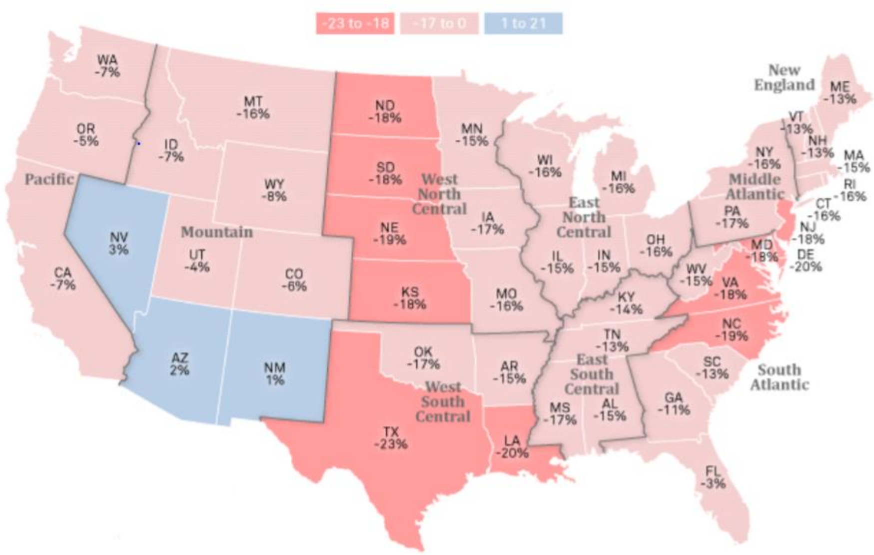
1Q20 HDDs decline ~14% vs. 1Q19

Overall, US heating degree days (HDDs) were down 14% in 1Q20 vs 1Q19 and were ~10% below longer-term 1Q averages. Broadly speaking, warmer y/y weather in 1Q20 was spread throughout the country, with parts of the Midcontinent and mid-Atlantic regions seeing the warmest y/y comparisons (Chart 1). Under normal weather conditions, 1Q accounts for roughly one-half of annual HDDs; while increased use of weather normalization clauses by state utility commissions reduce the impact of weather variations on profits, warmer y/y temperatures should provide a sequential headwind to those operating volumetric businesses delivering energy services to satisfy space heating loads. March HDDs were 22% warmer y/y and 12% below normal, which could exacerbate the load declines stemming from COVID-19 related isolationist responses and the shuttering of regional economies.

According to El Niño Southern Oscillation, or ENSO, reports issued earlier this month, ENSO-neutral conditions remain in place as equatorial sea surface temperatures are near to above average across much of the Pacific. The National Oceanic and Atmospheric Administration (NOAA) looks for ENSO-neutral conditions to continue through the spring and targets a 60% probability that similar conditions will continue through the Northern Hemisphere summer 2020 and likely into the fall.

Chart 1 - Heating Degree Days (HDD) 1Q20 vs. 1Q19



Source: SNL Energy, as of March 31, 2020.

National Fuel Gas Corp. (NFG)

- We expect NFG to report F2Q EPS of 96¢, in-line with the 97¢ Street mean estimate. We also expect F2Q net production of ~61.3 Bcfe, up ~5% q/q and ~26% y/y.
- With F1Q results, NFG lowered its F20 EPS guidance to \$2.95-\$3.15, due almost entirely to changes in natural gas price assumptions; at \$2.90, JEFe is below the low-end the updated range, but incorporates the recent rout in oil prices. Importantly, ~60% of Seneca's expected F20 natural gas production is locked-in physically & financially at a weighted average price of \$2.28/Mcf. Oil patch challenges have prompted a rally in natural gas prices and we lift our PT to \$50, from \$48, to incorporate higher out-year pricing.
- NFG will move to a single rig development program this summer and defer some of its EDA completion activity to F21; activity will remain focused on the WDA Utica, where existing Marcellus-focused infrastructure allows for capital efficient development while helping to grow Gathering revenue. Due to reduced activity levels, NFG now expects F20 E&P capex to be \$375-\$410mm; the 1-rig program is not expected to have a material impact on F20 production and NFG has previously cited \$250-\$300mm in annual capital to maintain flat production.
- On March 11th, NFG's BOD announced the approval of new directors, David Bauer & Barbara Baumann (1-yr term), as well as the election of David Anderson (1-yr term) Jeffrey Shaw (3-yr term), Thomas Skains (3-yr term), and Ron Tanski (3-yr term); Stephen Ewing retired from the board and Jeff Shaw was selected to serve as lead independent director. In addition, a stockholder proposal requesting NFG take steps to declassify the BOD received support from a majority of shares voted.

NiSource, Inc. (NI)

- We expect NI to report adjusted 1Q EPS and EBITDA of 82¢ & ~$699mm, in-line with the respective 81¢ and ~$694mm Street mean estimates.
- With 4Q results, NI announced a definitive agreement to sell Bay State Gas to Eversource (ES) for $1.1B and, as a result, withdrew its 2020 guidance. NI expects 2021 EPS to be 'at least equal' to its initial $1.36-$1.40 2020 EPS range and sees long-term EPS & DPS growth of 5-7%, with 2021 as the base year. With the sale, NI eliminated its planned 2020 block equity issuance ($500-$700mm), but continues to expect capex of $1.8-$1.9B. On the 4Q call, mgmt noted the loss in Bay State earnings will be mostly offset by the elimination of its block equity issuance with the possibility for some dilution as it de-consolidates the MA franchise.
- In late Feb., NI agreed to pay a $53mm criminal fine as part of a plea agreement with the US Attorney for the District of MA; the MA DPU continues its review of the incident, the company's response, and a Sept. 2019 gas leak while the MA Attorney General's Office continues its investigation of the restoration work. Despite the sale of CG of MA, NI remains liable for any fines imposed as part of criminal proceeding related to the Greater Lawrence incident and/or any civil claims made prior to the close of the transaction; as of YE19, NI cited Pipeline Replacement & Restoration costs of $258mm, 3rd-Party Claims, Fines, Penalties & Settlements of $1.041-$1.065B, and Other Expenses of $450-$460mm.
- We are downgrading NI to Hold, from Buy, as we no longer project >15% total return which is required under the JEF ratings parameters. We maintain our $28 price target, which is derived via P/E, DCF, DDM, and Target Yield approaches.
- On March 17th, NI declared a quarterly cash dividend of 21¢/share (84¢/share annualized), up ~5% y/y, but flat q/q, payable May 20th to shareholders of record on April 30th. We model ~4.8% growth in 2021 and a ~5.7% CAGR for 2021-24 as NI re-establishes its long term 5-7% growth trajectory.

Source: NI reports, Jefferies estimates

ONE Gas, Inc. (OGS)

- We expect OGS to report 1Q EPS of $1.84, above the $1.79 mean estimate.
- With 4Q results, OGS affirmed its 2020 guidance, consisting of $186-$198mm in net income, EPS of $3.44-$3.68, and capex of $475mm. Forecasts reflect normal weather, the benefit of new rates, and higher depreciation expense from capital investments; 70% of anticipated 2020 spending is targeted toward system integrity & replacement projects. Mgmt also updated its anticipated 5-year annual EPS, rate base, and dividend growth rates of 5-7%, 7%, and 6-8% respectively, down slightly from the previous ranges of 6-8%, 6-7%, and 7-9%. Annual capital expenditures, including asset removal costs, are expected to range $475-$525mm for 2020-24, up from a previous $450-$500mm range.
- To ensure liquidity during the uncertainty created by COVID-19, OGS took the following steps: 1) on Feb. 26th, it entered into an equity distribution agreement via which it can forward sell up to $250mm of common stock. 2) on April 7th, it entered into a $250mm 364-day revolving unsecured credit facility. OGS also has a $700mm commercial paper program, a $700mm existing credit agreement and a $250mm equity ATM program; as of YE19, it had ~$1B available on existing facilities, Net Debt/EBITDA of 3.8x, and its nearest maturity ($300mm) is in 2024.
- KGS had submitted an application to the KCC for a $4.2mm increase related to its GSRS; in Nov, the KCC approved the increase with rates effective in Dec 2019. In Texas, TGS filed a $15.6mm rate case for all customers in the Central TX & Gulf Coast area while also requesting to consolidate the two service areas; if approved, new rates are expected to take effect in 3Q20.
- With 1Q20 results, we expect OGS to declare a 54¢/share quarterly dividend ($2.16 annualized), flat q/q, but up 8% y/y. We model a 5-year DPS CAGR of 7%, squarely in-line with mgmt updated guidance range.

Southwest Gas Holdings (SWX)

- We expect recurring diluted 1Q EPS of $1.51, below the Street's $1.58 mean estimate; of note, our EPS excludes the effects of fluctuations in COLI surrender values, which may be in Street projections and can constitute a delta. We expect a punctuated impact from COLI in 1Q given the ~20% equity market decline.
- With 4Q results, mgmt offered a 2020 financial outlook, including EPS of $3.75-$4.00, Utility capex of $650-$700mm, and Infrastructure Services revenue growth of 5-10% ($1.84-$1.93B) with Op. Income 5.5-6.0% of revenues ($101-$116mm). In addition, SWX anticipates $3-$5mm of annual COLI benefit (5-9¢ EPS impact), which we have excluded as it is driven entirely by investment returns and independent of SWX operating performance, resulting in an apples:apples guidance range of $3.70-$3.91 vs $3.68 JEFe.
- Ahead of 1Q results, we expect SWX to announce a cash dividend of 57¢/share ($2.28/share annualized), falt q/q, but up 4.6% y/y. While SWX has posted a trailing 5-year (2014-19) DPS CAGR of ~8.6% we model decelerating growth and see a forward 5-year CAGR (2019-24) of ~3.7%.
- On April 10th, SWX extended the maturity on two of its three credit facilities, from 2022 to 2025, and noted ~$193mm of available liquidity between them; SWX ended 2019 at 3.9x Net Debt/EBITDA, had ~$29mm of cash on hand, and $125mm of 2020-21 maturities.
- Following a ~50% rally off its March lows, we downgrade SWX shares to Hold as our $72 price target no longer implies the >15% return required for Buy ratings. Our price target is achieved via SOP, DCF, DDM, and Target Yield approaches.

UGI Corp. (UGI)

- We forecast UGI to report a F2Q EPS of $1.50, slightly below the Street's $1.53 mean estimate. Warm F2Q US and European weather, combined with costs associated with its LPG business transformation initiative, are expected to weigh on results. We also anticipate UGI will revise its F20 adj. EPS guidance, as is its custom at the mid-year mark; we currently project F20 EPS of $2.18, but we include LPG-related investment costs that mgmt excludes from its guidance.

- UGI publishes weather specific to its various businesses and noted warmer than normal F2Q conditions everywhere. Compared to long-term average HDDs, APU saw conditions ~9% warmer, France was ~15% warmer, Energy Services ~19% warmer, and the PA utility service territory ~20% warmer.

- In March, UGI published a presentation noting steps it is taking to respond to the economic climate and COVID-19 fallout, including 1) boosting liquidity by $210mm (liquidity totalled $1.15B at 2.29) and 2) reducing F20 capex by >$120mm.

- Effective April 20th, UGI elected Mario Longhi to its Board of Directors; Mr. Longhi retired from US Steel Corporation in 2017, where he served in various capacities including as President and CEO from 2013 to 2017.

- On April 22nd, UGI lifted its quarterly cash dividend to 33¢/share ($1.32 annualized), up 1.5% q/q and ~10% y/y. The raise marks UGI's 33rd consecutive annual increase; it has paid dividends uninterrupted since 1885.

FY P/E	11.9x	14.1x	12.6x	11.9x
EV/EBITDA	7.4x	7.5x	7.0x	6.7x

The Long View

Scenarios

Base Case

- Appalachian drilling to grow production & reserves over next several years, California to provide free cash flow
- Midstream growth projects to add incremental Utica/ Marcellus takeaway capacity, aiding in-basin firm sale contracts & enabling Seneca production growth
- SOP, which utilizes EV/EBITDA multiples for business segments and reserve valuation for E&P & DCF analysis. F21 EPS: $2.90; F21 EBITDA: $788mm; PT $50

Upside Scenario

- Additional midstream opportunities are secured and progress successfully through regulatory approvals, driving meaningful takeaway options for Seneca and cementing a sustainably profitable net-back
- Stronger than anticipated proved reserve growth and continued improvements in drilling & completion activities, which aid Seneca's profit profile
- Sharp & sustained increase in natural gas and crude oil prices, limited basis issues. Utility experiences sustained cold weather in its PA service territory.
- SOP, which utilizes EV/EBITDA multiples for business segments and reserve valuation for E&P & DCF analysis. F21 EPS: $3.30; F21 EBITDA: $950; PT: $60

Downside Scenario

- Expansion projects in execution encounter cost overruns & time delays; NYSDEC's appeals of recent Northern Access victories are supported, permanently impairing Northern Access
- Production & reserve growth trails our expectations; drilling & completion efficiency gains do not materialize and Seneca's margins are minimized
- Sharp & sustained reduction in oil and natural gas prices, adverse basis differentials hinder realizations
- Mild weather, adverse rate case decisions
- SOP, which utilizes EV/EBITDA multiples for business segments and reserve valuation for E&P & DCF analysis. F21 EPS: $2.40; F21 EBITDA: $700; PT: $30

Investment Thesis / Where We Differ

- Appalachian drilling to grow production & reserves over next several years, California to provide free cash flow
- Midstream growth projects to add incremental Utica/ Marcellus takeaway capacity, aiding in-basin firm sale contracts & enabling Seneca production growth
- SOP, which utilizes EV/EBITDA multiples for business segments and reserve valuation for E&P & DCF analysis. F21 EPS: $2.90; F21 EBITDA: $788mm; PT $50

Catalysts

- Continued action by NFG in the wake of the FERC's decision to rule in favor of NFG as it relates to the NYSDEC waiving its certification authority under section 401 of the Clean Water Act; NYSDEC can appeal against the decision
- Execution of midstream projects & any additional expansions; Transco Zone 6 expected in 2021
- Narrowing of NE basis differentials and the disclosure of additional favorably priced firm sales agreements
- F2Q20 earnings out post-close on 4.30.20

The Long View

Scenarios

Base Case

- Infrastructure modernization programs to generate steady growth & returns across all segments for several decades
- Premium asset footprints and favorable regulatory climates, continuation on tracked infrastructure investments punctuated by rate case activity.
- ~5.4% dividend CAGR from 2019-24; ~4.1% EPS CAGR from 2019-24
- Combination of Target P/E, Target Yield, DDM, and DCF Analysis. 2021 Adj. EPS: $1.38; 2021 dividend: $0.88/share; PT $28

Upside Scenario

- Customer growth grows faster than projected ~0.5% per year assumption and alternative source of regulated revenues are secured
- NI spends above the high-end of its guidance range, growing rate base faster than anticipated
- Cash flow outperformance yields reduced debt load, generating interest cost savings
- Combination of Target P/E, Target Yield, DDM, and DCF Analysis. 2021 Adj. EPS: $1.70; 2021 dividend: $0.91/share; PT $30

Downside Scenario

- Customer growth is slower than projected ~0.5% per year assumption, or negative
- NI spends below the low-end of its guidance range, and rate base growth is slower than anticipated
- Cost overruns and rising debt loads weigh on EPS
- Adverse regulatory and rate case outcomes
- Combination of Target P/E, Target Yield, DDM, and DCF Analysis. 2021 Adj. EPS: $0.85; 2021 dividend: $0.45/share; PT $15

Investment Thesis / Where We Differ

- Infrastructure modernization programs to generate steady growth & returns across all segments for several decades
- Premium asset footprints and favorable regulatory climates, continuation on tracked infrastructure investments punctuated by rate case activity.
- ~5.4% dividend CAGR from 2019-24; ~4.1% EPS CAGR from 2019-24
- Combination of Target P/E, Target Yield, DDM, and DCF Analysis. 2021 Adj. EPS: $1.38; 2021 dividend: $0.88/share; PT $28

Catalysts

- Continued regulatory progress and reduction in regulatory lag could improve earnings growth
- Extension or expansion of modernization programs across any/all service territories
- Increased revenue-normalization efforts and reduction in volumetric sensitivities
- Sale of Columbia Gas of Mass. & removal of the overhang that comes with the Greater Lawrence Incident; NI remains liable for additional costs incurred
- 1Q20 earnings out pre-market on 5.06.20

FY P/E	24.4x	23.7x	22.7x	20.7x

The Long View

Scenarios

Base Case

- Customer growth continues at ~1.0% CAGR for several years
- Annual capex spend remains ~$500mm, delivering rate base growth broadly consistent with mgmt's expectations
- OGS continues to earn historical rate increases in KS & annual GRIP filings in TX
- Weather conditions revert to normal for consecutive years.
- Equal-weight valuation using DCF, DDM, Target P/E, and Target Yield methodologies; 2021 EPS: $3.78, 1Q21 DPS: $0.58; Target Yield: 2.6%; PT $82

Upside Scenario

- Customer growth grows faster than projected ~1.0% per year assumption and alternative sources of regulated revenue are secured
- OGS spends at or above the high-end of its guidance range growing its rate base faster than projected
- Mgmt employs cost cutting mechanisms which realizing an ROE closer to the top end of its authorized amount
- Equal-weight valuation using DCF, DDM, Target P/E, and Target Yield methodologies; 2021 EPS: $4.75, 1Q21 DPS: $0.60; Target Yield: ~2.25%; PT $95

Downside Scenario

- Customer growth is slower than projected ~1.0% per year assumption
- OGS spends at or below the low-end of its guidance range, thus its rate base ramp is slower than forecast
- Cost overruns occur and crimp allowed ROE in out-years
- Mild weather occurs in service areas where weather normalization provisions do not exist
- Equal-weight valuation using DCF, DDM, Target P/E, and Target Yield methodologies, 2021 EPS: $3.15, 1Q21 DPS: $0.48; Target Yield: ~3.2%; PT $60

Investment Thesis / Where We Differ

- Customer growth continues at ~1.0% CAGR for several years
- Annual capex spend remains ~$500mm, delivering rate base growth broadly consistent with mgmt's expectations
- OGS continues to earn historical rate increases in KS & annual GRIP filings in TX
- Weather conditions revert to normal for consecutive years.
- Equal-weight valuation using DCF, DDM, Target P/E, and Target Yield methodologies; 2021 EPS: $3.78, 1Q21 DPS: $0.58; Target Yield: 2.6%; PT $82

Catalysts

- Annual true-up regulatory filings across all three states
- With a low interest debt maturity in 2019, increased interest rates could act as a negative catalyst
- 1Q20 earnings out post-close on 4.27.20

The Long View

Scenarios

Base Case

- Customer growth continues at a ~1.7%+ annual rate through 2024 and dynamics of natural gas supply and demand trends remain supportive
- Centuri grows as utilities seek to replace & modernize aging infrastructure.
- SWX's regulatory outcomes are generally favorable and its LNG facility begins to contribute to earnings over the course of 2020.
- Equal-weighted DCF, DDM, SOP, and Target Yield approaches. 2Q21E Dividend: 59¢, Target Yield 2.9%, Projected 5-year Dividend CAGR 3.7%, PT $72

Upside Scenario

- Customer accounts grow faster than our baseline forecast and the economies of the AZ, NV, and CA service territories grow faster than anticipated.
- Rate activity is favorable and the LNG facility ramps up quicker than anticipated reaching above forecast utilization
- Centuri growth & profitability is better and Nueco acquisition is more accretive than anticipated, while Centuri's project backlog deepens
- Equal-weighted DCF, DDM, SOP, and Target Yield approaches. 2Q21E Dividend: 60¢, Target Yield 2.5%, Projected 5-year Dividend CAGR 6.5%, PT $95

Downside Scenario

- Weak economic conditions prompt slower than anticipated growth in customer accounts and an uptick in inactive meters
- Adverse future rate case outcomes & LNG facility contribution lower than anticipated
- Centuri backlog wanes & contract bidding becomes more competitive, crimping its growth & profitability
- Treasury yields widen, hindering capital costs
- Equal-weighted DCF, DDM, SOP, and Target Yield approaches. 2Q21E Dividend: 50¢, Target Yield 4.5%, Projected 5-year Dividend CAGR 0%, PT $40

Investment Thesis / Where We Differ

- Customer growth continues at a ~1.7%+ annual rate through 2024 and dynamics of natural gas supply and demand trends remain supportive
- Centuri grows as utilities seek to replace & modernize aging infrastructure.
- SWX's regulatory outcomes are generally favorable and its LNG facility begins to contribute to earnings over the course of 2020.
- Equal-weighted DCF, DDM, SOP, and Target Yield approaches. 2Q21E Dividend: 59¢, Target Yield 2.9%, Projected 5-year Dividend CAGR 3.7%, PT $72

Catalysts

- Dividend raises each Feb; expect a 3.7% 5-yr CAGR
- Additional sector consolidation (value read-through) and/or an accretive acquisition of its own
- Faster than expected increases in interest rates or a reduction of allowed ROEs act as negative catalysts
- Material change in the Arizona PUC with respect to favorable rate case outcomes; decision by the Nevada PUC on the rate case presented to them
- 1Q20 earnings out post-close on 5.12.20 (JEFe)

The Long View

Scenarios

Base Case

- PennEast pipeline experiences no further delays & is put into service in F1Q22.
- Continued conversion of fuel oil customers
- Normal weather conditions across all regions
- Additional midstream projects are secured and successfully executed upon at a 5-6x multiple
- Equal-weighted DCF, SOP, and Target Yield approaches. F2Q21E Dividend: 33¢, Target Yield 3%, Projected 5-year Dividend CAGR 5.8%, PT $48

Upside Scenario

- Projects completed early and under-budget, with utilization ramp faster than anticipated
- Fuel oil customer conversions accelerate in the US and Europe; significantly colder-than-normal winter weather conditions pervade all operating regions
- Additional high-quality midstream projects come into service earlier than expected, at accretive multiples, and backed by long-term fee-based agreements
- Equal-weighted DCF, SOP, and Target Yield approaches. F2Q21E Dividend: 35¢, Target Yield 2.35%, Projected 5-year Dividend CAGR 7.5%, PT $60

Downside Scenario

- Recent NE gathering acquisition doesn't lend itself to the 5-6x bolt-on projects, making the transaction more expensive than originally anticipated
- Projects delayed further and experience cost overruns due to operational issues and drag on total UGI results
- Customer conversions across all delivery platforms slow and European acquisitions dry up
- Significantly warmer than normal temps afflict all operating regions during the winter heating season
- Equal-weighted DCF, SOP, and Target Yield approaches. F2Q21E Dividend: 32.5¢, Target Yield 4.75%, Projected 5-year Dividend CAGR 0%, PT $20

Investment Thesis / Where We Differ

- PennEast pipeline experiences no further delays & is put into service in F1Q22.
- Continued conversion of fuel oil customers
- Normal weather conditions across all regions
- Additional midstream projects are secured and successfully executed upon at a 5-6x multiple
- Equal-weighted DCF, SOP, and Target Yield approaches. F2Q21E Dividend: 33¢, Target Yield 3%, Projected 5-year Dividend CAGR 5.8%, PT $48

Catalysts

- Additional M&A in its NE Midstream business as well as announcements regarding expansion projects
- Unusually warm/cold winter weather in PA, due to the lack of weather normalization provisions
- Announcements regarding Penn East progress have the potential to act as a positive catalyst if the regulatory and construction processes are successfully navigated, but also have the potential to act as a negative catalyst if there are further delays in the regulatory and/or construction processes
- International M&A as UGI looks to expand the international propane business
- F2Q20 earnings out post-close on 5.06.20

Company Description

National Fuel Gas Company

National Fuel Gas Company (NYSE: NFG) is a diversified energy holding company which operates in five business segments: Utility, Pipeline & Storage, Gathering, Exploration & Production, and Energy Marketing. The Utility operations are conducted by NFG Distribution Corp., which sells natural gas and provides natural gas and transportation services to ~750,200 customers in western New York and northwestern Pennsylvania. The Pipeline & Storage operations are carried out by NFG Supply Corp. and Empire Pipeline, Inc., which provide interstate natural gas transportation & storage services for affiliated and nonaffiliated companies. The Exploration & Production operates via Seneca Resources Corp., which is engaged in the exploration, development and purchase of natural gas and oil reserves primarily in California and in the Appalachian region. National Fuel Gas was founded on December 8, 1902, is incorporated under the laws of the state of New Jersey, and is headquartered in Williamsville, NY.

NiSource Inc.

NiSource, Inc. (NYSE: NI) is a diversified energy holding company whose subsidiaries provide natural gas, electricity, and other energy products & services to nearly 4mm US customers. The Company operates two business segments: Gas Distribution and Electric. The Gas Distribution operations provide natural gas service and transportation to ~3.5mm residential, commercial and industrial customers in Ohio, Pennsylvania, Virginia, Kentucky, Maryland, Indiana and Massachusetts. The Electric Operations segment provides electric service to ~472,000 customers across 20 counties in the northern part of Indiana. NiSource was founded in 1987, is incorporated under the laws of the state of Delaware, and is headquartered in Merrillville, IN.

ONE Gas Inc.

ONE Gas Inc. (NYSE: OGS) is a Local Distribution Company (LDC), that provides natural gas distribution services to 2.2mm customers and, despite the LDC market being categorized as an extremely fragmented industry, is the largest natural gas distributor in Oklahoma and Kansas and is the third largest in Texas, in terms of customers. OGS is the successor of a company founded in 1906 as Oklahoma Natural Gas Company and is 100% regulated. OGS's customer base includes residential, commercial & industrial, wholesale & public authority, and transportation. OGS has three divisions, Oklahoma Natural Gas, Kansas Gas Service, and Texas Gas Service, that distribute natural gas to ~88%, ~72%, and ~13% of the natural gas distribution customers in Oklahoma, Kansas and Texas, respectively.

Southwest Gas

Southwest Gas Holdings, Inc. (NYSE:SWX) is a holding company with business interests in two major business segments -- Natural Gas Operations and Utility Infrastructure Services. Southwest Gas Corporation purchases, distributes, and transports natural gas in the states of Arizona, Nevada, and California to residential, commercial, and industrial users. It is the largest natural gas distributor in Arizona and Nevada, providing service to the Phoenix, Tucson, and Las Vegas metropolitan regions among others. Southwest Gas also owns Paiute Pipeline Company, which owns and operates an interstate pipeline system that extends from the Idaho-Nevada border to the California-Nevada state line near the north and south ends of Lake Tahoe. Paiute also operates a peak shaving LNG storage facility near Lovelock, Nevada. Centuri Construction Group, Inc. is a comprehensive utility infrastructure services enterprise dedicated to meeting the growing demands of North American utilities, energy, and industrial markets. The Company was founded in March 1931, is incorporated under the laws of the State of California, and is headquartered in Las Vegas, NV.

UGI Corporation

UGI Corporation (NYSE: UGI) is a holding company that, through subsidiaries, distributes, stores, transports and markets energy products and services. UGI distributes natural gas and electricity to approximately 642,000 customers in eastern PA, operates merchant power and midstream assets in the Mid-Atlantic, and has LPG distribution operations in France and Eastern Europe. The company was founded in 1882, is organized under the laws of the state of Pennsylvania, and is headquartered in King of Prussia, PA. In F4Q19, UGI closed the acquisition of all publicly-held APU common units, rendering APU a wholly-owned UGI subsidiary.

Company Valuation/Risks

National Fuel Gas Company

Our $50 PT and Buy recommendation are derived via DCF and SOP, which includes an E&P reserve valuation & EBITDA multiples for all other segments. Risks: Deviations in reserve growth, commodity prices, interest rates, and midstream expansions.

Please see important disclosure information on pages 25 - 32 of this report.

NiSource Inc.
Our $28 PT and Hold recommendation are derived via Target P/E, Target Yield, DCF, and DDM approaches. Unexpected regulatory outcomes, deviations in customer growth, and project execution present risks to our estimates & PT.

ONE Gas Inc.
Our $82 PT and Hold rating are derived via Target P/E, Target Yield, DCF, and DDM approaches. Risks to our PT include: slower than expected annual customer growth, capex spend below the low-end of the guided range, slowing rate base growth, cost overruns crimping allowed ROE in future years and non-normal weather in service areas impacting top line results.

Southwest Gas
Our $72 PT and Hold recommendation are derived via DCF, DDM, SOP, and Target Yield approaches. Unexpected regulatory outcomes, contracting & execution risk, SW economic conditions, and interest rates all pose risks to our EPS & dividend projections and to our price target.

UGI Corporation
Our $48 PT and Buy recommendation are derived via a combination of DCF, SOP, and Target Yield approaches. Risks include non-normal weather, severe & rapid LPG price fluctuations, project execution, and interest rates.

I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.
I, Ryan Conlin, certify that all of the views expressed in this research report accurately reflect my personal views about the subject security(ies) and subject company(ies). I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed in this research report.
As is the case with all Jefferies employees, the analyst(s) responsible for the coverage of the financial instruments discussed in this report receives compensation based in part on the overall performance of the firm, including investment banking income. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgement.

Investment Recommendation Record

(Article 3(1)e and Article 7 of MAR)

Recommendation Published	April 24, 2020 , 03:22 ET.
Recommendation Distributed	April 24, 2020 , 03:22 ET.

Company Specific Disclosures

Jefferies Group LLC makes a market in the securities or ADRs of ONE Gas Inc.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.
Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.
Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.
The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus

20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.
NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Jefferies policies.
CS - Coverage Suspended. Jefferies has suspended coverage of this company.
NC - Not covered. Jefferies does not cover this company.
Restricted - Describes issuers where, in conjunction with Jefferies engagement in certain transactions, company policy or applicable securities regulations prohibit certain types of communications, including investment recommendations.
Monitor - Describes securities whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Valuation Methodology

Jefferies' methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Jefferies Franchise Picks

Jefferies Franchise Picks include stock selections from among the best stock ideas from our equity analysts over a 12 month period. Stock selection is based on fundamental analysis and may take into account other factors such as analyst conviction, differentiated analysis, a favorable risk/reward ratio and investment themes that Jefferies analysts are recommending. Jefferies Franchise Picks will include only Buy rated stocks and the number can vary depending on analyst recommendations for inclusion. Stocks will be added as new opportunities arise and removed when the reason for inclusion changes, the stock has met its desired return, if it is no longer rated Buy and/or if it triggers a stop loss. Stocks having 120 day volatility in the bottom quartile of S&P stocks will continue to have a 15% stop loss, and the remainder will have a 20% stop. Franchise Picks are not intended to represent a recommended portfolio of stocks and is not sector based, but we may note where we believe a Pick falls within an investment style such as growth or value.

Risks which may impede the achievement of our Price Target

This report was prepared for general circulation and does not provide investment recommendations specific to individual investors. As such, the financial instruments discussed in this report may not be suitable for all investors and investors must make their own investment decisions based upon their specific investment objectives and financial situation utilizing their own financial advisors as they deem necessary. Past performance of the financial instruments recommended in this report should not be taken as an indication or guarantee of future results. The price, value of, and income from, any of the financial instruments mentioned in this report can rise as well as fall and may be affected by changes in economic, financial and political factors. If a financial instrument is denominated in a currency other than the investor's home currency, a change in exchange rates may adversely affect the price of, value of, or income derived from the financial instrument described in this report. In addition, investors in securities such as ADRs, whose values are affected by the currency of the underlying security, effectively assume currency risk.

If you are receiving this report from a non-US Jefferies entity, please note the following: Unless prohibited by the provisions of Regulation S of the U.S. Securities Act of 1933, as amended, this material is distributed in the United States by Jefferies LLC, which accepts responsibility for its contents in accordance with the provisions of Rule 15a-6 under the US Securities Exchange Act of 1934, as amended. Transactions by or on behalf of any US person may only be effected through Jefferies LLC. In the United Kingdom and European Economic Area this report is issued and/or approved for distribution by Jefferies International Limited ("JIL") and is intended for use only by persons who have, or have been assessed as having, suitable professional experience and expertise, or by persons to whom it can be otherwise lawfully distributed.

JIL allows its analysts to undertake private consultancy work. JIL's conflicts management policy sets out the arrangements JIL employs to manage any potential conflicts of interest that may arise as a result of such consultancy work. Jefferies LLC, JIL and their affiliates, may make a market or provide liquidity in the financial instruments referred to in this report; and where they do make a market, such activity is disclosed specifically in this report under "company specific disclosures".

For Canadian investors, this material is intended for use only by professional or institutional investors. None of the investments or investment services mentioned or described herein is available to other persons or to anyone in Canada who is not a "Designated

Institution" as defined by the Securities Act (Ontario). In Singapore, Jefferies Singapore Limited ("JSL") is regulated by the Monetary Authority of Singapore. For investors in the Republic of Singapore, this material is provided by JSL pursuant to Regulation 32C of the Financial Advisers Regulations. The material contained in this document is intended solely for accredited, expert or institutional investors, as defined under the Securities and Futures Act (Cap. 289 of Singapore). If there are any matters arising from, or in connection with this material, please contact JSL, located at 80 Raffles Place #15-20, UOB Plaza 2, Singapore 048624, telephone: +65 6551 3950. In Japan, this material is issued and distributed by Jefferies (Japan) Limited to institutional investors only. In Hong Kong, this report is issued and approved by Jefferies Hong Kong Limited and is intended for use only by professional investors as defined in the Hong Kong Securities and Futures Ordinance and its subsidiary legislation. In the Republic of China (Taiwan), this report should not be distributed. The research in relation to this report is conducted outside the People's Republic of China ("PRC"). This report does not constitute an offer to sell or the solicitation of an offer to buy any securities in the PRC. PRC investors shall have the relevant qualifications to invest in such securities and shall be responsible for obtaining all relevant approvals, licenses, verifications and/or registrations from the relevant governmental authorities themselves. In India, this report is made available by Jefferies India Private Limited. In Australia, this report is issued and/or approved for distribution by, or on behalf of, Jefferies (Australia) Securities Pty Ltd. It is directed solely at wholesale clients within the meaning of the Corporations Act 2001 of Australia (the "Corporations Act"), in connection with their consideration of any investment or investment service that is the subject of this report. This report may contain general financial product advice. Where this report refers to a particular financial product, you should obtain a copy of the relevant product disclosure statement or offer document before making any decision in relation to the product. Recipients of this document in any other jurisdictions should inform themselves about and observe any applicable legal requirements in relation to the receipt of this document.

This report is not an offer or solicitation of an offer to buy or sell any security or derivative instrument, or to make any investment. Any opinion or estimate constitutes the preparer's best judgment as of the date of preparation, and is subject to change without notice. Jefferies assumes no obligation to maintain or update this report based on subsequent information and events. Jefferies, and their respective officers, directors, and employees, may have long or short positions in, or may buy or sell any of the securities, derivative instruments or other investments mentioned or described herein, either as agent or as principal for their own account. This material is provided solely for informational purposes and is not tailored to any recipient, and is not based on, and does not take into account, the particular investment objectives, portfolio holdings, strategy, financial situation, or needs of any recipient. As such, any advice or recommendation in this report may not be suitable for a particular recipient. Jefferies assumes recipients of this report are capable of evaluating the information contained herein and of exercising independent judgment. A recipient of this report should not make any investment decision without first considering whether any advice or recommendation in this report is suitable for the recipient based on the recipient's particular circumstances and, if appropriate or otherwise needed, seeking professional advice, including tax advice. Jefferies does not perform any suitability or other analysis to check whether an investment decision made by the recipient based on this report is consistent with a recipient's investment objectives, portfolio holdings, strategy, financial situation, or needs.

By providing this report, neither JRS nor any other Jefferies entity accepts any authority, discretion, or control over the management of the recipient's assets. Any action taken by the recipient of this report, based on the information in the report, is at the recipient's sole judgment and risk. The recipient must perform his or her own independent review of any prospective investment. If the recipient uses the services of Jefferies LLC (or other affiliated broker-dealers), in connection with a purchase or sale of a security that is a subject of these materials, such broker-dealer may act as principal for its own accounts or as agent for another person. Only JRS is registered with the SEC as an investment adviser; and therefore neither Jefferies LLC nor any other Jefferies affiliate has any fiduciary duty in connection with distribution of these reports.

The price and value of the investments referred to herein and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

This report may contain forward looking statements that may be affected by inaccurate assumptions or by known or unknown risks, uncertainties, and other important factors. As a result, the actual results, events, performance or achievements of the financial product may be materially different from those expressed or implied in such statements.

This report has been prepared independently of any issuer of securities mentioned herein and not as agent of any issuer of securities. April 23, 2020

NISOURCE

(NI US Equity – $25.85 – Outperform)

Core investment story intact; mgmt. Fireside Chat

- **Near term uncertainty but the long term sounds great.** We hosted a fireside chat with NiSource CEO Joe Hamrock and CFO Donald Brown today to discuss potential impacts of COVID-19. Both Joe and Donald were candid in saying that the impacts weren't clear cut and a lot depends on the duration of state shutdowns and how quickly respective economies can recover. Fortunately, mgmt's sense is that their core Midwestern states (OH, IN and PA) look poised to be among the first to return to work. More broadly, the L-T investment proposition remains solid – long runway of robust rate base growth opportunities coupled with a much lower business risk profile post CMA. We are lowering our PT by $4 to $29, reflective of lower group multiples and maintain our Outperform rating. See a full replay of the call here.

- **Decent C&I exposure.** NI provided EPS sensitivities for a 1% change in sales. Gas = $0.01 each for residential and commercial; electric = $0.01 each for residential, commercial, and industrial. The impact on Q1 sounded manageable and NI is moving into shoulder months for both businesses.

- **Constructive mechanisms for bad debts.** NI has bad debt trackers for gas costs at all of its LDCs (OH includes delivery charge too). MD has authorized a deferral for incremental costs related to COVID and NI is in active discussions with its other state regulators to obtain similar mechanisms.

- **CMA sale still on track; no impact to capital plan.** NI still expects the sale of CMA to close in Q3. The DPU's investigation is moving forward in sync with the sale process. NI hasn't had any issues executing on its capital plan thus far and noted it is ahead of schedule due to the warm winter.

- **Liquidity and credit solid.** NI had $1.3B of liquidity available as of 3/31 and has no L-T debt needs through 2021. NI most recently had its stable outlook at Fitch affirmed earlier this month.

- **Upside ahead for the capex plan.** NI is in the final stages of evaluating the results of its recent generation RFP. The likely outcome sounds like a big deployment of renewables in 2023-24 to replace the bulk of company's remaining coal units. Incremental capex for grid mod under NI's TDISC program is likely too. NI has also identified incremental investments on the gas side for reliability and safety purposes. A full update is expected later this year.

Company description

NiSource, headquartered in Merrillville, Indiana, operates two separate business lines: electric utility and gas distribution LDCs. The electric utility serves just under 500,000 customers in northern Indiana and owns 3,300 MW of generation. The gas LDC serves 3.5 million customers in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland and Massachusetts.

Investment Thesis

We see above-average rate base and earnings growth potential for NiSource relative to other electric and natural gas distribution utilities. NI has a $30B backlog of capital investment with recovery largely through trackers in mostly constructive regulatory environments. We see NI as a de-risking story in 2020 with an upward bias on rate base / EPS growth due to renewable investment opportunities at NIPSCO electric.

Valuation

Our $29 price target is derived using a P/E multiple of 18.5x (full turn premium) for NI's electric business and 19x (average) for NI's gas businesses on 2022 estimated earnings. Risks for NiSource are 1) bad regulatory outcomes and 2) pipeline safety incidents. Upsides are 1) additional growth projects and 2) customer growth

Exhibit 3. 2022E EPS by Segment

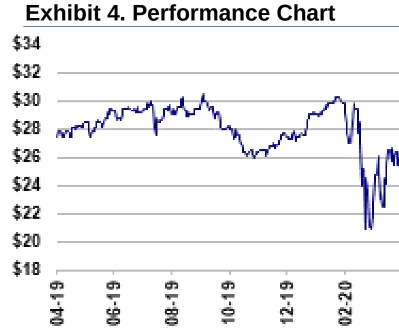
Exhibit 4. Performance Chart



Source: FactSet

WOLFE RESEARCH

NiSource

April 23, 2020

Investment Conclusion

We are Outperform rated on NiSource. The company's $30B capital investment backlog should drive its 5-7% annual earnings target well into the future. Most of the company's annual capex (~80%) is recovered with minimal lag via tracking mechanisms and the company has built a constructive track record with most of its state regulators. We view the sale announcement of Columbia Gas MA as an inflection point for the stock that should allow NI to re-rate closer to its historic 5-10% premium over time. Further, we see an upward bias on NI's 5-7% EPS growth rate long-term due to renewable and grid mod opportunities at NIPSCO electric which should come into view later this year.

NiSource Inc

Company description

NiSource Inc (NI) is primarily a regulated utility with an integrated network of gas distribution in the Northeast, Mid-Atlantic, and Midwest. NiSource also operates an electric utility in Northern Indiana. The company serves around 4 million customers across seven states through its two main business segments, including: 1) Gas Distribution, which delivers natural gas in several states; 2) Electric Operations, which consist of NiSource's regulated electric utility, Northern Indiana Public Service Company (NIPSCO).

Investment strategy

We rate the shares of NiSource (NI) Neutral (2). We believe NI's long-term earnings are relatively stable due to diverse operations areas and constructive regulatory jurisdictions. Our estimates do not include: 1) Substantial industrial load growth at the utilities; 2) Colder-than-normal weather and faster than average customer growth; or 3) Slower than typical timeline in regulatory filing and approval process for new infrastructure projects and cost recovery mechanisms.

Valuation

We average multiple valuation methodologies to derive our $29 target price. Our NAV yields a value of $23. We value regulated assets at a multiple of 1.3x rate base. These values are partially offset by the company's net debt. Our DDM, which incorporates our rate base growth assumptions, values the company at $36 per share. Our P/E and EV/EBITDA analyses yield values of $28 per share.

Risks

The key risks to our investment thesis are (1) Rate Cases – We estimate the company will receive rate relief at several of its utilities. Under- or over-estimation of relief could materially impact our estimates (2) Weather – Changes in weather impact the stability of earnings (3) Capital Investment Recovery — NI spends a substantial amount of capital to maintain and expand its distribution system. NI depends on rate increases from public utility commission to earn a fair return on this expansion. (4) Capital Markets — Access to cheap capital markets could be limited due to the size of the company. If the impact on the company from any of these factors proves to be greater/less than we anticipate, it may prevent the stock from achieving our target price or could cause the stock price to materially under/outperform our target. (5) There is a risk that there will be negative political, financial, and regulatory backlash from the recent events in New England.

Appendix A-1

Analyst Certification

The research analysts primarily responsible for the preparation and content of this research report are either (i) designated by "AC" in the author block or (ii) listed in bold alongside content which is attributable to that analyst. If multiple AC analysts are designated in the author block, each analyst is certifying with respect to the entire research report other than (a) content attributable to another AC certifying analyst listed in bold alongside the content and (b) views expressed solely with respect to a specific issuer which are attributable to another AC certifying analyst identified in the price charts or rating history tables for that issuer shown below. Each of these analysts certify, with respect to the sections of the report for which they are responsible: (1) that the views expressed therein accurately reflect their personal views about each issuer and security referenced and were prepared in an independent manner, including with respect to Citigroup Global Markets Inc. and its affiliates; and (2) no part of the research analyst's compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in this report.

Rating/target price changes above reflect Eastern Time

Due to Citi advising NiSource Inc (the 'Company') on the spin-off of off its pipeline & midstream assets into a publicly traded company,Columbia Pipeline Group,Citi Research suspended its rating and target price on 28 September 2014 (the suspension date). Please note that the Company price chart that appears in this report and is available on Citi Research's disclosure website does not reflect that Citi Research did not have a rating or target price between the Suspension Date and 19 April 2015 when Citi Research resumed full coverage.

Within the past 12 months, Citigroup Global Markets Inc. or its affiliates has acted as manager or co-manager of an offering of securities of NiSource Inc.

Citigroup Global Markets Inc. or its affiliates has received compensation for investment banking services provided within the past 12 months from NiSource Inc.

Citigroup Global Markets Inc. or an affiliate received compensation for products and services other than investment banking services from NiSource Inc in the past 12 months.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as investment banking client(s): NiSource Inc.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, securities-related: NiSource Inc.

Citigroup Global Markets Inc. currently has, or had within the past 12 months, the following as clients, and the services provided were non-investment-banking, non-securities-related: NiSource Inc.

Citigroup Global Markets Inc. and/or its affiliates has a significant financial interest in relation to NiSource Inc. (For an explanation of the determination of significant financial interest, please refer to the policy for managing conflicts of interest which can be found at www.citiVelocity.com.)

Disclosure for investors in the Republic of Turkey: Under Capital Markets Law of Turkey (Law No: 6362), the investment information, comments and recommendations stated here, are not within the scope of investment advisory activity. Investment advisory service is provided in accordance with a contract of engagement on investment advisory concluded between brokerage houses, portfolio management companies, non-deposit banks and clients. Comments and recommendations stated here rely on the individual opinions of the ones providing these comments and recommendations. These opinions may not fit to your financial status, risk and return preferences. For this reason, to make an investment decision by relying solely to this information stated here may not bring about outcomes that fit your expectations. Furthermore, Citi Research is a division of Citigroup Global Markets Inc. (the "Firm"), which does and seeks to do business with companies and/or trades on securities covered in this research reports. As a result, investors should be aware that the Firm may have a conflict of interest that could affect the objectivity of this report, however investors should also note that the Firm has in place organisational and administrative arrangements to manage potential conflicts of interest of this nature.

Analysts' compensation is determined by Citi Research management and Citigroup's senior management and is based upon activities and services intended to benefit the investor clients of Citigroup Global Markets Inc. and its affiliates (the "Firm"). Compensation is not linked to specific transactions or recommendations. Like all Firm employees, analysts receive compensation that is impacted by overall Firm profitability which includes investment banking, sales and trading, and principal trading revenues. One factor in equity research analyst compensation is arranging corporate access events between institutional clients and the management teams of covered companies. Typically, company management is more likely to participate when the analyst has a positive view of the company.

For securities recommended in the Product in which the Firm is not a market maker, the Firm is a liquidity provider in the issuers' financial instruments and may act as principal in connection with such transactions. The Firm is a regular issuer of traded financial instruments linked to securities that may have been recommended in the Product. The Firm regularly trades in the securities of the issuer(s) discussed in the Product. The Firm may engage in securities transactions in a manner inconsistent with the Product and, with respect to securities covered by the Product, will buy or sell from customers on a principal basis.

Unless stated otherwise neither the Research Analyst nor any member of their team has viewed the material operations of the Companies for which an investment view has been provided within the past 12 months.

For important disclosures (including copies of historical disclosures) regarding the companies that are the subject of this Citi Research product ("the Product"), please contact Citi Research, 388 Greenwich Street, 30th Floor, New York, NY, 10013, Attention: Legal/Compliance [E6WYB6412478]. In addition, the same important disclosures, with the exception of the Valuation and Risk assessments and historical disclosures, are contained on the Firm's disclosure website at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures. Valuation and Risk assessments can be found in the text of the most recent research note/report regarding the subject company. Pursuant to the Market Abuse Regulation a history of all Citi Research recommendations published during the preceding 12-month period can be accessed via Citi Velocity (https://www.citivelocity.com/cv2) or your standard distribution portal. Historical disclosures (for up to the past three years) will be provided upon request.

Citi Research Equity Ratings Distribution

	12 Month Rating			*Catalyst Watch*		
Data current as of 31 Mar 2020	Buy	Hold	Sell	Buy	Hold	Sell
Citi Research Global Fundamental Coverage	54%	35%	11%	17%	75%	8%
% of companies in each rating category that are investment banking clients	65%	63%	58%	70%	63%	65%

Guide to Citi Research Fundamental Research Investment Ratings:
Citi Research stock recommendations include an investment rating and an optional risk rating to highlight high risk stocks.
Risk rating takes into account both price volatility and fundamental criteria. Stocks will either have no risk rating or a High risk rating assigned.
Investment Ratings: Citi Research investment ratings are Buy, Neutral and Sell. Our ratings are a function of analyst expectations of expected total return ("ETR") and risk. ETR is the sum of the forecast price appreciation (or depreciation) plus the dividend yield for a stock within the next 12 months. The target price is based on a 12 month time horizon. The Investment rating definitions are: Buy (1) ETR of 15% or more or 25% or more for High risk stocks; and Sell (3) for negative ETR. Any covered stock not assigned a Buy or a Sell is a Neutral (2). For stocks rated Neutral (2), if an analyst believes that there are insufficient valuation drivers and/or investment catalysts to derive a positive or negative investment view, they may elect with the approval of Citi Research management not to assign a target price and, thus, not derive an ETR. Analysts may place covered stocks "Under Review" in response to exceptional circumstances (e.g. lack of information critical to the analyst's thesis) affecting the company and / or trading in the company's securities (e.g. trading suspension). As soon as practically possible, the analyst will publish a note re-establishing a rating and investment thesis. To satisfy regulatory requirements, we correspond Under Review and Neutral to Hold in our ratings distribution table for our 12-month fundamental rating system. However, we reiterate that we do not consider Under Review to be a recommendation. Investment ratings are determined by the ranges described above at the time of initiation of coverage, a change in investment and/or risk rating, or a change in target price (subject to limited management discretion). At other times, the expected total returns may fall outside of these ranges because of market price movements and/or other short-term volatility or trading patterns. Such interim deviations from specified ranges will be permitted but will become subject to review by Research Management. Your decision to buy or sell a security should be based upon your personal investment objectives and should be made only after evaluating the stock's expected performance and risk.

Catalyst Watch Upside/Downside calls:
Citi Research may also include a Catalyst Watch Upside or Downside call to highlight specific near-term catalysts or events impacting the company or the market that are expected to influence the share price over a specified period of 30 or 90 days. A Catalyst Watch Upside (Downside) call indicates that the analyst expects the share price to rise (fall) in absolute terms over the specified period. A Catalyst Watch Upside/Downside call will automatically expire at the end of the specified 30/90 day period; the analyst may also close a Catalyst Watch call prior to the end of the specified period in a published research note. A Catalyst Watch Upside or Downside call may be different from and does not affect a stock's fundamental equity rating, which reflects a longer-term total absolute return expectation. For purposes of FINRA ratings-distribution-disclosure rules, a Catalyst Watch Upside call corresponds to a buy recommendation and a Catalyst Watch Downside call corresponds to a sell recommendation. Any stock not assigned to a Catalyst Watch Upside or Catalyst Watch Downside call is considered Catalyst Watch Non-Rated (CWNR). For purposes of FINRA ratings-distribution-disclosure rules, we correspond CWNR to Hold in our ratings distribution table for our Catalyst Watch Upside/Downside rating system. However, we reiterate that we do not consider CWNR to be a recommendation. For all Catalyst Watch Upside/Downside calls, risk exists that the catalyst(s) and associated share-price movement will not materialize as expected.

NON-US RESEARCH ANALYST DISCLOSURES
Non-US research analysts who have prepared this report (i.e., all research analysts listed below other than those identified as employed by Citigroup Global Markets Inc.) are not registered/qualified as research analysts with FINRA. Such research analysts may not be associated persons of the member organization and therefore may not be subject to the FINRA Rule 2241 restrictions on communications with a subject company, public appearances and trading securities held by a research analyst account. The legal entities employing the authors of this report are listed below:

Citigroup Global Markets Inc	Ryan Levine; Willard A Grainger

OTHER DISCLOSURES

Any price(s) of instruments mentioned in recommendations are as of the prior day's market close on the primary market for the instrument, unless otherwise stated.

The completion and first dissemination of any recommendations made within this research report are as of the Eastern date-time displayed at the top of the Product. If the Product references views of other analysts then please refer to the price chart or rating history table for the date/time of completion and first dissemination with respect to that view.

Regulations in various jurisdictions require that where a recommendation differs from any of the author's previous recommendations concerning the same financial instrument or issuer that has been published during the preceding 12-month period that the change(s) and the date of that previous recommendation are indicated. For fundamental coverage please refer to the price chart or rating change history within this disclosure appendix or the issuer disclosure summary at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

European regulations require that a firm must establish, implement and make available a policy for managing conflicts of interest arising as a result of publication or distribution of investment research. The policy applicable to Citi Research's Products can be found at https://www.citivelocity.com/cvr/eppublic/citi_research_disclosures.

The proportion of all Citi Research research recommendations that were the equivalent to "Buy","Hold","Sell" at the end of each quarter over the prior 12 months (with the % of these that had received investment firm services from Citi in the prior 12 months shown in brackets) is as follows: Q1 2020 Buy 33% (68%), Hold 43% (60%), Sell 24% (57%), RV 0.6% (85%); Q4 2019 Buy 32% (68%), Hold 44% (61%), Sell 24% (56%), RV 0.8% (90%); Q3 2019 Buy 33% (72%), Hold 43% (65%), Sell 24% (57%), RV 0.6% (88%); Q2 2019 Buy 33% (72%), Hold 43% (64%), Sell 23% (56%), RV 0.6% (88%). For the purposes of disclosing recommendations other than for equity or high yield recommendations (whose definitions can be found in their corresponding disclosure sections), "Buy" means a positive directional trade idea; "Sell" means a negative directional trade idea; and "Relative Value" means any trade idea which does not have a clear direction to the investment strategy.

European regulations require a 5 year price history when past performance of a security is referenced. CitiVelocity's Charting Tool (https://www.citivelocity.com/cv2/#go/CHARTING_3_Equities) provides the facility to create customisable price charts including a five year option. This tool can be found in the Data & Analytics section under any of the asset class menus in CitiVelocity (https://www.citivelocity.com/). For further information contact CitiVelocity support (https://www.citivelocity.com/cv2/go/CLIENT_SUPPORT). The source for all referenced prices, unless otherwise stated, is DataCentral, which sources price information from Thomson Reuters. Past performance is not a guarantee or reliable indicator of future results. Forecasts are not a guarantee or reliable indicator of future performance.

Investors should always consider the investment objectives, risks, and charges and expenses of an ETF carefully before investing. The applicable prospectus and key investor information document (as applicable) for an ETF should contain this and other information about such ETF. It is important to read carefully any such prospectus before investing. Clients may obtain prospectuses and key investor information documents for ETFs from the applicable distributor or authorized participant, the exchange upon which an ETF is listed and/or from the applicable website of the applicable ETF issuer. The value of the investments and any accruing income may fall or rise. Any past performance, prediction or forecast is not indicative of future or likely performance. Any information on ETFs contained herein is provided strictly for illustrative purposes and should not be deemed an offer to sell or a solicitation of an offer to purchase units of any ETF either explicitly or implicitly. The opinions expressed are those of the authors and do not necessarily reflect the views of ETF issuers, any of their agents or their affiliates.

Citigroup Global Markets India Private Limited and/or its affiliates may have, from time to time, actual or beneficial ownership of 1% or more in the debt securities of the subject issuer.

This communication is directed at persons who are "Eligible Clients" as such term is defined in the Israeli Regulation of Investment Advice, Investment Marketing and Investment Portfolio Management law, 1995 (the "Advisory Law"). Within Israel, this communication is not intended for retail clients and Citi will not make such products or transactions available to retail clients. The presenter is not licensed as investment advisor or marketer by the Israeli Securities Authority ("ISA") and this communication does not constitute investment or marketing advice. The information contained herein may relate to matters that are not regulated by the ISA. Any securities which are the subject of this communication may not be offered or sold to any Israeli person except pursuant to an exemption from the Israeli public offering rules, including according to the Israeli Securities Law.

Citi Research generally disseminates its research to the Firm's global institutional and retail clients via both proprietary (e.g., Citi Velocity and Citi Personal Wealth Management) and non-proprietary electronic distribution platforms. Certain research may be disseminated only via the Firm's proprietary distribution platforms; however such research will not contain changes to earnings forecasts, target price, investment or risk rating or investment thesis or be otherwise inconsistent with the author's previously published research. Certain research is made available only to institutional investors to satisfy regulatory requirements. Individual Citi Research analysts may also opt to circulate published research to one or more clients by email; such email distribution is discretionary and is done only after the research has been disseminated. The level and types of services provided by Citi Research analysts to clients may vary depending on various factors such as the client's individual preferences as to the frequency and manner of receiving communications from analysts, the client's risk profile and investment focus and perspective (e.g. market-wide, sector specific, long term, short-term etc.), the size and scope of the overall client relationship with the Firm and legal and regulatory constraints.

Pursuant to Comissão de Valores Mobiliários Rule 598 and ASIC Regulatory Guide 264, Citi is required to disclose whether a Citi related company or business has a commercial relationship with the subject company. Considering that Citi operates multiple businesses in more than 100 countries around the world, it is likely that Citi has a commercial relationship with the subject company.

Securities recommended, offered, or sold by the Firm: (i) are not insured by the Federal Deposit Insurance Corporation; (ii) are not deposits or other obligations of any insured depository institution (including Citibank); and (iii) are subject to investment risks, including the possible loss of the principal amount invested. The Product is for informational purposes only and is not intended as an offer or solicitation for the purchase or sale of a security. Any decision to purchase securities mentioned in the Product must take into account existing public information on such security or any registered prospectus. Although information has been obtained from and is based upon sources that the Firm believes to be reliable, we do not guarantee its accuracy and it may be incomplete and condensed. Note, however, that the Firm has taken all reasonable steps to determine the accuracy and completeness of the disclosures made in the Important Disclosures section of the Product. The Firm's research department has received assistance from the subject company(ies) referred to in this Product including, but not limited to, discussions with management of the subject company(ies). Firm policy prohibits research analysts from sending draft research to subject companies. However, it should be presumed that the author of the Product has had discussions with the subject company to ensure factual accuracy prior to publication. All opinions, projections and estimates constitute the judgment of the author as of the date of the Product and these, plus any other information contained in the Product, are subject to change without notice. Prices and availability of financial instruments also are subject to change without notice. Notwithstanding other departments within the Firm advising the companies discussed in this Product, information obtained in such role is not used in the preparation of the Product. Although Citi Research does not set a predetermined frequency for publication, if the Product is a fundamental equity or credit research report, it is the intention of Citi Research to provide research coverage of the covered issuers, including in response to news affecting the issuer. For non-fundamental research reports, Citi Research may not provide regular updates to the views, recommendations and facts included in the reports. Notwithstanding that Citi Research maintains coverage on, makes recommendations concerning or discusses issuers, Citi Research may be periodically restricted from referencing certain issuers due to legal or policy reasons. Where a component of a published trade idea is subject to a restriction, the trade idea will be removed from any list of open trade ideas included in the Product. Upon the lifting of the restriction, the trade idea will either be re-instated in the open trade ideas list if the analyst continues to support it or it will be officially closed. Citi Research may provide different research products and services to different classes of customers (for example, based upon long-term or short-term investment horizons) that may lead to differing conclusions or recommendations that could impact the price of a security contrary to the recommendations in the alternative research product, provided that each is consistent with the rating system for each respective product.

Investing in non-U.S. securities, including ADRs, may entail certain risks. The securities of non-U.S. issuers may not be registered with, nor be subject to the reporting requirements of the U.S. Securities and Exchange Commission. There may be limited information available on foreign securities. Foreign companies are generally not subject to uniform audit and reporting standards, practices and requirements comparable to those in the U.S. Securities of some foreign companies may be less liquid and their prices more volatile than securities of comparable U.S. companies. In addition, exchange rate movements may have an adverse effect on the value of an investment in a foreign stock and its corresponding dividend payment for U.S. investors. Net dividends to ADR investors are estimated, using withholding tax rates conventions, deemed accurate, but investors are urged to consult their tax advisor for exact dividend computations. Investors who have received the Product from the Firm may be prohibited in certain states or other jurisdictions from purchasing securities mentioned in the Product from the Firm. Please ask your Financial Consultant for additional details. Citigroup Global Markets Inc. takes responsibility for the Product in the United States. Any orders by US investors resulting from the information contained in the Product may be placed only through Citigroup Global Markets Inc.

Summary Investment Thesis and Valuation

NiSource's heavy capital investment program drives rate base growth of at least ~7.5% over the next 3 years, with upside should the mid-or-high end of the capex guided ranges materialize. Declining O&M spending versus current elevated levels should improve earned ROE's at the utilities over coming quarters and additional cost discipline could further support growth. With an agreement in place to divest Bay State Gas, NI has reduced 2020 equity funding needs and will reestablish LT growth guidance post 2021. NiSource continues to offer top-tier rate base growth, which we see supporting long term earnings growth of 5-7% through 2022.

Our December 2020 price target of $29/per share is based on a sum-of-the-parts analysis and uses our 2021 electric and gas segment EPS forecasts. We value the gas and electric segments using 20.8x and 20.5x P/E multiples respectively, in line with LDC and Electric peer multiples.

Investment Thesis, Valuation and Risks

NiSource Inc. *(Overweight; Price Target: $29.00)*

Investment Thesis

NiSource's heavy capital investment program drives rate base growth of at least ~7.5% over the next 3 years, with upside should the mid-or-high end of the capex guided ranges materialize. Declining O&M spending versus current elevated levels should improve earned ROE's at the utilities over coming quarters and additional cost discipline could further support growth. With an agreement in place to divest Bay State Gas, NI has reduced 2020 equity funding needs and will reestablish LT growth guidance post 2021. NiSource continues to offer top-tier rate base growth, which we see supporting long term earnings growth of 5-7% through 2022.

Valuation

We lower our December 2020 price target to $29/share versus prior $31/share. Our price target is based on a sum-of-the-parts analysis and uses our 2021 electric and gas segment EPS forecasts. We value the gas and electric segments using 20.8x and 20.5x P/E multiples respectively, in line with LDC and Electric peer multiples. Our lower price target is due to lower peer group multiples versus prior.

Risk to Rating and Price Target

- Regulated electric transmission and distribution earnings are vulnerable to mild weather, as regulated revenues are calculated based on energy volumes sold. Extreme or mild temperatures may cause future earnings to differ materially from our current forecasts.
- Achievement of NiSource's long-term rate base and EPS CAGR targets are heavily dependent on robust capital investments, regulatory support, and favorable ratemaking mechanism. Any deferral of spending could put the company at risk of falling short of the LT rate base and earnings growth CAGR in any one year.
- Regulated electric and gas utilities are subject to federal and state regulations, including determinations of allowed revenues. Positive or negative changes to the regulatory environments may cause future earnings potential to differ materially from current expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

Coverage Universe: Sunderland III, Richard W: AES Corp. (AES), Algonquin Power & Utilities Corp. (AQN.TO), Allete Inc. (ALE), Ameren Corporation (AEE), American Water Works Company, Inc. ARGUS

NYSE: NI

NISOURCE INC

NiSource Inc. is an energy holding company whose subsidiaries are fully regulated natural gas and electric utility companies serving approximately 4.0 million customers in seven states. NiSource is one of the nation's largest natural gas distribution companies, as measured by number of customers. NiSource's principal subsidiaries include NiSource Gas Distribution Group Inc., a natural gas distribution holding company, and NIPSCO, a regulated gas and electric company. NiSource derives substantially all of its revenues and earnings from the operating results of these rate-regulated utilities.

Analyst's Notes

Analysis by Gary Hovis, April 6, 2020

ARGUS RATING: BUY

- Sharply discounted NI shares offer value
- On March 27, NiSource agreed to sell its Columbia Gas of Massachusetts assets to Eversource for $1.1 billion in a transaction expected to close by the end of 3Q20. With the transaction pending, NiSource withdrew its 2020 operating EPS guidance of $1.36-$1.40.
- After the completion of the transaction, the company expects to issue 2021 operating EPS guidance and establish a 5%-7% long-term growth rate with 2021 as the base year.
- On February 27, NiSource posted 2019 non-GAAP operating earnings of $494.7 million or $1.32 per share, compared to $463.3 million or 1.30 per share in 2018.
- Our EPS estimates are $1.42 for 2020 and $1.50 for 2021. The company will report 1Q20 EPS on April 29.

INVESTMENT THESIS

Our rating on NiSource Inc. (NYSE: NI) is BUY based on valuation and historical performance. Focusing on its regulated electric and gas utilities, NiSource recently completed a corporate restructuring that resulted in the spinoff of its nonregulated pipeline group. The company keeps a tight rein on expenses as well as capital spending. The shares trade near the midpoint of their historical range on P/E, price/book and price/cash flow. The balance sheet appears stable and, in our view, able to support the current dividend, which yields an above-industry-average 3.6%. We think the yield could be attractive to income-oriented investors during the coronavirus crisis. We are reiterating our BUY rating on NI with a 12-month target price of $32.

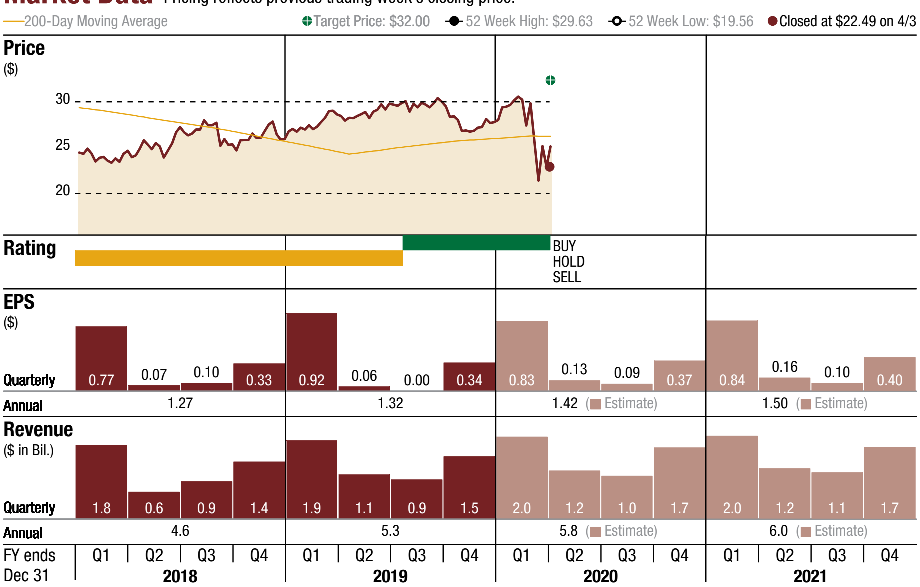
Our long-term rating is also BUY.

RECENT DEVELOPMENTS

Over the past three months, NI shares have fallen 17%, compared to a decline of 20% for the S&P 500. Over the past 52 weeks, the shares have fallen 19%, compared to decline

Market Data

Pricing reflects previous trading week's closing price.



Argus Recommendations

Twelve Month Rating	SELL	HOLD	**BUY**
Five Year Rating	SELL	HOLD	**BUY**
Sector Rating	Under Weight	**Market Weight**	Over Weight

Argus assigns a 12-month BUY, HOLD, or SELL rating to each stock under coverage.

- BUY-rated stocks are expected to outperform the market (the benchmark S&P 500 Index) on a risk-adjusted basis over the next year.
- HOLD-rated stocks are expected to perform in line with the market.
- SELL-rated stocks are expected to underperform the market on a risk-adjusted basis.

The distribution of ratings across Argus' entire company universe is: 64% Buy, 35% Hold, 1% Sell.

Analyst's Notes...Continued

of 9% for the index. Over the last five years, NI shares have advanced 33% versus a 26% gain for the S&P 500.

On February 27, NiSource posted 2019 non-GAAP operating earnings of $494.7 million or $1.32 per share, compared to $463.3 million or 1.30 per share in 2018. It posted 4Q operating earnings of $169.6 million or $0.45 per share, compared to $141.9 million or $0.38 per share in 4Q18. During 2019, the company focused on reliability and its electric generation and natural gas strategies, with nearly $1.9 billion in capital infrastructure investments.

On March 27, NiSource agreed to sell its Columbia Gas of Massachusetts assets to Eversource for $1.1 billion in a transaction expected to close by the end of 3Q20. With the transaction pending, NiSource withdrew its 2020 operating EPS guidance of $1.36-$1.40. However, the company continues to project capital investments of $1.8-$1.9 billion in 2020.

After the completion of the transaction, the company expects to issue 2021 operating EPS guidance and establish a 5%-7% long-term growth rate with 2021 as the base year. This new guidance is expected to include significant investments in electric generation and natural gas distribution.

EARNINGS & GROWTH ANALYSIS

On a stand-alone basis, our EPS estimates are $1.42 for 2020 and $1.50 for 2021. The company will report 1Q20 EPS on April 29.

NiSource continues to rely on its utility infrastructure programs for earnings and dividend growth. The company's regulated gas and electric segments will primarily invest in pipelines and in electric transmission lines as well as distribution modernization programs, and we believe the company will benefit from favorable regulation. In all, management expects the company to post operating earnings growth of 5%-7% annually from 2020 through 2023, resulting in total annual returns for shareholders of 6%-7%.

NiSource could also become a buyout target, as larger utilities and private equity firms have purchased smaller utilities because of their stable earnings growth and above-average dividend yields.

FINANCIAL STRENGTH & DIVIDEND

NiSource expects to complete capital investments of $1.8-$1.9 billion in 2020. The company remains committed to maintaining its current investment-grade credit ratings with Fitch (BBB), Moody's (Baa2), and Standard & Poor's (BBB+). As of December 31, 2019, NiSource had $1.5 billion in net available liquidity, consisting of cash and available capacity under its credit facility and accounts receivable securitization programs.

We believe that NiSource has improved its balance sheet by selling noncore assets, recalibrating capital expenditures, and carefully managing operating expenses and working capital.

NiSource pays an annualized dividend of $0.84 per share, for a yield of about 3.6%. Our dividend estimates are $0.84 for 2020 and $0.88 for 2021.

Analyst's Notes...Continued

The CEO of NiSource is Joseph Hamrock, 53, who assumed the position in July 2015. Mr. Hamrock, who joined NiSource in 2012, previously served as EVP and Group CEO for NiSource's Gas Distribution segment. He also has experience as an executive with American Electric Power. Donald E. Brown is the CFO.

Management is committed to electric and gas service expansion strategies in the company's regulated service territories, and to the expansion of its gas transmission and storage business. We think the company's platform for a return to growth is solid, and we are confident in management's ability to provide shareholders with increased value over the long term.

Key risks for stocks in our electric utility universe include fluctuations in interest rates and commodity prices, the effect of adverse weather on revenue, regulatory issues (especially involving construction cost recovery), and potential environmental and safety liabilities. In addition, the capital-intensive nature of the utility industry creates ongoing liquidity risk that must be actively managed by each company.

COMPANY DESCRIPTION

NiSource Inc. is an energy holding company whose subsidiaries are fully regulated natural gas and electric utility companies serving approximately 4.0 million customers in seven states. NiSource is one of the nation's largest natural gas distribution companies, as measured by number of customers. NiSource's principal subsidiaries include NiSource Gas Distribution Group Inc., a natural gas distribution holding company, and NIPSCO, a regulated gas and electric company. NiSource derives substantially all of its revenues and earnings from the operating results of these rate-regulated utilities.

VALUATION

We think that NI shares are favorably valued at current prices near $23, toward the low end of their 52-week range of $20-$31. The shares trade at 15-times our 2021 EPS estimate, below the average P/E of 21.7 for comparable electric and gas utilities. They are also trading at a price/book multiple of 2.2, close to the peer average of 2.3. The price/cash flow ratio is 16.2, above the peer average of 14.9. The shares trade near the midpoint of their historical range on P/E, price/book and price/cash flow. The dividend yield of 3.6% is above the industry average of 2.8%. We are reiterating our BUY rating on NI with a 12-month target price of $32.

On April 6 at midday, BUY-rated NI traded at $24.69, up $2.20.

Peer & Industry Analysis

The graphics in this section are designed to allow investors to compare NI versus its industry peers, the broader sector, and the market as a whole, as defined by the Argus Universe of Coverage.

- **The scatterplot shows how NI stacks up versus its peers on two key characteristics: long-term growth and value. In general, companies in the lower left-hand corner are more value-oriented, while those in the upper right-hand corner are more growth-oriented.**
- **The table builds on the scatterplot by displaying more financial information.**
- **The bar charts on the right take the analysis two steps further, by broadening the comparison groups into the sector level and the market as a whole. This tool is designed to help investors understand how NI might fit into or modify a diversified portfolio.**

About Argus

Argus Research, founded by Economist Harold Dorsey in 1934, has built a top-down, fundamental system that is used by Argus analysts. This six-point system includes Industry Analysis, Growth Analysis, Financial Strength Analysis, Management Assessment, Risk Analysis and Valuation Analysis.

Utilizing forecasts from Argus' Economist, the Industry Analysis identifies industries expected to perform well over the next one-to-two years.

The Growth Analysis generates proprietary estimates for companies under coverage.

In the Financial Strength Analysis, analysts study ratios to understand profitability, liquidity and capital structure.

During the Management Assessment, analysts meet with and familiarize themselves with the processes of corporate management teams.

Quantitative trends and qualitative threats are assessed under the Risk Analysis.

And finally, Argus' Valuation Analysis model integrates a historical ratio matrix, discounted cash flow modeling, and peer comparison.

THE ARGUS RESEARCH RATING SYSTEM

Argus uses three ratings for stocks: BUY, HOLD, and SELL. Stocks are rated relative to a benchmark, the S&P 500.

- A BUY-rated stock is expected to outperform the S&P 500 on a risk-adjusted basis over a 12-month period. To make this determination, Argus Analysts set target prices, use beta as the measure of risk, and compare expected risk-adjusted stock returns to the S&P 500 forecasts set by the Argus Market Strategist.
- A HOLD-rated stock is expected to perform in line with the S&P 500.
- A SELL-rated stock is expected to underperform the S&P 500.

NI Sees $0.00-$0.10/share negative EPS impact from COVID-19 in 2020/2021

Tonight, NI published a presentation with details on the impact from the pandemic and guided ($0.15-$0.20) negative EPS impact in 2020 and ($0.00-$0.10) in 2021. That said, management initiated mitigation efforts, including O&M and regulatory deferrals of COVID-19 expenses. As a result, NI sees overall ($0.00-$0.10) per year negative EPS impact in 2020 & 2021. We highlight that NI withdrew its 2020 guidance earlier this year. That said, 2020 EPS Cons of $1.33 is above UBSe of $1.27 and up from $1.32 in 2019 and likely doesn't reflect the negative impact from COVID-19. Overall, the guided impact is less than 5% of annual earnings in 2020 and should not be a surprise for investors; however, negative impact on 2021 was likely not expected. We will closely monitor the recovery of electric demand into summer as it is likely an important factor in the provided range.

Consumption Trends in April/May

NI noted that in April total margin declined $8.1MM as residential margin increased by $3.8MM but was more than offset by lower commercial ($4.1MM) and industrial (7.8MM) margin. That said, NI highlighted mid-to-late May volumes started to recover from the bottom in April. NI also provided reopening plan for each state in which it operates.

Highlights (US$m)	12/17	12/18	12/19	12/20E	12/21E	12/22E	12/23E	12/24E

Source: Company accounts, Thomson Reuters, UBS estimates. Metrics marked as (UBS) have had analyst adjustments applied. Valuations: based on an average share price that year, (E): based on a share price of US$ 23.39 on 26-May-2020

Forecast returns

Forecast price appreciation	+15.4%
Forecast dividend yield	3.9%
Forecast stock return	+19.4%
Market return assumption	5.2%
Forecast excess return	+14.2%

Valuation Method and Risk Statement

Risks include, but are not limited to, the following: changes to the regulatory environment, ability to achieve favorable returns on investment projects, and ability to continue to reinvest in the business for growth. We use comparable company multiples in our sum-of-the-parts EV/EBITDA and P/E valuations. Our price target is derived using an average of sum-of-the-parts EV/EBITDA and P/E valuations and DDM.

Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; certain additional disclosures concerning UBS research recommendations; and terms and conditions for certain third party data used in research report, please visit www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 27 May 2020 03:21 AM GMT. UBS has designated certain Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations.

Analyst Certification:
Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Investment Research: Global Equity Rating Definitions

12-Month Rating	Definition	Coverage[1]	IB Services[2]
Buy	FSR is > 6% above the MRA.	48%	32%
Neutral	FSR is between -6% and 6% of the MRA.	40%	28%
Sell	FSR is > 6% below the MRA.	13%	20%
Short-Term Rating	**Definition**	**Coverage[3]**	**IB Services[4]**
Buy	Stock price expected to rise within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%
Sell	Stock price expected to fall within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%

Source: UBS. Rating allocations are as of 31 March 2020.
1:Percentage of companies under coverage globally within the 12-month rating category.
2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.
3:Percentage of companies under coverage globally within the Short-Term rating category.
4:Percentage of companies within the Short-Term rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Research analysts contributing to this report who are employed by any non-US affiliate of UBS Securities LLC are not registered/qualified as research analysts with FINRA. Such analysts may not be associated persons of UBS Securities LLC and therefore are not subject to the FINRA restrictions on communications with a subject company, public appearances, and trading securities held by a research analyst account. The name of each affiliate and analyst employed by that affiliate contributing to this report, if any, follows.

UBS Securities LLC: Aga Zmigrodzka, CFA, Brian Reynolds, Shneur Z. Gershuni, CFA.

The Disclaimer relevant to Global Wealth Management clients follows the Global Disclaimer.

Global Disclaimer

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

This Document is provided solely to recipients who are expressly authorized by UBS to receive it. If you are not so authorized you must immediately destroy the Document.

Global Research is provided to our clients through UBS Neo, and in certain instances, UBS.com and any other system or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com (each a system) as an approved means for distributing Global Research. It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means. The level and types of services provided by Global Research to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS and legal and regulatory constraints.

All Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo.

When you receive Global Research through a system, your access and/or use of such Global Research is subject to this Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (http://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (http://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (http://www.ubs.com/global/en/homepage/cookies/cookie-management.html).

If you receive Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via Global Research or otherwise, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at http://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of UBS Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse

Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Where Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab you understand that UBS Evidence Lab is a separate department to Global Research and that UBS Evidence Lab does not provide research, investment recommendations or advice.

UBS New Zealand Ltd is not a registered bank in New Zealand. You are being provided with this UBS publication or material because you have indicated to UBS that you are a "wholesale client" within the meaning of section 5C of the Financial Advisers Act 2008 of New Zealand (Permitted Client). This publication or material is not intended for clients who are not Permitted Clients (non-permitted Clients). If you are a non-permitted Client you must not rely on this publication or material. If despite this warning you nevertheless rely on this publication or material, you hereby (i) acknowledge that you may not rely on the content of this publication or material and that any recommendations or opinions in such this publication or material are not made or provided to you, and (ii) to the maximum extent permitted by law (a) indemnify UBS and its associates or related entities (and their respective Directors, officers, agents and Advisors) (each a 'Relevant Person') for any loss, damage, liability or claim any of them may incur or suffer as a result of, or in connection with, your unauthorised reliance on this publication or material and (b) waive any rights or remedies you may have against any Relevant Person for (or in respect of) any loss, damage, liability or claim you may incur or suffer as a result of, or in connection with, your unauthorised reliance on this publication or material. **Korea:** Distributed in Korea by UBS Securities Pte. Ltd., Seoul Branch. This report may have been edited or contributed to from time to time by affiliates of UBS Securities Pte. Ltd., Seoul Branch. This material is intended for professional/institutional clients only and not for distribution to any retail clients. **Malaysia:** This material is authorized to be distributed in Malaysia by UBS Securities Malaysia Sdn. Bhd (Capital Markets Services License No.: CMSL/A0063/2007). This material is intended for professional/institutional clients only and not for distribution to any retail clients. **India:** Distributed by UBS Securities India Private Ltd. (Corporate Identity Number U67120MH1996PTC097299) 2/F, 2 North Avenue, Maker Maxity, Bandra Kurla Complex, Bandra (East), Mumbai (India) 400051. Phone: +912261556000. It provides brokerage services bearing SEBI Registration Number: INZ000259830; merchant banking services bearing SEBI Registration Number: INM000010809 and Research Analyst services bearing SEBI Registration Number: INH000001204. UBS AG, its affiliates or subsidiaries may have debt holdings or positions in the subject Indian company/companies. Within the past 12 months, UBS AG, its affiliates or subsidiaries may have received compensation for non-investment banking securities-related services and/or non-securities services from the subject Indian company/companies. The subject company/companies may have been a client/clients of UBS AG, its affiliates or subsidiaries during the 12 months preceding the date of distribution of the research report with respect to investment banking and/or non-investment banking securities-related services and/or non-securities services. With regard to information on associates, please refer to the Annual Report at: http://www.ubs.com/global/en/about_ubs/investor_relations/annualreporting.html **Taiwan:** Except as otherwise specified herein, this material may not be distributed in Taiwan. Information and material on securities/instruments that are traded in a Taiwan organized exchange is deemed to be issued and distributed by UBS Securities Pte. LTD., Taipei Branch, which is licensed and regulated by Taiwan Financial Supervisory Commission. Save for securities/instruments that are traded in a Taiwan organized exchange, this material should not constitute "recommendation" to clients or recipients in Taiwan for the covered companies or any companies mentioned in this document. No portion of the document may be reproduced or quoted by the press or any other person without authorisation from UBS. **Indonesia:** This report is being distributed by PT UBS Sekuritas Indonesia and is delivered by its licensed employee(s), including marketing/sales person, to its client. PT UBS Sekuritas Indonesia, having its registered office at Wisma GKBI, 22nd floor, JL. Jend. Sudirman, kav.28, Jakarta 10210, Indonesia, is a subsidiary company of UBS AG and licensed under Capital Market Law no. 8 year 1995, a holder of broker-dealer and underwriter licenses issued by the Capital Market and Financial Institution Supervisory Agency (now Otoritas Jasa Keuangan/OJK). PT UBS Sekuritas Indonesia is also a member of Indonesia Stock Exchange and supervised by Otoritas Jasa Keuangan (OJK). Neither this report nor any copy hereof may be distributed in Indonesia or to any Indonesian citizens except in compliance with applicable Indonesian capital market laws and regulations. This report is not an offer of securities in Indonesia and may not be distributed within the territory of the Republic of Indonesia or to Indonesian citizens in circumstance which constitutes an offering within the meaning of Indonesian capital market laws and regulations.

The disclosures contained in research documents produced by UBS AG, London Branch or UBS Europe SE shall be governed by and construed in accordance with English law.

Global Wealth Management Disclaimer

You receive this document in your capacity as a client of UBS Global Wealth Management. This publication has been distributed to you by UBS Switzerland AG (regulated by FINMA in Switzerland) or its affiliates ("UBS") with whom you have a banking relationship with. The full name of the distributing affiliate and its competent authority can be found in the country-specific disclaimer at the end of this document.

The date and time of the first dissemination of this publication is the same as the date and time of its publication.

Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and Research) and among

its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS Financial Services Inc. does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS Financial Services Inc. and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

If you require detailed information on disclosures of interest or conflict of interest as required by Market Abuse Regulation please contact the mailbox MAR_disclosures_twopager@ubs.com. Please note that e-mail communication is unsecured.

External Asset Managers / External Financial Consultants: In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.

Distributed to US persons by UBS Financial Services Inc. or UBS Securities LLC, subsidiaries of UBS AG. UBS Switzerland AG, UBS Europe SE, UBS Bank, S.A., UBS Brasil Administradora de Valores Mobiliarios Ltda, UBS Asesores Mexico, S.A. de C.V., UBS Securities Japan Co., Ltd, UBS Wealth Management Israel Ltd and UBS Menkul Degerler AS are affiliates of UBS AG. UBS Financial Services Incorporated of Puerto Rico is a subsidiary of UBS Financial Services Inc. **UBS Financial Services Inc. accepts responsibility for the content of a report prepared by a non-US affiliate when it distributes reports to US persons. All transactions by a US person in the securities mentioned in this report should be effected through a US-registered broker dealer affiliated with UBS, and not through a non-US affiliate. The contents of this report have not been and will not be approved by any securities or investment authority in the United States or elsewhere. UBS Financial Services Inc. is not acting as a municipal advisor to any municipal entity or obligated person within the meaning of Section 15B of the Securities Exchange Act (the "Municipal Advisor Rule") and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of the Municipal Advisor Rule.**

Austria: This publication is not intended to constitute a public offer under Austrian law. It is distributed only for information purposes to clients of UBS Europe SE, Niederlassung Österreich, with place of business at Wächtergasse 1, A-1010 Wien. UBS Europe SE, Niederlassung Österreich is subject to the joint supervision of the European Central Bank ("ECB"), the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Austrian Financial Market Authority (Finanzmarktaufsicht, FMA), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Bahrain**: UBS is a Swiss bank not licensed, supervised or regulated in Bahrain by the Central Bank of Bahrain and does not undertake banking or investment business activities in Bahrain. Therefore, clients have no protection under local banking and investment services laws and regulations. **Canada**: The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. Under no circumstances is the information contained herein to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada or, alternatively, pursuant to a dealer registration exemption. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed upon these materials, the information contained herein or the merits of the securities described herein and any representation to the contrary is an offence. In Canada, this publication is distributed by UBS Investment Management Canada Inc. **China**: This research report is neither intended to be distributed to PRC investors nor to provide securities investment consultancy services within the territory of PRC. **Czech Republic**: UBS is not a licensed bank in the Czech Republic and thus is not allowed to provide regulated banking or investment services in the Czech Republic. NI – Management Meetings; Impacts Defined, Increased Visibility Should Quell Investor Concerns; Price Action Overreaction

Key Message: COVID impact manageable, conservative messaging builds buffer and contingencies; Mgmt. sees opportunities to pull incremental levers while 2021 EPS guidance should be in “proximity” with the prior 2020 EPS guidance range (i.e. $1.38 guidance midpoint vs. Guggenheim at $1.37) with potential to come in stronger with incremental levers and/or COVID backdrop coming in better than Mgmt's. conservative assumptions. Post 2021, we continue to model (and the message today reinforced this notion) ~6-7% EPS growth off our 2021 base EPS estimate of $1.37 – growth drivers will include generation spend in Indiana, rate cases, further cost measure etc.

Main Takeaway: Ahead of our client hosted Mgmt. meetings with CEO, CFO and others at NiSource held early AM today, the company released updated slides detailing and quantifying the impact of COVID and the offsetting mitigation measures – providing clarity we were hoping to receive on the Q1. Mitigation efforts include O&M reductions and regulatory deferral for incremental COVID expenses and bad debt expense. **Key point – Mgmt. in good spot to provide 2021 EPS guidance in Q3 that should be close to flattish versus the prior pulled 2020 guidance range of ~$1.38 (midpoint) following the CMA sale announcement.** Further, Mgmt. **sees supplementary opportunities to pull additional mitigation levers that could potentially put ’21 EPS guidance slightly ahead of ‘20’s prior pulled guide.** In our view, investor concerns surrounding the 2021 impact are overstated (shares have underperformed UTY by ~100-150bps throughout the trading day) as Mgmt. has taken a conservative bend, managing expectations and messaging and creating contingencies should they need to be realized. **No change to our estimates through our ’23 trajectory as today’s message reconfirmed our thesis**. Potential catalysts: Q2 update around generation spending plan in IN and Q3 updated CapEx, growth trajectory through ’24 off of the new 2021 EPS midpoint, 2021 EPS guidance range as well as new financing needs.

Improved visibility – flat EPS in 2021 from initial 2020 guidance back in view despite conservative bend taken on COVID impact. Mgmt. released slides (HERE) and further detailed on our client hosted calls (8am and 9am) volume and expense impacts from COVID and strong mitigation factors including O&M reductions and regulatory mechanisms for 2020/2021. Overall, mgmt. expects ($0.00-$0.10) of EPS impacts in 2020 and 2021 **but ’21 could come in better if NI is able to utilize incremental mitigation levers which they are currently assessing – i.e. “flat-to-better” ’21 language presented at the YE call could still stand.** While some investors are apprehensive on the 2021 impact, **we feel the concerns are unfounded as mgmt. is taking a very conservative bend on sales and bad debt expense** - i.e. the estimated impact assumes gradual mean reversion to normal loads in 1H21 compared to other utilities that are assuming recovery to normal loads in 4Q20. Volumes have already started to rebound from April lows with industrial customers in the Midwest, specifically the auto industry, beginning to reopen. Mgmt., quantified mitigation measures including O&M reductions and regulatory approvals/actions. More specifically on the bad debt expense side, NI has received regulatory deferrals/recovery of COVID related expenses and bad debt above normal levels in MD, PA, and VA while working with other commissions to receive similar treatments. **The current plan does not include any regulatory treatment for the incremental expenses in IN and OH which is further potential upside.** Mgmt. noted increased bad debt expense could impact 2021 EPS by ($0.05), but we feel confident that NI will receive the mechanisms to offset the impact. **We expect the maximum downside on 2021 EPS to be ~ ($0.05) from the initial 2020 guidance of $1.36-$1.40 IF incremental levers are not able to be utilized.** Mgmt. will provide updates on expected impact throughout the year and the range will likely tighten over time. **Given mgmt's conservative stance on 2021 and the potential for incremental**

levers, we continue to model 2021 EPS of $1.37 and 5-7% LT EPS CAGR off a 2021 base (2022/23 EPS of $1.47/$1.57).

Mitigation efforts are extensive with a mix of perpetual and ST O&M reductions. Mgmt. quantified mitigation measures of $0.10 - $0.15 in 2020 and $0.05 - $0.10 in 2021. Employee and administrative expenses and the deferral of some non-essential field work make up the bulk of the cost cutting. **The mix of O&M reductions will be more short-term in 2020 and permanent in 2021.** Like we have seen with other utilities, NI has a better view on prioritization of work allowing crews to work more effectively, efficiently, and productively as a result of the pandemic. Cuts to offset the dis-synergies related to the sale of CMA will happen regardless of volume trends. Direct costs related to CMA will be eliminated while more structural items from shared services across the company will be addressed in 2021. **Mgmt. is still identifying incremental levers but is focused on stepping through the regulatory items and managing expenses.**

Core business investment remains strong despite lowering at 1Q call – renewable investment opportunities are robust. The core capital plan remains strong with modernization trackers and other mechanisms to support investment; renewable additions represent incremental capex. As a reminder, NI lowered its expected 2020 capital spend by $100M at the 1Q call to shore up cash flow due to the pandemic. **Discussions with parties on the RFP in IN are ongoing with 50/50 owned and PPA still expected and upside to their CapEx guidance which Mgmt. will update during the all-important Q3 earnings call.** Mgmt. noted owning projects is competitive because of their high credit quality. The tax equity market remains healthy from mgmt.'s view. NI expects to file CPCNs in the summer, and we continue to look for an extensive update on the investment opportunity on the 3Q call. There has not been an impact on the 2021 IRP from the virus. Investment in renewables drives the outlook for 2022 and beyond.

Limited capital market needs for 2020 outside of ATM equity – thinking long-term, incremental renewable investments will be financed with a mix of debt and equity while still supporting the 5-7% growth trajectory. NI still expects to issue $200M-$300M in ATM equity in 2020 to support core investments. As a reminder, NI pulled forward a debt issuance in 1Q to help shore up liquidity and does not expect substantial debt financing for the remainder of 2020. **Renewable investment stemming from the RFP will be financed with a mix of debt and equity that will maintain credit metrics and support the current 5-7% growth trajectory.** Mgmt. expects to roll out an updated financing plan along with the investment opportunity on the 3Q call which will also come with an extended growth rate likely through '23/'24 as well as a formal '21 EPS guidance range.

Valuation: We apply an 18x multiple on the electric utility and 21x multiple on the gas LDCs. We arrive at our valuation utilizing a sum-of-the parts analysis, based on: (1) ~$10/share for the regulated electric utility; (2) ~$20/share value for the regulated gas segment given the limited spread from LDCs after recent market volatility; and (3) (~$-3)/share for other adjustments for Corp and Other. We use this sum of the parts to arrive at our $27 valuation.

Risk: The primary risk on the regulated utility encompass the traditional risk factors inherent with all utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

ANALYST CERTIFICATION

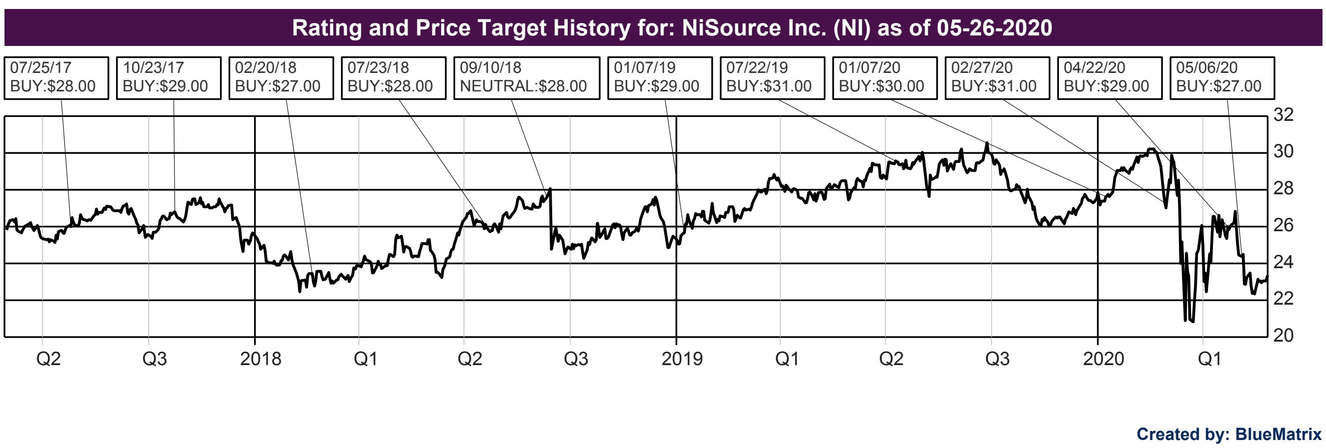
By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) whose name(s) appear(s) in this report have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from NiSource Inc. in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.



RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Power & COVID impact: ERCOT recovery & PJM markets

We had previously highlighted signs of a gradual turnaround in U.S. load, with total load bottoming out at -10% vs. pre-COVID expectations and then gradually improving to -8% vs. expectations, with ERCOT in particular showing meaningful growth from its lows after reversal of lockdowns in the state. In recent days, we have seen even further improvement, specifically in ERCOT with a 30% rally in the Jul-Aug '20 contract over the last two days. While this may have been partially driven by shifts in market sentiment around load trends, we *also* highlight weather as driving some of this upward movement. Separately, PJM recently stated it has over 187 GW of installed generation capacity available, relative to its forecast summer peak demand of 148 GW. This forecast compares to PJM's peak demand in 2019 of over 151 GW (i.e. '20 forecast is ~2% lower v. last year). PJM has seen load decline by ~10% as of mid-March due to COVID-related restrictions. We see the trends in ERCOT as only further affirming underlying positive load trends, especially in this the Central region which have proven consistently more resilient.

NI: '21 outlook updated: we see this implying ~$1.35

Seeing mgmt had already announced mitigation efforts to offset the loss of the MA biz largely (and seemingly affirmed), we effectively see the full impact. These are the variances from the last plan – and when at that time it was roughly ~$1.40 in '21 (higher end of $1.36-1.40 range was achievable in '21). Now, you have up to 10c Covid-related impacts off this $1.40, offset by *incremental* cost savings suggest $1.35. The NI load recovery is well under way and seemingly ahead of earlier plan. The 10c impact of Covid impacts appear *half from load degradation* (permanent/long ramp in C&I) as well as incremental expenses (reconnection fees, Covid-related mitigation costs). We see the mitigation efforts as *not entirely* different from the existing mitigation efforts already under way to offset loss of earnings from MA biz sale (principally dis-synergies from allocated SG&A). We note the wide range of expectations may prove offputting to investors upon initial look (albeit the wide range is perhaps the caution, *we* see this as roughly implying $1.35 likely *in-line with the reduced EPS expectations already and close our reduced $1.36 estimate already)*. The critical point is that Covid pressures are entirely under-earning related and should normalize out over time with future rate cases (this is not any reduction in '21 capex for instance after a slight earlier tweak to '20). We note this is the first update across the sector to provide an update on load expectations and cost reductions. <u>We also expect this load update on '21 to kickstart further moderation of EPS ests into next year across the sector.</u> We expect companies to continue to talk *up* the ongoing recovery in load in forthcoming meetings given numerous sellside meetings hosted in coming days (including our own mini-conference tomorrow).

LNT: acquired 675MW solar portfolio: executing against the expected buildout.. now it's time to watch WI approval

LNT announced to acquire 675MW solar portfolio at a purchase consideration of $900m of which tax equity partner would sponsor 35-40% of the investment outlay with the rest being financed by LNT's Wisconsin subsidiary. The company indicated to purchase tax equity's ownership in the projects within 10 years of operation. LNT expects to file an application with the PUC on the acquisition and anticipates a decision by 1H21. We note that LNT already signed purchase and sale agreements with the developers, subject to pending approval from the regulators, however, none of the projects are currently under construction. The company anticipates 425MW to be placed in service by 2022 and 250MW in 2023. Notably, last week the company announced early retirement of its Edgewater coal facility in Sheboygan in 2022. The latest development is no real surprise to us, given it is part of LNT's stated Clean Energy Blueprint plant for 1GW of solar in Wisconsin and in-line with its previous commentary on accelerating coal retirement with renewables installation to avoid hundreds of millions in long-term costs. Maintain Buy on LNT. *We note positive early indications from stakeholders in the state on regulatory approval prospects.*

Overall, the portfolio is comprised of six solar projects that include 200MW project developed by NEE sub NEER, a 150MW and 75MW facilities in Sheboygan County and Jefferson County, respectively, and developed by Ranger Power, a 150MW and a 50MW solar projects developed by Savion, owned by Macquarie Group Ltd.'s Green Investment Group and located in Wood County and Richland County, respectively, and a 50-MW facility in Rock County developed by National Grid's Geronimo Energy.

NI: rolled out details on COVID impact on EPS; No 20/21 EPS guidance still

NI rolled out supplementary details on COVID impact. While the slides include granular details on COVID 19 impact on operating EPS as well as mitigation measures to offset some of the pandemic impact, however, neither did the company provide 2020 EPS guidance (Recall they pulled it when MASS Sale to ES Was announced) nor did they reiterate 2021 EPS guidance. Specifically, the company quantified the impact to be ($0.15) – ($0.20) for 2020 and ($0.00)-($0.10) for 2021on NI's base case assumptions. However, the company expects mitigation measures initiated in April would likely offset $0.10-$0.15 and $0.05-$0.10 for 2020 and 2021, respectively.

Table 1: COVID 19 impact on net Operating EPS ($) for 2020/2021

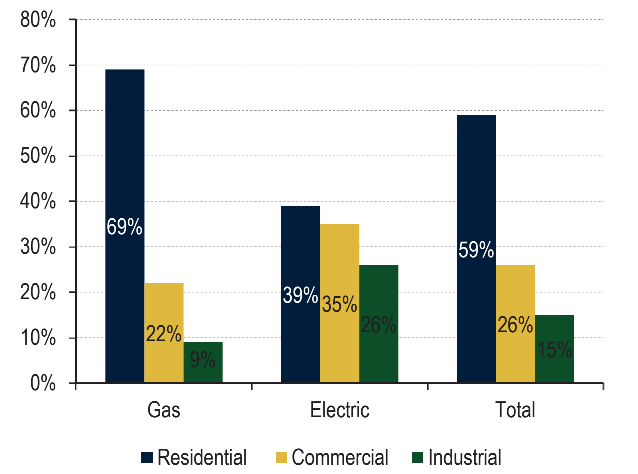
$	2020E	2021E
COVID-19 Impact on EPS Base Case	($0.15)-($0.20)	($0.00)-($0.10)
Mitigation Efforts - Initiated in April	$0.10-$0.15	$0.05-$0.10
Estimated Net NOEPS Impact	**($0.00)-($0.10)**	**($0.00)-($0.10)**

Source: BofA Global Research, Company report

While the company stressed on non-safety related savings in O&M, recovery for COVID related impacts and improving organization efficiencies by addressing dis-synergies, however, they did not quantify anticipated O&M savings to combat the COVID losses.

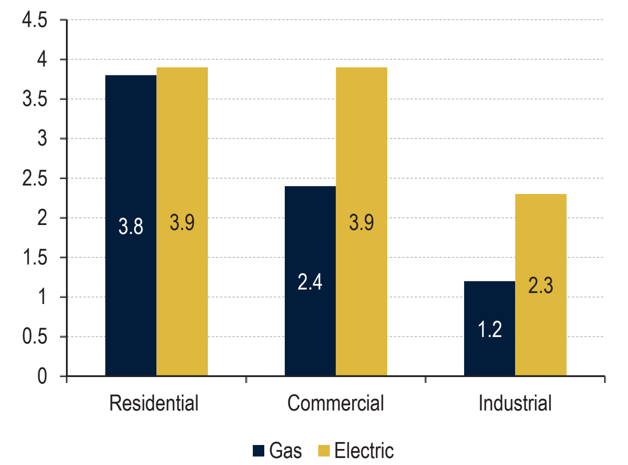
Meanwhile, NI outlined the detail on retail margins by customer class, in-addition to providing pre-tax operating earnings sensitivity to 1% change in annual sales volume both by customer class and by segment, besides noting out the COVID 19 impact on weather normalized April 2020 sales volumes as compared to April 2019 (4%/26% decline in Gas Distribution and Electric Operations). $8.1m margin loss booked in April 2020 reflecting the mitigation efforts initiated by the company.

Chart 1: Retail Margins by customer class and by segment



Source: BofA Global Research, Company report

Chart 2: Pre-tax operating income sensitivity to +/- 1% change in sales volumes ($M)



Source: BofA Global Research, Company report

However, the company did mention mid to late May trend in volumes indicated a recovery from April lows. While the company expects a rise in bad debt expense, however, reiterated rate design and availability of bad debt recovery mechanisms in certain states. The company requested IN IURC to create a bad debt tracker, besides deferring bad debt expenses much in-line with the states like MD, VA, and PA, which already allowed deferral of COVID related expenses and bad debt.

Critically, where many co's can use O&M savings to balance impacts, we see this as a greater challenge to NI as it promised it would pursue a program of cost savings to mitigate NT impacts of the CMA sale to ES this 3Q. With 2020 guidance having already been pulled related to the CMA sale, we only have an adj 2021 guide of a $1.36-1.40/sh 'earnings floor' (see this as risk). We previously downgraded NiSource to Neutral from Buy due to our concerns around absorbing lower demand from COVID.

Delaware BK court approved Longview's prepackaged reorganization plan

The U.S. Bankruptcy Court for the District of Delaware has confirmed Longview Power's prepackaged reorganization plan filed in April, effectively transferring company's equity ownership to its senior secured debt holders offsetting its $350m existing debt. The company would receive $40m as term loan to fund its working capital and capex program for next five years upon emergence from bankruptcy. We note the reorganization plan has no impact on the creditors as well as its employees.

NEE: Gulf Power requested FL PSC to allow deferral of bad debt/safety costs

Given anticipation of continuous rise in bad debt expense and safety costs associated with COVID, NEE subsidiary Gulf Power Co. requested Florida PSC (Florida PSC Docket No. 20200151-EI) to allow the company to defer bad debt expenses and safety costs associated with COVID as regulated asset that can be recovered later or to provide any other relief much in-line with states that have already ordered to create some sort of recovery mechanisms either through deferral of bad debt, creation of a regulatory asset, or by recording and tracking costs related to COVID-19. The utility proposed regulators to determine eligibility for bad debt to be deferred as regulated asset by taking the difference between the bad debt expense for a month in 2020 and the average bad debt expense for last three years, besides deferring safety costs by taking actual spending on safety measures related to COVID and as guided by the U.S. Centers for Disease Control and Prevention and the Florida Department of Health.

Alliant Energy Corporation (LNT)

Our $52 PO is based on a sum of the parts analysis employing relative premium and discounts to the large cap regulated peer multiple of 16.3x 2022E P/E. While our PO is on a 1 year basis we note the 2022 P/E multiple reflects a discount back to 2019. We note that electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector.

We apply a 2.0x P/E premium on IPL as we see the ratecase overhang being resolved. We apply a 3.0x P/E premium on Eastern Wisconsin Electric Company reflecting 1) low risk investment nature of the state, 2) above average ROEs, 3) higher than average growth runway for investments, and 4) bad debt deferral. At ATC, we reflect a 2.0 x P/E premium on LNT's 16% share in the transmission company. Growth expectations for this segment are high, paired with above average ROEs that we believe face less downward pressure vs. regulated state distribution ROEs. We apply an in line multiple at the parent to account for the blend of numerous businesses some which benefit from long term stable PPAs via intercompany generation.

Risks to our price objective are: 1) adverse rate case outcomes, 2) further equity dilution beyond our estimates, 3) interest rate risk, 4) natural disasters, and 5) lower allowed ROE's

NextEra Energy (NEE)

Our $258 PO is derived using a SOTP approach, with the utilities and parent segment valued on a 2022E P/E basis, and the generation segment valued on a 2022E EV/EBITDA basis. In addition, we include NEE's ownership stake in NextEra Energy Partners (NEP) as well as the value of IDRs (DCF, at 7% disc rate). We assign peer multiple of 17.0x (and gross this up by 5% to reflect capital appreciation across the sector) with disc/prem to the assets that reflect the growth/risk profile of the businesses. We provide value for possible regulated M&A announced as one strategy of capital redeployment, albeit weighted at 50% to reflect execution risk. Our valuation reflects the drag from the $5.1bn in new debt. For NEER, we apply a peer EV/EBITDA multiple of 8x, which we adjust depending on asset type. Give contracted renewables 6x prem given fuel type and contracted nature. We apply 2x discount to merchant nuclear (aside from Seabrook), and value contracted nuclear on a DCF approach using a 10% discount rate. We apply a 3x prem multiple to pipelines (2x for MVP), 1x discount to gas infrastructure and 2x discount for supply and trading given lower asset quality, line multiple for contracted gas peakers and 1x discount for merchant peakers (other), again based on asset quality. Downside risks: 1) unfavorable regulatory outcomes in Florida which could negatively affect ability to earn authorized ROE or lower authorized ROE, 2) higher interest rates, 3) changes in commodity prices.

NiSource Inc (NI)

Our $27 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2022 forward P/E multiples of 17.8x for gas utilities and 17.2x for electric utilities with an inline mult for gas utilities with just weather normalization, a 0.5x prem for gas utes with revenue normalization (prev 0x), and a 1.0x premium for the electric utility's strong growth rates (we factor in BOT in '24 EPS) but acknowledgement of industrial risk (prev 2x). We note that electric / gas peer P/E multiples are grossed up by 5% / 5.1% to reflect capital appreciation across the sector. We strip value from Columbia Gas of MA given the pending sale to close in 3Q20. We subtract the value of excess holding company debt at the parent not supporting the utility opcos. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its discounted multiple versus peers.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, financing plan updates, unforeseen costs associated with the MA incident, and challenging steel production economics in Indiana.

Analyst Certification

Equity Investment Rating Distribution: Global Group (as of 31 Mar 2020)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1602	52.15%	Buy	1005	62.73%
Hold	713	23.21%	Hold	463	64.94%
Sell	757	24.64%	Sell	382	50.46%

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Price charts for the securities referenced in this research report are available at https://pricecharts.baml.com, or call 1-800-MERRILL to have them mailed.
BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: Alliant Energy Corp, NextEra Energy, NiSource Inc.
BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: NextEra Energy, NiSource Inc.
The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: Alliant Energy, NextEra Energy, NiSource Inc.
BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Alliant Energy, NextEra Energy, NiSource Inc.
The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: Alliant Energy, NextEra Energy, NiSource Inc.
BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Alliant Energy, NextEra Energy, NiSource Inc.
BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Alliant Energy, NextEra Energy, NiSource Inc.
BofAS together with its affiliates beneficially owns one percent or more of the common stock of this issuer. If this report was issued on or after the 9th day of the month, it reflects the ownership position on the last day of the previous month. Reports issued before the 9th day of a month reflect the ownership position at the end of the second month preceding the date of the report: NextEra Energy, NiSource Inc.
BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Alliant Energy Corp, NextEra Energy, NiSource Inc.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: Alliant Energy, NextEra Energy, NiSource Inc.

BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Global Research policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.

Prices are indicative and for information purposes only. Except as otherwise stated in the report, for the purpose of any recommendation in relation to: (i) an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report; or (ii) a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including BofA Securities trading desks.

The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.

Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

BofA Global Research policies relating to conflicts of interest are described at https://rsch.baml.com/coi

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.

This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.

Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Securities entities located outside of the United Kingdom.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

NiSource

NI-NYSE	Rating	Price: May-22	Target	Total Rtn
	Outperform	$23.09	$27.00	21%

Incrementally Incremental

Bottom Line: NiSource released an investor update including management's current forecast for the net impact to 2020 and 2021 earnings from the COVID-19 pandemic.

Overall, we believe the update will be viewed as modestly disappointing and will likely raise incremental questions on what the company is seeing regarding the lingering COVID-19 and cost impacts embedded in the company's 2021 impact. That said, we believe the stock's nearly 500 bps under-performance (since 4/29) and current multiple (3% discount) largely reflects these uncertainties.

We reiterate our Outperform rating and $27 target price.

Key Points

In front of investor meetings this week, NiSource released an incremental COVID-19 update including a base case that calls for roughly a $30-40mm margin reduction in 2020 and $0-25mm margin reduction in 2021. Including other COVID-19 costs, total unmitigated non-GAAP costs are estimated to range from ($0.15-0.20)/share in 2020 and ($0-0.10)/share in 2021.

Management believes it can mitigate up to $0.10-0.15/share in 2020 and $0.05-0.10/share in 2021 through cost control, regulatory mechanisms and organizational repositioning efforts.

Although the net impact could suggest only an incremental $0.05 of potential EPS drag, management seems to be striking a more cautious stance suggesting a $0.0-0.10/share impact for both 2020 and 2021 and a recovery that extends into at least the first half of 2021. We believe the company's range likely includes some flexibility regarding the potential timing of regulatory recovery as well as financing costs associated with bridging lower operating cash flows.

We are reducing our 2020-22 EPS estimates to $1.30, $1.33 and $1.45, respectively, to reflect a more conservative sales outlook and a slightly longer time frame to execute its organizational repositioning efforts post the upcoming sale of Columbia Gas Massachusetts (CGM) in 3Q20.

Acknowledging the near-term uncertainties, we continue to find NI share attractive relative to the company's above-average 5-7% long-term EPS CAGR. In addition, the company has several positive catalysts upcoming in the Fall, including the completion of its sale of CGM to Eversource in 3Q20 as well as the company re-initiating its 2021 EPS guidance, which will serve as a base for its 5-7% above-average EPS CAGR.

Key Changes

Estimates	2020E	2021E
EPS	$1.30	$1.33
Previous	*$1.35*	*$1.40*
EBIT	$1,087	$1,155
Previous	*$1,113*	*$1,188*

Scenarios

Valuation

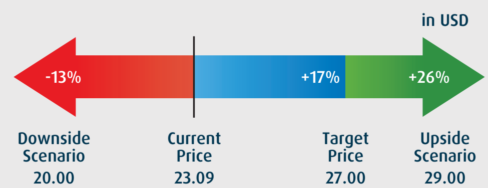
Our $27 target price is the product of a P/E-based sum of the parts. We utilize a regulated average multiple using 2022E EPS as base valuation and then make specific adjustments to reflect our current view of the fundamental outlook. For NI, we have removed EPS for its MA gas business from our P/E valuation and instead include only the asset value (1x equity rate base) in our SOTP framework.

Upside Scenario 29.00

Our upside scenario reflects continued multiple expansion associated with the company's premium and above-average earnings and dividend growth profile.

Downside Scenario 20.00

Our downside scenario reflects a tightening monetary policy and a deceleration of the company's rate base growth.



Key Catalysts

Initial indicative pricing in its second renewable RFP in IN. Completing the sale of Columbia Gas of Massachusetts to Eversource. Potentially, capital spending and growth rate update in 2H20 given clarity in the aforementioned RFP and recent rate orders in MA and IN.

Company Description

NiSource, Inc. is a regulated utility holding company, serving approximately 3.5 million natural gas customers and 500,000 electric customers across seven states. Through its Columbia Gas and NIPSCO brands, it provides natural gas, electricity, and other products and services. The company was founded in 1987 and is headquartered in Merrillville, Indiana.

Company Models

BMO Capital Markets

Take 2… "Action"

In front of investor meetings this week, NiSource released an investor update including management's current forecast for the net impact to 2020 and 2021 earnings from the COVID-19 pandemic.

Overall, we believe the update will be viewed as modestly disappointing and will likely raise incremental questions on what the company is seeing regarding the lingering COVID-19 and cost impacts embedded in the company's 2021 impact report. That said, we believe the stock's nearly 500 bps underperformance (since 4/29) and current multiple (3% discount) largely reflects these uncertainties and investors will now likely look to management for incremental details behind the company's additional disclosures for comfort.

For the month of April (which could prove to be the worst for the year), management estimates a net impact of $8.1 million pre-tax or just under 2c/share with gas distribution sales down 4% reflecting decoupling (0.3% annualized) and electric operation sales down 26% (2.3% annualized).

Although management indicated volumes had begun to recover by mid- to late-May off April lows, assuming a non-specified gradual recovery that extends into 1H21 and an assumption of favorable regulatory treatment on COVID-19 related costs (primarily at NIPSCO), **management's base case calls for roughly a $30-40 million margin reduction in 2020 and $0-25 million margin reduction in 2021**. When including other COVID-19 costs including bad debt, lost late payment fees and other operational expenses, total unmitigated non-GAAP costs are estimated to range from ($0.15-0.20)/share in 2020 and ($0-0.10)/share in 2021.

Partially offsetting these impacts and in an effort to mitigate the unallocated costs associated with the company's pending sale of Columbia Gas Massachusetts (CGM) to Eversource, **management believes it can mitigate up to $0.10-0.15/share in 2020 and $0.05-0.10/share in 2021 through cost control**, regulatory mechanisms and organizational repositioning efforts.

Although the net impacts above would suggest only an incremental $0.05 of potential EPS drag relative to its previous, pre-COVID-19 expectation that 2021 would be "at or above" 2020's initial $1.36-1.40/share guidance (issued on 3Q19 call but withdrawn with its 4Q19 release) **management seems to be striking a more cautious stance suggesting a $0.0-0.10/share** impact in both years and a recovery that extends into at least the first half of 2021. We believe the company's range likely includes some flexibility regarding the potential timing of regulatory recovery as well as financing costs associated with bridging lower operating cash flows.

We would hope to get more clarity on the cadence and magnitude of the demand recovery embedded in the company's current outlook as well as a better sense of the incremental costs and recovery assumptions, especially at NIPSCO. While not precise, we see bad debt and other costs ranging from $40-55 million in 2020 to $0-$22 million in 2021, which would imply a full-year sales reduction at NIPSCO in the lower-single-digit range (Exhibit 1).

BMO Capital Markets

Exhibit 1: Net Margin & Cost Impacts for 2020 & 2021

	2020		2021	
	Low	High	Low	High

Pre/Tax Revenue	($70)	($94)	$0	($47)
Base-Case Margin Impact	($30)	($40)	$0	($25)
Implied Bad-Debt & Other Costs	($40)	($54)	$0	($22)
Mitigation Efforts	**$0.10**	**$0.15**	**$0.05**	**$0.10**
Net Impacts	**($0.05)**	**($0.10)**	**($0.05)**	**($0.10)**

* Assumes primary impact at NIPSCO

Source: BMO Capital Markets

The company filed a petition with the Indiana commission (IURC) in early May for the ability to defer lost revenue and costs and the establishment of a bad debt tracker. Management has asked for the commission to respond by July 15th.

We are reducing our 2020-22 EPS estimates to $1.30, $1.33 and $1.45, respectively, to reflect a more conservative sales outlook and a slightly longer time frame to execute its organizational repositioning efforts post the sale of CGM.

We Reiterate Our Outperform Rating and $27 Target Price

Acknowledging the near-term uncertainties, we continue to find NI shares attractive relative to the company's above-average 5-7% long-term EPS CAGR, which is supported by a visible $30 billion investment backlog at both its natural gas and electric operations with minimal regulatory lag (75-80% converted to earnings within 12-18 months).

The company has several positive catalysts upcoming in the Fall, including the completion of its sale of Columbia Gas Massachusetts to Eversource in 3Q20 as well as the company re-initiating its 2021 EPS guidance, which will serve as a base for its 5-7% EPS CAGR.

We also see a bias to the upper end of this 5-7% growth range as the company finalizes its renewable RFPs to replace its retiring coal fleet at NIPSCO as well as other capex opportunities including grid modernization spending. Management should have visibility on both these opportunities in the Fall also and as such, we would look for the company to extend its 5-7% growth through 2024 (from 2022) to incorporate these new growth drivers.

Company Specific Disclosures

Disclosure 9B: BMO Capital Markets makes a market in NiSource Inc in United States.

Methodology and Risks to Target Price/Valuation for NiSource Inc (NI-NYSE)

Methodology: Our $27 target price is the product of a P/E-based sum-of-the-parts (SOTP) analysis of the company's primary regulated operating companies. We utilize a regulated group-average multiple based on 2022E EPS as our initial basis for valuation and then make adjustments specific to each jurisdiction to reflect our current view of the fundamental outlook.

Risks: NI's regulated profile exposes the company to business risk including but not limited to federal and state regulatory risk, federal and state political risk, environmental policy, interest rate risk, access to capital markets, construction risk, changes in customer demand trends, changes in customer affordability, extreme weather, natural disaster, and equipment failure.

Goldman Sachs & Co. LLC

We reiterate our Buy rating on NiSource (NI) after our virtual meeting with senior management. While we recognize concerns related to a lack of clarity on 2021 earnings power (guidance expected with 3Q20 results), we view current valuations somewhat accounting for a potentially bearish scenario and believe normalizing demand and robust investment pipeline support a relatively unchanged 2022 earnings profile. Our 2020-2022 EPS estimates of $1.27/$1.38/$1.49 remain unchanged, which already incorporate our forecasted -$0.09 and -$0.05 net impact (2020/2021) from COVID-19 that fall within the company's guidance impact range.

Below are the key takeaways from our virtual meeting:

- **Cost mitigation includes sustainable efficiencies.** While some cost controls (especially in 2020) reflect more short-term timing of various expenses, management noted that a bulk of the items stem from items planned prior to the 2018 gas incident, including corporate function consolidation and ongoing cost structure adjustments. NI's 2021 mitigation plan of $0.05-$0.10 accounts for certain delays in 2020 expenses.
- **NI expects a constructive outcome on COVID cost deferral proposals.** With Pennsylvania, Virginia, and Maryland already having approved incremental bad debt deferral and/or other COVID related costs, management looks to receive a similar decision in the proposal for Indiana and Ohio. In the $0.00 to -$0.10 net EPS impact guidance, they assume constructive outcomes at both jurisdictions.
- **While NI did not provide formal 2020/2021 guidance, prior management commentary serves as a guide.** On the 4Q19 earnings call, management pulled their 2020 EPS guidance range of $1.36-$1.40 given the announced sale of its MA gas utility, but commented that 2021 earnings could be at or above the prior 2020 guidance range. They still view this as a fair base to assess the ultimate COVID-19 impact and hope to provide formal 2021 guidance with 3Q20 earnings.
- **No bulk equity needed until renewable financing.** NI's financing plans through 2021 do not incorporate any assumed recovery of the $300mn in property insurance associated with the MA gas incident. They also do not expect a need to issue bulk equity unless to finance the purchase of owned renewables, either from the recent Indiana RFP or the 50% future ownership of the Rosewood (100 MW) and Crossroads (300 MW) wind plants (expected in 2023).

They continue to view RFP-based generation ownership potential as incremental upside, consisting of up to 50% of the 1.6 GW capacity opportunity. We note NI would need to file a base rate case to add any generation into rate base.

Our $28 12-month price target (unchanged) embeds 20x our 2021 EPS estimate of $1.38. Our target reflects a 24% total return, with the stock currently trading at a 1.0x P/E discount to smid-cap peers. Key risks include (1) legal and regulatory risks, (2) earnings/cash impact due to COVID-19, (3) higher than expected O&M, (4) electricity demand and customer growth, and (5) financing.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Disclosures

Financial advisory disclosure

Goldman Sachs and/or one of its affiliates is acting as a financial advisor in connection with an announced strategic matter involving the following company or one of its affiliates: Nisource Inc.

The rating(s) for NiSource Inc. is/are relative to the following companies in its coverage universe:

Ameren Corp., American Electric Power, American Water Works, Atmos Energy Corp., Avangrid Inc., CMS Energy Corp., Centerpoint Energy Inc., Clearway Energy Inc., Consolidated Edison Inc., DTE Energy Co., Dominion Energy Inc., Duke Energy Corp., Edison International, Entergy Corp., Essential Utilities Inc., Evergy Inc., Eversource Energy, Exelon Corp., FirstEnergy Corp., NRG Energy Inc., NextEra Energy Inc., NextEra Energy Partners, OGE Energy Corp., PG&E Corp., PPL Corp., Pinnacle West Capital Corp., Portland General Electric Co., Public Service Enterprise Group, Sempra Energy, Southern Co., WEC Energy Group, Xcel Energy Inc.

Company-specific regulatory disclosures

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at https://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Instruction 598 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Instruction 598, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian

Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage universe and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage universe. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each region's Investment Review Committee manages Regional Conviction lists, which represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage Universe: A list of all stocks in each coverage universe is available by primary analyst, stock and coverage universe at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Ombudsman Goldman Sachs Brazil: 0800 727 5764 and / or ouvidoriagoldmansachs@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Ouvidoria Goldman Sachs Brasil: 0800 727 5764 e/ou ouvidoriagoldmansachs@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by either Goldman Sachs Canada Inc. or Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage universe as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.fiadocumentation.org/fia/regulatory-disclosures_1/fia-uniform-futures-and-options-on-futures-risk-disclosures-booklet-pdf-version-2018. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by the Global Investment Research division of GS may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

Key Takeaways

Earlier today, we hosted a Virtual Investor Update Meeting with NiSource's CEO Joe Hamrock and CFO Donald Brown. NI published its expected impact from COVID-19 (click here) and some were surprised with $0.00-$0.10 per share negative impact on 2021 EPS. Management clarified that they tried to be conservative and that they see a recovery in margin from April lows and they expect full recovery by the end of the year. 2021 EPS will be a base year for future 5-7% long term growth and NI plans to provide 2021 EPS guidance on the 3Q20 earnings call together with an update on the long-term outlook. Management remains focused on cost reduction to mitigate the impact of COVID-19 on revenues and highlighted that they look at traditional cost management but also some structural changes could by under way and they could be more long term in nature.

Other Tidbits

Despite strong liquidity post recent debt issuance and planned asset sale, management sees a need for issuance on ATM to get to targeted FFO/Debt metrics. NI maintained its previously provided $200-$300MM range of ATM equity issuance in 2020. Sale of Columbia Gas of MA remains on track, with close expected by the end of 3Q20. Management doesn't see a risk to 2021 capex due to COVID-19 at this time. An increase in bad debt has not been material so far.

Regulatory Update

Earlier in May, NIPSCO filed for a deferral of COVID-19 expenses and NI plans to file for deferral in OH. Despite the lockdown, NI filed rate cases in Pennsylvania and Maryland with new rates expected in 2021. NI requested a $100.4MM rate increase in PA (based on ROE of 10.95% and equity/capital structure of 54.19%) and a $6.5MM rate increase in Maryland (based on ROE of 10.95% and equity/capital structure of 52.63%).

Source: Company accounts, Thomson Reuters, UBS estimates. Metrics marked as (UBS) have had analyst adjustments applied. Valuations: based on an average share price that year, (E): based on a share price of US$ 23.32 on 27-May-2020

Forecast returns

Forecast price appreciation	+15.8%
Forecast dividend yield	3.9%
Forecast stock return	+19.7%
Market return assumption	5.2%
Forecast excess return	+14.5%

Valuation Method and Risk Statement

Risks include, but are not limited to, the following: changes to the regulatory environment, ability to achieve favorable returns on investment projects, and ability to continue to reinvest in the business for growth. We use comparable company multiples in our sum-of-the-parts EV/EBITDA and P/E valuations. Our price target is derived using an average of sum-of-the-parts EV/EBITDA and P/E valuations and DDM.

Required Disclosures

This report has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

For information on the ways in which UBS manages conflicts and maintains independence of its research product; historical performance information; certain additional disclosures concerning UBS research recommendations; and terms and conditions for certain third party data used in research report, please visit www.ubs.com/disclosures. The figures contained in performance charts refer to the past; past performance is not a reliable indicator of future results. Additional information will be made available upon request. UBS Securities Co. Limited is licensed to conduct securities investment consultancy businesses by the China Securities Regulatory Commission. UBS acts or may act as principal in the debt securities (or in related derivatives) that may be the subject of this report. This recommendation was finalized on: 28 May 2020 08:19 PM GMT. UBS has designated certain Research department members as Derivatives Research Analysts where those department members publish research principally on the analysis of the price or market for a derivative, and provide information reasonably sufficient upon which to base a decision to enter into a derivatives transaction. Where Derivatives Research Analysts co-author research reports with Equity Research Analysts or Economists, the Derivatives Research Analyst is responsible for the derivatives investment views, forecasts, and/or recommendations.

Analyst Certification:
Each research analyst primarily responsible for the content of this research report, in whole or in part, certifies that with respect to each security or issuer that the analyst covered in this report: (1) all of the views expressed accurately reflect his or her personal views about those securities or issuers and were prepared in an independent manner, including with respect to UBS, and (2) no part of his or her compensation was, is, or will be, directly or indirectly, related to the specific recommendations or views expressed by that research analyst in the research report.

UBS Investment Research: Global Equity Rating Definitions

12-Month Rating	**Definition**	**Coverage**[1]	**IB Services**[2]
Buy	FSR is > 6% above the MRA.	48%	32%
Neutral	FSR is between -6% and 6% of the MRA.	40%	28%
Sell	FSR is > 6% below the MRA.	13%	20%
Short-Term Rating	**Definition**	**Coverage**[3]	**IB Services**[4]
Buy	Stock price expected to rise within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%
Sell	Stock price expected to fall within three months from the time the rating was assigned because of a specific catalyst or event.	<1%	<1%

Source: UBS. Rating allocations are as of 31 March 2020.
1:Percentage of companies under coverage globally within the 12-month rating category.
2:Percentage of companies within the 12-month rating category for which investment banking (IB) services were provided within the past 12 months.
3:Percentage of companies under coverage globally within the Short-Term rating category.
4:Percentage of companies within the Short-Term rating category for which investment banking (IB) services were provided within the past 12 months.

KEY DEFINITIONS: Forecast Stock Return (FSR) is defined as expected percentage price appreciation plus gross dividend yield over the next 12 months. In some cases, this yield may be based on accrued dividends. **Market Return Assumption (MRA)** is defined as the one-year local market interest rate plus 5% (a proxy for, and not a forecast of, the equity risk premium). **Under Review (UR)** Stocks may be flagged as UR by the analyst, indicating that the stock's price target and/or rating are subject to possible change in the near term, usually in response to an event that may affect the investment case or valuation. **Short-Term Ratings** reflect the expected near-term (up to three months) performance of the stock and do not reflect any change in the fundamental view or investment case. **Equity Price Targets** have an investment horizon of 12 months.

EXCEPTIONS AND SPECIAL CASES: UK and European Investment Fund ratings and definitions are: Buy: Positive on factors such as structure, management, performance record, discount; **Neutral:** Neutral on factors such as structure, management, performance record, discount; **Sell:** Negative on factors such as structure, management, performance record, discount. **Core Banding Exceptions (CBE):** Exceptions to the standard +/-6% bands may be granted by the Investment Review Committee (IRC). Factors considered by the IRC include the stock's volatility and the credit spread of the respective company's debt. As a result, stocks deemed to be very high or low risk may be subject to higher or lower bands as they relate to the rating. When such exceptions apply, they will be identified in the Company Disclosures table in the relevant research piece.

Research analysts contributing to this report who are employed by any non-US affiliate of UBS Securities LLC are not registered/qualified as research analysts with FINRA. Such analysts may not be associated persons of UBS Securities LLC and therefore are not subject to the FINRA restrictions on communications with a subject company, public appearances, and trading securities held by a research analyst account. The name of each affiliate and analyst employed by that affiliate contributing to this report, if any, follows.

UBS Securities LLC: Aga Zmigrodzka, CFA, Brian Reynolds, Shneur Z. Gershuni, CFA.

The Disclaimer relevant to Global Wealth Management clients follows the Global Disclaimer.

Global Disclaimer

This document has been prepared by UBS Securities LLC, an affiliate of UBS AG. UBS AG, its subsidiaries, branches and affiliates are referred to herein as UBS.

This Document is provided solely to recipients who are expressly authorized by UBS to receive it. If you are not so authorized you must immediately destroy the Document.

Global Research is provided to our clients through UBS Neo, and in certain instances, UBS.com and any other system or distribution method specifically identified in one or more communications distributed through UBS Neo or UBS.com (each a system) as an approved means for distributing Global Research. It may also be made available through third party vendors and distributed by UBS and/or third parties via e-mail or alternative electronic means. The level and types of services provided by Global Research to a client may vary depending upon various factors such as a client's individual preferences as to the frequency and manner of receiving communications, a client's risk profile and investment focus and perspective (e.g., market wide, sector specific, long-term, short-term, etc.), the size and scope of the overall client relationship with UBS and legal and regulatory constraints.

All Global Research is available on UBS Neo. Please contact your UBS sales representative if you wish to discuss your access to UBS Neo.

When you receive Global Research through a system, your access and/or use of such Global Research is subject to this Global Research Disclaimer and to the UBS Neo Platform Use Agreement (the "Neo Terms") together with any other relevant terms of use governing the applicable System.

When you receive Global Research via a third party vendor, e-mail or other electronic means, you agree that use shall be subject to this Global Research Disclaimer, the Neo Terms and where applicable the UBS Investment Bank terms of business (https://www.ubs.com/global/en/investment-bank/regulatory.html) and to UBS's Terms of Use/Disclaimer (http://www.ubs.com/global/en/legalinfo2/disclaimer.html). In addition, you consent to UBS processing your personal data and using cookies in accordance with our Privacy Statement (http://www.ubs.com/global/en/legalinfo2/privacy.html) and cookie notice (http://www.ubs.com/global/en/homepage/cookies/cookie-management.html).

If you receive Global Research, whether through a System or by any other means, you agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research provided via Global Research or otherwise, and that you shall not extract data from any research or estimates provided to you via Global Research or otherwise, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, structured derivative products and futures (including OTC derivatives) are not suitable for all investors. Trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "The Characteristics and Risks of Standardized Options." You may read the document at http://www.theocc.com/publications/risks/riskchap1.jsp or ask your salesperson for a copy. Various theoretical explanations of the risks associated with these instruments have been published. Supporting documentation for any claims, comparisons, recommendations, statistics or other technical data will be supplied upon request. Past performance is not necessarily indicative of future results. Transaction costs may be significant in option strategies calling for multiple purchases and sales of options, such as spreads and straddles. Because of the importance of tax considerations to many options transactions, the investor considering options should consult with his/her tax advisor as to how taxes affect the outcome of contemplated options transactions.

Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the Information.

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS and among its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of UBS Research Management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. All material information in relation to published research reports, such as valuation methodology, risk statements, underlying assumptions (including sensitivity analysis of those assumptions), ratings history etc. as required by the Market Abuse

Regulation, can be found on UBS Neo. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms under English law or, if not carried out by UBS in the UK the law of the relevant jurisdiction in which UBS determines it carries out the activity) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Within the past 12 months UBS AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

Where Global Research refers to "UBS Evidence Lab Inside" or has made use of data provided by UBS Evidence Lab you understand that UBS Evidence Lab is a separate department to Global Research and that UBS Evidence Lab does not provide research, investment recommendations or advice.

United Kingdom: This material is distributed by UBS AG, London Branch to persons who are eligible counterparties or professional clients. UBS AG, London Branch is authorised by the Prudential Regulation Authority and subject to regulation by the Financial Conduct Authority and limited regulation by the Prudential Regulation Authority. **Europe:** Except as otherwise specified herein, these materials are distributed by UBS Europe SE, a subsidiary of UBS AG, to persons who are eligible counterparties or professional clients (as detailed in the Bundesanstalt fur Finanzdienstleistungsaufsicht (BaFin) Rules and according to MIFID) and are only available to such persons. It provides brokerage services bearing SEBI Registration Number: INZ000259830; merchant banking services bearing SEBI Registration Number: INM000010809 and Research Analyst services bearing SEBI Registration Number: INH000001204. UBS AG, its affiliates or subsidiaries may have debt holdings or positions in the subject Indian company/companies. Within the past 12 months, UBS AG, its affiliates or subsidiaries may have received compensation for non-investment banking securities-related services and/or non-securities services from the subject Indian company/companies. The subject company/companies may have been a client/clients of UBS AG, its affiliates or subsidiaries during the 12 months preceding the date of distribution of the research report with respect to investment banking and/or non-investment banking securities-related services and/or non-securities services. With regard to information on associates, please refer to the Annual Report at: http://www.ubs.com/global/en/about_ubs/investor_relations/annualreporting.html **Taiwan:** Except as otherwise specified herein, this material may not be distributed in Taiwan. Information and material on securities/instruments that are traded in a Taiwan organized exchange is deemed to be issued and distributed by UBS Securities Pte. LTD., Taipei Branch, which is licensed and regulated by Taiwan Financial Supervisory Commission. Save for securities/instruments that are traded in a Taiwan organized exchange, this material should not constitute "recommendation" to clients or recipients in Taiwan for the covered companies or any companies mentioned in this document. No portion of the document may be reproduced or quoted by the press or any other person without authorisation from UBS. **Indonesia:** This report is being distributed by PT UBS Sekuritas Indonesia and is delivered by its licensed employee(s), including marketing/sales person, to its client. PT UBS Sekuritas Indonesia, having its registered office at Wisma GKBI, 22nd floor, JL. Jend. Sudirman, kav.28, Jakarta 10210, Indonesia, is a subsidiary company of UBS AG and licensed under Capital Market Law no. 8 year 1995, a holder of broker-dealer and underwriter licenses issued by the Capital Market and Financial Institution Supervisory Agency (now Otoritas Jasa Keuangan/OJK). PT UBS Sekuritas Indonesia is also a member of Indonesia Stock Exchange and supervised by Otoritas Jasa Keuangan (OJK). Neither this report nor any copy hereof may be distributed in Indonesia or to any Indonesian citizens except in compliance with applicable Indonesian capital market laws and regulations. This report is not an offer of securities in Indonesia and may not be distributed within the territory of the Republic of Indonesia or to Indonesian citizens in circumstance which constitutes an offering within the meaning of Indonesian capital market laws and regulations.

The disclosures contained in research documents produced by UBS AG, London Branch or UBS Europe SE shall be governed by and construed in accordance with English law.

Global Wealth Management Disclaimer

You receive this document in your capacity as a client of UBS Global Wealth Management. This publication has been distributed to you by UBS Switzerland AG (regulated by FINMA in Switzerland) or its affiliates ("UBS") with whom you have a banking relationship with. The full name of the distributing affiliate and its competent authority can be found in the country-specific disclaimer at the end of this document.

The date and time of the first dissemination of this publication is the same as the date and time of its publication.

Risk information:

You agree that you shall not copy, revise, amend, create a derivative work, provide to any third party, or in any way commercially exploit any UBS research, and that you shall not extract data from any research or estimates, without the prior written consent of UBS.

This document is for distribution only as may be permitted by law. It is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or would subject UBS to any registration or licensing requirement within such jurisdiction.

This document is a general communication and is educational in nature; it is not an advertisement nor is it a solicitation or an offer to buy or sell any financial instruments or to participate in any particular trading strategy. Nothing in this document constitutes a representation that any investment strategy or recommendation is suitable or appropriate to an investor's individual circumstances or otherwise constitutes a personal recommendation. By providing this document, none of UBS or its representatives has any responsibility or authority to provide or have provided investment advice in a fiduciary capacity or otherwise. Investments involve risks, and investors should exercise prudence and their own judgment in making their investment decisions. None of UBS or its representatives is suggesting that the recipient or any other person take a specific course of action or any action at all. By receiving this document, the recipient acknowledges and agrees with the intended purpose described above and further disclaims any expectation or belief that the information constitutes investment advice to the recipient or otherwise purports to meet the investment objectives of the recipient. The financial instruments described in the document may not be eligible for sale in all jurisdictions or to certain categories of investors.

Options, derivative products and futures are not suitable for all investors, and trading in these instruments is considered risky. Mortgage and asset-backed securities may involve a high degree of risk and may be highly volatile in response to fluctuations in interest rates or other market conditions. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument referred to in the document. For investment advice, trade execution or other enquiries, clients should contact their local sales representative.

The value of any investment or income may go down as well as up, and investors may not get back the full (or any) amount invested. Past performance is not necessarily a guide to future performance. Neither UBS nor any of its directors, employees or agents accepts any liability for any loss (including investment loss) or damage arising out of the use of all or any of the information (as defined below).

Prior to making any investment or financial decisions, any recipient of this document or the information should take steps to understand the risk and return of the investment and seek individualized advice from his or her personal financial, legal, tax and other professional advisors that takes into account all the particular facts and circumstances of his or her investment objectives.

Any prices stated in this document are for information purposes only and do not represent valuations for individual securities or other financial instruments. There is no representation that any transaction can or could have been effected at those prices, and any prices do not necessarily reflect UBS's internal books and records or theoretical model-based valuations and may be based on certain assumptions. Different assumptions by UBS or any other source may yield substantially different results.

No representation or warranty, either expressed or implied, is provided in relation to the accuracy, completeness or reliability of the information contained in any materials to which this document relates (the "Information"), except with respect to Information concerning UBS. The Information is not intended to be a complete statement or summary of the securities, markets or developments referred to in the document. UBS does not undertake to update or keep current the Information. Any opinions expressed in this document may change without notice and may differ or be contrary to opinions expressed by other business areas or groups, personnel or other representative of UBS. Any statements contained in this report attributed to a third party represent UBS's interpretation of the data, information and/or opinions provided by that third party either publicly or through a subscription service, and such use and interpretation have not been reviewed by the third party. In no circumstances may this document or any of the Information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes:

(i) valuation or accounting purposes;

(ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or

(iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees.

By receiving this document and the Information you will be deemed to represent and warrant to UBS that you will not use this document or any of the Information for any of the above purposes or otherwise rely upon this document or any of the Information.

UBS has policies and procedures, which include, without limitation, independence policies and permanent information barriers, that are intended, and upon which UBS relies, to manage potential conflicts of interest and control the flow of information within divisions of UBS (including between Global Wealth Management and Research) and among

its subsidiaries, branches and affiliates. For further information on the ways in which UBS manages conflicts and maintains independence of its research products, historical performance information and certain additional disclosures concerning UBS research recommendations, please visit www.ubs.com/disclosures.

Research will initiate, update and cease coverage solely at the discretion of research management, which will also have sole discretion on the timing and frequency of any published research product. The analysis contained in this document is based on numerous assumptions. Different assumptions could result in materially different results.

The analyst(s) responsible for the preparation of this document may interact with trading desk personnel, sales personnel and other parties for the purpose of gathering, applying and interpreting market information. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS into other areas, units, groups or affiliates of UBS. The compensation of the analyst who prepared this document is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking revenues; however, compensation may relate to the revenues of UBS and/or its divisions as a whole, of which investment banking, sales and trading are a part, and UBS's subsidiaries, branches and affiliates as a whole.

For financial instruments admitted to trading on an EU regulated market: UBS AG, its affiliates or subsidiaries (excluding UBS Securities LLC) acts as a market maker or liquidity provider (in accordance with the interpretation of these terms in the UK) in the financial instruments of the issuer save that where the activity of liquidity provider is carried out in accordance with the definition given to it by the laws and regulations of any other EU jurisdictions, such information is separately disclosed in this document. For financial instruments admitted to trading on a non-EU regulated market: UBS may act as a market maker save that where this activity is carried out in the US in accordance with the definition given to it by the relevant laws and regulations, such activity will be specifically disclosed in this document. UBS may have issued a warrant the value of which is based on one or more of the financial instruments referred to in the document. UBS and its affiliates and employees may have long or short positions, trade as principal and buy and sell in instruments or derivatives identified herein; such transactions or positions may be inconsistent with the opinions expressed in this document.

Options and futures are not suitable for all investors, and trading in these instruments is considered risky and may be appropriate only for sophisticated investors. Prior to buying or selling an option, and for the complete risks relating to options, you must receive a copy of "Characteristics and Risks of Standardized Options". You may read the document at https://www.theocc.com/about/publications/character-risks.jsp or ask your financial advisor for a copy.

Investing in structured investments involves significant risks. For a detailed discussion of the risks involved in investing in any particular structured investment, you must read the relevant offering materials for that investment. Structured investments are unsecured obligations of a particular issuer with returns linked to the performance of an underlying asset. Depending on the terms of the investment, investors could lose all or a substantial portion of their investment based on the performance of the underlying asset. Investors could also lose their entire investment if the issuer becomes insolvent. UBS Financial Services Inc. does not guarantee in any way the obligations or the financial condition of any issuer or the accuracy of any financial information provided by any issuer. Structured investments are not traditional investments and investing in a structured investment is not equivalent to investing directly in the underlying asset. Structured investments may have limited or no liquidity, and investors should be prepared to hold their investment to maturity. The return of structured investments may be limited by a maximum gain, participation rate or other feature. Structured investments may include call features and, if a structured investment is called early, investors would not earn any further return and may not be able to reinvest in similar investments with similar terms. Structured investments include costs and fees which are generally embedded in the price of the investment. The tax treatment of a structured investment may be complex and may differ from a direct investment in the underlying asset. UBS Financial Services Inc. and its employees do not provide tax advice. Investors should consult their own tax advisor about their own tax situation before investing in any securities.

Within the past 12 months UBS Switzerland AG, its affiliates or subsidiaries may have received or provided investment services and activities or ancillary services as per MiFID II which may have given rise to a payment or promise of a payment in relation to these services from or to this company.

If you require detailed information on disclosures of interest or conflict of interest as required by Market Abuse Regulation please contact the mailbox MAR_disclosures_twopager@ubs.com. Please note that e-mail communication is unsecured.

External Asset Managers / External Financial Consultants: In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.

Distributed to US persons by UBS Financial Services Inc. or UBS Securities LLC, subsidiaries of UBS AG. UBS Switzerland AG, UBS Europe SE, UBS Bank, S.A., UBS Brasil Administradora de Valores Mobiliarios Ltda, UBS Asesores Mexico, S.A. de C.V., UBS Securities Japan Co., Ltd, UBS Wealth Management Israel Ltd and UBS Menkul Degerler AS are affiliates of UBS AG. UBS Financial Services Incorporated of Puerto Rico is a subsidiary of UBS Financial Services Inc. **UBS Financial Services Inc. accepts responsibility for the content of a report prepared by a non-US affiliate when it distributes reports to US persons. All transactions by a US person in the securities mentioned in this report should be effected through a US-registered broker dealer affiliated with UBS, and not through a non-US affiliate. The contents of this report have not been and will not be approved by any securities or investment authority in the United States or elsewhere. UBS Financial Services Inc. is not acting as a municipal advisor to any municipal entity or obligated person within the meaning of Section 15B of the Securities Exchange Act (the "Municipal Advisor Rule") and the opinions or views contained herein are not intended to be, and do not constitute, advice within the meaning of the Municipal Advisor Rule.**

Austria: This publication is not intended to constitute a public offer under Austrian law. It is distributed only for information purposes to clients of UBS Europe SE, Niederlassung Österreich, with place of business at Wächtergasse 1, A-1010 Wien. UBS Europe SE, Niederlassung Österreich is subject to the joint supervision of the European Central Bank ("ECB"), the German Central Bank (Deutsche Bundesbank), the German Federal Financial Services Supervisory Authority (Bundesanstalt für Finanzdienstleistungsaufsicht), as well as of the Austrian Financial Market Authority (Finanzmarktaufsicht, FMA), to which this publication has not been submitted for approval. UBS Europe SE is a credit institution constituted under German law in the form of a Societas Europaea, duly authorized by the ECB. **Bahrain**: UBS is a Swiss bank not licensed, supervised or regulated in Bahrain by the Central Bank of Bahrain and does not undertake banking or investment business activities in Bahrain. Therefore, clients have no protection under local banking and investment services laws and regulations. **Canada**: The information contained herein is not, and under no circumstances is to be construed as, a prospectus, an advertisement, a public offering, an offer to sell securities described herein, solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. Any offer or sale of the securities described herein in Canada will be made only under an exemption from the requirements to file a prospectus with the relevant Canadian securities regulators and only by a dealer properly registered under applicable securities laws or, alternatively, pursuant to an exemption from the dealer registration requirement in the relevant province or territory of Canada in which such offer or sale is made. Under no circumstances is the information contained herein to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. To the extent that the information contained herein references securities of an issuer incorporated, formed or created under the laws of Canada or a province or territory of Canada, any trades in such securities must be conducted through a dealer registered in Canada or, alternatively, pursuant to a dealer registration exemption. No securities commission or similar regulatory authority in Canada has reviewed or in any way passed upon these materials, the information contained herein or the merits of the securities described herein and any representation to the contrary is an offence. In Canada, this publication is distributed by UBS Investment Management Canada Inc. **China**: This research report is neither intended to be distributed to PRC investors nor to provide securities investment consultancy services within the territory of PRC. **Czech Republic**: UBS is not a licensed bank in the Czech Republic and thus is not allowed to provide regulated banking or investment services in the Czech Republic. Quick thoughts from Wells Fargo Securities, LLC Utility & Infrastructure Team:

Utilities

NiSource Inc. (NI/Overweight) (Akers) – Since COVID-19 fears hit the US market, shares of NI have underperformed Gas Utility peers by nearly 7% and lagged the S&P Utilities by 3% (from 2/21/20 close). Most recently, shares reacted to the lack of affirmative guidance on the Q1 call and, subsequently, disclosures this week outlining a potential net impact from COVID of ($0.00-0.10) in each 2020 and 2021. Based on our conversation with NI mgmt. yesterday (5/27), we feel incrementally better about the story. Mgmt. highlighted opportunities to drive both structural cost savings and general process improvements; the company also expects more temporary cost reductions in 2020. O&M is likely to go down in 2021 on account of the sale of MA and trend flat or better off that base. The biggest determinant as to where the company lands in the ($0.00-0.10) COVID impact range is sales. The company currently expects gas/electric sales to be down 2.5%/4%, respectively, in 2020 with a margin impact of $30-40mm ($8mm of which was experienced in April), or $0.06-0.08 per share after-tax, and $0-20mm, or $0.00-0.04 in 2021. Within the industrial customer base, exposure to the auto supply chain and steel industry has weighed on volumes. That said, mgmt. is starting to see a recovery and noted that industrial customers continue to pay their bills. The commercial recovery remains murky as states are in the process of phased re-openings.

Regarding the growth rate, the 5-7% appears intact off of a normalized 2021 base as any lingering COVID impacts in 2021 would eventually be reconciled through a natural rebound and/or rate cases. Further, the 5-7% is supported by annual capex of ~$1.8B with renewable opportunities at NIPSCO offering potential upside to those levels in 2022 and 2023. The company outlined a 1,300-1,400 MW generation need in 2023 (three wind projects representing ~800 MW already announced). NI would look to procure half of the needs through power purchase agreements (PPA) and own the other half, which would be financed with the help of tax equity and likely require incremental equity beyond the ATM and ongoing programs. Reiterate Overweight.

American Electric Power (AEP/Overweight) (Kalton) – It's a go. On 5/27, the Louisiana Public Service Commission (LPSC) approved SWEPCO-LA's portion of North Central Wind, a 1,485 MW regulated wind project located in OK. The LPSC also approved a flex-up option in the event the Public Utility Commission of Texas (PUCT) does not approve the SWEPCO-TX allocation. As a result of the LPSC approval plus prior approvals in AR (including flex-up) and OK, AEP has secured approvals sufficient to proceed with the entire project regardless of the PUCT's final decision. Our EPS outlook already incorporates the $2B North Central Wind project with a full year contribution beginning in '22. Upon completion, we estimate North Central will add ~$0.10 to annual EPS power assuming a 9.0-9.5% ROE, 45-50% equity ratio and $1.0-1.3B of new equity in '21, which is consistent with AEP's guidance of 50-66% equity financing for the project. Our 20-24E EPS

Please see page 3 for rating definitions, important disclosures and required analyst certifications.
All estimates/forecasts are as of 05/28/20 unless otherwise stated. 05/28/20 05:30:42 ET

remain $4.30, $4.70, $5.10, $5.40 & $5.70, which results in a 7% CAGR off the original mid-point of '19 guidance ($4.10). Our take: not a surprise, but an incremental positive nonetheless and increases our confidence in AEP's ability to achieve a '20-24 EPS CAGR in the upper half of the 5-7% guidance range.

American Electric Power Company, Inc. (AEP)/Overweight
Price as of 5/27/2020: $81.44
FY 20 EPS: $4.30
FY 21 EPS: $4.70
Shares Out.: 494.8 MM
Market Cap.: $40,296.51 MM

NiSource Inc. (NI)/Overweight
Price as of 5/27/2020: $23.32
FY 20 EPS: $1.26
FY 21 EPS: $1.37
Shares Out.: 382.2 MM
Market Cap.: $8,912.9 MM

Rating Basis Information:
AEP Thesis: We are attracted to AEP’s strong EPS and dividend growth prospects, organic investment opportunities and regulatory diversity.

NI Thesis: We rate shares Overweight. We are attracted to NI's robust long-term infrastructure growth opportunities and supportive regulatory treatment.

NISOURCE

(NI US Equity – $23.32 – Outperform)

Thinkin' of a master plan

- **Planning to mitigate COVID impact, CMA dis-synergies.** We hosted several members of NI's mgmt. team, including CEO Joe Hamrock and CFO Donald Brown, for a virtual meeting today. The punchline was that mgmt. is hopeful to offset impacts from COVID and dis-synergies from the CMA sale when looking out to 2021, with the goal of crafting a plan to still meet the $1.36-1.40 range that was pointed to on the YE19 call. This was encouraging to hear given commentary on the Q1 call less than a month ago where NI was noncommittal on expectations for 2021, which will be the basis for its 5-7% growth thereafter. Our 2021E is at the bottom of that range ($1.36), which assumes some spillover of COVID pressures/dis-synergies that aren't fully offset. We remain Outperform rated with a $26 PT as LT fundamentals remain solid and the plan post-CMA should be a lot easier to execute on.

- **Base scenario = ($0.00-0.10) EPS impact on 2021.** The base scenario that was outlined for 2021 assumes modest customer attrition/load declines, resulting in ($0-25M) of estimated margin reduction. Other potential impacts include incremental bad debts and financing expenses as well as the timing of regulatory activities. Mitigation efforts are underway, namely permanent structural changes and cost reductions catalyzed by the CMA sale. Importantly, lingering impacts stemming from COVID next year will be trued up through rate cases ultimately to where NI should get back on track LT.

- **Signs that sales are beginning to recover.** April sales data showed gas down (4%) and electric down (26%)! NI has started to see improvement off April-lows as C&I customers for both gas/electric (who are most impacted by the autos) have started to ramp back up. On the B/S, NI feels it is in good shape for 2020 as its $100M capex deferral was done largely to buffer cash.

- **Generation strategy.** NI's generation strategy in Indiana will start to piece together this summer as CPCN filings are made at the IURC, with a full update targeted for Q3. All capex will be incremental and result in a step-up in EPS growth in the 2022/2023 timeframe. Financing is TBD but will include equity that could come via a forward or hybrids to minimize any dilutive impacts until the capex is rolled into rates.

- **CMA sale on track.** NI still expects the CMA sale to close in Q3.

Company description

NiSource, headquartered in Merrillville, Indiana, operates two separate business lines: electric utility and gas distribution LDCs. The electric utility serves just under 500,000 customers in northern Indiana and owns 3,300 MW of generation. The gas LDC serves 3.5 million customers in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland and Massachusetts.

Investment Thesis

We see above-average rate base and earnings growth potential for NiSource relative to other electric and natural gas distribution utilities. NI has a $30B backlog of capital investment with recovery largely through trackers in mostly constructive regulatory environments. We see NI as a de-risking story in 2020 with an upward bias on rate base / EPS growth due to renewable investment opportunities at NIPSCO electric.

Valuation

Our $26 price target is derived using a P/E multiple of 17.5x on our 2022E. This reflects a full-turn premium for NI's electric utility and an average for its gas LDCs. Risks for NiSource are 1) bad regulatory outcomes and 2) pipeline safety incidents. Upsides are 1) additional growth projects and 2) customer growth

Exhibit 3. 2022E EPS by Segment

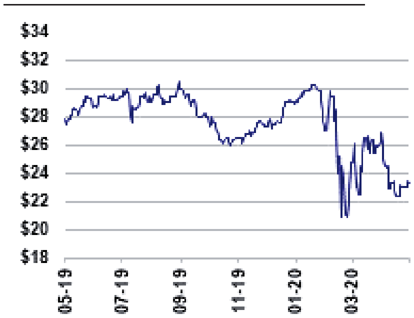
Exhibit 4. Performance Chart



Source: FactSet

WOLFE RESEARCH

NiSource

May 27, 2020

Investment Conclusion

We are Outperform rated on NiSource. The company's $30B capital investment backlog should drive its 5-7% annual earnings target over the long term. Most of the NI's annual capex (~80%) is recovered with minimal lag via tracking mechanisms and the company has built a constructive track record with most of its state regulators. Post the CMA sale, we believe the company's plan is a lot easier to execute on. Incremental capex is on the horizon from renewable opportunities in Indiana, which will provide a step-up in EPS growth in the 2022/2023 timeframe. NI's generation strategy in Indiana should start to come together over the summer, with a full update targeted for its 3Q20 call. The dramatic shift toward renewables and fact that NI will be coal-free by 2028 is also helpful from an ESG perspective. We see exiting MA as a turning point that should allow NI to re-rate closer to its historic 5-10% premium over time as it proves out its ability to execute going forward.

Wolfe Research, LLC Fundamental Stock Ratings Key:

Outperform (OP):	The security is projected to outperform analyst's industry coverage universe over the next 12 months.
Peer Perform (PP):	The security is projected to perform approximately in line with analyst's industry coverage universe over the next 12 months.
Underperform (UP):	The security is projected to underperform analyst's industry coverage universe over the next 12 months.

Wolfe Research, LLC uses a relative rating system using terms such as Outperform, Peer Perform and Underperform (see definitions above). Please carefully read the definitions of all ratings used in Wolfe Research, LLC research. In addition, since Wolfe Research, LLC research contains more complete information concerning the analyst's views, please carefully read Wolfe Research, LLC research in its entirety and not infer the contents from the ratings alone. In all cases, ratings (or research) should not be used or relied upon as investment advice and any investment decisions should be based upon individual circumstances and other considerations.

Wolfe Research, LLC Sector Weighting System:

Market Overweight (MO):	Expect the industry to outperform the primary market index for the region (S&P 500 in the U.S.) by at least 10% over the next 12 months.
Market Weight (MW):	Expect the industry to perform approximately in line with the primary market index for the region (S&P 500 in the U.S.) over the next 12 months.
Market Underweight (MU):	Expect the industry to underperform the primary market index for the region (S&P 500 in the U.S.) by at least 10% over the next 12 months.

Wolfe Research, LLC Distribution of Fundamental Stock Ratings (As of May 26, 2020):

Outperform:	45%	3% Investment Banking Clients
Peer Perform:	45%	1% Investment Banking Clients
Underperform:	10%	0% Investment Banking Clients

Wolfe Research, LLC does not assign ratings of Buy, Hold or Sell to the stocks it covers. Outperform, Peer Perform and Underperform are not the respective equivalents of Buy, Hold and Sell but represent relative weightings as defined above. To satisfy regulatory requirements, Outperform has been designated to correspond with Buy, Peer Perform has been designated to correspond with Hold and Underperform has been designated to correspond with Sell.

NI – Management Meetings; Impacts Defined, Increased Visibility Should Quell Investor Concerns; Price Action Overreaction

Key Message: COVID impact manageable, conservative messaging builds buffer and contingencies; Mgmt. sees opportunities to pull incremental levers while 2021 EPS guidance should be in "proximity" with the prior 2020 EPS guidance range (i.e. $1.38 guidance midpoint vs. Guggenheim at $1.37) with potential to come in stronger with incremental levers and/or COVID backdrop coming in better than Mgmt's. conservative assumptions. Post 2021, we continue to model (and the message today reinforced this notion) ~6-7% EPS growth off our 2021 base EPS estimate of $1.37 – growth drivers will include generation spend in Indiana, rate cases, further cost measure etc.

Main Takeaway: Ahead of our client hosted Mgmt. meetings with CEO, CFO and others at NiSource held early AM today, the company released updated slides detailing and quantifying the impact of COVID and the offsetting mitigation measures – providing clarity we were hoping to receive on the Q1. Mitigation efforts include O&M reductions and regulatory deferral for incremental COVID expenses and bad debt expense. **Key point – Mgmt. in good spot to provide 2021 EPS guidance in Q3 that should be close to flattish versus the prior pulled 2020 guidance range of ~$1.38 (midpoint) following the CMA sale announcement.** Further, Mgmt. **sees supplementary opportunities to pull additional mitigation levers that could potentially put '21 EPS guidance slightly ahead of '20's prior pulled guide.** In our view, investor concerns surrounding the 2021 impact are overstated (shares have underperformed UTY by ~100-150bps throughout the trading day) as Mgmt. has taken a conservative bend, managing expectations and messaging and creating contingencies should they need to be realized. **No change to our estimates through our '23 trajectory as today's message reconfirmed our thesis**. Potential catalysts: Q2 update around generation spending plan in IN and Q3 updated CapEx, growth trajectory through '24 off of the new 2021 EPS midpoint, 2021 EPS guidance range as well as new financing needs.

Improved visibility – flat EPS in 2021 from initial 2020 guidance back in view despite conservative bend taken on COVID impact. Mgmt. released slides (HERE) and further detailed on our client hosted calls (8am and 9am) volume and expense impacts from COVID and strong mitigation factors including O&M reductions and regulatory mechanisms for 2020/2021. Overall, mgmt. expects ($0.00-$0.10) of EPS impacts in 2020 and 2021 **but '21 could come in better if NI is able to utilize incremental mitigation levers which they are currently assessing – i.e. "flat-to-better" '21 language presented at the YE call could still stand.** While some investors are apprehensive on the 2021 impact, **we feel the concerns are unfounded as mgmt. is taking a very conservative bend on sales and bad debt expense** - i.e. the estimated impact assumes gradual mean reversion to normal loads in 1H21 compared to other utilities that are assuming recovery to normal loads in 4Q20. Volumes have already started to rebound from April lows with industrial customers in the Midwest, specifically the auto industry, beginning to reopen. Mgmt., quantified mitigation measures including O&M reductions and regulatory approvals/actions. More specifically on the bad debt expense side, NI has received regulatory deferrals/recovery of COVID related expenses and bad debt above normal levels in MD, PA, and VA while working with other commissions to receive similar treatments. **The current plan does not include any regulatory treatment for the incremental expenses in IN and OH which is further potential upside.** Mgmt. noted increased bad debt expense could impact 2021 EPS by ($0.05), but we feel confident that NI will receive the mechanisms to offset the impact. **We expect the maximum downside on 2021 EPS to be ~ ($0.05) from the initial 2020 guidance of $1.36-$1.40 IF incremental levers are not able to be utilized.** Mgmt. will provide updates on expected impact throughout the year and the range will likely tighten over time. **Given mgmt's conservative stance on 2021 and the potential for incremental**

levers, we continue to model 2021 EPS of $1.37 and 5-7% LT EPS CAGR off a 2021 base (2022/23 EPS of $1.47/$1.57).

Mitigation efforts are extensive with a mix of perpetual and ST O&M reductions. Mgmt. quantified mitigation measures of $0.10 - $0.15 in 2020 and $0.05 - $0.10 in 2021. Employee and administrative expenses and the deferral of some non-essential field work make up the bulk of the cost cutting. **The mix of O&M reductions will be more short-term in 2020 and permanent in 2021.** Like we have seen with other utilities, NI has a better view on prioritization of work allowing crews to work more effectively, efficiently, and productively as a result of the pandemic. Cuts to offset the dis-synergies related to the sale of CMA will happen regardless of volume trends. Direct costs related to CMA will be eliminated while more structural items from shared services across the company will be addressed in 2021. **Mgmt. is still identifying incremental levers but is focused on stepping through the regulatory items and managing expenses.**

Core business investment remains strong despite lowering at 1Q call – renewable investment opportunities are robust. The core capital plan remains strong with modernization trackers and other mechanisms to support investment; renewable additions represent incremental capex. As a reminder, NI lowered its expected 2020 capital spend by $100M at the 1Q call to shore up cash flow due to the pandemic. **Discussions with parties on the RFP in IN are ongoing with 50/50 owned and PPA still expected and upside to their CapEx guidance which Mgmt. will update during the all-important Q3 earnings call.** Mgmt. noted owning projects is competitive because of their high credit quality. The tax equity market remains healthy from mgmt.'s view. NI expects to file CPCNs in the summer, and we continue to look for an extensive update on the investment opportunity on the 3Q call. There has not been an impact on the 2021 IRP from the virus. Investment in renewables drives the outlook for 2022 and beyond.

Limited capital market needs for 2020 outside of ATM equity – thinking long-term, incremental renewable investments will be financed with a mix of debt and equity while still supporting the 5-7% growth trajectory. NI still expects to issue $200M-$300M in ATM equity in 2020 to support core investments. As a reminder, NI pulled forward a debt issuance in 1Q to help shore up liquidity and does not expect substantial debt financing for the remainder of 2020. **Renewable investment stemming from the RFP will be financed with a mix of debt and equity that will maintain credit metrics and support the current 5-7% growth trajectory.** Mgmt. expects to roll out an updated financing plan along with the investment opportunity on the 3Q call which will also come with an extended growth rate likely through '23/'24 as well as a formal '21 EPS guidance range.

Valuation: We apply an 18x multiple on the electric utility and 21x multiple on the gas LDCs. We arrive at our valuation utilizing a sum-of-the parts analysis, based on: (1) ~$10/share for the regulated electric utility; (2) ~$20/share value for the regulated gas segment given the limited spread from LDCs after recent market volatility; and (3) (~$-3)/share for other adjustments for Corp and Other. We use this sum of the parts to arrive at our $27 valuation.

Risk: The primary risk on the regulated utility encompass the traditional risk factors inherent with all utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

ANALYST CERTIFICATION

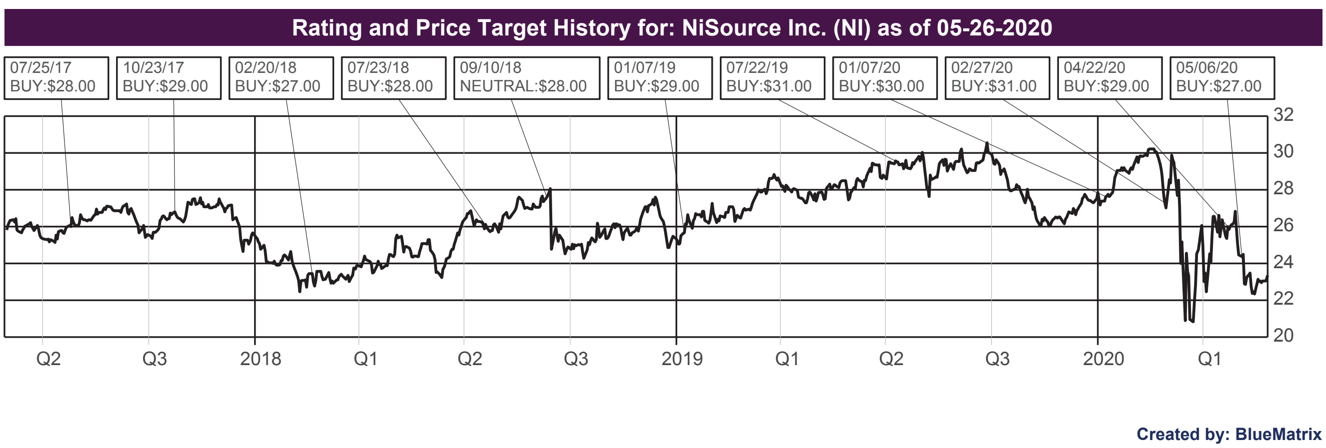
By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) whose name(s) appear(s) in this report have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from NiSource Inc. in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.



RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.
