Diameter (In)		66			<25cfs=36"; 25-50cfs=48"; 50-100cfs=66"; 100-150cfs=78"; 150-200cfs=90", 200-250cfs=96"; 250-300cfs=108"; >300cfs=120"
Length (Ft)		-			Input by Engineer
Depth (Ft)		-			Input by Engineer
Construction Cost (Local / Cnsldn Pipe)	**$**	**-**	**$**	**2,735,000**	Ancillary pipe / Pipe to connect outfalls
4. Odor Control Parameters					
Air Changes / Hour (ACH)		3			Ref: Technical Parameters
Volume of Ventilated Space (CF)		18,900			=CFS x 200
Odor Control Flow Rate (CFM)		950			= ACH x Volume / 60
Construction Cost (Odor Control)	**$**	**88,000**			
5. Disinfection Parameters					
Disinfection Required (Yes = 1; No = 2)		1			Default Value
Peak Flow (MGD)		61.05			Ref: Peak Flow into Facility
Cl_2 Contact Tank Length / Width (Ft)		123		59	
Passes		5		**15.37**	Ref: Tech Param-15 min minimum
				OK Detn Time	
Construction Cost (Disinfection / CC Tank)	$	1,457,000	$	1,525,000	
Construction Cost (Disinfection)	**$**	**2,982,000**			
7. Regulator / Vortex Drop Parameters					
Regulator Construction (0=None; 1=New Static; 2=New Auto; 3=New Reg; 4=Mod Reg)		4		**Modify Regulator**	Input by Engineer
Number Regulators		1			Input by Engineer
New Vortex Drop Shaft		1			**Typ=# Regs, Rev Qty as Req'd**
Construction Cost (Regulators/Vortex)	**$**	**299,000**			
7. Land Acquisition Parameters					
Land Required - Screening & Disinfection (SF)		29,000			=(0.0016 x Cap(CFS) + 0.514) x 43560
Land Required Cost ($ / SF)	$	2			Ref: Technical Parameters
Land Acquisition Cost	**$**	**58,000**			
				TOTAL CAPITAL COST	**$ 18,564,000**

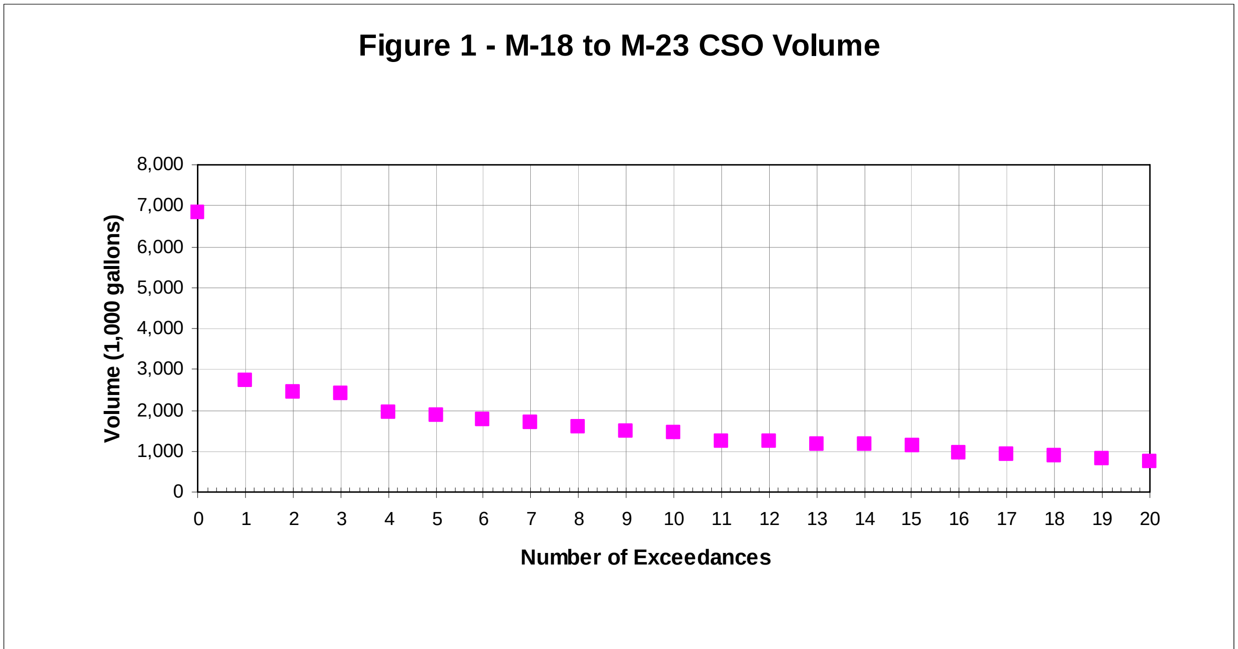
D.35.3 M-18 TO M-23 REGION – ARLINGTON THROUGH 25TH STREET SEWERSHEDS – NPDES# 012CM18, 012CM20, 012CM21, 012HM22, AND 012HM23

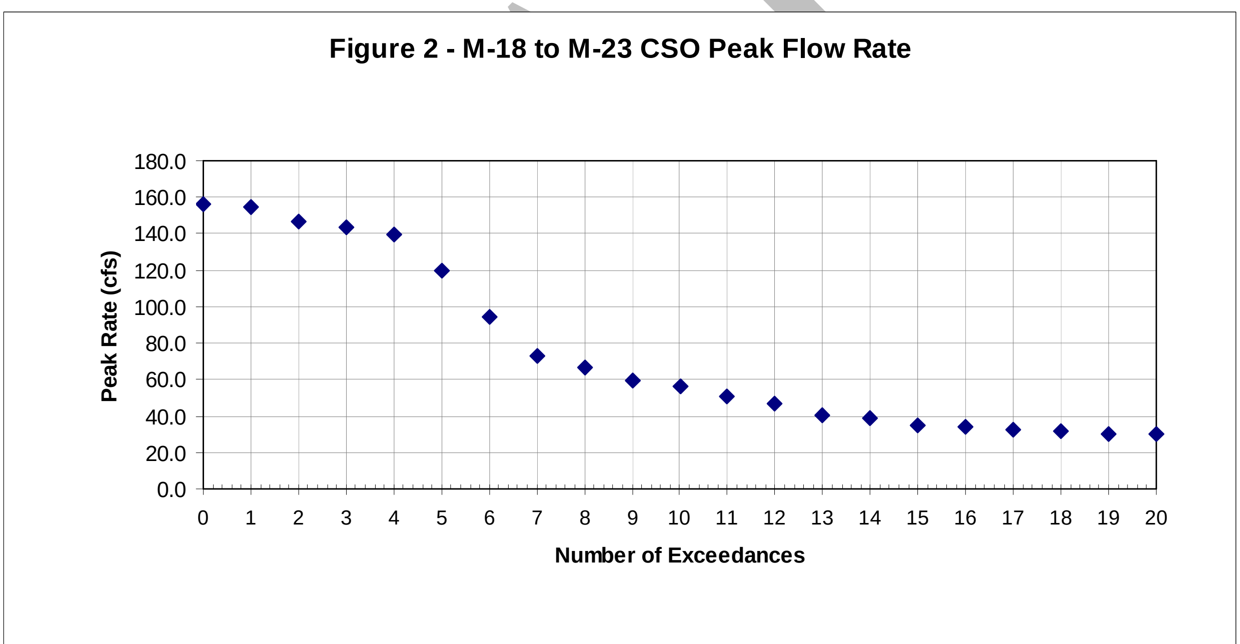
Description of Outfalls

The Arlington through 25th Street Sewersheds are located in portions of Allentown, Arlington, Arlington Heights, Mount Washington, South Shore, Southside Flats and Southside Slopes sections in the City of Pittsburgh. These sewersheds include approximately 1,369 acres of residential, business and commercial users that contribute flow to twenty-two (22) ALCOSAN outfalls. This group of consolidated outfalls includes outfalls M-18, M-20, M-21, M-22, and M-23. The M-18 tributary area consists of 15 acres of combined sewers, the M-20 tributary area consists of 16 acres of combined sewers, the M-21 tributary area consists of 68 acres of combined sewers, the M-22 tributary area consists of 117 acres of combined sewers, and the M-23 tributary area consists of 26 acres of combined sewers. The Arlington through 25th Street Sewersheds are comprised of approximately 1,184 manholes and 269,713 linear feet (51.1 miles) of sewer up to 90 inches in diameter. Outfalls 012CM18 through 012HM23 currently convey overflows from each of the respective ALCOSAN diversion chambers to the Monongahela River.

Attachment 1, *Tributary Area Map,* shows the CSO locations and the tributary areas.

Outfalls 012CM18 to 012HM23 typically experience 63 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from all the outfalls is approximately 6.82 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from the outfalls is approximately 156.47 CFS. Figures 1 and 2 illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.





A necessary component of all storage and treatment alternatives would be the construction of consolidation sewers. The sewers are required to convey CSOs from outfalls 012CM18, 012CM20, 012HM22, and 012HM23 to the vicinity of outfall 012CM21. There appears to be a limited amount of available space for potential storage or treatment facilities to the northwest of this outfall, north of the existing railroad tracks (between S. 23rd Street and S. 24th Street), east of the Birmingham Bridge. The site is generally bounded by the Monongahela River to the north, railroad tracks to the south and private property to west and east.

Description of Consolidated Outfall Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from the outfalls. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Alternatives

CS4-M-18 TO M-23 REGION: Sewer Separation

- Perform complete sewer separation of the tributary areas. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-M-18 TO M-23 REGION: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-M-18 TO M-23 REGION: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-M-18 TO M-23 REGION: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-M-18 TO M-23 REGION: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-M-18 TO M-23 REGION: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

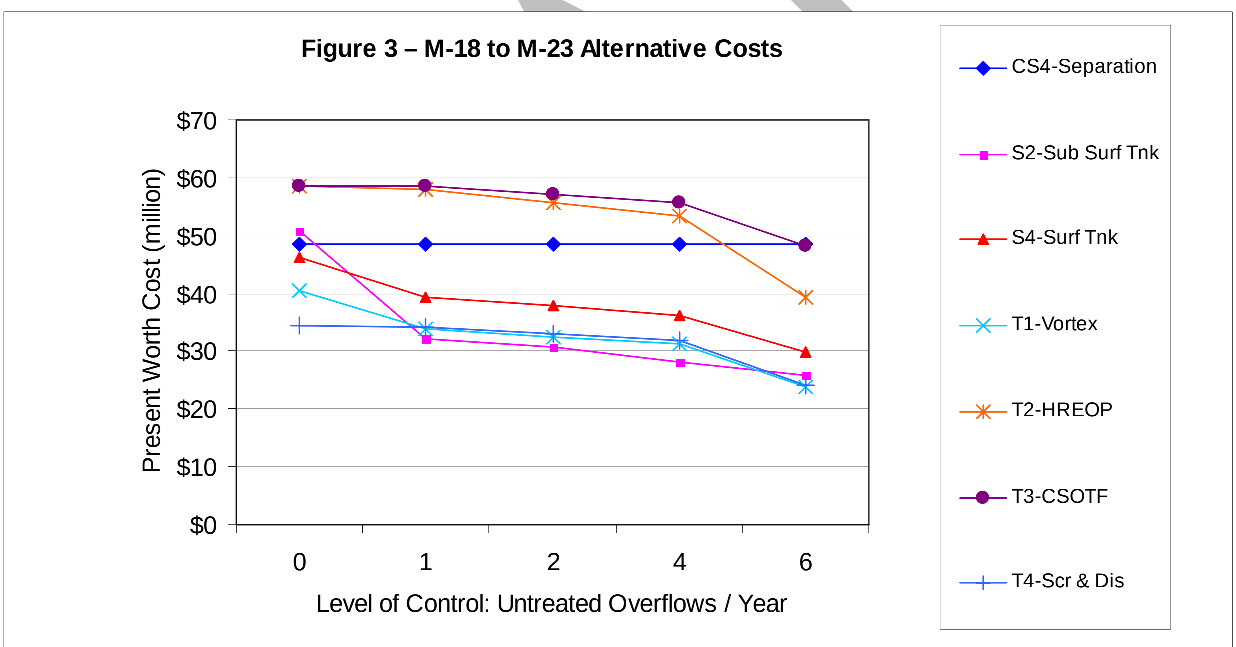
T4-M-18 TO M-23 REGION: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – M-18 to M-23 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control level 0 through 6, it is recommended that Alternative S2-M-18 to M-23: Sub-Surface Storage be carried forward and re-evaluated with the results of the system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Several significant issues exist with the siting of a CSO storage and treatment facility. A site large enough to store control level 0 does not appear to be available in the vicinity of outfall 012CM21. Installing a structure with a deeper sidewater depth could reduce the size of footprint required for a storage facility. Construction of the consolidation sewers will also be a significant endeavor considering the congested infrastructure that exists along the river in this area.

CSO Controls Alternatives

SW-D-0260.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will not be evaluated.
Sewer separation	Y	Sewer separation will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with all storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with all treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0260.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req’s	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req’s	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req’s	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	5	5	5	5	5
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Objective Scoring

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	4	4	4	4	4
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	3	3	3	3	3
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	3	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

Alternative:	S4-Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	3	3	3	2
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S4-Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S4-Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	5	5	4	4	4
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S4-Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	2	2	2	2	2
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S4-Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2

3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T2-HREOP	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T2-HREOP	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T2-HREOP	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	2	2	2	2	2
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T2-HREOP	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T2-HREOP	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed					

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T2-HREOP	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	1	1	1	1	1
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T2-HREOP	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	1	1	1	1	1
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	1	1	1	1	1
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**

Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T4-Scr & Dis	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	3	3	3	3	3
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	T4-Scr & Dis	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T4-Scr & Dis	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	3	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Region 1

PWSA CSO DISCHARGES
for "Typical Year - 2005"
Base Line Condition

Region Name	M-24 to M-28
Structures within Region	M-24, M-26, M-27, and M-28
Model ID	M-24 to M-28.1
Structure Type	Consolidation
PWSA Sewershed	N/A
Stream of Discharge	Monongahela River
NPDES Permit Number	N/A
Owner	N/A
Model Network	(07/19/07) Baseline Conditions#2 - FINAL!#1_1#2
Model Run	2005 Baseline Conditions w/Boundary (8.8.07) - Systemwide Selection

Results Summary

Number of Events:	115	
Peak Volume:	1,324,257	ft^3
	9.91	MG
Total Volume:	10,460,014	ft^3
	78.25	MG
Peak Rate:	163.88	cfs

D.35.4 M-24 TO M-28 REGION – ARLINGTON THROUGH 25TH STREET SEWERSHEDS – NPDES# 029KM24, 029KM26, 029PM27, AND 030CM28

Description of Outfalls

The Arlington through 25th Street Sewersheds are located in portions of Allentown, Arlington, Arlington Heights, Mount Washington, South Shore, Southside Flats and Southside Slopes sections in the City of Pittsburgh. These sewersheds include approximately 1,369 acres of residential, business and commercial users that contribute flow to twenty-two (22) ALCOSAN outfalls. The sewershed has been divided into four regions, regions 1 through 4. This region contains outfalls M-24, M-26, M-27 and M-28. The M-26 tributary area consists of 38 acres of combined sewers, M-26 tributary area consists of 41 acres of combined sewers, the M-27 tributary area consists of 123 acres of combined sewers and the M-28 tributary area consists of 67 acres of combined sewers. The Arlington through 25th Street Sewersheds are comprised of approximately 1,184 manholes and 269,713 linear feet (51.1 miles) of sewer up to 90 inches in diameter. Outfalls 029KM24 through 030CM28 currently convey overflows from each of the respective ALCOSAN diversion chambers to the Monongahela River.

Attachment 1, Tributary Area Map, shows the CSO locations and the tributary areas.

Outfalls 029KM24 to 030CM28 typically experiences 115 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from all the outfalls is approximately 9.91 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from the outfalls is approximately 163.88 CFS. Figures 1 and 2 illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.

Figure 1 - M-24 to M-28 CSO Volume

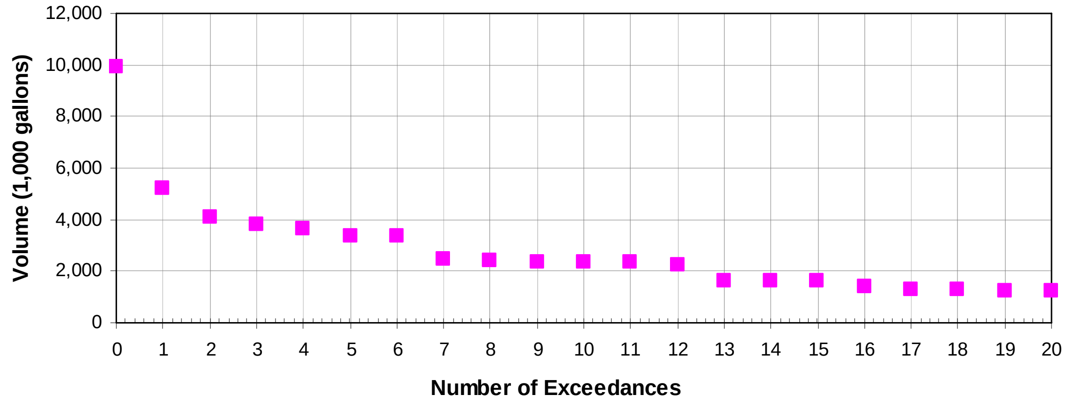

Figure 2 - M-24 to M-28 CSO Peak Flow Rate

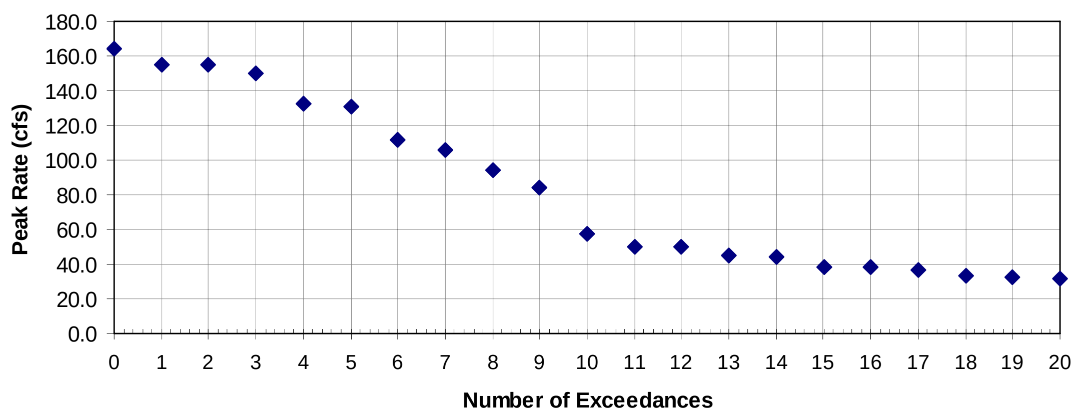


A necessary component of all storage and treatment alternatives would be the construction of consolidation sewers. The sewers are required to convey CSOs from outfalls 030CM28 and 029PM27 to the vicinity of outfall 029KM26. There appears to be a limited amount of available space for potential storage or treatment facilities to the southeast of this outfall on a vacant piece of property within an existing commercial development. The site is generally bounded by the Monongahela River to the east, private property to south, west and north.

Description of Consolidated Outfall Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from the outfalls. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Alternatives

CS4-M-24 TO M-28 REGION: Sewer Separation

- Perform complete sewer separation of the tributary areas. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-M-24 TO M-28 REGION: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-M-24 TO M-28 REGION: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the the

collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-M-24 TO M-28 REGION: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-M-24 TO M-28 REGION: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-M-24 TO M-28 REGION: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

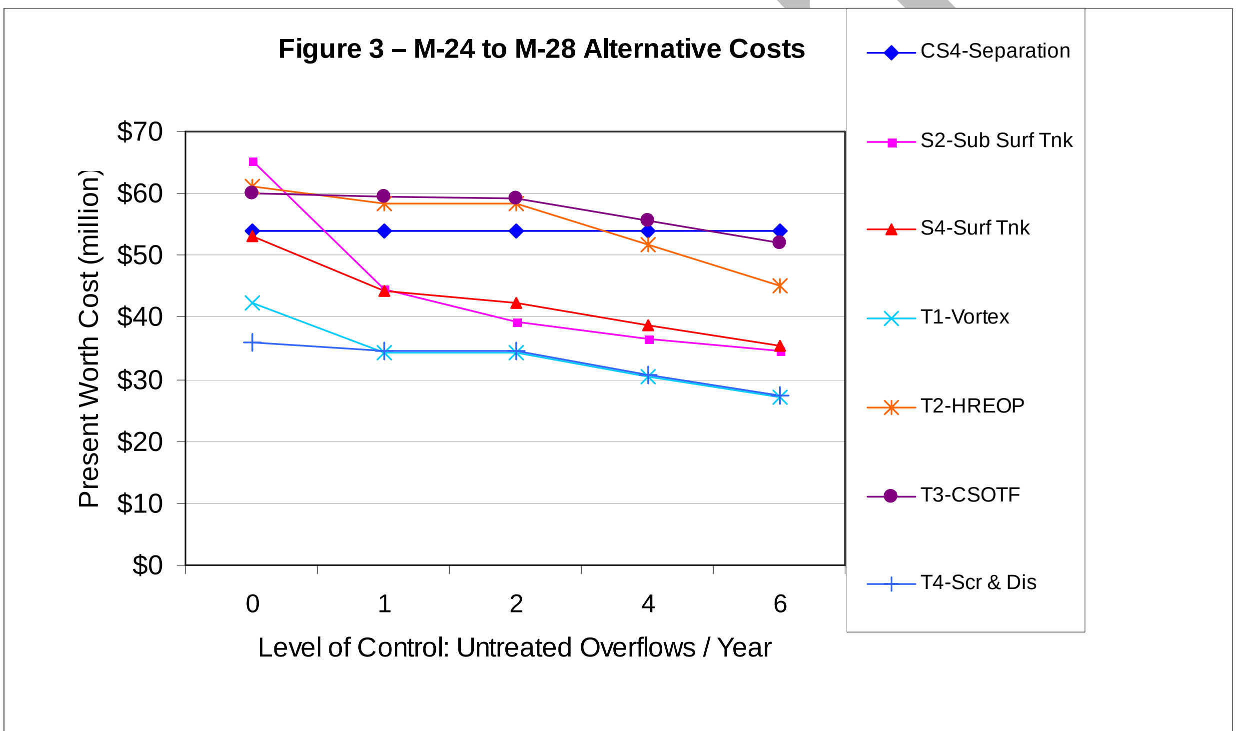
T4-M-24 TO M-28 REGION: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – M-46 to M-28 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 through 6, it is recommended that Alternative S2-M-26 to M-28 Region: Sub-Surface Storage be carried forward and re-evaluated with the results of the system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Several significant issues exist with the siting of a CSO storage and treatment facility. A site large enough to store control level 0 does not appear to be available in the vicinity of outfall 029KM26. Installing a structure with a deeper sidewater depth could reduce the size of footprint required for a storage facility. Construction of the consolidation sewers will also be a significant endeavor considering the congested infrastructure that exists along the river in this area.

CSO Controls Alternatives

SW-D-0262.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will not be evaluated.
Sewer separation	Y	Sewer separation will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with all storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with all treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0262.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	2	2	2	2	2
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific	1	1	1	1	1
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	3	3	3	3	3
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.					
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team
Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Objective Scoring

Alternative: S2-Sub Surf Tnk		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: S2-Sub Surf Tnk		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	4	4	4	4	4
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	3	3	3	3	3
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Alternative:	S4-Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	3	3	3	5	5
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S4-Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S4-Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	5	5	4	4	4
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S4-Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S4-Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**

3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T2-HREOP	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T2-HREOP	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: T2-HREOP		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: T2-HREOP		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: T2-HREOP		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T2-HREOP	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**

5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T4-Scr & Dis	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	3	3	3	3	3
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T4-Scr & Dis	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	3	3	3	3	3
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	2	2	2	2	2
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	2	2	2	2	2
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

3ox = Objective scores determined by PWSA / Consultant Team

›f Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Capital Costs - 032N001 / Sewershed CSO 032N001			
SURFACE STORAGE TANK			
0 Overflows / Year			
1. Tank Parameters			
Storage Type (1=Surface; 2=Subsurface)	1	Surface Tank	Default Value
Sizing Basis: Peak Volume (MG / CF)	0.04	6,000	Ref: CSO Statistics
Available Capacity (% Tank Vol)	85%		Ref: Technical Parameters
Required Storage Volume (MG / CF)	0.05	7,000	= Peak Vol / Available Capacity
Side-water Depth (Ft), 15' max depth	15	**Sufficient Depth**	**Ref: Tech Parmtrs, Rev as Req'd**
Length (Ft)	27		= (Vol / SWD * 1.5)$^{1/2}$
Width (Ft)	19		= (Vol / SWD / 1.5)$^{1/2}$
Total Volume (MG / CF)	0.06	7,695	**Sufficient Volume**
Tank Area (SF)	1,000		= Length x Width
Construction Cost (Storage Tank)	**29,000**		
2. Influent Pump Station / Force Main Parameters			
Volume Requiring Pumping (%)	100%		Ref: Technical Parameters
Dewatering Time (Days)	1		**Typ 1, Rev as Req'd Ref: Tech Par**
Influent Pumping Rate (MGD / CFS)	1.99	3.08	= Peak Rate
Force Main Diameter (In)	10		DW Pump Rate / 2 FPS
Force Main Velocity (FPS)	5.7	**Check:**	**OK - Velocity >2 fps/< 10 fps**
Force Main Length (Ft)	100		Input by Engineer
Construction Cost (PS / Force Main)	**$ 1,708,000**	**$ 19,000**	
3. Consolidation and/or Outfall Pipe Parameters			
Peak Flow (CFS)	3.08		Ref: Technical Parameters
Diameter (In)	36		<25cfs=36"; 25-50cfs=48"; 50-100cfs=66"; 100-150cfs=78"; 150-200cfs=90", 200-250cfs=96"; 250-300cfs=108"; >300cfs=120"
Length (Ft)	100		Input by Engineer
Depth (Ft)	20		Input by Engineer
Construction Cost (Pipe)	**$ 63,000**		
4. Odor Control Parameters			
Air Changes / Hour (ACH)	3		Ref: Technical Parameters
Volume of Ventilated Space (CF)	11,000		=Required Storage Vol x 1.5
Odor Control Flow Rate (CFM)	60		= ACH x Volume / 60 * 10%
Construction Cost (Odor Control)	**$ 10,000**		
5. Screening Parameters			
Screening Required (Yes = 1; No = 2)	1		Typ 1, Rev as Req'd
Peak Flow, into facility (MGD)	1.99		Ref: CSO Statistics
Construction Cost (Screening)	**$ 505,000**		
6. Disinfection Parameters			
Disinfection Required (Yes = 1; No = 2)	2		**Typ 2, Rev as Req'd**
Peak Flow (MGD)	0.00		Ref: Peak flow of PS
Cl_2 Contact Tank Length / Width (Ft)			
Passes / Detention (Min)		**No Disnfctn**	Ref: Tech Param-15 min minimum
Construction Cost (Disinfection / CC Tank)	$ -	$ -	
Construction Cost (Disinfection)	**$ -**		**No Disinfection**
7. Regulator Parameters			
Regulator Construction (0=None; 1=New Static; 2=New Auto; 3=New Reg; 4=Mod Reg)	4	**Modify Regulator**	Input by Engineer
Number Regulators	1		Input by Engineer
Construction Cost (Regulators)	**$ 39,000**		
8. Land Acquisition Parameters			
Land Required - Tank (SF)	20,000		=(0.291 x Vol (MG) + 0.439) x 43560
Land Required Cost ($ / SF)	$ 2		Ref: Technical Parameters
Land Acquisition Cost	**$ 40,000**		
		TOTAL CAPITAL COST $	**2,413,000**

D.36.1 032N001 – BECKS RUN – NPDES #032N001

Description of Outfall

Outfall 032N001 conveys overflows from the PWSA diversion chamber 032K001 to a tributary to Becks Run. Ultimately, the flow is received by the Monongahela River. The outfall is located near Mountain Avenue in the City of Pittsburgh. The Becks Run Sewershed consists of 1,635 acres of residential, business, and commercial users. The Becks Run Sewershed is comprised of approximately 1,350 manholes and 231,122 linear feet (43.8 miles) of sewer up to 48 inches in diameter. The sewershed is located in portions of Arlington, Arlington Heights, Carrick, Hays, Mount Oliver and St. Clair portions of the City and Baldwin Borough. The tributary area for this outfall is 44 acres.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

Outfall 032N001 typically experiences 26 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from outfall 032N001 is approximately 0.04 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 032N001 is approximately 3.08 CFS. *Figure 1 – Outfall 032N001 CSO Volume* and *Figure 2 – Outfall 032N001 CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 19 largest CSO events during the typical year baseline conditions simulation.

There appears to be limited space available for potential storage or treatment facilities due to steep slopes. The land in the vicinity of both the diversion chamber and the outfall is undeveloped but steep. To the north of the diversion chamber, there is a flat area which appears to be a ball field on school property. Flow would have to be pumped to this location from the diversion chamber, or new pipe and diversion structure constructed to divert flow to this location.

Description of Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 032N001. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS4-032N001: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-032N001: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-032N001: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-032N001: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-032N001: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-032N001: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T4-032N001: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 032N001 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.

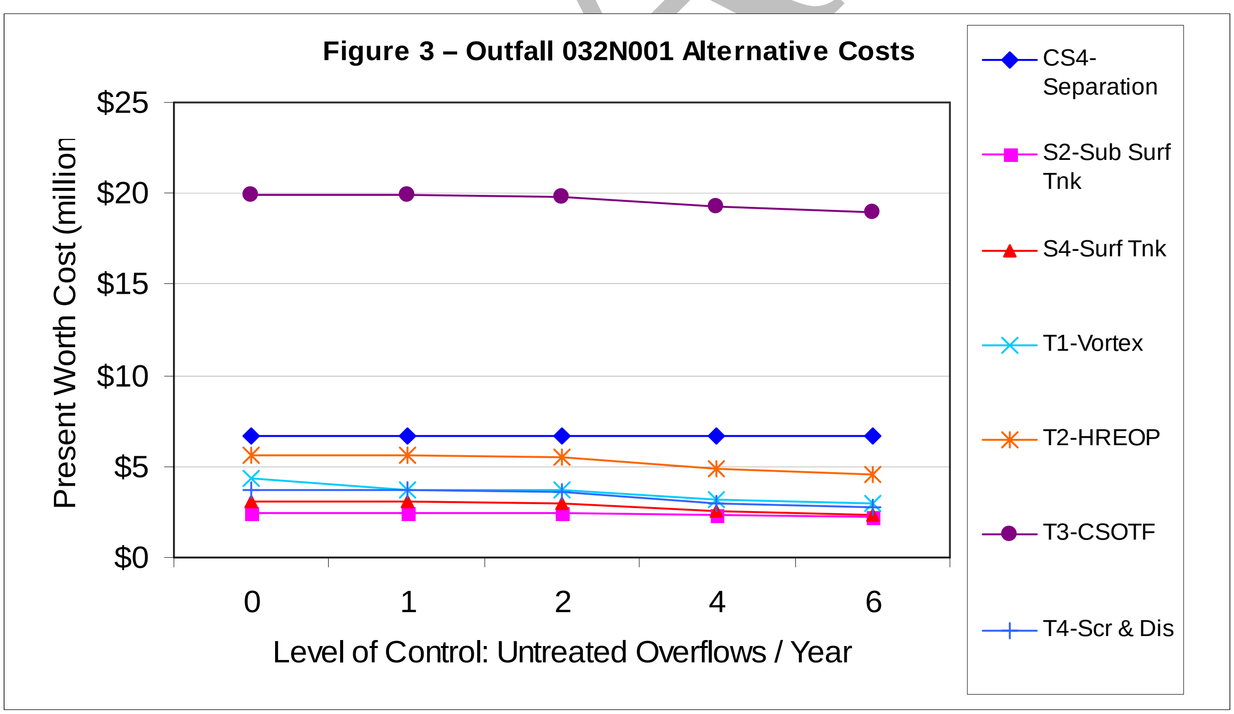

Figure 3 – Outfall 032N001 Alternative Costs

The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall “ranking” of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 through 6, it is recommended that Alternative S2-032N001: Sub-Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Limited space is available in the vicinity of the outfall. Steep slopes may limit construction of a storage or treatment facility near the outfall or diversion structure. There is an open flat area just north of the diversion chamber. However, it appears to be a ball field on school property. Flow would have to be diverted to this area for storage or treatment.

CSO Controls Alternatives

SW-D-0264.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will be evaluated on a regional or system-wide basis only.
Sewer separation	Y	Sewer separation within the 1,681 acres of combined sewer area tributary to this outfall will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated for up to 55.38 CFS.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation treatment in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	3	3	3	3	3
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team
Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Objective Scoring

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	5	5	4	4	4
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: S2-Sub Surf Tnk		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: S2-Sub Surf Tnk		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: S2-Sub Surf Tnk		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF

Alternative:	S4-Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S4-Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.

Objective Scoring

Alternative:	T2-HREOP	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T2-HREOP	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T2-HREOP	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: T2-HREOP		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: T2-HREOP		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: T2-HREOP		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T2-HREOP	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	1	1	1	1	1
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.

Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	3	3	3	3	3
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T4-Scr & Dis	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Objective Scoring

Alternative:	T4-Scr & Dis	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T4-Scr & Dis	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T4-Scr & Dis	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	3	3	3	3	3
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	T4-Scr & Dis	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T4-Scr & Dis	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	3	3	3	3	3
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	2	2	2	2	2
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.					
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.	5	3	3	3	3
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Box = Objective scores determined by PWSA / Consultant Team

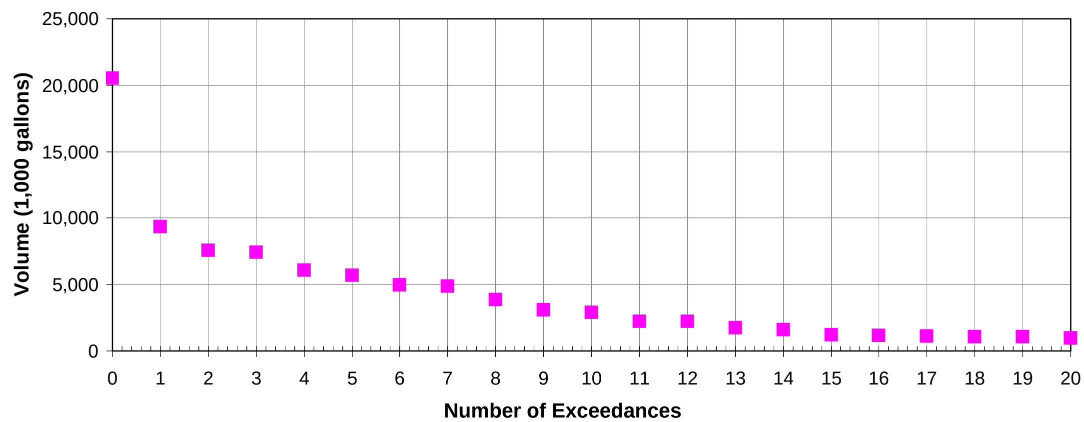

Figure 2 - Outfall 031GM34 CSO Peak Flow Rate

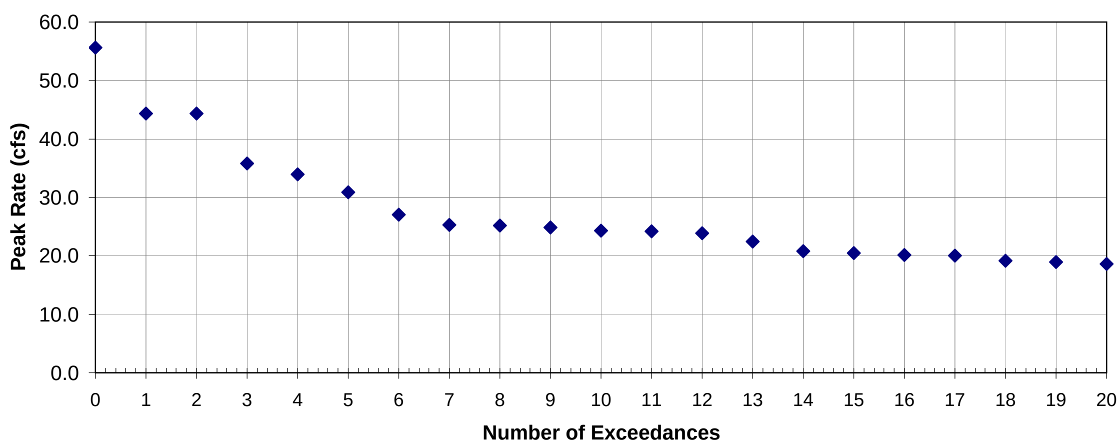

D.36.2 M-34 – BECKS RUN ROAD/EAST CARSON STREET – NPDES #031GM34

Description of Outfall

Outfall 031GM34 conveys overflows from the ALCOSAN diversion chamber M-34 to the Monongahela River. The outfall is located near the intersection of Becks Run Road and East Carson Street in the City of Pittsburgh. The Becks Run Sewershed consists of 1,635 acres of residential, business, and commercial users. The Becks Run Sewershed is comprised of approximately 1,350 manholes and 231,122 linear feet (43.8 miles) of sewer up to 48 inches in diameter. The sewershed is located in portions of Arlington, Arlington Heights, Carrick, Hays, Mount Oliver and St. Clair portions of the City and Baldwin Borough.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

Outfall 031GM34 typically experiences 54 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from outfall 031GM34 is approximately 20.50 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 031GM34 is approximately 55.63 CFS. *Figure 1 – Outfall 031GM34 CSO Volume* and *Figure 2 – Outfall 031GM34 CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.

Number of Exceedances

There appears to be limited available space for potential storage or treatment facilities between Carson Street and the Monongahela River. The site is generally bounded by the Monongahela River to the east, and existing vacant, steep lands to the north and south and Carson Street to the west.

Description of Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 031GM34. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS4-031GM34: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-031GM34: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-031GM34: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-031GM34: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-031GM34: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-031GM34: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T4-031GM34: Screening and Disinfection

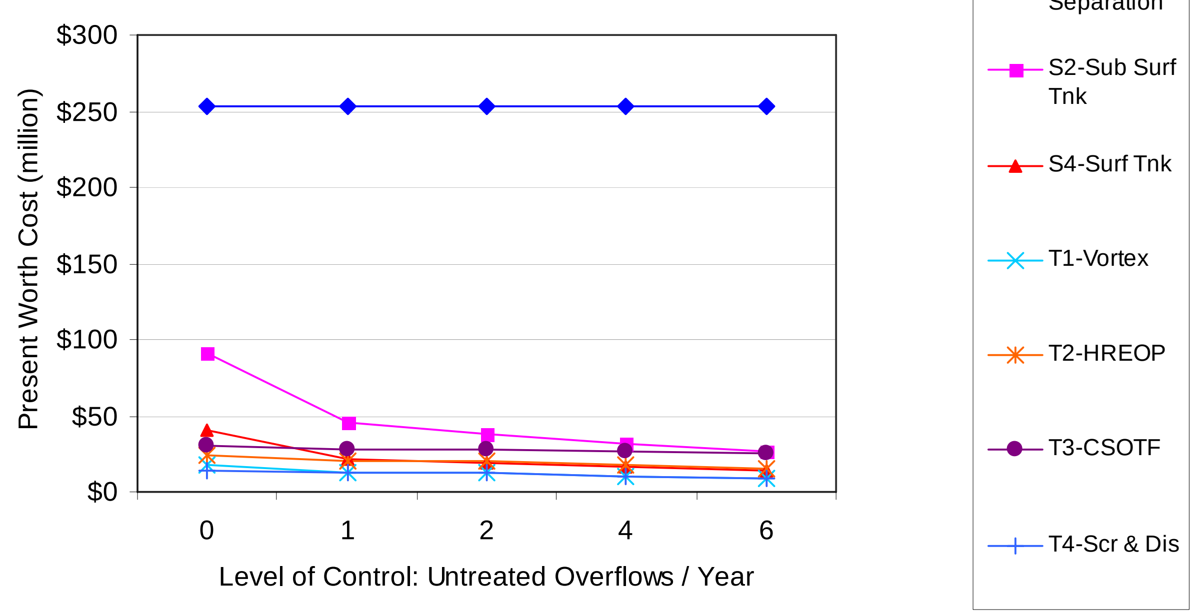
- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 031GM34 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 031GM34 Alternative Costs



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control level 0, it is recommended that Alternative T4-031GM34: Screening and Disinfection be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses. For control levels 1 through 6, it is recommended that Alternative S4-031GM34: Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Property acquisition and use along the Monongahela River is limited. However, the outfall appears to be isolated with respect to the other PWSA outfalls in that outfall specific technology may be feasible.

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will be evaluated on a regional or system-wide basis only.
Sewer separation	Y	Sewer separation within the 1,681 acres of combined sewer area tributary to this outfall will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated for up to 55.38 CFS.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation treatment in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA
THE PITTSBURGH WATER & SEWER AUTHORITY
Quality Water Quality Service

SW-D-0266.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	5	5	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	2	2	2	2	2
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	4	4	4	4	4
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	5	5	5	5	5
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S4-Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	5	5	4	4	4
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S4-Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	2	2	2	2	2
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S4-Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S4-Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	1	1	1	1	1
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.

Objective Scoring

Alternative:	T1-Vortex	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	3	5	5	5
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T1-Vortex	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	3	3	3	3	3
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T1-Vortex	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores

Alternative:	T3-CSOTF	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T3-CSOTF	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	3	3	3	3	3
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T3-CSOTF	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T3-CSOTF	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T3-CSOTF	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	3	3	3	3	3
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T3-CSOTF	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed					

Alternative:	T3-CSOTF	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	2	2	2	2	2
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T3-CSOTF	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req’s	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req’s	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req’s	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T3-CSOTF	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**

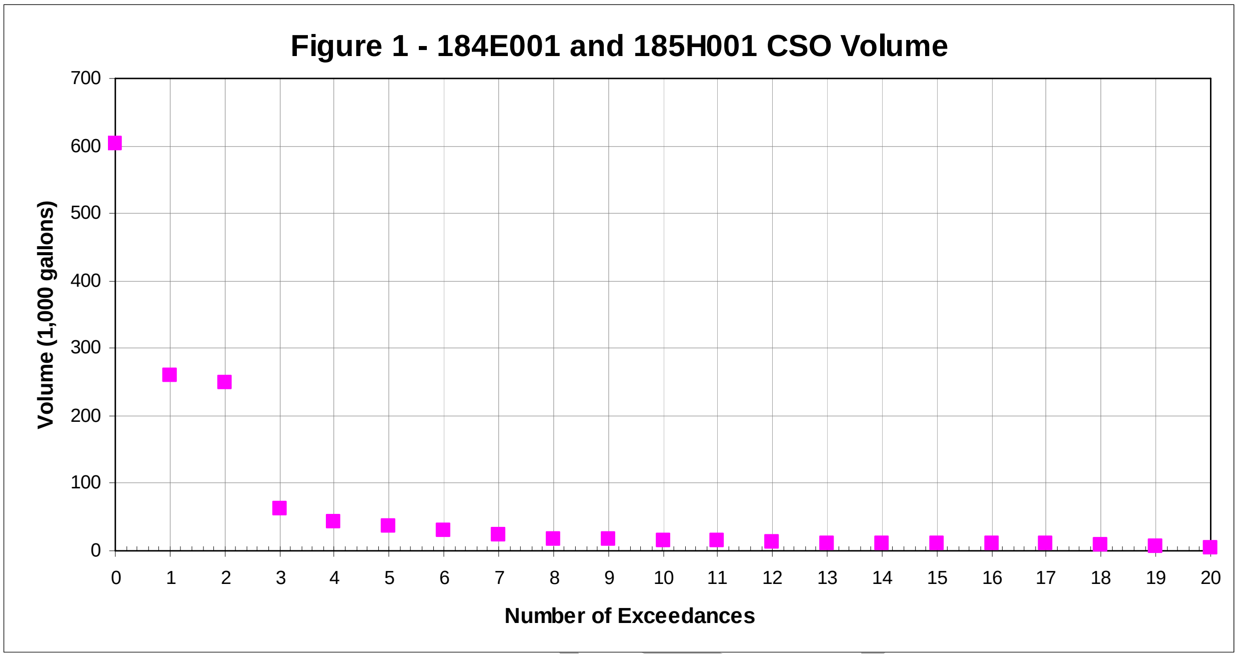
D.37.1 STREETS RUN SEWERSHED – NPDES # 184E001 AND 185H001

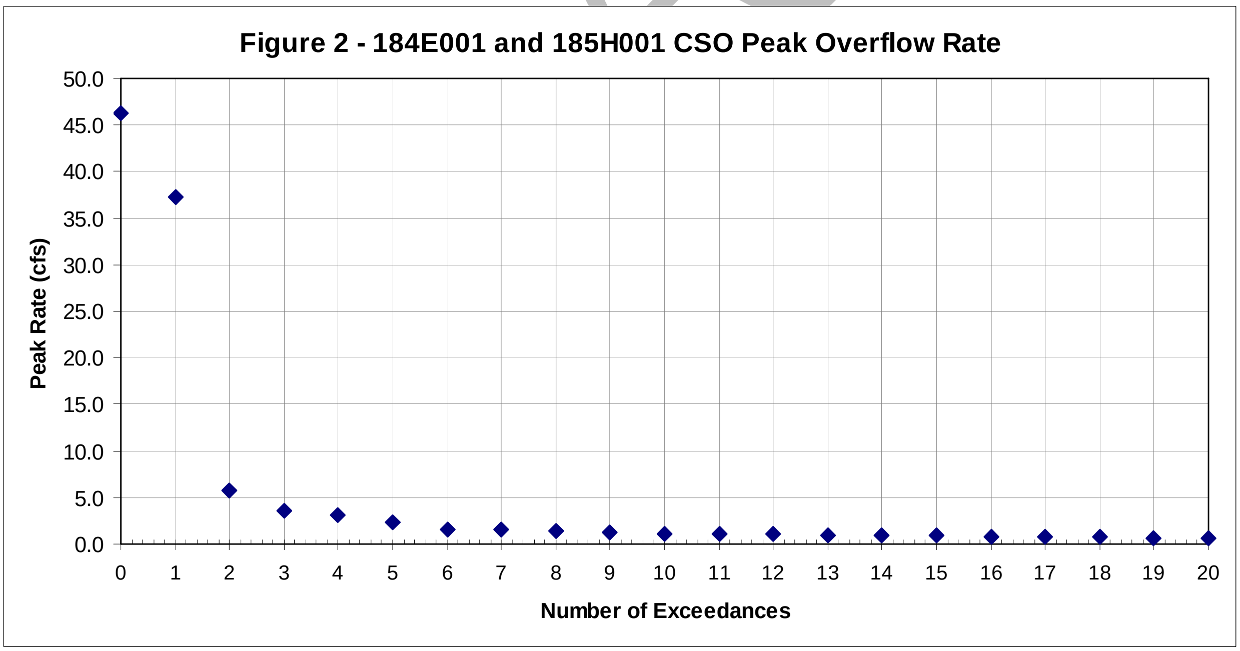
Description of Outfall

The outfalls 184E001 and 185H001 have been consolidated to be evaluated as a group. Outfall 184E001 conveys overflows from the PWSA diversion chamber 184E001 to a tributary to Streets Run, and ultimately into the Monongahela River. The outfall is located along a tributary to Streets Run, near Oakleaf Drive and Mifflin Road. Outfall 185H001 conveys flows from the PWSA diversion chamber 185H001 to a tributary to Streets Run. This outfall is located near Glenhurst Road and Mifflin Road. The Streets Run Sewershed consists of 6,521 acres of residential, business and commercial users. The Streets Run Sewershed is comprised of approximately 663 manholes and 125,501 linear feet (23.8 miles) of storm, sanitary, and combined sewers up to 60 inches in diameter. The 184E001 and 185H001 sewersheds consists of 22 acres and 35 acres, respectively.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

This consolidation of outfalls typically experiences 51 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from these outfalls is approximately 0.60 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 184E001 is approximately 46.25 CFS. Figures 1 and 2 illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.





A necessary component of all storage and treatment alternatives would be the construction of consolidation sewers. The sewers are required to convey CSOs from outfalls 184E001 and 185H001 to the vicinity of outfall 184E001. There appears to be available space for potential storage or treatment facilities adjacent to the outfall 184E001 to the north of Mifflin Road. The site is generally bounded by Mifflin Road to the south, a steep valley to the north and private development to the west and east.

Description of Consolidated Outfall Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 184E001. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS4-184E001 and 185H001: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-184E001 and 185H001: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-184E001 and 185H001: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-184E001 and 185H001: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-184E001 and 185H001: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-184E001 and 185H001: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T4-184E001 and 185H001: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 184E001 and 185H001 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.

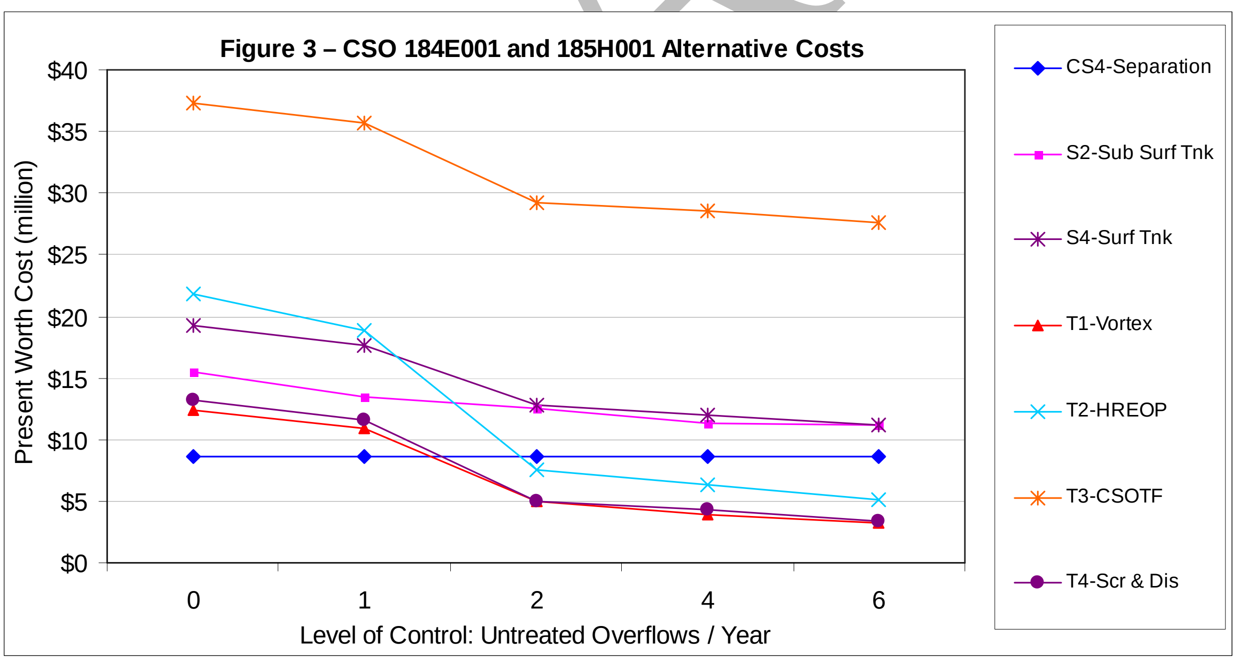


Figure 3 – CSO 184E001 and 185H001 Alternative Costs

The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall “ranking” of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 and 1, it is recommended that Alternative CS4-184E001 and 185H001: Sewer Separation be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses. For control levels 2 through 6, it is recommended that Alternative T4-184E001 and 185H001: Suspended Solids Control be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Although separation reduces hydraulic loading, additional pollutants may be introduced to the receiving stream. Stormwater flows that would have originally ended up in the trunk sewer will now discharge directly to local waterways. Discharge constituents include surface pollutants such as oil, grease and road grit, as well as general trash and road debris. Another issue to consider with separation is the available regulator capacity at the ALCOSAN diversion chamber. Sufficient capacity must exist in order to convey the sanitary flow to the interceptor. Failure to provide sufficient capacity may result in a sanitary sewer overflow (SSO) condition.

For control levels 2 through 6, a treatment facility was the highest rank alternative. It appears that space is available adjacent to Mifflin Road to construct a storage or treatment facility near the diversion chamber for 184E001. However the flow would have to be pumped to the facility.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0268.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	Y	A relief sewer will be evaluated.
Sewer separation	Y	Sewer separation within the 22 acres of combined sewer area tributary to this outfall will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0268.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	5	5	5	5	5
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific	1	1	1	1	1
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	3	3	3	3	3
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	5	5	4	4	4
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: S2-Sub Surf Tnk		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: S2-Sub Surf Tnk		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: S2-Sub Surf Tnk		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	4	4	4	4	4
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	3	3	3	3	3
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	4	3	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

Objective Scoring

Alternative:	T1-Vortex	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T1-Vortex	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T1-Vortex	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T1-Vortex	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	1	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Alternative:	T2-HREOP	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T2-HREOP	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T2-HREOP	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: T2-HREOP		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: T2-HREOP		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: T2-HREOP		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T2-HREOP	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	1	1	1	1	1
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF

4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T4-Scr & Dis	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	3	3	3	3	3
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T4-Scr & Dis	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T4-Scr & Dis	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T4-Scr & Dis	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T4-Scr & Dis	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	3	3	3	3	3
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T4-Scr & Dis	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	T4-Scr & Dis	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	1	1	1	1	2
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

3ox = Objective scores determined by PWSA / Consultant Team

of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

D.37.2 STREETS RUN SEWERSHED – HILLBURN STREET - NPDES #134A001

Description of Outfall

Outfall 134A001 conveys overflows from the PWSA diversion chamber 134A001 to Streets Run, and ultimately into the Monongahela River. The outfall is located along Streets Run, north of Hillburn Street, adjacent to a neighborhood playground area. The Streets Run Sewershed consists of 6,521 acres of residential, business and commercial users. The Streets Run Sewershed is comprised of approximately 663 manholes and 125,501 linear feet (23.8 miles) of storm, sanitary, and combined sewers up to 60 inches in diameter. The 134A001 Sewershed (Hillburn Street) consists of 9 acres, or approximately 0.1% of the total service area.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

Outfall 134A001 typically experiences 19 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from outfall 134A001 is approximately 0.16 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 134A001 is approximately 15.25 CFS. *Figure 1 – Outfall 134A001 CSO Volume* and *Figure 2 – Outfall 134A001 CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 19 largest CSO events during the typical year baseline conditions simulation.

Figure 1 - Outfall CSO134A001 CSO Volume

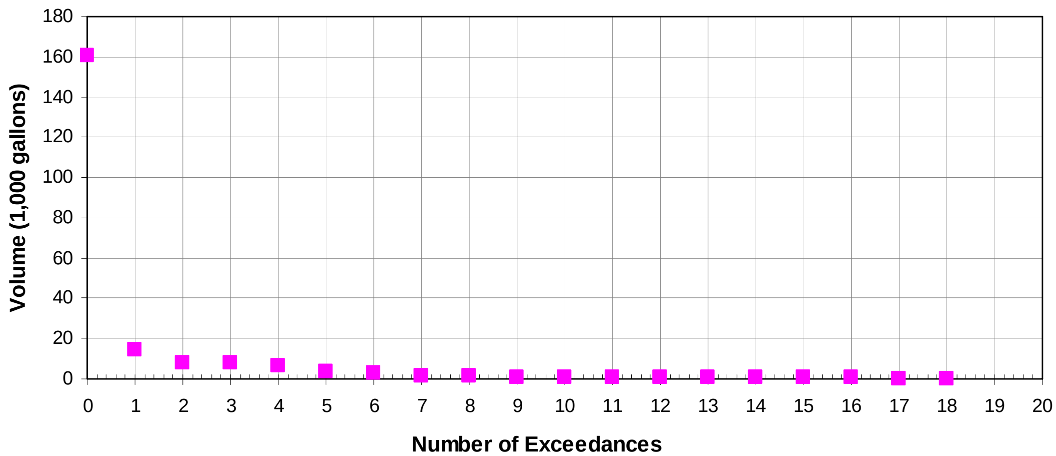

Figure 2 - Outfall CSO134A001 CSO Peak Flow Rate

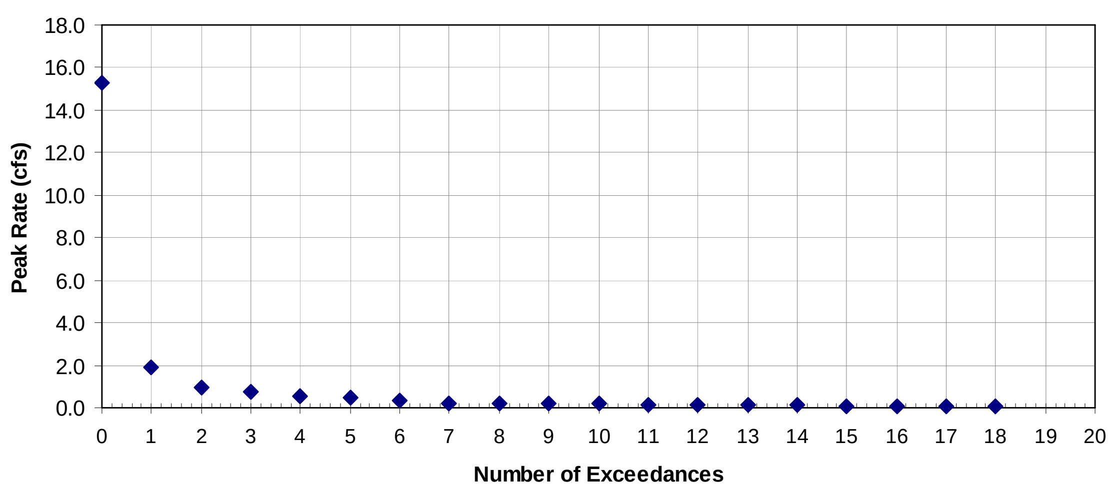


There appears to be available space for potential storage or treatment facilities to the north of Mifflin Road, adjacent to the outfall. The site is generally bounded by Mifflin Road to the south, Calera Street to the west and private development to the north and east.

Description of Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 134A001. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS3-134A001: Relief Sewer

- Construct a relief sewer to capture the overflows from the outfall and convey them to ALCOSAN regulator M-42.

CS4-134A001: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-134A001: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-134A001: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the the

collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-134A001: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-134A001: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-134A001: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T4-134A001: Screening and Disinfection

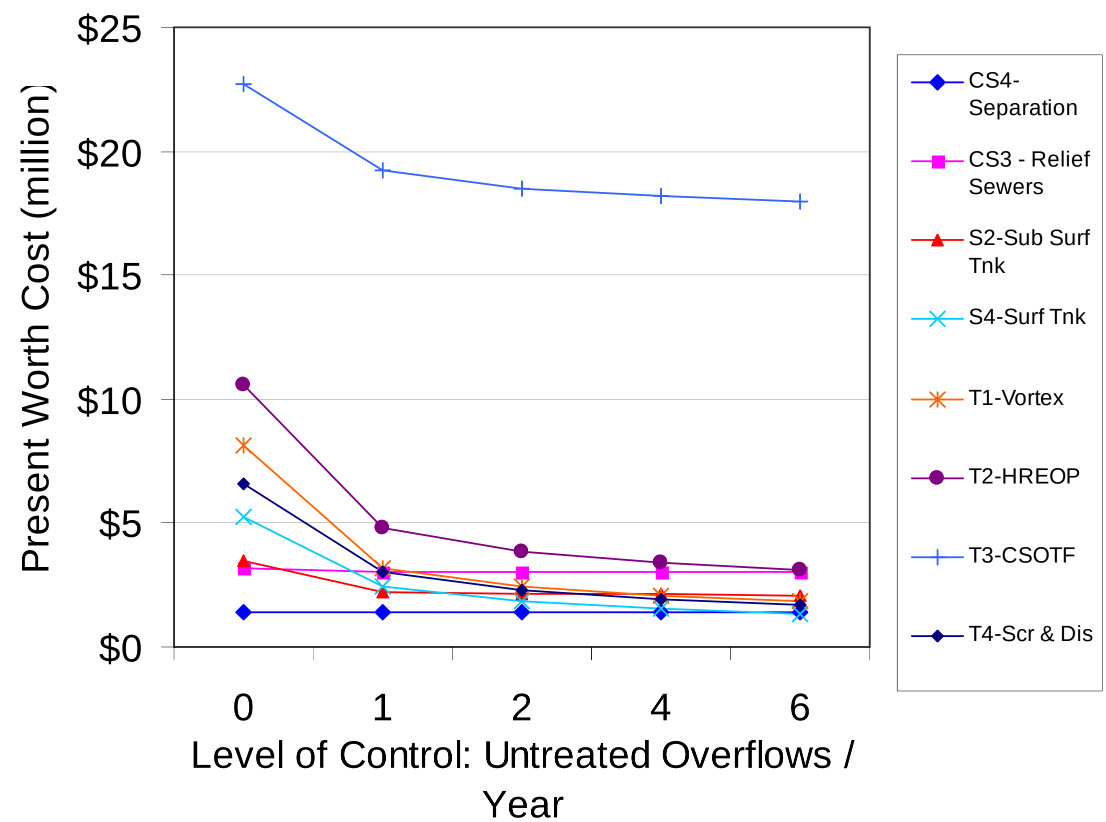
- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 134A001 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 134A001 Alternative Costs



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 through 6, it is recommended that Alternative CS4-134A001: Sewer Separation be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Although separation reduces hydraulic loading, additional pollutants may be introduced to the receiving stream. Stormwater flows that would have originally ended up in the trunk sewer will now discharge directly to local waterways. Discharge constituents include surface pollutants such as oil, grease and road grit, as well as general trash and road debris. Another issue to consider with separation is the available regulator capacity at the ALCOSAN diversion chamber. Sufficient capacity must exist in order to convey the sanitary flow to the interceptor. Failure to provide sufficient capacity may result in a sanitary sewer overflow (SSO) condition.

CSO Controls Alternatives

PWSA

SW-D-0270.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	Y	A relief sewer will be evaluated.
Sewer separation	Y	Sewer separation within the 9 acres of combined sewer area tributary to this outfall will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

SW-D-0270.pdf

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: CS4-Separation		Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: CS4-Separation		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	3	3	3	3	3
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	5	5	5	5	5
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	4	4	4	4	4
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Reliability	Actual Scores

Alternative:	**S4-Surf Tnk**	**Objective Scoring: Present Worth**	**Actual Scores**				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	2
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	**S4-Surf Tnk**	**Objective Scoring: Pollution Reduction**	**Actual Scores**				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	**S4-Surf Tnk**	**Objective Scoring: Impact on Habitat, Stream, River etc.**	**Actual Scores**				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	5	5	4	4	4
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S4-Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Alternative:	T2-HREOP	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T2-HREOP	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T2-HREOP	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T2-HREOP	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T2-HREOP	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T2-HREOP	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.					
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.	1	1	1	1	1
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T2-HREOP	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	1	1	1	1	1
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T2-HREOP	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	1	1	1	1	1
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	1	1	1	1	1
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	2	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T4-Scr & Dis	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	3	3	3	3	3
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T4-Scr & Dis	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	4	4	3
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

3ox = Objective scores determined by PWSA / Consultant Team

ıf Input: Used in calculation of Subjective and Total Scores in Sheet 2.

D.37.3 M-42 – STREETS RUN SEWERSHED – NPDES# 091AM42

Description of Outfall

Outfall 091AM42 conveys overflows from the ALCOSAN diversion chamber M-42 to the Monongahela River. The outfall is located along Streets Run, east of the Glenwood Bridge interchange, near the existing Sandcastle water park. The M-42 Service Area encompasses approximately 99% of the Streets Run Sewershed area (6,521 acres of residential, business and commercial users) and includes portions of Baldwin Borough, Brentwood Borough, Pleasant Hills Borough, and West Mifflin Borough, as well as the City of Pittsburgh. The Streets Run Sewershed is comprised of approximately 663 manholes and 125,501 linear feet (23.8 miles) of storm, sanitary, and combined sewers up to 60 inches in diameter.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

Outfall 091AM42 typically experiences 56 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from outfall 091AM42 is approximately 53.1 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 091AM42 is approximately 35.13 CFS. *Figure 1 – Outfall 091AM42 CSO Volume* and *Figure 2 – Outfall 091AM42 CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.

Number of Exceedances

There appears to be available space for potential storage or treatment facilities to the east of the Glenwood Bridge, just south of the Monongahela River. The site is generally bounded by the Monongahela River to the north, the Glenwood Bridge to the west and private development to the south and east. This outfall requires a significant storage volume and tank footprint for the 0 control level.

Description of Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 091AM42. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS4-091AM42: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-091AM42: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-091AM42: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-091AM42: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-091AM42: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

. T3-091AM42: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

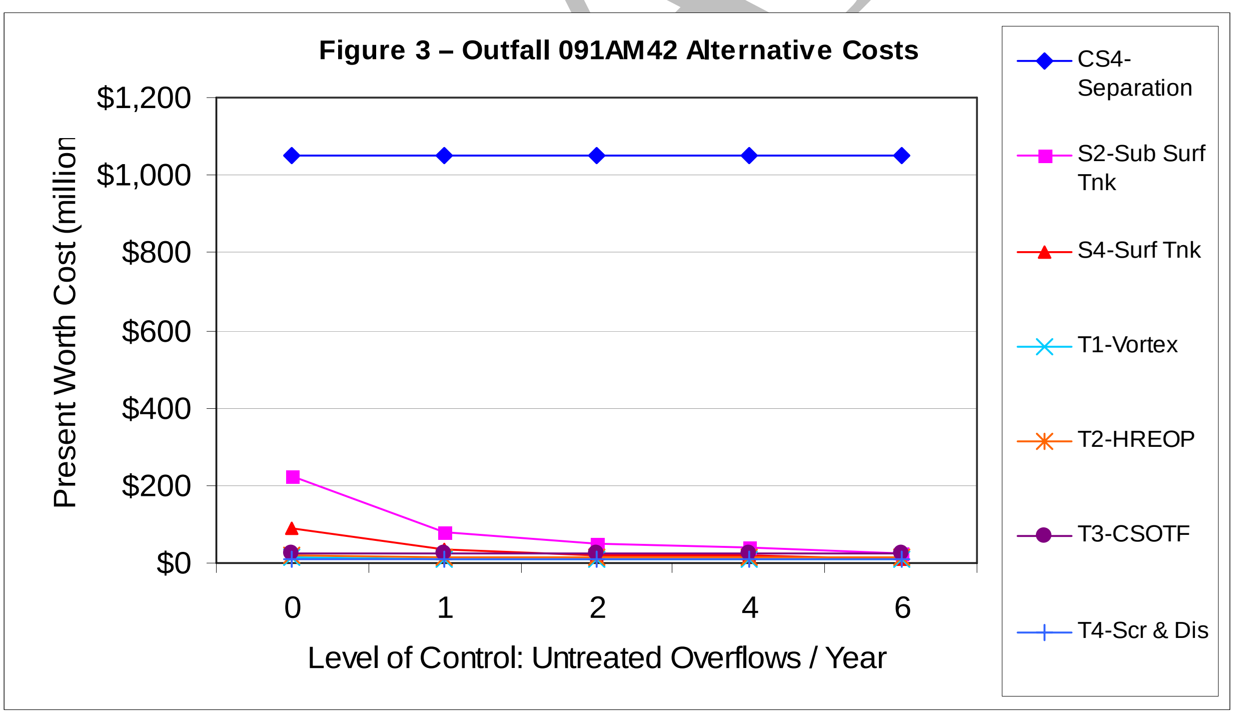
T4-091AM42: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 091AM42 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 through 4, it is recommended that Alternative T4-091AM42: Screening and Disinfection be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses. For control level 6, it is recommended that Alternative S4-091AM42: Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Property acquisition along the Monongahela River is limited. Property procurement from private landowners appears to be required for all control levels.

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will be evaluated on a regional or system-wide basis only.
Sewer separation	Y	Sewer separation within the 6,958 acres of combined sewer area tributary to this outfall will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.
