Re: **SERVICE LINE LEAK**

Dear Customer:

Our service person was at the above property on _____ and found that your service line is leaking. The repair of the leak is your responsibility.

At this time the leak did not appear to be doing any damage; therefore, we left the service on. If the leak increases in volume however and starts to do damage to property or endangers the safety of any person, it will be necessary for us to shut off the service without further notice.

It is important that a leak such as this is repaired as soon as possible. Please refer to the enclosed leak brochure for procedures necessary to correct the problem. Please call our office within 10 days of receipt of this letter to let us know the status of the repairs.

Leaks on copper services between the curb stop and the meter can generally be repaired with approved flared fittings. However, aging copper with deteriorating pinholes or inferior copper shall be replaced. If your water service is made of galvanized iron, lead, PE (polyethylene), or PVC (polyvinyl chloride), you must replace the entire water service pipe with K copper tubing. A representative from The York Water Company **must** inspect all repairs before service is restored.

If we do not hear from you, we will shut off the service. Please read the enclosed notice showing the scheduled shut-off date and explaining your rights. You can avoid having your water shut off by calling Kelly Messersmith at 717-845-3601, ext. 2190, and letting us know if the repairs have been made or if the plumber has been hired to do so.

Sincerely,

Timothy Young
Distribution Superintendent

WATER COSTS MONEY...

DON'T WASTE IT!

**A dripping faucet or fixture
can waste 3 gallons a day...
a total of 1095 gallons a year.**

**Conserve Water
and Save Money!**

A reminder from The York Water Company where
we're dedicated to quality and service.

Waste per quarter at 60 psi water pressure

Diameter of stream	Gallons	Cubic feet	Cubic meters
 1/4"	1,181,500	158,000	4,475
 3/16"	668,000	89,031	2,521
 1/8"	296,000	39,400	1,115
 1/16"	74,000	9,850	280

A continuous leak from a hole this size would, over a three month period, waste water in the amounts shown above.

York Water Exhibit 4

**Underground
Water Service
Leaks & Repairs**

**The York
Water Company**

Date: _____

DEAR CUSTOMER:

In response to a recent visit to your property to investigate a possible leak, a York Water representative found no leaks on the company's water mains or on the portion of the Company's water service, which is in the street, from the main to the curb line.

Our representative, however, did find an underground leak on your service line, (the line from the curb to building) at _____

which is your responsibility to repair.

It is the property owner's responsibility to contact a plumber of their choice and have arrangements made for the repairs within 10 days. The leak was found and verified using one or more specialized listening devices by our trained personnel.

1. When hiring a plumber to repair an underground leak, we recommend you obtain more than one estimate; prices vary. A plumber should independently confirm any leak information provided by a York Water representative.

2. Leaks in copper service lines can generally be repaired with clamps or by tightening leaking fittings. Galvanized iron pipe has a useful life of about 30 or 40 years. If your water service is made from aging galvanized iron, or lead pipe, you must replace the entire water service pipe. Once galvanized pipes begin to leak, more leaks

are sure to follow. Disturbed lead pipes can leach harmful lead into the water and therefore must be replaced.

3. The plumber you hire may shut-off your water at the curb valve to make repairs. All other operation of the curb valve must be done by a York Water representative.

4. Any water meter related problems associated with service line repairs, such as re-setting, re-sealing, or re-wiring the meter, must be reported to the Company at once, and will be handled at no charge to the customer.

5. If the leak is creating a public hazard, (damaging other properties) or is not scheduled for repairs within 10 days, The York Water Company may have no alternative but to shut-off the water service until repairs are made.

6. The property owner is responsible for any damage to other properties or public space (sidewalks, roads, etc.) caused by the "on-property" leak.

Page 2 of 2

York Water Exhibit 4

7. If your water meter is located outside in a "pit", the water that leaked from your underground pipe will have registered on your meter, and will be reflected as increased usage on your water bill over the next two months, depending on the meter reading cycle.

8. York Water representatives are available to assist plumbers with line location, temporary disconnects, service box clean out, etc. with prior notice.
