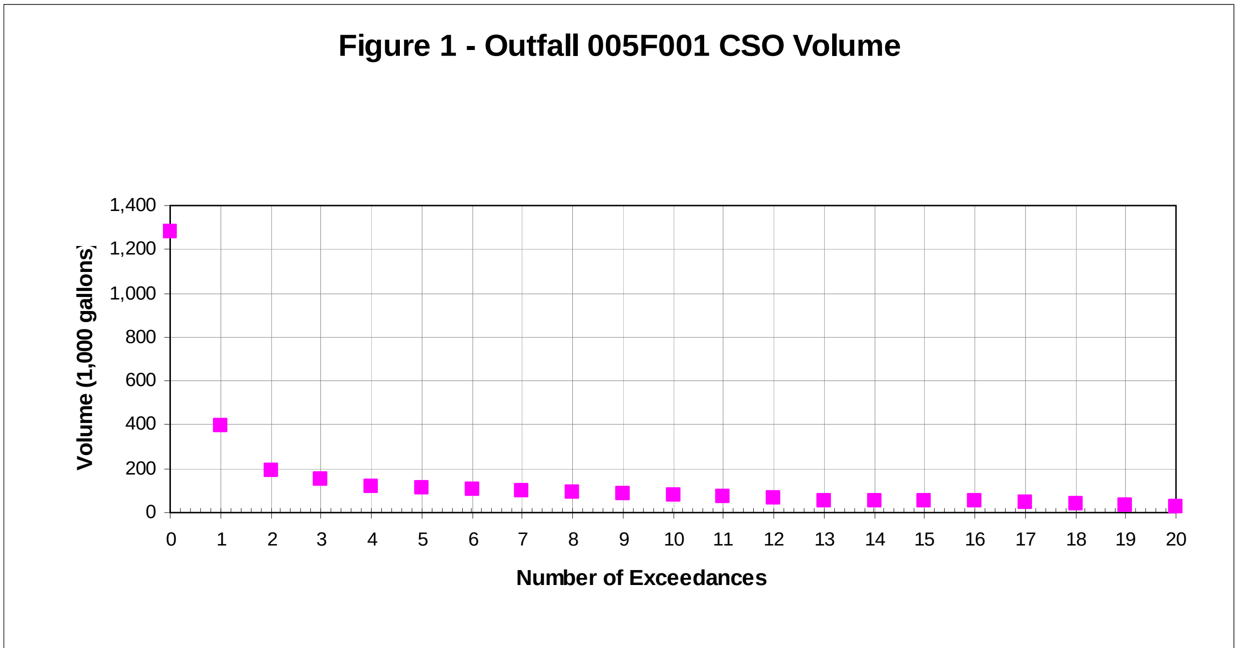
D.28.3 ACSO 005F001 – OLYMPIA, SHALER AND WOODRUFF SEWERSHED – NPDES# 005F001

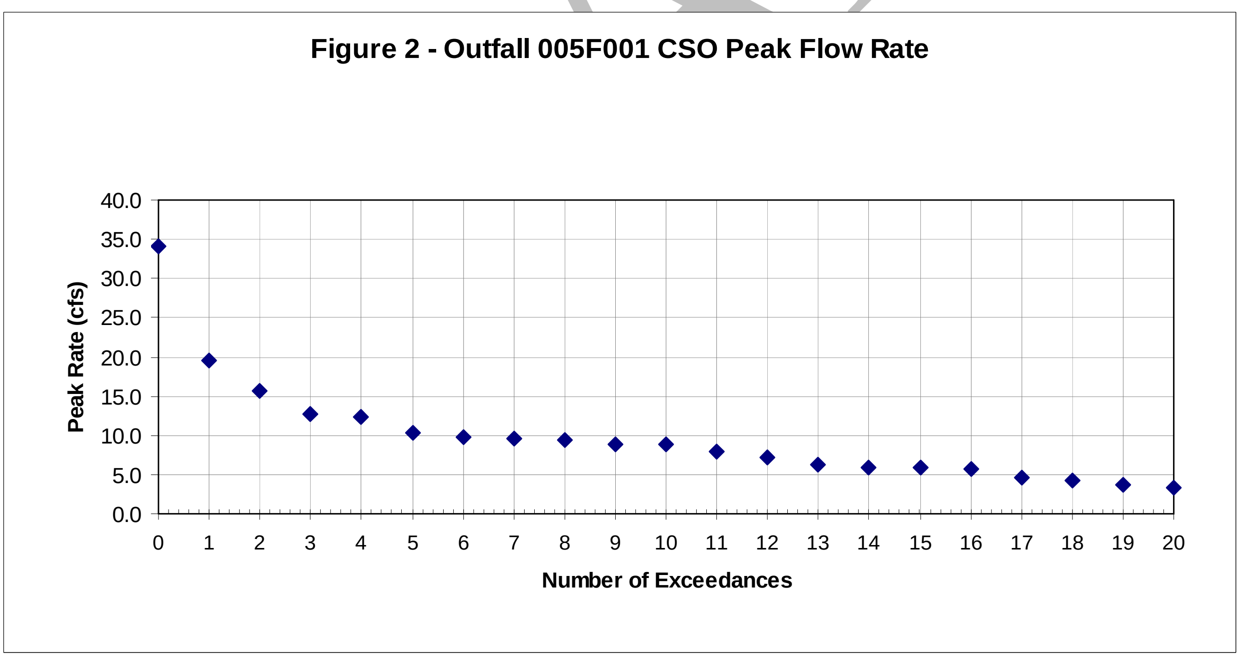
Description of Outfall

Outfall 005F001 conveys overflows from the ALCOSAN diversion chamber 005F001 to Saw Mill Run. The outfall is located along Saw Mill Run adjacent to the PennDOT maintenance facility near the outbound exit from the Fort Pitt Tunnels in the City of Pittsburgh. The service area is called the Olympia, Shaler and Woodruff Sewershed, and is 422 acres of residential, commercial, and business users. The Olympia, Shaler and Woordruff Sewersehds are comprised of approximately 316 manholes and 85,283 linear feet (16.2 miles) of mostly combined sewer up to 48 inches in diameter. The 005F001 sewershed (Banksville Road) consists of 79 acres, or approximately 19% of the total service area.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

Outfall 005F001 typically experiences 51 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from outfall 005F001 is approximately 1.28 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 005F001 is approximately 34.03 CFS. *Figure 1 – Outfall 005F001 CSO Volume* and *Figure 2 – Outfall 005F001 CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.





Very limited space exists adjacent to the outfall. There is an existing parking lot at the PennDOT maintenance garage located within the cloverleaf of the I-279 on-ramp and Saw Mill Run Boulevard. This parking facility may be able to be procured for a storage or treatment facility.

The site is generally bounded by Saw Mill Run to the west, the PennDOT maintenance garage to the north, and I-279 to the south.

Description of Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 005F001. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS4-005F001: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-005F001: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-005F001: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes.

Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-005F001: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-005F001: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-005F001: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

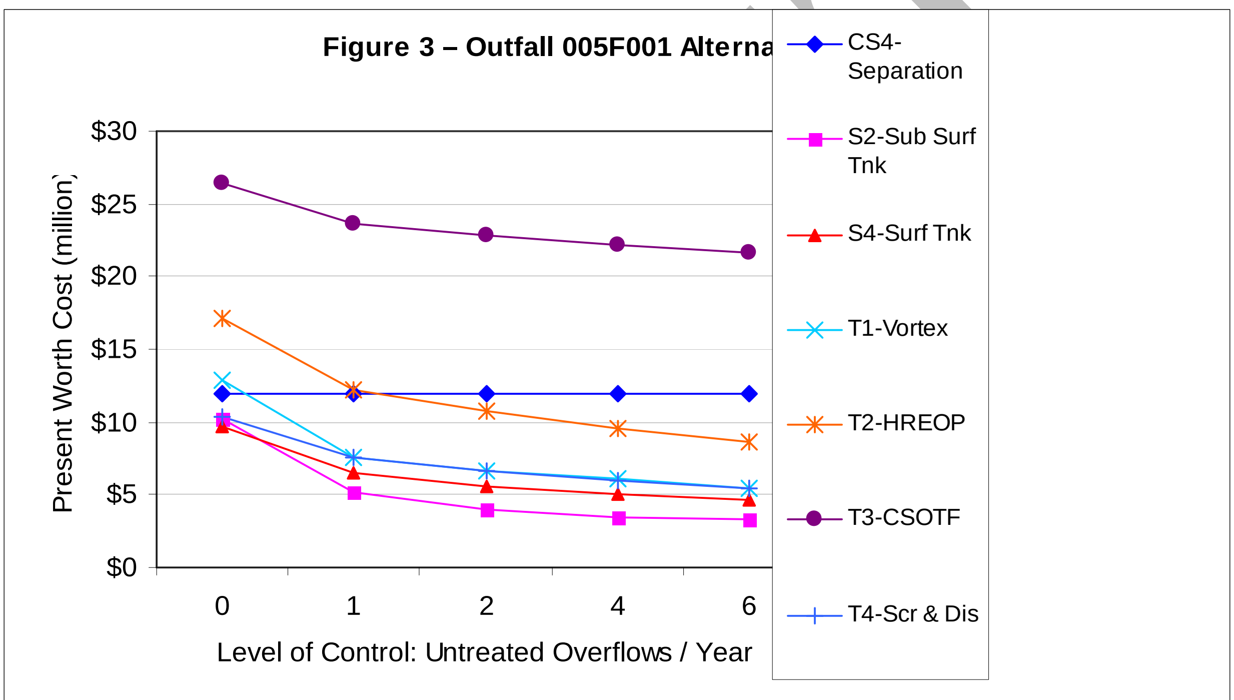
T4-005F001: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 005F001 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 through 6, it is recommended that Alternative S2-005F001: Sub-Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Space is limited for the construction of a sub-surface storage facility for all control levels. It appears that significant site work and property acquisition will be required for this alternative.

CSO Controls Alternatives

PWSA

SW-D-0228.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	A relief sewer will not be evaluated.
Sewer separation	Y	Sewer separation within the 79 acres of combined sewer area tributary to this outfall will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA

SW-D-0228.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: CS4-Separation		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific	1	1	1	1	1
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: CS4-Separation		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: CS4-Separation		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	3	3	3	3	3
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.					
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

Objective Scoring

Alternative:	S4-Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	2	2
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S4-Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S4-Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	5	5	4	4	4
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S4-Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S4-Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S4-Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	1	1	1	1	1
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	S4-Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S4-Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.					
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.	3	3	3	3	3
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S4-Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	4	4	4	4	4
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	S4-Surf Tnk	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.

5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T3-CSOTF	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	3	3	3	3	3
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T3-CSOTF	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: T3-CSOTF		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: T3-CSOTF		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: T3-CSOTF		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T3-CSOTF	Objective Scoring: Institutional Constraints	Actual Scores

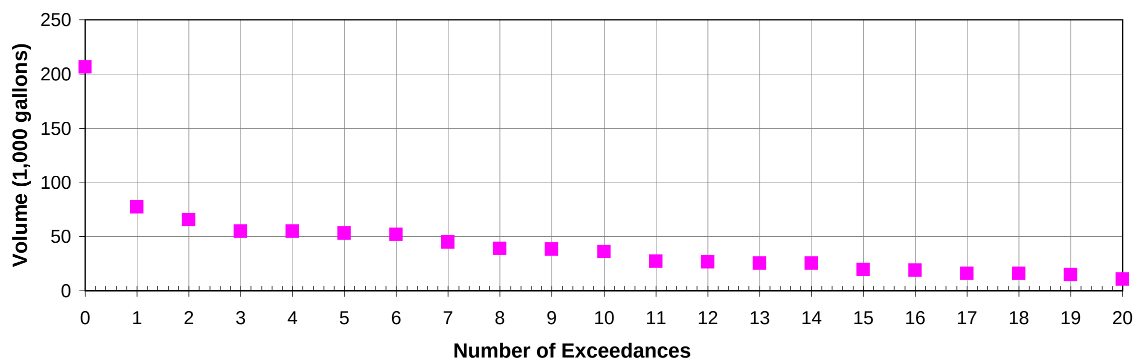

Figure 2 - Outfall 005AS41 CSO Peak Flow Rate

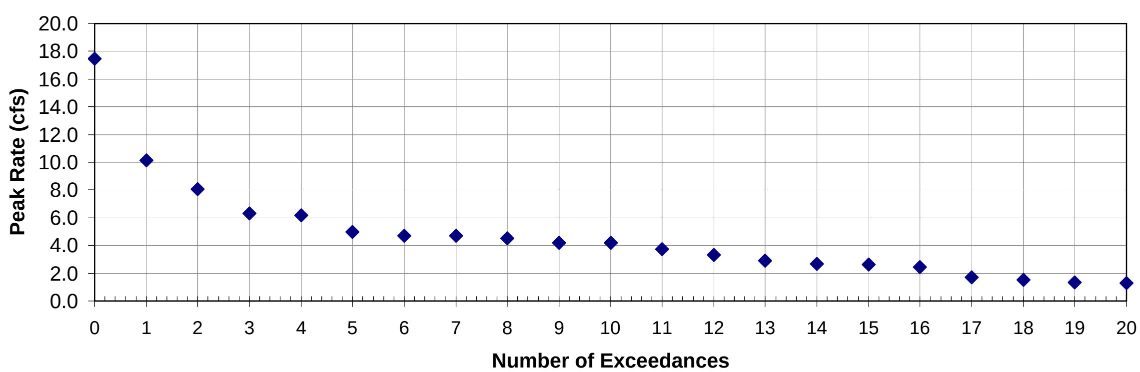

D.28.4 S-41 – OLYMPIA, SHALER AND WOODRUFF SEWERSHED – NPDES# 005AS41

Description of Outfall

Outfall S-41 conveys overflows from the ALCOSAN diversion chamber S-41 to Saw Mill Run. The outfall is located along Saw Mill Run adjacent to Shaler Street near the bridge to Woodville Avenue, in the City of Pittsburgh. The service area is called the Olympia, Shaler and Woodruff Sewershed and is 422 acres of residential, business and commercial users. The Olympia, Shaler and Woordruff Sewersheds are comprised of approximately 316 manholes and 85,283 linear feet (16.2 miles) of mostly combined sewer up to 48 inches in diameter. The S-41 sewershed (Shaler St.), consists of 106 acres, or approximately 25% of the total service area.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

Outfall 005AS41 typically experiences 41 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from outfall 005AS41 is approximately 0.21 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 005AS41 is approximately 17.48 CFS. *Figure 1 – Outfall 005AS41 CSO Volume* and *Figure 2 – Outfall 005AS41 CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.

There appears to be a limited amount of available space for potential storage or treatment facilities in the vicinity of outfall 005AS41, north of Minotte Square in an existing parking facility. The site is generally bounded by Wabash Street to the east, private development to the north and south and McKnight Street to the west.

Figure 1 - Outfall 005AS41 CSO Volume

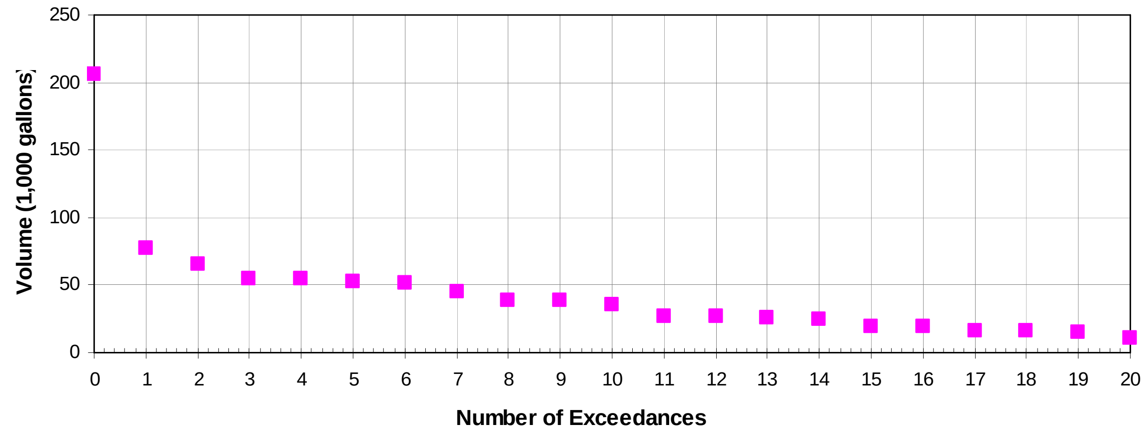

Figure 2 - Outfall 005AS41 CSO Peak Flow Rate

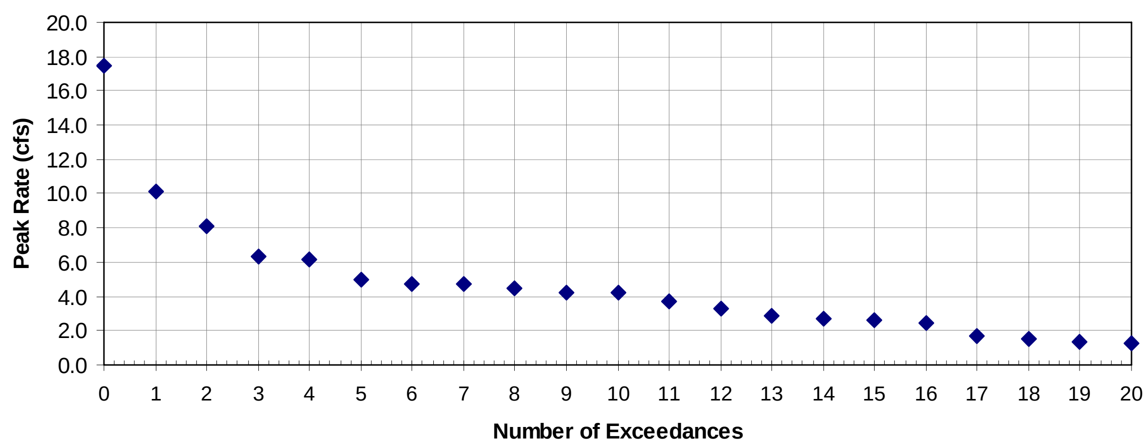


Description of Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 005AS41. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS4-005AS41: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-005AS41: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-005AS41: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-005AS41: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-005AS41: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities.   Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-005AS41: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

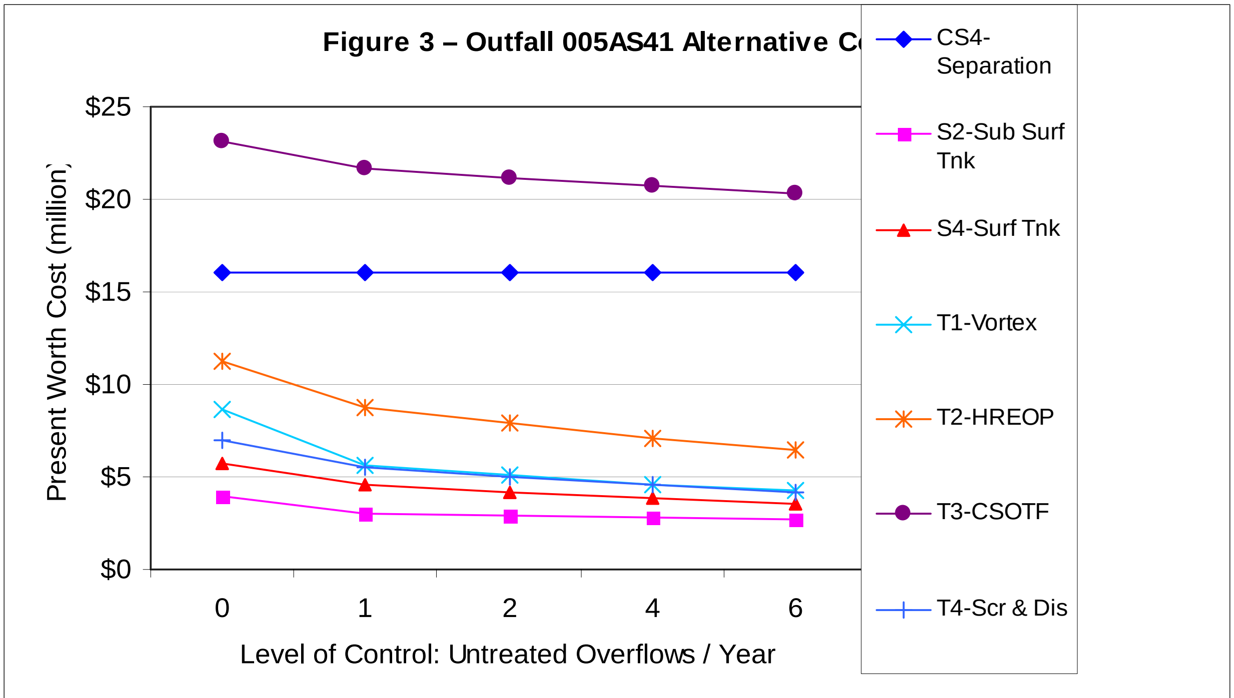
T4-005AS41: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 005AS41 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 through 6, it is recommended that Alternative S2-005AS41: Sub-Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

It appears that space is available for the construction of a sub-surface storage facility for all control levels.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0230.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not provide adequate CSO control.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will be evaluated on a regional or system-wide basis only.
Sewer separation	Y	Sewer separation within the 106 acres of combined sewer area tributary to this outfall will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will be not evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation treatment in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA

SW-D-0230.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	2	2	2	2	2
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: CS4-Separation		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	1	1	1	1	1
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: CS4-Separation		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: CS4-Separation		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	3	3	3	3	3
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	5	5	5	5	5
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	5	5	4	4	4
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: S2-Sub Surf Tnk		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: S2-Sub Surf Tnk		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: S2-Sub Surf Tnk		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.

Objective Scoring

Alternative:	S4-Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	4	4	3	3	3
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S4-Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.

Objective Scoring

Alternative:	T2-HREOP	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T2-HREOP	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T2-HREOP	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: T2-HREOP		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: T2-HREOP		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T2-HREOP	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T2-HREOP	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**

1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	3	3	3	3	3
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T4-Scr & Dis	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T4-Scr & Dis	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T4-Scr & Dis	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T4-Scr & Dis	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	3	3	3	3	3
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T4-Scr & Dis	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	3	3	3	3	3
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	2	2	2	2	2
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	2	3	3	3	3
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

3ox = Objective scores determined by PWSA / Consultant Team

of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

SUB-SURFACE STORAGE TANK

1 Overflows / Year

1. Tank Parameters					
Storage Type (1=Surface; 2=Subsurface)		2		Subsurface Tank	Default Value
Sizing Basis: Peak Volume (MG / CF)		0.13		18,000	Ref: CSO Statistics
Available Capacity (% Tank Vol)		85%			Ref: Technical Parameters
Required Storage Volume (MG / CF)		0.16		21,000	= Peak Vol / Available Capacity
Side-water Depth (Ft), 15' max depth		15		Sufficient Depth	Ref: Tech Parameters, Rev as Req'd
Length (Ft)		47			= (Vol / SWD * 1.5)$^{1/2}$
Width (Ft)		32			= (Vol / SWD / 1.5)$^{1/2}$
Total Volume (MG / CF)		0.17		22,560	Sufficient Volume
Tank Area (SF)		2,000			= Length x Width
Construction Cost (Storage Tank)		**1,326,000**			
2. Dewatering Pump Station / Force Main Parameters					
Volume Requiring Pumping (%)		100%			Ref: Technical Parameters
Dewatering Time (Days)		1			Typ 1, Adjust as Req'd Ref: Tech Par
Dewatering Pumping Rate (MGD / CFS)		0.13		0.21	= Peak Vol / DW Time x %Req Pump
Force Main Diameter (In)		3			Input by Engineer
Force Main Velocity (FPS)		4.2		Check:	OK - Velocity >2 fps/< 10 fps
Force Main Length (Ft)		100			Input by Engineer
Construction Cost (PS / Force Main)	**$**	**398,000**	**$**	**14,000**	
3. Consolidation and/or Outfall Pipe Parameters					
Peak Flow (CFS)		5.17			Ref: Technical Parameters
Diameter (In)		36			<25cfs=36"; 25-50cfs=48"; 50-100cfs=66"; 100-150cfs=78"; 150-200cfs=90", 200-250cfs=96"; 250-300cfs=108"; >300cfs=120"
Length (Ft)		100			Input by Engineer
Depth (Ft)		20			Input by Engineer
Construction Cost (Pipe)	**$**	**63,000**			
4. Odor Control Parameters					
Air Changes / Hour (ACH)		3			Ref: Technical Parameters
Volume of Ventilated Space (CF)		32,000			=Required Storage Vol x 1.5
Odor Control Flow Rate (CFM)		1,600			= ACH x Volume / 60
Construction Cost (Odor Control)	**$**	**132,000**			
5. Screening Parameters					
Screening Required (Yes = 1; No = 2)		1			Typ 1, Rev as Req'd
Peak Flow, into facility (MGD)		3.34			Ref: CSO Statistics
Construction Cost (Screening)	**$**	**567,000**			
6. Disinfection Parameters					
Disinfection Required (Yes = 1; No = 2)		2			Typ 2, Rev as Req'd
Peak Flow (MGD)		0.00			Ref: Peak flow of PS
Cl_2 Contact Tank Length / Width (Ft)					
Passes				No Disnfctn	Ref: Tech Param-15 min minimum
Construction Cost (Disinfection / CC Tank)	$	-	$	-	
Construction Cost (Disinfection)	**$**	**-**			No Disinfection
7. Regulator Parameters					
Regulator Construction (0=None; 1=New Static; 2=New Auto; 3=New Reg; 4=Mod Reg)		4		Modify Regulator	Input by Engineer
Number Regulators		1			Input by Engineer
Construction Cost (Regulators)	**$**	**39,000**			
8. Land Acquisition Parameters					
Land Required - Tank (SF)		21,000			=(0.291 x Vol (MG) + 0.439) x 43560
Land Required Cost ($ / SF)	$	2			Ref: Technical Parameters
Land Acquisition Cost	**$**	**42,000**			
			TOTAL CAPITAL COST	**$**	**2,581,000**

D.28.5 OLYMPIA, SHALER, AND WOODRUFF STREETS SEWERSHED – BOGGSTON AVENUE – NPDES# 015PS31

Description of Outfall

Outfall 015PS31 conveys overflows from ALCOSAN diversion chamber S-31 to Saw Mill Run, and ultimately into the Ohio River. The outfall is located along Saw Mill Run, near the Liberty Tunnels and Saw Mill Run Boulevard, in an area now or formerly owned by Gilbert Auto Wreckers. The Olympia, Shaler, and Woodruff Streets Sewershed consists of 422 acres of residential, business and commercial users. The Olympia, Shaler and Woordruff Sewersheds are comprised of approximately 316 manholes and 85,283 linear feet (16.2 miles) of mostly combined sewers up to 48 inches in diameter. The S-31 sewershed (Boggston Ave.) consists of 45 acres, or approximately 11% of the total service area.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

Outfall 015PS31 typically experiences 66 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from outfall 015PS31 is approximately 0.40 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 015PS31 is approximately 15.83 CFS. *Figure 1 – Outfall 015PS31 CSO Volume* and *Figure 2 – Outfall 015PS31 CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.

There appears to be a limited amount of available space for potential storage or treatment facilities to the west of the existing Liberty Tunnels, adjacent to Saw Mill Run. The site is generally bounded by Saw Mill Run to the south, the Liberty Tunnels to the east and steep slopes and private development to the north and west. Within the boundaries of this critical infrastructure, there appears to be limited potential space for a storage or treatment facility.

Description of Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 015PS31. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS4-015PS31: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-015PS31: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-015PS31: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-015PS31: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-015PS31: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-015PS31: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

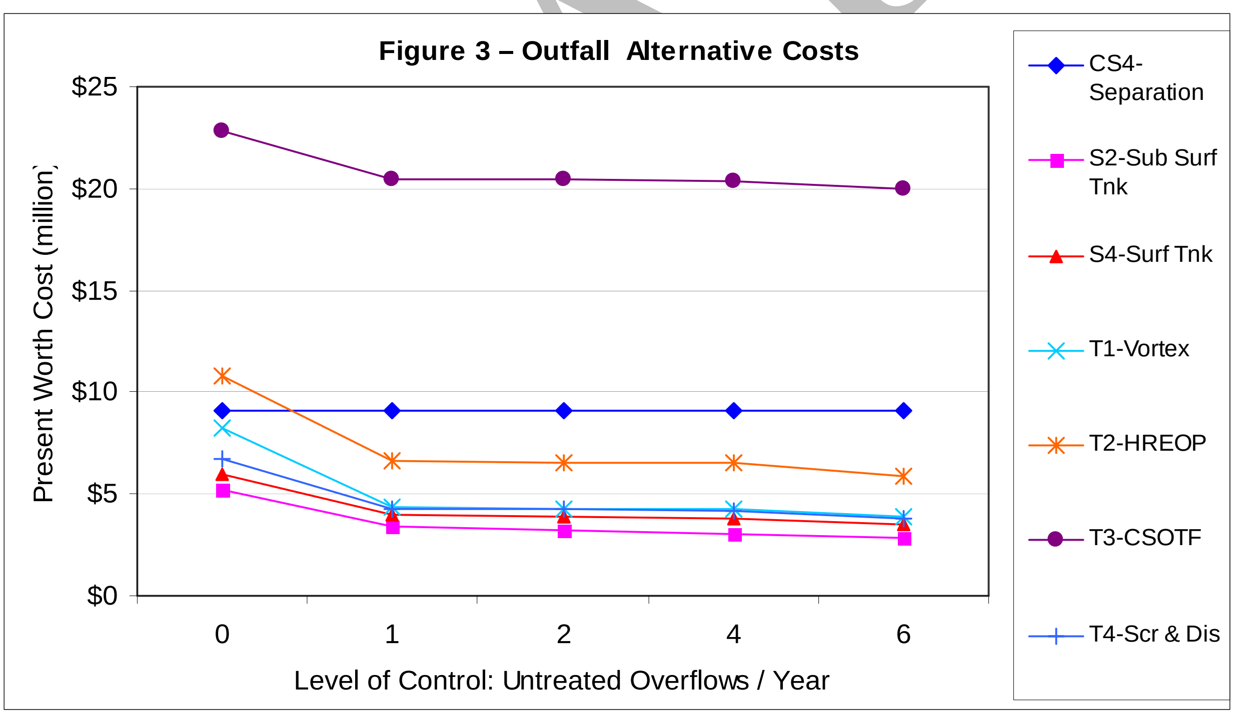
T4-015PS31: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 015PS31 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 through 6, it is recommended that Alternative S2-015PS31: Sub-Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

It appears that space is limited for a storage facility. However, since the site requires a relatively small storage area, it appears that an adequate site could be procured for construction of the facility.

THE PITTSBURGH WATER & SEWER AUTHORITY
Quality Water Quality Service

SW-D-0232.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not provide adequate CSO control.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will be evaluated on a regional or system-wide basis only.
Sewer separation	Y	Sewer separation within the 45 acres of combined sewer area tributary to this outfall will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will be not evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation treatment in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA

SW-D-0232.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	5	5	5	5	5
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

Objective Scoring

Alternative:	T1-Vortex	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	4	5	5	5	5
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T1-Vortex	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	3	3	3	3	3
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T1-Vortex	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	3	3	3	3	3
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T1-Vortex	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	2	2	2	2	2
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T1-Vortex	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T1-Vortex	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T1-Vortex	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T1-Vortex	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T1-Vortex	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	2	2	2	2	2
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.

3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	2	2	2	2	2
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T3-CSOTF	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T3-CSOTF	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T3-CSOTF	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T3-CSOTF	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T3-CSOTF	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	3	3	3	3	3
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T3-CSOTF	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T3-CSOTF	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T3-CSOTF	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T3-CSOTF	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	1	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Objective Scoring

Alternative:	T4-Scr & Dis	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	5	5	5	5	5
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T4-Scr & Dis	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	2	2	2	2	2
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T4-Scr & Dis	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	3	3	3	3	3
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T4-Scr & Dis	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	2	2	2	2	2
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T4-Scr & Dis	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.

#N/A					
SCREENING AND DISINFECTION					
6 Overflows / Year					
1. Screening Parameters					
Screening Required (Yes = 1; No = 2)		1			Default Value
Peak Flow, into facility (MGD)		12.19		18.86	Ref: CSO Statistics
Construction Cost (Screening)	**$**	**977,000**			
2. Pump Station / Force Main Parameters					
Volume Requiring Pumping (%)		100%			Ref: Technical Parameters
Dewatering Pumping Rate (MGD / CFS)		12.19		18.86	= Peak Flow x % Req Pump
Force Main Diameter (In)		24			DW Pump Rate / 2 FPS
Force Main Velocity (FPS)		6.0		**Check:**	**OK - Velocity >2 fps/< 10 fps**
Force Main Length (Ft)		100			Input by Engineer
Construction Cost (PS / Force Main)	**$**	**2,984,000**	**$**	**32,000**	
3. Consolidation and/or Outfall Pipe Parameters					
Peak Flow (CFS)		18.86			Ref: CSO Statistics
Diameter (In)		36			<25cfs=36"; 25-50cfs=48"; 50-100cfs=66"; 100-150cfs=78"; 150-200cfs=90", 200-250cfs=96"; 250-300cfs=108"; >300cfs=120"
Length (Ft)		-			Input by Engineer
Depth (Ft)		-			Input by Engineer
Construction Cost (Local / Cnsldn Pipe)	**$**	**-**	**$**	**5,351,000**	Ancillary pipe / Pipe to connect outfalls
4. Odor Control Parameters					
Air Changes / Hour (ACH)		3			Ref: Technical Parameters
Volume of Ventilated Space (CF)		3,800			=CFS x 200
Odor Control Flow Rate (CFM)		190			= ACH x Volume / 60
Construction Cost (Odor Control)	**$**	**25,000**			
5. Disinfection Parameters					
Disinfection Required (Yes = 1; No = 2)		1			Default Value
Peak Flow (MGD)		12.19			Ref: Peak Flow into Facility
Cl_2 Contact Tank Length / Width (Ft)		55		27	
Passes		3		**15.75**	Ref: Tech Param-15 min minimum
				OK Detn Time	
Construction Cost (Disinfection / CC Tank)	$	591,000	$	467,000	
Construction Cost (Disinfection)	**$**	**1,058,000**			
7. Regulator / Vortex Drop Parameters					
Regulator Construction (0=None; 1=New Static; 2=New Auto; 3=New Reg; 4=Mod Reg)		4		**Modify Regulator**	Input by Engineer
Number Regulators		1			Input by Engineer
New Vortex Drop Shaft		1			**Typ=# Regs, Rev Qty as Req'd**
Construction Cost (Regulators/Vortex)	**$**	**299,000**			
7. Land Acquisition Parameters					
Land Required - Screening & Disinfection (SF)		24,000			=(0.0016 x Cap(CFS) + 0.514) x 43560
Land Required Cost ($ / SF)	$	2			Ref: Technical Parameters
Land Acquisition Cost	**$**	**48,000**			
			TOTAL CAPITAL COST	**$**	**10,774,000**

D.29.1 016A001 TO 035J001 – LITTLE SAWMILL RUN SEWERSHEDS – NPDES# 016A001, 016A002, 035A001, 035E001, AND 035J001

Description of Outfalls

The Little Sawmill Run Sewershed is located in portions of Banksville, Beechview and Ridgemont sections in the City of Pittsburgh and in portions of Dormont Borough, Green Tree Borough, the Municipality of Mount Lebanon, and Scott Township. The Little Sawmill Run Sewershed includes approximately 1,819 acres of residential, business and commercial users. The CSO 016A001 to 035J001 outfall consolidation consists of the following outfalls:

- CSO016A001, NPDES# 016A002
- CSO016A002, NPDES# 016A002
- CSO035A001, NPDES# 035A001
- CSO035E001, NPDES# 035E001
- CSO035J001, NPDES# 035J001

The tributary area for the diversion chambers upstream of the above outfalls is approximately 207 acres. The individual diversion chambers overflow to Little Saw Mill Run, a tributary of Saw Mill Run. The NPDES locations correspond to a combination of individual outfalls that connect to an open channel portion of stream or locations where a culverted portion of the stream daylights. Nearly all of the service area is combined sewer. *Attachment 1, Tributary Area Map,* shows the CSO locations and the tributary areas.

Outfalls 016A001 to 035J001 typically experience overflow events 79 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from all the outfalls is approximately 3.50 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from the outfalls is approximately 52 CFS. Figures 1 and 2 illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.

Figure 1 - CSO 016A001 to 035J001 CSO Volume

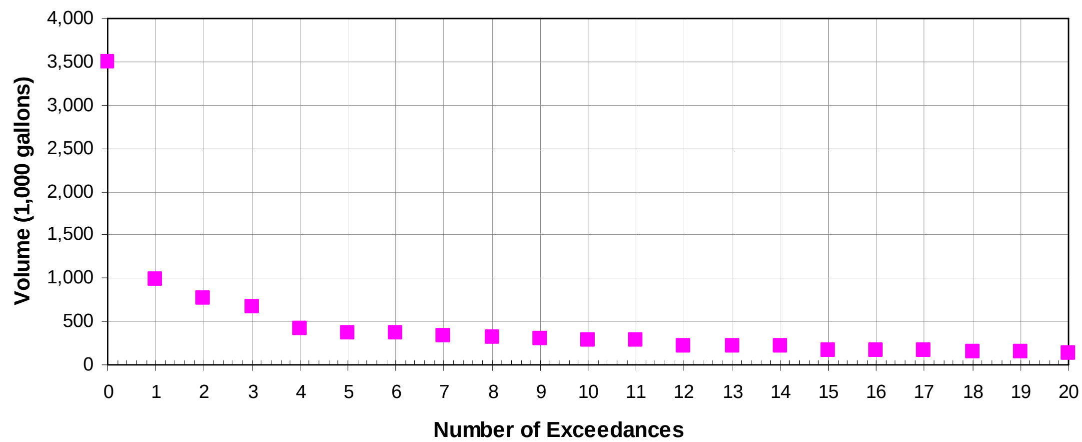

Figure 2 - CSO 016A001 to 035J001 CSO Peak Flow Rate

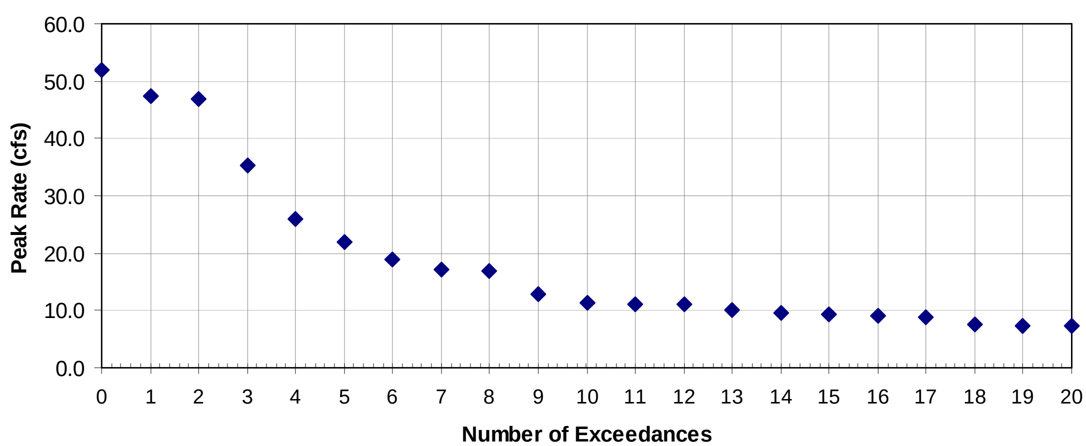


A necessary component of all storage and treatment alternatives would be the construction of consolidation sewers in order to control the CSO flows from each of the diversion structures and not the stream flows or additional stormwater that enters the stream. The sewers are required to convey CSOs from outfalls 035J001, 035E001, 035A001, 016A001 and 016A002 to an area along Banksville Road for storage and treatment. There appears to be a limited amount space available approximately 600 feet south of the CSO 016A001 in an existing parking facility that may be able to be procured for a storage or treatment facility. The site is generally bounded by Banksville Road to the east, Banksville Avenue to the north and west and private development to the south.

Description of Consolidated Outfall Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from the outfalls. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Alternatives

CS4-016A001 TO 035J001: Sewer Separation

- Perform complete sewer separation of the tributary areas. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-016A001 TO 035J001: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-016A001 TO 035J001: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-016A001 TO 035J001: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-016A001 TO 035J001: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities.   Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-016A001 TO 035J001: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

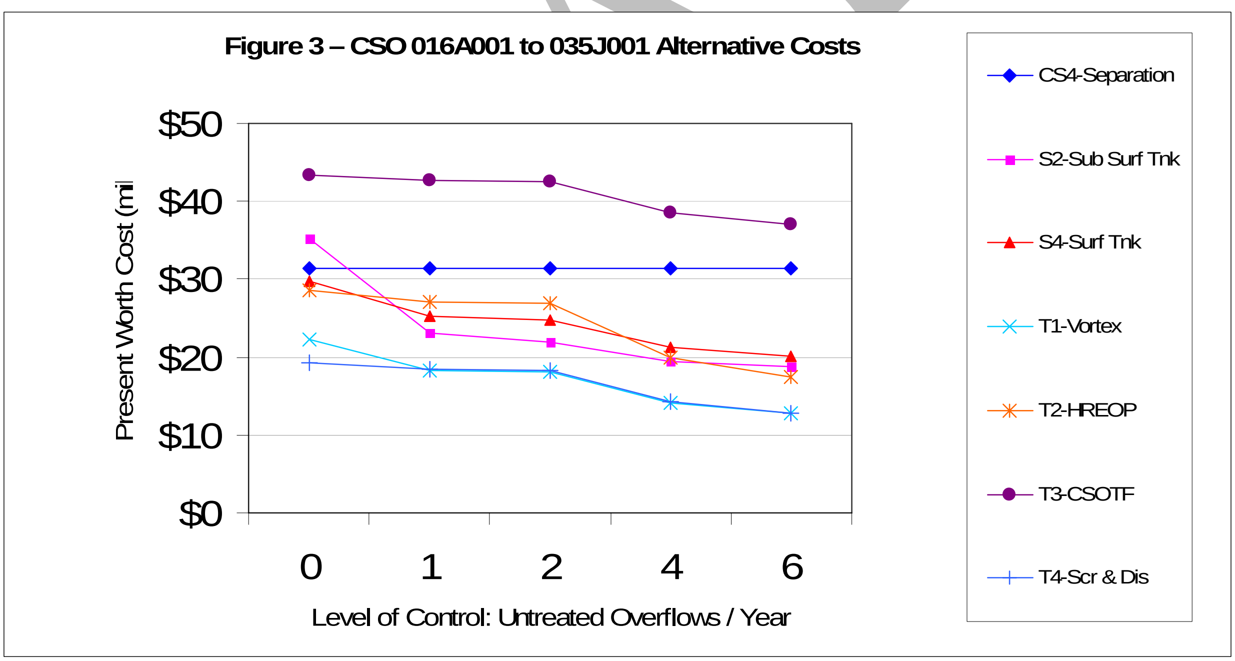
T4-016A001 TO 035J001: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – 016A001 to 035J001 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 through 6, it is recommended that Alternative S2-016A001 to 036R001: Sub-Surface Storage be carried forward and re-evaluated with the results of the system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

There appears to be a significant amount of critical infrastructure and underground utilities that would need to be dealt with during construction of a sub-surface storage tank.   A large area would be required for a storage facility for control level 0. Enough space for a sub-surface storage tank may not be available for control level 0. A much smaller area would be needed for control levels 1, 2, 4 and 6 and a storage facility would be easier to construct in the potential site identified on Attachment 4.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0234.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	Y	Inter-basin flow balance/relief will be evaluated.
Sewer separation	Y	Sewer separation will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with all storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with all treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0234.pdf

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	3	3	3	3	3
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	5	5	5	5	5
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	5	5	5	5	5
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	5	5	4	4	4
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF

Objective Scoring

Alternative:	T2-HREOP	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T2-HREOP	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T2-HREOP	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T2-HREOP	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T2-HREOP	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T2-HREOP	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.

1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T4-Scr & Dis	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	3	3	3	3	3
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T4-Scr & Dis	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T4-Scr & Dis	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T4-Scr & Dis	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T4-Scr & Dis	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	3	3	3	3	3
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	T4-Scr & Dis	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T4-Scr & Dis	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	1	1	1	1	2
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

3ox = Objective scores determined by PWSA / Consultant Team

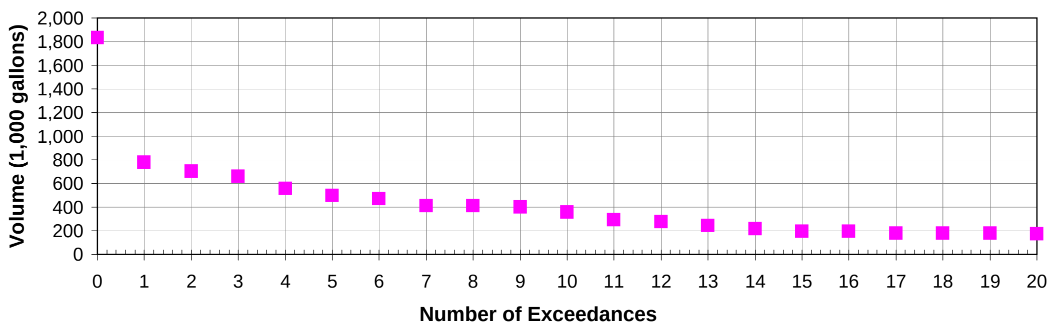

Figure 2 - Outfall 036R001 (DC 036P001, DC 036R001, DC 063B001, DC 063B002, DC 063F001) CSO Peak Flow Rate

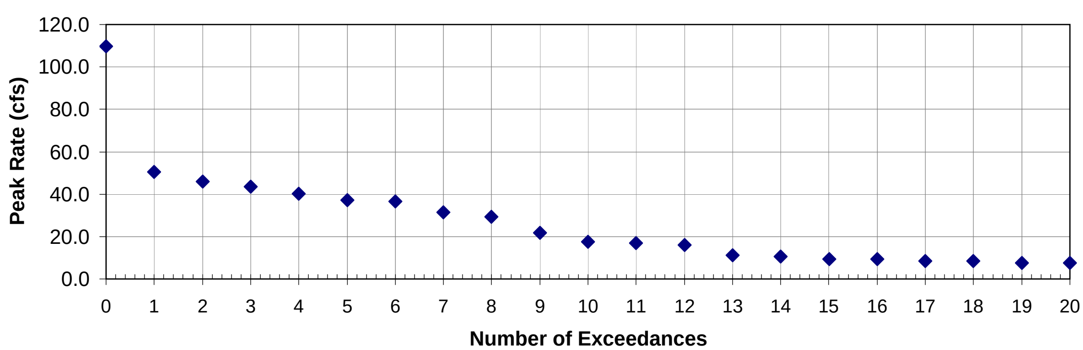


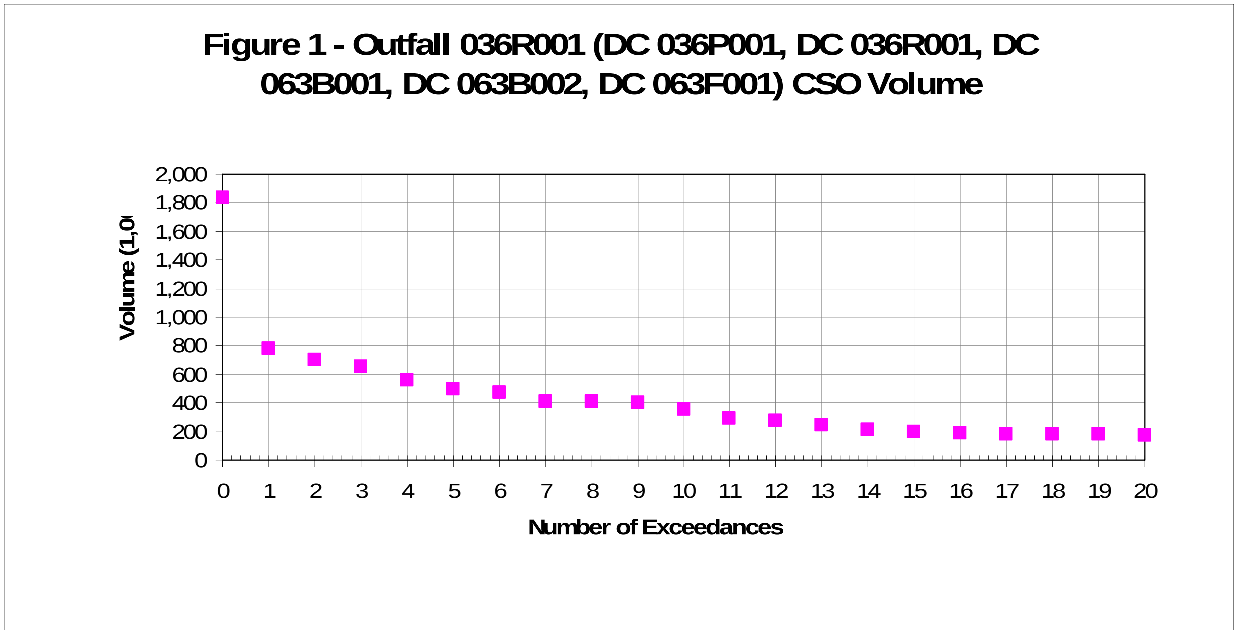
D.29.2 036R001 – LITTLE SAWMILL RUN – NPDES# 036R001

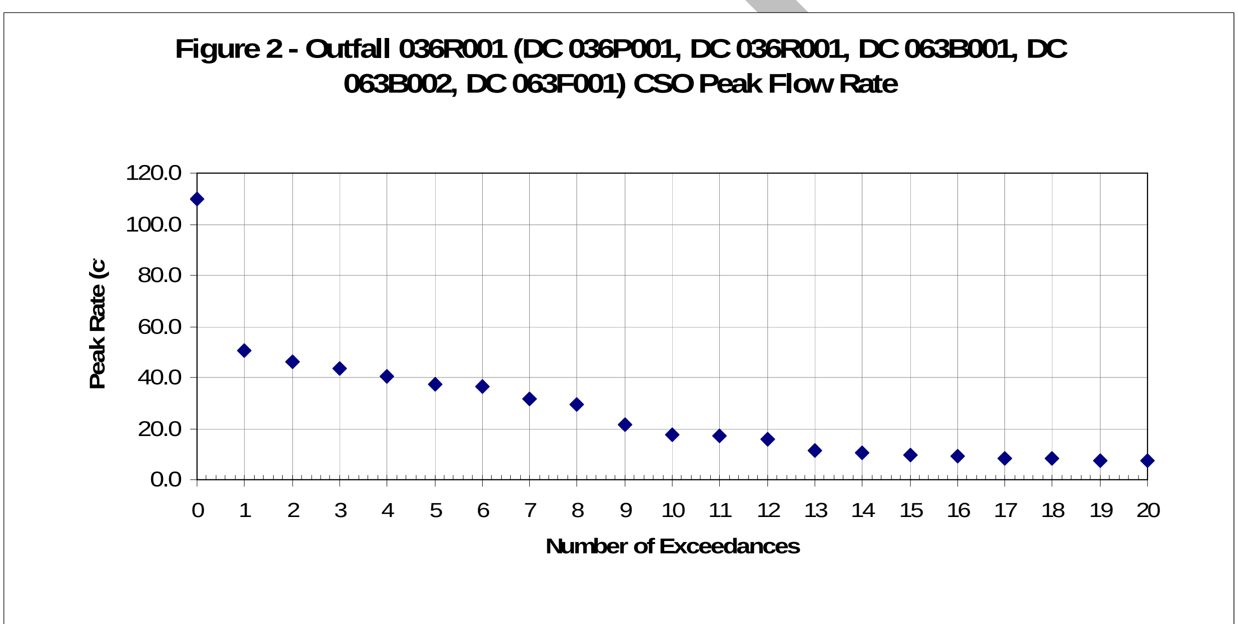
Description of Outfalls

The Little Sawmill Run Sewershed is located in portions of Banksville, Beechview and Ridgemont sections in the City of Pittsburgh and in portions of Dormont Borough, Green Tree Borough, the Municipality of Mount Lebanon, and Scott Township. The Little Sawmill Run Sewershed includes approximately 1,819 acres of residential, business and commercial users and is comprised of approximately 847 manholes and 188,900 linear feet (35.8 miles) of sewers up to 156 inches in diameter. Five PWSA diversion chambers contribute overflows to CSO 036R001: DC 036P001, DC 036R001, DC 063B001, DC 063B002, and DC 063F001. The tributary area for CSO 036R001 is 428 acres, of which approximately 303 acres are tributary to the individual PWSA diversion chambers and the remaining area is stormwater drainage tributary to CSO 036R001.

The individual diversion chambers overflow to Little Saw Mill Run, a tributary of Saw Mill Run, and the NPDES permit applies to the location where the culvert daylights. Nearly all of the service area is combined sewer. *Attachment 1, Tributary Area Map,* shows the CSO locations and the tributary areas.

Outfall 036R001 typically experiences overflow events 78 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from all the outfalls is approximately 1.83 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from the outfalls is approximately 110 CFS. *Figure 1 – Outfall 036R001 CSO Volume* and Figure *2 – Outfall 036R001 CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.





A necessary component of all storage and treatment alternatives would be the construction of consolidation sewers in order to control the CSO flows from each of the diversion structures and not the stream flows or additional stormwater that enters the stream. There appears to be a limited amount space available between Banksville Road and Banksville Avenue/Old Banksville Road between Wenzell Avenue and Potomac Avenue for a facility. The area is an existing parking facility and billboard area that may be able to be procured for a storage or treatment facility.

Description of Consolidated Outfall Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from the outfalls. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Alternatives

CS4-036R001: Sewer Separation

- Perform complete sewer separation of the tributary areas. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-036R001: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-036R001: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the the

collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-036R001: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-036R001: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-036R001: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

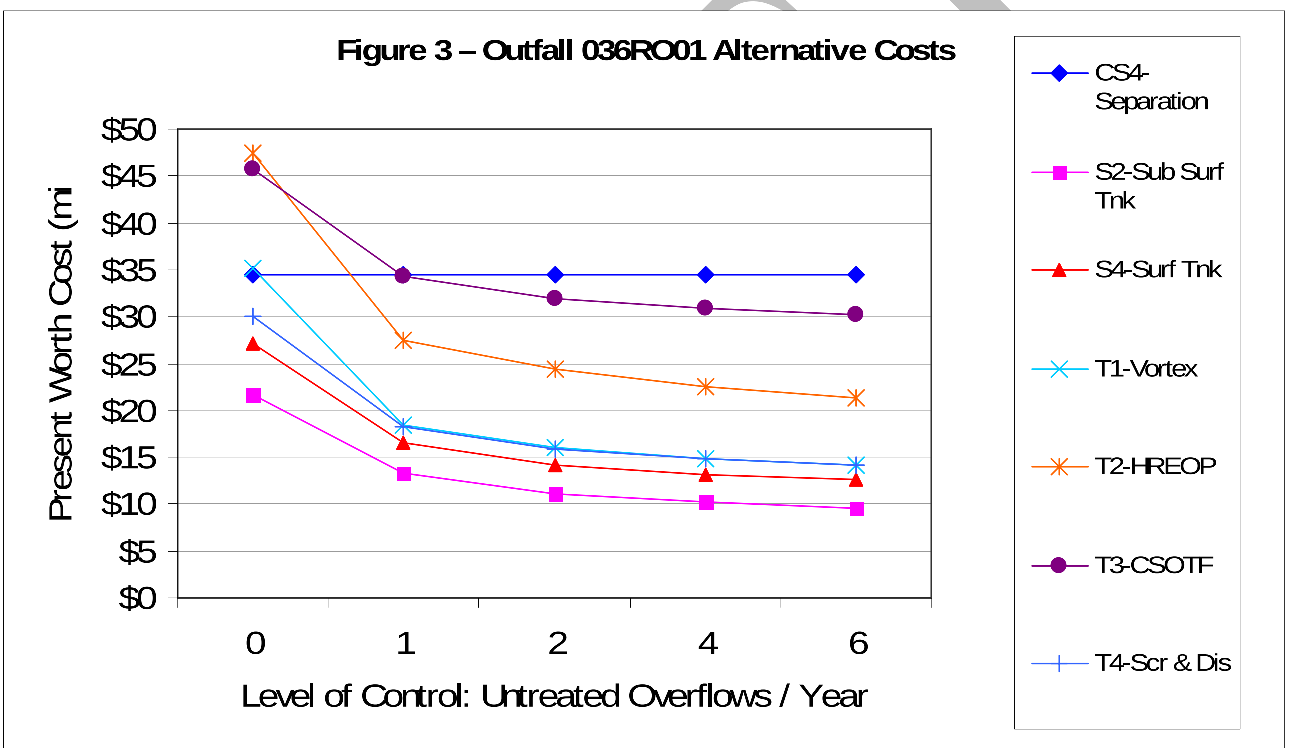
T4-036R001: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 036R001 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control levels 0 through 6, it is recommended that Alternative S2-016A001 to 036R001: Sub-Surface Storage be carried forward and re-evaluated with the results of the system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

There appears to be a significant amount of critical infrastructure and underground utilities that would need to be dealt with during construction of a sub-surface storage tank.   A large area would be required for a storage facility for control level 0. Enough space for a sub-surface storage tank may not be available for control level 0. A much smaller area would be needed for control levels 1, 2, 4, and 6 and a storage facility would be easier to construct in the potential site identified on Attachment 4.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0236.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	Y	Inter-basin flow balance/relief will be evaluated.
Sewer separation	Y	Sewer separation will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with all storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with all treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

SW-D-0236.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.

Objective Scoring

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	2	4	3	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	5	5	4	4	4
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed					

Objective Scoring

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores

5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T1-Vortex	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T1-Vortex	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T1-Vortex	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T1-Vortex	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T1-Vortex	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	2	2	2	2	2
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T1-Vortex	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T1-Vortex	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T1-Vortex	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T1-Vortex	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	2	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

Alternative:	T2-HREOP	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	1
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T2-HREOP	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T2-HREOP	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	2	2	2	2	2
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T2-HREOP	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T2-HREOP	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4

Objective Scoring

Alternative:	T4-Scr & Dis	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	5	5	5	5	5
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T4-Scr & Dis	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	2	2	2	2	2
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T4-Scr & Dis	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	3	3	3	3	3
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	T4-Scr & Dis	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	T4-Scr & Dis	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	4	4	4	4	4
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T4-Scr & Dis	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T4-Scr & Dis	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T4-Scr & Dis	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T4-Scr & Dis	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	3	3	3	3	3
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T4-Scr & Dis	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	3	3	3	3	3
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	2	2	2	2	2
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	3	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team
Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

D.30.1 S-23 AND S-24 – SAW MILL RUN INTERCEPTOR SEWERSHEDS – NPDES# 061DS23 AND 061DS24

Description of Outfalls

The Saw Mill Run Interceptor Sewersheds are located in portions of Beechview, Beltzhoover, Bon Air, Brookline, Carrick, Duquesne Heights, Elliott, Mount Washington, Ridgemont, South Shore, West End sections in the City of Pittsburgh and Baldwin Township, the Municipality of Bethel Park, Castle Shannon Borough, the Municipality of Mount Lebanon and Whitehall Borough. These sewersheds include approximately 12,417 acres of residential, business and commercial users.

These outfalls 061DS23 and 061DS24 are in the Brook, Bausman and Warrington sewershed and Edgebrook sewershed respectively. The S-23 tributary area consists of 177 acres of combined sewers and the S-24 tributary area consists of 311 acres of combined sewers. The outfalls convey overflows from each of the respective ALCOSAN diversion chambers to Saw Mill Run.

Attachment 1, Tributary Area Map, shows the CSO locations and the tributary areas.

Outfalls 061DS23 and 061DS24 typically experience 91 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from all the outfalls is approximately 9.38 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from both outfalls is approximately 96.26 CFS. Figures 1 and 2 illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.

Figure 1 - S-23 to S-24 CSO Volume

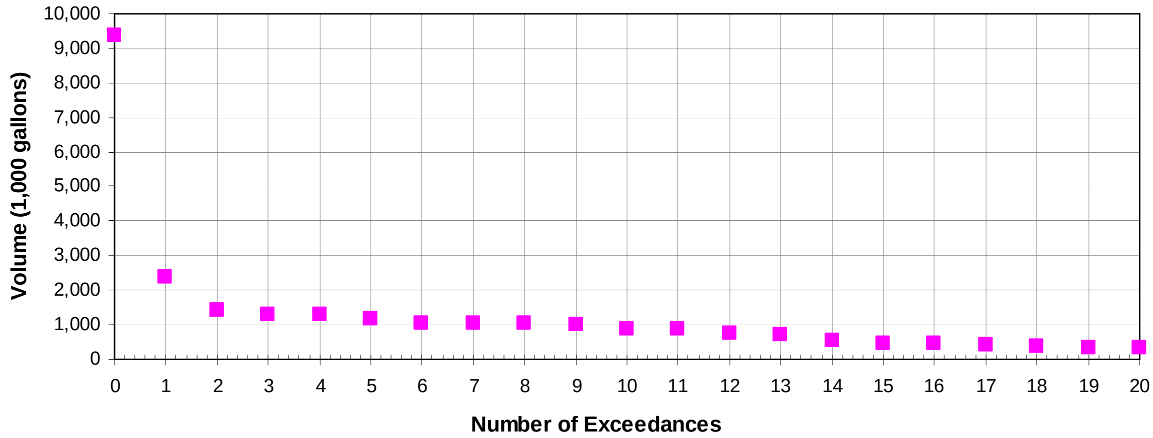

Figure 2 - S-23 to S-24 CSO Peak Flow Rate

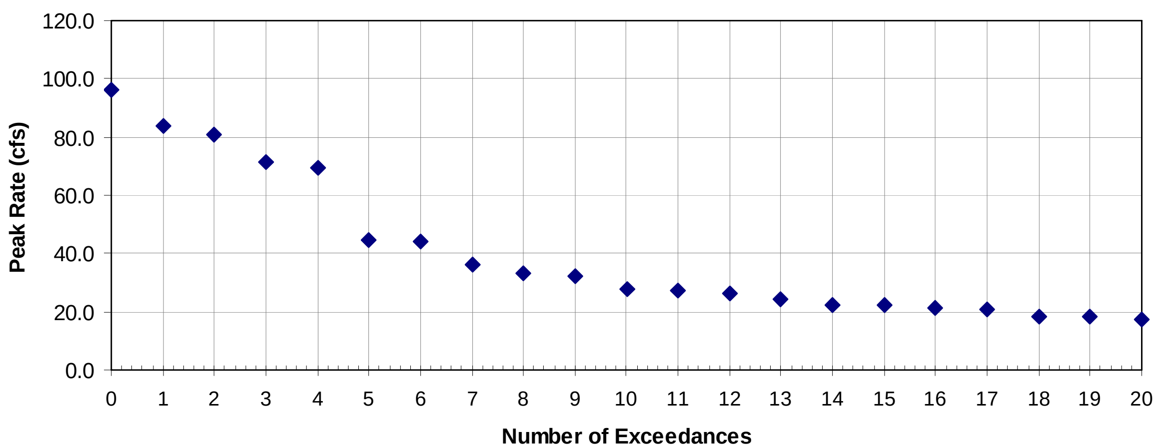


A necessary component of all storage and treatment alternatives would be the construction of a consolidation sewer. The sewer is required to convey CSOs from outfall 061DS24 to the vicinity of diversion chamber 061DS23.

There appears to be available space for potential storage or treatment facilities to the northeast of the existing outfalls, adjacent to an existing commercial building. The site is generally bounded by private development to the south and north, Saw Mill Run Boulevard and Saw Mill Run to the west, and steep slopes to the east.

Description of Consolidated Outfall Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from the outfalls. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Alternatives

CS4-S-23 AND S-24: Sewer Separation

- Perform complete sewer separation of the tributary areas. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-S-23 AND S-24: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-S-23 AND S-24: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-S-23 AND S-24: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-S-23 AND S-24: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-S-23 AND S-24: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

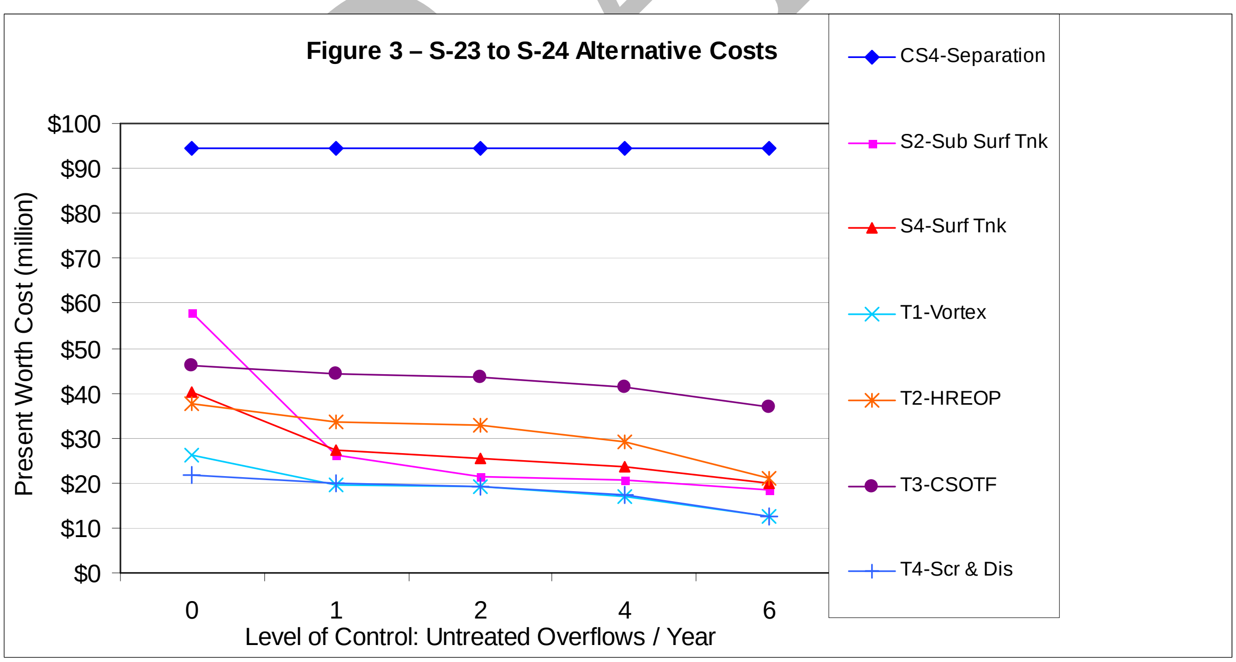
T4-S-23 AND S-24: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – S-23 and S-24 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall “ranking” at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control level 0, it is recommended that Alternative S4-S-23 and S-24: Surface Storage be carried forward and re-evaluated with the results of the system-wide alternatives analyses. For control levels 1 through 6, it is recommended that Alternative S2-S-23 and S-24: Sub-Surface Storage be carried forward.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

It appears that space is available for a storage or treatment facility for all control levels in the vicinity of diversion chamber 061DS23. An existing commercial parking facility and garage may need acquired for the construction of the storage facility.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0238.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will not be evaluated.
Sewer separation	Y	Sewer separation will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with all storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with all treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA
THE PITTSBURGH WATER & SEWER AUTHORITY
Quality Water Quality Service

SW-D-0238.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	2	2	2	2	2
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	CS4-Separation	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	CS4-Separation	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	CS4-Separation	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	3	3	3	3	3
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.					
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.	3	3	3	3	3
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	5	5	5	5	5
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative: CS4-Separation		Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

Objective Scoring

Alternative:	S4-Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.	1	1	1	1	2
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.					
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S4-Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S4-Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	5	5	4	4	4
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S4-Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	2	2	2	2	2
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S4-Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S4-Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	1	1	1	1	1
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	S4-Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S4-Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S4-Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores

For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: T2-HREOP		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: T2-HREOP		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.					
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.	5	5	5	5	5
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T2-HREOP	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.					
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.	1	1	1	1	1
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T2-HREOP	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	1	1	1	1	1
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	1	1	1	1	1
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	1	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

Objective Scoring

Alternative:	T3-CSOTF	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T3-CSOTF	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	3	3	3	3	3
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T3-CSOTF	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: T3-CSOTF		Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	2	2	2	2	2
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: T3-CSOTF		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.

D.30.2 S-29 – SAW MILL RUN SEWERSHED – NPDES# 034GS29

Description of Outfall

Outfall 034GS29 conveys overflows from the ALCOSAN diversion chamber S-29 to Saw Mill Run. The Saw Mill Run Interceptor Sewersheds are located in portions of Beechview, Beltzhoover, Bon Air, Brookline, Carrick, Duquesne Heights, Elliott, Mount Washington, Ridgemont, South Shore, West End sections in the City of Pittsburgh and Baldwin Township, the Municipality of Bethel Park, Castle Shannon Borough, the Municipality of Mount Lebanon and Whitehall Borough. The outfall is located along Saw Mill Run adjacent to Saw Mill Run Boulevard near Timberland Avenue in the City of Pittsburgh. The Saw Mill Run Interceptor sewersheds include approximately 4,734 acres of residential, business and commercial users. The 034GS29 Sewershed (S-29) consists of 211 acres, or approximately 4.5% of the total service area. The Saw Mill Run Interceptor Sewersheds are comprised of approximately 1,587 manholes and 353,993 linear feet (67.0 miles) of combined, sanitary, and storm sewer up to 72 inches in diameter.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

Outfall 034GS29 typically experiences 12 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from outfall 034GS29 is approximately 0.16 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 034GS29 is approximately 15.02 CFS. *Figure 1 – Outfall 034GS29 CSO Volume* and *Figure 2 – Outfall 034GS29 CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 12 largest CSO events during the typical year baseline conditions simulation.

Figure 1 - Outfall 034GS29 CSO Volume

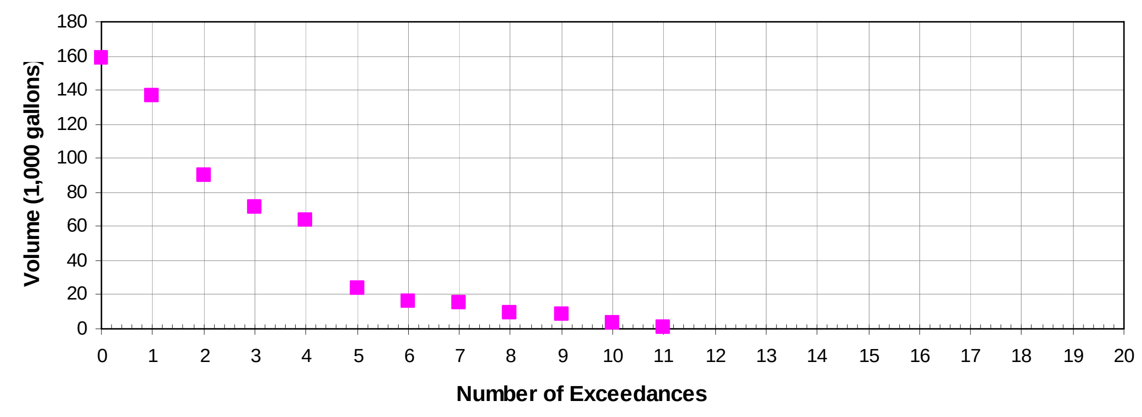

Figure 2 - Outfall 034GS29 CSO Peak Flow Rate

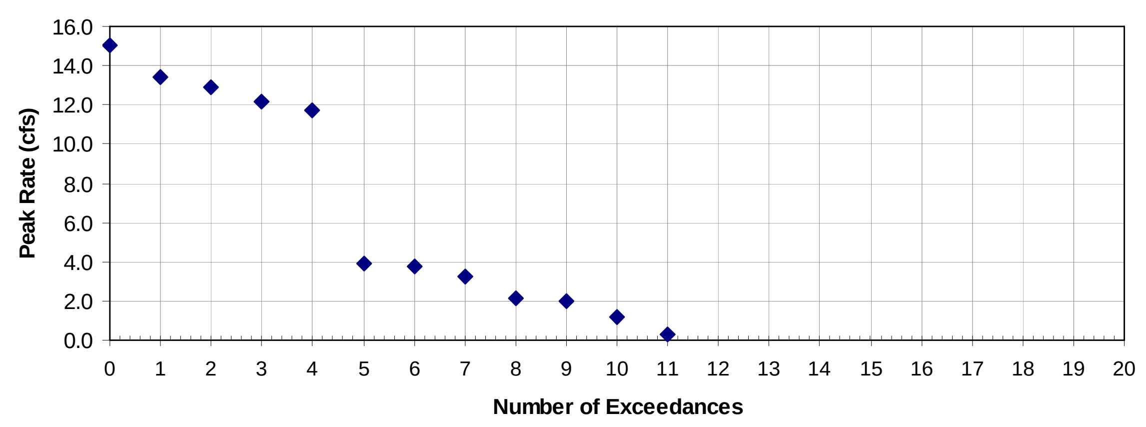


There appears to be a limited amount of available space for potential storage or treatment facilities in the vicinity of outfall 034GS29, north of Timberland Avenue near an existing parking facility. The site is generally bounded by railroad tracks to the west and private development to the north, south and east.

Description of Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 034GS29. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS4-034GS29: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-034GS29: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-034GS29: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-034GS29: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-034GS29: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-034GS29: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

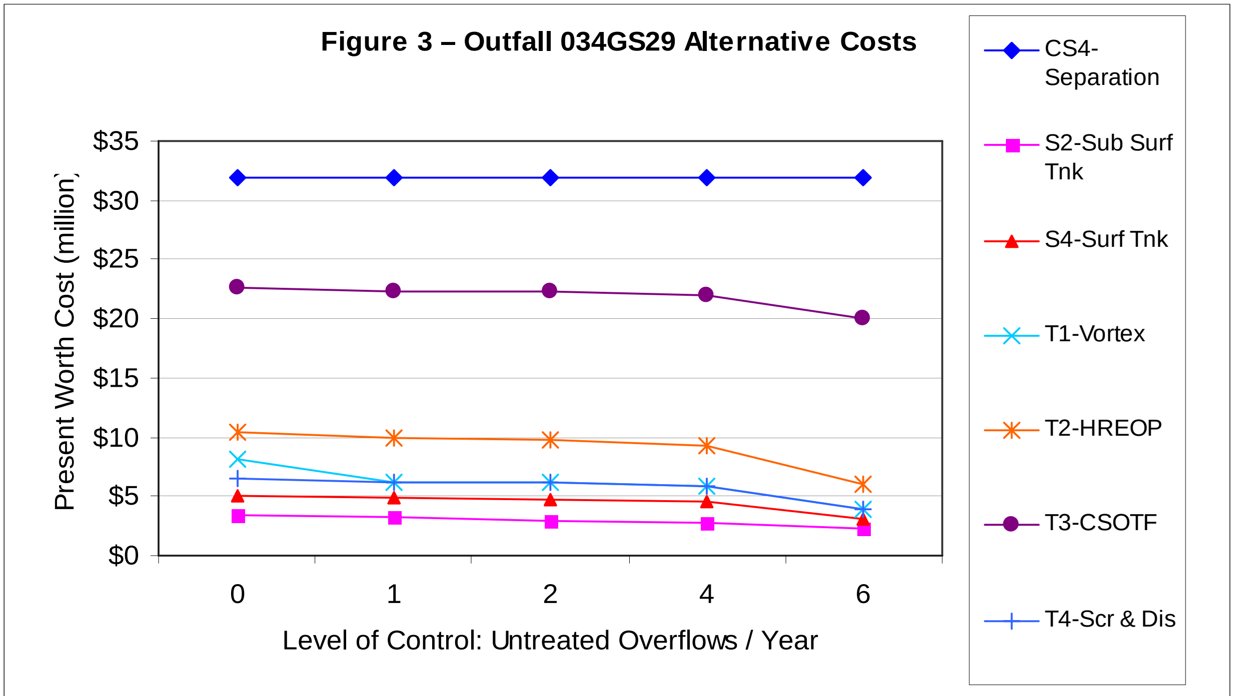
T4-034GS29: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 034GS29 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, it is recommended that Alternative S2-034GS29: Sub-Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

It appears that space is available for the construction of a sub-surface storage facility for all control levels.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0240.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not provide adequate CSO control.
Inter-basin flow balance / relief	N	Inter-basin flow balance/relief will be evaluated on a regional or system-wide basis only.
Sewer separation	Y	Sewer separation within the 211 acres of combined sewer area tributary to this outfall will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will be not evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation treatment in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

CSO Controls Alternatives

PWSA THE PITTSBURGH WATER & SEWER AUTHORITY Quality Water Quality Service

SW-D-0240.pdf

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	5	3	3	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	2	2	2	2	2
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: CS4-Separation		Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: CS4-Separation		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: CS4-Separation		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	3	3	3	3	3
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	5	5	5	5	5
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	4	4	4	4	4
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.	5	5	5	5	5
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.					
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	3	3	3	3	3
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	S2-Sub Surf Tnk	Objective Scoring: Annual O&M	Actual Scores

Alternative:	S4-Surf Tnk	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	5	5	5	5
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	S4-Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	4	4	4	4	4
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S4-Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	5	5	4	4	4
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S4-Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S4-Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S4-Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	1	1	1	1	1
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	S4-Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S4-Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores

5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: T2-HREOP		Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: T2-HREOP		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: T2-HREOP		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T2-HREOP	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T2-HREOP	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	T2-HREOP	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	1	1	1	1	1
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	3	3	3	3	3
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	T2-HREOP	Objective Scoring: Reliability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	1	1	1	1	1
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	1	1	1	1	1
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T2-HREOP	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	1	1	1	1	1
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

Yellow Box = Objective scores determined by PWSA / Consultant Team

Result of Input: Used in calculation of Subjective and Total Scores in Sheet 2.

Objective Scoring

Alternative:	T3-CSOTF	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T3-CSOTF	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	3	3	3	3	3
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T3-CSOTF	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: T3-CSOTF		Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: T3-CSOTF		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.

Alternative:	T4-Scr & Dis	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.	2	2	2	2	2
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.					
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Alternative:	T4-Scr & Dis	Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	3	2	2	2	2
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.					

3ox = Objective scores determined by PWSA / Consultant Team
›f Input: Used in calculation of Subjective and Total Scores in Sheet 2.

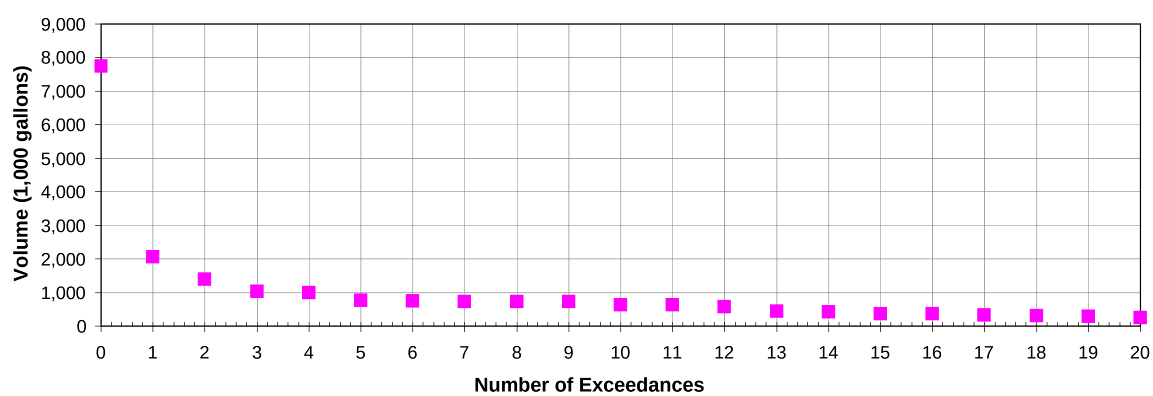

Figure 2 - Outfall 060A001 CSO Peak Flow Rate

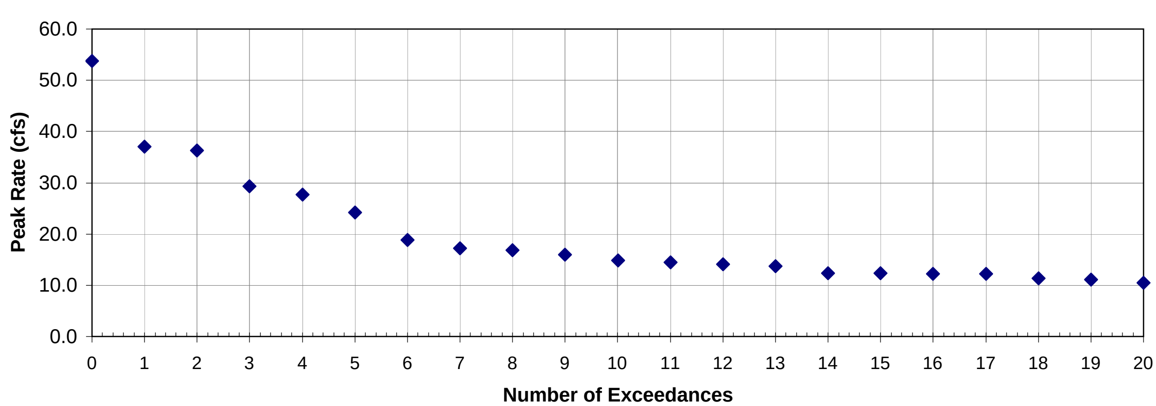


D.30.3 CSO060A001 – BAUSMAN, BROOK, WARRINGTON SEWERSHED – NPDES# 060A001

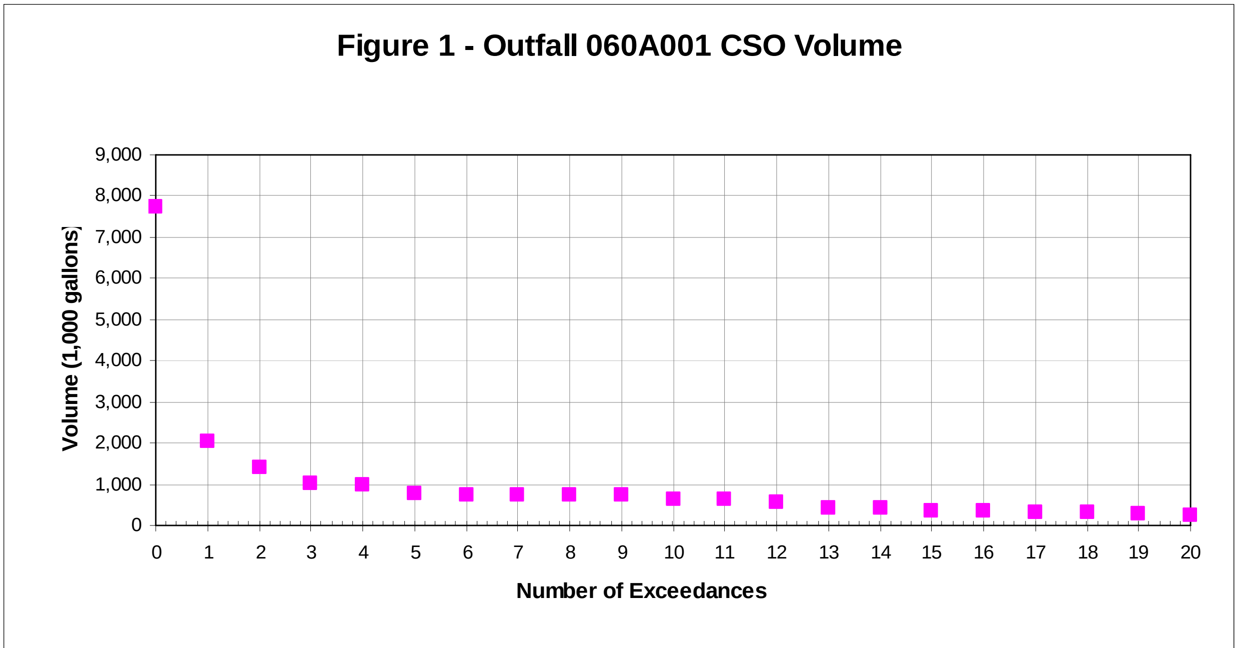
Description of Outfall

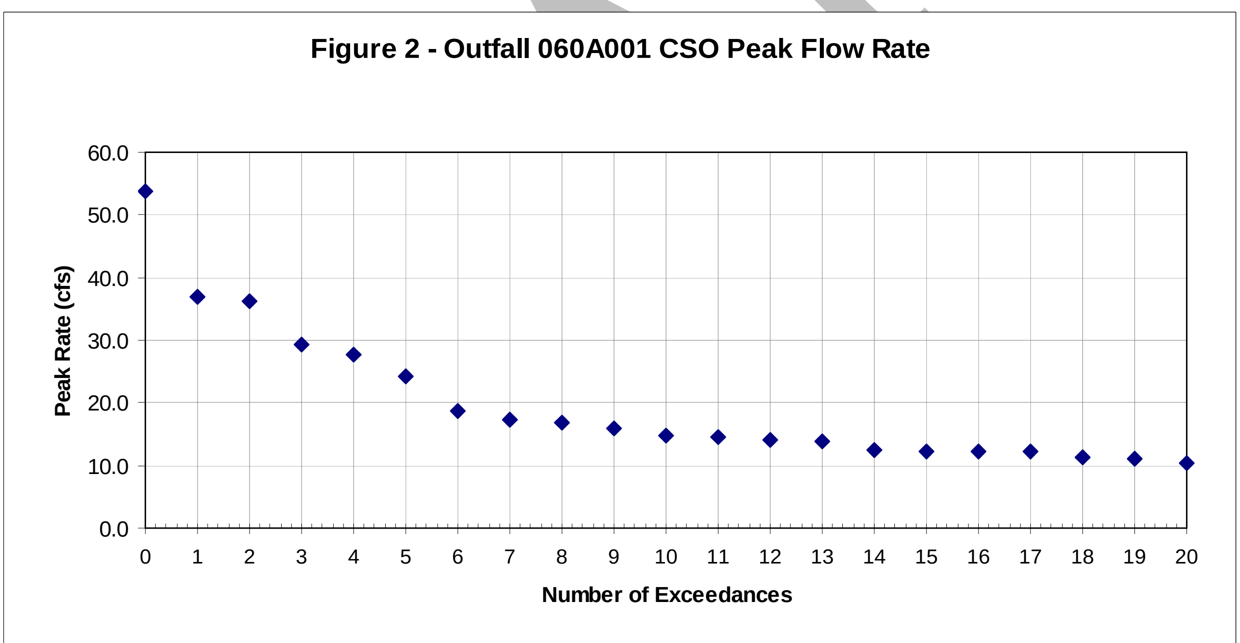
Outfall 060A001 conveys overflows from the PWSA diversion chamber 060A001 to a tributary of Saw Mill Run. The outfall is located along Brook Street in the City of Pittsburgh. The Bausman, Brook, and Warrington Street Sewersheds are located in portions of Allentown, Beltzhoover, Bon Air, Carrick, Knoxville, and Mount Washington sections in the City of Pittsburgh. The Bausman and Brook Street Sewersheds also include portions of Mount Oliver Borough. These sewersheds include approximately 871 acres of residential, business and commercial users. The Bausman, Brook and Warrington Sewersheds are comprised of approximately 751 manholes and 219,457 linear feet (41.6 miles) of mostly combined sewer up to 72 inches in diameter. The 060A001 sewershed consists of 88 acres, or approximately 10% of the total service area.

Attachment 1, Tributary Area Map, shows the CSO location and the tributary area.

Outfall 060A001 typically experiences 90 overflow events during the Typical Year Baseline Condition simulation. The maximum overflow volume during the typical year baseline conditions simulation (2005) discharging from outfall 060A001 is approximately 7.75 MG. The peak overflow rate during the typical year baseline conditions simulation (2005) discharging from outfall 060A001 is approximately 53.72 CFS. *Figure 1 – Outfall 060A001 CSO Volume* and *Figure 2 – Outfall 060A001 CSO Peak Overflow Rate* illustrate the CSO volume and peak flow characteristics of the 21 largest CSO events during the typical year baseline conditions simulation.

Figure 1 - Outfall 060A001 CSO Volume





Space appears to be limited for storage or treatment facilities adjacent to the outfall. Space appears to be available approximately 700 feet north of the outfall in an open field. The site is generally bounded by Drycove Street to the west, Brook Street and steep slopes to the south and private development to the north and east.

Description of Alternatives

Attachment 2 - CSO Alternatives Development Worksheet, summarizes the results of the initial screening of technologies for their applicability to the control of CSO discharges from Outfall 006A001. Attachment 2 identifies the alternatives that have been brought forward to be included in this more detailed evaluation. The following paragraphs describe these CSO control alternatives in more detail.

Collection System Control Alternatives

CS4-060A001: Sewer Separation

- Perform complete sewer separation of the tributary area. The separation of sanitary and storm sewers such that the drainage area is served by independent sanitary and stormwater sewer systems would reduce the hydraulic loading to the outfall. By definition, the complete separation of sewers would result in the elimination of all CSOs at the outfall.

Storage Alternatives

S2-060A001: Sub-Surface Storage

- Construct below grade storage unit, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Sub-surface storage methods typically consist of closed concrete tanks, and are also equipped with a pump station and odor control measures.

S4-060A001: Surface Storage

- Construct an above grade storage facility, in combination with a screening unit, to temporarily store CSO waters. Stored flows from the facility are slowly reintroduced into the collection and conveyance system after the storm event concludes and the system equalizes. Surface storage facilities methods typically consist of open concrete tanks and earthen basins, and are also equipped with a pump station and odor control measures.

Treatment Alternatives

T1-060A001: Suspended Solids Control

- Construct a suspended solids control unit, in combination with screening and disinfection units to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Swirl concentrators / vortex separators are typically utilized. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T2-060A001: High Rate End of Pipe Treatment (HREOP)

- Construct a high rate end of pipe unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Ballasted flocculation units are typically utilized in HREOP treatment facilities. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

T3-060A001: CSO Treatment Facility (CSOTF)

- Construct a CSOTF unit, in combination with screening and disinfection units, to significantly reduce the quantities of floatables, coarse solids, suspended solids and pathogens discharged into the receiving waters. Facilities are usually equipped with a pump station, screening facilities, disinfection technologies and odor control measures.

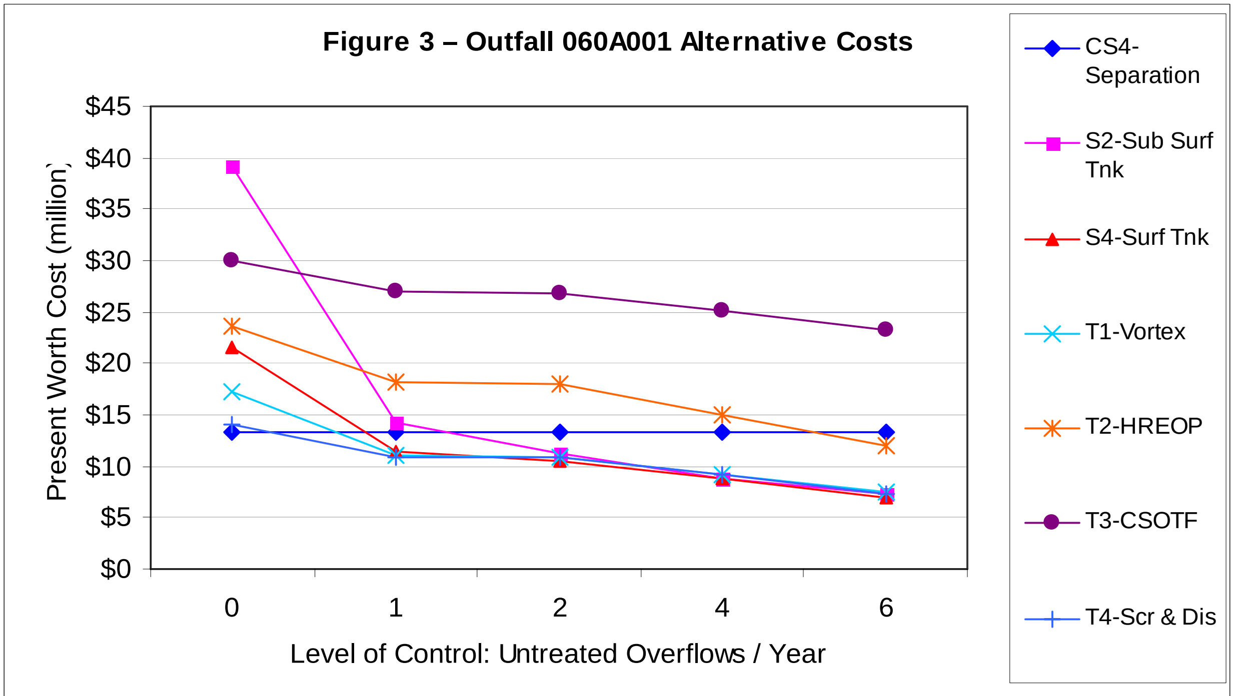
T4-060A001: Screening and Disinfection

- Construct screening and disinfection facilities to significantly reduce the quantities of floatables, coarse solids and pathogens discharged into the receiving waters. Facilities are commonly equipped with a pump station and odor control measures.

Alternative Evaluation Results

The above alternatives were evaluated based on a combination of their economic, environmental, implementation and operational impacts over a range of CSO control levels corresponding to 0, 1, 2, 4 and 6 untreated overflows per year.

Figure 3 – Outfall 060A001 Alternative Costs, illustrate the planning level present worth costs associated with each of the alternatives when sized for 0, 1, 2, 4 and 6 untreated overflows per year.



The alternative cost information was then pooled with the results of the environmental, implementation and operational impact analyses and PWSA-specific scaling and weighting factors to produce an overall "ranking" of each alternative at each control level.

Attachment 3 – Alternative Scoring Sheet, illustrates the composite scoring of economic, environmental, implementation and operational evaluation factors for control levels 0, 1, 2, 4 and 6 untreated overflows per year.

Recommendations

Based upon the above, for control level 0, it is recommended that Alternative CS2-060A001: Separation be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses. For control level 1, it is recommended that Alternative S4-060A001: Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses. For control levels 2 through 6, it is recommended that Alternative S2-

060A001: Sub-Surface Storage be carried forward and re-evaluated with the results of the regional and system-wide alternatives analyses.

Attachment 4 – Facilities Boundary Map, illustrates the estimated installation location of this recommended alternative.

Significant Issues

Although separation reduces hydraulic loading, additional pollutants may be introduced to the receiving stream. Stormwater flows that would have originally ended up in the trunk sewer will now discharge directly to local waterways. Discharge constituents include surface pollutants such as oil, grease and road grit, as well as general trash and road debris. Another issue to consider with separation is the available regulator capacity at the PWSA diversion chamber. Sufficient capacity must exist in order to convey the sanitary flow to the interceptor. Failure to provide sufficient capacity may result in a sanitary sewer overflow (SSO) condition.

For control levels 1 through 6, storage facilities were the highest rank alternatives. It appears that space is available at the location described above to construct said facilities.

SW-D-0242.pdf

Attachment 2 - CSO Alternatives Development Worksheet

Technology	Considered Y or N	Comments
Source Control:		
Sewer & Manhole Rehabilitation	N	The relatively small amount of groundwater abatement attainable will not provide adequate CSO control.
Collection System Controls:		
Sewer system optimization	N	The amount of sewer system optimization available will not provide adequate CSO control.
Regulator optimization	N	Regulator optimization will not be evaluated.
Inter-basin flow balance / relief	N	A relief sewer will not be evaluated.
Sewer separation	Y	Sewer separation within the 88 acres of combined sewer area tributary to this outfall will be evaluated.
Storage:		
In-line (existing unused conduits)	N	In-line storage will not be evaluated.
Sub-surface (tunnels, tanks, etc.)	Y	Sub-surface storage in conjunction with screening will be evaluated.
Surface (open tanks, earthen basins)	Y	Surface storage in conjunction with screening will be evaluated.
Treatment:		
Suspended Solids Control (swirl/vortex)	Y	Swirl concentrators in conjunction with screening and disinfection will be evaluated.
Floatables & Coarse Solids Control (screens, nets, etc.)	Y	Screening will be evaluated in conjunction with storage and treatment alternatives.
Disinfection (chlorine, ozone, etc.)	Y	Disinfection will be evaluated in conjunction with treatment alternatives.
High rate end-of-pipe (ballasted floc)	Y	Ballasted flocculation in conjunction with screening and disinfection will be evaluated.
CSO Treatment Facility (CSOTF)	Y	Detention and treatment in conjunction with screening and disinfection will be evaluated.
Other: Sidestream Elevated Pool Aeration	N	Technology does not effectively treat the parameters of concern.

SW-D-0242.pdf

Alternative:	CS4-Separation	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	CS4-Separation	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	2	2	2	2	2
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	CS4-Separation	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: CS4-Separation		Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	1	1	1	1	1
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: CS4-Separation		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	4	4	4	4	4
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative: CS4-Separation		Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	5	5	5	5	5
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	CS4-Separation	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	3	3	3	3	3
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	CS4-Separation	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	CS4-Separation	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extremely Complex; Req's Significant Trng and/or Staff	Example: High rate end-of-pipe treatment alternatives.	5	5	5	5	5
2	Difficult to Operate; Req's Specific Trng	Example: elaborate real-time control alternatives. Vortex separators.					
3	Moderately Complex; Req's General Trng	Example: CSO treatment facility or screening and disinfection facilities.					
4	Simple to Operate; Req's Limited Trng	Example: Storage / conveyance tunnels with pump station.					
5	Little or No O&M Required	Example: Sewer separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Flexibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Cannot be Exp. for Add'l CSO Control	Example: Storage / treatment facility located on site with no available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.					
3	May be Exp. on Ltd Basis, w/ Some Difficulty	Example: Storage / treatment facility located on site with available adjacent land for expansion. Site restrictions and ease of facility expansion to be considered.	1	1	1	1	1
5	Could be Easily Expanded	Example: Real-time control located in a conveyance system with available capacity. Site restrictions and ease of facility expansion to be considered.					

Alternative:	CS4-Separation	Objective Scoring: Reliability	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	History of Significant Problems / Ltd Track Record	Example: High rate end-of-pipe alternatives.					
3	Mod Reliable, Req's Routine Maint. & Repair	Example: CSO treatment facilities. Most other treatment units.	5	5	5	5	5
5	Minimum Maint with Proven Track Record	Example: Storage tanks tunnels. Also includes separation and regulator optimization.					

Alternative:	CS4-Separation	Objective Scoring: Compatibility	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	No PWSA Experience	Example: High rate end-of-pipe alternatives.					
2	Very little PWSA Exp	Example: End of pipe CSO Treatment Facility such as detention and treatment, swirl separators and screening and disinfection units.					
3	Limited PWSA Experience	Example: Sub-surface storage tanks and tunnels.	5	5	5	5	5
4	Moderate PWSA Exp	Example: Above greade storage faccilities.					
5	Extensive PWSA Exp	Example: Sewer separation and regulator optimization.					

Objective Scoring

Alternative: CS4-Separation		Objective Scoring: Annual O&M	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	Annual O&M Cost is more than 20% higher than the average Annual O&M Cost for all Alternatives.	5	5	5	5	5
2	High Cost	Annual O&M Cost is between 10% and 20% higher than the average Annual O&M Cost for all Alternatives.					
3	Moderate Cost	Annual O&M Cost is within +/-10% of the average Annual O&M Cost for all Alternatives.					
4	Low Cost	Annual O&M Cost is between 10% and 20% lower than the average Annual O&M Cost for all Alternatives.					
5	Very Low Cost	Annual O&M Cost is more than 20% lower than the average Annual O&M Cost for all Alternatives.

Alternative:	S4-Surf Tnk	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)	4	4	4	4	4
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP					
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	S4-Surf Tnk	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.	5	5	4	4	4
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.					
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative:	S4-Surf Tnk	Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.					
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.	3	3	3	3	3
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative:	S4-Surf Tnk	Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.					
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.	2	2	2	2	2
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	S4-Surf Tnk	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.					
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.	1	1	1	1	1
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Objective Scoring

Alternative:	S4-Surf Tnk	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	S4-Surf Tnk	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	3	3	3	3	3
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.					

Alternative:	S4-Surf Tnk	Objective Scoring: Operating Complexity	Actual Scores				
Baseline Score	Metric	Example / Explanation	0 OF	1 OF	2 OF	4 OF	6 OF

Objective Scoring

Alternative:	T3-CSOTF	Objective Scoring: Present Worth	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Very High Cost	PW Cost is more than 40% higher than the cost of the least expensive control alternative.					
2	High Cost	PW Cost is between 30% and 40% more than the cost of the least expensive control alternative.					
3	Moderate Cost	PW Cost is between 20% and 30% more than the cost of the least expensive control alternative.	1	1	1	1	1
4	Low Cost	PW Cost is between 10% and 20% more than the cost of the least expensive control alternative.					
5	Very Low Cost	PW Cost is within 10% of the cost of the least expensive control alternative.					

Alternative:	T3-CSOTF	Objective Scoring: Pollution Reduction	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Minimal Treatment	Provides minimal pollution reduction, with little or no reduction of TSS, bacteria etc. Applicable for floatables control and large screenings (clogs, debris etc.)					
2	Less than Primary Treatment	Some TSS removal or varying effectiveness of sediment removal. Less than sufficient handling of bacteria and/or floatables. Example, screening and disinfection facilities. Net result of sewer separation due to large increases of storm water pollutant loads compared to reduction of CSO.					
3	Primary Treatment	Meets EPA minimum treatment guidelines for CSO. Includes primary clarification, floatables / debris control and disinfection, if required. For example, CSOTF, vortex separation or increased primary tankage at WWTP	3	3	3	3	3
4	Primary to Secondary Treatment	Ensures at least minimum treatment per EPA guidelines with up to full secondary treatment at times. For example, deep storage tunnels and storage tanks capture, store and convey flow to WWTP where it receives at least primary and up to secondary treatment, per available capacity. Also, high rate end-of-pipe treatment can show greater than primary treatment levels.					
5	Secondary Treatment	Provides full secondary treatment for CSO at all times. For example, regulator modifications that send all flows to the WWTP.					

Alternative:	T3-CSOTF	Objective Scoring: Impact on Habitat, Stream, River etc.	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Negative Impact	Extreme reduction of natural habitat and/or stream flooding / erosion. Example: constructing large treatment facility with centralized effluent in natural resource habitat with streams, wildlife, etc.					
2	Mod Negative Impact	Reduces habitat acreage and/or increases stream bank erosion. Example: moderate sized storage / treatment facility (CSOTF and HREOP) in natural setting or sewer separation resulting in increased storm water flow and bank erosion. Also, alternatives that could discharge harmful chemical by-products, i.e. THMs					
3	No Impact	Alternative does not change habitat characteristics or increase erosion. Volume / frequency remain the same. For example, end-of-pipe treatment facilities such as vortex separators and screening and disinfection facilities. Include facilities without disinfection by-products located away from stream and natural habitats.	2	2	2	2	2
4	Mod Positive Impact	Alternative is not located in habitat and significantly reduces volume / frequency of wet weather flow in stream. For example, storage tanks or deep tunnels located outside of habitat.					
5	Positive Impact	Essentially eliminates flows and is not located in habitat. For example, storage / conveyance system that eliminates CSO. Also, alternative that increases habitat, such as wetlands constructed for treatment.					

Alternative: T3-CSOTF		Objective Scoring: Constructability	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Community Disruption	Construction activities producing extreme, sustained, widespread disruption to community. Large scale surface impacts that interrupt traffic / access and cause extreme levels of noise, odor, vibration or other inconveniences. Example: complete open-cut sewer separation in large, heavily populated area. Site specific.	3	3	3	3	3
2	Significant Community Disruption	Construction activities producing significant intermittent or short duration disruptions that result in interruption to traffic / access and cause significant levels of noise, odor, vibration or other inconveniences. For example, storage tank installation that requires significant excavation in heavily populated area. Site specific.					
3	Moderate Community Disruption	Construction activities producing moderate levels of noise, odor, vibration or other inconveniences over sustained periods of time and over large areas. For example, several drop shafts with mining pipe and material delivery in heavily populated area. Site specific.					
4	Minimal Community Disruption	Construction activities producing minimal levels of noise, odor, vibration or other inconveniences over short periods of time in limited areas. For example, regulator modifications involving short periods of excavation. Site specific.					
5	No Community Disruption	Alternative construction produces no contributions to noise, odor, vibration or other inconveniences. For example, adjustment to fixed weir or automatic gate that does not require excavation.					

Alternative: T3-CSOTF		Objective Scoring: Permanent Land Requirement	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Extreme Land Requirement	Alternative has extreme permanent land requirement. For example, construction of a surface storage tank would require a large amount of land.	2	2	2	2	2
2	Large Land Requirement	Alternative has large permanent land requirement. For example, construction of a sub-surface storage tank could require a lesser amount of land if the surface of the tank could be used for parking or some other activity.					
3	Moderate Land Requirement	Moderate permanent land requirement. Example: construction of tunnel storage requires access shafts and other appurtenances that in total, would use less land than other storage methods.					
4	Small Land Requirement	Alternative has small permanent land requirement. For example, construction of screening and disinfection facilities only. Typically includes sewer separation due to construction within exising easements.					
5	No Land Requirement	Alternative has no permanent land requirement. For example, adjustment to fixed weir or automatic gate that does not require construction of additional facilities.					

Alternative:	T3-CSOTF	Objective Scoring: Public Acceptance	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Strong Public Opposition	Alternative would likely result in major opposition. For example, open storage tanks in residential areas. Post construction consideration. Assume some type of CSO control to be constructed.	3	3	3	3	3
3	No Public Reaction	Alternative has no significant history of opposition. For example, collection system optimization and most treatment alternatives. Post construction consideration. Assume some type of CSO control to be constructed.					
5	Strong Public Support	Alternative would be embraced by the public over others. May include site enhancement such as a park over a sub-surface tank. Post construction consideration. Assume some type of CSO control to be constructed.					

Alternative:	T3-CSOTF	Objective Scoring: Institutional Constraints	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Not in PWSA Jurisdiction	Not located within PWSA owned sewer system. Example: source controls and collection system controls in outlying municipalities.	5	5	5	5	5
3	Shared Jurisdiction	PWSA relief sewer that also requires local relief sewers or ALCOSAN WWTP expansion.					
5	PWSA Jurisdiction	Storage, treatment and collection systems within the PWSA owned sewer system; real-time controls, regulator modifications.					

Alternative:	T3-CSOTF	Objective Scoring: Siting Restrictions	Actual Scores				
Baseline Score	**Metric**	**Example / Explanation**	**0 OF**	**1 OF**	**2 OF**	**4 OF**	**6 OF**
1	Difficult Req's	Requires extensive approval process involving permitting / acceptance effort. Example: emerging technology (i.e. ballasted flocculation) with little installation history, may require pilot facilities and studies. Also, an alternative which requires a series of wetland, architectural and community permits. Example: traffic permitting for a large open-cut relief sewer in Oakland.	1	1	1	1	1
3	Moderate Req's	Normal review & approval process requiring minimal permits. Example: a tunnel located w/in existing right-of-ways, requiring plan review/ approval from <three authorities.					
5	No Req's	No permits required. Example: expanding existing PWSA facilities, such as raising weirs.

Region 1

PWSA CSO DISCHARGES
for "Typical Year - 2005"
Base Line Condition

Structure ID	ACSO 015PS32
Location Name	Warrington Avenue
Model ID	ADC 015PS32.1
Structure Type	Outfall
PWSA Sewershed	Bausman, Brook and Warrington
Stream of Discharge	Saw Mill Run
NPDES Permit Number	015PS32
Owner	ALCOSAN

Results Summary

Number of Events:	64
Peak Volume:	1,392,766 ft^3
	10.42 MG
Total Volume:	5,994,417 ft^3
	44.84 MG
Peak Rate:	114.19 cfs

Model Network	(07/19/07) Baseline Conditions#2 - FINAL!#1_1#2
Model Run	2005 Baseline Conditions w/Boundary (8.8.07)
