(f) Reason for the interruption or outages:

The interruptions were caused by a winter storm system that brought approximately 6 hours of heavy winds followed by breezy conditions that slowly diminished over the proceeding 24-hour time period. This system affected all regions of PPL Electric’s service territory. The system produced sustained winds in the 25 to 35 MPH range with isolated peak gusts in excess of 45 MPH.

(g) Projected time of restoration:

Restoration was projected to be completed by 0300 on January 19, 2022.

(h) The number of utility workers, contract workers and workers received as mutual aid assigned specifically to the repair work by general function, that is linemen, troublemen, tree crew and the like:

- (i) The date and time of the first information of service interruption:

The initial service interruption occurred at approximately 2100 on January 16, 2022.

- (j) The date and time that repair crews were assembled:

Crews were assembled on January 16, 2022, prior to the start of the event.

- (k) The actual time that service was restored to the last affected customer:

The final customer was restored at 2245 on January 18, 2022.

- (l) A general description of the physical damage sustained by the utility facilities as a result of the interruption/outage:

The damage to PPL Electric facilities included trees or limbs on conductor, downed wires, and broken equipment.

Materials used to complete restoration included:

- Wire and Cable – 7,504 feet
- Arrestors – 18
- Cross arms – 42
- Wood Poles – 12
- Transformers – 24
- Cutouts – 37

- (m) If the interruption / outage event was weather-related, the utility's weather reports, outlooks, or scenarios for the day before and the day of the interruption / outage event:

As of January 15, PPL Electric's weather outlook for January 16-17 called for a major winter storm system to move through the territory starting in the late evening on January 16 (approximately 1800) and exiting the service territory completely by the afternoon of January 17 (approximately 1600). The system was forecasted to produce sustained wind gusts in the 25 to 35 MPH range with peak gusts of 45 MPH. Additionally, periods of heavy snow (3-6 inches) were expected during the onset of the storm. The snow would then transition into sleet/rain in the early morning of January 17.

As of January 16, PPL Electric’s weather outlook for January 16-17 was much the same as the prior day, with the expected start time of the breeziest conditions shifted forward from 2300 to 2100 on January 16. The actual weather unfolded generally as predicted, affecting all of PPL Electric’s territories.

- (n) If the interruption / outage event caused approximate outages that exceed 10% or more of customers in the utility’s entire service territory, rank the event in terms of the number and duration of outages and provide 2 comparable events, including the number and duration of outages for those comparable events:

This event did not impact more than 10% of PPL Electric customers.
