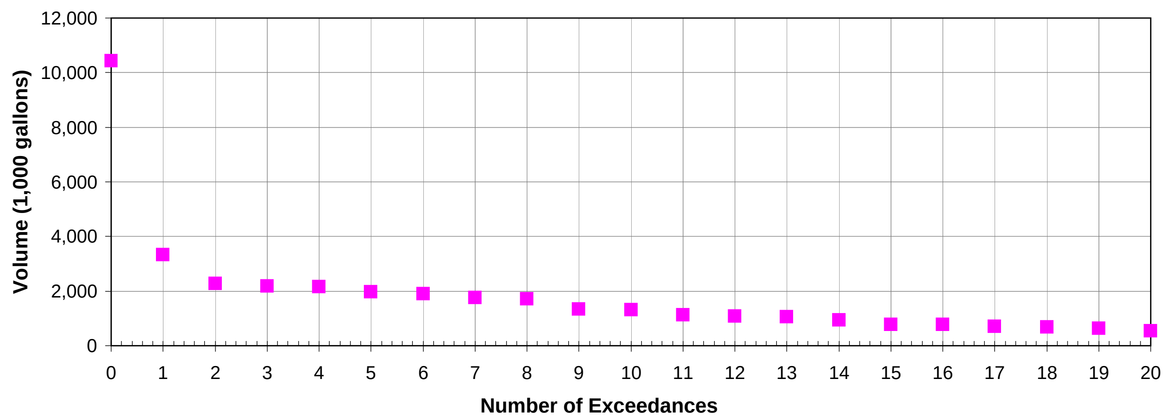

Figure 2 - Outfall 015PS32 CSO Peak Flow Rate

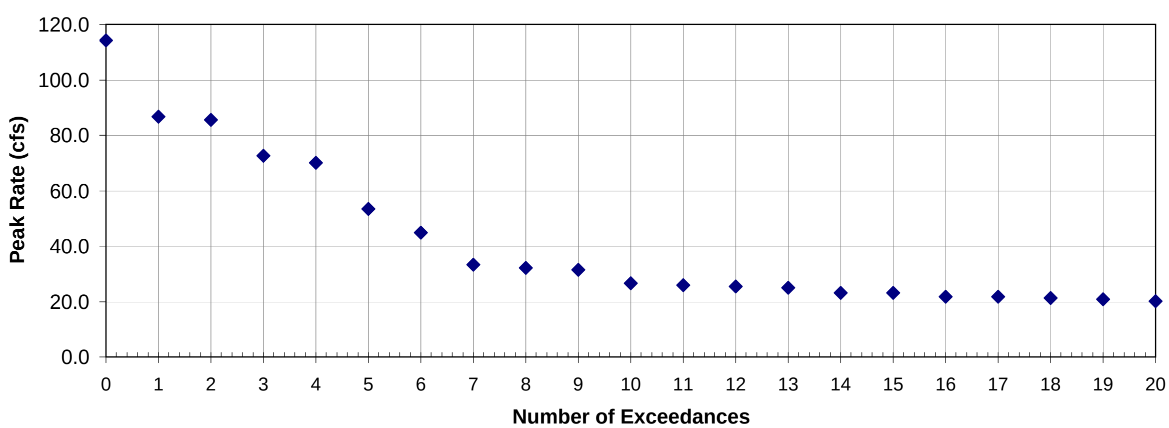

D.30.4 BAUSMAN, BROOK, AND WARRINGTON SEWERSHED – WARRINGTON AVENUE – NPDES# 015PS32

Description of Outfall

Outfall 015PS32 conveys overflows from the ALCOSAN diversion chamber 015PS32 to Saw Mill Run, and ultimately into the Ohio River. The outfall is located along Saw Mill Run, near the intersection of Warrington Avenue and Saw Mill Run Boulevard. The Bausman, Brook, and Warrington Street Sewersheds are located in portions of Allentown, Beltzhoover, Bon Air, Carrick, Knoxville, and Mount Washington sections in the City of Pittsburgh. The Bausman and Brook Street Sewersheds also include portions of Mount Oliver Borough. These Sewersheds include approximately 871 acres of residential, business and commercial users. The 015PS32 Sewershed (Warrington Ave.) consists of 376 acres, or approximately 44% of the total service area. The Bausman, Brook and Warrington Sewersheds are comprised of approximately 751 manholes and 219,457 linear feet (41.6 miles) of mostly combined sewer up to 72 inches in diameter.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

Outfall 015PS32 typically experiences 64 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from outfall 015PS32 is approximately 10.42 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 015PS32 is approximately 114.2 CFS. *Figure 1 – Outfall 015PS32 CSO Volume* and *Figure 2 – Outfall 015PS32 CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.

Figure 1 - Outfall 015PS32 CSO Volume

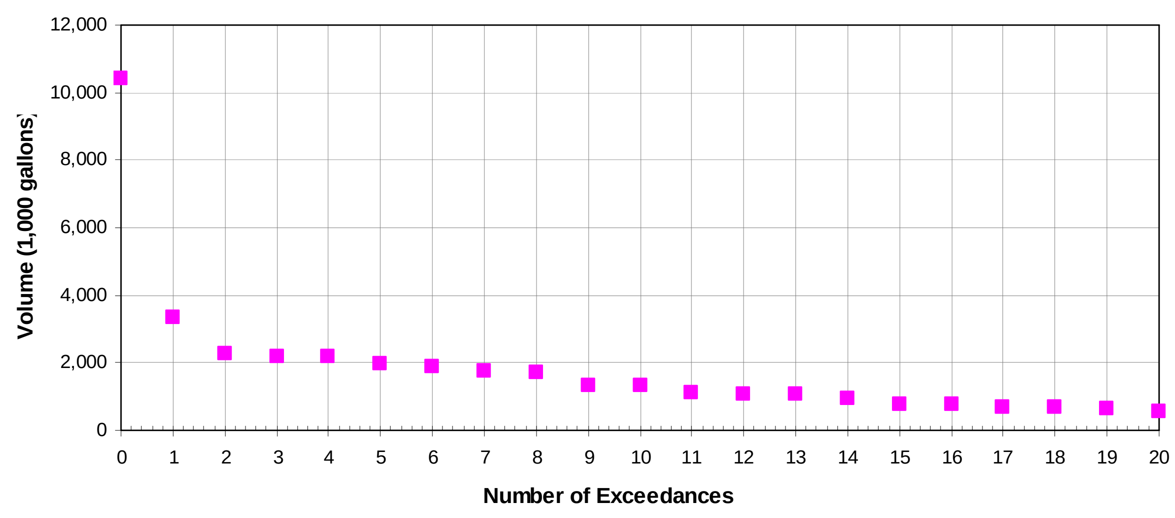

Figure 2 - Outfall 015PS32 CSO Peak Flow Rate

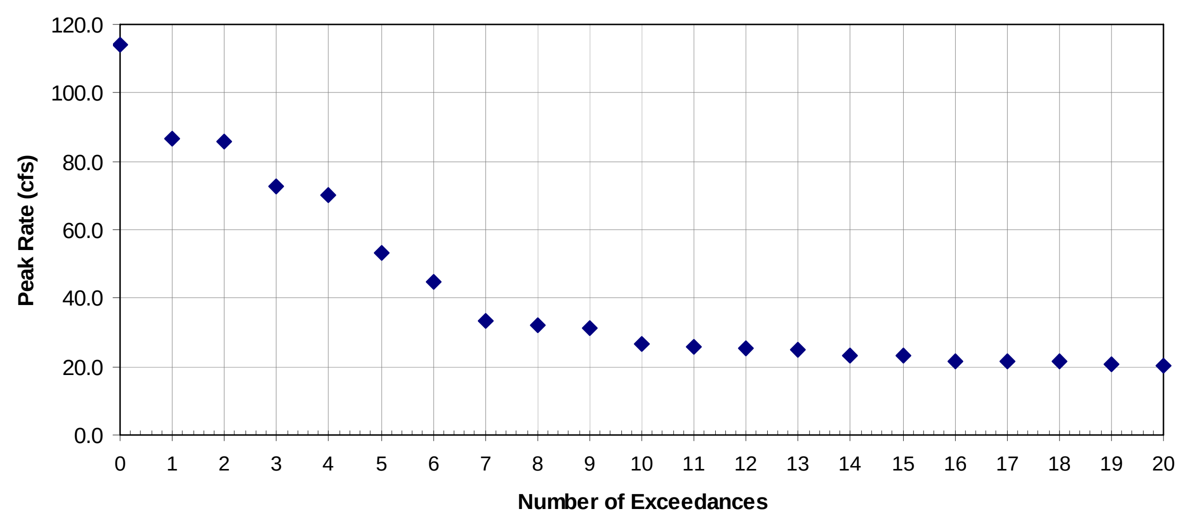


There appears to be a limited amount of available space for potential storage or treatment facilities to the west of the existing South Busway route in an existing parking facility near the end of Hargrove Street. CSOs would be required to be pumped from the outfall to this location. Potential sites near the outfall do not appear to be available. The site is generally bounded by Saw Mill Run and steep slopes to the north and private development to the south, east and west.

Description of Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 015PS32. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS4-015PS32: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-015PS32: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-015PS32: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-015PS32: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-015PS32: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-015PS32: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

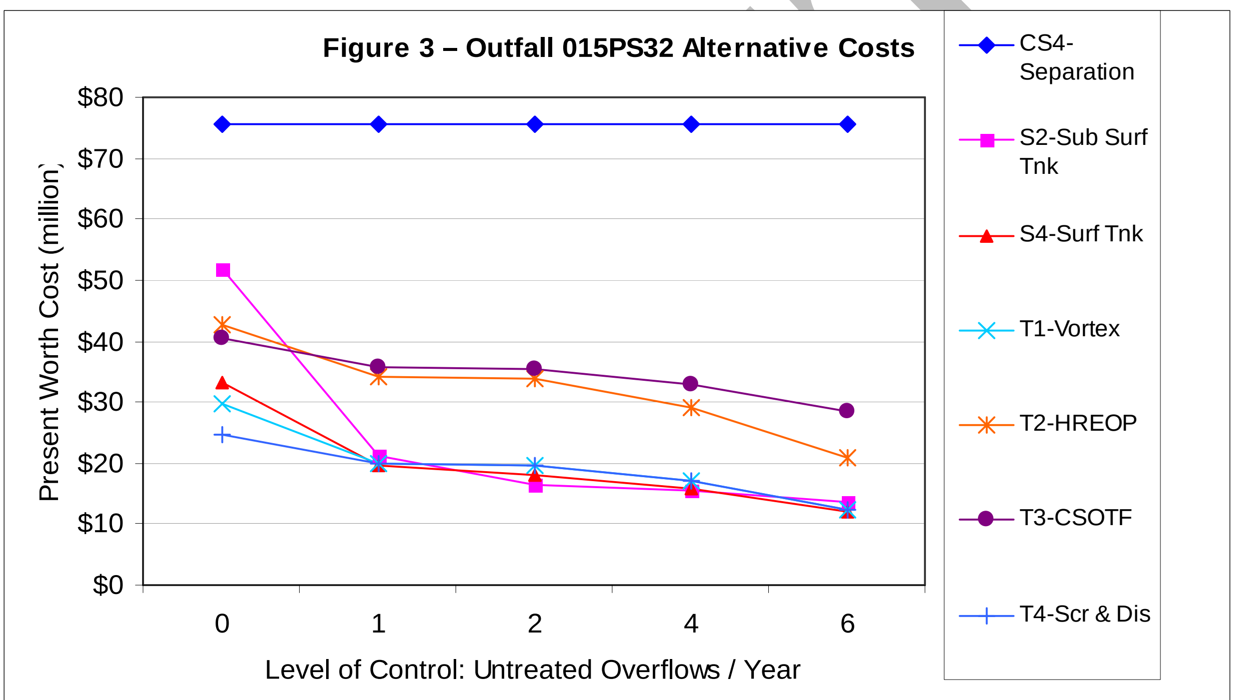
T4-015PS32: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 015PS32 Alternative Costs, illustrates the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall “ranking” of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control level 0, it is recommended that Alternative S4-015PS32: Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses. For control levels 1 through 6, it is recommended that Alternative S2-015PS32: Sub-Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Space does not appear to be available for the 0 control level. A deeper storage structure would reduce the footprint required. Significant critical infrastructure and topography exists in the vicinity of the outfall.

CSO Controls Alternatives

PWSA

SW-D-0244.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not provide adequate CSO control.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will be evaluated on a regional or system-wide basis only.
Sewer separation	Y	Sewer separation within the 376 acres of combined sewer area tributary to this outfall will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will be not evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation treatment in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0244.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	4	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: CS4-Separation		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	1	1	1	1	1
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: CS4-Separation		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: CS4-Separation		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	3	3	3	3	3
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	5	5	5	5	5
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Objective Scoring

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	3	5	5	5	4
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	5	5	4	4	4
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF

5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T2-HREOP	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T2-HREOP	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: T2-HREOP		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: T2-HREOP		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T2-HREOP	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.

3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T4-Scr & Dis	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	3	3	3	3	3
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T4-Scr & Dis	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T4-Scr & Dis	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T4-Scr & Dis	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T4-Scr & Dis	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	3	3	3	3	3
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	T4-Scr & Dis	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T4-Scr & Dis	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	2	2	2	2	2
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

3ox = Objective scores determined by PWSA / Consultant Team

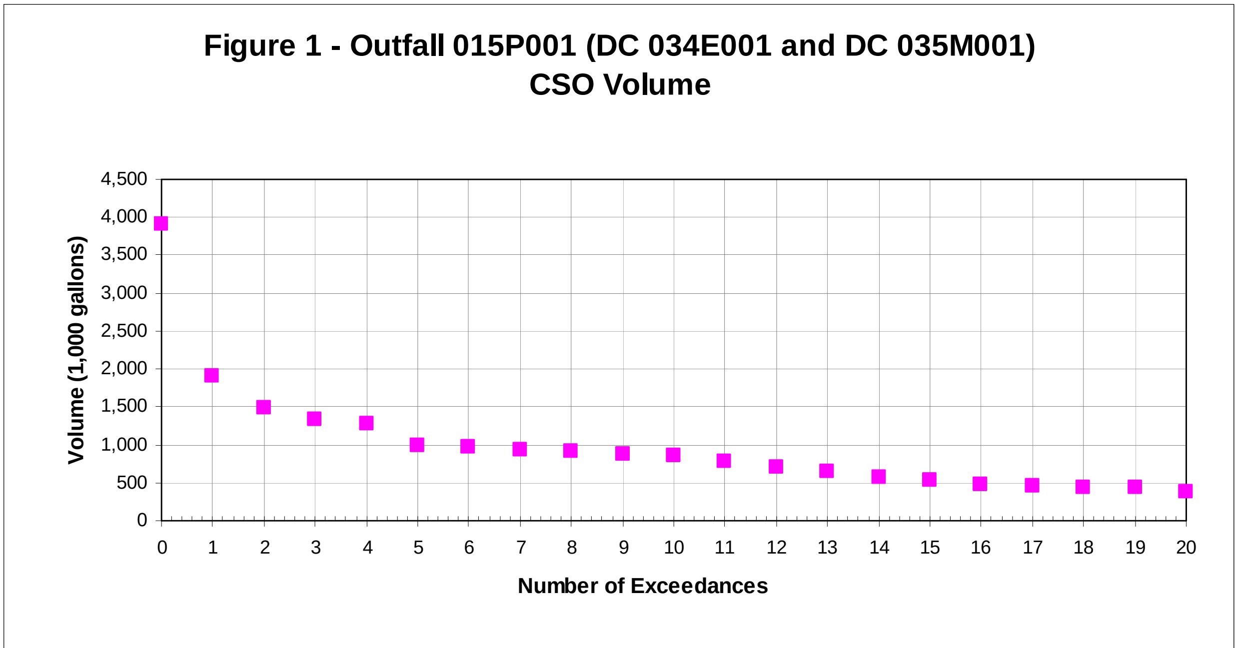
D.31.1 CSO 015P001 (DC 034E001 and DC 035M001) – PLUMMER'S RUN SEWERSHED – NPDES #015P001

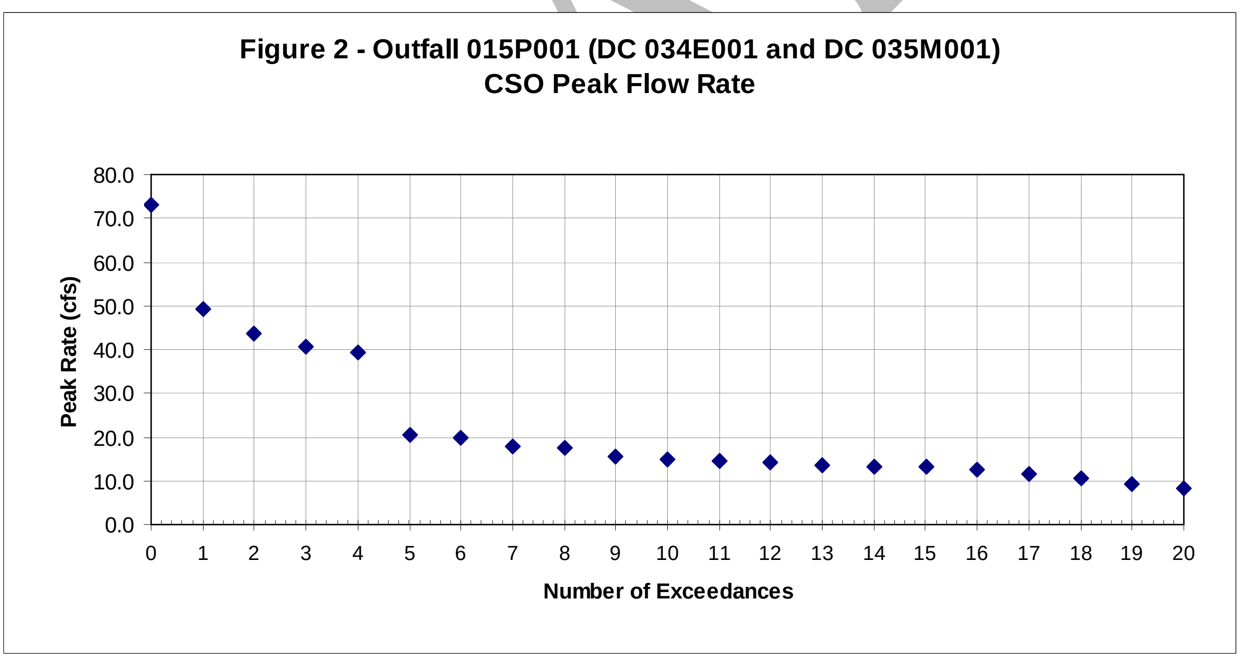
Description of Outfall

Outfall 015P001 (DC 034E001 and DC 035M001) conveys flows from the overflow portion of the Plummers Run trunk sewer to Saw Mill Run, and ultimately to the Ohio River. The outfall is located in the City of Pittsburgh at Saw Mill Run near the Liberty Tunnels. The tributary sewershed is called the Plummers Run Sewershed and is 611 acres of residential, commercial, and business users. The Plummers Run Sewershed is comprised of approximately 742 manholes and 167,939 linear feet (31.8 miles) of sanitary, combined, and storm sewers up to 89 inches in diameter. The sewersheds upstream of PWSA Diversion Structures 034E001 and 035M001 consist of 125 acres of residential, commercial, and business users. PWSA Diversion Structures 034N001, 035P001, 035S001, 062C001, 062D001, and 062K001 are not applicable to this analysis, along with their related acreages, manholes, and length of sewers, as they are considered either remote location or low flow structures. Similarly, PWSA Diversion Structures 062C002 and 062K001 are not applicable to this analysis, along with their related acreages, manholes, and length of sewers, as they have no overflow activations.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

Outfall 015P001 (DC 034E001 and DC 035M001) typically experiences 69 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from outfall 015P001 (DC 034E001 and DC 035M001) is approximately 3.91 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 015P001 is approximately 73.1 CFS. *Figure 1 – Outfall 015P001 (DC 034E001 and DC 035M001) CSO Volume* and *Figure 2 – Outfall 015P001 (DC 034E001 and DC 035M001) CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.





Space appears to be extremely limited for storage or treatment facilities. A significant storage and treatment footprint is required for all control levels. The outfall is located in a very congested area of the Saw Mill Run area with critical infrastructure to the south and east, including the Liberty Tunnels and multiple lanes of Saw Mill Run Boulevard. Significant site work and property acquirement will be required to construct a storage or treatment facility near the outfall. The site is generally bounded by Saw Mill Run Boulevard to the south, the Liberty Tunnels to the east, Saw Mill Run and steep slopes to the north and private development to the west. A cursory review of available space upstream of the outfall was conducted. The area upstream of the outfall includes areas along West Liberty Avenue, which is significantly congested with critical infrastructure and underground utilities. Siting a storage or treatment facility upstream of the outfall also appears to be non-feasible.

Description of Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 015P001 (DC 034E001 and DC 35M001). Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS4-015P001: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-015P001: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-015P001: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-015P001: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-015P001: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-015P001: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T4-015P001: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 015P001 (DC 034E001 and DC 035M001) Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.

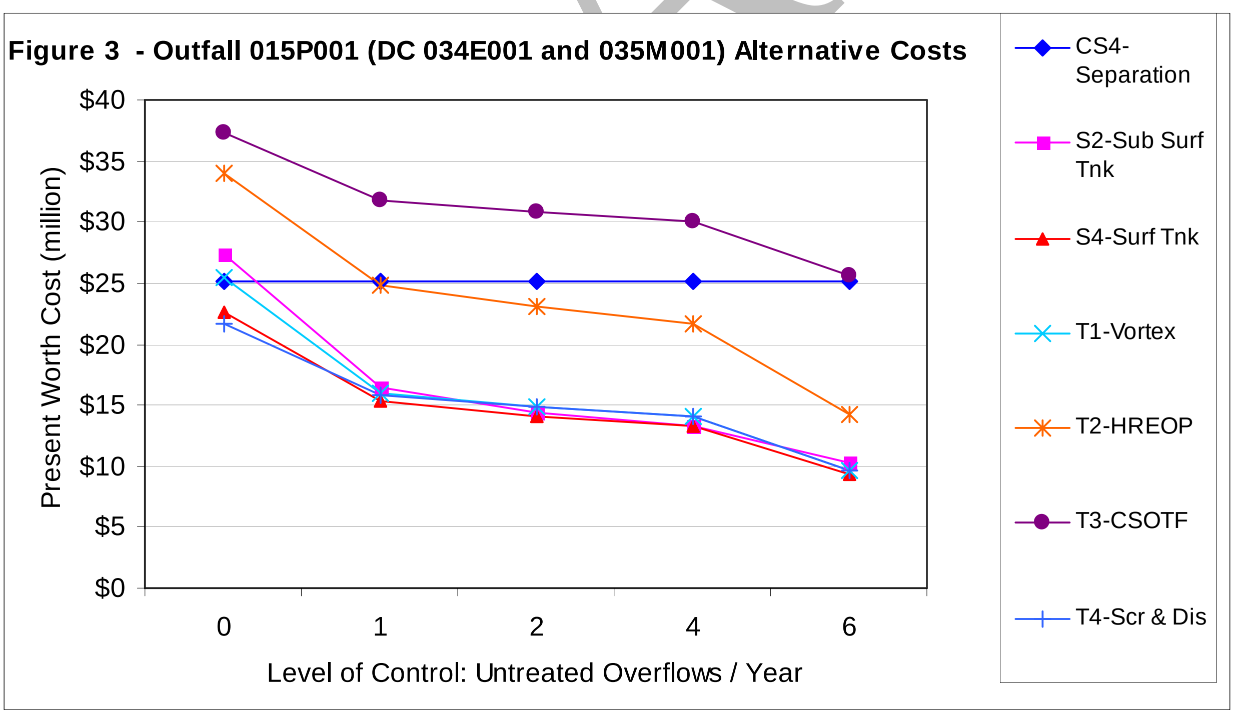


Figure 3 - Outfall 015P001 (DC 034E001 and 035M001) Alternative Costs

The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control level 0, it is recommended that Alternative S4-015P001: Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses. For control levels 1 through 6, it is recommended that Alternative S2-015P001: Sub-Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Space does not appear to be available for a sub-surface storage facility at any of the control levels. A significant amount of property acquisition and site work will be required to construct said facility near the outfall. The tank could be constructed with deeper sidewalls to reduce the required footprint for the facility. Significant permitting issues could arise with PennDOT to construct a control facility in this area.

CSO Controls Alternatives

PWSA

SW-D-0246.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	A relief sewer will not be evaluated.
Sewer separation	Y	Sewer separation within the 125 acres of combined sewer area tributary to this outfall will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0246.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	5	4	3	3	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	1	1	1	1	1
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	5	5	5	5	5
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

Alternative:	S4-Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S4-Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	5	5	4	4	4
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S4-Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific	2	2	2	2	2
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S4-Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S4-Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	1	1	1	1	1
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed					

Alternative:	S4-Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S4-Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S4-Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF

Objective Scoring

Alternative:	T3-CSOTF	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T3-CSOTF	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	3	3	3	3	3
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T3-CSOTF	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T3-CSOTF	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	2	2	2	2	2
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T3-CSOTF	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T3-CSOTF	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.

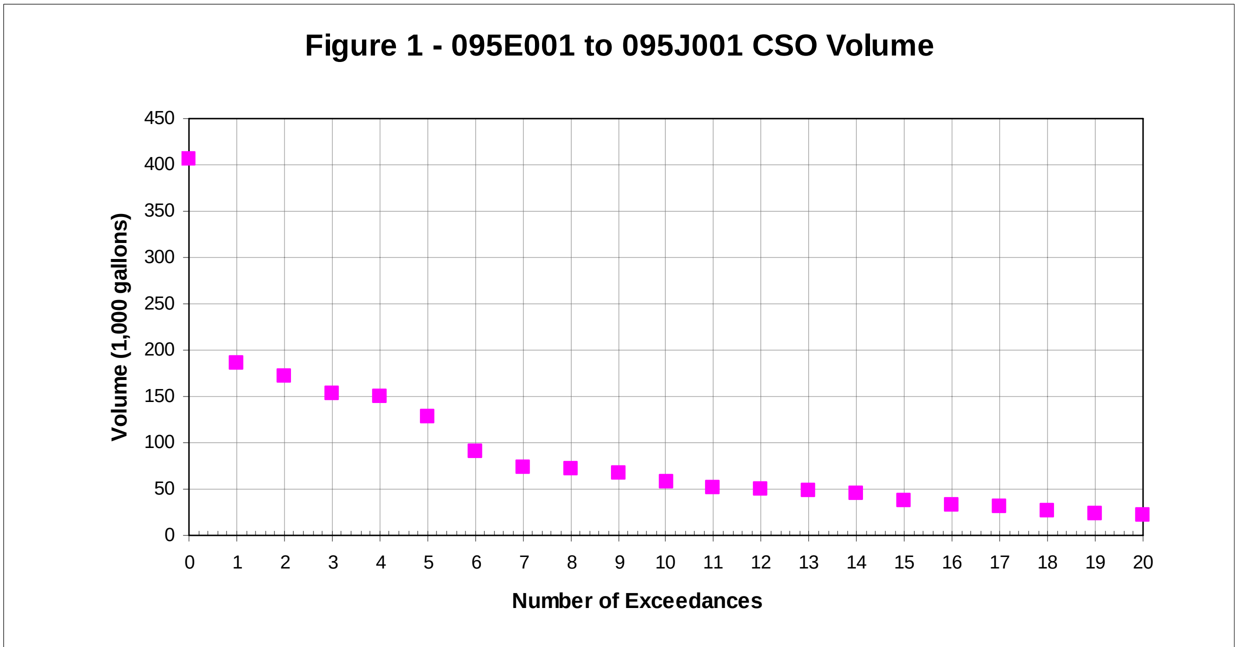
D.32.1 095E001 TO 095J001 – BROOKLINE BOULEVARD AND ENGLERT SEWERSHEDS – NPDES# CSO095E001 AND 095J001

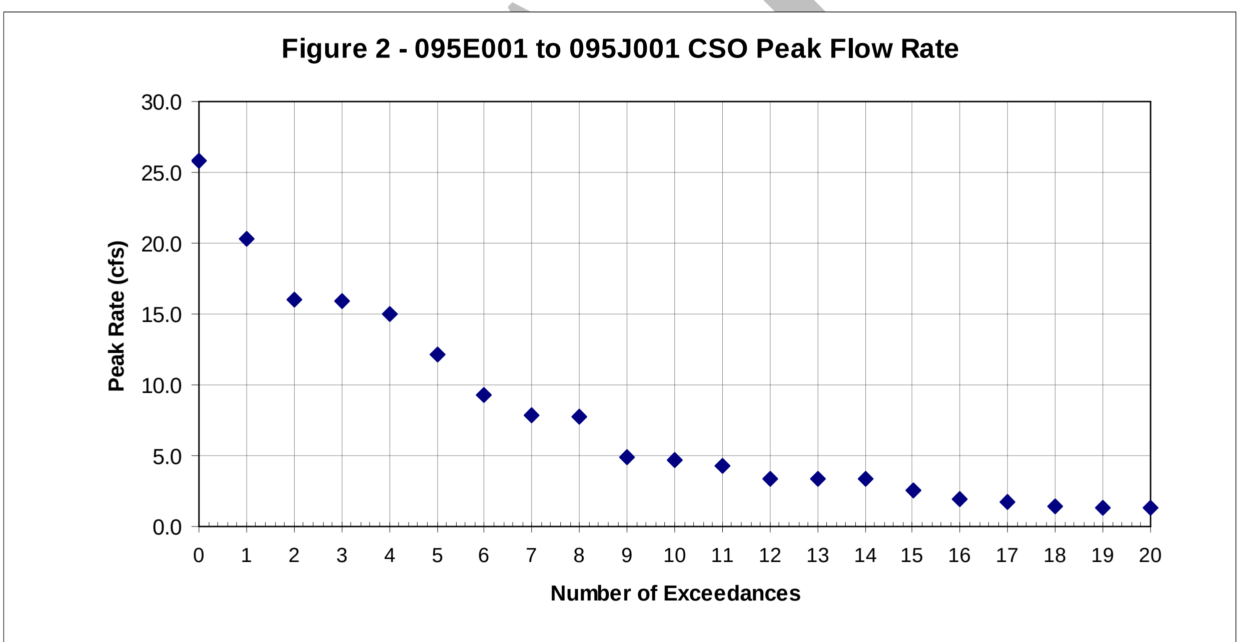
Description of Outfalls

These outfalls are included in the Brookline Boulevard Sewershed and the Englert Sewershed. CSO095E001 is in the Brookline Boulevard Sewershed, which is located in portions of Brookline and Overbrook sections in the City of Pittsburgh. This sewershed includes approximately 196 acres of residential, business and commercial users, of which approximately 84 acres are located upstream of the PWSA diversion chambers. CSO095J001 is in the Englert Sewershed, which is located in portions of Carrick and Overbrook sections in the City of Pittsburgh and in portions of Brentwood Borough, Castle Shannon Borough and Whitehall Borough. This sewershed consists of 49 acres of residential, business and commercial users, of which approximately 5 acres are located upstream of the PWSA diversion chamber. Outfalls CSO095E001 and CSO095J001 currently convey overflows from each of the respective PWSA diversion chambers to tributaries of Saw Mill Run.

Attachment 1, Tributary Area Map, shows the CSO locations and the tributary areas.

Outfalls 095E001 and 095J001 typically experience 71 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from all the outfalls is approximately .41 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from the outfalls is approximately 25.80 CFS. Figures 1 and 2 illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.





A necessary component of all storage and treatment alternatives would be the construction of consolidation sewers. The sewers are required to convey CSOs from outfalls 095E001 and 095J001 to an area between the two outfalls for storage and treatment. There appears to be space available approximately 600 feet north of outfall 095J001 in an existing parking facility that may be able to be procured for a storage or treatment facility. The site is generally bounded by Saw

Mill Run to the west, Saw Mill Run Boulevard to the east, and private development to the north and south.

Description of Consolidated Outfall Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from the outfalls. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Alternatives

CS4-095E001 TO 095J001: Sewer Separation

- Perform complete sewer separation of the tributary areas. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-095E001 TO 095J001: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-095E001 TO 095J001: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes.

Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-095E001 TO 095J001: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-095E001 TO 095J001: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-095E001 TO 095J001: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

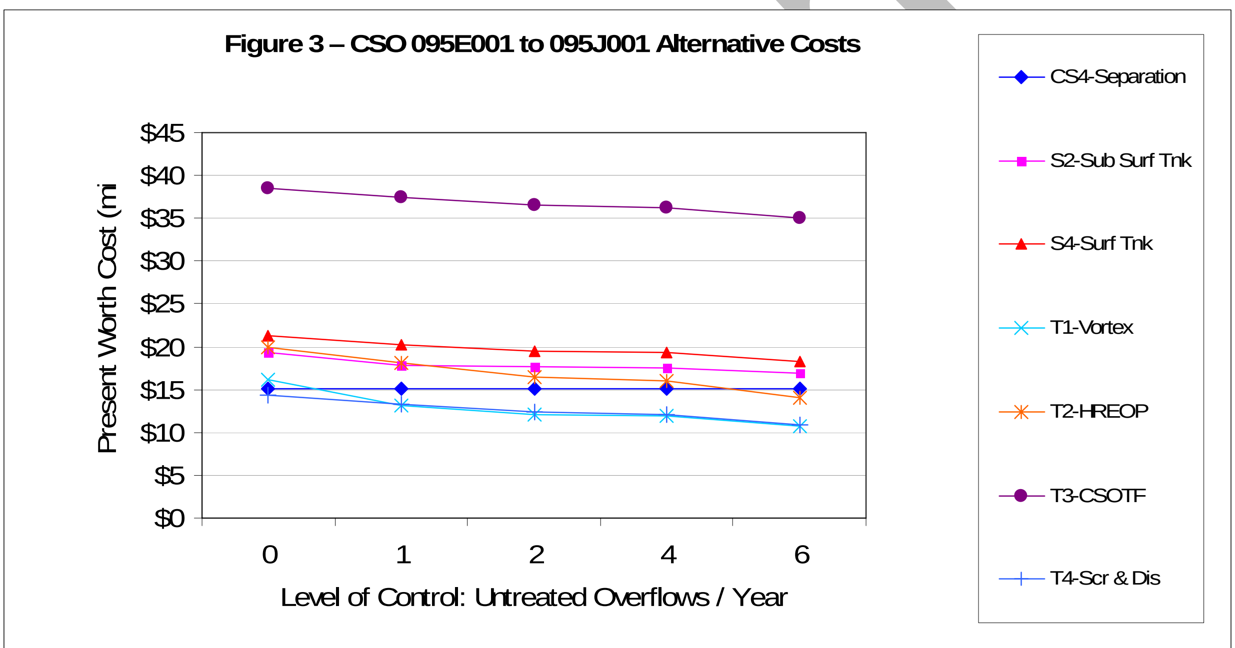
T4-095E001 TO 095J001: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – 095E001 to 095J001 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control level 0, it is recommended that Alternative CS4-095E001 to 095J001: Sewer Separation be carried forward and re-evaluated with the results of the system-wide alternatives analyses. For control levels 1 through 6, it is recommended that Alternative S2-095E001 to 095J001: Sub-Surface Storage be carried forward and re-evaluated with the results of the system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

There appears to be available space to construct a sub-surface storage facility between the two outfalls. Private property will need to be acquired for construction of the facility.

CSO Controls Alternatives

PWSA
THE PITTSBURGH WATER & SEWER AUTHORITY
Quality Water Quality Service

SW-D-0248.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will not be evaluated.
Sewer separation	Y	Sewer separation will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with all storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with all treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0248.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	5	5	5	5	5
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	2	2	2	2	2
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific	1	1	1	1	1
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	4	4	4	4	4
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	5	5	4	4	4
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific	2	2	2	2	2
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Objective Scoring

Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	3	3	3	3	3
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T1-Vortex	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T1-Vortex	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	3	3	3	3	3
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T1-Vortex	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T1-Vortex	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	3	3	3	3	3
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T1-Vortex	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T1-Vortex	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	2	2	2	2	2
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T1-Vortex	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T1-Vortex	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T1-Vortex	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T1-Vortex	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Objective Scoring

Alternative:	T2-HREOP	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T2-HREOP	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T2-HREOP	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.

3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T3-CSOTF	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	3	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Alternative:	T4-Scr & Dis	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	3	4	4	5
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T4-Scr & Dis	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	2	2	2	2	2
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T4-Scr & Dis	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	3	3	3	3	3
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T4-Scr & Dis	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T4-Scr & Dis	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	3	3	3	3	3
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T4-Scr & Dis	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T4-Scr & Dis	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	2	2	2	2	2
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T4-Scr & Dis	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T4-Scr & Dis	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	3	3	3	3	3
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	T4-Scr & Dis	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T4-Scr & Dis	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	T4-Scr & Dis	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	4	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

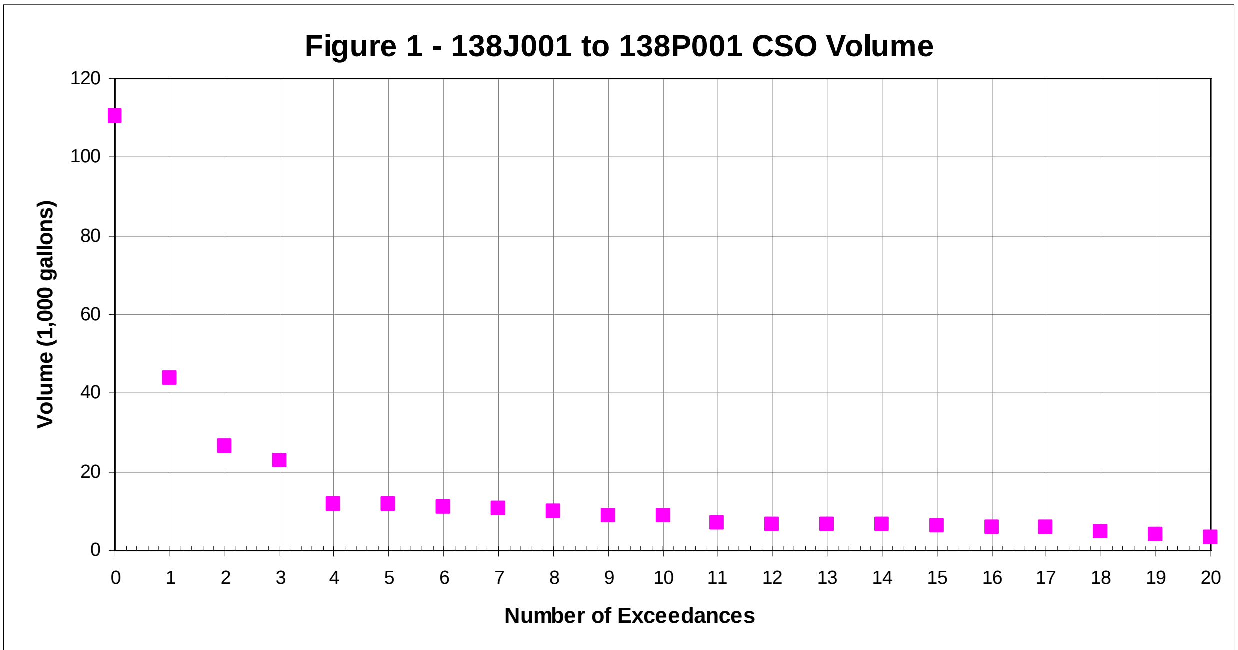
D.33.1 138J001 AND 138P001 – WEYMAN STREET SEWERSHED

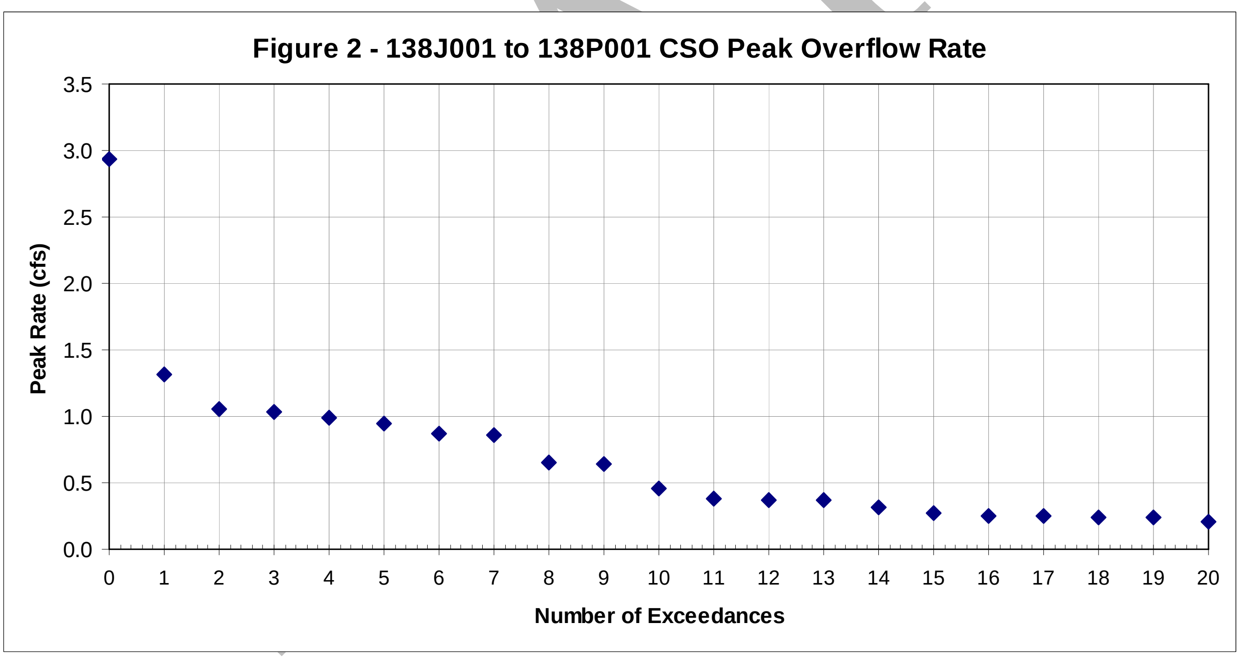
Description of Outfalls

The outfalls 138J001 and 138P001 have been consolidated into a group for evaluation. The Englert and Weyman Street Sewersheds are located in portions of Carrick and Overbrook sections in the City of Pittsburgh are located in portions of Allentown, Beltzhoover, Bon Air, Carrick, Knoxville, and Mount Washington sections in the City of Pittsburgh. The Englert and Weyman Street Sewersheds are comprised of approximately 295 manholes and 54,482 linear feet (10.3 miles) of combined, sanitary and storm sewer up to 36 inches in diameter. The outfalls are both located in the Weyman Street Sewershed. The Weyman Street Sewershed includes 77 acres of area. Flow from PWSA diversion chambers 138J001 and 138P001 is discharged to a tributary to Saw Mill Run. Neither of these outfalls has an NPDES permit number.

Attachment 1, Tributary Area Map, shows the CSO locations and the tributary areas.

The outfalls typically experience 42 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from all the outfalls is approximately 0.11 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from both outfalls is approximately 2.93 CFS. Figures 1 and 2 illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.





A necessary component of all storage and treatment alternatives would be the construction of consolidation sewers. The sewers are required to convey CSOs from outfalls 138J001 to the vicinity of outfall 138P001 where a storage or treatment alternative might be located. There appears to be a limited amount of available space for potential storage facility and some types of treatment facilities in the vicinity of this outfall due to steep slopes in the undeveloped private land. Some types of treatment require much less space and could be easily located approximately 500 to the north of CSO 138P001 in an undeveloped area. Residential land is located to the east and west of the potential storage or treatment area.

Description of Consolidated Outfall Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from the outfalls. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Alternatives

CS4- 138J001 and 138P001: Sewer Separation

- Perform complete sewer separation of the tributary areas. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2- 138J001 and 138P001: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4- 138J001 and 138P001: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1- 138J001 and 138P001: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2- 138J001 and 138P001: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities.   Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3- 138J001 and 138P001: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T4- 138J001 and 138P001: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – 138J001 and 138P001 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.

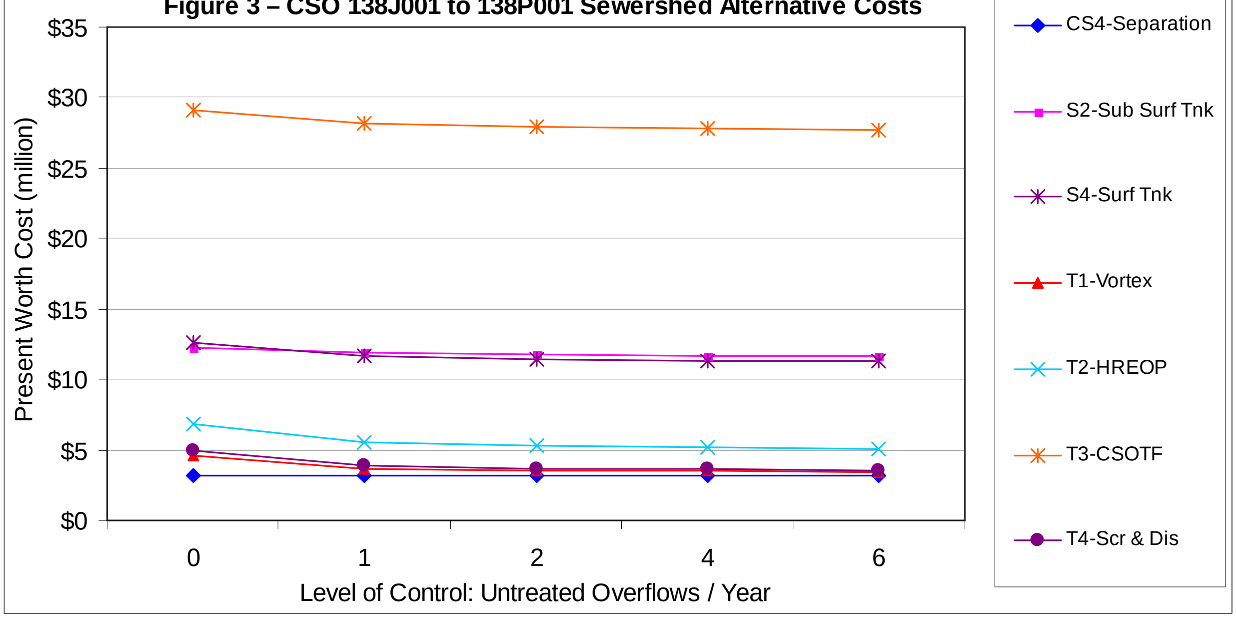


Figure 3 – CSO 138J001 to 138P001 Sewershed Alternative Costs

The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall “ranking” at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 to 6, it is recommended that Alternative CS4-138J001 and 138P001: Sewer Separation be carried forward and re-evaluated with the results of the system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, shows the locations of the outfalls that will be addressed with the recommended alternative. Separation sewers will be constructed throughout the sewershed. No storage or treatment facility will be needed so no facility location is identified on the map.

Significant Issues

There is very limited space in the vicinity of either of the outfalls in this group for a storage or treatment facility but construction may be limited due to steep slopes. Significant earthwork may be required due to steep slopes if storage or certain treatment alternatives are selected. For the recommended alternative, sewer separation, however, this is less of a significant issue.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0250.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will not be evaluated.
Sewer separation	Y	Sewer separation will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with all storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with all treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0250.pdf

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	5	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	3	3	3	3	3
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	5	5	5	5	5
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	5	5	4	4	4
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.

Objective Scoring

Alternative:	T1-Vortex	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative: T1-Vortex		Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	3	3	3	3	3
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative: T1-Vortex		Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	3	3	3	3	3
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: T1-Vortex		Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: T1-Vortex		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: T1-Vortex		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Objective Scoring

Alternative:	T1-Vortex	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T1-Vortex	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T1-Vortex	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**

Alternative:	T3-CSOTF	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T3-CSOTF	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T3-CSOTF	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T3-CSOTF	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	3	3	3	3	3
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T3-CSOTF	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T3-CSOTF	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T3-CSOTF	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T3-CSOTF	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	1	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Objective Scoring

Alternative:	T4-Scr & Dis	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	3	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T4-Scr & Dis	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	2	2	2	2	2
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T4-Scr & Dis	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	3	3	3	3	3
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T4-Scr & Dis	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T4-Scr & Dis	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	3	3	3	3	3
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T4-Scr & Dis	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.

SCREENING AND DISINFECTION					
6 Overflows / Year					
1. Screening Parameters					
Screening Required (Yes = 1; No = 2)		1			Default Value
Peak Flow, into facility (MGD)		10.93		16.91	Ref: CSO Statistics
Construction Cost (Screening)	**$**	**918,000**			
2. Pump Station / Force Main Parameters					
Volume Requiring Pumping (%)		100%			Ref: Technical Parameters
Dewatering Pumping Rate (MGD / CFS)		10.93		16.91	= Peak Flow x % Req Pump
Force Main Diameter (In)		23			DW Pump Rate / 2FPS
Force Main Velocity (FPS)		5.9		**Check:**	**OK - Velocity >2 fps/< 10 fps**
Force Main Length (Ft)		100			Input by Engineer
Construction Cost (PS / Force Main)	**$**	**2,888,000**	**$**	**31,000**	
3. Consolidation and/or Outfall Pipe Parameters					
Peak Flow (CFS)		16.91			Ref: CSO Statistics
Diameter (In)		36			<25cfs=36"; 25-50cfs=48"; 50-100cfs=66"; 100-150cfs=78"; 150-200cfs=90", 200-250cfs=96"; 250-300cfs=108"; >300cfs=120"
Length (Ft)		100			Input by Engineer
Depth (Ft)		20			Input by Engineer
Construction Cost (Pipe)	**$**	**63,000**			
4. Odor Control Parameters					
Air Changes / Hour (ACH)		3			Ref: Technical Parameters
Volume of Ventilated Space (CF)		3,400			=CFS x 200
Odor Control Flow Rate (CFM)		170			= ACH x Volume / 60
Construction Cost (Odor Control)	**$**	**23,000**			
5. Disinfection Parameters					
Disinfection Required (Yes = 1; No = 2)		1			Default Value
Peak Flow (MGD)		10.93			Ref: Peak Flow into Facility
Cl_2 Contact Tank Length / Width (Ft)		52		25	
Passes		3		**15.38**	Ref: Tech Param-15 min minimum
				OK Detn Time	
Construction Cost (Disinfection / CC Tank)	$	565,000	$	434,000	
Construction Cost (Disinfection)	**$**	**999,000**			
6. Regulator Parameters					
Regulator Construction (0=None; 1=New Static; 2=New Auto; 3=New Reg; 4=Mod Reg)		4		**Modify Regulator**	Input by Engineer
Number Regulators		1			Input by Engineer
Construction Cost (Regulators)	**$**	**39,000**			
7. Land Acquisition Parameters					
Land Required - Screening & Disinfection (SF)		24,000			=(0.0016 x Cap(CFS) + 0.514) x 43560
Land Required Cost ($ / SF)	$	2			Ref: Technical Parameters
Land Acquisition Cost	**$**	**48,000**			
			TOTAL CAPITAL COST	**$**	**5,009,000**

D.34.1 CSO097L001 – MCDONOUGHS RUN SEWERSHED – NPDES# 097L001

Description of Outfall

Outfall 097L001 conveys overflows from the PWSA diversion chamber 097L001 to McDonough's Run. The McDonoughs Run Sewershed is located in portions of the Brookline section in the City of Pittsburgh and in portions of Baldwin Township, Dormont Borough and the Municipality of Mount Lebanon. The outfall is located along McDonough's Run off Queensboro Avenue in the Brookline section of the City of Pittsburgh. This sewershed includes approximately 1,068 acres of residential, business and commercial users. The tributary sewershed is called the McDonough's Run Sewershed and is 51 acres, or 4.78% of total service area. The McDonoughs Run Sewershed is comprised of approximately 409 manholes and 105,281 linear feet (19.9 miles) of mostly combined sewer up to 54 inches in diameter.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

Outfall 097L001 typically experiences 53 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from outfall 097L001 is approximately 0.72 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 097L001 is approximately 26.21 CFS. *Figure 1 – Outfall 097L001 CSO Volume* and *Figure 2 – Outfall 097L001 CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.

Figure 1 - Outfall 097L001 CSO Volume

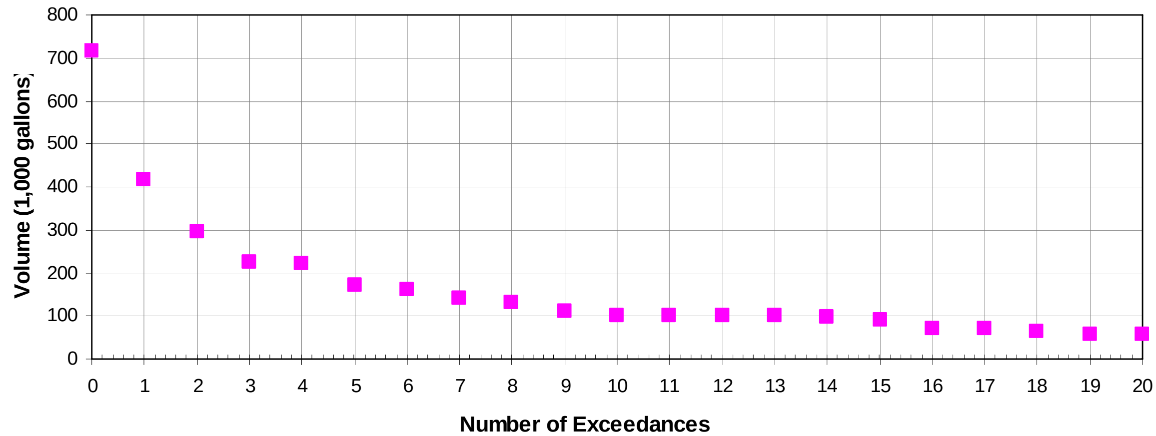

Figure 2 - Outfall 097L001 CSO Peak Flow Rate

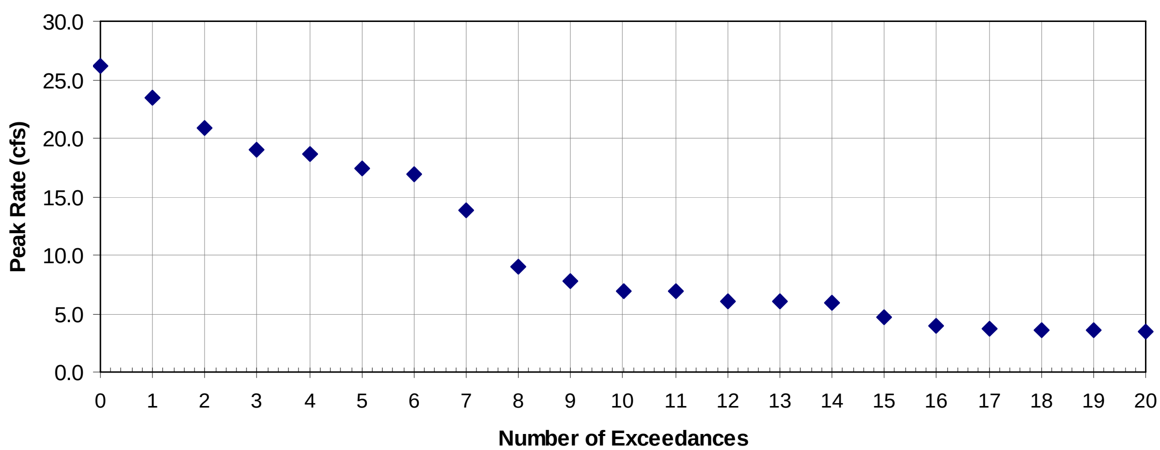


Limited space appears to be available for storage or treatment facilities adjacent to the outfall, southeast of the end of Queensboro Avenue. The site is generally bounded by steep slopes to the south, west and east and residential development to the north.

Description of Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 097L001. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS4-097L001: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-097L001: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-097L001: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-097L001: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-097L001: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-097L001: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

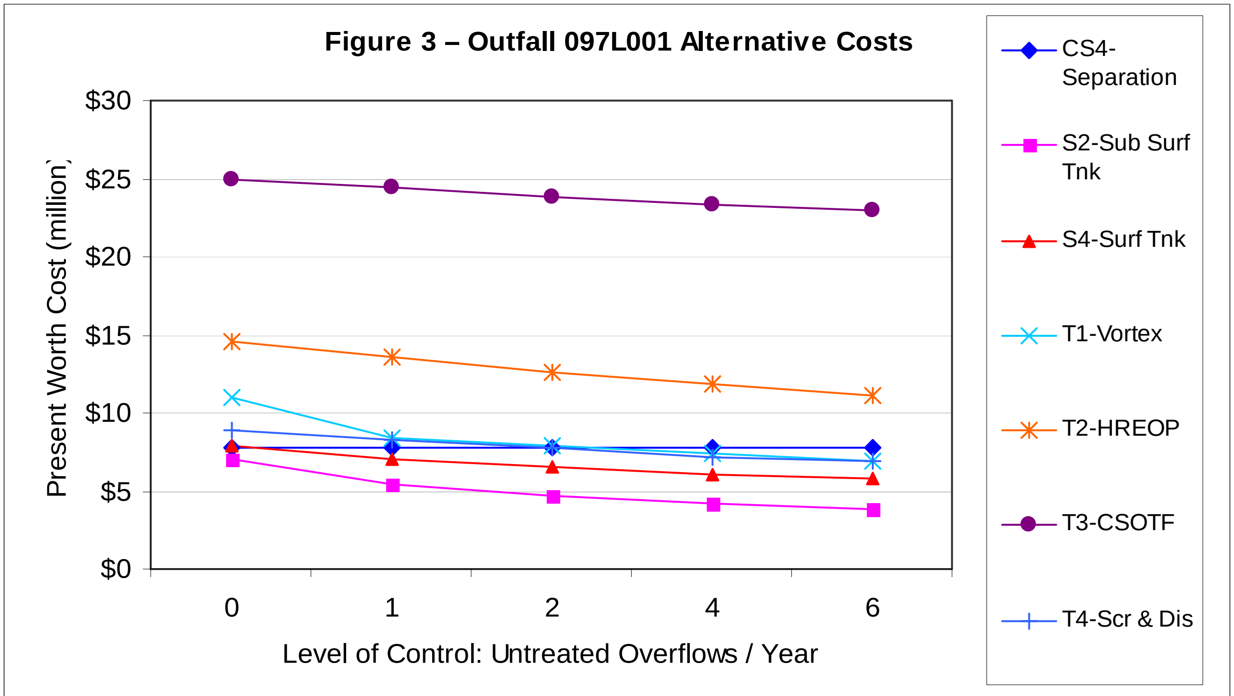
T4-097L001: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 097L001 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 through 6, it is recommended that Alternative S2-097L001: Sub-Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

It appears that space is available at the location described above to construct said facilities.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0252.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
<u>Source Control:</u>		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
<u>Collection System Controls:</u>		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	A relief sewer will not be evaluated.
Sewer separation	Y	Sewer separation within the 51 acres of combined sewer area tributary to this outfall will be evaluated.
<u>Storage:</u>		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
<u>Treatment:</u>		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

SW-D-0252.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	2	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	2	2	2	2	2
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific	1	1	1	1	1
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.					
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.	4	4	4	4	4
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	5	5	5	5	5
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	5	5	5	5	5
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Alternative:	S4-Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	2	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S4-Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S4-Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	5	5	4	4	4
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S4-Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	2	2	2	2	2
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S4-Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S4-Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	1	1	1	1	1
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Objective Scoring

Alternative:	S4-Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	3	3	3	3	3
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S4-Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	2	2	2	2	2
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S4-Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**

2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T2-HREOP	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	3	3	3	3	3
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T2-HREOP	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	2	2	2	2	2
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	2	2	2	2	2
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T2-HREOP	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	1	1	1	1	1
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	2	2	2	2	2
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T2-HREOP	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	1	1	1	1	1
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	1	1	1	1	1
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	1	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

Alternative:	T3-CSOTF	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T3-CSOTF	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	3	3	3	3	3
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T3-CSOTF	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T3-CSOTF	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. D.34.2 139A001 TO 139B002 – McDONOUGHS RUN SEWERSHED – NPDES# 139A001, 139B001, 139B002

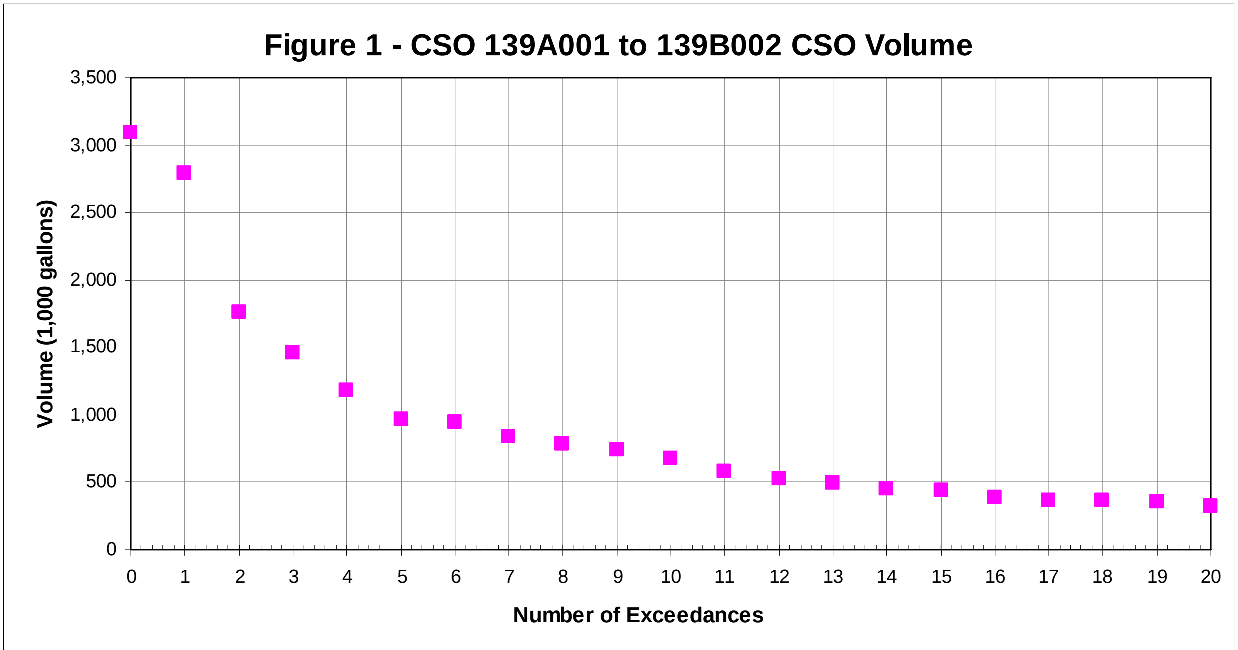
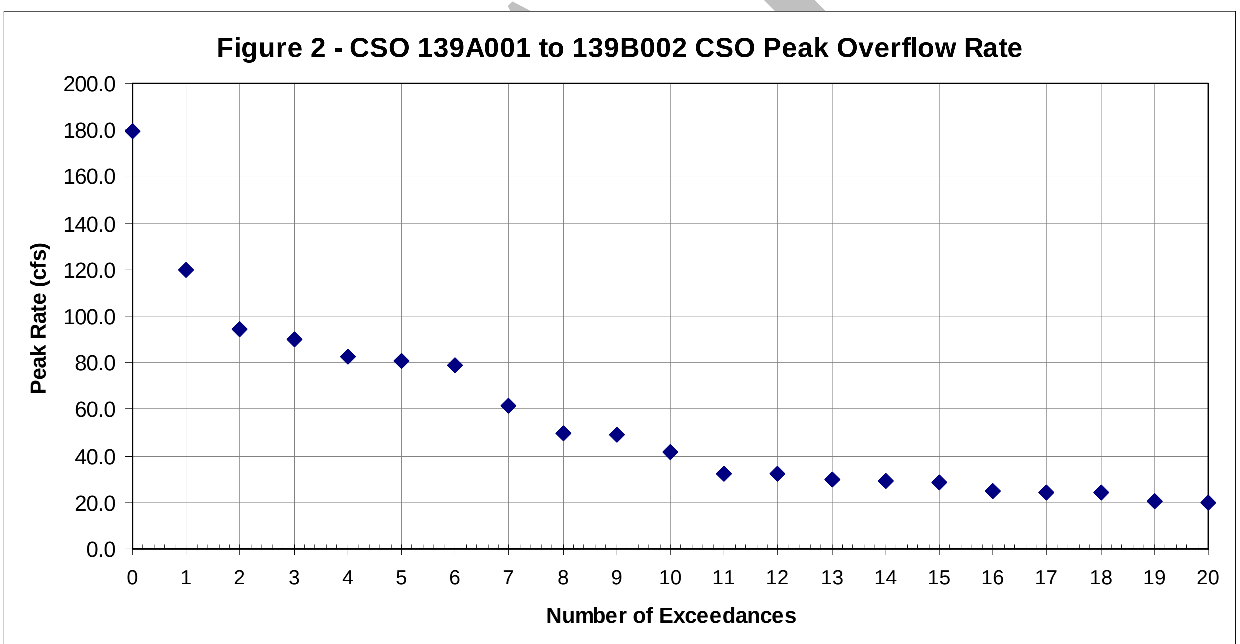
Description of Outfalls

The McDonoughs Run Sewershed is located in portions of the Brookline section in the City of Pittsburgh and in portions of Baldwin Township, Dormont Borough and the Municipality of Mount Lebanon. It consists of approximately 1,068 acres of combined sewers that contribute flow to six (6) PWSA outfalls. Outfalls CSO139A001, CSO139B001, CSO139B002 have been consolidated into a group for evaluation. These outfalls currently convey overflows from each of the respective PWSA diversion chambers to McDonough's Run and subsequently to Saw Mill Run. The CSO139A001 tributary area consists of 228 acres of combined sewers, the CSO139B001 tributary area consists of 18 acres of combined sewers, and the CSO139B002 tributary area consists of 52 acres of combined sewers. The McDonoughs Run Sewershed is comprised of approximately 409 manholes and 105,281 linear feet (19.9 miles) of mostly combined sewer up to 54 inches in diameter. This consolidation includes 320 acres of the McDonough's Run Sewershed.

Attachment 1, Tributary Area Map, shows the CSO locations and the tributary areas.

Outfalls 139A001 to 139B002 typically experience 80 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from all the outfalls is approximately 3.09 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from the outfalls is approximately 179.47 CFS. Figures 1 and 2 illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.





A necessary component of all storage and treatment alternatives would be the construction of consolidation sewers. The sewers are required to convey CSOs from outfalls 139B002, and 139B001 to the vicinity of the diversion chamber 139A001. Space is extremely limited in the vicinity of the intersection of McNeilly Road and Sussex Avenue. The site is generally bounded by McNeilly Road and private development to the north and McDonough's Run and steep slopes to the south, east and west. The largest CSO volume and flow rate is from outfall 139A001, which is upstream of the other outfalls in this group of consolidated outfalls. Space is also limited at the other outfall locations in this consolidation.

Description of Consolidated Outfall Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from the outfalls. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Alternatives

CS4-139A001 to 139B002: Sewer Separation

- Perform complete sewer separation of the tributary areas. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-139A001 to 139B002: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-139A001 to 139B002: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-139A001 to 139B002: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-139A001 to 139B002: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-139A001 to 139B002: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

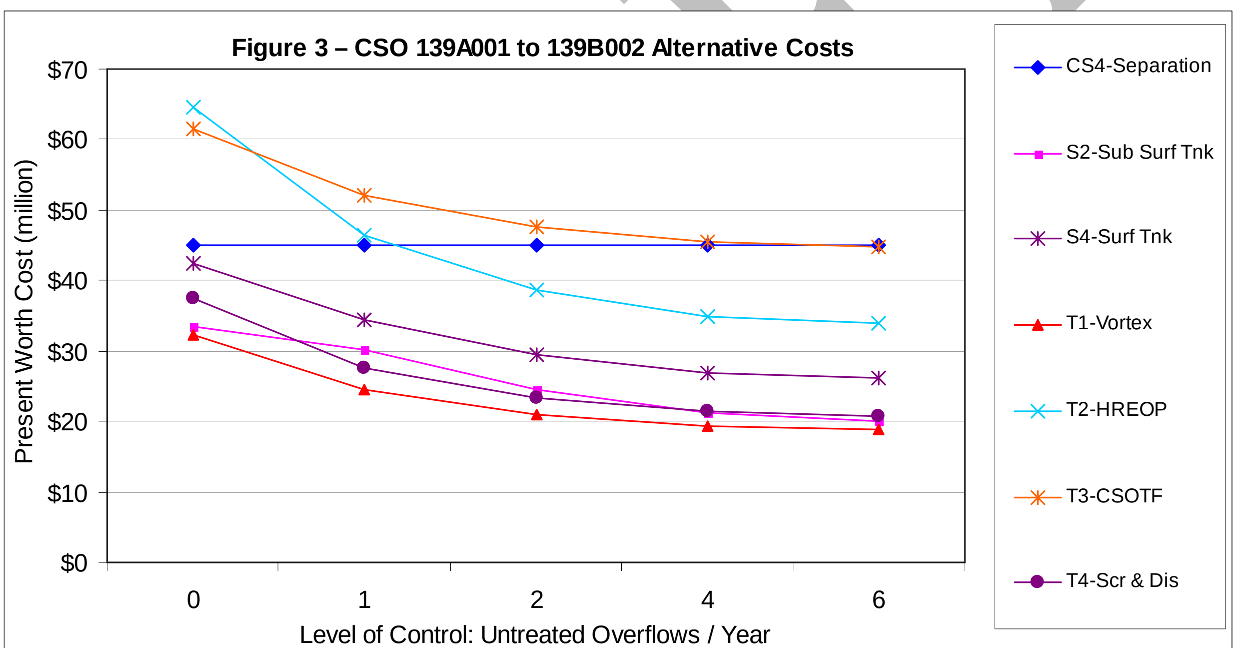
T4-139A001 to 139B002: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure3 – 139A001 to 139B002 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 through 6, it is recommended that Alternative S2-139A001 to 139B002: Sub-Surface Storage be carried forward and re-evaluated with the results of the system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Space is limited for a treatment or storage facility at any of the control levels without property acquisition. In addition, the flows would have to be pumped to the potential site. There does not appear to be space near the outfalls or diversion chambers for treatment or storage facilities due to steep slopes.

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will not be evaluated.
Sewer separation	Y	Sewer separation will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with all storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with all treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	2	2	2	2	2
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	5	5	5	5	5
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

Alternative:	S4-Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S4-Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	1	1	1	1	1
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	S4-Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S4-Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S4-Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**

5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T1-Vortex	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	3	3	3	3	3
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T1-Vortex	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	3	3	3	3	3
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T1-Vortex	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific	2	2	2	2	2
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T1-Vortex	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.

Alternative:	T3-CSOTF	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	3	3	3	3	3
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T3-CSOTF	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T3-CSOTF	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific	2	2	2	2	2
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T3-CSOTF	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T3-CSOTF	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed					

Alternative:	T3-CSOTF	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T3-CSOTF	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.					
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.	1	1	1	1	1
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T3-CSOTF	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	3	3	3	3	3
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T3-CSOTF	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T3-CSOTF	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T3-CSOTF	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T3-CSOTF	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	2	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Alternative:	T4-Scr & Dis	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**

Screening Required (Yes = 1; No = 2)		1		**Typ 1, Rev as Req'd**
Peak Flow, into facility (MGD)		58.08		Ref: CSO Statistics
Construction Cost (Screening)	**$**	**3,101,000**		
6. Disinfection Parameters				
Disinfection Required (Yes = 1; No = 2)		1		**Typ 1, Rev as Req'd**
Peak Flow (MGD)		63.88		Ref: Peak flow of PS
Cl_2 Contact Tank Length / Width (Ft)		125	60	
Passes		5	**15.17**	Ref: Tech Param-15 min minimum
			OK Detn Time	
Construction Cost (Disinfection / CC Tank)	$	1,500,000	$ 1,561,000	
Construction Cost (Disinfection)	**$**	**3,061,000**		
7. Regulator / Vortex Drop Parameters				
Regulator Construction (0=None; 1=New Static; 2=New Auto; 3=New Reg; 4=Mod Reg)		4	**Modify Regulator**	Input by Engineer
Number Regulators		1		Input by Engineer
New Vortex Drop Shaft		1		**Typ=# Regs, Rev as Req'd**
Construction Cost (Regulators/Vortex)	**$**	**299,000**		
8. Land Acquisition Parameters				
Land Required - HREOP (SF)		49,000		= (0.0069 x Cap(CFS) + 0.4993) x 43560
Land Required Cost ($ / SF)	$	2		Ref: Technical Parameters
Land Acquisition Cost	**$**	**98,000**		
			TOTAL CAPITAL COST	**$ 31,294,000**

SW-D-0255.pdf

RESULTS SUMMARY		
Number of Events / Year	66	
Number of Overflows / Year	6	
Peak Volume	400,828	CF
	3.00	MG
Total Volume	8,912,713	CF
	66.67	MG
Peak Rate	89.86	CFS
	58.08	MGD

		#N/A			
		SCREENING AND DISINFECTION			
		6 Overflows / Year			
1. Screening Parameters					
Screening Required (Yes = 1; No = 2)		1			Default Value
Peak Flow, into facility (MGD)		58.08		89.86	Ref: CSO Statistics
Construction Cost (Screening)	**$**	**3,101,000**			
2. Pump Station / Force Main Parameters					
Volume Requiring Pumping (%)		100%			Ref: Technical Parameters
Dewatering Pumping Rate (MGD / CFS)		58.08		89.86	= Peak Flow x % Req Pump
Force Main Diameter (In)		52			DW Pump Rate / 2 FPS
Force Main Velocity (FPS)		6.1		**Check:**	**OK - Velocity >2 fps/< 10 fps**
Force Main Length (Ft)		100			Input by Engineer
Construction Cost (PS / Force Main)	**$**	**8,737,000**	**$**	**62,000**	
3. Consolidation and/or Outfall Pipe Parameters					
Peak Flow (CFS)		89.86			Ref: CSO Statistics
Diameter (In)		66			<25cfs=36"; 25-50cfs=48"; 50-100cfs=66"; 100-150cfs=78"; 150-200cfs=90", 200-250cfs=96"; 250-300cfs=108"; >300cfs=120"
Length (Ft)		-			Input by Engineer
Depth (Ft)		-			Input by Engineer
Construction Cost (Local / Cnsldn Pipe)	**$**	**-**	**$**	**4,543,000**	Ancillary pipe / Pipe to connect outfalls
4. Odor Control Parameters					
Air Changes / Hour (ACH)		3			Ref: Technical Parameters
Volume of Ventilated Space (CF)		18,000			=CFS x 200
Odor Control Flow Rate (CFM)		900			= ACH x Volume / 60
Construction Cost (Odor Control)	**$**	**84,000**			
5. Disinfection Parameters					
Disinfection Required (Yes = 1; No = 2)		1			Default Value
Peak Flow (MGD)		58.08			Ref: Peak Flow into Facility
Cl_2 Contact Tank Length / Width (Ft)		120		57	
Passes		5		**15.22**	Ref: Tech Param-15 min minimum
				OK Detn Time	
Construction Cost (Disinfection / CC Tank)	$	1,412,000	$	1,465,000	
Construction Cost (Disinfection)	**$**	**2,877,000**			
7. Regulator / Vortex Drop Parameters					
Regulator Construction (0=None; 1=New Static; 2=New Auto; 3=New Reg; 4=Mod Reg)		4		**Modify Regulator**	Input by Engineer
Number Regulators		1			Input by Engineer
New Vortex Drop Shaft		1			**Typ=# Regs, Rev Qty as Req'd**
Construction Cost (Regulators/Vortex)	**$**	**299,000**			
7. Land Acquisition Parameters					
Land Required - Screening & Disinfection (SF)		29,000			=(0.0016 x Cap(CFS) + 0.514) x 43560
Land Required Cost ($ / SF)	$	2			Ref: Technical Parameters
Land Acquisition Cost	**$**	**58,000**			
				TOTAL CAPITAL COST	**$ 19,761,000**

D.35.1 M-6 TO M-11 – ARLINGTON THROUGH 25TH STREET SEWERSHEDS – NPDES# 004DM06, 003BM07, 003BM08, 003CM10, AND 003CM11

Description of Outfalls

The Arlington through 25th Street Sewersheds are located in portions of Allentown, Arlington, Arlington Heights, Mount Washington, South Shore, Southside Flats and Southside Slopes sections in the City of Pittsburgh. These sewersheds include approximately 1,369 acres of residential, business and commercial users that contribute flow to twenty-two (22) ALCOSAN outfalls. The sewershed has been divided into four separate consolidated groups of outfalls. The first consolidation contains outfalls M-6 through M-11. The M-6 tributary area consists of 256 acres of combined sewers, the M-7 tributary area consists of 12 acres of combined sewers, the M-8 tributary area consists of 15 acres of combined sewers, the M-10 tributary area consists of 170 acres of combined sewers and the M-11 tributary area consists of 16 acres of combined sewers. The Arlington through 25th Street Sewersheds are comprised of approximately 1,184 manholes and 269,713 linear feet (51.1 miles) of sewer up to 90 inches in diameter. Outfalls M-6 through M-11 currently convey overflows from each of the respective ALCOSAN diversion chambers to the Monongahela River.

Attachment 1, *Tributary Area Map,* shows the CSO locations and the tributary areas.

The outfalls typically experience 66 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from all the outfalls is approximately 14.39 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from both outfalls is approximately 244.46 CFS. Figures 1 and 2 illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.

Figure 1 - M-6 to M-11 CSO Volume

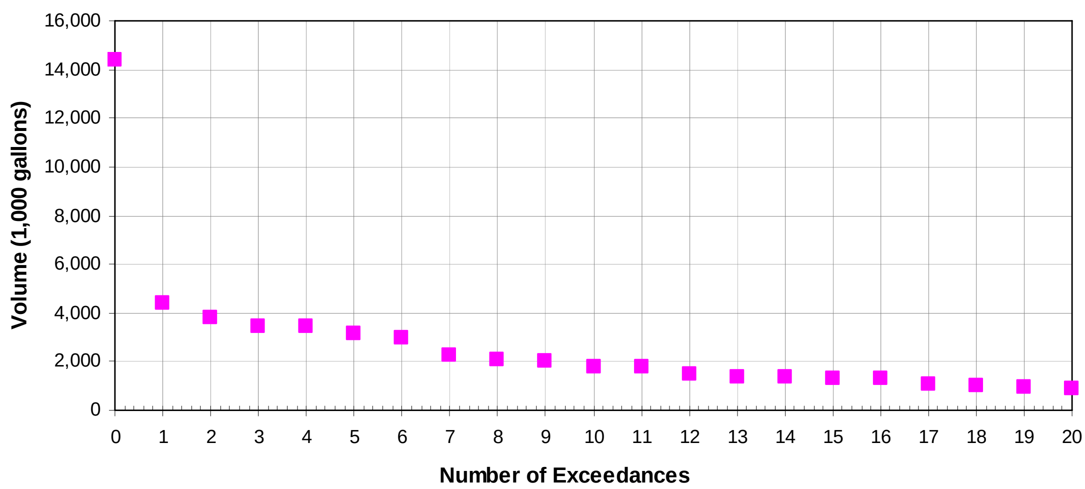

Figure 2 - M-6 to M-11 CSO Peak Flow Rate

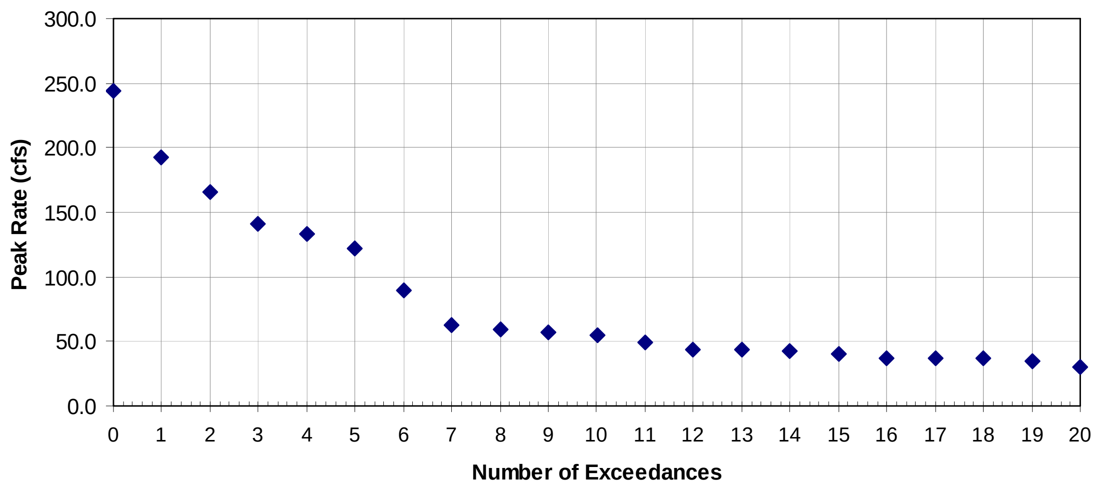

A necessary component of all storage and treatment alternatives would be the construction of consolidation sewers. The sewers are required to convey CSOs from outfalls 004DM06, 003BM07, 003BM08 and 003CM11 to the vicinity of outfall 003CM10. There appears to be a limited amount of available space for potential storage or treatment facilities to the west of this outfall, north of the existing railroad tracks (between S. Sixth Street and S. Eighth Street). Critical infrastructure in this area includes railroad tracks, the Liberty Bridge and riverfront development along the Monongahela River. The site is generally bounded by the Monongahela River to the north, railroad tracks to the south and private property to west and east.

Description of Consolidated Outfall Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from the outfalls. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Alternatives

CS4-M-6 to M-11: Sewer Separation

- Perform complete sewer separation of the tributary areas. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2- M-6 to M-11: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4- M-6 to M-11: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1- M-6 to M-11: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2- M-6 to M-11: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3- M-6 to M-11: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T4- M-6 to M-11: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – M-6 to M-11 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.

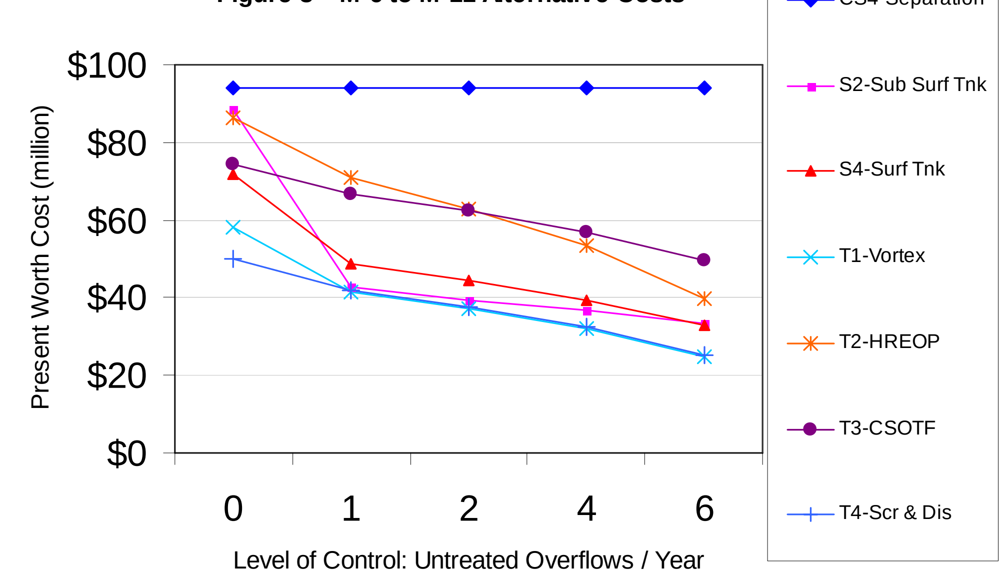

Figure 3 – M-6 to M-11 Alternative Costs

The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 through 6, it is recommended that Alternative S2-M-6 to M-11: Sub-Surface Storage be carried forward and re-evaluated with the results of the system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Several significant issues exist with the siting of a CSO storage and treatment facility. A site large enough to store control level 0 does not appear to be available in the vicinity of outfall 003CM10. Installing a structure with a deeper sidewater depth could reduce the size of footprint required for a storage facility. Construction of the consolidation sewers will also be a significant endeavor considering the congested infrastructure that exists along the river in this area.

CSO Controls Alternatives

PWSA
THE PITTSBURGH WATER & SEWER AUTHORITY
Quality Water Quality Service

SW-D-0256.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will not be evaluated.
Sewer separation	Y	Sewer separation will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with all storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with all treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA
THE PITTSBURGH WATER & SEWER AUTHORITY
Quality Water Quality Service

SW-D-0256.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	5	5	5	5	5
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	5	5	4	4	4
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	2	2	2	2	2
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	4	4	4	4	4
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF

Objective Scoring

Alternative:	T1-Vortex	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T1-Vortex	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T1-Vortex	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	T1-Vortex	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	1	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Alternative:	T2-HREOP	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T2-HREOP	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T2-HREOP	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T2-HREOP	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	2	2	2	2	2
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T2-HREOP	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T2-HREOP	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T2-HREOP	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	1	1	1	1	1
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**

3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T4-Scr & Dis	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T4-Scr & Dis	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T4-Scr & Dis	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T4-Scr & Dis	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T4-Scr & Dis	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	3	3	3	3	3
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T4-Scr & Dis	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	2	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

D.35.2 M-12 TO M-17 REGION – ARLINGTON THROUGH 25TH STREET SEWERSHEDS – NPDES# 003DM12, 003DM13, 012AM14, 012AM14A, 012AM15, 012BM16, AND 012BM17

Description of Outfalls

The Arlington through 25th Street Sewersheds are located in portions of Allentown, Arlington, Arlington Heights, Mount Washington, South Shore, Southside Flats and Southside Slopes sections in the City of Pittsburgh. These sewersheds include approximately 1,369 acres of residential, business and commercial users that contribute flow to twenty-two (22) ALCOSAN outfalls. The sewershed has been divided into four regions, regions 1 through 4. Region 2 contains outfalls M-12, M-13, M-14, M-14A, M-15, M-16 and M-17. The M-12 tributary area consists of 26 acres of combined sewers, the M-13 tributary area consists of 13 acres of combined sewers, the M-14 tributary area consists of 16 acres of combined sewers, the M-14A tributary area consists of 17 acres of combined sewers, the M-15 tributary area consists of 6 acres of combined sewers, and the M-16 tributary area consists of 301 acres of combined sewers. The M-17 tributary area consists of 8 acres of combined sewers. The Arlington through 25th Street Sewersheds are comprised of approximately 1,184 manholes and 269,713 linear feet (51.1 miles) of sewer up to 90 inches in diameter. Outfalls 003DM12 through 012BM17 currently convey overflows from each of the respective ALCOSAN diversion chambers to the Monongahela River.

Attachment 1, Tributary Area Map, shows the CSO locations and the tributary areas.

Outfalls 003DM12 to 012BM17 typically experience 73 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from all the outfalls is approximately 9.26 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from the outfalls is approximately 175.68 CFS. Figures 1 and 2 illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.

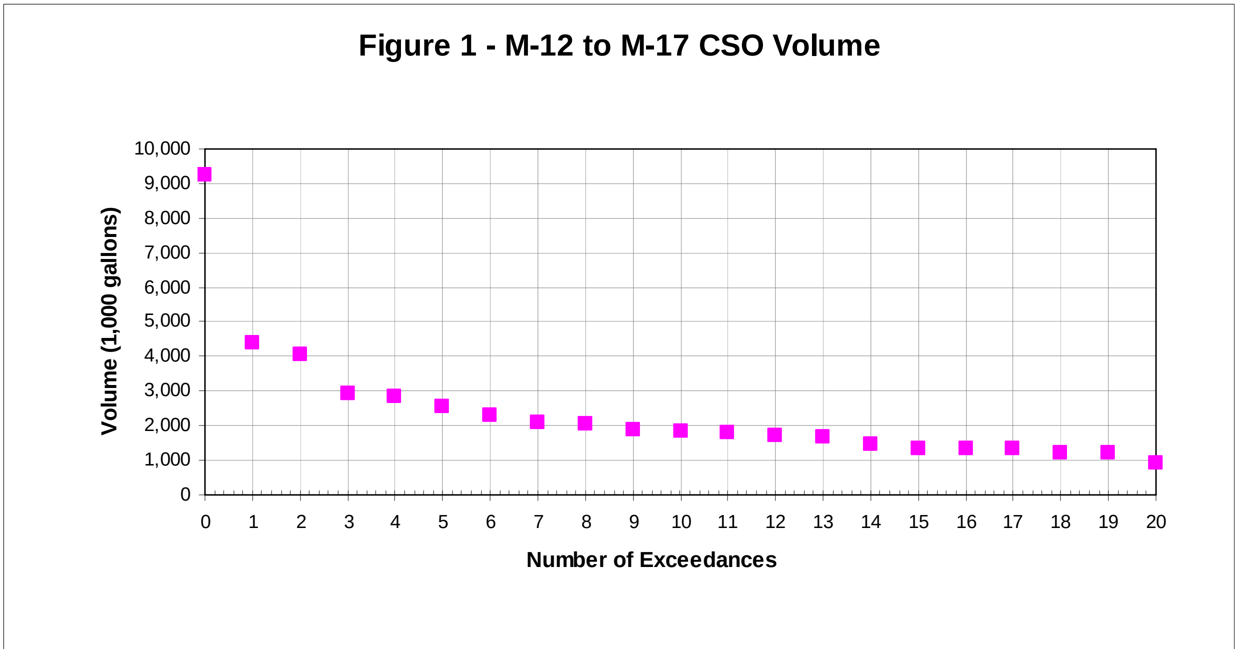

Figure 1 - M-12 to M-17 CSO Volume

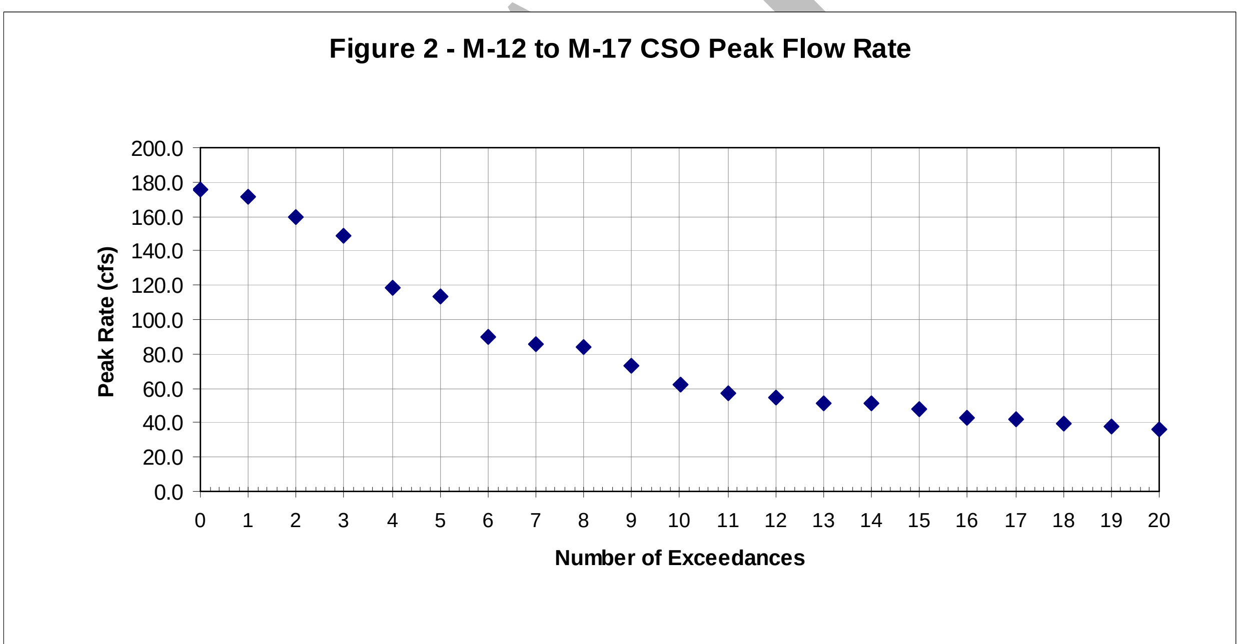

Figure 2 - M-12 to M-17 CSO Peak Flow Rate

A necessary component of all storage and treatment alternatives would be the construction of a consolidation sewer. The sewer is required to convey CSOs from outfalls 003DM12, 003DM13, 012AM14, 012AM14A, 012AM15 and 012BM17 to the vicinity of outfall 012BM16. There appears to be a limited amount of available space for potential storage or treatment facilities to the east of this outfall, north of the existing railroad tracks (between S. 20th Street and S. 21st

Street), near the existing riverfront park. The site is generally bounded by the Monongahela River to the north, railroad tracks to the south and private property to west and east.

Description of Consolidated Outfall Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from the outfalls. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Alternatives

CS4-M-12 TO M-17 REGION: Sewer Separation

- Perform complete sewer separation of the tributary areas. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-M-12 TO M-17 REGION: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-M-12 TO M-17 REGION: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-M-12 TO M-17 REGION: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-M-12 TO M-17 REGION: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-M-12 TO M-17 REGION: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

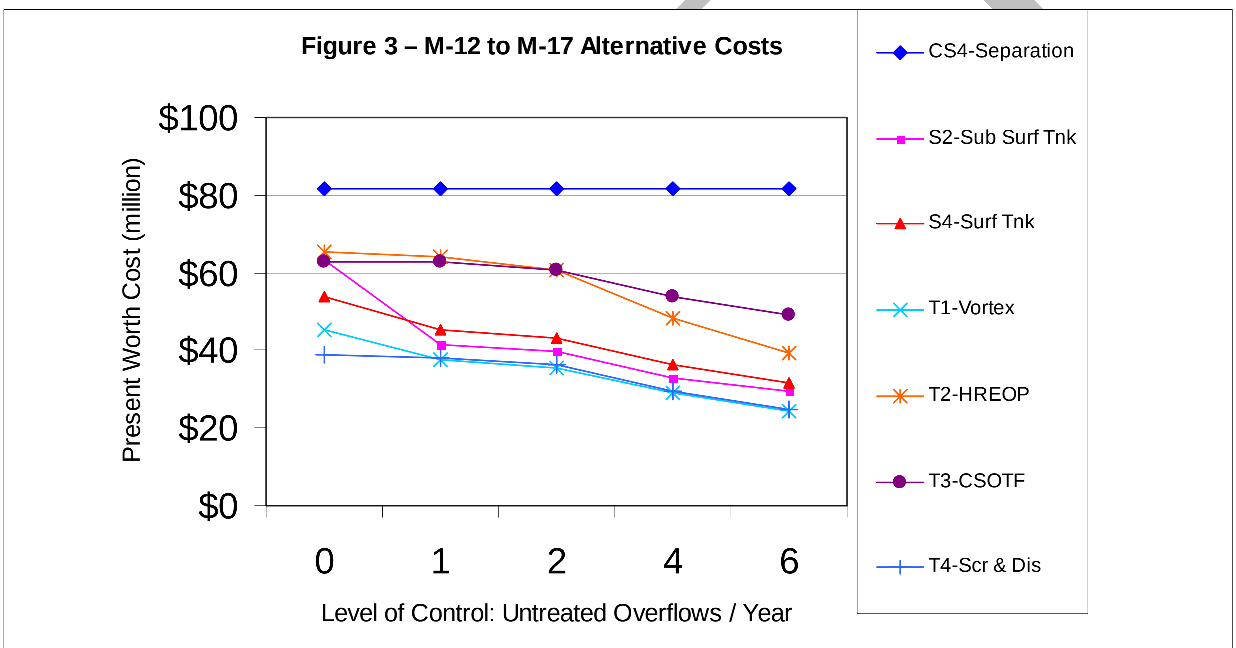
T4-M-12 TO M-17 REGION: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – M-12 to M-17 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall “ranking” at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control level 0, it is recommended that Alternative S4- M-12 to M-17: Surface Storage be carried forward and re-evaluated with the results of the system-wide alternatives analysis. For control levels 1 through 6, it is recommended that Alternative S2-M-12 to M-17 Region: Sub-Surface Storage be carried forward and re-evaluated with the results of the system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Several significant issues exist with the siting of a CSO storage and treatment facility. A site large enough to store control levels 0 and 1 does not appear to be available in the vicinity of outfall 012BM16. Installing a structure with a deeper sidewater depth could reduce the size of footprint required for a storage facility. Also, in order to consolidate CSOs to outfall 012BM16, it will need to be conveyed in an upstream direction, which may result in a deep gravity consolidation sewer. Construction of the consolidation sewers will also be a significant endeavor considering the congested infrastructure that exists along the river in this area.

SW-D-0258.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will not be evaluated.
Sewer separation	Y	Sewer separation will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with all storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with all treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	5	5	5	5	5
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	5	5	5	5	5
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S4-Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S4-Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	5	5	4	4	4
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S4-Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	2	2	2	2	2
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S4-Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S4-Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	1	1	1	1	1
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T2-HREOP	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	1	1	1	1	1
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T2-HREOP	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	1	1	1	1	1
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	1	1	1	1	1
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	1	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team
Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Alternative:	T3-CSOTF	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T3-CSOTF	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	3	3	3	3	3
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T3-CSOTF	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T3-CSOTF	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific[…]					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	2	2	2	2	2
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T3-CSOTF	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T3-CSOTF	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T3-CSOTF	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF

#N/A					
SCREENING AND DISINFECTION					
2 Overflows / Year					
1. Screening Parameters					
Screening Required (Yes = 1; No = 2)		1			Default Value
Peak Flow, into facility (MGD)		95.04		147.07	Ref: CSO Statistics
Construction Cost (Screening)	**$**	**4,813,000**			
2. Pump Station / Force Main Parameters					
Volume Requiring Pumping (%)		100%			Ref: Technical Parameters
Dewatering Pumping Rate (MGD / CFS)		95.04		147.07	= Peak Flow x % Req Pump
Force Main Diameter (In)		67			DW Pump Rate / 2 FPS
Force Main Velocity (FPS)		6.0		**Check:**	**OK - Velocity >2 fps/< 10 fps**
Force Main Length (Ft)		100			Input by Engineer
Construction Cost (PS / Force Main)	**$**	**13,247,000**	**$**	**81,000**	
3. Consolidation and/or Outfall Pipe Parameters					
Peak Flow (CFS)		147.07			Ref: CSO Statistics
Diameter (In)		78			<25cfs=36"; 25-50cfs=48"; 50-100cfs=66"; 100-150cfs=78"; 150-200cfs=90", 200-250cfs=96"; 250-300cfs=108"; >300cfs=120"
Length (Ft)		-			Input by Engineer
Depth (Ft)		-			Input by Engineer
Construction Cost (Local / Cnsldn Pipe)	**$**	**-**	**$**	**2,735,000**	Ancillary pipe / Pipe to connect outfalls
4. Odor Control Parameters					
Air Changes / Hour (ACH)		3			Ref: Technical Parameters
Volume of Ventilated Space (CF)		29,400			=CFS x 200
Odor Control Flow Rate (CFM)		1,470			= ACH x Volume / 60
Construction Cost (Odor Control)	**$**	**124,000**			
5. Disinfection Parameters					
Disinfection Required (Yes = 1; No = 2)		1			Default Value
Peak Flow (MGD)		95.04			Ref: Peak Flow into Facility
Cl_2 Contact Tank Length / Width (Ft)		153		73	
Passes		7		**15.19**	Ref: Tech Param-15 min minimum
				OK Detn Time	
Construction Cost (Disinfection / CC Tank)	$	1,920,000	$	2,286,000	
Construction Cost (Disinfection)	**$**	**4,206,000**			
7. Regulator / Vortex Drop Parameters					
Regulator Construction (0=None; 1=New Static; 2=New Auto; 3=New Reg; 4=Mod Reg)		4		**Modify Regulator**	Input by Engineer
Number Regulators		1			Input by Engineer
New Vortex Drop Shaft		1			**Typ=# Regs, Rev Qty as Req'd**
Construction Cost (Regulators/Vortex)	**$**	**299,000**			
7. Land Acquisition Parameters					
Land Required - Screening & Disinfection (SF)		33,000			=(0.0016 x Cap(CFS) + 0.514) x 43560
Land Required Cost ($ / SF)	$	2			Ref: Technical Parameters
Land Acquisition Cost	**$**	**66,000**			
				TOTAL CAPITAL COST	**$ 25,571,000**

RESULTS SUMMARY		
Number of Events / Year	63	
Number of Overflows / Year	4	
Peak Volume	261,327	CF
	1.95	MG
Total Volume	6,129,569	CF
	45.85	MG
Peak Rate	139.27	CFS
	90.01	MGD

CONSOLIDATION SEWERS			
4 Overflows / Year			
1. Consolidation Sewer Parameters			
Total Consolidation Pipe (Ft)		1,820	Width of Sewershed along Riverline
Peak Flow (CFS)		39.12	25% of Peak Flow Rate
Diameter (In)		48	<25cfs=36"; 25-50cfs=48"; 50-100cfs=66"; 100-150cfs=78"; 150-200cfs=90", 200-250cfs=96"; 250-300cfs=108"; >300cfs=120"
Length (Ft)		455	25% of Total Length
Depth (Ft)		20	Input by Engineer
Subtotal	$	381,000	
Peak Flow (CFS)		78.23	50% of Peak Flow Rate
Diameter (In)		66	<25cfs=36"; 25-50cfs=48"; 50-100cfs=66"; 100-150cfs=78"; 150-200cfs=90", 200-250cfs=96"; 250-300cfs=108"; >300cfs=120"
Length (Ft)		455	25% of Total Length
Depth (Ft)		20	Input by Engineer
Subtotal	$	570,000	
Peak Flow (CFS)		117.35	75% of Peak Flow Rate
Diameter (In)		78	<25cfs=36"; 25-50cfs=48"; 50-100cfs=66"; 100-150cfs=78"; 150-200cfs=90", 200-250cfs=96"; 250-300cfs=108"; >300cfs=120"
Length (Ft)		455	25% of Total Length
Depth (Ft)		20	Input by Engineer
Subtotal	$	726,000	
Peak Flow (CFS)		156.47	100% of Peak Flow Rate
Diameter (In)		90	<25cfs=36"; 25-50cfs=48"; 50-100cfs=66"; 100-150cfs=78"; 150-200cfs=90", 200-250cfs=96"; 250-300cfs=108"; >300cfs=120"
Length (Ft)		455	25% of Total Length
Depth (Ft)		20	Input by Engineer
Subtotal	$	906,000	
Construction Cost (Consolidation Sewers)	**$**	**2,583,000**	
2. Interceptor Connection Parameters			
Diameter (In)		24	
Number Connections		-	Input by Engineer, Total 8"-24" Connx
Subtotal	$	-	Ref: Technical Parameters
Diameter (In)		48	
Number Connections		-	Input by Engineer, Total 25"-48" Connx
Subtotal	$	-	Ref: Technical Parameters
Diameter (In)		72	
Number Connections		-	Input by Engineer, Total 49"-72" Connx
Subtotal	$	-	Ref: Technical Parameters
Diameter (In)		90	
Number Connections		1	Input by Engineer, Total >73" Connx
Subtotal	$	152,000	Ref: Technical Parameters
Construction Cost (Interceptor Connx)	**$**	**152,000**	
3. Land Acquisition Parameters			
Land Acquisition - Consolidation Sewers (SF)		0	Input by Engineer
Land Required Cost ($ / SF)	$	2	Ref: Technical Parameters
Land Acquisition Cost	**$**	**-**	
		TOTAL CAPITAL COST	**$ 2,735,000**

RESULTS SUMMARY		
Number of Events / Year	63	
Number of Overflows / Year	4	
Peak Volume	261,327	CF
	1.95	MG
Total Volume	6,129,569	CF
	45.85	MG
Peak Rate	139.27	CFS
	90.01	MGD

	SEWER SEPARATION			
	4 Overflows / Year			
1. Sewer Separation Parameters				
Drainage Area - Suburban Areas (Acres)		0		**Typ 0, Rev as Req'd**
% Separation - Suburban Areas		100%		Complete Separation
Drainage Area - Urban Areas (Acres)		242		Ref: CSO Statistics
% Separation - Urban Areas		100%		Complete Separation
Construction Cost (Sewer Separation)	**$**	**48,400,000**		
2. Regulator Parameters				
Regulator Construction (0=None; 1=New Static; 2=New Auto; 3=New Reg; 4=Mod Reg)		4	**Modify Regulator**	Reg Mod Only
Number Regulators				Input by Engr-Typ=# Regs in Region
Construction Cost (Regulators)	**$**	**-**		
3. Land Acquisition Parameters				
Land Acquisition - Sewer Separation (SF)		105,415		1% Drainage Area
Land Required Cost ($ / SF)	$	2		Ref: Technical Parameters
Land Acquisition Cost	**$**	**211,000**		
			TOTAL CAPITAL COST	**$ 48,611,000**

RESULTS SUMMARY		
Number of Events / Year	63	
Number of Overflows / Year	4	
Peak Volume	261,327	CF
	1.95	MG
Total Volume	6,129,569	CF
	45.85	MG
Peak Rate	139.27	CFS
	90.01	MGD

#N/A				
SURFACE STORAGE TANK				
4 Overflows / Year				
1. Tank Parameters				
Storage Type (1=Surface; 2=Subsurface)		1	Surface Tank	Default Value
Sizing Basis: Peak Volume (MG / CF)		1.95	261,000	Ref: CSO Statistics
Available Capacity (% Tank Vol)		85%		Ref: Technical Parameters
Required Storage Volume (MG / CF)		2.30	307,000	= Peak Vol / Available Capacity
Side-water Depth (Ft), 15' max depth		15	**Sufficient Depth**	**Ref: Tech Par, Rev as Req'd**
Length (Ft)		176		= (Vol / SWD * 1.5)$^{1/2}$
Width (Ft)		118		= (Vol / SWD / 1.5)$^{1/2}$
Total Volume (MG / CF)		2.33	311,520	**Sufficient Volume**
Tank Area (SF)		21,000		= Length x Width
Construction Cost (Storage Tank)		**1,958,000**		
2. Influent Pump Station / Force Main Parameters				
Volume Requiring Pumping (%)		100%		Ref: Technical Parameters
Dewatering Time (Days)		1		**Typ 1, Rev as Req'd Ref: Tech Par**
Influent Pumping Rate (MGD / CFS)		90.01	139.27	= Peak Rate
Force Main Diameter (In)		65		DW Pump Rate / 2 FPS
Force Main Velocity (FPS)		6.0	**Check:**	**OK - Velocity >2 fps/< 10 fps**
