Columbia Gas of Pennsylvania, Inc.
Standard Data Request
Rate of Return

Question No. GAS-ROR-010:

Please provide copies of all securities analysts' reports relating to the Company and/or its parent issued within the past 2 years.

Response: Columbia Gas of Pennsylvania, Inc.

Columbia Gas of Pennsylvania, Inc. (Company) is a wholly owned subsidiary of NiSource Gas Distribution, Inc. (NGD), which is a subsidiary of NiSource Inc. (Parent). There are no securities analysts reports that relate to the Company or NGD that are separate from such reports relating to the Parent.

Response: NiSource Inc.

Security analysts' reports issued within the past 2 years are attached in Attachment A – Attachment H.

2019 Utility Outlook: We Didn't Hear A Bell… "Nothing's Over 'Til It's Over;" One More Round for Utilities

2019 Outlook: Utilities entering final rounds? We didn't hear a bell… Utilities can still do well but pick your winners wisely. *In this outlook piece, we are* ***downgrading several names on valuation: NJR to SELL; AEP, OGE, SR and CWEN to NEUTRAL; Upgrading to BUY: NI, CNP – CenterPoint new Best Idea (in place of NRG).***

We are hosting a brief client call discussing our 2019 Utility outlook @9am. Participant Dial-In: 1.800.446.1671

Password: Please contact your Guggenheim Sales Representative for Conference Call Password

2019 Outlook: Utilities entering final rounds? We didn't hear a bell… Utilities can still do well but pick your winners wisely. *In this outlook piece, we are* ***downgrading several names on valuation: NJR to SELL; AEP, OGE, SR and CWEN to NEUTRAL; Upgrading to BUY: NI, CNP – CenterPoint new Best Idea (in place of NRG).*** *We continue to bend our 40+ utility coverage space to more power/energy/multi industry levered names given our viewpoint that* ***we will continue to see a more pronounced capital rotation within the sector in 2019 – we saw major multiple divergences across market caps, business mixes, etc. in '18 so we expect stock picking will continue to matter in 2019.***

'19 bellwether BUYS: *SRE, NEE, D, VST and NRG*; **NEUTRAL ratings with bias:** *CMS, OGE, PCG, PNW*; **Regulated utility deep value plays:** *FE, ETR*.

"Rest at ease" bond surrogate calls becoming harder to come by... Out of our 40+ names under coverage, **the only "pure" bond surrogates we now recommend are DUK, ES, ETR, FE and WEC,** which we believe either trade at appealing valuations, have other factors at play that could contribute to more growth, and/or have upcoming potential catalysts that could re-rate shares to the upside where we think investors have been slow to catch on; other than these, we now favor utilities tilting to broader power/energy trends.

Pick your winners and losers wisely in '19: Investors increasingly on the hunt for ideas within the sector as was the case in '18; utility basket can't outperform the broad markets, in our view, but we think individual names can – **(1) Upgrading NI to BUY** from Neutral on valuation, eventual removal of the gas explosion overhang and incremental growth opportunities; **(2) Upgrading CNP to BUY** from Neutral **and adding to Best Idea List** on deep value, above-average growth, incremental opportunities post VVC deal etc. **(3) Downgrading on valuation and strong 2018 performance despite sound fundamentals — to NEUTRAL from BUY: AEP, OGE, SR**; **to SELL from NEUTRAL: NJR.** Lastly, **(4) Downgrading CWEN to NEUTRAL** from BUY given our viewpoint that investors in '19 have a small appetite for YieldCo's and while CWEN trades at a higher yield than NEP, NEP remains our preferred name to own given sponsor strength and material distribution growth prospects with very little needs to access the equity markets – CWEN should work but will take time, in our view, as more comfort is gained w/sponsor, contract quality and pipeline of opportunities.

CNP new Best Idea, removing NRG on '18 performance. While we still see material upside potential with BUY-rated NRG (and VST) in '19, **CNP valuation entering this year, coupled with incremental growth opportunities post VVC deal, cannot be ignored** – a limited entry point opportunity, in our view. **Side note:** w/several potential NT catalysts and an attractive valuation, we grappled with D as a Best Idea but decided on CNP as the "safer" call.

Continued on page 2…

California Dreamin'... California Callin'... Whole Lotta Shakin' Goin' On - We remain firm on our CA calls: BUY on EIX; Neutral on PCG. PCG could emerge as a material value play and we'd be the first to be *Rainin' in California* but too early to make that call given uncertainties with PCG including 2017/18 CalFire findings, stress tests analysis, legislative fixes/support, investigations into corp. culture/restructuring and a general message by the CPUC that tends to be conflicted at times, esp. w/PCG. We await more visibility with PCG as we believe EIX remains the "safer" way to play CA (outside of BUY-rated SRE) – in this note we refresh our liability assumptions etc. for each utility among other items.

We remain constructive on Power: Federal and State "Policy" remains the "3rd Factor" dictating energy price formation above power market fundamental like heat rates and gas. While merchant power market reform didn't quite come to a head in 2018, we certainly closed the year with a greater sense of urgency to address the "missing money" problem that has plagued merchant generators for years**.** In this note we lay out elements of reform, model power curve upside and mark our curves to mid-Dec. '18, update reserve margin forecasts, etc. **Don't get lost in the weeds – We see market reforms coming in two brackets: (1) Energy:** improvements to both price formation and scarcity pricing are coming in ERCOT and PJM in 2019; **(2) Capacity:** all eyes are on PJM in the new year as we await FERC's decision on reforms to the auction. **From a stock perspective: very tough to be negative on power in '19, hence our multiple BUYs on all power-levered names.**

Is it time to tap out? Are utilities entering final rounds? Sector valuation not great but utilities have some stamina remaining. Given the current BBB yield curve, regulated **utilities look fairly valued vs. forward yield expectations but we also see "minimal" downside risk for the group** *(~17x fair value vs the current ~16.8x multiple implies ~1% upside potential; factoring in the group's average dividend yield of 3.5% implies additional upside*). **Although we would note that premium valuation levels could be sustained for some time as has been the case historically** when there have been several externalities at play: **This begs the question – How far, for how long?** While we are in the latter rounds, we believe utilities still have runway as several externalities (e.g., macro/geopolitical uncertainties, thirst for yield, broad market trading at elevated levels, etc.) should continue to support the group trading beyond fundamentals and forward-yield expectations in the NT. **In other words**, other factors can be attributed to the movement in utility values above and beyond interest rate fundamentals all else equal… But **again, in our view, we are now likely in the final rounds: 2019 will likely continue to dictate a utility stock pickers market.**

Hockey stick recovery: M&A activity should pause in '19 before picking up again in '20 – at least within our coverage; but... plenty of assets potentially for sale. In the NT, within our coverage, we see very few potential acquisition targets but **certainly see more opportunities to sell one-off assets as well as less core utility OpCo's within a larger holding company including:** *Duke Kentucky, AEP's PSO, Southern's Nicor Gas, Mississippi Power or Virginia Natural Gas, NiSource's Columbia Gas of Massachusetts, Sempra's South American utilities, etc (see our M&A section below and our EEI note HERE for further thoughts).* We no longer believe that **FirstEnergy or Exelon** could be in the market to divest their NJ operations...not yet anyway. While strategic moves with **PPL** (i.e. selling company) could eventually transpire, we do not think it would be a 2019 story especially with Brexit uncertainty. Conversely, while we believe **Edison International** could be a buyer of assets, given current currency stemming from wildfires, we do not see an acquisition as likely in 2019. **NextEra** remains a natural bidder for Santee Cooper in SC (see our previous thoughts HERE and our NDR HERE). **Buyers of individual assets could be:** *Exelon, ConEd, Eversource, ALLETE, OGE Energy, WEC Energy, NRG Energy, Vistra Energy, DTE Energy, NextEra, American Water, NextEra Energy Partners etc.* **Outside of the aforementioned, much of 2019 should be focused on closing existing deals including**: *Duke's partial Commercial monetization, CNP/VVC merger, ConEd's Sempra solar deal, Sempra's remaining renewable wind asset sale, NextEra's Florida acquisition, etc.*

Further in the note, we: refresh our EPS forecasts through '21, introduce 2022 estimates, mark our regulated multiple to current forward bond yields, update our reserve margin forecasts, roll forward our valuation, model power price upside as policy takes shape, mark our power models to December curves, discuss key policy/regulatory issues to watch for this year, and map out other implications for the utility sector as investors enter 2019. In addition, we highlight company-specific catalysts such as rate/regulatory proceedings, pending and/

or potential legislative efforts, major projects under development, and discuss the M&A landscape among several other items.

CONTENTS

TABLE OF FIGURES

PORTFOLIO MANAGER SUMMARY

Let's pick stocks in 2019 – not a sector call …

In this 2019 utility/power outlook note, we refresh our view on the sector, as well as each of the companies we cover within it – key notables:

- **Upgrading CNP to BUY (from NEUTRAL) and adding to Best Idea List**
- **Removing NRG from Best Idea list given material '18 outperformance**
  - ...But retaining BUY given sizeable upside opportunities remaining in '19 and beyond for IPPs
- **Upgrading NI to BUY (from NEUTRAL)**
- **Downgrading NJR to Sell (from NEUTRAL)**
- **Downgrading AEP to Neutral (from BUY)**
- **Downgrading OGE to Neutral (from BUY)**
- **Downgrading SR to Neutral (from BUY)**
- **Downgrading CWEN to Neutral (from BUY)**

…2019 we expect more of the same as 2018...

'19 bellwether BUYS: *SRE, NEE, D, VST and NRG*; **NEUTRAL ratings with bias:** *CMS, OGE, PCG, PNW*; **Regulated utility deep value plays:** *FE, ETR*.

2019: Let's talk cyclicality, policy and even more sector capital rotation. *2018 we saw energy/cyclical plays like NRG, VST, EXC, NEE, DTE, SRE, etc., as well as some more traditional "regulated" utilities like CMS, WEC, ETR, ES, etc., materially outperform the utility index –* ***performance was widely dispersed within the sector and we expect the same dynamics to carry into 2019 with a more continued bend towards cyclical energy/power levered names remaining as the top quartile performers.*** As we discuss in this note, **in 2019 we recommend only 5 traditional utility "bond surrogates"** within our wide coverage space as we continue to expect more capital to be diverted into energy/powered levered names given sector valuation - we continue to bend our 40+ utility coverage space to more power/energy/multi industry levered names.

...But even more pronounced capital rotation into select names

In this note, we further highlight key trends/dynamics taking shape in each power market/RTO while modeling power price upside as policy takes shape and becomes the 3rd factor dictating curves above heat rates and gas, we update reserve margin forecasts at each RTO, discuss key policy/regulatory issues to watch for this year and which ones we think will matter; in addition, company-specific potential catalysts such as rate/regulatory proceedings, pending and/or potential legislative efforts, and status of major projects under development.

Further, we refresh our EPS forecasts through '21, introduce 2022 estimates, mark our regulated multiple to current forward bond yields, roll forward our valuation, mark our power models to December curves among other items.

Industry themes we highlight and discuss in this note include:

Policy reforms, sector valuation and M&A key thematic items

- **'19 Power markets** and evolving energy **policy landscape**;
  - *FERC/regional level agenda items, policy initiatives and which ones actually matter and impact to power prices as a result;*
  - *Potential for new nuclear lifelines in states we had previously considered too hostile: we foresee a robust debate in PA this spring, while OH remains a tougher environment;*

- *Commodity forward curves and updates on developments in each power market including reserve margin outlooks;*

- **M&A** – Hockey stick recovery: Pending/potential transactions, and other strategic activity on the horizon;
- **Key infrastructure project** status and upcoming potential catalysts;
- **Valuation dynamics** relative to forward bond yield expectations;
- **Regulatory proceedings** currently pending and key upcoming dates; and,
- **Focus on California** – latest thinking, models around wildfires and where our thesis stands, how it can evolve;
- **Company-specific updates while rolling forward our estimates to 2022, regulated utility valuations refreshed with latest forward yield expectations and re-based off 2020 fundamentals (vs. 2019), and merchant power outlooks marked to the 12/07/2018 forward power/gas commodity price curves…**

Limited upside and downside potential for utility basket – pick stocks…

Is it time to tap out? Are utilities entering final rounds? Sector valuation not great but we believe utilities have some stamina remaining. Given the current BBB yield curve, regulated **utilities look fairly valued vs. forward yield expectations but we also see "minimal" downside risk for the group** *(~17x fair value vs the current 16.8x multiple implies a modest ~4.5% total return; factoring in the group's average dividend yield of 3.5%*). **Although we would note that premium valuation levels could be sustained for some time as has been the case historically** when there have been several externalities at play: **This begs the questions – How far, and for how long?** While we are in the latter rounds, we believe utilities still have runway as several externalities (e.g., macro/geopolitical uncertainties, thirst for yield, broad market trading at elevated levels, etc.) should continue to support the group trading beyond fundamentals and forward-yield expectations in the NT. **In other words**, other factors can be attributed to the movement in utility values above and beyond interest rate fundamentals all else equal… But, **again, we are now likely in the final rounds: 2019 will likely continue to dictate a utility stock picker's market.**

...we now recommend 5 "bond surrogates"

"Rest at ease" bond surrogate calls becoming harder to come by... Out of our 40+ names under our coverage, **the only "pure" bond surrogates we now recommend are DUK, ES, ETR, FE and WEC,** which either trade at appealing valuations, have other factors at play that could contribute to more growth, and/or have upcoming potential catalysts that could re-rate shares to the upside where we think investors have been slow to catch on; other than these, we now favor utilities tilting to broader power/energy trends.

Making several portfolio changes

Pick your winners and losers wisely in '19: Investors increasingly on the hunt for ideas within the sector as was the case in '18; utility basket can't outperform the broad markets but individual names can – **(1) Upgrading NI to BUY** from NEUTRAL on valuation, eventual removal of the gas explosion overhang and incremental growth opportunities; **(2) Upgrading CNP to BUY** from Neutral **and adding to Best Idea List** on deep value, above average growth, incremental opportunities post VVC deal etc. **(3) Downgrading on valuation and strong 2018 performance despite sound fundamentals: to NEUTRAL from BUY: AEP, OGE, SR**; **to SELL from NEUTRAL: NJR.** Lastly, **(4) Downgrading CWEN to NEUTRAL** from BUY given our viewpoint that investors in '19 have a small appetite for YieldCo's and while CWEN trades at a higher yield than NEP, NEP remains our preferred name to own given sponsor strength and material distribution growth prospects with very little need to access the equity markets – **CWEN will work but will take time as more comfort is gained w/sponsor, contract quality and pipeline of oppty's.**

...CNP new Best Idea

2019 finally the year for capacity and energy policy reforms...

CNP new Best Idea, removing NRG on '18 performance. While we still see material upside potential with BUY-rated NRG (and VST) in '19, **CNP valuation entering this year coupled with incremental growth opportunities post VVC deal cannot be ignored** – a limited entry opportunity, in our view. **Side note –** w/several NT potential catalysts and an attractive valuation, we grappled with D as a Best Idea but decided with CNP as the "safer" call.

We remain constructive on Power: Federal and State "Policy" remains the "3rd Factor" dictating energy price formation above power market fundamental like heat rates and gas. While merchant power market reform didn't quite come to a head in 2018, we certainly closed the year with a greater sense of urgency to address the "missing money" problem that has plagued merchant generators for years – **In this note** we lay out elements of reform, model power curve upside and mark our curves to mid-Dec. '18, update reserve margin forecasts etc. **Don't get lost in the weeds – We see market reforms coming in two brackets: (1) Energy:** improvements to both price formation and scarcity pricing are coming in ERCOT and PJM in 2019; **(2) Capacity:** All eyes are on PJM in the new year as we await FERC's decision on reforms to the auction. **From a stock perspective: very tough to be negative on power in '19 hence our BUY ratings on all power-levered names.**

...we have Buy ratings across the Power spectrum

California Dreamin'... California Callin'... Whole Lotta Shakin' Goin' On - We remain firm on our CA calls: BUY on EIX; Neutral on PCG. PCG could emerge as a material value play and we'd be the first to be *Rainin' in California* but too early to make that call given uncertainties with PCG including 2017/18 CalFire findings, stress tests analysis, legislative fixes/support, investigations into corporate culture/restructuring and a general message by the CPUC that tends to be conflicted at times especially with PCG. We await more visibility with PCG as EIX remains the "safer" way to invest in CA (outside of BUY-rated SRE) – **in the note we refresh our liability assumptions etc. for each utility among other items and assess if wildfires are priced-in or not.**

Plenty to talk about with strategic initiatives in '19

Hockey stick recovery: M&A activity likely to pause in '19 before picking up again in '20 – at least within our coverage; but... plenty of assets potentially for sale. In the NT, within our coverage, we see very few acquisition targets but **certainly see potentially more opportunities to sell one-off assets as well as less core utility OpCo's within a larger holding company including:** *Duke Kentucky, AEP's PSO, Southern's Nicor Gas, Mississippi Power or Virginia Natural Gas, NiSource's Columbia Gas of Massachusetts, Sempra's South American utilities etc.*

We no longer believe that **FirstEnergy or Exelon** could be in the market to divest their NJ operations...not yet anyway. While strategic moves with **PPL** (i.e. selling company) could eventually transpire, we do not think it would be a 2019 story especially with Brexit uncertainty. Conversely, while we believe **Edison International** could be a buyer of assets given currency stemming from wildfires, we do not see an acquisition in 2019. **NextEra** remains a natural bidder for Santee Cooper in SC, in our view.

Buyers of individual assets could be: *Exelon, ConEd, Eversource, ALLETE, OGE Energy, WEC Energy, NRG Energy, Vistra Energy, DTE Energy, NextEra, American Water, NextEra Energy Partners etc.* **Outside of the aforementioned, much of 2019 will be focused on closing existing deals including**: *Duke's partial Commercial monetization, CNP/VVC merger, ConEd's Sempra solar deal, Sempra's remaining renewable wind asset sale, NextEra's Florida acquisition, etc.*

See our M&A section below and our 2018 EEI Conference Summary HERE for further details and background thoughts on these activities as we head into the new year.

KEY RESEARCH CALLS

Valuations should continue to diverge in '19 like in '18 – pick stocks

2019 remains a utility stock-picker's market: Investors will increasingly distinguish between names within the sector as we saw in 2018 – not a sector call anymore. '18 stock performance was widely dispersed within the sector (i.e. energy/cyclical plays like NRG, VST, EXC, NEE, DTE, SRE, some more traditional "regulated" utilities like CMS, WEC, ETR, ES as well as some special opportunity plays like FE, EVRG, OGE, NJR materially outperforming the utility index as well as the broad markets). And, **we expect the same dynamics to carry into 2019 with a continued bend towards cyclical energy/power levered names remaining as the top quartile performers.**

Our ratings distribution is shifting away from "pure" bond surrogates...

Utilities have had a solid multi-year run in 2018 (+0% vs S&P -6%), and the group continues to trade beyond fundamentals or valuations implied by forward yield expectations, although valuation can only stretch so far for so long in our view, and we believe we are likely going into the latter rounds for the utility rally now – And while the group has performed well over the past several years, **there's been notable disparity within the group recently, with a wide dispersion of risk/reward remaining** – **Said differently**, stock picking is more important now than ever; we wouldn't go into 2019 owning a basket of utilities, the group is getting pricey, but we believe **there are plenty of opportunities to find value within the sector as was the case in '18**, with no shortage of stock-specific catalysts on the horizon, or long/short battlegrounds, in addition to some value the market typically takes longer to catch-up with.

Tilting even further away from regulated utilities. As highlighted above, the only "pure" regulated bond surrogates we now recommend are DUK, ES, ETR, FE and WEC. **Our focus shifted to more power-levered** (i.e. IPPs)**, diversified energy companies** (i.e. multi industry, integrated utilities) **going into 2019 with regulated valuations breaching forward bond yield expectations.** More specifically, these lofty utility values coupled with a trough commodity cycle prompt us to remain more constructive on integrated utilities and Independent Power Producers (IPPs) with BUY-ratings across the board (i.e. EXC, PEG, VST, NRG) as well as multi-industry players (i.e. CNP, D, SRE, NEE) – **see our updated ratings distribution entering 2019 below.**

1: We are restricted on SJI due to investment banking activities
2: Includes Buy ratings on special opportunities including EIX, EVRG which are not considered "bond surrogates" per say despite being in the "electric utility" category.

...focusing on names more levered to the cyclical aspects of the energy value chain

Looking to '18 and beyond, investors should increasingly look for ideas within the sector, as a return to stock picking matters now more than even – especially with utility performance ending '18 with lofty valuation levels. Our bend continues to shift to names levered to broader energy trends, names levered to commodity price recovery constructive power price formation, with exposure to infrastructure constraints across the broader energy value chain, including midstream opportunities further upstream (e.g., developing/expanding gas pipelines), in addition to traditional investments in regulated electric transmission and distribution infrastructure, with peripheral growth platforms offering additional avenues to pursue for growth. **Regulated utilities have had a solid multi-year run, but as we emerge from a sustained period of low interest rates, investors tend to discount utilities that represent bond surrogates, turning focus to utilities with strong, visible growth to overcome expectations for higher yield elsewhere as well as those names levered to the more "cyclical" aspects of the energy value chain.**

There is a wide disparity of risk/reward within the group that should not be ignored either. We are not making a sector call as we recognize that just looking at the utility space in isolation, valuation is somewhat pricey versus forward bond yields. However, taking a step back and considering the various market factors at play, we believe stock picking finally matters in this space, and **continue to see value in several names that offer higher growth and dividends, as well as a bend towards those levered to broader energy trends, which aren't your typical bond surrogate.**

LET'S THINK IN RELATIVE TERMS: SOURCES/USES OF FUNDS - SHORT/LONG PAIRING IDEAS FROM RATINGS CHANGES AND KEY '19 CALLS

Below we summarize our key calls going into 2019, with BUY recommendations to pair with each of our downgrades; i.e., **Uses of funds to pair our SELL recommendations**, and **better opportunities to consider for names we are stepping aside on given solid performance in 2018**.

Making several key ratings changes and thinking in relative terms

We also highlight several utilities where we remain very-much entrenched despite our NEUTRAL-ratings, with reads on where each company could be headed in the right direction; i.e., **Battleground stocks where we remain neutral in anticipation of potential catalysts that could have us to re-visit our thesis**.

We round-off our key calls with **"Bellwether BUYs" – Relatively diversified utilities with a solid foundation of healthy regulated utilities at their core, complementary non-utility platforms with appropriate scale and broader exposure, and where we still see room for valuations to expand** despite where we are in the cycle for regulated bond surrogates or merchant commodity derivatives, etc. **as well as highlight two other "utility deep value plays" with very NT inflection points that investors have been slow to catch up on – good entry point opportunities.**

Figure 2: Guggenheim's key power & utility ratings changes, pair ideas; Neutral ratings w/upside bias

Guggenheim's Ratings Changes, Pair Ideas & Key Calls – *Not going into 2019 owning a basket of utilities*		
Upgrading to BUY & Adding to Best Idea List		***Pair Idea***
CNP	*Deep value, above average utility growth and incremental opportunities post VVC deal closure - BEST IDEA!*	**OGE**
Upgrading to BUY		***Source of Funds***
NI	*Valuation presents good entry point, NT catalysts include gas explosion moving into rearview mirror plus higher CapEx opportunities among other items key events to watch in 1H19.*	**SR/NJR**
Downgrading to SELL		***Use of Funds***
NJR	*Stretched valuation absent M&A, top tier performer in 2018 (+130bps above UTY for the year) - nothing broken but stock performance moved ahead of NT drivers and growth trajectory.*	**NI**
Downgrading to NEUTRAL		***Better Opportunities***
AEP	*Cautious on pure bond surrogates and downgrading on performance, valuation at a slight premium to electric counterparts - solid growth but reflected in shares and, only key NT catalyst remains PSO rate case or a strategic move in OK if negative outcome in proceeding; AEP could benefit from simplifying further. Overall, we like Mgmt. and see potentially higher CapEx but dynamic already reflected in shares.*	**FE, ETR, DUK**
OGE	*Purely a valuation call - fundamentals strong but priced-in for the NT but we do see an eventual entry point given our strong viewpoint of company, Mgmt. and incremental growth opportunities.*	**CNP**
SR	*Valuation call despite sound fundamentals, no M&A call from us. Multiple hard to justify. Cheaper names to own in the NT.*	**NI**
CWEN	*Story will take time to play out including sponsor and growth confidence.*	**NEP**
Guggenheim's Battleground Utilities: *NEUTRAL Ratings with Upside Bias*		
CMS	*Best in class and solid growth overall but valuation and performance in '18 has us seeking better entry point which could come in the NT as we remain fans of MI and Mgmt. It's a question of time for us.*	
OGE	*Despite downgrading, we look for an entry point again - possibly as we move through rate case which could yield higher growth as well as underutilized balance sheet getting deployed.*	
PNW	*Valuation becoming attractive esp. vs similar cap names (i.e. LNT).*	
Guggenheim's '19 Bellwether BUYs		
SRE	*Manageable growth guide with incremental opportunities to exceed including additional LNG (i.e. Total MOU), Oncor, CA GRC, InfraREIT/Sharyland deal - valuation presents good entry point especially given current yield cycle. SRE key holding given bend towards "energy" vs bond surrogacy.*	
NEE	*Conservative growth guide, further potential M&A utilizing borrowing capacity, Gulf Power acquisition that could eventually prove materially higher accretion, renewable economics prompting perpetual growth and LT commitment to NEP, aggressive interest hedging program, among other items should continue to re-rate story upward.*	
D	*Transformative year in '18 should transpire well in 2019 with sustainable 6-8% growth within and beyond current guide led by full ownership of Cove Point, SCG upside, Millstone incentives, VA legislation among other items key drivers - valuation continues to discount shareholder friendly actions.*	
VST	*We remain a BUY on VST despite top performer in 2018 on the back of solid FCF generation and our outlook for power markets, with the latest announcements around capital allocation including buybacks and dividend marking a key inflection point. We believe a lot of value remains and continue to see material upside opportunities with double digit FCF yield unsustainable especially given retail opportunities, de-levering, EBITDA-accretive cost cuts, market reforms among other items.*	
NRG	*Similar to VST, NRG key holding in '19 following transformational '18. We continue to model $2bn in buybacks through 2019 which should provide floor with shares that continue to trade at mid double digit FCF yields which fails to price-in market reforms, retail growth, further cost cuts and solid balance sheet among other items.*	
Regulated Utility Deep Value Plays - Key Inflection Point Stories		
FE	*Regulated utility inflection story that continues to trade at a deep discount to group on top quartile 6-8% regulated utility growth - investors slow to catch on as story evolves.*	
ETR	*Regulated utility inflection story that continues to trade at a deep discount to group on top quartile 6-8% regulated utility growth - investors slow to catch on as story evolves.*

Time to get out of some names… some on strong performance

DOWNGRADES: NJR, AEP, OGE, SR, CWEN

Downgrading NJR to SELL; AEP, OGE, SR, CWEN to NEUTRAL

- **Downgrading NJR to SELL; Use of funds BUY-rated NI:** After a solid run in '18 we believe NJR's one turn premium to the gas group (itself skewed by NWN's 23x) is unjustified. We see fewer incremental items of note going forward (no SRL or PennEast 2.0) and do not see NJR as an acquisition target. **We recommend buying NI as a use of funds given:** it currently trades at almost a two-turn *discount* to the gas group, our belief that 2019 will see additional capex driven by gas safety requirements, and our thesis that the fallout from the Columbia Gas explosions in Massachusetts have been largely priced in. In addition, we do not ascribe to the assertion by some investors that the 2018 explosions may have damaged NI's regulatory relationships, both inside and outside of MA.
- **Downgrading AEP to NEUTRAL; Better Buy opportunity FE, ETR or even DUK:** downgrade is mainly based on valuation, performance and general cautiousness around pure bond surrogates – **we have become very selective**. **We see better re-rating opportunities with other fully regulated electric peers like ETR, FE who trade cheaper and have higher growth prospects (albeit with some higher leverage).** AEP worked in '18 as best it could, has good growth prospects but at this stage, fully priced in – NT potential catalyst is PSO rate case or strategic move. Overall, we like fundamentals, we like mgmt., and see somewhat higher capex but this is already reflected in performance. **Could also pair with BUY-rated DUK on valuation**.
- **Downgrading OGE to NEUTRAL; Better BUY opportunity CNP:** The downgrade is driven mainly by valuation as it comes on the heels of a great run in 2018 outperforming the utility sector by over 18% - **we were OGE supporters all year and are now essentially reversing our prior '18 pair idea between CNP and OGE.** Despite solid business fundamentals and a few potential catalysts waiting to play out (i.e. rate cases, grid modernization), we feel constructive outcomes are adequately priced in the stock with OGE closing the year valued at ~17x P/E on 2020 consensus EPS estimates. Currently we see better opportunity in CNP (15.6x P/E), a natural pair for OGE with comparable regulatory jurisdictions and midstream exposure through ENBL co-ownership but has more growth upside potential, especially post VVC deal. CNP has under-performed the utility sector by ~100 bp (a -16.4% under performance relative to OGE), and we believe the valuation disconnect between the pair presents a good buying opportunity. **That said, we look to get back into OGE as soon as opportunity presents itself.**
- **Downgrading SR to NEUTRAL; Better BUY opportunity NI:** We are downgrading SR mainly on valuation and lack of potential catalysts for upside in the stock. In our view, SR is a solid gas utility and midstream business with medium growth prospects, which is adequately represented in the current stock price. **We see a good opportunity to rotate into a cheaper name with better growth prospects like BUY-rated NI** - a utility that has underperformed on the heels of the MA gas explosion. NI has worked diligently to resolve investigative matters and will be looking to put extra capital to work on system safety, which could accelerate growth and re-rate the stock on the safety story.
- **Downgrading CWEN to NEUTRAL; Better BUY opportunity NEP:** Story will take time to play out including sponsor and growth confidence. Mgmt is very clear, in our view, that 5-8% DPS growth is a LT target and we believe this is a fair measure vs other income oriented sectors like MLPs, REITs, etc. With higher growth and a trusted, investment grade sponsor, we see NEP outperforming its yieldco peers despite the lower Yield. **More specifically, our viewpoint remains that investors**

in '19 will have a small appetite for YieldCo's and while CWEN trades at a higher yield than NEP, NEP remains our preferred name to own given sponsor strength and material distribution growth prospects with very little needs to access the equity markets – CWEN should work but will take time as more comfort is gained w/sponsor, contract quality and pipeline of oppty's.

UPGRADES: CNP, NI

CNP, NI – sound entry opportunities; CNP Best Idea

- **Upgrading CNP to BUY and adding to Guggenheim Best Idea list; NT pair idea NEUTRAL-rated OGE:** CNP has under-performed the utility sector by by ~100 bp (a -16.4% under performance relative to OGE) and we believe the **valuation disconnect between the pair presents a good buying opportunity especially with CNPs higher organic growth and incremental growth opportunities post VVC deal.** We believe CNP has solid Texas utility fundamentals with ~8% growth through 2022 in our estimates, with additional upside potential coming by way of the VVC acquisition and potential for accelerated growth based on expectations of deferred capital being brought back into the plan.
- **Upgrading NI to BUY; Source of funds SELL-rated NJR, NEUTRAL-rated SR; LNT also pair opportunity:** NI valuation provides a good entry point; watch for capex updates driven by gas safety requirements, mid-2019 analyst day ahead. NT catalysts also include gas event moving into the review mirror. NI trades at a discount to gas, modest premium to electric peers with above-average growth and incremental capital opportunities in the NT – NI's current 5-7% guide was affirmed after the September gas event and no change with the O&M profile. **Swap from SR, LNT and/or NJR who trade at a higher valuation with lower growth and less NT catalysts.**

NEUTRAL RATED W/UPSIDE BIAS: CMS, DTE, OGE, PNW

Some Neutrals can swing fast

- **CMS: We remain NEUTRAL-rated on CMS as the company trades at a significant premium to the electric utilities group but we wait for an entry point.** The premium in valuation at year-end (18.5x P/E vs. 17x for electric utilities on consensus 2020E) reflects above average growth, constructive regulatory relationships, consistent execution from management and best in class cost management practices that enable equity free growth. **At this point we are looking for a better entry point as we don't see material upside potential to our current $53 PT.** We note that broad market externalities could lead to elevated utility valuations in 2019, the absence of which could re-rate the sector valuations and present a buying opportunity for stocks such as CMS.
- **OGE: We are NEUTRAL-rated on OGE despite solid business fundamentals and a few potential catalysts waiting to play out (i.e. rate cases, grid modernization).** We feel constructive outcomes are adequately priced in the stock with OGE currently valued at ~17x P/E on 2020 consensus EPS estimates. **We may revisit our thesis as we head through the Sooner case, which could lend to further capital opportunities above current plan - for now, no NT catalysts for 1H 2019 so we believe we have time to see a better entry point.** We note that broad market externalities could lead to elevated utility valuations in 2019, the absence of which could re-rate the sector valuations and present a buying opportunity for stocks such as OGE.
- **PNW:** PNW's longtime premium somewhat evaporated with the Prop 127 process this fall, **with the stock now trading almost in line with the group on '20 and**

below **other SMID names where we don't see M&A – case in point: POR's 0.5x premium.** We believe PNW remains a strong stock given robust growth and its simple, single-state story, but we are not making an M&A call at this time. **Modest pullback could cause us to revisit our thesis.**

BELLWETHER '19 BUYS: SRE, NEE, D, VST, NRG

Bellwether '19 buys are cyclical energy plays

- **SRE: Presents a buying opportunity based on a catalyst rich 2019 year** – InfraREIT acquisition closing, business review and asset divestitures, corporate cost cutting and regulatory events. SRE expects to close the acquisition of InfraREIT in 2H2019, which will merge InfraREIT assets into the Oncor business and establish a 50% joint venture with Sharyland utilities on transmission development. The business review process will turn to a sale announcement of the South American utility assets in 1H2019 and could see a recycle of capital into North American infrastructure or return to shareholders, de-levering etc. SRE wind and midstream asset sales are expected to be announced in early 2019, providing more dry powder for re-investment. SRE will be commercially operating the Cameron LNG facility with all 3 trains expected in service before year end and the company is evaluating investment decisions on additional LNG terminals (Port Arthur, ECA, Cameron 4/5). The CA utilities will also be filing a cost of capital case, which early indications have pointed to a sizeable ROE increase (11.2% requested at FERC) and we believe the valuation has potential to re-rate higher on legislative or regulatory action on wildfire risk mitigation. **Overall, 2019 holds multiple constructive potential catalysts for SRE and we expect the stock to move higher, BUY, $134 PT.**
- **NEE: Great name to own in 2019 - Conservative growth guide, further M&A utilizing borrowing capacity, continued upside potential from Gulf Power deal on improving O&M, purchased power and higher capex – move past "optically" high P/E and focus on the bigger picture, which continues to show value on a cash flow basis.** That said, earnings growth likely breaching 9-10% post FL deal digestion. Looking through 2019, very tough for us to not see further multiple re-rating as story remains event driven by Gulf Power, which closed on Jan.1, 2019 followed by likely higher accretion vs current guide and an outcome/conclusion with Santee Cooper process in SC.
- **D: Transformative year in '18 should transpire well in 2019 with sustainable 6-8% growth within and beyond current guide led by full ownership of Cove Point, SCANA upside, potential Millstone incentives, Virginia legislation among other key drivers – valuation continues to discount shareholder-friendly actions, in our view.** We see the recently closed acquisition of SCANA as 2-3% under modest synergy assumptions; could be more room for upside on SCG deal given capex was held back during nuclear cost recovery/merger hearings - ample opportunity for renewables, potential expansion of ACP in SC among other items.
- **NRG: Capital return, capital return, capital return. Our Best Idea in 4Q18 (and top performer for the year) is poised to enter 2019 with more room to run in our view, shares are still trading at a somewhat unsustainable FCF yield** and mgmt. remains committed to returning capital via buybacks for the foreseeable future – we currently model up ~$2bn in 2019 and $1.5bn in the two subsequent years. The integrated power company model has come of age…
- **VST: A similar story to NRG**, albeit with some key nuances beyond pure timing that investors should be aware of: Foremost, VST remains focused on buybacks given where its stock currently trades (mid-teens FCF yield), but we note that mgmt. is *also* initiating a small dividend (~2% yield) that it targets to grow at a healthy 6-8% going

 See pages 278 - 279 for analyst certification and important disclosures.

forward. Finally, we highlight that the rotation of large block holders out of shares remains a slight overhang on the stock in our view, although we view this as more of a perception issue and note that some have already exited as of December '18.

DEEP VALUE REGULATED PLAYS: FE, ETR

FE, ETR deep value regulated electric plays

- **FE: A fully-regulated no-drama utility that grows at 6-8% and trades noticeably below the group.** Between T&D opportunities and the latest round of FE Tomorrow cost cuts, we believe FE is poised to grow above its 7% midpoint guide in 2019. FE remains a deep value play in our view, with additional room for the stock to re-rate into 2019 as more marginal investors catch up and get comfortable with the story.
- **ETR: It's finally started to work!** Investors have been cautious to catch on to the nuclear wholesale generation wind down story as the stock flipped between under- and out-performance through the year, closing ~5% ahead of the utility sector but we see much more room to run in '19. **We believe the fully regulated transition still has a lot of runway for outperformance in 2019** as we are looking forward to seeing announcements around the Indian Point decommissioning sales, as well as further approvals for NDT transfers. So far only Vermont Yankee has been approved, but it has created a feasible model for other decommissioning sales, and by generating robust interest from buyers could leave ETR cash positive after the transactions are completed. On the regulated front, ETR continues to target 5-7% regulated growth over the 4 year plan, which we feel the company could accomplish at the high end based on incremental organic capital deployment opportunities and projects such as grid modernization not currently incorporated in growth expectations. **Other item to note: Mgmt. could be in the process of enhancing and simplifying how they report their results, which could clear the air and become a catalyst in its own right.**

SUMMARY OF VALUATION AND ESTIMATE CHANGES

Our valuations apply a ~17x target multiple to our forward 2020E regulated electric utility earnings driven by a higher BBB corporate bond yield environment. Our target earnings multiple for regulated utilities is derived from our long-term corporate bond yield and utility valuation regression analysis. The updated analysis arrives at a combined ~17x target multiple before company specific discounts/premiums. For gas utilities, we ascribe a 4.0x premium relative to their electric counterparts – properly reflects mid-cycle despite the ebbs and flows of the spread.

Introducing 2022 estimates and refreshing our annual estimates through 2021. We now forecast out to 2022 for each company in our coverage and derive our 12-month price targets by applying our ~17x target multiple (plus company specific discounts/premiums) to 2020 fundamentals vs prior 2019.

Refreshing our power and commodity market assumptions. Our estimates for integrated utilities and IPPs now use the 12/07/2018 forward curves (vs. 09/28/2018 curves used in our prior estimates).

Note: We are currently restricted on SJI due to the firm's investment banking activities

(1) Regulated utilities deliver power to end-use customers via regulated transmission & distribution (T&D) infrastructure; vertically integrated utilities with regulated or mostly contracted generation are also included.

(2) Local Gas Distribution Companies (LDCs), as well as diversified utilities with a business mix largely comprised of gas infrastructure and related activities (i.e., LDC franchises, interstate pipelines, and/or other gas midstream activities).

(3) Integrated utilities own and operate regulated T&D franchises, as well as un-regulated power generation with commodity exposure.

(4) IPPs operate merchant (i.e., un-regulated, non-utility) power plants that compete to sell power in wholesale markets or through retail marketing businesses.

(5) Mult-Industry Utilities operate some comibination of regulated electric and/or gas utilities, in addtion to substantial non-power unregulated activities (i.e. midstream, renewable development, energy trading, etc.).

KEY THEMES FOR 2019

CALIFORNIA DREAMIN'... CALIFORNIA CALLIN'... WHOLE LOTTA SHAKIN' GOIN' ON

We stand firm on our ratings – EIX "safer" option

We remain firm on our CA calls despite what appears to be optical "value" for PCG - BUY on EIX; NEUTRAL on PCG. PCG could emerge as a material value play and we'd be the first to be *Rainin' in California* but it's too early to make that call given uncertainties with PCG including 2017/18 CalFire wildfire findings, stress tests analysis, legislative fixes/support especially for '18 gap year, investigations into corporate culture/restructuring and a general message by the CPUC that tends to be conflicted at times, esp. with PCG. **We await more visibility with PCG as EIX remains the "safer" way to invest in CA (outside of BUY-rated SRE which is too diverse to be even considered a "CA play").**

Refreshing what liabilities could equate to...

We are refreshing our liability analysis for the most recent structural damage estimates while confirming our thesis on the potential upside in EIX stock on wildfire liability and the negatively skewed risks which keep us on the sidelines for PCG. **Our refreshed analysis of market implied liability and structural damage estimates implies *EIX has 11% potential upside* if we take the liability estimates in isolation, while *PCG has a potential downside of 22%*.** Both scenarios do not take into account any externalities around litigation outcomes, legislative involvement or regulatory recovery.

...EIX could have 11% upside; PCG 22% downside

So much going on in 2019: we are monitoring the CA legislature for continued work on wildfire liability reform, especially for the 2018 "gap" year, the CPUC for initiating implementation of SB901 cost caps, litigation in PCG's Butte fire case, litigation of 2017 fires in both Northern/Southern California and waiting for updated damage/insured loss estimates from the 2018 fires as well as CalFire findings for both Northern and Southern CA wildfire events for 2017 and 2018. What the CPUC also deems as "reasonable" for wildfire recovery also remains a big question mark.

PCG WILDFIRE LIABILITY UNCERTAINTY HAS ROOM TO MOVE STOCK LOWER

Implied value of NorCal 2017 and Camp 2018 fires using current price and our methodology is $21B embedded in shares... Specifically for this short term analysis we assume a base regulated utility multiple of 17x P/E on **2019E EPS of $4.03**, with a 1.5x turn discount for the challenged California regulatory climate (i.e., what we could theoretically see for valuations, excluding wildfire liabilities, for regulatory constructs that remain challenging and utilities that are dealing with binary items – valuation disparities in the sector have been wide, with discounts ranging between 1-4x). **With a 15.5x all-in P/E, we arrive at a $33B theoretic market cap for PCG, with the current $13B market cap representing a $21B discount... as we show below, ~$3B may not be currently priced in.**

~$3B in Wildfire liabilities is not currently priced in for PCG, in our view

Our fundamental view of 2017+2018 wildfire liabilities for PCG is ~$24B. For 2017 Northern California (NorCal 2017) liabilities, we use the CA insurance commissioner's estimated insured losses of ~$10B and gross up by a factor of 10% for uninsured and other damages claims, or $1.1B. This results in an aggregate $11.1B liability for NorCal 2017 (i.e., $1.2M per structure for 9,000 structures). Despite the $11.1B bottom-up estimate, **we previously modeled an ~$8B after-tax base case cost cap for utility liability in 2017 ($4B from an equity only perspective, ~$6B from debt only and ~$10B in a worst-case scenario including both equity and debt).** These cost cap numbers are based on our understanding and modeling of the application of SB901 with

See pages 278 - 279 for analyst certification and important disclosures.

math available below and a discussion in our prior note on cost cap for PCG. **This results in an $8B in uncovered liability for 2017 that shareholders could absorb, in our view.**

Wildfire liabilities could breech $24B after accounting for tax and insurance

Camp Fire 2018 liability is likely even worse (~$16B) than 2017 based on the higher number of structures and several other factors at play. Assuming the same $1.2M per structure (NOTE: see few lines down on what is embedded in this figure which goes above looking at just replacement values) as calculated previously and the 18,793 structures damaged, we arrive at a $23B gross liability, before tax offset (at 28%) and insurance proceeds of ~$1B. **We note that the estimate per structure figure implies all potential liabilities that are pro-rated to structures; which may include insured claims from residential, commercial, auto, agricultural and other items; as well as other claims not limited to: emotional damages, property improvements, tree damage, business equipment/goodwill, pets, future profits and all fees associated with appraisal, engineering and legal costs in the trial.** The net result of our calculation is **$16B of exposure from the 2018 Camp fire.**

We also note insurance industry consultant RMS estimated insured claims at ~$10B on early reports of 11,000 structures damage, while early CA insurance commissioner reported $7B of insured claims, but noted that claims are still being filed and the number is expected to rise.

The combined uncovered liability from the two PCG fire seasons in our fundamental view could be $24B, i.e., not be eligible for securitization, implying ~$3B potentially not accounted for in the current stock price, or a ~$22% downside. We note that the ultimate outcome of PCG liabilities could depend on legislative intervention, regulatory cost cap setting and legal challenges to Inverse Condemnation at the CA supreme court. We see risks skewed negatively against PCG in most of these venues. Even as some Senate and Assembly members vocalized support for further wildfire legislation, the legislature does not seem to have any bill text yet and political capital may have been expended in 2018 as opposition against PCG has grown with calls for penalties, criminal prosecution and even taking state control over parts of the utility.

EIX OVERSELLING POINTS TO UPSIDE, BETTER POSITIONED FOR FUTURE GROWTH

Wildfire liabilities overly priced into EIX stock

Implied value of the Thomas and Hill/Woolsey fires using current price and our methodology is $4.5B embedded in shares. Like in the PCG case, we assume a base regulated utility multiple of 17x P/E on 2019 EPS of $4.53, with a 1.5x turn discount for the challenged California regulatory climate (i.e., what we could theoretically see for valuations excluding wildfire liabilities with names that have binary events/challenging regulatory constructs). **With a 15.5x all-in P/E, we arrive at a $23B theoretic market cap for EIX and the current $18B market cap represents a $4.5B discount.**

2017 Thomas fire unrecoverable liability is $0.7B

Our fundamental view of wildfire liabilities for EIX is $2.5B combined for both years. For 2017 Thomas fire liabilities we use the CA insurance commissioner's estimated insured losses of ~$1.8B and gross up by a factor of 10% for uninsured and other damages claims, or $0.2B. This results in an aggregate $2B liability for the Thomas fire ($1.9M per structure for 1,063 structures) before insurance proceeds of ~$1B and tax offset; we assume no mudslide damage claims are applicable given the speculative outcome of legal determinations and we assume no cost cap gets triggered. **This results in a $0.7B uncovered liability for 2017 Thomas Fire.**

Source: CA Department of Insurance, CalFire, FactSet, Guggenheim Securities, LLC estimates

2018 wildfires unrecoverable liability is ~$1.8B

Upside to EIX from wildfire mispricing is ~11%

Hill and Woolsey Fires (2018) liability is unlikely to be significantly worse than 2017 based on the similar number of structures. Assuming $2.5M per structure and the ~1,847 structures damaged, we arrive at a $3.5B gross liability, before insurance proceeds of ~$1B and tax effects, **netting $1.8B of exposure from the 2018 Hill/Woolsey fires. The combined uncovered liability from the two EIX fire seasons in our fundamental view could be $2.5B. If we use all our assumptions mentioned above, the difference in implied liability from the current EIX stock price to a fundamental liability view is $2.7B, implying an ~<u>11% upside potential to the stock price for wildfires alone.</u>** Additionally, as a part of our thesis we believe that after resolution of the 2018 wildfire liabilities, EIX is better positioned for future growth regardless of near-term legislative outcomes.

POWER MARKETS AND THE EVOLVING POLICY LANDSCAPE

Power Market Portfolio Manager Summary

Policy considerations will continue to overhang almost all of the nation's power markets in 2019, with many of 2018's issues still unresolved – but we believe some clarity is on the way… 2019 is shaping up to be a key year for execution on many of the various markets' unresolved policy overhangs, **from the ORDC in ERCOT to the MOPR in PJM.** The list of acronyms at the federal, state, and RTO/ISO level is unfortunately not much smaller this year, as many of the 2018's biggest issues remain outstanding into 2019.

ERCOT and PJM are the key 'policy' markets to watch in 2019

Power market reforms this year remain focused on PJM and ERCOT, with LT policy considerations underway in NYISO and ISO-NE… Our refreshed outlook for power policy in 2019 includes many of the usual suspects, with **energy pricing and capacity market reform** the enduring themes for several of the nation's markets**. On the energy price formation side,** both PJM and ERCOT continue to work through their own internal stakeholder processes, with FERC and the Public Utilities Commission of Texas (PUCT) the final arbiters for each. We continue to expect decisions in the NT from FERC on fast start pricing in PJM, and from the PUCT on modifications to scarcity pricing in ERCOT. **As a reminder, we calculate a range of $1-4/MWh of energy price uplift from implementation of the proposed energy price formation enhancements, in-line with PJM's estimate of $3.5/MWh** (*model available on pp. 23-24 HERE*).

Almost all policy items appear favorable for EXC, NRG, VST and PEG

On the capacity side, all eyes remain fixed on FERC for a decision on PJM's capacity market reform proposals, with an order expected by the end of the month. Further north, ISO-NE is grappling with its own capacity reforms as it prepares for CASPR and enters its first year under Pay for Performance. In addition to energy and capacity changes, we also highlight some longer-term items investors should be aware of, including NYISO's introduction of a carbon-price adder to comply with NY's aggressive carbon reduction policies, and ISO-NE's ongoing fuel security discussion. **Overall, we emphasize that we view almost all of the policy changes slated for 2019 across the nation's markets as supportive of energy and/or capacity pricing and in turn favorable for power-exposed names under coverage – EXC, NRG, PEG, VST.**

In addition to the specific market proposals detailed above we also provide our high-level thoughts on two key state/federal policy shifts for investors with second-level read through to power markets: 1) changes at FERC and 2) new state policies for nuclear generation. Our initial impressions of the shuffle at FERC this past fall is generally benign, with McNamee and Chatterjee potentially emphasizing resilience more than their predecessors. On the state nuclear front, we dive further into the possibility for ZEC mechanisms in Pennsylvania and Ohio, with the latter still a tough lift in our view.

All indications point to a very stressful summer for the grid operator in the Lone Star state

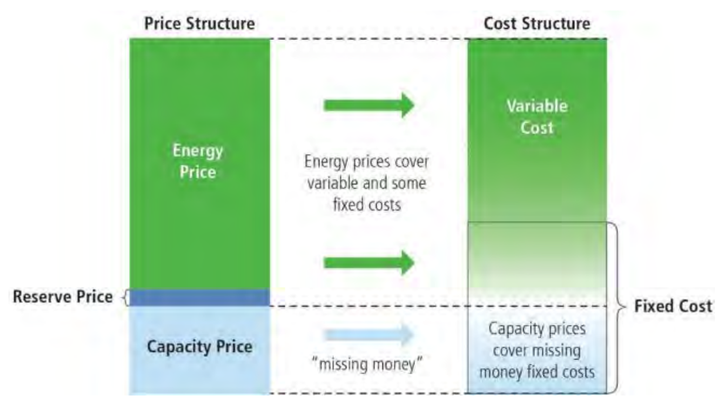
After refreshing our reserve margin outlooks, we believe ERCOT remains the sole market with attractive fundamentals through the next decade… The tightening we had predicted largely took place over the past 18 months in ERCOT, with robust load growth continuing to pressure the ISO from the demand side. The grid operator now expects a reserve margin of only 8.1% in 2019 and is examining changes to the energy market via the ORDC to potentially incent new generation. **Outside of ERCOT the story is largely the same… the other regional markets remain oversupplied despite incremental coal retirements** (see our per RTO reserve margins below)**. While some markets are exposed to locational fuel availability concerns (ISO-NE) or transmission constraints (NYISO), we believe power fundamentals overall will run heavily on energy and capacity policy moves in 2019.**

From a stock perspective: very hard to be negative power in '19 in our view, given the reforms we discuss above and below; hence, our continued support for BUY-rated EXC, PEG, VST, NRG.

What problem are markets trying to solve?

Power market reforms continue to revolve around solving the 'missing money' problem for generators… What exactly does missing money mean? While people have adopted the term to describe different revenue insufficiency phenomena in power markets over the years (more on this below), at an academic level it is a reflection of the market's inability to reflect the planning requirements placed on the markets.[1] More specifically, peaking units that run only a few hours of the year, yet bid their marginal costs, were not recovering all of their fixed costs in the early days of restructured markets, hence "missing" money. Furthermore, the revenues of units would be further subject to year to year variations in weather; running some years in heat waves/polar vortices, and then some not at all. To address these issues, power markets have pursued two distinct paths, some concurrently: **1) scarcity pricing**, also known as shortage pricing, which raises the price of electricity above marginal costs during times of tight reserves (and also eschews low price caps), and **2) capacity payments** via a centralized market for capacity as a stand-alone commodity. ERCOT has exclusively pursued the former path, while PJM, NYISO, ISO-NE, and MISO (to a degree) have followed the second. Below is a representation of how energy and capacity revenues in PJM help cover total costs for a generator:

Figure 6: How Missing Money is Mitigated in PJM



Source: U.S. Department of Energy (HERE)

No matter who you ask, money is still missing…

Fast forward to recent years and the term "missing money" has been extended outside of this purely fundamental paradigm to reflect the challenges facing entire classes of technologies in the markets: nuclear units on certain buses are 'missing' money due to negative pricing from PTC-earning wind, coal units are 'missing' money because their coal piles go uncompensated, nuclear units are 'missing' money because their lack of GHG emissions is not reflected in the markets, etc. To ameliorate many of these issues, grid operators and FERC have sought changes in both the energy and capacity markets.

So, is money still missing? Yes, but policy reforms remain on a trajectory to close the gaps across many markets in the coming years. The nation's various markets have taken different approaches to solving both the missing money problem, with the starkest difference between ERCOT and PJM/ISO-NE/NYISO. Below we detail some of

[1] The first use of this term is attributed to Roy Shanker in his 2003 testimony before FERC - William W. Hogan, Harvard University, "'Energy Only' Electricity Market Design for Resource Adequacy," September 23, 2005

the key changes to be aware of heading into the new year, with nearly every market going through some degree of change…

PJM: Policy reforms moving slowly, but endgame still positive

2019 shaping up to be a year of execution on power and capacity reforms…

A multipronged, years-long effort to improve both *energy* and *capacity* markets in PJM should come to fruition in 2019, although some changes will take time to percolate. PJM remains a region in transition in our view, with reforms underway for almost every segment of revenue generation in the RTO. We continue to see the net result of these efforts as purely positive to energy and capacity prices ***outside of any natural supply/demand dynamics***. Unfortunately, the pace of policy at both the RTO and at FERC has been slow, but we believe many of the reforms slated for 2018 will finally come to pass in 2019, with some new items in the works as well. **Below we highlight the status of the key ongoing reforms on both the energy and capacity fronts.**

ENERGY: PRICE FORMATION

In our view, minimizing uplift[2] via improving price formation are straightforward reforms for PJM and other RTOs to pursue, with less of the acrimonious policy-tinged debate that has shrouded efforts regarding capacity markets. Uplift payments in prior years were quite high (FERC Staff tallied over $5.5bn in payments from 2009-2013 – see page 5 HERE), triggering a June 2014 proceeding at the Commission on price formation at large (AD-14-14). Over a series of subsequent orders, the Commission has addressed issues ranging from shortage pricing, to the alignment of settlement and dispatch intervals (RM15-24), to a doubling of the "hard" offer cap for day-ahead and real-time markets from $1,000/MWh to $2,000/MWh (RM16-5). The endgame of all of this is to improve the price signals sent by the energy markets, thereby shrinking the missing money problem and sending accurate investment signals to the broader market. Below we provide updates on two aspects of price formation reform in PJM under consideration in the NT: 1) implementing fast-start resources into prices, and 2) a package of broader market reforms under consideration by the RTO. **Finally, we note that the integer relaxation proposal (see HERE) remains somewhat of a lower priority in our view, but it could re-emerge in the course of 2019's stakeholder processes**.

Fast Start: Minimum Pricing Requirements for Fast-Start Resources

Fast start only part of overall price reform efforts

PJM continues to work towards the implementation of fast start pricing, in which all of the costs incurred by fast-start resources (e.g., start-up) would be included in the price of electricity instead of getting paid separately via uplift. The most prevalent group of such fast-start resources is natural gas peakers. By including the total cost of supplying electricity in the marginal price, fast start pricing should go a long way towards FERC's goal of minimizing uplift payments. **As a reminder, we previously calculated a range of $1-4/MWh of energy price improvement from the implementation of the proposed energy price formation enhancements, roughly in-line with PJM's estimate of ~$2-$3.5/MWh** *For more on fast start see our overview on pp. 23-24 of last year's outlook **HERE**.*

Price Formation

Beyond fast start and integer relaxation, PJM is also pursuing several other broad price formation initiatives to improve the energy and reserve markets via its *Energy Price*

---

[2] Uplift credits are payments made to resources whose commitment and dispatch by an RTO or ISO result in a shortfall between the resource's offer and the revenue earned through market clearing prices. While shortfalls can occur for many reasons, three primary reasons are: (1) a resource's operating costs and limits not being reflected in prices; (2) unmodeled system constraints; and (3) the dispatch and commitment of inflexible resources or the commitment of resources ineligible to set price – p.5 HERE

Broader price formation has strong traction, action likely in Winter '19

Formation Senior Task Force. The PJM Board of Governors recently set a January 31, 2019 deadline for the Task Force to reach a consensus on a slew of items, including the following six components:

1. *Consolidation of Tier 1 and Tier 2 Synchronized Reserve products*
2. *Improved utilization of existing capability for locational reserve needs*
3. *Alignment of market-based reserve products in Day-ahead and Real-time Energy Markets*
4. *Operating Reserve Demand Curves (ORDC) for all reserve products*
5. *Increased penalty factors to ORDCs to ensure utilization of all supply prior to a reserve shortage*
6. *Transitional mechanism to the RPM Energy and Ancillary Services (E&AS) Revenue Offset to reflect expected changes in revenues in the determination of the Net Cost of New Entry*

See HERE for the RTO's Energy Price Formation Senior Task Force Primer

In our view the net effect of these changes should be directionally positive for generators in PJM, although the reserve market remains a minor portion of total revenues. For example, changes to shortage pricing via the raising of the ORDC high point to $2,000/MWh is clearly positive, but PJM has to actually experience shortage/scarcity conditions to trigger it, which may be difficult in a market with >20% reserve margins. The RTO's own analysis (pp. 19-22 HERE) found that these reforms could boost systemwide energy and capacity revenues by up to $1.5bn:

Figure 7: PJM Analysis of Energy Price Formation Reform Impact

Net Cost Impacts			
	Scenario 1	Scenario 2	Scenario 3
Increase in Energy and Reserve Market Costs ($ millions)	1,920	1,920	1,920
Capacity Market Cost Reduction ($ millions)	440	640	1,500
Net Cost Increase ($ millions)	1,480	1,280	420
Net Cost Increase as a Percentage of 2017 PJM Billing	3.4%	3.0%	1.0%

Source: PJM. Note: This analysis does not include the fast start or integer relaxation proposals.

We expect PJM to make a 206 filing at FERC in February laying out its full suite of desired changes.

CAPACITY MARKETS

Capacity market reform likely to respect state's resource choices

Answer expected soon on reforms to the Base Residual Auction; FERC trying to walk a fine line between state policies and 'just' rates for generators… FERC is expected to rule on modifications to the PJM capacity market within the next few weeks, providing some much need clarity on an issue that dogged integrateds and IPPs for much of 2018. As a reminder, **FERC is now sitting on a large pile of initial and reply briefs from stakeholders in response to its June Order rejecting PJM's 'jump ball' proposal.** While FERC could ultimately mix and match ideas from the various briefs or even present its own unique proposal for reforming the market, **we believe PJM's own filing likely bears the largest resemblance to any final order.** We followed the PJM stakeholder process underlying the October FERC filing closely for most of 2018 - see links to our notes on this below.

PJM is committed to a middle of the road proposal that 1) accommodates state policy choices (e.g. ZECs/RECs), while 2) protects pricing in the capacity market. PJM offers up a strong MOPR to mitigate almost all subsidies, and suggests "*we believe the Commission can, if care is taken, lawfully afford states that subsidize preferred* *generation the option to have these resources recognized as capacity outside PJM's capacity market*" (p.3). To walk this line PJM has formally proposed two potential modifications to its tariff, with the latter modification containing two further options:

1. An Extended MOPR
2. FRR-Alternative
    a. Resource Carve Out (RCO)
    b. Extended RCO (ERCO)

The grid operator's preference in our view is undoubtedly for a combination of the MOPR and ERCO proposals, with its filing noting; "*the expanded MOPR, coupled with the Resource Carve-Out as proposed here, offers the Commission a defensible FPA-compliant path to accept and limit the trade-off that comes from recognizing subsidized, and hence uneconomic, resources as PJM capacity*" (p.8). **In our view the crux of the FERC process will be what happens with the RCO and ERCO options, with the MOPR less of a flash point. The ERCO (repricing) element is essential in our view to ensuring capacity pricing remains 'just and reasonable,' however it is unclear at this time whether FERC will ultimately take what PJM has proposed or put forward its own mechanism. For more on PJM's reforms and our evolving thoughts see our other research notes here (ordered from newest to oldest):**

FERC Docket (*October – Present*)

2. PJM: You May Ask Yourself, Well How Did I Get Here? Back to the Commission for the Main Show (see HERE)

PJM Stakeholder Process (*June-October*)

3. PJM Update: Capacity Market Reform Process Grinds On, Still Too Early to Make Any Calls (see HERE)
4. PJM: Initial Comments Indicate Divergent Opinions on Capacity Reforms But We Will Get to the Correct Endgame Supporting GenCos (see HERE)

ERCOT or: How I Learned to Stop Worrying and Love the Scarcity

Reforms likely supportive of pricing, but PUCT's leanings remain an unknown

ERCOT's reform efforts are entering their final innings, with the PUCT slated to vote in the NT on the fate of several price formation initiatives. The star of this narrative remains the proposed modifications to the operating reserve demand curve (ORDC), which has become bundled with a series of other proposals. As a reminder, the Public Utility Commission of Texas (PUCT) established a docket (No. 47199) to assess the price formation rules in ERCOT's energy-only market in response to a paper[3] by Harvard's Bill Hogan and FTI's Sue Pope (sponsored by NRG and CPN) that was submitted to the PUCT in May 2017. The paper suggested several major modifications to the ERCOT market, including:

- Including marginal line losses in calculations for dispatching and pricing
- Enhancements to the Operating Reserve Demand Curve
- Real-time co-optimization of energy with ancillary services
- Establishment of locational reserve requirements
- Modifying transmission planning and cost recovery towards "market reflective" policies instead of Texas' socialized planning process

[3] *Priorities for the Evolution of an Energy-Only Electricity Market Design in ERCOT*. See HERE

All of these changes are currently under consideration by the PUCT, which as of late December had twice deferred a decision as it examined the proposals further. **What direction the PUCT ultimately takes is difficult to predict in our opinion, as stakeholders have reached little consensus on what is actually needed to improve the resource adequacy outlook for the state.** For reference, Exelon has estimated (see HERE) that changing the ORDC by shifting the Loss of Load Probability (LOLP) one deviation could cost Texas consumers up to an additional $4bn/year. In a separate proceeding for the ISO, the Brattle Group found (see HERE) in October that *maintaining* the ORDC's status quo would result in a tight, yet acceptable, 10.25% reserve margin in 2022.

Finally, we note that some of the proposed recommendations are in conflict with Texan public policy – specifically the proposal to including marginal line losses would run counter to the legislature's 'postage stamp' approach to socializing transmission losses. While this approach has been credited with helping spur the development of remote resources within the state like wind and solar, it runs counter to the popular convention in every other US power market. Very much a "stay tuned" situation heading into the new year.

The other markets: ISO-NE and NYISO

ISO-NE

2019 slated to be a critical implementation year, with Pay for Performance and CASPR coming into effect

2019 will likely be more of a transitional year, in our view, dominated by 1) execution on capacity market policy changes, and 2) modifications to the market to ensure 'fuel security' on a long term basis… In contrast to PJM and ERCOT, ISO-NE got more of its policymaking agenda done in 2018, setting up 2019 to be a key execution and implementation phase of the story. As a reminder, the RTO is now seeking to implement a two-tiered capacity auction; the Competitive Two-tier Auctions with Subsidized Policy Resources (CASPR) mechanism - for a full refresh on CASPR see our overview on page 27 HERE. February's upcoming FCA 13 auction will be the first to feature the mechanism. The grid operator has already filed (see HERE) several modifications to CASPR in advance of FCA 13, including exempting offshore wind in federal waters from the MOPR after it failed to include it under the renewable technology resource exemption, and the implementation of price tests during the first stage of the auction. **Finally, we highlight that this winter is the first to feature full Pay-for-Performance requirements on generators and is the first *without* the transitional Winter Reliability Program, a transitional mechanism which had compensated generators for storing onsite fuel inventories.**

The second major agenda item outstanding in New England is a familiar one at this point: fuel security. The proposed retirement of **EXC's Mystic plant** and subsequent ST reliability contract (see FERC's approval of that contract HERE) **has touched off another round of reform consideration in the market,** with FERC directing NEPOOL and stakeholders to come up with a long term markets-based solution to ensuring fuel security in the region. This effort remains quite nascent, but investors should be on the lookout for developments as we draw further into 2019 and the process gels. Preliminary conversations at NEPOOL indicate the ISO is considering a "multi-day-ahead" market for up to several days in advance, while other mechanisms include a "Forward Inventory Reserve Mechanism" to focus on fuel inventories in advance of the winter season. **Side note: the inclusion of Mystic as a price taker in FCA 13 has been projected by Platts to lower clearing prices by "roughly $0.50-1.00/kW-month." The New England Power Generators Association (NEPGA) has asserted prices could be suppressed by up to 30%.**

NYISO

NYISO continues to focus on carbon reduction

As a single state ISO, NYISO has found itself to be an important component of the state's aggressive environmental policy goal of reducing carbon dioxide emissions 40% by 2030 and 80% by 2050, relative to 1990 levels. **The ISO's Integrating Public Policy Task Force (IPPTF) has been an instrumental part of this, with the ultimate goal of instituting a carbon adder in the state's energy markets in the early part of the next decade.** As currently envisioned (see full proposal as of December 2018 HERE), the NY PSC would set the social cost of carbon that would form the basis for the adder. In the ISO's own words:

> *"The NYISO is not proposing to change existing energy market mechanics or supplier offer procedures in order to incorporate a carbon price. Suppliers are expected to add their carbon charges into each applicable component of their energy offers (i.e., startup, minimum generation, and/or incremental cost curves). Supplier energy market payments would continue to be based on the full LBMP, which would rise due to the carbon charge when carbon-emitting resources are on the margin.*
>
> *The NYISO would calculate and publish the LBMPc for the Real-Time Market (RTC and RTD), including the "look-ahead" intervals. Publishing the LBMPc would provide carbon pricing transparency to the market. The LBMPc is also needed to determine the adjustment to the payments for import and export transactions and effectuate the recommended allocation of Carbon Residuals."*

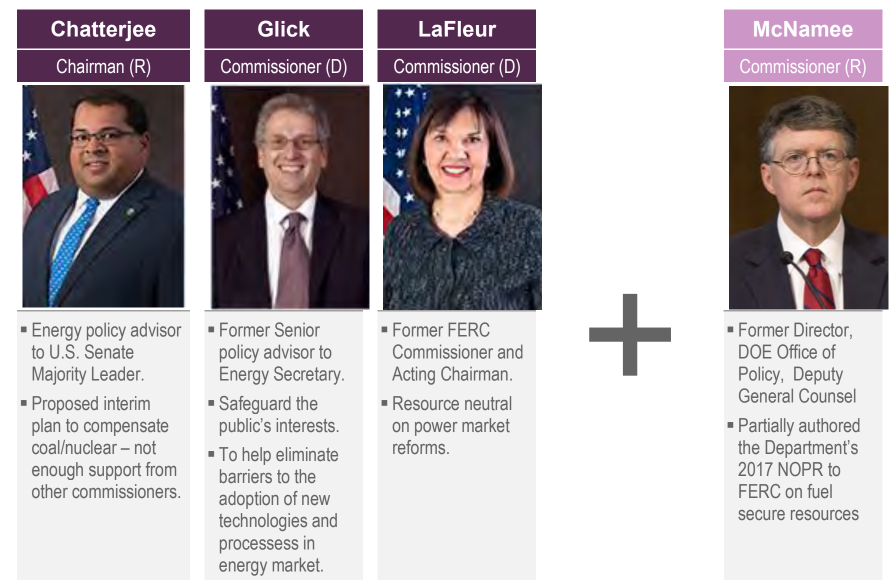
In our view, the proposed carbon adder remains a work in progress, with the ISO targeting a 2020 implementation date at the earliest. We note that the stakeholder process to date has been a bit of a tough slog in our view, largely as a result of the proposal's sheer complexity. The proposal continues to work through issues such as imports, the interaction with RECs, how the actual price is set by the PSC, and other issues. In the long run we believe the process will yield results, but we **note that the NYISO market is tertiary at best for most of the IPP names under our coverage. We continue to watch for indications from key officials and stakeholders on how a pricing phase in could/would potentially interact with a phase out of nuclear ZECs, given EXC's exposure to the market.**

> *Business as usual, but we see a new tone to the Republicans*

Shifting Sands at FERC: Powelson Departs, McNamee Enters, Chatterjee Assumes Chairmanship

Commissioners reshuffled in 2018, and while the partisan lines remain firmly in Republicans' favor, we believe the tone could change in 2019… 2018 was an eventful year for the Commission, with the departure of Robert Powelson after only a year on the job, the relinquishing of the Chairmanship by Kevin McIntyre, and the confirmation of Bernard McNamee in December. **While the *overall* slate and makeup of the commission has changed only slightly heading into 2019, we believe the replacement of Powelson with McNamee in late 2018 and the changes at the chair will inevitably change the tone of the Republican-majority as the new year unfolds.** Powelson and McNamee came from different backgrounds (more on this below), as did Chatterjee and McIntyre. In our view, these differences alone could drive a slight shift in tone at the Commission, as Powelson had been a proponent for competitive energy markets and served on the PUC in a restructured state (PA). **We believe investors should be aware that 2019 will likely bring *additional* shifts in the makeup of the Commission in our view**, **with Commissioner LaFleur's term slated to end on June 30, 2019 (she could possibly serve through the end of the congressional cycle in December), and former Chair McIntyre's unfortunate passing leaving yet another Republican vacancy. Finally, we think there is also a remote but tangible possibility that McNamee could be named Chair by the President given that we see him as the Commissioner most closely-aligned with the administration.**

Figure 8: Shifting Sands at FERC: Powelson Departs and McNamee Arrives



Source: FERC (images), Guggenheim Securities, LLC.

Below we highlight some of our high-level thoughts on Chatterjee given his new role as Chair and provide additional details on McNamee.

- **Chairman Neil Chatterjee**

  Chairman Neil Chatterjee was nominated to FERC in May 2017 and confirmed by the U.S. Senate on August 4, 2017. Prior to joining the Commission, he was energy policy advisor to U.S. Senate Majority Leader Mitch McConnell and over the years, Chatterjee has played an integral role in major energy legislations. His term expires on June 30, 2021.

Chatterjee's time at FERC has softened perceptions of a 'fossil' bias, in our view

Key comments/actions: Chatterjee's background, including time in McConnell's office and his time lobbying on behalf of the National Rural Electric Cooperative Association (NRECA), has led some groups to label him a "rubber stamp for fossil fuel and utility interest."[4] During his short stint as Chairman prior to McIntyre's arrival Chatterjee had expressed support for the Administration's comments regarding fuel secure resources and proposed an interim plan to better compensate baseload generation while FERC undertook a more thorough review of grid resilience and baseload generation. Later in the process, Chatterjee pulled back on his proposal for payments for coal and nuclear plants as interim solutions, saying that longer-term assessment of grid resilience is more important. Chatterjee subsequently spent a year as a commissioner under McIntyre, and in June 2018 he joined his fellow commissioners in unanimously testifying before the Senate Energy and Natural Resources Committee that there was no grid emergency at the time. Finally we note that on his promotion to the Chairman's position there were some plaudits that Chatterjee had proven to be more pragmatic than some had initially expected in 2017 (see HERE for an excellent synopsis):

"*I think he genuinely appreciates new technologies and innovation including renewable energy and storage*" - Rob Gramlich, Grid Strategies

"*I think he really understands the value of markets and the value ensuring that these innovative technologies have an opportunity to participate in those markets in a full and robust way*" – Former Chairman Jon Wellinghoff (D)

- **Commissioner Bernard McNamee**

McNamee a bit of an unknown, with his DOE work slanted towards resilience

Commissioner Bernard McNamee was nominated to FERC in October 2018 and confirmed by the U.S. Senate on December 6, 2018. Prior to joining the Commission, he was the Executive Director of the Office of Policy at the Department of Energy. Earlier in 2017 he served as the Deputy General Counsel for Energy Policy at the DOE. Prior to these roles he was an energy lawyer for 9 years representing utilities before PUCs and also worked as a policy advisor for various governors and senators in Texas and Virginia. His nomination biography is available HERE. **McNamee is serving the remainder of Powelson's term, which ends on June 30, 2020**.
Key comments/actions: Commissioner McNamee remains an unknown variable at this time, in our opinion. His background is firmly in utility law, and Virginia, despite its membership in PJM, remains very much a traditional regulated cost of service state. McNamee did spend time working for Texas senator Ted Cruz and on policy in the Lone Star state, but it is unclear to what degree McNamee worked on matters related to ERCOT. **By far the largest point of focus during the nomination process was McNamee's role in the DOE's 2017 NOPR to FERC**, and subsequent leaked policy document (see our note HERE) detailing a nation security threat from the retirement of fuel-secure baseload plants.

On a more technical legal note, we highlight that following McNamee's confirmation by the Senate, Harvard Law's Electricity Law group, led by Ari Peskoe, filed comments at FERC calling for McNamee to recuse himself on matters related to fuel security and his tenure at the Department of Energy:

> "*The overarching principle is that McNamee may not decide issues as a Commissioner that he worked on while serving as*

---

[4] See HERE

> *an attorney at the Department of Energy. As a matter of law, he is incapable of being an impartial adjudicator on any such matter*."
>
> "*Recusal is not an admission of actual bias. Our filing does not second guess McNamee's commitment to being an impartial arbiter. But the law establishes objective tests that protect against the appearance of bias. McNamee fails those tests*."
>
> – Harvard Law's Ari Peskoe[5]

The Comments appear to be focused on the NOPR and issues of 'fuel security' – but it is unclear to us at this time if that would extend to voting on tariff modifications like Capacity Performance in PJM or Pay for Performance in ISO-NE, both of which somewhat indirectly address fuel security. As a reminder, FERC voted 3-2 on party lines in June to find PJM's existing construct unjust and set in motion the current reform process - should McNamee have to recuse himself it could open the door to a split decision, although this is all very high level at this point.

FERC to rule on PJM reforms by early January 2019

FERC's agenda continues to be dominated by power market reforms, and we expect the personnel changes highlighted above to elevate the importance of 'resilience' going forward. Our high-level take from the shuffles at FERC this fall is that the general agenda remains the same, with the partisan divide likely a larger factor on many votes than any individual personality. The commissioners have split 3-2 on several decisions for both pipeline and power orders, so a 2-2 partisan divide may slow things at the Commission until a new republican can be confirmed.

[5] Comments available HERE

STATE LEVEL: NUCLEAR LIFELINES

Nuclear operators across the eastern markets successfully argued for state support in 2018, with efforts in NJ and CT both largely across the finish line by year's end. We also note that the frontrunners of nuclear support, ZECs in IL and NY, withstood legal challenges in two different appeals courts in 2018, with an appeal to the Supreme Court a likelihood in 2019. Below we provide some key updates on two of the remaining states we see as open to nuclear lifelines: PA and OH.

PA policy support push coming in '19, outcome far from certain

Full court press expected in 1H19 by nuclear caucus in legislature

2019 shaping up to be a 'battleground' year for nuclear support in PA, with several shutdown decisions looming. In prior years we had largely ruled out the prospects for state-directed policy support for nuclear units, primarily due to the state's powerful oil and gas lobby and the presence of too many competing constituencies on the matter. **When we hosted commissioner meetings (See note HERE) with former PA commissioner, and then-FERC Commissioner Robert Powelson, he acknowledged that many in the state were aware of the challenges facing nuclear.** Fast forward a year to 2018, and the state is now looking at the announced retirements of FES' 1.8GW Beaver Valley (1,000 employees) and EXC's 800MW Three Mile Island Unit 1 (675 employees). **It was in this environment that the Bicameral Nuclear Energy Caucus sought to invigorate the debate on nuclear support in the PA legislature, with the cornerstone of that initiative the release of a report detailing potential avenues for the legislature and the industry in the state**. The report (available HERE) also outlines four key options for the state:

1. Do nothing and leave Pennsylvania's clean energy resources, including its nuclear plants, on a trajectory to early retirement – effectively allowing PJM to dictate the mix of resources serving Pennsylvania.
2. Modify AEPS (or establish a ZEC program) to put nuclear generation on equal footing with other zero-emission electric generation resources in Pennsylvania.
3. Modify AEPS (or establish a ZEC program) with a "safety valve" mechanism that (depending on the outcome of the FERC proceeding) would allow Pennsylvania to adopt a new capacity construct proposed by FERC that is designed to accommodate state programs to support preferred generation resources.
4. Establish a Pennsylvania carbon pricing program

Our impression of the report is that none of the options presented are particularly out of step with expectations. In our view, the only two 'solutions' presented are a ZEC program or a carbon pricing scheme. We do not believe a carbon pricing scheme could even be implemented in a timely manner (e.g., NYISO's is taking several years), **leaving ZECs as the only real option for staving off the retirements of TMI and Beaver Valley.** It remains to be seen how this all plays out in the legislature this spring, but we note that parties including the AARP and some generators (NRG, Calpine) have already come out against the proposal. We expect the state's powerful oil and gas lobby to do the same.

As a reminder, EXC has set a 1H19 timeframe for a final TMI decision, while Beaver Valley likely has slightly more time. Very much of a 'stay tuned' situation as the report reverberates across the political spectrum, with a vibrant debate likely, in our view, sometime this spring.

OH legislation remains possible, but far from certain in our view

We continue to view OH as a decidedly tougher environment for ZECs vs. IL/NY/NJ

A legislative fix in OH remains elusive in our view, as we believe the conversation remains framed around jobs and economic impact, in contrast to the high weight placed on environmental attributes in other jurisdictions. As a reminder, after the initial attempt at providing a state support mechanism called the Zero Emission Nuclear Resource Program (ZEN - H.B. 178/S.B. 128[6]) stalled in the OH legislature, **a new bill (H.B. 831) to subsidize at-risk nuclear generation was introduced in the state House.** The previously-proposed ZEN program would cost customers less than the prior proposals by shortening to 12 years from 16 years and requiring $2.5 per month from residential customers and lesser of $3,500 or 5% of total bill from non-residential customers. We note that the legislation has moved in fits and starts in 2018, with only a moderate degree of action between 2Q-4Q18 consisting primarily of union employees and local governments. **We note that, in our view the matter is complicated by the bankruptcy of FES, who owns the only two nuclear units that would be eligible for compensation.**

> "*The ZEN legislation (House Bill 178) that was introduced was strictly on the FirstEnergy footprint, so it was clearly not a statewide piece of legislation and therein lies a problem*" - State Rep. Steve Arndt[7]

In addition, we highlight that both of the units in OH are single unit plants, which would likely require higher compensation vs. the PEG Hope Creek/Salem nuclear complex in NJ, or even the Fitzpatrick unit in NY, which will likely see operational synergies with Nine Mile Point under EXC's ownership.

REFRESHING OUR RESERVE MARGIN OUTLOOK: MARKETS OUTSIDE OF TEXAS REMIAN OVERSUPPLIED

Outside of Texas, markets remain oversupplied

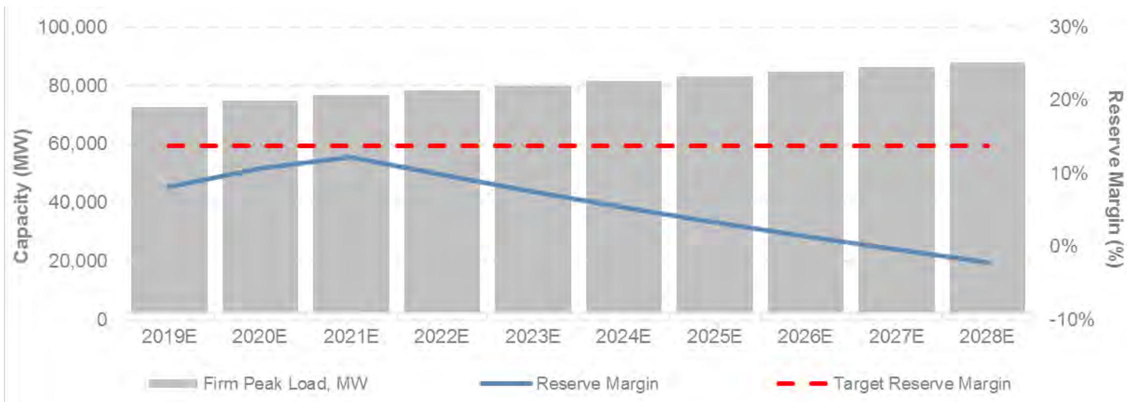
ERCOT remains the standout market for tight reserves, as newbuild gas plants and the slow pace of retirements across the NE leave margins elevated. Below we show forecasted reserve margins for the key de-regulated markets in which the IPPs operate – plotted against peak demand and total installed capacity (net of capacity additions/retirements). As a reminder, a reserve margin is excess capacity above and beyond the capacity needed to meet peak demand levels – a proxy of resource adequacy and a measure of supply/demand. While it varies among regions, planners typically target reserve margins within the 13-16% range – forecasted reserve margins below target levels equate to a tight market; forecasted reserve margins above target levels equate to a looser supply/demand balance. **See below for key regional takeaways.**

ERCOT remains the market to watch

Reserve margin remains well below target levels, in-line with our past projections

Following a very tight 2018, ERCOT enters the new year on even more precarious terms... ERCOT's reserve margin is now forecasted to be 8.1% for 2019, down from last year's forecast of 11.7% and even further from the ISO's target of 13.75%. While this decline is not a surprise for many stakeholders and industry observers, it is a very stark shift from the almost 19% reserve margin the ISO had expected in 2017 for the summer of 2018. **Much of this is in line with our prior assertions in 2017 and 2018 (e.g., see page 34 HERE) that the market was likely to see a wave of retirements.** The pendulum has now swung hard in the opposite direction, with 2017/18 coal retirements and robust load growth driving the market into much tighter conditions. **We continue to believe that the market is not yet attracting new entrants, a view also held by mgmt. at some IPPs under coverage. Absent a strong destruction of demand in Texas (e.g., a recession) we expect 2019 and 2020 to remain very tight.**

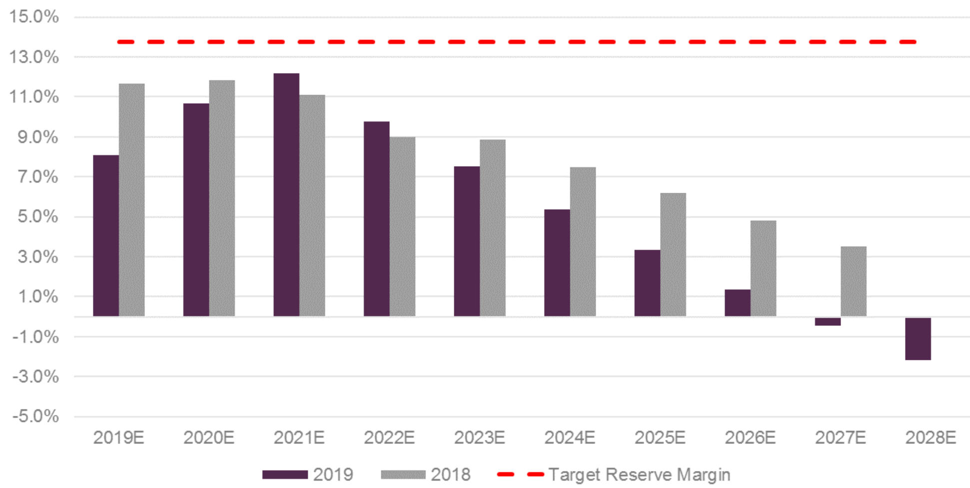
Figure 9: ERCOT Reserve Margin Forecast Indicates Supply Shortage in the LT



Source: ERCOT, SNL, Guggenheim Securities, LLC estimates

We believe ERCOT's reserve margin could fall even further below targeted levels, but much depends on the decisions of independent actors. When we ran our coal screen last year (see page 35 HERE), we had assumed certain plants like the Gibbons Creek ST would retire, but we have yet to see many of these more marginal assets retire. This includes some 3.9GW of municipally-owned coal, or approximately 27% of all coal capacity. **The variability in both retirement decisions and load growth means that read through to summer conditions is not perfect – but the trend towards tightening is still clear (see our YoY reserve margin comparison below).**

Figure 10: YoY Margin Comparisons: 2019 and 2020 are lower, while 2020 and 2021 are higher



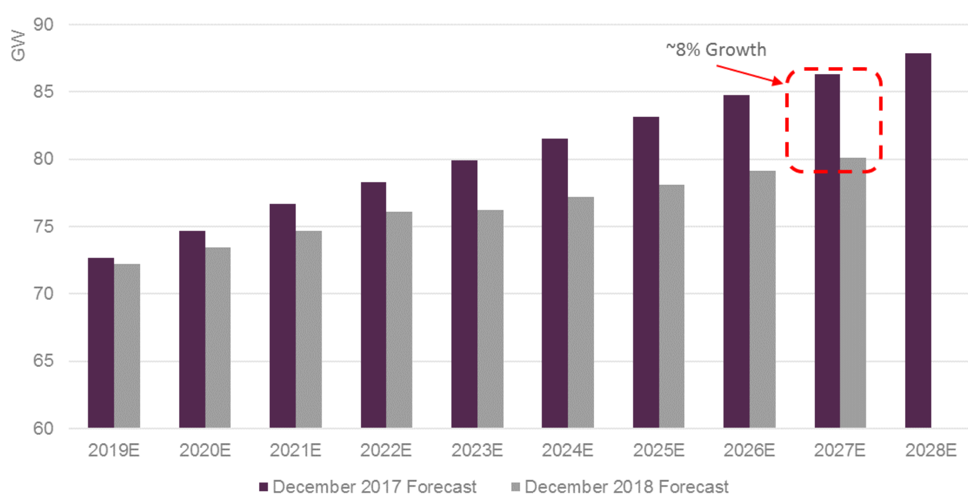
Source: ERCOT, SNL, Guggenheim Securities, LLC estimates

Where could ERCOT see relief? Lower demand or more capacity

We estimate 3GW of solar to come online by 2020

We continue to believe ERCOT will remain tight well into the next decade, so long as the lack of scarcity pricing and the forward pricing environment in its energy-only market deters new entry. Absent the reforms detailed earlier we see two pathways to relief: 1) demand destruction or 2) new capacity added outside of the merchant paradigm. On the **first item**, we note that the latest CDR reports from the ISO show no shortage of growth, with outer years of the LT projections now higher by 7-8% vs. the 2017 estimates. On the **second item**, new capacity, we specifically flag the growth of solar in the state, with installed capacity expected by the ISO to double between 2017 and 2020 from 1.1GW to 3GW, with additional incremental projects likely in our view.

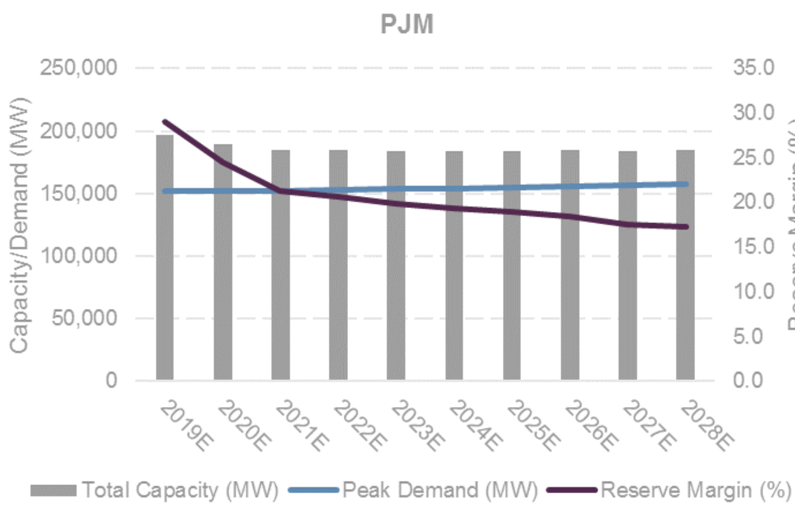
Figure 11: Current forecasts show much higher firm peak load projections



Source: ERCOT, SNL, Guggenheim Securities, LLC estimates

PJM: Excess capacity remains an overhang

Figure 12: PJM reserve margin forecast



Source: PJM, Guggenheim Securities, LLC estimates

- **PJM reserve margin forecasts remain healthy...** Reserve margins slightly contract through the forecast period, but we note stagnant demand growth (currently projected by the RTO to average 0.4% over the next decade) is expected to keep major pressure off margins.
- **Gas units remain the marginal price setters** – now on the margin 55-70% of the day as retirements and coal to gas displacement reduces coal's marginality.[8]

East/West power basis remains through forecast period.

Figure 13: Gas increasingly marginal

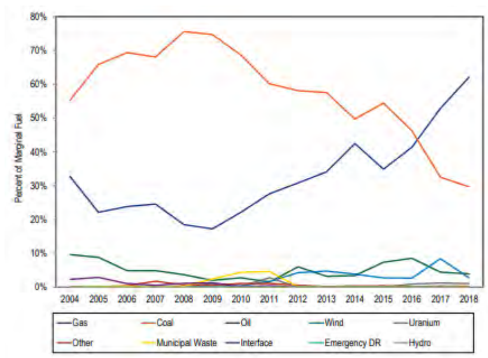


Image Source: Monitoring Analytics

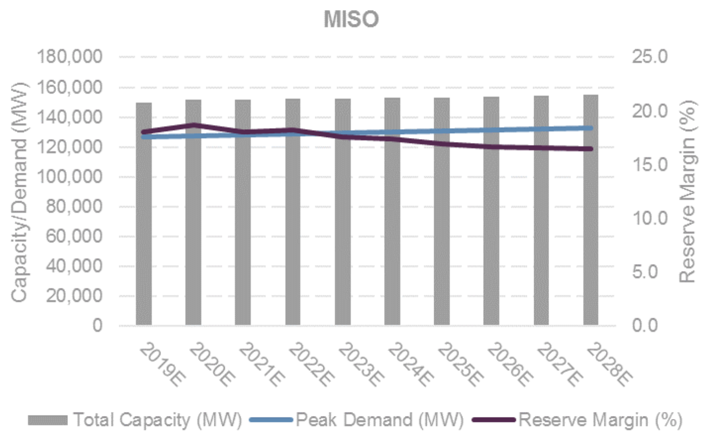
- **Things to watch: 1) Policy:** Energy price formation and capacity market design changes, as well as potential nuclear subsidies in NJ, PA and OH, which we discuss in greater detail later in thus section, and **2) the erosion of basis differentials over time as Marcellus takeaway capacity increases**.

[8] See Page 113 HERE

MISO: Few concerns in this mostly regulated market

Figure 14: MISO reserve margin forecast



Source: MISO, Guggenheim Securities, LLC estimates

- **Reserve margin forecasts improve slightly with our refresh this year, remain above ~16% target.** The RTO is expected to have up to 6.6GW of excess resources heading in to the 2019 season.[9] Like other markets, we continue to see a slowing or reduction in demand growth forecasts, with MISO's latest 2019 summer peak forecast dropping some 1.5GW from the 2017 estimate. The five-year regional growth rate outlook used by the RTO has also decreased from 0.5% in the 2018 analyses, to 0.3% in the 2019 outlook.

- **Fuel mix continues to trend towards gas becoming more and more marginal as coal exits**. Key parts of the MISO are also now dominated by wind (e.g., Iowa) – with the lower resultant power prices causing negative quark spreads at certain off-peak times for nuclear units like Clinton in IL.

Key trends in MISO remain the same YoY: Wind, Zone 4, Gas, etc.

- **Zone 4 issues remain unresolved** – MISO Zone 4 in (South and Central Illinois), lies in the only restructured state in MISO. As such generators in the state (e.g., VST's predecessor Dynegy) have long raised concerns over low capacity market prices, and even sought to move the Zone into PJM via legislation. **As a reminder, ICC staff wrote a white paper detailing the Zone 4 issues**[10]. Finally, we note that MISO's efforts to reform the capacity construct (i.e., use of slope demand curve, eliminating zero bidding, longer planning period) did not have much traction in 2018.

- **Things to watch: The Zone 4 question remains the primary outstanding issue we continue to watch.** By extension we continue to monitor VST's legacy coal fleet in Southern IL, which both we and management have repeatedly highlighted are economically challenged. VST had sought changes to IL's emissions requirements to afford it more operational flexibility, but the election of a new governor in November 2018 complicated this. Finally, we remain on the lookout for additional capacity in MISO-South, given ongoing constraints in the region.

---

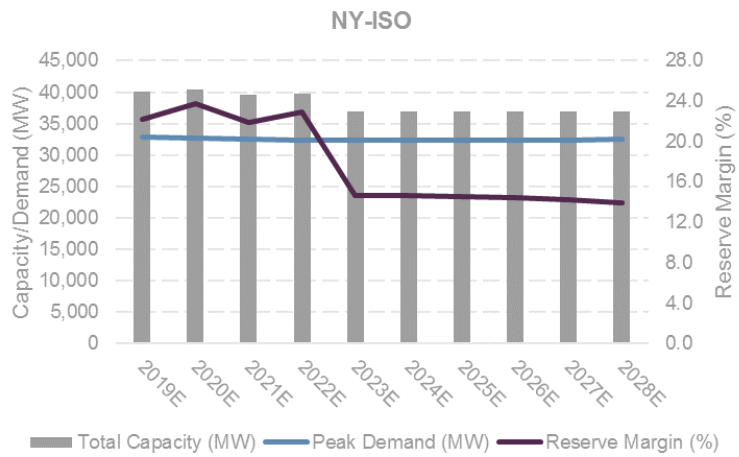
NYISO: Indian Point closure looms

Figure 15: NYISO reserve margin forecast



Source: NYISO, Guggenheim Securities, LLC estimates

ISO remains bifurcated between upstate gen and downstate load

- **The ISO's reserve margin outlook continues to be dominated by the closure of Indian Point**. Current projections continue to portend a significant tightening in the ISO following the retirement of Indian Point's 2GW of generation, although new generation and transmission projects are expected to alleviate any system violations. On the demand side, peak demand remains very subdued as slow organic load growth, EE, and DER efforts continue to keep overall demand in check through our forecast period.
- **Of all the markets we cover, NYISO is arguably one of the most balkanized…** NYISO's longstanding issues around moving upstate generation to the load centered in the New York City Metropolitan Area (NYCMA) have only been heightened by the planned retirement on Indian Point and the end of the ConEd wheel through PJM. Further to the east, Zone K (Long Island) remains well supplied.
- **Merchant transmission remains unbuilt**, although the Champlain Hudson Power Express announced in early December 2018 that it now expects to begin construction of the 330-mile project in 2020. The HVDC line, largely buried below the Hudson river, would carry up to 1GW of power from Quebec to downstate New York. A 2020 construction start would put completion sometime in the 2022-2023 timeframe.

Integration of offshore wind remains an open question

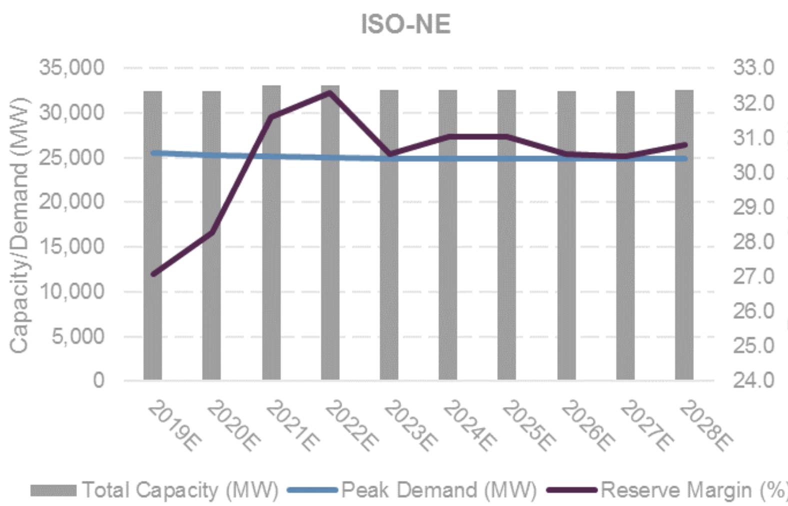
- **Offshore wind remains an unknown variable in this equation:** The state's aggressive plan[11] to deploy up to 2.4GW of offshore wind remains a nascent, but potentially potent, variable in understanding the future reserve margin picture. As this capacity will most likely be completely interconnected in Zones J and K (NYC and Long Island), it will likely improve the downstate reserves margin and, in our view, the transmission interconnections alone could provide additional reliability benefits depending on the final configurations (e.g., improving intra or inter market transfer capability).

[11] The state's Offshore Wind Master Plan is available HERE

See pages 278 - 279 for analyst certification and important disclosures.

ISO-NE: Plenty of capacity, not enough fuel

Figure 16: ISO-NE reserve margin forecast



Source: NERC, Guggenheim Securities, LLC estimates

Watch for Northern Pass and TDI projects bringing Canadian hydro

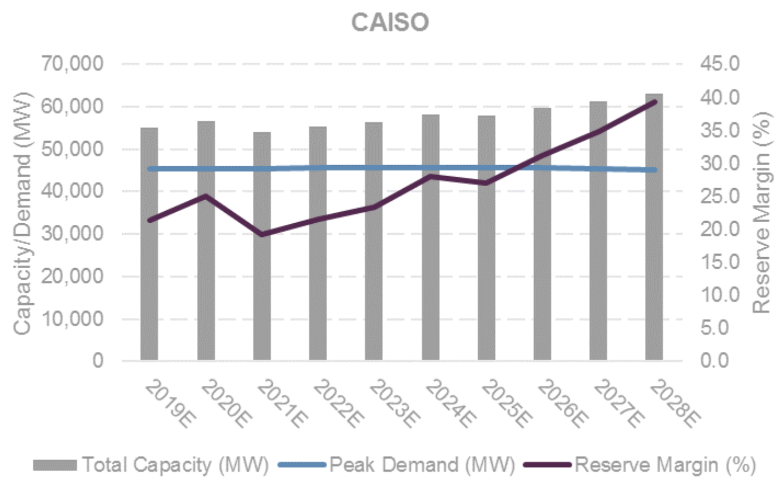
- **ISO-NE is well-supplied with capacity through our forecast period, but focus remains on fuel availability**. The RTO continues to look oversupplied well into the 2020s, as new gas capacity and flat-to-declining demand across the region keep margins around approximately 30%. This large amount of capacity does not reflect the competition for natural gas between LDC heating demand and power generation, which continues to be the single largest issue facing the RTO. The Pay for Performance rules implemented over the past few years in the RTO's capacity market are intended to incent generators to store onsite fuel, but it remains to be seen if this actually occurs (this winter will be the first without the transitional Winter Reliability Program, which provided payments to dual fuel generators for storing fuel onsite).
- **Supply-demand dynamic remains exposed to large new projects and ongoing retirements - Massachusetts and Connecticut are in the driver's seat…** The importation of Canadian hydropower and the procurement of offshore wind (more on this below) remain the two largest new supply possibilities in our forecast period, with ES' Northern Pass now supplanted by AGR's New England Clean Energy Connect (NECEC). Both were submitted as part of MA's solicitation for up to 1,200MW of clean energy. Meanwhile on the retirements front, ETR's 680MW Pilgrim nuclear power plant is slated to power down in 2Q19, while D's Millstone in CT appears slated to remain open thanks to state-driven support from ratepayers.

Offshore wind RFPs continue apace

- **Offshore wind to add several GW of capacity by the end of the next decade…** 2018 was a banner year for offshore wind in New England, with nearly every coastal state awarding RFPs and/or boosting their mandates for wind-driven power. The net impact of all of these procurements on LT reserve margins is still unclear in our view given it may not all come to fruition, although the momentum to date leads us to believe that the final MWs procured will likely be very close to the stated targets.

CAISO: Lost cause as policy-driven build stamps out merchants

Figure 17: CAISO reserve margin forecast



Source: NERC, Guggenheim Securities, LLC estimates

We do not see IPPs investing in CAISO outside of policy-driven storage builds

- **CAISO remains a challenging power market for almost all parties involved**, with volatility, low prices, environmental regulations, and unfavorable resource adequacy mechanisms driving the retirement of many IPP assets in the state. Overall, we see the policy environment in California continuing to drive the LT reserve margin outlook, which remains oversupplied at a high level. As a reminder, Diablo Canyon (~2.3GW) is slated to retire by 2025.
- **This is a very tough market to operate in for IPPs unless assets are tolled or have PPAs**. Too many renewables and cheap hydro resources mean that many merchant generators have only the summer peaks to derive energy revenues. Forward capacity procurements for resource adequacy in the state remain primary bilateral contracts, with RMRs also in use in constrained zones (e.g., the Bay Area).
- **Energy storage investments at both wholesale and distribution levels expected to dominate going forward…** The role of energy storage and its impact on LT reserve margins is a very large unknown in our view, with several large projects already underway (e.g., VST's 300MW/1200MWh project at its Moss Landing site) and the state nearing its current ~2GW mandate. The large amount of DER solar also provides a fertile opportunity for localized storage, in our view, and we expect both the state legislature and the CPUC to continue fostering a supportive environment for investment in the technology.
- **Things to watch:** The state continues to grapple with the 'duck curve,' while simultaneously losing conventional generators. We remain on the lookout for details regarding reforms to the ISO's capacity mechanisms, with FERC recently rejecting an attempt (see Docket No. EL18-177 – decision available HERE) by several generators to have the Commission impose a mandatory capacity construct on the state. In addition to this, we are also following regional developments regarding the Energy Imbalance Market (EIM), with lawmakers in California hesitant in our view to expand beyond its pure balancing function at this time.

POWER MARKET AND COMMODITY OUTLOOK

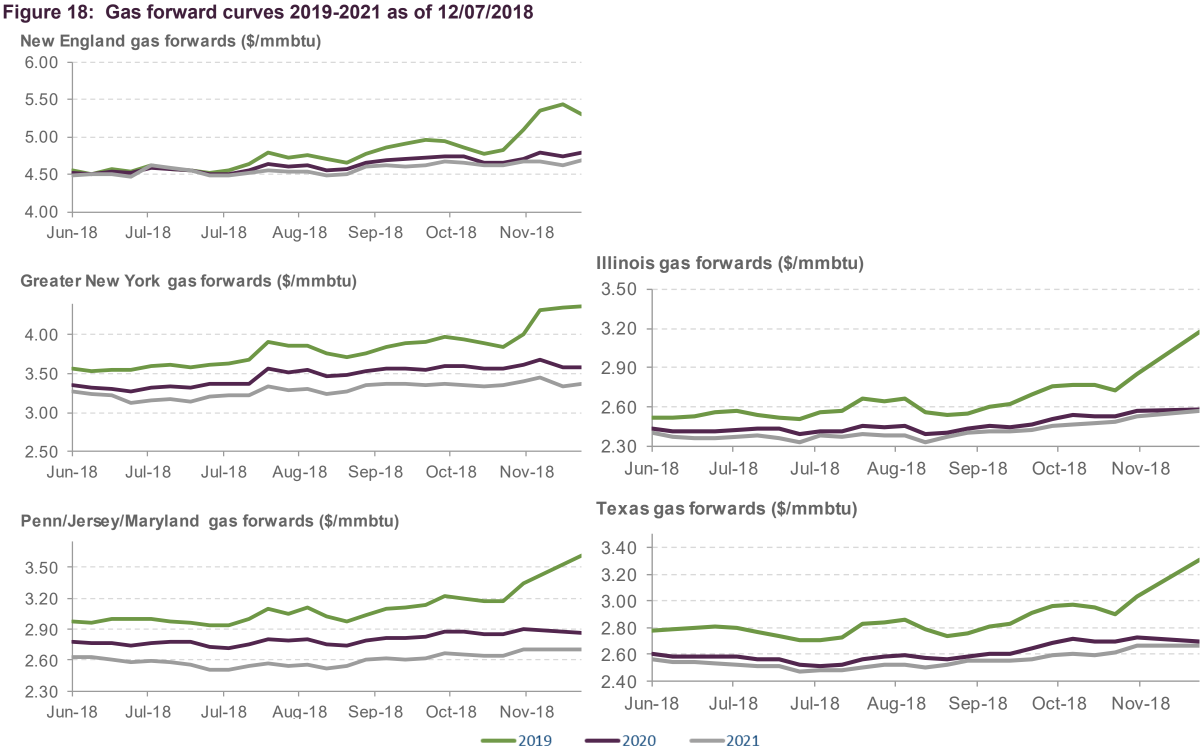
Marked our model to 12/07/18 forward curves.

Our integrated and IPP models are now marked to the 12/07/18 forward curves. Our current viewpoint continues to hold that power markets remain broadly supportive for the IPPs under our coverage, with conditions in ERCOT standing out as the most favorable. The recent rise in natural gas forwards across the eastern markets has also carried through somewhat to power prices, although these markets remain rather oversupplied and less likely to generate the kinds of very high scarcity pricing we are expecting in the Lone Star state. **Our IPPs (NRG and VST) are still trading at historically high free cash flow yields which, in our view, is not sustainable.**

Commodity price environment

2018 experienced similar fluctuation in natural gas and power forward prices as 2017, while basis differential volatility continued driven by weather, coal retirements, midstream capacity constraints, contract relationships, storage levels, and environmental policy developments. Forward prices increased in general towards the end of the year. Below we present forward curve movements over the course of 2018 for power prices, gas prices, and spark spreads (PJM, MISO, ISO-NE, NY-ISO, and ERCOT).

Figure 18: Gas forward curves 2019-2021 as of 12/07/2018



Source: ICE, Bentek, Guggenheim Securities, LLC.

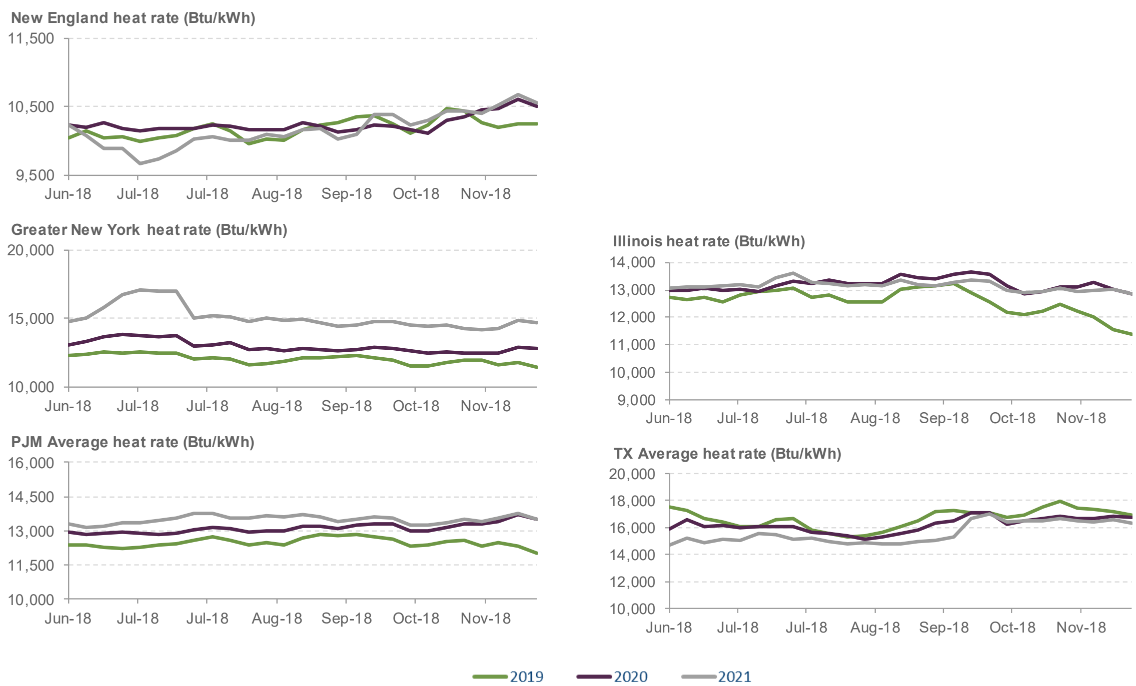
Figure 21: Forward heat rate 2019-2021 as of 12/07/2018



Source: ICE, Bentek, Guggenheim Securities, LLC.

Forward commodity curves for natural gas, coal, and power

The charts below highlight the curves for natural gas, power, coal, heat rates, and spreads (spark, dark, and quark) that now run our GenCo models. The nature of the forward curve reflects the need of industry participants to hedge their risk even though companies may have a more optimistic view of the pricings. **Our integrated and IPP models are now driven by the 12/07/2018 forward curves presented below – generally driving estimates higher vs. our last mark on 9/28.**

VALUATION: ENTERING FINAL ROUNDS? WE DIDN'T HEAR A BELL... UTILITIES CAN STILL WIN BUT PICK YOUR WINNERS WISELY

Is it time to tap out? Not yet… utilities have some fight left in them

Sector valuation not great but utilities have some stamina remaining – getting close to latter rounds so pick your winners and losers wisely. Regulated utilities look somewhat pricey vs. forward yield expectations, although several externalities (e.g., macro/geopolitical uncertainties, broad market in and of itself trading at peak levels) continue to support the regulated group trading at a higher altitude than that stipulated solely by projected interest rates in the NT. More specifically, the regulated **group currently trades at 16.8x based on consensus 2020E EPS, which is beyond fundamentals and forward yield expectations that would imply a P/E closer to ~17x** (note – we exclude EIX, PCG, PPL, and SCG from the average given extraordinary considerations impacting their current valuation). **Given our viewpoint that we will continue to see capital flows into the US likely putting some ceiling toward the longer end of the yield curve coupled with our belief that utilities can trade beyond rate fundamentals in the NT given several other externalities, we continue to see some value with select names**, especially those with higher and more visible growth prospects, trading at less elevated levels than the sector and those levered to broader macro/energy trends including LNG and renewables.

Focus on higher growth, levered to macro/energy trends... or bargain shop

… though this remains no longer a sector call - investors will increasingly be on the hunt for ideas within the sector – stock picking will continue to matter in 2019 as was the case in 2018; the **only electric "bond surrogates" we really continue to recommend out of our 40+ utility coverage are DUK, ES, ETR, FE and WEC** – which either **trade at appealing valuations** (*i.e., DUK, ETR, FE*), have **other factors at play that could contribute to more growth than investors are giving credit for** (*i.e., DUK, ES, WEC*), and/or have **upcoming potential catalysts that could re-rate shares to the upside where investors have been slow to catch on** (*i.e., DUK, ETR, FE*); **other than these names, we continue to favor utilities more exposed to broader power/energy trends** (*i.e., SRE, NEE, D, VST, NRG, EXC, PEG, CNP*).

We see minimal upside or downside for a utility basket… some stocks can work well

How far, how long? Given the current BBB yield curve, we see the group as fairly valued (~17x fair value vs. the current 16.8x multiple implies ~1% upside; factoring in the group's average dividend yield of 3.5% implies ~4.5% total return). Although we would note that premium valuation levels could be sustained for some time as has been the case historically (i.e., as charts below display) when there have been several externalities at play: **this begs the question** – **How far, for how long? While we are in the latter rounds, utilities still have runway as several externalities** (e.g., macro/geopolitical uncertainties, thirst for yield, broad market trading at elevated levels, etc.) **should continue to support the group trading beyond fundamentals and forward-yield expectations in the NT**; Or in other words, **other factors can be attributed to the movement in utility values above and beyond interest rate fundamentals all else equal…** But, again, we are now likely in the final rounds: 2019 will likely continue to dictate a utility stock picker's market.

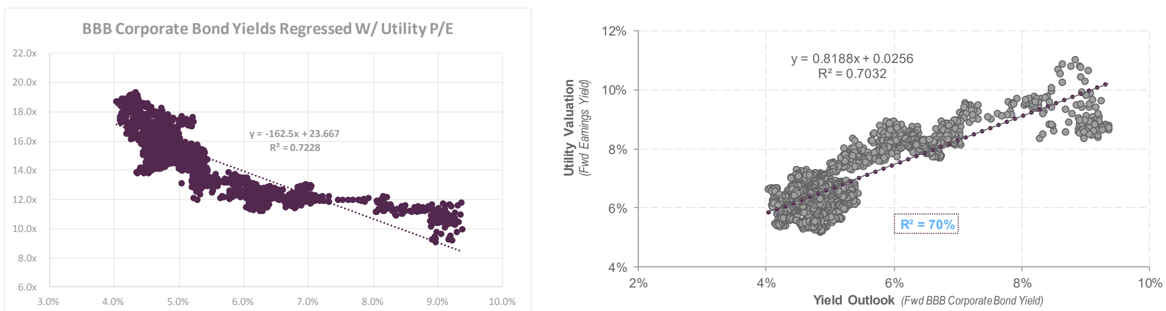
…other externalities at play that could keep sector elevated

Shifting away from pure yields in isolation, sever factors should help continue to provide a glide path for utilities at least in the NT. As a reminder, the R^2 of our regression model only captures ~73% of the movement in utility valuation (i.e., P/E multiple) being explained by forward bond yields, suggesting there are other factors/externalities that aren't accounted for in the implied valuation as mentioned above – i.e., **utilities still remain an attractive risk/reward option given mixed market sentiment.** But, this isn't a sector call for us - **Investors in 2019 are expected to increasingly begin to distinguish between names within the utility sector as**

we believe stock picking matters now more than ever… we already saw strong evidence of this pattern in 2018.

As depicted in the figures below, there is a relatively strong inverse relationship between corporate bond yields and P/E valuations and, conversely, a positive correlation between utility earnings yield and corporate bond yields over the long term. **Looking to '19 and beyond, we think investors should increasingly look for ideas within the sector – it's not a sector call anymore.**

Figure 23**: Forward P/E multiples and earnings yield vs. corporate bond yields**



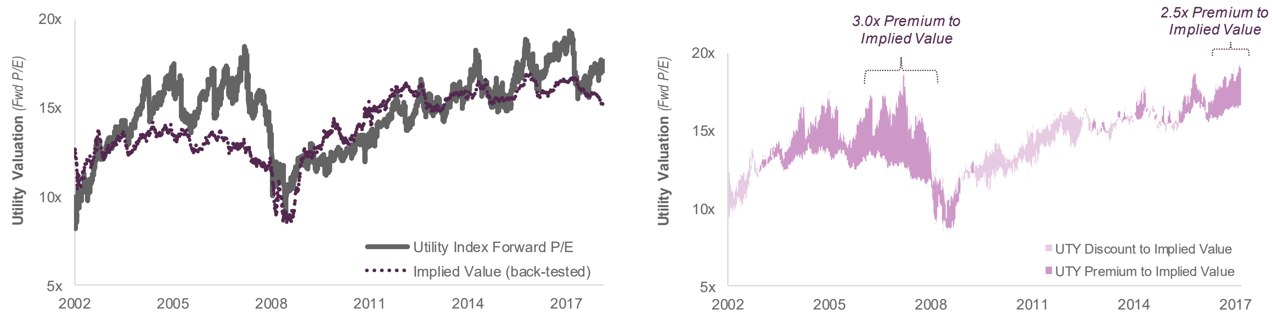
Source: Bloomberg, Guggenheim Securities, LLC.

Relationship w/BBB corp bond yields and utility values remains sound...

The relationship between forward P/E multiples, earnings yield and corporate bond yields reinforces our stance that regulated utilities should trade <u>at least</u> in line with "expected" bond yields in "normal" times. In the past, this relationship has broken down as relationships tend to do during periods of market turmoil. While past events like the tech bubble, CA power crisis, Enron, Iraq War, U.S. recession, and financial crisis have created noise, they still maintained their inverse relationship albeit weakened materially as the chart below clearly displays. **Following these periods of market turmoil, the yield-P/E relationship strengthened and mean reverted.** That said, as we mention above, the R^2 of our regression model captures ~73% of the movement in regulated utility multiples being explained by corp. bond yields, suggesting that there are several other factors that aren't accounted for in the valuation implied by forward yield expectations.

Back-testing our regression analysis supports the notion that utilities can trade at levels above what is dictated purely by yield expectations. On the charts below, we plot the historical trading multiple (i.e., two-year forward P/E) of the utility index back to 2002 (the grey line on the chart to the left) vs. the valuation that would have been implied by our regression analysis (the purple line on the chart to the left below), and isolate the spread in the chart to the right (the light purple range on the chart to the right) – Illustrating an ~three-turn premium observed and maintained historically during periods of uncertainty (i.e., macro/geopolitical risks, mixed market sentiment, U.S. political uncertainty, etc.).

Figure 24: Valuation levels and premium justified by back-testing regression

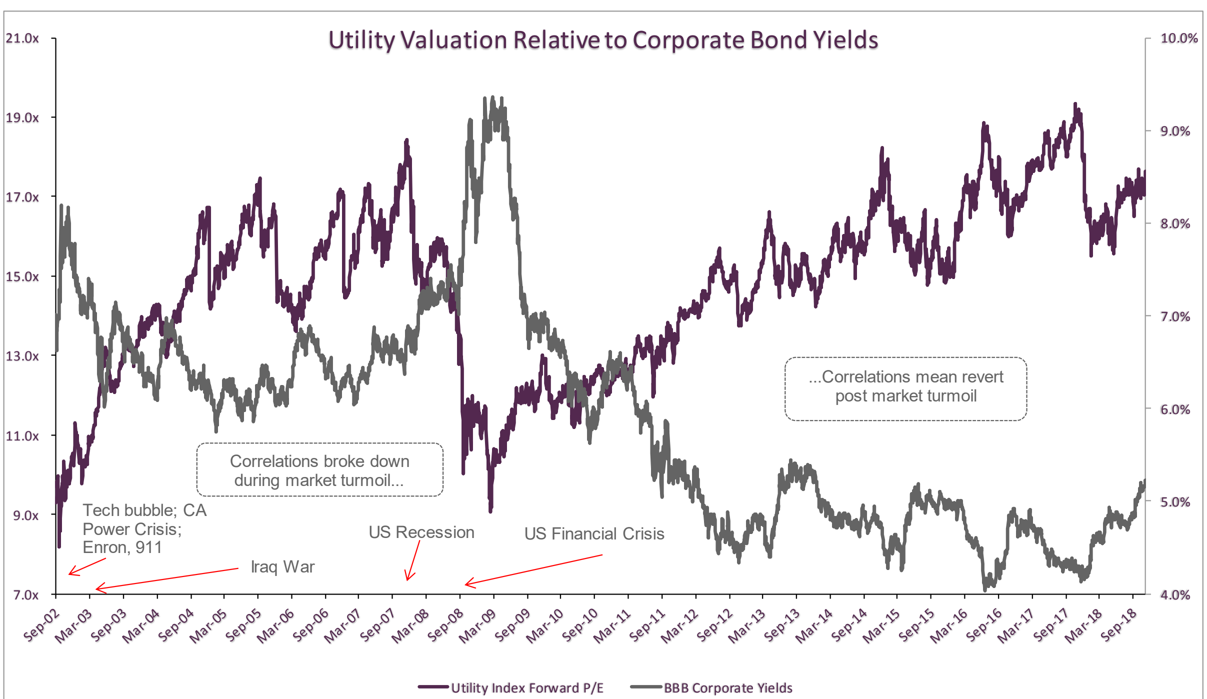


Source: Bloomberg, Guggenheim Securities, LLC.

> *...Yield/utility value relationship only breaks down during turmoil*

Historical relationship between BBB corporate bond yields and regulated utility valuations remains fundamentally intact. Our regulated P/E multiple is fundamentally based on a regression of bond yields, using the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years excluding periods of market turmoil when the relationship broke down (see Figure 25 below). Excluding these periods, regulated utilities have exhibited strong correlation, since both assets serve as defensive positions in an investment portfolio.

Figure 25: Utility valuation relative to BBB corporate bond yields



Source: Bloomberg, Guggenheim Securities, LLC.

4.2% 2020 projected BBB bond yield now embedded in our P/E multiple

How do we arrive at our target utility multiple? Incorporating the forward yield outlook for corporate bonds of 4.2% for 2020, we derive: **(1)** our target multiple for regulated utilities and **(2)** where we believe the group should fundamentally trade versus forward interest rate expectations. The current 2020E 4.2% corporate bond yield curve would imply a 2020 regulated P/E multiple of ~17x. Using the ~17x multiple derived from our regression model, in addition to company-specific discounts/premiums, we derive our 12-month price targets before applying a full year discount factor to 2019 fundamentals.

Figure 26: P/E sensitivity to bond yields

BBB Yield (%)	2020E P/E Multiple	Multiple Premium / (Discount)	Implied Upside / (Downside)
3.0%	18.8x	2.0x	-10%
3.2%	18.5x	1.6x	-9%
3.4%	18.2x	1.3x	-7%

'20 BBB Bond Yield (%)	4.2%	c
Projected 2019 P/E Multiple	**17x**	d = (a*c) + b

Where group currently trades

Where group should trade versus forward corporate bond yield expectations

Source: Bloomberg, Guggenheim Securities, LLC estimates and analysis.

Summary takeaways from our regression analysis for regulated utilities:

- **Fair value for utilities on the current '20 BBB bond yield curve equates to 17x.**
  - Our regression incorporates a projected 2020 YE BBB corporate bond yield of 4.2%, which implies 17x fair value for regulated utilities on 2020E earnings – this is where we believe the group should trade if it were to solely reflect forward interest rate fundamentals.
  - We admit the group can trade above levels dictated solely by interest rates with several externalities at play that could continue to support the group trading beyond fundamentals and forward-yield expectations (e.g., macro/geopolitical uncertainties, thirst for yield, capital flows keeping long end of the bond yield curve low, etc.).
- **Return implication for the group, on average:**
  - Given the current outlook for rates, we see modest upside or downside risk for the group as a whole (~17x fair value vs. the current 16.8x multiple implies a ~4.5% total return; factoring in the group's average dividend yield of 3.5%, implying minimal downside from a total return perspective).
  - Also, while valuations are close to peak levels on an absolute basis, utilities have enjoyed higher premiums relative to the market, and the

See pages 278 - 279 for analyst certification and important disclosures.

broader market is trading at all-time highs in its own right and dividend yields maintain an attractive spread above Treasuries.

- **Therefore, we also incorporate a 17x regulated target P/E multiple for peer average regulated utilities.**
    - Before company-specific discounts/premiums.

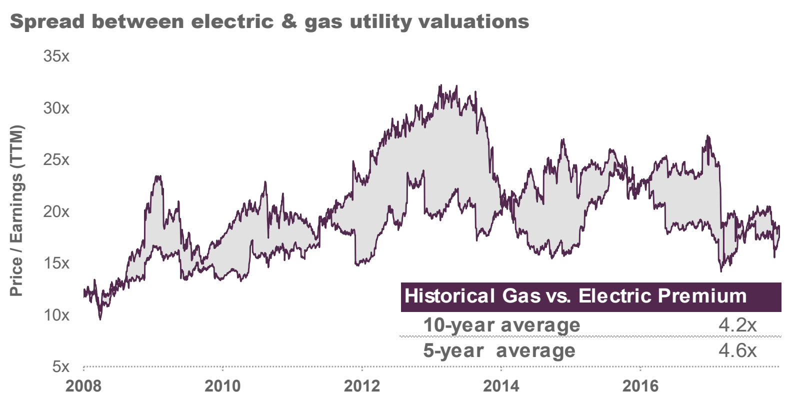
LET'S TALK GAS – A PREMIUM IN ITS OWN RIGHT

A 4.0x premium is applied for lower-risk growth, better regulated construct, M&A, etc.

Gas utility premium for lower-risk growth, better regulated construct, less lag, M&A, etc. Gas utilities trade at a premium to their electric counterparts as they typically demonstrate higher growth, lower risk with more constructive rate design to facilitate cost recovery, and have more recently reflected an M&A premium as larger electric utilities among other bidders have actively acquired gas distribution/midstream platforms in pursuit of growth.

For gas utilities, we ascribe a 4.0x premium relative to their electric counterparts – properly reflects mid-cycle despite the ebbs and flows of the spread. For companies primarily engaged in local gas distribution activities, or those with a significant portion of gas utility earnings to warrant a sum-of-the-parts valuation, we ascribe a 4.0x premium to our 17.0x regulated utility target multiple, which we derive from valuation implied by current bond yield expectations as described above. The 4.0x premium reflects the historical spread between gas and electric utilities over the past ~5 and ~10 years, as illustrated in Figure 27 below.

Figure 27: Gas-to-Electric P/E Spread



Note: Based on trailing-twelve-month P/E ratios for SNL's Gas Utility Index vs. Electric Utility Index.
Source: SNL, Guggenheim Securities, LLC.

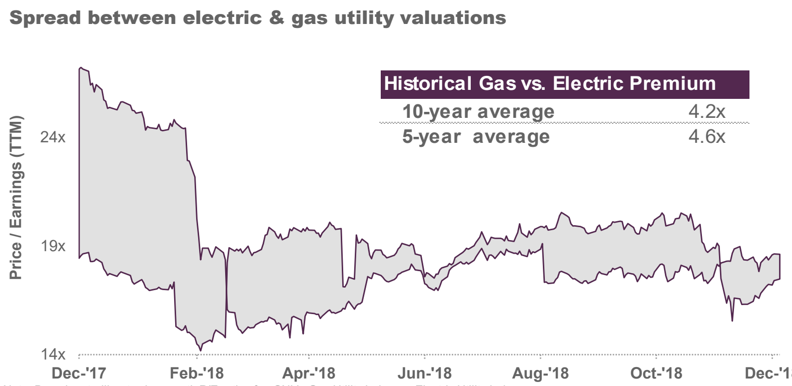
Spread between gas and electric utility valuations moves in cycles

The ebb and flow of the spread clearly stands out, but not dissipating – spreads typically mean revert. The seemingly cyclical expansion and contraction of the spread between gas and electric utility valuations is clearly pronounced in the chart above (**Error! Reference source not found.**); we've entertained some debate around the spread dissipating in recent months, which it has, although historically it has reverted every ~2 years. The contraction and expansion of the spread can be attributed to midstream components of the gas utility index with commodity exposure in earlier years, and more recently (and interestingly) to the acquisition of gas utilities in the index by their electric counterparts at relatively lofty valuations – effectively removing names that were lifting the composite index by trading with an M&A premium. In the last year, we would highlight contraction of the spread attributable to the removal of Questar (acquired by D) and

Piedmont (acquired by DUK) from the gas utility index, and our view is that the spread has merely reset as the next wave of M&A incubates – see Figure 28 below.

We believe gas utility valuations are set to expand again with the next wave of M&A – it moves in cycles; investors should continue to place valuation premiums for gas vs. their electric counterparts outside of just an M&A argument. M&A is just one of several observations.

Figure 28: Spread between electric & gas utility valuations

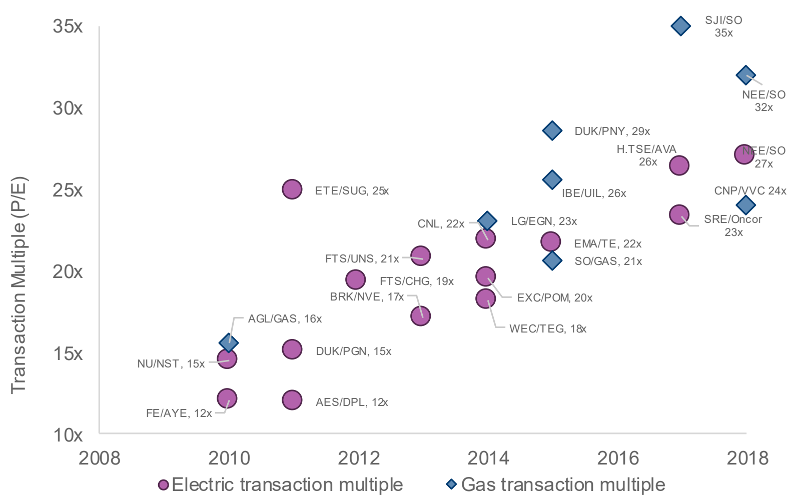


Note: Based on trailing-twelve-month P/E ratios for SNL's Gas Utility Index vs. Electric Utility Index.
Source: SNL, Guggenheim Securities, LLC.

Historical M&A transaction multiples support our 4x premium assumption

M&A transaction premiums for electric and gas utility acquisitions further support our target multiples. The average transaction multiple (P/E) for both electric and gas utilities **over the past 10 years** coincides precisely with our respective target multiples; ~+17x average for electric utility acquisitions (*note - over the past five years, the average electric utility transaction has garnered a ~22x multiple*), and 21x average for gas utility acquisitions – the same as our respective target multiples for electric and gas utilities.

Figure 29: Recent utility transaction multiples (electric vs. gas)



Note: Multiples are on 2-year forward consensus estimates at the time the transaction was announced.
Source: SNL, Guggenheim Securities, LLC.

Assuming the historical spread premium for gas utilities vs. their electric counterparts into our regression analysis, we arrive at 21x – a premium relative to the current trough we see in the gas/electric valuation spread.

See pages 278 - 279 for analyst certification and important disclosures.

Valuation Methodology Summary

For **Regulated Utilities**, our valuation analysis is based on a long-term regression of BBB corporate bond yields and P/E multiples, dating back to 1980, and encompassing various macro/policy environments (e.g., pre- and post-dividend tax rate changes).

For **Integrated Utilities**, we utilize a sum-of-the-parts methodology, applying the regulated methodology described above to regulated segments, applying an EV/open-EBITDA multiple to unregulated generation segments, and we adjust for the NPV of hedges, mid-cycle capacity payments, and future liabilities/benefits (e.g., nuclear subsidies, parent drag).

For **Independent Power Producers**, our valuation turns to unlevered free cash flows, conversion cycles, balance sheet position, and discounted cash flow analysis with a focus on asset type, tech, and age. We value IPPs using an unlevered discounted cash flow methodology before accounting for growth CapEx through 2024 terminal year, at which point we apply an asset-weighted terminal multiple. We then subtract net debt (recourse) to arrive at equity value and price targets. Our IPPs are marked to the 12/07/2018 forward curves.

M&A – POTENTIAL TRANSACTIONS

NEE - Santee Cooper?

NEE heading to SC?

Could 2019 be the year of Santee Cooper? Three options with Santee are likely in play: (1) they remain government owned, **(2)** sell to a larger public entity like NEE **(3)** have an operating management agreement like PSEG and LIPA with a larger entity like NEE - **someone would benefit from the latter two options w/ more preference for the 2nd option.** NEE mgmt. has publicly acknowledged that the RFP for Santee Cooper is out, independent consultants are evaluating bids and that answers are expected by early 2019. From there it is up to the consultants and a legislative committee to decide upon which bids will make it to the second round.

NEE looks to us like the obvious potential counterparty for Santee Cooper (see our NEE section for more detail) - only question is if Santee should be 100% acquired or if someone will come in and strike a management agreement. NEE has stated it does not have as much interest in a management contract vs outright acquiring Santee but would do either if presented the opportunity. **Competition bidding for Santee could be sparse considering it would likely take sizable balance sheet capacity to refinance all of the municipal tax-free debt on Santee's balance sheet -** $5-7bn balance sheet capacity, solid operating history and highly constructive relation with regulators, we believe NEE is very strongly positioned to be considered for acquiring Santee Cooper. As a reminder, Santee Cooper is the third largest municipal utility in the U.S. and the Governor of South Carolina has been very vocal about monetizing Santee to pay for debt incurred while constructing the abandoned VC Summer nuclear power plant.

For our prior thoughts, see HERE.

PPL - Strategic Alternatives ahead?

PPL may sell but it's all or nothing

PPL appears ripe for strategic alternatives, but we do not think it will be a 2019 story especially with Brexit uncertainty. PPL mgmt. has been very vocal that it's open to strategic alternatives. **Right now, we're in wait and see mode but a strategy could come to fruition as visibility with Brexit improves,** which could ultimately bring in a potential buyer for the entire US/UK enterprise. **Why all or none?** Selling 100% or a partial interest in just the UK business does not work, in our view, because the rating agencies give more credit to the WPD UK business model (i.e. agencies view it as having lower credit risk than an equivalent U.S. business) and this affords PPL a lower FFO/debt threshold of 12% vs the peer group, which is ~15% - i.e. if PPL sold the UK business it would not only lose this lower threshold with the agencies, it would lower their actual FFO/debt metrics and so a meaningful amount of sale proceeds would need to be utilized for debt reduction which would prove as highly dilutive to earnings. Either way, there would be a tax bill and mgmt. recognized this is also a hurdle.

What about simply diluting the UK contribution to consolidated results? Mgmt. target mix of 20-25% UK vs consolidated likely hinders a U.S. acquisition given a lack of currency (i.e. shares trade at a massive discount) and balance sheet capacity - in our view, this target mix implies a large +$10bn deal to dilute the UK. This target business mix also likely rules out any potential single state small utility acquisitions like a potential opportunity in KY.

For our prior thoughts, see HERE.

No fire sales at SO... in a much better stance

SO - More asset sales coming?

SO could potentially sell additional CCGT assets, Nicore Gas, Mississippi Power or Virginia Natural Gas to continue whittling down its $2.4bn of remaining equity needs and further "simplify" the story. However, SO has been very clear, in our view, that it can address this remaining $2.4bn equity need with internal programs such as its DRIP. SO has 12 GW of remaining fossil fuel assets which could be rationalized in the future. As a reminder, SO recently sold Mankato a 760 MW plant in 3Q for $650mm or $855/kW. **Mgmt has explained there are three items that fit into their decision-making process for a potential asset sale 1) Transaction value -** is there a better owner of the asset that is willing to pay a price which offers premium value (i.e. will someone step up for Nicore?) **2) SO stock price –** i.e. if SO is trading at a significant discount, it is less attractive to issue stock and more attractive to monetize additional assets **3) tax position –** Mgmt. now could be less prone to sell assets especially as they become more of a cash tax payer approaching ~2022 timeframe. **One item SO is conscious about when potentially monetizing gas assets is if the plant resides in the Southern Company power pool which could preclude further sales** - it is worth noting that the other two plants SO Power sold to NEE, Stanton and Oleander, were not in the power pool. At the end of the day, if SO had any unexpected incremental equity needs we do believe it has levers to pull including monetizing additional assets.

For our prior thoughts, see HERE and HERE.

PSO strategic move coming to light in '19

AEP - PSO, Third strike and you're out?

PSO rate case could be a knock-on effect for a potential strategic review; Oklahoma rate case – the one we are watching. We continue to have a view point that the 3rd strike could lead to an out in Oklahoma but some complexities need to be worked through including a separate headquarters in Tulsa that houses ~618 employees that will need to be accounted for in any strategic decision – i.e. another reason why an OGE deal could make sense, in our view. **Reminder, from our recent OK Commissioner meetings we hosted with clients in the state, we don't have a lot of confidence in this GRC (i.e. OCC suggested there was a structural problem at the utility in the NT) but the state has been known to surprise to the upside as they certainly did with OGE in the recent past – so we are slightly optimistic but more cautious overall. For our thoughts on following our Commissioner meetings, see our note HERE.**

As we have also stated in the past, blending in the TransCo's earned ROEs in the state with that of PSO does not equate to a higher earned ROE in that state – TransCo's contribution is not material enough (i.e. ~30bps) to negate PSOs under-earning. **So, while we continue to see upside potential in AEP shares if it divests underperforming assets such as PSO and reinvests the proceeds and captures a wider ROE spread despite tax leakage, as well as, the benefits of merely simplifying the story, it's not a NT catalyst to drive shares as it will take time to play out**. In our previous work we found this to be +3% accretive to AEP shares under very conservative assumptions and further note mgmt. has affirmed it would consider selling if PSO receives an unfavorable decision for its pending rate case. **What defines an "unfavorable decision"?** This includes if PSO does not get performance-based rate making or tracker for transmission. **For more on PSO see our detailed note HERE**.

ES - CT Water and/or Columbia Gas?

NI re-refiling decision at Columbia Gas of MA could signal lack of sale process…

ES mgmt. has stated it is keeping one eye open for potential acquisitions but not as a driver of growth nor as a way to backfill – opportunistic at best. Mgmt. has highlighted that it would be interested in acquiring NI's Columbia Gas of Massachusetts if it came up for sale…but caveated, there is no indication that it is up for sale. (For more see HERE and HERE.) A predictor could be if NI's Columbia Gas files (or not) for a GRC – NI's MA settlement was revoked after the September gas explosions. As a reminder, ES did bid on Columbia Gas back in the day but lost the auction process to NI. Continuing with the M&A theme, ES last summer was in a bidding war for Connecticut Water (CTWS) but was outbid by SJW Group. The tide might be turning here since SJW's acquisition of CTWS was recently deemed not in the public interest by local CT regulators…it is possible ES gets a second chance to bid for CTWS – **we do not assume this deal closes in our ES model and we consider this more as an option than a likely event in the near term.**

For our prior thoughts, see HERE.

SRE - Wind and US Midstream Assets sale, South American Utility review

Plenty of deals coming for SRE

SRE is moving steadily through the business review process, with phase 1 (asset divestiture) nearing completion in early 2019. The SRE solar assets sale to ED has closed in 4Q18 and we are now awaiting disclosure around the sale of SRE wind assets, which we estimate to be around 747MW of operating assets, plus a potential development pipeline. The wind assets vary in vintage but include projects 6-7 years old, which may have higher priced PPAs attached that may result in a higher than average transaction price based on $/kW. **The proceeds will likely go towards de-levering, offsetting equity needs and return of shareholder capital.** SRE currently does not foresee equity issuance. We note however that the solar asset sale proceeds are tentatively being used in the InfraREIT acquisition, but management has said that the timing of those events was not planned.

SRE midstream asset sale was announced Jan 2, 2019 with ArcLight capital buying both Bay Gas and Missisippi Hub assets for $332M in cash. The US Midstream assets include in the sale of Mississippi Hub and a 90.9% ownership interest in Bay Gas Storage (the transaction also includes the remaining ~9% ownership). Bay Gas is a facility located near Mobile, AL, that provides underground storage with 20 Bcf of operational storage capacity, and Mississippi Hub is an underground salt dome with 22 Bcf of operational storage capacity located near Jackson, Mississippi. **Proceeds will likely contribute to the capital rotation strategy outlined in the business review process.**

The SRE South America utilities (Luz Del Sur, Chilquinta, etc.) were highlighted as next on the list of businesses under review, which management expects to make a decision on in early 2019 (~1Q). South America utilities were announced as a potential for divestiture at the May 2018 investor day. **Tax basis is a critical consideration for the SA utilities, with the SA utilities having a combined tax basis of $561M** (335M Chile, $226M Peru) vs a potential $3-4B transaction value (**as we noted in our analyst day note HERE**). Local taxes apply to gains for transactions of 50% or more of a Peruvian entity and 10% of more for Chilean entities – meaning significant tax leakage is almost guaranteed, but in our view **a sale could become palatable at elevated (greater than ~25x P/E) multiples to offset the tax leakage.**

AWK/NWN – More Small Water Acquisitions ahead

Only bolt-on's for NWN and AWK

AWK, and to a lesser extent, NWN, spent much of 2018 acquiring small municipal water systems in their respective territories – we see this continuing in 2019. AWK remains committed to expanding its regulated footprint, with bolt-on acquisitions likely in CA and MO thanks to favorable legislation in both states that allows for simple-majority votes for municipalities to sell their systems. For NWN, the water utility story remains in its very early innings with only ~20 thousand customers – **we do not currently account for it in our estimates.** Mgmt. has identified a robust opportunity set of both municipal and privately-owned water and wastewater systems within the PNW, however we do not see a major acceleration of the current acquisition pace at this time. As a reminder, the recently announced Sunriver transaction will bring the segment's total customer count to 42k across ~17k connections in 3 states.

WEC – Energy Infrastructure Investments remain in focus

No game changer deals for WEC… growth around organic opportunities

Asset-level acquisitions in the energy infrastructure space remain a focus for mgmt., with some $1.7bn devoted to the segment out of a 2019-2023 capital spend plan of $14.1bn. Given WEC's relatively healthy balance sheet (no need for equity), we believe the company **can continue to take advantage of asset-level opportunities**, with contracted renewables, contracted pipelines, and gas storage assets likely to be the preferred targets, in our view. We still expect, which mgmt. reinforcing on the 3Q18 call and at EEI, that **WEC will seek assets with a similar risk-adjusted return profile to fully-regulated assets, with the assets comprising as much as 10% of the overall business mix overtime.** WEC's recent acquisitions of the 130MW Bishop Hill III and 80% of the 200MW Upstream project reflect these criteria very well.

For our prior thoughts, see HERE and HERE.

ALE – Wind asset transactions possible, regulated mix in focus

ALE could eventually look to dilute strong non-regulated growing segments

Growth in ALLETE's Clean Energy (ACE) business could prompt some degree of NT M&A in our view, both as the company seeks projects for its safe harbored turbines and to dilute the nonregulated growth. We see a low level possibility, but a possibility nonetheless, that ALE looks to acquire additional wind assets at ACE – although we note that our focus at the moment is on whether ALE is allowed to take a 49% stake in the recently-approved Nobles II project under development by Tenaska. **More broadly, as growth at both ACE and US Water continue, we see the need for either a divestiture or regulated acquisition in order to keep the business mix predominantly regulated.** As a reminder, we model the regulated business declining to ~77% in 2022 as a result of nonregulated growth. **Finally – although ALE may screen as an acquisition target given its size, we are not making a broader M&A call at this time on the name.**

For our prior thoughts, see HERE.

AVA – Acquisition by Hydro One

AVA deal dead… question is whether someone else steps in or AVA standalone in NT

The Hydro One (H.CA) acquisition of AVA for $3.4bn in cash, or $53/share has been blocked by WA regulators. With the blockage of the acquisition path, the joint applicants have requested a reconsideration in WA, but the reconsideration does not provide material new evidence or exhibits, in our view. If the merger is ultimately abandoned, the question remains whether AVA will now have to play catch up in regulatory processes that were deferred due to the pending merger (i.e. file rate cases) or seek other offers from a regulator-friendly counterparty (i.e. US domiciled). The former scenario would likely take 9-18 months to play out the regulatory proceedings necessary to secure rate increases and get the company on closer to earning its allowed ROE and aligning capital plans with regulators. **This would push off any potential M&A considerations into the 2020 timeframe.** We do see potential for a willing party to step up and make an offer for AVA, as the key regulatory approval risk is now well briefed in the acquisition dockets across 5 states (i.e. foreign government control and corporate governance issues). In our view there is no clear fit at this time for an acquirer, as the transaction would need to make sense from geographic and synergy standpoints, as well as matching the size of the acquiring entity (a merger-of-equals is not as likely of an option at this time).

M&A – CURRENTLY PENDING TRANSACTIONS

SRE – Acquisition of InfraREIT, good fit for TX, upside option on transmission development.

SRE/HIFR moving through the regulatory approval process

SRE announced the acquisition of InfraREIT (HIFR) and 50% interest in Sharyland Utilities on October 18, 2018 and is currently working through the necessary approvals to finalized and close the deal. The transaction is based on Oncor (80% SRE ownership) taking 100% ownership of InfraREIT and SRE taking a 50% interest in Sharyland. The Sempra share of the transaction is valued at $1.12B, or a range of 16x-17.2x P/E multiple based on the early 2019 guidance ($65-70M) and our calculations. **Using the disclosed information, InfraREIT rate base math implies a $54M earnings contribution to SRE that results in 19.7x P/E transaction multiple ($1.53B rate base, 45% Equity ratio, 9.7% ROE), which is less favorable than headline economics, but still a discount to recent acquisition multiples north of 23x P/E.**

Sempra expectations imply a 2019 over-earning of about $5-10M, which is ~250bp above the authorized ROE for InfraREIT assets, implying some potential for retained synergies being a part of the deal approval with the PUCT. While that may be a challenging scenario to work through the PUCT, a mitigating factor is rate setting for the combined Oncor and InfraREIT assets, that will in fact be consolidated as a part of the deal. The Oncor assets are currently under-earning their allowed 9.8% ROE by an estimated 40-50bp largely due to regulatory lag and Oncor capital expansions rolling into rate base slower than the associated recovery. With a 50bp ROE lag equating to under-earning ~$25M based on our $11.5B rate base estimate for 2018, **the combined asset base would easily absorb the $5-10M over-earning from InfraREIT implied by the deal estimates.**

We like this deal as it highlights Sempra's ability to fill the earnings divot from the renewable sale and strategically reshape its business mix through capital rotation as announced at the June 28 Analyst Conference. Beyond the immediate effect of recycling capital into a regulated utility investment, this acquisition partners Sempra with

Hunt on a 50/50 JV on Sharyland utilities with potential participation in future transmission development and long-term upside in capital deployment inside and outside of TX.

Go Shop is leading to No Shop: We view this deal positively due to the geographic proximity of Oncor and InfraREIT assets, strategic fit between Sempra, Hunt and Oncor, as well as the history and the 'dry powder' left for Sempra given the low acquisition multiple. Despite infraREIT announcing a potentially competing offer, after review the InfraREIT board dismissed the competing offer and clarified that the SRE offer is currently in the best interest of HIFR. In terms of additional M&A opportunities in Texas, SRE management has stressed that TTI (Oncor co-owner) is not looking to sell its 19.75% share of Oncor at this time, while the remaining Sempra wind assets are in a sale process with a potential deal announcement before year end.

For our prior thoughts, see HERE.

NEE - Gulf Power closed well ahead of schedule

FL playbook should prove accretion guide conservative

We see strong capex and O&M improvement opportunities at Gulf Power, which NEE closed on Jan. 1, 2019, well ahead of the original targeted closing of 1H19. (See HERE.) We continue to view the $0.15-$0.20/share in accretion mgmt. disclosed as a place holder until the full FP&L playbook can be unleashed at Gulf Power. With O&M multiple times that of FP&Ls and old high heat rate plants in service including very high purchase power costs, Gulf Power appears ripe for optimization. Example, Gulf Power O&M is ~$31/MWh, which is more than double FP&L's $12.44/MWh and this alone should provide ample headroom in rates to invest in modern infrastructure opportunities. **So what's the likely strategy with Gulf Power in the NT?** NEE will likely increase Capital spend and manage to stay out of a rate case for several years with O&M and fuel/purchase power synergies subsidizing the spending. At some point in the future when NEE files a Gulf Power GRC, we see further upside potential as they true-up the regulatory construct (i.e. ROE band, equity layer) to emulate FP&L.

For our prior thoughts, see HERE.

DUK - Partially monetizing Commercial renewables moving along

Commercial sales should show strong public mark but not as high as SRE deal w/ED

DUK is also close to partially monetizing its commercial renewables portfolio – a well-subscribed process. A data room was opened for the potential partial monetization of 3,000 MW of commercial renewables and a resolution on this could be reached by 1Q19. DUK noted that the % sell down could vary by project but views this monetization as a solid financing tool. We wouldn't be surprised if proceeds were reinvested as well as some de-levering opportunities – former seems more likely. Incremental renewables opportunities for DUK are underappreciated - HB 589 continues to present a substantial opportunity to DUK. There are 2.7 GW of total renewable opportunities that the bill unleashes and 30% of this DUK can self-build and with no cap on what DUK could acquire from developers (potentially the remaining 70%). **The total opportunity could be over ~$2.0bn assuming ~$1-1.50/watt**. We believe it is likely DUK would use at least some of the proceeds from its commercial renewable monetization to fund an incremental build out of more renewables under HB 589.

For our prior thoughts, see HERE.

M&A – INTEGRATED MODEL

ETR – Exiting the EWC with cash flow neutral position with the sale of NDT moving along

Progress expected in '19 for ETR's NDT sale process (IP2-3).

The NDT sales process is moving along – ETR has gained robust interest from potential buyers according to the company and continues to build a market to sell. On EWC, the NDT sales process is moving slightly slower than anticipated (i.e., for Pilgrim, Palisades, Indian Point) given first-in-kind transactions, although we would note here that it is not necessarily negative. The company is working on creating a market for this type of transaction and it could take a while to get potential buyers up-to-speed with information about the projects. A positive data point is the recent Vermont Yankee (VY) transaction approval from the Vermont PUC, which creates a path for a similar process elsewhere. **Management reiterated that they have gained robust interest from multiple buyers and we should see some progress in 2019 at least on the Indian Point assets, given the ~12-18 month window to complete the deal for the first IP unit scheduled retirement in 2020.**

ETR continues to target exiting the EWC with slightly positive cash flow. ETR sees upside in cash flow savings from some level of lower capital, improved capacity factors from better outage times and O&M, in addition to deals structured similar to VY with the other merchant nuclear plants that will include the sale of the nuclear sites and associated decommissioning activities. Any incremental cash could be available to pay down parent debt or support utility growth – no equity issuance needed as a side note.

EXC – Integrated model remains, for now

ExGen not going anywhere for now…

EXC mgmt. remains faithful to the integrated business model in the NT as ExGen remains core. Strong FCF at ExGen continues to support regulated growth and deleveraging at the GenCo. Management has reiterated several times to us in the past few months that ExGen will remain core as growth at the regulated utilities continues to dilute ExGen exposure and power market reforms continue to yield constructive outcomes for nuclear plants. As the PHI utilities begin to self-fund/earn higher ROEs and ExGen de-levers, we believe there may be additional opportunities for M&A activity at EXC, but this remains mid 2020s likelihood vs. the NT. Finally, **we recently asked mgmt. (see HERE) about the potential for an acquisition of SO's Nicor Gas** given that company's ongoing asset sales to improve its balance – they did not give a clear answer affirming or deny interest. We note that there have been no indications that Nicor is even for sale at this time, but in our view the geographic overlap with EXC's electric utilities would make it a natural fit.

PEG – If it ain't broke, don't fix it

…neither is PEG Power

Power remains very strategic for PSEG – Growth projects on pace, healthy free cash flow generation remains core to fund PSE&G; not actively looking to grow or divest. The prospective spend at Power remains very modest post Keys, Sewaren and final completion of Bridgeport Harbor. The key notable from our past meetings was mgmt. was relatively comfortable with the size of power: not looking to grow through new projects/or asset acquisition nor looking to divest. **From a buyer perspective**, growth at Power through generation projects ends with Bridgeport in mid-2019. That said, mgmt. in prior meetings has noted they have looked and will continue to look at everything but their more tepid viewpoint around market pricing and the forwards has yielded their historical bids below market – i.e., they have underpriced most assets they have looked at by simply reverse engineering the forward curves. So, we do not expect PSEG to be an obvious buyer of generation assets given their conservative stance and view on the forward curves.

Well… if they aren't looking to grow, why not divest? Answer: Power is more synergistic to the enterprise than ever before. Coming off the meetings, the take we see here is a strategic move with Power is a few years away even with the enhanced scale as the three remaining gas projects come online. **Tax reform coupled with growth capital opportunities at PSE&G, which continue to remain very healthy, bring to light the importance of Power's cash flow contributions** – in other words, Power helps fund the utility's growth and eliminates any forward equity needs despite some balance sheet pressure post tax reform. So if anything, PSE&G needs the cash support from Power, especially now post tax reform.

NRG/VST – Only M&A here is retail, if at all

NRG and VST continue to prioritize returning cash over M&A

Both of these names remain focused on captial allocation, although some retail M&A may come to pass in 2019 if the right book presents itself… Our conversations in 2018 with mgmt. at both NRG and VST support our ongoing view that **M&A is not a priority** for either of the IPPs under coverage given their ongoing focus on capital discipline and return. **The *sole* potential M&A activity we see in this space is regarding retail, however we caution that targets like XOOM are not particularly commonplace.** In addition, we note that VST mgmt. has stated a desire to organically expand its book it the northeastern markets vs. inorganic acquisitions. Beyond retail we remain on the lookout for the potential sale of VST's Independence CCGT in NYISO, although we note this has not been widely discussed by the company since some low-level comments at the analyst day in June (see HERE for additional details.

FE/EXC – NEW JERSEY NOT FOR SALE, YET

FE and EXC staying in Jersey, for now

After repeatedly asking mgmt. at both EXC and FE throughout 2018 about their thoughts regarding their New Jersey subsidiaries, we now believe that neither Jersey Central Power & Light (JCP&L) nor Atlantic City Electric (ACE) are likely to be sold in the NT. We view both JCP&L and ACE as interesting utilities to watch over the next two years as the unfolding policy shift in New Jersey begins to take hold. In 2018, we saw PSE&G cut a very wide path for grid mod and policy-driven spend, with $3-4bn in investment proposed in its territory. Conversely, we have heard relatively little from JCP&L (a $400mm infrastructure investment program was announced in June) or ACE (general rate case currently pending). **We asked both mgmt. teams recently whether these utilities were really 'core' to their relative portfolios, and while both companies answered in the affirmative,** we still believe ACE is a relatively minor part of EXC. Both utilities have had slightly tougher interactions with the NJ BPU versus PSE&G, in our view, and their service territories are more rate sensitive than those to the northeast. **EXC** mgmt. has noted to us in the past that they see broader value in ACE's exposure to the progressive policies underway at the BPU as it helps it prepare for the spread of those policies to other adjacent jurisdictions. **FE** for its part still sees value in JCPL given its size, and the improvements it has seen in its relationship with the BPU since hitting a post-Sandy low. **Very much a stay-tuned situation, but we don't see any movement for these utilities in the NT.**

For our prior thoughts, see HERE.

COMPANY-SPECIFIC CATALYSTS

MAJOR INFRASTRUCTURE PROJECTS

Several regulated utilities within our coverage are developing major infrastructure projects with key milestones to look out for in 2019 and beyond. We highlight projects being developed by D, DUK, NEE, ED, SO, NJR, and SRE in this section as well as **our assumptions on each**.

Atlantic Coast Pipeline (D / DUK / SO)

ACP 1 contributes ~$0.16/share to D in 1st full yr of service...

...before extensions and upsizing through laterals and compressors

Project overview: The Atlantic Coast Pipeline is a 600-mile ~$6.5bn to $7.0bn, 1.5Bcf/day project with potential to upsize to 2Bcf/day and extend further down from South Carolina and into the Southeast. **The project has recently had permitting setbacks but D and DUK have some contingencies built into the project –** i.e., some cost contingencies are built into the current cost estimate (but no number has been provided at this time). **DUK also has a significant amount of unprotected ADIT, which could be refunded faster, driving rate base growth higher, which could be used as an offset to fill any potential divots if ACP gets delayed further. D does not have access to such a large amount of unprotected ADIT but believes the issue could be addressed in the courts over the next few weeks.** On Thursday, December 13th, 2018, the U.S. 4th Circuit Court of Appeals vacated ACP's existing U.S. National Park permit, which included a right-of-way to cross the Appalachian Trail in a national forest. Roughly 20 miles of ACP's 600-mile pipeline cut through national forest land. ACP's owners/developers disagree with the **Court's decision and note the decision has broader implications for all oil and gas pipelines that cross the Appalachian Trail along its 2,200-mile course from Maine to Georgia (roughly 50 pipelines do so according to the owners)**. ACP's owners have requested an "en banc" review by the full 4th Circuit Court and additional next steps are expected to be announced in the future. In 3Q18 the FERC stop work order combined with delays in obtaining certain permits caused the cost estimate to increase from $6.0bn-$6.5bn to now $6.5bn-$7.0bn and pushed out the in-service date to mid-2020 from YE 2019 (for more detail see our D note HERE).

On their 3Q18 earnings calls D and DUK mgmt. affirmed that returns on ACP will be commensurate with existing regulated returns despite delay and cost increase but these delays are items we should monitor (see 3Q DUK note HERE). We continue to model ACP with $0.16/shr of accretion for D in its first full year of service. As a reminder, the pipeline is being developed by D, the majority owner with a 48% stake (30% levered) – Last year D's ownership interest was recalibrated to 48% from 45% in order to retain majority control following DUK's acquisition of PNY and SO's acquisition of AGL. DUK has a 47% interest following the acquisition of PNY (re-calibrated from 40%), and SO inherited its 5% interest in the pipeline by acquiring AGL.

Offshore Wind (D)

D opening the door to offshore wind in VA w/$300mm pilot project

Dominion is testing out an offshore wind pilot program in Virginia. In November the Virginia State Corporation Commission approved a $300mm project for two 6 MW offshore wind turbines. The project is funded through existing base rates and is enabled by the Grid Transformation and Security Act of 2018. The project is expected to be in-service by the end of 2020. Virginia's 10-year energy plan, which was debuted in October 2018, sets a target of 2 GW of offshore wind by 2028. The initial pilot project may sound expensive, but the expectation is that a larger scale project would be more cost effective if the pilot project proves operationally successful. **For more background see our recent conversation with senior mgmt. HERE.**

Mountain Valley Pipeline (NEE / ED)

Project overview: As a reminder, the Mountain Valley Pipeline (MVP) is a 301-mile ~$4.6bn JV between NEE (35% stake), ED (12.5% stake), WGL Midstream (TSX: ALA, NC, $14.44CAD), Vega Midstream, RGC Midstream (RGCO, NC, $29.75), and EQT (EQM, NC, $19.52) to transport ~2Bcf/day of Marcellus and Utica gas to markets in Mid/South Atlantic regions.

MVP project included in our estimates.

The project is moving in fits and starts after receiving its certificate from FERC with an in-service date slated for 4Q19 – project included in our estimates. The in-service date for MVP was delayed from 1Q19 to 4Q19 but **we don't expect the in-service date to be pushed out further given 1)** construction continuing on most of the pipe with the FERC stay order lifted; **2)** WV will likely issue new regulations to allow more than 72 hours for stream crossings, which could take 4-6 weeks to complete; **3)** The Governor is on board and has been calling for expedited construction. **Regarding economics, the project owners continue to earn AFUDC and construction continues on most of the pipe in 2018 and 2019. Similar to ACP the construction cost overruns are somewhat mitigated by tax reform since the projects were negotiated when the corporate tax rate was 35%.** In a post-tax reform world with a 21% tax rate project owners retain the tax savings, which is a tailwind for returns. Given the small contribution to earnings, we don't see the in-service delay impacting ED (for more detail see our 3Q ED note HERE) or even NEE – i.e., MVP is a less pronounced growth engine for NEE, which has no shortage of growth opportunities, in our view, but opportunities such as these have been somewhat of an aspiration for ED.

Vogtle Units 3&4 (SO)

Project overview: As a reminder, Southern Company is leading the construction effort on Vogtle Units 3 & 4: two 1,100 MW new nuclear reactors in Georgia. Increasing staffing will be a key input into maintaining productivity levels and driving increased man hours. SO is on the hunt to hire another ~350 electricians and pipefitters. **In order to attract this labor force SO implemented a plan approved by regulators to offer top decile pay, these compensation increases are consistent with the current revised cost estimate - without using any of the contingencies.** It is also working with the U.S. department of labor to secure visas for Canadian electricians and might **also pick up 75-100 electricians from the DOE's MOX project, which was recently repurposed.** If SO does get the Canadian visas it is expected these workers would arrive at the site in March. **The regulatory picture in Georgia should continue to be constructive for SO.** All of the incumbent Republican Georgia Public Service Commissioners (PSC) that were up for re-election in 2018 won their seats, with Chuck Eaton winning a run-off shortly after the regular November election. As a reminder, these commissioners unanimously voted for the revised cost estimate and construction schedule.

We remain in a 'show me' phase on Vogtle, though mgmt. disclosing more than ever…

The current expected in-service date is November 2021 for Unit 3 and November 2022 for Unit 4. In 2Q18 Georgia Power, which owns 45.7% of Vogtle Units 3 &4, revised its base cost forecast and estimated contingency to $8.0bn and $0.4bn for a total project capital cost forecast of $8.4bn (net of $1.7bn from the Toshiba (TYO: 6502) parental guarantee and ~188mm for customer refunds). The Georgia PSC did state in the 17th VCM proceedings that the $7.3bn cost estimate did not represent a cost cap and Georgia Power did not seek rate recovery for the $0.7bn increase in costs included in the revised base capital forecast for the 19th VCM report filed with the Georgia PSC in August 2018. In 2Q18 Georgia Power took a total pre-tax charge of $1.1bn ($0.8bn after tax).

Vogtle will be a significant driver of earnings once it comes online in 2021/22 but investors have been skeptical after the latest round of cost overruns. Southern recently held a "stand down" and locked the construction site down for a day and a half to have conversations with employees on safety and productivity…150 employees did not return after the stand down, but **productivity has increased since** – i.e., **Pre-stand down the site was hitting ~80,000 man hours per week but after the workforce reductions productivity improved to 120,000 man hours with fewer people.** Mgmt believes they **need to hire more construction workers to hit a target of 140,000 to 150,000 man hours per week, which gets them to the accelerated April schedule vs. the November schedule regulators are using.**

Adelphia Gateway Pipeline (NJR)

We estimate 13% ROE, $0.09 of EPS for Adelphia

The Adelphia Gateway pipeline expected to contribute to earnings in 2020 following completion in late 2019 and help offset earnings impact from PennEast delays. As a reminder in 2017 NJR agreed to acquire the Adelphia Gateway pipeline system from Talen Generation for ~$170mm. The current oil pipeline will be repurposed to natural gas in order to meet a supply-constrained market in PA. **Total CapEx is expected to be roughly $80mm-130mm for the repurposing efforts, with the pipeline expected to be in-service by late 2019 and contributing to earnings in 2020. As a reminder, we model ~13% ROE and estimate Adelphia contributes $0.09/share in its first full-year of operations.** In our view, Adelphia will likely face much less pushback than PennEast given the brownfield nature of the project, and has flown largely under the radar versus more controversial projects like PennEast and the SRL (see below for more).

Southern Reliability Link (NJR)

The Southern Reliability Link (SRL) finally began construction in December 2018 after a very long permitting process – though appeals remain outstanding. The company finally began initial construction activities on the line in Ocean County as it awaits the road cut permit in Burlington County. The project will add resiliency through a second feed to NJNG's system (currently 85% of supply is transported on a single interstate pipeline system), **with an estimated cost of $180mm**. Assuming NJR gets the final approvals for the project, it **will file for recovery in a separate filing before its Nov. 2019 GRC filing**, which could occur prior to the project's in-service date Finally, we highlight that the construction is starting at NJR's own risk, as the threat of a court rejection remains. The BPU's 2016 approval has been appealed by several towns and counties (including Burlington) along the route and environmental groups. As of early December, no hearing dates have been set for the appeals. The company expects to have the project in service in 2019. **As a reminder, the project is assumed in our estimates**.

PennEast (NJR / SJI / SO)

PennEast advancing, but at a slow pace

The PennEast pipeline intends to provide the East Coast with access to cheaper Marcellus shale gas. NJR/SJI/SO each own a 20% equity interest in the 120-mile, 1Bcf/d pipeline project that would extend from northeast PA to western NJ. The project received its final EIS from FERC back in April 2017, and its final Certificate of Necessity from the Commission in January 2018. Subsequently, the project spent much of the year mired in courts over survey access, **with the company only receiving a favorable ruling from New Jersey District Court in December. While the project's consortium maintains that the pipe will come online in 2019, NJR (20%) now expects it to enter service in 2020.** The project is still awaiting a permit from the Delaware River Basin Commission and is lacking a water crossing permit from the NJ DEP following a denial in February over insufficient information. The delays have prompted some to draw comparisons to the unbuilt Constitution Pipeline. **As a reminder, we model PennEast contributing $0.11/share to NJR in its first full year of operation.**

Cameron LNG (SRE)

SRE has a number of potential LNG expansion opportunities on the horizon.

Project overview: As a reminder, SRE holds a 50.2% equity interest in Cameron LNG JV Facility (Unit 1-2-3) with obligations under the financing agreements for a maximum of \$3.9bn from SRE. Total nameplate capacity is 13.9Mtpa and export capability of 12Mtpa of LNG, backed by 20-year tolling capacity agreements. All 3 liquefaction trains are expected to come online by end of 2019, contributing full year to our model in 2020.

We assume one train online in 2019 and all three trains in-service in 2020.

SRE is optimistic that Cameron Trains 1-3 will hit its updated in-service dates with commissioning already in progress, and commercial operations on the first train expected to start 1Q19. McDermott Industries (MDU) took 3Q losses on project delays at Cameron, which caused some concern with investors (as MDU market cap is smaller than the project), but the delay which may move commercial in-service dates from one quarter to the next is believed to be a delay of weeks, not months, according to SRE management; with **SRE's return on investment protected against delays and cost overruns**. SRE management intends to hold contractors to the contingencies in place designed to mitigate construction risk. **We continue to point out the two safeguards in place designed to protect the economics of the project: (1)** The lump-sum, turn-key contract, designed to transfer cost overruns and construction/scheduling risk to contractors; and **(2)** A tariff adjustment mechanism designed to preserve the project's IRR against cost overruns and schedule changes. At the end of the day, SRE never intended to take on construction risks, and their interest in Cameron was structured to preserve the IRR of the project. **SRE updated expectations for \$365-425M in run rate annual earnings contribution from Cameron**, with the expectation that the 3 trains will go in service before year-end 2019, with full year annual contribution achieved in 2020.

Expansion opportunities on the horizon? Total SA (TOT) has purchased Engie's (ENGI) LNG business including a 16.6% stake in Cameron LNG, which may be incrementally constructive to the Cameron Expansion investment decision, given SRE and Total have signed an MOU for LNG infrastructure development (Nov 5, 2018). Total is independently looking to have 40 MTPA of LNG supply in their portfolio by 2020 with 5% annual growth afterwards. Cameron expansion FERC permits and DOE licenses are completed. **Total highlighted that this cooperation agreement will constructively impact investment decisions for Cameron expansion and the ECA West Coast facility.** Having Total on board is also supportive of an investment decision for Port Arthur, another contemplated facility with 12 MTPA capacity.

Energia Costa Azul LNG (SRE)

ECA Phase 1 nearly a done-deal; Phase 2 looks to be demand competitive.

Project overview: Energia Costa Azul (ECA) is the only brownfield LNG export facility on the West Coast with a planned capacity of 2.5 MTPA. Most recently in 4Q of 2018 the full capacity of the planned ECA project is under Heads of Agreements (HOAs) with Total (NYSE: TOT), Mitsui (TYO: 8031) and KOGAS (KRX: 036460) split equally, which are semi-firm arrangements that stop short of fully priced purchase agreements. Along with the signing of the HOAs, **SRE management disclosed that the West Coast project had significant competition from the demand side and expects similar competition for a larger scale ECA project.** ECA phase 2 is being considered for development as firm regas contracts for the ECA regas plant come to term in 2028. The Phase 2 expansion would expand the facility to 11 MTPA of capacity. This project is incremental to our valuation and estimates for SRE.

Port Arthur LNG (SRE)

SRE has several potential LNG expansion opportunities on the horizon.

Project overview: Port Arthur is an SRE proposed LNG export facility with aggregate capacity of 11 MTPA. There has not been a commercial investment decision yet as SRE is shopping the LNG capacity across Europe and Asia. LT contracting appetite seemingly stalled at this time, potentially due to political tensions, the easing of which could be a catalyst to more open supply/demand dialogue. SRE management notes that at current forward gas prices, US Gulf Coast liquefaction is among the most price-competitive potential LNG supply in the world.

The current status of Port Arthur stops short of the investment decision. Bechtel is already selected as EPC contractor, with a project development MOU signed by Sempra LNG & Midstream, Woodside Petroleum Ltd. (ASX: WPL) and Korea Gas Corporation signed in 2017 that provides a framework for cooperation and joint discussion by the parties on project development and sourcing (with KOGAS a potential offtake). **Additionally, a 2 MTPA supply agreement with Polish Oil & Gas Company was signed in Dec 2018, which is a bullish indicator for filling the capacity and enabling the investment decision; a potential for 2019.** Port Arthur LNG is incremental to our estimates and valuation for SRE.

MAJOR RATE CASES PENDING OR UPCOMING

Below we highlight some of the major rate cases pending before state commissions, and also those that we see as likely in the coming year based upon our conversations with management

AEP – PSO Rate Case, Third Strike and you're out?

It's coming to a head in OK for AEP – either strike out or home run

PSO rate case could be a knock-on effect for a potential strategic review; Oklahoma rate case – the one we are watching. The near-term catalyst in 2019 for AEP really centers on making a call in OK – either a constructive call on the General Rate Case or a strategic review and future sale of the PSO utility; we bend toward the latter as we can't envision a constructive enough outcome to stay vested in OK and also see an "accretive angle" with a deal as well as a benefit from just simplifying the AEP story. We continue to have a view point that the third strike could lead to an out in Oklahoma but some complexities need to be worked through including a separate headquarters in Tulsa that houses ~618 employees, which will need to be accounted for in any strategic decision – i.e., another reason why an OGE deal could make sense in our view, given their presence in the state.

Reminder, from our recent OK Commissioner meetings we hosted with clients in the state, we don't have a lot of confidence in this GRC (i.e. OCC suggested there was a structural problem at the utility in the near term) but the state has been known to surprise to the upside as it certainly did with OGE – so we are slightly optimistic but more cautious overall. For our thoughts on following our Commissioner meetings, see our note HERE. As we have also stated in the past, blending in the TransCo's earned ROEs in the state with that of PSO does not equate to a higher earned ROE in that state – TransCo's contribution is not material enough (i.e. ~30bps) to negate PSOs under-earning. **So, while we continue to see upside potential in AEP shares if it divests underperforming assets such as PSO and reinvests the proceeds and captures a wider ROE spread despite tax leakage, as well as, the benefits of merely simplifying the story, in our view it's not a near term catalyst to drive shares as it will take time to play out**. In our previous research we found this to be +3% accretive to AEP shares under very conservative assumptions and further note management has affirmed it would consider selling if PSO receives an unfavorable decision for its pending rate case. **What defines an "unfavorable decision"?** This includes if PSO does not get performance-based rate making or tracker for transmission. **For more on PSO see our detailed note** HERE.

We model approx. 300bps of under-earning at PSO w/current rate construct

As a reminder we view the significant ROE lag at PSO as structural (we model PSO at ~6.5 to ~7.0% ROE or ~300bps of lag) and believe our case for a sale of PSO to maybe a potential player such as OGE on the buying end would be a win-win for both parties involved if something leads to a transaction – accretion all around: over +3-6% for OGE, +1-2% for AEP under modest 50% capital redeployment assumption. There are certainly several complexities that need to be worked out if the Oklahoma commission fails to deliver this third time around, including the relocation of employees, tax leakage as well as the redeployment of proceeds (i.e. how quickly). For a full drilldown on this thesis see our note HERE - our estimates in the analysis assume full tax leakage and a quick redeployment of proceeds. **As a reminder and for historical context, when AEP exited merchant generation a couple of years ago, it had an earnings divot that took several months to backfill following the GenCo sale. That said, shifting to today, we believe capital growth opportunities seem to be more fruitful than in the past especially around wires and renewables.**

FE – Potomac Edison Base Case in MD; IIP in NJ

Mgmt. watching NJ filing for potential read through to appetite for additional investment

FirstEnergy is working its way through several major filings at the moment, with proceedings open in both MD and NJ. In MD FE subsidiary Potomac Edison has filed for its first rate case in over 20 years, seeking a $20mm increase in rates (15.00%), to support a $470mm rate base and a 10.80% ROE (52.82% of cap structure). In late November MD PSC Staff reccomended a $12mm increase supporting a $463mm rate base and 9.25% ROE. Hearings on the case are scheduled for January 22, with a final order expected by March 23.

NJ filing could be harbinger of filings to come…. In New Jersey JCP&L continues to await a decision from the BPU on its $400mm “Reliability Plus” infrastructure investment program (IIP). The four year program would spend on improving outages via enhanced undergrounding, improved overhead wires, and additional vegetation management. **We currently model JCP&L getting the full ask – as the program follows similar initiatives we have seen from NJ utilities, like PSE&G and its Energy Strong programs**. The filing is also important given the strong change in policy we saw in 2018 under the new Governor, Phil Murphy. Our conversations with FE management (including with CEO Chuck Jones at EEI – see HERE) indicate that the utility stands ready to support the state’s policy efforts on clean energy and resilience. We see additional EE spend as a logical first step and low-hanging fruit, but having said that, we note that management indicated that it would prefer policymakers/the BPU ‘pull’ it into the process vs. JCP&L blindly proposing spend. **Very much a stay tuned situation.**

EXC – Momentum continues as PHI moves to close ROE gap

9-10% earned ROEs at the legacy PHI utilities still within sight… which we model

EXC continues to navigate through several rate cases in 2019 and beyond, with its target of 9-10% at the PHI utilities almost within reach, in our view. EXC maintains good traction in achieving ~9% ROE at legacy Pepco utilities through our forecast period, with a successful series of cases filed and approved over the course of 2018 **we model lower lag through 2021 at PHI consistent with plan.** In 2019 we will be looking for traction on Atlantic City Electric’s (ACE) base rate filing, which was filed this past August. As a reminder, ACE is seeking a ~$110mm annual rate increase to support a $1.6bn rate base with a 10.10% ROE (50.22% equity ratio). The ROE ask is the same as the 2017 case, in which it was authorized a 9.6% ROE on a ~$1.3bn rate base. We currently model an improvement in ROEs at ACE consistent with management’s plan – with returns improving from ~5% in 2017 to 7% in 2019. We note that a multiyear filing by Pepco in DC also remains a distinct possibility in 2019 after management highlighted it during our 2018 EEI meetings. Finally, BG&E remains in in process on its gas base rate case, where a decision by the MD PSC is expected within weeks. It has asked for a $94mm increase supporting a $1.7bn rate base and 10.5% ROE. MPSC Staff and the People’s Counsel have both recommended lower amounts across the board, with Staff proposing a ~$42mm increase supporting a $1.5bn rate base and 9.65% ROE.

LNT – Iowa electric rate case to be filed in 2019

LNT’s Iowa subsidiary Interstate Power & Light (IPL) will be filing in 2019, with the process likely to feature a dual-case structure. Investors should be on the lookout for IPL to make two rate case filings sometime in the first half of 2019.with management putting forward test years to its first use. We believe will likely be two simultaneous filings: the first would be utilize a 2018 test year to seek rate recovery of the first 500MW of wind, in addition to other investments, while the second would utilize a forward looking 2020 test year to seek rate recovery for the remaining ~500MW, in addition to other investments. Such an approach should, according to management, minimize regulatory lag. Finally we note that management has indicated it will likely seek a higher equity ratio (up to 51.00% vs. the current 49.02%), as it did successfully during the recently-approved gas base rate case where it was authorized a 51% layer (up from 45%, and vs. a request of 53%) – we currently model up to $150mm in additional equity for LNT in 2020 given its ongoing capital program (vs. management's 2019 target of ~$375mm). Management indicated on the 3Q18 call a filing could come as early as 1Q19.

NWN – General Rate Case in Washington

NWN closed out 2018 with a filing for a general rate increase in Washington – no surprise after it had a successful filing cycle in Oregon and management had recently indicated a filing was under consideration. NWN filed for an $8.3mm rate increase in Washington on December 31, its first rate case in the state in over 10 years. The ask features an ROE of 10.3% (vs. current 10.65%), supporting a rate base of $187mm. As a reminder, we currently model NWN under-earning in WA by ~1.5-2.0% through our forecast period. **Overall WA remains a relatively minor part of NWN's overall portfolio – accounting for ~11% of customers and ~10% of revenues.**

ED – O&R utilities electric and gas rate case filed in 2018; CECONY expects to file a multi-year plan in early 2019

ConEd regulatory calendar busy but supportive of our model

ED's O&R utilities are getting close to final rates in a joint electric and gas rate cases (C-18-E-0067 / C-18-G-0068) filed in early 2018 with a joint proposal currently in front of the commission that is awaiting rebuttal/approval. The joint proposal filed on November 9, 2018 recommends a $13.4M electric and -$7.5M gas rate increase and is premised on a 9.75% proposed ROE (vs 9.00% in current rates), 48% equity ratio (same as currently authorized) and $0.87B rate base E + $0.45B rate base G. **We expect a modified proposal or amended PSC approval in early 2019, but no change in ROE.**

We expect a CECONY electric and gas rate case to be filed in early 2019 as this year will be the last year of the multi-year plan and we expect the filing to support ~6% rate base growth currently forecast by ED management. The filing is not expected to be controversial by any measure, with NYSPC generally formulaic in setting ROE (~9% not expected to change in our view), with decoupling already in place and minimal regulatory lag.

EIX – Still waiting for a 2017 vintage GRC decision 1/3 of the way into the multi-year rate plan; FERC Formula rates under review (no ROE change); Cost of Capital filing due in April 2019.

The EIX general rate case (GRC 2018) for rates starting in 2018 has not received approval despite thorough briefing and hearings in 2017 and even the inclusion of tax reform in early 2018. The 2018-2020 multi-year plan as proposed supports grid modernization projects and a 9.8% rate base growth from a 2017 base, which was slightly depressed due to deferral of grid mod to be included in a GRC instead of a standalone proceeding; the first of a kind filing requested by CPUC. The major disagreement in the proceeding (while it was active) was the level of grid modernization spending, which many ratepayer advocates opposed in hearings, with TURN and ORA recommending near zero spending levels for grid mod. There is currently no timeline for approval, with the statutory deadline ordered to be extended until at least June 2019. We note that EIX also filed for an augmented risk mitigation program outside of the GRC mainly focused on emergent wildfire risks for 2018-2020 years.

EIX FERC formula rates are also currently under review (in closed door settlement hearing stage). The main focus of the application are adjustments to cost recovery timing and methodology, but the case does not seek a base ROE increase, as the case was filed before the most recent set of wildfires and peer cases asking for 10.7%-12.0% ROE (base rates exclude RTO and projects incentives).

Wildfires having initial impact on cost of capital in CA

All California utilities are also due to file an updated CPUC cost of capital filing in April 2019, based on the settlement requirements from 2017. The current read through from transmission rate requests place base ROE requirements before incentives from 10.7% (SDG&E) to 12.0% (PCG); although the CPUC requests may be even higher due to the commission's stance on the CA courts' interpretation of Inverse Condemnation. **We currently model no change to allowed ROE for EIX in 2019-2022, assuming 10.3% throughout the forecast period.**

CMS – Electric rate settlement filed in Dec 2018; Gas rates filed in late 2018 to be discussed in detail during 2019.

Base filings inline, not ready for trackers/IRMs but regulatory construct suffice

CMS reached a settlement in the MI PSC electric rate case (C-U-20134) on December 12, 2018 resolving most outstanding issues in proceeding and found a revenue sufficiency of $24M inclusive of tax reform (ex-tax refund a $79.4M deficiency). The settlement does not include trackers/IRMs (which were a potential constructive catalyst for MI) but opens workshops for future discussion in 2019. **The settlement allows smoother cost deferral between years, retains 2019 cost savings and includes a stay out provision, meaning no filing by CMS in 2019 (defers filing for 1 year)**. The settlement includes a 10% ROE with a black box equity ratio (~40-41% based on past formulaic decisions) and ~$10.6B rate base. Request inclusive of Tax refunds (ex-refund ~79.4M increase in revenues for investments and cost tracking). We anticipate approval as soon as January 2019. We assume the base ROE remains ~10%, with some potential to over-earn based on energy efficiency and other incentives.

November 11, 2018, CMS requested an increase in retail natural gas rates of $229M (C-U-20322). The rate case is in early stages at this point and will likely take the majority of 2019 to reach a settlement or litigated outcome. The request is based on 10.75% ROE, 42.17% equity (vs. 10.00% ROE and 40.91% ER in current rates) and on $6.5B rate base. We assume no change to the allowed 10% ROE in the future forecast periods 2019-2022.

DTE – DTE electric rate case on track for 2019 settled/litigated outcome; DTE Gas likely filer in early 2019 for serial rate case.

DTE should remain serial filer

In the DTE Electric rate case (C-U-20162) the MPSC Staff recommended a $159.8M rate increase on November 11, 2018. The Staff rate increase is based on a 9.8% ROE and 38.72% equity ratio, 17B rate base (vs. 10.0% ROE in current rates and 36.82% Equity ratio). Given the read through from CMS settlement, litigation would likely lead to a conventional outcome – standard 10% ROE, formulaic equity ratio, no incremental IRM tacking. DTE indicated that it would remain a serial filer in the absence of constructive recovery mechanisms and we model the base ROE at ~10% in the forecast period 2019-2022.

DTE Gas has received approval for 2019 rates in September 2018 and based on past timelines we expect 2020 rates to be filed in early 2019. We do not expect any

See pages 278 - 279 for analyst certification and important disclosures.

controversial "asks" to materialize as the MPSC has been consistent with gas rate case criteria and has already approved program specific IRMs.

OGE – AR formula rate review requested and to be deliberated in early 2019; OK rate case to be filed by the end of 2018 for scrubber and natural gas conversions

We model earned ROE in ARK in-line with Allowed returns post rate order

OGE has filed for adjustments in AR formula rates (D-18-046-FR) in 2018 and requested an order from order from the PSC by March 12, 2019. OGE earned ROEs are expected to be 7.43% for the projected test year, which is below the company's target 9.5% ROE. **The proposed increase would bridge the ROE gap to 9.5%, and we model the company earning near allowed ROE levels in the long term.**

OK Rate Case was filed 4Q 2018 (PUD201800140) which includes recovery of Sooner scrubbers and Muskogee natural gas conversions with scrubber investments of ~$534M, including AFUDC and ~$75M for the gas conversions. **The rate case application also seeks to align the costs profile to get the company earned ROE closer to the allowed ROE, as well as raise the allowed ROE to closer to the industry average, with 9.9% proposed vs. 9.5% currently authorized.** The cost of capital as proposed will remain nearly identical as long term debt costs have decreased ~40bp. The company intends to have a test year ending September 2018 with pro forma adjustments to March 2019 and rates implemented mid-2019. **We note the company also recently reached an agreement to buy out AES generation assets** that were under expensive PPAs running through 2019. The purchase as proposed would reduce customer rates by $40-50M, allow for operational synergies with the existing OGE fleet, shore up capacity requirements at ~$10/kW and provide economic development support to the region.

ETR – New Orleans last rate case outstanding after TX, AR approval in 2018

After constructive outcomes in TX and AR in 2018, ETR has one rate case outstanding for rates at New Orleans electric and gas (D-UD-18-07). The rate request was filed on September 21, 2018 for an electric increase of $135.1M and a modest gas base rate decrease of $0.9M, or $0.1M after rider impacts. The electric request is based on 10.5% ROE, 52.2% ER on 0.77B rate base; vs. 11.1% ROE in current rates, with a black box ER. After consideration of certain riders, ratepayers would experience a roughly $20.2 million net rate reduction. The gas request is based on 10.75% ROE, 52.20% ER on 0.12B rate base; vs. 10.75 % ROE in current rates, with a black box ER.

PCG – Gas transmission and storage rate case in progress; FERC formula rate application; CPUC GRC to be litigated in 2019; Cost of capital filing due in April 2019.

PCG filed the generation and distribution general rate case (GRC) for gas and electric rates (GRC A-18-12-009) on December 13, 2018 asking for a $1.1B rate increase in 2020 over currently adopted revenues for 2019 ($8.506B for 2019 to $9.6B in 2020). More than half of the proposed increase is directly related to wildfire prevention and risk. The electric base rate increase requested by company is based on 10.25% ROE (existing) and a $22.5B rate base and the gas rate increase is based on 10.25% ROE (existing) and $7.5B rate base. PCG also requested adjustments for the 2021 and 2022 attrition years. **The 2020 increase represents a 6-7% rate increase for customers and**

we see rising concerns that California's already high retail electric rates may be squeezed for bill headroom for future investment.

PCG has also made an application with FERC to go to formula rates (instead of annual litigated rate cases), with a base ROE of 12.00%, and increase from the currently authorized 10.25% based on increase operations and wildfire risks of California.

Cost of capital filings key item we are watching with wildfire impact

All California utilities are also due to file an updated CPUC cost of capital filing in April 2019, based on the settlement requirements from 2017. The current read through from transmission rate requests place base ROE requirements before incentives from 10.7% (SDG&E) to 12.0% (PCG); although the CPUC requests may be even higher due to the commission's stance on the CA courts' interpretation of Inverse Condemnation. **We currently model no change to allowed ROE for PCG in 2019-2022, assuming 10.25% throughout the forecast period, but include ROE lag for timely approval of cost and rate base adjustments based on the current delays at the CPUC.**

PCG is in progress of the gas transmission and storage (GT&S) rate case (A-17-11-009). The company updated testimony on March 30, 2018 reflecting the December 2017 tax law and now requests a $265M rate increase in the first year. In addition to the above rate increase, which would take effect in 2019, PCG requested incremental "attrition" rate increases of $131M for 2020 and $188M for 2021. A third attrition year would authorize a $26 million increase for 2022, but the CPUC has historically shied away from 4-year rate plans. The rate bases associated with the request are $6.1B for 2020, $6.6B for 2021, and $7.2B for 2022.

SRE – General rate cases for SDG&E and SoCalGas; FERC formula rate filing; CPUC cost of capital filing due in April 2019

We currently model no change to allowed ROE for SDG&E/SocalGas in 2019-2022...

...could prove conservative

SRE requested rate increases through the CPUC general rate case for SDG&E and SoCalGas (A-17-10-007 SDGE Elec/Gas, A-17-10-008 SoCalGas) in 2018 with most recent (April 13, 2018) rate changes recommended by PUC's Office of Ratepayer Advocates of -$123.7M for SDG&E electric, $60M for SDG&E gas and $238.6M for SoCalGas in 2019. The SRE proposals support projected rate base growth of ~6% for SDG&E and up to 9% for SoCalGas.

For SDG&E (elec/gas) GRC increases, SRE noted in updated April 6, 2018 testimony that the December 2017 tax law reduced the electric and gas revenue requirement by $58M, but SDG&E is not proposing to reduce the requested revenue requirement because it is examining options for securing the use of a high-capacity, quick-strike firefighting helicopter on a year-round basis and because of anticipated increases in insurance premiums due to 2017 wildfires. **The April 6, 2018 testimony reflects an electric rate base of $5.4B** and requests revised electric and gas attrition rate increases of $151.5M in 2020, $120M in 2021 and $122.2M in 2022. The ORA, in its April 13, 2018 testimony recommended lower combined electric and gas rate increases; $78M in 2020, $80M in 2021, and an incremental $83 million in 2022. The ORA's April 13, 2018 testimony reflects the impact of the new tax law enacted in December 2017. **For SoCalGas GRC increases, SRE requested a $480M rate increase for 2019 (Dec 2017 testimony), based on a $6.8B rate base** and in the updated testimony filed on 4/6/18, requested attrition rate increases of $236.9M in 2020, $192.9M in 2021, and $202.6M in 2022. The ORA recommended attrition rate increases of $121M in 2020, $145M in 2021, and $157M in 2022 in 4/13/18 testimony inclusive of the impact of the new tax law enacted in December 2017.

SDG&E additionally requested adjustments to the FERC formula rates to adjust cost calculation methodology and to reflect a base 10.7% ROE (excluding 50bp ISO

See pages 278 - 279 for analyst certification and important disclosures.

incentive adder) based on increased operational and wildfire risks in California. FERC has currently ordered settlement discussion and is in the process of appointing a settlement judge. If an impasse is reached the judge will order a prehearing conference and establish a procedural schedule.

All California utilities are also due to file an updated CPUC cost of capital filing in April 2019, based on the settlement requirements from 2017. The current read through from transmission rate requests place base ROE requirements before incentives from 10.7% (SDG&E) to 12.0% (PCG); although the CPUC requests may be even higher due to the commission's stance on the CA courts' interpretation of Inverse Condemnation. **We currently model no change to allowed ROE for SDG&E/SocalGas in 2019-2022, assuming 10.20%/10.05% for the two operating companies respectively throughout the forecast period.**

PPL – KY rate case extends green tariffs and UK RIIO2 ahead

We forecast a healthy ROE of ~9.5% in our PPL model for KY through 2022.

PPL is requesting a $112mm increase in base electric rates in KY and expanding its renewables program in the state. PPL's Louisville Gas and Electric and Kentucky Utilities filed for base rate increases. LG&E requested a $34.9mm or 3.4% increase for its electric business and a $24.9mm or 13.1% increase for its gas business. The electric increase is predicated on a 10.4% ROE (52.84% equity layer) with $2.5bn rate base on a test year starting April 2020. The gas business is requesting a 10.42% ROE (52.84% equity layer) with $788.4mm rate base. New rates are expected to go into effect May 1 of 2019. **We forecast a healthy ROE of ~9.5% in our PPL model for KY through 2022.** The KY rate case has a green tariff embedded in it and this will combine some existing tariffs into one for retention as well as expanding the green offerings in the state. PPL announced in 2018 a goal to reduce its carbon emission footprint by 70% by 2050. The company anticipates for this plan will predominately be driven by 8,000 MW of generation (mostly coal) in KY, about 70% is coal based. This coal will eventually be replaced with a combination of natural gas and renewables over the long term.

UK process is going to weigh on the shares... indirect read to EDCs

We spoke with company, and we remain cautiously optimistic but on guard

The market is penalizing PPL for a recent proposed UK regulatory decision regarding gas and transmission utilities. Ofgem sent a shot heard around the world when it cut the cost of capital in half for gas and transmission utilities (i.e. the cost of capital was cut to a base line rate of return of 4% for gas distribution and electric transmission businesses). **Investors immediately extrapolated this to PPL's UK electric distribution business even though the proposed ruling's scope did not extend to electric distribution businesses.** PPL shares fell 6% the day Ofgem announced this proposal vs the UTY only down 0.46% (for more see HERE). Ofgem's executive director for systems and networks explained, "We want to cut the cost to consumers for accommodating electric vehicles, renewables and electricity storage, and make sure that all consumers benefit from these technologies." Given the market reaction, Ofgem's proposed cost of capital was on the much lower end of investor's expectations. **Although we agree that the current rate cut was not directly related to electric distribution companies like WPD, investors will draw correlations indirectly – though Management has stopped short of revising guidance on this. At a minimum, this places a major overhang on shares, in our view, which we will continue to monitor for the time being.** As a reminder PPL won't have its cost of capital proposal until mid 2020 (with a final decision in 2022) so we believe there is ample lead time until PPL's cost of capital is actually impacted.

We caught up with PPL after the Ofgem decision which lowered the cost of capital for gas and transmission utilities to compare notes – we think this is better but remain on guard given the indirect read. PPL explained that nothing in the Ofgem decision was causing them to change previously announced guidance for RIIO2. As a reminder PPL's UK business is only electric distribution and they have no exposure to gas distribution or electric transmission. It is possible that the market's reaction was premature but only time will tell. PPL maintains a stance that gas/transmission and electric distribution are two very distinct businesses and if the UK wants to achieve its goals for carbon reduction – **bill headroom for renewables (i.e., DG investments, electric vehicles) clearly a reason why it cut returns for gas and electric transmission – then it will likely require investment in the electric distribution systems, which we believe would be severely curtailed if returns are cut in half.** Regardless of the company's messaging U.S. infrastructure investors view the Ofgem's regulatory proposals for gas/transmission as contentious.

DUK – Carolinas Rate Decision due March '19; Renewables RFP opportunity continues

We assume an ~10-11%% ROE for DEC and ~10-11% ROE for DEP through 2022.

DUK is expected to receive a decision on its Duke Energy Carolina's and Duke Energy Progress rate cases by May 2019. DUK requested a $168 million base rate increase at Duke Energy Carolinas (DEC) and $59 million increase at Duke Energy Progress (DEP). DEC is requesting a 10% increase in retail rates with a 10.5% ROE on 53% equity layer with a rate base of $5.6 billion. DEP is requesting a 10.3% increase for retail revenues with a 10.5% ROE on 53% equity layer for $1.5 billion of rate base. In our model **we assume an ~10-11%% ROE for DEC and ~10-11% ROE for DEP through 2022.** The last time DEC filed a rate increase in was 2013 and DEP filed in 2016. The rate increases will be used modernize power plants, manage coal ash, and improve reliability. Both plans are for grid mod and have step-ups in base rates to recover grid investments.

Renewables opportunity underappreciated - HB 589 continues to present a substantial opportunity to DUK; we watch this process very closely. There are 2.7 GW of total renewable opportunities that the bill unleashes and 30% of this DUK can self-build and with no cap on what DUK could acquire from developers (potentially the remaining 70%). **The total opportunity could be over ~$2.0bn assuming ~$1.00-1.50/watt**. In July 2018 the RFP was launched for 680 MW which are projected to be in-service by 2020, Oct 9 bids were submitted and over the next several months bids will be evaluated by an independent administrator. In 1H19 the winning bids are expected to be announced and in 2H19 the new project construction is anticipated to begin for the 2020 in service dates. **For more background see our recent NDR with management HERE.**

NI – NIPSCO and VA Gas Rate Cases pending, still waiting on MA re-filing

We model NIPSCO with robust ROEs of 9.8-10.3% through 2022

NI has a pending rate case at Northern Indiana Public Service Co. (NIPSCO) in which it requests a two step $21.4mm electric base rate increase (Cause No. 45159). The first step rate change is a $90mm reduction based on a 10.8% ROE (47.28% equity layer) and would be effective Sep 1 2019. The second step rate change would be a $11.4mm increase on a 10.8% ROE (47.86% equity layer) with $4.1bn of rate base. **We model NIPSCO with robust ROEs of 9.8-10.3% through 2022 and estimate ~$3.6bn of rate base for 2018.** Part of the driver behind the rate case is to reset deprecation rates for coal assets that will retire sooner than their originally expected useful lives. NI previously announced it will retire four units at RM Schahfer by 2023 and Michigan City by 2028 but NIPSCO has been previously assuming a 2030 retirement date for these units. The company's long term plan is to replace these coal fired units with solar, wind combined with battery storage.

COMPANY SECTIONS

AMERICAN ELECTRIC POWER (AEP, NEUTRAL, $78 PT)

Downgrading to NEUTRAL on valuation, solid performance and general cautiousness around pure bond surrogates – we have become very selective in that space and prefer other regulated electrics with higher growth, lower valuation. AEP worked in '18 as best as it could, has good growth prospects but at this stage, fully priced in, in our view - NT potential catalyst is PSO rate case or strategic move in the state.

- **Downgrading to NEUTRAL and raising our price target to $78 (from $77) as we roll forward our valuation to 2020 earnings.** In summary, our downgrade is predominately a valuation call despite sound fundamentals, driven by a lack of NT catalysts outside of making a call in OK – we believe solid growth prospects are priced in with shares outperforming UTY ~300 bps and now essentially trading at a slight premium to peers. **As we also noted in the earlier part of this note, we are very selective on bond surrogates and see better re-rating opportunities with other fully regulated electric peers like ETR, FE** that trade cheaper and have higher growth prospects (albeit with somewhat higher leverage); **we also prefer DUK** at this stage. **The NT catalyst in 2019 for AEP really centers on making a call in OK – either a constructive call on GRC or a strategic review and future sale of the PSO utility; we bend towards the latter as we can't envision a constructive enough outcome to stay vested in OK and also see an "accretive angle" with a deal as well as a benefit from just simplifying the AEP story.** Overall, we like fundamentals, we like mgmt., and see somewhat higher capex but we believe this is already reflected in performance.
- **Introducing our 2022 estimate of $4.93 which equates to a 6% CAGR off an '18 base.** Mgmt affirmed a 5-7% guide after increasing its capex plan to $33bn from $24bn through 2023. Our 2019/2020/2021 estimates of $4.17/$4.44/$4.71 exhibit ~6% YoY growth based on strong ROEs of ~9-12% at APCo, I&M and OPCo but continued lag at PSO and SWEPCo of 200 to 300 bps. Through 2022, we model ~$6Bn/year in regulated CapEx and similar dynamics at the utilities in 2022.
- **PSO rate case could be a knock-on effect for a potential strategic review; Oklahoma rate case – the one we are watching.** We continue to have a view point that the 3rd strike could lead to an out in Oklahoma, but some complexities need to be worked through including a separate headquarters in Tulsa that houses ~618 employees that will need to be accounted for in any strategic decision – i.e., another reason why an OGE deal could make sense. **Reminder, from our recent OK Commissioner meetings we hosted with clients in the state, we don't have a lot of confidence in this GRC (i.e., OCC suggested there was a structural problem at the utility in the NT) but the state has been known to surprise to the upside as it did with OGE – so we are slightly optimistic but more cautious overall. For our thoughts following our Commissioner meetings, see our note HERE.** As we have also stated in the past, blending in the TransCo's earned ROEs in the state with that of PSO does not equate to a higher earned ROE in that state – TransCo's contribution is not material enough (i.e., ~30bps) to negate PSOs under-earning. **So, while we continue to see upside in AEP shares if it divests underperforming assets such as PSO and reinvests the proceeds and captures a wider ROE spread despite tax leakage, as well as, the benefits of merely simplifying the story, we do not see it as a NT catalyst to drive shares as it will take time to play out**. In our previous work, we found this to be +3% accretive to AEP shares under very conservative assumptions and further note that mgmt. has affirmed it

would consider selling if PSO receives an unfavorable decision for its pending rate case. **What defines an "unfavorable decision"?** This includes if PSO does not get performance-based rate making or tracker for transmission. **For more on PSO see our detailed note HERE**.

- **As a reminder, we view the significant ROE lag at PSO as structural and believe our case for a sale of PSO to maybe a player like OGE on the buying end would be a potential win-win for both parties involved if something leads to a transaction – accretion all around:** over +3-6% for OGE, 1-2% for AEP under modest 50% capital redeployment assumption. There are several complexities that need to be worked out if the Oklahoma commission fails to deliver this a 3rd time around, including the relocation of employees, tax leakage as well as the redeployment of proceeds (i.e., how quickly). For a full drilldown on this thesis see our note HERE - our estimates in the analysis assume full tax leakage and a quick redeployment of proceeds. **As a reminder and for historical context, when AEP exited merchant generation a couple of years ago, it did have an earnings divot that took several months to backfill following the GenCo sale. That said, shifting to today, capital growth opportunities seem to be more fruitful than in the past, especially around wires and renewables.**

Source: Guggenheim Securities, LLC.

- **Valuation:** Our new $78 price target is derived from our 2020 EPS estimate of $4.44 (previously 2019E of $4.17) for AEP's regulated utility subsidiaries and applying a target multiple of 18x (our regulated utility multiple of 17x plus a one turn premium) gets us to an $79 valuation; we subtract ~$2/share for Holding Company drag, amongst some other items, and discount our valuation back one year to arrive at our 12-month price target of $78.

- **Risks: Upside risks:** AEP could breach our estimates/valuation if capital investments exceed our modeling assumptions, or with interest rate changes below those reflected in our regression model. **Downside risks:** as a fully regulated name, AEP is exposed to rate case risk, and potential rising interest rate risk.

ALLETE (ALE, NEUTRAL, $74 PT)

ALE continues to trade at a premium valuation – NT focus remains on ROE improvement at MN Power and execution at ACE and US Water, LT business mix continues to shift, albeit slowly.

- **We are maintaining our NEUTRAL rating and raising our price target to $74 from $71 as we roll forward our valuation.** We view ALE as somewhat of a unique story within our coverage universe – it has grown at a relatively in line 5-7% growth rate, but underneath this is an operating mix that is slowly shifting towards a higher contribution from its unregulated subsidiaries. This is a result of very different growth profiles in each business; ALE's regulated segment is for all intents and purposes a single-state utility (SWP&L in WI has a ratebase <$70mm) with ratebase growth of only 1-3%, while the Clean Energy and US Water businesses are projected by mgmt. to grow significantly faster (we model ~9% 2018-2022 CAGR). This differential will take the regulated business from approximately ~84% of earnings in our 2019 estimates down to ~77% in our 2022 estimates. Valuation and the potential need to do a regulated deal keeps us on the sidelines for now; fundamentals remain sound.
- **We are launching our 2022 EPS estimate of $4.46 and updating our 2018-2020 outlook to $3.34/$3.71/$4.01 from $3.39/$3.79/$3.98**. Our 2021 estimate of $4.20 remains unchanged. Our 6% consolidated earnings growth outlook (through our new 2022 trajectory), which is in line with management guidance of >5%, is comprised of ~7% regulated earnings growth accounts for ~84% of total earnings in 2019, and our 9% non-regulated growth outlook. The latter is driven primarily by incremental renewable investments at Clean Energy and to a very small degree by U.S. Water. We arrive at ~2-4% YoY earnings growth at the utilities based on modeling ~2% rate base growth and ~9.25% earned returns (with some further drag in 2019 from the Husky refinery outage), with ~$160mm in CAPEX/year, generally a balanced cap structure, 2% volume growth and consistent growth at ATC, etc. We also assume minimum idled taconite production with customers through 2021 and continued contribution from equity investment in ATC. We assume modest growth at the non-regulated segment driven by continued wind expansion at ACE as well as steady customer growth at U.S. Water. **Our newly-introduced 2022 EPS estimate implies a CAGR above the LT growth guidance midpoint of 6%, but within the 7% top end guide. As a reminder, additional industrial customers like Mercuria (detailed more below) could be incremental catalysts to growth.**
- **2019 potential catalysts aplenty, there are key items for investors to be aware of in the new year…** On the regulatory front, ALE continues its efforts to trim costs at MN Power and earn its allowed ROE of 9.25%. This has been impacted somewhat by the Husky refinery outage – we remain on the lookout for any details regarding the restart schedule. For rates themselves, **mgmt. has indicated that they could pursue a rate case potentially in November 2019 for a 2020 test year.** It remains to be seen whether this will include the previously-proposed ARRM mechanism, or a change in the ROE (mgmt. has recently pointed to a 10% allowed decision in a competitor's MN gas rate case). ALE is also applying for approval of its investment in Tenaska's Nobles 2 wind project after it faltered post-tax reform. As a reminder, MN Power is the 250MW project's offtaker. Mgmt. has indicated that its proposed 49% stake in the project would not require additional equity. On the unregulated side, we continue to look out for additional wind opportunities at ACE, as the subsidiary has seen some steady traction in putting its safe-harbored turbines to use. US Water remains a relatively smaller part of the business through 2022, and we note that mgmt. has not made secret its desire to see the segment exceed its cost of capital.

- **Taconite customers continue to operate at full capacity – prospects for additional load remain positive, albeit somewhat elusive…** ALE's major taconite customers continue to operate at full production capacity, and we model as such through our forecast period. More importantly, two key customers are progressing well: **(1) Polymet:** the copper and nickel mine for which almost all of the major permits are in hand and **(2) Mesabi Metallics (former Essar Steel):** an unfinished taconite project that had been in and out of bankruptcy prior to receiving a ~$650mm investment from Swiss commodity house Mercuria. As a reminder, **PolyMet's 50MW of load are included in ALE's planning, while Mesabi's potential 110MW would be incremental.**

Source: Company reports, Guggenheim Securities, LLC estimates.

- **Valuation:** We value ALE as a regulated utility, as the non-regulated businesses are a relatively small part of the business mix, and focus on utility-related infrastructure or services, arriving at our $78 price target using our regulated group multiple of 17x, which is based on our regression model using the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, and now ascribe a two-turn premium to reflect M&A premium this market cap range tends to trade at and incremental growth opportunities not embedded in our multiple or EPS, which is applied to our 2020 EPS estimate of $4.01.
- **Risk:** Outside of the smaller base of large industrial customers and weak industrial demand, risks to achieving our fair value/share for ALE mainly encompass traditional risk factors inherent with regulated utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

  Upside risks to our fair value estimate include: (1) favorable regulatory settlements; (2) acceleration in taconite production; and (3) higher CapEx outlook.

AVISTA CORPORATION (AVA, NEUTRAL, $42 PT)

After getting the Hydro One acquisition of AVA blocked in WA, we believe AVA is likely to become a high price, low growth utility stock, buoyed by future M&A expectation.

- **We are maintaining our NEUTRAL rating and $42 PT.** The AVA-Hydro One (H.TSE) merger story of last year fell apart with the WA UTC rejecting the merger application on the grounds of public interest according to state statute as it relates to foreign government control. With major breaking points being the contradiction to Hydro One's (H.TSE) testimony that the province of Ontario would remain a passive investor as evidenced by the board and CEO removal due to political outcomes, we do not see a pathway for this deal to resume, especially as the Oregon PUC has vacated the December 14, 2018 decision date to consider the denial posted in WA. ID PUC is another challenging jurisdiction that has seen staff remain in opposition alongside intervenors after the November technical hearing and does not currently have a deadline set for a decision. For our most recent thoughts on merger, see HERE.
- **For 2019, we see the company either moving back to core operations, as regulatory backlogs (i.e. rate adjustments) need to be filed, or seeking another acquiring party to step in as soon as possible – latter not a likely factor in the NT.** We see it unlikely for another party to step up on short notice since it would have to be a domestic utility operator with reasonable scale and have a plan for the benefit of AVA customers that would pass approval in 5 states. In our view, some of the Pacific Northwest utilities could be potential suitors, but we envision that much of 2019 could be focused on trueing up rates for AVA and any strategic opportunities likely a 2020+ story.
- **Maintaining our 2018 EPS estimate, updating 2019-2021 EPS estimates ($2.19, $2.31, $2.38 respectively) and introducing our 2022 EPS estimate of $2.45.** Our estimates are based on a 4-6% regulated utility rate base growth from 2018-2022 with a 49.1% equity ratio and 9.9% allowed ROE, while earned ROE reflects 150-200bp ROE regulatory lag. On a consolidated basis, our outlook implies a ~5% EPS CAGR though 2022, excluding acquisition costs and breakup fees, which may offset some equity needs in the future.
- **There are no major rate cases currently in progress and some potential exists for near-term underearning due to regulatory lag and expenses not covered in current rates.**

Source: Guggenheim Securities, LLC; FactSet consensus estimates.

- **Valuation:** Our $42 PT is based on an 18x multiple applied to our 2020 EPS estimate of $2.31. We use a 1x premium to our baseline regulated multiple of 17x to adjust for an acquisition premium for AVA going forward.
- **Risks:** The primary risks on the regulated utility encompass the traditional risk factors inherent with all utilities including: (1) rate case risk, (2) lower/higher capex outlook, and (3) interest rate changes above/below what we account for in our regression model. M&A risks: Failure to approve the pending acquisition of AVA by Hydro One could impact the valuation of AVA.

AMERICAN WATER WORKS (AWK, NEUTRAL, $96 PT)

We remain neutral on valuation as AWK continues to trade at a premium valuation above historical spread vs. gas LDCs. The underlying fundamentals of AWK's regulated business remain sound in our view, and growth remains in the top quartile so we look for a better entry point.

- **We remain NEUTRAL rated based on AWK's relative valuation**, with the stock now trading at a three-turn premium vs. gas utilities and a six-turn spread vs. electric utility counterparts. While we recognize that water utilities are ascribed a higher premium compared to electric/gas utilities given higher growth prospects, less risk around rate cases and perpetual capital deployment opportunities, AWK's relative valuation has remained near an all-time peak for much of 2018**. We continue to look for a better entry point, as AWK's strong growth and underlying fundamentals remain attractive and mgmt. team remains top tier, in our view.**
- **AWK's 7-10% growth profile remains above-average in our universe, with the overall structure retaining its emphasis on the regulated segment; at the aforementioned premiums we believe the valuation already reflects this outlook.** AWK's large spreads vs. gas and electric utilities reinforce our thesis that AWK is fairly-to-slightly overvalued at current levels, while on an absolute basis AWK remains outside of our ETR threshold - based on our $96 PT. **At this juncture, we don't see further NT catalysts that would drive earnings growth higher to warrant a higher multiple re-rating, although overall we remain positive on the fundamentals of the story; growth, strong management, inorganic opportunities, etc. so we seek a better entry point.**
- **Regulated business' focus remains on bolt-on expansion and rate case execution.** Mgmt. continues to target small municipal utilities for acquisition and integration into its system, with ~56k customers to be added across 20 acquisitions in 8 states. Organic growth added another ~9k customers as of 3Q18. Supporting this strategy, legislation has now been passed in CA and MO that allows for simple majority votes for municipalities exploring the sale of their systems. This slow roll-up strategy mirrors the one we've seen at NWN, which is also looking to expand its water segment via municipal acquisitions. On the regulatory front, AWK closed out several rate cases in 2018, including in one of its largest jurisdictions, New Jersey ($2.95bn rate base, 9.6% ROE, 54% equity). **We expect additional cases to be filed in other jurisdictions in 2019 as the capex program continues apace amid ample modernization opportunities.**
- **Market-based segment trimmed slightly in 3Q18, to remain below 15% of earnings through 2023 as Pivotal integration continues…** In a sign of mgmt.'s commitment to earnings strength in the market-based business, it recently trimmed the Keystone business' construction operations and sold a majority of Veolia's Contract Services Group. Both operations were in fairly competitive market environments, per management. **We do not foresee major adjustments to the market-based segment in 2019 given the ongoing Pivotal integration, however mgmt. has also shown it is ready to cut when needed.**
- **Refreshing our annual EPS estimates through 2021 and introducing our 2022 estimate of $4.60.** Our 2018-2021 EPS estimates move to $3.30/$3.61/$3.96/$4.27 from $3.31/$3.52/$3.81/$4.10 as we refresh and update our assumptions. Through our forecast period, we now model earned ROEs of ~9.9% for the regulated utility compared to authorized ROEs of ~10%, as we expect minimal lag given regulatory mechanisms in place. The market-based business grows at a ~14% CAGR, through 2022 consistent with management's guidance. Additionally, we model ~$1.6bn in annual capital spend through our forecast period, in line with guidance of ~$8bn-

See pages 278 - 279 for analyst certification and important disclosures.

$8.6bn through 2023. Our 2022 estimate of $4.60 represents ~9% CAGR based on 2017 actuals and much of the same dynamics in prior years.

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** Water utilities continue to be ascribed higher multiples versus electric/gas utility counterparts given higher growth prospects and less risk around CapEx, which haven't slowed and are not expected to anytime soon, and lower perceived risk vs. electric/gas peers. Our $96 PT for AWK is predicated on our 2020 EPS estimate of $3.96 applied to an effective 25x P/E multiple, which we believe fairly captures the spread at which water utilities should trade vs. gas counterparts.
- **Risks:** Risks to achieving our price target for AWK mainly encompass traditional risk factors inherent with regulated utilities including: (1) rate case risk, (2) lower/increased capex outlook, and (3) interest rate changes above or below what we account for in our regression model. Decline in allowed ROE. A lower/higher allowed ROE can impact our earned return assumptions.

CMS ENERGY (CMS, NEUTRAL, $53 PT)

No frills story advances with above-average growth and no unexpected changes to complicate the picture – reflected in current valuation.

- **We are maintaining our NEUTRAL rating and raising our PT to $53 from $48 as we roll forward our valuation incorporating our 2020 EPS estimates.** CMS remains one of the few top quartile utility growth names in our coverage with consistent execution, good regulatory relationships and sustainable strategy. The valuation is currently at ~10% premium to fully regulated peers, which in our view adequately reflects the consistent top of the range performance and Mgmt. premium. We remain comfortable with its current growth trajectory and don't see the value in mgmt. revising growth higher despite having the levers to do so. **Our Neutral stance remains a valuation call but we do highlight CMS as one of our "upside" bias names earlier in the report.**
- **Maintaining our 2018 EPS estimate of $2.35, adjusting our 2019-2021 EPS estimates ($2.50, $2.69 and $2.88, respectively) and introducing our 2022 EPS estimate of $3.08.** We model a +7% EPS CAGR from 2018-2022, with our estimates incorporating average earned ROEs of ~10.3% for Consumers Energy utilities (vs. ~10% authorized) and we are including the ~20-40bps over-earning for energy efficiency incentives and renewables adder. **We continue to expect CMS to deploy capital expenditures of ~$1.8-1.9B annually through 2022, translating into total rate base growth of ~6% (Gas/Electric combined).** We expect the Gas segment to grow at a faster clip with rate base growth of ~10% vs ~4% for Electric, with CMS previously acknowledging that lower commodity prices for gas is creating the opportunity to retrofit aging gas infrastructure on the grounds of safety and risk mitigation.
- **On the question of bill headroom in 2019 and beyond**, CMS detailed in our EEI meeting that with current bills below national avg for electric and slightly above for gas (due to large heating loads), using the competency of reducing bills through efficient operations, efficient capital, and O&M reductions, it should be able to manage increases to a minimum (~2%, inflation level) and expects to continue to do so as expensive PPAs roll off and become replaced with modular, low-priced alternatives.
- **Gas rate case filed in November and the ongoing Electric rate case not overly contentious; we continue to model in-line assumptions in rates.** For the electric rate case we expect no change to the current settlement with an allowed ROE of 10% and an equity layer ~41%. The settlement does not have IRM approval, but opens the dialog around the investment recovery mechanisms (such as distribution programs) to be discussed in 2019 workshops. CMS will stay out of electric rate cases in 2019, but will remain whole in terms of earned ROE due to existing tracking mechanisms, cost deferral and retained cost savings through the next rate case in 2020. CMS also filed the Gas rate case for 2019 rates in late November 2018, again with no financial parameters that were beyond expectation, with a 10.75% ROE, 42.17% equity layer, decoupling, IRMs, etc. – similar to the previous year's proposed application, which was later settled with a 10% ROE.
- **The IRP and 5yr distribution plan filing should provide LT visibility and allow for more transparency with the commission on the supply portion of the CMS growth plan** while allowing for less contested rate cases (latter point is key advantage of IRP). CMS expects coal retirements and LT generation spending to the tune of $10B in base 5-year plan with $1B in renewables with no concentration on any one project. The IRP also includes a potential upside of $3B in the 10-year

 See pages 278 - 279 for analyst certification and important disclosures.

timeframe for more modular renewables and supply projects, and includes energy efficiency incentives ~$45M/yr on a pretax basis.

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** We arrive at our valuation utilizing a sum-of-the-parts analysis, comprised of: (1) ~$35/share (up from $32/share) for the electric segment; (2) ~$19/share (up from $17/share) for the regulated gas segment utilizing our regulated electric P/E multiple plus a premium to account for the historical gas LDC spread above electric counterparts; and (3) (-$1)/share for the Enterprises segment (merchant generation) and Corp. & Other segment. We then discount our valuation back to the PV to arrive at our $53 PT.
- **Risks:** CMS risks mainly encompass traditional risk factors inherent with all electric utilities, including: 1) rate case risk, 2) lower/higher capex outlook, and 3) interest rate changes above/below what we account for in our regression model. Additional risk factors include: Executing and implementing the Michigan Energy law and commodity risk exposure through CMS' Enterprises segment - a decrease/increase in power prices and spark spreads can negatively/positively impact the merchant generation business.

CENTERPOINT ENERGY (CNP, BUY, $33 PT)

Market valuation for CNP now lags fundamental value of a utility with solid growth, favorable geography, solid regulatory construct and upside to capex especially as we move through VVC deal – Upgrade to BUY and adding to Best Idea list on valuation disconnect and NT potential catalysts. We recommend owning CNP heading into the VVC deal.

- **We are upgrading CNP to a BUY rating (from NEUTRAL) and our $33 PT (from $29) as we roll forward our valuation incorporating our 2020 EPS estimates.** Our valuation call is based on 2018's relative underperformance of ~100bp vs. the S&P Utilities (as we stayed NEUTRAL rated), while the fundamental value drivers remain in place and are actually improving for 2019 – solid growth, constructive regulatory environment and potential upside catalysts. **We view CNP as a solid utility performer with some midstream exposure similar to NEUTRAL-rated OGE, but we favor CNP at this time due to valuation. CNP, BUY, $33 PT.**

- **We are maintaining our 2018 EPS estimates of $1.58, updating our 2019-2021 estimates ($1.72, $1.82, $1.92, respectively) for strong YTD performance and introducing our 2022 EPS estimate of $2.02.** We model a ~6% CAGR through 2022, with regulated utilities earnings ROEs of ~10-11% for the regulated electric and gas businesses, as we continue to expect minimal ROE drag given the regulatory mechanisms in place (i.e. DCRF, TCOS, GRIP, decoupling, and other riders/trackers). **Our estimates assume electric rate base growth of ~8% and gas rate base growth ~9%, as we model capex consistent with the high-level updates given on the 3Q call, with a detailed update expected on the 4Q call (March 2019).** See below for VVC accretion.

- **Our 2022 EPS estimate of $2.02 consists of earned ROEs near ~10% with some potential to temporarily earn above authorized levels before resetting rates**. We expect the company to earn near the top of the guidance range based on strong economic growth in existing service territories and constructive regulatory environment. We continue to model ENBL representing ~25% of the consolidated pie and contributing $0.51/share in 2022, consistent with YTD 2018 results and 2019 guidance extended to 2022 with no fundamental changes in the business. **We do not include the potential earnings accretion from the VVC merger as the deal is expected to close 1Q of 2019 but model upside under very conservative assumptions.**

- **Outside of a large premium for the ENBL shares, we aren't sold that CNP is a willing seller as history has shown –** we believe it will likely take a significant amount of time, perhaps 7-10yrs, before management can effectively sell down a material stake in ENBL given the capital market limitations of the MLP and thus, ENBL price has benefited from the removal of the technical overhang from a faster sell down process or other strategic moves – i.e., limited public float and minimum trading volumes of ENBL should continue to warrant a slow sell down in time. The midstream segment contribution will however become diluted once the VVC acquisition closes in the first quarter of 2019 and only remains pure upside for our valuation/estimates.

- **How much incremental regulated growth can we expect from capital updates at CNP utilities, near-term synergies from the VVC merger and LT upside to VVC capex?** We expect management to revisit its capital plan on the YE18 call, as they **have openly discussed having an upward slanted bias in spending through transmission, grid modernization, storm hardening, and gas pipeline replacement projects.** The preliminary update called out 5-10% upside for the entire 5 year plan, which includes a roll off of 2018 and 2022 introduced. Some of the project call-outs like Freeport and natural gas cast iron replacements may be the majority of the 5-10%, and we see potential for other increases to emerge on or after the initial detailed plan is unveiled on the 4Q call. **The VVC synergies point to a ~2.5% EPS accretion, based on our 2Q accretion analysis,** with management remaining light on the details of the integration plan until a full review of VVC financial plans, which is expected to be kicked off in 1Q of 2019 (as soon as the deal closes) with potential to get at least some incremental updates by the 4Q call (expected to be held in March 2019). Another element that could potentially emerge is a **higher or longer capex runway for VVC given the deferred organic capital spending** during the M&A process. **Overall, we remain confident in CNP's ability to achieve the top-end of growth over the next several years, making the BUY call on favorable valuation and our view that the fundamentals of the company have not changed, they have gotten better – this valuation-growth discount put CNP as our Best Idea.**

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** We arrive at valuation utilizing a sum-of-the-parts analysis comprised of: (1) ~$13/share (up from $12/share) for the regulated electric utility when we apply our target multiple to our electric EPS estimate of $0.79; (2) ~$10/share (up from $8/share) for the Gas utility, ascribing our historical LDC premium spread to the group average electric utility multiple on our gas EPS estimate of $0.48; (3) ~$1/share for Energy Services; (4) ~$11/share (up from $10/share) for CNP's ~54% ownership of ENBL's LP units, based on cash distributions of $1.32 per unit and applying an ~7% target yield; and, (5) (~$2)/share for Corporate & Other. We then discount our valuation back to the PV to arrive at our $33 PT.
- **Risks:** Outside of potential midstream volatility, risks for CNP mainly encompass traditional risk factors inherent with regulated utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

CLEARWAY ENERGY (CWEN, NEUTRAL, $17 PT)

Downgrading to NEUTRAL, NT growth opportunities support mid to low end of DPS guide; we need more time to get comfortable with new sponsor, pipeline and contract quality - lower growth vs. peers a NT headwind in a very selective YieldCo investor base… we think CWEN will work but it will take time to play out.

- **Downgrading CWEN to NEUTRAL from BUY and lowering our PT to $17 from $22 - we continue to maintain modest expectations for growth while continuing to build confidence in the new sponsor, assets and contract quality.** CWEN's growth opportunities continue to support mid to lower end of 5-8% DPS guidance. At least for the start of '19, we see very limited appetite for yieldcos and continue to prefer NEP over CWEN, despite the former's valuation, given higher and more visible growth trajectory, familiarity with the assets and sponsor. We think CWEN will work but more time is needed.
- **Our 2022 DPS estimate of $1.53 equates to a 5% CAGR off a 2018 base.** We are lowering our 2019 DPS expectation to 5% YoY growth and this brings down our 2020/2021/2022 estimates to reflect modest dropdowns with the underlying portfolio. We see the new sponsor taking time to grow the asset base and for this reason we do not assume any large (1GW+) dropdowns in the NT. We are still trying to get comfortable with the new PE-backed sponsor. Our assumptions assume payout of ~80% range, '18/19 CAFD of $285/$321mm growing to $362mm by 2022 among other items.
- **As a new company with a new sponsor it will take time for CWEN to fire on all cylinders.** Mgmt is very clear that 5-8% is a LT target and further believes this is a fair growth guide when compared to a variety of income producing industries like MLPs, REITs, etc. – not sure we are fully onboard, but we get the rationale. Structurally the idea is to not set expectations too high and/or create too much of a reliance on equity especially given the current trading yield. We note, one positive is with the DevCo constructing/acquiring assets CWEN should continue to have a younger age for its portfolio over time vs. peers with pre-built pipelines. Mgmt has mentioned they see 3rd party opportunities in the market and presumably with the capital of a PE sponsor CWEN is potentially better positioned vs. its former sponsor – we take a wait and see approach.
- **We continue to prefer NEP over CWEN in the NT with higher growth and a trusted, investment grade sponsor - we see NEP outperforming its yieldco peers despite the lower yield.** NEP remains the best option in a highly selective investor base, in our view. While CWEN trades at a higher yield than NEP, NEP remains our preferred name to own given sponsor strength and material distribution growth prospects with very little need to access the public equity markets. Unless capital is provided by its PE sponsor, CWEN will likely need to continually access external capital markets at attractive levels to fund large dropdowns and drive above-average distribution growth – hence why DPS growth is materially below NEP. In other words, NEP has changed the yieldco game by side-stepping public markets and raising capital privately (i.e., $750mm BlackRock [BLK] transaction).
- **Over the long term, SPWR 4.7 GW acquisition should drive growth higher, but assets will take time to de-risk**. These assets are sitting above CWEN at the DevCo – note some do not have PPAs yet. Mgmt has noted it could take 24 to 30 months before all of these assets are constructed, de-risked and secure signed PPAs. The lead time slows NT organic growth opportunities and factors into our lower DPS assumption. CWEN's sponsor Global Infrastructure partners has set up a 9.5 GW project pipeline controlled by Clearway Group. As of 3Q CWEN had 832 MW of committed + ROFO projects.

- **Valuation:** We apply a 7.5% target yield to our estimated distribution of $1.39 in 2020, and discount back one-year to arrive at our $17 12-month price target.
- **Risks: Downside risks are:** CWEN is exposed to interest rates as it is an investment vehicle marketed to yield-oriented investors; as well as some construction, operating, and re-contracting risk, there is the risk of unfavorable weather. In our view, the largest risk to valuation is CWEN's ability to access capital markets, as the entity's growth could be challenged if it cannot issue equity on constructive terms. **Upside risks are:** CWEN delivering higher growth than expected, potentially with CWEN's development arm completing projects faster than expected and dropping down assets quicker than expected.

DOMINION RESOURCES (D, BUY, $82 PT)

Transformative year in '18 should transpire well in '19, in our view, with above average growth likely supported beyond current guide, stabilized B/S with incremental capital growth opportunities not within plan, Millstone upside potential among other NT catalysts – Bellwether position, in our opinion, to own in '19.

- **Reaffirming our BUY rating and raising our PT from $77 to $82 – we continue to see solid value especially post '18 being a transformative year coupled with our positive bend toward higher growth, and more cyclical energy names.** 2018 was a transformative year for Dominion and this sets it up nicely for 2019, in our view, with sustainable 6-8% growth, stabilized balance sheet and recent key wins – i.e., **led by full ownership of Cove Point, SCG upside, Millstone incentives, Virginia legislation among other items key drivers.** Our view: valuation continues to discount shareholder friendly actions and 2018 being a transformative year will have a positive effect on 2019. We see the recently closed acquisition of SCANA being +3% accretive under modest synergy assumptions; we believe there could be more room for upside potential on SCG deal given that Capex was held back during nuclear cost recovery phases – ample opportunity for renewables, conventional generation, wires, gas infrastructure and potential expansion of Atlantic Coast Pipeline into South Carolina among other items.
- **Introducing our 2022 estimate of $5.18 which equates to a ~7% CAGR through our extended trajectory.** Our estimates for 2019/2020/2021 of $4.27/$4.49/$4.76 are driven by strong ROEs at VEPCO (~12% on average through 2022), regulated electric CAPEX of ~$3Bn/year, balanced cap structure and modest amount of customer growth in addition to the various regulated generation projects in riders. Additionally, we assume modest growth at D's gas distribution and gas transmission businesses. We model ~3% accretion for Scana/year, which we deem as conservative. VA legislation, Millstone incentives offer pure upside potential to our estimates, in our view. Note: Fairless and Manchester no longer contribute to our estimates given recent sale.
- **D's Atlantic Coast Pipeline continues to have speed bumps related to permitting but we continue to see the pipeline getting built in time – continues to earn AFUDC.** ACP should contribute ~$0.16 cents per share to D's earnings in the first full year of service, in our opinion. **Currently ACP is dealing with two major permitting issues that are creating hurdles for the project. 1)** A biological opinion regarding endangered species which impacts all 600 miles of the pipeline and this caused the owners of the pipe to go shovels down. In theory, the endangered species are only located on certain areas of the pipeline and this legal argument could enable work to be completed on other section of the pipe. D is taking steps to accelerate the court schedule for actual hearings on the merits – looking for end of June earnings vs. late March schedule. **2)** US forest service permit issue which covers 21 miles of the pipe. This permitting issue was heard by a small panel of judges and for this reason D has requested an "en banc" review which will cause a review by the full panel of 15 judges – a panel of judges appointed by various political parties with a more diverse background could opine on the issue; could lead to a more judicious opinion.
- **DEEP awarded Millstone significant capacity in its zero carbon RFP – overall, we view this as a mixed bagged so far with more negotiations and dialogue needed. On the positive side: Millstone was awarded a large amount of capacity and a longer tenure in the RFP which is incremental to our estimates; On the not-so-positive side: price and thus, returns might be lower than initially expected so more negotiations with intervenors are needed to abate this.** The Connecticut Department of Energy and Environmental Protection (DEEP) awarded

Millstone ~9mm MWh/year which equates to over half of Millstone's output and was awarded a 10-year term: **DEEP separated the 10 year contract into two buckets: 1)** Mid 2019 to mid-2022 (pre at risk time period) for the first three years Millstone will be awarded energy only component of the bid which could imply a lower return than expected; **2)** Mid 2022 to mid 2029 (post at risk time period) DEEP directed the utilities (Eversource and United Illuminating) to negotiate a contract price at a lower ROE than D's original bid which could also imply a lower return than we expected. DEEP noted a normal utility rate of return on equity is 9% but DEEP would consider 12-15% reasonable for a merchant power plant with a long-term contract. As this currently stands, the viability of the plant remains uncertain.

- **We see upside potential to our +3% accretion math for D's acquisition of SCG given modest synergy assumptions and incremental growth opportunities with base capital spend being held back for years with VC Summer being built.** We view the merger stipulation as very supportive of D guidance and our ~3% prior accretion estimates – reminder deal economics remain unchanged despite changes to the "plan" since first announced so we believe our prior accretion estimates should still remain representative but likely still very conservative. The final incarnation of the D/SCG deal remains positive for Dominion and in our view providing additional support to D's 6-8% growth story and helping to extend the runway for above average growth post our current trajectory (i.e., potential upside could include more room to invest in renewables, grid mod, generation, wires, gas infrastructure).
- **Let's remember D, at a core, is an above average regulated electric utility in VA with healthy returns, constructive regulatory mechanisms including the use of Riders among other items** – **Virginia legislation opens the door for further CAPEX opportunities.** Recent legislation enabled a pilot offshore wind program of 12 MW but management recognizes the Commission wrote a very reluctant opinion when approving the program and further highlights that legislation makes the program in the public interest, not economics. While the economics don't look impressive, operating the pilot program and eventual scale could drive better economics in the future especially given the location of where the utility is located in VA. More specifically, when we asked management in prior meetings about offshore vs. onshore, it was explained that due to zoning issues, and population density on the east coast, it's nearly impossible to get onshore wind done in Virginia – offshore is more of a reality. **We continue to view the recent Virginia legislation promoting investment carrots rather than sticks, i.e., while there is no mandatory Renewable Portfolio Standard (RPS) in the Legislation, it could enable offshore wind, grid modifications, solar and energy efficiency programs which are incremental opportunities for D.**

Source: FactSet, Guggenheim Securities, LLC.

- **Valuation:** We derive our regulated utility group target multiple of 17x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years. Our valuation is based on our sum-of-the-parts analysis comprised of (1) ~ $45/share from VEPCO; (2) ~$13/share from gas distribution using a 4x historical gas premium to regulated electric target multiple; (3) ~ $38/share from gas transmission using a 4x premium to our 17x regulated target multiple; (4) ~$1/share from generation using a 6x EV/EBITDA multiple; and, (5) (~$15)/share from Corp & Other. We then discount our valuation one year back to arrive at our $82 PT.

- **Risks:** Commodity risk: A drop in gas price below what we model can equate to a contraction in quarks for D's unregulated fleet (nuclear), although we would note that nuclear support in CT would mitigate some of that risk. Dropdown risk: Unfavorable drop-down economics can impact our cash flow centric metrics. Outside of the above-mentioned items, risks to achieving our price target for D mainly encompass traditional risk factors inherent with all electric utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

DTE ENERGY (DTE, BUY, $129 PT)

Strong regulated utility growth and a well performing midstream business are generating significant value; DTE remains a selective BUY among our utility coverage.

- **We are maintaining our BUY rating on DTE and raising our PT to $129 from $119 as we roll forward our valuation to 2020 estimates.** DTE ended 2018trading at a ~16.6x P/E multiple, which is a slight discount to our midstream exposed (multi-industry) utility and fully regulated peer groups (16.8x, 16.9x P/E respectively). We still think the DTE businesses have sound fundamentals, with DTE utilities having above-average growth prospects, a gas LDC business which trades inherently at a premium, a constructive regulatory backdrop, and an ever-growing midstream presence in the right basins. **With our selective view of utilities in 2019, DTE continues to show potential for growth in the regulated and GSP businesses above current expectations and therefore we maintain our BUY rating. Outside of extraordinary events or fundamental deterioration we remain constructive on DTE.**
- **Refreshing our 2018 EPS estimate to $6.40 for YTD results, updating 2019-2021 estimates ($6.32, $6.84, $7.34, respectively) and introducing our 2022 estimate of $7.70.** Our 2018-2021 EPS estimates are based on 6% growth at DTE electric (with ~10.1% ROE going forward), 8% growth at DTE gas (with 10.1% ROE going forward), a flat to slightly declining contribution from P&I, continued growth from the GS&P segments reflecting business development activities and the latest increases to capex (to fund expansions and incremental gathering connection). Energy Trading would also nearly double to $30-40M in contribution by 2020.
- **DTE's midstream segment (GS&P) continues to be a growth engine with GSP operations and opportunities on Link and Nexus pipes expected to have favorable performance and provide potential for upside.** DTE 5 year, 15B capital plan is a 17% increase over the previous iteration and is partially levered to opportunities in GSP expansions. While the $1.2-1.6B GSP expansion does not have firm projects associated with the capital, management has been having constructive conversations with producers and counterparties as to the probability of such investments over the next 5 years. We expect the GSP segment to grow near the LT guidance level of 12% CAGR from 2017 levels.
- **Regulated segment remains strong as DTE has no shortage of organic growth opportunities while rate cases are not expected to be contentious and now include investment tracking mechanisms (IRMs),** which if approved would streamline multiyear program approvals and reduce regulatory lag. We model capital expenditures of ~$1.9bn annually for DTE Electric, translating into total rate base growth of ~7%; and for DTE Gas ~$415mm of capital deployment with 6% rate base growth through 2022. While DTE is still expected to be a serial case filer, the company targets maintaining rate increases around inflation or less and has the O&M levers to do so through productivity, natural attrition of the workforce, and the transformation of its generation fleet.
- **Doing a consolidation of the business assumptions at a high level results in growth figures at or above the high end of the 5-7% long term target set by DTE**, despite some investor skepticism around earnings quality dilution from non-regulated sources (including increased Energy Trading contribution). **Overall, we get a sense that the new guidance is constructive for the value of DTE with expected LT results comfortably within the 5-7% guidance**.

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** We arrive at our valuation utilizing a sum-of-the-parts analysis comprised of: (1) ~$76 (up from $68) for DTE Electric utilizing our target 17x multiple, 1x P/E premium and $4.25 estimate; (2) ~$22 (up from $20) for DTE Gas utilizing our target multiple, 4x Gas LDC spread plus 1x premium for above-average growth and EPS estimate of $1.01; (3) ~$12 for Power & Industrial Projects; (4) ~$31 (up from $30) for Gas Storage and Pipelines; (5) less than ~$1 (up from $0) value for Energy Trading; and (6) ~($10) (down from -$9) for corporate drag. We then discount our valuation back to the PV to arrive at our $129 PT (up from $119).
- **Risks:** DTE risks mainly encompass traditional risk factors inherent with all electric utilities, including: 1) rate case risk, 2) lower capex outlook, and 3) interest rate changes above what we account for in our regression model.

DUKE ENERGY (DUK, BUY, $94 PT)

Duke is one of our few remaining bond surrogate calls. We believe it is undervalued vs fully valued sector, with manageable expectations, good regulatory construct, and potential upside to capital plan including renewables. Value remains on the sidelines, hence our continued support for shares.

- **We are maintaining our BUY rating on DUK and raising our price target to $94** from $86, as we roll our regulated utility valuations forward to base off 2020 earnings, and apply a one-turn premium to our target multiple for regulated utilities. DUK is a solid name to own for investors concerned about broader market volatility, potential recession risk and/or looking for upside to growth from renewable investments among other items. **Couple these with an attractive valuation level (vs a fully valued electric utility sector) and manageable expectations vs Street and DUK's own internal growth parameters, shares should still point to further rerating vs peers.** Reiterate BUY.
- **Introducing our 2022 estimate of $5.91 which incorporates a 5.2% CAGR off the $4.60 2017 original mid-point mgmt. guides from.** Our forecasts for 2019/2020/2021 of $5.00/$5.26/$5.57 trend to the top end of mgmt's 4-6% growth guide but are mindful of mgmt's caveat to expect low end (~4%) in 2019 and mid to high end (5-6%) for 2020 and beyond. **We see upside potential to DUK's growth (or at least a potential acceleration) if it executes successfully on its renewable initiatives in the Carolinas, which could amount to over $2bn in incremental spend among other spending items.** We see balance sheet strains in the review mirror (close to industry average now), and we expect no more equity needs beyond DRIP/ATM even if DUK wins NC solar RFPs. **We continue to see ACP getting completed but permitting issues will be a speed bump in the NT. That said, Duke has levers to pull to fill any NT growth gaps from a project delay, if need be, including a faster refund of unprotected ADIT (See more thoughts HERE) which could help drive rate base growth higher depending on the timing of the refunds** (i.e., any growth divots from project delays could be partially/fully mitigated by deferred tax refunds). As a reminder, deferred taxes were agreed to be held by DUK in SC and NC until the next GRC which, ironically have been filed in both DEC and DEP so will be addressed during these proceedings. On the M&A front we don't see DUK looking to acquire especially now that Scana is closed. We believe we could see a potential sale of KY if price is right and further balance sheet strengthening is needed.
- **DUK is also close to partially monetizing its commercial renewables portfolio – a well subscribed process.** A data room was opened for the potential partial monetization of 3,000 MW of commercial renewables and a resolution on this could be reached by 1Q19. DUK noted that the percentage sell down could vary by project but views this monetization as a solid financing tool. We wouldn't be surprised if proceeds were reinvested as well as some de-levering opportunities – former seems more likely to us.
- **Renewables opportunity underappreciated, in our view, HB 589 continues to present a substantial opportunity to DUK.** There are 2.7 GW of total renewable opportunities that the bill unleashes and 30% of this DUK can self-build and with no cap on what DUK could acquire from developers (potentially the remaining 70%). **We believe the total opportunity could be over ~$2.0bn assuming ~$1-1.50/watt**. In July 2018 the RFP was launched for 680 MW which are projected to be in-service by

2020, Oct 9 bids were submitted and over the next several months bids will be evaluated by an independent administrator. In 1H19 the winning bids are expected to be announced and in 2H19 the new project construction is anticipated to begin for the 2020 in service dates. **For more background see our recent NDR with mgmt. HERE.**

- **Permitting issues continue at ACP (i.e. court vacated permits) but DUK will earn AFUDC and the winter construction schedule could provide some cushion.** On Thursday December 13 the U.S. 4th Circuit Court of Appeals vacated ACP's existing U.S. National Park permit, which included a right-of-way to cross the Appalachian Trail in a national forest. Roughly 20 miles of ACP's 600 mile pipeline cut through national forest land. ACP's owners/developers disagree with the Court's decision and note the decision has boarder implications for all oil and gas pipelines that cross the Appalachian Trail along its 2,200 mile course from Maine to Georgia (roughly 50 pipelines do so according to the owners). ACP owners have requested an "en banc" review by the full 4th Circuit and additional next steps are expected to be announced in the future. **As a reminder, in the 3Q some delays for Atlantic Coast Pipeline pushed the in service date from YE19 to mid-2020 and caused a $500mm cost increase from $6.0-6.5bn to now $6.5-$7.0bn.** On its 3Q18 call DUK mgmt. affirmed that returns on ACP will be commensurate with existing regulated returns (see 3Q DUK note HERE) and noted they will continue to earn AFUDC. The 600 mile 1.5Bcf/day pipe has potential to upsize to 2Bcf/day and extensions into South Carolina and beyond.

- **Valuation:** We derive our regulated utility group target multiple of 17x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, and now ascribe a one-turn premium to reflect several externalities (e.g., macro/geopolitical uncertainties) that continue to support the group trading beyond fundamentals and forward-yield expectations; we apply the 18x multiple to our 2020 EPS estimate of $5.26 and discount back one-year to arrive at our $94 12-month price target.

- **Risks:** Risks to our rating and to achieving our price target for DUK mainly encompass traditional risk factors inherent with all electric utilities including: 1) rate case risk, 2) lower capex outlook, and 3) interest rate changes above what we account for in our regression model.

CONSOLIDATED EDISON (ED, NEUTRAL, $82PT)

Maintaining our NEUTRAL view on the moderate growth potential at the utilities, current yield cycle and no significant upside from the competitive business platforms in the NT despite sound fundamentals, regulatory construct... though '18 underperformance has made shares more attractive.

- **Raising our price target to $82 as we roll forward to a 2020 valuation year but maintaining our NEUTRAL stance.** ED remains a regulated utility with bond proxy characteristics and it remains expensive in our view of utility sector valuations. We expect ED utilities to grow rate base at ~6% through 2021 and we expect earnings to track closely with the exception of share dilution and regulatory risk as the next rate case is yet to be filed. ED utilities contribute over 90% of earnings, with the remainder coming from contracted renewable, transmission, and gas pipeline and storage assets. ED has been acquisitive with renewables in 2018, but management has stated it will likely pivot back to the "develop, build and operate" strategy in the near term, with an opportunistic approach to asset acquisition and conservative view on contracted gas assets. **With our current view of remaining selective on the utility sector and an absence of catalysts for ED, we remain NEUTRAL rated on the stock, with an $82 PT.**
- **We are updating our EPS estimates for 2018-2021 to $4.25, $4.36, $4.61 and $4.79, respectively.** We expect the ED utilities to earn close to its authorized ~9% ROE throughout our forecast period and do not foresee an upside on regulatory outcomes (9% for CECONY ex-steam, 9.5% O&R). On the CET (transmission) front Mountain Valley Pipeline is expected to be in service early 2020. Our model for CEB currently does not include the earnings contribution from the pending renewable asset acquisition. **Per the company, while the earnings contribution is expected to be to be in the $34-38M range in the post 2021 timeframe, the cash return profile is expected to be front skewed with 90% of the return expected in the first decade of ownership.** The self-delivering capital structure should also help create headroom for further investment or reduce overall capital needs. **We would also note ED is naturally hedged against rising rates to some extent with formulaic ROEs, and an allowed ROE increase coming out of multi-year rate plans after 2019 is a possibility in a rising rate environment.**
- **We are rolling out our 2022 EPS estimate of $4.95.** 2022 estimates are based on the ~6% rate base growth and ability to earned allowed ROEs for ED utilities, with a modest EPS growth contribution from CEB and CET business lines as no major projects are expected to enter service at that time. Projects on the horizon for ED are the placeholder $400M of renewable development and the MVP expansion (6.375% ownership for ED; much smaller 73-mile/0.3 Bcf/d expansion vs. $4.6B MVP line, 301 miles, 2Bcf/d). Neither the projects listed nor the pending acquisition of SRE renewable assets are currently in our numbers.
- **Con Edison will be filing a CECONY electric and gas rate case in early 2019 for rates starting in 2020.** CECONY typically files (and receives approval/settlement) for multi-year rate plans, with the previous rate plan set for 2017-2019. The ROE and equity ratio are formulaic, so we generally would not expect that to be a highly contested issue, with the previous rate negotiations mainly focused on O&M cost structure. **We expect the filing to be supportive of the 6% rate base CAGR and associated capital program as presented by the company on the 3Q call.** Overall we view the case to some degree a deciding factor for the earnings outlook and it will likely be an input to confirm the 6% rate base CAGR for the core utility business.

 See pages 278 - 279 for analyst certification and important disclosures.

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** We derive our regulated utility group target multiple of 17x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years; and now ascribe a one-turn premium to reflect ED's stable regulatory jurisdiction and contemporaneous return of capital, as well as several externalities (e.g., macro/geopolitical uncertainties) that continue to support the group trading beyond fundamentals and forward-yield expectations; we apply this multiple to our 2020 EPS estimate of $4.61, and discount back to arrive at our $82 12-month price target.
- **Risks:** Downside risks to our rating and valuation mainly encompass traditional risk factors inherent with all electric utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

  Upside risks to our rating and valuation: If forward bond yield expectations fall, if ED achieves a better-than expected performance vs. our model (i.e., achieving a higher ROE), or if any of the above-mentioned items turn out to be more favorable versus our model, shares could breach our price target.

See pages 278 - 279 for analyst certification and important disclosures.

EDISON INTERNATIONAL (EIX, BUY, $69 PT)

EIX continues to be our preferred California re-rating story. Due to potential wildfire liabilities and strained regulatory environment, PCG and EIX have become special situation relative calls, with EIX having a cleaner growth path and fewer long-term overhangs, in our view.

- **Maintaining our BUY rating, $69 PT (up from $63), based on our 2020 EPS estimate of $4.93,** while our view on **potential liabilities and future resolution to wildfire exposure provides significant upside potential to EIX's stock price** with a high yielding dividend and a less binary risk scenario than PCG. We view the potential liability related to wildfires as manageable (pending CalFire finding of fault/negligence) and **simultaneously over-discounted in the current stock price on the order of ~11%** (see our California section). Outside of wildfire liabilities, EIX core rate base growth is expected to be in the 8-9% range at the current capex and General Rate Case (GRC) requested levels. Despite the long delay in GRC approval and the strained regulatory process, we expect **EIX to be well positioned for a "return to basics" regulatory re-rating once regulatory processes catch up, without compromising the utility's financial or operational integrity.**

- **Adjusting our 2018-2021 EPS estimates to account for probable recovery of wildfire insurance costs and an eventual outcome to the long delayed 2017 GRC.** Our 2018-2021 estimates are now $4.15, $4.57, $4.93 and $5.37 for the respective years. We expect EIX to earn the allowed 10.30% ROE in the period, with rate base growth closely tracking the current GRC proposed level through 2019, and growing consistently after 2019 (inclusive of placeholder growth for Transportation Electrification, RAMP and other non-GRC projects); rate base growth in aggregate is ~8.7% through 2022. We model EIX parent and energy services (EEG) earnings contribution remaining flat at -$0.26 after EEG reaches an EPS neutral run rate by the end of 2019 (in line with company guidance). **We are not including potential outcomes of ROE adjustments at the CPUC or FERC level; with the CPUC filing due in April 2019 and ongoing at FERC through the Formula Rate filing.**

- **We are introducing our 2022 EPS estimate of $5.70 based on a return to timely regulatory approvals for general rate case cost recovery, cost of capital proceedings and non-GRC projects recovery.** The underlying rate base growth is ~8% in 2022 and includes the base trend for reliability and safety spending, grid modernization (extended from current GRC) and other projects such as energy storage and transportation electrification. We do not expect the competitive energy services (EEG) business to be a major contributor to earnings in our estimates as the business strategy is yet to be proven out in 2019. **We expect an 8.3% aggregate EPS CAGR over 2018-2022, but we note that 2018 base year may be considered lagging due to delays of the 2017 GRC (2018-2020 rates), and it is important to note that we do not include any drag or dilution for unrecoverable wildfire costs in our EPS estimates.**

- **A significant amount of regulatory activity in California - EIX still has an outstanding rate case for 2018-2020, and will be filing a cost of capital proceeding in April of 2019,** which is likely to be a contentious process, with early indications pointing to an ROE increase based on the risk factors the utility faces and the need for capital flows for an ambitious clean energy agenda in the state of CA.

- **On the related regulatory note – the regulatory backstop in working through the wildfire issues is potential for recovery through a CPUC process.** In 2017, the CPUC partially deferred cost recovery decision making to the legislature, seeking

See pages 278 - 279 for analyst certification and important disclosures.

to clarify the capacity and framework for recovery. The CPUC was later given some framework for consideration and allocation of costs through the passage of Senate bill 901. At this point management expressed that under the utilities code, the CPUC has a responsibility to provide cost recovery for prudently incurred expenses and has the power to allocate costs, with SB901 giving specific factors for consideration that the CPUC "may" use ("may" vs. "shall" language was under debate in the legislative process). EIX also believes that wildfire contingency plans that were filed with the CPUC better enable the commission to take decision making into their own hands. **Overall, EIX management is understanding of the investor frustrations with the lack of progress on wildfire resolution, acknowledges that the volatility of the stock in the range of $4-5B of market cap over several days (Nov 7- Nov 15) and negative credit rating changes demonstrate that the wildfire liability framework is incomplete.**

- **The circumstances for recovery of wildfire costs beyond insured coverage continue to be fundamentally broken in CA.** The cause of the major 2017 wildfires (i.e., Tubbs, Thomas) is still under investigation and could include multiple ignition sources given the overall size of the fires, with 2018 fire investigations being in the very early stages. After cause is established, which may subject EIX to claims under inverse condemnation in the litigation process (i.e., strict liability under premise of cost socialization), the probability of recovery of those court claims will be at first dependent on the finding of negligence on the part of the utility, which may involve the CalFire reporting, CPUC safety division (SED) reports and the company's own rebuttal in the process. **If there is no negligence found, and the utility is found prudent in its operations, the CPUC may allow for allocation and recovery of wildfire liabilities.** Outside of a regulatory process that is not well established by precedent, PCG's Butte fire case has become a battleground for determination of IC application to private/publicly traded utilities, with the CA Supreme Court currently reviewing the application of IC.
- **At the end of the day regulators recognize the disconnect between their responsibility to review prudency vs. the court's interpretation of inverse condemnation as it applies to regulated utilities**, effectively holding them liable for damages irrespective of cause, and without commensurate rate relief. We do not currently ascribe an allocation of the liabilities nor a probability of recovery through the regulatory process, rather we take a view of the potential aggregate liabilities. **Despite what seems like a lengthy resolution timeline, we believe this presents an interesting opportunity for investors that can weather the multi-year volatility we describe above, with eyes on a longer-term resolution.**

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

Valuation: We apply a 2x discount vs. the 17x multiple we employ for the regulated utility group, as we currently view Inverse Condemnation and the California regulatory environment as headwinds for EIX valuation relative to peers. We apply the 15x P/E multiple to our 2020 EPS estimate of $4.93 and discount 50% of our ~$2.5B wildfire liability as unrecoverable (or incremental ~0.75x P/E discount) to arrive at our new $69 price target.

Risks: Outside of exposure to the wildfires discussed above, downside risks to our valuation mainly encompass traditional risk factors inherent with all electric utilities including: (1) rate case risk; (2) lower CapEx outlook; and (3) interest rate changes above what we account for in our regression model.

EVERSOURCE (ES, BUY, $72 PT)

Welcome to reemerging as a bond surrogate but with solid growth opportunities: Core regulated utility businesses drive above-average, block-and-tackle 5-7% growth, look for capex upside on Feb call.

- **Reaffirming our BUY rating on ES and raising our PT to $72/shr, up from $63 as we shift valuation forward on 2020 fundamentals.** ES offers premium growth backed by fully regulated businesses. Mgmt. continues to maintain a constructive relationship with regulators in New England, which offers investors a level of regulatory clarity commanded by very few peers – **not the cheapest "bond surrogate" we recommend but NT catalysts and incremental growth opportunities should still translate into further multiple re-rating especially in this sector with very few ideas not inundated by binary events as we move through 2019.** Following Yankee Gas settlement, a majority of ES' spend has minimal to no lag (i.e., recovered in less than 12 months) with earned returns mirroring allowed through our forecast period.
- **Introducing our 2022 estimate of $4.17, which results in a 6% CAGR off of a 2017A base of $3.11**. Our estimates are driven by NSTAR electric earning its allowed ROE of ~11% by 2022, CL&P and PSNH earning healthy ~10% returns. We continue to exclude Northern Pass from our estimates but remind investors that ES has not written down its investment in the project yet – free option. Our 6% CAGR through 2022 falls in the middle of mgmt's 5-7% CAGR but we will look for updates to its capex plan on the 4Q call in February – we continue to model CapEx of ~$2.2Bn/year from 2019-22 combined for the regulated entities, ~$23Bn in rate base ex Northern Pass. ES typically updates its capex on the 4Q call and could look to extrapolate battery investments in MA to CT and other areas of its service territory among other spending opportunities including grid mod. The overall focus is on the core utilities with little discussion of binary projects, i.e., NPT, Access Northeast (officially written off this year). Our estimates continue to give no credit for Northern Pass Transmission even though ES hasn't written off its investment in the project yet. The recent Yankee Gas settlement was a positive for ES (including healthy ROE, decoupling) and is one recent example of the strong regulatory construct in NE region.
- **ES raised capex in 2018 by $600mm - an increase that could foreshadow other opportunities.** The main driver of the $600mm capex increase was grid mod in Massachusetts. This capex in MA was partially driven by battery investments at the distribution level. It's possible CT could enable battery investments too, which could unlock more capex spend. There is also a potential for incremental capex related to the gas distribution system. Reminder, an independent safety evaluator was recently hired to make recommendations after the September gas explosions in NI's service territory. It's possible that recommendations from the independent safety evaluator could be an impetus for incremental gas safety capex for ES's LDCs. NI has already said it is investing an incremental $150mm capex across its PA and OH gas distributions to fund safety improvements such as automatic shutoff valves.
- **ES mgmt. has stated it is keeping one eye open for potential acquisitions but not as a driver of growth nor as a way to backfill – opportunistic at best.** Mgmt. has highlighted that it would be interested in acquiring NI's Columbia Gas of Massachusetts if it came up for sale…but caveated, there is no indication that it is up for sale. (For more see HERE and HERE.) A predictor could be if NI's Columbia Gas files (or not) for a GRC – NI's MA settlement was revoked after the September gas explosions. As a reminder, ES did bid on Columbia Gas back in the day but lost the auction process to NI. Continuing with the M&A theme, ES last summer was in a bidding war for Connecticut Water (CTWS) but was outbid by SJW Group. The tide

might be turning here since SJW's acquisition of CTWS was recently deemed not in the public interest by local CT regulators…it is possible ES gets a second chance to bid for CTWS – **we do not assume this deal closes in our ES model and we consider this more as an option than a likely event in the near term.**

- **ES wrote off its investment in Access Northeast this year but didn't write off Northern Pass yet.** We and likely most of the Street do not include Northern Pass in any of our estimates going forward but by not writing off NPT, mgmt. implies under accounting rules there is some line of sight into recovery. It's key for investors to note that the Governor of New Hampshire made several public statements in support of Northern Pass shortly after the New Hampshire Site Evaluation Committee (SEC) denied the project. Governor Chris Sununu was recently re-elected for a second two-year term. The Chairman of the New Hampshire Public Service Commission serves a six-year term that will expire this summer. The Chair of the NH Public Utilities Commission is also the Chair of the New Hampshire Site Evaluation Committee and also runs the SEC's Northern Pass Committee. It's expected that NH's Governor (R) will replace the head of the NH PUC, which could shift sentiment at the SEC for Northern Pass. It's possible there could be a shift in the NH PUC and SEC's leadership by the time the NH Supreme court remands the NPT decision back to the SEC.

- **Valuation**: We derive our regulated utility group target multiple of 17x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, and now ascribe a three-turn premium, which accounts for ES's above-average regulatory construct/ mechanisms, certain growth items not imbedded in our EPS projections as well as to account for the reality that bond surrogates without binary risk could trade above what is dictated by yield expectations for a prolonged period of time given several externalities taking place. We apply this 20x multiple to our 2020 EPS estimate of $3.71 and discount back one-year to arrive at our $72 12-month price target (previously $63).
- **Risks:** Risks to our valuation mainly encompass traditional risk factors inherent with all electric utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

See pages 278 - 279 for analyst certification and important disclosures.

ENTERGY CORP (ETR, BUY, $96 PT)

Getting simpler… good traction in '18 with more to follow in 2019 – shares beginning to reflect transformation. Market was slow to align with our thesis but we think significant value upside still remains for ETR stock. Focus on Nuclear De-Risking with NDT sales, AR FRP Heading to the Finish Line and LA Following Suit. ETR could "enhance" their reporting disclosures beginning with YE results.

- **Reiterate BUY rating on ETR and raising our price target to $96 from $94 as we roll forward our valuation – once again we turn investors' attention to regulated utility growth and the nuclear de-risking plan at an attractive valuation.** The company is working to finalize regulated utility settlements in AK and TX, with a minor case outstanding in New Orleans (<$1B rate base). As regulatory outcomes continue to decrease the earned-allowed ROE gap, we expect to see a valuation improvement as the market starts to price in a mostly regulated utility with ~7% growth at the mid-point of guidance, with capacity for future rate base investment through traditional capital as well as grid modernization and renewables-oriented investments.
- **We are updating our 2018-2021 EPS estimates for recent performance, regulatory outcomes and regulated growth expectations and rolling out a 2022 estimate.** We are updating our 2018-2021 estimates to $7.02, $5.94, $5.66 and $5.92, with our 2022 estimate of **$6.33. our 2022 EPS estimate represents ~7% growth at the Utility Parent and Other segment, while we expect a wind down of EWC to reduce earnings contribution to ~$0.02 by 2022**, but we note the EWC segment remains cash positive (vs. company guidance for -$5M EBITDA in 2022). Our estimates embed ~$3.5Bn in regulated Capex/year through 2022 with earned returns commensurate with current rate plans in place.
- **Our ~6.7% regulated utility earnings growth (off 2019 normalized estimate) is in-line with management guidance of 5-7%** and is premised upon ~$18bn of capex spread among transmission, distribution and generation through 2018-2022 (~$3.5B/yr), with rate base reaching over $31B by 2022. 2022 rate base levels represent ~8% CAGR, or the top of the ETR 2018-2021 guidance range extended to 2022 as we believe the company has ample organic opportunities to deploy capital into grid mod and renewable driven programs. **Utility earnings in aggregate represent earning an ROE in the 9-9.5% range on an approximately 50% equity ratio** (earned ROEs and equity ratios vary slightly with time across jurisdictions). We estimate ~1.5% sales growth through 2022, which is driven by higher commercial and industrial customer usage and numbers, especially with ethane crackers and LNG terminals in the gulf service territory
- **On the nuclear side, the timely decommissioning of EWC nuclear operations is on track,** with key NRC requirements met for VY, and ETR stated it has generated robust interest from potential buyers, which will likely lead to a cash positive transaction. ETR management sees a conservative window of ~1 year for plants where they would need to start the sale process for the plants with near term shutdown (i.e., IP2 shutdown in 2022, IP3 in 2023). The progress to be made in the **EWC wind down and NDT sales is something to watch in 2019 as that would signal a successful transition to a fully regulated utility and create a case for further valuation multiple re-rating – we now simply wait for an Indian Point NDT announcement.**

Guggenheim's ETR EPS Estimates

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** Our price target of $96 is based on a SOTP analysis and includes (1) ~$116/share (up from $108) for the regulated utilities based on our 2020E EPS of $6.80 and our group average regulated target multiple of 17.0x, (2) parent drag (normalized for interest) of ~($21)/ share (down from -$20), and (3) EWC, which has an enterprise value of $0.5bn when applying a 2x EV/EBITDA multiple to our '20 open EBITDA estimate of $255mm (2x EBITDA for near-term discontinuation) or ~$3/share (down from $9). We discount our 2020-based SOTP estimate to arrive at our 12-month $96/share price target (up from $94).
- **Risks:** Commodity price risk. If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. ETR is still inherently a long natural gas call, with gas the marginal price setter in New England and New York.

  The remaining risks center around the regulated utilities, particularly the uncertainty around nuclear costs and recovery, in addition to traditional risks inherent with all utilities, including: 1) rate case risk; 2) lower capex outlook; and 3) interest rate changes above what we account for in our regression model.

See pages 278 - 279 for analyst certification and important disclosures.

EVERGY ENERGY (EVRG, BUY, $63 PT)

Maintaining BUY: Remains Buyback story driving 6-8% growth; Buybacks ratable through mid-2020 then we expect utility growth to pick up slack; solid story driven by synergies, capital opportunities.

- **Maintaining our BUY on EVRG with PT of $63/shr, up from $60/shr, and watching closely for any signs of a potential acceleration of the 60mm share buyback.** Increased market volatility and any potential pullback in shares could trigger a decision to accelerate the share repurchases, not something we or mgmt. is calling for but a potential possibility we are watching closely for – story remains sound on above-average growth that is maintained systematically through buyback program in NT, capital opportunities in the LT – we believe **EVRG remains a stable investment in this somewhat jittery market and a utility sector that has very few ideas remaining without binary events and/or elevated multiples.**
- **Introducing our 2022 estimate of $3.58/shr, which implies a CAGR of 6.7% on a $2.43 base from 2016 per mgmt. guide. Our 2019/2020/2021 estimates of $2.93/$3.27/$3.42** imply 7-8% YoY growth at the high end of mgmt's 6-8% growth guide. We model the utilities at 3-4% net income growth inline with mgmt's projections and get to the higher consolidated CAGR by implementing the 60mm share repurchase program: ~$2.1Bn in 2019 or ~34m shares, ~$1.1Bn in 2020 or ~17m shares. We model ~$1.4Bn/year in CapEx from 2019-22, rate base growth of ~3% per annum at combined utilities: Westar 5%/year, KCP&L 3%/year and GMO 4%/year – combined rate base of ~$16Bn by 2022.
- **2019 is a simple year of execution for EVRG – no surprises.** We continue to view this name as a simple buyback story with modest rate base growth due to rate freezes. We model the utilities with ROE earning their allowed with WR at a 9.5% ROE, KCP&L getting to ~10% ROE and GMO hitting its 9.75% allowed ROE. As a reminder roughly **40-50% of merger synergies were from labor and supply chain given that a larger company should give EVRG more negotiating leverage and economies of scale over suppliers so we could see further upside here**.
- **We see upside to our/mgmt's estimates if coal plant retirements are accelerated, merger synergies prove to be larger than expected or regulators enable more renewables spending than expected.** Mgmt. notes they see very favorable wind economics in their service territory and have customers asking to go direct – renewables could be a very key driver of EVRG growth post buyback period, rate stipulations among grid mod, etc.

Source: Company reports, Guggenheim Securities, LLC, Factset

- **Valuation:** Our $63 PT is derived from a higher multiple that we ascribe to shares (19.5x) vs. the regulated utility group target multiple (17x) to account for premium growth on a risk-adjusted basis. We apply this multiple to our 2021 estimated EPS of $3.42, and discount back to the present value to arrive at our $63 PT. We value EVRG based off 2021 fundamentals to capture the company's capital allocation plan of share repurchases and believe that 2021 reflects the normalization of earnings. Under our prior PT of $60 we assumed a target multiple of 18x, only a one turn premium to the group multiple (17x).

- **Risks:** The primary risks encompass traditional risk factors inherent with all utilities including: (1) rate case risk, (2) capex outlook, and (3) interest rate changes above what we account for in our regression model. Company-specific risks include failure to execute on its share repurchase strategy and/or failure to realize merger synergies.

See pages 278 - 279 for analyst certification and important disclosures.

EXELON (EXC, BUY, $53 PT)

Strong execution at the utilities is underscored by a slate of state and federal policy tailwinds for ExGen in 2019… this remains a very strong, if unique, story within our coverage universe – reiterate Bellwether BUY…

- **EXC remains a differentiated story in our coverage universe thanks to its large policy-exposed generation business coupled with materially lean balance sheet – we think 2019 should bring additional comfort to investors who may be wary of the integrated model, as state and federal reforms provide more 'regulated'-like revenue streams, stable cash flows – EXC valuation, in our view, doesn't reflect these dynamics.** ExGen's story continues to shift towards a more regulated, contracted earnings profile as nuclear ZECs proliferate and FERC moves to accommodate state policies, while on the regulated side mgmt. continues to execute on ROE improvements at the POM utilities. Underpinning the commitment to the integrated model are the strong FCFs from ExGen, which continues to support spend at the utilities, assist with dividend and deleveraging, as mgmt. remains disciplined at ExGen on capex and O&M. **We believe EXC's current valuation still fails to reflect the positive potential catalysts in this story for 2019, mainly: strong contracted cash flows, ROE improvements at PHI, energy/capacity market reforms, solid growth at legacy utilities, a commitment to de-levering, retail exposure, healthy balance sheet and respectable 5% dividend growth. The stock trades at roughly a ~0.5x discount to its integrated peer PEG, and even more (~2.4x) versus other 'multi-industry' utilities with the most upside potential from market reforms vs. peers. Reiterate BUY – our PT moves to $53 from $51 as we refresh and roll forward our valuation.**
- **We are introducing our 2022E EPS of $3.21 and refreshing our 2019/2020/2021 outlook - our 2019/2020/2021 EPS estimates move to $3.16/$3.25/$3.17 from $2.87/$3.07/$3.20.** Our consolidated EPS estimates are based on an expected ~$21bn of regulated CapEx over the 2019-2022 period, driving ~6% rate base growth through 2022 – our ExGen estimates are marked to the 12/07/2018 curves**.** Consolidated earnings growth is comprised of ~7% regulated earnings growth at the utilities from a base of 2017 actuals through 2022E, which is in line with the midpoint of management's guidance of 6-8%. **We model PHI ROEs improving through our forecast period from ~7-8% to 8.75%, slightly below mgmt.'s target of 9%**, on improvements in distribution ROEs. The legacy utilities continue to perform at close to their ~10% allowed through our forecast period. **At ExGen we now include NJ ZECs from the Salem plant in our model, adjusted for outages.**
- **State and federal policy reforms remain the keystone to the ExGen story…** NJ ZECs aside, many of the reforms we had expected to come to fruition in 2018 have slipped to 2019, but the net effect of the initiatives remains positive for EXC's fleet in our view. **On the energy and capacity side**, the PJM market continues to move forward with a slate of changes – *all of which we see as beneficial to EXC's baseload fleet*. The single largest outstanding item will be FERC's January ruling on reforms to the capacity market, **with the Commission likely, in our view, to pursue a path that accommodates the will of states to subsidize nuclear plants for their environmental attributes**. Such a ruling would remove a major overhang for EXC, as even though the capacity auctions are already set through our 2022 forecast window, we believe investors have been experiencing some FERC-fatigue during the long stakeholder/hearing process. Changes to the energy market are also afoot, with fast start and other efforts designed to minimize uplift likely to provide a modest boost. **Finally, we highlight (and discuss further in our industry section) that we see a greater possibility of some sort of ZEC support mechanism emerging in Pennsylvania following the release of the Nuclear Caucus' report and pledge to**

bring forward legislation. We are not assigning any odds to the likelihood of passage at this time, but we note that sentiment has improved significantly since our last outlook, which we partially attribute to the announced closure of FES' large Beaver Valley plant. **As a reminder, our current model assumes the retirement of TMI after June 2019.**

Focus at utilities remains on robust capex and earning their allowed returns. EXC continues to work towards achieving ~9+% ROEs at the legacy Pepco utilities through our forecast period, with additional rate cases possible in jurisdictions like DC, where mgmt. is considering a multi-year case in 2019. **We also remain on the lookout for 1)** any changes at PECO given PA has now opened the door to decoupling and performance-based ratemaking (PBR) and **2)** additional capex and ROE improvement at Atlantic City Electric (ACE) in NJ. **On ACE in particular we believe there are opportunities for EE and grid mod investment, especially given the scale of what we've seen from its neighbors PSE&G, and to a lesser degree JCP&L.** We also no longer feel EXC has any remote interest in moving out of NJ... not yet given recent policy initiatives within the state – could be an opportunity at a later time.

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** Our $53 price target is based on a sum-of-the-parts analysis. We assign ~$21/share (vs. prior $22/share) for ExGen using a 5.5x (vs. prior 7x) weighted average EV/EBITDA applied to ExGen's various assets. We assign $36/share (vs. prior $33/share) for the regulated utilities combined based on our 2020E EPS of $2.13 (vs. prior 2019E EPS of $1.93) applied to a 17x regulated utility multiple, which is based on our regression model using the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years. Subtracting out ~$2 (vs. prior $3) in parent drag and discounting back, we arrive at our 12-month price target of $53.
- **Risks:** Commodity price risk. If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. EXC is still inherently a long natural gas call with gas the marginal price setter in PJM.

  The remaining risks center on the regulated utilities and transmission assets, which encompass traditional risk factors inherent with all utilities, including: 1) rate case risk; 2) lower capex outlook; and 3) interest rate changes above what we account for in our regression model.

FIRSTENERGY (FE, BUY, $46 PT)

A boring regulated utility with 6-8% growth or more – It's what we have all been waiting for! We see the rebooted FE entering 2019 as attractive as ever…

- **Reaffirming our BUY rating on FE and raising our PT to $46 from $43 – we believe FE remains one of the cheaper value utilities in the sector as it continues to re-rate towards the regulated group average or higher in time: story could take some time to play out as they recently reemerged as a traditional, block and tackle regulated electric utility.** One of the busiest names in 2018 remains a solid value heading into the new year, in our view, with 6-8% growth and a slate of investment opportunities across its regulated footprint. **With the dissolution of the Restructuring Working Group (RWG) FE remains solidly on track towards its new fully regulated life and one that grows top tier with a better balance sheet.** Having said that, we believe the market still undervalues this story, with the stock trading at ~15x on 2020E EPS vs. the group average of ~16.9x. As such, we reiterate our BUY rating and expect 2019 to be another step function in the company's reinvention.
- **We are introducing our 2022E EPS of $3.02 and updating our 2018-21 outlook...** Our estimates for 2018/2019/2020/2021 move to $2.56/$2.57/$2.63/$2.81 from $2.59/$2.40/$2.66/$2.93 as we adjust our operating assumptions. We model ~6% regulated earnings growth through 2022, including ~7% earnings growth at the transmission business driven by 9% rate base growth with ~$1.2bn annual CapEx spread across the transmission subsidiaries. Our estimated ~4% earnings growth at Distribution through 2021 reflects average $1.6bn CapEx with ~5% rate base growth. **We also assume the Distribution Modernization Rider (DMR), which was approved in OH authorizing ~$200mm/year recovery through 2019, ends after its initial run**. Finally, we continue to model ~$100mm/year in equity ongoing through the employee benefit plan.
- **What happens next? 2019 to bring the next phase of guidance as investors begin looking towards the 2020s.** FE mgmt. declined to update investors on its plans for the post-2021 window on the 3Q18 call (or at EEI), with CEO Chuck Jones highlighting on the 3Q18 call that FE has "*been a fully regulated company now for all of about a month since the filing was approved...*" **We expect mgmt. to take a methodic approach before announcing a roll forward in 2H19 at the earliest.** As a reminder, at this time we model a placeholder $1.6bn in distribution spend and $1.2bn in transmission spend for 2022. Finally, we note that mgmt. does not see further FE Tomorrow cost cuts at the parent going forward after announcing an additional $85mm on the 3Q18 earnings call – tough for us to not see top end of growth guide.
- **Robust investment opportunities abound in OH and NJ - we are allocating additional focus to New Jersey in 2019 as JCP&L works through its infrastructure program with the BPU.** FE's recent filing for a $400mm IIP program dubbed Reliability Plus bears close watching, in our view, as mgmt. has indicated that it sees the filing as somewhat of a litmus for its building a more constructive relationship with the BPU. **We view this as critical, given the policy direction in the state should provide additional opportunities for JCP&L to spend above its current base (e.g., EV infrastructure, EE, AMI, etc.) in a manner similar to PSE&G.** We also note that similar opportunities exist in OH, where the company recently received approval to spend some $500mm, including the installation of 700k smart meters across the state.
- **M&A not a priority in the NT.** We do not see M&A as a near-term priority for FE mgmt. in 2019 given its focus on the regulated transition and infrastructure

investment. In addition, the sale of individual utilities seems highly unlikely, in our view, given the aforementioned investment opportunities and mgmt.'s stated belief that it does not feel the need to delever at this point. **FE sticking with Jersey, for now.**

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** Our $46 price target is based on a sum-of-the-parts analysis. We assign ~$43/share for the regulated utilities using the 17.0x regulated group target multiple, which is based on our regression model using the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years and apply a one turn premium. We assign $15/share to transmission, subtract ~$11 of parent drag, and discount back to arrive at our 12-month price target of $46.
- **Risks:** The remaining risks center on the regulated utilities and transmission assets, which encompass traditional risk factors inherent with all utilities, including: 1) rate case risk; 2) lower CapEx outlook; and 3) interest rate changes above what we account for in our regression model.

ALLIANT ENERGY (LNT, NEUTRAL, $41 PT)

LNT remains a low drama story with solid growth in favorable jurisdictions – Our NEUTRAL stance remains a valuation call as we continue to look for better entry, not making an M&A call here.

- **Maintaining our NEUTRAL rating on LNT and raising our PT to $41 from $37.** LNT remains a fundamentally strong utility with minimal overhangs and organic growth story capital plan that is well laid out through 2027, cementing above-average utility growth of 5-7%. LNT's primary long-term focus for the capex plan, in our view, will be continued gas/electric distribution system improvements and planning the future of its generation fleet (i.e., wind, peaking capacity, distribution, batteries) as it continues to take more traditional resources (coal/nuclear) offline. We believe incremental growth opportunities could come in the form of a policy windfall in Wisconsin (more on this below) and to a lesser degree from growth at ATC outside the base plan (e.g., efforts in AZ and AK). That said, the fairly high multiple that shares trade at keep us on the sidelines for now; **essentially a valuation call on a quality utility with above-average growth prospects and very favorable regulatory environments. A modest pullback could cause us to become more constructive on the stock given a multitude of attributes we like with the story.**

- **We are introducing our 2022E EPS of $2.69 and refreshing our 2018-2021 outlook.** As a result, our 2018-2021 EPS moves to $2.18/$2.24/$2.37/$2.50 from $2.19/$2.19/$2.31/$2.45 This outlook captures the continued spending on regulated investments especially focusing on renewable and gas generation projects, organic growth and rate recovery through improving rate mechanisms, as updated on the 3Q18 call and further at EEI. Our forecasted consolidated earnings growth of ~6% is comprised of 6.7% growth from the regulated utility segment. We project 15% rate base growth and ROEs of ~10% through 2020 at IPL and 8% rate base growth at WPL earning ROEs in the low 10% range, with ~$1.4bn of annual CapEx deployed at the utility through 2021, fairly evenly spread between IPL and WPL and in line with LNT's updated Capex program of $6.9Bn through 2022. Additionally, we forecast continuation of earnings from transmission and energy efficiency riders through 2021 and model ~1% system-wide volume growth at IPL and ~0.75% growth at WPL through 2022. **Finally we note that we continue to model up to $400mm in additional equity in 2019, in line with mgmt.'s guide and the recently announced forward sale of up to $375mm, and remain on the lookout for additional details regarding 2020, where we do see incremental equity of $150mm.**

- **Some key items coming up in 2019, including an electric filing in Iowa.** LNT's electric filings are currently planned for a somewhat unique format, as Iowa recently passed legislation to allow forward-looking rates. IPL mgmt. is currently planning to file two concurrent rate cases: one with a historical test year and one with a forward test year of 2020. This format will capture a majority of IPL's current wind buildout. **In addition we note that mgmt. will likely seek to replicate the higher equity layer (51%, up from 45%) it recently achieved in its gas rate review settlement this past September.** Beyond Iowa we also foresee the potential for incremental renewables investment in Wisconsin, largely as a result of the election of Democrat Tony Evers. We believe Evers could prompt the state to revisit its current RPS standard of 10% by 2015. Evers has been supportive of clean energy, and both we and mgmt. agreed that he could provide a policy boost for solar resources in the state. **We note that this is also very much in line with what we heard from WEC mgmt. on Day 2 of this year's EEI Conference. We will continue to be on the lookout in 2019 for signs that the state is considering an expansion of its RPS.**

- **We don't see M&A as likely in the near term, although the premium at which shares trade indicates there may be others who hold differing view.** LNT's mgmt. team has reiterated to us on NDRs and in EEI meetings that it remains focused on the company's rather robust organic growth story, which we largely take at face value. In our view, mgmt. is occupied with the ongoing wind buildout and minimizing lag via the regulatory cycle.

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** We arrive at our $41 price target by applying our 17.0x regulated group target multiple, which is based on our regression model using the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, plus a one turn premium to account for the reality that this market cap range will continue to embed an M&A premium above larger cap equivalents, to our 2020 EPS estimate of $2.37.
- **Risk:** Downside risks to our rating and valuation for LNT mainly encompass traditional risk factors inherent with all regulated utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model. Upside risks include: (1) favorable regulatory settlements; (2) opportunities around ATC; and (3) higher CapEx outlook.

NEXTERA ENERGY (NEE, BUY, $205 PT)

We rate NEE a BUY based on conservative growth guide, potential further M&A potential utilizing borrowing capacity, continued upside from Gulf Power deal on improving O&M, purchase power and higher capex – move past "optically" high P/E, and focus on the bigger picture which continues to show value on a cash flow basis. That said, we believe earnings growth is likely breaching 9%-10% post FL deal digestion.

- **Reiterating our BUY rating on NEE** and **raising our price target to $205** from $197 as we roll our valuation forward to base off 2020 fundamentals and embed accretion from Florida acquisitions. While NEE P/E screens high vs peers, NEE is a sum of the parts, cash flow generating story and on any cash flow metric shares look more under-valued, in our view. NEER growth is perpetual – we believe this management team is able to execute on large scale renewables better, faster, and cheaper – we don't see the NEER backlog decreasing and remains a core growth engine in addition to Florida utilities. **Looking through 2019, it is very tough for us to not see further a multiple re-rating as this story remains event driven by Gulf Power deal which closed on Jan 1 2019, followed by a likely higher accretion vs current guide and an outcome/conclusion with Santee Cooper process in SC, etc.** Reiterate BUY.
- **Introducing our 2022 estimate of $10.52/shr which equates to a strong consolidated CAGR of 8%, the top end of management's 6-8% LT growth guide.** We see little impact to FP&L due to the tax reform legal challenge intervenors recently filed - the intervenors are breaking the settlement they were previously signatories to, which, in our view, will have little-to-no traction. We model FP&L earning at or close to its allowed ROE with earned ROEs of 11.5-12.0% through 2022. We model 8% earnings growth at FP&L through 2022 on regulated CAPEX of ~$4.1Bn/year through 2022 ex the FL deals. We also continue to see perpetual growth opportunities at NEER given continued corporate demand for long term renewable PPAs and very favorable wind + battery economics – backlog and pipeline continues to expand, not contract.
- **We see strong capex and O&M improvement opportunities at Gulf Power.** We continue to view the **$0.15-$0.20/share in accretion mgmt. disclosed as a place holder** until the full FP&L play book can be unleashed at Gulf Power. **With O&M multiple times that of FP&Ls and old high heat rate plants in service including very high purchase power costs, Gulf Power is ripe for optimization.** Example, Gulf Power O&M is ~$31/MWh which is more than double FP&L's $12.44/MWh and this alone should provide ample headroom in rates to invest in modern infrastructure opportunities. **So what's the likely strategy with Gulf Power in the NT?** We believe NEE will likely increase Capital spend and manage to stay out of a rate case for several years with O&M and fuel/purchase power synergies subsidizing the spending. At some point in the future when NEE files a Gulf Power GRC, we see further upside potential as they true-up the regulatory construct (i.e., ROE band, equity layer) to emulate FP&L.
- **Could 2019 be the year of Santee Cooper? Three options with Santee: (1) it remains government owned, (2) sells to a larger public entity like NEE, (3) has an operating management agreement like PSEG and LIPA with a larger entity like NEE. NEE clearly benefits from the latter two options and would obviously prefer the 2nd route.** Mgmt. has publicly acknowledged that the RFP (request for purchase) for Santee Cooper is out, independent consultants are evaluating bids and that answers are expected by early 2019. From there it is up to the consultants and a legislative committee to decide upon which bids will make it to the second round. NEE mgmt's only question is if Santee should be 100% acquired or if someone will

 See pages 278 - 279 for analyst certification and important disclosures.

come in and strike a management agreement. **NEE does not have as much interest in a management contract vs out right acquiring Santee but would do either if presented the opportunity.** Competition bidding for Santee could be sparse considering it would likely take sizable balance sheet capacity to re-finance all of the municipal tax free debt on Santee's balance sheet. **We continue to believe that given its $5-7bn balance sheet capacity, solid operating history and highly constructive relation with regulators NEE is very strongly positioned to be considered for acquiring Santee Cooper.** As a reminder Santee Cooper is the third largest municipal utility in the U.S. and the Governor of South Carolina has been very vocal about monetizing Santee to pay for debt incurred while constructing the abandoned VC Summer nuclear power plant.

Source: Guggenheim Securities, LLC. , FactSet, Company reports

- **Valuation:** Our $205 PT is comprised of $95 for FP&L, and $116 for NEER, which we discount back by one-year to arrive at our 12-month price target. We derive our regulated utility group target multiple of 17x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, and we now ascribe a one-turn premium to reflect several externalities (e.g., macro/geopolitical uncertainties) that continue to support the group trading beyond fundamentals and forward-yield expectations; we apply the 18x multiple to our 2020 EPS estimate of $5.29 for NEE's FP&L subsidiary and Other to arrive at a ~$95 valuation, while our NEER valuation assumes an 90% payout rate and targets a 4% yield to arrive at a $116 valuation – We combine these in our sum-of-the-parts to arrive at a $208 valuation, and next add 15 cents for Gulf Power, which we then discount back by one-year to arrive at our $205 PT.

- **Risks:** Risks to our thesis for NEE include Florida economy, commodity prices, and other risk factors inherent with all regulated utilities including: (1) rate case risk, (2) lower CapEx outlook, and (3) interest rate changes above what we account for in our regression model.

NEXTERA ENERGY PARTNERS (NEP, BUY, $56 PT)

NEP continues to be our preferred yieldco because it has very visible 12-15% growth through our trajectory with minimal needs to access market-based equity offerings; perpetual growth funded with dropdowns at +20 GW of potential assets from sponsor NEE as well as inorganic acquisition opportunities; and attractive financing with the Blackrock deal likely opening the door for more nontraditional players to step in.

- **Maintaining our BUY and increasing our price target to $56 from $50 as we roll forward to 2020 fundamentals - LT commitment from NEE "yields" solid investment in NEP.** We continue to see high organic growth opportunities, perpetual support from a very strong parent (NEE halo effect) and continued end demand for renewables on multiple end user fronts. Continued strong visibility into a 12-15% growth rate and incremental financing, similar to last year's Blackrock deal, we believe it could pave a path for additional attractive financing. NEP's $5bn interest rate hedge should help insulate from any fears of rising interest rates. **Above average CAFD/share growth conservative, achievable and LT sustainable.**
- **Our 2022 DPS estimate of $3.05 equates to a ~15% CAGR from 2018 to 2022.** Our DPS estimate is driven by EBITDA accelerating from $1.0Bn in 2018 to ~$2.0bn by 2022 and NEE steadily dropping down projects with a "conveyor belt" approach and a specific payout ratio which we model to be slightly lower than historical precedence due to the recent acquisitions that should effectively lead to higher dividend growth vs our conservative assumptions – i.e. we assume more dry powder vs higher payouts. Additionally, we assume no needs to fund organic drops utilizing public equity markets. Continued attractive financing like the Blackrock deal (2.5% coupon) could incentivize dropdowns quicker than we expect
- **We continue to believe the Blackrock financing in '18 opened the spigot for attractive financing at NEP, it's just a question of time for others to step in.** The $750 million of convertible financing affirmed that NEP can stand on its own to fund its 20 GW of potential opportunities presented by NEE through time as other nontraditional financing prospects will likely open up, in our view. The Blackrock financing was utilized to partially fund 1.4 GW of renewable projects dropped down from NEER to NEP. As a reminder the deal pays a 2.5% yield to BlackRock in exchange for the right to convert into NEP common + cash after three years. **This was privately negotiated financing which validates the yieldco model for NEE and affirms NEP is not dependent on public equity markets to fund its future growth** - NEP can stand on its own which should help remove any lingering investor concerns about dilution to fund dropdowns, a practice many of NEP's yieldco peers have engaged in.
- **Key take here on NEP? Size doesn't matter for NEE.** The NEP structure has been highly effective and unlike other YieldCo peers, NEP has satisfied its original intent since its launch. **Will the "law of large numbers" eventually curtail the yieldco as we have seen in the MLP space? Likely not.** As a reminder, NextEra has +12GW of eligible assets in operation with a backlog that has grown over 2.5x to over +7.5GW so mgmt. sees no issues growing and capital markets continue to present opportunities to fund NEP's growth – **the financial strength of NEE, available debt capacity, innovative structures like the BlackRock deal, as well as the lever to further reset/modify IDRs among other options all present opportunities for incremental growth opportunities at NEP.**
- **We continue to prefer NEP over CWEN in the NT.** We downgraded CWEN to NEUTRAL in this outlook given our view point that investors in '19 have a small appetite for yieldco's with NEP yielding the strongest option in the NT. While CWEN

trades at a higher yield than NEP, NEP remains our preferred name to own given sponsor strength and material distribution growth prospects with very little needs to access the equity markets – NEP has a proven mgmt. team that consistently under promises and over delivers but more importantly, committed to the yieldCo for the LT **and why shouldn't they be??** NEE is very comfortable with NEP, it's performed well and remains only one of several avenues NEE has to recycle capital. NEE has plenty of ways to monetize its renewable assets (i.e., sell assets privately, tap balance sheet capacity, etc.), but NEP remains the key avenue.

Valuation: We apply a 4.0% target yield to our estimated distribution of $2.30 in 2020, and discount back to the PV to arrive at our $56 12-month price target.

Risks: NEP is exposed to interest rates as it is an investment vehicle marketed to yield-oriented investors, in addition to some construction, operating, and re-contracting risk, as well as risk of unfavorable weather.

NISOURCE INC (NI, BUY, $29 PT)

Upgrading to Buy from Neutral, valuation provides good entry point; watch for capex update driven by gas safety requirements, mid-2019 analyst day ahead.

- **We are upgrading NI to BUY on valuation with a PT of $29, up from $28.** Valuation presents a good entry point; potential NT catalysts include gas event moving to the rearview mirror plus higher capex opportunities among other items key events to watch. NI trades at a discount to gas, modest premium to electric peers but with above-average growth and incremental capital opportunities in the NT - NI's current 5-7% growth guidance was affirmed after the September gas event and no change with O&M profile. Restoration efforts in MA are substantially complete. We see the tide beginning to turn for NI given its proactive focus on safety/restoration following the unexpected gas event with upside optionality and even a potential to sell Columbia Gas of MA if price is right, which could lead to a further strengthening of the B/S or redeployment of capital into other regulated growth opportunities.
- **Introducing our 2022 EPS estimate of $1.68, which is predicated on a 7% CAGR hitting the high end of mgmt's guide without even including a higher capital program.** Our 2019/2020/2021 estimates of $1.38/$1.48/$1.58 are inline with a smooth ~7% YoY earnings growth profile and are based on electric/gas earnings mix shifting from 58% in 2018 to 68% by 2021. Our electric earnings are driven by earning a strong ~10% ROE and the gas business closing some historical lag by 2021 and earning its allowed ROE of ~10%. We see clarity ahead in the MA gas event investigations, which could drive capex needs for gas safety spending – **we currently model ~$1.9Bn in capex on average per year through 2022, which could prove conservative following the YE call and heading into the Analyst Day.**
- **Ex-Columbia Gas of Massachusetts valuation impact.** Shortly after the September gas event in Massachusetts we re-ran our valuation model for NiSource but **excluded Columbia Gas of Massachusetts earnings to establish a simple floor price ex-Columbia Gas of MA's earnings** (see original note HERE). As a reminder, MA earnings contribution is ~$0.12/share on consolidated EPS of $1.48 or approximately 8% of earnings. Under an unlikely scenario we simply eliminate the $0.12/share of MA earnings, our PT would de-rate ~$2.40 but this assumes no de-levering or capital redeployment opportunities which provide earnings upside. **We think that the most likely scenarios are: (1)** NI files a MA rate case soon given that they recently pulled their settlement or **(2)** they outright sell MA if price is right (although the company has not indicated it is looking to sell) and proceeds are redeployed into de-levering or other regulated organic opportunities – **we think former for now**.
- **We believe the market will continue to be focused on negative events from the September Gas event but working through it could bring more clarity.** NI mgmt. already mentioned at EEI that recent gas safety concerns have caused other service territories outside of MA to consider spending on automatic shut-off valves to prevent MA-like situations from happening. NI mgmt. noted that this gas safety spend should result in $150mm in incremental capex across its other low pressure distributions systems, mainly PA and Ohio. **There is likely little reason for regulators to push back on gas safety investments after recent events.** The silver lining continues to be increased capex on modernizing the gas systems.
- **Look out for mid-2019 analyst day.** Likely a substantial update post MA gas event here with a potential focus on state by state capex. **The analyst day could be a key podium to reaffirm above-average growth prospects** and to reiterate there's more to the story than issues in MA. Columbia Gas of MA is a small portion of rate base yet it has had an outsized impact on the valuation. **In the near term NI is focused**

on the short term cash flow mismatch of safety/restoration spend vs. insurance proceed receivables. We don't see NTSB investigation impacting its access to insurance proceeds.

- **Gas event could be in the rearview mirror but watching for insurance proceeds and potential developments on criminal investigation.** On the 3Q18 call, mgmt. disclosed for the first time that it should have access to $800mm of general liability insurance, which should cover all of the costs associated with the September gas event in Massachusetts. Mgmt disclosed cost estimates of $415mm to $450mm for third party claims, $180mm to $210mm for other expenses (emergency response, personal injury, property damage, etc.), and $135mm to $165mm for capex. These amounts do not include potential fines or settlements with the government, which are not recoverable by insurance. An insurance receivable is expected to be recorded by 4Q.

Source: Guggenheim Securities, LLC; FactSet consensus estimates.

- **Valuation:** We derive our regulated utility group target multiple of 17x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, and now ascribe a one-turn premium to reflect several externalities (e.g., macro/geopolitical uncertainties) that continue to support the group trading beyond fundamentals and forward-yield expectations. We arrive at our valuation utilizing a sum-of-the parts analysis, based on: (1) ~$9/share for the regulated electric utility; (2) ~$23/share value for the regulated gas segment utilizing our regulated electric P/E multiple plus a premium to account for the historical gas LDC spread above electric counterparts; and (3) (~$2)/share for other adjustments for Corp and Other. We then discount our valuation back by one-year to arrive at our $29 PT.
- **Risks:** The primary risks on the regulated utility encompass the traditional risk factors inherent with all utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model. Company specific risks include regulatory risk/rate case risk associated with September gas explosions in Massachusetts.

NEW JERSEY RESOURCES (NJR, SELL, $39 PT)

Strong 2018 performance prices in the entire story and then some - downgrading to SELL on valuation as we await clarity on the next phase of this story: tough to justify these valuation multiples unless one is making an M&A call... which we are not.

- **We are downgrading from a NEUTRAL to a SELL rating on valuation; we don't see an M&A premium as justified at this time, and the valuation has become stretched given top tier performance in 2018 – we downgraded in September 2018 from BUY to NEUTRAL (see HERE) on valuation, and now we are taking a further step back.** On M&A, we continue to believe management is not quite as interested in selling as some may think. NJR shares continue to trade at a slight premium to the gas LDC average – which itself is skewed by the 4x premium currently assigned by the market to sell-rated NWN. Aside from NWN, NJR is the second most expensive gas LDC under our coverage. At these levels, and with an outstanding run for 2018 (up 13%), we see an exit point in the NT to allow shares to re-rate. In addition, and similar to our view on NWN, we see regional environmental policies as dimming the prospects for any new midstream investment in the LT. Our PT moves to $39 from $49 as we shift our valuation forward to 2020 and concurrently remove the M&A premium. **NJR remains a sound story with good fundamentals but these valuation levels becoming harder and harder to justify.**

- **We are introducing our 2022 EPS estimate of $2.54, maintaining our 2019 estimates and refreshing our 2020/2021 estimates.** Our 2020 and 2021 EPS estimates move to $2.19 and $2.36 from $2.10 and $2.26 as we refresh. Our estimates incorporate average earned ROEs of ~9.4% for the regulated utility (vs. 9.75% authorized) driven by rate base growth of ~7.8% from '18 to '22, with average customer growth of ~1.8%. We model PennEast coming online in fiscal 1Q20, contributing $0.11/share in its first year of operations, and the Adelphia Gateway Pipeline contributing to earnings in the midstream segment in 2020. Additionally, we model continued strength in the Clean Energy Ventures (CEV) segment driven by solid contracted solar investments and firmer SREC pricing, with CEV contributing ~32% to our consolidated EPS estimate of $2.54 in 2022.

- **SRL and PennEast projects were further delayed in 2018, but not estimated to materially impact earnings due to AFUDC contributions. Adelphia project slightly backfilling PennEast delays…** As of December 2018, SRL had commenced construction in Ocean County on SRL, with road opening permits in Burlington County and appeals in state courts still outstanding. The project has a targeted in-service date of late 2019 (from late 2018), and assuming NJR gets the final approvals needed, it will likely file for recovery in a separate filing to mitigate regulatory lag. PennEast has faced its own challenges 2018, with its in-service date pushed back to 2020 following survey delays along the route in both PA and NJ from landowner legal actions. These delays on PennEast have been slightly backfilled by the acquisition of the Adelphia liquids to gas conversion project, which has faced significantly less opposition as a brownfield development. **We model PennEast earning $0.11/share in its first full-year of operation vs. Adelphia at ~$0.09/share when live in 2020 before any upsizing.**

- **NJ policy direction cuts both ways in the LT - we are increasingly left to wonder what the state's new direction will mean for NJR.** Governor Murphy made good on his campaign promises to implement new environmental policies in NJ, with his first year in office punctuated by several initiatives to bolster the state's green credentials. NJR's CEV segment should benefit as a result, as its residential and commercial solar investments are supported by state policy and growing customer demand that will see the state procure 50% of its energy from Class I renewables by 2030. We continue to expect future year SREC prices may firm up as LSEs will need to meet the targets. Despite the positive momentum on the CEV side, **we are increasingly left to wonder what the state's new direction will mean for NJR.** While the core LDC business is experiencing steady customer growth, we do not see additional midstream investment as particularly viable from a policy standpoint going forward. Adelphia aside (itself a unique conversion project), **the state has become much more hostile towards fossil infrastructure, in our view.**

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** We arrive at our valuation utilizing a sum-of-the parts analysis comprised of: (1) ~$27/share for regulated gas utility when we ascribe our historical LDC premium to our regulated electric target multiple; (2) ~$5/share (previously ~$6/share) for the midstream segment, applying a 21x gas multiple for growth associated with the Adelphia Gateway pipeline (2020 targeted in-service date); (3)~$7/share (previously $14) for Clean Energy Ventures and Home Services, applying an 11x multiple for its LT contracted cash flow stream; and, (4) ~-$1/share for NJR's energy services (previously $3) when we ascribe an 8x EV/EBITDA multiple to our 2020 EBITDA estimate less implied debt (previously 12x on 2019E EBITDA). We then discount our valuation back one year to arrive at our new $39 PT.
- **Risks:** Upside risks for NJR include (1) more favorable regulatory outcomes, (2) higher capex outlook, (3) favorable interest rate changes, and (4) additional midstream capex opportunities.

NRG ENERGY, INC. (NRG, BUY, $51 PT)

We believe 2018's breakneck pace of transformation should yield way to a slightly more straightforward 2019; focus remains on buybacks and execution at the 'new' NRG.

- **Reiterating our BUY rating on NRG** and **maintaining our $51 PT** as we enter 2019 primed for additional capital return via buybacks and a robust outlook for power; both fundamentals in ERCOT and policy-driven change in PJM. NRG's stock continues to trade, in our view, at an unsustainably high FCF yield in the mid-teens – we see buybacks remaining the favored capital allocation route until this corrects. **Overall, we believe NRG looks very well positioned for 2019 and on a path to realize its integrated power model, with retail as the keystone to the transformed NRG. As a reminder we recently took the full C-suite of management on the road – see our deeper thoughts on that HERE.**
- **We are updating our estimates through 2022 as we mark our merchant power models to the 12/07/18 forward commodity price curves and introduce 2022 estimates.** Our estimates are slightly changed versus our fall 2018 mark, with 2019 higher and 2020/2021 slightly lower. We are introducing 2022 estimates built off the same underlying assets and assumptions driving our estimates in 3Q18, with NYLD and LaGen completely removed. **Note: our estimates incorporate the most visible cost savings management has highlighted from its transformation plan thus far -** we model O&M and SG&A reductions ramping up over time consistent with management's guidance, achieving 100% of the $590mm EBITDA-accretive cost savings by YE2020. **Our estimates also call for roughly $5bn in buybacks between 2018 and 2021, with $3.5bn of those yet to be announced by mgmt**. The deployment of all this cash slightly delays our deleveraging versus mgmt.'s original goal, and we now forecast NRG to fall below 3x net debt/EBITDA in 2020. We note that mgmt. has considered relaxing this timeline as well, so we remain very much in line with the overall guide. On the retail side We forecast the segment rising from ~54% of EBITDA in 2019, to ~60% in 2020, in line with mgmt.'s stated target of 60%. We also assume ~1% growth in usage per customer in all 2Qs, and 2% growth in all 3Qs going forward, to account for our expectation that summers will be hotter going forward.
- **Power markets remain favorably positioned for NRG, with tightness in ERCOT and reforms in PJM slated for the 2019 season.** As noted in early sections, we remain highly constructive on power-levered names, with policy and market fundamentals driving a robust outlook for 2019 across the major markets. In ERCOT, we note that expectations for an 8.1% reserve margin have primed the market for scarcity pricing, and while NRG's retail hedge may dull its exposure to volatility we still see the company as better positioned vs. some of its shorter retail peers. In PJM the central focus remains on capacity market reforms, with an announcement from FERC expected within the next month. As we have noted previously (see HERE), we do not expect FERC's order to be anything less than beneficial for generators like NRG, although we remain highly attuned to the details as NRG's fleet is highly concentrated in the Comed LDA. EXC also owns a substantial amount of nuclear capacity in this LDA, so we remain on the lookout for whether its 'carve out' could positively or negatively swing clearing prices.

Guggenheim's NRG EBITDA Estimates

EBITDA ($MM)	1Q	2Q	3Q	4Q	FY	*Cons*

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** We project unlevered free cash flows based on adjusted EBITDA, subtracting environmental and maintenance CapEx, and cash taxes. We apply an NRG-specific 5.6x (previously 6.9x) terminal multiple to 2025 cash flow, which is weighted by the individual assets in NRG's portfolio, and we discount at NRG's estimated WACC. We also incorporate our fair value estimates for NRG's future environmental liabilities and NOLs and subtract net debt of ~$6.5bn to arrive at our $51 price target.
- **Risk:** Commodity price risk: If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. NRG is still inherently a long natural gas call, with gas the marginal price setter in PJM, MISO, ERCOT, NYISO, etc. Environmental/Policy risk: Environmental regulations could require increased spending; permitting and compliance associated with these regulations could require significant capital and operating expenditures. Considering timing to comply with these regulations and costs, some retirements of plants could be accelerated. Changes to these regulations could increase costs of operating these plants and/ or increase competition. Operational risks: NRG's fleet could experience unforced outages or other operational issues that are inherent risks of the power generation business.

NORTHWEST NATURAL GAS (NWN, SELL, $49 PT)

Reiterate SELL based on lofty M&A premium persists, underlying utility sound but not a big grower and we aren't making an M&A call with this name.

- **Reiterate SELL and are lowering our PT to $49 from $51 as we roll forward our valuation. We continue to believe NWN commands an unjustified M&A premium, and we do not foresee any suitors in the near term.** NWN remains a fundamentally strong utility earning decent returns in a fairly constructive regulatory environment, all overlaid by a strong underlying economy and growth. **Our thesis remains based on the valuation, with the stock trading at a roughly four-turn premium to the already-premium regulated gas utility group.** NWN trades at a ~26x multiple on '20 EPS estimates, reflecting a lofty acquisition premium. **Said differently, if an acquirer were to come in and make an offer, the 25-30% premiums target company board members have been accustomed to would yield a potential transaction multiple of ~34x for NWN** – **something rarely seen in the utility space.** We also question whether a deal could be done in the state in the near term, especially given that the commissioners have been somewhat vocal against utility combinations. **We continue to foresee the potential for sizeable downside if the M&A premium wears out, which we anticipate could happen, given recent M&A issues in the region.**

- **We are introducing our estimate for 2022 of $2.71 and maintaining 2018/2019/2020 EPS outlook.** Our consolidated earnings growth of ~3.8% through 2022, based off 2017 actuals, is comprised of ~3.0% growth from the regulated utility segment, where we anticipate an average earned ROE of 8.6% from 2019-2022. Our utility estimates also assume ~1.5% consolidated load growth through 2021, in line with management's outlook, driving the consistent growth profile of NWN's utility business as we model ~3% regulated earnings growth and ~8.6% ROEs through 2022, vs. 9.4% authorized ROEs. We project ~3.8% rate base growth with ~$180mm of annual CapEx deployed at the utility through 2021, including the North Mist gas storage expansion investment to be concluded in 2019 in Oregon. Our capex numbers are slightly higher than mgmt. guide ($160mm per year through 2022). **In addition, we note that the nascent water business segment is not yet reflected in our numbers as it remains quite small (<20k customers), but mgmt. has identified significant opportunities in the region to pursue through our forecast period**.

- **North Mist expansion project is slightly delayed – now expected by the company to be online in 1Q19.** On the 3Q18 call management highlighted that the North Mist Gas Storage expansion project continues to move forward; however, its completion has been delayed from December 2018 to March 2019. The expansion project (to serve POR under a long-term contract) has been slightly delayed due to site conditions and contracting delays on the compressor station, with the $12mm in additional investment costs to be recovered through the existing tariff once project is in service. As a reminder compressor which was delayed slightly at the manufacturer in Texas due to Hurricane Harvey. The total estimated cost for the project is ~$140mm and it will be rate-based immediately after completion with a tariff schedule that has been approved by the Oregon PUC.

- **Valuation:** We value NWN as a regulated gas utility, arriving at our $49 PT. We employ our regulated electric target P/E multiple, derived from our corporate bond regression model, of 17.0x and an incremental 2.5x premium to account for the traditional LDC spread, adjusted downward to arrive at our NWN specific 19.5x target P/E multiple. Applying this to our 2020 EPS estimate of $2.60, we arrive at our $49 price target.
- **Upside risks** to our price target include: (1) favorable regulatory settlements; (2) additional gas reserve deals; and (3) higher CapEx outlook.

OGE ENERGY (OGE, NEUTRAL, $41 PT)

Potential upside to capital and earnings remains from OK grid modernization, Midstream recovery a free call option, but stock now pricing in a more balanced risk/reward, and we have to make a valuation call; we Downgrade to NEUTRAL on material '18 outperformance and lack of NT catalysts over the next few months.

- **We are downgrading to NEUTRAL (from BUY) and raising our PT to $41 (from $39) as we roll forward our valuation, incorporating our 2020 EPS estimates.** OGE now trades at ~17x P/E on 2020 earnings which is in line with our electric utility, multi industry peer group and our baseline utility multiple of 17x. **We maintain our previous view that OGE deserves at least an inline multiple or a slight premium**, due to the potential upside in capital plan expansion, despite some of the regulatory overhangs. That said, with current market valuations, the stock has limited upside (as illustrated by our $41 price target), and **we prefer to be selective in other value names such as CNP which has a similar growth profile, a lower valuation multiple (i.e., CNP ~1.5x cheaper) and MLP upside exposure through ENBL ownership.** But, as we noted earlier in the note, despite the downgrade, we consider OGE a battleground name as a NEUTRAL with potential upside bias – **we look for another entry point given probable incremental growth opportunities especially as we move through the OK rate case later in 2019** (i.e., the OK rate case could be the catalyst we need, but we do not expect more visibility with regulatory progress for a few months).
- **We are maintaining our 2018-2021 estimates and introducing our 2022 EPS estimate of $2.51.** We model earned ROEs near authorized levels of 9.7% through our forecast period, with rate base growth of ~5-7% and an earnings CAGR of ~5%. We expect ENBL to contribute between $0.40-$0.41/share through 2021, representing ~19% of the overall earnings mix on average, with distributions of $1.32 in 2019. Our 2022 estimate incorporates earned ROEs near authorized, with ENBL contributing $0.41/share, and OG&E contributing $1.82/share, with no changes in rate base growth and earned return expectations.
- **OGE is working through rate filings in AK and OK.** In AK, the FRP was filed in October for recovery of Mustang CTs and grid modernization, while the OK rate case filed in 4Q18 includes the Muskogee natural gas conversion and Sooner scrubber investment, as well as depreciation rate adjustments, cost structure updates and a potential ROE increase from 9.5% to 9.9%. OGE management has had conversations with OK regulators and further expects that a rider mechanism could also be approved, with Arkansas' filing serving as the benchmark - could lead to some further capex expansion opportunities for grid modernization but not likely a game changer and not expected to be disclosed for a few months, in our view.
- **OGE management and the board remains comfortable with ENBL as a source of cash flow which strengthens the balance sheet and gets reinvested in the business and dividend (i.e., no needs to fund regulated CapEx with equity).** Management guidance for investors is 3 pronged – expect OGE to invest wisely, grow earnings and return capital through dividends. On the question of debt capacity and opportunities to utilize balance sheet strength for acquisitions, management declined to comment directly, but stated that status quo is seen as fine in terms of business mix, and transactions to pivot to more regulated business are not necessarily top of mind. While **OGE sees no need for utilizing leverage at this time, Mgmt. remains committed to not having a "lazy balance sheet" – it's a question of time when they access it.**

- **AEP's PSO utility still could present a healthy accretive opportunity but likely waits for AEP to potentially become a more willing seller in 2019 if a 3rd strike occurs in the rate case** – as a reminder, we believe our case for a sale of PSO to maybe a player like OGE on the buying end would be a potential win-win for both parties involved if something leads to a transaction – accretion all-around: over 3-6% for OGE, 1-2% for AEP under a modest 50% capital redeployment assumption and growing through time. There are several complexities that need to be worked out for AEP if the Oklahoma commission fails to deliver this a 3rd time around, including the relocation of employees, tax leakage as well as the redeployment of proceeds (i.e., how quickly), which we think could be worked through. **See our most recent OK commissioner meetings HERE and our deeper thoughts around a potential AEP/OGE PSO deal HERE.**

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** We arrive at our valuation utilizing a sum-of-the-parts analysis, which is comprised of: (1) ~$31/share (up from $29) for the regulated electric utility, apply a one-turn discount for uncertainty in OK which we could remove following the current rate case; and, (2) ~$11/share (up from $10) for OGE's ~26% ownership of ENBL's LP units, based on cash distributions of $1.38 per unit and applying a 7% target yield, which we derive from comparable gas-focused MLPs and ENBL's current LP unit value. We then discount our valuation back one-year to arrive at our $41 PT (up from $39).

- **Risks:** Outside of noise around ENBL, downside/upside risks to achieving our price target for OGE mainly encompass traditional risk factors inherent with all electric utilities including: (1) negative/constructive rate case outcomes (i.e. regulatory risk including AR), (2) lower/higher capex outlook, and (3) interest rate changes below/above what we account for in our regression model.

PG&E CORP (PCG, NEUTRAL)

PCG faces an uphill battle in 2019, with 2017/18 wildfire investigation results still due, regulators scrutinizing PCG safety record and organizational structure and liability claims mounting in courts with no clear path for recovery pending cost cap and securitization analysis for 2017; furthermore, 2018 still remains a "gap" year pending further legislative relief, if any.

- **We maintain our NEUTRAL rating on PCG as the stock remains burdened with a broken regulatory construct and potential wildfire liabilities that may keep PCG un-investable in the near future – <u>see our CA industry section earlier on in this note for a more in-depth drill down</u>.** While in theory a return to rational utility valuation based on earnings power could mean a significant upside to the stock, the bottom scenario for the stock is zero, as late 2018 regulatory efforts sought to examine the feasibility of restructuring and potential breakup of PCG electric and gas utilities – **Note: we aren't sold that shareholders (i.e., equity owners) will ultimately benefit from this path as there isn't enough information to assess in either direction at this point; at a minimum, it's a big uncertainty as policymakers' comments have been very conflicted at times.** We think the majority of 2019 could remain a "falling knife" year for PCG as it remains at the mercy of regulators and legislators while property damage claims continue to accumulate, with expected civil suits and potentially criminal investigations/cases and while any hope from legislative/judicial efforts re-visiting the interpretation of inverse condemnation in CA will likely take a considerable amount of time to play out. And, we are still waiting for CalFire findings for 2017 Tubbs and 2018 Camp Fires which could further cause a downturn in shares if outcomes are as damaging as prior CalFire findings. **Due to low visibility into the legislature, regulatory process and litigation, we remain NEUTRAL on PCG, and prefer to BUY EIX on the thesis of rebuilding the California regulatory construct with less risk for EIX despite shares trading at a premium to PCG (see our dedicated California wildfire section in this report).**
- **Major events in 2019 will start with the legislative session, CPUC safety investigations, CPUC SB901 cost cap proceedings and a variety or regulatory proceedings to follow. The CA legislature reconvenes on Jan 7,** but there are currently no bills directly addressing wildfire liabilities, especially for '18 gap year or Inverse Condemnation in general, despite some legislators calling for bill language to be introduced at the onset of the legislature taking seats in late 2018. While there is no constructive potential catalyst at this time, we are reminded of the tumultuous process that SB901 took, with final language only in place in the last month of the session. **The CPUC will be taking up the implementation of SB901 cost cap provision starting the docket with a vote on the order instituting ratemaking (OIR) on January 10, with the opening comments expected Feb 11, while the second phase of the PCG safety investigation will have PCG background filing due Jan 16 and opening comments on January 30.** Both proceedings have consequences for PCG; Cost cap methodology will narrow the range of liabilities from the 2017 wildfires (<u>see our California section in this report</u>), while the safety investigation will analyze PCG corporate structure and governance, and could include ROE penalties and restructuring alternatives (up to public ownership of PCG utilities). **2019 was also expected to be a back to core operations year for PCG** – GRC filing due for rates starting in 2020 and a Cost of capital filing due in April 2019; all this before the wildfire season opened the more immediate set of uncertainties, with GRC and Cost of Capital proceedings now unlikely to be resolved in 2019 due to the heavy wildfire related workload at the CPUC, as well as backlog delays, including the EIX GRC from 2017.
- **The circumstances for recovery of wildfire costs beyond insured coverage are fundamentally broken in CA; in our view, the bull/bear case is a function of timing,**

and time likely won't be on PCG's side for the NT. Despite regulators recognizing the disconnect between their responsibility to review prudency vs. the court's interpretation of inverse condemnation as it applies to regulated utilities, they've stopped short of offering a solution or even a visible path toward one. The CPUC has been critical of PCG operations and safety efforts thus far, including in the public forum, while Federal judges and state AGs have faced inquiries over potential probation violations and criminal charges to be filed against the company over events in 2018. Insured loss estimates are still getting updated and civil claims against PCG from 2018 are just starting to be filed in courts. A petition to review IC is awaiting response from the California Supreme Court (expected by December 2018), which if granted could go through an appellate process of ~1-2 years. **Due to the length of the litigation progress, we maintain focus on the near-term potential catalysts in the regulatory and legislative arena to provide clarity on rebuilding PCG investability. As it currently stands outside of special situations, there is no market with utility investors for a pure T&D business that doesn't pay a dividend and has the potential for material liabilities and equity needs in the near future.**

- **We are updating our 2018-2021 estimates and introducing 2022, noting that we are excluding any potential liabilities resulting from litigation.** Our 2018 – 2021 estimates of $3.84, $4.07, $4.39 and $4.57 respectively are based on the capital and rate base growth guidance provided on the 3Q18 call, in aggregate a 7-8.5% CAGR through 2023, with accumulating lag due to recoverability of operating and wildfire costs, as well as capital recovery lag due to rate case and financing uncertainty (minimal internal-only equity issuance) past the last currently approved GRC year (2019). We expect there to be significant delays in the cost of capital proceeding (due to start 2019) and the GRC which should be filed some time in 2019 as well (we note EIX has operated without a GRC approved rate for all of 2018). Our 2022 EPS estimate of $4.67 assumes significant earned ROE lag vs. the currently approved 10.25% ROE due to our view of regulatory uncertainty related to the core business but does not include any incremental wildfire liabilities or dilution due to potential up-front funding (half of pre-tax liability ~36% would need to have a cash reserve at time of non-cash charge). **In relative terms, $1B of pre-tax liability would imply ~$0.09 of earnings power if funded by "normalized" equity issuance; $1B x (1 – 28% tax rate), divided by current 517M share count, divided by a "normalized" 15x P/E ratio (15x is where a CA utility could trade in the absence of liabilities – a 2x discount to our regulated P/E for challenging regulatory environment).**

- **Valuation:** We do not assign a price target to PCG given extraordinary circumstances, as PCG no longer trades on utility fundamentals and has now become a pure special situation story. We could consider reinstalling our PT once fundamentals come back into play following any regulatory or legislative actions.

- **Risks:** Outside of exposure to the wildfires discussed above, downside risks to our valuation mainly encompass traditional risk factors inherent with all electric utilities including: (1) rate case risk; (2) lower CapEx outlook; (3) interest rate changes above what we account for in our regression model. Upside risk to our price target include: (1) favorable regulatory settlements; (2) improved regulatory construct in CA; and (3) higher CapEx outlook.

PUBLIC SERVICE ENTERPRISE GROUP (PEG, BUY, $59 PT)

Quality Regulated business with a profitable generation business awaiting policy changes and market reform – tough to get negative in '19 so we continue to support.

- **Reaffirming our BUY rating on PEG and maintaining our $59 price target. We remain very supportive of the "Power" sector, while the PSE&G utility remains a cornerstone of sector-leading long-term growth.** We continue to see PEG as best in class while policy efforts with market reforms could further benefit the unregulated power segment substantially – would be pure upside to our numbers. PSE&G on the regulated side maintains a clear line of sight in achieving the high-end of the 7-9% rate base growth range through 2022 with no equity needs. **On the Power side, we incorporate the state efforts to reward environmental attributes (ZECs which legislated and process of regulator approval), while further upsides could materialize in 2019 for federal/RTO level efforts to properly compensate coal, gas and nuclear baseload generation (i.e., energy price formation and capacity market reforms in PJM).** Viability of the integrated model continues to draw some investor attention, but PEG is maintaining a wait-and-see approach while recycling capital internally to fund the top quartile regulated growth and pushing off need for strategic alternatives in the medium term – Power funds ~9%-10% rate base growth at PSE&G without having any needs to raise equity. **We believe PEG should continue to be a core investor holding given the high-quality underlying utility that remains a growth engine and energy policy reforms that could add incremental value to Power. Reiterate BUY, $59 PT.**
- **PEG's regulated business remains the bedrock of this 8-10% growth story, supported by a strong policy environment in NJ.** With the distribution base rate case settlement approved (9.6% ROE on 54% equity, $9.5bn rate base), the focus at PSE&G now turns to the incremental infrastructure spend and clean energy filings pending before the BPU. As a reminder, PEG currently has the Energy Strong 2 Program ($2.5bn), and the Clean Energy Future ($3.6bn over 6 years, now including $700mm of AMI) before the BPU. In the LT, we continue to believe that opportunities exist for 1) storage (the CEF filings only propose ~35MW out of a state mandate for 600MW) and 2) transmission investments driven by the development of offshore wind.
- **Despite some challenges to power in 2018, the segment remains profitable, a large cash generator and well positioned for policy-driven uplift.** In 3Q Power lead to lowered guidance for 2018, while the ZEC process continues apace. The revision drew a sharply negative market response as it was attributed to compressed sparks, driven by higher prices at the Leidy hub and some coal/gas switching on the margin. Our view is that despite the near-term compression, Power remains a valuable part of the business and will likely have more value to gain from energy/capacity market reforms. Meanwhile on the ZEC front, the process continues to move forward; the public hearings are done, and PEG anticipates the BPU filing in December 2018, which we now model in our estimates. **PEG has been actively involved in discussions around DOE's rulemaking proposal, supporting DOE and FERC's effort to properly compensate baseload generation** while seeing that a likely outcome would be that FERC works with RTO/ISOs on a comprehensive market-based solution to solve the energy price formation issue in the LT.
- **We are introducing our 2022E EPS of $3.83 and updating our 2018-2021 outlook to $3.13, $3.28, $3.49 and $3.60 respectively**, as we now account for higher capital spending at PSEG, with the removed overhang of rate case uncertainty, and including updates for ZECs and power curves. **This outlook captures the consistent ~9% regulated earnings growth at PSE&G**, modeling ROEs averaging ~11% through

2022. We project ~8-9% rate base growth, driven by a $16B capex program addressing NJ's aging infrastructure needs coupled with ambitious clean energy programs that have been supported by the Governor and Legislature. Should PEG receive close to the full ask for the NJ infrastructure programs, it could push growth to 10%. We model a declining contribution from Power segment due to continued weakness of forward curves, generation volume adjustment and roll-off from higher hedged prices – **our Power model is marked to the 12/7 forward curves. We also assume Keys and Sewaren begin operating in 2H2018, and Bridgeport Harbor in 2H2019.**

- We recently hosted NJ BPU and PSEG site visit for clients, **see HERE.**

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** Our $59 price target incorporates SOTP analysis. We assign a PEG-specific ~7.2x weighted average EV/EBITDA multiple for Power, subtracting out net debt of ~$2.8B and making other EV adjustments including MtM, resulting in a Power contribution of ~$12 (down from $14) to our equity valuation. We apply our regulated multiple and 2x premium for above average growth and regulatory constructs to our 2020E utility EPS of $2.50 resulting in $48/share (up from $45) and incorporate $1/share (down from $2) for holdings. We then discount our valuation back to arrive at our $59 PT.
- **Risks:** Commodity price risk. If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. In our view, PEG is inherently a long natural gas call, with gas the marginal price setter in PJM. If forward natural gas prices fall or PEG loses its basis and locational advantages, earnings can be impacted.

  The remaining risks center on the regulated electric and gas utility – PSE&G. Risks mainly encompass traditional risk factors inherent with all utilities, including: (1) future rate case risk, (2) lower CapEx outlook, (3) interest rate changes above what we account for in our regression model and (4) decline in allowed ROE for investment programs in NJ (energy strong II, GSMP, clean energy future).

PINNACLE WEST (PNW, NEUTRAL, $89 PT)

PNW remains a simple story underpinned by strong fundamentals at both the utility and within its service territory. We remain NEUTRAL on valuation and are not making any M&A calls at this time – PNW highlighted as a NEUTRAL-rated stock with upside bias…

- **Maintaining our NEUTRAL rating and shifting our PT to $89 from $80 as we roll forward our valuation.** PNW remains a very strong name in our view, with a seasoned management team, constructive relationship with regulators, above-average EPS growth, a sustainable capital program, and robust underlying growth in its service territory. We remain on the sidelines solely due to valuation as shares have continued to trade at a premium to the group, **however we note that this premium has diminished over the course of 2018, with the stock almost in line on 2020 EPS - a further pull-back in shares could cause us to revisit our NEUTRAL stance which remains on watch.**
- **We are introducing our 2022 EPS estimate of $5.45 and refreshing our 2019-2021 estimates.** As a result, our estimates are slightly higher at $4.84/$5.04/$5.25 for '19/20/21, versus the previous $4.75/$4.99/$5.24. Through our forecast period, we incorporate rate base growth of +6%, consistent with guidance of 6-7%, and average earned ROEs near the 10.1% authorized for APS, translating into an EPS CAGR of ~6% through 2021 off a base of 2017 actuals. Our 2022 EPS estimate represents ~4% EPS growth vs. 2021, as we continue to forecast roughly ~$1.2bn in capital expenditures through the 2022 forecast window, which could be backfilled with additional spend in our view given the level of LT policy uncertainty at the moment. We model EPS growth at APS will remain consistent YoY at roughly 4-5% through the forecast period, with the 4 Corners SCR recovery starting in January 2019. As we noted following the 3Q18 call and our EEI meetings earlier in November, mgmt. indicated that it is considering filing a rate case in 2020 (it is in a stay out through May 2019). **We asked if mgmt. even needs to file in 2020, to which mgmt. acknowledged it is still thinking through its options and could consider delaying if it's able to reduce costs further.**
- **Capex update coming with 4Q18 results in February…** While we continue to model roughly ~1.2bn in annual capex through the 2022 forecast period, in line with the current guide, we would not be surprised if mgmt. upwardly revised its capital expenditure forecast on the YE18 call. We believe there remains ample opportunities for grid modernization, while incremental improvements in O&M efficiency may also provide additional headroom for spend - but again we will await 4Q18 results. **As a reminder, PNW remains under a self-build moratorium through a 2021 in-service date**.
- **Despite the defeat of Proposition 127, policy and regulatory fronts remain key areas for investors to watch in 2019…** In our view, the LT policy picture in AZ remains rather muddled, as the state is still recovering from the bruising fight over 127. We note that ACC Chairman Tobin's 2050 Energy Modernization Plan remains an outstanding possibility on the generation front, although we expect progress in the docket to move slowly over the course of the year given the sheer complexity and number of stakeholder opinions involved. **Finally, we note that ACC has restarted an examination of retail choice in the state, but we do not see this as more than an informational process at this time – retail choice seems to us a big stretch.**
- **As a clean single state utility, the topic of M&A frequently comes up in our conversations on PNW with investors – we continue to hold the impression that PNW mgmt. remains comfortable with its single state utility model and are not motivated sellers, at least not in the near term.** At EEI, mgmt. noted that it was

not particularly interested in acquiring assets in neighboring states given the economic conditions in AZ are comparatively better, and in our view, the tone was very focused on the current model. Mgmt. sees no problems with its current size. As a target, mgmt. acknowledged that there could be some execution risk for any potential suitor given the regulatory approval process – no surprise to us.

Valuation: We apply our target multiple of 17x (previously 16x), which we derive from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, and ascribe a universal one-turn premium to reflect several externalities that continue to support the group trading beyond fundamentals and forward yield expectations; we apply the 18x multiple to our 2020 EPS estimate of $4.84 (up from $4.75) to arrive at our $89 PT.

- **Risks:** Downside risks to our rating and valuation for Pinnacle West mainly encompass traditional risk factors inherent with all electric utilities including: (1) rate case risk, (2) lower CapEx outlook, and (3) interest rate changes above what we account for in our regression model. Upside risk to our price target include: (1) improved regulatory constructs; (2) higher CapEx outlook; (3) interest rates fall lower.

PORTLAND GENERAL ELECTRIC CO. (POR, NEUTRAL, $44 PT)

Renewables, Grid Mod and Customer Growth Remain Key Variables to watch for POR into 2019

- **Maintaining our NEUTRAL rating and moving our PT to $44 from $42 – our stance is purely a valuation call.** POR exhibits an average earnings growth profile with a steady capital spending program and relatively constructive rate-making given the use of forward-looking test years and decoupling mechanisms, among other items – earned ROEs exhibit very modest regulatory lag, which accounts for certain items like incentive comp, etc. **That said, we believe POR's valuation captures this outlook, with the company trading at roughly a 0.5x vs. peers; we continue to remain on the sidelines largely due to valuation – a modest pullback could warrant an interesting opportunity to revisit our thesis esp. given potential RPS legislative efforts (i.e., potentially mirroring CA) among other incremental policy items as well as possibly more frequent updates around the capital program.**

- **Our 2018E EPS remains the same, while our 2019-2021 EPS estimates move to $2.43/$2.54/$2.68 from $2.51/$2.64/$2.77; introducing our 2022 EPS estimate of $2.75.** We model a +4% EPS CAGR through our forecast period, incorporating rate base growth of 4% and average earned ROEs of ~9% (vs. current 9.5% authorized in the 2019 GRC settlement). Our model captures capital expenditures of roughly $575mm/year in the 2020-2022 time period, roughly $75mm/year higher than the ~$500mm/year in guidance – we believe there are opportunities for additional capex to be added for distribution system investment and renewables deployments over the coming years. Given recent changes to internal planning, mgmt. could be in a position to update the Street quarterly on CapEx changes approved by the finance committee vs. annually, as was the case in the past. We expect modest structural lag to remain over the forecast period, which partially contributed to the shift in our 2019-2021 numbers. **Finally, our 2022 number reflects roughly 3% growth over 2021 and a CAGR of ~4% off of 2017 actuals – we believe there may be additional backfill here as the policy picture in the state continues to evolve as discussed below.**

- **POR could be entering a positive policy cycle, as state entities coalesce around a focus on renewables and new technologies…** The recent reelection of Governor Kate Brown could presage the enactment of a 100% RPS standard, with both mgmt. and the legislature likely supporting any such move in our view. As a reminder, OR currently operates under a 50% by 2040 construct. While POR remains on track through 2025 under this program, we believe an increase to 100% could be a podium for increasing spending opportunities given it is still below targets for 2030 under the 50% goal – i.e., a higher and more aggressive RPS standard could prompt some additional spending opportunities in the 2020 timeframe. Avenues for increased spend include generation and smart grid technologies to support DERs. We note that POR's current trial smart grid programs currently serve over 20k customers. **Finally, on the policy front, we believe the OPUC is generally on the same page as mgmt., and while policy requests such as full decoupling may not come with the 2019 GRC, they remain aware of the de-risking benefits of such mechanisms.** The SB978 process has also strengthened this relationship, in our view.

- **Capex program remains consistent through our forecast period: grid modernization and renewables investments could provide upside to the current plan, although region remains sensitive to rates.** We continue to look for details that POR's existing grid mod efforts could help reduce the O&M profile going forward – potentially providing more headroom in rates, in our view. Otherwise, we believe that the region remains sensitive to rate pressures, with the unknown variable in this equation the above-discussed policy deliberations. **Finally, we highlight that mgmt. remains undecided on the timing of its next GRC, and could potentially stay out through 2020, although the decision remains an ongoing internal process.**

- **M&A not likely a near term option…** Our numerous meetings with mgmt. this year lead us to believe that they remain focused on the organic growth within their service territory and not on M&A opportunities. We have asked mgmt. several times about the potential for a tie-up with NWN, the gas LDC within its electric territory, but mgmt. indicated that 1) the price NWN would command is too high at this time, and 2) they see future environmental policies as diminishing the value of gas PDC in the coming years/decades. Finally, we note that the OPUC is not particularly fond of M&A activity, in our opinion, given its experiences with Enron's ownership in the early 2000s. The additional frictions in the Hydro One (TSX: H) and Avista merger have also led to renewed scrutiny of such activity in the region.
- **We recently took mgmt. on a two day NDR – see our note HERE for additional thoughts and details.**

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** We apply our electric target multiple of 17x plus a one-turn premium for the potential for utilities to trade outside forward interest rate fundamentals and for the reality that this market cap range will continue to embed an M&A premium to our 2020 EPS estimate of $2.54 and discount our valuation back to the PV to arrive at our $44 PT. Our prior $42 PT was based on a 16x plus one-turn premium off 2019E EPS of $2.51.

- **Risks:** The primary downside risks on the regulated utility encompass the traditional risk factors inherent with all utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model. Upside risks to our price target include: (1) favorable regulatory settlements; (2) higher economic growth in service territory; and (3) higher CapEx outlook.

PPL CORP (PPL, NEUTRAL, $29 PT)

Continued UK regulatory/Brexit uncertainty keeps us on the sidelines, strategic alternatives are possible but require diluting UK business mix – a tall order with Brexit ambiguity.

- **Maintaining our NEUTRAL view on PPL as uncertainty surrounding Brexit and UK regulatory reform only seems to increase despite us seeing material value in the business w/ investors remaining on the sidelines.** Maintaining our $29 PT as we roll forward on 2020 fundamentals. PPL mgmt. continues to publicly telegraph it is ripe for strategic alternatives but in our view any large buyers are likely waiting out the game until more clarity on Brexit/Ofgem is gained. Ofgem's recent decision to lower the cost of capital for gas and transmission utilities has only further confused U.S. utility investors and for now seems hard for us to imagine this won't have a ripple effect on the electric distribution companies – at a minimum, this is a major uncertainty which we are closely following.
- **Introducing our 2022 estimate of $2.85 which equates to a ~5.5% CAGR off mgmt's $2.30 base, i.e., the 2018 mid-point guide.** Our estimates incorporate healthy ROEs at the US regulated utilities with each earning close to their allowed, i.e., we forecast the Pennsylvania earning 10.5-11.0% growing off $7.1Bn rate base in 2018, LKE earning 9.0-10.0% growing off $9.9Bn in rate base in 2018; we model total regulated CAPEX of ~$3.2Bn/year for PPL consolidated, cap structure in line with regulatory allowed and UK business growing rate base at a ~5% CAGR off of $10.3Bn base at YE 2018.
- **We and most traditional U.S. utility investors remain on the sidelines with continued regulatory uncertainty in the UK.** Ofgem sent a 'shot heard around the world' when it cut the cost of capital in half for gas and transmission utilities (i.e., the cost of capital was cut to a base line rate of return of 4% for gas distribution and electric transmission businesses). Investors immediately extrapolated this to PPL's UK electric distribution business even though the proposed ruling's scope did not extend to electric distribution businesses. PPL shares fell 6% the day Ofgem announced this proposal vs the UTY only down 0.46% (for more see HERE). Ofgem's executive director for systems and networks explained, "We want to cut the cost to consumers for accommodating electric vehicles, renewables and electricity storage, and make sure that all consumers benefit from these technologies." Given the market reaction, Ofgem's proposed cost of capital was on the much lower end of investor's expectations. **Although we agree that the current rate cut was not directly related to electric distribution companies like WPD, investors will likely draw correlations indirectly – though Mgmt. has stopped short of revising guidance on this. At a minimum, this places a major overhang on shares which we will continue to monitor for the time being.**
- **We caught up with PPL after the Ofgem decision to compare notes – we feel better but remain on guard given the indirect read.** PPL explained that nothing in the Ofgem decision was causing them to change previously announced guidance for RIIO2. As a reminder PPL's UK business is only electric distribution and it has no exposure to gas distribution or electric transmission. It is possible that the market's reaction was premature but only time will tell. PPL maintains the stance that gas/transmission and electric distribution are two very distinct businesses and if the UK wants to achieve its goals for carbon reduction – bill headroom for renewables (i.e., DG investments, electric vehicles) are clearly a reason why they cut returns for gas and electric transmission – then we believe it will require investment in the electric distribution systems, which would be severely curtailed if returns are cut in half.

Regardless of the company's messaging U.S. infrastructure investors view the Ofgem's regulatory proposals for gas/transmission as contentious.

- **Strategic alternatives ahead? It has to be an entire PPL sale, not parts.** PPL has been very public about its openness to strategic alternatives, but the UK business creates some unique hurdles to getting a deal done. In our recent meetings mgmt. said it gets pitched ideas all of the time that just don't work. Mgmt. explained that selling 100% or a partial interest of the UK business does not fit well as the credit rating agencies view the UK business in a stronger light vs other US utilities given the long-term rate certainty, i.e., this affords PPL a lower FFO/debt threshold of 12% vs U.S. regulated peers of ~15%. If WDP was monetized, then FFO/debt would come in below 12% and **proceeds from a sale would need to be used for debt reduction which would be dilutive to earnings**. Either way there would be a tax bill and mgmt. recognized this is also a hurdle.
- **Mgmt. wish list, target mix 20-25% - likely hinders a U.S. acquisition given lack of currency and balance sheet capacity.** This target business mix likely rules out any potential single state small utility acquisitions like in KY and, in our view, implies a large +$10bn deal to dilute the UK. We observe conventional wisdom amongst investors that only a very large player could step in, potentially absorb PPL and dilute down the contribution of the UK business but given NT uncertainty with Brexit and the Ofgem regulatory process, trying to extrapolate earnings visibility could be challenging, in our view, for an acquirer and not likely an upside risk to our neutral stance for now.

Source: Company reports, Guggenheim Securities, LLC, Factset

Valuation:

- We derive our regulated utility group target multiple of 17x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years; we apply the 17x multiple to our 2020 EPS estimate of $1.30 for PPL's US utility franchises (i.e., PA and KY utilities) to arrive at a $22 valuation; we combine this with the $7.5bn equity value we estimate for PPL's UK franchise above (~$10/share), and subtract ~$2/share of holding company drag, we then discount back by one year to arrive at our $29 12-month price target.

Risks:

- **Downside risks include** PPL's UK segment performance, accounts for a majority of consolidated results, can be impacted by fluctuations on FX rates between USD/GBP as well as potential deterioration in regulatory construct and actions outside of the US Outside of the UK segment, risks to estimates for PPL Corp mainly encompass traditional risk factors inherent with all electric and gas utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

- **Upside risks** include an (1) improving outlook for the UK economy, (2) improved capital flows, and (3) strengthening of the GBP above our estimates.

SOUTHERN COMPANY (SO, NEUTRAL, $44 PT)

We are remaining on sidelines and waiting for stronger track record on Vogtle productivity improvements – which we view as an execution story for us at this point; Mgmt. is doing shareholder-friendly moves and can virtually eliminate any remaining market-based equity offerings through other avenues, in our view.

- **Maintaining our NEUTRAL rating on SO; we remain on the sidelines given the binary risk associated with Vogtle – pending visibility, our thesis could change despite us being very selective in this space.** Lowering our PT to $44 from $47 as we roll forward on 2020 fundamentals. Note: we continue to incorporate a two and a half discount for construction risks associated with Vogtle as our EPS estimates do not reflect any incremental risks for Vogtle which we choose to capture in our discounted multiple. Shares do present some value vs peers but we are still trying to gain more comfort with the project with recent productivity improvements but with the continued need to hire hundreds of more construction workers to meet the accelerated April 2021/22 schedule. We could see additional asset sales ahead to accelerate the remaining $2.4bn equity need, but we recognize SO can clear this equity need over time with internal programs, further equity infusion into Alabama, etc.
- **Introducing our 2022 estimate of $3.46/shr which equates to a ~4% CAGR through our trajectory.** Mgmt continues to guide toward 4-6% LT growth but binary risks associated with Vogtle and equity needs across the complex keep us conservative. Our model assumes robust ROEs of 13-14% at Alabama Power with $2.2-$1.7bn/year of capex, an ~11% ROE at Georgia Power with $3.4bn of capex in '18 that steps down to $2.7bn through '22, an ~13% ROE at Mississippi Power with capex of ~$200mm per year, and no additional asset sales at Southern Power. We assume SO can address its remaining $2.4Bn of equity needs with its internal programs. These ROE and capex assumptions drive our 2019/2020/2021 estimates of $3.05/$3.15/$3.31, respectively. We are not modeling further delays or cost overruns with Vogtle.
- **Vogtle remains top of mind but continuity of Commissioners on SO's side.** Based on recent VCM testimony we believe SO is on track to meet the normal November 21/22 schedule for Vogtle (i.e., the regulator's schedule). However, it is worth noting consultants explained in recent VCM testimony that any delays past the November 21/22 schedule would cause cost increases of ~$100mm per month. All of the republican Commissioners that unanimously voted for the revised cost estimate and revised schedule were recently re-elected in the November elections, we view this continuity as a plus for the project. Mgmt is focused on hiring more electricians and pipefitters to meet the accelerated April 2021/22 schedule. **The "bugle of hiring" will continue through the next couple of months.** As a reminder, Southern had a "stand down" at the Vogtle work site last year where it locked the construction site out for a day and a half and had conversations with employees on safety and productivity: 150 employees didn't return after the stand down but productivity levels rose dramatically. Pre-stand down SO was hitting 80,000 weekly hours and after it was achieving 120,000 weekly hours with less labor. The goal is to ramp up and sustain 140-150,000 weekly hours at the stronger productivity levels. SO continues to look toward Canada for labor and is working with the DOL to secure visas for electricians from our neighbors to the north.
- **Equity needs whittled down from $7.0bn to now $2.4bn.** In mid-December SO closed on its $1.2Bn of tax equity financing for its wind portfolio and this marks the latest internal financing initiative that is shareholder friendly. The large equity needs were mostly caused by cost overruns at Vogtle. Southern is working on increasing

 See pages 278 - 279 for analyst certification and important disclosures.

the equity layer at utilities as an avenue, i.e., Alabama power will need over $1bn in equity to step up to 55% by 2025.

- **SO could potentially sell additional CCGT assets, Nicore Gas, Mississippi Power or Virginia Natural Gas to continue whittling down its $2.4bn of remaining equity needs and further "simplify" the story.** However, SO has been very clear that it can address this remaining $2.4bn equity need with internal programs such as its DRIP. SO has 12 GW of remaining fossil fuel assets which could be rationalized in the future. As a reminder, SO recently sold Mankato a 760 MW plant in 3Q for $650mm or $855/kW. **Mgmt has explained there are three items that fit into its decision making process for a potential asset sale: 1)** Transaction value, is there a better owner of the asset that is willing to pay a price which offers premium value (i.e. will someone step up for Nicore?); **2)** SO stock price, i.e. If SO is trading at a significant discount, it is less attractive to issue stock and more attractive to monetize additional assets; **3)** Tax position, Mgmt. now could be less prone to sell assets especially as it becomes more of a cash tax payer approaching ~2022 timeframe. One item SO is potentially conscious about when monetizing gas asset is if the plant resides in the Southern Company power pool, which could preclude further sales - it is worth noting that the other two plants SO Power sold to NEE, Stanton and Oleander, were not in the power pool. At the end of the day if SO had any unexpected incremental equity needs, we believe it has levers to pull including monetizing additional assets.

Valuation:

- We arrive at our $44 price target for SO using our regulated utility target multiple of 17x and apply a two and half turn discount since our EPS estimates do not incorporate any risks associated with Vogtle's construction; we apply this to our 2020E EPS estimate of $3.15 and discount back one year to arrive at our 12-month price target of $44.

Risks:

- Downside risks include, Outside of nuclear construction risks, risks to our rating and price target for SO mainly encompass traditional risk factors inherent with all electric and gas utilities, including: (1) Rate case risk; (2) Lower CapEx; and (3) Interest rate changes above what we account for in our regression model.
- Upside risks, SO coming in under budget and ahead of schedule on Vogtle and/or plugging remaining equity need quicker than expected.

SPIRE (SR, NEUTRAL, $77 PT)

Downgrading to NEUTRAL rating based on valuation and lack of near-term catalysts in an otherwise uncontroversial gas utility story.

- **We are downgrading SR to NEUTRAL (from BUY) with a $77 PT (unchanged) on valuation and lack of near-term catalysts that are not priced into the current stock price – this is a valuation call on an already elevated utility sector.** The regulatory calendar is light, with few contested issues expected to arise, as revenue recovery mechanisms in place allow for adequate rate adjustment. We continue to see good value in the story despite any perception investors may have had around a "Missouri discount," which we continue to view as a misconception as gas utilities historically get favorable treatment (and have traded at higher P/E valuations, by our count a ~3x net premium, included in our valuation). Overall there is little improvement to be expected from the regulatory construct in the major operating jurisdictions for SR (MO/AL). SR has historically grown through acquisition but we believe it now has the scale to grow organically with infrastructure needs providing perpetual opportunities. We do not foresee any major acquisitions in the near term, which is overall a neutral view of prospects for outsized growth, balanced with few "surprises" and a focus on a regulated organic growth strategy. **With limited upside to the SR story, and a highly selective view going into 2019, at this time we are downgrading to a NEUTRAL with a $77 PT.**
- **We are adjusting our 2019-2021 EPS estimates to $3.75, $3.92 and $4.06, respectively, and introducing our 2022 estimate of $4.30.** We model 4.3% annual earnings growth through 2022 at the corporate level, with ~5.5% CAGR from the regulated utilities, in line with management's outlook of 4-7% for net economic earnings. Majority of the growth is driven by regulated utility investments - we note that more than 80% of capex is recoverable in rates with minimal regulatory lag. Capital investment in utility mainly focuses on infrastructure upgrades. We also model modestly increasing earnings contribution from gas marketing business with the exception of non-recurring earnings in 2018. **We are introducing our 2022 estimate of $4.30 based on continued utility investments**, totaling ~$490mm including the STL pipeline being fully operational by 2020 YE, with some contribution in 2019 FY for start of commercial operations. Our 2022 estimate also incorporates a ~10% earned return for the utilities, ~55% cap structure with potential to over-earn on cost management incentives among other items.

See pages 278 - 279 for analyst certification and important disclosures.

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** For SR, since the non-regulated businesses are a relatively small contribution to aggregate earnings and the focus of those businesses is on utility-related infrastructure or services, we value SR as a regulated gas distribution utility. We use our 17x regulated group multiple, applying a 3x gas utility premium spread to 2020 fundamentals, which equates to a 20.0x target P/E multiple. We apply our target multiple to our 2020 EPS estimate of $3.92 to arrive at our $77 price target.

- **Risks:** Outside of the potential overhangs around a difficult Missouri jurisdiction, downside risks to our rating and valuation for SR mainly encompass traditional risk factors inherent with all electric utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model. Upside risks include (1) constructive rate case outcomes (including favorable ROE / equity ratio decisions), (2) higher capex outlook (including development projects not currently in plan), and (3) interest rate changes below what we account for in our regression model.

SEMPRA ENERGY (SRE, BUY, $133 PT)

We view SRE as a catalyst rich long CA call, with business restructuring, capital recycling and infrastructure development upside potential – we believe it's a bellwether name to own in '19.

- **Maintaining our BUY rating on SRE and raising our PT to $133 (up from $127). Our long view on SRE is premised upon a value accretive business transformation of the diversified infrastructure businesses with potential for high growth LNG investments, while being supported by a growing, high-quality regulated utility core in CA and TX.** We feel comfortable with SRE's limited exposure in CA relative to EIX/PCG, and we are bullish on potential for above average growth in Texas (with Oncor upside capex and pending purchase of InfraREIT assets), commercial operation of Cameron LNG in 2019 with additional east/west coast project options on the horizon and a self-funding LatAM portfolio (SA utilities) and IENOVA – South America utilities monetization likely announced by the '19 Analyst Day to fund growth and/or strengthening the balance sheet. **We see 2019 as a catalyst rich year for SRE and view the company as well positioned for outperformance; reiterate BUY.**
- **Texas regulated utility growth and Sharyland JV provide a strong base for the diversified business mix going forward.** With the closing of the Oncor acquisition in 2018, 2019 will be the first year of full earnings contribution to SRE and the company has moved to shore up capex plans resulting in a 6% baseline CAGR from a $5.1B capital plan and included up to an 18% of potential capex increases beyond the base plan. In the 4Q of 2018, SRE also announced the acquisition of InfraREIT and 50% of Sharyland Utilities, setting up Texas for further growth opportunities namely transmission expansion for new generation in Panhandle and South Plains, economic expansion in West Texas and macroeconomic infrastructure need to support population growth. **Overall, we see potential for above-guidance growth at the Texas utilities, supported by the constructive regulatory relationships and a value creating acquisition catalyst pending InfraREIT deal close (see note here).** We also note that over time, SRE could look to purse 100% ownership of Oncor and look to eliminate ring-fencing provisions, optimize the B/S of Oncor (vs. the ~42.5% equity cap). And further enhance the value of Texas in the overall structure.
- **2018 built confidence in SRE LNG development goals which seemed to be achievable and the investment decisions more probable – instead of cherry picking which projects to move forward with, now everything in the mix plus some additional opportunities.** On the 3Q call, CEO Jeff Martin stated that the 45 MPTA of LNG capacity goal is set at what the SRE management team sees as the achievable level and is supported by the MOU with Total on LNG development and signed HOAs with off-takers for West Coast LNG. The HOAs with Total (TOT), Mitsui (8031.T) and Tokyo Gas (9531.T) are an example of long term, credible counterparties stepping up to contract near-term project capacity and at the current level of interest for ECA, which were stood at 5-6 parties according to SRE, is currently giving pricing power to SRE. This is a constructive precursor to the phase 2 investment decision; in management's words nobody wants to be left out in this process. This strong interest is also a direct read through to Port Arthur which is also gathering interest from potential off-takers. **Taken in aggregate, we view Sempra's 45 MPTA goal firmly achievable and see potential to stretch beyond that goal.** Sempra targets an equity share of 60-70% across the LNG portfolio, which may provide an opportunity to take on additional partners in development.

 See pages 278 - 279 for analyst certification and important disclosures.

- **Guilt by association? California regulated utility exposure has weighed on the stock in the 2018 wildfire season** as peers EIX and PCG faced wildfires in their service territory (by our estimates presented in the CA wildfire section, $2.5B and $23.8B in potential liability, respectively). **We see SRE California utilities, namely the electric portion of SDG&E, as relatively de-risked from wildfire events with a better geography and a world class weather monitoring and response program that the utility has implemented for almost a decade which now at least one in-state peer has begun to emulate** (since its own last major set of wildfire events in 2008).
- **The procedure for recovery of wildfire costs beyond insured coverage is fundamentally broken in CA; the bull case remains a function of valuation for SRE.** To some degree we believe even regulators recognize the disconnect between their responsibility to review prudency vs. the court's interpretation of inverse condemnation as it applies to regulated utilities, effectively holding them liable for damages irrespective of cause, and without commensurate rate relief. At the end of 2018, however, they've stopped short of offering a solution and as the process becomes more politicized around the massive Northern California wildfires in 2017 and 2018, it's becoming increasingly difficult to see a universal fix in 2019. **Our core thesis with SRE is not levered to legislative/judicial efforts re-visiting the interpretation of inverse condemnation in CA, since those will likely take a considerable amount of time, but such action could help the stock valuation re-rate higher.** If a constructive resolution doesn't play out around inverse condemnation and the CA regulatory construct doesn't improve, SRE at a minimum has other business areas to deploy additional capital.
- **Updating our 2018-2021 estimates to $5.47, $6.13, $7.29 and $7.60; introducing our 2022 estimate of $7.96.** Our forecast incorporates a consolidated ~9.4% EPS CAGR through 2022, driven by rate base growth of ~6% for the SDG&E and ~8% for SoCal Gas with earned ROEs close to or above authorized levels for each SoCal and SDG&E given incentives and FERC assets. Oncor rate base CAGR is ~7% through 2022, and currently does not include the InfraREIT acquisition and associated upsides which can prove material as we displayed in prior research (see link above). **We expect Cameron LNG to begin contributing to earnings in 2019** with all three trains fully in-service by 2019, providing ~$320mm to earnings in 2020 (consistent with guidance of $300-350mm) and growing to full run rate earnings of ~$400M with escalation beyond that. The international segment grows at a ~6-7% CAGR through our forecast period driven by energy reform in Mexico with several recent project wins (i.e. marine terminals, transmission, etc.) for IENOVA and solid performance by the S.A. utilities in Chile and Peru.

Source: Company reports, Guggenheim Securities, LLC estimates, FactSet.

- **Valuation:** We derive our valuation through our sum-of-the-parts analysis comprised of: (1) ~$40/ share (up from $39) for SDG&E when we apply our 17x group average regulated electric utility multiple and 1x discount to our 2020 EPS estimate; (2)

~$36/share (up from $34) value for SoCalGas utilizing 17x our regulated electric P/E multiple and 4x historical gas LDC spread; (3) ~$29/share for Oncor applying our 17x regulated multiple plus 1x premium (down from 3x as incremental growth is now in EPS estimates) to our 2020 estimate; (4) ~$15/share (up from $14) for IEnova (~66.4% ownership) based on a 9x EV/EBITDA multiple; (5) ~$13/share (up from $12) for the S.A. Utilities based on our regulated electric group multiple; (6) ~$28/share (up from $25) for SRE LNG & Midstream using an 11x EV/EBITDA multiple; (6) ~$3/share for renewables utilizing a CAFD yield of 4%; and, (7) ~($30)/share (down from $30) for parent drag. We discount our valuation back to the present value to arrive at our $133 PT (up from $127).

- **Risk**: Outside of exposure to the wildfires discussed above and potential delays around Cameron, risks to our valuation mainly encompass traditional risk factors inherent with all electric utilities including: (1) rate case risk; (2) lower CapEx outlook; (3) interest rate changes above what we account for in our regression model.

VISTRA ENERGY (VST, BUY, $37 PT)

We believe capital allocation remains the key to this story as power market reforms and strong underlying fundamentals in ERCOT provide positive tailwinds in 2019. We see additional buybacks as a path of least resistance as mgmt. balances its deleveraging goals against returning capital to shareholders.

- **Reiterating our BUY rating and maintaining our $37 PT for VST as we remain firmly in favor of power-levered names heading into a likely eventful 2019.** As we noted for NRG and in our power and policy overviews, power-levered names are slated to go through a year of positive catalysts in 2019, dominated by the forecasted tightness of the ERCOT market this summer (where VST's portfolio remains slightly long power), and by the reform efforts underway in both the eastern markets and ERCOT. **Like NRG, we believe VST remains a "good problem to have" story with capital allocation the central narrative.** Mgmt.'s eventful 3Q18 call set a strong runway for 2019, with both buybacks and a dividend slated for the new year; **however, we believe investors should be on the lookout for additional updates in the coming year on capital allocation *beyond 2019*, as VST is expected to remain a strong FCF generator**.
- **Updating our estimates through 2021 and introducing 2022 estimate.** Our EBITDA estimates of $3,307MM/$3,355MM/$3402MM for 2019/2020/2021 are generally in line, to slightly higher than our previous estimates through 2021 as we mark our models to the 12/07/2018 forward curves for electric, natural gas, and coal prices. We are introducing 2022 estimates built off the same updated underlying assets and assumptions driving our estimates in prior years. We model O&M and SG&A reductions of ~$275mm through the Operations Performance Initiative (OPI) achieved by 2020, consistent with management's updated guidance. In addition, the retail business continues to provide a consistent $700-$900mm of EBITDA with modest maintenance capex through our forecast period. **We arrive at balance sheet and cash flow metrics relatively consistent with VST's targets**, with a relaxation of the <3.0x net debt/EBITDA deleveraging target from 2019 to 2020 (mgmt. indicates 2.9x still within sight by YE 2019). **We model $1.25Bn in buybacks for '19 and ~$500mm additional shares each year from 2020 through our forecast period of 2022, with the newly instated dividend slated to grow 7% yearly through the same period.** Finally, we model 2020 EBITDA as largely in line with 2019, per mgmt.'s most recent guidance.
- **The ERCOT market continues to look very tight in the near term, with all eyes on this upcoming summer and a forecasted 8% reserve margin – see our reserve margin forecasting in prior sections. To the east the focus is on policy, where FERC is expected to rule within the next month on reforms to PJM's capacity market.** We view both of these items as net positives for VST, with ERCOT providing both a fundamental supply/demand boost and the opportunity for policy-driven upside potential via energy market reforms (e.g., the ORDC, marginal line losses, etc.). In PJM, FERC continues to deliberate on the best path forward for reforms to the capacity market construct. We continue to see the process as constructive for generators like VST and NRG, and we expect a ruling on PJM's proposal by the end of January – stay tuned. Finally we note that the fate of the MISO fleet remains somewhat uncertain, with favorable developments at the state level in IL on emissions regulations left somewhat incomplete in 2018. We remain on the lookout for further policy indications from the office of the incoming governor, J.B. Pritzker (D).
- **On capex and M&A, we note that VST has dipped its toes into energy storage arena via two projects: the Moss Landing Project (300MW) and the Upton TX**

solar-colocation project (10MW). We currently model some $400mm in capex associated with Moss Landing; however, given our view that mgmt. will remain disciplined with capital deployment **we do not foresee many additional storage projects or associated capex at this time**. As policies in California and other states change (i.e., mandates) we may revisit this thesis**.** M&A remains a very low-level possibility, in our view, with retail books in ERCOT the only real feasible targets at this time, as mgmt. has indicated it is also trying to organically grow in the east. Finally we note that mgmt. had previously indicated that the Independence CCGT (the sole asset in NYISO) was non-core, but we are of the impression that mgmt. is in no rush at this point given its hands are still full with the Dynegy integration and the fact that the asset remains profitable.

- **Valuation:**

  We value IPPs including VST using an unlevered discounted cash flow methodology before accounting for growth CapEx from 2020 through the 2025 terminal year, at which point we apply an asset-weighted terminal multiple of 6.9x to derive a terminal value. We subtract net debt of ~$10.5bn to arrive at equity value of $16.6bn and price target of $37/share, which is discounted back a full year. Our model is marked to the 12/07/2018 forward through the 2025 terminal year.

- **Risks:**

  Commodity price risk: If natural gas prices fall, wholesale power prices will likely fall, limiting Power margins. VST is still inherently a long natural gas call, with gas the marginal price setter in ERCOT.

  Environmental/Policy risk: Environmental regulations could require increased spending; permitting and compliance associated with these regulations could require significant capital and operating expenditures. Considering timing to comply with these regulations and costs, some retirements of plants could be accelerated. Changes to these regulations could increase costs of operating these plants and/ or increase competition.

  Operational risks: VST's fleet could experience unforced outages or other operational issues that are inherent risks of the power generation business.

VECTREN (VVC, NEUTRAL, $72 PT)

Working through the CNP/VVC deal, which the company expects to close by 1Q of 2019, we see no roadblocks ahead. In 2019 VVC will be a part of CNP and big driver of the story – a key reason why CNP is now our new Best Idea.

- **We are maintaining our NEUTRAL rating and $72 PT for VVC.** We expect shares to continue to trade near the proposed acquisition price of $72/share with current merger arbitrage spreads below ~5bp not expected to change. CNP announced the proposed, combined corporate structure for the post-merger CNP company, and has been vocal about synergy analysis and financial reviews of VVC that were in the works for 1Q 2019, demonstrating confidence in a timely deal close. **At this point we do not see material risk to the CNP/VVC deal close in 1Q of 2019.**
- **Maintaining our 2018 EPS estimates of $2.89 on YTD results among modest model adjustments, updating 2019-2021 EPS estimates and introducing our 2022 EPS estimate of $3.71.** On a standalone basis, our outlook incorporates a ~6.5% EPS CAGR though 2022 excluding acquisition costs and is comprised of ~7.0% regulated rate base growth with earned ROEs near authorized levels ~10.0% and cap structures emulating the current approved construct at the gas and electric utilities, not including any incremental capex or synergies from the pending merger. We continue to also model non-utility segments grow ~5.5% through our extended 2022 timeframe. That said, **we believe that potential exists for near-term underearning due to regulatory lag and expenses not covered in current rates which may provide potential upside to synergies/growth for the combined CNP/VVC entity.**
- **For our prior CNP/VVC merger takes, see HERE.**

Valuation

Our $72 PT reflects the announced purchase price of the proposed CenterPoint transaction.

Risk

Risks to our rating and valuation for VVC mainly encompass traditional risk factors inherent with all electric utilities including: **Downside risks** such as (1) negative rate case outcomes and lower allowed ROE, (2) lower capex outlook and (3) interest rate changes above what we account for in our regression model. **Upside risks** include (1) constructive rate case outcomes and higher allowed ROE, (2) higher capex outlook and (3) interest rate changes below what we account for in our regression model. M&A risks: Failure to approve the pending acquisition by CNP would impact the valuation of VVC.

WISCONSIN ENERGY GROUP (WEC, BUY, $76 PT)

WEC remains a strong story, in our view, with 6% growth well-cemented into the next decade with potential upside. We continue to look for incremental renewables to be added, while monitoring the ongoing progress around Foxconn and broader economic development – one of only a few regulated electric utilities we continue to recommend.

- **Reaffirming our BUY rating and are raising our PT to $76 from $69 – we still see value in the shares; we believe this is a good story to own in 1H 2019 despite slightly higher valuation vs some peers.** WEC exhibits above-average 5-7% EPS growth, with the midpoint of growth well-cemented into the next decade, in our view, with strong visibility in to the future and the potential for incremental renewables opportunities to arise. WEC's updated capital program through 2023 maintains a healthy profile in our view, with spend likely sustainable beyond that, in our view; **a somewhat unique level of detail within our coverage universe, in our view**. As noted, we believe a number of potential upside renewables opportunities remain outside of the plan, with both mgmt. and our own estimates targeting growth just above midpoint growth. WEC continues to trade at a premium to the group, which we feel as justified given the long runway of strong capex and a favorable regulatory/economic environment in Wisconsin. However, we also note that we remain much attuned to developments regarding Foxconn (2354.TW), given the recent election of Democrat Tony Evers and the repeated modifications to the final plant design (Generation 10.5 vs. 6).
- **Refreshing our estimates and introducing our 2022 estimate of $4.26.** We model a ~6% EPS CAGR through our forecast period, coming in slightly above the midpoint. This is based off rate base growth of ~8% across all of the utilities and capital expenditures averaging ~$2.6bn/year (including ATC) consistent with guidance. Given the rate freeze in WI, we model earned ROEs averaging ~9.5% (vs. 10.2% authorized), which we believe could prove conservative. We expect management to stay out of rate case in IL for 2018 and model ROEs above authorized, with ROEs more in line thereafter. We also forecast a declining O&M profile annually through our forecast period, driven by coal plant retirements. Our 2018-2021 estimates remain unchanged at $3.32/$3.50/$3.73/$3.98. Our 2022 estimate of $4.26 represents ~7% YoY growth from 2021.
- **Incremental solar opportunities likely in our view, with corporate policy and political changes driving our thesis.** We continue to foresee the potential for additional solar to be added in Wisconsin, both at the Foxconn site (conversation on this remains ongoing per mgmt.) and more broadly in the state. On the political front, we note that the election of Tony Evers could drive a boost to the state's renewable portfolio standards, as he had indicated a clean energy tilt on the campaign trail. **The state's 10% by 2015 RPS could be ripe for revision under the new governor, per our conversations with mgmt., although it qualified that this is all very much in the early innings and conversations with Evers are only just beginning. We note that this exact sentiment has been echoed in our conversations with LNT mgmt.** We remain on the lookout for additional data points on the policy landscape as the new year unfolds. Finally, there are still sizeable ATC projects outside WEC's base plan still on the drawing board in AZ, AK, and elsewhere, though they continue to move at a very slow pace. **These yet-to-be-announced projects would be incremental to the current growth guidance, in our opinion.**
- **Progress continues on Foxconn development and other economic development opportunities in the region.** We remain attuned to developments at the Foxconn site, where mgmt. has already identified some $140mm in incremental

 See pages 278 - 279 for analyst certification and important disclosures.

capex spend – largely on natural gas infrastructure. Foxconn's plant and the associated developments are anticipated to generate ~250MW of electricity demand, with the manufacturing campus needing 60,000 dekatherms of natural gas capacity when completed ~2023. Having said that, the project has faced its own criticism of late, with the projects design changing from a more advanced Generation 10.5 plant to a Generation 6 design, a Wall Street Journal report on staffing via China due to labor shortages (see HERE), and the election of Tony Evers in November. On the last item we note that the that the Republican-led legislature has been seeking to strip the Governor's office of its ability to oversee the Wisconsin Economic Development Corp, the same entity that created the incentive packages for Foxconn (see HERE). **Finally we note that mgmt. has highlighted the potential for additional gas-related investment at the Mayo Clinic site in MN, where a significant enlargement of the campus is under consideration.**

- **Valuation:** We derive our regulated utility group target multiple of 17x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years and ascribe a two turn premium for WEC's superior regulatory environment and the positive economic outlook within its service territories as well as some growth opportunities not being reflected in our EPS forecasting. We arrive at our $76 price target utilizing a sum-of-the-parts analysis comprised of: (1) ~$27/ share for the regulated WI utility; (2) ~$26/share value for the regulated gas segment utilizing our 17x P/E multiple and historical gas LDC spread of 4x above their electric counterparts; (3) ~$12/share for ATC utilizing a premium to electric P/E multiple given the segment's higher growth; (4) ~$14/share for WE Power when utilizing a premium to electric P/E multiple given the segment's higher authorized return; and, (5) (~$2)/share for Corp. & Other. We then discount our valuation back on-year to arrive at our $76 price target.

- **Risks:** The primary risk to our thesis for WEC encompass the traditional risk factors inherent with all utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

WOLFE RESEARCH

UTILITIES & POWER

Regulateds – Market Underweight
Gas/Power Infrastructure – Market Overweight

February 3, 2019

NISOURCE

(NI US Equity – $26.79 – Outperform)

Prepping for N-T disappointment, but this is very fixable

- **Dividend update foreshadows a disappointing YE call.** On Friday, NI raised its annual dividend to $0.80 from $0.78, representing 2.5% growth – well below the company's targeted 5-7%. Following up with the company, we sense this as a signal that the drag associated with MA gas explosion fixes are worse than we originally thought likely leading to weak initial '19 guidance. Issues include higher recovery and carrying costs. As such, we are cutting our 2019E to $1.31 from $1.35. Our updated estimate represents 2.5% growth off our 2018E of $1.28. We feel this is a more prudent growth rate and keeps the company within its 60-70% targeted payout ratio. We are also reducing are 2020E by $0.02 to $1.43 as we feel it may take a bit longer for NI to fully offset / eliminate the drag associated with MA.
- **Sale of MA business would make even more sense now.** We continue to believe that NI would be best served exiting MA. NI's MA business only makes up roughly 7% of the company, yet it commands a significant amount management's time and is distracting investors from an otherwise solid story. As NI moves closer toward fully completing the recovery process, we think it would make sense to exit the state for a couple reasons 1) there are natural buyers, most logical being ES or Grid and 2) NI is unlikely to come out from under the political microscope in the state anytime soon. **We are sticking with our Outperform rating as we feel a sale of the business is more likely than not and would be a key positive catalyst for the stock. Even without it, MA will quiet down over time and NI's premium LDC value will return.**
- **Expecting N-T pressure, but we are ultimately buyers on weakness.** NI is currently trading at a modest premium to the electric average and has recovered a lot of its post explosion collapse, but its still well-below the LDC premium it had prior to the incident in MA. We expect the stock will likely weaken into the earnings call on 2/20. But long-term investors should hold on and we think the stock will likely rebound as investors realize the MA issues are very fixable and the stock will likely will claw back its prior premium.
- **Rolling valuation year to 2021, PT to $28.** We are rolling forward our valuation year to 2021 and raising our PT by $1 to $28. The increase in our PT is largely due to higher group multiples. In deriving our PT, we are still embedding a two-turn discount to the gas LDC average given the overhang in MA.

Company description

NiSource, headquartered in Merrillville, Indiana, operates two separate business lines: electric utility and gas distribution LDCs. The electric utility serves just under 500,000 customers in northern Indiana and owns 3,300 MW of generation. The gas LDC serves 3.5 million customers in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, and Massachusetts.

Investment Thesis

We see above-average rate base and earnings growth potential for NiSource relative to other electric and natural gas distribution utilities. NI has a $30B backlog of investment with recovery largely through trackers and balanced regulatory environments. Additionally, we see the gas business getting larger over time. NI appears attractive at current levels.

Valuation

Our $28 price target is on a SOTP target P/E valuation. We apply a two-turn discount to the 19.5x group LDC multiple given the Massachusetts overhang. For its electric utility earnings, we ascribe a one-turn premium to our 17x group multiple. NI deserves the premium for its electric utility in Indiana given the tracking mechanisms that allow for timely cost recovery. Risks for NiSource are execution on rate base investment, economic conditions, regulatory outcomes, and if the company is found grossly negligent for operating its gas system in MA. Upsides are additional growth projects, customer growth potential, and the cost cutting initiatives

Exhibit 3. 2020E EPS by Segment

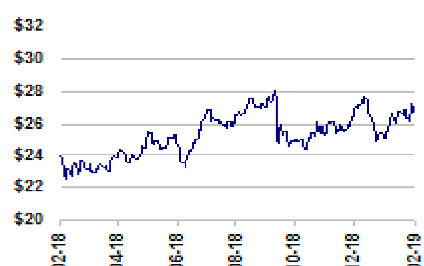
Exhibit 4. Performance Chart



Source: FactSet

Investment Conclusion

We remain Outperform on NI. The company's $30B capital investment backlog will drive its 5-7% annual earnings target well into the future, most of which is recovered with minimal lag via tracking mechanisms. Furthermore, NI has developed quite a constructive track record in the regulatory arena. The settlement in its Ohio CEP rider proceeding is the latest example. The situation in MA has unfortunately overshadowed an otherwise solid business – we believe the company would be best served to exit the state for a couple reasons 1) there are natural buyers, most logical being ES or Grid and 2) the company is unlikely to come out from under the political microscope in the state anytime soon. We believe a sale is more likely than not and are maintaining out Outperform rating as we believe this would be a key positive catalyst for the stock.

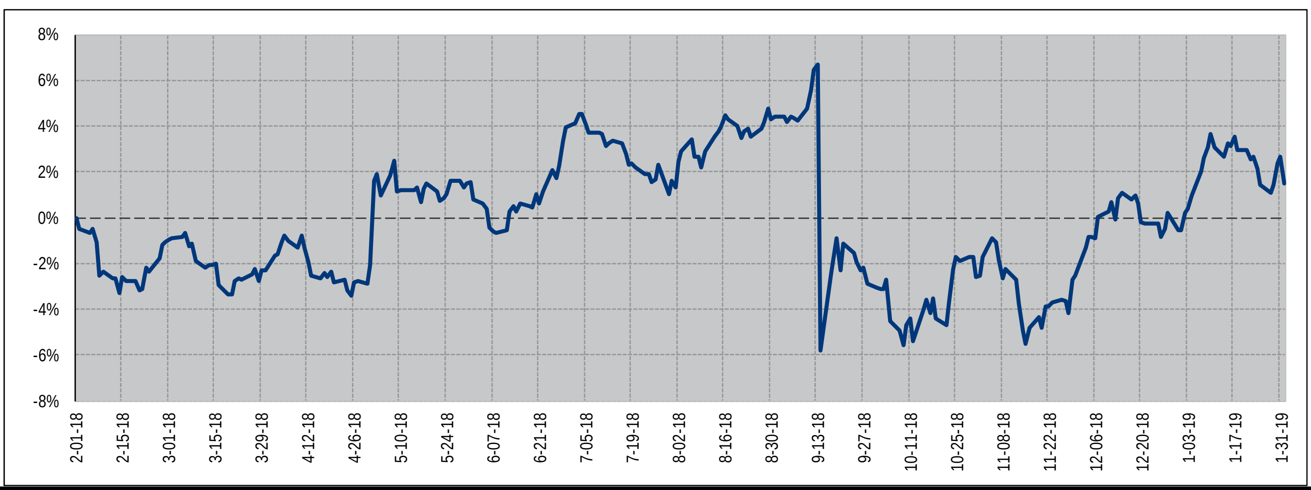
Source: Wolfe Research, FactSet

Exhibit 6: NiSource vs Regulated Average



Source: Wolfe Research, FactSet

We expect a negative call and N-T pressure, but this is very fixable

- **Massachusetts will be more of a headwind than we originally thought.** We expect the drag associated with MA to be more pronounced when NI gives its initial 2019 guidance on its year-end earnings call on 2/20. We believe this sets the stage for an otherwise negative call vs prior expectations. Originally, we had expected that constructive outcomes in other jurisdictions (OH and PA) would offset the on-going drag associated the withdrawn rate case and pipeline replacement program in MA. What we had underappreciated was the lingering impacts associated with getting affected customers back into their homes – additional costs related to providing housing, repairing damaged appliances, etc. NI's $800M+ of insurance should still be largely enough to cover the claims (may go over a little), but the timeline for collecting the cash from insurers is less certain. Additionally, NI has taken steps at its other subsidiaries to make sure an incident like this from happening again, which is likely to include additional O&M-type expenses.

- **Sale of MA business makes even more strategic sense.** We continue to hold the view that NI would be best served exiting MA. The MA business only represents roughly 7% of the business, yet it commands a significant amount of management's time and distracts investors from an otherwise solid story. We think it would make sense to exit the state for a couple reasons 1) there are natural buyers, most logical being ES or Grid 2) NI is unlikely to come out from under the political microscope in the state anytime soon. We are sticking with our Outperform rating given that we believe a sale of the business is more likely or not – this, in our opinion, would be a key positive catalyst for the stock and would allow the company to regain its premium multiple at a much faster pace.

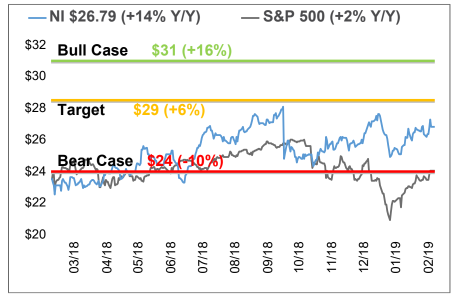
pridzon@key.com

NI: Massachusetts Impacts Reflected in Dividend?

NI raised its annual dividend to $0.80 from $0.78 per share on February 1, 2019. This 2.5% increase is below NI's long-term targeted EPS growth of 5-7%. We expect the lower increase reflects near-term challenges around the MA gas accident as the Company grapples with the logistics of the incident. We have trimmed our 2019 estimate to $1.32 from $1.37. We believe the long-term story remains intact.

NYSE: NI	
Rating:	**Overweight**
Price Target:	**$28.50(▼from $29.00)**
Price:	**$26.79**



Sources: Company reports, Thomson Reuters, KeyBanc Capital Markets Inc.

Key Investment Points

Dividend Hike Below 5-7% - NI increased its dividend to $0.80 from $0.78 per share, below management's 5-7% long-term EPS growth range.

Earnings Read-Through - We believe this signals that the September MA gas incident may be having an EPS impact as management assesses the scale of the response and insurance recovery process.

Lowering 2019 Estimate - We have reduced our 2019 estimate to $1.32 from $1.37, aligning the y/y growth with the recent dividend announcement. We await more detail when NI reports 2018 results on February 20th.

Lowering Price Target - We have trimmed our price target to $28.50 from $29.00 given the lower near-term earnings outlook.

Long-Term Story Appears Intact - We view the setback as temporary as NI works through the NI recovery and expect the Company to be able to get back to (or close to) its original EPS trajectory of 5-7% growth of off 2018 results.

Our Case

Value at $28.50

NI continues to benefit from a constructive regulatory environment across its several jurisdictions, remains committed to its customer growth initiative and manages the MA incident to restore its growth trajectory. Shares trade at 21.6x 2019 EPS on our $28.50 price target.

Bull Case
Value of $30.50

NI is able to manage through its MA incident and deploy capital to hit top end of its long-term growth initiative. Shares trade at 23.1x 2019 EPS.

Bear Case
Value of $24

After the Massachusetts incident, NI's constructive regulatory environment starts to deteriorate and the Company does not execute on its customer growth initiative, pushing NI's long-term EPS growth rate to the low end of its 5-7% target EPS growth rate. Shares trade at 18.2x 2019 EPS.

Valuation

NiSource Inc. (NI)
Our price target represents a P/E multiple of 21.6x our 2019 estimate, while shares are recently trading (intraday $26.16 per share) at 19.8x our 2019 estimate. Our $28.50 price target assumes NI warrants a modest premium to peers given attractive capital opportunities backed by favorable regulation and capital trackers. With roughly two-thirds of NI's net income earned at the gas utilities, we use a sum-of-the-parts valuation with natural gas (21.8x) and regulated electric (18.5x) utility peers.

Investment Risks

NiSource Inc. (NI)
We believe the primary risks to achieving our price target include any deterioration of regulation and any inability to execute on the growth initiatives that management is targeting. A finding of gross negligence could result in fines requiring the issuance of equity.

Scale of MA Recovery Drives Headwinds

With NI's recent 2.5% dividend hike, we believe management may be suggesting the targeted 5-7% EPS growth may get sidetracked by the scale of September 2018 gas fires in explosions in Massachusetts. In our view, as the full extent of the response and financial recovery from insurers became more clear, near-term earnings pressures emerged. We have extrapolated the earnings outlook from this dividend increase and are reducing our 2019 EPS estimate to $1.32 from $1.37 per share.

We view the setback as temporary and consider the long-term story to be intact. We look for NI to return to its EPS trajectory by 2021 as the MA situation is resolved. At this point, we believe management is likely considering strategic options around the Massachusetts subsidiary, to find the best way to put the issues behind NI.

Overweight - We expect the stock to outperform the analyst's coverage sector over the coming 6-12 months.

Sector Weight - We expect the stock to perform in line with the analyst's coverage sector over the coming 6-12 months.

Underweight - We expect the stock to underperform the analyst's coverage sector over the coming 6-12 months.

Other Disclosures

KeyBanc Capital Markets is a trade name under which corporate and investment banking products and services of KeyCorp and its subsidiaries, KeyBanc Capital Markets Inc., Member FINRA/SIPC ("KBCMI"), and KeyBank National Association ("KeyBank N.A."), are marketed.

KeyBanc Capital Markets Inc. ("KBCMI") does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report has been prepared by KBCMI. The material contained herein is based on data from sources considered to be reliable; however, KBCMI does not guarantee or warrant the accuracy or completeness of the information. It is published for informational purposes only and should not be used as the primary basis of investment decisions. Neither the information nor any opinion expressed constitutes an offer, or the solicitation of an offer, to buy or sell any security. The opinions and estimates expressed reflect the current judgment of KBCMI and are subject to change without notice. This report may contain forward-looking statements, which involve risk and uncertainty. Actual results may differ significantly from the forward-looking statements. This report is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the specific needs of any person or entity.

No portion of an analyst's compensation is based on a specific banking transaction; however, part of his/her compensation may be based upon overall firm revenue and profitability, of which investment banking is a component. Individuals associated with KBCMI (other than the research analyst(s) listed on page 1 of this research report) may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(A), financial interest, if any, by any research analysts listed on page 1 of this report will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosure Appendix. KBCMI itself may have a position (long or short) in the securities covered in this research report and may make purchases and/or sales of those securities in the open market or otherwise without notice. As required by FINRA Rule 2241(C)(4)(F), if KBCMI, or its affiliates, beneficially own 1% or more of any class of common equity securities in the subject company(ies) in this research report, it will be disclosed in Important Disclosures, Company-specific regulatory disclosures located above in the Disclosures Appendix. This communication is intended solely for use by KBCMI clients. The recipient agrees not to forward or copy the information to any other person without the express written consent of KBCMI.

NI: Rebasing Expectations Following Recent Discussions with Management

Key Message: Rebasing expectations following recent discussions with management. Near-term estimates revised downward on higher regulatory lag (i.e., timing of capital recovery, drag from property taxes and depreciation), modest pension headwind, among other items. Longer term thesis remains intact. We believe growth in 2021 and beyond should resume back closer to historical guide.

Following discussions with NI, we are adjusting estimates as we enter YE results and ahead of expected new guidance provided by the company. We now account for modest drag from pension but, more materially, regulatory lag at Columbia Gas of MA (AKA Bay State Gas) stemming from the September 2018 explosion. We now assume material regulatory lag in the state driven by (1) a slower recovery of insurance proceeds over the next 12-18m as they work through the various towers and the reality that they may not get full proceeds vs our prior assumptions; (2) timing for recoveries for their pipeline replacement program where we now expect a GRC filing in early 2020 with rates in effect in 2021, which is more delayed than we initially thought; (3) higher drag from property taxes and depreciation among other minor items.

We are modestly lowering our 2019/20/21/22 estimates to $1.32/$1.37/$1.47/$1.58 from $1.38/$1.48/$1.58/$1.68, respectively. Our updated ’19-22 EPS CAGR equates to 6.5%, with more backend loaded growth post 2020 as recoveries in MA begin to bear fruit – 2021 and beyond should see a reversion to the mean when thinking about NI's longer term growth prospects. Regarding dividends, year-over-year growth mirrors our updated EPS growth trajectory and essentially implies a ~61% payout ratio. Given now more grounded expectations among investors, we believe NI should be in a better position to on deliver on plan.

Continued on second page...

Valuation: We derive our regulated utility group target multiple of 17x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, and now ascribe a two turn premium to reflect several externalities (e.g., macro/geopolitical uncertainties) that continue to support the group trading beyond fundamentals and forward-yield expectations. We arrive at our valuation utilizing a sum-of-the parts analysis, based on: (1) ~$10/share for the regulated electric utility; (2) ~$22/share value for the regulated gas segment utilizing our regulated electric P/E multiple plus a premium to account for the historical gas LDC spread above electric counterparts; and (3) (~$2)/share for other adjustments for Corp and Other. We then discount our valuation back by two years to arrive at our $29 PT.

Risks: The primary risks on the regulated utility encompass the traditional risk factors inherent with all utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model. Company specific risks include regulatory risk/rate case risk associated with September gas explosions in Massachusetts.

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Guggenheim Securities, LLC or its affiliates expect(s) to receive or intend(s) to seek compensation for investment banking services from NiSource Inc. in the next 3 months.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

Rating and Price Target History for: NiSource Inc. (NI) as of 02-05-2019

Created by: BlueMatrix

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

COMMENT

Vail Commentary: Looking Past Temporary Hits in 2019/20

- **Maintain Outperform and would buy on weakness as we reduce 2019/20 $0.05-0.07 for additional, but temporary hits beyond the $0.05 we already identified for pension.** We now expect additional pressure in 2019/20 from $0.04-$0.05 of gas system Safety Management System (SMS) accelerated implementation across NI's utilities. This is opex and importantly, we expect it to eventually make its way into rates over the next 12-18 months through the normal filing process. We also expect $0.08 of short-term debt carrying cost on $800M of Massachusetts costs and liabilities as the company waits for $800M of insurance offset over 12-24 months.
- **Expect 5%-7% long-term annual EPS growth guidance to be maintained, albeit off a lower 2019 initially.** However, we think that NI could be back on track (e.g., vs a 2018 base) as early as 2021 as pension, SMS, and carrying costs roll off. Also, the 5%-7% may be extended to 2022.
- **No block equity despite higher cost estimate for Massachusetts.** The cost estimate is likely to escalate from $660M first look to as much as $1.1B, with a portion of the increase at least partially covered by ~$300M pipeline property insurance. Bottom line: we expect management to maintain the prior financing plan of $200M-$300M through a new at-the-market (ATM) shelf plus $35-$60M employee plans.
- **Potential Sale of Columbia Gas of Massachusetts.** With ~$800M ratebase and only $0.11 EPS, our sense is that management is willing to consider the sale of Columbia Gas of Massachusetts, as suggested by local politicians in hearings last year.
- **Valuation:** Our 2019 and 2020 estimates are reduced to $1.30 and $1.39, accounting for the temporary near-term cost drags. Our TP stays at $29 with higher peer group 2020 P/E (19.3x (from 18.5x) and 20.3x (from 20.2x) to electric and gas utilities, respectivley) offsetting lower estimates. Our valuation also accounts for the reversal of 50% of the near-term $0.17 cost drag by 2021. Risks include regulatory outcomes and capital plan execution.

Company Background

NiSource Inc. is energy holding company whose subsidiaries provide natural gas, electricity & other products & services. It operates in 3 segments: Gas Distribution Operations; Gas Transmission & Storage Operations, & Electric Operations.

Blue/Grey Sky Scenario

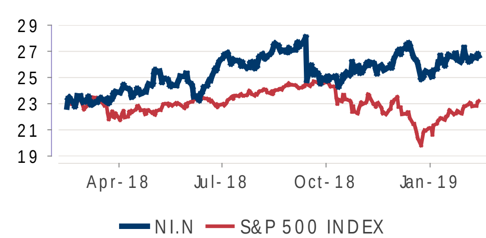
Our Blue Sky Scenario (US$) **32.00**

In our blue sky scenario we assume favorable regulatory outcomes across NI's jurisdictions, successful execution of their capital plan, and growth of infrastructure replacement program backlog. We assume that capex is at the high end of the $1.6-$1.8B and that NI is able to grow ratebase at the high end of their 8-10% range and grow earnings at the high end of their 5-7% range.

Our Grey Sky Scenario (US$) **25.00**

In our grey sky scenario we assume unfavorable regulatory outcomes across NI's jurisdictions, only partial execution of their capital plan, and a decline in the infrastructure replacement program backlog. We assume that capex is at the low end of the $1.6-$1.8B and that NI is able to grow ratebase at the low end of their 8-10% range and grow earnings at the low end of their 5-7% range. We also assume a -1% ROE hit in Ohio

Share price performance



On 13-Feb-2019 the S&P 500 INDEX closed at 2754.12
Daily Feb13, 2018 - Feb13, 2019, 02/13/18 = US$23.13

Further commentary:

We met with management at the annual CS Energy Conference in Vail.

- **Light dividend increase points to turbulence in 2019.** On Feb 1, NI raised its dividend only 2.5%, well below the expected 5%-7% that would be in-line with EPS growth. We expect dividend growth to resume a normal 5%-7% in 2020 and beyond.
- **Sale of Columbia Gas of Massachusetts could occur** should it become apparent that state officials signal that this is their preference through their treatment of cost recovery and returns. Recall that Eversource (ES) was tapped by the Governor to manage the crisis early on. We believe investors would react positively to a divestiture that eliminated future regulatory and political risk.
- **No analyst day in 2019.** This is going to be postponed while the company works out Massachusetts impacts and actions.

We reprint the remainder of our earnings preview from Jan 23rd below (adjusted for our new lower expectation for 2019/20):

- **Guidance for 2019** will be provided on the 4Q call, and we expect a range of $1.27-1.34 vs our reduced 1.30 and consensus $1.34. Expect further discussion of Massachusetts impacts as well as a long-term capex update, more details on the IRP, RFP, and the generation replacement strategy, with wind plant CPCN filings likely filed before the call. Progress will also be discussed for the Indiana ratecase that enables the generation strategy (the case is less important as a near-term earnings driver). Management will also highlight the new CEP rider in Ohio that brings tracked earnings up to over 80% from an already impressive ~75% previously.
- **Indiana electric rate case filed 10/31 in conjunction with a new IRP calling for 100% coal retirements by 2028 (vs prior plan for 50% by 2023), replaced with renewables rather than natural gas.** Looking beyond Massachusetts, the IRP calls for retirement of 80% of the coal fleet by 2023 and 100% by 2028 (vs prior plan 50% by 2023). The IRP also points toward rapidly declining-cost renewables (wind, solar, batteries) rather than gas-fired replacements, as had been the case with the 2016 IRP.
- **Despite impact from Massachusetts, no block equity in 2019/20.** With the recent 25M-share private placement out of the way, we expect equity to resume a more normalized annual pace of $200M-$300M through a new at-the-market (ATM) shelf plus another $35-$60M employee plans. The timing of equity issuance in 2019 is likely dependent on the timing of liability and property insurance recoveries for the Massachusetts incident.
- **Pension hit for 2018.** The assumed 7% return was not achieved, due in part to the market drawdown in 4Q18. Expect a 0.05 drag for 2018 results.
- **4Q18 earnings walk.**

FY 2019 EPS - Consensus	$1.33
FY 2019 EPS - Guidance	$1.27-$1.34

Source: Company data, Credit Suisse estimates, IBES

- **A 3Q18 beat $0.10 vs CS $0.08 and consensus $0.06. No changes to 2018 guidance $1.26-$1.32 vs. CS $1.29 and cons. $1.28, with 5%-7% annual EPS growth target off a lower 2019**. We've noted before that both the timing of rate orders as well as deployment of capital to support 8%-10% ratebase growth may cause some deviation from the midpoint of guidance, but management remains confident of steady performance within the band with no block equity required through 2020 (unchanged). While financing associated with ~$150M accelerated capex in Mass. and possible 1x penalties could put some temporary pressure on earnings (our opinion), the company continues to project performance toward the midpoint of the band. Ultimately, insurance is expected to be adequate to cover virtually all expected expenses (not penalties), and ratebase earnings and cost rolloff should eventually offset any effects by 2021/22 and beyond.
- **Base electric rate case filed in Indiana along with a new, more aggressively carbon-focused Integrated Resource Plan (IRP)**: NIPSCO Electric filed a $21.4M annual base rate request on Oct 31, 2018 in conjunction with the new 2018 Integrated Resource Plan filing also filed on Oct 31. An order is expected by 3Q19 and if approved, rates would be effective as of Sept 2019. The rate filing also includes changes to the depreciation schedules for the IRP's planned early retirements of coal, along with rate design changes to provide more tariff flexibility to industrial customers. The 2018 all-source RFP is a key component of the IRP planning process, with a winning selection expected to be approved by Indiana regulators in early 2019 for a "Phase 1" of the plan. For Phase 2, additional RFPs could be issued around 2021 to meet the 2023 80% goal (and take advantage of renewable tax credit programs before they completely ramp down). The IRP as submitted favors significant amounts of wind in the early years of the plan (take advantage of PTC tax credits in Phase 1 prior to 2020), although solar should become more economic after 2020. Management expects to have a better idea of timing on retirements and investment by mid-2019. Furthermore, we note that Indiana historically prefers utility ratebase generation vs PPAs. For Phase 3 after 2023, the utility is likely to rely on PPA contracts for a

remaining 400-MW hole. By 2028, all coal units including Michigan City are expected to be retired.

- **Integrated Resource Plan (IRP) now calls for 100% coal retirements by 2028.** NI takes a laddered approach to portfolio planning, so we expect to see a combination of PPAs and possible ratebase plants out of the process, with the possible acceleration of coal retirements. The 2018 all-source RFP helps with planning and has seen a strong response (80 bidders). Submissions were released to stakeholders on July 24 for their review followed by a submission of a winner to the IURC Nov for approval in early 2019. However, the final plan will be developed in coordination with the IRP process, with the company likely to file for a Certificate of Public Convenience and Necessity (CPCN) no later than early 2019 in order to have a plant ready to place assets in 2023 (should that be the path agreed upon through the IRP process).
- **Renewables favored over CCGTs in the IRP.** This is a rather stunning development in our opinion, especially since it relates to a near-term need (next few years) rather than middle of next decade as has been the case with CMS's longer-term coal replacement plans. The company says that CCGTs offered into the RFP have been in the $800-$900/kW cost range, well above the ~$300/kW needed to compete with tax advantaged wind, solar, and storage. Note that solar becomes more attractive than wind after 2020 as both the wind PTC and solar ITC begin to sunset. As we've noted previously, regulated utilities will increasingly find themselves more competitive with ratebased solar after 2022 when the ITC drops to 10% and the disadvantage of required tax normalization doesn't handicap utilities as much vs non-regulated third parties. For NIPSCO, the company's existing gas fleet will help balance the system as coal is replaced with renewables, although eventually (after 2028), more gas peakers may be needed. However, we would add here that with the cost of battery storage coming down too, gas peakers might eventually find themselves under threat as well.

- **The 2016 IRP had called for retiring 50% of the coal-fired generation fleet by the end of 2023**, including 500-MW Bailly 7/8 (MISO approved closure by May 31, 2018) and R.M. Schahfer Units 17 and 18. With interruptible load contracts in place, there is no rush to build replacement capacity until Schahfer retires in 2023 (likely replaced with a CCGT). However, with a three-year lead time (one year for filings and two for build), NIPSCO expects to file the 2018 IRP in November 2018 despite a November 2019 deadline to file, providing additional details on its long-term capacity plan as well as additional clarity on the capital plan and capital guidance post-2020.

Massachusetts Update:

- **Upgrades of other low pressure systems outside of Massachusetts now planned through 2019.** As part of the early response to the Massachusetts over pressurization incident in September, the company plans to reprioritize the installation of upgrades to other similar low pressure (i.e., older) systems in Ohio, PA, and elsewhere, including the fitting of safety shutoff and remote monitoring systems to modernize them into medium pressure systems with regulators at each location. Although this is a $150M capital program in 2019, there is no change to the company's long-term $1.6-$1.8B annual capital plan as this is simply a reprioritization within the budget.
- **Massachusetts work is progressing ahead of schedule.** All pipe replacement was completed and >99% of houses were reconnected and reoccupied in late-December. Despite bringing in work crews from across the country, the company has not yet

forecasted significant incremental capital expense beyond the $135-$165M that would have occurred normally (just accelerated, helped by having the entire system shut down for the upgrades). However, the final restoration cost estimate is still being developed and capex is likely to be somewhat higher than this, although some recovery is also likely through property insurance claims (>$800M coverage, separate from the ~$800M liability coverage previously discussed) that could mitigate needs for financing as well as any incremental rate requirements (for capex).

- **Replacement of entire system includes modern safety features.** The existing system is over 100 years old and did not have individual regulator valves or safety valves at each house. The new system consists of high-pressure plastic mains with regulators at each service meter to reduce the line pressure from the main to the required pressure.

- **A recommendation aimed at Massachusetts (i.e., not just NiSource):** As part of the ongoing investigation into the September natural gas explosions in Massachusetts, the National Transportation Safety Board (NTSB) released on Nov 15 five urgent safety recommendations, the first of which is aimed at the state itself. The NTSB recommended that Massachusetts eliminate a licensure exemption given to professional engineers for utility work, which would otherwise require a professional engineer's seal on utility engineering drawings. The report goes further to note that this type of exemption is a common practice across the country: "According to the National Society of Professional Engineers (NSPE), in most states PE's are not required to review and approve project plans, such as those used in this accident, because they have industrial, public utility, or other exemptions. The NSPE has advocated for the phasing out of existing industrial exemptions in state licensing laws."

- **NiSource recommendations**: These recommendations are not surprising and NI management has indicated they have already made significant procedural changes since the incident: (i) Revision of engineering plan and constructability review process, (ii) Review and ensure records and documentations are traceable, reliable, and complete, (iii) Apply management of change process to adequately identify system threats, and (iv) develop and implement control procedures during modifications to gas mains.

- **Next Steps.** The NTSB investigation is continuing; we note that a similar investigation into a 2014 explosion on Consolidated Edison's system was previously completed in 15 months. With Senate field hearings completed in November, we expect lower-key state hearings in mid-2019 (unlikely to be televised) as well as more generalized full Senate hearings on pipeline safety likely to take place next year, with the goal to improve federal regulations (e.g., Pipeline and Hazardous Materials Safety Administration PHMSA).

- **Penalties in MA are delineated at $20M per emergency response incident**, which the company is interpreting to mean one incident. Other penalties are limited to ~$2M. In our opinion, the incident appears more likely to be a one-time, quickly correctible event, and the company's latest estimate of Lawrence incident expenses stood at $415-$450M third-party claims and related expenses plus another $180-$210M administrative, charitable, and other expenses, much of which could be covered by the utility's $800M of insurance coverage plus additional claims through its property insurance (> $800M of coverage). We reiterate that uncovered expenses and penalties are unlikely to approach the ~$1B discount that NI currently trades at and more likely to be closer with those settled in the 2014 Con Ed Harlem explosion ($153M).
    - **Seems like a singular event.** As we've noted, the NTSB's preliminary fact finding report (Oct 2018) into the September Massachusetts natural gas explosions cites that the faulty work was performed in accordance with steps laid out in a work package developed and approved by Columbia Gas. The report identified two key findings: (1) a contracted

crew accompanied by a Columbia Gas inspector (this is normal) were working on a tie-in project of a new plastic distribution main and the abandonment of a cast-iron distribution main. The crew disconnected the cast-iron line without relocating pressure sensor lines to the new pipe. This resulted in the system falsely reading low pressure in the live system, which automatically opened regulator valves to raise pressure in the low-pressure distribution system. (2) The work was "performed in accordance with steps laid out in the work package…developed and approved by Columbia Gas".

- We note that for some investors, there's some uncertainty as to whether the cause of the error could be systematic poor long-term recordkeeping, which we agree had been a factor leading to high penalties in past cases such as San Bruno in California. However, the nature of this error so far described by the NTSB suggests to us that a non-systematic one-time engineering error is more likely: that an employee failed to instruct this crew to move sensing lines in this specific case. The replacement of old cast iron/bare steel pipes has been taking place for years and is not specialized situation work, hence we think if this error were systematic in nature, we would expect to have seen similar incidents in the past. In our opinion, this incident appears more likely to be a one-time, correctible event, more similar to the Harlem event than San Bruno.
- As we have noted before, the regrettable human toll from this incident (1 fatality, 21 injured, 131 structures damaged, including five houses destroyed) has been less than previous gas explosions at San Bruno, Dallas, and New York. In our opinion, this incident is more likely to follow a path similar to that of Consolidated Edison's 2014 Harlem explosion (eight fatalities resulting in a $153M settled outcome) rather than the much more punitive path followed in California after San Bruno.

Financing and Regulatory Updates:

- **No change to equity financing plan over the long term.** We expect management to make an effort (and likely succeed) to avoid any additional common or preferred equity despite Massachusetts impacts and for the company to maintain 5%-7% EPS annual EPS growth off a lower 2019 base (but caught up by 2021/22 as temporary earnings hits in 2019/20 roll off). Still see needs limited to $200-$300M annually through the ATM. In the short term, the timing of debt and equity in 2018/19 may be dependent on the timing of insurance recoveries in Massachusetts. While $800M of insurance won't cover capex, charitable contributions, and any possible penalties (apparently limited to ~$22M for the entire incident by state law), it should cover the company's estimate of other Lawrence incident expenses which currently stands at $415-$450M in third-party claims and related expenses plus another $180-$210M administrative, charitable, and other expenses. Furthermore, property insurance (>$800M coverage, of which $300M covers pipeline damage) may also cover a portion of capital expenses, although we wouldn't expect full recovery of depreciated equipment, obviously. Still expect 13% FFO/Debt by yearend 2018 improving to 15% for 2019/20, driven by a combination of strengthening cash flows and de-leveraging.
- **Gas utility rate activity heating up:** Aside from annual filings in Pennsylvania, we expect filings every few years in NI's other jurisdictions to recover remaining capital not picked up under tracker mechanisms. A $107.3M annual revenue base rate settlement in **Indiana** for NIPSCO Gas was reached in April 2018 and was approved on Sept 19th as filed, with rates effective Oct 1st. The company has withdrawn its filing to extend the

NIPSCO Gas System Modernization Program for another five years after the current one expires in May 2020. Instead, NI and intervenors are working on a new program after legal challenges, although NI may also choose to simply file forward looking ratecases similar to ones currently filed in Pennsylvania and Indiana. Also expect a general ratecase filing nearly every year in **Pennsylvania** ($47M filed in March 2018 with a $26M settlement reached Aug 31 and a final order on Dec 16 for rates effective in Dec), small filings in **Maryland** to pick up non-tracked STRIDE spending (settlement filed 7/31/18 with an order in 4Q18), and a 3-year cycle in **Massachusetts** (filed in April 2018 with a settlement withdrawn on Sept 19 after the explosions there). No new filing is expected there in 2019. In **Virginia**, the company filed for a $22M increase on Aug 28 (only $14M effective increase net of tracker roll-in). In **Ohio**, the Infrastructure Replacement Program just received a five-year extension in Jan 2018, while the company filed a $74.5M annual revenue settlement on Oct 25, 2018, establishing a deferral recovery rider for the Ohio Capital Expenditure Program, or CEP that was approved with rates in place on Nov 28. Note that a 9/4/18 audit returned virtually no red flags (only $200k). The CEP case was the first filing of its kind and essentially applies rate headroom from lower income tax rates to recovery of a $400M regulatory asset. See below for details.

- **Plans intact post-tax reform impact.** Management continues to guide annual infrastructure investments of $1.6B-$1.8B through 2020 (with $1.7B-$1.8B in 2018) and reiterated the commitment to investment grade credit ratings. This is notable given NI's relatively high level of parent debt (nearly 2/3 of the capital structure). As we've noted before, NI expects to maintain interest expense deductibility for holding company debt as it is now essentially classified as a regulated utility following legal entity restructuring initiated early 2017 to convert NIPSCO into an LLC. Our calculations have shown a -$14M (-$0.05 EPS) hit from lower parent interest shielding at the lower tax rate, but management has plans in place to offset this with cost cutting.

- **Rate headroom supports investment.** Following tax reform, NI's NOL carryforward had been revalued to $508M, which is expected to continue to provide a cash tax benefit that extends beyond 2025. The re-measurement of deferred tax liabilities decreases regulatory liabilities by ~$1.5B. The amortization of this regulatory liability and the reduction in the pass-through tax expense for customer bills provide additional rate headroom for incremental investments in necessary utility infrastructure.

- **Privately issuing some equity, shoring up credit ratings against tax reform impact.** On May 2nd, NI announced a private placement for the issuance and sale of 24,964,163 shares of common stock to six investors for gross proceeds of ~$606M. This is expected to fund capex and be used for general corporate purposes. This issuance resolves any negative credit and cash impacts from tax reform, and management does not expect any additional common equity block offerings in the planning horizon of 2018-2020. Recall that we had expected NI to issue incremental equity above the typical $200M-$300M annual at-the-market (ATM) issuances plus an additional $35M-$60M ESPP/401K/Other. With the latest equity issuance, management expects to raise FFO/debt to 13% by year-end 2018 from 12% as of year-end 2017, with a 14-15% target for 2019/2020. NI maintains investment grade credit ratings at Moody's (Baa2), S&P (BBB+), and Fitch (BBB) with a stable outlook al all three. We continue to expect NI to consider other alternatives to debt, including convertible equity, with $400M preferred equity issued in Jun 2018.

- **Tax reform progress with regulators also helps support FFO and credit ratings.** NI continues to work across its seven state jurisdictions on the pass-through of tax benefits for customers while maintaining credit metrics supportive of investment-grade credit ratings, as the company remains largely out of base ratecases in most jurisdictions. Thus far, NI has received rate orders for lower tax rates only in Maryland (effective April) and Kentucky (May 1st). The recent settlement in Indiana for NIPSCO Gas also includes the impact of lower tax rates (see below). NI's utilities hypothetically face the potential for roughly $200M lower cash collection in rates for deferred taxes as well as another $50M lower cash as ~$1.5B deferred tax liabilities are amortized (starting 2020, typically over the life of assets, e.g., about 30 years). This could include the reduction of deferred regulatory asset balances, including ~$63M of TDSIC tracker roll-in for higher depreciation in the ongoing NIPSCO Gas base ratecase. Furthermore, NI has a pending request for another ~$70M for the deferred recovery of prior period capital spending in Ohio under the Capital Expense Program rider (see below).

- **O&M and debt cost –** the company guides to flattish going forward, with some deviance due to timing issues. Debt refinancing opportunities have been largely executed, with no significant new refinancings expected through 2022.
- **On M&A**, the company emphasizes plenty of organic opportunity vs the high premiums that would be required for an acquisition (aside from small tuck-ins).

Regulatory details:

- **NIPSCO Gas ratecase settlement approved on Sept 19.** On April 20th, NIPSCO, the Indiana Office of Utility Consumer Counselor (OUCC), and other parties filed a settlement with the Indiana Utility Regulatory Commission (IURC) in the company's pending rate case. The settlement calls for a $107.3M three-step gas distribution rate increase with the first/second/third step at $86.5M/$29.2/-$8.4 at a 9.5% ROE, 45.91%/46.88%/46.88% equity ratio and a $1.25B/$1.52B/$1.52B ratebase to be effective Oct 1, 2018/Jan 1, 2019/Jan 1, 2020, respectively. ~$63M of the increase, the largest component of the ratecase, was for the Transmission, Distribution and Storage System Improvement Charge (TDSIC) tracker roll-in and higher depreciation, with no impact on net income. The reset of depreciation rates is the widely anticipated last step of a 2010 settlement that reduced depreciation temporarily in order to "rebuild" ratebase. To account for tax reform impact, NIPSCO previously revised its rate request to a two-step $117.9M rate increase at a 10.7% ROE, 46.02% equity ratio, and a $1.483B ratebase for a test year ending Dec. 31, 2018.
- **Rebuilding ratebase.** Recall that NIPSCO Gas' ratebase had been previously depleted faster than normal as the result of a 1998 rate order that set a 5% depreciation rate. By 2010, ratebase had been depleted to only ~$300M vs. what would have been about $1B under a normal 2% depreciation rate. A 2010 settlement agreed that the fair value of ratebase was $725M (based on a 9.9% ROE minus 2.9% inflation) and reset depreciation down to a 1.6% rate for a nearly $76M annual cash rate reduction to rebuild ratebase over the next several years (this was $26M beyond a normal 2%). In 2013, another settlement renewed the lower depreciation rate through 2020 with an agreement to file a ratecase before Nov 2020. The Sept 27th filing satisfied this requirement early, with $1.5B projected ratebase for 2018 including capital investment from the utility's ongoing $800M TSIC infrastructure program. Note that the TDSIC program is only expected to be about 1/2 to 2/3 completed by 2018 (Note that TDSIC filings are on their own track with the latest gas filing in Feb and decisions expected for gas and electric in July and June, respectively.)
- **Columbia Gas of Ohio Infrastructure Replacement Program.** On April 25th, the Public Utilities Commission of Ohio (PUCO) approved Columbia Gas of Ohio's (COH) annual Infrastructure Replacement Program tracker adjustment, allowing cost recovery of ~$207M of 2017 infrastructure investments. Recall that a 2017 settlement allowing COH to continue the IRP tracker through 2022 was previously approved in Jan 2018. The IRP program covers the replacement of priority mainline pipes and targeted customer service lines.

- **Columbia Gas of Ohio CEP rider settlement for $74.5M was reached on Oct 25, 2018.** Essentially, this would apply some cash tax savings toward the deferred recovery of Capital Expense Program spending since 2011. Under a 2011 agreement, NI had been allowed to spend on non-IRP capital spending in Ohio with recovery deferred until a ratecase (at a 10.95% ROE) in 2020. However, given the new headroom in rates from a lower revenue requirement for a lower tax rate, management filed for an initial $69.8M of recovery starting Aug 2018 for investments through Dec 2015 but deferred through Dec 2017. Going forward, the company had also requested revenue requirement increases to $90.1M in Aug 2020 and $108M in Aug 2022 for additional investment. A 9/4/18 audit returned virtually no red flags (only $200k), but the settlement reached on Oct 25, 2018 includes a $74.5M annual increase. The CEP case is one to watch as this is the first filing of its kind and seeks recovery of a $400M regulatory asset.
- **Columbia Gas of Maryland ratecase and IRIS filing - Settlement was filed on 7/31/18 with an order expected by 4Q18.** On April 13th, Columbia Gas of Maryland (CMD) filed with the Maryland Public Service Commission (PSC) for a $6M gas rate increase at a 10.95% ROE, 52.06% equity ratio, and a $113.5M average ratebase for a test period ending April 30th. The PSC is required to act by Oct. 29th. On April 16th, CMD also filed with the PSC for an updated Strategic Infrastructure Development and Enhancement (STRIDE) plan for 2019 through 2023 with its infrastructure replacement and improvement surcharge application (IRIS) calling for an incremental $4.3M revenue requirement increase, effective Jan 1, 2019, at a 9.7% ROE and $34.2M IRIS ratebase. Under the STRIDE plan, utilities in MD may recover related costs through the annual updated limited issue IRIS rider. Under the new STRIDE plan, CMD seeks to further accelerate the replacement of outdated “priority pipe” to 42.5 miles per year vs. the previously approved 37.8 miles per year for CMD’s 2014-2018 STRIDE plan.
- **Ratecase filing and settlement in Massachusetts withdrawn; no new filing expected in 2019**. This isn’t surprising given the attention now focused on restoration efforts after the recent explosions and fires in Lawrence, North Andover, and Andover. For details on the original filing, see our 9/13 note, ‘Massachusetts Explosions; Story Developing’.
- **Columbia Gas of Massachusetts ratecase filing.** On April 13th, Columbia Gas of Massachusetts (CMA) filed with the Massachusetts Dept. of Public Utilities (DPU) for a $43.8M gas rate increase at a 10.95% ROE, 53.25% equity ratio, and a $769.8M year-end ratebase for a calendar-2017 test period. The net annual rate increase (excluding $19.7M in infrastructure trackers from its Gas System Enhancement Plans) is $24.1M. A DPU decision is expected by Feb. 28, 2019 with new rates effective Mar. 1, 2019. Additionally on April 30th, the DPU approved CMA’s 2018 Gas System Enhancement Plan allowing for recovery of ~$84M incremental 2018 capital investments, effective May 1, 2018.
- **Columbia Gas of Pennsylvania rate increase request.** On Mar. 16th, Columbia Gas of Pennsylvania (CPA) filed with the Pennsylvania Public Utilities Commission (PUC) for a $46.9M rate increase for gas pipeline upgrade work. CGP currently plans to spend $215M in 2018 on upgrades to aging pipeline infrastructure. A $27M settlement was reached on Aug 31 with an order expected in Nov and rates effective in Dec 2018.
- **Remain on track for $30B in infrastructure investments, seven-year modernization programs.** NI has identified ~$30B in long-term infrastructure investment opportunities, with $20B from gas distribution operations and $10B from electric operations. After legal challenges, a filing this year was withdrawn that would have extended the 7-year NIPSCO Gas System Modernization Plan (TDSIC) past 2020 (a new deal is in the works, or perhaps the company will simply file regular ratecases for recovery rather than a rider). However, under the IURC-approved seven-year electric infrastructure modernization program remains in effect for now, and

NIPSCO expects $1.25B in electric infrastructure investments to be made through 2022.

- **From our 11/1 NI 3Q17 Earnings Note: 2018E Capex forecast is a little higher than expected.** Positive on the margins with $1.7B-$1.8B forecast vs. maintained longer-term guidance for $1.6B-$1.8B annually from 2019-2020. Continue to note short regulatory lag periods with 75% of capital starting recovery within 12 months or less.

Figure 2: NI Major Gas and Electric Utility Infrastructure Programs

	Authorized ROEs	Ratebase (YE 2017)	Total Identified Infrastructure Investments	Modernization Programs	Annual Modernization	Recovery Mechanism	Notes
NIPSCO Gas							
Columbia Gas Maryland	9.70%	$107M	$0.2B	$0.1B	$16-$21M	Tracked	Settlement filed 7/31/18 for a $3.7M annual increase vs the $6M requested Increase filed on 4/13/2018. Order Expected: 4Q2018
Columbia Gas Massachusetts	9.55%	$792M	$1.4B	$0.7B	$80-$120M	Tracked	Requested Increase: $24.1M, net of infrastructure trackers; filed: 4/13/2018 Settlement withdrawn Sept 19; refiling expected in 2019
NIPSCO Gas Base Rates	9.90%	$1.2B	$4.5B			Base rates	First base rate request in 25 years filed 9/27/17. Inclusive of various tracker programs, had sought annual revenue increase of $138.1M based on 10.7% ROE on 46.02% equity on $1.5B ratebase (yearend 2018), with ~half for higher depreciation rates. Settlement Filed for $107.3M on 4/20/2018 and was approved Sept 19 as filed. Rates effective Oct 1.
NIPSCO Gas System Modernization Program				$3.9B	$135-$160M	Tracked with TDSIC	7 Year plan update filing 4/2/18. Investment of ~$1.25B. Plan was withdrawn after legal challenges - NI likely to file forward looking ratecases going forward. Current plan expires May 2020.
NIPSCO Gas - PHMSA	Recovery of Federally Mandated Pipeline Safety Compliance Plan Settled as part of Base Rate Case						Filed: 11/8/2017 Settled: 4/20/2018. Settlement approved 9/19/18.
Columbia Gas Pennsylvania	Settlement - not specified	$1.5B	$3.0B	$1.8B	$210-$250M	Ratecase (Fwd Test Year)	Requested Increase: $46.9M Filed: 3/16/2018. Settlement filed for $27M on Aug 31 with approval expected in Nov and rates effective in Dec 2018.
Columbia Gas of Ohio (CEP)							Establishment of Deferral Recovery Rider for investments not covered through the IRP tracker. Filed 12/1/17 for initial annual revenue increase $69.8M. Audit in Sept revealed no major issues (only $200k flagged). Settlement filed 10/25/18 for $74.5M annual increase.
Columbia Gas of Ohio (IRP)	Settlement - not specified	$2.5B	$4.1B	$3.4B	$220-$270M	Tracked	Settlement for IRP 5-year extension through Dec 2022 filed 8/18/17 with approval on 1/31/2018
Columbia Gas Virginia	Settlement - not specified	$669M	$0.6B	$0.3B	$30-$40M	Tracked	Base ratecase settlement approved in Mar 2017. Filed again in Aug 2018 for a $22M increase, including $8M of tracker roll-in. Order expected in 2H2019 with rates effective 2/1/19 subject to refund.
Columbia Gas Kentucky	Settlement - not specified	$259M	$0.8B	$0.4B	$25-$45M	Tracked	
NIPSCO Electric							
Integrated Resource Plan (IRP)	The 2018 IRP calls for retirement of nearly 80 percent of NIPSCO's coal-fired generation fleet by 2023 and the remaining coal-fired units by 2028. Replacement options point toward lower-cost renewable energy resources such as wind, solar and battery storage technology. The prior 2016 IRP had called for retiring 50% of coal-fired generation fleet by end of 2023, including Bailly 7/8 (MISO approved closure by mid-2018) and R.M. Schahfer Units 17 and 18.						Stakeholder process initiated Mar. 2018; third stakeholder meeting held 7/24/18. 2018 IRP submitted to IURC Oct 31, 2018
Electric System Modernization (20+ years)	9.975%		$4.2B	$1.3B	$135-$235M	Tracked - TDSIC	Seven-year ~$1.25B electric system modernization program in progress 2016-2022 at $175M-$225M/yr. Filed semi-annual update TDSIC 4 on 7/31/18 for $77M of investment made from Dec 2017-May 2018. Settlement filed 10/25/18 with an order expected in 4Q18.
Environmental Compliance (~7 years) at Michgan City, RM Schahfer stations	Address requirements under U.S. EPA's Effluent Limitation Guidelines (ELG) and Coal Combustion Residuals (CCR) rules		$0.4B		$10-$90M	Tracked - FMCA	Costs to be recovered through Federally Mandated Cost Adjustment (FMCA) mechanism. CCR $193M settlement approved 12/13/17. Construction underway, expected completion by YE18. ELG moved to a later proceeding.
Transmission Project I (100-mi, 345-kV Reynolds-Topeka; 2H18)			$350-$400M		$50-$120M	FERC Formula	Completed and in-service June 2018
Transmission Project II (65-mi, 765-kV Greentown-Reynolds Partnership; 2H18)			NI: $175-$200M		$25-$50M	FERC Formula	Completed and in-service June 2018

As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.
Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.
Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and Asia stocks (excluding Japan and Australia), ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark (India - S&P BSE Sensex Index); prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.

Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.
Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:
Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.
Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.
Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.
An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	48%	(33% banking clients)
Neutral/Hold*	38%	(28% banking clients)
Underperform/Sell*	12%	(20% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Target Price and Rating
Valuation Methodology and Risks: (12 months) for NiSource Inc. (NI.N)

Method: We arrive at our $29 target price for NI by applying an effective 19.3x and 20.3x 2020 P/E multiple to the electric and gas utilities, respectively, representing a 1.5x premium to the peer group average to reflect the constructive regulatory environments in the jurisdictions that NI operates in. Our Outperform rating reflects a forecasted total return that is above the group average.

Risk: Risks to our $29 target price and Outperform rating are: 1) ROE risk related to the ongoing ratecases 2) continued approvals relating to infrastructure replacement/grid modernization programs 3) commodity risk, 4) interest rate risk, 5) derivative risk, 6) load growth risk particulary in the non-decoupled jurisdictions, 7) weather risk, and 8) environmental and climate change risk, 9) physical infrastructure and cybersecurity risk.

Please refer to the firm's disclosure website at https://rave.credit-suisse.com/disclosures/view/selectArchive for the definitions of abbreviations typically used in the target price method and risk sections.

For valuation methodology and risks associated with any recommendation, price target, or rating referenced in this report, please refer to the disclosures section of the most recent report regarding the subject company.

CREDIT SUISSE

13 February 2019

This report is produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division. For more information on our structure, please use the following link: https://www.credit-suisse.com/who-we-are This report may contain material that is not directed to, or intended for distribution to or use by, any person or entity who is a citizen or resident of or located in any locality, state, country or other jurisdiction where such distribution, publication, availability or use would be contrary to law or regulation or which would subject Credit Suisse or its affiliates ("CS") to any registration or licensing requirement within such jurisdiction. All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates.The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. CS does not advise on the tax consequences of investments and you are advised to contact an independent tax adviser. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. Such address or hyperlink (including addresses or hyperlinks to CS's own website material) is provided solely for your convenience and information and the content of any such website does not in any way form part of this document. Accessing such website or following such link through this report or CS's website shall be at your own risk.

Additional Regional Disclaimers

Australia: Credit Suisse Securities (Europe) Limited ("CSSEL") and Credit Suisse International ("CSI") are authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority ("FCA") and the Prudential Regulation Authority under UK laws, which differ from Australian Laws. CSSEL and CSI do not hold an Australian Financial Services Licence ("AFSL") and are exempt from the requirement to hold an AFSL under the Corporations Act (Cth) 2001 ("Corporations Act") in respect of the financial services provided to Australian wholesale clients (within the meaning of section 761G of the Corporations Act) (hereinafter referred to as "Financial Services"). This material is not for distribution to retail clients and is directed exclusively at Credit Suisse's professional clients and eligible counterparties as defined by the FCA, and wholesale clients as defined under section 761G of the Corporations Act. Credit Suisse (Hong Kong) Limited ("CSHK") is licensed and regulated by the Securities and Futures Commission of Hong Kong under the laws of Hong Kong, which differ from Australian laws. CSHKL does not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act in respect of providing Financial Services. Investment banking services in the United States are provided by Credit Suisse Securities (USA) LLC, an affiliate of Credit Suisse Group. CSSU is regulated by the United States Securities and Exchange Commission under United States laws, which differ from Australian laws. CSSU does not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act in respect of providing Financial Services. Credit Suisse Asset Management LLC (CSAM) is authorised by the Securities and Exchange Commission under US laws, which differ from Australian laws. CSAM does not hold an AFSL and is exempt from the requirement to hold an AFSL under the Corporations Act in respect of providing Financial Services. This material is provided solely to Institutional Accounts (as defined in the FINRA rules) who are Eligible Contract Participants (as defined in the US Commodity Exchange Act). Credit Suisse Equities (Australia) Limited (ABN 35 068 232 708) ("CSEAL") is an AFSL holder in Australia (AFSL 237237).

Malaysia: Research provided to residents of Malaysia is authorised by the Head of Research for Credit Suisse Securities (Malaysia) Sdn Bhd, to whom they should direct any queries on +603 2723 2020.

Singapore: This report has been prepared and issued for distribution in Singapore to institutional investors, accredited investors and expert investors (each as defined under the Financial Advisers Regulations) only, and is also distributed by Credit Suisse AG, Singapore Branch to overseas investors (as defined under the Financial Advisers Regulations). Credit Suisse AG, Singapore Branch may distribute reports produced by its foreign entities or affiliates pursuant to an arrangement under Regulation 32C of the Financial Advisers Regulations. Singapore recipients should contact Credit Suisse AG, Singapore Branch at +65-6212-2000 for matters arising from, or in connection with, this report. By virtue of your status as an institutional investor, accredited investor, expert investor or overseas investor, Credit Suisse AG, Singapore Branch is exempted from complying with certain compliance requirements under the Financial Advisers Act, Chapter 110 of Singapore (the "FAA"), the Financial Advisers Regulations and the relevant Notices and Guidelines issued thereunder, in respect of any financial advisory service which Credit Suisse AG, Singapore Branch may provide to you.

EU: This report has been produced by subsidiaries and affiliates of Credit Suisse operating under its Global Markets Division

In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements.

This material is issued and distributed in the U.S. by CSSU, a member of NYSE, FINRA, SIPC and the NFA, and CSSU accepts responsibility for its contents. Clients should contact analysts and execute transactions through a Credit Suisse subsidiary or affiliate in their home jurisdiction unless governing law permits otherwise.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents. This research may relate to investments or services of a person outside of the UK or to other matters which are not authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority or in respect of which the protections of the Prudential Regulation Authority and Financial Conduct Authority for private customers and/or the UK compensation scheme may not be available, and further details as to where this may be the case are available upon request in respect of this report.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. Principal is not guaranteed. Commission is the commission rate or the amount agreed with a customer when setting up an account or at any time after that. No information or communication provided herein or otherwise is intended to be, or should be construed as, a recommendation within the meaning of the US Department of Labor's final regulation defining "investment advice" for purposes of the Employee Retirement Income Security Act of 1974, as amended and Section 4975 of the Internal Revenue Code of 1986, as amended, and the information provided herein is intended to be general information, and should not be construed as, providing investment advice (impartial or otherwise).

Investment principal on bonds can be eroded depending on sale price or market price. In addition, there are bonds on which investment principal can be eroded due to changes in redemption amounts. Care is required when investing in such instruments.

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

NI: Lowering Estimates Ahead Of YE Report

Outperform / $29

Natural Gas LDCs
Market Weight

Earnings Estimate Revised Down

- Summary. We are lowering our post-'18 EPS estimates by $0.02-0.04 to better reflect near-term carrying costs on expenditures related to the Greater Lawrence explosions, along with recent financing activities. Our new/old '19-21E EPS are $1.31/1.35, $1.40/1.43 & $1.47/1.49. Based on our improved understanding of the insurance process, it is likely to take 12+ months to fully recover approved costs. Further, consistent with the pattern of other major utility incidents, we expect upward revisions to the total cost estimate relative to the 11/1/18 update, which included $135-165mm of capex, third-party claims of $415-450mm and other expenses of $180-210mm. We expect total expenditures could be $1B+. While NI previously disclosed $800mm of insurance coverage, it is our understanding that the company has separate property insurance (gas portion likely much smaller than the $800mm casualty coverage, but still material).

  NI is scheduled to report YE'18 results on 2/20. Of note, we believe shares already reflect downwardly revised expectations for '19E EPS based on our conversations with investors and the recent under-performance (shares have underperformed the S&P Utilities by over 3% month-to-date).

Price Target

Price Target: $29 from NC

Our price target is based on a P/E multiple analysis (~21X our '20E EPS of $1.40). Risks include material shareholder liabilities associated with the 9/13/18 MA gas incidents, unfavorable regulatory developments, a potential rise in interest rates (financing costs and sector valuation), and lower than expected sales growth.

Investment Thesis

We rate shares Outperform. We believe the current valuation overly discounts the risks associated with the MA gas fire/explosion incidents. Further, we are attracted to NI's robust capital plan, constructive regulatory treatment, prudent strategy, and shareholder-friendly management team.

Company Description

Based in Merrillville, Indiana, NiSource, Inc. is a holding company with regulated gas (64%) and electric (36%) utility operations across seven states. The company's Gas Distribution Operations serve 3.4 million customers in Indiana, Kentucky, Maryland, Massachusetts, Ohio, Pennsylvania, and Virginia. The Electric Operations consist of a vertically-integrated utility serving nearly 500 thousand customers in northern Indiana. On July 1, 2015, NiSource completed the separation of Columbia Pipeline Group (CPG) from NiSource via the distribution of one share of CPG common stock for every share of NI common stock.

STOCK RATING
1=Outperform: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
2=Market Perform: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
3=Underperform: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

SECTOR RATING
O=Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.
M=Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
U=Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

VOLATILITY RATING
V = A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

As of: February 13, 2019

2% of companies covered by Wells Fargo Securities, LLC Equity Research are rated Underperform.

Wells Fargo Securities, LLC has provided investment banking services for 12% of its Equity Research Underperform-rated companies.

Important Disclosure for U.S. Clients
This report was prepared by Wells Fargo Securities Global Research Department ("WFS Research") personnel associated with Wells Fargo Securities and Structured Asset Investors, LLC ("SAI"), a subsidiary of Wells Fargo & Co. and an investment adviser registered with the SEC. If research payments are made separately from commission payments, this report is being provided by SAI. For all other recipients in the U.S. this report is being provided by Wells Fargo Securities.

Important Disclosure for International Clients

EEA – The securities and related financial instruments described herein may not be eligible for sale in all jurisdictions or to certain categories of investors. For recipients in the EEA, this report is distributed by Wells Fargo Securities International Limited ("WFSIL"). WFSIL is a U.K. incorporated investment firm authorized and regulated by the Financial Conduct Authority. For the purposes of Section 21 of the UK Financial Services and Markets Act 2000 ("the Act"), the content of this report has been approved by WFSIL, an authorized person under the Act. WFSIL does not deal with retail clients as defined in the Directive 2014/65/EU ("MiFID2"). The FCA rules made under the Financial Services and Markets Act 2000 for the protection of retail clients will therefore not apply, nor will the Financial Services Compensation Scheme be available. This report is not intended for, and should not be relied upon by, retail clients.

Australia – Wells Fargo Securities, LLC is exempt from the requirements to hold an Australian financial services license in respect of the financial services it provides to wholesale clients in Australia. Wells Fargo Securities, LLC is regulated under U.S. laws which differ from Australian laws. Any offer or documentation provided to Australian recipients by Wells Fargo Securities, LLC in the course of providing the financial services will be prepared in accordance with the laws of the United States and not Australian laws.

Canada – This report is distributed in Canada by Wells Fargo Securities Canada, Ltd., a registered investment dealer in Canada and member of the Investment Industry Regulatory Organization of Canada (IIROC) and Canadian Investor Protection Fund (CIPF). Wells Fargo Securities, LLC's research analysts may participate in company events such as site visits but are generally prohibited from accepting payment or reimbursement by the subject companies for associated expenses unless pre-authorized by members of Research Management.

Hong Kong – This report is issued and distributed in Hong Kong by Wells Fargo Securities Asia Limited ("WFSAL"), a Hong Kong incorporated investment firm licensed and regulated by the Securities and Futures Commission of Hong Kong ("SFC") to carry on types 1, 4, 6 and 9 regulated activities (as defined in the Securities and Futures Ordinance (Cap. 571 of The Laws of Hong Kong), "the SFO"). This report is not intended for, and should not be relied on by, any person other than professional investors (as defined in the SFO). Any securities and related financial instruments described herein are not intended for sale, nor will be sold, to any person other than professional investors (as defined in the SFO). The author or authors of this report may or may not be licensed by the SFC. Professional investors who receive this report should direct any queries regarding its contents to Mark Jones at WFSAL (email: wfsalresearch@wellsfargo.com).

Japan – This report is distributed in Japan by Wells Fargo Securities (Japan) Co., Ltd, registered with the Kanto Local Finance Bureau to conduct broking and dealing of type 1 and type 2 financial instruments and agency or intermediary service for entry into investment advisory or discretionary investment contracts. This report is intended for distribution only to professional investors (Tokutei Toushika) and is not intended for, and should not be relied upon by, ordinary customers (Ippan Toushika).

The ratings stated on the document are not provided by rating agencies registered with the Financial Services Agency of Japan (JFSA) but by group companies of JFSA-registered rating agencies. These group companies may include Moody's Investors Services Inc., Standard & Poor's Rating Services and/or Fitch Ratings. Any decisions to invest in securities or transactions should be made after reviewing policies and methodologies used for assigning credit ratings and assumptions, significance and limitations of the credit ratings stated on the respective rating agencies' websites.

About Wells Fargo Securities

Wells Fargo Securities is the trade name for the capital markets and investment banking services of Wells Fargo & Company and its subsidiaries, including but not limited to Wells Fargo Securities, LLC, a U.S. broker-dealer registered with the U.S. Securities and Exchange Commission and a member of NYSE, FINRA, NFA and SIPC, Wells Fargo Prime Services, LLC, a member of FINRA, NFA and SIPC, Wells Fargo Securities Canada, Ltd., a member of IIROC and CIPF, Wells Fargo Bank, N.A. and Wells Fargo Securities International Limited, authorized and regulated by the Financial Conduct Authority.

Investment Thesis, Valuation and Risks

NiSource Inc. *(Overweight; Price Target: $29.00)*

Investment Thesis

We see an overhang for NI shares persisting following the September MA incident, and do not rule out the possibility of additional headline risk before a recovery. The number of people impacted along with the historically higher-risk MA political operating environment are differentiating negatives. These factors put the accident at the higher-end of the risk spectrum for recent gas infrastructure incidents and make it difficult to quantify ultimate shareholder exposure. However we see shares as pricing in a cushion for both direct costs and ongoing risk moving forward. We view one of the stronger growth stories in our coverage as delayed but still intact, and the core IN, PA and OH jurisdictions as unaffected. Patience is required for at least 6 more months as the situation takes steps toward full containment, and NI's operational history is scrutinized, but we nonetheless reiterate our OW rating.

Valuation

We raise our December 2019 price target to $29/share, from prior $28. Our price target is based on a sum-of-the-parts analysis and uses our 2020 electric and gas segment EPS forecasts. We value the gas segment using a 21.7x P/E multiple, a discount to gas utility peers due to growth prospect offset by lack of M&A takeout potential and fine risk from the MA gas accident, and we value the electric segment using an 20.3x P/E multiple, a modest premium to pure regulated electric utility peers due to favorable rate construct in IN. The higher price target is due to increased peer average multiples versus prior.

Risk to Rating and Price Target

- Regulated electric transmission and distribution earnings are vulnerable to mild weather, as regulated revenues are calculated based on energy volumes sold. Extreme or mild temperatures may cause future earnings to differ materially from our current forecasts.
- Achievement of NiSource's long-term rate base and EPS CAGR targets are heavily dependent on robust capital investments, regulatory support, and favorable ratemaking mechanism. Any deferral of spending could put the company at risk of falling short of the LT rate base and earnings growth CAGR in any one year.
- Regulated electric and gas utilities are subject to federal and state regulations, including determinations of allowed revenues. Positive or negative changes to the regulatory environments may cause future earnings potential to differ materially from current expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

Coverage Universe: Turnure, Christopher: AES Corp. (AES), Algonquin Power & Utilities Corp. (AQN.TO), Allete Inc. (ALE), AltaGas Canada Inc (ACI.TO), AltaGas Ltd (ALA.TO), American Electric Power (AEP), Atmos Energy (ATO), Avangrid, Inc (AGR), Black Hills Corp. (BKH), CenterPoint Energy, Inc. US Electric Utilities & IPPs

First Thoughts on 1Q: ETR nuke deals, NI cost hikes, SO affirmation, FTS progress

Earnings Review

Bank of America Merrill Lynch

Equity | 01 May 2019

SO: No change in Vogtle costs is positive

The Vogtle Units 3 & 4 rebaselining led to *no change* in cost estimates, and a reaffirmation of the in-service regulatory dates of November 2021 and November 2022 for Units 3 & 4 respectively. Management noted 6 months of margin to November in-service dates which implies a ~2 month slip off the accelerated April in-service dates. We believe this should have been largely expected by the street and still see the update as positive given wider concerns on Vogtle costs. Slides note earned above 100khrs should provide margin to regulatory approved in-service dates, though the aggressive plan calls for a ramp to 160k earned hours in late summer '19 through spring '20. Management is currently operating at 130k earned hours YTD, and we look for further commentary on the call to discuss execution against this updated timeline. Bottom line, we still see the update as positive to future de-risking of SO shares, though reiterate our Neutral rating giving ongoing project risk.

NI: Quarter comes in strong as Mass cost continues to rise

NI posted 1Q19 results of $0.82/sh, beating our $0.80/sh estimate and consensus of $0.77/sh. More importantly, the company provided an update on its expected costs related to the MA incident, with total costs rising ~19% sequentially, following a ~70% increase in 4Q18. While we recently downgraded NI to Neutral based on expectations for costs estimates to rise another 10%, the increase was greater than we expected. Third-party claims, in particular rose ~27% (+$212mn), with replacement of the gas system and other costs rising 9% (+$20mn) and 8% (+$28mn), respectively. Moreover, commentary in the slide deck suggested that casualty insurance claims are expected to significantly increase as claims are filed with insurers, yet another cautious data point. With total estimated costs exceeding insurance levels of ~$1.1b, we continue to believe it will be an overhang on shares and expect to see a difficult regulatory environment, particularly around the MA Department of Public Utilities' definition of prudent vs. imprudent spending. We see a risk to eventual recovery. We maintain our Neutral rating; we expect a cautious reaction today to the update.

ETR: Miss due to weather, cash flows slightly lower

ETR reported 1Q19 results of $0.82/sh vs. our $0.85/sh estimate with the miss largely due to weather as unfavorable conditions was a headwind of $0.12/sh, exceeding our expectations. ETR adjusted EBITDA at Entergy Wholesale Commodities (EWC) did not change, including retention/severance payments, nor were there any material updates to EWC capital plan despite the commitment to sell down its Indian Point units to Holtec in '21. We flag the -$240 Mn Net Loss now recorded in '21 appears non-cash. We emphasize that almost all other variables have not changed. We see the mere affirmation of previous outlook inclusive of change in ownership (including retention initiatives) as itself a small positive. Meanwhile we see FFO/debt at 11.1% in 1Q, meaningfully below its'19 target but we see this likely as a timing issue due to weather and potentially from the unplanned outage at Indian Point (and exclusive of the return of unprotected accumulated deferred income taxes - ~15% on an adjusted basis). Focus on upside opportunity from TX legislation in coming weeks & potential benefits to earned ROEs as well as longer-dated opportunities around de-risking. We emphasize the process to sell down IP appears to have been quite competitive. Maintain BUY.

FTS: In-line print: Focus on execution

FTS announced in-line results $0.74 EPS vs. Cons $0.74 / BofAML $0.73 as energy infra and share dilution partially offset core ratebase growth at utilities. We expect management to highlight continued execution on its $17.3Bn capital plan this year, with wind announcements in AZ (Osa Grande) adding $150mn of incremental capital, and the recent leave-to-construct application for the Wataynikaneyap project approved by the OEB. We look for further updates on large capital projects, such as pipeline spend related to the Woodfibre LNG project. We maintain our Buy rating on shares.

Table 1: Tickers

BofAML Ticker	Bloomberg ticker	Company name	Price	Rating
ETR	ETR US	Entergy Corp.	US$ 96.9	B-1-7
FTS	FTS US	Fortis	US$ 37	B-1-7
YFTS	FTS CN	Fortis	C$ 49.52	B-1-7
NI	NI US	NiSource Inc	US$ 27.78	B-2-7
SO	SO US	Southern Company	US$ 53.22	B-2-7

Source: BofA Merrill Lynch Global Research

Price objective basis & risk

Entergy (ETR)

Our $107 PO is SOTP based. We assign P/E multiples [peer multiple of 18.9x] for 2021E on most segments in line with peer multiples due to similar growth], and strip out 50% of the holdco senior notes. The Merchant business is also added as a DCF (10% discount rate, no terminal value). Both electric peer P/E multiple is grossed up for a year to 2019 by 5% to reflect capital appreciation across the sector.
Downside risks: 1) Regulatory outcomes or earned ROE's could worsen, 2) Rate making mechanisms could change in the future, 3) Failure to get trackers or ROE adjustment mechanisms could hurt realized ROE, 4) weather can affect operations and earnings, 5) Interest rate risk affects cost of capital, 6) Consumer advocates or utility staff may focus more on issues that challenge the company ROE, 7) ETR has had safety issues in the past, which have affected regulatory relationships and company liabilities, 8) Exit from the competitive business could present unforeseen challenges.

Fortis (YFTS / FTS)

Our PO is C$55 / US$41.67. We assign a 2021E forward base peer P/E multiple of 18.3x to the US utility business with a premium of 1.0x for UNS Energy (AZ), 2.0x for ITC, and an in-line multiple for Central Hudson (NY). Our premium in AZ represents upside in renewable-driven capital spend as well as positive load growth in AZ. Our premium for ITC is for above average ROEs and our expectation for a reacceleration of capital spend. For Central Hudson we apply an inline multiple seeing NY regulatory environment as challenging despite the 3-year rate stay out.
For Canadian utilities, we assign a base peer 2020E P/E multiple of 15.2x. Lower ratebase growth profiles and generally lower authorized equity layers/ROEs, paired with a more challenging regulatory environment, will continue to warrant a discount to US peers, in our view.
At Caribbean utilities, we apply 60% ownership share to the publically listed subsidiaries' current market cap.
We assign a 7.0x EV/EBITDA multiple to FTS's non-regulated segment seeing the contracted nature of its non-regulated segment positively offset lower growth opportunities.

Downside risks include: 1) higher interest rates, 2) lower USD/CAD exchange rate given FTS has substantial unhedged exposure to the US, 3) FTS operates as a highly levered utility HoldCo, and unforeseen events could cause management to issue unforeseen equity, 4) unfavorable regulatory actions, and 5) natural disasters which could impact utility operating systems

NiSource Inc (NI)
Our $30 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2021 forward P/E multiples of 21.1x for gas utilities and 18.9x for electric utilities with a 1.0x premium to reflect NiSource's utilities strong growth rates and earned ROEs. We note that both electric and gas peer P/E multiples are grossed up for a year to 2019 by 5% to reflect capital appreciation across the sector. We then subtract the value of excess holding company debt at the parent not supporting the utility opcos. This multiple is slightly below the LDC peer average but above the small-mid cap electric utility average. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its inline-ish multiple versus peers. We add in Columbia Gas of MA but discount the jurisdiction by 3.0x due to Andover challenges.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, and challenging steel production economics in Indiana.

Southern Company (SO)
We have a $57 PO on SO using SoTP approach. We use a P/E valuation approach on 2021 and use peer multiples 18.0x for electric and 20.1x for gas (with discounts/premiums applied per asset depending on growth/risk). Finally we subtract the 50% of the 2021 parent interest expense multiple by an electric P/E peer multiple to reflect parent leverage supporting the utilities. We subtract the remaining 50% of the debt on a per share basis. Both electric and gas peer P/E multiples are grossed up to 2019 by 5% to reflect capital appreciation across the sector.
Upside risks are: 1) Regulatory outcomes or ROE's could be better than expectations, particularly since exposed to multiple state jurisdictions 2) Additional riders and capital trackers can help the company achieve better than expected ROE, but failure to get riders would hurt SO 3) The natural gas related businesses are relatively new and could prove more or less able to earn an ROE in line with or different from their allowed ROE, 4) high capital forecasts and subsequent earnings streams than our current assumptions Downside risks are: 1) Regulatory outcomes or ROE's could be worse than expectations, particularly since exposed to multiple state jurisdictions, 2) SO has exposure to a number of problematic projects (Vogtle and Kemper) which could shift earnings, 3) Weather patterns could influence usage or natural disasters could affect system reliability 4) Utilities are subject to interest rate risk.

Goldman Sachs India SPL

NiSource Inc. (NI, Buy) reported 1Q2019 operating EPS of $0.82 versus GS/FactSet consensus both at $0.77, with the beat versus our estimate is largely driven by higher gross margin. The company also reiterated its 2019 EPS guidance range of $1.27-$1.33 ($1.30 mid-point) versus GS/consensus of $1.30 and $1.31 respectively, as well as its capital plan of $1.6-$1.7bn in 2019 and $1.6-$2.0bn annually in 2020-2022, respectively. However, we note that management increased their total MA incident cost estimate by $230mn (at the mid-point) to $1.32-$1.38bn, versus around $1.09-$1.13bn prior, which we believe could pressure the stock today.

Key takeaways from NI's release include:

- **During the quarter, NI's electric segment beat GS, reporting $95.4m of operating income vs GS at $90.6mn, with gas also higher at $397.7mn vs GS at $372.3mn.** We note the gas segment beat the GS estimate primarily given higher gross margin, partly offset by higher O&M and D&A at the segment.
- **NI maintained its 2020-2022 annual capital investment guidance of $1.6-$2.0bn ($1.8bn mid-point),** including its 2019 capital spending range to $1.6-$1.7bn. Along with NI's capex plan, the company expects to grow operating EPS and dividend by 5%-7% annually.
- **Management increased the expected third-party claims and other expenses (from the MA incident) by $230mn to $1.32-$1.38bn from $1.09-$1.13bn prior,** with most of the increase coming from third-party claims; NI recorded $235mn recovery recorded as of 1Q19. We note that the company has a $1.1bn in total insurance limit ($800mn casualty, $300mn property). They maintained the previously guided financing plan of no bulk equity and $200-$300mn in annual ATM in 2019/2020, while maintaining 2019/2020 FFO/Debt targets of 14-15%. Our current estimates assume $600mn of equity in 2019-2021, with FFO/debt of 14.0%/14.5%/14.6%.
- **We also highlight two key regulatory updates, with (1) Columbia Gas of MA receiving approval for its Gas System Enhancement Plan (GSEP) and (2) NIPSCO electric reaching a partial settlement in its base rate case.** NI notes $64mn of planned GSEP spending in 2019, consistent with 4Q2018 disclosure.

NIPSCO electric's partial settlement most notably allows for a 9.9% RoE vs current authorized of ~9.98%.

Key topics to monitor on NI's earnings call include (1) additional color on expected timing of MA incident insurance recoveries as well as items driving the increased total cost estimate, (2) updated forecast on debt/equity financing, and (3) management's thoughts on recent efforts in Indiana to place a moratorium on new generation build and any potential impact to NI's plans. We derive our 12-month target price of $29 using a 20x blended P/E multiple on 2020E EPS. Key risks include (1) legal and regulatory risks, (2) system damages related to the recent MA natural gas incident, (3) higher than expected O&M, (4) electricity demand and customer growth, and (5) financing.

NiSource Inc.

Puts and Takes

Greater Lawrence Costs Continue to Increase Above Insurance Limit

Despite stronger than expected 1Q19 EPS, management maintained 2019 EPS guidance and noted higher expenses related to Greater Lawrence incident. Third-party claim estimate was increased by over $200MM to $961MM-$1,010MM and other expenses and pipeline replacement expenses increased by ~8-9% (other expenses: $360-$370MM, pipe replacement: $240-$250MM). Notably, insurance limit is $1.1B (casualty of $800MM and property of $300MM) and as a result we see a risk that some expenses will not be recovered. NI continues to expect to make a decision on a filing in MA to recovery replacement expenses in late 2019-early 2020. During the call management said there is a risk that costs could increase further. Notably, in its 10K filing NI noted pending investigations conducted by NTSB, SEC (related to disclosures prior to MA incident), and U.S. Dept of Justice. NI also spent time discussing progress in Indiana on electric side. Wind farms filings are pending at IURC and the decision is expected in 3Q19. Those projects will add nameplate capacity of 800MW by the end of 2020.

Results: NI Reported 1Q19 EPS Above UBSe/Consensus

NI reported 1Q19 EPS of $0.82, above UBSe/Consensus. Adj. gas utilities op income of $397.7MM was above UBSe, driven by higher operating margin, partially offset by higher than expected O&M and D&A. Electric op income was $95.4MM below UBSe, driven by lower operating margin and higher D&A, offset by lower O&M. Interest expense was modestly higher than expected.

Increasing Estimates

We are increasing our 2019/2020/2021 EPS estimates to $1.33/$1.41/$1.49 from $1.31/$1.40/$1.48 to reflect stronger than expected gas utility margins in 1Q19.

Valuation:

We maintain our Neutral rating and our $29 PT. Our price target is based on sum-of-the-parts P/E.

NiSource Inc.

NI: Strong Q1 Results, But Another Lawrence Cost Revision Weighs On Shares

Outperform/$31

Natural Gas LDCs
Market Weight

Price Target Change

- **Summary.** NI affirmed 2019 EPS guidance of $1.27-1.33 along with the 5-7% annual EPS and dividend growth targets through 2022 and 2019/2020 financing plans. While Greater Lawrence costs increased by nearly 20% from the YE update, management remains confident in the outlook given strong Q1 results and continued constructive regulatory outcomes. No change to our ’19-21E EPS of $1.31, $1.40 & $1.48. With shares trading at 8-9% P/E and EV/EBITDA discounts to blended Gas/Electric peers on ’20 & ’21 estimates, we consider this to be an attractive entry point and reiterate our Outperform rating. We increase our 12-18 month price target to $31/share from $30/share reflecting higher peer group multiples.
- **Lawrence Update.** We were disappointed by the nearly 20% increase in total Lawrence-related costs to ~$1.6B, which exceeds insurance limits of $1.1B ($235mm recorded through 3/31). The biggest increase was to third party claims, which includes estimated amounts to be paid via settlements and is subject to further revisions. There were no updates on the company’s regulatory recovery strategy in MA (we estimate current lag of ~$0.06 based on the pulling of the rate case and unrecovered capex), but management expects to provide more clarity in late 2019/early 2020. Lastly, on the operational side, implementation of the Safety Management System (SMS) is underway across all seven states and NI established an independent quality review board (QRB) to enhance governance on the new system.
- **Regulatory Update.** NI settled the two pending rate cases including the gas case in VA (order 2H’19) and the NIPSCO electric case (partial settlement including 9.9% ROE, revenue requirement, tax reform and depreciation for accelerated coal retirements; rate design and industrial tariff issues remain outstanding – order 2H’19). NIPSCO electric also has pending wind proposals in Indiana (order 3Q’19) and intends announce additional renewable projects and commence a second round of RFPs later this year. Lastly, in conjunction with various ongoing rider/enhanced recovery programs across the platform, management will file a new gas TDSIC in Q3’19 (current plan runs through 2020) and is evaluating whether to file a new electric plan (current through 2022) in light of the passage of House Bill 1470 which could afford more flexibility around the inclusion of advanced grid investments among other items.

NIPSCO – Northern Indiana Public Service Company
RFP – Request For Proposal
TDSIC – Transmission, Distribution and Storage System Improvement Charge

Price Target

Price Target: $31 from $30

Our price target is based on a P/E multiple analysis (~21X our '21E EPS of $1.48 reflecting a 2-3% discount to blended Gas/Electric peers). Risks include greater than expected shareholder liabilities associated with the 9/13/18 MA gas incident, unfavorable regulatory developments, a potential rise in interest rates (financing costs and sector valuation), and lower than expected sales growth.

Investment Thesis

We rate shares Outperform. We believe the current discounted valuation provides an attractive entry point to a company with robust long-term infrastructure growth opportunities and supportive regulatory treatment.

Company Description

Based in Merrillville, Indiana, NiSource, Inc. is a holding company with regulated gas (64%) and electric (36%) utility operations across seven states. The company's Gas Distribution Operations serve 3.5 million customers in Indiana, Kentucky, Maryland, Massachusetts, Ohio, Pennsylvania, and Virginia. The Electric Operations consist of a vertically-integrated utility serving nearly 500 thousand customers in northern Indiana. On July 1, 2015, NiSource completed the separation of Columbia Pipeline Group (CPG) from NiSource via the distribution of one share of CPG common stock for every share of NI common stock.

NiSource, Inc.

NI: Solid Regulatory Picture, MA Costs Increase

Stock Rating/Industry View: Equal Weight/Neutral
Price Target: USD 28.00
Price (30-Apr-2019): USD 27.78
Potential Upside/Downside: 1%
Tickers: NI

NI has made solid strides in regulatory proceedings, resulting in high levels of contemporaneous return. Above-average LT earnings growth combined with the regulatory picture justifies our 10% premium valuation to the group average. Given the uncertainty of ultimate costs and recovery of costs in Massachusetts, we continue to see the name as fairly valued.

Regulatory Updates

Management highlighted good outcomes or settlements in regulatory filings in OH, VA, MA, and IN
Additionally Indiana legislation is a potential tailwind

- HB1470 – cleans up legal challenges on TDISC, has potential to result in incremental capex recovery from TDISC from grid modernization spending
- SB472 – which would have created a moratorium on new CPCNs failed to pass

Massachusetts Update

Post potential regulatory recovery, settlement and negotiations with claimants, and final insurance recovery, shareholders will be paying a material amount as a result of the Greater Lawrence event.

- Event related costs and expenses increase by $249-$270M in total from Q4, with the largest increase coming from third-party claims
- Third-party claims are currently estimated at $961M-$1.01B
- Pipeline replacement and restoration costs are currently estimated at $240-$250M
- Other Expenses are currently estimated at $360-$370M
- Total expenses are currently estimated at $1.561-$1.63B which is in excess of the $1.1B of insurance ($800M casualty, $300M property)

Solid quarter: NI reported $0.82, ahead of consensus, and reiterated 2019 guidance of $1.27-$1.33 and long term growth of 5-7%

Key Message: Solid beat, guidance reaffirmed and CapEx remains healthy. Good start but uncertainties still remain around MA situation and thus, any incremental equity needs beyond current plan. A key question is sell MA or file rate case. Mgmt. displayed some confidence with updated 3rd party claim projections which could point to a settlement with key claimants in the works.

Quick take – Solid beat, outlook, financing plan and growth trajectory reiterated. NI reports Q1 2019 EPS of $0.82 vs consensus/Guggenheim estimate of $0.77/$0.73, respectively. For 2019, Mgmt. reiterates $1.27-$1.33, in line with our estimate of $1.32; CapEx guide of ~$1.7Bn vs. our $1.8Bn. Through 2022, we continue to model ~ $2bn per year in regulated CapEX for gas and electric which is essentially at the top end of Mgmt. updated capital guidance range which we still deem as somewhat conservative given projected spending needs. 2019-22 EPS growth for 5-7% is also generally in-line with our 6.3% assumption through our 2022 trajectory though YoY can be lumpy with timing of CapEx/insurance recovery. Generally, good execution despite higher expenses from MA gas explosion year-over-year.

2019 expectations remain as is... Our estimates continue to account for modest drag from pension but more materially, regulatory lag at Columbia Gas of MA (AKA Bay State Gas) stemming from the September 2018 explosion. We continue to assume material regulatory lag in the state driven by (1) a slower recovery of insurance proceeds over the next 12-18m as they work through the various towers and the reality that they may not get full proceeds vs our prior assumptions; (2) timing for recoveries for their pipeline replacement program where we still expect a GRC filing in early 2020 with rates in effect in 2021, which is more delayed than initially expected when process started; (3) higher drag from property taxes and depreciation among other minor items. Following today's results, no reasons we see to change our thoughts from when we re-based in our 2/6 note (see HERE),

... but uncertainties still remain. Insurance recoveries for MA are key NT items to watch as we could see some changes to NT equity needs but still no large block deals expected – internal plans suffice. As a reminder, NiSource has ~$800mm for liability insurance, ~ $300mm for property insurance vs. the now ~20% higher cost and expenses related to the MA gas explosion – the increase vs the prior ~$1.1Bn estimate reported at YE was mainly driven by higher 3rd party claims. Tone on call from Mgmt. seemed to assert a certain level of confidence that a material amount of costs should be recovered from providers and the current updated 3rd party claim figures should now be a more accurate reflection – **we wonder whether Mgmt's confidence around the latest 3rd party claim estimates could be a precursor for a large claim settlement in the works.**

Still assessing timing of a Bay State rate filing. We also question whether the timing of the rate case is predicated on attaining more accuracy around truing-up regulatory lag from the recently pulled settlement as well as gaining more precision with the latest gas explosion expenditures and insurance recoveries or **Mgmt. grappling with a potential strategic move out of MA through a sale which would preempt a GRC for obvious reasons. As we have discussed in the past (HERE), we believe a potential sale of the jurisdiction to a player like ES (Neutral, $71.66) could be a very viable path/solution and manageable for ES given their balance sheet capacity (EV of Bay State ~$700-800mm).**

CapEx remains healthy through the trajectory with renewable opportunities supporting plan post 2022 – that said, CapEx guide could prove NT conservative given somewhat of a politically sensitive time for NI. For the NT outlook, growth driven by (1) the electric business as coal shifts towards renewables, (2) infrastructure investments for incremental gas line capacity in Ohio to account for better than expected customer growth and (3) IT spending to modernize the system.

Valuation

We derive our regulated utility group target multiple of 17x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, and now ascribe a two turn premium to reflect several externalities (e.g., macro/geopolitical uncertainties) that continue to support the group trading beyond fundamentals and forward yield expectations. We arrive at our valuation utilizing a sum-of-the parts analysis, based on: (1) ~$10/share for the regulated electric utility; (2) ~$22/share value for the regulated gas segment utilizing our regulated electric P/E multiple plus a premium to account for the historical gas LDC spread above electric counterparts; and (3) (~$2)/share for other adjustments for Corp and Other. We then discount our valuation back by two years to arrive at our $29 PT. There is ~8% upside to our price target from current levels, but we maintain our BUY rating based on our expectation that Bay State could have incremental upside potential from our conservative forecast due to better than expected regulatory outcomes at the DPU or strategic moves.

EPS($)	1Q	2Q	3Q	4Q	FY

Prior	*0.88E*	*0.14E*	*0.11E*	*0.45E*	*1.58E*

Risk

The primary risk on the regulated utility encompass the traditional risk factors inherent with all utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model

EQUITY RESEARCH
NiSource Inc. (NI)

Greater Liabilities Overshadow Strong 1Q Results

May 1, 2019

Key Takeaway

NI 1Q adj. EPS of 82¢ crushed our 73¢ forecast & outpaced the 77¢ Street mean est.; op income of ~$497mm exceeded JEFe by 13.4% as better margins & below-forecast O&M propelled Gas Distribution (+12.2% vs JEFe) & Electric (+7% vs JEFe) results. NI's est. of Greater Lawrence incident costs rose ~20%, to $1.6B, while its insurance coverage remains $1.1B. 2019 EPS guidance of $1.27-$1.33 was affirmed and, against TTM EPS of $1.38, implies lower y/y 2Q-4Q results.

Better operating margins, lower O&M drive segment results

Gas Distribution: Op. income of ~$398mm crushed our ~$355mm est. as significantly better operating margins were only partially offset by higher costs (O&M, DD&A, and other taxes). Though NI sensitizes for non-normal weather, 1Q HDDs were ~1.2% above normal & up ~2.6% y/y. **Electric Operations:** Segment revenues were broadly in-line with JEFe, but lower than anticipated O&M ($121.7mm vs $127.8mm JEFe) helped drive 1Q op. income of ~$95mm surpassing our ~$89mm expectation. In aggregate, 1Q operating income exceeded JEFe by ~13%, driving a comparable beat in Net Income and EPS. 1Q capex of $354mm was ~9% above JEFe though mgmt affirmed its $1.6-$1.7B 2019 capital program while also coordinating Greater Lawrence restoration work.

Greater Lawrence costs continue to rise

NI excluded ~$134mm in costs related to the 2018 Greater Lawrence, MA, gas explosions from its 1Q results; it also raised its midpoint estimate for the total cost of the incident to ~$1.60B, from ~$1.34B. Revised estimates now include Pipeline Replacement & Restoration work of $240-$250mm (vs $220-$230mm), 3rd-Party Claims of $961mm-$1.01B (vs $757-$790mm), and Other Expenses of $360-$370mm (vs $330-$345mm). On its call, mgmt cited final billings for construction, emergency response, and adjustments for legal, liability, and settlement expenses as reason for the higher estimates; casualty insurance recoveries recorded through 1Q19 increased to $235mm and NI's combined limit remains $1.1B. Financing plans remain unchanged though mgmt noted the timing & magnitude of certain expenses and insurance recoveries will determine when/how it will access additional capital; incremental preferred equity remains a possibility this year.

YTD regulatory activity

On April 19th, Columbia Gas of VA filed a unanimous settlement agreement that includes a $9.5mm annual increase ($1.3mm net of infrastructure trackers), down from the original $22.2mm request ($14.2mm net of infrastructure trackers). On April 24th, Columbia Gas of Ohio received approval from the PUCO to begin recovery of ~$199.6mm of infrastructure investments made in 2018. Finally, on April 30th, CMA received approval from the Mass. Dept. of Public Utilities for its 2019 GSEP, which seeks recovery of ~ $64mm in 2019 capital investments with new rates effective in May.

2019 guidance affirmed, long-term targets also remain intact

NI reiterated its 2019 non-GAAP EPS target of $1.27-$1.33 & capex forecast of $1.6-$1.7B; with strong 1Q performance and a TTM EPS of $1.38, 2019 guidance suggests ~15% lower y/y 2Q-4Q results. Annual 2019-22 EPS & DPS growth targets remain 5-7%.

Exhibits 1-2 offer more detail on 1Q results and regulatory & expansion initiatives

Exhibit 2 - NI Regulatory Backlog

Company/Filing	Summary	Timeline
NIPSCO Gas - PHMSA Compliance Plan 2	Recovery of Federally Mandated Pipeline Safety Compliance Plan; Includes ~$230mm of capital through 2023	Filed: 12/31/2018; Order Expected 2H2019
Columbia Gas of Ohio Capital Expenditure Program Annual Rider Update	Recovery of certain capital investments and related deferred expenses not recovered through the IRP tracker; includes $122.1mm of capital investments made in 2018	Filed: 2/28/2019; Order Expected Aug. 2019; New rates effective Sept. 2019
Columbia Gas of Virginia - Base Rate Case	Unanimous settlement includes $9.5mm of annual revenue increase; $1.3mm net of infrastructure trackers	Filed: 8/28/2018; Settlement filed 4/19/19; Order Expected 2H2019
Columbia Gas of Ohio IRP Annual Rider Annual	Supports continued infrastructure replacement investments; Filing includes $199.6mm of capital investments made in 2018	Filed: 2/28/2019; Order Received 4/24/19; New rates effective May 1st 2019
Columbia Gas of Mass. Gas System Enhancement Plan	Priority pipline replacement program; filing includes $64mm of capital investments to be made during 2019	Filed: 10/31/2018; Order Received 4/30/19; New rates effective May 2019
Wind CPCN Filings	Seeking approval for 20-yr PPAs to purchase 100% output from Jordan Creek (400MW*) and Roaming Bison (300MW*) & approval for BTA for Rosewater (100MW*), a JV between NIPSCO and EDP renewables; all 3 projects expecting construction by end 2020	Filed: 2/1/2019; Order expected in 3Q2019
Electric System Modernization Program	Focused on electric transmission & distribution investments designed to improve system reliability & safety; TDSIC 5 semi-annual tracker update covering ~$58.8mm in investments from June 2018 - Nov 2018	Filed: 1/29/2019; Order expected 2Q2019
Environmental Upgrades	Addresses requirements under Effluent Limitation Guidelines (ELG) and Coal Combustion Residuals (CCR) rules; Settlement covers CCR-related investments of ~$193mm; ELG-related investments moved to later proceeding	Filed Nov. 1 2016; CCR Settlement filed June 9 2017 & approved Dec. 13 2017; Construction substantially complete 1Q19
Base Rate Case	Seeks changes to depreciation schedules related to the early retirements of coal-fired generation plants called for in the IRP; Proposes changes to tariffs to provide service flexibility for industrial customers; partial settlement that addresses revenue requirement, federal tax reform & depreciation schedules and allows for 9.9% ROE	Filed: 10/31/2018; Partial Settlement on 4/26/19; Order expected 2H2019

Company Description

NiSource Inc.

NiSource, Inc. (NYSE: NI) is a diversified energy holding company whose subsidiaries provide natural gas, electricity, and other energy products & services to nearly 4 million US customers. The Company operates through three segments: Gas Distribution, Columbia Pipeline Group, and Electric. The Gas Distribution operations provide natural gas service and transportation for residential, commercial and industrial customers in Ohio, Pennsylvania, Virginia, Kentucky, Maryland, Indiana and Massachusetts. Columbia Pipeline Group offers gas transportation and storage services for Local distribution companies, marketers and industrial and commercial customers located in Northeastern, Mid-Atlantic, Midwestern and Southern states. The Electric Operations segment provides electric service in various counties in the northern part of Indiana. NiSource was founded in 1987, is incorporated under the laws of the state of Delaware, and is headquartered in Merrillville, IN.

Company Valuation/Risks

NiSource Inc.

Our $27 PT and Hold recommendation are derived via Target P/E, Target Yield, DCF, and DDM approaches. Unexpected regulatory outcomes, deviations in customer growth, and project execution present risks to our estimates & PT.

Investment Recommendation Record

(Article 3(1)e and Article 7 of MAR)

Recommendation Published	May 1, 2019 , 15:41 ET.
Recommendation Distributed	May 1, 2019 , 15:41 ET.

Explanation of Jefferies Ratings

Buy - Describes securities that we expect to provide a total return (price appreciation plus yield) of 15% or more within a 12-month period.

Hold - Describes securities that we expect to provide a total return (price appreciation plus yield) of plus 15% or minus 10% within a 12-month period.

Underperform - Describes securities that we expect to provide a total return (price appreciation plus yield) of minus 10% or less within a 12-month period.

The expected total return (price appreciation plus yield) for Buy rated securities with an average security price consistently below $10 is 20% or more within a 12-month period as these companies are typically more volatile than the overall stock market. For Hold rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is plus or minus 20% within a 12-month period. For Underperform rated securities with an average security price consistently below $10, the expected total return (price appreciation plus yield) is minus 20% or less within a 12-month period.

May 1, 2019

NISOURCE

(NI US Equity – $27.40 – Outperform)

On track despite another MA cost increase

- **$260M cost increase related to incident in MA…**Heading into the Q1 call, we expected a much more modest cost increase; our expectation proved optimistic as NI now expects a 20% increase from the amount provided just a couple months ago. NI recently reached a settlement on what is likely one of its larger claims, thus taking some risk off the table for large future increases. But there is still a fair amount of uncertainty that remains concerning what's embedded in estimations for claims yet to be settled / litigated (class action, wrongful death, municipalities); footnote language related to the possibility for further increases makes us a bit weary as well. We would be remiss if not admit that mgmt's credibility is taking a bit of a hit with respect to this issue.
- **…but 2019 guidance and L-T growth commitments remain intact.** Despite the cost increase, NI reaffirmed 2019 guidance of $1.27-1.33 (WRe $1.31) and its targeted annual 5-7% EPS / dividend growth from 2019 through 2022. Strong underlying performance of the business and continued constructive regulatory outcomes are largely to thank. NI's 1Q19 EPS of $0.82 handily beat consensus expectations of $0.77 (WRe $0.79). We also sense that when originally re-setting expectations at YE, mgmt gave itself some wiggle room and took a conservative stance on the timing of insurance recoveries. NI's financing plans were unchanged, but there is some optionality on the timing of its planned DRIP equity (i.e. more in '19 vs '20) and the potential for preferreds in order to assure hitting its targeted credit metrics.
- **Confident with generation plans in Indiana.** In light of the IURC's recent decision to reject CNP's 850 MW proposed CCGT, mgmt reiterated confidence in its plans to accelerate the retirement of NI's remaining coal facilities and replace the capacity with a mix of wind / solar / storage. A key differentiator that mgmt pointed out was NI's broad stakeholder participation in its IRP and that its RFP contemplated all resource types.
- **PT to $30, maintain O/P rating.** We maintain our Outperform rating despite the continued frustration related to MA. Importantly, there is no collateral damage to the underlying business and it appears that NI has levers to pull if need be to stay on its projected path. We also think a sale of Columbia MA later this year is still more probable than not. Our PT moves up $2 to $30 on higher group multiples. We extended our model to 2022 and see EPS of $1.59.

Company description

NiSource, headquartered in Merrillville, Indiana, operates two separate business lines: electric utility and gas distribution LDCs. The electric utility serves just under 500,000 customers in northern Indiana and owns 3,300 MW of generation. The gas LDC serves 3.5 million customers in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland and Massachusetts.

Investment Thesis

We see above-average rate base and earnings growth potential for NiSource relative to other electric and natural gas distribution utilities. NI has a $30B backlog of investment with recovery largely through trackers and balanced regulatory environments. Additionally, we see the gas business getting larger over time. NI appears attractive at current levels.

Valuation

Our $30 price target is on a SOTP target P/E valuation. We apply a one-turn discount to the 20.5x group LDC multiple given the Massachusetts overhang. For its electric utility earnings, we ascribe a one-turn premium to our 18x group multiple given the constructive regulatory environment. Risks for NiSource are 1) further cost increases in MA 2) regulatory outcomes and 3) pipeline safety incidents. Upsides are 1) additional growth projects and 2) customer growth

Investment Conclusion

We are Outperform rated on NI. The company's $30B capital investment backlog will drive its 5-7% annual earnings target well into the future, most of which is recovered with minimal lag via tracking mechanisms. NI has also established a track record of reaching constructive regulatory settlements in its various jurisdictions. The event at its MA subsidiary last September has unfortunately overshadowed an otherwise solid business – we believe the company would be best served to exit the state for a couple reasons 1) there are natural buyers, most likely being ES or Nat Grid and 2) a sale would allow NI to get out from under the political microscope in MA and claw back its gas LDC premium at a fast pace. We believe a sale of the business is more likely than not and maintain our Outperform rating as we believe this would be a positive catalyst for the stock.

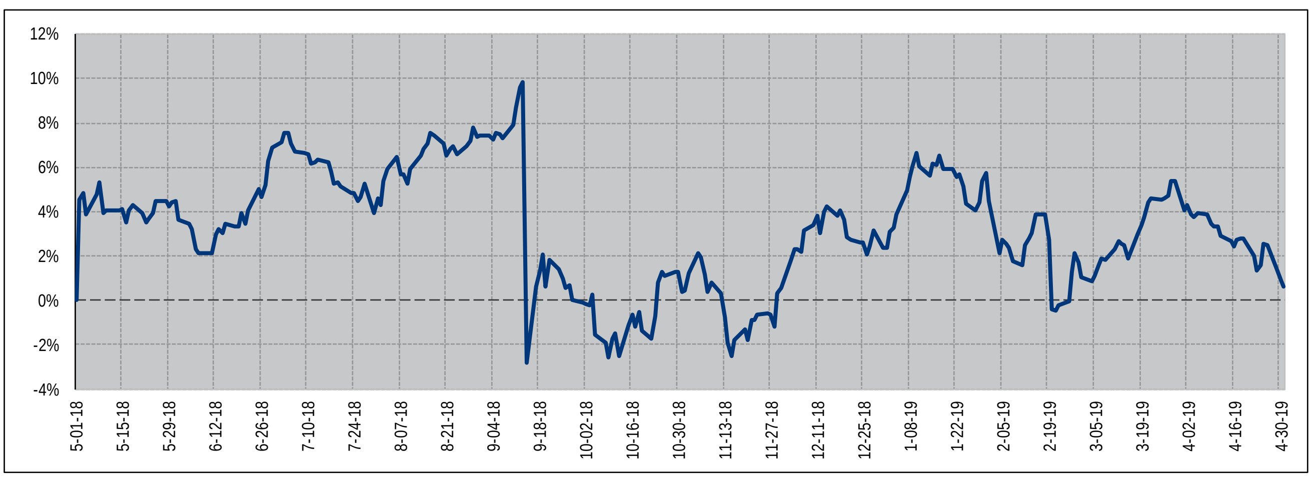
Exhibit 6: NI vs the Regulated Average



NiSource Inc

Reiterating Neutral amid increased MA costs, with IN upsides eventually

Reiterate Rating: NEUTRAL | PO: 29.00 USD | Price: 27.40 USD

Bank of America Merrill Lynch

Equity | 02 May 2019

Reiterate Neutral: Higher (and climbing) MA incident costs

NI updated its expected costs related to the MA incident by +19% – following the ~70% increase in 4Q18 – and went further to highlight that costs could continue to increase due to settlements with injured individuals, class action suits, and communities (updates to be expected quarterly). While we downgraded NI to Neutral based on expectations for costs estimates to rise 10%, the increase was greater than we expected: Third-party claims rose ~27% (+$212mn), replacement of the gas system rose 9% (+$20mn) and other costs 8% (+$28mn). We assume another $90mn of costs as a starting point given commentary around perhaps incremental $50-100mn outstanding (easily exceeding insurance levels of ~$1.1b). While too early to confirm, mgmt. acknowledged there is at least a potential it pursues incremental financing in '19 in an effort to ensure FFO/debt metrics are at the 14-15% range (with options including issuing preferred equity and accelerating more of its $500mn at-the-market (ATM) issuance program into '19 versus '20). We expect more costs and potential financing plan updates will be an overhang on shares and expect to see a difficult regulatory environment, particularly around the MA Department of Public Utilities' definition of prudent vs. imprudent spending (where we see a risk to eventual recovery). We maintain our Neutral rating at a -$1/sh lower PO (now $29/sh), update our discount to 1.0x across the gas utilities (previously -0.5x) to reflect overhang, reduce our EPS by up to $0.03/sh to reflect underearning in MA, and update peer multiples to 19.2x and 21.4x for electric and gas.

Some positive datapoints: Quarterly est. and NIPSCO RFP

NI posted 1Q19 results of $0.82/sh, beating our $0.80/sh estimate and consensus of $0.77/sh. Given NI sees roughly 2/3 of its annual earnings in the first quarter, this places NI in a good position to reach its annual non-GAAP guidance of $1.27-1.33/sh (our '19E of $1.30/sh is within guidance). Furthermore, we see two wins and upside potential in Indiana: NIPSCO recently settled the first half of its base rate case (gaining a key accelerated depreciation schedule for its retiring coal units) and House Bill 1470 was passed (eliminating noise for NI's TDSIC filings and opening the company to longer-dated investment upside opportunity in the electric biz for smart grid). Finally, NI's second RFP (details by YE19) should see more renewable ownership than its first.

Company Sector

Natural Gas-Local Distribution Companies

Company Description

NiSource Inc. (NI) is a fully-regulated utility company serving approximately 3.5mn natural gas customers and 500,000 electric customers across seven states through its local Columbia Gas and NIPSCO brands. NI generates substantially all of its operating income through these rate-regulated businesses.

Investment Rationale

NI's positives including 5-7% earnings/dividend growth via $30bn of infrastructure investments over the next 20+ years and fully regulated subsidiaries with earned ROEs consistently near the allowed.However, we see increased regulatory lag associated with the MA incident. Moreover, with the outcome of Department of Justice investigation still unclear, we believe an overhang on shares will persist. Bottom line, we see more balanced risk/reward profile and as such we rate NI Neutral.

Merrimack costs: Room for more & financial implications

Costs increased again, and there could still be more to come

As anticipated, mgmt. provided another incremental update on Merrimack cost estimates. However, the increased costs were larger than we expected: closer to a further 19% higher than prior estimates compared to our anticipated +10% increase (which we had estimated to be around $0.01 neg to estimates to finance the uncovered exposure). Note that this +19% is on top of NI's last +70% adjustment made in 4Q.

Furthermore, mgmt. made clear that there still room for *more* incremental adjustments possible to the total Merrimack costs, and that updates on the cost front will be provided quarterly. The company has settled with at least one of the severely injured parties and is in the midst of settlement discussions with remaining injured individuals, class action lawsuits, as well as communities for costs incurred. We anticipate we could see at least another $50-100mn of incremental costs as a result given limited details, meaning this could lead to a total of up to $0.03 neg to estimates relative to adjustments made in 4Q if we assume a total of 25% delta for all of 2019 adjustments and a 4% cost of debt. In the table below, we assume the updated costs provided on the 1Q call (third-party claims +$212mn, replacement of the gas system +$20mn, and other costs +$28mn) and an additional 5% increase on top of each to account for further announcements.

Table 1: Estimated increased costs for MA incident relative to 4Q18 midpoint

Fines/Costs ($mn)	4Q18 Midpoint	1Q19 Update	Delta	% chg	Spend (incl. in range)	% of est. total	Remaining est. spend

Source: BofA Merrill Lynch Global Research estimates, company data

Impact on company's financial planning: Preferred of ATM are options if needed

While *not* confirmed on the call, we highlight there is at least a potential that NI pursues incremental financing in 2019. NI noted that the Merrimack incident has many dimensions and that currently, it is too early to update the company's financing plan. Dimensions include the pace of insurance distribution; NI currently conservatively estimates it collects half of the insurance this year, and the other half next year. If the company were able to achieve more up front, this could offset some of the cost adjustments. Another dimension is the status of settlement discussions with injured individuals and communities; some conversations are in earlier stages than others and are too far out to anticipate the result. If costs going forward were increased to the point that NI chose to pursue incremental financing in '19, we would expect options considered to include issuing preferred equity or accelerating more of its $500mn at-the-market (ATM) issuance program into '19 versus '20 (currently anticipated at $200-300 per year in '19 and '20). Note that any financing plan update would be made in an effort to ensure FFO/debt metrics are at the 14-15% range in '19 and beyond.

Other complications: SMS implementation, awaiting year end announcements

Separately, we highlight another cautious datapoint: We expect the company's Safety Management System (SMS) push to result in a more complicated change in corporate culture, considering this is to be an opportunity pursued across all jurisdictions.

Moreover, with the DoJ investigation still ongoing and details from the National Transportation of Safety Board (NTSB) yet to be revealed as well as the ongoing SEC investigation, we see headline risks ahead. While we believe the company will likely look to strategic options around the Bay State Gas subsidiary, including a potential sale that would likely be accretive, we believe it will be 4Q earliest to decide to make a call (pending the outcome of regulatory developments through the balance of 2019).

Not all negative: First MA DPU litmus test approved

We saw some color around the first regulatory environment litmus test: the MA Dept of Public Utilities (DPU) gave regulatory approval for NI's '19 Gas System Enhancement Program. This authorizes recovery of incremental capital investments and priority pipe replacement of $64mn for 2019 (Greater Lawrence incident not included). We continue to watch to see how the DPU defines prudent vs. imprudent spending, given we expect this could pose a risk to eventual recovery to the Greater Lawrence event.

Estimates

We present our EPS estimates below, which we slightly tweak downward to reflect the again incremental costs NI is to face in response to the Merrimack incident and potential financing plan update; in other words, expectations around earned ROEs at Columbia Gas of Massachusetts are a bit further below authorized. We continue to expect NI meets its 2019 EPS guidance of $1.27-$1.33/sh (BofAMLe $1.30/sh) as well as '19-'22 EPS/DPS annualized growth of 5-7% (BofAMLe 6.5% EPS CAGR) given the 1Q19 results beat our expectation slightly and NI's weight on 1Q results is roughly 2/3 of the full year. If the company can capitalize on owning incremental renewable opportunities in Indiana, we could see some upside here.

NIPSCO Rate Case Settlement: Halfway there

Part One: The most critical accomplished

Last week, NiSource's subsidiary Northern Indiana Public Service Co (NIPSCO) filed a Settlement Agreement on Less Than All the Issues for its electricity base rate case (Cause No: 45159, filed Oct '18); a status update was provided on April 30. Most intervenors are participating in the settlement including: the United States Steel Corporation, Walmart, Indiana Municipal Utilities Group, NLMK Indiana, Indiana Office of Utility Consumer Counselor, Citizens Action Coalition of Indiana, Northern Indiana Commuter Transportation District, NIPSCO Industrial Group, and Sierra Club. Parties *not* on board with the settlement are the Indiana Coal Council, the LaPorte County Board of Commissioners, and Dennis Rackers. We see the filings positively for NIPSCO, given that the partial settlement resolves the most important revenue requirement issues, such as fixing its depreciation (both increasing depreciation and ensuring the schedule is more in line with accelerated coal retirements) and passing back deferred taxes to help offset that. Rather than the 10.8% ROE that NI originally asked for, the settlement proposes a 9.9% ROE consistent with today's; net operating income also was proposed to increase to $289mn from $255mn, and the settlement calls for $271mn instead. We see the settlement as earnings neutral to only slightly positive (albeit cash positive due to accelerated depreciation), but important to NI given it has seen the rate case more as a policy fix from day one.

Part Two: Cherry on top still in the works

We highlight that the parties are still working on another settlement to address the more contentious proposed Rate 831 that allows most sophisticated industrials to buy through MISO for electricity needs (but through NIPSCO for backup/maintenance power). Parties are also still looking to fully address revenue allocation. In terms of when this might be resolved, we note that the procedural schedule for this rate case was extended to account for these further negotiations. While the Commission typically resolves rate cases in ~300 days, an extension to 360 days is allowed. Settling parties must now file testimony May 10th, non-settling parties by May 31st, replies must be filed by June 14th, and then the updated hearing timeline is July 16th to August 2nd. We highlight that on the call, mgmt. noted this remaining portion on Rate 831 and revenue allocation may ultimately be resolved in the litigated case. Look to 3Q19 for more closure on this front.

NIPSCO RFPs 1 and 2: Replacing Bailly and Schahfer

We highlight that NIPSCO's first request for proposal (RFP) associated with NI's previously filed 2018 integrated resource plan (IRP) resulted with NI selecting three wind farms (Jordan Creek, Roaming Bison, and Rosewater) to replace the already-retired Bailly generating facility. NIPSCO is only to own half of the 100MW Rosewater facility through a build-own transfer. NI filed for the projects' certificates of public convenience and necessity (CPCNs) in February and the Commission should issue an order in 3Q19.

The second RFP will kick of later this year (perhaps into early next year) in efforts to replace the Schahfer generating facility (to retire in '23). NIPSCO looks to own more of the renewables selected through this second RFP, noting that it would characterize success as owning ~half of the projects. We see NI as using the first build-own-transfer project from RFP 1 as an educational process to help ensure success in RFP 2.

TDSIC bill passes: Perhaps small LT capex upside

We highlight another Indiana bill (signed into law April 24th) that cleans up language around what can be included in NI's transmission, distribution, and storage system improvements charge (TDSIC) plans for both its electric and gas businesses: House Enrolled Act 1470. While not a large incremental update in the near-term, we highlight that NI sees the bill's passing as eliminating noise (eg, cumbersome filings to file a budget for every pole replaced) as well as putting an end to the high number of law suits the company has previously encountered from industrials on TDSIC filings. It also smoothing out the transition between TDSIC plans and allows them to range from 5-9 years (rather than just 7 previously). Most importantly, we note that the TDSIC program includes some language around smart grid investment, meaning we could see some longer-dated (~2023) investment upside opportunity in the electric biz. We note that NI intends to file a new gas TDSIC plan in 3Q19 (given the current plan runs through 2020) and is determining next steps for filing a new electric plan (given the current plan runs through 2022).

Valuation

We move our Price Objective to $29 from $30/sh previously after marking to market our most recent peer utility multiples of 19.2x for electric (previously 18.9x) and 21.4x for gas (previously 21.1x) - both assuming a group '18-'22 CAGR of 5% for electric and 5.1% for gas.

We continue to use a -3.0x discount for Columbia Gas of MA in our valuation and continue to include the parent EPS drag - ex-interest expense - given expectations for continued lag associated with the MA incident. Meanwhile, we update our discount to NI's remaining gas utilities to -1.0x (previously -0.5x) given the overall overhang we expect to persist on shares as the company updates the Street quarter by quarter on incremental costs and resulting impact on its financing plan. We stress applying a premium relative to an inflated gas utility multiple vs other utilities was always a point of recent contention - and we acknowledge the equity is less favorably positioned vs. many peer gas smids to benefit from a wider M&A 'boost'. Bottom line, we see risk/reward as less compelling given ongoing risks associated with Columbia Gas of MA.

Finally, we apply a +1.0x premium to NIPSCO electric to reflect upside potential around the second RFP, which should be announced later this year. NIPSCO aims to own part of these projects, perhaps up to half of the total capacity selected.

Price objective basis & risk

NiSource Inc (NI)

Our $29 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2021 forward P/E multiples of 21.4x for gas utilities and 19.2x for electric utilities with a 1.0x premium to reflect NiSource's electric utility's strong growth rates and earned ROEs. We note that electric / gas peer P/E multiples are grossed up for a year to 2019 by 5% / 5.1% to reflect capital appreciation across the sector. We then subtract the value of excess holding company debt at the parent not supporting the utility opcos. This multiple is slightly below the LDC peer average but above the small-mid cap electric utility average. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its inline-ish multiple versus peers. We add in Columbia Gas of MA but discount the jurisdiction by -3.0x due to Andover challenges. We also adjust other gas utilities to a -1.0x discount to reflect overhang of shares.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, financing plan updates, and challenging steel production economics in Indiana.

2 May 2019

NiSource, Inc.

Less Mass(achusetts), More Value?

Assuming the use of NOLs, we estimate that a potential sale of the Massachusetts operations would be accretive to NI by year 2 at a price of $1.125B, or above $1.5B without using NOLs. (When asked about a potential sale of MA, NiSource states that it does not comment on M&A.) This is premised upon the calculation that 46.5% of the year-end 2018 rate base of $991M is debt and that amount of debt would be extinguished. It also assumes a $0M tax basis, and either no use of NOLs to offset tax leakage or up to $500M of NOLs to offset tax leakage. We also assume that net proceeds after taxes and associated debt paydown is used to retire corporate debt, resulting in a lower debt/cap reducing or eliminating equity needs over the forecast period.

There are varied opinions on whether NI should divest its MA operations given fallout from the Lawrenceville over-pressurization event: We look at potential sale valuation scenarios, use of proceeds and ultimate accretion/dilution. The quantitative analysis comes to the conclusion that it is all about sale price. The qualitative is more complex and is examined in detail. The potential decision and timing of any sale is likely dependent upon finalizing financial liability from the Greater Lawrence over-pressurization event as well as getting past the associated criminal investigation.

The overall range of hypothetical sale prices and accretion/dilution can be found in Figures 1, 2, and 3: Ultimately, the potential range of sale prices evaluated goes from $950M (based on book value) to $1.9B (based on 2x book and consistent with the 2015 Piedmont transaction and the 2018 Gulf Power transaction).

We reiterate our Equal Weight rating, update our estimates, and increase our price target by $1 to $29, but highlight the potential value associated with the MA option: Based on the implied accretion from several of the sale scenarios, our price target methodology would suggest up to $2/share of additional value for NI based solely on EPS uplift.

Price (30-Apr-2019)	USD 27.78
Price Target	USD 29.00

Why Equal Weight? We view NI as a quality utility with a well-defined rate base growth strategy from gas and electric infrastructure modernization, which we see as relatively low risk. However, because of premium valuation we do not see material upside to our price target.

Upside case USD 34.00

Our upside case reflects a 25% premium to the 2021 utility group average P/E multiple of 17.5x applied to higher earnings driven by additional rate base growth and favorable rate case outcomes and an accretive sale of Massachusetts.

Downside case USD 24.00

Our downside case reflects a 5% premium to the 2021 utility group average P/E multiple applied to lower earnings driven by slower rate base growth and unfavorable Maryland, Massachusetts, and Pennsylvania rate case outcomes.

Upside/Downside scenarios

Note: FY End Dec

Sale of Columbia Gas of Massachusetts Scenario Analysis

There are several main assumptions that underpin our scenario analysis of the hypothetical sale of the MA jurisdiction by NI. These base assumptions are as follows:

- The tax basis of the subsidiary is $0.
- $500M in NOLs exist, which can be used to offset tax leakage.
- The allocated debt of the subsidiary is 46.5% of rate base ~$460M of debt.
- The net proceeds are assumed to pay down corporate debt.
- The delevering of the balance sheet allows for avoidance of equity.
- For simplicity, our accretion/dilution analysis assumes the MA subsidiary would grow net income at 7%.
- For accretion/dilution beyond 2021. we assume an EPS growth rate of 7%.
- Capex and associated debt for MA subsidiary is avoided beginning in 2021.
- Debt is issued above plan in lieu of equity until 80% of the proceeds have been issued as debt in excess of plan.
- The financial liabilities from the Greater Lawrence pressurization event are finalized, and for the scenarios are assumed to be in line with company expectations.

Benefits of a Sale

Qualitative

There are several qualitative reasons that selling MA makes sense.

- Derisking the overall business by removing a large overhang.
- At the right price allows for accretion, higher EPS growth and significant improvement in the capital efficiency metric (EPS growth/rate base growth).
- Simplifies the business, allowing for more resources and focus on remaining subsidiaries.
- Improves the balance sheet.

Quantitative

Here it all comes down to numbers. As shown in Figure 3, any sale at or above $1.125B utilizing NOLs and $1.5B absorbing the tax leakage is neutral longer term, while avoiding equity needs for 1-2 years. The higher the price, the higher the potential accretion, which we estimate drives a growth rate from the 6-7% range to the 8-9% range through 2021 at the high end of valuation. The higher the price, the further out in time the higher growth continues as equity needs can potentially be avoided for up to four years. The difference in EPS growth from 2019 through 2021 assuming a sale by year-end 2019 can be as much as a 2.5% increase in CAGR over the period for a sale at $1.9B.

Benefits of Keeping Columbia Gas of Massachusetts

Qualitative

There are several qualitative reasons that keeping MA makes sense.

- Employee morale – selling any subsidiary tends to call company loyalty into question.
- Regulatory perception – will the company sell at the first sign of rough seas or work with regulators to rebuild relationships?
- Continues to provide a large platform to the extent supply chain savings benefit from a larger system as well as corporate functions are amortized over more subsidiaries.

Quantitative

Again, it all comes down to numbers. As shown in Figure 3, we estimate that any sale at or above $1.25B value could be accretive beyond year 2, while avoiding equity needs for 1-2 years. Hence, any price that does not result in accretion should arguably not be pursued from a purely quantitative standpoint.

Valuation

Our new $29 valuation is premised upon a 10% premium to the group average 2021 P/E of 17.5 applied to our updated 2021 EPS estimate of $1.48.

Our previous $28 valuation was premised upon a 10% premium to the group average 2021 PE of 17.5 applied to our previous 2021 EPS estimate of $1.46.

Updating Two Smid Cap Utilities Post 1Q2019

We remain Buy rated NI as we still see upside to consensus estimates and potential for multiple expansion, but acknowledge NI increasing its disclosure of Greater Lawrence damages could delay the re-rate near-term. We continue to use premium multiples of 21.25x/17.5x 2020 P/E for gas/electric (vs baselines of 20x/17x) given above average rate base growth, and highlight a consolidated 2019-2021 EPS CAGR of 7.8% vs smid-cap regulated utility peer average of ~6% - although we note 2018-2021 EPS CAGR of ~5% given MA related costs in 2019. We also highlight that our estimates already incorporate conservative cost recovery expectations (2/3 recovery over next ~18 months).

We remain Neutral rated PNW and update our estimates modestly higher 2019-2021 from $4.83/5.02/5.26 to $4.85/5.02/5.29, reflecting a number of items including (1) weather, (2) Ocotillo deferral magnitude and timing, (3) mid-year 2021 rate relief, (4) capex, and (5) financing assumptions. We continue to see slight downside risk to consensus 2021 estimates, given increasing uncertainty around RoEs and the regulatory climate in AZ. However, we reiterate our Neutral view given that PNW trades at a discount to other Smid-Cap Utilities under coverage at 19.0x/18.0x 2020/2021 EPS, compared to 20.7x/18.9x for peers — with the 1x 2021 discount largely reflecting this regulatory uncertainty already.

NI: Above average growth at a discount, but increased MA cost estimate could limit multiple expansion near-term

Additional disclosed costs in MA creates uncertainty on the final cost level. NI increased its Greater Lawrence cost estimate disclosure by $250mn at the midpoint (likely delaying multiple expansion), but didn't change its financing guidance. However, we note guidance for preferred equity financing remains TBD - potentially plugging the financing gap related to incremental cash outflows due to the Greater Lawrence incident. We highlight our estimates for ~$1.1bn of LT debt issuances through 2021 (vs guidance of up to $500mn/year) and $660mn of common equity financing through 2021 (vs guidance of up to $360mn/year of ATM, employee stock purchase plan, and other). We assume NI meets its incremental cash needs through 2021 with $465mn of additional preferred equity financing.

We update our 2019-2021 EPS estimates to $1.29/$1.43/$1.49 from $1.30/$1.43/$1.50. Our revised estimates reflect (1) 1Q2019 results, (2) increased cash outflows related to the Greater Lawrence incident - partly offset by increased insurance recoveries, (3) tweaks to our base rate case assumptions for Columbia Gas of VA and NIPSCO electric, and (4) updated financing assumptions - largely driven by the revised Greater Lawrence damages guidance. We note our estimates remain above FactSet consensus in 2020/2021, and imply a consolidated EPS growth rate of 7.8% for 2019-2021.

We remain Buy rated with a $29 12-month price target, derived with a 20x P/E multiple on 2020E EPS. Key risks for NI include utility regulation, litigation, damages related to the Greater Lawrence incident, O&M management, and financing.

PNW: Regulatory uncertainty overshadows solid rate base growth, for now

We update our PNW estimates modestly higher 2019-2021 from $4.83/5.02/5.26 to $4.85/5.02/5.29, reflecting a host of items including (1) weather, (2) Ocotillo deferral magnitude and timing, (3) mid-year 2021 rate relief, (4) capex, and (5) financing assumptions. We continue to see slight downside risk to consensus 2021 estimates, given increasing uncertainty around RoEs and the regulatory climate in AZ. However, we reiterate our Neutral view given that PNW trades at a discount to other Smid-Cap Utilities under coverage at 19.0x/18.0x 2020/2021 EPS compared to 20.7x/18.9x for peers — with the 1x 2021 discount largely reflecting this regulatory uncertainty already.

Regulatory risk remains high for PNW as the Arizona Corporation Commission (ACC) Staff is scheduled to file its APS Rate Review results on May 3, although they could request an extension. We note that a rate audit is not a common regulatory proceeding, which gives us pause. As we have previously written, we estimate outcomes ranging from fairly benign – where ACC regulated earnings range from RoEs of 9.7% to 10.1%, near the authorized RoE level of 10% — to more bearish – where ACC earned returns reach as high as 12%, largely due to the use of the last authorized (2017) rate base in the calculation. A negative Staff recommendation likely would lead to a call for an ACC vote to force APS into a rate case earlier than anticipated (currently planned for 2020), and would increase the regulatory pressure and uncertainty surrounding PNW.

We maintain our $89 12-month price target, derived from a 17.75x 2020 P/E multiple based on a 0.75x premium to our 17.0x industry baseline multiple. The premium better reflects PNW's above average rate base growth (~7%) and leverage to a secular trend in renewable and the related electric infrastructure investment. Key upside and downside risks include the upcoming earnings review, renewable/storage project awards, plant outages and cost management, load/customer growth, and regulatory or legislative changes.

Analyst Note 01 May 2019

We are reaffirming our $27 per share fair value estimate after narrow-moat NiSource reported 2019 first-quarter operating EPS of $0.82 versus $0.77 in the same period last year.

However, operating earnings exclude roughly $0.30 per share of estimated costs related to the tragic natural gas explosion north of Boston in September 2018. We suspect some of these expenses may be recovered by insurance claims or regulatory relief and reversed later.

Third-party claims and other expenses have climbed to about $1.35 billion net of insurance recoveries from about $1.1 billion at 2018 year-end. We had thought most of the claims had been identified, but it appears more difficult to quantify some of the third-party claims for personal injury and property damage than we had suspected.

NiSource's insurance policies have a combined limit of $1.1 billion ($800 million of casualty and $300 million of property), but even if some of the $250 million of incremental claims and other expenses in the recently ended quarter are not recovered, we doubt it would have a material impact on our fair value estimate.

NiSource reaffirmed 2019 operating earnings guidance of $1.27-$1.30 per share and our estimate of $1.30 per share is unchanged. The utility also reaffirmed its 2019 capital expenditure guidance of $1.6 billion to $1.7 billion. Our estimate of $1.7 billion remains at the top end of the guidance.

We believe annual EPS growth will return to management's 5%-7% target after 2020 and our EPS growth rate estimate from 2020-23 equals 6.1%. We also expect annual dividend increases to average 6% starting next year after

Profile

NiSource is one of the nation's largest natural gas distribution companies with approximately 3.5 million customers in Indiana, Kentucky, Maryland, Massachusetts, Ohio, Pennsylvania, and Virginia. NiSource's electric utility transmits and distributes electricity in northern Indiana to about 500,000 customers. The regulated electric utility also owns more than 3,000 megawatts of generation capacity, most of which is now coal-fired but is being replaced by natural gas and renewables.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. We believe this bottom-up, long-term, fundamentally based approach allows our analysts to focus on long-term business drivers, which have the greatest valuation impact, rather than short-term market noise.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at an uncertainty-adjusted discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define excess economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

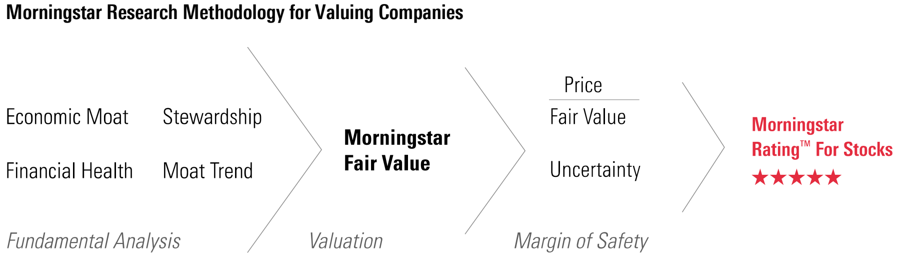
To assess the direction of the underlying competitive advantages, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

All the moat and moat trend ratings undergo periodic review and any changes must be approved by the Morningstar Economic Moat Committee, comprised of senior members of Morningstar's equity research department.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies



Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes, or EBI, and the net new investment, or NNI, to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital, or RONIC, and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until the perpetuity stage is reached. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term market-value weights.

Research Methodology for Valuing Companies

3. Uncertainty Around That Fair Value Estimate
Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the fair value estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

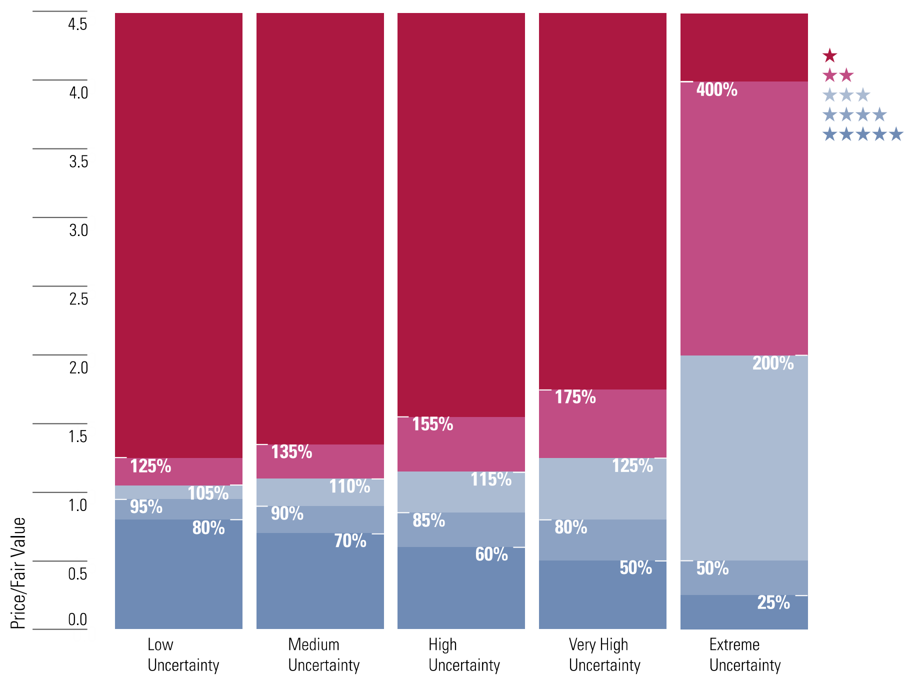
Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

- Low–margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- Medium–margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- High–margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- Very High–margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- Extreme–margin of safety for 5-star rating is a 75% discount and for 1-star rating is 300% premium.

4. Market Price
The market prices used in this analysis and noted in the report come from exchange on which the stock is listed, which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com.

Morningstar Equity Research Star Rating Methodology



Morningstar Star Rating for Stocks
Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open.
Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. The current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. The market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Research Methodology for Valuing Companies

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- Undervalued: Last Price is below Morningstar's quantitative fair value estimate.
- Fairly Valued: Last Price is in line with Morningstar's quantitative fair value estimate.
- Overvalued: Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Natural Gas LDCs

NI: Shares Pop On Bloomberg Report Of Potential MA Sale

Sarah Akers, CFA, Senior Analyst (314) 875-2040
Neil Kalton, CFA, Senior Analyst (314) 875-2051
Jonathan Reeder, Senior Analyst (314) 875-2052
Rena Wang, Associate Analyst (314) 875-2049

Sector Rating: Natural Gas LDCs, Market Weight

Intra-day on 6/17, shares of NI are up 1.9% versus the S&P Utilities -0.1% following a Bloomberg report stating that the company is planning to sell the division tied to the 9/13/18 Merrimack Valley gas explosion outside of Boston. NI has not commented as of the writing of this publication. News of a sale would not come as a major surprise as management has not ruled out the consideration of strategic alternatives in recent conversations, though the focus remains on final restoration work. We previously expected the timing of such an announcement would follow the final NTSB (National Transportation Safety Board) report expected this fall.

We would view a sale favorably – assuming a reasonable price – as it would allow investors to refocus on NI's attractive gas infrastructure growth story. Shares currently trade at 4-6% discounts to blended gas/electric peers on our '20E & '21E EPS of $1.40 & $1.48, respectively. Just prior to the explosion, shares were at slight premium. The divestiture of the MA system – which represented 8% of consolidated rate base as of YE'18 – could serve as a clearing event that we expect would support further multiple appreciation on a substantially similar EPS outlook (given the MA system is experiencing regulatory lag, we do not expect EPS dilution). Reiterate Outperform ($29.30).

Of note, the Bloomberg report indicated that the system "Is said to be worth about $2B," which strikes us as reasonable (implies an EV/rate base of ~1.8X on 2020E). No potential suitors have been mentioned – we note that local players include Eversource Energy (ES/Outperform/$76.86), which was the utility that Governor Barker put in charge of operations in the immediate aftermath of the incident, Avangrid, Inc. (AGR/Market Perform/$51.45) and UK-based National Grid (NGG/Not Covered/$52.24).

NiSource Inc. (NI)/Outperform (1)
Price as of 6/17/2019: $29.30
FY 19 EPS: $1.31
FY 20 EPS: $1.40
Shares Out.: 372.5 MM
Market Cap.: $10,914.25 MM

Eversource Energy (ES)/Outperform (1)
Price as of 6/17/2019: $76.86
FY 19 EPS: $3.45
FY 20 EPS: $3.65
Shares Out.: 317.3 MM
Market Cap.: $24,389.26 MM

Please see page 3 for rating definitions, important disclosures and required analyst certifications.
All estimates/forecasts are as of 06/17/19 unless otherwise stated. 06/17/19 15:57:27 ET

AVANGRID Inc. (AGR)/Market Perform (2)
Price as of 6/17/2019: $51.45
FY 19 EPS: $2.30
FY 20 EPS: $2.60
Shares Out.: 309.0 MM
Market Cap.: $15,898.05 MM

Rating Basis Information:
NI Thesis: We rate shares Outperform. We believe the current discounted valuation provides an attractive entry point to a company with robust long-term infrastructure growth opportunities and supportive regulatory treatment.

ES Thesis: We believe shares of ES warrant a 5% premium P/E given an above average EPS & DPS growth profile, heavy concentration of FERC-regulated earnings, proven management team and strong financial position.

AGR Thesis: Our Market Perform rating primarily reflects concerns around AGR's ability to hit targeted EPS growth goals in light of recent execution issues. AGR’s features include strong EPS growth potential, relatively predictable earnings (90% regulated/contracted) and a large U.S. renewable franchise.

NiSource Inc. currently is, or during the 12-month period preceding the date of distribution of the research report was, a client of Wells Fargo Securities, LLC. Wells Fargo Securities, LLC provided non-investment banking securities-related services to NiSource Inc..
Wells Fargo Securities, LLC or its affiliates has a significant financial interest in AVANGRID Inc., Eversource Energy, NiSource Inc..

NI: Risks include greater than expected shareholder liabilities associated with the 9/13/18 MA gas incident, unfavorable regulatory developments, a potential rise in interest rates (financing costs and sector valuation), and lower than expected sales growth.
ES: Risks to our price target include potential development issues related to offshore wind (new to the U.S.) along with unfavorable regulatory developments.
AGR: Risks include an increasingly competitive renewables landscape, adverse regulatory decisions and below average share liquidity due to Iberdrola's 80% share stake.

Wells Fargo Securities, LLC does not compensate its research analysts based on specific investment banking transactions. Wells Fargo Securities, LLC’s research analysts receive compensation that is based upon and impacted by the overall profitability and revenue of the firm, which includes, but is not limited to investment banking revenue.

STOCK RATING
1=Outperform: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
2=Market Perform: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
3=Underperform: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

SECTOR RATING
O=Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.
M=Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
U=Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

VOLATILITY RATING
V=A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

June 17, 2019

NISOURCE

(NI US Equity – $29.16 – Outperform)

Come sale away, come sale away, sale away with MA

- **NiSource reported to consider sale of Columbia MA.** Today during market hours, *Bloomberg* reported that NI has received bids and is considering a sale of its MA subsidiary. The report indicated that a sale of Columbia MA could fetch up to $2B (~2x total rate base). In our view, a sale of MA makes sense and was the primary reason we stuck with our Outperform rating following the gas explosions last fall. A sale would remove the MA overhang on an otherwise solid investment story. We believe a natural suitor to be ES who could buy the property at a decent price, making it a win-win for both parties. NI outperformed the UTY by 180bps on the day following the news.

- **Reported $2B sale price higher than we assume.** We believe a $2B sale price could be a little high given that the rate base number reported ($1B) for Columbia MA includes money spent on the expediated pipeline replacement effort. NI is not earning on that amount and will attempt to get recovery of the cash via a property insurance filing later this year. While the reported sale price is possible, we think a more likely price would be closer to $1.7-1.8B, assuming the property sells for 2x the rate base that NI is allowed to earn on.

- **We see a sale dilutive initially, modest accretion by 2022.** Earnings power associated with the MA subsidiary is $0.11-0.12/sh, which comprises roughly 8% of total earnings. Assuming a $1.75B sale price, we allocate proceeds via the following – eliminate ATM equity needs in '20-'22 ($900M) and layer in $100M of new capex per year given NI's extensive backlog. In doing so, we see ~$0.08 / $0.01 of EPS dilution in 2020 / 2021. By 2022, We see $0.04 of EPS accretion largely due to the lower share count. It is our understanding that there would be no tax leakage given NI's deferred tax asset position.

- **Multiple re-rating is the most compelling piece.** Prior to the Merrimack Valley incident, NiSource traded at a 2x premium to the electric average. As of today's close, NI trades just below a 1x premium. We believe a sale of Columbia MA will allow NI to re-rate at a faster pace, reasserting itself amongst the highest quality names in the sector. Separately, we raise out PT by $1 to $31 to reflect higher group multiples – this includes a full-turn discount on NI's gas LDC segment given the MA overhang.

Company description

NiSource, headquartered in Merrillville, Indiana, operates two separate business lines: electric utility and gas distribution LDCs. The electric utility serves just under 500,000 customers in northern Indiana and owns 3,300 MW of generation. The gas LDC serves 3.5 million customers in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland and Massachusetts.

Investment Thesis

We see above-average rate base and earnings growth potential for NiSource relative to other electric and natural gas distribution utilities. NI has a $30B backlog of investment with recovery largely through trackers and balanced regulatory environments. Additionally, we see the gas business getting larger over time. NI appears attractive at current levels.

Valuation

Our $31 price target is on a SOTP target P/E valuation. We apply a one-turn discount to the 21x group LDC multiple given the Massachusetts overhang. For its electric utility earnings, we ascribe a one-turn premium to our 19x group multiple given the constructive regulatory environment. Risks for NiSource are 1) further cost increases in MA 2) regulatory outcomes and 3) pipeline safety incidents. Upsides are 1) additional growth projects and 2) customer growth

Investment Conclusion

We are Outperform rated on NI. The company's $30B capital investment backlog will drive its 5-7% annual earnings target well into the future, most of which is recovered with minimal lag via tracking mechanisms. NI has also established a track record of reaching constructive regulatory settlements in its various jurisdictions. The event at its MA subsidiary last September has unfortunately overshadowed an otherwise solid business – we believe the company would be best served to exit the state for a couple reasons 1) there are natural buyers, most likely being ES or Nat Grid and 2) a sale would allow NI to get out from under the political microscope in MA and claw back its gas LDC premium at a fast pace. We believe a sale of the business is more likely than not and maintain our Outperform rating as we believe this would be a positive catalyst for the stock.

Bay State Gas Accretion: Potential Sale has Merit

Reiterate Rating: NEUTRAL | PO: 29.00 USD | Price: 29.10 USD

Bank of America Merrill Lynch

Equity | 18 June 2019

NI Ridding of Mass Biz? See strategic rationale as positive

Yesterday, widespread media articles (eg, Bloomberg) reported that NI is considering the sale of its MA subsidiary Columbia Gas at a value of $2bn; this is not a surprise following previous commentary from mgmt. weighing its options. Following the biz's Merrimack incident and subsequent series of additional costs that have far exceeded $1.1bn of insurance coverage, we see this possibility as a positive. We have viewed MA as NI's largest uncertainty given the company will likely need to ask to recover costs exceeding insurance – which the MA Commission could very well argue is imprudent. Even so, we see the transaction value Bloomberg and other articles have cited as too high to be realistic. Columbia Gas's reported ratebase (YE18) was $991mn meaning an over 2x transaction multiple; *and if factoring out unrecoverable costs associated with the MA incident (eg, pipe replacement) this figure is closer to $750mn* meaning $2bn would equate to a 2.67x multiple – which looks too high in our view. In fact, we think a more realistic purchase price would be less than $1.5bn – to reflect only recoverable rate base given our expectation the MA Commission will not take it easy on the company. Note we see a sale happening sooner than we initially anticipated (2H19). Reiterate Neutral rating.

Accretion / Dilution of potential sale

All in all, off a $750mn YE18 ratebase we see a deal as $0.04/sh accretive. Given the company has $509mn of net operating losses (NOLs) we see this as being able to offset any tax leakage with a sale. We believe it is likely a suitor would pay a premium for a deeply discounted utility given the under-earning. Assuming NI can garner about a 23x P/E for the asset, considering another suitor would not be penalized and would likely be able to turn the asset around and earn closer to allowed returns. This would imply $882mn in cash proceeds on $38mn of income. We assume around $750mn debt paydown at 4% interest given our assumed $50mn of offsetting equity need. Further, we assume remaining proceeds are invested back into the other subsidiaries, earning an approximate 9% ROE. This would imply 1.4x ratebase on its current asset base, and would be a clear valuation uplift by $1 /sh+ compared to the $0.8/sh we assume in our SOTP analysis. We see the article indicating a potential sale as potentially illustrative of our underlying concerns on recovery in a stand-alone NI/Bay State gas rate case.

Company Sector

Natural Gas-Local Distribution Companies

Company Description

NiSource Inc. (NI) is a fully-regulated utility company serving approximately 3.5mn natural gas customers and 500,000 electric customers across seven states through its local Columbia Gas and NIPSCO brands. NI generates substantially all of its operating income through these rate-regulated businesses.

Investment Rationale

NI's positives including 5-7% earnings/dividend growth via $30bn of infrastructure investments over the next 20+ years and fully regulated subsidiaries with earned ROEs consistently near the allowed.However, we see increased regulatory lag associated with the MA incident. Moreover, with the outcome of Department of Justice investigation still unclear, we believe an overhang on shares will persist. Bottom line, we see more balanced risk/reward profile and as such we rate NI Neutral.

Stock Data

Average Daily Volume	2,772,388

Quarterly Earnings Estimates

	2018	2019
Q1	0.77A	0.82E
Q2	0.08A	0.09E
Q3	0.10A	0.27E
Q4	0.38A	0.14E

Accretion/Dilution of Columbia Gas of MA

We assume the $750mn rate base at YE18 after factoring out unrecoverable costs associated with the MA, and apply the equity ratio and allowed ROE to come up with the total potential net income proceeds of $38mn. We then apply a 23x multiple to come up with total potential proceeds of $882mn. We see a clear potential for in-state buyers (i.e. ES or National Grid) to socialize the cost impacts across a wider base and also bring back local control of the utility. Bottom line, we see real merit to this move and believe it would be accretive from both an EPS and valuation standpoint.

Source: BofA Merrill Lynch Global Research estimates, company report

Price objective basis & risk

NiSource Inc (NI)

Our $29 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2021 forward P/E multiples of 21.4x for gas utilities and 19.2x for electric utilities with a 1.0x premium to reflect NiSource's electric utility's strong growth rates and earned ROEs. We note that electric / gas peer P/E multiples are grossed up for a year to 2019 by 5% / 5.1% to reflect capital appreciation across the sector. We then subtract the value of excess holding company debt at the parent not supporting the utility opcos. This multiple is slightly below the LDC peer average but above the small-mid cap electric utility average. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its inline-ish multiple versus peers. We add in Columbia Gas of MA but discount the jurisdiction by -3.0x due to Andover challenges. We also adjust other gas utilities to a -1.0x discount to reflect overhang of shares.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, financing plan updates, and challenging steel production economics in Indiana.

iQmethod [SM] is the set of BofA Merrill Lynch standard measures that serve to maintain global consistency under three broad headings: Business Performance, Quality of Earnings, and validations. The key features of iQmethod are: A consistently structured, detailed, and transparent methodology. Guidelines to maximize the effectiveness of the comparative valuation process, and to identify some common pitfalls.

iQdatabase® is our real-time global research database that is sourced directly from our equity analysts' earnings models and includes forecasted as well as historical data for income statements, balance sheets, and cash flow statements for companies covered by BofA Merrill Lynch.

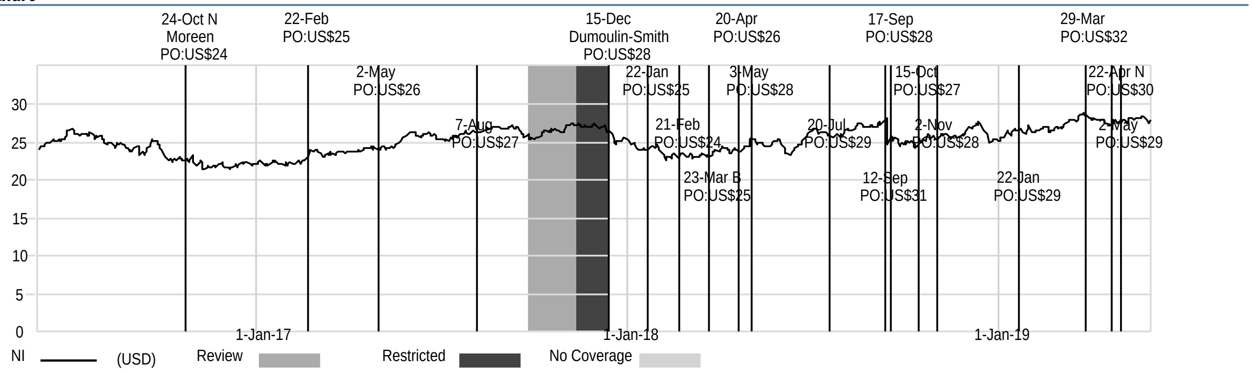
Important Disclosures

NI Price Chart



The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of May 31, 2019 or such later date as indicated.

Equity Investment Rating Distribution: Energy Group (as of 31 Mar 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	99	56.57%	Buy	73	73.74%
Hold	37	21.14%	Hold	23	62.16%
Sell	39	22.29%	Sell	22	56.41%

Equity Investment Rating Distribution: Utilities Group (as of 31 Mar 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	59	42.75%	Buy	46	77.97%
Hold	44	31.88%	Hold	31	70.45%
Sell	35	25.36%	Sell	26	74.29%

Equity Investment Rating Distribution: Global Group (as of 31 Mar 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1519	51.39%	Buy	954	62.80%
Hold	701	23.71%	Hold	443	63.20%
Sell	736	24.90%	Sell	362	49.18%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

Price charts for the securities referenced in this research report are available at https://pricecharts.baml.com, or call 1-800-MERRILL to have them mailed.
BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: NiSource Inc.
BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: NiSource Inc.
The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: NiSource Inc.
BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: NiSource Inc.
The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: NiSource Inc.
BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: NiSource Inc.
BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: NiSource Inc.
BofAS together with its affiliates beneficially owns one percent or more of the common stock of this issuer. If this report was issued on or after the 9th day of the month, it reflects the ownership position on the last day of the previous month. Reports issued before the 9th day of a month reflect the ownership position at the end of the second month preceding the date of

the report: NiSource Inc.
BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: NiSource Inc.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: NiSource Inc.
BofA Merrill Lynch Research Personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Merrill Lynch policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for the purpose of any recommendation in relation to: (i) an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report; or (ii) a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including Bank of America Merrill Lynch trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.
Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.
BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at https://rsch.baml.com/coi

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Merrill Lynch clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including,

among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.
BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.
Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.
UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom.
BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.
BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.
In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

As a result, BofA Merrill Lynch does not disclose certain client relationships with, or compensation received from, such issuers. To the extent this material discusses any legal proceeding or issues, it has not been prepared as nor is it intended to express any legal conclusion, opinion or advice. Investors should consult their own legal advisers as to issues of law relating to the subject matter of this material. BofA Merrill Lynch Global Research personnel's knowledge of legal proceedings in which any BofA Merrill Lynch entity and/or its directors, officers and employees may be plaintiffs, defendants, co-defendants or co-plaintiffs with or involving issuers mentioned in this material is based on public information. Facts and views presented in this material that relate to any such proceedings have not been reviewed by, discussed with, and may not reflect information known to, professionals in other business areas of BofA Merrill Lynch in connection with the legal proceedings or matters relevant to such proceedings.
This information has been prepared independently of any issuer of securities mentioned herein and not in connection with any proposed offering of securities or as agent of any issuer of any securities. None of BofAS any of its affiliates or their research analysts has any authority whatsoever to make any representation or warranty on behalf of the issuer(s). BofA Merrill Lynch Global Research policy prohibits research personnel from disclosing a recommendation, investment rating, or investment thesis for review by an issuer prior to the publication of a research report containing such rating, recommendation or investment thesis.
Any information relating to the tax status of financial instruments discussed herein is not intended to provide tax advice or to be used by anyone to provide tax advice. Investors are urged to seek tax advice based on their particular circumstances from an independent tax professional.
The information herein (other than disclosure information relating to BofA Merrill Lynch and its affiliates) was obtained from various sources and we do not guarantee its accuracy. This information may contain links to third-party websites. BofA Merrill Lynch is not responsible for the content of any third-party website or any linked content contained in a third-party website. Content contained on such third-party websites is not part of this information and is not incorporated by reference. The inclusion of a link does not imply any endorsement by or any affiliation with BofA Merrill Lynch. Access to any third-party website is at your own risk, and you should always review the terms and privacy policies at third-party websites before submitting any personal information to them. BofA Merrill Lynch is not responsible for such terms and privacy policies and expressly disclaims any liability for them.
All opinions, projections and estimates constitute the judgment of the author as of the date of publication and are subject to change without notice. Prices also are subject to change without notice. BofA Merrill Lynch is under no obligation to update this information and BofA Merrill Lynch's ability to publish information on the subject issuer(s) in the future is subject to applicable quiet periods. You should therefore assume that BofA Merrill Lynch will not update any fact, circumstance or opinion contained herein.
Subject to the quiet period applicable under laws of the various jurisdictions in which we distribute research reports and other legal and BofA Merrill Lynch policy-related restrictions on the publication of research reports, fundamental equity reports are produced on a regular basis as necessary to keep the investment recommendation current.
Certain outstanding reports or investment opinions relating to securities, financial instruments and/or issuers may no longer be current. Always refer to the most recent research report relating to an issuer prior to making an investment decision.
In some cases, an issuer may be classified as Restricted or may be Under Review or Extended Review. In each case, investors should consider any investment opinion relating to such issuer (or its security and/or financial instruments) to be suspended or withdrawn and should not rely on the analyses and investment opinion(s) pertaining to such issuer (or its securities and/or financial instruments) nor should the analyses or opinion(s) be considered a solicitation of any kind. Sales persons and financial advisors affiliated with BofAS or any of its affiliates may not solicit purchases of securities or financial instruments that are Restricted or Under Review and may only solicit securities under Extended Review in accordance with firm policies.
Neither BofA Merrill Lynch nor any officer or employee of BofA Merrill Lynch accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this information.

Buy

NiSource Inc. (NI)

Potential MA sale could provide earnings/multiple uplift; remain Buy

NI	12m Price Target: **$29.00**	Price: **$29.16**	Downside: **0.5%**

Following a Bloomberg article on the potential sale of NI's MA gas utility, we run a scenario analysis highlighting the potential EPS and multiple upside from a sale. We reiterate our $29 12-month price target and remain Buy rated.

On Monday, June 17, Bloomberg reported NI (Buy) is considering selling Columbia Gas of MA, which we estimate makes up roughly 10% of the company's rate base/earnings power. We note that Columbia Gas of MA pipelines were involved in an explosion in September 2018, resulting in third party claims and other expenses estimated at $1.32bn-$1.38bn (per company disclosure).

Our scenario analysis suggests NI could receive ~$1.15bn-$1.8bn in cash for the assets, assuming NI remains liable for third party claims and other expenses related to the MA incident. In recent large transactions, gas utilities have sold for 1.9x-2.1x of year-end rate base; in Exhibit 2, we also show scenarios at 1.5x and 1.7x year-end rate base given Columbia Gas of MA may sell at a discount to recent transactions due to the regulatory overhang related to the incident (i.e. the potential for unrecoverable capex). We apply the 1.5x-2.1x range of multiples to our estimated year-end rate base of ~$1.1bn for Columbia Gas of MA. While we take no view on the likelihood of a potential transaction and acknowledge that other outcomes exist outside those we present, our scenario analysis suggests an enterprise value of ~$1.64bn-$2.3bn. Given Columbia Gas of MA's 53.5% equity layer, this implies potential cash proceeds to NI of ~$1.15bn-$1.8bn. We estimate MA book value of ~$575mn at 2019YE; given an NOL of $760mn disclosed at 2018YE and a maximum gain on the sale in our scenario analysis of ~$1.2bn, we would not expect NI to pay any cash taxes related to a sale.

Source: Company data, Goldman Sachs Research estimates.

We estimate $0.01-$0.07 (~1%-5%) accretion to our 2021E EPS if NI were to use potential asset sale proceeds to offset financing needs largely related to the MA incident. Our base case estimates assume $465mn of preferred equity and ~$660mn of common equity will be raised through 2021. We note that all of our scenarios imply NI could offset its common and preferred equity financing needs through the asset sale, with any remaining cash used to reduce debt financing needs.

In our view, multiple expansion potential exists for NI as well, with the company trading at 20.4x 2020E P/E vs CMS/AEE (NI's closest comps) at 21.8x/21.5x on GS estimates. We expect NI may continue to trade at a discount to CMS/AEE, although less so as investors return to fully appreciating NI's gas heavy business (~2/3 of earnings) — historically a premium business relative to electric utilities. Based on our 2020E EPS, we highlight every 0.5x of multiple expansion implies ~$1/share of value.

We remain Buy rated with a $29 12-month price target, derived from a 20x P/E multiple on 2020E EPS. Key risks for NI include utility regulation, litigation, damages related to the Greater Lawrence incident, O&M management, and financing.

Exhibit 1: Recent gas utility transactions imply EV/year-end rate base of 1.9x-2.1x
Recent Gas LDC Transactions ($mn)

Recent Gas Utility Transactions				
Involved Parties	Announcement Date	Estimated Closing YE Rate Base	Purchase Price	Mutliple of Year End Rate Base
WTR/Peoples Gas	10/23/2018	$2,200	$4,275	1.9x
SJI/SO (Elizabethtown Gas and Elkton Gas)	10/16/2017	$810	$1,700	2.1x

Source: Company data, Goldman Sachs Global Investment Research

Exhibit 2: Assuming a range of multiples for the sale of NI's MA utility would imply ~$1.15bn-$1.8bn of cash proceeds...
Illustrative scenario analysis: cash proceeds to NI ($mn)

Cash Proceeds to NiSource Scenario Analysis				
Scenario	EV/Rate Base	Enterprise Value	LT Debt Estimate	Cash Proceeds
1	1.5x	$1,636	$484	$1,152
2	1.7x	$1,854	$484	$1,370
3	1.9x	$2,120	$484	$1,636
4	2.1x	$2,289	$484	$1,805

LT debt reflects Columbia Gas of MA's 46.5% authorized debt component of rate base

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy focused on the generation of long-term alpha through identifying high quality industry leaders. The GS SUSTAIN 50 list includes leaders we believe to be well positioned to deliver long-term outperformance through superior returns on capital, sustainable competitive advantage and effective management of ESG risks vs. global industry peers. Candidates are selected largely on a combination of quantifiable analysis of these three aspects of corporate performance.

Company-specific regulatory disclosures

The following disclosures relate to relationships between The Goldman Sachs Group, Inc. (with its affiliates, "Goldman Sachs") and companies covered by the Global Investment Research Division of Goldman Sachs and referred to in this research.

Goldman Sachs is acting as a manager or co-manager of a pending underwriting: NiSource Inc. ($29.16)

Goldman Sachs beneficially owned 1% or more of common equity (excluding positions managed by affiliates and business units not required to be aggregated under US securities law) as of the month end preceding this report: NiSource Inc. ($29.16)

Goldman Sachs has received compensation for investment banking services in the past 12 months: NiSource Inc. ($29.16)

Goldman Sachs expects to receive or intends to seek compensation for investment banking services in the next 3 months: NiSource Inc. ($29.16)

Goldman Sachs had an investment banking services client relationship during the past 12 months with: NiSource Inc. ($29.16)

Goldman Sachs had a non-securities services client relationship during the past 12 months with: NiSource Inc. ($29.16)

Goldman Sachs has managed or co-managed a public or Rule 144A offering in the past 12 months: NiSource Inc. ($29.16)

Goldman Sachs makes a market in the securities or derivatives thereof: NiSource Inc. ($29.16)

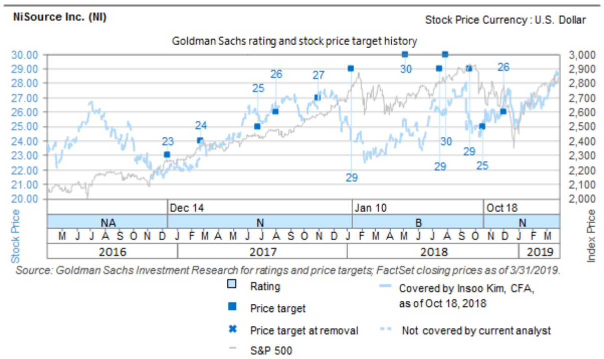
Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	35%	53%	12%	66%	58%	52%

As of April 1, 2019, Goldman Sachs Global Investment Research had investment ratings on 2,840 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage groups and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Price target and rating history chart(s)



The price targets shown should be considered in the context of all prior published Goldman Sachs research, which may or may not have included price targets, as well as developments relating to the company, its industry and financial markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at https://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure

information in relation to CVM Instruction 598 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Instruction 598, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each region's Investment Review Committee manages Regional Conviction lists, which represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Ombudsman Goldman Sachs Brazil: 0800 727 5764 and / or ouvidoriagoldmansachs@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Ouvidoria Goldman Sachs Brasil: 0800 727 5764 e/ou ouvidoriagoldmansachs@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by either Goldman Sachs Canada Inc. or Goldman Sachs & Co. European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman

Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.fiadocumentation.org/fia/regulatory-disclosures_1/fia-uniform-futures-and-options-on-futures-risk-disclosures-booklet-pdf-version-2018. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by the Global Investment Research division of GS may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

The Guggenheim Daily Transmission: PPL, FERC, Policy/MD/PA, Policy, NI, CWEN, ED, DTE

For Guggenheim's NDR schedule please scroll down

D/DUK/ED/NEE: MVP News Not A Read-Through for ACP (see our note HERE)

NI – Potential path forward for Columbia Gas of Massachusetts

PPL – KY PSC determines EV infrastructure is outside of its purview

FERC – Chair Chatterjee in Twitter spat with E&E News reporter

Policy – Supreme Court rules in favor of Virginia in uranium mining case

MD/PA/Policy – Maryland moves to address PA-generated smog

CWEN – Clearway announces wind repowering investments in TX, setting up for CAFD growth of $12M in 2020

ED – Notice of scheduled settlement talks filed in CECONY Rate Case

DTE – DTE Integrated Resource Plan public comment filed, discovery continues

NI – Potential path forward for Columbia Gas of Massachusetts

- Bloomberg News reported that NI is considering a path forward for Columbia Gas of Massachusetts (Bay State Gas).
- NI has reportedly retained an advisor to evaluate bids that it had received for the business.

Guggenheim takeaway: *This is a welcomed development and we have noted in various notes/discussions that this would be an immediate NT catalyst for the stock. The potential divestiture of Bay State Gas would (1) provide better clarity into the rest of the business, and (2) remove the drag on the stock caused by the uncertainty around the explosion costs and insurance recoveries.* ***For further details, see our Outlook note (HERE) and our 1Q19 note (HERE). As we highlighted in these notes, we believe ES may be the most logical buyer given past interest in the Gas LDC before NI purchased.***

PPL – KY PSC determines EV infrastructure is outside of its purview

- "*The Kentucky Public Service Commission (PSC) ruled today that electric vehicle (EV) charging stations are not utilities and therefore should not be subject to regulation. The ruling, contained in an order issued today, is intended to remove any ambiguity over the legal status of EV charging stations and pave the way for the deployment of more such stations in Kentucky. The PSC noted in the order that Kentucky has lagged behind neighboring states in the availability of public EV charging stations, with only 94 in the state thus far.*"
- PSC press release HERE.

Guggenheim takeaway: *Positive development for future EV deployment in the state, where the deployment of advanced technologies has continued to lag behind neighbors (e.g. EVs in TN, or AMI in OH/PA). We continue to look out for potential movement on AMI.*

FERC – Chair Chatterjee in Twitter spat with E&E News reporter

- In a series of tweets, Chair Chatterjee called the reporter an "irresponsible journalist."

- Also see HERE, HERE, and HERE.

Guggenheim takeaway: *Beltway drama. The spat appears to emanate from E&E's claim that Chatterjee was involved in the failure of David Hill's nomination to FERC.*

Policy – Supreme Court rules in favor of Virginia in uranium mining case

- In a 4-3 decision, SCOTUS ruled that the Atomic Energy Act does not preempt a ban on uranium mining in Virginia, with tangential read-through to the FPA and ZEC, per Harvard's Peskoe.

- Opinion HERE.

Guggenheim takeaway: *Minor FYI and interesting legal data point.*

MD/PA/Policy – Maryland moves to address PA-generated smog

- Maryland has reportedly requested that the 13-state Ozone Transport Commission recommend to the EPA that PA coal plants run pollution controls more frequently.

Guggenheim takeaway: *Cross state air pollution remains a potent issue for many eastern states, and another headwind for coal. The problem is not contained to the coast – we continue to look out for modifications to Illinois' Multi-Pollutant Standards (MPS).*

CWEN – Clearway announces wind repowering investments in TX, setting up for CAFD growth of $12M in 2020

- On June 17, CWEN announced a binding agreement with Clearway Group (project sponsor) on a $111M investment in repowering existing Wildorado and Elbow Creek wind assets.

- The repowering will extend/replace existing contracts and provide opportunities for improved operational profile through increased capacity factors and new service agreements.

- The repowering includes 283 MW: 161 MW Wildorado Wind Project and the 122 MW Elbow Creek, both located in Texas.

Guggenheim takeaway: *This announcement confirms growth in 2020 at a headline attractive yield: $12M / $111M ~ 10.8%, assuming a $111M equity-only investment. This is an interesting datapoint on CWENs project pipeline coming to fruition as projects advance through development phases. The repowering projects were previously committed and targeted a 2019 COD.*

ED – Notice of scheduled settlement talks filed in CECONY Rate Case

- On June 17, ED filed a notice confirming that ED, NY PSC Staff and other parties to the CECONY rate case have agreed to enter into settlement negotiations.

- An initial meeting to discuss possible settlement will be on Thursday, June 27.

- Docket: 19-00317/19-E-0065

Guggenheim takeaway: *This filing is made pursuant to NY disclosure rules, but given the initial sets of testimony and rebuttals, the parties have already gathered significant information around what the regulatory bid-ask could look like. Nonetheless, this formal process kick-off is a constructive data point for rate case resolution.*

DTE – DTE Integrated Resource Plan public comment filed, discovery continues

- Intervenors continue discovery requests into DTE's proposed IRP application (namely MSPC staff).

See pages 10 - 11 for analyst certification and important disclosures.

- Additionally, a public comment petition was filed with 800 individuals co-signed, seeking to increase the amount of renewables deployed in Detroit / Michigan.

- Docket: U-20471

Guggenheim takeaway: *On public comment – while the comment is negative towards the current plan and the use of gas fired generation, the high-level implications of increased renewable development would have increased costs associated with it from a consumer standpoint.*

See pages 10 - 11 for analyst certification and important disclosures.

Guggenheim's Power & Utility Comp Sheet

ice as of Close Saturday, June 15, 2019

Note: We are currently restricted on EIX and PCG

(1) Regulated utilities deliver power to end-use customers via regulated transmission & distribution (T&D) infrastructure; vertically integrated utilities with regulated or mostly contracted generation are also included.

(2) Local Gas Distribution Companies (LDCs), as well as diversified utilities with a business mix largely comprised of gas infrastructure and related activities (i.e., LDC franchises, interstate pipelines, and/or other gas midstream activities).

(3) Integrated utilities own and operate regulated T&D franchises, as well as un-regulated power generation with commodity exposure.

(4) IPPs operate merchant (i.e., un-regulated, non-utility) power plants that compete to sell power in wholesale markets or through retail marketing businesses.

(5) Mult-Industry Utilities operate some comibination of regulated electric and/or gas utilities, in addtion to substantial non-power unregulated activities (i.e. midstream, renewable development, energy trading, etc.).

ANALYST CERTIFICATION

By issuing this research report, each Guggenheim Securities, LLC ("Guggenheim Securities") research analyst whose name appears in this report hereby certifies that (i) all of the views expressed in this report accurately reflect the research analyst's personal views about any and all of the subject securities or issuers discussed herein and (ii) no part of the research analyst's compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analyst.

IMPORTANT DISCLOSURES

The research analyst(s) and research associate(s) have received compensation based upon various factors, including quality of research, investor client feedback, and Guggenheim Securities, LLC's overall revenue, which includes investment banking revenue.

Please refer to this website for company-specific disclosures referenced in this report: https://guggenheimsecurities.bluematrix.com/sellside/Disclosures.action. Disclosure information is also available from Compliance, 330 Madison Avenue, New York, NY 10017.

RATINGS EXPLANATION AND GUIDELINES

BUY (B) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of 10% or more within a 12-month period.

NEUTRAL (N) - Describes stocks that we expect to provide a total return (price appreciation plus yield) of between plus 10% and minus 10% within a 12-month period.

SELL (S) - Describes stocks that we expect to provide a total negative return (price appreciation plus yield) of 10% or more within a 12-month period.

NR - The investment rating and price target have been temporarily suspended. Such suspensions are in compliance with applicable regulations and/or Guggenheim Securities, LLC policies.

CS - Coverage Suspended. Guggenheim Securities, LLC has suspended coverage of this company.

NC - Not covered. Guggenheim Securities, LLC does not cover this company.

Monitor - Describes stocks whose company fundamentals and financials are being monitored, and for which no financial projections or opinions on the investment merits of the company are provided.

Under Review (UR) - Following the release of significant news from this company, the rating has been temporarily placed under review until sufficient information has been obtained and assessed by the analyst.

Guggenheim Securities, LLC methodology for assigning ratings may include the following: market capitalization, maturity, growth/value, volatility and expected total return over the next 12 months. The price targets are based on several methodologies, which may include, but are not restricted to, analyses of market risk, growth rate, revenue stream, discounted cash flow (DCF), EBITDA, EPS, cash flow (CF), free cash flow (FCF), EV/EBITDA, P/E, PE/growth, P/CF, P/FCF, premium (discount)/average group EV/EBITDA, premium (discount)/average group P/E, sum of the parts, net asset value, dividend returns, and return on equity (ROE) over the next 12 months.

Price targets are assigned for Buy- and Sell-rated stocks. Price targets for Neutral-rated stocks are provided at the discretion of the analyst.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at https://guggenheimlibrary.bluematrix.com/client/library.jsp, contact the primary analyst or your Guggenheim Securities, LLC representative, or email GSResearchDisclosures@guggenheimpartners.com.

Utilities

Utility & Infrastructure Daily

Neil Kalton, CFA, Senior Analyst (314) 875-2051
Jonathan Reeder, Senior Analyst (314) 875-2052
Sarah Akers, CFA, Senior Analyst (314) 875-2040
Rena Wang, Associate Analyst (314) 875-2049

Quick thoughts from Wells Fargo Securities, LLC Utility & Infrastructure Team:

Updated Thoughts on Columbia Gas of MA (Akers/Kalton) – Yesterday (6/25), we met with Eversource (ES/Outperform) and we recently caught up with NiSource (NI/Outperform) regarding the composition of the MA system rate base ($991mm at YE'18). Both discussions temper our expectations on the potential sale price for Columbia Gas of MA, which Bloomberg reported was being considered in a 6/17/19 report (NI has not formally commented). The Bloomberg article cited a $2B sale price (enterprise value). While this would not be out of line with recent transactions (implies 1.8X 2020E rate base), we expect the ultimate transaction price could be closer to $1.5B+ considering (1) $200-250mm of the rate base is not yet in rates and relates to the Merrimack Valley system rebuild and (2) political/regulatory considerations may not be conducive to a price-based auction process. On the last point, we expect MA would be highly skeptical of non-traditional buyers (infrastructure players, Canadian pension money, etc.), which have shown a willingness to bid more aggressively than strategic buyers (U.S. utilities) in recent deals. In our estimation, the regulatory risk in getting such a deal approved likely outweighs price. Further on that point, ES indicated no interest in participating in an auction process and suggested a highly disciplined approach given complications introduced by the explosion and the existence of other attractive organic investment opportunities including offshore wind. As a reminder, Governor Barker appointed ES to oversee operations in the immediate aftermath of the incident. Other local players include Avangrid, Inc. (AGR/Market Perform) and UK-based National Grid (NGG/Not Covered).

For NI, even at a lower price of at least $1.5B, we would view a sale favorably. While there would likely be initial EPS dilution to the tune of $0.03-0.05, or 2-3%, we expect it would be neutral to slightly positive to the EPS outlook over time through the avoidance of equity issuances, which we currently estimate at $300-350mm annually. Further, a sale would serve as a clearing event and allow investors to refocus on NI's attractive gas infrastructure growth story.

Eversource Energy (ES)/Outperform (1)
Price as of 6/25/2019: $76.98
FY 19 EPS: $3.45
FY 20 EPS: $3.65
Shares Out.: 317.3 MM
Market Cap.: $24,425.75 MM

Please see page 3 for rating definitions, important disclosures and required analyst certifications.
All estimates/forecasts are as of 06/26/19 unless otherwise stated. 06/26/19 05:30:09 ET

NiSource Inc. (NI)/Outperform (1)
Price as of 6/25/2019: $29.34
FY 19 EPS: $1.31
FY 20 EPS: $1.40
Shares Out.: 372.5 MM
Market Cap.: $10,929.15 MM

AVANGRID Inc. (AGR)/Market Perform (2)
Price as of 6/25/2019: $51.17
FY 19 EPS: $2.25
FY 20 EPS: $2.48
Shares Out.: 309.0 MM
Market Cap.: $15,811.53 MM

Rating Basis Information:
ES Thesis: We believe shares of ES warrant a 5% premium P/E given an above average EPS & DPS growth profile, heavy concentration of FERC-regulated earnings, proven management team and strong financial position.

NI Thesis: We rate shares Outperform. We believe the current discounted valuation provides an attractive entry point to a company with robust long-term infrastructure growth opportunities and supportive regulatory treatment.

AGR Thesis: Our Market Perform rating primarily reflects concerns around AGR's ability to hit targeted EPS growth goals in light of recent execution issues. AGR’s features include strong EPS growth potential, relatively predictable earnings (90% regulated/contracted) and a large U.S. renewable franchise.

Wells Fargo Securities, LLC or its affiliates has a significant financial interest in AVANGRID Inc., Eversource Energy, NiSource Inc..

ES: Risks to our price target include potential development issues related to offshore wind (new to the U.S.) along with unfavorable regulatory developments.
NI: Risks include greater than expected shareholder liabilities associated with the 9/13/18 MA gas incident, unfavorable regulatory developments, a potential rise in interest rates (financing costs and sector valuation), and lower than expected sales growth.
AGR: Risks include an increasingly competitive renewables landscape, adverse regulatory decisions and below average share liquidity due to Iberdrola's 80% share stake.

Wells Fargo Securities, LLC does not compensate its research analysts based on specific investment banking transactions. Wells Fargo Securities, LLC's research analysts receive compensation that is based upon and impacted by the overall profitability and revenue of the firm, which includes, but is not limited to investment banking revenue.

STOCK RATING
1=Outperform: The stock appears attractively valued, and we believe the stock's total return will exceed that of the market over the next 12 months. BUY
2=Market Perform: The stock appears appropriately valued, and we believe the stock's total return will be in line with the market over the next 12 months. HOLD
3=Underperform: The stock appears overvalued, and we believe the stock's total return will be below the market over the next 12 months. SELL

SECTOR RATING
O=Overweight: Industry expected to outperform the relevant broad market benchmark over the next 12 months.
M=Market Weight: Industry expected to perform in-line with the relevant broad market benchmark over the next 12 months.
U=Underweight: Industry expected to underperform the relevant broad market benchmark over the next 12 months.

VOLATILITY RATING
V=A stock is defined as volatile if the stock price has fluctuated by +/-20% or greater in at least 8 of the past 24 months or if the analyst expects significant volatility. All IPO stocks are automatically rated volatile within the first 24 months of trading.

As of: June 26, 2019

Americas Utilities

More cautious on Utilities - Downgrade OGE, WEC, AEP; Remove NEE from CL; Upgrade NI and AGR

Given stretched valuations across the utility sector we move to a cautious view on the group, and see (2%) total return across our utilities coverage. Following the XLU's ~11% outperformance vs the S&P since the start of 4Q18 the group now trades at a 20% premium to the market while current UST 10-year yields imply it should trade at a much more modest premium to the market. Given expectations for yields to rise over the NTM (GS/forwards at 2.9%/2.6%), we expect the sector's relative premium realigns closer to its historically implied level. Additionally, the sector screens expensive on several other key metrics including absolute P/E multiples, yield vs IG credit, and yield vs midstream (which GS remains positive on).

We also shuffle ratings for a handful of stocks:

- **Remove NEE from the CL but remain Buy-rated, $194 12-month price target, 5% upside**
- **NI from Neutral to Buy, $29 12-month price target, 7% upside**
- **OGE from Neutral to Sell, $37 12-month price target, (10%) downside**
- **WEC from Neutral to Sell, $70 12-month price target, (7%) downside**
- **AGR from Sell to Neutral, $47 12-month price target, (4%) downside**
- **AEP from Buy to Neutral, $78 12-month price target, (2%) downside**

PM Summary

We view the utilities sector as largely overvalued following the XLU's strong outperformance relative to the S&P since the start of 4Q2018, and a shift in expectations for UST 10-year yields and S&P P/E in the NTM. We note the XLU outperformed the S&P by ~15% in 4Q2018 and has underperformed YTD by ~(7%). On consensus estimates, Regulated Utilities now trade at 18.5x 2020 P/E, near peak absolute multiples. Relative to the S&P, utilities trade at a ~20% premium on consensus 2020 EPS estimates. Given current UST 10-year yields of 2.5%, and expectations for yields to remain around or below 3% (GS/forwards at 2.9%/2.6%)

over the NTM - based on the historic relationship between utility relative valuation to the S&P - expectations imply the group should trade at just a slight premium to the market.

We make a host of ratings changes in this note:

- **Removing NEE from the Conviction List but remain Buy-rated** following 17% outperformance since adding to the CL in October 2017. We continue to expect tailwinds for NEE resulting from its exposure to the U.S. renewable market, spare balance sheet capacity, and ability to recycle capital effectively through NEP, but now view upside as more limited following meaningful outperformance.
- **NI from Neutral to Buy** as (1) our revised estimates imply upside to consensus – despite baking in conservative outcomes related to the Greater Lawrence incident, (2) we see less uncertainty regarding the Greater Lawrence incident, and (3) we no longer believe the stock deserves a discount multiple on the gas business as a result – driving 7% return vs peers at (2%).
- **OGE from Neutral to Sell** as (1) we see valuation downside – (10%) return – following the stock's 14% outperformance vs the XLU over the LTM, (2) our analysis implies the Regulated Utility operations – or OGE ex. midstream – trades at a 0.5x premium to peers, which we view as unwarranted, and (3) we no longer apply an M&A premium to our OGE valuation as we view the company's risk profile, due to its midstream exposure at ENBL, a likely headwind.
- **WEC from Neutral to Sell** given (1) the stock's 9% outperformance vs the XLU over the LTM limiting valuation upside, (2) WEC's upcoming rate cases for all three Wisconsin utilities may create an overhang on the stock as we've seen in the past, and (3) we view potential gas demand upside as largely priced in following WEC raising both demand growth and related capital spending guidance.
- **AGR from Sell to Neutral** given (1) meaningful underperformance of 8% YTD as the shares now appear to reflect more conservatism related to major projects NECEC and Vineyard Wind, (2) improved valuation as AGR now trades at a more moderate 6% premium to Infrastructure Utility peers, and (3) total return of (4%), just below our coverage median of (2%).
- **AEP from Buy to Neutral** on (1) ~7% outperformance over the last 6 months drives some valuation downside, (2) revised estimates now slightly below consensus in 2020 – our valuation year, and (3) a lack of clear positive catalysts ahead.

We continue to value our Regulated Utility coverage with a 17x baseline P/E multiple on 2020E EPS, a slight premium to the GS portfolio strategists' forecast that the S&P trades at ~16.5x 2020 P/E at 2019YE - although a more significant premium to consensus at ~15.5x (based on consensus forecasts for 2019YE S&P pricing and Factset bottoms up consensus S&P 2020 EPS). We see some downside potential to our 17x baseline multiple as blending GS and consensus estimates (our historic methodology) implies the group should trade just below 17x 2020 P/E at 2019YE - but we see no major catalysts to the group re-rating.

We continue to use 2020 estimates for valuation - historically rolling forward valuation years mid-summer - but highlight that the group doesn't screen meaningfully better on 2021. Our estimates imply Regulated Earnings growth of ~4% vs consensus implying ~3.75% - discounting our 17x multiple for GS/consensus EPS growth from 2020 to 2021 implies a baseline 2021 multiple of ~16.5x. For illustrative purposes, we rolled forward valuation of our Regulated Utilities coverage and the illustrative price targets implied only 1%-2% of incremental return.

Very limited return for the group as well as risk/reward skewed to the downside - despite no clear negative sector catalysts - drive a cautious sector view. We compare this to our call mid-year 2017 to go cautious utilities as tax reform ultimately created meaningful headwinds for the group relative to the market. In particular (1) utility earnings power did not benefit from a lower tax rate as tax remains a pass through in customer rates and (2) tax reform led to a large portion of our coverage requiring incremental equity financing given lower tax shields (also creating slight earnings drag). We expect a slower grind lower for the sector as rates rise, the yield curve steepens, and investors shift towards more cyclical and growth oriented sectors.

Stretched valuations without a negative catalyst

We maintain our 17x 2020E EPS baseline multiple for utility valuation, derived by analyzing utilities' historic premium/(discount) to the market in different UST 10-year yield environments. We then use GS portfolio strategists'/consensus forecasts for the S&P/UST 10-year to back in to a baseline multiple for the group. Combining GS/consensus forecasts implies at 2019YE the S&P trades around 16x 2020E EPS and UST 10-year yields remain around 2.6%-2.9% (GS at 2.9% and the forward curve at 2.6%) - implying utilities should trade at a modest premium to the market.

- **Bull case utility valuation implies the group could trade at 17.75x 2020 P/E (still below the 18.5x the group currently trades at)** based on the GS portfolio strategists' forecast the market trades at about 16.5x 2020 EPS and the forward curve implying UST 10-year yields remain relatively low over the NTM, rising to just 2.6% (driving a ~1.25x premium for utilities relative to the market). We note increasing our baseline multiple to 17.75x only drives Regulated Utilities average return to 0% vs (2%) on 17x.
- **We see more downside risk as our bear case scenario implies the group could trade as low as 16x 2020 P/E** using consensus estimates for the S&P to trade at just 15.5x 2020 EPS and GS economists' expectation the UST 10-year yield climbs back to 2.9%. While our bull case scenario implies 2% incremental return for our Regulated Utilities coverage, our bear case implies as much as ~(4%) of incremental downside.

Utilities look expensive on a relative and absolute basis, in particular we see:

1. **Relative valuation at a 20% FY2 P/E premium to the S&P 500,** well above our expectations given current UST 10-year yields implying just a ~8.5% premium.
2. **Absolute valuation returned to near peak levels,** with utilities now trading at 18.5x/17.9x FY2/FY3 P/E multiples.
3. **Utility yield spreads to IG credit yields and midstream yields appeared stretched relative to history,** with spreads to midstream the widest since early 2016 and spreads to IG credit appearing expensive relative to the average since 2013.
4. **GDP growth levels likely remain strong NTM based on GS economist forecasts,** historically a driver of utility relative underperformance as utilities generally underperform more cyclical sectors during periods of healthy economic growth (as highlighted by the (54%) correlation between utility relative performance and GDP YoY percent changes).

Infrastructure Utilities remain an attractive "total income return" (dividend yield + growth) option with a relatively low beta in comparison to other energy infrastructure options, as previously highlighted in our Dividend Diamonds notes. However, Regulated Utilities and Diversified Utilities remain (1) lower total income sectors relative to our Midstream and Infrastructure Utilities coverage and (2) don't have meaningfully lower betas - with our Midstream MLP coverage beta coming in below that of Regulated Utilities and Diversified Utilities (while also offering higher total income return). Relative to other defensive/income oriented sectors utilities screen largely in line on EV/EBITDA, but appear more expensive on dividend yield.

As valuation appears stretched and upside limited, we become increasingly cautious the utilities sector, but we see no clear negative catalysts for the group. We previously were cautious utilities in late 2017 - but at the time saw tax reform as a potential negative catalyst for the sector given. Both GS economists and the forward curve imply yield curve steepening, which could cause the group to grind lower. Additionally, rates rising over time and economic growth remaining strong in the NTM should lead to utilities relative premium moving lower.

Remain Buy-rated on NEE but remove from the CL following meaningful outperformance

We remain Buy-rated on NEE but remove the shares from the Conviction List following 17%/12% outperformance (NEE +23% vs XLU +6%/S&P 500 +13%) since adding to the CL in October 2017. We continue to expect tailwinds for NEE resulting from its leverage to the rapidly growing US renewable market, combined with $4-6bn of excess balance sheet capacity and the ability to effective recycle capital through drop-down transactions with NEP, though we now view upside as more limited following meaningful outperformance vs. the XLU (17%). While we do not see NEE's late 2019 analyst day as a major catalyst, we note mild near-term risk exists related to the ongoing regulatory challenges filed by several customer groups to FP&L's current rate structure. We estimate a 25bps reduction in the earned RoE at FP&L would impact our 2020 consolidated EPS estimate by $0.12, all else equal. We see 5% upside to our $194, 12 month price target vs -3% coverage average.

We revise our 2019-2021 EPS estimates for NEE modestly to $8.46/$9.13/$9.92 from $8.48/$9.14/$9.94 previously to incorporate (1) recently published NEP estimate revisions and (2) minor adjustments to financing. Our estimates imply 1-2% upside to FactSet Consensus, driven by our view that the company's renewable growth profile over the next several years comes in at the high end of guided ranges – and cost management across all businesses helps as well, particularly at Gulf Power. We also increase our 12-month price target to $194 (from $193 previously) to reflect a higher NEP target price. Key risks for NEE include Florida utility regulation, lower than expected renewable development growth and lower than expected cost management levels.

Exhibit 16:
New vs Old vs Consensus estimates

Upgrading NI to Buy on above-consensus growth and reduced concerns on incremental MA incident impact

We upgrade NI given upside to consensus estimates and a reduced overhang related to last year's Greater Lawrence pipeline incident. We previously embedded a discounted multiple at the gas business to account for further potential headwinds related to last year's MA natural gas incident, but we no longer see the discount as warranted. We now believe that potential incremental costs (largely from personal claims) will be more moderate and unlikely to meaningfully impact our above-consensus 7% EPS CAGR from 2019-2021. Although the stock has already recovered some of its relative discount since the 4Q18 earnings release, we expect the multiple to continue to re-rate higher over the coming months, better capturing the company's robust regulated earnings growth profile in largely constructive regulatory jurisdictions.

We revise our 2019-2020 EPS estimates to $1.30/$1.43 from $1.32/1.41 and introduce our 2021 estimate of $1.50. Our revised estimates reflect (1) slightly higher O&M in 2019, followed by more cost management in 2020+, (2) more front-end loaded ATM equity issuances and higher preferred equity issuances in 2019 to maintain FFO/debt levels above 14.0%, and (3) other minor adjustments to financing. Based on NI's 4Q2018 disclosures, we continue to include $275mn of cash payments for the Greater Lawrence incident in 2019 given ~$1.1bn of total claims (for damages related to structures/homes and expertise needed) and management commentary that 75% of claims were already paid out in 2018. Our model also embeds $625mn of non-convertible preferred shares in 2019 to meet financing needs while maintaining adjusted FFO/debt of 14-15% through 2021, and ATM equity issuances totaling $600mn in 2019-2021 compared to the $200-$300mn per year guidance range, with no assumption of bulk equity issuances in our forecast. We assume NI recovers ~2/3 of total damages related to the Greater Lawrence incident through insurance - 1/3 in 2019 and 1/3 in 2020, and include a $75mn penalty to the company paid in 2Q2020. We note NI already recovered $175mn through insurance in 2018, and further upside to our estimates could exist should the company recover a greater amount than our 2/3 estimate.

Despite our, in our view, conservative approach to measuring impacts of the Greater Lawrence incident, we still see strong EPS growth and upside to FactSet Consensus, as our 2019 estimate appears roughly in line with consensus and 2% above in 2020-2021. Overall, we believe our estimates embed a conservative scenario for recovery or non-recovery of costs related to the Greater Lawrence incident, and imply a 2019-2021 EPS CAGR of 7.0% compared to the 5%-7% guidance range off of a 2019 base. We note our estimates do not include any claims related to the 21 injuries caused by the incident, as limited information exists. We estimate, for illustrative purposes only, that costs between $1mn-$10mn per injury (as has been observed in similar incidents) would result in a range of $21mn-$210mn in additional claims. This range represents 0.1%-1.2% of the company's EV, and would create up to $0.02 of drag on our 2022 EPS estimate, though we note claims paid out may be spread out over time, moderating impact to any given year. Assuming any injury-related claims are paid out entirely with incremental debt financing, we estimate additional claims could reach up to $450mn before the company would fall below the 14.0% FFO/debt threshold in 2021 required by Moody's.

We raise our 12-month price target to $29 from $26 previously, as we now apply a 21.25x multiple to the gas business (vs. 19.25x previously) given best-in-class 10% gas rate base growth combined with our view that the Greater Lawrence incident should no longer act as an overhang on the stock. We also assign a higher 17.5x multiple on the electric business (vs. 17.0x previously) to better reflect the relatively constructive regulatory environment in Indiana. Our revised price target now implies 6% total return compared to a (3%) median for our coverage universe. Key risks for NI include (1) legal and regulatory risks, (2) system damages related to the recent MA natural gas incident, (3) higher than expected O&M, (4) electricity demand and customer growth, and (5) financing.

Exhibit 20: We increase our EPS estimates for NI and now appear 2% above consensus in 2020/2021...

Downgrading OGE to Sell largely on valuation and relative outperformance

We downgrade OGE from Neutral to Sell largely on valuation and following 7%/17% outperformance for the last 6/12months. While we continue to view OGE's balance sheet capacity positively, we consider OGE's current premium valuation as unwarranted as we see its industry average ~5% regulated earnings growth profile more than priced into shares. We note that OGE has largely outperformed XLU with OGE currently trading at a 6% premium on our 2020E EPS vs the Diversified Utilities average vs an historical discount of 5-10%. Our $37, 12-month target price denotes a total return potential of (10%) vs diversified/regulated medians at (1%)/(3%).

Valuation fully reflecting growth profile and improving regulatory environment. Our analysis of implied OGE valuation excluding midstream shows OG&E trading at a ~0.5x FY3 P/E premium to regulated peers (Exhibit 30), which we see as somewhat overdone given its industry average regulated growth profile. Also, while we acknowledge some relative improvement in Oklahoma regulatory environment in our view, we do not believe it warrants a premium valuation at the present given a continued use of a historical test year and lack of tracking mechanisms to reduce regulatory lag.

OGE offers stable but average regulated growth along with moderate midstream exposure. OGE's regulated utility Oklahoma Gas & Electric (OG&E), comprising around 75% of consolidated earnings, in recent history spent meaningful funds to decrease its generation fleet's carbon footprint, including building cleaner gas units and installing scrubbers on existing coal plants. Going forward, we do not anticipate any meaningful generation investments over the next few years. We expect OG&E's capital spending to average ~$600mn per year, comprising largely of grid modernization initiatives. Our estimate imply a 5% rate base CAGR from 2018-2021E, which we believe is in-line with the industry average. OGE also remains committed to maintaining its current 25.6% ownership stake in Enable Midstream Partners (ENBL), which we see contributing roughly half of OGE's free cash flow but exposing the company to share volatility during periods of material oil price changes.

Potential upside could arise from capital allocation options but largely factored into current valuations. We see OGE's consolidated FFO/Debt remaining close to 23% through 2021, allowing for some room above the downgrade threshold as stated by Moody's (potential downgrade if FFO/debt approaches 20%). As seen in Exhibit 19, we see around $0.01-$0.06/ $0.02-$0.10 of positive EPS impact assuming buybacks/ incremental rate base investment not reflected in our model. However, we see this largely factored into valuations, while also noting potential limitations on meaningful rate base acceleration due to customer rate impact.

We lower our SOTP valuation to $37 from $39 while lowering our 2019-2021 estimates from $2.20/$2.32/$2.43 to $2.18/$2.29/$2.40 from 2019-2021, largely driven by higher financing costs associated with accumulated deferred tax givebacks (~$35mn annually). We continue to assume OG&E receives full recovery and return of the environmental investments in the Sooners and Muskogee coal plants. We now remove the previously assigned M&A component (15% weight in old price target) given 1) we do not see OGE as a willing seller, 2) the 25.6% stake in ENBL lowers its attractiveness as a take-out candidate in our view, and 3) we see more limited M&A near-term as most potential buyers face balance sheet constraints from tax reform (due to negative cash impact of deferred tax givebacks to ratepayers). However, we still apply a premium to our baseline regulated utility multiple to reflect balance sheet capacity which could be utilized for possible buybacks or regulated growth.

What could make us more positive/upside risks for OGE: (1) OGE may initiate a share buyback program, resulting in $0.01-$0.06 EPS upside as mentioned above, (2) OG&E may announce higher regulated capital spending driving upsized rate base growth and increased earnings growth profile, (2) the company could be a target of a take-out, although we do not see that as likely given its premium valuation and exposure to Enable, (3) Oklahoma may implement favorable rate-making changes in , reducing OG&E's regulatory lag, and (4) OGE's utility jurisdictions could experience increasing customer and demand growth, bolstering OG&E's organic earnings power.

Exhibit 26: We lower our 2019-2021 estimates slightly given adjustments to deferred tax raising our financing costs slightly higher...

Downgrading WEC to Sell on valuation and a potential rate case overhang

We downgrade WEC from Neutral to Sell given valuation that appears stretched following ~9% outperformance relative to the XLU since 2Q2018, limiting valuation upside. We see (7%) downside to our 12-month price target of $70 vs (1%) average downside to our coverage. We previously highlighted strong natural gas demand growth as a positive catalyst and earnings growth driver for WEC, but now view this as largely priced-in following upward guidance revisions made to both the company's natural gas demand forecasts and to related capex levels. We note since 2Q2018, 2020+ estimates have increased slightly, with a more significant increase in the stock's P/E premium - doubling from 6% to 12% on 2020 estimates vs an average FY2 premium of ~10% over the last 4 years. As the utility group multiple contracts, WEC should see more significant multiple compression given its premium to the group, driving incremental downside vs peers.

We continue to view WEC as a premium utility given its above average earnings growth (~6% CAGR for 2018-2021 vs peers around 4%-5%), constructive regulation, and well above average demand growth. WEC's Wisconsin based utilities all benefit from sharing bands (allowing them to earn slightly above authorized RoEs), forward test years to reduce regulatory lag, and strong demand growth driven by economic activity. We note incremental demand growth tailwinds – picking up in 2020-2023 – as a large industrial project comes online in the state. WEC also maintains exposure to a medium-sized regulated gas utility in IL, smaller utilities in MI and MN, and a pure-play transmission utility, all of which benefit from constructive regulation. Additionally, WEC recently began increasing its non-regulated operations through the acquisition of contracted wind and solar plants – although we note this makes up a very small portion of the company's earnings power.

We also expect WEC underperforms regulated utility peers over the coming months as the company historically underperformed in the first few months following a rate case filing. As shown in Exhibit 37, WEC generally underperformed the XLU in April through May during rate case years, with performance from June through the end of the year largely influenced by the rate case outcome. We therefore view the company's upcoming 2019 rate case filing in Wisconsin as a very modest overhang on the stock which we expect to play out over the next several months. We see little potential upside from the rate case outcome as the company intends to request rate increases in line with inflation. We also see significant potential - given the new state governor taking office this past January - for potential turnover at the PSC in WI, driving incremental regulatory uncertainty in a rate case year. The new governor has already announced one commissioner (of a three person commission) would not get reappointed.

We revise our 2019-2020 EPS estimates for WEC to \$3.46/\$3.72 from \$3.50/\$3.78, and introduce our 2021 EPS estimate of \$3.93. Our revised estimates reflect (1) recent 10K filings, (2) an additional \$300mn of energy infrastructure capex for a placeholder wind project, and (3) adjustments to financing. Our 2019E EPS comes in 1-2% below company guidance and FactSet consensus, while our 2020-2021 estimates imply 0-1% downside to consensus.

Given revised EPS estimates, we lower our 12-month target price to \$70 from \$71 previously, derived by applying an 18.75x P/E multiple on 2020E EPS – a 1.75x premium (or ~10%) to our industry baseline, which we continue to view as warranted given (1) an above-average rate base growth CAGR of 9.6% from 2018-2021, (2) favorable regulation at WEC's subsidiaries, and (3) strong demand growth – especially on the gas side – in WEC's service territory. We note our 1.75x premium remains largely in line with WEC's average premium vs regulated peers of 10% over the last 5 years.

What could make us more positive? We highlight a few key items that could make us incrementally more positive on WEC including (1) incremental energy infrastructure investments beyond our expectations/guidance, (2) stronger than expected natural gas demand growth, which could result in upside to the company's 5-year capex guidance-increasing regulated earnings power, and (3) positive regulatory actions related to the 2019 rate case in Wisconsin.

Exhibit 32: We revise our estimates for WEC and see between 0%-2% difference vs. FactSet Consensus...
EPS New vs Old vs Consensus

	EPS			Difference	
	New	Old	Cons	vs Old	vs Cons

Upgrading AGR to Neutral - Project risk now better reflected in share price

We upgrade AGR from Sell to Neutral following meaningful underperformance YTD, as the stock now appears to reflect more conservatism related to major projects NECEC and Vineyard Wind. Since downgrading to Sell AGR shares are +2% vs the S&P500 +8% and the XLU +8%. AGR now trades at just a 6% premium to Infrastructure Utility peers on our 2021 and 2022 estimates. While we continue to see execution risk, we view uncertainty related to the two major projects as more priced-in, and move to the sidelines.

We continue to see risk to 2022 FactSet Consensus after making modest revisions to our EPS estimates. We revise our 2020-2021 EPS estimates to $2.57/$2.82 from $2.60/$2.86 previously and reiterate our 2019 and 2022 estimates of $2.26 and $2.97 respectively. Our revised estimates reflect (1) recent 10K disclosures, and (2) minor changes to rate increase timing, and (3) adjustments to financing. We forecast a 2018-2022 earnings growth CAGR of 7.7% compared to the 8-10% guidance range, and while our 2019-2021 estimates appear only 0-1% different from FactSet Consensus, we see meaningful downside to consensus in 2022 - roughly 3%, as shown in Exhibit 39 - driven by our assumption that NECEC and Vineyard Wind both experience one year construction delays.

Risk/reward appears more balanced, but a few key items could drive us incrementally more positive. We view any encouraging outcomes in the approval processes related to NECEC or Vineyard Wind as a potential catalyst, given broader investor concern on both projects despite a recent favorable recommendation from the ME Hearing Examiner related to NECEC, and management’s plans to utilize Iberdrola in delivering the Vineyard Wind project on time and on budget. We also see potential upside to utility earnings growth through earned RoE improvement and cost saving initiatives, which we note are currently under review via the Forward 2020 plan. Our EPS estimates incorporate an 9.2%-9.4% average earned RoE in 2019-2022 and roughly flat O&M growth through 2022, and we note every 50bps change in earned RoE/O&M growth impacts our 2022 estimate by $0.11 and $0.04, respectively.

We increase our 12-month price target to $47 from $46 previously using a sum-of-the-parts analysis, now applying a 17.5x P/E to the regulated segments - versus 17.0x prior - to reflect robust growth potential off of reset expectations. We now see (4%) total return for AGR, about (2%) below the median for our utilities coverage. Key risks for AGR include regulation, cost management, major project execution and demand.

Downgrading AEP to Neutral; no clear positive catalysts and strong outperformance over the last 6 months

We downgrade AEP from Buy to Neutral as valuation no longer appears attractive. Additionally, we see few if any positive catalysts remaining in the near term for AEP and our revised estimates now come in below consensus on 2020 – our valuation year. Since upgrading to Buy AEP shares are +17% vs the S&P500 +3% and the XLU +9%.

We update our estimates for AEP, slightly decreasing 2020 and adding 2021 estimates. Our updated estimates now include (1) 10K detail, (2) revised cost management assumptions in 2020, and (3) incorporating AEP's planned purchase of a handful of wind plants (AEP expects the transaction closes during 2Q2019), and (4) the financing AEP announced in relation to the purchase. We also raise our target EV/EBITDA multiple on AEP's non-regulated generation segment from 5x 2020E EBITDA to 8.5x 2020E EBITDA as the segment now consists primarily of contracted renewables - higher quality assets than the merchant coal plants AEP owns.

We reiterate our $78 12-month target price, derived using a sum-of-the-parts. Given outperformance over the last 6 months we now see (3%) downside to our target, in line with Regulated Utility peers, driving our downgrade to Neutral. Key upside risks for AEP include power demand and incremental renewables – either in rate base given the cancellation of Wind Catcher or with PPAs similar to those in the recently announced transaction. Key downside risks include cost management, regulation, and financing.

We, Michael Lapides, Insoo Kim, CFA, David Fishman, CFA, Jack Pearl, Sarah Davis and Chitra Narayan Mahale, hereby certify that all of the views expressed in this report accurately reflect our personal views about the subject company or companies and its or their securities. We also certify that no part of our compensation was, is or will be, directly or indirectly, related to the specific recommendations or views expressed in this report.

Unless otherwise stated, the individuals listed on the cover page of this report are analysts in Goldman Sachs' Global Investment Research division.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy focused on the generation of long-term alpha through identifying high quality industry leaders. The GS SUSTAIN 50 list includes leaders we believe to be well positioned to deliver long-term outperformance through superior returns on capital, sustainable competitive advantage and effective management of ESG risks vs. global industry peers. Candidates are selected largely on a combination of quantifiable analysis of these three aspects of corporate performance.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at https://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Instruction 598 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Instruction 598, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior

Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each region's Investment Review Committee manages Regional Conviction lists, which represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Ombudsman Goldman Sachs Brazil: 0800 727 5764 and / or ouvidoriagoldmansachs@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Ouvidoria Goldman Sachs Brasil: 0800 727 5764 e/ou ouvidoriagoldmansachs@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by either Goldman Sachs Canada Inc. or Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by the Global Investment Research division of GS may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

NiSource Inc

Downgrading to Neutral: Less Merrimack Recovery Upside

Rating Change: NEUTRAL | PO: 30.00 USD | Price: 27.59 USD

Bank of America Merrill Lynch

Equity | 22 April 2019

See increased & ongoing costs as limiting further recovery

We are downgrading NI to Neutral as we see increased risk to capital recovery in Massachusetts (MA) given expectations for costs to increase yet again in 1Q19 following the approximate 70% increase in 4Q18 with total costs likely to exceed insurance levels. Further, we see a difficult regulatory environment to persist putting in doubt the approximate $200 Mn of capital; admittedly offsetting this concern is the growing likelihood for a sale of the Bay State gas unit after last Fall's gas incident given this decline in the regulatory backdrop (mgmt. has been clear on this front – and the prospect would likely prove accretive despite numerous required input assumptions). While our EPS estimates are already about $0.02-$0.03/sh below consensus, we perceive Street estimates could well decline given increased regulatory lag. Moreover, with the Department of Justice (DoJ) investigation still ongoing, we believe an overhang on shares will persist as it remains unclear as to the ultimate outcome. Bottom line, we see more cautious data points ahead with risk/reward increasingly difficult to justify. We move our PO to $30 (from $32) as we assign a 0.5x discount to NI's gas utilities to reflect the persistant overhang.

More to hear from MA: Expect discussion on safety, costs

Even though restoration activity is largely behind NI, we see several cautious data points in MA. We expect Safety Management System to result in a more complicated change in corporate culture (across all jurisdictions), and for mgmt. to provide another incremental update on Merrimack cost estimates. While we do not expect the increased costs to be as large as the last adjustment (4Q's of about 70% increase), we see potential for costs to increase by a further 10% or so (about $100-$150mn) sequentially; this would be around $0.01 neg to estimates to finance this uncovered exposure. Furthermore, we expect to see color around the first regulatory environment litmus test by month's-end: the MA Dept of Public Utilities (DPU) will soon rule on NI's '19 Gas System Enhancement Program asking for more revenue, $2.9mn of which exceeds the cap. We could see first cautious read-throughs here, notably in terms of how the DPU defines prudent vs. imprudent spending. As such, we see a risk to eventual recovery. We *continue to* model 6-7% earned ROEs through '21/22 in our projections; look for a decision on the fate of the business unit by late '19.

Company Sector

Natural Gas-Local Distribution Companies

Company Description

NiSource Inc. (NI) is a fully-regulated utility company serving approximately 3.5mn natural gas customers and 500,000 electric customers across seven states through its local Columbia Gas and NIPSCO brands. NI generates substantially all of its operating income through these rate-regulated businesses.

Investment Rationale

NI's positives including 5-7% earnings/dividend growth via $30bn of infrastructure investments over the next 20+ years and fully regulated subsidiaries with earned ROEs consistently near the allowed.However, we see increased regulatory lag associated with the MA incident. Moreover, with the outcome of Department of Justice investigation still unclear, we believe an overhang on shares will persist. Bottom line, we see more balanced risk/reward profile and as such we rate NI Neutral.

Q2	0.08A	0.13E
Q3	0.10A	0.31E
Q4	0.38A	0.26E

Bank of America Merrill Lynch

What do we think of shares?

NI's premium to the group has come down since YE18, yet is above its February low as shares have rebounded since the disappointing 4Q18 call. That said, we see continued risk in MA as likely weighing on shares, creating a further overhang to the story. MA complications are largely around the Safety Management System process, potential adjustments in cost estimates, and a potentially difficult regulatory environment around the Department of Public Utilities' definition of prudent vs. imprudent spending that could pose a risk to eventual recovery (albeit our low 6-7% earned ROE may largely already account for this outcome). Moreover, with the DoJ investigation still ongoing and details from the National Transportation of Safety Board (NTSB) yet to be revealed as well as the ongoing SEC investigation, we see headline risks ahead. While we believe the company will likely look to strategic options around the Bay State Gas subsidiary, including a potential sale that would likely be accretive, we believe it will be 4Q earliest to decide to make a call (pending the outcome of regulatory developments through the balance of 2019). Moreover, while recent Indiana (IN) legislation failed to gain traction, we see potential risk to steel for fuel conversion overtime; we see the ongoing Northern Indiana Public Service Company LLC (NIPSCO) rate case as still quite critical to execute correctly in order to ensure accelerated depreciation of its coal units is indeed accepted. The NIPSCO request for proposal (RFP) in Indiana could very well provide some upside through a solar ratebase ownership opportunity (albeit likely resulting in ownership awards in '20+); earlier anticipation of an award was ultimately fulfilled with almost entirely power purchase agreements (PPAs) (non-ownership) around 4Q18 results. Bottom line, the risk/reward opportunity is more difficult to justify at this juncture given our view of lingering risks. Finally, we note that shares have indeed recovered in part from the initial downtick and even from its 4Q earnings guidance downtick. We believe opportunities could still emerge around shares should headlines around fire risk emerge that have limited financial impact (we see for instance the initial reaction to gas safety datapoints as illustrative of this sensitivity).

Source: Bloomberg

Expect some more around Merrimack safety and costs

We expect to hear an update on NI's progress in Merrimack Valley on the 1Q19 call, largely related to Safety Management System (SMS) issues and the Quality Review Board it recently put in place. We highlight stakeholders have stressed that SMS is not a simple measure, but instead requires a complicated change in corporate culture. Given that this is part of a NI process of implementing SMS in all jurisdictions across the gas business (rather than merely just its Columbia Gas of Massachusetts subsidiary), we could see this unfold as a challenge for the company in upcoming quarters.

Increased costs estimates expected in the near-term

Outside SMS measures, we expect NI to stress its largest restoration activity is behind it, and that it continues to work with communities to provide support while ensuring it installs slam-shut devices to protect low-pressure systems. That said, we expect another update on cost estimates, where we see it possible that another upward adjustment is made given the potential for claims to still rise, albeit not as large as the last adjustment (perhaps about a 10% increase compared to 4Q's of about a 70%% increase). This could be in the approximate $100-150 Mn range and is a relatively immaterial EPS impact (about $0.01) as this would not be recovered from insurers (above cap) presumably.

Table 1: Estimated increased costs for MA incident

Fines/Costs ($mn)	4Q18 Midpoint	1Q19 Est.	Delta	% chg	4Q18 Spend (incl. in range)	% of est. total	Remaining est. spend

*Maximum cap from DPU

Insurance Policy	
Casualty	$800
Property	$300
Total ($mn)	$1,100
2018 Insurance Recoveries ($mn)	$135

Source: BofA Merrill Lynch Global Research estimates, company report, Bloomberg

While our $134mn increased cost estimate would not materially impact mgmt.'s guidance as we see incremental debt financing needs translating into a penny of downside vs the base plan (assuming around 4% cost of debt), we see this as likely to add to incremental lag given the amount above insurance will need to be recovered in rates over-time. While we model 6-7% earned ROEs through '21/22 in our projections that largely already account for this outcome, we see Street estimates as not fully capturing this outlook and could see downward EPS revisions.

Risks ahead for capital recovery: this is the underlying rate case risk

We note that we will see results of the first regulatory environment litmus test by month's-end. NI filed a normal Gas System Enhancement Program (GSEP) October 31, 2018 for the year of 2019, which proposed recovery of another $10.7mn of revenue, $2.9mn of which exceeds the GSEP revenue cap provision; as such, the GSEP included a waiver to collect this additional revenue. The Massachusetts Department of Public Utilities will have the final say here, with new rates effective May 1, 2019; we highlight latest datapoints from our conversations with stakeholders indicate caution ahead, specifically around potential MA Commission treatment of prudency of spending around the event (about $200 Mn as best we understand or about $0.02-0.03). We could see MA regulators come down harder on NI as a result, depending on how prudency is defined.

Strategic alternatives seem likely given substantial regulatory lag expected

We note that the company has highlighted that it has continually been open-minded to the evaluation of all of its assets so long as it makes sense to shareholder value. We continue to see a departure from the Massachusetts area as quite likely, consistent with Governor Baker's efforts to have Eversource Energy (ES) take over operational control to address the problems at the time of the event last September (*as an addendum to the widespread perception ES was the favorite to run the Bay State operations – it was in fact the second choice as initial efforts to enlist National Grid were rejected)*. We note this would not be the first departure from the Northeast: In 2008, Unitil acquired Northern Utilities from NI; we see similarities in terms of (1) Unitil committed to enhanced safety and reliability and (2) UTL and Northern Utilities had customer and business synergies.

We see a sale as accretive, although will take some time to play out
While the result of the litmus test are not expected to produce an immediate decision on what to do with the future of Columbia Gas of MA, we believe discussions will likely begin to accelerate in the fall timeframe. Given the company has about $509mn of Net Operating Losses (NOLs), we see this as being able to offset any tax leakage with a sale. We believe it is likely a suitor would pay a premium for a deeply discounted utility given the under-earning. Assuming NI can garner about a 23x P/E for the asset (or about 1.2x rate base), considering another suitor will not be penalized and would likely be able to turn the asset around and earn closer to allowed returns, we see a transaction as around $0.02/sh accretive under conservative assumptions.

Table 2: Accretion/Dilution Assumption of Columbia Gas of MA transaction - $0.01-0.02/sh accretive under conservative assumptions

Columbia Gas of MA Transaction ($Mn)

Tax Shield	21%
Share Price	27.67
Incremental Capital Investment	
ROE	10%

Source: BofA Merrill Lynch Global Research estimates, company report, Bloomberg

- We assume around $250mn debt paydown on about 4% interest leading to around $2mn in interest expense savings after tax. Additionally, we assume it can offset about $300mn in equity needs in '21 that would have been issued through the At the Market (ATM) issuance, avoiding about 11mn shares of additional equity issuance.

- Further, we assume the remaining proceeds of about $264mn are invested back into the other subsidiaries, earning an approximate 10% ROE.

Bottom line, given the difficulties we expect NI to face with regulators, we see a sale as likely the best option to create further shareholder value.

NI Gas Elsewhere: Focus will be low

We highlight that the 1Q call will largely be quiet on NI's gas side of the business outside of Massachusetts. We expect to hear the company reiterate that it is in the midst of a rate case for Virginia, with calls for hearing scheduled this month. Note that rates went into effect February 15th, which are subject to refund in Virginia. We highlight that NI still has the opportunity to strike a settlement, but wait for more details perhaps on the call.

1Q19 NiSource Walk

We forecast 1Q19 adjusted EPS of $0.80 vs. $0.77 in 1Q18 and $0.77 Consensus.

- **Key Drivers**: First quarter is typically strong for NI, which finds annual sales cadence around 50% in 1Q (compared to ~25% in 4Q and the remaining split between 2Q-3Q). For 1Q19, we expect $0.07/sh for gas and electric tracking mechanisms largely offset by -$0.06/sh of dilution.

- **One-time items**: We reiterate that we continue to expect NI to treat legal and communication expenses associated with Columbia Gas of MA as one-time in nature and therefore not impact adjusted results.
- **Other**: We highlight other drivers of the quarter include the Capital Expenditure Program (CEP) in Ohio, pension and Safety Management System (SMS) expenses, and preferred dividend issuance.

Indiana front and center

We perceive modest rate case pushback on NI's proposed depreciation schedule (more in line with accelerated coal retirements) and pass back of deferred taxes. Rather, we see the issue lying with proposed shifts rates between industrial and other customers, allowing industrials under Rate 831 to buy electricity needs through Midcontinent Independent System Operator (MISO). While NI has settled its last three-four electric/ gas cases often before hearings, we see the rate issue as challenging to settle and highlight evidentiary hearings already began (held April 16th – May 1st). As such, we expect to see clarity on results by 3Q.

As for RFPs to replace accelerated coal retirements, we see the first round of wind unscathed by the SB 472 amendment that proposed a 20-month hiatus on regulatory review of generating facilities above 250MW (thrown out last week). We see the second round (likely of solar) as more important for earnings, given most round 1 wind was contracted through PPAs and considering we expect round 2 solar to amount to Build-Own-Transfer projects. If this is not pursued, we see other capex opportunities (likely clarified in 3Q) that include transmission investment, capacity projects in Ohio, IT investment. That said, we believe that recent legislation in Indiana highlights the risk in accelerated coal retirements to be replaced with renewable resources despite the bill ultimately failing.

Electric rate case updates

We reiterate that we see the NIPSCO electricity base rate case (Cause No: 45159, filed Oct '18) as a policy fix due to its focus on setting a depreciation schedule that is more in line with accelerating coal retirements – rather than a focus on a substantial ratebase increase (note the case only requests a net $21.4mn increase). We note here that NI aims to pass back deferred taxes in order to offset the shortened useful life of retiring coal assets. Thus far, we perceive only modest pushback depreciation rates and retirement of coal assets on an expedited basis. We see it critical for mgmt. to manage

Bank of America Merrill Lynch

the overall bill such that rate inflation considerations are muted by ongoing cost management.

The other critical part of the case is that it shifts rates between industrial and other customers, allowing most sophisticated industrials under new rate proposed 831 to buy through MISO for electricity needs but through NIPSCO for backup/maintenance power. This is seen by NI as preventing overlap of new generation build and/or future disruption to resi and commercial customers (i.e., many of these about 1/2 dozen customers have the capability of self-generating which could lead to volatility further out). However, it has been one of the more problematic issues in testimony given the wide variety of stakeholders and concern around cost burden for retail customers.

Settlement window pushed out further than historically

We highlight that NI settled its last three-four electric and gas cases; however, we view settling this case as more challenging than in the past given that industrial groups and others will have to agree upon the 831rate issue. Furthermore, we see settling a greater opportunity before hearings commence; note that evidentiary hearings have already begun with the Indiana Utility Regulatory Commission (April 16th – May 1st). As such, we expect to see clarity on results in 3Q. We note that NI originally targeted receiving orders 3Q19 that are effective Sept '19.

IRP Updates: The First (Wind) RFP

NI broke its RFP into two to be able to have wind in the first RFP to take advantage of the full Production Tax Credit (PTC) (i.e. commissioning by YE-2020) while having the second RFP produce projects with commissioning by 2023. The first IRP – like the rate case – was filed Oct '18. Most projects in the first integrated resource plan (RFP) were 20-year PPAs (400MW Jordan Creek wind farm and 300MW Roaming Bison wind farm) but the 100MW Rosewater wind farm affords NI earnings opportunity given its Build Transfer Agreement (BTA) via JV with EDR Renewables (EDPR).

IRP Updates: The Second (Solar) RFP

NI is pursuing its goal of structuring more build-own-transfer projects in its second renewable push. Around the time when there is more clarity in September, the second RFP will be filed; we expect this round will focus on owning solar that commissions in '23. As such, <u>we anticipate NI will provide a capex update to reflect '23 investment at a later time.</u>

Indiana SB 472 amendment struck down

We highlight that earlier this month, an amendment was made to SB 472 that proposed a 20-month moratorium on allowing the Indiana Utility Regulatory Commission to act on any new generation matters for assets over 250MW; this was largely a response to coal retirements and replacement with clean energy. While many stakeholders anticipated this could move forward given regional sentiment, we highlight that the amendment was struck recently, a slight positive for NI as it moves forward with its renewable energy plan via its first RFP. Even if the amendment were to get through, though, we expected it would have only had a small impact on NI via the three projects that won the RFP; we would have expected the 300MW project to decrease in size to 250MW, and the 400MW NextEra project to disaggregate into two smaller projects rather than putting ending the projects. The other 100MW project (with ownership opportunity) would have been under the 250MW cap. We see this as more of a risk to CentrePoint Energy (CNP)'s efforts in the state under its Vectren subsidiary rather than NIPSCO, but sentiment is cautious nonetheless.

Other capex opportunities for NI to keep an eye on

Outside of these NIPSCO projects, we highlight NI is pursuing transmission investment, capacity projects in Ohio, IT investment, and other smaller programmatic projects. We do not expect a capex update for '23 (and thus glimpse into whether NI's 8-10% rate base growth is sustainable) until after the September clarity on these issues.

EPS Estimates

We present our EPS estimates below, which were previously updated to reflect 2019 EPS guidance of $1.27-$1.33/sh as well as '19-'22 EPS/DPS annualized growth of 5-7%. Our estimates point to a 6.7% EPS CAGR from 2019 to 2022, above guidance midpoint. Note that these estimates already have lower expectations around earned ROEs at Columbia Gas of Massachusetts; if the company can capitalize on incremental renewable opportunities in Indiana, we could see some upside here, although recent IN legislation highlights risk in conversion opportunities.

Table 4: EPS Estimates

NI EPS Estimates		2017A	2018E	2019E	2020E	2021E	2022E	2023E	2024E	2025E

Valuation

We move our Price Objective to $30 from $32/sh previously after marking to market our most recent peer utility multiples of 18.9x for electric (previously 19.2x) and 21.1x for gas (previously 21.5x) – both assuming a group '18-'22 CAGR of 5% for electric and 5.1% for gas.

We continue to use a 3.0x discount for Columbia Gas of MA in our valuation and continue to include the parent EPS drag - ex-interest expense - given expectations for continued lag associated with the MA incident. We appreciate this could prove relatively conservative on a sale multiple but caution underlying earnings base could see negative revisions depending on recovery process (we suspect depressed assumptions on any future earnings from this segment to be depressed as reflected through lower ROE as well: this is reflected already in our EPS assumptions below at about 6-7%). Bottom line, even a higher EPS assumption would only nudge valuation incrementally.

Moreover, we apply a 0.5x discount to NI's remaining gas utilities given the overall overhang we expect to persist on shares. We stress applying a premium relative to an inflated gas utility multiple vs other utilities was always a point of recent contention – and we acknowledge the equity is less favorably positioned vs. many peer gas smids to benefit from a wider M&A 'boost'.

Bottom line, we see risk/reward as less compelling given ongoing risks associated with Columbia Gas of MA.

Table 5: NI SOTP Analysis

NiSource Inc: Eyes on Massachusetts recovery: Reiterate the Buy Opportunity	Julien Dumoulin-Smith	02 November 2018
NiSource Inc: Still Strong: Why We're Still Comfortable: Reiterate Buy, PO to $27	Julien Dumoulin-Smith	15 October 2018

Price objective basis & risk

NiSource Inc (NI)

Our $30 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2021 forward P/E multiples of 21.1x for gas utilities and 18.9x for electric utilities with a 1.0x premium to reflect NiSource's utilities strong growth rates and earned ROEs. We note that both electric and gas peer P/E multiples are grossed up for a year to 2019 by 5% to reflect capital appreciation across the sector. We then subtract the value of excess holding company debt at the parent not supporting the utility opcos. This multiple is slightly below the LDC peer average but above the small-mid cap electric utility average. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its inline-ish multiple versus peers. We add in Columbia Gas of MA but discount the jurisdiction by 3.0x due to Andover challenges.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, and challenging steel production economics in Indiana.

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Merrill Lynch clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not

deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom.

MLPF&S or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. MLPF&S or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and MLPF&S for the provision of research services for a separate fee, and in connection therewith MLPF&S may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom MLPF&S has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by MLPF&S). If such recipient uses the services of MLPF&S in connection with the sale or purchase of a security referred to herein, MLPF&S may act as principal for its own account or as agent for another person. MLPF&S is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

NiSource, Inc.

NI: Growth on Horizon, Ready to Move Past MA

Stock Rating/Industry View: Equal Weight/Neutral
Price Target: USD 30.00
Price (30-Jul-2019): USD 29.58
Potential Upside/Downside: 1%
Tickers: NI

Expectation of limited additional cost creep pertaining to Merrimack Valley incident supports NI's ability to meet FY19 targets: We reiterate our EW rating as progress in MA reduces uncertainty and mitigates earnings downside risk. NI's significant investment plan supported by constructive regulatory treatment drives long-term EPS growth of 5-7%.

Merrimack Valley:

- Material future cost additions related to the Massachusetts incident are not expected.
- NI announced 7/29 that 4 major civil claims were resolved, subject to court approval.
- Management affirms progress on realizing $1.1B ($800M casualty, $300M property) in insurance claims, securing recovery of $670M to date from casualty claims.
- We await recovery results on $300M in property claims that are subject to the ongoing NTSB investigation.

SMS:

- We expect increases in O&M forecasts later this year driven by the acceleration of NI's SMS initiatives.
- Cynthia Quarterman, former administrator for pipeline and hazardous material, joined the now six-person QRB in Q2.
- Debra Hirschman, former chair of the National Transportation Safety Board, was appointed to Board of Directors.

Regulatory:

- 2 of 3 20-year wind farm PPA filings approved by IURC.
- 3rd BTA for Rosewater JV between NIPSCO and EDP Renewables remains pending with decision

Goldman Sachs India SPL

NiSource Inc. (NI, Buy) reported 2Q2019 operating EPS of $0.05 versus GS/FactSet consensus at $0.03/$0.05. The company also reiterated its 2019 EPS guidance range of $1.27-$1.33 ($1.30 mid-point) versus GS/consensus of $1.29 and $1.30 respectively, as well as its 5-7% EPS/dividend growth and $1.6-$2.0bn annual capital plan, respectively. MA incident cost estimate remained unchanged from the recently updated amount of ~$1.45bn at the mid-point (vs. $1.35bn prior), with no changes to equity assumptions.

Key takeaways from NI's release include:

- **NI's electric segment reported operating income of $85.8mn vs GS at $81.1mn,** or ~$0.01 per share after-tax, driven by moderately lower O&M and D&A expenses.
- **NI's gas segment reported operating income of $46.8mn vs GS at $40.1mn,** or ~$0.01 per share after-tax, driven by moderately higher gross margins.
- **NI maintained its 2020-2022 annual capital investment guidance of $1.6-$2.0bn ($1.8bn mid-point),** including its 2019 capital spending range to $1.6-$1.7bn. NI also reiterated growing operating EPS and dividend by 5%-7% annually.
- **Management reiterated their total MA incident cost estimate of ~$1.45bn (mid-point)** recently updated from ~$1.35bn prior as part of the MA class action lawsuit settlement news (please our note here). NI reported insurance recoveries of $670mn through 2Q2019 vs. $235mn as of 1Q2019.
- **Equity financing forecast remained unchanged at $200-$300mn of annual ATM;** we do note that NI now estimates ~$500mn of annual incremental long-term debt, versus $0-$500mn prior. Our model currently incorporates $400mn/$40mn/$220mn of equity in 2019-2021, respectively.

Key topics to monitor on NI's earnings call include (1) additional color on potential upside to latest total cost estimate for the MA incident as well as timing of future insurance recoveries, (2) next steps strategically for the MA gas utility, and (3) updated view on incremental regulated investment opportunities. We derive our 12-month target price of $31 using a 21x blended P/E multiple on 2021E EPS. Key risks include (1) legal and regulatory risks, (2) system damages related to the recent

MA natural gas incident, (3) higher than expected O&M, (4) electricity demand and customer growth, and (5) financing.

NiSource Inc.
Settlements Offer MA Clarity Amid Rising Costs

July 31, 2019

Key Takeaway

NI 2Q adj. EPS of 5¢, a touch below our 6¢ projection & the Street's 6¢ mean est.; the slight miss vs. JEFe resulted from below-forecast Gas Distribution performance and Other Income, which more than offset better than anticipated interest and tax expenses. In May, NI settled with municipalities impacted by the Sept. 2018 Greater Lawrence event for $80mm and, earlier this week, reached an agreement to settle all class action claims resulting from the incident.

Greater Lawrence settlement reached, costs rise further. CG of MA this week announced an agreement in principal to settle all class-action claims stemming from the Sept. 2018 Greater Lawrence incident; NI will pay $143mm into a fund for plaintiffs, including thousands of impacted residents & businesses. Columbia will continue to process claims until the proposed settlement receives court approval. While legal settlements provide clarity on the recovery process, incident-related costs have continued to rise with Pipeline Replacement work now forecast $250-$260mm (vs $240-$250mm), 3rd-Party Claims at $994mm-$1.02B (vs $961-$1.01B), and Other Expenses projected $430-$440mm (vs $360-$370mm); the ~$1.67B total estimate is now ~$570mm above NI's $1.1B insurance policy limit.

Regulatory updates. In May, CG of MD filed a base rate case request with the Maryland PSC to support continued replacement of aging pipelines and the adoption of pipeline safety upgrades. If approved as filed, the request would increase annual revenues by ~$3.7mm, including $1.2mm of current infrastructure tracker revenue; a commission order is expected by YE with new rates effective in January. In June, the VACC approved a settlement agreement in CG of VA's base rate case; the approved settlement, which took effect this month, raises annual revenues by $9.5mm, including $8.2mm of current infrastructure tracker revenue. Also in June, NIPSCO filed its latest tracker update request under its long-term gas infrastructure modernization program, covering $12.4mm in incremental investments made between July 2018 & April 2019; an IURC order is expected in 4Q19 with rates effective in November. In addition, NIPSCO continues to execute on its 7-year electric infrastructure modernization program as, on June 12th, the IURC approved the company's latest tracker update covering $58.5mm in incremental capital investments made from June-Nov 2018.

Guidance affirmed. NI affirmed its 2019 capex guidance of $1.6-$1.7B ($1.675B JEFe) and its non-GAAP EPS range of $1.27-$1.33 ($1.31 JEFe). Mgmt also continues to expect annual non-GAAP EPS & DPS growth of 5-7% through 2022, fueled by yearly capex of $1.6-$2.0B, and remains committed to its existing IG credit ratings. We note that 1H19 adj. OCF (ex-WC fluctuations) of ~$1.01B is the highest since the 2015 spin of Columbia and NI maintained ~$1.0B in net liquidity as of June 30th; however, with ongoing increases to its Greater Lawrence incident cost estimates, which now meaningfully exceed insurance coverage limits, mgmt now anticipates ~$500mm/year in 2019-20 debt placements, up from a previous $0-$500mm annual range.

See Exhibit 1 for greater color on 2Q results & Exhibit 2 for regulatory details.

2019 Guidance Reaffirmed; MA Incident Costs Revised Higher

NI reported 2Q EPS roughly inline with Cons and reaffirmed its 2019 EPS and capex guidance. NI reached settlements with class action plaintiffs, municipalities and MA incident costs were revised higher to $1,674-1,720MM up from $1,561-1,630MM, above the insurance coverage of $1.1B ($800MM of casualty insurance and $300MM of property insurance). During the call, we will listen for an update on the capex funding in 2019 and potential for higher ATM than $200-$300MM (forward from 2020 ATM program of $200-$300MM). In 1-2Q19, NI recorded $670MM from casualty insurance recoveries and NI filed a claim with a property insurer.

Results: NI Reported 2Q19 EPS Roughly inline UBSe/Consensus

NI reported 2Q19 EPS of $0.05, $0.01 below UBSe and in-line with Consensus. Adj. gas utilities op income of $46.8MM was below UBSe, driven by higher O&M, while higher operating margin partially offset. Electric op margin was $85.8MM, $1.4MM below UBSe, driven by lower than expected operating margin and higher D&A, offset by lower O&M. Interest expense was ~3% lower than expected.

Adjusting 2019 Estimates

We are modestly lowering our 2019 EPS estimates to $1.31 from $1.32 to reflect higher than expected gas utility O&M in 2Q19. We maintain 2020/2021 EPS estimates.

Valuation:

We maintain our Neutral rating and our $29 PT. Our price target is based on sum-of-the-parts P/E.

Valuation Method and Risk Statement

Risks include, but are not limited to, the following: changes to the regulatory environment, ability to achieve favorable returns on investment projects, and ability to continue to reinvest in the business for growth. We use comparable company multiples in our sum-of-the-parts EV/EBITDA and P/E valuations. Our price target is derived a sum-of-the-parts P/E valuation.

WELLS FARGO SECURITIES

NiSource Inc.

NI: NTSB Report, Additional Financing & Guidance Refresh All on Deck for 2H

Outperform/$33

Natural Gas LDCs
Market Weight

Price Target Change

- **Summary.** NI reported Q2 EPS of $0.05 (in-line with our estimate) and affirmed 2019 EPS guidance of $1.27-1.33 along with 5-7% annual EPS and dividend growth from 2019 through 2022. The company has made substantial progress on Merrimack Valley restoration, insurance recoveries and implementation of safety enhancements including the Safety Management System (SMS). On deck is (1) the NTSB report, which we consider to be a gating factor in determining the path forward in MA (regulatory/strategic alternatives) along with (2) additional long-term financing, which is likely to include preferred equity (we assume $300mm in Q3) or subordinated debt and (3) 2020 EPS guidance and growth/capex refresh (SMS could drive incremental operating and capital costs) in conjunction with the Q3 update. With shares trading at 3-5% P/E discounts to blended gas/electric peers on our '20E & '21E EPS of $1.38 & $1.46, respectively, and 6% discounts on an EV/EBITDA basis, we reiterate our Outperform rating. Our price target is $33/sh (up from $32/sh).
- **Merrimack Valley Update.** NI expects final restoration work to be complete by 9/15/19 (customer equipment replacements, etc.) and a final NTSB report around the same time. Once those two milestones are reached, we expect management to articulate an updated strategy as it relates to Columbia Gas of MA, which could include regulatory and/or strategic alternatives. The ultimate amount and pace of insurance proceeds could also impact the outlook. The updated cost of the event stands at $1.7B ($994-1,010mm third-party claims, which are now substantially settled; $430-440mm other expenses such as consultants and charitable contributions; and $250-260mm of pipe replacement and restoration) – this represents a 6% increase vs. the Q1 update. As of 6/30/19, NI has recorded $670mm of insurance recoveries (including $535mm in cash), which compares to total coverage of $1.1B including $800mm casualty and $300mm property. It is our understanding that the property insurance would primarily cover system replacement/restoration with any recovery serving as an offset to rate base (NI wouldn't seek recovery in rates).
- **Generation Update.** Plans associated with NIPSCO's 2018 IRP advanced this quarter with a 6/5 approval of the PPAs for two of the three proposed wind projects. An order is expected on the third project, which includes an ownership agreement, in Q3'19. NI plans to issue another round of RFPs in Q4'19. As a reminder, the IRP is aimed at the retirement of nearly 80% of NIPSCO's coal generation in the next five years and 100% by 2028.

UTILITIES & POWER

Regulateds – Market Underweight
Gas/Power Infrastructure – Market Overweight

July 31, 2019

NISOURCE

(NI US Equity – $29.69 – Outperform)

Moving past Mass.

- **Q2 in-line, L-T outlook reaffirmed; expectations for 2020 guide**. NI reported 2Q19 EPS of $0.05, matching us/consensus. NI reaffirmed its FY19 guidance range of $1.27-1.33 and its expectation for 5-7% annual EPS/div growth from 2019 through 2022. Looking forward to Q3, where NI will provide initial 2020 guidance, we see the company growing at the midpoint of its 5-7% range YoY. We expect that the accelerated nature of the SMS safety spending will limit the potential for NI to grow near the top or beat its range as has been the case in the past (pre-MA event). Presumably, NI will true-up these costs via regulatory proceedings next year, allowing for a reacceleration back toward the top end of the range in the outer years. We maintain our Outperform on NI; on a relative basis, valuation is still attractive.
- **At a turning point in Massachusetts.** There were no surprise cost increases related to the restoration effort this quarter. The incremental $100M write-off was disclosed prior to the release and was in-line with our expectation. With the four major lawsuits now settled, mgmt. expressed confidence that the current cost estimate would not go higher. The booking of insurance recoveries has paced better than originally budgeted for 2019, suggesting a low probability that NI would need to pull forward any 2020 ATM equity to hit its credit metrics. A final NTSB report could come out around the anniversary of the event (Sept. 13th). We see no firm gating items that would impede a sale and continue to believe an announcement comes by yearend.
- **Electric business coming more into focus.** NI expects a decision from the IURC in 3Q on its proposed ownership agreement for the 100 MW Rosewater wind project. While the associated capex is relatively modest within the current forecast, NI's next round of RFPs (to launch in Q4) will likely be more impactful as the company works to replace 1,625 MW of coal capacity when the Schahfer units retire in 2023.
- **PT moves up to $32.** We are raising our PT from $31 to $32 due to higher group multiples. Our valuation embeds a half-turn discount vs the industry average on NI's LDC earnings given the Massachusetts overhang. Our modest estimate update (see right) comes after refining growth assumptions.

Source: Wolfe Utilities & Power Research

Company description

NiSource, headquartered in Merrillville, Indiana, operates two separate business lines: electric utility and gas distribution LDCs. The electric utility serves just under 500,000 customers in northern Indiana and owns 3,300 MW of generation. The gas LDC serves 3.5 million customers in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland and Massachusetts.

Investment Thesis

We see above-average rate base and earnings growth potential for NiSource relative to other electric and natural gas distribution utilities. NI has a $30B backlog of investment with recovery largely through trackers and balanced regulatory environments. Additionally, we see the gas business getting larger over time. NI appears attractive at current levels.

Valuation

Our $32 price target is on a SOTP target P/E valuation. We apply a half-turn discount to the 21.5x group LDC multiple given the Massachusetts overhang. For its electric utility earnings, we ascribe a one-turn premium to our 19x group multiple given the constructive regulatory environment. Risks for NiSource are 1) further cost increases in MA 2) regulatory outcomes and 3) pipeline safety incidents. Upsides are 1) additional growth projects and 2) customer growth

NI: Inline 2Q; Stable Plan Reaffirmed with Positive Capex Update on 3Q while More Clarity Achieved in MA Incident

Key Message: NI reported an inline quarter as management reaffirmed a stable plan all around, including 2019 guidance, capex, financing plan, dividend policy and LT growth rate. We will look for positive capex updates resulted from the SMS implementation on 3Q together with 2020 EPS guidance. A key focus on MA continues to be the rate case timing or a strategic process, especially now that more clarity has been achieved with class lawsuit settlements and good insurance recovery. We continue to believe strategic process more likely in MA.

Quick take – Inline quarter, outlook, financing plan, dividend policy and growth trajectory reaffirmed. NI reports 2Q19 EPS of $0.05 vs. Guggenheim/ consensus estimate of $0.05. Management reiterated 2019 guidance of $1.27-$1.33, in line versus our estimate of $1.32 and consensus of $1.30; 2019 CapEx guide of $1.6-1.7B vs. our $1.8B. 2019-22 EPS and dividend growth rate of 5-7% was also reaffirmed and is also in-line with our 6.3%. Overall, a good quarter with consistent execution of capital plan and regulatory strategy. Reiterate BUY.

Looking to 3Q call for comprehensive updates with 2020 EPS and capital plan guidance. Management indicates that they will provide 2020 earnings guidance as well as capex outlook on the 3Q call which encompasses the impact of the implementation of the Safety Management System (SMS). While management is holding off on making any comments on the impact of SMS on O&M, which could yield a higher trajectory vs. historical, incremental growth opportunities on the capital side should be more than supportive of Mgmts. earnings guidance range of 5-7%. **We view this as a positive development for NI and will look for more details on the 3Q19 call.**

Insurance recovery tracking well with class lawsuit settlements driving up total cost estimate – an end to the fallout from MA incident is near. NI is making good progress on casualty insurance recovery with $670M recorded ($535M collected in cash) to date against the total of ~$800mm in liability insurance. The process on claiming property insurance has also commenced with on-going claim discussion with insurer. The total cost related to the MA incident is now $80M- 103M higher versus the estimate at 1Q19 (see table below) due to the settlements (HERE) on all class action lawsuits reached recently. NI will pay $143M to a $1B settlement fund pursuant to the settlement terms. With these settlements, NI is taking a $103M charge in 2Q19 and revised the range of third-party claims to $994M - $1,020M (from $961M - $1,010M) and the range of other incident-related costs to $430M - $440M (from $360M – 370M). **Despite a slight increase in estimated costs versus the last disclosure, we believe the clarity around the total liabilities related to the MA incident is a positive development for the stock.**

($M)	As of 3/31/2019		As of 6/30/2019		Delta	
Third-party claim	$ 961	$ 1,010	$ 994	$ 1,020	$ 33	$ 10
Other incident-related costs	$ 360	$ 370	$ 430	$ 440	$ 70	$ 70
Total	$ 1,321	$ 1,380	$ 1,424	$ 1,460	$ 103	$ 80

Sources: Company data

What is the timing of a Bay State rate filing while all the necessary data points are becoming more readily available now? With more clarity and certainty on the cost of the incident and insurance recovery, management's deferral of a decision on the timing of the rate case in MA makes us continue to think that either the company requires more time to arrive at a decision or **management is in the process of a potential strategic move out of MA through a sale which would preempt a GRC for what we see as obvious**

reasons – we believe latter. As we have discussed in the past (HERE), we believe a potential sale of the jurisdiction to a company such as ES (Neutral) could be a very viable path/solution and manageable for ES given their balance sheet capacity (EV of Bay State ~$700-800mm).

Overall financing plan unchanged but potential pulling forward of ATM from 2020 to 2019. While the insurance claim is tracking well versus plan which should alleviate the need for additional financing and equity in 2019, management continues to explore the possibility of pulling some of the ATM from 2020 to 2019 but leave the total average ATM at $200-$300M/year.

Valuation

We derive our regulated utility group target multiple of 18x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, and now ascribe a 2x premium to reflect several externalities (e.g., macro/geopolitical uncertainties) that continue to support the group trading beyond fundamentals and forward yield expectations. We arrive at our valuation utilizing a sum-of-the parts analysis, based on: (1) ~$11/share for the regulated electric utility; (2) ~$23/share value for the regulated gas segment utilizing our regulated electric P/E multiple plus a premium to account for the historical gas LDC spread above electric counterparts; and (3) (~$2)/share for other adjustments for Corp and Other. We then discount our valuation back by two years to arrive at our $31 valuation. There is 4.4% upside to our price target (or ~7% total return) from current levels, but we maintain our BUY rating based on (1) the solid business outlook of the company, (2) the up-coming positive capex update on 3Q call, and (3) better clarity around the MA incident which should pave the way for a path forward with regard to Bay State Gas.

Prior	*0.90E*	*0.11E*	*0.11E*	*0.47E*	*1.58E*

Sources: Company data, Guggenheim Securities, LLC estimates

Risk

The primary risk on the regulated utility encompass the traditional risk factors inherent with all utilities including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

NiSource Inc

Refocusing onto Indiana and Procurement as Mass gets quiets

Reiterate Rating: NEUTRAL | PO: 31.00 USD | Price: 29.69 USD

Bank of America Merrill Lynch

Equity | 01 August 2019

NIPSCO update: the next critical mover for shares

With Massachusetts (MA) incident costs nearly pinpointed, the next key issue to examine is NIPSCO's Electric Rate Case and Request for Proposal (RFP) outcomes; these establish the degree to which Indiana (IN) permits ownership of new renewable and gas. Lobbyists working to keep the SW IN coal region active that pushed for the moratorium earlier this year have given way to an Energy Task Force intended to define energy policy goals and uphold resiliency and low cost by the end of '20 (after the fed election possibly to avoid future coal retirement announcements in VP Pence's home state). While the IURC has not been disrupted in its proceedings, it is clear that the task force now has a fairly significant role that could shape policy and put guidelines into place to be used by regulators and utilities. Even so, we expect NI's future plans to run smoothly given NI already announced accelerated coal retirement starting in '23 and awarded three wind projects the first RFP (two of which have been approved). We note two leading indicators for future NI success in the state (including its second RFP): First, if the third wind project is approved by the commission, this would indicate support for more ownership opps given its Build-Own-Transfer (BOT) structure. Second, if the IURC upholds the rate case, 400MW of firm load may be lost if industrials can contract directly with MISO impacting size of the next RFP. Either way, we expect solar to be a major contender as the wind tax credits phase down.

MA risk unfolding, sale or reg action likely on the horizon

The MA incident is starting to be largely derisked; NI has neared a final cost assumption with the class-action law suit and wrongful death suit now settled. We see NI ready to pursue a potential sale of the MA biz or regulatory action –only further likely when the NTSB report is out (expected 3Q/4Q). If the sale progresses, we expect it is a 4Q item.

Earnings results: IN developments keep us a bit concerned

NI reported non-GAAP earnings of $0.05 for 2Q19 – what we expected (compared to $0.07 2Q18 & $0.06 Consensus). Reaffirmed '19 guidance of $1.27-1.33/sh, along with 5-7% CAGR and an investment target of at $1.6-$2.0bn/year through '22. We see its Safety Management System Implementation key for spend in all regions. Reaffirm Neutral at a $31 PO (prev $30) from peer multiple, '21+ equity issuance and smaller MA discount adjs.

* For full definitions of *iQmethod* SM measures, see page 9.

Company Sector

Natural Gas-Local Distribution Companies

Company Description

NiSource Inc. (NI) is a fully-regulated utility company serving approximately 3.5mn natural gas customers and 500,000 electric customers across seven states through its local Columbia Gas and NIPSCO brands. NI generates substantially all of its operating income through these rate-regulated businesses.

Investment Rationale

NI's positives including 5-7% earnings/dividend growth via $30bn of infrastructure investments over the next 20+ years and fully regulated subsidiaries with earned ROEs consistently near the allowed.However, we see increased regulatory lag associated with the MA incident. Moreover, with the outcome of Department of Justice investigation still unclear, we believe an overhang on shares will persist. Bottom line, we see more balanced risk/reward profile and as such we rate NI Neutral.

NIPSCO IRP and RFPs: Stay tuned to year-end

As part of its 2018 Integrated Resource Plan (IRP) that pushed for 80% of coal retirements (ie, 1.6GW) in '23 and the remaining thereafter, NI subsidiary NIPSCO has been clear it looks to find the amount and technology of replacement generation through request for proposals (RFPs). We highlight key updates below, all of which with details expected by year-end around the timing of the pending ratecase outcome.

- **Round 1 RFP**: NI's two purchase power agreement (PPA) projects have been approved. The third project for co-ownership is still pending before the IURC. This is key to watch for read-throughs on the Indiana Regulatory Utility Commission's (IURC) view of utilities owning and ratebasing renewables. This would be critically different as it would result in a tax-equity in ratebase construct, seemingly the first of its kind in the industry, in which the utility would procure renewables through a build-own-transfer process. The latest stakeholder we spoke with in the state emphasized approval of this latest construct would be critical to affirming the state's commitment to the energy transition despite the backdrop of political involvement.

- **Impact of outstanding portion of ratecase**: Part Two of NIPSCO's rate case settlement is still outstanding, which touches on Rate 831 allowing industrials to buy through MISO for electricity needs. This would result with 400MW *less* of firm load meaning that it partially counterbalances the coal capacity coming offline. Part One (regarding depreciation) is settled.

- **Round 2 RFP**: NI has not indicated capacity or size of this round yet. The company anticipates it will know what size it will need to fulfill depending on how the ratecase is tracking (likely due to the impact of Rate 831 on firm load). NI expects all ownership options and technologies will be eligible to participate – and it will look to the outcome of the Round 1 RFP to see how the commission views utility-ownership. Finally, depending on technology, we could see more than the firm capacity coming offline filled given that renewables have a smaller capacity weighting than fossils. We are expecting a good amount of solar that is a mix of contracted and owned.

- **Number of RFPs**: NI noted it intends to have a series of RFPs. We could see the second round total capacity vary in size based on this, or based on legislative uncertainty.

Key Indiana issues to keep in mind

Further details on the moratorium

We provide a synopsis to gain a sense of the political environment going forward. Indiana's generation moratorium (established to save coal generators) was proposed following (1) a change in legislative members including those on the Committee on Utilities, Energy, and Telecommunications (2) a Vectren petition for a natural gas plant replacing coal and (3) a NIPSCO request for proposal (RFP) with three resulting wind contracts also replacing coal. We expect the coal industry requested the moratorium because of the state's ties to coal particularly in the southwest, and because most coal units in the state (apart from Schahfer and Rockport) burn Indiana coal. The moratorium was voted down (even with two-thirds Republican majority) indicating extensive lobbying by utilities, renewable developers, environmental groups, and other interests. We note, though, that if it were to have passed Congress, IN Governor Holcomb (from the SW region) voiced support for the moratorium and may have signed it into law. We are concerned that intervention is likely to continue into the 2020 legislative session in light of the forthcoming political election season. We anticipate NI's 4Q release of its latest RFP could yet become politicized. We are also concerned around the near-term approval of its third-PPA.

The Energy Task Force

Another outcome of the legislative session was the Energy Task Force, which is to develop a state-wide energy plan by the end of 2020 that makes recommendations on emerging technologies and the energy transition while upholding reliability and cost. The 15-member force is established to have a broad range of appointees not driven by one specific interest: both parties on legislation, and governor-appointed university, CEOs, professors, lab experts, and the office of utility consumer counsel are represented.. The critical question is to what extent this task force could play a role in defining the policy and guidelines for regulators and utilities that could affect CNP and NI's ability to pursue economically driven coal plant retirements. The question is whether political interests of those appointed on the task force will outweigh the underlying economics merits of the utilities proposal. We suspect given the background of those involved that indeed a more nuanced approach that focuses on mitigating the impacts of retirements will hold the day based on our initial assessment. We note the timeline with an outcome by Dec '20 could also prove a bit too late to save further coal assets. We suspect that there will be a clear cut bifurcation between coal plants saved that burn local coal in Indiana vs. plants that burn out-of-state coal (principally PRB from WY). We look for proposals from AES' forthcoming IRP later this year – and corresponding decisions on the fate of its Petersburg plan – could well continue to garner attention in light of the local coal burned to support this plant.

Key items to watch going forward

We highlight the following key issues to watch in the next year or so:

- Given the legislative and executive backdrop, we watch changes on the Indiana Regulatory Utility Commission (IUR) closely, particularly as a seat became available as early as next January 2020 and another in March 2021.
- We perceive influence in energy policy from the federal election given Indiana is VP Mike Pence's home state. We could see the timing of the Task Force possibly intentionally result in recommendations *after* the election to avoid any further announcement of coal retirements in the state in the run up to Nov '20.
- The use of IN coal vs. out-of-state resources remains an apparent dividing point with respect to scrutiny of any plant retirements.
- If renewable generation is selecting in forthcoming RFPs, we could see more nameplate capacity awarded than the firm capacity being retired.

Massachusetts cost uncertainty coming to a wrap

We see NI as approaching the back side of the Merrimack incident now that NI settled both of the outstanding lawsuits (class-action for $143mn, and wrongful death for an unknown amount). As also highlighted by lower proportion of time spent on the 2Q call discussing Merrimack vs. other issues, we expect the Street has greater confidence that cost uncertainty is coming to an end. Further, the Street likely is factoring in the upside opportunity looming from the potential sale of the MA subsidiary by year-end (albeit price remains critical). The only other costs outstanding are if there are potential fines, around the $20mn mark.

Timeline: We see impacted by cleaning up the story

With the story largely cleaned up, we think the timing of the potential sale (or perhaps regulatory action if this is not pursued) to come close to the National Transportation Safety Board (NTSB) review expected in the 3Q/4Q timeframe (ie, 12-months after the event). While not necessary for NI to wait for the NTSB report, we see this piece of information helping NI pursue its next step.

Any potential risk in the regulatory ask

While the risk around MA cost uncertainty is relieving, one risk still exists around the MA subsidiary needing to ask to recover costs exceeding insurance. Depending on any potential sale, we wait to see if the MA Commission argues these as imprudent.

Transaction value

Media articles cited a $2bn transaction value, but we find a purchase price of up to $1.5bn as more likely. It is critical to put a multiple on only the recoverable portion of rate base (ie, $750mn of the $991mn reported YE18). We see potential for in-state buyers (i.e. ES or National Grid) to socialize the cost impacts across a wider base and also bring back local control of the utility. See our prior note for more detail here.

Financing: Insurance coming in faster, but wait for 3Q call

With previous uncertainty around the total Merrimack settlement costs and pace of insurance recovery, NI was at least considering pursuing incremental financing in '19 to ensure the company maintains FFO/debt metrics of 14-15%. However, now that costs are about pin-pointed and insurance is coming in faster than originally anticipated, NI may reconsider if and how much it pursues. For insurance, NI recorded $670mn of casualty insurance recovery for 1H19 and $535mn in cash to date compared to original expectation of collecting half the $1100mn this year and half next year. *Seeing more recovery upfront leads us to expect some to all of the additional financing needs are offset.*

The two main financing options are detailed below. The company still considers these options 'on the table' but will provide a financing (and capital) update on the 3Q call:

- Pulling forward the $500mn **at-the-market (ATM) issuance** program from '20 into '19 (with flexibility around NI's deliberate language of '$200-300mn of ATM per year' in '19 and '20)

- Issuing a **preferred**, which is expected to receive a 50% equity credit weighting with credit agencies. We highlight the company issued two pref's last year, one before the incident (with a 5.65% rate that was somewhat earnings-neutral) and one after the incident (with a 6.5% rate).

EPS Estimates

We include our latest estimates below largely unchanged from before. We tweak the equity issuance assumption in Consolidated to reflect that NI's financing plan guidance is only given for '19 and '20. Prior, we included $35-60mn of employee stock options on top of the $200-300mn ATM for '19 and years beyond, but now we assume $250mn equity issuance from '21 and beyond.

NI SOTP Valuation

We include our SOTP Valuation with the latest peer multiple of 21.1x for gas and 19.0x for electric. We lower the discount on Columbia Gas of MA given increased confidence of cost estimates, insurance recovery ahead of schedule, and potential sale upside. We keep our premium on at 1.0x NIPSCO Electric given confidence that the NIPSCO rate case proceed with ownership opportunities but uncertainty with the outcome of the Task Force. Our PO is $31/sh compared to the $30/sh PO prior.

Price objective basis & risk

NiSource Inc (NI)

Our $31 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2021 forward P/E multiples of 21.1x for gas utilities and 19.0x for electric utilities with a 1.0x premium to reflect NiSource's electric utility's strong growth rates and earned ROEs. We note that electric / gas peer P/E multiples are grossed up for a year to 2019 by 5% / 5.1% to reflect capital appreciation across the sector. We then subtract the value of excess holding company debt at the parent not supporting the utility opcos. This multiple is slightly below the LDC peer average but above the small-mid cap electric utility average. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its inline-ish multiple versus peers. We adjust gas utilities (including Columbia Gas of MA) to a -1.0x discount to reflect overhang of shares.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, financing plan updates, and challenging steel production economics in Indiana

NiSource Inc.

Moving Through the MA Overhang; Expect Financing Execution Shortly

NI reported 2Q EPS of $0.05 vs our $0.04 estimate and $0.07 in 2Q18, and reiterated 2019 guidance and the 2019-22 EPS growth target of 5-7%. We expect the 2019 financing plan to be executed shortly, and await a final NTSB report on the MA incident as well as clarity on any potential sale of Bay State Gas in coming months. We estimate a sale would be $0.03 dilutive to our 2020 EPS estimate (2.5% on $1.34), using our base assumptions, before considering any positive offset from property insurance proceeds. Though valuation has rebounded since last year, NiSource offers top-tier long-term rate base and earnings growth and we expect de-risking activities to continue in 2H19, and we reiterate our OW rating.

- **MA liability amount near final, 2020 guidance expected at 3Q.** A $143 million settlement agreement announced on 7/29 resolves all class action lawsuits related to the MA incident last September. Management noted increased cost of ~$90-$113 million vs guidance provided at 1Q with a new estimated cost range of ~$1,674-$1,720 million. In Indiana, the IURC approved two wind PPA's in June, which signals regulatory support for NI's plans to retire ~80% of coal-fired generation over the next 5 years. Management reiterated a 5-7% EPS CAGR from 19-22 and will introduce full 2020 guidance at 3Q. Our $1.34 2020 EPS estimate is on the lower end of the company's guided $1.33-$1.42 range.
- **2019 financing imminent, awaiting potential Bay State sale clarity.** We expect execution of 2019 financings over the short term with a large portion of the guided $235-$360 million equity and potentially additional preferred shares to be issued prior to October. A final NTSB report is imminent and subsequent rating agency comments may be soon, which are both gating factors for preferred issuance. It is unclear whether property insurance discussions around the claim and recovery that commenced in 2Q are impacting management's plans. A 6/17 Bloomberg News report indicated a potential sale of Bay State Gas. We see a sale as a likely near term strategy to move past he MA overhang.
- **Assuming common and preferred issuance in 2019 and model no fines, assets sales or property insurance recoveries.** We model $357 million of equity in 19, consisting in part of $125 million of forward pulldown from a forward agreement entered in 18. We are modeling $500 million of additional preferred shares issued at a 5.75% coupon. Our model assumes no fines, asset sales or any cash proceeds from property insurance. Under our scenario, NI is left on the hook for ~$600 million of incident related costs not covered by insurance, which have already been realized and any property insurance proceeds received would be upside to our assumptions.

Summary Investment Thesis and Valuation

We expect the 2019 financing plan to be executed shortly, and await a final NTSB report on the MA incident as well as clarity on any potential sale of Bay State Gas in coming months. We estimate a sale would be $0.03 dilutive to our 2020 EPS estimate (2.5% on $1.34), using our base assumptions, before considering any positive offset from property insurance proceeds. Though valuation has rebounded since last year, NiSource offers top-tier long-term rate base and earnings growth and we expect de-risking activities to continue in 2H19, and we reiterate our OW rating.

Our December 2019 price target of $31/per share is based on a sum-of-the-parts analysis and uses our 2020 electric and gas segment EPS forecasts. We value the gas segment using a 24.9x P/E multiple, a discount to gas utility peers due to growth prospects offset by lack of M&A takeout potential, and we value the electric segment using an 21.8x P/E multiple, a modest premium to pure regulated electric utility peers due to favorable rate construct in IN.

Investment Thesis, Valuation and Risks

NiSource Inc. *(Overweight; Price Target: $31.00)*

Investment Thesis

We expect the 2019 financing plan to be executed shortly, and await a final NTSB report on the MA incident as well as clarity on any potential sale of Bay State Gas in coming months. We estimate a sale would be $0.03 dilutive to our 2020 EPS estimate (2.5% on $1.34), using our base assumptions, before considering any positive offset from property insurance proceeds. Though valuation has rebounded since last year, NiSource offers top-tier long-term rate base and earnings growth and we expect de-risking activities to continue in 2H19, and we reiterate our OW rating.

Valuation

We raise our December 2019 price target to $31/share, from prior $30/share. Our price target is based on a sum-of-the-parts analysis and uses our 2020 electric and gas segment EPS forecasts. We value the gas segment using a 24.9x P/E multiple, a discount to gas utility peers due to growth prospects offset by lack of M&A takeout potential and fine risk from the MA gas accident, and we value the electric segment using an 21.8x P/E multiple, a modest premium to pure regulated electric utility peers due to favorable rate construct in IN. The higher price target is due to higher peer average multiples versus prior.

Risk to Rating and Price Target

- Regulated electric transmission and distribution earnings are vulnerable to mild weather, as regulated revenues are calculated based on energy volumes sold. Extreme or mild temperatures may cause future earnings to differ materially from our current forecasts.
- Achievement of NiSource's long-term rate base and EPS CAGR targets are heavily dependent on robust capital investments, regulatory support, and favorable ratemaking mechanism. Any deferral of spending could put the company at risk of falling short of the LT rate base and earnings growth CAGR in any one year.
- Regulated electric and gas utilities are subject to federal and state regulations, including determinations of allowed revenues. Positive or negative changes to the regulatory environments may cause future earnings potential to differ materially from current expectations.

Goldman Sachs India SPL

We reiterate our Buy rating on NiSource (NI) as we see reduced overhang from the MA gas incident, in addition to potential upside to capital and EPS growth guidance near-term. We also see a potential sale of the MA gas utility as a catalyst that could result in EPS accretion and multiple expansion. Our unchanged $31 price target reflects an 8% total return versus 3% for Regulated Utilities.

We see potential upside to NI's capital investment forecast through 2022 when management provides their updated guidance with 3Q2019 earnings results, with incremental rate base opportunities at NIPSCO electric (generation, TDSIC-qualifying investments), as well as certain gas safety-related capital across its jurisdictions. We believe management may update capital guidance to the upper half of the $1.6-$2.0bn annual range, with every $100mn of incremental rate base translating into a little over $0.01 of EPS. Our model incorporates $1.8 billion of annual capital in 2020 and 2021.

In our scenario analysis of NI selling its MA gas utility, we estimate $0.00-$0.07 (~0%-5%) accretion to our 2021E EPS. The analysis in our prior note addressing the potential sale implied potential cash proceeds to NI of $1.15bn-$1.8bn, based on 1.5x-2.1x our estimated 2019 MA rate base of ~$1.1bn. However, given that around $250mn of capital associated with the MA incident currently is not in rates, our analysis now implies potential cash proceeds of ~$900mn-$1.4bn based on an ~$850mn rate base, all else equal. Despite the lower cash proceeds, the implied EPS accretion is not meaningfully impacted (~+1%-5% prior) given lower MA earnings power lost (calculated based on lower rate base). We note that we take no view on the likelihood of a potential transaction and acknowledge that other outcomes exist outside those we present.

We adjust up our 2019 EPS estimate to $1.30 while maintaining our 2020/2021 estimates of $1.43/$1.49, respectively. We assume $200-$300mn of equity annually from 2019-2021, along with ~$500mn of annual long-term debt in 2020-2021, but revise down our net debt levels given higher insurance proceed assumptions. Our model reflects at 15% FFO/debt by 2021.

We maintain our $31, 12-month price target, derived from a blended 21x P/E multiple on 2021E EPS. Key risks for NI include utility regulation, damages related to the Greater Lawrence incident, O&M, and financing.

ARGUS

NYSE: NI

NISOURCE INC

NiSource Inc. is an energy holding company whose subsidiaries are fully regulated natural gas and electric utility companies serving approximately 4.0 million customers in seven states. NiSource is one of the nation's largest natural gas distribution companies, as measured by number of customers. NiSource's principal subsidiaries include NiSource Gas Distribution Group Inc., a natural gas distribution holding company, and NIPSCO, a gas and electric company. NiSource derives substantially all of its revenues and earnings from the operating results of these rate-regulated businesses.

Analyst's Notes

Analysis by Gary Hovis and David Coleman, July 23, 2019

ARGUS RATING: BUY

- Upgrading to BUY
- NiSource recently completed a corporate restructuring that resulted in the spinoff of its pipeline group subsidiary.
- NiSource will report 2Q19 results on July 31.
- Our 2019 operating EPS estimate is $1.32 and our 2020 estimate is $1.42.
- We are establishing a 12-month target price of $32 which implies a potential return including the dividend of 12.6% from current levels.

INVESTMENT THESIS

We are upgrading our rating on NiSource Inc. (NYSE: NI) from HOLD to BUY based on valuation and historical performance. NiSource recently completed a corporate restructuring that resulted in the spinoff of its pipeline group subsidiary. The balance sheet appears stable and able to support the current dividend, which yields about 2.8%. We are establishing a 12-month target price of $32 which implies a potential return including the dividend of 12.6% from current levels.

Our long-term rating is also BUY.

RECENT DEVELOPMENTS

Over the past three months, NI shares have gained 6.1%, compared to an advance of 1.7% for the S&P 500. Over the past 52 weeks, the shares have risen 13.2%, compared to a 5.5% rise for the index. Over the last five years, NI shares have advanced 99.6%, versus a 54.6% gain for the S&P 500. The beta on NI is 0.30.

On February 20, NiSource reported GAAP 1Q19 earnings of $205.1 million or $0.55 per share, compared to $276.1 million or $0.82 per share in 1Q18. Non-GAAP operating earnings rose to $307.7 million or $0.82 per share from $259.7 million or $0.77 per share in 1Q18. For all of 2018, NiSource's net operating earnings (non-GAAP) were $463.3

Argus Recommendations

Twelve Month Rating	SELL	HOLD	BUY
Five Year Rating	SELL	HOLD	BUY
Sector Rating	Under Weight	Market Weight	Over Weight

Argus assigns a 12-month BUY, HOLD, or SELL rating to each stock under coverage.

- BUY-rated stocks are expected to outperform the market (the benchmark S&P 500 Index) on a risk-adjusted basis over the next year.
- HOLD-rated stocks are expected to perform in line with the market.
- SELL-rated stocks are expected to underperform the market on a risk-adjusted basis.

The distribution of ratings across Argus' entire company universe is: 65% Buy, 35% Hold, 1% Sell.

million or $1.30 per share, compared to $397.5 million or $1.21 per share in 2017.

NiSource has made and is still making extensive efforts to enhance the safety and reliability of the company's gas distribution systems across its seven-state footprint.

First Quarter highlights include:

--On April 19, 2019 Colombia Gas of Virginia filed a settlement agreement with parties to its base rate case which remains pending. If the settlement is approved it would increase annual revenue by $9.5 million. The result is expected in the second half of 2019.

--On April 24, the Public Utilities Commission of Ohio approved Colombia Gas of Ohio's (COH) annual Infrastructure Replacement Program tracker adjustment. This order allows the company to begin recovery of approximately $199.6 million of infrastructure investments made in 2018 and is authorized through 2022 and covers replacement of priority mainline pipe and targeted customer service lines.

--On February 28, COH filed an application for adjustment to its Capital Expenditure Program rider. The application seeks to begin to recover $133 million in capital invested in 2018.

--Colombia Gas of Massachusetts received approval of its 2019 Gas System Enhancement Plan which seeks to recover incremental 2019 capital investments of $64 million and new rates effective May 2019.

While supporting significant restoration efforts in Massachusetts, the company delivered on a number of key objectives in 2018, including:

-- Repositioning its Indiana electric business, with submission of a long-term plan to transition its generating fleet away from coal to lower-cost renewable energy resources by 2028, which will save customers an estimated $4 billion over the long-term.

-- Invested $1.8 billion in its gas and electric utilities, including the accelerated mainline replacement in Greater Lawrence. NiSource replaced over 430 miles of natural gas pipeline including 302 miles of priority pipeline in 2018.

-- Added approximately 27,000 net new gas customers, driven by increased conversions to natural gas from other fuels as well as new home construction.

EARNINGS & GROWTH ANALYSIS

NiSource will report 2Q19 results on July 31. Our 2019 operating EPS estimate is $1.32 and our 2020 estimate is $1.42.

NiSource continues to rely on its utility infrastructure programs for earnings and dividend growth. The company's regulated gas and electric segments will primarily invest in pipelines and in transmission and distribution modernization programs, and should benefit from favorable regulation. The company expects adjusted operating earnings in 2019 of $1.27-$1.33 and capital investments of $1.6-$1.7 billion. In all, management expects the company to post operating earnings growth of 5%-7% annually from 2019-2022 resulting in total annual returns for shareholders of 6%-7%.

Analyst's Notes...Continued

NiSource could also become a buyout target, as larger utilities and private equity firms have purchased smaller utilities because of their stable earnings growth and above-average dividend yields. Even so, we think the possibility of a buyout is largely priced into the NI shares.

FINANCIAL STRENGTH & DIVIDEND

The company expects to make capital investments of $1.6 to $2.0 billion annually from 2020 through 2022.

We believe NiSource remains committed to maintaining investment-grade credit ratings. The company has investment-grade ratings with Fitch Ratings (BBB), Moody's (Baa2) and Standard & Poor's (BBB+).

NiSource's total debt/total capital ratio was 62% at the end of 1Q19, above the average of 52% for peers. EBIT in 1Q19 covered interest expense by a factor of 2.9, below the peer average of 6.9. In 2018, NI's adjusted net margin was 17.4%, above the peer average of 15.3.

Management has emphasized the importance of maintaining adequate liquidity and favorable credit ratings. We believe that NiSource's business units and finance team have improved the balance sheet by selling noncore assets, recalibrating capital expenditures, and carefully managing operating expenses and working capital.

NiSource pays an annualized dividend of $0.80 per share, for a yield of about 2.8%. Our dividend estimates are $0.80 for 2019 and for 2020, we are looking at $0.84.

MANAGEMENT & RISKS

The CEO of NiSource is Joseph Hamrock, 53, who assumed the position in July 2015. Mr. Hamrock, who joined NiSource in 2012, previously served as executive vice president and Group CEO for NiSource's Gas Distribution segment. He also has experience as an executive with American Electric Power. Donald E. Brown is the CFO.

Management is committed to electric and gas service expansion strategies in the company's regulated service territories, and to the expansion of its gas transmission and storage business. We think the company's platform for a return to growth is solid, and we are confident in management's ability to provide shareholders with increased value over the long term.

Key risks for stocks in our electric utility universe include fluctuations in interest rates and commodity prices, the effect of adverse weather on revenue, regulatory issues (especially involving construction cost recovery), and potential environmental and safety liabilities. In addition, the capital-intensive nature of the utility industry creates ongoing liquidity risk that must be actively managed by each company. Specific to NiSource, we would likely reduce our earnings estimates if economic conditions in the Midwest deteriorate or the company is unable to make further reductions in pension and benefit costs.

COMPANY DESCRIPTION

Peer & Industry Analysis

The graphics in this section are designed to allow investors to compare NI versus its industry peers, the broader sector, and the market as a whole, as defined by the Argus Universe of Coverage.

- **The scatterplot shows how NI stacks up versus its peers on two key characteristics: long-term growth and value. In general, companies in the lower left-hand corner are more value-oriented, while those in the upper right-hand corner are more growth-oriented.**
- **The table builds on the scatterplot by displaying more financial information.**
- **The bar charts on the right take the analysis two steps further, by broadening the comparison groups into the sector level and the market as a whole. This tool is designed to help investors understand how NI might fit into or modify a diversified portfolio.**

Analyst's Notes...Continued

NiSource Inc. is an energy holding company whose subsidiaries are fully regulated natural gas and electric utility companies serving approximately 4.0 million customers in seven states. NiSource is one of the nation's largest natural gas distribution companies, as measured by number of customers. NiSource's principal subsidiaries include NiSource Gas Distribution Group Inc., a natural gas distribution holding company, and NIPSCO, a gas and electric company. NiSource derives substantially all of its revenues and earnings from the operating results of these rate-regulated businesses.

VALUATION

We think that NI shares appear favorably valued at current prices near $29. Over the last 52 weeks, NI shares have traded in a range of $24-$30. They currently trade at the top of this range. The shares trade at 20.5-times our 2020 EPS estimate and 22 times our 2019 EPS estimate, below the peer average of 23.8 for comparable electric and gas utilities with nonregulated natural gas transmission and storage operations. They are also trading at a price/book multiple of 2.2, in line with the peer average of 2.2. The price/cash flow ratio is 19, above the peer average of 12. The shares trade near the high end of their historical range on P/E, price/book and price/cash flow. The dividend yield of 2.75% is slightly above the industry average of 2.6%. We are establishing a 12-month target price of $32 which implies a potential return including the dividend of 12.6% from current levels.

On July 23, BUY-rated NI closed at $29.22, up $0.08.

METHODOLOGY & DISCLAIMERS

About Argus

Argus Research, founded by Economist Harold Dorsey in 1934, has built a top-down, fundamental system that is used by Argus analysts. This six-point system includes Industry Analysis, Growth Analysis, Financial Strength Analysis, Management Assessment, Risk Analysis and Valuation Analysis.

Utilizing forecasts from Argus' Economist, the Industry Analysis identifies industries expected to perform well over the next one-to-two years.

The Growth Analysis generates proprietary estimates for companies under coverage.

In the Financial Strength Analysis, analysts study ratios to understand profitability, liquidity and capital structure.

During the Management Assessment, analysts meet with and familiarize themselves with the processes of corporate management teams.

Quantitative trends and qualitative threats are assessed under the Risk Analysis.

And finally, Argus' Valuation Analysis model integrates a historical ratio matrix, discounted cash flow modeling, and peer comparison.

THE ARGUS RESEARCH RATING SYSTEM

Argus uses three ratings for stocks: BUY, HOLD, and SELL. Stocks are rated relative to a benchmark, the S&P 500.

- A BUY-rated stock is expected to outperform the S&P 500 on a risk-adjusted basis over a 12-month period. To make this determination, Argus Analysts set target prices, use beta as the measure of risk, and compare expected risk-adjusted stock returns to the S&P 500 forecasts set by the Argus Market Strategist.
- A HOLD-rated stock is expected to perform in line with the S&P 500.
- A SELL-rated stock is expected to underperform the S&P 500.

Morningstar Disclaimer

Goldman Sachs | Equity Research

29 July 2019 | 10:02AM EDT

NiSource Inc. (NI): First take: Settlement announced for MA class action case; remain Buy ahead of 2Q2019

NiSource announced the company entered into a $143mn settlement agreement with plaintiffs in the class action lawsuit, and separately increased NI's total estimate for third-expenses related to the Greater Lawrence incident from ~$1.35bn to ~$1.45bn**.** We note our estimates reflect damages of $1.35bn, in line with management's previous guidance. We view today's announcement as largely neutral for the stock as clarity on the potential class action damages should largely offset the ~$100mn of incremental financing needs.

We highlight our assumption that NI recovers 1/3 of our $1.35bn damage estimate in 3Q19 and another 1/3 in 3Q20. We also assume NI does not receive recovery of the final third of damages or recovery of most of the incremental $150mn of pipeline safety capital spending at Columbia Gas of MA. Additionally, we highlight our recent note on the estimated impact of a potential sale of NI's MA business - implying ~1%-5% of EPS upside relative to our 2021 estimate.

We remain Buy rated with a $31 12-month target price, derived from a 21x 2021E P/E multiple. Key risks for NI include utility regulation, damages related to the Greater Lawrence incident, O&M, and financing.

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

GS SUSTAIN

GS SUSTAIN is a global investment strategy focused on the generation of long-term alpha through identifying high quality industry leaders. The GS SUSTAIN 50 list includes leaders we believe to be well positioned to deliver long-term outperformance through superior returns on capital, sustainable competitive advantage and effective management of ESG risks vs. global industry peers. Candidates are selected largely on a combination of quantifiable analysis of these three aspects of corporate performance.

The price targets shown should be considered in the context of all prior published Goldman Sachs research, which may or may not have included price targets, as well as developments relating to the company, its industry and financial markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at https://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure

information in relation to CVM Instruction 598 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Instruction 598, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each region's Investment Review Committee manages Regional Conviction lists, which represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Ombudsman Goldman Sachs Brazil: 0800 727 5764 and / or ouvidoriagoldmansachs@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Ouvidoria Goldman Sachs Brasil: 0800 727 5764 e/ou ouvidoriagoldmansachs@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by either Goldman Sachs Canada Inc. or Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom; Goldman

Sachs AG and Goldman Sachs International Zweigniederlassung Frankfurt, regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht, may also distribute research in Germany.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.fiadocumentation.org/fia/regulatory-disclosures_1/fia-uniform-futures-and-options-on-futures-risk-disclosures-booklet-pdf-version-2018. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by the Global Investment Research division of GS may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

UTILITIES & POWER

Regulateds – Market Underweight
Gas/Power Infrastructure – Market Overweight

August 4, 2019

NISOURCE

(NI US Equity – $29.71 – Peer Perform)

Disappointed, Downgrade

- **PA explosion raises broader safety issue; Downgrade to Peer Perform.** This past Thursday (8/1), a gas explosion leveled a Franklin County home in Pennsylvania and NI's Columbia Gas was at fault. We saw little news coverage following and don't believe many investors were aware last week. Thankfully there were no deaths / life-threatening injuries sustained as a result, but the incident is alarming given what transpired in the Merrimack Valley last year. At a high-level, the cause of the explosion appears to have closely mirrored that in MA. Columbia crews were replacing a low-pressure gas system and failed to recognize that the home was connected to the system. Thus, when re-activating the line, there was no regulator in place to moderate the pressure going into the home, leading to the explosion. This was the one thing NI could not let happen – Downgrade to Peer Perform.

- **Thesis changer.** A key tenant of our prior investment thesis for NI was that what happened in the Merrimack Valley was an isolated incident. We were of the mindset that it was a mistake that would not happen again, and the fallout could be manageable and ultimately fixed by exiting Massachusetts. This was all starting to play out well. However, this event broadens the safety concerns at NI to another state and suggests upgrading NI's low pressure systems is inherently risky and/or the implementation of a new safety system (SMS) will take a while to work. The PA event will not likely have any material direct financial impact to NI, but we will be watching for any political / regulatory reactions, potential slowing of low-pressure system capex fixes in the meantime, and possible reverberations back to Mass. A Mass sale may take longer than we previously thought in light of this as well.

- **Tough to see the stock re-rate higher for now; PT cut to $30.** NI is back at a decent premium (full-turn vs electric avg) and the stock has performed well YTD (up 280bps vs UTY). We had been calling for he stock to reassert itself amongst the highest premium names in the sector, which is where it had traded prior to the Merrimack Valley incident. We now see that as unlikely for a while and don't believe NI deserves to trade amongst the highest quality names until the company's new safety procedures are proved out. We are cutting our PT by $2 to $30 reflecting a premium to electrics but a full-turn discount on NI's LDC earnings vs the industry average.

Source: Wolfe Utilities & Power Research

Company description

NiSource, headquartered in Merrillville, Indiana, operates two separate business lines: electric utility and gas distribution LDCs. The electric utility serves just under 500,000 customers in northern Indiana and owns 3,300 MW of generation. The gas LDC serves 3.5 million customers in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland and Massachusetts.

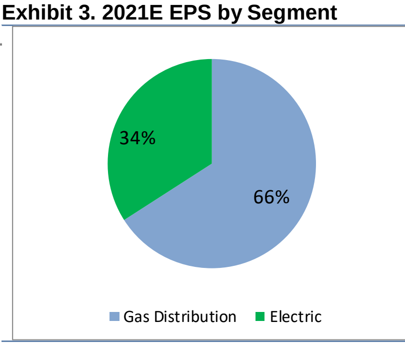
Investment Thesis

We see above-average rate base and earnings growth potential for NiSource relative to other electric and natural gas distribution utilities. NI has a $30B backlog of investment with recovery largely through trackers and balanced regulatory environments. That said, recent safety concerns have caused us to take more

Valuation

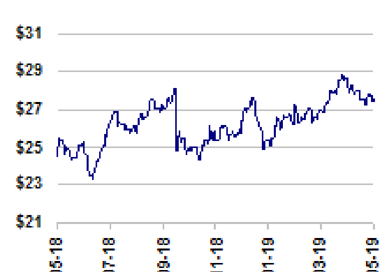
Our $30 price target is on a SOTP target P/E valuation. We apply a full-turn discount to the 21x group LDC multiple given operational / safety concerns. For its electric utility earnings, we ascribe a one-turn premium to our 19x group multiple given the constructive regulatory environment and history of execution. Risks for NiSource are 1) further cost increases in MA 2) regulatory outcomes and 3) pipeline safety incidents. Upsides are 1) additional growth projects and 2) customer growth

Exhibit 3. 2021E EPS by Segment



Source: Wolfe Utilities & Power Research

Exhibit 4. Performance Chart

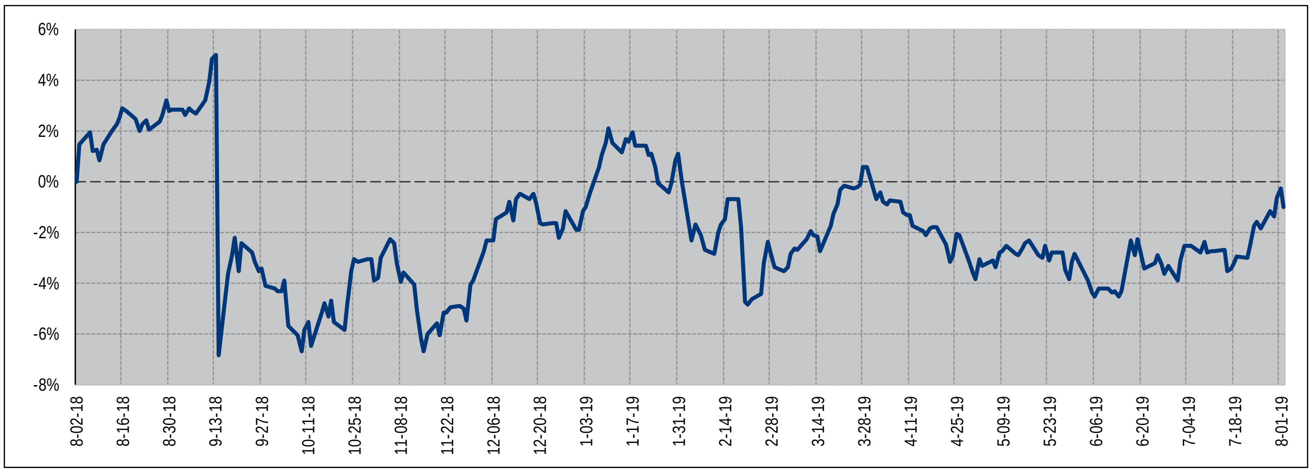


Source: FactSet

Investment Conclusion

We are downgrading NiSource to Peer Perform from Outperform due to concerns around safety practices at the LDCs. A key tenant of our prior investment thesis was that the incident in the Merrimack Valley was an isolated accident – but this is harder to argue after this week's PA gas explosion. NI is back to a decent premium (full-turn vs electric average) and is outpacing the UTY by 280bps YTD. Prior to the incident in the Merrimack Valley, NI traded at one of the highest premiums in the sector. We had been calling for the stock to reassert itself amongst the highest quality names, but we no longer believe that will be the case any time soon. There are qualities about the company we find attractive – NI's $30B capital investment backlog will drive its 5-7% annual earnings target well into the future, most of which is recovered with minimal lag via its tracking mechanisms. That said, we prefer to be on the sidelines until the company has proved out its new safety procedures or a more discounted valuation.

Exhibit 5: NI vs the Regulated Average



Potential reverberations

- **Slowdown in capex deployment**. On one hand, the more capex NiSource can deploy to replace its low-pressure systems, the more it can de-risk the entire company. However, we think they might need to moderate the pace in favor of ensuring that there are zero accidents going forward.
- **Heighted regulatory pressure.** NI has forged a consistent track record of reaching constructive regulatory outcomes over the years. Even after the incident in MA, that has continued to be the case in NI other states. We will be watching for implications on PA regulation and whether the other states/feds take a closer look at NI practices. The company will be under a microscope.
- **MA sale may take more time**. Following the news out of PA last week, we wouldn't be surprised to see the timeline for a potential sale of Columbia Gas MA to be a bit elongated. Previously, we had anticipated an announcement by yearend but now think the process likely plays out in 2020. At this point, management sounds more focused on de-risking its business than selling it quick.

NiSource Inc. (NI)

DOWNGRADE RATING

Downgrade to Neutral on Gas Operations Risk

- **Downgrade to Neutral after another explosive incident occurred in Pennsylvania last week.** On Thursday, Aug 1, NI's Columbia Gas of Pennsylvania reportedly accepted responsibility for causing a house explosion in North Franklin Township, PA. Apparently, the cause of the accident was the failure to install a pressure regulator during main replacement in the neighborhood. Columbia Gas President Mike Huwar told the press that the house involved had "slipped through both the initial design and secondary field survey". As a result, town supervisors issued "cease and desist" orders to Columbia Gas barring them from work until further notice.
- **Incident is minor but bears striking similarities to the events that occurred in Massachusetts in Sept 2018**. Recall that in the Greater Lawrence case, high pressure gas was also released into a low pressure system by accident, with NTSB preliminarily citing a "faulty work package" as a contributing factor (the final NTSB report is expected in 3Q19). We note that the PA accident occurred even as the company has taken aggressive steps across all jurisdictions to implement procedural changes and safety enhancements designed to prevent another similar incident from occurring.
- **We see elevated risk around gas operations for now.** There were no fatalities in PA and the incident itself is relatively immaterial. NI also enjoys favorable regulatory treatment across most jurisdictions with a $30B long-term capital opportunities driving 8%-10% ratebase growth (70%+ trackers) and 5%-7% EPS growth. Nevertheless, we think it prudent to reduce to Neutral pending possible wider consequences/implications given a repeated error. See our 2Q19 earnings report for the positive side of the story.
- **Valuation:** Our estimates are unchanged. We are reducing our TP to $29 from $33, with -$2/sh from a lower peer gas utility 2021 multiples within our SoTP and another -$2 from reducing the 1.5x premium we had applied to the gas utility segment to a -0.5x discount for increased operational and regulatory risk pending more clarity and certainty over safety management system installations across all NI gas service territories.

Company Background

NiSource Inc. is energy holding company whose subsidiaries provide natural gas, electricity & other products & services. It operates in 3 segments: Gas Distribution Operations; Gas Transmission & Storage Operations, & Electric Operations.

Blue/Grey Sky Scenario

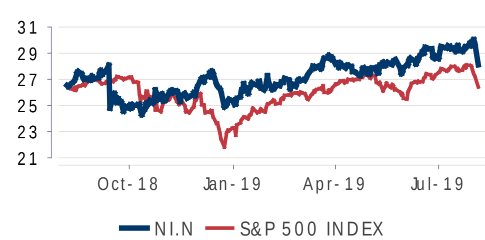
Our Blue Sky Scenario (US$) (from 38.00) 35.00

In our blue sky scenario we assume favorable regulatory outcomes across NI's jurisdictions, successful execution of their capital plan, and growth of infrastructure replacement program backlog. We assume that capex is at the high end of the $1.6-$2.0B and that NI is able to grow ratebase at the high end of their 8-10% range and grow earnings at the high end of their 5-7% range. We assume a 2.0x premium to the average peer 2021 P/E multiples.

Our Grey Sky Scenario (US$) (from 27.00) 26.00

In our grey sky scenario we assume unfavorable regulatory outcomes across NI's jurisdictions, only partial execution of their capital plan, and a decline in the infrastructure replacement program backlog. We assume that capex is at the low end of the $1.6-$2.0B and that NI is able to grow ratebase at the low end of their 8-10% range and grow earnings at the low end of their 5-7% range. We assume a -1.5x discount to the average peer 2021 P/E mult.

Share price performance



On 05-Aug-2019 the S&P 500 INDEX closed at 2844.74
Daily Aug06, 2018 - Aug05, 2019, 08/06/18 = US$26.79

Additional comment and valuation

- **Valuation:** Our base case target price is reduced $4, to $29, with -$2/sh from a lower peer gas utility 2021 multiple within our SoTP and another -$2 from reducing the 1.5x premium we had previously applied to the gas utility segment to a -0.5x discount for increased operational and regulatory risk pending more clarity and certainty over safety management system installations across all NI gas service territories. We continue to assume 80% credit for reversal of temporary earnings hits in 2019/20/21 for pension, SMS delayed recovery, and 2018 Massachusetts incident carrying cost and 90% negative credit for ~$700M of unrecovered Greater Lawrence expenses.

Figure 1: Base Case NI Valuation – applying a -0.5x discount now to the gas segment.

			BASE CASE			
	2021 EPS		Prem / Disc	Effective P/E	Equity	Equity / Sh

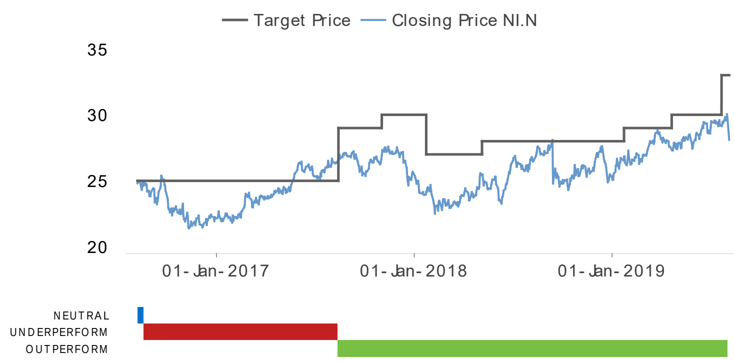
** Asterisk signifies initiation or assumption of coverage.*



As of December 10, 2012 Analysts' stock rating are defined as follows:

Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.
Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.
Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and Asia stocks (excluding Japan and Australia), ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark (India - S&P BSE Sensex Index); prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.
Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.
Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:
Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.
Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.
Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	46%	(33% banking clients)
Neutral/Hold*	39%	(27% banking clients)
Underperform/Sell*	13%	(22% banking clients)
Restricted	2%	

For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.

Target Price and Rating
Valuation Methodology and Risks: (12 months) for NiSource Inc. (NI.N)

Method: We arrive at our $29 target price for NI by applying a -0.5x discount to the gas segment peer 2021 P/E to reflect the increased operational and regulatory risk across its gas utilities after explosive incidents in both Mass and Pennsylvania in 2018 and 2019, respectively, despite otherwise constructive regulatory environments with capex trackers in place in the jurisdictions that NI operates. We also apply a 1.5x premium to the average peer electric utility 2021 P/E multiple for NIPSCO Electric utility in Indiana to reflect the favorable ratebase growth profile and regulatory environment in the state. Our Neutral rating reflects a forecasted total return that is equal the group average.

Risk: Risks to our $29 target price and Neutral rating are: 1) ROE risk related to the ongoing ratecases 2) continued approvals relating to infrastructure replacement/grid modernization programs 3) commodity risk, 4) interest rate risk, 5) derivative risk, 6) load growth risk particulary in the non-decoupled jurisdictions, 7) weather risk, and 8) environmental and climate change risk, 9) physical infrastructure and cybersecurity risk, 10) Operational and regulatory risk in MA, PA and possibly other jurisdictions after explosive incidents invoilving the installation of new pipe systems and safety equipment.

Please refer to the firm's disclosure website at https://rave.credit-suisse.com/disclosures/view/selectArchive for the definitions of abbreviations typically used in the target price method and risk sections.

All material presented in this report, unless specifically indicated otherwise, is under copyright to CS. None of the material, nor its content, nor any copy of it, may be altered in any way, transmitted to, copied or distributed to any other party, without the prior express written permission of CS. All trademarks, service marks and logos used in this report are trademarks or service marks or registered trademarks or service marks of CS or its affiliates.The information, tools and material presented in this report are provided to you for information purposes only and are not to be used or considered as an offer or the solicitation of an offer to sell or to buy or subscribe for securities or other financial instruments. CS may not have taken any steps to ensure that the securities referred to in this report are suitable for any particular investor. CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. This report may provide the addresses of, or contain hyperlinks to, websites. Except to the extent to which the report refers to website material of CS, CS has not reviewed any such site and takes no responsibility for the content contained therein. In jurisdictions where CS is not already registered or licensed to trade in securities, transactions will only be effected in accordance with applicable securities legislation, which will vary from jurisdiction to jurisdiction and may require that the trade be made in accordance with applicable exemptions from registration or licensing requirements.

This material is issued and distributed in the U.S. by CSSU, a member of NYSE, FINRA, SIPC and the NFA, and CSSU accepts responsibility for its contents. Clients should contact analysts and execute transactions through a Credit Suisse subsidiary or affiliate in their home jurisdiction unless governing law permits otherwise.

Please note that this research was originally prepared and issued by CS for distribution to their market professional and institutional investor customers. Recipients who are not market professional or institutional investor customers of CS should seek the advice of their independent financial advisor prior to taking any investment decision based on this report or for any necessary explanation of its contents.

CS may provide various services to US municipal entities or obligated persons ("municipalities"), including suggesting individual transactions or trades and entering into such transactions. Any services CS provides to municipalities are not viewed as "advice" within the meaning of Section 975 of the Dodd-Frank Wall Street Reform and Consumer Protection Act. CS is providing any such services and related information solely on an arm's length basis and not as an advisor or fiduciary to the municipality. In connection with the provision of the any such services, there is no agreement, direct or indirect, between any municipality (including the officials,management, employees or agents thereof) and CS for CS to provide advice to the municipality. Municipalities should consult with their financial, accounting and legal advisors regarding any such services provided by CS. In addition, CS is not acting for direct or indirect compensation to solicit the municipality on behalf of an unaffiliated broker, dealer, municipal securities dealer, municipal advisor, or investment adviser for the purpose of obtaining or retaining an engagement by the municipality for or in connection with Municipal Financial Products, the issuance of municipal securities, or of an investment adviser to provide investment advisory services to or on behalf of the municipality. If this report is being distributed by a financial institution other than Credit Suisse AG, or its affiliates, that financial institution is solely responsible for distribution. Clients of that institution should contact that institution to effect a transaction in the securities mentioned in this report or require further information. This report does not constitute investment advice by Credit Suisse to the clients of the distributing financial institution, and neither Credit Suisse AG, its affiliates, and their respective officers, directors and employees accept any liability whatsoever for any direct or consequential loss arising from their use of this report or its content. No information or communication provided herein or otherwise is intended to be, or should be construed as, a recommendation within the meaning of the US Department of Labor's final regulation defining "investment advice" for purposes of the Employee Retirement Income Security Act of 1974, as amended and Section 4975 of the Internal Revenue Code of 1986, as amended, and the information provided herein is intended to be general information, and should not be construed as, providing investment advice (impartial or otherwise).

When you purchase non-listed Japanese fixed income securities (Japanese government bonds, Japanese municipal bonds, Japanese government guaranteed bonds, Japanese corporate bonds) from CS as a seller, you will be requested to pay the purchase price only.

ARGUS

NYSE: NI

NISOURCE INC

Report created Aug 21, 2019 **Page 1 OF 5**

NiSource Inc. is an energy holding company whose subsidiaries are fully regulated natural gas and electric utility companies serving approximately 4.0 million customers in seven states. NiSource is one of the nation's largest natural gas distribution companies, as measured by number of customers. NiSource's principal subsidiaries include NiSource Gas Distribution Group Inc., a natural gas distribution holding company, and NIPSCO, a gas and electric company. NiSource derives substantially all of its revenues and earnings from the operating results of these rate-regulated businesses.

Analyst's Notes

Analysis by Gary Hovis, August 22, 2019

ARGUS RATING: BUY

- Continued strong fundamentals; reiterating BUY
- NiSource recently completed a corporate restructuring that resulted in the spinoff of its pipeline group subsidiary.
- The balance sheet appears stable and, in our view, able to support the current dividend, which yields about 2.7%.
- NiSource has reaffirmed its 2019 operating EPS guidance range of $1.27-$1.33. The company will report 3Q19 results on October 30.
- Our 2019 operating EPS estimate is $1.32 and our 2020 estimate is $1.42.

INVESTMENT THESIS

Our rating on NiSource Inc. (NYSE: NI) is BUY based on valuation and historical performance. NiSource recently completed a corporate restructuring that resulted in the spinoff of its pipeline group subsidiary. The balance sheet appears stable and, in our view, able to support the current dividend, which yields about 2.7%. Our 12-month target price of $32 implies a potential total return, including the dividend, of 11% from current levels.

Our long-term rating is also BUY.

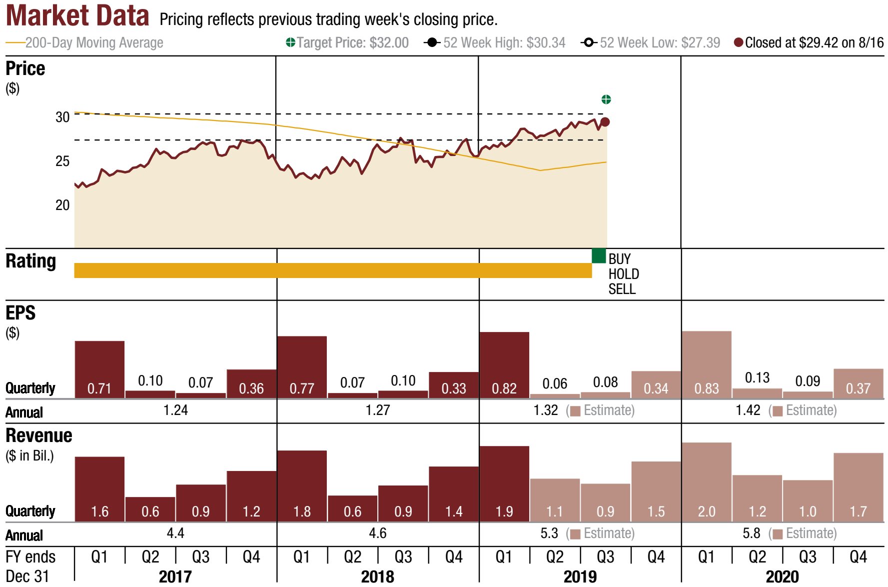
RECENT DEVELOPMENTS

Over the past three months, NI shares have gained 2.1%, compared to an advance of 4.1% for the S&P 500. Over the past 52 weeks, the shares have risen 1.5%, compared to an 8.1% increase for the index. Over the last five years, NI shares have advanced 45.9%, versus an 88.1% gain for the S&P 500. The beta on NI is 0.33.

On July 31, NiSource posted 2Q19 GAAP earnings of $283.1 million or $0.76 per share, compared to $23.2 million or $0.07 per share in 2Q18. Non-GAAP earnings came to $19.1 million or $0.05 per share, compared to $26.4 million or $0.07 per share in 2Q18. Recent developments in the company's operating businesses are highlighted below.

Market Data

Pricing reflects previous trading week's closing price.



Argus Recommendations

	SELL	HOLD	BUY
Twelve Month Rating	SELL	HOLD	**BUY**
Five Year Rating	SELL	HOLD	**BUY**
Sector Rating	**Under Weight**	Market Weight	Over Weight

Argus assigns a 12-month BUY, HOLD, or SELL rating to each stock under coverage.

- BUY-rated stocks are expected to outperform the market (the benchmark S&P 500 Index) on a risk-adjusted basis over the next year.
- HOLD-rated stocks are expected to perform in line with the market.
- SELL-rated stocks are expected to underperform the market on a risk-adjusted basis.

The distribution of ratings across Argus' entire company universe is: 66% Buy, 33% Hold, 1% Sell.

Analyst's Notes...Continued

Gas Distribution Operations: In February 2019, the company filed an application seeking recovery of approximately $122.1 million of capital invested in 2018. A regulatory order is expected in September with rates set to take effect the same month.

In June, company subsidiary Northern Indiana Public Service Co. (NIPSCO) filed a tracker update request in its long-term gas infrastructure modernization program. The request covers $12.4 million in incremental capital investments made between July 2018 and April 2019. An Indiana Utility Regulatory Commission (IURC) order is expected in 4Q19, with gas rates set to take effect in November 2019.

Electric Operations: NIPSCO's electric base rate case remains pending before the IURC. A partial settlement agreement filed on April 26 addresses the early retirement of coal-fired generation called for by the IURC. If approved as filed, the settlement would establish a return on equity of 9.9%. An IURC order is anticipated in 4Q19.

NIPSCO continues to work on its electric infrastructure modernization program, which includes enhancements to its electric transmission and distribution system. It expects to invest $1.2 billion in electric infrastructure improvements through 2022.

EARNINGS & GROWTH ANALYSIS

NiSource has reaffirmed its net operating non-GAAP EPS guidance range of $1.27-$1.33 for 2019. The company will report 3Q19 results on October 30. Our 2019 operating EPS estimate is $1.32 and our 2020 estimate is $1.42.

NiSource continues to rely on its utility infrastructure programs for earnings and dividend growth. The company's regulated gas and electric segments will primarily invest in pipelines and in transmission and distribution modernization programs, and should benefit from favorable regulation. In all, management expects the company to post operating earnings growth of 5%-7% annually from 2019 through 2022, resulting in total annual returns for shareholders of 6%-7%.

NiSource could also become a buyout target, as larger utilities and private equity firms have purchased smaller utilities because of their stable earnings growth and above-average dividend yields. Even so, we think the possibility of a buyout is largely priced into the NI shares.

FINANCIAL STRENGTH & DIVIDEND

NiSource remains committed to maintaining its investment-grade credit ratings from Fitch (BBB), Moody's (Baa2), and Standard & Poor's (BBB+). As of June 30, NiSource had approximately $1.0 billion in net available liquidity, consisting of cash and available capacity under its credit facility and accounts receivable securitizations. The company expects to make capital investments of $1.6-$1.7 billion annually from 2020 through 2022.

NiSource's total debt/total capital ratio was 61% at the end of 2Q19, above the average of 54% for peers. EBIT covered interest expense by a factor of 3.3 in 2Q19, below the peer average of 6.7.

Analyst's Notes...Continued

In 2018, NI's adjusted net margin was 16.9%, above the peer average of 15.3%.

We believe that NiSource's business units and finance team have improved the balance sheet by selling noncore assets, recalibrating capital expenditures, and carefully managing operating expenses and working capital.

NiSource pays an annualized dividend of $0.80 per share, for a yield of about 2.7%. Our dividend estimates are $0.80 for 2019 and $0.84 for 2020.

MANAGEMENT & RISKS

The CEO of NiSource is Joseph Hamrock, 53, who assumed the position in July 2015. Mr. Hamrock, who joined NiSource in 2012, previously served as executive vice president and Group CEO for NiSource's Gas Distribution segment. He also has experience as an executive with American Electric Power. Donald E. Brown is the CFO.

Management is committed to electric and gas service expansion strategies in the company's regulated service territories, and to the expansion of its gas transmission and storage business. We think the company's platform for a return to growth is solid, and we are confident in management's ability to provide shareholders with increased value over the long term.

Key risks for stocks in our electric utility universe include fluctuations in interest rates and commodity prices, the effect of adverse weather on revenue, regulatory issues (especially involving construction cost recovery), and potential environmental and safety liabilities. In addition, the capital-intensive nature of the utility industry creates ongoing liquidity risk that must be actively managed by each company.

COMPANY DESCRIPTION

NiSource Inc. is an energy holding company whose subsidiaries are fully regulated natural gas and electric utility companies serving approximately 4.0 million customers in seven states. NiSource is one of the nation's largest natural gas distribution companies, as measured by number of customers. NiSource's principal subsidiaries include NiSource Gas Distribution Group Inc., a natural gas distribution holding company, and NIPSCO, a gas and electric company. NiSource derives substantially all of its revenues and earnings from the operating results of these rate-regulated businesses.

VALUATION

We think that NI shares are favorably valued at current prices near $29, toward the high end of the 52-week range of $24-$30. The shares trade at 20.6-times our 2020 EPS estimate, below the average of 23.7 for comparable electric and gas utilities with nonregulated natural gas transmission and storage operations. They are also trading at a price/book multiple of 2.2, in line with the peer average of 2.1. The price/cash flow ratio is 19, above the peer average of 12. The shares trade near the high end of their historical range on P/E, price/book and price/cash flow. The

Peer & Industry Analysis

The graphics in this section are designed to allow investors to compare NI versus its industry peers, the broader sector, and the market as a whole, as defined by the Argus Universe of Coverage.

- **The scatterplot shows how NI stacks up versus its peers on two key characteristics: long-term growth and value. In general, companies in the lower left-hand corner are more value-oriented, while those in the upper right-hand corner are more growth-oriented.**
- **The table builds on the scatterplot by displaying more financial information.**
- **The bar charts on the right take the analysis two steps further, by broadening the comparison groups into the sector level and the market as a whole. This tool is designed to help investors understand how NI might fit into or modify a diversified portfolio.**

dividend yield of 2.7% is slightly above the industry average of 2.6%. We are reiterating our BUY rating with a 12-month target price of $32.

On August 22 at midday, BUY-rated NI traded at $29.63, down $0.03.

About Argus

Argus Research, founded by Economist Harold Dorsey in 1934, has built a top-down, fundamental system that is used by Argus analysts. This six-point system includes Industry Analysis, Growth Analysis, Financial Strength Analysis, Management Assessment, Risk Analysis and Valuation Analysis.

Utilizing forecasts from Argus' Economist, the Industry Analysis identifies industries expected to perform well over the next one-to-two years.

The Growth Analysis generates proprietary estimates for companies under coverage.

In the Financial Strength Analysis, analysts study ratios to understand profitability, liquidity and capital structure.

During the Management Assessment, analysts meet with and familiarize themselves with the processes of corporate management teams.

Quantitative trends and qualitative threats are assessed under the Risk Analysis.

And finally, Argus' Valuation Analysis model integrates a historical ratio matrix, discounted cash flow modeling, and peer comparison.

THE ARGUS RESEARCH RATING SYSTEM

Argus uses three ratings for stocks: BUY, HOLD, and SELL. Stocks are rated relative to a benchmark, the S&P 500.

- A BUY-rated stock is expected to outperform the S&P 500 on a risk-adjusted basis over a 12-month period. To make this determination, Argus Analysts set target prices, use beta as the measure of risk, and compare expected risk-adjusted stock returns to the S&P 500 forecasts set by the Argus Market Strategist.
- A HOLD-rated stock is expected to perform in line with the S&P 500.
- A SELL-rated stock is expected to underperform the S&P 500.

Business Strategy and Outlook 30 Oct 2019

NiSource completed its separation from Columbia Pipeline Group in 2015 and now derives all of its operating revenue from its regulated electric and natural gas distribution utilities. About two thirds of operating income comes from its seven natural gas distribution utilities. The remaining third comes from its electric utility business in Indiana.

NiSource's utilities have regulatory frameworks that include automatic rate tracker mechanisms for over 75% of planned capital expenditures, providing recovery of investments in less than 12 months. As a result of the favorable regulation, NiSource has stepped up its capital expenditures to almost $2 billion per year over the next five years. This is an investment level almost double the previous five years.

Over the next 20 years, NiSource plans to invest about $30 billion in infrastructure improvements. Over 50% of these investments are modernization programs for replacing steel and cast-iron pipe with plastic at its natural gas distribution utilities. Almost all of these investments receive rate tracker treatment. This allows NiSource to earn returns on these investments near allowed returns and consistently above its cost of capital.

In September 2018, a natural gas explosion killed one person north of Boston on NiSource's Columbia Gas of Massachusetts system. Although the incident was caused by a contractor, the National Transportation Safety Board concluded at a September 2019 hearing that the ultimate responsibility for the incident rests with NiSource. Insurance should cover a significant portion of the costs, but the event was a public-relations nightmare and did have a negative effect on 2018 and 2019 earnings. Still, we expect annual earnings growth to be back to 6% by 2020.

NiSource cut its dividend in 2015 to $0.62 per share annualized after the separation from CPG. The company increased its dividend by 9.4% in 2017 and 11.4% in 2018. However, in part due to the Boston tragedy, dividend growth was only 2.6% in 2019. As earnings recover, we expect 6% annual dividend increases through 2023, at the midpoint of management's target of 5%-7%.

Profile

NiSource is one of the nation's largest natural gas distribution companies with approximately 3.5 million customers in Indiana, Kentucky, Maryland, Massachusetts, Ohio, Pennsylvania, and Virginia. NiSource's electric utility transmits and distributes electricity in northern Indiana to about 500,000 customers. The regulated electric utility also owns more than 3,000 megawatts of generation capacity, most of which is now coal-fired but is being replaced by natural gas and renewables.

Morningstar Analysis

Boston Gas Explosion Costs Finally Firm; Increasing NiSource's Fair Value Estimate 30 Oct 2019

We are increasing our fair value estimate to $27.50 per share from $27 after narrow-moat NiSource reported break even 2019 third-quarter operating EPS, initiated 2020 earnings guidance in line with our estimate, and modestly increased the lower end of its 2020-22 capital expenditure guidance.

The financial impact from the tragic natural gas explosion north of Boston in September 2018 appears to be quantified and was one of the drivers for the $0.50 per share increase in our fair value estimate. For the first time since the tragedy, the estimate of total costs related to the event were unchanged versus last quarter. We reduced our estimate of the costs, net of insurance recovery, to $850 million from our previous estimate of $1 billion.

The increase in our capital expenditure estimate also had a positive impact on our fair value estimate. The $100 million bump in the lower end of the three-year annual capital expenditure guidance range, to $1.7 billion-$2.0 billion, increases our confidence in our estimates that were already above the midpoint of management's previous guidance. We increased our average annual capital expenditures over the next three years by approximately $30 million, to an average of $1.93 billion per year.

We have a high level of confidence that these investments will achieve returns above our 6% estimate of NiSource's weighted average cost of capital since approximately 78% are covered by rate trackers and reflected in rates in 12 months or less after the investment. This favorable regulatory framework reduces regulatory lag, improving returns on invested capital.

The third quarter is normally weak since about two thirds of NiSource's earnings are from natural gas distribution. NiSource's break even third-quarter results compare with $0.10 per share in the same period last year. NiSource reaffirmed its 2019 EPS guidance range of $1.27-$1.33, and our estimate of $1.30 is unchanged.

Fair Value & Profit Drivers 30 Oct 2019

We increased our fair value estimate to $27.50 per share from $27 after NiSource reported third-quarter earnings, initiated 2020 earnings guidance in line with our estimate, and modestly increased the lower end of 2020-22 capital expenditure guidance.

The financial impact from the tragic natural gas explosion north of Boston in September 2018 appear now to be quantified and was one of the drivers for the $0.50 per share increase in our fair value estimate. For the first time since the tragedy, the estimate of total costs related to the event were unchanged versus last quarter. We reduced our estimate of the costs, net of insurance recovery, to $850 million from our previous estimate of $1 billion.

The increase in our capital expenditure estimate also had a positive impact on our fair value estimate. The $100 million bump in the lower end of management's three-year annual capital expenditure guidance range, to $1.7 billion-$2 billion, increases our confidence in our estimates that were already above the midpoint of previous guidance. We increased our average annual capital expenditures over the next three years by approximately $30 million, to an average of $1.93 billion per year.

We have a high level of confidence that these investments will achieve returns above our 6% estimate of NiSource's weighted average cost of capital since approximately 78% are covered by rate trackers and reflected in rates in 12 months or less after the investment. This favorable regulatory framework reduces regulatory lag, improving returns on investment.

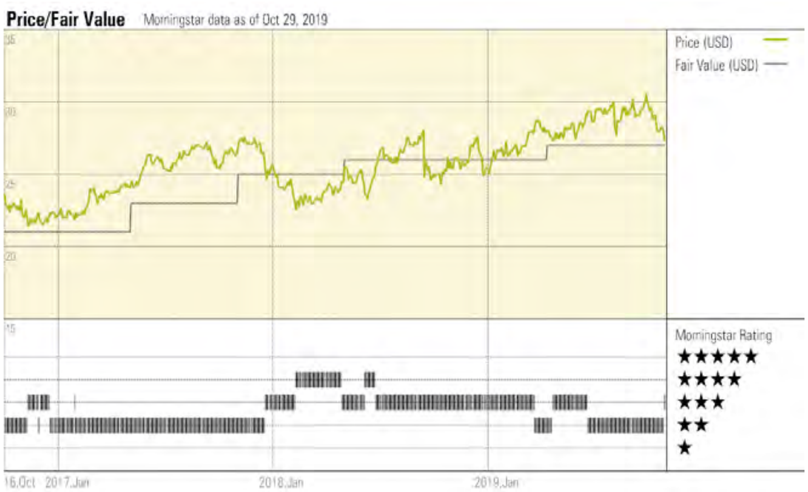
Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
27.39 USD	27.50 USD	Low	Narrow	Stable	Standard	Utilities - Regulated



We use a 6% cost of capital in our discounted cash flow valuation, which incorporates a 7.5% cost of equity. Our cost of equity is lower than the 9% rate of return we expect investors will demand of a diversified equity portfolio. We believe our cost of equity reflects the risk associated with regulated electric and natural gas distribution utilities operating in states that have average to above-average regulatory frameworks.

Our pretax cost of debt assumption is 5.8%, as we incorporate a normalized long-term real rate environment and normalized credit spreads. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Our fair value estimate implies a 20 times multiple on 2020 earnings. This is a discount to market valuations for peer combination electric and gas distribution utilities that we think are overvalued as of late October.

Scenario Analysis

Our uncertainty rating is low. If we assume capital expenditures are 25% lower than our estimate during the next five years, then our annual EPS growth would decline about 5% and our fair value estimate would decrease approximately $3 per share. We believe it is unlikely that capital expenditures will materially exceed our estimate.

A 50-basis-point change in our cost of equity assumption changes our fair value estimate by $3 per share.

Economic Moat

Service territory monopolies and efficient scale advantages are the primary moat sources for NiSource's regulated utilities. State and federal regulators typically grant regulated utilities exclusive rights to charge customers rates that allow the utilities to earn a fair return on and return of the capital they invest to build, operate, and maintain their infrastructure. In exchange for regulated utilities' service territory monopolies, state and federal regulators set returns at levels that aim to minimize customer costs while offering fair returns for capital providers.

This implicit contract between regulators and capital providers should, on balance, allow NiSource's regulated utilities to achieve at least their costs of capital, though observable returns might vary in the short run based on demand trends, investment cycles, operating costs, and access to financing.

NiSource derives roughly two thirds of its operating earnings from the regulated distribution of natural gas. For natural gas distribution service, regulators set distribution rates and the commodity price for customers purchasing natural gas from NiSource. NiSource recovers its costs for natural gas that it sells with a pass-through charge to customers. Thus, NiSource has no commodity price risk that could weaken its moat. Customers may elect to purchase natural gas from independent retail energy suppliers and use and pay for distribution services only. NiSource exited the no-moat retail energy supply business in 2010.

Electricity generation, which contributes about one third of

operating earnings, is from operations in Indiana and is also regulated. The rates for this service are combined with regulated customer rates for transmission and distribution service. In exchange for its monopoly position, state and federal regulators set NiSource's electric rates.

Moat Trend

We believe NiSource's moat trend is stable. We do not foresee a long-term change to the firm's business as a monopoly provider of natural gas and electricity, nor do we see changes to its compact with regulators. All operating earnings are from FERC-regulated electric transmission and state-regulated natural gas and electric utilities. We think it is unlikely that the FERC or the state regulatory frameworks will change. As with almost all regulated utilities, we believe regulatory caps on revenue and returns preclude NiSource from establishing a wide economic moat.

27.39 USD	27.50 USD	Low	Narrow	Stable	Standard	Utilities - Regulated

Bulls Say/Bears Say

Bulls Say

- We expect annual dividend growth to average 6% from 2020 to 2023.
- We believe the separation of the Columbia Pipeline Group from NiSource was good shareholder stewardship, as the market valued the individual businesses more highly at the time of the separation.
- New legislation has improved the regulatory framework in Indiana for NiSource's electric and natural gas distribution utilities.

Bears Say

- Industrial customers account for over half of NiSource's electric sales, higher than most utilities. Industrial sales are more sensitive to the economy than residential and commercial sales.
- Liabilities and fines from the September natural gas explosion in Massachusetts are likely to exceed the amounts covered by insurance and also strain regulatory relationships.
- NiSource's common shares increased 15% and it issued about $900 million of preferred shares in 2017 and 2018. The additional shares will be a headwind to EPS growth.

Financial Strength

NiSource issued over $1.7 billion of common and preferred shares in 2018 because of infrastructure investments, the negative impact of tax reform on its balance sheet, and the Boston tragedy. We estimate it will need to issue approximately $1.5 billion of new equity over the next five years to maintain its solid balance sheet and credit profile. The issuance of common and preferred equity in 2018 strengthened the debt/capital ratio of its balance sheet to 61.4% versus almost 68% the prior year-end. We project that the ratio will remain in the low 60% range over the next five years, owing in large part to the equity issuances and earnings growth. We expect NiSource's EBIT/interest expense ratio will recover to around 3 times after sinking to only 0.4 in 2018 because of the impact of the Boston tragedy. This is still slightly below the industry average, but we view it as sufficient, given that NiSource's diversified regulated operations provide fairly consistent earnings and cash flow.NiSource began increasing its dividend in 2012; this marked the first increase in 10 years, following a 2003 dividend cut to strengthen its balance sheet after the Columbia Energy Group acquisition. NiSource reduced its common dividend to $0.62 per share annualized following the separation from CPG, but this represented an 8% total increase when combined with the CPG dividend.The company raised its dividend in mid-2016 by 6.5% and again by 6.1% in the first quarter of 2017. NiSource rewarded shareholders with an 11.4% increase in 2018. However, the most recent increase was only 2.6% for the first quarter of 2019, in large part due to the negative impact on earnings and cash flow of the Boston incident. Based on our earnings estimates and the company's dividend payout guidance of 60%-70%, we believe annual dividend increases will average 6% per year from 2020 to 2023, the midpoint of management's 5%-7% target.

Risk & Uncertainty

Regulatory risk remains the key uncertainty; however,

NiSource Inc NI (NYSE) | ★★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
27.39 USD	27.50 USD	Low	Narrow	Stable	Standard	Utilities - Regulated

NiSource's regulatory exposure is diversified, owing to operations in seven states and its federal-regulated electric transmission system. NiSource has reduced some of the regulatory uncertainty related to its planned natural gas distribution and electric utilities investments by securing preapprovals and favorable rate mechanisms that provide for automatic rate increases as infrastructure investments are made.In 2018, NiSource announced it would eliminate all coal-fired generation from its power plant fleet within 10 years. This transition will require signing power purchase agreements for renewable energy; building new gas-fired power plants and solar and wind farms; and making modifications to its electric grid. There is a modest amount of execution risk to this dramatic transition from coal.

Stewardship 30 Oct 2019

We assign NiSource a Standard stewardship rating. We think management's decision to form Columbia Pipeline Partners and execute CPG's tax-free separation exhibited exemplary stewardship of shareholder capital. However, the CEO who probably drove those decisions left NiSource to go with CPG before he retired.

The National Transportation Safety Board found NiSource responsible for the tragic gas explosion north of Boston. The incident had a negative effect on shareholder value and has been a public relations nightmare. The good news is that Massachusetts represents less than 10% of operating earnings.

Joe Hamrock became CEO following the separation. He has been with NiSource since 2012 and previously ran the natural gas distribution business. Before joining NiSource, he was with American Electric Power. CFO Donald Brown joined NiSource in April 2015. Previously, he was with UGI Utilities and Constellation Energy. These individuals have significant utility experience, and we believe they will not stray from the strategy that has benefited shareholders.

Most of the members of NiSource's board of directors were involved in the separation of CPG and oversight of investment decisions. Given this, we are confident that the solid stewardship of shareholder capital is likely to continue.

Analyst Notes

Boston Gas Explosion Costs Finally Firm; Increasing NiSource's Fair Value Estimate 30 Oct 2019

We are increasing our fair value estimate to $27.50 per share from $27 after narrow-moat NiSource reported break even 2019 third-quarter operating EPS, initiated 2020 earnings guidance in line with our estimate, and modestly increased the lower end of its 2020-22 capital expenditure guidance.

The financial impact from the tragic natural gas explosion north of Boston in September 2018 appears to be quantified and was one of the drivers for the $0.50 per share increase in our fair value estimate. For the first time since the tragedy, the estimate of total costs related to the event were unchanged versus last quarter. We reduced our estimate of the costs, net of insurance recovery, to $850 million from our previous estimate of $1 billion.

The increase in our capital expenditure estimate also had a positive impact on our fair value estimate. The $100 million bump in the lower end of the three-year annual capital expenditure guidance range, to $1.7 billion-$2.0 billion, increases our confidence in our estimates that were already above the midpoint of management's previous guidance. We increased our average annual capital expenditures over the next three years by approximately $30 million, to an average of $1.93 billion per year.

We have a high level of confidence that these investments will achieve returns above our 6% estimate of NiSource's weighted average cost of capital since approximately 78% are covered by rate trackers and reflected in rates in 12 months or less after the investment. This favorable regulatory framework reduces regulatory lag, improving returns on invested capital.

The third quarter is normally weak since about two thirds of NiSource's earnings are from natural gas distribution. NiSource's break even third-quarter results compare with $0.10 per share in the same period last year. NiSource reaffirmed its 2019 EPS guidance range of $1.27-$1.33, and our estimate of $1.30 is unchanged.

The Next Battle Royale: Natural Gas Generation vs. Renewable Energy 07 Oct 2019

We are reaffirming our fair value estimates and moat ratings for all U.S. utilities after updating our 2020-30 U.S. power generation forecast.

Our forecast shows natural gas generation expanding its leading market share in the U.S. power generation market through 2030. But our forecast also shows renewable energy moving into second place, overtaking coal, nuclear, and hydropower generation.

We think this sets up a "bloody" fight for market share by the end of the next decade: natural gas vs. renewable energy. Renewable energy has policy momentum and its costs are now competitive with natural gas generation even at today's low gas prices and without tax subsidies. But gas generators offer grid reliability, a key competitive advantage.

We forecast U.S. renewable energy will top 1,000 terawatt-hours by 2030, or 22% of U.S. electricity generation, excluding hydropower. The ramp down in solar and wind tax credits during the next five years won't slow growth as much as others assume. Our 8% CAGR in 2018-30 is higher than global growth rate forecasts and higher than the most recent U.S. Energy Information Administration reference case.

State renewable energy portfolio standards and corporate purchases will fill in any growth gaps related to tax roll-offs. We estimate 32 of the 38 states with renewable energy

NiSource Inc NI (NYSE) | ★★★

Last Price	Fair Value	Uncertainty	Economic Moat™	Moat Trend™	Stewardship	Industry Group
27.39 USD	27.50 USD	Low	Narrow	Stable	Standard	Utilities - Regulated

Analyst Notes

targets have not met their marks. New York (70% by 2030) and California (60% by 2030) represent one-third of our renewable energy growth forecast.

We forecast natural gas generation will grow 2% annually between 2019 and 2030, reaching 41% of U.S. generation. Coal and nuclear will each fall to 15% market share.

Utilities with large renewable energy investment plans like NextEra Energy and Xcel Energy will continue to benefit from our higher renewable energy growth forecast. We think the market overlooks renewable energy growth potential from wide- and narrow- moat utilities like CMS Energy, NiSource, Edison International, Alliant Energy, and Dominion Energy.

NiSource's Boston Natural Gas Explosion Costs Climb, but Should Remain Less Than Our Estimate 02 Aug 2019
We are reaffirming our $27 per share fair value estimate after narrow-moat NiSource reported 2019 second-quarter operating EPS of $0.05 versus $0.07 in the same period last year. Second-quarter earnings are usually barely above breakeven as the months of April to June are a relatively low period for electricity and gas sales.

Estimated third-party claims and other expenses related to the tragic natural gas explosion north of Boston in September 2018 increased by almost $100 million, to approximately $1.45 billion. NiSource has third-party liability insurance of $800 million, of which $670 million has been recorded and $535 million has been collected.

In addition, estimated the capital cost for pipeline replacement is approximately $255 million that we expect to be mostly covered by NiSource's $300 million of property insurance. These estimates do not include fines, penalties or settlements with other government authorities not included in the July 29 class-action settlement or other regulators. Massachusetts caps most of these fines and we don't expect them to add materially to the total incident expenses.

Thus, we estimate NiSource's exposure to the Boston incident is roughly $700 million pre-tax currently, $1.5 billion less $800 million of insurance proceeds. Our fair value estimate of $27 per share conservatively assumes roughly $1 billion of pre-tax expenses related to the incident.

NiSource reaffirmed 2019 operating earnings guidance of $1.27-$1.33 per share and our estimate of $1.30 per share is unchanged. The utility also reaffirmed its 2019 capital expenditure guidance of $1.6 billion to $1.7 billion. Our estimate of $1.7 billion remains at the top end of the guidance.

We believe annual EPS growth will return to management's 5%-7% target after 2020 and our EPS growth-rate estimate from 2020-23 equals 6.1%. We also expect annual dividend increases to average 6% starting next year after shareholders received only a 2.6% increase in 2019.

October 30, 2019

NISOURCE

(NI US Equity – $27.51 – Peer Perform)

Patience is a virtue

- **2020 guidance in-line; LT growth targets intact despite equity needs.** NI provided initial 2020 guidance of $1.36-1.40 which was in-line with us/consensus and reaffirmed its 5-7% annual EPS growth expectation through 2022. This came despite $500-700M of incremental equity needed in 2020 to cover MA costs above its casualty insurance. The equity needs were not a surprise, but the ability to reaffirm the growth expectation beyond 2020 was reassuring. Timing of the issuance is unclear, but our sense is to not expect anything before yearend. The impact of the new shares won't be reflected until some point in the second half of next year in order to minimize the dilutive effect on 2020 numbers.

- **Massachusetts update.** The cost estimate in MA was unchanged from Q2. The DPU opened two formal investigations into Columbia last week for its role in and response to the Merrimack Valley incident. The investigations are expected to last a year, making the timing of a rate case or clarity on potential strategic options seem a bit further off. Fines from the investigations are believed to be capped at $22M. It is unclear what amount of the $250M in pipeline replacement capex will be recovered under property insurance. We believe NI assumes that any amount not covered by insurance will be recoverable through rates – we are a bit more skeptical given the amount of scrutiny that NI has received since the incident.

- **PT down to $29; remain Peer Perform.** We reduce our PT by $2 to $29 as we have moved to valuing NI using an average regulated electric multiple. Our 2021E is down a penny after adding $100M of equity next year (prev. assumed $500M). We remain Peer Perform and see some upside given the recent weakness, but think it is limited by overhangs such as the MA investigations, equity needs, and belief that new safety protocols need to be proved out.

- **Q3 miss, 2019 reaffirmed; update at NIPSCO electric.** NI reported Q3 EPS of $0.00, missing us/consensus $0.02/$0.04 but reaffirmed its 2019 guidance range. Separately, NIPSCO electric recently filed a CPCN with the IURC for the 302 MW Indiana Crossroads windfarm. The ownership structure would be similar to the approved Rosewater windfarm. Capex for the two projects would be ~$360M in total, but outside of NI's current forecast period.

Company description

NiSource, headquartered in Merrillville, Indiana, operates two separate business lines: electric utility and gas distribution LDCs. The electric utility serves just under 500,000 customers in northern Indiana and owns 3,300 MW of generation. The gas LDC serves 3.5 million customers in Indiana, Ohio, Pennsylvania, Kentucky, Virginia, Maryland and Massachusetts.

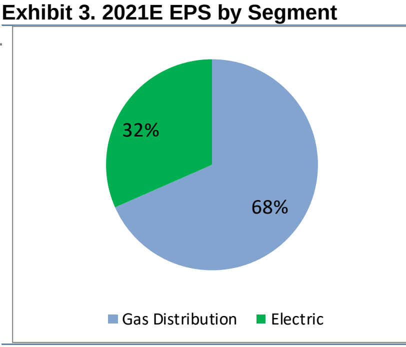
Investment Thesis

We see above-average rate base and earnings growth potential for NiSource relative to other electric and natural gas distribution utilities. NI has a $30B backlog of capital investment with recovery largely through trackers in mostly constructive regulatory environments. That said, recent concerns around safety protocols have caused us to take more cautious view on the stock.

Valuation

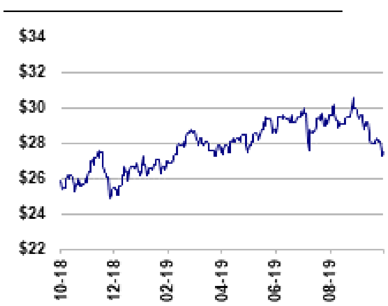
Our $29 price target is derived using a regulated electric average P/E of 20x on our 2021E. Risks for NiSource are 1) further cost increases in MA 2) bad regulatory outcomes and 3) pipeline safety incidents. Upsides are 1) additional growth projects and 2) customer growth

Exhibit 3. 2021E EPS by Segment



Source: Wolfe Utilities & Power Research

Exhibit 4. Performance Chart



Source: FactSet

Investment Conclusion

We are Peer Perform rated on NiSource. There are qualities about the company we find attractive – NI's $30B capital investment backlog should drive its above-average 5-7% annual earnings target well into the future. Most of the company's annual capex (~75%) is recovered with minimal lag via tracking mechanisms and the company has built a constructive track record with most of its state regulators (ex. Massachusetts). That said, issues stemming for the Merrimack Valley incident cause us to remain on the sidelines. We think NI could reach an average multiple, but for the stock to reassert itself amongst the highest quality names in the sector, we believe the DPU's investigation in Massachusetts needs to play out further and the company's new safety procedures need to be proved out.

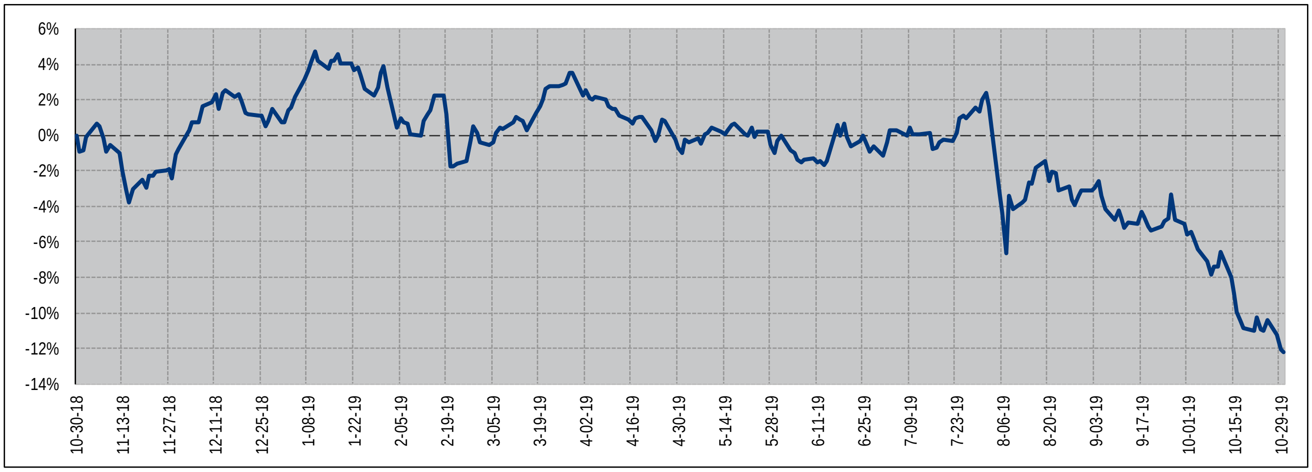
Exhibit 6: NI vs the Regulated Average



Source: Wolfe Research, FactSet

PT down to $29; modest estimate updates

We have reduced our PT by $2 to $29 as we have moved to valuing NiSource using an average regulated electric multiple. Previously we used a SOTP framework, using a gas LDC multiple on gas earnings and an electric multiple on NIPSCO electric's earnings. Given the current issues NiSource is dealing with in Massachusetts and the fact that LDC multiples embed somewhat of a takeout premium, we felt it was more accurate to comp NiSource vs the regulated electric average.

We also updated our 2019 and 2021 estimates modestly. Our 2019E moves down by a penny to reflect our view that NiSource is tracking slightly below the midpoint for the year. Our 2021E moves down by the same amount after reflecting an incremental $100M of equity in 2020 (prev. assumed $500M) to cover MA costs above the company's casualty insurance. Our estimates assume that the incremental dilution next year won't be reflected until some point in Q3, as NiSource looks to minimize the effect and maintain its 5-7% annual EPS growth target.

Update in Massachusetts, still some items to play out

Importantly, there was no surprise cost increase in Massachusetts this quarter. That said, last week the DPU opened two formal investigations into Columbia Gas for its role in and response to the Merrimack Valley incident. While these investigations weren't a surprise, we feel there is likely to be some noise over the next 6-12 months given that the DPU opted to make proceedings more public than maybe expected (a public meeting is scheduled to be held in the next couple of months). We think a rate case or potential strategic options are unlikely to happen until the DPU is much further along in its investigation.

It is unclear what amount of the $250M in pipeline replacement capex will be recovered under NiSource's property insurance. NiSource has filed proof of loss with its property insurer, but discussions are still in the early stages. We believe NiSource expects that any amount not covered by insurance will be recovered through rates, likely in the '21/'22 timeframe. We are a bit more skeptical given the level of scrutiny the company has faced from regulators and politicians in the state. The rate base return associated with the capex is worth ~$0.03 of EPS.

We remain Peer Perform rated despite the fact that NiSource is trading at a ~1x discount. We see some upside given the recent weakness, but think it is limited by overhangs such as the MA investigations, equity needs, and belief that the company's new safety protocols need to be proved out.

NiSource Inc

Wading through the concern: Is the discount warranted?

Reiterate Rating: NEUTRAL | PO: 30.00 USD | Price: 27.51 USD

Bank of America Merrill Lynch

Equity | 31 October 2019

How we see the shares now with capex, equity & risk

After the 3Q call, we admit NI shares appear to be trading at a discount relative to peers – but this is solely on a valuation perspective without regards to outstanding risks. NI vs. the IXU Index is indeed the lowest it's been since before the Merrimack indecent (0% now vs 20% premium pre-Merrimack and ~10% avg for the rest of the yr). However, we (and we perceive the street) still factor in risk discounts related to the still unfolding Merrimack incident impacts as well as Indiana coal politics that lead us to still rate the company at a Neutral. As for guidance, NI expectedly launched its '20 EPS at $1.36-1.40 & reaffirmed its 5-7% LT outlook (now off '19 guidance going forward) – all within our expectations. It discussed $500-700mn of new equity in '20 to fund the Merrimack cost gap between $1.4bn of 3rd party claims & other and $800mn of casualty insurance; we prev included $600mn between 4Q20-1Q21 in our model and now tweak it up slightly to $400mn in 4Q20 and $250mn in 1Q21 to be more conservative amidst another potential $22mn+ of MA fines. Capex tweaks indicate a slightly weaker '20 than before (difference of -$50mn) but more annual LT spend (diff of +$50mn/yr); more capex has shifted from the 'within 0-3 months recovery' growth bucket into the 'within 0-12 months' tracker bucket – but this is largely an impact of CEP categorization rather than an actual concern involving more lag. While shares remain cheap, uncertainty of just how far the process in MA DPU could go adds to uncertainty. Reiterate Neutral at $30 PO (prev 30.5) with 19.2/19.3x electric/gas peer multiple.

Not out of the Massachusetts woods yet

NI perceives a $22mn cap for potential fines related to the two investigations opened by the MA DPU (on the cause of the event, and NI's response & preparedness). However, there are still other potential impacts. MA has *informal* investigations (e.g. abandoned pipeline checks) also with potential fines (albeit not of magnitude). The company is also undergoing criminal investigations by the Attorney General; while difficult to pinpoint a potential outcome the NTSB did not uncover inappropriate actions around NI's response. It is still unclear how much of the $300mn in property insurance NI can use to cover the $255-260mn pipeline replacement & restoration costs. Non-covered expenses could be filed for recovery but stakeholders expect the DPU will find spending imprudent.

Company Sector

Natural Gas-Local Distribution Companies

Company Description

NiSource Inc. (NI) is a fully-regulated utility company serving approximately 3.5mn natural gas customers and 500,000 electric customers across seven states through its local Columbia Gas and NIPSCO brands. NI generates substantially all of its operating income through these rate-regulated businesses.

Investment Rationale

NI's positives including 5-7% earnings/dividend growth via $30bn of infrastructure investments over the next 20+ years and fully regulated subsidiaries with earned ROEs consistently near the allowed.However, we see increased regulatory lag associated with the MA incident. Moreover, with the outcome of Department of Justice investigation still unclear, we believe an overhang on shares will persist. Bottom line, we see more balanced risk/reward profile and as such we rate NI Neutral.

How we see the shares

While NI's valuation compared to peers is at the lowest it has been over the last year, we still argue we see shares at a Neutral given uncertainty on how the Merrimack situation works out. A potential $22mn fine from DPU investigations, a criminal investigation, and uncertainty on recovery up to $265mn of spend (either via property insurance or a rate case filing that's likely a year out) leaves us uncertain. Indiana is not clear sailing either – although less impacted than peers like Vectren because NIPSCO does not buy Indiana coal unlike others.

Exhibit 1: NI vs the IXU Index

Capex shifts

We include three tables below, highlighting NI's updated capex plan vs. the previous quarter's capex plan. The last table shows change between the two. While the figure highlights less growth and more tracker later-dated opps, NI has noted this is mostly driven by CEP tracker categorization in Ohio – meaning limited lag impact.

Table 1: NI capex updates (3Q19 forecast vs. 2Q19 forecast, with changes showed below)

Indiana thoughts

Some political challenges but NI escape unscathed

Indiana's Energy Task Force is yet to issue guidelines for generators around maintaining resilience. We expect to see these guidelines delayed, though, waiting for 2020 federal election results given the politically involved state (i.e. Mike Pence's home state with a large supply of goal in the Southwest). This may impact utility plans to retire coal and replace with capacity through request for proposals (RFP), and could impact how the Indiana Utility Regulatory Commission (IURC) evaluates plans if mandated to use resiliency metrics. However, we note that NIPSCO's coal uses no Indiana coal, meaning the company may be able to avoid pushback from lobbyists and coal-supporting politicians while other neighbors using Indiana coal may not fare as well. Either way, the IURC has noted NIPSCO's first RFP process was well run, which may be enough indication that NIPSCO fares well in the now ongoing 2nd RFP process as well. Either way, we note a small potential risk around the next RFP process based on state receptiveness to more renewables. See more on our political thoughts here.

302MW wind farm hinted at slightly shifted capex; part of RFP 1.0

NI and EDP Renewables recently executed a Build & Transfer agreement for the 302MW Indiana Crossroads Wind Farm. The wind farm is expected to be constructed and operational in 2021 and was selected through the original Request for Proposal (RFP) that NI ran as part of the company's Integrated Resource Plan. The project helps NI reach the outer-years of its adjusted $1.7-$2bn capex forecast, and we think it likely provides more confidence in the higher-end of that range as we assume total project cost of ~$400-$450mn (at $1.3-1.5/KW).

Next RFP 2.0

We look to updates around the second RFP for potential upside to capex on the 4Q call, especially if NI can pursue more co-ownership projects like Rosewater and Crosswater. We expect these capital deployment updated will help NI position meaningful future growth beyond the '22 timeframe in addition to gas-safety-related spend. We do not expect management to roll forward guidance to '23 until after the RFP concludes, however. Resolution of NIPSCO's rate case merits close focus too; we expect the timeline on Rate 831 decisions are delayed into Feb as well.

MA Insurance and gaps

Below we show the difference between Merrimack costs and insurance policies. It is unclear if the $300mn property insurance will fully cover the first cost listed below.

Table 2: Greater Lawrence Event Costs & Insurance Update

Cost	Midpt	Insurance Policies	Difference	Rate case potential?
Pipeline Replacement & Restoration	$257.5	$300.0	?	yes
Third-Party Claims	$987.5	$800.0	$622.5	no
Other Expenses	$435.0			

Source: BofA Merrill Lynch Global Research estimates, company report

Bank of America Merrill Lynch

Estimates

We include latest estimates below, largely unchanged apart from shifting and slightly increasing our expectation around equity issuance. (Prev assumed $300mn in 4Q20 and $300mn 1Q21 – now $400mn in 4Q20 and $250mn in 1Q21).

Price objective basis & risk

NiSource Inc (NI)

Our $30 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2022 forward P/E multiples of 19.3x for gas utilities and 19.2x for electric utilities with a 1.0x premium to reflect NiSource's electric utility's strong growth rates and earned ROEs. We note that electric / gas peer P/E multiples are grossed up by 5% / 5.1% to reflect capital appreciation across the sector. We then subtract the value of excess holding company debt at the parent not supporting the utility opcos. This multiple is slightly below the LDC peer average but above the small-mid cap electric utility average. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its inline-ish multiple versus peers. We adjust gas utilities (including Columbia Gas of MA) to a -1.0x discount to reflect overhang of shares.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, financing plan updates, and challenging steel production economics in Indiana

NiSource, Inc.

A Plan in Place, Upgrade to Overweight

We believe the market is pricing in too much risk around the final Lawrence liability figure and believe underperformance over the past three months (NI down 8% vs XLU up 7%) has created an attractive entry point; we upgrade our NI rating to Overweight and lower our price target by $1 to $31. We see upside to the current valuation even after making conservative assumptions related to unrecoverable costs from the Greater Lawrence Event.

Funding sources have been identified to permanently address incident-related costs. Clarity into total unrecovered costs is improving, and we are confident that previously issued debt and preferred equity combined with Wednesday's announcement of $500 to $700M in block equity issuance will permanently address total funding needs for unrecovered costs related to the Greater Lawrence Event.

5 to 7% growth can be maintained under the current funding scenario. Block equity issued in the back half of 2020 or through a forward agreement will mitigate 2020 earnings dilution. The dilutive impact will be further offset by a growing proportion of capital spend earning contemporaneous returns, which results in a ~1% tailwind to growth.

The consequences of pending regulator intervention are checked: Civil penalties related to the event are capped at ~$22M and any unfavorable ratemaking treatment from MA regulators will have a limited impact on NI, as Columbia Gas of Massachusetts comprises just 8% of total rate base. No details have been disclosed since a criminal investigation was launched in Nov 2018, but we believe that NTSB findings showing no indication of fraud or willful negligence set a high bar for criminal penalties.

Price (30-Oct-2019)	USD 27.51
Price Target	USD 31.00

Why Overweight? We view NI as a quality utility with a well-defined rate base growth strategy from gas and electric infrastructure modernization, which we see as relatively low risk. We believe final Lawrence liability and related financing needs are manageable within the 5-7% earnings growth guidance and believe NI continues to deserve a 10% premium.

Upside case — **USD 37.00**

Our upside case reflects a 25% premium to the 2021 utility group average P/E multiple applied to higher earnings driven by additional rate base growth and favorable rate case outcomes and an accretive sale of Massachusetts.

Downside case — **USD 27.00**

Our downside case reflects a 5% premium to the 2021 utility group average P/E multiple applied to lower earnings driven by slower rate base growth and unfavorable Maryland, Massachusetts, and Pennsylvania rate case outcomes.

Upside/Downside scenarios

Note: FY End Dec

Upgrade to Overweight

We believe the valuation impact of unrecovered costs related to the Greater Lawrence Event leaves upside to the current share price. We gain confidence in the limited magnitude of this impact as cost estimates have solidified, insurance claims are realized, and funding sources are finalized.

We see block equity as manageable within the current growth forecast given timing optionality and management's revised capital guidance.

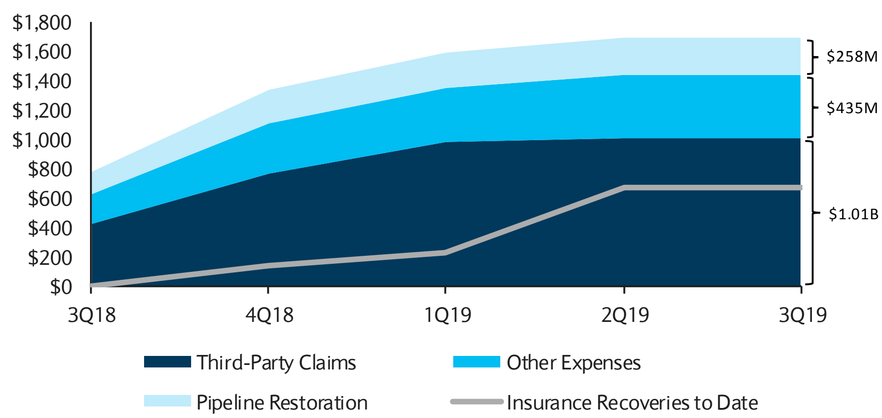
We believe the dilutive effect of the $500-$700M block equity issuance will be lessened in 2020 through either issuance in the back half of the year or the use of a forward agreement. Furthermore, management revised up the midpoint of capital spending guidance through 2022 and increased the proportion of capex that will earn a contemporaneous return, stepping up from 69% in 2019 to 78% 2020 through 2022. This shift adds ~1% to growth, which helps to offset the dilution in order to fit within the 5-7% long-term growth target.

Funding Sufficient to Cover Capital Needs

Event-Related Cost Picture Gaining Clarity

Since NI provided initial estimates at 3Q 2018 earnings, cost estimates have increased 118%. NI is nearing completion on repairs and has reached settlements with most affected parties ($80M settlement with the three municipalities in May and $143M settlement of all class action lawsuits in July). We believe the risk of significant upward cost revisions is now considerably less, though NI does not include estimates for any penalties.

FIGURE 1
Cost Estimate Revisions



Source: Barclays Research, Company Reports

Ongoing Investigations – Civil Penalties Are Capped

In 3Q 2019, the NTSB concluded its investigation of the Greater Lawrence Event, citing "deficiencies in management and oversight" that led to the overpressurization of the system. The Massachusetts DPU, which has the ability to assign penalties, recently launched two investigations into the Greater Lawrence Event (dockets 19-140 and 19-141). Civil penalties related to the storage, transportation and distribution of gas are capped at $2.1M for a related series of violations (G.L. c. 164, § 105A.), and civil penalties related to emergency preparedness and restoration of service are capped at $20M (G.L. c. 164, § 1J). Any violation of DPU orders concerning repair work could result in additional penalties. In 2018, the U.S. Attorney's Office in Massachusetts launched a criminal probe of NI. Since the

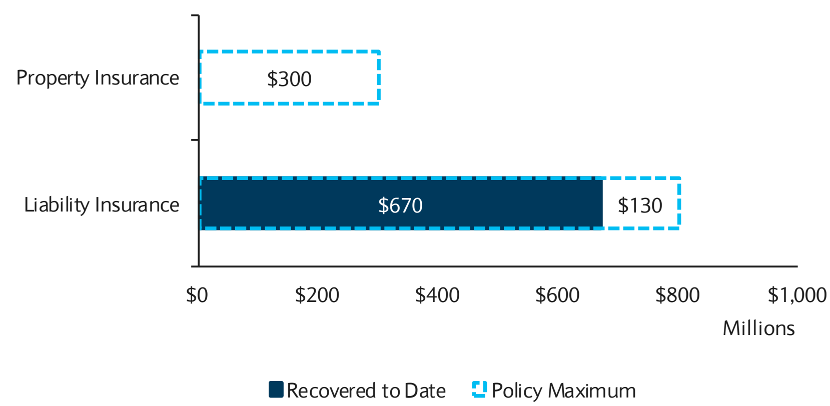
NTSB report did not indicate fraud or wilful negligence, we believe there is a high bar for penalties from this ongoing criminal probe.

Uncertainty of Insurance Recovery

To date, NI has recovered $670M of its $800M liability insurance coverage, and its pipeline property insurance claim ($300M in coverage) is still pending. While a handful of insurance providers comprise the liability insurance policy, only one underwrites the property insurance policy. Capex for pipeline restoration will be offset by property insurance recoveries. Any excess dictates the amount filed for recovery in the next MA gas rate case.

FIGURE 2

Insurance Policies



Source: Barclays Research, Company Reports

Funding Sources Identified

NI issued $500M in preferred equity during December 2018 and $750M in debt during August 2019, some of which may be allocated towards event-related costs. At Q3 earnings, management announced $500-$700M in block equity to be issued in mid-to-late 2020 in order to permanently finance the remaining portion of unrecovered costs from the Greater Lawrence Event. We believe this $500-$700M is sufficient financing under all scenarios for remaining event-related costs (inclusive of potential penalties) and insurance recovery.

Future Massachusetts Regulatory Outlook

While we believe Columbia Gas of Massachusetts may face elevated scrutiny among MA regulators going forward, we do not see single-state regulatory risk as sufficient justification for a reduction to the 10% premium valuation we currently apply, as NI continues to possess above-average long-term growth and diverse geography as a consolidated company. In 2018, Columbia Gas of Massachusetts comprised 11.5% of gas rate base and just 7.6% of total rate base. As such, we believe the read through to consolidated EPS of any less than favourable ratemaking remains limited.

Divestiture Remains a Possibility

A sale of Columbia Gas of Massachusetts assets may be accretive for all parties involved. For NI, a divestiture may remove a large regulatory overhang and improve the balance sheet. A potential acquirer may benefit from cheap distribution assets while avoiding the heat from NI's damaged relationship with Massachusetts regulators. For additional commentary on potential sale scenarios, see our note "*Less Mass(achusetts), More Value?*," published 5/2/19.

Price Target and Methodology

Our new $31 valuation was premised upon a 10% premium to the group average 2021 PE of 19.5 applied to our updated 2021 EPS estimate of $1.46, which takes into account updated guidance for financing and capital spending.

Our previous $32 valuation was premised upon a 10% premium to the group average 2021 PE of 19.5 applied to our previous 2021 EPS estimate of $1.48

3Q Miss with 2020 Guidance a Bit Light

NI

Target price (12M, US$)
30.00
Neutral

Natural Gas | Research Bulletin

- **Miss for 3Q19 at $0.00 vs CS/consensus $0.09/$0.08.** With TTM tracking at $1.25, guidance for 2019 was maintained at $1.27-$1.33 vs CS/consensus $1.32/$1.30.
- **Guidance for 2020 initiated below our expectations.** Initiated at $1.36-$1.40, which is consistent with 5%-7% earnings growth, but below our previewed expectation for $1.37-$1.43. We had expected earnings growth to be tracking ahead of current guidance as a result of accelerated insurance recoveries and pension asset valuation. However, it appears these factors are not yet working their way into the earnings trajectory (or are being offset by other factors). We continue to expect NI to return to the original guidance glidepath (5%-7% off a 2018 base $1.30) by 2022, although it appears that progress will be more loaded into 2021/22.
- **NTSB report on Oct 24 for the Greater Lawrence incident says company response to earlier recommendations (Nov 2018) is "acceptable".** Further service line verifications for safety compliance continue for ~2000 abandoned lines, with inspections expected to be complete by yearend. For 3Q19, the company booked a small $21M incremental cost for estimated third-party claims and related other expenses net of insurance recoveries recorded.
- **In Indiana, NIPSCO announced the next RFP for new generating resources on Oct 1.** The electric base ratecase remains pending before regulators after a partial settlement was filed in April at a 9.9% ROE. Eapect a final decision in 4Q with rates effective 1Q20.
- **Call at 9 am ET**, (855) 219-9570 pin code 7898904.

Goldman Sachs & Co. LLC

NiSource (NI, Buy) recorded a modest 3Q2019 miss on a small earnings quarter, but more importantly, the company reiterated its 2019 EPS guidance ($1.27-$1.30) while introducing 2020 guidance ($1.36-$1.40) versus GS/consensus of $1.40/$1.38. We view the guidance as constructive, given NI's new bulk equity forecast of $500-$700mn in 2020 (above the $200-$300mn of annual ATM previously guided), as well as concerns about potentially higher gas O&M expenses related to safety management system (SMS) spend. See inside for additional details.

NI reported 3Q2019 operating EPS of $0.00 versus GS/FactSet consensus at $0.03/$0.04. The company also **reiterated its 2019 EPS guidance range of $1.27-$1.33** ($1.30 mid-point) versus GS/consensus of $1.30 and $1.31 respectively, as well as its **5-7% EPS/dividend growth annually** through 2022. **NI also introduced 2020 operating EPS guidance of $1.36-$1.40 ($1.38 mid-point) versus GS/consensus of $1.40/$1.38.**

Key takeaways from NI's release include:

- **Modest 3Q2019 miss on higher gas O&M.** NI's gas segment reported operating income of ($26.4)mn vs GS at ($18.5)mn, or a $0.02 miss, primarily driven by higher O&M expenses. NI's electric segment reported operating income of $135.4mn vs GS at $132.8mn, or a $0.01 beat, on better O&M management and lower D&A expenses.
- **NI modestly raised its 2021/2022 annual capital investment guidance to $1.7-$2.0bn ($1.85bn mid-point)** versus $1.6-$2.0bn ($1.8bn mid-point) prior, while also raising its 2019 capital spending range to $1.7-$1.8bn from $1.6-$1.7bn. NI also reiterated growing operating EPS and dividend by 5%-7% annually. We currently estimate between $1.75-$1.80bn of annual capital spend through 2021.
- **NI plans to issue $500-$700mn of block equity in 2020,** in addition to reiterating its $200-$300mn annual ATM equity in 2019/2020. Our model currently assumes $500mn of preferred equity in YE2019 as well as $250mn/$300mn of ATM in 2019/2020. The company does not plan to issue any preferred equity during this time period while reiterating around $500mn of debt in 2020.
- **Management reiterated their total MA incident cost estimate of ~$1.45bn**

(mid-point) for third party claims and other expenses, while insurance recoveries of $670mn through 3Q2019 remained unchanged versus that as of 2Q2019.

Key topics to monitor on NI's earnings call include (1) additional color on timing of future insurance recoveries related to the MA incident, (2) O&M growth expectations in 2020 and beyond including the portion related to gas safety, (3) thoughts on potential timing of planned bulk equity and the assumed impact to 2020 EPS, and (3) updated view on incremental regulated investment opportunities. We derive our 12-month target price of $31 using a 21x blended P/E multiple on 2021E EPS. Key risks include (1) legal and regulatory risks, (2) system damages related to the recent MA natural gas incident, (3) higher than expected O&M, (4) electricity demand and customer growth, and (5) financing.

NI - ’19 On Track; ’20 Outlook Very Consistent – Beginning to Turn Chapter in MA; Shares Continue to Present Value

Key message: Despite miss, ’19 outlook sound; ’20 guidance and financing updates consistent; MA restoration efforts/overhangs moving to the rear window. We reiterate BUY on one of only two remaining gas utilities that continue to show value on top quartile growth prospects. Further re-rating should transpire as MA overhangs continue to move further in the rear window.

Quick Take - Modest miss, outlook, financing plan, dividend policy and growth trajectory inline despite higher equity which was well projected/telegraphed. NI reports 3Q19 EPS of $0.00, below Guggenheim/Consensus estimate of $0.07/$0.04. Management reiterated 2019 guidance of $1.27-$1.33, in line versus our estimate of $1.30; 2019 CapEx guide of $1.7-1.8Bn slightly higher vs prior guide vs. our current $1.8B. 2019-22 EPS and dividend growth rate of 5-7% was also reaffirmed and is also inline with our 6.8% trajectory; Capex of $1.7-$2Bn compares well to our ~$2Bn/year forecast. Overall, consistent execution of capital plan and regulatory strategy, with NT MA headwinds working themselves through. Reiterate BUY on deep value vs. gas/electric peers.

2020 guide inline: EPS and CapEx inline, equity higher but inline with prior signals. Mgmt. on the call presented ’20 outlook very consistent with our expectations: $1.7-1.8Bn CapEx vs Guggenheim at $1.8Bn; EPS range of $1.36-1.40 vs Guggenheim estimate $1.38. On the equity front, Mgmt. reiterates ATM and internal program needs, consistent with our $250mm forecast, but initiated on new common block issuance needs within the $500-700mm range. On the latter block equity transaction expected by Mgmt, while a new incremental data point, in our view it was well telegraphed and expected by investors given the delta between MA restoration costs (~$1.4Bn) and ultimate insurance recoveries (~ $800mm) leading to incremental equity needs (~$600mm) – in line with today’s range. Note: Mgmt. has flexibility on the timing of the equity between now and YE 2020 to take advantage of capital market conditions and eliminated the use of prior disclosed hybrids given the assessment that a block equity deal is best option to maintain current credit profile (block receives 100% equity credit vs partial from hybrids and preferred’s), EPS growth and cheapest alternative. Additionally, per Mgmt's take the timing of the equity transaction is not expected to impact the new 2020 EPS guide and is already reflected in guidance.

MA Restoration Efforts? Insurance recovery tracking well and prior total cost estimates remain as is – we think an end to the fallout from MA incident is near. NI is making good progress on casualty insurance recovery, with $670M recorded ($535M collected in cash) to date against the total of ~$800mm in liability insurance. The process on claiming property insurance has also commenced with on-going claim discussion with insurer. We believe the clarity around the total liabilities related to the MA incident is a positive development for the stock and should further allow shares to re-rate despite the perception that the MA utility is a small component of the NI enterprise.

Valuation

We derive our regulated utility group target multiple of 18x from our regression model, which uses the correlation between electric utility valuations and forward interest rate expectations over the past 30+ years, and now ascribe a 2x premium to reflect several externalities (e.g., macro/geopolitical uncertainties) that continue to support the group trading beyond fundamentals and forward yield expectations. We arrive at our valuation utilizing a sum-of-the parts analysis, based on: (1) ~$11/share for the regulated electric utility; (2) ~$23/ share value for the regulated gas segment utilizing our regulated electric P/E multiple plus a premium to account for the historical gas LDC spread above electric counterparts; and (3) (~$2)/share for other adjustments for Corp and Other. We then discount our valuation back by two years to arrive at our $31 valuation.

Risks

The primary risk on the regulated utility encompasses the traditional risk factors inherent with all utilities, including: (1) rate case risk, (2) lower capex outlook, and (3) interest rate changes above what we account for in our regression model.

Jefferies

EQUITY RESEARCH
NiSource Inc. (NI)

NiSource Inc.
Costs Hit 3Q; Financing in Focus

October 30, 2019

Key Takeaway

NI's 3Q break-even NOEPS fell short of our 5¢ forecast & the Street's 4¢ mean est.; the miss was driven by elevated O&M expense and weaker Other Income. Mgmt affirmed its 2019 NOEPS guidance of $1.27-$1.33, implying 4Q of 40-46¢, up ~13% y/y at the mid-point, but raised its capex outlook ~6%, to $1.7-$1.8B. NI initiated 2020 NOEPS guidance of $1.36-$1.40, up ~6% y/y at the mid-point & in-line with the $1.38 Street mean; 2020 capex is expected to be $1.7-$1.8B

Guidance suggests ~$1.2B in 4Q-2020 equity raises. With results, NI affirmed its 2019 NOEPS outlook of $1.27-$1.33 ($1.30 JEFe), implying 4Q of 40-46¢ (vs. 40¢ Street mean), but lifted anticipated capital spending ~$100mm, to $1.7-$1.8B. Mgmt also initiated 2020 NOEPS guidance of $1.36-$1.40 (vs. $1.38 Street mean), with a capex forecast of $1.7-$1.8B, and affirmed its expectation for annual NOEPS & DPS growth of 5-7% through 2022, fueled by yearly capex of $1.7-$2.0B, a modest lift from its previous $1.6-$2.0B stated spending range. Assuming 50% equity credit to its Prefs, we calculate TTM leverage of ~5.8x and note NI has raised just $11mm in equity YTD, far below its $235-$360mm 2019 expectation & implying meaningful 4Q ATM activity. Moreover, NI now anticipates $500-$700mm of block equity issuance in 2020 above its legacy expectation of $235-$360mm in annual ATM, ESPP, 401(k) and other equity capital sources.

Regulatory updates. In Aug., the PUCO approved CG of OH's application for the first annual adjustment to its CEP rider; the approved application allows the company to begin recovering ~$121.7mm of capital invested in 2018 and new rates became effective in Sept. On Aug. 7th, the IURC approved the JV and ownership agreement for Rosewater, one of three wind projects NIPSCO announced in Feb. In addition, on Oct. 22nd, NIPSCO filed an application with IURC for approval of a fourth wind project, Indiana Crossroads, also a JV with EDP Renewables, which would have an aggregate nameplate capacity of 302 MW; operations are expected in 4Q21.

Columbia Gas of MA update. In Sept., the NTSB closed the last two open urgent safety recommendations related to the Sept. 2018 Greater Lawrence event and, on Oct. 24th, it released its final report. However, following the report's release, the MA DPU opened two new investigations covering cause and NI's emergency preparedness and response. Beginning in Sept., NI commenced service line verifications, including lines abandoned as part of the fall 2018 recovery work. NI noted 700 lines had been completed by the required deadline of Oct 18th, verification of the next group of ~2,200 lines is expected to be complete by Nov 15th, and the final 2,000 abandoned lines are expected to be verified by YE. Greater Lawrence incident costs seem to have stabilized at ~$1.7B (midpoint).

New Safety Chiefs. On Oct. 1st, NI named Chuck Shafer to the newly created position of Chief Safety Officer, responsible for driving NI's long-term, multi-year risk reduction outlook. On Oct. 16th, NI appointed Nick Stavropoulos as Chief Safety Advisor for CG of MA. Both men report directly to CEO Joe Hamrock.

See Exhibit 1 for greater color on 3Q results & Exhibit 2 for regulatory details.

Exhibit 2 - NI Regulatory Backlog

Company/Filing	Summary	Timeline
NIPSCO Gas - PHMSA Compliance Plan 2	Recovery of Federally mandated pipeline safety compliance plan; includes ~$230mm of capital recovery through 2023	Filed: 12/31/2018; Order Received Sept. 2019
Columbia Gas of Ohio Capital Expenditure Program Annual Rider Update	Recovery of certain capital investments and related deferred expenses not recovered through the IRP tracker; includes $121.7mm of capital investments made in 2018	Filed: 2/28/2019; Order Received Aug. 2019; New rates effective Sept. 2019
NIPSCO Gas System Modernization Program	Long-term infrastructure modernization program; TDSIC10 filing covers $12.4mm in incremental capital investments made between July 2018 and April 2019	Filed 6/25/209; Order Received 10/16/2019; New rates effective Nov. 2019
Columbia Gas of Kentucky Advanced Main Replacement Program Annual Rider Update	Seeks to recover $40.4mm of 2020 capital investments; includes capital to be spent on low-pressure system safety enhancements	Filed 10/15/2019; Order expected by YE19; Rates expected to be effective Jan. 2020
Columbia Gas of Maryland Base Rate Case	Supports continued infrastructure replacement investments; Requests $3.7mm total annual revenue increase; $2.5mm, net of infrastructure trackers	Filed: 5/22/19; Order expected 4Q19; New rates expected to be effective by Jan 2020
Wind CPCN Filings	BTA application approved for Rosewater (100MW), a JV between NIPSCO and EDP Renewables; BTA CPCN application filed for Indiana Crossroads (302MW), a second JV between NIPSCO and EDP renewables	Rosewater approved 8/7/2019; Indiana Crossroads CPCN filed 10/22/2019, expected in-service 4Q2021
Electric System Modernization Program	Focused on electric transmission & distribution investments designed to improve system reliability & safety; TDSIC 6 semi-annual tracker update covering ~$131.1mm in investments from Dec 2018 - June 2019	Filed: 8/21/2018; Order expected 4Q2019; Rates expected effective Jan. 2020
Integrated Resource Plan	Outlines NIPSCO's plans for meeting customers' long-term electricity needs; 2018 IRP includes plans to retire nearly 80% of NIPSCO's coal-fired generation fleet by 2023 and all remaining units by 2028; replacement options point toward lower-cost, cleaner energy resources; 2nd round of RFP's launched 10/1/2019	Submitted 10/31/18
Base Rate Case	Seeks changes to depreciation schedules related to the early retirements of coal-fired generation plants called for in the IRP; Proposes changes to tariffs to provide service flexibility for industrial customers; partial settlement that addresses revenue requirement, federal tax reform & depreciation schedules and allows for 9.9% ROE	Filed: 10/31/2018; Partial Settlement 4/26/2019; Hearing concluded Aug. 2019; Order expected 4Q2019; New rates expected in 1Q2020

2020 EPS Guidance ~ Inline with Consensus; Equity Block Expected in 2020

NI reported 3Q19 EPS miss, however, 2019 EPS guidance was reaffirmed. 2019 capex range was increased to $1.7-$1.8B, up from $1.6-$1.7B and during the call we will listen for details on change in capex guidance. NI also announced 2020 EPS guidance of $1.36-$1.40 ($1.38 midpoint) vs. Cons of $1.38 and UBSe of $1.40. NI expects 2020 capex of $1.7-$1.8B (flat from revised higher 2019 range), in-line with UBSe. Notably, NI now expects $500-$700MM of equity block offering in 2020 as well as $200-$300MM of annual equity issued via ATM versus our prior estimate of $450MM of ATM issuance in 2H2019-2020 or a roughly $400mm net increase in equity needed. Hence, we expect it could be a near term overhang. That said, NI no longer plans any non-convertible subordinate debt or preferred equity issuance in 2019/2020. During the call, we will listen for an update on restoration efforts in MA as well as recent developments within the state. As noted in the past, potential sale of Columbia of MA could be positive for the balance sheet and regulatory lag. In Indiana, the Rosewater wind project was approved and NI filed a second JV wind project (Indiana Crossroads).

Results: 3Q19 Adj. EPS Below UBSe/Consensus

NI reported 3Q19 adj EPS of $0.00, below UBSe/Consensus of $0.04/$0.04. Gas Distribution Segment margin was $8.7MM above UBSe, but it was more than offset by higher than expected operating expenses. Electric segment margin was below UBSe, while lower O&M partially offset.

Lowering Estimates

To reflect lower than expected 3Q19 earnings and higher than expected equity issuance in 2020, we are lowering our 2019/2020/2021 EPS estimates by 2%/1%/1% to $1.28/$1.38/$1.46, respectively.

Valuation:

We maintain our Neutral rating and $30 PT.

Valuation Method and Risk Statement

Risks include, but are not limited to, the following: changes to the regulatory environment, ability to achieve favorable returns on investment projects, and ability to continue to reinvest in the business for growth. We use comparable company multiples in our sum-of-the-parts EV/EBITDA and P/E valuations. Our price target is derived using an average of sum-of-the-parts EV/EBITDA and P/E valuations and DDM.

NI: Solid 2020 Guidance & No Increase In Merrimack Valley Costs

Focus Shifts to Equity Needs & DPU Investigations

Outperform / $31

Natural Gas LDCs
Market Weight

Price Target Change

- Summary. NI affirmed '19 EPS guidance of $1.27-1.33 and initiated '20 guidance of $1.36-1.40, which is above our prior estimate of $1.35 and in-line with the consensus estimate of $1.38. As expected, the company outlined $500-700mm of incremental financing needs in '20, which will be met with common equity. Separately, we are encouraged that the cost estimate for the Merrimack Valley incident held at $1.7B. We increase our '20-22E EPS to/from $1.38/1.35, $1.44/1.42 & $1.52/1.50 on revised financing assumptions and slightly higher assumed earned ROEs. We reiterate our Outperform rating and lower our price target to $31/sh from $33/sh reflecting lower peer group multiples.

- Path to In-Line Multiple? Year-to-date, shares of NI have under-performed the S&P Utilities by ~11% with most of that under-performance coming in the last few months. We attribute the recent weakness to (1) the need to do additional inspections following a gas leak and concerns regarding abandoned service lines and (2) an expectation of additional equity needs, which were outlined on today's (10/30) call. Shares now trade at 6-8% P/E discounts to blended gas/electric peers on '20E & '21E and 11% EV/EBITDA discounts. Prior to the Merrimack incident, we considered NI to merit a premium valuation given a long capex runway, constructive regulatory treatment and a solid execution track record. While we no longer call for a premium – at least not over the next 12-18 months – we do see potential for multiple appreciation. The path to a peer group multiple includes demonstrating an improvement in safety (i.e. no more gas leaks/incidents), executing on equity financing needs, and delivering on the 5-7% annual EPS growth target. While recovery of pipe replacement work in MA via property insurance would also help, we are not baking that in (nor is NI) at this point.

- Equity Needs. In addition to annual ATM equity of $200-300mm and $35-50mm for employee/other plans, management outlined an additional $500-700mm of equity needed in 2020 to permanently finance the portion of Merrimack Valley third party claims and other expenses that are not covered by insurance. While the company has used hybrid/equity-rich securities in the past, management has concluded that common equity offers the best economic proposition taking into account cost of capital and balance sheet considerations. In terms of exact timing, management only commented that there is flexibility (equity is not *needed* until late 2020), but did not rule out a forward. We suspect 2020 EPS guidance contemplates the equity in mid-to-late 2020.

- **Merrimack Valley & Other Gas Updates.** Favorably, the total cost of the Merrimack incident stayed at $1.7B. With the NTSB report issued, the focus shifts to the DPU investigations of the incident itself and the emergency preparedness/response. In the meantime, NI continues to take steps to improve safety including accelerated SMS implementation and enhancements to the company's low pressure systems, along with personnel changes (Chuck Shafer named Chief Safety Officer for NI and Nick Stavropoulos named Chief Safety Advisor for Columbia Gas of MA). While these efforts are expected to drive near-term O&M growth of 1-2%, management expects flattish O&M overall taking into account parent and electric operations. On the insurance front, the company has collected $670mm of the $800mm casualty insurance and has requested recovery of the $255-260mm of replacement/restoration costs under the $300mm property insurance.
- **CapEx Update.** NI increased 2019 capex guidance to $1.7-1.8B from $1.6-1.7B, narrowed 2020E to $1.7-1.8B (vs. prior 2020-2022E $1.6-2.0B annually) and outlined 2021-2022E capex of $1.7-2.0B. Management still expects ~75% of capital investments to be reflected in rates within 12 months. Looking ahead, NI expects to be in a position to extend the capex outlook beyond 2022 early next year as the company gains clarity on generation plans in Indiana including the pending RFP. Also on the generation front, the IURC approved the 100 MW Rosewater build-transfer agreement in August and NI filed a CPCN for the 302 MW Crossroads wind project last week with a requested order in February 2020 and expected in-service date of Q4'21. It is our understanding that the capex associated with the Crossroads investment will fall outside of the current outlook based on the tax equity structure.

Acronyms
ATM – At-the-Market
CPCN – Certificate of Public Convenience and Necessity
DPU – Department of Public Utilities
IURC – Indiana Utility Regulatory Commission
NTSB – National Transportation Safety Board
RFP – Request for Proposals
SMS – Safety Management System

Price Target

Price Target: $31 from $33

Our price target is based on a P/E multiple analysis (apply a 2-3% discount to the blended gas/electric peer group multiple of 21X on our '21E EPS of $1.42) in concert with EV/EBITDA, residual income and dividend discount methodologies. Risks include lower than expected recovery of costs associated with the 9/13/18 MA gas incident, unfavorable regulatory developments, a potential rise in interest rates (financing costs and sector valuation), and lower than expected sales growth.

Investment Thesis

We rate shares Outperform. We believe the current discounted valuation provides an attractive entry point to a company with robust long-term infrastructure growth opportunities and supportive regulatory treatment.

Company Description

Based in Merrillville, Indiana, NiSource, Inc. is a holding company with regulated gas (64%) and electric (36%) utility operations across seven states. The company's Gas Distribution Operations serve 3.5 million customers in Indiana, Kentucky, Maryland, Massachusetts, Ohio, Pennsylvania, and Virginia. The Electric Operations consist of a vertically-integrated utility serving approximately 500 thousand customers in northern Indiana. On July 1, 2015, NiSource completed the separation of Columbia Pipeline Group (CPG) from NiSource via the distribution of one share of CPG common stock for every share of NI common stock.

Source: FactSet

Updated Financing Plan Includes Equity In '20, Overall Target Still 5-7% EPS Growth

Maintaining 12-month target of $30/share. Rating remains In Line.

EPS light in Q3 but the year is fine: NI reported Q3'19 adjusted EPS of $0.00 vs. consensus of $0.04 and $0.10 in Q3'18. The biggest driver of the YoY decrease was higher safety-related spending and increased financing costs, partially offset by higher net revenues due to the impact of long-term infrastructure modernization investment.

Guidance for '20 EPS introduced in line with expectations. Specifically, NI expects to deliver $1.36-1.40/share of EPS in '20, which represents 6% growth over their reaffirmed '19 EPS guidance of $1.27-1.33. The company continues to target 5-7% annual EPS (and dividend) growth through '22 off the'19 guidance midpoint of $1.30.

Capex outlook increased modestly. In '19, NiSource now expects to invest $100m more at $1.7-1.8bn versus $1.6-1.7bn previously. The increase is driven by spending on automatic shut-off devices on the low pressure systems across the seven states. NI also raised the low end of the guidance range for its long-term annual capex forecast through '22 by $100m to $1.7-2.0bn versus $1.6-2.0bn previously.

Primary change to financing plan is block equity in '20. NiSource now expects to issue $500-700m in common equity in '20, replacing the placeholder they had for non-convertible debt or preferred equity in their previous plan. They are also issuing +/-$709m of long-term debt in '19 up from ~$500m. The need for equity is primarily to permanently finance the cost of the MA incident, which when excluding capex is estimated at $1.4bn, then is offset by casualty insurance expected to total $800m, leaving $600m to be financed. Potential recovery of property insurance of $300m would be upside. We have removed our assumption that the company needs to issue $660m of preferred equity in Q4'19 and replaced it with the company's updated guidance for $500-700m in common block equity in '20 (we assume mid-20 issuance). This gets them to their targeted 14-15% adjusted FFO to debt metric. See inside this note for more details.

Maintaining our 12-month target price of $30/share. Our '19/'20/'21 EPS estimates change from $1.30 / $1.36 / $1.45 to $1.30 / $1.38 / $1.46. Our $30 target price is derived using a SOTP analysis assigning a modest premium to their electric utility vs. peers and a modest discount to their Gas utilities vs. peers. Our valuation derives a consolidated target multiple of ~20.5 '21 EPS. We had said previously that our '20 and '21 estimates could drop $0.03-0.05 in the event NiSource sells the MA gas utility for $1.25-$1.50b but that would appear to be off the table for now with NI recently hiring Nick Stavropoulos as Chief Safety Advisor for Columbia Gas of Massachusetts to advise on operational safety strategy and planning statewide.

Price Target & Valuation

Raising our '20 and '21 EPS estimates by $0.02 and $0.01, respectively. Our updated '19-'21 EPS forecast is now $1.30 / $1.38 / $1.46 versus $1.30 / $1.36 / $1.45 previously. NiSource is guiding to '19 EPS of $1.27-1.33 and '20 EPS of $1.36-1.40/share. The company expects to deliver 5-7% annual EPS growth through '22 off the midpoint of '19 EPS guidance ($1.30).

We don't assume they sell Columbia Gas of MA in our updated $1.30 / $1.38 / $1.46 forecast. That is 6.0% growth vs. their target of 5-7% off '19 mid-point of $1.30. If they sell Columbia gas our forecast would drop to $1.30 / $1.35 / $1.42 and the '19-'21 EPS growth CAGR would be 4.5%. In '18, they paid out ~$1,000m of the Greater Lawrence costs. Given their $1,700m total cost estimate, we assume ~$700m of cash drag in '19. As of reporting Q3'19 results, NiSource has now recorded and collected $670m of insurance recoveries. In total, we expect NI to receive $800m of insurance recoveries in relation to the event through 1Q20. We have removed our assumption that the company needs to issue $660m of preferred equity in Q4'19 and replaced it with the company's updated guidance for $500-700m in common block equity in '20 (we assume mid-20 issuance). This is the amount of equity that should enable them to achieve their adjusted FFO/debt target of 14-15% in '20 and '21. In our base case model, we also estimate capex at the midpoint of NI's updated guidance ranges and forecast annual issuances (in line with guidance) of $250m of ATM equity, $47.5m of employee program equity, and an incremental $500m in long-term debt. At the electric segment, we model the company achieving its allowed ROE and at the gas segment we model achieved ROEs slightly below allowed to take into account increased O&M from the acceleration of the SMS program, higher pension expense and the withdrawal of the Massachusetts rate case.

Maintaining our In Line rating and our 12-month target price of $30/share. To arrive at our $30/share price target we use a SOTP analysis. On NI's electric EPS, we assign a 5% premium to our base '21 P/E "market-agnostic" target multiple of 19.5x. For the gas segment we apply a 20.2x P/E multiple, a 5% discount to LDC trading multiples. Gas utilities warrant a premium given a more attractive L-T rate base growth outlook. But the discount for NI's gas utilities reflects its recent operating problems and an adjustment out of an M&A premium that we think inflates the valuation of the gas peer group. Our valuation derives a consolidated target multiple of ~20.5x. If we assume they sell Columbia Gas of MA we can still get to the same target price by reducing our discount vs. the gas peer group from 5% to 2%.

Exhibit 2: SOTP Valuation

Valuation using 10% Discount on Gas and 5% premium on Electric	'21 EPS	P/E	Val/Shr
Gas EPS	$1.23	20.2x	$24.96
Electric EPS	$0.60	20.5x	$12.23
Parent/Other	($0.37)	19.9x	($7.47)
Consolidated 2020 EPS	**$1.46**	20.6x	**$30.00**

Source: EVRISI Research

Third Quarter 2019 Highlights:

NiSource reported Q3 '19 adjusted EPS of $0.00 vs. consensus of $0.04 and $0.10 in Q3'18. The biggest drivers of the YoY decrease were higher safety-related spending and increased financing costs, partially offset by higher net revenues due to the impact of long-term infrastructure modernization investment. The adjusted earnings reflects $20.5m of Greater Lawrence incident operating expenses, $3.6m of revenue due to unfavorable weather, and a $0.2m gain on sale of assets and impairments. Gas Distribution operating earnings were $23.5m lower YoY. Net revenues for that segment were $58.7m higher driven primarily by new rates from base rate proceedings and infrastructure replacement programs. Operating expenses for gas came in $82.2m higher driven by higher depreciation, increased employee and administrative expenses, increased outside services and higher property taxes. Electric operating earnings were $12.6m higher compared to prior year quarter. Net revenues for electric were $10.9m higher primarily due to increased residential and commercial usage, and increased rates due to incremental capital spending on infrastructure replacement programs and electric transmission projects. Operating expenses for that segment were $1.7m lower due to decreased materials and supplies costs, lower outside service costs and decreased employee and administrative costs, partially offset by increased depreciation. Corporate and Other Operations was $6.4m lower. The change there was driven by a favorable insurance reserve adjustment recorded in '18.

EPS guidance for '19 is unchanged. NiSource continues to target a '19 EPS guidance range of $1.27-$1.33/share. Note that the midpoint of the company's '19 earnings guidance, $1.30, falls short of their old long-term annual growth target articulated last year (growth of 5-7% off '18 guidance at the time of $1.26-$1.32) primarily due to the impacts of financing the Greater Lawrence restoration, expenses associated with accelerated implementation of a Safety Management System (SMS), and increased pension costs related to market volatility in late '18. Basically this event cost them a year of earnings growth.

NiSource issued '20 EPS guidance that is in line with their long-term annual EPS growth forecast. Specifically, NI expects to deliver $1.36-1.40/share of EPS in '20, which represents 6% growth over their '19 EPS guidance midpoint of $1.30. The company continues to target 5-7% annual EPS (and dividend) growth through '22 off of the '19 base of $1.30. The guidance assumes the $500-700m in block equity to be issued to satisfy credit metrics. NiSource expects total O&M to remain flat next year, with 1-2% increases in gas offset by reductions to the electric and corporate segments.

Capital spending forecast increased modestly. In '19, NiSource now expects to spend $100m more in capex at $1.7-1.8bn versus $1.6-1.7bn previously. The increase is being driven by spending on automatic shut-off devices on the low pressure systems across the company's seven states. NiSource also raised the low end of its long-term annual capex guidance range through '22 by $100m to $1.7-2.0bn versus $1.6-2.0bn previously.

Financing plan update: NiSource is issuing more debt in '19 than previously expected at $709m, compared to the prior $500m guidance. In addition, the company now expects to issue $500-700m in block equity in '20. This basically replaces the "TBD" placeholder for non-convertible debt or preferred equity they had in prior guidance. NiSource is still targeting an adjusted FFO/total debt of ~14-15%. Exhibit 1 below shows the update to the financing plan. We have removed our assumption that the company needs to issue $660m of preferred equity in Q4'19 and replaced it with the company's updated guidance for $500-700m in common block equity in '20 (we assume mid-20 issuance).

Exhibit 1: NiSource Financing Plan

	2018 Actual	2019		2020	
		Prior	Updated	Prior	Updated
Common Equity Block	$606m	None	None	None	$500-700m
ATM	$239m	$200-300m	$200-300m	$200-300m	$200-300m
ESPP/401K/Other	$41m	$35-60m	$35-60m	$35-60m	$35-60m
Long-Term Debt	-$410m	$500m	$709m	$500m	$500m
Other Financing	$900m	TBD	None	TBD	None

Source: NiSource

Greater Lawrence cost estimates are largely unchanged. Total cost estimates now $1,700m versus $1,697m at the midpoint. Capital costs are now $255-260m versus $250-$260m previously. Third party claims and related expenses are now $995-1,020m versus $994-$1,020m previously. "Other" expenses still estimated to be $430-$440m. The company's liability insurance limit is maintained at $1.1bn, including $800m of casualty and $300m of property insurance. Note that the property insurance is not included in NI's forecast and would represent upside. Through Q3'19, NiSource has recorded $670m of casualty recoveries, the same as last quarter, and has now collected that full amount versus the $535m they had collected as of Q2'19. The company expects to collect the remaining $130m of casualty insurance by early '20. Proof of loss has been filed with the property insurer for the full $255-260m cost of the pipeline replacement.

Q3'19 was the first quarter since the Greater Lawrence incident where cost estimates of the event did not increase. On their Q3'18 earnings call, NI estimated that the total costs and expenses relating to the event would be between $730m and $825m and consist of ~$150m of capital expenditures, ~$433m of third party claims and ~$195m of other expenses. On the Q4'18 call, NiSource increased their estimate for the range of total costs and expenditures to $1,307m-$1,365m consisting of ~$225m of capital expenditures, ~$774m of third party claims, and $338m of other expenses. On the Q1'19 call, NiSource raised the midpoint of their estimate a second time to $1,596m, consisting of ~$245m of capital expenditures, ~$986m of third party claims and ~$365m of other expenses. On the Q2'19 call, the company increased the midpoint of their estimate a third time to $1,697m, including $255m in capital expenditures, $1,007m of third party claims and $435m of other expenses. With this Q3'19 update, total cost estimates are now $1,700m, including $258m in capital expenditures, $1,007m of third party claims and $435m of other expenses. Going forward, with the restoration work complete and the service lines verification work nearing completion, NiSource does not expect any significant future adjustments. However, it is worth noting that these estimates exclude any amounts they may incur for potential fines and penalties.

Greater Lawrence Incident – Additional Details

On September 14th 2018, there were multiple gas explosions in NI's MA gas system. One person was killed, at least 21 individuals were injured and 131 structures were damaged including 5 that were destroyed. The National Transportation Safety Board (NTSB) recently released its final report on the event which coincided with its preliminary 10/10/18 report. According to the report, prior to the explosions a Columbia Gas contracted work crew, which included a Columbia Gas inspector, was performing a Columbia Gas designed and approved pipe-replacement project in South Lawrence. The contracted crew was replacing a distribution main for a low pressure gas system. The distribution main had sensors attached to it that provided input to regulators governing gas pressure on the system and when the existing pipe was removed the sensors were never placed on the new pipe being put into place. This caused a false signal from the old depressurized pipe to tell the regulators increase pressure into the system. Eventually the system exceeded the maximum allowable pressure and the explosion ensued. In the pre-approved work plan, there were no instructions to move the sensors from the old pipe being removed to the new pipe being installed, implying the explosion was the result of a failure at the planning stage of the project. With the NTSB investigation now complete, the Massachusetts Department of Public Utilities announced its own investigations of the incident in NI's emergency preparedness and response. NiSource has been cooperating with all inquiries and investigations. The outcomes and impacts of these pending investigations and any potential future investigations are uncertain at this time.

On June 17th, Bloomberg reported that NI is weighing the sale of Columbia Gas of Massachusetts. Press reports said NI received bids from rival utilities and is working with an adviser on an auction. That report said a divestiture could reportedly fetch $2bn in proceeds but by our analysis that appears unlikely, with our models indicating the deal could be financially viable for a strategic buyer a closer to $1.25- $1.5bn in value. We estimate a sale would be $0.03-0.04 dilutive to NI's '20/'21 EPS at $1.5bn or $0.04-0.05 dilutive at $1.25bn. While it looks EPS dilutive, we see improved credit metrics and better strategic focus as offsetting positives so it makes sense.

Columbia Gas of MA has faced significant unrecoverable costs and regulatory risk in Massachusetts. In addition to our estimate of $795m of unrecoverable costs for the incident, NI had a pending rate case settlement in '18 for a $33m rate increase that was nixed and spent +/-$225m of capital upgrading the distribution network that is not in rates. Given these facts, we see them earning a 5.5% ROE on the $995m of rate base they attest to at Columbia Gas of MA at YE '18, $0.08/share of FY'19 EPS.

We believe a divestiture could eliminate the need for ~$500m in common equity issuance in '20-'21. As part of its current plan targeting 14-15% FFO/debt in '19 and '20, the company expects to issue $200-300m of equity via an ATM issuance per year and $500-700m of common equity block in '20. We believe NiSource could receive $1.25-1.50bn in proceeds from a divestiture of Columbia Gas of Massachusetts and would expect them to pay down debt with the full amount of proceeds given no taxes because of existing NOLs. This could enable them to avoid issuing $250m of common equity in each of '20 and '21, while still achieving their targeted credit metrics.

In mid-August, NiSource completed their restoration efforts in Greater Lawrence. This included the replacement of all customer equipment impacted by the event and fulfilled the company's commitment to have that work completed by September 15th this year. NiSource also repaired outdoor areas affected by their fall '18 construction work, including residential lawns, irrigation systems, walkways, driveways and state roads throughout the impacted communities. The company says a dedicated team remains in place providing support to impacted customers, assisting with claims processing and providing repair support on appliances and heating equipment.

In September, NI launched inspections of gas lines abandoned as part the fall '18 recovery work. These verifications, as required by the Massachusetts Department of Public Utilities, are confirming that the service lines were abandoned consistent with legal requirements and in compliance procedures and protocols. As the Company finds any service line abandonment that did not meet those requirements, they are correcting the situation immediately. To date, NiSource has completed the initial set of 700 verifications by the required deadline of October 18th. The second set of approximately 2,200 verifications is expected to be complete by November 15th. As announced yesterday, NiSource is planning to verify the remaining 2,000 service lines by year-end. These verifications are being done on abandoned service lines, which are not connected to an active gas system and, therefore, will not disrupt gas service to customers.

Regulatory & Legislative Updates

Gas Operations: Columbia Gas of Maryland's rate case request remains pending before the commission. The request filed in May '19 is for continued replacement of aging pipelines and adoption of pipeline safety upgrades. If approved as filed, it would increase annual revenues by $3.7m. The order is expected by year-end '19, with new rates effective in January '20. On August 28th, the Public Utility Commission approved Columbia Gas of Ohio's application for the first annual adjustment to its Capital Expenditure Program (CEP) rider. The approved application allows the company to begin recovering approximately $121.7m of capex from '18. New rates became effective in September '19. NIPSCO's latest infrastructure modernization tracker update request, covering $12.4 million in incremental capital investments made between July '18 and April '19, was approved by the Indiana Utility Regulatory Commission on October 16th, with new rates effective in November '19.

Electric Operations: On October 1st, NIPSCO announced the opening of its next round of RFPs consistent with its ‘18 Integrated Resource Plan, which calls for the retirement of nearly 80% of its remaining coal generation by 2023, and all coal generation to be retired by 2028. NIPSCO is considering all sources in the RFP process, which closes on November 20th. On August 7th, the IURC approved the joint venture and ownership agreement for Rosewater, one of three wind projects that NIPSCO announced in February ‘19. The IURC in June approved Power Purchase Agreement applications for the other two projects, Jordan Creek and Roaming Bison. On October 22nd, NIPSCO filed an application with the IURC for approval of a fourth wind project, Indiana Crossroads, a joint venture with EDP Renewables, which will have a nameplate capacity of 302 MW. It is expected to be in operation in the fourth quarter of ‘21. Separately, NIPSCO's electric rate case remains pending. A partial settlement agreement was filed on April 26th. If approved as filed, the settlement would establish a return on equity of 9.9%. The hearing concluded in August, and an IURC order is anticipated in the fourth quarter of ‘19, with new rates effective in the first quarter of ‘20. NIPSCO's latest infrastructure modernization tracker update request, covering $131.1m in incremental capex made from December ‘18 through June ‘19 remains pending. An order is expected in the fourth quarter of ‘19, with rates effective in January ‘20.

On 4/24/19, HB1470 was passed in Indiana. The bill amends Senate Enrolled Act 560 which created NI’s transmission, distribution, and storage system improvement charges (TDSIC tracker). HB 1470 allows the tracker to include projects that do not include specific locations or exact numbers and to include advanced technology investments. It should bring clarity as to what kind of projects can be included in NI’s TDISC plans and may allow NI to recover a wider variety of capital through the tracker. TDISC plans normally cover seven years and NI’s current gas plan runs through ‘20 and current electric plan runs through ‘22.

VALUATION METHODOLOGY

To arrive at our $30/share price target we use a SOTP analysis. On the company's electric earnings EPS we assign a 5% premium to our base '21 P/E multiple of 19.5x. For the gas segment we apply a 20.2x P/E multiple which is a 5% discount to a current gas LDC trading valuation multiple. Gas utilities warrant a premium multiple relative to predominantly electric utilities that are, in our view, facing a more challenging growth profile creating medium to longer term headwinds for rate base growth. Our valuation derives a consolidated multiple of ~20.5x.

RISKS

Risks to our thesis include incremental costs related to the Greater Lawrence incident, an inability to deploy capital at the company's expected rate resulting in a lower rate base and regulatory pressure resulting in lower allowed ROEs.

ANALYST CERTIFICATION

The analysts, Michael Lonegan, Greg Gordon, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group L.L.C. ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and Evercore ISI International Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Inc. ("Evercore"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore's Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group L.L.C., Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore and its affiliates, and I or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore and its affiliates may have, or have had, business relationships with the companies mentioned in this report.

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform- the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line- the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform- the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy- the total forecasted return is expected to be greater than 10%

Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell -the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Evercore ISI rating (as of 10/30/2019)

Receipt and review of this research report constitutes your agreement not to redistribute, retransmit, or disclose to others the contents, opinions, conclusion or information contained in this report (including any investment recommendations, estimates or target prices) without first obtaining express permission from Evercore ISI.

This report is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to local law or regulation.

For investors in the UK: In making this report available, Evercore makes no recommendation to buy, sell or otherwise deal in any securities or investments whatsoever and you should neither rely or act upon, directly or indirectly, any of the information contained in this report in respect of any such investment activity. This report is being directed at or distributed to, (a) persons who fall within the definition of Investment Professionals (set out in Article 19(5) of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (the “Order”)); (b) persons falling within the definition of high net worth companies, unincorporated associations, etc. (set out in Article 49(2) of the Order); (c) other persons to whom it may otherwise lawfully be communicated (all such persons together being referred to as “relevant persons”). This report must not be acted on or relied on by persons who are not relevant persons.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group L.L.C., Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

In compliance with the European Securities and Markets Authority's Market Abuse Regulation, a list of all Evercore ISI recommendations disseminated in the preceding 12 months for the subject companies herein, may be found at the following site: https://evercoreisi.mediasterling.com/disclosure.

Goldman Sachs | Equity Research

31 October 2019 | 4:29PM EDT

NiSource Inc. (NI): Right-sizing the ship while maintaining above-average growth; remain Buy

We remain Buy-rated on NiSource (NI), as we expect the company to achieve above-industry average 6.8% EPS CAGR from 2019-2021 even with bulk equity needed to improve its balance sheet (resulting from the 2018 Merrimack gas incident). Despite some remaining MA regulatory overhang, we view the current 1.5x P/2021E discount versus regulated peers as unwarranted and see multiple expansion potential in the near-to-medium term.

Managing the MA process while continuing robust investment growth. With total estimated costs related to the 2018 MA gas incident largely stabilized, we note next steps involve awaiting on Massachusetts Public Utilities Commission (MPUC) investigation results, likely sometime in 2H2020 in our view. Our model estimates a $75mn fine levied on the utility in 4Q2020, along with recovery/return of 1/3 of the ~$250mn restoration capital in 2021. Aside from incident-related items, we continue to see a robust investment pipeline across the various utilities that support 8% operating income CAGR through 2021, with higher growth at the gas utilities. Beyond 2022, we see higher growth potential at NIPSCO Electric from potential ownership of renewable generation similar to the current wind JV on Rosewater/Indiana Crossroads (400 MW - expected in rate base in 2023).

We do not expect NI to need additional bulk equity in 2021 to maintain its 14-15% FFO/debt target. Following management's revised financing guidance, our model now incorporates $700mn of bulk equity in 2020 (the higher end of the guided range) - in addition to $300mn of ATM - all issued in 4Q2020, versus prior assumptions of $500mn of preferred equity in 4Q2019 and no bulk equity in 2020; consequently, we lower our 2021 ATM assumption from $200mn to $100mn. Our revised estimates imply a 14.7%/15.3% adjusted FFO/debt in 2020/2021, above Moody's Baa2 threshold of 14%. We note the net EPS impact of these changes is minor, given the larger common equity dilution offset with elimination of additional preferred dividends.

We adjust our 2019-2021 EPS estimates to $1.29/$1.41/$1.48 from $1.30/$1.40/$1.46 to reflect several changes to our model, including 1) financing changes mentioned above, 2) updates to trackers/base rate increases, and 3) relatively flat O&M growth from 2019-2021 versus a modest increase prior.

Our $31 12-month target price (unchanged) is derived from an electric/gas

blended 20.9x P/E multiple on 2021E EPS, which reflects a 16% total return versus -1% for Regulated Utilities and 1% for smid-cap utilities and one of our highest total returns versus regulated peers. Key risks include (1) legal and regulatory risks, (2) system damages related to the recent MA natural gas incident, (3) higher than expected O&M, (4) electricity demand and customer growth, and (5) financing.

NI in Charts

Exhibit 1: We adjust our 2019-2021 estimates modestly, reflecting a 6.8% EPS CAGR from 2019-2021...

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Goldman Sachs makes a market in the securities or derivatives thereof: NiSource Inc. ($27.51)

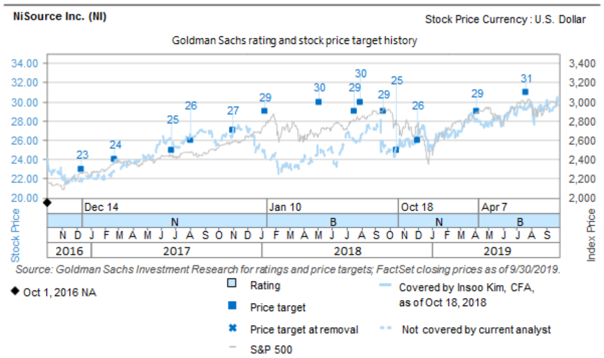
Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	43%	42%	15%	64%	56%	50%

As of October 1, 2019, Goldman Sachs Global Investment Research had investment ratings on 2,987 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage groups and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Price target and rating history chart(s)



The price targets shown should be considered in the context of all prior published Goldman Sachs research, which may or may not have included price targets, as well as developments relating to the company, its industry and financial markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at https://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Instruction 598 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Instruction 598, is the first author named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc.

disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each region's Investment Review Committee manages Regional Conviction lists, which represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Ombudsman Goldman Sachs Brazil: 0800 727 5764 and / or ouvidoriagoldmansachs@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Ouvidoria Goldman Sachs Brasil: 0800 727 5764 e/ou ouvidoriagoldmansachs@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by either Goldman Sachs Canada Inc. or Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.fiadocumentation.org/fia/regulatory-disclosures_1/fia-uniform-futures-and-options-on-futures-risk-disclosures-booklet-pdf-version-2018. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by the Global Investment Research division of GS may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

Summary Investment Thesis and Valuation

NiSource's heavy capital investment program drives rate base growth of at least 7.5% over the next 3 years, with upside should the mid-or-high end of the capex guided ranges materialize. Declining O&M spending versus current elevated levels should improve earned ROE's at the utilities over coming quarters, and additional cost discipline could help growth even more. The equity funding requirement represents a mild near-term overhang, and the property insurance claim process is also an outstanding unknown. Though valuation has rebounded since last year, NiSource offers top-tier long-term rate base and earnings growth and we expect de-risking activities to continue into 2020, and we reiterate our OW rating.

Our December 2020 price target of $32/per share is based on a sum-of-the-parts analysis and uses our 2020 electric and gas segment EPS forecasts. We value the gas segment using a 22.0x P/E multiple, a discount to gas utility peers due to growth prospects offset by lack of M&A takeout potential, and we value the electric segment using an 21.0x P/E multiple, in line with pure regulated electric utility peers.

Investment Thesis, Valuation and Risks

NiSource Inc. *(Overweight; Price Target: $32.00)*

Investment Thesis

NiSource's heavy capital investment program drives rate base growth of at least 7.5% over the next 3 years, with upside should the mid-or-high end of the capex guided ranges materialize. Declining O&M spending versus current elevated levels should improve earned ROE's at the utilities over coming quarters, and additional cost discipline could help growth even more. The equity funding requirement represents a mild near-term overhang, and the property insurance claim process is also an outstanding unknown. Though valuation has rebounded since last year, NiSource offers top-tier long-term rate base and earnings growth and we expect de-risking activities to continue into 2020, and we reiterate our OW rating.

Valuation

We maintain our December 2020 price target at $32/share. Our price target is based on a sum-of-the-parts analysis and uses our 2020 electric and gas segment EPS forecasts. We value the gas segment using a 22.0x P/E multiple, a discount to gas utility peers due to growth prospects offset by lack of M&A takeout potential and risk overhanging from the MA gas accident, and we value the electric segment using an 21.0x P/E multiple, in line with pure regulated electric utility peers.

Risk to Rating and Price Target

- Regulated electric transmission and distribution earnings are vulnerable to mild weather, as regulated revenues are calculated based on energy volumes sold. Extreme or mild temperatures may cause future earnings to differ materially from our current forecasts.
- Achievement of NiSource's long-term rate base and EPS CAGR targets are heavily dependent on robust capital investments, regulatory support, and favorable ratemaking mechanism. Any deferral of spending could put the company at risk of falling short of the LT rate base and earnings growth CAGR in any one year.
- Regulated electric and gas utilities are subject to federal and state regulations, including determinations of allowed revenues. Positive or negative changes to the regulatory environments may cause future earnings potential to differ materially from current expectations.

The chart(s) show J.P. Morgan's continuing coverage of the stocks; the current analysts may or may not have covered it over the entire period.
J.P. Morgan ratings or designations: OW = Overweight, N= Neutral, UW = Underweight, NR = Not Rated

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:
J.P. Morgan uses the following rating system: Overweight [Over the next six to twelve months, we expect this stock will outperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Neutral [Over the next six to twelve months, we expect this stock will perform in line with the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Underweight [Over the next six to twelve months, we expect this stock will underperform the average total return of the stocks in the analyst's (or the analyst's team's) coverage universe.] Not Rated (NR): J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap equity research, each stock's expected total return is compared to the expected total return of a benchmark country market index, not to those analysts' coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying analyst's coverage universe can be found on J.P. Morgan's research website, www.jpmorganmarkets.com.

Coverage Universe: Turnure, Christopher: AES Corp. (AES), Algonquin Power & Utilities Corp. (AQN.TO), Allete Inc. (ALE), AltaGas Canada Inc (ACI.TO), AltaGas Ltd (ALA.TO), American Electric Power (AEP), Atmos Energy (ATO), Avangrid, Inc (AGR), Black Hills Corp. J.P. Morgan Equity Research Ratings Distribution, as of October 05, 2019

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage	45%	40%	14%
IB clients*	53%	48%	38%
JPMS Equity Research Coverage	43%	43%	14%
IB clients*	76%	64%	55%

*Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months. Please note that the percentages might not add to 100% because of rounding.
For purposes only of FINRA ratings distribution rules, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at http://www.jpmorganmarkets.com, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, http://www.jpmorganmarkets.com. This report also sets out within it the material underlying assumptions used.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

All research reports made available to clients are simultaneously available on our client website, J.P. Morgan Markets. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research reports available on a particular stock, please contact your sales representative.

Any data discrepancies in this report could be the result of different calculations and/or adjustments.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research report are Mainland China; Hong Kong SAR, China; Taiwan, China; Macau SAR, China.

Options and Futures related research: If the information contained herein regards options or futures related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit https://www.theocc.com/components/docs/riskstoc.pdf for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or http://www.finra.org/sites/default/files/Security_Futures_Risk_Disclosure_Statement_2018.pdf for a copy of the Security Futures Risk Disclosure Statement.

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including but not limited to the J.P. Morgan corporate and investment bank and its research division.

Legal entity responsible for the production of research: The legal entity identified below the name of the Reg AC research analyst who authored this report is the legal entity responsible for the production of this research. Where multiple Reg AC research analysts authored this report with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research.

Country and Region Specific Disclosures
U.K. and European Economic Area (EEA): Unless specified to the contrary, issued and approved for distribution in the U.K. and the EEA by JPMS plc. Investment research issued by JPMS plc has been prepared in accordance with JPMS plc's policies for managing conflicts of interest arising as a result of publication and distribution of investment research. Many European regulators require a firm to establish, implement and maintain such a policy. Further information about J.P. Morgan's conflict of interest policy and a description of the effective internal organisations and administrative arrangements set up for the prevention and avoidance of conflicts of interest is set out at the following link https://www.jpmorgan.com/jpmpdf/1320742677360.pdf. This report has been issued in the U.K. only to persons of a kind described in Article 19 (5), 38, 47 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 (all such persons being referred to as "relevant persons"). This document must not be acted on or relied on by persons who are not relevant persons. Any investment or investment activity to which this document relates is only available to relevant persons and will be engaged in only with relevant persons. In other EEA countries, the report has been issued to persons regarded as professional investors (or equivalent) in their home jurisdiction. **Australia:** This material is issued and distributed by JPMSAL in Australia to "wholesale clients" only. This material does not take into account the specific investment objectives, financial situation or particular needs of the recipient. The recipient of this material must not distribute it to any third party or outside Australia without the prior written consent of JPMSAL. For the purposes of this paragraph the term "wholesale client" has the meaning given in section 761G of the Corporations Act 2001. J.P. Morgan's research coverage universe spans listed securities across the ASX All Ordinaries index, securities listed on offshore markets, unlisted issuers and investment products which Research management deem to be relevant to the investor base from time to time. J.P. Morgan seeks to cover companies of relevance to the domestic and international investor base across all GIC sectors, as well as across a range of market capitalisation sizes. **Germany:** This material is distributed in Germany by J.P. Morgan Securities plc, Frankfurt Branch which is regulated by the Bundesanstalt für Finanzdienstleistungsaufsicht. **Korea:** This report may have been edited or contributed to from time to time by affiliates of J.P. Morgan Securities (Far East) Limited, Seoul Branch. **Singapore:** As at the date of this report, JPMSS is a designated market maker for certain structured warrants listed on the Singapore Exchange where the underlying securities may be the securities discussed in this report. Arising from its role as designated market maker for such structured warrants, JPMSS may conduct hedging activities in respect of such underlying securities and hold or have an interest in such underlying securities as a result. The updated list of structured warrants for which JPMSS acts as designated market maker may be found on the website of the Singapore Exchange Limited: http://www.sgx.com. In addition, JPMSS and/or its affiliates may also have an interest or holding in any of the securities discussed in this report – please see the Important Disclosures section above. For securities where the holding is 1% or greater, the holding may be found in the Important Disclosures section above. For all other securities mentioned in this report, JPMSS and/or its affiliates may have a holding of less than 1% in such securities and may trade them in ways different from those discussed in this report. Employees of JPMSS and/or its affiliates not involved in the preparation of this report may have investments in the securities (or derivatives of such securities) mentioned in this report and may trade them in ways different from those discussed in this report. **Taiwan**: Research relating to equity securities is issued and distributed in Taiwan by J.P. Morgan Securities (Taiwan) Limited, subject to the license scope and the applicable laws and the regulations in Taiwan. According to Paragraph 2, Article 7-1 of Operational Regulations Governing Securities Firms Recommending Trades in Securities to Customers (as amended or supplemented) and/or other applicable laws or regulations, please note that the recipient of this material is not permitted to engage in any activities in connection with the material which may give rise to conflicts of interests, unless otherwise disclosed in the "Important Disclosures" in this material. **India:** For private circulation only, not for sale. **Pakistan:** For private circulation only, not for sale. **New Zealand:** This material is issued and distributed by JPMSAL in New Zealand only to "wholesale clients" (as defined in the Financial Advisers Act 2008). The recipient of this material must not distribute it to any third

party or outside New Zealand without the prior written consent of JPMSAL. **Canada:** This report is distributed in Canada by or on behalf of J.P.Morgan Securities Canada Inc. The information contained herein is not, and under no circumstances is to be construed as an offer to sell securities described herein, or solicitation of an offer to buy securities described herein, in Canada or any province or territory thereof. The information contained herein is under no circumstances to be construed as investment advice in any province or territory of Canada and is not tailored to the needs of the recipient. **Dubai:** This report has been distributed to persons regarded as professional clients or market counterparties as defined under the DFSA rules. **Brazil:** Ombudsman J.P. Morgan: 0800-7700847 / ouvidoria.jp.morgan@jpmorgan.com.

General: Additional information is available upon request. Information has been obtained from sources believed to be reliable but JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) do not warrant its completeness or accuracy except with respect to any disclosures relative to JPMS and/or its affiliates and the analyst's involvement with the issuer that is the subject of the research. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Opinions and estimates constitute our judgment as of the date of this material and are subject to change without notice. Past performance is not indicative of future results. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. The recipient of this report must make its own independent decisions regarding any securities or financial instruments mentioned herein. JPMS distributes in the U.S. research published by non-U.S. affiliates and accepts responsibility for its contents. Periodic updates may be provided on companies/industries based on company specific developments or announcements, market conditions or any other publicly available information. Clients should contact analysts and execute transactions through a J.P. Morgan subsidiary or affiliate in their home jurisdiction unless governing law permits otherwise.

- **Guidance for 2020 initiated below our expectations as a result of incremental equity plans.** Initiated at $1.36-$1.40, which is consistent with the 5%-7% annual earnings growth target, but below our previewed expectation for $1.37-$1.43, largely the result of plans for an incremental $500-$700M equity issuance in late-2020 to help fund Lawrence MA incident expenses. This comes on top of ongoing and unchanged plans for $200-$300M annual ATM and $35-$60M employee plan equity (no plans for use of convertible or hybrid financing) with management targeting FFO/Debt ~14%-15%. We are reducing our 2019-2021 estimates a few pennies and no longer expect an accelerated earnings growth profile through 2022 toward the original pre-Lawrence earnings growth glidepath (which had been 5%-7% off a 2018 $1.30 base). Management's 5%-7% target remains an annual target over the long term (rather than a CAGR off a base year). **Miss for 3Q19 at $0.00 vs CS/consensus $0.09/$0.08.** With TTM tracking at $1.25, guidance for 2019 was maintained at $1.27-$1.33 vs CS/consensus $1.30.
- **In Indiana, NIPSCO announced the next RFP for new generating resources on Oct 1.** The electric base ratecase remains pending before regulators after a partial settlement was filed in April at a 9.9% ROE. Expect a final decision in 4Q with rates effective 1Q20.
- **Valuation.** We reduce our TP $1 to $29 after reducing our 2019-2021 estimates $0.02-$0.03 for higher line location inspection and remediation expense as well as increased dilution from $500-$700M equity to be issued in late 2020 to finance spending for the Lawrence incident not covered by insurance. Our TP remains based on peer 2021 electric and gas P/Es within our SoTP.
- **Maintain Neutral rating with ~6%-8% total return potential over the next 12 months.** We continue to apply a -0.5x discount to the gas utilities for increased operational and regulatory risk pending more clarity and certainty over Safety Management System (SMS) implementation and new safety system installations across all NI gas service territories over the 6-12 months. We also value the electric operation in Indiana at a 1.5x premium for excellent operations and supportive regulation. Risks include regulatory, interest rates, project execution, operational risk around gas line upgrades, and

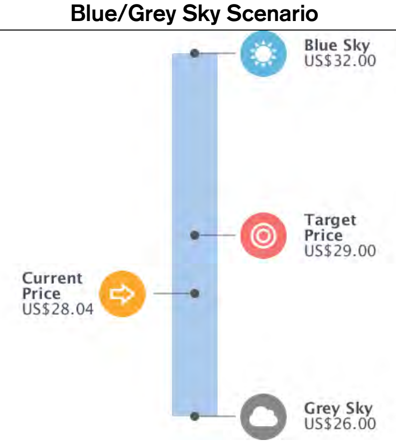
Company Background

NiSource Inc. is energy holding company whose subsidiaries provide natural gas, electricity & other products & services. It operates in 3 segments: Gas Distribution Operations; Gas Transmission & Storage Operations, & Electric Operations.

Blue/Grey Sky Scenario



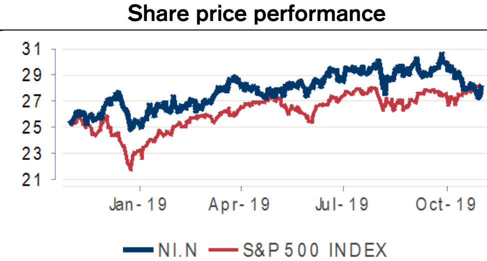
Our Blue Sky Scenario (US$) **(from 35.00) 32.00**

In our blue sky scenario we assume favorable regulatory outcomes across NI's jurisdictions, successful execution of their capital plan, and growth of infrastructure replacement program backlog. We assume that capex is at the high end of the \$1.7-\$1.8B and that NI is able to grow ratebase at the high end of their 8-10% range and grow earnings at the high end of their 5-7% range. We assume a 2.0x premium to the average peer 2021 P/E multiples.

Our Grey Sky Scenario (US$) **26.00**

In our grey sky scenario we assume unfavorable regulatory outcomes across NI's jurisdictions, only partial execution of their capital plan, and a decline in the infrastructure replacement program backlog. We assume that capex is at the low end of the \$1.7-\$1.8B and that NI is able to grow ratebase at the low end of their 8-10% range and grow earnings at the low end of their 5-7% range. We assume a -1.5x discount to the average peer 2021 P/E mult.

Share price performance



On 31-Oct-2019 the S&P 500 INDEX closed at 3037.56
Daily Nov01, 2018 - Oct31, 2019, 11/01/18 = US$25.37

Additional Comment

- **See our recent reports:** 5/24 "2019 AGA Financial Conference – Takeaways" and 5/2 'Guidance Remains Firm as Focus Shifts West".
- **Capex for gas and electric transmission.** Management now guides to annual infrastructure investment of \$1.7B-\$1.8B for 2019 and 2020 vs May 2019 guidance for \$1.6B-\$2.0B from 2020-2022. Spending categories include gas pipeline transmission capital (Ohio) and higher spending for electric transmission in Indiana to support future renewables. Information Technology upgrades for grid modernization are also included.
- **New Chief Safety Advisor.** NiSource has appointed Nick Stavropoulous Chief Safety Advisor for Columbia Gas of Massachusetts. Stavropoulous will be working on operational safety strategy and planning statewide. Prior to this role, Stavropoulos worked for PG&E since 2011 and lead the multi-billion-dollar recovery and restoration effort following the San Bruno explosion. (Press Release).
- **NTSB report on Oct 24 for the Greater Lawrence incident says company response to earlier recommendations (Nov 2018) is "acceptable".** Further service line verifications for safety compliance continue for ~2000 abandoned lines, with inspections expected to be complete by yearend. For 3Q19, the company booked a small \$21M incremental cost for estimated third-party claims and related other expenses net of insurance recoveries recorded. Total estimated cost of the event remains essentially unchanged at \$1.6-\$1.7B.
- **Another incident in Lawrence, MA.** In September, a ruptured gas main forced the temporary evacuation of homes in Lawrence, MA, the site of a 2018 incident that resulted in citywide explosions on Columbia Gas' distribution system as a result of human error (see our Aug 7th Downgrade to Neutral on Gas Operations Risk). A joint statement from NI's Columbia Gas and the MA Department of Public Utilities (DPU) stated that road paving contractors working for the City of Lawrence "…inadvertently closed a gas valve, puncturing an active gas main. Preliminarily, it appears that this gas valve should have been disabled as part of pipeline reconstruction in 2018 and was not compliant with DPU standards." A DPU investigation into the incident is ongoing, while Senator Warren has pledged to demand "answers from Columbia Gas and NiSource about why they keep placing our residents and first responders at risk."
- **No material changes to Greater Lawrence incident cost estimate.** These remain \$1.6-\$1.7B as illustrated in the table below, of which \$1.4B is expensed rather than capitalized, with about \$600M uncovered by \$800M of casualty insurance (plan to fund with equity in late 2020). Casualty insurance recoveries recorded through 3Q19 total \$670M, a figure that should increase toward the \$800M cap in early 2020 as claims are processed. Property insurance covering up to \$300M remains a pending issue, with proceeds expected to cover about 45 miles of pipeline replacement capital costs. Recall that in July 2019, NI announced a \$143M settlement of all class action lawsuits, which helps the company firm up final cost estimation. Any amount of this work not covered by insurance could theoretically become the subject of rate recovery, although we would expect the company to step gingerly around this sensitive issue. All four major liability classifications for the Greater Lawrence incident are known quantities, including:

    1) a \$250-\$260M settlement with the cities of Andover, Lawrence, and North Andover to replace the entire gas distribution system, including ~\$80M for paving and property restoration. NI is filing for recovery of capital costs under \$300M of property insurance.
    2) bodily injury claims: The April announcement of a settlement with the Figueroa family, of Lawrence, which had several individuals injured
    3) class action lawsuits and remediation, including more than 25K claims settled with a mediator for \$143M, and;

4) The July announcement of a settlement between the company and the family of Leonel Rondon, who lost his life in the incident.

Figure 1: Estimated Expenses and Insurance Coverage Related to the Greater Lawrence Incident, with Change Since 2Q19 ($M)

Estimated Amounts of Costs and Expenses Related to the Greater Lawrence Incident ($M)						Portion recorded to date 9/30/19		Insurance collected (cash) to date 9/30/19		Difference since 6/30/19

Property insurance (gas pipelines)	$	300	$	300	$	-				

Source: Company data, Credit Suisse estimates

- **GSEP tracker a positive sign in Massachusetts.** Recall that in Oct 2018, NI filed for recovery of $64M investment in FY2019 under the Gas System Enhancement Plan (GSEP). Rates were approved effective May 2019.
- **Upgrades of other low pressure systems outside of Massachusetts planned through 2019.** As part of the response to the Massachusetts over pressurization incident in September, the company plans to reprioritize the installation of upgrades to other similar low pressure (i.e., older) systems in Ohio, PA, and elsewhere, including the fitting of safety shutoff and remote monitoring systems to modernize them into medium pressure systems with regulators at each location. Although this is a $150M capital program in 2019, it is not expected to significantly change the company's 2019 $1.6-$1.7B annual capital plan as this is simply a reprioritization within the budget.
- **Light dividend increase points to turbulence in 2019, but cash flows will continue to improve nevertheless.** On Feb 1, NI raised its dividend only 2.5%, well below the expected 5%-7% that would be in-line with EPS growth. We expect dividend growth to resume a normal 5%-7% in 2020 and beyond. **Improving cash flows.** Still expect ~14%-15% FFO/Debt long-term, driven by a combination of strengthening cash flows and de-leveraging.

Regulatory Updates

- **Pending regulatory approvals:**

1) **Wind CPCN filings** made on Feb 1st, 2019 seeking approvals to develop 3 wind farms consistent with the IRP filed in the fall of 2018. Orders approving the PPAs on these filings were received on June 5, 2019 and the wind farms are expected to be built by yearend 2020. The three wind farms include Jordan Creek (400 MW), Roaming Bison (300 MW), and Rosewater (100 MW). On Oct 22, 2019, a Build-Transfer Agreement BTA was filed for Indiana Crossroads JV between NIPSCO and EDP Renewables (302 MW). An order is expected Feb 2020.

2) **Columbia Gas of MD** requested a $2.5M increase net of trackers on May 22, 2019. The request seeks to support continued replacement of aging

pipelines and adoption of pipeline safety upgrades. An order is expected in 4Q19.

3) **NIPSCO Electric** filed a partial settlement in its base ratecase in April 2019. The settlement addresses revenue requirement, federal tax reform and depreciation schedules and allows for 9.9% ROE. An order is expected in 4Q19.

- **Clarity from legislation in IN drives filing of a new gas TDSIC plan**. While the company continues to execute its approved TDSIC plans businesses through 2020 and 2022 for gas and electric, respectively, the passage of the H.B. 1470 provides clearer guidelines on items that can be included in a TDSIC plan. As result, management filed and received approval on Oct 16, 2019 for gas TDSIC10 covering $12.4M incremental capital between July 2018 and April 2019

- **Columbia Gas of Ohio received approval for a CEP rider covering $121.7M of investment in 2018 on Aug 28** with rates effective Sep. 2019.

    1) **Columbia Gas of Ohio CEP rider settlement for $74.5M was reached on Oct 25, 2018.** Essentially, this would apply some cash tax savings toward the deferred recovery of Capital Expense Program spending since 2011. Under a 2011 agreement, NI had been allowed to spend on non-IRP capital spending in Ohio with recovery deferred until a ratecase (at a 10.95% ROE) in 2020. However, given the new headroom in rates from a lower revenue requirement for a lower tax rate, management filed for an initial $69.8M of recovery starting Aug 2018 for investments through Dec 2015 but deferred through Dec 2017. Going forward, the company had also requested revenue requirement increases to $90.1M in Aug 2020 and $108M in Aug 2022 for additional investment. A 9/4/18 audit returned virtually no red flags (only $200k), but the settlement reached on Oct 25, 2018 includes a $74.5M annual increase. The CEP case is one to watch as this is the first filing of its kind and seeks recovery of a $400M regulatory asset.

- **Columbia Gas of Ohio Infrastructure Replacement Program.** On April 24th, 2019, the Public Utilities Commission of Ohio (PUCO) approved Columbia Gas of Ohio's (COH) annual Infrastructure Replacement Program tracker adjustment, allowing cost recovery of ~$199.6M of 2018 infrastructure investments. Recall that a 2017 settlement allowing COH to continue the IRP tracker through 2022 was previously approved in Jan 2018. The IRP program covers the replacement of priority mainline pipes and targeted customer service lines.

- **Partial settlement in Indiana ratecase, with final order expected by yearend for rates effective 1Q20.** The April 2019 partial settlement included revenue requirements and accelerated depreciation schedules related to early retirement of coal plants, including an agreement to reduce the book lives of $1.5B coal ratebase to match retirement plans at an average 2032 vs the prior 2030s-2040s. Non-protected accumulated deferred income tax passback amortization has also been agreed at a comfortable 10-year amortization period. Remaining talks appear to be more focused on rate design and allocation issues among customer groups rather than on the more investor-centric issues as discussed above. While these are all important policy issues, we note that the incremental revenue requirement in the case is only $22M.

    1) **Indiana electric rate case** filed 10/31 in conjunction with the new Integrated Resource Plan (IRP) calling for 100% coal retirements by 2028 (vs. prior plan for 50% by 2023), replaced with renewables rather than natural gas. The IRP calls for retirement of 80% of the coal fleet by 2023 and 100% by 2028 (vs. prior plan 50% by 2023). The plan also points toward rapidly declining-cost renewables (wind, solar, batteries) rather than the gas-fired replacements that were planned within the last 2016 IRP.

NIPSCO Electric filed a $21.4M annual base rate request on Oct 31, 2018 in conjunction with the new 2018 Integrated Resource Plan filing also filed on Oct 31. A partial settlement for the ratecase was filed on April 26th with an order is expected by yearend 2019 and if approved, rates would be effective as of 1Q20. With much of the new generation in service in 2023 and beyond, the ratecase is less important as a near-term earnings driver. The rate filing also includes changes to the depreciation schedules for the IRP's planned early retirements of coal, along with rate design changes to provide more tariff flexibility to industrial customers. A second all-source RFP is planned for later in 2019 and additional RFPs could be issued around 2021 to meet the 2023 80% goal (and take advantage of renewable tax credit programs before they completely ramp down). The IRP as submitted favors significant amounts of wind in the early years of the plan (take advantage of PTC tax credits in Phase 1 prior to 2020), although solar should become more economic after 2020. Management expects to have a better idea of timing on retirements and investment by mid-2019. Furthermore, we note that Indiana historically prefers utility ratebase generation vs. PPAs. For Phase 3 after 2023, the utility is likely to rely on PPA contracts for a remaining 400-MW hole. By 2028, all coal units including Michigan City are expected to be retired.

- **Another RFP for the Indiana Electric Integrated Resource Plan (IRP), which calls for 100% coal retirements by 2028.** A second all-source RFP was opened on Oct 1, 2019 for needs in 2023. NI takes a laddered approach to portfolio planning, so we expect to see a combination of PPAs and possible ratebase plants out of the process, with the possible acceleration of coal retirements. The first 2018 all-source RFP had seen a strong response (80 bidders) and the company filed for a Certificate of Public Convenience and Necessity (CPCN) on Feb 1, 2019 for a 20-year PPA for 100% of the output from the 400-MW Jordan Creek and 300-MW Roaming Bison wind farms. The company is also seeking approval for a BTA for the 100-MW Rosewater facility, a JV between NIPSCO and EDP Renewables. The final IRP will be developed in coordination stakeholders. The final IRP will be developed in coordination with stakeholders, with specific plans approved by regulators after RFP results.

1) **Renewables favored over CCGTs in the IRP.** This is a rather stunning development in our opinion, especially since it relates to a near-term need (next few years) rather than middle of next decade as has been the case with CMS's longer-term coal replacement plans. The company says that CCGTs offered into the RFP have been in the $800-$900/kW cost range, well above the ~$300/kW needed to compete with tax advantaged wind, solar, and storage. Note that solar becomes more attractive than wind after 2020 as both the wind PTC and solar ITC begin to sunset. As we've noted previously, regulated utilities will increasingly find themselves more competitive with ratebased solar after 2022 when the ITC drops to 10% and the disadvantage of required tax normalization doesn't handicap utilities as much vs. non-regulated third parties. For NIPSCO, the company's existing gas fleet will help balance the system as coal is replaced with renewables, although eventually (after 2028), more gas peakers may be needed. However, we would add here that with the cost of battery storage coming down too, gas peakers might eventually find themselves under threat as well.

2) **Use of tax equity proposed.** Regulated utilities that build solar projects in ratebase must amortize the Investment Tax Credit (ITC) over the life of assets to tax normalize the credit across present and future customers. While it has so far been unusual for regulated utilities to use tax equity, we note that NIPSCO has proposed a tax partnership structure within the Indiana IRP, a request that management acknowledges requires a special explanatory effort to regulators on the cost benefits vs the extra level of complexity. If

successful, we suspect that other utilities may try similar proposals in other states as well.

- **Columbia Gas of Massachusetts Gas System Enhancement Plan (GSEP)** received regulatory approval on Apr. 30th, 2019 allowing the recovery of $64M in investments and priority pipe replacement to be done in 2019. Note that this cost recovery is separate from those related to the Great Lawrence incident.

- **NIPSCO filed PHMSA Compliance Plan with the IN Utility Regulatory Commission on Dec. 31st, 2018**. This plan will cover $230M capital investment related to the federally mandated pipeline safety compliance plan for 2019 through 2023. Approval was received on Sept 4, 2019.

- **Remain on track for $30B in infrastructure investments, seven-year modernization programs.** NI has identified ~$30B in long-term infrastructure investment opportunities, with $20B from gas distribution operations and $10B from electric operations. After legal challenges, a filing this year was withdrawn that would have extended the 7-year NIPSCO Gas System Modernization Plan (TDSIC) past 2020. However, under the IURC-approved seven-year electric infrastructure modernization program remains in effect for now, and NIPSCO expects $1.2B in electric infrastructure investments to be made through 2022. The company's latest $131.1M tracker covers incremental capital investments made from Dec 2018 through June 2019 and remains pending before the IURC. An order is expected in 4Q19, with rates effective in Jan 2020.

Figure 2: NI Major Gas and Electric Utility Infrastructure Programs

	Authorized ROEs	Ratebase (YE 2018)	Total Identified Infrastructure Investments	Modernization Programs	Annual Modernization	Recovery Mechanism	Notes
Gas Distribution ~$20B in Identified Long-Term Infrastructure Investment Opportunities							
Columbia Gas Maryland	9.70%	$127M	$210M	$130M	$16-$20M	Tracked	New case filed May 22, 2019 for $3.7M ($2.5M net of trackers) with order expected 4Q19.
Columbia Gas Massachusetts	9.55%	$991M	$2.1B	$1.0B	$64-$120M	Tracked	Requested Increase: $24.1M, net of infrastructure trackers; filed: 4/13/2018 Settlement withdrawn Sept 19; refiling decision expected in late 2019 or early 2020
Columbia Gas of PA	Settlement - not specified	$1.7B	$4.3B	$3.2B	$240-$290M	Base rates (forward TY)	
NIPSCO Gas Base Rates	9.85%	$1.5B	$4.9B			Base rates	First base rate request in 25 years filed 9/27/17. Inclusive of various tracker programs, had sought annual revenue increase of $138.1M based on 10.7% ROE on 46.02% equity on $1.5B ratebase (yearend 2018), with ~half for higher depreciation rates. Settlement Filed for $107.3M on 4/20/2018 and was approved Sept 19 as filed. Rates effective Oct 1.
NIPSCO Gas System Modernization Program				$3.7B	$130-$190M	Tracked with TDSIC	7 Year plan update filing 4/2/18. Investment of ~$1.25B. • Long-term infrastructure modernization program • TDSIC10 filing covers $12.4M in incremental capital investments made between July 2018 and April 2019. • Filed June 25, 2019 • Order received Oct. 16, 2019 • New rates effective Nov. 2019
NIPSCO Gas - PHMSA	Recovery of Federally Mandated Pipeline Safety Compliance Plan Settled as part of Base Rate Case include $230M for 2019-2023						Filed Dec. 31, 2018 • Order received Sept. 4, 2019
Columbia Gas of Ohio IRP Annual Rider Update	Supports continued infrastructure replacement investments Includes $199.6M of capex in 2018						Filed 2/28/2019; Order received 4/24/2019; rate effective 5/1/2019
Columbia Gas of Ohio (CEP)	Recovery of certain capital investments and related deferred expenses not recovered through the IRP tracker • Order covers $121.7M of capital investments made in 2018						Filed Feb. 28, 2019 • Order received Aug. 28, 2019 • New rates effective Sept. 2019
Columbia Gas of Ohio (IRP)	Settlement - not specified	$2.8B	$5.6B	$3.0B	$230-$270M	Tracked	Settlement for IRP 5-year extension through Dec 2022 filed 8/18/17 with approval on 1/31/2018
Columbia Gas Virginia	Settlement - not specified	$711M	$1.8B	$0.5B	$35-$60M	Tracked	Base ratecase settlement approved in Mar 2017. Filed again in Aug 2018 for a $22M increase, including $8M of tracker roll-in. Settlement for $9.5M revenue increase and $1.3M net of infrastructure trackers filed 4/19/2019; Order received June 12 and and rates effective July 2019.
Columbia Gas Kentucky	Settlement - not specified	$302M	$1.1B	$850M	$30-$40M	Tracked	Seeks to recover $40.4M for 2020 capital investments • AMRP rider allows company to recover capital investments not currently recovered in base rates • Application includes request to recover capital to be spent on low-pressure systems safety enhancements Filed Oct. 15, 2019 • Order expected by YE2019 • Rates expected to be effective Jan. 2020
NIPSCO Electric ~$10B in in Identified Long-Term Infrastructure Investment Opportunities							
Wind CPCN Filings	Sought approval for 20-year PPAs to purchase 100% of the output from the Jordan Creek (400MW*) and Roaming Bison (300MW*). Also sought approval for Build-Transfer Agreement (BTA) for Rosewater (100MW*), a joint venture between NIPSCO and EDP Renewables. All three projects expected to be constructed by the end of 2020. BTA CPCN application filed for Indiana Crossroads (302MW), a second joint venture between NIPSCO and EDP Renewables						Filed Feb 1, 2019 with PPAS APPROVED June 5, 2019. Rosewater BTA approved Aug 2019. Indiana Crossroads CPCN filed Oct 22, 2019 - expect order Feb 2020 - expected in-service 4Q21
NIPSCO Indiana Base Ratecase	Seeks changes to the company's depreciation schedules related to the early retirements of coal-fired generation plants called for in the IRP. Proposes changes to tariffs to provide service flexibility for industrial customers to remain competitive in the global marketplace. Requests $21.4M annual revenue increase. Partial settlement that addresses revenue requirement, federal tax reform, depreciation schedules and allows for 9.9% ROE						Filed Oct 31, 2018; partial settlement filed 4/26/2019. Hearings July-Aug 2019 and order expected in 4Q19 and rates expected to be in effect 1Q20.
Integrated Resource Plan (IRP)	The 2018 IRP calls for retirement of nearly 80 percent of NIPSCO's coal-fired generation fleet by 2023 and the remaining coal-fired units by 2028. Replacement options point toward lower-cost renewable energy resources such as wind, solar and battery storage technology. The prior 2016 IRP had called for retiring 50% of coal-fired generation fleet by end of 2023, including Bailly 7/8 (MISO approved closure by mid-2018) and R.M. Schahfer Units 17 and 18.						Stakeholder process initiated Mar. 2018; third stakeholder meeting held 7/24/18. 2018 IRP submitted to IURC Oct 31, 2018. Second round of RFPs launched Oct. 1, 2019
Electric System Modernization (20+ years)	9.975%		$4.9B	$1.3B	$185-$215M	Tracked - TDSIC	Seven-year ~$1.25B electric system modernization program in progress 2016-2022 at $175M-$225M/yr. Focused on electric transmission and distribution investments designed to improve system reliability and safety. TDSIC 6 semi-annual tracker update filed Aug 2019 covering $131.1M in investments from December 2018 - June 2019. Expect order in 4Q19, rates effective Jan 2020.
Environmental Compliance (~7 years) at Michgan City, RM Schahfer stations	Address requirements under U.S. EPA's Effluent Limitation Guidelines (ELG) and Coal Combustion Residuals (CCR) rules		$0.4B		$10-$90M	Tracked - FMCA	Costs to be recovered through Federally Mandated Cost Adjustment (FMCA) mechanism. CCR $193M settlement approved 12/13/17. Construction underway, expected completion by 1Q19 ELG moved to a later proceeding.
Transmission Project I (100-mi, 345-kV Reynolds-Topeka; 2H18)			$350-$400M		$50-$120M	FERC Formula	Completed and in-service June 2018
Transmission Project II (65-mi, 765-kV Greentown-Reynolds Partnership; 2H18)			NI: $175-$200M		$25-$50M	FERC Formula	Completed and in-service June 2018

Source: Company data, Credit Suisse estimates

- **More gas utility rate activity:** Aside from annual filings in Pennsylvania, we expect filings every few years in NI's other jurisdictions to recover remaining capital not picked up under tracker mechanisms.
- **Rate headroom supports investment.** Following tax reform, NI's NOL carryforward had been revalued to $508M, which is expected to continue to provide a cash tax benefit that extends beyond 2025. The re-measurement of deferred tax liabilities decreases regulatory liabilities by ~$1.5B. The amortization of this regulatory liability and the reduction in the pass-through tax expense for customer bills provide additional rate headroom for incremental investments in necessary utility infrastructure.
- **O&M cost –** pipeline inspection and remediation costs notwithstanding, the company has previously guided to flattish O&M going forward, with some deviance due to timing issues.
- **Valuation:** We reduce our TP $1 to $29 after reducing our 2019-2021 estimates $0.02-$0.03 for higher line location inspection and remediation expense as well as increased dilution from $500-$700M equity to be issued in late 2020 to finance spending for the Lawrence incident not covered by insurance. Our TP remains based on peer 2021 electric and gas P/Es within our SoTP. We value the electric operation in Indiana at a 1.5x premium for excellent operations and supportive regulation, but apply a -0.5x discount to the gas utilities for increased operational and regulatory risk pending more clarity and certainty over safety management system installations across all NI gas service territories. With the impact from equity dilution now baked into our 2021 estimates, we have removed the explicit negative credit for ~$700M of unrecovered Greater Lawrence expense that had been in our SoTP previously, along with prior offsetting credit for the treatment of Lawrence expense carrying cost as a short-term phenomenon (i.e., we had assumed accelerated earnings growth at the top end of 5%-7% through 2022 previously). Risks include regulatory, interest rates, project execution, operational risk around gas line upgrades, and political/legislative changes.

Figure 3: NI Valuation

		BASE CASE			
	2021 EPS	Prem / Disc	Effective P/E	Equity	Equity / Sh
Electric	$0.65	1.5x	21.4x	$5,219	$13.83

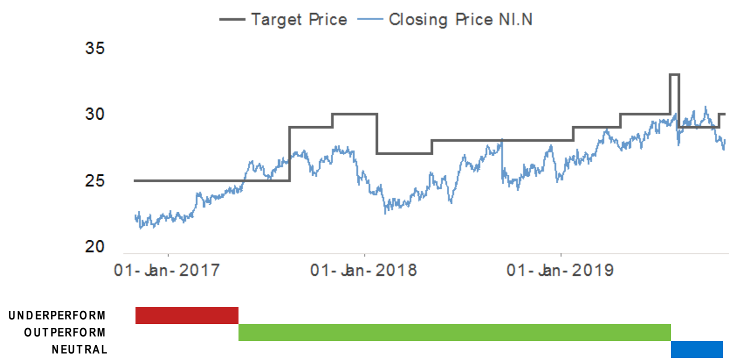
** Asterisk signifies initiation or assumption of coverage.*



As of December 10, 2012 Analysts' stock rating are defined as follows:
Outperform (O) : The stock's total return is expected to outperform the relevant benchmark* over the next 12 months.
Neutral (N) : The stock's total return is expected to be in line with the relevant benchmark* over the next 12 months.
Underperform (U) : The stock's total return is expected to underperform the relevant benchmark* over the next 12 months.

**Relevant benchmark by region: As of 10th December 2012, Japanese ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. As of 2nd October 2012, U.S. and Canadian as well as European ratings are based on a stock's total return relative to the analyst's coverage universe which consists of all companies covered by the analyst within the relevant sector, with Outperforms representing the most attractive, Neutrals the less attractive, and Underperforms the least attractive investment opportunities. For Latin American and Asia stocks (excluding Japan and Australia), ratings are based on a stock's total return relative to the average total return of the relevant country or regional benchmark (India - S&P BSE Sensex Index); prior to 2nd October 2012 U.S. and Canadian ratings were based on (1) a stock's absolute total return potential to its current share price and (2) the relative attractiveness of a stock's total return potential within an analyst's coverage universe. For Australian and New Zealand stocks, the expected total return (ETR) calculation includes 12-month rolling dividend yield. An Outperform rating is assigned where an ETR is greater than or equal to 7.5%; Underperform where an ETR less than or equal to 5%. A Neutral may be assigned where the ETR is between -5% and 15%. The overlapping rating range allows analysts to assign a rating that puts ETR in the context of associated risks. Prior to 18 May 2015, ETR ranges for Outperform and Underperform ratings did not overlap with Neutral thresholds between 15% and 7.5%, which was in operation from 7 July 2011.*

Restricted (R) : In certain circumstances, Credit Suisse policy and/or applicable law and regulations preclude certain types of communications, including an investment recommendation, during the course of Credit Suisse's engagement in an investment banking transaction and in certain other circumstances.
Not Rated (NR) : Credit Suisse Equity Research does not have an investment rating or view on the stock or any other securities related to the company at this time.
Not Covered (NC) : Credit Suisse Equity Research does not provide ongoing coverage of the company or offer an investment rating or investment view on the equity security of the company or related products.

Volatility Indicator [V] : A stock is defined as volatile if the stock price has moved up or down by 20% or more in a month in at least 8 of the past 24 months or the analyst expects significant volatility going forward.

Analysts' sector weightings are distinct from analysts' stock ratings and are based on the analyst's expectations for the fundamentals and/or valuation of the sector* relative to the group's historic fundamentals and/or valuation:
Overweight : The analyst's expectation for the sector's fundamentals and/or valuation is favorable over the next 12 months.
Market Weight : The analyst's expectation for the sector's fundamentals and/or valuation is neutral over the next 12 months.
Underweight : The analyst's expectation for the sector's fundamentals and/or valuation is cautious over the next 12 months.

**An analyst's coverage sector consists of all companies covered by the analyst within the relevant sector. An analyst may cover multiple sectors.*

Credit Suisse's distribution of stock ratings (and banking clients) is:

Global Ratings Distribution

Rating	Versus universe (%)	Of which banking clients (%)
Outperform/Buy*	47%	(32% banking clients)
Neutral/Hold*	38%	(26% banking clients)
Underperform/Sell*	13%	(23% banking clients)
Restricted	2%	

**For purposes of the NYSE and FINRA ratings distribution disclosure requirements, our stock ratings of Outperform, Neutral, and Underperform most closely correspond to Buy, Hold, and Sell, respectively; however, the meanings are not the same, as our stock ratings are determined on a relative basis. (Please refer to definitions above.) An investor's decision to buy or sell a security should be based on investment objectives, current holdings, and other individual factors.*

Target Price and Rating
Valuation Methodology and Risks: (12 months) for NiSource Inc. (NI.N)

Method: We arrive at our $29 target price for NI by applying a -0.5x discount to the gas segment peer 2021 P/E to reflect the increased operational and regulatory risk across its gas utilities after explosive incidents in both Mass and Pennsylvania in 2018 and 2019, respectively, despite otherwise constructive regulatory environments with capex trackers in place in the jurisdictions that NI operates. We also apply a 1.5x premium to the average peer electric utility 2021 P/E multiple for NIPSCO Electric utility in Indiana to reflect the favorable ratebase growth profile and regulatory environment in the state. Our Neutral rating reflects a forecasted total return that is equal the group average.

Risk: Risks to our $29 target price and Neutral rating are: 1) ROE risk related to the ongoing ratecases 2) continued approvals relating to infrastructure replacement/grid modernization programs 3) commodity risk, 4) interest rate risk, 5) derivative risk, 6) load growth risk particularly in the non-decoupled jurisdictions, 7) weather risk, and 8) environmental and climate change risk, 9) physical infrastructure and cybersecurity risk, 10) Operational and regulatory risk in MA, PA and possibly other jurisdictions after explosive incidents involving the installation of new pipe systems and safety equipment.

Please refer to the firm's disclosure website at https://rave.credit-suisse.com/disclosures/view/selectArchive for the definitions of abbreviations typically used in the target price method and risk sections.

CS will not treat recipients of this report as its customers by virtue of their receiving this report. The investments and services contained or referred to in this report may not be suitable for you and it is recommended that you consult an independent investment advisor if you are in doubt about such investments or investment services. Nothing in this report constitutes investment, legal, accounting or tax advice, or a representation that any investment or strategy is suitable or appropriate to your individual circumstances, or otherwise constitutes a personal recommendation to you. Please note in particular that the bases and levels of taxation may change. Information and opinions presented in this report have been obtained or derived from sources believed by CS to be reliable, but CS makes no representation as to their accuracy or completeness. CS accepts no liability for loss arising from the use of the material presented in this report, except that this exclusion of liability does not apply to the extent that such liability arises under specific statutes or regulations applicable to CS. This report is not to be relied upon in substitution for the exercise of independent judgment. CS may have issued, and may in the future issue, other communications that are inconsistent with, and reach different conclusions from, the information presented in this report. Those communications reflect the different assumptions, views and analytical methods of the analysts who prepared them and CS is under no obligation to ensure that such other communications are brought to the attention of any recipient of this report. Some investments referred to in this report will be offered solely by a single entity and in the case of some investments solely by CS, or an associate of CS or CS may be the only market maker in such investments. Past performance should not be taken as an indication or guarantee of future performance, and no representation or warranty, express or implied, is made regarding future performance. Information, opinions and estimates contained in this report reflect a judgment at its original date of publication by CS and are subject to change without notice. The price, value of and income from any of the securities or financial instruments mentioned in this report can fall as well as rise. The value of securities and financial instruments is subject to exchange rate fluctuation that may have a positive or adverse effect on the price or income of such securities or financial instruments. Investors in securities such as ADR's, the values of which are influenced by currency volatility, effectively assume this risk. Structured securities are complex instruments, typically involve a high degree of risk and are intended for sale only to sophisticated investors who are capable of understanding and assuming the risks involved. The market value of any structured security may be affected by changes in economic, financial and political factors (including, but not limited to, spot and forward interest and exchange rates), time to maturity, market conditions and volatility, and the credit quality of any issuer or reference issuer. Any investor interested in purchasing a structured product should conduct their own investigation and analysis of the product and consult with their own professional advisers as to the risks involved in making such a purchase. Some investments discussed in this report may have a high level of volatility. High volatility investments may experience sudden and large falls in their value causing losses when that investment is realised. Those losses may equal your original investment. Indeed, in the case of some investments the potential losses may exceed the amount of initial investment and, in such circumstances, you may be required to pay more money to support those losses. Income yields from investments may fluctuate and, in consequence, initial capital paid to make the investment may be used as part of that income yield. Some investments may not be readily realisable and it may be difficult to sell or realise those investments, similarly it may prove difficult for you to obtain reliable information about the value, or risks, to which such an investment is exposed. Source: Morningstar

Bulls Say

- We expect annual dividend growth to average 6% from 2020 to 2023.
- We believe the separation of the Columbia Pipeline Group from NiSource was good shareholder stewardship, as the market valued the individual businesses more highly at the time of the separation.
- New legislation has improved the regulatory framework in Indiana for NiSource's electric and natural gas distribution utilities.

Bears Say

- Industrial customers account for over half of NiSource's electric sales, higher than most utilities. Industrial sales are more sensitive to the economy than residential and commercial sales.
- Liabilities and fines from the September natural gas explosion in Massachusettes are likely to exceed the amounts covered by insurance and also strain regulatory relationships.
- NiSource's common shares increased 15% and it issued about $900 million of preferred shares in 2017 and 2018. The additional shares will be a headwind to EPS growth.

NiSource's Annual Dividend Growth Should Resume Mid-Single-Digit Levels in 2020

Business Strategy and Outlook

Charles Fishman, CFA, Eq. Analyst, 08 October 2019

NiSource completed its separation from Columbia Pipeline Group in 2015 and now derives all of its operating revenue from its regulated electric and natural gas distribution utilities. About two thirds of operating income comes from its seven natural gas distribution utilities. The remaining third comes from its electric utility business in Indiana.

NiSource's utilities have regulatory frameworks that include automatic rate tracker mechanisms for over 75% of planned capital expenditures, providing recovery of investments in less than 12 months. As a result of the favorable regulation, NiSource has stepped up its capital expenditures to almost $2 billion per year over the next five years. This is an investment level almost double the previous five years.

Over the next 20 years, NiSource plans to invest about $30 billion in infrastructure improvements. Over 50% of these investments are modernization programs for replacing steel and cast-iron pipe with plastic at its natural gas distribution utilities. Almost all of these investments receive rate tracker treatment. This allows NiSource to earn returns on these investments near allowed returns and reduces regulatory risk.

In September 2018, a natural gas explosion killed one person north of Boston on NiSource's Columbia Gas of Massachusetts system. Although the incident was caused by a contractor, the National Transportation Safety Board concluded at a September 2019 hearing that the ultimate responsibility for the incident rests with NiSource. Insurance should cover a significant portion of the costs, but the event was a public-relations nightmare and did have a negative effect on 2018 and 2019 earnings. Still, we expect annual earnings growth to be back to 6% by 2020.

NiSource cut its dividend in 2015 to $0.62 per share annualized after the separation from CPG. The company increased its dividend by 9.4% in 2017 and 11.4% in 2018. However, in part due to the Boston tragedy, dividend growth was only 2.6% in 2019. As earnings recover, we expect 6% annual dividend increases through 2023, at the midpoint of management's target of 5%-7%.

Analyst Note

Travis Miller, Strategist, 07 October 2019

We are reaffirming our fair value estimates and moat ratings for all U.S. utilities after updating our 2020-30 U.S. power generation forecast.

Our forecast shows natural gas generation expanding its leading market share in the U.S. power generation market through 2030. But our forecast also shows renewable energy moving into second place, overtaking coal, nuclear, and hydropower generation.

We think this sets up a "bloody" fight for market share by the end of the next decade: natural gas vs. renewable energy. Renewable energy has policy momentum and its costs are now competitive with natural gas generation even at today's low gas prices and without tax subsidies. But gas generators offer grid reliability, a key competitive advantage.

We forecast U.S. renewable energy will top 1,000 terawatt-hours by 2030, or 22% of U.S. electricity generation, excluding hydropower. The ramp down in solar and wind tax credits during the next five years won't slow growth as much as others assume. Our 8% CAGR in 2018-30 is higher than global growth rate forecasts and higher than the most recent U.S. Energy Information Administration reference case.

State renewable energy portfolio standards and corporate purchases will fill in any growth gaps related to tax roll-offs. We estimate 32 of the 38 states with renewable energy targets have not met their marks. New York (70% by 2030) and California (60% by 2030) represent one-third of our renewable energy growth forecast.

We forecast natural gas generation will grow 2% annually between 2019 and 2030, reaching 41% of U.S. generation. Coal and nuclear will each fall to 15% market share.

NiSource Inc NI (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★ 07 Oct 2019 21:46, UTC	29.33 USD 07 Oct 2019	27.00 USD 10 Apr 2019 21:27, UTC	1.09	2.71 07 Oct 2019	2.73 07 Oct 2019	10.95 07 Oct 2019	Utilities - Regulated Gas	Standard

Close Competitors	Currency (Mil)	Market Cap	TTM Sales	Operating Margin	TTM/PE
WEC Energy Group Inc WEC	USD	30,036	7,688	18.86	27.62
CMS Energy Corp CMS	USD	18,290	6,932	16.17	31.45
Alliant Energy Corp LNT	USD	12,774	3,580	19.67	24.88

Utilities with large renewable energy investment plans like NextEra Energy and Xcel Energy will continue to benefit from our higher renewable energy growth forecast. We think the market overlooks renewable energy growth potential from wide- and narrow- moat utilities like CMS Energy, NiSource, Edison International, Alliant Energy, and Dominion Energy.

Economic Moat

Charles Fishman, Eq. Analyst, 08 October 2019

Service territory monopolies and efficient scale advantages are the primary moat sources for NiSource's regulated utilities. State and federal regulators typically grant regulated utilities exclusive rights to charge customers rates that allow the utilities to earn a fair return on and return of the capital they invest to build, operate, and maintain their infrastructure. In exchange for regulated utilities' service territory monopolies, state and federal regulators set returns at levels that aim to minimize customer costs while offering fair returns for capital providers.

This implicit contract between regulators and capital providers should, on balance, allow NiSource's regulated utilities to achieve at least their costs of capital, though observable returns might vary in the short run based on demand trends, investment cycles, operating costs, and access to financing.

NiSource derives roughly 65% of its operating earnings from the regulated distribution of natural gas. For natural gas distribution service, regulators set distribution rates and the commodity price for customers purchasing natural gas from NiSource. NiSource recovers its costs for natural gas that it sells with a pass-through charge to customers. Thus, NiSource has no commodity price risk that could weaken its moat. Customers may elect to purchase natural gas from independent retail energy suppliers and use and pay for distribution services only. NiSource exited the no-moat retail energy supply business in 2010.

Electricity generation, which contributes about 35% of operating earnings, is from operations in Indiana and is also regulated. The rates for this service are combined with regulated customer rates for transmission and distribution service. In exchange for its monopoly position, state and federal regulators set NiSource's electric rates.

Fair Value & Profit Drivers

Charles Fishman, Eq. Analyst, 08 October 2019

We are reaffirming our fair value estimate of $27 per share. Our estimate assumes investments will exceed $9.5 billion over 2019 to 2023, in line with our previous five-year capital expenditure estimate.

NiSource management has said it has combined casualty and property damage insurance coverage of $1.1 billion and they expect to recover the majority of costs associated with the Boston incident. Based on caps on fines in Massachusetts and the amount of insurance coverage, we believe the under recovery and effect on earnings could be roughly $1 billion pretax. Over 50% of this amount has already been spent or reserved and is included in our fair value estimate. Over the long term, we believe the earnings and cash flow benefits from the acceleration of capital expenditures to replace substandard pipe in NiSource's entire system will offset a material portion of these unrecovered expenses.

We use a 6% cost of capital in our discounted cash flow valuation, which incorporates a 7.5% cost of equity. Our cost of equity is lower than the 9% rate of return we expect investors will demand of a diversified equity portfolio. We believe our cost of equity reflects the risk associated with regulated electric and natural gas distribution utilities operating in states that have average to above-average regulatory frameworks.

Our pretax cost of debt assumption is 5.8%, as we incorporate a normalized long-term real rate environment and normalized credit spreads. A 2.25% long-term inflation outlook underpins our capital cost assumptions.

Our fair value estimate implies a 19.6 times multiple on 2020 earnings. This is a discount to market valuations for peer utilities that we think are overvalued as of early October.

Risk & Uncertainty

Charles Fishman, Eq. Analyst, 08 October 2019

Regulatory risk remains the key uncertainty; however, NiSource's regulatory exposure is diversified, owing to

NiSource Inc NI (XNYS)

Morningstar Rating	Last Price	Fair Value Estimate	Price/Fair Value	Trailing Dividend Yield %	Forward Dividend Yield %	Market Cap (Bil)	Industry	Stewardship
★★	29.33 USD	27.00 USD	1.09	2.71	2.73	10.95	Utilities - Regulated Gas	Standard
07 Oct 2019 21:46, UTC	07 Oct 2019	10 Apr 2019 21:27, UTC		07 Oct 2019	07 Oct 2019	07 Oct 2019		

operations in seven states and its federal-regulated electric transmission system. NiSource has reduced some of the regulatory uncertainty related to its planned natural gas distribution and electric utilities investments by securing preapprovals and favorable rate mechanisms that provide for automatic rate increases as infrastructure investments are made.

In 2018, NiSource announced it would eliminate all coal-fired generation from its power plant fleet within 10 years. This transition will require signing power purchase agreements for renewable energy; building new gas-fired power plants and solar and wind farms; and making modifications to its electric grid. There is a modest amount of execution risk to this dramatic transition from coal.

Stewardship

Charles Fishman, Eq. Analyst, 08 October 2019

We assign NiSource a Standard stewardship rating. We think management's decision to form Columbia Pipeline Partners and execute CPG's tax-free separation exhibited exemplary stewardship of shareholder capital. However, the CEO who probably drove those decisions left NiSource to go with CPG before he retired.

The National Transportation Safety Board found NiSource responsible for the tragic gas explosion north of Boston. The incident had a negative effect on shareholder capital and probably could have been handled better by management.

Joe Hamrock became CEO following the separation. He has been with NiSource since 2012 and previously ran the natural gas distribution business. Before joining NiSource, he was with American Electric Power. CFO Donald Brown joined NiSource in April 2015. Previously, he was with UGI Utilities and Constellation Energy. These individuals have significant utility experience, and we believe they will not stray from the strategy that has benefited shareholders.

Most of the members of NiSource's board of directors were involved in the separation of CPG and oversight of investment decisions. Given this, we are confident that the solid stewardship of shareholder capital is likely to continue.

Analyst Notes Archive

NiSource's FVE Unchanged as Estimated Claims From Boston Gas Explosion Continue to Rise

Charles Fishman, Eq. Analyst, 01 May 2019

We are reaffirming our $27 per share fair value estimate after narrow-moat NiSource reported 2019 first-quarter operating EPS of $0.82 versus $0.77 in the same period last year.

However, operating earnings exclude roughly $0.30 per share of estimated costs related to the tragic natural gas explosion north of Boston in September 2018. We suspect some of these expenses may be recovered by insurance claims or regulatory relief and reversed later.

Third-party claims and other expenses have climbed to about $1.35 billion net of insurance recoveries from about $1.1 billion at 2018 year-end. We had thought most of the claims had been identified, but it appears more difficult to quantify some of the third-party claims for personal injury and property damage than we had suspected.

NiSource's insurance policies have a combined limit of $1.1 billion ($800 million of casualty and $300 million of property), but even if some of the $250 million of incremental claims and other expenses in the recently ended quarter are not recovered, we doubt it would have a material impact on our fair value estimate.

NiSource reaffirmed 2019 operating earnings guidance of $1.27-$1.30 per share and our estimate of $1.30 per share is unchanged. The utility also reaffirmed its 2019 capital expenditure guidance of $1.6 billion to $1.7 billion. Our estimate of $1.7 billion remains at the top end of the guidance.

We believe annual EPS growth will return to management's 5%-7% target after 2020 and our EPS growth rate estimate from 2020-23 equals 6.1%. We also expect annual dividend increases to average 6% starting next year after shareholders received only a 2.6% increase last quarter.

NiSource's Boston Natural Gas Explosion Costs Climb, but Should Remain Less Than Our Estimate

Charles Fishman, Eq. Analyst, 02 August 2019

We are reaffirming our $27 per share fair value estimate after narrow-moat NiSource reported 2019 second-quarter operating EPS of $0.05 versus $0.07 in the same period last year. Second-quarter earnings are usually barely above breakeven as the months of April to June are a relatively low period for electricity and gas sales.

Estimated third-party claims and other expenses related to the tragic natural gas explosion north of Boston in September 2018 increased by almost $100 million, to approximately $1.45 billion. NiSource has third-party liability insurance of $800 million, of which $670 million has been recorded and $535 million has been collected.

In addition, estimated the capital cost for pipeline replacement is approximately $255 million that we expect to be mostly covered by NiSource's $300 million of property insurance. These estimates do not include fines, penalties or settlements with other government authorities not included in the July 29 class-action settlement or other regulators. Massachusetts caps most of these fines and we don't expect them to add materially to the total incident expenses.

Thus, we estimate NiSource's exposure to the Boston incident is roughly $700 million pre-tax currently, $1.5 billion less $800 million of insurance proceeds. Our fair value estimate of $27 per share conservatively assumes roughly $1 billion of pre-tax expenses related to the incident.

NiSource reaffirmed 2019 operating earnings guidance of $1.27-$1.33 per share and our estimate of $1.30 per share is unchanged. The utility also reaffirmed its 2019 capital expenditure guidance of $1.6 billion to $1.7 billion. Our estimate of $1.7 billion remains at the top end of the guidance.

We believe annual EPS growth will return to management's 5%-7% target after 2020 and our EPS growth-rate estimate from 2020-23 equals 6.1%. We also expect annual dividend increases to average 6% starting next year after shareholders received only a 2.6% increase in 2019.

The Next Battle Royale: Natural Gas Generation vs. Renewable Energy

Travis Miller, Strategist, 07 October 2019

We are reaffirming our fair value estimates and moat ratings for all U.S. utilities after updating our 2020-30 U.S.

NiSource Inc NI (XNYS)

Company Profile

NiSource is one of the nation's largest natural gas distribution companies with approximately 3.5 million customers in Indiana, Kentucky, Maryland, Massachusetts, Ohio, Pennsylvania, and Virginia. NiSource's electric utility transmits and distributes electricity in northern Indiana to about 500,000 customers. The regulated electric utility also owns more than 3,000 megawatts of generation capacity, most of which is now coal-fired but is being replaced by natural gas and renewables.

Research Methodology for Valuing Companies

Qualitative Equity Research Overview

At the heart of our valuation system is a detailed projection of a company's future cash flows, resulting from our analysts' research. Analysts create custom industry and company assumptions to feed income statement, balance sheet, and capital investment assumptions into our globally standardized, proprietary discounted cash flow, or DCF, modeling templates. We use scenario analysis, in-depth competitive advantage analysis, and a variety of other analytical tools to augment this process. We believe this bottom-up, long-term, fundamentally based approach allows our analysts to focus on long-term business drivers, which have the greatest valuation impact, rather than short-term market noise.

Morningstar's equity research group ("we," "our") believes that a company's intrinsic worth results from the future cash flows it can generate. The Morningstar Rating for stocks identifies stocks trading at an uncertainty-adjusted discount or premium to their intrinsic worth—or fair value estimate, in Morningstar terminology. Five-star stocks sell for the biggest risk-adjusted discount to their fair values whereas 1-star stocks trade at premiums to their intrinsic worth.

Four key components drive the Morningstar rating: (1) our assessment of the firm's economic moat, (2) our estimate of the stock's fair value, (3) our uncertainty around that fair value estimate and (4) the current market price. This process ultimately culminates in our single-point star rating.

1. Economic Moat

The concept of an economic moat plays a vital role not only in our qualitative assessment of a firm's long-term investment potential, but also in the actual calculation of our fair value estimates. An economic moat is a structural feature that allows a firm to sustain excess profits over a long period of time. We define excess economic profits as returns on invested capital (or ROIC) over and above our estimate of a firm's cost of capital, or weighted average cost of capital (or WACC). Without a moat, profits are more susceptible to competition. We have identified five sources of economic moats: intangible assets, switching costs, network effect, cost advantage, and efficient scale.

Companies with a narrow moat are those we believe are more likely than not to achieve normalized excess returns for at least the next 10 years. Wide-moat companies are those in which we have very high confidence that excess returns will remain for 10 years, with excess returns more likely than not to remain for at least 20 years. The longer a firm generates economic profits, the higher its intrinsic value. We believe low-quality no-moat companies will see their normalized returns gravitate toward the firm's cost of capital more quickly than companies with moats.

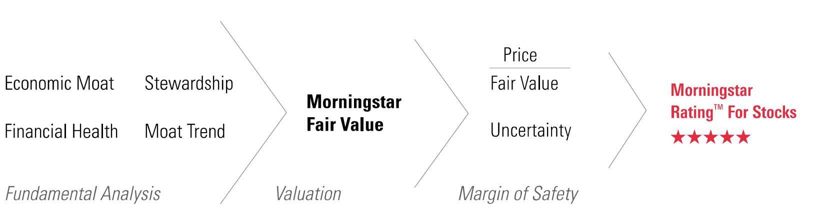
To assess the direction of the underlying competitive advantages, analysts perform ongoing assessments of the moat trend. A firm's moat trend is positive in cases where we think its sources of competitive advantage are growing stronger; stable where we don't anticipate changes to competitive advantages over the next several years; or negative when we see signs of deterioration.

All the moat and moat trend ratings undergo periodic review and any changes must be approved by the Morningstar Economic Moat Committee, comprised of senior members of Morningstar's equity research department.

2. Estimated Fair Value

Combining our analysts' financial forecasts with the firm's economic moat helps us assess how long returns on invested capital are likely to exceed the firm's cost of capital. Returns of firms with a wide economic moat rating are assumed to fade to the perpetuity period over a longer period of time than the returns of narrow-moat firms, and both will fade slower than no-moat firms, increasing our estimate of their intrinsic value.

Morningstar Research Methodology for Valuing Companies



Our model is divided into three distinct stages:

Stage I: Explicit Forecast

In this stage, which can last five to 10 years, analysts make full financial statement forecasts, including items such as revenue, profit margins, tax rates, changes in working-capital accounts, and capital spending. Based on these projections, we calculate earnings before interest, after taxes, or EBI, and the net new investment, or NNI, to derive our annual free cash flow forecast.

Stage II: Fade

The second stage of our model is the period it will take the company's return on new invested capital—the return on capital of the next dollar invested ("RONIC")—to decline (or rise) to its cost of capital. During the Stage II period, we use a formula to approximate cash flows in lieu of explicitly modeling the income statement, balance sheet, and cash flow statement as we do in Stage I. The length of the second stage depends on the strength of the company's economic moat. We forecast this period to last anywhere from one year (for companies with no economic moat) to 10–15 years or more (for wide-moat companies). During this period, cash flows are forecast using four assumptions: an average growth rate for EBI over the period, a normalized investment rate, average return on new invested capital, or RONIC, and the number of years until perpetuity, when excess returns cease. The investment rate and return on new invested capital decline until the perpetuity stage is reached. In the case of firms that do not earn their cost of capital, we assume marginal ROICs rise to the firm's cost of capital (usually attributable to less reinvestment), and we may truncate the second stage.

Stage III: Perpetuity

Once a company's marginal ROIC hits its cost of capital, we calculate a continuing value, using a standard perpetuity formula. At perpetuity, we assume that any growth or decline or investment in the business neither creates nor destroys value and that any new investment provides a return in line with estimated WACC.

Because a dollar earned today is worth more than a dollar earned tomorrow, we discount our projections of cash flows in stages I, II, and III to arrive at a total present value of expected future cash flows. Because we are modeling free cash flow to the firm—representing cash available to provide a return to all capital providers—we discount future cash flows using the WACC, which is a weighted average of the costs of equity, debt, and preferred stock (and any other funding sources), using expected future proportionate long-term market-value weights.

Research Methodology for Valuing Companies

3. Uncertainty Around That Fair Value Estimate

Morningstar's Uncertainty Rating captures a range of likely potential intrinsic values for a company and uses it to assign the margin of safety required before investing, which in turn explicitly drives our stock star rating system. The Uncertainty Rating represents the analysts' ability to bound the estimated value of the shares in a company around the fair value estimate, based on the characteristics of the business underlying the stock, including operating and financial leverage, sales sensitivity to the overall economy, product concentration, pricing power, and other company-specific factors.

Analysts consider at least two scenarios in addition to their base case: a bull case and a bear case. Assumptions are chosen such that the analyst believes there is a 25% probability that the company will perform better than the bull case, and a 25% probability that the company will perform worse than the bear case. The distance between the bull and bear cases is an important indicator of the uncertainty underlying the fair value estimate.

Our recommended margin of safety widens as our uncertainty of the estimated value of the equity increases. The more uncertain we are about the estimated value of the equity, the greater the discount we require relative to our estimate of the value of the firm before we would recommend the purchase of the shares. In addition, the uncertainty rating provides guidance in portfolio construction based on risk tolerance.

Our uncertainty ratings for our qualitative analysis are low, medium, high, very high, and extreme.

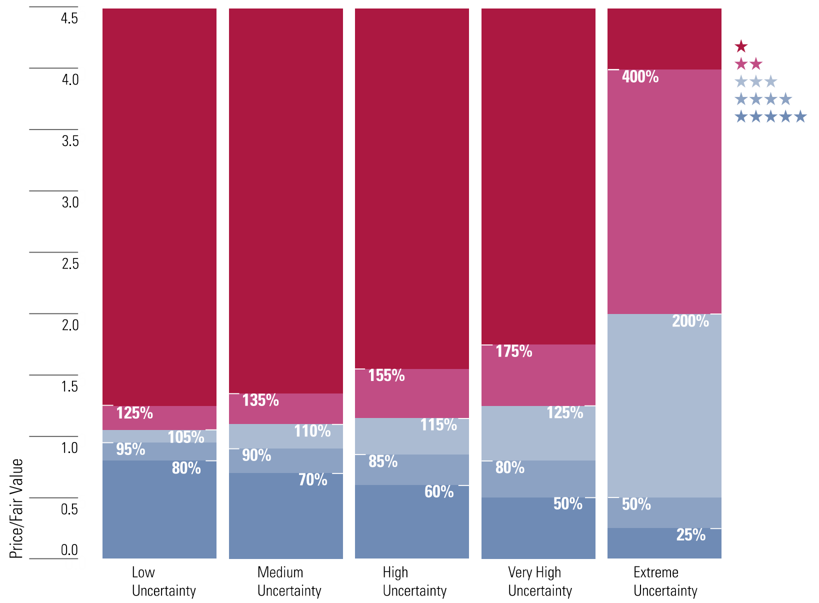
- Low–margin of safety for 5-star rating is a 20% discount and for 1-star rating is 25% premium.
- Medium–margin of safety for 5-star rating is a 30% discount and for 1-star rating is 35% premium.
- High–margin of safety for 5-star rating is a 40% discount and for 1-star rating is 55% premium.
- Very High–margin of safety for 5-star rating is a 50% discount and for 1-star rating is 75% premium.
- Extreme–margin of safety for 5-star rating is a 75% discount and for 1-star rating is 300% premium.

4. Market Price

The market prices used in this analysis and noted in the report come from exchange on which the stock is listed, which we believe is a reliable source.

For more details about our methodology, please go to https://shareholders.morningstar.com.

Morningstar Equity Research Star Rating Methodology



Morningstar Star Rating for Stocks

Once we determine the fair value estimate of a stock, we compare it with the stock's current market price on a daily basis, and the star rating is automatically re-calculated at the market close on every day the market on which the stock is listed is open.
Please note, there is no predefined distribution of stars. That is, the percentage of stocks that earn 5 stars can fluctuate daily, so the star ratings, in the aggregate, can serve as a gauge of the broader market's valuation. When there are many 5-star stocks, the stock market as a whole is more undervalued, in our opinion, than when very few companies garner our highest rating.

We expect that if our base-case assumptions are true the market price will converge on our fair value estimate over time, generally within three years (although it is impossible to predict the exact time frame in which market prices may adjust).

Our star ratings are guideposts to a broad audience and individuals must consider their own specific investment goals, risk tolerance, tax situation, time horizon, income needs, and complete investment portfolio, among other factors.

The Morningstar Star Ratings for stocks are defined below:

★★★★★ We believe appreciation beyond a fair risk-adjusted return is highly likely over a multiyear time frame. The current market price represents an excessively pessimistic outlook, limiting downside risk and maximizing upside potential.

★★★★ We believe appreciation beyond a fair risk-adjusted return is likely.

★★★ Indicates our belief that investors are likely to receive a fair risk-adjusted return (approximately cost of equity).

★★ We believe investors are likely to receive a less than fair risk-adjusted return.

★ Indicates a high probability of undesirable risk-adjusted returns from the current market price over a multiyear time frame, based on our analysis. The market is pricing in an excessively optimistic outlook, limiting upside potential and leaving the investor exposed to Capital loss.

Research Methodology for Valuing Companies

Other Definitions

Last Price: Price of the stock as of the close of the market of the last trading day before date of the report.

Stewardship Rating: Represents our assessment of management's stewardship of shareholder capital, with particular emphasis on capital allocation decisions. Analysts consider companies' investment strategy and valuation, financial leverage, dividend and share buyback policies, execution, compensation, related party transactions, and accounting practices. Corporate governance practices are only considered if they've had a demonstrated impact on shareholder value. Analysts assign one of three ratings: "Exemplary," "Standard," and "Poor." Analysts judge stewardship from an equity holder's perspective. Ratings are determined on an absolute basis. Most companies will receive a Standard rating, and this is the default rating in the absence of evidence that managers have made exceptionally strong or poor capital allocation decisions.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ► Undervalued: Last Price is below Morningstar's quantitative fair value estimate.
- ► Fairly Valued: Last Price is in line with Morningstar's quantitative fair value estimate.
- ► Overvalued: Last Price is above Morningstar's quantitative fair value estimate.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report. Morningstar's Uncertainty Rating serves as a useful data point with respect to sensitivity analysis of the assumptions used in our determining a fair value price.

Quantitative Equity Reports Overview

The quantitative report on equities consists of data, statistics and quantitative equity ratings on equity securities. Morningstar, Inc.'s quantitative equity ratings are forward looking and are generated by a statistical model that is based on Morningstar Inc.'s analyst-driven equity ratings and quantitative statistics. Given the nature of the quantitative report and the quantitative ratings, there is no one analyst in which a given report is attributed to; however, Mr. Lee Davidson, Head of Quantitative Research for Morningstar, Inc., is responsible for overseeing the methodology that supports the quantitative equity ratings used in this report. As an employee of Morningstar, Inc., Mr. Davidson is guided by Morningstar, Inc.'s Code of Ethics and Personal Securities Trading Policy in carrying out his responsibilities.

Quantitative Equity Ratings

Morningstar's quantitative equity ratings consist of:
(i) Quantitative Fair Value Estimate
(ii) Quantitative Star Rating
(iii) Quantitative Uncertainty
(iv) Quantitative Economic Moat
(v) Quantitative Financial Health
(collectively the "Quantitative Ratings").

The Quantitative Ratings are calculated daily and derived from the analyst-driven ratings of a company's peers as determined by statistical algorithms. Morningstar, Inc. (""Morningstar," "we," "our") calculates Quantitative Ratings for companies whether it already provides analyst ratings and qualitative coverage. In some cases, the Quantitative Ratings may differ from the analyst ratings because a company's analyst-driven ratings can significantly differ from other companies in its peer group.

Quantitative Fair Value Estimate: Intended to represent Morningstar's estimate of the per share dollar amount that a company's equity is worth today. Morningstar calculates the quantitative fair value estimate using a statistical model derived from the fair value estimate Morningstar's equity analysts assign to companies. Please go to https://shareholders.morningstar.com for information about fair value estimates Morningstar's equity analysts assign to companies.

Quantitative Economic Moat: Intended to describe the strength of a firm's competitive position. It is calculated using an algorithm designed to predict the Economic Moat rating a Morningstar analyst would assign to the stock. The rating is expressed as Narrow, Wide, or None.

- ► Narrow: assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 70% but less than 99%.
- ► Wide: assigned when the probability of a stock receiving a "Wide Moat" rating by an analyst is greater than 99%.
- ► None: assigned when the probability of an analyst receiving a "Wide Moat" rating by an analyst is less than 70%.

Quantitative Star Rating: Intended to be the summary rating based on the combination of our Quantitative Fair Value Estimate, current market price, and the Quantitative Uncertainty Rating. The rating is expressed as 1-Star, 2-Star, 3-Star, 4-Star, and 5-Star.

★: the stock is overvalued with a reasonable margin of safety.
Log (Quant FVE/Price)<–1*Quantitative Uncertainty

★★: the stock is somewhat overvalued.
Log (Quant FVE/Price) between (–1*Quantitative Uncertainty, –0.5*Quantitative Uncertainty)

★★★: the stock is approximately fairly valued.
Log (Quant FVE/Price) between (–0.5*Quantitative Uncertainty, 0.5*Quantitative Uncertainty)

★★★★: the stock is somewhat undervalued.
Log (Quant FVE/Price) between (0.5*Quantitative Uncertainty, 1*Quantitative Uncertainty)

★★★★★: the stock is undervalued with a reasonable margin of safety. Log (Quant FVE/Price) >1*Quantitative Uncertainty

Quantitative Uncertainty: Intended to represent Morningstar's level of uncertainty about the accuracy of the quantitative fair value estimate. Generally, the lower the quantitative Uncertainty, the narrower the potential range of outcomes for that particular company. The rating is expressed as Low, Medium, High, Very High, and Extreme.

- ► Low: the interquartile range for possible fair values is less than 10%.
- ► Medium: the interquartile range for possible fair values is less than 15% but greater than 10%.
- ► High: the interquartile range for possible fair values is less than 35% but greater than 15%.
- ► Very High: the interquartile range for possible fair values is less than 80% but greater than 35%.
- ► Extreme: the interquartile range for possible fair values is greater than 80%.

Quantitative Financial Health: Intended to reflect the probability that a firm will face financial distress in the near future. The calculation uses a predictive model designed to anticipate when a company may default on its financial obligations. The rating is expressed as Weak, Moderate, and Strong.

- ► Weak: assigned when Quantitative Financial Health <0.2
- ► Moderate: assigned when Quantitative Financial Health is between 0.2 and 0.7
- ► Strong: assigned when Quantitative Financial Health >0.7

Research Methodology for Valuing Companies

Other Definitions

Last Close: Price of the stock as of the close of the market of the last trading day before date of the report.

Quantitative Valuation: Using the below terms, intended to denote the relationship between the security's Last Price and Morningstar's quantitative fair value estimate for that security.

- ► Undervalued: Last Price is below Morningstar's quantitative fair value estimate.
- ► Fairly Valued: Last Price is in line with Morningstar's quantitative fair value estimate.
- ► Overvalued: Last Price is above Morningstar's quantitative fair value estimate.

This Report has not been made available to the issuer of the security prior to publication.

Risk Warning

Please note that investments in securities are subject to market and other risks and there is no assurance or guarantee that the intended investment objectives will be achieved. Past performance of a security may or may not be sustained in future and is no indication of future performance. A security investment return and an investor's principal value will fluctuate so that, when redeemed, an investor's shares may be worth more or less than their original cost. A security's current investment performance may be lower or higher than the investment performance noted within the report.

The quantitative equity ratings are not statements of fact. Morningstar does not guarantee the completeness or accuracy of the assumptions or models used in determining the quantitative equity ratings. In addition, there is the risk that the price target will not be met due to such things as unforeseen changes in demand for the company's products, changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, and tax rate. For investments in foreign markets there are further risks, generally based on exchange rate changes or changes in political and social conditions.

A change in the fundamental factors underlying the quantitative equity ratings can mean that the valuation is subsequently no longer accurate.

For more information about Morningstar's quantitative methodology, please visit http://global.morningstar.com/equitydisclosures.

NiSource Inc

Affirming it is indeed still in 5-7% EPS CAGR despite more equity

Reiterate Rating: NEUTRAL | PO: 30.50 USD | Price: 28.05 USD

Bank of America Merrill Lynch

Equity | 22 October 2019

3Q Call thoughts: Equity forward pushed to YE'20 impact

Amidst the ongoing balance sheet needs arising from the Bay State Gas biz, we reiterate we expect another ~$600 Mn of equity support (largely between preferreds and equity) to bridge the gap between collected insurance ($800mn) & Merrimack costs ($1.4bn) and to shore up the FFO/debt figures (beyond the annual ~$300Mn/yr ATM + employee DRIP needs). Despite this potential added dilution vs. our earlier expectations (which we perceive to be upwards of -$0.07 incremental dilution over time), mgmt appears quite confident still in its 5-7% long-term EPS growth rate (off its $1.30 midpoint of 2019). We highlight it is possible for NI to stay within its '20 EPS range ($1.37-1.39) based on the timing & our expectation NI would issue forward equity; we expect shares for the $600mn need will start to hit in December 2020 and the rest in 2021, meaning dilution and EPS impact is more of a '21 issue. Further, we see mgmt's growth confidence as a notable *affirmation* of the company's outlook considering the challenges at its Bay State gas; we see strength via improving earned returns, pending NIPSCO ratecase (resolution of which expected late Jan/early Feb as Rate 831 is resolved), and future ratecases to be filed (which could include PA). Below, we include a 2020 EPS walk of $1.37/sh compared to Consensus of $1.38/sh; we assume +16c from normal programs & pension offset by -10c from ATM dilution, O&M expense & interest expense ($500mn @4%). We update share count to reflect timing of equity issuance & tweak ROEs up given upside potential such as a potential PA case. Finally for 3Q, we expect $0.00/sh vs. $0.07 Consensus.

Look for future growth discussion at EEI; IN RFP at 4Q

We suspect updates around EEI will be critical in positioning future growth as we acknowledge potentially meaningful shifts in gas-safety related capex programs. We note Street is still towards the mid-to-high end of its 5-7% LT EPS growth rate, while we model EPS closer to the lower end in '21 (reflecting equity issuance) & mid beyond. Finally, we look for updates following the RFP solicitation at NIPSCO; we expect more material RFP updates at 4Q call though given timing on proposal deadline. We reiterate our Neutral at an updated PO of $30.5/sh (prev $32) with a lower peer multiple of 19.1x electric & 19.5x gas to which a 5%/5.1% growth CAGR is applied; we see give a -1x disc to gas utes given safety issues & a +1x prem to NIPSCO electric given ownership opp.

Company Sector

Natural Gas-Local Distribution Companies

Company Description

NiSource Inc. (NI) is a fully-regulated utility company serving approximately 3.5mn natural gas customers and 500,000 electric customers across seven states through its local Columbia Gas and NIPSCO brands. NI generates substantially all of its operating income through these rate-regulated businesses.

Investment Rationale

NI's positives including 5-7% earnings/dividend growth via $30bn of infrastructure investments over the next 20+ years and fully regulated subsidiaries with earned ROEs consistently near the allowed.However, we see increased regulatory lag associated with the MA incident. Moreover, with the outcome of Department of Justice investigation still unclear, we believe an overhang on shares will persist. Bottom line, we see more balanced risk/reward profile and as such we rate NI Neutral.

Quarterly Earnings Estimates

	2018	2019
Q1	0.77A	0.82E
Q2	0.08A	0.05E
Q3	0.10A	0E
Q4	0.38A	0.44E

3Q19 NI Walk

We estimate 3Q19 EPS of $0.00 vs. $0.10 in 3Q18 and $0.07 Consensus.

- **Key Drivers**: We expect a strong quarter of D&A expense as well as pref dividend issuance and O&M. We see some strength in ratebase outcome and Ohio's CEP, but note that largely the high expenses results in an earnings-less quarter. Nonetheless, we expect the year of 2019 EPS falls within guidance of $1.27-1.33/sh.

Table 1: 3Q19 NI EPS Walk

NI 3Q19 Earnings Walk	EPS
NI 3Q18 EPS	0.10
Gas tracking mechanisms	0.00
Electric tracking mechanisms	0.00

2020 NI Walk

On the 3Q call, we expect the company to provide a first look at 2020 earnings, inclusive of EPS, capital/financing plan and overall long term growth rate. We expect the company to narrow the ends of the $1.6-2Bn capital plan (as opposed to raising overall spend expectations) and note overall confidence from mgmt. around the 5-7% growth rate despite any equity needs. We estimate 2020 EPS of $1.37 vs. Consensus of $1.38.

- **Key Drivers**: Starting with a normalized 2019 guidance of $1.30/sh, we expect the company benefits $0.15/sh from tracked investments (assumes 75% of $1.8Bn growth is tracked within 12 months with a 50% equity layer and 9% ROE), and slightly from pension expense. We see the IN electric ratecase less of an EPS impact. Offsetting, we forecast -$0.04 from ATM program dilution (YE s/o from 284mn to 397mn), O&M, and incremental interest expense of -$0.03 (assuming $500mn debt at 4% interest).

Table 2: 2020 NI EPS Walk

2020 NI earnings walk	EPS
2019 Normalized Guidance	$1.30
Tracked investments (riders, mechanisms)	$0.15
Pension Expense	$0.01
IN Electric rate case	$0.00
Preferred Dividends/Additional Equity (likely YE20)	$0.00
Dilution from ATM program	($0.04)
O&M	($0.02)
Incremental Interest expense ($500mn @ 4%)	($0.03)
2020 BofAe Adjusted EPS	$1.37
2020 Consensus	$1.38

The latest on Merimack

Accounting for equity dilution

In addition to the ~$200-$300Mn of normal equity needs to execute NI's ongoing operations, latest discussions with mgmt. highlighted an expectation for permanent financing related to the $1.4Bn estimates from Merimack. While the company has insurance recovery of around $800Mn, it will need to address the $600Mn delta at some point in the future. Our sense is that the company is exploring a range of forward options including pure common equity as well as other instruments with an equity component (e.g. pref), but with no immediate need but likely at some point in 2020. Our latest model reflects an assumption of ~$300Mn each in 4Q20 and 1Q21. We expect this to be a key focal point on the 3Q call with the company likely to provide additional color around how they will pursue financing going forward; note that we had previously expected NI to potentially announce incremental financing in '19 to ensure the company maintains FFO/debt metrics of 14-15%. The financing (and capital) update on the 3Q call may include options such as pulling forward the $500mn **at-the-market (ATM) issuance** program from '20 into '19 and/or issuing a **preferred**, which is expected to receive a 50% equity credit weighting with credit agencies. We highlight the company issued two pref's last year, one before the incident (with a 5.65% rate that was somewhat earnings-neutral) and one after the incident (with a 6.5% rate).

NI appointment of Nick Stavropoulos positive

We see the move to appoint Mr Stavropoulos, former PG&E gas executive of late to the Bay State gas turnaround as a generally positive move. We note NI has in particular had success in recent years pulling key talent from across the industry into its biz units. We continue to see the Bay State gas properties as critically cautious despite what appears to be no sale as we do not believe recovery of associated spend from last year's incident will be recoverable. Looking at mid-2020 timing for a rate case filing in MA nonetheless.

Not clear sailing yet: we perceive MA DPU as still very much concerned

Earlier this fall, NI Columbia Gas of MA pipes were found leaking, coming from 146m of the new Lawrence system. Homes were evacuated. By day's-end NI found the cause was related to water valve work: Contractors inadvertently closed a gas valve that punctured an active gas main. NI was ordered to immediately inspect 45 gas valves over that weekend. We see the incident negatively: It highlights more safety issues and might be another reason to suggest the MA biz won't be able to get approval recover capex on fix.

Multiple state PUC changes: Watching MA DPU for NI

We highlight a number of recent changes across state PUCs in New England. The new chairman of the MA PUC is Matt Nelson, with significant experience at the DPU plus a history which includes approving the Hydro Quebec contract. In NH, Chairwoman Dianne Martin was approved after a nomination by Governor Sununu; she comes from the Attorney General's office without an energy background. The new CT PURA Chairwoman Marissa Gillett comes from the Energy Storage Association, with experience as a staffer at the Maryland PSC. Overall, turnover has been high driving uncertainty on decisions. In particular, we see NI Bay State gas issues will persist in MA despite turnover.

NIPSCO

RFP for more renewables is out

The key upside opportunity for NI is the success of its renewable build out program in Indiana. Earlier this month, NIPSCO requested proposals for 2.6GW of wind to meet its 2023 need as coal phases out (with 1.6GW Schahfer retiring first). Of this, 300MW was for wind (with or without storage) and 2.3GW was for solar (with or without storage). The RFP also opened 'economic opportunities' for thermal and other capacity sources. We are not surprised by the size of the RFP given the lower capacity weighting of renewables compared to fossil's more firm capacity. We see this as an upside opportunity for NI – especially if it is able to pursue more of the co-ownership potential as it did in the first RFP round (i.e. Rosewater Wind). We could see first contracts announced around the 4Q call.

Ratecase update: protracted timeline on industrials tariff issue

There continues to be no unilateral settlement agreed upon by all parties and intervener views remain largely unchanged on Industrial Rate 831. The outcome of Rate 831 impacts how much new capacity is needed to replace the 1.6GW of coal retirements by '23 proposed in NI's 2018 Integrated Resource Plan (IRP); this is because Rate 831 allows six large industrials to contract wholesale electric needs with MISO directly, resulting in a load decrease for the utility (we expect demand could decrease 200-400MW). We expect RFP results spill into 1Q20 given the continued Rate 831 disagreements.

Other key items to watch going forward

We highlight the following key issues to watch in the next year or so:

- Given the legislative and executive backdrop, we watch changes on the Indiana Regulatory Utility Commission (IUR) closely, particularly as a seat became available as early as next January 2020 and another in March 2021.
- We perceive influence in energy policy from the federal election given Indiana is VP Mike Pence's home state. We could see the timing of the Task Force possibly intentionally result in recommendations *after* the election to avoid any further announcement of coal retirements in the state in the run up to Nov '20.
- The use of IN coal vs. out-of-state resources remains an apparent dividing point with respect to scrutiny of any plant retirements.

EPS Estimates

Equity issuance

We update our equity issuance assumptions such that $300mn of additional equity (via a forward) is accounted for in 4Q 2020, and the remaining $300mn (for a total of $600mn) in 1Q 2021. We continue to assume the $200-300mn ATM and XX are consistent going forward as well.

ROEs

We expect NI goes in for a ratecase in PA next year, and as such we remove our underearning turn of -1% starting in 2020 and beyond. All other ROE assumptions stay the same – which include Columbia Gas of MA penalization after Merrimack as well as a +0.75% overearning potential in NIPSCO Gas due to the implementation of rates.

Table 3: NI Earned ROEs
