COMMENT DETAILS

Comments	Operator Name	Operator Certification Number	Operator Contact Number
The RAW Influent CBOD and BOD and FINAL Effluent CBOD analyses for July 14, 19, 20, 21, 26, 27, the FINAL Effluent Fecal coliform analyses for July 1, 19, 20, 21, 26, 27, 28, the TDS, Total Nitrogen, and Total Phosphorus analyses for July 1, 10, 17, 25, 31 and the Total Copper analysis for July 10 were performed by ALS Environmental, PA Lab ID 22-293. On July 1, the VFSA lab and ALS both performed fecal coliform analyses - the results reported are the average of the two sample results (VFSA 7-1 result = 13, ALS 7-1 result = 33). Due to metering and computer problems, final effluent flows for July 19-21 were estimated while there is no data for UVT for July 20, 21, 27 and 28. Also, the raw influent TSS, BOD and CBOD data for July 1, 2, 3, 5, 7, 12, 16, 20, 23 and 26 were deemed non-representative and were not included in the monthly calculations.	Martin F. Goldberg	194283	(610)-935-1553

COMMENT DETAILS

Comments	Operator Name	Operator Certification Number	Operator Contact Number
The RAW Influent CBOD and BOD and FINAL Effluent CBOD analyses for September 9, 13, 14, 15, 20, 21, 22, 27, 28, the FINAL Effluent Fecal coliform analyses for September 13, 14, 15, 20, 21, 22, 27, 28, 29, the TDS, Total Nitrogen, and Total Phosphorus analyses for September 4, 11, 18, 25, and the Total Copper analysis for September 5 were performed by ALS Environmental, PA Lab ID 22-293. Also, the raw influent TSS, BOD and CBOD data for September 3, 4, 5, 8, 12, 13, 23, 24, 25, 29, and 30 were deemed non-representative and were not included in the monthly calculations. Due to computer and metering issues, there was no value reported for UVT on September 14 and 15.	Martin F. Goldberg	194283	(610)-935-1553

102776	Sample collection less frequent than required					Due to a miscommunication with ALS labs, the weekly samples for Total Dissolved Solids, Total Phosphorus and Total Nitrogen were not collected for the week of November 17-23. An additional weekly sample for each parameter was collected for analysis during the week of December 15-21, 2019, in lieu of the missed November sample.

COMMENT DETAILS

Comments	Operator Name	Operator Certification Number	Operator Contact Number
The RAW Influent CBOD and BOD and FINAL Effluent CBOD analyses for November 10, 15, 16, 17, 22, 23, the FINAL Effluent Fecal coliform analyses for November 15, 16, 17, 22, 23, 24, the TDS, Total Nitrogen, and Total Phosphorus analyses for November 6, 13, 20, 26, the Total Copper analyses for November 6, 19, the Raw Influent and Final Effluent priority pollutant analyses were performed by ALS Environmental, PA Lab ID 22-293. The Whole Effluent Toxicity Testing analyses performed the week of Nov 18-Nov 22 were subcontracted to Environmental Resource Management, Inc , PADEP lab ID 68-04227, by ALS Environmental, PA Lab ID 22-293. Also, the raw influent TSS, BOD and CBOD data for November 10, 16-20, 22, 24-26 and 28-29 were deemed non-representative and were not included in the monthly calculations. Also, due to a miscommunication with ALS labs, the weekly samples for Total Dissolved Solids, Total Phosphorus and Total Nitrogen were not collected for the week of November 17-23. An additional weekly sample for each parameter was collected for analysis during the week of December 15-21, 2019, in lieu of the missed November sample.	Martin F. Goldberg	194283	(610)-935-1553

PLEASE NOTE: On Jan 27, 2020, I was informed by Synagro, VFSA's biosolids hauler/applier, that the data required to complete the VFSA December 2019 Sewage Sludge/Biosolids Production and Disposal supplemental report will not be available by the due date of January 28, 2020. I will submit the VFSA December 2019 Sewage Sludge/Biosolids Production and Disposal supplemental report as soon as possible after receiving the data. The RAW Influent CBOD and BOD and FINAL Effluent CBOD analyses for December 8, 13, 14, 15, 20, 21, 22, 27, 28, the FINAL Effluent Fecal coliform analyses for December 13, 14, 15, 16, 20, 21, 22, 27, 28, 29, the TDS, Total Nitrogen, and Total Phosphorus analyses for December 4, 11, 16, 18, 25, the Total Copper analysis for December 4 were performed by ALS Environmental, PA Lab ID 22-293. Also, the raw influent TSS, BOD and CBOD data for December 1 - 4, 8, 14, 20-21, and 26 were deemed non-representative and were not included in the monthly calculations. Also, due to computer/metering issues there was no minimum UVT value reported for Dec 26, 2019. Finally, as previously noted in the Nov 2019 report, an additional weekly sample for TDS, Total Phosphorus and Total Nitrogen was collected for analysis during the week of December 15-21, 2019, in lieu of the missed November weekly sample.	Martin F. Goldberg	194283	(610)-935-1553

COMMENT DETAILS

Comments	Operator Name	Operator Certification Number	Operator Contact Number
The RAW Influent CBOD and BOD and FINAL Effluent CBOD analyses for January 12, 17, 18, 19, 24, 25, the FINAL Effluent Fecal coliform analyses for January 17, 18, 19, 24, 25, 26, the TDS, Total Nitrogen, Total Phosphorus analyses for January 1, 8, 15, 22, 29 and the Total Copper analysis for January 9 were performed by ALS Environmental, PA Lab ID 22-293. Also, the raw influent TSS, BOD and CBOD data for January 7 - 12, 15, 20 and 21 were deemed non-representative and were not included in the monthly calculations. PLEASE NOTE: On Jan 25, 2020, an SSO occurred adjacent to the VFSA Pothouse pump station. Per the requirements of VFSA's NPDES permit, PADEP and three downstream water plants were notified. I have attached a copy of the Non-Compliance Reporting Form and accompanying information, previously submitted to PADEP, to the January 2020 eDMR.	Martin F. Goldberg	194283	(610)-935-1553

COMMENT DETAILS

Comments	Operator Name	Operator Certification Number	Operator Contact Number
The RAW Influent CBOD and BOD and FINAL Effluent CBOD analyses for April 12, 17, 18, 19, 24, 25, the FINAL Effluent Fecal coliform analyses for April 17, 18, 19, 24, 25, 26, the FINAL Effluent TDS, Total Nitrogen, Total Phosphorus analyses for April 1, 8, 15, 22, 29 and the FINAL Effluent Total Copper analysis for April 8 were performed by ALS Environmental, PA Lab ID 22-293. Raw Influent BOD, CBOD and TSS samples for April 2, 3, and 17 were determined to be non-representative and were not included in the monthly data. Per the "90% Rule", the fecal coliform analysis result of 1,733 for April 14, 2020, is not being reported as the Instantaneous Maximum (Concentration 3) value, instead, the next highest daily result of 37 has been reported.	Martin F. Goldberg	194283	(610)-935-1553

COMMENT DETAILS

Comments	Operator Name	Operator Certification Number	Operator Contact Number
The RAW Influent CBOD and BOD and FINAL Effluent CBOD analyses for May 10, 15, 16, 17, 22, 23, 25, 29, 30, the FINAL Effluent Fecal coliform analyses for May 15, 16, 17, 22, 23, 24, 29, 30, 31, the FINAL Effluent TDS, Total Nitrogen, Total Phosphorus analyses for May 6, 13, 20, 27 and the FINAL Effluent Total Copper analysis for May 6 were performed by ALS Environmental, PA Lab ID 22-293. Also, due to a miscommunication between VFSA and ALS Labs, the Raw Influent CBOD/BOD and Final Effluent CBOD sample analyses for May 25 and May 29 were started after the holding time had expired. Note, as previously reported to PADEP by voice message and email, a violation of the Instantaneous Maximum fecal coliform limit occurred on June 4, 2020. Although this Non-Compliance occurred in June 2020, the Non-Compliance Reporting Form has been included with the May eDMR reports.	Martin F. Goldberg	194283	(610)-935-1553

OTHER PERMIT VIOLATIONS

Non-Compliance ID	Non-Compliance Type	Sampling Point	Parameter	Reported Value	Permit Limit	Comments
116794	Sample collection less frequent than required					There was no final effluent pH value reported for June 4, 2020. This was due to the ongoing effects of the power outage of June 3, 2020 - June 4, 2020 which occurred as a result of extreme local weather conditions on June 3, 2020. Please see the Non-compliance report previously submitted to PADEP.

COMMENT DETAILS

Comments	Operator Name	Operator Certification Number	Operator Contact Number
The RAW Influent CBOD and BOD and FINAL Effluent CBOD analyses for June 14, 19, 20, 21, 26, 27, the FINAL Effluent Fecal coliform analyses for June 19, 20, 21, 26, 27, 28, the FINAL Effluent TDS, Total Nitrogen, Total Phosphorus analyses for June 3, 10, 17, 24, and the FINAL Effluent Total Copper analysis for June 10 were performed by ALS Environmental, PA Lab ID 22-293. Also, the raw influent TSS, BOD and CBOD data for June 19 was deemed non-representative and was not included in the monthly calculations. Note, as previously reported to PADEP, a non-compliance of the Instantaneous Maximum fecal coliform limit and the final effluent pH sample (no sample result reported) occurred on June 4, 2020. Both of these non-compliances are attributed to the effects of the total plant power outage which occurred on June 3, 2020, due to extreme local weather conditions.	Martin F. Goldberg	194283	(610)-935-1553

COMMENT DETAILS

Comments	Operator Name	Operator Certification Number	Operator Contact Number
The RAW Influent CBOD and BOD and FINAL Effluent CBOD analyses for August 14, 15, 16, 21, 22, 23, 28, 29, the FINAL Effluent Fecal coliform analyses for August 14, 15, 16, 21, 22, 23, 28, 29, 30, the FINAL Effluent TDS, Total Nitrogen, Total Phosphorus analyses for August 5, 12, 19, 26, and the FINAL Effluent Total Copper analysis for August 12 were performed by ALS Environmental, PA Lab ID 22-293. Also, the raw influent TSS, BOD and CBOD data for August 1, 2 and 28 was deemed non-representative and was not included in the monthly calculations. PLEASE NOTE: As previously reported to PADEP, a non-compliance of the Instantaneous Maximum fecal coliform limit occurred on August 5, 2020. This non-compliance event is attributed to the effects of the total plant power outage which occurred on August 4-5, 2020, due to extreme weather conditions. Also, on August 4-5, 2020, two SSOs occurred, one adjacent to the VFSA Pothouse pump station (August 4 only) and one on the lane adjacent to the VFSA Admin building (August 4-5). Per the requirements of VFSA's NPDES permit, PADEP and downstream water plants were notified. A copy of the Non-Compliance Reporting Form and accompanying information was previously submitted to PADEP and DRBC.	Martin F. Goldberg	194283	(610)-935-1553

125323	Sample collection less frequent than required					As previously reported to PADEP, a non-compliance for sample frequency of final effluent fecal coliform sampling occurred on October 30, 2020 when the commercial laboratory performing the analysis for that day failed to collect the sample at the treatment plant. The commercial laboratory has provided a detailed letter of explanation of the event which is being included with this eDMR report.

COMMENT DETAILS

Comments	Operator Name	Operator Certification Number	Operator Contact Number
The RAW Influent CBOD and BOD and FINAL Effluent CBOD analyses for October 11, 16, 17, 18, 23, 24, 25, 30, the FINAL Effluent Fecal coliform analyses for October 16, 17, 18, 23, 24, 25, 31, the FINAL Effluent TDS, Total Nitrogen, Total Phosphorus analyses for October 1, 7, 14, 21, 28, and the FINAL Effluent Total Copper analysis for October 21 were performed by ALS Environmental, PA Lab ID 22-293. PLEASE NOTE: As previously reported to PADEP, a non-compliance for sample frequency of final effluent fecal coliform sampling occurred on October 30, 2020 when the commercial laboratory performing the analysis for that day failed to collect the sample at the treatment plant. The commercial laboratory has provided a detailed letter of explanation of the event which is being included with this eDMR report. Also, the Raw Influent CBOD/BOD and Final effluent CBOD samples and the October 25 Final effluent Fecal coliform samples were analyzed out of holding time due to a miscommunication within the commercial laboratory performing the analyses on that day. Although these samples were picked up by the commercial laboratory correctly, they were not transported to their laboratory in time to begin the analyses within the holding times. The October 24, 2020, Raw Influent CBOD/BOD and Final effluent CBOD and fecal coliform results have been qualified to note the holding time issue. Finally, the October 25, 2020, Raw Influent CBOD/BOD results have been deemed non-representative and have been excluded from the monthly report.	Martin F. Goldberg	194283	(610)-935-1553

COMMENT DETAILS

Comments	Operator Name	Operator Certification Number	Operator Contact Number
The RAW Influent CBOD and BOD and FINAL Effluent CBOD analyses for November 1, 6, 7, 15, 20, 21, 22, 27, 28, 29, the FINAL Effluent Fecal coliform analyses for November 6, 7, 8, 20, 21, 22, 27, 28, 29, the FINAL Effluent TDS, Total Nitrogen, Total Phosphorus analyses for November 4, 11, 18, 24, the FINAL Effluent Total Copper analysis for November 8 and the 2020 Final Effluent Priority Pollutant analyses (November 9 -10) were performed by ALS Environmental, PA Lab ID 22-293. The Whole Effluent Toxicity Testing analyses performed the week of November 10 -17 were subcontracted to Environmental Resource management, Inc , PADEP Lab ID 68-04227, by ALS Environmental, PA Lab ID 22-293. Please note, the Raw Influent CBOD/BOD and TSS results for 11-30-20 have been deemed non-representative and have been excluded from the monthly report. Finally, at the time of submission of this report on 12-23-20, I did not have the data from VFSA's biosolids hauler/applier to complete the VFSA November 2020 Sewage Sludge/Biosolids Production and Disposal supplemental report. I will complete and submit this report as soon as possible upon receiving the data. Enclosed with this revision is the VFSA Nov 2020 Sewage Sludge/Biosolids Production and Disposal form.	Martin F. Goldberg	194283	(610)-935-1553

PERMIT VIOLATIONS

Non-Compliance ID	Event Start Date	Event End Date	Parameter	Limit Type	Reported Value	Permit Limit	Unit	Sampling Point	Cause Of Non-Compliance	Corrective Action	Comments
40651	02/01/2017	02/28/2017	Ammonia-Nitrogen	Average Monthly	9.54	7	mg/L	Final Effluent (001)	Equipment malfunction/failure	Increased blower run time	The SBR blower run times were less than required. Replaced dissolved oxygen probes, decreased MLSS wasting rates, and adjusted SBR controls to increase the blower operating hours
40652	02/01/2017	02/28/2017	Total Suspended Solids	Average Monthly	12	10	mg/L	Final Effluent (001)	Equipment malfunction/failure	Increased blower run time	The SBR was experiencing filled decants, coupled with decreased nitrification rates resulted in poor settling sludge resulting in solids carryover to the past EQ basins. The TSS loading from the EQ basins into the disc filters produced high levels resulting in unfiltered effluent flowing directly to the UV channel.
40653	02/01/2017	02/28/2017	Total Suspended Solids	Weekly Average	22	15	mg/L	Final Effluent (001)	Equipment malfunction/failure	Increased blower run time	The SBR was experiencing filled decants, coupled with decreased nitrification rates resulted in poor settling sludge resulting in solids carryover to the past EQ basins. The TSS loading from the EQ basins into the disc filters produced high levels resulting in unfiltered effluent flowing directly to the UV channel.

PERMIT VIOLATIONS

Non-Compliance ID	Event Start Date	Event End Date	Parameter	Limit Type	Reported Value	Permit Limit	Unit	Sampling Point	Cause Of Non-Compliance	Corrective Action	Comments
100023	09/01/2019	09/30/2019	Total Phosphorus	Average Monthly	.54	.5	mg/L	Final Effluent (001)	Equipment malfunction/failure	Equipment repaired	In review of the data, troubleshooting measures and corrective actions, SBR 2 final effluent decant was not fully closing. As a result, solids loss during influent fill and react cycles into the post final effluent EQ tank contributed for the excessive total phosphorus loading into the disc filters and final effluent. The problem has been corrected and compliance will be achieved during October. A detailed report will be provided.

DEP LETTER RE RELEASE FROM CORRECTIVE ACTION PLAN

Bill

pennsylvania
DEPARTMENT OF ENVIRONMENTAL
PROTECTION

September 1, 2015

Mr. John Nagel, Manager
East Whiteland Township
209 Conestoga Road
Frazer, PA 19355-1699

Re: Municipal Wasteload Management Program
Corrective Action Plan (CAP) & Connection Management Plan (CMP)
for Mill Lane and Sidley Road Gravity Sewer Collection and
Conveyance Systems
East Whiteland Township
Chester County

Dear Mr. Nagel:

On October 9, 2014, the Department of Environmental Protection (DEP) received a request from Mr. Kevin McAghon, P.E. of ARRO Consulting, Inc., East Whiteland Township's engineer, that East Whiteland Township's (Township) Connection Management Plan (CMP) for the Mill Lane and Sidley Road Gravity Sewer Collection and Conveyance Systems be modified.

Mr. McAghon has documented that Phases 1 and 2 of the Township's Corrective Action Plan (CAP) have been completed. Phases 1 and 2 involved the replacement and upgrade of the existing sewers in Mill Lane and Sidley Road with larger diameter pipe.

The replacement of these sewers mitigated the broken sewer interceptor along Mill Lane under Route 202 and eliminated the hydraulic restriction that existed within these sewer lines. The sewer upgrades within Mill Lane and Sidley Road have provided the Township's conveyance system with adequate capacity to meet its current and 5-year projected needs.

A review of the Township's portion of the Year 2014 Chapter 94 Report submitted for the Valley Forge Sewer Authority Treatment Plant received by DEP on April 10, 2015, also documents the elimination of the hydraulic restriction that existed within sewers along Mill Lane and Sidley Road with the completion of Phases 1 and 2 of the Township's CAP. Therefore, at this time, the Mill Lane and Sidley Road Gravity Sewer Collection and Conveyance Systems are no longer under any Chapter 94 restrictions. Please be advised that exemptions from Act 537 sewage facilities planning can now be processed for eligible projects proposed in areas tributary to this area of the Township's collection and conveyance system.

Southeast Regional Office
2 East Main Street | Norristown, PA 19401-4915 | 484.250.5970 | Fax 484.250.5971 | www.depweb.state.pa.us

Please note that while the Township's CAP is considered terminated, the Township continues to be obligated to implement their East Whiteland Township/Charlestown Township (Southside) Act 537 Special Study, approved by DEP on September 17, 2013. We note that the Township has committed to complete Phase 3 in accordance with the implementation schedule included in their Act 537 Special Study, as described in both the CAP and the approved Act 537 Special Study, to include an expansion of the Lee Boulevard Pump Station (LBPS) and associated force main.

Please note that while a CMP is no longer required to be submitted to DEP, we encourage the Township to continue to internally manage and keep track of connections into their sewerage system including those connections from Charlestown Township's Southside service area.

If you have any questions, please contact Ms. Kelly Boettlin at 484.250.5184.

Sincerely,

Steve O'Neil

ACT 537 PLAN SUMMARY

Extending existing centralized sewer collection lines is considered to be appropriate for most of the Township, principally because of its accessibility and configuration of the sewage service areas as well as the possibility of degrading local streams is eliminated. Although central sewers export water from the service areas, however, an overriding issue is the fact that 72% of the Township is comprised of soils unsuitable for on-lot sewage disposal.

Public sewage collection and disposal facilities will be extended, as the need is determined, to all new development situated in Study Areas 1, 2, 3, 4, 5 and 6, as indicated on Figure 12, the Sewage Facilities Plan. Study Areas 1, 2 and 3 are to be served by public sewage collection facilities within five years. Study Area 4 is proposed to be served by 2001, while Study Area 5 is to be served by 2006. Study Areas 6 and 7 are envisioned to be served beyond 2006, although Study Area 7 could be served sooner with some alternate disposal method. Study Area 7A has also been considered by neighboring East Goshen Township for inclusion within its sewer system due to its location within the Ridley Creek Watershed. Study 7B is proposed to utilize a new treatment facility with stream discharge which must meet the recent "exceptional value" waters reclassification of the Valley Creek. Portions of Study Area 7B comprising of tracts zoned R-4 and R-1 are also being considered by neighboring West Whiteland Township for inclusion within its sewage treatment facility with disposal of effluent by spray irrigation on the property to be acquired from Church Farm School.

The major issue regarding future sewage capacity is that while the Valley Forge Sewage Treatment Plant could be expanded and the Township receive its 9.5 mgd, the sewage could not be transported to the plant based upon the existing flow capacity of the Wilson Road Pump Station in adjacent Tredyffrin Township. The Township current average daily flow capacity of the Wilson Road Pump Station is 2.3 mgd. Until the Wilson Road Pump Station is upgraded to accommodate a potential sewage plant expansion, the Township's policy to serve the Study Areas indicated in this Plan. If, and when, capacity becomes available, the small private plants that currently exist in East Whiteland will be connected to the Township's system.

I. INTRODUCTION

A. Purpose of the Official Plan

This Official Plan for sewerage systems in East Whiteland Township represents a comprehensive study of existing sewerage services and expected wastewater disposal needs. The requirement for such a study is set forth in Section 5 of the Pennsylvania Sewage Facilities Act, P.L. 1535, No. 537, as amended. (Refer to Appendix A) Regarding Official Plans, it is stated that: "Each municipality shall submit to the Department an officially adopted plan for sewage services for areas within its jurisdiction...". The need for an Official Plan is aptly expressed in the provisions for the "Administration of Sewage Facilities Program" contained in Chapter 71 of the Pennsylvania Code, Title 25. (Refer to Appendix B) In subsection 71.3, Purposes, it is stated that: "Official plans shall of necessity clearly demonstrate the municipality's approach to alleviate existing mass sewage problems, shall identify the present sewerage services now available and shall further indicate what will be done to provide the services needed in the future to cope with new development." Further, the Plan has a major aim of integrating new sewage facilities into the community in ways that will not disrupt or debase other important facilities and amenities such as recreational or important natural areas. This includes preventing the interbasin transfer of water when the watershed of origin can be clearly determined.

B. Sewage Construction to Date in the Township

Construction of the East Whiteland Municipal Authority system was begun in 1975. The initial sewer system consisted of a 27 inch trunk line along Matthews Road and a collection system serving the Down East, General Warren Village, Chester Valley Knoll as well as a portion of the Whiteland Farms sections of the Township. The initial system also provided service for the commercial developments along Route 30 as far as the One Park Place apartments west of Malin Road. These lines served predominately the eastern portion of the Township between the Amtrak railroad line and Route 202. Included was the previously installed, capped system along Oak Hill Circle south of the Amtrak line.

The initial system also included the construction of the Mill Lane Pump Station which replaced a private treatment system at the same location. The private treatment system had served the central portion of the Township north of Route 202 in the vicinity of Lee Boulevard and Sidley Road and a part of the Great Valley Corporate Center West development. The Mill Lane Pump Station enabled the elimination of an obsolete treatment plant and the connection of a previously installed, capped system along Knollbrook Circle and Mill Creek Lane.

Once the initial system became operational in 1977, development of the Great Valley Corporate Center East initiated the extension of sewers to serve the eastern portion of the Township north of Route 202. Sewer extension to this portion of the Township allowed connection to the remainder of the Great Valley Corporate Center West shortly thereafter.

Construction of the Bryn Erin development in the late 1970's predicated the extension of sanitary sewers along Route 401 west of Mill Lane and Route 202.

The Meadowview Pump Station on Swedesford Road was constructed in the early 1980's and allowed the connection of the remainder of the capped sewer system in the Whiteland Farms section of the Township as well as a remaining portion of the One Park Place apartment complex.

Development of the Pickford Road subdivision in 1984 and the Oak Hill Subdivision in 1986 brought sewer service to the remaining portion of the Sidley Road/Mill Lane area and to the western Lapp Road area. The previously installed capped sewers in Forge Drive and Dale Lane were connected to the system in 1987.

In 1988, construction of the Route 30 sewer extension was begun. The initial portion included sanitary collection lines along each side of Route 30 from the previous terminus at One Park Place Drive west to Church Road. In 1989, the remaining portion of Route 30 from Church Road to Route 202 was constructed. During this period, the extension of the Oak Hill Circle line was constructed to serve the Amy Lane Development in the south-central portion of the Township.

C. Content of the Official Plan Report

The content of this Official Plan Report provides a description of the following: the institutional framework for the planning of sewage disposal systems; a profile of the Township's physical and demographic conditions and existing and proposed land development; the characteristics of existing sewerage services and conditions; the proposed sewerage services and conditions which relate to all of the above; and an evaluation of the Official Plan's proposals. These components are explained in accordance with the requirements of the Sewage Facilities Act and Subsection 71.14, Contents of Plans, of the provisions for "Administration of Sewage Facilities Program," both of which are contained in Appendix A.

II. BACKGROUND

A. Official Act 537 Plan Context

1. Requirements of the Pennsylvania Sewage Facilities Act

Act 537 sets forth certain plan requirements and planning directives to guide in the preparation of Official Plans. (The complete text of the Act, in particular 25 PA Code, Chapter 71, is contained in Appendix A.) According to Section 5.(d)(1) of the Act, "Every official plan shall: delineate areas in which community sewage systems are now in existence, areas experiencing problems with sewage disposal including a description of said problems, areas where community sewerage systems are planned to be available within a 10 year period, areas where community sewerage systems are not planned to be available within a 10 year period, and all subdivisions existing or approved."

The Act also requires that Official Plans: "provide for the orderly extension of interceptor sewers (1); provide for adequate sewage treatment facilities (2); consider all aspects of planning, zoning, population estimates, engineering and economics (3); consider any existing State plan affecting water and other natural resources (4); establish procedures for delineating and acquiring rights-of-way or easements for community sewage systems (5); set forth a time schedule of methods for financing the construction and operation of the planned community sewage systems (6); be reviewed by appropriate official planning agencies (7); and, designate municipal responsibility for implementation of the plan (8)."

These requirements are not entirely applicable to East Whiteland Township. The following numbers (1) thru (8) correspond to the preceding paragraph:

(1) Eight inch mains throughout the sewered areas feed into the 27 inch interceptor along Matthews Road and then to Tredyffrin Township for conveyance.

(2) The East Whiteland Municipal Authority operates a collection system only. Treatment is provided by the Valley Forge Sewer Authority (VFSA).

(3) Please refer to the text for pertinent information.

(4) The 1983 State Water Plan mandates that Schuylkill River water be retained within the Schuylkill basin.

(5) Developers are to provide, and have provided, rights-of-way or easements in coordination with the Municipal Authority.

(6) Private financing is provided as development occurs. For areas already developed, the Municipal Authority floats bonds that are paid off with annual Township revenues.

(7) Agencies such as the PA Department of Environmental Resources, Chester County Planning Commission, the Chester County Health Department and the East Whiteland Municipal Authority review official plans.

(8) The East Whiteland Township Board of Supervisors is responsible for implementation of the Official Plan.

2. Past Official Plans

a. Master Sewer Plan for Chester County, Pennsylvania

A county-wide Act 537 Official Plan was prepared in 1970 by the Chester County Planning Commission, with the assistance of Roy F. Weston, Inc., Environmental Scientists and Engineers. It was adopted by the Township Board of Supervisors through a resolution. A copy of the Officially Adopted Act 537, Sewer Plan (Map) is Figure 1. It recommends that:

1. Between 1968 and 1978 -

All of the Township is to be served by public sewer except the:

a) Northeast corner of the Township (east of Morehall Road and north of what is now the Great Valley Corporate Center);

b) Southeast corner of the Township (between the Chester Valley Rail Line and U.S. Route 30); and

c) Northwest corner of the Township (north of the Chester Valley Rail Line and west of Philadelphia Memorial Park).

2. Between 1978 and 1988, service would be extended to the -

a) Northeast corner of the Township (east of Morehall Road and north of what is now the Great Valley Corporate Center); and

b) Southeast corner of the Township (between the Chester Valley Rail Line and U.S. Route 30).

3. After 1988 -

No further provision of public sewer service was anticipated.

SOURCE:

MASTER SEWER PLAN
REVISED ADDITION 1970
FOR CHESTER COUNTY, PA

BASE MAP PREPARED BY KOHLI & ASSOCIATES, INC., 1981

The first phase of sewered area expansion, 1968 to 1978, was directed primarily toward those areas which in 1968 experienced sewage disposal problems. The second phase of expansion, 1978 to 1988, was defined for areas where additional growth was expected. The County-wide Plan has continued to remain in effect pending preparation of the East Whiteland Township 537 Plan.

b. Official Plan Activity by East Whiteland Township

The Township reviews every development proposal for consistency with the East Whiteland Comprehensive Plan and the Official Act 537 Plan. Significant development has occurred since 1970 and the Official Plan is not revised for each project. Rather, the Municipal Authority updates its service area maps and notes the correlation between the particular development and the Official Act 537 Plan.

3. The Institutional Context of the Valley Forge Sewer Authority

The Valley Forge Sewer Authority (VFSA) was organized on February 6, 1969 and operates under the provisions of the Municipal Authorities Act of 1945, P.L. 382, as amended. In November of 1970, Charlestown, East Pikeland and Schuylkill, through the VFSA, entered into the Valley Forge Sewage Treatment Plan Agreement along with the Townships of East Whiteland, Tredyffrin, Willistown and Easttown and the Borough of Malvern through their respective municipal authorities. Under this agreement, the VFSA was given an allocation of 26.5 percent of the initial design capacity of the Valley Forge Wastewater Treatment Facility (2.0 MGD of 7.53 MGD). East Whiteland's initial share of the VFSA allocation was utilized when properties in the Initial Service Area were connected to the wastewater treatment system. The VFSA, who assumed responsibility for the construction, ownership, operation and financing of the treatment facility, established and collects fees for its administration, operation and maintenance. East Whiteland Township had an approximate 1.7 million gallon per day capacity assigned for use within the Design Service Area. The average daily flow used by East Whiteland in 1990 is 1.052 million gallons per day, representing approximately 62 percent of the total Township allocations. Within the framework of the VFSA, East Whiteland will continue to obtain and expand upon its municipal sewage treatment.

B. Profile of East Whiteland Township

1. General Setting

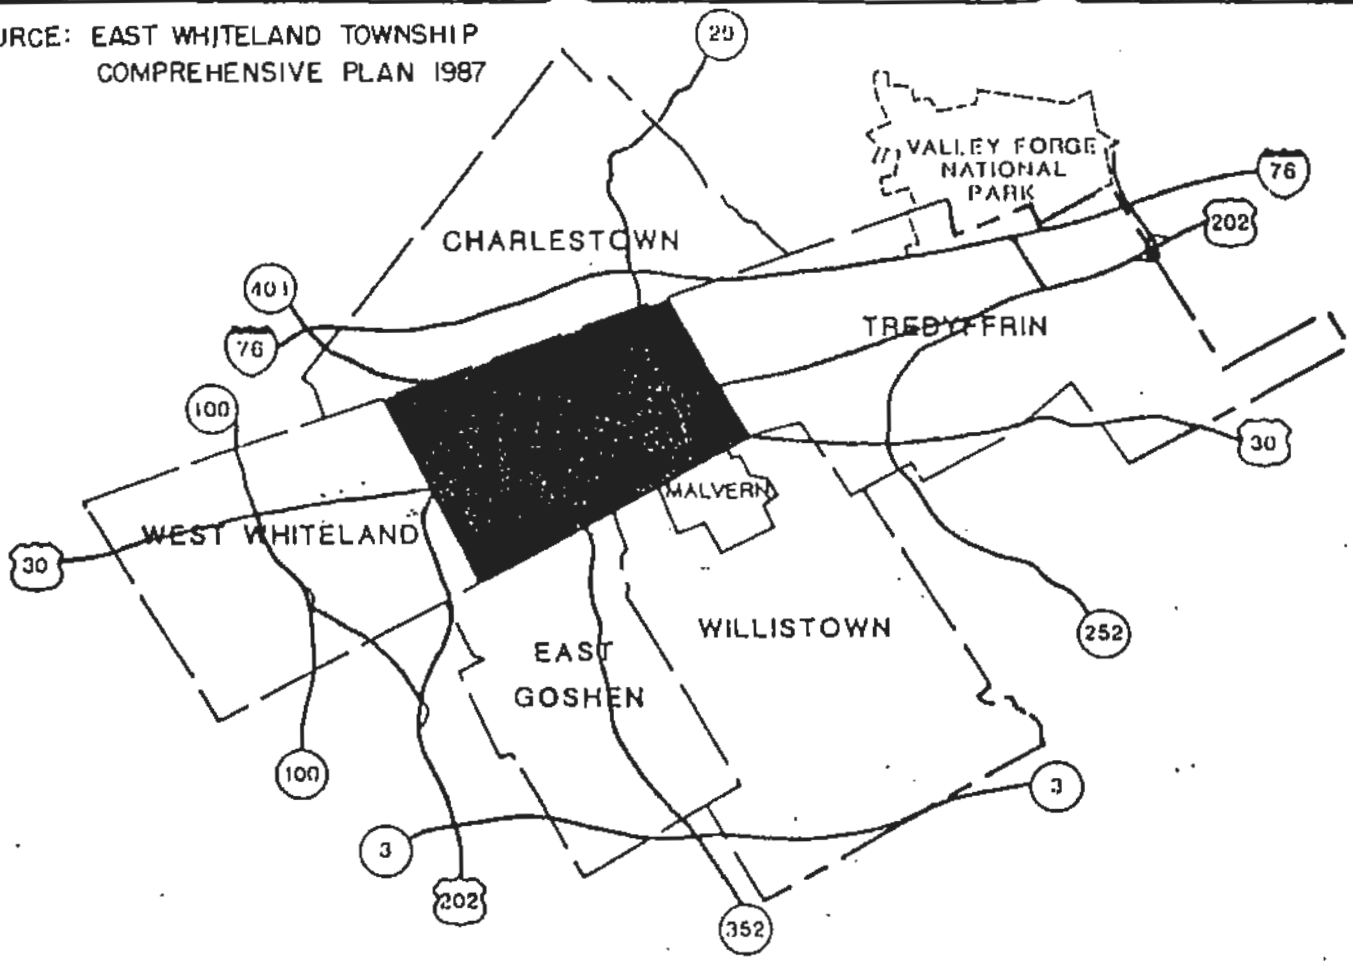
East Whiteland Township, located in Eastern Chester County, comprises approximately 6,930 acres or 10.8 square miles. East Whiteland is flanked by Tredyffrin Township to the east and West Whiteland Township to the west, within the Great Valley. Please refer to Figure 2, Regional Location.

Access

East Whiteland has many regional and interstate highway corridors located within or immediately adjacent to its boundaries. Few municipalities in Chester County are served directly by as many interstate and regional arteries. As can be seen in Figure 2, U.S. Routes 202 and 30 run east/west through the Township. Pennsylvania Routes 29, 352, and 401 provide north/south access through the Township. The Pennsylvania Turnpike (I-76) is situated just north of the Township, with two interchanges within 10 miles east or west. Although these roadways have provided easy access for commuters from East Whiteland to outlying population areas, the same highway network has brought outlying commuters into the employment centers of the Township, resulting in a change in travel patterns. East Whiteland has evolved, in recent years, into a major employment center and thus an importer of labor rather than an exporter of labor, a situation that is experienced by the majority of Chester County municipalities.

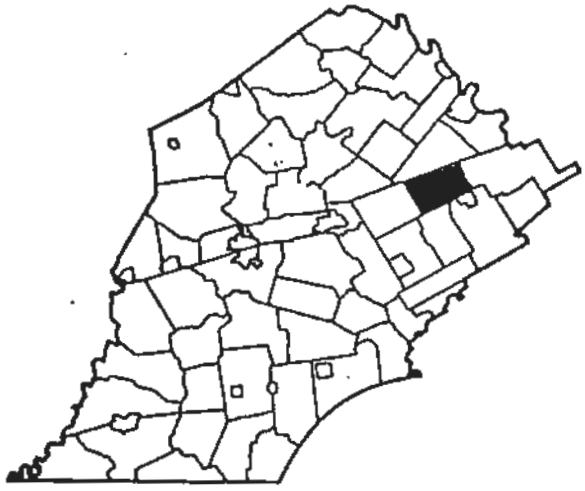
East Whiteland also has two freight lines (the Conrail Trenton cut-off and Chester Valley Line) and a high speedline (AMTRAK) traveling east/west through the Township. There are no train stations situated within the Township, but there are stations within minutes of East Whiteland located in Exton, Malvern, and Paoli which service commuters.

Employment



Since 1980, East Whiteland Township has become a prime location for many advanced technology and service-oriented companies in the Philadelphia Metropolitan Area. Many regional and national headquarters for major companies in these industries have located here. The hub of this industrial development is the Great Valley Corporate Center. This has resulted in East Whiteland evolving into the major industrial/office center in the County, if not the region. There were approximately 300 businesses in East Whiteland Township as of 1990.

FIGURE 2
REGIONAL LOCATION



EAST WHITELAND TOWNSHIP
CHESTER COUNTY, PENNSYLVANIA

NORTH

SOURCE: EAST WHITELAND TOWNSHIP COMPREHENSIVE PLAN 1987

EAST WHITELAND IN CHESTER COUNTY

EAST WHITELAND IN SOUTHEASTERN PENNSYLVANIA

In 1986, 13,247 persons were employed in East Whiteland. Predominant industries included: business services (2,648);insurance (2,000); chemicals (1,630); primary metals (1,405);and miscellaneous services (1,005). The top five employers in 1986 were: National Liberty Corp.; Shared Medical Systems; Wyeth Laboratories; Systems and Computer Technology Corp.; and National Rolling Mills.

The industrial and retail sections dominate the economy of East Whiteland. These sections are expected to continue to do so. Significant increases have been experienced, however, in administrative, managerial, sales and service occupations. These increases reflect the nationwide transition towards a service economy.

The Route 30 corridor which runs through the southern portion of the Township has supplanted any town center and provides the retail and service spine for East Whiteland.

Geology and Drainage

Most of East Whiteland, that area belonging to the Chester Valley, is underlain by limestone. The Chester Valley was formed not by a major stream, but a sequence of limestones and dolomites down-dropped by a combination of folding and faulting to form a relatively narrow band of sediments lying between the igneous and metamorphic rocks on either side. Subsequent physical and chemical weathering has further reduced the general level to below that of the quartzites of the North Valley Hills and the Wissahickon albite-chlorite schist of the South Valley Hills. The Valley is therefore defined by the limestone area.

The most distinctive characteristic of these limestones is that the chemical interaction of air and water tends to form a weak carbonic acid solution which, with humic acid from vegetation decay, slowly dissolves the limestones and forms underground solution channels which frequently extend long distances. These present the danger of sink holes and foundation collapse as well as the hazard of groundwater pollution. However, they also contribute to the generally deep and well-drained characteristics and fertility of the overlying soils. Groundwater yields of the limestones and dolomite underlying East Whiteland tend to be highly variable. When a large solution channel is tapped, very large water supplies may result. Otherwise yields are small. Water quality is generally good, although the risk for contamination is great.

The southern portion of the Township is underlain by Wissahickon albite chlorite schist. The deep weathering of these rocks tends to improve the percolation characteristics of the soil but frequently presents foundation problems. Foundation conditions for heavy buildings should be carefully checked in these areas. However, because of the greater weathering, schists yield more groundwater, the amounts ranging between 10 and 30 gallons per minute to a

maximum of 70 to 100 gallons per minute. Groundwater from schists tends to be of a high quality of purity and softness.

The extreme northern portion of East Whiteland is underlain by the Chickies group of quartzite. Quartzite is a strongly metamorphosed sandstone that occurs as a hard, smooth rock. Its hardness resists erosion and weathers slowly. As a result it often forms high sharp ridges such as the North Valley Hills. Like other hard rocks, water yields are low, ranging between 5 and 15 gallons per minute.

Drainage basins are illustrated in Figure 1. Most of East Whiteland Township (6,590 acres or 86%), falls within the Valley Creek subbasin, and thus drained eventually by the Schuylkill River. A small area (540 acres or 7%) of the south-central and southwest portion of the Township is drained by the headwaters of Ridley Creek. The extreme western portion of the Township (550 acres or 7%) is drained by Valley Creek which flows into the East Branch of the Brandywine Creek.

Topography, Geology and Land Use

The general pattern of land uses in East Whiteland is traceable, in part, to the existing topography and geology of the Township. The existence of the Great Valley, the wooded slopes of the North and South Valley Hills, and the plateau area in the southern portion of the Township have shaped settlement patterns and planning policies for development related to topographic and geologic features.

The present arrangement of land uses within and adjacent to the Township continues to reflect the natural conditions and the established planning policies. Slopes are one example of natural conditions affecting development and planning policies. Please refer to Figure 3, Slopes.

Land uses that seek the advantages of accessibility or the relative ease of development according to soils type or slopes are most evident throughout the Great Valley. Commercial and industrial uses along the Routes 29, 30 and 202 corridors, and office and industrial buildings with substantial ground coverage dominate in the valley. A potential disadvantage in this area is the carbonate limestone formation which underlies most of it. As described above, this geological formation is prone to sink holes and groundwater pollution, and therefore could pose problems for extensive on-site sewage disposal, heavy construction, or the expansion of impervious surfaces. Thus far the uses in this area have generally succeeded in avoiding such consequences.

SOURCE
EAST WHITELAND COMPREHENSIVE PLAN 1987
AND U.S.G.S. QUADRANGLE, MALVERN

BASE MAP PREPARED BY KOHLI & ASSOCIATES, INC. 1991

FIGURE 3

EAST WHITELAND TOWNSHIP

Chester County, Pennsylvania

Township Engineer: Kohli and Associates, Inc.

As accessibility has keyed the growth of industrial, office and commercial activity to the Routes 29, 30 and 202 corridors, concentrated development within the Great Valley is expected to continue once improvements to Route 29 and the proposed Exton By-Pass are constructed. These improvements will transform the circulation and access conditions of East Whiteland into a greater locational advantage.

Residential uses in East Whiteland are concentrated in the central to southern portions of the Township. Most of this development has been single-family dwellings, although multi-family dwellings have increased in recent years. Table 1 indicates the acres in each land use within the Township. Please refer to Figure 4, Existing Land Use, for a graphic depiction of land use patterns in the Township.

Existing Township parks embrace the stream corridor. As such, stream corridors represent a major amenity to the community which merit special protection.

Adjacent Municipalities

The six municipalities which surround East Whiteland include the Townships of Charlestown, Tredyffrin, Willistown, East Goshen, West Whiteland and the Borough of Malvern. The six municipalities are characterized by a diversity of land uses and intensity of development. Figure 2 displays the relationship between East Whiteland and the surrounding municipalities. An overview of each municipality in terms of land use adjacency and planning efforts follows.

East Whiteland does not have many serious land use conflicts at its respective boundaries with adjoining municipalities. In most instances, the use in both municipalities is single-family residential development at compatible densities. The industrial development along the Charlestown boundary abuts existing and zoned industrial uses. Although the Warner Quarry extends into Tredyffrin, the low density residential areas in Tredyffrin which abut the property are impacted by it. The balance of the Tredyffrin boundary consists of compatible industrial uses and zones. The boundaries with East Goshen and Willistown are well matched with existing and zoned uses.

Development along a portion of the Malvern Borough boundary is potentially a conflict due to the developing industrial park in the Borough. However, existing woodlands serve as an adequate buffer. The border with West Whiteland is consistent, as residential and agricultural uses abut. Both Townships have industrial uses that abut areas of lesser density, and tract sizes and buffers have reduced most points of conflict. The most significant area of potential change

along the East/West Whiteland border relates to the Church Farm School tract. Although currently in agricultural use, the proposed zoning change for a new community development known as "Churchill" was denied and a "by right" multi-family development, known as Valley Crossing has been granted preliminary approval.

Charlestown Township forms the entire northern boundary with East Whiteland. Charlestown is the most rural municipality adjoining East Whiteland with most of its land in low density residential and agricultural uses. The settlement patterns of the Township have been primarily influenced by the prevalence of environmental constraints and the lack of infrastructure, major roads and public facilities. The portion of the Township that borders East Whiteland has been planned for industrial uses adjacent to Phoenixville Pike and the Pennsylvania Turnpike, commercial uses in Devault, and residential uses of low to medium density.

Tredyffrin Township forms the entire eastern border of East Whiteland. Tredyffrin is the most populous municipality in Chester County and contains the same diversity of land uses found in East Whiteland. Tredyffrin experienced much of its development in the 1950's and 60's as suburbanization extended westward from Philadelphia. Development has accelerated due to available public sewer and water capacity as well as excellent highway access. Many key regional highways such as U.S. Routes 202, 30 and the Pennsylvania Turnpike traverse Tredyffrin. Tredyffrin is not entirely developed as implied, in fact much of the northern and western portions of the Township are low density residential development scattered amidst open, undeveloped lands. The portion of Tredyffrin that borders East Whiteland has been planned for low to medium density residential use. Stream valley preservation is planned along the Valley and Little Valley Creeks in the southern part of this border.

Willistown Township is one of the three municipalities that form the southern border of East Whiteland. The Township borders East Whiteland on either side of Malvern and each area has a different character. The eastern area contains the Paoli Memorial Hospital and office and industrial development, while the western area contains single-family development. Willistown Township can be divided into two distinct areas, the areas north and south of Paoli Pike. The northern area is comprised of medium density residential, commercial, institutional, and industrial uses. The southern area is comprised of low density residential and agricultural uses, and open undeveloped land.

Much of the land in the southern area of Willistown is under protective easement. The portion of Willistown that borders East Whiteland has been planned for low-to-medium density residential along the western portion of the border and medium to high density residential and industrial use along the eastern portion of the border.

Malvern Borough is situated along the southern border of East Whiteland and is surrounded by Willistown. Malvern is the most dense municipality of the seven

and is characterized by medium to high density residential, commercial, and industrial uses. King Street, which traverses the southern portion of East Whiteland, is the most important road in Malvern along which most of the commercial and service uses are located. The portion of Malvern that borders East Whiteland has been planned for medium density residential (4 DU/acre) and industrial use.

East Goshen Township forms over half of the southern border of East Whiteland. East Goshen is one of the most rapidly developing municipalities in the County. The Township increased 95% in population and 156% in dwelling units between 1970 and 1980. The Township is characterized by low to medium density residential development with areas of commercial, industrial and high density residential along Paoli Pike and PA Routes 3 and 352. The portion of East Goshen that borders East Whiteland has been planned for low density residential and conservation.

West Whiteland Township forms the entire western boundary of East Whiteland. West Whiteland has developed very similarly to East Whiteland in that the most intensive uses are within the Chester Valley. U.S. Route 30 is common to both East and West Whiteland. The Township also contains PA Route 100, the most important north-south route in the County. The Exton By-Pass is to be constructed within West Whiteland, connecting the Downingtown By-Pass to U.S. Route 202. West Whiteland has a diversity of land uses similar to East Whiteland and contains the largest concentrations of retail uses in Chester County. The portion of West Whiteland that borders East Whiteland has been planned by West Whiteland for low density residential and industrial/office uses adjacent to the U.S. Routes 202 and 30 interchange. However, there are proposals before both Townships for higher intensity uses, via the Churchill project.

2. Population

The total population in East Whiteland in 1980 was 8,468 according to the U.S. Bureau of the Census (refer to Appendix E). The population projections for the Township have been varied. For 1985, a range in total population of 8,750 to 8,970 was reported in the 1987 East Whiteland Township Comprehensive Plan. A range in the total population for 1990 from 9,466 to 11,088 was reported in the same Comprehensive Plan.

However, based on the U.S. Bureau of the Census, the 1990 population of the Township was 8,398. The County has projected a year 2000 population to be 9,780 (see Appendix E). In the COWAMP 208 Study, the Delaware Valley Regional Planning Commission reported a year 2000 projection of 9,300. The population for the 1990-2000 period, therefore, can be assumed to range from approximately 9,000 to 10,000.

3. Planning and Zoning Overview

a. The Comprehensive Plan

In January, 1987, the East Whiteland Township Board of Supervisors adopted the Comprehensive Plan. The Plan represents a high level of environmental analysis. It is also responsive to the development pressures which have been and will continue to be exerted on the Township and the infrastructure available to support development. The land use recommendations made in the Plan are shown in Figure 5. These various recommendations complement one another and were pertinent to a target year of 2000. In early 1987, the work program began to amend the Zoning Ordinance and implement the Comprehensive Plan.

b. The Zoning Ordinance

A brief summary of the East Whiteland Zoning Ordinance is provided in this section, along with a tabulation of the areas which remain to be developed. These undeveloped areas affect the type and amount of future sewage requirements.

The East Whiteland Township Zoning Ordinance and Map were adopted in 1975. The Ordinance and Map have subsequently been amended through 1988. Please refer to Figure 6, the Zoning Map. In 1987, a work program began to amend the Zoning Ordinance, which is still underway.

The Zoning Ordinance established 16 zoning districts including a Flood Hazard District. Included are four residential districts, four commercial districts, three professional office districts and four industrial districts.

The four residential districts comprise approximately 3,784 acres or 55% of East Whiteland.

- R-1 requires a minimum 44,000 square foot (or 1.01 acre) lot area. Uses allowed include single-family detached dwellings, agriculture, government, educational and religious activities. This zone includes about 2,253 acres and is found in the northwest, central and southwest areas of the Township.

SOURCE: EAST WHITELAND TOWNSHIP ZONING MAP
ADOPTED SEPTEMBER 2, 1975
LAST REVISED JUNE 8, 1992

BASE MAP PREPARED BY KOHLI & ASSOCIATES, INC., 1991

- The R-2 zone requires a minimum lot area of 22,000 square feet, or 0.51 acres. Permitted uses are similar to those of the R-1 zone. The R-2 zone is found in the western and south-central areas of East Whiteland. About 1,013 acres are zoned R-2.

- For R-3, the minimum lot size is 18,000 square feet, or 0.41 acres. Uses are again similar to R-1. Approximately 194 acres are zoned R-3 and are located in the southeast corner of the Township.

- R-4 is a higher density residential zone and allows various unit types ranging from mobilehomes and multi-family dwellings to single-family detached dwellings. A variety of minimum lot areas or densities are allowed, depending on the dwelling unit type. 324 acres are zoned R-4 and large areas can be found along the western, southern and eastern boundaries of the Township, plus a small area in the central portion of the Township north of U.S. Route 30.

Four commercial districts are delineated in the Zoning Ordinance. These districts total 572 acres, or 8.2% of the Township's land area.

- C-1 is a retail shopping district allowing shops, banks, restaurants and offices. A minimum 20,000 square foot lot area is required, with building coverage limited to 40%. Almost 143 acres are zoned C-1, most of which is already developed. C-1 is found north and south of Route 30.

- C-2 is a more general commercial district that, in addition to C-1 uses, can permit service and hotel/motel uses. C-2 requires a minimum one acre lot, and limits building coverage to 40%. Approximately 147 acres are zoned C-2 and are found primarily along Route 30.

- C-3 is also a general commercial district that allows C-2 uses, as well as automotive sales and repair and lumber activities. Only one area, of less than 80 acres, is zoned C-3. This is along the western part of Route 30.

- The last commercial district is C-4. All C-1 and C-2 uses are allowed, as well as distribution, assembly and office uses. The minimum lot area requirement is 12,000 square feet, and maximum building coverage is 40%. C-4 is found in a long strip of over 200 acres, south of and parallel to Route 30.

The Zoning Ordinance designates three "Professional Office Districts." These districts constitute 4.4% of the Township's land area, or 306 acres.

- PO-1 allows residential, agricultural and office uses. Educational and medical activities are also allowed. PO-1 requires a minimum 22 acre lot and caps building coverage at 15%. Approximately 210 acres are zoned PO-1 and are found at the intersection of Routes 202 and 401 and on the Township's eastern edge.

- PO-2 allows all PO-1 uses except residential. The minimum lot area is five acres. Building coverage cannot exceed 15%. About 75 acres are designated PO-2. These areas are found north and south of the Route 30 intersection with Route 29.

- The third professional office district is PO-3. All PO-2 uses are allowed, plus R-4 uses. The minimum lot area is three acres and building coverage cannot exceed 25%. Only one parcel of 21 acres is designated PO-3. This is south of Route 30, on the eastern end of the Township.

Four industrial districts are designated in the Ordinance, which account for almost 33% of the Township's land area, or 2,269 acres.

- LI is a limited industrial district. Permitted uses include agriculture, laboratories, transportation, warehousing, light manufacturing and offices. The minimum lot size is one acre. The maximum building coverage ranges from 20% for lots under three acres to 40% for lots over 10 acres. LI comprises over 1,000 acres and is found in several large areas, including those south of Route 30 and in the north-central and east-central part of the Township. A small area in the southeast is zoned LI.

- GI is a general industrial district. All LI uses are allowed, as well as manufacturing and construction equipment services. The minimum lot area is five acres. Building coverage is limited to 20 to 40%, depending on lot size. 587 acres are zoned GI and are found in two areas: the Great Valley Corporate Center and south of Route 202 on the Township's eastern boundary.

- GIM is the general industrial-mining district. All GI uses are allowed, plus surface mining. One large area in the northeast corner of the Township is zoned GIM, comprising 483 acres. The lot area minimums are the same as for GI except that surface mining requires at least 50 acres.

- The fourth industrial zone is RIC, or Restricted Industrial Commercial. Permitted uses include offices, parks, laboratories, municipal services and light manufacturing. The minimum lot size is five acres. The maximum building coverage ranges from 20% (up to a two acre lot) to 40% (lots over 10 acres). 157 acres are zoned RIC, in the eastern part of the Township along Liberty Boulevard and Matthews Road.

Sewage disposal requirements for all zoning districts are found in Section 1823 of the Zoning Ordinance. Uses are to be served "either by a municipal or privately owned sewage treatment plant or by an on-lot septic system" provided that the safety and effectiveness of the on-lot systems are approved by the appropriate public health officer.

Table 2 divides the Township land area into zoning districts. The Flood Hazard District is essentially an overlay area and not included for analytical purposes. The size of each zone is calculated by acreage and as a percentage of total Township land area. Acres served by public or private sewerage systems are listed, as are the amount of acres undeveloped. Finally, the number of residences that could be built on undeveloped land, or the square footage of potential commercial, office and/or industrial land uses are tabulated.

The table inventories two types of undeveloped land. The first type includes vacant parcels as classified by the Vacant Parcel Analysis conducted in 1986 by the Eastern Chester County Regional Planning Commission, the 1987 Township Comprehensive Plan, and field survey. The second type includes parcels currently developed but which are large enough to be subdivided and further developed. This type is primarily residential.

In summary, the Township could theoretically expect up to 3,600 new residences, over 776,000 square feet of commercial uses, 1,393,000 square feet of professional and office use, and over seven million square feet of industrial-type activities on undeveloped land.

It is important to note that the figures reported here do not reflect a detailed analysis of each tract of land in the Township. These calculations are generalized estimates and for planning purposes only. No site constraints, transportation, or other requirements were factored in. Parcels zoned non-residential were considered developed, if presently built upon. Vacant, non-residential parcels were assumed to be developed at their maximum, so these estimates are high.

Table 2

LAND AVAILABLE FOR FUTURE DEVELOPMENT IN EAST WHITELAND, BY ZONING DISTRICT

Zoning District	Potential New Acres In District	Percent of Township	Acres Sewered	Acres Undeveloped	Percent of Township	Dwelling Units/ Square Footage

Sources:

1. East Whiteland Township Comprehensive Plan, 1987.
2. Chester County Assessment Office, data available thru December, 1990.
3. Kohli and Associates, Inc., Sewer Service Analysis, 1991.

Almost 75% of the land area in East Whiteland is already developed. This leaves approximately 1,630 acres either vacant or capable of being subdivided and developed. Developable sites are scattered throughout the Township. Over three-quarters of this acreage is zoned residential. About 244 acres are industrially-zoned, 107 acres are zoned professional-office, and the remaining 45 acres are zoned commercial.

Most of the developable land is zoned residential and the majority of that, or 741 acres, is zoned R-1. This acreage could support 732 dwellings. Parcels are located throughout the central, northwest and southwest areas of East Whiteland. R-2 zoned land that could be developed or subdivided totals 238 acres. This acreage could support 468 dwellings and isolated in small parcels to the west and south. Only 11 acres of R-3 land remains to be developed, in the southeast part of East Whiteland. These parcels could support 26 new residences. About 244 acres of R-4 could be developed, accommodating a theoretical maximum of 2,405 dwelling units. This acreage is primarily on the western boundary of the Township. A preliminary plan for 1,474 multi-family units has already been approved for this particular R-4 land.

All of the commercially zoned land remaining to be developed is located along Route 30, primarily in small, scattered parcels. Approximately 25 acres are zoned C-1. These parcels could support 442,000 square feet of development. Less than 14 acres of developable land is zoned C-2 and could accommodate 239,000 square feet of commercial uses. Less than four acres of C-3 land remains to be developed. About 52,000 commercial square feet could be built on these scattered parcels.

Most of the available, "Professional-Office" land, 70 acres, is zoned PO-1 and is located at the intersection of Routes 202 and 401. Approximately 910,000 square feet of "PO-1" uses could be built here. About 37 acres of PO-2 land is available in the southeast quadrant of the Township. Up to 482,000 square feet could be built here. No land zoned PO-3 remains to be developed.

Nearly 80% of the available, industrial land is zoned L-1. Over six million square feet of industrial uses could be built on these various parcel which are located throughout the Township. Almost 50 acres of GI land is available. This acreage could support 774,000 square feet of GI uses and is located in the eastern area of the Township. No GIM or RIC land remains to be developed.

4. Land Development Overview

Significant subdivision and land development activity has occurred in East Whiteland Township since the adoption of the Township Comprehensive Plan in 1987. There have been 89 of 93 projects which received final approval. These proposals include: 167 single-family dwellings; 1,588 multi-family dwellings; 571 hotel rooms; 444,184 SF of commercial; 1,428,182 SF of office; 734,991 SF of industrial; and 25 industrial lots. Table 3 further details this land development activity. Figure 7 graphically depicts where these projects are located.

III. EXISTING SEWERAGE SERVICES AND CONDITIONS

A. The Existing Sewage System

1. Areas Presently Served by the Collection System

East Whiteland Municipal Authority owns the sewage collection system and leases its operation to East Whiteland Township. The sewer system served a total of 3,574 EDU's (Estimated Dwelling Units) at the end of 1990. Flows at the end of 1990 were approximately 1.052 million gallons per day (mgd). The average daily flow of the system is 50% residential and 50% commercial and industrial. The eastern two-thirds of East Whiteland including all of Route 30 is now served by the system. Please refer to Figure 9, Existing Sewer Service.

The collection system includes a total of 10 pump stations as shown in Figure 8. Design capacities and current flows are listed on Table 4.

2. Permitted and Reserve Flow Capacities

Sewage from East Whiteland Township flows through the Valley Creek Trunk Line into Tredyffrin Township to the Wilson Road Pump Station. The Wilson Road force main transmits flows to the Valley Forge Treatment Plant. East Whiteland Township is allocated certain capacities for the Valley Creek Trunk Line, the Wilson Road Pump Station and Force Main, and the Valley Forge Treatment Plant.

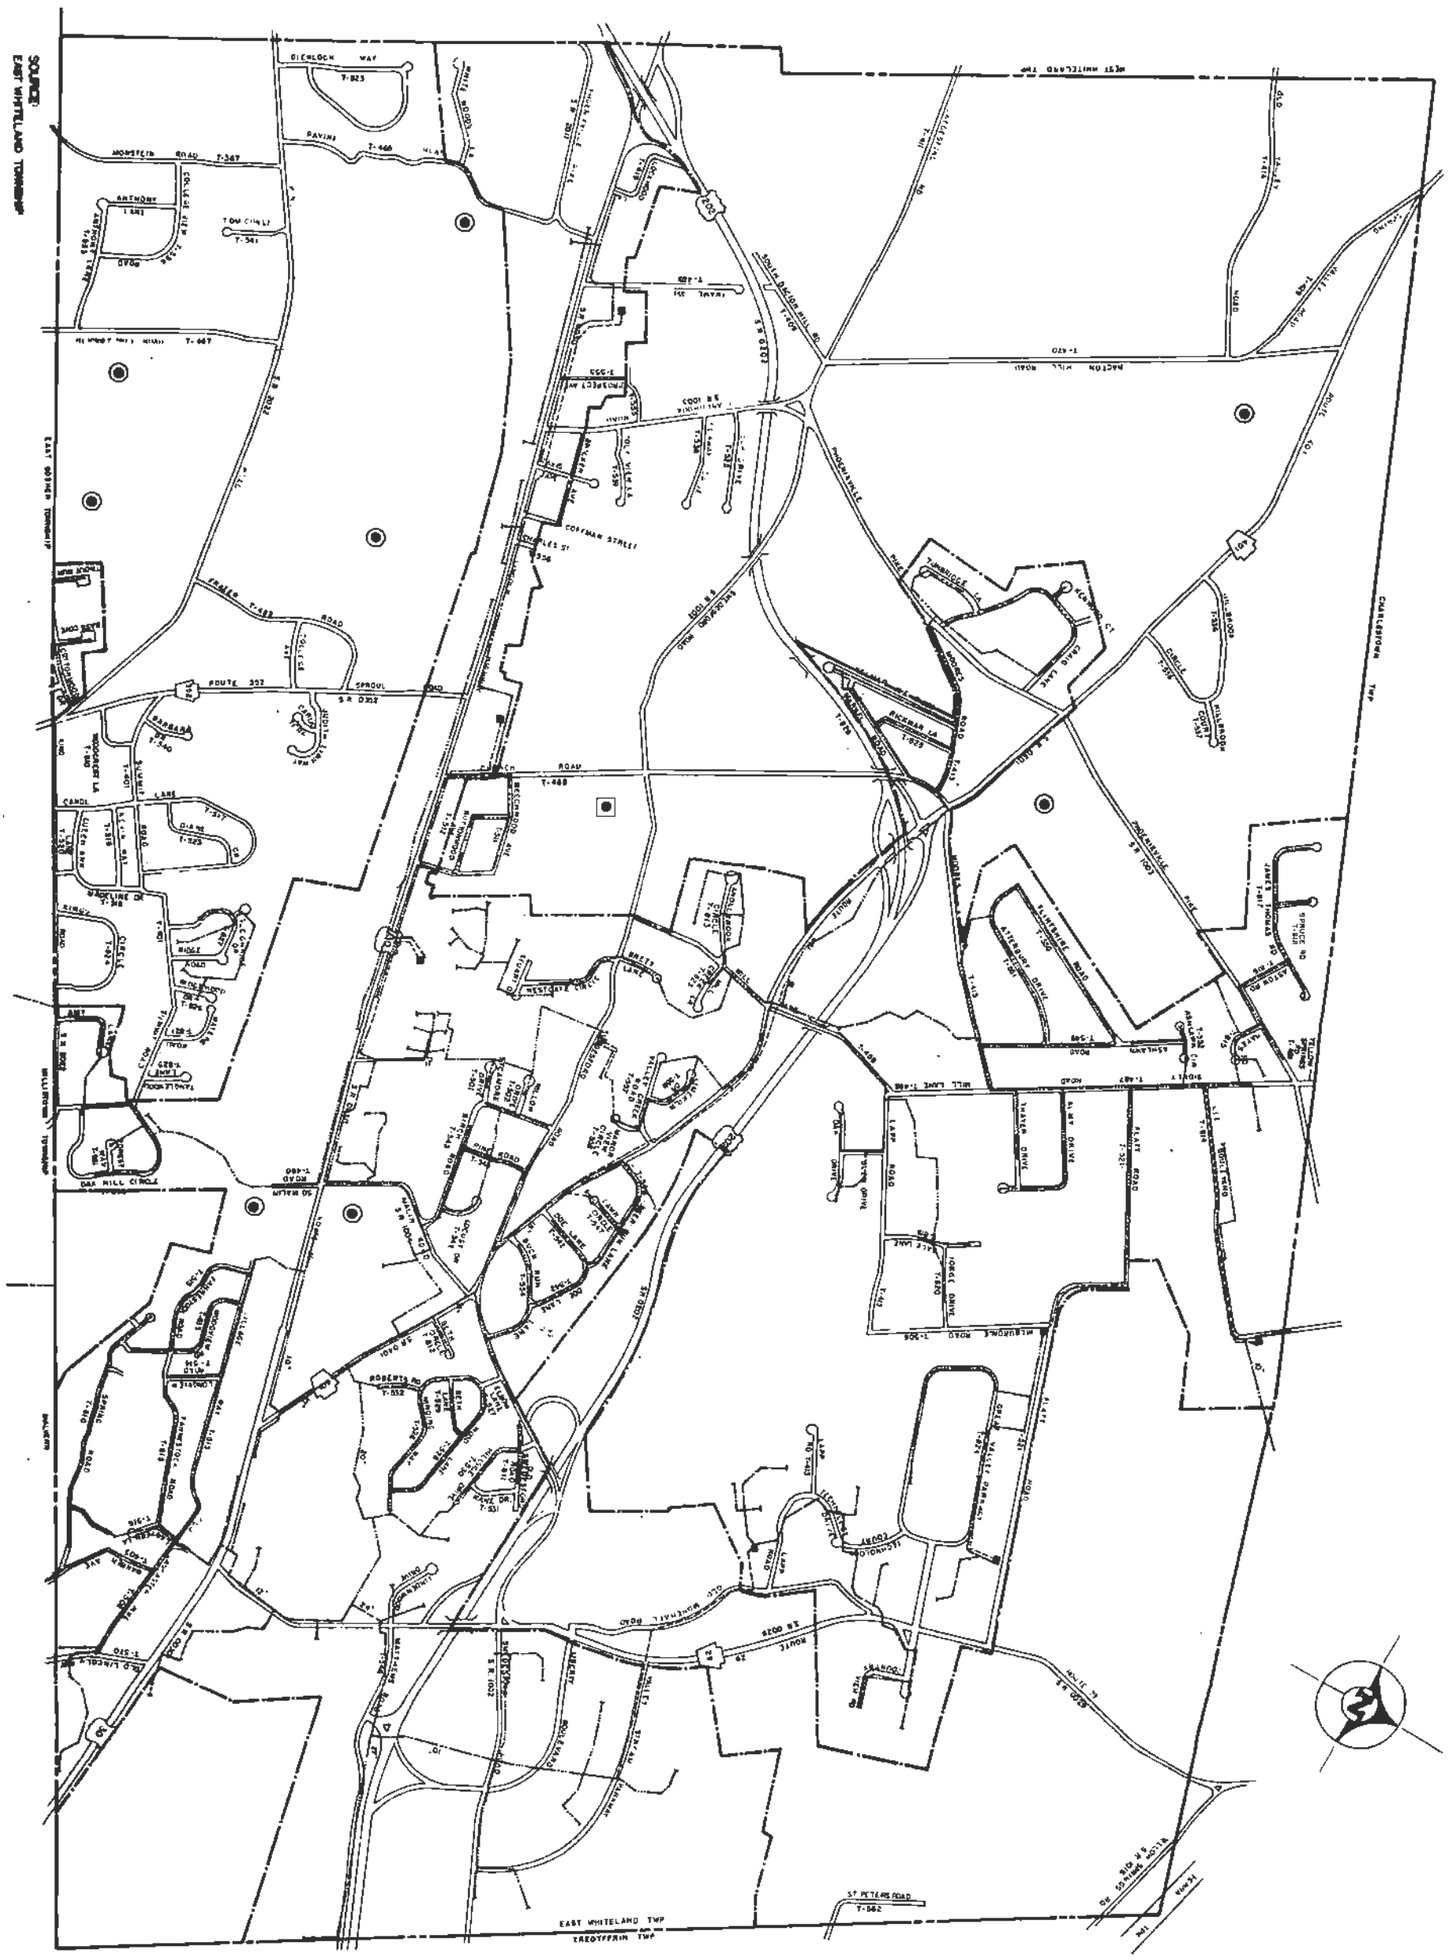

FIGURE 8

EXISTING SEWERED AREA - 1981

EAST WHITELAND TOWNSHIP

Chester County, Pennsylvania

Township Engineer: Kohli and Associates, Inc.

East Whiteland Township has been allocated a peak capacity of 9.5 mgd (4.0 mgd average) in the Valley Creek Trunk Line. Flows allocated to East Whiteland at the Wilson Road Pump Station, based on its current capacity, are 5.855 mgd peak and 2.34 mgd average. The Wilson Road Force Main, like the Pump Station, has a limited capacity and East Whiteland's allocation for the force main is 6.553 mgd peak and 2.62 mgd average daily flow. Based on the current plant capacity of 8 mgd, East Whiteland is allotted 1.7 mgd (average flows). East Whiteland has allowed Charlestown Township to utilize 0.3 mgd (average) of its allocation through the Valley Creek Trunk Line and the Wilson Road Pump Station and Force Main. Although the Valley Creek Trunk Line is capable of accepting the ultimate flows from East Whiteland Township, the plant capacity and the Wilson Road Pump Station and Force Main limit the actual flows possible through the system.

3. Treatment Systems

The Township collection system connects to the Valley Forge Sewer Authority plant for its sewage treatment and disposal. The sewage plant provides both primary and secondary treatment, and involves pressure filtration. The treatment system is an activated sludge method. The system was built in 1976 and is in excellent condition. The Municipal Authority plans to expand the collection system as funds become available. The expansion would accommodate infill development in western areas of the Township. No operating problems have been reported at this time. Treated effluent from the system is discharged into the Schuykill River.

4. Private Systems

Seven private package plants operate in East Whiteland Township. These treatment plants are generally located in the southern and western portions of the Township. The Bishop Tube Company operates one facility. The treatment plant has a designed operating capacity of 10,000 gallons per day. The present average daily flow is 4,000-5,000 gallons per day (gpd). There are future plans to upgrade and expand the system to a designed operating capacity of 20,000 gpd.

The second private treatment facility is an aeration system that serves the Great Valley High School. The average daily flow for the system is 9,000 gpd which is well under the designed operating capacity.

The third private package serves Immaculata College. The College has two Imhof gravity-fed treatment facilities. The combined designed operating capacity of the two facilities is 117,200 gpd. The average daily flow is 28,700-50,000 gpd. Ongoing repairs such as new flow and filtration devices are being done. Malvern Court Mobile Home Park operates the fourth private package plant in the Township. The type of treatment system is aeration with sand filter beds. The designed operating capacity is 24,000 gpd and the average daily flow is 16,000-18,000 gpd.

The fifth private package plant serves the Sun Refining and Marketing Company. No data is available on this facility other than it is a gravity separation system to insure that no oil is released into the Valley Creek.

Villa Maria House of Studies operates the sixth private treatment plant in East Whiteland. The designed operating capacity is 15,000 gpd and the average daily flow is 10,000 gpd.

The seventh private treatment plant serves the William Henry Apartments. The treatment system involves an aeration method. The designed operating capacity is 70,000 gpd and the average daily flow is 35,000 gpd. There are plans for the treatment facility to be expanded by the addition of a surging tank.

All of the private package plants, except those serving Villa Maria and William Henry Apartments, discharge into the Valley Creek, Little Valley Creek or their tributaries. The other two facilities discharge into tributaries of the Ridley Creek. The Bishop Tube Company and Sun Refining and Marketing Company are the only facilities which have industrial flow; the remaining private treatment facilities have domestic flow.

One community on-lot sewage disposal operates in the Township as of 1990. The facility serves the K.D. Markley Elementary and Intermediate School. No information is available on the type of system or design flows at the present time.

5. Operation and Maintenance

East Whiteland Township leases the operation and maintenance of the collection system from the East Whiteland Municipal Authority. The Valley Forge Sewer Authority is responsible for treatment and disposal. The private systems are operated and maintained by their respective owners.

B. The Valley Forge Wastewater Treatment Facility

The Valley Forge Wastewater Treatment Facility has been designed for a nominal 8 mgd based on a design year of 1985, although this capacity should be satisfactory through 1992-1993. The treatment plant is situated on two tracts of land totalling approximately 24 acres in Schuylkill Township on the west bank of the Schuylkill River at its confluence with Perkiomen Creek. The acreage associated with the Treatment Plant provides the capacity for expansion up to 20 mgd with conventional treatment. The treatment process selected for the facility has been designed to accomplish 95 percent total (BOD) removal during the summer months and at least 85 percent during the remainder of the year.

C. Sewage Disposal Problem Areas

Approximately one third of the East Whiteland Township land area relies on individual on-lot disposal systems. In general, existing systems have operated with few reports of malfunction. The 1987 Comprehensive reported that there were two concentrations of on-lot disposal system malfunctions in the Township reported by Chester County Health Department data. The two concentrations are: 1) the area east of PA Route 352 and north of Summit Road, and 2) the area between Swedesford Road and U.S. Route 30 from Penflex to the Township line. The malfunctions are primarily due to shallow depth to bedrock and other soil characteristics which prevent adequate percolation.

The new Rt. 30 sewer system, built over the last three years, has in large part remedied problems in the second area. Occasional failures continue to be reported along Bacton Hill Road, College View Road and Beechwood Avenue, however, these are individual lots with no concentrations of large numbers of failures. Currently the sewer design for the Beechwood and Buttonwood Avenue area is in progress.

In addition to these documented areas, much of the Township is situated on highly porous soils and rock formations, where conventional on-lot systems areas are not permitted according to DER facility standards (see next section).

D. Soils Analysis and Wetland Identification

1. Overview

Soils characteristics are important determinants for locating land use activities, and particularly on-lot sewage disposal systems. By analyzing man-made constraints such as land already developed or proposed for development as well as natural constraints such as shallow, alluvial, or wet soils, the most appropriate locations for on-site application of sewage effluent can be determined.

Wetlands are frequently found in conjunction with headwaters and ponds. Vegetation, soils and the level of water below the surface determine the location of wetlands. Wetlands can include a diversity of forms such as marshes, bogs, swamps or similar areas. These areas are essential because they support a unique array of wildlife and natural processes such as groundwater recharge. They are also important to reduce the hazards of flooding and maintain good water quality. The U.S. Army Corps of Engineers and the PADER recognize the importance of wetlands and promote regulations to protect them.

The wetlands in East Whiteland are spread throughout the Township. Many wetlands can be found within floodplain land of the Valley Creek or in areas where water tends to pond or drain slowly. One of the Township's largest wetlands is located northwest of the intersection of Old Morehall Road and

Swedesford Road, according to National Wetlands Inventory Maps. Please refer to Figures 9 and 10, Flood Plains - Wetland and Soil Limitations.

Given that much of East Whiteland is already served by public sewer and that additional service is planned or under consideration through efforts like this 537 Plan, this Soils Analysis uses existing information and is more of a summary than an exhaustive, new treatise. The analysis helps target those areas where on-lot sewage disposal, of whatever type, could be a significant problem.

2. Information Sources

This Soils Analysis describes the various soil types found in East Whiteland, locates them and discusses their general suitability for on-lot sewage disposal systems.

Information was taken from:

- Soil Survey - Chester and Delaware Counties, PA, Series 1959, No. 19 by U.S.D.A. (issued May, 1963)
- Master Sewer Plan for Chester County, PA (as revised by the Chester County Planning Commission, 1970)
- East Whiteland Township Comprehensive Plan (1987)
- Pennsylvania Sewage Facilities Act, as amended (Act of 1965, P.L. 1535, No. 537)
- Title 25 of the Pennsylvania Code, Part I, Subpart C, Article I, Chapters 71, 72, and 73 and Appendix A Soils Groups (as revised thru 1989)
- Chester County Health Department, Soil Survey Interpretation Sheets, Nos. 12 thru 52 (undated)

3. Profiles and Classifications of Soils

Soils are grouped by their ability to perform certain functions. The group hierarchy includes:

- Profiles. The sequence of natural layers, or horizons, in a soil.
- Series. Soils that have profiles almost alike. The major horizons are similar. Examples include Brandywine and Edgemont.
- Soil Types. Soils in a series that are alike except for the texture of their surface layer. Examples include Glenelg Silt Loam and Glenelg Very Stony Silt Loam.
- Soil Phases. Soils within a type that vary according to slope, degree of erosion, number and size of stones, etc. These differences are great enough that they could not be managed the same way. Such soil types are divided into soil phases.

Examples include Brandywine Loam 3 to 8 percent slopes and Brandywine Loam 8 to 15 percent slopes.

- Soil Associations. Broad categories referring to the main soil patterns of the particular area containing a few major soil groupings and several minor ones.

The 1987 East Whiteland Comprehensive Plan generally describes the two distinct Soil Associations found in the Township:

- "Hagerstown-Conestoga-Guthrie Association. That portion of the Township lying roughly north of the Lincoln Highway, Route 30. These soils are deep, silty material on limestone, characteristic of the Chester Valley physiographic region, and are generally well-suited for urban development.

- Glenelg-Manor-Chester Association. These are shallow to deep, rather silty and channery soils, on grayish-brown schist and gneiss. This association is the dominant one in Chester County as a whole, and particularly to the south of the Chester Valley. The problem of erosion connected with this association presents only moderate limitation on development."

The 1987 Plan language referring to soil types is still applicable:

"The specific soils pattern within East Whiteland itself is dominated by Hagerstown Silt Loam, to the north of Lincoln Highway, and by Manor Loam and Glenelg Channery Silt Loam in the southern portion. The central area of the Township is dominated by Conestoga Silt Loam, Lawrence Silt Loam, Lindside Silt Loam, Guthrie Silt Loam and Hollinger Silt Loam which are found along the various streams and drainage-ways. In addition, a significantly large pocket of Edgemont Channery Loam is found in the wooded slopes on the north slopes near North Valley Hills."

Other soils series are found in limited areas in the Township. Chewacla, Congaree, Wehadkee, Bedford, Glenville, Croton and Worsham are found along streams in the upland areas of East Whiteland. A small pocket of Brandywine soil is in the northwest corner of the Township.

The Pennsylvania State Department of Environmental Resources (DER) categorizes soil series into 15 groups according to the soil's ability to accommodate on-site sewage effluent. DER further organized the soil groups in ranges classified as A (very suitable) to F (unsuitable). These groups and ranges are found in Appendix A of Chapter 73, noted above. Table 5 is taken from "Appendix A" and lists those soils found in East Whiteland and their

sewage-related characteristics. Descriptions of each soil profile can be found in Appendix D of this report.

DER's correlation of Soil Groups to their sewage-effluent characteristics are:

A - Soils that do not have seasonal high water table, severe flooding hazard, extreme shallowness, or limestone bedrock; grouped according to probable percolation rates. (Includes Groups 1 thru 10)

B - Soils series that are underlain by limestone and have a high hazard of groundwater pollution through solution channels. (Group 11)

C - Well drained soils that are shallow or very shallow to bedrock. (Group 12)

D - Soil series that occur on floodplains and have a high flooding hazard. Not suitable for subsurface disposal systems. (Group 13)

E - Moderately well drained soils on upland sites. These soils have seasonal high water tables which is the major limitation on use for subsurface disposal systems. (Group 14)

F - Somewhat poorly, poorly, and very poorly drained soils on upland sites. These soils have high water tables and are unsuitable for subsurface disposal systems. (Group 15)

Appendix A further notes:

"Stoniness and Rockiness: Extremely stony phases of any soil and areas with common outcrops of bedrock and considered unsatisfactory for subsurface systems. Moderately stony areas may be used with care.

Made lands, Mine dumps, Strip mine spoils, and Sanitary landfills: These miscellaneous land types need individual, local determinations of depth, water table conditions, and soil texture as they affect percolation rates and effluent renovation in a stabilized area."

When mapped, these soil groups create a pattern across the Township of what areas would or would not be suitable for on-lot sewage disposal. Soil Group A comprises approximately 28% of the Township land area and is generally suitable for on-lot disposal systems. The majority of the Township is Soil Group B which, although the soils themselves are generally suitable for on-lot disposal, is much less suitable because of its limestone underlayment. Soil Group C is not found in the Township. Soil Groups D, E and F comprise 15% of the Township and are generally unsuitable for on-lot disposal. Man-made land, usually greatly disturbed areas like quarries, account for the last 5% of the Township acreage.

Table 5

SUITABILITY FOR SUBSURFACE DISPOSAL OF EFFLUENT OF SOIL GROUPS FOUND IN EAST WHITELAND

Soil Group	Soil Series	Symbol	Characteristics	Percent of Township*
A	Brandywine Edgemont Glenelg Manor	Br Ec Ge Mg, Mh, Mk, Mm	suitable - deep & moderately deep, well-drained soils	28%
B	Conestoga Hagerstown Hollinger	Cm Ha Ho	underlain by limestone	52%
C	(None in E. Whiteland)		shallow to very shallow & well-drained soils	0%
D	Chewacla Congaree Lindside Melvin Wehadkee	Ch Cn Ls Mn We	unsuitable - floodplain soils	4%
E	Bedford Glenville	Bd Gn	marginal - moderately well-drained soils with seasonal high water table	5%
F	Croton Guthrie Lawrence Worsham	Cr Gu La Wo	unsuitable - poorly drained soils with high water table	6%
(no letter)	Man-made land		questionable - quarries, land fills, mines, dumps, etc.	5%
			Total	100%

Note: * These percentages are estimates and for planning purposes only.

Sources:

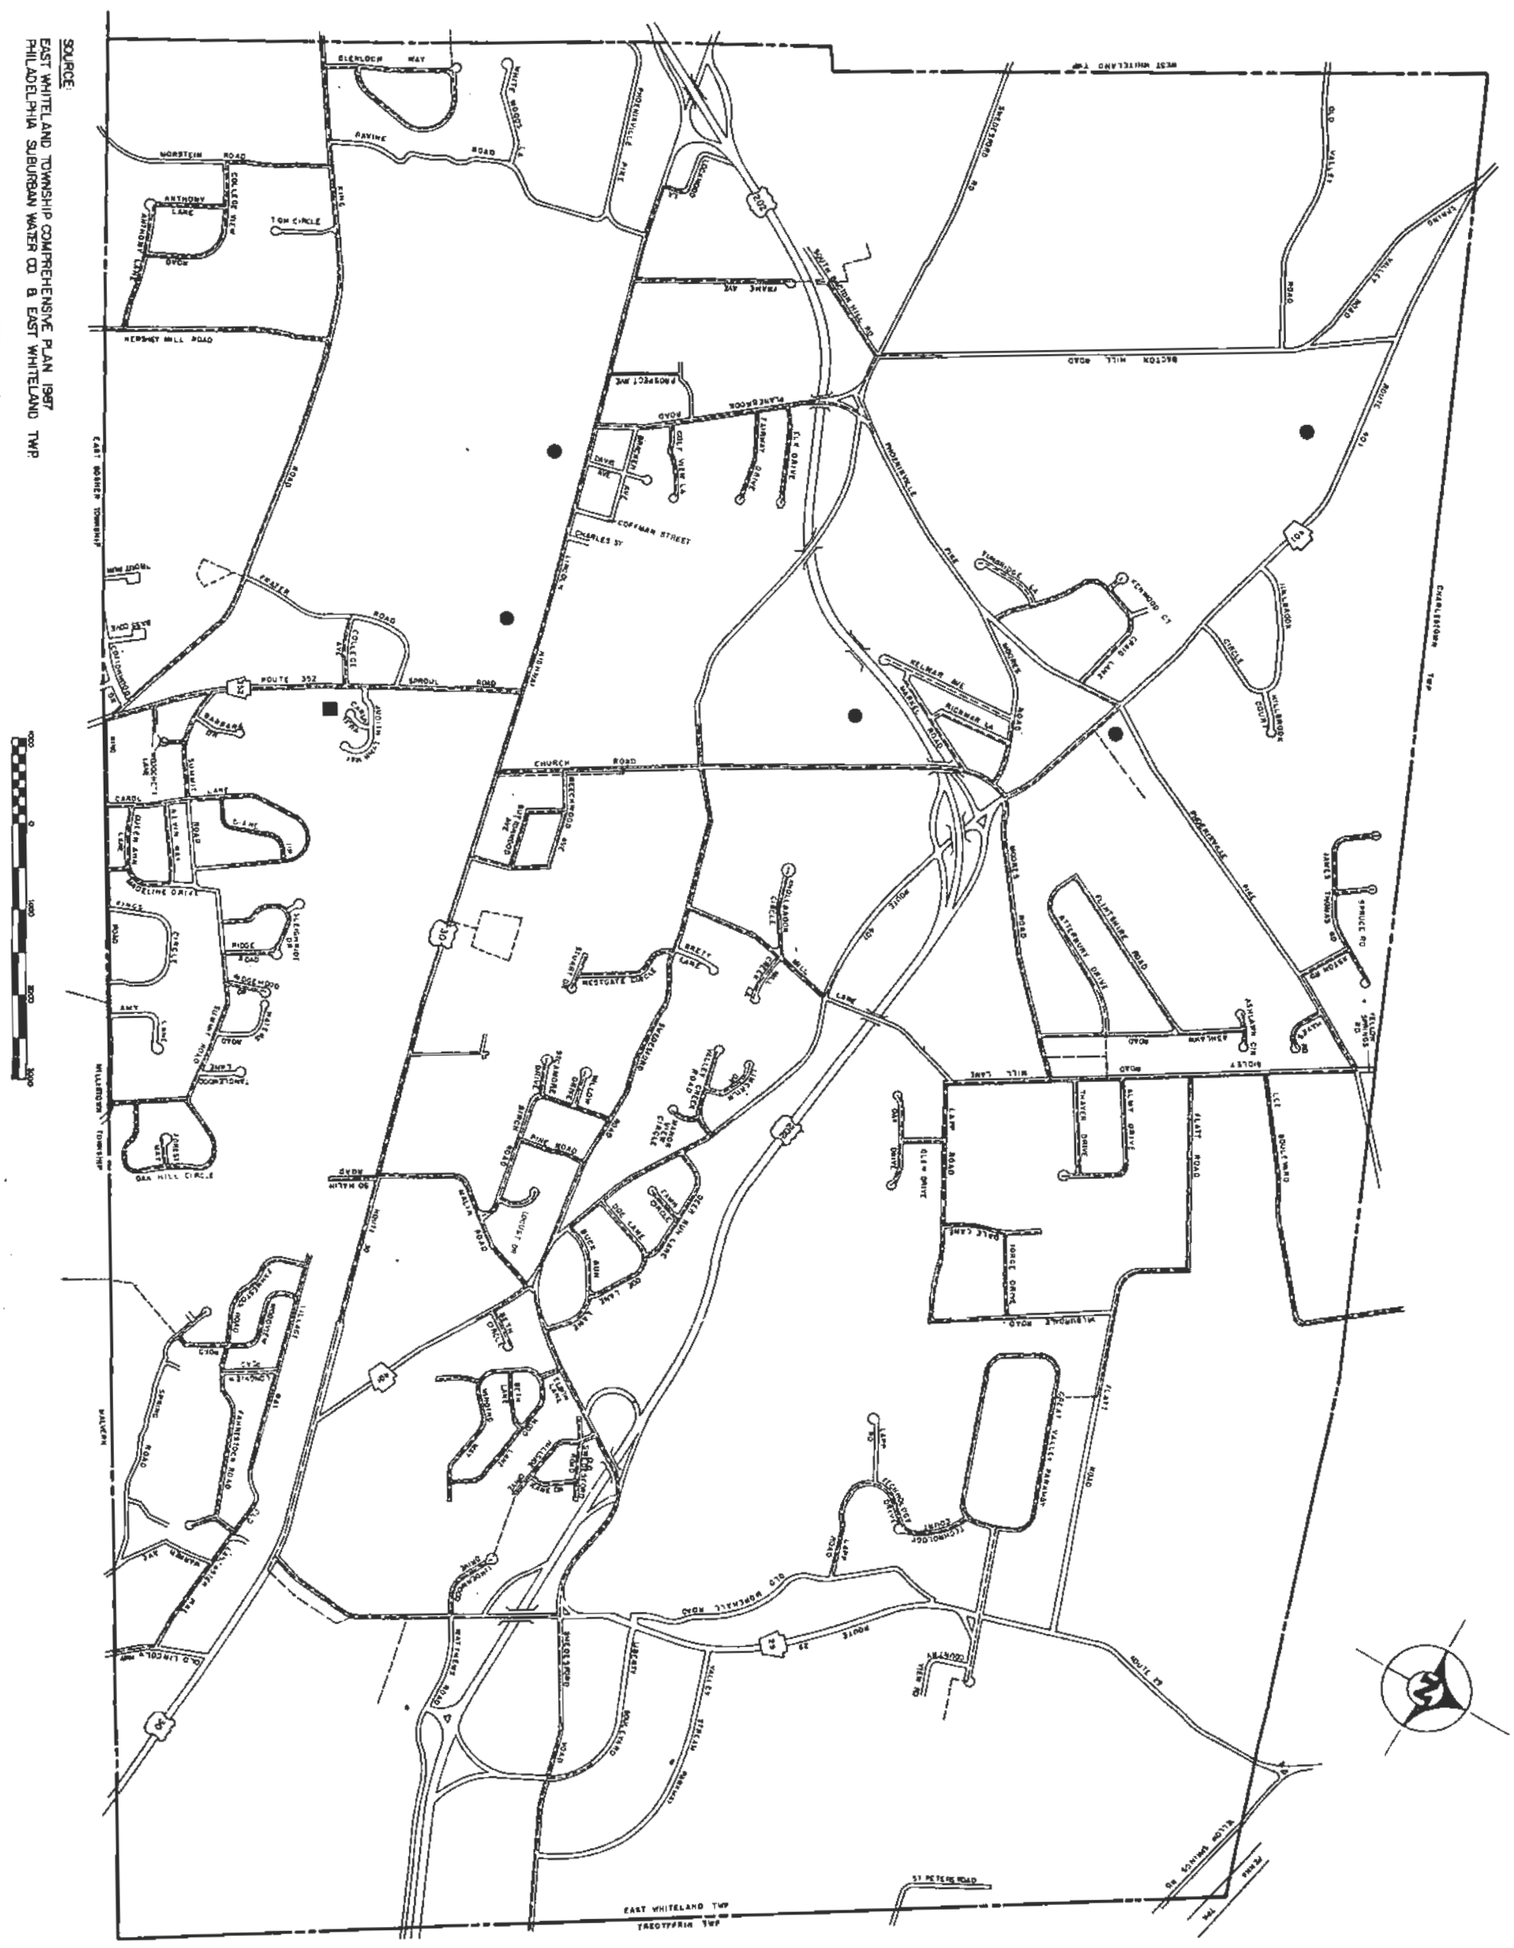
1. East Whiteland Township Comprehensive Plan, 1987
2. Soil Survey for Chester and Delaware Counties, PA, USDA, 1963
3. Title 25 of Pennsylvania Code, Part 1, Subpart C, Chapter 73, Appendix A, 1989

The 1987 East Whiteland Comprehensive Plan generally addresses the suitability of certain soils for on-site sewage disposal. Map 3, Soil Conditions, of the Plan depicts soil conditions according to shallow depth to bedrock, stoniness, and high erosion potential. The residual areas of Map 3 generally correspond with suitability for on-site sewage disposal.

4. Conclusions

Given that much of East Whiteland is already served by public or private community sewer systems and that much of the area remaining is planned for future sewage service, the foregoing soils analysis is important primarily for those limited areas of the Township where on-lot systems are expected to be used either now or in the foreseeable future. This Section combined with other elements of this 537 Plan can help target existing and potential problems with sewage disposal systems. If an area of poor suitability for sewage disposal is targeted for development, then public or private community sewage disposal systems should be a required condition. However, any new public or private community sewage disposal system involving stream discharge shall diffuse the effluent via wetland or marsh areas.

E. Existing Centralized Water Systems



The present water service areas within the Township as shown in Figure 11.

1. Public

Public water supply is provided to East Whiteland Township by the Philadelphia Suburban Water Company. The system has been expanded to include all but the extreme northeast and northwest corners of the Township.

The Philadelphia Suburban Water Company also supplies water to parts of Charlestown, East Goshen, Easttown, Schuylkill, Tredyffrin, and Willistown Townships as well as portions of Delaware and Montgomery Counties. The Water Company has interconnections with the Great Valley Water Company in West Whiteland and the Malvern Water Company to supplement their systems for emergency use.

The Philadelphia Suburban Water Company obtains its water supply from four separate wells and the Pickering Creek. The wells have a cumulative capacity of 5.46 million gallons per day and are located in East Whiteland and Tredyffrin Townships. The actual average daily use of this water supply in 1984 was 3.47 million gallons.

The storage facilities of the Philadelphia Suburban Water Company consist of four tanks located in East Whiteland and Tredyffrin Townships. The four reservoirs have a cumulative storage capacity of 11.46 million gallons.

2. Private

The northwestern corner of the Township and a few other isolated properties rely on individual on-site wells for water supply. The Malvern Court Mobile Home Park is the largest of these individual systems, and includes two private wells.

IV. PROPOSED SEWAGE SERVICES AND CONDITIONS

A. Expected Wastewater Disposal Needs

Most of East Whiteland is within the service area of the VFSA. The current 1990 sewage flows are 1.052 MGD. Based upon the development listed on Table 3 and shown on Figure 7, projected sewage flow is 3.09 MGD. Table 6 displays the future sewage flow projections for each of the Study Areas to beyond 2006. There has been no flow allocated for the landfill and two quarries. Flows are based upon 275 gallons per equivalent dwelling unit (EDU). Resultant flows could be reduced based upon implementation of water consumption reduction devices in new construction.

B. Areas Planned to be Served and Timing of Proposed Service

The areas which are planned for sewage service are closely related to the VFSA service area. The delineation of Study Areas which follows, outlines each of the areas to be served by the VFSA within a specified time frame. These Study Areas are also discussed on Table 6.

The areas not planned for service by 2006 generally include that portion of the Township outside the Schuylkill River watershed. These areas collectively are Study Area 7 and are also not planned for service based upon their potential for providing suitable on-lot methods of wastewater disposal. In Chapter 71 (Refer to Appendix A), Subsection 71.15(a)(1), Requirements to Revise Official Plans, it is stated that "Municipalities shall review their official plans and, if necessary, revise them at least once every five years." Relative to this requirement, the Township, if necessary, can reevaluate their wastewater disposal needs in 1996 and revise this Official Plan as needed.

Table 6

EXPECTED WASTEWATER DISPOSAL NEEDS - FUTURE FLOW PROJECTIONS

1990 Service Area (Study Area 1):

Current Flows:		1.05 MGD
Anticipated Demand[1]:		0.33 MGD
Total Flow Projection:		1.38 MGD Total

1991 to 1996 Projections (Study Area 3):

Anticipated Demand:	813 EDU =	0.22 MGD
Total Year 1996 Flow Projection =		1.60 MGD

1996 to 2001 Projections (Study Area 4):

Anticipated Demand:	700 EDU =	0.19 MGD
Total Year 2001 Flow Projection =		1.79 MGD

2001 to 2006 Projections (Study Area 5):

Anticipated Demand:	1725 EDU =	0.47 MGD
Total Year 2006 Flow Projection =		2.26 MGD

Beyond 2006 Projections (Study Area 6):

Anticipated Demand:	2700 EDU =	0.74 MGD
Total System Demand[2]:	=	3.00 MGD

Alternate Disposal Projections (Study Area 7):[3]

Anticipated Demand:	2680 EDU =	0.79 MGD
Total Township Demand:	=	3.79 MGD

Notes:

1. Anticipated demand includes allowance of 1205 EDU's for all areas within the 1990 Service Area for projects which are either approved and/or under construction, no flow is allocated for the landfill. Flow based on 275 GAL./EDU. Resultant flows could be reduced based on implementation of water consumption reduction devices in new construction.

2. 1990 Service Area anticipated demand includes all areas so noted on Figure 8.

3. All other areas which are noted for alternate disposal include areas outside of drainage basin, areas suitable for on-site disposal, or areas served by private systems.

1. Delineation of Study Areas

To facilitate analysis of the viable wastewater alternative for portions of the Township, it is subdivided into "Study Areas" having similar characteristics and current methods of sewage disposal. The following parameters are utilized in the determination of Study Areas: zoning, existing land use, population growth projections, drainage basins, existing problem areas, and soil types.

The delineated Study Areas are as follows (see Figure 12):

Study Area 1 comprises the 1990 Valley Forge Sewer Authority (VFSA) Service Area within the Township and is designated a study area for that reason. This area encompasses the majority of the Township and contains some of the R-1, R-2, R-3, R-4, LI and GI Zoning Districts and all of the commercial, professional office and RIC Zoning Districts.

Study Area 2 is located along the southern Township boundary east of the King Road and PA Route 352 intersection. This area is zoned R-2 and was selected as a study area because it is within the 1990 Ridley Creek Service Area.

Study Area 3 contains four separate areas which are planned for public sewage service between 1991 and 1996. The three areas are as follows:

Study Area 3A consists of a small area north of U.S. Route 30 at the southeastern corner of the Township. This area is zoned entirely LI and is bounded by Study Area 1 which is served by the VFSA.

Study Area 3B is along Church Road just north of U.S. Route 30. This entire area is zoned R-2 and abuts Study Area 1. The area is comprised of soils which are underlain by limestone.

Study Area 3C is situated south of the Conrail and Amtrak rail lines extending along PA Route 352 to the border with East Goshen. A portion of this area extends west to Ravine Road and is north of the abandoned rail line. Portions of this area contains developments with capped sewer. The northern portion of this area is zoned LI and the balance is zoned R-2.

Study Area 3D is located south of the rail line along the Township's border with Malvern and Willistown. This area is zoned predominantly R-2 with small portions of the north zoned R-3 and LI. While this area is comprised of good soils, there is substantial steep slope prevalent.

Study Area 4 is comprised of two separate areas which are planned for public sewage service between 1996 and 2001. The two areas are as follows:

Study Area 4A is in the central portion of the Township on the north and south side of Swedesford Road east of Church Road. This area is adjacent to Study Area 1 and is zoned entirely R-1. The area consists of soils underlain by limestone.

Study Area 4B is situated in the northwestern portion of the Township along PA Route 401 from the Route 202 interchange to the boundary with Charlestown. This area is zoned almost entirely R-1; the area adjacent to Moores Road is zoned PO-1. This area also abuts Study Area 1 which is served by VFSA. The area contains substantial floodplain, poorly drained and high water table soils as well as soils underlain by limestone.

Study Area 5 consists of two district areas which are planned for public sewage service between 2001 and 2006. The two areas are as follows:

Study Area 5A is located northeast of the Routes 202 and 29 interchange as well as an area extending west along Route 202. This area is surrounded by Study Area 1 and is the site of the former quarry. Much of the soils are made and are underlain by limestone. The majority of this area is zoned R-4, however, the northern portion is zoned GI and the western appendage is zoned R-2.

Study Area 5B is in the western portion of the Township along both sides of Bacton Hill and Planebrook Roads. The southern portion of this area abuts Study Area 1 and is zoned R-2. The northern area is zoned LI. This area contains floodplain, poorly drained and high water table soils and consists predominantly of soils underlain by limestone.

Study Area 6 contains five separate areas which are envisioned to be served by public sewage beyond 2006. The five areas are as follows:

Study Area 6A is located in the northeastern corner of the Township and consists of the two large quarries and the Township's Valley Creek Park. Much of the soils in this area are made land and underlain by limestone. This area is zoned almost entirely GIM; the Township Park is zoned GI.

Study Area 6B is situated in the southern portion of the Township abutting Tredyffrin. This area is

zoned entirely GI and contains soils which are poorly drained and underlain by limestone.

Study Area 6C is along the northern Township boundary between PA Route 401 and Phoenixville Pike. This area is zoned entirely R-1. Portions of this area contains poorly drained soils underlain by limestone and the extreme northern portion is characterized by steep slope.

Study Area 6D is in the west central portion of the Township on both sides of Phoenixville Pike. This area is essentially lands of the Philadelphia Memorial Cemetery and abuts Study Area 1. The area is zoned entirely R-1 and contains poorly drained and high water table soils underlain by limestone.

Study Area 6E is located south of Route 202 west of Church Road. Portions of this area abut Study Area 1. The majority of this area is the Chester Valley Golf Course and is zoned entirely R-1. The area is almost exclusively comprised of soils underlain by limestone and contains some floodplain and high water table soils.

Study Area 7 is comprised of two distinct areas which are planned for alternate methods of sewage disposal. The Study Area is generally outside the Schuylkill River Watershed. The two areas are as follows:

Study Area 7A encompasses the southwest corner of the Township. This area contains Immaculata and Villa Maria and most of the area is within the Ridley Creek Watershed. The area is zoned essentially R-1 with exception of the William Henry Apartments which are zoned R-4. Most of this area is comprised of good soils, however, some pockets of floodplain and high water table soils exist.

Study Area 7B is along the western border of the Township with West Whiteland from Route 202 north to Charlestown. This area essentially within the Valley Creek sub basin of the Brandywine Creek Watershed and is the site of the Valley Crossing proposal. The area contains four zoning districts: R-1 in the north, R-4 in the central, and LI and GI in the south. The area south of Route 202, part of Study Area 1, is the only abutting area with public sewage service. The northern third of this area is comprised of good soils characterized by steep slope, while the remaining two thirds contains soils underlain by limestone with some poorly drained soils.

C. On-Lot Sewage Disposal Maintenance Program

An on-lot sewage disposal maintenance program is envisioned to serve as an interim measure until all areas are served by the public system. The Township could employ several municipally sponsored programs including:

- regular articles on on-lot sewage disposal system maintenance in the Township newsletter
- educational programs through the Code Enforcement Officer, Township Engineer and Township Manager via literature dispersal to applicants for building and/or occupancy permits
- educational programs through the East Whiteland Township Planning Commission including workshops on an annual basis regarding relevant topics of interest to the residents, during which sewage disposal system maintenance can be discussed
- a speakers program with officials and representatives from the County to instruct residents on problems and needs pertaining to maintenance of on-lot disposal systems

For the short term, the Township newsletter will be used as the communication vehicle on the subject, along with direct communication with applicants for building and/or occupancy permits. In addition, the Township will send a questionnaire each year to all residents who utilize on-lot sewage disposal systems to ascertain the state of maintenance for their systems. In the event of problems with malfunctioning systems, a Township representative will respond and assist the residents with the resolution of their problem.

V. EVALUATION

A. Sewage Alternatives Evaluated

The following seven sewage alternatives are those evaluated for the seven Study Areas:

Alternative 1 — The Study Area is presently sewered. No justification for modifying the present configuration of sewers has been found, therefore, only one alternative has been developed. It is envisioned that the present sewer system will accommodate the sewage needs of the Study Area for the foreseeable future, including all existing and potential development activities.

Alternative 2 — This alternative involves connection of the Study Area to the Township Municipal Authority Sewer System. Connection could occur through

the construction of a central sewer main extending through the Study Area.

Alternative 3 — The Study Area presently utilizes on-site disposal practices. This alternative proposes the continued use of on-site disposal for existing and future development in the area.

Alternative 4 — This alternative proposes a central sewer collector system with either surface or subsurface disposal. Such a configuration of sewage facilities is flexible.

Alternative 5 — Using a system of central sewers, this alternative proposed tie-in of new subdivisions in the area to one or more community lagoon and spray irrigation systems for treatment and disposal. Since the location of the prospective spray irrigation sites and the sewer collectors cannot be identified at this time, a map of the alternative is not provided.

Alternative 6 — This alternative proposes the construction of a central sewer system with tie-in to a new tertiary treatment facility with stream discharge which shall be designed based on the following criteria:

a) Sewage collection and treatment facilities will be designed to handle a minimum of one day average daily design detention capacity.

b) Sand filtration that will prohibit any untreated sewage from entering a stream.

c) A treatment process that will meet or exceed the water quality parameters of the existing stream.

d) The effluent discharge shall be drawn from below ground level from holding tanks in order to reduce its temperature.

e) The effluent discharge will be diffused via the existing an/or proposed wetlands where it will be detained within a stream corridor.

f) The effluent will be disinfected with methods other than chlorination.

Alternative 7 — This alternative proposes that the Study Area tie in to sewer system of the adjacent municipality.

B. Sewage Alternatives

Study Area 1

Alternative 1

Description: Study Area 1 is presently sewered. No justification for modifying the present configuration of sewers has been found, therefore, only one alternative has been developed. It is envisioned that the present sewer system will accommodate the sewage needs of the Study Area for the foreseeable future, including all existing and potential development activities.

Study Area 2

Alternative 1

Description: Study Area 2 is presently sewered. No justification for modifying the present configuration of sewers has been found, therefore, only one alternative has been developed. It is envisioned that the present sewer system will accommodate the sewage needs of the Study Area for the foreseeable future, including all existing and potential development activities.

Study Area 3

Alternative 2

Description: This alternative involves connection of Study Area 3 to the East Whiteland Township Municipal Authority Sewer System. Connection could occur through the construction of a central sewer main extending through the Study Area.

Rationale: The alternative is a technically feasible configuration for providing conventional sewers to the Study Area.

Environmental Impacts: The provision of public sewers to this area would result in the export of water.

Development Impacts: The extension of a sewage collector into this Study Area would promote development. The sewering of adjacent parts of Study Area 4 and 7 may also be encouraged.

Comprehensive Plan: The provision of conventional sewers to this area of the municipality is consistent with the Comprehensive Plan.

B. Sewage Alternatives - continued

Estimated Costs: The estimated capital cost of this alternative is $4,500,000.

Alternative 7

Description: This alternative proposes that Study Area 3D tie in to sewers of the Malvern Borough Municipal Authority. The tie-in would occur via a central sewer connector running along Sugartown Road.

Rationale: The alternative is technically feasible and would eliminate the possibility of on-site malfunctions.

Environmental Impacts: Construction of this configuration of sewers would lead to the export of water from the area.

Development Impacts: The extension of a sewer collection would tend to encourage development in Study Area 3D, however, this Study Area is small and bounded by the rail lines on the north.

Comprehensive Plan: The provision of public sewers to this area is inconsistent with the Comprehensive Plan.

Estimated Costs: The estimated capital cost of this alternative is $12,400,000.

Study Area 4

Alternative 2

Description: This alternative involves connection of Study Area 4 to the East Whiteland Township Municipal Authority Sewer System. Connection could occur through the construction of a central sewer main extending through the Study Area.

Rationale: The alternative is a technically feasible configuration for providing conventional sewers to the Study Area.

Environmental Impacts: The provision of public sewers to this area would result in the export of water.

Development Impacts: The extension of a sewage collector into this Study Area would promote development. The sewering of adjacent parts of Study Area 6 and 7 may also be encouraged.

B. Sewage Alternatives - continued

Comprehensive Plan: The provision of conventional sewers to this area of the municipality is consistent with the Comprehensive Plan.

Estimated Costs: The estimated capital cost of this alternative is $5,400,000.

Study Area 5

Alternative 2

Description: This alternative involves connection of Study Area 5 to the East Whiteland Township Municipal Authority Sewer System. Connection could occur through the construction of a central sewer main extending through the Study Area.

Rationale: The alternative is a technically feasible configuration for providing conventional sewers to the Study Area.

Environmental Impact: The provision of public sewers to this area would result in the export of water.

Development Impacts: The extension of a sewage collector into this Study Area would promote development. The sewering of adjacent parts of Study Areas 6 and 7 may also be encouraged.

Comprehensive Plan: The provision of conventional sewers to this area of the municipality is consistent with the Comprehensive Plan.

Estimated Costs: The estimated capital cost of this alternative is $6,200,000.

Study Area 6

Alternative 2

Description: This alternative involves connection of Study Area 6 to the East Whiteland Township Municipal Authority Sewer System. Connection could occur through the construction of a central sewer main extending through the Study Area.

Rationale: The alternative is a technically feasible configuration for providing conventional sewers to the Study Area.

B. Sewage Alternatives - continued

Environmental Impact: The provision of public sewers to this area would result in the export of water.

Development Impacts: The extension of a sewage collector into this Study Area would promote development. The sewering of adjacent parts of Study Area 7 may also be encouraged.

Comprehensive Plan: The provision of conventional sewers to this area of the municipality is consistent with the Comprehensive Plan.

Estimated Costs: The estimated capital cost of this alternative is $14,000,000.

Alternative 3

Description: Portions of Study Area 6 presently utilize on-site disposal practices. Alternative 3 proposes the use of on-site disposal for existing and future development in the area.

Rationale: On-site systems in the area have functioned effectively, and future population densities are expected to remain low. Soils are generally suited to subsurface disposal of wastewater, but Study Area 6 does contain pockets of soils which restrict conventional subsurface disposal.

Environmental Impacts: On-site systems benefit recharge of the groundwater, however, most of this Study Area is underlain by limestone.

Development Impacts: This alternative is not expected to promote development in the Study Area.

Comprehensive Plan: The alternative is consistent with the Comprehensive Plan.

Estimated Costs: There are no public costs associated with this alternative.

Study Area 7

Alternative 3

Description: Study Area 7 presently utilizes on-site disposal practices. Alternative 3 proposes the use of on-site disposal for existing and future development in the area.

B. Sewage Alternatives - continued

Additional Considerations: Lands must be obtained in order to implement this alternative. The surface or subsurface disposal areas must be properly operated and maintained in order to avoid water degradation.

Alternative 5

Description: Using a system of central sewers, this alternative proposes tie-in of new subdivisions in the area to one or more community lagoon and spray irrigation systems for treatment and disposal. Since the location of the prospective spray irrigation sites and the sewer collectors cannot be identified at this time, a map of the alternative is not provided.

Rationale: It is suggested that this alternative may be appropriate to serve neighborhoods in the Study Area where lot averaging or clustering occurs. The configuration of lots in these types of development may cause individual on-site systems to be impractical.

Environmental Impacts: Spray irrigation benefits groundwater recharge. Spray irrigation systems must be properly operated and maintained to avoid possible surface or groundwater degradation. Study Area 7B is the most difficult due to wet soil conditions which severely restrict this type of system.

Development Impacts: Implementation of this alternative may promote clusters of development in the Study Area but is not expected to influence development in other area.

Comprehensive Plan: Spray irrigation systems are consistent with the Comprehensive Plan.

Estimated Costs: The estimated capital cost of this alternative is $9,500,000.

Additional Considerations: Land for the land application site must be obtained in order to implement this alternative.

Alternative 6

Description: This alternative proposes the construction of a central sewer system with tie-in to a new tertiary treatment facility with stream discharge which shall be designed based on the following criteria:

B. Sewage Alternatives - continued

a) Sewage collection and treatment facilities will be designed to handle a minimum of one day average daily design detention capacity.

b) Sand filtration that will prohibit any untreated sewage from entering a stream.

c) A treatment process that will meet or exceed the water quality parameters of the existing stream.

d) The effluent discharge shall be drawn from below ground level from holding tanks in order to reduce its temperature.

e) The effluent discharge will be diffused via the existing and/or proposed wetlands where it will be detained within a stream corridor.

f) The effluent will be disinfected with methods other than chlorination.

Rationale: By having Study Area 7B served by a package treatment facility development requiring public sewer can be serviced and on-site malfunctions in the Study Area would be eliminated. This will not burden the Township's collection system and will not require any additional capacity at VFSA.

Environmental Impacts: Possible surface and groundwater degradation from on-site system malfunctions would be eliminated. Such package treatment facility will provide an effluent equal or better than the existing stream quality which will help support aquatic life during drought periods.

Development Impacts: The construction of a package treatment facility will service development in the Study Area under existing Township zoning since the Township requires public sewer for multi-family developments.

Comprehensive Plan: The Comprehensive Plan is inconsistent with existing zoning and approved land development in the Study Area and has not as yet been amended to conform to existing conditions.

Estimated Costs: The estimated capital cost of this alternative is $9,200,000.

B. Sewage Alternatives - continued

Additional Considerations: Implementation of this alternative would require the appropriate discharge permits from the Department of Environmental Resources.

Alternative 7

Description: This alternative proposes that Study Area 7A tie into the East Goshen Township sewer system. The tie-in would occur via gravity or force main connections to the Ridley Creek Sewage Treatment Plant.

Rationale: The alternative is technically feasible only when the Ridley STP expansion is approved and would eliminate the possibility of on-site malfunctions. The East Goshen Township Act 537 Update of December 1992 includes the connection of Immaculata College and William Henry Apartments to the STP.

Environmental Impacts: Construction of this configuration of sewers would keep water within the Ridley Creek Watershed and prevent degradation of the headwaters of the Ridley Watershed.

Development Impacts: The extension of a sewer collection would tend to encourage development in Study Area 7A, however, this Study Area substantially developed.

Comprehensive Plan: The provision of public sewers to portions of this area is consistent with the Comprehensive Plan.

Estimated Costs: The estimated capital cost of this alternative is $4,000,000.

Alternative 7 - For Study Area 7B

Description: This alternative proposes that portion of Study Area 7B comprising of tracts zoned R-4 (Valley Crossing site limited to proposed 464 single family dwellings) and possibly R-1 may tie into the West Whiteland sewer system. The tie in would occur via gravity or force main connection to the future sewage treatment facility with disposal of effluent by spray irrigation on the adjacent Church Farm School property to be acquired by West Whiteland Township.

B. Sewage Alternatives - continued

Rationale:	The alternative is technically feasible only when the East Whiteland and West Whiteland Townships' 537 Plans, specifically addressing the service area for the proposed sewage treatment plant, is developed and the new sewage treatment with disposal of effluent by spray irrigation is approved.
Environmental Impact:	The development of the proposed sewage treatment plant with disposal of effluent by spray irrigation on the Church Farm School property would keep water within the Brandywine Basin and prevent degradation of the headwaters of the Brandywine Watershed.
Development Impact:	The sewer collection would be limited to the portion of Study Area 7B as described above in East Whiteland Township and the areas of the Church Farm School property in West Whiteland Township and thus the development of the new sewage treatment plant will not encourage development beyond the limit of the study area.
Estimated Costs:	The estimated capital cost will be developed upon updating the joint (East and West Whiteland Townships') 537 Plan which will address the service area of the new sewage treatment plant.

C. Institution Alternatives Necessary to Implement Recommended Official Plan

As the VFSA facility is expanded and upgraded, East Whiteland Township will obtain further sewage capacity.

D. Relationship of the Township's Official Plan to Other Plans

1. Federal

From a conceptual and policy planning standpoint, the COWAMP 208 Plan and this Official Plan relate well to one another. The population forecasts compare favorably as discussed earlier.

From the standpoint of sewer versus non-sewer alternatives for wastewater disposal, the two plans also compare favorably. Centralized treatment is proposed in this Official Plan, where accessible or reasonably accessible. Relative to specific sewer service area delineation, the two plans differ somewhat. In the State's Plan, existing (1978) and proposed (2000) sewer service areas were delineated. The existing sewer service areas were incorrect in that only the Initial Service Area of VFSA was shown. The proposed sewer service areas were delineated without an

understanding of the planning and zoning activities underway in the Township. The discrepancy should not pose any problem, however, the COWAMP 208 Plan Report states, "the COWAMP 208 Plan will provide a general delineation of sewer service area boundaries which will need refinement based on detailed local conditions, this, as well as the scheduling of Sewer Service Areas should be performed by the municipality in cooperation with the County Planning Agency."

An additional concern of COWAMP/208 is the implementation of public education programs and management procedures to ensure that on-lot disposal practices are made environmentally sound. East Whiteland Township has recognized the need for management practices and may implement such practices where necessary.

A final concern of COWAMP/208 as it relates to wastewater management in East Whiteland Township involves stream discharge by non-municipal sewage treatment plants. The stream discharge of the five private package plants are the only points of discharge within East Whiteland Township.

The discharge has been granted a permit by the Pennsylvania Department of Environmental Resources.

2. State

All stream discharges in Pennsylvania must meet certain quality criteria. The criteria are established in the amendments to Title 25, Rules and Regulations, Chapter 93, Water Quality Standards, and are enforced by the Department of Environmental Resources.

3. County

The Official Plan represents a slight departure from the previous 537 Plan, which was the County Master Sewer Plan of 1970. In the 1970 Plan, sewers were proposed for the entire area of the Township except the extreme northwest portion and the southeast corner between the Chester Valley rail line and U.S. Route 30. The 1970 Plan intended to provide public sewers in anticipation that significant development would occur. In general, this plan reflected the prevailing philosophy which favored centralized sewage collection and treatment facilities. This Official Plan reflects an approach favoring a centralized sewage collection system throughout the Township except those areas within the Ridley and Brandywine watersheds.

VI. RECOMMENDATIONS

A. Description

The purpose of this section is to present the selected sewage facilities plan for East Whiteland. The chapter will discuss the relationship of the selected plan to the existing and projected sewage treatment and disposal needs of the Township for the five and ten-year planning horizons.

The Township has chosen to adopt the extension of the VFSA collection lines approach to serve the needs of existing and projected development in Study Areas 1, 3, 4, 5 and 6. Existing and future development in Study Area 2 will utilize the existing public sewage facilities. Study Areas 5 and 6 may be reviewed over the next five years to evaluate the applicability of alternative disposal methods. Study Area 7A and 7B may utilize alternate disposal methods described herein involving on-lot systems and/or treatment facilities subject to further study of these areas.

The Valley Crossing Development, located within Study Area 7B will utilize a package treatment facility as described in Alternative 6 which will discharge effluent into the east branch of Valley Creek, and/or Alternative 7 which will permit the sewer tie-in with West Whiteland Township's sewage treatment plant.

The Chester County Health Department is the designated agency responsible for granting on-site disposal permits and will be retained in its enforcement role. Significant development is anticipated to continue in the Township within the five and ten-year planning horizon. East Whiteland will consider the use of community on-site systems and community lagoon and land application systems within Study Area 7 on a case-by-case basis where otherwise not previously addressed. These types of sewage treatment and disposal facilities will be dealt with as revisions to the Official Sewage Facilities Plan via planning module submission.

B. Rationale for the Selected Sewage Facilities Plan

Extending existing centralized sewer collection lines is considered to be appropriate for most of the Township, principally because of its accessibility and configuration of the sewage service areas as well as the possibility of degrading local streams is eliminated. Although central sewers export water from the service areas, however, an overriding issue is the fact that 72% of the Township is comprised of soils unsuitable for on-lot sewage disposal.

The Township places significant importance on the potential environmental impacts of the various sewage facility alternatives regarding Study Area 7. Alternatives involving the stream discharge of wastewater receive a negative assessment. First, it is Township policy not to degrade the sensitive

headwater areas of the Valley and Ridley Creeks. Second, the export of wastewater through sewage treatment plant stream discharges is perceived as a negative environmental impact, potentially contributing to water shortages.

Community lagoon and spray irrigation systems are viewed favorably in Study Area 7A, even though the development of these systems could involve the construction of central sewage collection lines. This system is appropriate for clustered development patterns and eliminates stream discharges associated with conventional sewage treatment. Groundwater recharge is also a benefit of spray irrigation systems.

The Township also views community subsurface disposal systems favorably in Study Area 7A. Community systems are considered appropriate, where available land for individual on-site disposal systems may be limited. Community systems recharge groundwater and have limited environmental and developmental impacts. Factors which negatively influence spray irrigation and community subsurface disposal systems involve ownership and maintenance responsibility and land availability. Land application and community subsurface disposal systems need to be regularly maintained. If these systems are privately owned and operated, then the Township needs to ensure that the systems are bonded, both for performance and maintenance.

The preliminary approved Valley Crossing Development Plan with 1,474 multi-family dwellings, located within Study Area 7B, if developed, may utilize a package treatment facility as described in Alternative 6 which will discharge effluent into the east branch of Valley Creek. However, if the Valley Crossing tract is developed with 464 single family dwellings, as proposed, then the wastewater from this tract is being considered to be included within the new sewage treatment facility located on the Church Farm School property in West Whiteland Township.

East Whiteland considers private on-site disposal to be an appropriate form of wastewater management for Study Area 7. In areas where on-lot systems perform effectively, it is difficult to justify any change in the configuration of sewage disposal facilities, particularly for low-density development is anticipated for the northern and southern portions of the study area.

C. Five and Ten-Year Planning Horizons

The selected 537 Sewage Facilities Plan satisfies the projected sewer needs of East Whiteland Township for the five and ten-year planning horizons. As discussed earlier, Chapter 71, or Act 208, the Pennsylvania Sewage Facilities Act, requires that the municipality must review this plan and, if necessary, revise it every five years. This mandatory review offers the Township the opportunity to alter the configuration of sewage facilities.

Public sewage collection and disposal facilities will be extended, as the need is determined, to all new development

situated in Study Areas 1, 2, 3, 4, 5 and 6, as indicated on Figure 12, the Sewage Facilities Plan. Study Areas 1, 2 and 3 are to be served by public sewage collection facilities within five years. Study Area 4 is proposed to be served by 2001, while Study Area 5 is to be served by 2006, although Study Area 7 could be served sooner with some alternate disposal method. Study Area 7A has also been considered by neighboring East Goshen Township for inclusion within its sewer system due to its location within the Ridley Creek Watershed. Study Area 7B may utilize a treatment facility as described herein subject to further study, or may be serviced by West Whiteland Township's proposed sewage treatment plant as described herein subject to further study of the area and/or may be served by the public sewage facilities draining to the Valley Forge Sewer Treatment Plant if and when the transmission and treatment facilities could be expanded to accommodate the required estimated sewage flows through year 2006. The extension of public sewers to development in this area is consistent with existing zoning, land use, the configuration of public sewer facilities now available, and population projections for the year 2000.

The major issue regarding future sewage capacity is that while the Valley Forge Sewage Treatment Plant could be expanded and the Township receive its 9.5 mgd, the sewage could not be transported to the plant based upon the existing flow capacity of the Wilson Road Pump Station in adjacent Tredyffrin Township. The current average daily flow capacity of the Wilson Road Pump Station is 2.3 mgd. Until the Wilson Road Pump Station is upgraded to accommodate a potential sewage plant expansion, the Township's policy to serve the study areas indicated in this Plan. If, and when, capacity becomes available, the small private plants that currently exist in East Whiteland will be connected to the Township's system.

On-lot disposal systems will be used to treat and dispose of wastewater in all areas of the Township not specifically referred to above. This configuration of sewage facilities is consistent with the current and projected sewer needs in the Township for the five and ten-year planning horizons. Justification for sewage collection facilities is also found in the nature of the population change in the Township. In addition, the majority of subdivision activity is occurring in the Study Areas proposed for sewage collection facilities.

D. Financing Methods Available

Capital expenditures for sewage facilities in East Whiteland Township may be financed in several different ways. Two sources of financing are: funds raised by the municipality through loans, taxes or assessments; and grants or loans from state and federal agencies. Funding arrangements may be used alone or in combination with each other. This section will explore these two sources of financing capital improvements and will also summarize the role of developers in providing sewage facilities.

EAST WHITELAND TOWNSHIP - ACT 537 PLAN

1. Municipal Funds

There are eight methods commonly employed by municipalities to fund capital improvements. These methods, which involve the use of loans, taxes, or assessments, are summarized below.

a. General Taxation

Municipalities may fund capital improvements on a `pay as you go' basis. Usually, second-class townships such as East Whiteland do not possess a large enough tax base to permit the financing of costly sewage facility capital improvements in this manner.

b. General Obligation Bonds

A municipality may use the taxation power as a pledge to pay the interest and principal to retire a debt incurred for a capital improvement. Rules and regulations specifying the legal procedures for incurring debt in this manner are contained in the Local Government Debt Act. This Act states that there are two types of debt a municipality may incur, electable and non-electable. Each type of debt has different regulations as to the amount which can be borrowed. There is no limit to the amount of debt that a municipality may incur provided a majority of eligible voters give their consent in a referendum. Non-electable debt can, on the other hand, be incurred without voter approval, but the Local Government Debt Act sets specific limits to the amount which can be borrowed. The debt limit for second-class townships such as East Whiteland is set at two hundred fifty percent of the local government borrowing base. The borrowing base is defined as the average annual municipal revenues for the three years prior to the sale of the bonds.

As a means of raising funds, General Obligation Bonds have several benefits. There are security features and standardization for market purposes which lend the General Obligation Bond readily to public sale.

c. Revenue Bonds

Municipalities commonly finance capital improvements by selling revenue bonds. Revenue bonds are financed through fees and service charges as opposed to taxes, as is the case with general obligation bonds. Revenue bonds have some advantages over general obligation bonds. There is no legal debt limit imposed on the amount which can be borrowed and voter approval is not required. Revenue bonds may also be used to finance projects extending beyond municipal boundaries such as

water supply or sewage facility projects. Revenue bonds are normally sold through a municipal authority.

A disadvantage of revenue bonds is that due to the lack of earnings record of the capital improvement, higher interest rates are required as compared to general obligation bonds. Usually, the bond market requires that net revenues exceed the debt service by 20 to 50 percent.

d. Reserve Funds

It is possible for a municipality to fund capital improvements from monies which have been accumulated in reserve funds. Reserve funds can include surplus revenues, proceeds from the sale of capital assets or funds in depreciation reserves. In second-class townships, the proceeds from reserve funds are not likely to be large enough to fund major capital improvement projects.

e. Lease-Purchase

A local government may contract with a private company or authority to construct or obtain a capital improvement. When the improvement is constructed or obtained, it is leased to the local government for a period of time, after which the title is conveyed to the municipality.

f. Special Assessments

Frequently, capital improvements will benefit only a specific area of a municipality. In this instance, a special assessment may be levied on the properties located in the area receiving the capital improvement since it would be inequitable to distribute the cost of the capital improvement among all municipal taxpayers. Unless the capital improvement is inexpensive, it is unlikely that a special assessment can be used to fund the entire cost of the improvement.

g. Assessment Bonds

Capital improvements may be partially or wholly financed through the sale of assessment bonds which are based on assessments levied on properties benefitting from a capital improvement. Assessment bonds are often combined with revenue bonds.

h. Tax Increment Financing

`Front-end funds' for capital improvements can be obtained through tax increment financing. Tax increment bonds are sold on the basis of expected additional tax revenues that will be paid by properties which will

benefit from a proposed capital improvement. Once the capital improvement has been constructed or obtained, the tax increments are placed into a fund to retire the bonds. Tax increment financing is applicable to areas where large scale redevelopment is feasible. This method of finance would not appear to be appropriate for East Whiteland Township.

2. Private Funds

Act 247, Pennsylvania Municipalities Planning Code, Article V, Section 503, grants municipalities the authority to require the provision of sewage facilities in subdivisions. The power vested in Article VII of the Act similarly applies to the provision of sewage facilities in Planned Residential Developments. In addition, the municipality may accept the dedication of open space for public use and maintenance. This would imply that the municipality could negotiate for the dedication of open space which would be used for purposes such as land application of wastewater.

Private funds can be an important consideration in funding sewage facilities. Where development of previously vacant land occurs, it is the general rule that the developer provide sewage facilities. There are instances in East Whiteland Township where developers will bear the cost of providing sewage facilities.

3. Government Subsidies

a. Federal

Environmental Protection Agency Construction Grants for Wastewater Treatment Works. As authorized under Public Law 92-500 - 33 USC, 1281(g)(1), this program of grants by the Environmental Protection Agency is a primary source of funds for the construction of sewage facilities.

Environmental Protection Agency Financing Authority. Public bodies which qualify for the EPA construction grant must still finance a maximum of 15 percent to 25 percent of the cost of the project. The Environmental Financing Authority, created under PL 92-500, 33 USC, 128, provides public bodies a source for marketing bonds in order to finance the non-federal share of wastewater treatment construction costs.

Community Development Block Grants. Block grants, funded by the Department of Housing and Urban Development, are a possible source of monies for sewage facility works. These funds are normally available only after a municipality has unsuccessfully attempted to obtain funds from other federal programs which are specifically directed at funding sewage facilities.

b. State

Department of Environmental Resources. The Department of Environmental Resources offers water pollution control grants totalling two percent of the annual operating and maintenance costs of a sewage treatment facility. This Department also provides a five percent grant to supplement the Environmental Protection Agency construction grants for wastewater treatment works.

4. Summary

The previous discussion has indicated various options available to East Whiteland Township for funding sewage facility capital improvements if desired in the future. It is evident that each option has advantages and disadvantages and that no single type of funding is appropriate for all capital improvements. In order to develop a capital improvement program which makes efficient use of municipal monies, the function of each proposed sewage facility capital improvement must be analyzed.

Sewage facilities can be developed for several different reasons, even though the ultimate objective of each facility, to protect both public health and environment, may be the same. Sewage facilities may be remedial in nature, extending sewers to areas experiencing health hazards from malfunctioning on-lot disposal systems or upgrading facilities which are outdated or are operating beyond the design capacity. Sewage facilities can, on the other hand, be provided as part of a new subdivision. Finally, sewage facilities can be extended to areas where new development would appear both imminent and consistent with municipal policies.

Once the function of the proposed sewage facility capital improvement is defined, those options for funding which appear most appropriate can be isolated. The funding options can be reduced further if the estimated cost of the capital improvement can be determined. The following table summarizes sewage facility capital improvements according to their functions and indicates the types of funding which may be most appropriate in each case.

Table 7

FUNDING ARRANGEMENTS FOR CAPITAL IMPROVEMENTS

Function of the Capital Improvement	Possible Funding Arrangement
Correcting existing problems. Upgrade existing facility. Enlarge existing facility.	Federal and state grants and loans supplemented by municipal funds.
Sewage for new subdivisions or land developments.	Private funds.
Construct sewage facilities for anticipated development. Alter the configuration of existing sewage facilities.	Municipal funds supplemented by federal and state funds.

It is noted that there are specific requirements involved in obtaining federal or state funds. These requirements should be thoroughly investigated before the Township makes any commitments for sewage facility improvements based on securing federal or state monies. Many grant and loan programs receive numerous applications for funds while having only limited resources. Application for a loan or grant does not guarantee approval.

Recycled Paper

Preface

This publication was prepared by the Department of Environmental Resources (Department), Bureau of Water Quality Management, to address the official plan update requirements of Chapter 71 of the Department Rules and Regulations promulgated under the Pennsylvania Sewage Facilities Act. It is written for local government officials, consultants and technical staff. This publication is designed to provide an overview of the sewage facilities planning process and to emphasize the importance of good communication with the Department prior to and during the development of a sewage facilities plan. Although the document is intended to assist local government officials in the development of a comprehensive official sewage facilities plan update, it also will be useful to planners, engineers and other consultants.

Special emphasis has been placed on several key planning elements that are the result of new environmental directives which prompted the 1989 revisions to Chapter 71 of the Department's Rules and Regulations. These elements have been highlighted by including them in some detail in the appendices of this publication.

The document is not intended to serve as a substitute for good professional judgement, and should not be used as such. Furthermore, the document is not intended to be used in place of or as an interpretation of the specific language of Act 537 or the Rules and Regulations adopted under the Act.

ACKNOWLEDGEMENTS

The Sewage Facilities Planning Program staff thanks the Sewage Advisory Committee's Subcommittee on Act 537 Plan Update Procedures, and Gary Metzger, Scott Novatnak, and Phil Zechman of the Department's field office staff for their help in developing this document.

A GUIDE FOR PREPARING ACT 537 UPDATE REVISIONS

The purpose of these guidelines is to provide municipal officials and their consultants with a general description of the Pennsylvania Sewage Facilities Act (Act 537) plan update process and to show how the plan can be used as a tool to resolve existing sewage disposal problems and prevent new problems from occurring. While the Department has both statutory and regulatory authority to require these plans, Act 537 plans are municipal plans which are developed by municipalities and must be implemented by municipalities. For this reason, local municipal officials must be actively involved in the plan update process.

I. Background

Act 537, enacted by the Pennsylvania Legislature in 1966, requires that every municipality in the state develop and maintain an up-to-date sewage facilities plan. The Act establishes the requirements for these plans and allows for reimbursement of up to 50% of the eligible costs incurred in preparing the plans. The first Sewage Facilities Plans prepared under Act 537 ranged in scope from countywide comprehensive sewage facilities plans to plans for specific areas experiencing sewage problems within a municipality.

Since 1966, growth patterns and sewage needs in Pennsylvania's municipalities have been constantly changing. Some municipalities have kept pace with the need for adequate sewage facilities, while others have critical needs for improved public treatment facilities. New land developments have increased pressure for new or expanded public treatment facilities, increased use of on-lot disposal systems and privately-owned treatment facilities, or have caused overloads to existing facilities.

Many municipalities have reacted to these changes by updating their Sewage Facilities Plan several times since the original plan was completed. Sewage facilities plan update revisions have resulted in new or improved wastewater facilities to meet the needs of the municipality. Municipal officials may find it necessary to update their Sewage Facilities Plan because it is out-of-date, not implementable, inconsistent with other municipal planning, or does not provide adequate solutions to resolve existing sewage problems or provide for growth.

Municipalities also may be required to update their Sewage Facilities Plan when the Department determines that the existing plan does not adequately meet the sewage disposal needs of the municipality.

II. Purpose of Sewage Facilities Plans

The main purpose of a municipality's Sewage Facilities Plan is to protect the health, safety, and welfare of the citizens living in the municipality by correcting malfunctioning on-lot septic systems, overloaded treatment plants or sewer lines, and wildcat sewers. The existence of untreated or improperly treated sewage in surface water, on the surface of the ground, or in the groundwater allows disease organisms to reach people through drinking water, through insects or other animals, and through direct contact. The most publicized recent transmissions of disease caused by sewage discharges to drinking water supplies were the numerous Giardia

outbreaks in Pennsylvania. This organism causes severe gastric and intestinal distress. Development and implementation of plans for the sanitary disposal of sewage waste can be very effective in resolving existing problems which threaten the public health in a municipality. Such planning is necessary before funding, permitting and construction of improved sewage treatment and disposal systems can begin.

A less obvious, but equally important purpose of the sewage facilities plan is to prevent future sewage disposal problems from occurring. Where sewage facilities plans are consistent with land use planning, zoning and other municipal planning, municipal officials are able to direct new land development to areas where adequate sewage disposal facilities are available or will be available. Sewer lines can be extended in a planned manner, treatment plants can be expanded as planned, and on-lot systems can be installed in soils suitable for such systems and maintained through municipal sewage management programs. Proper planning can prevent future sewage disposal problems associated with improper or poorly planned new land development and the lack of adequate planning for the long-term operation and maintenance of sewage facilities.

Another critical purpose of the Sewage Facilities Plan is to provide protection for both the groundwater and surface waters of the Commonwealth. All citizens of this Commonwealth are guaranteed clean water by the Pennsylvania Constitution. In carrying out this mandate, the Department uses the Official Sewage Planning requirements of Act 537 to prevent and eliminate pollution of the waters of the Commonwealth by coordinating planning for the sanitary disposal of sewage with a comprehensive program of water quality management.

III. Scope of Sewage Facilities Plans

Sewage Facilities Plans can be simple enough to address the repair, replacement and maintenance of malfunctioning on-lot systems in a small village using local resources, or complex enough to provide a planning basis to obtain funding for the design and construction of a multi-million dollar collection, conveyance and treatment system to serve a city. This flexibility in scope allows the Department and municipality to tailor the plan content to the specific planning needs of the municipality. It also allows expansion of the scope to cover a multi-municipal area under a single plan.

IV. Professional Assistance

It is unusual for a municipality to have the expertise to develop a sewage facilities plan update revision without assistance. It is strongly recommended that municipalities consider obtaining professional assistance, even in the early stages of planning.

Municipalities usually seek professional assistance from a municipal authority, planning agency or consulting firm to prepare an official plan update revision. While many of the planning requirements can be completed successfully by general consultants and planners, a plan being prepared to address improved or new collection, conveyance and treatment facilities requires engineering expertise.

A consulting firm with practical experience in the planning of water and sewer systems has the ability to develop and explore various sewage facilities options, and will develop an implementable sewage facilities plan. The consultant's

function is to prepare sewage facilities plans that meet local, state and federal requirements. The municipality retains, by law, the final decision regarding alternative selection and implementation of the plan.

There are a wide range of capabilities in consulting firms, so a municipality should be very careful in selecting a firm. The typical process for selecting a firm to develop an update revision is as follows:

* Establish a list of qualified consultants. This can be done by calling other municipalities that are familiar with such firms, contacting state associations, or checking with professional societies.

* Invite letters of interest and lists of references from the firms selected.

* Narrow the list to three to five qualified firms and request written proposals from these firms. Proposals should include references from municipalities with similar projects completed by the firm.

* Hold interviews during which the firm will present their qualifications, capabilities and experience so that the community can ask questions about their capabilities.

* Contact municipalities for which firms did similar work and ask if the municipalities were satisfied and had plans approved by the Department.

* Select a firm from those interviewed. Notify all others interviewed of the selection.

As with any business or profession, there is a substantial difference in the quality of consulting services among firms. The best way to investigate an individual firm is to inquire about its reputation and performance on previous projects and with other clients. It is suggested that a community check a firm's references before committing to a contract.

Some funding agencies have their own requirements on selecting a consultant. It is recommended that the municipality check with the funding agency for any specific requirements it may have in selecting a consultant.

The community may either request a proposal containing only qualifications and negotiate a fee after selecting a consultant, or it may request proposals containing fee estimates so that cost may be considered in the selection. If a community requests cost proposals, it should be very careful to compare the kind and quality of work proposed related to the cost.

V. Overview of the Sewage Facilities Planning Process

The sewage facilities planning process involves a number of distinct steps which allow for communication between the municipality and Department during the preparation of the plan.

A. Initiation of the Sewage Facilities Plan Update Process

1. Department Required Update Revision

The Department has the power, through Act 537, to require a municipality to update its Sewage Facilities Plan. The notice from the Department to the municipality includes the reasons for the required update, specific areas of the municipality to be included in the study, the time limit for submitting the proposed plan content, and the deadline for completing the plan. When the Department requires a plan update, specific legal responsibilities fall on the shoulders of municipal officials. (These are briefly discussed in Section V.I.) These responsibilities should be discussed with the Department's staff and/or the municipal solicitor.

2. Municipality-Initiated Plan Updates

Municipalities may initiate an update to their Official Sewage Facilities Plan without being required to prepare a plan update by the Department. This may be done because the municipality has determined that its plan is out of date or does not address the need for new or improved sewage facilities.

B. Meeting with the Department

In either case, before a municipality commits money to prepare a sewage facilities plan update, a meeting or other appropriate contact with the Department's regional office is required. Through this contact, the municipality establishes with the Department, the required content of the sewage facilities plan update. The "Act 537 Plan Content Checklist" in Appendix I is used to establish the specific planning elements which must be included in the plan.

This pre-planning meeting is important for several reasons:

1. Both the municipality and the Department may have specific items they want to have included in the plan. The Department makes the final determination as to minimal plan content.

2. While the municipality may include anything they want in their official sewage plan, only certain specific planning costs are eligible for reimbursement under the 50% planning grant. All of the planning elements which may be eligible for an Act 537 planning grant are listed in the "Act 537 Plan Content Checklist," Appendix I. The Department makes the final determination on the eligibility of a specific planning element for planning cost reimbursement.

3. The Department and the municipality may refine the study areas and establish the level of planning required for each study area where more than one exists.

4. Establishment of the proposed plan content of the plan update will allow the municipal officials to get several proposals for plan

preparation from different consultants. This may result in a reduction in the cost of the plan.

C. Submittal of the Proposed Plan Content with Cost Estimates

A municipality should require its consultant to submit cost estimates for completion of each of the required planning elements (see Appendix I). Because the Department may ultimately be reimbursing the municipality 50% of the cost to the municipality to prepare the sewage facilities plan, it is important (though not required) for the municipal officials to forward the cost estimates from the consultant they selected to prepare the plan update to the Department prior to beginning the plan update. A Task/Activity Report or other cost estimating document may be used for this purpose (see Appendix A).

This report allows the Department to screen out costly or unnecessary activities or planning elements already completed in a previous plan. The municipality should not begin development of the plan update until written concurrence on the proposed plan content is received from the Department.

D. Plan Development

The Department may require completion of the Official Sewage Facilities Plan Update within 120 days of the municipal officials' receipt of a notice to update. When two or more municipalities are developing a joint official plan update, the plan may be prepared by one of the municipalities, and submitted on behalf of the other participating municipalities. The plan must be adopted by resolution of the governing body of each municipality to which it relates.

Municipal officials may assign oversight of the plan development to their planning commission, an ad hoc committee or other group. The municipality also may allow a county or an authority to complete the plan. Plans which are initiated by the municipality without a Department notice to do so have no time restraints for completion of the plan unless a subsequent DER notice sets a time limit. In all of the above cases, timely completion of the plan and the content of the plan remains a municipal responsibility. Appropriate agreements or contracts should be developed prior to delegation of authority to another entity to develop or oversee a plan.

If the municipality cannot complete the plan within the 120-day time limit (if such a time limit has been established), a request for a time extension should be sent to the Department with justification of why the plan cannot be completed. The Department may, at its discretion, allow a time extension.

E. Review and Adoption of the Plan by the Municipality

1. Planning Agency Review

When a draft of the plan is completed, a copy must be sent to the municipal planning agency and area wide or county planning agency and/or county health department for comment. Comments received from any of the preceding agencies must be included with the submission to the Department along with responses to these comments from the municipality. Evidence that the official plan has been before

these agencies for 60 days without comment is sufficient to satisfy this requirement. Also, if no comments on the plan were received or made by the previously-mentioned planning agencies, a statement from the municipality reflecting this fact must accompany the official plan submitted to the Department.

The municipality must assure that all of the consistency requirements are addressed in the plan and that any required letters or documents are attached to the plan. (See Appendix B)

2. Public Notification

Public Notice is required as part of the plan update revision process. The following items must be contained in the notice.

a. Name of project.

b. Type of project (sewer line extension, collection, treatment facility, etc.).

c. User fees (PENNVEST or other federally financed projects only).

d. Location or areas of the municipality impacted.

e. Establishment of a 30-day comment and review period.

f. Where and when the plan can be seen for comment and review, preferably the municipal office.

g. Address of municipal office where comments will be accepted.

All comments, the municipal response to comments and proof of public notice must be submitted to the Department with the Sewage Facilities Plan update. If no comments on the proposed plan are received, a statement, from the municipality, reflecting this fact must accompany the official plan submitted to the Department.

The public notice must appear at least once in a newspaper of general circulation in the legal notice section. The consultant should work closely with the municipality in coordinating the comment period, and the time and location where the plan can be reviewed.

3. Department Review of Draft Plans

The Department may agree to review draft plans to provide direction to the municipality prior to the final plan adoption. This service is dependent upon the availability of staff resources. Contact the regional office to make such a request.

F. Plan Implementation

The Sewage Facilities Act requires complete and timely implementation of the activities described in Sewage Facilities Plans. An implementation schedule is developed which identifies the actions required to carry out the

plan's recommendations and when these actions will be completed. If the municipal officials determine that there are financial, legal or administrative barriers which would prevent this complete and timely implementation, they must have these barriers addressed in the plan before it is adopted. If the plan is determined to be inconsistent with other planning or natural resource protection actions or requirements, these inconsistencies must be resolved (see Appendix B).

Resolution of these inconsistencies may range from scheduling action to correct the inconsistency at some point in the project, to actually obtaining a required permit or completing a mitigation action. If plan implementation requires the passage of ordinances, regulations or the development of agreements, these may be developed as part of the planning process or listed in the implementation schedule for future development.

Completion of the plan occurs when the municipality adopts the plan by resolution (see sample resolutions in Appendix F.) Executing the resolution and adopting the plan acknowledges that the municipality assures that its plan meets the requirements of the Act and that it accepts the content of the plan and its implementation schedule.

The Department will monitor the progress of the municipality in meeting the schedule of implementation in the plan. If the municipality anticipates missing a milestone in the implementation schedule, the municipality should notify the Department and provide an explanation.

G. Review by the Department

Once the plan is adopted, it must be submitted to the Department for review and approval. A complete submittal includes those items listed in the Act 537 Plan Content checklist provided in Appendix I. The completeness and general plan checklist must be completed and submitted with the plan.

The Department normally will review and act upon a complete sewage facilities plan update within 120 days of receipt. If an extension of time is needed, the Department will notify the municipality of the need for an additional 60 days to complete its review. If the plan is disapproved, or incomplete, a letter will be sent by the Department listing the plan's deficiencies and establishing a time limit for resubmission. Major revisions to the previously submitted plan including but not limited to a change to the service area, change in the cost of the project or change in the method or location of disposal may require a new review by the planning agency, another public notice process and a new adoption of the modified plan by the municipal officials prior to resubmittal.

H. Planning Grants

When the Department approves the plan, an application for 50% reimbursement of the cost of plan preparation may be submitted to the Department. An application for requesting this reimbursement is included in Appendix G. The application will be processed and paid as soon as possible.

I. Enforcement Powers of the Department

If a municipality fails to update a Sewage Facilities Plan within the time allowed in the regulations or agreed to at the preplanning meeting with the Department or if the municipality fails to implement a Sewage Facilities Plan according to its implementation schedule, the plan may be placed in a disapproved status from the date of the Department's notice, and some restrictions begin. First, no on-lot sewage disposal system permits may be issued by the municipality in the area where the plan is in disapproved status. These limitations may apply to an entire municipality but usually are limited to a delineated planning area. Limitations on permit issuance are an automatic provision of the law.

In addition, new land development planning modules cannot be approved by the Department in the area where the plan is in a disapproved status. The Department cannot issue permits for sewage facilities which discharge to the waters of the Commonwealth in areas which do not have an approved Sewage Facilities Plan. The plan update revision must be submitted to and approved by the Department before new land development planning or permitting approvals can resume.

The Department may, by Order, restrain the municipality or planning agency from approving subdivision plans or issuing building permits in areas of the municipality for which there is no official plan or where the plan is not being implemented. Where collection, conveyance or treatment facilities are overloaded or projected to be overloaded, the Department or municipality may impose a moratorium on new construction. Finally, the municipality may be subject to legal action or fines where pollution incidents are documented.

J. Cooperation

The sewage facilities planning process works best when a cooperative effort between the Department and municipality exists. Good communication and knowledge of the process are critical to the development of a good plan. This communication begins at the preplanning meeting with the Department.

In most cases, the municipality will have a minimum of 120 days to complete and submit a plan to the Department without penalty. If the municipal officials or the consultant do not think the plan can be completed within 120 days, this should be discussed at the first meeting with the Department and a modified schedule for submittal of the plan should be justified. If, during the development of the plan, it becomes evident that an established deadline will not be met, the municipality should immediately notify the Department and submit justification for an extension of the deadline. This will lessen the potential for imposition of restrictions on development or other penalties.

In addition, the municipality should work with the Department as soon as possible to delineate the area or areas of the municipality which will be studied in the plan update. Establishing these areas will limit the imposition of restrictions on new land development to the study areas and prevent the imposition of restrictions in the entire municipality. The municipality should develop documentation supporting the establishment of delineated study

areas and present this information to the Department as soon as possible after receipt of a notification to develop an update revision.

Timely action by the municipality and Department will reduce the impact of any restrictions on new land development by reducing the time period that the plan is in a disapproved status. Timely action will also resolve public health and environmental problems more quickly, thus protecting the citizens of the municipality.

ords and terms, when used in this chapter, have the s, unless the context clearly indicates otherwise:

nsylvania Sewage Facilities Act (35 P. S. §§ 750.1—

Clean Streams Law—The Clean Streams Law (35 691.1001).

Clean Water Act—The Clean Water Act (33 U. 1376).

Equivalent dwelling unit—For the purpose of deter of lots in a subdivision, that part of a multiple commercial or industrial establishment with flows ec per day.

Large volume onlot sewage system—An individ onlot sewage system with a design capacity to di sewage flows which are in excess of 10,000 gallons pe

Limiting zone—A soil horizon or condition in underlying strata which includes one of the following:

(i) A seasonal high water table, whether pe determined by direct observation of the water tal soil mottling.

(ii) A rock with open joints, fracture or sol masses of loose rock fragments, including grave fine soil to fill the voids between the fragments.

(iii) A rock formation, other stratum or soil co slowly permeable that it effectively limits dow effluent.

Local agency—A municipality (or any combinatio acting cooperatively or jointly under the laws of th county, county department of health or joint cou health.

Lot—A part of a subdivision or a parcel of land site or intended to be used for building purposes, wh future, which would not be further subdivided. Wh for a multiple family dwelling or for commerci industrial purposes, the lot shall be deemed to ha into an equivalent number of single family residentia by estimated sewage flows.

Official plan—A comprehensive plan for the pro sewage systems, adopted by a municipality or muni authority or jurisdiction over the provision of submitted to, and approved by, the Department as p and this part.

Official plan revision—A change in the municipali provide for additional or newly identified or existi needs, which may include but not be limited to:

vision—A comprehensive revision to an existing ired when the Department or municipality determines or its parts is inadequate for the existing or future needs of a municipality or its residents or landown-

for new land development—A revision to a ficial plan resulting from a proposed subdivision as .

tudy—A study, survey, investigation, inquiry, re- r analysis which is directly related to an update dies provide documentation or other support neces- cific problems identified in the update revision.

vidual, association, public or private corporation for- profit, partnership, firm, trust, estate, department, gency of the United States, Commonwealth, political cipality, district, authority or another legal entity l by law as the subject of rights and duties. The term bers of an association, partnership or firm and the agency or municipal, public or private corporation or profit.

-A watertight receptacle which receives and retains gned and constructed to facilitate ultimate disposal of her site. The term includes, but is not limited to, the

toilet—A permanent or portable nonflushing toilet reatment in the retaining tank for odor control.

tank—A tank, whether permanent or temporary, to conveyed by a water carrying system.

Re: East Whiteland Township
Sewage Facilities Plan

Dear Mr. Stinson:

On behalf of East Whiteland Township, we are enclosing herein, an proposed outline for preparing the Act 537 Sewage Facilities Plan for your review and approval.

Based on the work included within the outline, we estimate the cost of the 537 Plan to be $32,750.00.

I would appreciate your earliest response so we can proceed with the project.

Thank you in advance for your cooperation.

Very truly yours,

Surender S. Kohli, P.E.

EAST WHITELAND TOWNSHIP
ACT 537 SEWAGE FACILITIES PLAN

Outline of the Proposed Plan

I. Introduction

- A. Purpose of the Official Act 537 Plan
- B. Content of the Official Act 537 Plan (Summary)
  - 1. Final Plan Recommendations
    - a. Alternatives of Choice
    - b. Service Areas
    - c. Institutional Arrangements
  - 2. Implementation
    - a. Costs
    - b. Funding
    - c. Schedule

II. Background Information

- A. Official Act 537 Plan Context
  - 1. Requirements of the Pennsylvania Sewage Facilities Act.
  - 2. Past Official Plans (including the identification of wastewater planning that has been previously undertaken or is anticipated).
    - a. Master Sewage Plan for Chester County, PA.
    - b. Official Plan Revision by East Whiteland Township.
  - 3. The Institutional Context of the Valley Forge Sewer Authority.

Re: Draft
East Whiteland Township
Act 537 Sewage Facilities Plan

B. Profile of East Whiteland Township

1. General Setting (including all municipal boundaries, sewer authority boundaries, and drainage basins)

2. Population (both existing and projections)

3. Planning and Zoning Overview (involving a comparison and analysis of proposed land used and growth areas with existing sewage facilities and facility planning)

a. Comprehensive Plan of 1987

b. Zoning Ordinance of 1965, as amended

4. Land Development Overview (involving regulations that establish lot sizes predicated on sewage disposal, all approved subdivision/land developments and approximate number of undeveloped lots/units approved within each identified Subdivision/land developments)

III. Existing Sewage Services and Conditions

A. Existing Sewage System

1. Areas presently served (including all components of the system)

2. Permitted capacity (as specified by NPDES or Clean Steams Law Permit)

3. Reserve Capacity (and any agreed allocation of or policy on use of this capacity)

4. Information on the Operation and Maintenance of the Sewage System Components

B. Valley Forge Wastewater Treatment Facility

C. Sewage Disposal Problem Areas

D. Soils Analysis

E. Existing Centralized Water System

Re: Draft
East Whiteland Township
Act 537 Sewage Facilities Plan

IV. Proposed Sewage Services and Conditions

A. Expected Wastewater Disposal Needs (based on population projected and approved subdivision/land development)

B. Areas Planned to be Served

C. Phases of the Proposed Sewage System

V. Evaluation

A. Identify and Analyze Alternatives

1. Collection, conveyance and treatment (including identified service areas and regional wastewater treatment concepts)

B. Evaluation of Each Alternative, based on:

1. Cost of Construction

2. Cost of Financing

3. Cost of On-going Administration

4. Cost of Operation and Maintenance

5. User fees for each Service Area

C. Identify and describe Institutional Alternatives necessary to implement the recommended official plan

VI. Recommendations

A. Designate the Institutional and Technical alternatives of choice that best meets the wastewater treatment needs, based on:

1. Sewage Needs

2. Technical and Administrative Needs

3. Management and Administrative system available

4. Financing Methods Available

5. 5 Year Plan and Growth Areas

6. 10 Year Plan and Growth Areas

Re: 537 Plan Update
East Whiteland
Chester County

Dear Mr. Kohli:

The Task/Activity Report, dated January 26, 1990, has been reviewed. The following additional information is needed.

The revisions to Chapter 71, Administration of Sewage Facilities Planning Program, which went into effect June 10, 1989, impact on minimum plan content. Changes include:

1. Wetlands must be identified. This is a conceptual planning task not to be confused with wetlands delineation, a more detailed permitting task.

2. Information about the source of potable water supplies is required. This will identify potential conflicts between sewage facilities planning and water allocation planning.

3. Operation and maintenance of all public and private sewage facilities must be addressed via an evaluation of alternatives. This prior requirement has been expanded so as to provide for the long-term operation and maintenance through sewage management agencies.

4. The consistency section of the regulations was expanded to require that each alternative be evaluated for consistency with the objectives and policies of additional programs such as wetlands protection.

Surender S. Kohli
April 2, 1990

5. Feasibility evaluations in the alternatives analysis phase of plan preparation are required for facilities scheduled within 5 years or less. Dates for future initiation of feasibility evaluations need to be to be included in the implementation schedule for areas proposing completion of sewage facilities for periods in excess of 5 years.

6. Listing of both the primary and contingency funding sources with documentation that the project sponsor meets eligibility requirements, is needed.

Other areas of the Task/Activity Report which lack certain specificity include:

1. the scale of figures will need to be large enough to allow for easy use.

2. Facility alternatives to evaluate must include land application of effluent generated from the various treatment alternatives, both community and individual type facilities.

3. Alternatives to be considered also need to include the use of non-structural land use planning alternatives.

4. The schedule of implementation will need to be specific in regards to milestone dates for design/construction and funding commitments for each area of need.

5. The delineation of community and individual water supplies is essential relative to concentrated areas of on-lot sewage systems. Given the close proximity of wells and on-lot systems, nitrate nitrogen well water analysis from a representative sampling is required.

Surender S. Kohli
April 2, 1990

Coordination of planning for the western portion of the Township affected by the Churchill subdivision with West Whiteland Township is essential.

If you have any questions please do not hesitate to call.

Very truly yours,

Lee Gemmill

Re: 537 Plan Update
East Whiteland Township
Chester County
Job #88050

Dear Mr. Gemmill:

In response to your letter of April 2, 1990, we have revised our task/activity report for the East Whiteland Township Sewage Facilities Plan. Enclosed for your information is a copy of the revised outline which incorporates the six changes outlined in your letter.

We have noted your concern about the need for specific information in the plan update. Please be assured that the 5 areas noted in your letter will be addressed in our report. Coordination of planning for the area of the Township affected by the proposed Churchill development will be an essential part of our report.

We are proceeding with the project based on the revised outline. Please let us know if you have any other comments as soon as possible. Thank you for your assistance.

Very truly yours,

David R. Fibrello, P.E.
Project Engineer

RE: Act 537 Plan
East Whiteland Township
Chester County

Dear Mr. Fiorello:

The Task/Activity Report submitted 1/26/90 & 4/26/90 on behalf of the East Whiteland Township Board of Supervisors has been reviewed and approved.

During plan preparation you are encouraged to consult with this office, especially upon screening of readily available needs documentation and preliminary screening of alternatives.

Enclosed is a checklist which needs to be completed during plan preparation. Please include a copy with the plan submission.

Proof of payment has been added as part of the Act 537 planning grant application requirements. When convenient please supply your estimate of Act 537 plan preparation cost. This dollar estimate is used by Harrisburg to manage the available funds.

Any questions please call.

Very truly yours,

Lee Gemmill

PUBLIC WORK SESSION

12 September 1991

In Attendance: Chairman, Richard Orlow; Vice Chairman, Russell Smith
Members, Walter Reimann, Paula Kocher, Ronald Knabb
Also, Surender Kohli, Township Engineer
Don Reimenschneider, Township Manager

The following items were discussed in the Public Work Session:

1. Graphic Impressions - Alternative Plans for a Loading Dock
2. Immaculata College - Proposed Library
3. Rubino Estate - Proposed Zoning Amendment (Information was not available; the Applicant will make a presentation at the Public Meeting.)
4. Liberty Square Condominium Owners - Proposed Zoning Amendment
5. Great Valley School District - Lighting at Football Stadium
6. James F. Clark/Linda Reilly - Proposed Residential Subdivision Plan
7. The Commons at Great Valley - Final Subdivision Plan
8. Proposed 537 Plan
9. Proposed Historic Preservation Regulations and Proposed Amendment to Historical Commission Ordinance
10. Other - The Planning Commission discussed the possibility of changing the meeting dates back to Monday nights.

Comments from the Public Work Session meetings will appear in the Minutes of the Public Meeting.

PUBLIC MEETING

17 September 1991

In Attendance: Vice Chairman, Russell Smith
Members, Walt Reimann, Paula Kocher, Ronald Knabb
Also, Surender Kohli, Township Engineer
Don Reimenschneider, Township Manager
Floss Hunt, Township Supervisor

ANNOUNCEMENTS:

The Vice Chairman, Mr. Smith called the meeting to order in the absence of the Chairman. No announcements were made.

AGENDA:

1. Graphic Impressions - Alternative Plans for a Loading Dock
2. Immaculata College - Proposed Library
3. Rubino Estate - Proposed Zoning Amendment
4. Liberty Square Condominium Owners - Proposed Zoning Amendment
5. Great Valley School District - Lighting at Football Stadium
6. James F. Clark/Linda Reilly - Proposed Residential Subdivision
7. The Commons at Great Valley - Final Subdivision Plan
8. Malvern Meeting House
9. Proposed 537 Plan
10. Proposed Historic Preservation Regulations & Proposed Amendment to Historical Commission Ordinance
11. Other

1. GRAPHIC IMPRESSIONS - ALTERNATIVE PLANS FOR A LOADING DOCK

COMMENTS:

Plan SK-1 shows no change from previously rejected plan. Unloading trucks will block right of way.

Plan SK-2 shows enlargement of the building and encroachment into the front yard beyond what is allowed.

Suggestion was made to move truck dock inside building or along North side to avoid encroachment and obstruction.

ENGINEERING COMMENTS.

ACTION:

The Applicant will review Planning Commission comments and resubmit the application.

2. IMMACULATA COLLEGE - PROPOSED LIBRARY

N/Side of Campus, Zoned R-1

COMMENTS:

The Applicant is withdrawing the application which included the West entrance.

Ordinance #1700 B4 requires one parking space per 50 sq. ft. of visitor space. The parking plan needs justification. The following points were made regarding parking requirements:

a. There will be an increase of 100 seats over those in the existing library. Proposed plan will add only 34 additional parking spaces.

b. Existing library facility would be transformed into administrative office.

c. Computer access capability of the library could create additional traffic to the library by the general public, and by high school students, in particular.

d. Expected student use at night cannot be anticipated.

e. Stabilized enrollment is projected by Immaculata - between 1,000 and 1,200 in the Fall semester and into the forseeable future.

f. The major concern is the possibility of overflow parking onto non-parking areas.

The plan will not be considered as a Preliminary/Final Plan unless all criteria are met and zoning issues addressed.

Lighting may not be sufficient. Illumination information that has been furnished by the Applicant on the photometric indicates areas of unacceptable darkness.

a. The primary concern is for safety. Insufficient lighting exists along pathways and in parking areas.

b. Necessary and corrected light level should be indicated on the plan.

The circulation area should be widened to from 22-24 feet in the parking lot.

The Applicant has been granted a Special Exception by the Zoning Hearing Board regarding the height of the building (44½ ft.) This information must be indicated on the plan.

Overall Circulation - Improvements in traffic circulation are necessary. Proposed routing of traffic through the parking lot as indicated represents a clear threat to public safety. Additional King Road access is indicated.

Planning Modules were submitted; copies will be submitted to the Planning Commission. D.E.R. noted a sewage capacity issue. Sewer feasibility is required for approval.

ENGINEERING COMMENTS.

RE: East Whiteland Township - Act 537 Plan Revision

Dear Mr. Stinson:

Pursuant to the Pennsylvania Sewage Facilities Act, 35 P.S. § 750.5(b) and 25 Pa. Code § 71.14, Immaculata College ("College") petitions the Pennsylvania Department of Environmental Resources ("Department") to order East Whiteland Township ("Township") to revise its official sewage plan since the plan is inadequate to meet the sewage disposal needs of the College.

The College avers that it occupies approximately 55 acres of property in the Valley Creek drainage basin in the southwest corner of East Whiteland Township, Chester County, which it leases from The Sisters, Servants of the Immaculate Heart of Mary. The College is located to the north of King Road, east of Ravine Road and west of Route 352. The adjacent properties are mostly residential with the exception of a densely wooded area located to the north of the campus.

At the present time, the Township's official sewage plan makes clear that the Township does not plan on servicing the southwest part of the Township including the College. Moreover, the public sewers do not extend into the immediate area of the College. The College presently treats its wastewater by means of a small sewage treatment plant ("STP") constructed in 1930 which discharges into an unnamed tributary of Valley Creek. Due to the advanced age of the STP and the stringent discharge standards required by NPDES Permit Number PA0050555, there have been compliance problems from time to time in the past. Although it is currently exploring modifications to the existing plant and alternative methods for handling its sewage, the College has established an ultimate goal of eliminating its effluent discharge into Valley Creek altogether and connecting to a public system.

On September 11, 1992, the College, by means of a Sewage Facilities Planning Module prepared by Roy R. Weston, Inc., requested that the Township revise its official plan. The College proposed to the Township that the STP be shut down and that: 1) a pipeline approximately 1,750 feet long be constructed to convey raw wastewater from the College to the nearest public sewer along Route 30 west of the intersection of Route 352 ("Alternative 1"); or 2) the public sewer system be extended so that a pipeline could be constructed to convey raw wastewater to the public sewer at the intersection of Frazer Road and Route 352 ("Alternative 2"). The College is committed to contributing reasonable financial resources to facilitate the construction of sewer lines to the public sewer system. By either Alternative 1 or 2, the wastewater would ultimately be treated at the Valley Forge Treatment Plant. In a letter dated October 23, 1992, James Carr, Chairman of the Township Municipal Authority, denied the College's request, stating that the Township's available capacity at the Valley Forge Treatment Plant had already been expended.

Copies of the College's September 11, 1992 Sewage Facilities Planning Module and the Township's October 23, 1992 response are enclosed. Also enclosed is a copy of NPDES Permit Number PA0050555. As indicated below, a copy of this Petition and its enclosures is being served today upon the Township by regular mail. A courtesy copy is also being sent to its solicitor, Mr. Kelly.

Please contact me if there is any other information that the Department requires on behalf of the College.

Sincerely yours,

David C. Toomey

RE: Township 537 Plan

Dear Mr. Gemmill:

To date, the Township has not received any comments from DER relative to our proposed 537 Plan Update. The document was submitted to your department last year, and revisions to the proposal were sent to you on October 22, 1992.

A status report will be appreciated.

Very truly yours,

J. Donald Reimenschneider

Re: Proposed revisions to the Act 537
Sewage Facilities Base Plan

Dear Mr. Reimenschneider:

The Chester County Planning Commission has completed its review of the above referenced revisions to the Official Sewage Facilities Plan of the township, as required by Act 537, the Pennsylvania Sewage Facilities Act.

It is the understanding of the Commission that the intent of the proposed changes is to protect the recreation facilities and important natural areas in the township from possible sources of water pollution and the negative environmental effects associated with the interbasin transfer of water. The Commission feels that this is an important goal for all of the municipalities in the County, and support your efforts to that end.

This review by Commission consists of two parts. The first part concerns technical issues associated with the proposed revisions which were submitted for review. The second part of the review contains comments relative to other parts of the Official Act 547 Plan of the Township. While these comments are not related to the specific revisions you are proposing, we believe that the submission of policy revisions to the municipal Act 537 plan other than new land development (Subchapter C) opens the entire Plan for comment.

Part 1. Comments on Proposed Revisions to Official Plan

Addition #1 to page 1: This appears to be a statement of policy to protect water quality. For clarification, the word debased (meaning to reduce in quality or value) could be added to the sentence to enhance the overall intent of the revision.

Example: Further, the plan has a major aim of integrating new sewage facilities into the community in ways that will not disrupt or debase other important facilities and amenities such as recreational or important natural areas.

Addition #2 on page 15: This appears to be a statement of policy regarding stream corridors and water quality. It may be more appropriate to place this statement under Purpose of the Official Plan rather than under Background Information. In either place, the wording could be changed slightly to read as a policy statement:

Example: Existing township parks embrace the stream corridors. As such,

stream corridors represent a major amenity to the community which merit special protection.

Addition #3 on page 42: The first sentence of the proposed revision basically outlaws direct stream discharges. Would indirect stream discharges, such as discharge to a wetland or marsh-pond-meadow system be acceptable? In addition, if the intent of the proposed revision is to protect and enhance water quality, then the Official Plan should also address the use of direct stream discharges from package plants serving a single residential dwelling.

The intent of the second sentence of the proposed revision concerning the watershed of origin needs to be made clearer. If the intent is to prevent interbasin transfer of water, then it should be stated that way.

Since much of East Whiteland is served by Philadelphia Suburban Water Company (PSWC), the issue of the watershed of origin becomes very complex. PSWC has multiple sources of water, many of which are outside of the township and the Valley Creek watershed. The watershed of origin would be more obvious if the proposed source of water is something other than the PSWC system.

The Commission believes it to be more appropriate to add a statement, similar to the one which follows, to the Purpose of the Official Plan in the INTRODUCTION along with the other proposed addition:

Example: ...amenities such as recreational or important natural areas. This includes preventing the interbasin transfer of water when the watershed of origin can be clearly determined.

Addition #4 on page 53: What is the definition of a "natural" treatment system? All treatment systems involve some type of "natural" biological processes using different types of bacteria. Do you mean "non-mechanical"? Even systems utilizing settling and aeration ponds usually have some mechanically driven compressors to pump air and oxygen into them. A description of what is meant by a natural treatment system is would help clarify this proposed revision.

Addition #5 on page 59: This part of the Official Plan describes the alternative treatment and disposal approach and the Environmental Impacts of choosing Alternative 6. The proposed revision calls for the construction of a central sewer system with tie-in to a new tertiary treatment facility with no direct stream discharge. As we previously mentioned, water could possibly be exported from the area, depending on its source. The rest of the sentence is not written as a possible impact. A possible rewording of the sentence we suggest is:

Example: Water may possibly be exported from the area, and the direct discharge with chlorination disinfection may adversely impact the Valley Creek or the Ridley Creek headwaters.

Part 2. Comments on East Whiteland Township Act 537 Base Plan

The Commission feels that the township should consider these additional amendments to its Official Sewage Facilities Plan before the proposed revisions are sent to PA DER for their review and action:

Population.

Page 18 of the Sewage Facilities Plan states that the County has projected a year 2000 population of 10,300. With the receipt of the 1990 Census figures, the Commission has re-evaluated the population projection developed during the 1980's. Based on the latest data, we now project the population of the township to be 9,780 by the year 2000. A copy of our Planning Bulletin #45 is enclosed for your reference.

On-Lot Sewage Disposal Maintenance Program.
The Commission continues to believe that an on-lot sewage management program with active municipal participation is an essential component of a sewage facilities plan. Education programs can be an important element in the overall Program, but a Program which requires proof of maintenance is the best way to extend the useful life of the system and help prevent public health hazards from malfunctioning systems. Our Planning Bulletin #42 is enclosed for your reference and consideration.

Study Areas.
Figure 12 which is affixed to the Official Sewage Facilities Plan shows the township divided into 7 different study or sewage areas. Of particular concern to the Commission are the areas designated as study area #7. This study area is divided into two sub-areas, one of which encompasses the western edge of the township (area 7B), and another encompassing the southwest corner of the township (area 7A). While these areas are not contiguous, the analysis of alternatives contained in the Plan evaluates these areas together as a single entity. It is the opinion of the Commission that these two areas should be considered separately and analyzed as separate study areas for the following reasons:

a)There is a geographical separation of these two sub-areas by an area shown to be in the current Valley Forge Service Area.

b)The sub-areas lie in different watersheds.

c)There are different land use and sewage facility issues in the two sub-areas which should be addressed and alternative sewage facilities options should be examined for all existing and proposed land developments within the sub-areas.

d)The potential for interbasin transfer of water to which the township has indicated its opposition.

In light of the fact that the Valley Creek is now being considered for special protection under the "Exceptional Value" status, there is the potential that PA DER would not issue a permit for a direct stream discharge from a new wastewater treatment plant in the watershed. It remains the responsibility of the townahip to continue to assess the sewage facilities needs of all current and future citizens and to identify and examine possible alternatives. The process of identifying, evaluating and selecting the best alternative for these areas would be accomplished more readily if the two sub-groups in Study Area #7 are separated into individual study areas.

If you have any questions regarding this review, please call me at 344-6285.

Very truly yours,

George W. Fasic

Re: Act 537 Plan Update - Draft Act 537
Request for Review
East Whiteland Township
Chester County

Dear Mr. Reimenschneider:

On September 16, 1991, October 26, 1992, and February 16, 1993 this office received your draft Official Sewage Facilities Plan Update of East Whiteland Township, Chester County, entitled Official Plan under the Pennsylvania Sewage Facilities Act (P.L. 1535, No. 537), as prepared by Kohli and Associates, Inc., dated August 12, 1991 and revised October 22, 1992. This plan is being submitted to this Department in accordance with the provisions set forth by Section 5 of the Pennsylvania Sewage Facilities Act and Chapter 71, the Administration of Sewage Facilities Program.

A preliminary review has indicated that the draft plan update is not in accordance with the provisions set forth in Chapter 71 for the following reasons:

First, you are hereby advised that this review is consultative only and not official. Also, this review is not a final action by the Department.

Second, there are several "paper items" which are missing from the submission. These items, listed below, must be provided when the "official" document is submitted to the Department.

The missing items include:

1. East Whiteland Township Planning Commission comments;

2. Chester County Health Department comments;

3. Proof of publication in a local newspaper;

8. On page 46, reference is made to Chapter 71 as being found in Appendix B. Appendix B is missing, however, an unofficial copy of Chapter 71 was found in Appendix A. Enclosed is an official copy of Chapter 71.

9. On page 47, Table 6, uses footnotes to clarify items in the table; however, notes 1 and 4 do not have a corresponding table item. Please clarify.

10. On page 48, the subsection "Delineation of Study Areas" references Figure 14; however, Figure 14 is missing. The "List of Figures" found in the Table of Contents ends with Figure 12. These items must be addressed.

11. On pages 53 thru 59, under the sub-heading "Sewage Alternatives", the criteria used in the evaluation are not the same criteria outlined in the original plan-of-study;

12. On page 53, the sub-heading "Sewage Alternatives" is missing a letter designation. It appears that it should be designated "B" when comparing it to the original plan-of-study outline.

13. On page 60, the sub-heading "Institutional Alternatives Necessary to Implement the Recommended Official Plan" should be designated "C", because of comment No. 1 above;

14. On page 60, the sub-heading "Relationship of the Township's Official Plan to Other Plans" should be designated "D" because of comments No. 1 and No. 2 above;

15. In between pages 61 and 62 are portions of pages numbered A-6 thru A-13 which appear to belong to Appendix A, which is an out-of-date copy of the Pennsylvania Sewage Facilities Act. Enclosed is the most recent version of Act 537 for your use;

16. The sub-headings "Description" on page 61 and "Rationale for the Selected Sewage Facilities Plan" on page 62 are not the same sub-headings used in the original plan-of-study;

17. The sub-headings found under the "Recommendations" section use letters A thru C, whereas the original plan-of-study used numbers in designating the sub-headings;

MAR 2 3 1983

If you have any questions concerning this advisory review, please feel free to contact me.

Very truly yours,

JOHN M. VENEZIALE

Re: Private Request to Revise Official Sewage Facilities Plan Immaculata College
East Whiteland Township
Chester County

Dear Mr. Veneziale:

Per your letter dated January 19, 1993, and as required by Chapter 71, Section 71.14(d), the Chester County Planning Commission is submitting the following comments concerning the above captioned Private Request.

Upon review of the information supplied to you by the College, it is our understanding that East Whiteland Township has denied the request from Immaculata College to revise the Official Sewage Facilities Plan (Official Plan) of the Township to provide public sewage facilities to the College. The proposed plan revision would allow the College to connect to these facilities for the purposes of eliminating its own outdated wastewater treatment plant and associated discharge to an unnamed tributary of the Valley Creek.

We believe that it would be in the best interest of all of the people who work and live in East Whiteland if the Township and the College were to work together to choose the best course of action that will provide for the long term sewerage needs of the College. By working together to revise the Official Plan, alternative methods can be examined, and the most environmentally and financially responsible plan can be selected.

The Planning Commission supports the Private Request of Immaculata College to have the Township help them provide for their sewage facilities needs by revising the Official Plan of the Township.

If you have any questions, please feel free to contact me.

Very truly yours,

George W. Fasic
Secretary

Re: Proposed Revisions to the Act 537
Official Sewage Facilities Plan

Dear Mr. Reimenschneider:

The Chester County Planning Commission has completed its review of the above referenced revisions to the Official Sewage Facilities Plan (Official Plan) of the Township, as required by Act 537, the Pennsylvania Sewage Facilities Act.

The changes you have made blend into the current version of the document very well. Table 3, now entitled LAND DEVELOPMENT IN EAST WHITELAND TOWNSHIP SINCE 1987 TO JANUARY 1991, could be updated to include all land development projects proposed or under construction through January of 1993.

Our review of materials recently submitted by the Department of Environmental Resources concerning Immaculata College finds that the current version of the Official Plan does not adequately address the past, present and future status of non-municipal sewage treatment and disposal systems in the Township. There is mention of the five privately owned package plants that currently exist in the Township, but these systems are not indicated on any of the maps contained in the Official Plan, and discussion is inadequate as to how these systems relate to, or could be integrated with, the sewerage needs of all who work and live in the Township. These relationships should be explored through the consideration of various institutional alternatives necessary to implement recommendations in the Official Plan (paragraph B. on page 60). The Official Plan should provide for institutional and management arrangements in which the Township becomes involved in the design, construction and operation of privately owned sewage facilities. An individual on-lot sewage disposal management program is one possible institutional arrangement. As a reference, we are enclosing the chapter on Wastewater System Management from the West Vincent Township official plan.

The Commission feels that by incorporating similar new management provisions in its Official Plan, the Township will be more responsive to the sewage facility needs of everyone in the community.

If you have any questions regarding this review, please call me at 344-6285.

Very truly yours,

George W. Fasic

RE: Act 537 Plan Update

Dear Mr. Stinson:

By letter dated March 24, 1993, John Veneziale provided comments concerning the Township's Act 537 Plan Update.

Mr. Veneziale advised us that the review was consultative only and not official.

Surender Kohli, Township Engineer, is including the revisions suggested by your department in the Plan Update.

Should the revised document be sent to you for official review before or after it is adopted by the Board of Supervisors?

Your advice will be appreciated.

Very truly yours,

J. Donald Reimenschneider
Township Manager

Richard D. Orlow
Anne Brown
Erik Hetzel

PUBLIC MEETING

March 23, 1994

In Attendance: Chairman, Ronald A. Knabb, Vice Chairman, Paula Kocher
Members: Walter Reimann; Erik Hetzel, Richard D. Orlow
Township Engineer: Surender Kohli

Agenda:

1. Reorganization of Planning Commission
2. McCoy Cockerham
3. Hudson Oil Company Property
4. Parcel XXXVIII G.V.C.C. West
5. Other Business
   A. Proposed Parking Regulations
   B. Schedule Meeting and Interview Applicants
   C. Miscellaneous

1. McCoy Cockerham

Description:
Located on the west side of Planebrook Road., near Route 202 & Frame Avenue. Zoned C & R2, Residential District. Sketch Plan.

Proposed:
Reconfigured 3 lot subdivision and proposed construction of a building within the commercial district. Several variances would be required as a result of the proposed (self imposed).

Comments:
The Planning Commission advised that it could not support this variance requests. The applicant will resubmit to subdivide into two parcels with north parcel having access to Planebrook Road.

Action:
Applicant will withdraw application and resubmit later.

2. Hudson Oil Company

Description:
Route 30, next to laundromat, Zoned C2

Proposed:
Proposed one story bank building

Comments:
Nonconforming lot. Applicant meets set-back requirements and layout, except proposal indicates paving within 1/2 of the front yard set-back. Need attention to detail of traffic flow, and frontage along Route 30. Suggested revision to circulation patterns moving building to west, drive-up to west end, parking to east end.

Action:
Suggested revision to plan and resubmit as sketch. Submit drawing to show Route 30 frontage from shopping center to laundromat.

3. Parcel XXXVII G.V.C.C. West

Description:
Technology Drive, Lapp Road, north east corner

Proposed:
Plans for 2 story research office facility, 28,000 sq. ft. per floor.

3. Parcel XXXVIII G.V.C.C. West Continued

Proposed:
1-8 tenants, multi tenant lab building. Bio med, bio tech. Access grade level, to south, access upper level, to north.

Comments:
Advised that zoning does not permit parking in front yard. Planning Commission feels that building can be sited to the south along Lapp Road, with the parking to the north, accessing the upper floor. The Planning Commission cannot support the variance but suggested that relief may be received from the Zoning Board. Further the applicant was advised that, to date, the original road bed of Lapp Road has not been legally abandoned.

Action:
Applicant is to resubmit a redesign if he wishes to pursue the plans.

4. Reorganization of Planning Commission

Ronald A. Knabb was elected Chairman and
Paula Kocher Vice Chairman

5. A. Proposed Parking Regulations

Richard Orlow submitted an updated draft. Planning Commission reviewed and commented on regulations, up to Landscaping and will resume at next workshop meeting.

5. B. Schedule Meeting and Interview Applicants

Four applicantions have been received and interviews will be scheduled for March 31, 1994.

1. Alice Maloney
2. Dean McGowan
3. Gary Samms
4. Charles Bernhardt III

5. C. Miscellaneous

537 Plan
The Planning Commission reviewed the updated 537 Plan as proposed by the township engineer. It was noted that the plan contained comments by the Chester County Planning Commission and the D.E.R. Accordingly, the Planning Commission recommended approval of the updated 537 Plan as dated February 16, 1994.

5. C. Miscellaneous Continued

Charleston Oaks
Planning Commission recommended approval and directed the chairman to sign the proposed planning module, illustrating the extension of a 50' sewer line into East Whiteland Township.

Ms. Kocher abstained from participation in the discussion.

Meeting Adjourned at 9:45

Respectfully Submitted,

Ronald A. Knabb, Chairman

Frazer, PA 19355

Re: Act 537 Plan Update
East Whiteland Township
Chester County

Dear Mr. Reimenscheider:

We have completed our review of your municipality's updated official sewage facilities plan entitled "East Whiteland Township Act 537 Plan" as prepared by Kohli and Associates, Inc., last revised May 2, 1995. The review was conducted in accordance with the provisions of the Pennsylvania Sewage Facilities Act.

Approval of the Plan is hereby granted.

The Plan provides for the:

1. Expansion of the sewer service area tributary to the Valley Forge Sewer Authority Wastewater Treatment Facility. As shown on Figure 12 of the plan, Study Areas 1-1990 Valley Forge Sewer Authority Service Area, 3-1991-1996 Valley Forge Sewer Authority Service Area, 4-1996-2001 Valley Forge Sewer Authority Service Area, 5-2001-2006 Valley Forge Sewer Authority Service Area, and 6-Beyond 2006 Valley Forge Sewer Authority Service Area are designated as the sewer service area tributary to Valley Forge Sewer Authority Wastewater Treatment Plant. The sewer service area expansion will require an additional 1.96 MGD average annual capacity for a total of 3.01 MGD average annual capacity at the Valley Forge Sewer Authority Wastewater Treatment Plant. To provide for the anticipated future needs of the sewer service area tributary to the Valley Forge Sewer Authority Wastewater Treatment Facility, further planning is required to acquire additional capacity in the Wilson Road Pump station and Force Main.

2. Continued service of Study Area 2-1990 Ridley Creek Service Area, as shown on Figure 12, by the East Goshen Township Ridley Creek Wastewater Treatment Plant.

3. Future evaluation of Study Areas 5 and 6 for applicability of alternative disposal methods.

4. Study area 7a may utilize alternate disposal methods involving on-lot systems and/or treatment facilities subject to further study of the area.

5. Study area 7b may be serviced by West Whiteland Township's proposed Spray Irrigation sewage treatment plant subject to further planning by West Whiteland and East Whiteland Township. If Study Area 7B can not be served by the proposed West Whiteland system, then the alternatives available to service the area including construction of a new treatment facility and service by Valley Forge Sewer Authority Wastewater Treatment Facility will be further studied.

6. An on-lot sewage management maintenance program of public education through the township newsletter.

If you have any questions regarding this matter, please feel free to contact me at the above number.

Sincerely,

Joseph A. Feola
Regional Manager
Water Management

Resolution for Township Adoption

EAST WHITELAND TOWNSHIP

CHESTER COUNTY, PENNSYLVANIA

RESOLUTION NO. 19-95

A RESOLUTION ADOPTING THE "OFFICIAL PLAN UNDER THE PENNSYLVANIA SEWAGE FACILITIES ACT" (ACT 537 PLAN)

WHEREAS, East Whiteland Township is a member of the Valley Forge Sewer Authority, and

WHEREAS, East Whiteland Township entered into certain Sewage Facility Grant Agreements with the U. S. Environmental Protection Agency (EPA), and agreed to prepare a local sewer plan for the Township as required by Section 5 of the Pennsylvania Sewage Facilities Act, 35 P.S. Section 750.5, and

WHEREAS, the Pennsylvania Department of Environmental Resources, the Chester County Health Department, and the Chester County Planning Commission have reviewed and commented on the Act 537 Plan, and

NOW, THEREFORE, BE IT RESOLVED that the Board of Supervisors of East Whiteland Township adopt the "Official Plan Under the Pennsylvania Facilities Act" (Act 537 Plan) as amended.

BE IT FURTHER RESOLVED that said local sewer plan be implemented by East Whiteland Township to control future sewage disposal systems in the Township in conjunction with the Pennsylvania Department of Environmental Resources, the Valley Forge Sewer Authority, the Chester County Health Department, and the East Whiteland Township Municipal Authority.

ADOPTED this 12th day of June, 1995.

BOARD OF SUPERVISORS
EAST WHITELAND TOWNSHIP

Glenn H. Cockerham, Chairman

ATTEST:

Charles C. DiSipio

Township Secretary

Stuart Levin

APPENDIX D

SOILS PROFILES

Soil Group A

BRANDYWINE - The Brandywine soils are well-drained soils which have developed over gneiss and pegmatite. The topsoil is grayish-brown while the subsoil is yellow to brown. The Brandywine soils tend to be dry and are characterized by their extremely thin B horizon. Generally, these soils are suitable for on-lot sewage disposal.

EDGEMONT - The Edgemont soils are moderately deep well-drained soils of the upland. These soils have developed mainly over quartz schist and quartzite. The topsoil is a dark grayish brown loam while the subsoil is a yellowish brown or strong brown loam to silty clay loam. The Edgemont soils have been found on occasion by the Department to be mottled but are generally suitable for standard subsurface sewage disposal systems.

GLENELG CHANNERY SILT LOAM - This soil is a moderately deep well-drained soil of the upland. The soils have developed over granite, gneiss and mica schist and have a brown topsoil and strong brown subsoil. The Glenelgs generally are suitable for standard subsurface sewage systems.

MANOR LOAM - The Manor Loam soils are shallow well-drained soils of the upland. The Manor Loams have developed primarily over mica, schist and gneiss. They have a dark brown surface layer while the subsoil is yellowish-red to yellowish-brown. Quite often the Manor Loams have a greasy feel due to the abundance of mica in the soil. Except in areas where the subsoil is extremely stony, the Manor Loams are generally suitable for conventional on-lot sewage disposal systems.

Soil Group B

CONESTOGA - The Conestoga series consists of deep well-drained soils of the uplands. The soils develop from calciferous schist, micaceous limestone or marble. The surface layer is dark brown silty loam. The subsoil is dark yellowish-brown or yellowish-brown silty clay loam. The Conestoga series have been found on occasion by this Department to be unsuitable for standard subsurface sewage disposal systems due to high hazard of groundwater pollution through limestone solution channels.

HAGERSTOWN - The Hagerstown series consists of deep well-drained soils that are underlain by limestone. The surface layer is dark brown silt loam. The subsoil, a strong brown silty clay loam, has limestone fragments scattered through it. The subsoil is blocky and prismatic in structure. The soil is underlain by yellowish-red silty clay loam that contains partially weathered fragments of quartz and limestone. The Hagerstown series have been found on occasion by this Department to be unsuitable for standard subsurface sewage disposal system due to high hazard of groundwater pollution through limestone solution channels.

HOLLINGER SILT LOAM - This is a deep well-drained soil of uplands. It is very similar to the Hagerstown soil but is somewhat shallowed to bedrock. In some places, it is underlain by dolomitic limestone instead of calcareous schist.

Soil Group D

CHEWACLA - The Chewacla soils are deep, moderately well-drained soils of the flood plains. These soils consist of alluvial deposits washed from upland soils. The parent materials were mainly gneiss, schist, quartzite, anorthosite and quartz monzonite. Being flood plain soils, these soils are unsuitable for on-lot sewage disposal.

CONGAREE - The Congaree Silt Loam is a deep, well-drained soil of flood plains. It is generally located along streams and is subject to occasional flooding. It is unsuitable for on-lot sewage disposal.

LINDSIDE - The Lindside series consists of deep, moderately well-drained soils on flood plains. The soils formed in sediments washed from areas underlain by limestone. The surface layer of these soils is very dark grayish brown. The subsurface is brown or yellow red and is mottled with light brown or gray. Due to a high flooding hazard, this soil is not suitable for any subsurface disposal.

MELVIN - The Melvin series consists of deep poorly-drained soils of flood plains. Their surface layers are dark gray while their subsoils are light brownish gray to dark yellowish gray mottled silty clay loams. The Melvin soils are found near streams that drain areas of Hagerstown and Conestoga soils. As flood plain soils, the Melvin series is unsuitable for subsurface sewage disposal.

WEHADKEE - The Wehadkee series consists of deep poorly drained soils on flood plains. The soils generally have formed from material washed from upland soils underlain by schist, gneiss, quartite, anorthosite, quartz, monzonite and granite. Being flood plain soils, these soils are unsuitable for any on-lot disposal.

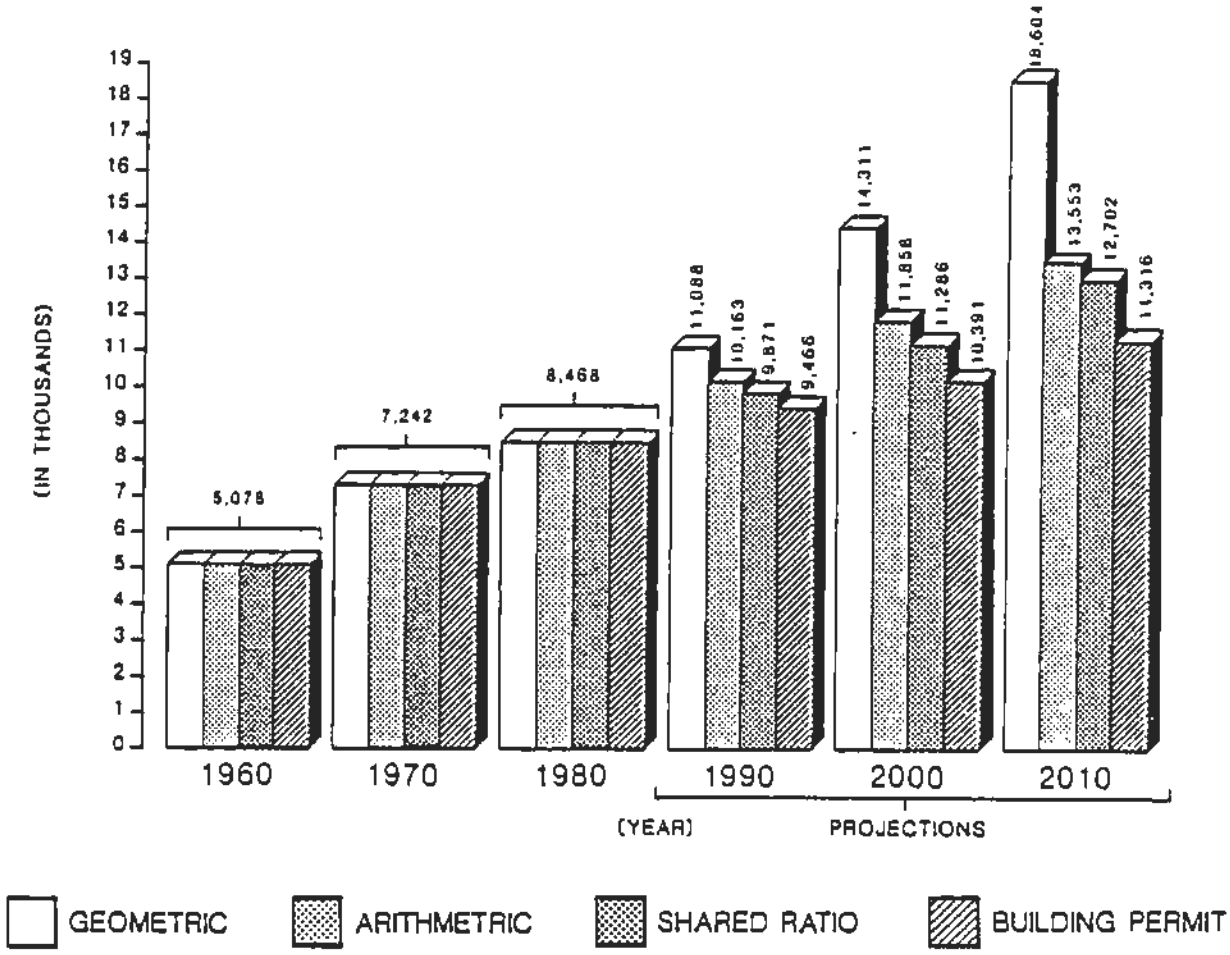
Soil Group E

BEDFORD - The Bedford series consists of deep, moderately well-drained soils. The soils are underlain by marble and other lime-bearing rock. The surface layer is grayish brown silt loam, and the subsoil is yellowish brown, light silty clay loam. Faint mottling is generally found at a depth of 28 to 32 inches. Due to shallow depth to water table, the Bedford soils are generally suitable for only elevated sand mounds.

GLENVILLE - The Glenville soils are deep moderately well-drained to somewhat poorly drained soils of the upland. These soils have developed mainly over granite, schist and gneiss. The topsoil is a very dark brown to dark grayish brown silt loam, while the subsoils are yellowish-brown to strong brown mottled silty clay loam to heavy silt loam. Due to the shallow depth of the water tables, the Glenville soils are generally suitable for only elevated sand mounds.

Soil Group F

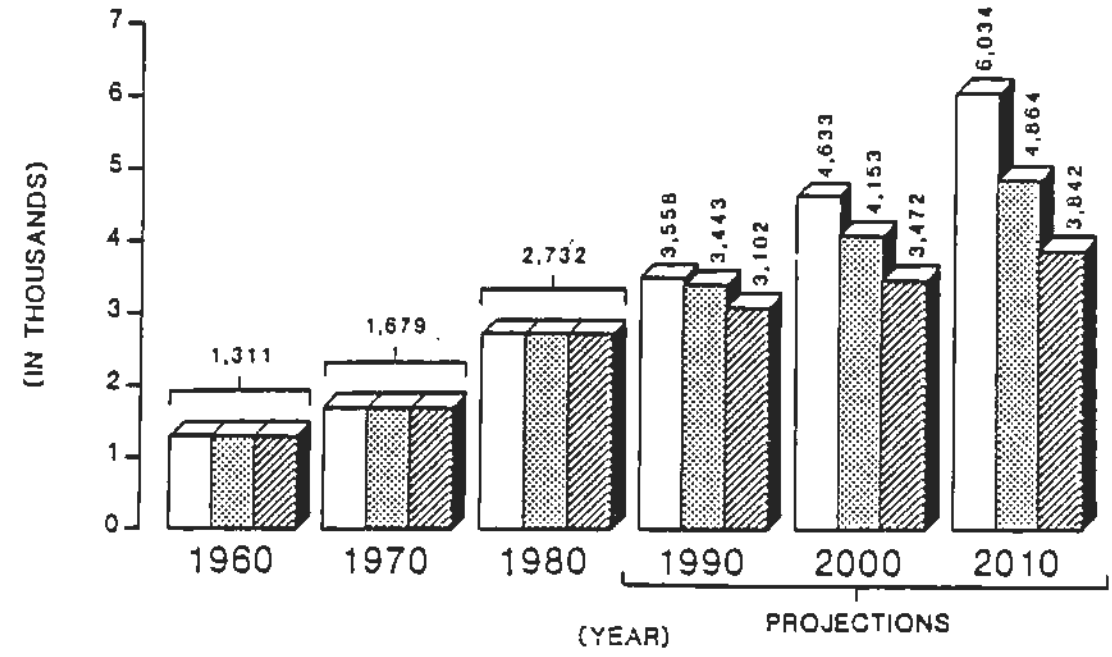
CROTON - The Croton series consists of poorly drained soils of the uplands. The soils are underlain by triassic red and gray shale and sandstone. These soils have a surface layer of dark brown silt loam that is mottled with gray. The subsoil is a mottled yellow brown and red brown silty clay loam. The claypan occurs generally at a depth between 15 and 22 inches. This claypan keeps the subsoil waterlogged much of the time. Due to this high water table, this soil series is unsuitable for any subsurface disposal systems.



GUTHRIE - The Guthrie series consists of deep, poorly drained soils on limestone or calcareous schist. The surface layer is very dark gray silt loam, and the subsoil is mottled with light brownish gray, greenish gray and brown. Mottling, beginning in the surface layer, becomes more prominent with increasing depth. The water table is high during most of the year. Due to high water tables, this series is unsuitable for subsurface sewage disposal.

LAWRENCE - The Lawrence soils are deep somewhat poorly drained soils of the uplands which have developed over dolonite and limestone. The topsoil is a dark grayish-brown silt loam. The subsoil is a yellow-brown silty clay loam that is mottled at 14 inches below the ground surface. The depth to the bedrock is often four to six feet below the surface. Generally, the Lawrence soils are unsuitable for any type of on-site subsurface sewage disposal system.

WORSHAM - The Worsham series consists of deep poorly-drained soils of the uplands. Their surface layer is dark grayish brown or black silt loam while the subsoil is a brownish-yellow a strong-brown clay loam that is mottled with pale gray or yellow mottles. Worsham soils develop primarily over granite, quartz, schist, gneiss and gabbro. Generally, they are waterlogged most of the year which makes them unsuitable for on-site sewage disposal.



MADE LAND - consists of fill material composed mostly of B and C horizon material. In this location, the material consists primarily of soil which develops from Wissahickon Schist and adjacent rock units.

CCPC BULLETIN

PLANNING BULLETIN #45

CHESTER COUNTY PLANNING COMMISSION

JULY 1992

Population Projections 1995-2020

County Level Projections, 1995-2020

Background:

The staff of the Chester County Planning Commission has prepared population projections to the year 2020. As part of the preparation a review of the 1980 population projection activity by Chester County was made. In the 1980s, projections were developed for the County and its 73 municipalities to the year 2010. With the release of 1990 U.S. Census data, it was necessary update and advance the projections based upon the new data. Similar efforts are underway in neighboring counties and at the Delaware Valley Regional Planning Commission.

The Chester County projections in the 1980s included consideration of separate efforts from a population research group at Pennsylvania State University and the planning staff of the Delaware Valley Regional Planning Commission (DVRPC). The Chester County Planning Commission staff monitored the population work of both organizations. After careful review of the projects in relation to the Commissions own efforts, CCPC accepted the work of the Penn State research team. The methodology and the assumptions set by this team were judged to be comprehensive and thorough; all measures of population change (fertility, mortality and migration) were thoroughly explained. Although Chester County staff also used the cohort component methodology, we accepted the Penn State calculations because their data base was more refined than that available to our staff. Although Penn State's team and DVRPC's team each used the cohort-component methodology, the Penn State researchers benefitted because they had access to the most recent detailed information on birth, death, and migration trends. Since Penn State only provided projections to 2000, DVRPC provided the County projections to 2010.

A comparison of the projections for 1990 prepared during the 1980s reveals that those projections are generally in an acceptable range when examined against the census of 1990. The 1990 projection total was 359,057 compared to the actual census count of 376,396; a numerical under projection of 17,339, only a 4.8 percent error.

A population projection is not a prediction, a forecast, or a target. It is a measurement of a future population that would exist if particular fertility, mortality and migration conditions prevail in the future. Valid projections carry no value judgments, and are not the result of policy decisions or directed goals. Projections by the Chester County Planning Commission are based upon expected trends in fertility, mortality and migration.

Methodology:

In developing projections to 2020, the Chester County Planning Commission again made use of the cohort-component method. The cohort-component method uses the three elements of population change (births, deaths, and net migration) to project separately 5 year age cohorts for both males and females. The method employs general fertility rates, Census survival rates, and migration rates for each age cohort to carry the population forward every 5 years.

The fertility component of this method utilized the general fertility rate (GFR). The GFR is the annual expected number of live births per 1,000 women aged 15-44. The GFR for these projections was set as 55.0. This figure was decided on by examining past birth rate trends in Chester County and recent national fertility trends.

Once the number of births are projected the sex ratio is calculated. Using an average of past trends in Chester County, the number of males born for each projected year was calculated at 0.513 of all births, with females being the difference, at 0.487 of all births.

For estimating mortality, these projections used the most recent five-year Census survival rates that were published by the U.S. Bureau of the Census in 1984. The rates were projected for each age cohort for both males and females. The Census survival rate is calculated by taking the number of persons in an age cohort and "surviving" them five years

later into the next cohort. For example, if there are 100 persons in the age cohort 5-9, and the the Census survival rate is .98, the number of persons five years later (which would be the cohort 10-15) would be 98. It should be noted that Census survival rates decrease with age.

Net migration is calculated by using survival rates and base populations. Using the example above, if the survived population is 98, but the base population is 110, then it can be assumed that there was a net migration of 12 persons (110 minus 98). The migration rate is then calculated by dividing the number of migrants by the survived population. In this case the result would be .1224.

For these projections, migration rates were averaged for the years 1970-1975, 1975-1980, 1980-1985, and 1985-1990. Because five year rates are used the total population in 1975 and 1985 had to be estimated. The population for these years were calculated by examining residential building permits during each respective decade. For instance, approximately 49 percent of the building permits issued between 1970 and 1980 were issued between 1970 and 1975. Therefore, the population in 1975 was assumed at 49 percent of the total increase between 1970 and 1980 plus the 1970 population. The 1985 population was calculated the same way. In this case the mid-decade population was approximately 33 percent of the total change plus the 1980 population. See Table 1 for age-cohort five year projections countywide.

Note: Projections are rounded to the nearest tenth for each age cohort and to the nearest hundredth for the total population.

Municipal Level Projections, 2000-2020

Methodology:

Projecting population for municipalities involved a separate process than projecting the County population. Since the cohort-component method of projecting population involved a number of variables not available on the municipal level and since most municipalities do not have a large population base to work with, a different approach to municipal projections was carried out.

Determining projections for municipalities in Chester County was a two-step process. The first step involved the calculation of unadjusted figures through use of the Bureau of the Census ratio-shared method. This method involved computing the average ratio of a municipality's population to the total County population in previous Census years. Further, a 1990 population for each municipality was calculated using the average ratio-shared method from 1960, 1970 and 1980. These numbers were then compared with actual 1990 Census figures and a percent difference between these two was calculated. For projections, the numbers calculated using the average ratio-shared method were multiplied by the percent difference in order to determine the unadjusted population projections for each municipality.

The second step of this process involved adjustment to these projections by looking at a number of variables for each municipality. These variables included past population trends, existing land use, known development proposals, transportation access, and other factors that could affect population change. Unlike the previous step this one does not contain calculations but includes general determinations about a municipality's future.

For instance, older, well-established, suburban municipalities are expected to gain fewer residents than those which are not as built-up and under development pressure. Further, the boroughs and the City of Coatesville in Chester County will likely experience limited increases in population due the built-out nature of these communities. Though some residential uses could be built through in-fill development or conversions, any substantial population increases could be offset by a decreasing household size. An exception to this would be the Borough of Elverson where large parcels of vacant land are being proposed for residential development. Increases in population through these developments would substantially change an already small population base.

Large percentage gains in population are projected for those municipalities where major development is expected. These include municipalities in south-central Chester County which have experienced growth pressure from the Wilmington metropolitan area and western municipalities where continuted westward movement of development along with the anticipated completion of the Exton Bypass could considerably increase development pressure.

Small population projections are anticipated for areas of limited potential growth. Factors affecting these municipalities include minimal highway access, environmental restrictions, low density zoning, and restricted land such as an agricultural easment. The results of this process are demonstrated in Table 2.

Table 2
Chester County Municipal Population Projections, 2000-2020

	Census			*Projections*

IMMACULATA COLLEGE (CONTINUED)

Note from Mr. Reimenschneider - The Applicant can agree with a condition that at a future date they will conform to the entrance requirements.

ACTION:

The Applicant will grant an extension to the Planning Commission so that they can consider the modifications.

The Applicant expressed concern regarding delaying the plan because of the PennDOT approval to the West entrance. The Planning Commission requested Mr. Reimenschneider to send the plan for the proposed West entrance to PennDOT for approval.

The Applicant will include the proposal of a West entrance for a conditional decision, pending PennDOT approval.

3. RUBINO ESTATE - PROPOSED ZONING AMENDMENT

COMMENTS:

No information was available during the Public Work Session. A presentation was made during the public meeting by Mr. James McErlane during the Public Meeting.

See Addendum for partial transcript of presentation and Q & A session.

ACTION:

The Planning Commission will take no action at this time. This presentation is for information only.

4. LIBERTY SQUARE CONDOMINIUM OWNERS - PROPOSED ZONING AMENDMENT

COMMENTS:

This was tabled at the request of the Applicant.

5. GREAT VALLEY SCHOOL DISTRICT - LIGHTING AT FOOTBALL STADIUM

COMMENTS: (From Public Work Session)

Pole height proposed is 90 feet.

Impact on surrounding property.

Applicant is required to file for Special Exception through Zoning Hearing Board.

ENGINEERING COMMENTS.

GREAT VALLEY SCHOOL DISTRICT (CONTINUED)

Attached Addendum is a partial transcript of a Q & A session in which audience participation is included.

ACTION:

The Applicant will apply to the Zoning Hearing Board for Special Exception.

6. JAMES F. CLARK/LINDA REILLY - PROPOSED RESIDENTIAL SUBDIVISION PLAN

Swedesford Rd., across from K.D. Markley School

COMMENTS:

If access road crosses over a flood hazard area, the Applicant will have to apply to the Zoning Hearing Board.

Application has been made to PennDOT regarding the access road.

A Planning Module will have to be submitted. Perc feasibility has to be demonstrated.

ENGINEERING COMMENTS.
Suggest a realignment of access to avoid flood hazard area.

ACTION:

The Applicant will review the Planning Commission comments and resubmit.

7. THE COMMONS AT GREAT VALLEY - FINAL SUBDIVISION PLAN

COMMENTS:

Property is primarily located in Charlestown Township. Six acres of the property are located in East Whiteland Township.

Special Exception was granted by the Zoning Hearing Board so the Applicant could comply with Charlestown Township setback requirements.

The traffic light escrow will have to be made in East Whiteland Township. East Whiteland is required to get the permit.

ENGINEERING COMMENTS.

ACTION:

The Planning Commission voted unanimously to approve the Final Subdivision Plan, subject to Engineering Comments.

8. MALVERN MEETING HOUSE - LAND DEVELOPMENT SKETCH PLAN

Zoned C-4

COMMENTS:

Applicant plans to construct office/storage shed.

Parking requirements have not been defined to include requirements for the office, in addition to existing parking requirements. Applicant needs to demonstrate parking conformity of entire lot with zoning requirements.

ACTION:

The Applicant will review Planning Commission comments and resubmit the Preliminary Plan.

9. PROPOSED 537 PLAN

COMMENTS:

ENGINEERING COMMENTS.

ACTION:

The Planning Commission is in receipt of a draft of the Proposed 537 Plan. It is under consideration and review by the Planning Commission.

A copy will be available in the Township building. Public comments can be received at the Planning Commission meetings, as well as the Supervisors meetings.

10. PROPOSED HISTORIC PRESERVATION REGULATIONS AND PROPOSED AMENDMENT TO HISTORICAL COMMISSION ORDINANCE

COMMENTS:

In the Public Work Session, along with two members of the Historical Commission, the proposed ordinance was reviewed at great length, and numerous revisions were noted.

Time consideration issues may have to be discussed with Ron Nagle.

ACTION:

The proposed amendment to the Historical Commission Ordinance is undergoing further revisions. It should be available in the near future.

The meeting was adjourned at 10:50 P.M.

Re: Act 537 Plan Update

Dear Mr. Finn:

The Chester County Planning Commission has completed its review of the above referenced revision to the Official Sewage Facilities Plan, as required by the Pennsylvania Sewage Facilities Act.

The Commission offers the following comments on the proposed plan update:

1. The Commission believes the relationship between soil suitability over carbonate formations and on-lot systems needs further exploration. To our knowledge DER does not consider soils over carbonate formations completely unsuitable for on-lot disposal systems. Soil descriptions for Conestoga and Hagerstown soils in Appendix D indicate that these soils have been found "on occasion" to be unsuitable. There may be additional siting requirements, but on-lot systems are not completely restricted from these areas. Thus, the statement in Section B on page 62 that, "...72% of the Township is comprised of soils unsuitable for on-lot sewage disposal", may be misleading. There may also be opportunities for surface land application on these areas that could be explored.

2. The Commission promotes clear relationships between zoning, soils, and sewage disposal methods. Study area 7A shows this relationship between suitable soils, R-1 zoning and the use of on-lot disposal system. The large area of R-1 zoning in the central and northwestern part of the Township falls within study areas 4A, 4B, 5B, 6C, 6D, and 6E. All of these study areas are slated for public sewer extension. Considering comment #1 above, the Commission believes these areas could also use on-lot disposal or other land application methodology.

3. The Commission believes that an analysis of alternatives is important for environmental protection. It is reasonable that study areas #1 and #2 do not require an alternatives evaluation because they are existing service areas. However, only in study area #7 does the plan address several alternatives for evaluation. Study areas #3, 4, 5, and 6 should include an evaluation of alternatives. It seems inappropriate to us to require Valley Forge Sewer Authority to provide this analysis later.

4. The Commission believes that an on-lot sewage management program is an essential component of a sewage facilities plan. On-lot systems can last indefinitely if they are adequately maintained, meaning routine pumping and inspection. This can only occur through a Township program that requires, at least proof of maintenance. Education material, while important, cannot ensure that all systems will receive the required maintenance. It is likely that many on-lot system problems can be prevented if systems are pumped every three years. The Commission believes that a management program as is described in Section 71.73 of Title 25 PA Code Chapter 71, DER Rules and Regulations should be included in the plan.

5. Given the Valley Crossing development, which has been granted preliminary approval for a portion of study area 7B, how will the selected alternative, land application, be implemented based on the plans for the site? Although we strongly support this method of disposal, its implementation is not clear, especially since newspaper articles are reporting a different form of disposal for the development. The Commission believes that the Act 537 revision for the Valley Crossing development should be integrated into this Township plan update rather than have each, the plan update and the revision for new development, presented to DER for separate review. This is particularly important since the plan update and the proposed facility for Valley Crossing are significantly different in approach to sewage disposal.

These comments are offered prior to formal action by the Planning Commission. If the Commission should have additional comments on the proposed revision, they will be forwarded to you.

If you have any questions regarding this review, please call me at 344-6285.

Very truly yours,

George W. Fasic

NATIONAL PARK SERVICE

VALLEY FORGE NATIONAL HISTORICAL PARK
P. O. Box 953
VALLEY FORGE, PA 19481-0953

N REPLY REFER TO:

L76

October 29, 1991

Mr. John J. Finn
Chairman, Board of Supervisors
East Whiteland Township
209 Conestoga Road
Frazer, PA 19355

Dear Mr. Finn:

The National Park Service (NPS) supports East Whiteland Township in its efforts to provide environmentally sound sewage disposal systems. Most of the Township is already serviced by the Valley Forge Sewer Authority (VFSA). East Whiteland's new 537 plan recommends that sewer service be extended to most areas in the Township where development has been proposed. We believe this is an acceptable way to manage wastewater as the VFSA has provided excellent service to surrounding townships while having minimum impact on the Schuylkill River, in which it discharges. This system is preferable to a proliferation of onsite sewage package plants constructed by private landowners and operated by a number of contractors.

The new 537 Plan excludes a large piece of the Township, designated as Area 7, from sewer service. Area 7 is really two tracts, 7A and 7B. Tract 7A in the southwest section of the Township is mostly in the Ridley Creek watershed, tract 7B in the northwest corner is chiefly in the Brandywine watershed. Wastewater management alternatives proposed for 7A and 7B include both on-land disposal and stream discharge. It is our view that on-land disposal systems, such as spray irrigation, are far less threatening to the environment than stream discharge.

One of the alternatives (No. 6) listed for tract 7B calls for the construction of an onsite sewage package plant with discharge into Valley Creek of 500,000 gallons per day of tertiary treated effluent. Valley Creek's confluence with the Schuylkill River is in Valley Forge National Historical Park. Anything that affects Valley Creek eventually makes its way downstream and impacts the park's riparian and aquatic resources. Valley Forge NHP is the largest landowner on Valley Creek, encompassing about four miles of streambank. Approximately four million people visit Valley Forge each year. Many are attracted to Valley Creek, one of the park's prime natural resources. It is a Class A coldwater fishery, a superb trout stream. We believe that no further degradation of Valley Creek should be permitted. We hope that East Whiteland Township will consider the concerns of the National Park Service when it revises its 537 plan for Area 7B.

On-land disposal systems are recommended in the new 537 Plan and seem to be given first priority where it is not feasible to tie in with VFSA. We agree with this approach. A major drawback to this type of facility is the amount of land required. It is safe to predict that most builders would tend to avoid a disposal system which might inhibit development of the greatest amount of land. However, we think the Township could negotiate with developers to set aside sufficient acreage for efficient on-land sewage disposal facilities to service new subdivisions.

Generally, the National Park Service supports the Township's new 537 Plan which recommends the extension of VFSA's sewer service and the use of on-land disposal systems. NPS believes that no further degradation of Valley Creek should occur. The stream is a wonderful regional resource shared by two counties, four townships, and a national park. It ought to be viewed as an aquatic treasure to be protected from developmental pressure. If we manage the stream corridor well, it will remain an important asset for our community, but, if we are so shortsighted that we sacrifice the creek to short term gains, then the public will be poorly served. The National Park Service urges all of us who use Valley Creek to implement management strategies which will protect and enhance the creek's natural resources.

Sincerely,

Warren D. Beach

Warren D. Beach

RESOLUTION NO. 21-92

EAST WHITELAND TOWNSHIP

A RESOLUTION AUTHORIZING
THE VALLEY FORGE SEWER AUTHORITY
TO PREPARE A REGIONAL ACT 537 PLAN

WHEREAS, the General Assembly by its Act 537 of January 24 1966, (P.L. 1535, 35 P.S. 750.5 et. seq.), requires each municipality to submit to the Department of Environmental Resources an officially adopted plan for sewage, and revise it periodically, and

WHEREAS, the Board of Supervisors of East Whiteland Township has initiated an individual Act 537 Plan update to determine the Township's sewerage needs and to delineate future sewer service areas,

NOW THEN THEREFORE BE IT RESOLVED, that the Board of Supervisors of East Whiteland Township does hereby authorize the Valley Forge Sewer Authority (VFSA) to proceed with the preparation and submission of a Regional Act 537 Plan. Said Regional Act 537 Plan will summarize projected public sewer needs, as documented in the individual approved Act 537 Plan updates prepared by each of the constituent municipalities. Alternatives for collection/conveyance and wastewater treatment facilities will be analyzed and a recommended plan prepared.

By this Resolution, the Valley Forge Sewer Authority is hereby appointed as the lead agency for the purposes of applying for and receiving any grant monies applicable to the cost of preparation of said Regional Act 537 Plan.

ADOPTED this 13th day of July 1992.

BOARD OF SUPERVISORS
EAST WHITELAND TOWNSHIP

Charles C. DiSipio, Chairman

Glenn H. Cockerham

Re: 537 Plan Revision

In Accordance with our meeting of July 17, 1992 enclosed herein please find revised page numbers 1, 15, 42, 53 and 59 for the East Whiteland Township 537 Plan. If the above revisions are satisfactory, please advise and I will transmit the copies to the East Whiteland Township Board of Supervisors, the Chester County Planning Commission, the Chester County Health Department and the Department of Environmental Resources for their records. Please note that these revisions will be incorporated when we revise the total document which will take place upon receiving the comments on the current draft document from all of the appropriate agencies.

1.0 INTRODUCTION

1.1 PURPOSE OF STUDY

A meeting was held on March 15, 2010 at the Pennsylvania Department of Environmental Protection's (PADEP's) regional office in Norristown. Personnel from Kohli & Associates, Inc. (K&A), East Whiteland Township (EWT) and Advanced GeoServices Corp. (AGC) were in attendance at the meeting, with several key PADEP representatives. Guidance was provided by the PADEP regarding a "Special Study" that is necessary to prepare an update to East Whiteland Township's existing Act 537 Plan. This effort focuses on the study areas related to the replacement and upgrade of the Mill Lane Pump Station. The study is required by PADEP and is intended to be completed prior to finalizing the design and permitting for the Mill Lane Pump Station replacement project.

The "Special Study" is necessary to address the needs of the existing sanitary collection and conveyance system, in order to accommodate the upgrade of the Mill Lane Pump Station. This will require the Township to cross-reference the final planning recommendations developed during the study, with Tredyffrin Township's Act 537 Plan Revision for Valley Creek Trunk Sewer projected sanitary flows thru year 2035. The study will focus on the collection and conveyance system upstream and downstream of the Mill Lane Pump Station, and will provide information pertaining to new sanitary sewer service connections and potential flow constrictions. A copy of the Authorization Letter (POS) from PADEP for this Plan of Study and Task Activity Report (TAR) is included in Exhibit 1.

This report intends to outline five specific service areas; which are to be provided with sanitary sewers to serve residential and commercial units totaling 1,644 equivalent dwelling units (EDU's). These areas were outlined in the original 537 Plan report prepared in 1995 approved by the EWT Board of Supervisors in 1996. The areas were expected to be connected in the early 2000's. The majority of the areas are currently served by on-lot sewage disposal systems; and several of the areas represent new development. Many of these on-lot systems are beyond their useful life and repair or replacement is not feasible.

This study is being conducted as a "Special Study" in accordance with Title 25 Chapter 71 of the Pennsylvania Code. Specifically, Chapter 71.1(iii) states that a special study is a study, survey, investigation, inquiry, research, report or analysis which is directly related to an update revision. The studies provide documentation or other support necessary to solve specific problems identified in the update revisions. As a result of this study, all developed areas and projected sanitary sewage flows within the Township will have been accounted for and factored into the 537 Plan. Therefore, the sewer infrastructure planning within this special study report will encompass and account for all remaining unsewered areas within the Township.

1.2 CURRENT EAST WHITELAND TOWNSHIP ACT 537 PLAN SUMMARY

The current Act 537 "Official Plan", prepared for East Whiteland Township, Chester County, was last revised by a "Special Study" in May 2000 and was adopted by the East Whiteland Township Board of Supervisors. The noted "Special Study" report was prepared by K&A to support Tredyffrin's Revision for the Valley Creek Trunk Sewer Project and in accordance with Chapter 71 of Title 25 of the Pennsylvania Code.

The EWT Sewage Facilities Plan map, included as Exhibit 2, illustrates the proposed sewage areas reviewed in this study. This map shows that five areas that were proposed to be served by public sewage collection facilities before 2006; and another two were envisioned to be served beyond 2006. From the original 537 Plan report submitted in 1995, the noted major issues regarding future sewage capacity was the capacity limitation of the Wilson Road Pump Station and the Valley Forge Sewage Treatment Plant; which are both located downstream of EWT's sewage collection system. The report notes that, until the Wilson Road Pump Station is upgraded to accommodate a potential Valley Forge Sewage Plant expansion, EWT may NOT adhere to their policy to serve the proposed areas indicated in their Act 537 Plan by making these connections into their public sewer system. However at this time, Tredyffrin Township has completed an update to their Act 537 Plan for Valley Creek Trunk Sewer to include an upgrade of the Wilson Road Pump Station. The Tredyffrin project is currently in design, and Tredyffrin's

Act 537 Plan update outlines the proposed future flows that the new Wilson Road Pump Station can accommodate. EWT's future projected flows, including the expansion of the Mill Lane Pump Station, are included in this planning.

The sewer service connections included in this "Special Study" are expected to be connected within the timeframes as noted in Table 1.1. These connections will provide sewer capacity to serve future service areas that were not included in the original Act 537 Plan from 1995. These new areas are Malvern Hunt, Whiteland Village and William Henry Apartments. The Whiteland Village area has undergone planning and design; construction is currently in progress, however the completion has been stalled due to funding constraints. In developing a summary of the future flow projections, it was found that a section of the gravity collection system downstream of the Mill Lane Pump station will need to be replaced to handle future sanitary flows. This gravity sewer section is identified within this report.

The original Act 537 Plan from 1995 contains a figure that illustrates all of the areas discussed within this report, with exception of the new areas Malvern Hunt, Whiteland Village and William Henry Apartments. These areas were on the sewer map, but were not highlighted as part of EWT's system. These areas are expected to be added to the Township's collection system, and have been included in the future flow projections. The referenced figure is included as Exhibit 2 to this "Special Study". Also included is Exhibit 3 which denotes the specific previously planned five (5) Service Areas to be connected, and labels the new Service Areas noted above (Malvern Hunt, Whiteland Village and William Henry Apartments). The five (5) previously planned project Service Areas that will be addressed in this "Special Study" are:

Area 1: Areas along Route 401 Corridor
Area 2: Bacton Hill and Swedesford Road Areas
Area 3: Planebrook Road Area
Area 4: Church Road Extension to eliminate the Church Road Pump Station (P.S. #. 9)
Area 5: Immaculata University Area

Exhibit 3 provides a color-coded outline of these areas, and also labels the future areas to be added to the EWT's collection system.

Table 1-1 Anticipated Connection Timeline

Area	Location	When to be serviced
1	Along Rt. 401	2010 - 2015
2	Bacton Hill and Swedesford Road	2010 - 2015
3	Planebrook Area	2010 - 2015
4	Church Road Extension	2015 - 2020
5	Immaculata University	2015 - 2020

Note that the new future areas to be serviced by EWT (Malvern Hunt and William Henry Apartments) are anticipated to be connected between 2020 and 2030 and have been identified in this study for future planning purposes. As noted, Whiteland Village has been approved and is currently in construction. New 8-inch and 10-inch sanitary sewer trunk lines are currently being constructed from Whiteland Village to the Mill Lane Pump Station. Final connections are expected to be completed within the 2011 calendar year. As previously noted, at the time when these areas are connected to the sewers, this will encompass the total Township sanitary sewer service area.

1.3 EAST WHITELAND TOWNSHIP CHAPTER 94 REVIEW

East Whiteland Township has been allocated to contribute a peak capacity of 9.5 million gallons per day (MGD) (3.8 MGD average) to the Valley Creek Trunk Sewer (as noted in the EWT 1995 Act 537 Plan Report). This total flow includes a 300,000 GPD allocation from Charlestown Township, which is conveyed to EWT. From the revised projected average flow at year 2035 for East Whiteland Township (see Exhibit 4), the projected average flow for the Township will be ~3.6 MGD. This is within the allocation of the average flow of 3.8 MGD.

2.0 WORK TO BE COMPLETED FOR NEW SERVICE AREAS TRIBUTARY TO THE MILL LANE PUMPING STATION

2.1 PROJECT SERVICE AREAS

2.1.1 Area 1 - Areas along Route 401 Corridor (2010 – 2015)

The area along Route 401 includes existing and projected flows from 147 EDUs and an allocated flow of 24,000 gallons per day (GPD) for the Malvern Courts mobile home park. This area is proposed to be served by public sewer between the years 2010 and 2015. A sanitary sewer line was extended from Charlestown Meadows (Charlestown Township Development, located at Rt. 401 and Newcomen Road) along Route 401 to the Hillbrook Pump Station (P.S. # 11). This sanitary sewer line will serve all development (existing and proposed) in this area. Eventually, it is anticipated that this sewer extension will permit the connection of Malvern Court, which is one of the new Service areas. Malvern Court is currently served by an onsite privately owned and operated wastewater treatment facility. Therefore, the connection of these sewers within this service area will facilitate the decommissioning and removal of the existing privately owned treatment facility. These sanitary sewer flows will be conveyed to the Mill Lane Pump Station.

2.1.2 Area 2 - Bacton Hill and Swedesford Road Areas (2010 – 2015)

Sanitary sewers will be extended along Bacton Hill Road and along South Bacton Hill Road to eliminate existing on-lot sewer systems. This area also includes the Swedesford Road area which conveys projected flows from 300 EDUs and is proposed to be connected to the public sewer system between 2010 and 2015. These sanitary sewer flows will be conveyed to the Mill Lane Pump Station.

2.1.3 Area 3 – Planebrook Area (2010 – 2015)

The Planebrook area includes existing and projected flows from 195 EDUs, and a majority of the existing residential dwellings are served by 30 – 35 year old on-lot sewer systems. The sanitary sewer extension from Whiteland Village (currently planned and partially constructed) will facilitate connection to the Planebrook Area located on the south side of Rt. 202 and will also provide access to the properties located on the north side of Swedesford Road and will extend to Bacton Hill Road area.

2.1.4 Area 4 - Church Road Extension - To Eliminate Church Road Pump Station (2015 – 2020)

Presently, the Church Road Pump Station (P.S. # 9) flow is ~168,500 GPD. Additionally, there are 5 projected EDUs that will be connected to the Church Road Pump Station. The Church Road Pump Station pumps the sanitary sewage to a manhole located at the intersection of Church Road and Rt. 30. The sewage then continues via a gravity sewer along Rt. 30 to the Westgate Pump Station (P.S. # 8). The Westgate Pump Station pumps the sanitary sewage to another gravity sewer line, which flows to Tredyffrin Township. Currently, this flow is not tributary to the Mill Lane Pump Station.

With the planned gravity sewer extension from Swedesford Road; it is anticipated that the Church Road Pump Station can be eliminated and the sewage will be collected by the gravity sewer to the Mill Lane Pump Station. This gravity sewer will also collect the sewage from the Church Road area.

2.1.5 Area 5 - Immaculata University Area (2015 – 2020)

The Immaculata University and surrounding area is located in the southwestern portion of the Township. Immaculata University has been allocated 250,000 GPD of sanitary sewage flow. Once Immaculata is connected, the William Henry apartments may also be connected; this will

add approximately 75,000 GPD. This area is anticipated to be connected between 2015 and 2020; which will provide time for the Wilson Road Pump Station and Valley Forge Treatment Plant to be upgraded.

Since the Whiteland Village sewer has been extended to Swedesford Road; the connection of the Immaculata University service area is dependent upon the extension of the gravity sewer from Swedesford Road to the Church Road Pump Station (P.S. # 9). The sanitary sewer flows from the Immaculata University service area can them be extended to this sewer line and will be conveyed to the Mill Lane Pump Station.

2.2 REVIEW OF ALTERNATIVES

With exception to the Church Road area, the other four proposed service areas under consideration in this "Special Study" are serviced by on-lot sewage disposal systems. Since sewer infrastructure will be within a reasonable distance from each of these service areas at the proposed times indicated as part of the Implementation Schedule, the most feasible alternative will be to connect these service areas to the public sewer system and eliminate the on-lot sewage disposal systems.

The Church Road area sewer configuration currently requires the sewage flow to be pumps from Pump Station #9 (Church Road PS) to a gravity sewer that flows to Pump Station #8 (Westgate PS). The sanitary sewage is pumped twice in this current configuration. Therefore, the most feasible alternative for this service area is to eliminate the redundant pumping, connect the remaining customers with on-lot sewage disposal systems and tie this area into the Mill Lane Pump Station collection system.

2.3 IMPLEMENTATION

2.3.1 Cost

The estimated probable construction costs to expand the sanitary sewer conveyance system to accomplish the outlined work are as follows:

Area 1 - Areas along Route 401 Corridor

The estimated construction cost of this project is approximately $920,000; which excludes the road surfacing cost.

Area 2 – Bacton Hill and Swedesford Road Area

The estimated construction cost of this project is approximately $975,000; which excludes the road surfacing costs.

Area 3 - Planebrook Road Area

The estimated construction cost of this project is approximately $270,000; which excludes the road surfacing costs.

Area 4 - Church Road Extension

The estimated construction cost of this project is approximately $300,000; which excludes the road surfacing cost.

Area 5 - Immaculata University Area

The estimated construction cost of this project is approximately $1,125,000; which excludes the road surfacing cost.

2.3.2 Funding

Financing of these projects will be accomplished through the Board of Supervisors of East Whiteland Township. Refer to Exhibit 8 for additional information.

2.3.3 Schedule

It is anticipated that each individual project and the work associated with these projects will generally be completed within an 8 to 12 months once authorization to proceed is received by EWT. Refer to Section6.0 for additional information pertaining to the Implementation Schedule.

2.3.4 Operation and Maintenance

All sanitary sewer facilities to be constructed under this "Special Study" will be owned and operated by East Whiteland Township. The sanitary sewer lines and manholes will be constructed within the Township owned rights of way or easements obtained prior to the start of any construction. In the event that new pump stations and force mains are deemed necessary, additional planning will be provided to PADEP for review and approval, permit applications will be submitted and all local communities and agencies will be notified appropriately. These facilities will also be constructed within the Township owned rights of way or easements obtained prior to the start of any construction.

New facilities will fall under the Maintenance Plan currently in place by East Whiteland Township. This Plan includes the periodic cleaning and flushing of sewer lines and manholes,

inspections of pump stations, as well as, the maintenance associated with pump station operations.

It is clear that EWT, as owner of these new facilities, will be responsible for the care and maintenance of all gravity sewers, manholes, force mains and proposed pump stations.

2.4 CONCLUSIONS

Based upon the information provided above, it is concluded that all of the units within the five proposed Study Areas will be best served by providing extensions of the existing sanitary sewer facilities to connect these areas. These sewer extensions will also provide the ability for the Township to connect all proposed "new" service areas as outlined herein.

Also, the previously agreed upon sanitary sewer flow allocations from EWT to Tredyffrin Township (as outlined in Tredyffrin's Revision for the Valley Creek Trunk Sewer Project) are adequate and coincide with the projected flows of EWT at year 2035, which includes the five proposed Study Areas and new Service Areas. At a point in the future, the five proposed Study Areas will be within a reasonable distance of gravity collection system sewers. It is our opinion and best judgment that the suitable alternative is to provide these areas with public sewage and eliminate on-lot sewer systems and privately owned treatment facilities.

3.0 SUMMARY OF ALL OTHER SERVICE AREAS TRIBUTARY TO THE MILL LANE PUMPING STATION

As illustrated on the attached drawing (See Exhibit 3), "Drainage areas and projected flows: East Whiteland Township" updated July 2008, the flows from areas in Point "A" (outlined in yellow) will be conveyed to Mill Lane Pump Station (P.S. # 2). The exception is with the flow from the area that serves the Deer Run Pump Station (P.S. # 1), since this is separate and is not tributary to Mill Lane Pump Station. Below is the summary of Mill Lane Pump Station projected flows, including the projected flows from the five (5) proposed project Study Areas and the new Service areas outlined in this "Special Study".

Table 3-1 Mill Lane Pump Station Projected Flows with Charlestown (Average & Peak)

Year	Current and Projected Average Daily Flows		DEP Peaking Factor*	Current and Projected Peak Flows	TDH
	(GPD)	(GPM)		(GPM)	(FEET)
2010	**817,600**	568	3.13	**1,777**	**150**
2015	**1,380,455**	959	2.94	**2,816**	**183**
2025	**2,126,055**	1,476	2.81	**4,152**	**142****
2035	**2,304,805**	1,601	2.78	**4,454**	**151****

* Peaking Factors were extracted from PADEP Domestic Wastewater Facilities Manual.

** Assumes that the force main from the Mill Lane PS will be replaced prior to 2025 (from a 14-inch to a 20-inch)

For year 2035, the projected peak hourly flow of Mill Lane Pump Station will be 4,454 GPM (~6.4 MGD).

4.0 REVIEW OF SANITARY SEWER COLLECTION SYSTEM DOWNSTREAM OF MILL LANE PUMPING STATION

4.1 GRAVITY TRUNK SEWERS WITHIN EAST WHITELAND TOWNSHIP

The gravity trunk sewers within EWT downstream of the Mill Lane Pump Station start from Manhole 2-6 (18"), which is the discharge manhole for the pump station, to Manhole 21-5 (36"). Below in Table 4-1 are the critical capacities of each major section of the sewer trunk line.

Table 4-1: Critical Sewer Capacities Downstream of Mill Lane Pump Station

Segment	Critical Capacity (MGD)*	Estimated Peak Flow (MGD) 2019	Estimated Peak Flow (MGD) 2029
MH 2-6 to MH 8-2(18")	7.06	6.00	6.03
MH 8-2 to MH 8-12(20")	7.81	6.00	6.03
MH 8-12 to MH 18-2(20")	6.21	6.55**	6.95**
MH 18-2 to MH 18-14(20")	5.98	6.90**	7.30**
MH 18-14 to MH 19-4(20")	6.21	7.25**	7.43**
MH 19-4 to MH 20-3(24")	11.05	9.00	9.35
MH 20-3 to MH 20-8(27")	11.79	9.00	9.35
MH 20-8 to MH 21-4(27")	12.64	9.00	10.68
MH 21-4 to MH 21-5(36")	17.95	9.00	10.68

* Data from Exhibit 5 of East Whiteland Township Sanitary Sewer System Evaluation, prepared by Kohli and Associates, Inc on June 22, 2005.

** Sewer Section Capacity exceeded starting 2019

From the results of the evaluation which includes the review of the historic projected flow data, it is noted that the future projected flows will exceed the capacities of three of the sewer trunk line segments; (1) MH 8-12 to MH 18-2 (20"), (2) MH 18-2 to MH 18-14 (20"), and (3) MH 18-14 to MH 19-4 (20"). As noted, these three sewer trunk line segments will need to be replaced before year 2019 with 24-inch piping. Refer to Exhibit 5 for a map of these segments.

Since the projected flows that include the five proposed Study Areas and the new Service Areas will be implemented by 2020; we are recommending that these sewer segments be replaced in a similar timeframe. This will assure that the existing Sewer capacities will not be exceeded. Refer to Section 6.0 for the Implementation Schedule.

4.2 REVIEW OF COLLECTION SYSTEM WITHIN TREDYFFRIN TOWNSHIP IN MOST RECENT ACT 537 PLAN UPDATE

The majority of EWT's flow is discharged to manhole No. LV77A located at the Tredyffrin - East Whiteland boundary. The flow is metered by the Matthews Road meter chamber. A small portion of EWT's flow, which is also metered, discharges to the Willistown Sewer System.

4.2.1 Gravity Trunk Line Tributary to Wilson Road Pumping Station

East Whiteland Township's flow will be transferred to the Wilson Road Pump Station via the trunk sewer line labeled as LV. The LV trunk sewer generally extends in an east to west direction from the Tredyffrin – East Whiteland boundary to the Wilson Road Pump Station, which is located near the point where Valley Creek crosses under the Pennsylvania Turnpike. The capacity evaluation (Table 7 from the Act 537 Plan Revision for Valley Creek Trunk Sewer) indicates that all except one segment of LV trunk sewer line has adequate capacity to convey the projected wastewater flows through the year 2035. Several pages from Table 7 are included as Exhibit 6 to this "Special Study" for reference. Additional capacity modeling completed after the initial capacity evaluation of this trunk sewer segment suggests that there is adequate capacity to convey the projected sanitary flows. Prior to proposing improvements to add sanitary sewage flows to the EWT's collection system; the Township will notify VFSA and Tredyffrin Township of the intent and confirm that capacity is available.

The limited capacity sewer trunk line segment is projected to occur within Manhole LV 58 to LV 57 by the year 2018 (based on projected flows). This segment of sewer is situated where the Valley Creek Trunk Sewer crosses under U.S. Route 202. The location is shown on Exhibit 7 of this "Special Study" (Also on Figure 3 and Figure 10 in the ACT 537 Plan Revision for Valley Creek Trunk Sewer). The pipe capacity is noted to be approximately 12.7 MGD. This capacity has been projected to be exceeded at year 2018; however as noted additional modeling has indicated that the capacity is available to convey the 2035 projected flows. Three alternatives are provided in the above mentioned Act 537 Plan; (1) enlarge existing sewer; (2) install parallel sewer; and (3) no action. In this Tredyffrin Act 537 the alternative recommended is installation of a parallel sewer. For details, please reference Chapter 6.1.2 and Chapter 6.2.2 of Tredyffrin Township Act 537 Plan Revision for Valley Creek Trunk Sewer. As noted, the sewer system capacities will be confirmed prior to adding additional sanitary sewer flows to the collection system.

The projected flows for EWT within the study period between 2010 and 2015 will not affect this capacity limit situation. However, as noted, the flow capacities will be confirmed for sewer collection system connection projects beyond 2015 to avoid capacity problems as a result of the projected flows for EWT.

4.2.3 Wilson Road Pumping Station Capacity

Currently, the Wilson road Pumping Station has the capacity for a peak flow of 16.27 MGD, and an average daily flow of 7.07 MGD. An ACT 537 Plan update was completed for the Wilson Road Pumping Station in 2008. The 537 Plan Revision was adopted by the affected municipalities in March of 2008, and was approved by PADEP on February 13, 2009. The Act 537 Plan recommended, and PADEP approved, a Phase 1 capacity increase to a peak flow of 20.16 MGD, and an average daily flow of 8.77 MGD. The Phase 1 capacity increase matches the capacity of the Wilson Road Pumping Station force main. Design of the Phase 1 was completed in 2009. Construction is expected to occur during the years 2010 and 2011.

The Phase 1 capacity increase, in consideration of the municipal wastewater flow projections set forth in Tredyffrin ACT 537 Plan Revision for Valley Creek Trunk Sewer, is expected to be adequate until the year 2025. In order to meet the projected capacity needs from 2025 through 2035, the capacity of the Wilson Road Pumping Station will need to be increased to a peak flow of 22.71 MGD (or an average daily flow of 9.87 MGD) by 2025.

The projected flows for EWT within this study period will not affect this capacity limit situation within the Wilson Road Pump Station.

4.2.4 Wilson Road Force Main to the Valley Forge Sewer Authority

The Wilson Road Pumping Station force main is approximately 19,300 feet long, 30-inches in diameter and extends from the Wilson Road Pumping Station to the Valley Forge Sewer Authority (VFSA) Wastewater Treatment Plant in Schuylkill Township, Chester County. Approximately two-thirds of the entire force main length is situated within Valley Forge Park.

The force main capacity is adequate for the current rated capacity of the Wilson Road Pumping station of 16.27 MGD (peak flow) and for the anticipated Phase 1 capacity increase to 20.16 MGD (peak flow). Therefore, based on current wastewater flow projections contained in the Act 537 Plan Revision for Valley Creek Trunk Sewer, the force main capacity should be adequate until year 2025. In order to meet the projected capacity needs from 2025 through 2035, the capacity of the Wilson Road Pumping Station force main (in conjunction with a commensurate capacity increase of the Wilson Road Pumping Station) will need to be increased to a peak flow of 22.71 MGD (9.87 MGD average daily flow) by 2025.

The projected flows for EWT within this study period will not affect this capacity limit situation within the Wilson Road Pump Station force main.

5.0 CONCLUSIONS

The average daily flow projected at year 2035 for East Whiteland Township (~3.6 MGD) will not be changed as a result of the projects outlined in this "Special Study". Therefore, the proposed new Study Areas and Service Areas outlined herein will simply provide the potential to eliminate on-lot sewage systems and privately owned treatment facilities. It is our opinion and best judgment that the suitable alternative is to provide these areas with public sewerage provided that the following actions occur in the timeframes noted within the Implementation Schedule in Section 6.0:

1. Replace the 14-inch force main from the MLPS with a 20-inch force main. The sanitary sewer flows to and from the MLPS will be monitored via flow metering equipment as new connections are added to the collection system. EWT will provide additional planning when it is determined that the force main capacity must be increased. It is estimated that this will occur prior to year 2025; however the actual timeframe will be dependent on funding availability to connect the service areas outlined.

2. Enlarge the pipe size to 24-inch for the sewer sections between (1) MH 8/12 to MH 18-2, (2) MH 18-2 to MH 18-14 and (3) MH 18-14 to MH 19-4 within the EWT collection system before year 2019.

3. Improve the capacity of gravity sewer trunk line from MH LV58 to MHLV57 in Tredyffrin Township before year 2018. The recommended alternative in Tredyffrin Township's Act 537 Plan revision for Valley Creek Trunk Sewer is to install a parallel sewer in order to improve capacity.

4. Refer to Exhibits 8 and 9 for additional clarification in response to PADEP comments.

6.0 IMPLEMENTATION SCHEDULE

TASK	DATE
Act 537 Plan Special Study adoptions	January 31, 2010
Act 537 Plan Special Study submitted to PADEP	September 30, 2010
Complete Design of Pump Station	February 25, 2011
Submit WQM Part II Permit Application	June 17, 2011
Submit Joint Permit Application	June 17, 2011
Obtain WQM Part II Permit	August 2011
Obtain Joint Permit	August 2011
Advertise for construction bids	September 2011
Receive Bids	September 2011
Award Construction Contract	October 2011
Issue Notice to Proceed	October 2011
Complete Construction	May 2012
New pump station online	June 2012
Provide Planning/Easement Information to PADEP for Area 1	August 2012
Complete Design, Permitting for Area 1	December 2012
Complete Bidding and Construction for Area 1	July 2013
Provide Planning/Easement Information to PADEP for Area 2	August 2013
Complete Design, Permitting for Area 2	December 2013
Complete Bidding and Construction for Area 2	July 2014
Provide Planning/Easement Information to PADEP for Area 3	August 2014
Complete Design, Permitting for Area 3	December 2014
Complete Bidding and Construction for Area 3	August 2015
Provide Planning Information to PADEP for Sewers Downstream of MLPS (MH 8-12 to MH 19-4)	December 2016
Complete Design, Permitting for Sewers Downstream of MLPS (MH 8-12 to MH 19-4)	July 2017

Complete Bidding and Construction for Sewers Downstream of MLPS (MH 8-12 to MH 19-4)	July 2018
Provide Planning/Easement Information to PADEP for Area 4	October 2018
Complete Design, Permitting for Area 4	February 2018
Complete Bidding and Construction for Area 4	September 2018
Provide Planning/Easement Information to PADEP for Area 5	December 2018
Complete Design, Permitting for Area 5	June 2019
Complete Bidding and Construction for Area 5	March 2020
Provide Planning Information to PADEP for New MLPS Force Main	August 2020
Complete Design, Permitting for New MLPS Force Main	February 2021
Complete Bidding and Construction for New MLPS Force Main	February 2022

*Note: This schedule is a general estimate of timeframes for implementation of the noted projects based on projected sanitary sewage flows outlined in EWT's sanitary sewer needs analysis. EWT will continue to closely monitor the sanitary sewage flow volumes and will initiate these improvements as the flows meet trigger points as noted in the Special Study.

EXHIBIT 1

Special Study Act 537 Plan Update –
Plan of Study Authorization Letter
And
Scope of Work Letter

pennsylvania
DEPARTMENT OF ENVIRONMENTAL PROTECTION
SOUTHEAST REGIONAL OFFICE

July 23, 2010

Ms. Terry H. Woodman, Manager
East Whiteland Township
209 Conestoga Road
Frazer, PA 19355

Re: Act 537 – Special Study Act 537 Plan Update – Plan of Study
Mill Lane Pumping Station
East Whiteland Township
Chester County

Dear Ms. Woodman:

We have completed our review of your municipality's proposed Plan of Study (POS), as prepared by Mr. Jack Polce, P.E., of Advanced GeoServices dated May 3, 2010, and a proposed Task Activity Report (TAR) dated July 8, 2010.

The proposed Special Study will evaluate the hydraulic flows for areas within East Whiteland Township's (Township) sanitary collection and conveyance system tributary to the Mill Lane Pumping Station (MLPS). In addition, the proposed Special Study will provide planning for the upgrade and replacement of the MLPS to accommodate flows coming from the service area of the MLPS, including flows from existing development, new development, new sanitary connections from neighboring communities, and from communities or subdivisions previously using on-site sewage disposal systems or privately owned treatment facilities.

The hydraulic capacities of the downstream collection and conveyance systems, including Tredyffrin Township's Valley Creek Trunk Sewer and Wilson Road Pumping Station and the Valley Forge Sewer Authority's sanitary system, will be summarized to verify that these systems can accommodate the future projected sanitary sewer flows from the Township. Please ensure that documentation from the downstream receiving authorities is included in the plan. This documentation must confirm that capacity exists within these downstream conveyance and treatment facilities for the increased flow coming from the upgraded MLPS.

Approval of this proposed POS and TAR is hereby granted. The estimated cost of the plan is $42,487.

Please note, however, that this POS approval does not constitute a final action by the Department of Environmental Protection (Department). When a completed plan is submitted to us, we will act upon it consistent with Pa. Code Title 25, Chapter 71.

PRESIDENT

May 3, 2010

Mr. Keith Dudley
PA Department of Environmental Protection
Southeast Regional Office
2 E. Main St.
Norristown, PA 19401

RE: **Scope of Work Outline for "Special Study" Act 537 Plan Amendment**
East Whiteland Township / Mill Lane Pumping Station

Dear Mr. Dudley:

At our meeting held on March 15, 2010 at your offices in Norristown; guidance was provided regarding the need for a "Special Study" that is necessary to develop an update to East Whiteland Township's existing Act 537 Plan. This study effort will focus on the hydraulic flows for the areas within the Township's sanitary collection and conveyance system related to the upgrade and replacement of the Mill Lane Pumping Station. Also, downstream of the Mill Lane Pumping Station, the Township's sanitary sewer is collected via a gravity trunk sewer line that crosses over into Tredyffrin Township and continues to the Wilson Road Pumping Station. The Wilson Road Pumping Station then pumps the sanitary sewage to the Valley Forge Wastewater Treatment Plant located in Schuylkill Township. The study will provide a review of Tredyffrin Township's most recent Act 537 Plan and will summarize the hydraulic capacities of the downstream collection and conveyance system tributary to the Wilson Road Pumping Station and the Valley Forge Sewer Authority to verify that these systems can accommodate the future projected sanitary sewer flows from East Whiteland Township.

The Mill Lane Pumping Station is being upgraded and replaced for two reasons; 1) the pumping station is over 30 years old, and 2) the station does not have space availability to expand operations and accommodate future projected sanitary sewer flows. The increase in capacity is to accommodate new development, new sanitary connections from neighboring communities and from communities or subdivisions previously using septic (or onsite sewage disposal) systems or privately owned treatment facilities. This study will identify these specific areas as an amendment to the Township's current Act 537 Plan and will quantify the projected increase in sanitary sewer flows for the collection and conveyance system tributary to the Mill Lane Pumping Station.

Very truly yours,

Surender S. Kohli, P.E.
Project Manager

Re: Act 537 Special Study
Mill Lane Pumping Station
Status: ISSUED
APS ID 38912, AUTH ID 854870
East Whiteland Township
Chester County

Dear Ms. Woodman:

We have completed our review of your municipality's proposed Official Sewage Facilities Plan Special Study for the Mill Lane Pumping Station in East Whiteland Township (Township), Chester County, entitled Special Study as an amendment to East Whiteland Township Act 537 for the Mill Lane Pumping Station Upgrade (Special Study), as prepared by Kohli & Associates, Inc., dated September 2010. This Special Study is being submitted to the Department of Environmental Protection (Department) in accordance with the provisions set forth by Section 5 of the Pennsylvania Sewage Facilities Act and Chapter 71, the Administration of Sewage Facilities Program. Additional information was received by the Department of Environmental Protection (Department) on July 11, 2011. The review was conducted in accordance with the provisions set forth by Section 5 of the Pennsylvania Sewage Facilities Act and Chapter 71, the Administration of Sewage Facilities Program.

Approval of the Special Study is hereby granted. This approval provides for the following:

1. The establishment of project service areas that make up the sewer service area of the Township. These areas are delineated on the plan labeled East Whiteland Township, which was prepared by Kohli and Associates, Inc., and last revised April 2004. The delineations for this Special Study were added to this plan in 2011. These areas include:

Area	Location	When Implemented
1	Along Route 401	2010–2015
2	Planebrook and Bacton Hill Road	2010–2015
3	Swedeford Road	2010–2015
4	Church Road Extension	2015–2020
5	Immaculata University	2015–2020
New Area 1	Malvern Hunt	2020–2030
New Area 2	Whiteland Village	2010–2015
New Area 3	William Henry Apartments	2020–2030

a. Area 1 – the extension of sanitary sewers along Route 401 to serve existing and proposed development in this area, including the connection of the Malvern Courts mobile home park, which is currently served by a privately owned and operated wastewater treatment facility.

b. Areas 2 and 3 – sanitary sewer extensions along Bacton Hill Road, Swedesford Road, and the Planebrook area of the Township to serve existing and proposed development in these areas.

c. Area 4 – the extension of sanitary sewers from Swedesford Road along Church Road to serve existing and proposed development in the Church Road area and which will allow for the abandonment and decommissioning of the Church Road Pump Station (PS 9).

d. Area 5 – extension of the proposed sanitary sewer main along Church Road (Area 4) to serve Immaculata University.

e. New Area 1 – commitment to initiate additional sewage facilities planning to connect the existing Malvern Hunt development to public sewer.

f. New Area 2 – sanitary sewer extension from the Whiteland Village development that is currently under construction to the existing sanitary sewer in Swedesford Road.

g. New Area 3 – commitment to initiate additional sewage facilities planning to connect the existing William Henry Apartments to public sewer. Connection to public sewer for this area will be dependent on the extension of public sewers to Immaculata University.

2. The expansion of the Mill Lane Pumping Station (MLPS) to accommodate total average annual flows of 2,304,805 gallons of sewage per day (gpd), which accounts for the existing flows to the pump station and the projected flows to the year 2035 for the service area tributary to the pump station.

3. The replacement of existing 20-inch sanitary sewer mains with 24-inch sanitary sewer mains from Manholes 8-12 to 18-2, 18-2 to 18-14, and 18-14 to 19-4. The permitting and construction of these sanitary sewer replacement sections shall be completed no later than the dates listed in the implementation schedule for these steps.

4. The replacement of the existing 14-inch MLPS force main from the MLPS to Manhole 2-6 with a 20-inch force main. The permitting and construction of these sanitary sewer replacement sections shall be completed no later than the dates listed in the implementation schedule for these steps.

Please note that additional sewage facilities planning may not be required for some of the projects listed in your implementation schedule. Please contact the Department prior to initiating planning for proposed sewage facilities not shown on the submitted sewer service map. The Department will determine if planning is needed for specific projects upon receipt of additional documentation.

Please note that any new land developments associated with this plan will not be eligible for exemptions from sewage facilities planning under Chapter 71, Section 71.51(b)(2), until after the receiving facilities have been constructed. Applicants proposing projects that will coordinate new development construction with the construction of municipal conveyance or treatment facilities must submit Sewage Facilities Planning Modules for adoption by the municipality and approval by the Department.

East Whiteland Township must secure Clean Streams Law permits from the Department for the construction and operation of their proposed sewerage facilities.

We acknowledge that the Township will initiate a study to evaluate options to connect the Malvern Courts Mobile Home Park to public sewers once the MLPS expansion is complete and operational.

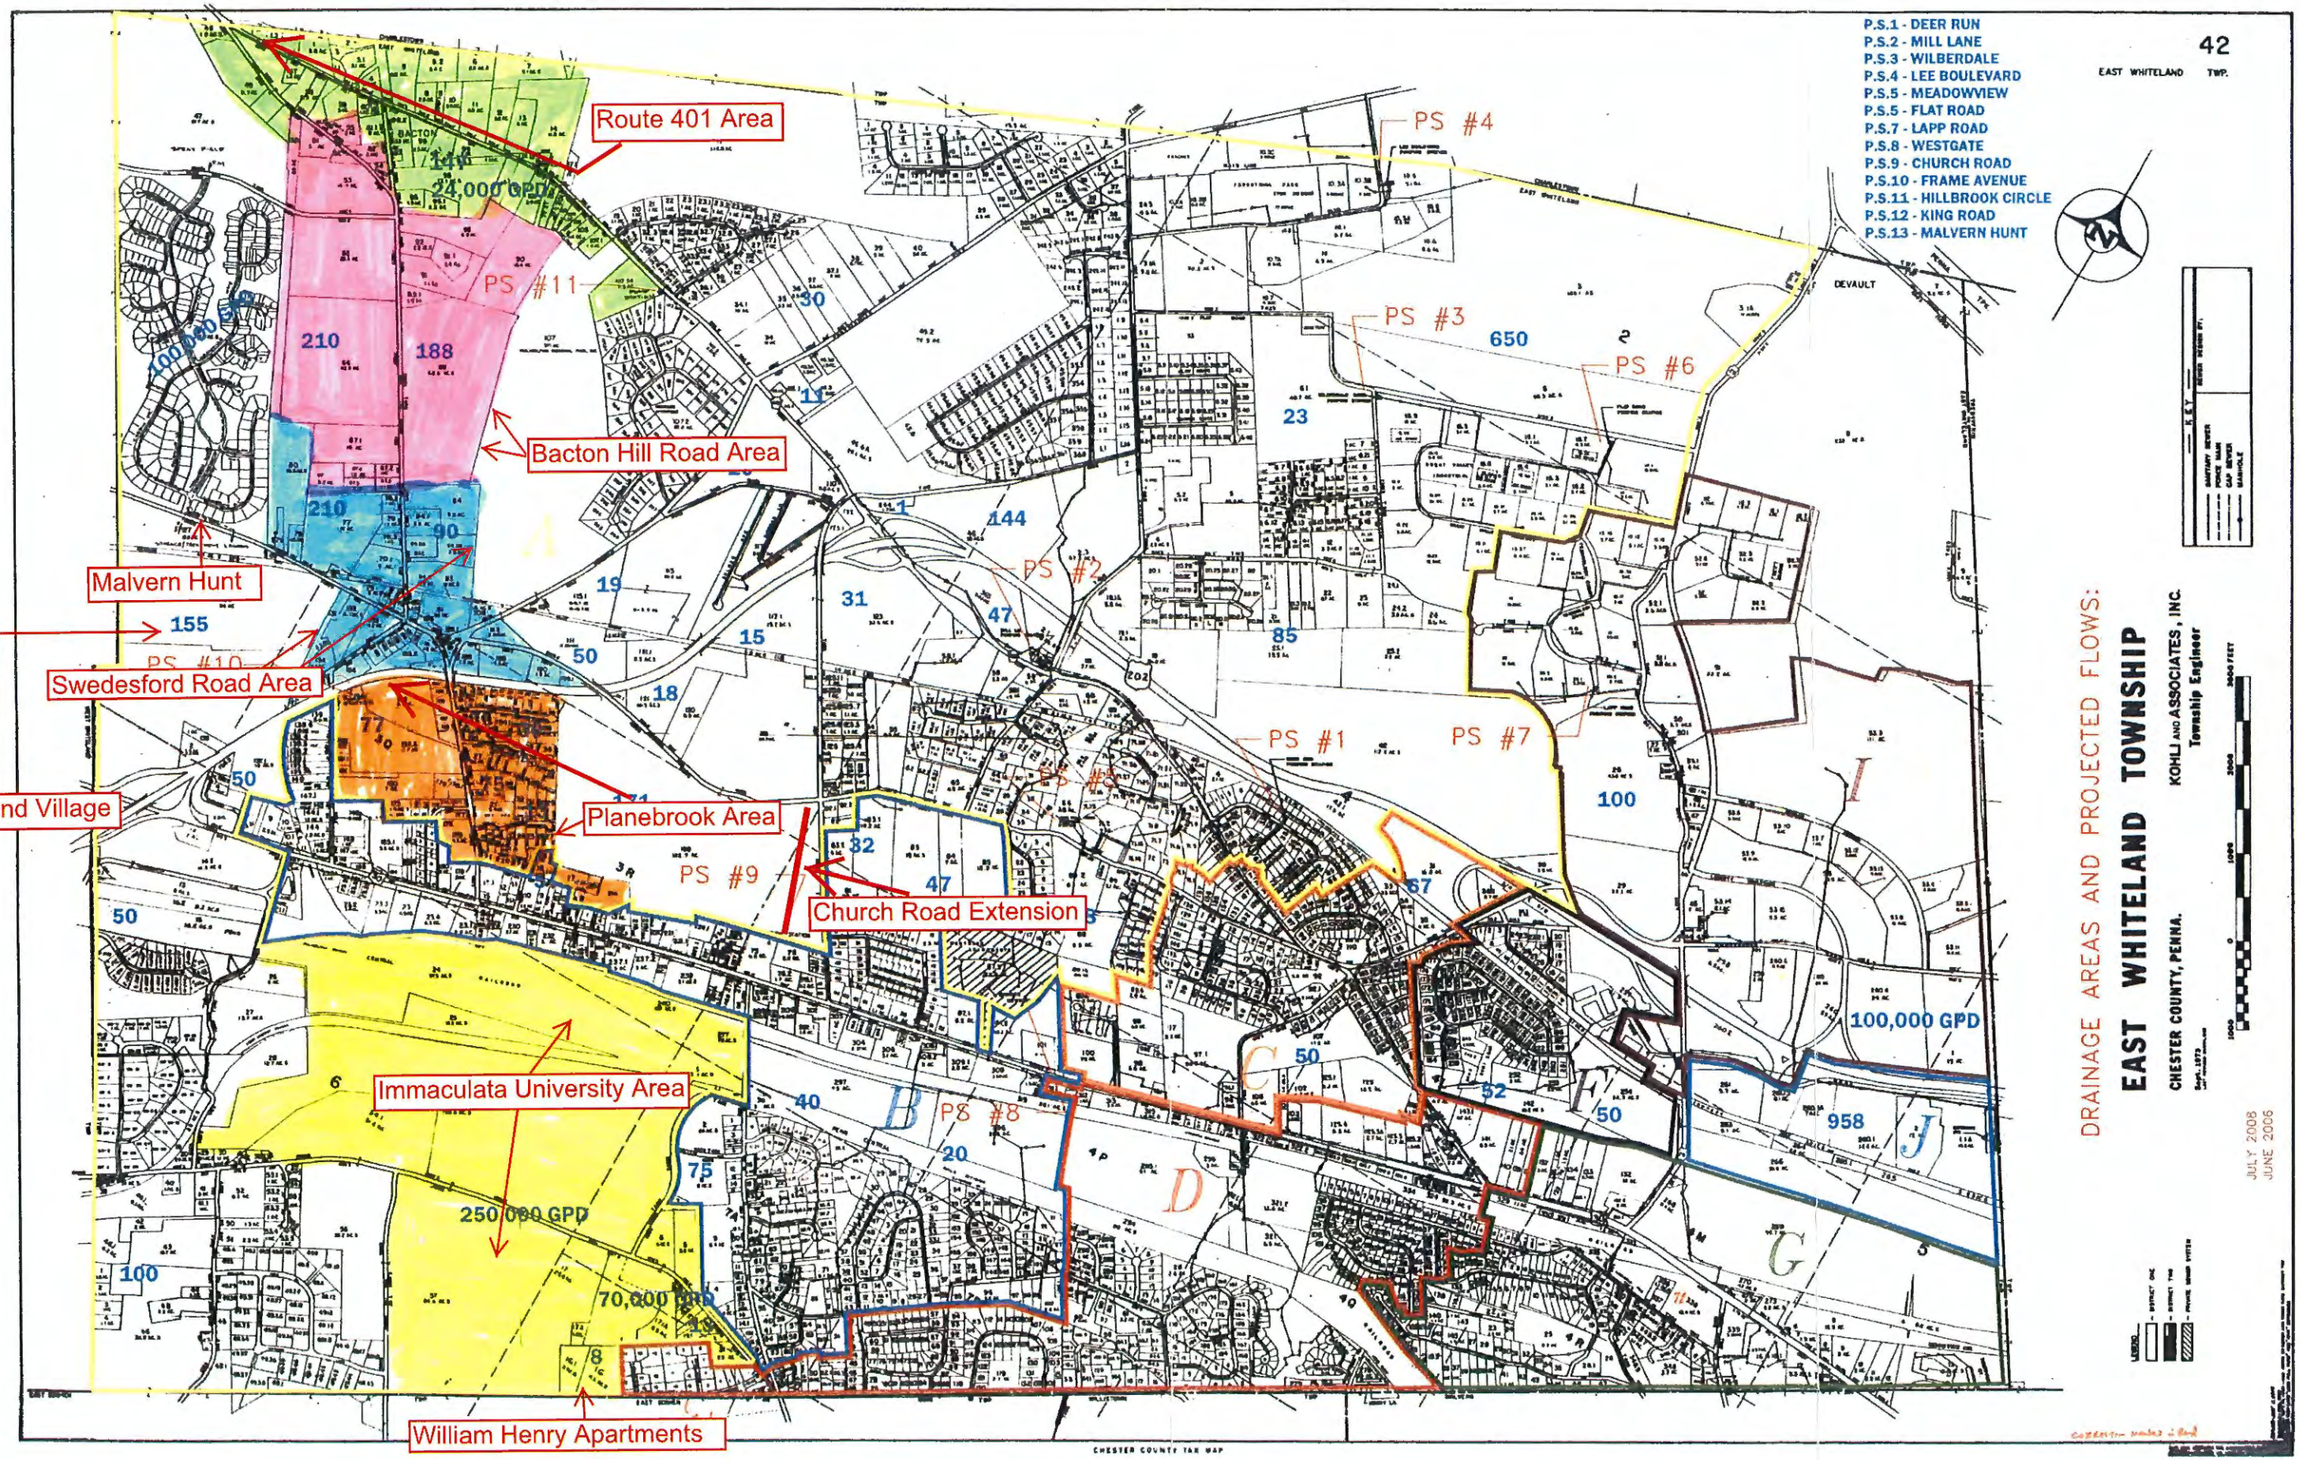
Documentation has been submitted that indicates that new dynamic flow modeling of Tredyffrin Township's Valley Creek Trunk Sewer from Section LV57 to LV58 shows that sufficient capacity exists in this sewer section to serve the Township's projected 2035 flows. However, field verification of the actual capacity of this sewer section has not been performed. The Valley Creek Trunk Sewer 537 Plan currently being reviewed by the Department has proposed engineering investigations to determine the actual capacity of the existing sanitary sewer. Please note that the outcome of these engineering investigations may affect the implementation of your plan. The Township should contact the Department with an amended implementation schedule regarding Areas 4 and 5 and New Areas 1 and 3, should this investigation result in there not being sufficient capacity within this sewer for the Township's projected flows.

Any person aggrieved by this action may appeal, pursuant to Section 4 of the Environmental Hearing Board Act, 35 P.S. Section 7514, and the Administrative Agency Law, 2 Pa.C.S. Chapter 5A, to the Environmental Hearing Board, Second Floor, Rachel Carson State Office Building, 400 Market Street, P.O. Box 8457, Harrisburg, PA 17105-8457, 717.787.3483. TDD users may contact the Board through the Pennsylvania Relay Service, 800.654.5984. Appeals must be filed with the Environmental Hearing Board within 30 days of receipt of written notice of this action unless the appropriate statute provides a different time period. Copies of the appeal form and the Board's rules of practice and procedure may be obtained from the Board. The appeal form and the Board's rules of practice and procedure are also available in braille or on audiotape from the Secretary to the Board at 717.787.3483. This paragraph does not, in and of itself, create any right of appeal beyond that permitted by applicable statutes and decisional law.

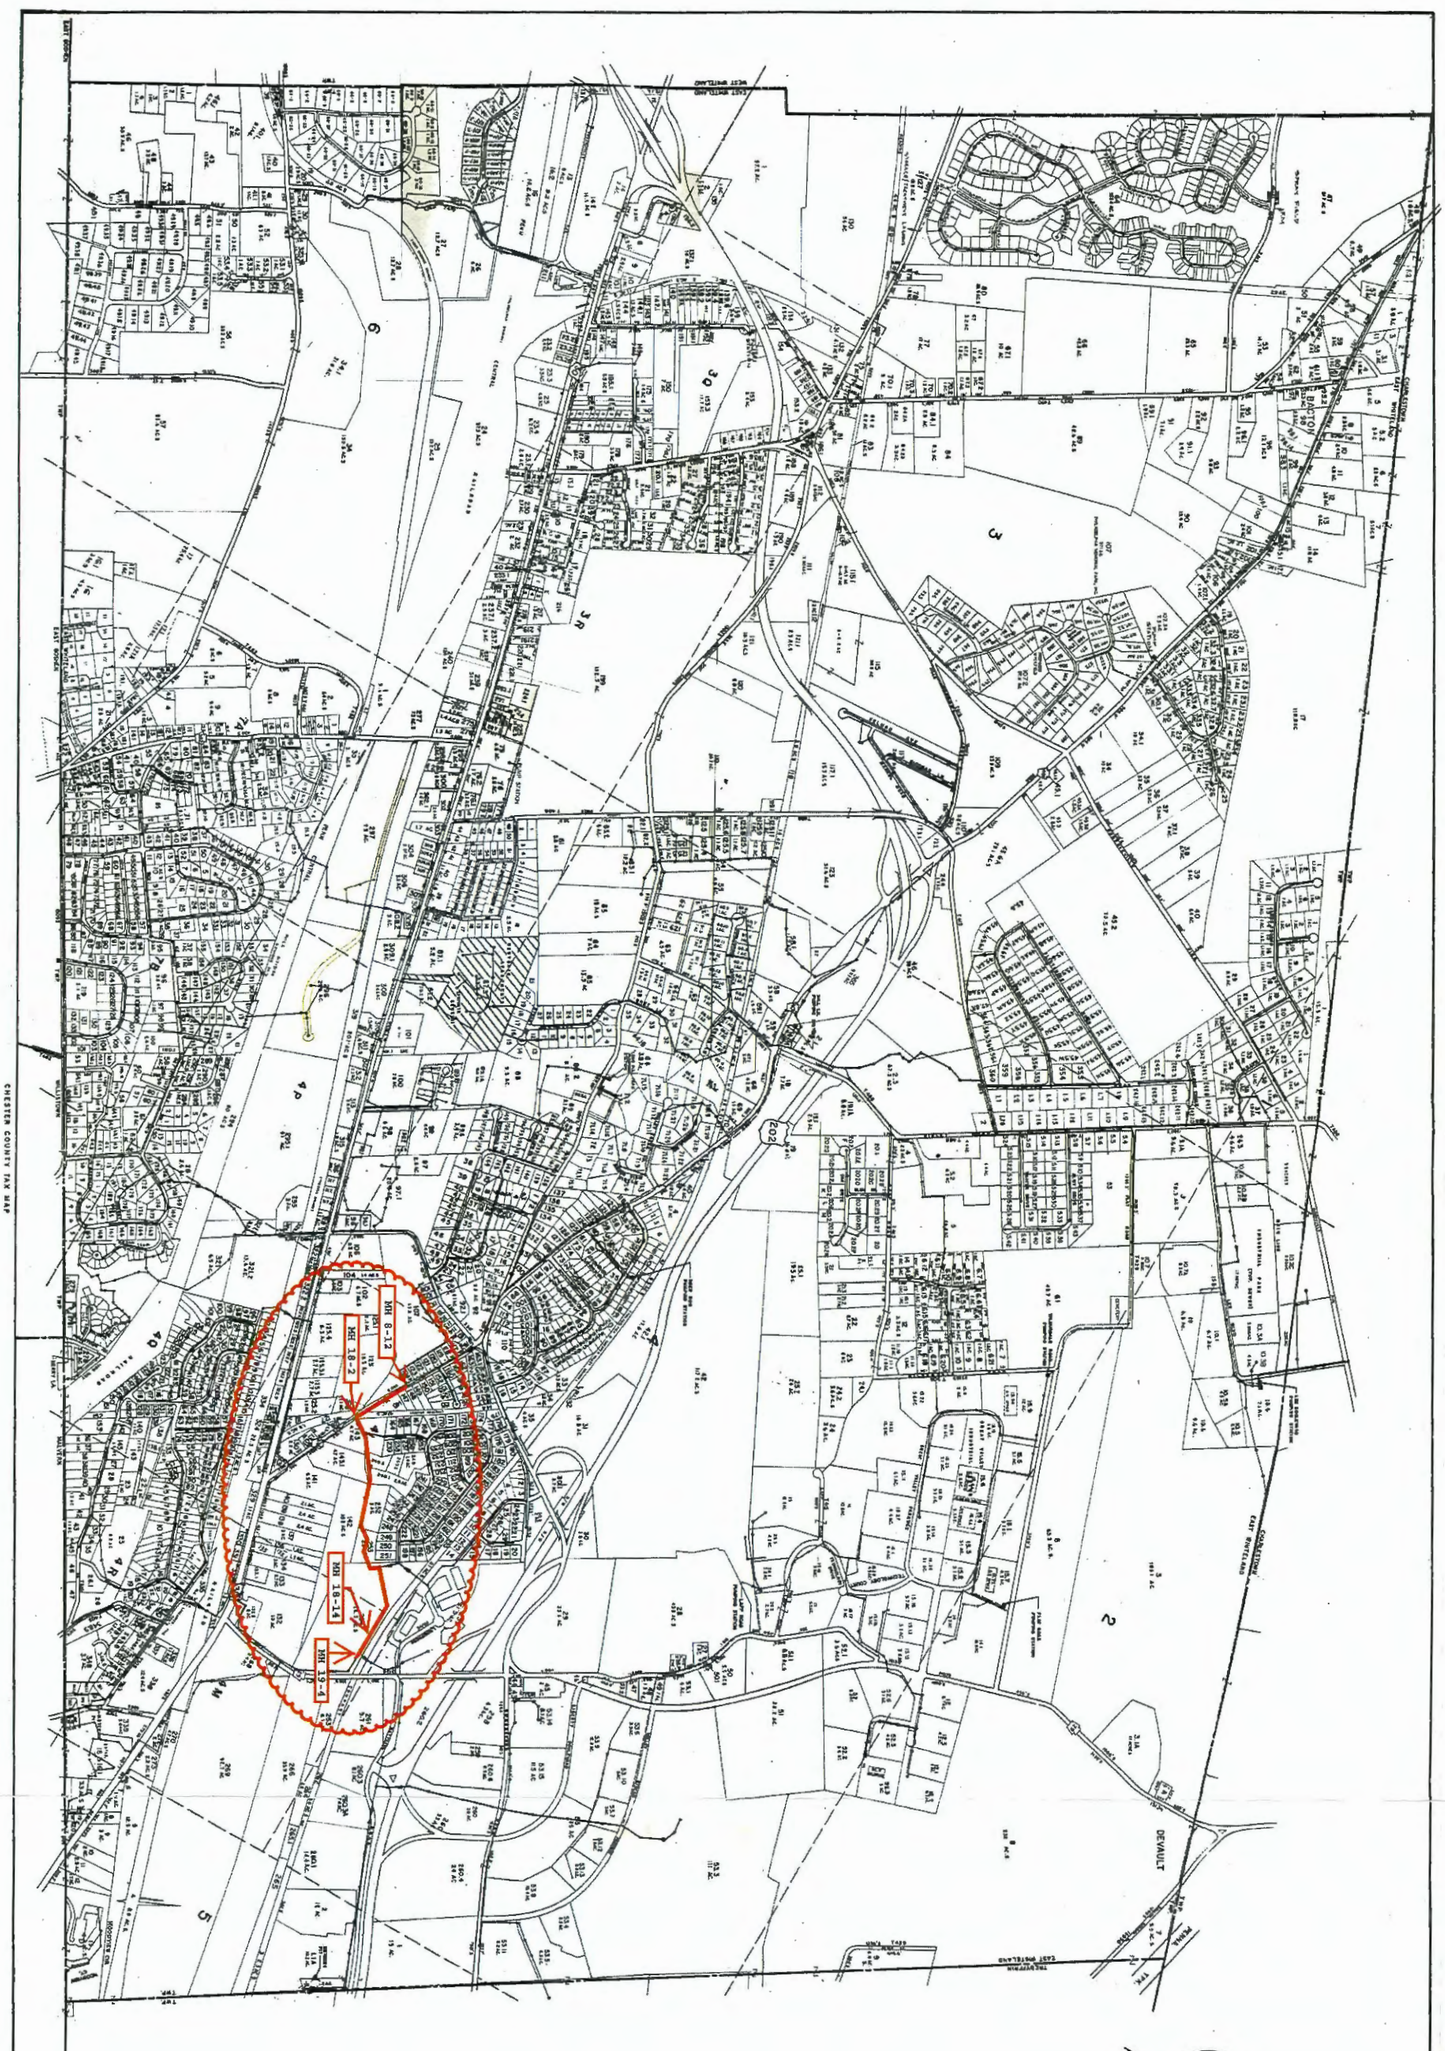
IF YOU WANT TO CHALLENGE THIS ACTION, YOUR APPEAL MUST REACH THE BOARD WITHIN 30 DAYS. YOU DO NOT NEED A LAWYER TO FILE AN APPEAL WITH THE BOARD.

IMPORTANT LEGAL RIGHTS ARE AT STAKE; HOWEVER, SO YOU SHOULD SHOW THIS DOCUMENT TO A LAWYER AT ONCE. IF YOU CANNOT AFFORD A LAWYER, YOU MAY QUALIFY FOR FREE PRO BONO REPRESENTATION. CALL THE SECRETARY TO THE BOARD (717.787.3483) FOR MORE INFORMATION.

If you have any questions, please contact Ms. Kelly Boettlin of this office at the phone number located in the first page footer.



Sincerely,



Jenifer Fields, P.E.

RE: "Special Study" Act 537 Plan Amendment – Response to PADEP Comments
East Whiteland Township / Mill Lane Pumping Station Replacement Project

Dear Ms. Boettlin:

The department's initial preliminary review has indicated that the plan update is incomplete and not in accordance with the provisions set forth in Chapter 71. The intent of the responses herein is to provide the requested information noted in the Departments letter dated November 12, 2010 and to insure that this information meets the provisions of Chapter 71 regarding the 537 planning process and warrants an approval of the plan amendment by the Department.

The following is a summary of each of the questions; followed by corresponding answers and a description of additional attached documentation, where appropriate:

1. Section 3.0 in the submitted Special Study provides projected flows for the Mill Lane Pump Station (MLPS). However, there appears to be no information provided on what will be involved in the replacement and upgrade of the MLPS. Please provide the following with regard to the MLPS:

   a. The current permitted average annual flows for MLPS.

      The pump station was originally rated for 1,400 GPM (~2.0 MGD). Currently the pump station is averaging approximately 820,000 GPD (~0.8 MGD). The purpose of the new pump station is two-fold, 1) to meet the future anticipated average and peak flows based on projected service area connections (these service areas were included as part of the original 537 Plan Report completed and approved in 1996 and last revised in May of 2000); and 2) to replace the existing station which is 30-years old and nearing its service life.

b. The proposed average annual flows for the expanded MLPS.

Below is Table 3.1 from the Special Study; which outlines the proposed average annual flow projections for the expanded MLPS. The replacement of the MLPS is the first step towards preparing for the sewer connections associated with the five (5) proposed project Study Areas described in the Special Study; which are to be connected to the sewer collection system tributary to the MLPS within the next 10 years.

Table 3-1 - Mill Lane Pump Station Projected Flows with Charlestown (Average & Peak)

Year	Current and Projected Average Daily Flows		DEP Peaking Factor*	Current and Projected Peak Flows	TDH
	(GPD)	(GPM)		(GPM)	(FEET)
2010	**817,600**	568	3.13	**1,777**	**150**
2015	**1,380,455**	959	2.94	**2,816**	**183**
2025	**2,126,055**	1,476	2.81	**4,152**	**142****
2035	**2,304,805**	1,601	2.78	**4,454**	**151****

* Peaking Factors were extracted from PADEP Domestic Wastewater Facilities Manual.

** Assumes that the force main from the Mill Lane PS will be replaced prior to 2025 (from a 14-inch to a 20-inch)

c. How is the MLPS proposed to be upgraded? Will the pumps be replaced with larger pumps?

A new pump station will be built adjacent to the existing pump station in a new larger building and will be equipped with larger pumps. Initially, the pump station will be equipped with three pumps (2 duty, 1 standby) and each pump will be designed to pump 1,600 GPM (~2.3 MGD) at ~200' of total dynamic head. Also, in order to handle future projected flows; East Whiteland Township will have the option to expand the pump station by adding a fourth pump, if necessary. The new pump station will add pump capacity to handle future projected sanitary sewer flows, pumping redundancy and pumping flexibility for the Township.

d. A note on Table 3-1 indicates that the force main from the MLPS will be replaced prior to 2025 from a 14-inch to a 20-inch. Please clarify if this refers to the force main from the pump station to where the gravity sewers begin at Manhole 2-6. Will the force main be replaced as part of this upgrade? At what point will the Township initiate the replacement of this force main?

To clarify, the note on Table 3-1 refers to the force main from the existing MLPS to Manhole 2-6 where the gravity sewers begin. The force main will NOT be replaced as part of this pump station replacement project. Based on future projected flows for the pump station, it is recommended that the force main from the MLPS to Manhole 2-6 be replaced prior to year 2025 in order to keep the total hydraulic head requirements within an optimal range. This force main replacement will be dependent on the accuracy of the future projected flows.

e. At what point will the Township initiate the upgrade of the MLPS?

Currently, the Township has authorized the design of the new proposed MLPS. The design is approximately 95% complete and it is anticipated that the design will be submitted to the Department for permitting in February or March of 2011. Construction is anticipated to start in late Spring or early Summer of 2011.

f. What are the estimated costs associated with the upgrade to the MLPS, and how does the Township propose to fund these improvements?

The estimated costs associated with the upgrade of the MLPS are anticipated to be approximately $2.0 to $2.5 MM. The Township will fund this project through a combination of monies from the Township's Sewer Reserve Fund, monies from a bond issuance and/or grant funds.

2. Please confirm that flows from other pump stations within the Township are not tributary to the MLPS.

Exhibit 1 for this response letter attached illustrates the pump stations that are tributary to the MLPS, and provides the current rated capacity of each pump station. The future projected flows for the MLPS include the projected flows from all pump stations tributary to the MLPS.

3. Please confirm that the flow from the MLPS will not be tributary to other pump stations within the Township.

The MLPS discharges at Manhole 2-6; and then the sanitary sewage flows via gravity to Tredyffrin Township. The MLPS is not tributary to any other pump stations within East Whiteland Township. See Exhibit 2 attached.

4. Section 2.3.4 indicates that all sanitary sewer facilities to be constructed under this Special Study will be owned and operated by the Township. The submitted Special Study also discusses enlarging certain sewer sections downstream of the MLPS by 2019. However, it is unclear what exactly will be constructed upon implementation of this Special Study. Please clarify what actions are proposed to be completed upon approval of this Special Study.

It is the intent of the Township for this Special Study to serve as the final planning module for sewer improvements as outlined in the original Act 537 Plan approved by the Department in 1996 and last updated or amended in 2000. Therefore, the sewer improvements and connections outlined in this study will encompass and account for all remaining sewage planning areas within the Township. Additional information is included in the Special Study report to reflect the force main replacement (from 14" to 20") and for the enlargement of the sanitary sewer sections downstream of the MLPS.

5. In addition, please provide a detailed implementation schedule for the implementation of this Special Study. This implementation schedule should include milestones for the permitting, construction, and completion of the proposed sanitary sewer facilities mentioned in Item 4 above. Dates can be time dependent on prior milestones.

   An implementation schedule is provided in the "Special Study" report illustrating projected milestone dates for completing the permitting, construction and completion of the planned improvements noted in Item 4 above.

6. Section 2.3.4 also states that the sanitary sewer lines and manholes will be constructed within the Township-owned rights-of-way or easements obtained prior to the start of any construction. Please clarify if any easements will be required for the sanitary sewer facilities proposed as part of this Special Study, and if easements will be necessary, does the Township foresee any issues obtaining the necessary easements.

   For Area's 1, 2 and 3 of the "Special Study"; which are areas that were previously included in the approved Act 537 Plan, there will not be a need to obtain additional easements. For Area 4 (Church Road Extension), it is anticipated that an existing easement will need to be extended through Chester Valley Golf Club to complete this work; however EWT does not foresee any issues with obtaining this easement extension. For Area 5 (Immaculata University Area), a new easement will likely be necessary to connect to the public sewer; however EWT does not foresee any issues with obtaining this easement, since sewer connection has been an ongoing discussion with the University. For the "new" development areas not included as part of the approved Act 537 Plan (Malvern Hunt, Whiteland Village and William Henry Apartments); easements will be necessary to extend sewer infrastructure to these areas, however EWT does not foresee any issues with obtaining these easements. These "new" areas will be connected to new sewers that will be constructed in the next 10 years. Finally, for several of these sewer improvement projects, a PennDOT road crossing permit will be necessary. EWT has obtained these permits on numerous occasions previously; therefore it is not anticipated that these road crossings will create any issues. The work will be coordinated with PennDOT and standard PennDOT construction practices will be used.

7. Section 2.3.4 also states that in the event that new pump stations and force mains are deemed necessary, they will also be constructed within the Township-owned rights-of-way or easements obtained prior to the start of any construction. Please note that additional sewage facilities planning will be required prior to the construction of any new pump stations and force mains.

   It is acknowledged that additional sewage facilities planning will be provided for any new pump station and force mains. At this time, the only potential planned force main project is to replace the MLPS force main within the next 5 to 10 years.

8. Section 2.3.2 states that the financing of these projects will be accomplished through the Board of Supervisors of the Township. Please elaborate. Does the Township have the funds available to be able to implement the construction of the new sewers? If the Township does not have funds available, how does the Township propose to raise the necessary funds? Also, please note that your plan must identify a contingency financing method in the event that the primary method identified is not available.

   EWT will fund these projects through a combination of monies from the Township's Sewer Reserve Fund, monies from a bond issuance and/or grant funds. Contingency methods will be from one of these three sources depending on the timing of the sewer improvement projects.

9. Section 2.3.3 indicates that these projects will generally be completed within 8 to 12 months once authorization to proceed is received by the Township. Please clarify what conditions would cause the Township to not authorize construction of the new sewers.

   EWT currently has ordinances containing sewer connection criteria for existing development. Many of these existing developments contain aging on-lot sewer systems. Therefore, EWT intends to complete these projects in order to assure that the infrastructure is available to make these connections and eliminate these aging on-lot sewer systems; therefore it is anticipated that authorization will be provided.

10. Please provide map(s) showing the proposed conceptual extensions in each area as well as the path from the MLPS to Manhole LV77A on the LV trunk sewer. These map(s) should be at a scale large enough to distinguish the detail shown and should also include a map legend.

    Refer to attached Exhibit 2; which illustrates the items requested above and all planned improvements per the "Special Study".

11. We note that the section of the Valley Creek Trunk Sewer (VCTS) from Manholes LV58 to LV57 is projected to exceed capacity from flows coming from the Township by 2018. Section 4.2.1 refers to a parallel sewer being proposed within the VCTS 537 Plan being prepared by Tredyffrin Township as a way to increase capacity within the section of the

VCTS from Manholes LV58 to LV57. However, in May 2010, the Department had discussions with Gannett Fleming, Inc., Tredyffrin Township's engineer that is working on the VCTS 537 Plan, in which they indicated that the planning for this sewer section will not be included in the current version of the VCTS Plan proposed to be submitted to the Department.

Section 5.0 states that the suitable alternative is to provide the areas identified in the Special Study with public sewerage provided that the capacity of the gravity sewer trunk line from MHLV58 to MHLV57 in Tredyffrin Township is improved before the year 2018. Since it appears that the planning for increasing capacity within this sewer section is likely being postponed, the Township will be restricted by the current hydraulic capacity of this sewer section and will therefore be unable to provide capacity for all of the proposed sewer service areas identified in the Special Study. Please identify with text and mapping which areas are proposed to be able to connect to public: sewer prior to capacity being increased within the VCTS from MHLV58 to MHLV57.

The proposed repair to section LV58 – LV57 of the Valley Creek Truck Sewer has been deferred from the current VCTS 537 Plan due to a disagreement over who is responsible for paying for the repairs needed to restore the design capacity to this section of the trunk line. EWT asked that this section be removed from the current VCTS Plan so that the Plan can go through the approval process to allow other member municipalities to start capacity improvements that are needed now to protect public health and safety. EWT will continue to have dialogue with Tredyffrin Township and if necessary, will enter into arbitration in order to settle our argument over the assignment of cost for this pipeline repair.

12. Please clarify how the Township will manage connections and ensure that the sewage flow coming from the planned service area will not exceed the hydraulic capacity of the sewer section from MHLV 58 to MHLV57.

    Per EWT's Act 537 "Special Study" report; there are several areas of sewer improvements that are noted to be completed by the year 2015. Currently, the preliminary hydraulic analyses that have been completed are focused specifically on the infrastructure needs within EWT as they related to the future projected sanitary sewage flows. Prior to adding additional flow to the sanitary sewer network as part of these planned projects; EWT will participate in informational meetings with VCTS and Tredyffrin Twp to update them regarding the intent and to verify sewer capacities.

13. The submitted Special Study indicates that the 2035 projected flows for the Township are available in the flow already allocated to the Township from both Tredyffrin Township and the VFSA. Please provide correspondence from both Tredyffrin Township and VFSA confirming this statement.

    Attached as Exhibit 3 is a table and figure from Tredyffrin's recent Act 537 Plan Revision for Valley Creek Trunk Sewer dated April of 2010. This correspondence documents the

projected flows for EWT as it pertains to Tredyffrin's the VCTS project improvements. These projected flows coincide with what has been summarized in EWT's Act 537 Plan "Special Study" report.

14. Section 1-3 of the Special Study states that the Township's capacity allocation to the VCTS is 4.0 MGD annual average flow. However, the March 2009 Act 537 sewage facilities planning done in support of the VFSA wastewater treatment facility expansion states that the Township's allocated capacity is only 3.63 MGD annual average flow. Please clarify this discrepancy.

    Attached as Exhibit 4 is an excerpt from EWT's original Act 537 Plan revised and completed in 1995. On page 32 of this plan, it states that the Township had been allocated a peak capacity for the Valley Creek Trunk Line of 9.5 MGD (4.0 MGD average). This capacity allocation information was summarized in Section 1-3 of the "Special Study". It must be noted that this flow of 4.0 MGD includes sanitary flows from Charlestown Township; since Charlestown is under Agreement with EWT to discharge 0.3 MGD to the Township in lieu of sending their sanitary flow directly to the VFSA. Therefore, EWT's total flow is 3.63 MGD + 0.3 MGD from Charlestown.

    However, attached is a letter dated October 15, 2008, which was a response to Buchart Horn, Inc. (the engineer of record for VFSA) regarding their request to separate the Charlestown flow from EWT's projected flow numbers. Therefore, the resulting total projected flows for EWT were documented to be 3.63 MGD average daily flow; which coincides with what was summarized in the March 2009 Act 537 planning completed in support of the VFSA wastewater treatment facility expansion. This letter is also included in Exhibit 4.

Very truly yours,

EXHIBIT 4

East Whiteland Township has been allocated a peak capacity of 9.5 mgd (4.0 mgd average) in the Valley Creek Trunk Line. Flows allocated to East Whiteland at the Wilson Road Pump Station, based on its current capacity, are 5.855 mgd peak and 2.34 mgd average. The Wilson Road Force Main, like the Pump Station, has a limited capacity and East Whiteland's allocation for the force main is 6.553 mgd peak and 2.62 mgd average daily flow. Based on the current plant capacity of 8 mgd, East Whiteland is allotted 1.7 mgd (average flows). East Whiteland has allowed Charlestown Township to utilize 0.3 mgd (average) of its allocation through the Valley Creek Trunk Line and the Wilson Road Pump Station and Force Main. Although the Valley Creek Trunk Line is capable of accepting the ultimate flows from East Whiteland Township, the plant capacity and the Wilson Road Pump Station and Force Main limit the actual flows possible through the system.

3. Treatment Systems

The Township collection system connects to the Valley Forge Sewer Authority plant for its sewage treatment and disposal. The sewage plant provides both primary and secondary treatment, and involves pressure filtration. The treatment system is an activated sludge method. The system was built in 1976 and is in excellent condition. The Municipal Authority plans to expand the collection system as funds become available. The expansion would accommodate infill development in western areas of the Township. No operating problems have been reported at this time. Treated effluent from the system is discharged into the Schuykill River.

4. Private Systems

Seven private package plants operate in East Whiteland Township. These treatment plants are generally located in the southern and western portions of the Township. The Bishop Tube Company operates one facility. The treatment plant has a designed operating capacity of 10,000 gallons per day. The present average daily flow is 4,000-5,000 gallons per day (gpd). There are future plans to upgrade and expand the system to a designed operating capacity of 20,000 gpd.

The second private treatment facility is an aeration system that serves the Great Valley High School. The average daily flow for the system is 9,000 gpd which is well under the designed operating capacity.

The third private package serves Immaculata College. The College has two Imhof gravity-fed treatment facilities. The combined designed operating capacity of the two facilities is 117,200 gpd. The average daily flow is 28,700-50,000 gpd. Ongoing repairs such as new flow and filtration devices are being done. Malvern Court Mobile Home Park operates the fourth private package plant in the Township. The type of treatment system is aeration with sand filter beds. The designed operating capacity is 24,000 gpd and the average daily flow is 16,000-18,000 gpd.

Re: **East Whiteland Township**
Regional Act 537 Response

Dear Diane:

In response to your faxed letter dated October 8, 2008, enclosed herein please find "Exhibit 2" Sewage Flow Calculations which have been revised by removing the Charlestown Flows (as you requested) from Point "A", the previously mistyped flows for P.S. #2 were corrected, and "other flow" EDU additions were changed from 1,873 EDUs to 1,963 EDUs; thus providing the total flows at Point "A" to be 2,007,525 GPD. Please note that the William Henry Apartments (projected flows) as noted in your spread sheet as 710,000 GPD is incorrect and should be 70,000 GPD.

The total projected flows to Valley Forge Sewer Authority, as noted on Sheet 4 of 4, now shall be 3,630,250 GPD.

Enclosed herein also find the projected flows Map (submitted with the previous submission as Exhibit "1") showing the EDU numbers in blue which shall correlate with the other flows.

If you have any further questions, please contact me.

Very truly yours,

Surender S. Kohli, P.E.
Township Engineer

Revised 10/14/08

Exhibit "2"

EAST WHITELAND TOWNSHIP
Regional Act 537 – Response

Sewage Flow Calculations

POINT "A"

Includes flows from P.S. #1 and #2 (which include flows from P.S. #3, #4, #5, #6, and #11), Charlestown flows, Malvern Hunt, Brownfields, Malvern, Court, Immaculata College, and William Henry Apartments and project flow from areas primarily in the northern and western parts of the Township.

P.S. #1 (current) = 14,700 gpd
P.S. #2 (current) = 854,000 gpd
Malvern Hunt (projected) = 100,000 gpd
Brownfields (projected) = 155,000 gpd
Malvern Court (projected) = 24,000 gpd
Immaculata University (projected) = 250,000 gpd
William Henry Apartments (projected) = 70,000 gpd
Other flow = 539,825 gpd (see below)

Projected flow (see Projected Flow Plan):
147, 188, 75, 30, 47, 85, 52, 15, 31, 90, 210, 210, 19, 144, 10, 50, 50, 30, 75, 13, 77, 5, 171, 18, 100, 13, 8 = 1,963 EDU @ 275 gpd/EDU = 539,825 gpd

TOTAL FLOW at "A" = 2,007,525 gpd

POINT "B"

Includes flows from P.S. #8 (which include flows from P.S. #9 and #10) and some projected flows from areas off of the Route 30 corridor.

P.S. #8 (current) = 272,300 gpd
Other flow = 78,925 gpd (see below)

Projected flow (see Projected Flow Plan):
32, 47, 68, 5, 75, 40, 20 = 287 EDU @ 275 gpd/EDU = 78,925 gpd

TOTAL FLOW at "B" = 351,225 gpd

East Whiteland Township Regional Act 537 Response
Exhibit "2"
Revised - 10/14/08

POINT "C"

Includes flows from Points "A" and "B" and flows from areas off of Route 401.

"A" = 2,007,525 gpd
"B" = 351,225 gpd
Other flow = 128,975 gpd (see below)

Projected flow (see Projected Flow Plan): 67, 50 = 117 EDU
Current estimated flow: 90, 19, 41, 10, 42, 150 = 352 EDU

(117 + 352) EDU = 469 EDU @ 275 gpd/EDU = 128,975 gpd

TOTAL FLOW at "C" = 2,487,725 gpd

POINT "D"

Includes flows along Route 30 and below (including P.S. #12)

P.S. #12 (current) = 50,850 gpd
Other flow = 97,900 gpd (see below)

Projected flow (see Projected Flow Plan): 1 EDU
Current estimated flow: 24, 7, 26, 7, 37, 12, 120, 30, 54, 37 = 355 EDU

(1 + 355) EDU = 356 EDU @ 275 gpd/EDU = 97,900 gpd

TOTAL FLOW at "D" = 148,750 gpd

POINT "E"

"E" = "C" + "D"

"C" = 2,487,725 gpd
"D" = 148,750 gpd

TOTAL FLOW at "E" = 2,636,475 gpd

East Whiteland Township Regional Act 537 Response
Exhibit "2"
Revised – 10/14/08

POINT "F"

Flows from "E" and some area north of the trunk line.

"E" = 2,636,475 gpd
Other flow = 65,725 gpd (see below)

Projected flow (see Projected Flow Plan): 52 EDU + 50 EDU = 102 EDU
Projected flow (see Projected Flow Plan): 20, 87, 30 = 137 EDU

(102 + 137) EDU = 189 EDU @ 239 gpd/EDU = 65,725 gpd

TOTAL FLOW at "F" = 2,702,200 gpd

POINT "G"

Projected flow (see Projected Flow Plan): 59, 72 = 131 EDU
Current estimated flow: 50, 69, 82, 40, 20, 6, 50, 126, 20 = 463 EDU

(131 + 463) EDU = 594 EDU @ 275 gpd/EDU = 163,350 gpd

TOTAL FLOW at "G" = 163,350 gpd

POINT "H"

"H" = "F" + "G"

"F" = 2,702,200 gpd
"G" = 163,350 gpd

TOTAL FLOW at "H" = 2,865,550 gpd

East Whiteland Township Regional Act 537 Response
Exhibit "2"
Revised – 10/14/08

POINT "I"

Flows from "H," P. S. #7, and the industrial park.

"H" = 2,865,550 gpd
P.S. #7 (current) = 157,500 gpd
(West) Industrial park area (projected) = 37,500 gpd
(East) Industrial park area (projected) = 100,000 gpd
Other flow = 27,500 gpd

Projected flow (see Projected Flow Plan): 100 EDU @ 275 gpd/EDU = 27,500 gpd

TOTAL FLOW at "I" = 3,188,050 gpd

POINT "J"

Flows from "I"

"I" = 3,188,050 gpd
Other flow = 442,200 gpd

Projected flow (see Projected Flow Plan):
Worthington = 958 EDU + Glasgow Quarry = 650 EDU

958 + 650 EDU = 1,608 EDU @ 275 gpd/EDU = 442,200 gpd

TOTAL FLOW at "J" = 3,630,250 gpd

TOTAL PROJECTED FLOW
TO VALLEY FORGE SEWER AUTHORITY
= 3,630,250 GPD

Department of Environmental Protection
Southeast Regional Office
2 E. Main St.
Norristown, PA 19401

RE: Act 537 Special Study Amendment – Response #2
East Whiteland Township, Chester County
Mill Lane Pump Station Replacement Project

Dear Ms. Boettlin:

The following letter is being submitted on behalf of East Whiteland Township (EWT) and in response to the Department of Environmental Protection's (Department) letter dated May 27, 2011 regarding the Official Sewage Facilities Plan Special Study for the Mill Lane Pump Station Replacement (MLPS). The Department's letter states that the special study continues to not be in accordance with the provisions of Chapter 71. The intent of the responses herein is to provide additional answers and information for the special study to insure that the Special Study documentation meets the provisions of Chapter 71 regarding the 537 planning process and warrants an approval of the plan amendment by PADEP.

The following is a summary of each of the questions; followed by corresponding answers and a description of additional attached documentation, where appropriate:

1. The Township had confirmed during the April 13, 2011, meeting that the MLPS is currently permitted for 2.0 million gallons of sewage per day (MGD). Projected flows to the pump station have been listed; however, as noted below, the Township will be unable to get planning approval for the entire projected flows. Since permit limits are based on approved planning flows, please clarify the proposed permitted flow for the MLPS.

   Please refer to Attachment 1 of this letter. This information was developed by Valley Forge Sewer Authority regarding the sewage flow capacity of the portion of Tredyffrin Township's interceptor between LV58 and LV57. The calculations to determine the flow capacity of this section of sewer were confirmed using dynamic modeling, as noted. The updated calculations (using the same site conditions as previously used) suggest that the flow capacity of this sewer section is 15.8 MGD, which is considerably greater than the 2035 projected

capacity noted in Tredyffrin's 537 Plan (14.5 MGD). This information suggests that EWT's flow thru the MLPS may not need to be restricted; thus a Phased approach for the MLPS replacement project and related unsewered area connections (Areas 1 thru 5 noted in the 537 Plan Special Study) is likely not necessary.

As noted in the Special Study, the 2035 projected average daily flow is approximately 2.3 MGD with a peaking factor of approximately 6.4 MGD for the MLPS. Also, as previously noted, the MLPS replacement is necessary initially because the existing MLPS is over 30 years old and the existing pumps are beyond their useful life.

In summary, the total 2035 projected sewage flows of approximately 15.6 MGD (as noted in Tredyffrin Township's Act 537 Plan Revision for Valley Creek Trunk Sewer) are below the capacity threshold of 15.8 MGD for the LV58 to LV57 trunk sewer. However, for consistency purposes with the VCTS Act 537 Plan; EWT will continue to monitor connected flows and provide a future amendment to the Act 537 Plan if further modeling results suggest that insufficient capacity exists in the LV58 to LV57 trunk sewer to handle future connected sanitary flows.

2. The implementation schedule provided in the March 17, 2011, resubmission is inadequate. As indicated in the Department's November 12, 2010, review letter, this implementation schedule should include milestones for the permitting, construction, and completion of the proposed sanitary sewer facilities. The schedule can be time dependent on prior milestones and may be based on flow triggers where applicable.

   Refer to Attachment 2 enclosed in this letter for implementation schedule information as it pertains to the permitting construction and completion of the MLPS, new connected areas outlined in the Special Study (Areas 1 thru 5), force main replacement and downstream sewer enlargement (from MH 8-12 to 18-2, MH 18-2 to 18-14 and MH 18-14 to 19-4) within EWT.

3. If flow triggers are to be included in your implementation schedule, please describe how the Township will monitor flows to see if the flow trigger points are reached.

   As previously noted, EWT will monitor flows via installed flow metering equipment at the MLPS. Also, EWT will provide additional planning and flow projection information for each of the new areas to be connected to the public sewer collection system at the time that the improvements are proposed. The latest calculated flow information for the LV58 to LV57 section of Tredyffrin's trunk sewer shows that there is adequate capacity to handle future projected flows. However, EWT will provide advanced notice to both Tredyffrin and

VFSA for any planned improvements and connections to the sewer system within EWT as a means of keeping all parties well informed.

4. A milestone for the replacement of the MLPS force main must be included in the required implementation schedule indicating what will trigger this force main replacement. Please note that additional sewage facilities planning may be required prior to replacement of this force main. The implementation schedule should reflect planning and permitting actions for the force main replacement.

   Please refer to Attachment 2 for the implementation schedule. EWT would like to include the planning for the force main replacement as part of this Act 537 Plan Special Study. At the time of the force main replacement project, EWT will submit the required permit application information and will notify both Tredyffrin and VFSA of this replacement.

5. Milestones and triggers must also be included in the implementation schedule for the enlargement of the downstream sewer sections noted within the Special Study.

   Please refer to Attachment 2 for the implementation schedule. EWT would like to include the planning for the sewer enlargement as part of this Act 537 Plan Special Study. At the time of the sewer enlargement project, EWT will submit the required permit application information and will notify both Tredyffrin and VFSA of this sewer enlargement.

6. Please clarify if all construction of sewage facilities proposed within the Special Study will take place within existing easements.

   The force main replacement and the downstream sewer enlargement will be constructed within existing PennDOT right-of-way and generally in parallel to the existing infrastructure.

   EWT will provide additional planning information to the Department and will obtain easements (if necessary) for Areas 1 thru 5 of the Special Study when these areas are to be connected to the sewer collection system. As part of this planning effort, EWT will also notify all parties involved, including Tredyffrin Township and VFSA.

7. As requested in the Department's November 12, 2010, review letter, please identify with text and mapping which areas are proposed to be able to connect to public sewer prior to capacity being increased within the Valley Creek Trunk Sewer (VCTS) from Manholes (MRs) LV58 to LV57.

Please refer to the response in Item #1 above. Based on this information, EWT concludes that the capacity increase within the VCTS from MH LV58 to LV57 should not create a bottleneck for the replacement of the MLPS. Therefore, EWT's proposed public sewer connections will be made as the projects are budgeted; and additional planning and design information will be provided to the Department for review and final approval.

8. As discussed in the April 13, 2011, meeting, the Township will be unable to determine when replacement of the gravity sewer trunk line from MH LV58 to MH LV57 in Tredyffrin Township will be taking place. Since flows coming from the Township are projected to exceed capacity of the VCTS from MH LV58 to MH LV57 by 2018, the Department will be unable to approve planning for any projected flows beyond the capacity of this sewer section. The Township may wish to split the submitted planning into 2 phases. Phase 1 will include all construction able to take place prior to capacity being increased within the VCTS from MH LV58 to MH LV57 as well as the sewer service area description requested in Item 7 above. Phase 2 will describe the actions and areas to be served after capacity is increased within this VCTS section.

   Please note that if the Township decides to split this planning into phases, the following will need to be included in the new Phase 1 submission:

   a. A new Resolution of Adoption.
   b. Evidence that this project has been republished.
   c. Documentation that shows that the Township Planning Commission, county planning commission, and the county health department have had a chance to review the changes to this planning document.
   d. An implementation schedule showing milestones and triggers pertaining to both phases.

   EWT does not wish to split the submitted planning into 2 phases and does not believe that this is necessary considering the information outlined in Item 1 above pertaining to the capacity of the VCTS trunk sewer between LV58 and LV57. The attached implementation schedule shows the proposed improvements to be implemented as part of the proposed Act 537 Plan Special Study. The additional sewer connections outlined in the Act 537 Plan Special Study will be planned and designed at the time the connections are to be made. This information will be submitted to the Department for final review and approval.

9. The March 17, 2011, resubmission included a copy of a portion of the draft VCTS Act 537 Plan to document that the 2035 projected flows for the Township are available in the flow already allocated to the Township from both Tredyffrin Township and the Valley Forge Sewer Authority (VFSA). This documentation is inadequate. Please submit separate correspondence from both Tredyffrin Township and VFSA confirming this statement.

   Please refer to Attachment 3 of this letter for correspondence from both Tredyffrin Township and VFSA confirming the 2035 projected flows for EWT.

10. The Special Study indicated that the connection of the existing Malvern Courts Mobile Home Park (MHP) located in Service Area I of the Township will take place between now and 2015. However, the Department's Operations Section has noted significant operational concerns with the private sewerage facilities serving the MHP.

    During the April 13, 2011 meeting, the Township had indicated that the connection of the MHP cannot occur until other sewerage facilities are installed closer to the development. Please clarify in detail what actions need to take place in order to connect this development to public sewer as well as the projected time needed for each action. In addition, please evaluate the feasibility of an expedited schedule of sewer construction which will allow for the near-term connection of the MHP.

    If an expedited connection schedule for the MHP is not feasible, interim corrective measures are required in order to address the significant operational problems with the private sewerage facilities serving the MHP. Section 71.71 of the Pennsylvania Code states that "Municipalities are required to assure the proper operation and maintenance of sewage facilities within their borders." Therefore, please clarify how the Township intends to address the problems associated with the sewerage facilities serving this mobile home park. Specifically, please evaluate a municipal takeover of the MHP's wastewater treatment plant.

    It is EWT's opinion that the status of the Malvern Courts MHP is a separate issue and is not related to the MLPS replacement project. However, the MLPS replacement has been designed and has been submitted to the Department for permitting. The MLPS must be replaced prior to any new connections to the collection system being implemented.

    In relation to the Malvern Courts MHP, discussions have previously occurred regarding the connection of the MHP to EWT's public sewer. Once the MLPS project is constructed and the new pump station is operational, EWT will resume discussions with the Owner of the MHP and will contact the Department to set up a meeting to discuss the issues surrounding this situation. At that time, EWT will propose a study be conducted by the property owner to evaluate options for eliminating the onsite wastewater treatment plant and for connecting the MHP to EWT's sanitary sewer collection system.

If you have any questions, comments or need additional clarification regarding the information contained within this letter, please contact me at (610) 840-9116.

Very Truly Yours,

Subject: RE: VCTS 537 Plan - Line LV 57-58
Attachments: VCTS LV Interceptor RT 202 Crossing

Ladies/Gentlemen,

As I discussed with Steve Norcini this morning, I asked Buchart-Horn to evaluate the VCTS system using a dynamic hydraulic model in order to evaluate in further detail the hydraulic characteristics around the LV 57-58 section of the VCTS. We are also doing this for some sections of the VFSA gravity sewer system where static modeling has identified sections which may be of concern; yet field conditions have shown these sections of pipe to be in a "far-from-full" condition during very heavy rain events.

The results of the dynamic model analysis (see attachments) indicate that at the projected maximum flow rate, the pipe would not be entirely full. According to the dynamic analysis, the "full pipe condition" results at a flow rate of 15.8 million gallons per day (mgd) which is much greater than 2035 projected capacity requirement of 14.5 mgd condition in the Plan. The dynamic analysis included the same site condition parameters that were used in the latest version of the Act 537 Plan.

Of course as stated in the Plan, field study should also be implemented to confirm model results. However, for the purpose of the Act 537 Plan, given the significant cost involved with , we would suggest utilizing the most detailed (dynamic) model regarding this section of sewer.

With the LV 57-58 repair removed, the staff would recommend approving a resolution adopting the Plan.

To: Martin Goldberg
Subject: VCTS LV Interceptor RT 202 Crossing
Attachments: VFSA LV 58 Analysis.pdf

Marty,

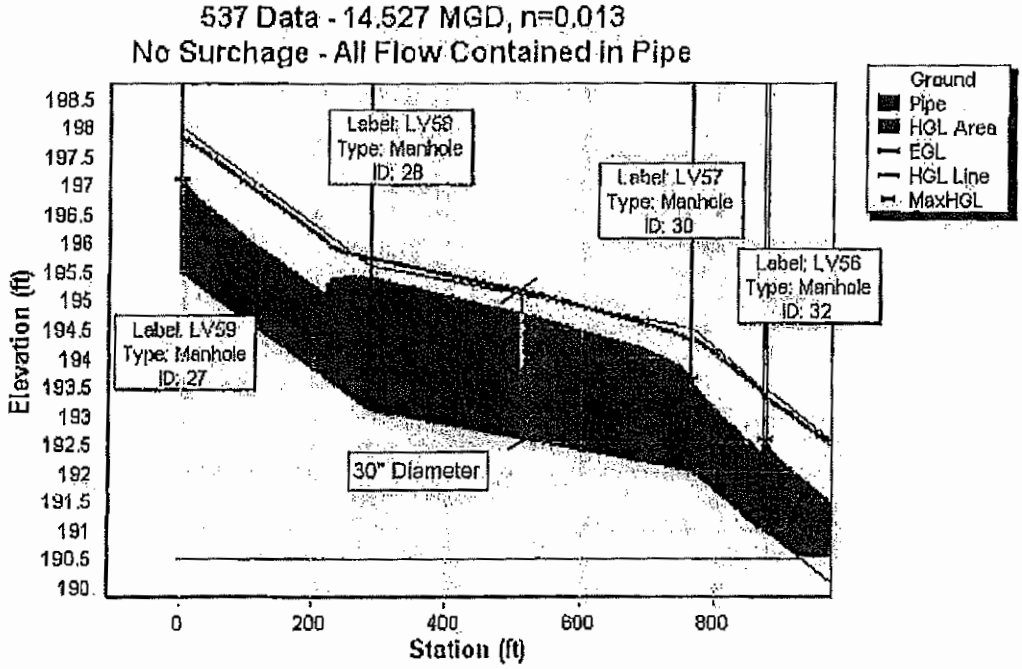
As requested by the VFSA, BH evaluated the capacity of the LV Interceptor at the RT 202 crossing specifically manhole section LV 57 to LV58. We used a dynamic model. The model is described and the results summarized below. The model results graphic for this manhole section is attached.

Bentley® SewerGEMS® Sanitary V8i was used to create this sewer model. SewerGEMS is a fully-dynamic, multi-platform, sanitary modeling solution. The model calculates the depth of flow in the interceptor and considers the depth of flow in downstream manhole sections while calculating the depth of flow for each manhole section. The interceptor from manhole LV59 to manhole V55 was set into the model using the pipe size, length, and slope listed in the October 2010 version of the VCTS Act 537 Plan. To establish invert elevation, the invert of manhole LV58 was set in the model at the elevation identified on the sewer plan and profile drawing. All other inverts were set using the pipe length and slope data listed in the 537 Plan. The "Manning's 'n'" value of 0.013 was used, the same as the used for the 537 Plan. The model results are as follows:

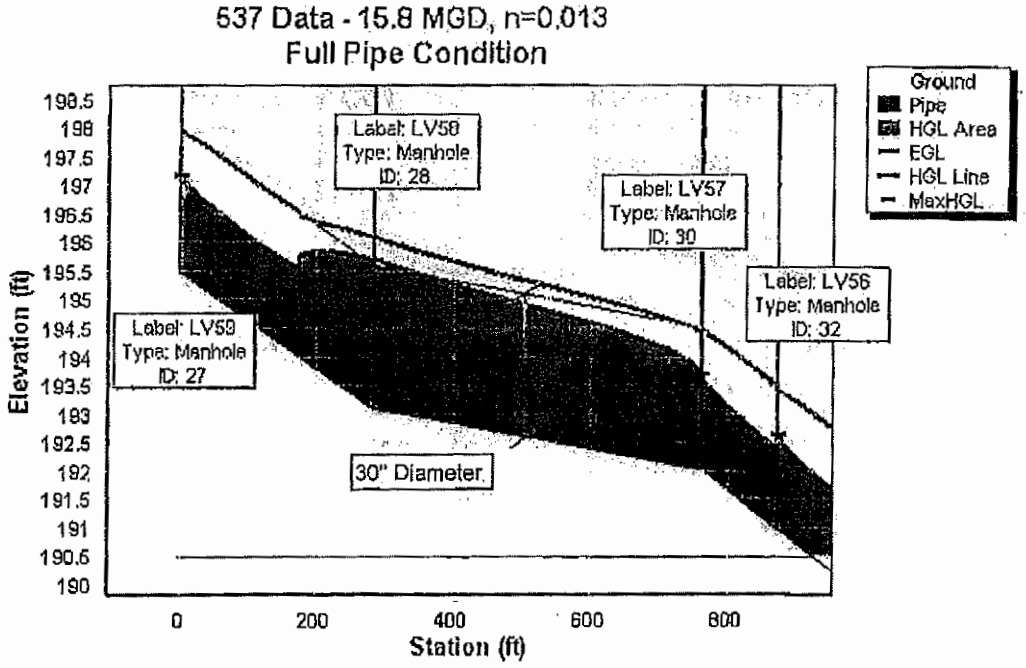
- @ 14.527 MGD, the peak flow rate identified in the Act 537 Plan: The Model indicates no surcharge at MH LV58
- @ 15.8 MGD the Model indicates full pipe at MH LV58

As with any model, the model results should be field verified for any manhole section where capacity is a concern. The field verification can be obtained by the use of a flow meter with a pressure sensor to verify flow rate and depth of flow. Field verification of the manhole conditions would be needed to confirm the manhole is suitable for a flow meter installation.

Please let me know if you have any questions.



Thanks.



Larry

Re: Tredyffrin Township
Valley Creek Trunk Sewer
Act 537 Plan – East Whiteland Capacity Certification

Dear Surrender:

With regard to the projected flows for East Whiteland Township in the Valley Creek Trunk Sewer Act 537 Plan, I have attached Table 6 of the Act 537 Plan indicating the projected flows from the member municipalities for your reference. East Whiteland Township has been allocated 3.63 mgd average daily flow, as previously requested, and as included in the Valley Forge Sewer Authority's Act 537 Plan. Utilizing a peaking factor of 2.30, this corresponds to a peak flow of 8.349 mgd. The wasteload projections in the Act 537 plan indicate a potential capacity shortfall in the LV pipeline in year 2018. The VCTS Act 537 Plan is deferring the final selected alternative for this section of pipeline until further engineering investigations can be undertaken closer to the year 2018, as indicated on page 45 of the plan.

The plan indicates the following to take place prior to determining the need for an increase in capacity:

- Flow metering during wet-weather periods.
- Visual observation of the flow through the run during wet-weather/high flows.
- Field verification of the condition of the pipe.
- Re-assessment of the pipe friction factor for use in determining pipe capacity.
- Determine actual capacity of existing sanitary sewer
- The use of dynamic flow modeling to reassess the adequacy of pipe capacity for present and projected peak wastewater flows through planning year 2035.
- Confirmation that additional capacity is required and in what time frame.

Gannett Fleming

If the results indicate that insufficient capacity exists, the findings will be addressed in a future amendment to the Act 537. I would recommend that similar language be included in the Act 537 Plan being prepared for East Whiteland Township in order to ensure consistency between the plans.

If you have any questions or require any additional information, please contact me.

Very truly yours,
GANNETT FLEMING, INC.

Public Works Director–Tredyffrin Township
1100 Duportail Road
Berwyn, PA19312-1079

RE: East Whiteland Township
Confirmation of Allocated Wastewater Flow

Dear Mr. Norcini:

Advanced GeoServices is currently working with Surender Kohli on a project to replace on the East Whiteland Township's (EWT) major wastewater pumping stations. As part of this project, EWT is required to update their Act 537 Plan to include projected sewer connections and flows through the year 2035. The Act 537 Plan revision has been submitted to the Pennsylvania Department of Environmental Protection (PADEP) for review and approval. As a requirement of PADEP's approval process, they have requested that EWT provide written confirmation from Tredyffrin Township of the allocated wastewater flows.

Attached to this correspondence is a letter dated October 15, 2008 confirming with Buchart Horn, Inc. that the total projected average daily flow to Valley Forge Sewer Authority (VFSA) is 3.63 MGD. Also, attached is a table from Tredyffrin's recent Act 537 Plan Revision for Valley Creek Trunk Sewer dated April of 2010. The table notes the average daily flow for EWT to be 3.621 MGD plus 0.009 MGD for Woodview, which equals a total average daily flow of 3.63 MGD. If you are in agreement with the noted information regarding the average daily flow allocation for EWT, please kindly sign on the line below as confirmation.

Upon signing this letter please either fax or mail the letter to my attention at (610) 840-9199 or to the address noted in the letterhead. Thank you for your anticipated timely response on this matter. If you have any questions, please contact Jack Polce at (610) 840-9116 or Surender Kohli at (610) 644-5591.

Very truly yours,

Steve Norcini

From: Phillips, Roger A. [rphillips@GFNET.com]
Sent: Thursday, May 26, 2011 8:28 AM
To: Steve Norcini
Subject: RE: Regarding East Whiteland Township Allocated Wastewater Flow Letter

The flows allocated to East Whiteland in the Act 537 plan for 2035 are 3.63 mgd, as also indicated in the letter from Advanced Geoservices. The initial evaluation of the LV line indicated that the projected flows would exceed the capacity of the line. Upon the discussions with VFSA and East Whiteland, it was decided to modify the language in the plan to reevaluate the LV portion of the VCTS in five years to determine if in fact sufficient capacity exists, and if there is a need for replacement.

The letter is requesting that you certify that the 3.63 MGD is allocated to East Whiteland for 2035, which it is. Any potential upgrades to the LV trunk will be determined in the future as stated in the VCTS 537 Plan.

I say that you can sign it since the flow is allocated to East Whiteland. Just wanted to call your attention to the fact that it is unknown if in fact the capacity exists for that allocation.

Good morning Mr. Norcini,

Advanced GeoServices on behalf of Kohll & Associates sent you a letter a few weeks back dated May 13, 2011 regarding the confirmation of allocated wastewater flow for East Whiteland Township.

Could you give me an update on where you are with reviewing this letter and sending us a confirmation letter as requested by PADEP on the allocated wastewater flows. We are in need of this letter to go with our submittal package to PADEP.

I would appreciate any indication of when you would get a chance to review this information and send us a confirmation letter. Thank you very much for your time.

Have a nice day.

Resolution No 11-2002

RESOLUTION NO. 11-2002
EAST WHITELAND TOWNSHIP

RESOLUTION FOR PLAN REVISION

RESOLUTION OF THE SUPERVISORS OF EAST WHITELAND TOWNSHIP, CHESTER COUNTY, PENNSYLVANIA (hereunder "the municipality").

WHEREAS, Section 5 of the Act of January 24, 1966, P.L. 1535, No. 537, known as the "Pennsylvania Sewage Facilities Act", as amended, and the Rules and Regulations of the Department of Environmental Protection (Department) adopted thereunder, Chapter 71 of Title 25 of the **Pennsylvania Code,** requires the municipality to adopt an Official Sewage Facilities Plan providing for sewage services adequate to prevent contamination of waters and/or environmental health hazards with sewage wastes, and to revise said plan whenever it is necessary to meet the sewage disposal needs of the municipality, and

WHEREAS, East Whiteland Township has prepared a minor amendment to Special Study – Act 537which provides for a sewage facilities in a portion of existing residential area bounded by Sproul Road to the west, Amtrak Railroad to the north, Oakhill Circle to the east and west King Road to the south in East Whiteland Township, and

The alternative choice to be implemented is to provide a public sewer system. The key implementation activities/date include the project is currently under design and projected to be completed by November of 2002.

WHEREAS, East Whiteland Township finds that the Facility Plan described above conforms to applicable zoning, subdivision, other municipal ordinances and plans and to a comprehensive program of pollution control and water quality management.

NOW, THEREFORE, BE IT RESOLVED that the Supervisors of the Township of East Whiteland hereby adopt and submit to the Department of Environmental Protection for its approval as a revision to the "Official Plan" of the municipality, the above referenced Facility Plan. The municipality hereby assures the Department of the complete and timely implementation of the said plan as required by law. (Section 5, Pennsylvania Sewage Facilities Act as amended).

I, Maureen G. Perri, Secretary of East Whiteland Township Board of Supervisors hereby certify that the foregoing is a true copy of the Township's Resolution No. 13-2002, adopted this 23rd day of April, 2002.

EXECUTIVE SUMMARY

This Act 537 Special Study (Special Study) was prepared for East Whiteland Township (Township) at the request of the Pennsylvania Department of Environmental Protection (PA DEP) in accordance with Act 537 entitled the Pennsylvania Sewage Facilities Act, Title 25, Chapter 71 of the Pennsylvania Code and the Pennsylvania Department of Environmental Protection Act 537 Plan Content and Environmental Assessment Checklist. This Special Study addresses the requirements necessary to upgrade components of the Township's conveyance system in order to continue to accommodate approximately 113,234 gallons per day of existing Charlestown Township flow, approximately 296,330 gallons per day of additional flow from Charlestown Township, and existing and future East Whiteland Township flows. The facilities are located in the located in the north-central portion of the Township.

The Plan is comprised of the following components addressed in the Plan of Study:

I. Previous Wastewater Planning

II. Physical and Demographic Analysis

III. Existing Sewage Facilities in the Planning Area

IV. Future Growth and Development

V. Alternatives to provide for new or improved wastewater disposal facilities

VI. Evaluation of Alternatives

VII. Institutional Evaluation

VIII. Selected Wastewater Treatment and Institutional Alternative

The primary focus of the Plan is to evaluate alternatives to provide for upgraded Township conveyance system facilities to meet the future sanitary sewer needs of the north central portion of the Township as well the south-central portion of Charlestown Township. The means of collection and conveying the projected wastewater flow were examined.

To meet the wastewater conveyance needs of the planning area, it is proposed that the Township implement the selected alternatives in three separate phases.

Phase I: This phase of the improvements has been set up to include the sanitary sewer improvements from Valley Creek north to Sidley Road approximately 220' north of the intersection of Sidley Road and Lapp Road. Construction of the Phase 1 improvements will eliminate the structural issues related to the pipe leakage into Valley Creek as detailed in Section A.III of the Corrective Action/Connection Management Plan. Construction of the Phase 1 improvements will also increase the capacity of the system to allow for the increased capacity for the improvements of the Phase 2 - Sidley Road Improvements.

Phase II: This phase of the improvements has been set up to include the sanitary sewer improvements from the end of Phase 1 in Sidley Road north in Sidley Road to the intersection with Lee Boulevard. Construction of the Phase 2 improvements will include the upgrading of sewer lines which will eliminate capacity issues related to the undersized pipe in Sidley Road as detailed in Corrective Action/Connection Management Plan. Construction of the Phase 2 improvements will also increase the capacity of the system to allow for the increased flow projected from Southside.

Phase III: Upgrade the Lee Boulevard Pump Station to meet the 5 to 10 year needs through the replacement of the existing pumps with new pumps. In addition, replace the existing constant speed controls with variable frequency drive controls.

Phase IV: This phase is dependent on future development in the planning area associated with Liberty Properties located in the Great Valley Industrial Park. At this time this future development is planned in accordance with the projections found in Tables 1 through 4 found in Section IV. Phase II upgrades to the gravity sewer in Sidley Road will be sized to accommodate the potential for future growth. A planning module will need to be prepared by Liberty Properties at the time of their development and this module will be more-able to detail collection and conveyance system upgrades necessary to meet the needs specific to the proposed development.

Currently the Mill Lane Pump Station, located at the base of the planning area, is being upgraded. This pump station has a peak permitted capacity of 2.07 MGD. The upgraded station will have two pumps operating and one standby pump. The capacity of this arrangement is 4.32 MGD. The station will also have space for the addition of a fourth pump. By adding the fourth pump, the station will be able to operate with 3 pumps active and one standby pump. The capacity of the station with this arrangement is 5.04 MGD. Both of these conditions are designed with the existing 14 inch force main in place. If the force main is upgraded to 20 inch, the 2 pump operating arrangement has a capacity of nearly 6.192 MGD. If 3 pumps would be operating with a fourth pump as standby, the station would have a capacity in excess of 7.20 MGD. This station should be online by the end of August. The station will undergo a 30-day test period. After the 30-day test period, if no problems are encountered, the old station will be decommissioned. Construction costs for the station (based on contractor's bid) total nearly $2,950,000. Engineering costs total nearly $478,320. Cost sharing for the project will be further established and discussed as the intermunicipal agreement amendment is finalized.

The engineer's opinions of probable construction cost (planning level costs) for the alternatives established within the primary phases are:

Total Costs -

Phase I: $717,000

Phase II: $1,357,000

Phase III: $111,000

Cost Sharing Estimates:

Phase I: East Whiteland Township - $397,972

Valley Forge Sewer Authority - $319,028

Phase II: East Whiteland Township - $579,186

Valley Forge Sewer Authority - $777,814

Phase III: East Whiteland Township - $6,600

Valley Forge Sewer Authority - $104,400

These alternatives will be paid for and financed through bond funding mechanisms and sharing of costs between the municipalities via the amended intermunicipal agreement structure. The amended agreement will have an exhibit attached to it that will reflect the final cost sharing structure as agreed by all parties. A draft of this agreement amendment is found in Appendix R of this Special Study.

The following is a schedule for implementing the proposed alternative:

	Description	Months from DEP Approval of Plan
1.	Phase I – Regulatory Approvals	0
2.	Phase I – Complete Cost Sharing/Financing Considerations	0
3.	Phase I – Construct Improvements	0
4.	Phase I – Complete Construction of Phase I Improvements	0
5.	Phase II – Submit Part II Water Quality Management Permit Application for Sidley Road Gravity Main Construction	Concurrent with Special Study Submission.

6.	Finalize Intermunicipal Agreement amendment between VFSA and EWT	Concurrent with DEP * Review of the Special Study.
7.	Phase II – Receive Part II Water Quality Management Permit	Concurrent with Special Study Approval from DEP.
8.	Phase II – Begin construction of Improvements; Sidley Road Gravity Main	3
9.	Phase II – Complete Construction; Sidley Road Gravity Main	9
10.	Televise and Repair Gravity Sewer through the AEGON property	20
10.	Phase III – Initiate Lee Blvd. Pump Station Upgrade Design	72
11.	Phase III – Submit Part II WQM Permit Application	78
12.	Phase III – Receive Part II WQM Permit Application Approval	81
13.	Phase III – Initiate Construction of Lee Blvd. PS Upgrades	82
14.	Phase III – Complete Construction of Lee Blvd. PS Upgrades	88
15.	Phase IV – Wilburdale PS Modifications	Dependent Upon GVCC Development

* It is anticipated that the Intermunicipal Agreement Amendment will be finalized and executed within the next one to two months. Letters of commitment from the Valley Forge Sewer Authority and East Whiteland Township are found in Appendix J.

I. PREVIOUS WASTEWATER PLANNING

A. Identify and Discuss Existing Wastewater Planning

1. Previous Act 537 Planning

An Act 537 Sewage Facilities Plan, dated May 2, 1995, was prepared for East Whiteland Township. This was a 'township-wide' plan. The primary purpose of the Plan was to consider the extension of the existing public collection and conveyance system to most of the Township as need was determined.

An Act 537 Plan amendment "Special Study" was prepared. It was last revised in September 2011. The purpose of this study was to focus on the wastewater needs to address the replacement and upgrade of the Mill Lane Pump Station. This Special Study was approved by PA DEP in 2011/2012.

2. Planning Not Done in Accordance with an Approved Implementation Schedule

There has been no planning by the Township that has not been completed in accordance with an approved implementation schedule.

3. Additional Planning

At this time, there is no additional Planning that is anticipated by the Township above and beyond the planning associated with this Act 537 Special Study.

4. Planning Via Planning Modules or Addenda.

One revision was made to the Township-wide 537 Plan. This was the Special Study for the Mill Lane Pump Station that was last revised in September 2011.

B. Identification of Municipal and County Planning Documents

1. *Identify Land Use Plans and Zoning Maps*

The Chester County Comprehensive Plan entitled "Landscapes" establishes guidelines for the following land use categories.

- Growth Management
- National Resource Protection and Open Space
- Agricultural and Farmland Protection

The categories are used to provide the municipalities with "planning strategies to assist them in implementing their growth boundaries."

The Township has four municipal planning documents that govern Land Use and Zoning.

- The East Whiteland Township Comprehensive Plan
- The East Whiteland Township Zoning Ordinance.

A zoning map showing the designated zoning districts is found in Appendix A.

2. *Identify Zoning Regulations That Establish Lot Sizes*

The Zoning Ordinance adopted by the Township establishes the criteria for lot sizes for the following zoning districts in the planning area.

Zoning District		Minimum Lot Area
R1	Low Density Residential District	40,000 Sq. Feet
O/BP	Office/Business Park	80,000 Sq. Feet

II. PHYSICAL AND DEMOGRAPHIC ANALYSIS

A. Identify Planning Area, Municipal Boundaries, and Service Area Boundaries Through Mapping

This Act 537 Special Study is being prepared to address the sewage facilities needs of existing and proposed development in the north-central portion of the Township. Refer to the Plan in Appendix B that shows the boundary for the planning area addressed in this Special Study.

The plan in Appendix B also represents a municipal plan/map showing the municipal boundaries of the entire Township. The area to be served by proposed sanitary sewer facilities falls with the planning area of this Special Study.

B. Identify the Physical Characteristics of the Planning Area

East Whiteland Township is located in Chester County, due east of Exton, PA. The topography of the planning area varies from a low elevation of 300 ft. near Sidley Road and Rt. 202 to an elevation of 360 ft. near the intersection of Sidley Road and Flat Road. A topographical map of the area is presented in Appendix D.

In addition, the wetlands per the National Wetlands Inventory Map are detailed on the map found in Appendix E.

C. Soils Analysis

This Plan will not consider the possibility of subsurface disposal of wastewater nor the issues concerning individual or community on-lot disposal systems. Therefore, this section is not applicable to this Special Study.

D. Geological Features of the Planning Area

As with Section C. above, this Plan will not consider the possibility of subsurface disposal of wastewater nor the issues concerning individual or community on-lot disposal systems. Therefore, this section is not applicable to this Special Study.

E. Topography

As referenced in Section II.B. of this Plan, the topography of the planning area varies from a low elevation of 300 ft. near Sidley Road at Rt. 202 to an elevation of 360 ft. near the intersection of Sidley Road and Flat Road. A topographical map of the area is presented in Appendix D.

F. Potable Water Supply Information

Since this is strictly a special study to address collection/conveyance issues within the planning area, potable water supply information is not applicable to this Special Study.

G. Wetlands

There are a number of wetland areas within the planning area as identified on the map found in Appendix E. The source for the wetlands information is the National Wetlands Inventory Mapping provided by the US Fish and Wildlife Service. The wetlands are found generally northeast of Mill Lane, just north of Route 202.

III. EXISTING FACILITIES IN THE PLANNING AREA

A. Identify and Describe Municipal Sewage Systems in the Planning Area

1. Location, Size, and Ownership of Facilities

Currently, there are collection and conveyance facilities in the planning area. The sanitary sewer mains that currently make up the collection and conveyance system range in size from 8 inches to 12 inches.

There are two wastewater pump stations in the planning area. The Lee Boulevard Pump Station is located along Lee Boulevard just south of the East Whiteland/Charlestown Township border. This pump station has a capacity of 0.828 MGD. Wastewater is pumped through an existing 8-inch force main to the gravity sewer main located in Sidley Road.

The other station is the Wilburdale Pump Station which is located near the intersection of Wilburdale Road and Flat Road. The Wilburdale station has a capacity of 1.15 MGD. Wastewater is pumped through an existing 6-inch force main to the gravity sewer located in Flat Road just east of Sidley Road.

2. Narrative and Schematic Diagram of the Basic Treatment Process

Since the focus of this Special Study is to address the needs associated with the collection and conveyance system in the planning area, a narrative and schematic diagram of the basic treatment process is not applicable.

3. Description of Problems with the Existing Facilities

Currently there is a wastewater surcharging concern that has persisted when both the Lee Boulevard Pump Station force main and the Wilburdale Pump Station force main discharge to the Sidley Road gravity sewer simultaneously.

In addition to the surcharging concern of the Sidley Road interceptor, wastewater from the interceptor under Route 202 was leaking into an unknown 8-inch drainage pipe.

The existing sanitary sewer main through the Aegon property shows signs of inflow and infiltration. A 46-day flow-monitoring program was conducted to determine the extent of the I/I.

Upon review of the flow monitoring data obtained during the flow monitoring program, the data showed an average daily infiltration of 50,080 gpd

In addition, inclusion of future flows in a desktop analysis shows that there will be several sanitary sewer segments that will be overloaded. Due to the location of structures on the property, direct sewer main replacement will be very difficult.

4. *On-Going Upgrades or Expansion of Facilities*

Currently the Mill Lane Pump Station, located at the base of the planning area, is being upgraded. This pump station has a peak permitted capacity of 2.07 MGD. The upgraded station will have two pumps operating and one standby pump. The capacity of this arrangement is 4.32 MGD. The station will also have space for the addition of a fourth pump. By adding the fourth pump, the station will be able to operate with 3 pumps active and one standby pump. The capacity of the station with this arrangement is 5.04 MGD. Both of these conditions are designed with the existing 14 inch force main in place. If the force main is upgraded to 20 inch, the 2 pump operating arrangement has a capacity of nearly 6.192 MGD. If 3 pumps would be operating with a fourth pump as standby, the station would have a capacity in excess of 7.20 MGD. The station should be online by the end of August. The station will undergo a 30-day test period. After the 30-day test period, if no problems are encountered,

the old station will be decommissioned. The station design will have the capacity to pump the projected flows from Charlestown Township and East Whiteland Township. Ultimate projected flows are 2,521, 433 gpd ADF. This includes existing flow plus projected flows for both Charlestown Township and East Whiteland Township. Applying a peaking factor of 2.78, established in the original basis of design report in concert with DEP guidance, the projected peak flow is 7.01 MGD. The ultimate pump station capacity is 7.2 MGD. Consequently the pump station will have the capability of meeting capacity needs of the planning area.

5. Operations and Maintenance Requirements and the Status of Past and Present Compliance

The Township is the facility permitee and the owner. They perform routine maintenance on the collection and conveyance system to keep the facilities operating satisfactorily.

B. Individual and Community On-Lot Disposal Systems

Since this Special Study is to address public sewers upgrades to the planning area, identification of individual on-lot disposal will not be addressed.

C. Wastewater Sludge and Septage Generation

Identification of wastewater sludge and septage generation is not considered applicable to this Special Study.

IV. FUTURE GROWTH AND LAND DEVELOPMENT

A. Description of Future Growth and Development

1. Areas with Existing Development and Plotted Subdivisions

The Plans included in Appendix C show the location of proposed and existing residential development within the planning area. Existing subdivisions are described as follows (based on the streets within the subdivisions):

- James Thomas/Aston
- Flintshire/Ashlawn/Atterbury
- Almy/Thayer
- Fetters Mill/Forge/Oak Glen

2. Land Use Designations

Land use in East Whiteland Township is governed by the Township's Zoning Ordinance. Land use is given the following designations per the zoning ordinance.

R-1	Low Density Residential
R-2	Low Density Residential
R-3	Low Density Residential
RM	Medium Density Residential
RMH	Medium-High Density Residential
CMX	Commercial Mixed-Use
VMX	Village Mixed-Use

FC	Frontage Commercial
ROC	Regionally Oriented Commercial
ROC/R	Regionally Oriented Commercial/Res
PO	Professional Office
O/BP	Office/Business Park
O/BPS	Office/Business Park Services
I	Industrial
INS	Institutional
NS	Neighborhood Schools
C	Cemetery
OS	Open Space

In the planning area, the zoning designations include:

- R-1 Low Density Residential
- O/BP Office Business Park
- OS Open Space

3. *Future Growth Areas and Projections*

For the planning area identified for this Special Study, there are areas that have existing development and areas that are planned for growth. The planned growth is detailed in Table 1 found at the end of Section IV.

4. *Subdivision Regulations as they Pertain to Planned Developments*

East Whiteland Township has established guidelines for development, use, and protection of land. The guidelines are established in the Township's Zoning Ordinance.

The Zoning Ordinance regulates:

- Building height, area, and location on the lot;
- Flood plains and uses within the flood plains;
- Where certain land uses make occur in the Township ;
- Quality, location, or size of signs;
- Minimum lot areas for various uses. Table 1

5. *Required Sewage Planning*

Sections V and VI of this Special Study will examine the technical alternatives necessary to meet the sewage facilities needs of the planning area. Projected wastewater flows for the planning area are classified by origin.

Table 1

Existing Flow Needs Summary

Source/Property	EDUs	Population***	Avg. Daily Flows (gpd)**
East Whiteland Township/Lee Blvd. Area	122	381	33,665
Charlestown Township/Lee Blvd. Area	277	756	78,544
East Whiteland Township/Aston – Hayes Road Area	52	163	14,300
Charlestown Township/Aston – Hayes Road Area (Charlestown Oaks)	135	369	38,354
East Whiteland Township/Ashlawn Road	16	50	4,400
East Whiteland Township/Atterbury Drive	62	194	17,050
East Whiteland Township/Alma-Thayer-Sidley	97	303	26,675
East Whiteland Township/Industrial - Moores	68	213	18,700
East Whiteland/Fetters-McCoy-Oak Glen	69	216	18,975
East Whiteland/Great Valley Industrial (to Wilburdale PS)	----------	----------	240,660
TOTAL			**491,323**
**** 275 gpd/EDU** ***** 3.13 People Per Household (East Whiteland);** *****2.73 Persons Per Household (Charlestown)**			

The means for serving the future needs of the planning area will be in the form of upgrades to the conveyance system extending from the Lee Boulevard Pump Station to a point just upstream from the Mill Lane Pump Station.

Table 2

Flow Projection Summary (Near Term Future Wastewater Needs; 0 to 5 y ears)

Source/Property	EDUs	Population	Avg. Daily Flows (gpd)
Charlestown Township/Spring Oak (to Lee Blvd. PS)	185	505	50,875
East Whiteland Township/Glasgow Tract (to Wilburdale PS)	23	72	6,325
Charlestown Township/Holy Ascension Church (to Lee Blvd. PS)	6.6	----------	1,815
Charlestown Township/Devault Foods (to Lee Blvd. PS)	135	----------	37,000
Charlestown Township/Tyler Griffin (to Lee Blvd. PS)	78	213	21,450
Charlestown Township/Charlestown School (to Lee Blvd. PS)	6.7	----------	1,845
Charlestown Township/Warner Lane (to Lee Blvd. PS)			4,650
Charlestown Township/The Office Restaurant (to Lee Blvd. PS)	13	---------	3,600
TOTAL			**127,560**

Table 3

Flow Projection Summary (Long Term Future Wastewater Needs; 5 to 10 years)

Source/Property	EDUs	Population	Avg. Daily Flows (gpd)
East Whiteland Township/Liberty Properties (to Wilburdale PS)	229	----------	62,975
Charlestown Township/Volpi (to Sidley Rd.)	85	232	23,500
Source/Property	**EDUs**	**Population**	**Avg. Daily Flows (gpd)**
Charlestown Township/Cellucci (to Lee Blvd. PS)	16	44	4,450
Charlestown Township/Laurabrooke (to Lee Blvd. PS)	17	46	4,740
Charlestown Township/"Late Spring" (to Lee Blvd. PS)	8	22	2,130
Charlestown Township/Adjacent to Laurabrook (to Lee Blvd. PS)	38	104	10,560
Charlestown Township/Fillippo Tract (to Lee Blvd. PS)	72	196	19,800
Charlestown Township/Across from Spring Oak Park (to Lee Blvd. PS)	9	25	2,475
Charlestown Township/Yellow Springs Road (to Lee Blvd. PS)	10	27	2,750
Charlestown Township/Rt. 29 and Charlestown Rd. (to Lee Blvd. PS)	50	136	13,750
Charlestown Township/Northside of School (to Lee Blvd. PS)	7	19	1,925
Charlestown Township/Farm Residence (to Lee Blvd. PS)	1	3	275
Charlestown Township/Commons at Great Valley (to Lee Blvd. PS)	40	----------	11,000
TOTAL			**160,330**

Table 4

Flow Projection Summary (Long Term Future Wastewater Needs; 10 to 25 years)

Source/Property	EDUs	Population	Avg. Daily Flows (gpd)
Charlestown Township/Remaining Tracts in I/O Zone (to Lee Blvd. PS)	137	----------	37,650
Charlestown Township/Remaining Tracts in B-1/FR/LI-B/RC Zones (to Lee Blvd. PS)	146	----------	40,090
TOTAL			**77,740**

Summarizing Pump Station Needs:

Lee Boulevard Pump Station:

0 to 5 years – 233, 444 gpd (includes existing ADF)

(Peak Flow to PS 2.17* x ADF = 0.507 MGD)

5 to 10 years – 307,299 gpd

(Peak Flow to PS 2.17 x ADF = 0.667 MGD)

10 to 25 years – 385,039 gpd

(Peak flow to PS 2.17 x ADF = 0.835 MGD)

Existing Pump Station Capacity – 0.619 MGD

Upgrade to Station = 0.956 MGD

Upgrade during 5 to 10 year time. Will meet ultimate flow needs

*Peaking Factor based on Table 6 of 2012 Chapter 94 Report

Wilburdale Pump Station:

0 to 5 years – 246,985 gpd (includes existing ADF)

(Peak Flow to PS 1.45* x ADF = 0.358 MGD)

5to 10 years – 309,960 gpd

(Peak Flow to PS 1.45 x ADF = 0.449 MGD)

10 to 25 years – 309,960 gpd

(Peak Flow to PS 1.45 x ADF = 0.449 MGD)

Existing Pump Station Capacity = 0.576 MGD

Able to meet current and projected needs; but this will depend on future development or use in the Great Valley Corporate Center.

* Peaking Factor based on Table 6 of the 2012 Chapter 94 Report.

Flat Road Pump Station:

The Flat Road Pump Station is a small public submersible pump station that serves two or three properties immediately adjacent to it in the Great Valley Corporate Center. It has an existing capacity of 396,000 gpd. Currently (per the 2012 Chapter 94 Report) the peak flow is 72,000 gpd. It is adequately sized for existing flows. Sizing for future flows will depend on the extent to which the corporate campus develops. This development will need to be addressed via planning modules. These modules shall address the needs to upgrade this pump station.

V. ALTERNATIVES TO PROVIDE NEW OR IMPROVED WASTEWATER DISPOSAL FACILITIES

A. Identify Alternatives

1. Regional Wastewater Treatment Concepts

Wastewater from East Whiteland Township is conveyed to the Valley Forge Sewer Authority's Wastewater Treatment Plant

2. Extension of Existing Municipal Sewage Facilities to Areas in Need

Currently, there are public collection and conveyance facilities that serve the north-central portion of East Whiteland Township and the southern portion of Charlestown Township. As discussed in Part A.1. of this section, wastewater collected in these facilities is conveyed to the Valley Forge Sewer Authority for treatment. Currently there is no plan to extend these facilities beyond the current reach. Refer to the plan found in Appendix B that shows the existing collection and conveyance system.

3. Continued Use of Existing Community Treatment Facilities

Currently, there are no community systems in the planning area. This is not applicable to this Special Study.

4. New Community Sewage Systems and Treatment

Since this Plan is examining the public sewer needs and the impact on existing conveyance system components, the implementation of new community sewage systems is not applicable to this Special Study.

5. *Repair and Replacement of Existing Collection and Conveyance System Components*

As stated in Part A.2. of this section, there are wastewater collection and conveyance facilities that serve the southern portion of Charlestown Township and the north-central portion of East Whiteland Township. The planning area is served by gravity sewers and pump stations that collect and convey the wastewater to the Mill Lane Pump Station. One of the pump stations in the planning area is the Lee Boulevard Pump Station. It receives flow from the northeastern portion of the planning area along with flows from Charlestown Township. This pump station's force main discharges to the existing gravity sewer main at Sidley Road. The Wilburdale Pump Station, located in the eastern portion of the planning area, receives flow from the Great Valley Industrial Park and pumps wastewater through a force main to the gravity sewer main located in Flat Road.

Operationally, the gravity sewer main in Sidley Road takes all flow from the above referenced pump stations along with flow from the adjacent subdivisions. Refer to the plan sheet in Appendix F.

There are areas of concern that need to be addressed to meet existing and future wastewater needs.

- The southern reach of the Sidley Road gravity main (under Route 202) has a leak that needs to be repaired.
- The primary portion of the Sidley Road gravity main is at capacity and the discharges from the Lee Boulevard force main and Wilburdale force main need to be accommodated.
- The sanitary sewer main that extends through the Aegon property has shown signs of I/I and requires repair.

A Corrective Action Plan/Connection Management Plan has been prepared to address these concerns. This document has been reviewed by the PA DEP and has been approved. A copy of this document is found in Appendix Q.

Potential alternatives to achieve these goals:

- Replace the existing gravity sewer with new gravity sewer from MH 67-1AA to MH ML8.
- Replace the existing gravity sewer main in Sidley Road to accommodate existing and future flows.
- Upgrade the Lee Boulevard Pump Station to meet future wastewater needs.
- Televise the gravity main through the Aegon property and, based on findings, grout and seal leaking portions of the main.

Upon reviewing these options, a Phased approach to the above referenced alternatives has been considered. Refer to the Plan and Table in Appendix F showing those phases and the Executive Summary for specific details.

It should be noted that a portion of the interceptor/trunk sewer, downstream from the Mill Lane Pump Station, and the 14 inch force main will require future upgrades. Upgrades to these portions of the infrastructure will require future planning in that they are dependent not only on impact/needs from the special study area but impacts/needs associated with other portions of the Township outside of the immediate Special Study planning area. The future planning effort will be triggered through the monitoring of average daily flows at the Mill Lane Pump Station. Knowing the flow contributions from adjacent drainage areas (via metered flow) along with flow contributions from the Mill Lane Pump Station, a base flow can be established. With the assumption that most significant growth in the Township will occur in the drainage area tributary to the Mill Lane Pump Station, the monitoring of average daily flows at the Mill

Lane station appears to be a reasonable approach. At this time, the Township has developed approximate "flow threshold values", that, when observed at the station will trigger the need for planning to upgrade the trunk sewer and force main. This planning will take into account all drainage areas tributary to the pump station and trunk sewer.

Phase I: This phase of the improvements has been set up to include the sanitary sewer improvements from Valley Creek north to Sidley Road approximately 220' north of the intersection of Sidley Road and Lapp Road. Construction of the Phase 1 improvements will eliminate the structural issues related to the pipe leakage into Valley Creek as detailed in Section A.III of the Corrective Action/Connection Management Plan. Construction of the Phase 1 improvements will also increase the capacity of the system to allow for the increased capacity for the improvements of the Phase 2 - Sidley Road Improvements.

Phase II: This phase of the improvements has been set up to include the sanitary sewer improvements from the end of Phase 1 in Sidley Road north in Sidley Road to the intersection with Lee Boulevard. Construction of the Phase 2 improvements will include the upgrading of sewer lines which will eliminate capacity issues related to the undersized pipe in Sidley Road as detailed in Corrective Action/Connection Management Plan. Construction of the Phase 2 improvements will also increase the capacity of the system to allow for the increased flow projected from Charlestown Township's southside. Through implementing this phase, the majority of wastewater flow can be redirected away from the sanitary sewer main through the Aegon property. This will allow East Whiteland Township to more easily televise and repair this main.

Phase III: Upgrade the Lee Boulevard Pump Station to meet the 5 to 10 year needs through the replacement of the existing pumps with new pumps. In addition, replace the existing constant speed controls with variable frequency drive controls.

The Corrective Action Plan/Connection Management Plan provides further detail concerning these phases.

Phase IV: This phase is dependent on future development in the planning area associated with Liberty Properties located in the Great Valley Industrial Park. At this time this future development is planned in accordance with the projections found in Tables 1 through 4 found in Section IV. Phase II upgrades to the gravity sewer in Sidley Road will be sized to accommodate the potential for future growth. A planning module will need to be prepared by Liberty Properties at the time of their development and this module will be more-able to detail collection and conveyance system upgrades necessary to meet the needs specific to the proposed development.

Alternatives to direct projected wastewater flow to other areas or in other directions were examined previously, outside the scope of this Special Study, and it was determined that these alternatives would not be cost effective. In addition, topography in the area of southern Charlestown Township, adjacent to or near the East Whiteland Township border, is conducive to utilizing a network of gravity sewers to convey flow to the existing collection and conveyance infrastructure in East Whiteland Township. As a result, the alternative methods for collection and conveyance of future flows, as shown above, and the associated phasing appear to be the most reasonable means for providing public sewer service to the planning area. In addition, an intermunicipal agreement is already in place (see description in Section VII). An amendment to the agreement is in the process of being drafted that will facilitate the conveyance of future flows through the respective municipalities,

through the Valley Creek Trunk Sewer, and to the Valley Forge Sewer Authority's WWTP (See Appendix R).

6. Alternative Methods of Collection and Conveyance to Serve Areas in Need

Given that this Special Study addresses the needs associated the upgrade of existing facilities to serve future flows, alternative methods of collection and conveyance to serve areas in need is not applicable to this Special Study.

B. Use of Individual Disposal Systems

The use of individual on-lot disposal systems will not be considered for this Special Study.

C. Small Flow Sewage Treatment Facilities

Assessment of alternatives based on the use of small flow sewage treatment facilities, land treatment alternatives, or package treatment facilities to serve individual homes or clusters of homes is not applicable to this Special Study.

D. Community Land Disposal

Assessment of alternatives based on the use of community land disposal is not applicable to this Special Study.

E. Retaining Tank

The use of retaining tanks will not be evaluated as part of this Special Study.

F. Septage Management

A discussion of the need for and implementation of a sewage management program will not be addressed as part of this Special Study.

G. Non-Structural Comprehensive Planning Alternatives

It is not anticipated that there will be any modifications to the Township Comprehensive Plan. Non-structural comprehensive planning alternatives shall not be addressed as part of this Special Study.

H. No Action Alternative

1. Water Quality and Public Health

If wastewater collection and conveyance system upgrades are not implemented, water quality and public health would be impacted. Upgrades planned under Phase I address the need to upgrade and repair the existing gravity sewer main located under Route 202 and will eliminate the leaking wastewater to the Valley Creek. This portion of the existing sewer main has been compromised and is leaking to the Valley Creek. Repairs and upgrades are necessary to eliminate this condition.

2. Growth Potential

The potential for growth in the planning area would be impacted by a no-action alternative. Proposed development would not go forward if wastewater conveyance system upgrades were not completed.

3. Community and Economic Conditions

With no-action to provide means for upgraded conveyance of wastewater, development may not go forward. Consequently, future connections would be limited, thus restricting growth that would supplement the Township tax base.

4. Recreational Opportunities

A no-action alternative for this Special Study would not have an impact on recreational opportunities.

5. *Drinking Water Sources*

If the proposed conveyance system upgrade, as identified under Phase I, is not constructed, there may be indirect impacts on drinking water sources.

6. *Other Environmental Issues*

If the proposed conveyance system upgrades are not implemented under Phase I, there may be impact on the wildlife of the Valley Creek.

VI. EVALUATION OF ALTERNATIVES

A. Consistency Determination

1. Clean Stream Law

The construction of an upgraded sanitary sewer conveyance and treatment system for the Planning area does not conflict with the Clean Stream Law. Flow generated by the planning area will ultimately be treated at Valley Forge Sewer Authority's wastewater treatment plant or the community wastewater treatment plant located at the Swinehart property and disposed of in accordance with requirements and limits set forth by PADEP.

2. Chapter 94 Report

The East Whiteland Township 2011 Chapter 94 Report indicates that the review of the planning module for the proposed Spring Oak development (located in Charlestown Township) revealed some existing and future hydraulic restrictions within the East Whiteland trunk sewer. These hydraulic restrictions and associated issues are consistent with the purpose behind this development of this Act 537 Special Study.

Currently the Mill Lane Pump Station, located at the base of the planning area, is being upgraded. This pump station has a peak permitted capacity of 2.07 MGD. The upgraded station will have two pumps operating and one standby pump. The capacity of this arrangement is 4.32 MGD. The station will also have space for the addition of a fourth pump. By adding the fourth pump, the station will be able to operate with 3 pumps active and one standby pump. The capacity of the station with this arrangement is 5.04 MGD. Both of these conditions are designed with the existing 14 inch force main in place. If the force main is upgraded to 20 inch, the 2 pump operating arrangement has a capacity of nearly 6.192 MGD. If 3 pumps would be operating with a fourth pump as standby, the station would have a capacity in excess of 7.20 MGD.

3. *Clean Water Act (Title II)*

This Act and the Federal Water Quality Act establish specific planning requirements for wastewater facilities planning. These requirements only apply to municipalities intending to apply for financial assistance from the Federal Government for the construction of sewage facilities. Since the funding of the construction of the alternatives would be through financial contributions by municipal users, and potentially State agencies, this analysis is not applicable.

4. *Comprehensive Plans*

The Chester County Planning Commission (CCPC) Comprehensive Plan, entitled "Landscapes2," was adopted in July of 2009. The alternatives to upgrade public sanitary sewer service to accommodate proposed development in the planning area is consistent with the implementation strategy, policies and goals of the current Landscapes2 as shown in the Utilities and Infrastructure section of the plan.

East Whiteland Township adopted a Comprehensive Plan in 2001 that identifies Township policies on future preservation and development.

In September 2002, Chester County adopted a water resources management plan, titled **'Watersheds'**. This is an element of the County's Comprehensive Plan. In Part 4 of the Plan (Goals and Objectives – Achieving the Vision), Goal 7 describes the need to integrate utility and municipal planning to meet future water supply and wastewater needs. It further discusses the need to delineate municipal planned public water/wastewater service areas and evaluate infrastructure alternatives. This Special Study is consistent with the objectives set forth in Watersheds.

5. ***Antidegradation Requirements Contained in Chapters 93, 95 and 102 of the Clean Water Act***

Implementation of any of the alternatives for this Special Study will not impact the antidegradation requirements contained in Chapters 93, 95, 102 of the Clean Water Act.

6. ***State Water Plans***

There are no anticipated conflicts with the State Water Plan for this submission.

7. ***Pennsylvania's Prime Agricultural Land Policy***

East Whiteland Township is committed to protecting prime agricultural land within the Township's boundaries.

For the planning area in this Special Study, the Township's Zoning Ordinance and Comprehensive Plan give the land area a residential, office/business park, and professional office designation. The development of this land is consistent with its land use designation.

It should be noted that the Chester County Planning Commission's agricultural conservation easement plan indicates that there are no agricultural conservation easements in East Whiteland Township. This plan was developed by the Chester County Department of Open Space Preservation utilizing information from the County Agricultural Preservation Board and the Chester County Bureau of Land Records.

8. ***County Stormwater Management Plan***

PA Act 167 Stormwater Management Plans (SWMP) have been completed and approved for portions of Chester County. The Valley Creek Watershed (East) is one of those plans that have been approved. PA DEP approved it February 2011. This SWMP is incorporated via reference into the County-wide Act 167 SWMP that is nearing the point of formal resolution of adoption. From a

consistency perspective, it appears that the concept to provide sewer service to potential development is consistent with the SWMP. This special study planning area falls within the Valley Creek Watershed and the prescribed system improvements not only accommodate future flows but provide for minimizing inflow and infiltration of stormwater into the sanitary sewer system.

9. Wetlands Protection

As referenced in Section II.G. of this Plan, There are a number of wetland areas within the planning area as identified on the map found in Appendix E. The source for the wetlands information is the National Wetlands Inventory Mapping provided by the US Fish and Wildlife Service. The wetlands are found generally northeast of Mill Lane, just north of Route 202. It is anticipated that development within the planning area or collection/conveyance routing will not negatively impact these wetlands.

10. Protection of Threatened, Rare, and Endangered Plant and Animal species (PNDI)

A Pennsylvania National Diversity Inventory (PNDI) search was completed for each area within the various phases. See Appendix H. For Phase I, a conflict was identified with the U.S. Fish and Wildlife Service. This conflict was resolved. Please refer to the June 6, 2012 correspondence with the Fish and Wildlife Service found in Appendix H. For Phase IIA and IIB, an avoidance measure was requested by the US Fish and Wildlife Service and a Conservation Measure was requested by DCNR. These conflicts have been resolved as well.

11. Historic and Archaeological Resource Protection

The Pennsylvania Historic and Museum Commission (PHMC) have been contacted to determine if there are any potential conflicts within the proposed Phases. PHMC reviews for the proposed sewerage facilities have been completed. The results of the PHMC's review for the proposed sewerage

facilities can be found in Appendix I. It has been determined that the projects will have no impact on historic resources.

B. Resolution of Inconsistencies

Upon review of the constraints discussed in items 1 through 11, there are no apparent inconsistencies with applicable planning requirements.

C. Alternative Evaluation with Respect to Applicable Water Quality Standards and Effluent Limitations

The planned alternatives to provide a sanitary sewer collection and conveyance system for this proposed development will not impact water quality standards or effluent limitation. Wastewater will be discharged to either the existing public collection and conveyance system or the proposed community collection, conveyance, and treatment system. Ultimately, wastewater will be treated at the Valley Forge Sewer Authority's WWTP.

D. Preliminary Cost Opinions

Preliminary cost opinions were developed for the primary alternatives discussed in Section V. These cost opinions reflect the following:

1. Immediate Needs Alternative

Construct Phase I (refer to detail in Section V) to serve immediate and near term wastewater needs. Wastewater through Phase I would be conveyed to the Mill Lane Pump Station and ultimately to the Valley Forge Sewer Authority's WWTP.

Planning Level - Construction Cost Opinion Total		$717,000
Cost Sharing:	East Whiteland Township -	$397,972
	Valley Forge Sewer Authority -	$319,028

Near Term Alternative

Construct Phase II (refer to detail in Section V) to serve 0 to 5 year wastewater needs. Wastewater through Phases I and II would be conveyed to the Mill Lane Pump Station and ultimately to the Valley Forge Sewer Authority's WWTP.

Planning Level - Construction Cost Opinion		(II)	$1,357,000
Cost Sharing -	East Whiteland Township -		$579,186
	Valley Forge Sewer Authority -		$777,814

Long Term Alternative

Construct Phase III (refer to detail in Section V) to serve 5 to 10 year wastewater needs. Wastewater through Phase III would be conveyed to the Mill Lane Pump Station and ultimately to the Valley Forge Sewer Authority's WWTP.

Planning Level - Construction Cost Opinion		$111,000
Cost Sharing -	East Whiteland Township -	$6,600
	Valley Forge Sewer Authority -	$104,400

E. Analysis of Available Funding Methods

This section of the Plan addresses methods available to finance the proposed alternative. Three financing alternatives exist for this particular project.

1. Municipal Bond Issue

a. General

There are several types of bonds; some are taxable and some are tax-exempt. However, the general classification of municipal bonds usually

refers to tax-exempt bonds. There are three types of municipal bonds generally used in financing public works.

- *General Obligation Bonds* are tax-free bonds that are secured by the pledge of the full faith, credit, and taxing owner of the issuing agency. This means that this type of bond is backed by all of the taxes on real estates and personal property within the jurisdiction of the issuing agency. It involves minimum risk to the investor and therefore requires a lower rate of interest than other types of bonds.

- *Dedicated Tax Bonds* are payable only from the proceeds from a special tax and are not guaranteed by the full faith, credit and taxing power of the issuing agency. Examples of special dedicated taxes are the special assessments against property which is adjacent to and the principal beneficiary of the improvement, and gasoline taxes used to finance highway construction.

- *Revenue Bonds* are payable from revenues derived from the use of the improvement such as tools, sewer bills, or rents paid by the users of the improvement and do not otherwise represent an obligation of the issuing agency. Revenue bonds are not ordinarily subject to statutory or constitutional debt limitations. They are often issued by commissions, authorities, and other public agencies created for the specific purpose of financing, constructing, and operating essential public projects.

Typically, municipal bonds are sold to an investment-banking firm, which then resells the bonds to individual investors. The advantage of municipal bonds to the investor is their tax-free status. A bond discount (a percentage of the total bond issue) serves as the investment banker's

commission. Before bonds are sold, they must be rated on the basis of risk to the investor by a rating agency such as Standard and Poor's or Moody's. The higher the rating, the lower the risk to the investor and, consequently, the lower the interest rate paid on the bond.

The legal instrument, which sets the rules that must be observed by the issuing agency, is the Trust Indenture. The Trust Indenture is prepared by the Bond Counsel and must be printed along with the bonds. Due to specific requirements as to the denominations of the bonds and methods and materials for printing, printing costs can be substantial. A Trustee is required to administer the bond issue and insure the terms of the Trust Indenture are observed. This results in an Annual Trustee Fee. Investment bankers indicate that it does not pay to extend the term beyond 25 years because the interest rate increases dramatically.

b. Advantages of Municipal Bond Issue Funding

- ► This program affords long-term fixed rate financing.
- ► Tax-exempt municipal bonds are in high demand.
- ► There is local investment opportunity.
- ► Municipal credit is established.
- ► It retains flexibility for future borrowing.

c. Disadvantages of Municipal Bond Issue Funding

- ► A cover may be required.
- ► A Debt Service Reserve Fund is generally required.
- ► There are trustee fees and costs of preparing a Trust Indenture.

2. *Bank Loan*

Another financing option for the implementation of this project is the bank loan. There are four basic categories of bank loans. These are:

- Real Estate Loans (Mortgage)
- Participation and Interbank Loans
- Installment Loans (Personal)
- Commercial and Industrial Loans

Of the four types, a commercial and industrial loan would be the most applicable to this project.

Commercial and industrial loans may be made on a demand or time basis. A demand basis loan allows the bank to call for repayment at any time, or the borrower can repay when convenient. A time basis loan provides for a specific loan maturity date.

Most commercial and industrial loans are unsecured. The credit is extended on the basis of an analysis of all available information pertaining to the customer and the bank's confidence in that customer's ability and willingness to repay.

For this planned project, it appears that it would be prudent to seek a time basis loan. An interest rate offering would be established, and an amortization schedule set. Interest rates may range from 5% to 10%.

<u>Advantages of the Bank Loan Financing</u>

- Ability to shop around for a loan structure that best fits the customer's needs.
- Flexibility in establishing repayment schedules.

- Working with and through a local financial institution.
- Municipal credit is established.
- Ability to obtain fixed rate financing.

Disadvantages of Bank Loan Financing

- Interest rates are charged for loan repayment.
- Processing fees may be required.
- Processing and issuances fees may be expensive.

3. *Direct Funding by Developers*

A third financing option for the implementation of this project is direct funding by those who are developing the property in the planning area. This would involve capital expenditures by the developer from his own capital funds.

Advantages of Direct Funding by Developer

- Avoid any third party involvement. Payment for services can be made directly to the manufacture or contractor by the Developer.
- There are no interest rate charges.
- Bank processing and issuance fees are avoided.
- Removes the financial burden from the Township.

Disadvantages of Direct Funding

- There are no disadvantages to this method of financing.

4. *Funding Through Contributions from Intermunicipal Partners*

Via the amended intermunicipal agreement, funding for proposed upgrades to the conveyance system will be shared between East Whiteland Township and

the Valley Forge Sewer Authority. It should be noted that an updated/amended intermunicipal agreement is currently being prepared and negotiated. This agreement will have an exhibit that will show the finalized cost sharing structure. A draft of this agreement is found in Appendix R.

F. Immediate or Phased Implementation

It is planned to implement the collection and conveyance system improvements in phases. These include:

Phase I: This phase of the improvements has been set up to include the sanitary sewer improvements from Valley Creek north to Sidley Road approximately 220' north of the intersection of Sidley Road and Lapp Road. Construction of the Phase 1 improvements will eliminate the structural issues related to the pipe leakage into Valley Creek as detailed in Section A.III of the Corrective Action/Connection Management Plan. Construction of the Phase 1 improvements will also increase the capacity of the system to allow for the increased capacity for the improvements of the Phase 2 - Sidley Road Improvements.

Phase II: This phase of the improvements has been set up to include the sanitary sewer improvements from the end of Phase 1 in Sidley Road north in Sidley Road to the intersection with Lee Boulevard. Construction of the Phase 2 improvements will include the upgrading of sewer lines which will eliminate capacity issues related to the undersized pipe in Sidley Road as detailed in Corrective Action/Connection Management Plan. Construction of the Phase 2 improvements will also increase the capacity of the system to allow for the increased flow projected from Charlestown Township's southside. Through implementing this phase, the majority of wastewater flow can be redirected away from the sanitary sewer main through the Aegon property. This will allow East Whiteland Township to more easily televise and repair this main.

Phase III: Upgrade the Lee Boulevard Pump Station to meet the 5 to 10 year needs through the replacement of the existing pumps with new pumps. In addition, replace the existing constant speed controls with variable frequency drive controls.

Phase IV: This phase is dependent on future development in the planning area associated with Liberty Properties located in the Great Valley Industrial Park. At this time this future development is planned in accordance with the projections found in Tables 1 through 4 found in Section IV. Phase II upgrades to the gravity sewer in Sidley Road will be sized to accommodate the potential for future growth. A planning module will need to be prepared by Liberty Properties at the time of their development and this module will be more-able to detail collection and conveyance system upgrades necessary to meet the needs specific to the proposed development.

G. Ability of the Township to Implement the Alternative

The Township is well established and has the ability to implement the technical alternatives presented in this Plan.

VII. INSTITUTIONAL EVALUATION

A. Analysis of the Township, Past Actions, and Present Performance

1. Financial and Debt Status

The Township is a well-established entity that will be able to oversee the implementation of the proposed technical alternative. Financially, through the funding mechanisms identified above and the shared costs established through the intermunicipal agreement structure between East Whiteland Township and the Valley Forge Sewer Authority, the construction of the necessary collection and conveyance facilities can be accomplished. Ultimately, the Township will take dedication of these facilities and will be required to operate and maintain them. The funds for facility O&M may originate from the Township's Sewer Fund.

2. Available Staff and Administrative Resources

The Township is governed by a three-member Board of Supervisors elected at-large, who each serve six-year terms that include executive and legislative responsibilities. Others associated with the Township are:

- Township Manager
- Director of Public Works
- Solicitor
- Consulting Engineer

The Township has the necessary staff and administrative resources already in place. No further evaluation of staffing and resources is necessary at this time.

3. *Existing Legal Authority*

As provided for under Pennsylvania Law, the Township has the necessary legal authority to oversee the implementation of the technical alternatives presented in this Special Study.

B. Institutional Alternatives Necessary to Implement the Technical Alternative

1. *Need for a New Authority*

East Whiteland Township does not have an Authority in place at this time. It is not deemed necessary that a new Authority be established to meet the needs of the alternatives identified in this Special Study. The Township and public works personnel are capable of implementing the identified alternatives.

2. *Function of the Authority*

This is not applicable given that the there is no sewer authority in place at this time.

3. *Cost of Administration*

This is not applicable given that the there is no sewer authority in place at this time.

C. Administrative and Legal Activities to be Completed and Adopted to Ensure the Implementation of the Technical Alternative

1. *Legal Authorities of Incorporation*

No new wastewater Authorities of Incorporation are necessary and there will be no changes to the Township's structure to implement this project.

2. *Required Ordinances, Standards, Regulations, and Intermunicipal Agreements*

In 1971, an Intermunicipal Agreement was signed by East Whiteland Township, the former East Whiteland Municipal Authority, Malvern Municipal Authority, Malvern Borough, and the Valley Forge Sewer Authority for conveyance of

wastewater through the Valley Creek Trunk Sewer to the Valley Forge Sewer Authority's WWTP for treatment and disposal. In December 1979, an amendment was issued to the existing 1971 intermunicipal agreement between East Whiteland Municipal Authority, East Whiteland Township, Malvern Municipal Authority, Borough of Malvern, and the Valley Forge Sewer Authority. This amendment facilitates the transmission of wastewater from an area in Charlestown Township adjacent to East Whiteland Township through the East Whiteland Township Trunk Line and the Valley Creek Trunk Line Both agreements can be found in Appendix K of this Special Study.

This intermunicipal agreement is currently undergoing an amendment to reflect the latest flow and cost sharing conditions. This effort to amend the agreement is taking place in accordance with the timing set forth in the implementation schedule found in the Executive Summary. The draft agreement is found in Appendix R.

3. *Provisions of Rights-of-Way, Easements, and Land Transfers*

The wastewater collection and conveyance system that will serve potential development will extend along Township or State Roads and easements. Modifications to the proposed pump stations will not require the acquisition of rights-of-way and easements at their respective locations.

4. *Other Sewage Facilities Plan Adoptions*

It is not anticipated that other sewage facilities plans will need to be adopted as part of this planning process.

5. *Legal Documents*

It is anticipated that legal documentation, in the form of an amended intermunicipal agreement will need to be completed as part of the implementation of the Special Study. Refer to the draft found in Appendix R.

6. Dates and Timeframes of 1 Through 5 Above

The dates and timeframes for the items in this section are found in the implementation schedule in the Executive Summary of this Plan.

D. Selected Institutional Alternative

No changes are needed to the existing municipal structure. An amendment to the existing intermunicipal agreement is currently being drafted and will be implemented per the implementation schedule found in the Executive Summary.

VIII. SELECTED WASTEWATER TREATMENT AND INSTITUTIONAL ALTERNATIVE

A. Identify the Chosen Technical Alternative

The selected alternative which best meets the wastewater treatment needs of the proposed development in the planning area is:

Phase I: This phase of the improvements has been set up to include the sanitary sewer improvements from Valley Creek north to Sidley Road approximately 220' north of the intersection of Sidley Road and Lapp Road. Construction of the Phase 1 improvements will eliminate the structural issues related to the pipe leakage into Valley Creek as detailed in Section A.III of the Corrective Action/Connection Management Plan. Construction of the Phase 1 improvements will also increase the capacity of the system to allow for the increased capacity for the improvements of the Phase 2 - Sidley Road Improvements.

Phase II: This phase of the improvements has been set up to include the sanitary sewer improvements from the end of Phase 1 in Sidley Road north in Sidley Road to the intersection with Lee Boulevard. Construction of the Phase 2 improvements will include the upgrading of sewer lines which will eliminate capacity issues related to the undersized pipe in Sidley Road as detailed in Corrective Action/Connection Management Plan. Construction of the Phase 2 improvements will also increase the capacity of the system to allow for the increased flow projected from Southside.

Phase III: Upgrade the Lee Boulevard Pump Station to meet the 5 to 10 year needs through the replacement of the existing pumps with new pumps. In addition, replace the existing constant speed controls with variable frequency drive controls.

Phase IV: This phase is dependent on future development in the planning area associated with Liberty Properties located in the Great Valley Industrial Park. At this time this future development is planned in accordance with the projections found in Tables 1 through 4 found in Section IV. Phase II upgrades to the gravity sewer in Sidley Road will be sized to accommodate the potential for future growth. A planning module will need to be prepared by Liberty Properties at the time of their development and this module will be more-able to detail collection and conveyance system upgrades necessary to meet the needs specific to the proposed development.

The phasing of alternative is recommended based on the following:

1. ***Existing Wastewater Disposal Needs***

   Within the planning area, wastewater disposal needs are met through the use of a network of gravity sewer mains, pump stations, and force mains. These facilities can continue to meet the existing disposal needs of the planning area.

2. ***Future Wastewater Treatment Needs***

   Future wastewater disposal needs, identified in Section IV of this Plan show existing, near term, and long-term wastewater needs for East Whiteland Township and Charlestown Township. Under the Phase I Alternative, existing wastewater needs can be met. Under Phase II and III alternatives for 0 to 5 and 5 to 10 year wastewater needs can be met. Implementation of the Phase IV Alternative will be strictly dependent on the timing of development in the Great Valley Industrial Park.

3. ***Operations and Maintenance Considerations***

   The proposed wastewater facilities will be owned and operated by East Whiteland Township upon completion. Operations and maintenance of the

new facilities will be the responsibility of the Township which currently operates and maintains existing wastewater facilities within the Township.

4. Cost Effectiveness

In accordance with the cost opinions for the alternatives presented in Section VI of this study, the phasing of the Alternatives is the most cost effective approach. This will allow for both East Whiteland Township and the Valley Forge Sewer Authority (Charlestown Township) to take a measured approach to upgrades to the existing conveyance system to meet the future needs.

5. Available Management and Administrative Systems

The Township has the management and administrative staff in place to implement the selected alternative. The intermunicipal agreements are in place to facilitate the sharing of costs associated with the upgrades to existing infrastructure. A copy of the agreement can be found in Appendix K of this Special Study.

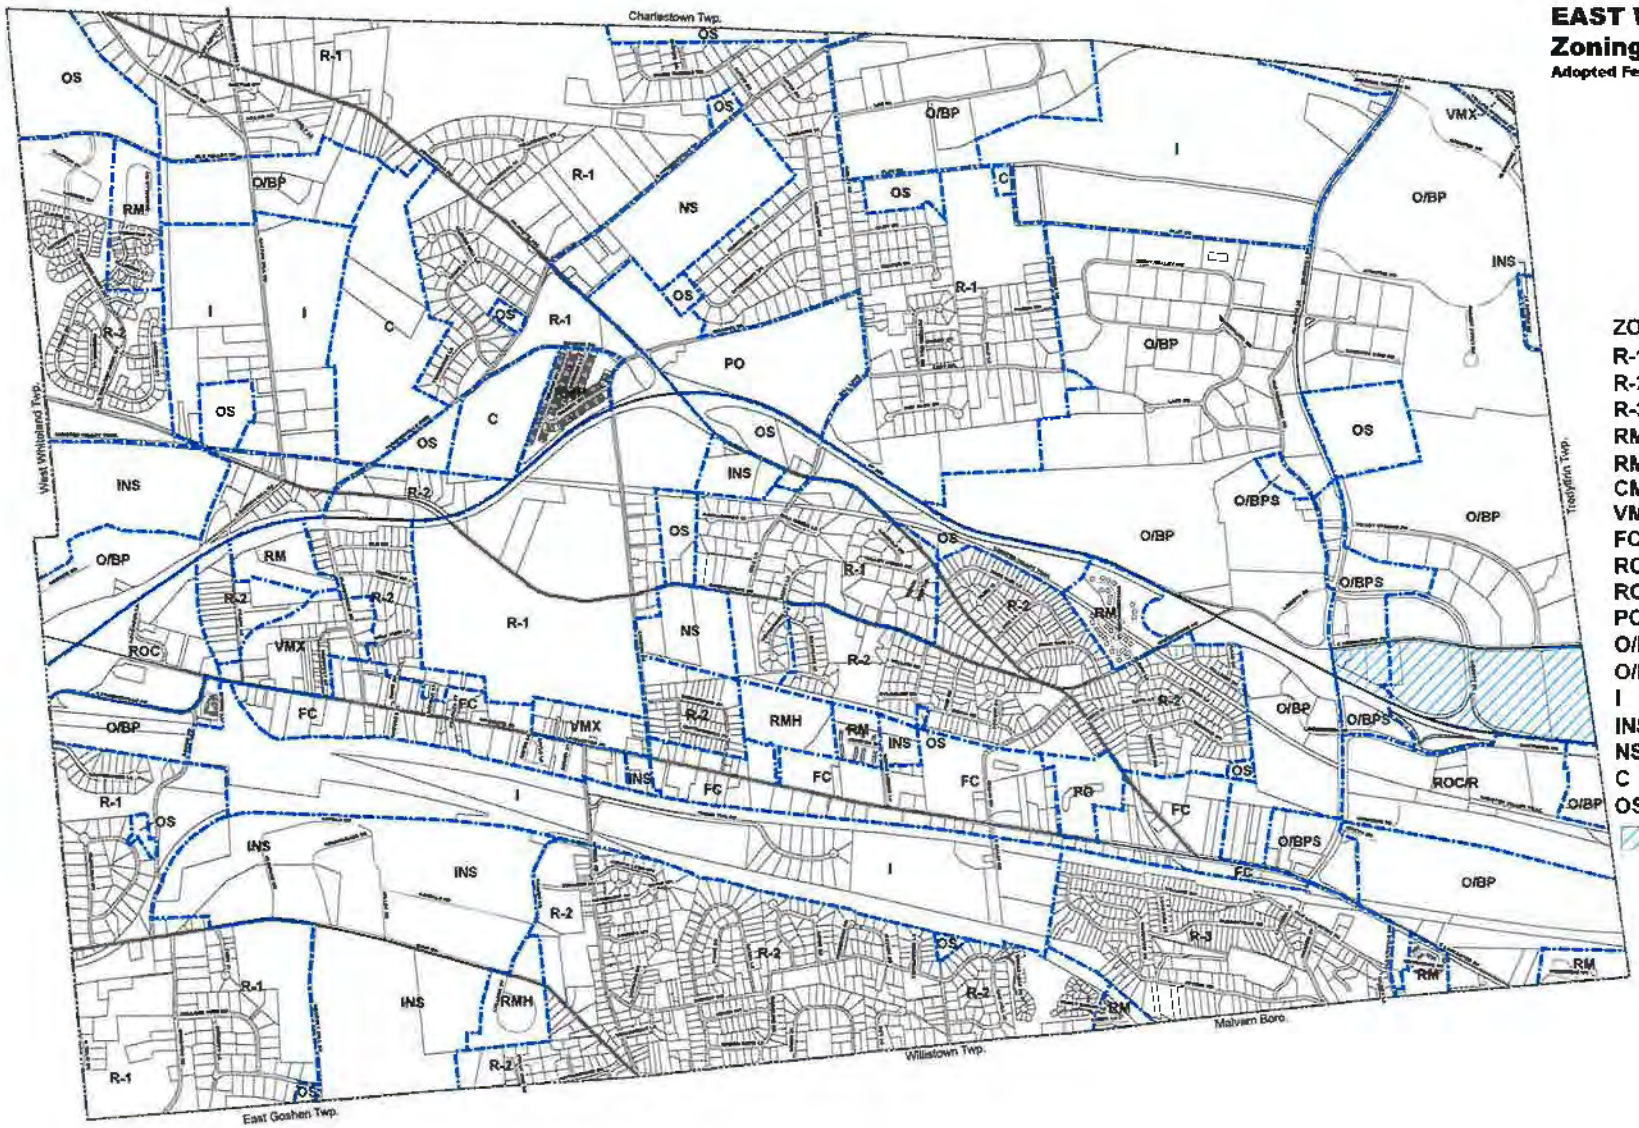
6. Available Financing Methods

Of the financing methods discussed in Section VI, each method can provide the necessary funding for the selected alternative. Refer to Section VIII.B. for the selected capital financing plan.

7. Environmental Soundness

Environmentally, the Valley Forge Sewer Authority's WWTP can adequately treat the average and peak flows within the permitted concentration limits.

B. Selected Capital Financing Plan



The selected technical alternative will be paid for and financed through bond funding mechanisms and sharing of costs between the municipalities via the current intermunicipal agreement structure. East Whiteland Township and the Valley Forge Sewer Authority (Charlestown Township) have been in communication regarding cost-sharing matters. The planning-level cost sharing structure is shown in Section VI.

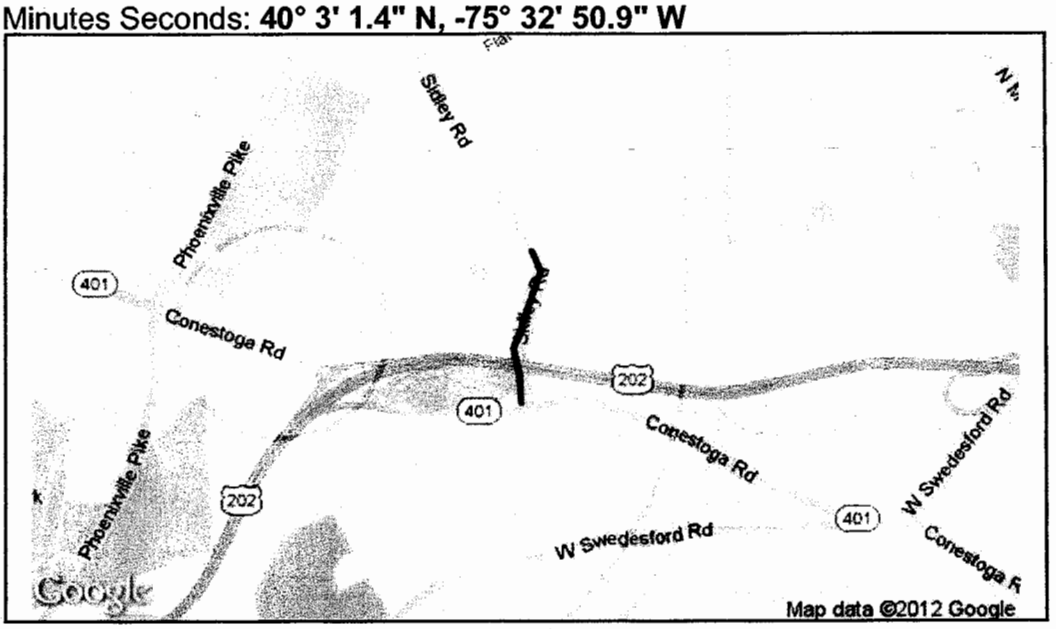
APPENDIX H



PNDI Response

Evaluating unlicensed DynamicPDF feature. DynamicPDF.com [400:200]

PNDI Project Environmental Review Receipt Project Search ID: 20120418350428

1. PROJECT INFORMATION

Project Name: **Mill Lane Sewer Replacement**
Date of review: **4/18/2012 4:38:47 PM**
Project Category: **Waste Transfer, Treatment, and Disposal,Liquid waste/Effluent,Sewer line maintainence-repair, replacement of existing line**
Project Length: **1945.2** feet
County: **Chester** Township/Municipality: **East Whiteland**
Quadrangle Name: **MALVERN** ~ ZIP Code: **19355**
Decimal Degrees: **40.050383 N, -75.547485 W**
Degrees Minutes Seconds: **40° 3' 1.4" N, -75° 32' 50.9" W**

2. SEARCH RESULTS

Agency	Results	Response
PA Game Commission	No Known Impact	No Further Review Required
PA Department of Conservation and Natural Resources	No Known Impact	No Further Review Required
PA Fish and Boat Commission	No Known Impact	No Further Review Required
U.S. Fish and Wildlife Service	**Avoidance Measure**	**See Agency Response**

As summarized above, Pennsylvania Natural Diversity Inventory (PNDI) records indicate there may be potential impacts to threatened and endangered and/or special concern species and resources within the project area. If the response above indicates "No Further Review Required" no additional communication with the respective agency is required. If the response is "Further Review Required" or "See Agency Response," refer to the appropriate agency comments below. Please see the DEP Information Section of this receipt if a PA Department of Environmental Protection Permit is required.

Evaluating unlicensed DynamicPDF feature. DynamicPDF.com [400:200]

Note that regardless of PNDI search results, projects requiring a Chapter 105 DEP individual permit or GP 5, 6, 7, 8, 9 or 11 in certain counties (Adams, Berks, Bucks, Carbon, Chester, Cumberland, Delaware, Lancaster, Lebanon, Lehigh, Monroe, Montgomery, Northampton, Schuylkill and York) must comply with the bog turtle habitat screening requirements of the PASPGP.

RESPONSE TO QUESTION(S) ASKED

Q1: Will this project or any project-related activities require any in-stream work, or a permanent or temporary crossing of a waterway (stream, river, creek, tributary)?
Your answer is: **1. Yes**

Q2: Accurately describe what is known about wetland presence in the project area or on the land parcel by selecting ONE of the following. "Project" includes all features of the project (including buildings, roads, utility lines, outfall and intake structures, wells, stormwater retention/detention basins, parking lots, driveways, lawns, etc.), as well as all associated impacts (e.g., temporary staging areas, work areas, temporary road crossings, areas subject to grading or clearing, etc.). Include all areas that will be permanently or temporarily affected -- either directly or indirectly -- by any type of disturbance (e.g., land clearing, grading, tree removal, flooding, etc.). Land parcel = the lot(s) on which some type of project(s) or activity(s) are proposed to occur.
Your answer is: **3. Someone qualified to identify and delineate wetlands has investigated the site, and determined that NO wetlands are located in or within 300 feet of the project area. (A written report from the wetland specialist, and detailed project maps should document this.)**

3. AGENCY COMMENTS

Regardless of whether a DEP permit is necessary for this proposed project, any potential impacts to threatened and endangered species and/or special concern species and resources must be resolved with the appropriate jurisdictional agency. In some cases, a permit or authorization from the jurisdictional agency may be needed if adverse impacts to these species and habitats cannot be avoided.

These agency determinations and responses are **valid for one year** (from the date of the review), and are based on the project information that was provided, including the exact project location; the project type, description, and features; and any responses to questions that were generated during this search. If any of the following change: 1) project location, 2) project size or configuration, 3) project type, or 4) responses to the questions that were asked during the online review, the results of this review are not valid, and the review must be searched again via the PNDI Environmental Review Tool and resubmitted to the jurisdictional agencies. The PNDI tool is a primary screening tool, and a desktop review may reveal more or fewer impacts than what is listed on this PNDI receipt. The jursidictional agencies **strongly advise against** conducting surveys for the species listed on the receipt prior to consultation with the agencies.

PA Game Commission

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Department of Conservation and Natural Resources

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Fish and Boat Commission

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern

Evaluating unlicensed DynamicPDF feature. DynamicPDF.com [400:200]

species and resources.

U.S. Fish and Wildlife Service

RESPONSE: Avoidance Measure: Avoid in-stream impacts by spanning the waterway or going under it (e.g., via horizontal boring or directional drilling). If in-stream impacts cannot be avoided, carry out instream work -- including installation of permanent structures (e.g., pipelines, livestock crossings, riprap), or installation, use, and removal of temporary structures (e.g., temporary road crossings) -- between October 1 and March 31.

As the project proponent or applicant, I certify that I will implement the above Avoidance Measure:

_____(Signature)

SPECIAL NOTE: **If you agree to implement the above Avoidance Measure, no further coordination with this agency regarding threatened and endangered species and/or special concern species and resources is required.** If you are not able to comply with the Avoidance Measures, you are required to coordinate with this agency - please send project information to this agency for review (see "What to Send" section).

WHAT TO SEND TO JURISDICTIONAL AGENCIES

If project information was requested by one or more of the agencies above, send the following information to the agency(s) seeking this information (see AGENCY CONTACT INFORMATION).

Check-list of *Minimum* Materials to be submitted:

____**SIGNED** copy of this Project Environmental Review Receipt
____Project narrative with a description of the overall project, the work to be performed, current physical characteristics of the site and acreage to be impacted.
____Project location information (name of USGS Quadrangle, Township/Municipality, and County)
____USGS 7.5-minute Quadrangle with project boundary clearly indicated, and quad name on the map

The inclusion of the following information may expedite the review process.
____A basic site plan(particularly showing the relationship of the project to the physical features such as wetlands, streams, ponds, rock outcrops, etc.)
____Color photos keyed to the basic site plan (i.e. showing on the site plan where and in what direction each photo was taken and the date of the photos)
____Information about the presence and location of wetlands in the project area, and how this was determined (e.g., by a qualified wetlands biologist), if wetlands are present in the project area, provide project plans showing the location of all project features, as well as wetlands and streams

4. DEP INFORMATION

The Pa Department of Environmental Protection (DEP) requires that a signed copy of this receipt, along with any required documentation from jurisdictional agencies concerning resolution of potential impacts, be submitted with applications for permits requiring PNDI review. For cases where a "Potential Impact" to threatened and endangered species has been identified before the application has been submitted to DEP, the application should not be submitted until the impact has been resolved. For cases where "Potential Impact" to special concern species and resources has been identified before the application has been submitted, the application should be submitted to DEP along with the PNDI receipt. The PNDI Receipt should also be submitted to the

Evaluating unlicensed DynamicPDF feature. DynamicPDF.com [400:200]

appropriate agency according to directions on the PNDI Receipt. DEP and the jurisdictional agency will work together to resolve the potential impact(s). See the DEP PNDI policy at http://www.naturalheritage.state.pa.us.

Evaluating unlicensed DynamicPDF feature. DynamicPDF.com [400:200]

5. ADDITIONAL INFORMATION

The PNDI environmental review website is a **preliminary** screening tool. There are often delays in updating species status classifications. Because the proposed status represents the best available information regarding the conservation status of the species, state jurisdictional agency staff give the proposed statuses at least the same consideration as the current legal status. If surveys or further information reveal that a threatened and endangered and/or special concern species and resources exist in your project area, contact the appropriate jurisdictional agency/agencies immediately to identify and resolve any impacts.

For a list of species known to occur in the county where your project is located, please see the species lists by county found on the PA Natural Heritage Program (PNHP) home page (www.naturalheritage.state.pa.us). Also note that the PNDI Environmental Review Tool only contains information about species occurrences that have actually been reported to the PNHP.

RE: USFWS Project #2012-0746
PNDI Review #20120418350428

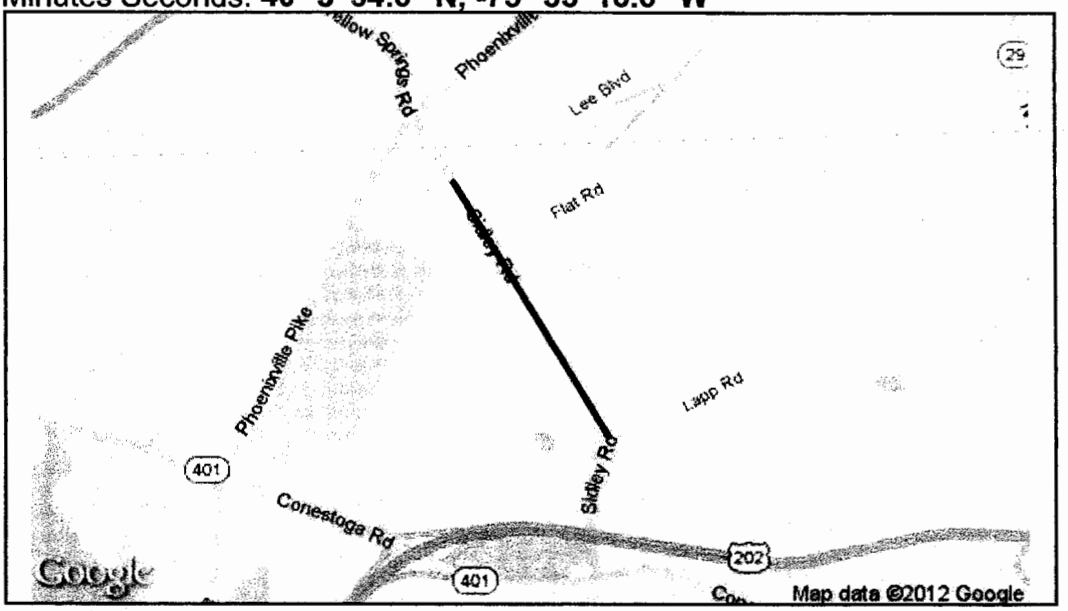
Dear Mr. McAghon:

This responds to your letter of April 20, 2012, which provided the Fish and Wildlife Service with information regarding the proposed Mill Lane sewer replacement project located in East Whiteland Township, Chester County, Pennsylvania. The proposed project is within the known range of the bog turtle (*Clemmys muhlenbergii*), a species that is federally listed as threatened. The following comments are provided pursuant to the Endangered Species Act of 1973 (87 Stat. 884, as amended; 16 U.S.C. 1531 *et seq.*) to ensure the protection of endangered and threatened species.

To evaluate the potential effects of this project on the bog turtle, a wetland investigation was conducted by your office on February 1, 2012. According to the information submitted, wetlands do not exist in the project area. Therefore, we conclude that implementation of the proposed project will not affect the bog turtle. Should project plans change, or if additional information on listed or proposed species becomes available, this determination may be reconsidered. Also, if the wetland investigation did not include all areas that will be directly or indirectly affected by the proposed project and project-associated features, the scope of the wetland investigation should be expanded to include these areas. If any wetlands are located, submit the results of the expanded wetland investigation to this office for review.

This response relates only to endangered and threatened species under our jurisdiction, based on an office review of the proposed project's location. No field inspection of the project area has been conducted by this office. Consequently, this letter is not to be construed as addressing potential Service concerns under the Fish and Wildlife Coordination Act or other authorities.

To avoid potential delays in reviewing your project, please use the above-referenced USFWS project tracking number in any future correspondence regarding this project.



Please contact Bonnie Dershem of my staff at 814-234-4090 if you have any questions or require further assistance regarding this matter.

Sincerely,

Clinton Riley
Field Office Supervisor

1. PROJECT INFORMATION

Project Name: **Sidley Road Sewer Replacement**
Date of review: **8/10/2012 8:32:55 AM**
Project Category: **Waste Transfer, Treatment, and Disposal,Liquid waste/Effluent,Sewer line (new - construction in new location)**
Project Length: **3592.9** feet
County: **Chester** Township/Municipality: **East Whiteland**
Quadrangle Name: **MALVERN** ~ ZIP Code: **19355**
Decimal Degrees: **40.059614 N, -75.555167 W**
Degrees Minutes Seconds: **40° 3' 34.6" N, -75° 33' 18.6" W**

2. SEARCH RESULTS

Agency	Results	Response
PA Game Commission	No Known Impact	No Further Review Required
PA Department of Conservation and Natural Resources	**Conservation Measure**	**No Further Review Required, See Agency Comments**
PA Fish and Boat Commission	No Known Impact	No Further Review Required
U.S. Fish and Wildlife Service	**Avoidance Measure**	**See Agency Response**

As summarized above, Pennsylvania Natural Diversity Inventory (PNDI) records indicate there may be potential impacts to threatened and endangered and/or special concern species and resources within the project area. If the response above indicates "No Further Review Required" no additional communication with the respective agency is required. If the response is "Further Review Required" or "See Agency Response," refer to the appropriate agency comments below. Please see the DEP Information Section of this receipt if a PA Department of Environmental Protection Permit is required.

Note that regardless of PNDI search results, projects requiring a Chapter 105 DEP individual permit or GP 5, 6, 7, 8, 9 or 11 in certain counties (Adams, Berks, Bucks, Carbon, Chester, Cumberland, Delaware, Lancaster, Lebanon, Lehigh, Monroe, Montgomery, Northampton, Schuylkill and York) must comply with the bog turtle habitat screening requirements of the PASPGP.

RESPONSE TO QUESTION(S) ASKED

Q1: "Accurately describe what is known about wetland presence in the project area or on the land parcel by selecting ONE of the following. ""Project"" includes all features of the project (including buildings, roads, utility lines, outfall and intake structures, wells, stormwater retention/detention basins, parking lots, driveways, lawns, etc.), as well as all associated impacts (e.g., temporary staging areas, work areas, temporary road crossings, areas subject to grading or clearing, etc.). Include all areas that will be permanently or temporarily affected -- either directly or indirectly -- by any type of disturbance (e.g., land clearing, grading, tree removal, flooding, etc.). Land parcel = the lot(s) on which some type of project(s) or activity(s) are proposed to occur ."
Your answer is: **"1. The entire project and associated discharge, plus a 300 feet buffer around the project area, all occur in or on an existing building, parking lot, driveway, road, road shoulder, street, runway, paved area, railroad bed, or crop agriculture field."**

Q2: "Will the entire project area (including any discharge), plus a 300 feet buffer around the project area, all occur in or on an existing building, parking lot, driveway, road, road shoulder, street, runway, paved area, railroad bed, maintained (periodically mown) lawn, crop agriculture field or maintained orchard?"
Your answer is: **1. Yes**

Q3: Accurately describe what is known about wetland presence in the project area or on the land parcel by selecting ONE of the following. "Project" includes all features of the project (including buildings, roads, utility lines, outfall and intake structures, wells, stormwater retention/detention basins, parking lots, driveways, lawns, etc.), as well as all associated impacts (e.g., temporary staging areas, work areas, temporary road crossings, areas subject to grading or clearing, etc.). Include all areas that will be permanently or temporarily affected -- either directly or indirectly -- by any type of disturbance (e.g., land clearing, grading, tree removal, flooding, etc.). Land parcel = the lot(s) on which some type of project(s) or activity(s) are proposed to occur.
Your answer is: **1. The entire project will occur in or on an existing building, parking lot, driveway, road, road shoulder, street, runway, paved area, or railroad bed.**

Q4: Will this project or any project-related activities require any in-stream work, or a permanent or temporary crossing of a waterway (stream, river, creek, tributary)?
Your answer is: **2. No**

3. AGENCY COMMENTS

Regardless of whether a DEP permit is necessary for this proposed project, any potential impacts to threatened and endangered species and/or special concern species and resources must be resolved with the appropriate jurisdictional agency. In some cases, a permit or authorization from the jurisdictional agency may be needed if adverse impacts to these species and habitats cannot be avoided.

These agency determinations and responses are **valid for two years** (from the date of the review), and are based on the project information that was provided, including the exact project location; the project type, description, and features; and any responses to questions that were generated during this search. If any of the following change: 1) project location, 2) project size or configuration, 3) project type, or 4) responses to the questions that were asked during the online review, the results of this review are not valid, and the review must be searched again via the PNDI Environmental Review Tool and resubmitted to the jurisdictional agencies. The PNDI tool is a primary screening tool, and a desktop review may reveal more or fewer impacts than what is listed on this PNDI receipt. The jursidictional agencies **strongly advise against** conducting surveys for the species

listed on the receipt prior to consultation with the agencies.

PA Game Commission

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Department of Conservation and Natural Resources

RESPONSE: Conservation Measure: Please avoid the introduction of invasive species in order to protect the integrity of nearby plant species of special concern. Voluntary cleaning of equipment/vehicles, using clean fill and mulch, and avoiding planting invasive species (http://www.dcnr.state.pa.us/forestry/invasivetutorial/index.htm) will help to conserve sensitive plant habitats.

Conservation Measure: Please avoid the introduction of invasive species in order to protect the integrity of nearby plant species of special concern. Voluntary cleaning of equipment/vehicles, using clean fill and mulch, and avoiding planting invasive species (http://www.dcnr.state.pa.us/forestry/invasivetutorial/index.htm) will help to conserve sensitive plant habitats.

DCNR Species: (Note: The PNDI tool is a primary screening tool, and a desktop review may reveal more or fewer species than what is listed below. After desktop review, if a botanical survey is required by DCNR, we recommend the DCNR Botanical Survey Protocols, available here: http://www.gis.dcnr.state.pa.us/hgis-er/PNDI_DCNR.aspx.)
Scientific Name: Dichanthelium lucidum
Common Name: Shining Panic-grass
Current Status: Special Concern Species*
Proposed Status: Endangered

Scientific Name: Viburnum nudum
Common Name: Possum-haw
Current Status: Endangered
Proposed Status: Endangered

PA Fish and Boat Commission

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

U.S. Fish and Wildlife Service

RESPONSE: Avoidance Measure: Do not conduct this project/activity within 50 feet of any streams, rivers, creeks, or tributaries. This includes both perennial and intermittent waterways.

As the project proponent or applicant, I certify that I will implement the above Avoidance Measure:

_____(Signature)

SPECIAL NOTE: **If you agree to implement the above Avoidance Measure, no further coordination with this agency regarding threatened and endangered species and/or special concern species and resources is required.** If you are not able to comply with the Avoidance Measures, you are required to coordinate with this agency - please send project information to this agency for review (see "What to Send" section).

* Special Concern Species or Resource - Plant or animal species classified as rare, tentatively undetermined or candidate as well as other taxa of conservation concern, significant natural communities, special concern populations (plants or animals) and unique geologic features.
** Sensitive Species - Species identified by the jurisdictinal agency as collectible, having economic value, or being susceptible to decline as a result of visitation.

WHAT TO SEND TO JURISDICTIONAL AGENCIES

If project information was requested by one or more of the agencies above, send the following information to the agency(s) seeking this information (see AGENCY CONTACT INFORMATION).

Check-list of *Minimum* Materials to be submitted:

____**SIGNED** copy of this Project Environmental Review Receipt
____Project narrative with a description of the overall project, the work to be performed, current physical characteristics of the site and acreage to be impacted.
____Project location information (name of USGS Quadrangle, Township/Municipality, and County)
____USGS 7.5-minute Quadrangle with project boundary clearly indicated, and quad name on the map

The inclusion of the following information may expedite the review process.
____A basic site plan(particularly showing the relationship of the project to the physical features such as wetlands, streams, ponds, rock outcrops, etc.)
____Color photos keyed to the basic site plan (i.e. showing on the site plan where and in what direction each photo was taken and the date of the photos)
____Information about the presence and location of wetlands in the project area, and how this was determined (e.g., by a qualified wetlands biologist), if wetlands are present in the project area, provide project plans showing the location of all project features, as well as wetlands and streams

4. DEP INFORMATION

The Pa Department of Environmental Protection (DEP) requires that a signed copy of this receipt, along with any required documentation from jurisdictional agencies concerning resolution of potential impacts, be submitted with applications for permits requiring PNDI review. For cases where a "Potential Impact" to threatened and endangered species has been identified before the application has been submitted to DEP, the application should not be submitted until the impact has been resolved. For cases where "Potential Impact" to special concern species and resources has been identified before the application has been submitted, the application should be submitted to DEP along with the PNDI receipt. The PNDI Receipt should also be submitted to the appropriate agency according to directions on the PNDI Receipt. DEP and the jurisdictional agency will work together to resolve the potential impact(s). See the DEP PNDI policy at http://www.naturalheritage.state.pa.us.

5. ADDITIONAL INFORMATION

The PNDI environmental review website is a **preliminary** screening tool. There are often delays in updating species status classifications. Because the proposed status represents the best available information regarding the conservation status of the species, state jurisdictional agency staff give the proposed statuses at least the same consideration as the current legal status. If surveys or further information reveal that a threatened and endangered and/or special concern species and resources exist in your project area, contact the appropriate jurisdictional agency/agencies immediately to identify and resolve any impacts.

For a list of species known to occur in the county where your project is located, please see the species lists by county found on the PA Natural Heritage Program (PNHP) home page (www.naturalheritage.state.pa.us). Also note that the PNDI Environmental Review Tool only contains information about species occurrences that have actually been reported to the PNHP.

RE: USFWS Project #2012-1219

Dear Mr. McAghon:

This responds to your letter of August 16, 2012, requesting information about federally listed and proposed endangered and threatened species within the area affected by the proposed Sidley Road Sewer Replacement project located in East Whiteland Township, Chester County, Pennsylvania. The following comments are provided pursuant to the Endangered Species Act of 1973 (87 Stat. 884, as amended; 16 U.S.C. 1531 *et seq.*) to ensure the protection of endangered and threatened species.

Given the proximity of the project to known bog turtle occurrences in the watershed, wetlands and streams are likely to be used as a dispersal/travel corridor. Accordingly, we recommend that project construction take place between October 1 and March 31, when bog turtles are closer to their hibernation areas, to avoid harming any turtles moving through the area. If this time-of-year restriction cannot be implemented, we further recommend you conduct a bog turtle survey in accordance with the following conditions, which only apply if project construction is proposed to occur between April 1 and September 30, during which time bog turtles are active:

1. Prior to performing any construction work in wetlands, streams, or uplands within 300 feet of the potential bog turtle habitat, all areas of expected disturbance must be surveyed by a qualified surveyor for the presence of bog turtles immediately prior to construction commencement.

2. Prior to the survey, herbaceous vegetation should be cut to a height of 4 to 6 inches using a hand-held trimmer/weed-cutter, and then carefully raked away from the area to be searched. A qualified bog turtle surveyor should be present when this vegetation clearing occurs.

3. Immediately following the survey, silt-fencing should be placed between the wetland and the proposed construction zone while the bog turtle surveyor is present to ensure

that the fencing is properly installed in the correct location. The silt-fencing should be removed immediately following construction.

4. If any bog turtles are located during these searches, the Service and Pennsylvania Fish and Boat Commission should be contacted immediately, and construction should not proceed until further consultation occurs. Survey results should be submitted to the Service and PFBC.

With the implementation of either the time-of-year restriction or pre-construction survey, this project is not likely to adversely affect the bog turtle, or any other federally listed or proposed species. If you are unable to implement the time-of-year restriction or pre-construction survey, or project plans change, further consultation with the Service will be required, pursuant to the Endangered Species Act.

To avoid potential delays in reviewing your project, please use the above-referenced USFWS project tracking number in any future correspondence regarding this project.

If you have any questions regarding this matter, please contact Pamela Shellenberger of my staff at 814-234-4090.

Sincerely,

Clinton Riley
Field Office Supervisor

Subject Sidley Road Sewer Replacement; USFWS #2(1185

Kevin,

This email is regarding the above-mentioned project and our phone conversation of September 18, 2012. After further discussions with you and further review of the project information, which determined that the project is located within the roadway and no streams will be impacted, we have determined that the effects of the project on the bog turtle are insignificant or discountable. This email supersedes our letter of September 14, 2012. Please accept this email as our official response.

Thank you,

Pamela Shellenberger

RE: East Whiteland Township (Chester County);
Act 537 Planning – Special Study; Lee Blvd. Force Main;
PA DCNR Review
ARRO # 10310.02

Dear PA Department of Conservation and Natural Resources:

On behalf of East Whiteland Township, we are assisting with the preparation of an Act 537 Sewage Facilities Special Study to update the Township's Act 537 Plan. This Special Study is to reflect the improvements necessary to meet the future wastewater needs of the north-central portion of East Whiteland Township and the bordering southern portion of Charlestown Township. One phase of the improvements may require the replacement of the sanitary sewer force main from the Lee Boulevard Pump Station, extending along Lee Boulevard to a point of connection at the intersection with Sidely Road.

Enclosed, for your review, is the Cultural Resource Notification form and the Malvern 7.5 Minute Quadrangle identifying the location of the proposed project. Photos are also enclosed identifying the specific location associated with the proposed forcemain replacement. The total area to be disturbed for the purposes of installing the proposed force main replacement is approximately 0.3 acres. No structures are planned to be disturbed as a result of implementing the planned alternatives. The proposed force main is primarily in the street with a small portion traversing an open field area just south of the pump station.

Please review this documentation and provide us with any comments or concerns that you may have at your earliest convenience. If you have any questions, please do not hesitate to call me at 610-495-2102.

Sincerely,

William L. Bohner, Jr., P.E.
Project Engineer

1. PROJECT INFORMATION

Project Name: **Lee Blvd PS Force Main to Sidely Road (Replacement)**
Date of review: **9/13/2012 11:04:01 AM**
Project Category: **Waste Transfer, Treatment, and Disposal,Liquid waste/Effluent,Sewage module/Act 537 plan**
Project Length: **3462.5** feet
County: **Chester** Township/Municipality: **East Whiteland**
Quadrangle Name: **MALVERN** ~ ZIP Code: **19355**
Decimal Degrees: **40.064935 N, -75.556926 W**
Degrees Minutes Seconds: **40° 3' 53.8" N, -75° 33' 24.9" W**

2. SEARCH RESULTS

Agency	Results	Response
PA Game Commission	No Known Impact	No Further Review Required
PA Department of Conservation and Natural Resources	**Potential Impact**	**FURTHER REVIEW IS REQUIRED, See Agency Response**
PA Fish and Boat Commission	No Known Impact	No Further Review Required
U.S. Fish and Wildlife Service	No Known Impact	No Further Review Required

As summarized above, Pennsylvania Natural Diversity Inventory (PNDI) records indicate there may be potential impacts to threatened and endangered and/or special concern species and resources within the project area. If the response above indicates "No Further Review Required" no additional communication with the respective agency is required. If the response is "Further Review Required" or "See Agency Response," refer to the appropriate agency comments below. Please see the DEP Information Section of this receipt if a PA Department of Environmental Protection Permit is required.

Note that regardless of PNDI search results, projects requiring a Chapter 105 DEP individual permit or GP 5, 6, 7, 8, 9 or 11 in certain counties (Adams, Berks, Bucks, Carbon, Chester, Cumberland, Delaware, Lancaster, Lebanon, Lehigh, Monroe, Montgomery, Northampton, Schuylkill and York) must comply with the bog turtle habitat screening requirements of the PASPGP.

3. AGENCY COMMENTS

Regardless of whether a DEP permit is necessary for this proposed project, any potential impacts to threatened and endangered species and/or special concern species and resources must be resolved with the appropriate jurisdictional agency. In some cases, a permit or authorization from the jurisdictional agency may be needed if adverse impacts to these species and habitats cannot be avoided.

These agency determinations and responses are **valid for two years** (from the date of the review), and are based on the project information that was provided, including the exact project location; the project type, description, and features; and any responses to questions that were generated during this search. If any of the following change: 1) project location, 2) project size or configuration, 3) project type, or 4) responses to the questions that were asked during the online review, the results of this review are not valid, and the review must be searched again via the PNDI Environmental Review Tool and resubmitted to the jurisdictional agencies. The PNDI tool is a primary screening tool, and a desktop review may reveal more or fewer impacts than what is listed on this PNDI receipt. The jursidictional agencies **strongly advise against** conducting surveys for the species listed on the receipt prior to consultation with the agencies.

PA Game Commission

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Department of Conservation and Natural Resources

RESPONSE: Further review of this project is necessary to resolve the potential impacts(s). Please send project information to this agency for review (see WHAT TO SEND).

DCNR Species: (Note: The PNDI tool is a primary screening tool, and a desktop review may reveal more or fewer species than what is listed below. After desktop review, if a botanical survey is required by DCNR, we recommend the DCNR Botanical Survey Protocols, available here: http://www.gis.dcnr.state.pa.us/hgis-er/PNDI_DCNR.aspx.)
Scientific Name: Dichanthelium lucidum
Common Name: Shining Panic-grass
Current Status: Special Concern Species*
Proposed Status: Endangered

Scientific Name: Viburnum nudum
Common Name: Possum-haw
Current Status: Endangered
Proposed Status: Endangered

PA Fish and Boat Commission

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

U.S. Fish and Wildlife Service

RESPONSE: No impacts to **federally** listed or proposed species are anticipated. Therefore, no further consultation/coordination under the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 *et seq.* is required. Because no take of federally listed species is anticipated, none is authorized. This response does not reflect potential Fish and Wildlife Service concerns under the Fish and Wildlife Coordination Act or other authorities.

* Special Concern Species or Resource - Plant or animal species classified as rare, tentatively undetermined or candidate as well as other taxa of conservation concern, significant natural communities, special concern populations (plants or animals) and unique geologic features.
** Sensitive Species - Species identified by the jurisdictinal agency as collectible, having economic value, or being susceptible to decline as a result of visitation.

WHAT TO SEND TO JURISDICTIONAL AGENCIES

If project information was requested by one or more of the agencies above, send the following information to the agency(s) seeking this information (see AGENCY CONTACT INFORMATION).

Check-list of *Minimum* Materials to be submitted:

____**SIGNED** copy of this Project Environmental Review Receipt
____Project narrative with a description of the overall project, the work to be performed, current physical characteristics of the site and acreage to be impacted.
____Project location information (name of USGS Quadrangle, Township/Municipality, and County)
____USGS 7.5-minute Quadrangle with project boundary clearly indicated, and quad name on the map

The inclusion of the following information may expedite the review process.
____A basic site plan(particularly showing the relationship of the project to the physical features such as wetlands, streams, ponds, rock outcrops, etc.)
____Color photos keyed to the basic site plan (i.e. showing on the site plan where and in what direction each photo was taken and the date of the photos)
____Information about the presence and location of wetlands in the project area, and how this was determined (e.g., by a qualified wetlands biologist), if wetlands are present in the project area, provide project plans showing the location of all project features, as well as wetlands and streams

4. DEP INFORMATION

The Pa Department of Environmental Protection (DEP) requires that a signed copy of this receipt, along with any required documentation from jurisdictional agencies concerning resolution of potential impacts, be submitted with applications for permits requiring PNDI review. For cases where a "Potential Impact" to threatened and endangered species has been identified before the application has been submitted to DEP, the application should not be submitted until the impact has been resolved. For cases where "Potential Impact" to special concern species and resources has been identified before the application has been submitted, the application should be submitted to DEP along with the PNDI receipt. The PNDI Receipt should also be submitted to the

appropriate agency according to directions on the PNDI Receipt. DEP and the jurisdictional agency will work together to resolve the potential impact(s). See the DEP PNDI policy at http://www.naturalheritage.state.pa.us.

5. ADDITIONAL INFORMATION

The PNDI environmental review website is a **preliminary** screening tool. There are often delays in updating species status classifications. Because the proposed status represents the best available information regarding the conservation status of the species, state jurisdictional agency staff give the proposed statuses at least the same consideration as the current legal status. If surveys or further information reveal that a threatened and endangered and/or special concern species and resources exist in your project area, contact the appropriate jurisdictional agency/agencies immediately to identify and resolve any impacts.

For a list of species known to occur in the county where your project is located, please see the species lists by county found on the PA Natural Heritage Program (PNHP) home page (www.naturalheritage.state.pa.us). Also note that the PNDI Environmental Review Tool only contains information about species occurrences that have actually been reported to the PNHP.

Re: Lee Blvd PS Force Main to Sidely Road (Replacement)
East Whiteland Township, Chester County, PA

Dear Mr. Bohner,

Thank you for the submission of the Pennsylvania Natural Diversity Inventory (PNDI) Environmental Review Receipt Number **20120913372241** for review. PA Department of Conservation and Natural Resources screened this project for potential impacts to species and resources of concern under DCNR's responsibility, which includes plants, terrestrial invertebrates, natural communities, and geologic features only.

No Impact Anticipated

PNDI records indicate species or resources of concern are located in the vicinity of the project. However, based on the information you submitted concerning the nature of the project, the immediate location, and our detailed resource information, DCNR has determined that no impact is likely. No further coordination with our agency is needed for this project.

Conservation Measure—Voluntary Action

The following plant species of concern is known to occur in the area but is not expected to be present within the project disturbance area and therefore, it is not a target for a survey; However, habitat exists in the area: A conservation measure is suggested to be mindful of the potential presence of the following species that may utilize open dry or moist fields:

- *Andropogon gyrans* (Elliott's beardgrass)–habitat is dry or moist fields, or open woods-

This response represents the most up-to-date review of the PNDI data files and is valid for **two years** only. If project plans change or more information on listed or proposed species becomes available, our determination may be reconsidered. For PNDI project updates, please see the PNHP website at www.naturalheritage.state.pa.us for guidance. As a reminder, this finding applies to potential impacts under DCNR's jurisdiction only. Visit the PNHP website for directions on contacting the Commonwealth's other resource agencies for environmental review. Should you have any questions or concerns, please don't hesitate to contact me at 717.705.2819 or c-frsechle@pa.gov.

RE: East Whiteland Township;
Phase 1 Mill Lane and Phase 2 Sidley Road Sewer Main Replacements
PHMC Review
ARRO # 10310.02

Dear Historical and Museum Commission:

On behalf of East Whiteland Township, we are preparing a design to replace the existing sanitary sewers in and along Mill Lane and Sidley Road.

Enclosed, for your review, is the Cultural Resource Notification form and a portion of the USGS Malvern, PA 7.5 Minute Quadrangle identifying the location of the project. The enclosed Plot Plan sheet C1 shows the extent of the phases. The enclosed sheets PP1 and PP2 show the extent of the Phase 1 improvements, which are located outside the existing roadways. All other portions of Phase 1 and Phase 2 are located within existing cartways. The projected Phase 1 and Phase 2 total area to be disturbed for the purposes of replacing the sewer lines is approximately 1.4 acres.

Please review this documentation and provide us with any comments or concerns that you may have at your earliest convenience. If you have any questions or comments regarding this matter please contact me at 610-495-2115.

Sincerely,

Kevin McAghon

Re: File No. ER 2012-1657-029-A
DEP Act 537 Sewage Facilities Planning:
Mill Lane & Sidley Road Sewer
Replacement Projects, East Whiteland
Twp., Chester Co.

Dear Mr. McAghon:

Thank you for submitting information concerning the above referenced project. The Bureau for Historic Preservation (the State Historic Preservation Office) reviews projects in accordance with state and federal laws. Section 106 of the National Historic Preservation Act of 1966, and the implementing regulations (36 CFR Part 800) of the Advisory Council on Historic Preservation, is the primary federal legislation. The Environmental Rights amendment, Article 1, Section 27 of the Pennsylvania Constitution and the Pennsylvania History Code, 37 Pa. Cons. Stat. Section 500 et seq. (1988) is the primary state legislation. These laws include consideration of the project's potential effects on both historic and archaeological resources.

Archaeology

There is a high probability that archaeological resources are located in this project area. In our opinion, the activity described in your proposal should have no effect on such resources. Should the scope of the project be amended to include additional ground disturbing activity this office should be contacted immediately and a Phase I Archaeological Survey may be necessary to locate all potentially significant archaeological resources.

Historic Structures

In our opinion no historic buildings, structures, districts, or objects will be affected by this project.

If you need further information in this matter please consult Mark Shaffer at (717) 783-9900.

Sincerely,

Douglas C. McLearen, Chief
Division of Archaeology &
Protection

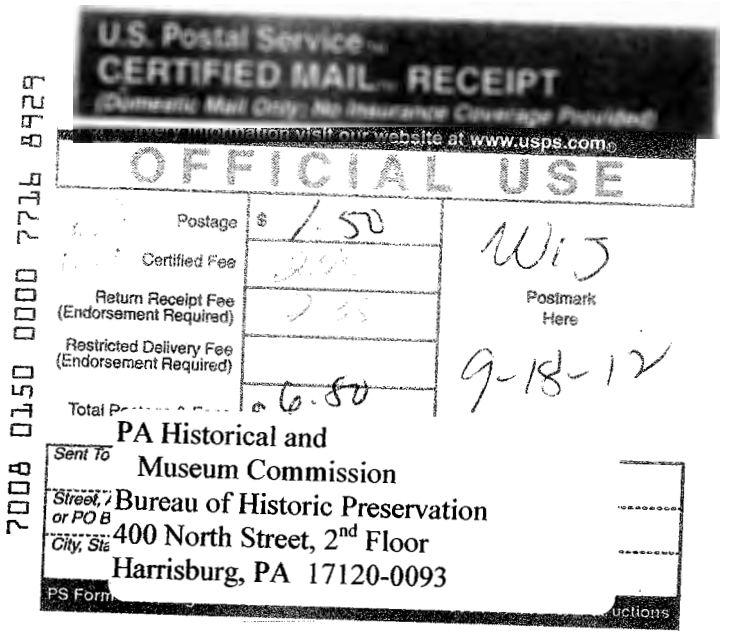
RE: East Whiteland Township (Chester County);
Act 537 Planning – Special Study; Lee Blvd. Force Main;
PHMC Review
ARRO # 10310.02

Dear Historical and Museum Commission:

On behalf of East Whiteland Township, we are assisting with the preparation of an Act 537 Sewage Facilities Special Study to update the Township's Act 537 Plan. This Special Study is to reflect the improvements necessary to meet the future wastewater needs of the north-central portion of East Whiteland Township and the bordering southern portion of Charlestown Township. One phase of the improvements may require the replacement of the sanitary sewer force main from the Lee Boulevard Pump Station, extending along Lee Boulevard to a point of connection at the intersection with Sidely Road.

Enclosed, for your review, is the Cultural Resource Notification form and the Malvern 7.5 Minute Quadrangle identifying the location of the proposed project. Photos are also enclosed identifying the specific location associated with the proposed forcemain replacement. The total area to be disturbed for the purposes of installing the proposed force main replacement is approximately 0.3 acres. No structures are planned to be disturbed as a result of implementing the planned alternatives. The proposed force main is primarily in the street with a small portion traversing an open field area just south of the pump station.



Please review this documentation and provide us with any comments or concerns that you may have at your earliest convenience. If you have any questions, please do not hesitate to call me at 610-495-2102.

Sincerely,

William L. Bohner, Jr., P.E.
Project Engineer

Re: East Whiteland Township Act 537 Special Study

Dear Ms. Boettlin:

This letter is to memorialize East Whiteland Township's commitment to finalizing the intermunicipal agreement amendment between the Township and the Valley Forge Sewer Authority.

We are aware that this amendment is part of the Special Study process and will endeavor to provide you with an executed amended Agreement in a timely manner.

Very truly yours,

Terry Woodman

Re: East Whiteland Township Act 537 Special Study

Dear Ms. Boettlin:

This letter is to memorialize the Valley Forge Sewer Authority's (VFSA) commitment to finalizing the inter-municipal agreement amendment between East Whiteland the VFSA. We are aware that this amendment is part of the Special Study process and will endeavor to provide you with an amended Agreement in a timely manner, once the details are worked out and the amendment is executed. We and East Whiteland have both reviewed draft agreement amendments and are in basic agreement as to the major terms, namely that after completion of the Mill Lane and upstream sewer projects in East Whiteland, VFSA's reserve capacity in the East Whiteland system will be 432,302 gallons per day. This capacity is consistent with the Municipal Needs Assessment that supports the VFSA's Regional Act 537 Plan. In accordance with the inter-municipal agreements, these projects will be funded by each municipality according their respective reserve capacities.

Very truly yours,

Martin Goldberg

EAST WHITELAND TRUNK LINE AGREEMENT

THIS AGREEMENT, dated as of the first day of February, 1971, by and between EAST WHITELAND MUNICIPAL AUTHORITY (East Whiteland Authority), a municipal authority organized by the Township of East Whiteland and operating under the provisions of the Municipality Authorities Act of 1945, the Act of May 2, 1945, P.L. 382, its supplements and amendments, and the TOWNSHIP OF EAST WHITELAND (East Whiteland Township), a second class township, parties of the first part, and MALVERN MUNICIPAL AUTHORITY (Malvern Authority) and the BOROUGH OF MALVERN (Malvern), parties of the second part, and VALLEY FORGE SEWER AUTHORITY, party of the third part, all of said parties being municipal authorities or political subdivisions within the County of Chester, Commonwealth of Pennsylvania.

W I T N E S S E T H :

WHEREAS, the parties hereto have constructed or provided for or are about to construct or provide for sanitary sewer collection systems; and

WHEREAS, the parties desire to dispose of sewage described hereinafter by a treatment plant (hereinafter called the "Valley Forge Treatment Plant") to be located on the Schuylkill River in Schuylkill Township, Chester County, Pennsylvania, which treatment plant is to be constructed and operated by Valley Forge Sewer Authority (a municipality authority formed by Schuylkill, East Pikeland and Charlestown Townships); and

WHEREAS, a substantial portion of the sewage emanating from within the municipalities which is to be disposed of by the aforesaid treatment plant is to be discharged into and conveyed to the aforesaid treatment plant by interceptors or trunk sewers to be constructed by Tredyffrin Township Municipal Authority (Tredyffrin Authority), which interceptors or trunk sewers, including pumping stations and appurtenances are hereinafter called, collectively, the "Valley Creek Trunk Sewer", are to be leased by Tredyffrin Authority to the Township of Tredyffrin, which will operate said Valley Creek Trunk Sewer; and

WHEREAS, all of the sewage emanating from Malvern, which is to be disposed of by the Valley Forge Treatment Plant must pass through East Whiteland to reach the Valley Creek Trunk Sewer; and

WHEREAS, East Whiteland Authority has agreed to construct an interceptor or trunk sewer which will be called the East Whiteland Trunk Line, and Malvern Authority and Malvern have indicated they will utilize said Trunk Line and share in the cost of its construction and operation for the mutual benefit of the parties.

NOW, THEREFORE, IN CONSIDERATION OF THE MUTUAL COVENANTS HEREIN CONTAINED, the parties hereto, intending to be legally bound hereby, covenant and agree as follows:

ARTICLE I

CONSTRUCTION OF EAST WHITELAND TRUNK LINE

1.01 Engineering Services.

Each party hereby approves the contract dated June 20, 1966, between East Whiteland Authority and Roy F. Weston, Inc. (hereinafter called the "Consulting Engineers"), for engineering

services in respect of the construction of sewerage facilities to serve the East Whiteland Township and interceptors or trunk sewers, and appurtenances, to be located as set forth on the attached Exhibit "A" - the East Whiteland Trunk Line. A copy of said contract having been delivered to each party, the municipalities and municipality authority set forth in Exhibit "B" (hereinafter referred in this Article I as the "municipalities") agree to share the cost of such engineering design in accordance with the percentages applicable to each section or reach of said trunk line set forth in Exhibit "B" attached hereto. The parties hereto likewise agree to share the cost of surveys and test borings incident to the aforesaid design in accordance with said percentages. When payments for such engineering design, surveys and test borings fall due from time to time, each such municipality upon receipt of a copy of an invoice from the Consulting Engineers, shall promptly pay or cause to be paid to East Whiteland Authority for delivery to the Consulting Engineers (or, upon request of East Whiteland Authority, directly to the Consulting Engineers) that percentage of such invoice as is set forth in said Exhibit. Nothing herein contained shall be construed so as to make any party hereto (other than East Whiteland Authority) a party to said contract between East Whiteland Authority and the Consulting Engineers. If any payment required of a party hereto under this Section 1.01 is not made within thirty (30) days of the receipt of the aforesaid copy of invoice, interest shall accrue at the rate of six per cent (6%) per annum from such date.

1.02 Design Capacity; Construction of East Whiteland Trunk Line.

For each such municipality listed in Exhibit B, said East Whiteland Trunk Line shall provide the design capacity (reserved capacity) for each secion or reach of the respective interceptor or trunk sewers as set forth after the name of each such municipality in said Exhibit. East Whiteland Authority, in accordance with said contract with the Consulting Engineers shall cause plans and specifications for the East Whiteland Trunk Line to be completed with all reasonable dispatch. East Whiteland Authority, upon receipt of capital contributions as provided in Article II hereof shall award construction contracts and cause the East Whiteland Trunk Line to be constructed with reasonable dispatch, all in accordance with said plans and specifications and sound engineering principles.

1.03 Review and Inspection.

Throughout the term of this Agreement, East Whiteland Authority shall cause the Consulting Engineers to make available at reasonable times and places any information concerning the design, construction and operation of the East Whiteland Trunk Line reasonably requested by Malvern Authority or Malvern. Members of the governing body of Malvern and the consulting engineers, employees and representatives of Malvern shall have the right at all reasonable times during construction and thereafter to inspect the construction and operation of the East Whiteland Trunk Line and all records of East Whiteland Authority and East Whiteland Township in respect thereof. East Whiteland Authority and East Whiteland Township, at reasonable times, shall receive and consider the opinions, comments and suggestions of Malvern or Malvern Authority and of the

consulting engineer of Malvern and Malvern Authority.

1.04 Date of completion of East Whiteland Trunk Line.

East Whiteland Authority shall make every reasonable effort to cause the East Whiteland Trunk Line to be completed with reasonable dispatch.

ARTICLE II

CAPITAL CONTRIBUTIONS

2.01 Percentages.

Subject to limitations hereinafter provided, each of the municipalities and municipality authorities listed in Exhibit B attached hereto (hereinafter referred to in this Article II as the "municipalities") shall bear the percentage of the total project cost of constructing the several sections or reaches of the respective interceptor or trunk sewers of the East Whiteland Trunk Line as set forth after its name in said Exhibit B, which lists the reserved capacity requirements of each party in each such section or reach of sewer, and are referred to hereinafter as "said percentages". The total estimated project cost of constructing the East Whiteland Trunk Line and of each section or reach thereof to be constructed as part of said Trunk Line is set forth in Exhibit B. The total project cost of constructing the East Whiteland Trunk Line shall include construction contract payments, land costs, engineering, surveying, boring and construction representation fees and expenses (other than those paid for under Section 1.01 hereof), legal fees incident to the construction (including preparation and review of

documents needed before construction can commence), a reasonable contingency fund and all other charges, costs and expenses incident to such construction and which are properly chargeable thereto under sound accounting practice but excluding (i) financing costs and (ii) all costs and expenses properly chargeable to East Whiteland Authority for construction of the balance of its own sewage collection system under sound accounting practice. Allocation of costs and expenses between the cost of constructing the East Whiteland Trunk Line and the cost of constructing of the balance of said collection system of East Whiteland Authority shall be subject to adjustment upon audit as provided for hereinafter.

2.02 Payment of Capital Contributions.

No capital contribution in respect of construction shall be due hereunder unless prior to the date of payment plans and specifications for the East Whiteland Trunk Line and revisions thereof, if any, have been approved by the municipalities. Disapprovals may be based only on sound engineering reasons. Within sixty (60) days of the date on which construction bids are received by East Whiteland Authority (or, in the event of increased costs requiring approval pursuant to Section 2.03 hereof, within sixty (60) days of approval pursuant thereto) time being of the essence of this Agreement, each of said municipalities listed in Exhibit B shall pay to East Whiteland Authority the total of (1) the share of the estimated total project cost of constructing the East Whiteland Trunk Line set forth in dollars after its name in Exhibit B, (2) said percentage of the amount by which the total project cost as stated by the Consulting Engineers after

the receipt of construction bids exceeds the estimates set forth in Exhibit B, up to an increase of 15% of said estimates, and (3) such amount as may be due pursuant to the next succeeding Section hereof.

2.03 Change in Project Cost.

In the event, after the receipt of construction bids, the total project cost (before deducting any federal or state grants) of constructing the East Whiteland Trunk Line is increased by more than 15% of the estimate set forth in Exhibit B, and such a revision is approved by Malvern Authority, each municipality listed in Exhibit B shall pay said percentage of said increase to East Whiteland Authority by the time set forth in the preceding section. In the event, after receipt of construction bids, the total project cost of constructing the East Whiteland Trunk Line is less than the estimate set forth in Exhibit B, the total payment to be made by each such municipality under Sections 2.01 and 2.02 hereof shall be proportionately reduced and refunds of payments made under Section 1.01 shall be made proportionately.

2.04 Grants.

Each party authorizes and directs East Whiteland Authority on behalf of each such muncipality or municipality authority from time to time to apply for and accept all available grants in aid towards any East Whiteland Trunk Line construction costs and any East Whiteland Trunk Line operating costs of any nature to be used in accordance with this Agreement. All Federal and State grants received by any such municipality properly

allocable to and to be applied to the project cost of constructing the East Whiteland Trunk Line shall be paid to East Whiteland Authority and the total payment to be made by each municipality under Sections 2.01 and 2.02 hereof shall be reduced proportionately by such grant or grants.

All Federal and State grants received by East Whiteland Authority which are properly allocable to the project cost of constructing the East Whiteland Trunk Line shall be applied by East Whiteland Authority to the payment of such project cost or in reimbursement of expenditures so made and the total payment to be made by each municipality under Sections 1.01, 2.01 and 2.02 hereof shall be reduced accordingly. If any such Federal or State grants shall have been awarded to East Whiteland Authority and an agreement with the appropriate Federal or State agency executed on or before the date capital contributions are to be made under Section 2.02, then such total payment to be made by each municipality shall be reduced appropriately. If any such Federal or State grant is awarded or the agreement with the appropriate Federal or State agency executed by East Whiteland Authority after the aforesaid payments have been made by the municipalities under Section 2.02, such grants shall be applied in the computation of any surplus or deficiency of capital contribution pursuant to Section 2.08 hereof.

Federal and State grants which are allocable to the project cost of constructing the East Whiteland Trunk Line and other portions of the sewer system constructed by East Whiteland Authority and used as collector sewers to serve East Whiteland Township shall be apportioned by the Consulting Engineers between the project cost of constructing the East Whiteland Trunk Line and such other portions of said sewer system and the portion of such grants thus determined to be allocable to the project cost

of constructing the East Whiteland Trunk Line shall be applied to the payment of the project cost of the East Whiteland Trunk Line or in reimbursement of expenditures so made.

All Federal and State contributions or grants in aid received by any of said municipalities properly allocable to and to be applied towards any cost of operation, maintenance, repair, replacement, or other expenses relating to the East Whiteland Trunk Line shall be paid over to East Whiteland Township and shall be deducted in determining actual annual operating expenses of the East Whiteland Trunk Line in accordance with Section 4.07 hereof.

2.05 Construction Fund.

East Whiteland Authority shall deposit all amounts delivered by all parties to it pursuant to this Article, together with East Whiteland Authority's share and all amounts received in payment of Federal and State grants allocable to the project cost of constructing the East Whiteland Trunk Line, in a special East Whiteland Trunk Line Construction Fund (hereinafter called "Construction Fund"). Such Construction Fund moneys shall be held and invested by a Trustee selected by East Whiteland Authority and to the extent not insured by the Federal Deposit Insurance Corporation or other Federal agency, or invested as hereinafter provided shall be continuously secured by the pledge of direct obligations of the United States of America or the Commonwealth of Pennsylvania having an aggregate market value (exclusive of accrued interest) at all times at least equal to the amount of such moneys. Such moneys may be wholly or partially invested by said Trustee only in direct obligations of the United States of America and certificates of deposit which

shall mature or shall be subject to redemption at the option of the holder not later than one year from the date of such investment. Any securities so purchased shall be a part of the Construction Fund. The interest and income received from time to time upon investments and any profit realized or loss sustained from the sale of such securities shall be added or charged to the Construction Fund and such interest, income, profit or loss shall be considered in the computation of any surplus or deficiency as provided in Section 2.08. Moneys paid to the East Whiteland Authority pursuant to this Agreement shall at all times be segregated in books of account from moneys received by East Whiteland Authority for any other purpose.

2.06 Construction Fund Requisitions.

East Whiteland Authority agrees that payments from the East Whiteland Trunk Line Construction Fund shall be made only upon requisitions, copies of which shall be available to any of said municipalities, duly executed by authorized representatives of East Whiteland Authority stating: (a) the amount requested; (b) the obligation for or the account for which the requisition is made, showing separately the total obligation, the amount already paid, if any, and the balance remaining to be paid; (c) the person to whom the payment shall be made and his address; (d) that the item for which requisition has been made has not been paid and (e) with respect to such item there are no vendors', mechanics' or other liens or secured transactions which will not be discharged by such payment.

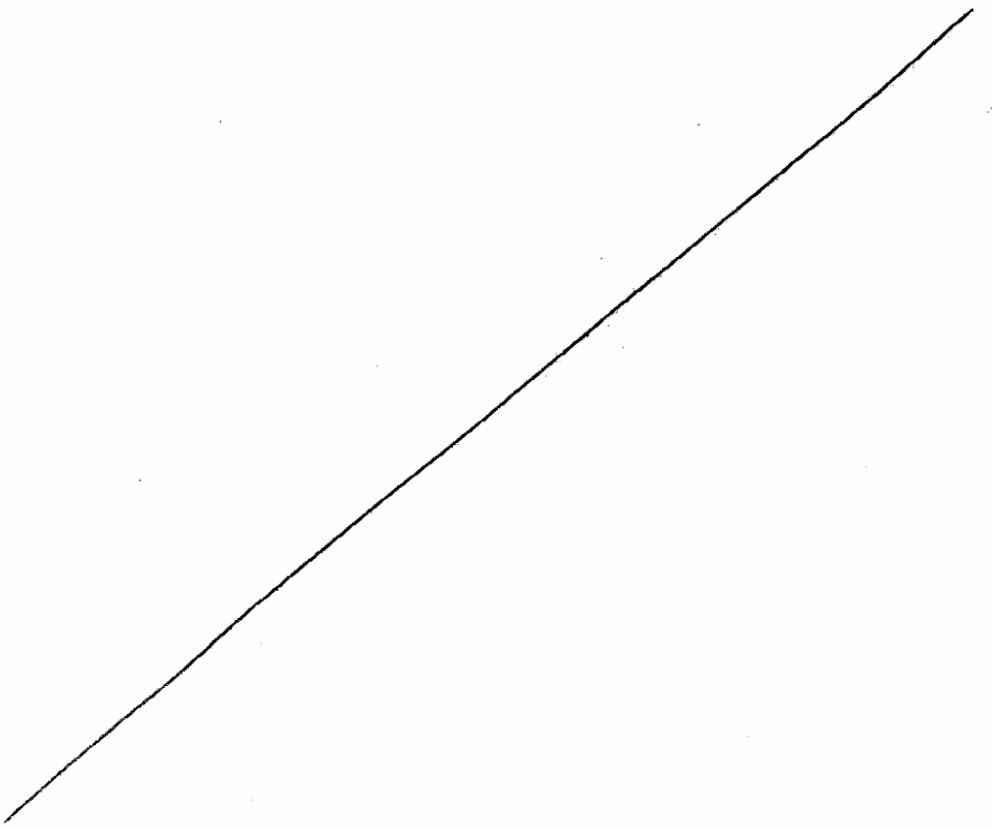
In case of payments under construction contracts, such requisitions shall also contain a certificate of the Consulting

Engineers certifying approval of the requisition and further certifying that such obligation has been properly incurred and is then due and unpaid and that insofar as such obligation was incurred for work, materials, supplies or equipment, such work was actually performed or such materials, supplies or equipment were actually installed in or about the construction of the East Whiteland Trunk Line, or delivered at the site of the work for that purpose, or delivered for fabrication at the place approved by the Consulting Engineers; and that all work done and materials, supplies or equipment for which such obligation was incurred are, in the Consulting Engineers' opinion, in accordance with the plans and specifications.

2.07 Change Orders.

East Whiteland Authority agrees to notify each of said municipalities of all changes or alterations in the East Whiteland Trunk Line plans and specifications. No change order concerning said plans and specifications in excess of $25,000. shall be approved by East Whiteland Authority unless it has previously been approved by Malvern Authority; provided, however, that if written notification of disapproval is not received by the East Whiteland Authority within ten (10) days of the date requested for approval of any change order is delivered to an officer of Malvern Authority, such change order shall be deemed to have been approved by such municipality. East Whiteland Authority further agrees that, without the prior approval of Malvern Authority, no change or alteration will be made in any of the plans and specifications of the Consulting Engineers, in respect to the

East Whiteland Trunk Line, which will cause the cost of construction to exceed the amount available in the East Whiteland Trunk Line Construction Fund.



2.08 Distribution of Construction Fund.

Upon completion of the construction of the East Whiteland Trunk Line, East Whiteland Authority shall deliver to each party a certificate of the Consulting Engineers stating (a) the fact of such completion and (b) in reasonably itemized form, the actual project cost of constructing the East Whiteland Trunk Line (i) after deducting therefrom the unexpended contingency fund, if any, and the amount of any applicable Federal or State grants paid into Construction Fund and not previously used to reduce payments in accordance with Section 2.04 and (ii) after making appropriate adjustments in respect of net income, gain or loss from investments. If any municipality's share of the actual cost of constructing the East Whiteland Trunk Line after adjustments (i) and (ii) is less than the total amount deposited by it as required by this Agreement, the excess of such deposits shall forthwith be refunded to such municipality if no municipality, within sixty (60) days of receipt of said certificate, has requested a readjustment or audit and, in the event of such a request, shall be refunded promptly after the matter is resolved. A deficiency, if any, incurred in accordance with this Agreement shall be charged to and paid by each such municipality in said percentages and shall be due within thirty (30) days of notice to pay, and if not then paid, shall be subject to interest at the rate of six per cent (6%) per annum until paid. Prior to

completion of the East Whiteland Trunk Line, East Whiteland Authority may make one or more interim distributions on the basis of information then available, which distributions shall be subject to adjustment at the time of final distribution.

2.09 Audit of Project Cost.

The said certificate of the Consulting Engineers as to the actual project cost of constructing the East Whiteland Trunk Line and the records from which it is compiled shall be audited by a certified public accountant selected by East Whiteland Authority and the expense of such audit shall constitute part of the project cost.

ARTICLE III

DELIVERY AND ACCEPTANCE OF SEWAGE

3.01 Delivery.

Malvern Authority, at its own expense, shall during the term of this Agreement cause all sewage emanating from The Borough of Malvern to be discharged into East Whiteland Trunk Line. Except as permitted pursuant to Article VII hereof, Malvern Authority shall not exceed the capacity reserved by it.

3.02 Acceptance.

Malvern shall commence delivering its sewage to the East Whiteland Trunk Line as soon as practicable after (a) the East Whiteland Trunk Line is sufficiently complete to provide service (as certified by the Consulting Engineers engaged by East Whiteland Authority) and (b) the Valley Creek Trunk Sewer is sufficiently complete to provide service (as certified by the Consulting Engineers engaged by Treddyffrin Authority) and (c) the treatment plant to be constructed by Valley Forge Sewer Authority to receive and treat the aforesaid sewage is sufficiently complete to provide service (as certified by the consulting engineers engaged by Valley Forge Sewer Authority in respect of the design and construction of said treatment plant). East Whiteland Authority, as soon as practicable after the East Whiteland Trunk Line and the Valley Creek Trunk Sewer and the aforesaid treatment plant are sufficiently complete to provide service as so certified, shall permit connections at the locations that East Whiteland Authority may agree to, which agreement may not be unreasonably withheld and shall accept sewage for conveyance to the aforesaid treatment plant subject to the terms and conditions herein set forth.

ARTICLE IV

OPERATING EXPENSES OF THE EAST WHITELAND TRUNK LINE

4.01 Proportion.

The Borough of Malvern and the Township of East Whiteland (which Borough and Township in this Article IV are referred to as "said municipalities") shall share the operating expenses of the East Whiteland Trunk Line (as defined in Section 4.06) as follows: The proportion that the volume of sewage (determined as hereinafter provided and by other agreement of the parties) emanating from each such municipality and discharged into the several sections or reaches of the interceptor or trunk sewer, constituting the East Whiteland Trunk Line bears to the total volume of sewage discharged by both of said municipalities into such sections or reaches shall be used in calculating the amount that each such municipality shall pay for sewage conveyance services. Operating expenses of the East Whiteland Trunk Line for the first two years of operation shall be paid as set forth in Section 4.13 hereof.

4.02 Estimates of Volume of Sewage.

In order to provide East Whiteland Township with working capital for payment of operating expenses of the East Whiteland Trunk Line, at least one hundred twenty (120) days prior to the end of the first two years of operation of the East Whiteland Trunk Line each said municipality shall supply or cause to be supplied to East Whiteland Authority an estimate of the volume of sewage to be discharged from its sewage collection system into the East Whiteland Trunk Line during the next succeeding calendar Year (or portion of a calendar year remaining after the end of the first two years of operation).

4.03 Estimated East Whiteland Trunk Line Operating Expenses.

Within sixty (60) days after receipt of the estimates provided under the preceding section, East Whiteland Township shall prepare, subject to the

approval of its consulting engineers, and furnish to Malvern, a budget setting forth (a) the estimated annual operating expenses of the several sections or reaches (including at least ten percent (10%) for contingencies) and (b) the share of each said municipality of such operating expenses (the share of each said municipality being an amount which is in the same ratio to the total of such expenses as the estimated volume of sewage from such municipality discharged in the several sections or reaches of the East Whiteland Trunk Line is to the total estimated volume of sewage from both of the said municipalities so discharged or served). If at any time it appears on the basis of past or current meter readings that the estimate of Malvern is substantially inaccurate, East Whiteland Township may revise said estimate based on such past or current meter readings and Malvern shall promptly make payments in accordance with the revised estimate.

In the event of an unusual contingency, an upward revision of the budget may be made by East Whiteland Township with the approval of Malvern, which approval shall not be unreasonably withheld; provided, however, that the budget may be exceeded without such prior approval in an emergency directly affecting the operation of the East Whiteland Trunk Line and certified by the consulting engineers engaged by East Whiteland Authority or East Whiteland Township to require immediate action. Each such municipality shall make payments in accordance with the revised budget within sixty (60) days of receipt of notice thereof. In the event a municipality is not able legally to obtain funds with which to pay all of its share of the budget increase, any unpaid amount shall be paid by it in the following year together with interest at the rate of six percent (6%) per annum until paid.

4.04 Payments on account of Estimated Operating Expenses.

On or before each January 1, April 1, July 1 and October 1 during the term of this Agreement, Malvern shall pay to East Whiteland Township (out of legally available current revenues and from sewer rentals) one quarter (1/4) of its share of the estimated annual operating expenses of the East Whiteland Trunk Line as determined in accordance with the preceding section (prorated if the two-year period referred to in Section 4.01 ends during rather than at the start of a quarter). Amounts not paid when due shall be subject to interest in the amount of six percent (6%) per annum of the amount due. Said interest shall be due from time to time upon the receipt of invoices from East Whiteland Township. In the event of a default in payment under this Section, East Whiteland Township may borrow all or part of the amount of such payment due hereunder and may use such interest to pay, or reimburse itself for paying, interest on such borrowed funds. Interest not so used shall be treated as a deduction under Section 4.07 hereo in determining actual annual operating expenses of the East Whiteland Trunk Line.

East Whiteland Township shall deposit all moneys delivered by all parties to it pursuant to this Article, together with the East Whiteland Township's share and all amounts received in payment of Federal and State contributions or grants in aid to be applied towards any cost of operation, maintenance, repair, replacement or other expenses relating to the East Whiteland Trunk Line, in a special East Whiteland Trunk Line Operating Fund (hereinafter called "Operating Fund"). Such Operating Fund moneys shall be invested by East Whiteland Township and to the extent not insured by the Federal Deposit Insurance Corporation or other Federal Agencies, or invested as hereinafter provided shall be continuously secured by the pledge of direct obligations of the United States of America or the Commonwealth of Pennsylvania having an aggregate market value (exclusive of accrued interest) at all times at least equal to the amount of such moneys.

Such moneys may be wholly or partially invested by said Township subject to the same limitations set forth in Section 2.05. Any securities so purchased shall be a part of the Operating Fund. The interest and income received from time to time upon investments and any profit realized or loss sustained from the sale of such securities shall be added to or charged to the Operating Fund and such interest, income, profit or loss shall be considered in determining the actual annual operating expenses of the East Whiteland Trunk Line pursuant to Section 4.06 hereof.

4.05 Annual Statement.

Within one-hundred twenty (120) days of the close of each calendar year, East Whiteland Township shall cause to be prepared and submitted to each of said municipalities a detailed statement, certified by a certified public accountant engaged by East Whiteland Township, showing the actual annual operating expenses of the East Whiteland Trunk Line (as defined in the next succeeding Section) and the apportionment of the cost among the said municipalities on the basis of Section 4.01.

4.06 Actual Annual Operating Expenses of the East Whiteland Trunk Line.

"Actual annual operating expenses of the East Whiteland Trunk Line" shall mean the sum of the costs referred to in subsections (a) through (f) hereof minus the deductions referred to in Section 4.07 hereof:

(a) All the actual reasonable expenses and costs of the adequate proper operation, maintenance and repair of the East Whiteland Trunk Line as the same may be constituted from time to time, determined in accordance with sound accounting practices and shall include, without limiting the generality of the foregoing, salaries and wages of operating, supervisory and administrative personnel directly charged to the operation, maintenance and repair of the East Whiteland Trunk Line (but in the event such personnel are also engaged in other activities of a municipality, shall include only that proportion of such salaries

and wages as is properly allocable to such operation, maintenance and repair on the basis of time spent or services performed); pensions, social security or unemployment taxes; chemicals; power; taxes (if any); insurance; administrative expenses; materials and supplies; maintenance; and repairs, improvements and betterments (including ordinary or routine repairs and replacements but not extraordinary replacements or additions of a capital nature which latter shall be treated in the manner provided for expansion in Section 7.02, except to the extent that Article VIII shall apply);

(b) The fees and expenses of the Consulting Engineers employed by East Whiteland Township concerning the operation, maintenance and repair of the East Whiteland Trunk Line and in preparing reports and determinations required by this Agreement;

(c) The fees and expenses of the certified public accountant engaged by East Whiteland Township to prepare the annual statement;

(d) Interest paid by East Whiteland Township pursuant to Section 4.04 hereof;

(e) The cost of that portion of the bond of the Treasurer and other officers or employees of East Whiteland Township attributable to his or their duties in connection with East Whiteland Trunk Line, under sound accounting practices; and

(f) Reasonable expenses of East Whiteland Township in providing service pursuant to this Agreement and attributable to the East Whiteland Trunk Line under sound accounting practices.

4.07 Deductions.

Any Federal or State contributions or grants in aid received by any party which is to be applied towards any cost of operation, maintenance, repair, replacement or other expenses relating to the East Whiteland Trunk Line shall be

paid to East Whiteland Township and shall be deducted in determining actual annual operating expenses of the East Whiteland Trunk Line. Interest properly allocable thereto pursuant to Section 4.04 and interest earned by East Whiteland Township on funds deposited in the Operating Expense Fund pursuant to Section 4.03 or Section 4.13 shall be deducted in determining such actual operating expenses.

4.08 Refunds of Additional Payments.

If any such municipality's share of the actual annual operating expenses of the East Whiteland Trunk Line is less than (or more than) the total amount paid by it under this Article in such calendar year, the excess shall forwith be refunded to such municipality (or the deficiency shall forthwith be paid by it) if no municipality within sixty (60) days of receipt of an annual statement has requested arbitration in accordance with Article IX and in the event of such a request, any excess (or deficiency) shall be refunded (or paid) within thirty (30) days after the matter is resolved. Amounts not paid when due shall be subject to interest at the rate of six percent (6%) per annum of the amount due and shall be subject to the provisions concerning interest of Section 4.04 hereof.

4.09 Use of Funds.

East Whiteland Township agrees that payments made by the said municipalities to East Whiteland Township on account of its share of operating expenses of the East Whiteland Trunk Line shall be applied only for the payment of actual operating expenses as defined in Section 4.06, subject to Section 4.07, and that such payments shall not be applied toward the payment of any other obligations or East Whiteland Township.

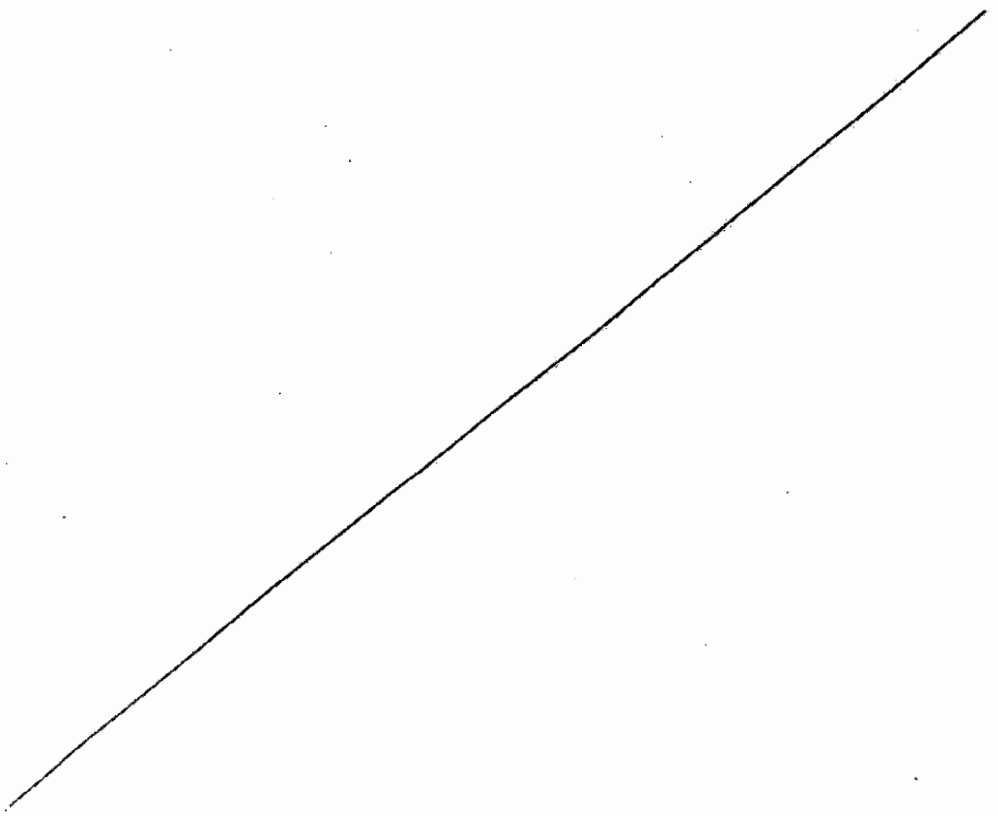
4.10 Books of Account.

In order that expenses of East Whiteland Township which are not properly allocable to the construction or operation of the East Whiteland Trunk Line shall

not be charged thereto, East Whiteland Township shall keep separate books of account for the operation of its collection system and for the East Whiteland Trunk Line or such books of account and other records which would readily permit such allocation. Said books and records shall be available for inspection by the municipalities at all times.

4.11 Sewer Rentals.

To insure the availability of current revenues adequate to meet its obligations under this Agreement, each said municipality shall impose and collect annual sewer rentals in an aggregate amount sufficient, together with other legally available funds, to equal (a) all sums payable by it to East Whiteland Township during the then current calendar year under this Agreement and (b) all sums payable by it to any other person, firm, corporation, municipality or municipality authority during the then current calendar year for or in respect to sewer purposes.



4.12 Commencement of Discharge into East Whiteland Trunk Line.

Each party shall make every reasonable effort to be ready to begin to discharge sewage into the East Whiteland Trunk Line by the time it and the Valley Creek Trunk Sewer are ready to receive sewage, and the aforesaid Valley Forge Treatment Plant is ready to treat and dispose of sewage.

4.13. Operating Expenses for the First Two Years.

Each such municipality set forth in Exhibit B shall pay to East Whiteland Township its share of the estimated operating expenses of the East Whiteland Trunk Line for the first two years of operation set forth after its name in Exhibit B (on the basis of reserved capacity) within thirty (30) days of receipt of the Certificates of the Consulting Engineers engaged by East Whiteland Authority, Tredyffrin Authority and Valley Forge Sewer Authority provided in Section 3.02. Said operating expense moneys for the first two years of operation shall be deposited in an Operating Expense Fund in the name of East Whiteland

Township separate and apart from any other fund of such Township. Investment of such moneys by East Whiteland Township shall be made subject to the same limitations set forth in Section 2.05 hereof. Within one hundred twenty (120) days of the close of said first two years of operation, East Whiteland Township shall cause a certified public accountant to prepare and submit to each participating municipality a detailed statement showing the actual annual operating expenses of the East Whiteland Trunk Line (as defined in Sections 4.06 and 4.07 hereof) and the apportionment of the cost among the said municipalities on the basis of reserved capacities as set forth in Exhibit B hereof. If at the end of the second year of operation the amount deposited hereunder by any municipality differs from the amount due, refunds or additional payments shall be made pursuant to Section 4.08 hereof.

ARTICLE V

QUALITY OF SEWAGE

5.01 General.

The sewage discharged directly or indirectly into the East Whiteland Trunk Line by any municipality or municipality authority shall be within the maximum limits presented below or pretreated to within the limits of Section 5.04.

5.02 Acceptability Standards.

After consultation with Valley Forge Sewer Authority, East Whiteland Township shall from time to time establish acceptability standards for sewage and industrial waste entering the collection system of any municipality or municipality authority and discharging directly or indirectly into the East Whiteland Trunk Line for the purpose of prohibiting materials or characteristics which would be deleterious to the East Whiteland Trunk Line, Valley Creek Trunk Sewer or to the Valley Forge Treatment Plant or the treatment process, which standards shall be reasonable and similar to standards imposed with regard to similar facilities and shall not be higher or more restrictive than those imposed by Valley Forge Sewer Authority. No municipality or municipality authority shall permit discharge directly or indirectly into the East Whiteland Trunk Line of any sewage or waste so certified to be deleterious, but such certification shall not preclude the municipality or municipality authority from contesting the reasonableness of such determination.

Subject to the foregoing, all municipalities and municipality authorities agree to enact or adopt or cause to be enacted or adopted uniform ordinances, resolutions, rules or regulations to prohibit users of the respective collection systems serving such municipalities and municipality authorities from discharging substances failing to meet such acceptability standards and to require all pre-treatment of sewage or other waste necessary to require the same to conform to the

acceptability standards and agree to take all necessary steps in the design and construction of the collection systems and in the subsequent maintenance and operation thereof (including the exercise of appropriate inspection of and control over building connections) to prevent infiltration of storm water and other improper substances into the collection systems.

5.03 Sampling Manholes.

For the purpose of determining the characteristics of sewage or wastes, each munioipality or munioipality authority shall install or cause to be installed a sampling manhole at the point of discharge at the property of any user which the consulting engineer of such municipality or municipality authority considers capable of discharging sewage or wastes not meeting any of such acceptability standards.

5.04 Industrial Wastes.

In order to control admission of industrial wastes, no party to this Agreement shall permit any industrial user to connect to or discharge into its collection system any waters or wastes other than sanitary waste without the prior review and approval of the consulting engineers and the consulting engineers of Valley Forge Sewer Authority. The consulting engineers' review (until such time as the following acceptability standards are amended in accordance with Section 5.02 hereof) shall be based on, but not limited to, the following standards:

Waste Characteristics to be Considered

Characteristics of the industrial waste shall not be in general in excess of those listed below:

(1) The 5-day 20 deg. centigrade B.O.D. (bio-chemical oxygen demand) shall not exceed 250 ppm.

(2) The suspended solids content shall not exceed 300 ppm.

(3) The total solids content shall not exceed 1,100 ppm.

(4) The PH shall not be less than 6.0 nor shall it exceed 9.0.

(5) The temperature shall not exceed 150° F.

(6) The color shall not be such as to require special treatment to render the effluent acceptable for discharge into the Schuylkill River.

(7) The waste shall not contain greases and oils, inflammable material, non-biodegradable materials or any oxygen scavengers, sufficient in quantity to be injurious to the treatment plant or interfere with any treatment process or to constitute a hazard to human or animal life.

(8) The waste shall not contain any solid or viscous material capable of causing obstruction to the flow in the sewers, or at the Valley Forge Treatment Plant or any material capable of causing interference with the proper operation of the East Whiteland Trunk Line, The Valley Creek Trunk Sewer or the Valley Forge Treatment Plant.

Where required, in the opinion of the consulting engineers, the user shall provide at his expense such preliminary treatment or handling as may be necessary to modify the objectionable characteristics or control the quantities and rates of discharge of such water or wastes as necessary.

Plans, specifications, and any other pertinent information relating to proposed preliminary treatment or handling facilities shall be submitted for review to Valley Forge Sewer Authority and no construction of such facilities shall be commenced until a permit for the connection is obtained in writing from Valley Forge Sewer Authority. A copy of each such permit shall be furnished to East Whiteland Township.

In order to insure quality compliance and to reduce the possibility of accidental discharges of wastes not conforming, each municipality and municipality authority shall sample, test or otherwise examine industrial wastes as often as reasonably necessary to insure quality compliance.

5.05 Combined Sewage and Industrial Wastes.

In order to control the sewage entering, Valley Forge Sewer Authority will sample the discharge from each municipality or municipality authority period-

ically to insure that no characteristic is evident which would be deleterious to the East Whiteland Trunk Line, the Valley Creek Trunk Sewer or the Valley Forge Treatment Plant or the treatment process.

The characteristic of each combined sewage and industrial waste discharge shall not be in excess of those listed under Section 5.04 except that the temperature of the combined discharge shall not exceed 100° F. Each municipality or municipality authority shall provide facilities to prevent the occurrence of septic conditions in the East Whiteland Trunk Line.

Should Valley Forge Sewer Authority find either the BOD or suspended solids characteristics exceeded as determined in the tests on the periodically obtained samples, the potentially offending municipality or municipality authority shall be notified of the findings and requested to examine the conditions. If at the end of a quarter Valley Forge Sewer Authority determines that the discharge from the municipality or municipality authority is in excess of the characteristics as determined by average test results by periodic sampling, the suspected offender shall be given written notice that its discharge is in excess and that a comprehensive sampling and testing program will be undertaken by Valley Forge Sewer Authority to verify the non-compliance and to notify that steps should be taken to rectify the problem.

If, at the end of the quarterly comprehensive test program the problem has not been rectified, a penalty charge as provided in Section 5.06 will be added to that quarter's billing and until the situation is shown to be corrected.

Should Valley Forge Sewer Authority find any of the additional characteristics to be in excess or to find the presence of any other untested deleterious material in the course of periodic sampling and testing the potential offending municipality or municipality authority shall be given notice to take immediate steps to rectify the problem.

ARTICLE VI

DETERMINATION OP QUANTITY OF SEWAGE DISCHARGED INTO THE EAST WHITELAND TRUNK LINE

6.01 Meters or Measuring Devices.

In order to measure in gallons the quantity of sewage emanating from the Borough of Malvern and the Township of East Whiteland, which is discharged into the various sections or reaches of the interceptor or trunk sewers of the East Whiteland Trank Line, each of said municipalities shall each, at its expense, construct or cause to be constructed, where feasible, a sewage meter or sewage flow measuring device at each point necessary to determine the volume of sewage emanating from the Borough of Malvern and the Township of East Whiteland, discharged into the East Whiteland Trunk Line. The above sewage meters and related equipment such as recorders and charts shall be as mutually agreed upon by the Consulting Engineers and the consulting engineers of Valley Forg Sewer Authority and of said municipalities. All metering stations shal provide facilities for sampling the sewage.

6.02 Calibration and Readings.

All meters or measuring devices constructed or installed by Valley Forge Sewer Authority, the Borough of Malvern and the Township of East Whiteland, shall be calibrated by Valley Forge Sewer Authority at least once each year and, if requested by East Whiteland Township, shall be checked at other times as a cost of operating the Valley Forge Treatment Plant. All readings of each such municipality or municipality authority's meter or measuring device shall be performed by a representative of said municipality, of Valley Froge Sewer Authority and of East Whiteland Township. Meters or measuring devices shall be read or examined on the date each municipality or municipality authority first connects and on the first day of each quarter of each year during the term of this Agreement

to determine the quantity of sewage emanating from each municipality or area served by a municipality authority for the previous quarterly period or portion thereof. Copies of meter readings or measuring device examinations shall forthwith be delivered to each municipality and to Valley Forge Sewer Authority and to East Whiteland Township.

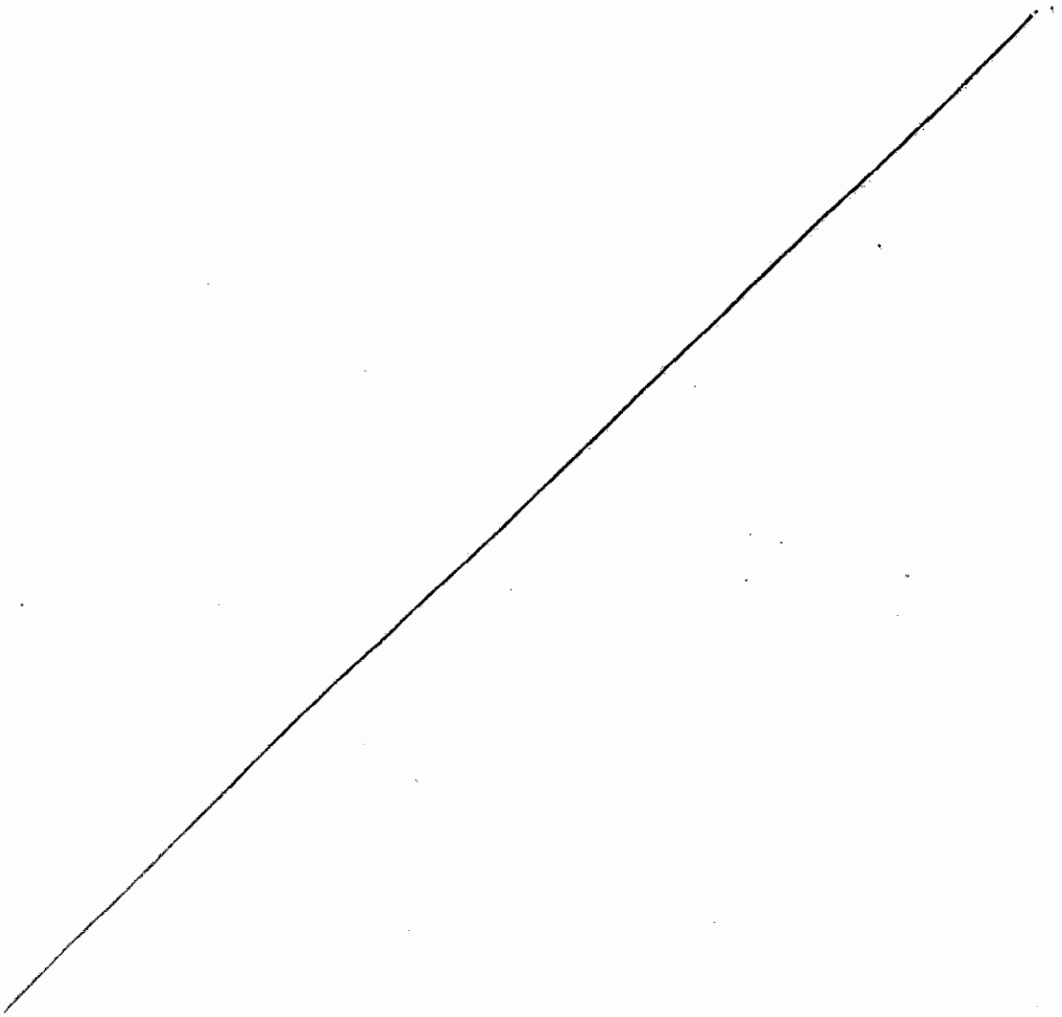
6.03 Maintenance and Operation.

All meters and measuring devices used for the purpose of determining flows into the Valley Creek Trunk Sewer and used for billing purposes will be routinely serviced and inspected by Valley Forge Sewer Authority as a part of the treatment plant operating expense. Valley Forge Sewer Authority shall undertake to have an inoperative or inaccurate meter or measuring device repaired as soon as practicable with the cost of such repair being charged back to the owner. Valley Forge Sewer Authority shall not be obligated to provide service to any devices other than the primary metering element, recorders, transmitters and other instruments. Each municipality or municipality authority shall, at its own expense, be responsible for all other maintenance and operation of its sewage metering facilities.

6.04 Missing or Inaccurate Flow Records; Use of Equivalent Dwelling Units as Measurement of Flow.

In the case of missing flow records due to faulty meter registration or otherwise, an estimate of flows shall be made by the Consulting Engineers for the purpose of determining volume of sewage discharges. This estimate will be based on a valuation of past flow records as applied to the then existing conditions and as reviewed and approved by the Consulting Engineer of the respective municipality or municipality authority.

In the absence of meter readings during the early period of low flows, when the sewage recording meters may not register the flow, or where meters



cannot practically be installed, flow quantities shall be determined on the basis of the average number of Equivalent Dwelling Units (upon the basis of a discharge rate of 275 gallons per Equivalent Dwelling Unit per day). The number of Equivalent Dwelling Units shall be determined at the beginning and end of each calendar quarter during the term of this Agreement based upon a certification by a responsible officer of the municipality or municipality authority as to the number of such Equivalent Dwelling Units so connected by the municipality or municipality authority at the beginning and end of each quarter and shall be averaged on the basis of the number of units so connected at the beginning and end of each such quarter. Where the initial connection of the collection system of any municipality or municipality authority is made to the East Whiteland Trunk Line after the first day of a calendar quarter, the quantity of sewage so discharged shall be based on the number of Equivalent Dwelling Units so connected at the end of such quarter prorated on the basis of the number of days in such calendar quarter that any sewage is so discharged from such municipality or municipality authority. For the purpose of determining the number of Equivalent Dwelling Units represented by schools, churches or municipal buildings, commeroial or industrial establishments, etc., the factors set forth in Exhibit C shall be applied. The officials and representatives of East Whiteland Township may inspect the records of any connecting municipality or municipality authority for the purpose of determining the accuracy of the number of Equivalent Dwelling Units certified by such municipality or municipality authority.

6.05 Proportion of Flows.

The quantity of sewage discharged into the several sections or reaches of the East Whiteland Trunk Line shall be determined, with respect to each such municipality or municipality authority in the ratio that the quantity of sewage emanating from each such municipality or municipality authority (determined as

above) shall bear to the total quantity of sewage discharged into such sections or reaches of the East Whiteland Trunk Line from all municipalities and any municipality authority.

Valley Forge Sewer Authority shall undertake to prepare a complete distribution of the total volume of sewage received and metered at the sewage treatment plant during each calendar quarter and during each calendar year, with respect to each such municipality or municipality authority which discharges sewage that is treated in the Valley Forge Sewer Authority sewage treatment plant, such distribution to include all metered and unmetered sewage flows of each municipality or municipality authority.

ARTICLE VII

RENTING UNUSED CAPACITY; EXTRAORDINARY REPAIRS, RENEWALS OR REPLACEMENTS OF INTERCEPTOR OR TRUNK SEWERS; ENLARGEMENTS OR ADDITIONAL INTERCEPTOR OR TRUNK SEWERS.

7.01 Renting Unused Capacity.

Each municipality discharging from its sewage collection system into the East Whiteland Trunk Line during a calendar year a volume of sewage less than its reserved capacity, as set forth in Exhibit B shall be deemed to have been placed its unused capacity in a rental pool. Any municipality (each of which is herein called "lessee municipality") discharging sewage into the East Whiteland Trunk Line in any calendar year in excess of its reserved capacity, as set forth in Exhibit B, shall rent from the pool for the entire calendar year capacity equal to the volume by which it exceeds its reserved capacity (with the total volume discharged by it being reduced to gallons per day by dividing the total gallons discharged by it in such calendar year by 365). The annual rental fee to be paid by the lessee municipality shall be the representative annual "debt service" (calculated at equal annual payments to amortize the debt, including seven per cent (7%) interest per annum for a 25-year term) for the amount obtained by multiplying the fraction of the rated capacity of the East Whiteland Trunk Line or of any section or reach thereof rented for the current calendar year by the total of capital contributions made by all parties hereto toward the cost of providing the East Whiteland Trunk Line or such section or reach thereof as then being used. The capacity thus rented by the lessee municipality shall be rented annually by it until the next expansion of the East Whiteland Trunk Line, at which time the lessee municipality

shall surrender the capacity rented by it and shall, at its expense, replace the capacity rented by it (in each such section or reach or pumping station) so that each lessor municipality will receive back its reserved capacity placed in the pool. In no event, shall any contribution of capacity to the rental pool be construed to decrease the reserved capacity in the East Whiteland Trunk Line or any section or reach thereof of any lessor municipality.

The rental fees shall be distributed to the contributors to the rental pool in proportion to their contributions (the contribution as to each being the difference between its actual flow during the current calendar year [reduced to gallons per day] and its reserved capacity) the rental fee owed by each lessee municipality, together with the proposed distribution thereof to the lessor municipalities, shall be shown as separate items in the annual statement furnished pursuant to Section 4.05 hereof. Rental fees owed shall be paid by each municipality to East Whiteland Township within sixty (60) days of receipt of said annual statement unless arbitration has then been requested, and in such event shall be paid within thirty (30) days of the date the matter is resolved pursuant to the procedure set forth in Section 9.01. Distribution of the rental fees shall be made by East Whiteland Township promptly thereafter as provided herein.

Although rental payments shall be paid and distributed hereunder on the basis of actual flows, the total estimates of sewage to be discharged into the East Whiteland Trunk Line in a calendar year pursuant to Section 4.02 hereof, shall be used to avoid exceeding the rated capacity of the East Whiteland Trunk Line or any section or reach thereof. In the event that the total of said estimates, pursuant to Section 4.02, exceeds 90% of the rated capacity of any

section or reach of the East Whiteland Trunk Line (with the remaining 10% being used as a safeguard against underestimation), the Consulting Engineers of East Whiteland Township shall allocate the capacity in the pool (as estimated) among the municipalities estimating discharge in excess of their reserved capacities in proportion to their flows during the preceding calendar year; provided, however, that any municipality may continue to rent the number of gallons of capacity previously rented by it. No municipality shall permit any new connection to be made to its collection system or permit increased flow from any existing connection (due to construction and connection to the system of additional facilities) if so permitting might cause its volume of sewage discharged into the East Whiteland Trunk Line at peak flows during such calendar year to exceed the total of its reserved capacity and the capacity in the pool allocated to it by the Consulting Engineers of East Whiteland Township for such year.

7.02 Extraordinary Repairs, Renewals or Replacements of Interceptor or Trunk Sewers and Pumping Stations; Enlargements or Additional Interceptor or Trunk Sewers.

If, during the term of this Agreement, any interceptor or trunk sewer (or any section or reach thereof) of the East Whiteland Trunk Line used in whole or in part for the conveyance of sewage emanating from any of the municipalities (in addition to sewage emanating from East Whiteland Township) to the Valley Forge Treatment Plant shall require extraordinary repairs, renewals or replacements, each municipality and municipality authority named in Exhibit B agrees to pay or to cause to pay to the East Whiteland Authority (but only from legally available current revenues, sewer rentals available and funds which can be legally borrowed) its proportionate share of the project cost of such repairs, renewals or replacements.

The necessity for and the extent of such extraordinary repairs, renewals or replacements of any such section or reach of an interceptor or trunk sewer (with a breakdown by municipality or municipality authority) shall be determined by the Consulting Engineers engaged by East Whiteland Authority subject to the approval of the municipalities affected (which approval may be withheld only for sound engineering reasons), after consultation with the consulting engineers of each of the said municipalities and municipality authorities affected and written notice of such determination together with the Consulting Engineers' estimate of the cost thereof (with a breakdown by municipality or municipality authority) shall be given to each such municipality and municipality authority affected.

Each such municipality and municipality authority affected shall pay or cause to be paid to East Whiteland Authority the proportion of the project cost of such repairs, renewals or replacements in the proportion that the reserved capacity of such municipality or municipality authority in such section or reach of interceptor or trunk sewer shall bear to the total of the reserved capacities of all such municipality or municipality authority in such sections or reaches.

At such times as (a) eighty per cent (80%) of the rated capacity of the East Whiteland Trunk Line or any section or reach thereof is used or (b) estimates of volume under Section 4.02 exceed ninety per cent (90%) of said rated capacity or (c) in the event (i) enlargement of any interceptor or trunk sewer (or any section or reach thereof) or the construction of an additional interceptor or trunk sewer within East Whiteland Township or partly within and partly without East Whiteland Township or (iii) the enlargement of

any pumping station or the construction of an additional pumping station within East Whiteland Township is required to meet the requirements or standards prescribed by the Sanitary Water Board of the Pennsylvania Department of Health or any other governmental authority having jurisdiction. East Whiteland Authority shall construct such enlargement or additional sewer or pumping station; and each municipality and municipality authority named in Exhibit B agrees to pay East Whiteland Authority (but only from legally available current revenues, sewer rentals available and funds which can be legally borrowed) its proper proportionate share of the project cost of enlargement or additional sewer or pumping station. The necessity for the extent of such enlargement or additional sewer or pumping station (with a breakdown by municipality or municipality authority) shall be determined by the Consulting Engineers engaged by East Whiteland Authority subject to the approval of such municipalities or municipality authorities (which approval may be withheld only for sound engineering reasons), after consultation with the Consulting Engineers of each municipality or municipality authority and written notice of such determination together with the Consulting Engineers' estimate of the cost thereof (with a breakdown by municipality and municipality authority) shall be given to each municipality and municipality authority affected.

Each such municipality or municipality authority affected shall pay or cause to be paid to East Whiteland Authority the proportion of the project cost of such enlargement of or additional interceptor or trunk sewer or enlargement of or additional pumping station on the basis of the proposed increases in design capacities to be reserved for each municipality or municipality authority in such

enlarged or additional reach or section of interceptor or trunk sewer or in such enlargement of or additional pumping station. The reserved capacities shall be as set forth in Exhibit B subject to any changes in such reserved capacities as may be requested by any municipality or municipality authority. Adjustment shall be made so that each lessee municipality or municipality authority pursuant to Section 7.01 hereof bears the expense of replacing the capacity rented by it and each lessor municipality receives back its reserved capacity placed in the pool.

The project cost of the aforesaid extraordinary repairs, renewals or replacements, enlargements or additions shall be determined as hereinabove provided with respect to the construction of the several sections or reaches of the respective interceptor or trunk sewers and the pumping stations of the East Whiteland Trunk Line set forth in Article II hereof and shall be paid and accounted for in the same manner as that provided in Article II hereof. Each party authorizes and directs East Whiteland Authority on behalf of each municipality and municipality authority from time to time to apply for and accept any one or more grants in aid towards the aforesaid extraordinary repairs, renewals or replacements, enlargements or additions.

7.03 Construction Fund.

Moneys paid pursuant to Section 7.02 of this Article shall be deposited, held and disbursed pursuant to the Construction Fund provisions set forth in Article II hereof.

ARTICLE VIII

INSURANCE AND DAMAGE OR DESTRUCTION

8.01 Insurance on East Whiteland Trunk Line.

East Whiteland Authority agrees that during the construction of East Whiteland Trunk Line it will at all times cause to be kept in force builder's risk insurance (or equivalent coverage) upon any work done or materials furnished under construction contracts (except foundations and any other structures not customarily covered by such insurance) said policies to be written in completed value form for 100% of the insurable value of the contracts. East Whiteland Township agrees that upon completion of such construction it will at all times as an East Whiteland Trunk Line operating expense cause the East Whiteland Trunk Line to be insured against loss or damage by fire or other casualty in such amount and against such risks as are usually carried with respect to like properties, provided that the amount of such insurance shall be sufficient to prevent the insured from becoming a co-insurer thereunder by reason of any co-insurance clause in the policies. All such insurance policies shall (a) be written by responsible insurance companies authorized and qualified to do business in Pennsylvania, (b) be non-assessable and (c) name as the insureds East Whiteland Authority, East Whiteland Township and the Trustee of the Trust Indenture executed by East Whiteland Authority to secure its bonds issued to provide for the construction in whole or in part of the East Whiteland Trunk Line and, in addition, during any period of repair or construction the contractors engaged in such repair or construction, and to the extent procurable shall not be cancellable for at least fifteen (15) days prior written notice to such named insureds. All payments made under such policies on account of loss shall be paid to the aforesaid Trustee. East Whiteland Township agrees to furnish to each municipality before commencing operation of the East Whiteland Trunk Line

and before the start of each year during the term of this Agreement a certificate of the Consulting Engineers stating the amount and kind of such insurance in effect for the ensuing year and that the same is, in the opinion of the Consulting Engineers, in compliance with the requirements of this section.

8.02 Repair or Reconstruction with Insurance Proceeds.

In the event any damage to the facilities covered by such insurance, East White Authority, upon receipt of the necessary funds as provided for herein, shall promptly repair or replace the damaged property unless the Consulting Engineers certify that it would not be practical and advantageous to do so. It is agreed that in the absence of such a certification the proceeds of all insurance coverage to the extent necessary shall be applied to such repair or reconstruction.

8.03 Repair or Replacement not covered by Insurance Proceeds.

In the event that it shall become necessary, in order to convey sewage to the Valley Forge Treatment Plant in accordance with the purport and intent of this Agreement, to make an extraordinary repair or replacement of any section or reach of any interceptor or trunk sewer or of any pumping station constituting a part of the East Whiteland Trunk Line because of damage or destruction by casualty or otherwise, and there are insufficient funds available from insurance proceeds to pay the costs and expenses thereof, East Whiteland Authority and Malvern Authority shall forthwith pay over to East Whiteland Authority (but only from legally available current revenues, sewer rentals and borrowed funds) for deposit in a special construction fund such amount as is required for the purpose, in the same proportions and in the

the same manner as that hereinabove provided under Section 7.02.

8.04 Providing Conveyance Capacity by a means other than Repair or Reconstruction of the East Whiteland Trunk Line.

In the event that proceeds of insurance resulting from damage to the East Whiteland Trunk Line are not applied to the repair or the replacement of the damaged property because the same is determined to be impractical and not advantageous (pursuant to Section 8.02 hereof) such proceeds shall be applied towards the provision of conveyance capacity pursuant to Section 7.02 hereof. In such event credit for funds so applied shall be given to the municipalities in the same proportions as capital contributions towards the project cost of the East Whiteland Trunk Line were made by each.

ARTICLE IX

ARBITRATION

9.01 Arbitration as the Charges provided in Articles II and IV.

In the event any disagreement shall arise concerning the charges provided in Articles II and IV and the parties cannot otherwise promptly resolve the same, such disagreement shall be submitted within ten (10) days of the time any party requests arbitration to a certified public accountant appointed by method agreed upon by the parties. In the event of failure to agree upon such an arbitrator within ten (10) days, an arbitrator shall be appointed by the Senior Judge of the Court of Common Pleas of Chester County available at the time when the Authority or any of the parties request appointment of an arbitrator. The decision of the accountant or arbitrator so chosen shall be binding and rendered within twenty (20) days. Any request for arbitration shall be made within sixty (60) days after receiving a certificate under Section 2.08 or a statement under Section 2.10,

Section 4.05 or Section 4.13, and if no such request is made the certificate or statement shall be considered correct and not subject to future questions. The fee of such certified public accountant or arbitrator shall be an operating expense of the East Whiteland Trunk Line.

9.02 Arbitration by Board of Arbitrators.

In the event any disagreement shall arise as to the interpretation of any provisions hereof or the rights and obligations of the parties hereunder (other than disagreements provided for in Section 9.01) and the parties cannot otherwise promptly resolve the same, such disagreement shall be submitted within ten (10) days of the time any party request arbitration to a Board of Arbitrators whose decision shall be binding and shall be rendered within twenty (20) days. Such Board shall consist of the Consulting Engineers appointed by East Whiteland Authority, a firm of consulting engineers selected by the other parties to this Agreement and a third professional engineer licensed in Pennsylvania selected by the Consulting Engineers appointed by East Whiteland Authority and by said other parties; provided, however, that East Whiteland Authority and the other parties to this Agreement may agree to select arbitrators other than engineers or may agree to submit the matter to a single arbitrator. In the event of failure of said engineers to agree upon a third engineer or arbitrator, the same shall be appointed in the manner set forth in Section 9.01 hereof. The fees of all arbitrators shall be an operating expense of the East Whiteland Trunk Line.

ARTICLE X

MISCELLANEOUS PROVISIONS

10.01 Operation of East Whiteland Trunk Line.

East Whiteland Township agrees that it will, for and during the term of this Agreement by use of funds provided hereunder, operate and maintain the East Whiteland Trunk Line and that it will keep the same in good order and repair, save where prevented from doing so by act of God or riot, rebellion, sabotage, act of the public enemy or public calamity in which event East Whiteland Township may suspend operation of the East Whiteland Trunk Line until the cause of such suspension shall no longer exist and for such reasonable time thereafter as may be required to effect a resumption of operations. Neither East Whiteland Authority nor East Whiteland Township shall at any time or under any circumstances be liable to any party for damages in case of failure or inadequacies of the East Whiteland Trunk Line or the Valley Creek Trunk Sewer, or the Valley Forge Treatment Plant to receive, convey, treat or dispose of sewage.

10.02 Operation of Collection Systems.

Each party agrees that during such time as it operates a sewage collection system it will continuously operate and keep and maintain its collection system at all time in first-class repair, order and efficient operating condition and will meet the standards prescribed by the Sanitary Water Board of the Pennsylvania Department of Health or any other governmental authority having jurisdiction. Each party agrees to pay the cost of any damage to the East Whiteland Trunk Line or fine imposed upon East Whiteland Authority or East Whiteland Township resulting from discharge of improper sewage from such party's collection system in violation of this Agreement or

from improper operation or maintenance of such party's collection system. Each party agrees to indemnify and save harmless all of the other parties against all costs, losses or damage on account of any injury to persons or property occurring in the performance of this Agreement due to the negligence of such party or its servants, agents or employees.

10.03 Leases.

In the event that any municipality authority shall at any time lease its collection system to a municipality, any right or obligation of such authority under this Agreement may be exercised and shall be performed, as the case may be, by the municipality instead of the municipality authority to the extent that it may legally do so. When, by reason of the termination of any collection system lease, or for any other reason, any municipality authority shall be in possession of its collection system, then without any further act or agreement such municipality authority shall succeed to and become vested with all of the rights, powers, duties and obligations under this Agreement granted to or imposed upon the municipalities which created such authority.

10.04 Public Utility Law.

In the event that the Commonwealth of Pennsylvania should subsequently lawfully confer jurisdiction of the subject matter of this Agreement upon the Pennsylvania Public Utility Commission in whole or in part, the parties shall, if requested so to do, proceed forthwith to obtain all necessary power, right and authority from the said Public Utility Commission or such other proper agency of such Commonwealth in order to carry out the terms, provisions and intendment hereof.

10.05 Permits.

In the event that it may be necessary for the proper performance of this Agreement on the part of the East Whiteland Authority or East Whiteland Township to apply to any governmental or other agency for any permit or license to do or perform any act or thing contemplated hereby, and if such application must be made by a municipality rather than by the East Whiteland Authority or East Whiteland Township, the municipality affected agrees that it will execute the required application upon request by the East Whiteland Authority or East Whiteland Township, it being understood that in executing such application the municipality shall not assume any obligations both those for which it would have been responsible had East Whiteland Authority or East Whiteland Township made the said application.

10.06 No Joint Liability.

With the exception of a municipality and a municipality authority organized by such municipality, no party shall be held to be jointly liable in the event of failure of any party to perform and discharge its obligations under this Agreement, it being the intent hereof that this shall constitute the separate agreement of each of the parties named herein and default by any party in the discharge of any obligation resting upon it hereunder, shall not relieve any party from full performance of and compliance with the terms hereof.

10.07 Connections.

Prior to the completion of construction of the Valley Forge Treatment Plant, the Valley Creek Trunk Sewer and the East Whiteland Trunk Line, the Borough and each Township which is a party

hereunder will (to the extent it has not done so prior thereto) take all action which may be legal and necessary to compel all properties located within its territorial limits and then capable or thereafter becoming capable of being served by the municipality's collection system to be connected therewith.

10.08 Records.

Each party agrees to make available at all reasonable times to the parties to this Agreement and their employees, agents and representatives, access to all records relating to matters covered in this Agreement and access to the physical facilities of each party in order to assure compliance with the terms and conditions of this Agreement. A copy of all ordinances, resolutions, rules and regulations adopted by each party from time to time, pursuant to this Agreement, shall be furnished to East Whiteland Authority within thirty (30) days after enactment.

10.09 Severability.

Should any one or more of the provisions of this Agreement for any reason be held illegal or invalid, such illegality or invalidity shall not affect any other provision of this Agreement; and this Agreement shall, in such circumstances, be construed and enforced as if such illegal or invalid provision had not been contained herein.

10.10 Term.

This Agreement shall become effective upon its execution and delivery by all the parties hereto and shall remain in effect for forty years and thereafter shall be terminated only by mutual agreement of all parties.

10.11 Definitions.

The following terms and phrases shall have the meanings hereinafter set forth whenever such terms and phrases are used herein:

(a) "Consulting Engineers" means Roy F. Weston, Inc., and in the event said firm ceases to serve as the Consulting Engineers for East Whiteland Authority, an engineering firm or professional engineer having a favorable repute for skill and experience in the construction and operation of sewage treatment plants, registered in Pennsylvania and chosen by East Whiteland Authority.

(b) "Equivalent Dwelling Unit" shall mean any room, group of rooms, house trailer or other enclosure occupied or intended for occupancy as separate living quarters by a family or other group of persons living together or by persons living alone.

(c) "Industrial Uses" means any improved property used, in whole or in part, for manufacturing, processing, cleaning, laundering or assembling any product, commodity or article or from which any process waste, as distinct from sanitary sewage, is discharged.

(d) "Industrial Wastes" means any and all wastes discharged from an industrial establishment or by an industrial user, other than sanitary sewage.

(e) "Sewage", "Wastewater", "Sanitary Sewage" and "Sanitary Waste" means normal water-carried household and toilet wastes from any improved property and is limited to sewage permitted by Article V hereof and industrial wastes to the

extent permitted by Article V.

(f) "Improved Property" means any property upon which there is erected a structure intended for continuous or periodic habitation, occupancy or use by human being or animals and from which structure sanitary sewage and/or industrial wastes shall be or may be discharged.

(g) "pH" means the logarithm of the reciprocal of the concentration of hydrogen ions, expressed in grams per liter of solution, indicating the degree of acidity or alkalinity of a substance.

(h) "B.O.D." means biochemical oxygen demand.

10.13 Execution.

This Agreement may be executed in any number of counterparts each of which may be deemed an original.

IN WITNESS WHEREOF, each of the parties hereto has caused this Agreement to be executed and attested by its proper officers, pursuant to the proper action of its governing body, as of the day and year first above written.

FACTORS FOR DETERMINATION OF EQUIVALENT DWELLING UNITS

Classification	Number of E.D.U.
A. Each private dwelling or living unit	1
B. Each fire house or municipal building	1
C. Each church	1
D. Each public or private day school . . . . . Elementary, junior or senior high school Based on the daily average number of pupils enrolled on days when the school was in session during the quarter immediately preceding the date for determination of the number of connections, divided by the factor of 20. Teachers and employees shall be classified as pupils. Average enrollment shall be redetermined annually.	
E. Each retail gas station without car washing facilities	2
F. Each retail gas station with car washing facilities	3
G. Each commercial establishment, hospital, convalescent home, or institution . . . . . The quantity of water used shall be evidenced by meter readings of water meters installed by water suppliers for the purpose of measuring water purchased from said water supplier and such other meters or measuring devices as may be installed. The quantity of water used during the quarter immediately preceding the date for determination of the number of connections divided by 24,750 gallons shall represent the number of Equivalent Dwelling Units determined in respect of such establishment. Where no meter has been installed by the supplier or no other meter or measuring device has been installed, the number of Equivalent Dwelling Units shall be estimated.	
H. Each motel, hotel, or rooming house . . . . . Each unit or room shall be evaluated as one-half an Equivalent Dwelling Unit. Where a restaurant or bar room is conducted in conjunction with any motel or hotel, a separate determination for such restaurant or bar room shall be made in accordance with paragraph "G" above.	
I. Industrial Establishments . . . . . The quantity of water used shall be evidenced by meter readings of water meters installed by water suppliers for the purpose of measuring	

water purchased from said water supplier and such other meters or measuring devices as may be installed. The quantity of water used during the quarter immediately preceding the date for determination of the number of connections divided by 24,750 gallons shall represent the number of Equivalent Dwelling Units determined in respect of such establishment.

Where no meter has been installed by the supplier or no other meter or measuring device has been installed, the number of Equivalent Dwelling Units shall be estimated.

J. Multiple Use. In case of a combination of one or more dwelling or living units with a similar unit or units or with one or more commercial establishments in the same or connected building with each thereof having the use of the Valley Creek Trunk Sewer (directly or indirectly) through one sewer connection, then each such private dwelling or living unit and each such commercial establishment shall be evaluated on the basis of the applicable factors for each use thereof as if such use were conducted in a separate structure and as if each such use had a direct and separate connection to the Valley Creek Trunk Sewer . . . . . .

AMENDMENT TO EAST WHITELAND TRUNK LINE AGREEMENT

This Amendment, dated as of the 12th day of December, 1979, to the East Whiteland Trunk Line Agreement dated as of February 1, 1971, as amended by Composite Amendment No. 1, dated as of December 1, 1974 (hereinafter referred to as "the Agreement"), is entered into between EAST WHITELAND MUNICIPAL AUTHORITY (East Whiteland Authority), the TOWNSHIP OF EAST WHITELAND (East Whiteland Township), parties of the first part, and the BOROUGH OF MALVERN (Malvern), and MALVERN MUNICIPAL AUTHORITY (Malvern Authority), parties of the second part, and VALLEY FORGE SEWER AUTHORITY, party of the third part.

WHEREAS, subsequent to the execution of the Agreement, Valley Forge Sewer Authority decided to seek the opportunity to transmit sewage from an area of Charlestown Township adjacent to East Whiteland Township through the East Whiteland Trunk Line (and the Valley Creek Trunk Line) to the Valley Forge Treatment Plant; and

WHEREAS, East Whiteland Authority and East Whiteland Township, at the request of Valley Forge Sewer Authority are willing to reserve for the Valley Forge Sewer Authority, the reserved capacity provided herein of the East Whiteland Trunk Line and the Mill Lane pumping station; and

NOW, THEREFORE, the parties hereto, intending to be legally bound hereby, agree as follows:

1. Valley Forge Sewer Authority shall have no rights or liabilities with respect to Section 1.01 of the Agreement.

2. Within thirty (30) days of the date of this Amendment, Valley Forge Sewer Authority shall pay to East Whiteland Authority the sum of one hundred fifteen thousand nine hundred seventy-five

dollars ($115,975). Of that sum, $114,189 shall be allocated to Valley Forge Sewer Authority's capital contribution pursuant to Sections 2.01 and 2.02 of the Agreement and $1,786 to operating expenses for the first two (2) years pursuant to Section 4.13 of the Agreement. The calculation of the above figure takes into consideration all currently applicable grants. Exhibit B of the Agreement is hereby amended in part as set forth in Exhibit A attached hereto. All references in the Agreement to Exhibit B thereof shall be deemed to refer to Exhibit B as amended by Exhibit A attached hereto.

3. Valley Forge Sewer Authority hereby is granted rights, and assumes liabilities as if it were one of the parties referred to in the Agreement as a "Municipality" which rights and liabilities are defined in the Agreement.

4. Valley Forge Sewer Authority, at its own expense or at the expense of its users, may, during the term of the Agreement, cause sewage emanating from Charlestown Township to be discharged into sewer lines of East Whiteland Township which have been acquired from Great Valley Wastewater Company ("the Great Valley Line"). The East Whiteland Trunk Line shall thus be extended to the boundary of Charlestown Township.

5. Valley Forge Sewer Authority shall commence delivering sewage to the Great Valley Line as soon as practicable after the execution of this Agreement. East Whiteland Authority, as soon as practicable thereafter, shall permit connection at the locations that East Whiteland Authority may agree to, which agreement may not be unreasonably withheld, and shall accept sewage for conveyance to the treatment plant subject to the terms and conditions herein set forth. Valley Forge Sewer Authority may make subsequent connections at locations agreed to by East

Whiteland Authority, which shall not unreasonably withhold its agreement. Except as permitted pursuant to Article VII of the Agreement, Valley Forge Sewer Authority shall not exceed its reserved capacity as set forth in Exhibit B, as amended by this Agreement.

6. Section 4.01 of the Agreement is hereby amended to read as follows:

"The Borough of Malvern, the township of East Whiteland and Valley Forge Sewer Authority (all of which are referred to in this article IV and elsewhere in this agreement as 'said municipalities') shall share the operating expenses of the East Whiteland Trunk Line and its extension to Charlestown Township, as defined in Section 4.06, as follows: the proportion that the volume of sewage (determined as hereinafter provided and by other agreement of the parties) emanating from each such municipality and discharged into the several sections or reaches of the interceptor or trunk sewer, constituting the East Whiteland Trunk Line and its extention to Charlestown Township bears to the total volume of sewage discharged by said municipalities into such sections or reaches shall be used in calculating the amount that each such municipality shall pay for sewage conveyance services. Operating expenses of the East Whiteland Trunk Line for the first two years of operation shall be paid as set forth in Section 4.13 hereof."

All references in Article 4 of the Agreement to East Whiteland Trunk Line shall be deemed also to refer to the Great Valley Line.

7. Any sewage discharged by Valley Forge Sewer Authority into the East Whiteland Trunk Line or Great Valley Line shall conform to the standards for quality of sewage set forth in Article V of the Agreement.

3. Pursuant to an Agreement entitled "Valley Creek Trunk Sewer Agreement" dated November 1, 1970, as amended, East Whiteland Authority has made payments to Tredyffrin Township for operating expenses of the Valley Creek Trunk Line during its first two years of operation, and will, during subsequent years, continue to be obligated to make payments on account of operating expenses. Valley Forge Sewer Authority agrees hereby to, within thirty days from the execution of this Agreement, reimburse East Whiteland Authority for 7.89% of the amount paid on account of operating expenses during the first two years by East Whiteland Authority to Tredyffrin Township. Valley Forge Sewer Authority further agrees to reimburse East Whiteland Authority for Valley Forge Sewer Authority's share of any payments East Whiteland must make to Tredyffrin Township pursuant to Article 4 of the Valley Creek Trunk Sewer Agreement for operating costs during years subsequent to the first two years of operation and for payments for capital contributions paid subsequent to the date hereof. Valley Forge Sewer Authority's share of the said operating costs and additional capital contributions will be its pro-rata share, based on the proportion that the volume of sewage emanating from Charlestown Township into the East Whiteland Trunk Line and Great Valley Line bears to the total sewage emanating from East Whiteland Township into the Valley Creek Trunk Sewer Line. The payments by Valley Forge Sewer Authority shall not exceed those that would be made if said Authority had made its payments directly to the Tredyffrin Township Municipal Authority.

9. At such time as East Whiteland Authority must pay funds to the Tredyffrin Township Municipal Authority resulting from an enlargement of an intercepter or trunk sewer (or any section or reach thereof) or the construction of an additional interceptor

or trunk sewer or the enlargement of a pumping station or the construction of an additional pumping station pursuant to the Valley Creek Trunk Sewer Agreement, then Valley Forge Sewer Authority shall reimburse East Whiteland Township for its pro-rata share of said funds calculated on the basis of its pro-rata share of reserved capacity, as such reserved capacity shall be determined by Valley Forge Sewer Authority, in such section or reach of interceptor or trunk sewer. In the alternative, Valley Forge Sewer Authority may reserve capacity pursuant to Section 7.02 of the Valley Creek Trunk Sewer Agreement.

10. Valley Forge Sewer Authority hereby agrees that all sewage from Charlestown Township shall be deemed to be sewage of Valley Forge Sewer Authorty for purpose of an Agreement dated as of November 1, 1970, as amended, known as "the Valley Forge Sewage Treatment Plan Agreement".

11. Valley Forge Sewer Authority shall, at its expense, construct or cause to be constructed a sewage meter or sewage flow measuring device to determine the volume of sewage emanating from Charlestown Township to East Whiteland Township.

12. All references in Sections 4.03, 7.03 and 8.03 of the Agreement to "Malvern" shall be deemed to refer to Malvern and Valley Forge Sewer Authority. Valley Forge Sewer Authority shall make payments pursuant to Section 4.04 of the Agreement at the same time as Malvern is required to make payments. All other sections of the Agreement refer to parties or municipalities defined in Section 4.01, as amended by Paragraph 6 of this Agreement, unless otherwise stated herein.

13. Pursuant to Paragraph 7.01 of the Valley Creek Trunk Sewer Agreement, Valley Forge Sewer Authority hereby is granted the right to rent a capacity of up to 300,000 gallons per day average flow (750,000 gallons per day peak flow) in the Valley

Creek Trunk Sewer from East Whiteland Authority, with all rental fees therefore being paid to East Whiteland Authority, as provided therein.

IN WITNESS WHEREOF, each of the parties hereto has caused this Agreement to be executed and attested by its proper officers pursuant to the proper action of its governing body as of the day and year first above written.

EXHIBIT "A"

Exhibit "B" of the East Whiteland Trunk Line Agreement is amended in part to provide that if any expansion, repair, enlargement or construction to the Great Valley Line shall be required, Valley Forge Sewer Authority shall pay its pro rata share of such expansion, enlargement or construction on the basis of its reserved capacity in the expanded or repaired Great Valley Line to the total reserved capacity therein. Notwithstanding the foregoing, 300,000 gallons per day of capacity shall be reserved in the Great Valley Line for Valley Forge Sewer Authority.

EXHIBIT "B"

THIS AGREEMENT made this 27th day of December 1978, by and between EAST WHITELAND MUNICIPAL AUTHORITY and VALLEY FORGE SEWER AUTHORITY

W I T N E S S E T H:

Valley Forge Sewer Authority and East Whiteland Municipal Authority have agreed to share cost for the Sidley Road Trunk Line repairs as indicated in Schedule A presented by East Whiteland Municipal Authority (Schedule A attached hereto). Items Nos. 1, 3, 4, and 6 of the Schedule A, which are line replacements, will be deferred until additional flows coming from Charlestown Township make ~~repairs~~ Replacements if necessary as determined by East Whiteland Municipal Authority's consulting engineers. Item No. 14 of Schedule A will be adjusted on the basis of proposed additional repairs to be required in lieu of replacement of earlier mentioned lines.

NOW THEREFORE, the parties hereto, agree that the mutual promises herein contained and previous arrangements will allow the parties to finalize the agreement to provide sewer service to the southern portion of Charlestown Township through the East Whiteland Trunk Line.

RE: East Whiteland Township Act 537 Plan Special Study for Planning Commission Review.
ARRO #10310.02 ✓

Dear Planning Commission Members:

On behalf of East Whiteland Township (Township), we are submitting a copy of the enclosed draft Act 537 Plan/Special Study for Planning Commission review. The primary focus of the Special Study is to evaluate alternatives to provide for upgraded Township conveyance system facilities to meet the future sanitary sewer needs of the north central portion of the Township as well the south-central portion of Charlestown Township.

Please review this Special Study and offer any comments or concerns that the Planning Commission may have. In addition, please share this document with Terry Woodman and Bill Steele so that they may review it and offer comments as well.

Thank you for your assistance with the review of this Plan. If you have any questions, please contact me at 610-495-2102.

Sincerely,

William L. Bohner, Jr., P.E.

Re: **East Whiteland Township Act 537 Plan**
Special Study for Planning Commission Review
ARRO # 10310.02

Dear Mr. Bonner:

At the November 13, 2012 Charlestown Township Planning Commission meeting I described the East Whiteland Township Act 537 Plan Special Study in general. I also described, in more detail, the anticipated flows from the southside of Charlestown Township to the East Whiteland Study Area.

There was discussion about some of the descriptions of certain areas shown on Tables 1 through 3 and a requested clarification on the flows that would be generated if development was done under the new TND overlay zoning district.

After the meeting we reviewed the flows that could be generated by areas developed using the TND overlay and have determined that there should be no increase to flows presented in Tables 1 through 3.

No other questions or concerns were raised by the Planning Commission.

Very truly yours,

Daniel T. Wright, P.E.
Township Engineer

Phoenixville, PA 19460

Re: Official Update of Charlestown South Side Sewerage Flow Projections

Dear Mr. Goldberg,

In accordance with the requirement of the Pennsylvania Department of Environmental Protection (PADEP) that all of the Valley Forge Sewer Authority's (VFSA) customers provide Municipal Needs Assessment Updates in order to complete its Regional Act 537 Plan, Charlestown Township provided the VFSA with its Needs Analysis prepared by Surender Kohli, P.E. and approved by its Board of Supervisors back in September of 2008.

The 2008 Needs Analysis indicates a projected total average flow from the south side of Charlestown Township at 417,060 gpd. This, along with the other community flow projects, was part of the basis for the PADEP-approved Act 437 Plan for the VFSA treatment plant.

Charlestown Township is hereby updating the 2008 Needs Analysis. This is included as Appendix A, which has been compiled by Charlestown's consulting engineer and approved by the Charlestown Township Board of Supervisors at their meeting on March 4, 2013.

Very truly yours,

Linda M. Csete
Township Manager

Re: East Whiteland Township Official Sewage Facilities Plan Special Study

Dear Ms. McMichael:

The Chester County Planning Commission (CCPC) has reviewed the Draft 537 Plan Special Study dated October 2012 as required by Section 71.53(a)(2) of the Pennsylvania Sewage Facilities Act (Act 537). The Plan was prepared by ARRO. The Plan was received on October 11, 2012.

This Plan was prepared to assess the needs for wastewater collection and treatment, evaluate alternatives to meet future demands, and to identify and implement improvements in the north-central portion of the Township. The CCPC recommends the Plan be adopted after addressing comments in this letter.

The following comments are offered based on review of the document:

A. Consistency with the County Comprehensive Plan – *Landscapes2*:

1. The Study Area for East Whiteland Township, generally located immediately south of Charlestown Township, in the north-central portion of the Township, is primarily defined as the Suburban Landscape, with portions of the Township located in the Natural Features Overlay. The Act 537 Plan is consistent with the policies of *Landscapes2,* as they relate to the Suburban Landscape, including *Landscapes2* Policy UI 2.5 which states: "Maintain, upgrade, or expand existing public sewer and water facilities to support redevelopment and new development in designated growth areas, where consistent with local land use planning, while discouraging the extension of those facilities in the rural, agricultural and natural landscapes." The Plan indicates that East Whiteland Township is planning to upgrade components of the Township's conveyance system in order to continue to accommodate flow from Charlestown Township and existing and future East Whiteland Township flows. The Plan, as proposed is consistent with the goals and policies of *Landscapes2.*

2. *Watersheds*, the water resources element of the County comprehensive plan, identifies Objective 7.2 of Goal 7, "concentrate planned utility service areas to support designated growth areas," to be achieved through key strategies such as the extension of wastewater facilities in Suburban Landscapes. As such, East Whiteland Township, through its Act 537 Plan Update, intends to upgrade components of their public sewer system to accommodate existing and future planned growth. Therefore the goals for wastewater in East Whiteland Township are consistent with those of *Watersheds*.

B. Selection of Alternative:

1. The selected alternative for East Whiteland Township is to address the requirements necessary to upgrade components to the municipal conveyance system to accommodate existing and future flows from both Charlestown Township and East Whiteland Township. The proposed alternative is supported by *Landscapes2* Sewer and Water Policy UI 2.2, "Support infrastructure expansion and improvements that are consistent with *Landscapes2* and adopted regional and local plans that support projected future demands, avoid capacity shortfalls, protect natural resources, and provide safe and reliable utility services." As proposed, this alternative is consistent with the goals and policies of *Landscapes2*.

C. General Comments

1. Page10. On-going Upgrades or Expansion of Facilities. This Plan is consistent with the ongoing upgrades to the Mill Lane Pump Station which is also in this planning area.

2. Page 25. Consistency Determination. East Whiteland Township should include consistency information regarding *Watersheds*, the Chester County comprehensive plan's water resources element.

3. Page 27. County Stormwater Management Plan. Dependent upon the timing of this plan's adoption and construction of expanded/upgraded facilities, the Township may want to consider including information from the forthcoming Chester County Act 167 Stormwater Management Plan.

Thank you for the opportunity to offer comments on this plan. We trust that these comments will be of assistance to you as you prepare the final document for submission to PA DEP. The CCPC recommends approval of the Plan after all comments have been addressed. If you have any questions, please contact Carrie Conwell at 610-344-6285.

Sincerely,

Ronald T. Bailey, AICP

RE: East Whiteland Township Act 537 Plan Special Study for Planning Commission Review; Response to Comments.

Dear Mr. Bailey:

We would like to take this opportunity to respond to the Planning Commission's general comments offered in the Commission's December 11, 2012 review letter of the above referenced Special Study.

General Comment C.1.

Page 10. On-going upgrades or Expansion of Facilities. This Plan is consistent with the ongoing upgrades to the Mill Lane Pump Station which is also in the planning area.

Response:

Acknowledged

General Comment C.2.

Page 25. Consistency Determination. East Whiteland Township should include consistency information regarding Watersheds, the Chester County comprehensive plan's water resources element.

Response:

The 'Consistency Determination' section of the Special Study has been revised to include this information concerning Watersheds.

General Comment C.3.

Page 27. County Stormwater Management Plan. Dependent upon the timing of this plan's adoption and construction of expanded/upgraded facilities, the Township may want to consider including information from the forthcoming Chester County Act 167 Stormwater Management Plan.

Response:

Acknowledged. A general discussion has been added to the Special Study's text.

Thank you for providing us with your comments and input. If you should have any additional questions or comments, please contact Bill Bohner at ARRO. His phone number is 610-495-2102.

Sincerely,

Terry H. Woodman

RE: East Whiteland Township
Act 537 Plan – Special Study

Dear Supervisors:

The Chester County Health Department received a draft copy of the Act 537 Plan – Special Study, dated October, 2012, on February 6, 2013. The Plan was prepared by Arro Engineering and Environmental Consultants. This Plan was reviewed in accordance with the requirements of Title 25, Environmental Protection, Chapter 71, Administration of Sewage Facilities Planning Program, § 71.31.(b). This draft Plan proposes the upgrading of sewage facilities collection system components and pumping stations. We offer the following comments:

The stated purpose of the plan is to provide upgrades to existing collection mains in order to provide additional capacity to accommodate fill-in development in the area of the municipality that is already serviced by public sewerage facilities. Based on the existing and future development projections provided for the study area these upgrades appear to be appropriate and will serve the needs of the municipality for potentially the next 25 years, depending on the rate of future development.

Replacing the gravity interceptor line upstream from the Mill Lane Pumping Station will also correct the currently leaking 12" line. We agree that this will be environmentally beneficial and potentially protect water supplies.

The phasing approach as proposed makes very good sense, especially since any of the Phase II or Phase 3 components can be put off if development does not take place at the rate anticipated.

It is the opinion of the Chester County Health Department that this draft Act 537 Plan – Special Study appropriately addresses the future needs of the study area and may be approved once it has been reviewed by all of the agencies with jurisdiction in the area.

Additionally, once this plan has been reviewed and approved by PA DEP, please submit to us a copy of that approved version of the plan. It can be submitted in electronic format.

Thank you for the opportunity to review and comment on this draft Act 537 Plan – Special Study.

Sincerely,

Ralph E. DeFazio
Environmental Health Supervisor
Chester County Health Department

County of Chester {ss: {No. Term, 2013

Patricia Sigda, Legal Representative of the Daily Local News Company, a corporation, of the County and State aforesaid, being duly affirmed, deposes and says that the Daily Local News, a newspaper of general circulation, published at 250 N. Bradford, Ave., West Chester, PA, County and State aforesaid, was established November 19, 1872, and Incorporated December 11, 1911, since which date the Daily Local News has been regularly issued in said county, and that the printed notice or publication attached hereto is exactly the same as in the regular editions and issues of the said Daily Local News on the following dates viz:

PUBLIC NOTICE

March 12 A.D. 2013

s that he/she is the proper person duly authorized by the Daily Local News Company, a
s of said Daily Local News, a newspaper of general circulation, to verify the foregoing
n, and that affiant is not interested in the subject matter of the aforesaid notice or
at all allegations in the foregoing statements as to time, place and character of publication

An Act 537 Plan Special Study has been prepared for East Whiteland Township, Chester County, Pennsylvania. The Special Study addresses the planning requirements necessary to provide for public sanitary conveyance improvements to existing portions of the Township's system. These improvements would provide the capacity for planned development in the north-central portion of East Whiteland Township and the south-central portion of Charlestown Township.

Wastewater from the planning area identified in this document would be conveyed via upgraded wastewater conveyance system infrastructure located along Sidley Road to the Mill Lane Pump Station located at the southern end of the planning area along Conestoga Road in East Whiteland Township. The Mill Lane pump station discharges through a force main and gravity sewer through East Whiteland Township and Tredyffrin Township to the Valley Forge Sewer Authority's Wastewater Treatment Plant.

To meet the wastewater conveyance needs of the planning area, it is proposed that the Township implement the selected alternatives in three primary phases.

For Phase I, it is proposed that the existing 12" gravity interceptor on Mill Lane, from the intersection of Sidley Road and Lapp Road to a point just upstream from the Mill Lane Pump Station, be replaced with 1820 +/- feet of new 18" pipe. The improved sewer line will provide capacity for the existing and projected future flows. An additional benefit is that the Phase I improvements will eliminate the leak in the existing gravity sewer under Route 202. PA DEP has already approved Phase I for construction due to the environmental concerns.

For Phase II, the intent is to make sanitary sewer improvements from the end of Phase I in Sidley Road north to the intersection Sidley Road and Lee Boulevard. Construction of the Phase II improvements will include the upgrading of the gravity sewer main which will eliminate capacity issues related to the undersized pipe in Sidley Road.

CE OR PUBLICATION

For Phase III, the intent is to upgrade the Lee Boulevard Pump Station through the replacement of the existing pumps with new pumps to meet the 5 to 10 year needs. In addition, replacement of the existing constant speed controls with variable frequency drive controls is planned.

The engineer's opinions of probable construction cost for these alternatives and the respective phases are:

Phase I: $723,000
Phase II: $1,279,000
Phase III: $111,000

These alternatives will be paid for and financed through bond funding mechanisms and the sharing of costs between the municipalities via the current intermunicipal agreement structure. Costs shall be recouped through established tapping fee and user rate structures.

In accordance with Chapter 71.3(c) of the Pennsylvania Code, the Township is providing a 30-day public comment period. The plan is available, for review, at the Township's offices, 209 Conestoga Road, Frazer, PA 19355 from 9:00 AM to 3:30 PM, Monday through Friday. Comments may be addressed to Ms. Terry Woodman, Township Manager, and are due no later than thirty (30) days from the date of this advertisement.

Public Comments and Responses

BUCHART HORN, INC.
Strengthening Communities

MEMORANDUM

Date: March 26, 2013
To: Martin Goldberg
From: Larry Lutter

Subject: East Whiteland Township/Charlestown Township (Southside)
Act 537 Special Study Dated February 2013

On behalf of the VFSA, I have reviewed the referenced study advertised by EWT for public comment and offer the following:

1. Executive Summary:

   a. Is the construction cost estimate for Phase 2 provided in the Study updated based on depth to rock information recently obtained?
   b. The East Whiteland Township (EWT) and the Valley Forge Sewer Authority (VFSA) cost sharing of each phase of the project is not listed or mentioned as to where that information is found in the document. What are the municipalities' shares of costs for Phase I, II, and III considering the updated 3/13/13 flow projections from Charlestown Township (CT) of 432,302 gpd?
   c. We assume VFSA does not have any cost share in the pending Phase IV. Is this correct?
   d. The future sewer service being discussed in this Special Study is directly related to the sewer service being provided by the Mill Lane Pump Station project. The same municipal entities are involved with the need for capacity and cost sharing. To assist the involved municipalities and the PADEP review and understanding of the complete picture, there should be some discussion in this Study related to the Mill Lane Pump Station project. Discussion of how it addresses the need for capacity, its current status, its time table and its cost and cost sharing would be very helpful. Including the Mill Lane Pump Station Special Study as an appendix to this Study would also help support any discussion added to this Study related to that project.
   e. Are there any other future projects associated with CT's Southside flow that are not discussed in this Special Study or in the Mill Lane Pump Station Basis of Design Report? If there are any other projects, what are they and what is the timing and estimated cost and cost sharing of these projects?

2. III. Existing Facilities in the Planning Area

   a. Paragraph 3.A.3: This section of the Study does not mention or describe problems with the existing sewer segment installed on the Aegon property. The BH dynamic model indicated sufficient capacity in this section of sewer for the future CT and EWT flows. Recent flow

metering results indicate possible excessive infiltration. This section of the report should include a discussion on the condition of the sewer through Aegon to support the selective alternative of routing most of the flow around this section of sewer.

b. Regarding the flow metering results from January 14, 2013 to February 28, 2013:
   1) What is the estimated average daily flow from the office building connected to the sewer system between manholes 67-12 and 67-2?
   2) What does the flow metering results show the typical diurnal flow curve to be? Is there a significant reduction in flow during the nighttime hours and for how long?
   3) What is the inflow estimate for rain events during the flow metering period?

3. IV. Future Growth and Land Development

   a. Tables 2, 3, and 4 along with the summaries for pump station and interceptors should be updated using the CT flow projections dated 3/13/13.

4. V. Alternatives to Provide New or Improved Wastewater Disposal Facilities

   a. Paragraph 5: The list of areas of concern should include a discussion on the condition of the existing sewer through the Aegon property.
   b. What if any planned improvements are being considered for the sewer though the Aegon property and what is the estimated cost and timing for the work? If any work is planned is should be described in this Study.

5. IV. Evaluation of Alternatives

   a. Paragraph A.2: This paragraph notes a "portion of Charlestown Township's projected flows (by specific reference) are included" in the Mill Lane Pump Station May 2011 Basis of Design report. The discussion goes on to state "other EDUs" are to be shared by EWT and CT. Does the Mill Lane Pump Station design include provisions for all of CT's future flow projection of 432,302 gpd?
   b. Paragraph E: Analysis of Available Funding Methods does not mention funding that would come from other involved municipalities under the terms of the Intermunicipal Agreement such as the VFSA.

6. VII. Institutional Evaluation
   a. Paragraph A.1 does not mention shared funding from the VFSA and as written appears to indicate that EWT will provide all funding.

b. Paragraph C.2 does not indicate the need to further amend the existing Intermunicipal Agreement between EWT and the VFSA. Also, this section does not include any discussion about the need to have VFSA's and CT's approval of the Study. An agreement amendment and other municipal approval are necessary.
c. Paragraph C.5 indicates that no further legal documentation is necessary to implement the selective alternative. Refer to comment to Paragraph C.2 above regarding the need for an agreement amendment.

7. VIII. Selected Wastewater Treatment and Institutional Alternative

a. Paragraph A.4: The Study notes the upgrade of the conveyance system in CT as a Township responsibility when it will be a VFSA responsibility.
b. Paragraph B: The Study notes the discussion for cost sharing is between EWT and CT. The Study should note this cost sharing discussion to be between EWT and the VFSA. The Study should include a cost sharing table for each phase of work. The cost used should be total project cost including engineering, construction and other associated project costs so all parties know the total magnitude of their financial responsibility.

8. Appendix G, Flow Projection Summary Table (Charlestown Township): The table should be updated using the 3/13/13 information provided by the CT.

9. Appendix K, Municipal Comments and Responses: VFSA's comments and the associated responses should be added to this document before it is submitted to PADEP.

10. Appendix O, Adoption Resolution: VFSA's and CT's adoptions of the Study should be added before the Study is submitted to PADEP.

11. Appendix Q, Corrective Action Plan (CAP)/Connection Management Plan (CMP):
    a. CAP Page 1 paragraph 2 Last 2 sentences should read: "Data on Charlestown Southside flows were provided by Charlestown Township. It is noted that VFSA is responsible for the sewer system in Charlestown Township."
    b. CAP 4th Paragraph page 1 under A.I: There should be a clarification that CT's sewage needs were originally provided in the Regional Act 537 Plan December 2008 Municipal Needs Assessment. The information provided in 2011 would have been an update of the original information. The CAP should also mention the recent March 2013 update of the CT flow projections.
    c. CAP Section VI Corrective Actions:

1) The first sentence of paragraph 2 notes the corrective actions are due "largely" to the additional flow from CT. Would not the cause of the corrective actions be a joint responsibility due to the additional flow from CT but also due to additional flow for EWT and the discharge from the Wilburdale Pump Station which causes surcharging in the Sidley Road sewers when discharging simultaneously with Lee Boulevard Pump Station?
2) Please clarify that the VFSA will share in the cost of the selected and approved work and not CT as CT is a member of the VFSA and will not pay separately for the work from Township funds.

d. CAP Section VII Milestones, page 8 Item C notes the cost share to be resolved by March 2013 with CT. The final cost sharing is to be resolved with the VFSA. The final cost share has not yet been provided for review and acceptance by EWT and VFSA.
e. The Exhibits for the CAP/CMP are not included in the copy of the Special Study BH received.

Re: East Whiteland Township/Charlestown Township (Southside)
Act 537 Special Study Dated February 2013;
Response to VFSA Comments
ARRO #10310.02

Dear Mr. Goldberg:

We have reviewed the comments provided by your consultant, Buchart-Horn, as part of the public-comment and review of the above referenced Special Study. On behalf of East Whiteland Township, we offer the following responses to those comments:

Executive Summary:

Comment 1.a.: Is the construction cost estimate for Phase 2 provided in the Study updated based on depth to rock information recently obtained?

Response: The construction cost opinion for Phase 2 has been updated to reflect the 'depth to rock' information recently obtained.

Comment 1.b.: The East Whiteland Township (EWT) and the Valley Forge Sewer Authority (VFSA) cost sharing of each phase of the project is not listed or mentioned as to where that information is found in the document. What are the municipalities' shares of costs for Phase I, II, and III considering the updated 3/13/13 flow projections from Charlestown Township (CT) of 432,302 gpd?

Response: The Executive Summary and Section VI of the Special Study have been adjusted to reflect the cost sharing associated with Phases I, II, and III.

Comment 1.c.: We assume VFSA does not have any cost share in the pending Phase IV. Is this correct?

Response: Yes. That is correct.

Comment 1.d.: The future sewer service being discussed in this Special Study is directly related to the sewer service being provided by the Mill Lane Pump Station project. The same municipal entities are involved with the need for capacity and cost sharing. To assist the involved municipalities and the PADEP review and understanding of the complete picture, there should be some discussion in this Study related to the Mill Lane Pump Station project. Discussion of how it addresses the need for capacity, its current status, its time table and its cost and cost sharing would be very helpful. Including the Mill Lane Pump Station Special Study as an appendix to this Study would also help support any discussion added to this Study related to that project.

Response: A discussion has been added to the Plan text relative to the Mill Lane Pump Station and the capacity of the station. The station is currently under construction with the potential to be

operational by late 2013 or early 2014. Construction costs for the station (based on the low bid for the project) total nearly $2,950,000. Engineering costs total nearly 478,320. Cost sharing for this project will be further established and discussed as the intermunicipal agreement amendment is finalized.

Comment 1.e.: Are there any other future projects associated with CT's Southside flow that are not discussed in this Special Study or in the Mill Lane Pump Station Basis of Design Report? If there are any other projects, what are they and what is the timing and estimated cost and cost sharing of these projects?

Response: A portion of the interceptor/trunk sewer downstream from the Mill Lane PS force main discharge and the 14" Mill Lane PS force main will require future upgrades. Upgrades to these portions of the infrastructure will require future planning in that they are dependent not only on impacts/needs from the special study area but impacts/needs associated with other portions of the Township outside of the immediate Special Study planning area.

Existing Facilities in the Planning Area

Comment 2.a.: Paragraph 3.A.3: This section of the Study does not mention or describe problems with the existing sewer segment installed on the Aegon property. The BH dynamic model indicated sufficient capacity in this section of sewer for the future CT and EWT flows. Recent flow metering results indicate possible excessive infiltration. This section of the report should include a discussion on the condition of the sewer through Aegon to support the selective alternative of routing most of the flow around this section of sewer.

Response: A discussion has been added to the text that provides further information concerning problems with the existing sewer segments on the Aegon property.

Comment 2.b.: Regarding the flow metering results from January 14, 2013 to February 28, 2013:

1) What is the estimated average daily flow from the office building connected to the sewer system between manholes 67-12 and 67-2?

Response: The estimated average daily flow from this office building is based on EDUs and is calculated to be 5,225 gpd.

Comment 2.b.:

2) What does the flow metering results show the typical diurnal flow curve to be? Is there a significant reduction in flow during the nighttime hours and for how long?

Response: The flow metering results show a flow pattern per the attached graph. Flow does decrease at night, but not by a significant amount.

Comment 2.b.:

3) What is the inflow estimate for rain events during the flow metering period?

Response: The inflow/infiltration estimate is 50,080 gpd (average daily estimate).

Future Growth and Land Development

Comment 3.a.: Tables 2, 3, and 4 along with the summaries for pump station and interceptors should be updated using the CT flow projections dated 3/13/13.

Response: These tables have been updated accordingly.

Alternatives to Provide New or Improved Wastewater Disposal Facilities

Comment 4.a.: Paragraph 5: The list of areas of concern should include a discussion on the condition of the existing sewer through the Aegon property.

Response: This discussion has been included.

Comment 4.b.: What if any planned improvements are being considered for the sewer though the Aegon property and what is the estimated cost and timing for the work? If any work is planned is should be described in this Study.

Response: This description has been added to the Study. The estimated costs and timing for this work is an unknown at this time. The extent of improvements will be more fully known after the sanitary sewer line is televised. The televising of the sewer main has been made a part of the Special Study's implementation schedule and will need to occur after the completion of Phase II.

Evaluation of Alternatives

Comment 5.a.: Paragraph A.2: This paragraph notes a "portion of Charlestown Township's projected flows (by specific reference) are included" in the Mill Lane Pump Station May 2011 Basis of Design report. The discussion goes on to state "other EDUs" are to be shared by EWT and CT. Does the Mill Lane Pump Station design include provisions for all of CT's future flow projection of 432,302 gpd?

Response: This paragraph has been revised to more fully explain the capacity of the Mill Lane Pump Station based on the proposed pump and piping modifications.

Comment 5.b.: Paragraph E: Analysis of Available Funding Methods does not mention funding that would come from other involved municipalities under the terms of the Intermunicipal Agreement such as the VFSA.

Response: Paragraph E. has been revised to reflect funding that would come from other involved municipal entities.

Institutional Evaluation

Comment 6.a.: Paragraph A.1 does not mention shared funding from the VFSA and as written appears to indicate that EWT will provide all funding.

Response: This paragraph has been modified to reflect shared funding among all parties.

Comment 6.b.: Paragraph C.2 does not indicate the need to further amend the existing Intermunicipal Agreement between EWT and the VFSA. Also, this section does not include any discussion about the need to have VFSA's and CT's approval of the Study. An agreement amendment and other municipal approval are necessary.

Response: Paragraph C.2. has been modified to include a discussion regarding an amendment to the existing Intermunicipal Agreement between EWT and VFSA.

Comment 6.c.: Paragraph C.5 indicates that no further legal documentation is necessary to implement the selective alternative. Refer to comment to Paragraph C.2 above regarding the need for an agreement amendment.

Response: Paragraph C.5. has been modified to indicate that an amendment to the respective intermunicipal agreement is in process.

Selected Wastewater Treatment and Institutional Alternative

Comment 7.a.: Paragraph A.4: The Study notes the upgrade of the conveyance system in CT as a Township responsibility when it will be a VFSA responsibility.

Response: Paragraph A.4. has been revised to reflect that upgrades to the Charlestown Township conveyance system will be the responsibility of VFSA.

Comment 7.b.: Paragraph B: The Study notes the discussion for cost sharing is between EWT and CT. The Study should note this cost sharing discussion to be between EWT and the VFSA. The Study should include a cost sharing table for each phase of work. The cost used should be total project cost including engineering, construction and other associated project costs so all parties know the total magnitude of their financial responsibility.

Response: The text of the Plan has been revised to note cost sharing is between East Whiteland Township and the VFSA. A cost sharing table has been provided.

Comment 8.: Appendix G, Flow Projection Summary Table (Charlestown Township): The table should be updated using the 3/13/13 information provided by the CT.

Response: The table in Appendix G has been updated accordingly.

Comment 9.: Appendix K, Municipal Comments and Responses: VFSA's comments and the associated responses should be added to this document before it is submitted to PADEP.

Response: VFSA's comments and these responses have been added to Appendix K accordingly.

Comment 10.: Appendix O, Adoption Resolution: VFSA's and CT's adoptions of the Study should be added before the Study is submitted to PADEP.

Response: Discussion with PA DEP indicated that the Plan is a municipal document that requires municipal resolutions only. As a result, a resolution of adoption from East Whiteland Township is included in Appendix O. Resolution of adoption from Charlestown is not necessary given the verification of their support of the projected flows per the formal letter from their Board of Supervisors found in Appendix K. As a follow up to this, given that a formal amendment to the Intermunicipal Agreement is being prepared (draft found in Appendix R), VFSA and East Whiteland will provide formal agreement upon signing of this amended document. As a requirement of this Special Study, the finalizing of the intermunicipal agreement amendment is included in the implementation schedule found in the Executive Summary.

It should be noted that the formal cost sharing structure will be finalized as an exhibit to this amended agreement. The cost sharing structure and project costs reflected in the plan are planning level amounts.

Comment 11: Appendix Q, Corrective Action Plan (CAP)/Connection Management Plan (CMP):

a. **Comment:** CAP Page 1 paragraph 2 Last 2 sentences should read: "Data on Charlestown Southside flows were provided by Charlestown Township. It is noted that VFSA is responsible for the sewer system in Charlestown Township."

Response: PA DEP has approved the CAP in its current form. DEP is requiring semi-annual updates to this document. Adjustments will be made at this time.

b. **Comment**: CAP 4th Paragraph page 1 under A.I: There should be a clarification that CT's sewage needs were originally provided in the Regional Act 537 Plan December 2008 Municipal Needs Assessment. The information provided in 2011 would have been an update of the original information. The CAP should also mention the recent March 2013 update of the CT flow projections.

Response: PA DEP has approved the CAP in its current form. DEP is requiring semi-annual updates to this document. Adjustments will be made at this time.

c. **Comment:** CAP Section VI Corrective Actions:

1) The first sentence of paragraph 2 notes the corrective actions are due "largely" to the additional flow from CT. Would not the cause of the corrective actions be a joint responsibility due to the additional flow from CT but also due to additional flow for EWT and the discharge from the Wilburdale Pump Station which causes surcharging in the Sidley Road sewers when discharging simultaneously with Lee Boulevard Pump Station?

2) Please clarify that the VFSA will share in the cost of the selected and approved work and not CT as CT is a member of the VFSA and will not pay separately for the work from Township funds.

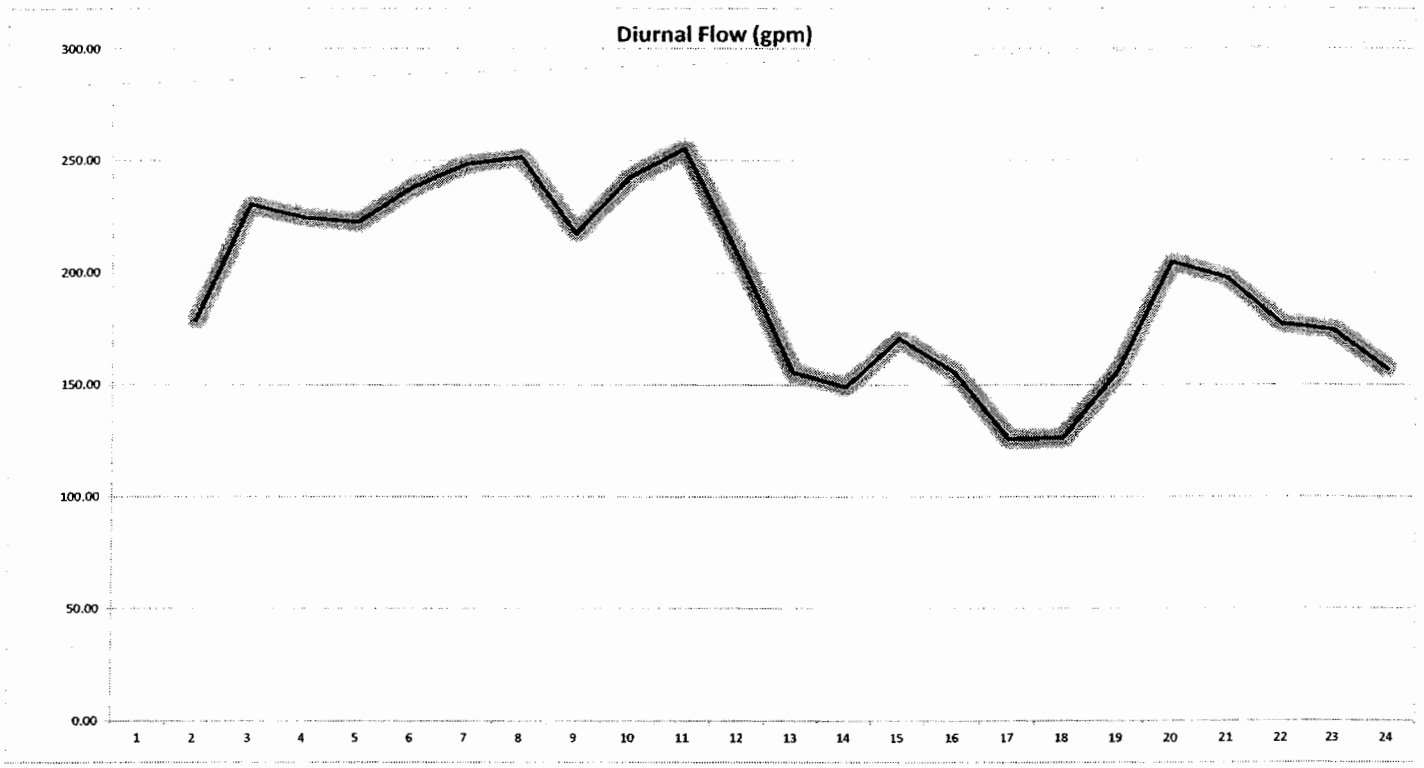
Response: PA DEP has approved the CAP in its current form. DEP is requiring semi-annual updates to this document. Adjustments will be made at this time.

d. **Comment:** CAP Section VII Milestones, page 8 Item C notes the cost share to be resolved by March 2013 with CT. The final cost sharing is to be resolved with the VFSA. The final cost share has not yet been provided for review and acceptance by EWT and VFSA.

Response: PA DEP has approved the CAP in its current form. DEP is requiring semi-annual updates to this document. Adjustments will be made at this time.

e. **Comment:** The Exhibits for the CAP/CMP are not included in the copy of the Special Study BH received.

Response: It was not the intent to provide those as part of the Special Study submission. They were provided to PA DEP with their submission for review. These documents have been approved as part of the CAP/CMP.



Thank you for your attention to this Special Study and for providing your comments. As discussed above, these comments and responses will become a part of the Special Study (Appendix K) for PA DEP's review and consideration.

Sincerely,

William L. Bohner, Jr., P.E.
Project Engineer

APPENDIX O

Adopted Resolution

EAST WHITELAND TOWNSHIP

RESOLUTION NO. 11-2013

RESOLUTION FOR PLAN REVISION

WHEREAS, A RESOLUTION OF THE BOARD OF SUPERVISORS OF EAST WHITELAND TOWNSHIP, CHESTER COUNTY, PENNSYLVANIA (hereinafter "the Township").

WHEREAS, Section 5 of the Act of January 24, 1966, P.L. 1535, No. 537 known as the "Pennsylvania Sewage Facilities Act", as Amended, and the Rules and Regulations of the Pennsylvania Department of Environmental Protection (PADEP) adopted thereunder, Chapter 71 of Title 25 of the Pennsylvania Code, require the Township to adopt an Official Sewage Facilities Plan providing for sewage services adequate to prevent contamination of waters and/or environmental health hazards with sewage wastes, and to revise said Plan whenever it is necessary to meet the sewage disposal needs of the Township's service area.

NOW, THEREFORE, BE IT RESOLVED, that East Whiteland Township Board of Supervisors hereby adopts and submits to the Pennsylvania Department of Environmental Protection for its approval, as a revision to the "Official Plan" of the Township, this Act 537 Special Study.

East Whiteland Township hereby approves and adopts the Act 537 Special Study which establishes the planning requirements necessary to provide public sanitary sewer infrastructure improvements located in the north central part of the Township resulting from wastewater needs within the Township as well as wastewater needs originating in south central Charlestown Township. Selected alternatives for infrastructure improvements include upgrades to the gravity sewer system in Sidley Road and improvements to the Lee Boulevard Pump Station. The Township is committed to implementing the recommendations of this Special Study in accordance with the Study's implementation schedule.

The Township finds that the Act 537 Special Study described above conforms to applicable zoning, subdivision, other municipal ordinances and plans, and to a comprehensive program of pollution control and water quality management.

ADOPTED this 12th day of June, 2013.

BOARD OF SUPERVISORS
EAST WHITELAND TOWNSHIP

Virginia McMichael, Chairman

John A. Mott

William Holmes

Attest:

Township Secretary

APPENDIX P

Approved Plan of Study and Task Activity Report

June 11, 2012

Ms. Terry H. Woodman, Manager
East Whiteland Township
209 Conestoga Road
Frazer, PA 19355

Re: Act 537 - Plan of Study
Sidley Road Trunk Sewer Special Study
East Whiteland Township
Chester County

Dear Ms. Woodman:

We have completed our review of your municipality's proposed plan of study (POS), as prepared by Mr. William L. Bohner, Jr., P.E., of ARRO Engineering and Environmental Consultants dated May 15, 2012, and a proposed Task Activity Report (TAR) dated May 2, 2012.

The proposed Special Study will provide planning for the upgrades to the East Whiteland Township (Township) wastewater conveyance system at and near Lee Boulevard and Sidley Road in order to accommodate flows coming from the service area of the Sidley Road Trunk Sewer. The service area includes flows from an existing development, a new development, new and existing sanitary connections from neighboring Charlestown Township, and from communities or subdivisions currently using on-site sewage disposal systems or privately-owned treatment facilities.

An analysis of the hydraulic capacity of the Township's recently upgraded Mill Lane Pump Station must be included in the Special Study to ensure that the pump station can accommodate the flows from the upgraded upstream conveyance system that will include the existing and projected flows from Charlestown Township.

Approval of this proposed POS is hereby granted. The estimated cost of the plan is $18,900. Please be advised, the approval of this scope of work is not a guarantee of eligibility of planning costs for reimbursement by the Commonwealth pursuant to Section 6(a) of Act 537 and 25 Pa. Code Chapter 71 of the Department of Environmental Protection's (Department) regulations.

This POS approval does not constitute a final action by the Department. When a completed plan is submitted to us, we will act upon it consistent with Pa. Code Title 25, Chapter 71.

The completed Special Study is scheduled to be submitted to the Department in November 2012.

Please consider the following comments as your municipality prepares its Act 537 Official Plan Update:

> Your municipality's Act 537 Official Plan Update is to be formatted as suggested in "A Guide for Preparing Act 537 Update Revisions," including the necessary items listed in the "Act 537 Plan Content and Environmental Assessment Checklist." All necessary items must be included, and a copy of the completed checklist must be included with your Act 537 Plan. This form is available on our website at:
>
> http://www.dep.state.pa.us/dep/deputate/watermgt/wqp/Forms/Act537/Forms_537Plan.htm

Also, please be advised that the Department will not pay grants under the act for planning costs incurred prior to the date of this POS approval or for information that has been completed previously under local, state, or federal funding programs. In addition, approval of this POS/TAR does not guarantee that all tasks listed will be eligible for reimbursement.

Please note that any new land developments associated with this plan will not be eligible for exemptions from sewage facilities planning under Chapter 71, Section 71.51(b)(2) until after the receiving facilities have been constructed. Applicants proposing projects that will coordinate new development construction with the construction of municipal conveyance or treatment facilities must submit Sewage Facilities Planning Modules for adoption by the municipality and approval by the Department.

This plan may affect municipalities other than East Whiteland Township. We urge you to coordinate with these municipalities early in the planning process in order to facilitate the review of your plan.

If you have any questions, please contact me at 484.250.5184.

Sincerely,

Kelly Boettlin

RE: East Whiteland Township; Chester County;
Act 537 Special Study – Plan of Study and Task Activity Report
ARRO #10310.02 ✓

Dear Ms. Mahoney:

On behalf of East Whiteland Township (Township), ARRO has prepared a Plan of Study (POS) and Task Activity Report (TAR) for the preparation of an Act 537 Sewage Facilities Plan (Special Study). This Special Study is to address the planning requirements necessary to address planned upgrades for the East Whiteland Township wastewater conveyance system at and near Lee Boulevard and Sidley Road.

Please give your consideration for approval of this POS and TAR. If you have any questions about these documents, please contact me at 610-495-2102.

Sincerely,

William L. Bohner, Jr., P.E.
Project Engineer

Enclosure

c: Terry Woodman, Township Manager – East Whiteland Township (w/enclosure)
Brady L. Flaharty, P.E. – ARRO (w/o enclosure)
Kevin McAghon, P.E. – ARRO (w/o enclosure)

EAST WHITELAND TOWNSHIP
SIDLEY ROAD TRUNK SEWER ACT 537 SPECIAL STUDY

In accordance with Title 25, Chapter 71, Administration of the Sewage Facilities Planning Program, of the Pennsylvania Code, a Plan of Study has been developed, for the preparation of a revision to the East Whiteland Township (Township) Act 537 Sewage Facilities Plan (Plan). This is being prepared to establish the planning elements that are necessary to meet the requirements of the Pennsylvania Department of Environmental Protection (PADEP) as they relate to the preparation of an Act 537 Plan Special Study (Special Study). This Special Study is to address the planning requirements necessary to address planned upgrades for the East Whiteland Township wastewater conveyance system at and near Lee Boulevard. This portion of the Township, as delineated on the location plan, will be the planning area for this Special Study. The Special Study shall become an amendment to the current Township-wide Act 537 Plan. Based on the PADEP Act 537 Plan Content and Environmental Assessment Checklist, the following addresses the planning requirements necessary to complete the study:

Executive Summary

1. Prepare a table of contents for the document.

2. Prepare a plan summary (Executive Summary).

   A. Identify the planning area to be served by the future collection and conveyance system.

   B. Identify the alternative chosen alternative.

   C. Include the cost opinion for implementing the proposed alternative.

   D. Identify the municipal commitments necessary to implement the plan.

   E. Provide a schedule for implementing the proposed project.

3. Include original signed and sealed Resolutions of Adoption.

4. Include comments provided by the Township Planning Commission, Chester County Planning Commission, and Chester County Health Department.

5. Include Proof of Public Notice.

6. Include a copy of all written comments received and written responses to each comment.

7. Prepare a project implementation schedule.

8. If any planning inconsistencies are identified, documentation will be provided discussing the resolution of the inconsistencies. If none are identified, a statement will be made to that effect.

General Plan

I. Previous Wastewater Planning

A. Identify and discuss existing wastewater planning.

1. Discuss previous Act 537 planning.

2. Discuss planning that has not been done in accordance with an approved implementation schedule.

3. Discuss additional planning, if any, that is anticipated or planned by East Whiteland Township.

4. Discuss planning that has been done via official plan revision such as planning modules or addenda.

B. Identification of Municipal and County planning documents.

1. Identify land use plans and zoning maps as they pertain to East Whiteland Township.

2. Identify the zoning regulations.

II. Physical and Demographic Analysis

A. Identify the planning area, municipal boundaries and service area boundaries utilizing existing mapping.

B. Identify physical characteristics of the planning area. Existing mapping will form the basis for this identification supplemented by USGS and National Wetlands Inventory maps, as required.

C. Discussion of soils characteristics is not applicable to this Special Study. .

D. Discussion of geological features in the service area is not applicable to this Special Study.

E. Discuss topographic features in the service area.

F. Identification of potable water supply is not applicable to this Special Study.

G. Identify wetlands in the area utilizing National Wetlands Inventory Mapping and existing Act 537 mapping.

III. Existing Sewage Facilities in the Planning Area

A. Identify and describe municipal sewerage systems in the planning area.

1. Discuss location, size and ownership of existing collection and conveyance facilities. A map will be provided to show the location of the collection and conveyance facilities within East Whiteland Township that could potentially serve the planning area.

2. Providing a narrative and schematic diagram of the basic treatment process is not applicable to this Special Study.

3. Providing a description of the problems, if any, with the existing treatment plant is not applicable to this Special Study. However, a description of problems, if any, associated with the existing conveyance system will be discussed.

4. Providing details, if any, relative to ongoing upgrading or expansion of the treatment facilities is not applicable to this Special Study. However, a description of ongoing upgrades or expansion, if any, of the conveyance system will be discussed.

5. Provide a description of operation and maintenance requirements and the status of past and present compliance with these requirements.

B. 1,2,3,4. Since this Special Study is to address public sewers upgrades to the planning area, identification of individual on-lot disposal will not be addressed.

C. 1,2,3. Identification of wastewater sludge and septage generation is not considered applicable to this Special Study.

IV. Future Growth and Development

A. Describe future growth and development through mapping, text and analysis for the planning area as defined by this Special Study. Note: No planning will be done for Charlestown Township (CT) to establish projected flows. Documentation will be provided in the Appendix of the Special Study that will verify the flow needs for CT.

1. Discuss areas with existing development or plotted subdivisions.

2. Discuss land use designations including residential, commercial and industrial areas.

3. Discuss future growth areas, population and EDU projections for these areas.

4. Briefly discuss zoning and subdivision regulations as they pertain to planned development.

5. Discuss the sewage planning required to provide adequate wastewater conveyance for planned development.

V. Alternatives to Provide New or Improved Wastewater Disposal Facilities

A. Identify the alternative to provide for improved sewage facilities

1. Identification of regional wastewater treatment concepts as an alternative shall make mention that wastewater is conveyed to the Valley Forge Sewer Authority's Wastewater Treatment Plant.

2. The potential for extension of existing municipal sewage facilities to areas in need. This will examine the extension of conveyance facilities to accommodate planned future development, if any.

3. A discussion addressing the potential for continued use of existing on-site or on-lot systems is not applicable to this Special Study.

4. Analysis of a new community sewage system is not applicable to this Special Study.

5. Analysis of alternatives as they relate to repair, replacement, and upgrade of existing conveyance system components will be discussed.

6. Discussion as it relates to the use of alternate methods of collection/conveyance to serve needs areas is not applicable to this Special Study.

B. The use of individual sewage disposal systems is not applicable to this Special Study.

C. Assessment of alternatives based on the use of small flow sewage treatment facilities, land treatment alternatives or package treatment facilities to serve individual homes or clusters of homes is not applicable to this Special Study.

D. Analysis based on the use of community land disposal is not applicable to this Special Study.

E. Addressing the use of retaining tank alternatives is not applicable to this Special Study.

F. A discussion of the need for and implementation of a sewage management program will not be addressed as part of this Special Study and is not considered applicable to this Special Study.

G. Non-structural comprehensive planning alternatives are not applicable to this Special Study.

H. Provide a no-action alternative which includes impacts on:

1. Water Quality and Public Health.

2. Growth Potential.

3. Community and economic conditions.

4. Recreational opportunities.

5. Drinking water sources.

6. Other environmental concerns.

VI. The Evaluation of Alternatives

A. Evaluate the alternatives, identified in Section V, for consistency with respect to the following:

1. Plans developed under the Clean Streams Law.

2. Plans developed under the Municipal Wasteload Management Plan (Chapter 94).

3. Plans developed under Title II of the Clean Water Act.

4. Comprehensive plans developed under the Pennsylvania Municipalities Planning Code.

5. Anti-degradation requirements as contained in PA Code, Title 25, Chapters 93, 95 and 102 and the Clean Water Act.

6. State water plans developed under the Water Resources Planning Act.

7. Pennsylvania Prime Agricultural Land Policy.

8. The County Stormwater Management Plan.

9. Wetlands Protection.

10. Protection of rare, endangered or threatened plant and animal species as identified by the PNDI.

11. Historical and Archeological Resource Protection (PHMC).

B. Provide for the resolution of any inconsistencies with items 1 through 11 above, if necessary.

C. Evaluate the alternatives with respect to applicable water quality standards and effluent limitations.

D. Provide cost opinions for construction, financing and engineering fees for the alternatives identified in Section V.

E. Provide an analysis of funding methods available to finance the proposed alternatives including financial contributions from private entities.

F. Analyze the need for immediate or phased implementation.

G. Analyze the ability of the Township to implement the alternative.

VII. Institutional Evaluation

A. Provide a brief discussion of the Township, their past actions and present performance including:

1. Financial and debt status

2. Available staff and administrative resources

3. Provide an analysis of the Township's legal authority to implement wastewater planning recommendations, implement system-wide operation and maintenance activities, set user fees, take purchasing actions, take actions against ordinance violators, negotiate agreements with other parties and raise capital for construction, operation and maintenance of facilities.

B. Describe the various institutional alternatives necessary to implement the technical alternatives, including:

1. There is no need for a new Authority. No analysis will be completed for this.

2. Function of the Township.

2. Cost of administration, implementability, and capability of the Township to provide for future needs.

C. Describe necessary administrative and legal activities, if any, to be completed and adopted to ensure the implementation of the alternatives, including:

1. Legal authorities of incorporation.

2. Required ordinances, standards, regulations and inter-municipal agreements.

3. Provisions of rights-of-way, easements, and land transfers.

4. Other sewage facilities plan adoptions.

5. Legal documents, if any.

6. Dates or timeframes of 1-5 above on the implementation schedule.

VIII. Selected Wastewater Treatment and Institutional Alternative

A. Identify the alternative that is the most feasible from a technical, financial, and institutional standpoint. Justify the choice based on:

1. Existing wastewater disposal needs.

2. Future wastewater disposal needs.

3. Operations and maintenance considerations.

4. Cost effectiveness.

5. Availability management and administrative systems.

6. Available finance methods.

7. Environmental soundness.

B. Describe the capital financing plan chosen to implement the selected alternative.

MILL LANE and SIDLEY ROAD
COLLECTION and CONVEYANCE SYSTEMS

A. CORRECTIVE ACTION PLAN (CAP)

I. INTRODUCTION

East Whitcland Township (Township) currently owns, operates, and maintains the Mill Lane and Sidley Road gravity sewer systems. The gravity sewer systems were originally installed in the early 1960's by a private developer. The gravity lines were originally owned and operated as part of the Great Valley Wastewater Company until the late 1970's at which time the infrastructure of the entire Great Valley Wastewater Company was dedicated to the Township. The Township has owned, operated, and maintained the gravity sewer lines since the late 1970's.

The Mill Lane and Sidley Road gravity sewer systems provide service for not only Township residential and commercial properties, but also adjacent residential and commercial properties in Charlestown Township (Charlestown). The Charlestown properties that drain to the Mill Lane and Sidley Road gravity sewer systems are generally known as Charlestown Southside (Southside). Data on Southside flows was provided by Charlestown Township. It is noted that Valley Forge Sewer Authority (VFSA) is responsible for the sanitary sewer system in Charlestown Township.

The Sidley Road system eventually drains into the Mill Lane system. The Mill Lane system drains into the Mill Lane Pump Station where the effluent is pumped to the Valley Forge Sewer Authority Wastewater Treatment Plant for treatment.

The Charlestown sewage needs were originally provided for in the Regional Act 537 Plan December 2008 Needs Assessment. In late 2011 Charlestown provided the Township with an update of the original sewage needs. The update consisted of a list of Southside properties and projected flows. In order to accommodate the projected Southside flows improvements are needed for the Mill Lane and Sidley Road gravity sewer systems. The Charlestown 2011 update was further updated in March 2013

with a latest revision of November 14, 2013. This report has been prepared based upon the Charlestown March 2013, revised to November 14, 2013 information.

In late 2011, it also became apparent certain structural deficiencies existed in the Mill Lane gravity sewer based upon the observation that sewage was leaking into Valley Creek an Exceptional Value Stream. The structural deficiencies have been eliminated due the construction of the Mill Lane Phase 1 improvements.

At a May 1, 2012 meeting at the Pennsylvania Department of Environmental Protection (DEP) in Norristown, PA, DEP indicated that due to the various sewage facilities planning issues that are raised by the construction of an improved Mill Lane and Sidley Road project, an ACT 537 Special Study should he prepared. The Special Study is to study not only the Mill Lane and Sidley Road drainage area in East Whiteland Township, but also the Southside area that drains to Mill Lane and Sidley Road. ARRO has completed the Special Study which was approved by DEP on September 17, 2013. The Township and Southside areas analyzed as part of the ACT 537 Special Study are included in Exhibit A. A copy of the DEP Special Study approval is also included in Exhibit A.

II. SANITARY SEWER COLLECTION and CONVEYANCE SYSTEM

Excluding the current proposed improvements, the Mill Lane and Sidley Road collection and conveyance system is comprised of 17 manholes and 4,090 linear feet of eight (8), ten (10), and twelve (12) inch gravity sewer. An overview of the Township sanitary sewer system is included as part of Exhibit A. Although the Mill Lane and Sidley Road systems are gravity sewers, three pump stations add flow to the Sidley Road system which in turn adds flow to the Mill Lane system. The Lee Boulevard Pump Station accepts not only Township commercial (9 lots) but also Southside residential/commercial flows and adds this flow to the Sidley Road system at Lee Boulevard. The Flat Road Pump Station accepts Township commercial flow (5 lots) and discharges this flow to the Wilburdale Pump Station. The Wilburdale Pump Station accepts Township commercial flow (16 lots) and adds this flow to the Sidley Road system at Flat Road. There are 185 Township residential homes connected to the Mill Lane and Sidley Road collection systems. The only expected Township residential growth expected to drain to the collection systems is the 23 lots identified as the Glasgow Tract. Additional Township

commercial flow is expected within the Great Valley Corporate Center (GVCC). A total of two-hundred twenty-nine (229) additional EDUs have been identified as being needed to address future growth in the GVCC. Twenty-nine (29) of the EDUs are assigned to 260 Great Valley Parkway for the J & J Sparta site. The remaining two-hundred (200) EDUs are assigned as an overall total to be used where needed in the GVCC based upon the actual future re-development of the sites. The Glasgow tract and the Great Valley Corporate Center (Great Valley Parkway area) are shown on the Township study area plan in Exhibit A. An additional 62 Township residential lots are connected to the Moores Road gravity sewer system which ultimately drains overland to the Mill Lane gravity sewer system.

III. EXISTING STRUCTURAL ISSUES

Prior to the construction of the current improvements, the portion of the Mill Lane system between Valley Creek north to the north side of State Route 202 (SR 0202) was a twelve (12) inch diameter asbestos cement pipe installed in the early 1960's. In late 2011 it was determined based upon physical evidence that sanitary sewage was leaking into a Tributary of Valley Creek just south of Rt 202 through an unknown drainage pipe. The drainage pipe was not indicated on any known design plans. Based upon Township investigation by means of televising the twelve (12) inch sanitary line, it appears that the joints in the existing twelve (12) inch pipe were defective and were the cause of the leakage. The existing structural issue was eliminated by the construction of the Mill Lane Phase 1 improvements which were fully operational as of November 4, 2013.

IV. EXISTING OVERLOAD

ARRO analyzed the Mill Lane and Sidley Road drainage systems for existing and future capacity. The existing capacity analysis indicates that three (3) ten (10) inch diameter segments of the Sidley Road system and one (1) eight (8) inch diameter segment of the Moore Road system are currently over capacity. Specifically, more flow is directed to the segments than the segment can handle hydraulically without exceeding the full flow pipe condition. In addition, a series of manholes (MHs) in Sidley Road that accept the Wilburdale and Lee Boulevard Pump Station flow surcharge during the pump discharge cycle. It is noted that the MH surcharge elevations currently do not exceed the MH rim elevations. Consequently no effluent is discharged from the MHs at street level. No DEP

Sanitary Sewer Overflow (SSO) reports have needed to be filed for the Sidley Road system. A copy of the existing system capacities spreadsheet is included as part of Exhibit C. A copy of the Sidley Road Existing Features Plans which shows the location of the existing overcapacity gravity lines and the MHs that surcharge during times of the Wilburdale and Lee Boulevard pump station discharge is included as part of Exhibit C.

V. PROJECTED OVERLOAD

The service area for Southside is included as part of Exhibit A. It is noted that an area west of Conestoga Road is listed as a Proposed Valley Forge Sewer Service Area. This area is considered a part of Southside and will drain to the Township. However, the flow will not drain through the Mill Lane and Sidley Road systems and therefore these flows are not included in the Mill Lane and Sidley Road calculations. A copy of the projected Southside flows is included as part of Exhibit D.

When the projected Southside flows are added to the existing system, additional pipe segments in the existing system are over capacity. The number of ten (10) inch diameter segments which are over capacity increases from three (3) at existing flow to ten (10) at the projected flows. In addition three (3) twelve (12) inch diameter lines downstream from Moores Road are also over capacity at the projected flows. An analysis of the existing Sidley Road and Mill Lane system with the projected Southside flows is included as part of Exhibit D.

VI. CORRECTIVE ACTIONS

The Township has prepared this Corrective Action Plan (CAP) to demonstrate its commitment towards resolving the hydraulic and conveyance issues in the Mill Lane and Sidley Road gravity sewer collection systems. The CAP consists of replacement construction measures that should effectively eliminate the structural and capacity issues in the identified collection systems.

Corrective actions are required due not only to the inadequacy of the existing system to adequately convey existing East Whiteland and Charlestown flows but also the inadequacy to adequately convey the future flows projected in East Whiteland and Charlestown. Consequently, a dialogue has been

established with VFSA, as representative for Charlestown, to communicate comments and ideas on the proposed design and cost of the overall construction process. It is noted that VFSA will share in the cost of all the work related to the analysis and design of the Mill Lane and Sidley Road systems in proportion to the amount of flow directly attributed to Charlestown. VFSA is representing Charlestown in the financial discussions with the Township.

The Township has started some of the corrective actions already and will continue the following actions and measures to the collection and conveyance systems:

A. Design and Construction of Phase 1 Improvements

Phase 1 - Mill Lane Improvements This phase of the improvements has been set up to include the sanitary sewer improvements from Valley Creek north to Sidley Road approximately 220' north of the intersection of Sidley Road and Lapp Road. Construction of the Phase 1 improvements will eliminate the structural issues related to the pipe leakage into Valley Creek as detailed in Section A.III of this report. Construction of the Phase 1 improvements will also increase the capacity of the system to allow for the increased capacity for the improvements of the Phase 2 - Sidley Road Improvements.

The Phase 1 design plans and specifications have been completed. Permits have been obtained from Penn DOT, PA DEP, and the Chester County Conservation District for the project. The Phase 1 construction bids were received on July 1, 2013 and construction started on September 9, 2013. The new piping system was operational on November 4, 2013. Final punch list type work still needs to be completed for the project. Final completion is expected to be completed by December 26, 2013. A copy of the Mill Lane Sewer Main Replacement Phase 1- Issued for Construction - design plans showing the plan and profile of the proposed piping system is included as part of Exhibit E.

B. Design and Construction of Phase 2 Improvements

Phase 2 – Sidley Road Improvements – This phase of the improvements has been set up to include the sanitary sewer improvements from the end of Phase 1 in Sidley Road north in Sidley Road to the intersection with Lee Boulevard. Construction of the Phase 2 improvements will

include the upgrading of sewer lines which will eliminate capacity issues related to the undersized pipe in Sidley Road as detailed in Sections IV and V of this report. Construction of the Phase 2 improvements will also increase the capacity of the system to allow for the increased flow projected from Southside.

The Phase 2 design plans are 100% complete. Phase 2 construction bids were received on November 4, 2013. The construction bid is expected to be awarded at the November 13, 2013 East Whiteland Township Board of Supervisors meeting. Phase 2 construction is expected to start by December 2013 and be substantially complete by March 2014, weather permitting. A copy of the Sidley Road Sewer Main Replacement Phase 2 - Issued for Bids - design plans showing the plan and profile of the proposed piping system along Sidley Road is included as part of Exhibit E.

It is noted that the eight (8) inch diameter existing over capacity segment in Moores Road will operate at an acceptable level when the Sidley Road gravity sewer is re-routed to drain south on Sidley Road toward Lapp Road and away from Moores Road. A capacity analysis of the entire improved Mill Lane and Sidley Road system is included as part of Exhibit E.

C. Design and Construction of Phase 3 Improvements

Phase 3 – Improvements to the Lee Boulevard Pump Station – The need for this phase of improvements will be based upon the timing of the connection schedules of the various Southside projects. Currently, the Lee Boulevard Pump Station (Pump Station) pumps have a hydraulic peak design capacity of 430 gallons per minute (gpm) which equates to 619,200 gallons per day (gpd). At the 619,200 gpd, using a 3.7 pump station peaking factor to evaluate the total allowable average daily flow, equates to an average daily flow of 167,350 gpd. The 2012 annual average daily flow through the Pump Station is 80,573 gpd which leaves (167,350 gpd – 80,573 gpd) 86,777 gpd remaining capacity before an upgrade to the pump station is needed.

According to current knowledge, Pickering Crossing (Charlestown) and Spring Oak (Charlestown) are actively seeking connection to the public sewer as soon as possible. The Office Restaurant (Charlestown) has also submitted a planning module to East Whiteland for

review. These three projects will not be able to connect to the East Whiteland sewer system until the Mill Lane Sewer Main Replacement Phase 1 and Sidley Road Sewer main replacement Phase 2 have been constructed and are operational. These three projects combined have been allocated a total of 273.1 EDUs which equates to an average daily flow of 75,103 gpd which is 86.6% of the remaining in the Pump Station and can be accommodated with the current pumps. It is noted that Pickering Crossing and Spring Oak are relatively larger type developments which may take a few years for full build out. Any additional Charlestown projects will require an upgrade to the Pump Station prior to connection to and discharge from the Pump Station.

It is noted that additional Charlestown projects listed on the CMP will require planning module approval from East Whiteland. As part of the planning module approval, East Whiteland is prepared to note the limitations at the Lee Boulevard Pump Station and delay approval of the modules until upgrades have been constructed at the pump station. It is further noted that the Volpi development does not drain to the Pump Station. Consequently the Volpi flows would not be subject to any restrictions at the pump station.

The design of the Pump Station upgrades is expected to be started in 2014. Construction of the improvements is expected to be completed in 2015 at the earliest. The specific timing of the actual construction of the upgrades will ultimately be determined by the actual construction schedule of the Charlestown Southside projects.

It is noted that Charlestown has a current 300,000 gpd average daily flow allocation in the Township sanitary sewer system. Discussions are in progress to grant Charlestown an increase of 132,302 gpd which will create a total allocation of 432,302 gpd. Additional discussion on the Charlestown allocation is included in the Connection Management Plan (CMP) section of this report.

VII. MILESTONES

The following is a list of the actions, with milestone dates, that the Township will undertake to resolve the structural and hydraulic issues with the Mill Lane and Sidley Road gravity sewer systems:

A. Prepare Design Plans for Phase I Mill Lane Sewer Replacement Project

Start: January 2012

Complete: May 2013

B. Prepare East Whiteland Township/Charlestown Township (Southside) ACT 537 Special Study

Start: August 2012

May/June – submit to DEP

Complete: September 2013 – approval by DEP

C. Resolve Cost Sharing with Valley Forge Sewer Authority

Start: August 2012

Complete: January 2014

D. Construct Phase 1 Mill Lane Sewer Replacement Project

Start: September 2013

Complete: December 2013

E. Prepare Design Plans for Phase 2 Sidley Road Sewer Replacement Project

Start: June 2012

Complete: September 2013

F. Prepare Water Quality Management General Permit – 02 (WQG-02)

Start: April 2013

May/June – submit to DEP

Complete: September 2013 – approval by DEP

G. Construct Phase 2 Sidley Road Sewer Replacement Project

Start: December 2013

Complete: March 2014

H. Design Phase 3 Lee Boulevard Pump Station Improvements Project

Start: March 2014

Complete: October 2014

I. Prepare Water Quality Management General Permit – 02 (WQG -02)

Start April 2014

September 2014 – submit to DEP

Complete December 2014 – approval by DEP

J. Construct Phase 3 Lee Boulevard Pump Station Improvements Project

Start: March 2015

Complete: September 2015

VIII.

MILL LANE and SIDLEY ROAD CORRECTIVE ACTION PLAN SUMMARY SHEET

Date: February 13, 2013 **Sheet 1 of 2**

Revised November 14, 2013

MUNICIPALITY:	**East Whiteland Township**
STRUCTURAL CONDITION:	**Mill Lane Sanitary Sewer Leakage**
OVERLOAD CONDITION:	**Sidley Road Sanitary Sewer Over-capacity**
REPORTING PERIOD:	**FROM: February 1, 2013 TO: November 8, 2013**
PROPOSED PLAN:	**Improve the Mill Lane and Sidley Road gravity sewer collection and conveyance systems to eliminate the structural and over-capacity issues.**

MILL LANE and SIDLEY ROAD COLLECTION and CONVEYANCE SYSTEMS

A. CONNECTION MANAGEMENT PLAN (CMP)

I. INTRODUCTION

As noted in the Corrective Action Plan (CAP) portion of the report, various existing system limitations are planned to be corrected by means of a series of improvements to the Mill Lane and Sidley Road gravity collection and conveyance systems.

Charlestown Township (Charlestown) has presented a schedule of flows from Charlestown Southside (Southside) which will drain to the Sidley Road and Mill Lane collection and conveyance lines. The timing of sewer connections will be determined by not only the progress of the corrective actions outlined in the CAP but also the individual progress of the identified Southside building projects.

An additional factor that will determine the timing of connections will be the status of the Amendment to East Whiteland Trunk Line Agreement (Agreement). The Agreement currently allows for 300,000 gallons per day from Southside. A copy of the Agreement is included in Exhibit F. In order to provide capacity for the entire list of identified Southside projects, additional capacity will need to be purchased by Charlestown. Discussions are underway with Valley Forge Sewer Authority (VFSA) to purchase the additional capacity for Charlestown. A copy of the revised draft Agreement is included in Exhibit F. A copy of the VFSA commitment letter is also included in Exhibit F.

II. CONNECTION MANAGEMENT

Connection management is based primarily upon a time table provided by Charlestown and included as part of Exhibit D. The flows and schedule in Exhibit D have been expanded to create a Connection Management Plan (CMP) which includes DEP Code Numbers, Date of Approval by DEP, Construction Status, and Connection Status. The CMP Schedule is included in Section B.III. The CMP does not include the existing Southside flows.

The 300,000 gallons per day allowed for Southside includes flows that do not drain to the Mill Lane and Sidley Road system. A tabulation of the 2012 existing Southside flows is as follows:

Charlestown Meadows – 19,074 gpd (does not drain to Mill Lane/Sidley Road)
Charlestown Oaks – 38,354 gpd (drains to Sidley Road/Mill Lane)
Lee Boulevard Pump Station – 77,668 gpd (drains to Sidley Road/Mill Lane)
Total 2012 Southside flow – 135,096 gpd

The remaining capacity, utilizing the existing 300,000 gpd allocation = 300,000 – 135,096 = 164,904 gpd which equates to 599.7 EDUs at 275 gallons/EDU. As noted in the CMP 599.7 EDUs are allocated to the Southside flow which will cover partial completion of projects projected to be constructed in years 2019 to 2023. An additional flow allocation is being discussed with Valley Forge Sewer Authority which will allow Charlestown to construct the remaining projects listed on the CMP. A copy of the current revised draft Agreement is included in Exhibit F.

B.III.

DEPARTMENT OF ENVIRONMENTAL PROTECTION
SOUTHEAST REGIONAL OFFICE

SEP 17 2013

Ms. Terry Woodman, Manager
East Whiteland Township
209 Conestoga Road
Frazer, PA 19355-1699

Re: Act 537 Special Study
Sidley Road Area Sewage Conveyance System Upgrades
Status: ISSUED
APS ID 38912, AUTH ID 986960
East Whiteland Township
Chester County

Dear Ms. Woodman:

We have completed our review of your municipality's proposed Official Sewage Facilities Plan Special Study for the Sidley Road area sewage conveyance system upgrades in East Whiteland Township (Township), Chester County. The Special Study, titled East Whiteland Township/ Charlestown Township (Southside) Act 537 Special Study (Special Study), was prepared by ARRO Engineering & Environmental Consultants, and is dated June 2013. This Special Study was submitted to the Department of Environmental Protection (DEP), and a review was conducted in accordance in accordance with the provisions set forth by Section 5 of the Pennsylvania Sewage Facilities Act and Chapter 71, the Administration of Sewage Facilities Program. Additional information was received by DEP on August 30, 2013.

Approval of the Special Study is hereby granted. This approval provides for the following:

1. The upgrade of portions of the existing sewage conveyance system to provide for the existing and future sanitary sewer needs of the north-central portion of the Township and the south-central portion of Charlestown Township. The implementation of these upgrades will occur in four phases.

    a. **Phase I** – will include the installation of a new 18-inch sanitary sewer main along Mill Lane from Manhole 67-1AA to Manhole ML-8 upstream of the Mill Lane Pump Station. (MLPS). The construction of these sanitary sewer sections has been allowed to proceed in order to mitigate the existing pipe leakage located under Route 202.

SEP 17 2013

b. **Phase II** – will include the installation of a new 18-inch sanitary sewer main along Sidley Road from Manhole ML-8 to Manhole SL-7 and the installation of a new 15-inch sanitary sewer main along Sidley Road from Manhole SL-7 to Manhole SL-10. The construction of these sanitary sewer sections shall be completed consistent with the implementation schedule found on pages 4 and 5 of the Special Study.

c. **Phase III** – The expansion of the Lee Boulevard Pumping Station (LBPS) to accommodate total average annual flows of 385,039 gallons of sewage per day (gpd), which accounts for the existing flows to the pump station and the projected flows through the year 2038 for the service area tributary to the pump station. The permitting and construction of the LBPS shall be completed consistent with the implementation schedule found on pages 4 and 5 of the Special Study.

d. **Phase IV** – commitment for additional sewage facilities planning for the planning area associated with Liberty Properties located in the Great Valley Industrial Park. This future planning effort will include planning for the expansion of the Wilburdale Pump Station. The timing of this future planning effort is dependent on the development of the Great Valley Industrial Park.

2. A commitment for additional sewage facilities planning for upgrades to portions of the interceptor/trunk sewer, downstream from the MLPS, and the existing 14-inch force main. The future planning effort will be triggered through the monitoring of average daily flows at the MLPS. This flow trigger will be approximately 989,126 gpd.

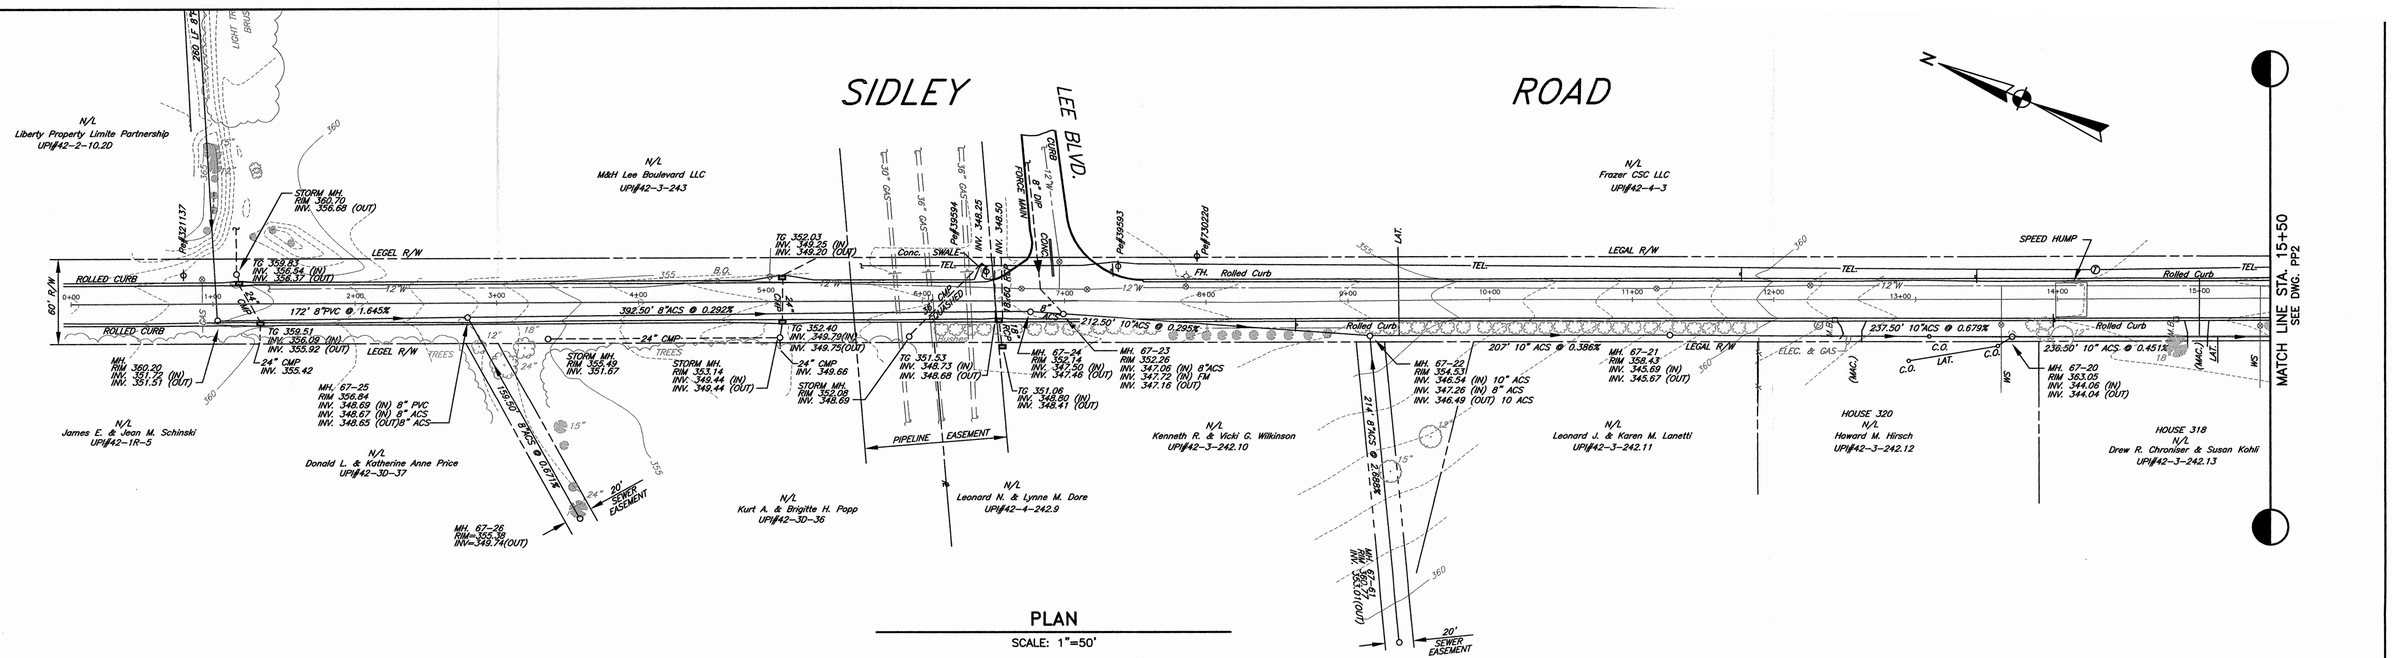
East Whiteland Township and Valley Forge Sewer Authority (VFSA) have committed to update and amend the existing intermunicipal agreement, known as the East Whiteland Trunkline Agreement, to allow for an increase in VFSA's annual average reserve capacity for Charlestown Township from 300,000 gpd to 432,302 gpd.

Please note that any new land developments associated with this plan will not be eligible for exemptions from sewage facilities planning under Chapter 71, Section 71.51(b)(2), until after the receiving facilities have been constructed. Applicants proposing projects that will coordinate new development construction with the construction of municipal conveyance or treatment facilities must submit Sewage Facilities Planning Modules for adoption by the municipality and approval by DEP.

The Clean Streams Law permit application for Phases I and II improvements is currently under review by DEP. East Whiteland Township must secure Clean Streams Law permits from DEP for the construction and operation of the remaining project phases.

Any person aggrieved by this action may appeal, pursuant to Section 4 of the Environmental Hearing Board Act, 35 P.S. Section 7514, and the Administrative Agency Law, 2 Pa.C.S. Chapter 5A, to the Environmental Hearing Board, Second Floor, Rachel Carson State Office Building, 400 Market Street, P.O. Box 8457, Harrisburg, PA 17105-8457, 717.787.3483. TDD users may contact the Board through the Pennsylvania Relay Service, 800.654.5984. Appeals must be filed with the Environmental Hearing Board within 30 days of receipt of written notice of this action unless the appropriate statute provides a different time period. Copies of the appeal form and the Board's rules of practice and procedure may be obtained from the Board. The appeal form and the Board's rules of practice and procedure are also available in braille or on audiotape from the Secretary to the Board at 717.787.3483. This paragraph does not, in and of itself, create any right of appeal beyond that permitted by applicable statutes and decisional law.

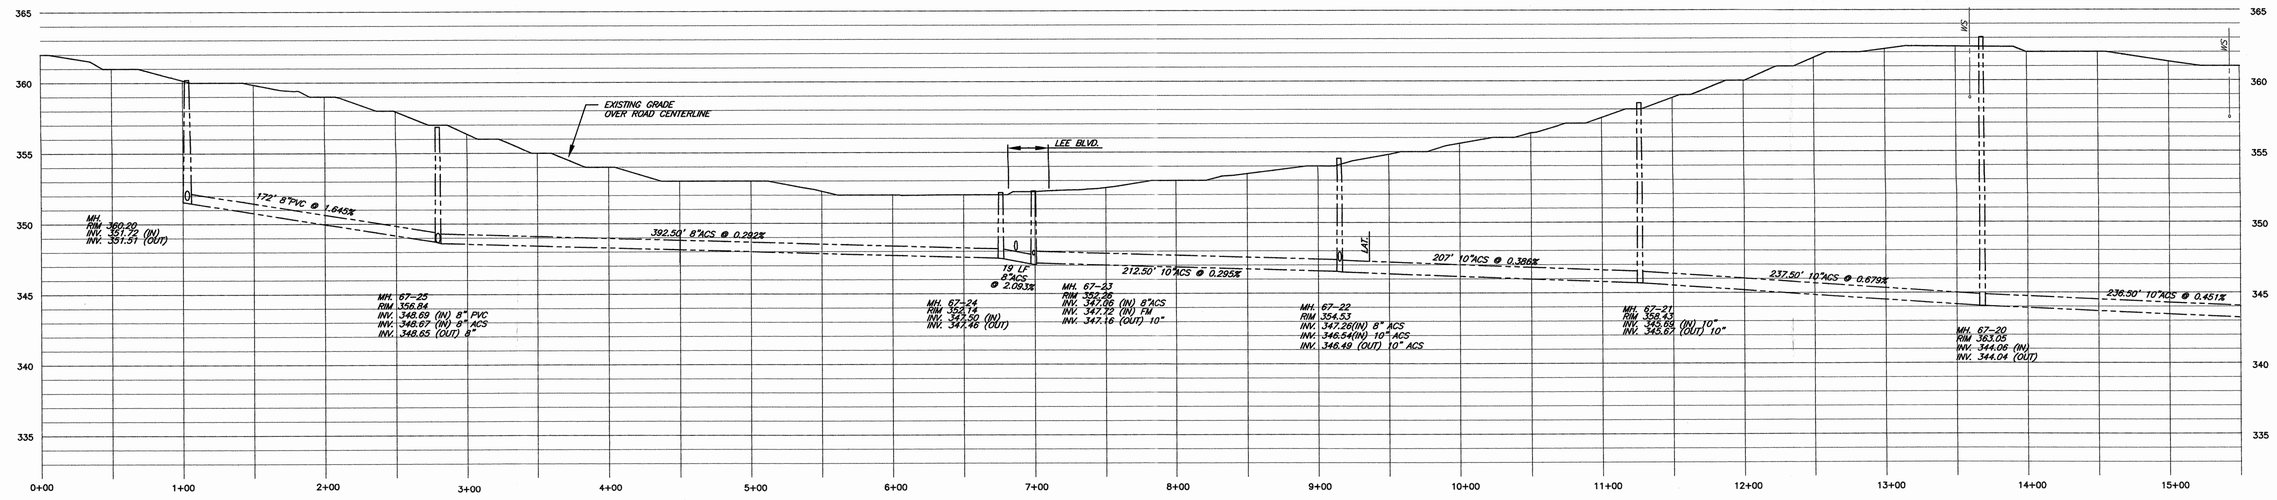
IF YOU WANT TO CHALLENGE THIS ACTION, YOUR APPEAL MUST REACH THE BOARD WITHIN 30 DAYS. YOU DO NOT NEED A LAWYER TO FILE AN APPEAL WITH THE BOARD.



IMPORTANT LEGAL RIGHTS ARE AT STAKE, HOWEVER, SO YOU SHOULD SHOW THIS DOCUMENT TO A LAWYER AT ONCE. IF YOU CANNOT AFFORD A LAWYER, YOU MAY QUALIFY FOR FREE PRO BONO REPRESENTATION. CALL THE SECRETARY TO THE BOARD (717.787.3483) FOR MORE INFORMATION.

If you have any questions, please contact Ms. Kelly Boettlin of this office at 484.250.5184.

Sincerely,



Jenifer Fields, P.E.

Re: Official Update of Charlestown South Side Sewerage Flow Projections

Dear Mr. Goldberg,

In accordance with the requirement of the Pennsylvania Department of Environmental Protection (PADEP) that all of the Valley Forge Sewer Authority's (VFSA) customers provide Municipal Needs Assessment Updates in order to complete its Regional Act 537 Plan, Charlestown Township provided the VFSA with its Needs Analysis prepared by Surender Kohli, P.E. and approved by its Board of Supervisors back in September of 2008.

The 2008 Needs Analysis indicates a projected total average flow from the south side of Charlestown Township at 417,060 gpd. This, along with the other community flow projects, was part of the basis for the PADEP-approved Act 437 Plan for the VFSA treatment plant.

Charlestown Township is hereby updating the 2008 Needs Analysis. This is included as Appendix A, which has been compiled by Charlestown's consulting engineer and approved by the Charlestown Township Board of Supervisors at their meeting on March 4, 2013.

Very truly yours,

Linda M. Csete
Township Manager

2. Phase 2 – Sidley Road Improvements Plans
3. System Capacities with Corrective Actions

PROFILE

SCALE: 1"=50' HORZ.
1"=5' VERT.

NOTES:

1. REMOVE MANHOLE FRAMES & COVERS, DEMO MANHOLE TOP DOWN TO 3 FEET BELOW GRADE & FILL WITH 2A STONE.
2. SEE DWG. D1 & C3 FOR BYPASS PUMPING LAYOUT.
3. MANHOLES ML1, ML 67-2, ML 67-1, ML 67-1A, & 59-4 SHALL BE EQUIPPED W/ WATERTIGHT COVERS & EXTEND 18" ABOVE FINISHED GRADE.
4. FOR INSIDE SLIDE MANHOLE SEE DETAIL, DWG. MD1.
5. ALL MANHOLES SHOWN ON PP1 SHALL BE 5'-0" IN DIAMETER.
6. FULL & HALF LANE MILL & OVERLAY LIMITS TO BE DETERMINED IN THE FIELD.

E&S NOTES:

1. THIS PROJECT IS IN AN EXCEPTIONAL VALUE WATERSHED, EXTREME CARE SHOULD BE EXERCISED IN ALL DISTURBANCE ACTIVITIES TO PREVENT DEGRADATION TO THE WATERS OF THE COMMONWEALTH.

   BECAUSE THIS PROJECT IS IN AN EXCEPTIONAL VALUE WATERSHED, UPON COMPLETION OR TEMPORARY CESSATION OF EARTH DISTURBANCE ACTIVITIES, THE PROJECT SITE MUST IMMEDIATELY BE STABILIZED WITH THE APPROPRIATE TEMPORARY OR PERMANENT STABILIZATION.
2. FOR PROPER STABILIZATION METHODS & DETAILS SEE DWGS. ES1, ES2, & ES3.
3. ALL FILTER SOCKS THIS SHEET SHALL BE 24" DIAMETER.
4. DISTURBED AREAS TO BE RE-VEGETATED WITHIN 50' OF SURFACE WATERS SHALL BE STABILIZED WITH EROSION CONTROL BLANKET (ECB).
5. SEE LEGEND ON DWG. ES1.

AMENDMENT TO EAST WHITELAND TRUNK LINE AGREEMENT

This Amendment, dated as of the 12th day of December, 1979, to the East Whiteland Trunk Line Agreement dated as of February 1, 1971, as amended by Composite Amendment No. 1, dated as of December 1, 1974 (hereinafter referred to as "the Agreement"), is entered into between EAST WHITELAND MUNICIPAL AUTHORITY (East Whiteland Authority), the TOWNSHIP OF EAST WHITELAND (East Whiteland Township), parties of the first part, and the BOROUGH OF MALVERN (Malvern), and MALVERN MUNICIPAL AUTHORITY (Malvern Authority), parties of the second part, and VALLEY FORGE SEWER AUTHORITY, party of the third part.

WHEREAS, subsequent to the execution of the Agreement, Valley Forge Sewer Authority decided to seek the opportunity to transmit sewage from an area of Charlestown Township adjacent to East Whiteland Township through the East Whiteland Trunk Line (and the Valley Creek Trunk Line) to the Valley Forge Treatment Plant; and

WHEREAS, East Whiteland Authority and East Whiteland Township, at the request of Valley Forge Sewer Authority are willing to reserve for the Valley Forge Sewer Authority, the reserved capacity provided herein of the East Whiteland Trunk Line and the Mill Lane pumping station; and

NOW, THEREFORE, the parties hereto, intending to be legally bound hereby, agree as follows:

1. Valley Forge Sewer Authority shall have no rights or liabilities with respect to Section 1.01 of the Agreement.

2. Within thirty (30) days of the date of this Amendment, Valley Forge Sewer Authority shall pay to East Whiteland Authority the sum of one hundred fifteen thousand nine hundred seventy-five

dollars ($115,975). Of that sum, $114,189 shall be allocated to Valley Forge Sewer Authority's capital contribution pursuant to Sections 2.01 and 2.02 of the Agreement and $1,786 to operating expenses for the first two (2) years pursuant to Section 4.13 of the Agreement. The calculation of the above figure takes into consideration all currently applicable grants. Exhibit B of the Agreement is hereby amended in part as set forth in Exhibit A attached hereto. All references in the Agreement to Exhibit B thereof shall be deemed to refer to Exhibit B as amended by Exhibit A attached hereto.

3. Valley Forge Sewer Authority hereby is granted rights, and assumes liabilities as if it were one of the parties referred to in the Agreement as a "Municipality" which rights and liabilities are defined in the Agreement.

4. Valley Forge Sewer Authority, at its own expense or at the expense of its users, may, during the term of the Agreement, cause sewage emanating from Charlestown Township to be discharged into sewer lines of East Whiteland Township which have been acquired from Great Valley Wastewater Company ("the Great Valley Line"). The East Whiteland Trunk Line shall thus be extended to the boundary of Charlestown Township.

5. Valley Forge Sewer Authority shall commence delivering sewage to the Great Valley Line as soon as practicable after the execution of thia Agreement. East Whiteland Authority, as soon as practicable thereafter, shall permit connection at the locations that East Whiteland Authority may agree to, which agreement may not be unreasonably withheld, and shall accept sewage for conveyance to the treatment plant subject to the terms and conditions herein set forth. Valley Forge Sewer Authority may make subsequent connections at locations agreed to by East

Whiteland Authority, which shall not unreasonably withhold its agreement. Except as permitted pursuant to Article VII of the Agreement, Valley Forge Sewer Authority shall not exceed its reserved capacity as set forth in Exhibit B, as amended by this Agreement.

6. Section 4.01 of the Agreement is hereby amended to read as follows:

"The Borough of Malvern, the township of East Whiteland and Valley Forge Sewer Authority (all of which are referred to in this article IV and elsewhere in this agreement as 'said municipalities') shall share the operating expenses of the East Whiteland Trunk Line and its extension to Charlestown Township, as defined in Section 4.06, as follows: the proportion that the volume of sewage (determined as hereinafter provided and by other agreement of the parties) emanating from each such municipality and discharged into the several sections or reaches of the interceptor or trunk sewer, constituting the East Whiteland Trunk Line and its extention to Charlestown Township bears to the total volume of sewage discharged by said municipalities into such sections or reaches shall be used in calculating the amount that each such municipality shall pay for sewage conveyance services. Operating expenses of the East Whiteland Trunk Line for the first two years of operation shall be paid as set forth in Section 4.13 hereof."

All references in Article 4 of the Agreement to East Whiteland Trunk Line shall be deemed also to refer to the Great Valley Line.

7. Any sewage discharged by Valley Forge Sewar Authority into the East Whiteland Trunk Line or Great Valley Line shall conform to the standards for quality of sewage set forth in Article V of the Agreement.

3. Pursuant to an Agreement entitled "Valley Creek Trunk Sewer Agreement" dated November 1, 1970, as amended, East Whiteland Authority has made payments to Tredyffrin Township for operating expenses of the Valley Creek Trunk Line during its first two years of operation, and will, during subsequent years, continue to be obligated to make payments on account of operating expenses. Valley Forge Sewer Authority agrees hereby to, within thirty days from the execution of this Agreement, reimburse East Whiteland Authority for 7.89% of the amount paid on account of operating expenses during the first two years by East Whiteland Authority to Tredyffrin Township. Valley Forge Sewer Authority further agrees to reimburse East Whiteland Authority for Valley Forge Sewer Authority's share of any payments East Whiteland must make to Tredyffrin Township pursuant to Article 4 of the Valley Creek Trunk Sewer Agreement for operating costs during years subsequent to the first two years of operation and for payments for capital contributions paid subsequent to the date hereof. Valley Forge Sewer Authority's share of the said operating costs and additional capital contributions will be its pro-rata share, based on the proportion that the volume of sewage emanating from Charleatown Township into the East Whiteland Trunk Line and Great Valley Line bears to the total sewage emanating from East Whiteland Township into the Valley Creek Trunk Sewer Line. The payments by Valley Forge Sewer Authority shall not exceed those that would be made if said Authority had made its payments directly to the Tredyffrin Township Municipal Authority.

9. At such time as East Whiteland Authority must pay funds to the Tredyffrin Township Municipal Authority resulting from an enlargement of an intercepter or trunk sewer (or any section or reach thereof) or the construction of an additional interceptor

or trunk sewer or the enlargement of a pumping station or the construction of an additional pumping station pursuant to the Valley Creek Trunk Sewer Agreement, then Valley Forge Sewer Authority shall reimburse East Whiteland Township for its pro-rata share of said funds calculated on the basis of its pro-rata share of reserved capacity, as such reserved capacity shall be determined by Valley Forge Sewer Authority, in such section or reach of interceptor or trunk sewer. In the alternative, Valley Forge Sewer Authority may reserve capacity pursuant to Section 7.02 of the Valley Creek Trunk Sewer Agreement.

10. Valley Forge Sewer Authority hereby agrees that all sewage from Charlestown Township shall be deemed to be sewage of Valley Forge Sewer Authorty for purpose of an Agreement dated as of November 1, 1970, as amended, known as "the Valley Forge Sewage Treatment Plan Agreement".

11. Valley Forge Sewer Authority shall, at its expense, construct or cause to be constructed a sewage meter or sewage flow measuring device to determine the volume of sewage emanating from Charlestown Township to East Whiteland Township.

12. All references in Sections 4.03, 7.03 and 8.03 of the Agreement to "Malvern" shall be deemed to refer to Malvern and Valley Forge Sewer Authority. Valley Forge Sewer Authority shall make payments pursuant to Section 4.04 of the Agreement at the same time as Malvern is required to make payments. All other sections of the Agreement refer to parties or municipalities defined in Section 4.01, as amended by Paragraph 6 of this Agreement, unless otherwise stated herein.

13. Pursuant to Paragraph 7.01 of the Valley Creek Trunk Sewer Agreement, Valley Forge Sewer Authority hereby is granted the right to rent a capacity of up to 300,000 gallons per day average flow (750,000 gallons per day peak flow) in the Valley

Creek Trunk Sewer from East Whiteland Authority, with all rental fees therefore being paid to East Whiteland Authority, as provided therein.

IN WITNESS WHEREOF, each of the parties hereto has caused this Agreement to be executed and attested by its proper officers pursuant to the proper action of its governing body as of the day and year first above written.

EXHIBIT "A"

Exhibit "B" of the East Whiteland Trunk Line Agreement is amended in part to provide that if any expansion, repair, enlargement or construction to the Great Valley Line shall be required, Valley Forge Sewer Authority shall pay its pro rata share of such expansion, enlargement or construction on the basis of its reserved capacity in the expanded or repaired Great Valley Line to the total reserved capacity therein. Notwithstanding the foregoing, 300,000 gallons per day of capacity shall be reserved in the Great Valley Line for Valley Forge Sewer Authority.

EXHIBIT "B"

THIS AGREEMENT made this 27th day of December 1978, by and between EAST WHITELAND MUNICIPAL AUTHORITY and VALLEY FORGE SEWER AUTHORITY

W I T N E S S E T H:

Valley Forge Sewer Authority and East Whiteland Municipal Authority have agreed to share cost for the Sidley Road Trunk Line repairs as indicated in Schedule A presented by East Whiteland Municipal Authority (Schedule A attached hereto). Items Nos. 1, 3, 4, and 6 of the Schedule A, which are line replacements, will be deferred until additional flows coming from Charlestown Township make ~~repairs~~ Replacements if necessary as determined by East Whiteland Municipal Authority's consulting engineers. Item No. 14 of Schedule A will be adjusted on the basis of proposed additional repairs to be required in lieu of replacement of earlier mentioned lines.

NOW THEREFORE, the parties hereto, agree that the mutual promises herein contained and previous arrangements will allow the parties to finalize the agreement to provide sewer service to the southern portion of Charlestown Township through the East Whiteland Trunk Line.

AMENDMENT TO EAST WHITELAND TRUNK LINE AGREEMENT

This Amendment to East Whiteland Trunk Line Agreement is made this _____ day of _____, 2013, between EAST WHITELAND TOWNSHIP ("East Whiteland"), a township of the second class, EAST WHITELAND MUNICIPAL AUTHORITY ("East Whiteland Authority"), a municipal authority organized by East Whiteland and VALLEY FORGE SEWER AUTHORITY, a municipal authority organized by Charlestown, East Pikeland and Schuylkill Townships.

BACKGROUND

A. On December 27, 1978, East Whiteland Authority and Valley Forge Sewer Authority entered into a cost sharing agreement for the Sidley Road Trunk Line repairs as indicated on Schedule A attached thereto to provide sewer service to the southern portion of Charlestown Townsbip through the East Whiteland Trunk Line (and the Valley Creek Trunk Line) to the Valley Forge Sewage Treatment Plant.

B. On December 12, 1979, the parties hereto among others entered in an Amendment to thc East Whiteland Trunk Line Agreement dated as of February 1, 1971, as amended by Composite Amendment No. 1, dated as of December 1, 1974, to reserve for the Valley Forge Scwer Authority 300,000 gallons per day of reserved capacity in the East Whiteland Trunk Line (as extended to the boundary to Charlestown Township via the "Great Valley Line") and the Mill Lane Pumping Station, to transmit sewage from Charlestown Township through the East Whiteland Trunk Line (and the Valley Creek Trunk Line) to the Valley Forge Sewage Treatment Plant.

C. The purpose of this Agreement Amendment is to establish a new and increased reserve capacity for the Valley Forge Sewer Authority within and through the East Whiteland sewer system. This Agreement Amendment shall also serve to establish the cost sharing between East Whiteland and the Valley Forge Sewer Authority.

D. This Agreement Amendment hereby declares that Valley Forge Sewer Authority shall have a reserved capacity within and through the East Whiteland system as apportioned below.

E. This Agreement Amendment also amends Article VI Section 6.01 of the East Whiteland Trunk Line Agreement to include the use of Tele-metering devices for transmitting flow signals from certain VFSA Sewage Discharge points into the East Whiteland system.

F. For purposes of this Agreement, the various portions of the East Whiteland Township sewer system are defined as follows:

1. East Whiteland Trunk Line (A) - The Trunk Line (A) shall include the gravity line through the Mill Lane Pump Station, the Mill Lane Pump Station force main, and gravity lines from the force main through the point at which the force main turns to gravity and then south and east to the point at which the East Whiteland gravity sewer leaves East Whiteland and then enters the Tredyffrin System.

2. East Whiteland Trunk Line (B) - The Trunk Line (B) shall include the gravity line from Charlestown Township along Conestoga Road through the Hillbrook Pump Station, the Hillbrook Pump Station force main, and gravity lines from the force main to the discharge point at the Mill Lane Pump Station.

3. Great Valley Line – The Great Valley Line shall include the existing gravity line to the Mill Lane Pump Station from the East Whiteland/Charlestown Township line to the terminal manhole at the east end of the James Thomas Road cul-de-sac thence along and/or through James Thomas Road, Aston Road, Phoenixville Pike, Hayes Road, Sidley Road, Moores Road, across the Aegon property, under Rt 202 to the Mill Lane Pump Station. The portion of sewer line along Sidley Road is also known as the Sidley Road Trunk Line.

4. Lee Boulevard Force Main – The Lee Boulevard Force Main shall include the force main from the Lee Boulevard Pump Station to the force main discharge point in Sidley Road.

5. Mill Lane Trunk Line – The Mill Lane Trunk Line shall include the gravity line as detailed on design plans prepared by ARRO Consulting, Inc. entitled Mill Lane Sewer Main Replacement, Phase 1. The Mill Lane Trunk Line shall extend from Manhole ML8 in

Sidley Road approximately two-hundred (200) feet north of the intersection of Sidley Road and Lapp Road, thence south in and/or along Sidley Road, Mill Lane, under Rt 202 to an existing portion of the Great Valley Line which drains to the Mill Lane Pump Station.

6. New Sidley Road Trunk Line – The New Sidley Road Trunk Line shall include the gravity line as detailed on design plans prepared by ARRO Consulting, Inc. entitled Sidley Road Sewer Main Replacement, Phase 2. The New Sidley Road Trunk Line shall extend south in Sidley Road from the intersection of Sidley Road and Lee Boulevard to Manhole ML8 in Sidley Road which is the terminal end of the Mill Lane Sewer Main Replacement, Phase 1.

7. Mill Lane Pump Station – The pump station shall include the existing/new facility located north west of the intersection of Route 401 and Mill Lane.

8. Lee Boulevard Pump Station – The pump station shall include the existing facility located adjacent to Lee Boulevard.

9. Hillbrook Pump Station – The pump station shall include the existing facility located on Conestoga Road adjacent to Hillbrook Circle.

10. In summary, the various systems described in Sections F1 through F9 include all the pipelines through which Valley Forge Sewer Authority wastewaters drain in East Whiteland Township.

G. The various portions of the sanitary sewer system noted in Section F of this Agreement are outlined in Schedule C.

H. East Whiteland and East Whiteland Authority, at the request of Valley Forge Sewer Authority, are willing to reserve additional capacity for Valley Forge Sewer Authority, for a total reserved capacity of 432,302 gallons per day as provided herein.

NOW, THEREFORE, the parties hereto intending to be legally bound hereby agree as follows:

1. Sidley Road Trunk Line Cost Sharing Agreement. The December 27, 1978 Agreement between East Whiteland Authority and Valley Forge Sewer Authority establishing the cost sharing agreement for the Sidley Road Trunk Line is amended by eliminating Schedule A attached thereto and substituting therefor Schedule B attached hereto and incorporated herein. It is noted that construction costs noted in Schedule B are estimates.

The final cost sharing shall be based upon actual construction contract prices, subject to the prior review and approval of the Valley Forge Sewer Authority.

2. Reserved Capacity. Following the 2013 replacement and enlargement of the Mill Lane Pump Station and the construction of the Mill Lane and New Sidley Road Trunk Lines (as described in Section C of this Agreement and in the East Whiteland Special Study of 2013 prepared by ARRO Consulting, Inc.), reserved capacity for Valley Forge Sewer Authority in the East Whiteland Trunk Line shall be as follows:

a. The reserved capacity for the Valley Forge Sewer Authority in the East Whiteland Trunk Line (A) shall be 432,302 gallons per day

b. The reserved capacity for the Valley Forge Sewer Authority in the New Sidley Road Trunk Line and Mill Lane Trunk Line shall be 412,302 gallons per day.

c. The reserved capacity for the Valley Forge Sewer Authority in the Lee Boulevard Pump Station and Lee Boulevard Force Main shall be 350,448 gallons per day.

d. The reserved capacity for the Valley Forge Sewer Authority in the Mill Lane Pump Station shall be 432,302 gallons per day.

e. The reserved capacity for the Valley Forge Sewer Authority in the East Whiteland Trunk Line (B) shall be 20,000 gallons per day.

3. Flow Meters or Measuring Devices. The Valley Forge Sewer Authority shall be responsible for all costs to include, but not be limited to, the costs of the installation and maintenance of the equipment and the monthly costs for transmission of flow data to East Whiteland Township via cell phone technology from the Lee Boulevard Pump Station, the Charlestown Meadows Pump Station, and the Charlestown Oaks metering station to the Remote Terminal Unit (RTU) located in the new Mill Lane Pump Station.

If there are future locations requiring flow monitoring of Valley Forge Sewer Authority flows into the East Whiteland System, the Valley Forge Sewer Authority will be responsible for all costs to include, but not be limited to, the costs of installation and maintenance of equipment and the monthly charges for transmission of required flow data to East Whiteland system. The cell phone technology shall be updated by the Valley Forge Sewer Authority. -

4. Future Capital Projects. Following completion of the Mill Lane Pump Station, the Mill Lane Trunk Line, and the New Sidley Road Trunk Line replacement and enlargement projects, if any additional expansion, enlargement, repair or construction of any portions of any of the sewer system entities defined in Section F of this Agreement shall be required, Valley Forge Sewer Authority shall pay its pro rata share of such expansion, enlargement, repair or construction on the basis of its reserved capacity as detailed in Section 2 Reserved Capacity of this Agreement.

5. Effective Date. This Amendment shall be effective upon the approval by the governing body of the last party to approve.

IN WITNESS WHEREOF, each of the parties hereto has caused this Agreement to be duly executed as of the day and year first above written.

Re: East Whiteland Township Act 537 Special Study

Dear Ms. Boettlin:

This letter is to memorialize the Valley Forge Sewer Authority's (VFSA) commitment to finalizing the inter-municipal agreement amendment between East Whiteland the VFSA. We are aware that this amendment is part of the Special Study process and will endeavor to provide you with an amended Agreement in a timely manner, once the details are worked out and the amendment is executed. We and East Whiteland have both reviewed draft agreement amendments and are in basic agreement as to the major terms, namely that after completion of the Mill Lane and upstream sewer projects in East Whiteland, VFSA's reserve capacity in the East Whiteland system will be 432,302 gallons per day. This capacity is consistent with the Municipal Needs Assessment that supports the VFSA's Regional Act 537 Plan. In accordance with the inter-municipal agreements, these projects will be funded by each municipality according their respective reserve capacities.

Very truly yours,

Martin Goldberg

APPENDIX R

Draft Intermunicipal Agreement Amendment

AMENDMENT TO EAST WHITELAND TRUNK LINE AGREEMENT

This Amendment to East Whiteland Trunk Line Agreement is made this 18 day of April, 2014, between EAST WHITELAND TOWNSHIP ("East Whiteland"), a township of the second class, EAST WHITELAND MUNICIPAL AUTHORITY ("East Whiteland Authority"), a municipal authority organized by East Whiteland and VALLEY FORGE SEWER AUTHORITY, a municipal authority organized by Charlestown, East Pikeland and Schuylkill Townships.

BACKGROUND

A. On December 27, 1978, East Whiteland Authority and Valley Forge Sewer Authority entered into a cost sharing agreement for the Sidley Road Trunk Line repairs as indicated on Schedule A attached thereto to provide sewer service to the southern portion of Charlestown Township through the East Whiteland Trunk Line (and the Valley Creek Trunk Line) to the Valley Forge Sewage Treatment Plant.

B. On December 12, 1979, the parties hereto among others entered in an Amendment to the East Whiteland Trunk Line Agreement dated as of February 1, 1971, as amended by Composite Amendment No. 1, dated as of December 1, 1974, to reserve for the Valley Forge Sewer Authority 300,000 gallons per day of reserved capacity in the East Whiteland Trunk Line (as extended to the boundary to Charlestown Township via the "Great Valley Line") and the Mill Lane Pumping Station, to transmit sewage from Charlestown Township through the East Whiteland Trunk Line (and the Valley Creek Trunk Line) to the Valley Forge Sewage Treatment Plant.

C. The purpose of this Agreement Amendment is to establish a new and increased reserve capacity for the Valley Forge Sewer Authority within and through the East Whiteland sewer system. This Agreement Amendment shall also serve to establish the cost sharing between East Whiteland and the Valley Forge Sewer Authority.

D. This Agreement Amendment hereby declares that Valley Forge Sewer Authority shall have a reserved capacity within and through the East Whiteland system as apportioned below.

E. This Agreement Amendment also amends Article VI Section 6.01 of the East Whiteland Trunk Line Agreement to include the use of Tele-metering devices for transmitting flow signals from certain VFSA Sewage Discharge points into the East Whiteland system.

F. For purposes of this Agreement, the various portions of the East Whiteland Township sewer system are defined as follows:

1. East Whiteland Trunk Line (A) - The Trunk Line (A) shall include the gravity line through the Mill Lane Pump Station, the Mill Lane Pump Station force main, and gravity lines from the force main through the point at which the force main turns to gravity and then south and east to the point at which the East Whiteland gravity sewer leaves East Whiteland and then enters the Tredyffrin System.

2. East Whiteland Trunk Line (B) - The Trunk Line (B) shall include the gravity line from Charlestown Township along Conestoga Road through the Hillbrook Pump Station, the Hillbrook Pump Station force main, and gravity lines from the force main to the discharge point at the Mill Lane Pump Station.

3. Great Valley Line – The Great Valley Line shall include the existing gravity line to the Mill Lane Pump Station from the East Whiteland/Charlestown Township line to the terminal manhole at the east end of the James Thomas Road cul-de-sac thence along and/or through James Thomas Road, Aston Road, Phoenixville Pike, Hayes Road, Sidley Road, Moores Road, across the Aegon property, under Rt 202 to the Mill Lane Pump Station. The portion of sewer line along Sidley Road is also known as the Sidley Road Trunk Line. The portion of Great Valley Line in Sidley Road from manhole 67-24 at Lee Boulevard to manhole 67-13 in Moores Road will be abandoned and replaced with the New Sidley Road Trunk Line described in Section F.6.

4. Lee Boulevard Force Main – The Lee Boulevard Force Main shall include the force main from the Lee Boulevard Pump Station to the force main discharge point in Sidley Road.

5. Mill Lane Trunk Line – The Mill Lane Trunk Line shall include the gravity line as detailed on design plans prepared by ARRO Consulting, Inc. entitled Mill Lane Sewer Main Replacement, Phase 1. The Mill Lane Trunk Line shall extend from Manhole ML8 in Sidley Road approximately two-hundred (200) feet north of the intersection of Sidley Road and Lapp Road, thence south in and/or along Sidley Road, Mill Lane, under Rt 202 to an existing portion of the Great Valley Line which drains to the Mill Lane Pump Station.

6. New Sidley Road Trunk Line – The New Sidley Road Trunk Line shall include the gravity line as detailed on design plans prepared by ARRO Consulting, Inc. entitled Sidley Road Sewer Main Replacement, Phase 2. The New Sidley Road Trunk Line shall extend south in Sidley Road from the intersection of Sidley Road and Lee Boulevard to Manhole ML8 in Sidley Road which is the terminal end of the Mill Lane Sewer Main Replacement, Phase 1.

7. Mill Lane Pump Station – The pump station shall include the existing/new facility located north west of the intersection of Route 401 and Mill Lane.

8. Lee Boulevard Pump Station – The pump station shall include the existing facility located adjacent to Lee Boulevard.

9. Hillbrook Pump Station – The pump station shall include the existing facility located on Conestoga Road adjacent to Hillbrook Circle.

10. In summary, the various systems described in Sections F1 through F9 include all the pipelines through which Valley Forge Sewer Authority wastewaters drain in East Whiteland Township.

G. The various portions of the sanitary sewer system noted in Section F of this Agreement are outlined in Schedule C.

H. East Whiteland and East Whiteland Authority, at the request of Valley Forge Sewer Authority, are willing to reserve additional capacity for Valley Forge Sewer Authority, for a total reserved capacity of 432,302 gallons per day Annual Average Daily Flow as provided herein.

NOW, THEREFORE, the parties hereto intending to be legally bound hereby agree as follows:

1. Sidley Road Trunk Line Cost Sharing Agreement. The December 27, 1978 Agreement between East Whiteland Authority and Valley Forge Sewer Authority establishing the cost sharing agreement for the Sidley Road Trunk Line is amended by eliminating Schedule A attached thereto and substituting therefore Schedule B attached hereto and incorporated herein. It is noted that some of the construction costs noted in Schedule B are estimates. The final cost sharing shall be based upon actual construction contract prices, subject to the prior review and approval of the Valley Forge Sewer Authority.

2. Reserved Capacity. Following the 2013 replacement and enlargement of the Mill Lane Pump Station and the construction of the Mill Lane and New Sidley Road Trunk Lines (as described in Section C of this Agreement and in the East Whiteland Special Study of 2013 prepared by ARRO Consulting, Inc.), reserved capacity for Valley Forge Sewer Authority and East Whiteland Township based on capacity needs analysis to the year 2035 in the East Whiteland Trunk Line the Annual Average Daily Flow shall be as follows:

a. The reserved capacity for the Valley Forge Sewer Authority in the East Whiteland Trunk Line (A) shall be 432,302 gallons per day. The reserve capacity for East Whiteland Township and Malvern Borough in the East Whiteland Trunk Line (A) shall be 3,882,698 gallons per day. The amount of reserve capacity for each of these municipalities is defined by separate agreement between East Whiteland Township and Malvern Borough. Since the East Whiteland Township and Malvern Borough flow enters at several locations along this trunk line the weighted average of each party's flow shall be used to calculate cost sharing for any project that may occur in the future on this trunk line. Weighted average is defined as the average of each party's percent of flow in each pipe section weighted by the length of each pipe section compared to the total length of pipe sections included in a future project.

b. The reserved capacity for the Valley Forge Sewer Authority in the New Sidley Road Trunk Line and Mill Lane Trunk Line shall be 412,302 gallons per day. The reserve capacity for East Whiteland Township in the New Sidley Road

Trunk Line and Mill Lane Trunk Line shall be 552,803 gallons per day. Since the East Whiteland Township flow enters at several locations along these two sewer line segments the weighted average for cost sharing of each shall be 57.37 % VFSA and 42.63 % EWT in New Sidley Road Trunk Line and 44.63 % VFSA and 55.37 % EWT in Mill Lane Trunk Line up to manhole MH 59.4. The cost sharing for any improvements from manhole MH 59.4 to the Mill Lane Pump Station shall be based upon the weighted average concept outlined in Section 2.a.

c. The reserved capacity for the Valley Forge Sewer Authority in the Lee Boulevard Pump Station and Lee Boulevard Force Main shall be 373,673 gallons per day. The reserve capacity for East Whiteland Township in the Lee Boulevard Pump Station and Lee Boulevard Force Main shall be 22,265 gallons per day.

d. The reserved capacity for the Valley Forge Sewer Authority in the Mill Lane Pump Station and the Mill Lane Pump Station Forcemain shall be 432,302 gallons per day. The reserve capacity for East Whiteland Township in the Mill Lane Pump Station and the Mill Lane Pump Station Forcemain shall be 1,872,503 gallons per day.

e. The reserved capacity for the Valley Forge Sewer Authority in the East Whiteland Trunk Line (B) shall be 20,000 gallons per day. The reserve capacity for East Whiteland Township in the East Whiteland Trunk Line (B) is undefined at this time due to various development possibilities and connections points to the Mill Lane Pump Station, Great Valley Line, and Trunk Line B. Since the East Whiteland Township flow enters at several locations along this trunk line the weighted average of each party's flow shall be used to calculate cost sharing for any project that may occur in the future on this trunk line.

3. Flow Meters or Measuring Devices. The Valley Forge Sewer Authority shall be responsible for all costs of the installation and maintenance of the equipment and the monthly costs for transmission of flow data to East Whiteland Township via cell phone technology from the Lee Boulevard Pump Station, the Charlestown Meadows Pump Station, and the

Charlestown Oaks metering station to the Remote Terminal Unit (RTU) located in the new Mill Lane Pump Station.

If there are future locations requiring flow monitoring of Valley Forge Sewer Authority flows into the East Whiteland System, the Valley Forge Sewer Authority will be responsible for all costs of installation and maintenance of equipment and the monthly charges for transmission of required flow data to East Whiteland system. The cell phone technology shall be updated by the Valley Forge Sewer Authority as required.

4. Rehabilitation of Manholes 67-13 (at intersection of Moores Road and Ashlawn Road) to ML-1 of the Great Valley Trunk Line. Within six (6) months following substantial completion of replacement of the New Sidley Road Trunk Line replacement, East Whiteland Township shall engage an engineer to conduct an evaluation of those portions of the Great Valley Trunk Sewer Line that will no longer carry flows from the Valley Forge Sewer Authority, (identified as Manholes 67-13 on design drawings prepared by Roy F. Weston, Inc. to Manhole ML-1 on drawings prepared by ARRO Consulting, Inc. entitled Mill Lane Sewer Main Replacement Phase 1) but will remain in service for East Whiteland Township. Cost of the evaluation shall be shared in accordance with Schedule B, attached to this Agreement Amendment. Included in the evaluation shall be a television inspection of all sections of the sewer line. Based on the results of the inspection(s) of the sewer line, a conceptual report shall be prepared by the engineer that includes concept level descriptions of all practical alternatives to repair (line, slipline, grout or spot repairs) the sections of the gravity sewer line that require repair according to the opinion of the engineer. In addition, the report shall include conceptual level total project cost estimates (plus or minus 25%) for the alternatives presented in the report. The study shall include the engineers' recommended alternative(s) for each section of sewer line that requires repair. The conclusions of the study shall be subject to the approval of the Valley Forge Sewer Authority (which approval may be withheld only for sound engineering reasons), after consultation with the consulting engineers of the Valley Forge Sewer Authority. If there shall be disagreement regarding selected alternatives, and the parties cannot otherwise promptly resolve said disagreement, the disagreement shall be submitted for arbitration in accordance with ARTICLE IX of the East Whiteland Trunk Line Agreement of 1971.

The implementation of the selected Alternative(s) shall be completed by East Whiteland Township within six (6) years of the engagement of the engineer to perform the study. Costs to implement the selected alternative(s) shall be shared in accordance with Schedule B, attached to this Agreement Amendment.

Following six years after completion of the study, the Valley Forge Sewer Authority's obligation to share in any cost associated with repair, upgrade, enlargement or replacement of any portion of the Great Valley Sewer Trunk Line shall cease to exist.

5. Future Capital Projects. Following completion of the Mill Lane Pump Station, the Mill Lane Trunk Line, and the New Sidley Road Trunk Line replacement and enlargement projects, if any additional expansion, enlargement, repair or construction of any portions of any of the sewer system entities defined in Section F of this Agreement – with the exception of the rehabilitation of the Great Valley Line from manhole 67-13 to manhole ML-1 shall be required, Valley Forge Sewer Authority shall pay its pro rata share of such expansion, enlargement, repair or construction on the basis of its reserved capacity as detailed in Section H.2 Reserved Capacity of this Agreement Amendment, and subject to all provisions of the East Whiteland Trunk Line Agreement.

6. Effective Date. This Amendment shall be effective upon the approval by the governing body of the last party to approve.

IN WITNESS WHEREOF, each of the parties hereto has caused this Agreement to be duly executed as of the day and year first above written.

Instructions for Completing Act 537 Plan Content and Environmental Assessment Checklist

Remove and recycle these instructions prior to submission

CHECKLIST INSTRUCTIONS

These instructions are designed to assist the applicant in completing the Act 537 Plan Content and Environmental Assessment Checklist.

This checklist is composed of three parts: one for "General Information," one for "Administrative Completeness," and one for "General Plan Content". A plan must be "administratively complete" in order to be formally reviewed by DEP. The General Plan Content portion of the checklist identifies each of the issues that must be addressed in your Act 537 Plan Update based on the pre-planning meeting between you and/or your consultant and DEP.

Use the right-hand column blanks in the checklist to identify the page in the plan on which each planning issue is found or to reference a previously approved update or special study (title and page number).

If you determine a planning issue is not applicable even though it was previously thought to be needed, please explain your decision within the text of the plan (or as a footnote) and indicate the page number where this documentation is found.

When information required as part of an official plan update revision has been developed separately or in a previous update revision, incorporate the information by reference to the planning document and page.

For specific details covering the Act 537 planning requirements, refer to Chapters 71 and 73 of DEP's regulations.

Wastewater projects proposing funding through the following sources must prepare an "Environmental Report" as described in the Uniform Environmental Review Process (UER) and include it with the plan submission designated as "Plan-Appendix A". The following funding programs use the UER process.

- The Clean Water State Revolving Loan Fund (PENNVEST, DEP, EPA)
- The RUS Water and Waste Disposal Grant and Loan Program (USDA-RD)
- The Community Development Block Grant Program (DCED, HUG)
- Other Federal Funding Efforts (EPA)

The checklist items or portions of checklist items required in the Act 537 Plan Update revision and that are also included in the UER process are indicated by shading. Most of the "Environmental Report" document may be constructed from the Act 537 Official Plan Update revision by using "copy & paste" techniques. The technical guidance document *Uniform Environmental Review Process* (UER) (DEP ID. 381-5511-111) is available electronically on DEP's website at www.dep.state.pa.us.

After Municipal Adoption by Resolution, submit three copies of the plan, any attachments or addenda and this checklist to DEP.

A copy of this completed checklist must be included with your Act 537 plan. DEP will use the "DEP USE ONLY" column during the completeness evaluation of the plan. This column may also be used by DEP during the pre-planning meeting with the municipality to identify planning elements that are not required to be included in the plan.

PART 2 ADMINISTRATIVE COMPLETENESS CHECKLIST

DEP Use Only	Indicate Page #(s) in Plan	In addition to the main body of the plan, the plan must include items one through eight listed below to be accepted for formal review by the department. Incomplete Plans will be returned unless the municipality is clearly requesting an advisory review.
_____	i	1. **Table of Contents**
		2. **Plan Summary**
_____	1,2	A. Identify the proposed service areas and major problems evaluated in the plan. (Reference - Title 25, §71.21.a.7.i).
_____	2	B. Identify the alternative(s) chosen to solve the problems and serve the areas of need identified in the plan. Also, include any institutional arrangements necessary to implement the chosen alternative(s). (Reference Title 25 §71.21.a.7.ii).
_____	2	C. Present the estimated cost of implementing the proposed alternative (including the user fees) and the proposed funding method to be used. (Reference Title 25, §71.21.a.7.ii).
_____	2	D. Identify the municipal commitments necessary to implement the Plan. (Reference Title 25, §71.21.a.7.iii).
_____	3	E. Provide a schedule of implementation for the project that identifies the MAJOR milestones with dates necessary to accomplish the project to the point of operational status. (Reference Title 25, §71.21.a.7.iv).
_____	App. N	3. **Municipal Adoption: Original,** signed and sealed Resolution of Adoption by the municipality which contains, at a minimum, alternatives chosen and a commitment to implement the Plan in accordance with the implementation schedule. (Reference Title 25, §71.31.f) Section V.F. of the Planning Guide.
_____	App. K	4. **Planning Commission / County Health Department Comments**: Evidence that the municipality has requested, reviewed and considered comments by appropriate official planning agencies of the municipality, planning agencies of the county, planning agencies with area wide jurisdiction (where applicable), and any existing county or joint county departments of health. (Reference-Title 25, §71.31.b) Section V.E.1 of the Planning Guide.
_____	App. L	5. **Publication:** Proof of Public Notice which documents the proposed plan adoption, plan summary, and the establishment and conduct of a 30 day comment period. (Reference-Title 25, §71.31.c) Section V.E.2 of the Planning Guide.
_____	App. M	6. **Comments and Responses:** Copies of ALL written comments received and municipal response to EACH comment in relation to the proposed plan. (Reference-Title 25, §71.31.c) Section V.E.2 of the Planning Guide.
_____	3	7. **Implementation Schedule:** A complete project implementation schedule with milestone dates specific for each existing and future area of need. Other activities in the project implementation schedule should be indicated as occurring a finite number of days from a major milestone. (Reference-Title 25, §71.31.d) Section V.F. of the Planning Guide. Include dates for the future initiation of feasibility evaluations in the project's implementation schedule for areas proposing completion of sewage facilities for planning periods in excess of five years. (Reference Title 25, §71.21.c).
_____	App. H, I	8. **Consistency Documentation:** Documentation indicating that the appropriate agencies have received, reviewed and concurred with the method proposed to resolve identified inconsistencies within the proposed alternative and consistency requirements in 71.21.(a)(5)(i-iii). (Reference-Title 25, §71.31.e). Appendix B of the Planning Guide.

PART 3 GENERAL PLAN CONTENT CHECKLIST

DEP Use Only	Indicate Page #(s) in Plan		Item Required
_____	4	I.	**Previous Wastewater Planning**
			A. Identify, describe and briefly analyze all past wastewater planning for its impact on the current planning effort:
_____	4		1. Previously undertaken under the Sewage Facilities Act (Act 537). (Reference-Act 537, Section 5 §d.1).
_____	4		2. Has not been carried out according to an approved implementation schedule contained in the plans. (Reference-Title 25, §71.21.a.5.i.A-D). Section V.F of the Planning Guide.
_____	5		3. Is anticipated or planned by applicable sewer authorities or approved under a Chapter 94 Corrective Action Plan. (Reference-Title 25, §71.21.a.5.i.A&B). Section V.D. of the Planning Guide.
_____	5		4. Through planning modules for new land development, planning "exemptions" and addenda. (Reference-Title 25, §71.21.a.5.i.A).
_____	7	II.	**Physical and Demographic Analysis utilizing written description and mapping** (All items listed below require maps, and all maps should show all current lots and structures and be of appropriate scale to clearly show significant information).
_____	7		A. Identification of planning area(s), municipal boundaries, Sewer Authority/Management Agency service area boundaries. (Reference-Title 25, §71.21.a.1.i).
_____	7		B. Identification of physical characteristics (streams, lakes, impoundments, natural conveyance, channels, drainage basins in the planning area). (Reference-Title 25, §71.21.a.1.ii).
_____	7		C. Soils - Analysis with description by soil type and soils mapping for areas not presently served by sanitary sewer service. Show areas suitable for in-ground onlot systems, elevated sand mounds, individual residential spray irrigation systems, and areas unsuitable for soil dependent systems. (Reference-Title 25, §71.21.a.1.iii). Show Prime Agricultural Soils and any locally protected agricultural soils. (Reference-Title 25, §71.21.a.1.iii).
_____	8		D. Geologic Features - (1) Identification through analysis, (2) mapping and (3) their relation to existing or potential nitrate-nitrogen pollution and drinking water sources. Include areas where existing nitrate-nitrogen levels are in excess of 5 mg/L. (Reference-Title 25, §71.21.a.1.iii).
_____	8		E. Topography - Depict areas with slopes that are suitable for conventional systems; slopes that are suitable for elevated sand mounds and slopes that are unsuitable for onlot systems. (Reference-Title 25, §71.21.a.1.ii).
_____	8		F. Potable Water Supplies - Identification through mapping, description and analysis. Include public water supply service areas and available public water supply capacity and aquifer yield for groundwater supplies. (Reference-Title 25 §71.21.a.1.vi). Section V.C. of the Planning Guide.
_____	8		G. Wetlands-Identify wetlands as defined in Title 25, Chapter 105 by description, analysis and mapping. Include National Wetland Inventory mapping and potential wetland areas per USDA, SCS mapped hydric soils. Proposed collection, conveyance and treatment facilities and lines must be located and labeled, along with the identified wetlands, on the map. (Reference-Title 25, §71.21.a.1.v). Appendix B, Section II.I of the Planning Guide.

9 **III. Existing Sewage Facilities in the Planning Area - Identifying the Existing Needs**

A. Identify, map and describe municipal and non-municipal, individual and community sewerage systems in the planning area including:

9 1. Location, size and ownership of treatment facilities, main intercepting lines, pumping stations and force mains including their size, capacity, point of discharge. Also include the name of the receiving stream, drainage basin, and the facility's effluent discharge requirements. (Reference-Title 25, §71.21a.2.i.A).

9 2. A narrative and schematic diagram of the facility's basic treatment processes including the facility's NPDES permitted capacity, and the Clean Streams Law permit number. (Reference-Title 25, §71.21.a.2.i.A).

9 3. A description of problems with existing facilities (collection, conveyance and/or treatment), including existing or projected overload under Title 25, Chapter 94 (relating to municipal wasteload management) or violations of the NPDES permit, Clean Streams Law permit, or other permit, rule or regulation of DEP. (Reference-Title 25, §71.21.a.2.i.B).

10 4. Details of scheduled or in-progress upgrading or expansion of treatment facilities and the anticipated completion date of the improvements. Discuss any remaining reserve capacity and the policy concerning the allocation of reserve capacity. Also discuss the compatibility of the rate of growth to existing and proposed wastewater treatment facilities. (Reference-Title 25, §71.21.a.4.i & ii).

11 5. A detailed description of the municipality's operation and maintenance requirements for small flow treatment facility systems, including the status of past and present compliance with these requirements and any other requirements relating to sewage management programs. (Reference-Title 25, §71.21.a.2.i.C).

11 6. Disposal areas, if other than stream discharge, and any applicable groundwater limitations. (Reference-Title 25, §71.21.a.4.i & ii).

11 B. Using DEP's publication titled *Sewage Disposal Needs Identification*, identify, map and describe areas that utilize individual and community onlot sewage disposal and, unpermitted collection and disposal systems ("wildcat" sewers, borehole disposal, etc.) and retaining tank systems in the planning area including:

11 1. The types of onlot systems in use. (Reference-Title 25, §71.21.a.2.ii.A).

11 2. A sanitary survey complete with description, map and tabulation of documented and potential public health, pollution, and operational problems (including malfunctioning systems) with the systems, including violations of local ordinances, the Sewage Facilities Act, the Clean Stream Law or regulations promulgated thereunder. (Reference-Title 25, §71.21.a.2.ii.B).

11 3. A comparison of the types of onlot sewage systems installed in an area with the types of systems which are appropriate for the area according to soil, geologic conditions, topographic limitations sewage flows, and Title 25 Chapter 73 (relating to standards for sewage disposal facilities). (Reference-Title 25, §71.21.a.2.ii.C).

11 4. An individual water supply survey to identify possible contamination by malfunctioning onlot sewage disposal systems consistent with DEP's *Sewage Disposal Needs Identification* publication. (Reference-Title 25 §71.21.a.2.ii.B).

11 5. Detailed description of operation and maintenance requirements of the municipality for individual and small volume community onlot systems, including the status of past and present compliance with these requirements and any other requirements relating to sewage management programs. (Reference-Title 25, §71.21.a.2.i.C).

12 C. Identify wastewater sludge and septage generation, transport and disposal methods. Include this information in the sewage facilities alternative analysis including:

12 1. Location of sources of wastewater sludge or septage (Septic tanks, holding tanks, wastewater treatment facilities). (Reference-Title 25 §71.71).

12 2. Quantities of the types of sludges or septage generated. (Reference-Title 25 §71.71).

12 3. Present disposal methods, locations, capacities and transportation methods. (Reference-Title 25 §71.71).

13 **IV. Future Growth and Land Development**

A. Identify and briefly summarize all municipal and county planning documents adopted pursuant to the Pennsylvania Municipalities Planning Code (Act 247) including:

13 1. All land use plans and zoning maps that identify residential, commercial, industrial, agricultural, recreational and open space areas. (Reference-Title 25, §71.21.a.3.iv).

13 2. Zoning or subdivision regulations that establish lot sizes predicated on sewage disposal methods. (Reference – Title 25§71.21.a.3.iv).

14 3. All limitations and plans related to floodplain and stormwater management and special protection (Ch. 93) areas. (Reference-Title 25 §71.21.a.3.iv) Appendix B, Section II.F of the Planning Guide.

14 B. Delineate and describe the following through map, text and analysis.

14 1. Areas with existing development or plotted subdivisions. Include the name, location, description, total number of EDU's in development, total number of EDU's currently developed and total number of EDU's remaining to be developed (include time schedule for EDU's remaining to be developed). (Reference-Title 25, §71.21.a.3.i).

15 2. Land use designations established under the Pennsylvania Municipalities Planning Code (35 P.S. 10101-11202), including residential, commercial and industrial areas. (Reference-Title 25,§71.21.a.3.ii). Include a comparison of proposed land use as allowed by zoning and existing sewage facility planning. (Reference-Title 25, §71.21.a.3.iv).

16,17 3. Future growth areas with population and EDU projections for these areas using historical, current and future population figures and projections of the municipality. Discuss and evaluate discrepancies between local, county, state and federal projections as they relate to sewage facilities. (Reference-Title 25, §71.21.a.1.iv). (Reference-Title 25, §71.21.a.3.iii).

14 4. Zoning, and/or subdivision regulations; local, county or regional comprehensive plans; and existing plans of any other agency relating to the development, use and protection of land and water resources with special attention to: (Reference-Title 25, §71.21.a.3.iv).
--public ground/surface water supplies
--recreational water use areas
--groundwater recharge areas
--industrial water use
--wetlands

18 5. Sewage planning necessary to provide adequate wastewater treatment for five and ten year future planning periods based on projected growth of existing and proposed wastewater collection and treatment facilities. (Reference-Title 25, §71.21.a.3.v).

20 **V. Identify Alternatives to Provide New or Improved Wastewater Disposal Facilities**

A. Conventional collection, conveyance, treatment and discharge alternatives including:

20 1. The potential for regional wastewater treatment. (Reference-Title 25, §71.21.a.4).

20 2. The potential for extension of existing municipal or non-municipal sewage facilities to areas in need of new or improved sewage facilities. (Reference-Title 25, §71.21.a.4.i).

20 3. The potential for the continued use of existing municipal or non-municipal sewage facilities through one or more of the following: (Reference-Title 25, §71.21.a.4.ii).

20 a. Repair. (Reference-Title 25, §71.21.a.4.ii.A).

20 b. Upgrading. (Reference-Title 25, §71.21.a.4.ii.B).

20 c. Reduction of hydraulic or organic loading to existing facilities. (Reference-Title 25, §71.71).

20 d. Improved operation and maintenance. Reference-Title 25, §71.21.a.4.ii.C).

20 e. Other applicable actions that will resolve or abate the identified problems. (Reference-Title 25, §71.21.a.4.ii.D).

20 4. Repair or replacement of existing collection and conveyance system components. (Reference-Title 25, §71.21.a.4.ii.A).

21 5. The need for construction of new community sewage systems including sewer systems and/or treatment facilities. (Reference-Title 25, §71.21.a.4.iii).

23 6. Use of innovative/alternative methods of collection/conveyance to serve needs areas using existing wastewater treatment facilities. (Reference-Title 25, §71.21.a.4.ii.B).

23 B. The use of individual sewage disposal systems including individual residential spray irrigation systems based on:

23 1. Soil and slope suitability. (Reference-Title 25, §71.21.a.2.ii.C).

23 2. Preliminary hydrogeologic evaluation. (Reference-Title 25, §71.21.a.2.ii.C).

23 3. The establishment of a sewage management program. (Reference-Title 25, §71.21.a.4.iv). See also Part "F" below.

23 4. The repair, replacement or upgrading of existing malfunctioning systems in areas suitable for onlot disposal considering: (Reference-Title 25, §71.21.a.4).

23 a. Existing technology and sizing requirements of Title 25 Chapter 73. (Reference-Title 25, §73.31-73.72).

23 b. Use of expanded absorption areas or alternating absorption areas. (Reference-Title 25, §73.16).

23 c. Use of water conservation devices. (Reference-Title 25, §71.73.b.2.iii).

23 C. The use of small flow sewage treatment facilities or package treatment facilities to serve individual homes or clusters of homes with consideration of: (Reference-Title 25, §71.64.d).

23 1. Treatment and discharge requirements. (Reference-Title 25, §71.64.d).

23 2. Soil suitability. (Reference-Title 25, §71.64.c.I).

23 3. Preliminary hydrogeologic evaluation. (Reference-Title 25, §71.64.c.2).

23 4. Municipal, Local, Agency or other controls over operation and maintenance requirements through a Sewage Management Program. (Reference-Title 25, §71.64.d). See Part "F" below.

23 D. The use of community land disposal alternatives including:

23 1. Soil and site suitability. (Reference-Title 25, §71.21.a.2.ii.C).

23 2. Preliminary hydrogeologic evaluation. (Reference-Title 25, §71.21.a.2.ii.C).

23 3. Municipality, Local Agency or Other Controls over operation and maintenance requirements through a Sewage Management Program (Reference-Title25, §71.21.a.2.ii.C). See Part "F" below.

23 4. The rehabilitation or replacement of existing malfunctioning community land disposal systems. (See Part "V", B, 4, a, b, c above). See also Part "F" below.

23 E. The use of retaining tank alternatives on a temporary or permanent basis including: (Reference- Title 25, §71.21.a.4).

23 1. Commercial, residential and industrial use. (Reference-Title 25, §71.63.e).

23 2 Designated conveyance facilities (pumper trucks). (Reference-Title 25, §71.63.b.2).

23 3. Designated treatment facilities or disposal site. (Reference-Title 25, §71.63.b.2).

23 4. Implementation of a retaining tank ordinance by the municipality. (Reference-Title 25, §71.63.c.3). See Part "F" below.

23 5. Financial guarantees when retaining tanks are used as an interim sewage disposal measure. (Reference-Title 25, §71.63.c.2).

23 F. Sewage Management Programs to assure the future operation and maintenance of existing and proposed sewage facilities through:

23 1. Municipal ownership or control over the operation and maintenance of individual onlot sewage disposal systems, small flow treatment facilities, or other traditionally non-municipal treatment facilities. (Reference-Title 25, §71.21.a.4.iv).

23 2. Required inspection of sewage disposal systems on a schedule established by the municipality. (Reference-Title 25, §71.73.b.1.).

23 3. Required maintenance of sewage disposal systems including septic and aerobic treatment tanks and other system components on a schedule established by the municipality. (Reference-Title 25, §71.73.b.2).

23 4. Repair, replacement or upgrading of malfunctioning onlot sewage systems. (Reference-Title 25, §71.21.a.4.iv) and §71.73.b.5 through:

23 a. Aggressive pro-active enforcement of ordinances that require operation and maintenance and prohibit malfunctioning systems. (Reference-Title 25, §71.73.b.5).

23 b. Public education programs to encourage proper operation and maintenance and repair of sewage disposal systems.

23 5. Establishment of joint municipal sewage management programs. (Reference-Title 25, §71.73.b.8).

23 6. Requirements for bonding, escrow accounts, management agencies or associations to assure operation and maintenance for non-municipal facilities. (Reference-Title 25, §71.71).

24 G. Non-structural comprehensive planning alternatives that can be undertaken to assist in meeting existing and future sewage disposal needs including: (Reference-Title 25, §71.21.a.4).

1. Modification of existing comprehensive plans involving:

24 a. Land use designations. (Reference-Title 25, §71.21.a.4).

24 b. Densities. (Reference-Title 25, §71.21.a.4).

24 c. Municipal ordinances and regulations. (Reference-Title 25, §71.21.a.4).

24 d. Improved enforcement. (Reference-Title 25, §71.21.a.4).

24 e. Protection of drinking water sources. (Reference-Title 25, §71.21.a.4).

24 2. Consideration of a local comprehensive plan to assist in producing sound economic and consistent land development. (Reference-Title 25, §71.21.a.4).

24 3. Alternatives for creating or changing municipal subdivision regulations to assure long-term use of on-site sewage disposal that consider lot sizes and protection of replacement areas. (Reference-Title 25, §71.21.a.4).

24 4. Evaluation of existing local agency programs and the need for technical or administrative training. (Reference-Title 25, §71.21.a.4).

24 H. A no-action alternative which includes discussion of both short-term and long-term impacts on: (Reference-Title 25, §71.21.a.4).

24 1. Water Quality/Public Health. (Reference-Title 25, §71.21.a.4).

24 2. Growth potential (residential, commercial, industrial). (Reference-Title 25, §71.21.a.4).

24 3. Community economic conditions. (Reference-Title 25, §71.21.a.4).

24 4. Recreational opportunities. (Reference-Title 25, §71.21.a.4).

24 5. Drinking water sources. (Reference-Title 25, §71.21.a.4).

24 6. Other environmental concerns. (Reference-Title 25, §71.21.a.4).

26 VI. Evaluation of Alternatives

A. Technically feasible alternatives identified in Section V of this check-list must be evaluated for consistency with respect to the following: (Reference-Title 25, §71.21.a.5.i.).

26 1. Applicable plans developed and approved under **Sections 4 and 5 of the Clean Streams Law or Section 208 of the Clean Water Act** (33 U.S.C.A. 1288). (Reference-Title 25, §71.21.a.5.i.A). Appendix B, Section II.A of the Planning Guide.

26 2. Municipal wasteload management **Corrective Action Plans or Annual Reports** developed under PA Code, Title 25, Chapter 94. (Reference-Title 25, §71.21.a.5.i.B). The municipality's recent Wasteload Management (Chapter 94) Reports should be examined to determine if the proposed alternative is consistent with the recommendations and findings of the report. Appendix B, Section II.B of the Planning Guide.

27 3. Plans developed under **Title II of the Clean Water Act** (33 U.S.C.A. 1281-1299) or **Titles II and VI of the Water Quality Act of 1987** (33 U.S.C.A 1251-1376). (Reference-Title 25, §71.21.a.5.i.C). Appendix B, Section II.E of the Planning Guide.

27 4. **Comprehensive plans** developed under the Pennsylvania Municipalities Planning Code. (Reference-Title 25, §71.21.a.5.i.D). The municipality's comprehensive plan must be examined to assure that the proposed wastewater disposal alternative is consistent with land use and all other requirements stated in the comprehensive plan. Appendix B, Section II.D of the Planning Guide.

28 5. **Antidegradation requirements** as contained in PA Code, Title 25, Chapters 93, 95 and 102 (relating to water quality standards, wastewater treatment requirements and erosion control) and the Clean Water Act. (Reference-Title 25, §71.21.a.5.i.E). Appendix B, Section II.F of the Planning Guide.

28 6. **State Water Plans** developed under the Water Resources Planning Act (42 U.S.C.A. 1962-1962 d-18). (Reference-Title 25, §71.21.a.5.i.F). Appendix B, Section II.C of the Planning Guide.

28 7. **Pennsylvania Prime Agricultural Land Policy** contained in Title 4 of the Pennsylvania Code, Chapter 7, Subchapter W. Provide narrative on local municipal policy and an overlay map on prime agricultural soils. (Reference-Title 25, §71.21.a.5.i.G). Appendix B, Section II.G of the Planning Guide.

28 8. **County Stormwater Management Plans** approved by DEP under the Storm Water Management Act (32 P.S. 680.1-680.17). (Reference-Title 25, §71.21.a.5.i.H). Conflicts created by the implementation of the proposed wastewater alternative and the existing recommendations for the management of stormwater in the county Stormwater Management Plan must be evaluated and mitigated. If no plan exists, no conflict exists. Appendix B, Section II.H of the Planning Guide.

29 9. **Wetland Protection.** Using wetland mapping developed under Checklist Section II.G, identify and discuss mitigative measures including the need to obtain permits for any encroachments on wetlands from the construction or operation of any proposed wastewater facilities. (Reference-Title 25, §71.21.a.5.i.I) Appendix B, Section II.I of the Planning Guide.

29 10. **Protection of rare, endangered or threatened plant and animal species** as identified by the Pennsylvania Natural Diversity Inventory (PNDI). (Reference-Title 25, §71.21.a.5.i.J). Provide DEP with a copy of the completed Request For PNDI Search document. Also provide a copy of the response letter from the Department of Conservation and Natural Resources' Bureau of Forestry regarding the findings of the PNDI search. Appendix B, Section II.J of the Planning Guide.

29 11. **Historical and archaeological resource protection** under P.C.S. Title 37, Section 507 relating to cooperation by public officials with the Pennsylvania Historical and Museum Commission. (Reference-Title 25, §71.21.a.5.i.K). Provide the department with a completed copy of a Cultural Resource Notice request of the Bureau of Historic Preservation (BHP) to provide a listing of known historical sites and potential impacts on known archaeological and historical sites. Also provide a copy of the response letter from the BHP. Appendix B, Section II.K of the Planning Guide.

30 B. Provide for the resolution of any inconsistencies in any of the points identified in Section VI.A. of this checklist by submitting a letter from the appropriate agency stating that the agency has received, reviewed and concurred with the resolution of identified inconsistencies. (Reference-Title 25, §71.21.a.5.ii). Appendix B of the Planning Guide.

30 C. Evaluate alternatives identified in Section V of this checklist with respect to applicable water quality standards, effluent limitations or other technical, legislative or legal requirements. (Reference-Title 25, §71.21.a.5.iii).

30 D. Provide cost estimates using present worth analysis for construction, financing, on going administration, operation and maintenance and user fees for alternatives identified in Section V of this checklist. Estimates shall be limited to areas identified in the plan as needing improved sewage facilities within five years from the date of plan submission. (Reference-Title 25, §71.21.a.5.iv).

31 E. Provide an analysis of the funding methods available to finance the proposed alternatives evaluated in Section V of this checklist. Also provide documentation to demonstrate which alternative and financing scheme combination is the most cost-effective; and a contingency financial plan to be used if the preferred method of financing cannot be implemented. The funding analysis shall be limited to areas identified in the plan as needing improved sewage facilities within five years from the date of the plan submission. (Reference-Title 25, §71.21.a.5.v).

35 F. Ana lyze the need for immediate or phased implementation of each alternative proposed in Section V of this checklist including: (Reference-Title 25, §71.21.a.5.vi).

35 1. A description of any activities necessary to abate critical public health hazards pending completion of sewage facilities or implementation of sewage management programs. (Reference-Title 25, §71.21.a.5.vi.A).

35 2. A description of the advantages, if any, in phasing construction of the facilities or implementation of a sewage management program justifying time schedules for each phase. (Reference-Title 25, §71.21.a.5.vi.B).

35 G. Evaluate administrative organizations and legal authority necessary for plan implementation. (Reference - Title 25, §71.21.a.5.vi.D.).

36 **VII. Institutional Evaluation**

A. Provide an analysis of all existing wastewater treatment authorities, their past actions and present performance including:

36 1. Financial and debt status. (Reference-Title 25, §71.61.d.2).

36 2. Available staff and administrative resources. (Reference-Title 25, §71.61.d.2)

37 3. Existing legal authority to:

37 a. Implement wastewater planning recommendations. (Reference-Title 25, §71.61.d.2).

37 b. Implement system-wide operation and maintenance activities. (Reference-Title 25, §71.61.d.2).

37 c. Set user fees and take purchasing actions. (Reference-Title 25, §71.61.d.2).

37 d. Take enforcement actions against ordinance violators. (Reference-Title 25, §71.61.d.2).

37 e. Negotiate agreements with other parties. (Reference-Title 25, §71.61.d.2).

37 f. Raise capital for construction and operation and maintenance of facilities. (Reference-Title 25,§71.61.d.2).

37 B. Provide an analysis and description of the various institutional alternatives necessary to implement the proposed technical alternatives including:

37 1. Need for new municipal departments or municipal authorities. (Reference-Title 25, §71.61.d.2).

37 2. Functions of existing and proposed organizations (sewer authorities, onlot maintenance agencies, etc.). (Reference-Title 25, §71.61.d.2).

37 3. Cost of administration, implementability, and the capability of the authority/agency to react to future needs. (Reference-Title 25, §71.61.d.2).

37 C. Describe all necessary administrative and legal activities to be completed and adopted to ensure the implementation of the recommended alternative including:

37 1. Incorporation of authorities or agencies. (Reference-Title 25, §71.61.d.2).

37 2. Development of all required ordinances, regulations, standards and inter-municipal agreements. (Reference-Title 25, §71.61.d.2).

38 3. Description of activities to provide rights-of-way, easements and land transfers. (Reference-Title 25, §71.61.d.2).

38 4. Adoption of other municipal sewage facilities plans. (Reference-Title 25, §71.61.d.2).

39 5. Any other legal documents. (Reference-Title 25, §71.61.d.2).

39 6. Dates or timeframes for items 1-5 above on the project's implementation schedule.

39 D. Identify the proposed institutional alternative for implementing the chosen technical wastewater disposal alternative. Provide justification for choosing the specific institutional alternative considering administrative issues, organizational needs and enabling legal authority. (Reference-Title 25, §71.61.d.2).

40 **VIII. Implementation Schedule and Justification for Selected Technical & Institutional Alternatives**

A. Identify the technical wastewater disposal alternative which best meets the wastewater treatment needs of each study area of the municipality. Justify the choice by providing documentation which shows that it is the best alternative based on:

40 1. Existing wastewater disposal needs. (Reference-Title 25, §71.21.a.6).

40 2. Future wastewater disposal needs. (five and ten years growth areas). (Reference-Title 25, §71.21.a.6).

40 3. Operation and maintenance considerations. (Reference-Title 25, §71.21.a.6).

41 4. Cost-effectiveness. (Reference-Title 25, §71.21.a.6).

41 5. Available management and administrative systems. (Reference-Title 25, §71.21.a.6).

41 6. Available financing methods. (Reference-Title 25, §71.21.a.6).

41 7. Environmental soundness and compliance with natural resource planning and preservation programs. (Reference-Title 25, §71.21.a.6).

41 B. Designate and describe the capital financing plan chosen to implement the selected alternative(s). Designate and describe the chosen back-up financing plan. (Reference-Title 25, §71.21.a.6)

3 C. Designate and describe the implementation schedule for the recommended alternative, including justification for any proposed phasing of construction or implementation of a Sewage Management Program. (Reference – Title 25 §71.31d)

N/A **IX. Environmental Report (ER) generated from the Uniform Environmental Review Process (UER)**

N/A A. Complete an ER as required by the UER process and as described in the DEP Technical Guidance 381-5511-111. Include this document as "Appendix A" to the Act 537 Plan Update Revision. Note: *An ER is required only for Wastewater projects proposing funding through any of the funding sources identified in the UER.*

EXECUTIVE SUMMARY

This Act 537 Special Study (Special Study) was prepared for East Whiteland Township (Township) at the request of the Pennsylvania Department of Environmental Protection (PA DEP) in accordance with Act 537 entitled the Pennsylvania Sewage Facilities Act, Title 25, Chapter 71 of the Pennsylvania Code and the Pennsylvania Department of Environmental Protection Act 537 Plan Content and Environmental Assessment Checklist. This Special Study addresses the requirements necessary to upgrade components of the Township's conveyance system in order to meet the future wastewater needs of the Great Valley Corporate Campus.

The Plan is comprised of the following components addressed in the Plan of Study:

I. Previous Wastewater Planning

II. Physical and Demographic Analysis

III. Existing Sewage Facilities in the Planning Area

IV. Future Growth and Development

V. Alternatives to provide for new or improved wastewater disposal facilities

VI. Evaluation of Alternatives

VII. Institutional Evaluation

VIII. Selected Wastewater Treatment and Institutional Alternative

The primary focus of the Plan is to evaluate alternatives to provide for upgraded Township conveyance system facilities including the Wilburdale Pump Station and the Flat Road Pump Station.

To meet the wastewater conveyance needs of the planning area, it is proposed that the Township implement the selected alternatives as follows:

Phase I: Upgrade the Wilburdale Pump Station along with the force main and gravity main located in Flat Road.

Phase II: Due to uncertainties regarding the timing of the Liberty Properties development, Liberty Properties will prepare planning for upgrades to the Flat Road Pump Station at the time of their module submission.

Currently, upgrades to the Mill Lane Pump Station are complete. The upgraded station has two pumps operating and one standby pump. The capacity of this arrangement is 4.32 MGD. The station will also have space for the addition of a fourth pump. By adding the fourth pump, the station will be able to operate with 3 pumps active and one standby pump. The capacity of the station with this arrangement is 5.04 MGD. Both of these conditions are designed with the existing 14 inch force main in place. If the force main is upgraded to 20 inch, the 2 pump operating arrangement has a capacity of nearly 6.192 MGD. If 3 pumps would be operating with a fourth pump as standby, the station would have a capacity in excess of 7.20 MGD.

The engineer's opinions of probable construction cost (planning level costs) for the alternatives established within this Special Study are:

Total Costs - Phase I

Planning Level - Construction Cost Opinion Total for Pump Station Upgrades: $690,000

Planning Level – Gravity Sewer and Force Main Construction Cost Opinion: $682,000

Total Planning Level Construction Cost: $1,372,000

Total Costs - Phase II

Planning Level – Defer to Future Planning.

With the need for infrastructure improvements being prompted by the wastewater to be generated from extensive development that is proposed for the corporate center, these alternatives will be paid for and financed through a combination of monies from developer funds and Township funds.

The following is a schedule for implementing the proposed alternative:

	Description	Months from DEP Approval of Plan
1.	Phase I – Preliminary Design of Wilburdale Pump Station, Force Main, and Gravity Sewer.	6
2.	Phase I – Complete Financing Considerations	6
3.	Phase I – Permitting (Part II WQM and E&S/Stormwater)	6
4.	Phase I – Receive Permits	9
5.	Phase I – Final Design	10
6.	Phase I – Bid the Project	11
7.	Phase I – Award the Project	14
8.	Phase I – Complete Construction	26
9.	Phase II – Flat Road Pump Station	Deferred to Future Planning

I. PREVIOUS WASTEWATER PLANNING

A. Identify and Discuss Existing Wastewater Planning

1. *Previous Act 537 Planning*

An Act 537 Sewage Facilities Plan, dated May 2, 1995, was prepared for East Whiteland Township. This was a 'township-wide' plan. The primary purpose of the Plan was to consider the extension of the existing public collection and conveyance system to most of the Township as need was determined.

The Valley Forge Sewer Authority adopted their Act 537 Planning in November of 2006. The Authority is the point to where wastewater flows for ultimate treatment and disposal.

An Act 537 Plan amendment "Special Study" was prepared. It was last revised in September 2011. The purpose of this study was to focus on the wastewater needs to address the replacement and upgrade of the Mill Lane Pump Station. This Special Study was approved by PA DEP in 2011/2012.

An Act 537 Special Study was prepared in 2013 and approved by the Department. This Special Study identified and addressed the requirements necessary to upgrade portions of the Township's conveyance system to accommodate future flow needs from Charlestown Township and East Whiteland Township. The planning area included south central Charlestown Township and north central East Whiteland Township.

2. *Planning Not Done in Accordance with an Approved Implementation Schedule*

There has been no planning by the Township that has not been completed in accordance with an approved implementation schedule.

3. *Additional Planning*

Planning that is anticipated by the Township above and beyond the planning associated with this Act 537 Special Study is associated with the timing for installation of a fourth pump at the Mill Lane Pump Station and improvements to the MLPS force main and the down-stream trunk sewer. This will be triggered by the flow indicator of monitored average daily flows at the Mill Lane Pump Station. This flow is 989,126 gpd. The Township intends to monitor the average daily flows at the Mill Lane Pump Station knowing the flow contributions from adjacent drainage area (via metered flow) along with flow contributions from the Mill Lane Pump Station. From this, a base flow can be established with the assumption that the most significant growth in the Township will occur in the drainage area tributary to the Mill Lane Pump Station, the monitoring of the average daily flows at the station appears to be a reasonable approach.

4. *Planning Via Planning Madules or Addenda.*

Two revisions were made to the Township-wide 537 Plan. The first was the Special Study for the Mill Lane Pump Station that was last revised in September 2011. The second was the most recent Special Study (approved by the Department in September 2013) addressing conveyance system upgrades to accommodate future flows in East Whiteland and Charlestown Township.

B. Identification of Municipal and County Planning Documents

1. *Identify Land Use Plans and Zoning Maps*

The Chester County Comprehensive Plan entitled "Landscapes2" establishes guidelines for the following land use categories.

- Growth Management
- National Resource Protection and Open Space

- Agricultural and Farmland Protection

The categories are used to provide the municipalities with "planning strategies to assist them in implementing their growth boundaries."

The Township has three municipal planning documents that govern Land Use and Zoning.

- The East Whiteland Township Comprehensive Plan (Adopted 2001)
- The East Whiteland Township Zoning Ordinance (Adopted 2007)
- Subdivision and Land Development Ordinance (Adopted 2007)

A zoning map showing the designated zoning districts is found in Appendix A.

2. *Identify Zoning Regulations That Establish Lot Sizes*

The Zoning Ordinance adopted by the Township establishes the criteria for lot sizes for the following zoning districts in the planning area.

Zoning District		Minimum Lot Area
R1	Low Density Residential District	40,000 Sq. Feet
O/BP	Office/Business Park	80,000 Sq. Feet

II. PHYSICAL AND DEMOGRAPHIC ANALYSIS

A. Identify Planning Area, Municipal Boundaries, and Service Area Boundaries Through Mapping

This Act 537 Special Study is being prepared to address the sewage facilities needs of existing and proposed development in the area served by the Flat Road Pump Station and the Wilburdale Pump Station. Refer to the Plan in Appendix B that shows the boundary for the planning area addressed in this Special Study.

The plan in Appendix B also represents a municipal plan/map showing the municipal boundaries of the entire Township. The area to be served by proposed sanitary sewer facilities falls with the planning area of this Special Study.

B. Identify the Physical Characteristics of the Planning Area

East Whiteland Township is located in Chester County, due east of Exton, PA. The topography of the planning area varies from a low elevation of 359 ft. near the Wilburdale Pump Station to an elevation of 383 ft. near the southern portion of the Great Valley Parkway loop. A topographical map of the area is presented in Appendix D.

In addition, the wetlands per the National Wetlands Inventory Map are detailed on the map found in Appendix E.

C. Soils Analysis

This Plan will not consider the possibility of subsurface disposal of wastewater nor the issues concerning individual or community on-lot disposal systems. Therefore, this section is not applicable to this Special Study.

D. Geological Features of the Planning Area

As with Section C. above, this Plan will not consider the possibility of subsurface disposal of wastewater nor the issues concerning individual or community on-lot disposal systems. Therefore, this section is not applicable to this Special Study.

E. Topography

As referenced in Section II.B. of this Plan, the topography of the planning area varies from a low elevation of 359 ft. near the Wilburdale Pump Station to an elevation of 383 ft. near the southern portion of the Great Valley Parkway loop. A topographical map of the area is presented in Appendix D.

F. Potable Water Supply Information

Since this is strictly a special study to address collection/conveyance issues within the planning area, potable water supply information is not applicable to this Special Study.

G. Wetlands

There are no wetland areas within the planning area as identified on the map found in Appendix E. The source for the wetlands information is the National Wetlands Inventory Mapping provided by the U.S. Fish and Wildlife Service.

III. EXISTING FACILITIES IN THE PLANNING AREA

A. Identify and Describe Municipal Sewage Systems in the Planning Area

1. Location, Size, and Ownership of Facilities

Currently, there are collection and conveyance facilities in the planning area. The sanitary sewer mains that currently make up the collection system are 8 inches in diameter.

There are two wastewater pump stations in the planning area. The Flat Road Pump Station is located along Flat Road on the northeast side of the GVCC. This pump station has a capacity of 0.540 MGD. Wastewater is pumped through an existing 6-inch force main to the gravity sewer main located in Great Valley Parkway.

The other station is the Wilburdale Pump Station located near the intersection of Wilburdale Road and Flat Road. The Wilburdale station has a capacity of 0.576 MGD. Wastewater is pumped through an existing 8-inch force main to the gravity sewer located in Flat Road just east of Sidley Road.

2. Narrative and Schematic Diagram of the Basic Treatment Process

Since the focus of this Special Study is to address the needs associated with the collection and conveyance system in the planning area, a narrative and schematic diagram of the basic treatment process is not applicable.

3. Description of Problems with the Existing Facilities

Both the Flat Road Pump Station and the Wilburdale Pump Station are aging submersible stations with control equipment and electrical disconnects mounted in outside enclosures that are exposed to daily weather conditions.

Plans and specifications were prepared for mechanical/maintenance improvements to the Flat Road Pump Station. However, this work was not completed since the potential for development in the GVCC could dictate the need for additional facility upgrades.

Since both pump stations are aging, operations and maintenance of the mechanical and electrical equipment are a concern.

4. *On-Going Upgrades or Expansion of Facilities*

The Mill Lane Pump Station, located at the intersection of Conestoga Road and Mill Lane, has been upgraded. The upgraded station has two pumps operating and one standby pump. The capacity of this arrangement is 4.32 MGD. The station will also have space for the addition of a fourth pump. By adding the fourth pump, the station will be able to operate with 3 pumps active and one standby pump. The capacity of the station with this arrangement is 5.04 MGD. Both of these conditions are designed with the existing 14 inch force main in place. If the force main is upgraded to 20 inch, the 2 pump operating arrangement has a capacity of nearly 6.192 MGD. If 3 pumps would be operating with a fourth pump as standby, the station would have a capacity in excess of 7.20 MGD. The station design has the capacity to pump the projected flows from Charlestown Township and East Whiteland Township. Ultimate projected flows are 2,521,433 gpd ADF. This includes existing flow plus projected flows for both Charlestown Township and East Whiteland Township. Applying a peaking factor of 2.78, established in the original basis of design report in concert with DEP guidance, the projected peak flow is 7.01 MGD. The ultimate pump station capacity is 7.2 MGD.

In accordance with the recommendations of the East Whiteland/Charlestown Township Special Study, approved in September 2013, a new 18-inch sanitary sewer main was installed in Mill Lane from manhole ML-8 to manhole 67-1AA.

This installation was completed in late 2013 to facilitate the diverting of a large portion of wastewater from the Sidley Road area and around the Aegon property. In addition, the Township recently installed a new sewer main in Sidley Road (15-inch from manholes SL-10 to SL-7 and 18-inch from manholes SL-7 to ML-8) to receive the majority of the proposed flow from the planning area and Charlestown Township. This new gravity sewer provides capacity for planned future flows and will remove flow from the existing Sidley Road sewer main that was hydraulically overloaded in some locations.

5. Operations and Maintenance Requirements and the Status of Past and Present Compliance

The Township is the facility permitee and the owner. They perform routine maintenance on the collection and conveyance system to keep the facilities operating satisfactorily.

B. Individual and Community On-Lot Disposal Systems

There are four lots located along Wilburdale Road that have individual on-lot disposal systems. These lots could potentially be served, in the future, through the extension of an 8-inch collector sewer. Investigation of Chester County Health Department records shows that there are no reported malfunctions. However, CCHD researched their records back to their 1968 micro film log and found nothing referencing Wilburdale Road in their records. Consequently, it was concluded that these OLDS may be old systems that were built before the CCHD permitted on-lot facilities. With the age of these OLDS being a potential factor, the Township feels that it is important to include planning for the extension of public sanitary sewer service to the four Wilburdale Road properties in the event there is a problem with these systems in the future.

C. Wastewater Sludge and Septage Generation

Identification of wastewater sludge and septage generation is not considered applicable to this Special Study.

IV. FUTURE GROWTH AND LAND DEVELOPMENT

A. Description of Future Growth and Development

1. *Areas with Existing Development and Plotted Subdivisions*

Existing development and plotted subdivisions are described as follows:

- Great Valley Corporate Center

2. *Land Use Designations*

Land use in East Whiteland Township is governed by the Township's Zoning Ordinance. Land use is given the following designations per the zoning ordinance.

R-1	Low Density Residential
R-2	Low Density Residential
R-3	Low Density Residential
RM	Medium Density Residential
RMH	Medium-High Density Residential
CMX	Commercial Mixed-Use
VMX	Village Mixed-Use
FC	Frontage Commercial
ROC	Regionally Oriented Commercial
ROC/R	Regionally Oriented Commercial/Res
PO	Professional Office

O/BP Office/Business Park

O/BPS Office/Business Park Services

I Industrial

INS Institutional

NS Neighborhood Schools

C Cemetery

OS Open Space

In the planning area, the zoning designations include:

- R-1 Low Density Residential
- O/BP Office Business Park
- C Cemetery

3. *Future Growth Areas and Projections*

For the planning area identified for this Special Study, there are areas that have existing development and areas that are planned for growth. The planned growth is:

- Liberty Properties
- J & J Properties (w/i GVCC)
- Glasgow Tract (w/i GVCC)
- Wilburdale Road OLDS

These are detailed in Table 2 below.

4. *Subdivision Regulations as they Pertain to Planned Developments*

East Whiteland Township has established guidelines for development, use, and protection of land. The guidelines are established in the Township's Zoning Ordinance.

The Zoning Ordinance regulates:

- Building height, area, and location on the lot;
- Flood plains and uses within the flood plains;
- Where certain land uses make occur in the Township;
- Quality, location, or size of signs;
- Minimum lot areas for various uses. Table 1

5. *Required Sewage Planning*

Sections V and VI of this Special Study will examine the technical alternatives necessary to meet the sewage facilities needs of the planning area. Projected wastewater flows for the planning area are classified by origin.

Table 1

Existing Flow Needs Summary

Source	EDUs	Population (2)	Avg. Daily Flows (gpd) (1),(3)
Great Valley Corporate Campus	1017	--------	279,600
TOTAL			**279,600**
(1) Based on pump station flow data obtained during full occupancy of the corporate center (2008). **(2) 3.13 People Per Household.** **(3) 275 gpd/EDU.**			

The means for serving the future needs of the planning area will be in the form of upgrades to the conveyance system including the Flat Road Pump Station and the Wilburdale Pump Station.

Table 2

Flow Projection Summary (Future Wastewater Needs)

Source	EDUs	Population (2)	Avg. Daily Flows (gpd) (1),(3)
Great Valley Corporate Campus	1017	--------	279,600
Glasgow Tract	23	72	6,325
Liberty Properties	371	--------	102,000
J & J Properties	29	--------	7,975
Wilburdale Road (OLDS)	4	12	1,100
TOTAL			**397,000**

(1) Great Valley Corporate Campus flow is based on flow data obtained during full occupancy (2008). Liberty Properties flow based on data provided by Liberty Properties.

(2) 3.13 People Per Household.

(3) 275 gpd/EDU.

Summarizing Pump Station Needs:

The **Wilburdale and Flat Road Pump Station**s are public submersible pump stations that serve existing properties in the GVCC. Development of wastewater flow parameters was based on system operational data that defined a maximum or worst case scenario. This operational data reflected that period in time when the GVCC was fully occupied in the mid to late 2000's (2008). With the economic decline over the course of the past five to six years, a number of tenants moved their businesses or facilities from the GVCC to other locations or closed their businesses altogether.

In an effort to establish a more current base flow, operational data from 2014 was reviewed. Assuming the former case described above represents the upper boundary, the latter (based on 2014 data) would more accurately represent a base scenario.

The two primary property owners in the GVCC include Liberty Properties and Johnson & Johnson. Both of these entities were consulted and both provided their anticipated future wastewater loading based on their known plans for development or redevelopment of their properties.

For the two flow bases, the average daily base flows for the entire GVCC are:

- Upper Boundary (2008) – 279,600 gpd
- Base Boundary (2014) – 238,466 gpd

When including the projected flows provided by the primary property owners of Liberty Properties and Johnson & Johnson, the projected average daily flows from the entire GCCC are:

- Upper Boundary (2008) – 389,575
- Base Boundary (2014) – 348,375 gpd

Upon review of these boundary conditions, there does not appear to be a significant difference in the base and upper flow rates. Therefore, the sizing of infrastructure to accommodate the projected flows would be better served by utilizing the Upper Boundary condition to remain conservative.

The **Wilburdale** pump station has an existing capacity of 576,000 gpd. Using the Upper Boundary case, the average daily flow is nearly 279,600 gpd. With the addition of Liberty Properties, J & J Properties, Wilburdale Road (OLDS), and the Glasgow Tract, average daily flows will be more nearly 397,000 gpd.

V. ALTERNATIVES TO PROVIDE NEW OR IMPROVED WASTEWATER DISPOSAL FACILITIES

A. Identify Alternatives

1. *Regional Wastewater Treatment Concepts*

Wastewater from East Whiteland Township is conveyed to the Valley Forge Sewer Authority's Wastewater Treatment Plant

2. *Extension of Existing Municipal Sewage Facilities to Areas in Need*

Currently, there are public collection and conveyance facilities that serve the GVCC. As discussed in Part A.1. of this section, wastewater collected in these facilities is ultimately conveyed to the Valley Forge Sewer Authority for treatment. Currently there is no plan to extend these facilities beyond the current reach. Refer to the plan found in Appendix B that shows the existing collection and conveyance system.

3. *Continued Use of Existing Community Treatment Facilities*

Currently, there are no community systems in the planning area. This is not applicable to this Special Study.

4. *New Community Sewage Systems and Treatment*

Since this Plan is examining the public sewer needs and the impact on existing conveyance system components, the implementation of new community sewage systems is not applicable to this Special Study.

5. *Repair and Replacement of Existing Collection and Conveyance System Components*

As stated in Part A.2. of this section, there are wastewater collection and conveyance facilities that serve the GVCC. The planning area is served by gravity sewers and pump stations that collect and convey the wastewater to the Sidley Road gravity sewer main. One of the pump stations in the planning area is the Flat Road Pump Station. It receives flow from several parcels in the planning area. This pump station's force main discharges to the existing gravity sewer main located in Great Valley Parkway. The Wilburdale Pump Station, located in the western portion of the planning area, receives flow from the Great Valley Corporate Campus and pumps wastewater through a force main to the gravity sewer main located in Flat Road. This gravity main conveys wastewater to the gravity sewer in Sidley Road.

Operationally, the gravity sewer main in Sidley Road takes all flow from the above referenced pump stations along with flow from the adjacent subdivisions. Refer to the plan sheet in Appendix C.

There are areas of concern that need to be addressed to meet existing and future wastewater needs.

- The Wilburdale Pump Station: This is one of the oldest stations in the Township with no control building or permanent emergency power source.
- The Flat Road Pump Station: This is an antiquated submersible pump station with no control building or permanent emergency generator power source.
- The gravity sewer in Flat Road: This sewer main receives flow from the Wilburdale Pump Station's force main. The diameter of this gravity sewer will need to be increased to accommodate future flows.

- The force main for the Wilburdale Pump Station will need to be increased in diameter to reduce the headloss and accommodate future flows.
- The Flat Road Pump Station may need to be relocated pending a full determination of the physical scope of the development that is proposed by Liberty Properties.

Upon review, a Phased approach to the above referenced upgrades has been considered. Refer to Section VIII and the Executive Summary for specific details.

Phase I: Upgrade the Wilburdale Pump Station along with the force main and gravity main located in Flat Road. The pump station site is limited in terms of available area. However, it is anticipated that through the implementation of a compact package pump station, upgrades can be implemented on the existing site. Two options that exist include a compact submersible station or a compact suction lift station constructed adjacent to the current station. This would enable the current station to stay in operation while the new facility is constructed. The existing fence would be expanded outward for placement of the new station on the northside of the current station. The force main will need to be upgraded from the existing 6 inch main to a new 10 inch main. An 8 inch main could accommodate the flows. But, headloss in the 8 inch main would be significant compared to that of a 10 inch main.

The pump station would also include a new structure to house the controls, a new permanent emergency generator, and a bypass connection.

Phase II: Upgrade the Flat Road Pump Station and relocate it if necessary (The need to relocate this station is dependent upon the configuration of the proposed entrance/access to the Liberty Properties development). Since the

design of the upgrades to this station is dependent upon the timing and location of the proposed development by Liberty Properties, the Township commits to deferring the planning for this pump station to the planning module submission for Liberty Properties.

6. Alternative Methods of Collection and Conveyance to Serve Areas in Need

Given that this Special Study addresses the needs associated with the upgrade of existing facilities to serve future flows, alternative methods of collection and conveyance to serve areas in need is not applicable to this Special Study.

B. Use of Individual Disposal Systems

The use of individual on-lot disposal systems will not be considered for this Special Study.

C. Small Flow Sewage Treatment Facilities

Assessment of alternatives based on the use of small flow sewage treatment facilities, land treatment alternatives, or package treatment facilities to serve individual homes or clusters of homes is not applicable to this Special Study.

D. Community Land Disposal

Assessment of alternatives based on the use of community land disposal is not applicable to this Special Study.

E. Retaining Tank

The use of retaining tanks will not be evaluated as part of this Special Study.

F. Septage Management

A discussion of the need for and implementation of a sewage management program will not be addressed as part of this Special Study.

VI. EVALUATION OF ALTERNATIVES

A. Consistency Determination

1. Clean Stream Law

The construction of upgrades to the conveyance facilities in the Planning area does not conflict with the Clean Stream Law. Flow generated by the planning area will ultimately be treated at Valley Forge Sewer Authority's wastewater treatment plant and disposed of in accordance with requirements and limits set forth by PADEP.

2. Chapter 94 Report

The East Whiteland Township 2013 Chapter 94 Report indicates that both the Wilburdale and Flat Road Pump Stations have capacity to meet current flow needs. However, based on the needs identified in this Special Study, the capacity of both stations will be exceeded.

The Mill Lane Pump Station, located at the intersection of Conestoga Road and Mill Lane, has been upgraded. The upgraded station has two pumps operating and one standby pump. The capacity of this arrangement is 4.32 MGD. The station will also have space for the addition of a fourth pump. By adding the fourth pump, the station will be able to operate with 3 pumps active and one standby pump. The capacity of the station with this arrangement is 5.04 MGD. Both of these conditions are designed with the existing 14 inch force main in place. If the force main is upgraded to 20 inch, the 2 pump operating arrangement has a capacity of nearly 6.192 MGD. If 3 pumps would be operating with a fourth pump as standby, the station would have a capacity in excess of 7.20 MGD.

3. *Clean Water Act (Title II)*

This Act and the Federal Water Quality Act establish specific planning requirements for wastewater facilities planning. These requirements only apply to municipalities intending to apply for financial assistance from the Federal Government for the construction of sewage facilities. Since the funding of the construction of the alternatives would be through financial contributions by municipal users, and potentially State agencies, this analysis is not applicable.

4. *Comprehensive Plans*

The Chester County Planning Commission (CCPC) Comprehensive Plan, entitled "Landscapes2," was adopted in November of 2009. The alternatives to upgrade public sanitary sewer service to accommodate proposed development in the planning area is consistent with the implementation strategy, policies and goals of the current Landscapes2 as shown in the Utilities and Infrastructure section of the plan.

East Whiteland Township adopted a Comprehensive Plan in 2001 that identifies Township policies on future preservation and development.

In September 2002, Chester County adopted a water resources management plan, titled **'Watersheds'**. This is an element of the County's Comprehensive Plan. In Part 4 of the Plan (Goals and Objectives – Achieving the Vision), Goal 7 describes the need to integrate utility and municipal planning to meet future water supply and wastewater needs.

It further discusses the need to delineate municipal planned public water/wastewater service areas and evaluate infrastructure alternatives. This Special Study is consistent with the objectives set forth in Watersheds.

5. ***Antidegradation Requirements Contained in Chapters 93, 95 and 102 of the Clean Water Act***

Implementation of any of the alternatives for this Special Study will not impact the antidegradation requirements contained in Chapters 93, 95, 102 of the Clean Water Act.

6. ***State Water Plans***

There are no anticipated conflicts with the State Water Plan for this submission.

7. ***Pennsylvania's Prime Agricultural Land Policy***

East Whiteland Township is committed to protecting prime agricultural land within the Township's boundaries.

For the planning area in this Special Study, the Township's Zoning Ordinance and Comprehensive Plan give the land area a residential and office/business park designations. The development of this land is consistent with its land use designation.

It should be noted that the Chester County Planning Commission's agricultural conservation easement plan indicates that there are no agricultural conservation easements in East Whiteland Township. This plan was developed by the Chester County Department of Open Space Preservation utilizing information from the County Agricultural Preservation Board and the Chester County Bureau of Land Records. The latest update is January 2014.

8. ***County Stormwater Management Plan***

PA Act 167 Stormwater Management Plans (SWMP) have been completed and approved for portions of Chester County. The Valley Creek Watershed (East) is one of those plans that have been approved. PA DEP approved it February 2011. The Valley Creek (East) is designated as an exceptional value stream. This SWMP is incorporated via reference into the County-wide Act 167 SWMP

that is nearing the point of formal resolution of adoption. From a consistency perspective, it appears that the concept to provide sewer service to potential development is consistent with the SWMP. This special study planning area falls within the Valley Creek Watershed and the prescribed system improvements not only accommodate future flows but provide for minimizing inflow and infiltration of stormwater into the sanitary sewer system.

9. Wetlands Protection

As referenced in Section II.G. of this Plan, There are no mapped wetland areas within the planning area as identified on the map found in Appendix E. The source for the wetlands information is the National Wetlands Inventory Mapping provided by the US Fish and Wildlife Service.

10. Protection of Threatened, Rare, and Endangered Plant and Animal species (PNDI)

A Pennsylvania National Diversity Inventory (PNDI) search was completed for each area within the various phases. See Appendix H. No conflicts were found for proposed upgrades associated with the Wilburdale Pump Station or the Flat Road Pump Station.

11. Historic and Archaeological Resource Protection

The Pennsylvania Historic and Museum Commission (PHMC) were contacted to determine if there were any potential conflicts within the proposed Phases. PHMC reviews for the proposed sewerage facilities have been completed. The results of the PHMC's review for the proposed sewerage facilities can be found in Appendix I. It has been determined that the projects will have no impact on historic resources.

B. Resolution of Inconsistencies

Upon review of the constraints discussed in items 1 through 11, there are no apparent inconsistencies with applicable planning requirements.

C. Alternative Evaluation with Respect to Applicable Water Quality Standards and Effluent Limitations

The planned alternatives to provide a sanitary sewer collection and conveyance system for this proposed development will not impact water quality standards or effluent limitation. Wastewater will be discharged to the existing public collection and conveyance system. Ultimately, wastewater will be treated at the Valley Forge Sewer Authority's WWTP.

D. Preliminary Cost Opinions

Preliminary cost opinions were developed for the primary alternatives discussed in Section V. These cost opinions reflect the following:

1. Phase I – Wilburdale Pump Station and Force Main

Construct Phase I (refer to detail in Section V) to serve projected wastewater needs. Wastewater through Phase I would be conveyed to Sidley Road and ultimately the Mill Lane Pump Station.

Planning Level - Construction Cost Opinion Total for Pump Station Upgrades (pumps, wetwell, piping, bypass connection, permanent emergency generator, control building, flow meter): $690,000

Planning Level – Gravity Sewer Upgrade and Force Main Upgrade Construction Cost Opinion: $682,000

Total Planning Level Construction Cost - $1,372,000

Phase II – Flat Road Pump Station

Construct Phase II (refer to detail in Section V) to serve projected wastewater needs. Wastewater through Phase II would be conveyed to the Wilburdale Pump Station and ultimately to the Mill Lane Pump Station.

Planning Level – Planning deferred to future planning to be initiated by Liberty Properties.

E. Analysis of Available Funding Methods

This section of the Plan addresses methods available to finance the proposed Phases. Three financing alternatives exist for this particular project.

1. Municipal Bond Issue

a. General

There are several types of bonds; some are taxable and some are tax-exempt. However, the general classification of municipal bonds usually refers to tax-exempt bonds. There are three types of municipal bonds generally used in financing public works.

- *General Obligation Bonds* are tax-free bonds that are secured by the pledge of the full faith, credit, and taxing owner of the issuing agency. This means that this type of bond is backed by all of the taxes on real estates and personal property within the jurisdiction of the issuing agency. It involves minimum risk to the investor and therefore requires a lower rate of interest than other types of bonds.

- *Dedicated Tax Bonds* are payable only from the proceeds from a special tax and are not guaranteed by the full faith, credit and taxing power of the issuing agency. Examples of special dedicated taxes are the special assessments against property which is adjacent to and the principal beneficiary of the improvement, and gasoline taxes used to finance highway construction.

- *Revenue Bonds* are payable from revenues derived from the use of the improvement such as tools, sewer bills, or rents paid by the users of the improvement and do not otherwise represent an obligation of the issuing agency. Revenue bonds are not ordinarily subject to statutory or constitutional debt limitations. They are often issued by commissions, authorities, and other public agencies created for the specific purpose of financing, constructing, and operating essential public projects.

Typically, municipal bonds are sold to an investment-banking firm, which then resells the bonds to individual investors. The advantage of municipal bonds to the investor is their tax-free status. A bond discount (a percentage of the total bond issue) serves as the investment banker's commission. Before bonds are sold, they must be rated on the basis of risk to the investor by a rating agency such as Standard and Poor's or Moody's. The higher the rating, the lower the risk to the investor and, consequently, the lower the interest rate paid on the bond.

The legal instrument, which sets the rules that must be observed by the issuing agency, is the Trust Indenture. The Trust Indenture is prepared by the Bond Counsel and must be printed along with the bonds. Due to specific requirements as to the denominations of the bonds and methods and materials for printing, printing costs can be substantial. A

trustee is required to administer the bond issue and insure the terms of the Trust Indenture are observed. This results in an Annual Trustee Fee. Investment bankers indicate that it does not pay to extend the term beyond 25 years because the interest rate increases dramatically.

b. Advantages of Municipal Bond Issue Funding

- This program affords long-term fixed rate financing.
- Tax-exempt municipal bonds are in high demand.
- There is local investment opportunity.
- Municipal credit is established.
- It retains flexibility for future borrowing.

c. Disadvantages of Municipal Bond Issue Funding

- A cover may be required.
- A Debt Service Reserve Fund is generally required.
- There are trustee fees and costs of preparing a Trust Indenture.

2. Bank Loan

Another financing option for the implementation of this project is the bank loan. There are four basic categories of bank loans. These are:

- Real Estate Loans (Mortgage)
- Participation and Interbank Loans
- Installment Loans (Personal)
- Commercial and Industrial Loans

Of the four types, a commercial and industrial loan would be the most applicable to this project.

Commercial and industrial loans may be made on a demand or time basis. A demand basis loan allows the bank to call for repayment at any time, or the borrower can repay when convenient. A time basis loan provides for a specific loan maturity date.

Most commercial and industrial loans are unsecured. The credit is extended on the basis of an analysis of all available information pertaining to the customer and the bank's confidence in that customer's ability and willingness to repay.

For this planned project, it appears that it would be prudent to seek a time basis loan. An interest rate offering would be established, and an amortization schedule set. Interest rates may range from 5% to 10%.

Advantages of the Bank Loan Financing

- Ability to shop around for a loan structure that best fits the customer's needs.
- Flexibility in establishing repayment schedules.
- Working with and through a local financial institution.
- Municipal credit is established.
- Ability to obtain fixed rate financing.

Disadvantages of Bank Loan Financing

- Interest rates are charged for loan repayment.
- Processing fees may be required.
- Processing and issuances fees may be expensive.

3. Direct Funding by Developers

A third financing option for the implementation of this project is direct funding by those who are developing the property in the planning area. This would involve capital expenditures by the developer from his own capital funds.

Advantages of Direct Funding by Developer

- Avoid any third party involvement. Payment for services can be made directly to the manufacture or contractor by the Developer.
- There are no interest rate charges.
- Bank processing and issuance fees are avoided.
- Removes the financial burden from the Township.

Disadvantages of Direct Funding

- There are no disadvantages to this method of financing.

F. Immediate or Phased Implementation

It is planned to implement the collection and conveyance system improvements in phases. These include:

Phase I: Upgrade the Wilburdale Pump Station along with the force main and gravity main located in Flat Road.

Phase II: Upgrade the Flat Road Pump Station.

G. Ability of the Township to Implement the Alternative

The Township is well established and has the ability to implement the technical alternatives presented in this Plan.

VII. INSTITUTIONAL EVALUATION

A. Analysis of the Township, Past Actions, and Present Performance

1. Financial and Debt Status

The Township is a well-established entity that will be able to oversee the implementation of the proposed technical alternative. Financially, through the funding mechanisms identified above, the construction of the necessary collection and conveyance facilities can be accomplished. Ultimately, the Township will take dedication of these facilities and will be required to operate and maintain them. The funds for facility O&M may originate from the Township's Sewer Fund.

2. Available Staff and Administrative Resources

The Township is governed by a three-member Board of Supervisors elected at-large, who each serve six-year terms that include executive and legislative responsibilities. Others associated with the Township are:

- Township Manager
- Director of Public Works
- Solicitor
- Consulting Engineer

The Township has the necessary staff and administrative resources already in place. No further evaluation of staffing and resources is necessary at this time.

3. *Existing Legal Authority*

As provided for under Pennsylvania Law, the Township has the necessary legal authority to oversee the implementation of the technical alternatives presented in this Special Study.

B. Institutional Alternatives Necessary to Implement the Technical Alternative

1. *Need for a New Authority*

East Whiteland Township does not have an Authority in place at this time. It is not deemed necessary that a new Authority be established to meet the needs of the alternatives identified in this Special Study. The Township and public works personnel are capable of implementing the identified alternatives.

2. *Function of the Authority*

This is not applicable given that the there is no sewer authority in place at this time.

3. *Cost of Administration*

This is not applicable given that the there is no sewer authority in place at this time.

C. Administrative and Legal Activities to be Completed and Adopted to Ensure the Implementation of the Technical Alternative

1. *Legal Authorities of Incorporation*

No new wastewater Authorities of Incorporation are necessary and there will be no changes to the Township's structure to implement these projects.

2. *Required Ordinances, Standards, Regulations, and Intermunicipal Agreements*

In 1971, an Intermunicipal Agreement was signed by East Whiteland Township, the former East Whiteland Municipal Authority, Malvern Municipal Authority, Malvern Borough, and the Valley Forge Sewer Authority for conveyance of

wastewater through the Valley Creek Trunk Sewer to the Valley Forge Sewer Authority's WWTP for treatment and disposal. In December 1979, an amendment was issued to the existing 1971 intermunicipal agreement between East Whiteland Municipal Authority, East Whiteland Township, Malvern Municipal Authority, Borough of Malvern, and the Valley Forge Sewer Authority. This amendment facilitates the transmission of wastewater from an area in Charlestown Township adjacent to East Whiteland Township through the East Whiteland Township Trunk Line and the Valley Creek Trunk Line.

This intermunicipal agreement was amended and signed by all parties in 2013 to reflect the latest flow and cost sharing conditions. This effort to amend the agreement took place in accordance with the September 2013 Special Study approved by the Department.

3. *Provisions of Rights-of-Way, Easements, and Land Transfers*

Upgrades to the wastewater collection and conveyance system that will serve potential development will extend along Township or State Roads and easements. The Wilburdale Pump Station site is limited in terms of available area. However, it is anticipated that through the implementation of a compact package pump station, upgrades to the station can be implemented on the existing site.

The Flat Road Pump Station may need to be moved to accommodate the configuration associated with the access that is proposed for Liberty Properties. This location is yet to be determined pending further definition of the physical configuration of the proposed development.

4. *Other Sewage Facilities Plan Adoptions*

It is not anticipated that other sewage facilities plans will need to be adopted as part of this planning process.

5. Legal Documents

Legal documentation, in the form of an amended intermunicipal agreement was completed as part of the September 2013 Special Study. Revisions to this agreement are not necessary for this Special Study.

6. Dates and Timeframes of 1 Through 5 Above

The dates and timeframes for the items in this section are found in the implementation schedule in the Executive Summary of this Plan.

D. Selected Institutional Alternative

No changes are needed to the existing municipal structure. An amendment to the existing intermunicipal agreement was completed as part of the September 2013 Special Study.

VIII. SELECTED WASTEWATER TREATMENT AND INSTITUTIONAL ALTERNATIVE

A. Identify the Chosen Technical Alternative

The selected alternative which best meets the wastewater treatment needs of the proposed development in the planning area is:

Phase I: Upgrade the Wilburdale Pump Station along with the force main and gravity main located in Flat Road.

Phase II: Upgrade the Flat Road Pump Station. (Planning deferred to the planning module submission by Liberty Properties)

The phasing of alternative is recommended based on the following:

1. Existing Wastewater Disposal Needs

Within the planning area, wastewater disposal needs are met through the use of the Flat Road Pump Station, the Wilburdale Pump Station, and a network of gravity sewer mains and force mains. These facilities can continue to meet the existing wastewater disposal needs of the planning area.

2. Future Wastewater Treatment Needs

Future wastewater disposal needs, identified in Section IV of this Plan show that upgrades will be needed for both the Wilburdale Pump Station and the Flat Road Pump Station. Additional upgrades will be planned for the Wilburdale Force Main and the downstream gravity sewer main that extends from the force main to the intersection of Sidley Road and Flat Road.

3. Operations and Maintenance Considerations

The proposed wastewater facilities will be owned and operated by East Whiteland Township upon completion. Operations and maintenance of the new facilities will be the responsibility of the Township which currently operates and maintains existing wastewater facilities within the Township.

Since both the existing Flat Road Pump Station and the Wilburdale Pump Station are antiquated facilities, new stations will greatly improve upon the operations and maintenance that is currently needed by Township personnel.

4. ***Cost Effectiveness***

In accordance with the cost opinions for the alternatives presented in Section VI of this study, the phasing of the Alternatives is the most cost effective approach. In addition, since the Wilburdale pump station is downstream from the Flat Road station, capacity will need to be built into the system at Wilburdale first. Then, upgrades to the Flat Road pump station can follow.

5. ***Available Management and Administrative Systems***

The Township has the management and administrative staff in place to implement the selected alternative.

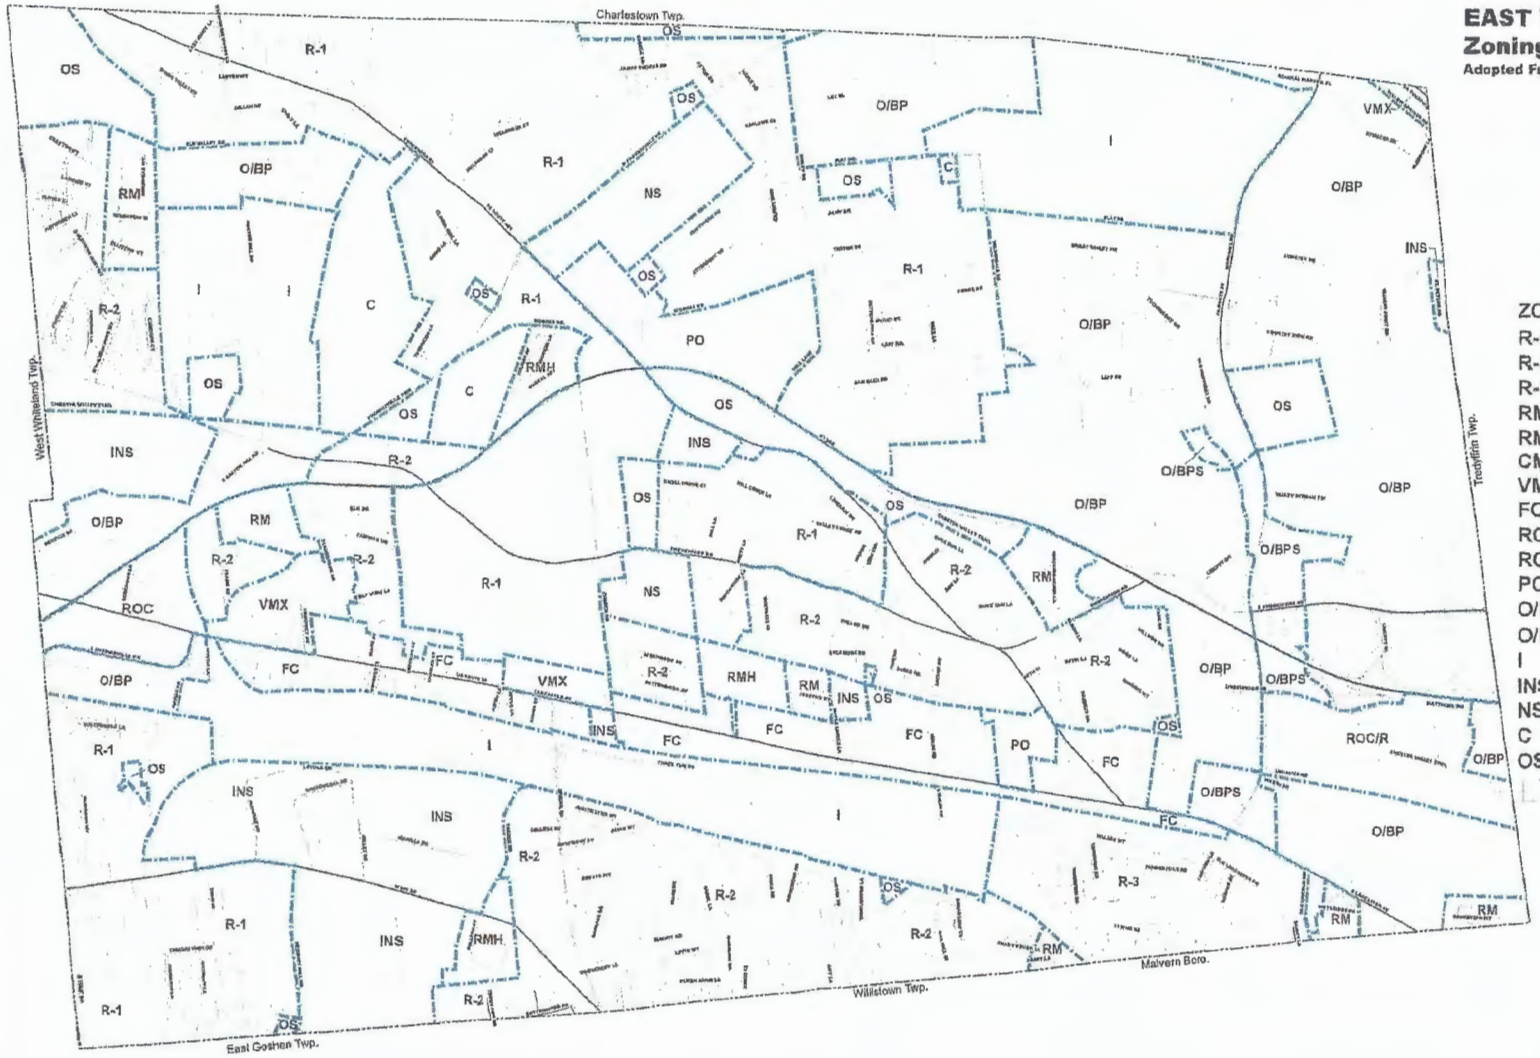
6. ***Available Financing Methods***

Of the financing methods discussed in Section VI, each method can provide the necessary funding for the selected alternative. Refer to Section VIII.B. for the selected capital financing plan.

7. ***Environmental Soundness***

Environmentally, the Valley Forge Sewer Authority's WWTP can adequately treat the average and peak flows within the permitted concentration limits.

B. Selected Capital Financing Plan



The selected technical alternative will be paid for and financed through bond funding mechanisms and sharing of costs between the municipality and developers. The planning-level costs are shown in Section VI.

The Township intends to pay for the proposed upgrades up-front and then plans to pass along those costs to the developers of the development that is proposed within the planning area.

APPENDIX H

PNDI Response

PNDI Project Environmental Review Receipt Project Search ID: 20140513450681

1. PROJECT INFORMATION

Project Name: **Act 537 Study for Wilburdale PS and Flat Road PS**
Date of review: **5/13/2014 9:33:36 AM**
Project Category: **Waste Transfer, Treatment, and Disposal,Liquid waste/Effluent,Sewage module/Act 537 plan**
Project Area: **11.4** acres
County: **Chester** Township/Municipality: **East Whiteland**
Quadrangle Name: **MALVERN** ~ ZIP Code: **19355**
Decimal Degrees: **40.061509 N, -75.553748 W**
Degrees Minutes Seconds: **40° 3' 41 N, W**

2. SEARCH RESULTS

Agency	Results	Response
PA Game Commission	No Known Impact	No Further Review Required
PA Department of Conservation and Natural Resources	No Known Impact	No Further Review Required
PA Fish and Boat Commission	No Known Impact	No Further Review Required
U.S. Fish and Wildlife Service	No Known Impact	No Further Review Required

As summarized above, Pennsylvania Natural Diversity Inventory (PNDI) records indicate no known impacts to threatened and endangered species and/or special concern species and resources within the project area. Therefore, based on the information you provided, no further coordination is required with the jurisdictional agencies. This response does not reflect potential agency concerns regarding impacts to other ecological resources, such as wetlands.

Note that regardless of PNDI search results, projects requiring a Chapter 105 DEP individual permit or GP 5, 6, 7, 8, 9 or 11 in certain counties (Adams, Berks, Bucks, Carbon, Chester, Cumberland, Delaware, Lancaster, Lebanon, Lehigh, Monroe, Montgomery, Northampton, Schuylkill and York) must comply with the bog turtle habitat screening requirements of the PASPGP.

3. AGENCY COMMENTS

Regardless of whether a DEP permit is necessary for this proposed project, any potential impacts to threatened and endangered species and/or special concern species and resources must be resolved with the appropriate jurisdictional agency. In some cases, a permit or authorization from the jurisdictional agency may be needed if adverse impacts to these species and habitats cannot be avoided.

These agency determinations and responses are **valid for two years** (from the date of the review), and are based on the project information that was provided, including the exact project location; the project type, description, and features; and any responses to questions that were generated during this search. If any of the following change: 1) project location, 2) project size or configuration, 3) project type, or 4) responses to the questions that were asked during the online review, the results of this review are not valid, and the review must be searched again via the PNDI Environmental Review Tool and resubmitted to the jurisdictional agencies. The PNDI tool is a primary screening tool, and a desktop review may reveal more or fewer impacts than what is listed on this PNDI receipt. The jurisdictional agencies **strongly advise against** conducting surveys for the species listed on the receipt prior to consultation with the agencies.

PA Game Commission

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Department of Conservation and Natural Resources

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Fish and Boat Commission

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

U.S. Fish and Wildlife Service

RESPONSE: No impacts to **federally** listed or proposed species are anticipated. Therefore, no further consultation/coordination under the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 *et seq.* is required. Because no take of federally listed species is anticipated, none is authorized. This response does not reflect potential Fish and Wildlife Service concerns under the Fish and Wildlife Coordination Act or other authorities.

4. DEP INFORMATION

The Pa Department of Environmental Protection (DEP) requires that a signed copy of this receipt, along with any required documentation from jurisdictional agencies concerning resolution of potential impacts, be submitted with applications for permits requiring PNDI review. For cases where a "Potential Impact" to threatened and endangered species has been identified before the application has been submitted to DEP, the application should not be submitted until the impact has been resolved. For cases where "Potential Impact" to special

concern species and resources has been identified before the application has been submitted, the application should be submitted to DEP along with the PNDI receipt. The PNDI Receipt should also be submitted to the appropriate agency according to directions on the PNDI Receipt. DEP and the jurisdictional agency will work together to resolve the potential impact(s). See the DEP PNDI policy at http://www.naturalheritage.state.pa.us.

5. ADDITIONAL INFORMATION

The PNDI environmental review website is a **preliminary** screening tool. There are often delays in updating species status classifications. Because the proposed status represents the best available information regarding the conservation status of the species, state jurisdictional agency staff give the proposed statuses at least the same consideration as the current legal status. If surveys or further information reveal that a threatened and endangered and/or special concern species and resources exist in your project area, contact the appropriate jurisdictional agency/agencies immediately to identify and resolve any impacts.

For a list of species known to occur in the county where your project is located, please see the species lists by county found on the PA Natural Heritage Program (PNHP) home page (www.naturalheritage.state.pa.us). Also note that the PNDI Environmental Review Tool only contains information about species occurrences that have actually been reported to the PNHP.

1. PROJECT INFORMATION

Project Name: **Act 537 Study for Flat Road PS**
Date of review: **5/13/2014 10:15:55 AM**
Project Category: **Waste Transfer, Treatment, and Disposal,Liquid waste/Effluent,Sewage module/Act 537 plan**
Project Area: **3.0** acres
County: **Chester** Township/Municipality: **East Whiteland**
Quadrangle Name: **MALVERN** ~ ZIP Code: **19355**
Decimal Degrees: **40.064441 N, -75.539521 W**
Degrees Minutes Seconds: **40° 3' 52" N, -75° 32' 22.3" W**

2. SEARCH RESULTS

Agency	Results	Response
PA Game Commission	No Known Impact	No Further Review Required
PA Department of Conservation and Natural Resources	No Known Impact	No Further Review Required
PA Fish and Boat Commission	No Known Impact	No Further Review Required
U.S. Fish and Wildlife Service	No Known Impact	No Further Review Required

As summarized above, Pennsylvania Natural Diversity Inventory (PNDI) records indicate no known impacts to threatened and endangered species and/or special concern species and resources within the project area. Therefore, based on the information you provided, no further coordination is required with the jurisdictional agencies. This response does not reflect potential agency concerns regarding impacts to other ecological resources, such as wetlands.

Note that regardless of PNDI search results, projects requiring a Chapter 105 DEP individual permit or GP 5, 6, 7, 8, 9 or 11 in certain counties (Adams, Berks, Bucks, Carbon, Chester, Cumberland, Delaware, Lancaster, Lebanon, Lehigh, Monroe, Montgomery, Northampton, Schuylkill and York) must comply with the bog turtle habitat screening requirements of the PASPGP.

3. AGENCY COMMENTS

Regardless of whether a DEP permit is necessary for this proposed project, any potential impacts to threatened and endangered species and/or special concern species and resources must be resolved with the appropriate jurisdictional agency. In some cases, a permit or authorization from the jurisdictional agency may be needed if adverse impacts to these species and habitats cannot be avoided.

These agency determinations and responses are **valid for two years** (from the date of the review), and are based on the project information that was provided, including the exact project location; the project type, description, and features; and any responses to questions that were generated during this search. If any of the following change: 1) project location, 2) project size or configuration, 3) project type, or 4) responses to the questions that were asked during the online review, the results of this review are not valid, and the review must be searched again via the PNDI Environmental Review Tool and resubmitted to the jurisdictional agencies. The PNDI tool is a primary screening tool, and a desktop review may reveal more or fewer impacts than what is listed on this PNDI receipt. The jursidictional agencies **strongly advise against** conducting surveys for the species listed on the receipt prior to consultation with the agencies.

PA Game Commission

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Department of Conservation and Natural Resources

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Fish and Boat Commission

RESPONSE: No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

U.S. Fish and Wildlife Service

RESPONSE: No impacts to **federally** listed or proposed species are anticipated. Therefore, no further consultation/coordination under the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 *et seq.* is required. Because no take of federally listed species is anticipated, none is authorized. This response does not reflect potential Fish and Wildlife Service concerns under the Fish and Wildlife Coordination Act or other authorities.

4. DEP INFORMATION

The Pa Department of Environmental Protection (DEP) requires that a signed copy of this receipt, along with any required documentation from jurisdictional agencies concerning resolution of potential impacts, be submitted with applications for permits requiring PNDI review. For cases where a "Potential Impact" to threatened and endangered species has been identified before the application has been submitted to DEP, the application should not be submitted until the impact has been resolved. For cases where "Potential Impact" to special

concern species and resources has been identified before the application has been submitted, the application should be submitted to DEP along with the PNDI receipt. The PNDI Receipt should also be submitted to the appropriate agency according to directions on the PNDI Receipt. DEP and the jurisdictional agency will work together to resolve the potential impact(s). See the DEP PNDI policy at http://www.naturalheritage.state.pa.us.

5. ADDITIONAL INFORMATION

The PNDI environmental review website is a **preliminary** screening tool. There are often delays in updating species status classifications. Because the proposed status represents the best available information regarding the conservation status of the species, state jurisdictional agency staff give the proposed statuses at least the same consideration as the current legal status. If surveys or further information reveal that a threatened and endangered and/or special concern species and resources exist in your project area, contact the appropriate jurisdictional agency/agencies immediately to identify and resolve any impacts.

For a list of species known to occur in the county where your project is located, please see the species lists by county found on the PA Natural Heritage Program (PNHP) home page (www.naturalheritage.state.pa.us). Also note that the PNDI Environmental Review Tool only contains information about species occurrences that have actually been reported to the PNHP.

Re: File No. ER 2014-1234-029-A
DEP Act 537 Study: Wilburdale & Flat Road Pump Station Replacements & Upgrades, East Whiteland Twp., Chester Co.

Dear Mr. Kee:

Thank you for submitting information concerning the above referenced project. The Bureau for Historic Preservation (the State Historic Preservation Office) reviews projects in accordance with state and federal laws. Section 106 of the National Historic Preservation Act of 1966, and the implementing regulations (36 CFR Part 800) of the Advisory Council on Historic Preservation, is the primary federal legislation. The Environmental Rights amendment, Article 1, Section 27 of the Pennsylvania Constitution and the Pennsylvania History Code, 37 Pa. Cons. Stat. Section 500 et seq. (1988) is the primary state legislation. These laws include consideration of the project's potential effects on both historic and archaeological resources.

Based on our survey files, which include both archaeological sites and standing structures, there are no National Register eligible or listed historic or archaeological properties in the area of this proposed project.

Therefore, your responsibility for consultation for this project is complete. However, should you encounter archaeological resources during construction, please notify the Bureau for Historic Preservation at (717) 783-8946.

Sincerely,

Douglas C. McLearen, Chief
Division of Archaeology & Protection

Act 537 Study
PHMC Narrative
Project Number: 10310.09
Date: 5/13/14

This Act 537 study proposes the replacement and upgrades of two existing pump stations – Wilburdale and Flat Road Pump Stations. It also proposes to upgrade approximately 3,400 feet of sanitary sewer lines from the Wilburdale Pump Station near the intersection of Flat Road and Wilburdale Road to Sidley Road. All sanitary sewer line replacement shall be within the existing road. The anticipated disturbance and site area for the upgrades to the pump stations and sanitary sewer is less than 1 acre.

February 2, 2015

To Whom It May Concern:

On December 17, 2014, Bill Bohner, ARRO Engineers, made a presentation to the East Whiteland Township Planning Commission on the Act 537 Plan Special Study. At the meeting, one member, John Laumer, offered to prepare a response to the presentation. Other members of the Planning Commission offered no comments. Here is Mr. Laumer's response:

Prepared and Submitted by: John Laumer

Based on the preliminary ARRO presentation made to the Planning Commission on December 17, 2014, and on subsequent Commission discussions of points raised, the need clearly exists for improvement of Wilburdale and Flat Road Sewerage Pump Stations and inter-connected sewer mains (the "*conveyance system*").

More public input is needed.
Design flow projections, more than any other single factor, will strongly shape conveyance system design – in a manner of speaking, they 'toss the card into a cocked hat' as to what the pipe and pump capacities will be. Therefore, prior to ARRO initiating further billable design work on the system, the planning and cost implications of wastewater flow estimate(s) needs more public input.

Ideally, the additional public input should include facility managers from manor GVCC tenants and property owners, and especially should draw upon persons with an engineering expertise. Ideally, also, two scenarios should be run: base and upper boundary wastewater flows.

As the business world changed, so did our wastewater.
Wastewater characteristics of and volumes generated by the typical GVCC tenant have changed greatly over the last decade: laboratory, pilot, and commercial production operations, once prominent within the Center, have been relocated to Cambridge MA or similar biotech academic centers, or were closed outright as the conventional R&D pipeline was found to hold diminishing prospects for new products.

Most other water intensive business sectors, unlike the BioPharma sector, require fewer 'knowledge workers' or are otherwise incompatible with the GVCC setting for variety of reasons, most of which are self-evident. Examples include:

1. Pulp and paper production;
2. Power generation by fossil fuel or nuclear power;
3. Specialty & commodity chemical production;
4. Computer circuit board fabrication;
5. Vegetable and fruit processing, canning, freezing, etc;
6. Steel manufacture;
7. Animal slaughter and meat processing; and,
8. Vehicle manufacturing

What are water intensive industries doing to lower their water use?
Corporate water management is important for sustainable development programs, as well to meet investor demands. Corporate management systems have been widely expanded over the last decade to reduce water used per unit of production (saving money on raw materials). The other priority has been to reduce the mass of pollutants from getting into wastewater discharges (saving more money on pretreatment construction and operations). The upshot of such systems is to reduce water consumption by water recycling, through process equipment choices and reconfiguration, and through new operating protocols. (The plant that uses less water can better survive a drought and continues to operate reliably with a less complex wastewater management system in place, even in a flood! Hence, it is more sustainable.)

What are the most plausible water consumption scenarios for GVCC tenants, into the near term (Near term <= 10 years)?
There is no evidence that water intensive industrial tenants will relocate to or develop as from a startup, as has happened in the past. The converse is also true, though all 8 examples presented in the list above would be incompatible by most citizens, due to noise, odor, toxic emissions, unsightliness, transportation requirements, and difficulties posed by raw material and product storage.

The dream of a new, water-intensive biopharma operation locating in GVCC is just that: a dream.

A far more plausible scenario, by a *l-o-n-g* planning mile, would be for greatly increased overall tenant density, both of employees inside the Center and, eventually, by residences located contiguously to the Center so that those employees can "live work and play" in one closely configured locale. There are already strong indications that that is exactly the "future space" we in East Whiteland are entering.

Conclusion.
Use of wastewater flow numbers that reflect a bygone era of industrial operations 'just because" is potentially a waste of capital and commitment to unneeded operating and maintenance expenses. If the Township wants the large pipes and pumps 'just in case' higher density is coming, then just say so and lets get on with thinking about what that means for planning and zoning and budgeting.

Respectfully submitted,

Terry H. Woodman

RE: East Whiteland Township Act 537 Plan Special
Study for Planning Commission Review; Response to Comments.
ARRO #10310.09

Dear Commission Members:

We would like to take this opportunity to respond to the comments offered by the Commission for the above referenced Act 537 Special Study.

Response:

When preparing this Special Study, development of wastewater flow parameters was based on system operational data that defined a maximum scenario. This operational data reflected that period when the Great Valley Corporate Campus (GVCC) was fully occupied in the mid to late 2000's (2008). With the economic decline over the course of the past five to six years, a number of tenants moved their businesses or facilities from the GVCC to other locations or closed their businesses altogether.

In an effort to establish a more current base flow for the purposes of this Special Study, operational data for 2014 was reviewed.

Assuming that the former case described above represents the upper boundary scenario, the latter (based on 2014 data) would more accurately represent a base scenario.

The two primary property owners in the GVCC include Liberty Properties and Johnson & Johnson. Both of these entities were consulted and both provided their anticipated future wastewater loadings based on their known plans for development or redevelopment of their properties.

For the two flow cases, the average daily base flows from the GVCC are as follows:

Upper Boundary (2008) – 279,600 gpd
Base Boundary (2014) – 238,466 gpd

When including the projected flows provided by the primary property owners of Liberty Properties and Johnson & Johnson, the projected average daily flows from the GVCC are as follows:

Upper Boundary (2008) – 389,575 gpd
Base Boundary (2014) – 348,375 gpd

Upon review of these boundary conditions, there does not appear to be a significant difference in the base and upper flow-rates. Therefore, the sizing of infrastructure to accommodate the projected flows would be better served by utilizing the Upper Boundary condition to remain conservative.

Thank you for providing us with your comments and input. If you should have any additional questions or comments, please contact Bill Bohner at ARRO. His phone number is 610-495-2102.

Sincerely,

Terry H. Woodman

RE: East Whiteland Township
Act 537 Plan Special Study
Wilburdale and Flat Road Pump Stations

Dear Ms. Woodman,

The Chester County Health Department (CCHD) is in receipt of the above noted Act 537 Plan Revision document. This Special Study was prepared by ARRO Engineering and Environmental Consultants and dated November, 2014. It was received by CCHD on November 25, 2014 and has been reviewed in accordance with Title 25, Environmental Protection, Chapter 71, Administration of Sewage Facilities Planning Program, Chapter 71 § 71.31.(b.). We offer the following comments:

- In Section I, Previous Wastewater Planning, item #3 on page 6 references the DEP approved 2013 Special Study flow triggers. For Continuity those triggers should be included in this Special Study.

- In Section II, Physical and Demographic Analysis:

  - Section A. on page 8 references maps found in Appendix B. These maps are too small to adequately provide the detail intended here.

  - Section B., Identify Physical Characteristics of the Planning Area, on page 8, references the map in Appendix D and mentions Great Valley Parkway. The map in Appendix C labels this as Great Valley Boulevard. Also, Great Valley Bulevard is referenced in item #5 on page 20. You may want to change one or the other for accuracy and consistency.

  - Section E. Topography, on page 9, the maps are too small to be of any value in understanding the area.

- In Section III, Existing (Wastewater) Facilities, item B identifies 4 lots in the planning area that use on-lot sewage facilities and will not be connected to the public sewer at this time. However, now would be the appropriate time to address them in this plan so that additional planning will not be necessary when these lots are eventually connected.

- In Section VI, Future Growth and Land Development, Section A.1., on page 13, lists the Glasgow Tract, Liberty Properties and J&J Properties, which are not identified on any map in this plan. Since they are mentioned, and flows are assigned to each on page 17, they should be identified on the map of the planning area.

CCHD recognizes that the purpose of this plan is to gain approval to upgrade the Wilburdale and Flat Road Pumping Stations to provide adequate capacity to provide for the ultimate final development of the planning area. We consider this planning to be appropriate and recommend approval once all review comments have been addressed.

Once this plan has been approved by PA DEP, please forward a final version to CCHD for our files. Electronic copies of the finally approved plan are acceptable.

Thank you for the opportunity to review this Special Study Plan. Please contact me with any questions at 610-344-6239.

Sincerely,

Ralph E. DeFazio, SEO

RE: East Whiteland Township Act 537 Plan Special
Study for Health Department Review; Response to Comments.
ARRO #10310.09

Dear Mr. DeFazio:

East Whiteland Township would like to take this opportunity to respond to the Health Department's comments offered in the Department's January 6, 2015 review letter for the above referenced Act 537 Special Study.

Comment/Bullet 1:

In Section I, Previous Wastewater Planning, item #3 on page 6 references the DEP approved 2013 Special Study flow triggers. For continuity, those triggers should be included in the Special Study.

Response:

Acknowledged. Text has been added to this subsection showing the referenced trigger that was referenced in the PA DEP approval.

Comment/Bullet 2:

In Section II, Physical and Demographic Analysis:

Sub-bullet 1:

- Section A. on page 8 references maps found in Appendix B. These maps are too small to adequately provide the detail intended here.

Response:

These maps have been plotted at a larger scale (24"x36") to reflect the needed detail.

Sub-bullet 2:

- Section B., Identify Physical Characteristics of the Planning Area, on page 8, references the map in Appendix D and mentions Great Valley Parkway. The map in Appendix C labels this as Great Valley Boulevard. Also, Great Valley Boulevard is referenced in item #5 on page 20. You may want to change one or the other for accuracy and consistency.

Response:

Acknowledged. Text on the mapping and in the body of the Special Study has been revised to reflect consistent references to Great Valley Parkway.

Sub-bullet 3:

- Section E. Topography, on page 9, the maps are too small to be of any value in understanding the area.

Response:

Acknowledged. A larger scale topographic map has been provided in the appendix of the Special Study for reference.

Comment/Bullet 3:

In Section III, Existing (Wastewater) Facilities, item B identifies 4 lots in the planning area that use on-lot sewage facilities and will not be connected to the public sewer at this time. However, now would be the appropriate time to address them in this plan so that additional planning will not be necessary when these lots are eventually connected.

Response:

Acknowledged. Text has been added to this subsection that stipulates the projected flows from each of the OLDS properties have been accounted for in the overall flow projections. In addition, the planning area mapping reflects that these properties have been included in the Special Study's planning area.

Comment/Bullet 4:

In Section VI, Future Growth and Land Development, Section A.1., on page 13, lists the Glasgow Tract, Liberty Properties and J&J Properties, which are not identified on any map in this plan. Since they are mentioned, and flows are assigned to each on page 17, they should be identified on the map of the planning area.

Response:

Acknowledged. The mapping has been revised accordingly.

Thank you for providing us with your comments and input. If you should have any additional questions or comments, please contact Bill Bohner at ARRO. His phone number is 610-495-2102.

Sincerely,

Terry H. Woodman

Re: East Whiteland Township
Official Sewage Facilities Plan Special Study - Wilburdale Road and Flat Road Pump Stations

Dear Mr. Holmes:

The Chester County Planning Commission (CCPC) has reviewed the Draft 537 Plan Special Study dated November 2014 as required by Section 71.53(a)(2) of the Pennsylvania Sewage Facilities Act (Act 537). The Plan was prepared by ARRO. The Plan was received on November 25, 2014.

This Plan was prepared to evaluate alternatives to provide for upgraded Township conveyance system facilities to meet the future sanitary sewer needs of the Great Valley Corporate Campus and adjacent properties along Wilburdale Road and Flat Road, as well as examine the related impacts those needs will have on the Township's Flat Road Pump Station and the Wilburdale Pump Station.

The following comments are offered based on review of the document:

A. Consistency with the County Comprehensive Plan – *Landscapes2*:

1. The Study Area for East Whiteland Township, generally located south of Charlestown Township in the north-eastern portion of the Township, is primarily defined as the Suburban Landscape. The Act 537 Plan is consistent with the policies of *Landscapes2,* as they relate to the Suburban Landscape, including *Landscapes2* Policy UI 2.5 which states: "Maintain, upgrade, or expand existing public sewer and water facilities to support redevelopment and new development in designated growth areas, where consistent with local land use planning, while discouraging the extension of those facilities in the rural, agricultural and natural landscapes." The Plan indicates that East Whiteland Township is planning to upgrade components of the Township's conveyance system in order to accommodate future flows from the Great Valley Corporate Campus and adjacent properties along Wilburdale Road and Flat Road. The Plan, as proposed, is consistent with the goals and policies of *Landscapes2*.

2. *Watersheds*, the water resources element of the County comprehensive plan, identifies Objective 7.2 of Goal 7, "concentrate planned utility service areas to support designated growth areas," to be achieved through key strategies such as the extension of wastewater facilities in Suburban Landscapes. As such, East Whiteland Township, through its Act 537 Plan Update, intends to upgrade components of their public sewer system to accommodate existing and future planned growth. Therefore the goals for wastewater in East Whiteland Township are consistent with those of *Watersheds*.

B. Selection of Alternative:

1. The selected alternative for East Whiteland Township is to address the requirements necessary to upgrade components to the municipal conveyance system to accommodate future flows from the Great Valley Corporate Campus and adjacent properties. The proposed alternative is supported by *Landscapes2* Sewer and Water Policy UI 2.2, "Support infrastructure expansion and improvements that are consistent with *Landscapes2* and adopted regional and local plans that support projected future demands, avoid capacity shortfalls, protect natural resources, and provide safe and reliable utility services." As proposed, this alternative is consistent with the goals and policies of *Landscapes2*.

C. General Comments

1. The CCPC supports the comments made by the Chester County Health Department in their letter, dated January 6, 2015.

2. For clarity, please include a map of the Pump Stations, and associated lines, to be included in the Appendix as a separate map.

3. Please include information relating to the East Valley Creek being designated as an Exceptional Value stream. While there is text referencing the Act 167 Plan for this watershed, there is no discussion relating to the State designation.

4. Page 5. Previous Wastewater Planning. For clarity, please include information on the Valley Forge Sewer Authority's Act 537 Plan, adopted November 2006, which is the ultimate treatment and disposal method of this wastewater.

5. Page 6. Previous Wastewater Planning. For clarity, please include more information on the flow indicators, which are referenced as being included in the September 2013 Special Study, that was approved by PA DEP.

6. Page 6. Identify Land use Plans and Zoning Maps. Please update the text to reflect the title of the Chester County Comprehensive Plan as "Landscapes2."

7. Page 6. Identify Land Use and Zoning Maps. Please include the adoption dates of the plans listed.

8. Page 8. Identify Planning Area, Municipal Boundaries, and Service Area Boundaries Through mapping. Please include a larger map in Appendix B. As presented, the text is unclear.

9. Page 9. Topography. The map, referenced as being in Appendix D, should be presented in a larger format, so that it is easier to read.

10. Page 12. Individual and Community On-lot Disposal Systems. The text indicates that there are four lots along Wilburdale Road that could potentially be served through the extension of an 8-inch collector sewer. It would seem that this planning effort would be an appropriate time to address this potential extension, as those lots would likely be connected to the system in the future.

11. Page 13. Description of Future Growth and Development. For clarity, please include a map that shows the zoning districts/land use designations with the existing development and future growth (if known) included on it, as the plan presents future wastewater needs for specific parcels.

12. Page 27. Comprehensive Plans. Please update the text to reflect the adoption date of *Landscapes2* as November 2009.

13. Page 29. County Stormwater Management Plans. The text should include a reference to the Countywide Act 167 Plan, which is an addendum to the *Watersheds* document. While the study area is correctly identified as being within the East Valley Creek watershed, it would be useful to readers, to include a reference to the Countywide Act 167 document as well.

14. Appendices. It would be helpful to have all of the maps included in the appendices presented in a larger size, to make them more readable.

Thank you for the opportunity to offer comments on this plan. We trust that these comments will be of assistance to you as you prepare the final document for submission to PA DEP. The CCPC recommends approval of the Plan after all comments have been addressed. If you have any questions, please contact Carrie Conwell at 610-344-6285.

Sincerely,

Ronald T. Bailey, AICP

RE: East Whiteland Township Act 537 Plan Special Study;
Great Valley Corporate Campus (Wilburdale PS and Flat Rd. PS);
Planning Commission Review; Response to Comments.
ARRO #10310.09

Dear Mr. Bailey:

East Whiteland Township would like to take this opportunity to respond to the Planning Commissions comments offered in the Commissions' January 22, 2015 review letter for the above referenced Act 537 Special Study.

General Comment 1:

The CCPC supports the comments made by the Chester County Health Department in their letter dated January 6, 2015.

Response:

Acknowledged.

General Comment 2:

For clarity, please include a map of the pump stations, and associated lines, to be included in the Appendix as a separate map.

Response:

Acknowledged. A collection/conveyance system map has been added to the Appendix for reference.

Mr. Ronald T. Bailey, AICP
February 4, 2015

General Comment 3:

Please include information relating to the East Valley Creek being designated as an exceptional value stream. While there is text referencing the Act 167 Plan for this watershed, there is no discussion relating to the State designation.

Response:

This discussion will be added to Section VI.A.8 titled "County Stormwater Management Plan.

General Comment 4:

Page 5. Previous Wastewater Planning: For clarity, please include information on the Valley Forge Sewer Authority's Act 537 Plan, adopted November 2006, which is the ultimate treatment and disposal method for this wastewater.

Response:

Acknowledged. Text with this information will be added to Section I.A.1. "Previous Wastewater Planning".

General Comment 5:

Page 6. Previous Wastewater Planning. For clarity, please include more information on the flow indicators, which are referenced as being included in the September 2013 Special Study, that was approved by PA DEP.

Response:

Acknowledged. The approved flow indicator will be added to the text accordingly.

General Comment 6:

Page 6. Identify Land Use Plans and Zoning Maps. Please update the text to reflect the title of the Chester County Comprehensive Plan as "Landscapes2".

Response:

Acknowledged. The text will be revised accordingly.

General Comment 7:

Page 6. Identify Land Use and Zoning Maps. Please include the adoption dates of the plans listed.

Response:

Acknowledged. Adoption dates will be added to the listing of plans and ordinances accordingly.

General Comment 8:

Page 8. Identify Planning Area, Municipal Boundaries, and Service Area Boundaries Through Mapping. Please include a larger map in Appendix B. As presented, the text is unclear.

Response:

Acknowledged. A larger (24"x36") map/plan will be included in Appendix B for reference.

General Comment 9:

Page 9. Topography. The map, referenced as being in Appendix D, should be presented in a larger format, so that it is easier to read.

Response:

Acknowledged. A larger topographic map will be provided in Appendix D.

General Comment 10:

Page 12. Individual and Community On-Lot Disposal Systems. The text indicates that there are four lots along Wilburdale Road that could potentially be served through the extension of an 8 inch collector sewer. It would seem that this planning effort would be an appropriate time to address this potential extension, as those lots would likely be connected to the system in the future.

Response:

The projections in Section IV include the flows for these four properties in anticipation of future public sanitary sewer connection.

General Comment 11:

Page 13. Description of Future Growth and Development: For clarity, please include a map that shows the zoning districts/land use designation with the existing development and future growth (if known) included on it, as the plan presents future wastewater needs for specific parcels.

Response:

Acknowledged. The above referenced map will be provided.

General Comment 12:

Page 27. Comprehensive Plans. Please update the text to reflect the adoption date of Landscapes2 as November 2009.

Response:

Acknowledged. This text adjustment will be made.

General Comment 13:

Page 29. County Stormwater Management Plans. The text should include a reference to the Countywide Act 167 Plan, which is an addendum to the Watersheds document. While the study area is correctly identified as being within the East Valley Creek watershed, it would be useful to readers, to include a reference to the Countywide Act 167 document as well.

Response:

Acknowledged. The above referenced text will adjusted accordingly.

General Comment 14:

It would be helpful to have all of the maps included in the appendices presented in a larger size, to make them more readable.

Response:

Acknowledged. The maps will be plotted at a larger size and those larger prints will be incorporated into the appendices.

Mr. Ronald T. Bailey, AICP

February 20, 2015, A.D.

COPY OF NOTICE OR PUBLICATION

PUBLIC NOTICE

An Act 537 Plan Special Study has been prepared for East Whiteland Township, Chester County, Pennsylvania. The Special Study addresses the planning requirements necessary to provide for public sanitary conveyance improvements to existing portions of the Township's system. These improvements would provide the capacity for planned development to be located in the Great Valley Corporate Campus in East Whiteland Township.

Wastewater from the planning area identified in this document would be conveyed via upgraded wastewater conveyance system infrastructure, located along Flat Road, to Sidley Road at the western end of the planning area. The wastewater, once received at the Sidley Road sewer main would be conveyed to the Mill Lane pump station. This discharges through a force main and gravity sewer through East Whiteland Township and Tredyffrin Township to the Valley Forge Sewer Authority's Wastewater Treatment Plant.

To meet the wastewater conveyance needs of the planning area, it is proposed that the Township implement the selected alternatives in two primary phases.

For Phase I, it is proposed that the existing 8" gravity main, located in Flat Road (west of Wilburdale Road) be replaced with 1400 +/- feet of new 12" pipe. The improved sewer line will provide capacity for the existing and projected future flows. In addition the Wilburdale Pump Station, located at the corner of Wilburdale Road and Flat Road (and its respective forcemain) would also be planned for upgrades.

For Phase II, the intent is to make sanitary sewer improvements to the Flat Road Pump Station located in the eastern portion of the Great Valley Corporate Campus, adjacent to Flat Road. Phase II improvements will include the upgrading of the pump station only. No upgrades to the forcemain or gravity sewer main are planned.

The engineer's opinions of probable construction cost for these alternatives and the respective phases are:

Phase I: $1,372,000
Phase II: $642,000

The selected technical alternative will be paid for and financed through bond funding mechanisms and sharing of costs between the municipality and developers. Costs shall be recouped through established tapping fee and user rate structures.

In accordance with Chapter 71.3(c) of the Pennsylvania Code, the Township is providing a 30-day public comment period. The plan is available, for review, at the Township's offices, 209 Conestoga Road, Frazer, PA 19355 from 9:00 AM to 4:00 PM, Monday through Friday. Comments may be addressed to Ms. Terry Woodman, Township Manager, and are due no later than thirty (30) days from the date of this advertisement.

EAST WHITELAND TOWNSHIP

RESOLUTION NO. 16-2015

Resolution for Plan Revision Act 537

RESOLUTION OF EAST WHITELAND TOWNSHIP BOARD OF SUPERVISORS, CHESTER COUNTY, PENNSYLVANIA (hereinafter "the Township").

WHEREAS, Section 5 of the Act of January 24, 1966, P.L. 1535, No. 537 known as the "Pennsylvania Sewage Facilities Act", as Amended, and the Rules and Regulations of the Pennsylvania Department of Environmental Protection (PADEP) adopted thereunder, Chapter 71 of Title 25 of the Pennsylvania Code, require the Township to adopt an Official Sewage Facilities Plan providing for sewage services adequate to prevent contamination of waters and/or environmental health hazards with sewage wastes, and to revise said Plan whenever it is necessary to meet the sewage disposal needs of the Township's service area.

NOW, THEREFORE, BE IT RESOLVED, that East Whiteland Township Board of Supervisors hereby adopts and submits to the Pennsylvania Department of Environmental Protection for its approval, as a revision to the "Official Plan" of the Township, this Act 537 Special Study.

East Whiteland Township (Township) hereby approves and adopts the Act 537 Special Study which establishes the planning requirements necessary to provide public sanitary sewer infrastructure improvements located in and adjacent to the Great Valley Corporate Campus (GVCC) in the north central part of the Township. Improvements are a result of wastewater needs generated from proposed development within and adjacent to the GVCC. Selected alternatives for infrastructure improvements include upgrades to the Wilburdale Pump Station and Force Main, upgrades to the Flat Road gravity sewer main, and upgrades to the Flat Road Pump Station. The Township is committed to implementing the recommendations of this Special Study in accordance with the Study's implementation schedule.

The Township finds that the Act 537 Special Study described above conforms to applicable zoning, subdivision, other municipal ordinances and plans, and to a comprehensive program of pollution control and water quality management.

ADOPTED this 8th day of April, 2015.

BOARD OF SUPERVISORS
EAST WHITELAND TOWNSHIP

William Holmes, Chair

John A. Mott

ATTEST:

Township Secretary

Bill Wrabley

I, Maureen G. Perri, Secretary, East Whiteland Township, hereby certify that the foregoing is a true copy of Township Resolution No.16-2015, adopted April 8, 2015.

APPENDIX O

Approved Plan of Study and Task Activity Report

pennsylvania
DEPARTMENT OF ENVIRONMENTAL PROTECTION
SOUTHEAST REGIONAL OFFICE

April 17, 2014

Ms. Terry H. Woodman, Manager
East Whiteland Township
209 Conestoga Road
Frazer, PA 19355

Re: Act 537 - Plan of Study
Great Valley Corporate Campus Special Study
East Whiteland Township
Chester County

Dear Ms. Woodman:

We have completed our review of your municipality's proposed Plan of Study, as prepared by Mr. William L. Bohner, Jr., P.E., of ARRO Engineering and Environmental Consultants, dated February 25, 2014, and a proposed Task Activity Report dated January 2014.

The proposed Special Study will provide planning to address the wastewater needs of the Great Valley Corporate Campus (GVCC) in East Whiteland Township, Chester County and will provide planning for any necessary upgrades to the existing collection and conveyance system that serves the GVCC. These facilities include the existing Wilburdale Pump Station, force main and gravity sewer as well as the Flat Road Pump Station that serves the easternmost portion of the GVCC. The completed Special Study is scheduled to be submitted to the Department of Environmental Protection (DEP) in November 2014.

We note that this planning effort addresses Phase IV of the East Whiteland Township/Charlestown Township (Southside) Act 537 Special Study that was approved by DEP on September 13, 2013. Please provide a status update on the implementation of the remaining phases of this Special Study in the proposed special study for the GVCC.

Approval of this proposed Plan of Study is hereby granted. The estimated cost of the plan is $33,964. Please be advised the approval of this scope of work is not a guarantee of eligibility of planning costs for reimbursement by the Commonwealth pursuant to Section 6 (a) of Act 537 and 25 Pa Code Chapter 71 of DEPs regulations.

This Plan of Study approval does not constitute a final action by DEP. When a completed plan is submitted to us, we will act upon it consistent with Pa. Code Title 25, Chapter 71.

Please consider the following comments as your municipality prepares its Act 537 Official Plan Update:

Your municipality's Act 537 Official Plan Update is to be formatted as suggested in the"A Guide for Preparing Act 537 Update Revisions" including the necessary items listed in the "Act 537 Plan Content and Environmental Assessment Checklist." All necessary items must be included, and a copy of the completed checklist must be included with your Act 537 Plan. This form is available on our website at:
http://www.dep.state.pa.us/dep/deputate/watermgt/wqp/Forms/Act537/Forms_537Plan.htm

Also, please be advised that DEP will not pay grants under the act for planning costs incurred prior to the date of this Plan of Study approval or for information that has been completed previously under local, state, or federal funding programs. In addition, approval of this POS/TAR does not guarantee that all tasks listed will be eligible for reimbursement.

Please note that any new land developments associated with this plan will not be eligible for exemptions from sewage facilities planning under Chapter 71, Section 71.51(b)(2), until after the receiving facilities have been constructed. Applicants proposing projects that will coordinate new development construction with the construction of municipal conveyance or treatment facilities must submit Sewage Facilities Planning Modules for adoption by the municipality and approval by DEP.

If you have any questions, please contact me at 484.250.5184.

Sincerely,

Kelly Boettlin

RE: East Whiteland Township;
Act 537 Special Study for the Wilburdale Pump Station and
Great Valley Corporate Campus Planning Area
ARRO # 10310.09

Dear Ms. Woodman:

In keeping with the Pennsylvania Department of Environmental Protection's (DEP) requirements to prepare an Act 537 Special Study (Special Study) for the Wilburdale Pump Station and the Great Valley Corporate Center planning area, we have prepared a Plan of Study and Task Activity Report. These documents must be submitted to DEP at the time that the work on the Special Study is initiated. The Plan of Study establishes the project scope for DEP and the Task Activity Report establishes the budget. The Task Activity Report is DEP's primary tool for budgeting as it relates to providing 50% reimbursement to municipalities for their Act 537 planning efforts.

Please sign the attached Task Activity Report (11x17 sheet) in the lower right hand corner of the report. Return it to my attention and I will send both documents to DEP for processing.

If you have any questions regarding these documents, please contact me. You can reach me at 610-495-2102 or at bill.bohner@thearrogroup.com.

Sincerely,

William L. Bohner, Jr., P.E.
Project Engineer

EAST WHITELAND TOWNSHIP
GREAT VALLEY CORPORATE CAMPUS ACT 537 SPECIAL STUDY

In accordance with Title 25, Chapter 71, Administration of the Sewage Facilities Planning Program, of the Pennsylvania Code, a Plan of Study has been developed, for the preparation of a revision to the East Whiteland Township (Township) Act 537 Sewage Facilities Plan (Plan). This is being prepared to establish the planning elements that are necessary to meet the requirements of the Pennsylvania Department of Environmental Protection (PADEP) as they relate to the preparation of an Act 537 Plan Special Study (Special Study). This Special Study is to address the planning requirements necessary to address the need to upgrade existing collection and conveyance facilities that serve the Great Valley Corporate Campus (GVCC) in East Whiteland Township. These facilities include the existing Wilburdale Pump Station, force main, and gravity sewer as well as the Flat Road Pump Station that serves the eastern most portion of the GVCC. The planning area, as delineated on the location plan, will be the planning area for this Special Study. The Special Study shall become an amendment to the current Township-wide Act 537 Plan.

Based on the PADEP Act 537 Plan Content and Environmental Assessment Checklist, the following addresses the planning requirements necessary to complete the study:

Executive Summary

1. Prepare a table of contents for the document.

2. Prepare a plan summary (Executive Summary).

   A. Identify the planning area to be served by the future collection and conveyance system.

   B. Identify the alternative chosen alternative.

   C. Include the cost opinion for implementing the proposed alternative.

   D. Identify the municipal commitments necessary to implement the plan.

   E. Provide a schedule for implementing the proposed project.

3. Include original signed and sealed Resolutions of Adoption.

4. Include comments provided by the Township Planning Commission, Chester County Planning Commission, and Chester County Health Department.

5. Include Proof of Public Notice.

6. Include a copy of all written comments received and written responses to each comment.

7. Prepare a project implementation schedule.

8. If any planning inconsistencies are identified, documentation will be provided discussing the resolution of the inconsistencies. If none are identified, a statement will be made to that effect.

General Plan

I. Previous Wastewater Planning

A. Identify and discuss existing wastewater planning.

1. Discuss previous Act 537 planning.

2. Discuss planning that has not been done in accordance with an approved implementation schedule.

3. Discuss additional planning, if any, that is anticipated or planned by East Whiteland Township.

4. Discuss planning that has been done via official plan revision such as planning modules or addenda.

B. Identification of Municipal and County planning documents.

1. Identify land use plans and zoning maps as they pertain to East Whiteland Township.

2. Identify the zoning regulations.

II. Physical and Demographic Analysis

A. Identify the planning area, municipal boundaries and service area boundaries utilizing existing mapping.

B. Identify physical characteristics of the planning area. Existing mapping will form the basis for this identification supplemented by USGS and National Wetlands Inventory maps, as required.

C. Discussion of soils characteristics is not applicable to this Special Study. .

D. Discussion of geological features in the service area is not applicable to this Special Study.

E. Discuss topographic features in the service area.

F. Identification of potable water supply is not applicable to this Special Study.

G. Identify wetlands in the area utilizing National Wetlands Inventory Mapping and existing Act 537 mapping.

III. Existing Sewage Facilities in the Planning Area

A. Identify and describe municipal sewerage systems in the planning area.

1. Discuss location, size and ownership of existing collection and conveyance facilities. A map will be provided to show the location of the collection and conveyance facilities within East Whiteland Township that could potentially serve the planning area.

2. Providing a narrative and schematic diagram of the basic treatment process is not applicable to this Special Study.

3. Providing a description of the problems, if any, with the existing treatment plant is not applicable to this Special Study. However, a description of problems, if any, associated with the existing conveyance system will be discussed.

4. Providing details, if any, relative to ongoing upgrading or expansion of the treatment facilities is not applicable to this Special Study. However, a description of ongoing upgrades or expansion, if any, of the conveyance system will be discussed.

5. Provide a description of operation and maintenance requirements and the status of past and present compliance with these requirements.

B. 1,2,3,4. This Special Study is to address public sewers service and related upgrades within the planning area, There are four lots along Wilburdale Road that have on-lot systems. It is not planned that public sewer will be extended to these lots at this time. However, capacity will be allotted in the Wilburdale pump station in the event that public sewer is needed in the future.

C. 1,2,3. Identification of wastewater sludge and septage generation is not considered applicable to this Special Study.

IV. Future Growth and Development

A. Describe future growth and development through mapping, text and analysis for the planning area as defined by this Special Study.

1. Discuss areas with existing development or plotted subdivisions.

2. Discuss land use designations including residential, commercial and industrial areas.

3. Discuss future growth areas, population and EDU projections for these areas.

4. Briefly discuss zoning and subdivision regulations as they pertain to planned development.

5. Discuss the sewage planning required to provide adequate wastewater conveyance for planned development.

V. Alternatives to Provide New or Improved Wastewater Disposal Facilities

A. Identify the alternative to provide for improved sewage facilities

1. Identification of regional wastewater treatment concepts as an alternative shall make mention that wastewater is conveyed to the Valley Forge Sewer Authority's Wastewater Treatment Plant.

2. The potential for extension of existing municipal sewage facilities to areas in need. Municipal collection and conveyance facilities currently exist for the GVCC.

3. A discussion addressing the potential for continued use of existing on-site or on-lot systems is not applicable to this Special Study.

4. Analysis of a new community sewage system is not applicable to this Special Study.

5. Analysis of alternatives as they relate to repair, replacement, and upgrade of existing conveyance system components will be discussed. Specific attention shall be given to the Wilburdale Pump Station and Force Main as well as the gravity sewer downstream from the point at which the Wilburdale forcemain discharges. The Flat Road Pump Station and force main shall also be evaluated.

6. Discussion as it relates to the use of alternate methods of collection/conveyance to serve needs areas is not applicable to this Special Study.

B. The use of individual sewage disposal systems is not applicable to this Special Study.

C. Assessment of alternatives based on the use of small flow sewage treatment facilities, land treatment alternatives or package treatment facilities to serve individual homes or clusters of homes is not applicable to this Special Study.

D. Analysis based on the use of community land disposal is not applicable to this Special Study.

E. Addressing the use of retaining tank alternatives is not applicable to this Special Study.

F. A discussion of the need for and implementation of a sewage management program will not be addressed as part of this Special Study and is not considered applicable to this Special Study.

G. Non-structural comprehensive planning alternatives are not applicable to this Special Study.

H. Provide a no-action alternative which includes impacts on:

1. Water Quality and Public Health.

2. Growth Potential.

3. Community and economic conditions.

4. Recreational opportunities.

5. Drinking water sources.

6. Other environmental concerns.

VI. The Evaluation of Alternatives

A. Evaluate the alternatives, identified in Section V, for consistency with respect to the following:

1. Plans developed under the Clean Streams Law.

2. Plans developed under the Municipal Wasteload Management Plan (Chapter 94).

3. Plans developed under Title II of the Clean Water Act.

4. Comprehensive plans developed under the Pennsylvania Municipalities Planning Code.

5. Anti-degradation requirements as contained in PA Code, Title 25, Chapters 93, 95 and 102 and the Clean Water Act.

6. State water plans developed under the Water Resources Planning Act.

7. Pennsylvania Prime Agricultural Land Policy.

8. The County Stormwater Management Plan.

9. Wetlands Protection.

10. Protection of rare, endangered or threatened plant and animal species as identified by the PNDI.

11. Historical and Archeological Resource Protection (PHMC).

B. Provide for the resolution of any inconsistencies with items 1 through 11 above, if necessary.

C. Evaluate the alternatives with respect to applicable water quality standards and effluent limitations.

D. Provide cost opinions for construction, financing and engineering fees for the alternatives identified in Section V.

E. Provide an analysis of funding methods available to finance the proposed alternatives including financial contributions from private entities.

F. Analyze the need for immediate or phased implementation.

G. Analyze the ability of the Township to implement the alternative.

VII. Institutional Evaluation

A. Provide a brief discussion of the Township, their past actions and present performance including:

1. Financial and debt status

2. Available staff and administrative resources

3. Provide an analysis of the Township's legal authority to implement wastewater planning recommendations, implement system-wide operation and maintenance activities, set user fees, take purchasing actions, take actions against ordinance violators, negotiate agreements with other parties and raise capital for construction, operation and maintenance of facilities.

B. Describe the various institutional alternatives necessary to implement the technical alternatives, including:

1. There is no need for a new Authority. No analysis will be completed for this.

2. Function of the Township.

2. Cost of administration, implementability, and capability of the Township to provide for future needs.

C. Describe necessary administrative and legal activities, if any, to be completed and adopted to ensure the implementation of the alternatives, including:

1. Legal authorities of incorporation.

2. Required ordinances, standards, regulations and inter-municipal agreements.

3. Provisions of rights-of-way, easements, and land transfers.

4. Other sewage facilities plan adoptions.

5. Legal documents, if any.

6. Dates or timeframes of 1-5 above on the implementation schedule.

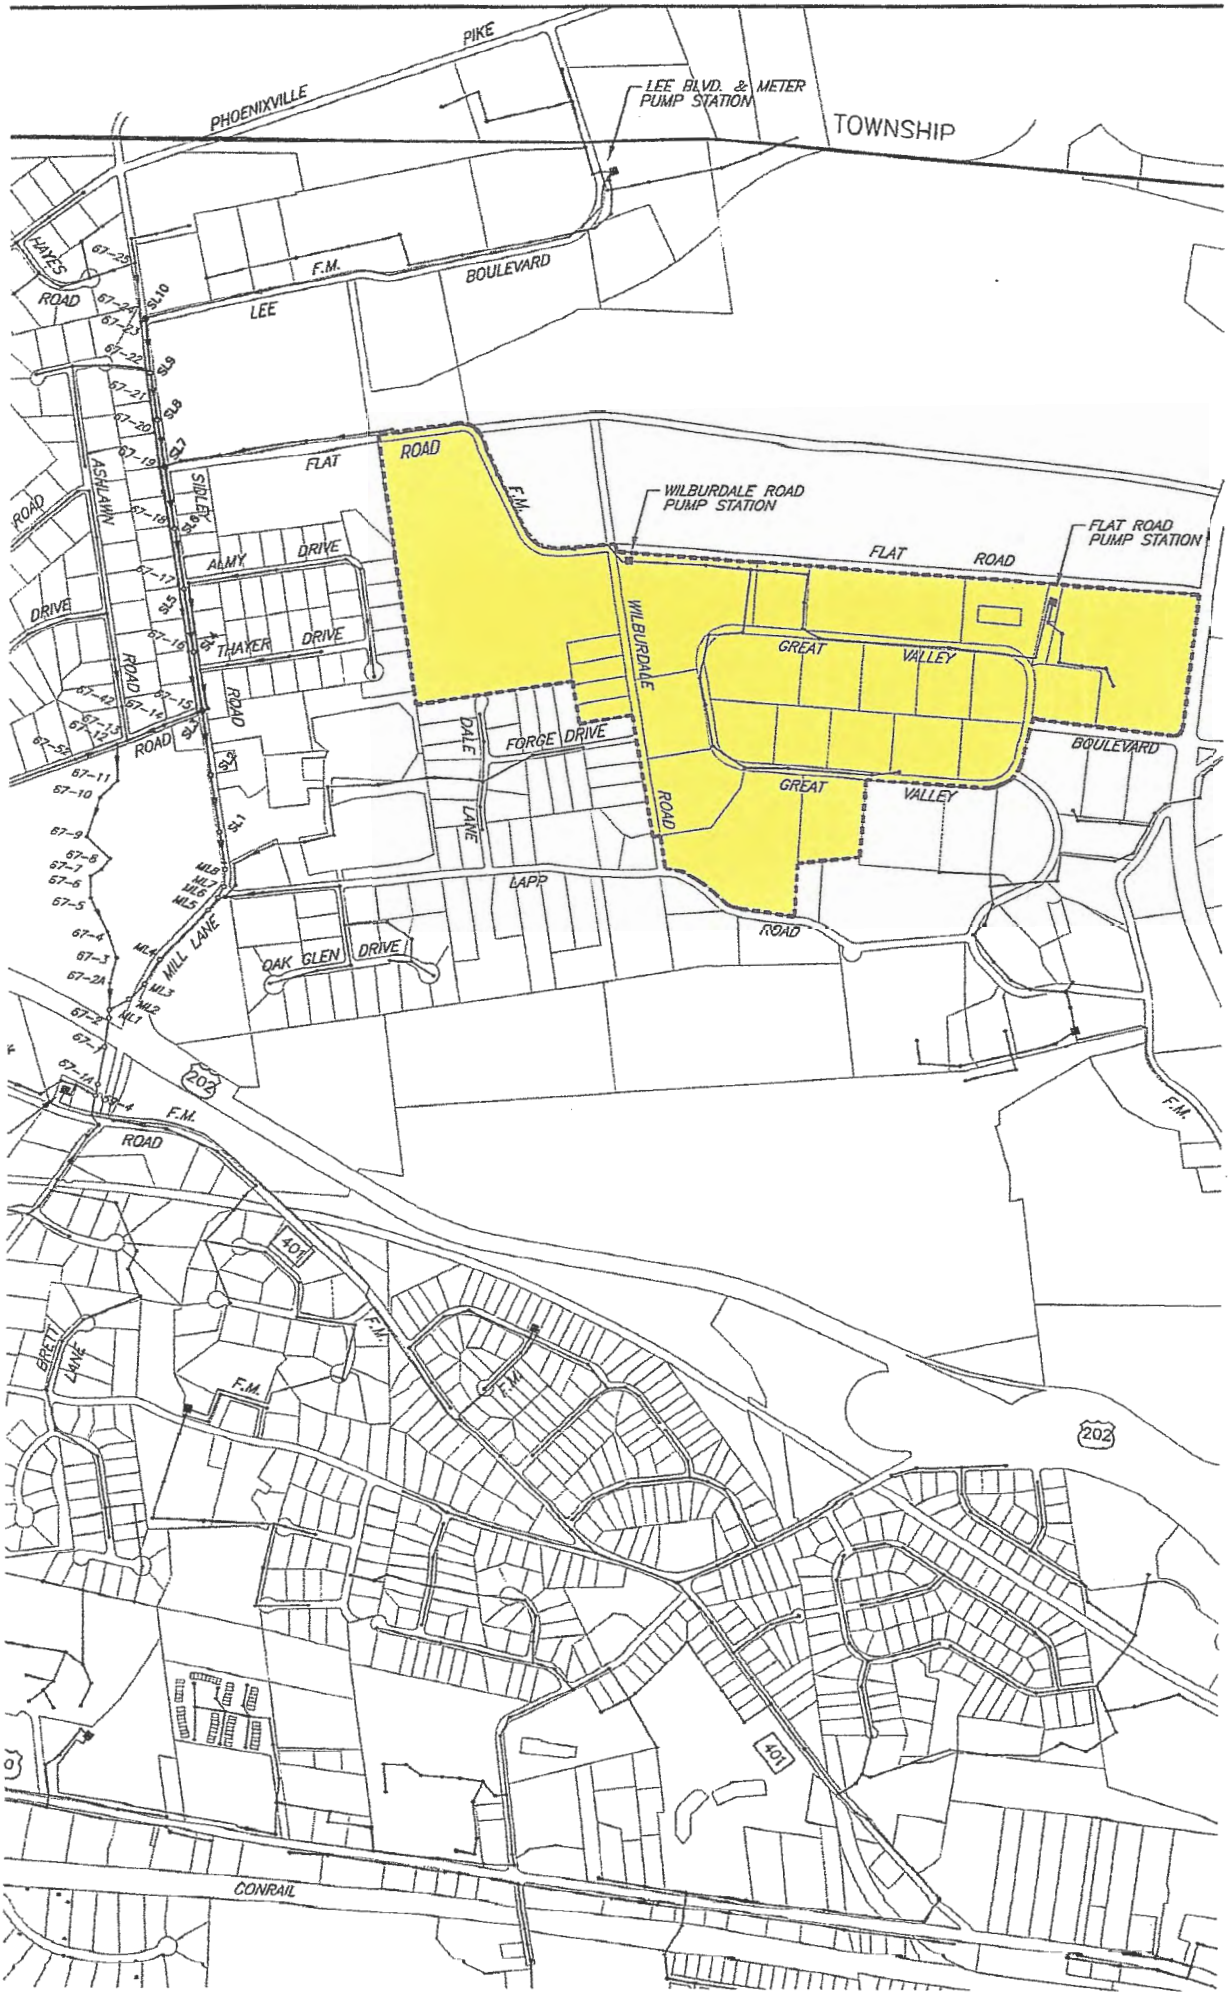
VIII. Selected Wastewater Treatment and Institutional Alternative

A. Identify the alternative that is the most feasible from a technical, financial, and institutional standpoint. Justify the choice based on:

1. Existing wastewater disposal needs.

2. Future wastewater disposal needs.

3. Operations and maintenance considerations.



4. Cost effectiveness.

5. Availability management and administrative systems.

6. Available finance methods.

7. Environmental soundness.

B. Describe the capital financing plan chosen to implement the selected alternative.

EXECUTIVE SUMMARY

This Act 537 Special Study (Special Study) was prepared for East Whiteland Township (Township) at the request of the Pennsylvania Department of Environmental Protection (PA DEP) in accordance with Act 537 entitled the Pennsylvania Sewage Facilities Act, Title 25, Chapter 71 of the Pennsylvania Code and the Pennsylvania Department of Environmental Protection Act 537 Plan Content and Environmental Assessment Checklist. This Special Study addresses the requirements necessary to implement a regional pump station that is to provide service to the Frame Avenue and Planebrook Road planning area. (See Appendix B for planning area map)

The Plan is comprised of the following components addressed in the Plan of Study:

I. Previous Wastewater Planning

II. Physical and Demographic Analysis

III. Existing Sewage Facilities in the Planning Area

IV. Future Growth and Development

V. Alternatives to provide for new or improved wastewater disposal facilities

VI. Evaluation of Alternatives

VII. Institutional Evaluation

VIII. Selected Wastewater Treatment and Institutional Alternative

The primary focus of the Plan is to evaluate alternatives to provide for upgraded Township conveyance system facilities including the implementation of the above-referenced regional pump station and extension of sanitary sewer main to areas currently served by on-lot disposal systems.

To meet the wastewater conveyance needs of the planning area, it is proposed that the Township implement the construction of a regional pump station and force main.

The engineer's opinions of probable construction cost **(planning level costs)** for the selected alternative is:

- Construct a regional pump station that will serve the current public sewer service area that drains to the existing Frame Avenue Pump Station as well as provide for future service to areas currently served by OLDS. $560,000

- Construct an 8-inch force main that will extend from the proposed regional pump station to a connection point with the existing Whiteland Village interceptor north of the intersection of Planebrook Road and Swedesford Road. $720,000

With the infrastructure improvements being prompted by the implementation of the proposed regional pump station as well as new development on the Cockerham Tract, these alternatives will be paid for and financed through a combination of monies from developer funds and Township funds.

The following is a schedule for implementing the proposed alternative:

	Description	Date
1.	Complete rehabilitation of Whiteland Village dry sewer and complete the missing link (Rehabilitation is on-going by others)	5/17
2.	Preliminary design Planebrook Road Force Main	5/17
3.	Preliminary design Planebrook Road Regional Pump Station	5/17
4.	Submit Permit Applications (Part II WQM/E&S/Stormwater)	6/17
5.	Receive Permits	9/17
6.	Final Design	9/17
7.	Project Bid – Force Main	9/17
8.	Developer Begin Construction – Pump Station	9/17
9.	Award Bid – Force Main	11/17

10.	Initiate Planning – Public Sewer Extensions to OLDS Properties [Component 3m]	11/17
11.	Complete Construction – Force Main	5/18
12.	Complete Construction – Pump Station	5/18
13.	Initiate Preliminary Design Public Sewer Extensions	11/17

I. PREVIOUS WASTEWATER PLANNING

A. Identify and Discuss Existing Wastewater Planning

1. Previous Act 537 Planning

An Act 537 Sewage Facilities Plan, dated May 2, 1995, was prepared for East Whiteland Township. This was a 'township-wide' plan. The primary purpose of the Plan was to consider the extension of the existing public collection and conveyance system to most of the Township, as needed.

The Valley Forge Sewer Authority adopted their Act 537 Planning in November of 2006. The Authority's wastewater treatment plant is the point to where the Township's wastewater flows for ultimate treatment and disposal.

An Act 537 Plan amendment "Special Study" was prepared. It was last revised in September 2011. The purpose of this study was to focus on the wastewater needs to address the replacement and upgrade of the Mill Lane Pump Station. This Special Study was approved by PA DEP in 2011/2012.

An Act 537 Special Study was prepared in 2013 and approved by the Department. This Special Study identified and addressed the requirements necessary to upgrade portions of the Township's conveyance system to accommodate future flow needs from Charlestown Township and East Whiteland Township. The planning area included south central Charlestown Township and north central East Whiteland Township.

An Act 537 Special Study was prepared and approved in 2015. This Special Study identified and addressed the requirements necessary to upgrade the Wilburdale Pump Station as well as adjacent conveyance components to meet the future needs of the Great Valley Corporate Campus.

2. ***Planning Not Done in Accordance with an Approved Implementation Schedule***

There has been no planning by the Township that has not been completed in accordance with an approved implementation schedule.

3. ***Additional Planning***

Planning that is anticipated by the Township above and beyond the planning associated with this Act 537 Special Study is associated with the extension of public sanitary sewer service to properties currently served by on-lot disposal systems along and adjacent to Planebrook Road. Planning for this will need to be completed via a Component 3m Planning Module. This planning component is for Minor Act 537 Update revisions for proposed sanitary sewer extensions to serve existing development. This will facilitate specifics associates with costs to the residents and will allow for additional public involvement. Note that the initiation of this planning shall be triggered by the start of construction of the Planebrook Road Regional Pump Station and force main.

4. ***Planning Via Planning Modules or Addenda.***

Three (3) revisions were made to the Township-wide 537 Plan. The first was the Special Study for the Mill Lane Pump Station that was last revised in September 2011. The second was the Special Study (approved by the Department in September 2013) addressing conveyance system upgrades to accommodate future flows in East Whiteland and Charlestown Township. The third was the Special Study (approved 2015) addressing upgrades to the Wilburdale Pump Station to accommodate GVCC needs.

II. PHYSICAL AND DEMOGRAPHIC ANALYSIS

A. Identify Planning Area, Municipal Boundaries, and Service Area Boundaries Through Mapping

This Act 537 Special Study is being prepared to address the sewage facilities needs of existing and new development in the area served by the Frame Avenue Pump Station, the temporary pump station on the Cockerham Tract, and properties surrounding Planebrook Road. Refer to the Plan in Appendix B that shows the boundary for the planning area addressed in this Special Study.

B. Identify the Physical Characteristics of the Planning Area

East Whiteland Township is located in Chester County, due east of Exton, PA. The topography of the planning area varies from a low elevation of 350 feet near the temporary pump station on the Cockerham Tract to an elevation of 550 feet near Glen Loch Way and Ravine Road. A topographical map of the area is found in Appendix D.

In addition, the wetlands per the National Wetlands Inventory Map are detailed on the map found in Appendix E.

C. Soils Analysis

In the identified planning area, most areas are served by public sewer. There is a portion of the planning area that is served by on-lot disposal systems. The soils in this area are UudB (UuB) "Urban Land-Udorthents complex, 0 to 8 percent slopes." For the application of wastewater to areas with this type of soil, the soil is very limited, has low absorption, slow water movement, and is too acidic.

D. Geological Features of the Planning Area

The primary geologic formations in the planning area include:

1. C1 - Ledger Dolomite

2. Ce - Elbrook Limestone

3. OCc - Conestoga Limestone

The ledger formation is light gray, locally mottled, pure, coarsely crystalline dolomite, and siliceous in the middle part. Elbrook Limestone is light blue, laminated, containing argillaceous limestone and calcareous shale and some dolomite. Conestoga Limestone is light gray, thin-bedded, impure, contorted limestone having shale partings.

E. Topography

As referenced in Section II.B. of this Plan, the topography of the planning area varies from a low elevation of 350 feet near the temporary pump station on the Cockerham Tract to an elevation of 550 feet near Glen Loch Way and Ravine Road. A topographical map of the area is presented in Appendix D.

F. Potable Water Supply Information

The entire area is served by public water supplied by Aqua PA.

G. Wetlands

There are no wetland areas within the planning area as identified on the map found in Appendix E. The source for the wetlands information is the National Wetlands Inventory Mapping provided by the U.S. Fish and Wildlife Service.

III. EXISTING FACILITIES IN THE PLANNING AREA

A. Identify and Describe Municipal Sewage Systems in the Planning Area

1. Location, Size, and Ownership of Facilities

Currently, there are collection and conveyance facilities in the planning area. The sanitary sewer mains that currently make up the collection system are 8 inches in diameter.

There is one (1) wastewater pump station in the planning area. The Frame Avenue Pump Station is located at the end of Frame Avenue in the northeast portion of the planning area. This pump station has a design capacity of 0.360 MGD. Wastewater is pumped through an existing 6-inch force main to the gravity sewer main located in Lancaster Avenue.

2. Narrative and Schematic Diagram of the Basic Treatment Process

Since the focus of this Special Study is to address the needs associated with the collection and conveyance system in the planning area, a narrative and schematic diagram of the basic treatment process is not applicable.

3. Description of Problems with the Existing Facilities

Currently, there are no specific problems with the existing facilities.

4. *On-Going Upgrades or Expansion of Facilities*

Adjacent to the planning area, there are some upgrades being made. These include:

a. Maintenance and placing into service the Whiteland Village Interceptor.

b. Construction of the sanitary sewer "connector" that will allow wastewater to be conveyed from the Whiteland Village Interceptor to the Mill Lane Pump Station.

5. *Operations and Maintenance Requirements and the Status of Past and Present Compliance*

The Township will be the facility permitee and the owner. They will perform routine maintenance on the collection and conveyance system to keep the facilities operating satisfactorily.

B. Individual and Community On-Lot Disposal Systems

Properties along Planebrook Road, Elk Drive, Fairway Drive, Golf View Lane, Bracken Avenue, Prospect Avenue, and Davis Avenue are currently served by individual on-lot disposal systems.

The property owners have expressed interest in connecting to the public sewer system. In the early 2000's, a public meeting was held and a survey was conducted to gather public input. Documentation showing this is found in Appendix O.

Act 537 Planning, completed and approved by the Department in 2011, included these properties within the proposed public sewer service area. A 'Sewage Needs Identification' evaluation for these properties is not needed as part of the planning process.

Upon initiation of the construction of the Planebrook Road Regional Pump Station and force main, Act 537 Planning (via Module Component 3m) will begin for the extension of the public sewer main to serve these properties. Preliminary design of the gravity sewer extensions will occur in parallel to the planning. This will enable OLDS property owners to get a better sense for what is planned and what the preliminary costs might be.

Upon completion of the Component 3m planning and the construction of the regional pump station, permit applications shall be submitted for construction of the proposed sanitary sewer extensions.

C. Wastewater Sludge and Septage Generation

Identification of wastewater sludge and septage generation is not considered applicable to this Special Study.

IV. FUTURE GROWTH AND LAND DEVELOPMENT

A. Identification of Municipal and County Planning Documents

1. *Identify Land Use Plans and Zoning Maps*

The Chester County Comprehensive Plan entitled "Landscapes2" establishes guidelines for the following land use categories.

- Growth Management
- National Resource Protection and Open Space
- Agricultural and Farmland Protection

The categories are used to provide the municipalities with "planning strategies to assist them in implementing their growth boundaries."

The Township has three (3) municipal planning documents that govern Land Use and Zoning.

- The East Whiteland Township Comprehensive Plan (Adopted 2001)
- The East Whiteland Township Zoning Ordinance (Adopted 2007)
- Subdivision and Land Development Ordinance (Adopted 2007)

A zoning map showing the designated zoning districts is found in Appendix A.

2. *Identify Zoning Regulations That Establish Lot Sizes*

The Zoning Ordinance adopted by the Township establishes the criteria for lot sizes for the following zoning districts in the planning area. Zoning mapping is found in Appendix A.

Zoning District		Minimum Lot Area
R1	Low Density Residential District	40,000 Sq. Feet
O/BP	Office/Business Park	80,000 Sq. Feet
OS	Open Space	-----
RM	Medium Density Residential	5,000 Sq. Feet
R-2	Low Density Residential	20,000 Sq. Feet
VMX	Village Mixed Use	10,000 Sq. Feet
FC	Frontage Commercial	20,000 Sq. Feet

B. Description of Future Growth and Development

1. Areas with Existing Development and Plotted Subdivisions

Existing development and plotted subdivisions are described as follows:

- Cockerham Tract
- Celia Tract
- Frame Avenue
- Elk Drive
- Fairway Drive
- Golf View Lane
- Bracken Avenue
- Davis Avenue
- Prospect Avenue
- Planebrook Road
- Ravine Road
- Whitewoods Tract
- Glenloch Tract

2. *Land Use Designations*

Land use in East Whiteland Township is governed by the Township's Zoning Ordinance. Land use is given the following designations per the zoning ordinance.

R-1	Low Density Residential
R-2	Low Density Residential
R-3	Low Density Residential
RM	Medium Density Residential
RMH	Medium-High Density Residential
CMX	Commercial Mixed-Use
VMX	Village Mixed-Use
FC	Frontage Commercial
ROC	Regionally Oriented Commercial
ROC/R	Regionally Oriented Commercial/Res
PO	Professional Office
O/BP	Office/Business Park
O/BPS	Office/Business Park Services
I	Industrial
INS	Institutional
NS	Neighborhood Schools
C	Cemetery
OS	Open Space

3. *Future Growth Areas and Projections*

For the planning area identified for this Special Study, there are areas that have existing development and areas that are planned for growth. The planned growth is:

- Cockerham Tract
- Celia Tract
- Existing Development served by the Frame Avenue P.S.
- Existing Development served by OLDS

These are detailed in Tables 1 and 2 below.

4. *Subdivision Regulations as they Pertain to Planned Developments*

East Whiteland Township has established guidelines for development, use, and protection of land. The guidelines are established in the Township's Zoning Ordinance.

The Zoning Ordinance regulates:

- Building height, area, and location on the lot;
- Flood plains and uses within the flood plains;
- Where certain land uses are allowed to occur in the Township;
- Quality, location, or size of signs;
- Minimum lot areas for various uses.

5. *Required Sewage Planning*

Sections V and VI of this Special Study will examine the technical alternatives necessary to meet the sewage facilities needs of the planning area. Projected wastewater flows for the planning area are classified by origin.

Table 1

Existing Flow Needs Summary

Source	EDUs	Population (1)	Avg. Daily Flows (gpd) (2)
1. Existing Development served by the Frame Avenue Pump Station	~327	1023	90,000
2. Cockerham Tract	50	157	13,750
3. Celia Tract	60	188	16,500
TOTAL			**120,250**
(1) 3.13 People Per EDU. **(2) 275 gpd/EDU.**			

Table 2

Flow Projection Summary (Future Wastewater Needs)

Source	EDUs	Population (1)	Avg. Daily Flows (gpd) (2)
Elk Drive	20	63	5,500
Fairway Drive	11	34	3,025
Planebrook Road	12	9	3,300
Golf View Lane	16	50	4,400
Bracken Avenue	8	25	2,200
David Avenue	1	3	275
Prospect	24	75	6,600
Miscellaneous Properties	15	47	4,125
TOTAL			**29,425**
(1) 3.13 People Per EDU. **(2) 275 gpd/EDU.**			

Summarizing Pump Station Needs:

The proposed Planebrook Road Pump Station will be a public submersible pump station that will serve existing development, new development, and properties with existing on-lot disposal systems. The projected average daily flow/need is:

120,250 gpd	Existing
29,425 gpd	Future
149,675	TOTAL

The planned peak flow, utilize the peaking factors established by PA DEP's Southeast Regional Office,

149,675 x 3.75 = 561,281 gpd

= 390 gpm

V. ALTERNATIVES TO PROVIDE NEW OR IMPROVED WASTEWATER DISPOSAL FACILITIES

A. Identify Alternatives

1. *Regional Wastewater Treatment Concepts*

Wastewater from East Whiteland Township is conveyed to the Valley Forge Sewer Authority's Wastewater Treatment Plant. This regional treatment of the Township's wastewater is not planned to change.

2. *Extension of Existing Municipal Sewage Facilities to Areas in Need*

Currently, there are public collection and conveyance facilities that serve the Frame Avenue Pump Station's drainage area. As discussed in Part A.1. of this section, wastewater collected in these facilities is ultimately conveyed to the Valley Forge Sewer Authority for treatment. Refer to the plan found in Appendix C that shows the existing and proposed sanitary sewer service area. Adjacent areas served by existing OLDS are planned to receive future public sewer service. Conceptual facilities are reflected on the plan in Appendix F.

3. *Continued Use of Existing Community Treatment Facilities*

There are no community systems in the planning area. This is not applicable to this Special Study.

4. *New Community Sewage Systems and Treatment*

Since this Plan is examining the public sewer needs and the impact on existing conveyance system components, the implementation of new community sewage systems is not applicable to this Special Study.

5. *Repair and Replacement of Existing Collection and Conveyance System Components*

As stated in Part A.2. of this section, there are wastewater collection and conveyance facilities that serve the Frame Avenue drainage area. The planning area is served by gravity sewers and pump stations that collect and convey the wastewater to the gravity sewer main located in Lancaster Avenue originating near Davis Avenue.

Alternatives, as part of this Special Study, include:

Alternative 1: Retain the existing Frame Avenue Pump Station. Keep the small pump station recently constructed on the Cockerham Tract, in service, and continue to use the Frame Avenue Pump Station to serve both the Cockerham and Celia Tracts along with the existing flows. Properties with on-lot systems would continue to utilize their respective systems.

Alternative 2: Construct a regional pump station that will handle wastewater flows from the Cockerham and Celia tracts, from properties currently served by the existing Frame Avenue Pump Station, and from properties currently served by individual on-lot disposal systems. The existing Frame Avenue Pump Station would be decommissioned.

Under Alternative 1, the utilization of the Frame Avenue Pump Station will continue to discharge flow to the gravity sewer main in Route 30 and will continue to utilize the Church Road Pump Station and the Westgate Pump Station. A regional station (as identified under Alternative 2) will not only remove and redirect flow away from the Route 30 sewers and pump stations, it will provide a means for more effectively accommodating the wastewater needs of adjacent properties with OLDS.

New gravity sewer infrastructure and the restoration of an existing dry sewer main (Whiteland Village Interceptor) being completed by others, will complete the conveyance path for Alternative 2. Refer to the Exhibit found in Appendix F which shows the gravity sewer improvements and the "flow-path" for the wastewater discharged from the proposed Planebrook Road Force Main. These gravity sewer improvements are in progress and are planned for completion late 2016 or early 2017. Wastewater, through this portion of the collection and conveyance system, will ultimately pass through the Mill Lane Pump Station.

The installation of a regional pump station eliminates the need for the existing older station (Frame Avenue Pump Station), and removes flow from the Route 30 gravity sewers and pump stations. This frees-up capacity in the existing gravity mains and lightens the load on the existing pump stations, thus reducing O&M costs. This also eliminates the duplicity of keeping the smaller Cockerham Pump Station and the Frame Avenue Pump Station in operation.

6. Alternative Methods of Collection and Conveyance to Serve Areas in Need

Given that this Special Study addresses the needs associated with the upgrade of existing facilities to serve future flows, alternative methods of collection and conveyance to serve areas in need are not applicable to this Special Study.

B. Use of Individual Disposal Systems

Properties in the planning area, identified in Section IV.B.1, are served by individual on-lot disposal systems. These properties are planned to receive future public sewer service.

C. Small Flow Sewage Treatment Facilities

Assessment of alternatives based on the use of small flow sewage treatment facilities, land treatment alternatives, or package treatment facilities to serve individual homes or clusters of homes is not applicable to this Special Study.

D. Community Land Disposal

Assessment of alternatives based on the use of community land disposal is not applicable to this Special Study.

E. Retaining Tank

The use of retaining tanks will not be evaluated as part of this Special Study.

F. Septage Management

A discussion of the need for and implementation of a sewage management program will not be addressed as part of this Special Study.

G. Non-Structural Comprehensive Planning Alternatives

It is not anticipated that there will be any modifications to the Township Comprehensive Plan. Non-structural comprehensive planning alternatives shall not be addressed as part of this Special Study.

H. No Action Alternative

1. Water Quality and Public Health

If wastewater collection and conveyance system upgrades are not implemented, water quality and public health may be impacted. Downstream conveyance might be impacted by present and increased future flows that could lead to the potential for sanitary sewer surcharging.

2. Growth Potential

The potential for growth in the planning area would be impacted by a no-action alternative. Even though development of both the Celia and Cockerham tracts has moved forward, potential in-fill development of OLDS area would not occur.

3. ***Community and Economic Conditions***

With no-action to provide means for upgraded conveyance of wastewater, development in adjacent commercial areas may not go forward. Consequently, future connections would be limited, thus restricting commercial development and economic growth that would supplement the Township tax base.

4. ***Recreational Opportunities***

A no-action alternative for this Special Study would not have an impact on recreational opportunities.

5. ***Drinking Water Sources***

If the proposed conveyance system upgrades are not constructed, there may be future indirect impacts on groundwater water sources since the existing OLDS will remain in place.

6. ***Other Environmental Issues***

If the proposed conveyance system upgrades are not implemented, it does not appear that other environmental issues would be impacted.

VI. EVALUATION OF ALTERNATIVES

A. Consistency Determination

1. Clean Stream Law

The construction of upgrades to the conveyance facilities in the planning area does not conflict with the Clean Stream Law. Flow generated by the planning area will ultimately be treated at Valley Forge Sewer Authority's wastewater treatment plant and disposed of in accordance with requirements and NPDES limits set forth by PA DEP.

2. Chapter 94 Report

The East Whiteland Township 2015 Chapter 94 Report indicates that the Frame Avenue Pump Station has capacity to meet current flow needs. Based on the needs identified in this Special Study, the capacity of this station will be exceeded if flows from the properties served by OLDS are directed to this station.

The Chapter 94 Report shows that the current capacity of the Frame Avenue Pump Station is 360,000 gpd which equates to 250 gpm. Flows projected for the planning area equate to 561,600 gpd (390 gpm). Refer to Section IV of this Special Study for a tabulation of projected flows.

3. Clean Water Act (Title II)

This Act and the Federal Water Quality Act establish specific planning requirements for wastewater facilities planning. These requirements only apply to municipalities intending to apply for financial assistance from the Federal Government for the construction of sewage facilities. Since the funding of the construction of the alternatives would be through financial contributions by the municipality and developers, this analysis is not applicable.

4. *Comprehensive Plans*

The Chester County Planning Commission (CCPC) Comprehensive Plan, entitled "Landscapes2," was adopted in November of 2009. The alternatives to upgrade public sanitary sewer service to accommodate proposed development in the planning area is consistent with the implementation strategy, policies and goals of the current Landscapes2 as shown in the Utilities and Infrastructure section of the plan.

East Whiteland Township adopted a Comprehensive Plan in 2001 that identifies Township policies on future preservation and development.

In September 2002, Chester County adopted a water resources management plan, titled **'Watersheds'**. This is an element of the County's Comprehensive Plan. In Part 4 of the Plan (Goals and Objectives – Achieving the Vision), Goal 7 describes the need to integrate utility and municipal planning to meet future water supply and wastewater needs.

It further discusses the need to delineate municipal planned public water/wastewater service areas and evaluate infrastructure alternatives. This Special Study is consistent with the objectives set forth in Watersheds.

5. *Antidegradation Requirements Contained in Chapters 93, 95 and 102 of the Clean Water Act*

Implementation of any of the alternatives for this Special Study will not impact the antidegradation requirements contained in Chapters 93, 95, 102 of the Clean Water Act.

6. *State Water Plans*

There are no anticipated conflicts with the State Water Plan for this submission.

7. *Pennsylvania's Prime Agricultural Land Policy*

East Whiteland Township is committed to protecting prime agricultural land within the Township's boundaries.

For the planning area in this Special Study, the Township's Zoning Ordinance and Comprehensive Plan give the land area residential, office/business park, open space, village mixed use, and frontage commercial designations. The development of this land is consistent with its land use designation.

It should be noted that the Chester County Planning Commission's agricultural conservation easement plan indicates that there are no agricultural conservation easements in East Whiteland Township. This plan was developed by the Chester County Department of Open Space Preservation utilizing information from the County Agricultural Preservation Board and the Chester County Bureau of Land Records. The latest update is January 2014.

8. *County Stormwater Management Plan*

A County-wide PA Act 167 Stormwater Management Plan (SWMP) has been completed and approved for Chester County. The Valley Creek Watershed (East) is a part of this Plan. PA DEP approved it July 2013. The Valley Creek (East) is designated as an exceptional value stream. From a consistency perspective, it appears that the concept to provide sewer service to existing and potential development is consistent with the SWMP. This special study planning area falls within the Valley Creek Watershed and the prescribed system improvements not only accommodate existing and future flows but provide for minimizing inflow and infiltration of stormwater into the sanitary sewer system.

9. *Wetlands Protection*

As referenced in Section II.G. of this Plan, there are no mapped wetland areas within the planning area as identified on the map found in Appendix E. The source for the wetlands information is the National Wetlands Inventory Mapping provided by the U.S. Fish and Wildlife Service.

10. *Protection of Threatened, Rare, and Endangered Plant and Animal species (PNDI)*

A Pennsylvania National Diversity Inventory (PNDI) search was completed for the planning area. See Appendix G. The U.S. Fish and Wildlife Service asked that, during construction of the force main, in-stream impacts should be avoided by spanning the creek (Waterway) or going under the creek via boring or directional drilling. If in-stream impacts cannot be avoided, the Fish and Wildlife Service requests that in-stream work be carried out between October 1 and March 31. Therefore, as a means for resolving this conflict, notes shall be placed on the force main design plans to instruct the contractor to install the force main accordingly.

11. *Historic and Archaeological Resource Protection*

The Pennsylvania Historic and Museum Commission (PHMC) were contacted to determine if there were any potential conflicts within the proposed infrastructure. PHMC reviews for the proposed sewerage facilities have been completed. The results of the PHMC's review for the proposed sewerage facilities can be found in Appendix H. It has been determined that the pump station and force main will have no impact on historic resources.

B. Resolution of Inconsistencies

Upon review of the constraints discussed in items 1 through 11, there is one apparent inconsistency with applicable PNDI requirements and that inconsistency has been resolved.

C. Alternative Evaluation with Respect to Applicable Water Quality Standards and Effluent Limitations

The planned alternatives to provide a sanitary sewer collection and conveyance system for this planning area will not impact water quality standards or effluent limitation. Wastewater will be discharged to the existing public collection and conveyance system. Ultimately, wastewater will be treated at the Valley Forge Sewer Authority's WWTP.

D. Preliminary Cost Opinions

Planning-level cost opinions were developed for the primary alternatives discussed in Section V. These cost opinions reflect the following:

Alternative 1:	No additional capital costs.	
	O&M costs (20 yr. PW):	$560,000
	TOTAL:	$560,000
Alternative 2:	Pump Station:	$560,000
	Force Main:	$720,000
	O&M Costs (20 yr. PW):	$321,000
	TOTAL:	$1,441,000

It should be noted that under Alternative #1, O&M expenses on existing infrastructure would continue at the current rate. Under Alternative #2 it is anticipated that O&M expenses could be reduced.

E. Analysis of Available Funding Methods

This section of the Plan addresses methods available to finance the proposed Phases. Three financing alternatives exist for this particular project.

1. Municipal Bond Issue

a. General

There are several types of bonds; some are taxable and some are tax-exempt. However, the general classification of municipal bonds usually

refers to tax-exempt bonds. There are three (3) types of municipal bonds generally used in financing public works.

- *General Obligation Bonds* are tax-free bonds that are secured by the pledge of the full faith, credit, and taxing owner of the issuing agency. This means that this type of bond is backed by all of the taxes on real estates and personal property within the jurisdiction of the issuing agency. It involves minimum risk to the investor and therefore requires a lower rate of interest than other types of bonds.

- *Dedicated Tax Bonds* are payable only from the proceeds from a special tax and are not guaranteed by the full faith, credit and taxing power of the issuing agency. Examples of special dedicated taxes are the special assessments against property which is adjacent to and the principal beneficiary of the improvement, and gasoline taxes used to finance highway construction.

- *Revenue Bonds* are payable from revenues derived from the use of the improvement such as tools, sewer bills, or rents paid by the users of the improvement and do not otherwise represent an obligation of the issuing agency. Revenue bonds are not ordinarily subject to statutory or constitutional debt limitations. They are often issued by commissions, authorities, and other public agencies created for the specific purpose of financing, constructing, and operating essential public projects.

Typically, municipal bonds are sold to an investment-banking firm, which then resells the bonds to individual investors. The advantage of municipal bonds to the investor is their tax-free status. A bond discount (a percentage of the total bond issue) serves as the investment banker's

commission. Before bonds are sold, they must be rated on the basis of risk to the investor by a rating agency such as Standard and Poor's or Moody's. The higher the rating, the lower the risk to the investor and, consequently, the lower the interest rate paid on the bond.

The legal instrument, which sets the rules that must be observed by the issuing agency, is the Trust Indenture. The Trust Indenture is prepared by the Bond Counsel and must be printed along with the bonds. Due to specific requirements as to the denominations of the bonds and methods and materials for printing, printing costs can be substantial. A trustee is required to administer the bond issue and insure the terms of the Trust Indenture are observed. This results in an Annual Trustee Fee. Investment bankers indicate that it does not pay to extend the term beyond 25 years because the interest rate increases dramatically.

b. Advantages of Municipal Bond Issue Funding

- This program affords long-term fixed rate financing.
- Tax-exempt municipal bonds are in high demand.
- There is local investment opportunity.
- Municipal credit is established.
- It retains flexibility for future borrowing.

c. Disadvantages of Municipal Bond Issue Funding

- A cover may be required.
- A Debt Service Reserve Fund is generally required.
- There are trustee fees and costs of preparing a Trust Indenture.

2. *Bank Loan*

Another financing option for the implementation of this project is the bank loan. There are four (4) basic categories of bank loans. These are:

- Real Estate Loans (Mortgage)
- Participation and Interbank Loans
- Installment Loans (Personal)
- Commercial and Industrial Loans

Of the four (4) types, a commercial and industrial loan would be the most applicable to this project.

Commercial and industrial loans may be made on a demand or time basis. A demand basis loan allows the bank to call for repayment at any time, or the borrower can repay when convenient. A time basis loan provides for a specific loan maturity date.

Most commercial and industrial loans are unsecured. The credit is extended on the basis of an analysis of all available information pertaining to the customer and the bank's confidence in that customer's ability and willingness to repay.

For this planned project, it appears that it would be prudent to seek a time basis loan. An interest rate offering would be established, and an amortization schedule set. Interest rates may range from 5% to 10%.

<u>Advantages of the Bank Loan Financing</u>

- Ability to shop around for a loan structure that best fits the customer's needs.
- Flexibility in establishing repayment schedules.
- Working with and through a local financial institution.
- Municipal credit is established.

- Ability to obtain fixed rate financing.

Disadvantages of Bank Loan Financing

- Interest rates are charged for loan repayment.
- Processing fees may be required.
- Processing and issuances fees may be expensive.

3. *Direct Funding by Developers, Supplement by Township Funds*

A third financing option for the implementation of this project is direct funding by those who have developed the property in the planning area. This would involve capital expenditures by the developer from his own funds along with the supplementing of costs by the Township.

Advantages of Direct Funding by Developer

- Avoid any third party involvement. Payment for services can be made directly to the manufacturer or contractor by the Developer.
- There are no interest rate charges.
- Bank processing and issuance fees are avoided.
- Removes part or the majority of the financial burden from the Township.

Disadvantages of Direct Funding

- There are no disadvantages to this method of financing.

F. Immediate or Phased Implementation

It is planned that the force main and pump station will be constructed as two separate projects. However, the timing of the construction will be such that the force main will be in concert with the pump station's construction. Planning for extension of sanitary sewers to serve properties (currently served by OLDS) will take place upon the start of construction of the pump station and force main.

G. Ability of the Township to Implement the Alternative

The Township is well established and has the ability to implement the technical alternatives presented in this Plan.

VII. INSTITUTIONAL EVALUATION

A. Analysis of the Township, Past Actions, and Present Performance

1. Financial and Debt Status

The Township is a well-established entity that will be able to oversee the implementation of the proposed technical alternative. Financially, through the funding mechanisms identified above, the construction of the proposed conveyance facilities can be accomplished. Ultimately, the Township will take dedication of these facilities and will be required to operate and maintain them. The funds for facility O&M are planned to originate from the Township's Sewer Fund.

2. Available Staff and Administrative Resources

The Township is governed by a three-member Board of Supervisors elected at-large, who each serve six-year terms that include executive and legislative responsibilities. Others associated with the Township are:

- Township Manager
- Director of Public Works
- Assistant Director of Public Works
- Solicitor
- Consulting Engineer

The Township has the necessary staff and administrative resources already in place. No further evaluation of staffing and resources is necessary at this time.

3. *Existing Legal Authority*

As provided for under Pennsylvania Law, the Township has the necessary legal authority to oversee the implementation of the technical alternatives presented in this Special Study.

B. Institutional Alternatives Necessary to Implement the Technical Alternative

1. *Need for a New Authority*

East Whiteland Township does not have an Authority in place at this time. It is not deemed necessary that a new Authority be established to meet the needs of the alternatives identified in this Special Study. The Township and public works personnel are capable of implementing the identified alternatives.

2. *Function of the Authority*

This is not applicable given that the there is no sewer authority in place at this time.

3. *Cost of Administration*

This is not applicable given that the there is no sewer authority in place at this time.

C. Administrative and Legal Activities to be Completed and Adopted to Ensure the Implementation of the Technical Alternative

1. *Legal Authorities of Incorporation*

No new wastewater Authorities of Incorporation are necessary and there will be no changes to the Township's structure to implement these projects.

2. *Required Ordinances, Standards, Regulations, and Intermunicipal Agreements*

In 1971, an Intermunicipal Agreement was signed by East Whiteland Township, the former East Whiteland Municipal Authority, Malvern Municipal Authority, Malvern Borough, and the Valley Forge Sewer Authority for conveyance of

wastewater through the Valley Creek Trunk Sewer to the Valley Forge Sewer Authority's WWTP for treatment and disposal. In December 1979, an amendment was issued to the existing 1971 intermunicipal agreement between East Whiteland Municipal Authority, East Whiteland Township, Malvern Municipal Authority, Borough of Malvern, and the Valley Forge Sewer Authority. This amendment facilitates the transmission of wastewater from an area in Charlestown Township adjacent to East Whiteland Township through the East Whiteland Township Trunk Line and the Valley Creek Trunk Line.

This intermunicipal agreement was amended in April 2014 to reflect the latest flow and cost sharing conditions. This effort to amend the agreement took place in accordance with the September 2013 East Whiteland Township/Charlestown Township (Southside) Special Study approved by the Department.

3. *Provisions of Rights-of-Way, Easements, and Land Transfers*

Proposed wastewater collection and conveyance system components will extend through the streets of new development (Cockerham Tract), through an easement already obtained through that same development and then through a newly acquired easement between existing homes near Planebrook Road. Once the force main is at Planebrook Road, it will follow the road right-of-way north to the point of connection to the existing gravity sewer.

4. *Other Sewage Facilities Plan Adoptions*

It is not anticipated that other sewage facilities plans will need to be adopted as part of this planning process.

5. *Legal Documents*

Revisions to intermunicipal agreements are not necessary for this Special Study.

6. Dates and Timeframes of 1 Through 5 Above

The dates and timeframes for the items in this section are found in the implementation schedule in the Executive Summary of this Plan.

D. Selected Institutional Alternative

No changes are needed to the existing municipal structure.

VIII. SELECTED WASTEWATER TREATMENT AND INSTITUTIONAL ALTERNATIVE

A. Identify the Chosen Technical Alternative

The selected alternative which best meets the wastewater treatment needs of the proposed and existing development in the planning area is:

Alternative #2:

Construct a regional pump station and force main to serve the Frame Avenue Pump Station Drainage Area, to serve the Cockerham and Celia Tracts, and to ultimately serve properties with on-lot disposal systems located along and adjacent to Planebrook Road.

1. *Existing Wastewater Disposal Needs*

Within the planning area, wastewater disposal needs are currently met through the use of the Frame Avenue Pump Station, and individual on-lot disposal systems. This pump station can meet the existing wastewater disposal needs of the planning area provided the existing OLDS remain in service. If the OLDS are decommissioned and wastewater from these properties is directed to the existing Frame Avenue station, then there won't be adequate capacity at this station.

2. *Future Wastewater Treatment Needs*

Future wastewater disposal needs, identified in Section IV of this Plan show that in order to serve existing development, new development, and properties served by OLDS, a central regional pump station will be needed to meet the flow requirements and the wastewater needs.

3. *Operations and Maintenance Considerations*

The proposed wastewater facilities will be owned and operated by East Whiteland Township upon completion. Operations and maintenance of the new facilities will be the responsibility of the Township which currently

operates and maintains existing wastewater facilities within the Township. Since the Frame Avenue Pump Station is an existing pump station, a new station will improve upon the operations and maintenance that is currently needed by Township personnel.

4. ***Cost Effectiveness***

In accordance with the cost opinions for the alternatives presented in Section VI of this study, the separate construction of the force main is the most cost effective approach. Construction of the regional pump station can follow under the purview of the developer. Economically, Alternative 1 appears to be more favorable than Alternative 2. This is due to the lack of initial capital expenses to construct new infrastructure in Alternative 1. However, the environmental benefits of regionalizing the conveyance system and connecting existing OLDS to the public sewer system outweigh the financial implications.

5. ***Available Management and Administrative Systems***

The Township has the management and administrative staff in place to implement the selected alternative.

6. ***Available Financing Methods***

Of the financing methods discussed in Section VI, each method can provide the necessary funding for the selected alternative. Refer to Section VIII.B. for the selected capital financing plan.

7. ***Environmental Soundness***

Environmentally, the Valley Forge Sewer Authority's WWTP can adequately treat the projected average and peak flows within the permitted concentration limits.

B. Selected Capital Financing Plan

The selected technical alternative will be paid for and financed through the sharing of costs via Township capital funds and developer funds.

The planning level costs are shown in Section VI.

2. SEARCH RESULTS

Agency	Results	Response
PA Game Commission	No Known Impact	No Further Review Required
PA Department of Conservation and Natural Resources	No Known Impact	No Further Review Required
PA Fish and Boat Commission	No Known Impact	No Further Review Required
U.S. Fish and Wildlife Service	**Avoidance Measure**	**See Agency Response**

As summarized above, Pennsylvania Natural Diversity Inventory (PNDI) records indicate there may be potential impacts to threatened and endangered and/or special concern species and resources within the project area. If the response above indicates "No Further Review Required" no additional communication with the respective agency is required. If the response is "Further Review Required" or "See Agency Response," refer to the appropriate agency comments below. Please see the DEP Information Section of this receipt if a PA Department of Environmental Protection Permit is required.

Note that regardless of PNDI search results, projects requiring a Chapter 105 DEP individual permit or GP 5, 6, 7, 8, 9 or 11 in certain counties (Adams, Berks, Bucks, Carbon, Chester, Cumberland, Delaware, Lancaster, Lebanon, Lehigh, Monroe, Montgomery, Northampton, Schuylkill and York) must comply with the bog turtle habitat screening requirements of the PASPGP.

RESPONSE TO QUESTION(S) ASKED

Q1: Will this project or any project-related activities require any In-stream work, or a permanent or temporary crossing of a waterway (stream, river, creek, tributary)?
Your answer is: Yes

Q2: Describe how wastewater (effluent) will be handled (select one). For the purpose of this question, wastewater/effluent does not include stormwater runoff. If the project involves solely the renewal or modification of an existing discharge permit (e.g., NPDES permit), select from options 3, 4, 5, or 6 below.
Your answer is: All wastewater/effluent from this project/activity will be routed to an existing municipal wastewater treatment plant.

Q3: Accurately describe what is known about wetland presence in the project area or on the land parcel by selecting ONE of the following. "Project" includes all features of the project (including buildings, roads, utility lines, outfall and intake structures, wells, stormwater retention/detention basins, parking lots, driveways, lawns, etc.), as well as all associated impacts (e.g., temporary staging areas, work areas, temporary road crossings, areas subject to grading or clearing, etc.). Include all areas that will be permanently or temporarily affected -- either directly or indirectly -- by any type of disturbance (e.g., land clearing, grading, tree removal, flooding, etc.). Land parcel = the lot(s) on which some type of project(s) or activity(s) are proposed to occur.
Your answer is: Someone qualified to identify and delineate wetlands has investigated the site, and determined that NO wetlands are located in or within 300 feet of the project area. (A written report from the wetland specialist, and detailed project maps should document this.)

3. AGENCY COMMENTS

Regardless of whether a DEP permit is necessary for this proposed project, any potential impacts to threatened and endangered species and/or special concern species and resources must be resolved with the appropriate jurisdictional agency. In some cases, a permit or authorization from the jurisdictional agency may be needed if adverse impacts to these species and habitats cannot be avoided.

These agency determinations and responses are **valid for two years** (from the date of the review), and are based on the project information that was provided, including the exact project location; the project type, description, and features; and any responses to questions that were generated during this search. If any of the following change: 1) project location, 2) project size or configuration, 3) project type, or 4) responses to the questions that were asked during the online review, the results of this review are not valid, and the review must be searched again via the PNDI Environmental Review Tool and resubmitted to the jurisdictional agencies. The PNDI tool is a primary screening tool, and a desktop review may reveal more or fewer impacts than what is listed on this PNDI receipt. The jursidictional agencies **strongly advise against** conducting surveys for the species listed on the receipt prior to consultation with the agencies.

PA Game Commission
RESPONSE:
No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Department of Conservation and Natural Resources
RESPONSE:
No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

PA Fish and Boat Commission
RESPONSE:
No Impact is anticipated to threatened and endangered species and/or special concern species and resources.

U.S. Fish and Wildlife Service
RESPONSE:

Avoidance Measure: Avoid in-stream impacts by spanning the waterway or going under it (e.g., via horizontal boring or directional drilling). If in-stream impacts cannot be avoided, carry out instream work -- including installation of permanent structures (e.g., pipelines, livestock crossings, riprap), or installation, use, and removal of temporary structures (e.g., temporary road crossings) -- between October 1 and March 31.

As the project proponent or applicant, I certify that I will implement the above Avoidance Measure:
_____ (Signature)

SPECIAL NOTE: **If you agree to implement the above Avoidance Measure, no further coordination with this agency regarding threatened and endangered species and/or special concern species and resources is required.** If you are not able to comply with the Avoidance Measures, you are required to coordinate with this agency - please send project information to this agency for review (see "What to Send" section).

WHAT TO SEND TO JURISDICTIONAL AGENCIES

If project information was requested by one or more of the agencies above, upload* or email* the following information to the agency(s). Instructions for uploading project materials can be found here. This option provides the applicant with the convenience of sending project materials to a single location accessible to all three state agencies. Alternatively, applicants may email or mail their project materials (see AGENCY CONTACT INFORMATION).
***Note:** U.S.Fish and Wildlife Service requires applicants to mail project materials to the USFWS PA field office (see AGENCY CONTACT INFORMATION). USFWS will not accept project materials submitted electronically (by upload or email).

Check-list of Minimum Materials to be submitted:
____Project narrative with a description of the overall project, the work to be performed, current physical characteristics of the site and acreage to be impacted.
____A map with the project boundary and/or a basic site plan(particularly showing the relationship of the project to the physical features such as wetlands, streams, ponds, rock outcrops, etc.)
In addition to the materials listed above, USFWS REQUIRES the following
____**SIGNED** copy of a Final Project Environmental Review Receipt

The inclusion of the following information may expedite the review process.
____Color photos keyed to the basic site plan (i.e. showing on the site plan where and in what direction each photo was taken and the date of the photos)
____Information about the presence and location of wetlands in the project area, and how this was determined (e.g., by a qualified wetlands biologist), if wetlands are present in the project area, provide project plans showing the location of all project features, as well as wetlands and streams.

4. DEP INFORMATION

The Pa Department of Environmental Protection (DEP) requires that a signed copy of this receipt, along with any required documentation from jurisdictional agencies concerning resolution of potential impacts, be submitted with applications for permits requiring PNDI review. Two review options are available to permit applicants for handling PNDI coordination in conjunction with DEP's permit review process involving either T&E Species or species of special concern. Under sequential review, the permit applicant performs a PNDI screening and completes all coordination with the appropriate jurisdictional agencies prior to submitting the permit application. The applicant will include with its application, both a PNDI receipt and/or a clearance letter from the jurisdictional agency if the PNDI Receipt shows a Potential Impact to a species or the applicant chooses to obtain letters directly from the jurisdictional agencies. Under concurrent review, DEP, where feasible, will allow technical review of the permit to occur concurrently with the T&E species consultation with the jurisdictional agency. The applicant must still supply a copy of the PNDI Receipt with its permit application. The PNDI Receipt should also be submitted to the appropriate agency according to directions on the PNDI Receipt. The applicant and the jurisdictional agency will work together to resolve the potential impact(s). See the DEP PNDI policy at https://conservationexplorer.dcnr.pa.gov/content/resources.

5. ADDITIONAL INFORMATION

The PNDI environmental review website is a preliminary screening tool. There are often delays in updating species status classifications. Because the proposed status represents the best available information regarding the conservation status of the species, state jurisdictional agency staff give the proposed statuses at least the same consideration as the current legal status. If surveys or further information reveal that a threatened and endangered and/or special concern species and resources exist in your project area, contact the appropriate jurisdictional agency/agencies immediately to identify and resolve any impacts.

For a list of species known to occur in the county where your project is located, please see the species lists by county found on the PA Natural Heritage Program (PNHP) home page (www.naturalheritage.state.pa.us). Also note that the PNDI Environmental Review Tool only contains information about species occurrences that have actually been reported to the PNHP.

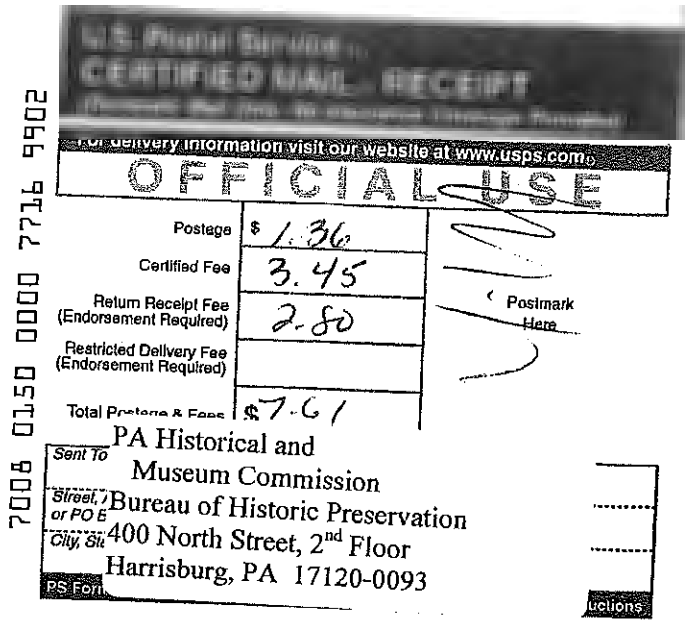
RE: East Whiteland Township (Chester County);
Act 537 Planning – Special Study;
Planebrook Road Regional Pump Station and Force Main; PHMC Review
ARRO # 10310.21

Dear Historical and Museum Commission:

On behalf of East Whiteland Township, we are assisting with the preparation of an Act 537 Sewage Facilities Special Study to update the Township's Act 537 Plan. This Special Study is to reflect the improvements necessary to meet the future wastewater needs of the western portion of East Whiteland Township near Frame Avenue and Planebrook Road. Improvements will require the construction of a regional wastewater pump station, a force main from the pump station to Planebrook Road, then along Planebrook Road to just north of the intersection of Planebrook and Swedesford Roads.

Enclosed, for your review, is the Project Review Form, the Malvern 7.5 Minute Quadrangle identifying the location of the proposed project, and an aerial photograph using 'Google Maps' data. The total area to be disturbed is approximately 0.5 acres. No structures are planned to be disturbed as a result of implementing the planned alternatives. The pump station is going to be installed on a parcel that has been designated for the station in a new development. The proposed force main will be installed through an easement and then will be primarily installed in the street right of way.

Please review this documentation and provide us with any comments or concerns that you may have at your earliest convenience. If you have any questions, please do not hesitate to call me at 610-495-2102.



Sincerely,

William L. Bohner, Jr., P.E.

PUBLIC NOTICE

An Act 537 Plan (Special Study) has been prepared for East Whiteland Township, Chester County, Pennsylvania. The Special Study addresses the planning requirements necessary to provide for public sanitary conveyance improvements to existing portions of the Township's system. These improvements would provide the capacity for existing and planned development located in the Frame Avenue and Planebrook Road areas in the western portion of East Whiteland Township.
Wastewater from the planning area identified in this Special Study will be conveyed via upgraded wastewater conveyance infrastructure from the Cockerham Tract to Planebrook Road and then to the existing sanitary sewer system. The existing system discharges through East Whiteland Township and Tredyffrin Township to the Valley Forge Sewer Authority's Wastewater Treatment Plant.
To meet the wastewater conveyance needs of the planning area, it is proposed that the Township implement the selected alternatives as follows:
Implement Alternative 2 as identified in the Special Study. This alternative includes the construction of a regional pump station via the upgrading of the existing temporary pump station currently located on the Cockerham property. With the construction of this regional station, the existing Frame Avenue Pump Station would be decommissioned. In addition, the construction of approximately 2,000 feet of new 8 inch force main will be completed. This regional pump station and force main will provide capacity for the existing and projected future flows.
The engineer's opinions of probable construction cost for these alternatives and the respective phases are:
Regional Pump Station: $590,000
Force Main: $720,000
The selected technical alternative will be paid for and financed through the sharing of costs between East Whiteland Township and the developer of the Cockerham and Celia properties. Costs shall be recouped through established tapping fees and user rate structures.
In accordance with Chapter 71.3(c) of the Pennsylvania Code, the Township is providing a 30-day public comment period. The plan is available, for review, at the Township's offices, 209 Conestoga Road, Frazer, PA 19355 from 9:00 AM to 4:00 PM, Monday through Friday. Comments may be addressed to Mr. John Nagel, Township Manager, and are due no later than thirty (30) days from the date of this advertisement.

PUBLIC NOTICE

An Act 537 Plan (Special Study) has been prepared for East Whiteland Township, Chester County, Pennsylvania. The Special Study addresses the planning requirements necessary to provide for public sanitary conveyance improvements to existing portions of the Township's system. These improvements would provide the capacity for existing and planned development located in the Frame Avenue and Planebrook Road areas in the western portion of East Whiteland Township.

Wastewater from the planning area identified in this Special Study will be conveyed via upgraded wastewater conveyance infrastructure from the Cockerham Tract to Planebrook Road and then to the existing sanitary sewer system. The existing system discharges through East Whiteland Township and Tredyffrin Township to the Valley Forge Sewer Authority's Wastewater Treatment Plant.

To meet the wastewater conveyance needs of the planning area, it is proposed that the Township implement the selected alternatives as follows:

Implement Alternative 2 as identified in the Special Study. This alternative includes the construction of a regional pump station via the upgrading of the existing temporary pump station currently located on the Cockerham property. With the construction of this regional station, the existing Frame Avenue Pump Station would be decommissioned. In addition, the construction of approximately 2,000 feet of new 8 inch force main will be completed. This regional pump station and force main will provide capacity for the existing and projected future flows.

The engineer's opinions of probable construction cost for these alternatives and the respective phases are:

Regional Pump Station: $590,000

Force Main: $720,000

The selected technical alternative will be paid for and financed through the sharing of costs between East Whiteland Township and the developer of the Cockerham and Celia properties. Costs shall be recouped through established tapping fees and user rate structures.

In accordance with Chapter 71.3(c) of the Pennsylvania Code, the Township is providing a 30-day public comment period. The plan is available, for review, at the Township's offices, 209 Conestoga Road, Frazer, PA 19355 from 9:00 AM to 4:00 PM, Monday through Friday. Comments may be addressed to Mr. John Nagel, Township Manager, and are due no later than thirty (30) days from the date of this advertisement.

RE: East Whiteland Township Sewage Facilities
Planning Special Study for the
For the Planebrook Rd. Regional PS and Force Main;
Public Comment Period – No Public Comment.

Dear Mr. Bohner:

In accordance with Title 25, Chapter 71 of the Pennsylvania Code, a 30-day public comment period was conducted for the above referenced East Whiteland Township Sewage Facilities Planning Special Study. The public comment period began on October 27, 2016 and ended on November 25, 2016. During that period, no public comments were received by East Whiteland Township.

Sincerely,

John Nagel
Township Manager

APPENDIX M

Adopted Resolution

EAST WHITELAND TOWNSHIP

RESOLUTION NO. 41-2016

RESOLUTION FOR PLAN REVISION

WHEREAS, A RESOLUTION OF THE BOARD OF SUPERVISORS OF EAST WHITELAND TOWNSHIP, CHESTER COUNTY, PENNSYLVANIA (hereinafter "the Township").

WHEREAS, Section 5 of the Act of January 24, 1966, P.L. 1535, No. 537 known as the "Pennsylvania Sewage Facilities Act", as Amended, and the Rules and Regulations of the Pennsylvania Department of Environmental Protection (PADEP) adopted thereunder, Chapter 71 of Title 25 of the Pennsylvania Code, require the Township to adopt an Official Sewage Facilities Plan providing for sewage services adequate to prevent contamination of waters and/or environmental health hazards with sewage wastes, and to revise said Plan whenever it is necessary to meet the sewage disposal needs of the Township's service area.

NOW, THEREFORE, BE IT RESOLVED, that East Whiteland Township Board of Supervisors hereby adopts and submits to the Pennsylvania Department of Environmental Protection for its approval, as a revision to the "Official Plan" of the Township, this Act 537 Special Study.

East Whiteland Township hereby approves and adopts the Act 537 Special Study which establishes the planning requirements necessary to provide public sanitary sewer infrastructure improvements to the Planebrook Road Pump Station and Force Main. The Township is committed to implementing the recommendations of this Special Study in accordance with the Study's implementation schedule.

The Township finds that the Act 537 Special Study described above conforms to applicable zoning, subdivision, other municipal ordinances and plans, and to a comprehensive program of pollution control and water quality management.

ADOPTED this 14th day of December, 2016.

BOARD OF SUPERVISORS
EAST WHITELAND TOWNSHIP

William Holmes, Chairman

Richard Orlow, Vice Chairman

Susan Drummond

Attest:

Township Secretary

I, Maureen G. Turley, Secretary, East Whiteland Township, hereby certify that the foregoing is a true copy of Township Resolution No. 41-2016, adopted December 14, 2016.

(TOWNSHIP SEAL)

Maureen G Turley

Township Secretary

APPENDIX N

Approved Plan of Study and Task Activity Report

pennsylvania
DEPARTMENT OF ENVIRONMENTAL PROTECTION

RECEIVED
MAR 24 2016
ARRO Consulting, Inc.

March 18, 2016

Mr. John Nagel, Manager
East Whiteland Township
209 Conestoga Road
Frazer, PA 19355-1699

Re: Act 537 - Plan of Study
Planebrook Road Regional Pump Station Planning Area Special Study
East Whiteland Township
Chester County

Dear Mr. Nagel:

We have completed our review of your municipality's proposed Plan of Study, as prepared by Mr. William L. Bohner, Jr., P.E. of ARRO Engineering and Environmental Consultants, dated March 10, 2016, and a proposed Task Activity Report dated February 2016.

The proposed Special Study will provide planning to address the implementation of a regional pump station that is to provide service to the Frame Avenue and Planebrook Road area in East Whiteland Township, Chester County. As part of the implementation of this station, the existing Frame Avenue pump station will be decommissioned. The completed Special Study is scheduled to be submitted to the Department of Environmental Protection (DEP) in January 2017.

Approval of this proposed plan of study is hereby granted. The estimated cost of the plan is $39,988. Please be advised the approval of this scope of work is not a guarantee of eligibility of planning costs for reimbursement by the Commonwealth pursuant to Section 6 (a) of Act 537 and 25 Pa Code Chapter 71 of DEP's regulations.

This Plan of Study approval does not constitute a final action by DEP. When a completed plan is submitted to us, we will act upon it consistent with Pa. Code Title 25, Chapter 71.

Please consider the following comments as your municipality prepares its Act 537 Official Plan Update:

Your municipality's Act 537 Official Plan Update is to be formatted as suggested in the"A Guide for Preparing Act 537 Update Revisions" including the necessary items listed in the "Act 537 Plan Content and Environmental Assessment Checklist". All necessary items must be included, and a copy of the completed checklist must be included with your Act 537 Plan.

This form is available on our website at:
http://www.dep.state.pa.us/dep/deputate/watermgt/wqp/Forms/Act537/Forms_537Plan.htm

Also, please be advised that DEP will not pay grants under the act for planning costs incurred prior to the date of this Plan of Study approval or for information that has been completed previously under local, state or federal funding programs. In addition, approval of this POS/TAR does not guarantee that all tasks listed will be eligible for reimbursement.

Please note that any new land developments associated with this plan will not be eligible for exemptions from sewage facilities planning under Chapter 71, Section 71.51(b)(2), until after the receiving facilities have been constructed. Applicants proposing projects that will coordinate new development construction with the construction of municipal conveyance or treatment facilities must submit Sewage Facilities Planning Modules for adoption by the municipality and approval by DEP.

If you have any questions, please contact me at 484.250.5184.

Sincerely,

Kelly Boettlin

OUT IN FRONT

EAST WHITELAND TOWNSHIP
FRAME AVENUE/PLANEBROOK ROAD ACT 537 SPECIAL STUDY

In accordance with Title 25, Chapter 71, Administration of the Sewage Facilities Planning Program, of the Pennsylvania Code, a Plan of Study has been developed, for the preparation of a revision to the East Whiteland Township (Township) Act 537 Sewage Facilities Plan (Plan). This is being prepared to establish the planning elements that are necessary to meet the requirements of the Pennsylvania Department of Environmental Protection (PADEP) as they relate to the preparation of an Act 537 Plan Special Study (Special Study). This Special Study is to address the planning requirements necessary to implement a regional pump station that is to provide service to the Frame Avenue and Planebrook Road planning area. As part of the implementation of this station, the existing Frame Avenue pump station will be decommissioned. The area, as delineated on the attached location plan, will be the planning area for this Special Study. The Special Study shall become an amendment to the current Township Act 537 Plan.

Based on the PADEP Act 537 Plan Content and Environmental Assessment Checklist, the following addresses the planning requirements necessary to complete the study:

Executive Summary

1. Prepare a table of contents for the document.

2. Prepare a plan summary (Executive Summary).

   A. Identify the planning area to be served by the future pump station as well as the future collection and conveyance system.

   B. Identify the alternative chosen alternative.

   C. Include the cost opinion for implementing the proposed alternative.

   D. Identify the municipal commitments necessary to implement the plan.

   E. Provide a schedule for implementing the proposed project.

3. Include original signed and sealed Resolutions of Adoption.

4. Include comments provided by the Township Planning Commission, Chester County Planning Commission, and Chester County Health Department.

5. Include Proof of Public Notice.

6. Include a copy of all written comments received and written responses to each comment.

7. Prepare a project implementation schedule.

8. If any planning inconsistencies are identified, documentation will be provided discussing the resolution of the inconsistencies. If none are identified, a statement will be made to that effect.

General Plan

I. Previous Wastewater Planning

A. Identify and discuss existing wastewater planning.

1. Discuss previous Act 537 planning.

2. Discuss planning that has not been done in accordance with an approved implementation schedule.

3. Discuss additional planning, if any, that is anticipated or planned by East Whiteland Township.

4. Discuss planning that has been done via official plan revision such as planning modules or addenda.

II. Physical and Demographic Analysis

A. Identify the planning area, municipal boundaries and service area boundaries utilizing existing mapping.

B. Identify physical characteristics of the planning area. Existing mapping will form the basis for this identification supplemented by USGS and National Wetlands Inventory maps, as required.

C. Discuss soils characteristics in the planning area.

D. Discuss geological features in the planning area.

E. Discuss topographic features in the service area.

F. Identify the potable water supply in the planning area.

G. Identify wetlands in the area utilizing National Wetlands Inventory Mapping.

III. Exlsting Sewage Facilities in the Planning Area

A. Identify and describe municipal sewerage systems in the planning area.

1. Discuss location, size and ownership of existing collection and conveyance facilities. A map will be provided to show the location of the collection and conveyance facilities within East Whiteland Township that could potentially serve the planning area.

2. Providing a narrative and schematic diagram of the basic treatment process is not applicable to this Special Study.

3. Providing a description of the problems, if any, with the existing treatment plant is not applicable to this Special Study. However, a description of problems, if any, associated with the existing conveyance system will be discussed.

4. Providing details, if any, relative to ongoing upgrading or expansion of the treatment facilities is not applicable to this Special Study. However, a description of ongoing upgrades or expansion, if any, of the conveyance system will be discussed.

5. Provide a description of operation and maintenance requirements and the status of past and present compliance with these requirements.

6. A description of disposal areas, other than stream discharge, is not applicable to this special study.

B. Identify the areas served by on-lot disposal systems located along the following roads:

- Planebrook Road
- Elk Drive
- Fairview Drive
- Golf View Lane
- Bracken Avenue
- Prospect Avenue

1. These areas were identified to be in the proposed public sanitary sewer service area in the 2011 Township wide Act 537 Plan approved by the Department. No further planning, to establish the need for public sewer, is required.

2. The planning area is served by public water. The public water supplier will be identified as part of this Special Study.

C. Identification of wastewater sludge and septage generation is not considered applicable to this Special Study.

IV. Future Growth and Development

A. Identify and briefly summarize municipal and County planning documents for the planning area as defined by this Special Study.

1. Discuss the planning area in the context of land use planning and zoning.

2. Discuss zoning or subdivision regulations that establish lot sizes .

3. Discuss limitations and plans relating to the floodplain and stormwater management and special protection areas.

B. Describe future growth and development through mapping, text and analysis for the planning area as defined by this Special Study.

1. Discuss areas with existing development or plotted subdivisions.

2. Discuss land use designations including residential, commercial and industrial areas.

3. Discuss future growth areas, population and EDU projections for these areas.

4. Briefly discuss zoning and subdivision regulations as they pertain to planned development.

5. Discuss the sewage planning required to provide adequate wastewater conveyance for planned development.

V. Alternatives to Provide New or Improved Wastewater Disposal Facilities

A. Identify the alternative to provide for improved sewage facilities

1. Identification of regional wastewater treatment concepts as an alternative shall make mention that wastewater is conveyed to the Valley Forge Sewer Authority's Wastewater Treatment Plant.

2. The potential for extension of existing municipal sewage facilities to areas in need.

3. A brief discussion regarding the potential for continued use of existing on-site or on-lot systems.

4. Analysis of a new community sewage system is not applicable to this Special Study.

5. Analysis of alternatives as they relate to repair, replacement, and upgrade of existing conveyance system components will be discussed.

6. Discussion as it relates to the use of alternate methods of collection/conveyance to serve needs areas is not applicable to this Special Study.

B. The implementation of individual sewage disposal systems beyond the existing systems identified above, is not applicable to this Special Study.

C. Assessment of alternatives based on the use of small flow sewage treatment facilities, land treatment alternatives or package treatment facilities to serve individual homes or clusters of homes is not applicable to this Special Study.

D. Analysis based on the use of community land disposal is not applicable to this Special Study.

E. Addressing the use of retaining tank alternatives is not applicable to this Special Study.

F. A discussion of the Township's sewage management program is not applicable to this Special Study.

G. Non-structural comprehensive planning alternatives are not applicable to this Special Study.

H. Provide a no-action alternative which includes impacts on:

1. Water Quality and Public Health.

2. Growth Potential.

3. Community and economic conditions.

4. Recreational opportunities.

5. Drinking water sources.

6. Other environmental concerns.

VI. The Evaluation of Alternatives

A. Evaluate the alternatives, identified in Section V, for consistency with respect to the following:

1. Plans developed under the Clean Streams Law.

2. Plans developed under the Municipal Wasteload Management Plan (Chapter 94).

3. Plans developed under Title II of the Clean Water Act.

4. Comprehensive plans developed under the Pennsylvania Municipalities Planning Code.

5. Anti-degradation requirements as contained in PA Code, Title 25, Chapters 93, 95 and 102 and the Clean Water Act.

6. State water plans developed under the Water Resources Planning Act.

7. Pennsylvania Prime Agricultural Land Policy.

8. The County Stormwater Management Plan.

9. Wetlands Protection.

10. Protection of rare, endangered or threatened plant and animal species as identified by the PNDI.

11. Historical and Archeological Resource Protection (PHMC).

B. Provide for the resolution of any inconsistencies with items 1 through 11 above, if necessary.

C. Evaluate the alternatives with respect to applicable water quality standards and effluent limitations.

D. Provide cost opinions for construction, financing and engineering fees for the alternatives identified in Section V.

E. Provide an analysis of funding methods available to finance the proposed alternatives including financial contributions from private entities.

F. Analyze the need for immediate or phased implementation.

G. Analyze the ability of the Township to implement the alternative.

VII. Institutional Evaluation

A. Provide a brief discussion of the Township, their past actions and present performance including:

1. Financial and debt status

2. Available staff and administrative resources

3. Provide an analysis of the Township's legal authority to implement wastewater planning recommendations, implement system-wide operation and maintenance activities, set user fees, take purchasing actions, take actions against ordinance violators, negotiate agreements with other parties and raise capital for construction, operation and maintenance of facilities.

B. Describe the various institutional alternatives necessary to implement the technical alternatives, including:

1. There is no need for a new Authority. No analysis will be completed for this.

2. Function of the Township.

3. Cost of administration, implementability, and capability of the Township to provide for future needs.

C. Describe necessary administrative and legal activities, if any, to be completed and adopted to ensure the implementation of the alternatives, including:

1. Legal authorities of incorporation.

2. Required ordinances, standards, regulations and inter-municipal agreements.

3. Provisions of rights-of-way, easements, and land transfers.

4. Other sewage facilities plan adoptions.

5. Legal documents, if any.

6. Dates or timeframes of 1-5 above on the implementation schedule.

D. Identify the proposed institutional alternative for implementing the selected technical alternative.

VIII. Selected Wastewater Treatment and Institutional Alternative

A. Identify the alternative that is the most feasible from a technical, financial, and institutional standpoint. Justify the choice based on:

1. Existing wastewater disposal needs.

2. Future wastewater disposal needs.

3. Operations and maintenance considerations.

4. Cost effectiveness.

5. Availability management and administrative systems.

6. Available finance methods.

7. Environmental soundness.

B. Describe the capital financing plan chosen to implement the selected alternative.

C. Designate and describe the implementation schedule (see Executive Summary).

To: Boettlin, Kelly
Subject: Planebrook Rd. Regional PS - Special Study (OLDS Properties)

Hi Kelly,

We have been having an internal discussion regarding the planning for extending public sewer service to the OLDS properties as part of the Planebrook Road Regional PS Special Study.

Approximately 10 years ago, notifications were sent to these properties and a public meeting was held whereby property owners had the opportunity to express their interest or lack thereof. Generally, the Township found that these property owners were receptive to the extension of public sewer. The Township has also noted that there has been little owner turnover in these neighborhoods. So, the current desire for public sewer should remain consistent with what the Township determined in the past.

In thinking some more about how we would integrate this into the Special Study, we would like to consider making these notifications and the public meeting information a part of this Special Study and include in text that these properties are a part of the planned public sewer service area in accordance with the approved 2011 537 Plan Update.

Then, similar to what we discussed at our meeting in February, we would like to write text that describes triggers for the preparation of Component 3m's that will provide specifics for the extension of public sewer mains to the OLDS properties. During the 3m planning process, the Township would plan to issue new letters to each property owner and the Township could provide them with a more defined time line relative to when public sewers will be extended. This, from the Township's perspective, would avoid getting the property owners' hopes too high without clearer definition of a time line.

Please let me know what you think and if this approach sounds reasonable.

Thanks,

Bill

Dear Resident:

This is to inform you of **the rescheduled date of the special meeting to discuss potential sewers for Planebrook Road, including Elk Drive, Fairway Drive, Golfview Lane and Prospect Avenue,** which was cancelled due to the snowstorm on February 22, 2001. The meeting has been rescheduled to **Thursday, March 15, 2001, at 6:00 PM** in the Municipal Building, 209 Conestoga Road, Frazer, PA.

Sincerely,

BOARD OF SUPERVISORS
EAST WHITELAND TOWNSHIP

By

EAST WHITELAND TOWNSHIP
SPECIAL MEETING
March 15, 2001

Chair, Michele Vaughn, called the meeting to order at 6:10 p.m. The meeting was advertised in the *Daily Local News* on March 9 and 14, 2001, the subject being discussion of proposed sewer installations in the Planebrook Road area. Terry Woodman, Township Manger, William Steele, Public Works Director, Surender Kohli, Township Engineer, and Mary Lou Knight, Assistant Township Secretary, were present. There were approximately thirty-five (35) people in the audience at the onset of the meeting. Virginia McMichael, Vice-Chair, joined the meeting at 6:15 p.m.

The Chair indicated that the meeting was informational only and intended to ascertain residents' interest in having sewers installed. Ms. Vaughn introduced Terry Woodman.

Ms. Vaughn gave a summary of costs to the homeowner associated with the sewer project:

$4,000.00 tapping fee (one time fee) paid to the Township
$25.00 per linear foot (approximate) fee to hook into the sewer line (one time fee) paid to the plumber
$300.00 to $500.00 fee to close current septic tank (one time fee) paid to the plumber.
$350.00 connection fee (one time fee) paid to the Township
$260.00 per year usage fee (sewer rental) paid to the Township

The Chair noted that the tapping fee charged to the homeowner is one-third of its actual cost, the balance being paid by the Township.

Ms. Vaughn explained that the plumber is only required to place the piping and do the hook-up, and the homeowner has the option of digging the pipe trench, thereby saving on this part of the cost. Savings might also be realized if neighborhood groups utilized the services of one plumber, as the contractor can realize savings, i.e., buying stone in bulk, placing equipment over a period of time.

Ms. Vaughn stated that state and federal government funds to aid homeowners with costs involved with connecting to the sewer line are not available, as East Whiteland Township, as a whole, does not qualify for these funds. She said that area banks have been approached regarding homeowner loans to cover these costs. The banks have indicated their willingness to help in this regard.

In response to a question regarding timing of the project, the Chair indicated that a letter would go out to residents to get their overall feeling on the project. If the response is favorable (51% of residents in agreement), Mr. Kohli would send a letter requesting details which relate to the piping connection for individual residents. The residents would have thirty (30) days to respond. If the project goes forward, completion would be expected between one to one and one-half years.

Mr. Davis joined the meeting at 6:25 p.m.

Mr. Cockerham brought up the fact that not all neighbors received notification of the meeting and asked that the Township review the mailing list of residents in the designated area under discussion.

In response to a question regarding the necessity for sewers, Ms. Vaughn stated that there have been a number of complaints regarding failing septic systems. This presents an environmental issue regarding the safety, health and welfare of residents. If enough failing systems turn up over time, the Department of Environmental Protection has the authority to mandate sewer installation. The Township is being proactive by offering residents the option of connecting to a sewer system. Several residents indicated that they were having a problem with their septic systems.

Ms. Vaughn stated that if the project did not go forward at this time, the price to the homeowner would likely increase.

The Township Engineer outlined the tapping fee as strictly for the sewer collection system design. The connection fee is for the house/street connection. In response to a question, Mr. Kohli stated that each property would require one connection, even if that property has two apartments.

The Chairperson of the East Whiteland Fire Company inquired if the Fire Company would be considered a business and, if so, would the cost be different than that charged to homeowners. This cost would be based on EDUs used.

A resident spoke to the charges which might be incurred when running the connection line from the house to the street due to particular piping lay-outs, oil tanks, trees, etc., on each individual property. He felt that the $25.00 per foot estimate mentioned above is low. Mr. Kohli responded that when individual responses are received, the lateral would be designed according to those responses. Ms. McMichael encouraged residents to contact a plumber to ascertain individual costs. In response to a question, Mr. Kohli responded that under the Ordinance, each home is required to have an individual hook-up, as opposed to sharing a line. Regarding placement of lines on individual property, Mr. Kohli stated that there is interplay between individual property owners and the Township on how things will be done.

Mr. Kohli gave a presentation of the project using the tax parcel map. Approximately 84 properties would be connected along Prospect, Gulfview, Elk, Fairview, Bracken and Planebrook. The sewer would be a gravity design. A number of properties will require an injector pump system, and the Township will supply this system which includes a pump, back-up pump, wet well and electrical panel. The pump will be located outside the residence. The resident will be responsible for the cost of installation. Mr. Kohli estimates that the actual cost for this particular neighborhood is $14,900.00 per household, however, the cost to the homeowner remains at $4,000.00. The main pump station is an approximately 10-ft. X 12-ft. building and will be maintained by the Township. Depth of the main line will be determined when the final engineering design is complete. Discussion ensued regarding placement of trunk lines. Sewer fees were discussed. Mr. Kohli explained that if the majority of neighbors elect to have sewers, everyone within 150 ft. of the line must connect. Anyone outside of that range does not have to connect.

The residents were invited to look at the plan.

There being no further business, Ms. Vaughn made a motion to adjourn the meeting. Ms. McMichael seconded the motion, and the meeting was adjourned at 7:20 p.m.

Respectfully submitted,

Mary Lou Knight

TO: **PLANEBROOK ROAD AREA RESIDENTS**

FROM: **WILLIAM STEELE**

DATE: **APRIL 2, 2001**

RE: **PUBLIC SEWER**

East Whiteland Township has conducted a feasibility study in your area for the possibility of installing public sewer. There was a public meeting held on March 15, 2001 in the Municipal Building to discuss this potential project. (Meeting minutes attached) **As a follow up to that meeting we are asking all residents to respond on the enclosed post card.** This will help us to determine the interest in your area with regard to the addition of public sewer.

As discussed the costs to each homeowner would include a $4,000.00 tapping fee and a $350.00 connection fee. These would be the only fees paid to the Township to connect to the system. After connecting to the public sewer the sewer rental charge is $65.00 per quarter per EDU (equivalent dwelling unit) to total $260.00 per year.

There would be additional costs to each homeowner to contract with a plumber to install the lateral piping from the right of way to the house. Also to clean out and backfill the septic tank per Township regulations. These costs are estimated to be $25.00 per foot for the piping and $500.00 for the septic tank work. These costs could vary depending on conditions around your house.

The feasibility study has shown some homes would need a grinder pump to discharge your sewage into the Township system. The pit and pump would be supplied by the Township (at no addition cost) and installed by your plumber. It would then be owned and maintained by the property owner.

If you have any questions or concerns, please contact me at your earliest convenience. If you would like to contact the Township Supervisors you may reach them by calling Michele Vaughn (610-408-0793), Virginia McMichael (610-993-8725), or Gregory Davis (610-647-3586). **Please complete the enclosed post card and return it to the Township by April 30, 2001.** Thank you for your cooperation in this survey.

EAST WHITELAND TOWNSHIP
PLANEBROOK ROAD AREA
SEWER SURVEY APRIL 2001

PLEASE MARK ONE LINE BELOW

_____ **I WOULD** be interested in connecting to public sewer if it were made available to my property.

_____ **I WOULD NOT** be interested in connecting to public sewer.

Re: Act 537 Special Study
Frame Avenue/Planebrook Road Regional Pump Station
and Force Main
Status: ISSUED
APS ID 38912, AUTH ID 1175131
East Whiteland Township
Chester County

Dear Mr. Nagel:

We have completed our review of your municipality's proposed Official Sewage Facilities Plan Special Study for the Planebrook Road Regional Pump Station and Force Main in East Whiteland Township (Township), Chester County. The Special Study, titled East Whiteland Township Frame Avenue/ Planebrook Road Act 537 Special Study (Special Study), was prepared by ARRO Engineering & Environmental Consultants, and is dated December 2016. This Special Study was submitted to the Department of Environmental Protection (DEP) and a review was conducted in accordance in accordance with the provisions set forth by Section 5 of the Pennsylvania Sewage Facilities Act and Chapter 71, the Administration of Sewage Facilities Program. Additional information in support of the December 2016 Special Study was received by DEP on March 29, 2017.

Approval of the Special Study is hereby granted. This approval provides for the following:
