FirstEnergy (FE)

We reiterate our Buy rating on FE (following our recent upgrade here) with a quiet first quarter call approaching. We expect to see the Street focus on New Jersey given it's the only regulatory rate case the company is in right now (note we see a strength in the stay-out trend in other subs). Here, interim rates already took effect, but a ruling on its 10.8% ROE request is outstanding. We note the company is somewhat shielded from COVID impacts given it recently was awarded decoupling in Ohio making it a third less sensitive to load than before; also important to note is the low portion of revenue industrial sales contribute (7%) and that just 10% of industrial revenue is volumetric-based Further, FE recovers uncollectible expenses in OH / NJ through a rider and in PA / WV / MD through base rates. As for other updates, we continue to look for commentary around extension of the Electric Security Plan (ESP) given the commission removed the requirement for rate case filing in '24; note it still may be too early on this front, though. Finally, we continue to see the company steadily moving forward with its $3bn per year of capex trajectory. We forecast a 1Q20 estimate of $0.62/sh – just 1c lower than Consensus.

1Q20 EPS Walk

Below, we present our EPS forecast for 1Q20. We are roughly in line with Consensus (BofA $0.62/sh vs. Consensus of $0.63/sh). This stems from a $0.67/sh 1Q19.

- **Drivers**: Drivers for the quarter include -4c from mild weather in 1Q20 (not as impactful as peers noting decoupling in Ohio), +4c from Ohio decoupling true up, -6c from Ohio DMR stopping.
- **Other**: We expect flat distribution sales growth, and some impact from Maryland rates and other states' riders.
- **Wildcard**: We highlight COVID impacts are a wildcard, as well as the full extent of weather.

Items to track

COVID: Decoupling in Ohio makes less sensitive; PA is the real focus

The company's (new) decoupling in Ohio for 2020 makes FE 1/3rd less sensitive to loan than it was beforehand; decoupling or weather normalization is not present in other jurisdictions but FE does have energy efficiency riders (incl. demand response) except in WV. For a -1% decline in load, retail is impacted by -$0.02/sh, commercial by -$0.006/sh, and industrial by -$0.005/sh. Further, FE derives most (i.e. 65%) of its revenue from residential (meaning just 28% from commercial and 7% from industrial). Finally, for industrial customers, only 10% of revenue is volumetric-based while the rest is fixed. As for bad debt, FE recovers uncollectible expenses in OH / NJ through a rider and in PA / WV / MD through base rates. Finally, there's no risk around off-system sales / wholesale revenues given WV is only jurisdiction w/ generation and FE has an ENEC rider there (reconciled annually).

Pennsylvania is what to watch

While Pennsylvania has attracted limited attention this remains *our* focus at present among the numerous Covid exposures given its lack of any contemplated base rate cases and lack of decoupling. That said, margin remains biased towards resi mix, but still an underlying risk on earned ROE trends. We've already moderated our ROEs a bit in this state albeit still assume healthy returns overall in our last EPS est update.

New Jersey: The only rate case activity this year so far

FE filed a JCP&L transmission and distribution rate cases, with formula rates having gone into effect January 1st (subject to refund); a FERC decision on these transmission rates is anticipated in 1H20. The value of the formula rate would be for future years (i.e. there is a minimal anticipated impact on 2020). There is concern given the 10.8% filed but recent models indicating FERC base rates could fall within 8-10% depending on when data is selected.

Also important to note is that FE has a limited regulatory calendar compared to other utilities; this limits risk of downward shifts in authorized ROEs that other names are likely to face this year due to lower Treasuries (leading regulators to suspect lower costs of capital to build infrastructure). Limiting authorized ROE revision risk is increasingly a key theme in the sector after our latest conference and we perceive FirstEnergy as among the quietest large-cap companies from a regulatory perspective through its entire forecast period. While this limits upside capex and further positive revisions, we view its steady EPS growth as enabling its current outlook.

Ohio: Doubt legislation for '20 but perhaps in the future

While we doubt it's possible to pass in 2020 given COVID's situation, we expect the next legislative session to at least consider bills similar to proposed HB 247, 246, and 13. These could provide key investment opportunities (particularly for neighbor AEP) around industrial customers, broadband, and utility-regulator relations, although FE has not shared how exactly this could impact EPS growth for the company. These could also indicate a potential ESP (electric security plan) resolution that extends the current plan from '24 to '30.

Capex likely to be consistent

We continue to anticipate that FE will look to largely stay around the $3bn/ yr capex range in the years to come. We sense regulatory recovery and stable cash flows, balance sheet considerations drive this spend (and as such see less of a risk from Covid) beyond the operational challenges that may exist this year in executing.

Credit discussions with S&P

While FE has more holdco leverage than peers, we anticipate that FE may consider starting to discuss its credit metrics with rating agencies soon, with potential positive news to come from S&P on its FE outlook considering the agency lowered its FFO/debt

threshold to 12%. Note Moody's upgrade threshold is 14% and our reconciliation is mid-12%'s. Recall that issuing $2bn of equity equates to roughly only a 1% increase in FFO/debt, and that the company plans for incremental equity '22 (after which mgmt. has noted could be up to $600mn/yr). With its FES business disposition resolved, we perceive few angles to meaningfully shift its balance sheet outlook.

Estimates

We keep estimates largely the same given decoupling as well as our expectation that there is a more modest pace of consistent growth given ratebase is driven largely outside of any meaningful rate cases.

Pinnacle West (PNW)

We expect Q1 Operating EPS of $0.15/sh as compared to $0.16/sh Street estimates. Q1 is as seasonally slow quarter for PNW as its Arizona service territory generates most of its electric demand in the warmer months, particularly Q3. We expect that Covid reduced demand slightly at the end of the quarter as shut down orders spread in the state though the greater impact is likely to come in Q2 or later. They key lever for PNW to offset lost earnings from commercial and industrial customers is control of O&M - in fact mgmt's 2020 guidance already incorporates O&M savings into the forecast and it remains to be seen whether costs can be flexed even more to offset lost revenues. We flag additional possible risk of the rate case slipping further into 2021 as the commission's attention is likely occupied with service reliability issues during the health emergency. We further note that PNW had increased its bad debt expense target for 2020 given last year's disconnect moratorium, suggesting it may be better able to withstand an increase in delinquent accounts than peers – though note the likelihood of regulatory action to address increases in bad debt expense.

1Q20 Walk

We forecast 1Q20 adjusted EPS of $0.15 vs. $0.16 in 1Q19 and $0.16 consensus.

- **Key Drivers:** Weather will be a slight negative driver as 6 cents of benefit from Q1 2019 is normalized and an additional 4 cent uplift from slightly colder than normal conditions in the most recent quarter. We expect $0.03/sh in savings from ongoing O&M initiatives and highlight that the degree to which mgmt. can flex short term costs will drive the ability to offset lost sales (1 cent impact in Q1). We expect higher D&A driven by growing rate base to be an 11 cent drag.

- **Unknowns:** Weather is difficult to estimate given Q1 months have different weightings toward cooling and heating degree days, with January heating playing the biggest role.

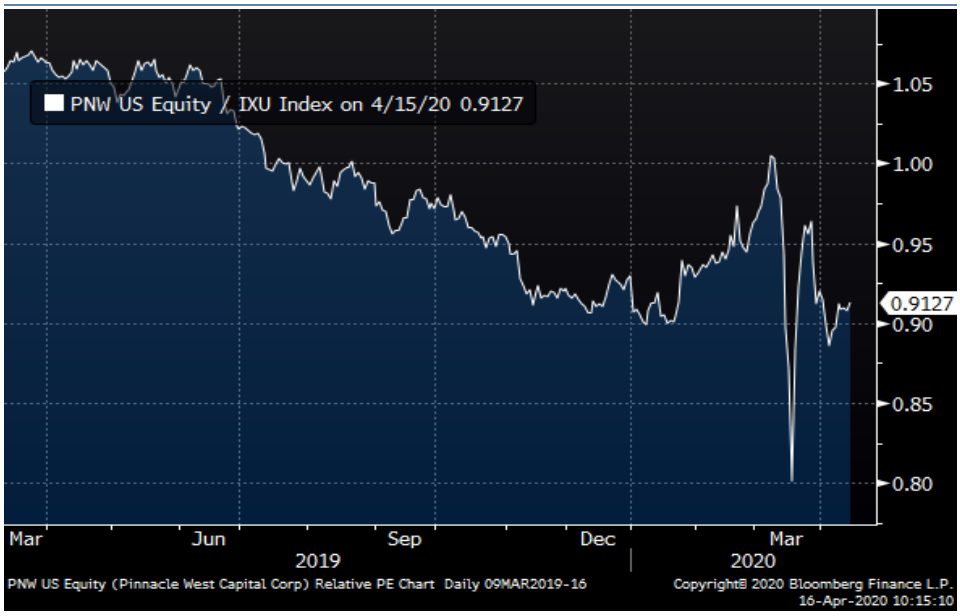
Stock trading dynamics

Shares of PNW have de-rated slightly following the late March Covid-driven market volatility, and now trade at a relative 2-year PE to the IXU Index near the lows achieved at the end of Q4. PNW's service territory remains largely weighted toward residential

customers at over 50% of total demand, which should insulate its revenues somewhat from an expected decline in sales from commercial and industrial (C&I) customers – note that PNW has single-digit exposure to industrials with the balance being commercial exposure. The primary Covid-related risk on the regulatory front is further delay of the ongoing Arizona Public Service (APS) rate case, with the Arizona Corporation Commission (ACC) already pushing the proposed time frame of the rate case into 2021 (75-day delay) with possibility of additional delays depending on the duration of Covid shut down orders. Electoral concerns make the situation potentially more opaque given potential for turnover at the commission following Nov elections.

Exhibit 4: PNW shares relative value vs. IXU



Source: Bloomberg

Quantifying the impact of Covid shutdowns

APS does not have a separate bad debt expense recovery mechanism in its rates with expense rolled into customer rates based on a historical test year. While APS does not have traditional decoupling, it utilizes the Lost Fixed Cost Recovery (LCFR) mechanism that recovers lost fixed costs related to EE and Distributed Generation. The company estimates a 16-20 cent EPS impact from a 1% reduction in load, with the effect weighted toward residential customers who make up 51% of total load.

PNW proactively released March demand numbers indicating that through the 12th of the month residential sales were flat y/y while commercial and industrial (C&I) grew by 2-3%. For the remainder of the month as the Covid situation unfolded residential sales increased 7% y/y while C&I declined by 12-13%. PNW's annualized EPS sensitivities to a 1% move in demand for resi/comm/industrial are $0.09/$0.07/$0.01. Given PNW's disclosures, we estimate that Q1 EPS impact from Covid-related demand shifts was -$0.01, as an increase in higher-margin residential load mostly offset the larger declines in C&I.

Table 52: March EPS impact – resi mutes the C&I impacts to a large extent– are they the first of many to indicate this substantial offset in sales trends?

	EPS impact per 1% chg in annual sales	% of total load	Mar 1-12 change y/y	Mar 1-12 impact	Mar 13-31 change y/y	Mar 13-31 impact	March cumulative
Residential	0.09	51%	0%	-	7%	0.031	0.031
Commercial	0.07	38%	2-3%	0.006	(12)-(13)%	(0.043)	(0.037)
Industrial	0.01	11%	2-3%	0.001	(12)-(13)%	(0.006)	(0.005)
Total	0.16-0.20	100%	2-3%	0.007	(5)-(6)%	(0.018)	(0.012)

Source: BofA Global Research Estimates, company report

We acknowledge the limits of this disclosure given that it is only for the month of March with only half the month impacted by Covid, while demand in Jan-Feb was likely unaffected by the virus. PNW additionally included a disclosure of a potential $0.06 EPS impact if residential demand were to grow by 6% and commercial and industrial were to each decline by 10% - we note that since these are y/y comparisons they take into account the growth in residential load linked to air conditioning in the warmer Q2 months. PNW additionally disclosed that its pension plan hedges 100% of its interest rate exposure via Treasury futures, suggesting its plan's funding gap has declined YTD by less than the 11% estimated by our mtm analysis (and likely rebounded since our report with the broader market).

Rate case developments and top issues

The ACC issued a procedural order on March 18 that pushed back the timeframe of the pending rate case. By pushing out key milestones including staff and intervener testimony (originally scheduled for May, now due in August) the commission essentially assured that the case will not reach a resolution in 2020. While this assures that at a minimum commission Chair Bob Burns will not rule on the case as he is termed out at the end of the year, there remains uncertainty about the makeup of the commission in 2021 given 3 Republican-held seats are up for election, and the potential impact this would have on the outcome of the case. Below we present the updated rate case timeline while noting that the updated timeline was issued in mid-March as the Covid situation was still unfolding, and there remains the possibility of further delays.

Table 53: APS rate case amended timeline

Rate cases unlikely to be settled, potentially decided by different commissions

Both FTS and PNW have electric rate cases pending in front of the ACC. Stakeholders see potential for settlement as unlikely in either rate case given prior ACC utility staff statements, despite the heavy workload placed on staff of late with multiple rate cases pending. Given timing of each case, with FTS having been filed several months prior to PNW, it is increasingly likely that the commission that decides the FTS case will be different by at least one member from the one that decides PNW - recall that 3 of 5 seats are up for election this year including the one held by Chair Burns who is termed out. Bottom line: while Covid-related shutdowns are placing additional strain on an already-overburdened utility staff at the commission, we see a fully litigated path as the most likely resolution for APS's case.

Four Corners scrubbers remain key issue

The scrubbers installed at Four Corners are a meaningful portion of the total revenue ask of $73m - relative to the $184m total revenue increase requested. The recovery of the scrubbers was included in the last PNW rate case and the utility received a favorable administrative law judge (ALJ) recommendation to receive a step-up in rates mid-year in 2018. With the step-up having not been brought forward by the ACC the item now represents a significant discrete ask as part of the current case. Other notable items are

renewable generation / rooftop solar as well as rate making issues including a formula rate proposal and a pilot subscription rate program.

Renewables in focus with new resource filing in June

PNW capex outlook relies heavily on investment in renewable generation, accelerating spend in the near term such that the plan sees rate base growing by ~8% through 2022 vs. a long-term goal of 6-7%. Recall the recent announcement of a 2050 decarbonization goal with intermediate 2030 goal of 65% clean energy by 2030 with 45% renewables. The clean gen plan calls for the addition of 850 MW of battery storage as well as 100 MW of solar generation by 2025 - note storage technology has been developing rapidly with several qualified developers capable of delivering utility-scale solutions today. The storage plan will include a mix of standalone facilities as well as batteries added to existing PNW solar assets. PNW intends to file its new Integrated Resource Plan (IRP) in June, its first since the announcement of the ambitious new green generation goals. Given the focus around its decarbonization agenda we would expect the IRP to include an updated timeline for retiring of coal plants in line with the long-term plans laid out earlier in Q1 along with further renewable generation options.

The APS' recent approval of the 500-kV Ten West Link transmission project from California to APS' Delaney Substation located 60 miles outside of Phoenix should also boost the opportunity for renewable development and procurement. As the proposed line will cross from Arizona into California, it will allow APS to procure excess renewable energy from California during peak generation times. Further, the project has already reported 5,000 MW of interconnection requests from Arizona-based renewable developers which could further boost renewable development. Recall that under a recent ACC ruling, APS and other state utilities are required to sign contracts of 18 years or longer with operators of Qualified Facilities (QFs) under the Public Utility Regulatory Policies Act (PURPA) – APS had initially proposed a 2 year minimum contract tenor but the commission increased it to 18 in its final decision last December.

Lost fixed cost rate finalized

APS received a decision in its most recent Lost Fixed Cost Recovery (LCFR) mechanism filing related to lost energy sales revenues from customers related to energy efficiency initiatives, principally those utilizing distributed generation. The new rate will be $0.372/kW per month for customers on a demand rate and $0.00125/kWh per month for customers on an energy-only rate, with an estimated revenue recovery of $26.6m in 2020, down from $36.2m in 2019. Recall the LCFR is an annual filing under which APS seeks to recover fixed costs related to revenues lost by customers who are electing for distributed generation.

EPS estimates

We tweak our 2020 estimates lower to account for the likelihood of lost revenues due to Covid shutdown orders in place. Our new consolidated estimate of $4.78 is toward the low end of mgmt.'t guidance range and reflects essentially flat EPS growth y/y. We are slightly below Street consensus for 2020 on our updated estimates though we perceive downside to consensus forecasts as Covid-related lost revenues are factored in. As the ACC has not yet flagged a *further* deterioration in the rate case time frame, we do not adjust our estimates for 2021+ which currently assume the existing rate case schedule with a fully litigated resolution in mid-Q1.

Table 54: PNW estimates

Valuation: PO to $84, maintain Neutral

We maintain our Neutral rating on PNW as we see the current share price as adequately reflecting near-term risks around rate case outcomes, including the uncertain rate case recovery of SCR step up associated with Four Corners along with recovery related to Ocotillo. We reduce the valuation discount applied to PNW's peer group electric utility multiple of 17.6x to -2.5x from -1.5x in order to more adequately reflect ongoing rate case risk – with an uncertain timeline potentially pushing the implementation of new rates further out and lingering uncertainty around the outcome of commission elections in the fall. We reiterate our Neutral rating.

PPL Corporation (PPL)

We remain Neutral rated on shares of PPL into the quarter. While shares have meaningfully underperformed this year, FX remains volatile with current forwards already at the low end of mgmt.'s (recently lowered) assumptions and we see load degradation as particularly concerning for the company. While the UK is decoupled, volumes are only trued up on a two year basis while US utilities are fully exposed outside of some fixed billing components (sensitivities suggest a 1% change in load is a penny impact in each jurisdiction). *We remain focused on the KY footprint as to sales impacts, particularly as a rate case this year seems unlikely given the latest ROE backdrop. Bottom line, we ultimately see risk/reward as balanced at the current valuation.*

PPL 1Q20 Earnings Walk

We forecast 1Q20 adjusted EPS of $0.73 compared to $0.70 1Q19 & $0.72 consensus.

- **Key Drivers:** We expect gross margin growth across the portfolio and currency tailwinds y/y given hedging position in the UK partially offset by dilution and higher expenses.

Table 56: 1Q20 Walk

PPL 1Q20 Earnings Walk	EPS
1Q19 EPS	$0.70
WPD	$0.02
Kentucky	$0.02
PPL PA	$0.01
Corp & Other	($0.02)

2020 Consensus	$2.47
2020 Guidance	$2.40-2.60
1Q19 Shares outstanding	730
1Q20 Shares outstanding	756

Source: BofA Global Research, Bloomberg

Contemplating COVID Implications

We see PPL as particularly exposed to load degradation amid the ongoing COVID pandemic. While the UK is decoupled, volumes are only trued-up on a two-year basis. While the US has some demand components, we note no decoupling in PA or KY and remain focused on the KY footprint specifically, particularly as any near term rate relief seems less likely on the margin given the latest rate paradigm. For domestic utilities, a 1% change in load is a penny impact in each jurisdiction and the company has some off system sales exposure but no bad debt expense trackers.

FX Outlook: Forwards Imply Low End of Revised Guide

Mgmt lowered expectations with its latest update given current FX rates and forecasts. While the company is 90% hedged for 2020 at an average rate of $1.48, it is only 5% hedged in 2021 at $1.33 and completely exposed in outer years. We note that on an open basis, every 1c in the exchange rate equates to about $0.01/sh of EPS for the company.

Chart 8: Budgeted vs. FX Forwards

WPD RIIO-ED2 Mini Model: OFGEM Prospects

The exhibit below reflects our latest UK mini model for the WPD (Western Power Distribution) business. Recall that Ofgem formally kicked off its RIIO-ED2 process in August 2019 with the publishing of an open letter consultation. A framework was laid out in Mid-December setting the blueprint, confirming the expectation that most design features would follow the earlier RIIO-2 reviews for Transmission and Gas Distribution (being finalised in 2020): a 5 year duration, retaining debt cost indexation, strengthening output incentives, and a move from RPI to CPI inflation indexation (which could ultimately help cash flows). Additional specifics and final decisions for ED (Electric Distribution) will start to shake out over the next couple of years (RIIO-ED1 price control is set to end at the end of March '23).

We therefore expect investors to continue to look for potential read-throughs as Ofgem works through the gas/transmission specific methodology – albeit likely with some delays given the on-going crisis. Developments thus far on the ED2 process have principally reflected those of its earlier counterpart including lower base returns and potentially a similar level to those proposed for transmission and gas. We continue to assume a -3% drop in ROEs under new rates, which we view as a sober set of assumptions *(anywhere in the low 5% to even 7% range on nominal basis appears reasonable in our view given lack of clarity on process).*

We ultimately expect nuances between ED2 and the gas/transmission framework given different risk profiles. However, we see a clear desire from Ofgem to maintain incentives and give the best performing companies an ability to overearn, particularly as distribution networks will be a key enabler of the net-zero carbon target. Any developments out of the COVID crisis will also be critical in terms of nuances around their thought process for UK utilities longer term.

Valuation:

The table below reflects our latest valuation. As shown, we apply the latest peer multiple of 17.6x (vs. 20.6x previously) to our utility estimates for both PPL Electric and PPL Kentucky. We use a 30% premium to RAV for the UK business. Our price objective ultimately shifts to $29. We remain Neutral rated on shares seeing risk/reward as balanced.

WEC Energy (WEC)

We expect WEC to hit the low end of its guidance range for the quarter despite the weather headwind given ability to flex O&M down as we expect demand impact from Covid to be limited in Q1 and largely weighted toward Q2. WEC is able to utilize its fuel recovery mechanism as a means of partially offsetting lower demand which had been forecast by the company to decline by ~1% in 2020. Accordingly, we maintain our Underperform rating.

WEC 1Q20 Earnings Walk

We forecast 1Q20 adjusted EPS of $1.32 compared to 1Q19 results of $1.33, consensus estimates of $1.33, and guidance of $1.32-1.34.

- **Key Drivers:** Positive YoY drivers include infrastructure investments from the Upstream, Bishop Hill, and Coyote Ridge wind farms (+$0.01), sales growth at the gas utility (+$0.01), reduced O&M expenses (+$0.01). Offsetting results includes the impact of weather which is estimated at 7 cents including a 2 cent drag from normalizing the impact of 1Q19 and incorporating the impact of 2020 milder weather which is estimated at 12% warmer than normal and 16% warmer than 2019.

- **Unknowns**: While Heating Degree Days (HDDs) were 16% above the prior year's level in WI, the exact magnitude of the benefit is difficult to estimate. Recall, WEC is decoupled in IL and at MN gas. Another unknown is the extent to which load growth was affected by Covid-related slowdowns as shut-in orders were generally implemented at the end of the quarter.

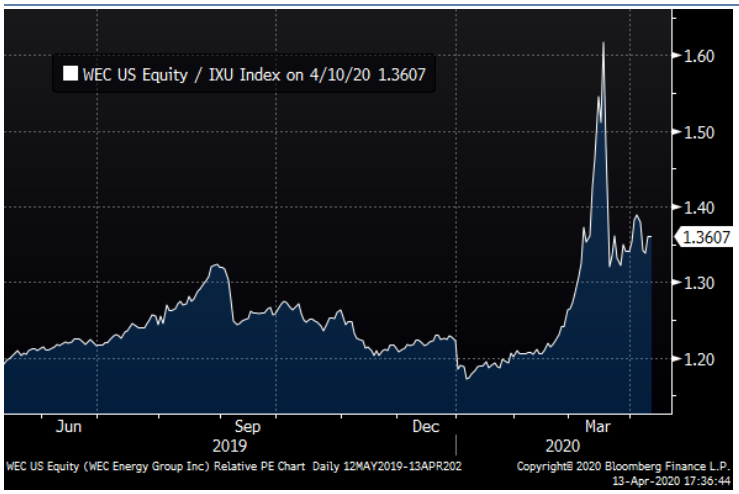
Stock trading implications

Shares of WEC have performed well vs. the peer group of late reflecting the company's defensive nature amid significant market volatility and investor concerns about the effects on demand from Covid-related shut downs. After re-rating for much of the month of March, WEC trades at roughly 22x forward earnings ('22), a meaningful premium vs. our electric utility peer multiple of ~17x. While shares have consistently traded at a premium to the peer group since 2019, WEC now trades at over 1.3x

premium to the IXU on a 2 year forward PE relative basis, the highest such level in the past 12 months with the exception of the extreme market volatility seen in March. Accordingly we remain Underperform on shares of WEC as the shares remain priced richly relative to the peer group.

Exhibit 5: WEC relative PE chart



Source: Bloomberg

Partial decoupling and a debt tracker to mitigate impact

Most of WEC's jurisdictions do not have a bad debt rider with the exception of IL Gas. Additionally Wisconsin Gas and Wisconsin Electric have bad debt escrow accounting mechanisms. WEC's Illinois Gas and Minnesota Gas businesses have decoupling while the other jurisdictions of Michigan and Wisconsin do not - at both the electric and gas utilities. WEC's electric utilities do not have material exposure to losses from wholesale volumes and accordingly off-system sales are not expected to be a significant source of downside risk. In terms of margin breakdown, 62% of total margin comes from the Electric business with the balance coming from Gas. Residential is relatively heavily weighted among electric demand at 47%, with industrial accounting for 17% and commercial for the balance. 2020 EPS is expected to be impacted by approximately 2-3 cents from a 1% decline in demand and by 0.5 cents from a 1% decline in industrial sales, according to the company. We also highlight that pension funding is less of an issue for WEC than for many utility peers, as the company was fully funded in its *qualified* defined benefit plans at the end of 2019 and over 90% funded on a GAAP basis across all of its pension plans.

Commission latest: new appointee, addressing Covid

Back in March, Wisconsin Governor Tony Evers appointed Tyler Huebner to fill the seat vacated by the retirement of Mike Huebsch on the three-person Public Service Commission of Wisconsin (PSCW). Huebner has been the Executive Director of RENEW Wisconsin since 2013, where he led the organization's efforts to expand and promote the use of renewable energy in the state. He will serve out the remainder of Huebsch's term that expires on Mar 1, 2021. Huebner joins PSCW chair Rebecca Valcq as an appointee of Democrat Gov. Evers, while the third commissioner (Ellen Nowak) was appointed by Republican Scott Walker. We expect that the PSCW will continue to (and perhaps accelerate) its support for renewables investment in the state following this appointment. We expect incumbent utilities WEC and LNT to benefit from increased support for renewables and potentially an increased push for accelerated coal retirements - WEC's Columbia, South Oak Creek, and Weston units being potential candidates. As with other jurisdictions, the issue of undepreciated plant remains a hurdle for possible accelerated retirement, particularly given recent investment in scrubber technology at Columbia.

The PSCW was one of the first utility commissions in the US to act in response to Covid shut downs, suspending late fees and power disconnections for affected customers across the state on Mar 24 and opening a docket to evaluate recovery by utilities of extraordinary expenses incurred in an effort to keep power on for all customers during the declared health emergency. The PSC is working with utilities to identify specific expenses and foregone revenues that have been and are expected to be incurred due to the Covid emergency and is evaluating methods for recovery. Though it remains early days we see this as a constructive and proactive move by the PSC which should at least partially offset WEC's lack of bad debt trackers in Wisconsin.

EPS estimates

We update our 2020 EPS estimate for WEC to reflect headwinds from both lost demand resulting from Covid as well as mild Q1 weather, though the latter point may abate later in the year particularly if warm weather persists into the cooling season and residential load may be boosted by extended stay-in orders. Accordingly we reduce our 2020 estimate to $3.72 from $3.75, toward the low end of mgmt.'s $3.71-3.75 guidance range. Estimates are slightly below Street consensus in 2020-21 and a penny ahead in 2022. The degree to which mgmt. can flex O&M spending in order to offset the effects of Covid related shutdowns remains a key question as stay at home orders persist through Q2 and potentially longer.

Table 61: WEC estimates

Valuation

We move our PO to $85 after refreshing for updated peer group electric (17.6x) and gas (17.6x) multiples and continue to stress very limited upside with shares trading above our valuation. We update our relative peer group premium for the Wisconsin electric utilities to 3.0x from 2.0x given positive regulatory backdrop in the state including prospects for bad debt recovery and decoupling. We also reduce the premium applied to We Power (PTF) from 2.0x to 1.0x. Bottom line, WEC shares continue to trade at a premium valuation and despite accounting for Wisconsin's positive regulatory backdrop in our SOTP the shares remain expensive, and accordingly we maintain our Underperform rating on WEC.

Table 62: WEC SOTP

Xcel Energy (XEL)

After resolving much of the regulatory calendar from filing rate cases in 2019 (even recently announcing a settlement w/o details in TX), XEL is still working to file in 2020 in many states and exploring ability to push off some of the rate cases. We see two states of focus here: MN (using 2015 legislation that allows XEL to recover advanced grid spend through the transmission rider) and CO (depending on in the advanced grid initiative can be recovered via rider). Both depend on regulators, and we saw value in XEL being able to stay out of MN's last year. XEL isn't as exposed to COVID demand impacts as other names given its decoupling mechanisms in CO & MN (accounts for 45% of retail electric sales) and given its impact in prior events (i.e. '08 crisis and low oil prices of '16). Finally, we note our ests reflect XEL now selling Mankato to keep the utility fully regulated (we see viewed positively); while we had factored in 4c/yr for the non-reg asset before the sale, XEL was only expecting 1-2c/yr in early years. With our expectation of LT earnings squarely in the 5-7% trajectory, good FFO/debt metrics, and a consistent earnings growth story, we expect the name to be strong during recovery. Finally, given orig O&M '20 guidance, we expect there's room for savings that counterbalance some impacts from COVID & mild winter overall. As for 1Q, we forecast $0.53/sh vs. $0.62/sh likely un-updated Consensus. Reiterate Neutral.

1Q20 Walk

We expect a $0.53/sh 1Q20 estimate, versus a Consensus of $0.62/sh and a prior year's 1Q19 est of $0.61/sh. We expect Consensus has not been adjusted for weak weather and COVID impacts on demand.

- **Drivers**: With a number of rate cases filed in 2019, XEL has new rates starting in 2020 for MN, CO, NM, and TX (although some taking effect later this year). Impacting 1Q include Minnesota's interim sales true up and nuclear decommissioning (Jan 1, 2020), Colorado's electric rates (Feb 25, 2020), and last year's $4.5mn SPS incremental rate increase (March 11, 2019); these contribute to +5c for the walk. The capital rider revenue and AFUDC contribute another +3c.

- **Other**: We evenly distribute XEL's annual '20 guide between quarters for interest expense, O&M, and property taxes (-5c). We only include -5c of D&A as this will likely be a little more back-end loaded. Finally, we expect -2c of demand impact from COVID since most businesses were shut down for the last 2 weeks in March and some folks were working from home for the last 3 weeks.

- **Wildcard**: We expect XEL to be negatively impacted by the wild winter, likely a few pennies worth (1-3c); note 45% of the electric sales (in CO & MN) are decoupled.

Source: BofA Global Research estimates, company report, Bloomberg

Key 1Q20 Topics

- **O&M**: XEL's original 2020 guidance includes a 1-2% O&M increase; we could see the company look to bend the curve if it needs from COVID impacts. We see this as a key differentiating strength compared to peers.

- **2019 Rate cases**: XEL is resolving many of its rate cases, having a settlement in principal for its TX case (we expect somewhat slowed down from working remote); we expect cap structure avoids concerns peers recently saw since XEL is integrated in TX and interveners all proposed 51% layers or higher. CO gas just received a schedule from an administrative law judge (would allow rates to be implemented in Nov) and NM is waiting for the commission to decide on the settlement.

- **2020 Rate cases**: As for next cases to be filed, we look for commentary on whether XEL can pursue transmission trackers to recovery other expenses in MN (given 2015 legislation allowed XEL to recover advanced grid spend) and CO (perhaps recovering the advanced grid initiative through a rider). We see rate case stayouts as a key strategy in avoiding ROE risk, and have confidence in XEL's ability. If filed, timelines would be later this summer for CO and in Nov for MN.

- **Mankato sold**: After purchasing Mankato as a non-regulated instead of regulated (which was accretive 3-4c vs 1-2c in the near-term, respectively), mgmt. absorbed feedback on being fully regulated and viewed a purchase as resulting in a better valuation for the company. We removed from our estimates any more PPA buyouts we thus expect to be regulated or not pursued.

- **COVID**: XEL has decoupling mechanisms in both Minnesota (fully) and Colorado (partially) representing 45% of retail electric sales: In MN, sales are trued-up for all electric classes, and in CO, decoupling is for resi and SC&I non-demand classes. XEL doesn't have bad debt recovery but we would expect the company to request deferred accounting if expenses significantly increase. As for looking at historic responses, we note that in 2016 when oil prices were in the $30 range, SPS YTD 2016 sales through 2Q16 declined by 1.1% (resi declined 3.2% and C&I only 0.6%). Meanwhile during the '08/09 crisis, XEL saw weather-adjusted sales down 1.8%. Finally in terms of sensitivity, we highlight the company anticipates a 100bps change in electric equates to a $25mn pre-tax impact (if the full change in sales was for C&I, the impact would be less but it's not separately broken out); we calculate this to be a 3-4c impact using a 21% tax rate.

Estimates

Our estimates remove the non-regulatory Mankato asset (given its sale in '20) and reflect our expectation that lower demand from COVID, mild winter, and oil price are somewhat balanced by more cost cutting. We await O&M announcements on the call.

Price objective basis & risk

Alliant Energy Corporation (LNT)

Our $56 PO is based on a sum of the parts analysis employing relative premium and discounts to the large cap regulated peer multiple of 17.6x 2022E P/E. While our PO is on a 1 year basis we note the 2022 P/E multiple reflects a discount back to 2019. We note that electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector.

We apply a 2.0x P/E premium on IPL as we see the ratecase overhang being resolved. We apply a 3.0x P/E premium on Eastern Wisconsin Electric Company reflecting 1) low risk investment nature of the state, 2) above average ROEs, 3) higher than average growth runway for investments, and 4) bad debt deferral. At ATC, we reflect a 2.0 x P/E premium on LNT's 16% share in the transmission company. Growth expectations for this segment are high, paired with above average ROEs that we believe face less downward pressure vs. regulated state distribution ROEs. We apply an in line multiple at the parent to account for the blend of numerous businesses some which benefit from long term stable PPAs via intercompany generation.

Risks to our price objective are: 1) adverse rate case outcomes, 2) further equity dilution beyond our estimates, 3) interest rate risk, 4) natural disasters, and 5) lower allowed ROE's

Ameren Corporation (AEE)

Our $85 price objective is predicated on a P/E based sum of the parts, valuing each business subsidiary relative to the 2022E ratebase weighted peer multiple of 17.6x for electric. We apply a 3.0x premium to peers at AEE Missouri to account for the improving

prospects of capital spend, supplemented by a regulatory jurisdiction becoming more favorable. We apply a 3.0x premium to peers at AEE Illinois to account for decoupling on the distribution business which aids in earnings predictability. The overall business is expected to grow at a more meaningful clip than that of peers - we see a 10% EPS CAGR at IL 2020-2024. At ATXI, we apply a 0x premium to peers to reflect the latest potential step down in FERC ROEs. At the Parent, we assume an in line multiple given the healthy debt metrics with FFO/Debt at 17%+. Electric peer P/E multiple is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector.

The upside (downside) risks to our price objective are the utilities earning their allowed returns or better (worse), a significant increase (decrease) in 30-year U.S. Treasury bond yields, and positive (adverse) regulatory outcomes that could impact mgmt's ability to earn its allowed return

American Electric Power (AEP)
Our price objective of $93 is based on SOTP analysis. We ascribe a peer forward P/E multiple (17.6x) with a 0x premium for its transmission-only Utilities segments as well as Kentucky Power, a 1x premium for its T&D utilities, and a 0x premium for regulated utilities. We ascribe limited value to the nascent renewables business & SRE Renewables deal ($0.03/sh), based on a in-line peer P/E multiple given uncertainty. We note that electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector. We assume 100% likelihood of the North Central wind project and assign it a 0x premium under the reg utes as well.

Downside risks to our price objective are 1) regulatory outcomes are less favorable than expected, which could result in reduced ROE, 2) large capital intensive are subject to delays or cost overruns, which can change the return profile, 3) natural disasters or catastrophic events can affect system reliability and are subject to regulatory cost recovery risk, 4) utilities are subject to interest rate risk to fund their business, which affects cost of capital, 5) commodity risk affects the generation business margins and indirectly affects the regulated business as a pass through cost, 6) consumer advocates are focused on bill inflation, which can affect regulatory outcomes, 7) non-regulated businesses are inherently more risky and subject to execution risk and commodity variation.

American Water Works (AWK)
Our PO for American Water Works is $133. We apply the sector average 26.3x P/E multiple to American Waters 2022E earnings based on the water peer multiple and a 8.3% group EPS CAGR for '18-'22E. We think this multiple is justified as in our view AWK largely drives the peer multiple as the largest publicly traded water utility. We ascribe a 3x premium for NJ, PA, and IL, and a -3x discount to the military biz. Meanwhile, we ascribe a 12x multiple to the non-regulated Retail biz. Also a -1x P/E for Cali utility. no prem/discount for 'Other' segment with smaller state exposures.

Risks to the downside are increase in market interest rates, potential impact of tax reform on utilities, operational errors, changes in valuation levels for water utilities. Risks to the upside are accelerating muni acquisitions, multiple expansion, and constructive legislation in regulatory jurisdictions.

Consolidated Edison (ED)
Our $93 PO is based on a sum-of-the-parts analysis applying premiums and discounts to the regulated group multiples (17.6x/17.6x for electric/gas respectively) with a 1.0x premium to reflect defensive nature of the stock. We note that both electric and gas peer P/E multiples are grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We applied inline peer regulated multiple at CECONY despite its rate certainty for conservatism as our higher capex expectations are reflected in our EPS outlook. We apply a discounted PE for infrastructure projects given the lack

of clarity around the capital structure. We further apply an EV/EBITDA approach on 2022E EBITDA to the CEB business using a 10.0x multiple for both the legacy portfolio and the renewables portfolio seeing it as having higher quality returns.

Downside risks: ED, like all utility stocks, is also sensitive to changes in the market level of interest rates. Utilities historically underperform if bond yields rise, and outperform when they fall. Further downside risks are the inability to recontract storage, adverse regulatory outcomes, a deteriorating regulatory environment, or unforeseen disasters such as the Harlem gas explosion, the SRE transaction not being completed. Customer inflation is also a downside risk. PCG related counterparty exposure is among the nearest exposures to watch.

DTE Energy (DTE)

We value DTE Energy at $112 using a SOTP approach.
We value the utility segment on a 2022E forward P/E multiple basis and the non-utility seg. on a 2022E forward EV/EBITDA mult. basis. For the utility segment we apply a 1x premium to our both reg. electric and gas utility peer mult. of 17.6x. Both electric and gas peer P/E mult. are grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We subtract out Corp & Other expense excl. interest rate. For GSP we use a midstream peer group multiple of 9x, with a -0.5x discount for Momentum. P&I, we apply a 8x EV/EBITDA mult, despite the lower equality of these earnings and opaque disclosures, as mgmt has been able to execute on new project origination. We value the reduced emissions fuel (REF) tax credits separately using a DCF methodology at 6%
discount rate.
Upside risks to our PO are capex expansions, higher authorized ROEs, and strong performance in the ET segment. Downside risks are interest rate hikes, execution risk on organic growth initiatives at the nonregulated business, and less favorable regulatory environment.

Duke Energy (DUK)

Our $93 PO is derived from a sum-of-the-parts valuation. We value the Electric and Gas utilities using peer 2022E P/E multiples. We apply a 1.0x multiple premium to Duke's operations in Florida to reflect more favorable regulatory environments. We apply an in-line multiple to the Carolinas given risk ahead. We value the other regulated electric utilities and the gas utilities at peer group multiples of 17.9x 2022E P/E, respectively. Both electric and gas peer P/E multiples are grossed up by 5% for the groups CAGR to reflect capital appreciation across the sector. The commercial midstream, and transmission are valued on a 2022E EV/EBITDA basis. We use a 11.0x multiple for midstream and transmission segment, although we assume a 50% weighting for ACP given risks to completion. We add the net present value of renewable segment using an 8% discount rate. We subtract out the impact of commercial debt, and add back for the renewable debt.

Upside risks: constructive rate case results, higher capital expenditure additions vs our assumptions, ACP ahead of schedule, lower interest rates. Downside risks: poor rate case results, operating errors, and negative changes in the regulatory environment, ACP delays. Macro risks: Increases in interest rates and decreases in equity market valuations.

Edison International (EIX)

Our $69 PO is based on SOTP, applying a 3x disc to the FERC and CPUC jurisdictional subsidiaries, and the parent/other segment 17.6x on 2022E (grossed up by 5% to reflect capital appreciation across the sector). The disc reflects CA ongoing wildfire risk despite the improved construct through AB1054. We apply 10x 2022E P/E to the Edison Energy segment to reflect uncertainty in the nascent biz. We net out ongoing contribution to the fund on an NPV basis. Lastly, we assume equity financing to fund '17/18 wildfire claims.

Downside risks: 1) Regulatory outcomes less favorable than expected. 2) Natural disasters or catastrophic events can affect system reliability and are subject to regulatory cost recovery risk. 3) Interest rate risk. 4) Non-reg businesses are inherently more risky and subject to both execution risk and commodity variation. 5) CA has specific risks given the differentiated regulatory regime. 6) CA wildfires.
Upside risks: rate case outcome above what's embedded in companies' guidance and BofA estimates, lower interest rates, more constructive regulatory / legislative outcomes to address wildfire risk

Entergy (ETR)
Our $122 PO is SOTP based. We assign P/E multiples (peer multiple of 17.6x) for 2022E on most segments, in line with peer multiples (and grossed up by 5% to reflect capital appreciation across the group) due to similar growth, and strip out 50% of the holdco senior notes. The Merchant business is also added as a DCF (10% discount rate, no terminal value). Both electric peer P/E multiple is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector.

Downside risks: 1) Regulatory outcomes or earned ROE's could worsen, 2) Rate making mechanisms could change in the future, 3) Failure to get trackers or ROE adjustment mechanisms could hurt realized ROE, 4) weather can affect operations and earnings, 5) Interest rate risk affects cost of capital, 6) Consumer advocates or utility staff may focus more on issues that challenge the company ROE, 7) ETR has had safety issues in the past, which have affected regulatory relationships and company liabilities, 8) Exit from the competitive business could present unforeseen challenges.

Essential Utilities (WTRG)
Our price objective is $47 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. We apply a 2.0x premium to Peoples Gas given the organic growth opportunities.We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

Risks to the upside include upward revisions to street estimates and further accretion from implementation of the Repairs Tax Benefit.

Evergy, Inc (EVRG)
Our $69 price objective for EVRG shares is based on sum of the parts valuation, applying an in-line utility peer 2022E P/E of 17.6x. Electric peer P/E multiple is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We further apply a +2.0x turn discount across all jurisdictions based on our perception of improving regulatory relationships and possibility of further stakeholder engagement.

Downside risks to our price objective are adverse regulatory outcomes in rate cases, higher interest rate environments, adverse and unexpected risks associated with operating a nuclear facility, the possibility that the strategic review committee does not result in a transaction recommendation and that a modified standalone plan disappoints in rate base and earnings growth when presented later in 2020.

Upside risks to our price objective are favorable regulatory outcomes in rate cases, lower interest rate environments, higher than anticipated O&M benefits and merger synergies, ability to recover capital tied to retired coal plant.

Eversource Energy (ES)
Our sum of the parts based price objective of $83 uses P/E multiples on 2022E earnings. For electric utilities, we attribute a 2x premium NSTAR and 1x for CL&P, reflecting future potential positive revisions to capex and earnings, while maintaining an in line multiple of 17.6x P/E for PSNH. For gas, we apply an in-line to the peer 17.6x multiple, given recently compressed spread relative to electric peers. Both electric and gas peer

P/E multiples are grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We value Aquarion at a 22.6x multiple to reflect the premium water utilities are currently trading at. We reflect ES' 50% ownership in Revolution and South Fork offshore wind sites on NPV basis. We take out 50% of parent debt, and 50% of interest to accurately reflect parent leverage.

Upside risks to our price objective are additional capex announcements on the T&D side, as well as success in offshore wind RFPs or other larger projects such as Northern Pass.

Downside risks are reduction in authorized ROEs, inability to meet earned ROE expectations, as well as failure to receive permitting on incremental capex opportunities

FirstEnergy (FE)
Our PO of $47 is based on a SOTP: Multiples are driven by relative P/E premiums/discounts to the 2022 regulated peer multiple of 18.5x. Electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector. For NJ, we apply an in line multiple to account for slightly higher ROEs vs. the national average and a generally constructive commission. In PA, we apply a -1x disc to reflect O&G royalties (albeit limited). In OH, we apply a -4x P/E discount multiple and a -2x discount to others. We argue this accounts for overearning risk. Finally, we apply a 0x P/E premium to peers 2022E multiple to the Transmission business given some limited ability to invest and FERC ROE difficulties. We removed impact of DMR payments. We subtract out the holding co debt given the high parent lev. We net out potential liabilities from a potential FES bankruptcy by assuming all known 'extra' potential liabilities.

Downside risks: 1) Reg outcomes may improve/deteriorate, 2) legislative solutions may materialize for challenged parts of biz or FE could lose/fail to gain legislative support in key states, 3) int rates positively/negatively affect cost of cap, 4) reg staff or cons advocates may focus on issues beneficial/detrimental to ROEs, 5) exit from comp power biz may or may not have substantive liabilities accrued to equity holders.

Pinnacle West (PNW)
Our price objective of $84 is based on a peer utility 2022E P/E multiple of 17.6x with a -2.5x discount to account for PNW's risk around its pending rate case as well as headline risk related to disconnect policy review. Electric and gas peer P/E mult is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We ascribe an in-line premium despite clear renewable capex backdrop given ongoing regulatory risk associated with the company's upcoming rate filing and 2020 election risk.

Upside risks: 1) Regulatory relationships/outcomes could improve, including changes at the elected commission 2) load growth in territory above expectations 3) Riders and capital trackers could help achieve ROE 4) positive weather helps earnings 5) interest rate risk changes cost of capital - lower rates could improve 6) Consumer advocates or utility staff could become focused on issues that improve ROE

Downside risks: 1) Regulatory relationships/outcomes could decline, including changes at the elected commission 2) load growth in territory below expectations 3) Riders and capital trackers could hurt ROE 4) negative weather hurts earnings 5) interest rate risk changes cost of capital - higher rates could worsen 6) Consumer advocates or utility staff could become focused on issues that hurt ROE 7) Solar advocates in the state have engaged in public confrontations with the utility, which could change public relations in the future.

PPL Corporation (PPL)
Our $29 price objective is based on a sum of the parts methodology applying respective premium/discounts to the 2022E peer group multiple of 17.6x. Electric peer P/E multiple is grossed up by 5% to reflect capital appreciation across the sector. We apply a 1.3x

RAV multiple in our base case for our Western Power Distribution (WPD) RAV approach, seeing the higher ROEs relative to other distribution networks commanding a premium valuation.

Downside risk to our price objective is exposure to FX rates. Since the UK segment represents a significant portion of PPL's earnings, a Federal Reserve decision to raise interest rates could produce a fall in the GBP/USD currency rate that would adversely affect our estimates and valuation for PPL. Also, like all utility stocks, PPL has historically underperformed if bond yields rise. Upside risks are a rising $/pound (GBP) price, positive regulatory outcomes, and decreasing treasury yields.

WEC Energy Group Inc (WEC)
Our $85 PO is based on a 2022E SoTP analysis, based on the large cap electric group multiple of 17.6x and the gas regulated multiple of 17.6x. Both electric and gas peer P/E multiples are grossed up for a year to reflect capital appreciation across the sector.

We apply a 3.0x premium to WEC's electric subs to compensate for surety in earnings growth for the next two years following the Commissions affirmation of the recent settlement on above average ROE's of 10%+. We apply a 0.5x premium to the gas utilities, including Peoples Gas and North Shore Gas with the Gas System Modernization Program (GSMP) and capex forecasts de-risked following the ICC order. We ascribe a 2x premium vs. the group at ATC to account for the steady nature of earnings growth as well as above average ROE's that are set at a federal level by FERC. We give Power the Future (PTF) a 2.0x premium multiple given the ROE is set indefinitely on historical and new investments. We ascribe an in line multiple for the parent accounting for the interest expense which finances overall utility operations. For the HoldCo adjustment to debt, we net out 50% of HoldCo debt from equity valuation and adjust to add back the parent drag on interest expense.

Upside Risks to achieving our price objective include 1) stronger than expected execution 2) accelerating capital opportunities and 3) favorable ratecase outcomes

Xcel Energy Inc (XEL)
Our PO is $66. We value Xcel Energy using a sum of the parts (SOTP) approach. Given the difference in geography, earnings strength, growth opportunity and risk profile, we divide the segments by subsidiary.

We use 2022E forward P/E multiples to derive a value for the different business segments, including the parent segment. We use on a peer multiple of 17.6x . Electric peer P/E multiple is then grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We apply a 2x premium to subsidiaries. We see this multiple as appropriate as the company has growth opportunities, resolving regulatory drag and resolving uncertainty around rate cases. We include Mankato as a non-reg asset in our SOTP. We also net back 50% of the parent interest expense and instead subtract out 50% of parent debt to more accurately reflect HoldCo leverage.

Downside risks are interest rate increases, regulatory risk such as lower authorized ROEs or less favorable riders/trackers for renewables and transmission, interest rate risk, execution delays, and weather anomalies.

Analyst Certification

I, Julien Dumoulin-Smith, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

Disclosures

Important Disclosures

Equity Investment Rating Distribution: Utilities Group (as of 31 Mar 2020)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	72	50.35%	Buy	51	70.83%
Hold	38	26.57%	Hold	28	73.68%
Sell	33	23.08%	Sell	24	72.73%

Equity Investment Rating Distribution: Global Group (as of 31 Mar 2020)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1602	52.15%	Buy	1005	62.73%
Hold	713	23.21%	Hold	463	64.94%
Sell	757	24.64%	Sell	382	50.46%

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

AGA Digital Takeaways: What We Learned on Day 1

Industry Overview

Holding the line on ’21 remains the focal point

We hosted meetings on Day 1 of the online version of the AGA conference with AEE, AGR, CNP, ED, DUK, WTRG, MDU, NWE, SRE, SO, and WEC. Much of the discussion remains focused on holding the line on both costs and rate case strategy heading into ’21 for most companies. We stress an implicit pivot on how costs are managed into ’21 to ensure their sustainability, with several companies increasingly contemplating labor-related savings annualizing into ’21 based on headcount freezes enacted (as well as forthcoming voluntary headcount reductions/early retirement options increasingly considered should Covid impacts last beyond ’20 too). That said, the most critical considerations remain how to *establish a test year* based on current year (inclusive of updated load growth & updated/suppressed cost inputs) while similarly facing pressures on authorized ROEs. We suspect companies will *continue* to attempt to delay any future rate increases on customers beyond 2021, suggesting another year of cost cutting necessary to keep EPS intact. By contrast, 2022 could prove substantially more active on rate activity as ’21 should provide a ‘normalized’ set of assumptions and the palatability of rate cases proves more intact among regulators. We could see this accentuate all the more the differences between companies benefitting from automated structures such as decoupling and formula rates, in contrast to those companies without any such mechanisms. We also see a need to remain vigilant on costs. We anticipate another wave of modestly cautious updates by 2Q and definitely by the 3Q as discussions around next year begin to frame up (cost cutting once more should feature prominently in these updates we think). While 1Q ended up proving more intact than anticipated, largely due to affirmations on outlook on ’20 to cost reductions the question remains just if companies can sustain reductions & still execute on contemplated growth: increasingly tricky backdrop albeit risks to sector EPS remain quite limited to downside (1-2% order of magnitude).

What companies stood out from our meetings?

We see AEE’s strong affirmation on its outlook as quite notable, seeing sizable latitude between its recently concluded MO rate case and ongoing costs to ensure continued earning close to its authorized level. Following earlier fears permeating in the marketplace we perceive shares as substantially intact with mgmt. notably confident on its outlook despite its volumetric exposure in Missouri. In fact, we continue to see latitude to execute against its plan if not *more* on the back of its forthcoming IRP this fall. We could see a net increase in capex, bolstering doubts that seem to be emerging around shares. Related we also saw SO’s confidence in ongoing pivot at Vogtle as worthwhile given pivot on employee execution. SRE appeared quite confident on its CA outlook again, but note emerging risk of capex deferrals in Mexico is likely under-appreciated among investors and could partially offset in its outlook. We maintain our Underperform on CNP as we maintain our concerns on prospects for execution at levels contemplated. We see DUK’s Sept update on its IRP as likely understated & explaining its recent pos re-rating relative alongside greater confidence in cost cuts. Rate case risks loom here otherwise.

Sempra Energy (SRE)	14
Southern Company (SO)	16
WEC Energy Group (WEC)	18

Thematic Prospects

1. Execution intact; bill arrears remain quite early

We note few incremental comments in recent days on load trends, with most of the focus increasingly focused on the ramp in bill arrears from customers. With April bills just becoming due now, preliminary data does not necessarily show the full ramp. While residential customers are typically eligible for non-disconnect and avoidance of late feeds, we also note discussion among many companies of the benefits provided from the CARES act in allowing funds disbursed to small businesses to qualify towards paying utility bills (in addition to employee labor expenses, etc) such that this class of customers is likely to remain more intact than otherwise expected.

2. Renewable delays, but not really an issue

We stress that few investors really appreciate the potential *benefits* of forthcoming PTC guidance latitude from IRS. We could actually see this add to the net NPV of projects (seeing currently '21 contemplated projects) partially qualify for the full 100% PTC. This would appear the most constructive to NEE of companies covered.

3. Capex upsides still quite real

We perceive investors need to appreciate that companies could very well see capex increases altogether as they move forward with a wider array of coal plant retirements on an accelerated basis including AEE, ETR, and DUK among others. We see this all likely forthcoming in 2H despite a related backdrop & fear of capex *slippage from 2020 into future years* to limit pressure on balance sheet metrics. This remains a key potential variable as companies seek to hold the line on the outlook in '20 as virus could very well imperil guidance more than otherwise perceived/reflected in sales guidance presently with greater corresponding impacts to balance sheets than appreciated as well.

Ameren (AEE)

Standing by the main points from the 1Q call: *quite confident*

Mgmt. reiterated much of what was discussed on its earnings call last week (as discussed in our last note), including its affirmation of 2020 guidance $3.40-3.60/sh under adjusted assumptions including the constructive Missouri (MO) rate case outcome, O&M savings, and a YoY sales decrease expectation of -2.5% (a -$0.10 item). There's still lack of clarity around how much of an O&M swing AEE is factoring in (recall mgmt. stated on the 1Q call original guidance had a YoY increase in expenses, changed to a YoY decrease). We hope for further clarity as peers have provided a sense of how much is factored in – important in tracking impacts if stay-at home orders last a little longer than anticipated. Either way, as we previously calculate a 1% change in O&M is equivalent to roughly $0.10/sh, we still expect AEE has room left for other O&M savings if need be to keep '20 in its guide. We maintain Buy given this, that also see growth opps, and the company's strong FFO/debt metrics that are better than those of peers.

Capex and growth rate

AEE affirmed its 6-8% EPS CAGR from '20-'24, emphasizing its $36bn 10-year capex plan (as well as its $16bn 5-year plan). Mgmt. pointed out that the plan's capex is largely focused on grid modernization as well as projects that enhance reliability, resiliency, and security. AEE doesn't have big generation growth other than the $1.2bn invested in wind, which is still expected to commission mostly this year (perhaps just $100mn rolls into 2021 due to COVID-related supply chain delays). We see further opps for gen-related growth, but it's too soon for the company to firmly fold upside into guidance; this includes the IL downstate legislation & associated renewable and electrification of transportation proposals, as well as potential generation trajectories proposed this fall through Missouri's integrated resource plan (IRP).

Missouri rate case settlement: When's the next one?

Mgmt. reiterated its constructive rate review outcome including having the commission affirm its 95% / 5% sharing as well as a decrease in revenues by -$32mn, fuel cost expenses by -$115mn, and other costs by -$50mn. This results in a net +$133mn pre-taximpact, with rates taking effect April 1st. We calculate the annual impact of this

result is $0.40/sh annually, i.e. $0.30/sh for 2020 given it impacts nine of twelve months. Note the electric result was an ROE of 9.4-9.8% as well.

Recall prior to COVID & this rate case result, AEE had indicated it was planning to file *another* MO rate case once its wind program came online YE 2020 to reduce lag beyond what PISA (plant in-service accounting) provides in deferring 85% of depreciation. While the company had never provided an exact sense of timing, one could have assumed that AEE might have wanted to file July 2020 for a true up by year end that would have included the wind projects. However, we note that mgmt. again expressed it was happy with the construction result of this last recent settlement. Moreover, now with COVID, *AEE is still debating the timing of when to come in next to limit regulatory lag but be conscious on the backdrop.* In other words, we see AEE looking to balance the recent rate case result (which we believe would support a stay-out) with wanting to bring 2020 wind investments into rate base (which we believe would support an earlier case, but with some flexibility given PISA eliminates as much loss on depreciation of rate base) and then COVID impacts (which in itself has a push-pull: We'd see reason to push out given economic impact on customers but reason to pull forward to balance impacts of lower demand and bad debt expense). Nothing is on the table yet in terms of the next filing, but AEE mentioned the Commission Staff did open a workshop to look at tools around costs from COVID.

We discussed potential alternatives to a full rate case, noting that AEE chose PISA rather than decoupling. We still wonder whether the MO commission could be amenable to a stabilization filing, like LNT is pursuing in Wisconsin (i.e. keeping rates stable by using cost costs and other accounting mechanisms to balance the increase to rate base the wind would provide). We also could see AEE look to pursue accounting authority orders (AAOs) related to COVID-specific costs in MO.

Coal update: Still waiting on this fall

AEE did not provide a glimpse into any future potential accelerated coal retirements. It noted its unique situation since it has not made as many investments in scrubbing equipment as peers have, resulting with coal representing just 12% of rate base now, expected to drop to 8% in 2024 without facing stranded costs. Plants outside of Meramec (which is set to retire in '22) are still operating at 70% capacity factors, and the state has historically appreciated the ownership aspect of generation.

While not discussed, we still see accelerated unscrubbed coal retirements as untapped potential not only as a catalyst in which to pursue more rate based renewables (which could be discussed this fall as the IRP is due), but also as a way to pursue better ESG metrics as well (see our recent ESG flows note here, which suggested flows have continued strong this year, but utilities as a whole are underutilized even with some of the largest clean energy rate of changes proposed – we could see an opp'y here). We think that if not this fall, AEE could also be waiting for the result of the 8th Circuit environmental issue around Rush Island (with oral arguments likely later this year) and/or securitization legislation in MO to be pushed forward.

Illinois: Downstate bill isn't off the table yet

While impacted by 30-year Treasury rates, AEE's Illinois formula rates in the electric segment result in no regulatory lag. The company continued to discuss the Downstate legislation including extension of formula rates with the 100bps adder – in addition to plans for more renewables and electrifying the transportation sector – by specifically noting that the legislation is based on a strong foundation that has driven investment, jobs, and reliability in the past. We interpreted the company still sees palpable backing by environmental & labor group, in addition to geographically and politically diverse legislators. While investors appear quite worried about sustaining status quo; we note the program officially expires in coming years (and would otherwise seemingly result in a more traditional litigated rate case). While timing could yet get shifted out we perceive a clear bias towards an extension, likely in oru vie won more favorable ROE terms given the wide discrepancy from other 'normal' returns for companies. This backdrop makes us more constructive on shares despite the more acute recent arguments suggesting risks to their LT EPS CAGR carrying forward current EPS CAGR outlook.

Avangrid (AGR)

New England Clean Energy Connect (NECEC) saga continues

As we noted here, AGA recently filed a lawsuit in Maine at the Superior Court level regarding the state's referendum to derail the NECEC transmission project through this November's election. The suit is based on AGR's view that (1) the referendum exceeds the power of the law as it's not a rule for all (focused on just one project) and it's retroactive, and that (2) there is a separation of powers issue that is allowing the legislative branch to exert power over the judicial and executive branches. The outcome is needed before the item would go on the ballot this November. AGR did not address impacts to capex deployment yet, noting it continues to first focus on receiving the remaining permits as well as ensuring the referendum is challenges and voters have all the information to make an educated decision. We point out that construction is now not expected to start until the end of August; the ME DEP permitted the project recently so the only two outstanding permits are the Army Corps expected in August (which is necessary to start US construction) and then the Presidential permits 60 days later (which is necessary to cross the Border into Canada). The silver lining in the delays faced by AGR is that a concurrent non-appealable order in Massachusetts (which was appealed by NextEra) won't be ruled on until this June. As such, AGR has gained flexibility on when exactly the project contractually needs to be in service; the company is still anticipating a '22 in-service date as of now, but can bleed into '23 if difficulties cause further delay (i.e. giving AGR a risk mitigating factor of more time and latitude if it is delayed more). Bottom line: AGR pulled its long-term guidance on the 1Q call and by the time we expect an update (at the Analyst Day likely in line with Iberdrola's), AGR will have referendum clarity on whether this project will go forward.

Note also in ME, AGR recently teamed up with two wind generators (EDPR and Clearway) to propose wind farms (~325MW) for the state's request for proposal (RFP) due last week. AGR would be responsible for transmission gen-ties – and the projects represent significant distances. Stay tuned here, with the RFP announcement likely this December. *These transmission interconnects would be modest upside to the plan.*

ROEs: Company expecting largely around authorized once all said and done

AGR anticipates it will finalize its New York rate case settlement with interveners this month such that it is able to file a joint proposal with the Commission soon. As noted in our recent upgrade to Neutral from Underperform (here), AGR anticipates the final order to be approved this fall, with rates taking effect in September but being made-whole as of April 17th. We point out two key discussions in our eyes: First whether the commission will allow recovery of some bad debt expenses, and second the ability to earn at the authorized ROE. AGR noted in 2009 the commission put in place a methodology for recovery after a generic hearing. It expects something similar – we'd expect more likely a generic proceeding but if need be through the settlement. Note CT and ME already opened dockets recovered to bad debt, and AGR seemed confident some sort of recovery would be possible in NY due to past precedent.

As for earning as close to the allowed as possible, the outcome on minor storm recovery particularly with staging costs is key. NY had limitations on how many staging costs it could recovery, and would allow just 3 events at NYSEG and 2 at RGE. AGR is seeking more events and more dollars to recover. It also is looking to deploy incremental dollars for maintenance, equipment failures, and enhancing the system (due to age or quality). In other words, AGR is looking for capital, O&M, head count, and storm recovery – mostly at NYSEG. Once rates are in place, mgmt. expects to earn around the allowed ROE. This would indicate the first year of limited lag for NY Is 2021.

As for ME, the company expects to earn around the allowed ROE as well – although likely closer to having 2020 as the first full normal year. Note the company is facing 1x items in 2020 that will prohibit earning at the authorized return, and until September 2021 at

the earliest the company faces a -100bps penalty on its authorized ROE. This penalty will be lifted if AGR proves its customer standards metrics.

Question of capex and resolution on bad debt unlikely in JP

We perceive a generally cautious attitude on storm related capex & opex coming out of the NY rate case resolution. While already an ambitious plan articulated in its capex projection, we perceive a potential for modestly reducing expectations. Meanwhile resolution in the joint proposal of bad debt recovery appears increasingly unlikely in our view and would likely be joined together with other utilities including ConEd. We stress recovery appears to be dimming in a separate Covid docket in sharp contrast to many other regions nationally.

Offshore wind update: Waiting on BOEM with study all focused on distance

AGR indicated that the Bureau of Ocean Energy Management (BOEM) communicated last that it is still on target to issue its cumulative impact study this June 12th. The company expects it will be an all-encompassing finding on project density – i.e. how far apart turbines must be in the New England area. Note that the industry up to this point has largely agreed upon a one-nautical mile spacing in all directions (N/S/E/W) and that the Coast Guard has indicated it is in line with this spacing; most fishermen negotiations were reflecting of this as well. We point out that AGR is still waiting to comment officially on how Vineyard Wind will be included its updated EPS CAGR (i.e. to commission in 2023 or 2024?). Due to the delay from the original online-date of '21-'22, AGR has a silver lining of being able to explore larger turbines with more capacity, improving its density of its total offshore wind lease area (having originally looked to 9.5MW turbines, but now looking at turbines 12MW+).

On track '20 and succession

Finally, the company indicated its '20 projects are on track and that it is not seeing a COVID-related slow-down. We expect AGR is one of the more shielded companies from lower demand and other impacts due to its decoupling at Networks. We stay tuned for succession plans, likely to be announced by Jim Torgerson's departure at the end of June.

Centerpoint Energy (CNP)

While CNP remains a highly debated name, we remain cautious on the overall outlook and see downside to shares given both ambitious 5-7% growth targets that are difficult to achieve as best we can tell (w/ inclusion of mandatory converted shares offset by interest expense savings) with upside case principally centered around the strategic review process, which has yet to be clearly articulated. With Change of Control at a sector-record at ~$10Mn for the chair, we believe the question remains whether this could potentially evolve further with additional incentives, a dynamic we've seen elsewhere among companies evaluating strategic actions, although still no timeline on this process. Meanwhile, there are some signs of progress on the new CEO search although still no definitive timeline. At the end of the day, we continue to see a challenged outlook and maintain our Underperform rating.

Succession planning: Still no definitive timeline although making progress

During our call, mgmt. highlighted that several candidates have been identified for a new CEO appointment, and is in the process of narrowing down the list and working to prepare arrangements. That said, mgmt. was unable to put a more specific timeline on the process. Given wider governance concerns around the structure & compensation of the board, we see this as critical to re-establishing confidence in the strategic direction of the company. While an astute CEO appointment would be the most obvious upside angle, especially if it were to come from in-state peer, we could see the process be more drawn out.

What about the strategic preview process? CoC critical to watch

While mgmt. talked down the M&A angle on its earnings call, commentary from our AGA meeting suggested that the advisory board committee would look to optimize the business by assessing all assets and the business as a whole with still plans to announce something by the Analyst Day in early 2021. Given we perceive limited independence of recently appointed board member Lesar and current Chair Milton given historic relationship, we continue to see changes around Change of Control (CoC) incentives as critical to watch. Yet there was no more specificity as to when these payments will be subject to annual review or around additional details for the process itself beyond the fact that the interim CEO/CFO will be involved in the process. With CoC at a sector-record at ~$10Mn for the chair, we believe the question remains whether this could potentially evolve further with additional incentives, a dynamic we've seen elsewhere among companies evaluating strategic actions. We note the chair has three years left prior to mandatory retirement age; we also still note the decision by CNP in past efforts around strategic actions *not* to pursue a sale. Bottom line, we remain less convinced about the motivations on this front, although recognize this is a key upside angle.

What about the dynamics in IN?

With ~$300mn/yr of IN electric capex that will need to be backfilled and largely dependent upon the Integrated Resource Plan (IRP) filing, mgmt. highlighted that it remains on track for its June filing with expectations to bring a more balanced portfolio mix of new generation to the table. While details of the plan have not been disclosed, mgmt. highlighted a much more engaged stakeholder process taking in factors from both the coal industry and the renewable energy in order to balance low cost needs with stakeholder objectives. Meanwhile, despite 80% of capex trued up on an annual basis, we remain concerned around COVID pressures and ability to earn authorized returns; see recent read-throughs from in-state peers AES and NI on load trends as also cautious given Commercial & Industrial (C&I) load declines in the mid-teens, and it remains unclear if resi trends of +10-11% can be sustainable.

Consolidated Edison (ED)

We maintain our Buy rating on ED as we continue to see the shares as largely de-risked following implementation of new rates at its CECONY (Con Ed co. of New York) subsidiary and given its decoupled electric and gas business. Nonetheless mgmt. continued to strike a sober tone on assumptions for recovery of Covid-related items including higher bad debt expense and direct expenses. Mgmt. acknowledged that the timing of a potential commission docket for Covid recovery would likely come after the state has better visibility into the length and depth of the economic downturn, particularly as it relates to unemployment. On the financing front the company reports ample liquidity following the establishment of a new $750m credit facility. No change in plans to issue $600m of equity in 2021 as the company continues to see annual equity needs, thus any delay would cause requirements to increase in future years.

'20 guidance cut driven by Covid which is seen as a current-year drag

Mgmt. sees the impact of Covid on financial results as seen in lower revenue from disconnect fees, late payment fees, no access charges, and related O&M items to largely be limited to 2020. Incentive programs built into rates are reset on an annual basis, with the expectation that the Covid impact from these will also be limited to 2020. Looking beyond 2020 the company sees its multi-year earnings CAGR guidance as intact given expected recovery in subsequent years as fee collections normalize. The reduced 2020 guidance range of $4.15-4.35 was driven in part by the negative contribution from weather in the CECONY Steam business (ED's largest non-decoupled segment). Mgmt. estimates that thee Q1 drag on Steam was approximately 80-20 due to weather and reduced consumption stemming from Covid stay at home orders in the end of March. Mgmt. did not give a forecast for the segment for the remainder for the year though noted that Steam is economically sensitive – it is unclear to what extent demand will continue to be reduced by remote working employees given that large office buildings in the city may continue to take steam even at reduced occupancy rates.

Bad debt expense largely depends on depth and duration of downturn

ED sees its bad debt expense as largely dependent on the path of economic recovery in the NY City area, in particular the length of time that unemployment rates stay elevated and to what level unemployment rises. Mgmt. provided color into the determination of bad debt expense in a rate proceeding – the beginning point is the actual bad debt expense in a historical test year with a normalization process that takes place to account for one-time or unusual events during the test year, making the final outcome difficult to forecast. At present mgmt. is using 2008-09 as a template in the absence of more detailed data – in both instances collections for delinquent accounts were suspended, though the reduction in demand has been faster in 2020 as compared to the prior recession. Mgmt. sees a potential for a generic cost recovery docket to be opened by the NY commission, though does not expect clarity in the near term as the commission remains focused on delivery of service to customers.

Equity needs remain $600m in '20, liquidity seen as adequate

ED established a line of credit in April that will allow it to draw down up to $750m to fund operations and capex in the near term. The company sees its current year equity needs as unchanged at $600m though acknowledged the possibility of drawing down the credit line *prior* to an equity issuance (by mid year) if market conditions precluded an issuance by that time frame. Looking further out mgmt. sees annual equity needs "as far as the eye can see" making pushing out the current equity needs difficult as they would accumulate in the following year. Mgmt. stressed market conditions and ensuring the best possible price as the key factor in its timing decision. *Bottom line, could see this come by mid-year depending on market conditions. With this company among the single remaining marketed issues for the year to be issued we perceive disproportionate 'overhang' and hence concerns on shares reflected today.*

Duke Energy (DUK)

Despite Duke's recently announced sizeable cost cutting plan to offset expected load declines this year, we maintain our Neutral rating on shares given lingering risks in the Carolinas with 3 untested NCUC commissioners and potential for delay at ACP with NWP12 timing. With the near-term uncertainty in the Carolina rate cases given litigated ROEs, coal ash pressures and implementation timing, Duke's execution of its cost cut initiatives will be critical for the company to maintain its +4-6% EPS growth target (reaffirmed on 1Q call). On the other hand, we see potential progress with the Clean Energy report from the NC where we see pathway for alternative rate making mechanism (MYRPs, ROE banding, securitization, riders, etc.), although specifics around a particular outcome remains premature: we see our AGA meeting as a net positive driven by growing confidence around future Carolinas spend (watch large re-write on capex outlook with the IRP) as well as focus into '21 on cost cutting. Specifically its forthcoming IRP should both add to cash flow potentially with accelerated depreciation of plants – improving balance sheet while laos providing a further uptick in capex this ~September.

Regarding ACP, we continue to perceive challenges in having all permits approved by the tree-felling window in November; in addition to potential risk that the 9th does not approve the motion to stay for the recently narrowed NWP12 order (likely hear on the stay next week). Long term, we see the upcoming NC IRP in September including a meaningful amount of incremental opportunity by way of clean energy for Duke, but risk remains around the natural gas build out due to uncertainty at ACP.

ACP needs 4 items resolved this yr to remain on schedule; NWP12 in focus

With 47% interest in the $8bn Atlantic Coast Pipeline (ACP), the project continues to be an overhang on DUK shares as there are several items that need to be resolved this year to keep the expected in service timeline of early 2022 intact. Moreover, the recent Nationwide Permit 12 (NWP12) vacature order out of the US District Court of Montana, which was narrowed last week to only new oil and gas pipelines, has become an incremental obstacle for ACP and all other new pipelines across the nation. On Friday (5/15), after declining to grant an immediate stay of the MT Court's narrowed order, the 9th Circuit US Court of Appeals established an expedited briefing schedule concluding on May 22 (this Friday) to address the defendants' motions for a stay implying the 9th's critical decision on the motions to stay for NWP12 will likely come next week (May 25-29). Duke hopes this motion to stay is granted next week allowing the project schedule to remain in line with expectations. This assumes the other three items are resolved this year, which include: 1) biological opinion from the US Fish and Wildlife Service (expected by end of 2Q20) – a pre-requisite for water crossings authorized by the NWP12, 2) a favorable SCOTUS ruling on Appalachian trail crossing (expected in next few weeks), and 3) an air permit for the Buckingham, VA Compressor station (expected by YE20). FERC likely needs all these major permits in place to approve recommencing construction and tree felling. Bottom line, we continue to see risk of a delay at ACP with a potential motion to stay for the narrowed vacature of NWP12 presenting incremental delay risk.

Upcoming IRP to be broader than DUK's typical IRPs historically

Duke's upcoming North Carolina Integrated Resource Plan (IRP) that will be filed in September is expected to be broader than the company's usual IRP as it will contain more carbon reduction initiatives, renewables, third party providers, and distributed generation. The carbon reduction initiatives will include more thoughts on the early retirement of coal plants. We expect the commission will look to find a balance between the lowest cost plan and aligning de-carbonization efforts, which Duke likely incorporates into its IRP. The company is trying to reflect a composition of assets that is less base load, but rather more on the grid and smaller generation assets. Further we perceive the NC IRP filing could create additional opportunities for DUK in terms of clean energy and coal reduction opportunities, although see risks to natural gas build considerations given still uncertainty around ACP.

Securitization as a potential tool for coal retirement in the Carolinas

For the early retirement of coal plants, we believe Duke could potentially securitize these early retirement costs such that they are not penalizing the rate payer, creating headroom. Duke has used securitization for storms in the past, and we perceive this as an attractive tool for Duke to potentially apply to coal retirements if the corresponding amendment is made to the legislation (assuming put forth in the Clean Energy study by year-end). We will continue to watch for this as another potential lever for Duke.

Multi-year rate plan legislation

Duke continues to push the Public Utilities Commission (PUC) for alternative rate mechanisms to move forward, specifically, a multi-year rate plan (MYRP). With the upcoming report due from the Governor's committee on Clean Energy, there remains potential for Duke to have a recommendation back to the legislation that would include a MYRP, ROE banding, securitization, and/or rider capability. There are a wide range of tools available, but it will take time to educate the necessary parties. All of these tools would be positive for Duke, but there are a number of steps it will take to get there as past efforts stalled/failed. With that said, we see both increased confidence from the company and corresponding stakeholder commentary as supportive for DUK's legislative prospects in the 2021 long session.

Offsetting COVID-driven load declines with cost cuts; some sustainable cuts

On the 1Q update, Duke announced targeted cost cut reductions of $350-450mn to offset annualized load decline expectations of 3-5% this year. A portion of these cost savings are savings that Duke will benefit from beyond 2020 (i.e. structural) and some are not. Recall, Duke noted hiring freezes into '21 and corporate IT reductions as a tailwind for O&M agility. The new processes Duke is putting in place will drive efficiencies and yield cost savings through the incorporation of more digital, analytics and robotics throughout the organization. These new processes likely require less people going forward, which will sustainably lower the company's overall cost structure. Duke has dedicated resources working on these efficiency gains, and we expect to get more transparency on the major cost savings buckets later this year.

Essential Utilities (WTRG)

NT COVID Implications De-Risked, with LT Recovery Prospects Emerging

With their 1Q report earlier this month, WTRG reaffirmed 2020 guidance of $1.53-$1.58 and a 5-7% EPS CAGR through '22. We stress the largely residential profile of the water biz as providing some protection against load degradation while the gas biz enters shoulder season against the pandemic backdrop for now, as we monitor duration on a go-forward basis and any second waves or further escalation. While early action was taken to maintain a more conservative amount of liquidity, bad debt has been our primary concern. That said, discussions with mgmt. stressed last week's order in PA as helping to de-risk this given their particularly large presence in the state: recall, last Wednesday, the PA PUC issued a letter directing utilities to track COVID expenses and authorized regulatory assets for incremental uncollectible expenses incurred above those embedded in rates since the PUC's March 13, 2020 Emergency Order -any regulatory asset created under the authorization contained in the Secretary's Letter will be subject to review by the PUC in future proceedings. While this won't provide immediate help to cash flow, it should help limit degradation to P&L in the nearer term.

Meanwhile, we perceive the latest economic pressures broadly as likely to further accelerate consolidation in the industry as muni budgets are further flex'd from the crisis - and stress any further resulting acquisitions would be upside to mgmt's latest reaffirmed targets. States we are watching in the near term include TX & OH following the passage of FMV legislation in the states early last year and VA passing the legislation more recently. While we perceive TX bids as likely more competitive, WTRG is currently the only large water utility in the state of OH - and we see particular opportunities as likely to emerge following the Campbell acquisition. Meanwhile, we see NC as another state to watch given the new commission dynamic, albeit muni acquisitions there seem less clear cut relative to the more challenged munis in PA and IN.

Overall, mgmt. stressed confidence in our latest discussions around both volume and magnitude of muni acquisitions, and we perceive particularly bullish prospects for further consolidation for the water industry going forward.

Latest discussions also pointed to their intact balance sheet (following the Peoples acquisition despite some add'l debt to improve liquidity) with equity only needed to finance acquisitions. While continuing to allude to $300Mn in equity for DELCORA (& some latitude for further add'l acquisitions), we see timing as either 4Q or 1Q given a likely somewhat protracted process from the COVID backdrop and the current market environment.

Watch Repairs Tax Developments for the Catch Up Component

After closing on the Peoples Gas acquisition in Mid-March, the company elected the current component of repairs tax, reducing income tax by $5.9Bn for the quarter with expectations to drive $0.08-$0.12 worth of contribution for the year. Latest discussions suggested a filing for the catch up component in June or July with the process taking six to nine months. *We see this as the critical debate driving shares.*

Under implementation for the water biz, seven years of a ten year amortization went to the shareholder while three went to the ratepayer under what we stress as a particularly constructive outcome. While it remains to be seen how the commission will rule this time around, a constructive outcome remains clear cut upside to their numbers.

We remain Neutral rated on shares of WTRG, seeing risk/reward as balanced.

MDU Resources (Not Rated)

Catching Up Post Cut on COVID & More

MDU Resources (MDU) is a $4.4Bn market cap company based out of Bismark, ND that operates in 44 states. The company is a mix of regulated electric, natural gas, pipelines, and an unregulated construction materials and services business. MDU recently narrowed its 2020 EPS guidance from $1.65 - $1.85 to $1.50 - $1.70 with a 5-8% long-term CAGR while also lowering its revenue guidance for the construction business by $100M (while pulling margin guidance) following weak 1Q weather and as they continue to navigate the COVID crisis. Despite the lower guide, the company has a record backlog of $1.3Bn for construction services and a backlog of over $900Mn in construction materials.

Despite the more uncertain backdrop, management remains committed to M&A primarily through bolt on acquisitions, noting potential for more distressed opportunities in particular going forward and financing will likely be determined on a case by case basis. Shy of acquisitions, the company doesn't anticipate any near term equity needs and FFO/Debt metrics remain north of S&P's upwardly revised target of 22% (from 15% previously). Bottom line, while organic growth remains the primary driver of mgmt's capital allocation on a go forward basis, mgmt. has clearly identified a desire and opportunities for further acquisitions.

Northwestern Energy (NWE)

Contemplating Prospects & Evolving COVID Crisis

With their latest AGA update, NWE reaffirmed their recently revised 2020 guidance of $3.30-$3.45, but didn't provide any additional color around the latest weeks of load data. As previously noted, guidance assumes flat gross margin growth through the remainder of the year at the midpoint and we continue to watch any decoupling developments after the MT commission recently denied the intervener motion for reconsideration (around the potential ROE reduction for NWE if decoupling is implemented). While decoupling for NWE was initially contemplated for July, the MT commission plans on opening another docket to explore impacts of implementation during the pandemic and latest discussions suggested postponement would be beneficial given 90% relates to resi load (which has seen an uptick as expected given latest lockdowns across the nation). As such, we perceive NWE as likely to advocate for postponing any action around the mechanism into 2021 *(a presumably more normalized baseline)* despite a clear cut desire to implement in LT (not just in a five year pilot). Nuances & timeline to implementation remain critical both in the near term and longer term in MT.

We stress another nuance to watch is bad debt in particular given management's assumption of recovery in the latest guidance - albeit we continue to perceive a constructive backdrop in both SD and MT. The company has filed a joint expense recovery filing in SD with plans to file soon in MT.

Rate Cases & LT Gen: Awaiting MT RFP Bids

While the company doesn't plan to file any rate cases this year, discussions suggested they will continue to evaluate every April - and we don't perceive any firm decisions as having been made regarding a potential filing for next year. That said, given the capital spent and investment underway in SD with the latest generation win (and known and measurable gen spend into '21), we see a SD filing as more likely than not - and ultimately view a constructive backdrop for the state. We would expect MT filings to be more challenging on the margin given the aggressive cost cuts underway in '20 - as well as the likely ROE environment (with outstanding FERC uncertainty even as potentially weighing on state returns). All that said, we perceive bias towards a MT generation filing as opposed to a full rate case if the company is able to be successful with any generation bids in the state. Following an extension of the timeline, initial RFP bids are now due in July and we perceive confidence around maintaining the schedule and turning things around in a reasonable amount of time. Preapproval of a project could help mitigate impact in pushing out a rate case to '22.

Meanwhile, the company continues to work through potential approval to acquire additional Colstrip that would reduce their generation needs in MT and are hopeful to have clarity by the end of the year if ultimately approved. The company earlier notified the MT PSC that Talen Energy has purported to exercise its right under the Colstrip Ownership and Operation agreement to acquire a portion of the transaction that was negotiated between Puget Sound Energy and NWE for the proposed sale of the 185MW of Colstrip Unit 4. If Talen purchases a portion of the Puget Unit 4 interest, NWE would acquire at least half of Puget Sound Energy's interest equating to 92.5MW with a purchase price of $0.50, with the PPA with Puget Sound shifting to 45MW (from 90 initially contemplated) for five years. With any approval and potential close expected to play out by the end of the year, we continue to see rejection of the add'l Colstrip as best case scenario as meaningful generation spend and rate base is critical to driving longer term EPS growth.

We maintain our Underperform rating, seeing NT risk to the revised '20 guide under a protracted crisis and a lack of LT growth without meaningful generation.

Sempra Energy (SRE)

We maintain our Neutral rating as we continue to see shares as fairly valued given average implied upside as well as the uncertainty in LNG development given the market backdrop and limited recent developments after 1Q call as we await ECA FID (and financing disclosures). However, we stress SRE is one of few peers to have reaffirmed '20 guide at the top-end and provided visibility into '21 in the wake of COVID with potential upside at the CA utilities with clear bias to earn at more robust historical earned ROE levels. Confidence in TX also remains notable as incremental capex depends on interconnect approvals rather than the base plan despite the oil patch woes.

While IEnova concentration continues, mgmt. stresses that majority of $1bn growth capital can be deferred while confidence in counterparty contracts given continued payment and fixed/pass-through rates. Deferal of segment capex remains a unique risk. Further, we continue to see an equity issuance as unlikely as management prioritizes shareholders over a potential credit downgrade at Moody's (currently on downgrade review). Note SRE targets 16% FFO/debt in 2020 vs the 17% Moody's downgrade threshold; see Fitch/S&Ps outlook as critical given likely foregone conclusion at Moody's. Bottom line, while we see potential upside to the utility outlook, LNG uncertainty continues to linger with both the credit outlook (sending mixed messages to LNG counterparties?) and lack of tangible data points beyond ECA phase 1.

On balance we see upside to our ests consistent with management commentary on its 1Q call. That said, we suspect investors in SRE largely under-appreciate the consternation at IENova emerging in recent months.

California returning to a premium regulatory environment?

With recent constructive rate cases, we perceive confidence in mgmt.'s ability to earn closer to its historical earned ROEs. SRE has a history of earning strong ROEs relative to its authorized rates – see our report: Sempra Energy: Focus on the Utility: Raising expectations on (adamant) continued mgmt. confidence 06 February 2020. We continue to believe our estimates could very well see an improving trend through the forecast period. Sempra continues to allocate a significant amount of capital towards safety and reliability (80%+ of 5-yr capex relates to safety and reliability), and the company got nearly everything it asked for in the last general rate case under RAMP (risk mitigation phase). Bottom line, we perceive SRE's CA jurisdiction to be the most well positioned given the healthy ROE outlook and upside to spending initiatives to further align with state policy (wildfire mitigation/de-carbonization).

Balance Sheet: equity continues to seem unlikely with Moody's action likely

We continue to see FFO/Debt achieving the 16% threshold by YE2020, which compares to Moody's 17% threshold to maintain its BBB+ rating. With the addition of ECA LNG and management's commitment to its shareholders (i.e. no equity), we believe it will be difficult for SRE to maintain its BBB+ rating at Moody's. However, we expect the other agencies to grant more latitude to SRE with the Port Arthur FID pushed to 2021 as of the 1Q call, which gives the company more time to improve its metrics. We continue to see FFO/debt at 17% in 2022. Given ECA phase 1 could still move forward with the current threshold and Port Arthur would be project financed for 2-3yrs (with equity likely needed in year 3) we see no equity needs through the forecast period. Hence, we see a downgrade at Moody's as likely inevitable given commitment to no equity and company target of 16% FFO/Debt in 2020, but not at the other agencies that will likely allow SRE more leeway.

Texas: mgmt. still feels good about current capex plan

Management was clear it remains confident regarding the current capex plan at Oncor in the face of COVID and blatant exposure to the apex of the oil downturn in West Texas. The company does not expect an update to the Oncor capex program until its annual meeting in October, where the company will refresh the 5-year capital program as it

typically does each year. While management is cognizant of the steep decline in activity in the oil patch, it noted three areas offset to this, which include 1) Dallas Ft. Worth being one of the fast growing metropolitan areas in the country with 18k hookups in 1Q alone, 2) >100 GW of renewable generation in the queue in Texas, and 3) marginal producers in the Permian demand for converting diesel generation (30c/KW) to lower cost natural gas. On top of those three areas, management sees up to $750mn of ongoing capex deployment and has 13 renewable interconnects in the queue that are not in the base plan (i.e. incremental). *Despite clear risk of renewable project delays, management appears to feel confident a future roll forward could be at least as constructive as its latest update from late 2019. This was surprising in our view.*

IEnova: deferring of growth capital but not a material concern

At IEnova, mgmt. highlighted that its counterparty contracts continue to pay with over 50% backed by government entities (PEMEX, etc) with fixed rates/past through transmission costs. Despite confidence in navigating the regulatory climate, consternation persists following recent dynamics with the President and avoidance of subsidizing private industry. That said, mgmt. acknowledged that growth capital of $1bn+ associated with fuel terminals are likely to be deferred as the company looks to align with counterparty timing (BP, Valero, etc.). While majority of contracted EBITDA comes from ECA imports and pipelines with total income from the Mexican unit roughly 10-15% of SRE consolidated, we continue to monitor developments with the government bodies as it pertains to both ECA phase 1 approval and ability to execute on growth capex. See our colleagues note on IEnova for more.

Reiterate LNG update from 1Q call

Management had no change in messaging on the LNG front during its AGA update noting confidence in the future of the LNG business. The company emphasized its discipline where it looks for LNG returns well in excess of those at the utilities to justify the investments. SRE expects a Final Investment Decision (FID) on ECA LNG phase 1 this quarter (2Q20) subject to receiving an export permit. Once the project is sanctioned, the company plans to announce the financing terms. SRE noted it is reasonable to expect some of IEnova construction capital will be deferred from 2020 to 2021due to COVID-related pressures. We perceive the delay on logistics/terminals given lower liquids makes room in capex budget for ECA related spend. We expect SRE likely sells down some of its ownership stake to counter parties, adding some latitude to the balance sheet. Recall, as of the 1Q call, SRE secured the sale of two 20-year Supply Purchase Agreements (SPA) with Total and Mitsui for a total of 2.5Mtpa from ECA LNG phase 1. Further, the Port Arthur FID is still expected in 2021 (previously expected in 3Q20 ahead of COVID). On Cameron LNG Phase 2, MOU negotiations will likely take some time to turn into Sale and Purchase Agreements (SPAs) given the uncertain market environment. Net net, we continue to be cautious on LNG growth given the current market backdrop, but see this reiterated update as a moderate positive under the current circumstances of the market.

Incremental capex upside via RNG, hydrogen, DG, and mobile home parks

Despite an already robust 5-yr capex plan ($32bn 2020-2024), Sempra identified that the company has incremental upside to capex via 1) Renewable Natural Gas (RNG), 2) hydrogen, 3) distributed generation (DG), and 4) mobile home park upgrade programs. Recall, SoCalGas committed to replacing 20% of its traditional natural gas supply with RNG by 2030. We would note Sempra continues to be very focused on distributed generation, particularly in fuel cells, which could help supplement public safety power shutoffs (PSPS) especially for more isolated communities. These initiatives all provide upside to capex at the utilities over the next five years that is not baked into guidance. While we do not currently model these several items into our capex, it could drive eventual bias to positive estimate revisions.

Southern Company (SO)

We sensed an overall confident tone from mgmt. during our meetings on ability to sustain both cost cuts into the future (potentially 2/3 of upper end of $400mn range) and execution on Voglte w/ improvements in absenteeism and focus on upcoming Cold Hydro testing in the June/July timeframe. Meanwhile, mgmt. remains confident in the ability to overcome increased arrears/bad debt expense both from an EPS and cash flow impact. Aside from ability to defer costs in GA/MS (and annual filings in AL and gas LDCs insulated), the utilization of CARES Act loans for commercial and low income customers (loans forgiven as long as utility bills are paid) should help to alleviate cash flow impact. While we still see workforce reduction transition as important to monitor as well as remaining cost contingency relative to percentage to complete (w/ utilization of contingency a good barometer to monitor in terms of execution on costs), focus on upcoming testing data points remain critical to the SO story as start of Unit 3's Cold Hydro testing and execution will indicate if SO can turn the switch on. Net-net maintain Neutral rating given critical execution ahead.

Vogtle execution: watching productivity as Cold Hydro the next key inflection

Following reaffirmation of the aggressive schedule for Unit 3 (May '21) and regulatory in-service date and costs for both units (albeit pushed the aggressive schedule for Unit 4 back to its original May '22 date), commentary during our AGA call suggested no material updates although it has seen a noticeable improvement in absenteeism after reduction in workforce (to 7k from 9k). While we still see workforce reduction transition as important and remaining cost contingency relative to percentage to complete (w/ utilization of contingency a good barometer in terms of execution on costs) as critical to monitor, execution on upcoming testing items remain the most critical inflection point to the story. To that end, we look to Unit 3 start of conducting Cold Hydro testing in the June to July 2020 timeframe, although mgmt. continues to highlight that it has headroom in its plan so that Cold Hydro doesn't need to be done until Sept. to meet the Nov. 21 deadline. *Bottom line, execution at Vogtle for the remainder of 2020 will be critical to the SO story, and we will be keen to hear an update on the next data point in June/July with regard to the start of Unit 3's Cold Hydro testing.*

Examining cost savings and sustainability through outlook

With expectations for load to be down 2-5% for FY20 ($250-400mn impact in base revenues), mgmt. has been broadly confident that focus on O&M reductions would offset the substantial majority of load declines. During our discussions, mgmt. further opined on the ability to sustain these cost reductions more indefinitely, suggesting that nearly 2/3rs of its targeted range could be sustained (hiring freeze and new work from home capabilities) while 1/3rd are likely to be a headwind in future periods as there can only be a delay in items such as vegetation mgmt. for a period of time. While we perceive ability to maintain '20 guide (at least conceptually) as a positive given pervasive concerns of EPS guidance reductions across the space through focus on cost reductions, the broader commitment to '20 rather than explicit reaffirm is similar to that of CMS and is a tad cautious. That said, mgmt. highlighted a review of headcount reductions at the end of the year if the duration of COVID latest longer than expected as the most obvious upside angle to increased cost savings; albeit we perceive this as potentially the least palatable with regulators given the importance of maintaining jobs.

Watching bad debt expense w/ COVID; CARES Act all the more relevant

SO's gas utilities already have riders and trackers in place that help recover most of their bad debt expenses, but its electric utilities do not. This leaves the electric utilities more exposed to bad debt expense due to COVID. However, similar to a number of other states, both the Georgia and Mississippi commissions have announced orders to implement regulatory assets that will allow recovery for COVID-related cost. In Alabama, there is already a bad debt recovery mechanism within the Rate Stabilization and Equalization (RSE) mechanism. Mgmt. has highlighted that it has yet to see a material increase in arrears payments, although has ample liquidity ($7bn) to withstand a 40% of

customers in arrears ($1bn impact per quarter vs 15% modeled expectations). Aside from ability to defer costs in GA/MS, the utilization of CARES Act loans for commercial and low income customers (loans forgiven as long as utility bills are paid) should help to alleviate cash flow impacts. While we believe SO will ultimately be able to recover most of its bad debt expenses associated with COVID, the timing of this recovery presents uncertainty and further negative revision risk to near-term estimates.

Southern Power: No major impacts from COVID given profile

The vast majority of growth is expected to come from the current wind assets in its portfolio and Hypothetical Liquidation at Book Value (HBVL) accounting as the company did tax equity financing on those assets to further enable growth at the 5% clip. Mgmt. highlighted that even if it stopped investing today it could maintain the 5% growth through the plan period, although remains optimistic around potential upside with $500mn/yr in investments in the outer years of the plan; mgmt. highlighted it has seen some battery opportunities in CA this year. Further, with contracts for gas plants (CTs and CCTGs) based on capacity payments and renewables on take or pay contracts; it does not expect to see any degradation in the revenue stream due to COVID.

Elsewhere, mgmt. remains committed to its Gas LDC business, although continues to see challenges with midstream given the difficulty in rectifying permits (pervasive throughout the space).

WEC Energy Group (WEC)

Our discussions with mgmt. largely focused on the outlook for 2020 in the wake of Covid, with management continuing to emphasize early stages in terms of visibility on demand for the remainder of the year while stressing confidence in its ability to manage O&M expense; long-term mgmt. stresses that the pipeline of large industrials coming to Wisconsin remains intact with a recent addition of a large ship builder to the other high-profile projects previously announced.. Renewable updates were limited other than the previously communicated update on Badger Hollow 1 which has been pushed back by several months in an effort to manage the onsite workforce. Company mgmt. acknowledged being linked to Bloomberg News reports on a possible M&A transaction but declined to comment on the story. Mgmt had earlier talked down M&A on its call seeing few opportunities to find accretive prospects that would meet its 5-7% EPS growth. We continue to maintain our Underperform rating.

Early days in state reopening, but cost cutting remains key lever

WEC mgmt. reiterated its confidence in being able to manage O&M such that higher expenses and lost sales linked with the shut down orders during the Covid pandemic are expected to be offset. Among tailwinds cited was a lower level of maintenance required by leaks in the gas distribution system given the warmer than average winter. We continue to see cost cuts over and above mgmt.'s initial guidance range of 2-3% of day to day O&M as key to achieving the 2002 EPS guidance range of $3.771-3.75. Mgmt. noted that the reopening of business in the state of Wisconsin has been moved ahead of schedule previously laid out by the governor which initially lifted the stay at home order in late May with a phased reopening of some businesses including bars and restaurants in the middle part of the month. Recall that the company provided an updated forecast for electric sales with its Q1 reporting – now assuming small C&I sales declining by 4.6% and large C&I sales declining by 10.5% - mgmt. did not indicate that the forecast has shifted following the early suspension of stay at home orders following a state court ruling in early May.

Generation updates: modest delays in renewables, additional detail on Riverside

Badger Hollow 1 remains the one renewable project with notable delays – following a recent decision to push back construction the project is now expected to be in service in Apr/May 2021 after initially targeting an in service date of year-end 2020. Mgmt. cited the need to maintain social distancing guidelines, making it difficult to mobilize a workforce of ~100+ workers in an area of the state resources for bringing in a large work crew are limited. On the non-renewables front the company is pushing forward with its LNG project which was submitted to the commission earlier in the year and is expected to come for approval later in 2020. Mgmt. provided some additional color on the option to purchase a stake from the newly operational Riverside plant – the option gives WEC the opportunity to purchase a stake in the unit over a four year period; additionally WEC and LNT have the option to co-invest in new utility-scale projects being developed by either party – mgmt. flags the second option as advantageous given the availability of locations available for siting new renewables. Overall, the company expects to maintain adequate reserve margins for the foreseeable future given its ongoing renewables buildout and the retirement of 1800 MW of coal generation assets over the past several years.

Large industrials keep plans intact, ship builder plans to build

Importantly, the *long-term industrial sales forecast is intac*t with mgmt. still expecting large-scale industrial projects from Foxconn, Amazon, Milwaukee Tools, and others to come online as currently forecast with no expectation of altered plans in the state. As a positive data point mgmt. flagged Marinette Marine as a new large-scale project coming online in the Green Bay area as an addition to the industrial pipeline. Bottom line: mgmt. indicated that given the current line of sight the capital plan remains intact as growth in the state continues to be supported by large-scale industrial projects, with an expected updated capex plan coming in the fall in line with the company's normal update schedule.

Price objective basis & risk

Ameren Corporation (AEE)

Our $75 price objective is predicated on a P/E based sum of the parts, valuing each business subsidiary relative to the 2022E ratebase weighted peer multiple of 15.8x for electric. We apply a 2.0x premium to peers at AEE Missouri to account for the improving prospects of capital spend, supplemented by a regulatory jurisdiction becoming more favorable - but lack of decoupling. We apply a 3.0x premium to peers at AEE Illinois to account for decoupling on the distribution business which aids in earnings predictability. The overall business is expected to grow at a more meaningful clip than that of peers - we see a 10% EPS CAGR at IL 2020-2024. At ATXI, we apply a 0x premium to peers to reflect the latest potential step down in FERC ROEs. At the Parent, we assume an in line multiple given the healthy debt metrics with FFO/Debt at 17%+. Electric peer P/E multiple is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector.

The upside (downside) risks to our price objective are the utilities earning their allowed returns or better (worse), a significant increase (decrease) in 30-year U.S. Treasury bond yields, and positive (adverse) regulatory outcomes that could impact mgmt's ability to earn its allowed return

Avangrid (AGR)

Our PO of $47 is based on an SOTP. The utilities are valued on a 2022E with a 1x disc to the electric peer P/E of 17.2x and 17.8x on the gas, given perceived risk to earned ROEs. Both electric and gas peer P/Es are grossed up to 2020 by 5-5.1% to reflect capital appreciation across the sector. We apply a 10X 2022E EBITDA multiple on the renewables sales earnings but strip out the tax credits/hedge value and apply a DCF (8%, no terminal) and an 8x EBITDA multiple for the small thermal assets (both based on comps). We back out 50% of the non-reg debt at the parent also. We include the value of the two offshore wind awards assuming $3500/kW cost, 6% disc, and 6% construction risk disc. We use an in-line discount for CMP's NECEC transmission project, but probability weight it 40% (broken out as well).

Upside risks: 1) ROE improvement in AGR's network business 2) Improvement in wind resources net capacity factor 3) higher than expected growth from offshore wind opp's.

Downside risks: 1) Iberdrola controls over 80% of AGR, limiting liquidity and exerting control over AGR's activities 2) Reg. relationships/outcomes could deteriorate 3) Existing and likely increasing exposure to the renewables biz results in a number of PPA related risks including commodity, recontracting & tax benefit recovery risk 4) Lack of adequate capital recovery mechanisms could threaten ROE's 5) The renewables biz may not expand as fast as expected or have worse returns 6) Offshore delays.

CenterPoint Energy (CNP)
We value CenterPoint Energy at $18 using a SOTP approach: electric business on an in-line utility multiple of 16.5x on 2022E P/E. We take out any earnings attributable to the transition bonds amortization, as those are temporary and instead add back the DCF value of future payments. For CNP's gas utilities we use an in-line utility gas peer multiple of 16.5x. Both electric and gas peer P/E multiples are grossed up by 5% to reflect capital appreciation across the sector. We integrate Vectren into our model and apply a 60/40% weighting to the gas/electric multiple. For VESCO we apply a 12x P/E multiple. We subtract parent interest expenses at a weighted average multiple. Further we net out the perpetual preferred, and apply a 50/50 weighting to parent debt and add back interest expense for recapitalization. We add CNP's interest in ENBL at the market value. We net out holdco interest at the weighted average P/E.

Downside risks: execution risk, decreases in capex which could support or weaken earnings ability, lower authorized returns, interest rate increases, and lower earnings from ENBL.
Upside risks: increase in capex, higher authorized returns, interest rate increase, better performance from the midstream biz.

Consolidated Edison (ED)
Our $85 PO is based on a sum-of-the-parts analysis applying premiums and discounts to the regulated group multiples (16.0x/16.5x for electric/gas respectively) with a 1.0x premium on gas and electric to reflect decoupling, and a -1.0x discount on steam to reflect volume exposure. We note that both electric and gas peer P/E multiples are grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We applied inline peer regulated multiple at CECONY despite its rate certainty for conservatism as our higher capex expectations are reflected in our EPS outlook. We apply a discounted PE for infrastructure projects given the lack of clarity around the capital structure. We further apply an EV/EBITDA approach on 2022E EBITDA to the CEB business using a 10.0x multiple for both the legacy portfolio and the renewables portfolio seeing it as having higher quality returns.

Downside risks: ED, like all utility stocks, is also sensitive to changes in the market level of interest rates. Utilities historically underperform if bond yields rise, and outperform when they fall. Further downside risks are the inability to recontract storage, adverse regulatory outcomes, a deteriorating regulatory environment, or unforeseen disasters such as the Harlem gas explosion. Customer inflation is also a downside risk. PCG related counterparty exposure has abated as a source of risk but remains worth monitoring.

Duke Energy (DUK)
Our $83 PO is derived from a sum-of-the-parts valuation. We value the Electric and Gas utilities using peer 2022E P/E multiples. We apply a 1.0x multiple premium to Duke's operations in FL/IN to reflect more favorable regulatory environments. We apply an in-line multiple to the Carolinas given risk ahead. We value the other regulated electric utilities at 15.8x and the gas utilities at peer group multiples of 16.3x 2022E P/E, respectively. Both electric and gas peer P/E multiples are grossed up by 5% for the groups CAGR to reflect capital appreciation across the sector. The commercial midstream, and transmission are valued on a 2022E EV/EBITDA basis. We use a 9.0x multiple for midstream and transmission segment, although we assume a 50% weighting for ACP given risks to completion. We add the net present value of renewable segment using an 8% discount rate. We subtract out the impact of commercial debt, and add back for the renewable debt.

Upside risks: constructive rate case results, higher capital expenditure additions vs our assumptions, ACP ahead of schedule, lower interest rates. Downside risks: poor rate case results, operating errors, and negative changes in the regulatory environment, ACP delays. Macro risks: Increases in interest rates and decreases in equity market valuations.

Essential Utilities (WTRG)
Our price objective is $47 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. We apply a 2.0x premium to Peoples Gas given the organic growth opportunities.We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

Risks to the upside include upward revisions to street estimates and further accretion from implementation of the Repairs Tax Benefit.

Sempra Energy (SRE)
Our $127 PO is based on a SOTP valuation based on 2022E net income. We apply a 1x discounted multiple to SDG&E and no premium multiple to SoCal Gas earnings (vs peer multiples of 16.3x and 17.1x, respectively). We use an in-line multiple for TX utility business given uncertain regulatory outlook despite T&D upside. For the LatAm business we value post-tax est for both sale of Peru & Chilean utilities. We value Cameron using a DCF at a 10.0% dis using a CAPM approach off its adjusted beta. We run a DCF on other LNG development and probability weight for project execution. We value the balance of the midstream segment using an EV/EBITDA approach using a 10.0x multiple as the Cameron import pipeline EBITDA doesn't step up until 2020. We further adj. for HoldCo debt & parent drag.

Downside risks: 1) negative reg risk from CA regulatory changes & int'l govts where SRE operates 2) incremental costs associated with Aliso canyon, 3) unanticipated cost overruns or delays for the Cameron LNG & other large organic growth projects 4) Capital markets or execution risk around the proposed Oncor transaction 5) rising rates, volatile natural gas prices & FX risks for SRE's int'l businesses Upside risks: 1) positive regulatory outcomes, 2) higher capex, 3) execution on Cameron ahead of our expectations, 4) lower interest rates.

Southern Company (SO)
Our $58 PO is derived from a SOTP. We use a P/E val approach on 2023 and use peer multiples of 15.7x for electric and 16.2x for gas, respectively (with dis/prem applied per asset depending on growth/risk): we then gross this multiple by +5% to account for sectorwide EPS growth to derive a 12-month forward PO. We subtract the 50% of the 2022 parent interest expense multiple by an electric P/E peer multiple to reflect parent lev supporting the utilities. We net out total parent drag and add back the remaining parent interest expense with a 50% weighting. Both electric and gas peer P/E multiples are grossed up by 5% to reflect capital appreciation across the sector.

Upside risks are: 1) Regulatory outcomes or RO's could be better vs expectations, as exposed to multiple state jurisdictions 2) Additional riders and capital trackers can help the company achieve better than expected ROE, but failure to get riders would hurt SO 3) The nat. gas related biz are relatively new and could prove more or less able to earn an ROE in line with or different from their allowed ROE, 4) high capital forecasts and subsequent earnings streams vs our assumptions
Downside risks are: 1) Regulatory outcomes or ROE's could be worse than expectations, particularly since exposed to mult. state jurisdictions, 2) SO has exposure to Vogtle which could shift earnings, 3) Weather patterns could influence usage or natural disasters could affect system reliability 4) Utilities are subject to interest rate risk.

WEC Energy Group Inc (WEC)
Our $81 PO is based on a 2022E SoTP analysis, based on the large cap electric group multiple of 16.3x and the gas regulated multiple of 16.7x. Both electric and gas peer P/E multiples are grossed up for a year to reflect capital appreciation across the sector.

We apply a 3.0x premium to WEC's WI electric & gas subs to compensate for surety in earnings growth for the next two years following the Commissions affirmation of the recent settlement on above average ROE's of 10%+. We apply a 1x premium to the gas utilities, incl IL's Peoples Gas and North Shore Gas with the Gas System Modernization Program (GSMP) and capex forecasts de-risked following the ICC order. We ascribe a 2x premium vs. the group at ATC to account for the steady nature of earnings growth as well as above average ROE's that are set at a federal level by FERC. We give Power the Future (PTF) a 2.0x premium multiple given the ROE is set indefinitely on historical and new investments. We ascribe an in line multiple for the parent accounting for the interest expense which finances overall utility operations. For the HoldCo adjustment to debt, we net out 50% of HoldCo debt from equity valuation and adjust to add back the parent drag on interest exp.

Upside risks are stronger than expected execution and accelerating capital oppt'y.

Downside risks are inability to achieve historical track record on cost cutting and ability to cont. to scale regulated investments given growing portion from contracted renewables.

Analyst Certification

I, Julien Dumoulin-Smith, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

Special Disclosures

BofA Securities is currently acting as financial advisor to Iberdrola SA in connection with the proposed sale of 50% ownership of the Dry Lake II Wind Farm and 50% of the Copper Crossing Solar Project to Axium Infrastructure Inc, owned by its subsidiary Avangrid, which was announced on 17 September 2019.

BofA Securities is currently acting as Financial advisor to Sempra Energy in connection with its proposed sale of 100% stake in Chilquinta Energia S.A., and Tecnored S.A as well as its 50% interest in Electrans S.A. to State Grid International Development Limited, which was announced on October 14, 2019.

Equity Investment Rating Distribution: Global Group (as of 31 Mar 2020)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1602	52.15%	Buy	1005	62.73%
Hold	713	23.21%	Hold	463	64.94%
Sell	757	24.64%	Sell	382	50.46%

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Diving In: See Opportunity in a Gas & Water Utility Hybrid

Initiating Coverage: BUY | PO: 45.00 USD | Price: 41.00 USD

Bank of America Merrill Lynch

Equity | 15 July 2019

Making a Splash: The gas uplift is real for EPS growth

We are initiating coverage on WTR, the second largest publicly traded water utility, with a Buy rating and $45 price objective. While we view the water sector overall as particularly pricey, we see a unique EPS revision potential for WTR as enabling a unique opportunity: we are above Street pro-forma for the Peoples Gas transaction (even with the full share o/s uplift), with our '20 EPS indicating upwards of $1.74 vs. Street of $1.55 (albeit unclear on what basis); we remain above Street on '21 EPS too with largely flat EPS still ($1.75 vs. Street of $1.66). While proforma EPS remains opaque prior to close, opportunities around Peoples Gas around repairs tax enable a potentially strong start to the EPS profile. While less confident on a precise figure, we perceive an upward bias relative to Street EPS expectations. While shares have already meaningfully rallied off lows, we sense a further re-rating opportunity as comfort emerges around the combined outlook. The deal comes on the heels of WTR's own step-down in EPS with normalization of earned ROEs at its principal subsidiary in PA, which has enabled outsized returns vs. authorized levels for years.

Water remains a pricey, but high quality & growth niche

We see the water sub-sector as lower risk vs. utility peers, with low overall consumer bills, opportunities for municipal consolidation across both water & waste-water systems affording a long tail of opportunities at above-sector growth. Smaller capital investments & recovery mechanisms limit material exposure to discrete project approval & afford for a more consistent return profile. Gas utilities fit many of these criteria with few large discrete projects

Valuing the Combined Company: The Right Move.

We use a SOTP analysis to value the company, applying a blended multiple (26.2x for water and 21.2x for gas). The Peoples Gas acquisition comes as water utilities are trading at what we see as an unsustainable premium to adjacent sectors. The ability to add among the highest growth utility assets at a discount to its own water multiple as particularly de-risking shares & strategically opportunistic.

Company Sector

Water Utilities

Company Description

Aqua America is a regulated water utility providing water or wastewater services to 3M customers in the states of PA, OH, TX, IL, NC, NJ, IN, and WV, with PA segment being the largest contributor to the NI. In Oct 2018, The company announced acquisition of Peoples Gas, a gas utility providing distribution services to 740,000 customers in PA, WV, and KY. The acquisition is expected to be closed by mid- 2019.

Investment Rationale

We see our Buy rating as supported by meaningfully above Street EPS projections on the back of its pending Peoples Gas business and above average ratebase growth.

Bank of America Merrill Lynch

Investment Thesis

We are initiating coverage on WTR with a Buy rating and $45 price target. Our estimates are meaningfully above the street, and we see higher revisions to numbers likely providing support for shares to move yet higher even after their de-risking post equity offering, particularly as we see risk to the multiples of pure water peers with less diverse growth prospects. We see growth as largely driven from Peoples Gas moving forward, where we expect the company to capture strong earnings power from repairs tax benefits in PA. We see an 11% total return to our price objective of $45, with further potential EPS upside if particularly successful in extracting ROE benefits in its core Peoples Gas utility from repairs tax benefits.

Strong Returns with Constructive Reg Backdrop

Following the acquisition expected to close this Fall, the company will be largely located in PA (the company received regulatory approval for Peoples in KY and WV and hearings PA hearings were recently completed) - a constructive utility jurisdiction, and will have a variety of mechanisms in place across states in which it operates to help drive recovery through rates. 46% of the company's legacy business is DSIC eligible, which they can leverage to stay out of formal ratecases, with a step up to 57% of spending DSIC eligible under the combined company. We have seen WTR utilize a repairs tax benefit in their legacy business that has helped to drive earnings without rate cases, and we could see a similar development on the gas side of the business post acquisition. If implemented, this should help to drive returns meaningfully higher over the next several years before any benefit is pushed back through to customers in a ratecase. We expect this to be a big driver of near term earnings, and a large reason why our estimates are well above the street.

What Are the Right ROEs for the Water Biz?

While ROEs are somewhat nuanced across WTR's footprint given varying mechanisms and the black box nature of some ratecase ROEs such as WTR's recent PA case, we expect the company to generally earn their authorized returns across most jurisdictions. 46% of WTR's business is currently DSIC eligible, which they can leverage to stay out of ratecases longer when returns start to fall. While their latest authorized ROE in Pennsylvania - the company's largest jurisdiction - isn't known, we suspect it to be close to around 10%. However, the company should benefit more in 2019 given the forward looking nature of the test year, with returns hovering at authorized levels across their water business looking forward. We see the regulatory construct in NC as the most challenging, with the commission historically focusing on water consumption, which typically declines 1% annually. That said, we note the company's small presence in the jurisdiction (~100K customers). While not likely to be material, an acceleration in muni acquisitions can also challenge modeling ROEs and create some regulatory lag.

Why Diversify into Gas? Ensuring Organic Prospects

Why invest in a gas utility when premiums are so material for stand-alone water companies? We see this as a bit of an experiment as to how investors will value a hybrid utility company considering the strong investor appetite for water today.

We see the gas transaction as principally motivated by its desire to firm up its own EPS growth outlook with the Peoples Gas business projected to grow its ratebase by 8-10% per mgmt. guidance, notably *higher* than WTR's stand-alone prospects of 7% (this is itself slower than the 8.7% EPS CAGR we have for its closest competitor AWK). We appreciate that gas utilities have more meaningful near-term prospects, but the underlying tension that is less clear is the question of how sustainable the ratebase growth profile is for each company? We believe current Street perception is that the ratebase growth outlook for water is more sustainable than that of gas. Should the reality be that gas growth is indeed more sustainable – whether on a discrete basis for Peoples Gas or for the wider gas utility industry –the valuation premium currently ascribed to the water industry could be in question, particularly as it continues to expand.

What about having other businesses? AWK experience has been positive

Contrasting with the Peoples Gas business, American Water, its closest competitor also maintains ongoing non-regulated operations as part of its overall business mix. The company has highlighted how this will not expand beyond 15% of the overall company and is designed to provide complementary opportunities to raise cash in a manner to minimize external equity. We see this firm cap as effective in reducing Street focus on this business at large. While actually achieving EPS growth for AWK has been another story given the specific non-reg efforts pursued, investor willingness to discount the company for these less valuable businesses has been less clear.

Without a set of comparisons, it's hard to say what the 'right' water multiple (and premium vs. electric utilities should be).

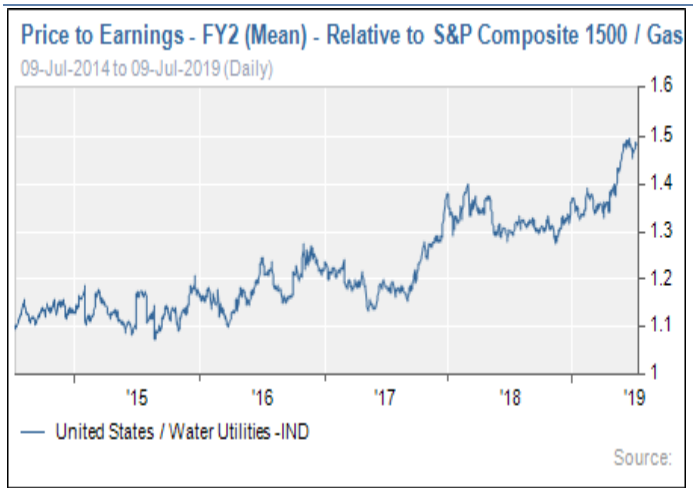
AWK's decision to pursue non-reg efforts as well as WTR's decision to pursue non-water efforts should in theory partially dilute down their exposure to pure-play water utility earnings growth. However, there is little evidence thus far this indeed the case.

We value Aqua America using a SOTP approach, ascribing an average of peer water utilities for its core water operations and ascribing a gas multiple for its gas businesses. We see upside to street estimates for WTR as supportive, particularly given the uncertainly around the water multiple more broadly. Our forward looking estimates reflect earnings on a combined basis with Peoples Gas.

Water: A Premium Product?

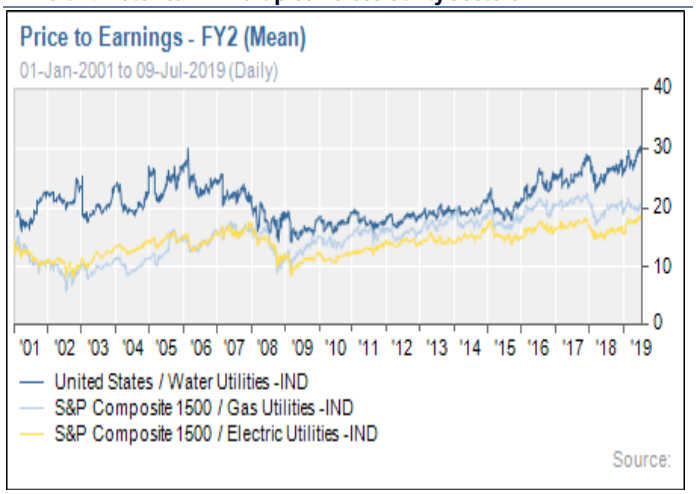
The exhibits below show the historical two year forward P/E ratio for water, gas, and electric utilities, as well as a history of water's premium over gas. While water has consistently traded at a premium to gas and electric, we note a strong acceleration in the spread more recently. We believe the historical premium is largely driven by water utilities' lower project risk associated with smaller and frequent projects, lower compliance and regulatory risk, and lower overall levels of scrutiny.

Exhibit 1: Historical Water Premium Relative to Gas



Source: BofA Merrill Lynch Global Research, FactSet

Exhibit 2: Historical PE multiples Across Utility Sectors



Source: BofA Merrill Lynch Global Research, FactSet

Water Growth Leading the Charge

In the exhibit below, we reflect Consensus estimates for growth across the water, electric, and gas utility sectors. From 2018 through 2021, water is expected to grow at the fastest pace, at an 8% CAGR relative to 5% CAGRs for gas and electric, respectively. We also highlight the smaller variation y/y across the water space.

Table 1: Just how fast do utilities grow?

	2018	2019	2020	2021	2018-2021 CAGR
Water Utilities	4%	6%	9%	9%	8%
Gas Utilities	13%	-2%	10%	7%	5%
Electric Utilities	8%	2%	7%	6%	5%

Source: BofA Merrill Lynch Global Research, Bloomberg

Chart 1: Historical PEs Across Sectors

How did the Peoples Gas Transaction Come About?

The company is acquiring Peoples Natural Gas from SteelRiver Infrastructure Partners. SteelRiver is the successor of Babcock & Brown Infrastructure Fund North America, The current company was created through the acquisition of Peoples in February 2010, TW Phillips in May 2011, Equitable in December 2013, and Delta Gas in September 2017. Our sense is that the Steel River fund was looking to sell as it approaches maturity, presenting an opportunity for Aqua America to diversify their business.

Why does water trade at such a premium & does adding gas create a risk?

This is the second critical question for Aqua America in its bold move to acquire Peoples Gas. We believe much of the outsized premium for water utilities broadly is a direct result of a capital flows from ESG-specific funds allocating capital into the most palatable utilities. We ascribe a scarcity premium to water utilities relative to available capital. That said, we question the sustainability of the water premium broadly following the latest re-ratings, and expect gas driven earnings growth to provide relative support.

Business Overview

Aqua America is the second largest publicly traded water utility with corporate headquarters in Byrn Mawr, Pennsylvania. The company currently operates in Pennsylvania, Ohio, Texas, Illinois, North Carolina, New Jersey, Indiana and Virginia. Following the close of the acquisition of Peoples Natural Gas now expected in Fall 2019 (from mid-2019 previously), the company will also operate in West Virginia and Kentucky, with a pro forma rate base of over $7Bn (70% of combined company net income and rate base in water and wastewater).

Aqua Pennsylvania

Aqua Pennsylvania is the company's largest operating subsidiary, and accounted for ~53% of operating revenues and 71% of the regulated segment income in 2018.

Recent & Pending Acquisitions: Momentum in Muni Tuck-Ins

The acceleration of Fair Market Value Legislation in a number of jurisdictions has made muni acquisitions more palatable, and we continue to expect WTR to drive incremental rate base growth through additional tuck-ins. The company completed six muni acquisitions in 2018 for an incremental 100mn in rate base, with another 6 signed agreements pending closing. While we don't anticipate any large water acquisitions, we expect to see additional announcements over the course of the year. Mgmt has noted active pursuit in four of their existing states totaling over 400K customers, but has not disclosed the particular states they are pursuing the larger acquisitions.

Table 2: Acquisitions in 2018

Source: Company report

Peoples Natural Gas

In 2018, WTR announced the acquisition of Peoples Natural Gas in an all-cash transaction that reflects an enterprise value of $4.3Bn (including $1.3Bn of debt). The company is headquartered in Pittsburgh, PA and provides natural gas distribution services to over 740K customers in three states (PA, KY, and WV; with KY and WV

expanding WTR's legacy geographic footprint). The company has ~15,500 miles of distribution pipeline, 1,500 miles of gathering pipeline and 250 miles of intrastate transmission pipeline. WTR has noted a 3,100 mile bare steel and cast pipe replacement opportunity at about 150 miles per year (implies 20+ years increased capex). In the near term, the company projects annual rate base growth of ~8-10% following a Pennsylvania rate case filed in January and new rates expected in the fall. Through the acquisition, WTR seeks to create a multi-platform regulated utility company, and expects the acquisition to be accretive to earnings in the first full year.

Pipeline Opportunity: Peoples has identified 3,000+ miles of bare steel and cast iron pipe to be replaced under their Long-term Infrastructure Improvement Plan (LTIIP) by 2034 in its PA service territory. The company currently has a Distribution System Improvement Charge (DSIC) in place that allows for the accelerated recovery of capital between rate cases. We see this as a key component of the company's ability to make timely recovery with minimal regulatory lag.

Operating Territories

Below we include the map of operating service territories of WTR and Peoples Gas on a standalone and pro forma basis. While WTR is currently present in the states of PA, OH, TX, IL, NC, NJ, and IN, Peoples Gas currently provides services in the states of KY, WV, and PA. Pennsylvania remains the only state where the footprints overlap.

Rate Base: History and Beyond

Ratebase – WTR prior to Peoples Gas Transaction

We highlight that standalone ratebase for WTR as of yearend '18 stood at $4.5B for WTR with 878k water and 128K waste water connections, respectively. PA remains the single largest contributor to the company, contributing ~69% of the total ratebase; given the size of its existing operations and future growth prospects, PA is likely to remain the most critical state in WTR's service territories.

Table 4: Aqua – Standalone – Ratebase/Customer Details

States	Rate Base ($M)	Water Connections	Wastewater Connections	Total Customers	Ratebase Composition	Total Customer Concentration
PA	3,095	440,487	28,115	468,602	69%	47%
OH	317	145,938	6,878	152,816	7%	15%

Source: Company report

In 2018, WTR closed six acquisitions across the states of PA, OH, and IL that contribute $107M to the YE2018 ratebase, adding ~14K customers in the process (in addition to +8.5K of customer growth organically). The company has guided to 2%-3% customer growth from the legacy water business, with management noting about 70bp from new homes and the remainder from muni acquisitions.

Revenue Surcharge

Revenue surcharge is a mechanism through which regulators allow utilities to recover depreciation and capital costs associated with capital expenditures related to replacing and maintaining infrastructure systems. By permitting utilities to add a surcharge on to customer bills without a full rate case, utilities can reduce regulatory lag between completion of a capital project and the recovery of its costs through a formal rate review process. While WTR is permitted to apply a surcharge in seven states for its water utility operations, six states allow a surcharge for its wastewater operations.

Below we include the tables on rate cases/surcharges that are already approved by the respective regulatory commissions, as well as the cases pending before the commission. While completed and approved rate cases and surcharges in the states of IL, OH, and PA will add ~$5M of annual revenues, pending proceedings if approved could increase revenue requirement by another $78M. That said, settlement agreements pending approval in PA contemplate a $47Mn in revenue vs. an original request of $71Mn.

Table 5: Completed Surcharges in 2019

2019 Completed Surcharges	Revenue Increase ($M)	Type
IL	2	Surcharges
OH	1	Rate Case
OH	2	Surcharge
PA	0	Surcharges
Total	**5**

Capex

WTR expects standalone rate base to be ~$5B at the end of 2019, and the company is projecting a CAGR of 7% through 2021. This is driven by $1.4B in investments over the next three years, with $550M earmarked for 2019. 46% of WTR's current capex is DSIC eligible.

WTR has guided to capital spending for Peoples Gas of $297Mn and $360Mn the next couple of years, largely driven by its Long-term Infrastructure Improvement Plan (LTIIP) for 3,100 miles of gas pipelines (~150 miles/year for next 20 years). 70% of Peoples capex is DSIC eligible to help reduce the regulatory lag. Under a combined entity, management expects capital spending to be 57% DSIC eligible.

Table 7: Peoples gas – Capex Plan

	2016	2017	2018E	2019E	2020E	2021E
Capex $M	140	205	280	297	360	360

Source: Company report

Could Clean Water Legislation Provide another Lever?

The Federal Safe Drinking Water Act, the Clean Water Act, and related state laws and regulations could provide further potential capital opportunities. While the US Environmental Protection Agency (EPA) has established health advisory levels at 70 parts per trillion for Perfluorooctanoic acid and Perfluorooctanesulfonic acid, states are increasingly looking to further limit such levels. Our sense from management is that installation of additional filters relating to stricter regulations could be an incremental $100Mn opportunity.

Texas the Latest to Adopt Fair Market Value Legislation

In 2016, fair market value legislation was enacted in Pennsylvania, WTR's largest jurisdiction, allowing the public utility commission to utilize fair market value to set ratemaking rate base (as opposed to the depreciated original cost of water or wastewater assets) for qualifying muni acquisitions. Under the process, independent valuation experts perform appraisals and the ratemaking base is the lower of the purchase price or average of the appraisals. The legislation ultimately provides a more accretive opportunity through these acquisitions, and we expect to see further tuck-ins across the water utility sector as the legislation gains momentum in additional jurisdictions. We highlight that six other states that WTR operates in currently have fair value legislation: Illinois, Indiana, New Jersey, North Carolina, Ohio and most recently Texas. Virginia is now the only state where Aqua operates without the legislation at the moment.

Ratebase – Peoples Gas

The table below reflects the rate base by state for Peoples Gas as of the end of 2018. Of the $2.1 total ratebase, PA represented $1.9Bn with small allocations for KY and WV. Looking forward, the company expects to grow ratebase at a 8%-10% CAGR through 2021.

Table 8: Peoples gas – Ratebase - standalone

State	Rate Base ($M)	Connections
PA	1,939	693,244
KY	108	38,701
WV	26	12,868
Total	**2,073**	**744,813**

Source: Company report

Peoples Gas filed its PA rate case earlier this year (Docket No. R-2018-3006818) for the first time since 2012. The request is for a revenue increase of $94.9m with a projected rate base of ~$2.1B for the test year ending October 2020. While rates are expected to go into effect in fall 2019, the rate case proceeding is ongoing. After rates go into effect, we expect the company to look at utilizing the repairs tax benefits to drive

material earnings growth for the gas business over the next several years. Under the treatment, the company could maintain any new revenue requirement while driving down the tax rate through expensing as opposed to capitalizing certain improvements.

Table 9: Applicable surcharge and Mechanisms

Stae	Allowed Surcharge	Mechanism
Aqua		
IL	2.5% avg annual increase	QIPS
IN	10%	DSIC
NC	5%	WSSIC

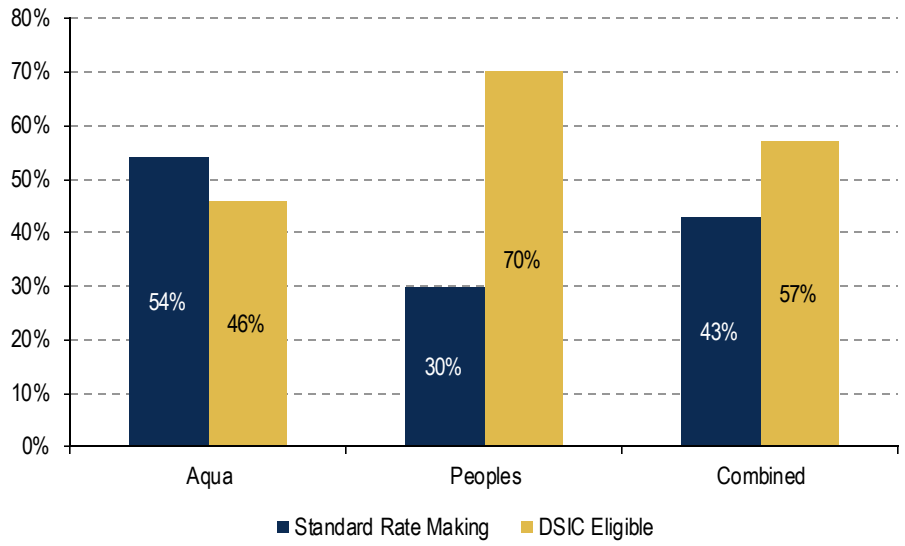
Below, we highlight the % of planned capex from 2019 through 2021 that is eligible for DSIC and that of which is dependent on Standard Rate Making procedures. On a combined basis, management has highlighted over half of pro forma capital spending will be DSIC eligible, an incremental 11% relative to WTR's standalone mechanisms.

Chart 2: % of capex 2019-2021 recovered through DSIC



Source: Company report

Projected Combined Rate base

In the exhibit below, we reflect average rate base by company and on a pro forma basis. Management has guided to 7% for the standalone water utility with stronger growth of 8%-10% for Peoples Natural Gas. Our water utility rate base assumes just under 100Mn in annual tuck in acquisitions.

Table 10: Projected Ratebase

Average Ratebase	2019E	2020E	2021E	2022E	2023E
Water Utility	4,748	5,171	5,513	5,842	6,158

Combined Company Will Be Heavily Exposed to PA Jurisdiction

The Pennsylvania Public Utility Commission (PUC) consists of five commissioners – Gladys Brown Dutrieuille (D – Chairman), David Sweet (D – Vice Chairman), John Coleman (R), Andrew Place (D), Norman Kennard (R) – and 503 commission staff members. The commissioners are appointed to serve five years with the governor appointing a chairman. No more than three commissioners may be from the same political party.

NJ Jurisdiction

The New Jersey Board of Public Utilities (NJ BPU) consists of five commissioners – Joseph Fiordaliso (D - President), Mary-Anna Holden (R), Dianne Solomon (R), Upendra Chivukula (D), Robert Gordon (D) – and 247 staff members. The commissioners are appointed to serve six years with the governor appointing president. The NJ BPU has adopted fair market value legislation as well as a 5% DSIC mechanism for the water utility.

KY Jurisdiction

The Kentucky Public Service Commission (PSC) consists of three commissioners – Michael J. Schmitt (R – Chairman), Robert Cicero (R – Vice Chairman), Talina R. Mathews (R) – and approximately 70 staff members. The commissioners are appointed to serve 4 years with the governor appointing a chairperson.

IL Jurisdiction

The Illinois Commerce Commission (ICC) consists of five commissioners – Carrie K. Zalewski (D – Chairman), Brien Sheahan (R), Sadzi Martha Oliva (R), D. Ethan Kimbrel (D), Maria S Bocanegra (I – Acting Commissioner) – and 232 staff members. The commissioners are appointed to serve five year terms with the governor appointing the chairman.

IN Jurisdiction

The Indiana Utility Regulatory Commission (IURC) consists of five commissioners – Jim Huston (R – Chairman), Sarah Freeman (D), Stefanie Krevda (R), David Ober (R), David E. Ziegner (D) – and approximately 75 staff members. The commissioners are appointed to serve four year terms with the governor appointing a chairman to serve for four years.

NC Jurisdiction

The North Carolina Utilities Commission (NCUC) currently consists of six commissioners – Charlotte Mitchell (D – Chair), TroNola D. Brown-Bland (D), Jerry Dockham (R), James Patterson (R), Lyons Gray (R), Daniel Clodfelter (D) – and about 60 staff members. The commissioners are appointed by the governor to serve a term of six years, with the chairperson appointed to serve four year terms. With the recent resignation of Ed Finley and terms up for James Patterson and Jerry Dockham, Gov Cooper nominated three new commissioners Floyd Mckissick (D) Kimberly Duffley and Jeff Hughes, all of which are pending approval.

OH Jurisdiction

The Public Utilities Commission of Ohio (PUCO) consists of five commissioners – Sam Randazzo (I – Chair), Beth Trombold (I), Lawrence Friedeman (D), Dennis Deters (R), Daniel Conway (R) – and about 330 staff members. The commissioners are appointed by the governor to serve five year terms, with the governor electing a chairperson to serve through the duration of their tenure. The next appointment will be at the conclusion of Friedeman's term in April of 2020.

TX Jurisdiction

The Public Utilities Commission of Texas consists of three commissioners – DeAnn Walker (R – Chair), Arthur D'Andrea (R), Shelly Botkin (R) – and about 215 staff members. The commissioners are appointed by the governor to serve five year terms, with the governor electing a chairperson to serve through the duration of their tenure. The next appointment will be at the conclusion of Botkin's term later this year. The company transitioned to being regulated by the Texas PUC in 2014, and has been enjoying a 12% current authorized ROE, which we expect to fall under a PUC ratecase proceeding.

WV Jurisdiction

The Public Service Commission of West Virginia consists of three commissioners – Charlotte Lane (R – Chair), Brooks McCabe (D), Renee Larrick (R) – and about 230 staff members. The commissioners are appointed by the governor to serve six year terms, with the governor electing a chairperson to serve through the duration of their tenure.

Bank of America Merrill Lynch

With the Company's updated timeframe for their expectations around the close of the Peoples Gas acquisition, we are projecting the transaction to close near the beginning of 4Q. The company has noted that they expect the transaction to be accretive to earnings in 2020 and longer term.

Comparing Aqua America with its peers

In the exhibits below, we reflect the latest WTR metrics relative to other water utilities. As the second largest publicly water utility (after AWK), the company is trading at 23.5x versus the broader water sector at 26.2x 2021 estimates on average. We see the street as largely underestimating the earnings ability for Peoples Gas in the near term, and see upside to estimates as largely supportive of valuation. The company's 2% dividend is in line with peers.

Table 13: DPS Comparison Across Water Comps

What about Gas comps?

The 8-10% ratebase CAGR contemplated for Peoples Gas appears meaningfully ahead of peer gas utilities. We do not ascribe a premium to the gas utility in our valuation, however, as we believe the balance of the stand-alone gas utility sector is awarded a premium in part because of M&A expectations. We do not see WTR as a seller; rather the question is if it will continue to acquire gas utility platforms to complement its organic EPS growth outlook.

Bank of America Merrill Lynch

EPS Estimates

The exhibit below reflects our EPS estimates based on the expectation for the acquisition to close later this year. Given the tangible equity unit offering in connection with the acquisition, the company will provide EPS based on a share conversion and excluding the ongoing interest expense from the units. The equity units will convert between 1.1790 and 1.4442 shares per purchase contract depending on share price, and we assume ~16mn incremental shares based on price. That said, we expect parent drag to be mostly limited to holdco debt.

Our '21 estimates of $1.75 are well above the street at $1.66, driven primarily from an expectation of stronger earnings at Peoples Gas. Earned ROE degradation at PA, also itself a gradual process drives the relatively flat outlook for its core water utilities through the near-term as well.

Table 14: EPS Estimates

EPS Estimates	2019E	2020E	2021E	2022E	2023E
PA	$0.79	$0.80	$0.77	$0.82	$0.86

Valuation

With our estimates, we set a price objective of $45 based on a SOTP analysis. We apply the water utility multiple of 26.2x to the water segment (with no discounts to reflect no over-earnings by '21 at any of the subsidiaries) and 21.2x for the gas segment (with a -1x discount to reflect risks related to both no takeout premium reflected in the balance of the sector in our judgement as well as its over-earning ROE profile particularly upfront), grossing each up for the respected growth CAGR. The question is just over what period of time can Peoples Gas navigate substantive rate increases without sacrificing a refund of merger synergy benefits fully; WTR's PA segment was able to maintain its over-earning position for upwards of 7-years. We net out 50% of holdco debt and 50% of interest expense. While we see risk to the water utility multiple premium broadly, we expect WTR to be supported from strong earnings growth and estimates moving higher.

Debt and Capital Structure

The exhibit below reflects our estimated debt construction across the pro-forma portfolio. We expect debt to move towards 15% at the holdco level, creating an additional parent lag. Our sense from management is that they will look to hold enough debt to finance a run rate of $100Mn in annual muni acquisitions.

Table 16: Debt Projections

S&P: (Aqua Pennsylvania)

Following the announcement of the People Gas acquisition, S&P placed subsidiary utility Aqua Pennsylvania on credit watch with negative implications for the A+ issuer rating and their AA- first mortgage bond rating. S&P noted this reflects the likelihood that the transaction would result in materially weaker consolidated financial measures for the overall group. For the rating agency to keep their current investment rating, they look for consolidated FFO/Debt to be 13%-23%, with their current forecast projecting 11.5%-13% following the close of the transaction.

Moodys: Baa2 – Stable Outlook

In late April, Moody's launched on WTR with a Baa2 rating and a stable outlook issued a on the senior unsecured debt. The rating agency noted the low-risk of water and waste water operations and strong regulatory support in the primary jurisdiction of Pennsylvania and diversity across the rest of the portfolio. That said, they expect a declining financial profile due to the pending acquisition (PNG is currently rated Baa2 positive) and debt funded capex. Post close, Moodys expects holding company debt to be roughly 15% of consolidated debt on their calculation.

While Moody's Stable outlook takes into account the weaker financial profile, key ratios of FFO/net debt and retained cash flow (RCF) are expected to be maintained above 12% and 7%, respectively. We see these as the two key indicators to monitor for potential equity needs.

Management Bios

Board of Directors

We see WTR's board as particularly qualified relative to the balance of the utility sector with numerous former corporate & business-unit level CEOs, but what is particularly remarkable are the multiple executives who have been previously involved in senior management positions within the utility industry. For instance, the experience offered from SO and DUK, two large cap utility peers, is particularly relevant in addressing strategy. The board recently voted to increase the size of their board to 8 members with the election of Francis Idehen, in line with peer AWK. Francis is a particularly relevant director given his prior role in IR at Exelon.

Christopher H. Franklin is Chairman, Chief Executive Officer and President

Christopher H. Franklin is Chairman, Chief Executive Officer and President of WTR. He was previously president and chief operating officer, regulated operations. He has held several key executive roles in public affairs, customer operations and as regional president of the company's southern and mid-western operations, and was responsible for company's corporate and public affairs federal, state and municipal legislative affairs, investor relations, and communications. He joined WTR in 1992 as director, corporate and public affairs. Prior to that, he worked at PECO Energy Company (an Exelon Company) as regional, civic and economic development officer and was responsible for the review, recommendation and promotion of economic development initiatives in the Philadelphia region. He serves as a director on the National Association of Water Companies' board of directors. Previously, he served on the board of directors of ITC Inc.

He earned his B.S. from West Chester University and his M.B.A. from Villanova University.

Elizabeth B. Amato - Director Since 2018

Ms. Amato, a director since 2018, appointed to the Executive Compensation Committee and the Corporate Governance Committee of the Board, is a human resources executive with over twenty years of leadership experience. She has been Executive Vice President and Chief Human Resources Officer of United Technologies Corp. since November 2015. Previously, she was Senior Vice President, Human Resources and Organization of UTC from August 2012 to November 2015. She joined UTC in 1985 and held a variety of the most senior human resources leadership positions across the corporation in both aerospace and commercial building systems, including UTC Climate, Controls & Security (2011-2012), Carrier (2010-2011), Pratt & Whitney (2006-2009) and Sikorsky (1997-2006).

She holds a bachelor's degree in political science from Davidson College and a law degree from the University of Connecticut. She is a recipient of the YWCA Women Achievers Award, is currently a member of the National Academy of Human Resources CHRO Board Academy, and is a member of the Board of Directors for Children's Healthcare Charity, Inc.

Nicholas DeBenedictis - Chairman Emeritus

Nicholas DeBenedictis currently serves as chairman emeritus. He recently stepped down as the non-executive chairman of the board of Aqua America. Previously, He served as Chairman and CEO of Aqua America (formerly Philadelphia Suburban Corporation) from June 1993 to July 2015. Prior to that, he served as senior vice president of corporate and public affairs for PECO Energy from 1989 to 1992 and was responsible for government relations, economic development and environmental policies, plus implementation of the utility's public policy positions. He also serves on the Board of Exelon. Before that, he worked as president of the Greater Philadelphia Chamber of Commerce from 1986 to 1989. He worked as a Secretary of the Department of Environmental Resources (1983-1986) and Director of the Office of Economic Development (1981-1983) in Pennsylvania

government's cabinet positions. Before joining the cabinet, he was associated with the U.S. Environmental Protection Agency fort eight years (1973-1981). He served in the Army Corps of Engineers between 1970 and 1973 reaching the rank of Captain. He is the current president of the Pennsylvania Society, and currently serves on the policy committee of the Pennsylvania Business Council and is a former Chairman of the Council (formerly the Pennsylvania Business Roundtable). He also serves on the Board of Directors for many regional businesses, economic and environmental organizations that include Drexel University, Exelon Corporation, PNC Bank - Southeast Pennsylvania Advisory, P.H. Glatfelter Company, and Independence Blue Cross. He is a past president of the National Association of Water Companies.

He earned his Bachelor's degree in business administration from Drexel University in 1968, and a Master's degree in environmental engineering and science from Drexel in 1969. He received an Honorary Doctorate of Science degree from Widener University, an Honorary Doctorate of Letters degree from Drexel University, and an Honorary Doctor of Humane Letters from Misericordia University.

Daniel J. Hilferty - Lead Independent Director, Director since 2017

Daniel J. Hilferty is Lead Independent Director of the company since 2017. He worked as president and chief executive officer of Independence Blue Cross. Previously, he worked as a Senior Vice President of Corporate and Government Affairs at Mercy Health Corporation in Bala Cynwyd, PA and then as President and CEO of AmeriHealth Caritas Family of Companies (formerly Amerihealth Mercy) in Philadelphia PA from 1996 to 2009.

He earned his undergraduate degree from St. Joseph's University in Philadelphia, Pennsylvania, and a master's degree in public administration from American University. He also serves on the boards of the Greater Philadelphia Chamber of Commerce, the Catholic Foundation of Greater Philadelphia, and FS Investment Corporation III and as chairman of the board of directors for the Blue Cross Blue Shield Association.

Ellen T. Ruff - Director since 2006

Ms. Ruff is director since 2006. She has over 30 years of experience with a major utility company in various management, operations, legal planning and public affairs positions. She is also a partner in the law firm of McGuire-Woods, LLP. Previously, she served as President, Office of Nuclear Development, for Duke Energy Corporation, from December 2008 until her retirement in January 2011. Prior to that, she worked as President of Duke Energy Carolinas from 2006 through 2008. She served Duke Energy organization in various capacities, including: Vice President and General Counsel of Corporate, Gas and Electric Operations; Senior Vice President and General Counsel for Duke Energy; Senior Vice President of Asset Management for Duke Power; Senior Vice President of Power Policy and Planning; and Group Vice President of Planning and External Affairs.. She is also a director of Mistras Group, Inc

Lee C. Stewart - Director Since 2018

Mr. Stewart, a director since 2018 is a private financial consultant with over 40 years of experience as an investment banker, corporate executive and professional director. He has been appointed to the Audit Committee and the Risk and Investment Policy Committee of the Board. Previously, he was Vice President at Union Carbide Corporation from 1996 to 2001, and as Chief Financial Officer of Foamex International, Inc from 2001 to 2002. After that, he served as a director of AEP Industries, Inc., a chemical company listed on the Toronto Stock Exchange from 2000 till 2011, as a director of ITC Holdings Corp. from 2005 to 2016, as well as associated with Momentive Performance Materials Inc., a specialty chemical company in silicone and advanced materials from May 2013 through its successful emergence from bankruptcy in October 2014. He has been director of P.H. Glatfelter, a global supplier of specialty papers and engineered materials, since 2002 and is also director of Mood Media, Inc.

Mr. Stewart has a bachelor's degree from the Wharton School of the University of Pennsylvania

Christopher Womack - Director Since 2019

Mr. Womack is a director of the company since 2019. He has served as President, External Affairs, Southern Company from December 2008 until the present. He has worked in various executive leadership positions at Southern Company since 1988 that includes Executive Vice President, Georgia Power Company from March 2006 to December 2008, Senior Vice President, Fossil & Hydro Power, Georgia Power Company from December 2001 to March 2006, and Senior Vice President, Human Resources from March 1998 to December 2001. He also served as a legislative aide in the U.S. House of Representatives from 1979 to 1987.

Francis Idehen – Director Since 2019

Mr. Idehen is the newest director of the company and was elected to the board at the beginning of June when the board voted to increase their size to 8. He currently serves as managing director and COO at Grosvenor Capital Management, a position he has held since 2017. In his current capacity, he is responsible for overseeing core operations functions, including fund finance, corporate finance, technology, compliance and legal. He is also a member of the firm's operations committee and labor impact fund investment committee. Previously, he has held senior roles at Exelon from 2011-2017, serving as treasurer, head of investor relations and managing director of Exelon's investment office. Prior to that, Idehen served as a Senior Portfolio Manager at Intel. Mr. Idehen has a bachelor's degree in economics from Yale University and an MBA from Harvard Business School.

Leadership Team

Rick Fox - Executive Vice President and Chief Operating Officer, Regulated Operations

Rick Fox serves as Chief Operating Officer (COO) of Aqua America since July 2015 and is responsible for the company's regulated operations, including engineering and environmental compliance.

Prior to that, he served as regional president for Aqua America since January 2012, responsible for managing utility operations in Texas, Illinois, North Carolina, Indiana and Virginia. Before that he was vice president, customer operations and responsible for all customer service operations for Aqua America's regulated operating subsidiaries, including the company's national customer call centers, national meter operations, and company-wide billing and collections. He joined Aqua America in 2002 as manager of customer service following 17 years in the chemical manufacturing industry in both operations and technical management.

He earned his B.S. in chemical engineering from Virginia Polytechnic Institute and State University, and his M.B.A from Villanova University, where he achieved Beta Gamma Sigma honors. He is a member of the American Institute of Chemical Engineers.

Christopher P. Luning - Senior Vice President, General Counsel and Secretary

Christopher P. Luning was appointed Senior Vice President, General Counsel and Secretary for Aqua America, Inc. in May 2012. He is the company's chief legal counsel and responsible for the company's legal, human resources, internal audit, and safety departments. Previously, he worked as a vice president, corporate development and was responsible for corporate development activities. He joined Aqua America in 2003 as assistant general counsel. Prior to WTR, he worked at Hovnanian Enterprises, Inc. as legal counsel.

He earned his B.S. business/political science from Albright College and his J.D. in 1993 from Villanova University. He is licensed to practice law in Pennsylvania and New Jersey.

Matt Rhodes - Executive Vice President, Strategy and Corporate Development

Matt Rhodes works as Executive Vice President, Strategy and Corporate Development for Aqua America since June 2018 and responsible for assisting the chief executive officer with developing, communicating, executing, and sustaining strategic initiatives, with an emphasis on growth. He is also responsible for overall corporate development, as well as acquisitions of regulated and market-based businesses.

Previously, he worked as Managing Director at Goldman Sachs in the Natural Resources Investment Banking Group with a focus on power and utility clients. Prior to that, he served at Bank of America and Duke Capital partners in energy finance roles.

He earned his BBA from the University of Texas at Austin and an MBA, with honors, from the Stern School of Business at New York University.

Robert A. Rubin - Senior Vice President, Chief Accounting Officer and Controller

Robert A. Rubin serves as senior vice president, controller and chief accounting officer (CAO) of Aqua America, since January 2012, and responsible for external and internal financial reporting, taxes, coordinating external audits, corporate accounting and maintaining compliance with accounting standards and principles throughout the company. Previously, he worked as chief accounting officer of the company from 2004 to 2012. Prior to that, he worked as controller for the company from 1999-2004. He joined Aqua America in 1989 as an accounting manager. Prior to that he was associated with KPMG LLP

He is a Certified Public Accountant with a B.S. in accounting from Penn State University and associated with the Pennsylvania and American Institutes of Certified Public Accountants and the National Association of Water Companies – Taxation Committee.

Dan Schuller - Executive Vice President, Chief Financial Officer

Dan Schuller is Executive Vice President and Chief Financial Officer for Aqua America, Inc. and responsible for accounting, tax, treasury, regulatory relations, planning, Sarbanes-Oxley compliance and capital spending in regards to return on investment. Previously, he served as Executive Vice President, Strategy and Corporate Development for Aqua America and was responsible for Aqua's strategic growth initiatives. Prior to Aqua America, he was associated with J.P. Morgan Asset Management – Infrastructure Investments Group as an investment principal. Prior to joining J.P. Morgan, he was a manager at Mars & Co., an international strategy/general management consulting firm and was responsible for consulting engagements related to growth and profitability for Fortune 500 companies and conducted due diligence for private equity firms.

He earned his B.S., M.S. and Ph.D. in civil engineering from Purdue University and also a member of the American Society of Civil Engineers.

Bank of America Merrill Lynch

Price objective basis & risk

Aqua America (WTR)
Our price objective is $45 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. We apply a 1.0x discount to Peoples Gas as we expect earned ROEs to be driven down over time.We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

Analyst Certification

I, Julien Dumoulin-Smith, hereby certify that the views expressed in this research report accurately reflect my personal views about the subject securities and issuers. I also certify that no part of my compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

EV / EBITDA	Enterprise Value	Basic EBIT + Depreciation + Amortization

iQmethod℠ is the set of BofA Merrill Lynch standard measures that serve to maintain global consistency under three broad headings: Business Performance, Quality of Earnings, and validations. The key features of iQmethod are: A consistently structured, detailed, and transparent methodology. Guidelines to maximize the effectiveness of the comparative valuation process, and to identify some common pitfalls.
iQdatabase® is our real-time global research database that is sourced directly from our equity analysts' earnings models and includes forecasted as well as historical data for income statements, balance sheets, and cash flow statements for companies covered by BofA Merrill Lynch.

iQprofile℠, *iQmethod℠* are service marks of Bank of America Corporation. *iQdatabase®* is a registered service mark of Bank of America Corporation.

Disclosures

Important Disclosures

Equity Investment Rating Distribution: Utilities Group (as of 30 Jun 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	61	44.20%	Buy	47	77.05%
Hold	42	30.43%	Hold	30	71.43%
Sell	35	25.36%	Sell	27	77.14%

Equity Investment Rating Distribution: Global Group (as of 30 Jun 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1516	51.23%	Buy	942	62.14%
Hold	687	23.22%	Hold	431	62.74%
Sell	756	25.55%	Sell	380	50.26%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: Aqua America.
BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Aqua America.
The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: Aqua America.
BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Aqua America.
The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: Aqua America.
BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Aqua America.
BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Aqua America.
BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Aqua America.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: Aqua America.
BofA Merrill Lynch Research Personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Merrill Lynch policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for the purpose of any recommendation in relation to: (i) an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report; or (ii) a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including Bank of America Merrill Lynch trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.
Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.
BofA Merrill Lynch Global Research policies relating to conflicts of interest are described at https://rsch.baml.com/coi
"BofA Merrill Lynch" includes BofA Securities, Inc. ("BofAS"), Merrill Lynch, Pierce, Fenner & Smith Incorporated ("MLPF&S") and its affiliates. General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.

This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Merrill Lynch clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.

Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

US Electric Utilities & IPPs

Power Points: ENBL lowers '19, WTR 2Q, AEE equity raise a bit more

Industry Overview

Bank of America Merrill Lynch

Equity | 07 August 2019

ENBL posts solid 2Q19 but points to low-end on '19

ENBL reported 2Q19 earnings of $124mn with adjusted EBITDA of $281mn, slightly ahead of expectations. The earnings contribution translates to ~$0.12/sh for CNP's 53.8% ownership and ~$0.12/sh for OGE's 25.5% ownership. Operationally, volumes continued to improve, principally at the natural gas business (90% of mix) with gathering (+4.3% YoY), processing (+9% YoY), and transportation (+14.4% YoY) all up and offsetting the decline in the oil biz. That said, ENBL mgmt. is now pointing to the low-end of guidance for 2019 net income of $435-$505mn as it doesn't expect hedging benefits that occurred in 4Q18 to follow through into 2H. We see this as cautionary for CNP in particular as concerns increase over midstream weakness given the recent decline in energy prices potentially impacting the company's 2019 and LT guidance. We reiterate our Buy rating on CNP, given confidence in mgmt's outlook and as we see a possible inflection on resolution of TX rate case settlement possible by mid-Sept. However, we look for affirmation of '19 guidance on the 2Q call. For OGE, we maintain our Neutral rating as we await potential indication of upside to capex with pending rate case nearly complete.

WTR: Expect Call to Focus on Pending Acquisition

WTR posted 2Q19 adjusted EPS of $0.37 compared to consensus at $0.36, with mgmt. reaffirming its 2019 guidance range of $1.45-$1.50 (excluding impacts related to the Peoples transaction). Management reiterated expectations for an organic rate base growth CAGR of 7% through '21(we still guide to 7.8% inclusive of acquisitions) and the closing of the Peoples transaction in the fall of 2019. The company also highlighted the recently received a letter of intent from the Delaware County Regional Water Control Authority (DELCORA) to exclusive discussions that could result in a combination with Aqua Pennsylvania Wastewater; if this occurs, we would view it as a nice potential tuck-in acquisition in a constructive jurisdiction where mgmt. could expand in the relatively niche wastewater sub-segment. Mgt is hosting a call at 11am ET, and we expect focus to largely center around the pending acquisition of Peoples and the potential to take advantage of the Repairs Tax benefit for the business; will mgmt. opt to spread this benefit thru its forecast period & how much of an initial jump will be realized? With shares valued off '21 & eventually '22 by 4Q, we stress spreading may become less relevant to valuation as longer-term ability to retain some amount of repairs benefits. We perceive upward bias to Street EPS expectations from Repairs Tax Benefit and further re-rating of shares as comfort emerges on the combined outlook; maintain Buy rating.

AEE: Prospectus for share issuance indicates slightly more

Ameren sold 7.549mn shares for $74.30/sh, indicating a total raise of $560.89mn; not all of the amount will be included in the resulting equity dilution for the company. Even so, this suggests more 2020 equity need than we include in our model to help finance the $1.2bn wind program; we model $350mn in '20. We still expect dilution in '20 even though the forward sale could be settled as late as March '21. We see clarity around the equity need as a positive for the company given some may have been anticipating the raise already. However, we reiterate it is offset by the slightly higher raise than some in the Street anticipated (we perceive up to ~$500 Mn had been in expectations). The equity raise also affirms to us mgmt. is unlikely to be more aggressive on its balance sheet; note the MO rate case is pending.

Price objective basis & risk

Ameren Corporation (AEE)

Our $81 price objective is predicated on a P/E based sum of the parts, valuing each business subsidiary relative to the 2021E peer multiple of 19.1x. We apply a 1.0x premium to peers at AEE Missouri to account for the improving prospects of capital spend, supplemented by a regulatory jurisdiction becoming more favorable. We apply a 1.0x premium to peers at AEE Illinois to account for formulaic rates and decoupling on the distribution business which aids in earnings predictability. The overall business is expected to grow at a more meaningful clip than that of peers - we see a 9% rate base CAGR at IL nat gas through 2023 - and at ATXI, we apply a 1.5x premium to peers even when contemplating the latest potential step down in ROEs. At the Parent, we assume an in line multiple given the healthy debt metrics with FFO/Debt at 19%+. Electric peer P/E multiple is grossed up for a year to 2019 by 5% to reflect capital appreciation across the sector.

The upside (downside) risks to our price objective are the utilities earning their allowed returns or better (worse), a significant increase (decrease) in 30-year U.S. Treasury bond yields, and adverse regulatory outcomes that could affect mgmt's ability to earn its allowed return

Aqua America (WTR)

Our price objective is $45 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. We apply a 1.0x discount to Peoples Gas as we expect earned ROEs to be driven down over time.We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

CenterPoint Energy (CNP)

We value CenterPoint Energy at $31 using a SOTP approach: electric business on 1x premium to the utility multiple on 2021E P/E. We take out any earnings attributable to the transition bonds amortization, as those are temporary and instead add back the DCF value of future payments. For CNP's gas utilities we apply an in-line multiple to the utility gas peer multiple of 21.1x (from 21.2x). Both electric and gas peer P/E multiples are grossed up for a year to 2019 by 5% to reflect capital appreciation across the sector.We integrate Vectren intor our model and apply a 60/40% weighting to the gas/electric multiple. For VISCO/VESCO we apply a 12x P/E multiple, and an 11x P/E multiple for the announced synergies. We subtract parent interest expenses at a weighted average multiple.We value the Energy Services segment we rely on a 12x P/E. We add CNP's interest in ENBL at the market value. We take a 50/50 interest/debt approach, where we net out 50% of interest and 50% of HoldCo debt.

Downside risks: execution risk, decreases in capex which could support or weaken

Bank of America Merrill Lynch

earnings ability, lower authorized returns, interest rate increases, and lower earnings from ENBL.

OGE Energy Corp (OGE)

We value OGE at $45 based on a sum of the parts, separating the utility business from the Enable stake.

For the utility business we apply the peer multiple of 19.2x on 2021E EPS and a 0.5x premium given the improving regulatory environment in OK. Electric peer P/E multiple is grossed up for a year to 2019 by 5% to reflect capital appreciation across the sector.

For the Enable Midstream Partners, LP stake we rely on the current market price of ENBL multiplied by the number of the shares owned by OGE to determine the equity value. We attribute no value to the GP shares, as we don't anticipate IDRs materializing over the next three years.

Downside risks are further declines in the regulatory environment possibly resulting in lower ROEs or other hurdles hindering OGE's ability to earn its authorized return. While not as exposed due to low parent interest, we see interest rate hikes as another potential downside risk. Finally, execution risk on existing capex schedule could put further pressure on earnings growth. Declines in value of ENBL share could also provide downside to our valuation.

Upside risks are shifts towards a more favorable Oklahoma regulatory environment, which could ease OGEs ability to earn its authorized return in the jurisdiction and possibly increase capex plan as management views prospects in the state more positively. Improvements in value of ENBL share could also provide upside to our valuation.

Sell	35	25.36%	Sell	27	77.14%

Equity Investment Rating Distribution: Global Group (as of 30 Jun 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1516	51.23%	Buy	942	62.14%
Hold	687	23.22%	Hold	431	62.74%
Sell	756	25.55%	Sell	380	50.26%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Merrill Lynch clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.
BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.
UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom.
BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.
BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.
In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

Executing on Legacy Water Biz and Tuck-Ins

WTR's latest update shows further execution on the core water business and continued focus on tuck in acquisitions. Following Ohio's adoption of FMV legislation in January, the company announced a purchase agreement earlier this month to acquire a small utility in Campbell (3.2K customers) to drive the latest addition to the $100Mn in expected rate base from signed muni acquisitions. Outside of the Peoples acquisition, we expect water tucks ins to continue driving incremental growth. The Fair Market Value legislation has been passed in 7 of the 8 states the company operates in (following TX in June). Thus, we could see mgmt start to pursue a wider geographic footprint as additional states become more appealing; mgmt highlighted a path to 30K customers as critical. More materially, we highlight DELCORA's recent announcement of intent to commit to exclusive discussions with WTR for a potential acquisition. While purchase price (& thus rate base opportunity) are yet to be negotiated, FMV legislation potentially could facilitate a step up from the ~$240Mn depreciated asset base. If such a scenario materializes, it could be a meaningful driver, albeit it may come with some kind of equity issuance.

Peoples Acquisition Remains on Track: October Order?

Following earlier approvals from the KY and WV PSCs for the Peoples acquisition, the company continues to await final approval from PA after filing a non-unanimous settlement. Latest commentary from management highlighted expectations for an October order from the commission with the transaction to close shortly after. Following the close of the transaction, we would expect more guidance around any upside at the Analyst Day tentatively set for December 5th.

Valuation: Repairs Tax Upside Remains Key

With the latest developments, our estimates are unchanged. We remain above the street as we still credit the company with execution of the repairs tax benefit. Our PO ultimately remains unchanged at $45. Maintain Buy given what we perceive as meaningful upside to estimates from Repairs Tax Benefit and further potential re-rating of shares as comfort emerges on the combined outlook.

Company Sector

Water Utilities

Company Description

Aqua America is a regulated water utility providing water or wastewater services to 3M customers in the states of PA, OH, TX, IL, NC, NJ, IN, and WV, with PA segment being the largest contributor to the NI. In Oct 2018, The company announced acquisition of Peoples Gas, a gas utility providing distribution services to 740,000 customers in PA, WV, and KY. The acquisition is expected to be closed by mid- 2019.

Investment Rationale

We see our Buy rating as supported by meaningfully above Street EPS projections on the back of its pending Peoples Gas business and above average ratebase growth.

Bank of America Merrill Lynch

Capitalizing on Fair Market Value Legislation

During 2Q, Texas became WTR's seventh state to adopt Fair Market Value Legislation when they adopted the legislation in June after Ohio adopted the legislation earlier in the year. Just this month, the company entered a purchase agreement to acquire the water system in Campbell, OH (3,200 customer connections), bringing the total signed purchase agreements for municipalities to 22.6K customers in 2019 and 2020. With WTR the only regulated water utility on size after acquiring operations from AWK, we could see more development in this state in particular following the latest move. Overall, management has noted ~$100Mn in rate base acquisition activity signed set to generate ~$5Mn of incremental earnings. While some of the transactions will close in 2020, the company remains on track to grow customers between 2-3% in 2019.

More materially than the typical tuck-ins, the board of directors of Delaware County Regional Water Control Authority (DELCORA) announced a letter of intent in July committing to exclusive discussions with Aqua Pennsylvania Wastewater that could result in a combination with DELCORA, who currently serves 500K people in 42 municipalities across Delaware and PA. While a sizable opportunity, management noted it would look to put an ATM program in place to raise some add'l equity, partially offsetting potential upside. Aside from a major acquisition, the company doesn't expect any other additional near term equity needs.

On the call, management noted a willingness to expand its footprint to additional states as Fair Market Value legislation gains momentum. We believe All expansion to additional states is increasingly likely following the successful push for passage of the legislation in 7 of the 8 states they operate in.

Peoples Acquisition: Still Guiding to Fall Close

The company received regulatory approval for the Peoples transaction from the Kentucky Public Service Commission in March and the West Virginia Public Service Commission in April after reaching unanimous settlements in the states. Following the approvals in those jurisdictions, the company filed a PA settlement agreement in June that is currently pending before the PA PUC (all but 2 intervenors to the case have entered into or chosen not to oppose the settlement agreement). With the settlement currently under review by the commission given the non-unanimous nature, the company continues to guide to a Fall decision. Specifically, management noted on the call that they expect an order from the commission on October 24th, with the transaction closing shortly after. That said, there is no statutory timeline for the commission to rule on the decision in the state.

EPS Estimates

The exhibit below reflects our EPS estimates which are largely unchanged as we await further developments on the pending acquisition. We remain above the street on '21, driven primarily from an expectation of stronger earnings at Peoples Gas. Earned ROE degradation at PA (assumed to be a gradual process) drives the relatively flat outlook for the core water utilities through the near term. *We appreciate there is substantial latitude in framing the '20 EPS & beyond based on the outlook of this acquisition around repairs tax. We emphasize the shape & form of deal approval remain critical to earnings trajectory, particularly given some mgmt commentary on smoothing its outlook. We stress some scenarios could result in EPS higher than Street consensus still though.*

Bank of America Merrill Lynch

Valuation

On our unchanged estimates, our PO remains $45. We continue to apply a 1x discount to Peoples Gas to reflect related removal of any sector takeout premium as well as discounting the strong returns we ascribe to it in the near term.

Price objective basis & risk

Aqua America (WTR)
Our price objective is $45 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. We apply a 1.0x discount to Peoples Gas as we expect earned ROEs to be driven down over time.We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Specifically, we derive a value of $31 or the Water Business and $16 per share for the Gas utilities. We then deduct $688M which accounts for $2 per share, and gives us our PO of $45.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

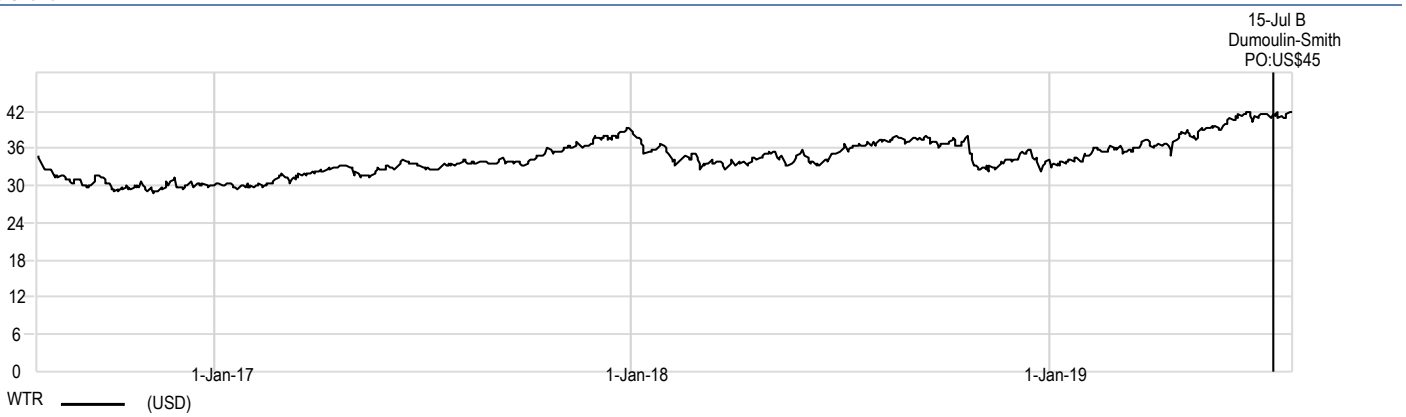
WTR Price Chart



B: Buy, N: Neutral, U: Underperform, PO: Price Objective, NA: No longer valid, NR: No Rating

The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of July 31, 2019 or such later date as indicated.

Equity Investment Rating Distribution: Utilities Group (as of 30 Jun 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	61	44.20%	Buy	47	77.05%
Hold	42	30.43%	Hold	30	71.43%
Sell	35	25.36%	Sell	27	77.14%

Equity Investment Rating Distribution: Global Group (as of 30 Jun 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1516	51.23%	Buy	942	62.14%
Hold	687	23.22%	Hold	431	62.74%
Sell	756	25.55%	Sell	380	50.26%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Merrill Lynch clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a

short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.
BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.
Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.
UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom.
BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.
BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Merrill Lynch is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.
In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

Snorkeling in the Deep End: A Closer Look at the Repairs Tax Benefit

Reiterate Rating: BUY | PO: 45.00 USD | Price: 44.18 USD

Bank of America Merrill Lynch

Equity | 21 August 2019

Repairs Tax Remains Focal Point...but What Will Qualify?

As WTR continues to progress through the approval process for the pending Peoples acquisition, we provide our latest model with slight tweaks to our estimates ahead of a potential order (Management has guided towards an Oct 24th ruling but note there is no statutory timeline for an order in the state). While latest discussions with the company suggest that they continue to work through a potential settlement, we see likelihood of one materializing as limited. That said, pending what we still perceive as a likely close during 4Q, the company plans to host an Analyst Day the first week of December that should provide a broad update for the combined company. We would expect a consolidated EPS range for 2020 and some longer term growth guidance to be provided, as well as potential clarity around sizing the repairs tax benefit opportunity for the gas business. The previously employed strategy consists of two components – a current portion based on qualified capex which can be elected (with the benefit flowing through in the income statement immediately) and a catch up adjustment component to reflect prior investments that are currently capitalized and depreciated for tax purposes. While the company has clearly articulated plans to elect the *current* component, the *catch up* component remains somewhat more of a wildcard given the requirement of a commission order and potential nuances around how it could be treated. In the past, the company was able to amortize the catch-up deduction for the PA water business over a 10-year period of time to provide additional tax relief. That said, we perceive the commission is more likely to give at least some benefit back to customers if enacted now. Nonetheless, we don't see the catch up component as necessary for our base case scenario, particularly given the likelihood of a ramp in capital investments going forward. While quantifying qualified capex remains somewhat more challenging, we continue to suspect robust ability to earn in PA, which makes up around 90% of the gas business.

Valuation: Shifting +$1/sh to $46/sh on higher multiple

We shift our '20-22 estimates 1% lower as we assume more conservative ROEs for Peoples Gas. That said, we remain 3% above the Street on '21 given what we still perceive as a robust earnings profile likely to materialize as the company moves to elect the current component post transaction close. On our new estimates and after reflecting the latest mark to market of peer multiples, our price objective shifts up $1 to $46.

Company Sector

Water Utilities

Company Description

Aqua America is a regulated water utility providing water or wastewater services to 3M customers in the states of PA, OH, TX, IL, NC, NJ, IN, and WV, with PA segment being the largest contributor to the NI. In Oct 2018, The company announced acquisition of Peoples Gas, a gas utility providing distribution services to 740,000 customers in PA, WV, and KY. The acquisition is expected to be closed by mid- 2019.

Investment Rationale

We see our Buy rating as supported by meaningfully above Street EPS projections on the back of its pending Peoples Gas business and above average ratebase growth.

Smoothing Out the Impact: What Would it Look Like

With the election of the repairs tax benefit the company plans to pursue for 2020, earnings will see a large step up as the company expenses capital costs as opposed to depreciating them over a useful life for tax purposes. The magnitude of the initial increase will ultimately be determined by how much of the capital investment program qualifies for the treatment and whether the commission allows the company to use a catch up component for costs that are currently being depreciated. Our sense is that capital investments back to 2012 could potentially be privy to such treatment – albeit investment was likely more muted relative to the current capital plans – and we don't see management relying on such election. We perceive the commission is more inclined to give at least partial benefit of any catch up component back to customers. If management is able to reach an acquisition settlement – which we don't see as likely given the current timeline – that could include a balancing account to help drive more stable earnings growth in a similar mechanism that has been employed by NEE for storms. Alternatively, the company could look to manage capex in a way that accelerates qualified expenses y/y. We see the level of overall eligibility as the more critical question into the transaction's close and the potential Analyst Day later this year.

EPS Estimates

The exhibit below reflects our latest EPS estimates. Our '20-22 estimates shift -1% lower as we assume more conservative ROEs for the Peoples Gas business (albeit still close to 14%). We remain 3% above the street for '21 given what we still perceive as a strong earnings potential from the election of the Repairs Tax Benefit, regardless of the company's ability to capture any benefit from the catch up adjustment. Despite any additional efforts by the company to smooth the impact from the benefit, we perceive a continued upward bias to street estimates.

Table 1: EPS Estimates

Valuation: PO Shifts to $46

The exhibit below reflects our latest SOTP on our new estimates and after marking to market for the latest peer multiples (27.9x vs. 26.2x and 20.7x vs. 21.2x for water and gas, respectively). We continue to apply a 1x discount to Peoples Gas to reflect removal of any sector takeout premium as well as discounting the strong returns we ascribe to it in the near term. Our lower gas contribution and multiple was more than offset by the sharp increase in peer water multiples. Overall, our water valuation shifts up $3, while lower gas contribution and higher corporate drag are a $2 headwind relative to our prior valuation. Net net, our PO ultimately shifts up $1 to $46.

Table 2: WTR SOTP

Bank of America Merrill Lynch

Price objective basis & risk

Aqua America (WTR)
Our price objective is $46 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. We apply a 1.0x discount to Peoples Gas as we expect earned ROEs to be driven down over time.We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Specifically, we derive a value of $34 or the Water Business and $15 per share for the Gas utilities. We then deduct around $3 per share related to corp drag, which gives us our PO of $46.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

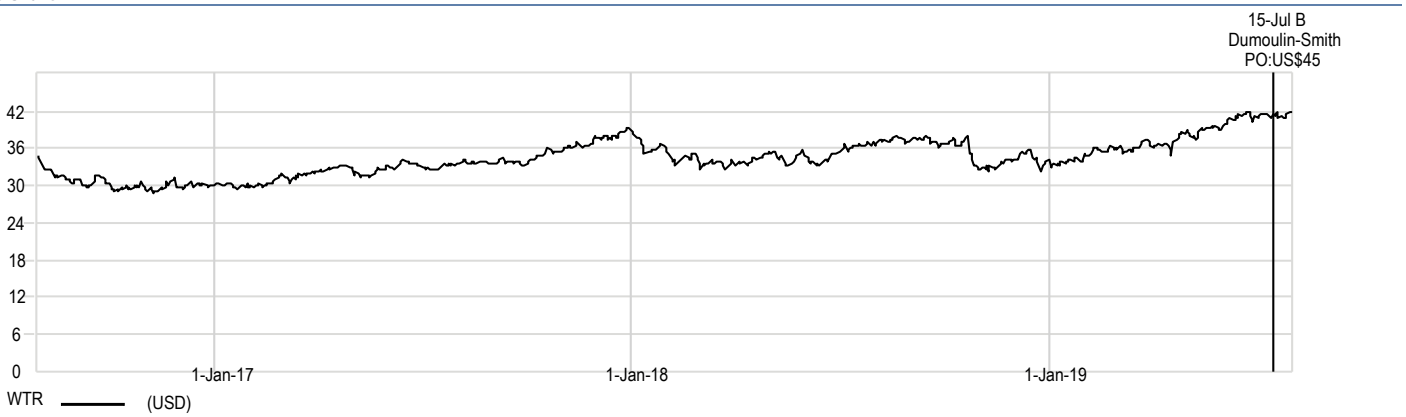
WTR Price Chart



B: Buy, N: Neutral, U: Underperform, PO: Price Objective, NA: No longer valid, NR: No Rating

The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of July 31, 2019 or such later date as indicated.

Equity Investment Rating Distribution: Utilities Group (as of 30 Jun 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	61	44.20%	Buy	47	77.05%
Hold	42	30.43%	Hold	30	71.43%
Sell	35	25.36%	Sell	27	77.14%

Equity Investment Rating Distribution: Global Group (as of 30 Jun 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1516	51.23%	Buy	942	62.14%
Hold	687	23.22%	Hold	431	62.74%
Sell	756	25.55%	Sell	380	50.26%

* Issuers that were investment banking clients of BofA Merrill Lynch or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Merrill Lynch Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Merrill Lynch report referencing the stock.

Price charts for the securities referenced in this research report are available at https://pricecharts.baml.com, or call 1-800-MERRILL to have them mailed.
BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: Aqua America.
BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Aqua America.
The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: Aqua America.
BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Aqua America.
The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: Aqua America.
BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Aqua America.
BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Aqua America.
BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Aqua America.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: Aqua America.
BofA Merrill Lynch Research Personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Merrill Lynch policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for the purpose of any recommendation in relation to: (i) an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report; or (ii) a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including Bank of America Merrill Lynch trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.
Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Merrill Lynch.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Merrill Lynch clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Merrill Lynch, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Merrill Lynch is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.
Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.
UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Merrill Lynch entities located outside of the United Kingdom.
BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.
BofA Merrill Lynch, through business units other than BofA Merrill Lynch Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Water on Wall Street: Takeaways from Our Inaugural Conference

Industry Overview

Splashing into the Water Industry

On Thursday, we hosted our Inaugural Water on Wall Street Conference in New York City with AQUA, AWK, AWR, CWT, HASI, MSEX, SJW, WTR, and YORW as well as a number of state regulators and industry experts. There were a variety of panels throughout the day with updates from company mgmt. and latest thoughts on trends and the state of the water industry. Key themes included what to make of emerging contaminates and expectations for further consolidation across the water industry against a backdrop of accelerating legislation momentum and stressed municipalities. Open the note for full takeaways.

Legislation, Infra Pressures to Drive Consolidation

Across the panels, speakers continuously emphasized the incredibly fragmented nature of the water industry. There are over 50K community water systems in the US, ~85% of which are publicly owned. This translates to a modest share for IOUs, particularly when contrasted with electric and gas (~3,000 electric utilities, the majority of which are structured as IOUs) and we increasingly view a clear cut opportunity for continued consolidation across the space. Given limited governmental funds and rising pension liabilities, we perceive a growing struggle around muni's abilities to inject the investments needed to maintain the water systems (with at least 1,200 systems deemed to be non-compliant with regards to the safe water act). Enabling legislation continues to pick up across states with FMV (FL likely to introduce next) & Single Tariff legislation gaining momentum and the Water Accountability Act starting to emerge (with IN following NJ's lead). We see this as creating a perfect backdrop to enable acquisitions - albeit not all of these states are created equal - with capital likely to flow to the most constructive jurisdictions. Meanwhile, discussions highlighted more limited participation from private equity players with underexposure to the space and a slower momentum around P3s in the US relative to other countries. Bottom line, we continue to expect an acceleration of tuck in acquisitions for the IOUs. One critical question is whether a constructive outcome with JEA in FL will drive more large acquisitions going forward.

Contemplating Emerging Contaminants

Another key focal point all day at the conference was around emerging contaminants and how they are changing the industry. Relative to the more publicized fire risks facing electric utilities, contamination is a critical – and likely still underappreciated - risk for the water industry. The EPA has currently established health advisory levels for PFAs at 70 parts per trillion, and concerns were voiced around how commissions will treat investment without a more clear cut standard. A handful of states have already started setting their own levels of stricter standards, and we perceive it as a likely driver of capital investment as awareness continues to be raised. While costs to treat will vary widely depending on technology and what contaminants are in the water, we perceive it as around $0.02-$0.10 per thousand gallons (note that AWK processes 1 billion gallons of drinking water daily). Bottom line, we would expect this to increasingly be a capital investment consideration and a potential driver for consolidation longer term as a more standard set of guidelines are adopted and municipalities are forced to comply.

BofA Securities does and seeks to do business with issuers covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

JEA: Jacksonville Electric Authority

Unauthorized redistribution of this report is prohibited. This report is intended for bjdingerdissen@aquaamerica.com

How do we think about the sector?

Growth remains consistently robust and the merits of a premium to the electric and gas peers remains clear. We perceive the latest re-rating higher as preventing consolidation more broadly, but could very see a return to consolidation should sector valuations normalize closer to historic norms (on corporate side). That said, municipal deals will continue, albeit always on a protracted basis given the local approvals typically required. We perceive the sector as among the single highest quality within our coverage universe albeit with valuations (earnings yields) approaching that of the cost of debt, it's hard to see how re-rating improves barring significant shifts in interest rates lower. We maintain our Buy rating on WTR and Underperform on AWK.

So what do we recommend?

Despite the latest underperformance this week, we continue to stress the premium valuations ascribed to the water sector broadly, with the group still trading at 25.6x 2022 estimates (vs. electric and gas peers both trading at 18.5x). While we appreciate the scarcity element and visibility into longer term growth, we see risk as underappreciated at these levels – despite growing attention to contamination. We remain Underperform rated on shares of AWK, with estimates coming down out of their latest Analyst Day, and our concerns for convergence of sector multiples. Meanwhile we highlight our Buy rating on shares of WTR given their discrete opportunities into the expected closing of the Peoples Gas transaction; we perceive an upward bias to estimates upon implementation of the Repairs tax.

Regulatory updates

Speakers highlighted views that surcharges including Distribution System Investment Charge (DSIC) programs are critical for return on capital that can be reinvested in future infrastructure projects. Commissions seem to be considering more innovative tools to help as well, whether DSICs, decoupling, or future test years. Commissioners also look to NJ and other states that are considering implementing water quality accountability standards – particularly to level the playing field and ensure smaller and medium-sized utilities keep in line with the same standards as IOUs. We see reducing lag for AWK in its core geographies remains a strategic priority with 59% tracked – and a return to lag in '20 thru rate cases emphasizing this need in particular. Regulatory support across key states remains clear and all the more pressing given litany of water quality issues lingering including lead, arsenic, and now proliferation of PFAS materials (principally fire retardants used that stay in environment; a particular issue on military installations).

We perceive legislation such as Fair Market Value legislation, Single Tariffs, and the Water Quality Accountability Act will all continue to gain momentum, setting up opportunities for further consolidation. We look to Texas as another evolving geography to watch for potential consolidation, especially for Aqua America.

Company Highlights

We include our latest company takeaways below:

Aqua America (WTR – Buy, A-1-7, $45.12)

WTR continues to await final approval for the pending Peoples gas acquisition, which we would expect to come over the next several weeks. Upon close, mgmt noted a path to growing the gas rate base at 8-10% for 15-20 years, a faster pace than the organic 7% that the company expects from the water biz. Nonetheless, mgmt highlighted their continued appetite for water and remains bullish on acquisition opportunities (Recall the company announced the acquisition of DELCORA following the initial Peoples transaction, which will already dilute down the 70-30 mix of water-gas that is expected upon close). We perceive less likelihood of mgmt further diversifying away from the pro-forma water & gas portfolio, with the company particularly talking down interest in anything non-regulated. Further – despite the recent move by peer AWK to optimize their portfolio and divest of NYAW and Keystone – we see more of a willingness from WTR to continue to pursue the thriving municipal market. When it comes to entering new territories, mgmt continues to suggest visibility to 30K customers in the state before jumping in. On the other hand, after previously exiting Florida operations, the company noted a lack of interest in pursuing JEA, and we don't expect the state as a likely candidate to grow the footprint (despite the pending FMV legislation). Following the close of the Peoples transaction, we expect the conversation to shift more towards Repairs Tax (and quantifying the impact given limited new details at this point), which we see as a critical driver of earnings and the reason we remain above the street. Reiterate Buy given upside to estimates.

American Water Works (AWK – Underperform, A-3-7, $118.43)

Following their Analyst Day earlier in the week, AWK highlighted their latest five-year plan of $8.8-$9.4Bn, which is $800Mn higher than the previous five-year plan. The company has also laid forward longer term visibility with a ten-year plan of $20-$22Bn for 2020-2029. With the latest guidance, mgmt. reiterated their expectations for 2019 EPS of $2.56-$3.64 while launching 2020 EPS guidance of $3.79-$3.89. Despite the recently announced pending sales of Keystone and NYAW assets, mgmt. has clearly articulated that they don't plan to sell off any additional assets, and the company should be poised to capitalize on the growing trend of M&A amid the latest momentum of legislation & compliance requirements. We further stress the recent decision to de-lever the balance sheet as providing additional flexibility to pursue acquisitions. That said, we reiterate our Underperform rating given the lofty valuation.

American States Water (AWR – Not Rated)

American States Water Company (AWR) is a consolidated low volatility water company that operates through 2 subsidiaries; 1) Golden State Water Company (GSWC) and; 2) American States Utility Services (ASUS). GSWC is a regulated water and electric utility the serves 261,000 and 24,000 customers across California, respectively. Meanwhile, ASUS is a contracted service for water/wastewater systems that serves military bases under 50-year contracts. The EPS breakdown is 76% GSWC (8% belonging to the electric utility with the other 24% coming from ASUS). The company expects to have continued military success as it won two RFP's for military bases over the past two years. Although the company operates an electric utility in California, mgmt is not overwhelmingly concerned about wildfire risk given the system does not contain any transmission lines and is also at 7,000ft of elevation (less winds). AWR emphasized that it has been able to continue to seek the benefits of forward test years.

California Water Service Group (CWT – Not Rated)

CWT mgmt. discussed the company's growth priorities, rate setting backdrop, and unique regulatory environment in the state. CWT recently filed a settlement with the CPUC in the company's general rate case which includes $609Mn of new capital spend

and $200Mn of authorized improvements spent in prior years – mgmt. notes this represents 85% of the company's ask, an improvement over the 80% established in the previous case. The company had been expecting a settlement before the end of the year but mgmt. now expects the timeline to be pushed to Q1 2020 given the ongoing PCG situation remains the top priority for the CPUC. Mgmt. flagged that the company actively works with regulators to remain in sync with state priorities, highlighting its decoupling mechanism as generally supportive of state water conservation efforts - in particular in light of the drought conditions seen during the previous decade. In terms of M&A (mgmt. has made tuck-in acquisitions in the past year in Washington state and Hawaii), the company sees systems with 1,000 – 5,000 customers as its target range. CWT plans to file its Cost of Capital with the CPUC next May, as public water utilities in the state synchronize their filings – mgmt. expects an improved cost of debt (4.5% currently vs 5.5% in the previous filing) to provide some headroom in the upcoming filing. Inverse Condemnation remains a risk for water utilities though not to the extent that it affects electric utilities. While water availability remains an issue in Western states including California, supply for residential and commercial customers is a lesser concern in mgmt's view with 80% of California demand driven by agricultural customers.

Middlesex Water (MSEX - Not Rated)

MSEX mgmt. expects to deploy $325m in capital in 2019-21 in its New Jersey and Delaware service territories. The spending will be driven by three projects including a Western Transmission Main ($50m), new treatment plant ($70m), and unlined and aging pipe replacement ($35m). The total plan is forecast by mgmt. to grow to $1.1B by YE 2021 with an approximate $800/300 split between NJ and DE. MSEX remains open to consolidating smaller municipal systems, having recently acquired a 1000-customer system in Delaware. While the company has not articulated a formal goal for EPS growth in the forecast period, mgmt. does expect its DPS payout ratio to increase from 49% in 2019 to a range of 65-70% in the coming years. MSEX is subject to a Distribution System Improvement Charge (DSIC) in both its NJ and DE jurisdictions which allows accelerated recovery of certain pre-approved investments subject to a cap. Mgmt does not anticipate approaching its 7% cap in Delaware in the near term owing to the system's relatively young age.

SJW Group (SJW – Not Rated)

SJW Group has completed transformative M&A activity – amounting up to 40 acquisitions in the last 10 years alone. The company sees these purchases as great for diversification when it comes to location (the company sits across four states), regulatory environment, weather, and availability of water; SJW Group sees diversification as a level of comfort and safety. Each geograpy provides different benefits: Silicon Valley, CA represents 60% of earnings, the Austin-to-San Antonio, TX region grew 16% last year (8% organically and the rest through M&A), and the CT and ME communities provide what SJW sees as the best in class regulatory relationships. The company has increased its payout ratio in recent years to increase its competitiveness with other companies. Finally, we note the company now has the third largest pure-play water utility ratebase in the country.

The York Water Co (YORW – Not Rated)

The York Water Company (YORW) is a water utility that serves customers ~200K across the state of Pennsylvania and is currently the oldest stock that trades on the NYSE (founded in 1819); The company currently has a 42/57% debt/equity ratio coupled with an A- credit rating from S&P. The company also has an average demand of 20Mn gallons of water per day (vs. 40Mn capacity) and is replacing 1% of its infrastructure per year (based off a 100yr rate). Of all of the publicly traded water companies YORW is the most expensive; it trades at 35x '21 earnings vs. the comp set avg of ~29x (inclusive of YORW). In addition to its water utility services, the company also owns and operates wastewater collection systems, which mgmt thinks will grow near-term given constructive legislation in the states (Act 11). The act ultimately combines water and wastewater revenue into one – meaning that the company can now buy a wastewater

system and allocate the cost over all its customers, thus preventing rate shock. Further positive legislation in the state includes Act 120 which allows the company to replace led lines at no cost to the customer. Mgmt emphasized that their presence in one state – and a constructive one at that – as a key advantage relative to larger peers.

PE investment in water infrastructure

Broadly, private equity investment in infrastructure has increased at a 16% CAGR over the last 10 years, to nearly $500bn by 2018 (incl. $312bn unrealized value, $179bn dry powder). This has resulted in upward pressure to valuations on private infra asset valuations, while fundamental valuations have not changed materially, given the tremendous amount of capital looking to be deployed. Water assets, however, have seen limited activity, averaging only 2.8% of annual infrastructure deal flow (3% water in 2018). Select opportunities do exist in certain areas including industrial water, water-as-a-service, technology deployment, and on-site residential wastewater.

We see this as driven by a number of challenges to water investment. These include:

1. **Investment size:** Few opportunities in the $200-$500mn EV range, with the market generally divided between larger publicly traded companies and municipal assets as well as many much smaller systems. Roughly 56% of systems serve less than 500 customers, representing only 1.6% of people served.
2. **Rising valuations:** Many assets reaching above 2x rate base valuations
3. **Change of control regulations:** Commissions skeptical of the PE model
4. **Limited flow of Public-Private Partnerships:** Municipalities have shown limited willingness to privatize facilities
5. **Diverse asset class:** Wide range of opportunities including IOUs (investor-owned utilities), water technologies, wastewater, water-as-a-service, etc.
6. **Political-related issues**

Storm Water Remediation

We highlight sustainable infrastructure opportunities as including stormwater remediation, environmental restoration, and water & wastewater infrastructure. Within wastewater infrastructure, the American Society of Civil Engineers estimates $271bn of needed facility upgrades in order to meet demand of an incremental 56mn users by 2032, while $1tn may be needed to update and upgrade water infrastructure.

HASI sees opportunities within storm water remediation, including $7mn investment in four projects to slow pollution runoff into downstream waterways in the Chesapeake Bay area. Waterway restoration and wetland mitigation credits are another opportunity: credits are generated through state or private restoration projects, and then banked and sold to offset environmental impact. In addition to the Chesapeake Bay and Great Lakes areas, these have some prevalence in the Gulf Coast with refineries needing to mitigate the impact on land in order to obtain permits for construction.

Public sector funding poses various limits. Federal funding includes the WIFIA (Water Infrastructure Finance and Innovation Act of 2014) program, which only funds 49% of the project cost, with a 35-year maximum duration. While state revolving funds have a low cost of capital with a 30-year maximum loan term, projects are ranked with preventative maintenance and plant expansion not considered to be a priority. Tax-exempt funding sources need voter approval and also take time to implement.

Private capital is also available for infrastructure funding purposes, with water public-private partnerships (P3) an option, although we note these can be challenging to find given a limited number of opportunities as well as municipal hesitancy. Specifically, P3s are contracts that allow a private partner to construct, upgrade, operate, and/or manage

a public service facility or system while investing capital, while the public entity remains ownership; income generated is shared between the two parties.

While HASI did not specify return criteria for their water investments, we note that their sustainable infrastructure portfolio yields 5.6% while their BTM portfolio has an 8.0% yield; their overall portfolio yield is 7.7% as of 3Q19. HASI expects water returns to increase over time given an underserved market with pressure for infrastructure investment to build in this market.

Price objective basis & risk

American Water Works (AWK)
Our PO for American Water Works is $130. We apply a 26.0x P/E multiple to American Waters 2022E earnings based on the water peer multiple and a 8.3% group EPS CAGR for '18-'22, as we see AWK largely driving the peer multiple as the largest publicly traded water utility.

Risks to the downside are increase in market interest rates, potential impact of tax reform on utilities, operational errors, changes in valuation levels for water utilities. Risks to the upside are accelerating muni acquisitions, multiple expansion, and constructive legislation in regulatory jurisdictions.

Aqua America (WTR)
Our price objective is $47 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. We apply a 0.5x discount to Peoples Gas as we expect earned ROEs to be driven down over time.We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

Analyst Certification

Equity Investment Rating Distribution: Utilities Group (as of 30 Sep 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	67	47.86%	Buy	51	76.12%
Hold	36	25.71%	Hold	24	66.67%
Sell	37	26.43%	Sell	26	70.27%

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2019)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1517	50.30%	Buy	964	63.55%
Hold	680	22.55%	Hold	434	63.82%
Sell	819	27.16%	Sell	408	49.82%

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

US Electric Utilities & IPPs

The Virtual Boston Conference Day 2: Who Said What?

Industry Overview

Summarizing the key events & updates

Our latest sector-wide Power, Utilities & Renewable Leaders conference concluded yesterday. While we hosted 50+ companies overall, stand out meetings yesterday included PEG, FE, ETR, and PCG. Day 2 Company write-ups included below include: AEE, ATO, BKH, CWEN, CMS, D, DTE, DUK, EIX, ETR, WTRG, ES, FE, HASI, NI, OGS, PCG, PNW, PEG, SR, RUN, VST, XEL.

On PEG, we see mgmt. as confident in addressing ongoing dockets and more critically poised to further its divestments in Power, offset dis-synergies, and ultimately seek further refinements of ZECs eventually too. Offshore appears clear too as a further avenue of interest for investors. Meanwhile, FE (Neutral) stated they believe a rate case could come sooner than '24, albeit with just -10c at risk based on regulatory capital structure derived off ratebase; this outcome could be substantially more accretive than our earlier concerns. That said, the pathway to such a rate case filing amidst numerous other pending dockets – and resolution in this favorable regard remains pending a lot of execution. As for ETR, we see mgmt. as quite firm in its expectations for an AR FRP extension to materialize by March 15th (rather than conceding the point of any eventual rate case). Further, LA settlement by late March also key. While we see capex cut risks under less bill headroom, we see affirmation of regulatory structures altogether as enabling some improvement off among widest discounts in group. Finally, PCG's ability to sidestep equity needs and pivot dialogue more constructively with CPUC continues to impress despite the continued pressure on the shares.

Financing with Preferreds continues to expand

Amidst an effort to limit dilution given wide discounts (EIX, ETR) and overall limit/delay dilution (NI), we look for equity-linked alternatives to prove a growing trend in utilities. With ~50% equity content treatment from the rating agencies and modest coupons, we perceive a sharp shift in financing alternatives. FE also affirmed its intent to evaluate such avenues (seemingly over asset sales) to fund any eventual B/S fix required. We see this as an expanding subject of focus from many companies – watch SEC filings for clues on extent of any such offerings.

Texas: Deep Freeze implications

So much of the conference was dedicated to understanding the vast array of implications. While a handful stand out as beneficiaries (SR principally; SO in part), we are looking at an array of cautious datapoints around cost recovery and rate impacts. With few datapoints from regulators yet on the 'crowding out' effect yet of higher fuel cost recovery charges we believe the discount will remain for some time (despite affirmation from many that recovery should prove forthcoming – whether through normal recovery mechanisms or discrete securitizations). We stress Gas LDC inflation in particular remains a cautious point. *We don't expect sharp recoveries post Texas.*

The Bigger Picture from the Administration

Few companies had good anecdoctes, but those that did are focused on transmission.

Just Where is Biden Going?

While front and center issues such as Texas rate impacts dominated dialogues this week, the bigger picture question of just where and how this new administration intends to achieve its clean energy goals remains opaque. We note the EEI CEOs appear to have had an initial meeting with DOE Sec Granholm this week alongside our conference. Early datapoints would appear to indicate a clear focus on transmission, consistent with our earlier discussions with the FERC. While XEL is among the first companies to come back with an expanded transmission plan in response to the election (and its own state targets for 80% by 2030), we expect others to come back later this year with revised outlooks. This view on transmission was shared by many, but remains in part dictated by the planning processes of key RTOs such as SPP and MISO. This should come in three forms: 1) larger project planning awards; and 2) addressing interconnection queues and processes – helping to accelerate deployment; and 3) on the margin, we could see some greater authority on eminent domain granted.

Where is this transmission upside coming? We heard it across the board. AEE, FTS, WEC would be direct beneficiaries of processes in MISO (updates later this year even with latest plan release possible), while others like SO and DUK could see those opportunities arise out of yet to be finalized generation resource planning. Even if unsuccessful in garnering greater renewables for itself, DUK should benefit from added transmission spend from legislation.

What appears clear to us though is that this spending may not materialize meaningfully for some time – adding to longer-dated prospects in the 2024+ timeframe. While we've perceived an acceleration for some time, we see growing acceptance of both a renewed uptick in transmission spend in 2024-2026 as well as generation replacement in this period as well. We see further roll-forwards of updates late this year (EEI principally) inclusive of 2026 in 5-year views as particularly relevant in initially reflecting this accelerating fact pattern.

Biden & subsidies – where to go from here?

We remain sober on more subsidies directly for clean energy – seeing this as potentially protracted. Rather, we remain focused on storage benefits. This remains the arena in which a new subsidy could bolster the market immediately and seemingly offers greater margin to utilities and developers alike given the integration 'complexity' relative to thin margins on offer for solar today.

The blowback from Texas on resource planning

While we identified this in our Day 1 takes, we stress a focus on *retaining assets while still adding renewable resources*. The focus on costs remains on proving out the economics of adding additional solar & wind relative to the *variable* cost of dispatching coal assets (rather than all-in fixed cost structure - which are not trivial). Shifting towards seasonal dispatch for coal assets – principally winter – appears an over-arching trend that started in the Northeast but appears to be spreading elsewhere. On-site fuels during harsh winter weathers that challenge gas deliveries - this includes both coal but especially oil resources to backstop the grid.

Expect more discussion grid support with more renewables too. XEL's next update would appear to be a $0.5-1.0 Bn voltage support effort to pair with its transmission proposal. This remains another avenue to watch peer companies propose, particularly across vast distances in the West with ever greater renewable penetration.

Competition is pervasive

Owning the renewables directly remains a challenge for utilities – and we view a backdrop of competition as adding a greater degree of opacity around capex planning. Assumptions on the split of PPA vs owned opportunities in ratebase is key, in our view (SO, DUK, but also for other smids too: EVRG, POR, PNW).

Ameren (AEE)

Our update with Ameren mgmt. covered several key pending pieces of legislation and their relative levels of support. We note that downstate legislation picked up a key sponsor in the chair of the Utilities Committee which is an incremental positive. While AEE mgmt. expressed clear support for the downstate legislation and its modification of the ROE mechanism to use an average of national rates, it remains unclear to what extent competing legislation including the Clean Energy Jobs Act (CEJA) can garner further support or potentially be reconciled with downstate legislation. Maintain Neutral on AEE.

Renewed support for higher transmission spending

Ameren mgmt. reiterated the growing need for higher levels of investment in regional transmission. Recall that on the Q4 call the company flagged investment in "multi-value" transmission projects (MVP) across its Midcontinent Independent System Operator (MISO) footprint in order to increase the reliability of the grid and ease regional congestion, particularly in light of its own ambitious renewable buildout plan. While such investments would likely have modest upside in the current investment plan through 2025, mgmt. reiterated that it sees upside and potential for sustained rate base expansion as part of its longer-term spending plan, in particular during the 2025-29 period. Ameren's current 5-year plan includes a robust +11% transmission rate base CAGR through 2025, which mgmt. notes does not currently include multi-value projects which have largely been completed, suggesting upside beyond the current plan if a new group of projects were proposed and approved by MISO and relevant regulators.

Downstate bill garners key support

We note that the downstate energy legislation currently making its way through the state house in IL recently picked up the sponsorship of the chair of the influential Utility Committee. Among the key components included in this bill is a modification of the current formula-based ratemaking mechanism and its 580 bps adder in favor of one based on an average of authorized ROEs from the previous 12 months adjudicated nationwide. While we note the proposed methodology is necessarily backward-looking, it would certainly serve to align IL allowed ROEs more closely with national levels as average ROEs tend to drift higher or lower over time. While the current 30Y UST + 580 bps methodology was originally intended to achieve the same goals, today's low levels of interest rates have resulted in far below-average ROEs. The downstate legislation also includes a 40 bps performance-based band based on measurable metrics.

Rate case filing in MO concurrent with wind approvals

Ameren expects a busy regulatory schedule in MO with an impending base rate case filing coming later this month, as well as filing for certificates of convenience and need (CCNs) for the latest renewable generation proposed in its latest resource filing. In MO the rate case process typically lasts 11 months and the most recent wind projects received CCNs after 5-6 months, suggesting that by Q3 the contours of both processes should come into focus. Recall that MO has been a relatively constructive jurisdiction of late, in particular with Ameren's most recent case outcome achieved in Q1 of 2020 given substantial cost offsets more than made up for a top line reduction in revenues and ended up with a ~$100m post-tax annual increase. While Ameren needs to make this filing in order to add its soon-to-be-completed wind generation into rates we note that the current bias across the sector remains toward staying out of rate case filings given regulatory sensitivity around bill increases during the Covid pandemic.

Atmos Energy (ATO)

How to think about financing needs with upcoming $2.5bn bill due

With ATO one of the few gas utilities not to have short-term financing in place (despite $2.8bn in liquidity), mgmt. highlighted that it would expect to have its financing in place by the end of March when bills are due. That said, the company continues to leave open the door for some equity content (as well as ST debt, LT debt and cash on hand) to meet its obligations. We also wonder if there could be some sort of posturing as a negotiating tactic with 3rd parties given the different approach that ATO has taken. At the end of the day, mgmt. did reiterate its 2021 EPS guidance and LT EPS CAGR of 6-8%, so it should provide some confidence that there is clearly a preference for debt (as it awaits approval from regulatory bodies).

Not much new on strategy for recovery or lessons learned in policy hearings

Mgmt. highlighted that hearings last week with executives didn't provide much info given the focus on energy needs, and it still remains too early to predict its regulatory strategy for recovery. Securitization also remains an option in Texas with the session ending in May (special session in June/July if needed), although here too it remains very early in the process and could be somewhat protracted given subsequent approval required from regulators (assuming a bill is introduced and passed) and the time to get financing in place. From a regulatory standpoint, mgmt. highlighted that there is a peaking component to consider for recovery, although the base charge component is 59% of the customer bill; we perceive the peaking component could be somewhat tricky given the likely pushback from those without flowing natural gas. Given the substantial impact to customer bills and discussions from policy makers around these concerns, we see this likely an overhang on shares until more clarity evolves.

$2.5bn seems like a best estimate at this point

In terms of reducing the $2.5bn number, mgmt. highlighted it has good confidence in its estimate and it's still going through force majeure considerations (freeze offs in the West). At this point we don't necessarily see ability to further mitigate these gas purchase costs.

Black Hills Corp (BKH)

Texas Setbacks, but Confidence in Plan

Ahead of our meetings with management, BKH reaffirmed their recently issued guidance despite the latest cold weather challenges - with the company previously disclosing a ~$600Mn elevated purchased gas cost and $800Mn ST debt facility in tandem to improve liquidity. As we await firmer details around regulatory recovery across jurisdictions, we note that several of their states have issued orders requesting applications to seek deferred accounting treatment and we believe recovery is likely over the next 2-3 years (albeit with Arkansas and Kansas potentially more protracted).

Despite the latest setbacks, discussions more broadly continued to highlight confidence in the company's recently laid out five year outlook and inaugural long term trajectory of 5-7%. We further don't view the latest events as impacting equity financing timing with conversations suggesting constructive conversations with rating agencies (recall FFO thresholds are 13% and 12% for Moody's and S&P, respectively) and levers to avoid breaching these thresholds ahead of incoming cash.

Elevated Level of Spend and CO Developments on the Horizon

We perceive particular confidence to achieve at least a $600Mn run rate in annual spend to drive 5-6% growth, with potential for yet elevated levels of investment and asset-light opportunities to further boost margins. This should help offset any challenges around ROE pressures for any upcoming rate cases to help drive elevated growth. After the Colorado commission extended the comment period for the RRR, comments are now due early next week after the earlier rate case dismissal. If a constructive resolution is reached, look for the prior rate case to be reinstated on a 60 day delay from the original procedural schedule that sought new rates for this Fall. If the company has to re-file the rate case, we would look for a new filing in CO this summer. Either way, watch parallel developments around efforts to incorporate another rider for additional relief with more minimal lag.

We reiterate our Buy rating on the shares, stressing elevated rate base growth at an attractive valuation – and see the latest guide of 5-7% LT EPS growth affirming our confidence in what we view as a Best-in-Class SMID.

Clearway Energy (CWEN)

Still confident on 5-8% div growth with upper end of range for '21

Mgmt reaffirmed confidence on LT div growth of 5-8%, with the upper end anticipated for '21 even after adjusting for the the one-time $20-30mn TX storm impact. The high end is still expected (with $325mn CAFD outlook also intact for '21) given a number of significant dropdowns of late, with pro forma CAFD recently raised to $385mn, up $40mn from $345mn after including Agua Caliente (closed Feb 3rd) and the 1.6 GW CEG co-investment. Other opportunities in the pipeline include the 1.1-1.7 GW co-investment with CEG (target closings 2021-2023) which is in the works, in addition to the recently signed agreement for the 264 MW Mount Storm Wind. Notably, this project has a 10-yr contracted energy hedge; we note ~$10mn CAFD on $96mn corp capital, or a 10.3% CAFD yield, with this deal expected to close 1H21. With ~1.7 GW of wind and ~600 MW of solar in the portfolio, mgmt appears to be comfortable with this level of exposure to more volatile wind production, given the higher ~9-10% IRRs to be found vs. solar.

More color on the financing strategy for growth

Mgmt has noted that all commitments made through Nov 3rd have effectively been funded, with deals thereafter to be funded via a combination ATM issuance as well as potential block equity deals in cases where it makes sense, in addition to project debt, green bonds, and retained CAFD. We note CWEN recently issued a $925mn green bond (3.75% senior unsecured notes due 2031) to finance new projects and refi the $600mn 5.75% senior notes. Mgmt highlighted increasingly greater demand for higher-yield debt.

Addressing TX: No change to guidance, need for upgrades will be assessed

Clearway had previously estimated a direct cash impact of $20-$30mn from the recent ERCOT weather event, prior to any potential mitigation factors (although we note cost savings will likely be limited). The impact appeared to have been driven by weather-driven wind outages and contractual hedge obligations from certain facilities. The company is currently assessing potential initiatives that could improve fleet resiliency in response to the TX event. That said, given the low-probability nature of this event, we expect a cost-focused approach to this endeavor. We note that a minority (likely well below 10%) of CWEN's renewable PPAs are firm commitment contracts.

CA gas assets: Re-contracting opps vs. up for sale?

Our discussions also focused on the improving backdrop for Clearway's contracted gas assets in California (two CCGTs, one peaker), with existing PPAs set to expire in 2023. Mgmt continues to assess all options including a combination of bilateral re-contracting on its gas assets given the robust environment (with mgmt aiming for ~7-10-yr contracts for greater earnings stability) and/or divestment of some or part of its ownership. We expect that addressing this uncertainty will be a priority in 2021. We note recent multiples as high as 14x EV/EBITDA from recent comparable West coast deals. For re-contracting efforts, we estimate that RA market prices may be in the $5-6/kw-mo range, with upward movement likely since this summer's rolling blackouts (we continue to assume $6/kw-mo for El Segundo, Marsh Landing, and Walnut Creek).

CMS Energy (CMS)

IRP Focus – Accelerating coal retirements, incremental renewable oppty

Among key discussion focuses with CMS mgmt included its upcoming IRP filing in June. Mgmt continues to indicate likely focus on accelerating coal retirements with Campbell 1 and 2 scheduled for 2031 and Campbell 3 scheduled for 2039 given latest state emission targets set, which could drive incremental renewables spend. We note that Campbell units 1 and 2 account for a relatively smaller portion of overall rate base (4%) than unit 3 (5.5%) and thus we see these as the most likely candidates for a potentially *accelerated* retirement when CMS releases its next IRP proposal. Indeed our channel checks with interveners including the Sierra Club identified these units as a focus of negotiations with environmental groups, further bolstering our view. Recall, while CMS is only required to file an IRP every 5 years, mgmt expressed a preference in filing more frequently with a voluntarily submission every 3 years, given the clarity provided from tri-annual IRP filing cycles around capital spend around resource planning.

Indeed discussions with mgmt affirm focus on retiring remaining coal units with 5 remaining (2 to be retired in 2023 already under first IRP filing in 2018). In terms of replacing capacity with accelerated retirements, mgmt expressed IRP filing to focus upon incremental renewables beyond 6GW of solar through 2030 already approved in the last IRP as well as on battery energy storage deployment, and demand-side management.

ERCOT comparison – better managed wind assets/grid, more extreme conditions

With the latest cold snap and outages across TX, discussions were focused on resiliency with mgmt keen to address key differences between its own operations and ERCOT. In terms of underperformance of wind assets in ERCOT during the cold snap as blades froze, CMS mgmt emphasized that MI was substantially colder than TX (~20 degrees) during this same period without the same issues for its wind assets. To this point, CMS mgmt expressed its wind turbine generally all have lubricant and conditions for components such as the gearbox, paired with its ability to forecast icing conditions to take pre-emptive actions to prevent asset failure, all without having to reach the point of heated turbine blades mentioned in 'winterization' discussions on ERCOT. CMS emphasized its engineering team does a lot of work on loss of load expectations during extreme weather conditions and actively works with MISO around backup and reserve margins – further noting the capacity market in MISO supporting resiliency and appropriate grid planning relative to failures in ERCOT.

That said, given that CMS is already embedding loss of load situations and managing extremes effectively, with its upcoming IRP – despite likely greater scrutiny on reliability and resiliency side of the equation – mgmt does not expect a significant amount of incremental capex from this angle.

With some peer utilities expressing early discussions on shift from coal retirements to usage as a seasonal asset, CMS mgmt was firm in its view that this is neither economic nor feasible (with CEO expertise incl. having operated coal plants). Coal units require consistent management as coal can spontaneously combust when wet and coal piles freeze, making usage as a peaking unit impractical relative to investing in natural gas - in additional to lower heat rate/efficiency even when retrofitting an existing coal unit to gas. Carbon capture is also better for gas relative to coal.

How to effectively decarbonize heating – gas infra remains critical here on H2

Discussions also focused upon CMS mgmt's long-term plan to future-proof its gas pipeline infrastructure in tandem with its plans. Mgmt notes that heat pumps are generally not effective below a certain temperature range (below 30 degrees) with heat pump homes requiring natural gas as a backup still in MI. Notably, mgmt highlights that fully shifting all space heating in MI to electric (currently 75% nat gas and 25% propane – latter being more rural areas) would increase customer utility bills 3x (also needing

modification of homes to HVAC systems) and would also substantially burden the electric grid flipping CMS from a summer peaking utility (as its resources are planned for) to a winter peaking utility with 3x higher peak.

As such, CMS mgmt emphasizes its nat gas pipeline infra remains essential in the most economical way to decarbonize space heating. Near-term CMS expects to reach net-zero methane by 2030. For long-term decarbonization, green H_2 remains particularly notable for use in decarbonizing space heating, but importantly metal pipeline is faced with stress corrosion cracking at even 20% H_2 blending with nat gas. As such, CMS emphasizes a continued trend of replacing cast iron pipe with plastic with 14K miles of plastic pipe and 12K miles of metal pipe in its system currently. Its $10Bn in spend through '30 is primarily to replace 2K miles of metal pipes with plastic and to reduce methane to reach net zero methane target by 2030. Beyond pipe replacement, mgmt notes H_2 space heating would require upgrades of appliances in homes as well as likely upgrades to valves and packing at points where pipe is sealed. CMS emphasizes working closely with organizations such as EPRI on H_2. Bottom-line, decarbonizing space heating presents a substantial investment runway with long build-out process for CMS.

Additional areas to support decarbonization include energy efficiency (1% annually supports ~$10mn in earnings), bio-sequestration (tree planting), RNG, and carbon capture.

Nat gas storage potential to be used as green H2 storage for seasonal ESS

With its substantial net gas storage fields, CMS emphasizes potential to be used as storage for green H_2 produced long-term as well, where H_2 can then be used for either space heating or even for electric generation with retrofits to gas plants (CMS mainly uses GE and expects retrofitted turbines capable of handling green H_2) as seasonal long-duration storage assets.

Dominion Energy (D)

Remain comfortable w/ the VA construct: Filing suggesting no refund a positive

For the upcoming triennial review (2017-2020), mgmt. highlighted it intends to file with the State Corporation Commission (SCC) at March end, suggesting no refund required. We stress GAAP earnings, including the ~$630.7mn expense in 1Q20 that will reduce reported 2020 earnings (14+% ROE otherwise) and $247mn in 2019 for coal plant retirements. We note a key consideration for the upcoming triennial review will be treatment of the coal plant retirement amortization in which D elected to period expense these plants (upfront expense) given the discretion of the SCC. We also view ability to utilize $300-325mn in CCRO investments as a positive, and remain comfortable with potential outcome here. While the time period is expected to be relatively long, with a hearings in Aug/Sept. and a final decision in March, we view both the commission makeup (with Navarro a clean energy proponent) and the construct as assuaging concerns on this front. *We still look for updates from the SCC to see how the new composition votes as there are few datapoints subsequent to her nomination to the role.*

SC rate case pause continues: settlement discussions moving forward

The SC rate case remains on 6-month pause as the DESC agreed in the January 2021 rate proceeding. The parties are required to report monthly on settlement progress with parties currently in settlement discussions. We continue to view the core debate to be around the rate increase during a pandemic. We continue to estimate that the financial impact to be relatively minimal (~2.5c) with a delay, although see the concession from Dominion as likely garnering additional political capital in the state. We still see probable bias for a settlement, with the SC Public Service Commission (PSC) indicating a preference for a settlement vs a fully litigated case, where we estimate a 9.5% authorized ROE (vs staff rec. of 8.9% and company request of 10.25%) as a reasonable outcome. Mgmt. voiced confidence in the case that it filed noting it has not had an SC base rate case in 8 years. We note that while securitization has come up in the past and is likely to continue, mgmt. seems less concerned on the margin given similar proposals have been defeated. While storm securitization is a useful tool, we believe securitization of NND would not be beneficial to D's EPS outlook, although see this as a low probability event.

Combing through the details on capex: watch storage and solar spend

Mgmt.'s 5-yr capex ('21-'25) of $32bn reflects a 43% increase from prior 5-yr plan with 87% of the $23.8bn in spend VA rider eligible (potential for triennial rate review offsets) and base rates diluted down ~26% by 2025. This capex program yields an impressive rate base growth in VA at +13% and 9% overall. We note discussions with mgmt. indicated that there could be some variability (to the upside) with solar spend through federal procurement/policies, although the current law allows for up to 1GW per year (2/3 rate base and 1/3 PPA), coinciding with mgmt.'s current plan. On storage, mgmt. highlighted that this $2bn in spend is likely somewhat less defined given 3 pilot projects ongoing, although did highlight its pumped storage project as progressing well. Undergrounding of distribution appears to be solidified. Net-net, we continue to view the capex profile as favorably, although look for variability in storage and/or solar.

Winter weather event impacts muted

Mgmt. highlighted minimal impacts in terms of fuel purchased costs for its gas LDCs with Utah having some mitigates due to storage and the wexpro model with 50% of supply under a rate base model. No other impacts on assets in Texas were noted (small asset on Ft. Hood, but no impact).

DTE Energy (DTE)

Our update with DTE focused on company mgmt's ongoing efforts to maintain bill stability including its current electric case stayout which is aided by strong residential sales which enabled the company to push back its deferred tax item recovery until December. On the non-regulated side we see some competitive pressures on the Renewable Natural Gas (RNG) portion of the Power & Industrial (P&I) part of the business given additional entrants to the market of late and expect the Energy Trading segment to post a positive contribution in Q1 from long positions that benefitted from price spikes following last month's severe weather. Encouragingly mgmt. affirmed confidence in attaining 5-7% EPS growth on a consolidated basis (post-spin remainco) in '22 despite tax credit earning cliff pressures and share count dilution from settlement of its equity units. Maintain Buy on DTE.

Steady electric rates through '22 expected

Mgmt. provided an update on the expectations for the next electric rate case filing, given strong retail sales to start the year. Recall that the current electric stay out was partially achieved by the utilization of an accumulated deferred income tax (ADIT) asset that was scheduled to flow back beginning in April, though DTE has recently filed to push back the recovery timeframe to December, allowing for rate stability through most of 2022. Given the rate case process in the state of MI that requires cases to be concluded within a 10 month window, the company expects to file in late 2021 for rates effective the following year. The current pending gas rate filing requesting a $195m increase based on a 10.25% ROE is expected to reach a resolution by the end of the current year (current ROE is 9.9%).

Cold snap was a net positive

DTE mgmt. reported strong performance of its electric generation fleet during the extreme cold weather seen in Feb with no material outages or customer impacts – given the strong uptime of its generation fleet DTE electric was able to export 2,000 MW to the MISO grid, while this does not impact earnings it did generate a $20m credit via the company's power supply recovery mechanism which will flow back to ratepayers – an incremental positive in the company's efforts to maintain stable bills in the absence of a rate case filing. The Energy Trading business generated gains as a result of being long spot pricing at the time of market volatility in mid-Feb, though mgmt. reported that the segment remains mostly a support function and does not hold large unhedged positions, in particular on the short side where losses could potentially be unlimited. While some midstream customers, particularly in the Haynesville basin, experienced well shut-ins, the majority of contracts are demand-based and mgmt. reports no meaningful impact on Q1 results from lower levels of activity during the severe weather.

RNG contracting more competitive

The P&I segment principally operates in the RNG market and on-site cogeneration for industrial customers. Mgmt has experienced a slightly more competitive environment in bidding for RNG inputs (manure from ag operations) where contracts have multi-year tenors, though the company continues to actively source new supply and to bring on new projects despite the more competitive environment. Demand, in particular from California given the Low Carbon Fuel Standard (LCFS) remains robust and mgmt. reports being well contracted in the near term. Despite previously pushing out its renewable energy fuel (REF) tax credit earnings cliff to the end of 2021, mgmt. sees a further extension as unlikely though expects to be able to backfill lost earnings over time.

Duke Energy (DUK)

Still waiting on key updates in NC: Rep Ark commentary positive on margin

With upside to the LT plan largely predicated on the IRP/legislative process in NC where, we wonder just how much renewable ownership is possible (relative to HB589 at 30%) and whether mgmt. can hit the top-end of its capex plan in '25-29 ($65-79bn, RAB of $140-150bn in '29) without progress on the legislative front. Mgmt. highlighted that it assume 25-50% ownership, which it feels is conservative. Still with public data points likely few and far between, aside from Rep. Dean Ark (co-chair of the Committee on Energy and Public Utilities) commentary that suggested intent to pass legislation this year and cross-over date for bills in May, we continue to wait for progress on this front. Meanwhile, mgmt. confirmed that regulatory reform such as multi-year rate plans (MYRP) and ROE banding are not needed to hit the mid-point of guidance, although would indeed enhance the LT plan given it reduces regulatory lag. We note that while the Rocky Mountain Institute endorsed these items, getting it through in legislation will be critical to monitor. *We remain quite focused on the legislation- both around the pace of acceleration on carbon reduction as well as proscribed ownership %'s. We stress that much of the 'upside' coming from legislation is likely relatively protracted (2024+) – but utility rider reform could be the most near-term tangible benefit. We also stress regardless of procurement cycle, the transmission investment is a clear opportunity in this '24 time period, and particularly accelerating should the state pursue offshore wind (East-West capacity would need to be substantially expanded).*

Texas impact: 600MW impacted, Gas LDCs not significant

Mgmt. highlighted that it had 600MW of renewables that were affected from the freeze given the inability to produce output; we estimate this likely measured in $MN's. While it did have a 100MW asset that has Brazos as a counterparty, its only 1 of 3 off-takers on the asset. Separately, mgmt. highlighted minimal impact to its gas LDCs across OH, KY, TN, and NC and would expect to recover fuel costs through the typical gas clause mechanism. Bottom line, we see an overall limited impact to DUK on an absolute and percentage terms basis.

IN: could be upside to spending but expect slower transition

While DUK recently sold a ~20% interest in IN to GIC for $2bn to eliminate equity needs with a nice recycling of capital, we don't believe additional transactions are likely in the NT given key data points that await from the Integrated Resource Plan (IRP) filing that mgmt. intends to file. This transition of the fleet is indeed likely to be slower than NC, although mgmt. highlighted that it looks to utilize the least cost financing tool. To the extent the opportunity set for the coal transition accelerates, we could see further sell down to fund growth over-time. Still with IN coal lobbyist particularly strong, we stress not to get too far ahead of expectations here.

Edison International (EIX)

Preference for additional preferred equity seems likely

Following the $1.25bn preferred issuance that has a 5.375% coupon (w/ reset date based on the 5yr treasury rate – potentially something to monitor given increasing interest rates) and is expected to have 50% equity content ($625mn) treatment from the rating agencies, we believe remaining $375mn of equity content could come in the form of preferred as well. While mgmt. left the door open for ATM utilization, the company also suggested that it has the balance sheet capacity to do *more* preferred and also acknowledged PCG's issuance considerations where it could be a different market depending on the product. To that end, we see this as indicating that there is more a preference to do preferred equity than ATM for remaining $375mn.

Customer bill impact: not too many solutions aside from securitization

While the customer bill impact will be a key consideration going forward given the substantial wildfire related spend (and O&M that will be difficult to ratchet back), mgmt. did not highlight any ability to sell assets to mitigate those considerations. While it has seen generally lower rate increases vs. peers, this still remains a consideration. One potential solution could be securitization of bad debt expenses from COVID (although not likely under collections as EIX does not likely meet the requirements). We view this as a potential useful tool given the rate impact that would occur earlier in the year otherwise.

FERC ROE focus in part

Mgmt remains confident that with its fully resolved FERC ROE at 10.3% on a settled basis from its last case this could help avoid the pitfalls of the +50bp RTO adder that otherwise appears at risk in the state. We see some risk of degradation still upon future reviews.

Entergy (ETR)

We caught up with the mgmt. team at Entergy principally focusing on the prospects for outcomes in the ongoing Arkansas Formula Rate Plan (FRP) docket which may see a resolution by the middle of the month. We also discussed the latest System Energy Resources (SERI) complaint filed last week which adds a further Federal Energy Regulatory Commission (FERC) proceeding in addition to the ongoing sale-leaseback case which has been in focus since the Administrative Law Judge (ALJ) ruling came down nearly one year ago. On balance we see a uniquely large number of uncertain regulatory outcomes upcoming, though mgmt. continues to highlight its ongoing contingency planning (as well as recent reiteration of guidance) to deal with the potential for adverse outcomes. Maintain Buy on ETR which we see as deserving of a higher valuation than lower-growth peers.

Arkansas resolution could come by mid-March

Entergy mgmt. laid out several potential paths to resolutions of its FRP proceedings – both for the 2021 rate increase where the Arkansas Public Service Commission (APSC) has initially ordered a $1m annual increase and in the broader 5-year renewal docket. Recall that based on the most recent commission filings, Mar. 15 is the target date by which the commission expects to rule on both issues. In addition to ongoing discussions at the regulatory level, state lawmakers recently put forward an amendment to the APSC appropriation bill seeking to clarify the netting portion of the FRP statute which with a retroactive application would result in approval of ETR's $67m requested increase for 2021 – note that the posted agenda for AR's Joint Budget Committee meeting on Mar 4 does not include the proposed amendment, suggesting sides have not yet reached a consensus. In our meeting mgmt. did not offer new specifics on progress of stakeholder talks citing confidentiality of the process, *though we note the recent reiteration of the long-term guidance assumes the FRP is renewed for an additional five years, a confident signal despite persistent uncertainty.*

SERI gets a new challenge from AR, LA

The APSC along with its LA counterpart have submitted a rate complaint to FERC alleging that ETR has overcharged its AR, LA, New Orleans, and MS opcos via its Unit Power Sales Agreement (UPSA) with SERI. The complaint alleges $360m of costs that were not prudently incurred were passed on to ETR's customers via the UPSA, resulting in elevated bills in service areas where incomes are below national averages. The complaint further alleges that an $800m uprate project undertaken in 2012 failed to increase the plant's output, further harming customers. Given the recency of the latest filing ETR mgmt. only affirmed that it intends to respond to the complaint through the FERC forum. We note however that the SERI has already been the subject of an adverse ALJ ruling one year ago in its leaseback and FIN-48 proceeding, and this latest complaint threatens to push back de-risking of this situation for months or even years given the busy FERC calendar.

Pref proposal coming in proxy; O&M levers

Mgmt. reiterated its expectation of seeking shareholder approval for a preferred issuance in its upcoming proxy, potentially with a convertible component, though the size of the preferred issuance will not be disclosed until the proxy filing. Further mgmt. affirmed its existing levers for managing different regulatory outcomes, including pension, tax, and interest in the context of its flat O&M outlook (inclusive of normalization of 2020 one-time items). On balance we see some degree of levers around Prefs vs common equity, as well as further O&M levers; we perceive some caution to affirming level of cost opportunities that exist ahead of details on the fate of AR.

Essential Utilities (WTRG)

Robust Muni Opportunities despite DELCORA Hiccups

We hosted our latest meetings with WTRG following their earlier guidance roll forward and recent full year results – and ahead of a potential decision from the PA commission in coming weeks around their pending DELCORA transaction.

After the Delaware County Court of Common Pleas issued an order supporting the pending acquisition of DELCORA by rejecting the county's attempt to block the sale, the county appealed the decision and the ALJ recommended the PUC deny the transaction. Given that there are only four commissioners right now in the state, we could very well see a stalemate or see the commission send it back to the ALJ to reconsider add'l evidence as the company works through their concerns. The company expects the commission to address the transaction on either March 11th or March 25th – with the latter seemingly more likely. We stress that the equity doesn't need to be pulled until August if there is a slight delay in the transaction.

Discussions further highlighted potential for muni opportunities to arise out of the pandemic as budgets are further pressured. The company has already outlined $420Mn in rate base opportunities from signed APAs that should generate ~$21Mn in earnings, with announcements of further deals seemingly on the horizon. Following the adoption of Fair Market Value legislation in TX and VA, the company now has the constructive legislation in all eight states of their water footprint. While their water biz has a footprint in TX, the company has noted no material financial impact to the water biz and no financial impact to the recent cold weather events for the gas biz given the location of their operations.

We reiterate our Buy rating on shares, seeing value relative to AWK and longer term re-rating potential as management continues to perform and drive incremental growth through municipal acquisitions.

Eversource Energy (ES)

Offshore Prospects, CT Troubles, and Confidence in Plan

Latest discussions with ES echoed earlier commentary from Orsted around the improving BOEM landscape under the Biden administration – with the company optimistic around a pending schedule from the agency. Despite latest competitive pressures materializing – and particularly evident in the recent NY award with ES not winning any of the ~2500MW – ES continues to have plenty of spare capacity for additional projects and we look towards upcoming RFPs across their footprint. We could yet see further potential tailwinds arise from add'l legislative efforts, with the Clean Future Act the latest push at the Federal level: Similar to earlier developments around tax credits, any further benefits would flow through to ES/Orsted since they don't have flow backs with their customers for the currently contemplated project (contrasted to Ocean Wind with PEG). At the state level, we continue to watch climate policy in Massachusetts legislature and potential for incremental offshore wind targets: we see potential for another 1600MW RFP for offshore wind and more utility owned solar to pass in the next several weeks.

Recall with full year results, the company firmed up their capital plan and noted expectations to be in the upper half of their previously announced 5-7% core regulated CAGR longer term. Annual spend of $275Mn related to Columbia Gas exceeded our expectations and helped drive an 8% consolidated rate base CAGR through 2025 - and latest discussions continue to suggest integration of the acquisition as going well. We view additional ramp in spend at Columbia Gas as just one of the potential upside levers to the formal plan in addition to AMI and EV projects that could materialize. While we continue to await further developments of offshore awards and more granular timing, we expect the projects already awarded to take management comfortably above the current growth rate as they start to come online. While we still see challenges in CT the biggest risk, we perceive a relatively improved environment since late last year and continue to monitor ongoing dockets.

Bottom line, we see risk/reward as balanced. Maintain Neutral.

FirstEnergy (FE)

Deal on rate case appears a unique angle to watch

Mgmt appears keen to resolve its regulatory issues swiftly. What is remarkable to us is the potential to file a rate case either by '24 or even prior – but with mgmt. quite confident that the downside can be limited to just 10c (vs the much more meaningful step change we had been contemplating). It would appear the difference relate to the actual book equity of the Ohio utilities relative to use a hypothetical capital structure. Should mgmt. prove able to reset its rates (risking just -10c-ish) we see this as a uniquely constructive outcome to de-risk the backdrop for the utilities. We see potential further de-risking of shares to enable further re-rating despite the positive improvements already. The question remains just how and whether an (accelerated) rate case would be agreed to given the litany of parallel dockets underway. We view the company as still sincerely interested in pursuing further opportunities to de-risk the backdrop rapidly and come to conclusion around a range of dockets opened up in the wake of bribery investigations.

Asset sales: not so much?

On balance we do not see asset sales as much of a priority considering the tax leakage and relative size of cash needs. We suspect converts and other such structures appear preferable despite being open to sales processes. We see limiting dilution to shares at current levels as a key priority for mgmt.

Greater transparency with AG deal and further steps taken

Our discussions focused around FE's continued steps toward improving transparency and company culture. After FirstEnergy reached a deal with Ohio AG Dave Yost to forgo decoupling revenues, they took this a step further on their earnings call by also choosing to forgo LDR (Lost Distribution Revenues) benefit. Combined, this led to a -15c impact to '20 earnings. With the likely replacement of HB6 perhaps with legislation similar to HB10, we note no provision for LDR in the current pending bill. Mgmt highlighted that per its SEET filing, Ohio ROEs average at 7.6% for 2020 (10% for OH Edison, ~4-5% for CEI and Toledo), relative to 11.9% in 2019. The two main drivers for the decline include the collection of DMR revenues (excluded from '20) as well as the LDR-related charge taken in 2020. With no LDRs in '21+, mgmt would expect ROEs to be as similar ~7.6% levels going forward. Deconsolidation for the SEET threshold is still in pending legislation (passed by Senate thus far), although even Ohio Edison is still well below the SEET threshold (~17-18%) at ~10%.

Internal investigation remains ongoing, but minimal news of late appears pos

With recent 10-K disclosures of 'immaterial' transactions around improperly charging customers, mgmt noted that they have been in discussions with multiple states around addressing these issues and see minimal risk. Otherwise, we have seen minimal announcements and we view this as a positive, although the internal investigation is still underway with an ongoing DOJ investigation. FE is working to address liquidity issues with its FE Forward program potentially bringing cost reductions through O&M and capex efficiencies in addition to broader company transformation over a multi-year period. Further, equity issuance in 2022/2023 could potentially be used as a source of funds to finance a potential penalty (admittedly this longer perceived timeline brings some concerns around length of the federal investigation).

Hannon Armstrong (HASI)

A new era of growth, with further programmatic deals anticipated

With a recently announced 7-10% 3-yr EPS CAGR (up from the prior 2-6% through YE-20), discussions focused on the opportunities ahead given an expanding renewables outlook. Mgmt reiterated strong relationships with its partners Clearway and Engie, emphasizing the close collaboration as well as opportunities for further transactions, particularly given HASI's historical preference for programmatic deals. We expect that these meaningfully sized partnerships could provide Hannon with even further visibility to continue to expand its already robust pipeline That said, while 2020 was a successful year with $1.9bn originations, we expect that $1.0-$1.5bn will be a more normalized run-rate, although we could see upside to investments from an expanding $3.0+bn pipeline. We emphasize that mgmt did not reduce guidance in response to the ERCOT weather event. After assessing the situation, HASI determined that impact was likely minimal and any potential losses would principally be tied to force majeure disputes in the event that facilities were unable to operate. That said, given their preferred equity seniority, mgmt perceives a minor impact to returns over a 20-30 year life. HASI continues to be comfortable with achieving a portfolio yield in the ~7% range.

Mgmt expects leverage to stay in the 1.5-2x range for a period. Although the company's advocacy for an IG rating remains ongoing, it is not a key focus vs. other priorities (given relatively open access to capital markets). We note that mgmt recently amended its ATM equity issuance program, raising it to $500mn from the $350mn from May 2020.

Energy efficiency poses a strong opportunity

Under a Biden administration, we continue to see energy efficiency as an opportunistic growth sector for HASI (which had historically been a key component of earnings growth in the past). Notably, the ESPC program under Obama was expanded twice through executive order, and we see likelihood that Biden could take a similar approach to supporting this program, sometime this year, thus presenting a significant potential opportunity for Hannon. Additionally, we see federal procurement of renewables as another key area of growth, with currently only ~10% of the federal government's procured electricity sourced from renewables. We see the possibility of a new target set for ~35% procurement by 2030+. Finally, a carbon tax also remains on the table, although seemingly less likely than other options.

What to expect on REIT status?

An ongoing point of discussion appears to be the ability of HASI to maintain its REIT status given its increasing focus toward resi solar and other renewable equity stakes. While HASI remains confident in their REIT status over the next three years, they have stated that they see multiple paths ahead and would consider scenarios in which they are not a REIT if it were to mean additional investment opportunities. This remains a low probability event. That said, if Hannon were to go this route, we would expect them to disclose this shift well in advance, with a substantial amount of planning and discussion with agencies.

Tightening resi solar returns – in-line with SPWR commentary

In terms of the resi solar project equity financing business, mgmt expresses that its initial entry into this space was well-timed with much higher returns and particularly attractive rates given its ability to finance mezzanine debt (SunStrong JV with SPWR). That said, HASI mgmt acknowledges that its resi solar portfolio as well as resi solar industry broadly has matured, particularly with the latest economic downcycle and proven asset performance, though resi solar assets remain very much in the money with a lot of value in yield for prior deals still.

As such, HASI expresses that ability for future resi solar biz is more challenging as returns are less attractive from a yield perspective, particularly as resi solar service providers such as RUN can issue corporate capital at extremely attractive spreads rather

than needing project equity from a provider such as HASI. Nonetheless, HASI expressed that its SunStrong JV with SPWR will remain a good source of ongoing business given that it is more of a relationship than one-off project equity transactions. All-in, HASI expressed resi solar is not yet a point where this biz is not attractive at all, though acknowledging returns have definitively tightened – ultimately expect slower LT growth in resi solar (mostly ongoing basis with SPWR) for HASI but emphasis on ability to focus on other asset classes given diversified approach.

NiSource (NI)

2021 guidance has upside and affirmed with PA order

NI mgmt. reaffirmed '21 guidance today with the PUC order on Columbia Gas of PA's (NI Subsidiary) pending rate case, where the PA PUC granted a $65.2m rate increase with 9.86% ROE vs NI's original request of $100mn/10.95% ROE – in-line with previous guide and plan. We continue to think that NI appears among the few remaining utilities with material COVID latitude built into '21 guidance. That said, the company expects things to return to normal in 3Q21 with a vaccine in place. 5c is upside to this year should impacts be less than perceived and remains upside to the LT guidance range.

Financing coming soon; talking down portfolio optimization

On financing, the company plans to issue total amount of $600m to $1bn hybrid in 1H21with equity content at 50% or greater, we look to see updates in coming couple months. This will help dictate remaining equity needs in plan depending on size. On portfolio optimization, mgmt. seemed to talk down this angle given considerations on NIPSCO electric with its gas LDC. While not explicitly expressing a preference, we see somewhat less an emphasis on this for now.

ONE Gas (OGS)

OK regulatory asset order approved, but still waiting on recovery framework

Mgmt. highlighted it received the order to defer costs into a regulatory asset in OK (as well as in TX and OK). Mgmt. highlighted that hearings last week with executives didn't provide much info given the focus on outages, and did not seem to indicate any lessons learned. The company's gas cost estimate of $2.2bn remains a confident estimate. While volumes were higher than curtailments with 3-4BCF from OK and 10-12BCF from TX, we wonder around the recovery construct (mgmt. indicated a return on carrying cost with a shorter collection period vs. typical rate base asset), especially for those customers that did not receive gas (as those that did take on more volume will not necessarily have more of the burden). Given the substantial impact to customer bills and discussions from policy makers around these concerns, we see this likely an overhang on shares until more clarity evolves.

Securitization could be a path: but uncertain

Securitization also remains an option with the session ending in May in TX and OK (KS as well), although here too it remains very early in the process and could be somewhat protracted given subsequent approval required from regulators (assuming a bill is introduced and passed) and the time to get financing in place.

Not yet committing to LT growth rate

While mgmt. did not withdraw its LT guidance range, it did not necessarily commit to the 5-7% given some of the uncertainty. Securitization seems to be the key driver of this, and then otherwise the LT financing plan to help affirm its growth.

PG&E Corp (PCG)

We remain constructive on shares of late as we believe pressures on shares fail to reconcile with the improving regulatory & financing backdrop. On balance, we see an ever growing sense that the securitization outcome could well no longer involve equity at all – reducing key sensitivities around dilution. Moreover, don't expect equity should shares remain at their

current levels finding other alternatives. We don't look for any further capex updates in the near-term after a meaningful series of unveils with 4Q; also don't look for mgmt to pursue Preferreds akin to EIX given their commitments to existing capital structure between debt & equity.

Enhanced oversight enables Safety cert and improved trust

Mgmt continues to emphasize the point of further trust and coordination between the CPUC and PG&E as the enhanced oversight requires regular 90-day update on progress towards milestones. Overall we sense continued improvement among parties.

Defining equity needs and the customer rate impact

Mgmt. initiated EPS growth of 10% from 2021-2025, which embeds the equity needed to fund growth/additional spend in plan; we estimate this to be ~$200mn/yr likely though an ATM. Mgmt. confirmed 52% of the $2bn in additional spend to be a reasonable proxy. Additionally, mgmt. narrowed its 2021 equity needs to 0-$400mn (from prior $450-750mn) following recent asset sales agreement of $954mn, and highlighted potential to reduce those needs further (potentially to zero) with a successful resolution of its alternative proposal in the securitization filing. Further, the company highlighted additional asset sales that could be utilized to reduce the customer rate impact given items such as O&M on wildfire spend likely out of its control. This includes non-core asset sales such as undeveloped land (1/3 customer, 2/3 shareholder mix), developed properties (customer benefit), Hydro generation assets (although likely smaller in size given age, at least NT), and real estate (large building in Oakland, for instance). We continue to see ability to strip costs out of the business and other forms of solutions to reduce customer costs as key to gaining comfort in the capex profile and customer rate impact going forward.

PinnacleWest (PNW)

Our meeting with mgmt. of PNW focused on prospects for some form of concurrent recovery of clean generation investment, despite the company's recent capex cut. With the rate case currently in the hearing process we perceive that parties remain broadly opposed to the Advanced Energy Mechanism (AEM) rider as proposed by PNW. Given the need for a recovery mechanism we additionally touched on potential for a subsequent rate case filing including timing and equity needs. Overall we believe that PNW shares will remain under pressure until a proposed order is issued by the ALJ (the next concrete data point) and potentially beyond, given the broad perception of a cautious outlook in the current case. Maintain Underperform on PNW.

Renewable rider not likely despite lower capex

PNW's recent Q4 update included a resetting of its 3-year capex forecast including a reduced Clean Generation bucket owing to mgmt's assessment of the likelihood of inclusion of its AEM proposal. We note that during the hearing phase the bias across a majority of stakeholders appears to still oppose the proposed AEM, though staff has suggested potentially utilizing an existing renewable tracker instead. We expect this is likely an interim proposal as PNW's AEM was originally intended to provide not just for recovery of renewable investment, but also funding of the Coal Community Transition (CCT) program and consolidating several existing trackers into one mechanism (as requested by the commission). While the ultimate outcome remains unclear we believe that for the purposes of this rate case the bias remains against approval of the AEM, while longer term prospects are more constructive given state decarbonization priorities. Recall that PNW also increased its targeted level of transmission and distribution capex in the near term in order to accommodate its projected customer growth – we expect that the near-term capex shifts have shifted a greater portion of clean generation spend into future periods (including the second half of the decade).

Reliability will drive generation additions, coal shut downs

Despite its service territory being near both CA and TX, jurisdictions which have dealt with significant electric reliability issues in recent months, PNW mgmt. reiterated the company's commitment to retire the last of its coal burning fleet by 2031. Recall that on Day 1 of our conference we heard from several management teams who alluded to the possibility for keeping some coal assets operating in a peaking or seasonal capacity in order to ensure reliability – this does not to be a strategy contemplated by PNW beyond its current 2031 targeted date for exiting coal.

Commission legislation not likely to have near term impact

Pending state legislation intended to give lawmakers the authority to regulate generation resources has proceeded through party line votes – PNW mgmt. indicates it sees a likelihood of the legislation being signed in to law by the governor. Mgmt reaffirmed its commitment to the company's long-run decarbonization plan and maintains that other than clarifications on the bill's language regarding the procurement of lowest-cost resources, the bill as written should not have a near term impact or alter plans to reduce CO_2 emissions over the long run. Importantly under the legislation the authority to set electric utility rates is not addressed and remains under the sole discretion of the ACC.

Public Service Enterprise Group (PEG)

Scarcity value from T&D-only biz remains the key to upside

With PEG's non-nuclear asset sales progressing and initial interest received for both the solar and the fossil portfolios, we increasingly stress the scarcity value to be obtained from a standalone T&D (admittedly with offshore stake). With NRG's East/West asset sales attracting a 4.3x EV/EBITDA multiple, we perceive some investor concern on merchant gen multiples, even after considerations of fleet quality. That said, we continue to see an ESG premium warranted from a standalone utility biz. Our discussions indicate that PEG is likely still on track to complete sales by its targeted '21 timeline. What appears clear is that the cost dis-synergies contemplated by mgmt. appear to be on track to be offset by this transaction.

What to do with the nuclear portfolio? Changes to ZEC structure & spin/sale too

With nuclear to be the remaining assets in Power (aside from offshore wind, with much longer '24/'25 timeline), mgmt discussed a three-step plan for its approach to these assets. The ZEC (zero emissions certificate) 3-yr extension application is ongoing, and we largely expect the existing $10/MWh economics to be extended given the backdrop of falling power prices. That said, PSE&G continues to see a 3-yr timeline as insufficient with regard to making decisions about its nuclear fleet.

The next step post-ZEC decision (still expected late April) will be to secure the long-term economic viability of the nukes, most likely via special-purpose legislation in NJ (as opposed to less likely options such as federal action or state FRR election, which may ultimately be too cumbersome). *On balance, the 3-year review cycle putting ZECs at risk appears ill aligned with long-lived nature of assets.*

Finally, PEG would be open to selling these assets given the perceived investor benefit of divesting of generation assets. We stress a spin or sale of these assets would truly unlock its embedded scarcity value as a pure-play listed electric & gas LDC with no generation.

LIPA: yes, scrutiny again – but what will happen?

We stress that ongoing challenges in New York cloud the fate of its service agreement to operate LIPA. While the agreement remains for a further six years, we see some potential for reducing the scope of its involvement over time should the state deem its operations as inadequate from last year.

Utility biz strength with largely unchanged rate base CAGR

As the focus increasingly turns to utilities (with ~90% of earnings to come from PSE&G post-asset sales), we highlight PEG's recently updated rate base growth of 6.5-8% off a new 2020 base of $22Mn is relatively in line the prior 7-8% on a pre-rolled forward basis. PSE&G also recently updated its 5-yr capex forecast to $14-$16Bn for '21-25, with confidence by '25 on CEF-EE and GSMP extensions at least at current levels.

With NJ BPU transmission ROE negotiations ongoing, mgmt provided minimal update on negotiations (with transmission ROE change not factored into 1Q21 guidance at a minimum, giving some expectation of timeline for resolution) but we perceive the recent JCP&L settlement at a 10.2% stated ROE (incl. adder) as a positive sign that should guide resolution with others including PSE&G. As a positive, the company plans to finance its capex plan and planned offshore wind investments without the need to issue any equity. LIPA impact in aggregate is estimated to be minimal at roughly -5c/sh.

Further offshore wind opportunities

With PEG's recently confirmed agreement with Orsted to acquire a 25% equity interest in the 1.1GW Ocean Wind project, we still highlight limited contribution on an NPV basis to our SOTP at < $1/sh (no buy-in disclosed), although EPS profile could be upfront-biased. Mgmt noted clear interest in evaluating further opportunities in NJ as well as MD. Recall that Orsted has submitted a bid through Ocean Wind 2 for NJ's second

offshore wind solicitation of up to 2400 MW. While PEG has not directly entered into the bidding process with Orsted, we see it as likely that Orsted could offer to PEG at a later point a JV agreement akin to the one at present.

Spire (SR)

Spire represents the silver lining to gas LDCs relative to Texas events having invested in gas storage assets in the Southeast earlier, when they proved quite out of favor.

Gas LDC biz impact minimal; Gas marketing and off system sales big positive
Mgmt. highlighted that it would expect to use its typical Purchase Gas Account mechanism to recovery the fuel cost from the Texas winter event (with it mostly isolated to W. MO). While it did not specifically quantify the impact, we estimate this in the $200-400mn range; we view this as a clear positive given peers that experienced costs in the multi-billion dollar range and does NOT need securitization/amortization of regulatory asset with the latter that would impact customer bills more meaningfully. In terms of the impact on the gas marketing side, mgmt. is still working through the details although was clearly a beneficiary given the physical flow of gas on its storage assets in the MidCon, Texas, and Gulf. While difficult to quantify the impact, mgmt. highlighted that at a minimum it should reduce future equity needs (currently $100-150mn/yr). The company was also able to benefit on the gas utility side through off system gas sales, which should be a benefit to its gas customers. At the end of the day, we see SR as having a constructive set-up and would expect upside to both '21 guidance and the LT EPS trajectory.

Sunrun (RUN)

Strategic thoughts – but remaining focused on VSLR integration near-term
In light of continued strategic developments across resi solar sector, including peer NOVA (with SunStreet) and ENPH (software tuck-in acquisitions), RUN mgmt provided its perspective on strategic thoughts, emphasizing that it will look at companies that can add significant value to what RUN does in particular in being able to add meaningful capabilities from the acquisition of a leader in the space (as with the VSLR acquisition). Indeed RUN highlighted its past acquisitions having provided it with its Direct Biz capabilities, value for channel partners, proprietary racking technology, and digital lead generation. Specifically, mgmt expressed that RUN will evaluate any potential opportunity that provide bolt-on capabilities. While peer NOVA has expressed that it will remain tech hardware agnostic, RUN expressed that if there were a company that was also a product hardware OEM that mgmt perceived to be strategically important – it would be considered, noting that RUN has acquired a resi solar racking company in the past. Nonetheless, RUN mgmt emphasized focus on organic growth as well as continued integration of VSLR (post acquisition in FY20) – but continues to monitor M&A opportunities.

With the significant attention on cleantech from SPACs of late driving heightened public market activity of late, RUN mgmt expressed its view that sellers would perceive it as a desirable buyer in being able to further value by integrating with the leading resi solar and storage company (no SPAC 'finder's fee' either), though acquisitions are case by case in most suitable buyer (in going public via SPAC vs. strategic acquisition).

Storage inflection through '21 with >100% y/y growth guide
With its latest 4Q20 update, RUN notably guided >100% y/y increase in new storage deployments (~12-14K by our estimates) relative to its cumulative base of 16K storage systems, emphasizing that it is less impacted by higher storage cycle times (relative to solar) vs. long-tail installers given its acute focus on training installers for years within its Direct Biz. Mgmt expressed that FY21 storage guide is constrained by supply still given substantial consumer demand. That said, mgmt expressed being multi-sourced (TSLA and LG) helps with additional supply support from products from high quality

manufacturers near-term in the pipeline (for qualification to approved vendors list, expect ENPH and SEDG given existing relationship on inverters)

Mgmt highlighted significant demand from TX with latest cold snap outages, particularly as its solar+storage customers have been able to stay online with power through this period. RUN expressed it was already in the process of expanding in TX (San Antonio in particular) prior to event driven outages and expects strong traction here. In other markets, RUN expects continued geographic expansion growth organically, which includes working with channel partners/dealers.

Policy-wise, mgmt expects a stand-alone storage ITC as likely given case for meaningful value to the grid from a resiliency perspective for incremental storage assets.

Grid services – potential to expand/partner and further add to network effect

For grid services, RUN mgmt expressed that it would consider expanding beyond PPA/lease assets it owns on B/S to customers that purchase solar+storage via RUN or channel partners (where RUN still provides warranty and servicing) through cash/loan, with enrollment bringing more assets to its partnerships to deliver against its growing grid service contracts (12 awarded already currently). Additionally, mgmt acknowledged that it could potentially partner with product OEMs – here ENPH expressed it could provide customers with ENPH systems that use its app an opt-in option where it could then work with a partner to manage the grid services (such as RUN among others) This would still add $2K NPV per customer on grid service margin even if not a RUN originated or owned system.

Shift towards whole home energy – multi step approach in adding value

Beyond expansion from solar into storage, RUN mgmt expects trends to continue towards whole home energy/power – a focus are for its JV with SK. RUN mgmt expressed a multi-step approach - first electrifying more of the home, for instance electric appliances that have advanced significantly (smart water heaters, electric cooktops, etc) as well as EV additions. This creates more home electric load supporting greater sizing for home solar and storage, with saving potentially paying for much of the improvements. Smart devices such as thermostats (CFO experience as prior CFO of Nest) to support coordination of home DERs as well.

From a grid services perspective, solar+storage is the easiest to dispatch though RUN CFO emphasized experience doing this with thermostats at Nest. Key to consider here is finding the right balance between capacity for grid relative to home owner experience in properly coordinating between loads in home.

Vistra Energy (VST)

We see shares back at among their cheapest levels in the shares history – and at implied multiples that appear akin to the lows since 2008 despite the wider market backdrop. We reiterate our expectation for some degree of reform to materialize. We're surprised by continued fade in shares despite clear market focus on 'reform' and mitigating the supply impacts from recent impacts once more.

Presenting the upside case for market reform

Our discussion principally centered on market reform opportunities following the latest ERCOT severe weather event. With VST and NRG both presenting options to the TX legislature, we see VST as advocating a number of key changes. First, mgmt sees a need to address current market design, with a more defined reliability standard e.g. resource adequacy with potential for higher reserve margins, whether for dispatchable assets or all assets, or with potential changes in the ORDC curve. The question will be whether it makes sense to reduce the $9,000 price cap currently in place. While power forwards have been up of late, it is unclear how much of this can be attribute to likelihood of ERCOT market reform. Other options discussed have been improved coordination

between constituents such as natgas, power/retailers, and TDUs. A re-pricing scenario is also a point of discussion, although we see this as a lower likelihood option.

Nuances to watch in the market reform discussion: Not all reserves are created equal; look for discussion of dispatchable and un-dispatchable resreves each; also look for changes to the ORDC curve of late too. On balance, we stress how quickly ERCOT moved through its reserves was a key point of focus coming out of the events. However we do not see a capacity market as still in the cards. Rather, energy market reforms are the focus.

How much of the $900mn-$1.3bn impact can be mitigated?
With VST's plants largely winterized, mgmt emphasized their resilient business model over the long term with minimal changes necessary despite this one-time event. Notably, as VST had stated previously, the key driver of the $900mn-$1.3bn in estimated losses stemmed from gas suppliers declaring force majeure (*all of them appear to have done so).* While VST emphasized that they feel comfortable on being able to stay within this range on ultimate expected losses, the key question will be how much upside could be achieved in reducing this figure by disputing suppliers' force majeure claims. Separately, we see exposure to ERCOT default allocations as minimal given VST's 6-7% market participant share, in addition to $2.5mn monthly maximum allocations instituted by ERCOT for payments (with an event of this magnitude not previously considered, changes may need to be made).

Still see resilient integrated biz, despite it all
We continue to see a resilient integrated business model with a solid retail book backing the existing generation assets, and reduced earnings volatility aside from the latest event. It will be critical for mgmt to prove out guidance for long-term ~2% EBITDA growth. While VST mgmt made it clear that retail customers would not bear the impact of the February event, we stress that we continue to see a long-term trajectory of improving margins for the company, driven from a variety of angles including ability to capture some benefits from hedging strategies as well as cross-selling and add-on products and services. While questions had arisen of potential retail consolidation with the exit of smaller players, it now appears that this is less likely given the load curtailments seen during the TX Feb event.

What does winterization look like? Costly
Seems principally tied to coal handling systems at coal plants – costing upwards of $50-100 Mn. The question is whether this mandate for winterization will be funded in any explicit way in coming weeks. We suspect investing this level of capital back into coal assets is likely quite challenging to justify under any range of contexts. On balance we perceive few companies as poised to act substantively on winterization of their assets.

Xcel Energy (XEL)

Our update with XEL mgmt. focused on the recent announcement of transmission expansion projects in CO, with $700m of upside to the current plan through 2025, an additional $400m through 2027, and a further $1B of potential incremental investment, among the more ambitious transmission expansions recently seen across our coverage. As expected mgmt. reported that the CO ALJ recommended against the adoption of the wildfire rider while otherwise affirming recovery of wildfire mitigation spending through a reg asset. The proposed CO clean generation plan represents upside beyond the current plan through 2025 though includes a meaningful runway of generation investment. Maintain Neutral on XEL.

$2B transmission upside in CO; resource spend in '25+

The proposed transmission expansion plan calls for $1.3B of investment in 560 miles of 345 kW lines and several new and expanded substations in XEL's CO territory, supporting the buildout of over 5 GW of mostly renewable generation capacity (~4 GW rate base wind and solar, 1.3 GW distributed) as proposed in the recently filed resource plan for the state. While the investment in new generation build is targeted for beyond

2025, the supporting infrastructure buildout represents $700m of upside in XEL's current capex plan through 2025, as well as an additional $400m in the 2026-27 timeframe. A further $0.5-1.0B of incremental opportunities including network upgrades and interconnection work has been flagged but will depend on the ultimate mix and location of resources deployed. While the topic of expanding investment in transmission is not new in our coverage (and indeed has been gaining traction given expectations for infrastructure legislation at the federal level) XEL's update represents one of the more meaningful upticks in transmission investment of late. We note that as this proposal is entirely within Colorado, filings and approvals are at the state level, further reducing the regulatory burden. *On balance look for a constructive 1Q update.*

Rate case looking more likely following wildfire rec

The CO administrative law judge (ALJ) issued an order opposing XEL's proposed wildfire recovery rider which would have allowed for concurrent recovery of wildfire mitigation investment in the state through 2025 as drafted. While rejecting the rider, the ALJ recommended adoption of the investment plan ($325m) through 2025 with a proposed deferral of prudently-incurred spend for recovery in a future rate case. While mgmt. had previously indicated that the wildfire rider outcome is not in itself a driver of whether the company will elect to file a rate case in CO, XEL now expects to make a filing around mid-year.

Fuel cost impacts subject to recovery

XEL mgmt. estimates its incremental fuel costs stemming from severe weather across the country at $1.2B driven by spiking spot gas prices over a several day period. Mgmt. expressed confidence in achieving full recovery and expects an extended recovery period in order to mitigate the impact on customer bills. Based on preliminary calculations, XEL sees a per-customer impact of $250-300 across most of its jurisdictions, suggesting a $10/month or higher individual bill impact assuming recovery is spread over 2-3 years. Mgmt. maintains that its internal hedging policies were followed across all of its jurisdictions and does not expect any incremental impact on future rate case filings given what will likely be meaningful rate pressures in the near term.

Source: BofA Global Research

BofA GLOBAL RESEARCH

Price objective basis & risk

Ameren Corporation (AEE)
Our $76 price objective is predicated on a P/E based sum of the parts, valuing each business subsidiary relative to the 2023E ratebase weighted peer multiple of 15.9x for electric. We apply a 1.0x premium to peers at AEE Missouri to account for the improving prospects of capital spend, supplemented by a regulatory jurisdiction becoming more favorable - but lack of decoupling. We apply a 1.0x premium to peers at AEE Illinois to account for decoupling on the distribution business which aids in earnings predictability. The overall business is expected to grow at a more meaningful clip than that of peers - we see a 10% EPS CAGR at IL 2020-2024. At ATXI, we apply a 1x premium to peers to reflect the FERC ROEs. At the Parent, we assume 1x multiple premium reflecting average of the subs and given the healthy debt metrics with FFO/Debt at 17%+. Electric peer P/E multiple is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. The upside (downside) risks to our price objective are the utilities earning their allowed returns or better (worse), a significant increase (decrease) in 30-year U.S. Treasury bond yields, and positive (adverse) regulatory outcomes that could impact mgmt's ability to earn its allowed return

Atmos Energy Corporation (ATO)
Our $99 PO is based on our 2023E sum-of-the-parts (SOTP) analysis, based on the gas LDC peer group multiple of 14.1x. Our gas peer P/E multiple is grossed up to reflect the group's 5% CAGR to reflect capital appreciation across the sector. We then apply a 3x premium to the base gas LDC multiple to reflect the high-quality nature of the assets given a sustainable runway for capex/EPS underpinned by constructive regulatory mechanisms and jurisdictions. For the Pipeline & Storage segment we apply an 8x EV/EBITDA multiple as a base to our '23E EBITDA. We then apply a 2x premium to the assets given their fully regulated nature and unique ability for APT to benefit from the spread differentials.

Upside risks: 1) improving regulatory relationships, 2) decrease in interest rates, 3) incremental capital spending, 4) constructive rate case outcomes, 5) less equity needs.

Downside risks: 1) deteriorating regulatory relationship, 2) increase in interest rates, 3) less or deferred capital spending, 4) poor rate case outcomes, 5) more equity needs.

Black Hills Corporation (BKH)
Our $68 PO is based on a SoTP valuation. Gas Utilities: We apply the 14.7x peer P/E multiple on 2023E EPS. Electric Utilities: We apply the 16.2x peer P/E multiple on 2023E EPS. Both electric and gas peer P/E multiples are grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. Coal Mine: We apply an 8x peer EV/EBITDA multiple, which is in line with other PRB coal producers. Based on our view of the strength/maintainability of different coal plant output contracts, we apply a discount/prem multiple to that portion of the mine. IPP Assets: We use the recent sale price and '23/EVEBITDA multiple for Pueblo Airport and Wygen I assets, respectively. Parent Expense, Debt, and Eliminations: We apply an average regulatory P/E multiple to this segments income. This captures some Interco revenues that are double counted as well as parent SG&A drag and debt.

Downside risks: operational errors, increasing interest rates, and difficult regulatory environments.
Upside risks: favorable weather, favorable regulatory outcomes, higher capex deployment

Clearway Energy (CWENA / CWEN)

Our $38/sh PO is based on 75/25 weighted Growth/DCF methodologies. Our Growth value is $42 and our DCF value is $27.

In our DCF, we discount the current portfolio's expected cash flows. Main assumptions include:
- Our cost of equity applies a 1.50% yieldco premium to the 1.87% 30-yr Treasury
- Outstanding corporate debt is refinanced at maturity with amortizing debt with an eight-year term

Main assumptions under our drop-down approach are:
- 1,200 MW of assets are dropped down
- A target payout ratio of 80%
- A 3.8% required yield based on the 2021E dividend yield for the YieldCo peer set.
- A 0.25% premium for CWEN to the yieldco peer yield in our base case as prospects strengthen around the validity of the PPAs which are tied to PG&E

Risks are 1) misalignment between the new sponsor and the company's growth strategy, 2) the inability to purchase high-quality assets at accretive multiples, 3) the failure to successfully develop projects, and 4) the inability to access capital markets at attractive terms 5) PCG related counterparty exposure is among the nearest exposures to watch.

CMS Energy (CMS)
Our PO of $65 is based on a SotP relying on 2023E forward P/E multiples for the utility and banking business and a 2023E forward EV/EBITDA multiple for CMS' IPP assets. For the utility seg we apply a 4.0x prem to the avg regulated multiple P/E of 16.2x for the electric seg and of 14.6x for the gas seg, with the 10-yr capex update providing clear sight on ratebase growth and further upside, as well as cont'd favorable regulatory environment, and finally historically proven ability to consistently perform at the high end of guidance range. Both electric and gas peer P/E multiples are grossed up to 2020 by 5% to reflect capital appreciation across the sector. For CMS' merchant business we apply a 8x EV/EBITDA multiple, in line with current market value of CMS power plants (specifically DIG), moreover DIG has relatively favorable contracts for the near future which strengthen plant earnings. Finally, we apply a 15.5x P/E multiple on CMS' consumer lending subsidiary Enerbank, in line with forward P/Es other smaller regional banks with similar growth profile.

Risks are: 1) earned ROEs declining which reduce CMS utility earnings 2) execution risk on capex and cost cutting which would primarily affect the utility earnings, 3) negatives changes to market energy prices which could affect the DIG plant's ability to re-contract at the assumed prices.

Dominion Energy (D)
We use SOTP to derive our $78/sh PO. Utilities: We value VEPCO at 4x prem multiple to elec. peers of 16.1x '23 P/E and 14.1x w/ 3x prem on our '23E P/E to D's portfolio of gas LDCs (East Ohio, Hope Gas (WVa), and Questar (UT)). Mults are grossed up to by 5% to reflect capital appreciation. We value Wexpro at 10x disc to gas utility peers for declining rate base/ROEs and reg. risks. We ascribe a 3x premium multiple for SCANA legacy utility assets, and a 2x disc. for the NND asset. We also net out NPV of ongoing bill credits. Merchant: We apply an 8x FCF multiple for Millstone and separately apply a 100% wt to our NPV est of the ZCP cash flows. We include the full EBITDA from the contracted renewables with a 11x '23 EV/EBITDA multi w/ 3x prem in line with peers. Cove Point: We apply an NPV approach with to our DCF adjusted for the 50% sell-down in the facility. For remaining debt beyond that allocated to state utilities, we incl a 50% wt towards a str netting of leverage, with the remaining 50% using a P/E multiple on associated interest expense, in line with the methodology employed for more highly levered diversified utilities.

Downside risks: increase in rates, capex below assumptions, unconstructive regulatory outcomes, delays and/or cancellation of key projects vs our expectation.

DTE Energy (DTE)

We value DTE Energy at $133 using an SOTP approach.
We value the utility segment on a 2023E forward P/E multiple basis and the non-utility seg. on a 2023E forward EV/EBITDA multiple basis. For the utility segment we apply a 5x premium to both our reg. electric and gas utility peer multiples (of 16.3x and 13.5x, respectively). Both electric and gas peer P/E multiples are grossed up for a year to 2021 by 5% to reflect capital appreciation across the sector. We subtract out Corp & Other expense excl. interest rate.
For GSP we use a midstream peer group multiple of 9x. P&I, we apply an 8x EV/EBITDA multiple, despite the lower quality of these earnings and opaque disclosures, as mgmt has been able to execute on new project origination. We value the reduced emissions fuel (REF) tax credits separately using a DCF methodology at 6% discount rate.

Upside risks to our PO are capex expansions, higher authorized ROEs, and strong performance in the ET segment. Downside risks are interest rate hikes, execution risk on organic growth initiatives at the nonregulated business, and less favorable regulatory environment.

Duke Energy (DUK)

Our $94 PO is derived from a sum-of-the-parts valuation. We value the Electric and Gas utilities using peer 2023E P/E multiples. We apply a 3.0x multiple premium to Duke's operations in FL and 2x in IN to reflect more favorable regulatory environments (and recent sale valuation marker). We apply a 3x multiple to the Carolinas given upside to spending in improving regulatory construct combined with latest IRP & wider legislative reforms into 2021. We value the other regulated electric utilities at 16.2x and the gas utilities at peer group multiples of 14.7x 2022E P/E, respectively. Both electric and gas peer P/E multiples are grossed up by 5% for the groups CAGR to reflect capital appreciation across the sector. The commercial midstream, and transmission are valued on a 2023E EV/EBITDA basis. We use a 9.0x multiple for midstream and transmission segment. We add the net present value of renewable segment using an 8% discount rate. We subtract out the impact of commercial debt, and add back for the renewable debt.

Upside risks: constructive rate case results, higher capital expenditure additions vs our assumptions, lower interest rates. Downside risks: poor rate case results, operating errors, and negative changes in the regulatory environment, Macro risks: Increases in interest rates and decreases in equity market valuations.

Edison International (EIX)

Our $68 PO is based on SOTP, applying a 4x disc to the FERC and CPUC jurisdictional subsidiaries, and the parent/other segment 16.9x on 2023E (grossed up by 5% to reflect capital appreciation across the sector). The disc reflects CA ongoing wildfire risk despite the improved construct through AB1054. We apply 10x 2023E P/E to the Edison Energy segment to reflect uncertainty in the nascent biz. We net out ongoing contribution to the fund on an NPV basis. We also assume an additional $625mn of equity that we net out of our SOTP at the current share price given uncertainty over timing.

Downside risks: 1) Regulatory outcomes less favorable than expected. 2) Natural disasters or catastrophic events can affect system reliability and are subject to regulatory cost recovery risk. 3) Interest rate risk. 4) Non-reg businesses are inherently more risky and subject to both execution risk and commodity variation. 5) CA has specific risks given the differentiated regulatory regime. 6) CA wildfires.
Upside risks: rate case outcome above what's embedded in companies' guidance and

BofA estimates, lower interest rates, more constructive regulatory / legislative outcomes to address wildfire risk

Entergy (ETR)
Our $107 PO is SOTP based. We assign P/E multiples (peer multiple of 15.9x) for 2023E on most segments, in line with peer multiples (and grossed up by 5% to reflect capital appreciation across the group) due to similar growth, and strip out 50% of the holdco senior notes. The Merchant business is also added as a DCF (10% discount rate, no terminal value). Both electric peer P/E multiple is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector.

Downside risks: 1) Regulatory outcomes or earned ROE's could worsen, 2) Rate making mechanisms could change in the future, 3) Failure to get trackers or ROE adjustment mechanisms could hurt realized ROE, 4) weather can affect operations and earnings, 5) Interest rate risk affects cost of capital, 6) Consumer advocates or utility staff may focus more on issues that challenge the company ROE, 7) ETR has had safety issues in the past, which have affected regulatory relationships and company liabilities, 8) Exit from the competitive business could present unforeseen challenges.

Essential Utilities (WTRG)
Our price objective is $49 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. These peer multiples are 25.4x and 14.9x. We apply a 3.0x premium to Peoples Gas given the organic growth opportunities, while applying a variety of premiums to its water (2x previously) subsidiaries: +4x to PA, +3x to IL, +2x to OH, +2x for TX, +2x for OH, and no premium for balance of biz. We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

Eversource Energy (ES)
Our sum of the parts based price objective of $89 uses P/E multiples on 2023E earnings. For electric utilities, we attribute a 3x premium NSTAR, 3x premium to PSNH, and in line CL&P to peer 15.9x multiple, reflecting future potential positive revisions to capex and earnings. For gas, we apply a 3x premium to the peer 14.9x multiple, given capex upside particularly in MA and a 2x for Columbia Gas. Both electric and gas peer P/E multiples are grossed up by 5% to reflect capital appreciation across the sector. We value Aquarion at a 1x premium to the 27.9x water multiple. We reflect ES's 50% ownership in Revolution and South Fork offshore wind sites on an NPV basis. We further reflect a devco value with an assumption of an additional 3GW through 2031. We take out 50% of parent debt, and 50% of interest to accurately reflect parent leverage.
Upside risks to our price objective are additional capex announcements on the T&D side, as well as success in offshore wind RFPs.
Downside risks are reduction in authorized ROEs, inability to meet earned ROE expectations, as well as failure to receive permitting on incremental capex opportunities.

FirstEnergy (FE)
Our PO of $32 is based on an SOTP: Multiples are driven by relative P/E premiums/discounts to the 2023E regulated peer multiple of 16.0x. Electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector. As for premiums/discounts, we view NJ as at a slight discount -1x given a generally constructive commission despite overhang, PA at -2x as we view our more punitive ests already account for industrial load sensitivity incl O&G royalties, and others as in line. In OH, we apply a -2x P/E discount multiple to account for rate review risk. Finally, we apply a 0x P/E premium to peers 2023E multiple to the Transmission business given some limited ability to invest and FERC ROE difficulties. We removed impact of DMR

payments. We subtract out the holding co debt given the high parent lev. We net out potential liabilities from a potential FES bankruptcy by assuming all known 'extra' potential liabilities.

Downside risks: 1) Reg outcomes may improve/deteriorate, 2) legislative solutions may materialize for challenged parts of biz or FE could lose/fail to gain legislative support in key states, 3) int rates positively/negatively affect cost of cap, 4) reg staff or cons advocates may focus on issues beneficial/detrimental to ROEs, 5) exit from comp power biz may or may not have substantive liabilities accrued to equity holders, 6) negative outcome from any investigations and litigation including the HB6 lawsuit.

Hannon Armstrong (HASI)
Our valuation with a $63/sh price objective using a 75/25 DDM/DCF methodology, with $68 DDM valuation and $48 DCF valuation. For the DCF we apply a cost of equity of 3.0% to value the stream of cash flows from the existing portfolio as well as the growth prospects of the proprietary origination business. We assume a 11.1x P/E multiple on a peer group, with a 5x premium given strong growth prospects vs. peers, including commercial mortgage REITs and business development companies (BDCs).
Our assumptions for 7.7% yield and 3.8% cost of debt arise from analysis of historical and projected portfolio composition (and associated yields by asset class) and expectations for fixed vs. floating rate debt composition.

Upside risks: 1) Origination growth above expectations 2) Acceleration in securitization transactions 3) Dividend growth faster than expected 4) SG&A costs below expectations 5) Faster than expected yield expansion.

Downside risks: 1) Origination growth below expectations 2) Slowdown in securitization transactions 3) Shift towards greater proportion of BTM vs. GC assets may result in drag on portfolio's yield 4) Potential for rapid rise in interest rates 5) Slowing dividend growth may impact relative valuation vs. peers.

NiSource Inc (NI)
Our $26 PO is based on a sum of the parts valuation. We value each gas and electric utility separately using 2023 forward P/E multiples of 15.1 for gas utilities and 15.9x for electric utilities with a 2.0x premium for the electric utility's strong growth rates and incremental renewable buildout with capex beginning in '22, but acknowledge industrial risk. Also, we assign a 3x M&A premium to the VA, KY and MD gas utilities to account for their M&A premium. We note that electric / gas peer P/E multiples are grossed up by 5% to reflect capital appreciation across the sector. We subtract the value of excess holding company debt at the parent not supporting the utility opcos. We believe NI's 5-7% EPS/dividend growth outlook, attractive regulated earnings profile and constructive legislation across NI's service territories are under-estimated given its discounted multiple versus peers.

Downside risks to our PO are a sustained period of economic weakness pressuring customer growth, interest rate increases, high natural gas prices, financing plan updates, unforeseen costs associated with the MA incident, and challenging steel production economics in Indiana.

ONE Gas, Inc. (OGS)
We use a sum-of-the-parts analysis to calculate our $75 for OGS, applying a 23E Gas LDC peer multiple of 14.3x (grossed up by 5% to reflect capital appreciation across the space) with a 1.0x premium to the company's regulated Kansas assets due to upside on earned ROE, and a 2.0x and 3.0x premium for Oklahoma and Texas businesses, respectively, given their location and de-risked nature.

Upside risks: lower interest rates, constructive regulatory outcomes, increased capital

expenditure opportunities.
Downside risks: higher interest rates, unconstructive regulatory outcomes, decreased capex spending, ban on fracking, decarbonization efforts.

PG&E Corporation (PCG)
Our PO of $14 reflects an Electric peer P/E group multiple of 15.5x and gas group P/E multiple of 14.6x (w/ both grossed up by 5% to reflect capital appreciation across the sector) based on 2023E. We reflect a discount on both Electric and Gas group P/E multiple of -5x to PCG shares to reflect a larger fire-prone service territory, lack of dividend payment for 3yr period, and operational risks. Further, we net out the NPV of the ongoing wildfire contribution from valuation. Lastly, we net out 50% weighting of HoldCo debt and add back 50% weighting of interest expense to derive our $14 PO.

Upside risk: Better terms on equity raise or mandatory convert, incremental capex, favorable rate case outcomes, and lower interest rates.

Downside risk: Less favorable terms on further equity raises, selling pressure from unnatural owners including victims, lower capex, triggering the max liability cap for wildfires, unfavorable rate case outcomes, and higher interest rates.

Pinnacle West (PNW)
Our price objective of $74 is based on a peer utility 2023E P/E multiple of 15.8x with a -2.5x discount to account for PNW's risk around its pending rate case as well as headline risk related to disconnect policy review. Electric and gas peer P/E mult is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We ascribe an in-line premium despite clear renewable capex backdrop given ongoing regulatory risk associated with the company's upcoming rate filing and 2020 election risk.

Upside risks: 1) Regulatory relationships/outcomes could improve, including changes at the elected commission 2) load growth in territory above expectations 3) Riders and capital trackers could help achieve ROE 4) positive weather helps earnings 5) interest rate risk changes cost of capital - lower rates could improve 6) Consumer advocates or utility staff could become focused on issues that improve ROE

Downside risks: 1) Regulatory relationships/outcomes could decline, including changes at the elected commission 2) load growth in territory below expectations 3) Riders and capital trackers could hurt ROE 4) negative weather hurts earnings 5) interest rate risk changes cost of capital - higher rates could worsen 6) Consumer advocates or utility staff could become focused on issues that hurt ROE 7) Solar advocates in the state have engaged in public confrontations with the utility, which could change public relations in the future.

Public Service Enterprise Group (PEG)
Our $63 PO is derived from our SOTP valuation. For the electric utility we use a 3x premium to the 15.4x '23E group multiple to value the regulated and parent side of the business. Electric peer P/E multiple is grossed up by 5% to reflect capital appreciation across the sector. For the gas utility we use a 3x prem to the 13.7x '23E peer group multiple. PSE&G has meaningful growth capex planned, and while pressure on earned ROEs exists, the regulatory environment is favorable.
Downside risks to PO 1) interest rate increases, 2) unfavorable regulatory outcome, and 3) weather, all of which could lower PEG's earnings ability, 4) we caution dilutive asset sales, capacity auction uncertainty, and overall power headwinds as potential overhangs on the stock 5) BPU approvals.

Spire (SR)
Our $66 PO for SR is based on a sum-of-the-parts analysis, applying a Gas LDC multiple of 14.3x on '23E with in-line multiple for Missouri, and 2x premium for the

Mississippi/Gulf and 2x for AL assets given their location and de-risked nature (although COVID concerns remain). For the midstream assets, we use a base 8x EV/EBITDA multiple with a 1x premium for the STL pipeline given it is the one of the only new greenfield pipes in-service, a 4x discount for storage given uncertainty, and a 4x discount for marketing due to volatility.

Upside risks: 1) improving regulatory relationships, 2) decrease in interest rates, 3) incremental capital spending, 4) constructive rate case outcomes, 5) less equity needs.

Downside risks: 1) deteriorating regulatory relationship, 2) increase in interest rates, 3) less or deferred capital spending, 4) poor rate case outcomes, 5) more equity needs.

SunRun (RUN)
We arrive at our $95/share price objective as follows. We value the PowerCo portion of the company by taking NPV equal to Net Earnings Assets, equivalent to discounting cash flows from the existing asset by an unlevered 3.5% discount rate (roughly equivalent to 5% levered discount rate). We value the installed assets through 2025 on a DCF basis with cash flows discounted by 5% with an additional 8% discount rate on the NPV given future execution risk. We further include value from solar renewable energy credits beyond the four year contracting window also on a DCF basis at a 12% discount rate. With ITC extension prospects, we value installed assets through 2026 and include a 8x terminal value multiple on 2029 NPV given scale advantages for future growth prospects as a consolidated entity, we weigh '26+ DevCo value at 60%. We lower DevCo value created by annual R&D and non-cash SBC expenses not captured within creation costs and increase value by incremental NPV from storage and grid service contracts. We add value of operational synergies, existing grid service contracts, and upsell opportunities. We attribute credit for 50% of estimated renewal value to reflect incremental customer value.

Downside risks: We see downside risks associated with the ability to meet cost reduction expectations, MW deployment guidance, Net Energy Metering (NEM), debt capital markets given the highly leveraged strategy employed, as well as if the ITC is not extended beyond the current schedule.

Vistra Energy (VST)
Our $20/sh Price Objective is based on a 2021E SOTP valuation. We assign a discount/premium to the peer group EV/FCF multiple of 7.0x for each fuel within each geography, depending on our specific views for the asset type and market: We include the full $275mn of margin-enhancing initiatives as well as $200mn optimization benefits and the $275mn of synergies related to the DYN acquisition. We further capitalize our estimated income tax for the combined entity to reflect the higher tax burden than peers, and we include a $50mn NPV of TRA payments. We reflect accretion from the Moss Landing storage project as well.

Downside risks: 1) declining wholesale power & capacity prices, 2) competitive & regulatory change to retail businesses, principally in Texas, 3) operational issues pertaining to running power assets including Nuclear asset in Texas.

Upside risks: 1) VST may improve its retail margins and retain customers, 2) VST may beat its margin enhancements initiatives, 3) VST may see a decrease in the price of key inputs such as natural gas and coal, and 4) VST may see an increase in wholesale power prices.

Xcel Energy Inc (XEL)
Our PO is $63. We value Xcel Energy using a sum of the parts (SOTP) approach. Given the difference in geography, earnings strength, growth opportunity and risk profile, we divide the segments by subsidiary.

We use 2023E forward P/E multiples to derive a value for the different business segments, including the parent segment. We use a peer multiple of 16.1x . Electric peer P/E multiple is then grossed up for a year to 2021 by 5% to reflect capital appreciation across the sector. We apply a 2x premium to most subsidiaries except in MN where we apply a 3.0x due to additional stimulus upside. We see this multiple as appropriate as the company has growth opportunities, resolving regulatory drag and resolving uncertainty around rate cases. We stripped Mankato as a non-reg asset in our SOTP due to the sale. We also net back 50% of the parent interest expense and instead subtract out 50% of parent debt to more accurately reflect HoldCo leverage.

Downside risks are interest rate increases, regulatory risk such as lower authorized ROEs or less favorable riders/trackers for renewables and transmission, interest rate risk, execution delays, and weather anomalies.

Analyst Certification

We, Julien Dumoulin-Smith and Richard Ciciarelli, CFA, hereby certify that the views each of us has expressed in this research report accurately reflect each of our respective personal views about the subject securities and issuers. We also certify that no part of our respective compensation was, is, or will be, directly or indirectly, related to the specific recommendations or view expressed in this research report.

Special Disclosures

BofA Securities is currently acting as Financial Advisor to Engie SA inconnection with its proposed sale of Portfolio of 2.3 GW portfolio of U.S. wind& solar assets to Hannon Armstrong Sustainable Infrastructure Capital Inc,which was announced on July 2, 2020.

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.

This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.

Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Securities entities located outside of the United Kingdom.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

Essential Utilities

Moving Past the Tax: Ever Clearer 5-year Growth View

Reiterate Rating: BUY | PO: 49.00 USD | Price: 43.25 USD

Contemplating the Latest Developments

WTRG reported full year adjusted EPS of $1.58, a penny above our estimate and at the top end of management's guidance. After the earlier roll forward in January, there were limited financial updates with affirmation of 2021 EPS guidance of $1.64-$1.69 and their LT 5-7% EPS CAGR through 2023 – and while their water biz has a footprint in TX, commentary suggested no material financial impact from the recent cold weather events. After previously announcing plans to file a rate case at Aqua PA this year keeping with their three year rate case cadence for their water biz, a verbal settlement has been reached around the catch up component of Repairs tax accounting for the gas biz with plans to give **all** of the tax benefits back to customers over a five year period. While we view the decision to settle the catch up with the full benefit to the rate payers as an incremental drag on our estimates in '23, we expect rate relief in '24 to reaccelerate earnings for the gas segment and **stress their 5-7% CAGR as intact** (w/further upside support from the midpoint still given the robust muni pipeline). Meanwhile, after the ALJ recommended the PUC deny the DELCORA transaction, the commission is expected to make a decision next month: Given that there are only four commissioners right now in the state, we could very well see a stalemate or see the commission send it back to the ALJ to reconsider add'l evidence as the company works through their concerns. While we see some challenges on the margin, we stress the equity doesn't need to be pulled until August if there is a slight delay of the transaction and the robust muni opp's abound.

Valuation: PO to $49; tax noise is over; reiterate Buy

We tweak our model to reflect lower ROEs at Peoples Gas in '23 given commentary around the verbal settlement and the need to file a formal rate case for rate relief - but see '24 as intact when we would expect new rates to go into effect. We update our valuation to ascribe the current utility peer multiples of 25.4x and 14.9x for water & gas, respectively (vs. 27.4x and 14.2x previously). We reduce our premium for Peoples Gas from 3x to 1x given the need for a rate case in 2023 while our water premiums remain unchanged and continue to reflect confidence in ability to consistently deliver, strong muni acquisition prospects, and an underappreciated ESG angle. Our PO ultimately shifts to $49 (from $54 previously). Reiterate Buy given deep discount and muni upside.

Company Sector

Water Utilities

Company Description

Essential Utilities is a regulated water/gas providing water or wastewater services to 3M customers in the states of PA, OH, TX, IL, NC, NJ, IN, and WV, with PA segment being the largest contributor to the NI - along with a natural gas presence through the recently acquired Peoples Gas providing distribution services to 740,000 customers in PA, WV, and KY.

Investment Rationale

We are Buy rated on shares of WTRG, seeing shares as poised to re-rate higher given consistent execution, acquisition upside, and increasing conviction around the premium story.

Stock Data

Average Daily Volume	1,108,464

Quarterly Earnings Estimates

	2020	2021
Q1	NA	NA
Q2	NA	NA
Q3	NA	NA
Q4	NA	NA

LT Story Intact with Muni Acquisitions Abound

After rolling forward the outlook earlier this year, formal financial updates were relatively quiet for WTRG this quarter. Full year adjusted EPS of $1.58 was a penny above our estimate and at the top end of management's guidance, while the company reaffirmed 2021 EPS guidance of $1.64-$1.69 and their LT 5-7% EPS CAGR through 2023. While their water biz has a footprint in TX, they noted no material financial impact to the water biz and no financial impact to the recent cold weather events for the gas biz given the location of their operations.

After previously announcing plans to file a rate case at Aqua PA this year keeping with their three year rate case cadence for their water sub, management noted on the call that a verbal settlement has been reached around the catch up component of Repairs tax accounting for the gas biz – with plans to file the written agreement on March 11th that would give all of the tax benefits back to customers over a five year period. While we view the decision to settle the catch up with the full benefit to the rate payers as an incremental drag on our estimates in '23, we stress the $420Mn in rate base opportunities from signed APAs should generate ~$21Mn in earnings with further muni opportunities still to materialize – and we see opportunities abound to further accelerate water tucks ins. Following the adoption of Fair Market Value legislation in TX and VA, the company now has the constructive legislation in all eight states of their water footprint. We expect this to help further accelerate consolidation in the industry as muni budgets are further flex'd from the crisis.

Dissecting the DELCORA hiccups

After the Delaware County Court of Common Pleas issued an order supporting the pending acquisition of DELCORA by rejecting the county's attempt to block the sale, the county appealed the decision and the ALJ recommended the PUC deny the transaction. Given that there are only four commissioners right now in the state, we could very well see a stalemate or see the commission send it back to the ALJ to reconsider add'l evidence as the company works through their concerns. The commission is expected to issue a decision in March, and we stress the equity doesn't need to be pulled until August if there is a slight delay of the transaction.

We reiterate our Buy rating on shares, seeing value relative to AWK (B-2-7, $145.64) and longer term re-rating potential as management continues to perform and drive incremental growth through municipal acquisitions.

EPS Estimates

The exhibit below reflects our latest EPS Estimates. Our 2023 estimates shift down slightly to reflect a reduction in earned ROEs given the latest developments around the settlement related to the Repairs Tax Deduction. That said, we continue to stress longer dated estimates intact despite just a three year view - and see a long trajectory of tailwinds from an acceleration in muni acquisition opportunities: we continue to model to their 5-7% CAGR longer term.

Considering the tax deal we perceive this as de-risking eventual '23 rate case and positioning co well on track to execution backdrop in '24+. We see latest NI de-risking of its PA rate case as clearly improving backdrop too. Decisive reiteration of our Buy.

Exhibit 1: EPS Estimates
Lowering '23 on repairs tax developments: Still see LT outlook intact with new rates in 2024

BofA GLOBAL RESEARCH

Valuation: PO Shifts to $49

The exhibit below reflects our latest SOTP. We update our valuation to apply the current peer multiples to our latest estimates: 25.4x for water and 14.9x for gas (vs. 27.4x and 14.2x previously). We reduce our premium for Peoples Gas from 3x to 1x given the need for a rate case in 2023 while our water premiums remain unchanged and continue to reflect confidence in ability to consistently deliver, strong muni acquisition prospects, and an underappreciated ESG angle. Our PO ultimately shifts to $49 (from $54 previously). Reiterate Buy given deep discount and upside catalysts.

Exhibit 2: SOTP
PO Shifts to $49 on Lower Multiples and Gas Premium

BofA GLOBAL RESEARCH

Price objective basis & risk

American Water Works (AWK)
Our PO for American Water Works is $162. We apply the sector average 28.4x to American Water's 2023E earnings based on the water peer multiple and a 8.1% group EPS CAGR for '18-'23E. We think this multiple is justified as in our view AWK largely drives the peer multiple as the largest publicly traded water utility. We ascribe a 3x premium for NJ, PA, IL & Other given scope of acquisition opportunities. Also a -1x P/E for Cali utility.

Risks to the downside are increase in market interest rates, potential impact of tax reform on utilities, operational errors, changes in valuation levels for water utilities. Risks to the upside are accelerating muni acquisitions, multiple expansion, and constructive legislation in regulatory jurisdictions.

Essential Utilities (WTRG)
Our price objective is $49 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. These peer multiples are 25.4x and 14.9x. We apply a 3.0x premium to Peoples Gas given the organic growth opportunities, while applying a variety of premiums to its water (2x previously) subsidiaries: +4x to PA, +3x to IL, +2x to OH, +2x for TX, +2x for OH, and no premium for balance of biz. We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

Sell	38	24.52%	Sell	22	57.89%

Equity Investment Rating Distribution: Global Group (as of 31 Dec 2020)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1863	56.90%	Buy	1185	63.61%
Hold	686	20.95%	Hold	426	62.10%
Sell	725	22.14%	Sell	358	49.38%

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Securities entities located outside of the United Kingdom.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

North America Power & Utilities

Rolling Valuations to 2023

We have initiated 2023 estimates for our coverage and updated all price targets based on 2023 estimates. This update combined with EEI updates and relative price moves has resulted in the following ratings changes:

- Upgrading AEE to Equal Weight, from Underweight, on underperformance and higher projected earnings.
- Upgrading NI to Overweight, from Equal Weight, on higher earnings growth from the increased electric capex in Indiana.
- Downgrading NWE to Equal Weight, from Overweight, on outperformance and lower projected earnings.
- Downgrading PNM to Underweight, from Equal Weight, on low projected return given pending acquisition, along with view that and increased bid is unlikely near term.

With election results and multiple positive COVID-19 vaccine trials, risk appetite appears to be alive and well. In utilities, much like in other sectors, risk has outperformed momentum in recent weeks. This has manifested in a long awaited contraction in the PE disparity in the sector. We believe this trend will continue as investors seek risk and value over defense and momentum. We continue to see names with idiosyncratic risks expecting near term resolution along with utilities possessing higher energy exposure to be in favor given this dynamic. This aligns well with our Overweight ratings on SRE, PCG, SO and PNW and Underweight ratings on ED and WEC.

Based on EEI, Q3 and recent meetings with management, we highlight updates to stock investment theses, where our ratings remain unchanged. COVID-19 load impacts into 2021, rate case expectations, guidance updates, capex updates, corporate actions and more have been discussed recently. We highlight by stock where these changes cause a shift in our investment thesis.

Ratings Changes

Upgrades

AEE

We upgrade AEE to Equal Weight, as we believe recent underperformance has accounted for risks to future growth weighing on the stock, including energy rules modification in IL and the ability to execute on the preferred MO IRP scenario. At Q3, management narrowed guidance to $3.40-$3.55 (from $3.40-$3.60) and said updates to the 5-year capital plan and 2021 EPS guidance are planned for the Q4 call. We see the potential for incremental spending opportunities from the MO IRP (AEE has 950 MW of renewables opportunities before 2024 not included in current plans) as well as from regional transmission projects, though regulatory approval on a project-by-project basis and the ability to increase regulated capital plans while avoiding significant increases in customer bills will be areas of focus. Management notes the IL legislature's weak appetite for comprehensive energy legislation at this time, though Gov. Pritzker's eight-principled energy reform plan could influence regulatory policy in the future. We now view the risk/reward outlook for the stock as balanced given the uncertainty of the regulatory construct in IL offset by incremental

spending opportunities that could accelerate rate base growth. Our updated price target is $95, which is premised on a 20% premium to the 2023 regulated group average multiple of 18.5x applied to our 2023 EPS estimate of $4.28

NI

After the investor day, we used a 5% premium to the group average to reflect expectations of above-average growth driven by the $1.8-$2.0 bn in renewables investments related to RM Schahfer replacement power. By rolling our valuation forward to 2023, we are able to capture some of the earnings related to this spend via new rates from the anticipated 2022 rate case (rates expected effective mid-2023). We believe the level of cost savings necessary to achieve management's growth guidance is achievable. Additionally, although we do not believe concerns regarding the future of natural gas operations should be materially priced into the stock, we feel the need to reflect the overhang that may weigh on the stock until investors can gain more clarity into the future value of natural gas LDCs. Particularly for those companies operating colder climates, the threat posed by electrification of heating is limited by economic and technological constraints. Thus, for these reasons, we eliminate our premium to the group average, yet we still believe there is enough upside to the current valuation to merit an upgrade to Overweight.

Risks include a higher-than-anticipated skew towards PPAs from procurement results (though management remains on track as of EEI), as well as the ability to control costs and achieve savings from the NI Next initiative in 2021 and beyond. COVID-19 impacts on gas usage during winter months are a source of uncertainty, though most residential gas rate structures have decoupling mechanisms (management estimates that changes in gas usage will comprise a majority of the ($0.05) COVID-19 headwind in 2021). Considering these risks, the current risk/reward backdrop leaves opportunity for upside to the current valuation, in our view. Our updated price target is $29, which is premised on the 2023 regulated group average multiple of 18.5x applied to our 2023 EPS estimate of $1.55.

Downgrades

NWE

At EEI, NEW initiated 2021 guidance of $3.40-$3.60 (below consensus). The wider than normal range was used based on COVID-19 uncertainties and will be narrowed to a $0.15 range on the Q4 call. With the reiteration of a 3-6% growth range and rolling the starting point to a lower than expected 2021 guidance, our 2021 and 2022 numbers have come down and our updated valuation on 2023 combined with the recent outperformance, while providing upside no longer supports an Overweight rating.

We continue to view NWE as a well-managed company with limited growth opportunities compared to peers. The updated capital plan does show a $300M increase as compared to the previous 5-year plan. The updated plan includes $100m of incremental investment for SD generation from the results of a recent competitive solicitation. The Montana generation opportunity is still outstanding, but could add $200M to the capital plan over the next five years. Management had provided commentary previously that $400M/year of capex (new plan is at or above $400M in all years) would allow for growth at the midpoint of the earnings CAGR. While we see longer term opportunity and ability to grow earnings closer to 5% assuming a win in MT capacity RFPs, near term needs to manage O&M between rate cases will drive growth closer to 4% in the near term. We expect a Montana rate case filing in 2022 for new rates in 2023 and expect multiple cases in SD to coincide with commercial operation of the capacity resources to be owned by NWE selected in the competitive solicitation processes.

The current risk/reward feels balanced given the lower current relative growth, recent relative price performance, mixed recent regulatory results in MT and potential for future capex and earnings growth associated with winning MT capacity RFPs. Our updated price target is $63, which is premised on a 10% discount to the 2023 regulated group average multiple of 18.5x applied to our 2023 EPS estimate of $3.79.

PNM

We downgrade PNM to Underweight to reflect the limited upside in the stock given Avangrid's take-out offer of $50.30/share. The acquisition is expected to close in 2H21. We characterize prospects for a superior bid as unlikely given few competitors with the balance sheet capacity for such an acquisition, and none with the strategic alignment or likelihood for regulatory approval as AGR. While regulatory approval of any transaction can never be predicted with absolute certainty, we do not see any significant impediments to approval at this time. Given New Mexico is a net benefit state, AGR's commitment to maintain the PNM workforce and likely willingness to compromise on other factors (HQ location, customer credit, charitable giving, etc.) strengthen the likelihood of transaction approval. Our updated price target is $50, which is premised on the 2023 regulated group average multiple of 18.5x applied to our 2023 EPS estimate of $2.68.

Investment Thesis Updates

AEP

The 5-7% growth rate is maintained and the inclusion of North Central Wind pushes growth above the midpoint for 2022 and 2023, with expected equity to support NCW at 65% financing to be issued commensurate with commercial operation of each of the wind farms. AEP has highlighted a 5 year, $37B capital plan driving 7.4% rate base CAGR which supports the 5-7% EPS CAGR (regulatory lag, holding company debt and equity drive the difference). 2021 guidance was initiated at $3.51-$3.71.

AWK

AWK's resolution of key Pennsylvania and New Jersey rate cases is a strong step forward and should reinforce the market's confidence in AWK's ability to execute. Execution was particularly evident in 2020 as AWK was able to claw back to its original guidance range amidst Covid-19 and the ongoing uncertainty from the two material rate cases in PA and NJ. We see the upcoming 2021 and 2022 fiscal years as de-risked given the rate agreements and expect market focus to turn toward timing of equity in the forecast period, O&M management, and FMVL M&A given the lack of clear challenges ahead. AWK's multiple remains elevated, but near five-year spread averages relative to both the S&P 500 and the broader utility group P/E multiple. Following the rate case conclusions and the clear runway leaves little indication that the multiple will contract in the near term.

CNP

Management's reiteration of the prior 5-7% utility-level EPS CAGR is incrementally positive given our perception that the guidance range contemplates some type of strategic midstream corporate action. The ability to maintain the prior CAGR is viewed favorably as it seemingly overcomes headwinds from a re-allocation of corporate interest previously allocated to the midstream segment and contemplates a roll off of recovery bond equity earnings. We also note that the decision to sell at least one gas LDC business has received a positive reception as it avoids re-levering the holdco after significant debt maturities to come over the next three years. We are also more sanguine on the name following management's inclusion of IN capex in its formal guidance. The IN RFP process is ongoing, but we see the update building confidence that initial stakeholder feedback was positive enough to indicate that CNP wins more renewable build than originally expected. We

continue to model a 'status quo' forecast, but anticipate additional details to come from the December analyst day.

CMS

Management maintained the 6-8% growth rates for EPS and dividend and provided 2021 EPS guidance of $2.84-$2.86. The CMS Gas settlement includes a stay-out provision to avoid a rate case in 2021. CMS has filed for securitization of Karn 1&2 ($703m) and expects to file a new IRP mid-2021. CMS has had marked success at managing costs and work crews to offset any COVID-related headwinds. We expect CMS to refresh capital and financing plans at Q4.

DUK

The 4-6% growth rate is maintained with a bias towards the high end. DUK will provide 2021 guidance on the Q4 call, but has pointed towards expectations at or above $5.15 even with a "Dominion" coal ash outcome in North Carolina. The recent Carolina IRP provides a path to increasing rate base growth from the expected 6.5% CAGR through 2024 to 7% CAGR from 2024 through 2029. We expect earnings growth in the top half of the 4-6% range through 2023 off of a 2021 base.

ED

Management narrowed 2020 EPS guidance to $4.15-$4.30 (from $4.15-$4.35) to reflect COVID-19 impacts. ETRN pushed the expected in-service date for MVP to 2H21 due to pending legal challenges. Management accelerated some clean energy capex from 2021 to 2020 in order to create contingency against deliverables deadlines in planning for a potential second wave (5.5% rate base CAGR through 2022). In 2021 we anticipate more concrete planning regarding onshore and offshore transmission investment opportunities related to offshore wind. Strong execution on cost savings opportunities in 2021 and beyond will be critical to meeting allowed ROEs. We expect an update to financing and capex plans at Q4.

EIX

Focus remains on EIX's ability to settle remaining individual wildfire claims from the 2017 and 2018 seasons and the related equity issuance timing and magnitude. We see the $1bn figure as a helpful marker and should belay overstated credit rating agency concerns about the amount of debt issuance to occur under EIX's capital structure waiver. We still anticipate the individual victim settlement process to be a longer road than most current expectations, but delayed equity issuance and slower ultimate cash outflows could be a silver lining. We think the current discount may subside to some extent as we progress into the latter stages of wildfire season, but note that large fires in EIX's service territory as late as January.

ES

The 5-7% long-term EPS CAGR is maintained, with an expectation of the middle of the range. The CAGR does not reflect the CGMA acquisition, offshore wind, CT/NH grid modernization, or AMI in MA. Management expects to provide EPS commentary on the incremental opportunity from offshore wind at Q4. Management shifted the anticipated commercial operation dates for the three offshore wind projects back by roughly a year, dependant on BOEM review schedules expected to be released in early 2021. The Ørsted/ES partnership has submitted bids into the NY RFP (awards anticipated by EOY). Awards in the MD, NJ and RI RFPs are anticipated mid-2021. Penalties in CT related to Isaias are anticipated mid-2021. ES may be required to file a CT rate case, but otherwise has no plans for rate reviews in 2021.

FE

FE's recent management changes and discussions around financial contingencies to increases flexibility have encouraged us that the Board is moving quickly and taking the

federal investigation seriously. However, the moves could indicate management culpability, or at the least, indelicate ethical violations that could impact FE's ESG perception for the foreseeable future. We expect the FBI investigation to result in negative headlines for some time, but take recent management commentary around potential settlements or announcements in early 2021 at their merit. We look to the 4Q20 call and any investigation announcements for more clarity into financial impacts going forward and continue to monitor regulatory processes for potential impacts. We incorporate the potential for up to $2bn in penalties and fines based on historical precedent. However, with limited balance sheet capacity and our belief that public information regarding the investigation remains in the early stages, we see no reason to expect a re-rating near term.

LNT

LNT's roll forward incorporated some anticipated windfalls from the Iowa Clean Energy Blueprint and reinforced out perception in the achievability of the 5-7% EPS CAGR guidance off the back of strong rate base growth. We believe the capital investment need to hit state targets for renewables and broader sustainability efforts (including electric vehicles) actually affords LNT the ability to grow rate base and earnings at a faster clip, but believe management has concluded that 5-7% is the sweet spot because it allows for palatable customer bill increases under various load scenarios and avoids significant external funding requirements. We continue to value LNT at a 20% premium to the group on LNT's 2023E P/E, reflecting regional peers' valuations that remain above LNT.

NEE

Management expects to achieve 6-8% EPS growth through 2023 off of new adj 2021 guidance, with an assumption of the top of the range, and anticipates 10% dividend growth through at least 2022. NEE increased 2021 guidance due to strength in the renewables pipeline (~1.5 GW added since Q2). Management expects a $60bn 2019-2022 capital plan, an increase of $7.5bn from the previous midpoint.

OGE

The ability to receive approval for a grid modernization rider in OK is a positive step and provides evidence of an improving regulatory climate following years of environmentally-mandated capital. We also maintain a more positive outlook for OGE's ability to consider strategic alternatives to its ENBL stake given its strong balance sheet and ability to weather the loss of cash flows from a sale or other transaction. However, OGE's below-peer rate base and utilities EPS growth rate command a 10% discount P/E to the group average.

PCG

We believe near-term noise around PCG's safety certificate is unlikely to amount to a loss of coverage under the AB 1054 wildfire fund provision, though the proceeding merits close attention as long as there is no ruling beyond the statutory deadline. We also expect heavy investor focus on the securitization process and management appointments. Related to the securitization process, equity issuance timing and magnitude will likely gain increased clarity as we progress toward a May 2021 CPUC decision, per the procedural schedule (earlier with settlement). We see PCG as increasingly attractive as wildfire season nears an end in early 2021. We move PCG's discount to the group average 2023E P/E multiple to 35% to reflect the near-term headwinds and an active wildfire season. We believe the discount embedded in our valuation framework is an easy hurdle given regional peers and would expect PCG to re-rate higher in a risk on environment and see a further tailwind if we move through wildfire season with no additional large-liability fires.

PEG

The near-term focus will continue to be on potential participation in Ørsted's Ocean Wind, offshore wind project, a potential settlement with the NJ BPU on transmission ROE, updates

on the announced intention to divest non-nuclear generation, the NJ BPU report on resource adequacy expected in Q1 2021(will address fixed resource requirement), and a BPU ruling on non-energy efficiency aspects of the clean energy plan. The utility rate base and earnings growth are above average and the utility capital plan does not require equity, nor cashflow from the genco.

PNW

A focus going into 2021, alongside the APS rate case and AZ energy rulemaking, will be the new commissioners joining the AZCC. Commissioner Marquez Peterson (R), Jim O'Connor (R), and Anna Tovar (D), will join Commissioners Kennedy (D) and Olson (R). Though O'Connor was not initially planning on running, Commissioner Olson convinced him to run. We anticipate the two will have similar policy goals, and we look for any early alignment of rhetoric or voting between Commissioners Olson and O'Connor. A new commission chair will be voted on at the first open meeting of 2021, and, if precedent stands, Cmr. Olson would be chair as the most senior majority party member. If Cmrs. Olson and O'Connor have similar philosophies, Commissioner Marquez Peterson may be the deciding vote on contentious issues such as AZ energy rules and retail competition. For more information on the newly elected commissioners, see our note "*Last Bunch of EEI Meetings*," 11/12/20. Management does not plan to initiate FY21 guidance until the current rate case concludes.

SO

Vogtle continues to be the focus. We continue to expect and have modelled regulatory in-service dates for Unit 3 and Unit 4 of 11/21 and 11/22 respectively. Georgia Power will file an integrated resource plan (IRP) in January of 2022, the findings of which will likely be included in a mid-year 2022 rate case filing for new rates (to include Vogtle and the associated fuel savings) in 2023. We believe that the additional free cash flow from Vogtle will drive annual capex increases of $1B, which should increase the EPS CAGR from 4-6% to 5-7%. The dividend payout is expected to drop below 70% in 2023 when Vogtle is on line, providing the opportunity for dividend growth to accelerate from $0.08/share annually to a rate more in line with earnings growth.

SRE

We expect the recent FID decision at ECA to have a limited impact to SRE near term, given the low equity contribution from the SRE balance sheet, but continue to closely monitor the LNG segment as management mulls strategic options for financing future LNG export opportunities and maximize shareholder value as utility companies across the sector opt for pure-play, renewable-driven stories. We think the 'conglomerate discount' currently being ascribed to SRE is too severe and expect a re-rating to occur over the next twelve months as investors gain confidence around the energy outlook for Mexico and Ienova's role in the infrastructure buildout and management continues to seek ways to highlight value for the LNG business and reiterate our Overweight rating.

WEC

Management increased the 5-year capital plan 7.3% to $16.1 bn over 2021-2025 and firmly maintains expectations for 7% rate base growth and 5-7% EPS growth in the long term. Management sees significant bill offsets from O&M and fuel cost savings as legacy generation comes offline in 2023 and 2024 that would keep bill increases at or below the inflation rate. Management estimates legacy generation assets will amount to ~2% of company-estimated total 2025 rate base of $32 billion. Storage has become economic over peaking capacity, and for the first time WEC is adding 600 MW of battery storage to resource plans.

WTRG

WTRG continues to lag the valuation expansion experienced by AWK and other pure-play water peers. One of the drivers, in our view, is a perception of risk around the DELCORA acquisition and we keep a specific focus on the legal proceeding following local election results that flipped party affiliation of the City Council. We also believe WTRG will trade with some correlation to national gas LDC utilities, though we ascribe a 10% premium to the regulated utility group multiple to reflect our perception of People's gas as a higher-quality business mix than most. Finally, we continue to monitor WTRG's catch-up component of the repairs tax election, but remain confident that WTRG will receive an outcome that allows it to maintain its current growth and authorized ROE levels while extending the rate case need out through 2025.

XEL

The 5-7% long-term growth target is maintained. Management initiated 2021 EPS guidance of $2.90-$3.00, consistent with 5-7% long-term growth objective. Electric sales and O&M are both expected to increase 1% while gas sales are expected to remain flat in FY21 relative to FY20. The $22.6bn 2021-2025 capital plan has $1.4bn in upside from incremental renewables investments (mostly from MN Relief and Recovery spending on wind repowering and solar, which would be funded at 50% equity). Average annual capex from 2021-2024 was increased by ~$140 annually over the previous plan. The implied rate base CAGR from 2021-2025 is 6.3% (6.9% including the incremental renewables spending). XEL has requested a MPUC decision on wind repowering by EOY and expects a decision on solar investments in Q2 or Q3 of 2021. PSCo's AGIS rider filing was dismissed on procedural grounds. PSCo can still defer ~80% of AGIS-related costs for future recovery and does not believe there is any read-through to the wildfire rider filing. The MN PUC must decide whether to implement interim rates or approve the stay-out request by EOY (regardless, capital plans will not be impacted).

Relative Group Valuation and PE Disparity

P/E Disparity Starting to Show Signs of Life for Value

Between the lack of a "blue wave" and positive news on the COVID-19 vaccine front value or 'risk on' names have begun to show evidence of revaluing higher toward 'comfort' names premiums that had increased throughout the year. This contraction has been long-awaited by the market given the historically high spreads and a belief that the spread was unsustainable. We highlight that there is still room to go for the value trade, but are encouraged by signs that fundamentals are beginning to matter as flows move in the direction of more realistic valuation of idiosyncratic risks.

The constituent stocks for our discounted 'value' and high-premium 'comfort' groups displayed in the graphic is broken out below.

Comfort: AEE, CMS, NEE, LNT, ES, WEC, XEL,

Value: CNP, DUK, EIX, NWE, PCG, PNM, PNW, SO, SRE

FIGURE 2
Spread between Value and Comfort Groups (2yr Blended Fwd P/E)

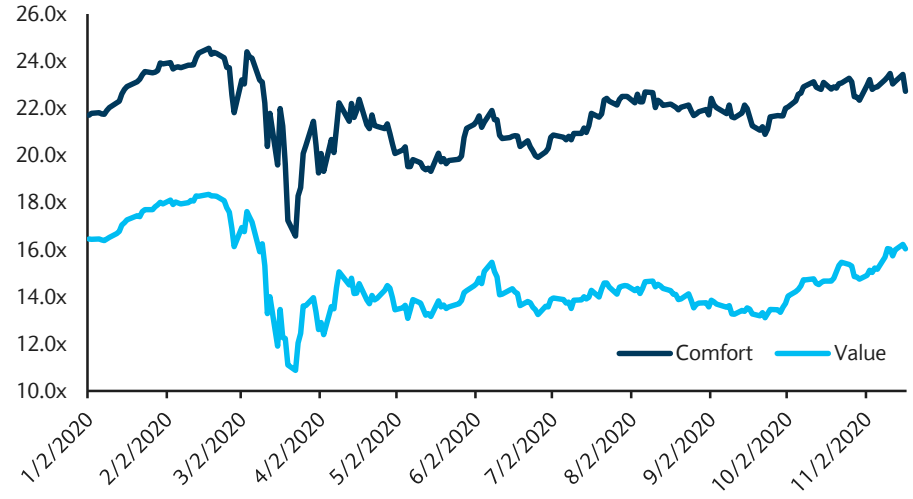
FIGURE 3
Comfort and Value Group P/E (2yr Blended Fwd P/E)



Source: Bloomberg, Barclays Research

Valuation Methodology

We have updated our valuation methodology to use relative premiums and discounts to the 2023 regulated group average PE multiple applied to our 2023 EPS estimates combined with any sum of the parts valuation aspects updated to 2023 expectations.

Our previous valuation methodology used relative premiums and discounts to the 2022 regulated group average PE multiple applied to our 2022 EPS estimates combined with any sum of the parts valuation aspects based on 2022 expectations.

AEE

Our current $95 price target is premised upon a 20% premium applied to the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E EPS of $4.28.

Our previous $79 price target was premised upon a 20% premium applied to the 2022 utility group average PE multiple of 17x applied to the prior Barclays 2022E EPS of $3.90.

AEP

Our current $107 price target is premised upon a 10% premium applied to the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E EPS of $5.28.

Our previous $93 price target was premised upon a 10% premium applied to the 2022 utility group average PE multiple of 17x applied to the Barclays prior 2022E EPS of $4.97.

AWK

To derive our $173 price target, we utilize a group average water P/E multiple for 2023 earnings and apply a 15% premium to AWK's consolidated 2023 EPS estimate of $5.01. The premium reflects strong management, constructive regulatory exposure, and top-tier growth visibility following key rate case outcomes.

Our previous $138 price target was premised on a 15% premium to the previous 2022 group average water multiple of 27x for AWK applied to our previous 2022 EPS estimate of $4.46

CMS

Our current $75 price target is premised upon a 25% premium applied to the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E EPS of $3.25.

Our previous $65 price target was premised upon a 25% premium applied to the 2022 utility group average PE multiple of 17x applied to the Barclays 2022E EPS of $3.09 estimate.

CNP

Our current $27 price target is premised upon a 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E utility EPS estimate of $1.38 after allocating parent debt and operating expenses. We use the current ENBL price of $5 adjusted for CNP's ownership, adjusted for allocated debt – leaving $2 of ENBL value to CNP on a consolidated basis.

Our previous price target of $21 used a group average utility multiple of 17x applied to 2022E prior utility EPS of $1.46 and the prior ENBL share price of $4.

DUK

Our current $102 price target is premised upon a 5% discount applied to the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E EPS of $5.81.

Our previous $87 price target was premised upon a 5% discount applied to the 2022 utility group average PE multiple of 17x applied to the Barclays prior 2022E EPS of $5.39.

ES

Our current $100 price target is premised upon a 25% premium to the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E EPS of $4.34.

Our previous $88 price target was premised upon a 25% premium to the 2022 utility group average PE multiple of 17x applied to the Barclays prior 2022E EPS of $4.15.

EIX

Our $69 price target is based on a 20% discount to the 2023 group average multiple of 18.5x applied to an adjusted, post wildfire liability and additional funding, Barclays 2023 EPS estimate of $5.12. The 20% discount is based upon perceived wildfire risk absent a test of AB 1054 cost recovery standards and remaining uncertainty on 2017 and 2018 wildfire liabilities.

Our previous $57 price target was premised upon a 25% discount applied to the 2022 utility group average PE multiple of 17x applied to the Barclays prior 2022E EPS of $4.65.

ED

Our current $83 price target is premised upon a 10% discount to the 2023 group average P/E multiple of 18.5x applied to our 2023 EPS estimate of $4.94.

Our prior price target of $74 was premised upon a 10% discount to the 2022 group average P/E multiple of 17x applied to our prior 2022 EPS estimate of $4.73.

FE

Our $33 price target for FE is based on a 30% discount to the group average 2023 multiple of 18.5x applied to our pro forma FY23 EPS estimate, adjusted for an assumed $2bn equity issuance to reflect balance sheet repair following fines or penalties. The 30% discount is based on our expectation that the ongoing Ohio corruption investigation serves as an overhang to the stock valuation regardless of the financial impact.

Our previous $32 price target was premised upon a 30% discount applied to the 2022 utility group average PE multiple of 17x applied to our unchanged 2022E EPS estimate of $2.73.

LNT

Our LNT price target is $65. We utilize a relative target P/E multiple to value LNT shares. We apply a 20% premium to the 18.5x group average 2023 P/E multiple using EPS of $2.94 to reflect LNT's strong track record for execution, visible earnings growth, attractive rate base growth opportunities driven by renewable generation that limit customer bill inflation, and constructive regulatory oversight.

Our previous $56 price target was premised upon a 20% premium to the 2022 group average multiple applied to our prior 2022 EPS estimate of $2.73.

NEE

Our new price target of $87 is premised upon a SOTP with a 20% premium to the 2023 group average PE multiple of 18.5x applied to our 2023 EPS estimate of $1.74, a 17.5x 23E EV/EBITDA for the NEER business – comparable to valuations of renewables developers such as Ørsted. We then add $3 for NEP as we take the Barclays $67 NEP price target and flow it through to represent NEE's ownership.

Our previous price target of $301 was premised upon a SOTP with a 20% premium to the 2022 group average PE multiple of 17x applied to our 2022 EPS estimate of $6.43, a 16x 22E EV/EBITDA for the NEER business – comparable to valuations of renewables developers such as Ørsted. We then add $13 for NEP as we take the Barclays $61 NEP price target and flow it through to represent NEE's ownership.

NI

Our current $29 price target is premised upon the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E EPS estimate of $1.55.

Our prior $25 price target was premised upon a 5% premium to the 2022 regulated utility group average P/E applied to our prior 2022 EPS estimate of $1.42.

NWE

Our current $63 price target is premised upon a 10% discount applied to the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E EPS of $3.79.

Our previous $59 price target was premised upon a 10% discount applied to the 2022 utility group average PE multiple of 17x applied to the Barclays prior 2022E EPS of $3.83.

OGE

We derive our $36 price target by applying a 10% discount to the group average multiple of 18.5x applied to our 2023 utility earnings estimate combined with the current ENBL price $5 applied to the 111 units that OGE owns. Our 10% discount reflects below average earnings CAGR compared to the group.

Our previous $33 price target utilized a group average P/E multiple of 17x reflecting our view that earnings growth could expand following the approval of certain regulatory riders and grid modernization opportunities.

PEG

Our current $65 price target is premised upon a 5% premium to the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023 utility net parent EPS estimate, resulting in a $62 valuation for the utility. We then use a 5x EV/EBITDA multiple on 2023 generation EBITDA applied to the Barclays 2023 generation EBITDA estimate resulting in $3.25 valuation for PEG Power. Combining the utility $62 valuation and the $3.25 PEG Power valuation yields our $65 price target.

Our previous $59 price target was premised upon a 10% premium to the 2022 utility group average PE multiple of 17x applied to the Barclays 2022 utility net parent EPS estimate, resulting in a $55 valuation for the utility. We then used a 5x EV/EBITDA multiple on 2022 generation EBITDA applied to the Barclays 2022 generation EBITDA estimate resulting in $3.70 valuation for PEG Power. Combining the utility $55 valuation and the $3.70 PEG Power valuation yielded our $59 price target.

PCG

We move PCG's discount to the group average 23E P/E multiple to 35% to reflect the near-term headwinds and an active wildfire season. We believe the discount embedded in our valuation framework is an easy hurdle given regional peers and would expect PCG to re-rate higher in a risk on environment and see a further tailwind if we move through wildfire season with no additional large-liability fires. The P/E multiple is applied to our 2023 EPS estimate of $1.25, which gives a price target of $14.

Our previous $13 price target was premised on a 25% discount to the 2022 utility group average PE of 17x applied to the prior Barclays 2022E EPS of $1.08.

PNM

Our current $50 price target is premised upon the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E EPS estimate of $2.68. Our price target remains consistent with the terms of the AGR acquisition offer.

Our previous $50 price target was premised upon the terms of the AGR acquisition offer.

PNW

Our current $103 price target is premised upon the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E EPS estimate of $5.56.

Our previous $89 price target was premised upon the 2022 utility group average PE multiple of 17x applied to the Barclays 2022E EPS estimate of $5.22.

SO

Our $73 price target is premised on the 2023 group average PE multiple of 18.5x applied to our 2023 earnings estimate of $3.92. The group average multiple is based on a discount for the risk of Vogtle construction offsetting the premium valuation SO deserves based on fundamentals post commercial operation of Vogtle.

Our previous $61 price target was premised on a 5% discount to the 2022 group average PE multiple of 17x applied to our prior 2022 earnings estimate of $3.60 and then add the NPV of the Vogtle earnings uplift of $0.20 and apply 5% discount to the group average 2022.

SRE

We utilize a sum of the parts valuation framework for our $159 price target for SRE. We apply a relative P/E multiple premium / discount to the North American utility businesses a base group average (10% premium for Texas, 15% for SoCalGas, group average for SDG&E). We utilize the Barclays' Ienova price target and adjust for SRE ownership and spot USDMXN for Peso translation. We utilize a probability-weighted DCF approach for the LNG business depending on where each facility is on securing contracting for export capacity.

Our previous $146 price target was derived using the same methodology, but prior 2022 EPS of $8.49 and 2022E P/E multiple of 17x for the group.

WTRG

Our $50 price target is arrived at using our methodology where we value WTRG's water business using a 5% premium to the 2023 water group average P/E multiple. The 5% premium reflects strong regulatory exposure and public M&A opportunities, balanced by growth visibility lower than peers. We value the regulated gas business at a 15% premium to reflect a strong growth profile and familiar regulatory exposure.

Our previous $45 price target was premised on a 5% premium to the 2020 group average water multiple of 27x applied to the $1.24 2022 earnings contribution from the water business combined with a 15% premium to the 2022 regulated utility group average multiple of 17x applied to the $0.72 2022 earnings contribution from the LDC business, less the 2022 parent drag eps of $0.15 at a blended multiple of 25.8x

WEC

Our current $107 price target is premised upon a 30% premium to the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E EPS estimate of $4.45.

Our previous $94 price target was premised upon a 30% premium to the 2022 utility group average PE multiple of 17x applied to the prior Barclays 2022E EPS estimate of $4.24.

XEL

Our current $82 price target is premised upon a 30% premium to the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E EPS estimate of $3.40.

Our previous $70 price target was premised upon a 30% premium to the 2022 utility group average PE multiple of 17x applied to the Barclays 2022E EPS estimate of $3.15.

Note: FY End Dec

Price (17-Nov-2020)	**USD 80.60**
Price Target	**USD 95.00**

Why Equal Weight? AEE is a quality name with 5-7% growth that is visible for an extended period of time and we see the name deserving of a 20% premium to the group. Given the current price and premium we see increased uncertainty surrounding the regulatory construct in IL as balanced by incremental potential growth opportunities, resulting in our EW rating.

Upside case **USD 99.00**

Our upside case reflects a 25% premium to the 2023 group average P/E multiple applied to our 2023 EPS estimate.

Downside case **USD 75.00**

Our downside case reflects a 5% discount to the 2023 group average P/E multiple applied to our 2023 EPS estimate.

Upside/Downside scenarios

Price (17-Nov-2020)	USD 86.73
Price Target	USD 107.00

Why Overweight? We assign an Overweight rating as we believe AEP should trade at a 10% premium to the average regulated utility multiple. This is supported by top-tier EPS growth target of 5-7% with a bias towards the high end.

Upside case — **USD 122.00**

Our upside case reflects a 20% premium to the utility group average P/E multiple , applied to higher earnings driven by additional rate base growth and a favorable rate case outcomes.

Downside case — **USD 77.00**

Our downside case reflects a 20% discount to the utility group average P/E multiple, applied to lower earnings driven by slower rate base growth and unfavorable rate outcomes

Note: FY End Dec

Price (17-Nov-2020)	**USD 159.29**
Price Target	**USD 173.00**

Why Equal Weight? AWK presents a strong growth profile with top-tier management and a solid execution track record, however valuation is stretched relative to electric and gas utilties and our valuation framework implies a 15% premium to the water group average P/E multiple, all of which is fully reflected in the current stock price

Upside case **USD 188.00**

Our upside case assumes AWK trades at a 25% premium to the group average water utility P/E multiple. We believe this scenario could materialize if ESG flows increase or general utility equity demand rises and disproportionately benefits AWK.

Downside case **USD 107.00**

Our downside case values AWK on the same 15% premium, but applies the group utitlity multiple in lieu of the water group multiple. This could materialize if investors perceive long-term growth opportunities and ESG profiles to be similar to electric and gas.

Price (17-Nov-2020)	**USD 25.17**
Price Target	**USD 27.00**

Why Equal Weight? We see upside potential from activist involvement and valuation expansion balanced by uncertainty on asset sales, strategic actions with Enable. We await results of the business review and see reduced risk now that the CEO and CFO positions have been filled with strong candidates.

Upside case — **USD 29.00**

Our upside case for CNP values the company's Utility business on a 5% premium to the group average multiple for 2022 and utilizes the Barclays MLP upside case for ENBL.

Downside case — **USD 24.00**

Our downside case for CNP values the Utility business on a 20% discount to the group average multiple for 2022. We use the Barclays MLP team's downside case for ENBL.

Note: FY End Dec

Price (17-Nov-2020)	**USD 63.83**
Price Target	**USD 75.00**

Why Equal Weight? We see the current valuation as fair given a constructive regulatory jurisdiction, 10-year capex backlog, above-average earnings/dividend growth, and a long history of achieveing or exceeding results through capital and O&M managment.

Upside case — **USD 78.00**

Our upside case values CMS at a 30% premium to the regulated utility average multiple applied to our 2023 EPS estimate.

Downside case — **USD 60.00**

Our downside case values CMS at the regulated utility average multiple applied to our 2023 EPS estimate.

Price (17-Nov-2020)	**USD 79.25**
Price Target	**USD 83.00**

Why Underweight? We rate ED Underweight as we believe the current valuation is stretched based on a lack luster rate outcome for CECONY which drives a lower growth profile. We see the lower than group average growth as driving a 10% discount to the 2023 group average multiple.

Upside case — **USD 91.00**

Our upside case reflects the utility group average P/E multiple to portray potentially higher earnings from additional rate base growth and a favorable O&R rate case outcome.

Downside case — **USD 73.00**

Our downside case reflects a 20% discount to the regulated group to reflect potentially lower earnings driven by lower sales growth and investment because of REV.

Price (17-Nov-2020) USD 92.92
Price Target USD 102.00

Why Equal Weight? We view DUK as a solid regulated company with a credible long-term investment plan. We see earnings growth rebounding back to the 4-6% off of a 2021 earnings base given the removal of ACP earnings from 2020 and 2021 earnings

Upside case USD 112.00

Our upside case uses a 5% premium to the 2023 group average P/E multiple applied to our 2021 EPS estimate.

Downside case USD 80.00

Our downside case uses a 10% discount to the 2023 group average P/E multiple applied to our 2021 estimate.

Price (17-Nov-2020)	**USD 65.60**
Price Target	**USD 69.00**

Why Equal Weight? We assign an Equal Weight rating as we believe questions around final net 17/18 liability risk, implementation of improved cost recovery parameters, and equity issuance mean EIX likely continues to trade at a discount for next 12 months.

Upside case **USD 83.00**

The upside case applies a group average 2023 P/E multiple and assumes zero wildfire liability for 2017 / 2018 fires.

Downside case **USD 54.00**

Our downside case assumes $3.7bn net 2017 / 2018 wildfire liability and a 20% discount to the group average P/E multiple.

Note: FY End Dec

Price (17-Nov-2020)	**USD 44.88**
Price Target	**USD 50.00**

Why Equal Weight? We assign an Equal Weight rating to reflect transitory overhangs and a historically palatable valuation. We value WTRG on a sum of the parts basis and apply the utility group average P/E multiple, reflecting gas utility peers. The current share price reflects our valuation conclusion.

Upside case — **USD 71.00**

Our upside case assumes WTRG is valued using consolidated EPS against a water group P/E multiple. We believe this case could materialize if scarcity value persists and WTRG is deemed a pure-play water utility, despite the gas contribution to earnings.

Downside case — **USD 34.00**

Our downside case values WTRG consolidated EPS on the utility group average P/E multiple, while maintaining a 15% premium for the gas business and a 5% premium for water. We think this could materialize if ESG flows lessen or long-term growth appears unsustainable long term.

Source: Company data, Bloomberg, Barclays Research
Note: FY End Dec

Price (17-Nov-2020) **USD 91.75**
Price Target **USD 100.00**

Why Equal Weight? We believe ES's diverse, high quality regulated business will grow base earnings at the midpoint of its 5-7% target through the forecast period. We apply a 25% valuation premium to reflect the above average growth, reasonable regulatory mechanisms that are in place, allowing the company to earn a prompt return on its regulatory investing.

Upside case **USD 108.00**

We believe there are a number of large projects that could boost ES's earnings power and growth rate in the medium to long term. Offshore wind projects, the CGMA acquisition, grid mod, and elevated ESG fund flows could justify a 35% premium.

Downside case **USD 84.00**

An adverse change in regulation or legislation, while not expected, could result in a discount valuation for ES. We impute a 5% group discount to arrive at our downside case valuation.

Note: FY End Dec

Price (17-Nov-2020)	**USD 76.61**
Price Target	**USD 87.00**

Why Equal Weight? Top industry growth combined with an above-average regulatory environment drive the 20% premium valuation. Above-average growth provides for a larger increase to our expected price target, providing a compelling risk reward.

Upside case — **USD 99.00**

Our upside case applies a 30% premium multiple to the 2023 EPS estimates for the regulated utilities and assumes a 25% greater contribution from NEP and 20% greater contribution from NEER.

Downside case — **USD 73.00**

Our downside case applies an industry average multiple to 2023E earnings and assumes a 25% lower NEP value and a 15% lower contribution from NEER.

Price (17-Nov-2020)	**USD 24.75**
Price Target	**USD 29.00**

Why Overweight? We view NI as a quality utility with a well-defined rate base growth strategy from gas and electric infrastructure modernization, which we see as relatively low risk. We believe opportunities for accelerated growth from legacy generation replacement power investments result in upside to the current valuation.

Upside case **USD 32.00**

Our upside case reflects a 5% premium to the 2023 utility group average P/E multiple applied to higher earnings driven by additional rate base growth and favorable rate case outcomes.

Downside case **USD 24.00**

Our downside case reflects a 10% discount to the 2023 utility group average P/E multiple applied to lower earnings driven by slower rate base growth and unfavorable rate case outcomes.

Price (17-Nov-2020)	**USD 60.38**
Price Target	**USD 63.00**

Why Equal Weight? We believe a 10% discount to the group multiple is appropriate given below average growth and regulatory (although regulatory is improving). The current valuation shows the balanced risk reward profile.

Upside case — **USD 81.00**

Our upside case assumes a 15% premium to the group average regulated utility multiple assuming a positive shift in regulatory framework and significant improvement to ratebase growth and visibility driven by self build of generation in support of capacity needs.

Downside case — **USD 49.00**

Our downside case assumes a 15% discount to the group average regulated utility multiple if regulatory issues persist and capacity needs are filled via purchased power contracts and not self build.

Note: FY End Dec

Price (17-Nov-2020)	**USD 34.21**
Price Target	**USD 36.00**

Why Equal Weight? While there recent developments for OK regulatory lag and ENBL options. The combination of Enable Midstream and Oklahoma Gas and Electric, while synergistic from a utility financing standpoint, is ultimately dilutive to the corporate growth rate. Fair and timely regulatory recovery remains a risk as OG&E's earned returns show a meaningful regulatory lag.

Upside case **USD 47.00**

Our upside case factors in a 10% utility P/E premium based on 2023 utility EPS combined with ENBL valued at $5/unit ($2 to OGE).

Downside case **USD 32.00**

Our downside case factors in a 20% discount to the group average at the utility, for higher regulatory risk and uncertainty. We value ENBL at $5 per unit ($2 to OGE).

Price (17-Nov-2020)	USD 11.72
Price Target	USD 14.00

Why Overweight? We expect PCG's discount to close over the coming twelve months following resolution of the safety certification process, conclusion of the CPUC securitization regulatory proceeding, and eventual equity issuance in 2021.

Upside case — **USD 16.00**

Our upside case assumes a group average multiple if PG&E is able to avoid large wildfires, reinstate the dividend, and execute at its guided growth rate for multiple years.

Downside case — **USD 8.00**

Our downside case assumes a 50% discount to the group average multiple. We would expect this draconian outcome to emerge if a large-scale wildfire is caused in a negligent manner without AB 1054 coverage if PCG cannot obtain a safety certificate.

Note: FY End Dec

Price (17-Nov-2020)	**USD 86.78**
Price Target	**USD 103.00**

Why Overweight? We rate PNW as Overweight based on current relative value within our regulated utility group. The price target is based on a group average 2023 EPS multiple.

Upside case — **USD 113.00**

A 10% premium to the group P/E multiple is attributed to potential for above-average earnings and dividend growth, pending regulatory outcomes and economic conditions.

Downside case — **USD 82.00**

A 20% discount to the group P/E premised on lower-than-expected load growth combined with sub-optimal rate case, IRP, and retail competition outcomes.

Note: FY End Dec

Price (17-Nov-2020)	**USD 48.90**
Price Target	**USD 50.00**

Why Underweight? We expect average to above-average earnings/dividend growth through the close of the transaction and believe management has provided adequate information to be confident they can achieve growth through the forecast period. Our price target and UW rating reflect the per share purchase price according to the terms of the AGR merger agreement.

Upside case — **USD 51.00**

Our upside case comprises the small likelihood a topping bid from a competitor is seriously considered.

Downside case — **USD 44.00**

Our downside case assumes that the merger falls through and growth proceeds at a slower pace and the regulatory and/or economic landscape in NM does not improve. PNM could trade down to a 10% discount in this environment.

Upside/Downside scenarios

Price (17-Nov-2020) **USD 59.05**
Price Target **USD 65.00**

Why Equal Weight? PEG is a quality company that should be able to support 6%+ utility growth in our view based on current capital expenditure projections. As the merchant arm results in lower total EPS growth and the utility has risks on transmission ROE and the clean energy plan, we see PEG as an Equal Weight investment.

Upside case **USD 77.00**

This is a 20% premium to the 23 group average PE applied to our 23 eps estimate and a 7.5x EBITDA multiple applied to our 23 Power EBITDA.

Downside case **USD 53.00**

This is a 15% discount to the 23 group average PE applied to our 23 eps estimate, discounted to reflect lower transmission ROE and lower capital spending approved by the BPU estimate and a 5.0x EBITDA multiple applied to our 23 Power EBITDA.

Upside/Downside scenarios

Note: FY End Dec

Price (17-Nov-2020)	**USD 134.06**
Price Target	**USD 159.00**

Why Overweight? We think SRE represents an attractive thematic investment opportunity to invest with a top-tier management team with exposure to the best parts of the North American energy story. We also see the CA utilities' rate case outcomes as constructive to support utility growth and stability. We believe recent sensitivity to weak global LNG prices is overdone.

Upside case — **USD 185.00**

Our upside case assumes all LNG projects are FID'd and applies a 10% premium to SDG&E, a 15% premium in TX, and increases the SoCalGas premium to 15%.

Downside case — **USD 126.00**

Our downside case assumes no future LNG projects are FID'd, assumes the current Ienova stock price (mxn), and lowers SDG&E to a 20% discount, SoCalGas and Texas to a 10% and 15% discount, respectively.

Upside/Downside scenarios

Note: FY End Dec

Price (17-Nov-2020)	**USD 62.36**
Price Target	**USD 73.00**

Why Overweight? Southern is a high-quality company with above-average dividend payments, which has traded to a discount based on construction risk for Vogtle. With schedule and cost risks still lessening and the risks being schedule and cost, not technology, we see SO as rerating over the next 12 months, thus justifying our Overweight rating.

Upside case **USD 75.00**

We apply a 15% premium to group average 2023 P/E multiple on our 2023 EPS which includes the assumption that both Vogtle are in commercial operation in 2022

Downside case **USD 51.00**

We apply a 15% discount to the 2022 group average multiple applied to our 2022 EPS estimate and give no credit for future Vogtle earnings uplift

Why Underweight? We rate WEC as Underweight on its group high valuation, though meaningful dividend growth, significant free cash flow, and steady ratebase growth in a constructive regulatory jurisdiction provide a lower risk profile. We give WEC a 30% premium to the 2023 group average P/E multiple.

Upside case — **USD 111.00**

Our upside case assumes a 35% premium to the 2023 group average P/E multiple applied to our 2023 EPS estimate.

Downside case — **USD 95.00**

Our downside case assumes a 15% premium the group average multiple on our 2023 EPS estimate.

Price (17-Nov-2020)	**USD 72.63**
Price Target	**USD 82.00**

Why Equal Weight? We rate XEL as Equal Weight as it is a well-run core large-cap utility whose mix of businesses and locations, coupled with solid operating results and visible growth, supports a 30% premium to the group average 2023 P/E multiple. XEL has rerated close to our expected premium.

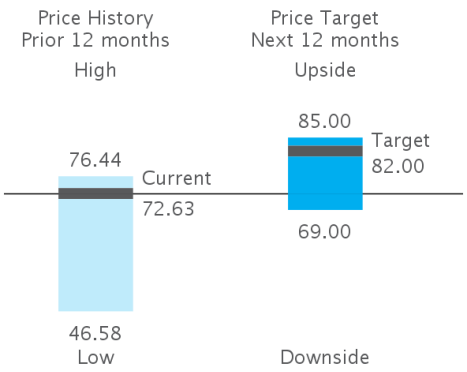
Upside case — **USD 85.00**

We use a 35% premium to the 2023 group average multiple applied to our 2023 EPS estimate.

Downside case — **USD 69.00**

We use a 10% premium to the 2023 group average multiple applied to our 2023 EPS estimate.

Upside/Downside scenarios



North America Power & Utilities **Industry View: POSITIVE**

Alliant Energy Corporation (LNT)

Source: Company data, Bloomberg, Barclays Research
Note: FY End Dec

Price (17-Nov-2020) **USD 54.73**
Price Target **USD 65.00**

Why Equal Weight? We assign an Equal Weight rating to LNT given our view that the current premium to the 2023E group average multiple is appropriate for a name with strong renewable growth potential and an improving regulatory profile.

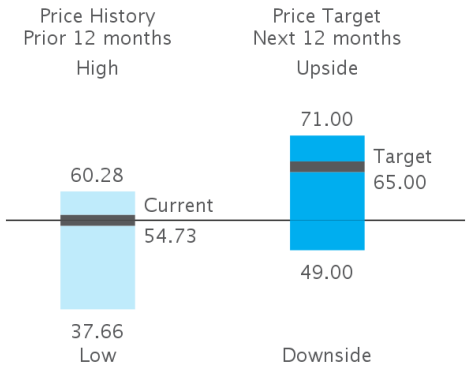
Upside case **USD 71.00**

Our upside case assumes a 25% premium to the group average 2023 utility P/E multiple, which we believe can be realized if LNT receives additional renewable capex approval, translates rate base growth to EPS growth more efficiently, or consistently beats guidance for 4-6 quarters.

Downside case **USD 49.00**

Our downside case assumes a 10% discount to the group average multiple, which we believe may occur if the WPL rate case is unfavorable or sales volumes are lower than expected and cash flow and earnings are put at risk.

Upside/Downside scenarios



Valuation Methodology and Risks

North America Power & Utilities
Alliant Energy Corporation (LNT)
Valuation Methodology: Our LNT price target is $65. We utilize a relative target P/E multiple to value LNT shares. We apply a 20% premium to the 18.5x group average 2023 P/E multiple to reflect LNT's strong track record for execution, visible earnings growth, attractive rate base growth opportunities driven by renewable generation that limit customer bill inflation, and constructive regulatory oversight.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Upside risks to our estimates and price target include better-than-expected regulatory outcomes, defensive equity flows, and increased M&A activity. Downside risks include inflation (commodity and PCE- leading to higher interest rates), adverse regulatory outcomes, project execution issues, or broad economic slowdown in LNT's service territories.
Ameren Corp. (AEE)
Valuation Methodology: Our $95 price target is derived by applying a 20% premium to the group average multiple of 18.5x to our 2023 EPS estimate of $4.28/share. We believe a premium multiple is appropriate at this time given the favorable regulatory structures AEE operates under in its primary jurisdictions of Missouri and Illinois.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Volatility of the US 30 Year Treasury Bond given formulaic rates in IL adds upside and downside risk. Threats to the IL QIP and uncertainty regarding the regulatory construct in IL and MO provide downside risk. Incremental spending opportunities from the MO IRP or clean energy legislation providing for higher levels of capex provide upside risk
American Electric Power Company, Inc. (AEP)
Valuation Methodology: Our price target for AEP is $107. We use a 10% premium to the 2023 regulated group average multiple of 18.5x applied to our 2023 estimate of $5.28 to reflect above average regulatory and long-term growth.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the company are: fair and timely rate recovery, regional economic impacts resulting in lower-than-expected usage, execution on cost controls to manage customer bill impacts.
American Water Works Company, Inc. (AWK)
Valuation Methodology: We utilize a group average water P/E multiple for 2023 earnings and apply a 15% premium to AWK's consolidated 2023 EPS estimate of $5.01. The premium reflects strong management, constructive regulatory exposure, and top-tier growth visibility.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Risks to AWK include rate case outcomes, public system M&A deals and integration, external financing needs, and general interest rate environments.
CenterPoint Energy, Inc. (CNP)
Valuation Methodology: Our $27 price target is premised upon the 2023 utility group average P/E multiple of 18.5x against our 2023 EPS estimate. We use the current ENBL unit price adjusted for CNP's owned shares to account for the midstream segment value.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Equity needs if ENBL cuts its distribution, reaching EPS guidance through 2023, and realizing capex opportunities in IN remain as material upside/downside risks. Broader items that could also impact the shares: 1) economic growth impacting sales volumes, 2) constructive gubernatorial and commission changes benefiting regulation and legislation, and 3) cost control to manage customer bill impacts.
CMS Energy Corporation (CMS)
Valuation Methodology: Our $75 price target is derived by applying a 25% premium to the group average multiple of 18.5x to our 2023 EPS estimate of $3.25. CMS has a constructive regulatory relationship in Michigan and above-average earnings/dividend growth forecast.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major company risks are: broad economic impact slowing sales growth, inability to gain fair and timely regulatory recovery, gubernatorial and commission changes impacting regulation and legislation, Ability to control costs in order to manage customer bill impacts.
Consolidated Edison, Inc. (ED)
Valuation Methodology: Our ED price target is $83. We use a 10% discount to the 2023 group average P/E multiple of 18.5x applied to our 2023 EPS estimate of $4.94 to reflect an average regulatory environment, a more challenged earnings outlook, and low-risk profile.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the upside are: ED being able to achieve the full allowed ROE at CECONY, competition for growing NY transmission opportunities, and competition for behind-the-meter infrastructure based on REV.
Duke Energy Corporation (DUK)
Valuation Methodology: We derive our $102 price target for DUK by applying a 5% discount to the 2023 regulated group average multiple of 18.5x to 2023E regulated utility earnings for DUK of $5.81 per share. We believe a discount to the group average multiple is appropriate given the lack of earnings growth historically.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the company are: the ability to obtain fair and timely rate recovery,and recovery of coal ash costs. The ability to maintain credit metrics in order to avoid equity needs, regional economic impacts driving lower-than-expected usage, lower than expected regulatory recovery
Edison International (EIX)

Valuation Methodology and Risks

Valuation Methodology: Our $69 price target is based on a 20% discount to the 2023 group average multiple of 18.5x applied to an adjusted, post wildfire liability and additional funding, Barclays 2023 EPS estimate of $5.12. The 20% discount is based upon perceived wildfire risk absent a test of AB 1054 cost recovery standards and remaining uncertainty on 2017 and 2018 wildfire liabilities.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major upside/downside risks to the company are: final wildfire liability for 17/18 fires, ultimate legislation on inverse condemnation, and regulatory outcomes in pending and future rate cases.

Essential Utilities, Inc. (WTRG)

Valuation Methodology: We value WTRG's water business using a 5% premium to the group average water multiple. The 5% premium reflects strong regulatory exposure and public M&A opportunities, balanced by growth visibility lower than peers. We value the regulated gas business at a 15% premium to reflect a strong growth profile and familiar regulatory exposure.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Risks to WTRG include rate case outcomes and general regulatory treatment, gas price inflation impacts on customer bills, and general interest rate environments.

Eversource Energy (ES)

Valuation Methodology: We derive our $100 price target by applying a 25% premium to the group average P/E multiple of 18.5x, to our 2023 earnings estimate of $4.34 per share. We believe a premium multiple is appropriate at this time given the nature of ES's growth profile, regulatory relationships, accretion from the Columbia Gas of MA acquisition and recovery mechanisms.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The primary risk to our investment thesis is a change in regulation. We don't expect significant regulatory change in any of ES's jurisdictions at this time.

FirstEnergy Corp. (FE)

Valuation Methodology: Our $33 price target for FE is based on a 30% discount to the group average 2023 multiple of 18.5x applied to our pro forma FY23 EPS estimate, adjusted for an assumed $2bn equity issuance to reflect balance sheet repair following fines or penalties. The 30% discount is based on our expectation that the ongoing Ohio corruption investigation serves as an overhang to the stock valuation regardless of the financial impact.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major company risks are: OH corruption investigation, regulatory recovery in pending and future cases as well as prudency of spending associated with rate riders and formulaic rates; the ability to finance and execute on capital investment plans; broad economic impacts driving customer usage trends; and cost control execution to manage customer bill increases.

NextEra Energy, Inc. (NEE)

Valuation Methodology: Our price target of $87 is premised upon a SOTP with a 20% premium to the 2023 group average PE multiple of 18.5x applied to our 2023 EPS estimate of $1.74, a 17.5x 23E EV/EBITDA for the NEER business – comparable to valuations of renewables developers such as Ørsted. We then add $3 for NEP as we take the Barclays $67 NEP price target and flow it through to represent NEE's ownership.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: The major company risks are: ability to achieve fair and timely rate recovery, competition for renewable energy projects at NEER, federal legislation impacting profitability or competition of renewable generation, and regional economic impacts resulting in lower-than-expected usage.

NiSource, Inc. (NI)

Valuation Methodology: Our $29 price target is derived using the 2023 regulated utility group average P/E of 18.5x applied to our 2023 EPS estimate of $1.55. This reflects our view that NiSource, despite near-term headwinds, is a quality utility with a above-average medium-term rate base growth strategy from coal replacement power and gas and electric infrastructure modernization.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the company are: the ability to obtain fair and timely rate recovery, regional economic impacts driving lower-than-expected usage, and cost controls to manage customer rates.

NorthWestern Corporation (NWE)

Valuation Methodology: Our $63 price target is derived using the 2023 regulated utility group average P/E of 18.5x discounted by 10% to account for lower than average growth, applied to our 2023 EPS estimate of $3.79. We believe favorable geographic attributes of the state are outweighed by regulatory challenges and uncertainties in Montana.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the company are: fair and timely rate recovery; regional economic impacts; potential ability to manage customer bill impacts. Upside risks include positive regulatory outcomes and potential for new build of capacity resources in Montana.

OGE Energy Corp. (OGE)

Valuation Methodology: We derive our $36 price target by applying a 10% discount to the group average multiple of 18.5x applied to our 2023 utility earnings estimate combined with the current ENBL price $5 applied to the 111 units that OGE owns.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: OGE's capital plans impute less than 5% rate base growth. This is lower than the group average and is indicative of a below average regulatory jurisdiction. The upside is that as most companies grow earnings at or below the rate base growth level, OGE has the opportunity to grow regulated earnings in the 4-6% level on solid customer growth combined with potential to close the earned to allowed ROE gap that exists. The key (upside and downside risk) to enhancing growth lies in gaining rider approvals in Oklahoma. As significant generation and environmental spending is winding down, grid modernization, reliability, resiliency and technology are the next set of major spending programs.

PG&E Corporation (PCG)

Valuation Methodology and Risks

Valuation Methodology: Our $14 price target is based on a 35% discount to the group average 2023E P/E multiple of 18.5x against a $1.25 EPS estimate, reduced by the NPV of wildfire fund contributions, assuming the fund lasts 15 years.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: There is additional downside risk if capital structure changes lead to additional equity, future wildfires occur, or earnings are negatively impacted by regulatory outcomes.

Pinnacle West Capital Corporation (PNW)

Valuation Methodology: Our $103 price target is derived by applying the group average multiple of 18.5x, to our 2023 EPS estimate of $5.56. We expect the company to deliver average EPS and above-average dividend growth through 2023. In our view, the current regulatory uncertainty and geographic attributes justify a discount to the group average P/E multiple on a 2023 utility earnings.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major company risks to the downside include: 1) poor regulatory outcome of current APS rate case, 2) economic impact of lower sales growth, 3) ability to control costs in order to manage customer bill impacts and potential to allow retail choice, 4) deterioration of the regulatory construct.

PNM Resources, Inc. (PNM)

Valuation Methodology: Our $50 price target is premised upon the 2023 utility group average PE multiple of 18.5x applied to the Barclays 2023E eps $2.68 estimate. Our price target is consistent with the terms of the AGR acquisition offer.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Events and outcomes that could result in under performance are: lack of regulatory support for the acquisition or a change in management sentiment regarding the acquisition.

Public Service Enterprise Group (PEG)

Valuation Methodology: Our price target for PEG is $65. We use a sum of the parts methodology, where we use a 5% premium to the 2023 regulated group average PE multiple of 18.5x applied to our 2023 EPS estimate for the utility and parent earnings of $3.18 and apply a 5X EBITDA multiple to the 2023 genco earnings.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Volatility in power prices, changes to the structure of the PJM, NYISO of NEPOOL capacity or energy markets. FERC ROE changes, or NJ BPU approval or changes to the pending Clean Energy Future capital spending plans.

Sempra Energy (SRE)

Valuation Methodology: We utilize a sum of the parts valuation framework for SRE. We apply a relative P/E multiple premium / discount to the North American utility businesses a base group average (10% premium for Texas, 15% for SoCalGas, group average for SDG&E). We utilize the Barclays Ienova Price Target and adjust for SRE ownership and spot USDMXN for Peso translation. We utilize a probability-weighted DCF approach for the LNG business depending on where each facility is on securing contracting for export capacity.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Risks include incremental equity needs, FIDs at LNG projects, construction problems, and negative regulatory outcomes.

The Southern Company (SO)

Valuation Methodology: We derive our $73 price target by applying the 2023 regulated group average P/E multiple of 18.5x to our 2023 EPS estimate of $3.92 for SO

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the company are: Adverse regulatory outcomes for Vogtle or the upcoming Georgia rate case; additional, unexpected delays to the plant Vogtle schedule; economic impacts that would drive lower electric usage; competition for renewable and contract generation impacting Southern Power's growth; and ability to drive O&M lower in order to earn the allowed ROE in each jurisdiction.

WEC Energy Group, Inc. (WEC)

Valuation Methodology: Our price target of $107 represents a 30% premium valuation relative to the utility peer group P/E multiple of 18.5x on our 2023 EPS estimate of $4.45. We believe this premium valuation is justified by the strong performance record the company has achieved and our belief that its forward growth goals are both realistic and achievable.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Risks to the upside are: Continued load growth; higher than regulated returns from nonregulated renewable investments; ability to get fair and timely rate recovery; execution on cost controls; continued flight to safety and flows into the "comfort" group of utilities.

Xcel Energy Inc. (XEL)

Valuation Methodology: Our $82 price target is based on a 30% premium to the group average multiple of 18.5x applied to our 2023 EPS estimate of $3.40. We believe this premium valuation fairly reflects the quality, strength, and potential endurance of the company's growth.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Major risks to the company are: ability to obtain fair and timely rate recovery, execution on coal to renewable generation transformation, ability to maintain credit metrics while financing its long-term capital plan, and execution on cost control to manage customer bill impact.

IMPORTANT DISCLOSURES

Unless otherwise indicated, prices are sourced from Bloomberg and reflect the closing price in the relevant trading market, which may not be the last available price at the time of publication.

Disclosure Legend:

A: Barclays Bank PLC and/or an affiliate has been lead manager or co-lead manager of a publicly disclosed offer of securities of the issuer in the previous 12 months.

B: An employee or non-executive director of Barclays PLC is a director of this issuer.

CD: Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by this issuer.

CE: Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by this issuer.

D: Barclays Bank PLC and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

E: Barclays Bank PLC and/or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer within the next 3 months.

FA: Barclays Bank PLC and/or an affiliate beneficially owns 1% or more of a class of equity securities of this issuer, as calculated in accordance with US regulations.

FB: Barclays Bank PLC and/or an affiliate beneficially owns a long position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.

FC: Barclays Bank PLC and/or an affiliate beneficially owns a short position of more than 0.5% of a class of equity securities of this issuer, as calculated in accordance with EU regulations.

FD: Barclays Bank PLC and/or an affiliate beneficially owns 1% or more of a class of equity securities of this issuer, as calculated in accordance with South Korean regulations.

GD: One of the Research Analysts on the fundamental credit coverage team (and/or a member of his or her household) has a long position in the common equity securities of this issuer.

GE: One of the Research Analysts on the fundamental equity coverage team (and/or a member of his or her household) has a long position in the common equity securities of this issuer.

H: This issuer beneficially owns more than 5% of any class of common equity securities of Barclays PLC.

I: Barclays Bank PLC and/or an affiliate is party to an agreement with this issuer for the provision of financial services to Barclays Bank PLC and/or an affiliate.

J: Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities of this issuer and/or in any related derivatives.

K: Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from this issuer within the past 12 months.

L: This issuer is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an affiliate.

M: This issuer is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

N: This issuer is, or during the past 12 months has been, a non-investment banking client (non-securities related services) of Barclays Bank PLC and/or an affiliate.

O: Not in use.

P: A partner, director or officer of Barclays Capital Canada Inc. has, during the preceding 12 months, provided services to the subject company for remuneration, other than normal course investment advisory or trade execution services.

Q: Barclays Bank PLC and/or an affiliate is a Corporate Broker to this issuer.

R: Barclays Capital Canada Inc. and/or an affiliate has received compensation for investment banking services from this issuer in the past 12 months.

S: This issuer is a Corporate Broker to Barclays PLC.

T: Barclays Bank PLC and/or an affiliate is providing equity advisory services to this issuer.

U: The equity securities of this Canadian issuer include subordinate voting restricted shares.

V: The equity securities of this Canadian issuer include non-voting restricted shares.

Risk Disclosure(s)

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or

IMPORTANT DISCLOSURES

Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

North America Alternative Energy		
Array Technologies, Inc. (ARRY)	Azure Power Global (AZRE)	Brookfield Renewable Energy Partners LP (BEP)
Brookfield Renewable Energy Partners LP (BEP_u.TO)	Covanta Holding (CVA)	Enphase Energy (ENPH)
Enviva Partners LP (EVA)	First Solar (FSLR)	GFL Environmental (GFL)
GFL Environmental (GFL.TO)	NextEra Energy Partners LP (NEP)	Plug Power, Inc. (PLUG)
SolarEdge Technologies Inc. (SEDG)	SunPower (SPWR)	Sunrun Inc. (RUN)
North America Power & Utilities		
Alliant Energy Corporation (LNT)	Ameren Corp. (AEE)	American Electric Power Company, Inc. (AEP)
American Water Works Company, Inc. (AWK)	Brookfield Infrastructure Partners LP (BIP)	Brookfield Infrastructure Partners LP (BIP_u.TO)
CenterPoint Energy, Inc. (CNP)	CMS Energy Corporation (CMS)	Consolidated Edison, Inc. (ED)
Dominion Energy (D)	DTE Energy (DTE)	Duke Energy Corporation (DUK)
Edison International (EIX)	Essential Utilities, Inc. (WTRG)	Eversource Energy (ES)
Exelon Corporation (EXC)	FirstEnergy Corp. (FE)	NextEra Energy, Inc. (NEE)
NiSource, Inc. (NI)	NorthWestern Corporation (NWE)	OGE Energy Corp. (OGE)
PG&E Corporation (PCG)	Pinnacle West Capital Corporation (PNW)	PNM Resources, Inc. (PNM)
Portland General Electric Company (POR)	Public Service Enterprise Group (PEG)	Sempra Energy (SRE)
The Southern Company (SO)	WEC Energy Group, Inc. (WEC)	Xcel Energy Inc. (XEL)

Distribution of Ratings:

Barclays Equity Research has 1632 companies under coverage.

48% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 50% of companies with this rating are investment banking clients of the Firm; 73% of the issuers with this rating have received financial services from the Firm.

36% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 43% of companies with this rating are investment banking clients of the Firm; 68% of the issuers with this rating have received financial services from the Firm.

13% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 33% of companies with this rating are investment banking clients of the Firm; 61% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

IMPORTANT DISCLOSURES

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

Types of investment recommendations produced by Barclays Equity Research:

In addition to any ratings assigned under Barclays' formal rating systems, this publication may contain investment recommendations in the form of trade ideas, thematic screens, scorecards or portfolio recommendations that have been produced by analysts within Equity Research. Any such investment recommendations shall remain open until they are subsequently amended, rebalanced or closed in a future research report.

Disclosure of other investment recommendations produced by Barclays Equity Research:

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view all investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to *https://live.barcap.com/go/research/Recommendations*.

DISCLAIMER:

This publication has been produced by Barclays Research Department in the Investment Bank of Barclays Bank PLC and/or one or more of its affiliates (collectively and each individually, "Barclays"). It has been prepared for institutional investors and not for retail investors. It has been distributed by one or more Barclays affiliated legal entities listed below. It is provided to our clients for information purposes only, and Barclays makes no express or implied warranties, and expressly disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to any data included in this publication. To the extent that this publication states on the front page that it is intended for institutional investors and is not subject to all of the independence and disclosure standards applicable to debt research reports prepared for retail investors under U.S. FINRA Rule 2242, it is an "institutional debt research report" and distribution to retail investors is strictly prohibited. Barclays also distributes such institutional debt research reports to various issuers, media, regulatory and academic organisations for their own internal informational news gathering, regulatory or academic purposes and not for the purpose of making investment decisions regarding any debt securities. Media organisations are prohibited from re-publishing any opinion or recommendation concerning a debt issuer or debt security contained in any Barclays institutional debt research report. Any such recipients that do not want to continue receiving Barclays institutional debt research reports should contact debtresearch@barclays.com. Clients that are subscribed to receive equity research reports, will not receive certain cross asset research reports co-authored by equity and FICC research analysts that are distributed as "institutional debt research reports" unless they have agreed to accept such reports. Eligible clients may get access to such cross asset reports by contacting debtresearch@barclays.com. Barclays will not treat unauthorized recipients of this report as its clients and accepts no liability for use by them of the contents which may not be suitable for their personal use. Prices shown are indicative and Barclays is not offering to buy or sell or soliciting offers to buy or sell any financial instrument.

Without limiting any of the foregoing and to the extent permitted by law, in no event shall Barclays, nor any affiliate, nor any of their respective officers, directors, partners, or employees have any liability for (a) any special, punitive, indirect, or consequential damages; or (b) any lost profits, lost revenue, loss of anticipated savings or loss of opportunity or other financial loss, even if notified of the possibility of such damages, arising from any use of this publication or its contents.

Other than disclosures relating to Barclays, the information contained in this publication has been obtained from sources that Barclays Research believes to be reliable, but Barclays does not represent or warrant that it is accurate or complete. Barclays is not responsible for, and makes no warranties whatsoever as to, the information or opinions contained in any written, electronic, audio or video presentations of third parties that are accessible via a direct hyperlink in this publication or via a hyperlink to a third-party web site ('Third-Party Content'). In this month's Straight from the Tap, we preview 1Q21 earnings for AWK and WTRG and discuss recent regulatory updates and potential implications of forthcoming water infrastructure legislative efforts.

AWK 1Q21 preview summary - 1Q21E EPS: $0.73. We expect a very straightforward 1Q21E earnings release for AWK as the company enters a relative quiet period now that PA, NJ, and MO rate cases are in the rear view mirror. We expect management commentary to highlight the strong regulated M&A execution YTD following the York deal (*AWK: Regulated M&A Train Rolls Through York, PA*, published 4/7/21), in line with upsized guidance on the 4Q20 call in February. We also anticipate commentary on potential legislative packages at the federal and state level. AWK's New York divestiture is the only remaining overhang, albeit unlikely to prove material in our view, as Governor Cuomo's efforts to push for municipalization as part of a larger budget bill seemingly stalled in the legislature. We reiterate our Equal Weight rating for AWK given our view that the sizable premium to the regulated utility group captures growth upside from regulated M&A amidst a broader ESG prioritization in both politics and financial markets.

WTRG 1Q21 preview summary - 1Q21E EPS: $0.66. We expect a cleaner 1Q21 EPS print as YoY comps now reflect the Peoples deal, though regulatory and legal updates could prove to be more nuanced. We are interested to hear management's perspective on the recent Delcora ALJ stay order, legal case progress, and how the process interacts with financing planning. We expect additional color on Peoples Gas rate case timing following WTRG's commitment to file a base rate case by year-end 2023. The company made the commitment as part of its repairs tax settlement to placate intervenor concerns about potential overearning from ongoing tax benefits above forecast. We expect management to provide a summary of the settlement terms and how the flow-through regulatory accounting interacts with earnings given the agreement compensates customers for 100% of catch-up benefits via a fixed annual surcredit for five years, while WTRG will not monetize the tax benefits as long as it retains an NOL position. We reiterate our Equal Weight rating on WTRG and believe the discount to AWK reflects a lower growth outlook and AWK's pure-play water scarcity. We do not expect near-term Delcora uncertainty to have a material impact longer term, but acknowledge risk that a protracted process serves as an overhang. With repairs tax nearly complete, we think a simplified profile with upside potential from regulated M&A should resonate with investors after Delcora is resolved.

Barclays Capital Inc. and/or one of its affiliates does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.
PLEASE SEE ANALYST CERTIFICATION(S) AND IMPORTANT DISCLOSURES BEGINNING ON PAGE 10.

Industry View: Pos: Positive; Neu: Neutral; Neg: Negative

AWK 1Q21 Earnings Expectations

1Q21E EPS Bridge

Our $0.73 1Q21E EPS estimate contemplates various rate increases from infrastructure surcharges, limited issue trackers, and partial realization of rate relief following GRC decisions at AWK's largest operating companies in PA and NJ. Surcharges and general rate relief is expected to provide more than enough offset to incremental financing and operational costs throughout FY21, though rate relief pacing shifts much of the cash benefit post 1Q21. We note that AWK's guidance basis EPS now includes DD&A benefits associated with the NY sale, the impact on Q1 is de minimis, as only $0.01 is added back to reported 1Q20 adjusted EPS.

Expected Call Topics:

Regulated M&A Execution

We are expecting management to highlight the York wastewater deal and the general market strength for regulated M&A across AWK's national footprint (FMV laws cover 10 states and water quality accountability laws cover 3). We do not anticipate changes to the guidance provided during AWK's combined 4Q20 earnings and Investor Day in February, but expect a reiteration of confidence amidst strong early execution.

Sentiment on regulated M&A has been strong in recent months as muni budgets are strained following Covid-19 and environmental compliance costs are expected to rise as EPA enforcement rates increase under President Biden's administration. However, numerous federal policy proposals being floated to provide direct investment or bolster funding access for municipal water infrastructure could, all else equal, reduce the impetus to sell to AWK.

We believe it is too early to predict final terms of any water infrastructure package, as Republicans have not presented a counter proposal, but President Biden's proposal indicates that lead pipe replacement and water quality standards (contaminant regulations, PFAS monitoring and remediation) are going to be prioritized (see: *link*). While specific earmarks for rural and disadvantaged communities could help, we note that major cities and large municipal systems have historically received the bulk of federal funding versus smaller systems that AWK tends to prefer as acquisition opportunities. Regardless of likely concession and compromises, the President's proposal allocates $45bn for lead pipe replacement (WIIN grants), $56bn for disadvantaged and rural communities (upsize existing programs), and $10bn to remediate PFAS in drinking water and upgrade small rural systems. $110bn compares to the American Society of Civil Engineers estimate that $1tn of water

infrastructure investment is needed in the US over the coming 25 years. The infrastructure package is light on wastewater systems, which we anticipate will continue to make up the bulk of regulated M&A moving forward. Thus, we see plenty of opportunities for AWK in small to medium wastewater systems (5,000-30,000 average customer systems).

NYAW Exit Headaches Persist

At Governor Cuomo's direction, on March 29, 2021, the New York Department of Public Service (DPS) presented a municipalization feasibility study that concluded a public takeover of AWK's Nassau County system is the optimal and least cost option. The primary concern from lawmakers is the outsized customer bill (a result of high local property and franchise taxes that make up 38%-60% of total bills) and an upcoming rate increase (26% increase in some rate classes) set to take effect on May 1, 2021. The DPS report found that municipalization was the optimal path because the inefficient tax collection structure creates numerous inequities and inefficiencies, including paying higher federal taxes when compared to a scenario where NYAW becomes tax exempt and those tax revenues are replaced with higher property taxes. The recommendations from the DPS were to immediately pass legislation to remove the property tax burden on NYAW and create a public authority to acquire NYAW and operate the assets as a public provider.

There was a push to include municipalization authority in the 2021-2022 budget, however efforts stalled in the Assembly on concerns about how special franchise taxes might be absorbed by Long Island utilities under the proposed process. Standalone bills to defer the rate increase and authorize a public takeover were introduced after the budget efforts collapsed, and the Senate passed a version on Tuesday (4/20/21) as negotiations are ongoing with the Assembly.

We see the outcome of the NYAW process as highly uncertain, but remain confident that the PSC will stand by the authorized rate increase if needed and do not see a scenario where AWK receives less than the Liberty offer. However, we stress that the size of the system likely means AWK will comfortably absorb any near-term financial impacts from a delay. The DPS study assumes the $608mn sale price that Liberty agreed to, plus $84.5mn in rate base investment in 2022, less ~$25mn for upstate assets that would be retained and deferrals owed to customers, resulting in a net purchase price of $669.2mn. However, the study is explicit that the math is illustrative and likely inflated (maintaining negotiating options).

CA American Water Cost of Capital

CA water utilities will file updated cost of capital proceedings by May 1, 2021, to determine authorized ROE and capital structures for test years 2022-2024. CA American Water is currently authorized a 9.2% ROE on 55.39% equity layer from a 2018 CPUC decision. It is worth noting that the ALJ proposed decision suggested an 8.23% ROE (avg US water ROE was 9.5%), which was met with significant industry backlash before commissioners decided on the higher 9.20%. It is also important to note that the WRAM decoupling mechanism was a critical element that the ALJ relied upon to justify below industry returns given lower risk. In 2020, the CPUC decided that the WRAM decoupling mechanism used by CA American Water will be replaced by a new structure to be determined during the next rate case covering test years 2024-2026. It is unclear how the cost of capital proceeding will handle the overlap and uncertainty around a replacement. For additional thoughts on the WRAM decision, see our Straight from the Tap note published 9/8/2020 (*link*).

WTRG 1Q21 Earnings Expectations

1Q21E EPS Bridge

Our 1Q21E EPS estimate of $0.66 accounts for small rate relief via water infrastructure surcharges and a full year of Peoples integration. Our estimate is in line with management's projections for first quarter earnings weighting of 35%-45% of $1.64-$1.69 FY21E EPS

guidance (implicit 1Q21 guidance range of $0.58-$0.74 using the FY21 guidance midpoint). We anticipate a small amount of volumetric help YoY given customer growth (guidance 2%-3% annually) and degree day comps for gas usage in PA. We also note residential water usage trends have been strong during the covid-19 shutdowns and margin help may continue to pace favorably relative to 1Q20, providing additional flexibility to meet FY21 guidance. We also forecast small organic growth and operational efficiencies for Peoples relative to the early days of the integration in 1Q20, in line with WTRG's O&M initiatives across the business.

FIGURE 2

Expected Call Topics:

Peoples Rate Case Timing

As part of WTRG's settlement on the catch-up component of repairs tax, Peoples committed to filing a general rate case no later than December 31, 2023 (Peoples will also likely implement the DSIC mechanism in 2023). Under the initial proposal, WTRG proposed a sharing mechanism that would have allowed Peoples Gas to stay out through 2026.

The settlement effectively provides customers 100% of $381mn catch-up deduction tax savings benefits via a $27.9mn annual surcredit over five years (true up in sixth year). The settlement acknowledges that Peoples is operating in an NOL position and thus cannot monetize the benefit near term, thus justifying the five-year deferral and includes various true up and reconciliation terms to ensure surcredits track actual tax benefits flowing through to Peoples.

Taking Steps Forward at Delcora but Stuck in Regulatory and Legal Maze

We discussed the ALJ PD calling for the PA PUC to reject the Delcora acquisition in the January 22 monthly, *Straight from the Tap*. The PD had three main concerns; 1) commercial customer objections to the deal, 2) the effective rate stabilization plan creation via trust refunds on bills, and 3) the ongoing legal challenge to the sale contract. The Commission took into account new settlements with numerous customers and clarifying comments from WTRG around its willingness to provide trust benefits off of customer bills to avoid being a 'de facto' rate stabilization plan and decided not to adopt the ALJ PD.

The PUC vacated the PD and remanded back to the ALJ level to reopen the docket. Importantly, as part of the reopening of the docket WTRG agreed to waive the statutory timeline requirements for a decision. The new ALJ on April 16 issued a stay order for the PA PUC proceeding until a final, un-appealable decision is reached in the county court case on whether an enforceable contract exists. Our understanding is that the appeals process could be lengthy and that WTRG will likely seek to have the ALJ order changed to allow for approval while legal appeals on contract validity play out.

We view the Delcora situation as bureaucratically complicated but the deal remains achievable if WTRG continues to execute settlements and legal decisions are upheld, however the timeline remains unclear. WTRG's $300mn forward equity mechanism must be pulled

down by August. We still believe WTRG is likely to issue all authorized equity regardless of whether Delcora is approved in time. We also see the guidance range as intact regardless of the deal given strong M&A activity outside of Delcora. We anticipate management will highlight the strength of their deal backlog and general market activity.

Source: Company data, Bloomberg, Barclays Research
Note: FY End Dec

Price (21-Apr-2021)	**USD 161.00**
Price Target	**USD 154.00**

Why Equal Weight? AWK presents a strong growth profile with top-tier management and a solid execution track record, however valuation is stretched relative to electric and gas utilties and our valuation framework implies a 15% premium to the water group average P/E multiple, all of which is fully reflected in the current stock price

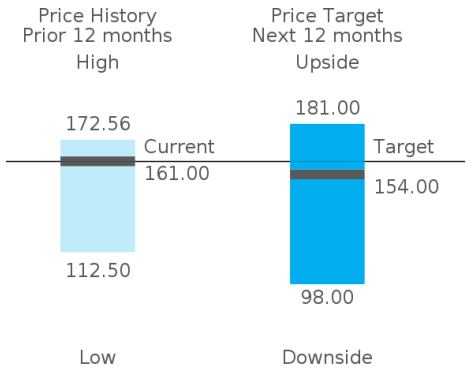
Upside case **USD 181.00**

Our upside case assumes AWK trades at a 25% premium to the group average water utility P/E multiple. We believe this scenario could materialize if ESG flows increase or general utility equity demand rises and disproportionately benefits AWK.

Downside case **USD 98.00**

Our downside case values AWK on the same 15% premium, but applies the group utitlity multiple in lieu of the water group multiple. This could materialize if investors perceive long-term growth opportunities and ESG profiles to be similar to electric and gas.

Upside/Downside scenarios



Valuation Methodology and Risks

North America Power & Utilities
American Water Works Company, Inc. (AWK)
Valuation Methodology: We utilize a group average water P/E multiple for 2023 earnings and apply a 10% premium to AWK's consolidated 2023 EPS estimate of $5.01 to arrive at our $154 price target. The premium reflects strong management, constructive regulatory exposure, and top-tier growth visibility.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Risks to AWK include rate case outcomes, public system M&A deals and integration, external financing needs, and general interest rate environments.

Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

North America Power & Utilities

Alliant Energy Corporation (LNT)	Ameren Corp. (AEE)	American Electric Power Company, Inc. (AEP)
American Water Works Company, Inc. (AWK)	Brookfield Infrastructure Partners LP (BIP)	Brookfield Infrastructure Partners LP (BIP_u.TO)
CenterPoint Energy, Inc. (CNP)	CMS Energy Corporation (CMS)	Consolidated Edison, Inc. (ED)

IMPORTANT DISCLOSURES

Dominion Energy (D)	DTE Energy (DTE)	Duke Energy Corporation (DUK)
Edison International (EIX)	Essential Utilities, Inc. (WTRG)	Eversource Energy (ES)
Exelon Corporation (EXC)	FirstEnergy Corp. (FE)	NextEra Energy, Inc. (NEE)
NiSource, Inc. (NI)	NorthWestern Corporation (NWE)	OGE Energy Corp. (OGE)
PG&E Corporation (PCG)	Pinnacle West Capital Corporation (PNW)	PNM Resources, Inc. (PNM)
Portland General Electric Company (POR)	Public Service Enterprise Group (PEG)	Sempra Energy (SRE)
The Southern Company (SO)	WEC Energy Group, Inc. (WEC)	Xcel Energy Inc. (XEL)

Distribution of Ratings:

Barclays Equity Research has 1674 companies under coverage.

48% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 50% of companies with this rating are investment banking clients of the Firm; 73% of the issuers with this rating have received financial services from the Firm.

36% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 44% of companies with this rating are investment banking clients of the Firm; 70% of the issuers with this rating have received financial services from the Firm.

13% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 35% of companies with this rating are investment banking clients of the Firm; 61% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

Types of investment recommendations produced by Barclays Equity Research:

In addition to any ratings assigned under Barclays' formal rating systems, this publication may contain investment recommendations in the form of trade ideas, thematic screens, scorecards or portfolio recommendations that have been produced by analysts within Equity Research. Any such investment recommendations shall remain open until they are subsequently amended, rebalanced or closed in a future research report.

Disclosure of other investment recommendations produced by Barclays Equity Research:

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view all investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to *https://live.barcap.com/go/research/Recommendations*.

Valuation Methodology: We have a $47 price target for WTRG. We value WTRG's water business using a group average water multiple of 28x. The valuation reflects strong regulatory exposure and public M&A opportunities, balanced by growth visibility lower than peers and near-term risk from closing recent public M&A deals. We value the regulated gas business at a 5% premium to the average 2023 multiple of 17x for our electric and gas group coverage, reflecting a strong growth profile and familiar regulatory exposure.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Risks to WTRG include rate case outcomes and general regulatory treatment, gas price inflation impacts on customer bills, and general interest rate environments.

DISCLAIMER:

This publication has been produced by Barclays Research Department in the Investment Bank of Barclays Bank PLC and/or one or more of its affiliates (collectively and each individually, "Barclays"). It has been prepared for institutional investors and not for retail investors. It has been distributed by one or more Barclays affiliated legal entities listed below. It is provided to our clients for information purposes only, and Barclays makes no express or implied warranties, and expressly disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to any data included in this publication. To the extent that this publication states on the front page that it is intended for institutional investors and is not subject to all of the independence and disclosure standards applicable to debt research reports prepared for retail investors under U.S. FINRA Rule 2242, it is an "institutional debt research report" and distribution to retail investors is strictly prohibited. Barclays also distributes such institutional debt research reports to various issuers, media, regulatory and academic organisations for their own internal informational news gathering, regulatory or academic purposes and not for the purpose of making investment decisions regarding any debt securities. Media organisations are prohibited from re-publishing any opinion or recommendation concerning a debt issuer or debt security contained in any Barclays institutional debt research report. Any such recipients that do not want to continue receiving Barclays institutional debt research reports should contact debtresearch@barclays.com. Clients that are subscribed to receive equity research reports, will not receive certain cross asset research reports co-authored by equity and FICC research analysts that are distributed as "institutional debt research reports" unless they have agreed to accept such reports. Eligible clients may get access to such cross asset reports by contacting debtresearch@barclays.com. Barclays will not treat unauthorized recipients of this report as its clients and accepts no liability for use by them of the contents which may not be suitable for their personal use. North America Power & Utilities

Water valuations are hot, but have they boiled over?

We initiate coverage on AWK and WTRG with Equal Weight ratings: Water valuations have seemingly lost all correlation to electric and gas utilities, as the group P/E multiple has expanded to a ~10-turn premium. However, we see little evidence of the spread contracting near term, as we view investor expectations as reasonable and near-term earnings headwinds as scarce. Increasing reliance on rate cases throughout the forecast period represent the largest sector-wide risk factor through our 2022 forecast horizon, but customer bill offsets exist for some, and overall customer bill inflation appears palatable.

Scarcity value and ESG narrative likely to drive premium for foreseeable future, in our view: Regardless of fundamental similarities to electric and gas utility counterparts, we expect the water premium to persist as scarcity and index composition drive ownership diversity and support water valuations for the foreseeable future. Water utilities also benefit from their lack of electric generation exposure that disqualifies some utilities on ESG screens, and we see increased environmental regulation on water quality coupled with fair market value legislation as adding a compelling qualitative ESG narrative as investor-owned water utilities provide needed financing for cash-strapped public agencies, particularly following the impact of COVID-19 on public budgets.

Recent execution and industry tailwinds likely mean EPS CAGRs moderate somewhat, but growth backlog and visibility still exceed electric peers: AWK and WTRG possess unique scale that position both to play leading roles in a national water infrastructure replacement cycle in the US. Chronic under-investment in water infrastructure has led the American Society of Civil Engineers to estimate that $1tn of total infrastructure spending is needed over the coming 25 years to repair and replace aging infrastructure. The market position dominance is unmatched in the electric utility space (NEE is probably closest with NEER). We see the scale advantage and reputation for best-in-class management providing greater confidence and visibility into capital deployment and growth. External financing needs likely increase relative to previous years given cash tax positions and balance sheet limitations; we see modest ROE lag between cases as possible, but still believe EPS and rate base growth exceed the average electric utility.

Valuation framework: We arrive at a $138 price target for AWK and a $45 price target for WTRG and rate both Equal Weight. We utilize a 27x 2022 P/E group average multiple base for water utilities and a 17x general utility group average multiple for WTRG's gas business. We apply our standard premium and discount valuation framework to arrive at a 15% water premium for AWK and a 5% and 15% premium for WTRG's water and gas business, respectively.

Is Water Just Worth More Than Electricity?

Water Valuation Premium Continues to Expand

Water utilities have seemingly broken free of any tether to electric and gas utilities in recent years and there are no signs that the gap will close. We use AWK, WTRG, CWT, and AWR as our water utility basket for all group average calculations. The premium would screen even greater, but we exclude securities with a market cap below $2bn (MSEX, SJW, YORW), as we believe limited trading liquidity and embedded takeout premiums would misrepresent comparisons to the traditional US utility under coverage. The pace of the expansion has been particularly notable as the group hovered between 2x-4x premium from 2010 through 2015 before expanding to >10x since early 2019. AWK currently trades at a record 11.5x premium to the UTY.

Is That Premium Justified?

Valuation has dominated the debate for the water sector as a whole for the last few years. The duration and apparent sustainability of the premium is notable, in our view, and cannot be dismissed as irrational or transient.

We present our view of current market sentiment on water utilities in the following "Bulls say, Bears say, Barclays says" section before going into additional detail on what we view as the three most compelling justifications for the premium.

Bulls, Bears, Barclays

Bulls say: *Water utilities are advantaged to electric and gas given a more visible long-term capital deployment and earnings growth opportunity, lower earnings and operational risk, and cleaner ESG attributes.*

- **1) Long-term EPS and dividend growth are more than enough to justify price:** AWK's 7-10% growth guidance is ongoing and sustainable long term and justify prices when applied to DCF and dividend-based valuation frameworks. If recently authorized ROE decisions made by state regulatory commissions are correct (most use some derivation of CAPM), the cost of equity capital for most US utilities like AWK and WTRG is ~9.0-9.5x. Assuming AWK can maintain a 7-10% CAGR, the current <2.0% dividend yield is more than adequate for equity investors.
- **2) Rate base growth opportunity is larger and more visible than electric and gas:** Average system age indicates the US is approaching a multi-generational water infrastructure replacement cycle. The investment need is larger than electric and gas, and AWK and WTRG have the scale to become the 'first call' from public officials and legislators when towns are unable to afford upgrades required to stay in compliance. The recent wave of fair market value legislation (FMVL) that passed state legislatures is evidence that public officials understand the need for and support private investment in water systems. The economic impact of COVID-19 on public tax revenues and financial positions will also increase the likelihood of reaching agreement with systems previously unwilling. Additionally, water utilities have greater residential customer bill headroom to pursue rate base growth compared to typical residential electric and gas bills.
- **3) Water utility ESG profiles are more attractive than electric or gas:** Water utilities provide ESG-constrained funds, which may be barred from owning generation or gas assets, an opportunity to gain utility sector exposure. The core growth driver of a water utility is to deploy capital that ensures reliable, efficient, and safe delivery of drinking water and treatment of wastewater, which sustainability-focused funds should find attractive (particularly as water scarcity issues grow). There is also an environmental angle for water utilities, as they could benefit from a wave of environmental regulations (emerging contaminants, like PFAS, are a near-term focus as capex / rate base growth will increase and local municipalities turn to investor-owned utilities with greater capital access and operational expertise.
- **4) Lower operational and earnings risk:** Water infrastructure compares favorably to common electric and gas utility risk factors such as workplace safety, environmental violations and related lawsuits, wildfires, and cost recovery uncertainty as renewable replacement accelerates. Earnings are also more predictable, as revenues are less reliant on weather than electric and gas. Water capex plans consist of thousands of small, diverse projects, lacking the large project risk (execution, environmental permitting, legal challenges) that electric and gas utilities are often exposed to.

Bears say: *Valuations are overdone, equity capital raises will be larger and more frequent, regulated acquisitions are becoming more challenging, ROE lags, and rate case exposure presents greater risk.*

- **1) Current valuations are unapproachable:** All-time high valuations are pricing in unsustainable long-term growth assumptions based on earnings outperformance over the past five years that will settle closer to consensus electric EPS CAGRs over time. With no other apparent distinctions between an electric and water utility with similar regulatory exposure, water stocks carry a 10-turn 'air pocket' on a P/E basis that will fall out as long-term growth assumptions converge.
- **2) Future equity needs will be higher than the past few years:** Debt metrics and parent leverage will approach rating agency thresholds given cash flow projections relative to the size of current capex and regulated M&A plans, requiring greater and more frequent reliance on equity capital markets. The equity need will be amplified as utilities become cash taxpayers (AWK sees payments starting in modest ~2021; $~200mn annual cash source currently). Early evidence can be seen with AWK's inclusion of $500mn of equity in its five-year capital plan and WTRG's $300mn planned issuance in late 2020/1Q21 (timing depends on Delcora outcomes).
- **3) Municipal acquisitions are not the panacea that some think they are:** M&A executed immediately following passage of fair market value bills likely attracted public systems that needed financing most desperately and were most motivated to sell. Recent complications and community pushback relates primarily to concerns about losing both control over freshwater supply and public tax revenues. Negotiating leverage will continue to strengthen over time and municipalities will likely require more onerous terms like customer bill commitments and employee retention, in addition to a pure financial contribution. Regulatory commissions that employ single-tariff ratemaking structures have also limited the ability for utilities to get 'back door' rate recovery without a new general rate case (GRC).
- **4) Rate case reliance and risk of under-earning is higher for water than for electric or gas:** The public M&A component (driven by fair market value legislation discussed in greater detail on page 9) of rate base growth means water companies often carry newly-acquired assets for a time before integrating the assets in rate calculations (leads to regulatory lag). As noted above, the negotiating table for public M&A is likely to become more competitive and investor-owned utilities will often compete for deals with commitments on customer bill increases.

***Barclays says**: Valuations are objectively high, but there is no clear catalyst for compression; scarcity value is likely the main rationale for valuation premium; long-term earnings and rate base growth could moderate somewhat but still outpace electric and gas growth, and visibility clearly leads peers.*

1) Water utilities are still utilities, but valuation premium shows little: We believe any new fundamentals-driven investment in US water utilities requires a long time horizon and the view that the infrastructure replacement cycle will drive EPS growth in excess of most electric utilities. However, there are non-financial factors (e.g. ESG, thematic) attracting capital to the sector. We note AWK's spread to the UTY has been at or near all-time highs since diverging in 2013 (including the current all-time high). We see no imminent catalyst for water valuations to compress to electric utility levels, and thus we utilize a water group average P/E multiple of 27x for our valuation framework.

2) Earnings execution and outlook is strong, but scarcity value is the most compelling justification for the premium: We see scarcity value for publicly traded water equities as a large component of the premium that AWK and other regulated water utilities command. AWK represents ~10% of the S&P Global Water Index and security-specific shareholder composition implies a broader base of investors for both AWK and WTRG than the typical electric utility (both in geography and fund style).

3) Recent execution and industry tailwinds likely mean EPS CAGRs moderate somewhat, but growth backlog and visibility still exceeds electric peers: AWK and WTRG possess unique scale that position both to play leading roles in any water infrastructure replacement programs in the US. The American Society of Civil Engineers estimates that $1tn of total infrastructure spending is needed over the coming 25 years to repair and replace aging infrastructure. The market position dominance is unmatched in the electric utility space (NEE is probably closest with NEER). We also see the scale advantage and reputation for best-in-class management providing greater confidence and visibility into capital deployment and growth. External financing needs likely increase relative to previous years given cash tax positions and we see modest ROE lag between cases as possible, but overall we still believe EPS and rate base growth exceed the average electric utility.

4) ESG is often highlighted as a justification for higher valuations – we agree that the lack of generation allows some funds to own water utilities that cannot own electric and that a strong sustainability narrative exists, however there are material ESG risks inherent to the water utility business model that must be weighed by ESG-focused investors. The ESG pitch for water utilities is that a water utility's core business model is to invest capital in a chronically under-invested US water infrastructure system in order to enhance of an increasingly scarce resource and ensure safe drinking water and more environmentally-responsible wastewater treatment and management. The infrastructure investment embedded in water utility capex plans is based on the need to update pipelines that can be centuries old, improving both water quality (replace lead pipes and lower total effluents) and leakage (water scarcity issues should increase scrutiny on 'treated but not delivered' volumes). We also see a 'social' benefit when classifying customer disposable income as a social benefit, as investor-owned utilities have the unique opportunity to socialize and smooth community and customer financial impacts by utilizing single-tariff ratemaking and longer amortization periods given stronger capital market access. However, for all the positive ESG narratives that water utilities have exposure, there are material ESG risks inherent to doing business as a water utility – including spills, chemical usage, politicized under-investment and customer bill impacts, potential bribery, and workplace safety. The risk exposure to potential ESG disasters make management competency, ethics, Board oversight, and technical expertise critical to any ESG analysis.

Diving Deeper on Valuation Premium Drivers

Scarcity Value

Scarcity value for water-focused equity securities likely plays a significant role in driving premiums for water utilities when compared to electric utilities with similar growth and regulatory profiles. The market capitalization of each sector directionally illustrates investable supply (Figure 3), but the true float should be adjusted for insider and passive/index stakes.

ETFs (e.g. CGW) tracking the S&P Global Water Index are popular vehicles for investors to gain broad equity exposure to the global water industry. The index, as described by S&P, seeks to provide liquid and tradable exposure to growing global demand for water and ancillary services (infrastructure, equipment, and materials).

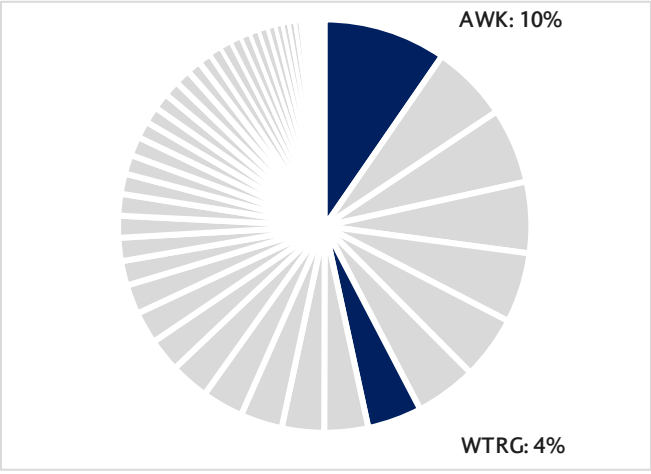
FIGURE 5
S&P Global Water Index



Source: Bloomberg, Barclays Research

This global index exposure is unique to water utilities when compared to electric and gas utilities who receive passive ownership in US utility benchmark indices (AWK and WTRG are also present in most) and is reflected in AWK and WTRG's sector fund and ETF ownership displayed in figures 6 and 9 below. We also believe this added index exposure is reflected in AWK and WTRG's foreign ownership (ESG also likely plays a role) levels. AWK's recent and projected EPS and rate base growth further qualifies the company for growth fund mandates that help broaden the stocks appeal to industry generalists and help to explain the valuation spread between AWK and WTRG (figure 10).

Long-term Growth Outlook

With an average asset age of ~50 years for water and wastewater pipes, the water industry appears to be nearing a generational replacement cycle that should drive capital deployment and rate base growth for the foreseeable future. This opportunity is bolstered by fair market value legislation passed in twelve states (including Virginia as of April 2020 and Texas as of 2019).

There is clearly a strong correlation between realized and expected long-term EPS growth and relative P/E multiples, as investors attempt to ascertain the sustainability of realized growth and CAGR guidance beyond forecast periods and estimate terminal growth assumptions for DCF-based valuation frameworks.

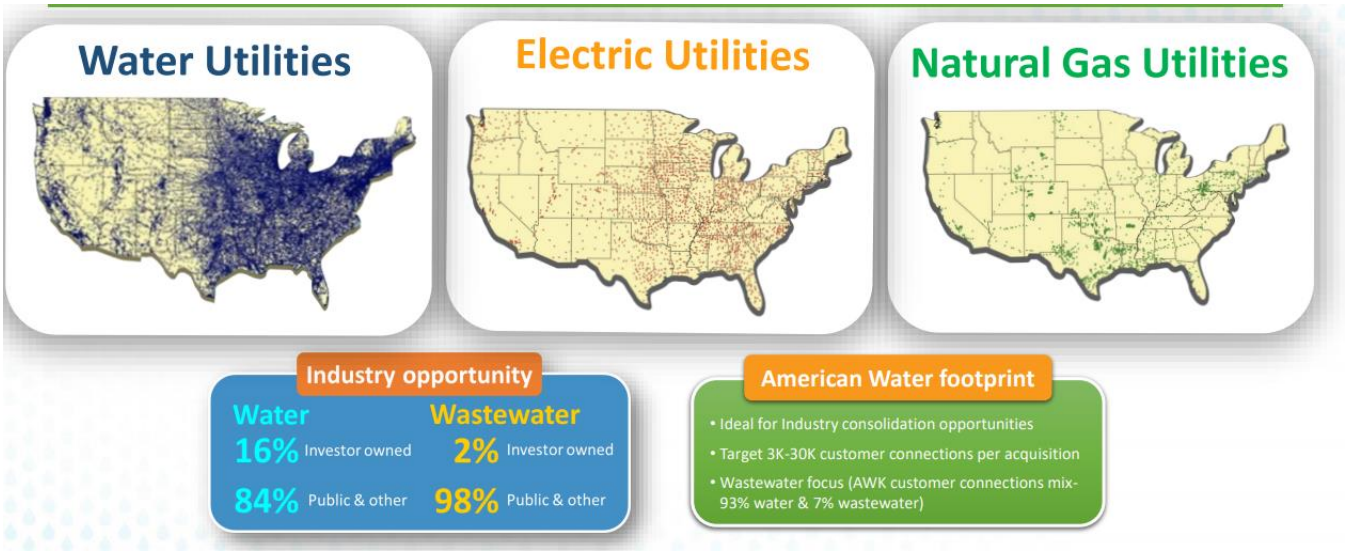
Fair Market Value Laws for Public System Acquisitions

Fair Market Value Legislation (FMVL) allows water utilities to purchase fresh water and wastewater systems from public municipalities and add the total cost of the transaction to rate base, rather than the traditional accounting-based asset cost standards held by many regulatory commissions. The opportunity provides incentive for private industry to financial support to public entities and provides water utilities a streamlined way to grow rate base and often provides outsized ongoing capital deployment opportunities given public systems are often under-invested or face strict environmental regulations that require investment that the public agency does not have financial means to make.

The nation-wide asset replacement narrative is bolstered by water utilities' unique opportunity provided by fair market value legislation, allowing IOUs like AWK and WTRG to participate via public system acquisitions. To date, fair market value legislation has passed in twelve states (including Virginia as of April of this year). The FMVL opportunity is unique to water given the far more fragmented nature of public water and waste water systems in the US when compared to electric or gas. While instances of heavy pushback to private acquisitions of public water distribution systems has been seen in recent years, 98% of US wastewater systems are owned by municipalities or other public entities and generally do not carry the same anxieties associated with freshwater distribution assets, making the public

perception and path to acquisition approval less burdensome. As such, we expect wastewater acquisitions to dominate transaction volume moving forward.

FIGURE 11
Industry Fragmentation



Source: American Water June Investor Presentation

Can FMVL Start to Really Flow?

There are three key recent and ongoing dynamics driving a view that regulated M&A will increase. The first is the significant capital investments required. The second is a reaction to COVID-19 impacts on tax revenues and local government budgets and the need for alternative and external means for municipalities to finance water and wastewater system investment. The third is an outlook for increasing environmental regulation and legislation to address emerging contaminant treatment (primarily PFAS and aging / lead pipelines).

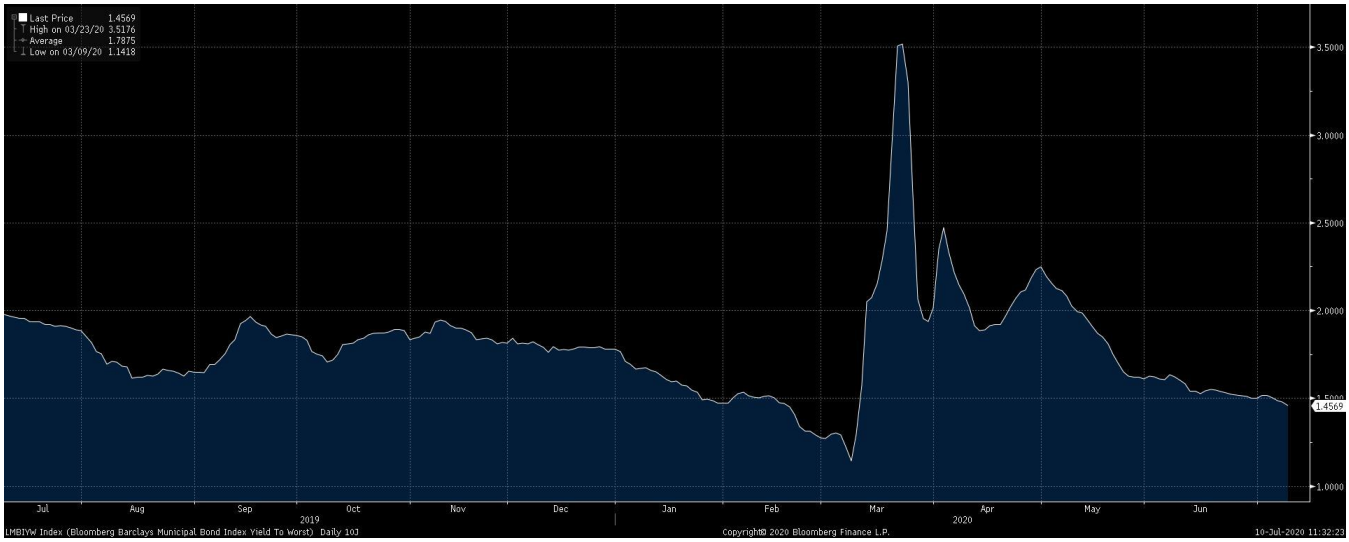
1) **Significant capital investment required**

   A majority of the water and waste-water systems in the US are approaching or beyond their useful lives. This results in increasing annual capital needs, which if not met put reliability, resiliency and public health and safety at risk. The chronic under investment is generally a function of available tax bonding authority combined with pressured municipality budgets.

2) **Municipal financing cost:**

   We view the pressure from COVID-19 related shutdowns on local government finances as a potential driver of increased M&A. Investor-owned utilities can provide capital to execute needed system investments, and public budgets can receive relief in the form of immediate cash inflows (while losing a long-term revenue source). However, all-in financing costs appear to have avoided worst-case scenarios, as evidenced by municipal bond yields as a proxy for total municipal financing costs.

FIGURE 12
Barclays Bloomberg Municipal Bond Index Yield to Worst



Source: Bloomberg

3) Environmental Regulations:

Emerging contaminants like PFAS or 1,4-dioxane have received increased regulatory and legislative attention recently. Numerous new state laws have been introduced over the past few years and national efforts have taken shape to introduce PFAS legislation at a federal level. Emerging contaminants like PFAS are only a health advisory at the EPA, but states have recently chosen to regulate these 'forever chemicals' through state legislatures. Local towns and municipalities with aging infrastructure are already challenged to make investments needed to remain in compliance with many existing environmental regulations and could face further financial pressure given requirements to install water treatment facility upgrades necessary to address new contaminants. Many water companies have already implemented PFAS standards across all systems (~13 parts per trillion seems to be industry standard), but there has been increased pressure from groups like National Association of Water Companies (NAWC) to apply legal requirements to require similar treatment across state and federal jurisdictions.

Trade Off: Added Rate Case Reliance

The nature of the opportunity provides a strong rate base growth avenue; however, it increases water utility reliance on rate cases. It increases susceptibility to ROE lag as larger acquisitions often under-earn until added rate base can be reflected in the revenue requirement recovered in customer bill. This dynamic could be further stretched depending on whether public entities include terms on bill increases as part of the acquisition terms. We assume an average 300bp net lag to authorized for newly-acquired systems, slowly moving back to authorized ROE within three years of the acquisition date after the system is reflected through broader general rate cases. As nationwide ROEs remain under pressure from low interest rates (CAPM), water utilities face more frequent rate cases.

ESG Analysis

As discussed on page 6, ESG is often viewed as a differentiator for water utilities when compared to their electric and gas counterparts given the lack of generation-related GHG emissions and a perception that operations are safer and more immune to environmental disasters (wildfires, workplace safety, fossil and nuclear waste management). While we agree that water utilities often screen better than electric and gas on scope 1 greenhouse gas emissions and do not directly utilize or transport fossil fuels, they are by no means immune to significant ESG risk exposures from emerging contaminants, wastewater and stormwater chemical use and treatment shortcomings, and potential environmental and safety disasters from spills. This exposure makes management competence and oversight crucial to any ESG-focused investment analysis.

We view the following ESG risks as most critical to discuss with management teams:

- Emerging contaminant standards: Emerging contaminants like PFAS and other effluents are regulated by a rapidly evolving state and federal framework. Top-tier management teams deploy significant research and internal resources to identify risks and play an active role in policy discussions. Best-in-class management teams have scenario planning completed for a variety of regulatory paths and abide by effluent standards that often exceed legally mandated levels to ensure safe drinking water. Utilities should publicly disclose the number of EPA violations related to effluents in annual reporting material.
- Chemical usage and wastewater treatment standards: Wastewater treatment requires heavy chemical usage that can lead to adverse environmental impacts when improperly managed and disposed. Incident histories and internal policies can be supplemented by analyzing EPA violation trends to approximate the relative risk.
- Board oversight: Given the high exposure to potential bribery inherent to any heavily regulated industry and the political nature of public system M&A, the Board should be directly involved in business ethics decisions.
- Energy consumption: Water transportation and treatment is an energy-intensive operation, requiring high levels of electricity usage. Water utilities should disclose total consumption and electricity sources. Analysis of electricity usage and sources can help quantify indirect GHG emission contributions.
- Bill affordability and outlook: We classify customer affordability as a social attribute given the non-discretionary nature of water consumption. With a robust capital outlook, customer affordability and the pace of bill inflation will be critical. The EPA guidelines suggest keeping water bill costs to 2.5% of average family income for residential customers.
- Emergency management plans: Risk of water and chemical spills are inherent to any water utility. We believe strong mitigation systems and quantified risk exposure must be supplemented by a robust and frequently updated environmental response plan to spill events. The plan should be designed to mitigate environmental and social impacts while maintaining safe water services to communities impacted.
- Workplace safety: Workplace safety trends DART rates and OSHA reportable incidents should be analysed to gauge safety program efficacy in recent years.

American Water Works (AWK)

Equity Research
Eric Beaumont, CFA
+1 212 526 4016
eric.beaumont@barclays.com
BCI, US

Company description – American Water Works Co., Inc. provides drinking water, wastewater, and other water-related services in multiple states and Ontario, Canada. The company's primary business involves the ownership of regulated water and wastewater utilities that provide water and wastewater services to residential, commercial, and industrial customers.

American Water Works Company, Inc.

Blocks show how a company is scored by ESG providers (one block is worst, five are best). Icons show the dispersion of those views (no bars indicates only one score provider, two bars indicate dispersion between providers, full bars indicate aligned views). Source: Barclays Research, Sustainalytics, Vigeo Eiris

Key conclusions

E AWK receives average environmental ratings, which may be lower than how the average investor thinks about environmental attributes, but accurately reflects negative risk factors balanced by the positive environmental treatment services provided by the company's core operating function, in our view. Said differently, we believe E scores provided by ESG ratings agencies reflect risk factors, rather than the environmental attributes of the business itself. AWK is exposed to environmental risk from effluents that may be insufficiently addressed at AWK's wastewater treatment facilities or leaks and ruptures could lead to environmental disasters when storm water and wastewater contaminate nearby watercourses. American Water has faced minor fines related to improper chemical and hazardous waste, but fewer than industry peers. AWK has experienced no major releases of untreated wastewater or storm water in recent years, while other industry participants have. The risk of large spills of untreated wastewater or storm water remains a material environmental consideration given the impact such releases have on nearby wildlife and water supply.

S AWK's social scores screen as average. We view the social category as inclusive of water waste and water quality. Water scarcity has grown in terms of public knowledge and attention and AWK's (along with the entire water pipeline industry's) lost water amounts could come under increased scrutiny. Lost water can be defined as water that is treated for consumption, but is never delivered to the end use customer due to leakage. This issue is likely to both drive investment capital and risk as average pipe age increases (some pipes are over 100 years old). Our perception is that AWK leads the industry on emerging contaminants, evidenced by environmental policies that often exceed legal requirements and the number of PhD-level specialists and dedicated research labs focused on mitigating potentially harmful particulates not yet regulated directly. However, with growing attention paid to lead levels and other water quality metrics, freshwater delivery quality will remain a risk. Other standard social considerations also apply to American Water, including workplace diversity, community giving, and community relations. Customer bills are a material consideration as water infrastructure ramps up in the United States. AWK highlights average residential bill costs of ~1.9% of average customer family income, versus EPA guidance to keep water bills ~2.5%, however AWK appears to lag WTRG on average customer bill rates.

G American Water's governance scores are above average, which we agree with. As previously noted, our perception is that AWK takes the aggressive and proactive approach necessary to prepare and combat significant safety and environmental risks inherent to the water delivery and treatment business. AWK's Board composition, management compensation structure, and audit quality are consistently ranked among the best in the country. Combined with strong shareholder voting rights and transparent disclosure, we believe governance should be viewed as a differentiator for AWK.

Past and present ESG issues

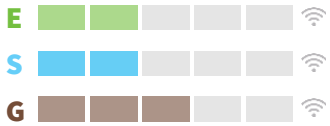
Essential Utilities (WTRG)

Equity Research
Eric Beaumont, CFA
+1 212 526 4016
eric.beaumont@barclays.com
BCI, US

Company description – Essential Utilities, Inc. operates as a water utility company. The company supplies water to residential, commercial, industrial, and public customers. Essential Utilities serves residents through its water and wastewater operations in the Northeastern, Southeastern, and Midwestern United States.

Essential Utilities, Inc.



Blocks show how a company is scored by ESG providers (one block is worst, five are best). Icons show the dispersion of those views (no bars indicates only one score provider, two bars indicate dispersion between providers, full bars indicate aligned views). Source: Barclays Research, Sustainalytics, Vigeo Eiris

Key conclusions

E Essential receives slightly below average scores for environmental risk factors given below average preparedness and management of potential disasters. We view the ratings as somewhat dated as ratings providers do not contemplate the Peoples natural gas business. WTRG is negatively impacted by a view that the hazardous waste management program lacks management oversight, seemingly from WTRG's lack of EMS certification and emergency response program. While ratings providers take specific issue with the management of environmental risks, we see little evidence that WTRG is lacking relative to other management teams in the water industry. Overall, we view WTRG as equally exposed to environmental risks inherent to the water industry as any other industry participant and applaud WTRG for a robust data disclosure on environmental issues.

S Essential receives below average social ratings due to similar management issues as discussed in the environmental section. We note WTRG has disclosed a fairly robust effluent management system with data supporting its claim that it takes emerging contaminants seriously (citing 95.5% of days in compliance and 272 effluent quality 'events' in 2019). We also highlight that WTRG's average retail rate is lower than the average industry rate on a consolidated average basis across its service territory. DART rates hover around 2.1, slightly higher than industry average. Similar to industry peers, community giving is also prioritized.

G WTRG's Governance ratings are average. Governance risk factors material to WTRG's ratings include a high susceptibility to bribery concerns given the public regulated nature of operations and previous reliance on municipality O&M contracts (though largely divested now). We view the ratings as somewhat stale given the immaterial contribution of municipal O&M contracts. Balancing the downside risks, we note significant management compensation incentives aligned with shareholder and public stakeholder interests. WTRG has explicit long-term and short-term incentives linked to realized ROE, public M&A growth, and O&M inflation management, all of which we view as material to the holistic stakeholder value proposition for a consolidated WTRG.

Past and present ESG issues

Applying Views to Individual Stocks

Barclays Valuation Framework Refresher:

We apply our standard valuation framework used for electric and gas utilities to derive a premium or discount to a group average multiple (in this case we use a water group average multiple of 27x). Our valuation framework takes into account regulatory jurisdiction exposure (capital trackers, ROE trends, other recent commission decisions), geographic trends (population growth, GDP per capita, other general economic activity), long-term growth guidance and visibility, and a qualitative assessment of investor sentiment. The qualitative investor sentiment attribute seeks to encapsulate ESG characteristics and general risk exposures to idiosyncratic issues potentially impacting earnings and providing added earnings variability relative to published financial estimates.

Barclays Water Valuation Framework:

We apply a 15% premium to the group average water multiple for AWK and a 5% premium for WTRG. AWK's premium reflects diversified regulatory and geographic exposure, disproportionate exposure to jurisdictions with DSIC and other constructive capital recovery mechanisms, strong management and competitive position as industry leader, ESG exposure, peer-leading EPS CAGR and multi-decade capex visibility.

WTRG receives a 5% premium to the group average multiple also reflecting disproportionate exposure to strong PA regulatory environment and capital recovery mechanisms, balanced by lower EPS growth, capital guidance visibility and some risk around current M&A deals (namely Delcora). We apply a 15% premium to the 17x utility group average multiple used for all other utility valuation for the regulated gas business (Peoples acquisition) in PA, strong EPS and rate base growth, and our view that constructive regulatory relationships will translate to stable earnings growth in PA.

American Water Works (AWK)

Investment Thesis:

AWK provides a peer-leading 7-10% EPS CAGR through 2024 (off of 2018 EPS) driven by regulated investment (5-7% annual contribution to EPS growth), public M&A (likely weighted more toward wastewater; 1-2% annual contribution to EPS growth), and market-based businesses (homeowner services and military services provide 1-2% contribution to annual EPS growth).

We expect AWK to continue to identify accretive capex and public system acquisition opportunities throughout the forecast period, balanced by $500mn of block equity financing weighted toward the middle of the forecast period (we reflect $450mn in 2022 in our model assumptions, but see optionality to delay to 2023), which helps to address increasing parent leverage. Customer bills remain a material consideration as needed investment and public acquisition costs are recovered in rates. O&M efficiency should remain the center of focus for management, and we expect bills to be managed at or below inflation, while also seeking to keep total water bills <2.5% of average family income, per EPA best practices (AWK current avg ~1.9%).

We concede that AWK screens expensive on a P/E basis to any water, electric and gas comps. However, we do not get the impression that earnings expectations are unreasonable, nor do we expect any material unconsidered risk factors to emerge. ESG factors (lack of generation primarily) and scarcity value have led to a sustainable demand premium to electric equities, requiring the use of a water group multiple separate from electric and gas. We apply a 15% premium to the group average multiple (discussed in greater detail in valuation section) to reflect AWK's strong long-term growth visibility, peer-leading EPS CAGR, and constructive regulatory treatment.

Key Regulatory Proceedings:

Pennsylvania: PA represents ~28% of AWK's regulated rate base and benefits from strong capital tracking mechanisms via Distribution System Improvement Charges (DSIC). ROE for the DSIC investment rider is updated via the state's quarterly earnings review. PA's most-recent update held water ROEs at 9.9%. American Water's current Pennsylvania general rate case requests a $92mn rate step up effective January 1, 2021, and a step-up of $46mn in 2022 reflecting a 10.8% ROE (current 10%) and a rate base of $3.98bn in 2021 and $4.29bn in 2022. We assume the 10% ROE currently reflected in rates remains in place and rate increases sufficient to allow PA to earn its allowed returns in 2021 and 2022.

New Jersey: AWK's New Jersey general rate case is seeking an $88mn base rate increase in 2021, reflecting a $3.63bn rate base, 10.5% ROE (current 9.6% authorized), and an assumed 54% equity layer. We note that the $88mn request is incremental to an expected $35mn rate increase contribution from the NJ DSIC mechanism. We assume NJ receives a 9.6% ROE and comparable cap structure, with rate increases adequate to earn implied authorized returns against a $3.6bn rate base as of year-end 2020.

California: CA benefits from forward-looking rate cases with strong precedent of including attrition and capital cost adjustments and a disaggregated cost of capital proceeding reducing general rate case risk (current ROE set at 9.2% with 55.39% equity layer). AWK's current CA rate case requests a $27mn increase effective 1Q21 and a $9.8mn step-up in 2022.

Virginia: AWK's current VA rate case reflects only $196mn of total rate base and requests a $5.6mn rate increase. Interim rates became effective on May 19, 2020, and the case contemplates ~$100mn of infrastructure investments since 2017.

Missouri: AWK's most-recently filed rate case is in Missouri, where the company is requesting a $74mn rate increase to reflect $490mn of investment since the last filing.

Earnings Estimates and Rate Base Model:

Risks:

Upside

AWK will likely outperform if M&A opportunities outpace current expectations and EPS grows faster than expected. AWK will also likely outperform if ESG flows increase, general demand for utility equities increase and disproportionately benefit water utilities, O&M reductions are above expectations, or ROE trends benefit earnings.

Downside

AWK will likely underperform if interest rates remain low or decline and impact authorized ROEs, volumes decline materially as a result of COVID-19, heightened M&A activity and competitiveness result in increased ROE lag, FFO metrics deteriorate and require increased equity financing contributions, or operational and environmental accidents impact ESG scores and flows.

Essential Utilities (WTRG)

Investment Thesis:

Essential Utilities closed its transformative acquisition of Peoples Gas in March 2020. The transaction is likely to be accretive to earnings and long-term rate base growth, but it took WTRG from a pure-play water utility to a combined water and natural gas LDC company. The impact from an ESG perspective will be fully reflected over time, but we believe the earnings and growth accretion from the deal helps to put WTRG on a financial trajectory more competitive with industry leaders like AWK. The deal provides gas rate base growth of 8-10%, versus 6-7% water rate base growth through the same forecast period. We view the backlog of necessary gas system investment as providing a strong runway of capital eligible for recovery under the DSIC mechanism, and we highlight the updated pipe replacement programs that provide visibility into 15+ years of investment opportunity and assumes ~200 miles of pipe per year is sustained.

Near-term focus for the investment community is on repairs tax implications to earnings and the closing of the Delcora water system acquisition. While repairs tax election (discussed below) is already helping to support financials in 2020, the remaining catch-up portion remains a key point of debate. We see repairs tax as less likely to provide material upside to estimates, but moreso as a useful tool to upcoming rate case negotiations in PA that should allow WTRG to earn its allowed ROE moving forward while limiting customer bill impacts from otherwise necessary rate increases.

Key Regulatory Proceedings:

Repairs tax and PA rate case outlook: - Repairs tax allows immediate expensing of capex deployed for infrastructure repairs for tax purposes, providing significant tax savings relative to tax rates assumed in ratemaking. The repairs tax situation has two components that contribute to the expected earnings outlook for WTRG. The initial component of repairs tax election is already flowing through financials and is expected to provide $0.08-$0.12 of EPS help for FY20. The second component is the 'catch up' component of repairs tax election – or how much income tax saving is passed through to customers versus retained for shareholders. The prior commission precedent allocated shareholders seven of the ten total years of amortization benefits from the tax savings to shareholders. We view that prior decision as a very constructive outcome. While we do not assume the same treatment in the current round, we again view the repair tax situation as a helpful tool that WTRG possesses for purposes of negotiation in the context of its PA rate case plans (likely to allows for rate case stay outs and other customer commitments rather than purely incremental to growth guidance and assumptions).

DELCORA: - WTRG signed with the Delaware County Regional Water Control Authority (DELCORA) to purchase its wastewater system serving 42 municipalities and ~500k customers for $277mn. DELCORA has line of sight to ~$700mn capex through 2028; however, increasing environmental requirements with the Philadelphia Water Department (one of DELCORA's wastewater offtake and treatment facilities) imply potential investment requirements of >$1bn will be needed ahead of contract renewal in 2028. The investment would require significant customer bill increases and heavy financing strain on the public authority.

WTRG's purchase agreement effectively takes the $277mn of transaction proceeds and allocates it to a customer bill trust that would mitigate customer bill impacts following system investment. As part of WTRG's solution, the wastewater would be directed away from the Philadelphia Water Department facility to one of its own treatment facilities, avoiding worst-case environmental-related capex requirements and providing WTRG opportunities to

acquire other fragmented local wastewater systems that currently send wastewater through the DELCORA system.

The process has become heavily politicized, as some Delaware County representatives seek to block the transaction and restructure the customer bill trust established in the binding sale agreement. The county officials have intervened in the PUC approval process and have filed a lawsuit alleging the transaction is not permitted under current legal provisions. We expect the transaction to remain 'noisy' given the politicized nature, but ultimately we expect the deal to go through without significant changes. We note delays and ultimate approval are not material to financial estimates throughout the forecast period.

Risks:

Upside

WTRG would likely outperform if repairs tax accretion exceeds expectations and results in incremental growth relative to guidance, currently contemplated M&A is approved in an expedited timeframe, or new M&A deals are announced and provide greater-than-anticipated accretion to growth. WTRG could also outperform if ESG flows increase, general demand for utility equities increases and disproportionately benefits water utilities, O&M reductions are above expectations, or ROE trends benefit earnings.

Downside

WTRG would likely underperform if Peoples integration faces operational challenges, volumes decline materially as a result of COVID-19 or mild weather in gas service territories, rate case outcomes negatively impact earnings, M&A deals face increased scrutiny and legal challenges, deal competitiveness results in increased ROE lag, FFO metrics deteriorate and require increased equity financing contributions, or operational and environmental accidents impact ESG scores and flows.

Note: FY End Dec

Price (13-Jul-2020)	**USD 132.97**
Price Target	**USD 138.00**

Why Equal Weight? AWK presents a strong growth profile with top-tier management and a solid execution track record, however valuation is stretched relative to electric and gas utilties and our valuation framework implies a 15% premium to the water group average P/E multiple, all of which is fully reflected in the current stock price

Upside case **USD 151.00**

Our upside case assumes AWK trades at a 25% premium to the group average water utility P/E multiple. We believe this scenario could materialize if ESG flows increase or general utility equity demand rises and disproportionately benefits AWK.

Downside case **USD 87.00**

Our downside case values AWK on the same 15% premium, but applies the group utitlity multiple in lieu of the water group multiple. This could materialize if investors perceive long-term growth opportunities and ESG profiles to be similar to electric and gas.

Note: FY End Dec

Price (13-Jul-2020)	**USD 43.37**
Price Target	**USD 45.00**

Why Equal Weight? We believe the recent Peoples acquisition is constructive given its accretion to growth and EPS, however we value WTRG on a sum of the parts basis and apply the utility group average P/E multiple, reflecting gas utility peers. The current share price reflects our valuation conclusion.

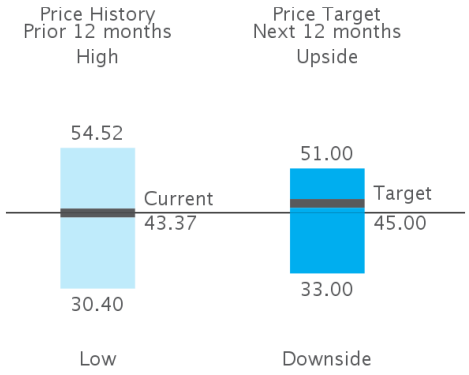
Upside case — **USD 51.00**

Our upside case assumes WTRG is valued using consolidated EPS against a water group P/E multiple. We believe this case could materialize if scarcity value persists and WTRG is deemed a pure-play water utility, despite the gas contribution to earnings.

Downside case — **USD 33.00**

Our downside case values WTRG consolidated EPS on the utility group average P/E multiple, while maintaining a 15% premium for the gas business and a 5% premium for water. We think this could materialize if ESG flows lessen or long-term growth appears unsustainable long term.

Upside/Downside scenarios



Valuation Methodology and Risks

North America Power & Utilities
American Water Works Company, Inc. (AWK)
Valuation Methodology: We utilize a group average water P/E multiple for 2022 earnings and apply a 15% premium to AWK's consolidated 2022 EPS estimate. The premium reflects strong management, constructive regulatory exposure, and top-tier growth visibility.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Risks to AWK include rate case outcomes, public system M&A deals and integration, external financing needs, and general interest rate environments.
Essential Utilities, Inc. (WTRG)
Valuation Methodology: We value WTRG's water business using a 5% premium to the group average water multiple. The 5% premium reflects strong regulatory exposure and public M&A opportunities, balanced by growth visibility lower than peers. We value the regulated gas business at a 15% premium to reflect a strong growth profile and familiar regulatory exposure.
Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Risks to WTRG include rate case outcomes and general regulatory treatment, gas price inflation impacts on customer bills, and general interest rate environments.

Master limited partnerships (MLPs) are pass-through entities structured as publicly listed partnerships. For tax purposes, distributions to MLP unit holders may be treated as a return of principal. Investors should consult their own tax advisors before investing in MLP units.

Guide to the Barclays Fundamental Equity Research Rating System:

Our coverage analysts use a relative rating system in which they rate stocks as Overweight, Equal Weight or Underweight (see definitions below) relative to other companies covered by the analyst or a team of analysts that are deemed to be in the same industry (the "industry coverage universe").

In addition to the stock rating, we provide industry views which rate the outlook for the industry coverage universe as Positive, Neutral or Negative (see definitions below). A rating system using terms such as buy, hold and sell is not the equivalent of our rating system. Investors should carefully read the entire research report including the definitions of all ratings and not infer its contents from ratings alone.

Stock Rating

Overweight - The stock is expected to outperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Equal Weight - The stock is expected to perform in line with the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Underweight - The stock is expected to underperform the unweighted expected total return of the industry coverage universe over a 12-month investment horizon.

Rating Suspended - The rating and target price have been suspended temporarily due to market events that made coverage impracticable or to comply with applicable regulations and/or firm policies in certain circumstances including where the Investment Bank of Barclays Bank PLC is acting in an advisory capacity in a merger or strategic transaction involving the company.

Industry View

Positive - industry coverage universe fundamentals/valuations are improving.

Neutral - industry coverage universe fundamentals/valuations are steady, neither improving nor deteriorating.

Negative - industry coverage universe fundamentals/valuations are deteriorating.

Below is the list of companies that constitute the "industry coverage universe":

North America Power & Utilities

Alliant Energy Corporation (LNT)	Ameren Corp. (AEE)	American Electric Power Company, Inc. (AEP)
American Water Works Company, Inc. (AWK)	Brookfield Infrastructure Partners LP (BIP)	Brookfield Infrastructure Partners LP (BIP_u.TO)
CenterPoint Energy, Inc. (CNP)	CMS Energy Corporation (CMS)	Consolidated Edison, Inc. (ED)

Distribution of Ratings:

Barclays Equity Research has 1577 companies under coverage.

45% have been assigned an Overweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Buy rating; 50% of companies with this rating are investment banking clients of the Firm; 74% of the issuers with this rating have received financial services from the Firm.

38% have been assigned an Equal Weight rating which, for purposes of mandatory regulatory disclosures, is classified as a Hold rating; 43% of companies with this rating are investment banking clients of the Firm; 69% of the issuers with this rating have received financial services from the Firm.

15% have been assigned an Underweight rating which, for purposes of mandatory regulatory disclosures, is classified as a Sell rating; 32% of companies with this rating are investment banking clients of the Firm; 58% of the issuers with this rating have received financial services from the Firm.

Guide to the Barclays Research Price Target:

Each analyst has a single price target on the stocks that they cover. The price target represents that analyst's expectation of where the stock will trade in the next 12 months. Upside/downside scenarios, where provided, represent potential upside/potential downside to each analyst's price target over the same 12-month period.

Top Picks:

Barclays Equity Research's "Top Picks" represent the single best alpha-generating investment idea within each industry (as defined by the relevant "industry coverage universe"), taken from among the Overweight-rated stocks within that industry. Barclays Equity Research publishes "Top Picks" reports every quarter and analysts may also publish intra-quarter changes to their Top Picks, as necessary. While analysts may highlight other Overweight-rated stocks in their published research in addition to their Top Pick, there can only be one "Top Pick" for each industry. To view the current list of Top Picks, go to the Top Picks page on Barclays Live (https://live.barcap.com/go/keyword/TopPicks).

To see a list of companies that comprise a particular industry coverage universe, please go to https://publicresearch.barclays.com.

Types of investment recommendations produced by Barclays Equity Research:

In addition to any ratings assigned under Barclays' formal rating systems, this publication may contain investment recommendations in the form of trade ideas, thematic screens, scorecards or portfolio recommendations that have been produced by analysts within Equity Research. Any such investment recommendations shall remain open until they are subsequently amended, rebalanced or closed in a future research report.

Disclosure of other investment recommendations produced by Barclays Equity Research:

Barclays Equity Research may have published other investment recommendations in respect of the same securities/instruments recommended in this research report during the preceding 12 months. To view all investment recommendations published by Barclays Equity Research in the preceding 12 months please refer to *https://live.barcap.com/go/research/Recommendations*.

A: Barclays Bank PLC and/or an affiliate has been lead manager or co-lead manager of a publicly disclosed offer of securities of Essential Utilities, Inc. in the previous 12 months.

CD: Barclays Bank PLC and/or an affiliate is a market-maker in debt securities issued by Essential Utilities, Inc..

CE: Barclays Bank PLC and/or an affiliate is a market-maker in equity securities issued by Essential Utilities, Inc..

D: Barclays Bank PLC and/or an affiliate has received compensation for investment banking services from Essential Utilities, Inc. in the past 12 months.

E: Barclays Bank PLC and/or an affiliate expects to receive or intends to seek compensation for investment banking services from Essential Utilities, Inc. within the next 3 months.

J: Barclays Bank PLC and/or an affiliate is a liquidity provider and/or trades regularly in the securities by Essential Utilities, Inc. and/or in any related derivatives.

K: Barclays Bank PLC and/or an affiliate has received non-investment banking related compensation (including compensation for brokerage services, if applicable) from Essential Utilities, Inc. within the past 12 months.

L: Essential Utilities, Inc. is, or during the past 12 months has been, an investment banking client of Barclays Bank PLC and/or an affiliate.

M: Essential Utilities, Inc. is, or during the past 12 months has been, a non-investment banking client (securities related services) of Barclays Bank PLC and/or an affiliate.

Valuation Methodology: We value WTRG's water business using a 5% premium to the group average water multiple. The 5% premium reflects strong regulatory exposure and public M&A opportunities, balanced by growth visibility lower than peers. We value the regulated gas business at a 15% premium to reflect a strong growth profile and familiar regulatory exposure.

Risks which May Impede the Achievement of the Barclays Research Valuation and Price Target: Risks to WTRG include rate case outcomes and general regulatory treatment, gas price inflation impacts on customer bills, and general interest rate environments.

DISCLAIMER:

This publication has been produced by Barclays Research Department in the Investment Bank of Barclays Bank PLC and/or one or more of its affiliates (collectively and each individually, "Barclays"). It has been prepared for institutional investors and not for retail investors. It has been distributed by one or more Barclays affiliated legal entities listed below. It is provided to our clients for information purposes only, and Barclays makes no express or implied warranties, and expressly disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to any data included in this publication. To the extent that this publication states on the front page that it is intended for institutional investors and is not subject to all of the independence and disclosure standards applicable to debt research reports prepared for retail investors under U.S. FINRA Rule 2242, it is an "institutional debt research report" and distribution to retail investors is strictly prohibited. Barclays also distributes such institutional debt research reports to various issuers, media, regulatory and academic organisations for their own internal informational news gathering, regulatory or academic purposes and not for the purpose of making investment decisions regarding any debt securities. Media organisations are prohibited from re-publishing any opinion or recommendation concerning a debt issuer or debt security contained in any Barclays institutional debt research report. Any such recipients that do not want to continue receiving Barclays institutional debt research reports should contact debtresearch@barclays.com. Clients that are subscribed to receive equity research reports, will not receive certain cross asset research reports co-authored by equity and FICC research analysts that are distributed as "institutional debt research reports" unless they have agreed to accept such reports. Eligible clients may get access to such cross asset reports by contacting debtresearch@barclays.com. The ESG Antidote: Why Water is a Win/Win

Industry Overview

Takeaways from our 2nd Annual Water on Wall Street

Late last week, we hosted our Second Annual Water on Wall Street conference with ARTNA, AWK, AWR, CWT, ES, MSEX, SJW, WTRG, as well as a number of state regulators, industry experts and water equipment makers. There were a variety of panels throughout both days with updates from company management teams and a wide range of perspectives on the latest trends and the state of the water industry. We left our latest conference increasingly bullish on the water sector, seeing elevated EPS and DPS growth well into the future along with ESG tailwinds that seem unlikely to abate. We prefer WTRG- with its similarly elevated EPS growth to AWK – and very much intact view of EPS despite tax nuance; mgmt. could very well extend out growth targets over time as water & gas normalized (expect 'normal' 3-yr view in Jan still). Bottom line, this remains our 'go to' in the space- even *after* its recent recovery trade. Finally, while the loss of California decoupling provides varying degrees of exposure across the sector, we perceive protracted implementation enables appeal process & mitigating processes to work their way into planning. We see continued positive bias for water utilities alongside renewable energy investments earning renewable returns as among the more desirable opportunities for investors seeking compounding, sustainable earnings and div growth while desiring clean attributes. See parallel AWK upgrade to Neutral today here.

LT visibility to elevated growth & ESG tailwinds

We came away particularly impressed by the elevated EPS and dividend trajectories for the sector, and see visibility to long term organic rate base and accelerating acquisition prospects as municipal budget deficits and FMV legislation drive further privatization efforts (appears '20 acceleration already). With ~44% of all of the water pipe across the US currently classified as poor (up from ~10% in 1980), we see no shortage of investment opportunities and discussions highlighted that about a trillion dollars in spend is currently needed to bring all of the systems up to date. Meanwhile, relative to more carbon-heavy electric and gas peers, we think water remains the clear cut way to play ESG themes as a utility investor. That said, the water sector has materially underperformed relative to other ESG friendly US renewable names (vs. FSLR, BE, RUN, NOVA, and ENPH; see table one in the full note for latest stock performance). Aside from the unfavorable decoupling decision by the CPUC likely to increase rate base contention and drive earnings volatility for companies exposed to the state (a small part of AWK's consolidated biz) , discussions around regulatory treatment for the sector were generally constructive and we don't see particular discrete concerns looking forward. Bottom line, we see increasing merit to premiums for the water sector well above electric and gas peers – due to both sustainable earnings growth justifying P/E-to-G ratios & comps across Clean & YieldCo spaces. If anything else, expanded est of elevated multiples in adjacent clean spaces (well above that of Water & AWK) – justifies valuations, in our view. We believe the water sector *overall* could perform relatively well – and could still eek out a further bid vs electric peers.

Why are we so constructive on water utilities *now?*

We bullet out the key factors in our mind below but stress for those investors who have only looked at just AWK and WTRG, the entire sector is full of consistent EPS and DPS growth (even if lumpy at times due to discrete rate cases). The outsized growth of the two largest peers in the space understates the consistent trend of growth across the wider sector. We include historical table below; bottom line, while this trend is exceptional relative to the ~5% growth achieved in utilities, the elevated P/E multiple that is 60% higher on average could be explained by its relative P/E-to-G multiple at a minimum (an *increasingly* employed metric given growth co's involved), but ever more supported by emerging high multiple clean alternatives across sector.

Our growing confidence in long-term compounding prospects alongside what is an increasingly supported multiple offer our improved confidence against what is otherwise an admittedly elevated peer group multiple. While it is difficult to have a more positive view on AWK given its 30x+ P/E on '23 EPS, we perceive WTRG as a key opportunity given its compounding re-rating and what should prove meaningfully less contentious EPS growth trajectory. While we acknowledge dilutive effect of its gas LDC acquisition, we stress its ability to drive a consistent 3-year EPS CAGR (irrespective of what happens on repairs tax true-up) and growing ability to articulate a longer term growth outlook (perhaps in future updates beyond Jan '21 release of latest guidance). As integration is fully reflected, we see a normalized outlook without adjustments and clean baseline for growth. On balance, this remains our favorite name in the Water sector at just 25x '23 P/E.

COVID just the latest push for industry consolidation

The latest conference highlighted the incredibly fragmented nature of the water industry, with over 50K community water systems & 15K wastewater systems relative to ~3200 electric and ~1000 gas LDCs (Local Distribution Company). This remains particularly glaring given 16% of water systems are Investor owned (with an even more notable ~2% investor owned for wastewater) and with 92% of systems serving less than 10K customers. Even prior to COVID, the industry was ripe for consolidation against a backdrop of favorable legislation and higher compliance burdens around emerging contaminants. Twelve states have now adopted FMV legislation with both Consolidated Tariff and Water Quality Legislation also continuing to gain momentum. The EPA has currently established health advisory levels for PFA at 70 parts per trillion, but we perceive a broader mandate for the industry as on the horizon amid some discrete state-level requirements already. That said, the latest pressures put on munis from the ongoing pandemic are just another factor in the perfect storm to accelerate the consolidation trend. Meanwhile, a further environmental push under a Biden administration could provide additional capital opportunities as compliance costs with PFAs (per- and polyfluoroalkyl substances) and water quality concerns have already started contributing to the push away from muni owned water systems

Contemplating the Setup for the Sector

We left our Second Annual Water on Wall Street Conference increasingly constructive on prospects for the sector for the foreseeable future. We see visibility well into the future for earnings trajectory given both organic opportunities and the clear cut industry consolidation trends that we expect to continue to accelerate amid the lingering pandemic.

Meanwhile, we stress the water utility sector as the clear cut way for utility investors to play the ESG theme over the coming years given their lack of carbon exposure vs. both electric and gas utility peers. Despite this, the sector has materially underperformed other ESG friendly US renewable names (vs. FSLR, BE, RUN, NOVA, and ENPH). The exhibit below reflects water utilities stock performance on a one week, one month, three month, and YTD vs. US solar plays, with the sector materially underperforming despite a much better proven track record.

Table 1: Stock Performance: Water Utilities Materially Underperforming US Renewables by a good bit…

Water Utilities	Ticker	One Week	One Month	Three Month	YTD
American Water	AWK	-1.4%	-8.1%	3.3%	20.7%
Essential Utilities	WTRG	0.7%	6.4%	20.8%	1.4%
American States Water	AWR	3.7%	-0.1%	6.4%	-11.0%
SJW Group	SJW	3.7%	4.8%	15.4%	-2.4%
Artesian Water	ARTNA	2.2%	0.8%	15.0%	5.8%
Middlesex Water Company	MSEX	6.1%	5.0%	15.6%	17.3%
California Water Services	CWT	4.9%	-0.2%	21.0%	1.4%
York Water	YORW	5.9%	6.8%	13.5%	7.0%
US Renewables	Ticker	One Week	One Month	Three Month	YTD
First Solar Inc	FSLR	-2.7%	8.0%	18.5%	54.3%
SunPower Corp	SPWR	2.1%	13.2%	95.1%	321.0%
Bloom Energy	BE	-10.7%	36.7%	70.6%	230.4%
SunRun	RUN	-0.6%	5.2%	-4.5%	322.0%
Sunnova Energy	NOVA	1.5%	20.4%	48.8%	252.2%
Enphase	ENPH	8.2%	20.0%	93.9%	435.4%

Source: BofA Global Research, Bloomberg

But just how fast has the sector actually grown?

Consistently better than Utility alternatives: we provide comments provided by companies across the sector on both historical and prospective growth commitments. Bottom line, we see nearly uniform high single digits ratebase growth across the sector (rather than AWK being the unusually elevated company). We perceive ratebase growth as still in the midst of execution – rather than reaching the 'end' of its reinvestment cycle. We perceive few specific regulatory consternations – with in fact many pointing to the need for more consolidation to enable greater scale. If anything what remains critical to the industry is ensuring cost efficiencies to offset otherwise bill inflation. This remains critical as FMV acquisitions drive shifts in tariffs across customers as well.

Table 2: Contrasting commitments on EPS, DPS, and Ratebase across sector: mixed disclosures – but trajectory is clear

Companies	EPS (CAGR)	DPS (CAGR)	Rate Base
American Water Works (AWK)	2020-2024 expected 7-10%	2020-2024 projected high end of 7-10%	NA
American States Water (AWR – Not Rated)	2009-2019: 10.7%	2010-2020: 9.4%, guiding 7% going forward	Planned capex going forward remains at 3.5-4x depreciation
Aquarion – Eversource (ES)	NA	NA	2017-2024 expected 8% rate base CAGR
Artesian Resources (ARTNA – Not Rated)	NA	Expected 3%	NA
California Water Service Group (CWT – Not Rated)	NA	NA	2008-2019: 9.7%
Essential Utilities (WTRG)	Expected 5-7% through 2022	NA	NA
Middlesex Water (MSEX - Not Rated)	NA	NA	Capex forecast of $295Mn in 2020 through 2022
SJW Group (SJW – Not Rated)	5% LT	Committed to a dividend payout ratio of 50-60%	2016-2021 projected: 13%

Source: BofA Global Research estimates & Bloomberg; industry presentations & commentary from conference for uncovered companies

We also include the existing historical EPS growth rates across the sector to provide a bit more perspective across the peers- admittedly AWK stands out clearly vs. peers on its ability to consistently execute and explains its notable premium. If anything, we perceive re-acceleration of growth underway across peers beyond just AWK's consistency.

Table 3: EPS Growth over Time Across the Water Industry: entire sector's performance is well in excess of trends elsewhere

	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	Average EPS Growth - over decade	EPS CAGR - over decade	EPS Growth 2019-2020E	EPS CAGR - 5YR - 2015-2020E
AWK	22%	18%	17%	4%	10%	9%	8%	7%	9%	9%	8%	9%	7%	11%	11%	8%	8%
WTRG	17%	4%	40%	10%	3%	5%	5%	4%	3%	4%	6%	6%	9%	10%	9%	6%	4%
SJW	60%	-28%	27%	-5%	121%	-25%	39%	11%	-12%	-29%	16%	16%	7%	16%	8%	16%	2%

Source: BofA Global Research, Bloomberg; consensus applied for uncovered names (we only cover AWK and WTRG)

Contemplating the Regulatory & Legislative Backdrop

Aside from the unfavorable decoupling decision by the CPUC likely to increase rate base contention and drive earnings volatility for companies exposed to the state, discussions around regulatory treatment for the sector were generally constructive. We perceive continued support in surcharges like the DSIC (Distribution System Improvement Charge) to drive critical investment spend longer term and see commissions as continuing to engage with companies around COVID challenges and navigating through as the pandemic continues to linger. As we await a broader mandate around PFAs and water quality, regulatory support across states will remain critical to watch: We don't expect it to be too controversial. Meanwhile, we perceive legislation such as Fair Market Value legislation, Single Tariffs, and the Water Quality Accountability Act will all continue to gain momentum, setting up opportunities for further consolidation.

Company Highlights

We include our latest company takeaways below:

Essential Utilities (WTRG)

Latest discussions with WTRG management stressed confidence around execution of their strategy with the company successfully navigating the pandemic while integrating their Peoples Gas acquisition. Despite COVID, the company previously noted expectations to be at the top end of the 2020 range and affirmation of their 5-7% EPS growth through '22. The company is poised to roll forward their guidance on January 11th, and we perceive more announcements to come on the acquisition front. Recall the company has elected to use Repairs Tax accounting treatment and has effectively implemented the last several months – with guidance of $0.08-$0.12 benefit annually. We await developments around the regulatory process of the catch up component after the earlier filing, with resolution expected early in April of 2021. Rather than drive incremental upside to their 5-7% EPS CAGR, the filing seeks to extend the growth without a need for a rate case. As opposed to going in for new rates in 2023 to take effect in 2024, a constructive outcome from the catch up filing would benefit '23, with incremental benefits in '24, and '25 to help drive earned returns for the segment in outer years without any rate relief until 2026: the repairs tax debate boils down to Peoples Gas ROE lag in '23 likely to a modest degree. On balance we are comfortable in mgmt's ability to manage lag around its ROEs at core water utilities including PA into a potential water filing next year.

With FMV legislation now in all eight water & wastewater states in WTRG's footprint following the passage in Virginia earlier this year, the company continues to execute on tuck in acquisitions and discussions continue to highlight a robust pipeline of opportunities. Management remains confident on the DELCORA process, with a regulatory approval expected in mid-March. This would put the company on track to

potentially close the transaction in April or May after the 30 day appeal window. Meanwhile, a decision is expected from a judge within 60 days after the recent hearing regarding the litigation around the trust. Recall the company has until August to pull on the ~$300Mn equity forward to be used for DELCORA and other acquisitions.

We reiterate our Buy rating, seeing upside risk in the event of better than expected execution on their long-term growth rate.

American Water Works (AWK)

Ahead of their upcoming 2021 guidance and outlook roll forward, AWK management continued to highlight confidence across their business and around their ability to execute on their strategy through both the lingering pandemic and the longer term. Despite the ongoing impact of COVID, latest disclosures with their 3Q update brought the midpoint of full year 2020 guidance back to the original 2020 guidance on an adjusted basis – and we see the company as poised to extend expectations another year: We don't perceive a pivot from the strategy with management seemingly committed to their growth triangle and the largely regulated portfolio. As such, we expect continued guide towards 7-10% EPS growth through 2025 with their full year results.

As the largest publicly traded water utility with a regulated footprint across 14 states, AWK is poised to benefit from enabling legislation and the continuing acceleration in consolidation across the industry. FMV legislation has been enacted in ten of their states including the top 7 (which make up 88 % of their biz by revenue).

95% of their acquisitions over the last five years have been in states that have enacted the legislation. Meanwhile, the company now enjoys consolidated tariffs in 12 states and water accountability legislation in three. We see the latest pressures from both COVID and water quality standards as likely to further accelerate the trends. After our event, the company announced the latest completed tuck in acquisition of Four Lakes Water Distribution System in Illinois American Water's Chicago Metro Area ($900K and 1300 households). With a line of sight to $20-$22Bn of investment over the ten year period, we see no slowdown in opportunities even through the longer term, particularly given the consolidation backdrop. The earlier decision to de-lever the balance sheet should further provide additional flexibility to pursue acquisitions.

We upgrade AWK shares to Neutral following the latest constructive conference and a more fairly balanced risk/reward. Click here for the parallel upgrade.

Aquarion – Eversource (ES)

We hosted meetings with Aquarion Water, ES' regulated water utility subsidiary that comprises 5% of the company's rate base. The company is one of the ten largest privately-owned water utilities in the US and the largest investor-owned water utility in NE serving ~214K customers in NH, MA, and CT. Following the sale to ES, Aquarion's rate base is expected to grow nearly 3x faster than before the acquisition to a rate base of ~1.3Bn in 2024, reflecting an 8% rate base CAGR off the 2017 base. We perceive opportunities beyond this as the industry continues to consolidate from the 50,000+ water systems that are in the US today. Since 2011, Aquarion has closed 24 transactions, with two small acquisitions currently before regulators – and discussions stressed the constructive regulatory backdrop to further promote muni deals. We see the M&A focus going forward on larger opportunities over a thousand connections in both water & wastewater. Maintain our Neutral rating on ES given balanced risk/reward.

American States Water (AWR – Not Rated)

American States Water Company (AWR) is a consolidated low volatility water company that operates through 3 subsidiaries: 1) Golden State Water Company (GSWC), Bear Valley Electric Service, Inc. (BVESI), and 3) American States Utility Services (ASUS). The company recently spun out BVESI to insulate it from the rest of the company, but stressed the higher elevation (7000ft) and stronger build to whether ice and snow required above 3000ft – stressing the differences in risk relative to some other parts of

California. The regulated water and electric utility serves 261,000 and 24,000 customers across California, respectively, while ASUS is a contracted service for water/wastewater systems that serves military bases under 50-year contracts, largely competing with AWK.

The EPS breakdown is comprised 72% from GSWC, 7% from BVESI, and 21% from ASUS with the company growing earnings at a ten year CAGR of 10.7% through 2019. Going forward, the company is guiding to dividend growth of 7%, stressing potential room to grow from the company's earnings prospects: planned capex going forward remains at 3.5-4x depreciation. Given the rate case filing in July, the company doesn't expect to lose decoupling until 2025 (after the commission subsequently opted to eliminate it on August 27th) and view the language in the decision as supporting Golden State Water's position that it does not apply to its general rate case application filed earlier this summer (which will set new rates for '22-24). The company may still have the ability to use the Monterey-style WRAM for partial price adjustment protection.

Artesian Resources (ARTNA – Not Rated)

ARTNA is a $400Mn market cap water utility headquartered in Newark, DE providing water services in parts of Delaware, Maryland, and PA. The company services more than 118K metered customers and supplies over 8.3Bn gallons of water per year through more than 1,331 miles of water mains. Through public-private partnerships, the company provides a variety of water and wastewater-related services to several municipalities with latest discussions suggesting the primarily resi based business as not materially impacted by COVID. The company continues to focus on organic growth on the Delmarva Peninsula and growth has been around 1-2% across their footprint in addition to several recent acquisitions. The company alluded to 3% dividend growth.

California Water Service Group (CWT – Not Rated)

We hosted meetings with management of CWT – the second largest ($2.5Bn market cap) pure play water company in the US. The latest 2018 California GRC adopted on Dec 3rd allows 3-year CapEx of $828m, adopting a $1.5bn rate base in 2020, with the company growing investment at a ten year CAGR of 9.7% through 2019. As they appeal the recent CPUC decision to eliminate decoupling in California, discussions stressed any overturn as unlikely before the next GRC and they expect the shift to make rate cases more contentious and drive rate design changes, potentially reducing conservation incentives and increasing volatility. COVID has increased the number of delinquencies with 60,000 customers behind on payments - raising the company's bad debt reserve to $2.7Mn (albeit the state has provided an emergency memo account for COVID related expenses). Overall, the capital program remains robust and running 3x depreciation, while acquisition opportunities remain strong with five more acquisitions in progress after closing the Rainier View deal in June.

Middlesex Water (MSEX - Not Rated)

We hosted meetings with MSEX, a $1.3Bn regulated water utility with operations in NJ and DE. Discussions emphasized robust investment opportunities, with a capex forecast of $295Mn in 2020 through 2022, including a $70Mn CJO plant upgrade in New Jersey anticipated to complete in mid-2021. MSEX is subject to a Distribution System Improvement Charge (DSIC) in both its NJ and DE jurisdictions which allows accelerated recovery of certain pre-approved investments subject to a cap. While favorable legislation such as FMV is helping drive consolidation across the industry, MSEX doesn't currently enjoy such legislation in their states at this point in time. Nonetheless, discussions still suggested muni opportunities materializing with the Water Quality Act in NJ and as more and more munis look to get help from IOUS. The company has not articulated a formal EPS target.

SJW Group (SJW – Not Rated)

We hosted meetings with SJW, the second-largest pure-play water/wastewater utility by rate base in the US. Discussions emphasized the company's growth strategy including Capex, constructive regulatory relations, and acquisitions. After the earlier transformative M&A, the footprint now includes San Jose Water (regulated utility in California), Conneticut Water, Maine Water, SJWTX (regulated utility in TX), and SJW Land Company (unregulated biz in California). The company is committed to a dividend payout ratio of 50-60% and seeks to grow earnings around 5% longer term – and stressed additional capital opportunities above plan including further municipal acquisitions. The company estimated over $230m of Capex in 2021, implying 5 year CAGR of 13% through 2021. Despite the latest decoupling setbacks for the water industry in the state of California with the CPUC's decision to eliminate it, SJW didn't employ the mechanism and instead remains well protected with the Monterey-style WRAM in place. After earlier issues with guidance, the company noted that guidance will be released after the rain season going forward in order to more accurately reflect any water costs.

The Tech Angle: AQUA, BMI, Ionic Water & XYL

We held meetings with AQUA, BMI, Ionic Water, and XYL for perspective and latest updates from technology providers.

Ionic: Start-up company by same developer of EOS stationary batteries. Focused on PFOA solution with regenerative (reusable) activated carbon solution. See potentially material cost reductions to cost of water purification along with substantial reductions in use of activated carbon (presently consumed in large quantities).

AQUA: Evoqua is a $2.8Bn market cap company that provides water treatment equipment and services through two segments, Integrated Solutions and Services and 2) Applied Product Technologies. Discussions stressed that COVID had led to rapid growth in outsourced water, creating short term revenue challenges but paving a way for long term success as projects take 12-24 months until they are fully operational. Looking forward, their base case guidance into 2021 is flat to slightly up sales and adjusted EBITDA y/y as the pandemic continues to linger.

BMI: Badger Meter is a $2.6Bn market cap company that manufactures and markets flow measurement and control products focused on smart meters in the water sector. Latest discussions stressed that after a very challenging second quarter, business bottomed in April and organic growth has started to resume. While the company doesn't provide formal guidance, they expect 5% growth on the utility business longer term on higher average selling prices, and expect software as a service to grow to 10% of their biz. Only ~60% of the US market currently has some form of AMR/AMI (automated meter reading / advanced metering infrastructure), and while likely slow to adopt, this provides a long runway of potential growth along with upgrades from AMR to AMI. Meanwhile, with 80% of their utility biz in the US, discussions noted potential for international tailwinds through the strategic cycle. While small, their recent acquisition of S:CAN has an installed base in 50 countries to help further accelerate their international push.

XYL: Xylem Inc is an $18Bn market cap designer, manufacturer, equipment, and service provider for water and wastewater applications addressing the full-cycle of water from collection, distribution, and use to the return of water to the environment. By geography, the bulk of revenue is generated in the US (45%) while Western Europe, Emerging Markets, and the rest of the world comprise 26%, 21%, and 8%, respectively, while end markets are broken down by utilities at 50%, industrial at 35%, commercial at 10%, and resi at 5%. Discussions stressed the company as well positioned to grow faster than the market the next several years and a likely pickup in growth in 2H as we start to recover from the pandemic – with signed contracts building up given the delay in work.

Table 4: Stocks mentioned

BofA Ticker	Bloomberg ticker	Company name	Price	Rating
AWK	AWK US	American Water	US$ 148.55	B-2-7
WTRG	WTRG US	Essential Utilities	US$ 47.07	B-1-7
ES	ES US	Eversource Energy	US$ 85.46	B-2-7

Source: BofA Global Research

Price objective basis & risk

American Water Works (AWK)

Our PO for American Water Works is $155. We apply the sector average 27.8x to American Water's 2023E earnings based on the water peer multiple and a 8.1% group EPS CAGR for '18-'23E. We think this multiple is justified as in our view AWK largely drives the peer multiple as the largest publicly traded water utility. We ascribe a 3x premium for NJ, PA, and IL, and a -3x discount to the non-regulated Retail biz. Also a -1x P/E for Cali utility. no prem/discount for 'Other' segment with smaller state exposures.

Risks to the downside are increase in market interest rates, potential impact of tax reform on utilities, operational errors, changes in valuation levels for water utilities. Risks to the upside are accelerating muni acquisitions, multiple expansion, and constructive legislation in regulatory jurisdictions.

Essential Utilities (WTRG)

Our price objective is $51 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. These peer multiples are 25.5x and 13.9x. We apply a 3.0x premium to Peoples Gas given the organic growth opportunities, while applying a variety of premiums to its water (2x previously) subsidiaries: +4x to PA, +3x to IL, +2x to OH, +2x for TX, +2x for OH, and no premium for balance of biz. We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

Eversource Energy (ES)

Our sum of the parts based price objective of $93 uses P/E multiples on 2023E earnings. For electric utilities, we attribute a 4x premium NSTAR, and 3x premium to PSNH and CL&P to peer 16.6x multiple, reflecting future potential positive revisions to capex and earnings. For gas, we apply a 3x premium to the peer 15.0x multiple, given capex upside particularly in MA and a 2x for Columbia Gas. Both electric and gas peer P/E multiples are grossed up by 5% to reflect capital appreciation across the sector. We value Aquarion at a 1x premium to the 26.5x water multiple. We reflect ES's 50% ownership in Revolution and South Fork offshore wind sites on an NPV basis. We further reflect a devco value with an assumption of an additional 3GW through 2031. We take out 50% of parent debt, and 50% of interest to accurately reflect parent leverage.

Upside risks to our price objective are additional capex announcements on the T&D side, as well as success in offshore wind RFPs.

Downside risks are reduction in authorized ROEs, inability to meet earned ROE expectations, as well as failure to receive permitting on incremental capex opportunities

Equity Investment Rating Distribution: Utilities Group (as of 30 Sep 2020)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	79	51.63%	Buy	59	74.68%
Hold	36	23.53%	Hold	24	66.67%
Sell	38	24.84%	Sell	25	65.79%

Equity Investment Rating Distribution: Global Group (as of 30 Sep 2020)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1749	54.79%	Buy	1114	63.69%
Hold	677	21.21%	Hold	415	61.30%
Sell	766	24.00%	Sell	386	50.39%

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Essential Utilities

We Are Confident on the Near & 3-Yr View

Reiterate Rating: BUY | PO: 54.00 USD | Price: 48.18 USD

Latest Guide Intact Indeed – But Only Rolls to 3-yr view

On Monday morning, WTRG management provided 2021 EPS expectations of $1.64-1.69 - with the midpoint a touch above our prior estimate of $1.65 and prior consensus of $1.66 – while rolling forward their 5-7% EPS CAGR through 2023 (vs. '22 earlier). While the three year look is admittedly less than other utility peers, we expect a consistent roll forward of the outlook beyond '23 as well despite all the noise around tax credits and rate case timing. We perceive few meaningful impediments for shares despite perceived noise around tax credits this is simply rate case timing issue. See upside from further deals not contemplated in the plan, with only a ~$60Mn annual run rate considered outside of the known transactions, providing support for a water rate base CAGR well above their organic 6-7%. Discounted ESG opportunity remains clear among water peers

No Shortage of Muni Opportunities

With no shortage of municipal acquisition opportunities, we see the company as a prime beneficiary of further consolidation across the industry as COVID continues to pressure muni budgets and against a backdrop of favorable legislation: recall WTRG currently enjoys FMV legislation in all eight of their legacy water states. Following the acquisition of ~$63Mn in rate base in 2020, the company has five signed APAs totaling over $420Mn in rate base with another two winning bids totally ~$30Mn waiting a formal agreement. We see a long trajectory of further deals and suspect a potential run rate well above historical norms going forward given the increasingly constructive backdrop.

PO Shifts to $54 on Latest Multiples

Our 2021 estimate comes up slightly to the midpoint of management's guidance. We update our valuation to apply the current peer multiples to our latest estimates: 27.4x for water and 14.2x for gas (vs. 25.5x and 13.9x previously). Our premiums remain unchanged and continue to reflect confidence in ability to consistently deliver, strong muni acquisition prospects, and an underappreciated ESG angle. Our PO is raised to $54 (from $51 previously). Bottom line, see shares as poised to re-rate higher alongside wider water sector: The ESG Antidote: Why Water is a Win/Win.

Company Sector

Water Utilities

Company Description

Essential Utilities is a regulated water/gas providing water or wastewater services to 3M customers in the states of PA, OH, TX, IL, NC, NJ, IN, and WV, with PA segment being the largest contributor to the NI - along with a natural gas presence through the recently acquired Peoples Gas providing distribution services to 740,000 customers in PA, WV, and KY.

Investment Rationale

We are Buy rated on shares of WTRG, seeing shares as poised to re-rate higher given consistent execution, acquisition upside, and increasing conviction around the premium story.

969,084

Quarterly Earnings Estimates

	2019	2020
Q1	NA	NA
Q2	NA	NA
Q3	NA	NA
Q4	NA	NAE

Rolling Forward the EPS CAGR with More Muni Upside

WTRG management provided 2021 EPS expectations of $1.64-1.69 - with the midpoint a touch above our prior estimate of $1.65 and prior consensus of $1.66 – while rolling forward their 5-7% EPS CAGR through 2023 (vs. '22 earlier). While the three year look is admittedly less than other utility peers, we expect a consistent roll forward of the outlook beyond '23 as well despite all the noise around tax credits and rate case timing.

With the latest update, management noted plans to file a rate case at Aqua Pennsylvania later this year, keeping with their three year rate case cadence for their water biz in the state while the company continues to implement Repairs Tax accounting treatment at Peoples Gas: recall earlier guidance of $0.08-$0.12 benefit annually from the repairs election. After the earlier subsequent filing of the catch up component, hearings are scheduled for the end of this month with resolution expected in the second quarter. Rather than drive incremental upside to their 5-7% EPS CAGR, the filing seeks to extend the growth without a need for a rate case. As opposed to going in for new rates in 2023 to take effect in 2024, a constructive outcome from the catch up filing would benefit '23, with incremental benefits in '24, and '25 to help drive earned returns for the segment in outer years without any rate relief until 2026. On balance, we feel comfortable in management's ability to manage around lag, particularly if the company is able to opt out of going in for rates longer.

Muni opportunities Increasingly Robust

We expect the growing pipeline of municipal opportunities to provide a long term tailwind for the water biz. Following the adoption of Fair Market Value legislation in TX and VA, the company now has the constructive legislation in all eight states of their water footprint. We expect this to help further accelerate consolidation in the industry as muni budgets are further flex'd from the crisis - and any further resulting acquisitions would be upside to mgmt.'s latest extended targets with guidance *only assuming ~$60Mn* in annual tuck ins through the forecast period (this is relative to ~$420 Mn of ratebase acquisitions pending). We stress clear positive re-rating potential within this guide range – and see this as also helping to take pressure off execution at Delcora too.

De-risking DELCORA

Late last year, the Delaware County Court of Common Pleas issued an order supporting the pending acquisition of DELCORA by rejecting the county's attempt to block the sale. The order ruled the asset purchase agreement is fully binding and enforceable and that the funds to offset DELCORA customer bills is legal – helping derisk the deal and mitigating prior concerns about the ability for the transaction to close. While we perceive there could still yet be a potential appeal around the decision, the order supports the anticipated closing timeline for the transaction: the Recommended Decision from the PA ALJ is anticipated next week (1/20/21), setting up a decision by the commission in early March and a transaction close in early 2Q. Final resolution should help alleviate some overhang given the forward that needs to be pulled by August.

Overall, we think the $420Mn in rate base opportunities from signed APAs is should generate ~$21Mn in earnings with further muni opportunities still to materialize (*this is roughly +4% to EPS and should help mgmt. execute towards upper end of targeted range*). We see upside to the plan given the more conservative approach to guide, and expect shares to rerate higher relative to AWK as investors continue to appreciate the premium story amid consistent management execution.

We reiterate our Buy rating on shares of WTRG following the latest guidance update. We have increasing conviction in management's ability to consistently deliver and see the company as a prime beneficiary of further consolidation across the water industry. – while the ongoing docket for the catch up component of Repairs Tax treatment in PA should provide further latitude to stay out of rate cases for the gas segment. We struggle to reconcile the sharp discount to peer AWK and see the overhang from gas as nearsighted, particularly given the pipeline of water opp's to further dilute gas as a percentage of their biz. With a growing focus on ESG – and mgmt.'s proactive action around PFAs and emission reductions – we see this an underappreciated angle not reflected at the current valuation.

WTRG 4Q20 Earnings Walk

We forecast 4Q20 adjusted EPS of $0.45 compared to 4Q19 adjusted results of $0.34 and consensus of $0.45.

• **Key Drivers:** The primary driver of the quarter is the contribution from the Peoples Gas acquisition after closing the transaction earlier this year with additional dilution offsetting growth at the legacy water biz.

EPS Estimates: already towards top end of 5-7%

The exhibit below reflects our latest EPS Estimates. Our 2021 estimates come up slightly to the midpoint of management's newly rolled out guidance of $1.64-$1.69. Longer term, we continue to model to the high end of their 5-7% EPS CAGR. We perceive further upside from a likely acceleration in industry consolidation out of the pandemic as municipal budgets are further stretched and constructive legislation continues to enable transactions. With prospective EPS growth likely more consistent than earlier trajectory (which proved more 'lumpy,' we perceive the trajectory as ever more appealing for those seeking a de-risked outlook).

We continue to see positive bias on EPS execution as 5-7% could be implicitly reset off high end of '20 EPS guide – and see our estimates already at the top end of the EPS CAGR without the full inclusion of contemplated acquisitions (~$1.90 is high end of 5-7% for '23 off $1.55 midpoint). While financing details are pending, we see clear latitude to achieve high end and even re-base slightly higher too.

Valuation: PO Raised to $54 on Multiples

The exhibit below reflects our latest SOTP. We update our valuation to apply the current peer multiples to our latest estimates: 27.4x for water and 14.2x for gas (vs. 25.5x and 13.9x previously). Our premiums remain unchanged and continue to reflect confidence in ability to consistently deliver, strong muni acquisition prospects, and an underappreciated ESG angle. Our PO ultimately shifts to $54 (from $51 previously). Reiterate Buy given deep discount and upside catalysts.

Table 3: SOTP

Source: BofA Global Research, Bloomberg

Price objective basis & risk

Essential Utilities (WTRG)
Our price objective is $54 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. These peer multiples are 27.4x and 14.2x. We apply a 3.0x premium to Peoples Gas given the organic growth opportunities, while applying a variety of premiums to its water (2x previously) subsidiaries: +4x to PA, +3x to IL, +2x to OH, +2x for TX, +2x for OH, and no premium for balance of biz. We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

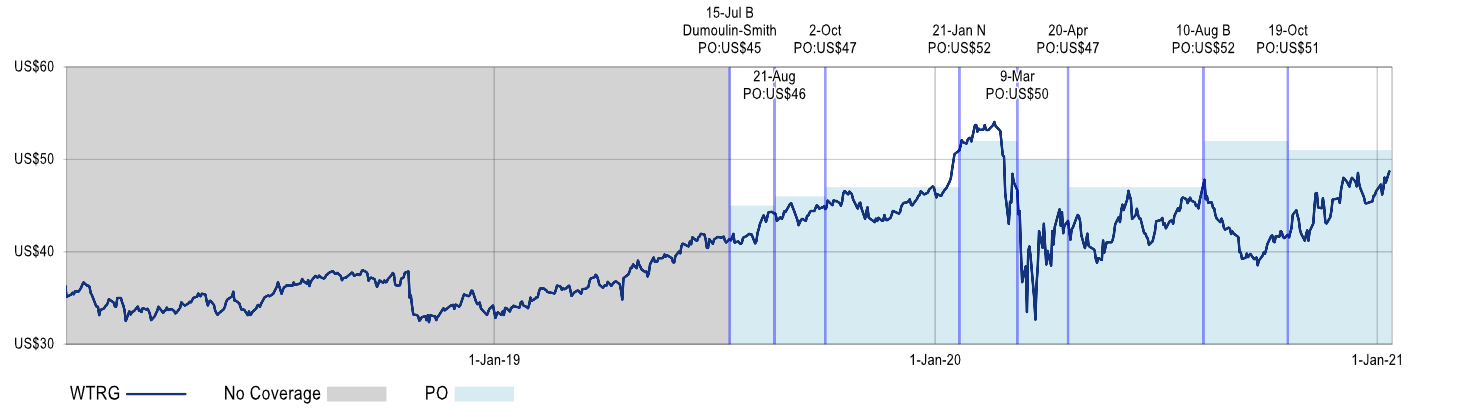
Essential Utilities (WTRG) Price Chart



B: Buy, N: Neutral, U: Underperform, PO: Price Objective, NA: No longer valid, NR: No Rating

The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of a date no more than one trading day prior to the date of the report.

Equity Investment Rating Distribution: Utilities Group (as of 31 Dec 2020)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	80	51.61%	Buy	58	72.50%
Hold	37	23.87%	Hold	28	75.68%
Sell	38	24.52%	Sell	22	57.89%

Equity Investment Rating Distribution: Global Group (as of 31 Dec 2020)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1863	56.90%	Buy	1185	63.61%
Hold	686	20.95%	Hold	426	62.10%
Sell	725	22.14%	Sell	358	49.38%

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a

short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.
BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.
Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

'20 looks intact for most across Regulated space

We provide our 2Q20 Regulated utility preview for AEE, AEP, AWK, CMS, DTE, DUK, EIX, LNT, WTRG, EVRG, FE, PNW, PPL, WEC, and XEL. The group trod water during Q2 with the IXU index returning +1.8% from Mar 31 through June 30, a tough comp against the broader market with the S&P 500 rallying +20% in the same period. Nonetheless, we see a more constructive story across the board than one quarter ago with weather largely serving as a cushion on Q2 results, offsetting expected losses linked to COVID. If Anything those with pitfalls into 2Q are largely of their own discrete nature, rather than wider (unknown) Covid concerns – along with a handful who didn't update earlier.

Q2 shaping up (much) better than initially feared

For **EIX** we see a miss on 2Q, although comparability continues to remain outside of reach given pending O&M recovery; instead, expect focus to remain on the upcoming fire season and mitigation efforts (PSPS, Blackhawks, fire retardants) as well as updates on '17/18 liabilities (where we remain biased to the upside on the $4.9bn low-end range) although could see further clarity on B/S help w/ re-rating potential. For **DUK**, we see a weak 2Q given more material COVID impacts with O&M offsets back half weighted; we remain concerned around mgmt.'s messaging *of re-base its growth trajectory* given an expected weak '21 outlook following cancelation of ACP and capex backfilled in the later part of the program; longer-term the IRP presents a clear opportunity for further capex deployment (post-21 given litigated process) as well as legislation stemming from the NC clean energy agenda. With large resi compositions and constructive recovery mechanisms/orders across most jurisdictions, we see **AWK** and **WTRG** as relatively protected from COVID challenges. After electing not to reset expectations with 1Q results, *we see more risk to **PPL**'s 2020 guidance* – albeit our latest model still suggests the low end of their range: full quarter impact and ongoing expectations around UK in particular will prove critical given two year lag with true up mechanism. **LNT** continues to move ahead with its WI solar filing with an expected order in '21, while the rate stabilization filing in the state should be decided in Q3 with unchanged ROE and equity and escrow treatment for pension and bad debt. **DTE** appears to have largely offset Covid impacts (among the higher Industrial sales declines posted in Apr) thanks to a strong weather uplift in the quarter (across MIS); we also see approval for rate case filing delay until Q2 202; among best for 2Q outlook. We expect similar benefits for CMS with further details and confidence in cost savings to support a firmer reaffirmation of FY20 guidance. **EVRG** received approval of its accounting order in KS (historically its more difficult jurisdiction) and has a pending request in MO; we see a largely in-line quarter though the focus remains on the outcome of its strategic process with committee recommendation in late July and Board decision in August. **PNW** has a tricky regulatory setup in 2H with rate case staff testimony due in early August, though mgmt. recently affirmed that they do not see a path to settlement in '20, with likely decision coming from a new bench of commissioners after Nov elections; we do expect capex clarity as unexpected angle into 2Q to drive partial offset to outlook; pos '20 affirmation too. We expect **WEC** to post a Q2 print at the top of its already-increased guide range on the back of warm June weather, and see their '20 guidance as very much intact (we raise ests to high range); here too pos framing ahead.

BofA Securities does and seeks to do business with issuers covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

2Q Summary and PO Changes

We include a brief summary of our 2Q estimates compared vs Street as well as PO changes reflected in this report.

Table 1: PO Changes

Regulated		New PO	Old PO
Alliant Energy Corp	LNT	$54.50	$52.00
Ameren Corp.	AEE	$79.00	$79.00
American Electric Power, Inc	AEP	$88.00	$80.00
American Water	AWK	$135.00	$133.00
DTE Energy Co.	DTE	$115.00	$115.00
Duke Energy	DUK	$87.00	$84.00
Edison International	EIX	$65.00	$65.00
Essential Utilities	WTRG	$47.00	$47.00
Evergy, Inc	EVRG	$68.00	$63.00
FirstEnergy Corp.	FE	$45.50	$45.50
Pinnacle West Capital Co.	PNW	$78.00	$78.00
PPL Corporation	PPL	$27.00	$27.00
WEC Energy Group Inc.	WEC	$83.00	$83.00
Xcel Energy Inc.	XEL	$62.50	$62.50

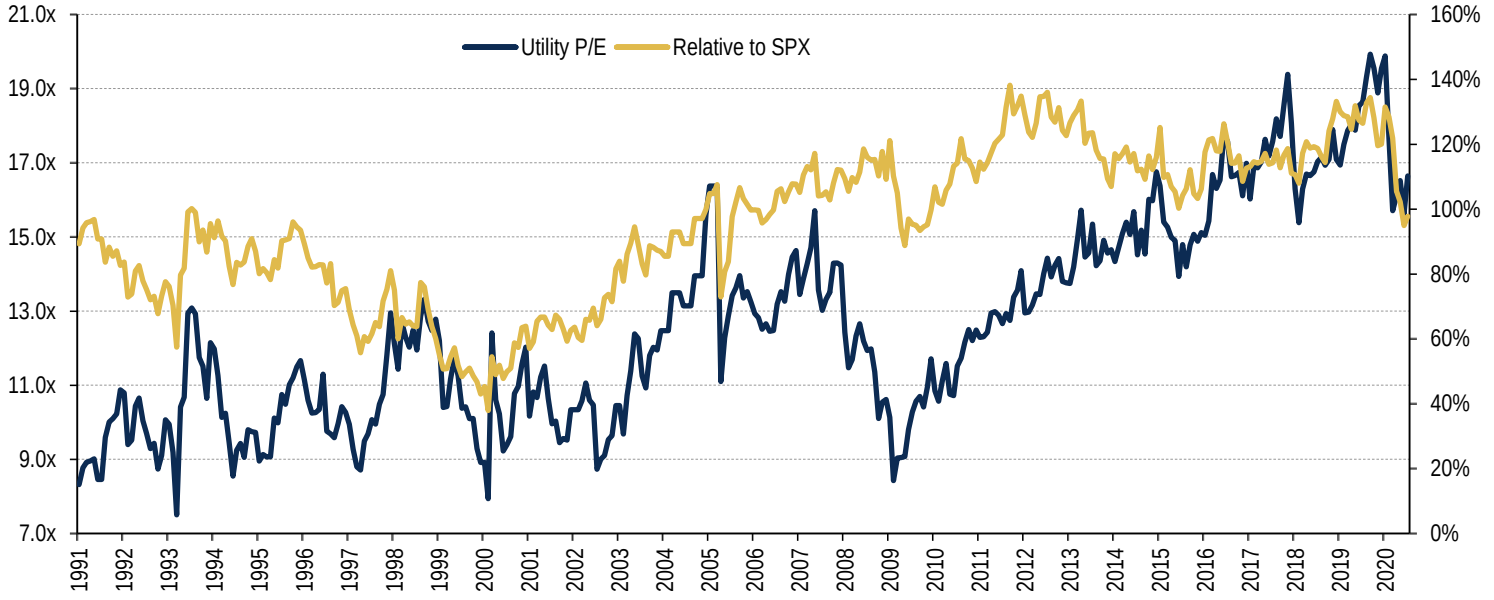
Macro Backdrop

We perceive investors are generally skeptical of current sector valuations – and see the continued upward trajectory of the sector as still showing an expensive backdrop from a high level perspective. The chart below shows the latest mark-to-market of the group on an absolute basis and against the SPX; utilities continue to trade near their all-time highs on both a relative and absolute basis.

We continue to see the backdrop as among the single most intriguing backdrops in recent memory with the sector having traded off relative to its historic relationship between rates and the S&P to its lowest levels since the 2000 tech bubble – off its highest relative trading levels in 3Q19 (almost -60% under-performance), making the sector incredibly compelling against historic valuation metrics. With few material risks to estimates, dividends, or outlook, the question is just whether the market will remain oriented towards growth equities with elevations. Much of this is dependent on recovery from recession ironically – where recovery has historically driven a bid towards value relative to growth (per our Equity strategist Savita Subramanian).

Chart 1: Utility PE relative to SPX



Source: Bloomberg

When adjusting for the S&P itself *and* the treasury environment: different story

In the exhibits below, we show a time series of where the sector has traded relative to the linear regression on a relative and absolute basis for Treasuries to illustrate the premium; the group has started to trade more in line with its historical linear relationship with 10Yr and 30 Yr Treasuries on a relative basis.

Tax Reform Perspectives For Utilities In Brief

Tax Reform & Utilities: Not as Concerned as Investors

We recently hosted a call with our BofA Public Policy expert regarding potential tax reform with Biden as President. Critically, our expert asserts only if there is a Democratic sweep in November (Biden wins, and Democrats regain control of both the House and Senate) would it be likely for Democrats move to pass a meaningful tax bill in 2021. Many utility investors have been concerned about tax reform prospects and focusing on this scenario as if this was directly tied to a Biden win of late- rather than appreciating the very more narrow under which comprehensive tax reform would once again pass. Note the budget reconciliation vehicle, allows Congress to move tax legislation with only a bare majority in the Senate (cannot be filibustered); this remains a critical vehicle seeing it being used for the last tax reform effort. Notably, Biden's platform currently has three major likely tax proposals, which include: 1) raising the U.S. corporate tax rate from 21% to 28%, 2) implementing a new minimum tax on companies' GAAP earnings, and 3) tightening of the Global Intangible Low Tax Income (GILTI). The first two matter to utilities, while the third really would only apply to AES among utilities/IPPs. Think tanks and private revenue estimators believe raising the tax rate (the most likely of the three proposals) would lead to government revenue of $1.3 trillion over ten years, the highest potential revenue source of the three proposals. The exact rate increase is still subject to change, but 28% is the current proposal. We address many of the tax reform debates in latest election note. The minimum tax on GAAP earnings specifically impacts U.S. corporations that currently do not pay taxes of at least 15% of their GAAP earnings. The proposal would bring the tax level up to 15% for the companies that currently "habitually pay less" than this rate; this could very well still allow for renewable tax credits to be netted even against this minimum requirement (hence giving reprieve to much of the utility industry, albeit this remains unclear). A tightening of GILTI impacts multinational corporations where a company's rate would be increased from 10.5% (current as of 2017) to 21%, effectively doubled. It remains unclear just how this would manifest itself for AES (B-1-7; $14.44). Overall, we see utilities as net beneficiaries under a tax reform context given the muted impact vs other industries despite what is likely delayed ability to recoup the higher tax rates from customers given the need to file rate cases (and likely suffer ROE drops too).

But the real low prob kicker is dividend tax rate hike risk

Separately on the income tax front, but critical for utility investors, Biden has also proposed to tax capital gains and dividends at the same rate as ordinary income, which would go back up to 39.6% in the top income bracket (above $1mn/year). However, we acknowledge that this would be a relatively dramatic proposal, and it is unclear if moderate democrats would support this or even move in the context of a Democratic sweep according to our internal expert. Bottom line, although it is unlikely there is desire to move legislation on capital gains and dividends, and a democratic sweep presents notable vulnerability for utilities under this proposal in addition to the three aforementioned major tax proposals.

King Coal: How Much Exposure is Left?

Measuring the value of remaining coal across the sector

We present our analysis of estimated rate base, earnings, and in turn, value of coal as a % of market cap across our Wider Power & Utilities universe. While disclosures vary with most companies under our coverage (explicitly) disclosing coal rate base many provide some very helpful clues enabling us to estimate ratebase (particularly of more recently built) scrubbers, leveraging FERC Form 1 data and estimates around deferred tax and related adjustments. We also highlight the impact on rate base of scrubber and other pollution control retrofits that have left many utilities with the challenge of dealing with undepreciated plant in what are increasingly uncompetitive generation assets - though some states such as MI have addressed the challenge head on with existing securitization laws, we see opportunities for acceleration of retirements in other jurisdictions such as WI, KS, MO among others where securitization is yet on the books.

Leaders and laggards among our coverage

Our analysis shows that on average Regulated and SMID-cap names have earnings exposure linked to coal in rate base of 10-15% while Diversified peers are meaningfully lower with the exception of SO, although w/ constructive regulatory relationships. EVRG stands out w/ 2019 EPS estimated at 39% derived from its coal-heavy fleet given an estimated ~$5B of coal in rate base. We continue to see this as a key angle to watch in the ongoing strategic process given a largely undepreciated amount w/an estimated $1-$1.5B in rate base linked to scrubber retrofits (highlights need for securitization in both the KS and MO). Elsewhere, we continue to see ETR's unscrubbed fleet as representing a significant renewable investment opportunity with minimal rate base remaining - though the overall share of coal-fired generation in the company's portfolio remains 9% by nameplate capacity. CNP screens as the single highest exposure to coal by % of its portfolio at 83% of nameplate, but the small size of its overall fleet and minimal ratebase associated with its assets (including scrubbers on all assets) mitigate its overall exposure. Meanwhile we expect DTE's relatively high exposure estimated at 19% of EPS to decline in coming years with scheduled 2022 retirements of three facilities - while we estimate some undepreciated rate base associated with the assets, the regulatory environment is broadly supportive of transitioning away from coal with securitization legislation in place in the state since 2000. NEE is unsurprisingly a leader in terms of minimizing exposure among utilities, with less than 1% of rate base tied to coal on our estimates. PNW provides particularly limited (no) disclosure on the composition of its coal rate base (we estimate modest exposure), although is seeking to meaningfully add to its coal rate base. DUK too stands out given ~13% of EPS made up of coal where it also intends to add through coal ash clean-up on one hand, although is looking to make strides through the IRP w/ coal retirements and potential for securitization/accelerated D&A in legislation/rate cases: only DUK, SO, and PNW are still really adding to coal (ash) ratebase. While AES' earnings are ~35% coal and our SOTP indicates ~30% value (among highest for entire sector) are from coal, co is rapidly selling & de-carbonizing (anticipate closer to ~20% end of year): more here. With ESG investors focused on this question of exposure typically from a revenue perspective we thought it appropriate to reposition the debate on a more relevant set of metrics. Please refer the link for full details here.

ESG in the Utility Sector: The Inaugural Diversity Handbook

Diversity & inclusion across the utilities

We provide an inaugural deep dive on diversity and inclusion efforts across our coverage universe. We perceive the issue of diversity in its various forms as increasingly relevant to the investor community, with a growing body of evidence linking financial performance to an inclusive and equitable business environment. We highlight our BofA ESG Research Team's recent report, Womentum! Our report on company initiatives and efforts covers nearly 60 companies across the Diversified, Regulated, SMID Utilities, Gas Utility, Water Utility, Power, LNG, and Residential Solar sectors.

Selecting our diversity metrics

We compiled data and information to assess D&I practices using a range of relevant diversity metrics. In particular, our analysis is focused on: 1) board representation of women & minorities, 2) senior leadership representation of women & minorities, 3) supplier diversity programs and % diverse spend, 4) availability of Employee Resource Groups, and 5) LGBTQ equality policies and practices. Based on public data regarding gender equality, we note a major push across the sector in recent years: on average, women now comprise ~30% of Board members and ~25% of executive leadership roles. Racial/ethnic minority representation is slightly lower with ~20% BoD and 15-20% executive leadership representation in companies in our coverage universe; these averaged statistics also fall slightly below company-reported workforce percentages. Further, fewer disclosures were provided on POC representation than on gender, suggesting that these figures may be even lower. We also provide LGBTQ equality ratings as assessed by the Human Rights Campaign's Corporate Equality Index. While the majority of companies with CEI ratings received full scores (100), a handful of companies scored below, a couple did not respond to repeated requests, and a few of the smaller-cap names were not included given their size. On supplier diversity, nearly all companies stated that they had supplier diversity programs but many did not disclose % spend; on the high end; we note that some companies had up to 30-40% diverse spend. Finally, we include company summaries with more qualitative information (e.g. ERGs, other initiatives).

How did the companies stack up? Stocks in focus...

After examining the quantitative/qualitative metrics, we highlight the companies which stood out within each subsector. SRE has 38% female and 31% POC Board representation, has signed on to the "Paradigm for Parity" for full gender parity in senior executive roles by 2030, and maintains ~40% diverse spend at SoCalGas and SDG&E. ETR has 40% female representation on its BoD, with 30% female executives and 20% POC executives. For 2020, ETR has a diverse spend target of 14% of managed spend. EIX has 36%/36% representation on the BoD by women and POC, respectively, with 35%/34% women and POC in executive roles. Edison is part of the Paradigm for Parity effort. Diverse spend comprises ~40% of total spend. PCG has 34% and 35% female and POC executives, respectively. Total diverse supplier spend represents ~41% of total purchases. CMS has 45% female representation and 27% POC representation on its Board. Women and POC comprise 32% and 18% of executive roles, respectively. Please refer the link for full details here.

Contrasting US Utility Performance Against Global Peers

A Sector Trip Around the Globe

Our macro series continues, with our latest analysis providing some color around BofA utility performance vs regional markets relative to the US Outlook. We include perspectives from our colleague's from Asia, Australia, Europe, and LatAm in an attempt to contrast against the latest backdrop for US utilities. Across the world, we have seen wide dispersions in performance by geography, subsector, and company - with our included tables highlighting performance on a one week, one month, three month, and YTD basis and reflecting averages by subsector across the durations (on a market-cap weighted basis). Most geographies show *relative performance similar or even out-performing their regional markets (admittedly what would be expected in a global defensive pivot*). See each relative performance trends below by region.

So how Does this Stack up with the US?

In our full note, we include the latest stock performance for our core US utility coverage (Diversified, Regulated, SMIDs, Gas, and Water) along with the latest charts showing utility valuations vs. risk free rates & bond yields - with discrepancies recently reached having not been seen in the last several decades. We view US Utilities as substantially intact despite earlier fears of widespread Covid impacts. While admittedly revisions could still prove slightly downwards (2-3%) on '21 given delayed rate recovery & under-earning vs. authorized returns, we see this as much more intact than peer S&P sectors. While a potential 'twin' headwind remains around corporate tax reform into '21, this admittedly is a factor for all utilities. On a market cap weighted basis, Diversified Utilities and Large CapRegulated Utilities remain down low double digits YTD, while SMIDs and Gas utilities are off a more material 25% and 14%, respectively. Water utilities are down a more modest 1% for the year. More specifically, with the utility sector primed for the return of the value cycle, we see SMIDs particularly well positioned to recover from the underperformance this year. With the economy reopening in many states across the nation, we could see a reversal of the 2Q liquidity environment that has favored growth stocks, with value stocks starting to outperform with the latest improving data trends amid re-openings and estimate revisions. With the BofA strategy team calling for value stocks to outperform at least for the next quarter, we believe this bodes well for the sector going forward. Into the next several months. We continue to see the most opportunity in **ETR** and **AEE** among larger-cap regulated names. We also highlight **AES** with its global footprint; down -33% YTD, we perceive this as outsized relative to any relevant geography for the company globally (with even Latam Utilities only down on average -8%). The wider under-performance of the US utilities as part of a near record downtick in 'Value' allocations (see macro note on this trend in US) is also highlighted by the near record relative dispersions *among* utilities, seeing near all-time highs in P/E spreads between 'quality' (those have a record of stable & consistent EPS growth) and 'value' (those with historically lower & less consistent EPS growth alongside higher leverage).

Please refer the link for full details here.

Why are US Utes so Cheap? Let's Look at the Balance Sheet- and P/BV

Tackling the Price/Book Value Debate for Utilities

With the evolving backdrop and strong market comeback more recently, we continue to analyze the US utilities sector against the latest macro data and trends. We continue to see utilities trading at a wide valuation gap on a relative basis to historical relationships to risk free rates and bond yields - with discrepancies recently reached having not been seen in the last several decades. Our latest analysis dives deeper by looking at Price/Book Values across our coverage at both a sector (vs. SPX and other S&P sectors) and company specific level vs. historical norms. Broadly speaking, the group is trading at a ~1.2x discount on this metric, slightly above the -1.0x discount to the S&P over the last decade while the majority of sectors (ex. Financials, Materials, and Energy) are all elevated from an absolute level vs historic norms but off their peaks. While admittedly P/BV value trends don't show the sector trading as cheap as comparisons vs yields (both risk-free and corporate IG bond yield relationships) would otherwise indicate, it admittedly is still wider than historical norms by -20%, this metric controversially shows the sector trading at one of its most elevated levels in recent years in absolute terms (see full tables below). Critically, his has been one of the arguments from bears or those otherwise Neutral on Utility sector valuation, suggesting it just doesn't 'screen' well for a hard asset sector. Admittedly, most sectors are already trading at near record historical levels on a P/BV basis (likely with tech & other growth sectors reflecting an increasing premium for intangible assets). Looking at the spread between the wider S&P and Utilities, the discount on a P/BV basis today is at its widest (eg-utility discount) since the GFC. Altogether, while not quite as bullish a characterization we still see even this valuation metric as meriting an investment case in utilities. Meanwhile looking at sector balance sheet more holistically, metrics have seen a steady uptick in leverage in recent years (both net Debt/EBITDA and FFO/debt) reflecting wider de-risking (fewer non-reg subs, etc) and acceptance of greater leverage by rating agencies

EV to Ratebase yields similar outcomes

In our latest analysis, we also highlight EV/Rate base as a further proxy of P/BV valuation: notable companies on EV/Ratebase metric include DUK, FE, ES, WEC, LNT among others with larger non-regulated/tax items.

So What are Our Top Picks these Days?

We see the utility sector as primed for the return of the value cycle, with SMIDs particularly well positioned to recover from the underperformance this year. With the economy reopening in many states across the nation, we could see a reversal of the 2Q liquidity environment that has favored growth stocks, with value stocks starting to outperform with the latest improving data trends amid re-openings and estimate revisions. With the BofA strategy team calling for value stocks to outperform at least for the next quarter, we believe this bodes well for the sector going forward. Into the next several months. Our favorite opportunities remain ETR and AEE among larger-cap regulated opportunities.

Please refer the link for full details here.

The ABC's of Utilities: ROE, leverage, debt capital, and capex tell the story

Evaluating GAAP ROEs and ratio trends

Below we compile a series of ratios to show aggregate trends for sector wide returns and balance sheet metrics. We find this a useful compilation for investors to gauge wider sector trends on largely sustained balance sheet metrics and consistent ROEs across the space in spite of sector gyrations from year to year & provides a baseline for comparison across each of the sub-sectors against 'normal'. We include full tables of both projected and historical earned ROEs and balance sheet metrics below for review. Credit metrics are intact, despite continued acceleration in capex in recent years. We anticipate 2020 could prove a pause on this accelerating trend.

Risks to sector linger as Corp Tax & Covid Combined

We increasingly see some risks of compounding rate case delays given consumer impacts of Covid (& low rates at that) exacerbated by the prospects of higher corporate taxes through a change in administration: this could drive more meaningful rate lag. This could specifically impact '22 and '23 ests as years of rate stay outs eventually take their toll on earned ROEs despite cost cutting efforts. While earlier (lower) corporate taxes were readily passed through to consumers, the reverse could be reflected potentially in a delayed fashion through new rate cases (unclear if trued up) and would present potentially unpalatable rate increases despite covid sensitivities. This could also serve to reduce authorized equity ratios.

Subsector breakdown: Regulated have higher GAAP ROEs

We find that Diversifieds, SMIDS, and gas utes have roughly an average of 9% GAAP ROEs, while Water and Regulateds are higher at 10%, and 11%, respectively. Canadian utes are at 7% - reflecting non-regulated segments and commodity risk. In '20 we see 40-100bps YoY decreases in all subsectors but gas (flat) & Canadian names (increasing).

Could we see more capex shifts?

In response to balance sheet pressures, a number of co's reduced capex in '20, shifted capex from '20 into later years, or reduced capex overall in the next few years; we adjusted capex in our models for co's including CNP, EXC, AEP, CMS, EIX, POR, NI, EMA and AQN. Not all companies reduced '20 capex; some have upside potential including co's positioned to benefit from replacing generation with ratebase opps (AEE, ETR) working with states in what we see as stimulus (i.e. accelerate or increase capex to create jobs) (XEL, PEG), and pursing renewables opps that benefit from the PTC continuity safe harbor guideline expansion (NEE, AQN). Across our coverage, we find a net $419mn capex reduction in '20 and a $1.5bn capex reduction for '20-25 - a mere -0.3% reduction in total spending but indicative of co-level differences. Looking forward this year, we believe there remains risk of negative capex revisions still for the sector, given potential further balance sheet pressure going into 2Q (what many expect is the hardest quarter on sales) and apparent delays in rate case timing (as companies are rightfully sensitive of the economic backdrop to not file too soon). We see this risk as largely overlooked.

Please refer the link for full details here.

Alliant Energy (LNT)

We forecast 2Q20 adjusted EPS of $0.53 vs. consensus of $0.40 (we note upside to Street estimates as these are not updated yet) and 2Q19 results of $0.40. We reflect a 2020 EPS estimate of $2.44/sh, above the midpoint of mgmt.'s $2.34-2.48/sh guidance range as LNT continues to respond to Covid-related sales impacts, though we note that Q2 provided an estimated weather-related uplift, in contrast with Q1. We expect an update on LNT's WI rate stabilization filing which is currently making its way through the PSC process with staff recommendations forthcoming. With this approval expected sometime in Q3 and the recent solar filing, we see the LNT story as increasingly de-risked and set up for continued execution into '21with our forecast EPS CAGR at 6-7% off 2019 vs. mgmt. range of 5-7% .

Key Drivers: Weather is expected to be a benefit of $0.05/sh as we normalize for the negative effects of 2Q19 (2 cents) and account for milder weather in 2Q20 that drove the number of CDDs across LNT's service area higher than normal – in particular in the month of June which sees a heavier weighting toward its degree days. We estimate a Covid-related impact (sales and O&M offsets) of approximately -3 cents for the quarter as LNT reported residential sales up 4% with C&I down 12% for the first 2 months of Q2. We also note a tax timing item which we estimate at+4 cents in Q2 related principally to PTCs, which along with the 8 cent gain reported by LNT in Q1 is expected to reverse during the balance of the year.

Unknowns: Weather is expected to be a benefit to LNT – we estimate a 3 cent uplift – thought given the shoulder quarter he exact impact is difficult to ascertain. We note the relative weighting of degree days varies from Apr-Jun, though with Q2 CDDs weighted toward June for LNT, this trend should provide a tail wind. Additionally, we note that while most states have lifted strict stay-at-home orders, higher-margin residential sales may have benefitted as more people remained indoors than during a 'normal' year. While the tax timing impact related mostly to PTCs is expected to be flat for the year, it is difficult to estimate the precise impact though we expect it to be directionally lower in Q2 relative to 8 cents in Q1.

Table 3: LNT Q2 EPS walk: a nice beat off lowered expectations from 1Q

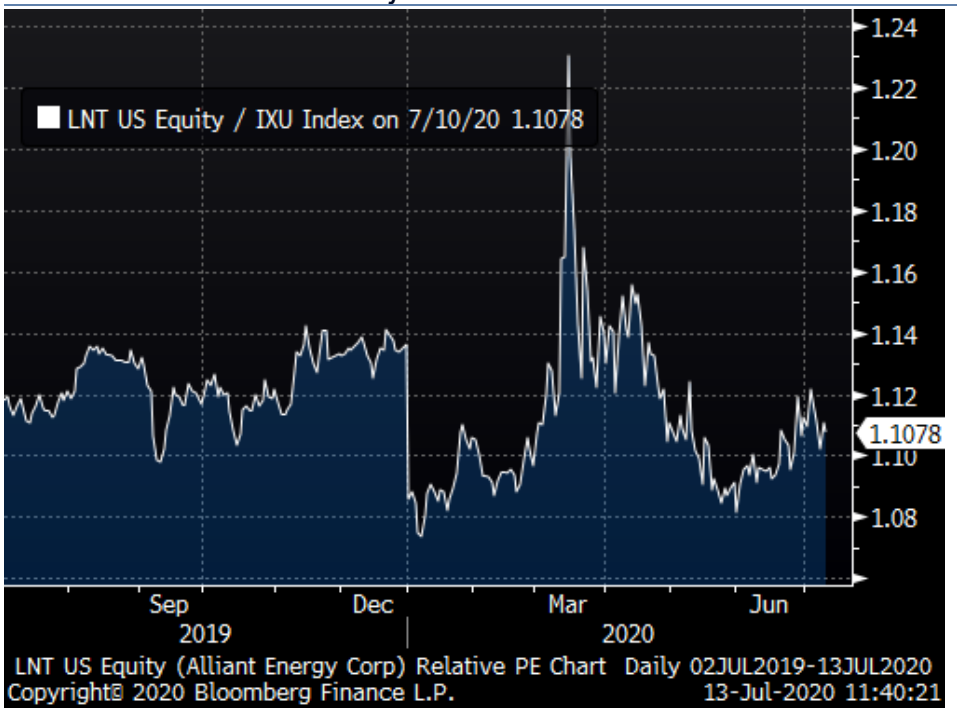
Stock trading dynamics

Shares of LNT have traded up in recent weeks relative to the electric utility peer group, exceeding the relative trading levels of pre-Covid Q1. We note several constructive developments of late including the filing of the company's first tranche of its intended 1 GW solar projects in WI – the company's request for 675 MW continues to move through the permitting process in the state where we note appetite for renewables is strong with ample precedent for including utility-scale projects in rate base, as MGEE has done. Mgmt. has also recently affirmed that it is not seeking to expand its non-reg business aside from a small wind footprint and transport business. We see LNT as offering above-peer EPS growth in its regulated biz of 6-7%, among the more constructive Midwest utility stories among our coverage.

Exhibit 1: LNT shares relative to IXU on 2yr forward PE



Source: Bloomberg

Covid impact: Q2 trending in the right direction

We note the most recent Covid sales update from mgmt. indicates an uptick in C&I sales in the month of May. While weather-normalized Residential sales held steady at +4% for the Apr-May period (in-line with prior Apr reporting), C&I ticked up to -12% from -13% previously reported in April, indicative of a modest though encouraging uptick. We note this trend largely supports MISO data which shows electricity demand bottoming in Apr and then beginning a gradual and somewhat uneven recovery. We note that LNT's service territory highlights the different state-level approaches to handling the pandemic, with IA having never issued a statewide shelter-in-place order (leaving this to the county level) while WI initially issued a lockdown order which has since been lifted, following by gradual re-introduction of distancing measures. We received further comfort from mgmt. on our recent fireside chat where the company affirmed the recent uptick in sales – a notable positive given one of the more conservative sales guidance outlooks and further bolstering what we expect to be a reaffirmation of full-year guidance as we remain above the midpoint. Among the other positive developments of late, the WI commission lifted the moratorium on disconnections effective Jul 25, after IA had issued a similar order effective Jul 1. WI utilities are likewise able to resume charging late payment fees on accounts in arrears effective Jul 15, all factors that are trending toward gradual normalization – though the PSC had previously issued an order

for deferral of Covid-related costs included those associated with bad debts and the disconnect moratorium.

WI stabilization in Q3, Solar approval expected in 1H21

LNT's rate WI stabilization asks for the same ROE & Equity layer, and escrow treatment of pension & bad debt. With ~$500mn in rate base additions, 1/3 will be offset with lower fuel costs and the remainder related to taxes. The decision on the stabilization plan is expected to come down in Q3, with staff recommendations to the PSC the next meaningful milestone.

During Q2 announced plans for the initial 675MW tranche of its eventual 1 GW solar portfolio at a purchase consideration of $900m of which tax equity partner would sponsor 35-40% of the investment outlay with the rest being financed by LNT's Wisconsin subsidiary - $780m is included in the capex plan across the full 1 GW portfolio. The company indicated to purchase tax equity's ownership in the projects within 10 years of operation. We note that LNT already signed purchase and sale agreements with the developers, subject to pending approval from the regulators, however, none of the projects are currently under construction. The company anticipates 425MW to be placed in service by 2022 and 250MW in 2023 – see below. We note positive signs toward eventual approval given the state PSC's pro-renewables stance (recently appointed third commissioner comes from a renewable advocacy group) and overall constructive utility-regulator relationships across the state.

Table 5: LNT initial 675 MW solar projects

Name	Capacity (MW)	In Service
Crawfish River	75	2022
Onion River	150	2022
Richland County	50	2022
Wood County	150	2022
Grant County	200	2023
North Rock	50	2023

Estimates

We had previously forecast Covid impact into our '20 estimates for LNT and remain 1 cent below the midpoint of the $2.34-2.48 guidance range at $2.40, tweaking our forecast incrementally to reflect updated ATC ROE following the FERC's MISO ruling. We note that positive weather trends in late Q2 and early Q3 bode well for a sales tailwind during the peak cooling season, with encouraging sales trends as previously highlighted by the mgmt. team further de-risking the near-term outlook. We remain near the upper end of mgmt.'s 5-7% EPS range looking out further ahead.

Ameren (AEE)

Among the positive drivers we see for Q2 is normalization of weather from 2019, partially offset by cooler weather as expressed by Heating Degree Days (HDDs), though this impact is tempered by fewer Cooling Degree Days (CDDs) both y/y and vs. normal. We estimate the positive impact from new rates in MO effective Apr 1 as 7 cents based on a pre-tax revenue net of fuel estimate of $83m, of which AEE is expected to realize ~80% during 2020 and which we assume is spread proportionally through the year. Normalization to account for a Callaway outage in 2019 would represent a further 8 cent uplift. We estimate 8 cents positive impact from O&M, which is roughly evenly split between Company Owned Life Insurance (COLI) benefit and additional non-fuel O&M savings included in the MO order (~5 cents each), offset partially by 2 cents of additional O&M inflation as per AEE's original guidance. On the negative side of the ledger we estimate 7 cents associated with COVID-19 impact relative to the company's expectation of 10 cents drag for the year given that MO began lifting its stay at home orders in early May. We also see 2 cents of interest expense as Ameren MO issued $465m at 2.95% in late Q1 and AEE issued $800m at 3.50% in early Q2, though only $435m of these issuances were allocated to refinancing with the remainder representing incremental interest expense. We also reflect proportional impact of an estimated 2 cent effect from higher bad debt expense, as well as a partial offset resulting from the Federal Energy Regulatory Commission (FERC) ROE ruling which effectively raised Ameren Transmission Company of Illinois's (ATXI) authorized ROE by 14 bps (~1 cent impact annualized). We estimate AEE EPS at $0.86/sh for Q2, slightly above $0.84/sh consensus estimates; we see upside risk to Street estimates as they are updated to fully reflect Q2 drivers, in particular the constructive MO rate ruling.

Framing the latest debates and items to watch

We catch up on the latest moving parts across AEE's territory ahead of the Q2 call.

MO rate case a positive near term, appears underappreciated by investors

Among the key takeaways from the recent MO rate case settlement, in our view, are a reduction in revenues of -$32m, and a further reduction of fuel cost expenses (-$115m) and other costs by an additional -$50m. The net impact on an annualized basis is +$133m given AEE's ability to effectively manage these costs. With rates taking effect April 1st AEE should realize a partial year impact in 2020 - we calculate the annual impact of this result is $0.40/sh, or a 2020E impact of $0.30 (previously reflected in our estimates). Given the constructive nature of this rate case outcome, we think AEE is unlikely to seek to file another rate case in 2020. We believe the key considerations in terms of timing remain the impact of COVID-19-related shutdowns on lost sales and additional expenses as well as the placement of additional wind assets into service. The Street consensus estimates are anchored toward the low end of mgmt.'s guidance range following Q1 reporting and the outbreak of COVID-19 – though we believe a constructive rate case outcome could provide AEE with an O&M tailwind going into H2, with potential for an upside surprise to full-year results.

700 MW wind projects in service in late '20/early '21

AEE MO is adding 700 MW of wind generation to its fleet in two tranches: a 400 MW facility expected to be in service by year end 2020 and a second 300 MW facility which is largely expected to be in service in 2020 with approx. $100m of assets in Q1 2021. Prior to being added to AEE's rates as part of a rate case, the projects qualify for a partial return under the MO Plant in Service Accounting (PISA) framework and existing renewable rider. MO's PISA mechanism allows the wind assets that are placed into service to earn a partial return until a formal rate case: AEE plans to defer 85% of the depreciation on the newly installed project and earn a debt return on the non-equity portion of the assets placed in service, with the remaining 15% depreciation qualifying for cash recovery under the existing renewable rider. While the company would not receive full recovery until its wind projects are added to rates, we note the PISA mechanism allows for partial recovery – likewise the expected filing date for a new rate case in the first half of 2021 is not significantly later than prior indications from mgmt.

Next filing in MO – looking like '21

Given the announced in-service timing of the wind assets, the constructive rate order received earlier this year, COVID-19 uncertainty likely to persist through the balance of 2020, and ability to earn an interim return on newly-installed wind assets, we expect AEE to file its next case sometime in 1H21 at the earliest. We believe this is largely reflected in Street estimates as the company has continued to refrain from providing specifics as to its rate case filing strategy while highlighting the need to place its wind assets in service as well as account for COVID-19 uncertainty.

IL legislation – potentially post-Nov election

While the 2020 IL spring legislative session passed without action taken on the Downstate Clean Energy legislation, we note additional opportunities for action in the coming months. The state typically holds a veto session in October or November, with potential for this session to fall after state and national elections are held. The following opportunity if no action is taken during the veto session is a lame duck session held in January, prior to the seating of the new group of legislators. Our estimates reflect the current ROE base rate of 580 basis points with the potential of an additional 100 bps in the event of passed legislation representing upside risk.

30Y UST rate visibility is limited, we assume a more conservative stance

We tweak our forecast for the 30Y UST lower by 15-25 bps across 2021-25, with our updated forecast rates remaining below 2% until 2025 when they reach 2.20%. We perceive limited visibility of Street consensus estimates of long-term rates beyond 2021

and see little consensus among investors. Accordingly we adjust our forecast to reflect a "lower for longer" outlook, which we see as appropriate given the path of rates of late and Fed signaling long-term support for the economy in the wake of COVID-19.

IRP coming in Sep, will mgmt. deliver on further retirements?

AEE's next triannual MO IRP filing is due in Oct with the company expecting to file in Sep. Likely of particular interest among investors are prospects for the announcement of additional coal retirements other than Meramec, which is scheduled for retirement in 2022. The 2017 filing gave planned retirement dates for Sioux and Labadie as 2033 and 2036, respectively – though we see potential for one of these to be accelerated (note Sioux and Rush Island have the lowest levels of undepreciated rate base of AEE's fleet at $0.5B and $0.6B, respectively). AEE's decision on whether it accelerates retirements of unscrubbed coal is partially tied to the unresolved 8th Circuit Case (i.e. appealing the EPA Clean Air Act mandate) and partially tied to a lack of securitization legislation. Some coal experts have questioned whether the company would rush to accelerate the retirement of the fleet if the case were still pending. In the event that the company did pursue accelerated retirement in its IRP before case resolution, we could see Labadie as a more likely target since it faces just sulphur dioxide controls rather than Rush Island's bigger violation. On the other hand, if the 8th Circuit Case were resolved and AEE's plants were ordered to install scrubbers, this hundreds of million dollar requirements could make the plants uneconomic and more ripe for accelerated retirement. We believe additional potential hurdles could be in the form of lack of securitization legislation as well as sensitivity around potential job reductions, particularly in the wake of the COVID-19 outbreak.

EVRG process: clarity should drive re-rating in AEE

Our most recent accretion analysis as well as feedback from our conversations with stakeholders in both MO and Kansas (KS) suggest that while AEE has been linked to the Evergy (EVRG) strategic process in media reports, the company is likely not a front runner were it to secure a bid. In particular, we see potential for resistance from environmentally-aligned interveners in both KS and MO should AEE emerge as the winning bidder – given EVRG's coal-heavy fleet and AEE's own slow adoption of renewables and unscrubbed legacy generation, we think there could be less potential opposition to an EVRG bidder with a proven track record of accelerated coal retirements and renewable transition. Some investors appear to have largely focused on other names such as NextEra Energy (NEE) as potential bidders, and we could see a modest degree of drag in AEE shares associated with the possibility of its participation in a protracted bidding process. We attribute much of the recent pressure on AEE shares to these concerns – and clarity on EVRG strategic direction in 2H could potentially drive relative outperformance of AEE shares.

Evergy, Inc: AEE linked to strategic review in news; looking at dilution from possible AEE bid 17 June 2020

Updated estimates

We see a positive skew to Street consensus estimates for 2020, particularly driven by the positive MO rate order which went into effect on Apr 1. As COVID-related shutdowns and resulting load shifts continue to pressure utilities into Q3, we believe the O&M portion in particular of the MO order could provide a key near-term tailwind. We detail our tweaked assumptions below.

- **Raising MO ROE forecast in '20 to reflect O&M savings.** We raise our EPS estimate by 3 cents to $3.45 for 2020 driven by an earned ROE of 9.8% in MO (upper end of 9.4-9.8% authorized range). We remain confident in mgmt's ability to execute.

- **Assuming a more conservative 30Y UST forecast in IL.** We tweak our forecast for the 30Y UST, reducing our forecast for yields (and corresponding IL authorized ROE) by 20-25 bps across the 2021-25 timeframe – in line with our forecast for EXC's ComEd - such that our forecast yield remains below 2% until 2025.

- **Reflecting 10.02% base ROE for transmission.** We tweak the authorized ROE at the ATXI segment to reflect the latest FERC order, reflecting a base rate of 10.02% plus 50 bps adder through the forecast. This effectively increases our estimates by ~1 cent annually through the forecast period.

We make additional tweaks to our earned ROE forecast, assuming that MO remains near the high end of its authorized range through the forecast period. We believe our forecast embeds relatively conservative assumptions – in particular in IL where we apply a more punitive UST forecast and do not reflect potential upside from possible legislation resulting in a 100 bps adder to the base authorized electric ROE. With these assumptions in place our forecast has an EPS CAGR that declines to below the midpoint of the 6-8% guidance range through 2024, though we see upside risk to our estimates as detailed above.

Valuation

We reiterate our Buy rating on AEE. We embed a more conservative set of assumptions around UST rates, and remain well within mgmt.'s guidance range while seeing potentially upside looking ahead. We believe shares of AEE could continue to outperform vs. the peer group driven by near-term catalysts including the expected IRP filing, IL legislation potential, and updated long term plan which the company historically provides with Q4 results. We raise our PO to $79 from $75 to reflect the updated Electric peer group multiple of 16.3x and our tweaked estimates. Reiterate Buy on solid +6-7% EPS growth through our forecast period as we believe AEE is one of the better-positioned names in our coverage universe.

Source: BofA Global Research estimates, Bloomberg

American Electric Power (AEP)

We forecast a strong 2Q20 with EPS of $1.07 vs. $1.00 in 2Q19 and $1.02 consensus, driven primarily by previously announced 2020 O&M savings in addition to $100mn COVID-related cost savings (most of these, however, will likely be temporary in nature). Weather should also likely provide some uplift. A Transmission HoldCo true-up in 2Q should be effectively offset at the VIUs and T&D utilities (by rate changes, etc.). North Central should be on schedule with the latest PUCT decision; despite the TX rejection, AEP will reallocate MW to SWEPCO's LA and AR customers and will proceed with the full 1485 MW project. We highlight concerns of over-equitizing North Central, given guidance for 50-66% equity; we now assume he high end of this range. However, the possibility of Kentucky asset sales for further equity could provide upside; we accordingly adjust for a 2x premium in our SOTP to the Kentucky Power breakout. The one-year PTC extension should act as a safeguard if there are any delays for the final two wind farms, although no delays currently expected vs. the current YE-21 timeline). We watch progress on rate cases including Kentucky Power (filed June 29th, with procedural schedule starting in early Nov, 6-month timeline, new rates could go into effect YE-21), AEP Ohio (base rate case filed June 1st, expected one-year procedural schedule), and APCo Virginia (filed March 31st, still in initial stages, with intervenor testimony on July 30th). It would seem strategic action on utilities is still dependent on the outcome of its pending rate cases. While more equity from North-Central to be disclosed formally in its cash flow outlook could be cautious, much better clarity on where it stands on its 5-7% EPS CAGR could be the bigger (offsetting) positive. Maintain Neutral.

2Q20 Earnings Walk

We estimate EPS of $1.07 for 2Q20. This compares to $1.00 in 2Q19 and consensus of $1.02.

- **Drivers:** Aside from weather, we anticipate a strong 2Q will be driven by 2020 planned O&M savings in addition to $100mn COVID-related cost savings (the majority of which will likely be non-recurring). Expect a Transmission HoldCo true-up in 2Q to be effectively offset by rate changes at OH, TX, and by the VIUs (transmission revenues).
- **Other:** A number of 2020 full-year items are weighted heavier towards 2Q. This includes COVID-related wholesale load impact (mostly in 2-3Q), 2020 O&M savings (mostly after 1Q), Texas carrying charges (a 2Q item, reversal of 2Q19), and a Transmission HoldCo true-up (a 2Q item).
- **Wildcard:** Weather should likely prove a positive with a reversion to more normalized weather from weak 2Q19 weather, in addition to more favorable weather in 2Q20.

North Central: Moving forward despite TX rejection

AEP has received its final regulatory decision for its multi-state 1485 MW North Central wind project and can now move ahead with its construction plans. The Public Utility Commission of Texas (PUCT) rejected SWEPCO's request to acquire a 54.5% stake in Invenergy's three wind North Central Energy Facilities. AEP's subsidiary PSO (Public Service Company of Oklahoma) will be acquiring the remaining 45.5% equity interest in the wind farms. AEP reaffirmed its plans to develop close to 1,500 MW of wind capacity in OK despite the TX rejection. SWEPCO and PSO already have received approval from AR, LA, and OK regulators, as well as from FERC. The wind farms to be owned by AEP include Traverse Wind (999 MW), Maverick Wind (288 MW), and Sundance Wind (199 MW); all three are expected to complete construction within the next two years. With the TX rejection, capacity will be allocated with 464 MW to SWEPCO's Louisiana customers, 268 MW to SWEPCO's Arkansas customers, 78 MW to SWEPCO's wholesale customers, and 675 MW to PSO's customers. On balance, this is not a meaningful setback and was somewhat anticipated given the prior pushback from the PUCT.

Concerns of over-equitizing North Central Wind

We highlight recent concerns of AEP potentially over-equitizing the North Central Wind project, following prior mgmt commentary of expectations for 50-66% equity financing. While we had previously assumed 50% equity, we now assume 66% equity/34% debt for a more conservative approach. Timing of equity needs should align with wind farms going into service; the bulk of the needs will be in 2021 (~$1.7bn capex of the $2bn total). Note that we also update our projections to reflect a shift in MW allocation to SWEPCO – AR and SPEPCO – LA, following the PUCT rejection in Texas.

For 2Q, we expect to see updated guidance on equity and capex for North Central, following a 1Q decision to defer $500mn of capex out of 2020; this update (deferral year) should be made with 2Q results. We continue to assume $2bn capex for the project, with 66% equity financing (previously 50%). Expect AEP's next published capex forecast to include North Central Wind.

We see upside, however, from the possibility of Kentucky asset sales for further equity. We thus now include a 2x premium to the Kentucky Power breakout at the VIUs in our SOTP valuation (KY Power contributes $3.40/sh to valuation).

Estimating North Central's EPS Contribution

Below we include our latest earnings impact from the North Central Wind project. We assume the company earns a regulated return based on each subsidiary's equity ratio and ROE, indicating a $13mn Net Income impact in '21 (since just 200MW would be slated to come online by year-end) and $95mn in '22. Our equity need calculation now assumes 66% equity financing for the project, and we'd expect $0.17/sh of EPS impact when the full project is online (i.e. starting in '22).

The first wind farm to be constructed in '20 will receive the 100% PTC, while the other two wind farms to be constructed by YE-21 will receive the 80% PTC. The one-year PTC extension should act as a safeguard if there are any delays at the second two wind farms.

Rate cases: Kentucky Power, APCo Virginia, AEP Ohio

Kentucky Power filed a rate case on June 29th requesting a ~$70mn rate increase at a 10.0% ROE (43.25% equity ratio). AEP expects to receive a response in June, with a procedural schedule starting in early November and new rates likely going into effect by YE-21. The timing could line up with the $1.7bn investment needs for North Central.

APCo Virginia filed a rate case on March 31st, requesting ~$65mn rate increase at a 9.90% ROE (50.31% equity ratio). This filing is still in the initial stages of the procedural schedule, and is expected to kick off with intervenor testimony on July 30th.

AEP Ohio filed a base rate case on June 1st, requesting a ~$400mn rate increase at a 10.15% ROE (54.43% equity ratio). Expect the OH procedural schedule to be roughly a year in length (in line with historical trends).

Signs PPA for 400 MW IL wind project

AEP Energy recently signed a PPA with CIP (Copenhagen Infrastructure Partners) for production of the 400 MW Panther Grove Wind Energy Facility in IL. Construction of the wind farm will start in early 2021, with COD (commercial operation date) expected in late 2022. The PPA will be secured to serve C&I customers, such as Google, looking to source clean energy for retail supply.

ApCo issued RFPs to procure 50MW solar

AEP subsidiary Appalachian Power Co. recently issued RFPs for 50MW solar capacity in West Virginia with projects having a minimum bid capacity of 10MW and in-service date of 15 December 2022, besides the projects should be located in West Virginia and interconnected to Appalachian Power's West Virginia distribution system or to the PJM Interconnection market to qualify for the federal investment tax credit. The deadline for bid submission is Aug 6 2020. This was not unexpected. We also look for parallel efforts in WV by Mon Power/FE on its future generation resource needs as well.

EPS Estimates

We provide our latest EPS estimates for AEP below.

Exhibit 3: AEP EPS Estimates

EPS	2017A	2018A	2019E	2020E	2021E	2022E	2023E

Valuation: Maintain Neutral, raise PO to $88

We maintain our Neutral rating and raise our Price Objective to $88 from $80. We update for the regulated peer ute multiple of 17.1x (previously 15.3x), which is the main driver of the PO change. We additionally now include a 2x premium for the Kentucky Power break out valuation. We tweak our estimates for North Central and also now reflect the associated equity issuance for the project (BofA ests at 66% equity financing up from prior 50%) for '21 and '22 (majority in '22, tied to construction needs). This implies <$1/sh accretion from the North-Central asset build now.

American Water Works (AWK)

Amid the evolving COVID pandemic, we expect continued execution by AWK with their inaugural ten year capital forecast of $20-22Bn intact. We have less concerns on the margin around bad debt given ten of their fourteen states have already adopted accounting orders or other recovery mechanisms. We don't perceive any meaningful delays in spend or regulatory filings (albeit note the timing shift for new rates to take effect for NYAW) and remain confident in the management team following recent succession. Further acceleration in muni consolidation remains a critical tailwind out of recovery without any meaningful infrastructure bill materializing. While we appreciate the scarcity element and higher sustained investment trajectory for the subsector, we ultimately see the steep premium as unwarranted. We maintain our Underperform rating.

AWK 2Q20 Earnings Walk

We forecast 2Q20 adjusted EPS of $0.97, slightly above consensus and a $0.03 uptick y/y.

- **Key Drivers:** The primary positive drivers y/y are new rates implemented across a number of states in their footprint as well as various infrastructure surcharges. Weather tailwinds y/y and cost savings should help offset any COVID impacts and the reversal of gain on sale in the prior period, while MBB will have contribution from the new military bases.

Reg., Leg., Muni & Military Prospects

We see AWK as particularly poised to execute on their LT plan despite the ongoing COVID pandemic. Earlier this year, the company announced a 10% dividend increase, in line with their targeted payout ratio of 50-60% and their targeted high end of the 7-10% outlined range. Along with continued regulatory filings – the company recently announced that Pennsylvania American Water filed a rate case request with the Pennsylvania Public Utility Commission for rates over a two-year period – we see the developments as affirmation by the company around their ability to manage through the crisis with its plan largely intact. With a largely resi customer base, bad debts have been our principal concern on the margin for water utilities. That said, we note accounting orders or mechanisms from the commission around recovery already in ten of the 14 states in which they operate, with discussions ongoing in all of their jurisdictions.

Following military business wins at San Antonio and West Point, both are now fully operational with contribution starting in 2Q and no delays despite the ongoing pandemic. Five other military bases remain potential candidates, with two to three expected to be awarded sometime during 3Q. Outside of the military business, we

expect some drag on new partnerships for Homeowners services – the other component of AWK's non-regulated business.

Meanwhile, municipal opportunities continue to arise despite the crisis, and we perceive particular acceleration of opportunities given the latest financial strain on munis from the pandemic shock – particularly if no infra bill or lifeline materializes.

We reiterate our Underperform rating on AWK shares given the steep premium vs. electric & gas peers.

EPS Estimates

The exhibit below reflects our latest EPS estimates with annuals remaining unchanged into upcoming results. We continue to expect sustained long term growth within their 7-10% LT EPS CAGR and 7% rate base growth longer term.

Table 13: EPS Estimates

Valuation

The exhibit below reflects our latest valuation: We mark to market our valuation for the latest water utility multiple of 26.9x (vs. 26.3x), with our PO shifting to $135 (vs. $133). We maintain our Underperform rating given the large premium vs. electric & gas peers, which we see as unjustified given its only modest relative growth premium.

CMS Energy (CMS)

Into 2Q, we perceive the critical update for CMS to be around FY20 guidance both around the extent of ongoing pandemic load impacts as well as the ability to drive cost savings. With a stronger-than-expected 2Q with favorable weather offsetting 1Q headwinds and the ability to materialize cost savings, we expect heightened confidence around FY20 EPS from mgmt and expect CMS to more firmly reaffirm its FY20 guidance range of $2.64-$2.68 (though likely contingent upon no escalation in shutdowns from a potential pandemic resurgence). In particular, we see a comfortable cushion for CMS to meet the mid-point of its guidance range relative to consensus expectations for the low-end of the range as we raise our forecast to the mid-point of the range. We expect CMS to provide an update around run-rate load impacts in June. Further with mgmt confidence emphasizing ability to drive cost savings beyond historically demonstrated 15c offset, we expect CMS to provide greater details around the extent of cost savings. With cost savings sustained, we express CMS as better positioned around a potential increase in corp tax rates under a Dem win in Nov '20 elections, with mgmt confidence around offsets to maintain customer affordability and headroom to support capex. Indeed, we expect improved confidence into the 2Q call to further support CMS shares in light of the latest re-rating across the group to defensive premium utilities focusing on reliable earnings. Maintain Buy.

2Q20 EPS Walk: Favorable weather, softer COVID impact

We forecast 2Q20 adjusted EPS of $0.45 vs. $0.33 in 1Q19 and $0.36 consensus.

- **COVID load impact, eased from peak:** Among most meaningful negative y/y drivers are load impacts from COVID-19 shifts with shelter-in-place orders implemented in Michigan, particularly around C&I load noting 3-4c negative impact monthly based on electric load impact through April. Load impact has since halved into May and again into June with businesses mostly reopen (though many such as restaurants and bars are at 50% capacity). As such, we estimate ~7c drag from COVID load impacts for 2Q20 as a key negative y/y driver. *Expect an update around run-rate impact based on Jun/Jul trends on the 3Q call.*

- **Very 2Q favorable weather, offsetting 1Q weather headwind:** We highlight substantially favorable weather trends (9% higher CDDs relative vs. normal), which we estimate at an 8c uplift y/y (in-line with 2Q18) with higher HDDs earlier in the quarter as well driving another 1c uplift y/y (shoulder month). Further, we highlight additional positive driver of normalization of 6c/sh favorable weather in 2Q19.

- **Key drivers:** Among additional drivers include ~6c contribution from new gas rates effective Oct '19, offset by ~6c negative impact from D&A and interest (closing of larger projects drive up depreciation costs). With mgmt having emphasized its ability to drive 15c O&M flex spend to offset COVID load impacts (not a cap but rather historically demonstrated), we estimate ~5c per quarter positive impact. We estimate 2c negative impact at Enterprises/DIG given 6c delivered in 1Q20 already relative to 8-9c embedded within FY20 guidance, with mgmt noting management of the business such as timing of plant outages.

FY20 guidance confidence with solid 2Q, cost execution

With highly favorable weather in 2Q offsetting 1Q unfavorable weather headwinds (~18c hit), as well as eased COVID load impacts (on a run-rate basis into June), we perceive greater mgmt confidence around FY20 guidance range. *We expect CMS to more firmly reaffirm its FY20 guidance range, though contingent upon no escalation in shutdowns driven by a potential pandemic resurgence in the state*.

In particular with our 2Q20 EPS estimate, we see 1H20 EPS of $1.21 with $1.45 remaining for 2H20 to reach the mid-point of the FY20 guidance range. Accordingly, relative to 2H19 EPS of $1.41, assuming additional COVID load impact of 6c remaining (1c per quarter based on estimated run-rate in June), against remaining 10c O&M cost savings as an offset, ~32c new gas rates offset by ~8c non-recurring benefit opportunities (mainly around favorable 2H19 sales mix) and ~12c D&A, interest, and other expense (~6c quarterly drag), we see ~10c cushion to offset any negative weather or further COVID impacts and *still* reach the mid-point of the FY20 guidance range.

Accordingly, we raise our FY20 EPS estimate to the mid-point of guidance at $2.66 ($2.64 at the low-end prior). With improved FY20, we expect CMS to maintain *its long term EPS CAGR of 6-8%*, we slightly raise forward EPS estimates as well given that CMS typically rebases EPS based on year-end results. We expect the improved confidence in ability to maintain earnings through best-in-class execution to manage earnings, further reaffirming CMS as among the most reliable utilities from an earnings trajectory perspective to investors, even without full revenue decoupling, further supporting the latest re-rating across the group to defensive premium utilities in favor of CMS.

Table 16: CMS EPS Estimates: 7.0% CAGR through '24, back to mid-point for FY20 with improved confidence around costs against easing pandemic impacts

Extent of cost savings, key 2Q call update to be provided

With the 2Q update, among most notable of updates, we expect mgmt to emphasize its cost savings strategy and provide greater details around the extent of cost savings it has been able to realize and expectations on a forward basis. Notably, mgmt has expressed that while it has highlighted historic ability to flex cost levers up to 15c of EPS offset, mgmt has been vocal in emphasizing that this *does not represent a cap on potential cost levers*.

In terms of cost levers, *mgmt emphasized sustainable cost reduction and management systems* rather than one-time cost cuts, with lower costs rolling into '21. In particular, mgmt emphasized leverage of its *lean operating system* implemented 4 years ago, focusing on waste elimination (both through process improvements and digital technology-enabled improvements) on an ongoing basis. Additionally, mgmt emphasized outperformance already on supply chain optimization, which has been underway for 12-18 months *already*. Additionally, mgmt highlighted O&M cost reductions including work at power plant units in economic reserve to lower costs and improve reliability into the summer peak, as well as shifting O&M employees to pre-approved capital work as well. Mgmt noted remote work by employees is expected to continue to an extent post-COVID as well. *We view confidence from mgmt around extent of cost savings against improving load trends as a positive data-point, and expect a detailed update with 2Q.*

Sustaining cost savings support rate headroom, critical with election dynamic

With sustained cost savings, mgmt emphasized initiatives continuing to provide long-term rate headroom into '21-'22 given carryover benefits, with incremental customer bill headroom for capital investments continuing to make for smooth regulatory approvals, with MPSC generally supportive of capex spend proposed in proceedings.

We emphasize ability to drive customer bill headroom as particularly important against the backdrop of Nov 2020 presidential elections. With Biden tax plan proposing an increase in the corporate tax rate to 28% (from 21%), we note that in contrast to 2017 tax reform, this would have a reverse impact to customer bill headroom. In particular the change in tax rate would drive ~$60mn impact to customer rates on raised rates, with the benefit of deferred income taxes (DFITs) halved as well (relative to prior 35%) reducing to $20mn annually (from $40mn prior with 21% tax rate). Recall, CMS currently already has a DFITs pass-through to customer approved for gas (and near-term for electric), with 21% tax rate driving a $1.6Bn reevaluation of DFITs passed back over a 40-year period (~$40mn a year), with a 28% lowering the reevaluation to ~$800mn over 40 years (reduced to ~$20mn customer benefit annually). Accordingly, CMS would need to support $80mn in savings to neutralize the impact for customers on a bill basis, critical to supporting capital spend on a forward basis.

Beyond cost savings, CMS emphasizes further customer bill headroom support and comfort to offset impacts from potential increase in the corporate tax rate, with ~$90mn reduction from roll-off of Palisades PPA and ~$$30mn O&M savings from retirements of Karn 1 and 2, among other opportunities. We view mgmt's best-in-class forward-planning around cost savings and confidence in maintaining customer affordability even with tax rate headwinds as further supportive of CMS' smooth and longer-dated capex outlook relative to peers.

MPSC ratecases on track, supportive of proposed spend

With prolonged ratecase schedules driven by pandemic delays across the utility group and subsequent ROE risks, CMS notes that all MPSC meetings have continued virtually and ongoing ratecase proceedings remain on schedule, *continuing to expect a final order in its pending Gas case in late October and a final order in its pending Electric case in Dec,* given respective 10 month statutory deadlines. With both ratecases, CMS emphasizes a constructive regulatory environment as well as alignment with MPSC commissioners and staff through both its IRP and long-term gas plan in place. Accordingly, CMS emphasizes MPSC support for proposed capital spend in proceedings, further supported by its customer bill affordability efforts.

Electric case remains on track of Dec 2020 order, staff supportive of capex

Indeed with the latest MPSC staff recommendation in CMS pending electric, MPSC staff filed testimony recommending a $90mn rate increase at a 9.75% ROE, 52.5% equity ratio and $11.71Bn rate base ('21 test-year). CMS had initially filed for a $244mn rate increase at a 10.5% ROE, 52.5% equity ratio, and $11.84Bn rate base. Critically, mgmt expresses alignment on capital spend, with main difference between Staff and request being around ROE as usual (with staff proposing 9.75% ROE in the prior ratecase as well before settling at 10%). Mgmt expresses proposed investment spend as in-line with its latest capital plan as well as its 5-Yr electric distribution infrastructure investment plan filed with the MPSC in Mar '18. With O&M spend requested, mgmt expresses approx. equal split between safety/reliability spend that it is currently earning upon, discretionary spend that CMS will not spend if not approved (including tree-trimming), and spend that it is not currently earning upon but still spending.

New gas rates remain on track for Oct 2020 order, staff supportive of capex

With its latest gas case filed at the MPSC in Dec 2019, CMS requested a $244.7mn rate increase at a 10.5% ROE, 52.5% equity ratio, and $7.38Bn rate base for test year ending Sept 30, 2021. Along with its ratecase, CMS filed its 10-year Natural Gas Delivery Plan (2021-2030), which aligns with its current 10-year capital plan, including upside (*$10Bn gas capex with $1.5-2.0Bn gas upside*). In its testimony filed, MPSC staff recommended a $139.1mn rate increase at a 9.6% ROE, 52.5% equity ratio, and $7.42Bn rate base. Notably, proposed spend was largely supported with lower ROE in staff testimony as typical of proceedings. In terms of procedural schedule, a target PFD is currently scheduled for Aug 12. *A final MPSC order is expected in Oct 2020 with a 10 month requirement in place.*

With its latest gas rate case approved in late Sept 2019, mgmt highlights ~2/3rd of rate step-up contribution for FY20 as already approved. Recall, the MPSC approved a $143.5mn rate increase (inclusive of $13mn deferred taxes) at a 9.9% ROE, 52.5% equity ratio, and $6.429Bn average ratebase in Consumers Gas ratecase (U-20322), relative to CMS' requested $204mn request at a 10.75% ROE, 52.5% equity ratio, and $6.54Bn average ratebase. *Mgmt. views the approval as supportive of gas capex, with 98% of requested capex spend approved* and PUC actually calling for main pipe replacement acceleration to ~$100mn/yr (from ~$75mn/yr). As such, we see the approval as in-line with the near-term plan, with mgmt. highlighting '19 and '20 capex plan covered with the order ($1.2Bn of gas infrastructure capex supported).

Duke Energy (DUK)

With the ACP overhang in the rearview, we see the story swiftly transitioning to a utility-centered story (albeit with ~$200mn per annum in renewables) where we still see rate case risk ahead with the DEC/DEP rate cases. Ability to garner a settlement on ROE/Cap structure would be clearly constructive for shares, although with a tight timeline ahead until hearings start we perceive downside risk to a 9.75% authorized ROE (inked with industrials). Meanwhile, we expect Duke's capex outlook to be reset higher with the upcoming September IRP that is likely broader than usual with the commission likely looking for a balance between the lowest cost plan and de-carbonization efforts. The IRP is likely to be an adjudicated process with multiple scenarios in which the commission will chose from, implying that a fully defined capex update is not likely to occur until the 4Q update. As such, we perceive a particularly weak '21 outlook given the loss of ACP earnings (30-35cents) and capex likely to be backfilled post-21, although with load trending slightly more favorable vs. expectations (-2-5% annualized) we could see some cost savings sustained into next year. Nevertheless, we expect mgmt. could rebase its 4-6% growth rate off a lower 2021 number, particularly cautious for shares. Longer-term improved regulatory mechanisms (multi-year rate plans, ROE banding, riders, etc.) stemming from the Clean Energy report recommendation to the legislature remain a possibility. Net-net, we maintain our Neutral rating seeing the ~15.2x P/E multiple (adjusted for renewables) as fairly capturing the growth outlook and risks ahead.

DUK 2Q20 EPS walk

We forecast 2Q20 EPS of $0.95 compared to 2Q19 results of $1.12 (-14% YoY) and consensus estimates of $1.01. Despite the loss of ACP (-13cent headwind YoY) and COVID related pressure, we see 2020 EPS at $5.07 near the bottom-end of mgmt.'s $5.05-$5.45 range.

- **Key drivers**: Positive YoY drivers include the implementation of rates and riders at the electric utilities (+$0.06), the wholesale contract moving to formula rates (+$0.01), new rates at Piedmont (+$0.001), still AFUDC on Atlantic Coast Pipeline (+$0.01), and the contribution from the Palmer commercial renewable projects and tax benefits from previously installed projects (+$0.03). Offsetting results are regulatory lag (-$0.04), impacts from COVID on load growth (-$0.10), higher interest expense (-$0.01), preferred coupon interest expense (-$0.04), share dilution (-$0.01), and reversal of weather benefits from 1Q19 (-$0.08).
- **Unknowns**: Weather is expected to be flattish to slightly favorable, although the exact magnitude is unclear. Another unknown impact is the decline in load growth from COVID19; while mgmt. provides sensitivity for the full-year impact of $0.25-$0.35, we expect a greater proportion of this to show up in 2Q given the timing of state re-openings. Further, it remains unclear if the company was able to bend the cost curve on O&M costs, which could be a potential offset as it experience 7cent favorable variance in 2Q19 and the majority of the 40cents offset are expected to show up in 2H; we could see a push to slightly favorable O&M variance.

Capex: look for details in 2Q but not defined until 4Q

Following the recent cancellation of ACP, we look ahead to the 2Q call where we expect mgmt. to articulate how it intends to backfill capex after reaffirming its 5yr $56bn capex plan. While Duke Energy Florida is proposing to spend ~$1bn on 750 MW of solar projects across Florida in the next three years with ~$500mn incremental, we perceive spending associated with the IRP and looping/laterals to source gas would occur in the *latter half* of the 5yr plan. The IRP is likely to be an adjudicated process with multiple scenarios in which the commission will chose from, implying that a fully defined capex update is not likely to occur until the 4Q update. As such, we expect capex will be delayed into 2021 with potential upside to capex stemming from the IRP and gas capex not likely defined until the 4Q call.

Upcoming IRP to potentially drive upside to capex and FFO

We expect Duke's capex outlook to be reset higher with the upcoming September IRP that is likely broader than usual with the commission likely looking for a balance between the lowest cost plan and de-carbonization efforts. We see the likelihood for meaningful clean energy capex opportunities underpinned by the IRP combined with the early retirement of coal plants in a similar fashion to Dominion's in Virgina. Critically, the IRP could also add to FFO via potential for the accelerated depreciation of coal plants driving further balance sheet improvement, and we even see an angle where Duke could utilize accelerated depreciation without the IRP (i.e. rate case).

NC rate cases remain key to watch: ROE and coal ash

We continue to expect DUK's rate case in the Carolinas to have a similar outcome to Dominion's coal ash order potentially further cautious for earned/recoverable ROEs where we already assume $0.10-$0.13/sh eventual drag. With upcoming hearings for the DEC/DEP rate case slated for July 27 and commentary suggesting the process could take 3-4weeks, it remains unclear if a settlement can be garnered with staff despite recently inked deals w/ industrials for a 9.75% ROE as we could still see downside to authorized levels. While we continue to account for coal ash impacts with 30-40bps of lag in the outer years, a less constructive outcome on ROEs could put further pressure our EPS CAGR. Rate cases remain cautious although see risks of the negative revisions priced-in/largely known.

FERC denied DEP's request to dismiss ROE complaint

We note FERC denied DUK subsidiary Duke Energy Progress' (DEP) request to reject the complaint filed by North Carolina Eastern Municipal Power Agency (MPA) in Oct 2019 against DEP on the matter of 11% ROE included in the Fifth Amended and Restated Full Requirements Power Supply Agreement executed between MPA and DEP. The agency found 11% ROE is excessive and also produced an affidavit from GDS Associates that comprised of a couple of approaches to determine the "zones of reasonableness" in favor of its argument. While the approaches yielded ROE zone of reasonableness of 7.66–12.02% with a median of 9.41%, and 7.26–10.55%, with a median of 8.17%, respectively, MPA forecasted a reduction of 1% in the ROE would reduce the charges by $5.8m per year. FERC dismissed DUK's argument of MPA's inability to establish the unreasonableness of the agreement, and ordered to appoint a settlement judge for a hearing with a refund effective date of Oct 11, 2019. *We note DEP has a wholesale ratebase of $3.2B including both South and North Carolina and as of 3Q19; unclear what portion of this* wholesale *ratebase* the *ROE update would have* been*. We see this as the latest (modest) negative impact from rate case activity to Duke. This is a small portion of overall earnings with likely in ~1c ($5.8M/yr) range but admittedly represents the latest pressure on generation – and highlights* the *latest FERC datapoint on where ROEs* (*even for generation*) *are deemed too high (as has been a focus for peers* like E*TR's SERI already). We expect this to prove as a premium to base ROEs for transmission and as such see a ~10% figure on MtM basis as a broad proxy for generation assets.*

Alternative rate mechanism legislation

We note continued progress, although still very early stages such that Duke is still pushing the Public Utilities Commission (PUC) for alternative rate mechanisms to move forward, such as Performance Based Rates (PBRs), Multi-year rate plans (MYRPs), ROE banding, securitization, riders and others. We believe there remains potential for Duke to have a recommendation back to the legislation that would include one of these alternative mechanisms. Management did make clear that is still early on in the process, but it seems like they are headed in the right direction especially with the upcoming report due from the Governor's committee on Clean Energy. The company is currently in the education phase and there are a number of different tools to look at. All of these tools would be positive for Duke, but there are a number of steps it will take to get there as past efforts stalled/failed. With that said, we see both increased confidence from the company and corresponding stakeholder commentary as supportive for DUK's legislative prospects in the 2021 long session, although wouldn't be implemented in a rate case until 2023.

EPS estimates

We tweak our EPS estimates lower to reflect expectations that 2021 capex will be delayed and now assume a 9.7% authorized ROE for the DEP/DEC rate cases (w/ potential for further downside if litigated). Given the difficulty in attaining its 4-6% EPS outlook, we wonder if DUK mgmt. will elect to re-base on the upcoming call or defer for a later period of time. At a minimum, we expect messaging to be somewhat squishy in regards to the 2021 outlook.

Table 18: DUK EPS Estimates

Source: BofA Global Research estimates, company report, Bloomberg

The open question remains how management could reposition its long-term EPS CAGR. While ACP should force some degree of guidance update by the time of its 2Q call in coming weeks, we anticipate a more meaningful roll-forward (and rebasing of its 4-6%) is likely only with 4Q. We anticipate a more comprehensive view of mitigating offsets to the outlook including initial expectations from its September IRP filing in the Carolinas and other mitigating capex (transmission, gas) to address ACP delays.

Valuation: PO of $87

We move our PO to $87 (from $84) based on mtm of peer utility multiples of 17.1x and 15.9x for gas and electric (from 16.4x and 15.6x), our lower EPS estimates. Net-net, we maintain our Neutral rating seeing the ~15.2x P/E multiple (adjusted for renewables) as fairly capturing the growth outlook and rate case risks ahead -> just what earned ROEs assumed in the Carolinas will be key.

DTE Energy

We forecast 2Q20 adjusted EPS of $1.27 vs. $0.99 in 2Q19 and $1.13 consensus. We expect that unlike Q1, Q2 will receive a boost from weather in particular with a higher incidence of CDDs in Q2 relative to last year and normal patterns – with Q2 typically a shoulder quarter we do expect some uplift from weather impact particularly as it appears that CDDs in June were 30%+ higher than normal. We estimate that Covid impact on electric sales will be felt most acutely in Q2 given the pace of phased reopening in DTE's MI territory, and we expect approximately half of DTE mgmt.'s forecast $40m decline in sales on an annualized basis to fall in the quarter.

- **Key Drivers:** Primary drivers include weather which is an 18 cent uplift at the electric utility reflecting normalization of 2019 (7 cents) and an estimated 9 cent boost from warmer-than-normal weather during Q2, weighted toward June. We also note that with at least partial stay-at-home orders in place for much of the quarter, the weather boost may be greater than in a 'normal' year. We continue to incorporate the impact of new electric rates which went into effect in May 2019, as well as a partial quarter impact of the new rate increase effective this year, along with correspondingly higher D&A and interest expense. While DTE mgmt. has flagged its previous expectation to utilize financial contingency to mitigate impacts of weather on its utility results, we expect a partial offset via O&M. In the non-reg business we see the biggest jump in the midstream GSP segment as we reflect our higher y/y operating earnings as the company incorporates the contribution of its acquired Haynesville assets.

- **Unknown:** Precise weather-related impacts are difficult to estimate – Q2 2020 CDDs reported *above normal by ~2x the amount below normal in 2019*, leading to our 13 cent estimate – though we highlight some upside to estimates as weather effects may be higher in the quarter due to Covid. We expect the majority of lost sales and additional expenses related to Covid to impact in Q2, with a total 16 cent drag at the electric utility. The Energy Trading business is difficult to forecast owing to the opaque nature of its operations – given significant volatility across most asset classes in the quarter there is potential for an above/below normal quarter, although we do not incorporate this into our estimates.

Covid impact on load – Q2 seen most affected

We expect mgmt. of DTE to provide an update on sales in its service territory on the Q2 call. Recall that mgmt. has mapped out two scenarios for returning from mandated shut down orders: May start scenario contemplates most C&I customers beginning a staggered reopening in May with a return to universities and K-12 schools under the regular fall schedule, and a Slow Start scenario with industrial customers remaining idle until late summer and schools and nonessential offices remaining closed until year-end. We note that the company has indicated that the pace of reopening in its service area so far has tracked with the May reopening scenario, though the reopening of schools and universities in the fall remains uncertain given Covid upticks across much of the country. Recall that Michigan reported one of the higher declines in Industrial activity with sales falling by 43% in April at the outset of shut down orders, though we note that based on company sensitivities Residential sales have 15x the earnings impact, making the reported 10.5% increase in sales in April 3x more meaningful from an earnings standpoint.

Table 21: Estimated earnings impact from April reported sales

April reported impact

Customer type	+1% annual impact	Impact (%)	Annual earnings impact ($m)
Residential	15	10.5%	39
Commercial	6	-17.0%	(26)
Industrial	1	-43.0%	(11)
Other	2	0.0%	-
Total			3
2020 guide midpoint		1,270	
Decline impact		0.2%	

Source: BofA Global Research Estimates, company report

Below we present illustrative earnings impact (annual) for a 1% drop in sales across all customer classes based on DTE sensitivities, along with the potential impact on Q2 from a +5%, -15%, -15% drop across the three major customer classes, respectively. We also highlight that our recent work on load trends across the US supports anecdotal reports of sales bottoming out in April and beginning a gradual and uneven recovery. Uncertainty around the reopening of schools and universities in the fall will continue to weigh on forecasts for electricity demand across customer classes.

Table 22: DTE electric demand impact

Flat 1% annual impact

Customer type	Sensitivity (%)	Annual earnings impact ($m)

Electric rate case pushed, River Rouge acc. to '21

The Michigan Public Service Commission (MPSC) **approved** DTE Electric's petition to accelerate amortization the $108m portion of its $1.4B accumulated deferred income tax (ADIT) balance associated with the 2017 tax reform law, with the accelerated timeframe requiring DTE to fully amortize by the end of 2021 instead of the end of 2033. Critically, the change in amortization will allow DTE Electric to defer its next electric rate case filing from July 2020 to at least Mar 2021 which will in effect keep customer rates flat through 2022. Yet again, de-risking DTE's utility risk profile through 2020 as far as we're concerned and reiterating our confidence in the MI regulatory backdrop. DTE's application noted that its rate filing would have sought to recover Covid-related costs – recall that per an MPSC order, uncollectibles related to Covid are subject to deferral for future recovery, while a separate docket is pending at the MPSC that will determine whether direct expenses are recoverable as well. Note that DTE mgmt. intends to offset its lost sales and direct expenses via its financial contingency, which we estimate has improved over Q1 given strong weather tailwind at the utilities. We note this is a constructive order for DTE, as ADIT flowback is typically offset by a revenue reduction (since it is normally included in a rate case) though this interim order comes with no adjustment to revenues as it is between rate cases.

In the same order, the MPSC approved early retirement of the River Rouge 3 coal plant, accelerating retirement to May 2021 from previously-scheduled 2022. DTE is required to file a transition plan by Sep 30 that will address the plant retirement and solicit feedback from the community and other stakeholders – note the MPSC order states that the plan to be filed by DTE is not subject to commission approval. As part of the plant retirement, DTE will file for securitization of the undepreciated plant (estimated at

$70m based on filings) along with approximately $120m related to spending on tree trimming. Given the ADIT flowback is typically a cash-negative event we see the concurrent securitization as mitigating most of the cash impact.

The MPSC also approved DTE Electric's amended renewable energy plan, including approvals of new renewable generation to be added to rate base and sourced via PPAs. The commission approved DTE's Meridien Wind project including all engineering and construction – the project is expected to provide 225 MW of generation when it goes in service in late 2021. The MPSC also approved solar PPAs between DTE Electric and two generation stations operated by Ranger Power for 25 year terms, totaling 128 MW of energy. The aggregate additions will bring DTE's renewable generation to the 15% by 2021 requirement set by the state.

Gas rate case – decision expected by Sept

We continue to forecast an authorized ROE reduction of 9.9% for DTE Gas (from the current 10.0%) which is in line with the decision for DTE Electric from earlier this year. Based on PSC staff recommendation of 9.6% (which is in line with the ALJ) and company request for a 10.5%, we see 9.9% as a reasonable level which would be in keeping with the Michigan PSC's history of not making drastic reductions to ROEs and taking a more gradual approach, along with recognizing the lower rate environment. We expect DTE to continue to earn its authorized ROE through the forecast period and to hit the long-term mgmt. guidance CAGR of 9.0% over the 2020-24 period. Bottom line: we expect that DTE's utilities will under-earn their authorized ROEs somewhat in 2020 as a result of sales impacts but recover in 2021 with DTE Electric achieving its authorized 9.9%, while we expect DTE Gas to receive a ~9.9% in its pending rate case.

Table 23: ROE forecast

ROEs							
Authorized	2018A	2019A	2020E	2021E	2022E	2023E	2024E

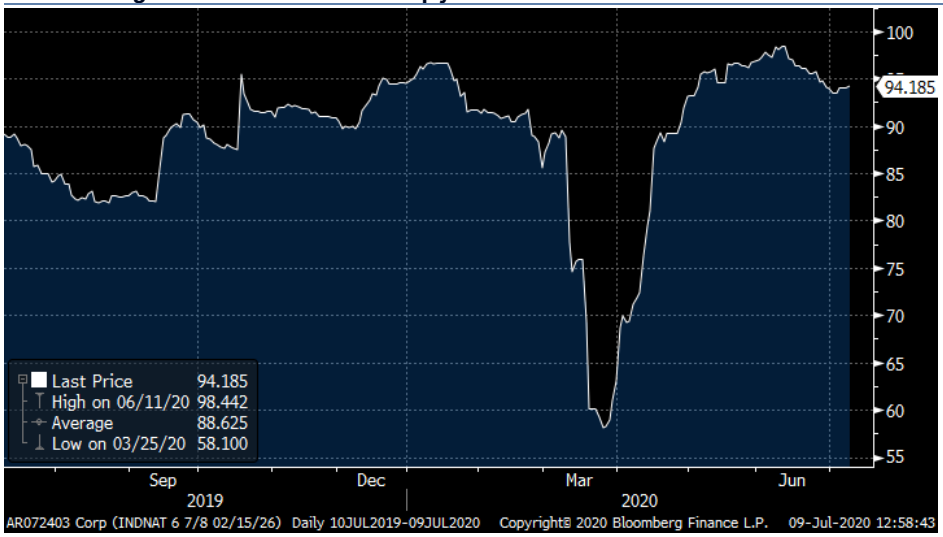
Midstream: read thru from D asset sale

We are forecasting a solid Q2 for DTE's Gas Storage & Pipeline (GSP) biz at approx. $70m operating income, a step-up from the same period last year. The major driver of improved midstream performance is the Haynesville Blue Union/Leap acquisition which is in its first year as part of DTE's midstream business, along with expansions at NEXUS and contributions from the Generation pipeline acquisition. While DTE's midstream business came sharply in focus during the late-March crude oil price collapse as investors ascertained the relative strength of its midstream counterparties, we sense investors have largely grown comfortable with DTE's position – especially in light of an improving natural gas supply/demand outlook given potential exit of producers of low-cost associated gas throughout US basins. Key Haynesville counterparty Indigo has seen its bonds recover substantially – and in fact trade higher than pre-crisis levels – see our recent Upgrade to Buy for more detail.

Following the D sale of its midstream assets to Berkshire *we sense a growing interest among investors in potential further M&A in the midstream space* – while DTE made its most recent acquisition less than 12 months ago, company mgmt. has stated that it continues to evaluate its portfolio on a regular basis and would be open to potentially monetizing assets in the right circumstance; were DTE to divest midstream assets we would expect it to be a fully-developed (with compression) pipeline or storage asset, rather than under-development projects such as LEAP or Generation. We continue to largely expect a status quo outlook for the company given its focus on growth; depending on the ultimate success in Dominion re-rating higher on a stand-alone strategy (or really CMS too), this could drive a further re-think strategically. Moreover,

given focus on growth at this segment only select assets would make sense to divest given need to maintain congruence of growth assets to maximize earned returns.

Exhibit 5: Indigo bonds have rebounded sharply from March lows



Source: Bloomberg

EPS Estimates

We raise our electric utility estimates on the expectation of warmer-than-normal weather enabling a rebuild of DTE's financial contingency. Our updated ests are now 1 cent above the midpoint of mgmt.'s 2020 range at $6.62 and 3 cents above Street consensus – we see upside to 2020 as well as Q2 estimates. We expect that warm weather should provide a tailwind to electric utility results following a warmer-than-normal Q2 and strong start to the key Q3: note that a higher incidence of customers remaining at home during Q3 may well contribute *more to weather impact than a normal year*, though the precise amount is difficult to estimate given uncertain path of state reopening measures. Bottom line: following DTE's reaffirmation of its 2020 guidance range on its Q1 call and commitment to re-establishing financial contingency, we expect company mgmt. will continue to project confidence on non-Covid financial mgmt. including O&M reductions intended to offset sales impacts, with a tailwind from weather in Q2 and early parts of Q3.

PO to $115; Reiterate Buy

We update our PO to $115 following mtm of electric and gas peer group multiples to 16.5x and 15.6x, respectively (17.2x and 17.4x prior). We continue to value midstream assets using a base EV/EBITDA multiple of 9.0x and adjust accordingly for in-progress Haynesville assets. We note that non-equity value of DTE's midstream and other non-reg assets has rebounded from March lows which implied minimal value (low single digits), principally as investor confidence in the outlook for the midstream sector has bounced back. We reiterate our Buy rating following the MPSC constructive decision on electric rate case timing and River Rouge securitization and resulting upward tweak in '20 ests.

Edison International (EIX)

With EIX's upcoming 2Q call we expect a miss on EPS, although comparability continues to remain outside of reach given still lack of recovery on O&M memo account items as we await an outcome with the 2021 GRC. Meanwhile, we continue to assume a 20% gross up to the low-end of $4.9bn liability range assumed by mgmt. as we expect an additional $670mn in equity issuance in the outer years (w/ the $1.95bn net imputed on the balance sheet). We note that the Bellwether trial for the Thomas fire is scheduled at the end of the year while there has been no date set for the Woolsey fire. That is not to say that mgmt. cannot reach a settlement with individual claimants prior to that date. While there are thousands of individual lawsuits, if mgmt. can garner meaningful settlements, we would expect the company to update its current charge of $4.9bn, although continue to perceive the bias is to the upside in terms of total liability assumed. With upcoming fire season and focus from the company on PSPS (although still needs permission from CAISO on transmission lines) and new technology deployed by the state (Blackhawks, fire retardants, etc.), execution will be critical to watch. We now move to a 4x discount (from 3x) to capture execution risk into this fire season (equivalent to ~50% prob. of triggering the liability cap with 46% earnings at risk). Still with shares trading at a ~30% discount vs. the broader utility group, we see an opportunity for a re-rating on fire execution and more clarity on the balance sheet.

EIX 2Q20 EPS walk

We forecast 2Q20 EPS of $0.95 compared to 1Q19 results of $1.58 and consensus estimates of $1.17.

- **Key drivers**: Positive YoY drivers include increase FERC and CPUC core contribution (+$0.16), and SCE financial and other benefit variances (+$0.08). Offsetting our estimates is the reversal of CPUC true-up from the GRC (-$0.20) negative variance from O&M expenses (-$0.30), higher D&A (-$0.04), wildfire mitigation costs (not earning ROE) and interest expense on contribution to fund (-$0.07), additional parent drag given HoldCo debt (-$0.07), and share dilution (-$0.20)
- **Unknowns**: We highlight uncertainty with O&M expenses as it continues to be somewhat challenging to handicap given the company will defer costs that are over and above the authorized limit; we expect a negative variance in 2Q20, similar to 1Q20.

Table 26: EIX 2Q20 EPS walk : mild results despite decoupling

Assumptions for remaining '17/18 wildfire exposure

We continue to assume a 20% gross up to the $4.9bn low-end of the '17/18 wildfire liability range, with the net remaining exposure of just $670mn after adjusting for the $1.9bn imputed from rating agencies on the balance sheet. We include this equity issuance in our 2021 share count to provide a fully-diluted EPS outlook. We note that the Bellwether trial for the Thomas fire is scheduled at the end of the year while there has been no date set for the Woolsey fire. That is not to say that mgmt. cannot reach a settlement with individual claimants prior to that dated. While there are thousands of individual lawsuits, if mgmt. can garner meaningful settlements, we would expect the company to update its current charge of $4.9bn that is assuming. We continue to perceive the bias is to the upside in terms of total liability assumed.

Table 27: EIX estimated remaining equity needs for '17/18 wildfires – 20% gross up of low-end

Managing the upcoming wildfire season will be critical

Communication with local authorities and the state is crucial given the need to focus on investments to harden the grid ahead of the upcoming wildfire season while at the same time procuring generators for its most critical customers. We see prioritization of wildfire mitigation and communication with the market as critical, especially ahead of the upcoming wildfire season. Public Safety Power Shutoffs (PSPS) efforts are likely to continue into the '20 season; and while weather conditions similar to last year would result in less shut-offs, mgmt. is going to continue covered conductors in the riskiest areas (1K circuit miles) and re-inspect structures in more than 50% of high-fire risk areas in order to raise the wind threshold and have an overall smaller impact on customers. Recent efforts by the state to deploy Blackhawk helicopters, new retardant technologies to drive more effective suppression, and focus on wildfire mitigation (increased state budget by $90mn), should help to some extent. While utilities continue to focus on PSPS, we remind investors that to shut-off transmission lines, the company will need permission from CAISO first. At the end of the day, fire risk into 2020 will be a binary event.

Just how much exposure is there?

We estimate the T&D cap for EIX is ~$3bn ($2.1bn net of tax) as the maximum amount over a 3year period (3yr rolling average); said another way just $720mn for EIX in 2020. We note that the company would first have to eat through the $1bn insurance deductible and then go through its cap; the company had $1.2bn of insurance through June 30, 2020 and is in the process of procuring the additional amount from July 1, 2020 – June 2021. The cap represents ~46% of EIX earnings that are exposed in addition to amounts of insurance less than $1bn in any given year (subject to a prudency review).

Table 28: EIX Max Liability Cap represents ~46% of earnings on an ongoing basis

Tracking the memo recovery: critical to limit equity

Mgmt. filed its Fire Memorandum Account (FMA) update, which initiated track 2 of the 2021 General Rate Case (GRC) proceeding. The company is seeking recovery of $509mn of O&M related expenses and $302mn of capital spending. This is considered track 2 of its memo recovery request with a decision not expected until 1Q21 with the GRC. The other items pertain to a decision with Wildfire Memorandum Expense Account (WEMA) for higher insurance cost vs. those approved (requesting $505mn in recovery) with a decision expected in Aug. 2020 and the (Catastrophic Event Memorandum Account) CEMA with a decision in March 2021 (for $88mn request). We now include an estimate for 2020 costs that mgmt. will file at YE20 w/ a decision in '22 (potentially growing by $400-500mn).

Mgmt. will defer these cost (once it consumes amount as prescribed in the GRC), although it's not getting any cash recovery, hence the impacts to credit metrics. We continue to see uncertainty around these items and look for more clarity in the coming months to understand the totality of equity needs as mgmt. has its own internal planning assumptions around recovery. Bottom line, recovery clarity could still take some time and we continue to see some risks on recovery given agencies assume this will be recovered.

Table 29: EIX Wildfire Memorandum Accounts

Memorandum Account	Capital Expenditure	O&M Spent	Total Request	Timeline

EPS Estimates

We provide our latest EPS estimates for EIX below, moving slightly higher on assumed forward looking share price issuance. Our estimates below are based on a fully diluted assumption with $670mn of incremental equity in 2021and $100mn of ongoing equity needs thereafter. We also continue to assume a constructive outcome in the 2021 GRC in that the company will be able to accrue cost savings over-time (similar to SRE) where we see a 10cent benefit in 2022.

Valuation: $65

We move our PO to $65 based on peer multiples of 17.1x (from 17.6x) and now apply a 4x discount to our EPS assumptions (from 3x) to capture execution risk into this fire season (equivalent to ~50% prob. of triggering the liability cap with 46% earnings at risk). Still with shares trading at a ~30% discount vs. the broader utility group, we see an opportunity for a re-rating on fire execution and more clarity on the balance sheet.

Essential Utilities (WTRG)

With a largely resi customer composition and the shoulder season of gas, we see WTRG as well positioned to navigate the evolving COVID crisis. Execution on their capital plans remains largely intact despite modest setbacks ($30Mn) earlier this year, and we would anticipate some further tailwinds from acceleration in muni deals during a recovery period. Meanwhile, we further continue to await developments around the catch up component of repairs tax implementation as additional upside to the recently rolled out guidance with a filing expected imminently. We reiterate our Neutral rating on shares of WTRG, seeing risk/reward as fairly balanced at the current valuation.

WTRG 2Q20 Earnings Walk

We forecast 2Q20 adjusted EPS of $0.24 compared to 2Q19 adjusted results of $0.37 and consensus of $0.22.

- **Key Drivers:** The primary driver of the quarter is the dilution from the Peoples Gas acquisition. This should be somewhat offset by growth in the legacy water business: partial quarter benefit of new rates in PA along with favorable weather should help mitigate COVID related headwinds.

Table 31: WTRG 2Q20 Walk

WTRG 2Q20 Earnings Walk		EPS
WTRG 2Q19 EPS	$	0.37
Aqua		0.01
Peoples Gas		-0.03
Dilution		-0.11

Consensus		$0.22
WTRG Guidance		$1.53-$1.58
2020 Consensus		$1.53

Source: BofA Global Research, Bloomberg

Weather & Commission Help Should Mitigate COVID Impacts

WTRG has guided to 2020 earnings of $1.53-$1.58 and a 5-7% EPS CAGR through '22. The largely residential profile of the water biz provides some protection against load degradation while the gas biz remains in shoulder season, and we expect some benefit from favorable weather at least in 2Q. While early action was taken to maintain a more conservative amount of liquidity, bad debt has been our primary concern. That said, the May order in PA helps to de-risk this given their particularly large presence in the state: recall the PA PUC issued a letter directing utilities to track COVID expenses and authorized regulatory assets for uncollectible expenses incurred above those embedded in rates since the PUC's March 13, 2020 Emergency Order - any regulatory asset created under the authorization contained in the Secretary's Letter will ultimately be subject to review by the PUC in future proceedings. While this won't provide immediate help to cash flow, it should help limit degradation to P&L in the nearer term.

DELCORA Dilemna? Consolidation Prospects Remain Strong

The latest economic pressures are likely to further accelerate consolidation in the industry as muni budgets are further flex'd from the crisis - and any further resulting acquisitions would be upside to mgmt.'s latest reaffirmed targets. States we are watching in the near term include TX & OH following the passage of FMV legislation in the states early last year and VA passing the legislation more recently. While we perceive TX bids as likely more competitive, WTRG is currently the only large water utility in the state of OH - and we see particular opportunities as likely to emerge following the Campbell acquisition. We see NC as another state to watch given the new commission dynamic, albeit muni acquisitions there seem less clear cut relative to the more challenged munis in PA and IN.

Overall, we remain particularly bullish prospects for further consolidation for the water industry going forward shy of any infrastructure bill of magnitude materializing.

Meanwhile, watch developments around their pending DELCORA acquisition after the the independent authority filed an injunction to stop the county from dissolving the authority. That said, we don't see meaningful risk to the deal and it remains upside to estimates over time from the currently laid out plan.

Catch Up Filing Imminent

After closing on the Peoples Gas acquisition in Mid-March, the company elected the current component of repairs tax, reducing income tax by $5.9Bn for the quarter with expectations to drive $0.08-$0.12 worth of contribution for the year. This should limit any risk from rate cases in the state while further driving earnings upside. Meanwhile, the only rate case in North Carolina continues to progress with their request for $7Mn in additional revenue. So overall, we don't see strong reliance on rate cases to hit their targets, albeit watch timing of new rates for any acquisition upside.

Latest discussions suggested a filing for the catch up component imminently with the process taking six to nine months. We see this as the critical debate driving shares with another opportunity in the hundreds of millions over time.

Under implementation for the water biz, seven years of a ten year amortization went to the shareholder while three went to the ratepayer under a particularly constructive outcome. While it remains to be seen how the commission will rule this time around, a constructive outcome would give upside to their numbers.

We maintain our Neutral rating on shares, seeing risk/reward as balanced.

EPS Estimates

The exhibit below reflects our current EPS estimates ahead of the upcoming quarter. We see limited risk to NT numbers and continue to model to the high end of their LT CAGR guidance.

Evergy Inc. (EVRG)

We forecast 2Q20 adjusted EPS of $0.70 vs. consensus of $0.68 and pro-forma 2Q19 results of $0.58. Our full-year forecast for EVRG of $3.06/sh reflects our expectation of drag resulting from Covid-related slowdowns – though we note EVRG remains one of the few companies in our coverage not to provide interim reporting during Q2, a decision related to the company's ongoing strategic process. We expect mgmt. will report a rebound in load across its service territory through Q2, largely in-line with utility peers, though we note EVRG remains exposed to key aerospace industrial customers in KS, with potential for a slower rebound across that sector.

- **Key Drivers:** Weather is expected to provide an uplift of $0.14/sh as we normalize for the negative effects of 2Q19 (4 cents) and account for milder weather in 2Q20 that increased the number of CDDs in EVRG's service area, particularly in KS. O&M savings including merger synergies are expected to provide an uplift of 6 cents as the company continues to look for ways to cut costs in order to realize full merger synergies, offset Sibley and Jeffery rulings from 2019 (1.5 cent drag in aggregate), and offset potential Covid-related drag on demand. We additionally see 4 cents of accretion from a lower share count in Q2 2020 following EVRG's share buyback program, but note that as this program has been suspended following the Elliott agreement this effect will abate in future quarters.

- **Unknowns:** Weather was warmer than normal in Q2 2020, particularly across EVRG's KS jurisdiction where June CDDs were well above normal. Given the greater importance of June CDDs in the shoulder Q2 quarter we expect a tailwind on results though we note the deviation from normal was more modest across MO. Weather impact on utility results is driven not just by the aggregate number of HDDs but also in the timing of deviations from norm (Jun CDDs worth more than April), and as such the precise weather impact is difficult to gauge. The Covid effect will likely be highest in Q2 as shut-in rules in EVRG's service territory were implemented in a staggered approach at the end of Q1 – we estimate a 7 cent drag.

Table 34: EVRG Q2 EPS walk

Stock trading dynamics

Shares of EVRG are back to trading near a relative high post-Covid, measured on a relative fwd 2Y PE compared to the IXU. Despite being a non-decoupled utility with exposure to two state jurisdictions, we sense investors are looking through near-term Covid impact and focusing on the potential for a constructive outcome from the ongoing strategic process. Recall that when we upgraded EVRG to Buy following the announcement of the formation of the Strategic Review and Operations Committee (SROC) on Mar 2, we applied a 2.0x premium to our electric utility peer multiple for valuation purposes after previously applying a discount to reflect EVRG's regulatory overhang and below-peer growth trajectory. With shares trading at a premium to the IXU of late we note investors remain focused on potential for a constructive SROC outcome, thought the company has not provided interim updates – we highlight the upcoming Jul 30 deadline for SROC recommendation to the board as the next key milestone, and remain Buy-rated.

Exhibit 7: EVRG relative chart

Source: Bloomberg

Covid: KS approves deferral, MO remains pending

In early July the KCC approved EVRG's petition for an Accounting Authority Order (AAO) to track and defer extraordinary costs (net of cost decreases) as well as lost revenues associated with the Covid pandemic. The AAO approval is not a finding that tracked costs and revenues will be recovered, rather that the items will be included in a future rate filing – recall that EVRG is under a rate stayout in KS until 2022 as part of its 2018 merger agreement. EVRG will be required to submit quarterly reports on the amounts tracked – including any federal or state assistance received. In its May filing, EVRG stated that several of its large industrial customers in KS – including Spirit AeroSystems, Textron Aviation, Hallmark Cards, and Goodyear – were forced to furlough employees or temporarily close facilities in its service territory. The AAO petition was supported by KCC staff in an earlier filing, nonetheless the KCC order is a constructive step for EVRG as it continues to deal with the pandemic and reflects a positive fact pattern toward eventual recovery of costs and lost revenues.

Separately, EVRG has filed testimony in its MO petition for an AAO all extraordinary costs and financial impacts that directly result from the Covid pandemic. The financial impacts include additional bad debt expense in excess of amounts recovered in rates and lost revenues, net of cost savings. As in its KS filing, EVRG disclosed that many of its large industrial customers - including a Ford plant – as well as commercial customers including casinos and the Kansas City Royals, were forced to curtail or suspend their

regular business activities, though the public filing does not detail lost sales resulting from the pandemic. The EVRG testimony proposes annual progress reports to track its Covid-related items for recovery, though given the KS ruling and evolving nature of the pandemic we expect the order to be for quarterly filings, should the AAO be approved.

Recapping a busy strategic quarter & looking ahead

Below we highlight some key takeaways from a series of developments during EVRG's strategic review that took place in Q2, and look ahead to the approaching milestones during the summer months which should bring clarity to the direction of the process – whether the company will contemplate M&A or an acceleration of rate base growth via a standalone plan.

KCC moves to get involved early in strategic process

The KCC approved a staff is petition for an order initiating an investigation into the ongoing EVRG strategic review. Staff's filing flagged a high degree of concern that Elliott's focus on increasing shareholder value will come at risk of ratepayers – forcing them to pay higher prices or have to suffer less reliable service in order to maximize shareholder value. Such a result is in direct opposition to EVRG obligations under a 2018 docket and the state's goal of making rates more competitive pursuant to SB 69 according to the filing. Staff did not ask the commission to take affirmative steps, referring to its inquiry as informational in nature. Staff will also petition for a new docket should EVRG elect for a standalone plan, given impact on potential core elements of the prior merger agreement under docket 18-095. Among the specific provisions of the 2018 merger agreement, staff calls out the items below as requiring particular scrutiny in the ongoing SROC review:

- 5-year Kansas rate moratorium following the 2018 rate cases.
- Earnings sharing plan to share merger synergies with shareholders/ratepayers.
- Upfront payments and bill credits.
- Recognition of $30m of merger savings in 2018 rate cases.
- Zero involuntary terminations in KS and maintain HQ in Topeka for 10 years.

New KCC appointment brings Industrials experience

On the same day as the KCC petition filing, Gov. Laura Kelley announced the appointment of Andrew French to the KCC seat being vacated by the expiration of Shari Feist Albrecht's term. French has most recently been employed as counsel at Smythyman & Zakoura, a Topeka-based law firm where he represented large industrial and commercial customers in utility-based litigation matters. With several years of experience litigating on behalf of large utility customers French brings highly relevant experience to the KCC's review of the SROC process and EVRG's retail rates.

Missouri: Focus on jobs, legislation path less clear

In contrast to the Kansas commission which just appointed Andrew French, an experienced litigator who has previously represented large industrial customers at the commission, the MPSC's five members are seen as more open to negotiation on individual issues, without a discernible ideological bent. Stakeholders see potential for progress on a number of issues including securitization and closure of aging coal plants – though this will require legislative action. The most recent appointed commissioner is seen as a proponent of renewable energy which may further accelerate the momentum for coal retirements. Commission staff are seen as key subject matter experts on issues such as authorized holdco equity layers, with commissioners largely relying on the analysis of staff to inform their decisions on such technical topics. The incumbent Missouri governor is largely expected to not seek an additional term if reelected this

November, having taken over from the predecessor halfway into the current term. In the event that the incumbent were to lose the election a new governor would take time to replace members of the MPSC, potentially slowing approval of any deal. With commissioners not ideologically opposed to a deal, a merger proposal that includes an additional rate stayout beyond the current one which runs through 2022 would be seen as most likely to garner support.

SROC milestones approaching in coming weeks

EVRG's Strategic Review & Operations Committee (SROC) created in EVRG's agreement with Elliott outlines specific dates by which proposals must be submitted, voted on, and presented publicly. Two of the four members of the SROC are the new directors selected by Elliott - industry vets Paul Keglevic and Kirk Andrews - giving the activist manager even representation with incumbent directors. Unsurprisingly, given intense focus by utility mgmt. teams and state utility regulators (not limited to EVRG) on maintaining ongoing service amid the Covid emergency, the SROC issued an updated time frame pushing back its most significant deliverables further into the year. We view the revised timeframe below as merely reflecting the practical realities of evaluating a complex transaction amid work-from-home restrictions and market volatility and remain constructive on the overall direction of the review.

- **SROC recommendation to Board due Jul 30.** The original timeline called for the committee to present to the Board its recommendation of a transaction or standalone strategy by May 30 - note that the specific recommendation will also determine the level of public disclosure, as we detailed previously.

- **Board announcement by August 17.** Previously June 17, giving the Board the same number of days to evaluate as under the previous timeframe. We note some nuance in the language of the agreement that allows members of the SROC to publicize both recommendations in the event of a tie vote and *both Elliott-appointed directors voting for the same recommendation*, in which case the external directors are permitted to discuss their vote publicly within 5 days of the earlier Jul 30 deadline.

- **Modified standalone plan by Oct 14 if selected.** Originally the deadline was Sep 4, so the time frame for a presentation of a potential standalone plan has been pushed back by six weeks. We continue to view this as the less likely option given specific wording of the SROC agreement and note that logistics around presenting such a plan may require rethinking in the wake of Covid. Note this deadline now also impacts EVRG's reporting to the KCC that is required pursuant to the commission's recent order, which is required to answer a set of questions about the committee's decision and process.

Updated estimates

We maintain our EVRG estimates at $3.06/sh for 2020 as we had previously reduced our forecast to account for Covid-related impacts and resulting company response via additional cost-cutting (mgmt. announced an additional 1% of cuts on the Q1 call). Our estimates are 1 penny above Street in 2020 after consensus forecasts were revised down to reflect the 2020 sales outlook. Looking ahead, we make tweaks and maintain our long-term EPS growth forecast which is based on rate base growth of 3-4% based on the most recent rolled-forward capex forecast presented by mgmt. on is Q4 call. While rate base and earnings growth is certainly below the peer group, we sense investors remain focused on the outcome of the strategic review principally, with organic growth considerations currently seen as less urgent by most investors.

Valuation

We update our PO to $68 reflecting an updated electric utility peer group multiple of 17.1x (17.6x previously). Our valuation is largely unaffected by the near-term drag on our estimates related to milder weather and Covid as both are expected to normalize by 2022. Shares have re-rated vs the peer group since our upgrade to Buy though we still perceive upside to the current share price amid ongoing strategic review.

FirstEnergy (FE)

We anticipate a quiet second quarter call approaching. We again expect to see the Street focus on New Jersey given it's the only regulatory rate case the company is in right now. For FERC, interim rates already took effect with a ruling on its 10.8% ROE request outstanding, and for distribution, the schedule is still outstanding. The lack of regulatory activity outside of this until 2023 is a positive in our eyes. FE is somewhat shielded from COVID impacts as Ohio is decoupled, it has a low portion of revenue that is tied industrial sales (just 7%), just 10% of industrial revenue is volumetric-based, and FE recovers uncollectible expenses in OH / NJ through a rider and in PA / WV / MD through base rates. We look for commentary on the company's $3bn per year of capex trajectory – particularly as mgmt. has noted perhaps +$400mn of additional opps. We also look for hints towards the West Virginia IRP scheduled for later this year (given FE indicated it expects it will show need for capacity), and updates on credit rating agency discussions. We forecast a 2Q20 estimate of $0.54/sh – just 1c lower than Consensus.

2Q20 EPS Walk

We forecast a 2Q20 of $0.54/sh versus a Consensus of $0.55/sh and last year's 2Q19 estimate of $0.61/sh.

- **Drivers**: We anticipate 2c of riders and decoupling along with -6c of losing the OH DMR as key drivers for the quarter.
- **Other**: 2Q is generally not a large driver for the year given it is a shoulder month; as 2Q20 saw a hotter than normal June and colder than normal April, we factor in +1c. 2Q19 was slightly mild versus normal, we assume +1c in reversing last year's impact. We also factor in -2c of D&A, lower intr exp from refinancing maturities at lower interest rates that are balanced by higher distribution & transmission interest, and a flat parent with balancing tax implications.
- **Wildcard**: We only factor in -1c of Covid impact based on the four weeks of data provided on the last earnings call (i.e. -13% in C&I and +6% in resi). We anticipate O&M savings of +1c largely offset this.

Key topics for 2Q20

- **Capex**: Reiterated comments made around capex during fireside chat.

- succession planning and CEO turnover are likely a 2021 item- albeit as part of an entirely regulatory path. OH is likely to continue under PUCO leadership of Sam Randazzo and with ~2.5 years of the current admin left, there remains ample time for legislation or reg reform that establishes stability

FFO/debt, Balance sheet, credit rating

FE's Balance Sheet is improving with expectations of improving credit metrics translating at first with an upgrade from S&P and subsequently Moody's, albeit still largely in the 12% FFO/debt range for our reconciliation. We' expect a positive outlook from S&P first – as early as later this year. Mgmt. has acknowledged it is discussing its credit metrics with rating agencies, with potential positive news to come from S&P considering the agency lowered its FFO/debt threshold to 12%. Moody's upgrade threshold is 14% however, so the process may be a little more protracted - but there is potential opportunity for Moody's to bring down its upgrade threshold to 13% (note Fortis' is 11-13% and FE noted it sees its companies in line with theirs in terms of credit and risk). We could expect to see FE approach a 13% FFO/debt in the next few years, particularly as FE has plans for incremental equity starting in '22 and the years after (could be up to $600mn/yr). With its FES business disposition resolved, we perceive few angles to meaningfully shift its balance sheet outlook so look to '22-'23 when the potential Moody's upgrade could be.

Rate cases

FE is one of the least exposed amongst peers to lower authorized returns given the company re-affirmed limited regulatory activity thru the forecast outlook with capex largely recovered thru riders rather than litigated cases. We suspect this limited rate case risk profile will increasingly resonate with investors keen to pursue a less volatile & overall noisy profile. Outside its NJ cases, FE is not planning to file elsewhere for several years - specifically noting for at least three years without a case. The pandemic is not expected to have an impact on timing.

We are still awaiting outcomes in NJ. For distribution, FE awaits a rate case schedule from the ALJ. NJ is just 13% of our modeled '22 EPS and that the distribution case was never included in FE's 2020 guidance. FE noted previously it expects an opportunity to settle (at the earliest later this year), and updated timing for a full case to a result in '21. Recall NJ is already FE's lowest allowed ROE at 9.6%, and we model 9-9.5% earned in the next few years. This remains among the principle (small gyrations) in outlook still.

Sustainable capex

Mgmt. continued to reiterate that it has a strong ability to execute on its ~$3bn/yr capex plans (+/- ~$400mn/yr - more likely a +). Further, the company has flexibility in its size and geographic diversity that allows it to proactively shift where it deploys capex. Mgmt. again noted that it is leaning towards not pursuing a second round of IIP at JCP&L because it currently sees itself as having accomplished reliability projects in the state, while also having enough investments in other states. The West Virginia IRP this fall is likely to drive new generation needs, improving opportunities but unclear if this will see an aggregate uptick in capex levels; we would expect a generation outlook is more likely in 2H.

Succession

The company announced plans to search for a candidate internally, we would expect any succession to take place next year at the earliest (if not longer). We see a discussion of mgmt incentives around change in control as meriting some attention. We see governance and exec comp as having improved in recent years under its regulated strategy.

Estimates

We provide our latest EPS estimates below.

Pinnacle West (PNW)

We expect Q2 Operating EPS of $1.55/sh as compared to $1.34/sh Street estimates and $1.28/sh in 2019. Weather is expected to be the largest single driver as we normalize for the effects of a significantly below-normal 2019 and add further tailwind from 2020 CDDs. We further note that PNW had increased its bad debt expense target for 2020 given last year's disconnect moratorium, suggesting it may be better able to withstand an increase in delinquent accounts than peers. We see additional impact from COVID-19 on sales – though this impact appears to have largely abated as the quarter developed resulting in company-reported flat weather-normalized level of sales for a trailing 33-day period ending in June. However, given the uptick in cases of COVID-19 in the state of Arizona, we acknowledge that C&I sales may fluctuate through the coming quarter. Finally, PNW's most important earnings quarter is Q3, with potential upside to results from increased residential usage given that customer segment's higher margin contribution. While visibility around the near-term outlook appears to be improving (and for the better), we continue to see substantial risks around the pending rate case (and potential for ACC turnover), with upcoming staff testimony the next significant milestone to watch for – due Aug 3.

2Q20 Walk

We forecast 2Q20 adjusted EPS of $1.55 vs. $1.28 in 1Q19 and $1.34 Street consensus. We expect substantial upward revisions to Street estimates over the coming weeks.

- **Key Drivers:** Weather normalization will be a significant driver in Q2 as 2019 was a below-average weather quarter, with an uplift of 31 cents. In addition, we see 14 cents uplift from weather in 2020 as service territory CDDs were meaningfully above normal (14% above normal). We see COVID-19-related impacts on EPS of -15 cents, which is in-line with company provided disclosures during Q2. While PNW realized significant Q1 savings in O&M – near levels suggested by its full year 2020 guidance – we assume an additional one cent of savings in the quarter as mgmt. seeks additional offsets to drag resulting from lost sales. Finally, we see two cents of drag related to pension/OPEB given the six cent gains reported in Q1 relative to full-year company guidance.

- **Unknowns:** Weather and COVID-19 sales fluctuations are the two key wildcards in Q2, with both playing meaningful and opposite roles. Unlike Q1 where both weather and COVID-19 provided a drag on utility earnings, we see the two factors as largely offsetting in Q2. Our 14 cent weather uplift estimate is based on CDDs 14% above normal as reported by PNW, compared with 27% below normal in 2019. Our COVID-19 impact of 15 cents is based on an earlier intra quarter update by the company which disclosed an EPS impact of -$0.14/sh for the period of Mar 13 – May 26, and the expectation that drag from lost sales *abated slightly during June* given the state's reopening schedule, though we acknowledge some uncertainty here given: 1) relative weighting of warmer-month earnings, and 2) uptick in COVID-19 cases and resulting impacts on business and consumer behavior.

Table 39: PNW Q2 earnings walk

COVID-19 disclosures trending in the *right direction*

We estimate a 15 cent impact from COVID-19-related sales disruptions in Q2. PNW's early June update reported a 14 cent EPS drag from Mar 13 to May 26, which we assume is heavily weighted toward April-May when the full impact of state closures took effect. With sales impacts abating per the most recent disclosures which cover the period running through mid-June, we expect that the weather-normalized impact on sales in the month of June was not as intense as in the prior periods reported. Below we include the weather-normalized sales trends by customer class for several periods as reported by the company as well as trailing-period EPS impacts. While most of the figures below are reported by PNW in its interim updates, the $0.15/sh EPS drag for Q2 in the rightmost column is our estimate based on prior-reported figures.

Table 40: PNW COVID-19 sales and EPS impact

			Mar 13 - Apr 30		May 1 - May 26		May 13 - June 16	
Sensitivities	Sales	Annual EPS Impact	Sales	EPS impact 3/13 - 4/30	Sales	EPS Impact 3/13 - 5/26	Sales	EPS Impact Q2 (BofA estimate)

Catching up with mgmt. on key topics

Below we review the key issues surrounding PNW after catching up with its management team on our recent fireside chat. We saw this as an opportune time to discuss the company's broader strategic vision and strategy for improving regulatory relationships. A recap of key topics follows.

- **Don't expect a settlement of the APS rate case.** Mgmt. sees little pathway to a settlement of the current APS rate case given the procedural and election schedules coming up in the second half of the year. Upcoming milestones in the rate case include filing of staff/intervener testimony on Aug 3 and the beginning of the Hearing on Sep 30. At this point in the calendar, PNW mgmt. expects that *even if a settlement agreement were reached with key counterparties, procedurally it would need to be approved by the next commission which will be seated in 2021.* Recall that 3 of 5 commissioner seats are up for election in Nov, with a minimum of 2 guaranteed to be replaced as Chair Bob Burns is termed out and Boyd Dunn is barred from running after forging signatures. Given these dynamics, mgmt. indicated the difficulty in reaching general consensus on key issues including revenue requirement, ROE, and equity layer with stakeholders and then seeking subsequent approval of a settlement agreement from a commission with 40% new members in 2021. Despite some earlier indications that a settlement may be possible (in order to give the current ACC an opportunity to decide APS' rates), all indications now point to a fully litigated outcome.

Table 41: APS case schedule

Event / Item Due	Original	Updated
Staff & Intervenor Testimony w/o Rate Schedules	5/20/2020	8/3/2020
Staff & Intervenor Testimony w/ Rate Schedules	5/27/2020	8/10/2020

Source: ACC docket #19-0236

Two other utilities (FTS and SWX) currently have rate cases pending before the ACC that are further advanced. FTS expects a fully litigated resolution to its case *prior to ACC turnover*, leaving APS in the unique position of having its case process straddle two ACC benches. *We perceive the protracted processes with these to suggest a case potentially delayed well into '21 with a new ACC composition.*

- **Pivot to clean generation is ongoing, expect mix of PPA and owned buildout.** Mgmt. expects to continue its pivot to a greater share of clean generation, as outlined in its decarbonization plan published earlier this year and recently-updated IRP filing. With 40% of its announced '21-22 capex plan allocated to clean generation, PNW is moving forward with a combination of owned and PPA renewable generation projects, and while the company intends to move forward with an ambitious Energy Storage buildout (750 MW through 2024 per the IRP), plans are currently on hold pending the outcome of the ongoing McMicken investigation. The company currently has two RFPs out for renewable generation including 150 MW of APS-owned solar and 250 MW of wind that may be owned or under a PPA structure. Critically, mgmt. sees future renewable solicitations as considering both owned and PPA structures given requirements to secure the most economic forms of supply. One potential form of additional PPA generation that was highlighted is a bolt-on addition to an existing renewable generation asset that is already contracted with APS, owing to the existence of already-built infrastructure that would reduce total costs to ratepayers.

- **Ratemaking and customer education are priorities – *but how to fix?*** *We see this as among the stickiest issues management has yet to resolve with its stakeholders.* Mgmt. highlighted its continuing efforts to rebuild relationships with regulators, as evidenced by frequent appearances at ACC open meetings to participate in direct dialogue with commissioners and the public – while efforts have yet to bear tangible outcomes, mgmt. indicated its intention to maintain the dialogue with stakeholders on the numerous issues in front of the ACC. We note the rate design question discussed in detail at a recent open meeting remains unanswered: given the requirement of the previous case settlement to encourage customers to opt-in to the "most economical plan", the company reported that a meaningful percentage of customers did not elect to do so, citing difficulty in getting customer engagement. Regarding future rate design, APS has proposed a flat bill option where the utility manages customers' thermostat settings though this proposal is opposed by some interveners for failing to send a price signal to customers.

- **No equity in '20, $300-400m coming *before* next case filing.** PNW does not expect to issue block equity until it is contemplating its next rate case filing. Company mgmt. has previously flagged some flexibility around APS' equity layer (rate case request of 54.7% has historically not been a negotiated term) with an

intention to true-up prior to its next filing. Consistent with prior statements, mgmt. does not expect to issue equity in order to preserve its credit rating. Our base case expectation is for a rate case filing in 2022, and we see an issuance of $350m, in line with the midpoint of mgmt. expectations, and a concurrent equity injection by PNW to APS in the same year. Additionally, while we forecast PNW's consolidated debt metrics to remain above the Moody's downgrade threshold through '22, we forecast the ratio dropping to ~18% by 2025 – consistent with mgmt. statements of some latitude on this front (not managing to a credit ratio).

Table 42: APS ROE and Equity forecast

Earned ROE - GAAP calculation	2018A	2019E	2020E	2021E	2022E	2023E	2024E
Average Equity Method - GAAP	10.45%	9.80%	9.51%	9.58%	9.19%	9.17%	9.65%

Equity Injection			5	260	625	10	10

Source: BofA Global Research estimates, company report

- **Renewable buildout is the path to greater cooperation with ACC.** PNW intends to shift its generation mix to 65% clean energy by 2030 (note this includes Palo Verde) by continuing its buildout of owned wind, solar, and storage and retiring Cholla in 2025. As part of its 2020-24 plan, the company intends to add 962 MW of renewable energy and 750 MW of storage, with the balance of the 2,900 MW in the plan consisting of Demand Side Mgmt, Demand Response, and Distributed Generation. *We look for whether management will be able to recover these in a rider treatment akin to its earlier AZ Sun program through the course of the pending rate case; we perceive this as increasingly key to rate case timeline and implicitly capex clarity too but don't perceive a need for pre-approval/CPCN for any of its renewables regardless. Meanwhile we anticipate a large chunk of its future renewable procurement to still be done on a PPA (rather than ownership) basis.*

- **Coal plans still key to de-risk in the rate case.** Given the uncertain treatment of the Four Corners scrubbers as part of the current rate case, mgmt. highlighted that previous dockets have laid out an evidentiary record for the need to invest in scrubbing technology and support for recovery in rates. While the rate case ask stands out for being one of the few among our coverage that actively seeks to *increase coal rate base,* PNW mgmt. stresses that Four Corners remains a key part of the company's generation mix today and expects to utilize the plant until its scheduled retirement in 2031 (itself pushed up from 2038 previously). We further note that the plant is a key employer in the Navajo Nation territory, making a potential early retirement thorny from a regulatory and political angle. PNW highlights that it sees its clean gen pivot as a key part of its strategy for enhanced cooperation with stakeholders and the ACC, noting significant support for renewables across the state.

Updated estimates

We update our PNW estimates as per below, as we increase our 2020 forecast from the low end of 2020 guidance to $4.80/sh, driven principally by the above-normal weather contribution in Q2. Our estimates are now three cents below Street consensus which itself is two cents below the midpoint of mgmt.'s guidance range. While PNW gave a relatively soft reaffirmation of 2020 guidance on its Q1 update, we see likelihood of a more confident tone on the upcoming call as a tailwind from warm Q2 weather and abating COVID-19 sales impacts has improved the near-term outlook of late, though we flag Q3 as critically important for the company's full year prospects given the importance of the peak cooling season. Looking ahead, we see an EPS CAGR of 3-4% through 2023 based on company-provided capex disclosures and assumptions around rate case filing

cadence and impacts on earned ROEs at APS. Upside to the current forecast is tempered somewhat by PNW mgmt. comments that the company intends to pursue PPA as well as utility-owned solutions for its future renewable procurement.

Capex updates

We perceive less confidence on long-dated further acceleration of current clean energy capex beyond '22, but rather more sustainable levels of investment. Meanwhile, we are critically focused on the 2Q call around the composition of just *what is reflected in its clean energy outlook.* As a reminder, the company has yet to clarify *what* specific projects are contemplated within its '21 guidance as far as clean energy investments go. We anticipate some level of details and/or risk of delay if not – but bias towards the former.

Table 43: PNW updated estimates

Valuation: PO to $78

We update our PO to $78 based on marking-to-market the electric utility peer multiple to 16.6x, from 15.6x previously. We continue to apply a -2.5x discount to PNW's consolidated '22 earnings, reflecting the unique set of regulatory risks facing the company in its sole AZ jurisdiction, notably timing of the current rate case whereby a settlement increasingly looks as if it is not an option and a *new* slate of commissioners will decide the pending proceeding – a decidedly uncertain prospect given Nov elections. Reiterate our Neutral rating as we see only modest return potential to shares at current levels.

Table 44: PNW updated SOTP

PPL Corporation (PPL)

We remain Neutral rated on shares of PPL into the quarter. While shares have meaningfully underperformed this year, FX remains volatile with current forwards remaining at the low end of mgmt.'s assumptions (already lowered earlier this year) and we critically watch load impacts after mgmt. elected to keep guidance unchanged last quarter. While the UK is decoupled, volumes are only trued up on a two year basis and mitigating impacts in the jurisdiction could be critical to keeping guide intact. Meanwhile, we await any developments around a formal decision for a rate case in KY - which we continue to see as unlikely against the protracted pandemic and latest ROE backdrop – along with the RIIO-ED2 consultation from Ofgem expected later this month: LT ROEs in the UK remain a lingering uncertainty after latest pressure suggested by T&G drafts. Bottom line, we ultimately see risk/reward as balanced at the current valuation.

PPL 2Q20 Earnings Walk

We forecast 2Q20 adjusted EPS of $0.54 compared to $0.58 in 2Q19 & $0.56 consensus.

- **Key Drivers:** We expect COVID challenges in the UK and dilution to weigh on the quarter and offset currency tailwinds and O&M savings.

Contemplating COVID Implications

After electing to keep guidance unchanged last quarter, we critically watch developments on load. Recall the company noted $0.03-$0.04 monthly impact in April primarily from lower electric sales in the UK and KY (2/3rds from the UK). Full disclosures noted specific early load observations and sensitivities in April: UK - +1-3% resi & (20-25%) C&I with a 1% change translating to a penny of EPS for each; PA - +6-8% resi & (15-20%) C&I with a 1% change translating to $0.005 for resi and no impact for C&I; KY - +5-7% resi and (15-20%). Given the extents of unknowns and a seemingly lack of conviction around full year guilde with 1Q results, we wouldn't be surprised for an expectation reset – albeit our estimates remain at the lower end but within their current guide.

FX Outlook: Forwards Remain Near Low End of Guide

After lowering embedded assumptions with an earlier update, FX rates and forecasts remain at the low end of the range. While the company is 86% hedged for the remainder of 2020 at an average rate of $1.55, it is only 8% hedged in 2021 at $1.32 and

completely exposed in outer years. On an open basis, every 1c in the exchange rate equates to about $0.01/sh of EPS for the company.

OFGEM Prospects: Contemplating Future UK Returns

Earlier this month, Offgem released its RIIO-2 draft proposals on price controls for the '21-26 period for transmission and gas distribution. The draft reflected a reduction of the base equity returns to 3.95% (post tax real, CPIH basis) for GT & GD, and 3.7% for ET vs. a previous 4.3% indication. The difference would appear principally driven by a change in lower interest rates reflected (and could yet change into the final decision).

While the draft proposals on Totex are 20-40% lower than business plans, the regulator indicated allowances to be considered on project by project basis instead of upfront considerations, and actual allowances could potentially be much higher than business plans. Ofgem's current base return proposal still includes a contentious -25bps adjustment justified by "information asymmetry" compared to -50bps adjustment previously included.

Shares of PPL underperformed on the news as we viewed the proposals more stringent than anticipated and as investors try to get a read-through to future returns for ED – a more protracted process that will shake out over the next couple of years. That said, the ED2 specific methodology expected later this month should provide some color around ED specific thoughts. We ultimately expect nuances between ED2 and the gas/transmission framework given different risk profiles. However, we see a desire from Ofgem to maintain incentives and give the best performing companies an ability to overearn, particularly as distribution networks will be a key enabler of the net-zero carbon target. Any developments out of the COVID crisis will also be critical in terms of nuances around their thought process for UK utilities longer term. *Our model assumes a base equity return of 3.95%, with up to 300bps of incentives.*

EPS Estimates

The table below reflects our latest EPS estimates after reflecting the latest currency forwards and on-going developments, and we see limited growth ahead given pension headwinds and questions around longer term UK returns, particularly without meaningful FX improvement.

Table 46: PPL EPS Estimates

Valuation: Risk/Reward Remains Balanced

The table below reflects our latest valuation based on a SOTP approach. On our latest estimates, we apply the current peer multiple of 17.1x (vs. 16.5x previously) for both PPL Electric and PPL Kentucky. Meanwhile, we ascribe a 25% premium to RAV for the UK biz.

Our PO ultimately remains unchanged at $27, and we continue to see risk/reward as balanced: Maintain Neutral.

Table 47: PPL SOTP

WEC Energy (WEC)

We expect WEC to hit the high end of its increased Q2 EPS guidance range of $0.67-0.69 for the quarter. WEC stood out as among the stronger 2020 guidance reaffirmations following Q1 reporting, with the company flagging ongoing O&M reductions above its original 2-3% forecast as an offset to an expected $70-80m gross margin drag due to sales lost resulting from Covid. The company provided an intra-quarter update where it flagged sales trending above its revised forecast, but it remains unclear whether the improving sales is due to faster-than-expected resumption of economic activity or to a higher incidence of Cooling Degree Days (CDDs) driven by unseasonably warm weather. Nonetheless, we perceive incrementally less pressure on mgmt. going into the Q2 print following the latest reaffirmation, and see the high end of 2020 guidance as well within reach.

WEC 2Q20 Earnings Walk

We forecast 2Q20 adjusted EPS of $0.69 compared to 2Q19 results of $0.74, consensus estimates of $0.67, and guidance of $0.67-0.69.

- **Key Drivers:** Weather is expected to be a key positive driver in Q2 with +3 cents from normalizing for below-normal temps in 2019 and an additional 5 cent uplift from warmer weather in 2019. While WEC has stated that Q2 sales have developed ahead of prior forecasts, we note it is unclear whether this is due to a faster reopening or to weather, accordingly we estimate an 8 cent quarterly drag from Covid lost sales based on company-provided sensitivities. American Transmission Co's (ATC) 3 cent uplift is driven by the Federal Energy Regulatory Commission's (FERC) Midcontinent Independent System Operator (MISO) order of 10.02% authorized ROE, recognizing benefits to 2015. Finally, in 2020 WEC realized the full benefits of its fuel cost recovery rider in Q1, resulting in a 2 cent drag in Q2 as compared to the prior year.

- **Unknowns**: Weather and Covid-linked shutdowns are both expected to have a disproportional impact on sales in Q2 and estimating the precise impact of both line items is difficult –warm weather along with a higher incidence of CDDs has coincided with the most acute period of lockdowns, largely mitigating the loss on our estimates. WEC maintains a Rabbi Trust to offset future legacy compensation obligations – while the trust tends to create Other Income in periods of strong market performance (as seen during Q2), the positive contribution tends to be offset in the O&M line, accordingly we do not estimate it in our walk below.

Table 48: WEC Q2 earnings walk

WEC 2Q20 Earnings Walk	EPS
2Q19 Adjusted EPS	$0.74
Weather - 2Q19 normalized	$0.03

Covid update and outlook

WEC last provided an update on Q2 sales expectations on its Q1 call, with the forecast below for the quarter and full-year results. An inter-quarter update from WEC disclosed that weather-normalized sales are trending above the current quarter outlook, which the full-year assumptions remain unchanged, following the lifting of state lockdown orders and resumption of business and commercial activity in a phased approach. Note that relative to 2019 normalized sales, mgmt.'s forecast calls for an annualized drop in total retail sales ex iron ore of 4.6%, with a modest 1.4% increase in residential sales offset by an 11.9% drop in C&I. While the WI Public Service Commission (WPSC) was one of the first commissions in the US to issue an order on deferral of Covid-related extraordinary items, we note the order includes bad debt and additional direct costs related to the pandemic and does not include lost revenues – we look to the Q2 update on cost cutting (where mgmt. flagged confidence) as well as weather contribution from higher than normal cooling days to provide the offset to lost revenues and allow mgmt. to hit the high end of its guidance range.

Table 49: WEC reported and forecast 2020 sales

	2020 Original	Q1 Actual	Q2 Forecast	2020 Revised
Residential	-0.2%	-4.6%	4.0%	1.4%
Small C&I	-0.3%	-2.6%	-8.0%	-4.6%
Large C&I	-1.0%	-3.1%	-18.0%	-10.5%
Total C&I	-1.2%	-2.5%		-11.9%
Total Retail	-0.6%	-3.2%		-5.3%
Total Retail ex iron ore	-0.5%	-3.4%		-4.6%

Source: Company report

Mgmt.'s Q1 announcement of an acceleration in cost cuts was predicated on offsetting an anticipated $70-80m in gross margin drag stemming from Covid. With additional Q2 data points now suggesting a meaningful weather tailwind, a key question remains whether mgmt. will continue to pursue aggressive cost reductions as originally planned, or whether an improving margin outlook will make less stringent cuts palatable. While some O&M reductions are a natural extension of telework and a reduced ability to travel, we perceive latitude to avoid certain discretionary cuts driven by better-than-expected contribution from weather during the quarter. Below we include our original estimate of O&M reductions aimed at offsetting the $70-80m of gross margin drag originally forecast from Covid-related shutdowns.

Table 50: Potential additional O&M savings; good historical success, but *where to now?*

Infrastructure update: modest delay to Badger Hollow II

Though not particularly surprising following the announced delay of the Badger Hollow I solar facility, Badger Hollow II announced a project delay with an updated in-service date of year-end 2022 vs. year-end 2021 previously. WEC's contribution of $130m to the project is modest relative to its projected $1.8B spend during the forecast period. Given the delays are linked to Covid and staging of work crews in rural WI, we do not see the delays as indicative of further slippage or lack of execution on future projects.

Reflecting an NPV valuation across the infra segment

We update our valuation methodology for WEC. While we had previously continued to use a P/E based approach for valuing WEC's planned investment other than announced projects, we now update our approach to reflect this across the segment. We see a DCF approach as increasingly relevant given the reflection of asset lives of wind projects as well as varying risk profiles by asset type.

Table 51: Allocated and unallocated infra investment – NPV approach

Project Name	Investment	Unlevered NPV	Unlevered IRR	Capacity	In Service
Upstream Wind	307	115	8.8%	180	Jan-19
Bishop Hill III Wind	166	72	8.9%	119	May-18

Estimates: Moving to high end of '20 guidance

We update our consolidated WEC ests to reflect the high end of mgmt.'s $3.71-3.75/sh 2020 guidance range. Given the degree of confidence reflected by WEC mgmt. in the company's ability to meet its guidance following its Q1 reporting – indeed before the Q2 weather impact was fully known and before raising its quarterly guidance range – we feel comfortable at the high end of the range, even given the backdrop of continuing pressure on sales from Covid. We also tweak our ATC numbers slightly to reflect the updated FERC ROE of 10.02% plus 50 bps adder, though this has a modest impact on our numbers. Bottom line: we continue to see earnings growth near the high end of mgmt.'s 5-7% long-term guidance range through the forecast period.

Table 52: WEC updated SOTP

Valuation

We update our valuation to reflect mark to market of electric and gas peer group multiples to 16.7x and 15.7x respectively. We additionally tweak our valuation premium applied to WI utilities to 4.0x to reflect the strong regulatory backdrop and long-term opportunity to invest in more rate base renewables. We also shift or Energy Infrastructure methodology to applying an NPV valuation to both announced as well as growth projects – recall that we had previously updated our valuation to reflect an NPV value for announced renewable projects. While execution by the mgmt remains strong and data points on sales remain constructive, we believe valuation is expensive with WEC shares trading at an implied P/E of 19.5x vs. electric/gas peer P/E of 17.5x/16.5x, respectively, reflecting 6-7% growth vs. mgmt.'s 5-7% guidance range even after the recent pullback that narrowed the premium between WEC and peers. We reiterate Underperform.

Table 53: WEC updated SOTP: raising our relative premium on WI to +4x and Bluewater to +2x; keeping renewables on DCF & IL at +1x. PTF also at +1x too.

Xcel Energy (XEL)

Below we find 2Q20 EPS of $0.43/sh, versus a $0.48/sh Consensus and a 2Q19 estimate of $0.46/sh.

- **Drivers**: We see Covid impacting sales about -5c, associated with a 6% sales drop; note our view that 2Q was impacted less than initially anticipated, but we expect the 'base case' for Covid to remain roughly around the same (or maybe just shy of the 'up to 17c EPS impact') as we think more impact could come later this year (e.g. if there is another shut-down or delay of openings). We expect this is balanced by +3c of O&M savings; while XEL communicated a 4-5% decrease YoY in O&M, we expect these to be more back-end loaded.

- **Others**: Rate changes in Minnesota (+4c), Colorado (+2c), and one month of NM (+0c) are not to be ignored. AFUDC was adjusted to $25-35mn annually (+1c) and capital rider revenue continues to add +2c. Interest expense (-2c) is in line with annual $50-60mn guidance, increase in D&A expense (-4c) is back end loaded, and property tax (-1c) is in line with annual $35-45mn guidance.

- **Unkown:**: Weather's return to normal was -1.4c and we expect another -1c of mild weather this quarter (which could be a wild card).

Adj capex to incl. 50% Minnesota stimulus

Adjusting incremental capex into our numbers: 50% probability weighting

Of the $3bn capex proposed with XEL's MN stimulus filing, roughly half is intended to accelerate capex already planned in later years of the 5-year outlook (e.g. distribution and natural gas spend). The other half is for newly proposed projects (e.g. wind repowering presumably under latest PTC extension, solar, and electric vehicle spend).

Capex opportunities likely include $1-1.4bn of wind repowering ('21-23), $650mn of solar ('23-25), and $100-150mn of EV infrastructure ('anytime' but we would expect '21-'25). It is unclear to us how the accelerated capex for already planned distribution and nat gas spend would re-arrange existing capex plans.

We provide details on how we include in our numbers below. We factor in a 50% probability weighting that the incremental capex is added in full, and we take an average of the assumed capex ranges per item. For example, wind repowering's $1-1.4bn capex opportunity averages to $1.2bn; with a 50% probability, we factor in $600mn of additional capex to the years '21-'23 – or $200mn each year in '21-'23. The same applies for solar ($108mn each year in '23-25) and EV infra ($12.5mn in '21-'25).

Bottom line, we see this as a net positive datapoint to shares and highlighting an emerging angle to capex. Moreover, we see the capex step-up as among the only such increases thus far in the sector; expect financing update discussion with 2Q as well pending success of filing. This critically drives cumulative gross EPS of ~$0.10 by 2025, or net of equity, ~$0.07 upside on our probability weighted basis. Upside to our ests below do not *directly* tie to this given other model refinements.

Table 55: Incremental capex factored into our Minnesota capex

Incremental capex associated with Minnesota stimulus (keeping the remaining 'accelerated' as is)						Prob. weight:	50%
Type	Details	2021	2022	2023	2024	2025	Total
Wind repowering	$1-1.4bn in '21-23	200	200	200			600
Solar	$650mn '23-'35			108	108	108	325
EV infrastructure	$100-150mn anytime	12.5	12.5	12.5	12.5	12.5	63
Total	$1.75-$2.20bn	213	213	321	121	121	988

Source: BofA Global Research estimates, company report

Below, we reflect how our capex numbers have been adjusted in our model. We leave existing capex as is (i.e. don't pull forward Minnesota capex associated with accelerated distribution and natural gas proposed spend) and we add in the incremental capex associated with wind renewables above.

Table 56: BofA modeled capex for XEL

Source: BofA Global Research estimates, company report

Recovery and commission procedures

We would anticipate the company looks to recover spend for wind repowering and solar incremental investments through its renewable rider, and spend for advanced grid through its transmission rider. Note the wind repowers would likely qualify for the 60% production tax credit (PTC) if equipment is safe-harbored this year in 2020. We expect the rest to fall under a sought after enhanced recovery mechanism that will be determined by the Commission. We also await developments on a wider effort to delay its rate case altogether and see the formal indication of such in this filing as a positive step.

More details on the capex positive: MN is first to stimulus program

As noted in our first take here, Xcel's Northern States Power Company Minnesota (MN) biz recently filed a proposal for $3bn accelerated and additional capex in the state. This will likely create new jobs in an effort to counter-balance 400,000 unemployment filings in MN from Covid and the economic shut-down. This is the first proposal of its kind nationally for a return to infrastructure 'stimulus' programs (akin to efforts in the 2008 GFC). Likely the first of several others – both in terms of peers following suit and XEL's other jurisdictions as well.

Fate of the docket: We see positively and giving rise to more

The filing seems likely to gain key support for two reasons. 1) It was made in response to the MN Public Utilities Commission (PUC) request from May to examine what utilities can do to spur jobs and economic development. 2) It will be in line with labor goals. We expect an update by later this year from the MN PUC as creating jobs amid a pandemic is a timely item, and we would also expect XEL to consider opportunities like this in other jurisdictions - particularly CO.

Next key datapoint: What happens with rate cases?

In its filing, the company expressed it would be open to staying out of a rate case in MN this year – in line with mgmt. commentary. Recall XEL was expected to file at the end of 2019 but was able to stay-out, meaning this would be the second stay-out. Whether this is possible will not be determined through this docket but rather was expressed by XEL as one way it could keep customer rates down. We expect to see discussion in the coming months of what XEL would need to file to pursue another stay-out. We would expect XEL to look similarly to CO as well – and that in both states it will expect to recover spend through existing trackers.

Estimates

We include our latest estimates below, highlighting capex changes made to the model as well as our assumption that 30% of this incremental capex (i.e. nearly $300mn) is funded with incremental equity. We include this additional equity need into our assumptions and find the EPS CAGR to be above midpoint of the 5-7% guide starting in '21 and beyond. Note that the our '20 estimates are the same as prior assumptions, given that while there was less Covid impact in 2Q than originally anticipated (just -5c we forecast associated with a 6% sales drop), there could be more impact on demand later this year given resurfacing concerns. XEL's base case includes 'up to 17c' of Covid impact for '20.

Valuation

We MtM our peer multiple to 16.3x from 16.7x before. We maintain our PO of $62.50/sh (unch vs prior) and we reiterate our Neutral rating as we factor in our 50% probability weighted Minnesota capex opp'y to the model. We note this still needs regulatory approval.

Price objective basis & risk

Alliant Energy Corporation (LNT)
Our $54.5 PO is based on a sum of the parts analysis employing relative premium and discounts to the large cap regulated peer multiple of 17.1x 2022E P/E. While our PO is on a 1 year basis we note the 2022 P/E multiple reflects a discount back to 2019. We note that electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector. We apply a 2.0x P/E premium on IPL as we see the ratecase overhang being resolved. We apply a 3.0x P/E premium on Eastern Wisconsin Electric Company reflecting 1) low risk investment nature of the state, 2) above average ROEs, 3) higher than average growth runway for investments, and 4) bad debt deferral. At ATC, we reflect a 2.0 x P/E premium on LNT's 16% share in the transmission company. Growth expectations for this segment are high, paired with above average ROEs that we believe face less downward pressure vs. regulated state distribution ROEs. We apply an in line multiple at the parent to account for the blend of numerous businesses some which benefit from long term stable PPAs via intercompany generation. Risks to our price objective are: 1) adverse rate case outcomes, 2) further equity dilution beyond our estimates, 3) interest rate risk, 4) natural disasters, and 5) lower allowed ROEs.

Ameren Corporation (AEE)
Our $79 price objective is predicated on a P/E based sum of the parts, valuing each business subsidiary relative to the 2022E ratebase weighted peer multiple of 16.3x for electric. We apply a 2.0x premium to peers at AEE Missouri to account for the improving prospects of capital spend, supplemented by a regulatory jurisdiction becoming more favorable - but lack of decoupling. We apply a 3.0x premium to peers at AEE Illinois to account for decoupling on the distribution business which aids in earnings predictability. The overall business is expected to grow at a more meaningful clip than that of peers - we see a 10% EPS CAGR at IL 2020-2024. At ATXI, we apply a 0x premium to peers to reflect the latest potential step down in FERC ROEs. At the Parent, we assume an in line multiple given the healthy debt metrics with FFO/Debt at 17%+. Electric peer P/E multiple is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector.

The upside (downside) risks to our price objective are the utilities earning their allowed returns or better (worse), a significant increase (decrease) in 30-year U.S. Treasury bond yields, and positive (adverse) regulatory outcomes that could impact mgmt's ability to earn its allowed return

American Electric Power (AEP)
Our price objective of $88 is based on SOTP analysis. We ascribe a peer forward P/E multiple (17.1x) with a 1.0x premium for its transmission-only Utilities segments, a 1.0x premium for its T&D utilities, and a 0x premium for regulated utilities as well as 2x for Kentucky Power. We note that electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector. We assume 100% likelihood of the North Central wind project and assign it a 0x premium under the reg utes as well.

Downside risks to our price objective are 1) regulatory outcomes are less favorable than expected, which could result in reduced ROE, 2) large capital intensive are subject to delays or cost overruns, which can change the return profile, 3) natural disasters or catastrophic events can affect system reliability and are subject to regulatory cost recovery risk, 4) utilities are subject to interest rate risk to fund their business, which affects cost of capital, 5) commodity risk affects the generation business margins and indirectly affects the regulated business as a pass through cost, 6) consumer advocates are focused on bill inflation, which can affect regulatory outcomes, 7) non-regulated businesses are inherently more risky and subject to execution risk and commodity variation.

American Water Works (AWK)
Our PO for American Water Works is $135. We apply the sector average 26.9x (vs. 26.3x) to American Water's 2022E earnings based on the water peer multiple and a 8.1% group EPS CAGR for '18-'23E. We think this multiple is justified as in our view AWK largely drives the peer multiple as the largest publicly traded water utility. We ascribe a 3x premium for NJ, PA, and IL, and a -3x discount to the military biz. Meanwhile, we ascribe a 12x multiple to the non-regulated Retail biz. Also a -1x P/E for Cali utility. no prem/discount for 'Other' segment with smaller state exposures.

Risks to the downside are increase in market interest rates, potential impact of tax reform on utilities, operational errors, changes in valuation levels for water utilities. Risks to the upside are accelerating muni acquisitions, multiple expansion, and constructive legislation in regulatory jurisdictions

Consolidated Edison (ED)
Our $86 PO is based on a sum-of-the-parts analysis applying premiums and discounts to the regulated group multiples (16.8x/15.8x for electric/gas respectively) with a 1.0x premium to reflect defensive nature of the stock, and -1.0x discount on Steam to reflect lack of decoupling / weather risk. We note that both electric and gas peer P/E multiples are grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We applied inline peer regulated multiple at CECONY despite its rate certainty for conservatism as our higher capex expectations are reflected in our EPS outlook. We apply a discounted PE for infrastructure projects given the lack of clarity around the capital structure. We further apply an EV/EBITDA approach on 2022E EBITDA to the CEB business using a 10.0x multiple for both the legacy portfolio and the renewables portfolio seeing it as having higher quality returns.

Downside risks: ED, like all utility stocks, is also sensitive to changes in the market level of interest rates. Utilities historically underperform if bond yields rise, and outperform when they fall. Further downside risks are the inability to recontract storage, adverse regulatory outcomes, a deteriorating regulatory environment, or unforeseen disasters such as the Harlem gas explosion, the SRE transaction not being completed. Customer inflation is also a downside risk. PCG related counterparty exposure is among the nearest exposures to watch.

DTE Energy (DTE)
We value DTE Energy at $115 using a SOTP approach.
We value the utility segment on a 2022E forward P/E multiple basis and the non-utility seg. on a 2022E forward EV/EBITDA multiple basis. For the utility segment we apply a 2x premium to our both reg. electric and gas utility peer multiple of (16.5x and 15.6x respectively). Both electric and gas peer P/E multiples are grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We subtract out Corp & Other expense excl. interest rate.
For GSP we use a midstream peer group multiple of 9x, with a -1x discount for Momentum. P&I, we apply an 8x EV/EBITDA multiple, despite the lower equality of these earnings and opaque disclosures, as mgmt has been able to execute on new project origination. We value the reduced emissions fuel (REF) tax credits separately using a DCF methodology at 6% discount rate.

Upside risks to our PO are capex expansions, higher authorized ROEs, and strong performance in the ET segment. Downside risks are interest rate hikes, execution risk on organic growth initiatives at the nonregulated business, and less favorable regulatory environment.

Duke Energy (DUK)
Our $87 PO is derived from a sum-of-the-parts valuation. We value the Electric and Gas utilities using peer 2022E P/E multiples. We apply a 1.0x multiple premium to Duke's

operations in FL/IN to reflect more favorable regulatory environments. We apply an in-line multiple to the Carolinas given risk ahead. We value the other regulated electric utilities at 17.1x and the gas utilities at peer group multiples of 15.9x 2022E P/E, respectively. Both electric and gas peer P/E multiples are grossed up by 5% for the groups CAGR to reflect capital appreciation across the sector. The commercial midstream, and transmission are valued on a 2022E EV/EBITDA basis. We use a 9.0x multiple for midstream and transmission segment. We add the net present value of renewable segment using an 8% discount rate. We subtract out the impact of commercial debt, and add back for the renewable debt.

Upside risks: constructive rate case results, higher capital expenditure additions vs our assumptions, lower interest rates. Downside risks: poor rate case results, operating errors, and negative changes in the regulatory environment, Macro risks: Increases in interest rates and decreases in equity market valuations.

Edison International (EIX)
Our $65 PO is based on SOTP, applying a 4x disc to the FERC and CPUC jurisdictional subsidiaries, and the parent/other segment 17.1x on 2022E (grossed up by 5% to reflect capital appreciation across the sector). The disc reflects CA ongoing wildfire risk despite the improved construct through AB1054. We apply 10x 2022E P/E to the Edison Energy segment to reflect uncertainty in the nascent biz. We net out ongoing contribution to the fund on an NPV basis.

Downside risks: 1) Regulatory outcomes less favorable than expected. 2) Natural disasters or catastrophic events can affect system reliability and are subject to regulatory cost recovery risk. 3) Interest rate risk. 4) Non-reg businesses are inherently more risky and subject to both execution risk and commodity variation. 5) CA has specific risks given the differentiated regulatory regime. 6) CA wildfires.
Upside risks: rate case outcome above what's embedded in companies' guidance and BofA estimates, lower interest rates, more constructive regulatory / legislative outcomes to address wildfire risk

Essential Utilities (WTRG)
Our price objective is $47 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. We apply a 2.0x premium to Peoples Gas given the organic growth opportunities.We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

Risks to the upside include upward revisions to street estimates and further accretion from implementation of the Repairs Tax Benefit.

Evergy, Inc (EVRG)
Our $68 price objective for EVRG shares is based on sum of the parts valuation, applying an in-line utility peer 2022E P/E of 17.1x. Electric peer P/E multiple is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We further apply a +2.0x turn discount across all jurisdictions based on our perception of improving regulatory relationships and possibility of further stakeholder engagement.

Downside risks to our price objective are adverse regulatory outcomes in rate cases, higher interest rate environments, adverse and unexpected risks associated with operating a nuclear facility, the possibility that the strategic review committee does not result in a transaction recommendation and that a modified standalone plan disappoints in rate base and earnings growth when presented later in 2020.

Upside risks to our price objective are favorable regulatory outcomes in rate cases, lower interest rate environments, higher than anticipated O&M benefits and merger synergies, ability to recover capital tied to retired coal plant.

FirstEnergy (FE)
Our PO of $45.5 is based on a SOTP: Multiples are driven by relative P/E premiums/discounts to the 2022 regulated peer multiple of 17x (previously 16.9x) . Electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector. As for premiums/discounts, we view NJ as in-line given a generally constructive commission, PA as in-line as we view our more punitive ests already account for industrial load sensitivity incl O&G royalties, and others as in-line. In OH, we apply a -1x P/E discount multiple, We argue this accounts for overearning risk. Finally, we apply a 0x P/E premium to peers 2022E multiple to the Transmission business given some limited ability to invest and FERC ROE difficulties. We removed impact of DMR payments. We subtract out the holding co debt given the high parent lev. We net out potential liabilities from a potential FES bankruptcy by assuming all known 'extra' potential liabilities.

Downside risks: 1) Reg outcomes may improve/deteriorate, 2) legislative solutions may materialize for challenged parts of biz or FE could lose/fail to gain legislative support in key states, 3) int rates positively/negatively affect cost of cap, 4) reg staff or cons advocates may focus on issues beneficial/detrimental to ROEs, 5) exit from comp power biz may or may not have substantive liabilities accrued to equity holders.

Pinnacle West (PNW)
Our price objective of $78 is based on a peer utility 2022E P/E multiple of 16.6x with a -2.5x discount to account for PNW's risk around its pending rate case as well as headline risk related to disconnect policy review. Electric and gas peer P/E mult is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We ascribe an in-line premium despite clear renewable capex backdrop given ongoing regulatory risk associated with the company's upcoming rate filing and 2020 election risk.

Upside risks: 1) Regulatory relationships/outcomes could improve, including changes at the elected commission 2) load growth in territory above expectations 3) Riders and capital trackers could help achieve ROE 4) positive weather helps earnings 5) interest rate risk changes cost of capital - lower rates could improve 6) Consumer advocates or utility staff could become focused on issues that improve ROE

Downside risks: 1) Regulatory relationships/outcomes could decline, including changes at the elected commission 2) load growth in territory below expectations 3) Riders and capital trackers could hurt ROE 4) negative weather hurts earnings 5) interest rate risk changes cost of capital - higher rates could worsen 6) Consumer advocates or utility staff could become focused on issues that hurt ROE 7) Solar advocates in the state have engaged in public confrontations with the utility, which could change public relations in the future.

PPL Corporation (PPL)
Our $27 price objective is based on a sum of the parts methodology applying respective premium/discounts to the 2022E peer group multiple of 16.5x. Electric peer P/E multiple is grossed up by 5% to reflect capital appreciation across the sector. We apply a 1.25x RAV multiple in our base case for our Western Power Distribution (WPD) RAV approach, seeing the higher ROEs relative to other distribution networks commanding a premium valuation.

Downside risk to our price objective is exposure to FX rates. Since the UK segment represents a significant portion of PPL's earnings, a Federal Reserve decision to raise interest rates could produce a fall in the GBP/USD currency rate that would adversely

affect our estimates and valuation for PPL. Also, like all utility stocks, PPL has historically underperformed if bond yields rise. Upside risks are a rising $/pound (GBP) price, positive regulatory outcomes, and decreasing treasury yields.

WEC Energy Group Inc (WEC)
Our $83 PO is based on a 2022E SoTP analysis, based on the large cap electric group multiple of 16.7x and the gas regulated multiple of 15.7x. Both electric and gas peer P/E multiples are grossed up for a year to reflect capital appreciation across the sector.

We apply a 4.0x premium to WEC's WI electric & gas subs to compensate for surety in earnings growth for the next two years following the Commissions affirmation of the recent settlement on above average ROE's of 10%+. We apply a 1x premium to the gas utilities, incl IL's Peoples Gas and North Shore Gas with the Gas System Modernization Program (GSMP) and capex forecasts de-risked following the ICC order. We ascribe a 2x premium vs. the group at ATC to account for the steady nature of earnings growth as well as above average ROE's that are set at a federal level by FERC. We give Power the Future (PTF) a 1.0x premium multiple given the ROE is set indefinitely on historical and new investments. We ascribe an in line multiple for the parent accounting for the interest expense which finances overall utility operations. For the HoldCo adjustment to debt, we net out 50% of HoldCo debt from equity valuation and adjust to add back the parent drag on interest exp.

Upside risks are stronger than expected execution and accelerating capital oppt'y.

Downside risks are inability to achieve historical track record on cost cutting and ability to cont. to scale regulated investments given growing portion from contracted renewables.

Xcel Energy Inc (XEL)
Our PO is $62.5. We value Xcel Energy using a sum of the parts (SOTP) approach. Given the difference in geography, earnings strength, growth opportunity and risk profile, we divide the segments by subsidiary.

We use 2022E forward P/E multiples to derive a value for the different business segments, including the parent segment. We use a peer multiple of 16.3x . Electric peer P/E multiple is then grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector. We apply a 3x premium to subsidiaries. We see this multiple as appropriate as the company has growth opportunities, resolving regulatory drag and resolving uncertainty around rate cases. We stripped Mankato as a non-reg asset in our SOTP due to the sale. We also net back 50% of the parent interest expense and instead subtract out 50% of parent debt to more accurately reflect HoldCo leverage.

Downside risks are interest rate increases, regulatory risk such as lower authorized ROEs or less favorable riders/trackers for renewables and transmission, interest rate risk, execution delays, and weather anomalies.

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

Price charts for the securities referenced in this research report are available at https://pricecharts.baml.com, or call 1-800-MERRILL to have them mailed.
BofAS or one of its affiliates acts as a market maker for the equity securities recommended in the report: Alliant Energy Corp, Ameren Corp, American Elec Power, American Water, Consolidated Edison, DTE Energy, Duke Energy, Edison Intl, Essential Utilities, Evergy, FirstEnergy, Pinnacle West Capit, PPL Corp., WEC Energy Group Inc, Xcel Energy.
BofAS or an affiliate was a manager of a public offering of securities of this issuer within the last 12 months: Amer Elec Power, Ameren Corporation, DTE Energy, Duke Energy, Essential Utilities, Evergy, FirstEnergy Corp, Xcel Energy Inc.
The issuer is or was, within the last 12 months, an investment banking client of BofAS and/or one or more of its affiliates: Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Consolidated Edison, DTE Energy, Duke Energy, Edison Intl, Essential Utilities, Evergy, FirstEnergy Corp, Pinnacle West Capita, PPL Corp., WEC Energy Group Inc, Xcel Energy Inc.
BofAS or an affiliate has received compensation from the issuer for non-investment banking services or products within the past 12 months: Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Consolidated Edison, DTE Energy, Duke Energy, Edison Intl, Essential Utilities, Evergy, FirstEnergy Corp, Pinnacle West Capita, PPL Corp., WEC Energy Group Inc, Xcel Energy Inc.
The issuer is or was, within the last 12 months, a non-securities business client of BofAS and/or one or more of its affiliates: Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Consolidated Edison, DTE Energy, Duke Energy, Edison Intl, Essential Utilities, Evergy, FirstEnergy Corp, Pinnacle West Capita, PPL Corp., WEC Energy Group Inc, Xcel Energy Inc.
BofAS or an affiliate has received compensation for investment banking services from this issuer within the past 12 months: Alliant Energy, Amer Elec Power, Ameren Corporation, American Water Works, Consolidated Edison, DTE Energy, Duke Energy, Edison Intl, Essential Utilities, Evergy, FirstEnergy Corp, Pinnacle West Capita, PPL Corp., WEC Energy Group Inc, Xcel Energy Inc.
BofAS or an affiliate expects to receive or intends to seek compensation for investment banking services from this issuer or an affiliate of the issuer within the next three months: Alliant Energy, Amer Elec Power, American Water Works, Consolidated Edison, DTE Energy, Duke Energy, Edison Intl, Essential Utilities, Evergy, FirstEnergy Corp, Pinnacle West Capita, PPL Corp., Xcel Energy Inc.
BofAS together with its affiliates beneficially owns one percent or more of the common stock of this issuer. If this report was issued on or after the 9th day of the month, it reflects the ownership position on the last day of the previous month. Reports issued before the 9th day of a month reflect the ownership position at the end of the second month preceding the date of the report: Amer Elec Power, American Water Works, DTE Energy, Duke Energy, FirstEnergy Corp, WEC Energy Group Inc.
BofAS or one of its affiliates is willing to sell to, or buy from, clients the common equity of the issuer on a principal basis: Alliant Energy Corp, Ameren Corp, American Elec Power, American Water, Consolidated Edison, DTE Energy, Duke Energy, Edison Intl, Essential Utilities, Evergy, FirstEnergy, Pinnacle West Capit, PPL Corp., WEC Energy Group Inc, Xcel Energy.
The issuer is or was, within the last 12 months, a securities business client (non-investment banking) of BofAS and/or one or more of its affiliates: Alliant Energy, Amer Elec Power, Ameren

Corporation, American Water Works, Consolidated Edison, DTE Energy, Duke Energy, Edison Intl, Essential Utilities, Evergy, FirstEnergy Corp, Pinnacle West Capita, PPL Corp., WEC Energy Group Inc, Xcel Energy Inc.
BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Global Research policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for the purpose of any recommendation in relation to: (i) an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report; or (ii) a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including BofA Securities trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.
Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.
BofA Global Research policies relating to conflicts of interest are described at https://rsch.baml.com/coi
"BofA Securities" includes BofA Securities, Inc. ("BofAS") and its affiliates. Investors should contact their BofA Securities representative or Merrill Global Wealth Management financial advisor if they have questions concerning this report or concerning the appropriateness of any investment idea described herein for such investor. "BofA Securities" is a global brand for BofA Global Research.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including,

among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Securities entities located outside of the United Kingdom.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

BofA Securities is not responsible for such terms and privacy policies and expressly disclaims any liability for them.

All opinions, projections and estimates constitute the judgment of the author as of the date of publication and are subject to change without notice. Prices also are subject to change without notice. BofA Securities is under no obligation to update this information and BofA Securities ability to publish information on the subject issuer(s) in the future is subject to applicable quiet periods. You should therefore assume that BofA Securities will not update any fact, circumstance or opinion contained herein.

Subject to the quiet period applicable under laws of the various jurisdictions in which we distribute research reports and other legal and BofA Securities policy-related restrictions on the publication of research reports, fundamental equity reports are produced on a regular basis as necessary to keep the investment recommendation current.

Certain outstanding reports or investment opinions relating to securities, financial instruments and/or issuers may no longer be current. Always refer to the most recent research report relating to an issuer prior to making an investment decision.

In some cases, an issuer may be classified as Restricted or may be Under Review or Extended Review. In each case, investors should consider any investment opinion relating to such issuer (or its security and/or financial instruments) to be suspended or withdrawn and should not rely on the analyses and investment opinion(s) pertaining to such issuer (or its securities and/or financial instruments) nor should the analyses or opinion(s) be considered a solicitation of any kind. Sales persons and financial advisors affiliated with BofAS or any of its affiliates may not solicit purchases of securities or financial instruments that are Restricted or Under Review and may only solicit securities under Extended Review in accordance with firm policies.

Neither BofA Securities nor any officer or employee of BofA Securities accepts any liability whatsoever for any direct, indirect or consequential damages or losses arising from any use of this information.

Essential Utilities

All Aboard: Upgrading to Buy as WTRG Plan More than Just Holds Water

Rating Change: BUY | PO: 52.00 USD | Price: 47.27 USD

Execution Remains Strong Despite Pandemic Backdrop

Following a strong 2Q and mgmt. affirmation of guide, we are jumping back in to WTRG and upgrading from Neutral to Buy. We see shares as poised to outperform with consistent quarterly execution to drive EPS of $1.53-$1.58 this year and the 5-7% EPS CAGR through '22, and stress incremental upside opportunities as acquisitions continue to materialize across their water footprint (we stress sharp contrast vs. peer AWK who already reflects acquisitions in guide). With favorable transaction legislation now enacted in all eight of their Aqua jurisdictions, we expect water rate base to grow well in excess of the 6-7% outlined through '22: the further municipal budget strain from the ongoing pandemic will likely accelerate consolidation in the industry at an even faster pace - and we expect additional developments over the next several months (after closing two deals already in '20 with four add'l signed agreements translating to ~$300Mn of rate base & ~$15Mn of earnings). Meanwhile, the 2,700 miles of pipe replacement at the recently acquired Peoples Gas segment will help drive 8-10% organic rate base through '22 and beyond - while mgmt. benefits from repairs tax treatment at the sub in PA to drive returns without the need for a rate case (with the repairs tax catch up component filed with the commission last Thurs providing even more latitude). With a growing focus on ESG – and mgmt.'s proactive action around PFAs – we see this an underappreciated angle not reflected at the current valuation (particularly vs. peer AWK with an elevated premium). Bottom line, we see shares as poised to re-rate higher given consistent execution, elevated growth prospects, and increasing appreciation for clean quality stories.

Upgrading to Buy

While our estimates are largely unchanged, we have increasing conviction in mgmt.'s ability to consistently deliver and see the company as a prime beneficiary of further consolidation across the water industry - while the latest filing for the catch up component of Repairs Tax treatment in PA should provide further latitude to stay out of rate cases for the gas segment. After applying slightly higher premiums and marking to market for the latest water and gas multiples (28.1x and 16.3 vs. 26.9x and 15.9x previously), our PO ultimately shifts to $52 (from $47 previously). Upgrade to Buy.

Company Sector

Water Utilities

Company Description

Essential Utilities is a regulated water/gas providing water or wastewater services to 3M customers in the states of PA, OH, TX, IL, NC, NJ, IN, and WV, with PA segment being the largest contributor to the NI - along with a natural gas presence through the recently acquired Peoples Gas providing distribution services to 740,000 customers in PA, WV, and KY.

Investment Rationale

We are Buy rated on shares of WTRG, seeing shares as poised to re-rate higher given consistent execution, acquisition upside, and increasing conviction around the premium story.

Stock Data

Average Daily Volume	905,604

Quarterly Earnings Estimates

	2019	2020
Q1	NA	NA
Q2	NA	NA
Q3	NA	NA
Q4	NA	NA

Why We're More Constructive Again

We are upgrading shares of WTRG following another consistent quarter of execution by management. Following a large 2Q beat, mgmt. reaffirmed their 2020 EPS of $1.53-$1.58 (while peer AWK revised down on COVID impact) and a 5-7% EPS CAGR through '22. We have increasing conviction around mgmt.'s ability to consistently deliver and see upside risk from further acceleration in muni acquisitions (excluded from guidance while already contemplated in the growth plan for AWK). In the near term, resi strength of their portfolio and constructive regulatory treatment (with the March order from the PA PUC boding particularly favorable given their large presence in the state) position the company to navigate pandemic challenges while the growing pipeline of municipal opportunities should provide a long term tailwind for the water biz; meanwhile after electing to implement Repairs Tax for the gas biz in PA (and a catch up filing to amortize capital already spent filed last week), we see a clear runway to drive earned returns for the next several years (Mgmt. noted expectations for the initial filing to drive $0.08-$0.12 worth of contribution for the year).

Following the adoption of Fair Market Value legislation in TX and VA, the company now has the constructive legislation in all eight states of their water footprint. We expect this to help further accelerate consolidation in the industry as muni budgets are further flex'd from the crisis - and any further resulting acquisitions would be upside to mgmt.'s latest reaffirmed targets. Despite the more recent adoption in the state, WTRG already announced their first acquisition in TX under the legislation and we perceive more and more acquisitions of muni's to materialize over the next several months across their footprint. Meanwhile, we are less concerned around recent media headlines around the DELCORA acquisition: we don't see meaningful risk to the deal and it remains upside to estimates over time from the currently laid out plan. With the PUC fully accepting the application last week, mgmt. noted expectations to close the transaction in early '21. Overall, we stress $300Mn+ in rate base opportunities from signed APAs expected to generate ~$15Mn in earnings that are all upside to the currently laid out plan.

Bottom line, we see upside to the plan given the more conservative approach to guide, and expect shares to rerate higher relative to AWK as investors continue to appreciate the premium story amid consistent management execution.

EPS Estimates

The exhibit below reflects our latest EPS Estimates. In addition to limited risk to NT numbers (despite some dilution from the expected equity offering) given the defensive nature of their portfolio and constructive regulatory treatment, we see the company as poised to deliver on their 5-7% EPS CAGR – with upside from a likely acceleration in industry consolidation. We continue to model towards the high end of their 5-7% EPS CAGR through '22. With consistency the metrics many in the industry continue to pursue as part of further re-rating opportunities, we see the relative *lack* of outperformance of late despite its track record and its relatively attractive ESG profile make it among the more compelling investments. With prospective EPS growth likely more consistent than earlier trajectory (which proved more 'lumpy' we perceive the outlook as ever more appealing for those seeking a de-risked outlook).

Valuation: Upgrading to Buy with $52 PO

The exhibit below reflects our latest SOTP after applying the current peer multiples to our valuation: 26.9x for water and 15.9x for gas (vs. 26.9x for water and 15.9x for gas previously). We raise our premiums across the board given particular confidence in management and their consistent ability to deliver, strong municipal acquisition prospects, and an underappreciated ESG angle. Our PO shifts to $52 (from $49 previously) and we are upgrading to Buy.

We note shares have notably lagged AWK, which has also consistently executed. We attribute some of this to WTRG's ownership of gas utility: ultimately we view this as quite value accretive and EPS accretive given sharp discrepancy in valuations. The question remains whether investors will value the consolidated entity for a clean(er) story with a carbon profile driven by a gas utility. We already substantially discount the gas utility: we perceive comps for the gas utility itself could well include the likes of ATO among other higher quality avenues.

We perceive management to be exceptionally consistent and focused on executing across a range of opportunities. Numerous acquisition avenues yet to be discovered.

Table 2: SOTP

Price objective basis & risk

Essential Utilities (WTRG)
Our price objective is $52 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. These peer multiples are 28.1x and 16.3 vs. 26.9x and 15.9x, respectively, previously. We apply a 3.0x premium to Peoples Gas given the organic growth opportunities, while applying a variety of premiums to its water (2x previously) subsidiaries: +4x to PA, +3x to IL, +2x to OH, +2x for TX, +2x for OH, and no premium for balance of biz.We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

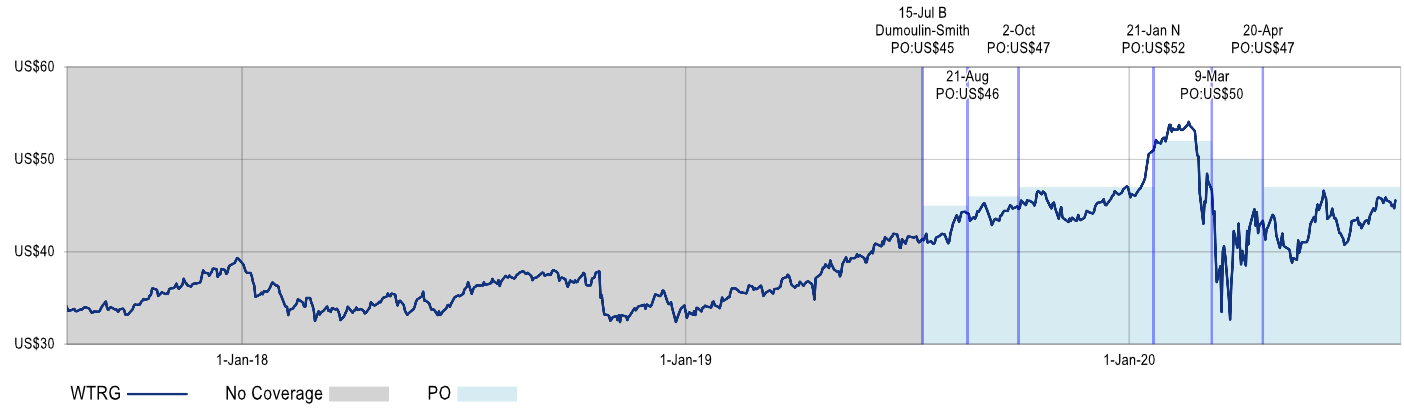
Essential Utilities (WTRG) Price Chart



B: Buy, N: Neutral, U: Underperform, PO: Price Objective, NA: No longer valid, NR: No Rating

The Investment Opinion System is contained at the end of the report under the heading "Fundamental Equity Opinion Key". Dark grey shading indicates the security is restricted with the opinion suspended. Medium grey shading indicates the security is under review with the opinion withdrawn. Light grey shading indicates the security is not covered. Chart is current as of a date no more than one trading day prior to the date of the report.

Equity Investment Rating Distribution: Utilities Group (as of 30 Jun 2020)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	76	51.01%	Buy	56	73.68%
Hold	33	22.15%	Hold	22	66.67%
Sell	40	26.85%	Sell	29	72.50%

Equity Investment Rating Distribution: Global Group (as of 30 Jun 2020)

Coverage Universe	Count	Percent	Inv. Banking Relationships*	Count	Percent
Buy	1632	52.21%	Buy	1031	63.17%
Hold	711	22.74%	Hold	444	62.45%
Sell	783	25.05%	Sell	407	51.98%

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

So big surprises? No; but datapoints, plenty.

As we close out this year's EEI we appreciate that few companies provided material updates. That said numerous companies provided substantive incremental datapoints on their trajectories – and overall large-cap companies did well in de-risking their outlooks including D, DUK, SO, and NEE. While large-caps have done relatively well already this year, we perceive support for each of these discrete stories to bolster sector prospects. By contrast, among the lone more cautious updates was AEP's '21 EPS guidance release & 5-yr view, which painted a slowing view vs earlier elevated expectations. Among other companies offering more cautious updates on their prospects included FE and EVRG albeit both are already at substantial discounts. We perceive persistent confidence in CNP on its subsequent roll forward (with details on both ENBL and LDC strategy), and a positive clear read-thru to NI. We suspect both will continue to trend well. With LDCs in focus, we perceive BKH as warranting greater attention given initiation of an EPS CAGR & yet further positive capex revisions. Other smids such as IDA and POR offered confidence inducing updates on their prospects – with expectations still relatively lower for POR, we flag this as particularly compelling. Finally, with DTE among the most controversial equities into the EEI conference we see mgmt's ability to add cnofidenc to reaching the high end of '21 affirmed that lingering doubts on spin could drive yet a further pos re-rating. Meanwhile on rate case developments, PNW offered among the single updates for a constructive new rider to limit renewable lag but ACC acceptance is still key. See earlier write-ups from Day 1, Day 2 and Day 3 here.

So who were our latest meetings? Wednesdays Slate

We met with AY, ED, ES, HE, LNT, MGEE & WTRG yesterday to close out the conference. AY appears poised to provide substantial 4Q updates, likely slowing its DPS growth to a mid-single digit (see table below), from 8-10%. That said, buyout opportunities of partners and expansions at existing sites provide a rare opportunity for higher return opportunities for YieldCo. We stress its focus on smaller acquisitions too also lend themselves to sustained higher returns too. ED's new CEO was indeed impressive & thoughtful on expanding ED increasingly into renewables; its challenges in NY remain real with pressures on '21 EPS. ES was indeed positive – and whether it raises its outlook for a 6-8% EPS CAGR (or not), we see a clear bias to argue this company will achieve a 7% EPS CAGR through '25 when disclosed on 4Q call (formally rolling in transmission, CMA accretion, and smaller South Fork offshore wind project). With expectations higher, these developments appear largely appreciated by the market. Rather, more importantly, we perceive near-term confidence around draft net metering decision and forthcoming affirmation on BOEM permitting process as all boding relatively well for shares. As for LNT, we perceive confidence on substantial cost reductions & emphasize this aspect as a key point to enable yet further T&D spending (that was otherwise displaced with its 3Q updates with renewables taking its 'place' in its 5-year capex budget). On balance, our favorite defensive utility still. MGEE was indeed constructive on just how further coal retirements could meaningfully shift its outlook from cost structure – enabling yet larger capex program and potentially protracted rate case stayouts. Our ES PO shifts to $95 (vs. $90) on group multiples.

Alliant Energy (LNT)

Alliant mgmt. highlighted the meaningful rate of change ahead in the composition of its generation portfolio, with an estimated 14% of its 2020 rate base allocated to coal generation forecast to shift to 7% by 2030 following the retirement of Lansing, conversion to gas of Burlington, and in-servicing of currently planned renewables (1000 MW WI solar, 400 MW IA solar). Among the operational improvements driven by the evolving generation portfolio are meaningful reductions in O&M, with mgmt. targeting cuts of 3-5%/yr, among the more impressive cost cutting targets across our coverage. Maintain Buy on LNT as remains our favorite defensive utility idea.

Driving 3-5% O&M reduction through renewables build

With 1400 MW of solar scheduled to come on line in coming years along with pending retirements of Edgewater (414 MW in 2022), Lansing (275 MW in 2022), and conversion of Burlington (2021), LNT mgmt. flagged an impressive outlook for O&M reductions of 3-5% per annum through 2024 as high fixed cost generation is swapped for renewables. The majority of savings are expected to come from lower overhead associated with no longer operating coal generation (including lower headcount) as well as additional investments in technology and automation across the enterprise. We note that the overall trajectory of O&M reduction implies ~15% aggregate savings over the course of the forecast period, one of the more impressive cost reduction trajectories across our coverage. Following the latest announcements of coal retirements and conversions in Iowa, mgmt. continues to evaluate the rest of its coal burning fleet to determine if and when an accelerated retirement is appropriate (coal rate base expected to fall from 14% to 7% of total through the decade). We note that MGEE mgmt. has been discussing potentially accelerating the retirement of Columbia generating (which is co-owned by LNT, MGEE, and WEC) though LNT mgmt. has stressed that it continues to evaluate plant productivity with needed future investments in deciding whether or not to accelerate a retirement.

Cash tax runway until 2024, steady balance sheet improvement seen

LNT mgmt. sees itself as not paying cash taxes based on its current appetite and tax credit profile until 2024. Mgmt. is not currently making any assumptions about potential monetization of investment tax credits in the event that such a provision were passed as part of a stimulus bill – the expectation remains that the federal government is reluctant to pick winners in terms of fuel type when crafting tax policy as it pertains to renewable generation. In terms of the balance sheet, LNT sees its FFO metrics improving over the course of the forecast period with current levels in the 'mid teens' (our forecast sees a range from 16-18% through 2024).

Clear path to 5-7% through 2024

While we attribute some of LNT shares' underperformance in the week following the Q3 announcement to lingering expectations of a capex increase at the roll-forward, we now sense that investors have largely come to appreciate that the composition of spending is weighted toward renewables in the near part of the forecast period, with a corresponding shift toward more distribution spend in later years. With no block equity in the current forecast and robust O&M reductions targeted, we continue to see LNT as one of the best-positioned Midwest utilities looking ahead.

Atlantica Sustainable Infrastructure (AY)

We continue to question the yieldco ESG re-rating trend, given the level of growth prospects that has been priced into shares across the sector. With AY expected to announce '21 guidance and a LT growth CAGR next quarter, we remain skeptical around ability to maintain 8-10% DPS growth. That said, mgmt expects AY's valuation to be supported by $200-$300mn of annual investment, at high-single-digit to low-double-digit returns, and an 80% payout; if achievable, this could admittedly help support div growth. The critical question will be whether the opportunities exist. In European markets, we note several administrations pushing for infrastructure programs with renewable components. The U.S., similarly, may provide a supportive environment for renewable development. The other question will be the level of support received from AY's sponsor AQN, given their own current issues. We would expect less support from AQN near-term, although in the longer term this may change. Maintain Neutral.

How to justify the yieldco re-rating trend?

Our meeting focused firstly on the latest yieldco re-rating trend, with questions on being able to justify current valuations in the sector. Mgmt expects AY's valuation to be supported by growth, with $200-$300mn of investments annually, including in 2020 thus far. Finding opportunities with an adequate return profile will be the key challenge, given declining returns across the renewables space. Mgmt did note that while returns have seen compression over the last couple of years, the recent declines in interest rates have helped to make returns somewhat more justifiable. A higher share price should further help to reduce dilutive impact of dropdowns partially funded with equity issuance. Assuming a high-single-digits levered return on equity investment and an 80% payout on ~$250mn annual investment and employing 3.3x CAFD/Debt, we perceive AY could potentially stand to grow at **~4% annual DPS**; suspect a substantially moderated growth rate from 8-10% given reduced usage of HoldCo debt. We note the $200-300 Mn is a placeholder but mgmt. appears abundantly confidence it can execute at this scale with its current employee base. However, the critical question will be whether sufficient opportunities exist today to generate this level of investment at adequate returns.

Exhibit 1: Placeholder drop down math

Drop Down Math			
		HoldCo Debt	74.25

Growth prospects and return expectations across geographies: watch for expansions & buyouts of partners *to continue*

In the U.S., Atlantica targets high single digit returns, while in international markets, the target is in the low double digits in certain geographies. In European markets, we see several administrations pushing infrastructure programs with renewable components which could drive growth for AY (given strong Spanish base with solar asset portfolio). In the U.S., as well, a potential Biden administration could boost growth prospects through improved returns and opportunities. We note AY's continued expansion in North American markets with its first investment in Canada, a $20mn district heating

investment. Separately, we highlight room for several more "niche opportunities" akin to the recent Solana tax equity investor buyout (we note peers including CWEN have also entered this area with re-powerings of existing projects).

Growth: Dropdowns vs. third-party partnerships vs. M&A

Atlantica noted several avenues through which to pursue growth, including investments to develop existing assets, partnerships with developers and construction companies (e.g. Algonquin, etc.), and third-party M&A through competitive deals. While AY expects that partnerships may comprise a smaller portion of growth in the short term (as partners are still developing their portfolios), longer term they are expected to make up a greater portion of the overall development pipeline.

Consolidated Edison (ED)

Con Ed's incoming CEO presented his vision for the company that largely builds on the strategic direction of the utility and non-reg business to date. At the regulated utilities the near term challenge remains managing the financial and operational impacts of Covid which are expected to persist into 2021 (and led to the recent '20 guidance cut). At the Clean Energy Business, the company continues to target investments of $400m/yr with an expectation to pivot to greater reliance on tax equity given its $800m backlog of accumulated tax credits as well as pursuing develop-build-flip projects that are less capital intensive. Incremental renewable investment opportunities were laid out for the regulated business as well, though the EV 'make ready' initiative had been previously known and battery storage potential remains in early days. Maintain Neutral on ED; we were impressed by the incoming CEO's eloquent description of future strategy – and efforts to expand renewable mandate but perceive pressures as likely to persist into 2021. We see question as still pending around future gas strategy, pressures from lost fees persisting into '21, and a regulatory backdrop that remains at an elevated risk (into 1Q21 O&R rate case filing). On balance, we perceive challenges ahead prior already reflected in its discount to peers.

2021 drivers: deferring bad debt, uncertain on foregone fees

We expect that per its usual schedule ED will provide forward guidance for 2021 with its Q4 update next Feb. Company mgmt. Among the key updates in the company's Q3 results is the deferral of Covid-linked bad debt expense – the uptick in expense reached $46m at the Con Ed Co of NY (CECONY), surpassing the materiality threshold of $20m that is part of ED's rate plans and allowing full deferral of the expense item to be considered in the next rate case filing (2022). Mgmt. indicated that it expects to defer these expenses in '21 as well, not surprising given the q/q uptick of $30m in bad debt expense as of Q3. Less obvious is whether foregone fees will be deferred in 2021 given the uncertain duration of the prohibition on charging fees to residential customers affected by Covid – recall this was the change in law (Cuomo exec orders) that drove the deferral of bad debt expense. ED estimates that it is losing $6.4m in fees *per month* during the pandemic, with an estimated half of that attributed to residential customers (though not clear how many of those are directly attributable to Covid). As we previously indicated in our updated estimates, we expect 6 months' of lost fee revenue and direct Covid expenses to impact ED by -7c, with an additional -7c due to lower Steam demand (TTM earned ROE at the Steam business is 5.6% as of Q3).

Table 1: EPS forecast

ED 2021 EPS Walk	EPS	Note
Start: 8.8% earned ROE	4.54	Based on CECONY earning full authorized
Less: foregone fees 6 months	(0.04)	6 months' impact, $6.4m revenue per month
Less: direct Covid expenses	(0.03)	Q2 impact was ($0.06)
Less: higher bad debt expense	-	Now deferred
Less: Steam lower demand	(0.07)	
BofA 2021 EPS estimate	4.40	

Source: BofA Global Research estimates

Renewable opportunities: EV station build out, still early on utility-scale storage

Incoming management flagged the opportunity to add to rate base meaningfully over the coming years via a number of renewable energy initiatives that are not fully captured in the current rate base forecast. We previously incorporated the EV 'Make Ready' charging station program into our forecasts, with an estimated EPS impact ranging from $0.02-0.04/yr based on ED's $314m of capex allocated to the program.

Table 2: Make-Ready Spend Detail

	State total	CECONY	O&R	ED Total	Central Hudson	NYSEG	Niagara Mohawk	RG&E
Level 2 Plugs	95	42	16	58	18	51	87	23

Implementation	72	35	3	38	3	10	17	5
Transit Authority	10	3		3			5	2
Total	601	290	24	314	26	78	143	40

Source: BofA Global Research estimates

Near-term upside from spending opportunities on utility-scale storage is less obvious though mgmt. reports high-level discussions with state regulators including the New York State Energy Research and Development Authority (NYSERDA). Among the structures under consideration is a partnership with private developers whereby battery storage is developed and utility-owned for a period of 7-10 years after which ownership would revert to the developer, with initial procurement estimated in the 300 MW range in ED's service territory. We note that conversations around this remain in early stages without a formal proposal, though we do expect acceleration of renewable and storage solicitations (ED estimates ~2.5 GW of renewables needed annually to reach state interim decarb goals by 2030).

Essential Utilities (WTRG)

Management Successfully Navigating COVID & Peoples Integration

Following their positive 3Q report last week in which management reaffirmed full year guidance of $1.53-$1.58 - noting expectations to be at the top end of the range and affirmation of their 5-7% EPS growth through '22 - latest discussions with management stressed confidence around execution of their strategy with the company successfully navigating the pandemic while integrating their Peoples Gas acquisition. Recall the company has elected to use Repairs Tax accounting treatment and has effectively implemented the last several months – with guidance of $0.08-$0.12 benefit annually. We await developments around the regulatory process of the catch up component after the earlier filing, with resolution expected early in April of 2021. Rather than drive incremental upside to their 5-7% EPS CAGR, the filing seeks to extend the growth without a need for a rate case. As opposed to going in for new rates in 2023 to take effect in 2024, a constructive outcome from the catch up filing would benefit '23, with incremental benefits in '24, and '25 to help drive earned returns for the segment in outer years without any rate relief until 2026. Bottom line, the repairs tax debate boils down to Peoples Gas ROE lag in '23, likely to a modest degree. Focus on EPS growth roll-forward to '23 (presumably with 4Q) will be of importance. Given the uncertainties in the outlook mgmt. intends to limit its roll forward to a 3-year outlook in spite of peers having a 5-year outlook. On balance we feel comfortable in mgmt's ability to manage lag around its ROEs at core water utilities including PA into a potential water filing next year.

Muni Pipeline Remains Strong amid pending DELCORA developments

With FMV legislation now in all eight water & wastewater states in WTRG's footprint following the passage in Virginia earlier this year, the company continues to execute on tuck in acquisitions and discussions continue to highlight a robust pipeline of opportunities. The company has already closed on Campbell, East Norriton, and Rockwell Utilities this year, with another ~353Mn of rate base opportunities from signed APAs expected to generate an additional ~$18Mn of earnings potential. Meanwhile, the company is actively pursuing acquisition opportunities across all of their water geographies, with ~360K customers identified, the majority being wastewater. We expect more firm announcements in coming weeks.

We see the latest pressures put on munis from the ongoing pandemic as likely to only further accelerate consolidation in the industry. Meanwhile, a further environmental push under a Biden administration could provide additional capital opportunities as compliance costs with PFAs and water quality concerns have already started contributing to the push away from muni owned water systems.

Management remains confident on the DELCORA process, with a regulatory approval expected in mid-March. This would put the company on track to potentially close the transaction in April or May after the 30 day appeal window. Meanwhile, a hearing is scheduled for early December regarding the litigation around the trust with a ruling expected from the judge within 60 days. Recall the company has until August to pull on the ~$300Mn equity forward to be used for DELCORA and other acquisitions.

We reiterate our Buy rating, seeing upside risk in the event of better than expected execution on their long-term growth rate.

Eversource Energy (ES)

Poised to Extend with Upcoming Roll Forward: Q'n is Just How Much Upside?

Following their 3Q report last week in which ES management reaffirmed full year guidance of $3.60-$3.70 (excluding full year costs related to the recently completed acquisition of Columbia Gas of Massachusetts) and its long-term EPS growth rate from its core regulated business of 5-7%, latest discussions with management continued to stress confidence around the trajectory of the company. While still unclear if it will formally raise to 6-8% trajectory, it is clear mgmt. will pivot to high end of its EPS growth rate by 4Q with inclusion of both smaller offshore (South Fork) likely alongside inclusion of CMA and potentially modest capex. We see a positive near-term tailwind between offshore wind trends and otherwise constructive updates. Management plans to roll forward their five year outlook through 2025 with full year results, with inclusion of Columbia Gas and some added capex from annual updates across their businesses including some transmission projects incremental to the plan. We perceive another ~$50Mn in transmission spend vs. what was previously contemplated; meanwhile, new MA legislation allowing the expansion of utility-owned solar generation is awaiting conference committee after being enacted in the House: this would allow utilities to own up to 10% of solar amount on its system, suggesting 230MW permitted for NSTAR Electric that would be incremental to the plan. We don't necessarily anticipate offshore wind or AMI to be firmly included with the update given a lack of clarity around approvals and timing, but nonetheless could see management point to a higher range from just the CMA accretion given the low acquisition price of 1x rate base. Expectations are for CMA alone to be accretive this quarter with further incremental accretion each year. It remains unclear if management would formally shift up guidance as opposed to pointing to the higher end given additional opportunities not yet formally included.

Offshore Protracted, but Upside Here too Quite Possible

After early commentary from Orsted around offshore delays, ES indicated changes in expectations around most recent in service dates of end of 2023 for South Fork wind (vs. End of 2022 previously), that it is unlikely to achieve end of '23 in-service date previously alluded to for Revolution Wind, and that it is unlikely to achieve the end of '24 in-service date for Sunrise Wind. Following the BOEM review schedule for South Fork Wind, the COP decision is due in January 2022 while the BOEM review schedule for Revolution Wind is now expected in early '21 (vs. late this year previously). After filing the COP application for Sunrise wind, the BOEM review schedule is expected in 2021. We see 2026 as entirely possible – and therefore outside of the 5-year window for the 2021-2025 CAGR roll forward. Management expects news from BOEM around Vineyard Wind shortly to help provide further clarity on their projects.

That said, a growing consideration is improvements to the economics of the projects: commentary from management highlighted that delays have provided latitude for better tech and we see improving O&M as another interesting nuance. It remains to be seen how prospects can further improve under a Biden administration given his support for offshore wind. We could yet see extensions for tax credits & inclusions for offshore wind and we perceive potential appetite for ITCs through 2025.

While current projects face delays on the margin, the company has capacity to build 4GW (with the JV representing 1.7GW) as they look to optimize their local expertise, and Orsted and ES announced their joint proposal to develop Sunrise Wind 2 (a new offshore wind farm for New York State). We perceive there may have only been three bidders for the project and quite possible multiple bids are awarded.

We see near-term resolution around low income rates in CT and storm response as key to enabling re-rating of shares higher. While we could yet see penalties accrue around Isaias, we stress the watered down Take Back our Grid Act in Connecticut was ultimately much less punitive than initially feared. We raise the PO from $90 to $95 on higher

group electric/gas multiples (17.3x/15.3x) vs. prior (16.5x/13.8x) Maintain Neutral given we see balanced risk/reward.

That said, we look for resolution around potential latest proposed decision in net metering tariff adjustment that would reduce rates in CT. Management remained confident in its ability to recover lost revenues from NEM in final order. Watch this in coming weeks to drive shares given $16Mn+ impact.

Hawaiian Electric Industries (HE)

Sustained cost reductions remains a key focus area ahead

With discussions, mgmt focused on sustaining cost reductions into '21+. Mgmt expressed a focus on sustained cost savings with the PUC mgmt audit. Among key cost levers expressed include strategic sourcing (renegotiating supply agreements with vendors, etc), work force reduction strategy (reduced overtime and improved scheduling coordination), process improvements, and other cost efficiency to lower cost of services.

That being said, in terms of O&M reductions to date, mgmt acknowledges meaningful portion (half of 3Q) associated with delayed but needed generation overhauls and station maintenance work, effectively timing shifts into 4Q and 1Q21 with FY20 utility guidance remaining at the bottom half of the range despite YTD performance. On a forward basis, mgmt express ability to keep O&M at or below inflation as key to forward performance beyond commitments of $25mn in annual cost reductions.

On balance a constructive meeting when considering both O&M tailwinds discussed from latest cost cuts pursued as well as potentially bottoming out on ASB. That said, clear pressures exist into '21 to drive EPS pressures vs Street. We maintain our Underperform pending clarity on critical PBR reforms ahead in coming weeks – this will be the single most important datapoint for shares in years.

PBR key focus on potential to reduce structural lag towards 9.0%

Among notable commentary, mgmt expressed potential opportunity to improve earned ROEs towards 9.0% (relative to authorized ROE of 9.5%) following the conclusion of PBR through the reduction of structural lag. While LTM ROE stands at 8.4% (with structural lag comprising ~120bps), mgmt expressed near-term O&M levels as an exception given push-out benefit with negative impact to 4Q/1Q21 ahead. As such, mgmt expects PBR resolution of structural lag potentially supporting towards a 9.0% earned ROE relative to a lower than 3Q normalized baseline ROE.

In terms of PBR discussions, mgmt expressed positives as support for earning sharing mechanisms (ESM) including both positive and negative, potentially with sharing in under-earning as well. Additionally, mgmt expressed focus on incentive PIMs with a range being established. Accelerating the annual accrual date for RAM to Jan 1 annually from June 1 also helps with structural lag. That said, 'day-1 savings' will likely be a focus as well, with Consumer Advocate proposing 4x cumulative value of accelerated RAM accrual relative to HE proposing the already committed $25mn by 2022 reduction.

Mgmt continues to expect a final PUC decision for PBR Phase II in Dec. That said, mgmt emphasizes specific rate tariffs will be established to implement new and gauged mechanisms after the order, as a new step by the PUC. As such, the timeline to reduce structural lag remains unclear. With potentially multi-year targets, mgmt expressed the extent of which under-earning can be mitigated in 2021 remains contingent on PBR results. Nonetheless, we perceive potential upside relative to earned ROE reflected in the low 8% range in our forecast but emphasize need for execution.

ASB remains cautious with yet further NIM compression likely ahead

On the other hand, ASB discussions remained cautious. With continued NIM compression into 3Q already at 3.12% (vs. 2Q/1Q NIM of 3.21%/3.72%), mgmt expressed further pressure ahead relative to already below-expectation 3Q levels. This is primarily driven

by the spread between higher rate existing loans rolling off and being replaced by new customer loan agreements at lower rates, with mgmt expressing a slow but gradual continued decline in NIMs likely as long as interest rates are lower relative to a year prior. With rates expected to remain low through the near-term, we expect continued pressure at the ASB segment. While, mgmt did not explicitly guide expectations for lower NIM relative to 3.12% in 3Q into 2021, noting variables including potential for higher margin mix as well, downward pressure on existing vs. new pricing remains.

For loan loss provision, mgmt continues to express uncertainty, though noting it exercises conservatism in projecting potential loan losses. If actual net charge offs are ultimately less than what is provisioned for ASB could see some provision come back. Mgmt expresses YTD provision largely in-line with its expectations. However, mgmt notes this could worsen if additional lockdown and economic pressures worsen (with economic impact with sustained tourism reopening uncertain).

MGE Energy (MGEE)

MGEE mgmt. expressed confidence in its near-term regulatory outlook with the pending decision of its WI rate case settlement expected before the end of the year. While capex shifted incrementally during the 2020-22 period it still remains elevated as MGEE works to complete its utility scale solar build at Badger Hollow and Two Creeks. Ahead of the roll-forward of its 3-year capex plan to be rolled out with the Q4 results, we look ahead to potential updates on further generation spend (particularly given WEC's confirmation of the exercise of its West Riverside option) though see these as mid-2020s items. Maintain Underperform on MGEE.

Generation investment needed by mid-decade

MGEE is in the process of completing 170 MW of utility scale solar at its Badger Hollow, Two Creeks, and O'Brien facilities with all targeted for completion by 2022. Unlike WEC, which confirmed its intention to exercise the option it holds to purchase an incremental 200 MW of generation capacity at LNT's recently opened West Riverside facility for total capex of $180m, MGEE did not confirm its plans with the option it holds for 50 MW (with option good until 2025). While the *specific* generation addition plans remain to be determined, MGEE mgmt. reiterated that it does see investment opportunities in new generation by the mid-2020s with expected upcoming retirements of gas combustion turbines (75 MW), Blount Generating (94 MW), and expiring PPAs (50 MW). We perceive that MGEE mgmt. is holding off on making fuel type decisions for its future generation fleet until necessary investments are required, rather than committing to a specific fuel now (such as gas as a bridge to renewables). While we do see a step-down in capex in the 2023+ timeframe following the placement in service of the current crop of renewables, we note there is mid-decade upside from the next tranche of generation spend, as well as incremental opportunities such as deployment of advanced meters.

Looking constructive on WI rate settlement

The Wisconsin electric 2021 rate settlement remains pending with the commission, though mgmt. indicates confidence in achieving a final order before year-end. Under the proposal rates would remain flat at the electric utility along with a 4% increase in gas rates, with a tightening of the fuel cost bandwidth to 1% from 2%, with an expected continuation of the ROE and authorized equity layer. With the majority of stakeholders in the proceeding signing off on the proposed settlement, we see a constructive outcome as more likely than not.

Storage co-investment opportunities with WEC, others

Following fellow WI utility WEC's update which is targeting 600 MW of rate base storage rollout through its forecast period, MGEE sees opportunities for co-investment, in particular in storage attached to co-owned projects (Badger Hollow, Two Creeks). Intriguingly, the opportunity extends beyond pairing storage with generation assets to the distribution system as well, though specific projects and investment sizes were not included in MGEE's update. As with additional generation investment, we see storage co-investment as a potential area to watch though likely in the 2022+ timeframe (beyond the current capex forecast).

Source: BofA Global Research

Price objective basis & risk

Alliant Energy Corporation (LNT)
Our $61 PO is based on a sum of the parts analysis employing relative premium and discounts to the large cap regulated peer multiple of 16.8x 2023E P/E. We note that electric peer P/E multiple is grossed up for a year by 5% to reflect capital appreciation across the sector. We apply a 3.0x P/E premium on IPL as we see the rate case overhang being resolved. We apply a 4.0x P/E premium on Eastern Wisconsin Electric Company reflecting 1) low risk investment nature of the state, 2) above average ROEs, 3) higher than average growth runway for investments, and 4) bad debt deferral. At ATC, we reflect a 2.0 x P/E premium on LNT's 16% share in the transmission company. Growth expectations for this segment are high, paired with above average ROEs that we believe face less downward pressure vs. regulated state distribution ROEs. We apply an in line multiple at the parent to account for the blend of numerous businesses some which benefit from long term stable PPAs via intercompany generation. Risks to our price objective are: 1) adverse rate case outcomes, 2) further equity dilution beyond our estimates, 3) interest rate risk, 4) natural disasters, and 5) lower allowed ROEs.

Atlantica Sustainable Infrastructure (AY)
Our $33/sh PO is based 50% on a DCF valuation and 50% on our Growth approach. Our Growth value is $36 (weighted 50%). Our DCF value is $29.00 (weighted 50%).

Assumptions in our DCF valuation are:
- A 7.0% discount rate based on a CAPM methodology assuming a 0.6% risk free rate and a 5.5% equity risk premium
- 2% annual escalator in corporate expenses

Main assumptions in our Growth valuation are:
- Run-rate CAFD generated by the current portfolio of $213 Mn
- 750 MW of future drop downs
- A target payout ratio of 80%

Downside risks are 1) the company may not be able to access capital markets at favorable terms, 2) the company may not be able to make accretive acquisition opportunities to fuel growth, 3) the company may not be able to grow DPS at the targeted growth rate, 4) the company may not be able to sustain its current dividend levels, and dividend yield could increase.5) PCG related counterparty exposure is among the nearest exposures to watch.

Consolidated Edison (ED)
Our $82 PO is based on a sum-of-the-parts analysis applying premiums and discounts to the regulated group multiples (16.6x/14.0x for electric/gas respectively) with a -1.0x discount on both Steam & Electric to reflect Covid recovery overhang. Steam for lack of decoupling. Both electric and gas peer P/E multiples are grossed up for a year to 2021 by 5% to reflect capital appreciation across the sector. We applied inline peer regulated multiple at CECONY despite its rate certainty for conservatism as our higher capex expectations are reflected in our EPS outlook. We apply a discounted PE for infrastructure projects given the lack of clarity around the capital structure. We further apply an EV/EBITDA approach on 2023E EBITDA to the CEB business using a 10.0x multiple for both the legacy portfolio and the renewables portfolio seeing it as having higher quality returns.

Downside risks: ED, like all utility stocks, is also sensitive to changes in the market level of interest rates. Utilities historically underperform if bond yields rise, and outperform when they fall. Further downside risks are the inability to recontract storage, adverse regulatory outcomes, a deteriorating regulatory environment, or unforeseen disasters such as the Harlem gas explosion, the SRE transaction not being completed. Customer

inflation is also a downside risk. PCG related counterparty exposure is among the nearest exposures to watch.

Essential Utilities (WTRG)
Our price objective is $51 based on our SOTP approach, applying a peer multiple to the water utility and gas utility, respectively and accounting for expected growth for each sector. These peer multiples are 25.5x and 13.9x. We apply a 3.0x premium to Peoples Gas given the organic growth opportunities, while applying a variety of premiums to its water (2x previously) subsidiaries: +4x to PA, +3x to IL, +2x to OH, +2x for TX, +2x for OH, and no premium for balance of biz. We net out parent debt and parent interest expense associated with parent debt 50/50 weighed basis.

Risks to the downside are acquisition risk, deteriorating regulatory outcomes, and risks from a lower rerating following the diversification into gas.

Eversource Energy (ES)
Our sum of the parts based price objective of $95 uses P/E multiples on 2023E earnings. For electric utilities, we attribute a 4x premium NSTAR, and 3x premium to PSNH and CL&P to peer 17.3x multiple, reflecting future potential positive revisions to capex and earnings. For gas, we apply a 3x premium to the peer 15.3x multiple, given capex upside particularly in MA and a 2x for Columbia Gas. Both electric and gas peer P/E multiples are grossed up by 5% to reflect capital appreciation across the sector. We value Aquarion at a 1x premium to the 27.5x water multiple. We reflect ES's 50% ownership in Revolution and South Fork offshore wind sites on an NPV basis. We take out 50% of parent debt, and 50% of interest to accurately reflect parent leverage.

Upside risks to our price objective are additional capex announcements on the T&D side, as well as success in offshore wind RFPs.

Downside risks are reduction in authorized ROEs, inability to meet earned ROE expectations, as well as failure to receive permitting on incremental capex opportunities

Hawaiian Electric Industries (HE)
Our PO of $34 for Hawaiian Electric Industries is based on a sum of the parts approach. We apply: 1) a 2023E forward P/E multiple in line with electric utility peer multiple of 16.9x. We see this as justified given ongoing issues in the regulatory environment need to be resolved and the earnings gap vs what is required to achieve authorized ROEs across all three of the jurisdictions. Electric utility peer P/E multiple is grossed up for a year to 2020 by 5% to reflect capital appreciation across the sector, 2) a 2021E forward price to tangible book value of 1.50x to the banking subsidiary, a 0.5x premium to smid cap regional peers (0.96x), in-line with Hawaiian banks peers due to outperformance. We then take into account parent overhead by applying the same multiple here as to the utility segment to 50% of parent interest and subtracting the per share value of the remaining 50% of the debt. Downside risks are delays on capital expenditures, weakening regulatory environment, PUC denial of new capital investments or lower authorized ROEs. Upside risks are expansion of capital expenditure plan, significant improvements in earned and/or authorized ROEs

MGE Energy (MGEE)
Our $62 PO is based on a sum-of-the-parts analysis applying premiums and discounts to the regulated group multiples (16.5x/13.9x for electric/gas respectively) with a 4.0x premium on WI regulated gas and electric to reflect the constructive regulatory mechanism, and a 2.0x premium on Transmission assets. We note that both electric and gas peer P/E multiples are grossed up for a year to 2021 by 5% to reflect capital appreciation across the sector. We apply utility premiums to the non-regulated Elm Road and West Campus assets as these are leased under long-term contractual arrangements. Downside risks: MGEE, like all utility stocks, is sensitive to changes in the market level of

interest rates. Utilities historically underperform if bond yields rise, and outperform when they fall. Further downside risks are the inability to secure further renewable rate base investments, adverse regulatory outcomes, a deteriorating regulatory environment, or adverse weather leading to less consumption of electricity and gas. Upside risks are acceleration of renewable gen investment, legacy coal asset early retirement, and enactment of further pro-renewable state policies.

* Issuers that were investment banking clients of BofA Securities or one of its affiliates within the past 12 months. For purposes of this Investment Rating Distribution, the coverage universe includes only stocks. A stock rated Neutral is included as a Hold, and a stock rated Underperform is included as a Sell.

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. *VOLATILITY RISK RATINGS*, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. *INVESTMENT RATINGS* reflect the analyst's assessment of a stock's: (i) absolute total return potential and (ii) attractiveness for investment relative to other stocks within its *Coverage Cluster* (defined below). There are three investment ratings: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster*
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

* Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

***INCOME RATINGS*, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend.** *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

General Investment Related Disclosures:
Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.
This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.
Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.
This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.
Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.
UK Readers: The protections provided by the U.K. regulatory regime, including the Financial Services Scheme, do not apply in general to business coordinated by BofA Securities entities located outside of the United Kingdom.
BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.
BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.
In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.

2021 guidance in-line, muni acquisition program remains on-track with key DELCORA court win.

Essential Utilities issued initial 2021 EPS guidance of $1.64-$1.69, bracketing incoming consensus of $1.67 (2020E: $1.59), highlighting the steady growth story of the regulated utility business. At the mid-point, the 2021 guidance represents year/year EPS growth of 5%, a solid figure in what remains a highly uncertain macro environment. We reiterate our Outperform rating for shares of WTRG, which are among our current top ideas in the water/environmental sector.

Key Guidance/Outlook Highlights:

- Diluted EPS: $1.64-$1.69 (midpoint $1.665)
- 3-year EPS CAGR: 5% to 7% (through 2023)
- 3-year Capex Target: $3 billion (Water + Gas)
- 3-year Rate Base CAGR – Water: 6% to 7%
- 3-year Rate Base CAGR – Gas: 8% to 10%
- Water Customer Growth: 2% to 3% (organic + acquisitions)

Discussing the municipal acquisition pipeline, Essential says that it currently has purchase agreements in place representing 225,000 customer connections and $420 million in rate base. This is up from 212,000 connections at the end of 3Q despite the tabling (for now) of the Norristown (PA) opportunity, reflecting in part the recent addition of Bourbonnais (IL) and underscoring the depth and cadence of the municipal M&A market in the fair market value era.

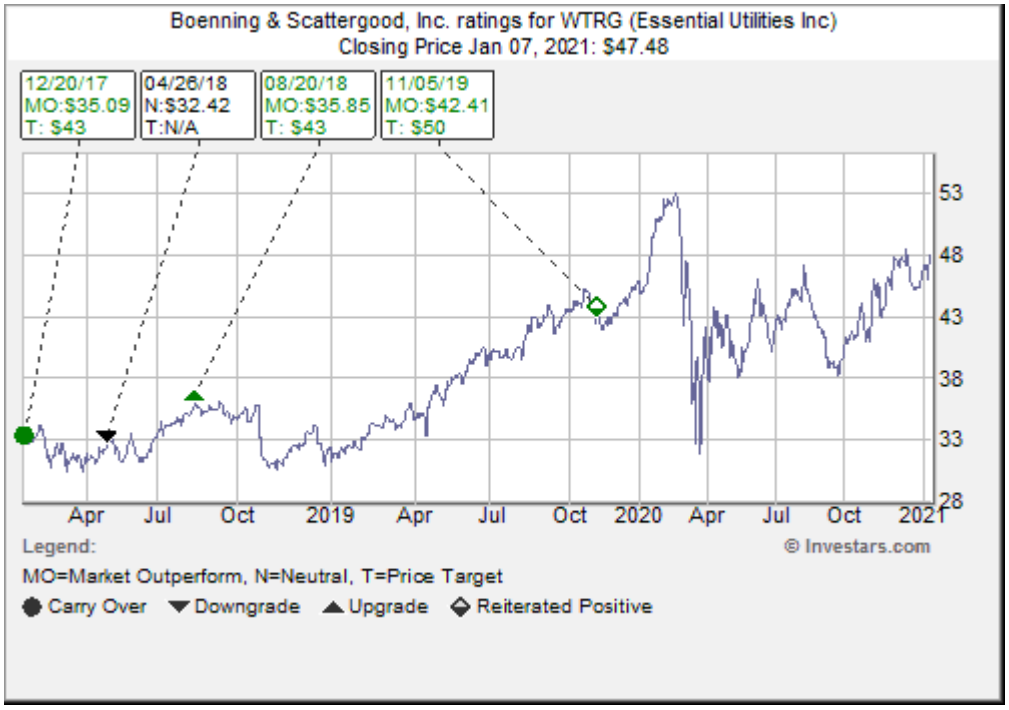
The $276 million purchase of DELCORA is the biggest deal pending, and we believe recent developments bode well for the transaction. A legal challenge brought by Delaware County politicians received a major setback when the Delaware Court of Common Pleas ruled in Essential's/Aqua's favor. Attention now turns to the PUC, where the deal must be approved before moving on to closing. We see the DelCo ruling as a key win for Aqua and would be very surprised if the PUC does not approve the deal. We anticipate a 2Q21 close.

WTRG and its regulated utility peers have performed respectably of late on a risk-adjusted basis (WTRG +5% TTM), but have lagged the broader bull market (S&P 500 +17% TTM) and in particular the huge gains in the water industrial sector (peer group average +33% TTM). We believe WTRG shares offer a compelling reward/risk equation, and reiterate our Outperform rating. Our price target of $54 reflects a P/E of 32times, in-line with the water utility peer group.

Boenning & Scattergood, Inc. does and seeks to do business with companies covered in its research reports. As a result, Investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. **FOR ANALYST CERTIFICATION AND OTHER IMPORTANT DISCLOSURES, PLEASE REFER TO THE DISCLOSURE SECTION LOCATED ON PAGES 2 & 3.**

Disclosure Appendix

Rating and Price Target History:



Risk Factors

The realization of any or all of the following risk factors, among others, may adversely affect the company's stock price and prevent it from reaching our price target: the economic cycle, concentration in energy sector, foreign currency exposure, and client concentration.

Analyst Certification:

The research analysts whose names appears on this research report certify that: (1) all of the views expressed in this research report accurately reflect their personal views about the subject security or issuer, and (2) no part of the research analysts' compensation was, is, or will be directly or indirectly related to the specific recommendations or views expressed by the research analysts in this research report.

Important Disclosures:

Analyst compensation is based on, in part, Boenning & Scattergood, Inc.'s profitability, which includes revenues from investment banking. Boenning & Scattergood expects to receive or intends to seek compensation for investment banking services from the subject company in the next three months.

Boenning & Scattergood received compensation for investment banking services from the subject company within the past 12 months.

Boenning & Scattergood has managed a public offering and received compensation from the subject company within the past 12 months.

Boenning & Scattergood's Ratings System:

Our three-tier investment ratings are based on a stock's return potential relative to a broad market index:

- ***Outperform (Buy):*** The security's total return over the year or longer is expected to exceed the total return of the S&P 500™ over the identical period.
- ***Neutral (Hold):*** The security's total return over the next year or longer is expected to be roughly equivalent to the total return of the S&P 500™ over the identical period.
- ***Underperform (Sell):*** The security's total return over the next year or longer is expected to be less than the total return of the S&P 500™ over the identical period.

Our four-tier risk ratings are based on a mix of price volatility and fundamental factors relative to the market and peer group.

- ***Low:*** The security has higher-than-average fundamental predictability and/or lower-than-average price volatility.
- ***Moderate:*** The security has average fundamental predictability and/or average price volatility.
- ***High:*** The security has lower-than-average fundamental predictability and/or higher-than-average price volatility.
- ***Speculative:*** The security has very inconsistent fundamental predictability and/or very high relative price volatility.

Company Update:

Company Delivers Favorable Q2 Results & Outlook; Advise Buying Dips

Investment Summary: *Aqua reported solid Q2 results as the company beat our non-GAAP diluted EPS estimate. Many developments transpired during the quarter that are imperative to our model, including a timing discrepancy in the P&L recognition of the Pennsylvania rate case, a delay in the close of the Peoples acquisition, and approval of the large Peoples rate case. As a result, WTR was short of our Q2 top-line estimate, and we were forced to meaningfully modify our model. However, the revision positively affects the model by swinging our 2019 diluted EPS estimate to the top-end of the guidance range from the bottom, and for 2020 and 2021, diluted EPS estimates are essentially the same. On top of these factors, the long U.S. Government bond yield fell over the course of Q2, as well as the five-year WTR beta (according to FactSet). In turn, the stronger 2019 estimated Aqua fundamentals, together with the lower long yield and beta, drive up the valuation multiple, and with our 2020 diluted EPS estimate unchanged, our fair value rises due to the valuation multiple increase. Accordingly, we view the Q2 report and resultant outlook favorably. Still, the stock run-up (along with top water utility peers) the past two weeks on trade tensions, and a falling risk-free rate, is pressing shares against our revised fair value that is at Street-high. Plus, we see the emergence of chatter around Fed rate cutting, and/or a trade truce, contracting the valuation multiple. As such, we see strong potential for a lid to be placed on shares, and for pullback and volatility. That said, our desire to recommend accumulating shares on the solid Q2 report and attractive outlook is offset by valuation. With this in mind, we encourage investors to take a year-end 2020 investment horizon with Aqua and buy dips, because once valuation rolls to 2021 estimates, it becomes compelling once again, and WTR is armed with many catalysts to power the stock to the next year fair value that currently stands at $51/sh according to our model.*

- **Aqua delivers Q2 bottom-line beat.** Q2 non-GAAP diluted EPS of $0.37 was $0.03 higher than our estimate. Revenue of $218.9m was $7.8m beneath our $226.7m estimate. The sales difference was a function of timing discrepancy in the model around incorporating the Pennsylvania rate case versus when the rate case went into effect. For simplicity, we plugged an April 1st rate case impact start into the model, yet the rate relief began May 24th. Had we forecasted a one-month recognition of the rate case in the model for Q2, our sales estimate would have matched the Q2 report. On that note, bottom-line outperformance stemmed from better-than-expected other income lines below the line.
- **Flow-through on model revision strengthens 2019 to 2021 earnings estimates and the financial condition.** During Q219, Aqua announced it anticipates closing the Peoples acquisition this fall instead of this summer. Moreover, WTR announced a Peoples rate case outcome of $59.5m. Going into Q2, we modeled Aqua and Peoples to begin operating as one company in Q319, and we estimated a $54.1m positive top-line impact, starting in Q419, from the Peoples rate case. Owed to the Peoples developments, we push out the close of the Peoples deal, in our model, by one quarter to Q419, which cuts our Q319 estimates, and we bump up our Q419-start Peoples rate case estimate to $59.5m to mirror the outcome. We also adjust the Aqua Pennsylvania rate case inclusion in the model to more accurately reflect timing. The model flow-through from these changes, and the update for actual Q2 figures, causes our 2019 non-GAAP diluted EPS estimate to climb by $0.06 to $1.50 (top of the $1.45 to $1.50 2019 guidance range), strengthening cash generation to a degree that reduces net debt estimates while lifting dividend estimates. Due to the greater 2019 non-GAAP diluted EPS estimate, lower net debt forecast, and higher dividend projection, our target P/E valuation multiple swells. For 2020 and 2021, the model flow-through leads to non-GAAP diluted EPS estimates for each year staying the same. This translates into YoY non-GAAP diluted EPS growth of ~6.5% for each year over the 2019 to 2021 period, implying to us our earnings estimates are on track when considering the Aqua rate base, and consolidated company breakdown, guidance for the Peoples and WTR combined entity.
- **We see stock pullbacks creating investment opportunity.** With our 2019 dividend and non-GAAP diluted EPS estimates rising to $0.91/sh from $0.90/sh, and $1.50 from $1.44, respectively, combined with the drop in the year-end 2019 consensus 30-year U.S. Government bond yield estimate to 2.5% from 3.0%, and the WTR five-year beta fall to 0.63 from 0.65 (FactSet), our target P/E valuation multiple amplifies to 28.2x from 26.4x. As a result, our fair value increases by $3 to $45. We support our valuation with the justified P/B multiple and justified dividend yield approaches that point to fair values of $45 and $47, respectively, based on a multiple and yield of 3.2x and 1.95%, respectively. Peeking into next year, our model suggests P/E multiple expansion to 29.9x, and when applied to our 2021 non-GAAP diluted EPS estimate of $1.70, the 29.9x multiple implies 2021 year-end fair value is $51/sh. Bearing this in mind, upside to the $51 mark from the present trading level stands at 16.8%, yet, accumulating shares at the current price sets up for the risk of pullback on current year (2020-based) valuation. Furthermore, we see potential for pullback on the back of easing trade tensions and discussion of Fed rate cuts. To these points, we advise investors to accumulate shares on dips with an investment horizon through 2020 year-end, and as Aqua catalysts come to fruition, we see value in the stock being unleased to ultimately drive it to the $51 fair value by end of next year.

Required Disclosures:

Analyst Certification:
We, David E. Beard, CFA, Noel Parks, & Richard A. Verdi, all certify that to the best of our knowledge, the views and opinions in our research reports accurately reflect our personal views about the subject company (companies) and it's (their) securities. We have not and will not receive direct or indirect compensation related to the specific recommendations or opinions of this report. Unless otherwise stated, the individuals listed on the cover page of this report are analysts for Coker & Palmer Investment Securities (Coker & Palmer). Coker Palmer Institutional (CPI) is the brand name used to distinguish Coker & Palmer's institutional only, sell side equity research operations.

Important Disclosures:
Conflicts of Interest: You should assume that as of the publication date of any report or letter, Coker & Palmer (possibly along with or through our members, partners, affiliates, employees, and/or consultants) along with our clients and/or investors has a position in the subject companies or derivatives of subject companies mentioned in this report, and therefore stands to realize gains based on the price movements of stocks covered in this report. Following publication of any report or letter, we intend to continue transacting in the securities covered therein, and we may be long, short, or neutral at any time hereafter regardless of our initial recommendation.

Analyst Compensation: Analysts are not directly compensated based on investment banking fees, but analysts' compensation is based on overall firm profitability, which may or may not include investment-banking fees. Coker & Palmer has not received investment-banking income from the subject companies in the previous 12 months. Investors should expect that Coker & Palmer may seek and may be seeking compensation for investment banking and non-investment banking related services and production from any or all companies mentioned within this report.

Conflicts: Noel Parks, E&P Analyst, owns REI and AXAS in personal accounts.

Rating Methodology: CPI DOES NOT HAVE OFFICIAL STOCK RATINGS
As of February 23, 2016, Coker & Palmer (CPI) eliminated any formal ratings system. Thus, as of this date, we no longer publish any formal "Buy", "Hold" or "Sell" recommendations on any stocks we cover. Any recommendations published before this date should not be relied upon going forward for any reason whatsoever. From this date forward, CPI might, from time to time, offer an informal view (or description or trend) as to our opinion relative to the short, medium or long-term price trend in a specific stock, group of stocks, industry index or commodity. Such views are not formal recommendations. Therefore, any view, description or trend offered by CPI should never be interpreted or construed as any type of formal stock/equity recommendation. It is also possible that CPI's views might even be inconsistent or even contradictory in our various written and/or verbal communications. Any such view, description or trend is subject to possible rapid change and can change without prior notice and/or warning. Therefore, any view we offer on the possible trading direction of an instrument cannot and should NEVER be relied upon as any type of official investment recommendation. In addition, you should expect such views to often prove inaccurate relative to either the direction of any price movement, the magnitude of any price movements or the timeframes involved. Therefore, you should NOT use such published views and/or verbally communicated views as a basis for buying or selling any stock, group, index or commodity. Coker & Palmer and any related entities cannot be held liable for any such actions, interpretations or constructions. Furthermore, any view we might offer is based on many factors, including company, industry and market specific items. Many of these factors are beyond our control, ability to analyze, are difficult to predict and often change rapidly and without warning.

Price Target Methodology: CPI DOES NOT HAVE OFFICIAL PRICE TARGETS
Coker & Palmer (CPI) does not provide official price target on subject companies, but does from time-to-time address what analysts believe to be possible stock valuations. These valuations may take the form of an Upside (or Reward), Downside (Risk), and Fair Value (FV) of subject companies, but could be written and described in various ways not listed here and subject to change in value and methodology. Furthermore, such valuation estimates incorporate many variables, both qualitative and quantitative, all of which can change without notice. It's quite likely that such valuation assessments might never prove accurate. Therefore, any such valuation metric could often be unreliable. You should expect any or all of these valuation metrics to change, often significantly, and without prior warning or notice. Therefore, you should use NOT these metrics as a basis for buying and selling any equity. In addition, CPI's assessments should only as only one of many variables you should use relative to valuation, stock investing and portfolio risk assessment.

Ratings Distribution and Investment Banking: As we do not carry any official rating system for our coverage universe, our ratings distribution is not applicable to our research coverage. Investment banking conflicts and operations are outlined below.

Coker Palmer Institutional Ratings Distribution * as of 6 | 25 | 2019			Ratings Distribution of IB Clients ** as of 6 | 25 | 2019		
Category	Count	Percent	Category	Count	Percent
Buy	NA	NA	Buy	0	0%
Hold	NA	NA	Hold	0	0%
Sell	NA	NA	Sell	0	0%
No Rating	34	100%	No Rating	4	12%

* As of February 23rd, 2016, CPI no longer offers any Official Stock Ratings Therefore, any ratings distribution is Not Applicable (NA)

** Coker & Palmer (C&P) acted as a Co-Manager for a Gulfport Energy (GPOR) and Halcon (HK) and a HighPoint Resources (HPR) fixed income offering over the past six months, or more. C&P also received consulting fees for work associated with Goodrich Petroleum (GDP).

You should expect that employees of C&P, including research analysts, might be compensated based on firm and/or division revenue. Such revenues are likely to include fees and other compensation from investment banking and/or consulting activities.

Investors should expect C&P to seek investment banking revenues from any and all companies under formal research coverage (incl but not limited to GPOR, HK, HPR & GDP) as well as other public companies, currently not under formal research coverage.

Valuation/Risk Factors:

The Exploration and Production (E&P) business in inherently risky. Investors in E&P equities should be fully aware of these risks, which include, but are not limited to, volatile natural gas, NGL's and crude oil prices, regional pricing differences, field and company asset quality, reserve depletion factors, drilling risks, operating costs, company capital structures, operating and working capital needs and ability to raise both debt and equity capital to fund operations. E&P Valuation Methods used to determine the Price Target: We value E&P companies on many different metrics, including, but not limited to, our estimate of net asset value (NAV), enterprise value to EBITDA or cash flow multiples, price/earnings or cash flow multiples, discounted cash flow analysis and breakup/acquisition values. All our estimates and valuations are highly and inherently uncertain. They are based on, but not limited to, our outlook for the commodity price, our subjective view as to the quality of management, net asset value, quality of the proven and unproven reserves and resources, ability to develop and produce these reserves/resources, financial strength, cash flow, access to capital, and full cycle economics of investments. These factors are uncertain and our outlook is subject to change, sometimes quite quickly. Any changes in the above factors can impede achievement of our valuation assessments.

Oilfield Services (OFS) business is inherently risky. OFS investors should be fully aware of these risks, which include, but are not limited to, volatile natural gas, NGL's and crude oil prices, demand for and competition for a company's product and/or service, asset quality, customer risks, changes in operating costs, company capital structures, operating and working capital needs and ability to raise both debt and equity capital to fund operations. We value OFS equities on many different metrics, including but not limited to, our subjective view as to the quality of management, discounted cash flows, net asset values, enterprise value to EBITDA or cash flow multiples, price to earnings or cash flow multiples, reinvestment risk and full cycle economics. These factors are uncertain and our outlook is subject to change, sometimes quite quickly. Any changes in the above factors can impede achievement of our valuation assessments.

Industrials: This category might cover many different types of companies with various business models and various factors affecting the operations and stock prices, some of which include overall economic growth, end market demand, product inventories and competition. Some of these companies might have various energy-related exposure through both sales and/or costs. In general, industrial company risks include, but not limited to, high fixed operating costs, rising input costs, currency and commodity price fluctuations, variable demand, inventory levels, quality of management, competition and obsolesce.

E&P, Oilfield Service, Consumer & Industrials investments, as well as investments in the other subsectors we follow (namely, the Marine Transport and Industrial subsector) are subject to a myriad of external factors, including but not limited to, commodity price risk, geopolitical risk, changes in interest rates, the value of worldwide currencies, especially the U.S. dollar, changing regulations, both domestically and abroad, regulatory enforcement levels, and changes in domestic or global economic fundamentals. Please see specific companies' most recent SEC filings, including 10-Ks, 10-Qs, 8-Ks, and proxy filing for additional risks and considerations.

Water Utilities: In addition to broad stock market and economic risk factors that impact most all equities, the water utility industry is uniquely at risk to, but not limited to, the following risks: state regulator decision, state law change, federal regulations, weather patterns, capital market accessibility, credit funding, acquisition, capital spend limitations, and litigation. Furthermore, company-specific risks are applicable to certain water utilities. Please see specific companies' most recent SEC filings, including 10-Ks, 10-Qs, 8-Ks, and proxy filings, for additional risks and considerations. We value water utility equities on many different metrics, including but not limited to, price-to-earnings, dividend yield, price-to-book, dividend discount model, enterprise value-to-EBITDA, enterprise value-to-revenue, and sum-of-the-parts. All estimates and valuations are highly and inherently uncertain. These factors are uncertain and our outlook is subject to change, sometimes quite quickly. Any changes in the above factors can impede achievement of our valuation assessments.

AGA Meeting Takeaways

In this note, we briefly summarize takeaways from each of our AGA meetings over the past two days.

Ameren Corp. (AEE), Outperform rating, $84 price target

- **IL Downstate Clean Energy Act:** AEE feels good about bill passage this year given bipartisan support / job creation potential. Whether it is addressed during the current legislative session ending 5/31, in a special session or the veto session remains to be seen. Recall that the Act would increase the adder on the ROE formula from 580 to 680 bps above the 30-YR treasury. It would also create the opportunity for solar/storage/EV investment in a state where AEE is purely T&D.
- **MISO ROE decision possible this Thursday:** AEE is hopeful that FERC will revise the methodology/raise the base ROE given consensus that it is based on a flawed methodology and the fact that transmission investment is more risky than distribution.
- **Next rate case in MO**: The primary factors determining timing of the next rate case are the wind projects slated to go into service late this year and early next year, and COVID-related issues. The only restriction on filing in MO is a 60-day notice. AEE expects to earn its allowed ROE in MO (recently increased from 9.2-9.7% to 9.4-9.8%) with help from PISA accounting and RESRAM riders.
- **O&M savings**: As AEE stated on the Q1 call, it expects to deliver within its 2020 EPS guidance by offsetting COVID-related impacts with reduced O&M. The reductions fall into several buckets, including reduced hiring, travel, consultants, etc.

See inside for our takeaways on 11 more companies.

Please see the analyst certification and important disclosures on page 6 of this report. Evercore ISI and affiliates do and seek to do business with companies covered in its research reports. Investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report is prepared solely for the use of Brian Dingerdissen

Avangrid (AGR), In Line Rating, $46 price target

- **Vineyard Wind:** AGR still expect BOEM to release draft cumulative impact statement on June 12 and for final EIS to come in November in line with BOEM's most recent schedule. AGR noted they have been in constant contact with BOEM, giving us more confidence that this schedule will hold. As a reminder, the cumulative impact statement will have impacts on other projects in the area, such as ES and Orsted's Revolution Wind.
- **NECEC**: The ME Department of Environment Protection issued a permit last week, so they now have all state permits. They are still waiting for Army Core of Engineers and a Presidential permit. YE'22 in-service still targeted but could see delay of a few months depending on remaining permits.
- **Analyst Day**: AGR expects to hold this event in coordination with Iberdrola in 4Q and will likely include disclosures on par with prior years (LT growth rate through 2024, rate base and capex, capacity factor forecasts for the renewables business, etc.)
- **CEO Succession plan:** The board is considering both internal and external candidates we would expect a successor to be name prior to current CEO Jim Torgerson's departure in June.

CenterPoint Energy (CNP), In Line rating, $18 price target

- **COVID update:** All of the states in CNP's service territory are in the process of reopening, giving confidence in the expected U-shaped recovery by September. Notably, the Toyota plant in Indiana is reopening.
- **2020 and long-term EPS guidance**: assumes earnings at or near allowed returns across the utilities and a continuation of 2% customer growth at Houston Electric. CNP does not expect ROEs in rate cases to be pushed much lower than current levels.
- **CEO search**: as CNP highlighted on the Q1 call, it is currently in the back end of the process.
- **Business Review and Evaluation Committee will pick up soon**. CNP said its Board always considers both corporate and asset-specific M&A, including as it relates to ENBL, though the tax basis still an issue with that. The company will publicly share any updates that it has after the Committee's recommendation to the Board in October and potentially before the Analyst Day in 1Q21.
- **Credit metrics**: as CNP stated on the Q1 call, it expects higher than 14.5% FFO to debt this year, providing some cushion for COVID with respect to company's 14% target long term. CenterPoint anticipates that rating agencies will revisit outlooks after the CES divestitures closes in Q2. Recall that CNP is currently on negative outlook at both Moody's and S&P, which were last updated prior to the $1.4Bn equity investment.

CMS Energy (CMS), In Line Rating, $63 price target

- **Covid sales impacts:** CMS indicated they see the $0.03-$0.04/sh per month hit to EPS quoted on the 1Q call as likely being the trough in terms of impacts. With reopening's starting in Michigan, they are already seeing signs that ultimate monthly impacts will be less.
- **Seeking approval to defer certain Covid costs:** Michigan has already authorized utilities to defer bad debt expense and has opened the door for consideration of other cost deferrals. In April, CMS also sought approval to defer other Covid-19 costs related to sequestering labor for 14 days at power plants and compression stations, keeping certain labor at home in home reserve status, incremental cleaning, and new technology for employees to work from home. All together these costs could total $2.2M to $15.3M per month.
- **Covid mitigation plans:** On the 1Q call, CMS noted that they have reduced expenses by $0.10-$0.15 in a given year in response to weak load or other unexpected negatives. At AGA, they reminded us that this was just to show what they have done in the past and was not meant to be considered a ceiling.
- **Enerbank:** CMS sounded relatively upbeat on Enerbank's positioning noting that while originations slowed in March they did see a nice recovery in April.
- **M&A Strategy**: CMS is focused on its organic growth plan and executing their capex backlog, while like any other prudent management team they consider M&A but view such transactions as having a high hurdle rate.

This report is prepared solely for the use of Brian Dingerdissen

Consolidated Edison (ED), In Line rating, $85 price target

- **Long-term EPS growth rate**: Items causing the reduction to 2020 EPS guidance is not expected to be carried forward into 2021 and beyond. Con Ed's 3-5% EPS CAGR through 2024 off of the original (higher) 2020 guidance remains intact.
- **COVID impacts:** Con Ed does not expect to recover lost revenue from suspension of late fees and connect / disconnect fees. Some incentives in the CECONY rate plan are harder to achieve in the COVID environment; these include work that is customer-facing, such as selling energy efficiency, connecting distributed energy resources, etc. While the incentives are not based on cumulative results, a ramp-up in 2021 could be required to recover lost ground.
- **O&M**: expected to be lower in 2020 than original plan due to acceleration of cuts that were originally planned for 2021 and 2022, as per the CECONY rate agreement. The bulk of the cuts are expected to be sustainable.
- **Equity issuance plans:** ED entered a bank loan agreement at the parent on April 6th that gave it the ability to borrow $750mm on a 364-day basis. It is designed to provide liquidity that the equity offering would have provided, so it gives ED flexibility to find a more opportune time to issue equity but still expected this year. Recall that the company has guided to up to $600mm this year and $1.1Bn in 2021/22. Con Ed typically issues equity to target a regulatory cap structure rather than an FFO to debt credit metric.
- **Pipeline update**: Sponsors still see a narrow path for a Mountain Valley Pipeline in-service date by YE'20. It is thought possible that the project will be delayed again given a federal judge's (in Montana) ruling in a case involving Keystone crude pipeline that the US Army Corps of Engineers did not comply with the Endangered Species Act. Last week, the judge refused to limit his decision to Keystone, prompting the US Justice Department to ask the 9th Circuit Court of Appeals to stay the lower court's ruling. Separately, Stagecoach does not fit into ED's long term plans in a decarbonized world, but the company is not in a hurry to reduce its ownership.

DTE Energy (DTE), In Line rating, $120 price target

- **Covid sales impacts**: Due to AMI, DTE is seeing real time impacts of reopening's in MI and is seeing load improve a little bit more than their assumptions discussed on the 1Q call.
- **Michigan regulatory environment**: Continue to be pleased with relationship in MI noting that the recent electric rate order was constructive.
- **Power & Industrials segment**: DTE noted that their industrial energy services business benefits from long-term contracts and is well insulated during Covid 19. The RNG business is also holding up well as pricing for RNG in California remains strong and there is still demand for new RNG projects.
- **Gas Storage and Pipelines segment**. The business (both in Appalachian and Haynesville basins) continues to deliver ahead of plan into 2Q in part driven by higher gas futures due to reduced associated gas supply.

Duke Energy (DUK), In Line rating, $90 price target

- **Covid sales impacts**: Load trajectories appear to be relatively consistent with what DUK had expected at the time of the 1Q call.
- **Rate cases:** No material updates in either the NC cases or in IN. They are awaiting a response in NC to the motion to consolidate hearings in the DEP and DEC cases and expect a rate order in IN around mid-year.
- **ACP:** The court order on Nationwide Permit 12 could be impactful on ACP. The Army Corp has already filed an appeal in the 9th Circuit Court and we could see a decision this month on their request for a stay of the application of the court order on the use of the nationwide permitting process. The appeal itself will likely play out through the rest of this year. They also await a decision on the Appalachian Trail crossing from the Supreme Court and a revised Biological Opinion from the US Fish and Wildlife Service. Michigan regulatory environment:
- **Credit Metrics**: An announced cost reduction puts them in targeted 15% FFO/Debt range for this year. No change to 2020 financing plan.

This report is prepared solely for the use of Brian Dingerdissen

Sempra Energy (SRE), Outperform rating, $138 price target

- **Chile:** SRE still expect to close the sale of its Chilean business by the end of the month. The last step before closing is getting workers from State Grid International, a Chinese company, into the country, which has of course been complicated by Covid-19. As we understand it, the workers might also need to be quarantined for 14 days before closing.
- **LNG:** Announced production at Cameron 3 during conference. They continue to expect to make a final investment decision on the ECA project in Mexico this quarter. The project still needs an export permit from Mexico –also complicated by Covid- before a decision can be made.
- **2020 EPS Guidance**: SRE continued to sound optimistic on their positioning in 2020 despite Covid, reiterating plans to deliver in the upper end of their current guidance as discussed on the 1Q call.
- **Covid exposure**: SRE's utilities are well positioned for Covid given decoupling and tracking mechanisms in California and still strong demand in Texas.
- **Credit Ratings**: We believe SRE's comments suggest they will be more likely to accept a credit rating downgrade (they are rated Baa1 by Moody's, so a credit downgrade is still high rated IG) at Moody's, which placed them on an outlook for downgrade earlier this year, than to issue incremental equity

Southern Company (SO), In Line rating, $59 price target

- **Covid sales impacts:** SO indicated that load in April was pretty consistent with what they expected at the time of the 1Q call and with their guidance for Covid to negatively impact revenues in the $250m-$400m range.
- **Mitigation plans:** SO is hopeful they might get some help from weather this summer but also noted that they still feel well positioned to offset Covid-related sales impacts with cuts to O&M. They will also benefit from the ability to defer Covid-related costs, like bad debt expense, in GA and MS now**.**
- **Doing more with less at Vogtle:** SO continues to adjust the Vogtle construction site in the wake of the labor force reduction last month. They have seen Cost performance Index (CPI) improve and are now focused on getting earned hours back to where they were. While they expect monthly completion in May at Unit 3 to hover around 1-1.5%, in line with what they delivered in April, they are hopeful that they will ramp back up to 2% in June even with around 2,000 fewer laborers on site.

WEC Energy (WEC), In Line rating, $93 price target

- **Covid sales impacts:** Recent sales trends have been consistent with the revised forecasts issued on the 1Q call.
- **Customer arrears/bad debt expense:** WEC has been pleasantly surprised by trends so far in terms of customer arrears but they will have a better idea of impacts as time goes on.
- **M&A:** WEC's message was relatively consistent in terms of how they think about M&A. They were willing to comment specifically on EVRG, however, noting that they were not interested in participating in any formal auction and also highlighted concerns with the Sibley coal plant disallowance in particular**.**

Essential Utilities (WTRG), In Line rating, $42 price target

- **PA Commission order on uncollectible expense:** In a letter dated 05/13/20 the PA commission directed state utilities to create a regulatory asset for any incremental uncollectible expenses incurred above those embedded in rates since the issuance of the Emergency Order.
- **M&A:** COVID has impacted the pace of discussions on M&A/tuck in opportunities but WTRG is in discussions with several municipalities and has line of sight to sizable water/wastewater acquisitions.
- **Delcora:** Still expected to close by year end but may get pushed into early next year. $300MM in equity issuance still anticipated late this year or early next.

This report is prepared solely for the use of Brian Dingerdissen

- **Peoples Gas repairs catch up:** There could be further potential earnings upside if the commission allows favorable treatment of the legacy tax balance ($0.05 - $0.10 annual EPS uplift not in our forecast). WTRG is expected to file with the PA commission in summer this year, timing on a final decision is unknown.

Xcel Energy (XEL), In Line rating, $65 price target

- **XEL is very comfortable in delivering 2020 EPS guidance**. The company believes there is opportunity to cut O&M more than 4-5% if the COVID impact is worse than their base case assumptions. So far, it has been better.
- **COVID expenses**: Minnesota is the latest state where XEL received a COVID expense deferral order, with a decision last week. Xcel has had some discussions in various states about tracking savings as well, but nothing has been finalized.
- **Long-term capex opportunities**: incremental capex could be driven by electric vehicle infrastructure, Minnesota renewables (could be highlighted in upcoming IRP) and PPA buyouts. These can be thought of as extending the five-year 5-7% growth rate rather than increasing it.
- **Rate case update**: Xcel is pleased with the recent modifications (resulting in an $11mm revenue increase) that came out of the reconsideration of the Colorado electric rate case. The company is generally pleased with the recent testimony in the Colorado gas rate case, especially as it pertains to the strong cap structure recommended by Staff and the Office of Consumer Council.. XEL is also having discussions in rate cases about how it can help the economy (i.e. workforce) by putting private capital back to work. This could also benefit them by allowing for more capex and/or acceleration of capex and also remove political pressure associated with a rate case.

This report is prepared solely for the use of Brian Dingerdissen

ANALYST CERTIFICATION

The analysts, Durgesh Chopra, Tulkin Niyazov, Michael Lonegan, Caroline Bone, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group L.L.C. ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and Evercore ISI International Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Inc. ("Evercore"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore's Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group L.L.C., Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore and its affiliates, and I or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore and its affiliates may have, or have had, business relationships with the companies mentioned in this report.

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform- the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line- the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform- the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy- the total forecasted return is expected to be greater than 10%
Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%

This report is prepared solely for the use of Brian Dingerdissen

Sell -the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Evercore ISI rating (as of 05/19/2020)

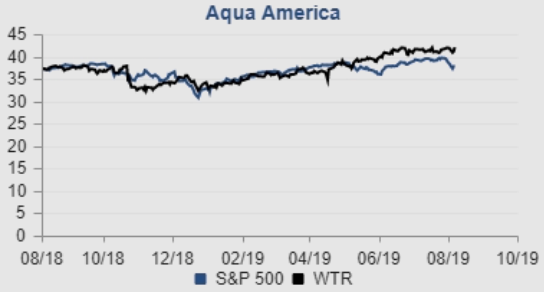
1 Year Price History



Source: FactSet

In Line Quarter; Eyes On The Prize

WTR reported a largely in line 2Q19. FOUR key items worth highlighting are: 1) The Peoples Gas acquisition is still expected to close in fall of this year; 2) Potential acquisition of a PA-based wastewater operator DELCORA (~$300mm rate base and ~$0.03 EPS uplift by our estimate); 3) Repair tax pass-through may be pursued next year; and 4) Long-term guidance is expected to be issued in December. We use a sum-of-the-parts approach to value WTR using a blend of water and gas multiples. At this current juncture, we think the stock trades above our bull-base valuation and we see limited near-term upside; **our rating remains In Line.**

Earnings notes. 2Q19 adjusted EPS of $0.37 was flat to prior year. EPS growth from rate cases and customer growth (acquisitions/ organic) was offset by higher depreciation, lower consumption, and impact of repairs tax. 2019 capex is still expected to be ~$550mm and the company reaffirmed its $1.4bn capex plan through '21, which supports 7% rate base growth in their legacy water business. The Y/Y customer growth rate is still expected to be between 2-3% for '19 (from both organic growth and acquisitions).

Peoples Gas update. Aqua still targets to close the Peoples Gas acquisition in fall of this year. A settlement agreement has been filed with the administrative law judge with a recommended decision expected later this month, and a final PA commission order is expected in the fall. On the rate case front, a settlement agreement seeking $59.5mm in rate increase is awaiting commission approval. New rates are expected to go into effect in October 2019.

Repairs tax election at Peoples could be up to $0.10 EPS accretive ($2/sh or 5% valuation uplift). In 2012, Aqua changed its tax method of accounting for qualifying utility asset repairs in PA. The tax accounting method was changed to permit the expensing of certain utility asset repairs/maintenance costs that were previously being capitalized and depreciated for tax purposes. The company used flow-through accounting for the tax benefits of the repair tax accounting change per the Pennsylvania rate order from June 2012. The flow-through accounting implementation resulted in a reduction in the company's effective income tax rate, which in turn lowered income tax expense and increased net income. WTR's effective tax rate was materially lower than the statuary tax rate at (7.7%) / 6.6% / 8.2% for the years '18 / '17 / '16 respectively. Higher earnings power supported higher returns on equity, which allowed Aqua to invest over $2bn of capital on system improvements over the past seven years without having to go in for rate cases in PA. If regulators approve a similar tax treatment at Peoples, it could be up to $0.10 accretive to EPS and $2/sh accretive to value by our math. We will look for additional color at the Analyst Day in December this year.

Please see the analyst certification and important disclosures on page 4 of this report. Evercore ISI and affiliates do and seek to do business with companies covered in its research reports. Investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.
© 2019. Evercore Group L.L.C. All rights reserved.

DELCORA opportunity. On the call management announced that the Delaware County Regional Water Authority (DELCORA) had signed a letter of intent with the company committing to exclusive discussions, which could result in a potential combination. DELCORA is a wastewater conveyance and treatment authority that serves approximately 500,000 people in 42 municipalities in Delaware and Chester Counties in southeastern Pennsylvania. We estimate that this could be a potential ~$300mm rate base ($0.03 EPS) uplift, assuming 50%/50% debt/equity financing if they were to move forward.

We are maintaining our $37 price target for WTR; our rating remains In Line. Our $37 target price is based on a sum-of-the-parts valuation where we assign 23.0x '21 P/E to the earnings contribution from the legacy water business and ~21.0x to earnings from the gas segment. The 23.0x water P/E is in line with our water regulated peer average target multiple. The gas multiple of ~21x is also in line with current gas LDC trading valuation multiples. Our bull case valuation of $39 assumes that both the water and gas segment trade at 5% premium to our base case scenario. Our bear case valuation of $33 assumes a 10% discount multiple to our base case scenario for both segments. Please see Exhibit 1 for additional details.

Exhibit 1
WTR Post-Merger Valuation Framework

SOTP Valuation (Base Case)	'21E	'21 P/E	Valuation
Legacy WTR EPS	$1.16	23.0x	$27.00
Gas EPS	$0.48	21.5x	$10.00
	$1.65		$37.00

SOTP Valuation (Bull Case)	'21E	'21 P/E	Valuation
Legacy WTR EPS	$1.16	24.1x	$28.00
Gas EPS	$0.48	22.6x	$11.00
	$1.65		$39.00

SOTP Valuation (Bear Case)	'21E	'21 P/E	Valuation
Legacy WTR EPS	$1.16	20.7x	$24.00
Gas EPS	$0.48	19.4x	$9.00
	$1.65		$33.00

Source: Evercore ISI Research

VALUATION METHODOLOGY

Our $37 target price is based on a SOTP where we assign 23.0x P/E to the earnings contribution from the legacy water business and ~21.0x to earnings from the gas segment. The 23.0x water P/E is in line with our water regulated peer average target multiple. The gas multiple of ~21.0x is also in line with current gas LDC trading valuation multiples.

RISKS

Risks to our thesis include an unfavorable regulatory outcome leading to lower rate base growth and/or lower allowed or earned ROEs in ongoing and future rate cases. Other risks include exposure to unusual weather, impact of conservation awareness of customers and more efficient plumbing fixtures and appliances on water usage per customer, cyber security and water contamination.

Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy- the total forecasted return is expected to be greater than 10%
Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell -the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Evercore ISI rating (as of 08/08/2019)

Water Utilities Q2 2019 Earnings Recap

The sector continues to look expensive to us on both an absolute and relative basis. Water utilities in our coverage universe are currently trading at a 30x P/E multiple on '21E EPS versus our fair value estimate for the space at 23x (58% / 75% premium to the electric utilities / S&P 500, respectively, versus the 10-year average of ~35% / ~50% based on a one-year forward P/E). 2Q19 earnings results were a mixed bag for the water utilities; see our key takeaways by company below.

AWK ($108PT, Outperform). 2Q19 EPS of $0.94 was a penny higher than consensus.

- The quarter benefitted from ~$0.10 EPS uplift from one-time items (land sales etc) offset by wet weather impact of $0.05.
- FY '19 adjusted EPS guidance range of $3.54-$3.64 was reaffirmed. The long-term EPS CAGR is still projected to be in the top half of the 7-10% range anchored off '17 adjusted EPS of $3.03, with dividends expected to grow at the high end.
- Capex guidance for the year was raised $100mm to $1.9bn, primarily driven by regulated acquisitions.
- We continue to struggle with the valuation for water utilities in our coverage universe. Despite a NTM total return proposition of -9% under our base case scenario (group average is around -11%), we think AWK offers the most attractive risk / reward proposition among our coverage universe over the long term, remain **Outperform**.

AWR ($60PT, Underperform). AWR reported 2Q19 adjusted EPS of $0.64 vs consensus of $0.56.

- Quarterly dividend was increased 10.9% and long term they are now targeting more than 7% compounded annual dividend growth (vs more than 6% previously)
- Company's proposed water rate case settlement was approved by the commission; gross margin is expected to increase by $7mm / $10mm / $12mm in '19 / '20 / '21, respectively.
- The commission issued a proposed decision in the ongoing electric rate case approving the settlement reached between the company and various parties. If approved, the rate increase would be retroactive, beginning 1/1/18.
- Reaffirmed ASUS 2019 EPS guidance range of $0.43 to $0.47, consolidated capex this year is still expected to be in the $115mm to $125mm range.
- We are raising our '19 / '20 / '21 EPS forecast to $2.00 / $2.10 / $2.25, driven by better than expected results YTD.
- Raising target price from $57 to $60, remain **Underperform.**

Please see the analyst certification and important disclosures on page 6 of this report. Evercore ISI and affiliates do and seek to do business with companies covered in its research reports. Investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.
© 2019. Evercore Group L.L.C. All rights reserved.

CTWS ($70PT, In Line). CTWS reported 2Q19 EPS of $0.48 vs prior year EPS of $0.39.

- The company filed an updated settlement agreement related to the SJW / CTWS merger application in CT. The one key addition to the previous application filed on 4/3/19 was that of rate credits totaling $300k/yr for a period of ten years, starting with the next general rate case (~$0.01 annual EPS impact before offsets). The agreement provides the companies with the opportunity to offset these credits with merger-related cost savings.
- SJW and CTWS expect the transaction to close in the third quarter of 2019, be neutral to slightly dilutive in the first full year, and be high-single-digit EPS accretive in the second full year post-closing.
- We are maintaining our $70 target price and **In Line** rating.

CWT ($46PT, In Line). CWT reported 2Q19 EPS of $0.35 vs consensus of $0.38.

- They are in settlement discussions in their ongoing rate case in CA. Recall they had filed their GRC in CA on 7/2/18, requesting $828.5mm in capital spend from '19-'21. The rate increase application requests $50.7mm / $31.5mm / $33.0mm revenue increases for years '20-'22, respectively. The company expects a final decision by YE '19 with rates effective 1/1/20.
- The company is dealing with a new variable: Public Safety Power Shutoffs (PSPS). Electric companies have been authorized to shut off the grid in addressing wildfire risk. They have redirected staff resources towards internal operational / wildfire readiness training, as well as hardening of their system for wildfires. They expect $2-3mm in equipment leases costs in 2H19 (59 generators for wildfire response)
- CWT's cost of capital filing is due in March next year. Currently they are approved for an equity / debt layer of 53% / 46%, and an ROE / cost of debt of 9.2% / 5.5%, respectively.
- We are maintaining our $46 target price and **In Line** rating.

.

SJW ($62PT, In Line). SJW reported 2Q19 EPS of $0.47 vs consensus of $0.56. Excluding one-time items, second quarter adjusted EPS came in at $0.58 versus $0.72 in the prior year.

- The company filed updated settlement agreement related to SJW/CTWS merger application in CT. The one key addition to the previous application filed on 04/03/19 was that of rate credits totaling $300k/yr for a period of ten years, starting with the next general rate case (~$0.01 annual EPS impact before offsets). The agreement provides for the companies' opportunity to offset these credits with merger-related cost savings.
- SJW expects the transaction to close in the third quarter of 2019, be neutral to slightly dilutive in the first full year, and be high-single-digit EPS accretive in the second full year post-closing.
- They settled with the California Public Utilities Commission (CPUC) over past customer billing practices. If approved by the Commission, the company would pay ~$2.1mm in one-time customer credits ($0.06 EPS hit booked in Q2) and invest $5.0mm in utility plant without seeking an investment return or rate recovery (<$0.01 EPS hit).
- In Texas (which represents ~5% of total EPS) legislations SB-700 and HB-3542 will take effect 09/01/19: the former will allow water utilities to recover and earn a return on capex in-between rate cases (similar to DSIC/infrastructure surcharges mechanisms in other states); HB-3542 allows a utility in Texas to value acquired assets at fair market value for ratemaking purposes.
- We are maintaining our $62 target price and **In Line** rating.

WTR ($37PT, In Line). 2Q19 adjusted EPS of $0.37 was largely in line with expectations and flat to prior year.

- The Peoples Gas acquisition is still expected to close in fall of this year. A settlement agreement has been filed with the administrative law judge with a recommended decision expected later this month, and a final PA commission order is expected in the fall. On the rate case front, a settlement agreement seeking $59.5mm in gas rate increase is awaiting commission approval. New rates are expected to go into effect in October 2019.
- Potential acquisition of a PA-based wastewater operator DELCORA may be in the cards (~$300mm rate base and ~$0.03 EPS uplift, by our estimate).
- Repair tax pass-through could be pursued next year, and could be up to $0.10 EPS accretive ($2/sh or 5% valuation uplift).
- Long-term guidance is expected to be issued in December '19; we are maintaining our $37 price target for WTR and **In Line** rating.

Exhibit 1
AWK Valuation Framework

Scenario	EPS CAGR*	'21EPS	'20 P/E	Valuation	Tot. Return
Base Case	7.9%	$4.10	26.5x	$108	-9%
Bull Case	9.3%	$4.32	27.8x	$120	1%
Bear Case	7.0%	$3.97	25.1x	$100	-15%

**17 through '21*

Valuation: Our $108 price target is 26.5x our FY '21 EPS estimate of $4.10/share. That is a ~15% premium to our water utility average target multiple of 23x, due to the company's best-in-class earnings and dividend growth, as well as geographical / regulatory diversity. The latter not only minimizes regulatory risks, but also offers a competitive advantage to capitalize on industry consolidation opportunities, given AWK's presence in 16 states. Our bull case valuation of $120 for AWK assumes growth in the upper half of their targeted 7-10% EPS growth guidance range and a 5% premium to a '21 P/E multiple of 26.5x. Our bear case valuation of $100 assumes AWK can grow earnings at the low end of the targeted 7-10% growth range and we apply a 10% discount to a '21 P/E multiple of 26.5x.

Source: Evercore ISI Research

Exhibit 2
AWR Valuation Framework

Scenario	EPS CAGR*	'21EPS	'20 P/E	Valuation	Tot. Return
Base Case	9.2%	$2.25	26.5x	$60	-27%
Bull Case	10.0%	$2.30	27.8x	$64	-23%
Bear Case	8.2%	$2.19	25.1x	$55	-33%

**18 through '21*

Valuation: Our $60 price target is 26.5x our FY '21 EPS estimate of $2.25/share. That is a ~15% M&A premium to our water regulated target multiple of 23x. Our bull case valuation of $64 for AWR assumes they can grow EPS at 10% through '21 and trade at a 5% premium to our base case '21 P/E multiple of 26.5x. Our bear case valuation of $55 assumes that they grow earnings at 6.5%, 100 bps lower than our base case and trade at 5% discount to our '21 base case P/E multiple of 26.5x.

Source: Evercore ISI Research

Exhibit 3
CTWS Valuation Framework

Scenario	EPS CAGR*	'21EPS	'21 P/E	Valuation	Tot. Return
Base Case	7.1%	$2.75	25.3x	$70	2%
Bull Case	8.1%	$2.83	26.6x	$75	9%
Bear Case	6.1%	$2.67	24.0x	$64	-6%

**18 through '21*

Valuation: Our $70 price target is 25.3x our FY '21 EPS estimate of $2.75/share. That is a ~10% M&A premium to our water regulated target multiple of 23x. Our bull case valuation of $75 for CTWS assumes they can grow EPS at 8.1% 100 bps higher than our base case forecast and trade at a 5% premium to our base case '21 P/E multiple of 25.3x. Our bear case valuation of $64 assumes that they grow earnings at 6.1%, 100 bps lower than our base case and trade at 5% discount to our '21 base case P/E multiple of 25.3x.

Source: Evercore ISI Research

Exhibit 4
CWT Valuation Framework

Scenario	EPS CAGR*	'21EPS	'21 P/E	Valuation	Tot. Return
Base Case	8.7%	$1.75	26.5x	$46	-14%
Bull Case	9.7%	$1.80	27.8x	$50	-6%
Bear Case	7.7%	$1.70	25.1x	$43	-19%

**18 through '21*

Valuation: Our $46 price target is 26.5x our FY '21 EPS estimate of $1.75/share. That is a ~15% M&A premium to our water regulated target multiple of 23x. Our bull case valuation of $50 for CWT assumes they can grow EPS at 9.7% 100 bps higher than our base case forecast and trade at a 5% premium to our base case '21 P/E multiple of 26.5x. Our bear case valuation of $43 assumes that they grow earnings at 7.7%, 100 bps lower than our base case and trade at 5% discount to our '21 base case P/E multiple of 26.5x.

Source: Evercore ISI Research

Exhibit 5
SJW Valuation Framework

Valuation	Post Merger	No Merger	Base Case (a)	Valuation	Bull Case	Bear Case
Consolidated 2021 EPS	**$2.55**	**$2.30**		**Consolidated 2021 EPS**	**$2.55**	**$2.30**
Forward P/E Multiple	25.5x	25.5x		Forward P/E Multiple	26.5x	24.5x
Implied Valuation	**$65.0**	**$59.0**	**$62.0**	**Implied Valuation**	**$68.0**	**$56.0**
Current Stock Price (07/25/19)	$64.3	$64.3	$64.3	Current Stock Price (07/25/19)	$64.3	$64.3
Price Appreciation	**1.1%**	**-8.2%**	**-3.6%**	**Price Appreciation**	**5.8%**	**-12.9%**
Dividend Yield	**1.9%**	**1.9%**	**1.9%**	**Dividend Yield**	**1.9%**	**1.9%**
Total Shareholder Return	**3.0%**	**-6.4%**	**-1.7%**	**Total Shareholder Return**	**7.6%**	**-11.0%**

Valuation: Our base case valuation of $62 is an average of our post-merger and no-merger valuations. Firstly, our $65 post-merger valuation is based on a pro-forma FY '21 EPS estimate of $2.55 and a 25.5x P/E multiple, which represents a ~10% M&A premium to our regulated water target multiple of 23.0x. Secondly, our no-merger valuation of $59 is based on a standalone FY '21 EPS estimate of $2.30 and a 25.5x P/E multiple. In our bull case of $68, we assume that the merger goes through and assign a 1.0x higher P/E multiple vs. the base case. In our bear case valuation of SJW, we assume the merger is not consummated and assign a 1.0x lower P/E multiple vs. the base case.

Source: Evercore ISI Research

Exhibit 6
WTR Valuation Framework

SOTP Valuation (Base Case)	'21E	'21 P/E	Valuation
Legacy WTR EPS	$1.16	23.0x	$27.00
Gas EPS	$0.48	21.2x	$10.00
	$1.65		$37.00

SOTP Valuation (Bull Case)	'21E	'21 P/E	Valuation
Legacy WTR EPS	$1.16	24.1x	$28.00
Gas EPS	$0.48	22.3x	$11.00
	$1.65		$39.00

SOTP Valuation (Bear Case)	'21E	'21 P/E	Valuation
Legacy WTR EPS	$1.16	20.7x	$24.00
Gas EPS	$0.48	19.1x	$9.00
	$1.65		$33.00

Valuation: Our $37 target price is based on a SOTP valuation where we assign 23x P/E to earnings contribution from the legacy water business and ~21x to earnings from the gas segment. The 23x water P/E is in line with our water regulated peer average target multiple .The gas multiple of ~21x is also in line with current gas LDC trading valuation multiples. Our bull case valuation of $39 assumes that both the water and gas segment trade at 5% premium to our base case scenario. Our bear case valuation of $33 assumes 10% discount multiple to our base case scenario for both segments.

Source: Evercore ISI Research

Risks. Risks to our thesis include an unfavorable regulatory outcome leading to lower rate base growth and/or lower allowed or earned ROEs in ongoing and future rate cases. Other risks include exposure to unusual weather, impact of conservation awareness of customers and more efficient plumbing fixtures and appliances on water usage per customer, cyber security and water contamination.

ANALYST CERTIFICATION

The analysts, Durgesh Chopra, Jeffrey Qiu, Greg Gordon, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and I or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report.

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform- the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line- the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform- the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

Buy- the total forecasted return is expected to be greater than 10%

Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell -the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Evercore ISI rating (as of 08/11/2019)

Announces '21 EPS Guidance Range, Extends Long-Term Growth Rate Target Through '23

Essential Utilities initiates' 2021 EPS guidance range of $1.64-$1.69, extends 5-7% EPS growth target through 2023. Essential hosted a guidance call earlier today to discuss company's 2021 expected EPS projection and three year outlook. The company initiated 2021 EPS guidance range of $1.64-$1.69 which at the mid-pt of $1.66 is in line with consensus/our estimate of $1.67 and points to year over year growth rate of 7% towards the high end of management targeted 5-7% long term growth rate. WTRG also extended its capex and rate base growth forecast by one year through 2023 and still anticipates water rate base growing by 6-7% (excluding acquisitions) and gas rate base 8-10% on average through that period. Fueling this growth is $3B in expected combined investments from 2020 through 2023. They expect to issue some equity to fund base capex (we model $100MM through 2023), municipal system acquisitions and dividends which are expected to grow in line with earnings. The company also extended its 5-7% EPS growth target through 2023 and introduced 60% emission reduction target by 2035. WTRG anticipates closing the DELCORA acquisition in the second quarter this year and plans on filing a general rate case application in PA later in the year for rate effective in late '21/early '22.

We are introducing '23E of $1.90, raising target price to $49. We are also modestly adjusting our '21/'22 eps estimates to $1.67/$1.79 respectively. Our 23E of $1.90 drives a CAGR of 7% (using 2020 guidance mid-pt of $1.56) which is at the high end of company's targeted 5-7% earnings growth rate. We further note that our EPS forecast could be conservative if WTRG announces more private and municipal water/waste water system acquisitions above their current forecast. Our $49 target price is based on a SOTP where we assign 29.5x P/E to the '23 earnings contribution from the legacy water business and ~ 17.5x to earnings from the gas segment. The 29.5x water P/E is a ~30% premium to our water utility average target multiple of 23x which we think is warranted in this environment given above average residential customer mix which positions them well against COVID related demand headwinds. Majority of their water EPS is derived from PA which is also a relative advantage versus peers. The gas multiple of ~17.5x is also in line with our target Electric/gas utility multiple. We see bull/bear case valuation of $56/$43 respectively, and given the potential upside from municipal water/waste water deals and other complementary growth projects we assign low probability to our bear case scenario, see page 2 of the report.

Q3 2020 Earnings Recap. WTRG reported Q3 '20 Adjusted EPS of $1.01 versus consensus of $1.02. Management Reaffirmed 2020 EPS guidance range of $1.53-$1.58, but expected to be at the top end. WTRG still projects EPS to grow in the range of 5-7% on average from 2019 through 2022. In Q3, company announced offering of 6.7MM shares via an equity forward agreement (~$300MM in proceeds). Proceeds which are expected to be used to fund general corporate purposes, including the acquisition of the Delaware County Regional Water. Quality Control Authority (DELCORA) and other water and wastewater acquisitions in its pipeline.

See inside for detail on the DELCORA opportunity, Repairs Tax Election Uplift, and our price target.

Please see the analyst certification and important disclosures on page 4 of this report. Evercore ISI and affiliates do and seek to do business with companies covered in its research reports. Investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

DELCORA opportunity. In September '19, management had announced a signed purchase agreement with Delaware County Regional Water Authority (DELCORA), following the latter's signing of a letter of intent with Aqua committing to exclusive discussions in August '19. DELCORA is a wastewater conveyance and treatment authority that serves approximately 500,000 people in 42 municipalities in Delaware and Chester Counties in southeastern Pennsylvania. We estimate that this could be a potential ~$300mm rate base / $0.03 EPS annual uplift (included in our forecast), assuming 50%/50% debt/equity financing. WTRG expects to close the transaction in second quarter this year.

Repairs Tax Election Uplift, 8-12c/yr. Essential's 2020 and forward looking EPS guidance includes 8-12c/share annual earnings uplift which is more/less in line with our estimate of ~10c. There may be additional accretion from historical balances pending commission review and final decision. For context, in 2012, Aqua (water utility) changed its tax method of accounting for qualifying utility asset repairs in PA. The tax accounting method was changed to permit the expensing of certain utility asset repairs/maintenance costs that were previously being capitalized and depreciated for tax purposes. The company used flow-through accounting for the tax benefits of the repair tax accounting change per the Pennsylvania rate order from June '12. The flow-through accounting implementation resulted in a reduction in the company's effective income tax rate, which in turn lowered income tax expense and increased net income. WTR's effective tax rate was materially lower than the statuary tax rate at (7.7%) / 6.6% / 8.2% for the years '18 / '17 / '16 respectively. Higher earnings power supported higher returns on equity, which allowed Aqua to invest over $2bn of capital on system improvements over the past seven years without having to go in for rate cases in PA. There could be further earnings upside (~$0.05 annual EPS uplift by our estimate) if the commission allows favorable treatment of the legacy tax balance. WTRG is asking the commission to apply the earnings upside to years 2023 and beyond such that the company can delay its 2023 rate filing by a year.

We are raising our target price to $49; our rating remains In Line. Our $49 target price is based on a SOTP where we now assign 29.5x P/E to the '23 earnings contribution from the legacy water business and ~ 17.5x to earnings from the gas segment. The 29.5x water P/E is a ~30% premium to our water utility average target multiple of 23x which we think is warranted in this environment given above average residential customer mix which positions them well against COVID related demand headwinds. Majority of their water EPS is derived from PA which is also a relative advantage versus peers. The gas multiple of ~17.5x is also in line with our target electric/gas multiple. Our bull case valuation of $56 assumes that they are able to achieve ~$0.06 combined upside from tax repairs, and both the water and gas segment trade at 10% premium to our base case scenario. Our bear case valuation of $43 assumes a 5% discount multiple to our base case scenario for the water segment, current trading multiple of comparable gas LDC's and low end of targeted LT EPS growth. Please see Exhibit 1 for additional details.

Exhibit 1

WTR Valuation Framework

SOTP Valuation (Base Case)	'23E	'23 P/E	Valuation
Legacy WTR EPS	$1.33	29.5x	$39.00
Gas EPS	$0.57	17.5x	$10.00
	$1.90		$49.00

SOTP Valuation (Bull Case)	'23E	'23 P/E	Valuation
Legacy WTR EPS	$1.37	32.5x	$45.00
Gas EPS	$0.59	19.3x	$11.00
	$1.96		$56.00

SOTP Valuation (Bear Case)	'23E	'23 P/E	Valuation
Legacy WTR EPS	$1.26	28.1x	$35.00
Gas EPS	$0.54	14.7x	$8.00
	$1.80		$43.00

This report is prepared solely for the use of Renee Marquis

VALUATION METHODOLOGY

Our $49 target price is based on a SOTP where we now assign 29.5x P/E to the '23 earnings contribution from the legacy water business and ~ 17.5x to earnings from the gas segment. The 29.5x water P/E is a ~30% premium to our water utility average target multiple of 23x which we think is warranted in this environment given above average residential customer mix which positions them well against COVID related demand headwinds. Majority of their water EPS is derived from PA which is also a relative advantage versus peers. The gas multiple of ~17.5x is also in line with our target electric/gas multiple

RISKS

Risks to our thesis include an unfavorable regulatory outcome leading to lower rate base growth and/or lower allowed or earned ROEs in ongoing and future rate cases. Other risks include exposure to unusual weather, impact of conservation awareness of customers and more efficient plumbing fixtures and appliances on water usage per customer, cyber security and water contamination.

ANALYST CERTIFICATION

The analysts, Durgesh Chopra, Tulkin Niyazov, Michael Lonegan, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 55 East 52nd Street, New York, NY 10055.

Evercore Partners and its affiliates, and I or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report.

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform- the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line- the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform- the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

This report is prepared solely for the use of Renee Marquis

Buy- the total forecasted return is expected to be greater than 10%
Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell -the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

Evercore ISI rating (as of 01/11/2021)

LT Growth Outlook Below Expectations

WTRG lagged peers today (-8% vs water uts/UTY -6%/-5%) amid a broad market sell off on a weaker than expected LT EPS growth outlook. The company initiated 2020 EPS guidance range of $1.53 - $1.58 and projects earnings to grow in the range of 5-7% on average from 2019 through 2022. Starting with 2019 adjusted EPS of $1.47, 6% EPS growth rate mid-pt would translate into 2021 EPS of $1.65 (includes ~10c repair tax uplift) materially below our bull case scenario of $1.78 which assumes repair election + Delcora accretion, see our last note here. Peoples Gas acquisition is expected to close in March 2020, combined water and gas, Essential expects to invest $2.8B from 2019 through 2022. The abovementioned capex investment (including ~$25MM towards reducing PFOS/PFOA levels) is projected to generate rate base growth of 6-7% in the water business and 8-10% in gas through the forecast period. We will be back with a model update and our '22 EPS projection, see additional details within.

2020 Guidance & LT EPS Growth. As we stated earlier, Essential initiated 2020 EPS guidance range of $1.53-$1.58 and projects EPS to grow in the range of 5-7% on average from 2019 through 2022. Both the guidance and LT earnings growth rate include 8-12c/year EPS uplift from repair tax flow through at Peoples gas. $2.8B in planned investments through 2022 is driving projected 6-7%/8-10% rate base growth at water/gas during that period. Included in the capex plan is $25MM in investment towards reducing PFOS/PFOA (potentially harmful chemicals in the water stream) levels to 13 parts per trillion across their service territory significantly below federal governments health advisory level of 70 parts per trillion. The company pointed to lower future earned ROE's (2019 returns were higher due to repairs flow through in the water business), regulatory lag on municipal acquisitions, and dilution from additional equity units as primary drivers of the lower expected EPS CAGR versus rate base growth.

Please see the analyst certification and important disclosures on page 4 of this report. Evercore ISI and affiliates do and seek to do business with companies covered in its research reports. Investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report is prepared solely for the use of Brian Dingerdissen

Repairs Tax Election Uplift, 8-12c/yr. Essential's 2020 and forward looking EPS guidance includes 8-12c/share annual earnings uplift which is more/less in line with our estimate of ~10c. There may be additional accretion from historical balances pending commission review and final decision. For context, in 2012, Aqua (water utility) changed its tax method of accounting for qualifying utility asset repairs in PA. The tax accounting method was changed to permit the expensing of certain utility asset repairs/maintenance costs that were previously being capitalized and depreciated for tax purposes. The company used flow-through accounting for the tax benefits of the repair tax accounting change per the Pennsylvania rate order from June '12. The flow-through accounting implementation resulted in a reduction in the company's effective income tax rate, which in turn lowered income tax expense and increased net income. WTR's effective tax rate was materially lower than the statuary tax rate at (7.7%) / 6.6% / 8.2% for the years '18 / '17 / '16 respectively. Higher earnings power supported higher returns on equity, which allowed Aqua to invest over $2bn of capital on system improvements over the past seven years without having to go in for rate cases in PA.

DELCORA Acquisition. In September '19, management had announced a signed purchase agreement with Delaware County Regional Water Authority (DELCORA), following DELCORA signing of a letter of intent with Aqua committing to exclusive discussions in August '19. DELCORA is a wastewater conveyance and treatment authority that serves approximately 500,000 people in 42 municipalities in Delaware and Chester Counties in southeastern Pennsylvania. We estimate that this could be a potential ~$300mm rate base / $0.03 EPS uplift in '21 (company expects to close in late '20/early '21), assuming 50%/50% debt/equity financing.

Peoples Gas Update. In March 2019, Essential received regulatory approval for the Peoples transaction from the Kentucky Public Service Commission, followed by approval in Kentucky next month. On 10/28/19 the PA Administrative Law Judge assigned to the case issued a proposed decision approving the Peoples Gas acquisition which was subsequently approved by the Commission in January this year. The company expects to complete the acquisition in March 2020.

2019 EPS. Essential reported FY 2019 adjusted EPS of $1.47 which was more/less in line with our forecast of $1.48. Compare to prior year EPS was $ 0.06 or 4.3% higher driven by rate/surcharges supporting capex +$0.16, customer growth +$0.03, higher expenses -$0.06, and lower usage/other -$0.07.

This report is prepared solely for the use of Brian Dingerdissen

VALUATION METHODOLOGY

Our $37 target price is based on a SOTP where we assign 23.0x P/E to the earnings contribution from the legacy water business and ~21.0x to earnings from the gas segment. The 23.0x water P/E is in line with our water regulated peer average target multiple. The gas multiple of ~21.0x is also in line with current gas LDC trading valuation multiples.

RISKS

Risks to our thesis include an unfavorable regulatory outcome leading to lower rate base growth and/or lower allowed or earned ROEs in ongoing and future rate cases. Other risks include exposure to unusual weather, impact of conservation awareness of customers and more efficient plumbing fixtures and appliances on water usage per customer, cyber security and water contamination.

ANALYST CERTIFICATION

The analysts, Durgesh Chopra, Emily Dang, Greg Gordon, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and I or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report.

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform- the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line- the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform- the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

This report is prepared solely for the use of Brian Dingerdissen

Buy- the total forecasted return is expected to be greater than 10%
Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell -the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

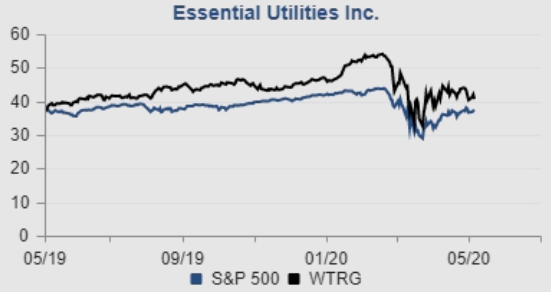
1 Year Price History



Source: FactSet

Good quarter, 2020 & LT EPS Targets Reaffirmed

WTRG reported Q1 '20 Adjusted EPS of $0.60 versus consensus of $0.58. The company booked $0.02 EPS uplift from repairs pass-through in the quarter in line with original guidance of $0.08 - $0.12 EPS benefit for the year. There could be further potential earnings upside if the commission allows favorable treatment of the legacy tax balance (not in our forecast). Essential also reaffirmed its 2020 EPS guidance range of $1.53-$1.58 and still projects EPS to grow in the range of 5-7% on average from 2019 through 2022. The company filed for Delcora waste water acquisition approval with the commission in the first quarter and still expects to issue $300MM in equity later this year to finance the deal ($0.03 EPS contribution included in our forecast). They are closely monitoring COVID-related implications on consumption, collections and capital expenditures and based on current available information don't expect a material financial impact to 2020 EPS.

Target Price $38, rating still In Line. We are maintaining our EPS estimates which incorporate company guidance issued at analyst day earlier in the year. Our '20/'21/'22 EPS forecast of $1.55/$1.65/$1.80 drives a '19 through '22 CAGR of ~7% towards the high end of company's targeted EPS growth rate of 5-7%. Our $38 target price is based on a SOTP where we assign 23.0x P/E to the earnings contribution from the legacy water business and ~17x to earnings from the gas segment. The 23.0x water P/E is in line with our water regulated peer average target multiple. The gas multiple of ~17x is also in line with current gas LDC trading valuation multiples. Rating remains In Line

Repairs Tax Election Uplift, 8-12c/yr. Essential's 2020 and forward looking EPS guidance includes 8-12c/share annual earnings uplift which is more/less in line with our estimate of ~10c. There may be additional accretion from historical balances pending commission review and final decision. For context, in 2012, Aqua (water utility) changed its tax method of accounting for qualifying utility asset repairs in PA. The tax accounting method was changed to permit the expensing of certain utility asset repairs/maintenance costs that were previously being capitalized and depreciated for tax purposes. The company used flow-through accounting for the tax benefits of the repair tax accounting change per the Pennsylvania rate order from June '12. The flow-through accounting implementation resulted in a reduction in the company's effective income tax rate, which in turn lowered income tax expense and increased net income. WTR's effective tax rate was materially lower than the statuary tax rate at (7.7%) / 6.6% / 8.2% for the years '18 / '17 / '16 respectively. Higher earnings power supported higher returns on equity, which allowed Aqua to invest over $2bn of capital on system improvements over the past seven years without having to go in for rate cases in PA. There could be further earnings upside (~$0.05 annual EPS uplift by our estimate) if the commission allows favorable treatment of the legacy tax balance.

Please see the analyst certification and important disclosures on page 3 of this report. Evercore ISI and affiliates do and seek to do business with companies covered in its research reports. Investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report is prepared solely for the use of Brian Dingerdissen

VALUATION METHODOLOGY

Our $38 target price is based on a SOTP where we assign 23.0x P/E to the earnings contribution from the legacy water business and ~17x to earnings from the gas segment. The 23.0x water P/E is in line with our water regulated peer average target multiple. The gas multiple of ~17x is also in line with current gas LDC trading valuation multiples.

RISKS

Risks to our thesis include an unfavorable regulatory outcome leading to lower rate base growth and/or lower allowed or earned ROEs in ongoing and future rate cases. Other risks include exposure to unusual weather, impact of conservation awareness of customers and more efficient plumbing fixtures and appliances on water usage per customer, cyber security and water contamination.

ANALYST CERTIFICATION

The analysts, Durgesh Chopra, Tulkin Niyazov, Michael Lonegan, Caroline Bone, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and I or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report.

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform- the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line- the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform- the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

This report is prepared solely for the use of Brian Dingerdissen

Buy- the total forecasted return is expected to be greater than 10%
Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell -the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

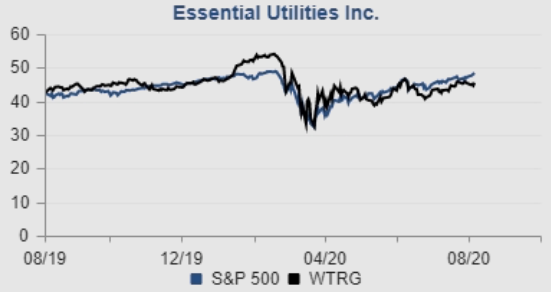
1 Year Price History



Source: FactSet

Solid Quarter, LT Outlook Reaffirmed

Essential posted a solid beat in the second quarter reporting EPS of $0.29 versus consensus of $0.23. Helped in part by favorable weather, residential load more the offset decline in Commercial/Industrial usage resulting in no meaningful COVID impact during the quarter. The company filed for repair tax catch-up with the PA Commission (~$0.05 annual EPS uplift if approved our estimate) and advanced Delcora transaction process expected to close early next year. They still expect to issue $300MM in equity later this year to finance the deal ($0.03 EPS contribution included in our forecast). WTRG also reaffirmed its 2020 EPS guidance range of $1.53-$1.58 and still projects EPS to grow in the range of 5-7% on average from 2019 through 2022.

Target Price $42, rating In Line. Our $42 target price is based on a SOTP where we now assign 26.5x P/E to the '22 earnings contribution from the legacy water business and ~ 16.5x to earnings from the gas segment. The 26.5x water P/E is a ~15% premium to our water utility average target multiple of 23x which we think is warranted in this environment given above average residential customer mix which positions them well against COVID related demand headwinds. Majority of their water EPS is derived from PA which is also a relative advantage versus peers. The gas multiple of ~16.5x is also in line with current gas LDC. We see bull/bear case valuation of $48/$38 respectively, and given the potential upside opportunity from tax catch up, municipal water/waste water deals and other complementary growth projects we assign low probability to our bear case scenario, see page 2 of the report.

Repairs Tax Election Uplift, 8-12c/yr. Essential's 2020 and forward looking EPS guidance includes 8-12c/share annual earnings uplift which is more/less in line with our estimate of ~10c. There may be additional accretion from historical balances pending commission review and final decision. For context, in 2012, Aqua (water utility) changed its tax method of accounting for qualifying utility asset repairs in PA. The tax accounting method was changed to permit the expensing of certain utility asset repairs/maintenance costs that were previously being capitalized and depreciated for tax purposes. The company used flow-through accounting for the tax benefits of the repair tax accounting change per the Pennsylvania rate order from June '12. The flow-through accounting implementation resulted in a reduction in the company's effective income tax rate, which in turn lowered income tax expense and increased net income. WTR's effective tax rate was materially lower than the statuary tax rate at (7.7%) / 6.6% / 8.2% for the years '18 / '17 / '16 respectively. Higher earnings power supported higher returns on equity, which allowed Aqua to invest over $2bn of capital on system improvements over the past seven years without having to go in for rate cases in PA. There could be further earnings upside (~$0.05 annual EPS uplift by our estimate) if the commission allows favorable treatment of the legacy tax balance.

Please see the analyst certification and important disclosures on page 4 of this report. Evercore ISI and affiliates do and seek to do business with companies covered in its research reports. Investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

This report is prepared solely for the use of Brian Dingerdissen

DELCORA opportunity. In September '19, management had announced a signed purchase agreement with Delaware County Regional Water Authority (DELCORA), following the latter's signing of a letter of intent with Aqua committing to exclusive discussions in August '19. DELCORA is a wastewater conveyance and treatment authority that serves approximately 500,000 people in 42 municipalities in Delaware and Chester Counties in southeastern Pennsylvania. We estimate that this could be a potential ~$300mm rate base / $0.03 EPS uplift in '21 (included in our forecast), assuming 50%/50% debt/equity financing.

We are changing our PT to $42 for WTR; our rating remains In Line. Our $42 target price is based on a SOTP where we now assign 26.5x P/E to the '22 earnings contribution from the legacy water business and ~ 16.5x to earnings from the gas segment. The 26.5x water P/E is a ~15% premium to our water utility average target multiple of 23x which we think is warranted in this environment given above average residential customer mix which positions them well against COVID related demand headwinds. Majority of their water EPS is derived from PA which is also a relative advantage versus peers. The gas multiple of ~16.5x is also in line with current gas LDC. Our bull case valuation of $48 assumes that they are able to achieve ~$0.05 combined upside from tax repairs, and both the water and gas segment trade at 10% premium to our base case scenario. Our bear case valuation of $38 assumes a 5% discount multiple to our base case scenario for both segments and low end of targeted LT EPS growth. Please see Exhibit 1 for additional details.

Exhibit 1
WTR Valuation Framework

SOTP Valuation (Base Case)	'22E	'21 P/E	Valuation
Legacy WTR EPS	$1.26	26.4x	$33.00
Gas EPS	$0.54	16.5x	$9.00
	$1.80		$42.00

SOTP Valuation (Bull Case)	'21E	'21 P/E	Valuation
Legacy WTR EPS	$1.29	29.0x	$38.00
Gas EPS	$0.55	18.1x	$10.00
	$1.85		$48.00

SOTP Valuation (Bear Case)	'21E	'21 P/E	Valuation
Legacy WTR EPS	$1.19	25.1x	$30.00
Gas EPS	$0.51	15.7x	$8.00
	$1.70		$38.00

This report is prepared solely for the use of Brian Dingerdissen

VALUATION METHODOLOGY

Our $42 target price is based on a SOTP where we now assign 26.5x P/E to the '22 earnings contribution from the legacy water business and ~ 16.5x to earnings from the gas segment. The 26.5x water P/E is a ~15% premium to our water utility average target multiple of 23x which we think is warranted in this environment given above average residential customer mix which positions them well against COVID related demand headwinds.

RISKS

Risks to our thesis include an unfavorable regulatory outcome leading to lower rate base growth and/or lower allowed or earned ROEs in ongoing and future rate cases. Other risks include exposure to unusual weather, impact of conservation awareness of customers and more efficient plumbing fixtures and appliances on water usage per customer, cyber security and water contamination.

ANALYST CERTIFICATION

The analysts, Durgesh Chopra, Tulkin Niyazov, Michael Lonegan, primarily responsible for the preparation of this research report attest to the following: (1) that the views and opinions rendered in this research report reflect his or her personal views about the subject companies or issuers; and (2) that no part of the research analyst's compensation was, is, or will be directly related to the specific recommendations or views in this research report.

DISCLOSURES

This report is approved and/or distributed by Evercore Group LLC ("Evercore Group"), a U.S. licensed broker-dealer regulated by the Financial Industry Regulatory Authority ("FINRA"), and International Strategy & Investment Group (UK) Limited ("ISI UK"), which is authorised and regulated in the United Kingdom by the Financial Conduct Authority. The institutional sales, trading and research businesses of Evercore Group and ISI UK collectively operate under the global marketing brand name Evercore ISI ("Evercore ISI"). Both Evercore Group and ISI UK are subsidiaries of Evercore Partners Inc. ("Evercore Partners"). The trademarks, logos and service marks shown on this report are registered trademarks of Evercore Partners.

The analysts and associates responsible for preparing this report receive compensation based on various factors, including Evercore Partners' total revenues, a portion of which is generated by affiliated investment banking transactions. Evercore ISI seeks to update its research as appropriate, but various regulations may prevent this from happening in certain instances. Aside from certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Evercore ISI generally prohibits analysts, associates and members of their households from maintaining a financial interest in the securities of any company in the analyst's area of coverage. Any exception to this policy requires specific approval by a member of our Compliance Department. Such ownership is subject to compliance with applicable regulations and disclosure. Evercore ISI also prohibits analysts, associates and members of their households from serving as an officer, director, advisory board member or employee of any company that the analyst covers.

This report may include a Tactical Call, which describes a near-term event or catalyst affecting the subject company or the market overall and which is expected to have a short-term price impact on the equity shares of the subject company. This Tactical Call is separate from the analyst's long-term recommendation (Outperform, In Line or Underperform) that reflects a stock's forward 12-month expected return, is not a formal rating and may differ from the target prices and recommendations reflected in the analyst's long-term view.

Applicable current disclosures regarding the subject companies covered in this report are available at the offices of Evercore ISI, and can be obtained by writing to Evercore Group LLC, Attn. Compliance, 666 Fifth Avenue, 11th Floor, New York, NY 10103.

Evercore Partners and its affiliates, and I or their respective directors, officers, members and employees, may have, or have had, interests or qualified holdings on issuers mentioned in this report. Evercore Partners and its affiliates may have, or have had, business relationships with the companies mentioned in this report.

Additional information on securities or financial instruments mentioned in this report is available upon request.

Ratings Definitions

Current Ratings Definition

Evercore ISI's recommendations are based on a stock's total forecasted return over the next 12 months. Total forecasted return is equal to the expected percentage price return plus gross dividend yield. We divide our stocks under coverage into three primary ratings categories, with the following return guidelines:

Outperform- the total forecasted return is expected to be greater than the expected total return of the analyst's coverage universe
In Line- the total forecasted return is expected to be in line with the expected total return of the analyst's universe
Underperform- the total forecasted return is expected to be less than the expected total return of the analyst's universe
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances.*
Rating Suspended- Evercore ISI has suspended the rating and target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon.*

*Prior to October 10, 2015, the "Coverage Suspended" and "Rating Suspended" categories were included in the category "Suspended."

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell" to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Outperform, In Line, and Underperform ratings can be equated to Buy, Hold and Sell, respectively.

Historical Ratings Definitions

Prior to March 2, 2017, Evercore ISI's recommendations were based on a stock's total forecasted return over the next 12 months:

This report is prepared solely for the use of Brian Dingerdissen

Buy- the total forecasted return is expected to be greater than 10%
Hold- the total forecasted return is expected to be greater than or equal to 0% and less than or equal to 10%
Sell -the total forecasted return is expected to be less than 0%

On October 31, 2014, Evercore Partners acquired International Strategy & Investment Group LLC ("ISI Group") and ISI UK (the "Acquisition") and transferred Evercore Group's research, sales and trading businesses to ISI Group. On December 31, 2015, the combined research, sales and trading businesses were transferred back to Evercore Group in an internal reorganization. Since the Acquisition, the combined research, sales and trading businesses have operated under the global marketing brand name Evercore ISI.

ISI Group and ISI UK:

Prior to October 10, 2014, the ratings system of ISI Group LLC and ISI UK which was based on a 12-month risk adjusted total return:

Strong Buy- Return > 20%
Buy- Return 10% to 20%
Neutral - Return 0% to 10%
Cautious- Return -10% to 0%
Sell- Return< -10%

For disclosure purposes, ISI Group and ISI UK ratings were viewed as follows: Strong Buy and Buy equate to Buy, Neutral equates to Hold, and Cautious and Sell equate to Sell.

Evercore Group:

Prior to October 10, 2014, the rating system of Evercore Group was based on a stock's expected total return relative to the analyst's coverage universe over the following 12 months. Stocks under coverage were divided into three categories:

Overweight- the stock is expected to outperform the average total return of the analyst's coverage universe over the next 12 months.
Equal-Weight- the stock is expected to perform in line with the average total return of the analyst's coverage universe over the next 12 months.
Underweight -the stock is expected to underperform the average total return of the analyst's coverage universe over the next 12 months.
Suspended- the company rating, target price and earnings estimates have been temporarily suspended.

For disclosure purposes, Evercore Group's prior "Overweight," "Equal-Weight" and "Underweight" ratings were viewed as "Buy," "Hold" and "Sell," respectively.

Ratings Definitions for Portfolio-Based Coverage

Evercore ISI utilizes an alternate rating system for companies covered by analysts who use a model portfolio-based approach to determine a company's investment recommendation. Covered companies are included or not included as holdings in the analyst's Model Portfolio, and have the following ratings:

Long- the stock is a positive holding in the model portfolio; the total forecasted return is expected to be greater than 0%.
Short- the stock is a negative holding in the model portfolio; the total forecasted return is expected to be less than 0%.
No Position- the stock is not included in the model portfolio.
Coverage Suspended- the rating and target price have been removed pursuant to Evercore ISI policy when Evercore is acting in an advisory capacity in a merger or strategic transaction involving this company, and in certain other circumstances; a stock in the model portfolio is removed.
Rating Suspended - Evercore ISI has suspended the rating and/or target price for this stock because there is not sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, a rating or target price. The previous rating and target price, if any, are no longer in effect for this company and should not be relied upon; a stock in the model portfolio is removed.

Stocks included in the model portfolio will be weighted from 0 to 100% for Long and 0 to -100% for Short. A stock's weight in the portfolio reflects the analyst's degree of conviction in the stock's rating relative to other stocks in the portfolio. The model portfolio may also include a cash component. At any given time the aggregate weight of the stocks included in the portfolio and the cash component must equal100%.

Stocks assigned ratings under the alternative model portfolio-based coverage system cannot also be rated by Evercore ISI's Current Ratings definitions of Outperform, In Line and Underperform.

FINRA requires that members who use a ratings system with terms other than "Buy," "Hold/Neutral" and "Sell," to equate their own ratings to these categories. For this purpose, and in the Evercore ISI ratings distribution below, our Long, No Position and Short ratings can be equated to Buy, Hold and Sell respectively.

For the exclusive use of INSOO.KIM@GS.COM

We initiate coverage on Essential Utilities Inc. (WTRG) and transfer primary coverage on American Water (AWK) from Michael Lapides to Insoo Kim with the following updated views:

Analyzing the water utility premium valuation: fundamentals + ESG. While we recognize the current 10-11x relative P/E premium versus electric/gas utilities, we view this as justified given two quantifiable advantages: 1) our analysis shows every $1 invested in water assets is worth more given a longer depreciable life vs electric, and 2) long visibility of above-average growth due to significant water pipe investment needs. In addition, we see continued ESG momentum sustaining additional relative premium for water utilities. With this in mind:

- **We upgrade AWK to Buy with a $146 price target (16% total return)** as we see 1) best-in-class 8.3% EPS CAGR, 2) one of the highest beta-adjusted returns among Regulated Utilities (Exhibit 3), and 3) its ESG-favorable position as the only large-cap, pure-play water utility in the U.S. We view this defensive utility offering investors an attractive investment opportunity with double-digit upside potential.
- **We initiate coverage of WTRG at Neutral with a $45 price target (7% total return)** given 1) robust 6.6% EPS CAGR post Peoples Gas acquisition, but 2) current multiples that largely reflect the water/gas sum-of-the-parts valuation.
- **AWK/WTRG both remain relatively defensive in the current COVID-19 environment,** outperforming the XLU by 7%/3% since March 1. Also, we favorably view their heavy residential revenue mix which could help offset potential near-term demand impact from commercial/industrial customers.

As highlighted in our recent note, we remain positive on the Utilities sector, both on an absolute and relative basis, given 10-year treasury yields below 1% and the regulated utilities' more resilient earnings power relative to that for the broader market, especially in the current COVID-19 environment. We see 15%/25% total return for Regulated Utilities and Diversified Utilities, respectively.

Goldman Sachs does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. For Reg AC certification and other important disclosures, see the Disclosure Appendix, or go to www.gs.com/research/hedge.html. Analysts employed by non-US affiliates are not registered/qualified as research analysts with FINRA in the U.S.

PM Summary: Premium water utility multiples are justified; buy AWK

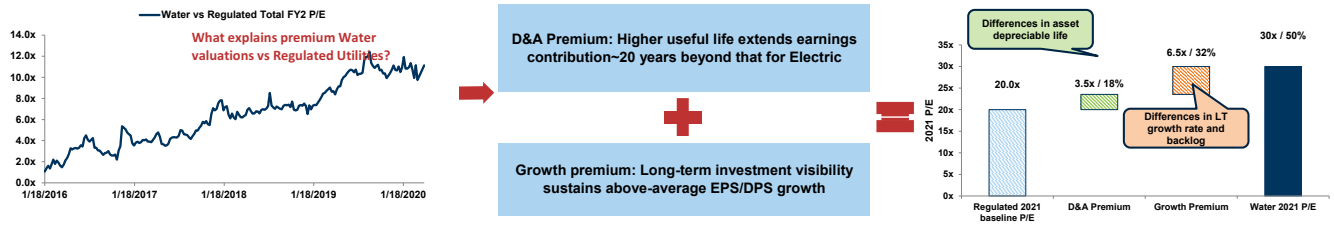
Despite the large relative P/E premiums for water utilities currently, we see two quantifiable advantages versus electric utilities that provide justification: 1) every $1 invested in water assets is worth more given a longer depreciable life, and 2) material organic/inorganic growth visibility that should sustain above-average earnings growth longer-term. Combined with a favorable ESG screen, we believe water utilities could see further relative multiple expansion from current levels.

To this end, we transfer primary coverage of AWK from Michael Lapides to Insoo Kim and upgrade from Neutral to Buy given best-in-class growth, more robust credit metrics, and its ESG-friendly status as a large-cap pure-play water utility, while we initiate on WTRG with a Neutral rating as we believe valuations fairly reflect the water/gas business mix.

Do water utilities deserve the current premium? We believe so. Based on our new and detailed analysis (please refer to the following section), we see certain fundamental advantages that justify the current 11.3x premium versus electric utilities. The primary drivers include:

1. **D&A premium (3.5x):** Every $1 invested to longer useful-life water assets (50 years vs. 30 years for electric) extends their value - translating into roughly 2% higher earnings growth.
2. **Growth premium (6.5x):** We see water utilities sustaining their above-average earnings/dividend growth over electric utilities over at least the next 15 years, given significant water investment needs in the U.S.
3. **Other qualitative factors:** 1) scarcity of water investor-owned utilities (IOUs), 2) ESG-related premium for pure-play water utilities (which we believe may impact WTRG given its new exposure to gas utilities).

Exhibit 1: Longer useful life and long-term investment visibility largely justify premium water valuations vs. electric/gas



Source: Goldman Sachs Global Investment Research

Following our analysis, we revise our regulated baseline water multiple from 25.5x to 30.0x, which incorporates the 10x D&A/growth premium to our 20x base P/E for electric/gas utilities on 2021E EPS.

With this revised base, we make the following recommendations:

- **Upgrade AWK to Buy**: **best-in-class growth and a pure-play large-cap water utility.** We expect AWK to continue to achieve above-average EPS growth, with our

For the exclusive use of INSOO.KIM@GS.COM

estimates (1% above consensus) implying an 8.3% EPS CAGR from 2019-2022 - at the middle of the company's 7-10% guidance - driven by a combination of core regulated investments, continued municipal utility acquisitions, and contributions from its contracted segments. Despite the 16% total return screening as comparable to 15% for Regulated Utilities, we believe AWK's below-average beta and ESG-friendly profile could drive further relative multiple expansion for this secular growth story.

- **Initiate on WTRG at Neutral**: **water/gas mix fully reflected in valuations.** We see WTRG's recent acquisition of Peoples Gas, a private gas utility business boosting consolidated rate base growth to 9.7% from 2019-2022 versus 9% prior as a stand-alone water utility, along with benefits from acquisition synergies. Our estimates - largely in-line with consensus - reflect a 6.6% EPS CAGR from 2019-2022, although we expect long-run growth to trend closer to rate base growth. We see the current 4.3x valuation discount versus water peers as largely appropriate given our view that gas utilities warrant a lower multiple. Our $45 target incorporates a 27.3x blended P/E multiple, resulting in a 7% total return versus the sector average at 15%.

Balance sheet/credit metrics favor AWK. While both AWK and WTRG maintain an A issuer rating by S&P, we see AWK's 15-17% FFO/debt, versus WTRG's 12%, through 2022 more favorably in the current economic environment. Parent debt levels - sub-20% for AWK verus 25-30% for WTRG - also screen better for AWK, as WTRG's recently completed Peoples Gas acquisition contributing to a more levered balance sheet.

How much near-term demand impact do AWK/WTRG face from COVID-19? Could be modest. We note that both AWK and WTRG derive less than 10% of revenues from industrial customers, while more than 60% from residential customers. GIven our view (see recent note) that residential volumes should see an increase in demand, we estimate that a +3%/-5%/-10% change in residential/commercial/industrial demand could actually result in a relatively neutral net income impact, while acknowledging the difficulty in estimating the net outcome.

Water Utilities – abundant growth opportunities in fragmented market

Water utilities are responsible for the operation and maintenance of water treatment plants and distribution networks, crucial for ensuring reliability and quality of supply. Water and wastewater services are primarily the two sources of revenue for a water utility.

- **Water services involve: (1) sourcing, (2) treatment and (3) distribution of water.** We outline the three steps in further detail below:
  - **Pumping Station:** A pumping station abstracts water from aquifers, rivers, reservoirs and lakes, using pumps, pipes and electricity.
  - **Treatment Facility:** After drawing the water, it is sent to a treatment facility, where chemicals and filtration systems minimize impurities and meet federal, state and local quality standards. Chemical and electric costs stand out as the two largest O&M expenses at a treatment facility.
  - **Distribution System:** The US water pipe network stretches across 70,000 miles, distributing water to the ultimate customers. Key periods of water pipe installations include: (1) late 1800s, (2) the 1920s and (3) the 1940s/1950s. Given the age of the current distribution system, pipe replacement spending represents the largest share of investor owned utilities' capital spending budget for the foreseeable future.
- **Wastewater services** involve the collection of wastewater from customers' premises through sewer lines. The wastewater is then transported through a sewer network to a treatment facility, where it is treated to meet required regulatory standards for wastewater before being returned to the environment. The solid waste by-product of the treatment process is disposed of or recycled in accordance with applicable standards and regulations.

Aging infrastructure and increased regulation in the sector are primary drivers for the need to modernize the country's water and wastewater infrastructure related to water quality and the management of water and wastewater residual discharges. Because pipe assets last a long time, water systems that were built in the latter part of the 19th century and throughout much of the 20th century have not, for the most part, experienced the need for pipe replacement on a large scale. To put this aging infrastructure into context, the American Water Works Association (AWWA) estimates that the cost of restoring underground pipes will total at least $1 trillion through 2035, without including the cost of constructing new infrastructure or repairing treatment plants. The estimate assumes pipes are replaced at the end of their useful lives. Over a 40-year period, through 2050, AWWA estimates the needs will exceed $1.7 trillion. Replacement needs account for about 54% of the national total, with the balance attributable to population changes over that period.

The key regulations that govern the distribution of water include the Safe Drinking Water Act and the Clean Water Act:

- **Federal Safe Drinking Water Act (1974):** The Federal Safe Drinking Water Act

For the exclusive use of INSOO.KIM@GS.COM

established national quality standards for drinking water. Under the SDWA, the EPA prescribes the legal limits of contaminants and sets water-testing schedules.

- **Clean Water Act (1972):** The Federal Clean Water Act regulates discharges from drinking water and wastewater treatment facilities into lakes, rivers, streams and groundwater.

Exhibit 14: The aging water and wastewater infrastructure in the United States require replacement and modernization, with at least $1 trillion investment potential through 2035

Source: AWK Dec 2017 Investor Presentation

The water utility sector is highly fragmented — more than 50,000 water utility systems exist nationwide — with investor-owned and privately held water utilities operating less than 15% of these systems. According to the U.S. Environmental Protection Agency (EPA), based on the 2015 U.S. Census American Housing Survey, approximately 89% of the U.S. population obtains its water from community water systems, and 11% of the U.S. population obtains its water from private wells. Of the approximately 50,000 community water systems in the U.S., 81% serve less than 3,300 customers, making the water industry the most fragmented of the major utility industries (natural gas, electric, water/wastewater). The majority of these community water systems are government-owned, and the balance of the systems are regulated utilities.

For the exclusive use of INSOO.KIM@GS.COM

Although not as fragmented as the water industry, the wastewater industry in the U.S. also presents opportunities for consolidation. According to the EPA's most recent survey of wastewater treatment facilities (which includes both government-owned facilities and regulated utility systems) in 2012, there were approximately 15,000 such facilities in the nation serving approximately 76% of the U.S. population. The remaining population represents individual homeowners with their own treatment facilities; for example, community on-lot disposal systems and septic tank systems. A majority of wastewater facilities are government-owned rather than regulated utilities.

Fair Market Value (FMV) legislation will continue to motivate consolidation of the water and wastewater industry, providing municipalities with an option for exiting the business if they are dealing with challenges associated with their aging, deteriorating water and wastewater assets, do not have the expertise or technical capabilities to continue to comply with ever-increasing environmental regulations or simply want to focus on other community priorities. The sector has been ripe for consolidation for decades and the largest water utilities have recently altered their strategic growth efforts to focus on buying mid-sized municipal water and wastewater systems fueled by fair market value (or FMV); legislation allows the water utilities to include into rate base the fair market value of the acquired municipal water assets instead of the depreciated original cost of water/wastewater assets. The legislation includes a process for engaging two independent utility valuation experts to perform appraisals that are filed with the public utility commission and then averaged and compared to the purchase price. The rate-making rate base is the lower of the average of the appraisals or the purchase price and is subject to regulatory approval. FMV is on the books in 10 states, including several of AWK/WTRG operating jurisdictions, and is pending before state legislatures in three more states.

What factors explain premium water valuations vs other regulated utilities?

Water utilities currently trade at a 30.2x FY2 P/E multiple, at a 11.3x premium to regulated electric/gas utilities trading at a 18.9x blended FY2 P/E multiple. Over the past few years, many investors had difficulty validating the valuation gap, questioning what level is justified. Fundamentally, we believe higher EPS/DPS growth trajectory, both historically and pro-forma, serves as the primary driver, with water utilities having grown EPS at a ~3%/2% CAGR above electric/gas utilities, respectively, over the past 10 years. The next task is determining how long water utilities can sustain this earnings gap, which we quantify in the following section. Below, we note a few factors (both quantitative and qualitative) that account for premium water valuations vs regulated electric detailed below:

Quantitative factors:

- **Longer asset life (D&A premium)** — Our analysis shows that every dollar invested in water assets yields a better return vs that for electric assets, driven by higher useful life (~20 years) extending the earnings potential. This D&A advantage translates into 2% in incremental EPS growth.
- **Continued robust capital program (Growth premium)** — As mentioned in the previous section, water IOUs have significant long-term investment opportunities (pipe replacement, treatment facilities, storage facilities, dams, wells and pumps), supported by favorable regulatory mechanisms to reduce lag in rate recovery. In addition, municipal acquisitions by IOUs continually add additional rate base backlog.

Qualitative factors:

- **Scarcity** — There are only a handful of investable water utilities for public investors. AWK, the largest water utility, has a market capitalization of more than $24 billion, and the remaining 11 investor-owned utilities have a combined market capitalization of just $22 billion. Trading volumes for the smallest water utilities average below 20,000 shares daily, which we believe could be beneficial for larger water IOUs like AWK and WTRG.
- **Take-out potential** — While initially slow, consolidation within the industry has accelerated during the past 30 years. Acquisitions by domestic and international utilities and by private equity has shrunk the group to just 12 investor-owned water utilities, while a handful of other large water utilities are owned by private equity investors. We attribute some of the relative premium of small-cap water utilities to take-out potential.
- **ESG focus** —Investor focus on ESG (environmental, social, governance) factors have increased meaningfully in recent years. While social and governance factors apply to many IOUs, pure-play water utilities satisfy the environmental factor, which could continue to support valuations. We note that AWK is a pure-play water utility, while WTRG now derives ~30% of its earnings from the recently acquired Peoples Gas business.

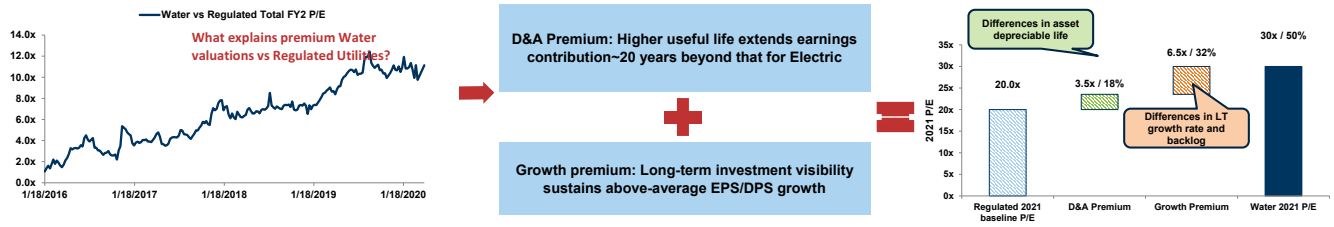
What premium do water utilities warrant?

Our analysis shows that water utilities deserve a meaningful P/E premium above electric utilities, with the current 11.3x premium largely justified.

We believe two quantifiable factors - D&A and investment growth - largely justify the current relative premium. We detail these calculations below.

Exhibit 26: We introduce our analysis on the earnings growth differential between water, electric and gas utilities, which we break into two components to arrive at our 30.0x baseline water multiple vs 20.0x baseline for our regulated coverage



Source: Goldman Sachs Global Investment Research

1. D&A premium:

A higher useful life for water assets (50 years vs 30 years for electric) extends the earnings potential ~20 yrs beyond what that realized for electric assets, with earnings differential increasing steadily over time, warranting for a 17%/3.5x premium for each dollar invested in rate base.

Exhibit 27: We attribute around 18% (3.5x) of water utilities' current 57% (11.3x) premium vs Regulated Utilities to longer depreciable asset life for water assets

GS 2020 Water baseline multiple

Hypothetical average Rate Base/ Net Income ($mn) assuming an initial investment of $100mn and 30/50 yrs of useful life for an Electric/Water Utility

Source: Goldman Sachs Global Investment Research

2. Growth premium:

Even excluding the EPS advantage from D&A, we expect the water utility industry's significant investment backlog supporting continued above-average EPS growth (7% for water vs. 5% for electric) longer-term. We arrive at our 32%/6.5x premium based on a 15-year relative dividend-discount model (DDM), which we believe could prove conservative given AWWA's estimated $1 trillion in water pipe replacement needs through 2035.

Exhibit 31: We justify the remaining 32% (6.5x) premium based on significant water pipe investment needs that should sustain water utilities' higher EPS growth profile versus electric utilities
GS 2020 Water baseline multiple

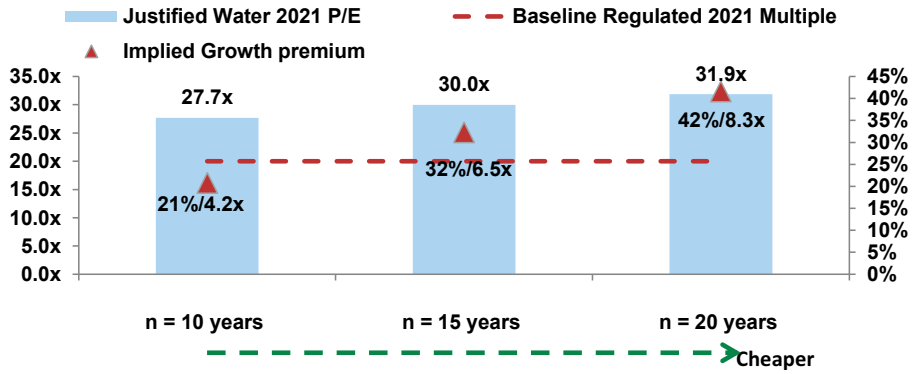
Source: Company data, Goldman Sachs Global Investment Research

Exhibit 34: We note that our base case of 15 years growth at 7% growth could prove conservative given long-term visibility of water investment needs

Justified Growth Premium for Water vs Regulated Electric assuming High Growth stage of 10/15/20 years



n= High growth years, LT growth rate =4%

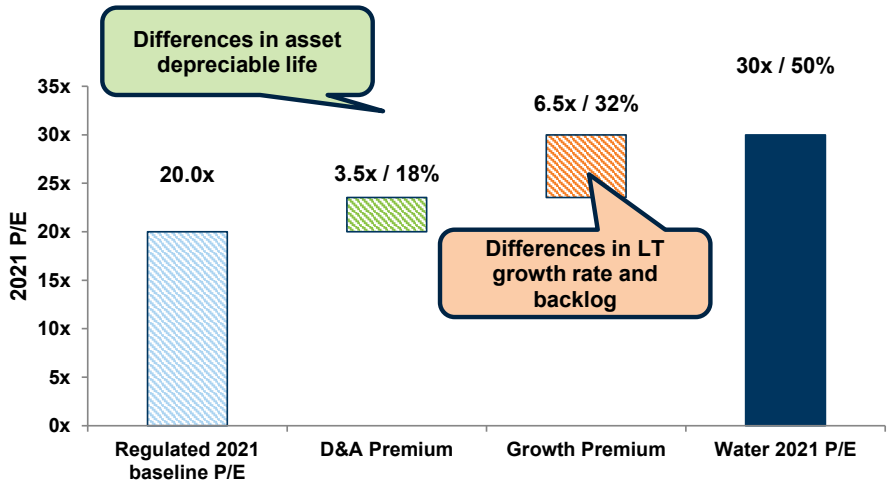
Source: Goldman Sachs Global Investment Research

Our revised 30.0x 2021 baseline multiple for water accounts for 3.5x/6.5x D&A/growth premium over the regulated baseline multiple of 20.0x.

We note that our analysis solely focuses on the longer useful life of water assets and higher growth opportunities to explain the premium water valuations; however, we note that qualitative drivers mentioned in the prior section - scarcity, take-out potential, ESG focus - could apply an additional layer of premium.

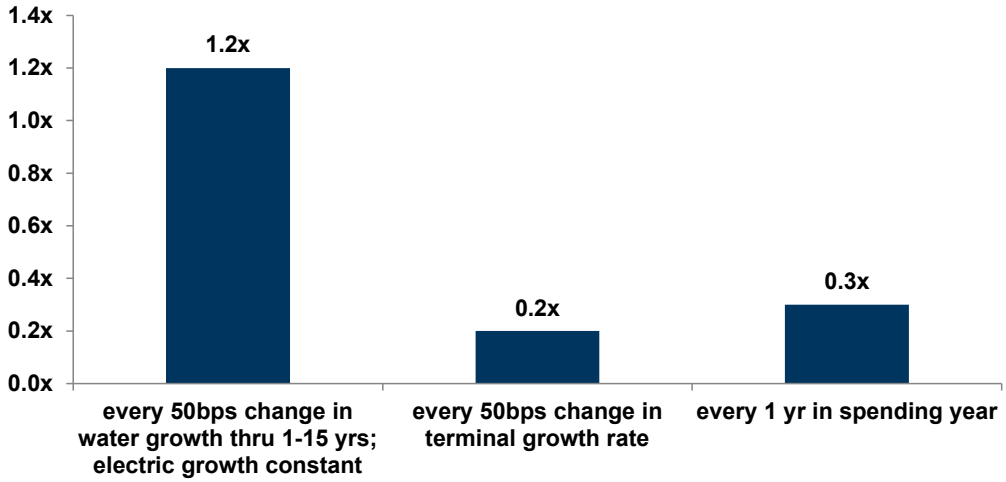
For the exclusive use of INSOO.KIM@GS.COM

Exhibit 35: Accordingly, our revised 30.0x 2021 baseline multiple for water accounts for 3.5x/6.5x D&A/growth premium over the regulated baseline multiple of 20.0x...
Water 2021 baseline P/E vs Regulated



Source: Goldman Sachs Global Investment Research

Exhibit 36: ...while noting our analysis remains sensitive to changes in various assumptions
Premium sensitivity to change in growth rate (yr 1-15), terminal growth rate and spending years



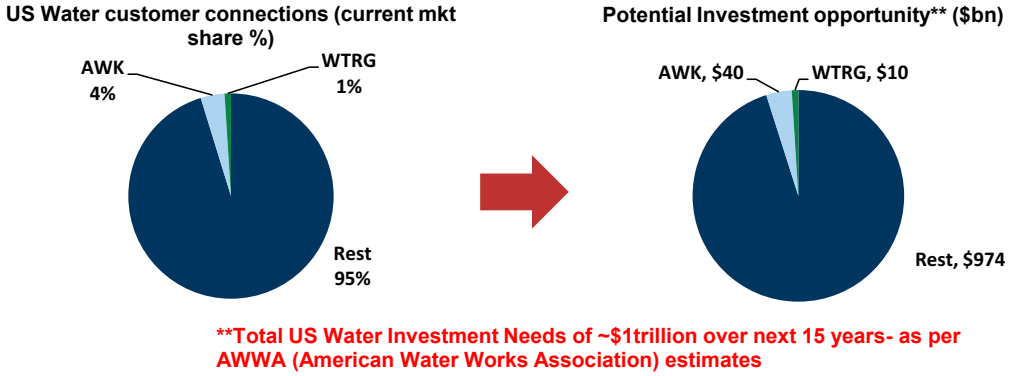
AWK/WTRG both stand to benefit from robust investment backlog

We see both AWK and WTRG able to sustain their robust water rate base growth outlook for at least the next 15 years. The AWWA's estimated $1 trillion in water pipe replacement needs in the U.S. - through 2035 - could imply around $40bn/$10bn of investment backlog for AWK/WTRG based on their respective market share (by customer connections). Given $13.7bn/$5.0bn YE2019 rate base for AWK/WTRG, respectively, we believe the these investments could support 3x/2x in rate base by 2035, or a 6.5%/4.9% rate base CAGR. While this growth rate alone could signal a slowing of earnings growth power, we note this does not account for additional rate base opportunities from ongoing municipal acquisitions or investments in new

For the exclusive use of INSOO.KIM@GS.COM

infrastructure, which we believe will continue to extend and expand organic investment opportunities. We view this long-term investment visibility as a key justifying factor for water utilities' relative premium valuations.

Exhibit 37: We see meaningful pipe replacement needs for both AWK/WTRG long-term...
Potential Investment Opportunity



Source: Company data, Goldman Sachs Global Investment Research, AWWA

Exhibit 38: ... that could support potential rate base growth of 6.5%/4.9% through 2035 for AWK/WTRG, not including potential upside from municipal acquisitions or new infrastructure spend
AWK/WTRG Potential rate base through 2035

Upgrade AWK to Buy - Best-in-class growth, ESG-friendly profile justify premium

We view large-cap AWK's best-in-class 8.3% EPS growth, below-average beta, and its ESG-friendly profile as deserving of the highest premium valuation in our coverage universe and see 16% potential total return based on our $146 price target.

Source: Goldman Sachs Global Investment Research

We upgrade AWK from Neutral to Buy given 1) continued best-in-class earnings and dividend growth in our coverage universe, 2) long-term visibility of above-average growth from organic investments and municipal system acquisitions, 3) its ESG-friendly status as the only large-cap pure-play water utility, and 4) our updated target multiple and premium that imply a 16% total return.

We see a long runway of water infrastructure investment opportunities that should sustain AWK's above-average growth. The aging water and wastewater infrastructure in the United States is in need of replacement and modernization. In addition, increased regulation related to water quality and the management of water and wastewater residual discharges are also primary drivers for the need to modernize the country's water and wastewater infrastructure. We note AWK is well positioned to benefit from ~$40bn in potential investment over the next 15 years, given the company's ~4% market share (based on customers served) and AWWA's estimated $1 trillion in water investment needs. AWK already plans to invest almost $20 billion to the regulated utilities (pipe replacement, system upgrades) over the next 10 years, sustaining its 7-8% rate base CAGR target longer-term.

We expect municipal acquisitions continue to provide an additional growth layer. As mentioned in the previous sections, the water utility space is very fragmented, with the bulk of the customers in the U.S. still served by municipal utilities. With the majority of AWK's utility jurisdictions allowing fair market value (FMV) treatment for municipal acquisitions, we expect the company to continue its consistent acquisition track record

For the exclusive use of INSOO.KIM@GS.COM

that should contribute 1-2% of the 7-10% EPS CAGR guided range. Along with the inherent financial advantages of FMV, we note that acquisitions add incremental infrastructure investment opportunities to bolster AWK's rate base growth longevity.

AWK carries a stable balance sheet, improving through 2022. While we acknowledge AWK's relatively high ~60% debt/cap levels, management at the recent investor day announced plans to issue $500mn of equity at around the mid-point of the 2020-2024 investment plan. Our model continues to embed the $500mn issued by YE2022, resulting in a 58% debt/cap in 2022, and an improvement in FFO/debt from 15% in 2020 to 17% in 2022. Based on the current A/Baa1 credit rating, we do not anticipate any additional equity needs beyond the guided levels.

We keep our EPS estimates unchanged at $3.88/$4.24/$4.58 for 2020-2022 and see EPS growing at 8.3% CAGR from 2019-2022, at the mid-point of the company's 7-10% guidance range, contributed by 7-8% from regulated utilities and 1% from the market based business. Primary drivers of growth continue to include robust capital investments, customer growth (both organic and via municipal acquisitions), O&M management, with some dilution in 2022 from the $500mn equity issuance. We continue to assume 10% annual dividend through 2022, resulting in a 55%-57% payout.

We raise our 12-month price target to $146 (from $134 previously) derived using a 34.5x 2021E P/E multiple (vs 31.5x prior). Our revised P/E multiple incorporates our new water base P/E multiple of 30.0x (calculated in prior sections), as well as a 3x (10%) premium to account for AWK's above-average growth and favorable ESG profile. While the water utility peer group is fairly limited, AWK is currently trading at a 30.0x P/E on 2021E, largely in-line with peers. We believe AWK should trade at the highest multiple among water utilities and relative to our overall coverage universe.

Key downside risks include 1) water quality issues that result in customer health risks, leading to significant financial and regulatory impact, 2) inability to consistently manage operating costs, 3) unfavorable turn in regulatory environment that negatively impacts robust earnings growth potential, 4) lower-than-expected growth at the non-regulated segments, which lowers AWK's best-in-class growth rate, and 5) reduced ESG fund flows that impact further multiple expansion as investors turn to other qualifying investments.

Company Overview

American Water Works (AWK), remains the largest publicly traded US water utility at more than $24bn in market cap, provides more than 14 million people with drinking water, wastewater and water-related services in almost 45 US states and 2 Canadian provinces. The company operates two divisions: (1) the Regulated segment, representing 86% of 2019 revenues and (2) the Market Based Operations segment, which comprises the remaining 14%. The key states served by AWK's regulated utilities are summarized in Exhibit 48.

For the exclusive use of INSOO.KIM@GS.COM

Exhibit 48: AWK's regulated segment exposure is distributed across sixteen states with bulk of earnings from seven states

Infrastructure Replacement surcharges: Allows rates to change periodically, outside a general rate case proceeding, to reflect recovery of capital investments made to replace infrastructure necessary to sustain safe, reliable services for our customers. These mechanisms typically involve periodic filings and reviews to ensure transparency.
Utility plant recovery mechanisms: Allows recovery of the full return on utility plant costs during the construction period, instead of capitalizing an allowance for funds used during construction. In addition, some states allow the utility to seek pre-approval of certain capital projects and associated costs. In this pre-approval process, the PUC may assess the prudency of such projects.
Expense mechanisms: Allows changes in certain operating expenses, which may fluctuate based on conditions beyond the utility's control, to be recovered outside of a general rate case proceeding or deferred until the next general rate case proceeding.
Revenue stability mechanisms: Separates a utility's cost recovery from the amount of water it sells to recover its fixed costs and ongoing infrastructure investment needs. Such a mechanism adjusts rates periodically to ensure that a utility's revenue will be sufficient to cover its costs, regardless of sales volume, including recognition of declining sales resulting from reduced consumption, while providing an incentive for customers to use water more efficiently.
Future test year: A test period used for setting rates, which begins with the date new rates are effective. This allows current or projected revenues, expenses and capital investments to be collected on a timelier basis.
Fair Market Legislation(FMV): Allows regulated water companies to pay a fair market value for the purchase of water and wastewater systems. Before these changes, system values were determined by their depreciated original cost, which generally did not reflect a reasonable market value for those assets and became a barrier to a sale.

Source: SNL Financial, Company reports, Goldman Sachs Global Investment Research

In addition to American Water's core regulated franchise, AWK owns and operates complementary water-related businesses as part of its Market-based segment which include:

The Homeowner Services Group- which provides warranty protection programs to residential and smaller commercial customers to protect against repair costs for interior and exterior water and sewer lines, interior gas and electric lines, heating and cooling systems, water heaters and other home appliances, as well as power surge protection and other related services. The current porfolio includes the June 2018 acquisition of Pivotal Home Solutions, which increased the segment's customer base from 0.9mn to 1.5mn. The company also partners with municipalities, utilities and other organizations to offer protection programs to customers serviced by, or affiliated with, those municipalities, utilities and organizations. The term of these partnership agreements is typically three to five years, with mutual optional renewals; each customer generates around $20-$40mn of net income for this segment, which reflects around half or more of AWK's 14% market-based earnings. As of YE2019, the Homeowner Services Group had approximately 3 million customer contracts in 43 states.

Initiate WTRG at Neutral – Robust water/gas growth already reflected in SOTP

While we see Aqua's recent acquisition of Peoples Gas providing upside to rate base and EPS growth longer-term, we view current valuations fairly crediting this growth in addition appropriately reflecting the company's water/gas utility mix (versus pure-play water prior). Our $45 price target implies an 7% total return versus 15% for Regulated Utilities.

WTRG	12m Price Target: $45	Price: $42.8			Upside: 5.1%

Source: Goldman Sachs Global Investment Research

We initiate coverage on Essential Utilities, Inc. (WTRG) - formed by the merger of Aqua America and Peoples Gas - at Neutral with a 12-month price target of $45. We view the 9+% combined rate base growth (including municipal acquisitions) driving a robust 6.6% EPS CAGR from 2019A-2022E. However, we view current valuation already reflecting these positive qualities, with just 7% total return based on our water/gas SOTP price target, versus 15% for Regulated Utilities.

Peoples Gas acquisition provides additional growth...

Peoples Gas acquisition elevates rate base growth profile. We see 10%+ rate base growth at Peoples Gas from 2019A-2022E primarily driven by long-term visibility of pipeline replacement projects. We note that Peoples has identified more than 2,700 miles of bare steel and cast iron pipe to be replaced under its Long-term Infrastructure Improvement Plan (LTIIP) by 2034 in its PA service territory, which at ~180-200 miles/year of pipe replacement, implies more than 15 years of increased capital spending to support around 9% rate base CAGR during the period. Along with the majority of these investments eligible for distribution system improvement charge (DSIC) that help reduce regulatory lag, we expect Peoples Gas to benefit from favorable tax election, as detailed below.

Tax repairs election should help maintain robust EPS growth while providing incremental funding for investments. WTRG plans to elect tax repairs for Peoples

For the exclusive use of INSOO.KIM@GS.COM

Gas' PA utility, which comprises more than 90% of the gas customer base. **What is tax repair?** It essentially allows the company to expense certain utility asset improvement costs that were previously capitalized and depreciated for book and tax purposes. For PA, which allows flow-through accounting, the utility is able to keep the incremental earnings and cash from the lower tax rate (still collected in customer bills at the higher tax rate), supporting financing needs while reducing rate case cycles. We note WTRG's PA water utility elected tax repairs in 2012 (now expired), which enabled it to record robust earned ROEs while staying out of a rate case for almost 10 years. For the gas utility, we expect WTRG to allocate qualified assets over a longer investment period, reducing the sudden jump in earnings growth recorded when implemented for the water utility. Our model embeds ~10.5% earned ROEs for Peoples Gas through 2022 versus 10.2% allowed, reflecting the tax repairs benefit.

We expect merger synergies to benefit EPS through 2022. With the bulk of the Peoples Gas service jurisdictions - Pennsylvania - sitting on top of Aqua America's PA water utility area, we expect the combined company to benefit from merger synergies related to various operations and system integration. Our model embeds 5% of combined O&M as acquisition synergies, resulting in flat to 1% O&M CAGR from 2019A-2022E for both water and gas utilities.

...to a fundamentally robust water growth story

We expect combined 9.7% water rate base CAGR (including acquisitions) from 2019-2022 driven by a robust organic capital program... The water sector is extremely capital intensive, given its extensive pipe and main infrastructure system as well as treatment facilities, storage facilities, dams, wells and pumps. As shown in Exhibit 37, the American Water works Association's (AWWA), most recent estimates about $1 trillion will be needed in the next 15 years to upgrade the country's water systems, both public and private, to meet environmental standards. At the Water business, we expect ~$400-$500mn in capital spending each year underlying the company's 7% rate base growth CAGR.

...as well as growth via municipal transactions supported by FMV legislation. Given the fragmented nature of the water utility industry, as detailed in the prior sections of this note, we expect WTRG to continue its robust municipal acquisition strategy to support and sustain its growth. The vast majority of WTRG's jurisdictional states currently allow fair market value (FMV) accounting that should provide continued incentive for acquisitions. In 2018, Essential Utilities closed 6 municipal acquisitions, adding more than 13,700 customers and more than $100 million of rate base. In September 2019, the company entered into a purchase agreement to acquire the wastewater utility system assets of the Delaware County Regional Water Quality Control Authority ("DELCORA"), which consists of approximately 16,000 customers in 42 municipalities in Southeast Pennsylvania for $276,500. If approved by the Pennsylvania Public Utilities Commission (PUCO), this acquisition would be the largest water and wastewater deal in state history. We note that every $100 million in rate base from acquisitions that are added through municipals contributes ~$5 million in earnings, or $0.02 in EPS.

For the exclusive use of INSOO.KIM@GS.COM

Relatively stable balance sheet, although somewhat levered given Peoples acquisition

Following the Peoples Gas acquisition, we see WTRG maintaining around 50% debt/cap through 2022, along with FFO/debt at ~12% during the period. We note S&P's "A" issuer credit rating targets FFO/debt to remain at or above 12% longer-term, with sustained lower levels a potential risk for a downgrade. In addition, we note around 25-30% of debt resides at the parent, somewhat elevated in our view. However, we believe a one-notch credit downgrade would still place WTRG's rating around the utilities average; we do not see this as a meaningful risk.

Will ESG momentum continue post gas integration?

In recent years, the water industry has seen increased interest from ESG investors contributing to a significant expansion of water premium vs the average electric/gas multiple. During the period from 2014 to 2017, water utilities traded at an 11% to 28% premium to the regulated group. This premium expanded in 2018 and 2019 with the water premium currently at a 58% premium to the average regulated multiple. WTRG's premium also expanded from 19% in 2017 to 34% in 2019. However, we believe that a change in WTRG's profile from a pure play water utility to a gas/water utility could prove to be a headwind to this premium expansion going forward, in addition to investors' utilization of a more SOTP valuation approach (utilized in deriving our price target).

Robust growth largely priced in - Initiate Neutral

Our $45, 12-month price target is based on an SOTP valuation methodology. Our 2020-2022E EPS estimates of $1.56/$1.65/$1.78 reflects a 6.6% CAGR from 2019-2022E, with potential upside to growth beyond 2022 as WTRG reduces regulatory lag on both organic investments as well as added rate base from municipal acquisitions. To arrive at our SOTP-based price target, we apply our new 30x base water target P/E multiple to 2021E EPS for the water utility segment, along with a 22x P/E multiple to 2021E EPS for the gas utility segment. Our gas multiple reflects a 10% (or 2x) premium to our 20x base gas target P/E, which reflects above-average rate base and EPS growth, as well as our constructive view of PA regulation (which makes up over 90% of the gas utility customer base).

We view WTRG's current valuation as fairly representing the company's water/gas utility mix, with our $45 target reflecting a 27.3x P/E, a discount our 30x base water target P/E for pure-play water utilities like AWK. **Upside risks to our call** include: 1) Peoples Gas acquisition synergies exceed our expectations, elevating EPS growth profile, 2) tax repairs election for the PA gas utility elevates earned ROEs even above our estimate, and 3) WTRG continues to benefit from ESG fund flows, despite its water/gas utility mix profile on a pro-forma basis. **Downside risks to our call** include: 1) PA regulation turns less constructive, 2) growth from municipal acquisitions slows, and 3) WTRG credit rating is downgraded.

Infrastructure Replacement surcharges: Allows rates to change periodically, outside a general rate case proceeding, to reflect recovery of capital investments made to replace infrastructure necessary to sustain safe, reliable services for our customers. These mechanisms typically involve periodic filings and reviews to ensure transparency.
Utility plant recovery mechanisms: Allows recovery of the full return on utility plant costs during the construction period, instead of capitalizing an allowance for funds used during construction. In addition, some states allow the utility to seek pre-approval of certain capital projects and associated costs. In this pre-approval process, the PUC may assess the prudency of such projects.
Expense mechanisms: Allows changes in certain operating expenses, which may fluctuate based on conditions beyond the utility's control, to be recovered outside of a general rate case proceeding or deferred until the next general rate case proceeding.
Revenue stability mechanisms: Separates a utility's cost recovery from the amount of water it sells to recover its fixed costs and ongoing infrastructure investment needs. Such a mechanism adjusts rates periodically to ensure that a utility's revenue will be sufficient to cover its costs, regardless of sales volume, including recognition of declining sales resulting from reduced consumption, while providing an incentive for customers to use water more efficiently.
Future test year: A test period used for setting rates, which begins with the date new rates are effective. This allows current or projected revenues, expenses and capital investments to be collected on a timelier basis.
Distribution System mprovement Charge ("DSIC") mechanism: Utilities are allowed to recover costs related to repair, replacement or improvement of eligible distribution property that has not previously been reflected in rates or rate base. Through a DSIC, subject to an earnings test, a utility may recover the fixed costs of eligible infrastructure incurred during the three months ended one month prior to the effective date of the charge, thereby reducing the historical regulatory lag associated with cost recovery through the traditional rate-making process.
Fair Market Legislation(FMV): Allows regulated water companies to pay a fair market value for the purchase of water and wastewater systems. Before these changes, system values were determined by their depreciated original cost, which generally did not reflect a reasonable market value for those assets and became a barrier to a sale.
**In Kentucky, Delta has a pipe replacement program tariff, which allows adjustment of regulated rates annually to earn a return on capital expenditures incurred subsequent to Delta's last rate case which are associated with the replacement of bare steel and vintage plastic pipe.

Company Overview

Essential Utilities Inc. (WTRG) formed from Aqua America's acquisition of privately owned Peoples Gas, completed on March 16, 2020. Essential's common stock

For the exclusive use of INSOO.KIM@GS.COM

began trading under the NYSE ticker symbol (WTRG) in early February. WTRG, with a market cap of $9.6 bn (as of 13th Apr close) market cap, serves more than 1 million water customers in 8 states and more than 740,000 gas customers in 3 states. WTRG projects 6-7% (ex. acquisitions) and 8-10% rate base growth for its water/gas utilities based on 2019 projected rate base of $5 billion and $2.3 billion, respectively. The key states served by WTRG are summarized in the Exhibit 52. The company operates through the following segments:

- **Regulated Water** (~70% of total operating revenues):
  - 2018 operating revenues were derived principally from the following states: ~53% in Pennsylvania, 9% in Ohio, 9% in Texas, 9% in Illinois, and 6% in North Carolina
  - The company's municipal growth strategy has accelerated significantly, largely due to the passage of Fair Market Value legislation(FMV) in several of its states. Aqua has added more than 33,000 new customers from 10 closed or signed municipal acquisitions in 2018
- **Regulated Gas** (~30% of total operating revenues):
  - The regulated gas business consists of 4 utility companies - Peoples Natural, and Peoples Gas (Formerly Peoples TWP) are regulated by the Pennsylvania Public Utility Commission. Peoples Gas – West Virginia is regulated by the West Virginia Public Service Commission. Peoples Gas – Kentucky is regulated by the Kentucky Public Service Commission
  - ~740,000 customers and 1,500 employees in western Pennsylvania, Kentucky and West Virginia
- **Market based business** (<1% of total operating revenues):
  - **Aqua Infrastructure**- provides non-utility raw water supply services for firms in the natural gas drilling industry
  - **Aqua Resources**- provides water service through O&M contracts with a municipal authority and another party close to utility companies' service territory; and offers, through a third-party, water and sewer line protection solutions and repair services to households

GS Factor Profile

The Goldman Sachs Factor Profile provides investment context for a stock by comparing key attributes to the market (i.e. our coverage universe) and its sector peers. The four key attributes depicted are: Growth, Financial Returns, Multiple (e.g. valuation) and Integrated (a composite of Growth, Financial Returns and Multiple). Growth, Financial Returns and Multiple are calculated by using normalized ranks for specific metrics for each stock. The normalized ranks for the metrics are then averaged and converted into percentiles for the relevant attribute. The precise calculation of each metric may vary depending on the fiscal year, industry and region, but the standard approach is as follows:

Growth is based on a stock's forward-looking sales growth, EBITDA growth and EPS growth (for financial stocks, only EPS and sales growth), with a higher percentile indicating a higher growth company. **Financial Returns** is based on a stock's forward-looking ROE, ROCE and CROCI (for financial stocks, only ROE), with a higher percentile indicating a company with higher financial returns. **Multiple** is based on a stock's forward-looking P/E, P/B, price/dividend (P/D), EV/EBITDA, EV/FCF and EV/Debt Adjusted Cash Flow (DACF) (for financial stocks, only P/E, P/B and P/D), with a higher percentile indicating a stock trading at a higher multiple. The **Integrated** percentile is calculated as the average of the Growth percentile, Financial Returns percentile and (100% - Multiple percentile).

Financial Returns and Multiple use the Goldman Sachs analyst forecasts at the fiscal year-end at least three quarters in the future. Growth uses inputs for the fiscal year at least seven quarters in the future compared with the year at least three quarters in the future (on a per-share basis for all metrics).

For a more detailed description of how we calculate the GS Factor Profile, please contact your GS representative.

M&A Rank

Across our global coverage, we examine stocks using an M&A framework, considering both qualitative factors and quantitative factors (which may vary across sectors and regions) to incorporate the potential that certain companies could be acquired. We then assign a M&A rank as a means of scoring companies under our rated coverage from 1 to 3, with 1 representing high (30%-50%) probability of the company becoming an acquisition target, 2 representing medium (15%-30%) probability and 3 representing low (0%-15%) probability. For companies ranked 1 or 2, in line with our standard departmental guidelines we incorporate an M&A component into our target price. M&A rank of 3 is considered immaterial and therefore does not factor into our price target, and may or may not be discussed in research.

Quantum

Quantum is Goldman Sachs' proprietary database providing access to detailed financial statement histories, forecasts and ratios. It can be used for in-depth analysis of a single company, or to make comparisons between companies in different sectors and markets.

Goldman Sachs has received compensation for investment banking services in the past 12 months: American Water Works ($133.61) and Essential Utilities Inc. ($44.30)

Goldman Sachs expects to receive or intends to seek compensation for investment banking services in the next 3 months: American Water Works ($133.61) and Essential Utilities Inc. ($44.30)

Goldman Sachs had an investment banking services client relationship during the past 12 months with: American Water Works ($133.61) and Essential Utilities Inc. ($44.30)

Goldman Sachs had a non-securities services client relationship during the past 12 months with: American Water Works ($133.61) and Essential Utilities Inc. ($44.30)

Goldman Sachs has managed or co-managed a public or Rule 144A offering in the past 12 months: Essential Utilities Inc. ($44.30)

For the exclusive use of INSOO.KIM@GS.COM

Goldman Sachs makes a market in the securities or derivatives thereof: American Water Works ($133.61) and Essential Utilities Inc. ($44.30)

Goldman Sachs is a specialist in the relevant securities and will at any given time have an inventory position, "long" or "short," and may be on the opposite side of orders executed on the relevant exchange: American Water Works ($133.61) and Essential Utilities Inc. ($44.30)

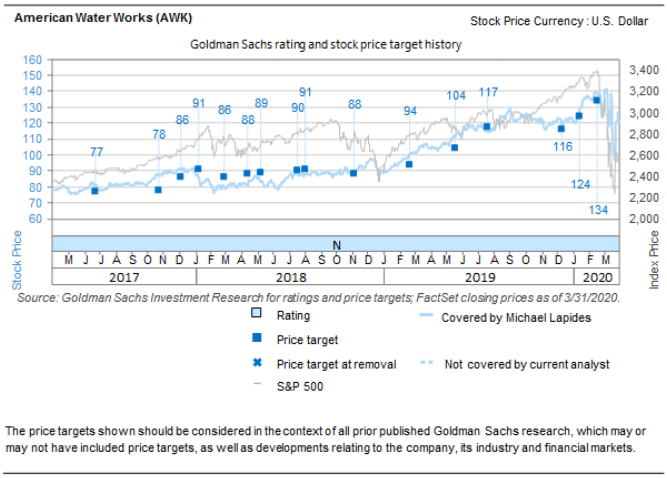
Distribution of ratings/investment banking relationships

Goldman Sachs Investment Research global Equity coverage universe

	Rating Distribution			Investment Banking Relationships		
	Buy	Hold	Sell	Buy	Hold	Sell
Global	46%	39%	15%	65%	57%	52%

As of April 9, 2020, Goldman Sachs Global Investment Research had investment ratings on 3,023 equity securities. Goldman Sachs assigns stocks as Buys and Sells on various regional Investment Lists; stocks not so assigned are deemed Neutral. Such assignments equate to Buy, Hold and Sell for the purposes of the above disclosure required by the FINRA Rules. See 'Ratings, Coverage groups and related definitions' below. The Investment Banking Relationships chart reflects the percentage of subject companies within each rating category for whom Goldman Sachs has provided investment banking services within the previous twelve months.

Price target and rating history chart(s)



The price targets shown should be considered in the context of all prior published Goldman Sachs research, which may or may not have included price targets, as well as developments relating to the company, its industry and financial markets.

Regulatory disclosures

Disclosures required by United States laws and regulations

See company-specific regulatory disclosures above for any of the following disclosures required as to companies referred to in this report: manager or co-manager in a pending transaction; 1% or other ownership; compensation for certain services; types of client relationships; managed/co-managed public offerings in prior periods; directorships; for equity securities, market making and/or specialist role. Goldman Sachs trades or may trade as a principal in debt securities (or in related derivatives) of issuers discussed in this report.

The following are additional required disclosures: **Ownership and material conflicts of interest:** Goldman Sachs policy prohibits its analysts, professionals reporting to analysts and members of their households from owning securities of any company in the analyst's area of coverage. **Analyst compensation:** Analysts are paid in part based on the profitability of Goldman Sachs, which includes investment banking revenues. **Analyst as officer or director:** Goldman Sachs policy generally prohibits its analysts, persons reporting to analysts or members of their households from serving as an officer, director or advisor of any company in the analyst's area of coverage. **Non-U.S. Analysts:** Non-U.S. analysts may not be associated persons of Goldman Sachs & Co. LLC and therefore may not be subject to FINRA Rule 2241 or FINRA Rule 2242 restrictions on communications with subject company, public appearances and trading securities held by the analysts.

Distribution of ratings: See the distribution of ratings disclosure above. **Price chart:** See the price chart, with changes of ratings and price targets in prior periods, above, or, if electronic format or if with respect to multiple companies which are the subject of this report, on the Goldman Sachs website at https://www.gs.com/research/hedge.html.

Additional disclosures required under the laws and regulations of jurisdictions other than the United States

The following disclosures are those required by the jurisdiction indicated, except to the extent already made above pursuant to United States laws and regulations. **Australia:** Goldman Sachs Australia Pty Ltd and its affiliates are not authorised deposit-taking institutions (as that term is defined in the Banking Act 1959 (Cth)) in Australia and do not provide banking services, nor carry on a banking business, in Australia. This research, and any access to it, is intended only for "wholesale clients" within the meaning of the Australian Corporations Act, unless otherwise agreed by Goldman Sachs. In producing research reports, members of the Global Investment Research Division of Goldman Sachs Australia may attend site visits and other meetings hosted by the companies and other entities which are the subject of its research reports. In some instances the costs of such site visits or meetings may be met in part or in whole by the issuers concerned if Goldman Sachs Australia considers it is appropriate and reasonable in the specific circumstances relating to the site visit or meeting. To the extent that the contents of this document contains any financial product advice, it is general advice only and has been prepared by Goldman Sachs without taking into account a client's objectives, financial situation or needs. A client should, before acting on any such advice, consider the appropriateness of the advice having regard to the client's own objectives, financial situation and needs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests and a copy of Goldman Sachs' Australian Sell-Side Research Independence Policy Statement are available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Brazil:** Disclosure information in relation to CVM Instruction 598 is available at https://www.gs.com/worldwide/brazil/area/gir/index.html. Where applicable, the Brazil-registered analyst primarily responsible for the content of this research report, as defined in Article 20 of CVM Instruction 598, is the first author

For the exclusive use of INSOO.KIM@GS.COM

named at the beginning of this report, unless indicated otherwise at the end of the text. **Canada:** Goldman Sachs Canada Inc. is an affiliate of The Goldman Sachs Group Inc. and therefore is included in the company specific disclosures relating to Goldman Sachs (as defined above). Goldman Sachs Canada Inc. has approved of, and agreed to take responsibility for, this research report in Canada if and to the extent that Goldman Sachs Canada Inc. disseminates this research report to its clients. **Hong Kong:** Further information on the securities of covered companies referred to in this research may be obtained on request from Goldman Sachs (Asia) L.L.C. **India:** Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (India) Securities Private Limited, Research Analyst - SEBI Registration Number INH000001493, 951-A, Rational House, Appasaheb Marathe Marg, Prabhadevi, Mumbai 400 025, India, Corporate Identity Number U74140MH2006FTC160634, Phone +91 22 6616 9000, Fax +91 22 6616 9001. Goldman Sachs may beneficially own 1% or more of the securities (as such term is defined in clause 2 (h) the Indian Securities Contracts (Regulation) Act, 1956) of the subject company or companies referred to in this research report. **Japan:** See below. **Korea:** This research, and any access to it, is intended only for "professional investors" within the meaning of the Financial Services and Capital Markets Act, unless otherwise agreed by Goldman Sachs. Further information on the subject company or companies referred to in this research may be obtained from Goldman Sachs (Asia) L.L.C., Seoul Branch. **New Zealand:** Goldman Sachs New Zealand Limited and its affiliates are neither "registered banks" nor "deposit takers" (as defined in the Reserve Bank of New Zealand Act 1989) in New Zealand. This research, and any access to it, is intended for "wholesale clients" (as defined in the Financial Advisers Act 2008) unless otherwise agreed by Goldman Sachs. A copy of certain Goldman Sachs Australia and New Zealand disclosure of interests is available at: https://www.goldmansachs.com/disclosures/australia-new-zealand/index.html. **Russia:** Research reports distributed in the Russian Federation are not advertising as defined in the Russian legislation, but are information and analysis not having product promotion as their main purpose and do not provide appraisal within the meaning of the Russian legislation on appraisal activity. Research reports do not constitute a personalized investment recommendation as defined in Russian laws and regulations, are not addressed to a specific client, and are prepared without analyzing the financial circumstances, investment profiles or risk profiles of clients. Goldman Sachs assumes no responsibility for any investment decisions that may be taken by a client or any other person based on this research report. **Singapore:** Further information on the covered companies referred to in this research may be obtained from Goldman Sachs (Singapore) Pte. (Company Number: 198602165W). **Taiwan:** This material is for reference only and must not be reprinted without permission. Investors should carefully consider their own investment risk. Investment results are the responsibility of the individual investor. **United Kingdom:** Persons who would be categorized as retail clients in the United Kingdom, as such term is defined in the rules of the Financial Conduct Authority, should read this research in conjunction with prior Goldman Sachs research on the covered companies referred to herein and should refer to the risk warnings that have been sent to them by Goldman Sachs International. A copy of these risks warnings, and a glossary of certain financial terms used in this report, are available from Goldman Sachs International on request.

European Union: Disclosure information in relation to Article 6 (2) of the European Commission Delegated Regulation (EU) (2016/958) supplementing Regulation (EU) No 596/2014 of the European Parliament and of the Council with regard to regulatory technical standards for the technical arrangements for objective presentation of investment recommendations or other information recommending or suggesting an investment strategy and for disclosure of particular interests or indications of conflicts of interest is available at https://www.gs.com/disclosures/europeanpolicy.html which states the European Policy for Managing Conflicts of Interest in Connection with Investment Research.

Japan: Goldman Sachs Japan Co., Ltd. is a Financial Instrument Dealer registered with the Kanto Financial Bureau under registration number Kinsho 69, and a member of Japan Securities Dealers Association, Financial Futures Association of Japan and Type II Financial Instruments Firms Association. Sales and purchase of equities are subject to commission pre-determined with clients plus consumption tax. See company-specific disclosures as to any applicable disclosures required by Japanese stock exchanges, the Japanese Securities Dealers Association or the Japanese Securities Finance Company.

Ratings, coverage groups and related definitions

Buy (B), Neutral (N), Sell (S) -Analysts recommend stocks as Buys or Sells for inclusion on various regional Investment Lists. Being assigned a Buy or Sell on an Investment List is determined by a stock's total return potential relative to its coverage. Any stock not assigned as a Buy or a Sell on an Investment List with an active rating (i.e., a stock that is not Rating Suspended, Not Rated, Coverage Suspended or Not Covered), is deemed Neutral. Each region's Investment Review Committee manages Regional Conviction lists, which represent investment recommendations focused on the size of the total return potential and/or the likelihood of the realization of the return across their respective areas of coverage. The addition or removal of stocks from such Conviction lists do not represent a change in the analysts' investment rating for such stocks.

Total return potential represents the upside or downside differential between the current share price and the price target, including all paid or anticipated dividends, expected during the time horizon associated with the price target. Price targets are required for all covered stocks. The total return potential, price target and associated time horizon are stated in each report adding or reiterating an Investment List membership.

Coverage groups: A list of all stocks in each coverage group is available by primary analyst, stock and coverage group at https://www.gs.com/research/hedge.html.

Not Rated (NR). The investment rating and target price have been removed pursuant to Goldman Sachs policy when Goldman Sachs is acting in an advisory capacity in a merger or strategic transaction involving this company and in certain other circumstances. **Rating Suspended (RS).** Goldman Sachs Research has suspended the investment rating and price target for this stock, because there is not a sufficient fundamental basis for determining, or there are legal, regulatory or policy constraints around publishing, an investment rating or target. The previous investment rating and price target, if any, are no longer in effect for this stock and should not be relied upon. **Coverage Suspended (CS).** Goldman Sachs has suspended coverage of this company. **Not Covered (NC).** Goldman Sachs does not cover this company. **Not Available or Not Applicable (NA).** The information is not available for display or is not applicable. **Not Meaningful (NM).** The information is not meaningful and is therefore excluded.

Global product; distributing entities

The Global Investment Research Division of Goldman Sachs produces and distributes research products for clients of Goldman Sachs on a global basis. Analysts based in Goldman Sachs offices around the world produce research on industries and companies, and research on macroeconomics, currencies, commodities and portfolio strategy. This research is disseminated in Australia by Goldman Sachs Australia Pty Ltd (ABN 21 006 797 897); in Brazil by Goldman Sachs do Brasil Corretora de Títulos e Valores Mobiliários S.A.; Ombudsman Goldman Sachs Brazil: 0800 727 5764 and / or ouvidoriagoldmansachs@gs.com. Available Weekdays (except holidays), from 9am to 6pm. Ouvidoria Goldman Sachs Brasil: 0800 727 5764 e/ou ouvidoriagoldmansachs@gs.com. Horário de funcionamento: segunda-feira à sexta-feira (exceto feriados), das 9h às 18h; in Canada by either Goldman Sachs Canada Inc. or Goldman Sachs & Co. LLC; in Hong Kong by Goldman Sachs (Asia) L.L.C.; in India by Goldman Sachs (India) Securities Private Ltd.; in Japan by Goldman Sachs Japan Co., Ltd.; in the Republic of Korea by Goldman Sachs (Asia) L.L.C., Seoul Branch; in New Zealand by Goldman Sachs New Zealand Limited; in Russia by OOO Goldman Sachs; in Singapore by Goldman Sachs (Singapore) Pte. (Company Number: 198602165W); and in the United States of America by Goldman Sachs & Co. LLC. Goldman Sachs International has approved this research in connection with its distribution in the United Kingdom and European Union.

European Union: Goldman Sachs International authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority, has approved this research in connection with its distribution in the European Union and United Kingdom.

General disclosures

This research is for our clients only. Other than disclosures relating to Goldman Sachs, this research is based on current public information that we

For the exclusive use of INSOO.KIM@GS.COM

consider reliable, but we do not represent it is accurate or complete, and it should not be relied on as such. The information, opinions, estimates and forecasts contained herein are as of the date hereof and are subject to change without prior notification. We seek to update our research as appropriate, but various regulations may prevent us from doing so. Other than certain industry reports published on a periodic basis, the large majority of reports are published at irregular intervals as appropriate in the analyst's judgment.

Goldman Sachs conducts a global full-service, integrated investment banking, investment management, and brokerage business. We have investment banking and other business relationships with a substantial percentage of the companies covered by our Global Investment Research Division. Goldman Sachs & Co. LLC, the United States broker dealer, is a member of SIPC (https://www.sipc.org).

Our salespeople, traders, and other professionals may provide oral or written market commentary or trading strategies to our clients and principal trading desks that reflect opinions that are contrary to the opinions expressed in this research. Our asset management area, principal trading desks and investing businesses may make investment decisions that are inconsistent with the recommendations or views expressed in this research.

The analysts named in this report may have from time to time discussed with our clients, including Goldman Sachs salespersons and traders, or may discuss in this report, trading strategies that reference catalysts or events that may have a near-term impact on the market price of the equity securities discussed in this report, which impact may be directionally counter to the analyst's published price target expectations for such stocks. Any such trading strategies are distinct from and do not affect the analyst's fundamental equity rating for such stocks, which rating reflects a stock's return potential relative to its coverage group as described herein.

We and our affiliates, officers, directors, and employees, excluding equity and credit analysts, will from time to time have long or short positions in, act as principal in, and buy or sell, the securities or derivatives, if any, referred to in this research.

The views attributed to third party presenters at Goldman Sachs arranged conferences, including individuals from other parts of Goldman Sachs, do not necessarily reflect those of Global Investment Research and are not an official view of Goldman Sachs.

Any third party referenced herein, including any salespeople, traders and other professionals or members of their household, may have positions in the products mentioned that are inconsistent with the views expressed by analysts named in this report.

This research is not an offer to sell or the solicitation of an offer to buy any security in any jurisdiction where such an offer or solicitation would be illegal. It does not constitute a personal recommendation or take into account the particular investment objectives, financial situations, or needs of individual clients. Clients should consider whether any advice or recommendation in this research is suitable for their particular circumstances and, if appropriate, seek professional advice, including tax advice. The price and value of investments referred to in this research and the income from them may fluctuate. Past performance is not a guide to future performance, future returns are not guaranteed, and a loss of original capital may occur. Fluctuations in exchange rates could have adverse effects on the value or price of, or income derived from, certain investments.

Certain transactions, including those involving futures, options, and other derivatives, give rise to substantial risk and are not suitable for all investors. Investors should review current options and futures disclosure documents which are available from Goldman Sachs sales representatives or at https://www.theocc.com/about/publications/character-risks.jsp and https://www.fiadocumentation.org/fia/regulatory-disclosures_1/fia-uniform-futures-and-options-on-futures-risk-disclosures-booklet-pdf-version-2018. Transaction costs may be significant in option strategies calling for multiple purchase and sales of options such as spreads. Supporting documentation will be supplied upon request.

Differing Levels of Service provided by Global Investment Research: The level and types of services provided to you by the Global Investment Research division of GS may vary as compared to that provided to internal and other external clients of GS, depending on various factors including your individual preferences as to the frequency and manner of receiving communication, your risk profile and investment focus and perspective (e.g., marketwide, sector specific, long term, short term), the size and scope of your overall client relationship with GS, and legal and regulatory constraints. As an example, certain clients may request to receive notifications when research on specific securities is published, and certain clients may request that specific data underlying analysts' fundamental analysis available on our internal client websites be delivered to them electronically through data feeds or otherwise. No change to an analyst's fundamental research views (e.g., ratings, price targets, or material changes to earnings estimates for equity securities), will be communicated to any client prior to inclusion of such information in a research report broadly disseminated through electronic publication to our internal client websites or through other means, as necessary, to all clients who are entitled to receive such reports.

All research reports are disseminated and available to all clients simultaneously through electronic publication to our internal client websites. Not all research content is redistributed to our clients or available to third-party aggregators, nor is Goldman Sachs responsible for the redistribution of our research by third party aggregators. For research, models or other data related to one or more securities, markets or asset classes (including related services) that may be available to you, please contact your GS representative or go to https://research.gs.com.

Disclosure information is also available at https://www.gs.com/research/hedge.html or from Research Compliance, 200 West Street, New York, NY 10282.

UK and US Water

New growth opportunities vs same old bond proxies

Equities
Utilities

UK and US

- Federal Water rehabilitation plans in the US and the Green Recovery scheme in the UK are new opportunities for growth
- US stocks are best placed for growth. Pennon may provide the M&A blueprint for the UK
- Downgrade UU to Reduce from Hold, Pennon to Hold from Buy; American Water and Essential, both Buy, offer more growth; Severn Trent remains Hold

** Employed by a non-US affiliate of HSBC Securities (USA) Inc, and is not registered/ qualified pursuant to FINRA regulations*

New opportunities for growth: Despite their ESG credentials, regulated UK and US utilities have performed less well than energy transition-focused stocks because of their status as bond proxies. The water proposals set out by the US government for accelerated investment and the UK's Green Recovery proposals show policy-makers are waking up to the need to improve resilience in water and waste water provision.

Opportunities from Federal Water spending plans: The US administration has proposed a USD111bn budget, of which USD10bn is for monitoring and cleaning up toxic (per and polyfluoroalkyl substances) and investing in rural water systems, household wells, and septic units. USD56bn is proposed for modernising drinking water, wastewater, and storm water conveyance and treatment. The remaining USD45bn will be used to remove lead drinking water pipes. We raise our target prices for both US water companies we cover, which are well placed to benefit from the focus on asset rehabilitation and their expertise in removing water contaminants to address historical municipal underinvestment.

UK has insufficient investment – M&A could be the way to grow: In contrast, Ofwat's PR19 price control focused on reducing customer bills rather than allowing RCV growth for the listed companies, except for Severn Trent. An announcement is due in May on whether it will allow the Green Recovery investment proposed by the companies or if it will be scaled back. We increase our risk-free rate in line with HSBC's new UK bond yield assumption, which reduces our DCF valuation for UU (UU/ LN, 968p, TP 910p vs 960p, downgrade to Reduce from Hold). We assume Pennon and Severn Trent can deliver higher long-term growth from their more ambitious Green Recovery plans. Severn Trent (SVT LN, 2,447p, TP 2,570p vs 2,450p) remains Hold but we downgrade Pennon (PNN LN, 1,030p, TP 1,090p) to Hold from Buy after its strong recent performance.

Executive summary

- New growth opportunities in the US from USD111bn water system improvements
- UK's Green Recovery proposals not sufficient to avoid bond proxy status for stocks; M&A needed to accelerate growth
- US water stocks AWK and WTRG, both rated Buy, offer growth potential; in the UK, we downgrade PNN to Hold from Buy after a strong performance, SVT remains Hold, UU offers limited growth potential and we downgrade to Reduce from Hold

New growth opportunities in UK and US water

The water proposals set out by the US government and the UK's Green Recovery proposals show governments are waking up to the need to improve resilience in water

Regulated UK and US utilities have not performed as strongly as energy transition stocks, because of their perceived status as bond proxies. UK water stocks are down 21.6% over 12 months relative to the FTSE Utilities Europe index compared with Drax (DRX LN, 412p, Buy) up 40.3%. However, they too have strong ESG credentials. The water proposals set out by the US government for accelerated investment and the UK government's Green Recovery proposals show policy-makers are waking up to the need to improve resilience in water and waste water provision.

The UK water companies have bond proxy status unless accelerated growth can be proven. In HSBC's report *The Price is right*, 14 April 2021, our Fixed Income strategists increased their 10- year RfR assumptions. "We move our 10-year gilt year-end forecast to 50bp (from 30bp) because some MPC members are concerned about the risk of inflation proving more persistent than elsewhere, and we fear market expectations could overshoot". We increase our risk-free rate used in our UK water company valuations in line with HSBC's new bond yield assumption. This reduces our DCF valuation for United Utilities and leads us to downgrade our rating to Reduce from Hold. We assume that Pennon and Severn Trent can deliver higher long-term growth from their more ambitious Green Recovery plans, which offset the higher WACCs we calculate for each company. We retain our Hold rating on Severn Trent but downgrade Pennon to Hold from Buy after its strong recent share price performance.

The UK

DEFRA and Ofwat likely to provide preliminary guidance on the Green Recovery Initiative in May

We expect the Department for Environment, Food and Rural Affairs (DEFRA) and the water industry regulator Ofwat to provide preliminary guidance on the projects submitted by the water companies under the Green Recovery Initiative in May. For the three UK water companies under our coverage this will accelerate their regulated asset growth. Severn Trent has the largest Green Recovery proposal of GBP730m as a percentage of its current five-year investment programme among the listed UK water companies, which if approved would lead to a rise of 24% in its existing capex plans of cGBP3bn for the current AMP (alternative

performance measures). Pennon has a capex plan of GBP1bn for the current AMP and has submitted proposals for GBP92m worth of plans under the Green Recovery initiative to the regulator; if approved it would increase capex by c9%. United Utilities has proposed GBP135m of additional capex, marking a c7% increase in its existing plan of GBP2bn for the current AMP.

Downgrade Pennon to Hold after strong recent performance, TP of 1,090p unchanged; better to travel than to arrive

The ability to create value through M&A, as Pennon did with Bournemouth Water, is a much more arduous task

Pennon has had a strong share price performance recently, driven by M&A expectations and strong initial regulatory performance. Its reinvestment decisions will provide an interesting regulatory precedent depending on where it chooses to invest its waste proceeds for growth. It could be bold and buy a large water company and plan ambitious expansion or look at a smaller water-only company and give the proceeds back to shareholders. As the sector resilience needs are significant, we assume management may think big. The case for paying a premium to Regulatory Capital Value (RCV) – the regulated asset base has been strengthened by National Grid's (NG/ LN, 915p, Buy) premium paid in March 2021 for WPD (a fast-tracked sector leader). Many of Pennon's unlisted water potential targets have a combination of complicated (with derivatives) balance sheets with higher leverage, or significant operational challenges. The ability to create value as it did with Bournemouth Water is a much more arduous task.

Severn Trent remains Hold, raise TP to 2,570p from 2,450p on higher longer term growth and higher performance rewards

Severn Trent continues to set itself out as an innovator with underlying growth and ideas for green investment

Severn Trent has applied for a cGBP730m package under the Green Recovery initiative. This investment plan is above its base capex plan of GBP3bn for the period 2021-25 (on top of the 4% RCV growth target for AMP7, the highest of its peers). Severn Trent continues to set itself out as an innovator with underlying growth and ideas for green investment. Management said in 2020 that M&A was not part of its strategy. It still has much work to do on Hafren Dyfrdwy, the small water company it owns. Management said in its pre-close statement at the end of March that Severn Trent remains on or ahead of target for almost 80% of its customer performance measures and has increased its guidance for outperformance on customer performance incentives (ODIs) this year from 'at least GBP25m' to 'at least GBP50m'. Pennon and UU shares have outperformed Severn Trent but in our view both have had a higher profile: Pennon through M&A and United Utilities at its CMD. However, Severn Trent consistently trades at a premium to RCV to the other two listed stocks, currently at c20%, and therefore we do not see sufficient additional value to justify a Buy rating.

Downgrade United Utilities to Reduce from Hold, cut TP to 910p from 960p on higher gilt yield assumptions and brought forward phasing of investment

UU still struggles to avoid its bond proxy status. Of all the water stocks under our coverage it has the highest dividend yield and the lowest Green Recovery list of potential projects compared to its current investment. It continues to bring forward investment to drive ODI performance but management seems to have backtracked on exploring M&A opportunities in UK water despite a significant operational improvement.

Despite UU's significant operational improvements, its asset base is shrinking

Despite UU's significant operational improvements, its asset base is shrinking. Ofwat is looking at the Haweswater Aqueduct Resilience Programme (HARP) project as a blueprint for attracting additional capital for major projects to the sector but it will have to prove convincingly that project finance without government guarantees with the additional cost of finance, lawyers, and cost duplication will deliver better value to shareholders. HARP in particular is a risky project because of the tunnelling required through hills in the Lake District, which is not a core competence for UU. We remain sceptical that it can be delivered at a lower cost to UU's customers bearing in mind that Thames Tideway, another significant project (Thames Water), needed a government guarantee. If HARP could be delivered more cheaply by United Utilities' management team it would form part of its regulatory asset growth post 2025.

The US

Federal proposal for USD111bn for water system improvements, most notably replacing lead pipes in drinking water systems

The US government set out its proposal, the 'American Jobs Plan', on 31 March 2021, which is a wide-ranging job creation and infrastructure rehabilitation plan. Among its many parts, it includes a proposal to allocate USD111bn for water system improvements, most notably replacing lead pipes in drinking water systems.

The larger privately held and investor-owned (IOU) water utilities including American Water Works and Essential Utilities, the two largest under our coverage, have the technological expertise to test and treat drinking water as additional federal and/or state contaminant levels are adopted. They also have the expertise in project management to rehabilitate waste water systems, which arguably have been neglected even more than the clean water network.

Funding aside, regulatory mechanisms such as Fair Market Value and the use of infrastructure charges have been major growth drivers for these listed companies

Funding aside, regulatory mechanisms such as Fair Market Value and the use of infrastructure charges have been a major growth driver for these listed companies. This has enabled them to:

- purchase regulated water systems at a premium to rate base (the appraised value),
- pay a premium for the municipality to redeploy the proceeds for other priorities,
- increase water rates incrementally each year in order to replace pipes.

The costs and risks of expansion within the states in which these two companies operate, has delivered savings through economies of scale and have also spread the cost of asset rehabilitation, especially for poor communities across the entire state rate base. US water assets are significantly underinvested compared to the UK. This underpins the mid-single digit earnings growth expected by the listed utilities.

Latest developments

HSBC's US Economics team on 15 April 2021 published *US Fiscal Policy*, updating on the Biden administration's latest proposals for spending on infrastructure and other areas of over USD2bn. We extract from this report below.

"Republican senators have indicated that they are preparing a smaller, counterproposal that would be focused on a narrower set of infrastructure investments compared to the American Jobs Plan. Republican Senator Shelley Moore Capito said on 14 April that the budgetary cost of such a plan could be in the range of USD600bn to USD800bn.

President Joe Biden is scheduled to address a joint session of Congress on 28 April. At that point, markets will be looking for some clarity about whether bipartisan discussions on infrastructure have yielded any progress or whether Democrats are likely to pursue enactment of American Jobs Plan proposals via budget reconciliation, relying on support strictly from Democratic lawmakers. In either case, it will be important to monitor the momentum of the discussions over the course of the early summer given that Congress typically goes on recess during the month of August".

American Water remains Buy, raise TP to USD183 from USD175 on higher growth

American Water plans to spend USD22-25bn over the next ten years on water quality, essential infrastructure replacement and regulated customer growth. This underpins regulated future revenue growth.

Its medium-term aim is for an EPS CAGR of 7-10% in 2021-2025. 1-2% growth is to come from Market-Based Businesses, 1-2% growth from Regulated Acquisitions and 5-7% growth from Regulated Investment (capex). Dividend growth is targeted at the high end of 7-10% while maintaining a payout ratio of 50-60% of earnings.

American plans to invest USD22-25bn of capital over the next ten years

It plans to maintain a predominantly regulated risk profile with capital-light, cash-generating Market-Based Businesses representing 12% of EPS in 2024.

Essential targets investment of USD3bn from 2021 to 2023 to maintain a 70/30 water to gas mix of business

Essential remains Buy, raise TP to USD57 from USD55 on higher growth

Essential Utilities' management targets investment of USD3bn from 2021 to 2023 to maintain a 70/30 water to gas mix of business measured by size of regulated rate base. To complement its infrastructure rehabilitation, Essential is also investing in municipal acquisitions in the US states in which it operates. We believe its recent performance has been muted because it remains embroiled in the political complexities of its Delcora acquisition, despite the legality of the contract. We think this could continue to depress its share price performance. Ultimately customers in Delaware will have to pay for asset rehabilitation even if Essential is not successful. There are other opportunities for expansion in water. In gas it has clear visibility for enhanced asset rehabilitation, which will also reduce carbon emissions.

Opportunities from Federal Water spending plans

- The challenge of US water provision
- Lead pipe replacement and water contaminants removal are opportunities
- US water companies benefit from a highly fragmented, underinvested market

The challenge of US water provision

Clean water

Renewal and replacement of ageing water and wastewater infrastructure, as well as the financing for capital improvements, the top two issues facing the US water industry

Renewal and replacement of ageing water and wastewater infrastructure, as well as the financing for capital improvements, are the top two issues facing the US water industry according to the 2021 Infrastructure Report Card.

Funding for drinking water infrastructure has not kept pace with the growing need to address ageing infrastructure systems, and current funding sources do not meet the total needs. Since 2017, there have been signs of improvement with the modest expansion of federal financing programmes and water utilities are raising water rates to fund network investment.

The US Environmental Protection Agency's (EPA) drinking Water State Revolving Fund (DWSRF) provides low-interest loans to state and local drinking water infrastructure projects. The DWSRF programme grew from USD2bn in 2013 to nearly USD3bn in 2018. The EPA's Water Infrastructure Finance & Innovation Act (WIFIA) programme offers the sponsors of large projects (over USD20m) a new financing tool to leverage limited federal resources; stimulate additional investment in drinking water, wastewater, and stormwater infrastructure; and encourage greater private sector participation. By 2019, prospective borrowers had submitted letters of interest requesting over USD21bn in WIFIA loans, including USD3.9bn for drinking water projects. The US government increased its lending capacity from USD2.5bn in 2017 to USD6bn in 2019.

According to an American Society of Civil Engineers' (ASCE) 2020 economic study, the annual drinking water and wastewater investment gap will grow to USD434bn by 2029

US water customers have not paid tariffs, in our view, that allow the cost of infrastructure rehabilitation (in addition to water service provision) compared to markets such as France and the UK. The average nationwide monthly drinking water rate has increased 31% from 2012 to 2018 but more is needed. According to an American Society of Civil Engineers' (ASCE) 2020 economic study, the annual drinking water and wastewater investment gap will grow to USD434bn by 2029.

Wastewater

The majority of the nation's Wastewater Treatment Plants (WWTPs) were designed with an average lifespan of 40 to 50 years. Since the systems were constructed in the 1970s, around the passing of the Clean Water Act in 1972, they are reaching the end of their service lives.

Moreover, utilities face the challenge of meeting increasingly stringent surface water quality regulations for rivers and lakes. Significant infrastructure replacement is needed but clean water investment has tended to be prioritised compared to wastewater. Investor-owned utilities are experts in resilience-related planning and using technological and scientific innovations that produce profitable by-products such as sludge. They can also deliver cost savings from wastewater treatment relative to legacy plant. Today's waste water can be tomorrow's clean water in areas of water stress. In 2019, the federal government invited more than a dozen wastewater and water reuse projects to apply for over USD2.3bn in loans.

Federal Water spending plans

The US government set out its proposal, the 'American Jobs Plan', on 31 March 2021, which is a wide-ranging job creation and infrastructure rehabilitation plan. Among its many parts it includes a proposal to allocate USD111bn for water system improvements, most notably replacing lead pipes in drinking water systems.

The plan offers USD10bn for monitoring and cleaning up toxic (per and polyfluoroalkyl substances), a particular competence of the companies under our coverage

The plan offers USD10bn for monitoring and cleaning up toxic (per and polyfluoroalkyl substances or PFAS) and investing in rural water systems, household wells, and septic units. This is a major focus for US investors. A sum of USD56bn is proposed for modernising drinking water, wastewater, and storm water conveyance and treatment. The remaining USD45bn will be used to remove all of the country's estimated 6-10m lead drinking water pipes. Additionally, the plan provides funding for the 'western drought crisis' by investing in water efficiency and recycling programmes.

Where do the investor-owned utilities fit into these plans?
We look at what has happened historically when large Federal financial resources have been available. Federal money is expected to provide some support, but funding may not be available to all the municipalities in need.

Federal money is expected to provide some support, but funding may not be available to all the municipalities in need

Financially, municipal systems have been facing challenges with limited government funding and competing needs for other services. Operationally, due to a lack of expertise, smaller systems will find it difficult to keep up with increasingly stringent water quality standards over the medium term, even if they have money to replace their lead pipes in the short term. Municipal systems in the medium term will continue to weigh up the advantages of divesting assets for ongoing asset replacement needs and when the expense of testing and treating for higher standards of water is overly burdensome. This will continue to drive acquisition opportunities for the listed water stocks under our coverage.

The larger privately held and investor-owned (IOU) water utilities have the technological expertise to test and treat drinking water as additional federal and/or state contaminant levels are adopted. They also have the expertise in project management to rehabilitate waste water systems, which arguably have been neglected even more than the clean water network.

UK Water

- Announcement to deliver accelerated environmental growth expected next month
- Pennon – premium precedent by National Grid for regulated assets and CMA green light on increased leverage
- HSBC Fixed Income expects an increase in short-term gilt yields

Accelerated environmental growth through Green Recovery

DEFRA and Ofwat will provide preliminary guidance on the projects submitted by the water companies under the Green Recovery Initiative, we believe in May

DEFRA and Ofwat will provide preliminary guidance on the projects submitted by the water companies under the Green Recovery Initiative we believe in May. For all the companies under our coverage this will accelerate regulated asset growth. The UK water sector has lagged the performance of its UK electricity peers. The prospect of more growth and the strong ESG credentials of the listed water companies may lead to a better performance in calendar Q2.

M&A update – Pennon management could be tempted to pay up

M&A: Two recent events may encourage Pennon to pay up: National Grid's 60% premium payment for WPD; and the CMA's lack of endorsement for capital structure sharing with customers

The market is waiting for Pennon to conclude its strategic review on where to redeploy the GBP2.7bn of net proceeds from its waste sale. The easy option would be to enhance earnings through a share buyback and return the proceeds to shareholders. In our experience, water companies under our coverage have always found something to invest in. This is a once-in-a-lifetime to invest for environmental performance and growth. Two recent events may encourage Pennon to pay up:

- National Grid's 60% premium payment for WPD
- The CMA's lack of endorsement for capital structure sharing with customers.

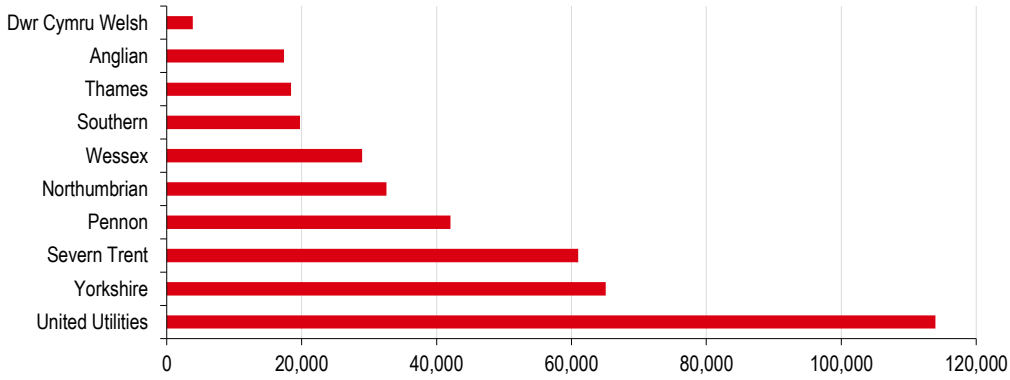
Both suggest that Pennon could pay more for one of the four companies that went to the CMA (Competition and Markets Authority) as it would not have to share the benefits of taking on more debt (to drive down the WACC) with shareholders.

Plenty of assets need accelerated investment – the UK's multiple sewage overflow numbers

According to an investigative report by the BBC's Panorama broadcast on 13 April, UK water companies have been illegally dumping untreated sewage into rivers. Panorama gathered detailed data from ten water companies in England and Wales through environmental information requests. The data suggests seven of the ten companies had treatment works that were breaching their permits by dumping sewage before they were treating the specified volumes. Water companies discharged untreated sewage into rivers more than 400,000 times lasting more than 3m hours last year.

To protect properties from flooding and prevent sewage from backing, treatment works are allowed to release sewage into rivers and streams after extreme weather, such as torrential rain, and when they are operating close to full capacity. This untreated sewage is normally screened and passed through storage tanks before it is dumped. Discharge permits issued by the Environment Agency specify the level of sewage each works has to treat before it can dump untreated sewage. But Panorama's report found some companies are discharging without a permit and/or providing incorrect information to the agency.

Number of storm water overflows, 2020



Source: Environment Agency

This is more an indication that even though the UK's water infrastructure has benefited from significant investment, more is needed

This chart does not imply that UU is exceeding its permitted discharge limits and this absolute chart does not reflect the size or geography of the companies. However, it does reflect that all the overflows were without permit. It merely demonstrates that further resilience investment is needed to reduce these numbers. This is more an indication that even though the UK's water infrastructure has benefited from significant investment, more is needed.

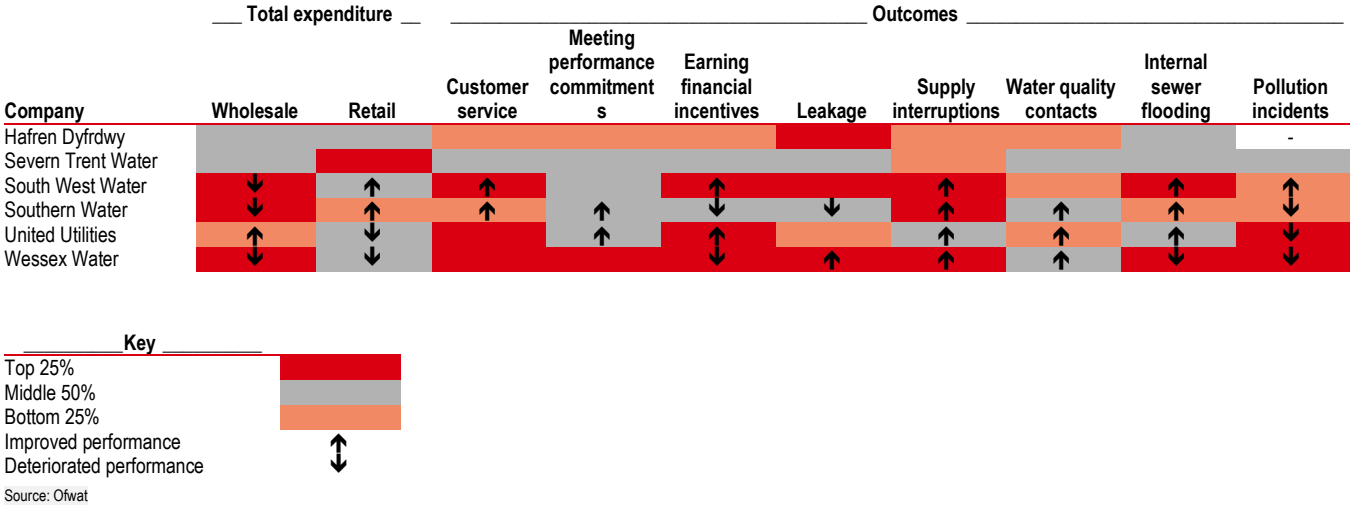
Customers may need to be prepared to accept increases in bills to ensure that less untreated sewage is released into rivers.

Bond proxy status unless accelerated growth can be proven

In HSBC Fixed Income's report *The Price is Right* published on 14 April 2021, the team increased its 10-year RfR assumptions. "We move our 10-year gilt year-end forecast to 50bp (from 30bp) because some MPC members are concerned about the risk of inflation proving more persistent than elsewhere, and we fear market expectations could overshoot".

We increase our RfR in line with HSBC's new UK bond yield assumption (we take an average of short and long-term gilt yields). This leads us to reduce our DCF valuation for United Utilities and we downgrade our rating to Reduce from Hold. We assume that Pennon and Severn Trent can deliver higher long-term growth from their more ambitious Green Recovery plans, which offset the higher WACC we now calculate for each company. We retain our Hold rating on Severn Trent but downgrade Pennon to Hold from Buy after its strong recent share price performance. United Utilities' RCV growth excludes the Haweswater Aqueduct project, which Ofwat is testing to see whether it can be financed more cheaply by project finance. This means its asset base is shrinking and it is hard to see how it will not continue to be seen as a bond proxy and command a yield premium to its peers. We downgrade United Utilities to Reduce from Hold on our higher RfR assumptions, not offset by significant Green Recovery Investment.

Overall Service Performance: Ofwat 2019-2020



Source: Ofwat

We reproduce above Ofwat's overall service performance table for 2019 to assess the task in hand for key companies in the sector. In terms of overall performance:

- Hafren Dyfrdwy, despite being owned by Severn Trent, is still a relatively poor performer on many measures.
- Severn Trent remains in the middle of the pack with an average performance but we know from its H1 presentation that it is working hard to alleviate its long-term weakness in supply interruptions.
- Southern Water is making progress but still has much work to do across many areas.
- South West Water still has to make better progress with water customer contacts, which was meant to be an area where its acquisition of Bournemouth Water was beneficial. It is already making improvements in reduction in pollution incidents.
- Wessex Water remains best in class across more measures than its peers.

Companies

American Water

- Acquisition-led growth accelerating
- Environmental credentials, especially in regard to removal of water contaminants
- Reiterate Buy rating, raise TP to USD183 from USD175

Investment thesis

American Water plans to spend USD22-25bn over the next ten years. This underpins its regulated future revenue growth.

Medium-term aims are for an EPS CAGR of 7-10% 2021-2025

The company's medium-term aims for an EPS CAGR of 7-10% from 2021-2025. adjusted EPS. 1-2% growth is to come from Market-Based Businesses, 1-2% growth from Regulated Acquisitions and 5-7% growth from Regulated Investment (capex). Dividend growth is targeted at the high end of a 7-10% range while maintaining a payout ratio of 50-60% of earnings.

It plans to maintain a predominantly regulated risk profile with capital-light, cash-generating Market-Based Businesses representing 12% of EPS in 2024. The company also plans to invest USD20-22bn of capital over the next ten years for water quality, needed infrastructure replacement and regulated customer growth.

Similarly, rate base growth of CAGR 7-8% is targeted for 2021-2025.

American is seen as one of the few regulated utilities with accelerated growth, which means it has not suffered as much as its peers from a bond proxy negative correlation with rising bond yields

Together this means American Water is regarded as one of the few regulated utilities with accelerated growth, which means it has not suffered as much as its peers from a bond proxy negative correlation with rising bond yields. Recent acquisitions have further underpinned its growth status.

2021 outlook

The outlook for 2021 was set out at the FY 2020 results on 25 February:

- 2021 earnings guidance range of USD4.18 to USD4.28 per diluted share.
- AWK has 44,000 customers in its pipeline through signed acquisitions following regulatory approval, which it expects to complete.
- The company is awaiting final orders for general rate cases in three states and filed for infrastructure surcharges in one state for a total annualised revenue request of USD126m.

Recent M&A activities underpin growth

American Water announced the acquisition of City of York wastewater systems in the state of Pennsylvania, through its subsidiary Pennsylvania American Water, for USD235m on 7 April. This acquisition will add roughly 45,000 connections. The agreement has received approval from York City Council and American Water plans to close the transaction by the end of 2021, assuming it receives the necessary approvals from the regulators. As part of the agreement, it will preserve current wastewater rates for a minimum of three years, offer employment to all of the city's wastewater system employees, establish an in-person customer service centre in

York, provide an upfront deposit of USD20m, and contribute at least USD50,000 in donations to non-profit organisations serving the city and its residents.

In another deal, American Water acquired the wastewater assets of Egg Harbour City in New Jersey for USD21.8m on 30 March. Under the terms of the deal, American Water will invest USD14m in the first ten years for necessary upgrades, including the construction of an emergency interconnection with the subsidiary's regional system. The deal is expected to be completed in the second half of the year, pending approval from the New Jersey Department of Community Affairs and the New Jersey Board of Public Utilities.

Performance against peers

The stock has underperformed the S&P 500 index by 8.5% and underperformed the FTSE USA growth index by 5.7% since 1 January 2021. In the same period, Essential Water's stock underperformed the S&P 500 index by 10.9% and FTSE USA growth index by 8.1%. Both American Water and Essential have performed as bond proxies since the start of the year. American Water appears to have a much greater correlation with the S&P 500 index than an inverse correlation with the US 10-year bond yield. As it accelerates its investment for growth, we expect the shares to continue to move in tandem with the FTSE USA Growth Index peers. This is in marked contrast to its regulated UK water peers, which have performed as bond proxies.

However, a falling UST 10-year yield has helped American Water's share price to move higher recently as it is the largest pure-play water company in the US with a clear growth trajectory and strong pipeline of acquisitive growth planned for the next few years.

Change in estimates

We update our model for the FY2020 results and introduce our 2023 estimates.

Valuation and risks

We value American Water via three approaches: DCF, target dividend yield, and sum of the parts (using the average of our rate base valuation and peer multiple valuation). Taking the average of the three fair values, which we update, we raise our target price to USD183 from USD175.

- **DCF:** We change our observed Bloomberg five-year beta to 0.79 from 0.5, reflecting volatility relating to interest rate rises in the US. We use a risk-free rate of 2.5%, equity risk premium of 3.0% and a cost of equity of 4.9%, resulting in a higher WACC of 4.2% (previously 3.7%). We update our earnings estimates. Despite the increased beta, recent deals mean we increase our terminal value growth rate by 50bp to 3.5%. This increases our DCF fair value to USD204.4 from USD175.5.
- **Target PE multiple and dividend yield:** We use the weighted average of the US water peer group (70%) and FTSE USA Growth index constituents (30%) to arrive at our PE multiple and target dividend yield. US water peers are now trading at a PE multiple of 36x with a yield of 1.45%, whereas the FTSE growth index is trading at a PE of 36x and yield of 1.25%. Hence, we use a 36x (unchanged) water peer multiple (for our SOTP valuation; see below) and a target dividend yield of 1.4% (unchanged in line with water peers), both in line with the above-mentioned methodology. The fair value from our yield approach is unchanged at USD170.9.
- **Sum of the parts:** In our SOTP approach, we continue to use the 2021e rate base to reflect the company's current growth trajectory (based on 2020e rate base numbers). In this we assume 8% annual growth of the rate base to 2021e. We then use the average of the sum-of-the-parts valuation based on the rate base with a small non-regulated element, and our peer multiple-based valuation of 3.5x price to regulated rate base (proxy for price to book in line with peers). Our new fair value from this method is USD173.3, down from USD179.9.

Our higher target price of USD183 implies upside of 13.4%. We retain our Buy rating as the company has a strong pipeline of accretive acquisitions to be completed in the next few years, which we expect to drive higher rate base growth than previously.

Summary of valuation

Downside risks

If American Water fails to achieve the desired rate case revisions, this could impact its revenue and profit margins. The company may also fail to deliver organic growth. If it fails to keep its momentum in acquiring water systems or gaining O&M efficiency, it may not achieve our forecasts.

Essential Utilities

- The growth proposition with gas decarbonisation investment
- Next catalysts in the regulatory processes, Delcora uncertainty discount should unwind in 2021
- Reiterate Buy rating, raise TP to USD57 from USD55

Investment thesis

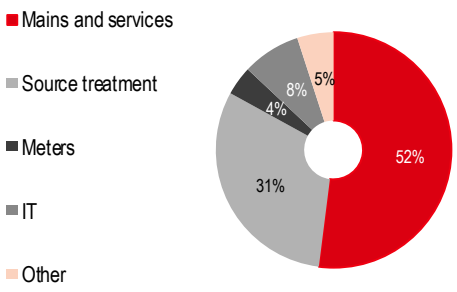
Essential Utilities' management set out its outlook for the period 2021-23 on 11 January, and confirmed it its FY2020 results on 24 February. It targets investment of USD3bn from 2021 to 2023 to maintain a 70/30 water (Aqua) to gas (Peoples) mix of business measured by size of regulated rate base. To complement its infrastructure rehabilitation, Essential is also investing in municipal acquisitions in the US states in which it operates. It has a pipeline of water acquisitions in these states and its accelerated investment programme in gas means it has not suffered as a bond proxy as much as some of its regulated peers. It has underperformed recently because of the well-publicised challenges to its acquisition of Delcora. We believe once either of these is resolved or indeed Essential walks away from the deal, this uncertainty discount should unwind.

2021 outlook

Management targets a range for 2021 EPS of USD1.64-1.69 with growth of 5-7% through to 2023. It will invest USD550m in regulated water and USD450m in its regulated gas segments.

We discussed both its growth and this guidance in our report of 14 January: *Guidance update; ESG acceleration*. Management sees opportunities to add USD500m of rate base growth from a number of acquisition targets but the largest of these, Delcora, has faced a number of headwinds, as we discuss below.

Water segment capex plan through to 2023e



Source: Essential Utilities: Investors presentation – 11 January 2021

Gas segment capex plan through to 2023e

Caveat – why growth may not be linear

As with all regulated utilities under our coverage, it is important to note that asset and earnings growth should not be expected to be linear.

For example, Essential Utilities' management pointed out that this year, the company is preparing a water three-year rate case filing in Pennsylvania for its Aqua PA unit. Because the majority of Aqua's rate base is from Pennsylvania, this will result in a short-term earnings lag until it can recover the revenues at the new rates. Indeed, under- or over-recovery of revenues means adjustments are needed in subsequent years. However, M&A does provide some short-term support for earnings growth. Municipal acquisitions generally create a short-term earnings lag as these acquisitions rarely, if ever, earn a full return until they are included in a rate case.

Delcora – getting it done

In the light of uncertainty around the Delcora acquisition, Essential has excluded Delcora contributions from its 2021 guidance

In the light of the uncertainty around the Delcora acquisition, Essential has excluded Delcora contributions from its 2021 guidance. Post the ruling by a judge in favour of Essential's claims of legality of the purchase contract, the county has appealed to the Commonwealth Court. According to management, the ruling may take about six months. In a bid to make a better case for the deal, Essential says it will submit a rate stabilisation plan. Essential further updated that it will not delay the Aqua Pennsylvania rate case due to the pending Delcora deal.

Peoples Gas

According to management guidance, the rate base of gas segment will increase 8-10% pa to 2023

During its investor presentation in February, Essential disclosed an investment plan of USD3bn from 2021 to 2023, with USD1bn being invested in the current year to rehabilitate and strengthen water, wastewater and natural gas systems. According to the management guidance, the rate base of gas segment will increase at 8-10% per year to 2023. For the year 2021, Essential is planning to invest USD450m. Essential management hoped to used tax optimisation (using capital allowances on the balance sheet) to stay out of rates. It seems likely that this option may not be utilised for Peoples Gas. This suggests it will file for rate increases earlier. This will have no effect on earnings from an investor perspective but means customers will pay for the asset rehabilitation earlier than using balance sheet resources.

Performance against peers

Essential's stock has underperformed the S&P 500 index by 10.9% and FTSE USA growth index by 8.1% year-to-date. In our view, this is because of the newsflow on the regulatory and legal challenges to the Delcora acquisition. We believe that some of the issues have been resolved but there are still uncertainties. Essential raised 6,700,000 shares of equity in August 2020 on a forward sale basis which must be exercised by 10 August 2021. The proceeds from this equity raise was primarily for Delcora but also Essential management said, for general corporate purposes, including for water and wastewater utility acquisitions, working capital and capital expenditures.

Feedback from some investors is that the equity raise of USD300m on a deferred basis might still be drawn down even if the acquisition doesn't proceed. Essential management says it is confident there are other acquisition targets that could be funded by equity but a smaller amount of equity might be deployed. Investors need to be reassured that only the appropriate level of equity is raised for the investment needs of the business and Essential is not overcapitalised.

We believe certainty either of the success or failure of the Delcora deal should lead to the unwinding of the current uncertainty discount.

Change in estimates

We have updated our estimates post the company's FY2020 results and introduce our 2023 estimates.

Valuation and risks

We value Essential Utilities using the average of three approaches: DCF, dividend yield and the average of our PE multiple and rate-base valuations. After updating our earnings estimates and assumptions, we raise our target price to USD57 from USD55.

- In our DCF, we increase our Bloomberg observed five-year beta to 0.89 from 0.6. This reflects, we believe, the market volatility of interest rate rises in the US. This is the primary driver of the reduction in our DCF value to USD45.8 per share from USD56.5.
- For our yield-based valuation, we cut our target average yield to 1.64% from 2.25% in line with the water (70% of water peers' yield) and gas-related utilities peers (30% of gas peers' yield. This reflects Essential's business mix and leads us to increase our yield valuation to USD65.0 from USD47.7. This reflects the movement in peer group multiples as water and gas is seen as having more of a growth status compared to that of bond proxy stocks.
- For our approach using the average of our PE multiple and rate-base valuations, we keep our target multiple unchanged at 33.5x, in line with that of peers. We use a water and gas peer group PB average of 2.6x as a proxy for a rate-base valuation. This is consistent with all US utilities under our coverage and is a proxy for EV. Our new SOP and peer multiple value is USD58.7, down from USD61.4.

We increase our target price to USD57 from USD55, which implies 19.0% upside. We reiterate our Buy rating as we believe the combination of regulated investment growth and earnings growth remains attractive and there is scope for the current uncertainty discount to unwind.

Downside risks

Essential Utilities failing to achieve the desired rate case upwards revisions and infrastructure surcharges; lacking organic growth from asset replacement; inability to take advantage of the Fair Market Value legislation opportunity; dividend growth at a lower rate than we assume; and inability to conclude the Delcora acquisition in 2021.

Pennon

- Trading update, positive FY21 guidance, possible news on cash deployment by June results
- Green Recovery push potential for cGBP92m of additional investment
- Downgrade to Hold from Buy with unchanged TP of 1,090p after strong performance; better to travel than to arrive

Investment thesis

The case for paying a premium to RCV has been strengthened by NG's premium paid for WPD (a fast-tracked sector leader). Many of Pennon's unlisted water potential targets have a combination of complicated (with derivatives) balance sheets with higher leverage, or significant operational challenges

Pennon shares have had a strong recent performance driven by M&A expectations and strong initial regulatory performance. Its reinvestment decisions will provide an interesting regulatory precedent depending on where it chooses to invest its waste proceeds for growth. It could be bold and buy a large water company and plan ambitious expansion or look for a smaller water-only company and give the proceeds back to shareholders. As the sector resilience needs are significant, we think management may think big. The case for paying a premium to RCV has been strengthened by National Grid's premium paid in March 2020 for WPD (a fast-tracked sector leader). Many of Pennon's unlisted water potential targets have a combination of complicated (with derivatives) balance sheets with higher leverage, or significant operational challenges as can be seen from the table on page 12 above. The ability to create value, as it did with Bournemouth Water, is a much more arduous task.

Trading update: growing regulatory return, M&A clarity in June

Pennon confirmed its FY2020/21 performance is in line with management expectations. It continues to expect a doubling of base RORE of 3.9% from total expenditure and financial outperformance, which remains in line with the H1 (April-September) number of 8%. The company anticipates a net ODI penalty (despite 80% ODIs on or ahead of targets) position for the year due to underperformance associated with pollution incidents. However, a COVID-19 financial impact is as anticipated. Pennon further suggested that cash collections in H2 have been robust and no new debtors provisions are added.

It confirmed that if a major deal is not completed, a substantial return of capital to shareholders will be made

There was no update on capital allocation plans, with clarity now expected at the FY2020/21 results in June. With GBP3bn cash and committed facilities, PNN is in a good financial position to carry out M&A. Pennon's management believes there is significant potential in the UK water sector and it continues to narrow down its review of potential growth opportunities to reinvest the proceeds from the Viridor sale in 2020. Moreover, Pennon has confirmed that if a major M&A opportunity is not available, a substantial return of capital to shareholders will be made.

Green Recovery initiative

Pennon has proposed a GBP92m Green Recovery investment for the period to 2025, which will mark a 10% increase in its existing GBP1bn investment programme for the period. It has proposed six projects focused on improving public health, protecting the environment and addressing climate change. Pennon has suggested that the impact on customer bills be paused until 2025. Ofwat will announce its preliminary views on the proposals in May.

Performance against peers

Pennon shares have underperformed the FTSE All share index by 19.4% year-to-date and underperformed other listed UK water companies. Lack of visibility on the deployment of cash may be driving this. It has announced it is evaluating M&A options in the UK water space and an update is expected during its full-year results in June. The current lack of visibility may hinder its performance in the short term, but management has confirmed a return of value is possible either through M&A or a share buyback in the medium term. It still appears to have some inverse correlation to gilt yields.

Change in estimates

We update our estimates post the trading update to reflect a slightly higher interest charge than we had assumed previously.

Valuation and risks

We value Pennon shares using three valuation approaches: DCF, dividend yield and sum-of the-parts. We assign a 50% weight to yield and 25% each to DCF and SOTP, rounded, to arrive at our target price of 1,090p (unchanged).

- In the DCF valuation, we change our forward estimates for 2021 and onwards to reflect the guidance by management during the trading update for FY2020/21. We also update our tax rate and interest rate as per company guidance. We take the five-year Bloomberg observed beta of 0.70 (unchanged). We revise our RfR to reflect the HSBC Fixed Income team view of 10-year gilt rates to 50bp from 30bp previously. To this we add a 150bp premium. This increases our RfR to 2.0% from 1.83% previously. This increases our WACC to 3.8% from 3.6%. Because of the Green Recovery potential additional growth, we increase our terminal growth value in our DCF to 1.25% from 1.0%. We also update the pension deficit for the H1 results. These changes lead to a net increase in our DCF valuation to 1,439p from 1,249p.
- In the yield valuation, we add an unchanged premium of 0.25% to our revised RfR, increasing our yield to 2.55% from 2.08%. This reduces our yield value to 1,001p from 1,088p.
- In the SOTP valuation, we continue to assume net proceeds of GBP2.7bn from the sale of Viridor. We use South West Water's RCV to March 2022 for the basis of our SOTP. The higher WACC leads to a lower value creation assumption than previously but is offset by the assumption that Pennon is able to earn a 10% return on the Green Recovery investment (the same proportion we calculate for our value creation relative to its RCV) which we add to our value creation assumption. These changes lead us to increase in our SOTP valuation to 928p from 925p.

Our target price of 1,090p is unchanged and implies upside of 5.9%. We downgrade our rating to Hold from Reduce reflecting the strong recent share price performance.

Upside risks

- Pennon acquires a regulated water company that demonstrates a clear value creation proposition to shareholders
- Pennon cannot create shareholder value through acquisition and returns the proceeds to shareholders, enhancing earnings and yield through a share consolidation.

Downside risks

- For SWB, not being able to achieve the efficiency challenges in its business plan for 2020-25 and not being able to achieve the ODI rewards needed to support the dividend policy.
- Bad debts may continue to rise in SWB and Pennon Water Services from the current challenging economic conditions.
- Pennon is unable to expand profitably in UK water from a lack of opportunities that create value.
- It provides no clarity on its reinvestment strategy of return of proceeds by the time of the FY 2021 results in May.

Note: Priced at close of 22 Apr 2021

Severn Trent

- Analysing the trading update, Green Recovery capex plans
- Still commands RCV premium relative to peers, despite Hafren Dyfrdwy performance and lack of M&A aspirations
- Retain Hold rating and raise TP to 2,570p from 2,450p on higher growth potential from Green Recovery

Investment thesis

Severn Trent continues to set itself out as an innovator with underlying growth and ideas for green investment. Management said in 2020 that M&A was not part of its strategy. It still has much work to do on Hafren Dyfrdwy, the water company it owns. We understand from the pre-close statement that management is focused on improvement in many areas. Severn Trent consistently trades at a premium to RCV to the other two UK listed stocks, currently at c20%, reflecting its higher RCV growth and recently its significant Green Recovery investment plans. We do not see therefore sufficient additional value to justify a Buy rating and remain at Hold.

Trading update for FY21

Company increased guidance for outperformance on Customer ODIs this year from GBP25m to at least GBP50m

SVT said at its trading update on 4 February 2021 that it remained on or ahead of its target for almost 80% of its customer performance measures. The company has therefore increased its guidance for outperformance on Customer ODIs this year from GBP25m to at least GBP50m.

Green Recovery initiative

SVT has applied for a cGBP730m package under Green Recovery

Severn Trent has applied for a cGBP730m package under Green Recovery. This investment plan is above the base capex plan of GBP3bn for the period 2021-25 (which would have delivered 4% RCV growth target for AMP7, the highest of its peers).

The water company said that only 15% of the cost would go directly onto customers' bills – Severn Trent will provide 85% of the funding needed upfront by raising new finance, which will then be recovered over a longer time period. Severn Trent estimates the extra cost to customers will be GBP6 per year on average.

Performance against peers

Pennon and UU shares have outperformed Severn Trent but in our view both have had a higher profile: Pennon through M&A and United Utilities at its CMD. However, Severn Trent consistently trades at a premium to RCV to the other two listed stocks, currently at c20%, and so we do not see sufficient additional value to justify a Buy rating. Our higher target price of 2,570p implies 5.0% upside and we maintain our Hold rating.

Valuation and risks

We value Severn Trent shares using three valuation approaches: DCF, dividend yield and sum of the parts. We assign a 50% weight to yield and 25% each to DCF and SOTP, rounded to arrive at our new target price of 2,570p from 2,450p, after adjusting our earnings estimates and assumptions.

- In the DCF valuation, we change our forward estimates for 2021 and onwards to reflect the guidance given by management during the trading update for FY2020/21. We also update our tax rate as well as interest rate as per company guidance. We take an observed Bloomberg five-year beta of 0.71 (changed from 0.75 from the previous Bloomberg estimates used in December 2020). We revise our RfR to reflect the HSBC Fixed Income view of 10-year gilt rates to 50bp from 30bp previously. To this we add at 150bp premium. This increases our RfR to 2.0% from 1.83% previously. This increases our WACC to 3.9% from 3.8%. Because of the Green Recovery potential additional growth, we increase the

terminal growth value in our DCF to 1.5% from 1.0%. We also update the pension deficit for the H1 results. This increases our DCF to 3,190p from 2,452p.

- In the yield valuation, a premium of 1.75% is added to our revised RfR (2%) resulting in a yield of 3.75% (previously 3.58%). The higher RfR reduces our yield valuation to 2,730p from 2,860p.
- In our sum of the parts we assume that Severn Trent is able to earn a 6% return on the Green Recovery investment (the same proportion we calculate for our value creation relative to its RCV) which we add to our value creation assumption. This increases the SoP value to 1,637p from 1,625p.

Our new target price of 2,570p implies upside of 5.0%. We maintain our Hold rating as we think the accelerated Green Recovery potential and underlying RCV growth are fully reflected in its price. We also note the relatively weaker financial profile of Severn Trent vs peers.

Upside risks

Severn Trent delivers additional operational total expenditure (totex) and ODI savings, driving higher EPS for FY 2020/21; property disposals above Severn Trent's GBP100m commitment; and growth in its Business Services division above our assumption.

Downside risks

Severn Trent faces higher costs than we assume, driving lower EPS for 2020/21; it may need to take remedial efforts to strengthen its balance sheet towards the end of the five-year period, which would be dilutive to shareholders.

United Utilities

- Trading update: FY21 revenue 3% lower, earnings 10% higher due to lower finance costs, Tallinn sale impact moves to next year
- Technology-driven GBP20m ODI outperformance, still ex-growth – most at risk of bond proxy correlation
- Downgrade to Reduce from Hold and cut TP to 910p from 960p on higher RfR assumption

Investment thesis

It has the highest dividend yield and the lowest Green Recovery list of potential projects compared to its current investment

United Utilities still struggles to avoid its bond proxy status. Of all the water stocks under our coverage it has the highest dividend yield and the lowest Green Recovery list of potential projects compared to its current investment. It continues to bring forward investment to drive ODI performance but management seems to have backtracked on exploring M&A opportunities in UK water despite a significant operational improvement.

Despite UU's significant operational improvements, its asset base is shrinking

Despite UU's significant operational improvements, its asset base is shrinking. Ofwat is looking at the Haweswater Aqueduct Resilience Programme (HARP) project as a blueprint for attracting additional capital for major projects to the sector but it will have to prove convincingly that project finance without government guarantees with the additional cost of finance, lawyers, and cost duplication will deliver better value to shareholders. HARP in particular is a risky project. We remain sceptical that it can be delivered at a lower cost to UU's customers, bearing in mind that Thames Tideway, another significant project (Thames Water), needed a government guarantee.

Trading update for FY21

UU issued a trading update on 25 March 2021. Management expects 3% lower revenue for FY 2020/21. Volumes have recovered in H2, compared to an H1 decline of 5%. Underlying operating profit for FY2020/21 is expected to be lower than in FY2019/20, largely reflecting the lower revenue and an increase in infrastructure renewals expenditure (IRE). The company expects its finance expenses to be cGBP100m lower than last year due to lower inflation applied to the group's index-linked debt. It has now adopted alternative performance measures (APMs) excluding what it says are non-core finance charges such as interest related to pensions. The recovery in H2 has also led to no extra provisions for bad debt, with only GBP17m bad debts aged more than a year. UU updated on its stake sale in Tallinn for EUR100m. The deal is pending regulatory clearance and realisation will move to next year.

Technology-driven GBP20m ODI outperformance

UU reiterated its ODI guidance of GBP20m announced during the capital markets day in early March

United Utilities reiterated its ODI guidance of GBP20m announced during the capital markets day in early March. The rewards are a result of accelerated investments in technology, automation and machine intelligence developed over the last five years. Moreover, UU recorded the lowest ever level of leakage and interruptions to water supply, which more than halved in the last 12 months.

Green Economic Recovery spend

UU has proposed to DEFRA and Ofwat a total of a further GBP135m investment in AMP7 (2020-2025) pending regulatory approval as part of the Green Economic Recovery. Of this GBP135m, GBP119m is enhancement expenditure, which UU is proposing to bring forward from future AMP8 plans into AMP7. The proposal also includes delaying the recovery through customer bills until 2025-2030.

Panorama investigation highlights a continuing weakness in UU's infrastructure

Although the BBC Panorama broadcast on 13 April highlighting UK water companies have been illegally dumping untreated sewage into rivers is arguably investigative journalism of an emotive nature, United Utilities remains a significant outlier. Whether this is from the nature of its Lake District geography or insufficient funding provided in price reviews, it still detracts from its reputation as an environmental company. Unlike Pennon, which has made very public statements about the focus from top management on reducing pollution incidents, UU has said little about this publicly.

Valuation and risks

We value United Utilities shares using three valuation approaches: DCF, dividend yield and sum of the parts. We assign a 50% weight to yield and 25% each to DCF and SOTP, rounded, to arrive at our lower target price of 910p from 960p.

- In our DCF valuation, we revise our RfR to reflect the new HSBC Fixed Income team view of 10-year gilt rates to 50bp from 33bp previously. To this we add a 150bp premium. This increases our RfR to 20% from 1.83% previously. We change our five-year Bloomberg observed beta to 0.73 from 0.75 because of share price movements since our last update in December 2020. We update our DCF estimates to reflect the phasing of capex that UU has brought forward in order to drive more ODI rewards. We increase our terminal value by 10bp to 1.10% because of the additional Green Recovery investment. This together reduces our DCF value to 939p from 1,064p.

- In our yield valuation we have updated our yield assumption to 4.25% from 4.58% based on higher RfR the premium of 2.25% remains unchanged. This reduces our valuation to 971p from 1,098p.
- In our SOP valuation, we assume that UU is able to earn a 4% return on the Green Recovery investment (the same proportion we calculate for our value creation relative to its RCV) which we add to our value creation assumption. This leads to an increase in our SOP valuation to 770p from 751p.

Overall, we reduce our target price to 910p from 960p, implying 6.0% downside from the current share price. We downgrade to Reduce from a Hold rating. We believe as a bond proxy with the most limited scope for Green Recovery of its peers, it is most at risk from rate increases.

Summary of valuation

	New	Previous
Current price on 22-Apr-21	**968**	**NA**
DCF (updated estimates)	939	1,064
Yield 4.25% (vs 4.58%)	971	1,098
SoP (updated estimates)	770	751
Target price (average rounded)	**910**	**950**
Implied downside to target price	-6.0%	NA
Rating	**Reduce**	**Hold**

Upside risks

(1) UU may reduce its bad debt provision potentially because better debt management at the end of the furlough scheme having not increased it at the H1; (2) UU delivers operational savings, decreasing its total expenditure (totex) over the five-year period relative to its regulatory allowances and increasing its ODI net rewards; and (3) in the medium term the HARP project is considered not to be achievable on a competitively tendered basis at a lower cost and risk to customers and the investment is then added back to UU's RCV, delivering accelerated growth from 2025 onwards.

Important disclosures

Equities: Stock ratings and basis for financial analysis

HSBC and its affiliates, including the issuer of this report ("HSBC") believes an investor's decision to buy or sell a stock should depend on individual circumstances such as the investor's existing holdings, risk tolerance and other considerations and that investors utilise various disciplines and investment horizons when making investment decisions. Ratings should not be used or relied on in isolation as investment advice. Different securities firms use a variety of ratings terms as well as different rating systems to describe their recommendations and therefore investors should carefully read the definitions of the ratings used in each research report. Further, investors should carefully read the entire research report and not infer its contents from the rating because research reports contain more complete information concerning the analysts' views and the basis for the rating.

From 23rd March 2015 HSBC has assigned ratings on the following basis:

The target price is based on the analyst's assessment of the stock's actual current value, although we expect it to take six to 12 months for the market price to reflect this. When the target price is more than 20% above the current share price, the stock will be classified as a Buy; when it is between 5% and 20% above the current share price, the stock may be classified as a Buy or a Hold; when it is between 5% below and 5% above the current share price, the stock will be classified as a Hold; when it is between 5% and 20% below the current share price, the stock may be classified as a Hold or a Reduce; and when it is more than 20% below the current share price, the stock will be classified as a Reduce.

Our ratings are re-calibrated against these bands at the time of any 'material change' (initiation or resumption of coverage, change in target price or estimates).

Upside/Downside is the percentage difference between the target price and the share price.

Prior to this date, HSBC's rating structure was applied on the following basis:

For each stock we set a required rate of return calculated from the cost of equity for that stock's domestic or, as appropriate, regional market established by our strategy team. The target price for a stock represented the value the analyst expected the stock to reach over our performance horizon. The performance horizon was 12 months. For a stock to be classified as Overweight, the potential return, which equals the percentage difference between the current share price and the target price, including the forecast dividend yield when indicated, had to exceed the required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). For a stock to be classified as Underweight, the stock was expected to underperform its required return by at least 5 percentage points over the succeeding 12 months (or 10 percentage points for a stock classified as Volatile*). Stocks between these bands were classified as Neutral.

*A stock was classified as volatile if its historical volatility had exceeded 40%, if the stock had been listed for less than 12 months (unless it was in an industry or sector where volatility is low) or if the analyst expected significant volatility. However, stocks which we did not consider volatile may in fact also have behaved in such a way. Historical volatility was defined as the past month's average of the daily 365-day moving average volatilities. In order to avoid misleadingly frequent changes in rating, however, volatility had to move 2.5 percentage points past the 40% benchmark in either direction for a stock's status to change.

Rating distribution for long-term investment opportunities

As of 23 April 2021, the distribution of all independent ratings published by HSBC is as follows:

Buy	58%	(29% of these provided with Investment Banking Services)
Hold	34%	(28% of these provided with Investment Banking Services)
Sell	8%	(25% of these provided with Investment Banking Services)

For the purposes of the distribution above the following mapping structure is used during the transition from the previous to current rating models: under our previous model, Overweight = Buy, Neutral = Hold and Underweight = Sell; under our current model Buy = Buy, Hold = Hold and Reduce = Sell. For rating definitions under both models, please see "Stock ratings and basis for financial analysis" above.

For the distribution of non-independent ratings published by HSBC, please see the disclosure page available at http://www.hsbcnet.com/gbm/financial-regulation/investment-recommendations-disclosures.
