Report Title: **Analytical Data Report # 023: County- and Municipal-Level Employment Forecasts, 2015–2045**

Publication No.: ADR023

Date Published: October 2016

Geographic Area Covered: DVRPC's nine-county region, including Burlington, Camden, Gloucester, and Mercer counties in New Jersey, and Bucks, Chester, Delaware, Montgomery, and Philadelphia counties in Pennsylvania.

Key Words: employment, employment forecasts, National Establishments Time Series database, NETS, Connections 2045, long-range plan

ABSTRACT: This report presents the Delaware Valley Regional Planning Commission's (DVRPC's) adopted 2045 county- and municipal-level employment forecasts and describes the method used to develop them. Population and employment forecasts are a critical component of long-range land use and transportation planning. As a part of DVRPC's long-range planning activities, the Commission is required to maintain forecasts with at least a 20-year horizon, or to the horizon year of the long-range plan.

DVRPC last adopted employment forecasts through the year 2040 in September 2012. In March 2016, DVRPC acquired a National Establishments Time Series (NETS) database that included 2013 employment data and revised 2010 data. The 2010 and 2013 employment data was reviewed and revised by DVRPC staff, utilizing resources that included CoStar, on-line business directories, company web sites, and, when appropriate, direct telephone calls. The revised data was then sent to the county planning staffs for additional revision. Additionally, during the summer of 2016, DVRPC acquired improved geocoding resources that allowed staff to further correct the spatial locations of employers.

Based on changes in the NETS employment between 2010 and 2013, and changes in employment in each county between 2010 and 2015, as reported by the U.S. Bureau of Labor Statistics, 2015 employment was estimated by county and municipality. Studies have shown that there is a direct relationship between the number of workers living in an area and the number of jobs. County-level employment was forecasted in five-year increments through 2045, by estimating a future ratio of population to employment in each county and applying it to DVRPC's adopted population forecasts. Together with the 2045 population forecasts adopted by the DVRPC Board in July 2016, these employment forecasts, adopted by the Board in October 2016, will serve as the basis for DVRPC's planning and modeling activities, and support the region's 2045 long-range plan, scheduled for adoption in July 2017.

Financial Information

Net Position - The following schedule presents a summary of net position comparison at December 31, 2018, 2017, and 2016:

	2018	2017 (As Restated)	2016 (As Restated)
Assets			
Unrestricted current assets	**$ 25,886,197**	$ 24,371,571	$ 20,614,911
Restricted current assets	**3,389,010**	11,067,725	19,177,064
Capital assets, net	**64,973,550**	59,036,648	55,262,527
Other asset	**351,810**	1,020,000	1,020,000
Deferred Outflow of Resources	**1,054,979**	1,197,798	1,346,286
Total Assets and Deferred Outflow of Resources	**$ 102,255,546**	$ 96,693,742	$ 97,420,788
Liabilities			
Current liabilities	**$ 7,496,258**	$ 5,387,837	$ 5,985,559
Long-term debt	**80,796,512**	84,017,089	87,200,895
Total Liabilities	**$ 88,292,770**	$ 89,404,926	$ 93,186,454
Net Position			
Net investment in capital assets	**$ (18,130,096)**	$ (27,177,795)	$ (22,222,481)
Restricted for debt service	**7,513,275**	7,426,839	7,409,503
Unrestricted	**24,579,597**	27,039,772	19,047,312
Total Net Position	**$ 13,962,776**	$ 7,288,816	$ 4,234,334

Current liabilities increased by 39.1% in 2018 compared to a decrease by 10.0% in 2017 and an increase by 20.7% in 2016. The 2018 increase is attributable to increases in capital accounts payable.

Revenues - The following schedule presents a summary of revenues for the years ended December 31, 2018, 2017, and 2016:

	2018	2017	2016
Operating Revenues			
Water billings	**$ 29,663,185**	$ 29,736,140	$ 29,622,297
Interest and penalty charges	**541,209**	472,340	586,502
Tampered meter and other charges	**310,720**	449,933	591,344
Tapping and connection fees	**50,610**	177,175	86,244
Abandonment fees	**20,107**	60,907	32,001
Total Operating Revenues	**$ 30,585,831**	$ 30,896,495	$ 30,918,388

The 2018 fiscal year's total operating revenue decreased by 1.0% compared to 2017, and decreased by 0.1% and increased by 11.7% in 2017 and 2016, respectively.

Financial Information (continued)

Expenses - The following schedule presents a summary of expenses for the years ended December 31, 2018, 2017, and 2016:

	2018	2017 (As Restated)	2016 (As Restated)
Operating Expenses			
Lease payments, City of Reading	**$ 11,640,032**	$ 11,426,339	$ 11,441,419
Chemical supplies	**1,051,101**	746,486	1,197,002
Meter reading	**-**	-	539,483
Salaries, payroll taxes, and employee benefits	**6,213,345**	5,877,245	5,529,809
Contracted services	**967,302**	849,520	1,089,676
Other	**3,895,738**	3,176,042	2,881,120
Total Operating Expenses	**$ 23,767,518**	$ 22,075,632	$ 22,678,509

The $1,691,886 increase in expenses is primarily the result of the increase in chemical supplies, salaries, payroll taxes and employee benefits, and bad debt expense.

Changes in Net Position - The following schedule presents a summary of changes in net position for the years ended December 31, 2018, 2017, and 2016:

	2018	2017 (As Restated)	2016 (As Restated)
Operating revenues	**$ 30,585,831**	$ 30,896,495	$ 30,918,388
Operating expenses	**23,767,518**	22,075,632	22,678,509
Operating Income before Depreciation	**6,818,313**	8,820,863	8,239,879
Depreciation and amortization	**3,872,439**	3,304,835	2,946,682
Operating Income	**2,945,874**	5,516,028	5,293,197
Nonoperating revenues (expenses), net	**3,728,086**	(2,461,546)	(3,468,433)
Increase in Net Position	**$ 6,673,960**	$ 3,054,482	$ 1,824,764

Table 2 below shows a Condensed Statement of Revenue, Expenses, and Changes in Net Position for the years ended March 31, 2017, 2016, and 2015 as restated. The change in net position increased from $ 3.7 million in fiscal year 2016 to $ 4.6 million in fiscal year 2017. Operating income increased $ 1.1 million over last year while non-operating revenue (expense) increased $ 1.1 million over fiscal year 2016.

	2017	2016	2015
Operating revenue	$ 20,849,832	$ 19,713,716	$ 17,642,797

Table 2 - Condensed Statement of Revenues, Expenses, and Changes in Net Position

Table 3 and Table 4 below show a breakdown of fiscal year 2020 Operating Revenue and Operating Expenses, respectively.

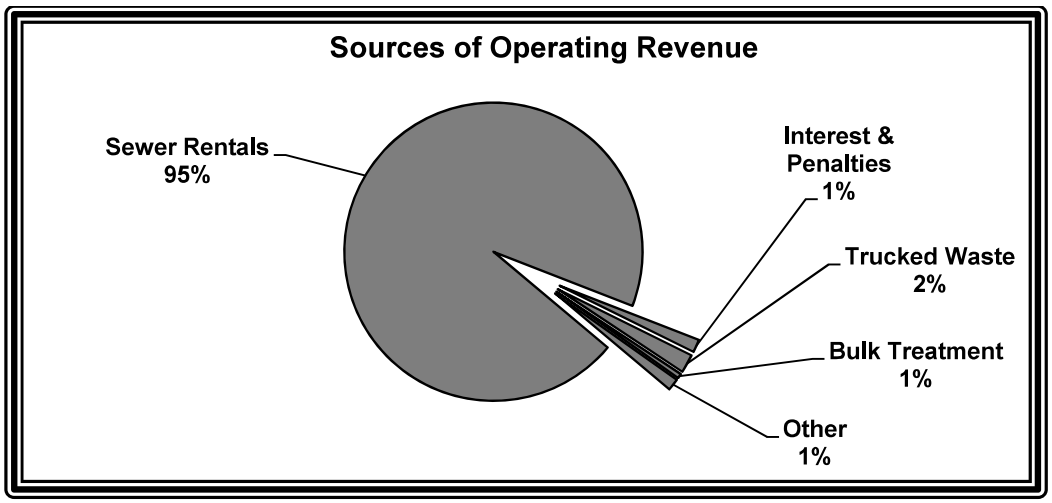

Table 3 - Sources of Operating Revenue - Fiscal Year 2020

Revenue

In fiscal year 2017, revenue exceeded budgeted revenue by 1.0% resulting from additional investment income earned from higher than expected rates of return and below projection draws on construction funds.

Expenses

Expenses, excluding depreciation, were 1.3% under budget. Interest expenses were below budget as 24% of paid interest expenses were capitalized as project costs. This was offset by above-budget expenditures in Administrative and Treatment Plant expenses. Higher than budgeted employee health care costs of $ 113,000 in the self-funded health insurance plan and amortization of pension liability of $ 52,000 generated above-budget Administrative expenses. Treatment plant expenses for nutrient credit purchases to remain in compliance with the Authority's discharge permit were over-budget by $ 131,000 and expenses for sludge disposal were over-budget by $ 63,000 to cover disposal costs during an extended repair of the centrifuge. Above-budget expense for depreciation account for 48.5% of the negative budget variance in operating expenses. Prior period adjustments to correct the posting of capitalized interest increased the asset value of constructed assets leading to above-budget depreciation costs.

CAPITAL ASSETS AND DEBT ADMINISTRATION

Capital Assets

The Authority's capital assets, net of accumulated depreciation, as of March 31, 2017 were $ 119.7 million. The Authority capitalizes all assets costing more than $ 20,000 whose expected life exceeds 12 months. A condensed statement of capital assets for fiscal years 2017, 2016, and 2015 is presented in Table 6 below. Additional information on the Authority's capital assets can be found in Note 5 of the financial statements.

	2017	2016	2015
Construction in progress	$ 24,247,571	$ 8,328,405	$ 6,383,634
Land	95,181	95,181	36,257
Sewer System			
Lines	99,909,426	99,088,012	89,292,400

Total accumulated depreciation	(83,211,180)	(78,843,305)	(74,748,106)
Total Capital Assets	$ 119,707,705	$ 105,853,576	$ 97,965,766

Table 6 - Condensed Statement of Capital Assets -
Fiscal Years 2017, 2016, and 2015

Revenue

In fiscal year 2018, revenue exceeded budgeted revenue by 7.2% resulting from capacity reservation and tapping fee income exceeding budget, which offset below-budget investment and other income.

Expenses

Expenses, excluding depreciation, were 5.3% over budget. Interest expense was below budget as 52% of paid interest expense was capitalized as project costs. This was offset by above-budget expenditures in Administrative and Treatment Plant expenses. Higher than budgeted legal expenses of $ 31,000 and amortization of pension liability of $ 58,000 generated above-budget Administrative expenses. Treatment plant expenses for nutrient credit purchases to remain in compliance with the Authority's discharge permit were over-budget by $ 62,000 and expenses for sludge disposal were over-budget by $ 91,000. Above-budget expense for depreciation of $ 573,000 accounts for 71.2% of the negative budget variance in operating expenses.

CAPITAL ASSETS AND DEBT ADMINISTRATION

Capital Assets

The Authority's capital assets, net of accumulated depreciation, as of March 31, 2018 were $ 141.2 million. The Authority capitalizes all assets costing more than $ 20,000 whose expected life exceeds 12 months. A condensed statement of capital assets for fiscal years 2018, 2017, and 2016 is presented in Table 6 below. Additional information on the Authority's capital assets can be found in Note 5 of the financial statements.

	2018	2017	2016
Construction in progress	$ 41,124,606	$ 24,247,571	$ 8,328,405
Land	95,181	95,181	95,181
Sewer System			
Lines	102,594,800	99,909,426	99,088,012

Table 6 - Condensed Statement of Capital Assets - Fiscal Years 2018, 2017, and 2016

Budgetary Highlights (Continued)

Revenue

In fiscal year 2019, actual revenue exceeded budgeted revenue by $ 820,000 resulting from sewer rental, investment, and other income exceeding budget. These were partially offset by below-budget revenue in capacity reservation and tapping fee income.

Expenses

Expenses, excluding depreciation, were $ 1.5 million over budget. Above average rainfall generated a 40% increase in flow through the collection system and treatment plant for the year. Consequently, electricity and chemical costs, sewer treatment costs from the City of Lancaster and the Borough of Columbia, and nutrient credit purchase costs were $ 1.4 million over budget. When combined with extensive rehabilitation of the centrifuge at the treatment plant, the operating expenses, excluding depreciation, exceeded budget by $ 1.5 million. Above-budget expense for depreciation of $ 308,000 accounts for the balance of the negative budget variance in operating expenses.

CAPITAL ASSETS AND DEBT ADMINISTRATION

Capital Assets

The Authority's capital assets, net of accumulated depreciation, as of March 31, 2019 were $ 142.3 million. The Authority capitalizes all assets costing more than $ 20,000 whose expected life exceeds 12 months. A condensed statement of capital assets for fiscal years 2019, 2018, and 2017 is presented in Table 6 below. Additional information on the Authority's capital assets can be found in Note 5 of the financial statements.

	2019	2018	2017
Construction in progress	$ 37,011,554	$ 41,124,606	$ 24,247,571
Land	95,181	95,181	95,181
Sewer System			
Lines	110,392,727	102,594,800	99,909,426
Pump stations	40,897,235	38,845,592	33,042,528
Treatment plant	38,262,279	38,193,779	38,039,056
Buildings and improvements	3,640,150	3,640,150	3,640,150
Technology	1,424,091	1,424,091	1,353,402
Vehicles	2,295,745	2,291,170	1,760,826

	234,996,143	229,040,114	202,918,885
Total accumulated depreciation	(92,678,068)	(87,820,739)	(83,211,180)
Total Capital Assets	$ 142,318,075	$ 141,219,375	$ 119,707,705

**Table 6 - Condensed Statement of Capital Assets -
Fiscal Years 2019, 2018, and 2017**

In fiscal year 2020, actual revenue was below budgeted revenue by $ 7,000 resulting from below-budget revenue in sewer rental and surcharges. These were offset by above-budget revenue in capacity reservation and tapping fee income and investment income.

Expenses

Expenses were $ 127,000 under budget. Above-budget expenses for required equipment maintenance in our collection system were offset by below-budget depreciation costs as well as below-budget expenditures at the treatment plant and laboratory.

CAPITAL ASSETS AND DEBT ADMINISTRATION

Capital Assets

The Authority's total capital assets, net of accumulated depreciation, as of March 31, 2020 were $ 140.4 million. The Authority capitalizes all assets costing more than $ 20,000 whose expected life exceeds 12 months. A condensed statement of capital assets for fiscal years 2020, 2019, and 2018 is presented in Table 6 below. Additional information on the Authority's capital assets can be found in Note 5 of the financial statements.

	2020	2019	2018
Construction in progress	$ 5,206,076	$ 37,011,554	$ 41,124,606

Total Capital Assets	$ 140,405,221	$ 142,318,075	$ 141,219,375

Table 6 - Condensed Statement of Capital Assets -
Fiscal Years 2020, 2019, and 2018

Debt Administration

As of March 31, 2020, the Authority had $ 66.4 million of bonds outstanding including $ 56.5 million in Sewer Revenue Bonds and $ 9.9 million of bonds through a subsidy agreement with the Borough of Columbia. Unamortized bond premiums of $ 2.8 million bring the total bonds payable liability to $ 69.3 million. Bond principal payments of $ 5.8 million and amortization of bond premiums of $ 0.3 million reduced the total bonds payable liability by $ 6.1 million from the March 31, 2019 balance of $ 75.4 million.

Total liabilities and net position	$ 286,127,576	$ 285,495,125	$ 632,451	0.22%

Changes in Net Position –

The Authority's net position decreased by $922,947 in 2019. The 2019 decrease in the net position resulted from several factors related to materials and supplies costs and personnel related costs that was offset by savings on interest expense.

Total operating revenues for the year ended December 31, 2019 of $40,086,711 increased $316,562 (0.80%) compared to December 31, 2018.

Total operating expenses of $22,143,829 increased $756,012 (3.53%).

Total 2019 expenses of $42,660,918 compared to $44,001,398 in 2018 decreased $1,340,480 (11.11%).

to $285.50 million. Total liabilities and inflows increased $36.14 million [11.88%] to $340.36 million. The primary reasons for the increase are discussed in the following *Changes in Net Position* section.

Restricted investments of $32.39 million increased $21.03 million [285.19%], primarily from $27 million of new capital project funds from the 2018 bond issue.

Capital assets (net of depreciation) increased $3.09 million. Gross capital assets (before depreciation) increased $11.47 million representing capital additions in accordance with the Authority's adopted capital project program.

Changes in Net Position –

The Authority's net position decreased by <$3.65> million in 2018, compared to a <$.84> million decrease in 2017. The 2018 decrease in the net position resulted from several factors – $1.84 million increase in pension costs, $1.1 million increase in interest expense and $1.03 million of bond issue costs.

Total operating revenues for the year ended December 31, 2018 of $39.8 million increased $1.3 million [3.3%] compared to December 31, 2017.

Total operating expenses of $21.4 million increased $2.48 million [13.1%]. The majority of the

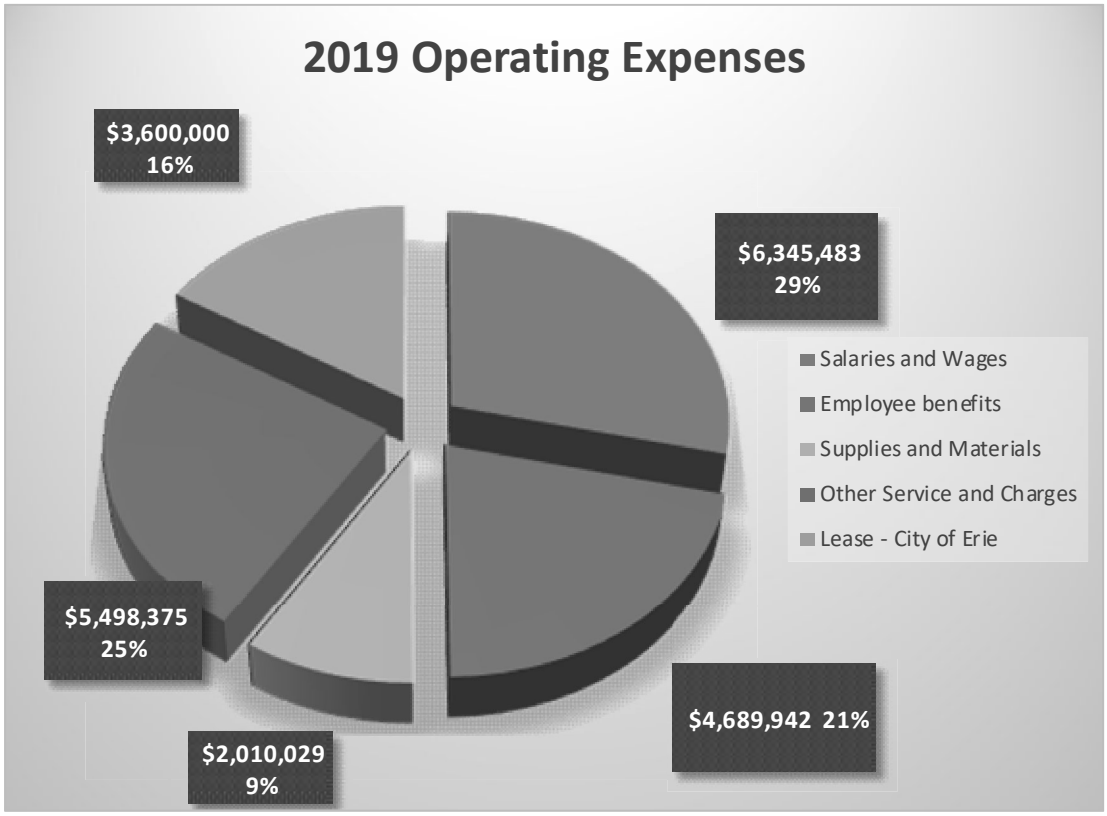
Total liabilities and net position	$ 254,119,835	$ 262,522,652	($ 8,402,817)	(3.2%)

Changes in Net Position –

The Authority's net position decreased by $.84 million in 2017, compared to a $1.92 million in 2016. The 2017 increase in the net position deficit of $.85 million resulted from several factors – $2.6 million increase in net operating revenue - $19.6 million in 2017 versus $17.0 million in 2016 and a $.4 million increase in interest expense - $13.2 million in 2017 versus $12.7 million in 2016.



Total operating revenues for the year ended December 31, 2017 of $38.5 million increased $1.8 million (4.9%) compared to December 31, 2016.

Total operating expenses of $18.9 million decreased $.77 million (3.9%). The majority of the 2017 decrease in operating expenses was attributable to lower repair costs on water mains.

Total 2017 expenses of $40.3 million increased $.15 million (.04%) compared to 2016.

Exhibit 7.7 is a graphical depiction of the year-end index levels presented in Exhibit 7.5 for mid-cap stocks (a portfolio comprised of CRSP deciles 3, 4, and 5), low-cap stocks (a portfolio comprised of CRSP deciles 6, 7, and 8), micro-cap stocks (a portfolio comprised of CRSP deciles 9 and 10), and the "market" (a portfolio comprised of CRSP deciles 1–10).

Exhibit 7.9: Security Market Line Versus a Scatter-Plot of Average Arithmetic Total Returns of the CRSP NYSE/NYSE MKT/NADAQ Deciles 1–10 and Their Respective Betas.

Sources of underlying data: Betas are estimated from monthly returns in excess of the 30-day U.S. Treasury bill total return, January 1926–December 2018. Historical riskless rate measured by the 93-year arithmetic mean income return component of SBBI® 20-year government bonds (4.97%). Calculated in the context of the CAPM by multiplying the equity risk premium by beta. The equity risk premium is estimated by the arithmetic mean total return of the S&P 500 (11.88%) minus the arithmetic mean income return component of SBBI® 20-year government bonds (4.97%) from 1926–2018. Serial Correlation in Small-Cap Stock Returns

Serial correlation, or first-order autocorrelation, measures the degree to which the return of a given series is related from period to period. Serial correlation, like cross-correlation, ranges from 1.0 to negative 1.0. A positive serial correlation can be an indicator of a trend in a return series. A serial correlation of 1.0 indicates that returns from one period have a perfectly positive relationship to the returns of the next period; returns are therefore perfectly predictable from one period to the next. A negative serial correlation can be an indicator of a cycle in a return series. A serial correlation of negative 1.0 indicates that returns from one period have a perfectly negative relationship to the next period. A serial correlation near zero indicates that returns are random or unpredictable.

If stock returns have a positive or a negative serial correlation, one can gain some information about future performance based on prior period returns. The serial correlation of returns on large-cap stocks is near zero (see Exhibit 7.6). For the smallest deciles of stocks, the serial correlation tends to be higher. This observation bears further examination.

The Water Utility Industry consists of eight companies that provide water services mostly to residential customers. The group continues to be highly ranked among the 97 industries that are followed by *Value Line*. Much of the appeal of owning these securities has to do with their well-defined earnings and dividend growth prospects. These equities also provide diversification for professional money managers who overseeing funds that must be put invested in regulated utilities.

Due to the small number of equities available here, they trade at high Price/Earnings ratios.

As a group, these stocks have underperformed the S&P 500 Index since the beginning of the year.

INDUSTRY TIMELINESS: 7 (of 97)

Earnings Remain Steady

COVID-19 has not caused any real problems for water utilities. This is due to two main reasons. First, the demand for water is relatively inelastic. Whether GDP is rising or falling substantially, the demand for water will not change much. (Regulators can occasionally impose price increases for emergencies, such as a drought, to reduce usage.) People just have to consume this essential resource. Secondly, because utilities must file petitions with state authorities to change rates, the price of water is typically known for the next year or two. For example, in California, the process is so lengthy that a utility will file well in advance to establish rates for the next three-year period. The end result of this is that companies' level of profitability is very predictable relative to that of other industries. Of course, there is a cost for this as investors must pay a premium for these stocks. Furthermore, because profits here are less volatile, so too is dividend growth. The average increase for water utilities is currently in the range of 5% to 10%.

Industry Fundamentals

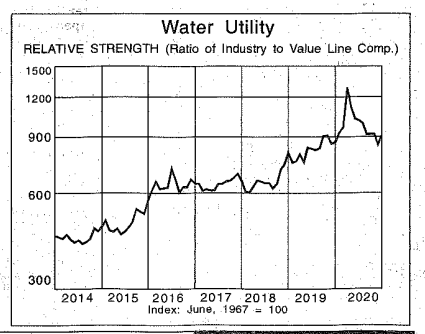
Change in this Industry historically doesn't occur overnight. Indeed, the storyline here has been consistent for some time. Following years and years of underinvestment, the nation found itself with an aging water infrastructure that is in poor condition. Many pipelines were installed 50 to 75 years ago. In badly need of replacement, water utilities have been spending heaving to replace old assets. This high level of expenditures will have to be maintained for decades.

Regulation

As we have highlighted in the past, one of the most significant factors in determining the profitability of a utility is the regulatory climate where it operates. Fortunately for the Water Utility Industry, state authorities and water utilities both realize what needs to be done, and are working constructively to address the issues. Regulators agree that the outlays being made to upgrade the country's infrastructure are required, so they are allowing fair return on investment to be made. Having a positive relationship may seem reasonable, but this is not the case for gas and electric utilities. Conflicts are not unusual.

Balance Sheets

Internally generated funds are not sufficient for these entities to cover their capital budgets. As a result, external financing is needed to make up the difference. The trend has been to sell debt rather than issuing new equity. We attribute this primarily to the low interest rates environment that has been prevalent for some time now. Still, on the whole, balance sheets here aren't overleveraged, as Financial Strength ratings average B+ to B++.



Scarcity

The market capitalization of all the stocks combined in this group total about $47 billion. (For example, Consolidated Edison, a New York-based electric utility has a market cap itself of approximately $25 billion.) Hence, water stocks always seem to be pricey because the demand outstrips supply.

Conclusion

Since the start of this year, the stock of *Middlesex Water* has been the only one out of the seven regulated water utilities to have outperformed the market averages. Still, though there are some timely stocks in the group, none can be considered inexpensive. Rather, the premium investors are willing to pay for these equities has been reduced. Certain Wall Street analysts have attributed the sluggish showing to rising yields on long-term Treasury bonds. Utilities are bought for the income they generate and this makes bonds look more attractive. In our opinion, the Water Utility Industry has not traded like electric and gas utilities for some time. Indeed, the average dividend yield of these equities is lower than the *Value Line* median. It should also be noted, that the typical member of this sector has below-average total return prospects out to 2024-2026. Nevertheless, very conservative accounts may find this a small price to pay for the low volatility and well-defined prospects. As always, we advise subscribers to read each individual report carefully before making any commitments to better understand the potential risk being assumed.

BUSINESS: American States Water Co. operates as a holding company. Through its principal subsidiary, Golden State Water Co., it supplies water to 261,976 customers in 10 California counties. Service areas include the metropolitan areas of Los Angeles and Orange Counties. The company also provides electricity to 24,545 customers in Big Bear Lake and San Bernardino Cnty. Provides water & wastewater services to U.S. military bases through its ASUS subsidiary. Sold Chaparral City Wtr. of AZ. (6/11). Employs 841. BlackRock, Inc. owns 15.9% of out. shares; Vanguard, 11.9%; off. & dir. 1.0%. (4/20 Proxy). Chairman: Lloyd Ross. Pres. & CEO: Robert Sprowls. Inc: CA. Address: 630 East Foothill Blvd., San Dimas, CA 91773. Tel: 909-394-3600. Internet: www.aswater.com.

Shares of American States Water have not performed well lately. Over the past three-month period, the price of the stock has declined about 2%. By comparison, the S&P 500 Index has increased 7%, a difference of nearly 900 basis points. **Meanwhile, a major rate case is pending.** California is a state where water utilities file a petition to raise prices once every three years. Last summer, the Golden States Water Company (GSWC) submitted the papers for rate hikes that would cover the years 2022 to 2024. The final decision on the case is not expected until late this year, at the earliest. Our earnings assumptions are based upon a reasonable ruling, as relations with the regulators has been mostly positive. An unexpectedly harsh decision would have a negative impact on the bottom line. **Earnings should advance at a decent clip both this year and next.** The company's year-over-year share net will likely only increase 3% in 2021. (Utilities often see earnings growth slow in the year before new rates are determined.) In 2022, with the assistance of higher rates, we are estimating that earnings per share will climb 6%. **Dividend growth prospects seem to be somewhat brighter.** At the company's August board meeting, we think the distribution per share will be raised $0.03, a 9% increase. This is near the very high end of the range for water utilities. **The company's nonregulated operations offer some potential upside.** Through its ASUS business, the company operates water systems at U.S. Army installations. ASUS has been reasonably successful in winning its share of the many contracts the military has put out for bid. With more privatizations of these facilities planned, this segment could provide higher-margined revenues. That's because returns here are not capped, so there isn't a limit on profitability. **These neutrally ranked shares do not have appeal, at this time.** Despite lagging the market, AWR is only ranked to perform in line with the major indexes in the year ahead. Moreover, over the pull to 2024-2026, total return potential is well-below the *Value Line* median, as the equity is already in its Target Price Range.

BUSINESS: American Water Works Company, Inc. is the largest investor-owned water and wastewater utility in the U.S., providing services to approximately 15 million people in 46 states. Nonregulated business assists municipalities and military bases with the maintenance and upkeep as well. Regulated operations made up 86% of 2020 revenues. New Jersey is its largest market accounting for 24.5% of regulated revenues; Pennsylvania, 22.5%; Missouri, 10.6%. Has 6,800 employees. The Vanguard Grp, owns 11.7% of outstanding shares; BlackRock, Inc., 8.1%; officers & directors, less than 1.0%. (3/21 Proxy). President & CEO: Susan N. Story. Chairman: George MacKenzie. Address: 1 Water Street, Camden, NJ 08102. Tel.: 856-346-8200. Internet: www.amwater.com.

American Water Works completed another very successful year in 2020. Due in part to a strong fourth quarter, the water utility managed to post an impressive 14% share-earnings increase over 2019. One of the most attractive qualities about this industry is that the demand for water is relatively inelastic. Hence, the pandemic has had no real impact on the company.

The earnings picture remains bright. American Water has an aggressive acquisition policy (more below). This, plus solid cost controls, an expanding rate base, and the stable need for water, should ensure solid yearly earnings per share increases for the foreseeable future. We think the company's share net will rise 8% both this year and in 2022. Through 2024 to 2026, we estimate growth here should be in the 7%-10% range, a much higher rate than the typical utility.

The company ought to continue to following what has been a successful strategy. Management has been acquiring small, independent water districts for many years. Indeed, in 2020, 23 such purchases were made. Domestically, there are literally thousands of these undersized water entities that are run by local municipalities. Often they are inefficient and undercapitalized. American Water can merge these operations into its existing business and attain significant economies of scale. As a result, the utility's margins should continue to widen annually as long as this policy is in place.

Capital expenditures are large, but manageable. Like others in the group, the company is spending heavily to upgrade its pipelines and other assets. Also, most of the acquisitions require investment to ensure that they are in compliance with federal mandates. Over the past 10 years, capital outlays have totaled $28 billion. Out to mid-decade, annual outlays may average $2.2 billion to $2.5 billion. The balance sheet will likely handle this without deteriorating much.

These shares are timely. Since our January report, the equity has underperformed the market indexes by about 750 basis points. Thus, the premium investors usually have to pay for this industry standout has declined to some degree.

BUSINESS: California Water Service Group provides regulated and nonregulated water service to 492,600 customers in 100 communities in the state of California. Accounts for about 94% of total customers. Also operates in Washington, New Mexico, and Hawaii. Main service areas: San Francisco Bay area, Sacramento Valley, Salinas Valley, San Joaquin Valley & parts of Los Angeles. Acquired Rio Grande Corp; West Hawaii Utilities (9/08). Revenue breakdown, '20: residential, 70%; business, 18%; industrial, 4%; public authorities, 5%; other 3%. Off. and dir. own 1% of common stock (4/20 proxy). Has 1,184 employees. Pres. and CEO: Martin A. Kropelnicki. Inc.: DE. Addr.: 1720 North First St., San Jose, CA 95112-4598. Tel.: 408-367-8200. Internet: www.calwatergroup.com.

California Water Service Group reported solid financial results to wrap up 2020. The West Coast water service provider generated revenues of $189 million in the December period, or a 7% annual increase, thanks largely to rate hikes associated with the recently approved general rate case. Meanwhile, fourth-quarter share profits of $0.31, which were also buoyed by benefits from the general rate case decision, specifically higher operating income and lower taxes, logged a healthy 29% advance compared to the year-earlier tally.

California Water is on a buying spree. The company's subsidiary, Hawaii Water Service, announced that it has received approval to acquire the assets of Kapalua Water and Kapalua Waste Treatment Company, which will add roughly 1,000 service connections in the area. In addition, a deal has been inked to purchase the water system assets of Skylanda Mutual Water Company. Pending regulatory approval, the transaction, which would add almost 19,000 service connection in California, is expected to be finalized early next year. Overall, tuck-in acquisitions will probably be a staple in the company's long-term growth strategy.

The company is in the early innings of a massive infrastructure improvement program. Indeed, management is taking an aggressive approach to upgrading and revamping its aging water delivery, transportation, and treatment facilities. For this year, its capital spending budget for infrastructure-related projects is approximately $285 million. Over the pull to 2025, the company is likely to invest upwards of $700 million. Lastly, California Water has already been given the green light by the California Public Utilities Commission to tap the debt and equity markets.

We continue to like this issue for subscribers with a short-term investment horizon. The stock has been raised one notch on our Timeliness Ranking Scale, to 1 (Highest) and, thus is slated to outpace the broader market averages over the coming six to 12 months. On the other hand, buy-and-hold accounts should turn the page, as total return potential out to 2024-2026 is unenticing at recent levels.

BUSINESS: Consolidated Water Co. Ltd. develops and operates desalination plants and water distribution systems in areas where naturally occurring supplies of water are scarce. It provides water in the Cayman Islands, the Bahamas, and the British Virgin Islands. At 12/31/19, it operated 12 plants with a capacity of 25.6 million gallons per day. Sold Bali operations and divested Belize assets in '19. Also manufactures products for the industry through Aerex sub. Inc.: Cayman Is. Employs 105. Pres./CEO: F. McTaggart. Based on 4/19 proxy Offs./ Dirs. own 4.8% of stock; Amundi Asset, 7.7%; BlackRock, 5.6%. (No proxy filed in 2020). Addr.: Regatta Off. Pk. Windward Three, West Bay Rd., P.O. Box 1114 Grand Cayman, KYI-1102, Cayman Is. Tel.: (345) 945-4277. Int.: www.cwco.com.

Investors will have to wait for Consolidated Water's full-year 2020 results. The company will not file its fourth-quarter results until after this report goes to press. Since the value of certain assets must be evaluated quarterly, (with the largest changes usually occurring at year end), we have less confidence in our December period's bottom-line estimate.

Meanwhile, Consolidated is looking to recover from a significant blow suffered last year. In 2016, the builder and operator of desalination plants began development of the Rosarito project, which was a proposed Mexico-based facility that would provide badly needed water to the city of Tijuana. Despite some bumps in the road, progress seemed on track. However, Mexican authorities terminated the contract. Thus, four years of management's efforts and funds were wasted. Rosarito was classified as a discontinued operation, removing losses from its 2020 earnings. This also marked the second-straight time that Consolidated wrote off a major desalination facility, as was the case with Indonesia-based CW-Bali.

The focus seems to be shifting toward the United States. California has persistently struggled to provide residents with potable water. With its large coastline, there are ample opportunities to build new desalination facilities in the state. Currently, there are 11 such projects that are in operation and 10 proposed. We expect to see the company make its next major push here. This would also improve its exposure to regulatory risk (more below). In Arizona, research is underway on how to treat a large amount of brackish water deposits using the desalination process.

The main regulated foreign operations should remain the same. Consolidated provides clean water to the Cayman Islands, the Bahamas, and the British Virgin Islands. Basically, operations are sound. However, there has been sometimes difficult relationships with the countries' regulators, who determine what rates can be charged.

These shares carry our lowest rank for Timeliness (5). Conservative water utility investors should also note that this equity carries a much different risk profile than others in the industry.

BUSINESS: Essential Utilities, Inc. became the new name for Aqua America on Feb. 3, 2020, to reflect the acquisition of Peoples, a natural gas utility, which occurred in 3/20. In 2020, Aqua Amer. provided water and wastewater services to about 5 million people in PA, OH, TX, IL, NC, NJ, IN, VA NS WS. Employed 3,180 Acquired AquaSource, 7/13; North Maine Utilities, 7/15; and others. Water respn. for 65% of revenues in 2020; residential, 39%; commercial, 10%; industrial, wastewater & other, 26%. Gas 35%. Off. & dir. own less than 1% of the common stock; BlackRock, 10.5%; Vanguard, 10.4%; (4/20 proxy). Canadian Pension Plan about 8.8%. Pres. & CEO: Christopher Franklin. Inc.: PA Addr.: 762 W Lancaster Ave., Bryn Mawr, PA 19010. Tel.: 610-525-1400. Int.: www.essential.co.

Starting in the June quarter, Essential Utilities' figures ought to be comparable to 2020's. In mid-March of last year, Essential became a much different company (including taking on a new name), when it made the large acquisition of Peoples Gas for total consideration of about $5.3 billion. The purchase turned the new entity into one that is not totally water based. Despite not generating revenues for almost 85% of the first quarter, which is usually an important period for a gas entity, Peoples still accounted for 35% of Essential's revenues last year.

The outlook for earnings is positive. The company was able to increase its share net last year even though it had to absorb many merger-related charges. The process is mostly completed now. So, aided by cost-containment efforts, we expect WTRG to have a very strong share-net showing in 2021 and 2022.

The balance sheet is more leveraged. As a result of the merger, Essential's debt load increased significantly. As can be seen in the numbers array, long-term debt-to-equity rose from 43% to 54% during 2020. Capital expenditures are estimated to be $1 billion this year, which means that more borrowing will be required. Following 2022, we think the situation will likely stabilize, and Essential's finances should remain average for a water utility.

Essential's regulatory treatment will probably not be on par with other members of the group. Gas and electric utilities have historically not had great relations with the authorities that determine the rates they can charge customers. On the other hand, water utilities and the authorities have worked well together. Part of this is due to water regulators' understanding that there has been under investment in the domestic infrastructure and large amounts of capital spending are required to make upgrades.

These shares have moved up a notch in rank, to 2 (Above Average), since our January report. The equity is pegged to outperform the market averages in the year ahead. Long-term total return potential is still unattractive even though WTRG has trailed the S&P 500 Index significantly over the past three months.

BUSINESS: Middlesex Water Company engages in the ownership and operation of regulated water utility systems in New Jersey, Delaware, and Pennsylvania. It also operates water and wastewater systems under contract on behalf of municipal and private clients in NJ and DE. Its Middlesex System provides water services to 61,000 retail customers, primarily in Middlesex County, New Jersey. In 2020, the Middlesex System accounted for 59% of operating revenues. At 12/31/20, the company had 348 employees. Incorporated: NJ. President, CEO, and Chairman: Dennis W. Doll. Officers & directors own 3.1% of the com. stock; BlackRock Inst. Trust Co., 7.7% (4/20 proxy). Add.: 485 C Route 1 South, Suite 400, Iselin, NJ 08830. Tel.: 732-634-1500. Int.: www.middlesexwater.com.

Shares of Middlesex Water continue to march higher. The equity established yet another all-time high in early February, but has since retracted modestly to slightly above $80 per share. Still, the stock is up about 10% in price since our early-January review, keeping intact its enviable multiyear price ascent. Based on our Timeliness ranking scale, MSEX shares are slated to outperform (1: Highest) the broader market over the coming six to 12 months. Thus, they may pique the interest of near-term accounts.

The stage is set for respectable top- and bottom-line growth this year. Favorable operating trends, which were evident in the fourth quarter, are likely to persist over the near- to intermediate-terms. These include increased residential and wholesale water consumption owing to more people staying at home and greater handwashing frequency, as well as an expanding customer base in its Delaware water system. A recently inked contract with Highland Park in its New Jersey system is a positive, too. Adding it all up, revenues are poised to expand 6%, to $150 million, and will likely be accompanied by a 3% earnings advance, to $2.25 per share.

From a financial perspective, the company ought to be a stable performer over the pull to mid-decade. Modest revenue and earnings growth is likely on tap for 2022. Meanwhile, significant infrastructure spending may well overflow into the 3- to 5-year time frame. Management has laid out a budget of nearly $300 million through its Water For Tomorrow program, which aims to upgrade watermains, piping, and wastewater treatment facilities. Most recently, the company announced a $10 million investment to improve its drinking water infrastructure in New Jersey. Overall, aggressive spending ought to eventually curb unnecessary operating costs, and may well facilitate additional rate hikes going forward.

Shares of Middlesex Water are currently trading beyond the upper end of our 3- to 5-year Target Price parameters. This is so even after modestly lifting our P/E multiple to 24x. All in all, subscribers with an investment horizon of 18 months or longer can find more-attractive options elsewhere, at this juncture.

BUSINESS: SJW Group engages in the production, purchase, storage, purification, distribution, and retail sale of water. It provides water service to approximately 231,000 connections with a total population of roughly one million people in the San Jose area and 16,000 connections that reach about 49,000 residents in the region between San Antonio and Austin, Texas. The company merged with Connecticut Water (10/19) which provides service to approx. 138,000 connections with a total population of 450,000 people. Has 361 employees. Officers and directors own 8.3% of outstanding shares (3/21 proxy). Chairman & CEO: Eric Thornburg. Incorporated: California. Address: 110 West Taylor Street, San Jose, CA 95110. Telephone: (408) 279-7800. Internet: www.sjwater.com.

SJW Group posted better-than-expected top- and bottom-line results to close 2020. December-period revenues of $136 million came in about $5 million above our call, while earnings of $0.46 a share exceeded our $0.42 expectation. The overall outperformance was driven primarily by greater customer usage, cumulative water rate increases, slimmer operating expenses due to lower merger-related costs, and a decline in general & administrative expenses.

Noteworthy share-profit expansion is likely in the cards this year and next. Water production costs are apt to rise in conjunction with increased water consumption and a widening customer base, but operating expenses may well trend lower. Not to mention, we think significant merger synergies are likely to develop. All told, we think SJW will earn $2.55 a share this year, and $2.70 a share in 2022.

The coast-to-coast regulated water utility has tapped the equity markets. Specifically, the company recently closed a public offering of over one million shares, netting proceeds of almost $61 million. Management's plan for the raised funds include paying down outstanding obligations, various capital expenditures, and general corporate purposes.

The long-term growth narrative remains largely unaltered. Increased residential and wholesale water consumption, alongside periodic rate hikes, ought to keep revenues moving in the right direction. SJW Group's diverse geographical footprint is advantageous, and should expand further down the road. From an operational standpoint, robust capital spending on infrastructure upgrades ought to boost efficiency, as much of these costs can eventually be passed along to the consumer.

Unranked SJW shares are a bit more appealing for patient accounts following their recent step back in price. At recent levels, capital appreciation potential out to mid-decade is slightly above average, thus presenting a decent entry point for interested subscribers to start building a position. What's more, the dividend yield is now comfortably above the *Value Line* median, and ranks among the top payers in the Water Utilities Industry.

Nicholas P. Patrikis April 9, 2021

(A) Diluted earnings. Excludes nonrecurring losses: '05, $1.09; '06, $16.36; '08, $1.22; '10, $0.46. GAAP accounting as of 2013. Next earnings report due early May. Quarterly egs. may not add due to rounding.

EXHIBIT 20

The Brokers & Exchanges Industry seems well positioned for the near term. The financial companies experienced a turbulent year in 2020. The global coronavirus pandemic and ensuing market pressures weighed heavily on these stocks last March, though most companies herein and their quotations came roaring back in the following months, ultimately closing the year on strong footing.

What's more, the brokers and securities exchanges have been focused on strengthening their businesses, and we are optimistic that these measures will support their top- and bottom-line growth over the long haul.

The Market Backdrop

The rapid global spread of COVID-19 caused markets to quake last March. The record number of patients and very high death toll (more than 550,000 American lives lost, and 2.5 million victims across the globe) has been tragic.

Although there has been much progress on the public health front, including the ongoing rollout of the Pfizer, Moderna, and Johnson & Johnson vaccinations and the lifting of shelter-in-place orders, the negative reverberations may continue to hinder the worldwide economy. The lockdowns aimed to curb the spread of the virus; however some businesses did not recover, causing higher unemployment rates, which may still be seen in economic figures in the months and years to come.

Too, inflationary pressures and the volatile commodities markets that have led to rising operating costs that have been a detrimental side effect.

The United States is rolling out a second stimulus package to counter the economic struggles that many of its citizens have been facing. What's more, there has been some optimism that other measures the new presidential administration is taking will bolster the domestic economy.

Meanwhile, the Federal Reserve cut the federal funds rate to zero last year. And Chairman Jerome Powell has reiterated that interest rates will remain at historic lows for the time being. However, there has been recent speculation about the bond market and Treasury yields, which has spurred some investment activity.

All told, the recent market volatility has not necessarily been all bad for the companies herein, as the market players can benefit from the increased trading volume associated with both bull and bear markets.

Profit Margins

In the meantime, many here have been shoring up their operations. Some have focused on cost-cutting measures, while others have turned to productivity enhancements. To this end, technological investments have made some of the trading platforms more efficient, which should benefit the companies in the near term. All told, these moves should widen operating margins moving forward.

Likewise, some may continue to streamline their portfolios, shedding underperforming holdings. And a few have relied on the integration of acquisitions to spur these measures.

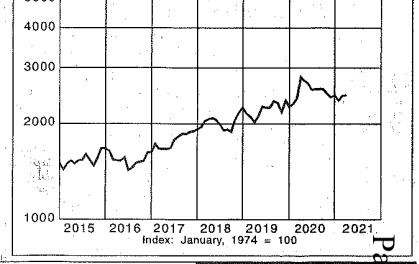
INDUSTRY TIMELINESS: 26 (of 97)

Business Improvements

These companies operate in a fairly competitive environment. We imagine technological investments and product innovation will be integral to their long-term growth strategies. Likewise, some may pursue bolt-on acquisitions to shore up their asset rosters, as well as expand their market reach and geographic footprints.

Last year saw the tie-ups of several online brokers. The e-brokers struggled since late-2019, when in an industrywide move, they eliminated transaction fees on most trades. *Charles Schwab* acquired erstwhile industry member TD Ameritrade, and E*TRADE Financial was bought by Morgan Stanley.

Conclusion



The Brokers & Exchanges Industry, as a whole, has made tremendous progress over the past few months. Indeed, many stocks here are trading well above the levels they achieved prior to the pandemic, and are ranked to outperform the broader market averages in the coming year. The group, as a whole, is ranked in the upper third of the *Value Line* investment universe for year-ahead Timeliness.

On the other hand, these issues' long-term capital appreciation potential may not be as compelling. Much of the good news we anticipate over the 2024-2026 span is already factored into their recent quotations. Consequently, we advise patient investors stay on the sidelines for a better entry point.

As for the industry's conservative appeal, it all depends on how you look at it. From one side, investors may be pleased by the companies' long histories and solid finances, which earn several herein high marks for Financial Strength and Safety. However, from a different perspective, the financial firms tend to be more vulnerable to the market's upswings and downswings, as they have their finger on the pulse of the market, so to speak.

All told, we caution readers from painting with too broad a brush, and recommend evaluating each individual report before making any capital commitments.

BUSINESS: The York Water Company is the oldest investor-owned regulated water utility in the United States. It has operated continuously since 1816. As of December 31, 2020, the company's average daily availability was 35.6 million gallons and its service territory had an estimated population of 202,000. Has more than 72,600 customers. Residential customers accounted for 66% of 2020 revenues; commercial and industrial (26%); other (8%). It also provides sewer billing services. Incorporated: PA. York had 108 full-time employees at 12/31/20. President/Chief Executive Officer: J.T. Hand. Officers/directors own 1.3% of the common stock (3/21 proxy). Address: 130 East Market Street, York, Pennsylvania 17401. Telephone: (717) 845-3601. Internet: www.yorkwater.com.

York Water delivered decent top- and bottom-line results to conclude 2020. In the December period, revenues of $13.4 million rose 2%, year over year, while earnings of $0.28 advanced 8%. For the full year, the regulated water utility benefited from rate increases, higher residential water consumption due to more people staying at home, and strong customer base expansion. Capital investment was robust in 2020, as the company spent more than $30 million on infrastructure upgrades such as standpipe replacements and raw water pumping station and wastewater treatment improvements.

Our preliminary 2022 financial projections suggest modest expansion is likely to persist. For the current year, we are maintaining our revenue call of $54.5 million, but are adding a nickel to our earnings forecast, to $1.35 per share. For next year, we anticipate low single-digit top- and bottom-line growth of 3% and 4%, respectively.

The long-term outlook is bright, as well. Water consumption ought to remain stable, and possibly trend higher, as York's customer base expands further. In addition, the company is likely to keep its foot on the gas in terms of capital investments, as its aging infrastructure demands increased attention. This ought to precipitate periodic rate hikes, which help to alleviate some of these expenses.

The stock is trading around recently minted all-time high territory. Underpinning the investment community's notable enthusiasm of late, in our view, is a combination of strong quarterly operating performances and a broad-based flight-to-safety approach amidst an uncertain, albeit improving economic backdrop. York Water is indeed a noncyclical, conservative security, as its water utility operations stand at the core of everyday life, and are largely immune to economic shocks.

We do not recommend starting a position at the recent quotation. On the contrary, committed investors may want to consider locking in some profits following the multiyear price ascent. Moreover, the equity is pegged as a year-ahead market performer, and offers limited price upside over the pull to 2024-2026. The dividend yield leaves much to be desired, too.

Nicholas P. Patrikis April 9, 2021

(A) Diluted earnings. Next earnings report due early May.
(B) Dividends historically paid in late February, June, September, and December.
(C) In millions, adjusted for split.

RE: UVE Market Value Appraisal of East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity

Enclosed is AUS Consultants' fair market value appraisal report for East Whiteland Township's wastewater collection system and purchased treatment capacity (System) as of January 8, 2021, prepared for East Whiteland Township, Pennsylvania. The report was prepared based on the 2020-2021 Uniform Standards of Professional Practices (USPAP) and is intended to meet the criteria established with Title 66 (Public Utilities) of the Pennsylvania Consolidated Statues (PA CS) Paragraph 1329 "Valuation of acquired water and wastewater systems", collectively referred to as Act 12 of the 2016 Pennsylvania legislative session (Act 12). The intended users of this appraisal are Pennsylvania American Water Company and the Pennsylvania Public Utility Commission.

Based on our appraisal the Fair Market Value of East Whiteland Township's wastewater System's property, plant, and equipment operating as a Pennsylvania rate regulated wastewater utility is $58,100,696 determined based on the cost, income, and market approaches to value, as detailed in the following table:

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity

Appraisal Conclusion	$	**57,781,458**	**100%**	**57,781,458**
Conclusion (cost approach)	$	**59,847,171**		

As the purpose of this appraisal was to fulfill the requirements of Act 12 in the establishment of value for rate making of the East Whiteland Township's wastewater collection system's

property, plant and equipment the appraisal's conclusion of $58,100,696 is consistent with the purpose of this appraisal. As the cost approach work papers detail our value conclusion by National Association of Regulatory Utility Commissioners' (NARUC) Uniform System of Accounts (USOA) for the wastewater industry account classifications and the installation year of the property this detail can be used to allocate the appraisal conclusion to establish the booked value for future accounting and rate making.

RE: UVE Market Value Appraisal of East Whiteland Township's Wastewater Collection System and Purchased Treatment

Enclosed is AUS Consultants' fair market value appraisal report of the East Whiteland Township's (Pennsylvania) wastewater collection system and purchased treatment capacity (System) as of January 8, 2021, prepared for our client East Whiteland Township. The report was prepared based on the 2020-2021 Uniform Standards of Professional Practices (USPAP) and is intended to meet the criteria established with Title 66 (Public Utilities) of the Pennsylvania Consolidated (PA CS) Statues Section 1329 "Valuation of acquired water and wastewater systems", collectively referred to as Act 12 of the 2016 Pennsylvania legislative session (Act 12). The intended users of this appraisal are East Whiteland Township and the Pennsylvania Public Utility Commission.

Based on our appraisal, the Fair Market Value of the East Whiteland Township's (Pennsylvania) wastewater collection system's property, plant, and equipment operating as Pennsylvania rate regulated wastewater utility is $58,100,696 determined based on the cost, income, and market approaches to value, as detailed in the following table:

NARRATIVE REPORT

EXECUTIVE SUMMARY

The purpose of this value appraisal is the determination of the fair market value of the property plant and equipment of the East Whiteland Township's wastewater collection system and purchased treatment capacity (System) for our client East Whiteland Township, Pennsylvania. The report was prepared based on the 2020-2021 Uniform Standards of Professional Practices (USPAP) and is intended to meet the criteria established with Title 66 (Public Utilities) of the Pennsylvania Consolidated Statues Paragraph 1329: "Valuation of acquired water and wastewater systems", collectively referred to as Act 12 of the 2016 Pennsylvania legislative session (Act 12) and the Pennsylvania Public Utility Commission's Final Implementation Order M-2016-2543193 adopted October 27, 2016. The intended users of this appraisal are East Whiteland Township, Pennsylvania and the Pennsylvania Public Utility Commission (PA PUC).

The value established in this appraisal was based on the definition of Market Value as:

> *"The most probable price, as of a specified date, in cash, or in terms equivalent to cash, or in other precisely revealed terms, for which the specified property rights should sell after reasonable exposure in a competitive market under all conditions requisite to a fair sale, with the buyer and seller each acting prudently, knowledgeably, and for self-interest, and assuming that neither is under undue duress."* *The Appraisal of Real Estate, 14th Edition, page 58.*

In arriving at our opinion of value of the System's property, plant, and equipment as it is operated as an investor-owned Pennsylvania PUC rate regulated wastewater utility the cost, income, and market approaches to value were considered. Detailed explanations of each approach to value are included below in the section "Appraisal Procedures and Results". The following summarizes the data, analysis and conclusions of each of those valuation approaches.

Cost Approach - The philosophy in the cost approach to value is that the maximum value of a property's tangible assets is established by the cost to acquire or build a similar property. In this appraisal, the cost approach to value was analyzed using reproduction/replacement cost approach.

Reproduction cost and replacement cost are defined as:

> Reproduction cost – "Reproduction cost is the estimated cost to construct, as of the effective appraisal date, an exact duplicate or replica of the building [property] being appraised, insofar as possible, using the same materials, construction standards, design, layout, and quality of workmanship and embodying all the deficiencies, super-adequacies, and obsolescence of the subject improvements [property]."[1]
>
> Replacement cost – "Replacement cost is the estimated cost to construct, as of the effective appraisal date, a substitute for the building [property] being appraised using contemporary materials, standards, design and layout. When this cost basis is used, some existing obsolescence in the property may be cured. Replacement cost may be the only alternative if reproduction cost cannot be estimated"[2]
>
> In the wastewater industry the property's reproduction costs and replacement costs are quite similar; therefore, the most of the property's cost new was determined based on its reproduction/replacement cost new. However, for the easements the replacement cost were developed based on current costs.

The trended original cost method was utilized in preparing the replacement cost new. "Trending is a method of estimating a property's replacement cost new in which an *index* or *trend factor* is applied to the property's *historical costs* to convert the known historical costs into an indication of current (appraisal date) costs. Simply put, trending reflects the movement of price over time."[3] In the trended original cost method, East Whiteland Township's investment in wastewater collection plant and equipment is restated to costs reflective of the appraisal date, by the application of cost trends to the property's original investment. AUS Consultants utilized the Engineer's Assessment performed by Pennoni Associates, Inc. (Engineer's Assessment tab) as the starting point of the Cost Approach. Utilizing the Engineer's Assessment AUS Consultants developed the System's original cost less depreciation (OCLD) and replacement cost new less depreciation (CORLD) in property, plant and equipment on January 8, 2021 (Cost Approach tab).

The cost trends were applied to each of the System's various investment categories (NARUC plant accounts) by original year of placement for that investment. The cost

		Grand Total	43,447,309.24		1.96	85,233,123	1.01	85,964,664

Easement - For easement, the appraisal date cost to obtain and register an easement was developed as follows:

Current cost of Easements

Activity	Engineer	Legal	Fees	Total
Determine the facilities for which a Easment is need	1	0	0	
Locate the Land owner for the property needing a easement	1	1	0	
Develop a diagram o the Property, the facilities, and the easement	2	0	0	
Develop the easement document	1	1	0	
Visit the property owner to obtain permission for the easement and sign the easment documentation	4	0	0	
Register the easement with the Municipal Clerk	0	1	250	
Total	9	3	250	
Labor Costs per Hour	54	100		
Total Cost	486	300	250	1,036

Replacement Cost New Less Depreciation - The replacement cost described above reflects the cost of new property; however, East Whiteland Township's wastewater collection system property is not new and has experienced normal depreciation and potentially functional and/or economic obsolescence. These various forms of depreciation are defined as follows:

> Normal depreciation/deterioration, akin to physical deterioration, is "loss in value caused by wear, tear, age and use."[4]
>
> Functional obsolescence is "the loss in value or usefulness of a property caused by inefficiencies or inadequacies of the property itself, when compared to a more efficient of less costly replacement property that new technology has developed."[5]
>
> Economic, or external, obsolescence is defined as "a loss in value caused by factors outside a property"[6] and is most often indicated by insufficient earning.

Based on our experience in regard to water and wastewater depreciation studies and our analysis of East Whiteland Township's wastewater collection system operating performance; we found that the Borough of Brentwood's wastewater utility's property experiences normal depreciation but not any significant functional obsolescence; economic obsolescence is best evaluated after the results of the income and market approaches to values are determined (see Cost Approach Revisited).

The service lives used in the depreciation and functional obsolescence calculations were developed based on the property and its use, AUS Consultants' experience in developing depreciation studies for the water and wastewater industries and depreciation studies filed with PAWC and Aqua America rate cases. With each of their

[4] The Dictionary of Real Estate Appraisal, 4th Edition
[5] Valuing Machinery and Equipment: The Fundamentals of Appraising Machinery and Technical Assets, Second Edition. Page 67.
[6] The Appraisal of Real Estate, 13th Edition, page 442.

recent rate case filings PAWC and Aqua America have filed depreciation studies in support of their depreciation service lives and associated depreciation expenses contained within their revenue requirements. The depreciation studies were prepared by Gannett Fleming Rate Consultants a recognized firm in the depreciation consulting area. AUS Consultants has reviewed the PAWC studies which are summarized in the following table:

9 10 11 12 13

361.23	Collection Sewers - Gravity - Manholes	R2.5		80.00	0.00%	MACRS		25.00
363.20	Service Laterals	R3.0		70.00	0.00%	MACRS		25.00
365.20	Flow Measuring Installations Meter Pits	S2.0		30.00	0.00%	MACRS		25.00
390.70	Office Furniture and Equipment	R3.0		12.00	0.00%	MACRS		12.00
391.70	Transportation Equipment	R3.0		10.00	0.00%	MACRS		10.00

Normal Depreciation – The extent of the normal depreciation in the property was evaluated using age-life depreciation techniques. In age-life depreciation, the property's depreciation or condition is estimated using the following formulas:

$$\text{Depreciation (\%)} = \frac{\text{Age (years)} \times 100\%}{\text{Service Life (years)}}$$

$$\text{Condition (\%)} = \frac{\text{Remaining Life (years)} \times (100\%)}{\text{Service Life (years)}}$$

where: the property's Service Life = Age + Remaining Life and
Remaining Life = *f*(Survival Characteristic, Service Life, and Age)

However, due to the age of some of the assets the extent of the depreciation was limited to 85% of the asset's original cost and its replacement cost new.

When the above depreciation lives are used to quantify the property's depreciation is applied to the replacement cost new (COR) of $85,964,664 the resultant COR less normal depreciation (CORLD) was found to be $58,078,339 detailed as follows:

East Whiteland Township, Pennsylvania

Grand Total		24.57	85,964,664		68.23	46.41	70.71	0.68	58,078,339

The preliminary cost approach to value of East Whiteland Township's tangible wastewater system property was found to be $58,078,339.

Intangible Assets

In addition to the above-described tangible assets are the intangible assets, in East Whiteland Township's case which consist of the contract associated with its wastewater treatment contracts with the following communities:

Municipality	2020 YTD Projected
Charlestown Township	
Treatment Charge	80,068
Subtotal Charlestown Twp	80,068
Malvern Borough	
Treatment Charge	150,300
Subtotal Malvern Borough	150,300
East Whiteland Service Revenues	
Total Revenues	3,761,787

These contract represent value assets which are included in the overall income and market approaches which are not specifically address in the cost approach of the tangible assets; therefore, in order to make the cost approach comparable to the income and market these intangible assets were separately appraised and included in the cost approach totals. AUS Consultants developed using an income approach estimate to the value of the above contracts.

Income Approach to Treatment Contracts – AUS Consultants also developed a income approach analysis of the treatment contracts. Using the 2020 budget estimate the revenues and expenses of the treatment contracts in order to develop the estimated operating income as a surrogate for the cash flows associated the treatment contracts. The estimated cash flows were next discounted to appraisal date values using the cost of capital of 5.65% i.e., the cost of capital of 7.57% with the embedded growth rate of 1.82% removed; the development which is described in the Cost of Capital section of the workpapers. The income approach to the treatment contract was developed as follows:

East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
As of January 8, 2021

Income Approach to Trearment Agreements Valuation

Municipality	2020 YTD Actual	2021 Projected		Expenses	Operating Income	Value Capitalized @ 5.65%
						5.65%

Income Approach

The income approach to value establishes the value of the property based on its economic returns. There are two generally accepted procedures in performing an income analysis: the direct capitalization of anticipated income, and the discounted cash flow procedures.

In the direct capitalization approach, anticipated earnings are capitalized directly into value using a market-required capitalization rate. The East Whiteland Township's wastewater system's operation will be moving from a municipal operation, wherein economic returns are not the primary objective of the operation to a private (investor owned) rate regulated sewer utility operation in which economic returns are one of the objectives of the operation; therefore, the direct capitalization of earnings approach was not utilized in this appraisal.

In the discounted cash flow (DCF) approach, the property's economic returns are forecast for future periods. The cash flows (debt-free after-tax net cash flows) from operations are discounted to the appraisal date using a market derived discount rate resulting in the DCF approach's income indicator of value. Use of the DCF approach allows the appraiser to address the property's historical operating experience and its migration, in future periods, to an operation as a rate regulated income taxed (local, state, and federal) operation; thus, making the DCF approach preferable in this case.

In preparing this appraisal's DCF analysis (Income Approach tab), first the results from the East Whiteland Township's wastewater system's operations were evaluated based on an analysis of historical operating performances over the period 2016 through budgetary 2019 (Financials tab) resulting in operating statistics such as revenues and their growth, various operating expenses stated as function of their typical drivers (revenues, plant investment, income from operations, etc.). Next, the results of future periods operations were forecast for a period of 20 years based on the migration of the East Whiteland Township's historical operations over time to operations of the wastewater operation similar to a public investor-owned water/wastewater utility. Finally, the resultant cash flows from future period operations on the System were discounted to the appraisal date using a market derived discount rate for a public investor-owned water/wastewater utility. The following table details the market discount rate developed using the weighted average cost of capital (WACC) of the market debt and equity:

Water and Wastewater Cost of Capital

								Average					52,196,394

Based on the above-described discounted cash flow analysis, the Income Approach to value of the System's property operating as a rate regulated wastewater utility under the regulation of the Pennsylvania Public Utility Commission (PA PUC) was determined to be $56,398,141. To ensure that the above-described forecast captured the entire economic returns of the property an additional 40-year period beyond the original 20-year forecast was made. This additional forecast indicated the reasonableness of the initial forecast results.

Market Approach

The market or comparable sales approach to value looks to market sales of comparable properties in order to arrive at value. In this appraisal, the market approach was addressed from a comparable sales approach of Pennsylvania water and wastewater systems and market value to book value ratios based on investor-owned water utilities' financial performance as reported in Value Line Investment Survey (January 8, 2021).

Market Sales – In the comparable sale market approach, the sales of Pennsylvania municipal water and wastewater systems to investor-owned water/wastewater utilities were used to insure comparability. As the purpose of this appraisal is to define the value of East Whiteland Township's wastewater system under Section 1329 of the PA CS the market comparable sales were limited to sales subsequent to the passage of Section 1329 in 2016. The following sales were considered:

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
As of January 8, 2021

Comparable Sales Approach

18	9/17/2020	Aqua PA	Lower Makefield	Bucks	Wastewater Collection and Purchased Treatment Capacity	53,000,000	53,000,000	11,151	Post

In order to arrive at a measure of comparability these system sales were analyzed in relationship of the purchase price to the properties' depreciated original cost (OCLD),

depreciated replacement cost (CORLD), customers, and cashflow (EBITDA) for an average 5-year and 13-year periods (Market Approach tab).

Financial Market Ratios – In the market approach based on market financial ratios the market data of companies (nine) in the water/wastewater industry as reported in Value Line Investment Surveys (January 2021) were analyzed. In the analysis the companies' stock (market) and debt (book value) per share are compared as a ratio to the book investment value per share.

The following table summarizes both the comparable sales and financial market ratio analysis and the Market Approach conclusion of this appraisal:

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity

Conclusion	**56,178,539**

The market approach conclusion of this appraisal was determined to be $56,178,539.

Cost Approach Revisited – Before concluding this appraisal's fair market value, the preliminary cost approach conclusion of $59,847,171, including intangibles, needs to be reviewed in light of the above-described income and market analyses in order to evaluate if external obsolescence exists in the preliminary replacement cost new less depreciation conclusion. The appraisal literature in regard to developing a cost approach states:

> "The last step in the implementation of the cost approach is to estimate *economic obsolescence*. Economic obsolescence (sometimes called "external obsolescence") has been previously defined as the loss in value or usefulness of a property caused by factors external to the asset. These factors include increased cost of raw materials, labor, utilities (without an offsetting increase in product price); reduced demand for the product; increased competition; environmental or other regulations; or similar factors.
>
> The difficulty in measuring the full effect of economic obsolescence is one of the weaknesses of the cost approach. Because economic obsolescence is usually a function of outside influences that affect an entire business (i.e., all tangible and intangible assets) rather than individual assets or isolated groups of assets, it is sometimes measured using the income approach or by using the income approach to help identify the existence of economic influences on value. However, the cost approach can be used to measure some forms of economic obsolescence."[7]

The above-described income approach value conclusion of $56,398,141 and the market approach conclusion of $56,178,539 for the East Whiteland Township's future wastewater system compared to the preliminary cost approach conclusion of $59,847,171 indicates no significant external obsolescence exists in the cost approach conclusion of $59,847,171 detailed as follows:

As the purpose of this appraisal was to fulfill the requirements of Section 1329 of the PA CS in the establishment of value for rate making of the East Whiteland Township's property, plant and equipment this appraisal's conclusion of $58,100,696 is consistent with the purpose of the appraisal. As the cost approach work papers detail our value conclusion by National Association of Regulatory Utility Commissioners' (NARUC) Uniform System of Accounts (USOA) for the wastewater industry account classifications and the installation year of the property this detail can be used to allocate the appraisal conclusion to establish the booked value for future accounting and rate making.

PURPOSE AND SCOPE OF WORK

The purpose of this appraisal of the East Whiteland Township's wastewater collection system and purchased treatment capacity is the determination of the fair market value of the property plant and equipment of wastewater utility. The report was prepared based on the 2020-2021 Uniform Standards of Professional Practices (USPAP) and is intended to meet the criteria established with Title 66 (Public Utilities) of the Pennsylvania Consolidated Statues (PA CS) Paragraph 1329: Valuation of acquired water and wastewater systems, collectively referred to as Act 12 of the 2016 Pennsylvania legislative session (Act 12). The intended users of this appraisal are our client East Whiteland Township, Pennsylvania and the Pennsylvania Public Utility Commission.

The value established in this appraisal was based on the definition of Market Value as:

> *"The most probable price, as of a specified date, in cash, or in terms equivalent to cash, or in other precisely revealed terms, for which the specified property rights should sell after reasonable exposure in a competitive market under all conditions requisite to a fair sale, with the buyer and seller each acting prudently, knowledgeably, and for self-interest, and assuming that neither is under undue duress."* *The Appraisal of Real Estate, 14th Edition, page 58.*

In conducting this appraisal, we utilized several sources of data:

- Annual (year-ending December 31) East Whiteland Township (Pennsylvania) wastewater collection and treatment operational financial statements cover the period 2016 through 2019 and budgets for 2019 and 2021.

- The Pennoni Associates, Inc.'s Engineer's Assessment and inventory of the Borough of Brentwood's wastewater system's property dated June 17, 2021.

- The Handy-Whitman (water industry) Index of Public Utilities Construction Costs for northeastern United States, AUS Consultant General Plant Cost Indexes for the period 1912 through January 1, 2021, and various cost indexes published by the United States Bureau of Labor Statistics (US BLS).

In preparing this fair market value appraisal of the System's property, plant and equipment, and its operations: the cost, income, and market approaches to value were considered. Primary reliance was placed on the cost approach for the property, plant and equipment, with the income approach and market approaches being utilized to confirm the overall value of the sewer system's operation. A detailed explanation of each approach to value is included below in the section "Appraisal Procedures and Results".

WATER/WASTEWATER INDUSTRY NATIONALLY AND IN PENNSYLVANIA AND EAST WHITELAND TOWNSHIP, PENNSYLVANIA WASTEWATER COLLECTION SYSTEM AND PURCHASED TREATMENT CAPACITY

Water/wastewater Industry

The water and wastewater industry in the United States consist of both municipal authorities (literally thousands) and private investor-owned companies. Of the investor owned there are nine which are large enough to be tracked by Value Line Investment Surveys, of which, two are major players in the northeast portion of the United States, American Water Works Company, Inc. and Aqua America, Inc. (on February 3, 2020, Aqua's name changed to Essential Utilities, Inc.) American and Aqua have been particularly active in the acquisition of municipal water and wastewater systems.

Pennsylvania Water / Wastewater Industry

The water and wastewater industry in Pennsylvania also consist of both municipal and investor-owned systems. Over last several years the need for infrastructure improvements has led the Pennsylvania legislature to pass legislation facilitating the acquisition of municipal water and/or wastewater systems to a private investor-owned rate regulated companies such as American Water and Aqua America. This legislation was Act 12 of the Pennsylvania legislator's 2016 legislative session (Act 12). The Act 12 legislation added a section (1329) modifying Title 66 (Public Utilities) of the Pennsylvania Consolidated Statues (PA CS) adding Section 1329: Valuation of acquired water and wastewater systems, collectively referred to as Act 12. This appraisal was developed to meet the valuation criteria established by Section 1329 and the PA PUC's subsequent Implementation Orders in the valuation of acquired water and wastewater systems.

East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity[8]

East Whiteland Township is responsible for the safe collection and transmission of an average over 1.062 million gallons per day (MGD) of wastewater generated in southeastern Pennsylvania. East Whiteland Township's facilities serve residential, commercial, institutional, and industrial customers all within Chester County. The Township owns and operates a system consisting of 12 pump stations and associated force mains, and approximately 60 miles of gravity collection system mains and interceptor sewers for the conveyance of wastewater to the Valley Forge Sewer Authority Wastewater Treatment Plant via the Valley Creek Trunk Sewer. The Township does not have any property held for future use.

In addition to customers within the Township, East Whiteland Township also collects/conveys sewage to/from municipalities that border the Township including Malvern Borough, Tredyffrin Township Charlestown Township and Willistown Township. Agreements with these municipalities, (or entities operating their respective system) outline the responsibilities regarding this relationship.

[8] Extracted from East Whiteland Township's Engineers Assessment

APPRAISAL PROCEDURES AND RESULTS

The purpose of this appraisal of the East Whiteland Township's wastewater collection system and purchased treatment capacity is the determination of the fair market value of the wastewater's property plant and equipment as of January 8, 2021. The report was prepared based on the 2020-2021 Uniform Standards of Professional Practices (USPAP) and is intended to meet the criteria established with Title 66 (Public Utilities) of the Pennsylvania Consolidated Statues (PS CS) Section 1329: Valuation of acquired water and wastewater systems, collectively referred to as Act 12 of the Pennsylvania legislator's 2016 legislative session (Act 12). The intended users of this appraisal are East Whiteland Township, Pennsylvania and the Pennsylvania Public Utility Commission (PA PUC).

The value established in this appraisal was based on the definition of Market Value as:

> *"The most probable price, as of a specified date, in cash, or in terms equivalent to cash, or in other precisely revealed terms, for which the specified property rights should sell after reasonable exposure in a competitive market under all conditions requisite to a fair sale, with the buyer and seller each acting prudently, knowledgeably, and for self-interest, and assuming that neither is under undue duress."* *The Appraisal of Real Estate, 14th Edition, page 58.*

In conducting this appraisal, we utilized several sources of data:

- Annual (year-ending December 31) East Whiteland Township's wastewater system's operational financial statements cover the period 2016 through budgetary 2021.

- The Pennoni Associates, Inc.' Engineer's Assessment and inventory of the East Whiteland Township's wastewater system's property date June 17, 2021.

- The Handy-Whitman (water industry) Index of Public Utilities Construction Costs for northeastern United States, AUS Consultant General Plant Cost Indexes for the period 1912 through January 1, 2021, and various cost indexes published by the United States Bureau of Labor Statistics (US BLS).

In preparing this fair market value appraisal of the System's wastewater system's property, plant and equipment, and its operations; the cost, income, and market approaches to value were considered. Primary reliance was placed on the cost approach for the property, plant and equipment, with the income approach and market approaches being utilized to confirm the overall value of the sewer system's operation. Detailed explanation of each approach to value is included below.

Cost Approach (Cost Approach tab) - The philosophy in the cost approach to value is that the maximum value of a property's tangible assets is established by the cost to acquire or build a similar property. In this appraisal, the cost approach to value was analyzed using reproduction/replacement cost approach.

Reproduction cost and replacement cost are defined as:

> Reproduction cost – "The estimated cost to construct, at current prices as of the effective date of the appraisal, an exact duplicate or replica of the [property] being appraised, using the same materials, construction standards, design, layout, and quality of workmanship and embodying all the deficiencies, super-adequacies, and obsolescence of the subject [property]."[9]
>
> Replacement cost – "The estimated cost to construct, at current prices as of the effective appraisal date, a substitute for the [property] being appraised using modern materials and current standards, design and layout."[10]
>
> In the wastewater industry the property's reproduction costs and replacement costs are quite similar; therefore, the most of the property's cost new was determined based on its reproduction/replacement cost new. However, for the easements the replacement cost were developed based on current costs.

The trended original cost method was utilized in preparing the replacement cost new. "Trending is a method of estimating a property's replacement cost new in which an *index*

[9] The Appraisal of Real Estate, 13th Edition. Page 385
[10] ibid

or *trend factor* is applied to the property's *historical cost* to convert the known cost into an indication of current cost. Simply put, trending reflects the movement of price over time."[11] In the trended original cost method, the System's investment in wastewater plant and equipment is restated to costs reflective of the appraisal date, by the application of cost trends to the property's original investment. AUS Consultants utilized the Engineer's Assessment performed by Pennoni Associates, Inc. (Engineers Assessment tab) as the starting point of the Cost Approach. Utilizing the Engineer's Assessment of the System's original cost in property, plant and equipment AUS Consultants developed the plant's depreciated original cost (OCLD) and depreciated replacement cost (RCNLD) on January 8, 2021 (Cost Approach tab).

The cost trends are applied to each of the various investment categories (NARUC plant accounts) by original year of placement for that investment. The cost indexes used in these studies were the Handy-Whitman Index of Public Utility Construction Costs for the water industry of the northeastern region of the United States which includes the Commonwealth of Pennsylvania (HW), the AUS Consultants of General Plant Indexes AUS), and various United States Bureau of Labor Statistics (US BLS) indexes. The following table details the costing parameters using in the trending costing procedures:

Easement - For easement, the appraisal date cost to obtain and register an easement was developed as follows:

Current cost of Easements

Activity	Engineer	Legal	Fees	Total
Determine the facilities for which a Easment is need	1	0	0	
Locate the Land owner for the property needing a easement	1	1	0	
Develop a diagram o the Property, the facilities, and the easement	2	0	0	
Develop the easement document	1	1	0	
Visit the property owner to obtain permission for the easement and sign the easment documentation	4	0	0	
Register the easement with the Municipal Clerk	0	1	250	
Total	9	3	250	
Labor Costs per Hour	54	100		
Total Cost	486	300	250	1,036

Replacement Cost New less Depreciation - The replacement cost described above reflects the cost of new property; however, the Borough of Brentwood's wastewater system property is not new and has experienced normal depreciation and potentially functional and or economic obsolescence. These various forms of depreciation are defined as follows:

> Normal depreciation/deterioration, akin to physical deterioration, is "loss in value caused by wear, tear, age and use."[12]
>
> Functional obsolescence is "the loss in value or usefulness of a property caused by inefficiencies or inadequacies of the property itself, when compared to a more efficient of less costly replacement property that new technology has developed."[13]
>
> Economic, or external, obsolescence is defined as "A loss in value caused by factors outside a property"[14] and is most often indicated by insufficient earning.

Wastewater Depreciation Service Life Experience in Pennsylvania

The service lives used in the depreciation and functional obsolescence calculations were developed based on the property and its use, AUS Consultants' experience in developing depreciation studies for the water and wastewater industries and depreciation studies filed with PAWC and Aqua America rate cases. With each of their recent rate case filings PAWC and Aqua America have filed depreciation studies in support of their depreciation service lives and associated depreciation expenses contained within their revenue requirements. The depreciation studies were prepared by Gannett Fleming Rate Consultants a recognized firm in the depreciation consulting area. AUS Consultants has reviewed the PAWC studies which are summarized in the following table:

398.00	OTHER TANGIBLE PLANT		SQ			25	

It is of particular importance in the above table the service life extension of the mains plant categories between the 2016 and the 2020 studies. The mains service lives increased as follows:

Account	Description	Service Life	
		2016	2020
360.10	COLLECTION SEWERS - FORCE MAINS	70	75
361.10	COLLECTION SEWERS - GRAVITY MAINS	70	80

AUS Consultants believe this increase in service lives is attributable to the widespread use of relining older mains instead of replacing mains which are in need of repair. The practice of relining mains with a cured in place plastic liner not only repairs specific main but has the effect of extending the life of the original mains by the length of time which the relining can be expected to last. Most relining vendors warranty their product and procedure for 50 years. Thus, in essence the original main's service life will be extended by 50 plus years at the date the relining occurred. For those mains associated with

relining their installation date was established at the date of their relining and their depreciation parameters were established the same as the depreciation parameters of the relining, i.e., R2.5 – 60 years.

The following table details the lives used in the depreciation portion of the replacement cost new less depreciation analysis:

9 10 11 12 13

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity

361.21	Collection Sewers - Gravity - Mains		R2.5	80.00	0.00%		MACRS	25.00
361.23	Collection Sewers - Gravity - Manholes		R2.5	80.00	0.00%		MACRS	25.00
363.20	Service Laterals		R3.0	70.00	0.00%		MACRS	25.00
365.20	Flow Measuring Installations Meter Pits		S2.0	30.00	0.00%		MACRS	25.00
390.70	Office Furniture and Equipment		R3.0	12.00	0.00%		MACRS	12.00
391.70	Transportation Equipment		R3.0	10.00	0.00%		MACRS	10.00

As the above table demonstrates, the depreciation lives selected for the AUS Consultants appraisal are consistent with the depreciation studies' finding for wastewater plant.

Normal Depreciation – The extent of the depreciation in the property was evaluated using age-life depreciation techniques. In age-life depreciation, the property's depreciation or condition is estimated using the following formulas:

$$\text{Depreciation (\%)} = \frac{\text{Age (years) x100\%}}{\text{Service Life (years)}}$$

$$\text{Condition (\%)} = \frac{\text{Remaining Life (years) x (100\%)}}{}$$

Service Life (years)

where: the property's Service Life = Age + Remaining Life
and Remaining Life = f(Survival Characteristic, Service Life, Age)

However due to the age of some of the property the extent of the depreciation was limited to 85% of the assets original cost and its replacement cost new.

When the above depreciation lives are used to quantify the property's depreciation is applied to the replacement cost new of the gravity mains example East Whiteland Township's wastewater service area of $30,582,161, the replacement cost new less depreciation was determined to be $18,623,208 detailed as follows:

East Whiteland Township, Pennsylvania

The preliminary cost approach to value of the tangible assets of East Whiteland Township's wastewater utility property was found to be $58,078,339.

Intangible Assets

In addition to the above-described tangible assets are the intangible assets, in East Whiteland Township's case which consist of the contract associated with its wastewater treatment contracts with the following communities:

Municipality	2020 YTD Projected
Charlestown Township	
Treatment Charge	80,068
Subtotal Charlestown Twp	80,068
Malvern Borough	
Treatment Charge	150,300
Subtotal Malvern Borough	150,300
East Whiteland Service Revenues	
Total Revenues	3,761,787

These contract represent value assets which are included in the overall income and market approaches which are not specifically address in the cost approach of the tangible assets; therefore, in order to make the cost approach comparable to the income and market these intangible assets were separately appraised and included in the cost approach totals. AUS Consultants developed an income approach estimate to the value of the above contracts.

Income Approach to Treatment Contracts – AUS Consultants also developed a income approach analysis of the treatment contracts. Using the 2020 budget estimate the revenues and expenses of the treatment contracts in order to develop the estimated operating income as a surrogate for the cash flows associated the treatment contracts. The estimated cash flows were next discounted to appraisal date values using the cost of capital of 5.65% i.e., the cost of capital of 7.57% with the embedded growth rate of 1.82% removed; the development which is described in the Cost of Capital section of the workpapers. The income approach to the treatment contract was developed as follows:

East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
As of January 8, 2021

Income Approach to Trearment Agreements Valuation

Municipality	2020 YTD Actual	2021 Projected		Expenses	Operating Income	Value Capitalized @ 5.65%
						5.65%
Charlestown Township						
Treatment Charge	80,068					
Subtotal Charlestown Twp	80,068	80,068	1.39%	45,324	34,744	614,938
Malvern Borough						
Treatment Charge	150,300					
Subtotal Malvern Borough	150,300	150,300	2.61%	85,105	65,195	1,153,894
Total East Whiteland Revenues						
Total Revenues	5,428,667	5,759,816		3,260,709		1,768,832

Based on income analysis of the treatment contracts their value were determined to be $1,768,832 which was included in the final cost approach to value.

Income Approach (Income Approach tabs)

The income approach to value establishes the value of the property based on its economic returns. There are two generally accepted procedures in performing an income analysis: the direct capitalization of anticipated income, and the discounted cash flow procedures.

In the direct capitalization approach, anticipated earnings are capitalized directly into value using a market-required capitalization rate. The East Whiteland Township's wastewater operation will be moving from a municipal operation, wherein economic returns are not the primary objective of the operation to a private (investor owned) rate regulated sewer utility operation in which economic returns are one of the objectives of the operation; therefore, the direct capitalization of earnings approach was not utilized in this appraisal.

In the discounted cash flow (DCF) approach, the property's economic returns are forecast for future periods. The cash flows (debt-free after-tax net cash flows) from operations are discounted to the appraisal date using a market derived discount rate resulting in the DCF approach's income indicator of value. Use of the DCF approach allows the appraiser to address the property's historical operating experience and its migration, in future periods, to an operation as a rate regulated income taxed (local, state and federal) operation; thus, making the DCF approach preferable in this case.

In preparing this appraisal's DCF analysis first the results from the Borough of Brentwood's wastewater utility's operations were evaluated based on an analysis of historical operating performances over the period 2016 through budgetary 2019 (Financials tab). In this analysis operating statistics such as revenues and their growth, various operating expenses were stated as function of their typical drivers (revenues, plant investment, income from operations, etc.) were analyzed. Details are provided in Income Approach tab. Using the above-described analyses, the results of future periods operations were forecast based on the migration of the East Whiteland Township's of historical operations type experience over time to operations of the wastewater operation similar to a public investor-owned water/wastewater utilities. These forecasts are detailed in the Income Approach tab.

In this appraisal, future operating results were forecasted as follows:

- Revenues
- Operating Expenses
  - Operating and Maintenance Expense
  - Depreciation & Amortization
- Total Operating Expenses
- Operating Income (Revenues less Operating Expenses)
- Taxes
  - Property
  - Income (state & federal)
- Total Taxes
- After Tax Income (Operating Income less Total Taxes)
- Net Cash Flows
  - Plus: After Tax Income
  - Plus: Depreciation
  - Less: Capital Expenditures
  - Plus/less: Change in Working Capital
- Equals: Debt-free after-tax net cash flows

In the above-described table, the depreciation expense (both book and tax) and the capital expenditures were forecast based on the investment in property plant and equipment at the appraisal date and in subsequent periods. The initial investment in the plant and depreciation forecast were based on the criteria established in Section 1329 for the acquisition and subsequent regulation (rate base) of the acquired property by the acquiring investor-owned utility company. The following table details the forecasts of plant investment, book depreciation, tax depreciation forecast, and the resultant net plant investment and rate base as follows:

- Plant Investment
  - Initial Investment/ Beginning Plant Balance
  - Additions (Capital Expenditures)
  - Retirements

Ending Plant Balance

Depreciation (book)

Initial Book Depreciation Reserve / Beginning Book Reserve Balance

Book Depreciation & Amortization

Retirements

Ending Book Reserve Balance

Depreciation (tax)

Initial Tax Reserve / Beginning Tax Reserve

Tax Depreciation

Retirement

Ending Tax Reserve Balance

In these forecasts, the initial plant investment was based on the allocated purchase price of $54,930,000. Initially, the Cost Approach results are utilized to allocate the purchase price by category of plant (NARUC account). The Cost Approach results also define the property's ages and remaining lives of the various plant investment categories. Using these inputs, the future periods book and tax depreciation can be forecast, as well as the accumulated deferred taxes and resulting rate base.

With a forecast of the future rate base and an estimate of the Pennsylvania Commission's authorized return on rate base, the future return on rate base can be estimated which along with the forecast operating expenses (operating expenses, depreciation, and taxes) the future period revenue requirement forecasts can be made. An estimate of the PA Commission return on rate base is detailed as follows:

Water and Wastewater Cost of Capital
First Quarter 2021 (0-01-2021)

As an Investor-Owned Utility

Weighted Cost of Capital (Rate of Return on Rate Base)

(1)	(2)	(2a)	(3)	(3a)	(4)	(4a)	(5)
	Portion of Capital AUS Input	Type of Data	Capital Cost AUS Input	Type of Data	Tax Rate	Tax affect on cost of capital	Required Return on Rate Base (2)*(3)
Debt	44%	Embedded	3.84%	Embedded	Not Applicable	Not Applicable	1.69%
Equity	56%	Embedded	9.85%	Market	Not Applicable	Not Applicable	5.52%
Total Capital r	**100.0%**						**7.21%**
Growth (g)						Not Applicable	**0.00%**
Rate without Growth: [(1+r)/(1+g)]-1							**7.21%**

Based on a comparison of the forecast revenues and the forecast of the estimated revenue requirement, future period rate increases were forecast. The criteria in making future period rate adjustments was to bring the forecast achieved return in line with the required return. Based on this process the results of future operations were forecast for the next 20-year period. Period 20 of the forecast was treated in the discounted cash flow as the forecast for period 20 through perpetuity.

Finally, the resultant cash flows from future period operations of the System were discounted to the appraisal date using a market derived discount rate for a public investor-owned water/wastewater utility (Cost of Capital / Required Return tab). The following table details the market discount rate developed using the weighted average cost of capital (WACC) of the market debt and equity:

Water and Wastewater Cost of Capital
First Quarter 2021 (0-01-2021)

As an Investor-Owned Utility

Weighted Cost of Capital (Discount Rate)

(1)	(2)	(2a)	(3)	(3a)	(4)	(4a)	(5)
	Portion of Capital AUS Input	Type of Data	Capital Cost AUS Input	Type of Data	Tax Rate	Tax affect on cost of capital	After-tax Market Capital Cost (2)*(3)*(4a)
Debt	29%	Market	2.79%	Market	28.89%	71.11%	0.58%
Equity	71%	Market	9.85%	Market	0.0%	100.0%	6.99%
Total Capital r	**100.0%**						**7.57%**
Growth (g)							**1.82%**
Rate without Growth: [(1+r)/(1+g)]-1							**5.65%**

The market cost of debt was developed based on market returns for utilities debt as reported in the Value Line Investment Survey. The market cost of equity was developed

using the capital asset pricing model (CAPM) and the dividend-growth model (DGM). Input to these equity costing models were developed based on Value Line Investment Surveys for the water industry published for January 1, 2021, consisting of the following nine companies:

Company	
American States Water (NYSE-AWR)	Consolidated Water Company (NDQ-CWCO)
American Water ((NYSE-AWK)	Middlesex Water (NDQ-MSEX)
Essential Utilities, Inc. (NYSE-WTRG)	SJW Corporation (NYSE-SJW)
California Water (NYSE-CWT)	York Water (NDQ-YORW)
In the January 2020 Issue Value Line dropped Connecticut Water (NDQ-CTWS) out of its list of Water Utility Industry companies	

The Value Line data was also used to develop the market capital structure used in the WACC determination. The market required return analysis can be found in the Cost of Capital / Required Return tab.

The following table presents the results of the discounted cash flow analysis:

East Whiteland Township, Pennsylvania

Based on the above-described discounted cash flow analysis, the Income Approach to value of the System's wastewater property and its operations was determined to be $56,398,141. To ensure that the above-described forecast captured the entire economic returns of the property an additional 40-year period beyond the original 20-year forecast was made. This additional forecast indicated the reasonableness of the initial forecast results.

Market Approach (Market Approach tab)

The market or comparable sales approach to value looks to market sales of comparable properties in order to arrive at value. In this appraisal, the market approach was addressed from a comparable sales approach using Pennsylvania water and wastewater

systems and market value to book value ratios based on investor-owned water utilities reported in Value Line Investment Survey.

Market Sales – In the comparable sales market approach the sales of Pennsylvania municipal water and wastewater systems to investor-owned water/wastewater utilities following the passage of Section 1329 were used to insure comparability. The following sales were considered:

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
As of January 8, 2021

Comparable Sales Approach

In order to arrive at a measure of comparability these system sales were analyzed in relationship of the purchase price to the properties' depreciated original cost (OCLD), depreciated replacement cost (RCNLD), customers, and cashflows (EBITDA) for an average 5-year and 13-year periods (Market Approach tab).

The following tables details the market sales analyses:

Purchase Price to Original Cost less Depreciation (OCLD)

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
As of January 8, 2021

Median	49,659,444
Conclusion	**56,178,539**

The market approach conclusion of this appraisal was determined to be $56,178,539.

Cost Approach Revisited – Before concluding this appraisal's fair market value, the preliminary cost approach conclusion of $59,847,171, including intangibles, needs to be evaluated to determine if external obsolescence exists in the preliminary replacement cost new less depreciation conclusion of $59,847,171. The appraisal literature regarding developing a cost approach state:

> "The last step in the implementation of the cost approach is to estimate *economic obsolescence*. Economic obsolescence (sometimes called "external obsolescence") has been previously defined as the loss in value or usefulness of a property caused by factors external to the asset. These factors include increased cost of raw materials, labor, utilities (without an offsetting increase in product price); reduced demand for the product; increased competition; environmental or other regulations; or similar factors.
>
> The difficulty in measuring the full effect of economic obsolescence is one of the weaknesses of the cost approach. Because economic obsolescence is usually a function of outside influences that affect an entire business (i.e., all tangible and intangible assets) rather than individual assets or isolated groups of assets, it is sometimes measured using the income approach or by using the income approach to help identify the existence of economic influences on value. However, the cost approach can be used to measure some forms of economic obsolescence."[15]

The above-described income approach value conclusion of $56,398,141 and the market approach conclusion of $56,178,539 for the East Whiteland Township's future wastewater system compared to the preliminary cost approach conclusion of $59,847,171 indicates no significant external obsolescence exists in the cost approach conclusion of $59,847,171 detailed as follows:

As the purpose of this appraisal was to fulfill the requirements of Section 1329 of the PA CS in the establishment of value for rate making of the East Whiteland Township's wastewater collection system's property, plant and equipment this appraisal's conclusion of $58,100,696 is consistent with the purpose of the appraisal. As the cost approach work papers detail our value conclusion by National Association of Regulatory Utility Commissioners' (NARUC) Uniform System of Accounts (USOA) for the water industry account classifications and the installation year of the property, this detail can be used to allocate the appraisal conclusion to establish the booked value for future accounting and rate making.

Compliance with Uniform Standards of Professional Appraisal Practice (USPAP) 2020-2021

Fulfillment of Requirements for a Personal Property Appraisal and Report

- State the identity of the client and any intended users, by name or type:
  East Whiteland Township, PA and the Pennsylvania Public Utility Commission

- State the intended use of the appraisal
  To establish the Fair Market Value of East Whiteland Township's (PA) Wastewater Collection System (System), Purchased Treatment Capacity and other assets.

- Describe information sufficient to identify the property, real, personal, and intangible, involved in the appraisal, including the physical and economic property characteristics relevant to the assignment.

  The system consists of collection mains and laterals of various sizes and types, pumping structures, improvements and equipment, and purchased treatment capacity. The property is in good condition based on physical inspections and reviews or operating statements. The property is an operating wastewater system the economics of which were analyzed based on seven years of operating financials which were incorporated into the income approach to value analysis in this appraisal.

- State the real property interests appraised
  The system's land rights agreements necessary to access its property.

- State the type and definition of value and city the source of the definition, including whether the opinion of value is in terms of cash or of financing terms equivalent to cash, or based on non-market financing or financing with unusual conditions or incentives
  - *Market Value definition:*
    "The most probable price, as of a specified date, in cash, or in terms equivalent to cash, or in other precisely revealed terms, for which the specified property rights should sell after reasonable exposure in a competitive market under all conditions requisite to a fair sale, with the buyer and seller each acting prudently, knowledgeably, and for self-interest, and assuming that neither is under undue duress." The Appraisal of Real Estate, 12th Edition, page 22.

- State the effective date of the appraisal and the date of the report
  The effective date of the appraisal is January 8, 2021, and the appraisal report date is June 20, 2021.

- Describe sufficient information to disclose to the client and any other intended users of the appraisal the scope of work used to develop the appraisal
  The appraisal considered all three approaches to value: the cost, income and market. Briefly the scopes of work for each are as follows:

Compliance with Uniform Standards of Professional Appraisal Practice (USPAP) 2020-2021

Fulfillment of Requirements for a Personal Property Appraisal and Report

Cost Approach – The cost approach utilized the trended cost method utilizing the investment inventory developed by Pennoni Associates, Inc's "Engineers Assessment". The Handy Whitman Index of Public Utility Construction Costs for the water industry were used in the trending. Depreciation was assessed based on straight line age-life depreciation method based on service life expectation for each of the various account categories.

Income Approach – The income approach utilized the discounted cash flow (DCF) method that facilitates the development of cash flows from operations as the property migrates from municipal operation to a regulated investor-owned operation. The Townships' operating experience was analyzed (2016-2019) in order to estimate the initial cash flows. Future customer tariff rates address the rates agreed to by the parties in the Asset Purchase Agreement between the parties. The operations were forecast for 19 periods in the future and a 20th period which is intended to reflect operation beyond that time. The discount rate was developed based on market debt and equity rates at the appraisal date.

Market Approach – The market approach was developed based on market comparable sales of Pennsylvania wastewater properties and market to book ratios developed for the water industry based on information published by Value Line Investment Surveys at the appraisal date.

Valuation Approaches Reconciliation - The appraisal conclusion was based on reconciliation of each of the approaches and the intended purpose of the appraisal.

- Clearly and conspicuously:
  - State all extraordinary assumptions and hypothetical conditions;

    There were no extraordinary assumptions or hypothetical conditions in this appraisal.

  - State that their use might have affected the assignment results

    Not applicable.

- Clearly and accurately disclose all assumptions, extraordinary assumptions, hypothetical conditions, and limiting conditions used in the assignment

  Not applicable.

- Describe the information analyzed, the appraisal procedures followed, and the reasoning that supports the analyses, opinions, and conclusions

Compliance with Uniform Standards of Professional Appraisal Practice (USPAP) 2020-2021

Fulfillment of Requirements for a Personal Property Appraisal and Report

See scope of work above.

- State the use of the real estate existing as of the date of value and the use of the real estate reflected in the appraisal – when reporting an opinion of market value, describe the support and rationale for the appraiser's opinion of the highest and best use of the real estate

- State and explain any permitted departures from specific requirements of STANDARD 1 and the reason for excluding any of the usual valuation approaches. The appraisal then becomes a limited appraisal – a limited appraisal report must contain a prominent section that clearly identifies the extent of the appraisal process performed and the departures taken

  No departures for Standard 1 were made.

- Include a signed certification in accordance with Standards Rule 2-3

  Contained in Narrative Report.

Compliance with Uniform Standards of Professional Appraisal Practice (USPAP) 2020-2021

Fulfillment of Requirements for a Personal Property Appraisal and Report

AUS Consultants, Valuation and Depreciation Services Group certify that, to the best of its knowledge and belief:

- The statements of fact contained in this report are true and correct.

- The reported analyses, opinions, and conclusions are limited only by the reported assumptions and limiting conditions, and are our personal, impartial, and unbiased professional analyses, opinions, and conclusions.

- AUS Consultants, Valuation and Depreciation Services Group has not performed an appraisal of the East Whiteland Township's wastewater collection system previously in the last three year.

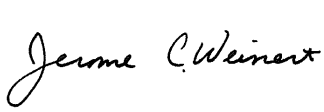
- AUS Consultants, Valuation and Depreciation Services Group, nor its professional staff has any present or prospective interest in the property that is the subject of this report and has no interest or bias with respect to the parties involved.

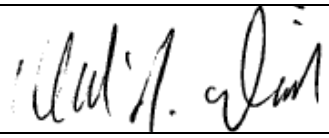
- We have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment.

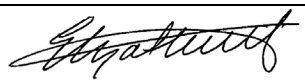
- Our engagement in this assignment is not contingent upon developing or reporting predetermined results.

- Our compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of this appraisal.

- Our analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice 2020-2021.







- The signers of this report have not made a personal inspection of the property that is the subject of this report.

- Individuals providing significant appraisal assistance to the person signing this certification include: Scott Shearer- Managing Director and Garrett Moore – Senior Analyst both oof PFM Financials Advisors, LLC whom provided information obtained from East Whiteland Township and the Engineer's Assessment report prepared by Pennoni Associates, Inc.which was the inventory starting point of the Cost Approach.

Compliance with Uniform Standards of Professional Appraisal Practice (USPAP) 2020-2021

Fulfillment of Requirements for a Personal Property Appraisal and Report

Michael J. Diedrich, ASA, P.E., CDP Certified General Appraiser Principal	Elizabeth A. Weinert Associate

ASA: Accredited Senior Appraiser in the Machinery and Equipment (Public Utilities) discipline of the American Society of Appraisers
AMA: Accredited Member Appraiser in the Machinery and Equipment (Public Utilities) discipline of the American Society of Appraisers
P.E.: Registered Professional Engineer State of Wisconsin
CDP: Certified Depreciation Professions in the Society of Depreciation Professionals

Curriculum Vitae (CV) of Jerome C. Weinert, P.E., CDP, ASA

Mr. Weinert is currently Principal and Director of AUS Consultants, Depreciation and Valuation. He has forty-nine (2021-1972) years' experience in valuation and depreciation consulting and management. AUS, with offices across the country, has provided consulting services to the regulated utility industry nationally for over thirty-nine years. A partial list of services provided includes valuations depreciation studies, rate of return studies, cost of service studies, and rate design.

Prior to joining AUS in 1987, Mr. Weinert was employed by American Appraisal Associates, Inc. (American) for sixteen years in their Regulated Industries Group. He held various positions at American, the last being supervising appraiser. Among his other valuation responsibilities, he directed the firm's utility industry capital recovery studies and AUS Consultant's valuation of communication company assets and businesses.

Mr. Weinert graduated from the Milwaukee School of Engineering with a Bachelor of Science degree in Mechanical Engineering and received a master's in business administration from Marquette University. He is a registered professional engineer (1976) (by examination) in the state of Wisconsin as well as a senior member (1982) of the American Society of Appraisers in the public utility valuation field. This latter designation is obtained by written examination primarily in the areas of utility valuation, depreciation, and the economics of regulated firms. He is also a Certified Depreciation Professional (1997) (CDP) and founding member of the Society of Depreciation Professionals and the Society's 1995 President and sponsor of the Society's Certification and re-certification program as such Mr. Weinert developed these programs and oversaw their initial introduction into the Society. He also worked in conjunction with Society members in the development of the Society's training programs which as of 2003 has become the only such formalized depreciation training program in the North America and is an instructor in several of its courses.

During his professional career related to valuations and depreciation matters Mr. Weinert has testified before various courts and public service commissions on these subjects. He has also assisted numerous utilities in preparing capital recovery plans which specifically address the issues of plant replacement. Mr. Weinert has also presented expert testimony on valuation matters. Mr. Weinert has testified before the Pennsylvania Public Utility Commission on regulatory matters associated with Pennsylvania Section 1329 matters. On matters related to eminent domain issues, Mr. Weinert has presented expert testimony in the Massachusetts Superior Court, the Court of Common Pleas, Fayette County, Ohio, the New Hampshire Public Utilities Commission, the Twentieth Judicial Court (deposition only) in Charlotte County, Florida, the Nineteenth Judicial Circuit Court in St. Lucie County, Florida (deposition only). In regard to ad valorem taxation, Mr. Weinert has presented study results to the New York State Board of Equalization and Assessment (now the New York Office of Real Property Services (NY ORPS)), pertaining to useful life and net salvage values for all types of utility property subject to the Board's mass appraisal model. Mr. Weinert has appeared before the Valuation Adjustment Board in Florida for Duval, Hillsborough, Okeechobee, and Palm Beach counties, the Twelfth Judicial Circuit Sarasota County, Florida, the California Board of Equalization and Assessment, the Arizona Board of Assessment, the Missouri Board of Taxation, the Colorado and Texas Departments of Review, the Massachusetts Tax Appeal Court, the Superior Court of the State of Arizona in the County of Maricopa, the State Tax Appeal Board of the State of Montana, the New York City Tax Commission and the Public Utility Commission of Pennsylvania Section 1329 hearings (8).

Mr. Weinert has appeared before regulatory bodies in Alaska, Arkansas, Illinois, Indiana, Iowa, Missouri, Nevada, Nebraska, North Carolina, Ohio, Oregon, Pennsylvania, and South Carolina in support of rate-base valuation determination and capital recovery. He has presented testimony on depreciation matters before the Canadian Radio-Television and Telecommunications Commission (CRTC) and the United

States Federal Energy Regulatory Commission (FERC). In terms of water and wastewater acquisitions and applications for regulatory approval of rate base Mr. Weinert has testified for two investor-owned acquisitions of municipal wastewater authorities one representing the municipality and secondly for the acquiring investor-owned utility. He has submitted study results to the State Commissions of Alabama, Alaska, Arkansas, Idaho, Illinois, Indiana, Iowa, Kentucky, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, North Carolina, Oregon, Pennsylvania, South Carolina, Washington, and Wisconsin, and the Federal Communications Commission.

Mr. Weinert has presented papers on valuation and depreciation topics to professional and utility industry trade organizations. He also directed AUS Consultants' semi-annual week-long depreciation training programs (1988-1997). These specialized training courses, offered at basic and advanced levels, teach depreciation study techniques to public utility and public service commission staff specialists. The training includes depreciation theory and concepts and hands-on experience with personal computer-based analytical depreciation programs.

TRENDS OF PUBLIC UTILITY CONSTRUCTION COSTS

GEOGRAPHIC REGIONS

Tradition of Quality

The Handy-Whitman Index of Public Utility Construction Costs has been published continuously since 1924. Formerly the Handy Index, Bulletin Nos. 1 through 15 were developed by William W. Handy of Baltimore who had wide valuation experience in public utilities. *He believed that valuation studies should not be confined to rate cases but should be kept alive to the benefit of the utility industry.* He began publishing index numbers for electric and gas construction cost trends. Carrying on with the *tradition of quality*, after Mr. Handy's death, we continued publication for his estate beginning with Bulletin 16. Then, January 1, 1950, Whitman, Requardt and Associates, LLP purchased rights to the publication and have since been the sole publishers.

The name Handy-Whitman Index was adopted for Bulletin No. 53 and succeeding issues to combine the names of Mr. Handy and Ezra B. Whitman, a well-known valuation engineer. In 1957 an index of water utility construction costs was added. Mr. Whitman was a consultant on the publication of the Index until his death in 1963.

Whitman, Requardt and Associates, LLP

Ezra B. Whitman, a well-known valuation engineer was one of the founders of our firm. Major Whitman, as he was known from his World War I service, had already made a name for himself. Prior to the founding of the firm in 1915, Major Whitman had been President and Chief Engineer of the Water Board of the City of Baltimore. He designed the first rapid sand filtration plant serving a major city while he was the Baltimore Water Engineer. He was also president of the American Society of Civil Engineers and of the American Institute of Consulting Engineers and a chairman of the Public Service Commission of Maryland.

The Handy-Whitman Index is prepared especially for electric, gas and water utilities and is the only known publication of its kind available to the public. The list of subscribers is international and includes operating utilities, regulatory bodies, valuation engineers, equipment industries, insurance companies and reference libraries.

Tradition of Quality Continued

Since 1915, Whitman, Requardt and Associates, LLP, has been an independent consulting engineering firm organized to serve government, industry and private enterprise.

The firm has steadily expanded its engineering capabilities, providing complete services for civil, sanitary, structural, mechanical and electrical engineering and architectural projects from job inception through construction management. Construction cost data from utility projects of all types are available from design and valuation assignments. The staff is composed of specialists in these and related disciplines who bring a diverse professional and academic expertise to each assignment. A full-time staff is maintained specifically for preparing the Handy-Whitman Index.

Methods of Preparation of Indexes

An index number is a percentage ratio between the cost of an item at any stated time and its cost at a base period, or:

$$\text{Index Number} = \frac{\text{cost at stated time}}{\text{cost at base period}} \times 100$$

Index numbers have been prepared for many items, including wage rates, cost-of-living, material and equipment costs, and financial transactions. In the Handy-Whitman Index, index numbers have been developed for Building Construction, Electric Utility Construction, Gas Utility Construction and Water Utility Construction. Prices of basic materials such as cement, sand, gravel, cast iron pipe, wire, etc., are obtained from publications such as Engineering News-Record and checked against prices actually being paid for such materials. Labor cost trends are computed from labor rates obtained from sources such as the Construction Labor Research Council. Prices and cost trends of equipment are obtained from nationally recognized manufacturers, and operating utilities.

Handy-Whitman Index numbers are developed from wage rates and prices prevailing on January 1 and July 1 each year. The index numbers are generally based on 1973 = 100, although those items of recent origin are based on a later year.

The proportions of basic materials, labor, equipment and other cost components used in the Handy-Whitman Index are based on analyses developed during valuation and design assignments and on data furnished by utilities and industrial sources willing to assist with the Index. These data are reviewed continuously, and weightings and components are revised as required. This review assures that the indexes published reflect current construction practice.

Geographic Regions

To reflect differing cost trends throughout the 48 contiguous states, the index has been divided into six geographical regions of similar characteristics. They are shown on the accompanying map.

Use of Index Numbers

Handy-Whitman Index numbers have been widely used to trend earlier valuations and original cost records to estimate reproduction cost at prices prevailing at a certain date. The use of indexes for an appropriate property item or group will provide a reliable guide to changes in cost. Cost trends are given for all the important items of property. The electric and gas groups are arranged by the Federal Energy Regulatory Commission Uniform System of Accounts. The water property accounts are arranged to follow the classification of the National Association of Regulatory Utility Commissioners and the American Water Works Association.

The Handy-Whitman Index will furnish a yardstick for the fluctuations in value of property which will be satisfactory for many purposes. In rate cases, when a more exact determination of value is desired, however, the Index must be used carefully. Average prices and cost trends are used to develop the Index, and any direct application of cost trends without checking with actual local experience may not be accepted without controversy. When local experience is compared with the index and the correlation between the two trends is determined, the result is satisfactory. Costs trended by such a method are used to assist in establishing a rate base.

Indexes in these bulletins are used to trend earlier valuations or original cost records for insurance purposes.

The Handy-Whitman Index has a general application in valuations of all types of property. The building construction cost trends may be used wherever similar items of property are to be compared. Many of the other trends may be used for related items in other industries because of their similarity.

State-of-the-art changes often affect costs independently of inflation. New regulatory and environmental requirements, changes in work rules and improved design standards, for instance, increase construction costs even though the price of wages, materials and equipment may be static. Trended construction costs will not reflect such changes. However, trended costs are a reasonably accurate measure of the cost of reproducing actual plant.

Although every effort is made to maintain accuracy, Whitman, Requardt and Associates, LLP disclaim any responsibility for the use of these indexes, because local conditions may vary.

No guarantee or warranty of any kind is made in the sale of the Handy-Whitman Index. Published numbers are occasionally subject to change based upon receipt of new or different information. These numbers will be bolded.

Further inquiries on electric, gas and water indexes should be addressed to Whitman, Requardt and Associates, LLP.

Total Electric Plant and Function

Three indexes are provided for total plant. The first is for all steam generation and the other two for weighted combinations of steam and nuclear, and steam and hydro generation. Indexes are also provided for each function.

Indexes are not maintained for plant accounts 323,324,325,341,345 and 346. We believe that indexes for comparable accounts in other functions are sufficiently accurate for these accounts.

The indexes for total nuclear production and total other production incorporate comparable indexes from the steam production function for the accounts not listed.

Value of Index Numbers

We believe that present-day reproduction cost of any property can be calculated more accurately using index numbers than by repricing a complete inventory.

Trending the controlling items of property in any utility by the index method saves time and effort in arriving at a valuation. Analyzing and determining cost trends for all of the great numbers of articles of plant that represent only a very small proportion of the value of the utility is not necessary. They may be assumed to follow in general the trend of the controlling items, and the fluctuations in value above or below the trends of the controlling items will tend to offset each other and have a very slight effect on the total value.

Comments on Bulletin No. 193

During the twelve-month period ending January 1, 2021, the average index of all geographical regions for Total Gas Plant increased 0.9%, and the comparable index for Electric Plant-All Steam Generation increased 4.5%.

FOREWORD

The AUS Telephone Plant Index, which follows this foreword was first introduced in 1977 by Associated Utility Services, Inc., and published as part of the Handy-Whitman Index of Public Utility Construction Costs through 1989. In 1990 AUS Consultants, the successor company to Associated Utility Services, Inc., decided to publish the Telephone Plant Index under the name C.A. Turner Utility Reports publication division. In 2005 the index changed its name from C.A. Turner Telephone Plant Index to AUS Telephone Plant Index.

The 1990 AUS Telephone Plant Index (TPI) was the first nationally available TPI based on the Federal Communication Commission (FCC) Uniform System of Accounts (USOA) Part 32. The prior published TPI, also prepared by AUS staff, was based on the earlier USOA Part 31 Standards.

Telephone Plant Index Description

The TPI consists of a separate cost index series for each of six geographic regions shown on the map at page iv. These regions are designated: North Atlantic, South Atlantic, North Central, South Central, Plateau, and Pacific Coast. The regional designation are the same as those used in the prior issues of the cost index and are based on similarity of characteristics among the contiguous 48 states.

Each cost index series within a region consists of one index labeled "Total Plant Account" and up to 31 individual cost index series for the individual plant account identified in the left hand columns.

The Base Year for each cost index is 1973=100. Some plant accounts will not show an index number of 100 at year 1973 due to a subsequent adjustment for FCC Part 31 to Part 32, changes explained later in this foreword. In a few accounts the item described in the account was not included in the index series until after 1973 and the base year is considered the first year of entry.

The index for most plant accounts begins with a single entry in year 1946 and continues with a single number for each year through 1973. Beginning in 1974 there are two index numbers for each year; one for January 1 and one for July 1. These numbers represent the prevailing wages and material prices and weightings at that point in time.

Index History

An index is a tool for identifying the relative price change of an item, or group of items over an identified period of time. Price indexes have been in use for many years for a variety of reasons. One example is an index developed in the eighteenth century by an Italian named Carli to determine the effect of the discovery of America upon the level of prices in Italy of three commodities between the years 1500 and 1750. In the current century, numerous organizations, including the United States Bureau of Statistic, have developed a variety of indexes ranging from the cost of basic commodities to manufactured goods and building construction cost.

Interest in telephone utility cost indexes has varied over time depending on the need to develop reproduction cost values for utility properties. Previous uses of cost indexes included such things as the determination trended original cost in fair value rate jurisdictions and current cost pricing for FASB-33 financial accounting disclosures. Due to changes in rate regulation proceedings and financial disclosure requirements, the need in these two specific areas has declined. Other areas in which reproduction cost indexes were utilized included insurance valuations, property tax valuations, retirement accounting and cost forecasting, etc.

Most recently, interest in cost indexes for the telecommunication industry has increased due to the possible implementation of price cap regulation. This form of regulation incorporates the use of changes in price levels by regulators to set rates. Under one proposal, customer tariff prices are adjusted to give consideration to productivity improvements, therefore, the development of the construction cost indexes will have an indirect bearing on the level of the company revenue requirements.

Index Design

The telephone plant index was designed as a product which could be utilized by any of the various telephone operating companies to develop the reproduction cost of the company's property at the selected test year date. Due to the variation of many design construction specifics from one company to another, it is impossible to produce an index which will exactly mirror the construction cost changes for each company. In circumstances where companies desire a more specific reproduction cost of their property, a custom index should be prepared or, alternately, the company's property should be inventoried and unit priced. Such unit cost work efforts, of course, will be significantly more expensive and time consuming to complete.

As indicated, the telephone plant index is a standard index which is published on a semi-annual basis. The yearly average index is calculated via a 1-2-1 weighting process which is the sum of 25% of the January index, 50 of the July index, and 25% of the succeeding year's January index.

In general terms, the telephone plant index was constructed around the FCC Part 32 system of accounts to aid companies in ease of application of the published index. Each embedded property account was reviewed to determine the components which comprise the large segment of the property investment in each account. In this manner, the resulting telephone plant index was a reasonable proxy for determining the reproduction cost of the embedded investment of the independent telephone industry.

With the exception of the General Support Asset Group, the FCC Part 32 based indexes were adjusted for all index years 1987 and prior to compensate for the change in overhead capitalization policies effective with the new regulations. That is, under FCC Part 31 regulation, a greater level of overheads were previously incorporated in the plant in service investments contained on the company's books and records. The adjusted indexes for the years 1946 through 1987, when applied to the company's original costs, will produce the applicable reproduction cost under FCC Part 32 accounting treatment. The index adjustment for Part 31 to Part 32 accounting results in the plant accounts not having an index number of 100 at the 1973 base year.

The AUS Telephone Plant Index was designed around thirty-six component indexes representing the basic components of material and labor which make up the construction of the various telephone plant accounts. The components include such items as Buildings, Switching Equipment, Circuit Equipment, Poles, Cable, Wire Vehicles, Tools, Furniture, Installer Labor and Lineman Labor, etc. The components were composited together into account level indexes based upon material and labor weights derived from a study of independent telephone construction cost experience.

Introduction of new technologies into a reproduction cost index required the review of composite weight included in development of the account level index to reflex the new mix of property.

The goal of the telephone plant index was to produce a product which when utilized together with each companies' books and records would produce a reproduction cost value.

The AUS Telephone Plant Index does not reflect replacement cost inasmuch as it was designed to produce the reproduction cost (the cost in today's dollars to reproduce the company's embedded plant in service).

Index Functions

The AUS Telephone Plant Index series was initially prepared to address a very specific function. That is, it was designed to enable companies to produce trended original cost values to the historical original cost of plant in service on the companies' books and records. This trended original cost is a general representation of the cost to reconstruct the property in question at the price level of the selected period. If a company desires a more specific estimate of reconstruction, the property specific indexes can be developed giving consideration to the actual history of the company's wages and material cost in comparison to the labor and material costs. For an even more specific cost estimated to rebuild the plant in serve, engineering estimated can be completed based upon the property inventory and the current unit costs for constructing the various plant categories.

In summary, the index was designed to be applied on a vintage and account level basis to determine the reproduction cost of local distribution companies' plant in service, as of the selected price level.

A tool can be utilized correctly only within the boundaries for which the product was originally designed. Uses above and beyond the scope of the original design may or may not produce reliable results. That is, the use of a generalized index to prepare a reproduction cost will provide general results within the range of reasonableness. If more specific or exact results are required, alternative methods or procedures (i.e., custom indexes or specific detail pricing) should be employed.

An effort has been made to carefully construct an index which produces a reasonable proxy of reproduction cost for the telephone plant or local distribution companies giving consideration to the fact that there are variances in material and labor costs, as well as, construction methods and practices from one company to another. Nevertheless, we believe that there is sufficient similarity in the cost trends to make the AUS Telephone Plant Index a useful tool when carefully applied to a company's historical cost base.

DEPRECIATION AND FUNCTIONAL OBSOLESCENCE

An important step in the appraisal of property using the cost approach is the determination of the depreciation or condition of the property. Depreciation in this appraisal was segregated into normal (mostly physical) depreciation and functional obsolescence. The normal depreciation was determined based on the age of the property and its normal service life; while functional obsolescence was based on the impact on the property's remaining life caused by factors such as changing technology, service requirements, and competition.

Depreciation - The depreciation was determined based on the property's age and it normal service life using the following formula:

$$\text{Condition} = \frac{\text{Remaining Life}}{\text{Age + Remaining Life}}$$

or

$$\text{Depreciation} = \frac{\text{Age}}{\text{Age + Remaining Life}}$$

Where: Remaining Life = f(Age, Survival Characteristic, Normal Service life)

Functional Obsolescence - The obsolescence inherent in the property was determined using the above-described normal service life in comparison to the property's service life is adjusted for functional factors. The obsolescence was quantified base on the difference between the property's normal service life and its functional service life. The following formula was used to calculate the obsolescence:

$$\text{Obsolescence} = \frac{\text{Normal Service Life - Functional Service Life}}{\text{Normal Service Life}}$$

Service Lives - (normal versus functional) - The service life of property is that period of time in which it provides the service to which it was designed and placed into service. In most industrial properties there is a difference between a property's normal or physical life and its functional life. A piece of equipment may physically last for an extended

period; however, as that property ages changing technology, improvements or enhancement in similar equipment, functional and or service requirements change resulting in decreased utility of the existing equipment, and therefore decrease in value to it owner, this additional deterioration over that defined by the equipment's normal life is functional obsolescence.

Wastewater Depreciation Service Life Experience in Pennsylvania

The service lives used in the depreciation and functional obsolescence calculations were developed based on the property and its use, AUS Consultants' experience in developing depreciation studies for the water and wastewater industries and depreciation studies filed with recent PAWC and Aqua America rate cases. With each of their rate case filings PAWC and Aqua America have filed depreciation studies in support of their depreciation service lives and associated depreciation expenses contained within their revenue requirements. The depreciation studies were prepared by Gannett Fleming Rate Consultants a recognized firm in the depreciation consulting area. AUS Consultants has reviewed the studies which are summarized in the following table:

Summary of PAWC & Aqua Depreciation Studies Prepared for Rate Case

Account	Account Description	Iowa Curves			Service Life		
		PAWC 12/31/2016	PAWC 12/31/2019	Aqua 3/31/2018	PAWC 12/31/2016	PAWC 12/31/2019	Aqua 3/31/2018
					years	years

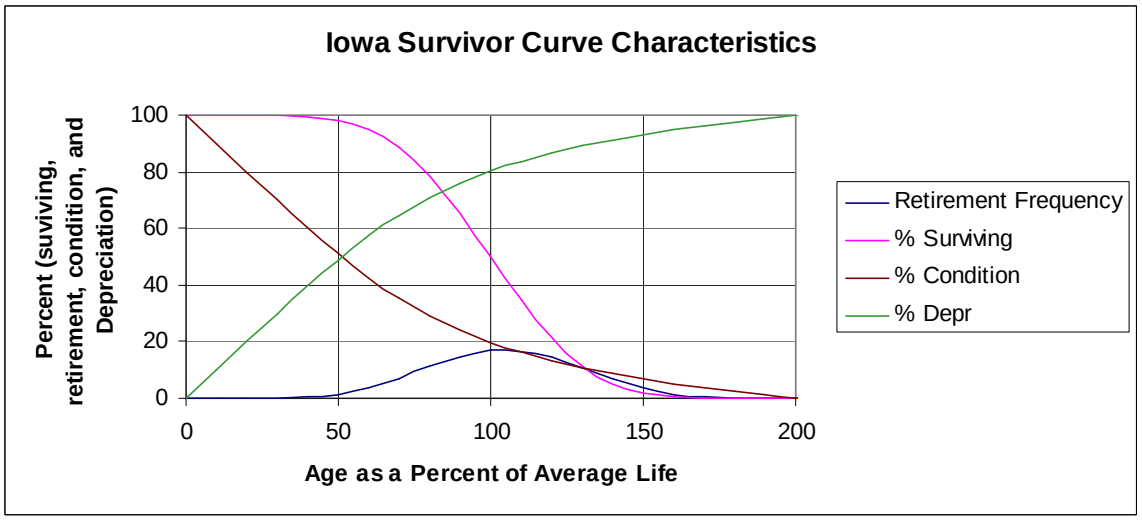
395.00	POWER OPERATED EQUIPMENT	SQ	R2		15	22	
396.00	COMMUNICATION EQUIPMENT	SQ	SQ		15	15	
397.00	MISCELLANEOUS EQUIPMENT		SQ			15	
398.00	OTHER TANGIBLE PLANT		SQ			25	

AUS Consultants believe this increase in service lives is attributable to the widespread use of relining older mains instead of replacing mains which are in need of repair. The practice of relining mains with a cured in place plastic liner not only repairs specific main but has the affect of extending the life of the original main by the length of time which the relining can be expected to last. Most relining vendors warranty their product and procedure for 50 years. Thus, in essence the original mains' service life will be extended by 50 plus years at the date the relining occurred. For those mains associated with relining their installation date was established at the date of their relining and their depreciation parameters were established the same as the depreciation parameters of the relining, i.e., R2.5 – 60 years.

The following table presents the depreciation parameters (Iowa-type survivor curve and service life) used in the cost approach in calculating the deprecation of the property:

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
January 8, 2021

Summary of Account Costing and Depreciation Parameters Used in the Depreciation Original Cost and the Depreciated Replacement Cost New Studies



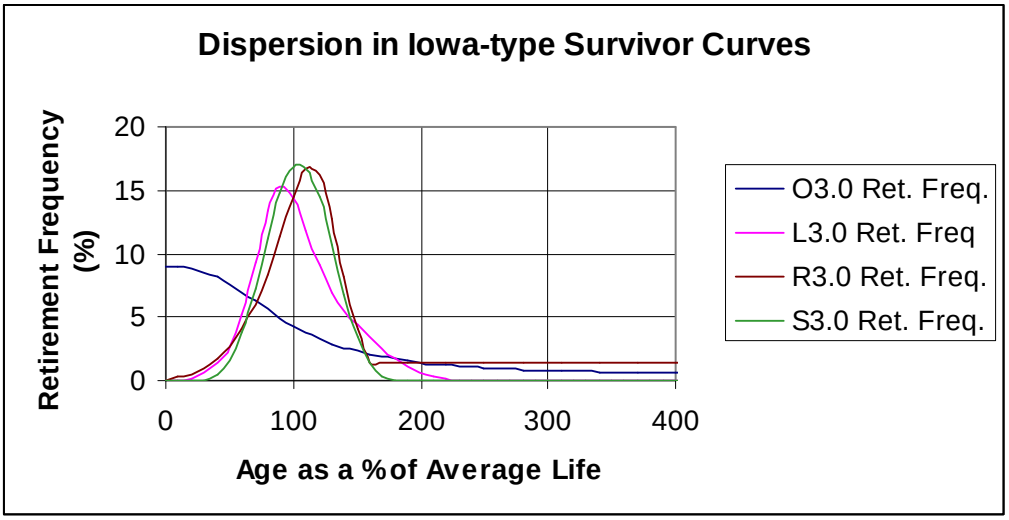
(1)	(2)	(4)		(5)	(6)	
		(4a)	(4b)		(6a)	(6b)
Account Number	Description	Iowa Survivor / Retirement Curve	Normal Service Life	Economic Obsolescence	Tax Depreciation	
			years	% of CORLD	Table	Life
353.20	Land & Land Rights - Original Basin	ZNonDep	0.00	0.00%	Non-Depr	0.00
353.30	Land & Land Rights - Pumping	ZNonDep	0.00	0.00%	Non-Depr	0.00
354.30	Stuctures & Improvements - Pumping	R4.0	45.00	0.00%	MACRS	25.00
360.21	Collection Sewers - Force - Mains	R3.0	75.00	0.00%	MACRS	25.00
361.21	Collection Sewers - Gravity - Mains	R2.5	80.00	0.00%	MACRS	25.00
361.23	Collection Sewers - Gravity - Manholes	R2.5	80.00	0.00%	MACRS	25.00
363.20	Service Laterals	R3.0	70.00	0.00%	MACRS	25.00
365.20	Flow Measuring Installations Meter Pits	S2.0	30.00	0.00%	MACRS	25.00
380.00	Treatment and Disposal Equipment	R2.0	45.00	0.00%	MACRS	25.00
390.70	Office Furniture and Equipment	R3.0	12.00	0.00%	MACRS	12.00
391.70	Transportation Equipment	R3.0	10.00	0.00%	MACRS	10.00

As the above table demonstrates the depreciation lives selected for the AUS Consultants appraisal are consistent with the industry depreciation studies' finding for

wastewater plant. However due to the age of some of the property the extend of the depreciation was limited to 85% of the assets original cost and its replacement cost new.

Iowa Survivor Curves

The Iowa Survivor Curves recommended in the McKeesport appraisal are used to determine the remaining life of the property, and therefore its condition, recognizing the properties' service life and age. The Iowa Survivor Curves allows the appraiser to recognize the property being studied (mains, treatment and pumping plant equipment etc placed in a particular year, say1985) is part of a larger group of property, i.e., all the property i.e., mains, treatment and pumping plant equipment, etc. As such, the service lives which we refer to in our appraisal are an average service lives for the group, i.e., the average life of all mains, treatment and pumping plant equipment, etc. The Iowa Survivor curve allows the appraiser to calculate the remaining life, and therefore condition, of a subset of the group (the mains placed in 1985) based on the groups': (1) Iowa Survivor Curve, (2) Service Life and the (3) age of property at the appraisal date. An Iowa Survivor Curves depicts how property from a group survives and retires about that groups' average life.

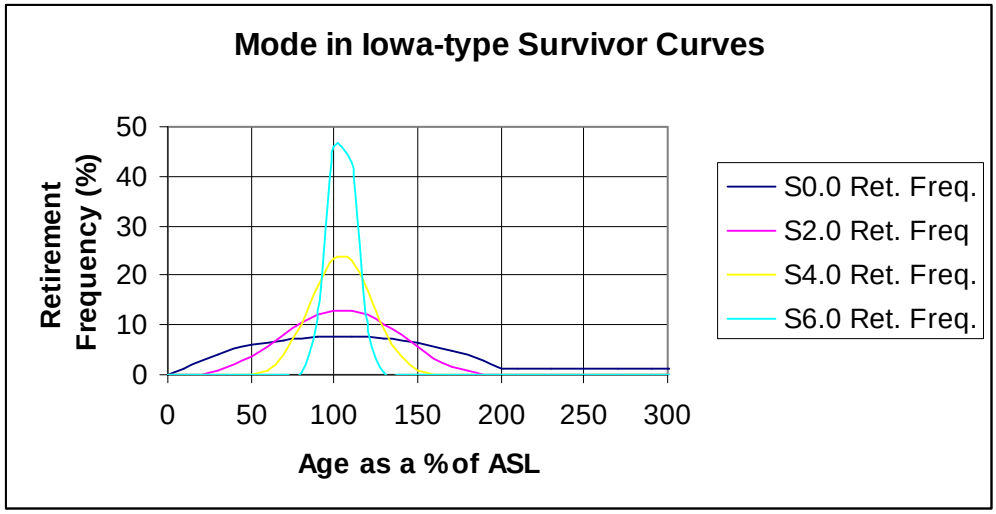


The above figure depicts a typical Iowa-type survivor curve, an S3.0 Iowa-type survivor curve. In this case the survivor curve has been generalized to a service life of 100% of the property's average life, in this generalized form the survivor curve statistics can be utilized with any individual service life in the age-life service life and depreciation calculations. There are four characteristics displayed in the above chart depicting the manner in which property survives and retires about the group's average life, those characteristics are: the retirement frequency (blue), the percent surviving (red), the percent condition (brown) and the percent depreciated (green). The retirement frequency represents the retirement of individual property items about the group's average service life. As can be seen the retirements are distributes about the group's average life with some items retiring before the average life and some items retiring at or after the group's service life. The group's survivor curve is developed from subtracting the retirements as they occur as the property ages. The depreciation curve depicts how much of the property group's life has been consumed; while the condition curve depict

how much of the property group's life remains. The condition and depreciation curves are complementary in that condition equals 100% minus depreciation and vice versa.

The theory of Iowa Survivor Curves was presented in the 1920s and 30s by Robley Winfrey based on research at Iowa State University (then the Iowa Engineering Experiment Station). Winfrey's research was first published in Bulletin 103 - Life Characteristics of Physical Property and Bulletin 125 - Statistical Analysis of Industrial Property Retirements. (Incidentally, both publications are out of print, I have a copy of Bulletin 125 but not Bulletin 103, I'm still trying to get a copy of that piece of depreciation literature.). Bulletin 125 was updated in 1967 by Professor Harold Cowles of Iowa State University's Department of Industrial Engineering. In conducting his research, Winfrey collected data on industrial property survival and retirement from various sources and analyzed that data as a function of property's age at retirement and ultimately the property groups' service life when all the property in the group was fully retired.

Winfrey discovered the industrial property's survival and retirement fits three basic patterns with relationship to the property's average life:



Symmetrically moded (S-type Iowa Survivor Curves) (green) – The S-type Iowa Survivor Curve is one wherein the property's retirements are symmetrically distributed about the mode. Mode in statistics is defined as the highest frequency, in this case retirement frequency. Thus an S-type Iowa curve is like a normal curve; however, its shape is not identical to a normal distribution function.

Right moded (R-type Iowa Curves) (brown) – the R-type Iowa curve has its mode skewed to the right of the property's average life; therefore, the retirements tend to be distributed later in the property's life and there are less retirements earlier in the property's life.

Left moded (L-type Iowa Curve) (red) – The L-type Iowa curve has its mode skewed to the left of the property's average life; therefore, the retirements tend to be distributed earlier in the property's life and there are less retirements later in the property's life.

In the utility industry, the plant, i.e., mains, treatment and pumping plant equipment tends to have a R-type survival/retirement dispersion as it is designed to provide service over extended periods, requiring little maintenance, and it designers have significant experience in designing and placing such property.

In conjunction with the above-described R-, S-, and L-type survival/retirement patterns, Winfrey determine that there were several patterns of the manner in which the retirements' peakedness occur around the average life. In this case, Winfrey described the peakedness of the property retirements with peakedness enumerations of 0, 1, 2, 3, 4, 5, and 6. The low peakedness numbers 0 and 1 represent low levels of retirements being distributed over the property entire life, while high peakedness numbers, 5 and 6 represent retirement patterns where the majority or all the retirement occur tightly grouped around the property's average life. Peakedness numbers 2, 3, and 4 are middle of the road, so to speak, in terms of peakedness.

Origin moded (O-type) survivor curve (blue) – Harold Cowles in his 1967 update of Bulletin 125 introduced the O-type survivor curve with the mode of the curve at the origin or at age equal to zero (0) years. This class of Iowa curves was over looked by Winfrey possibly because it made little intuitive sense that industrial retirement of property would have their maximum retirement frequency at age equal to zero. However, Cowles felt for completeness they should be included. O-type survivor curves do reflect the survival pattern of intangible assets.

Iowa-type survivor curves are parametric, as opposed to formalistic, in that they were derived from empirical survival/retirement data which Winfrey collected. There are Iowa curve equations are presented in Bulletin 125; however, in most cases users reference standardized Iowa Survivor Curve tables. The Iowa-type survivor curves used in this appraisal have been generalized to a service life of 100% of the property's average life. By generalizing the service life to 100% of average life these tables can be used to generate survival and retirement statistics for property of any service life.

It should be apparent that Iowa-types survivor curves are valid for any type property as the curves only depict how that property survives and retires about the average life of a group of similar property.

Generalized Iowa-type Survivor Curves

As was discussed earlier, most users of the Iowa-type survivor curves use standardized tables of Iowa curves. The most usable form of these standardized tables are tables which have been generalized to a standard life of 100% of the property's average life. Based on these generalized tables the user can determine the property's remaining life by knowing the Iowa-type survivor curve (mode and peakedness characteristics), the property's (group's) service life, and the specific property's (for which the remaining life is desired) age. The following table reflects how the remaining life, as well as its condition, is determined:

Year	Study Date	Age	Iowa Curve	Service Life	Age % of ASL	Iowa Lookup	Iowa Condition	Remaining Life	Total Life	Condition
				ASL						
		years		years	%			years	years	%
Input		Calc	Input	Input	Calc	Calc	lookup	Calc	Calc	Calc
1970	2006	35.5	R3.0	25	142	R3.0142	0.066388	1.7	37.2	4.47%
1980	2006	25.5	R3.0	25	102	R3.0102	0.192543	4.8	30.3	15.88%
1990	2006	15.5	R3.0	25	62	R3.0062	0.442050	11.1	26.6	41.62%
2000	2006	5.5	R3.0	25	22	R3.0022	0.787294	19.7	25.2	78.16%
2004	2006	1.5	R3.0	25	6	R3.0006	0.941117	23.5	25.0	94.01%
2005	2006	0.5	R3.0	25	2	R3.0002	0.980320	24.5	25.0	98.00%

The above table was developed with reference to the standardized Iowa Survivor curves contained and represent a R3.0 25 year Iowa curve and life table. The standardized Iowa Curves are located in tab database. In order to reference the proper line of the Iowa Curve data the user looks up that data by reference to the property's age as percent of the service life (age % of ASL column) and the Iowa Survivor curve (Iowa Curve column), combining these two criteria the Iowa Lookup column will get the user to the proper Iowa Curve data.

In the above calculation the Iowa-type survivor curve is R3, the service life of the group is 25 years, and its age is defined by property's accounting records which specifies the investment in property by account (A group in service life terms) and by the year of installation of that property. The age is dependent upon the appraisal year (study date) and the year of placement. It is customary to assume that the property placed in any particular placement year was placed continuously during that year and therefore its age is best represented as if that investment was placed in the middle of the year, i.e., July 1; hence, the adoption of the "mid-year" convention where all property is treated as if placed the mid-year.

Service Life and Survival/retirement pattern

The service life and survival/retirement pattern are determined by an analysis of historical survival and retirement experience of the company's property. This historical experience must be adjusted for factor which are known to be impacting the property's

service life but may not exhibited their effect on the property's retirement. Here it is important that a distinction is made between industrial property's physical service life and its functional service life. While physically a type of property may be deployed and remain in use for many years, over those years factors of changing technology, consumers demand and patterns, and even regulation, lessen the property functional life when compared to its physical life. In an industry such as the communications industry, function obsolescence is the primary driver of depreciation.

The following table details the impact of the above-described lives on the condition calculations:

Year	Study Date	Age	Iowa Curve	Service Life	Age % of ASL	Iowa Lookup	Iowa Condition	Remaining Life	Total Life	Condition
				ASL						
		years		years	%			years	years	%
Input		Calc	Input	Input	Calc	Calc	lookup	Calc	Calc	Calc
1970	2006	35.5	R3.0	30	118	R3.0118	0.131771	4.0	39.5	10.02%
1979	2006	26.5	R3.0	30	88	R3.0088	0.264919	7.9	34.4	23.07%
1981	2006	24.5	R3.0	25	98	R3.0098	0.211333	5.3	29.8	17.74%
1989	2006	16.5	R3.0	25	66	R3.0066	0.411848	10.3	26.8	38.42%
1990	2006	15.5	R3.0	20	78	R3.0078	0.327281	6.5	22.0	29.69%
2000	2006	5.5	R3.0	20	28	R3.0028	0.731331	14.6	20.1	72.67%
2004	2006	1.5	R3.0	20	8	R3.0008	0.921605	18.4	19.9	92.47%
2005	2006	0.5	R3.0	20	3	R3.0003	0.970499	19.4	19.9	97.49%

Statistical Analyses of Industrial Property Retirements

by

Robley Winfrey

BULLETIN 125
REVISED

ENGINEERING RESEARCH INSTITUTE
IOWA STATE UNIVERSITY • AMES, IOWA

IOWA CURVES

Iowa-type survivor curves are based on a set of empirical data collected (mainly in the 1930s) for the purpose of statistically predicting future service expectancy (remaining service) for physical properties.

The techniques used and methods applied are exactly analogous to those used by the insurance industry for the purpose of predicting human mortality (life expectancy) when determining appropriate insurance premium rates. The only distinction to be made is that the life insurance companies are investigating the life or longevity characteristics of human beings and the studies which developed the Iowa-type survivor curves were developed to predict the longevity or service life experience for physical, inanimate objects. The seminal statistical analyses for industrial property were conducted under the auspices of the Iowa Research Station now known as Iowa State University and were published in Statistical Analyses of Industrial Property Retirements, Bulletin 125, Engineering Research Institute, Iowa State University.

From the preface to the revised 1967 edition of Bulletin 125:

> "With the original publication of Bulletin 125 by the Iowa Engineering Experiment Station in 1935 (now known as the Engineering Research Institute), a significant contribution was made to the practice of industrial property life estimation. This was in the form, first, of a single volume, readily available, which presented in considerable detail the procedures for statistically analyzing historical property retirement data. Secondly, but no less significant, was the presentation of a set of 18 generalized density functions descriptive of industrial property retirement dispersion, mathematically described in terms of the Pearson frequency curve family, but with parameters established empirically from the analysis of a wide range of actual retirement experience.
>
> These curves, the cumulative form of which are commonly referred to as the Iowa-type Survivor Curves, have been used extensively since their introduction and, at the present time, the set is accepted as the standard of industrial property retirement dispersion. Because of the very simple mnemonic coding system which suggests the varying statistical characteristics involved, the Iowa Curves have also become widely used and recognized in the identification or classification of retirement dispersions, even for patterns derived in terms of analytical techniques not using the Curves."

The tables which follow this discussion are the ones used to estimate the remaining life of investment at particular age for an account with a particular service life.

Statistical Analyses of Industrial Property Retirements

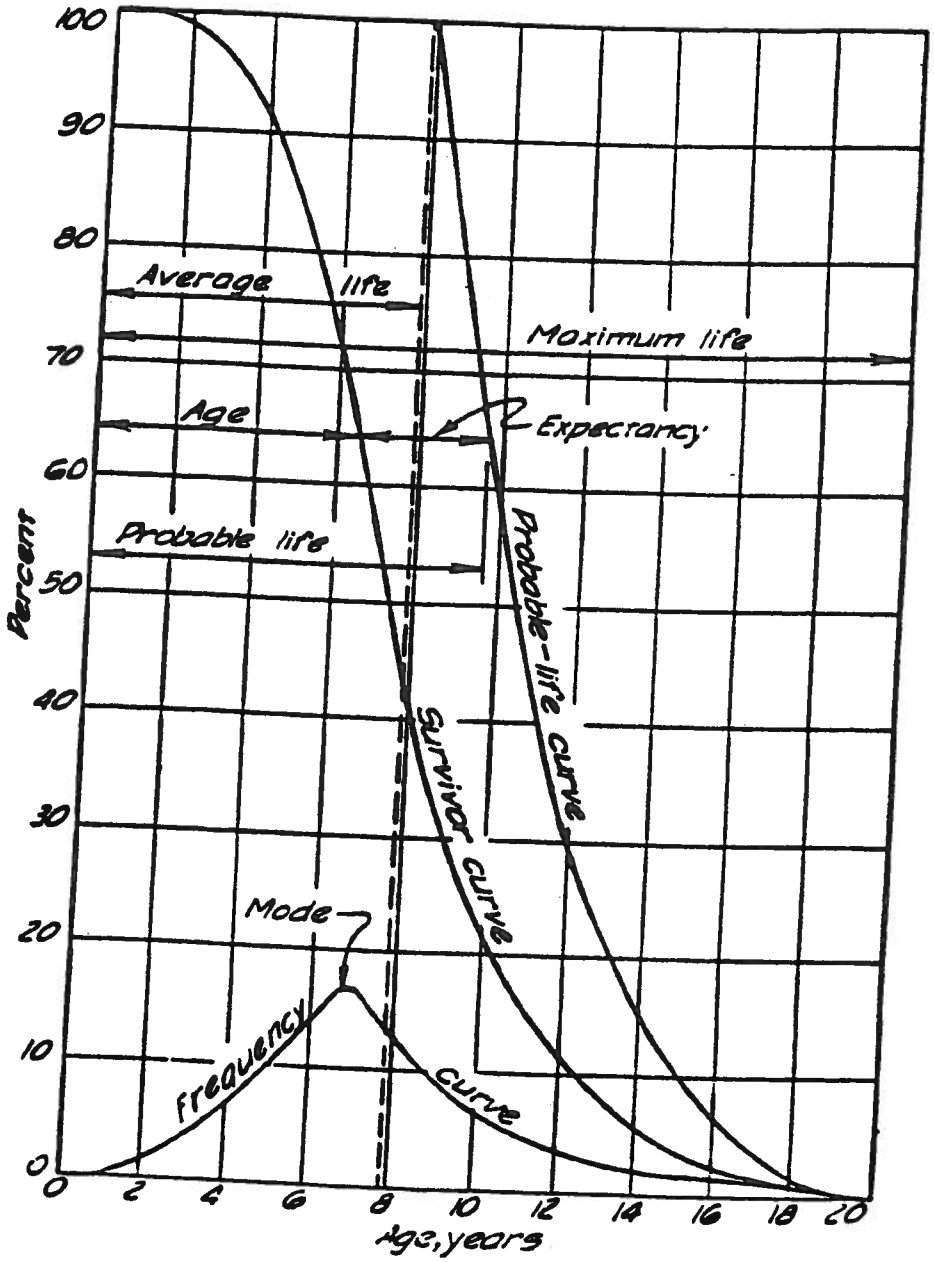

FIG. 1.—A typical survivor curve and its derived curves.

8. The *service life* of a unit is that period of time (or service) extending from the date of its installation to the date of its retirement from service. While the service life of physical property is usually expressed in years it may also be expressed in terms of units of production (screws, wheels, cars, pounds, miles, car-miles), time units of less than a year (months, hours, minutes), or combinations of physical units or services and time (lamp-hours, ton-years).

9. The *probable service life* of an individual unit is that period of time extending from its date of installation to the forecasted date when it probably will be retired from service.

10. The *expectancy* of life of an individual unit is that period of time extending from the observation age (usually the present) to the forecasted date when the unit probably will be retired from service. Age plus expectancy always equals probable life.

11. The *average service life of* a group of individual units is the quotient obtained by dividing the sum of the service lives of all the units by the number of units. The average service life (in years) is equal to the area under the survivor curve in percent-years (or unit-years) divided by 100 percent (or the total number of units).

12. The *probable average service life of* a group of individual units is the average of the probable service lives of the units of the group.

13. The *expectancy* of life of a group of individual units is that period of time extending from the observation age (usually the present) to the average of the forecasted dates when the units probably will be retired. The observation age plus the expectancy always equals the probable average service life.

> Note: Service life and average service life are always known quantities since they represent completed service life; probable service life and probable average service life always must be estimated since they are forecasts of uncompleted service.

14. *Maximum life* or *maximum age* is the age of the last unit of a given group to be retired from service; it is also the age at which the survivor curve has a zero ordinate, or zero percent surviving.

15. Property units which are taken out of service for any reason whatsoever are called *retirements*. Retirements may include original units (units of the initial installation) as well as "second-generation" units, that is, replacements (or renewals) which were installed to take the place of the original units as they were removed.

16. *Replacements* are the units put in service to replace retirements.

17. *Renewals* are replacements "in kind" which have exactly the same life characteristics as the retirements.

18. *Installations* are new units placed in service, not as replacement units, but as additions to the property.

19. All renewals, replacements, and installations are *placements*.

20. *Survivor curves* show the number of units of a given group

which are surviving in service at given ages. The ordinates to the curve give at any particular age the percentage (or the actual number) of the original number which are yet surviving in service. The abscissa is measured in years or other suitable service unit. The *original survivor curve* is the curve drawn through the points calculated from the original data without adjustment. Since this original survivor curve is generally irregular it is smoothed to produce a *smoothed survivor curve*, sometimes referred to as an *adjusted curve*.

Survivor curves have in some publications been referred to as *mortality curves*. However, the term *survivor curve* is used in this report because the curves referred to show the *percent surviving*, not the *percent retired*, and because the term *mortality* suggests human beings and not inanimate objects.

21. A *stub survivor curve* is an incomplete survivor curve; that is, one which does not extend to zero percent surviving because of a lack of retirement data on the longer-lived units.

22. A *probable-life curve* shows the probable average life of the survivors at any age from zero to maximum life.

23. If the percent surviving is read at the beginning of each successive age-interval and the differences in these successive readings plotted at ages corresponding to the midpoints of the intervals, the resulting points form a *frequency curve*, or *distribution curve*. Since the ordinates indicate the percentage of the units retired during each interval, the curve shows in what manner the retirements are distributed over the period from zero age to maximum life.

24. The point on the frequency curve having the highest ordinate is called the *mode*. The year in which the mode occurs is called the *modal year*.

25. A *maximum-life cycle* is a period of time corresponding in length to the maximum life of the units. An industrial property may continue to be operated through several maximum-life cycles of some of the units of which it is composed.

26. An *average-life cycle* is a period of time corresponding in length to the *average* life.

27. If a property is continued in service for a long time and maintained with a constant number of like units of substantially the same potential average life, it will reach a *normal condition* or *stabilized condition*, after which the average age of the units in service and the annual renewals will be constant year after year.

28. *Normal renewals* are the annual renewals after the property group has reached a stabilized condition. Normal renewals, in percent of the original number of units, are equal to 100 percent divided by the average life.

29. *Generalized curves* are those whose ordinates are expressed in percent of the total number of units and whose abscissas (age) are expressed in percent of average life.

30. *Type curves* are those theoretical curves derived by the methods described in this report from a study of actual retirements. They depict typical survivor and frequency curves for industrial property. Actual survivor curves are compared with type survivor curves in the process of determining probable average lives.

MORTALITY TABLES AND CURVES OF HUMAN BEINGS

By a study of population and deaths, life insurance companies have arrived at life tables for human beings of different nationalities. From these life tables the normal death rate and life expectancy for people at different ages can be determined as a basis for life insurance premiums and reserves. Life tables can be prepared from the vital statistics for any desired number of years in combination with census returns. By means of mathematical formulas a life table is adjusted to remove any slight irregularities that may exist in the original data.

Table 1 is the United States life table for white males, based upon deaths for the 10 years from 1901 to 1910. Unlike industrial property units whose average lives are continually being affected by many forces, the human average life and distribution of deaths according to age change very little over several generations. The life curve, however, varies considerably for different races as is illustrated in Fig. 2. The deaths at different ages are shown for the United States by the frequency curves in Fig. 3.

This reference to the United States life tables is made to show the similarity between the life characteristics of human beings and industrial properties. The essential differences are three. First, human beings experience a heavy infant mortality which results in a bi-modal frequency curve, one mode occurring between ages 0 and 1, and the other between ages 75 and 76. Second, the mode at the age-interval 75–76 occurs at a much greater percentage of average life than is usually found with physical property employed in industry. Third, the curves for industrial equipment vary in shape over wide limits while human mortality curves vary relatively little. The Makehamized curve in Fig. 3 is one that has been smoothed. (It does not represent the same group of lives as the lower curves of the figure.)

ANALYZING RETIREMENT DATA

The foregoing section discussed the life tables for humans and the accompanying curves. Similar analyses can be made of the behavior of the physical equipment employed in industry when sufficient information is available. The processes employed for analyzing the retirements of industrial property are not so easily handled as are those employed for mortality data of human beings, nor are the results usually as uniform because of the small number of units observed and the more numerous, less uniform causes of retirement of industrial

Attention: Ashley E. Everette
Director, Rates and Regulatory

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to water plant as of December 31, 2021. The results of our study at December 31, 2020 are presented in our report titled "2020 Depreciation Study - Calculated Annual Depreciation Accruals Related to Water Plant as of December 31, 2020". The same methods, procedures and estimates are used in both studies.

Summaries of the original cost, annual accruals, book depreciation reserve and amortization of net salvage are presented in Tables 1 through 5, beginning on page I-3 of the attached report.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

DEPRECIATION STUDY

RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 5 presented on pages 3 through 13 summarize the results of the depreciation study as of December 31, 2021. Table 1 sets forth the development of the net original cost by account as of December 31, 2021. Table 2 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of December 31, 2021, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 3 presents the bringforward of the book reserve to December 31, 2021. Table 4 sets forth the calculation of the depreciation accruals for the twelve months ended December 31, 2021. Table 5 presents the annual amortization of experienced and estimated net salvage based on the period 2017 through 2021.

DESCRIPTION OF DETAILED TABULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on page II-8. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2017 through 2021, beginning on pages III-2 through III-6.

Attention Ashley E. Everette
Director, Rates & Regulatory

Ladies and Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to wastewater plant as of December 31, 2022. The results of our study at December 31, 2020 are presented in our report titled "2020 Depreciation Study - Calculated Annual Depreciation Accruals Related to Wastewater Plant as of December 31, 2020". The same methods, procedures and estimates are used in both studies.

Summaries of the original cost, annual accruals, book depreciation reserve and amortization of net salvage are presented in Tables 1 through 5, beginning on page I-3 of the attached report.

Respectfully submitted,

GANNETT FLEMING VALUATION

DEPRECIATION STUDY

PART I. RESULTS OF STUDY

SUMMARY OF RESULTS

Tables 1 through 5 presented on pages I-3 through I-7 summarize the results of the depreciation study as of December 31, 2022. Table 1 sets forth the development of the net original cost by account as of December 31, 2022. Table 2 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of December 31, 2022, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 3 presents the bringforward of the book reserve to December 31, 2022. Table 4 sets forth the calculation of the depreciation accruals for the twelve months ended December 31, 2022. Table 5 presents the annual amortization of experienced and estimated net salvage based on the period 2018 through 2022.

DESCRIPTION OF DETAILED TABULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on page II-7. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2018 through 2022, beginning on pages III-2 through III-4.

Attention: Mr. John R. Cox
Manager of Rates and Regulations

Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to water plant as of December 31, 2018. The results of our study at December 31, 2013 are presented in our report titled "2017 Depreciation Study - Calculated Annual Depreciation Accruals Related to Water Plant as of December 31, 2017". The same methods, procedures and estimates are used in both studies.

Summaries of the original cost, annual accruals, book depreciation reserve and amortization of net salvage are presented in Tables 1 through 5, beginning on page I-3 of the attached report.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

DEPRECIATION STUDY

RESULTS OF STUDY

DESCRIPTION OF SUMMARY TABULATIONS

Tables 1 through 5 presented on pages 3 through 10 summarize the results of the depreciation study as of December 31, 2018. Table 1 sets forth the development of the net original cost by account as of December 31, 2018. Table 2 sets forth, by depreciable group, the estimated survivor curve, original cost, book depreciation reserve as of December 31, 2018, future book accruals, calculated annual accrual amount and rate, and composite remaining life for plant in service. Table 3 presents the bringforward of the book reserve to December 31, 2018. Table 4 sets forth the calculation of the depreciation accruals for the twelve months ended December 31, 2018. Table 5 presents the annual amortization of experienced and estimated net salvage based on the period 2014 through 2018.

DESCRIPTION OF DETAILED TABULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on page II-2. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage and cost of removal are set forth by account for the years 2014 through 2018, beginning on pages III-2 through III-5.

Hershey, PA 17033

Attention Mr. John R. Cox
Manager of Rates and Regulations

Gentlemen:

Pursuant to your request, we have determined the annual depreciation accruals applicable to wastewater plant as of December 31, 2016. Summaries of the original cost, annual accruals and the book depreciation reserve are presented in Tables 1 through 3, beginning on page I-3 of the attached report.

A description of the methods and procedures upon which the study was based, as well as support for the service life estimates, is set forth in a companion report "2017 Depreciation Study - Calculated Annual Depreciation Accruals Related to Wastewater Plant as of December 31, 2017".

Respectfully submitted,

GANNETT FLEMING VALUATION

DEPRECIATION STUDY

PART I. RESULTS OF STUDY

SUMMARY OF RESULTS

Table 1 presents the development of net original cost used in the study. The net original cost is the original cost of wastewater plant less advances and contributions. The results of the depreciation study are summarized in Table 2, which sets forth the book reserve and the calculated annual depreciation related to net original cost as of December 31, 2016, and the annual amortization of net negative salvage. Table 3 presents the calculation of the amortization of experienced net salvage, by account, based on the five-year period, 2012-2016.

DETAILED TABULATIONS OF DEPRECIATION CALCULATIONS

The supporting data for the depreciation calculations are presented in account sequence in the section beginning on page II-2. The original cost, calculated accrued depreciation, allocated book reserve, future accruals, remaining life and annual accrual are shown for each vintage of each account or subaccount. The amounts of regular retirements, gross salvage, and cost of removal are set forth by account for the years 2012 through 2016, on pages III-2 through III-6.

Cost of Capital / Required Return

The net cashflows described in the income approach section of this report were discounted to present value using a cost of capital reflective of the investor-owned water industry with particular emphasis on investor-owned water and wastewater in the Commonwealth of Pennsylvania capital costs for both debt and equity summarized as follows:

Water and Wastewater Cost of Capital
First Quarter 2021 (0-01-2021)

As an Investor-Owned Utility

The cost of capital and required return was based on the weighted cost of capital (WACC) method; wherein the market capital cost of debt and equity at the second quarter (January 1, 2021) closest to the appraisal date are weighted based on the market capital structure typical of the industry. The inputs to the WACC required return determination are described summarized below.

Debt Cost – The market cost of debt at the study data was determined based on review of financial information published by Value Line Investment Surveys in their Selected Yield weekly publication. These sources were helpful in determining the typical debt rating for investments in water industry to be A Standard and Poor's corporate debt rating. The above sources were also useful in determining that the market cost of debt at A rating to be 2.76% on January 1, 2021. Issuance cost of 0.90% was determined based on analysis annual Public Utility Financing Tracker reports over the period 2008 through 2019 published by PUFT, Inc. The final market cost of debt of 2.79% was determined for the water industry using the following formula which incorporates the above-described issuance costs:

1	2	3	4	5
Value Line Investment Surveys **Water Industry** **As of First Quarter 2021 (1-1-2021)**	S&P Debt Rating	Long Term Debt	Long Term Interest	Long Term Interest Rate (embedded)

Debt Rating and Cost of Debt

Embedded	3.84%	wtd mean col 5
Rating (S&P)	A	Input
Market Cost of Debt @Bond Rating Value Line Selected Yields	2.76%	Input
Use	2.76%	AUS Input
Issuance Cost PUFT Data 2018-2019	0.90%	Input
Final Cost of Debt	2.79%	

$K_d = K_u / (100\% - f)$

where:

K_d =Cost of Debt recognizing issuance costs

K_u is the market cost of debt without consideration of issuance costs

f is the cost of issuance as a percentage of the debt's par value

$K_d = 2.76\% / (100\% - 0.90\%)$

$K_d = 2.79\%$

Equity Cost – The cost of equity was evaluated using the Capital Asset Pricing Model (CAPM) and the dividend growth model (DGM) which looks to market returns to quantify the cost equity capital.

Capital Assets Pricing Model (CAPM) - The CAPM method estimates the cost of equity capital by quantifying the premium, or additional return required to entice investors to purchase equities, over an investment in which the investors would receive riskless return like that from a long-term U.S. government security.

The mathematical form of this model is:

Capital Asset Pricing Model:

$$r_e = r_f + B_c(r_p) + r_s + r_i$$

where:

B_c is an estimation of the subject Company's risk premium relative to the risk premium of the entire market. In these equity cost estimating methods the risk premium of the entire market is defined as unity or $B_m = 1.0$.

The inputs to this model are developed from an analysis of the financial markets. The risk-free government securities rate (rf) is readily available from financial sources; we have used the risk-free rate at the study date of 5.21% as determined from the average long-term income returns of government bonds over the period 1926 through 2020 as detailed on table A-7 in Ibbotson Associates' 2020 Yearbooks of Stocks, Bonds, Bills, and Inflation (SBBI).

The risk premiums (r_p) and size premiums (r_s) were established based on analysis of the data presented by Ibbotson Associates and published in Ibbotson Associates' 2010 through 2020 Yearbooks of Stocks, Bonds, Bills, and Inflation (SBBI), detailing the financial market returns of stocks, bonds, U.S. Treasury Bills, and Inflation for the period 1926 through 2020.

The total market risk premium (r_p) required to entice an investor to invest in equity securities over risk-free government securities was established at 6.60% based on the Ibbotson Associates research, while the size premiums (r_s) were established at:

1.99% for mid-capitalization companies with market equity capitalization between $2,444.7 and $13,177.8 million.

3.46% for low-capitalization companies with market equity capitalization between $451.8 and $2,444.7 million.

5.72% for micro-capitalization companies with market equity capitalization under $451.8 million.

There is no size premium (0.0%) for companies with market equity capitalization above $13,177.8 million.

Dividend Yield and Growth Model (DGM)

The dividend yield and growth model was also review in estimating the cost of equity. Two models were considered, those of:

re = Dividend Yield + Dividend Growth

re = Dividend Yield + Earnings Growth

Cost of Equity Conclusion - Based on these procedures the cost of equity using previous described cost of equity estimating techniques the cost of equity was determined as follows:

Cost of Equity	9.85% AUS Input Jurisdictional Exception
Growth	6.71% Input from Growth Above
Inflation	1.82% SBBI Last 5-years

Equity issuance cost (f) of 3.60% was determined based on analysis annual Public Utility Financing Tracker reports over the period 2008 through 2019 published by PUFT, Inc. The final market cost of equity of 9.88% was determined for the water industry using the following formula which incorporates the above-described issuance costs:

$K_e = K_{e'} / (100\% - f)$

where:

K_e =Cost of equity recognizing issuance costs

$K_{e'}$ is the market cost of equity without consideration of issuance costs (9.85%)

f is the cost of issuance as a percentage of the equity par value (3.60%)

$K_e = 9.53\% / (100\% - 3.60\%)$

$K_e = 9.88\%$

An equity cost of 9.85% was used in the determination of the cost of capital based on the determination of Pennsylvania PUC's Bureau of Technical Utility Services (TUS) Report on Quarterly Earnings of Jurisdictional Utilities for year-ending December 31, 2020.

Tax Rate

The tax rate was determined at 28.89% (State and Federal) based on the Value Line Investment Survey as follows:

PENNSYLVANIA PUBLIC UTILITY COMMISSION

Public Meeting held May 6, 2021

Docket Number: M-2021-3025288

BUREAU OF TECHNICAL UTILITY SERVICES

REPORT ON THE QUARTERLY EARNINGS

OF JURISDICTIONAL UTILITIES

FOR THE YEAR ENDED

December 31, 2020

Gladys Brown Dutrieuille, Chairman
David W. Sweet, Vice Chairman
John F. Coleman, Jr., Commissioner
Ralph V. Yanora, Commissioner

TABLE OF CONTENTS

Page No.

Introduction..... 4

* UGI Utilities, Inc. – Electric Division, PECO Energy Company – Gas Operations, Columbia Gas of Pennsylvania, Inc., and UGI Utilities, Inc. – Gas Division have rate filings at Docket Nos. R-2021-3023618, R-2020-3018929, R-2020-3018835, and R-2019-3015162 respectively, and filed a letter with the Secretary in place of a report in accordance with 52 Pa. Code § 71.4.

Attachment A – Summary of Equity Returns..... 5

Attachment B – Summary of Returns..... 12

This chart depicts the overall and equity returns (actual and adjusted) for the filing utilities for the current quarter. The last authorized equity return and the year authorized is also shown.

Attachment C – Allowed Rates of Return on Common Equity..... 14

This is a historical chart that shows the most recent rate cases for select companies in electric, gas, and water. A docket number followed by their final return on equity and year is also given.

Attachment D – Distribution System Improvement Charge Return on Equity 15

Compares utility adjusted return on equity to Commission authorized return on equity for utilities with a Distribution System Improvement Charge.

Attachment E – Explanation of Return on Equity Methods 16

Criteria for determining the industry barometer groups used in ROE calculations. Also, provides details of the Discounted Cash Flow equation and Capital Asset Pricing Model equation.

Attachment F – Market Based Returns on Equity – Electric..... 18

The market indicated common equity cost rate range consists of data used from the electric barometer groups and is based on a series of calculations to average the DCF methods. Also, indicates Distribution System Improvement Charge Return.

Attachment F – Historic DCF and CAPM – Electric 19

Historic barometer group DCF and CAPM average ROEs.

Attachment F – Electric Barometer Group Calculation of a Current and 52 Week Average Dividend Yield..... 20-21

Electric barometer companies are used to calculate a current DCF in the first chart. The second chart demonstrates the companies 52-week average DCF. A final average of the two calculations is also shown at the bottom.

Attachment F – Development of a Representative Dividend Growth Rate..... 22

Multiple sources of the gas barometer companies projected 5-year Earnings Per Share are used to calculate the Group Average Dividend Growth Estimate.

Attachment G – Market Based Returns on Equity – Gas..... 23

The market indicated common equity cost rate range consists of data used from the gas barometer groups and is based on a series of calculations to average the DCF methods. Also, indicates Distribution System Improvement Charge Return.

Attachment G – Historic DCF and CAPM – Gas 24
Historic barometer group DCF and CAPM average ROEs, including a linear trend line graph.

Attachment G – Gas Barometer Group Calculation of a Current and 52 Week Average Dividend Yield 25
Gas barometer companies are used to calculate a current DCF in the first chart. The second chart demonstrates the companies 52-week average DCF. A final average of the two calculations is also shown at the bottom.

Attachment G – Development of a Representative Dividend Growth Rate 26
Multiple sources of the gas barometer companies projected 5-year Earnings Per Share are used to calculate the Group Average Dividend Growth Estimate.

Attachment H – Market Based Returns on Equity – Water 27
The market indicated common equity cost rate range consists of data used from the water barometer groups and is based on a series of calculations to average the DCF methods. Also, indicates Distribution System Improvement Charge Return.

Attachment H – Historic DCF and CAPM – Water 28
Historic barometer group DCF and CAPM average ROEs, including a linear trend line graph.

Attachment H – Water Barometer Group Calculation of a Current and 52 Week Average Dividend Yield 29
Water barometer companies are used to calculate a current DCF in the first chart. The second chart demonstrates the companies 52-week average DCF. A final average of the two calculations is also shown at the bottom.

Attachment H – Development of a Representative Dividend Growth Rate 30
Multiple sources of the water barometer companies projected 5-year Earnings Per Share are used to calculate the Group Average Dividend Growth Estimate.

Introduction:

On September 20, 1991, the Commission initiated a rulemaking at L-00910061 pertaining to earnings disclosures by the public utilities subject to its jurisdiction. At that docket, the Commission stated that the submission of accurate, reliable and complete earnings disclosure reports, at regular intervals, is essential to the fulfillment of the broad regulatory oversight responsibilities entrusted to the Commission by the Legislature in the Public Utility Code. The earnings disclosure regulations promulgated by the Commission were adopted October 1, 1992, and published January 23, 1993, at 23 Pa.B. 463. Based upon those regulations, codified at 52 Pa. Code, Chapter 71, a reporting format was developed and distributed to the jurisdictional fixed utilities of Pennsylvania.

All fixed utilities having jurisdictional revenues of $1,000,000 or more, for a calendar year, are required to file the report by March 31 of each year. Such reports are to be based upon the results of operations for the 12-month period ending December 31 of the prior year. Utilities having more than $10,000,000 in jurisdictional revenues are also required to file reports for the 12 months ending on March 31, June 30, and September 30 of each year. On November 30, 2004, however, the Pennsylvania General Assembly signed into law Act 183 concerning alternative telecommunications regulation and broadband deployment. As a result of Act 183, the reporting requirements for the PUC jurisdictional telecommunications companies of Pennsylvania have been streamlined at section 3015(e) of the Public Utility Code. A quarterly earnings report is not listed among those reports now required of PUC jurisdictional telecommunications utilities in Pennsylvania and, therefore, this report does not address telephone company earnings.

The reports have been filed for the period ended December 31, 2020.[1] The Finance Staff of the Bureau of Technical Utility Services has reviewed the reports and has prepared this summary report for public release. This report sets forth the achieved return on equity for each company, the last allowed return for that utility, a market return as determined through the analysis of the barometer group data and the most recent returns allowed, per industry, by the Pennsylvania Public Utility Commission and by other regulatory bodies. Where a utility has not filed a report, the reasons for not filing are indicated.

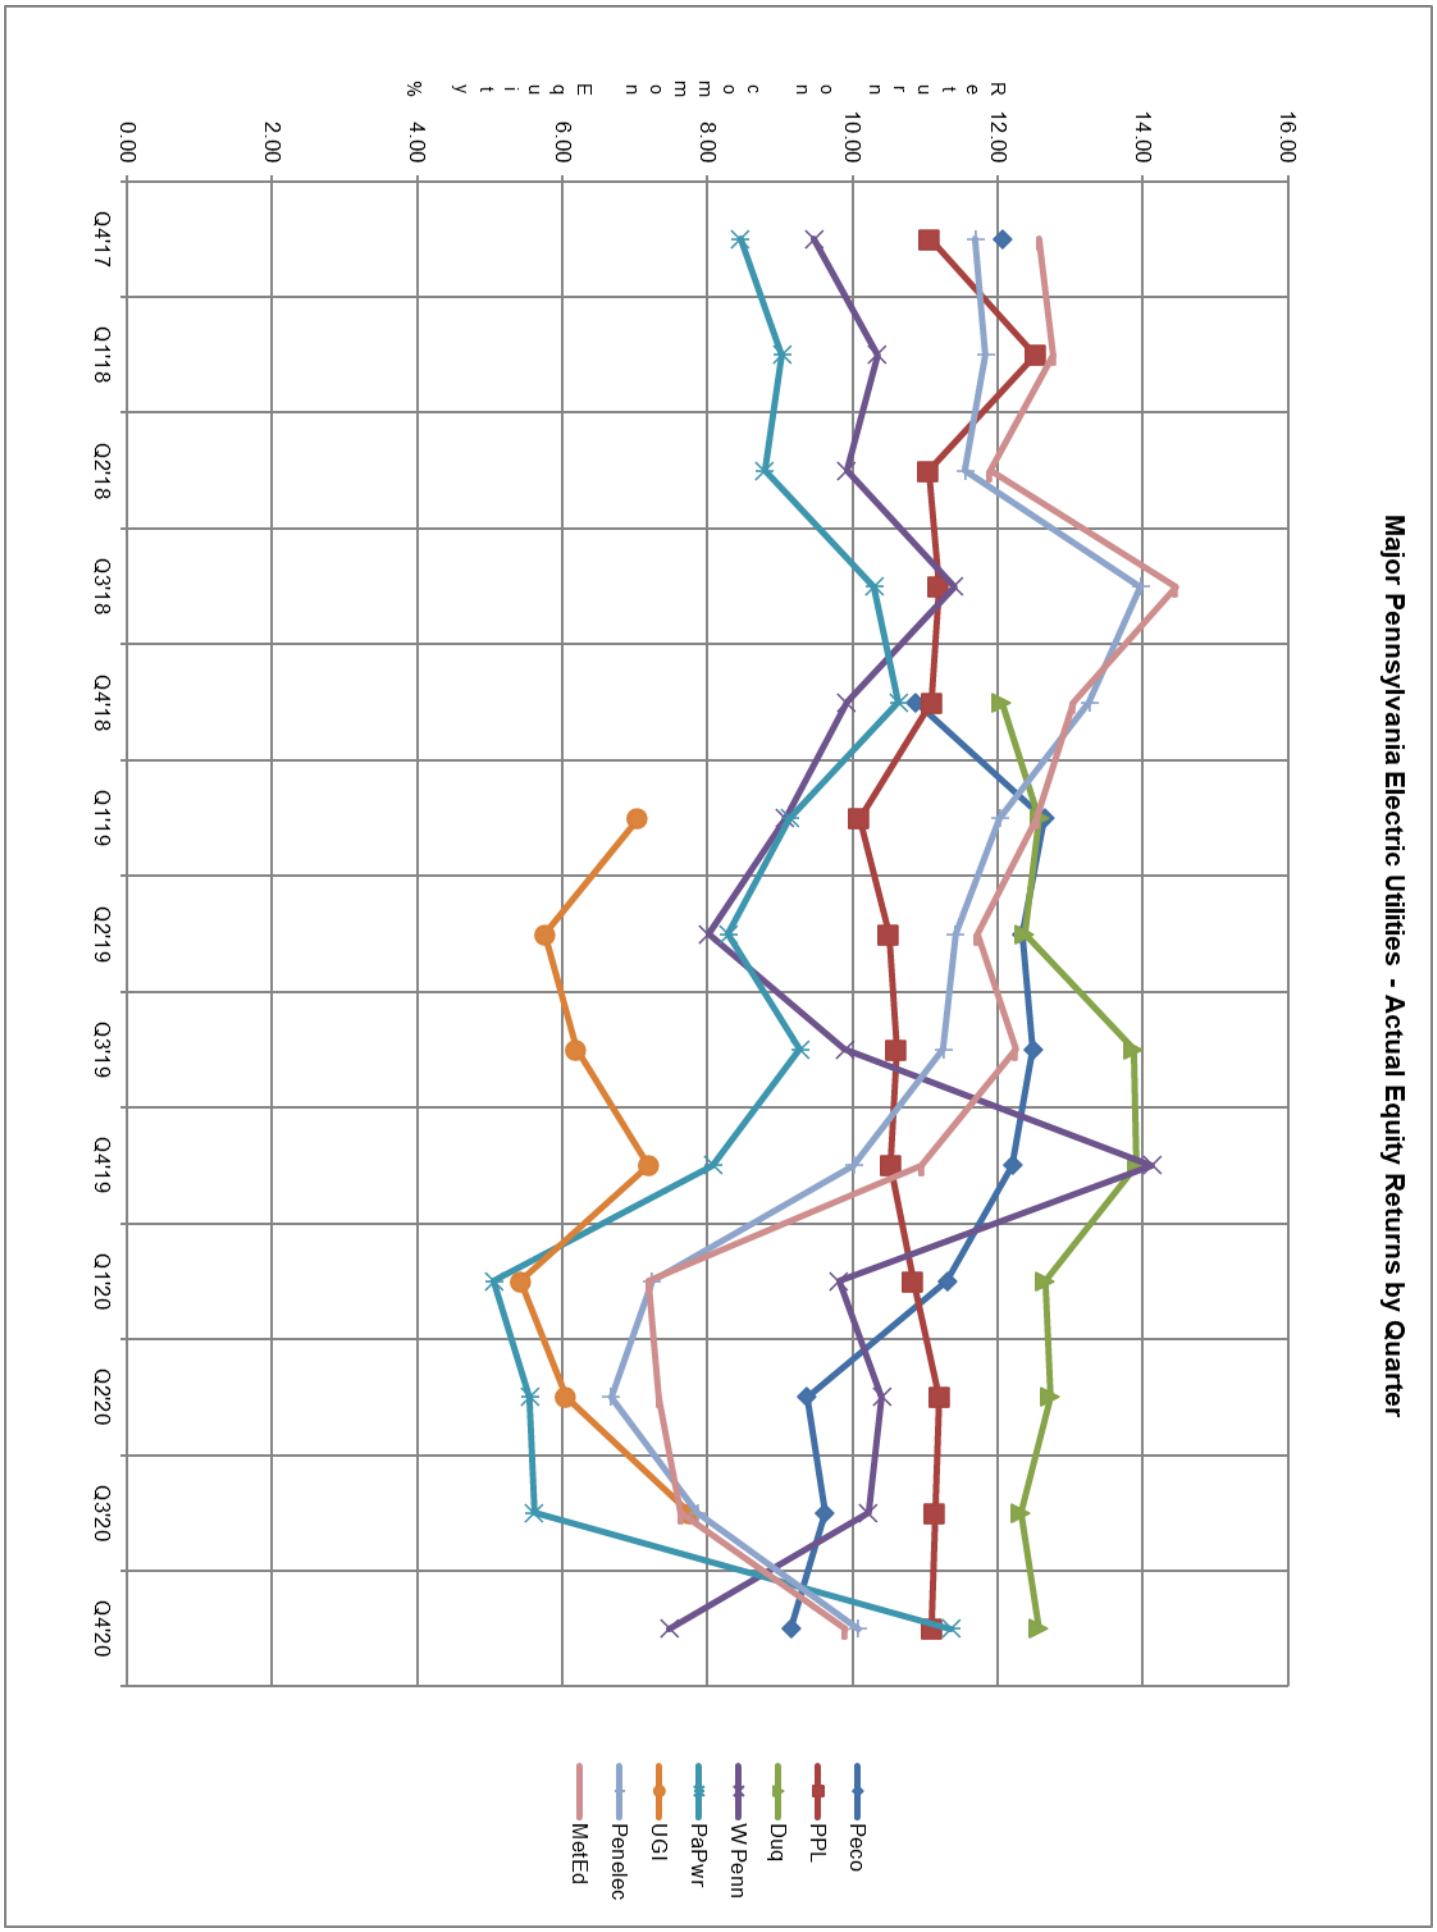
Questions pertaining to the preparation and contents of this Report should be directed to Ms. Erin Laudenslager, Manager - Finance, Bureau of Technical Utility Services, at (717) 705-4364.

[1] UGI Utilities, Inc. – Electric Division, PECO Energy Company – Gas Operations, Columbia Gas of Pennsylvania, Inc., and UGI Utilities, Inc. – Gas Division have rate filings at Docket Nos. R-2021-3023618, R-2020-3018929, R-2020-3018835, and R-2019-3015162 respectively, and filed a letter with the Secretary in place of a report in accordance with 52 Pa. Code § 71.4.

The equity return summaries that follow in Attachment A are, for each quarter;

ACTUAL

1. Based on actual results of operations



and

ADJUSTED

2. Based on company proposed pro forma and ratemaking adjustments

AQUA Pennsylvania – Wastewater	8.30	9.85
York Water Company	9.94	9.85
SUEZ Water Pennsylvania Inc.	10.17	9.85
Columbia Water Company	3.70	9.85
Newtown Artesian Water	12.92	9.85

* UGI Utilities, Inc. – Electric Division, PECO Energy Company – Gas Operations, Columbia Gas of Pennsylvania, Inc., and UGI Utilities, Inc. – Gas Division have rate filings at Docket Nos. R-2021-3023618, R-2020-3018929, R-2020-3018835, and R-2019-3015162 respectively, and filed a letter with the Secretary in place of a report in accordance with 52 Pa. Code § 71.4.

2 Each utility lists adjustments on Schedule B of their quarterly financial report.

3 The ROE is approved in a utility's most recent fully litigated base rate proceeding for which a final order was entered not more than two years prior to the effective date of the DSIC. If more than two years have elapsed between the entry of a final order and the DSIC effective date, the ROE is from this report. If the base rate proceeding is settled, without a stipulated ROE, the ROE is from this report.

Explanation of Discounted Cash Flow (DCF) and Capital Asset Pricing Model (CAPM)

Barometer Group Criteria

The criteria used for determining the industry barometer groups used to calculate ROEs in this report are as follows:

- 50% or more of the company's assets must be related to the jurisdictional utility industry;
- The company's stock must be publicly traded;
- Companies involved in merger & acquisition activity will be excluded;
- Investment information for the company must be available to the Commission from more than one source; and
- Geographic Regions:
  EDCs: *Value Line* East, Central, and West Group Electric Utility companies;
  NGDCs: *Value Line* Investment Survey's Natural Gas Utility industry group companies;
  Water/Wastewater: *Value Line* Investment Survey's Water Utility industry group companies.

The barometer group companies are reviewed by staff on a quarterly basis and make any changes to these companies based upon the criteria above.

ROE Calculations

The Commission consistently uses the DCF model to determine the appropriate cost of equity for utilities. In this report, the DSIC ROE is calculated using two DCF models.

TUS uses the following formula to calculate the current dividend DCF: $K = D_1/P_0 + G$

TUS uses the following formula to calculate the 52-week average dividend DCF: $K = D_0/P_a + G$

Definitions:

K	=	Cost of equity
D_1	=	Dividend expected during the year
	=	$D_0 + ½g$
D_0	=	Latest indicated dividend, obtained from Yahoo! Finance
g	=	Expected 5-year dividend growth rate of barometer group obtained from Value Line Investment Survey.
P_0	=	Current price of the stock, obtained from Yahoo! Finance
P_a	=	Average of high and low stock price over the latest 52-week period, obtained from Yahoo! Finance
G	=	Average of 5-year expected earnings growth rate forecasts obtained from Value Line, Zacks Investment Survey, Yahoo! Finance, and Morningstar.

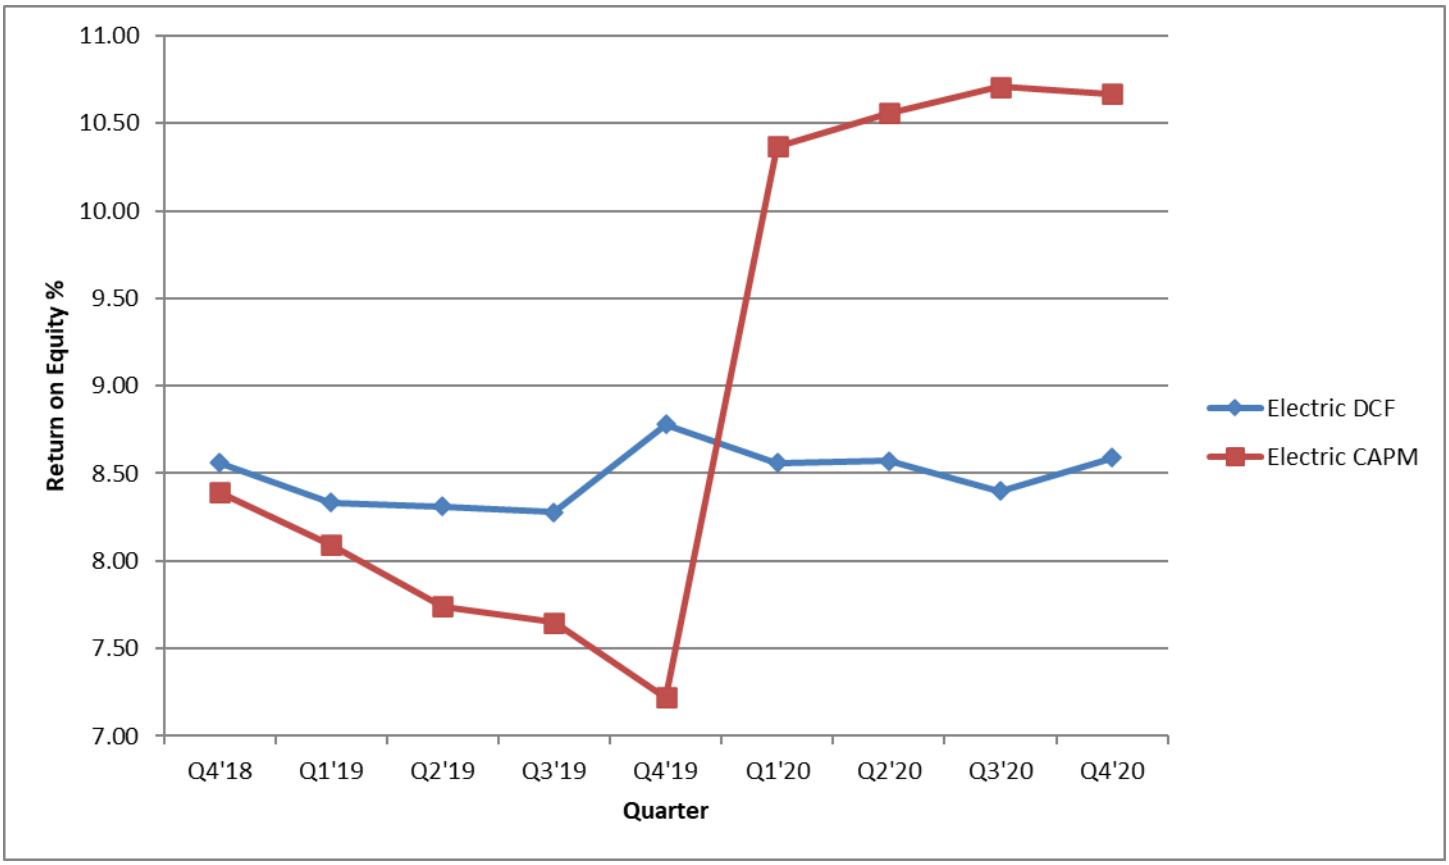
The CAPM uses the yield of a risk-free interest-bearing obligation plus a rate of return premium that is proportional to the systematic risk of an investment.

TUS uses the following formula to calculate CAPM: $K = \beta(R_m - R_f)$

Three components are necessary to calculate the CAPM cost of equity:

β	=	Beta, a measure of systematic risk for each stock
R_f	=	The risk-free rate of return, 10-year U.S. Treasury yields are used for R_f. Yields are taken from the previous two quarters and forecasted next four quarters.
R_m	=	Total return of the equity market as determined by the SBBI Yearbook

The Commission determines the ROE used for DSIC purposes based on the range of reasonableness from the DCF barometer group data, CAPM data, recent ROEs adjudicated by the Commission, and informed judgment.



The market indicated common equity cost rate range consists of data used from the barometer groups and is based on a series of calculations to average the DCF methods.

ESPECIALLY NOTEWORTHY:

On December 20th, ***Aerojet Rocketdyne Holdings*** *inked a definitive agreement with Lockheed Martin under which the latter would acquire the outstanding shares of AJRD. Turn to page 1746 for the terms of the deal, which has been unanimously approved by each company's Board of Directors.*

Financial services titan ***Morgan Stanley*** *is looking to further bolster its wealth management business. Just months off its industry-altering acquisition of E*TRADE, the company announced that it has agreed to purchase industry mate Eaton Vance. See our take on this development on page 1811.*

Slack Technologies *has continued to see breakneck top-line growth, and this has not gone unnoticed. Indeed, the business technology software operator recently agreed to be acquired by customer relationship management leader* ***salesforce.com****. Specifics of the deal are on pages 1834 and 1832, respectively.*

Meanwhile, commerce company ***Shopify*** *also continues to gain significant traction with consumers, benefiting from favorable demand trends as well as growth initiatives that should remain catalysts for the foreseeable future. Turn to page 1833 to learn more.*

The Water Utility Industry consists of companies that provide water services mostly to residential customers. The group continues to be highly ranked among the 96 industries that are followed by *Value Line*.

Over the past three months since our last report, these stocks have had a wider range of returns than is typical for this industry. Even though theses equities are sought out by investors for their well-defined earnings and good dividend growth prospects, they have performed well, despite the recent strong market showing. We attribute this partially to investors willing to pay a steep premium to own these relatively scarce stocks.

The fundamentals of the Water Industry have not changed much in the past 10 years. Previously, in order to keep customers' bills low, water companies did not invest the funds required to keep their pipelines and wastewater facilities in top condition. As a result, over the past decade, they have been pouring large amounts of money into upgrading their assets. Despite the progress made, much of the nation's water infrastructure is in less than ideal shape, with some systems having pipes that were installed 50 to 75 years ago.

Most water districts in the United States are run by municipalities and states. Indeed, when the smallest districts are included, there are over 100,000 separate domestic entities that provide water services. Consolidation has been ongoing in this sector, as the smaller less-efficient operators are being absorbed, by larger players.

External debt is used frequently to fund these major construction projects that are in progress.

As regulated companies, the members of this group are allowed to act as monopolies. However, to offset the lack of competition, water utilities permit state regulators to determine the rates they can charge. Unlike other regulated industries, water stands out for its generally constructive relationship with its overseers. This is a major reason why the equities of these companies have been so successful.

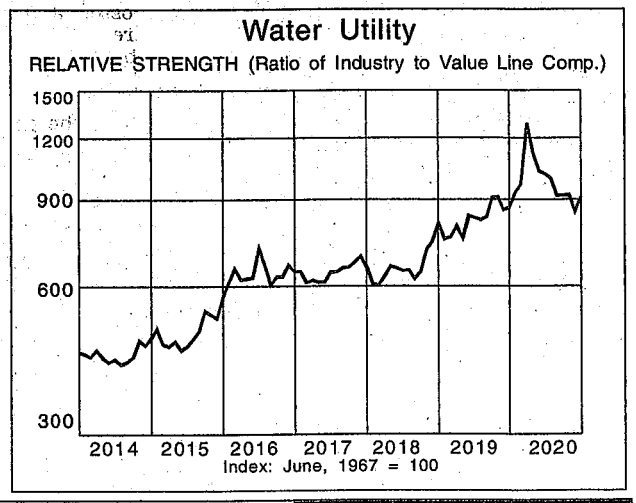
Strong Demand, Few Stocks

One of the trademarks of the Water Utility Industry is that there are only eight publicly traded equities that we follow. Moreover, of this group only two fall under the definition of being Large Cap stocks (having a market capitalization of over $10 billion (*American Water Works* and *Essential Utilities*.) Four are classified as Mid Cap ($1 billion to under $5 billion). Included in this group, are *American States Water*, *California Water*, *Middlesex Water*, and *SJW Group*. The Small Cap stocks (under $1 billion) are *Consolidated Water* and *York Water*. Combined, the total market cap of the entire industry is under $50 billion. Thus, there is a limited pool of shares for investors wanting to have a presence in the space. It's also one of the reasons why water stocks trade with such high Price Earnings ratios, as people are willing to pay a steep premium to own them.

Industry Fundamentals

As we mentioned, the average age of water pipelines in the United States is estimated to be more than 50 years old, with it not being unusual for some pipes to having been laid 75 to 100 years ago. Thus, capital budgets are usually burdensome, as miles and miles of new pipe are installed annually. Also, because of the size of the outlays, not all of the expenditures can be financed with internally generated funds. Many in the industry have to rely upon debt. Thus, while the normal Financial Strength rating in the group is a B+ to a B++, *California Water* is the only one that rates a grade as high as A.

Consolidation remains ongoing, as many of the smaller water companies are inefficient and undercapitalized. The large caps often absorb many water districts each year. Regulators are usually not bothered by this because the results can be better service for the customers and sometimes even lower bills. *American Water Works* uses the growth by acquisition strategy more than its peers, and we don't think that the situation will change anytime soon.



Another of the industry's attractive attributes is its regulatory climate, or basically the relationship between the water companies and authorities. Regulated businesses and utilities are often involved in disagreements and lawsuits. An example of this would be electric and gas companies and the states they operate in. Since authorities establish the rate of return that utilities can earn, a constructive relationship between the parties cannot be underestimated.

INDUSTRY TIMELINESS: 9 (of 96)

Conclusion

As noted, there are a handful of opportunities here that momentum accounts may find attractive. However, due to the strong showing of many of the stocks, long-term total return potential here is often not just underwhelming, but well below that of the average stock covered by *Value Line*. Unfortunately, this seems to be the case even on a risk-adjusted basis. Indeed, many of these equities are already trading within their 2023-2025 projected Target Price Range. Thus, despite all of its positives, investors with a long-term horizon may want to look elsewhere, as a lot of good news is already factored into share prices. As always, we advise subscribers to read each individual report before investing to better understand the level of risk being assumed.

BUSINESS: American States Water Co. operates as a holding company. Through its principal subsidiary, Golden State Water Co., it supplies water to 260,708 customers in 10 California counties. Service areas include the metropolitan areas of Los Angeles and Orange Counties. The company also provides electricity to 24,420 customers in Big Bear Lake and San Bernardino Cnty. Provides water & wastewater services to U.S. military bases through its ASUS subsidiary. Sold Chaparral City Wtr. of AZ. (6/11). Employs 841. BlackRock, Inc. owns 15.9% of out. shares; Vanguard, 11.9%; off. & dir. 1.0%. (4/20 Proxy). Chairman: Lloyd Ross. Pres. & CEO: Robert Sprowls. Inc: CA. Address: 630 East Foothill Blvd., San Dimas, CA 91773. Tel: 909-394-3600. Internet: www.aswater.com.

American States Water probably turned in flattish results in 2020. In the key water segment, higher rates implemented retroactively in 2019 caused a reduction in administrative costs that wasn't replicated last year. A higher effective tax rate and an increase in other operating expenses also contributed to a weaker showing. Nonregulated operations also likely posted a negative comparison due to a decrease in construction activity on military bases. An improved performance from the electric business was not enough to offset these negatives. All told, for the full year, the company's share net likely declined about $0.03, to $2.25.

We look for earnings to get back on track this year, however. This is based on our expectations that the company's expense ratios revert to normal levels. The nonregulated businesses should also do much better, as more military bases in the United States are privatized (more below). In sum, share earnings could well advance a healthy 7%, to $2.40.

A new application for rates should not be ruled upon for some time. As per California procedure, Golden States Water filed a general rate case last year seeking higher tariffs for the years 2022-2024. A final decision by state authorities is not expected until very late this year. The outcome will have a major impact on the utility's profits for this three-year period. We are assuming a reasonable decision in our projections, as relations with the state regulators have generally been constructive.

Nonregulated business should provide an earnings boost. American States' contract service operations ought to make inroads in this market as, more domestic military installations conduct bidding processes to have outside companies provide water to these bases. Returns in this sector are higher than the regulated businesses. The company has already proven itself in this area, as it has won a number of these 50-year contracts.

These shares do not stand out at this time. AWR is ranked to underperform the market averages in the year ahead. Furthermore, long-term prospects are not bright either, as the equity is currently trading near the high end of our 2023-2025 Target Price Range.

2021					

BUSINESS: American Water Works Company, Inc. is the largest investor-owned water and wastewater utility in the U.S., providing services to approximately 15 million people in 46 states. Nonregulated business assists municipalities and military bases with the maintenance and upkeep as well. Regulated operations made up 86% of 2019 revenues. New Jersey is its largest market accounting for 24.6% of regulated revenues; Pennsylvania, 22.3%; Missouri, 10.5%. Has 6,800 employees. The Vanguard Grp, owns 12.4% of outstanding shares; BlackRock, Inc., 8.7%; officers & directors, less than 1.0%. (3/20 Proxy). President & CEO: Susan N. Story. Chairman: George MacKenzie. Address: 1 Water Street, Camden, NJ 08102. Tel.: 856-346-8200. Internet: www.amwater.com.

American Water Works probably completed another strong year. In 2020, we think the water utility posted solid earnings growth for the third consecutive year. Indeed, we estimate that its share net rose nearly 14% to $3.90. Much of this can be attributed to the demand for water by residential customers not being impacted much by the state of the economy.

The positive profit trend should continue this year. Through the bottom-line gain will likely not match last year's rate, American Water should still see a solid 9% increase in earnings per share.

Acquisitions should remain a key part of the growth strategy. The utility has been purchasing many smaller municipally run water districts for years. Many of these entities are extremely inefficient and lack the financial wherewithal to replace their aging pipelines. American Water has a proven track record of absorbing new assets and streamlining costs, all while improving service. It's likely because of these two factors that regulators have treated the company so constructively.

The construction budget is enormous, but manageable. Management targeted $1.9 billion to refurbish and expand its existing water infrastructure in 2019. What's more, the cost of continuing the program should average about $2 billion annually over the next decade. Internally generated funds should cover a good deal of the funds needed, but the company has been issuing bonds to finance the difference. Indeed, its long-term debt-to-total capital ratio has reached the 60% mark. New equity issuance has been very restrained, and shares outstanding have increased only around 4% over the past 11 years. As the equity has performed well over that time span, management may want to consider selling new stock as a way of improving its finances.

The dividend ought to be hiked later this year. At the next meeting in February, we expect the quarterly payout to be raised 9.3%, or $0.05 per share, to $0.60. Moreover, this healthy rate of growth is probably sustainable through mid-decade.

These shares remain timely. However, like most in the water utility group, total return prospects through 2023-2025 are well below the *Value Line* median.

BUSINESS: California Water Service Group provides regulated and nonregulated water service to 489,600 customers in 100 communities in the state of California. Accounts for over 94% of total customers. Also operates in Washington, New Mexico, and Hawaii. Main service areas: San Francisco Bay area, Sacramento Valley, Salinas Valley, San Joaquin Valley & parts of Los Angeles. Acquired Rio Grande Corp; West Hawaii Utilities (9/08). Revenue breakdown, '19: residential, 67%; business, 20%; industrial, 5%; public authorities, 5%; other 3%. Off. and dir. own 1% of common stock (4/20 proxy). Has 1,184 employees. Pres. and CEO: Martin A. Kropelnicki. Inc.: DE. Addr.: 1720 North First St., San Jose, CA 95112-4598. Tel.: 408-367-8200. Internet: www.calwatergroup.com.

California Water Service Group's 2018 general rate case has officially been approved. The California Public Utilities Commission (CPUC) has fully adopted the proposal. Specifically, the subsequent to CPUC giving California Water the nod, the company is now authorized to invest more than $825 million through 2021 for various infrastructure upgrades, such as improvements to its water distribution system, treatment facilities, and piping systems. Because of this development, California Water's third-quarter financial results reflect the application and recording of certain assets and revenues recovered under the new rate decision. Moreover, the company has been approved to boost revenues by increasing customer rates beginning this year through 2022.

All things considered, our financial projections are being raised across the board. For 2020, the company likely generated share profits of $2.00 (up from our previous call of $0.85) from revenues of $800 million (up from $730 million). Modest top-line growth is probably in the cards this year, given the favorable rate case decision mentioned above, coupled with the likelihood for sustainable water consumption, though the bottom line may contract by a dime, largely due to the tough year-over-year comparison.

California Water's subsidiary, Hawaii Water, announced it will acquire wastewater system assets from Keauhou Community Services. The deal, which would add roughly 1,500 customers to Hawaii Water's roster, is pending approval by local regulators. Financial details were not disclosed. Finally, the asset purchase comes off the heels of its recent acquisition of Rainier Water Company in Washington State. On top of expanding populations, we think bolt-on asset agreements will be par for the course.

Short-term investors are best suited here. The issue has been upgraded one notch for Timeliness, to 2 (Above Average). Notably, the stock price has risen more than 15% since our October review. That said, we think it would be prudent for patient accounts to remain on the sidelines, for now, as total return potential out to 2023-2025 does not stand out at recent levels.

BUSINESS: Consolidated Water Co. Ltd. develops and operates desalination plants and water distribution systems in areas where naturally occurring supplies of water are scarce. It provides water in the Cayman Islands, the Bahamas, and the British Virgin Islands. At 12/31/19, it operated 12 plants with a capacity of 25.6 million gallons per day. Sold Bali operations and divested Belize assets in '19. Also manufactures products for the industry through Aerex sub. Inc.: Cayman Is. Employs 105. Pres./CEO: F. McTaggart. Based on 4/19 proxy Offs./ Dirs. own 4.8% of stock; Amundi Asset; 7.7%; BlackRock, 5.6%. (No proxy filed in 2020). Addr.: Regatta Off. Pk. Windward-Three, West Bay Rd., P.O. Box 1114 Grand Cayman, KYI-1102, Cayman Is. Tel.: (345) 945-4277. Int.: www.cwco.com.

Consolidated Water is different from all other companies in the Water Utility Industry. The builder and operator of desalination plants does the majority of its business outside of the United States. Thus, it is subject to the laws and regulations of foreign countries, which have not been beneficial to the company over the past several years.

The long-planned Mexican desalination plant has been shelved. Consolidated began planning for the proposed plant almost a decade ago. The Rosarito project was to initially supply 50 million gallons per day of potable water to the city of Tijuana. In time, the facility's capacity was to double to provide 100 million gallons per day. The company placed significant importance on this project and spent a considerable amount of funds going through a rigorous planning process. Legal issues arose in the latter part of 2019, and Consolidated's management seems to believe that it will no longer be built. The company has filed a lawsuit, but judging the outcome is difficult.

Earnings have been reclassified. In the third-quarter report, the Rosarito project is now considered a discontinued operation, and earnings statements for the entire year seem to have been restated.

The Rosarito project is the second-straight much-ballyhooed plant to fail. Several years ago, the company built a desalination plant in Bali, Indonesia to much fanfare due to the island's urgent need for fresh water. The facility was built on speculation, however. Problems with the government arose causing Consolidated to exit the business.

Finances are not as strong as they appear. Despite having just about no debt whatsoever, the possibility of Rosarito-related writeoffs could put a dent in the balance sheet.

These shares are ranked to underperform the market in the year ahead. Moreover, the company's prospects remain undefined following the problems in Mexico. While the world continues to be in great need of potable water, Consolidated is having a difficult time capitalizing on it. Much of this has to do with the fact that these arid regions often aren't easy places to conduct business.

James A. Flood *January 8, 2021*

(A) Fully diluted earnings. Excludes gains from discontinued operations: '17, $0.07 a share; '18, $0.07 a share; '19, $0.24 a share; losses in 2020 of $0.30 a share. Next earnings report due mid-February.
(B) Dividends historically paid in late January, April, July, and October. ■ Dividend reinvestment plan available.
(C) In millions, adjusted for stock split.
(D) Includes intangibles. As of 9/30/20, $17.7 million/$1.17 a share.

2021					

BUSINESS: Essential Utilities, Inc. became the new name for Aqua America on Feb. 3, 2020, to reflect the acquisition of Peoples, a natural gas utility, which occurred in 3/20. In 2019, Aqua Amer. provided water and wastewater services to about three million people in PA, OH, TX, IL, NC, NJ, IN, and VA. Employed 1,583. Acquired AquaSource, 7/13; North Maine Utilities, 7/15; and others. Water supply revenues 2019: residential, 58%; commercial, 16%; industrial, wastewater & other, 26%. Off. & dir. own less than 1% of the common stock; BlackRock, 10.5%; Vanguard, 10.4%; (4/20 proxy). Canadian Pension Plan about 8.8%. Pres. & CEO: Christopher Franklin. Inc.: PA Addr.: 762 West Lancaster Ave., Bryn Mawr, PA 19010. Tel.: 610-525-1400. Int.: www.essential.co.

Essential Utilities' prospects should be better defined going forward. The basic makeup of the company was greatly altered last March when the water company (formerly know as Aqua America), paid $4.3 billion, and assumed over $1 billion in debt, to acquire Peoples, a large natural gas concern. Due to the transaction, Essential had to absorb a number of one-time charges related to the acquisition. Following this year's first quarter, year-over-year comparisons will become more meaningful. All told, eliminating some of the costs incurred in 2020, we estimate that Essential's share net can climb 14%, to $1.20, in 2021. *(Please note: Management was scheduled to hold a conference call providing guidance for 2021 shortly after this report was made public.)*

Dividend growth prospects are good. Following the merger, the board raised the quarterly payout 7%. We expect this rate to be maintained over the next three- to five-year period.

The company has an ambitious capital spending program. On the water side of the business, like almost all of its peers, Essential is in the midst of spending heavily to replace aging pipelines. It's also making outlays to modernize the natural gas infrastructure. Overall, the construction budget should total close to $3.0 billion over the 2020-2022 period.

Finances have weakened. Despite the large acquisition and assumption of debt, the balance sheet is in decent shape with long-term debt accounting for slightly over half of total capital. Nevertheless, we are lowering its Financial Strength two notches to B+, which is an average rating.

Regulation will continue to have a huge impact on operations. In the water utility sector, state authorities treat companies under their domain relatively constructively. In the gas business, the same cannot be said, as regulators and gas utilities seem to clash more often regarding rate hikes and allowed returns.

Shares of Essential have done well since our October report. They are ranked to only perform in line with the market averages in the coming year, though. Moreover, as is the case with most members of this group, CWCO's total return prospects to 2023-2025 are subpar.

BUSINESS: Middlesex Water Company engages in the ownership and operation of regulated water utility systems in New Jersey, Delaware, and Pennsylvania. It also operates water and wastewater systems under contract on behalf of municipal and private clients in NJ and DE. Its Middlesex System provides water services to 61,000 retail customers, primarily in Middlesex County, New Jersey. In 2019, the Middlesex System accounted for 60% of operating revenues. At 12/31/19, the company had 352 employees. Incorporated: NJ. President, CEO, and Chairman: Dennis W. Doll. Officers & directors own 3.1% of the com. stock; BlackRock Inst. Trust Co., 7.7% (4/20 proxy). Add.: 485 C Route 1 South, Suite 400, Iselin, NJ 08830. Tel.: 732-634-1500. Int.: www.middlesexwater.com.

Middlesex Water reported better-than-expected bottom-line results in the third quarter. Notably, the company earned $0.72 a share, or 9% above the previous-year tally. The strong performance stemmed largely from lower taxes due to regulatory accounting changes, as well as higher operating income. Meanwhile, despite slightly missing our $42 million mark, revenues of nearly $40 million (up 6% year over year) were aided by increased residential and wholesale water consumption, along with a wider customer base in its Delaware system.

All in all, we now expect Middlesex Water to close out 2020 with revenues of $142 million (down from our previous call of $145 million) and share net of $2.20 (up from $2.15). For this year, modest top- and bottom-line growth is probably in the cards. Water consumption should stay elevated as personal hygiene remains a top priority. Assuming the economy gets back on track in the near term, we expect the reopening of businesses and resumed construction and industrial projects to boost wholesale consumption.

Infrastructure spending is apt to be robust through mid-decade. Specifically, Middlesex's Water For Tomorrow initiative has earmarked investment funds of $300 million that will be used to improve watermains, pipe systems, wastewater treatment facilities, and other vital infrastructure upgrades. To supplement its spending, we suspect management can pass along some of these costs to consumers via periodic regulator-approved rate hikes.

The stock etched a fresh high-water mark during the December interim. Based on our Timeliness Ranking System, Middlesex shares are slated as a top selection (1) for relative year-ahead price performance and, thus, ought to appeal to momentum accounts. On the other hand, we continue to recommend that subscribers with a long-term bent remain on the sidelines, as most of the growth we envision over the coming three to five years appears to already be factored into the current quotation. Moreover, even after recently increasing the quarterly payout by 6%, the dividend yield is subpar.

Nicholas P. Patrikis *January 8, 2021*

BUSINESS: SJW Group engages in the production, purchase, storage, purification, distribution, and retail sale of water. It provides water service to approximately 231,000 connections with a total population of roughly one million people in the San Jose area and 16,000 connections that reach about 49,000 residents in the region between San Antonio and Austin, Texas. The company merged with Connecticut Water (10/19) which provides service to approx. 138,000 connections with a total population of 450,000 people. Has 361 employees. Officers and directors own 8.3% of outstanding shares (3/20 proxy). Chairman & CEO: Richard Roth. Incorporated: California. Address: 110 West Taylor Street, San Jose, CA 95110. Telephone: (408) 279-7800. Internet: www.sjwater.com.

SJW Group reported solid third-quarter financial results. The regulated water utility posted revenues of $166 million, a jump of 46% year over year, and earnings of $0.91 per share, nearly triple the year-earlier tally in the September interim. Underpinning the impressive advance was approximately $37 million in new revenues associated with the CTWS merger, roughly $5 million linked to water rate increases and higher customer usage, and about $10 million in reserve revenues recognized from previous years. Moreover, COVID-19-related disruptions that hampered results in previous periods have largely subsided, and merger-related expenses have notably waned.

Our 2020 share-profit forecast sits a nickel above management's upper guidance range. Our slightly-more-optimistic call for earnings of $2.10 per share stems from the recent outperformance, as well as improving post-merger operating metrics. Meanwhile, we are adding $5 million to our top-line estimate, to $560 million. For 2021, we currently look for revenues and earnings to expand 5% and 21%, respectively.

SJW Group is well positioned for long-term growth, in our view. For one, its recently bolstered geographic footprint now spans four states, which augurs well for an expanding customer base and increased operational synergies. Too, the top line ought to get a boost from the implementation of periodic rate hikes. Meanwhile, we think aggressive capital investment to replace and upgrade aging infrastructure, such as watermains, pipe systems, and treatment facilities is likely on tap. Lastly, an improving economic backdrop and a renewed focus on personal hygiene from the general public should support higher consumer water consumption in the coming years.

Strong business prospects aside, we are hesitant to recommend the stock at recent levels. Unranked SJW shares have risen about 10% in value since our October review, and are currently trading inside our 3- to 5-year Target Price Range. The dividend yield is merely average, as well. Thus, we suggest interested subscribers remain on the sidelines until a better entry point is available.

Nicholas P. Patrikis *January 8, 2021*

(A) Diluted earnings. Excludes nonrecurring losses: '04, $3.78; '05, $1.09; '06, $16.36; '08, $1.22; '10, $0.46. GAAP accounting as of 2013. Next earnings report due early Feb.
Quarterly egs. may not add due to rounding.
(B) Dividends historically paid in early March, June, September, and December. ■ Div'd reinvestment plan available.
(C) In millions.
(D) Paid special dividend of $0.17 per share on 11/17.
(E) Suspended due to recent CTWS merger.

BUSINESS: The York Water Company is the oldest investor-owned regulated water utility in the United States. It has operated continuously since 1816. As of December 31, 2019, the company's average daily availability was 35.4 million gallons and its service territory had an estimated population of 201,000. Has more than 71,400 customers. Residential customers accounted for 65% of 2019 revenues; commercial and industrial (28%); other (7%). It also provides sewer billing services. Incorporated: PA. York had 106 full-time employees at 12/31/19. President/Chief Executive Officer: J.T. Hand. Officers/directors own 1.2% of the common stock (3/20 proxy). Address: 130 East Market Street, York, Pennsylvania 17401. Telephone: (717) 845-3601. Internet: www.yorkwater.com.

York Water raised its quarterly dividend payment for the 24th-consecutive year. The distribution was increased 4%, to $0.1874 per share, equating to an annual return of about 1.6%. Though the water utility has historically been a consistent income generator, given several years of share-price advances, conservative yield-seeking investors might be better suited elsewhere at this juncture.

We think York delivered strong top- and bottom-line growth in 2020, which will likely be followed up by moderate expansion in 2021. The company posted revenues of $14.3 million and earnings of $0.36 a share in the September period, improving decently on a year-over-year basis and falling relatively in line with expectations. Fourth-quarter results were probably solid, too, driven by higher household water consumption and an expanding customer base. For this year, we are reiterating our calls for low single-digit revenue and earnings growth, to $54.5 million and $1.35 per share, respectively.

Long-term business prospects are bright, and should be accompanied by aggressive spending on infrastructure upgrades. Since our previous review, management invested nearly $7 million on a standpipe and other construction projects, with an estimated $12 million allocation likely tapped in the December period. Over the coming years, as the company's water delivery infrastructure ages and its customer base expands, York ought to spend heavily on pipe replacements, wastewater treatment facilities, service lines, and pumping stations. Overall, York should be able to recoup most of these investments via increased customer rates through its Distribution Systems Improvement Charge program, which requires approval from Pennsylvania regulators.

The stock price is hovering around recently etched all-time highs. Over the coming six to 12 months, YORW shares are pegged to outpace the broader market averages, thus ought to appeal to subscribers with a short-term horizon. On the other hand, 3- to 5-year total return potential is unenticing at recent levels. In fact, long-time investors might want to consider booking some profits at these elevated valuations.

EAST WHITELAND TOWNSHIP

RECONCILIATION OF THE GOVERNMENTAL FUNDS STATEMENT OF REVENUES, EXPENDITURES AND CHANGES IN FUND BALANCES TO THE STATEMENT OF ACTIVITIES

YEAR ENDED DECEMBER 31, 2018

NET CHANGE IN FUND BALANCES - TOTAL GOVERNMENTAL FUNDS	$	3,237,452
Capital outlays are reported in Governmental Funds as expenditures. However, in the statement of activities, the cost of those assets is allocated over their estimated useful lives as depreciation expense. This is the amount by which depreciation exceeds (2,026,819) capital outlays ($1,444,679) in the current period.		(582,140)
Because some property taxes will not be collected for several months after the Township's fiscal year ends, they are not considered as "available" revenues in the Governmental Funds. Deferred tax revenues increased by this amount this year.		(999)
The issuance of long-term debt (e.g., bonds, leases) provides current financial resources to Governmental Funds, while the repayment of the principal of long-term debt consumes the current financial resources of Governmental Funds. Neither transaction, however, has any effect on net position. Also, Governmental Funds report the effect of issuance costs, premiums, discounts and similar items when debt is first issued, whereas these amounts are deferred and amortized in the statement of activities. This amount is the net effect of these differences in the treatment of long-term debt and related items.		
Repayment of bond principal		285,000
Amortization of bond discount and premium		1,801
Amortization of deferred amount on refunding		(15,444)
Repayment of capital lease		2,913
Some expenses reported in the statement of activities do not require the use of current financial resources and, therefore, are not reported as expenditures in the Governmental Funds.		(1,713,590)
In the statement of activities, compensated absences (vacations and sick leave) are measured by the amounts earned during the year. In the Governmental Funds, however, expenditures for these items are measured by the amount of financial resources used (essentially, the amounts paid).		25,802
Interest on long-term debt in the statement of activities differs from the amount reported in the Governmental Funds because interest is recognized as an expenditure in the funds when it is due and thus requires the use of current financial resources. In the statement of activities, however, interest expense is recognized as the interest accrues, regardless of when it is due.		17,604
CHANGE IN NET POSITION OF GOVERNMENTAL ACTIVITIES	$	1,258,399

See accompanying notes to the basic financial statements.

Alex,
The total number of accounts billed for the last quarter of 2020 was:

District A/B – 3053
District C - 28
District D - 279
District E - 522
High Volume – 13

Total accounts – 3,895

District E (Atwater) has been built out since the last bill of 2020 for a total of 545 accounts.

Thank you,

John Neild
Director of Public Works
East Whiteland Township

1. EXECUTIVE SUMMARY

As required by PA Act 12 of 2016 and following the guidelines of the "Uniform System of Accounts for Class A Wastewater Utilities", an assessment of the tangible assets of facilities and equipment of the East Whiteland Township wastewater utility has been prepared as part of the asset purchase agreement with Aqua Pennsylvania Wastewater, Inc. (Aqua). Each facility and class of equipment was coded based on Section 300 of the "Wastewater Utility Plant Accounts" of the Guidelines. The Asset Survey included the 12 Township owned pump stations and associated force mains, and approximately 60 miles of gravity sewers. Asset cost information was derived from various sources. Site visits to each of the facilities were conducted to inventory the equipment and assess conditions.

Site inventories and facility conditions were documented on facility information sheets and summarized in the facility description summaries.

Conditions of the Pump Stations varies from fair to very good based on the age and/or completion of recent improvements.

Gravity sewer and force main conditions were not determined. The piping installation period ranges from approximately the late 1970s to 2019.

A complete list of the assets and available original costs is provided in Section 8 of this report.

2. PURPOSE OF REPORT

The purpose of this report is to "conduct an assessment of the tangible assets of the selling utility" per the requirements of PA Act 12 of 2016.

This engineering assessment will be used by the Utility Value Experts (UVEs) retained by both the seller (East Whiteland Township) and buyer (AQUA). The engineering assessment followed the practices and procedures of the Public Utility Commission (PUC) and National Association of Regulatory Utility Commissioners (NARUC) Systems of Accounts. The engineering assessment report documents the conditions and original costs of East Whiteland Township's assets that will be used as the common list for the UVEs to develop their appraisal of the system.

The report preparation process included meeting with key Township and Aqua representatives to identify and confirm specific information needed to support the assessment and to prepare the report, providing a mutually agreed upon scope of work with East Whiteland Township and Aqua. The inventory is a compilation of data gathered by the Township and Pennoni, developed from institutional knowledge, available records, maps, work orders, payment records from construction projects, GIS, site evaluations, and other sources to provide an inventory and listing.

This report contains the following:

- An inventory of the used and useful assets to be transferred, compiled by year and account (codes).
- A list of non-depreciable property such as land and rights-of-way.
- A review of system components, plans, and reports of key facilities. This includes:
  - Permitted discharges, including regulatory requirements
  - Pumping Stations (12 each), including force mains
  - Gravity collection system
  - Metering stations
- Summary of the operation and maintenance expenses based upon review of Township operating records.
- An assessment of the identified assets.
- Determination and/or establishment of an original cost of construction for each asset.

Assets were identified through various sources. Force main sizes and quantities were taken from GIS and project drawings. Pump Stations were field inventoried and evaluated; and, supplemented with information obtained from drawings, where available. Asset costs are based on Construction Escrow Releases/Estimates where available or estimated current cost and back calculated to the year of installation using the ENR Construction Cost Index.

A coding system as described in Section 300 of the Uniform System of Accounts for Class A Wastewater Utilities was used for classifying various assets. Section 300 as well as the listing of codes can be found in Appendix B. The entire Uniform System of Accounts can be found in the Digital Files.

3. SYSTEM DESCRIPTION

System Summary

East Whiteland Township is responsible for the safe collection and transmission of an average over 1.062 million gallons per day (MGD) of wastewater generated in southeastern Pennsylvania (A map of the service areas is located in Appendix A, Figure A1). East Whiteland Township's facilities serve residential, commercial, institutional, and industrial customers all within Chester County. The Township owns and operates a system consisting of 12 pump stations and associated force mains, and approximately 60 miles of gravity collection system mains and interceptor sewers for the conveyance of wastewater to the Valley Forge Sewer Authority Wastewater Treatment Plant via the Valley Creek Trunk Sewer. The Township does not have any property held for future use.

In addition to customers within the Township, East Whiteland Township also collects/conveys sewage to/from municipalities that border the Township including Malvern Borough, Tredyffrin Township Charlestown Township and Willistown Township. Agreements with these municipalities, (or entities operating their respective system) outline the responsibilities regarding this relationship.

4. INVENTORY OF ASSETS

4.1. PUMP STATIONS

P.S. 1 - AKA Deer Run PS

Facility Description (see attached Information Sheet)

P.S. 1 is located at 15 Deer Run Lane and is equipped with (2) 90-GPM dry pit submersible pumps. Wastewater is discharged through an 830 foot, 4-inch ACP force main that ties into the existing sewage collection system at Manhole 826 located on Conestoga Road near Deer Run Ln. The pump station was installed in 1976.

The pump wet well is (5-ft diameter, 12-ft deep) with 24-inch MH cover hatchway. The control panel is custom manufactured.

The Building (10-ft x 12-ft) is constructed of concrete with brick facade and asphalt shingle roof in good condition. The building contains florescent lighting and 1 steel door.

The Generator is a Generac SD00353G163, 35 KW unit with 132-gallon fuel tank. The Automatic Transfer Switch (ATS) is manufactured by Cummins Power Command.

The property is surrounded by a 136 LF 6-ft chain link with barbed wire fence.

Property Condition

The building is in good condition, the roof is in good condition and all HVAC systems appear to be in good condition.

OVERALL BUILDING AND FACILITY ASSESSMENT						
Pumps and controls are original and in fair condition. Building and other facilities are in good condition. Generator is was replaced in 2018 and is in very good condition.						

P.S. 2 - AKA Mill Lane PS

Facility Description (see attached Information Sheet)

P.S. 2 is located at 202 Conestoga Rd and is equipped with (3) 1600-GPM dry pit submersible pumps. Wastewater is discharged through a 3400 LF, 14-inch DIP force main that ties into the existing sewage collection system at Manhole 826 located on Conestoga Road near Deer Run Lane. The pump station was installed in 1976 and reconstructed 2013.

The pump wet well is Concrete (9-ft x 30-inch x 31-ft deep) with 42-inch x 42-inch and 36-inch x 36-inch hatchways. The control panel is manufactured by Healy-Ruff. There are (6) 12-inch gate valves and (3) 12-inch check valves installed in 2013. The influent line to the wet well contains a bar screen.

The Building (32-ft x 22-ft) is constructed of masonry block and asphalt shingle roof in good condition. The building contains 2 steel doors.

The Generator is an Onan DFEK-1207638, 500 KW unit with 850-gallon fuel tank. The Automatic Transfer Switch (ATS) is an ASCO 7000 series.

The property is surrounded by a 600 LF 6-ft cyclone with barbed wire fence.

Property Condition

The building is in very good condition, the roof is in good condition and all HVAC systems are in very good condition.

OVERALL BUILDING AND FACILITY ASSESSMENT						
The pump station was built in 2013 and is in excellent condition. The property is shared with the Police Department which includes their impoundment lot. The former pump station is used for storage, pumps and related equipment have been removed.						

P.S. 3 - AKA Wilburdale PS

Facility Description (see attached Information Sheet)

P.S. 3 is located at 101 Flat Rd. and is equipped with (2) 930-GPM submersible pumps. Wastewater is discharged through a 1935 LF, 10-inch PVC force main that ties into the existing sewage collection system at Manhole 1202 located on Flat Road by Sidley Road. The pump station was installed in 1979 and reconstructed 2017.

The pump wet well is precast concrete (12-ft dia. x appr. 18-ft deep) with 6-ft x 4.5-ft hatchway. There are (3) 4-inch gate valves, (2) 4-inch check valves within a (12.5-ft x 10-ft x 5-ft deep) valve box installed in 2017. The control panel is manufactured by Stacon.

The Building (15-ft x 13-ft) is constructed of concrete block and asphalt shingle roof in very good condition. The building contains outdoor walpacks lighting and 1 steel door.

The Generator is an MTU 4R0113DS50 50 KW unit with 185-gallon fuel tank. The Automatic Transfer Switch (ATS) is an ASCO 7000 series.

The property is not fenced.

Property Condition

The building is in very good condition, the roof is in very good condition.

OVERALL BUILDING AND FACILITY ASSESSMENT						
The facility was installed in 2017 and is in excellent condition.						

P.S. 4 - AKA Lee Boulevard PS

Facility Description (see attached Information Sheet)

P.S. 4 is located at 13 Lee Blvd and is equipped with (2) 470-GPM Submersible pumps. Wastewater is discharged through a 3310 LF, 8-inch DIP force main that ties into the existing sewage collection system at Manhole 1582 located on Yellow Spring Road at Lee Boulevard. The pump station was installed in 1987 and reconstructed 2007.

The pump wet well is precast concrete (9-ft diam. X 15-ft deep (est)) with 4.5-ft x 4.5-ft aluminum hatchway. There are (2) 6-inch check valves and (2) 6-inch gate valves. The control panel is manufactured by Flygt.

The Building (11.5-ft x 15.5-ft) is constructed of prefabricated masonry and asphalt shingle roof in good condition. The building contains Halogen wall pack lighting and 1 steel door.

The Generator is an Katolight D50FJJ4T2 50 KW unit with 140-gallon fuel tank. The Automatic Transfer Switch (ATS) is manufactured by ASCO.

The property is surrounded by a 115 LF 6-ft cyclone with barbed wire fence.

Property Condition

The building is in very good condition, the roof is in good condition.

P.S. 5 - AKA Meadowview PS

Facility Description (see attached Information Sheet)

P.S. 5 is located at 317 Swedesford Rd and is equipped with (2) 80-GPM submersible pumps. Wastewater is discharged through a 1245 LF, 4-inch ACP force main that ties into the existing sewage collection system at Manhole 822 located on Manor View Circle by Valley Creek Road. The pump station was installed in 1980.

The pump wet well is precast concrete (6-ft dia. x 12-ft deep) with 3-ft x 6-ft hatchway. There are (2) 4-inch check valves and (2) 4-inch plug valves. The control panel is custom manufactured.

The property is surrounded by a 112 LF chain link and wood stockade fence.

Property Condition

The facility is in fair condition.

P.S. 6 - AKA Flat Road PS

Facility Description (see attached Information Sheet)

P.S. 6 is located at 601 Flat Rd and is equipped with (2) 275-GPM submersible pumps. Wastewater is discharged through a 1655 LF, 6-inch ACP force main that ties into the existing sewage collection system at Manhole 1323 located on Great Valley Parkway parallel to Flat Road. The original pump station was installed in 1979. In January of 2019 a sinkhole developed at the station. This required the station to be reconstructed at a new location. The new station went online in 2019. Components, such as the control panel and pumps (2002), were incorporated from the decommissioned Frame Avenue Pump Station.

The pump wet well is precast concrete (8-ft diam. x 16.85-ft deep) with a 3-ft x 4-ft hatchway. There are (2) 4-inch check valves and (2) 4-inch gate valves. The control panel is manufactured by Flygt. The facility has no generator.

The property is not fenced in.

Property Condition

The facility is in very good condition.

OVERALL BUILDING AND FACILITY ASSESSMENT						
In January of 2019 a sinkhole developed at the station. This required the station to be reconstructed at a new location. The new station went online in 2019. Components, such as the control panel and pumps (2002), were incorporated from the decommissioned Frame Avenue Pump Station. All in very good condition.						

P.S. 7 - AKA Lapp Road PS

Facility Description (see attached Information Sheet)

P.S. 7 is located at 510 Lapp Rd and is equipped with (2) 315-GPM submersible pumps. Wastewater is discharged through a 3715 LF, 6-inch PVC force main that ties into the existing sewage collection system at Manhole 746 located on Valley Stream Parkway near Morehall Road. The pump station was installed in 1995 and upgraded in 2000.

The pump wet well is precast concrete (6-ft dia x 20-ft deep (est)) with 4-ft x 4-ft aluminum hatchway. There are (2) 4-inch check valves and (2) 4-inch gate valves. The control panel is manufactured by Flygt.

The Generator is an Onan DGDA-3384553 80 KW unit. The Automatic Transfer Switch (ATS) is an ASCO 300 series. The wet well is oversized to accommodate excess volume to compensate for the lack of a generator.

The property is surrounded by a 150 LF 60-ft chain link with barbed wire fence.

Property Condition

The facility is in fair condition.

OVERALL BUILDING AND FACILITY ASSESSMENT						
The overall facility condition is fair. Pump control panel was upgraded in 2006. Generator enclosure is rusting, generator is in good condition.						

P.S. 8 - AKA Westgate PS

Facility Description (see attached Information Sheet)

P.S. 8 is located at 331 Lancaster Ave and is equipped with (2) 700-GPM pumps. Wastewater is discharged through a 1620 LF, 8-in PVC force main that ties into the existing sewage collection system at Manhole 530 located on Lancaster Avenue near Maple Linden Lane. The pump station was installed in 1988 and upgraded in 2001.

The pump wet well is precast concrete (9-ft dia. x 12-ft deep) with aluminum 3-ft x 6-ft hatchway. There are (2) 6-inch check valves and (2) 6-inch gate valves. The control panel is manufactured by Flygt.

The Generator is an Onan DGEA 125 KW unit with integral fuel tank. The Automatic Transfer Switch (ATS) is manufactured by Onan.

The property is surrounded by a 150 LF 6-ft chain link with barbed wire fence.

Property Condition

The facility is in fair condition.

OVERALL BUILDING AND FACILITY ASSESSMENT						
The facility is in fair condition.						

P.S. 11 - AKA Hillbrook Circle PS

Facility Description (see attached Information Sheet)

P.S. 11 is located at 379 Conestoga Rd and is equipped with (2) 295-GPM submersible pumps. Wastewater is discharged through a 785 LF, 4-inch PVC force main that ties into the existing sewage collection system at Manhole 985 located on Clover Mill Lane near Craig Lane. The pump station was installed in 2000.

The pump wet well is precast concrete (8-ft diam x 25-ft deep) with 3-ft x 5-ft alum hatchway. There are (2) 4-inch check valves and (2) 4-inch gate valves. The control panel is manufactured by Flygt.

The Building (12-ft x 15-ft) is constructed of concrete block and asphalt shingle roof in good condition. The building contains florescent lighting and 1 steel door.

The Generator is an Onan DGCA-5007330GS 50 KW unit. The Automatic Transfer Switch (ATS) is manufactured by Cummins.

The property is not fenced.

Property Condition

The overall facility is in good condition. The building is in very good condition and the roof is in good condition.

OVERALL BUILDING AND FACILITY ASSESSMENT						
The overall facility is in good condition. The building is in very good condition and the roof is in good condition.						

P.S. 12 - AKA King Road PS

Facility Description (see attached Information Sheet)

P.S. 12 is located at 340 King Rd within an easement in Williston Township and is equipped with (2) 258-GPM Submersible pumps. Wastewater is discharged through a 2400 LF, 4-inch PVC force main that ties into the existing sewage collection system at Manhole 338 located on Amy Lane near W. King Road. The pump station was installed in 2004.

The pump wet well is precast concrete (7-ft diam. x 15-ft est) with 4-ft x 4.5-ft aluminum hatchway. There are (2) 4-inch check valves and (2) 4-inch gate valves. The control panel is manufactured by Flygt.

The Building (13-ft x 10-ft) is constructed of concrete block and asphalt shingle roof in good condition. The building contains halogen wall pack lighting and 1 steel door.

The Generator is an Onan DGHE-5636689B 50 KW unit with 145-gallon fuel tank. The Automatic Transfer Switch (ATS) is manufactured by Cummin Power Command.

The property is not fenced.

Property Condition

The building is in very good condition, the roof is in good condition and all HVAC systems are in good condition.

OVERALL BUILDING AND FACILITY ASSESSMENT						
The overall facility was in very good condition. The roof was in good condition.						

P.S. 13 - AKA Malvern Hunt PS

Facility Description (see attached Information Sheet)

P.S. 13 is located at 30 Corbin Dr and is equipped with (2) 300-GPM submersible pumps. Wastewater is discharged through a 2860 LF, 6-inch DIP force main that ties into the existing sewage collection system at Manhole 101 located on Chester Valley Trail near Swedesford Road. The pump station was installed in 2000.

The pump wet well is precast concrete (9-ft dia. x 15-ft deep (est)) with 7.5-ft x 6-ft aluminum hatchway. The control panel is manufactured by Flygt. There are (2) 6-inch check valves and (2) 6-inch gate valves. The influent line to the wet well contains a 3 HP Muffin Monster.

The Building (14-ft x 16-ft) is constructed of concrete block with stucco and asphalt shingle roof in very good condition. The building contains halogen wall pack lighting and 1 steel door.

The Generator is an Katolight D50FJJ4 50 KW unit with 150-gallon fuel tank. The Automatic Transfer Switch (ATS) is manufactured by Katolight.

The property is surrounded by a 200 LF 6-ft cyclone fence. This facility also has a chemical dosing system, which contains 100-gallon fuel tank and LMI Dosing pump. The system is not currently in use.

Property Condition

The building is in fair condition, the roof is in very good condition and all HVAC systems are in very good condition.

OVERALL BUILDING AND FACILITY ASSESSMENT						
The building, generator and control panels are all in fair condition. The pump station guide rails and some support bracket have begun to rust.						

P.S. 14 - AKA Planebrook Road PS

Facility Description (see attached Information Sheet)

P.S. 14 is located at 170 Cricket Drive and is equipped with (2) 390-GPM submersible pumps. Wastewater is discharged through a 2545 LF, 8-inch PVC force main that ties into the existing sewage collection system at Manhole 113 located on Phoenixville Pike at Chester Valley Trail. The pump station was installed in 2018.

The pump wet well is precast concrete (9-ft dia. x 18-ft Deep) with 6-ft x 6-ft aluminum hatchway. There are (2) 4-inch check valves and (6) 4-inch gate valves. The control panel is manufactured by Flygt/Stacon.

The Building (12.5-ft x 15.5-ft) is constructed of Concrete Block and asphalt shingle roof in very good condition. The building contains LED wall pack lighting and 1 steel door.

The Generator is an MTU4R0113 DS50 50 KW unit with 185-gallon fuel tank. The Automatic Transfer Switch (ATS) is an ASCO 7000 series.

The property is surrounded by a 225 LF 6-ft cyclone fence.

Property Condition

The building is in very good condition, the roof is in very good condition and all HVAC systems are in good condition.

OVERALL BUILDING AND FACILITY ASSESSMENT						
The facility was built in 2018, all components are in very good condition.						

4.2. COLLECTION SYSTEM

East Whiteland Township owns the collection system identified within this report. There are also privately owned systems within the Township that connect to the Township system. collection system generally consists of 8-inch to 36-inch gravity piping and laterals within the right of way. A map of the collection system can be found in Appendix A, Figure A1. Related cost data for the collection system can be found in Section 8 under account codes 361.21, 361.23, and 360.21.

4.3. METER PITS

A total of eleven (11) meter pits measure flow to/from the Township. However, East Whiteland Township only owns the following three (3):

- Erin Glen Meter located within the vicinity of Kerry lane and Iris way adjacent to Malvern Borough.
- Woodview Apartments Meter located within the East Whiteland Township portion of the apartment complex at the southeast corner of the Township.
- Mathews Road meter located on the border with Tredyffrin Township at the southeast corner of the Township.

All other meters are owned and operated by other municipalities or the Valley Forge Sewer Authority.

5. OWNED PROPERTY & EASEMENTS OF VALUE

Property that was directly purchased by the Township and easements acquired are listed in Section 8 – "List of Assets and Costs". The value of said easements are listed with a purchase price of $1 and included in the original purchase price of the facilities listed in Section 8 – "List of Assets and Costs".

6. REGULATORY REQUIREMENTS

3800-PM-WSFR0015 1/2011
Permit

pennsylvania
DEPARTMENT OF ENVIRONMENTAL PROTECTION

COMMONWEALTH OF PENNSYLVANIA
DEPARTMENT OF ENVIRONMENTAL PROTECTION
BUREAU OF POINT AND NON-POINT SOURCE MANAGEMENT

WATER QUALITY MANAGEMENT PERMIT

PERMIT NO. 1599418

AMENDMENT NO. _____

APS ID. 916602

AUTH. ID. 1139890

A. PERMITTEE (Name and Address): CLIENT ID#: **78789** **East Whiteland Township** **209 Conestoga Road** **Frazer, PA 19355**	B. PROJECT/FACILITY (Name): **Malvern Hunt WWTP**
C. LOCATION (Municipality, County): **East Whiteland Township, Chester County**	SITE ID#: **527339**

D. THIS PERMIT APPROVES THE OPERATION OF SEWAGE FACILITIES CONSISTING OF:

The Malvern Hunt Pump Station with comminutor, an influent bar screen, a two sell aerated treatment lagoon, a storage lagoon, a chlorine disinfection system, and spray fields.

Pump Stations: _____	Manure Storage:	Sewage Treatment Facility:		
Design Capacity: _____ GPM	Volume: _____ MG	Annual Average Flow:	**0.105**	MGD
	Freeboard: _____ inches	Design Hydraulic Capacity:	**0.128**	MGD
		Design Organic Capacity:	**222**	lb/day

E. APPROVAL GRANTED BY THIS PERMIT IS SUBJECT TO THE FOLLOWING:

1. **Permit Renewal:** All operations and procedures shall be in accordance with the Water Quality Management Permit application dated **5/23/2016**, its supporting documentation and addendums dated _____, which are hereby made a part of this permit.

   Amendments: All construction, operations and procedures shall be in accordance with the Water Quality Management Permit Amendment application dated _____ and its supporting documentation and addendums dated _____, which are hereby made a part of this amendment.

   Except for any herein approved modifications, all terms, conditions, supporting documentation and addendums approved under Water Quality Management Permit No. _____ dated _____ shall remain in effect.

   Transfers: Water Quality Management Permit No. _____ dated _____ and conditions, supporting documentation and addendums are also made part of this transfer.

2. Permit Conditions Relating to Sewerage are attached and made part of this permit.
3. Special Conditions **1 through XVII** are attached and made part of this permit.

F. THE AUTHORITY GRANTED BY THIS PERMIT IS SUBJECT TO THE FOLLOWING FURTHER QUALIFICATIONS:

1. If there is a conflict between the application or its supporting documents and amendments and the attached conditions, the attached conditions shall apply.
2. Failure to comply with the rules and regulations of DEP or with the terms or conditions of this permit shall void the authority given to the permittee by the issuance of this permit.
3. This permit is issued pursuant to the Clean Streams Law Act of June 22, 1937, P.L. 1987, as amended 35 P.S. §691.1 *et seq.* Issuance of this permit shall not relieve the permittee of any responsibility under any other law.

PERMIT ISSUED: November 21, 2016

BY: _____

TITLE: **Jenifer L. Fields, P.E.**
Clean Water Program Manager
Southeast Regional Office

pennsylvania
DEPARTMENT OF ENVIRONMENTAL PROTECTION

COMMONWEALTH OF PENNSYLVANIA
DEPARTMENT OF ENVIRONMENTAL PROTECTION
BUREAU OF WATER STANDARDS AND FACILITY REGULATION

SPECIAL CONDITIONS

Water Quality Management Permit No. 1599418

Malvern Hunt WWTP

East Whiteland Township, Chester County

I. Discharge Limitations and Monitoring Requirements

Effluent from the sewage treatment plant shall be sampled at a point after chlorination and shall be limited at all times as follows:

	Discharge Limitations (mg/l)			Monitoring Requirements	
Parameter	Average Monthly	Average Weekly	Instantaneous Maximum	Measurement Frequency	Sample Type
Influent Flow (mgd)	0.105			Continuous	Recorded
$CBOD_5$	25		50	1/Month	Grab
Suspended Solids	30		60	1/Month	Grab
Fecal Coliform	200/100 ml as geometric average			1/Month	Grab
pH	Within limits of 6.0 to 9.0 standard units at all times			1/Month	Grab

Additional treatment requirements include the satisfactory disposal of sludge and the reduction of quantities of oils, greases, acids, alkalis, toxic, taste and odor producing substances, inimical to the public interest to levels which will not pollute the receiving waters.

Monitoring results shall be reported monthly on the Discharge Monitoring Report (DMR). The term "grab" sample means an individual sample collected in less than 15 minutes. Samples and measurements taken as required, herein, shall be representative of the volume and nature of the monitored discharge.

II. Copies of monthly Discharge Monitoring Reports must be submitted within 28 days of the end of the monitoring period to:

Department of Environmental Protection
Southeast Regional Office
Water Management
2 East Main Street
Norristown, PA 19401

III. Groundwater Monitoring Requirements

The permittee shall effectively monitor the quality of the groundwater. The parameters to be tested, and frequency of analysis and other monitoring requirements shall be as follows:

A. Quarterly analysis of groundwater sampled at groundwater monitoring wells **MW-L1, MW-L2, MW-L3, MW-S1, MW-S2, MW-S3, MW-S6, MW-S7, and MW-S8,** shall consist of: static water level, sampling depth, turbidity, pH, chloride, total phosphorus, ammonia nitrogen, nitrate nitrogen, nitrite nitrogen, total dissolved solids, fecal coliform, and alkalinity.

B. Groundwater elevations must be measured prior to purging the groundwater monitoring well.

C. Before collection of the groundwater sample, a groundwater monitoring well shall be properly purged and allowed to recover to at least 90 percent of the well volume that was present prior to purging.

D. All groundwater samples shall be collected from within the top five feet of the water elevation within the well column.

IV. Groundwater Monitoring Data Reporting Requirements

All groundwater data shall be submitted to DEP **annually** and be in **report form.** The report shall be due to DEP within 28 days of the end of the month of permit issuance. For example, if your permit was issued on March 4th, then your annual report is due by April 28th. The annual report shall be mailed under separate cover and addressed to:

Department of Environmental Protection
Southeast Regional Office
Water Management Program
2 East Main Street
Norristown, PA 19401

Attention: Hydrogeologist
Planning Section

V. The annual groundwater monitoring report shall include the following information:

A. General Information

i. Facility name
ii. Facility permit number
iii. Facility location (including municipality and county)
iv. Facility contact information:

a. permittee name, address, and telephone number
b. contact name and title
c. facility operator name, address, and telephone number
d. facility consultant name, address, and telephone number

B. Site Data

i. A brief narrative that provides the date and description of any facility event which may have impacted any part of the groundwater monitoring program. (e.g., collapse of groundwater monitoring well, etc.).

ii. Average effluent flow for the year covered by this report.

iii. In tabular form, the following information needs to be provided for at least the last 5 years of system operation:

a. Date of sampling
b. Groundwater elevations
c. Sampling depth
d. Identification of upgradient and downgradient wells
e. The results of the analysis of the samples

iii. Background groundwater data generated prior to system start-up. **This information is absolutely needed and needs to be included in the data tabulation.**

C. Comprehensive Groundwater Evaluation (CGE)

As part of the facility's 5-year permit renewal application, the permittee shall submit a report that is a result of a comprehensive evaluation of the systems impact on groundwater. A Registered P.G. must identify any trends which may pose a threat to human health or certify that none are present. Should adverse impacts to groundwater be identified, the permittee needs to recommend actions to address the potential threat.

D. **Groundwater Background Report**

Within 60 days of system start up, or upon issuance of permit renewal a Groundwater Background Report shall be submitted to DEP. The report shall include the follow information:

i. Site Information

a. Brief narrative, including site limitations.
b. Soil type and bedrock lithology beneath the absorption areas.
c. Site drawings showing general location of absorption fields and monitoring wells. Drawings must show site topography.

ii. Construction details of each groundwater monitoring well shall include:

a. Well depth.
b. Casing depth.
c. Static water levels.
d. Surface elevation.
e. Well log.
f. Water bearing zones.
g. Top of casing elevation.
h. Ground surface elevation.

VI. Unless, otherwise, specified in this permit, the test procedures for analysis of pollutants shall be those contained in 40 C.F.R. Part 136, or alternative test procedures approved pursuant to that Part. For the analysis of CBOD5, consult Section 507 of Standard Methods.

VII. Effective disinfection to control disease producing organisms shall be the production of an effluent which will contain a concentration neither greater than 200/100 ml of Fecal Coliform organisms, as a geometric average value nor greater than 1000/100 ml of these organisms in a more than 10 percent of the samples tested.

VIII. If the permittee monitors any pollutant more frequently than the permit requires, the results of this monitoring shall be incorporated, as appropriate, into the calculations used to report self-monitoring data on the DMR.

IX. The authorization to discharge contained in Section D of this permit shall expire in five years from the date of issuance, or reissuance. Application for renewal of this permit, or notification of intent to cease discharging by the expiration date, must be submitted to the Department at least 180 days prior to the above expiration date (unless permission has been granted by the Department for submission at a later date). In the event that a timely and complete application for renewal has been submitted and the Department is unable, through no fault of the permittee, to reissue the permit before the above expiration date, the terms and conditions of this permit will be automatically continued and will remain fully effective and enforceable pending the grant or denial of the application for permit renewal. The application for renewal shall be submitted on the appropriate Water Quality Management Part II Application forms and shall include a tabulated summary of all groundwater monitoring data for the previous five years, including a discussion of groundwater quality trends resulting from this discharge.

X. Sprayfield Weekly Maximum Hydraulic Loadings

A. Effluent flows to each sprayfield must be consistent with the maximum hydraulic loading requirements of the following tables, which provide the weekly maximum gallons for each irrigation zone.

MAXIMUM WEEKLY SPRAYFIELD HYDRAULIC LOADINGS IN GALLONS

Spray Zone 1 6.16 Acres Woods		
Month	Inches/Acre/Week	Maximum/Week Gallons
January	0.50	83,671
February	0.50	83,671
March	1.27	212,539
April	1.50	251,020
May	2.00	334,691
June	2.50	418,369
July	2.50	418,369
August	2.50	418,369
September	2.50	418,369
October	1.55	259,410
November	1.16	194,126
December	0.50	83,671

Spray Zone 2 6.19 Acres Woods		
Month	Inches/Acre/Week	Maximum/Week Gallons
January	0.50	84,079
February	0.50	84,079
March	1.27	213,574
April	1.50	252,243
May	2.00	336,321
June	2.50	420,406
July	2.50	420,406
August	2.50	420,406
September	2.50	420,406
October	1.55	260,673
November	1.16	195,072
December	0.50	84,079

Spray Zone 3 6.15 Acres Woods		
Month	Inches/Acre/Week	Maximum/Week Gallons
January	0.50	83,536
February	0.50	83,536
March	1.27	212,194
April	1.50	250,613
May	2.00	334,148
June	2.50	417,690
July	2.50	417,690
August	2.50	417,690
September	2.50	417,690
October	1.55	258,989
November	1.16	193,811
December	0.50	83,536

B. The permittee shall include with the monthly Discharge Monitoring Report a Supplemental Land Application System Form 3800-FM-BPNPSM0449 that indicates the gallons per day discharged to the spray irrigation zones.

C. Spray irrigation events shall consist of simultaneous operation of two zones with one zone left off for a week-long resting period. All zones shall be rested each month.

D. Application of the effluent shall be managed to prevent runoff from the permitted spray fields and ponding of effluent.

E. No irrigation is to occur on frozen soils.

F. No irrigation is to occur if more than 0.5 inches of rainfall has fallen during the previous 24 hours.

G. The operator is to assess soil moisture content and soil/vegetation conditions frequently. It is the operator's responsibility to inspect the fields on a routine basis to prevent and/or address damage to the irrigation fields.

H. The spray fields shall be maintained to ensure that vegetation does not interfere with or impair proper operation of the spray heads.

I. Fallen trees in wooded spray fields are required to be removed. All work must be conducted during dry or frozen soil conditions to prevent damage to the soil.

XI. At all times, the wastewater level in the storage lagoon shall be managed within the low and high water level parameters as designed. The water level shall be controlled so that a freeboard of at least 24 inches is maintained at all times. The Department must be notified if the water level is anticipated to enter freeboard.

XII. Recording of Results

For each measurement or sample taken pursuant to the requirements of this permit, the permittee shall record the following information:

A. The exact place, date, and time of sampling or measurement.
B. The person(s) who performed the sampling or measurement.
C. The dates the analyses were performed.
D. The person(s) who performed the analyses.
E. The analytical techniques or methods used.
F. The results of such analyses.

XIII. Recordkeeping and Retention

The permittee shall keep records of operation and efficiency of the wastewater treatment facilities. All records of monitoring activities and results (including all original strip chart recordings for continuous monitoring instrumentation and calibration and maintenance records), copies of all reports required by this permit, and records of all data used to complete the application for this permit shall be retained by the permittee for three (3) years. The three-year period shall be extended as requested by the Department.

XIV. The facility shall be operated under the charge of a responsible operator(s) certified under the Pennsylvania Water and Wastewater Systems Operations Certification Act (Act 11). The operator(s) shall comply with the continuing education requirements required under the regulations and guidelines related to Act 11.

XV. Laboratory Certification

Facilities that test or analyze environmental samples used to demonstrate compliance with this permit shall be in compliance with laboratory accreditation requirements of act 90 of 2002 (27 Pa. Code C.S. §§ 4101-4113) and 25 Pa. Code Chapter 252, relating to environmental laboratory accreditation. An environmental laboratory is any facility engaged in the testing or analysis of environmental samples required by a statute administered by the Department relating to the protection of the environment or of public health, safety, and welfare.

XVI. Right of Entry

Pursuant to Sections 5(b) and 305 of Pennsylvania's Clean Stream Law, the permittee shall allow authorized representatives of Department of Environmental Protection upon the presentation of credentials and other documents as may be required by law:

A. To enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit.

B. To have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit.

C. To inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this permit.

D. To sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the Clean Water Act or The Clean Streams Law, any substances or parameters at any location.

XVII. If there is a change in ownership of this facility or in permittee name, an application for transfer of permit must be submitted to the Department.

8. LIST OF ASSETS AND COSTS

EAST WHITELAND TOWNSHIP WASTEWATER SYSTEM
SUMMARY OF ANALYSIS OF ORIGINAL COST OF WASTEWATER SYSTEM
AS OF JUNE 17, 2021

ACCOUNT	DESCRIPTION		ORIGINAL COST ($)
353.2	LAND AND LAND RIGHTS - COLLECTION	$	668.00
353.3	LAND AND LAND RIGHTS - PUMPING	$	13.00
354.2	STRUCTURES AND IMPROVEMENTS - COLLECTION PLANT	$	11,085,241.50
354.3	STRUCTURES AND IMPROVEMENTS - PUMPING	$	8,005,275.38
360.21	COLLECTION SEWERS - FORCE - MAINS	$	2,304,354.55
361.21	COLLECTION SEWERS - GRAVITY - MAINS	$	10,767,737.96
361.23	COLLECTION SEWERS - GRAVITY - MANHOLES	$	4,350,867.01
363.2	SERVICES TO CUSTOMERS	$	6,619,976.03
365.2	FLOW MEASURING INSTALLATIONS	$	78,670.00
390.7	COMPUTER AND SOFTWARE	$	21,550.00
391.7	TRANSPORTATION EQUIPMENT	$	212,955.81
	SYSTEM TOTAL	$	43,447,309.24

MAP NOTES:

Mapping information was derived from various planning documents including Schoor DePalma's Sanitary Sewer Meter Location Plan, Kohli & Associates Township plan, Roy F. Weston's Master Sanitary Sewer System Plan, Chester County Recorder of Deeds Plans, and township as-built plans received by ARRO. The mapping is incomplete and will be improved as as-built and other plan information is updated into the GIS. This GIS database will provide a framework for modeling the collection system to analyze capacity issues and make recommended improvements to mitigate capacity deficiencies.

Data Sources: East Whiteland Township, Schoor DePalma, Kohli & Associates, Roy F. Weston, Chester County Recorder of Deeds and ARRO.

WASTEWATER UTILITY PLANT ACCOUNTS

The wastewater utility plant accounts have been designed utilizing an account matrix. The matrix employs a list of object accounts which in effect act as control accounts. The object accounts are further segregated by the matrix into classifications by functions or subaccount. The instructions for segregating the object accounts to the function subaccount are contained in Accounting Instruction 32. Listed below are the object account descriptions.

351. Organization

This account shall include all fees paid to federal or state governments for the privilege of incorporation and expenditures incident to organizing the corporation, partnership or other enterprise and putting it into readiness to do business. A sample of items to be included in this account are listed below.

1. Actual cost of obtaining certificates authorizing an enterprise to engage in the public utility business.
2. Fees and expenses for incorporation.
3. Fees and expenses for mergers or consolidations.
4. Office expenses incident to organizing the utility.
5. Stock and minute books and corporate seal.

Note A:--This account shall not include any discounts upon securities issued or assumed; nor shall it include any costs incident to negotiating loans, selling bonds or other evidences of debt, or expenses in connection with the authorization, issuance and sale of capital stock.

Note B:--Exclude from this account and include in the appropriate expense account the cost of preparing and filing papers in connection with the extension of the term of incorporation unless the first organization costs have been written off. Where charges are made to this account for expenses incurred in mergers, consolidations or reorganizations, amounts previously included herein or in similar accounts in the books of the companies concerned shall be excluded from this account.

352. Franchises

A. This account shall include amounts paid to the federal government, to a state or to a political subdivision thereof in consideration for franchises, consents or certificates, running in perpetuity or for a specified term of more than one year, together with necessary and reasonable expenses incident to procuring such franchises, consents or certificates of permission and approval, including expenses of organizing and merging separate corporations, where statutes require solely for the purpose of acquiring franchise.

B. If a franchise or certificate is acquired by assignment, the charge to this account in respect thereof shall not exceed the amount paid therefor by the utility to the assignor, nor shall it exceed the amount paid by the original grantee, plus the expense of acquisition to such grantee. Any excess of the amount actually paid by the utility over the amount specified shall be charged to account 426 - Miscellaneous Nonutility Expenses.

C. When any franchise has expired, the book cost thereof shall be credited hereto and charged to account 426 - Miscellaneous Nonutility Expenses, or to account 110.1 - Accumulated Amortization of Utility Plant in Service, as appropriate.

D. Records supporting this account shall be kept so as to show separately the book cost of each franchise.

Note:--Annual or other periodic payments under franchises shall not be included herein but in the appropriate expense account.

353. Land and Land Rights

This account shall include the cost of land and land rights used in connection with wastewater collection, pumping, treatment and disposal, reclaimed water treatment and distribution and general plant operations (See Accounting Instruction 24). A sample of items to be included in this account are listed below:

1. Bulkheads buried, not requiring maintenance or replacement.
2. Cost, first, of acquisition including mortgages and other liens assumed (but not subsequent interest thereon).
3. Condemnation proceedings, including court and counsel costs.
4. Consents and abutting damages, payment for.
5. Conveyancers' and notaries' fees.
6. Fees, commissions, and salaries to brokers, agents, and others in connection with the acquisition of the land or land rights.
7. Leases, cost of voiding upon purchase to secure possession of land.
8. Removing, relocating, or reconstructing property of others, such as buildings, highways, railroads, bridges, cemeteries, churches, telephone and power lines, etc., in order to acquire quiet possession.
9. Retaining walls unless identified with structures.
10. Special assessments levied by public authorities for public improvements on the basis of benefits for new

roads, new bridges, new sewers, new curbing, new pavements, and other public improvements, but not taxes levied to provide for the maintenance of such improvements.

11. Surveys in connection with the acquisition, but not amounts paid for topographical surveys and maps where such costs are attributable to structures or plant equipment erected or to be erected or installed on such land.
12. Taxes assumed, accrued to date of transfer of title.
13. Title, examining, clearing, insuring and registering in connection with the acquisition and defending against claims relating to the period prior to the acquisition.
14. Appraisals prior to closing title.
15. Cost of dealing with distributees or legatees residing outside of the state or county, such as recording power of attorney, recording will or exemplification of will, recording satisfaction of state tax.
16. Filing satisfaction of mortgage.
17. Documentary stamps.
18. Photographs of property at acquisition.
19. Fees and expenses incurred in the acquisition of sewer rights, and grants.
20. Cost of fill to extend bulkhead line over land under water, where riparian rights are held, which is not occasioned by the erection of a structure.
21. Sidewalks and curbs constructed by the utility on public property.
22. Labor and expenses in connection with securing rights of way, where performed by company employees and company agents.

354. Structures and Improvements

This account shall include the cost in place of structures and improvements used in connection with wastewater collection, pumping, treatment and disposal, reclaimed water treatment and distribution and general plant operations (See Accounting Instruction 25). A sample of items to be included in this account are listed below:

1. Architects' plans and specifications including supervision.
2. Boilers, furnaces, piping, wiring, fixtures, and machinery for heating, lighting, signaling, ventilating and air conditioning systems, plumbing, vacuum cleaning systems, incinerator and smoke pipe, flues, etc.

3. Bulkheads, including dredging, riprap fill, piling, decking, concrete fenders, etc., when exposed and subject to maintenance and replacement.
4. Commissions and fees to brokers, agents, architects and others.
5. Conduit (not to be removed) with its contents.
6. Damages to abutting property during construction.
7. Drainage systems.
8. Elevators, cranes, hoists, etc., and the machinery for operating them.
9. Excavation, including shoring, bracing, bridging, refill and disposal of excess excavated material, cofferdams around foundations, pumping water from cofferdam during construction, test borings.
10. Fences and fence curbs (not including protective fences isolating items of equipment, which should be charged to the appropriate equipment account).
11. Fire protection systems when forming a part of a structure.
12. Flagpole.
13. Floor covering (permanently attached).
14. Foundations and piers for machinery, constructed as a permanent part of a building or other item listed herein.
15. Grading and clearing when directly occasioned by the building of a structure.
16. Intrasite communication system, poles, pole fixtures, wires and cables.
17. Landscaping, lawns, shrubbery, etc.
18. Leases, voiding upon purchase, to secure possession of structures.
19. Leased property, expenditures on.
20. Lighting fixtures and outside lighting systems.
21. Marquee, permanently attached to building.
22. Painting, first cost.
23. Permanent paving, concrete, brick, flagstone, asphalt, etc., within the property lines.
24. Partitions, including movable.
25. Permits and privileges.
26. Power boards for services to a building.
27. Refrigerating systems for general use.
28. Retaining walls except when identified with land.
29. Roadways.
30. Roofs.
31. Scales, connected to and forming a part of a structure.
32. Water and wastewater systems, for general use.
33. Sidewalks, culverts, curbs and streets constructed by the utility on its property.

34. Sprinkling systems.
35. Stacks -- brick, steel, or concrete, when set on foundation forming part of general foundation and steelwork of a building.
36. Steel inspection during construction.
37. Storage facilities constituting a part of a building.
38. Storm doors and windows.
39. Temporary heating during construction (net cost).
40. Temporary water connection during construction (net cost).
41. Temporary shanties and other facilities used during construction (net cost).
42. Topographical maps.
43. Vaults constructed as part of a building.
44. Watchmen's sheds and clock systems (net cost when used during construction only).
45. Water meters and supply system for a building or for general company purposes.
46. Water supply piping, hydrants and wells.
47. Yard surfacing, gravel, concrete, or oil (First cost only).
48. Tunnels, intake and discharge when constructed as part of a structure including sluice gates and those constructed to house.

355. Power Generation Equipment

A. This account shall include the cost installed of any equipment used for the production of power principally used in pumping operations.

B. Subaccounts shall be maintained hereunder for the cost of equipment used for each type of power generating equipment.

360. Collecting Sewers - Force

This account shall include all sewers which are used to lift sewage from a low elevation to a higher elevation. The force sewer will include that pipe between the discharge outlet of the lift station and the receiving manhole.

361. Collecting Sewers - Gravity

This account shall include the installed cost of all gravity collecting sewers, interceptor, branch, trunk, lateral including service wye, and manholes and lampholes. Manholes shall be included as a separate unit of property.

362. Special Collecting Structures

Inverted siphon shall be included in this account but so

distinctly noted; also any other special designed structures unusual to the wastewater system should be included herein but specifically noted as to what they do.

363. Services to Customers

This account shall include the installed cost of service sewers, from collection sewer to the customer's property or curb line. A sample of items to be included in this account are listed below:

1. Jointing and jointing material.
2. Manhole or clean-out.
3. Municipal inspection and permits
4. Pavement disturbed.
5. Protection of street openings.
6. Tapping saddle.
7. Service connection wye shall be included in account 363 instead of account 361 when company owns service sewers to customers property line.

364. Flow Measuring Devices

A. This account shall include the cost of flow measuring and recording equipment and initial testing used for measuring the quantity of wastewater or wastewater effluent delivered by customers, whether actually in service or held in reserve.

B. When flow measuring equipment is permanently retired from service, the amount at which it is included herein shall be credited to this account.

C. The records covering flow measuring equipment shall be so kept that the utility can furnish information as to the number of devices of each type and size in service and in reserve, as well as the location of each device included in this account.

365. Flow Measuring Installations

A. This account shall include the cost of labor employed, materials used and expenses incurred in connection with the original installation of customers' flow measuring equipment. A sample of items to be included in this account are listed below:

1. Floats, connections, flumes, or wires.
2. Special manhole, boxes, or other separate housing.

B. When a flow measuring installation is permanently retired from service, the cost thereof shall be credited to this account.

366. Reuse Services

A. This account shall include the cost installed of reclaimed water service pipes and accessories leading to the customers' premises.

B. A complete reclaimed water service begins with the connection on the main and extends to but does not include the connection with the customer's meter. A stub service extends from the main to the property line, or the curb stop (curb stop cock).

C. Services which have been used but have become inactive shall be retired from utility plant in service immediately if there is no prospect for future use.

Items

1. Corporation stops or tees.
2. Gate valves and boxes.
3. Goose necks.
4. Jointing and jointing material.
5. Municipal inspection or permits.
6. Pavements disturbed.
7. Pipes.
8. Placing pipes and accessories.
9. Protection of street openings.
10. Service or curb boxes.
11. Service or curb stops (curb stop cocks).
12. Tapping main.
13. Tapping saddle.

367. Reuse Meters and Meter Installations

A. This account shall include the cost of meters, devices and appurtenances attached thereto, used for measuring the quantity of reclaimed water delivered to users, whether actually in service or held in reserve. It shall also include the cost of labor employed, materials used and expenses incurred in connection with the original installation of a customer's meters and devices and appurtenances attached thereto.

B. When a meter and/or meter installation is permanently retired from service, the amount at which it is included herein shall be credited to this account.

C. The records covering meters shall be so kept that the utility can furnish information as to the number of meters of each type and size in service and in reserve as well as the location of each meter included in this account.

D. A sample of items to be included in this account are listed

below:

1. Meters, including badging and initial testing.
2. Remote meter registers.
3. Installation labor (first installation only).
4. Meter coupling.
5. Meter bars.
6. Meter yokes.
7. Meter fittings, connections and shelves.
8. Meter vaults or boxes.
9. Stops.

Note A:--This account shall not include meters for recording the output of a supply or treatment plant, or those located on mains. It includes only those meters to record reclaimed water delivered to customers, including company use and for those used elsewhere in the system if a type available for general use.

Note B:--The utility shall maintain a statistical record to show separately the number of each type and size of meter or group of types and sizes as carried in the continuing property record. Underlying records shall be kept so that the utility can determine readily for each such classification the number of company-owned meters in service (subdivided between active and inactive) and the number of meters carried herein but not in service, the latter to include meters undergoing repairs; and the number of meters in service owned by customers.

370. Receiving Wells

This account shall include the cost of constructing wells at pumping stations or at other junction points along the collecting system, used for intercepting wastewater for clearing and screening, transfer to a pumping well or otherwise further convey it along the collecting system to the treatment plant or point of final
discharge. This account shall include any chemical feed apparatus and holding basins associated with the receiving well.

371. Pumping Equipment

This account shall include the cost installed of pumping equipment driven by electric power or diesel engines. A sample of items to be included in this account are listed below:

1. Motors or engines for driving pumps.
2. Pumps, including settings, gearing, shafting and belting.
3. Sewage piping within station, including valves.
4. Auxiliary equipment for motors and pumps such as oiling systems, cooling systems, condensers, etc.

5. Electrical power lines and switching.
6. Foundations, frames, and bed plates.
7. Hoist units.

374. Reuse Distribution Reservoirs

This account shall include the cost in place of reservoirs, tanks and appurtenances used in storing reclaimed water for distribution. A sample of items to be included in this account are listed below:

1. Bridges and culverts.
2. Clearing land.
3. Dams.
4. Embankments.
5. Fences.
6. Foundations.
7. Gates and gate houses.
8. Landscaping.
9. Lighting systems.
10. Piping system within reservoirs.
11. Retaining walls.
12. Roads and paths.
13. Rust-proofing apparatus.
14. Sewer drain or storm sewer.
15. Spillways and channels.
16. Standpipes.
17. Tanks.
18. Towers.
19. Valves.

375. Reuse Transmission and Distribution System

A. This account shall include the cost installed of reclaimed water transmission and distribution mains and appurtenances. A sample of items to be included in this account are listed below:

1. Air chambers.
2. Blow-offs and overflows.
3. Bridges and culverts.
4. Electrolysis control equipment.
5. Gauges and recorders.
6. Jointing and jointing material.
7. Manholes.
8. Meters and appurtenances.
9. Municipal inspection or permits.
10. Pavement disturbed, including cutting and replacing pavement, pavement base and sidewalks.
11. Pipes.
12. Fire mains.
13. Fire Hydrants.

B. Records supporting this account shall be so kept as to show separately the cost of mains of different sizes and types and of each tunnel, bridge, or river crossing.

380. Treatment and Disposal Equipment

This account shall include the cost installed of apparatus equipment and other facilities used for the treatment of wastewater, disposal of sewage wastes and the treatment of effluent for reuse. A sample of items to be included in this account are listed below:

1. Aeration chambers.
2. Chemical equipment.
3. Disinfection facilities.
4. Filters.
5. Imhoff tank.
6. Land fill equipment and appurtenances.
7. Monitoring equipment.
8. Oxidation pond or lagoon.
9. Sedimentation equipment.
10. Septic tank.
11. Screen unit.
12. Sludge system.
13. Trucks, tractors, or other equipment used primarily for sludge or other waste disposal.
14. Package mechanical treatment plant.
15. Sedimentation basin.
16. Sludge digestion equipment.
17. Sludge filtration or dewatering equipment.

381. Plant Sewers

This account shall include the cost installed of plant yard piping and appurtenances, and facilities required to dispose of treatment plant liquid effluent into the outfall sewer line. A sample of items to be included in this account are listed below:

1. Unit to unit sections of yard piping.
2. Valves and vaults.
3. Pipe tunnels and galleries.
4. Filter and filter backwash piping.

382. Outfall Sewer Lines

This account shall include the installed cost of sewer line carrying effluent from treatment facility to point of discharge. Includible in this account would be headwall or outlet.

389. Other Plant and Miscellaneous Equipment

This account shall include the cost installed of all other intangible, collection system pumping, treatment and disposal, reclaimed water treatment and reclaimed water distribution plant not provided for in the foregoing accounts.

390. Office Furniture and Equipment

A. This account shall include the cost of office furniture and equipment owned by the utility and devoted to utility service, and not permanently attached to buildings, except the cost of such furniture and equipment which the utility elects to assign to other plant accounts on a functional basis. A sample of items to be included in this account are listed below:

1. Book cases and shelves.
2. Desk, chairs, and desk equipment.
3. Drafting room equipment.
4. Electronic data processing equipment.
5. Filing, storage and other cabinets.
6. Floor covering.
7. Library and library equipment.
8. Mechanical office equipment such as accounting machines, typewriters, etc.
9. Safes.
10. Tables.

B. If the utility has equipment includible in this account at more than one location, separate records shall be maintained for each location.

391. Transportation Equipment

This account shall include the cost of transportation vehicles used for utility purposes. A sample of items to be included in this account are listed below:

1. Airplanes.
2. Automobiles.
3. Bicycles.
4. Electrical vehicles.
5. Motor trucks.
6. Motorcycles.
7. Repair cars or trucks.
8. Tractors and trailers.
9. Other transportation vehicles.

392. Stores Equipment

A. This account shall include the cost of equipment used for the receiving, shipping, handling and storage of materials and supplies.

B. If the utility has equipment includible in this account at more than one location, separate records shall be maintained for each location. A sample of items to be included in this account are listed below:

1. Chain falls.
2. Counters.
3. Cranes (portable).
4. Elevating and stacking equipment (portable).
5. Hoists.
6. Lockers.
7. Scales.
8. Shelving.
9. Storage bins.
10. Trucks, hand and power driven.
11. Wheelbarrows.

393. Tools, Shop and Garage Equipment

This account shall include the cost of tools, implements, and equipment used in construction, repair work, general shops and garages and not specifically provided for or includible in other accounts. A sample of items to be included in this account are listed below:

1. Air compressors.
2. Anvils.
3. Automobile repair shop equipment.
4. Battery charging equipment.
5. Belts, shafts and countershafts.
6. Boilers.
7. Cable pulling equipment.
8. Concrete mixers.
9. Drill presses.
10. Derricks.
11. Electric equipment.
12. Engines.
13. Forges.
14. Furnaces.
15. Foundations and settings specially constructed for and not expected to outlast the equipment for which provided.
16. Gas producers.
17. Gasoline pumps, oil pumps and storage tanks.
18. Greasing tools and equipment.

19. Hoists.
20. Ladders.
21. Lathes.
22. Machine tools.
23. Motor driven tools.
24. Motors.
25. Pipe threading and cutting tools.
26. Pneumatic tools.
27. Pumps.
28. Riveters.
29. Smithing equipment.
30. Tool racks.
31. Vises.
32. Welding apparatus.
33. Work benches.

394. Laboratory Equipment

A. This account shall include the cost installed of laboratory equipment used for general laboratory purposes and not specifically provided for or includible in other departmental or functional plant accounts. A sample of items to be included in this account are listed below:

1. Autoclaves.
2. Barometers.
3. Cameras.
4. Centrifuge.
5. Distilling apparatus.
6. Furnaces.
7. Microscopes.
8. Ovens.
9. Pitometers.
10. Rain gauges.
11. Refrigerators.
12. Scales.
13. Sterilizers.
14. Stop watches.
15. Testing machines.
16. Therometers.
17. Voltmeters.
18. Other bacteriological, electric, chemical hydraulic or research equipment.

B. If the utility has equipment includible in this account at more than one location, separate records shall be maintained for each location.

395. Power Operated Equipment

This account shall include the cost of power operated equipment used in construction of repair work exclusive of equipment includible in other accounts. Include, also, the tools and accessories acquired for use with such equipment and the vehicle on which such equipment is mounted. A sample of items to be included in this account are listed below:

1. Air compressors, including driving unit and vehicle.
2. Back filling machines.
3. Boring machines.
4. Bulldozers.
5. Cranes and joists.
6. Diggers.
7. Engines.
8. Pile drivers.
9. Pipe cleaning machines.
10. Pipe coating or wrapping machines.
11. Tractors - Crawler type.
12. Trenchers.
13. Other power operated equipment.

Note:--It is intended that this account include only such large units as are generally self-propelled or mounted on moveable equipment.

396. Communication Equipment

This account shall include the cost installed of telephone, telegraph and wireless equipment for general use in connection with utility operations. A sample of items to be included in this account are listed below:

1. Antennae.
2. Booths.
3. Cables.
4. Distribution boards.
5. Extension cords.
6. Gongs.
7. Handsets, manual and dial.
8. Insulators.
9. Intercommunicating sets.
10. Loading coils.
11. Operators desks.
12. Poles and fixtures used wholly for telephone and telegraph wires.
13. Radio transmitting and receiving sets.
14. Remote control equipment and lines.
15. Sending keys.
16. Storage batteries.

17. Switchboards.
18. Teleautograph circuit connections.
19. Telegraph receiving sets.
20. Telephone and telegraph circuits.
21. Testing instruments.
22. Towers.
23. Underground conduit used wholly for telephone or telegraph wires and cable wires.

397. Miscellaneous Equipment

This account shall include the cost of equipment, apparatus, etc., used in utility operations, and which is not includible in any other account. A sample of items to be included in this account are listed below:

1. Hospital and infirmary equipment.
2. Kitchen equipment.
3. Recreation equipment.
4. Radios.
5. Restaurant equipment.
6. Soda fountains.
7. Operator's cottage furnishings.
8. Electric signs advertising the corporate name or symbol, plant or facility name, or otherwise serving only the general purpose of acquainting the public with the facilities and services of the utility.
9. Other miscellaneous equipment.

Note:--Miscellaneous equipment of the nature indicated above wherever practicable shall be included in the utility plant accounts on a functional basis.

398. Other Tangible Plant

This account shall include the cost of tangible utility plant not provided for elsewhere.

§ 1329. Valuation of acquired water and wastewater systems.

(a) Process to establish fair market value of selling utility.--Upon agreement by both the acquiring public utility or entity and the selling utility, the following procedure shall be used to determine the fair market value of the selling utility:

(1) The commission will maintain a list of utility valuation experts from which the acquiring public utility or entity and selling utility will choose.

(2) Two utility valuation experts shall perform two separate appraisals of the selling utility for the purpose of establishing its fair market value.

(3) Each utility valuation expert shall determine fair market value in compliance with the Uniform Standards of Professional Appraisal Practice, employing the cost, market and income approaches.

(4) The acquiring public utility or entity and selling utility shall engage the services of the same licensed engineer to conduct an assessment of the tangible assets of the selling utility. The assessment shall be incorporated into the appraisal under the cost approach required under paragraph (3).

(5) Each utility valuation expert shall provide the completed appraisal to the acquiring public utility or entity and selling utility within 90 days of execution of the service contract.

(b) Utility valuation experts.--

(1) The utility valuation experts required under subsection (a) shall be selected as follows:

(i) one shall be selected by the acquiring public utility or entity; and

(ii) one shall be selected by the selling utility.

(2) The utility valuation experts shall not:

(i) derive any material financial benefit from the sale of the selling utility other than fees for services rendered; or

(ii) be an immediate family member of a director, officer or employee of either the acquiring public utility, entity or selling utility within a 12-month period of the date of hire to perform an appraisal.

(3) Fees paid to utility valuation experts may be included in the transaction and closing costs associated with acquisition by the acquiring utility or entity. Fees eligible for inclusion may be of an amount not exceeding 5% of the fair market value of the selling utility or a fee approved by the commission.

(c) Ratemaking rate base.--The following apply:

(1) The ratemaking rate base of the selling utility shall be incorporated into the rate base of:

(i) the acquiring public utility during the acquiring public utility's next base rate case; or

(ii) the entity in its initial tariff filing.

(2) The ratemaking rate base of the selling utility shall be the lesser of the purchase price negotiated by the acquiring public utility or entity and selling utility or the fair market value of the selling utility.

(d) Acquisitions by public utility.--The following apply:

(1) If the acquiring public utility and selling utility agree to use the process outlined in subsection (a), the acquiring public utility shall include the following as an attachment to its application for commission approval of the acquisition filed pursuant to section 1102 (relating to enumeration of acts requiring certificate):

(i) Copies of the two appraisals performed by the utility valuation experts under subsection (a).

(ii) The purchase price of the selling utility as agreed to by the acquiring public utility and selling utility.

(iii) The ratemaking rate base determined pursuant to subsection (c)(2).

(iv) The transaction and closing costs incurred by the acquiring public utility that will be included in its rate base.

(v) A tariff containing a rate equal to the existing rates of the selling utility at the time of the acquisition and a rate stabilization plan, if applicable to the acquisition.

(2) The commission shall issue a final order on an application submitted under this section within six months of the filing date of an application meeting the requirements of subsection (d)(1).

(3) If the commission issues an order approving the application for acquisition, the order shall include:

(i) The ratemaking rate base of the selling utility, as determined under subsection (c)(2).

(ii) Additional conditions of approval as may be required by the commission.

(4) The tariff submitted pursuant to subsection (d)(1)(v) shall remain in effect until such time as new rates are approved for the acquiring public utility as the result of a base rate case proceeding before the commission. The acquiring public utility may collect a distribution system improvement charge during this time, as approved by the commission under this chapter.

(5) The selling utility's cost of service shall be incorporated into the revenue requirement of the acquiring public utility as part of the acquiring utility's next base rate case proceeding. The original source of funding for any part of the water or sewer assets of the selling utility shall not be relevant to determine the value of said assets.

(e) Acquisitions by entity.--An entity shall provide all the information required by subsection (d)(1) to the commission as an attachment to its application for a certificate of public convenience filed pursuant to section 1102.

(f) Postacquisition projects.--The following apply:

(1) An acquiring public utility's postacquisition improvements that are not included in a distribution improvement charge shall accrue allowance for funds used during construction after the date the cost was incurred until the asset has been in service for a period of four years or until the asset is included in the acquiring public utility's next base rate case, whichever is earlier.

(2) Depreciation on an acquiring public utility's postacquisition improvements that have not been included in the calculation of a distribution system improvement charge shall be deferred for book and ratemaking purposes.

(g) Definitions.--The following words and phrases when used in this section shall have the meanings given to them in this section unless the context clearly indicates otherwise:

"Acquiring public utility." A water or wastewater public utility subject to regulation under this title that is acquiring a selling utility as the result of a voluntary arm's-length transaction between the buyer and seller.

"Allowance of funds used during construction." An accounting practice that recognizes the capital costs, including debt and equity funds that are used to finance the construction costs of an improvement to a selling utility's assets by an acquiring public utility.

"Entity." A person, partnership or corporation that is acquiring a selling utility and has filed or whose affiliate has

filed an application with the commission seeking public utility status pursuant to section 1102.

"Fair market value." The average of the two utility valuation expert appraisals conducted under subsection (a)(2).

"Ratemaking rate base." The dollar value of a selling utility which, for postacquisition ratemaking purposes, is incorporated into the rate base of the acquiring public utility or entity.

"Rate stabilization plan." A plan that will hold rates constant or phase rates in over a period of time after the next base rate case.

"Selling utility." A water or wastewater company located in this Commonwealth, owned by a municipal corporation or authority that is being purchased by an acquiring public utility or entity as the result of a voluntary arm's-length transaction between the buyer and seller.

"Utility valuation expert." A person hired by an acquiring public utility and selling utility for the purpose of conducting an economic valuation of the selling utility to determine its fair market value.

(Apr. 14, 2016, P.L.76, No.12, eff. 60 days)

2016 Amendment. Act 12 added section 1329.

Notes:

1. Reflects generic unit prices for various components of a sewer system within this region. The schedule was a basis of cost for previous Assessment reports in the region.

2. Prices from 2015 unless otherwise noted, Table ENR CCI (2015) = 10035

3. The "Blended Cost" is a combined cost that accounts for the percentage of the overall system constructed within a completed roadway. Approximate percentages were determined from Township Records.

4. The "Blended Cost" is a combined cost that accounts for the percentage of laterals installed 2005 & later, assumed to be developer installed, and % of laterals installed before 2005, assumed to be Township installed. This number is assumed to be in the year 2012 and is then brought back for all of the other years.

SANITARY SEWER ASSET PURCHASE AGREEMENT

THIS SANITARY SEWER ASSET PURCHASE AGREEMENT ("Agreement"), dated as of January 8, 2021 (the "Effective Date"), is made and entered into by and between the Township of East Whiteland, Chester County, a body corporate and politic, organized and existing under the laws of the Commonwealth of Pennsylvania (the "Seller"), and Aqua Pennsylvania Wastewater, Inc. (the "Buyer"), a corporation organized and existing under the laws of the Commonwealth of Pennsylvania.

RECITALS:

WHEREAS, Seller, acting by and through the Board of Supervisors of East Whiteland Township, Chester County (the "Township Board") owns and operates a sanitary wastewater collection and conveyance system (the "System") that provides sanitary wastewater service to various customers in East Whiteland Township, Pennsylvania (the "Service Area") and as set forth on Schedule A; and

WHEREAS, Buyer is a regulated public utility organized and existing under the laws of the Commonwealth of Pennsylvania that furnishes wastewater service to the public in several counties, including Chester County, Pennsylvania; and

WHEREAS, Buyer, in reliance upon the representations, warranties and covenants of Seller herein, desires to purchase and acquire from Seller, and Seller, in reliance upon the representations, warranties and covenants of Buyer herein, desires to sell, transfer and convey to Buyer all of the assets of the System (other than the Excluded Assets), and in connection therewith, Buyer has agreed to assume certain ongoing obligations and liabilities of Seller related to the acquired assets, all on the terms and conditions set forth in this Agreement.

NOW, THEREFORE, in consideration of the mutual representations, warranties, covenants, and agreements stated in this Agreement, the receipt and sufficiency of which hereby are acknowledged, intending to be legally bound, the Parties agree as follows:

ARTICLE I.

DEFINITIONS

In addition to the capitalized terms defined elsewhere in this Agreement, the following terms, as used in this Agreement (unless otherwise specified herein), have the meanings set forth in this Article I:

"**Acquired Assets**" has the meaning specified in Section 2.01.

"**Affiliate**" means, when used to indicate a relationship with a specified Person, a Person that, directly or indirectly, through one or more intermediaries, has a 10% or more voting or economic interest in such specified Person or controls, is controlled by or is under common control with (which includes, with respect to a managed fund or trust, the right to direct or cause the direction of the management and policies of such managed fund or trust as manager, advisor, supervisor, sponsor or trustee pursuant to relevant contractual arrangements) such specified

Person, and a Person is deemed to be controlled by another Person if controlled in any manner whatsoever that results in control in fact by that other Person (or that other Person and any Person or Persons with whom that other Person is acting jointly or in concert), whether directly or indirectly and whether through share ownership, a trust, a contract or otherwise (and for purposes of this definition, a managed fund or trust is deemed to be an Affiliate of the Person managing, supervising, sponsoring or advising such fund or trust and a limited partner in a managed fund or trust is deemed to be an Affiliate of such fund or trust and of the Person managing, supervising, sponsoring or advising such fund or trust).

"**Agreement**" has the meaning specified in the Preamble to this Agreement (and includes all Schedules and Exhibits referred to herein), as amended, modified and supplemented from time to time in accordance with the terms hereof.

"**Assigned Contracts**" has the meaning specified in Section 2.01(c).

"**Assignment and Assumption Agreement**" has the meaning specified in Section 13.02(c).

"**Assumed Liabilities**" has the meaning specified in Section 2.04(a).

"**Authorizations and Permits**" mean all licenses, permits, franchises, authorizations, certificates, registrations, consents, orders, adjudications, variances, waivers and approvals currently in effect issued or granted by Governmental Authorities, including without limitation, environmental permits, operating permits and approvals that are held by Seller that primarily relate directly or indirectly to the operation of the System, including those set forth on Schedule 4.12.

"**Business Day**" means any day that is neither a Saturday, Sunday nor a day observed as a holiday by either the Commonwealth of Pennsylvania or the United States government.

"**Buyer**" has the meaning specified in the Preamble of this Agreement.

"**Buyer Fundamental Representations**" has the meaning specified in Section 8.01.

"**Buyer Indemnified Persons**" has the meaning specified in Section 8.02.

"**CERCLA**" means the Comprehensive Environmental Response Compensation and Liability Act of 1980, 42 U.S.C. §9601 et seq., as amended.

"**Closing**" means the consummation of the sale and purchase of the Acquired Assets and assumption of the Assumed Liabilities, the release/waiver of liabilities and the other transactions contemplated by this Agreement, all in accordance with the terms and conditions of this Agreement and as specified in Article XIII.

"**Closing Date**" has the meaning specified in Section 13.01.

"**Closing Effective Time**" has the meaning specified in Section 13.01.

"**Code**" means the Internal Revenue Code of 1986, as amended.

"**Confidential Information**" means any information about Buyer, Seller or the System related to the transactions contemplated by this Agreement, except that such term does not include information which the receiving Party can demonstrate (a) is generally available to or known by the public other than as a result of improper disclosure by the receiving Party, (b) is obtained by the receiving Party from a source other than the disclosing Party, and that source was not bound by a duty of confidentiality to the disclosing Party with respect to such information, or (c) is legally in the public domain.

"**Customer Sewer Laterals**" has the meaning specified in Section 2.02(k).

"**Direct Claim**" has the meaning specified in Section 8.04(c).

"**Easements**" means all easements, rights of way, licenses, use agreements, occupancy agreements, leases and other agreements and appurtenances for and over the real property of third parties that are necessary for or used in connection with the operation of the System or to provide continuous and unimpeded rights of way for the Acquired Assets (including access thereto).

"**EDU**" means equivalent dwelling unit and having a use rate of 275 gallons per day.

"**Effective Date**" has the meaning specified in the Preamble.

"**Environment**" means soil, surface waters, ground waters, land, stream sediments, flora, fauna, surface or subsurface strata and ambient air.

"**Environmental Claims**" means all notices of investigations, warnings, notice letters, notices of violations, Liens, orders, claims, demands, suits or administrative or judicial actions for any injunctive relief, fines, penalties, third party claims, or other claims asserting violations of Environmental Requirements or responsibility for Environmental Liabilities.

"**Environmental Conditions**" means the Release of Hazardous Materials or the presence of Hazardous Materials on, in, under or within any property (including the presence in the Environment), other than the presence of Hazardous Materials in locations and at concentrations that are naturally occurring.

"**Environmental Liabilities**" means any legal obligation or liability arising under Environmental Requirements or related to or arising out of any Environmental Condition, including those consisting of or relating to any (a) duty imposed by, breach of or noncompliance with any Environmental Requirements; (b) environmental, health or safety matters or conditions (including on-site or off-site contamination, occupational safety and health and regulation of Hazardous Materials); (c) Remedial Action undertaken by any Person; (d) bodily injury (including illness, disability and death, and regardless of when any such bodily injury occurred, was incurred or manifested itself), property damage (including trespass, nuisance, wrongful eviction and deprivation of the use of real or personal property), or other losses or damages incurred by any other Person (including any employee or former employee of such Person); (e) any injury to, destruction of, or loss of natural resources, or costs of any natural resource damage assessments; (f) exposure of any Person to any Hazardous Materials; and (g) the presence or Release of any Hazardous Materials.

"**Environmental Requirements**" mean all present Laws (including common law), regulations, legally binding or otherwise enforceable requirements and Authorizations and Permits relating to human health, pollution, or protection of the Environment (including ambient air, surface water, ground water, land surface or surface strata), including (i) those relating to emissions, discharges, Releases, or threatened Releases of Hazardous Materials, and (ii) those relating to the identification, generation, manufacture, processing, distribution, use, treatment, storage, disposal, release, recovery, transport or other handling of Hazardous Materials. Without limiting the previous, the term "**Environmental Requirements**" includes (1) CERCLA; the Superfund Amendments and Reauthorization Act, Public Law 99-499, 100 Stat. 1613; the Emergency Planning and Community Right to Know Act, 42 U.S.C. Sections 11001-11050; the Resource Conservation and Recovery Act, 42 U.S.C. Sections 6901-6992k ("RCRA"); the Safe Drinking Water Act, 42 U.S.C. Sections 300f to 300j-26; the Toxic Substances Control Act, 15 U.S.C. Sections 2601-2692; the Hazardous Materials Transportation Act, 49 U.S.C. Sections 5101-5127; the Federal Water Pollution Control Act, 33 U.S.C. Sections 1251-1387; the Oil Pollution Act of 1990, 33 U.S.C. Sections 2701--2761; the Clean Air Act, 42 U.S.C. Sections 7401-7671q; the Atomic Energy Act of 1954, as amended, 42 U.S.C. Sections 2011 et seq.; the Low Level Radioactive Waste Policy Act, as amended, 42 U.S.C. Section 2021b et seq.; the Occupational Safety and Health Act, 29 U.S.C. Sections 651-678, and the regulations promulgated pursuant to the above-listed federal statutes, and (2) counterpart Laws and regulations promulgated or issued by any state or local Governmental Authority, specifically including the Pennsylvania Storage Tank and Spill Prevention Act of 1989 (35 Pa. C.S.A. § 6021.101 *et. seq.*).

"**EPA**" means the United States Environmental Protection Agency, or a successor Governmental Authority with substantially similar power and authority thereto.

"**Equipment and Machinery**" means (i) all the equipment, tangible personal property, machinery, office furniture and equipment, fixtures, tooling, spare maintenance or replacement parts, environmental testing equipment, and vehicles owned or leased by Seller (including all leases of such property), which are primarily used in the operation of the System, (ii) any rights of Seller to warranties applicable to the foregoing (to the extent assignable), and licenses received from manufacturers and Seller of any such item, and (iii) any related claims, credits, and rights of recovery with respect thereto, as set forth on Schedule 4.10.

"**Excluded Assets**" has the meaning specified in Section 2.02.

"**Excluded Liability**" or "**Excluded Liabilities**" means all liabilities other than Assumed Liabilities.

"**Files and Records**" means all files and records of Seller primarily relating to the System and the Acquired Assets, whether in hard copy, digital, or magnetic or other format including data, geographic information system data, plans, contracts and recorded knowledge relating to the Acquired Assets (including property records, related to the foregoing), customer and supplier records, customer lists (both current and prospective), customer billing records, records of sales calls, manuals, books, files, records, engineering data, procedures, systems, instructions, drawings, blueprints, plans, designs, specifications, equipment lists, parts lists, equipment maintenance records, equipment warranty information, plant plans, specifications and drawings, sales and

advertising material, and computer software, and records relating to the System, whether stored on-site or off-site.

"**Final Order**" means a Governmental Approval by a Governmental Authority as to which (a) no request for stay of the action is pending, no such stay is in effect and if any time period is permitted by statute or regulation for filing any request for such stay, such time period has passed, (b) no petition for rehearing, reargument or reconsideration of the action is pending and the time for filing any such petition has passed, (c) such Governmental Authority does not have action under consideration on its own motion and (d) no appeal to a court or administrative tribunal or a request for stay by a court or administrative tribunal of the Government Authority's action is pending or in effect and the deadline for filing any such appeal or request for stay has passed.

"**Governmental Approval**" means any consent, approval, authorization, notice, filing, registration, submission, reporting, order, adjudication or similar item of, to or with any Governmental Authority.

"**Governmental Authority**" or "**Governmental Authorities**" means any court, department, commission, board, bureau, municipality, municipal authority (established pursuant to the Municipal Authorities Act of the Commonwealth of Pennsylvania), agency or instrumentality of the United States, any state, county, city or political subdivision thereof, or any foreign governmental body, including without limitation, the PaPUC, the EPA, PaDEP and the Township Board.

"**Hazardous Materials**" means any solid, liquid, gas, odor, heat, sound, vibration, radiation or other substance or emission which is a contaminant, pollutant, dangerous substance, toxic substance, hazardous waste, residual waste, solid waste, hazardous material or hazardous substance which is or becomes regulated by applicable Environmental Laws or which is classified as hazardous or toxic under applicable Environmental Laws (including gasoline, diesel fuel or other petroleum hydrocarbons, polychlorinated biphenyls, asbestos and urea formaldehyde foam insulation).

"**Indemnified Party**" means any Buyer Indemnified Persons or Seller Indemnified Persons, as applicable, entitled to indemnification pursuant to Article VIII.

"**Indemnifying Party**" means a Party which is obligated to indemnify the Buyer Indemnified Persons or the Seller Indemnified Persons, as applicable, pursuant to Article VIII.

"**Knowledge**" means either (i) the actual knowledge of a Representative of Buyer and the knowledge that each such person would reasonably be expected to obtain in the course of diligently performing his or her duties for Buyer or (ii) the actual knowledge of a Representative of Seller, the knowledge that each such person would reasonably be expected to obtain in the course of diligently performing his or her duties for Seller, as applicable based on the context in which the term is used.

"**Land Development Agreement / Financial Security Agreement**" means any agreement between Seller and an applicant for subdivision and/or land development approval pursuant to the Pennsylvania Municipalities Planning Code, pursuant to which applicant is required to construct

public improvements and required to post financial security, for the benefit of Seller, to secure applicant's obligations under such agreement.

"**Law**" means any applicable law, statute, regulation, ordinance, rule, order, judicial, administrative and regulatory decree, judgment, adjudication, consent decree, settlement agreement or governmental requirement enacted, promulgated, entered into, agreed or imposed by any Governmental Authority, as may be in effect at the relevant time or times in the context in which the term is used.

"**Liability Cap**" has the meaning specified in Section 8.05(c).

"**Lien**" means any lien in a fixed and ascertainable monetary sum, or any pledge, mortgage, deed of trust or security interest securing a fixed and ascertainable monetary sum, or any charge or claim in a fixed and ascertainable monetary sum. In addition, in connection with Real Property, any item otherwise falling within the definition of a "Lien" must be filed of record by the responsible Party in accordance with the terms of this Agreement.

"**Loss**" means any and all losses, liabilities, obligations, damages, penalties, interest, Taxes, claims, actions, demands, causes of action, judgments, reasonable attorneys', consultants' and other professional fees, and all other reasonable costs and expenses sustained or incurred in investigating, preparing or defending or otherwise incident to any such claim, action, demand, cause of action or judgment or the enforcement of a Party's rights under Article VIII; except that "**Losses**" shall not include punitive, incidental, consequential, special or indirect damages, including loss of future revenue or income, loss of business reputation or opportunity relating to the breach or alleged breach of this Agreement, or diminution of value or any damages based on any type of multiple, except in the case of fraud or to the extent actually awarded to a Governmental Authority or other third party in respect of a Third Party Claim.

"**Material Adverse Effect**" means any result, occurrence, fact, change, event or effect that has a materially adverse effect on the business, financial condition, physical condition or results of operations of the System, except that no effect arising out of or in connection with or resulting from any of the following is deemed, either alone or in combination, to constitute or contribute to a Material Adverse Effect: (i) general economic conditions or changes in those conditions; (ii) financial, banking, currency or capital markets fluctuations or conditions (either in the United States or any international market and including changes in interest rates); (iii) conditions affecting the real estate, financial services, construction, water utility or sewer utility industries generally; (iv) any existing event, circumstance, condition or occurrence of which Buyer has Knowledge as of the Effective Date; (v) any action, omission, change, effect, circumstance or condition contemplated by this Agreement or attributable to the execution, performance or announcement of this Agreement or the transactions contemplated hereby; and (vi) negligence, intentional misconduct or bad faith of Buyer or its Representatives.

"**Missing Easements**" means, as of any particular date, each material Easement that is for or used in connection with the operation of the System or to provide continuous and unimpeded rights of way for the Acquired Assets (including access thereto) that either (a) has not been obtained by Seller as of such date or (b) if such Easement has been obtained by Seller as of such date, and such Easement is not sufficient to operate the System as currently conducted.

"**MS4 System**" or **"Municipal Separate Storm Sewer System**" means the current and any future assets and facilities, built, operated or maintained, or real property ("**MS4 System Real Property**") and Stormwater System Assets owned by Seller and used for the purpose of capturing, conveying and discharging stormwater separate from the System.

"**Outside Date**" means 365 days after the date the application to the PaPUC is accepted as complete by the PaPUC and the statutory 6-month consideration period is initiated.

"**PaDEP**" means the Pennsylvania Department of Environmental Protection, or any successor Governmental Authority with substantially similar powers thereto.

"**PaPUC**" means the Pennsylvania Public Utility Commission, or any successor Governmental Authority with substantially similar powers thereto.

"**Party**" means Buyer or Seller and the term "Parties" means collectively Buyer and Seller.

"**PCB Equipment**" means PCB equipment as defined in 40 C.F.R. Part 761.

"**Pending Development Plan**" means any subdivision or land development plan that has been submitted to Seller for approval pursuant to the Pennsylvania Municipal Planning Code, as updated prior to Closing.

"**Permitted Liens**" means (a) Liens for Taxes not yet due and payable or being contested in good faith by appropriate procedures; (b) easements, rights of way, zoning ordinances and other similar encumbrances affecting Real Property and Easements as set forth on Schedule 4.09; (c) other than with respect to Real Property owned by Seller, Liens arising under original purchase price conditional sales contracts and equipment leases with third parties entered into in the ordinary course of business; and (d) other imperfections of title or Liens, if any, that have not had, and would not have, a Material Adverse Effect.

"**Person**" means any individual (including, the heirs, beneficiaries, executors, legal representatives or administrators thereof), corporation, partnership, joint venture, trust, limited liability company, limited partnership, joint stock company, unincorporated association or other entity or a Governmental Authority.

"**Plan**" has the meaning specified in Section 7.10(a).

"**Purchase Price**" has the meaning specified in Section 3.01.

"**Real Property**" means those certain parcels of land, with the buildings, improvements, and Equipment and Machinery thereon or therein, that are part of the System and fee simple title to which is to be conveyed by Seller to Buyer as part of the Acquired Assets.

"**Regulated Asbestos Containing Material**" means regulated asbestos containing material as defined by 40 C.F.R. § 61.141.

"**Release**" means any actual or threatened spilling, leaking, pumping, pouring, injecting, emptying, discharging, emitting, escaping, leaching, dumping, disposal, or release or migration of

Hazardous Materials into the Environment, including the abandonment or discarding of barrels, containers and other receptacles containing any Hazardous Materials.

"**Remedial Action**" means any and all actions to (a) investigate, clean up, remediate, remove, treat, contain or in any other way address any Hazardous Materials in the Environment, (b) prevent the Release or threat of Release or minimize the further Release of any Hazardous Materials so it does not migrate or endanger public health or welfare or the indoor or outdoor Environment, and (c) perform pre-remedial studies and investigations and post-remedial monitoring, maintenance and care. The term "**Remedial Action**" includes any action which constitutes (i) a "removal", "remedial action" or "response" as defined by Section 101 of CERCLA, 42 U.S.C. §§ 9601(23), (24), and (25); (ii) a "corrective action" as defined in RCRA, 42 U.S.C. § 6901 et seq.; or (iii) a "response" or "interim response" as defined in the Pennsylvania Hazardous Sites Cleanup Act, 35 P.S. §6020.103.

"**Representative**" means, with respect to any Person, any director, officer, employee, official, lender mortgagee, financier, provider of any financial instrument (or any agent or trustee acting on their behalf), partner, member, owner, agent, lawyer, accountant, auditor, professional advisor, consultant, engineer, contractor, other Person for whom such Person is at law responsible or other representative of such Person and any professional advisor, consultant or engineer designated by such Person as its "Representative."

"**Schedules**" means the disclosure schedules delivered by Seller and Buyer, respectively, concurrently with the execution and delivery of this Agreement, and as may be supplemented and updated pursuant to Sections 9.03 and 10.04. Any disclosure set forth on any particular Schedule is deemed disclosure in reference to all Schedules comprising the Schedules to which such disclosure is reasonably apparent.

"**Seller**" has the meaning specified in the Preamble of this Agreement.

"**Seller Fundamental Representations**" has the meaning specified in Section 8.01.

"**Seller Indemnified Persons**" has the meaning specified in Section 8.03.

"**Seller DEP Permits**" means the Water Quality Management Permits set forth on Schedule 4.12, each issued by PaDEP to Seller with respect to the System, including any revisions or amendments thereto. This definition shall not include any permit issued and related to the Stormwater System Assets.

"**Service Area**" has the meaning specified in the recitals to this Agreement.

"**Stormwater System Assets**" means all assets owned by Seller, and used exclusively in the operation or maintenance of the MS4 System, including (i) drains, pipes and collection basins and all other stormwater drainage assets used exclusively for stormwater collection, conveyance and discharge; (ii) catch basins, inlets, pipes and all other stormwater lateral facilities (the "**Stormwater Lateral Facilities**") that connect surface stormwater drains to storm conveyances which discharge to surface waters; (iii) interest in real estate directly associated with (i) and (ii); and (iv) any related permits.

"**Supplies**" means all lubricants, spare parts, fuel, chemicals, raw materials, and other supplies and inventory, and all rights to warranties received from suppliers with respect to the foregoing, and related claims, credits, and rights of recovery with respect thereto that are necessary to operate the System.

"**System**" has the meaning specified in the recitals to this Agreement and shall include the Acquired Assets and exclude the Excluded Assets.

"**Taxes**" means any federal, state, local or foreign income, gross receipts, license, payroll, employment, excise, severance, stamp, occupation, premium, windfall profits, environmental, customs duties, permit fees, capital stock, franchise, profits, withholding, social security, unemployment, disability, real property, personal property, parking, sales, use, transfer, registration, value added, alternative or add-on minimum, estimated or other tax, levy, impost, stamp tax, duty, fee, withholding or similar imposition of any kind payable, levied, collected, withheld or assessed at any time, including any interest, penalty or addition thereto, whether disputed or not.

"**Third Party Claim**" has the meaning specified in Section 8.05(a).

"**Threshold Amount**" has the meaning specified in Section 8.05(a).

"**Title Commitment**" has the meaning specified in Section 6.01.

"**Title Company**" has the meaning specified in Section 6.01.

"**Title Policy**" has the meaning specified in Section 2.03.

"**Township Board**" the meaning specified in the Preamble of this Agreement.

"**Township Senior Staff**" means the Township Manager, Assistant Manager, Superintendent of Public Works and the Township Engineer.

"**UCC Search**" has the meaning specified in Section 6.04.

"**Unscheduled Real Property**" has the meaning specified in Section 6.06.

"**Utility Valuation Expert**" means an expert that was approved by the PaPUC and is currently, at the time of this Agreement, on the list of approved appraisers maintained by the PaPUC.

ARTICLE II.

TERMS OF PURCHASE AND ASSUMPTION OF LIABILITIES

Section 2.01. Purchase and Sale of Acquired Assets.

Subject to the terms and conditions set forth in this Agreement, at Closing, Buyer shall purchase from Seller and Seller shall sell, transfer, assign and deliver to Buyer, free and clear of all Liens except for Permitted Liens, all of Seller's right, title and interest in and to all assets, facilities, business, goodwill, properties and rights of Seller of every kind and description, whether tangible or intangible, real, personal or mixed, wherever situated, in each case used in, held for use in, or acquired or developed for use in, the System, or otherwise related to, or arising out of the operation or conduct of the System (whether or not any such assets have any value for accounting purposes or are carried or reflected on the books or financial records of Seller), including any of the foregoing in which Seller is entitled to acquire rights in the future pursuant to Pending Development Plans (other than the rights of Seller pursuant to Section 2.02(d)) or development plans approved pursuant to this Agreement, but in all cases other than the Excluded Assets (collectively referred to as the "Acquired Assets"), including:

(a) all real property and appurtenant interests, rights of way used in, or necessary for, the operation of the System, including without limitation (i) good and marketable fee simple title to the Real Property set forth on Schedule 4.09, and (ii) all Easements, including without limitation those set forth on Schedule 4.09;

(b) all sanitary wastewater related treatment, collection and conveyance facilities, including all collection system mains (whether gravity or force mains), laterals (from the collection system main to the edge-of-road or curb-line when the main is located within a public right-of-way or the edge of an easement where the main is located within private property), pumping stations, generators, manholes, and other related appurtenances and any billing and collections related assets necessary to own and operate the System;

(c) all contracts, licenses, and leases to which Seller is a party or beneficiary or payee, including without limitation, all construction contracts, surety bonds, operation and maintenance agreements, management agreements, reserved capacity agreements, architect agreements and consultant agreements, and agreements relating to vehicles and other items of personal property as set forth on Schedule 4.13 (the "Assigned Contracts");

(d) all Supplies;

(e) all personal property and fixed assets, including all Equipment and Machinery, auxiliary equipment and plant equipment, including without limitation those items set forth on Schedule 4.10;

(f) all expenses prepaid by Seller and security deposits paid by Seller;

(g) all Files and Records;

(h) all Authorizations and Permits of or held by Seller (to the extent transferrable to Buyer under Law), including all Authorizations and Permits which are environmental permits, Seller DEP Permits other than those NPDES permits that relate to the Stormwater System Assets, other operating permits and those items set forth on Schedule 4.12; and

(i) all goodwill of the System.

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE SELLER MAKES NO EXPRESS OR IMPLIED REPRESENTATION OR WARRANTY REGARDING ANY REPRESENTATION REGARDING THE FUTURE PROFITABILITY OR FUTURE EARNINGS PERFORMANCE OF THE ACQUIRED ASSETS OR THE SYSTEM OR ANY FUTURE RATEMAKING THAT MAY BE ALLOWED BY THE PAPUC FOR ANY OF THE ACQUIRED ASSETS. NOTWITHSTANDING THE FOREGOING, ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE VALID UNTIL THE TIME OF CLOSING.

Section 2.02. Excluded Assets.

Notwithstanding anything herein to the contrary, the Acquired Assets shall not include the following (the "Excluded Assets"):

(a) the Stormwater System Assets, including any related NPDES permits;

(b) all contracts, licenses and leases that are not Assigned Contracts;

(c) the seals, organizational documents, minute books, tax returns, books of account or other records having to do with the organization of Seller;

(d) cash and cash equivalents, including (i) accounts receivable and amounts earned by Seller but not yet billed attributable to services rendered by Seller as of or before the Closing Date and (ii) EDU fees owed to Seller at or before the Closing Date for any Pending Development Plan but not yet paid to Seller;

(e) all insurance policies of Seller and all rights to applicable claims and proceeds thereunder;

(f) all rights to any outstanding lien related to non-payment by a System customer existing at or before the Closing Date and all actions, suits or claims of any nature available to or being pursued by Seller, whether arising by way of counterclaim or otherwise;

(g) all assets, properties and rights used by Seller other than those which primarily relate to the operations of the System;

(h) the assets, properties and rights specifically set forth on Schedule 2.02(h);

(i) the MS4 System Real Property;

(j) the rights which accrue or will accrue to Seller under this Agreement and any related agreement, exhibit or schedule; and

(k) all connecting facilities originating from Seller's terminus point of the collection facilities at the edge-of-road or curb-line when the facilities are located with a public right-of-way or the edge of an easement where the collection facilities are located within private property to and throughout the customer's property, including grinder pumps (the "Customer Sewer Laterals").

Section 2.03. Sale Free of Liens.

After Buyer fulfills its obligations pursuant to Section 3.01(a), on the Closing Date, the Acquired Assets will be free and clear of all Liens other than Permitted Liens. Seller shall convey the Acquired Assets by appropriate special warranty or other deed (subject to Section 6.02(c)), bills of sale, endorsements, assignments and other instruments of transfer or conveyance described herein, and if not expressly described herein, then by transfer documents satisfactory in form and substance reasonably acceptable to Buyer and Seller and their counsel in their reasonable, good faith discretion. At Closing, title to the Real Property shall be good and marketable and insured by the Title Company, at the Title Company's filed rates, as a good and marketable title, free and clear of all Liens and exceptions to coverage, except for the Permitted Liens, pursuant to an owner's policy of title insurance on the American Land Title Association's ("ALTA") Owner's Form 2006, subject to the terms of Section 6.02 (the "Title Policy").

Section 2.04. Assumption of Liabilities.

(a) On the terms and conditions set forth in this Agreement and excluding the Excluded Liabilities, Buyer shall assume and pay, perform and discharge when due any and all liabilities and obligations of Seller both (1) arising under Seller DEP Permits (arising from, related to, or based on events or circumstances occurring on or after the Closing Date), and (2) arising out of or relating to the System or the Acquired Assets on or after the Closing, including the following:

(i) all liabilities and obligations under the Assigned Contracts and Authorizations and Permits resulting from events that occur or conditions that arise on or after the Closing;

(ii) any litigation initiated against Seller related to the System or the Acquired Assets resulting from events that occur on or after Closing or conditions that arise on or after the Closing;

(iii) all liabilities and obligations for Taxes relating to the System, its operation, the Acquired Assets and the Assumed Liabilities attributable to the period after the Closing Date; and

(iv) all other liabilities and obligations arising out of or relating to Buyer's ownership or operation of the System and the Acquired Assets on or after the Closing (all of the aforementioned liabilities in this Section 2.04(a) are referred to as the "Assumed Liabilities").

(b) At the Closing, to the extent Seller is not released therefrom, Buyer shall indemnify Seller against any Loss relating to the Assumed Liabilities in accordance with Section 8.03.

(c) Buyer shall not assume or be liable to pay any liabilities or obligations relating to the Excluded Liabilities or any other liabilities or obligations that are not Assumed Liabilities.

Section 2.05. Further Assurances.

At any time and from time to time after the Closing Date, Seller shall, upon the request of Buyer, and Buyer shall, upon the request of Seller, at the cost of requesting Party, promptly execute, acknowledge and deliver, or cause to be executed, acknowledged and delivered, such other instruments of conveyance and transfer and other documents, and perform or cause to be performed such further acts, as may be reasonably required to evidence or effectuate, or more fully evidence or effectuate, (a) the sale, conveyance, transfer, assignment and delivery hereunder of the Acquired Assets to Buyer, (b) the assumption by Buyer of any of the Assumed Liabilities, (c) performance by the Parties of any of their other respective obligations under this Agreement, (d) the vesting in Buyer of all right, title and interest in the Acquired Assets and the System as specified in this Agreement, and (e) any other matters reasonably requested by a Party to carry out the provisions, purposes and intent of this Agreement.

Section 2.06. Certain Transfers; Assignment of Contracts.

(a) Notwithstanding anything to the contrary in this Agreement, and subject to the provisions of this Section 2.06(a) and Section 2.06(a), to the extent that the sale, transfer, assignment, conveyance and delivery, or attempted sale, transfer, assignment, conveyance and delivery, to Buyer of any Assigned Contract or other Acquired Asset would result in a violation of Law, or would require the consent, authorization, approval or waiver of any Person (other than the Parties), including any Governmental Authority, and such consent, authorization, approval or waiver shall not have been obtained before the Closing, this Agreement shall not constitute a sale, transfer, assignment, conveyance and delivery, or an attempted sale, transfer, assignment, conveyance and delivery, thereof (any such Acquired Asset, a "Nonassignable Asset"). Following the Closing, Seller and Buyer shall use its commercially reasonable efforts (at the cost and expense of the Party that is responsible for compliance with such Law or obtaining such consent, authorization, approval or waiver), and shall cooperate with each other, to obtain any such required consent, authorization, approval or waiver, or any release, substitution, novation or amendment required to sell, transfer, assign, convey and deliver any such Nonassignable Asset to Buyer and in no event will Buyer be required to pay any additional consideration therefor. Once such consent, authorization, approval, waiver, release, substitution or amendment is obtained, Seller shall sell, transfer, assign, convey and deliver to Buyer the relevant Acquired Asset to which such consent, authorization, approval, waiver, release, substitution or amendment relates for no additional consideration. Any applicable sales, transfer and other similar Taxes in connection with such sale, transfer, assignment, conveyance and delivery shall be paid one-half (50%) by Buyer and one-half (50%) by Seller.

(b) Until such time as a Nonassignable Asset is transferred to Buyer pursuant to this Article II, Buyer and Seller shall cooperate in any commercially reasonable and economically feasible arrangements (such as subleasing, sublicensing or subcontracting) to provide to the Parties

the economic and, to the extent permitted under Law, operational equivalent of the transfer of such Nonassignable Asset to Buyer at the Closing and the performance by Buyer of its obligations with respect thereto, and so long as Seller transfers and turns over all economic and beneficial rights with respect to each such Nonassignable Asset, Buyer shall, to the extent permitted under Law and the terms of any applicable contract that is a Nonassignable Asset, as agent or subcontractor for Seller, pay, perform and discharge the liabilities and obligations of Seller thereunder from and after the Closing Date, but only to the extent that such liabilities and obligations would be Assumed Liabilities if the applicable consent or approval had been obtained on or before the Closing Date and such Nonassignable Asset had been assigned to Buyer at Closing. To the extent permitted under Law, Seller shall hold in trust for and pay to Buyer promptly upon receipt thereof, such Nonassignable Asset and all income, proceeds and other monies received by Seller with respect to such Nonassignable Asset in connection with the arrangements under this Article II.

(c) If, following the Effective Date and before the Closing, Buyer identifies any contract to which Seller is a party which is not set forth on Schedule 4.13, and Buyer reasonably determines such contract is necessary or useful to the operation of the System, Buyer shall notify Seller of such determination and Seller shall, promptly following receipt of such notice, deliver to Buyer an updated Schedule 4.13 reflecting the addition of such contract, and such contract will be an "Assigned Contract" for all purposes hereunder.

(d) If during the twelve (12) month period following the Closing, Buyer or Seller identifies any contract to which Seller was a party as of the Closing and which (i) was not set forth on Schedule 4.13 (as may be updated pursuant to (c)) and (ii) Buyer reasonably believes is necessary or useful to the operation of the System, Seller shall, promptly following Buyer's written request therefor, execute, acknowledge and deliver, or cause to be executed, acknowledged and delivered, such other instruments of conveyance and transfer and other documents, and perform or cause to be performed such further acts, as may be reasonably required to evidence or effectuate, or more fully evidence or effectuate the assignment of such contract to Buyer for no additional consideration, and upon such assignment, such contract is deemed an Assigned Contract for all purposes hereunder.

ARTICLE III.

PURCHASE PRICE AND ADDITIONAL PURCHASE PRICE

Section 3.01. Purchase Price.

The purchase price for the Acquired Assets is Fifty Four Million Nine Hundred Thirty Thousand Dollars ($54,930,000) (the "Purchase Price") which Buyer shall pay as follows at Closing:

(a) Buyer shall pay, subject to any adjustment pursuant to Section 3.01(b) and any amounts required to be deposited into the escrow fund pursuant to Section 6.05(e), to Seller by wire transfer of immediately available funds the Purchase Price to one or more accounts that Seller designates and provides to Buyer at least three (3) Business Days before the Closing Date; and

(b) Final Billing: The Buyer is entitled to all customer billings with respect to sanitary wastewater customers' services for the period on or after the Closing Effective Time, and Seller is

entitled to all such billings for the period before the Closing Effective Time. The Parties shall cooperate to calculate an agreed upon proration of billing amounts and to the extent that either Party collects billings that are attributable to service provided by the other Party, the Party holding the other Party's billing collections shall pay such amount to the other Party.

(c) In addition to the Purchase Price, Buyer shall pay Seller up to Seventy Thousand Dollars ($70,000) as reimbursement for engineering and legal fees incurred related to this transaction to one or more accounts that Seller designates and provides to Buyer at least three (3) Business Days before the Closing Date. Seller shall provide Buyer with invoices evidencing the amount of transaction-related fees incurred at least five (5) Business Days before the Closing Date.

Section 3.02. Fair Consideration.

The consideration specified in this Article III represents fair consideration and reasonable equivalent value for the sale and transfer of the Acquired Assets and the transactions, covenants and agreements set forth in this Agreement, which consideration was agreed upon as the result of arm's-length good faith negotiations between the Parties and their respective Representatives.

Section 3.03. Transfer Taxes.

Any and all deed stamps or transfer Taxes which may be due the Commonwealth of Pennsylvania or any political subdivision in connection with the sale, transfer, assignment, conveyance and delivery hereunder of the Acquired Assets to Buyer (collectively, "Transfer Taxes"), shall be paid one-half (50%) by Buyer and one-half (50%) by Seller.

ARTICLE IV.

REPRESENTATIONS AND WARRANTIES OF SELLER

Seller makes only the representations and warranties which are set forth in this Article IV.

As a material inducement to Buyer to enter into this Agreement and to consummate the transactions contemplated by this Agreement, Seller represents and warrants, as of the Effective Date and as of the Closing Date (except to the extent any of the following representations and warranties specifically apply to or relate to another date, in which event such representations and warranties shall be true and correct as of such other date), as follows:

Section 4.01. Organization.

Seller is a body corporate and politic, organized and existing under the Second Class Township Code of the Commonwealth of Pennsylvania.

Section 4.02. Power and Authority.

Seller has (i) duly adopted an authorizing ordinance or resolution authorizing the transactions contemplated herein, which remains in full force and effect, (ii) duly authorized and approved the execution and delivery of this Agreement and (iii) duly authorized and approved the performance by Seller of its obligations contained in this Agreement. Seller has all requisite power

and authority to own, lease and operate the Acquired Assets and the System and has the power and authority to enter into this Agreement and to do all acts and things and execute and deliver all other documents as are required hereunder to be done, observed or performed by it in accordance with the terms of this Agreement.

Section 4.03. Enforceability.

This Agreement has been duly authorized, executed and delivered by Seller and is a valid and legally binding obligation of Seller, enforceable against Seller in accordance with the terms hereof, subject only to applicable bankruptcy, insolvency and similar laws affecting the enforceability of the rights of creditors generally and to general principles of equity.

Section 4.04. No Conflict or Violation.

The execution and delivery of this Agreement by Seller, the consummation of the transactions contemplated by this Agreement and the performance by Seller of the terms, conditions and provisions hereof has not and will not contravene or violate or result in a breach of (with or without the giving of notice or lapse of time, or both) or acceleration of any material obligations of Seller under (i) any Law or (ii) any agreement, instrument or document to which Seller is a party or by which it is bound.

Section 4.05. Consents and Approvals.

Schedule 4.05 sets forth a list of each consent, waiver, authorization or approval of any Governmental Authority, or of any other Person, and each declaration to or filing or registration with any Governmental Authority required in connection with the execution and delivery of this Agreement by Seller or the performance by Seller of its obligations hereunder.

Section 4.06. Undisclosed Liabilities

Except as set forth in Schedule 4.06, there are no liabilities or obligations of Seller, either accrued, absolute, contingent or otherwise, relating to the Acquired Assets, other than liabilities incurred in the ordinary course that could not reasonably be expected to have a Material Adverse Effect on Buyer.

Section 4.07. Absence of Certain Changes or Events.

Except as set forth on Schedule 4.07, since December 31, 2016, there has not been any transaction or occurrence that has resulted or is reasonably likely to result in a Material Adverse Effect and Seller has operated and maintained the System since that date in the ordinary course.

Section 4.08. Tax Matters.

Except as set forth in Schedule 4.08 or as would not have a Material Adverse Effect, (i) Seller has timely paid all Taxes that may have been or may be due and payable by Seller on or before the Closing Date, arising from the ownership or operation of the Acquired Assets or the System on or before the Closing Date (ii) no taxing authority has asserted any claim against the Seller for the assessment of any additional tax liability or initiated any action or proceeding which

could result in such an assertion; and (iii) the Seller has made all withholding of Taxes required to be made under all Laws and regulations, including without limitation, withholding with respect to compensation paid to employees, and the amounts withheld have been properly paid over to the appropriate taxing authorities.

Section 4.09. Real Property and Easements.

Schedule 4.09 sets forth all Real Property of Seller and separately identifies all Easements. Seller does not lease (as lessee) any real property that is used in the operation of the System. There are no pending condemnation proceedings relating to any of the Real Property or Easements nor has Seller actually received any written threats of any condemnation proceedings and, to the Knowledge of Seller, no such proceedings are threatened. Seller has not received any written notices of any violations of any Law from any Governmental Authority with respect to the Real Property or the Easements which has not been cured in all material respects and, to Seller's Knowledge, no such violations of Law exist. With respect to the Real Property, (i) there are no leases, options, rights of reversions or other rights of use or rights to acquire the Real Property held by third parties, (ii) Seller is in sole possession of the Real Property, and (iii) to Seller's Knowledge there are no encroachments either way across the boundary of the Real Property, nor any dispute with adjacent real property owners over the location of boundaries or potential claims adverse to title. With respect to each Easement, (i) there are no leases, options, rights of reversions or other rights of use or rights to acquire the Easement held by third parties, and (ii) to Seller's Knowledge there are no disputes with adjacent real property owners of the owners of the real property encumbered by the Easement over the location of boundaries or potential claims adverse to title.

Section 4.10. Equipment and Machinery.

All Equipment and Machinery included in the Acquired Assets is set forth on Schedule 4.10. Except as set forth in Schedule 4.10, Seller has good title, free and clear of all Liens (other than the Permitted Liens and Liens that will be released on or before Closing) to the Equipment and Machinery owned by Seller. Except as set forth on Schedule 4.10, all the Equipment and Machinery is owned by Seller, and none is leased or used under any conditional sales, title-retention, lease, license or similar arrangement.

Section 4.11. Environmental Compliance.

Except as set forth on Schedule 4.11, or that otherwise could not be expected to have a Material Adverse Effect:

(a) The System as currently operated by Seller and all operations and activities conducted by Seller with respect to the System are in compliance in all material respects with all applicable Environmental Requirements.

(b) Seller has generated, used, handled, treated, stored and disposed of all Hazardous Materials in (i) compliance in all material respects with all applicable Environmental Requirements and (ii) a manner that has not given, and could not reasonably be anticipated to give, rise to Environmental Liabilities.

(c) Seller has not received notice of any Environmental Claims related to the System that have not been fully and finally resolved, and to the Knowledge of Seller no claims of Environmental Liabilities have been threatened allegedly arising from or relating to the System that have not been fully and finally resolved.

(d) Hazardous Materials are not present at or on the System or Acquired Assets, there has been no Release of Hazardous Materials at, on or from any part of the System or the Acquired Assets, in each case in a manner that violates any Environmental Requirements or has resulted in, or could reasonably be anticipated to give rise to, Environmental Liabilities.

(e) No Lien or activity use limitation or institutional control has been recorded affecting any Acquired Assets by any Governmental Authority due to either the presence of any Hazardous Material on or off the Acquired Assets or a violation of any Environmental Requirement.

(f) There are no underground storage tanks on or at any of the Acquired Assets. Any underground storage tanks previously located at the Acquired Assets have been removed or otherwise closed, plugged and abandoned in compliance with applicable Environmental Requirements in effect at the time of such closure.

(g) No PCB Equipment is on or at any of the Acquired Assets. Any PCB Equipment that previously existed at the Acquired Assets has been flushed of polychlorinated byphenyls or has been removed and properly disposed of, in compliance with applicable Environmental Requirements, and any remaining PCB Equipment is labeled to the extent required under applicable Environmental Requirements and being managed in compliance with applicable Environmental Requirements.

(h) No Regulated Asbestos Containing Material exists in or on the Acquired Assets in an aggregate amount that would reasonably be expected to result in an Environmental Liability; and any Regulated Asbestos Containing Material is being managed in compliance with all applicable Environmental Requirements.

(i) Seller has delivered to Buyer (1) all material environmental site assessments or reasonable and accurate summaries thereof pertaining to the System, (2) all material compliance audits or compliance assurance reviews prepared within the previous five (5) years or reasonable and accurate summaries thereof relating to compliance with Environmental Requirements by the System, and (3) reasonable and accurate summaries of, or all material documents pertaining to, any known and unresolved Environmental Liabilities incurred in relation to the System, to the extent possessed by or under the reasonable control of Seller.

Section 4.12. Authorizations and Permits.

Schedule 4.12 sets forth the Authorizations and Permits of Seller that are currently in full force and effect; (ii) Seller has made true and complete copies of all Authorizations and Permits available to Buyer; and (iii) except as set forth on Schedule 4.12, Seller is in compliance with all terms, conditions and requirements of all Authorizations and Permits, except in each case where such violation or failure, individually or in the aggregate, would not have a Material Adverse

Effect, and no proceeding is pending or, to the Knowledge of Seller threatened relating to the revocation or limitation of any of the Authorizations or Permits, other than those revocations or limitations which do not individually or in the aggregate have a Material Adverse Effect.

Section 4.13. System Contracts.

(a) Schedule 4.13 sets forth a complete and accurate list of all the Assigned Contracts.

(b) Seller has made available to Buyer true and complete copies of all of the Assigned Contracts.

(c) All of the Assigned Contracts set forth on Schedule 4.13 are in full force and effect. Seller has not, nor to the Knowledge of Seller has any other party thereto, breached any material provision of or defaulted under the material terms of, nor does any condition exist which, with notice or lapse of time, or both, would cause Seller, or to the Knowledge of Seller, any other party, to be in default under any Assigned Contract.

Section 4.14. Compliance with Law; Litigation.

(a) Seller has operated and is operating the System in compliance, in all material respects, with all Laws, Authorizations and Permits and is not in breach of any Law, Authorization or Permit that would have a Material Adverse Effect on the operations of the System or on Buyer. There are no Authorizations or Permits from any Governmental Authority necessary for the operation of the System as currently being operated except for those Authorizations and Permits set forth on Schedule 4.12.

(b) Except at set forth on Schedule 4.14, there are no facts, circumstances, conditions or occurrences regarding the System that could reasonably be expected to give rise to any environmental claims or governmental enforcement actions that could reasonably be expected to have a Material Adverse Effect, and there are no past, pending or threatened environmental claims or governmental enforcement actions against Seller that individually or in the aggregate could reasonably be expected to have a Material Adverse Effect.

(c) Except at set forth on Schedule 4.14, no action, suit or proceeding, at law or in equity, or before or by any Governmental Authority, is pending nor, to the Knowledge of Seller, threatened against Seller before or at the time of Closing that could reasonably be expected to have a Material Adverse Effect on the operations of the System. As of the Effective Date, no action, suit or proceeding, at Law or in equity, or before or by any Governmental Authority, is pending nor, to the Knowledge of Seller, threatened against Seller which could materially affect the validity or enforceability of this Agreement.

Section 4.15. Broker's and Finder's Fees.

No broker, finder, or Person is entitled to any commission or finder's fee by reason of any agreement or action of Seller in connection with this Agreement or the transactions contemplated by this Agreement. Seller shall pay when due the fees and expenses of their financial and technical advisors. Seller has employed Public Financial Management, Inc., as municipal advisor to provide transaction structuring advice and to provide Seller with municipal advice relating to the sale of

the System. Seller shall pay all fees owed to Public Financial Management, Inc. in connection with the transactions contemplated by this Agreement.

Section 4.16. Title to the Acquired Assets; Sufficiency.

(a) Except as set forth on Schedule 4.16(a), Seller has good and marketable title to, all Real Property, and valid leasehold interest in or valid licenses or Easements to use and access, all of the Acquired Assets, free and clear of all Liens, other than Permitted Liens and Liens which will be fully and unconditionally released at or before Closing. The use of the Acquired Assets is not subject to any Liens, other than Permitted Liens, and such use does not encroach on the property or the rights of any Person.

(b) Except as set forth on Schedule 4.16(b), the Acquired Assets are sufficient for, and constitute all the assets, properties, business, goodwill and rights of every kind and description, and services required for, the continued conduct and operation of the System by Buyer in substantially the same manner as currently conducted and operated by Seller. Except for the Excluded Assets and except as set forth on Schedule 4.16(b), (i) the Acquired Assets, taken as a whole, comprise all the assets, properties, business, goodwill and rights of every kind and description used or held for use in, or useful or necessary to the operation of the System as currently operated by Seller, and (ii) there are no assets, properties, business, goodwill, rights or services used in the conduct or operation of the System that are owned by any Person other than Seller that will not be licensed or leased to Buyer under valid, current license arrangements or leases. None of the Excluded Assets are material to the System.

Section 4.17. Pending Development Plans.

Schedule 4.17 sets forth a full and complete list of all Pending Development Plans as of the Effective Date. Each Pending Development Plan, if consummated could result in the expansion of the Service Area. Seller provides no assurances whatsoever that any development or expansion of the Service Area associated with any Pending Development Plan will actually be undertaken or completed. The Parties expect that Schedule 4.17 will change from time to time between the Effective Date and Closing, and the Seller shall provide updates to Schedule 4.17 pursuant to Section 9.03.

Section 4.18. Land Development Agreements/Financial Security Agreements

Schedule 4.18 sets forth a list of all Land Development / Financial Security Agreements existing as of the Effective Date between Seller and any third party.

ARTICLE V. REPRESENTATIONS AND WARRANTIES OF BUYER

Buyer makes only the representations and warranties which are set forth in this Article V.

As a material inducement to Seller to enter into this Agreement and to consummate the transactions contemplated by this Agreement, Buyer represents and warrants to Seller, as of the Effective Date and as of the Closing Date (except to the extent any of the following representations and warranties specifically apply or relate to another date, in which event such representations and warranties shall be true and correct as of such other date), as follows:

Section 5.01. Organization.

Buyer is duly organized, validly existing and in good standing under the laws of the state of its organization.

Section 5.02. Authorization and Validity of Agreement.

Buyer has the power and authority to enter into this Agreement and to do all acts and things and execute and deliver all other documents as are required hereunder to be done, observed or performed by it in accordance with the terms of this Agreement. This Agreement has been duly authorized, executed and delivered by Buyer and is a valid and legally binding obligation of Buyer, enforceable against it in accordance with the terms hereof, subject only to applicable bankruptcy, insolvency and similar laws affecting the enforceability of the rights of creditors generally and to general principles of equity.

Section 5.03. No Conflict or Violation.

The execution and delivery of this Agreement by Buyer, the consummation of the transactions contemplated hereby and the performance by Buyer of the terms, conditions and provisions hereof has not and will not contravene or violate or result in a material breach of (with or without the giving of notice or lapse of time, or both) or acceleration of any material obligations of Buyer under (i) any Law, (ii) any material agreement, instrument or document to which Buyer is a party or by which it is bound or (iii) the articles, bylaws or governing documents of Buyer.

Section 5.04. Consents and Approvals.

Schedule 5.04 sets forth a list of each consent, waiver, authorization or approval of any Governmental Authority, or of any other Person, and each declaration to or filing or registration with any Governmental Authority required in connection with the execution and delivery of this Agreement by Buyer or the performance by Buyer of its obligations hereunder.

Section 5.05. Broker's and Finder's Fees.

No broker, finder or third party is entitled to any commission or finder's fee in connection with this Agreement or the transactions contemplated by this Agreement.

Section 5.06. Financial Wherewithal.

Upon Closing, and after giving effect to the consummation of the transactions contemplated hereby and the incurrence of any indebtedness in connection therewith, Buyer shall have the financial ability and will have sufficient working capital for its needs and anticipated needs to operate the System as a certificated public utility system regulated by the PaPUC, authorized, among things, to provide wastewater utility services to retail residential, commercial and industrial customers in the System.

Section 5.07. Sufficient Funds.

Buyer shall have sufficient funds available at Closing to consummate the transactions contemplated by this Agreement, to pay the Purchase Price in accordance with Article III and expenses related to the transactions contemplated by this Agreement, and on and after Closing, to generally provide ownership, operation and capital for the operations and capital needs of the System following the Closing, and assuring that the customers of the System will receive safe, adequate and reliable wastewater service equal to or better than such customers would have received without the transactions contemplated by this Agreement and at all times consistent with the provisions of the Pennsylvania Public Utility Code, 66 Pa. C. S. § 101 *et seq*, and Law.

Section 5.08. Independent Decision.

Except as expressly set forth in this Agreement, or any of the related agreements, Buyer acknowledges that (a) neither Seller nor any other Person has made any representation or warranty, express or implied, as to the accuracy or completeness of the System or information provided to Buyer, and (b) neither Seller nor any other Person shall have or be subject to any liability to Buyer or any other Person resulting from the distribution to Buyer, or Buyer use of, any information regarding the System or Acquired Assets that has been furnished or made available to Buyer and its Representatives.

Section 5.09. Scheduled Matters.

Buyer acknowledges that: (a) the inclusion of any matter on any Schedule shall not be deemed an admission by Seller that such listed matter is material or that such listed matter has or could have a material adverse effect or constitutes a material liability with respect to the Acquired Assets; (b) matters reflected in the Schedules are not necessarily limited to matters required by this Agreement to be reflected in such Schedules; and (c) such additional matters are set forth for informational purposes only and do not necessarily include other matters of a similar nature.

Section 5.10. Independent Investigation.

Buyer acknowledges that it has conducted an independent investigation of the financial condition, assets, liabilities, properties and projected capital needs and operations of the System in making its determination as to the propriety of the transaction contemplated by this Agreement and, in entering into this Agreement and related agreements, has relied solely on the results of its investigation and on the representations and warranties of Seller expressly contained in Article IV of this Agreement.

Section 5.11. Litigation.

Buyer is not in breach of any Law that could have a material adverse effect on the operations of the System or Buyer. Neither Buyer nor any Affiliate of Buyer is listed on any of the following lists maintained by the Office of Foreign Assets Control of the United States Department of the Treasury, the Bureau of Industry and Security of the United States Department of Commerce or their successors, or on any other list of Persons with which Seller may not do business under Law: the Specially Designated Nationals List, the Denied Persons List, the Unverified List, the

Entity List and the Debarred List. Except as set forth on Schedule 5.11, no action, suit or proceeding, at law or in equity, or before or by any Governmental Authority, is pending nor, to the Knowledge of Buyer, threatened against Buyer before or at the time of Closing, which will have a material adverse effect on (i) the transactions contemplated by this Agreement or (ii) the validity or enforceability of this Agreement.

ARTICLE VI.

TITLE TO REAL PROPERTY; EASEMENTS

Section 6.01. Evidence of Title.

Subject to Section 6.06, with respect to all Real Property, Buyer shall obtain at its sole cost and expense a commitment for a Title Policy (the "Title Commitment"), issued by a title insurance company selected by Buyer and licensed to insure title to real property by the Commonwealth of Pennsylvania (the "Title Company"). Promptly following the Effective Date, Buyer shall order the Title Commitment from the Title Company and shall provide Seller evidence of the order. Notwithstanding anything to the contrary in Section 6.02(a), a purported Objection Notice is void with respect to any parcel of Real Property if, within thirty (30) Business Days after the Effective Date, Buyer has not ordered the Title Commitment from the Title Company for such parcel of Real Property and provided Seller with evidence of the order.

Section 6.02. Objections to Title.

(a) Notice of Objections. Within thirty (30) Business Days of Buyer's receipt of the Title Commitment for any of the parcels of Real Property, Buyer shall deliver to Seller a true, correct and complete copy of the Title Commitment and true, correct, complete and legible copies of all exception documents listed in the Title Commitment, along with Buyer's notice to Seller of any exceptions to title set forth on Schedule B of the Title Commitment to which Buyer objects (the "Objection Notice"). The exceptions listed in the Title Objection Notice are referred to as the "Title Objection Items." None of the following are Title Objection Items: (a) Permitted Liens, (b) items that pertain to Buyer or any requirements, conditions or obligations of Buyer, (c) matters of record that are set forth in the Title Commitment and adversely restrict or prevent the use of the Real Property in the operation of the System and (d) standard Title Company exceptions (such as the "survey" exception). Any Objection Notice which does not include a true, correct and complete copy of the Title Commitment and true, correct, complete and legible copies of any and all exception documents listed in the Title Commitment is void. If Buyer provides Seller with an Objection Notice, Seller shall use its commercially reasonable efforts to have all of the Title Objection Items cured, satisfied or released of record, or bond over, by the Title Company ("Cure" or "Cured") before or as of the Closing. At or before the Closing, Seller shall deliver written evidence to Buyer, in form and substance reasonably satisfactory to Buyer and at Seller's cost and expense, evidencing that Seller has Cured all Title Objection Items.

(b) Liens. Without limiting Seller's obligations pursuant to Section 6.02(a), before or as of the Closing, Seller shall, at its sole cost and expense, Cure any Lien encumbering the Real Property which can be Cured by the payment of money (other than Permitted Liens).

(c) Title Endorsements/Survey. Buyer shall pay for any endorsements required by Buyer or any mortgagee of Buyer to the Title Policy. If any survey is required by Buyer or its mortgagee, either as a condition to any endorsement or otherwise, Buyer shall pay to obtain the survey and all related costs and expenses. If Buyer obtains a survey of any Real Property and wants the deed to contain the legal description based on a survey, if the same is not identical to the legal description contained in Seller's deed of record, Seller is not obligated to include the same in the deed to Buyer unless the survey is certified to Seller and such description is included in the deed on a "quitclaim" basis only and without warranty of title.

(d) License at Closing. Seller shall provide Buyer with a license agreement granting Buyer a license in all of Seller's rights to access Real Property in order to allow Buyer to operate and maintain the System until such time as Buyer is provided title to such Real Property as provided for in this Agreement. For the avoidance of doubt, Seller shall provide such title as soon as reasonably practicable in accordance with Section 6.01.

(e) Insurable Claims. To the extent any Claim for Losses under Article VIII is an Insurable Claim, Buyer shall assert and pursue with reasonable diligence the Insurable Claim against the Title Company (which includes commencing litigation and diligently prosecuting the Insurable Claim to judgment) before pursuing a Claim for Losses under Article VIII. Following a non-favorable judgment that substantially denies the relief sought by Buyer from the Title Company in connection with the Insurable Claim (each a "Non-Favorable Judgment"), Buyer may, following such Non-Favorable Judgment, pursue Seller with a Claim for Losses under Article VIII (any Claim against Seller following an attempted Insurable Claim against the Title Company is a "Residual Title Claim"). Notwithstanding anything to the contrary in Article VIII, Buyer must assert a Claim for Losses based upon a Residual Title Claim within sixty (60) day of the Non-Favorable Judgment. For purposes of this Section 6.02(d), an "Insurable Claim" means a Claim that: (i) arises out of Buyer's discovery of a title defect or encumbrance with respect to any of the Real Property following the Closing Date that materially restricts or prevents the use of such Real Property in the operation of the System; and (ii) is a claim against the Title Company under the Title Policy. Buyer acknowledges that any Claims that it could otherwise bring as a breach of a covenant of title under the special warranty deed to the Real Property is included within the Claim for Losses under Article VIII and is subject to the terms of this Section 6.02(d) of first pursuing the same as an Insurable Claim.

Section 6.03. Title Expenses.

Irrespective of whether Closing occurs, Buyer shall pay all costs and expenses for obtaining the Title Commitment, Title Policy and any survey. Seller shall pay for all expenses to release, satisfy or bond over any Liens, and to effect the Cure of any Title Objection Items that Seller undertakes to Cure, including the cost of any title endorsement to insure Buyer against any adverse effect of such Title Objection Items.

Section 6.04. UCC Search; Releases.

Not later than sixty (60) Business Days after the Effective Date, Buyer shall obtain at its sole cost and expense a Uniform Commercial Code search against Seller covering any of the personal property or fixtures included among the Acquired Assets from the Office of the Secretary

of the Commonwealth of Pennsylvania and the Recorder of Chester County, Pennsylvania (the "UCC Search"). On or before the Closing, Seller shall obtain at its sole cost and expense releases of any and all security interests in any of the Acquired Assets which are not Permitted Liens. Seller shall provide the form of the releases of any security interests to Buyer on or before the Closing Date.

Section 6.05. Easements.

(a) Promptly after the Effective Date and before the Closing, Seller shall, at its sole cost and expense, cause an abstractor selected by Seller and reasonably acceptable to Buyer and the Title Company (the "Abstractor") to perform a search of the public land records of Chester County, based on Seller's records and plans of the System (and such other sources of information as are reasonably related thereto), by means of searching the grantee index in the names of Seller and such other searches as the Abstractor may reasonably make, to (i) identify and provide Buyer with title information on all recorded Easements, and (ii) together with Seller, identify all Missing Easements. During this process, as the Abstractor provides written search results to Seller (including updated versions of the Abstractor search result chart), Seller will promptly provide the same to Buyer for its review, and Seller shall, or shall cause the Abstractor to, provide Buyer with periodic updates (which shall occur no less frequently than bi-weekly) on the status of the activities set forth in the previous sentence. Promptly after the Effective Date, Seller shall engage an engineer to develop a map of all collection pipes, services, pump stations, manholes of the System and identify each parcel within the Service Area that Seller's sanitary wastewater conveyance facilities encroaches upon private property for use in connection with the Abstractor's report to identify the Missing Easements.

(b) Notice of Objections. Within forty five (45) days of Buyer's receipt from the Seller (or the Abstractor or an engineer) of the information described in subsection 6.05(a), Buyer shall deliver to Seller written notice identifying the encumbrances on the Easements that, in Buyer's reasonable opinion, could materially and adversely restrict or prevent the use of the Easements in the operation of the System, (an "Easement Objection Notice"). Buyer shall not be permitted to include in its Easement Objection Notice any encumbrances that: (a) are Permitted Liens, (b) pertain to the Buyer or any requirements, conditions or obligations of the Buyer, or (c) are matters of record and set forth in the Abstractor's search results that do not, in Buyer's reasonable opinion, materially and adversely restrict or prevent the use of the Easements in the operation of the System (specifically including mortgages or other instruments securing indebtedness incurred by the owner of the land burdened by the Easement) (such exceptions objected to in the Objection Notice, the "Easement Objection Items." If Buyer provides the Seller with an Easement Objection Notice, the Seller shall use commercially reasonable efforts to have the Easement Objection Items Cured, prior to or as of the Closing. If Seller is unable to Cure any Easement Objection Item, Seller shall grant Buyer a license pursuant to Section 6.05(d) in all of Seller's rights necessary to access Easements and operate and maintain the System until such time as Buyer is provided title to such Easement as provided for in this Agreement.

(c) If during the process of Abstractor's review and investigation of the Chester County land records, Seller determines that there is a Missing Easement, Seller shall take any and all actions (including the use of its power of condemnation) to obtain any Missing Easements so that the same may be sold, assigned, transferred and conveyed to Buyer at the Closing pursuant to the terms and

conditions of this Agreement. All costs and expenses incurred in connection with obtaining each Missing Easement (including any payment to a landowner in connection with condemnation, in lieu of condemnation or otherwise) shall be paid by Seller and no additional consideration shall be payable by Buyer for any Missing Easement. If Seller has not obtained all Missing Easements by the date that is sixty (60) Business Days after the date that Abstractor has completed its review of the County land records and delivered the last results to Seller (the "Abstract Completion Date"), then, no later than thirty (30) Business Days after the Abstract Completion Date (but in any event no later than thirty (30) days before the Closing), Seller shall commence and file in the Court of Common Pleas, Chester County, a condemnation or eminent domain proceeding to obtain any and all such Missing Easements. For the purposes of clarity, upon obtaining each Missing Easement (including upon the final resolution of a condemnation proceeding), each Missing Easement that has been acquired or obtained by Seller will be considered an Easement.

(d) License at Closing. Seller shall provide Buyer with a license agreement granting Buyer a license in all of Seller's rights to access Easement in order to allow Buyer to operate and maintain the System until such time as Buyer is provided title to such Easement as provided for in this Agreement.

(e) Escrow at Closing for Missing Easements. For all of the Missing Easements listed on attached Schedule 6.05(e) as of the Closing Date, Seller will have additional time following the Closing Date to secure and assign and transfer the Missing Easements to Buyer. Seller shall diligently pursue and deliver the Missing Easements on or before the third (3rd) anniversary of the Closing Date, subject to any extension as permitted by Escrow Agreement, in the form attached as Exhibit C, that will require, among other things, the funding of an escrow account in the amount of Two Thousand Dollars ($2,000) per Missing Easements listed on attached Schedule 6.05(e) as of the Closing Date to secure the Seller's obligations under this Agreement and the Escrow Agreement.

Section 6.06. Unscheduled Property.

The Parties acknowledge that Seller may own interests in or have the legal right to use or occupy the Real Property and Easements that is necessary or essential to the operation of the System and that is not set forth on Schedule 4.09 (the "Unscheduled Real Property"). If the Parties discover before or after the Closing Date, one or more parcels of Unscheduled Real Property, the discovering Party shall notify the non-discovering Party of the discovery. In addition to its obligations in Section 2.03, Seller shall convey, assign or otherwise transfer any rights to each parcel of Unscheduled Real Property, without additional consideration payable by Buyer, in such a manner as to provide Buyer with reasonable assurances that Buyer may use or occupy the Unscheduled Real Property as it was used by Seller as of the Effective Date.

ARTICLE VII.

OTHER AGREEMENTS

Section 7.01. Taxes.

Seller shall pay any and all Taxes, if any, arising out of the ownership of the Acquired Assets and out of the operation of the System before the Closing.

Section 7.02. Cooperation on Tax Matters.

Seller shall furnish or cause to be furnished to Buyer, as promptly as practicable, whether before or after the Closing Date, such information and assistance relating to the System as is reasonably necessary for the preparation and filing by Buyer of any filings relating to any Tax matters.

Section 7.03. Rates.

(a) Rates. Buyer shall implement the Seller's sanitary wastewater base rates then in effect at Closing, as set forth on Schedule 7.03(a) (the "Base Rate") as Buyer's effective sanitary wastewater base rates, provided that the rates set forth on Schedule 7.03(a) (at Closing) shall not be lower than those in effect on the date the Effective Date. Buyer shall not propose to increase Base Rates until after the third anniversary of the Closing Date. Buyer intends to bill customers on a monthly basis instead of annual billing, which Buyer will prorate accordingly. At and after the Closing, Buyer shall charge and collect its then-existing miscellaneous fees and charges and apply its then-existing rules and regulations for wastewater service in the Buyer's tariff (or rules and regulations), as amended from time to time, within the Service Area.

(c) PaPUC Approval. The Buyer shall include the rate provisions of Sections 7.03(a) in its requested PaPUC Governmental Approval.

Section 7.04. Buyer Taxpayer.

From and after the Closing Date, Buyer acknowledges that, upon conveyance of the Acquired Assets to Buyer, Buyer will be subject to, among other Taxes, real estate Taxes, which Buyer shall pay when due.

Section 7.05. PaPUC Approval.

(a) Promptly after the Effective Date, Buyer shall timely initiate and faithfully prosecute the necessary proceedings to obtain from the PaPUC (i) the issuance of certificates of public convenience to Buyer to provide wastewater services in the Service Area and (ii) the approval of the acquisition of the System by Buyer under terms and conditions that are reasonably acceptable to Seller and Buyer. Seller shall cooperate with and assist Buyer in proceedings before the PaPUC.

(b) Buyer and Seller hereby agree that the procedures for determining fair market value of the System and Acquired Assets outlined in subsection (a) of Section 1329 of Title 66 of the

Pennsylvania Consolidated Statutes ("Section 1329") shall be utilized and filed with the PaPUC as contemplated by Section 1329.

(c) The fees and expenses related to engaging the licensed engineer for such Section 1329 determination shall be paid one-half (50%) by Buyer and one-half (50%) by Seller.

(d) Buyer, in Buyer's first base rate proceeding with respect to the System following the Closing, shall propose the use of statutory and regulatory mechanisms available to benefit the Buyer's acquired customers for ratemaking purposes.

Section 7.06. Remedies for Breach of Article VII Agreements.

If Buyer breaches any of the covenants and agreements set forth in this Article VII following Closing, in addition to all other rights and remedies available at law or in equity, including specific performance and/or injunctive relief, Seller may commence proceedings before the PaPUC seeking enforcement of such covenants and agreements.

Section 7.07. Operation and Maintenance of the MS4 System.

Subject to Law, Seller, shall at all times maintain ownership of its MS4 System and Stormwater System Assets. Seller will maintain any NPDES permits related to the Stormwater System Assets.

Section 7.08. Utility Valuation Experts.

Buyer and Seller shall each be responsible for the costs associated with their respective Utility Valuation Expert for the preparation and completion of their respective Utility Valuation Expert's appraisal report and any additional work by their respective Utility Valuation Expert necessary to assist in the processing and prosecution of the application to the PaPUC in regard to this transaction under Section 1329.

Section 7.09. EDU Allocations.

In connection with EDU allocations, Buyer shall at all times act in compliance with Seller's ordinances, including those with respect to zoning and land use, the Seller's Act 537 plan and the Seller's comprehensive plans.

Section 7.10 Act 537 Plan.

(a) Buyer acknowledges that Seller previously drafted and committed to an Act 537 Plan under the Pennsylvania Sewage Facilities Act (the original plan established in 1995, together with all subsequent amendments, the "Plan"), which has been made available to Buyer and which may be amended pursuant to Section 12.08 hereunder. Buyer understands that the Plan contains obligations and commitments, as more fully set forth in the Plan to complete certain improvements and upgrades to the System (the "System Improvements"). Buyer shall accept and complete all of the System Improvements as Seller agreed to complete under the Plan.

(b) Buyer acknowledges the Seller has jurisdiction over sewage facilities planning and sewer service through the Plan and its Act 537 planning program, zoning, subdivision and land development ordinances and comprehensive land use planning policies. Buyer and Seller shall cooperate with respect to current and future sewage facilities planning and sewer service consistent with the provisions of this Section 7.10.

(c) Subject to PaPUC approval of the Service Area as specified in Section 7.10, Buyer shall extend sewer lines and provide sewage collection and treatment services to properties within the Service Area in a manner consistent with the Plan and the Buyer's Tariff. Pursuant to Section 12.08, Seller will confer with Buyer concerning any amendment to the Plan that would affect the provision of sewage collection and treatment services within the Service Area. Seller will not propose or adopt any amendment to the Plan that would reduce the Service Area or divert wastewater flows generated from properties located within the Service Area from being served by the System without the approval of Buyer.

(d) Buyer will not request, pursue, or implement expansions of the System within the Seller's border beyond the current Service Area (that would trigger a Plan amendment) without the prior written approval of Seller and the PaDEP. Seller shall promptly notify and confer with Buyer, and consider Buyer's comments, concerning any proposed Plan amendment (including any sewage facilities planning module) that would involve the provision of sewage collection and treatment services by the System to area or properties outside of the Service Area. With respect to any such potential Plan amendment, Seller and Buyer shall cooperate in evaluating alternatives for provision of sewage services to such areas consistent with the requirements of 25 Pa Code Ch. 71, including consideration of the technical feasibility, economic feasibility and cost effectiveness, consistency with the objectives and policies of plans and requirements of 25 Pa. Code Ch. 71.21(a)(5), consistency with municipal land use plans and ordinances, subdivision ordinances and other ordinances and plans for controlling land use and development, technically and administratively able to be implemented, and other factors required under Act 537 or under Buyer's Tariff.

(e) If Seller and Buyer each determine that the provision of sewage collection and treatment services by the System to certain areas or properties outside of the Service Area is technically feasible, economically feasible and cost effective, and meets all of the requirements set forth in Act 537 and 25 Pa. Code Ch. 71, the Seller shall amend the Plan to include such identified areas and properties in the Service Area. If Seller amends the Plan pursuant to this subsection and such amendment is approved by PaDEP, (i) Buyer shall request that the modified Service Area be approved by PaPUC; and (ii) subject to PaPUC approval of the inclusion of such modified Service Area, Buyer shall extend sewer lines and provide sewage collection services to properties within such Service Area in a manner consistent with the Plan and Buyer's Tariff.

Section 7.11 Compliance and Operational Reports.

After the Effective Date and through the Closing Date, Seller shall provide Buyer with a periodic report to the person designated by Buyer, disclosing any and all material compliance or operational deficiencies that occurred during the previous month.

Section 7.12 Required Sewer Projects / Malvern Hunt System.

(a) Subject to extensions set forth in subsection (b) below, on or prior to the later to occur of: (i) the first anniversary of the Closing Date; or (ii) first anniversary following the date on which Seller secures and assigns to Buyer: all permits required from any Governmental Authority having jurisdiction over the Required Sewer Projects or the completion thereof; and all easements or other property rights required to complete the Required Sewer Projects, Buyer shall complete the sewer projects set forth on Schedule 7.12 (the "Required Sewer Projects") and a map of the expanded Service Area anticipated to result from the Required Sewer Projects as set forth on Schedule 7.12. Each Required Sewer project is deemed complete only upon notice of Seller's reasonable satisfaction of completion. After the Closing Date and through the completion date of each Required Sewer Project, Buyer shall provide Seller with a periodic report to the person designated by Seller, with an update and status report regarding each Required Sewer Project.

(b) The one (1) year deadline set forth in subsection (a) above shall be extended for any delays resulting from the discovery of concealed subsurface conditions, including but not limited to, the presence of rock or infrastructure of other utilities requiring relocation.

(c) Seller shall be responsible for all work to decommission the Excluded Assets specified on Schedule 2.02(h) (the "Malvern Hunt System") and for constructing all gravity and / or force main piping systems required to divert sewage flow into the existing collection system included with the Acquired Assets, all in compliance with applicable Laws. The decommissioning work conducted by Seller shall include upgrade of existing pumping systems if needed. Seller shall be responsible for post-decommissioning water quality sampling of existing groundwater monitoring wells as well as preparation of a final closure report to PA DEP if required by DEP.

Section 7.13 Governance Matters.

Effective on the Closing Date, Seller shall:

(i) provide Buyer with all financial information and other reports or communications received by Seller from the Valley Forge Sewer Authority within two (2) Business Days of receipt of such information by Seller from the Valley Forge Sewer Authority; and

(ii) appoint, as Seller representative, the person identified by Buyer to the joint board pursuant to the Valley Forge Sewage Treatment Plant Agreement and any successor to any subsequent term.

ARTICLE VIII.

INDEMNIFICATION

Section 8.01. Survival.

All representations and warranties contained in this Agreement shall survive until twelve (12) months following the Closing Date, except that (a) the representations and warranties of Seller set forth in Section 4.01 (Organization), Section 4.02 (Power and Authority), Section 4.03 (Enforceability) and Section 4.15 (Brokers' and Finders' Fees) (collectively, the "Seller

Fundamental Representations") shall survive the Closing indefinitely or until the latest date permitted by Law, and (b) the representations and warranties of Buyer set forth in Section 5.01 (Organization), Section 5.02 (Authorization and Validity of Agreement), and Section 5.05 (Brokers' and Finders' Fees) (collectively, the "Buyer Fundamental Representations") shall survive the Closing indefinitely or until the latest date permitted by Law. The covenants and agreements of the Parties contained in this Agreement survive the Closing indefinitely or for the shorter period explicitly specified therein, except that for those covenants and agreements that survive for a shorter period, breaches thereof survive indefinitely or until the latest date permitted by Law. Notwithstanding the preceding sentences, (x) any breach of representation, warranty, covenant or agreement in respect of which indemnity may be sought under this Agreement shall survive the time at which it would otherwise terminate pursuant to the preceding sentences, if notice of the inaccuracy or breach thereof giving rise to such right of indemnity shall have been given to the Party against whom such indemnity may be sought before such time, and (y) nothing contained in this Section 8.01 shall limit in any way any rights a Party may have to bring claims grounded in fraud, intentional misrepresentation or willful misconduct, which rights shall survive the Closing indefinitely.

Section 8.02. Indemnification by Seller.

To the maximum extent permitted by Law and subject to the terms and conditions of this Article VIII, Seller shall indemnify, defend and hold harmless, Buyer and its successors and Affiliates and their respective employees, officers, directors, trustees and agents (the "Buyer Indemnified Persons"), from and against any and all claims for Losses arising from or relating to: (a) any misrepresentation as to, or any material inaccuracy in, any of the representations and warranties of Seller contained in this Agreement or in any exhibit, schedule, certificate or other instrument or document furnished or to be furnished by Seller before the Closing pursuant to this Agreement (without regard to any materiality, Material Adverse Effect or related qualifications in the relevant representation or warranty (except where such provision requires disclosure of lists of items of a material nature or above a specified threshold)); (b) any breach or nonfulfillment of any of the covenants or agreements of Seller contained in this Agreement or in any exhibit, schedule, certificate or other instrument or document furnished or to be furnished by Seller before the Closing pursuant to this Agreement; or (c) any Excluded Liability or Excluded Asset.

Section 8.03. Indemnification by Buyer.

To the maximum extent permitted by Law and subject to the terms and conditions of this Article VIII, Buyer shall defend, indemnify and hold harmless Seller and its successors and Affiliates and each of their respective employees, officers, directors and agents (the "Seller Indemnified Persons") from and against any and all claims for Losses arising from or relating to: (a) any material misrepresentation as to, or any material inaccuracy in, any of the representations and warranties of Buyer contained in this Agreement or in any exhibit, schedule, certificate or other instrument or document furnished or to be furnished by Buyer pursuant to this Agreement; (b) any material breach of any of the covenants or agreements of Buyer contained in this Agreement or in any exhibit, schedule certificate or other instrument or document furnished or to be furnished by Buyer pursuant to this Agreement; (c) any Assumed Liability as and when payment and performance is due, including without limitation any liability related to any claims by any Governmental Authority; (d) Buyer's actions involving Environmental Laws, Hazardous

Materials or environmental claims from and after the Closing Date; or (e) the ownership, operation or control of the Acquired Assets or the System from and after the Closing Date.

Section 8.04. Indemnification Procedure.

(a) Third Party Claims. If any Indemnified Party receives notice of the assertion or commencement of any action, suit, claim or other legal proceeding made or brought by any Person who is not a Party or an Affiliate of a Party or a Representative of a Party (a "Third Party Claim") against such Indemnified Party with respect to which the Indemnifying Party may be obligated to provide indemnification under this Agreement, the Indemnified Party shall promptly notify the Indemnifying Party thereof. The failure to give such prompt notice shall not, however, relieve the Indemnifying Party of its indemnification obligations, except and only to the extent that the Indemnifying Party forfeits material rights or material defenses by reason of such failure. Such notice by the Indemnified Party shall describe the Third Party Claim in reasonable detail and shall indicate the estimated amount, if reasonably practicable, of the Loss that has been or may be sustained by the Indemnified Party. The Indemnifying Party may participate in, or by giving notice to the Indemnified Party (and subject to the other requirements herein) to assume the defense of any Third Party Claim at the Indemnifying Party's expense and by the Indemnifying Party's own counsel (which counsel shall be reasonably acceptable to the Indemnified Party), so long as (i) the Indemnifying Party notifies the Indemnified Party, within ten (10) Business Days after the Indemnified Party has given notice of the Third Party Claim to the Indemnifying Party (or by such earlier date as may be necessary under applicable procedural rules in order to file a timely appearance and response) that the Indemnifying Party is assuming the defense of such Third Party Claim, and if the Indemnifying Party assumes control of such defense it must first agree and acknowledge in such notice that the Indemnifying Party is fully responsible (with no reservation of any rights other than the right to be subrogated to the rights of the Indemnified Party) for all Losses relating to such Third Party Claim, (ii) the Indemnifying Party conducts the defense of the Third Party Claim actively and diligently and at its own cost and expense, and (iii) the Third Party Claim (A) does not involve injunctive relief, specific performance or other similar equitable relief, any claim in respect of Taxes, any Governmental Authority, any criminal allegations, or any potential damage to the goodwill, reputation or overriding commercial interests of Buyer or its Affiliates, (B) is not one in which the Indemnifying Party is also a party and joint representation would be inappropriate or there may be legal defenses available to the Indemnified Party which are different from or additional to those available to the Indemnifying Party, or (C) does not involve a claim which, upon petition by the Indemnified Party, the appropriate court rules that the Indemnifying Party failed or is failing to vigorously prosecute or defend. The Indemnified Party shall reasonably cooperate in good faith in such defense. If the Indemnifying Party assumes the defense of any Third Party Claim, subject to Section 8.04(b), it may take such action as it deems necessary to avoid, dispute, defend, appeal or make counterclaims pertaining to any such Third Party Claim in the name and on behalf of the Indemnified Party. The Indemnified Party may, at its own cost and expense, participate in the defense of any Third Party Claim with counsel selected by it subject to the Indemnifying Party's right to control the defense thereof. If the Indemnifying Party elects not to compromise or defend such Third Party Claim or fails to promptly notify the Indemnified Party in writing of its election to defend as specified in this Agreement, the Indemnified Party may, subject to Section 8.04(b), pay, compromise, and defend such Third Party Claim and seek indemnification for any and all Losses based upon, arising from or relating to such

Third Party Claim. Seller and Buyer shall reasonably and in good faith cooperate with each other in all reasonable respects in connection with the defense of any Third Party Claim, including making available records relating to such Third Party Claim and furnishing, without expense (other than reimbursement of actual out-of-pocket expenses) to the defending party or management employees of the non-defending party as may be reasonably necessary for the preparation of the defense of such Third Party Claim.

(b) Settlement of Third Party Claims. Notwithstanding any other provision of this Agreement, the Indemnifying Party shall not enter into settlement of any Third Party Claim without the prior written consent of the Indemnified Party (which consent shall not be unreasonably withheld or delayed), except as specified in this Section 8.04(b). If a firm offer is made to settle a Third Party Claim without leading to liability or the creation of a financial or other obligation on the part of the Indemnified Party and provides, in customary form, for the unconditional release of each Indemnified Party from all liabilities and obligations in connection with such Third Party Claim and the Indemnifying Party desires to accept and agree to such offer, the Indemnifying Party shall promptly notify the Indemnified Party. If the Indemnified Party fails to consent to such firm offer within fifteen (15) days after its receipt of such notice, the Indemnified Party may continue to contest or defend such Third Party Claim and in such event, the maximum liability of the Indemnifying Party as to such Third Party Claim shall not exceed the amount of such settlement offer. If the Indemnified Party fails to consent to such firm offer and also fails to assume defense of such Third Party Claim, the Indemnifying Party may settle the Third Party Claim upon the terms set forth in such firm offer to settle such Third Party Claim. If the Indemnified Party has assumed the defense pursuant to Section 8.04(a), it shall not agree to any settlement without the written consent of the Indemnifying Party (which consent shall not be unreasonably withheld or delayed).

(c) Direct Claims. Any claim by an Indemnified Party with respect to any Loss which does not arise or result from a Third Party Claim (a "Direct Claim") shall be asserted by the Indemnified Party giving the Indemnifying Party prompt notice thereof. The failure to give such prompt notice shall not, however, relieve the Indemnifying Party of its indemnification obligations, except and only to the extent that the Indemnifying Party forfeits material rights or material defenses by reason of such failure. Such notice by the Indemnified Party shall describe the Direct Claim in reasonable detail and shall indicate the estimated amount, if reasonably practicable, of the Losses that have been or may be sustained by the Indemnified Party. The Indemnifying Party shall have thirty (30) days after its receipt of such notice to respond in writing to such Direct Claim. During such thirty (30) day period, the Indemnified Party shall reasonably cooperate and assist the Indemnifying Party in determining the validity and amount of such Direct Claim. If the Indemnifying Party does not so respond within such thirty (30) day period, by delivery of notice disputing the basis or amount of the Direct Claim, the Indemnifying Party shall be deemed to have rejected such claim, in which case the Indemnified Party shall be free to pursue such remedies as may be available to the Indemnified Party on the terms and subject to the provisions of this Agreement. If the Indemnifying Party has timely disputed its indemnity obligation for any Losses with respect to such Direct Claim, the Parties shall proceed in good faith to negotiate a resolution of such dispute and, if not resolved through negotiations, such dispute may be resolved by litigation in an appropriate court of jurisdiction determined pursuant to this Agreement.

Section 8.05. Limitations on Indemnification Obligations.

(a) Subject to the other limitations contained in this Section 8.05, neither Buyer nor Buyer Indemnified Persons shall seek indemnification pursuant to Section 8.02(a) (other than for an intentional breach of any agreement or covenant contained in this Agreement or for breach of Seller's Fundamental Representations) unless the aggregate amount of Losses incurred by Buyer and Buyer Indemnified Persons under this Agreement exceeds one (1) percent of the Purchase Price in the aggregate (the "Threshold Amount"), in which case Seller will then be liable only for Losses in excess of the Threshold Amount, except that the limitations contained in this Section 8.05(a) shall not apply to any claims for indemnification based on fraud, intentional misrepresentation or willful misconduct.

(b) Subject to the other limitations contained in this Section 8.05 neither Seller nor the Seller Indemnified Persons shall seek indemnification pursuant to Section 8.03(a) (other than for an intentional breach of any agreement or covenant contained in this Agreement) unless the aggregate amount of Losses incurred by Seller and Seller Indemnified Persons under this Agreement exceeds the Threshold Amount, in which case Buyer will then be liable only for Losses in excess of the Threshold Amount, except that the limitations contained in this Section 8.05(a) shall not apply to any claims for indemnification based on fraud, intentional misrepresentation or willful misconduct.

(c) Except in the case of fraud, intentional misrepresentation or willful misconduct (for which all applicable legal and equitable remedies will be available to Buyer), the Buyer Indemnified Parties shall only be entitled to assert claims under Section 8.02(a) (other than claims with respect to breaches of any of the Seller Fundamental Representations, which shall not be limited by this Section 8.05(c)) up to the aggregate amount of 5% of Purchase Price (the "Liability Cap"), which shall represent the sole and exclusive remedy of Buyer and the other Buyer Indemnified Parties for any such claims under Section 8.02(a) (other than claims with respect to breaches of any of the Seller Fundamental Representations or in the case of fraud, intentional misrepresentation or willful misconduct which shall not be subject to the Liability Cap, but shall be capped at the Purchase Price).

(d) Payments by an Indemnifying Party pursuant to Section 8.02 or Section 8.03 in respect of any Loss shall be limited to the amount of any liability or damage that remains after deducting therefrom any insurance proceeds and any indemnity, contribution or other similar payment received or reasonably expected to be received by the Indemnified Party in respect of any such claim. The Indemnified Party shall use its commercially reasonable efforts to recover under insurance policies or indemnity, contribution or other similar agreements for any Losses before seeking indemnification under this Agreement.

(e) Payments by an Indemnifying Party pursuant to Section 8.02 or Section 8.03 in respect of any Loss shall be reduced by an amount equal to any Tax benefit realized or reasonably expected to be realized as a result of such Loss by the Indemnified Party.

(f) Each Indemnified Party shall take, and cause its Affiliates to take, all reasonable steps to mitigate any Loss upon becoming aware of any event or circumstance that would be

reasonably expected to, or does, give rise thereto, including incurring costs only to the minimum extent necessary to remedy the breach that gives rise to such Loss.

(g) Subject to the provisions of Sections 3.01, 7.06, 15.11 and any other provisions for equitable relief and/or specific performance, the Parties' sole and exclusive remedy with respect to any and all claims for any breach of any representation, warranty, covenant, agreement or obligation set forth herein or otherwise relating to the subject matter of this Agreement, shall be pursuant to the indemnification provisions set forth in this Article VIII. Each Party hereby waives, to the fullest extent permitted under Law, any and all rights, claims and causes of action for any breach of any representation, warranty, covenant, agreement or obligation set forth herein or otherwise relating to the subject matter of this Agreement it may have against the other Party and their Affiliates and each of their respective Representatives arising under or based upon any Law, except pursuant to the indemnification provisions set forth in this Article VIII. Nothing in this Section 8.05(g) shall limit any Party's right to seek and obtain any equitable relief and/or specific performance pursuant to this Agreement.

Section 8.06. Knowledge of Breach.

Neither Party shall be liable for any Losses based upon or arising out of any inaccuracy in or breach of any representations or warranties of such Party contained in this Agreement if the Party claiming such Losses had Knowledge of such inaccuracy or breach before the Closing.

ARTICLE IX.

PRE-CLOSING COVENANTS OF SELLER

Section 9.01. Operation of the System.

Except as otherwise expressly permitted by this Agreement, as required by Law or with the prior written consent of Buyer (which consent shall not be unreasonably withheld, delayed or conditioned), from the Effective Date until the Closing, Seller shall (i) operate and manage the System only in the ordinary course of business in accordance with past practices and procedures, (ii) collect accounts receivable and pay accounts payable in the ordinary course and in a manner consistent with its past practices, (iii) comply in all material respects with all Laws and Authorizations and Permits, (iv) use its commercially reasonable efforts to maintain and preserve intact the business and assets of the System and preserve the rights, franchises, goodwill and relationships of Seller and the System and its customers, lenders, suppliers, regulators, and others having business relationships with Seller and the System, (iv) continue to collect EDU Fees, and sewer rents in a manner consistent with past practice, without discounting such EDU Fees, and sewer rents, (v) perform all of its obligations under all Assigned Contracts, and (vi) not take any action, or omit to take any action, that would cause to occur a fact, circumstance, condition or occurrence regarding the System or any of the Acquired Assets that could reasonably be expected to have a Material Adverse Effect.

Section 9.02. Cooperation.

Seller shall reasonably cooperate with Buyer and its employees, attorneys, accountants and other agents and, generally, act in reasonably good faith to timely effectuate the purposes of this Agreement and the consummation of the transactions contemplated by this Agreement.

Section 9.03. Supplements and Updates.

Seller shall promptly deliver to Buyer any supplemental information and reports updating the information set forth in the representations and warranties set forth in Article IV of this Agreement so that such representations and warranties as supplemented by such information will be true and correct as of the Closing Date (or such other date as specified in such representations and warranties) as if then made. Within ten (10) Business Days of having Knowledge of the same, but in no event later than three (3) Business Days before the Closing Date, Seller shall promptly advise Buyer of any facts which would be a breach of a representation or warranty as of the date made or a default in a covenant contained herein.

Section 9.04. Consents and Approvals.

Promptly after the Effective Date, or as required by Law, except as otherwise expressly specified in this Agreement, Seller shall file all applications and reports that are required to be filed by Seller with any Governmental Authority necessary to undertake and consummate the transactions contemplated in this Agreement as set forth on Schedule 4.05. Seller shall also promptly provide all information that any Governmental Authority may require in connection with any such application or report. Seller shall use its commercially reasonable efforts to obtain each consent, waiver, authorization or approval of any kind from any Person in connection with the transactions contemplated by this Agreement. All authorizations of any Governmental Authority necessary to consummate the transactions contemplated by this Agreement will be in form and content reasonably satisfactory to Buyer and Seller before Closing and shall be final and non-appealable. If a party to the PaPUC proceeding appeals PaPUC authorization of the transaction, Buyer and Seller may mutually agree to proceed to consummate the transaction.

Section 9.05. Pending Development Plan Agreements / Future Developments.

Seller shall enforce all of its rights and the counterparties' obligations under any agreements relating to Pending Development Plans in existence as of the Effective Date, which shall not be amended without notice to and the consent of Buyer, which consent shall not be unreasonably withheld and Buyer shall provide such consent to Seller within fifteen (15) days of notice from Seller or this consent requirement is deemed waived by Buyer after such date. After the Effective Date, Seller shall not enter into any new agreements (including Land Development Agreements and Financial Security Agreements) with landowners regarding the construction of any sewer facilities which, upon completion of construction, will be transferred to Buyer pursuant to Section 2.01 without notice to and the consent of Buyer, which consent shall not be unreasonably withheld and Buyer shall provide such consent to Seller within seven (7) days of notice from Seller or this consent requirement is deemed waived by Buyer after such date. For the avoidance of doubt, any attempt by Buyer to withhold consent for entry into any amendment or new agreement by Seller pursuant to this Section 9.05 that is, in the opinion of Seller's solicitor, required pursuant

to the Pennsylvania Municipal Planning Code is deemed unreasonable. Prior to Closing, Seller shall complete the dedication of all Acquired Assets.

ARTICLE X.

PRE-CLOSING COVENANTS OF BUYER

Section 10.01. Actions Before the Closing Date.

Buyer shall not take any action which shall cause it to be in breach of any representation, warranty, covenant or agreement contained in this Agreement or cause it to be unable to perform in any material respect its obligations hereunder, and Buyer shall use its commercially reasonable efforts (subject to any conditions set forth in this Agreement) to perform and satisfy all conditions to Closing to be performed or satisfied by Buyer under this Agreement, including action necessary to obtain all consents and approvals from any Person required to be obtained by Buyer to effect the transactions contemplated by this Agreement.

Section 10.02. Governmental Approvals.

Promptly after the execution of this Agreement, or as required by Law, except as otherwise expressly specified in this Agreement, Buyer shall file all applications and reports that are required to be filed by Buyer with any Governmental Authority as set forth on Schedule 5.04. Buyer shall also promptly provide all information that any Governmental Authority may reasonably require in connection with any such application or report.

Section 10.03. Cooperation.

Buyer shall reasonably cooperate with Seller and their employees, attorneys, accountants and other agents and, generally, do such other acts and things in good faith as may be reasonable to timely effectuate the purposes of this Agreement and the consummation of the transactions contemplated in accordance with the provisions of this Agreement.

Section 10.04. Supplements and Updates.

Buyer shall promptly deliver to Seller any supplemental information updating the information set forth in the representations and warranties set forth in Article V of this Agreement so that such representations and warranties as supplemented by such information will be true and correct as of the Closing Date (or such other date as specified in such representations and warranties) as if then made. At least three (3) Business Days before the Closing Date, Buyer shall advise Seller of any facts which would be a breach of a representation or warranty as of the date made or a default in a covenant contained herein.

ARTICLE XI.

CONDITIONS PRECEDENT TO OBLIGATIONS OF SELLER

The obligation of Seller to consummate the transactions provided for in this Agreement is subject to the satisfaction, at or before the Closing, of the following conditions, any one or more of which may be waived in writing by Seller in its sole discretion:

Section 11.01. Consents and Approvals.

Receipt of all required material, consents, waiver, authorizations or approvals of any Governmental Authority, or of any other Person and any other approvals necessary to consummate the transactions contemplated by this Agreement set forth in Schedule 5.04, including without limitation all required EPA and PaDEP approvals and all such Authorizations and Permits and Governmental Approvals must be final (and not subject to any appeal and any applicable appeal period having expired).

Section 11.02. Representations and Warranties of Buyer.

The representations and warranties made by Buyer in Article V which are (a) not qualified by materiality must be true and correct in all material respects on and as of the Closing Date (except for representations or warranties that speak of a specific date or time other than the Closing Date which must be true and correct in all material respects as of such specified date) and (b) qualified by materiality must be true and correct in all respects on and as of the Closing Date (except for representations or warranties that speak of a specific date or time other than the Closing Date which must be true and correct in all respects as of such specified date), and Seller must have received a certificate to that effect from a duly authorized officer of Buyer dated as of the Closing Date.

Section 11.03. PaPUC Approval.

PaPUC must have issued a Final Order approving the acquisition of the System under terms and conditions that are reasonably acceptable to Seller and Buyer. If a party to the PaPUC proceeding appeals or files a petition for reconsideration of PaPUC authorization of the transaction, Buyer and Seller may mutually agree to proceed to consummate the transaction.

Section 11.04. No Injunctions.

Neither Seller nor Buyer are subject to any injunction, preliminary restraining order or other similar decree of a court of competent jurisdiction prohibiting the consummation of the transactions contemplated by this Agreement.

Section 11.05. Performance of the Obligations of Buyer.

Buyer must have performed in all material respects all obligations required under this Agreement to be performed by Buyer on or before the Closing Date, and Seller must have received a certificate to that effect from Buyer dated the Closing Date.

Section 11.06. Deliveries by Buyer.

Buyer must have made delivery to Seller of the documents and items specified in Section 13.03 herein.

Section 11.07. No Material Adverse Effect.

There must not have occurred any event or condition which gives rise to a Material Adverse Effect with respect to the Acquired Assets or the System.

ARTICLE XII.

CONDITIONS PRECEDENT TO OBLIGATIONS OF BUYER

The obligation of Buyer to consummate the transactions provided for in this Agreement is subject to the satisfaction, at or before the Closing, of the following conditions, any one or more of which may be waived in writing by Buyer in its sole discretion:

Section 12.01. Consents and Approvals.

Receipt of all required material, consents, waivers, authorizations or approvals of any Governmental Authority, or of any other Person and any other approvals necessary to consummate the transactions contemplated by this Agreement set forth in Schedule 4.05, including without limitation all required EPA and PaDEP approvals and all such Authorizations and Permits and Governmental Approvals must be final (and not subject to any appeal and any applicable appeal period having expired).

Section 12.02. Representations and Warranties of Seller.

The representations and warranties made by Seller in Article IV this Agreement (disregarding all "materiality" and "Material Adverse Effect" or similar qualifications contained therein) must be true and correct on and as of the Closing Date (except for representations and warranties expressly stated to relate to a specific date, in which case each such representation and warranty must be true and correct as of such earlier date), with only such exceptions as would not, individually or in the aggregate, reasonably be expected to have a Material Adverse Effect, and Buyer must have received a certificate to that effect from Seller dated as of the Closing Date.

Section 12.03. PaPUC Approval.

PaPUC must have issued a Final Order approving the acquisition of the System under terms and conditions that are reasonably acceptable to Seller and Buyer. If a party to the PaPUC proceeding appeals PaPUC authorization of the transaction, Buyer and Seller may mutually agree to proceed to consummate the transaction.

Section 12.04. No Injunctions.

Neither Seller nor Buyer are subject to any injunction, preliminary restraining order or other similar decree of a court of competent jurisdiction prohibiting the consummation of the transactions contemplated by this Agreement.

Section 12.05. No Material Adverse Effect.

There must not have occurred any event or condition which gives rise to a Material Adverse Effect with respect to the Acquired Assets or the System.

Section 12.06. Deliveries by Seller.

Seller must have made delivery to Buyer of the documents and items specified in Section 13.02 herein.

Section 12.07. Performance of the Obligations of Seller.

Seller must have performed in all material respects all obligations required under this Agreement to be performed by Seller on or before the Closing Date, and Buyer must have received a certificate to that effect from Seller dated the Closing Date.

Section 12.08. Act 537 Plan.

The Seller must have obtained PaDEP approval of all Act 537 Plan revisions or updates (i) required by PaDEP in order to allow acquisition of the System by Buyer or (ii) otherwise required to address other outstanding deficiencies with respect to existing Act 537 Plan, upon terms and conditions satisfactory to Buyer in its reasonable discretion. Notwithstanding the previous sentence, Buyer shall be responsible for the costs of preparing and submitting any necessary revisions to the Act 537 Plan required to allow acquisition of the System by Buyer. Seller and Buyer shall cooperate regarding the Act 537 Plan submission and PaDEP approval process.

ARTICLE XIII.

CLOSING

Section 13.01. Closing Date.

The Closing shall take place at the offices of Hamburg, Rubin, Mullin, Maxwell and Lupin, PC (375 Morris Rd, Lansdale, PA 19446) at 10:00 a.m. Eastern Standard Time on the earliest agreed upon date or within twenty (20) Business Days after the date upon which all the conditions precedent to Closing described in this Agreement have been fulfilled or waived and Buyer and Seller receive the last of the required consents, waivers, authorizations and approvals from the Governmental Authorities, in each case, for the transactions contemplated by this Agreement, or at such other place and time, by such other method, or on such other date, as may be mutually agreed to by the Parties (the "Closing Date"). The Closing will be effective at 12:01 a.m., East Whiteland Township, PA time, on the Closing Date (the "Closing Effective Time").

Section 13.02. Deliveries by Seller.

At the Closing, Seller shall deliver or cause to be delivered to Buyer executed copies of the following agreements, documents and other items:

(a) A Bill of Sale transferring all of the Acquired Assets comprising personal property, in the form attached as Exhibit A;

(b) Possession of the Acquired Assets, including without limitation, the Real Property, the Easements and an interest in the Missing Easements, including a license from Seller to Buyer;

(c) A duly executed counterpart to an Assignment and Assumption Agreement with respect to the Assumed Liabilities (the "Assignment and Assumption Agreement"), in the form attached as Exhibit B;

(d) The consents to transfer all of the Assigned Contracts and Authorizations and Permits (including environmental Authorizations and Permits), to the extent required hereunder;

(e) One or more special warranty or other deeds in recordable form reasonably acceptable to Buyer transferring fee simple title of Real Property;

(f) Copies or originals of all Files and Records, materials, documents and records in possession of Seller relating to the Real Property or the Assigned Contracts;

(g) Certificate of Seller pursuant to Section 12.02 of this Agreement;

(h) Certificate of Seller pursuant to Section 12.07 of this Agreement;

(i) Any documents duly executed by Seller required by the Title Company to issue final owner's title policies in accordance with the provisions of Article VI;

(j) A duly executed counterpart to the Escrow Agreement; and

(k) All such other instruments of conveyance or other documents as shall, in the reasonable opinion of Buyer and its counsel, be necessary to transfer to Buyer the Acquired Assets in accordance with this Agreement or to carry out the terms of this Agreement, duly executed and acknowledged by Seller, if necessary, and in a recordable form.

Section 13.03. Deliveries by Buyer.

At the Closing, Buyer shall deliver or caused to be delivered to Seller the following agreements, documents and other items:

(a) Payment in full of the Purchase Price;

(b) A duly executed counterpart to the Assignment and Assumption Agreement;

(c) Certificate of Buyer pursuant to Section 11.02 of this Agreement;

(d) Certificate of Buyer pursuant to Section 11.05 of this Agreement;

(e) Evidence of PaPUC approval as specified in Section 12.03;

(f) A duly executed counterpart to the Escrow Agreement; and

(g) All such other instruments of assumption as shall, in the reasonable opinion of Seller and its counsel, be necessary for Buyer to assume the Assumed Liabilities in accordance with this Agreement.

ARTICLE XIV.

TERMINATION

Section 14.01. Events of Termination.

This Agreement may be terminated and abandoned at any time before the Closing:

(a) By the mutual consent of Seller and Buyer;

(b) By either Seller or Buyer, upon notice, if:

(i) the Closing does not occur on or before the Outside Date, except Buyer has the one-time right, upon notice to Seller, to extend the Outside Date for up to ninety (90) days if, in the Buyer's sole discretion, any such amount of time up to ninety (90) days is necessary to obtain a required Governmental Approval; or

(ii) any Governmental Authority issues an order, decree or ruling or taken any other action, in each case permanently restraining, enjoining or otherwise prohibiting the material transactions contemplated by this Agreement and such order, decree, ruling or other action becomes final and non-appealable;

(c) By Seller (if Seller is not then in material breach of any provision of this Agreement) if a material breach of any covenant or agreement to be performed or complied with by Buyer pursuant to the terms of this Agreement or of any representation or warranty of Buyer contained in this Agreement, which breach (i) has continued without cure for a period of sixty (60) days following notice thereof by Seller to Buyer or if such breach cannot be cured and (ii) would result in a condition to Closing set forth in Article XI of this Agreement not being satisfied (which condition has not been waived by Seller in writing); or

(d) By Buyer (if Buyer is not then in material breach of any provision of this Agreement) if a material breach of any covenant or agreement to be performed or complied with by Seller pursuant to the terms of this Agreement or of any representation or warranty of Seller contained in this Agreement, which breach (i) has continued without cure for a period of sixty (60) days following notice thereof by Buyer to Seller or if such breach cannot be cured and (ii) would result in a condition to Closing set forth in Article XII of this Agreement not being satisfied (which condition has not been waived by Buyer in writing).

This Agreement may not be terminated after the Closing.

Section 14.02. Effect of Termination.

If this Agreement is terminated by Seller or Buyer pursuant to Section 14.01, notice thereof will be given promptly to the other and all further obligations of the Parties terminate without further action by either Party and without liability or other obligation of either Party to the other Party hereunder, except that no Party will be released from liability hereunder if this Agreement is terminated and the transactions abandoned by reason of any willful breach of this Agreement.

Section 14.03. Damages for Willful Breach.

If this Agreement is terminated as a result of willful breach by either Party as described in Section 14.02, the Party who willfully breached the Agreement is liable for Losses incurred by the non-breaching Party as a result of the breach in accordance with Article VIII.

ARTICLE XV.

MISCELLANEOUS

Section 15.01. Confidentiality.

Except as and to the extent required by Law (including but not limited to the Pennsylvania Right-To-Know Act at 65 Pa § 67.101) or pursuant to an order of a court of competent jurisdiction and as required hereunder to obtain any and all required Governmental Approvals, neither Party shall, directly or indirectly, disclose or use (and no Party shall permit its Representatives to disclose or use) any Confidential Information with respect to the other Party furnished, or to be furnished, by such other Party or its Affiliates or Representatives to the other Party or its Affiliates or Representatives in connection herewith at any time or in any manner other than in connection with the completion of the transactions contemplated by this Agreement and related transactions.

Section 15.02. Public Announcements.

Subject to Law or listing rules of an exchange on which Buyer's parent corporation's stock is listed, and except as otherwise set forth herein, the initial public announcement relating to the transactions contemplated herein will be mutually agreed upon and jointly made by the Parties. Subsequent public announcements related to the sale of the System by one Party shall be provided to the other Party as soon as reasonably practicable before issuance.

Section 15.03. Notices.

All notices, other communications and approvals required or permitted by this Agreement shall be in writing, shall state specifically that they are being given pursuant to this Agreement and shall be addressed as follows:

in the case of Seller:

East Whiteland Township

209 Conestoga Road
Frazer, PA 19355
Attention: Manager

with a copy to:

Hamburg, Rubin, Mullin, Maxwell and Lupin, PC
375 Morris Rd
Lansdale, PA 19446
Attention: Joseph J. McGrory, Jr., Solicitor

in the case of Buyer:

Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Avenue
Bryn Mawr, PA 19010
Attention: Marc A. Lucca, President
malucca@aquaamerica.com

with a copy to:

Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Avenue
Bryn Mawr, PA 19010
Attention: Frances Orth, Esq., Vice President, Senior Managing Counsel
fporth@aquaamerica.com

or such other persons or addresses as a Party may from time to time designate by notice to the other Party. A notice, other communication or approval is deemed to have been sent and received (i) on the day it is delivered, or if such day is not a Business Day or if the notice is received after ordinary office hours (time or place of receipt), the notice, other communication or approval is deemed to have been sent and received on the next Business Day, or (ii) on the fourth Business Day after mailing if sent by United States registered or certified mail.

Section 15.04. Headings.

The article, section and paragraph headings in this Agreement are for reference purposes only and do not affect the meaning or interpretation of this Agreement.

Section 15.05. Severability.

If any term, provision, covenant or restriction contained in this Agreement is held by a court of competent jurisdiction to be invalid, void or unenforceable, the remainder of the terms, provisions, covenants and restrictions contained in this Agreement shall remain in full force and effect and shall in no way be affected, impaired or invalidated.

Section 15.06. Entire Agreement.

This Agreement is the entire agreement between the Parties pertaining to the subject matter hereof and supersedes all prior agreements, negotiations, discussions and understandings, written or oral, between the Parties. There are no representations, warranties, conditions or other agreements, whether direct or collateral, or express or implied, that form part of or affect this Agreement, or that induced any Party to enter into this Agreement or on which reliance is placed by any Party, except as specifically set forth in this Agreement. The Parties acknowledge and agree that (i) each has substantial business experience and is fully acquainted with the provisions of this Agreement, (ii) the provisions and language of this Agreement have been fully negotiated and (iii) no provision of this Agreement shall be construed in favor of any Party or against any Party by reason of such provision of this Agreement having been drafted on behalf of one Party rather than the other Party.

Section 15.07. Amendments; Waivers.

The Parties may amend this Agreement only by the Parties' written agreement that identifies itself as an amendment to this Agreement. Any waiver of, or consent to depart from, the requirements of any provision of this Agreement will be effective only if it is in writing and signed by the Party giving it, and only in the specific instance and for the specific purpose for which it has been given. No failure on the part of any Party to exercise, and no delay in exercising, any right under this Agreement will operate as a waiver of such right. No single or partial exercise of any such right will preclude any other or further exercise of such right or the exercise of any other right.

Section 15.08. Parties in Interest; Third Party Beneficiary.

This Agreement is not intended to and shall not be construed to create upon any Person other than the Parties any rights or remedies hereunder.

Section 15.09. Anti-Assignment; Successors and Assigns.

Neither Party to this Agreement may assign any right or delegate any performance under this Agreement without the prior written consent of the other Party. A purported assignment or purported delegation without prior written consent is void. This agreement is binding upon, and inures to the benefit of, the Parties and their permitted respective successors and assigns.

Section 15.10. Governing Law; Jurisdiction.

The laws of the Commonwealth of Pennsylvania (without giving effect to its conflicts of law principles) govern all matters arising and relating to this Agreement, including torts. The Parties irrevocably agree and consent to the jurisdiction of the United States District Court for the Eastern District of Pennsylvania and the Court of Common Pleas of Chester County, Pennsylvania, for the adjudication of any matters arising under or in connection with this Agreement. Any action initiated in court shall be filed and litigated (including all discovery proceedings) exclusively in the United States District Court for the Eastern District of Pennsylvania and the Court of Common Pleas of Chester County, Pennsylvania, and each Party irrevocably submits to the exclusive

jurisdiction of such courts in any such suit, action or proceeding. Service of process, summons, notice or other document by mail to such Party's address set forth herein shall be effective service of process for any suit, action or other proceeding brought in any such court. EACH PARTY ACKNOWLEDGES AND AGREES THAT ANY CONTROVERSY WHICH MAY ARISE UNDER THIS AGREEMENT OR THE OTHER TRANSACTION DOCUMENTS IS LIKELY TO INVOLVE COMPLICATED AND DIFFICULT ISSUES AND, THEREFORE, EACH SUCH PARTY IRREVOCABLY AND UNCONDITIONALLY WAIVES ANY RIGHT IT MAY HAVE TO A TRIAL BY JURY IN RESPECT OF ANY LEGAL ACTION ARISING OUT OF OR RELATING TO THIS AGREEMENT, THE OTHER TRANSACTION DOCUMENTS OR THE TRANSACTIONS CONTEMPLATED HEREBY OR THEREBY. EACH PARTY TO THIS AGREEMENT CERTIFIES AND ACKNOWLEDGES THAT (A) NO REPRESENTATIVE OF ANY OTHER PARTY HAS REPRESENTED, EXPRESSLY OR OTHERWISE, THAT SUCH OTHER PARTY WOULD NOT SEEK TO ENFORCE THE FOREGOING WAIVER IN THE EVENT OF A LEGAL ACTION, (B) SUCH PARTY HAS CONSIDERED THE IMPLICATIONS OF THIS WAIVER, (C) SUCH PARTY MAKES THIS WAIVER VOLUNTARILY, AND (D) SUCH PARTY HAS BEEN INDUCED TO ENTER INTO THIS AGREEMENT BY, AMONG OTHER THINGS, THE MUTUAL WAIVERS AND CERTIFICATIONS IN THIS SECTION.

Section 15.11. Specific Performance.

Irreparable damage would occur if any provision of this Agreement were not performed in accordance with the terms hereof and that the Parties may seek specific performance of the terms hereof, in addition to any other remedy to which they are entitled at law or in equity if the other Party has performed in accordance with the terms hereof.

Section 15.12. Counterparts; Electronic Mail; Facsimile Execution.

This Agreement may be executed in any number of counterparts which, taken together, is one and the same agreement. This Agreement becomes effective when it has been executed by each Party and delivered to both Parties. To evidence the fact that it has executed this Agreement, a Party may send a copy of its executed counterpart to the other Party by electronic mail or facsimile transmission. Such Party is deemed to have executed and delivered this Agreement on the date it sent such electronic mail or facsimile transmission. In such event, such Party shall forthwith deliver to the other Party an original counterpart of this Agreement executed by such Party.

Execution Version

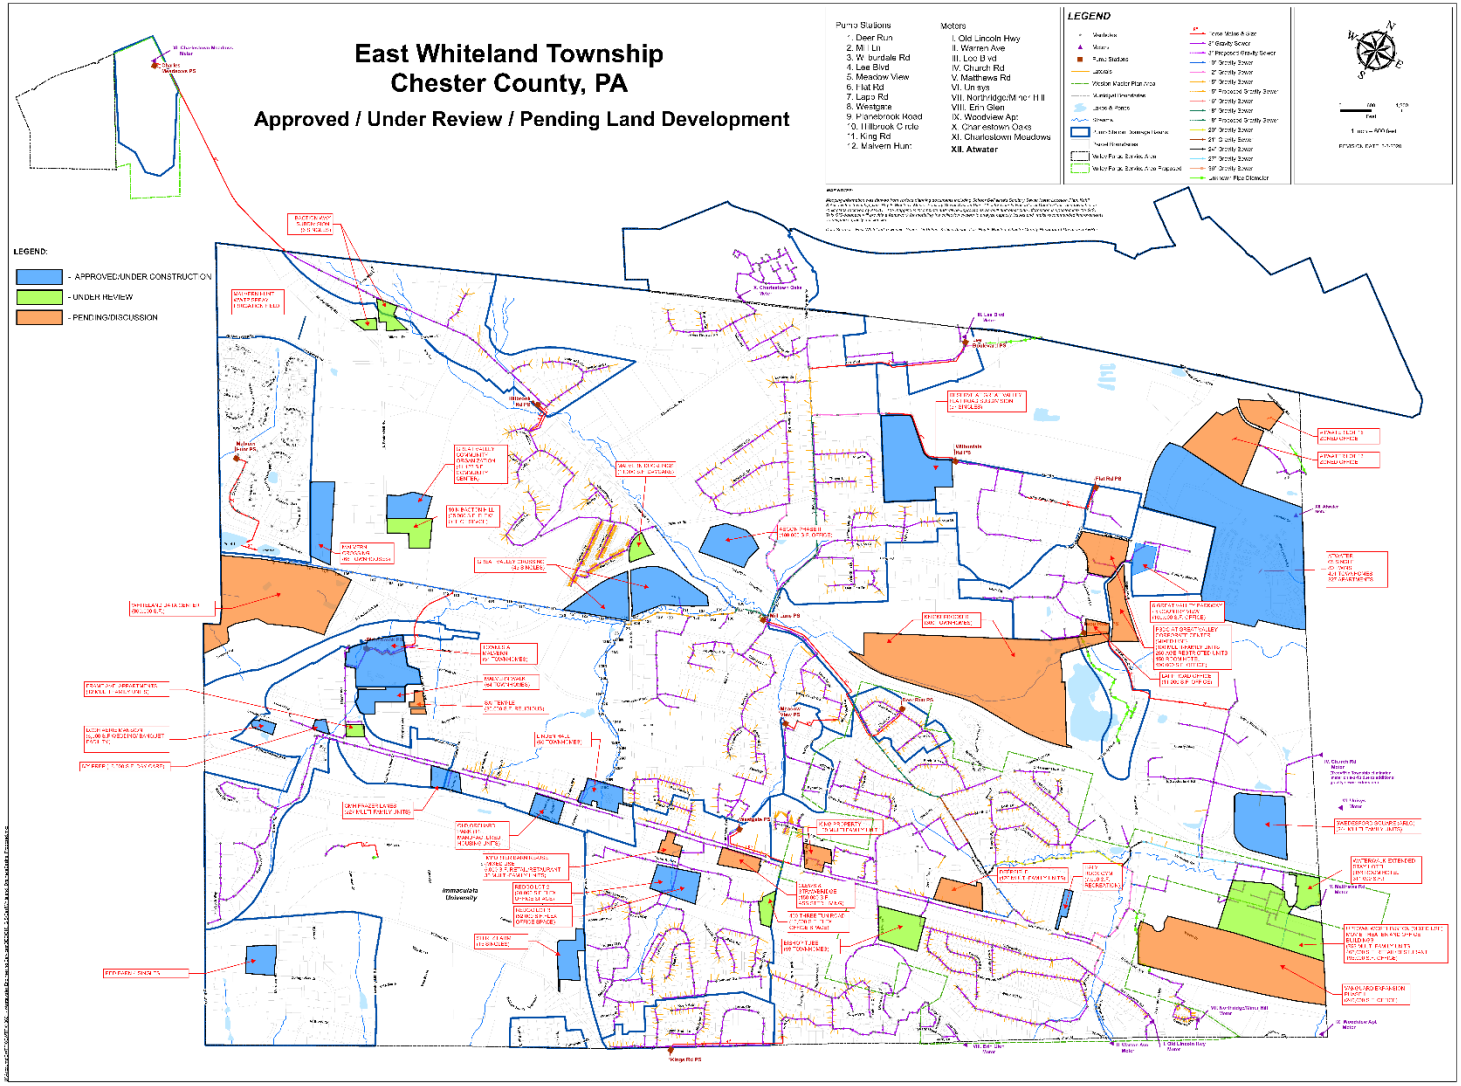
ASSET PURCHASE AGREEMENT

By and Between

Township of East Whiteland, Chester County,

As Seller

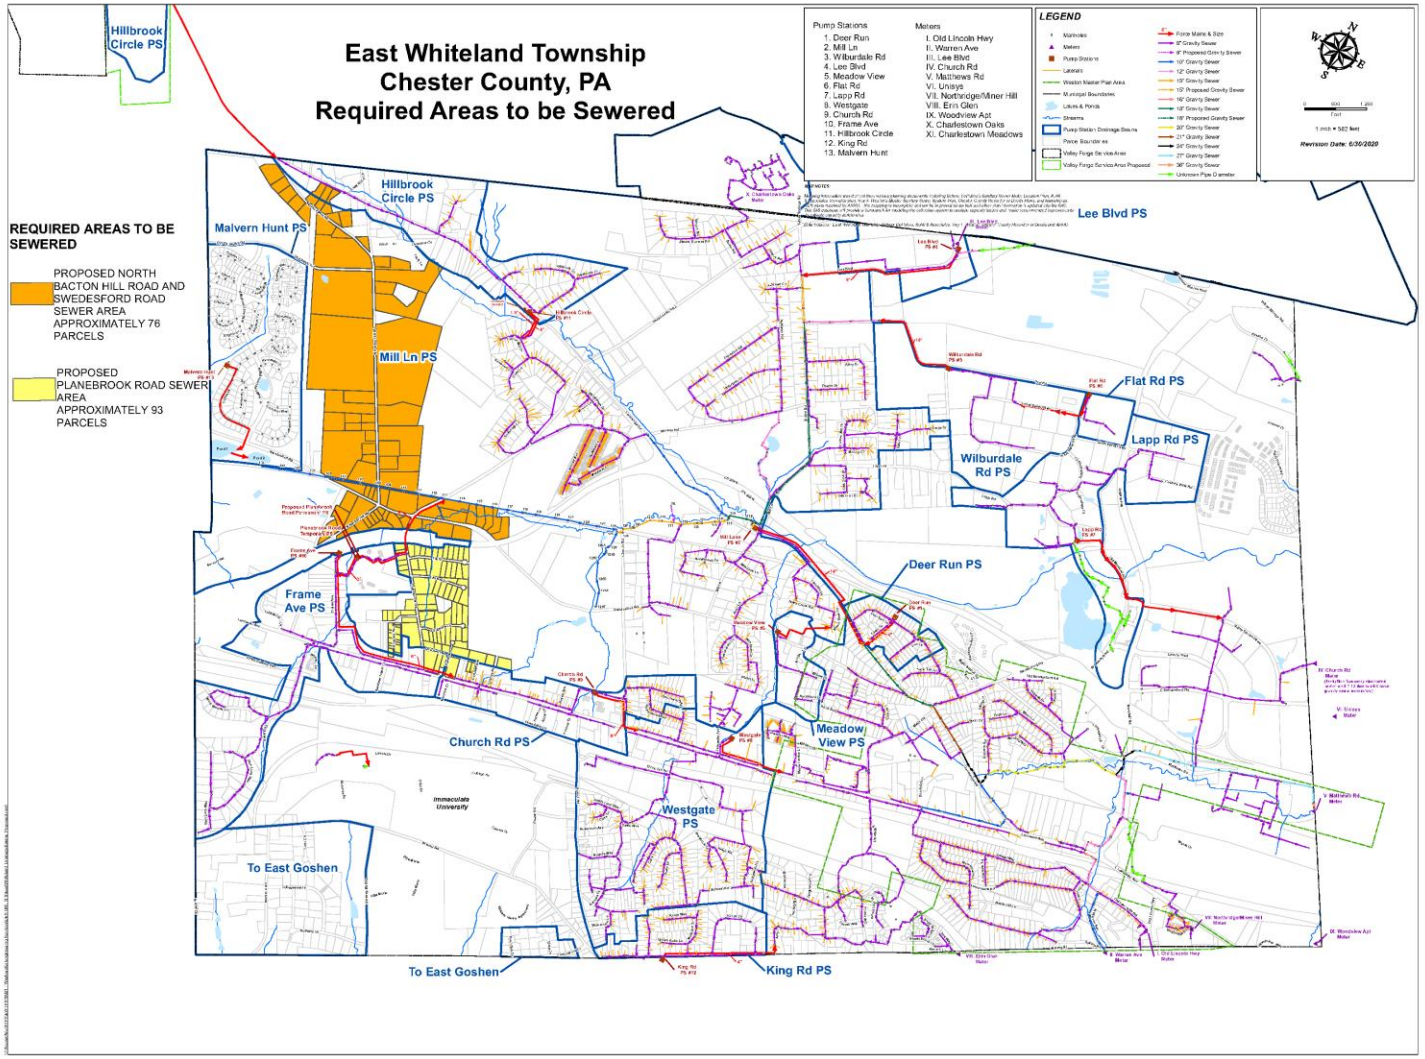
and



Aqua Pennsylvania Wastewater, Inc. As Buyer

SCHEDULES AND EXHIBITS

Capitalized terms used in the Schedules which are not otherwise defined herein shall have the respective meanings ascribed to such terms in the Agreement. The Schedules are to be read in their entirety. Nothing in the Schedules is intended to broaden the scope of any representation or warranty in the Agreement. The disclosure of any item, explanation, exception or qualification in any Schedule is disclosure of that item for all purposes for which disclosure is required under the Agreement when it is reasonably apparent from the context that such item, explanation, exception or qualification also relates to another Schedule irrespective of whether any cross reference is made or no Schedule is provided with respect to a representation. Other than as expressly set forth herein or when the Schedules reference agreements or other matters not documented in a separate writing, all descriptions of agreements, written materials or other matters appearing herein, are summary in nature and are qualified by reference to the complete documents, which have been supplied to the Buyer or its counsel.



SCHEDULE A

Service Area

SCHEDULE B

Expanded Service Area Map

Schedule 2.02(h)

Excluded Assets

The Malvern Hunt Pumping Station, force main and the gravity sewer collection system within the Malvern Hunt Wastewater Treatment Plant (the "WWTP") will be included in the Acquired Assets. However, it is expected that the spray irrigation system associated with the WWTP, including the treatment ponds and the spray irrigation fields, will be decommissioned[1] and, along with associated parcels 42-3-47 and 42-3-127, will be excluded from the sale.

[1] Pursuant to a plan to be provided by Pennoni.

Schedule 4.05

Consents and Approvals

1. Pennsylvania Public Utility Commission ("PaPUC") Approval of Transaction

2. PaPUC Approval of Consent to Assignment and Amendment to Sewer Service Agreements and Related Amendments

3. Pennsylvania Department of Environmental Protection ("PaDEP") Approval of Sanitary Sewer Collection and Conveyance System Act 537 Plan recognizing transfer of wastewater collection system from Seller to Buyer

4. PaDEP Approval of Transfer of all NPDES[2] and WQM Permits

[2] NPDES permits will not be transferred if the Malvern Hunt WWTP is decommissioned prior to closing, as anticipated.

Schedule 4.06

Undisclosed Liabilities

None.

Schedule 4.07

Events Having a Material Adverse Effect

None.

Schedule 4.08

Tax Matters

None.

Schedule 4.09

Real Property and Easements; Liens[3]

Deed of Dedication of Roads and Sanitary Sewer Easements for Whitewoods Subdivision dated August 8, 2002 by Southdown Properties, Inc. in favor of East Whiteland Township for sewer main located in Ravine Road.

East Whiteland Municipal Authority Railroad Crossings and Rights-of-Way, prepared by Roy F. Weston, Inc. dated September 25, 1975 and updated September 14, 1977.

Easement Agreement between East Whiteland and Malvern Institute dated September 16, 2003 and recorded January 8, 2004 (King Road Pump Station).

Easements: *See spreadsheet below for Easements and use following key in review of spreadsheet:*

EAST WHITELAND TOWNSHIP SEWER SALE SPREADSHEET COLOR KEY

Preliminary guidance on reading spreadsheet:

- The official sewer system map is separated by drainage basin, and therefore the spreadsheet is as well.
- The left-most column labels each sewer line segment by manhole. Often times the same segment of sewer line runs through multiple parcels.
- The owner listed is the most current owner, not the owner of the property at the time the easement/deed of dedication/condemnation/ license was entered into or occurred.
- The right-most column is still incomplete, but will ultimately indicate the type, validity, and issues of each easement/condemnation/deed of dedication/license.

Drainage Basin (heading): **Blue**
Road & Township Owned Property: **Green**
End of Road: **Black**
Same Road, Change of Direction: White
Private Property: **Yellow**
Pump Station / Force Maine: **Red**
Meter: **Purple**
Train Tracks: **Orange**
Private/Unlabeled Sewer Line: **Pink**

[3] Initial list of easements has been provided by solicitor. This will be updated and all easements and real property will be confirmed.

Environmental Compliance

Sanitary System Overflow (SSO) Reporting for Operating Years 2016 through 2019:

- Pursuant to the Chapter 94 Municipal Wasteload Management Annual Report for Operating Year 2016, there was no reported SSO within the East Whiteland Township wastewater collection and conveyance system.

- Pursuant to the Chapter 94 Municipal Wasteload Management Annual Report for Operating Year 2017, there was no reported SSO within the East Whiteland Township wastewater collection and conveyance system.

- Pursuant to the Chapter 94 Municipal Wasteload Management Annual Report for Operating Year 2018, there were three (3) SSOs:

    - On June 11, 2018 and August 13, 2018 SSOs occurred at manhole 6-9, located at 249 Lancaster Avenue. These 2 SSOs were caused by rain events exceeding 3" per hour. On November 30, 2018, the Township diverted the flow from the Frame Avenue Pump Station to the Planebrook Pump Station, which reduced the flow by 80,000 GPD on Lancaster Avenue at the location of the overflows. Also, the Church Road Sewer Extension, referenced on Schedule 4.12, which was completed in March 2020, will redirect the flow associated with the Church Road Pump Station from the Lancaster Avenue area where these SSOs occurred.
    - On August 23, 2018 an SSO occurred at manholes 18A-1 to 18 A-2, located on Warren Avenue, which was caused by a clogged pipe. The pipe was cleared and flow resumed.

- Pursuant to the Chapter 94 Municipal Wasteload Management Annual Report for Operating Year 2019, there was no reported sanitary system overflow within the East Whiteland Township wastewater collection and conveyance system.

Corrective Action Plan (CAP) and Connection Management Plan (CMP):

- From 2013 to 2014 the Township was under a CAP. Phases 1 and 2 of the CAP required improvements to the Mill Lane and Sidley Collection System. Phase 3 of the CAP required improvements to the Lee Boulevard Pump Station. Upgrade improvements were also made to the sanitary sewer within Conestoga Road. Approximately 3,780 L.F. of new 18", 20" and 24" pipe were installed to replace existing deteriorating sewer. The CAP was lifted by the DEP in 2015 after the Township completed the gravity sewer main replacement from the Mill Lane Pump Station to Lee Boulevard.

- The conditions of the CMP currently on file with the PADEP are still in effect for the contributory drainage areas from Charlestown that flow through the Mill Lane and Sidley Road sewer systems.

Schedule 4.12

Authorizations and Permits

537 Plan:

- East Whiteland Township Act 537 Sewage Facilities Plan, dated May 2, 1995
- East Whiteland Township Act 537 Sewage Facilities Plan Special Study for the Mill Lane Pump Station Replacement Project (Route 401 Area (Area 1), Bacton Hill and Swedesford Road Areas (Area 2), Planebrook Area (Area 3), Church Road Extension – to Eliminate Church Road Pump Station (Area 4), and Immaculata University Area (Area 5)), as prepared by Advanced GeoServices and revised September 2011.
- East Whiteland Township/Charlestown Township (Southside) Act 537 Sewage Facilities Plan Special Study for the North-Central portion of East Whiteland Township and the South-Central portion of Charlestown Township (to accommodate future flow needs for Charlestown Township and East Whiteland Township), as prepared by Arro Consulting, Inc. dated February 2013.
- East Whiteland Township/Great Valley Corporate Center Act 537 Sewage Facilities Plan Special Study for upgrades of the Willburdale Pump Station and Flat Road Pump Station (for wastewater needs of the Great Valley Corporate Campus), as prepared by Arro Consulting, Inc. dated April 2015 and revised September 2015.
- East Whiteland Township Act 537 Sewage Facilities Plan Special Study for Frame Avenue/Planebrook Road Sewer Extension, as prepared by Arro Consulting, Inc. dated August 2016, with a last revision date of October 30, 2018.
- East Whiteland Township Sewage Facilities Planning Module (Component 3m) Planebrook Road Area Sewer Extension, as prepared by Arro Consulting, Inc. dated March 2020. This module is for the extension of public sanitary sewer service from the existing manhole located on Planebrook Road to properties currently served by on-lot disposal systems along Planebrook Road, Elk Drive, Fairview Drive, Prospect Avenue, Golf Circle, Bracken Avenue, and Davis Avenue.

NPDES Permits:

- **Permit No. 1501419**[4]
- **Permit No. 1502418** for sewer extension completed in 2004 for approximately 250 homes located in the King Road, Carol Lane and Summit Road areas.

[4] To confirm purpose of permit

- **Permit No. 1599418** for the Malvern Hunt sewage treatment plant.[5]

Schedule 4.13

Assigned Contracts

Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Sewage Treatment Agreement	East Goshen Township East Goshen Municipal Authority East Whiteland Township East Whiteland Municipal Authority	November 17, 1987	Transmission of sewage from 23 lots located in East Whiteland (the "EW Lots") Township within the Lockwood Chase Development from East Whiteland through East Goshen Township's sewage collection system to the Lockwood Chase Plant (leased and operated by East Goshen Township) for treatment.
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Sewage Treatment Agreement	East Goshen Township East Whiteland Township	October 17, 2000	Transmission of sewage from 4 lots located in East Whiteland

	East Whiteland Municipal Authority		Township within the Mill Valley subdivision from East Whiteland through East Goshen's sewage collection system, to the West Goshen Treatment Plant for treatment. East Goshen reserves its capacity in the West Goshen Treatment Plant for East Whiteland.
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Agreement	Malvern Borough East Whiteland Township East Whiteland Municipal Authority	July 10, 1995	Transmission of sewage from 19 lots located in East Whiteland Township within the Erin Glenn subdivision from East Whiteland through the Erin Glen Meter into Malvern Borough's collection system, then

			back to East Whiteland through the Warren Avenue Meter (which will then go through the East Whiteland Trunkline to Valley Forge Sewage Treatment Plant).
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Agreement	Willistown Township East Whiteland Township East Whiteland Municipal Authority	September 14, 1993	Transmission of sewage from 114 apartments in East Whiteland Township within the Woodview Apartments from East Whiteland to the collection system in Willistown (which will then go through the Valley Creek Trunkline to the Valley Forge Sewage Treatment Plant).

Name of Contract	Parties to Contract	Date of Contract	Subject
Sewage Capacity/Service Agreement	East Whiteland Township East Whiteland Municipal Authority Tredyffrin Township Tredyffrin Township Municipal Authority Trammell Crow Northeast Metro Development, Inc.	November 1, 2000	Transmission of sewage from the portion of the Great Valley Corporate Campus (developed by Trammel Crow) located in East Whiteland Township (the "EW Portion") that is required to be served by the Valley Forge Sewage Treatment Plant ("VFSTP") under East Whiteland's 537 Plan. Tredyffrin sold its reserve capacity in the VFSTP to Trammel Crow for use by the EW Portion. Tredyffrin bills East Whiteland for its flow into Tredyffrin's system. Sewage is transmitted

			from the EW Portion through the Valley Creek Trunkline (in Tredyffrin) to the VFSTP for treatment.
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Addendum to Sewage Capacity/Service Agreement dated November 1, 2000	East Whiteland Township Tredyffrin Township RLD Water JV, LLC The Haven at Atwater Village, LLC	November 19, 2015	Modifies the Agreement dated November 1, 2000 to address additional flow from the Havens Apartment Complex, located in East Whiteland (the "Atwater Capacity"). The addendum adds RLD Atwater and The Haven at Atwater Village as parties. Tredyffrin will bill East Whiteland a sewer rental charge for the first 46,393 GPD of flows from the Atwater Capacity. For

			the average daily flows over 46,393 GPD, Tredyffrin will be entitled to collect a conveyance fee (but not a treatment fee) – as of March 2020, the conveyance fee has not yet been established or charged.
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Professional[7] Services Agreement	ARRO Consulting East Whiteland Township	July 26, 2011	ARRO's services in connection with the operation and maintenance of the Malvern Hunt Wastewater Treatment Plant.
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
East Whiteland Trunk Line Agreement	East Whiteland Township East Whiteland Municipal Authority	February 1, 1971	Transmission of sewage from the municipalities through the East

[7] Professional Services Agreement will not be transferred if the Malvern Hunt WWTP is decommissioned prior to closing, as anticipated.

	Malvern Municipal Authority Borough of Malvern Valley Forge Sewer Authority		Whiteland Trunkline (the "Trunkline") to the Valley Forge Sewage Treatment Plant ("VFSTP"), including charges for maintenance and repairs to the Trunkline.
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Amendment to East Whiteland Trunk Line Agreement	East Whiteland Township East Whiteland Municipal Authority Malvern Municipal Authority Borough of Malvern Valley Forge Sewer Authority ("VFSA")	December 12, 1979	Addendum to the Agreement dated February 1, 1971 to address the reservation by EW for the VFSA of reserved capacity in the Trunkline and the Mill Lane Pump Station and the transmission of sewage from Charlestown Township through the Trunkline to the VFSTP. The addendum also adds VFSA as a municipality under the

			agreement, as it owns and operates the Charlestown Sewer System.
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Amendment to East Whiteland Trunk Line Agreement	East Whiteland Township East Whiteland Municipal Authority Valley Forge Sewer Authority	April 18, 2014	Addendum to the Agreement dated February 1, 1971 establishing an increased reserve capacity for the VFSA within the East Whiteland sewer system and establishing the related cost sharing between East Whiteland and VFSA.
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Valley Forge Sewer Treatment Plant Agreement	Schuylkill Township East Pikeland Township Charlestown Township	November 1, 1970	Transmission and treatment of sewage from the municipalities to the Valley Forge Sewage Treatment Plant ("VFSTP"),

	East Whiteland Township East Whiteland Municipal Authority Tredyffrin Township Tredyffrin Municipal Authority Willistown Township Easttown Township Easttown Municipal Authority Malvern Borough Malvern Municipal Authority Valley Forge Sewer Authority ("VFSA")		including charges for maintenance and repairs to the VFSTP.
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Composite Amendment No. 1	Schuylkill Township East Pikeland Township Charlestown Township	December 18, 1974	This amendment amends portions of (and specifically Section 2.03 and certain Exhibits) of

	East Whiteland Township Tredyffrin Township Willistown Township Easttown Township Malvern Borough East Whiteland Municipal Authority Tredyffrin Municipal Authority Easttown Municipal Authority Malvern Municipal Authority Valley Forge Sewer Authority ("VFSA")		the Valley Creek Trunk line Agreement, the East Whiteland Trunk line Agreement and the Valley Forge Sewer Treatment Plant Agreement to address the construction by and reimbursement of Tredyffrin Authority by the other municipalities for its construction of the portion of the Valley Creek Trunk Sewer located in Valley Forge State Park. Also addresses the award of and credit for certain grants from the EPA to each of the authorities for the respective collection systems.

Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Agreement	East Whiteland Municipal Authority Valley Forge Sewer Authority	December 27, 1978	East Whiteland Municipal Authority and VFSA agreed to share costs for the Sidley Road Trunk line repairs. Schedule A (detailing the repairs and referenced in the agreement) is not included.

Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Amendment to Valley Forge Sewage Treatment Agreement	Schuylkill Township East Pikeland Township Charlestown Township East Whiteland Township East Whiteland Municipal Authority Tredyffrin Township Tredyffrin Municipal Authority Willistown Township Easttown Township Easttown Municipal Authority Malvern Borough Malvern Municipal Authority Valley Forge Sewer Authority ("VFSA")	January 1, 1983	This amendment changed the interest rates for late payments.

Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Supplement to Valley Forge Sewage Treatment Agreement for the Purpose of Complying with the United States Environmental Protection Agency Regulations	Schuylkill Township East Pikeland Township Charlestown Township East Whiteland Township East Whiteland Municipal Authority Tredyffrin Township Tredyffrin Municipal Authority Willistown Township Easttown Township	December 2, 1985	This supplement includes requirements that the municipalities, in order to comply with EPA regulations, enact ordinances to include monitoring, reporting and other requirements for industrial users and it gives VFSA authority to inspect, charge, fine, etc. industrial users and act on behalf of each municipality if necessary.

	Easttown Municipal Authority Malvern Borough Malvern Municipal Authority Valley Forge Sewer Authority ("VFSA")		
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Addendum to Valley Forge Sewage Treatment Agreement for the Purpose of Permitting and administering the Sale of Reserved Capacity among the Parties	Schuylkill Township East Pikeland Township Charlestown Township East Whiteland Township East Whiteland Municipal Authority Tredyffrin Township Tredyffrin Municipal Authority Willistown Township	October 1994	This addendum addresses disparities between the reserved capacities of the various municipalities by allowing for the permanent sale of unused reserved capacity between the municipalities, with the consent of VFSA and pursuant to certain offer and sale procedures.

	Easttown Township Easttown Municipal Authority Malvern Borough Malvern Municipal Authority Valley Forge Sewer Authority ("VFSA")		
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Wastewater Conveyance Agreement	Aqua Resources, Inc. Schuylkill Township East Pikeland Township Charlestown Township East Whiteland Township Tredyffrin Township Willistown Township Easton Township Easton Municipal Authority	November 2018	The transmission of sewage from the municipalities through the Valley Creek Trunkline (owned by Aqua) to be treated at Valley Forge Sewer Treatment Plant ("VFSTP"). The VFSA agrees to accept, treat and dispose of such sewage pursuant to this Agreement

	Malvern Borough Valley Forge Sewer Authority ("VFSA")		and the Valley Forge Sewage Treatment Plant Agreement.
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Sewer Treatment Agreement	East Whiteland Township East Goshen Township Malvern Institute for Psychiatric and Alcoholic Studies	March 2, 2004	Transmission of flow from the Malvern Institute property located in East Goshen, through East Whiteland Township's system to the Valley Forge Sewage Treatment Plant. The agreement also addresses the permanent sewer easement that Malvern Institute conveyed and granted across its property to allow East Whiteland to construct a sanitary sewer line and the King Road Pump Station.

Name of Contract	Parties to Contract	Date of Contract	Subject
National Railroad Passenger Corporation License Agreement	National Railroad Passenger Corporation (NRPC) East Whiteland Township Municipal Authority	November 18, 1993	NRPC granted an exclusive license to East Whiteland to construct, maintain, repair, alter, renew, relocate and remove an iron sewer pipe, encased in a steel casing pipe, for a distance of approximately 250 feet under NRPC's right-of-way. The pipe conveys sanitary sewage from the Southridge Subdivision to East Whiteland's collection system.
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
National Railroad Passenger Corporation Amendment to License Agreement	National Railroad Passenger Corporation East Whiteland Township Municipal Authority	May 6, 2002	Amends November 18, 1993 License Agreement. Changes description and location of pipe to be

			installed and adds additional lump sum rent payment of $16,315 for May 6, 2002 (date of Amendment) through October 31, 2018 and $250 fee for expenses and preparation of Amendment. Previous lump sum payment of $13,120 was made upon execution of original agreement (as well as $500 for expenses and license preparation).
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
National Railroad Passenger Corporation License Agreement	National Railroad Passenger Corporation East Whiteland Township	September 10, 1999	NRPC granted an exclusive license to East Whiteland to construct, maintain, repair, alter, renew, relocate and

			remove an iron sewer pipe, encased in a steel casing pipe, for a distance of approximately 267 feet near Sugartown Road. The pipe conveys sanitary sewage from the Sugartown Ridge Subdivision to East Whiteland's collection system.
Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
Agreement with Public Utility or Municipality for Crossing under Railroad Private Property	Reading Company East Whiteland Municipal Authority	March 21, 1972 (no set term)	Reading Company (RC) granted a license across and under its tracks, right of way and property to East Whiteland Municipal Authority (EW) to lay, maintain, and use two steel pipes in steel casing pipes 1,600 feet west and 511 feet west of Valley Store Station in East Whiteland

			Township (the "Facilities"). EW is responsible for all costs of construction, relocation and removal and for all taxes assessed against the Facilities. There is an annual $40 charge for the license, to be adjusted by RC every fifth year commencing on January 1, 1977. In the event that RC deems it necessary that the Facilities be altered or changed, EW must do so within 30 days of notice of such from RC. Upon termination of the agreement (by RC if there is a breach by EW), EW is required to remove the Facilities and restore the premises to good condition.

Name of Contract	**Parties to Contract**	**Date of Contract**	**Subject**
License Agreement for Wire, Pipe and Cable Transverse Crossings and Longitudinal Occupations	Penn Central Transportation Company East Whiteland Municipal Authority	July 11, 1975 (no set term)	Penn Transportation Company (PTC) granted a license across and under its tracks, right of way and property to East Whiteland Municipal Authority (EW) to construct, maintain, alter renew, relocate and ultimately remove a sewage main under Railroad Bridge No. 2.73 and 2 manholes at valuation station 2284+49, located 1399 feet west of mile post 3 (west of Knickerbocker station) (the "Facilities"). EW is responsible for all costs of construction, relocation and removal and

			for any taxes assessed against the Facilities. In addition to reimbursement to PTC for the cost of preparing the agreement, there was a $1,100 licensing fee paid to PTC. PTC must consent to any alterations to the planned Facilities required by EW. In the event that PTC deems it necessary that the location of the Facilities be altered, EW must do so at EW's sole cost and expense. Upon termination of the agreement, EW is required to remove the Facilities and restore the premises to good condition, at EW's sole cost and expense.

Schedule 4.14

Seller Litigation

None.

Schedule 4.16(a)

Exception to Title to Acquired Assets

None.

Schedule 4.16(b)

Sufficiency

To be provided upon further review of due diligence.

Schedule 4.17

Pending Development Plans

1. Phase 1 – Conestoga Road (Rt. 401) (TO BE COMPLETED BY SELLER)

Scope of work is to connect 22 properties (one has been connected) to the existing 8" sanitary main within the right-of-way of Conestoga Road.

- This phase requires receipt of a Highway Occupancy Permit (HOP) from PennDOT, the application for which has been submitted.
- Design drawings and bid specs are completed, other than revisions for bid dates.
- A field view with PennDOT was scheduled for June 2, 2020.
- In the event that PennDOT will require sections of lanes to be repaved, an alternate bid item has been added to obtain a unit price for milling and overlay based on a selected quantity.
- Remaining Work: Address and respond to PennDOT comments, and resubmit.
- Remaining Work: Finalize alternate bid item for road paving.
- Phase is 99% complete as of May 29, 2020.

Schedule 5.04

Buyer Consents and Approvals

1. Pennsylvania Public Utility Commission (the "PaPUC") Approval of Transaction

2. PaPUC Approval of Consent to Assignment and Amendment to Sewage Treatment Agreements and Related Amendments

3. Pennsylvania Department of Environmental Protection (the "PaDEP") Approval of Sanitary Sewer Collection and Conveyance System Act 537 Plan recognizing transfer of wastewater collection system from Seller to Buyer

4. PaDEP transfer of all NPDES[9] and WQM Permits

[9] NPDES permits will not be transferred if the Malvern Hunt WWTP is decommissioned prior to closing, as anticipated.

Schedule 5.11

Buyer Litigation

To be addressed by Buyer.

Schedule 7.03(a)

Rates

Sewer District	**Rate**
Sewer District A	$400/EDU/Year or $33.33/EDU/Month
Sewer District B	$400/EDU/Year or $33.33/EDU/Month
Sewer District C	$542/EDU/Year or $45.17/EDU/Month
Sewer District D	$600/EDU/Year or $50.00/EDU/Month
Sewer District E	$480/EDU/Year or $40.00/EDU/Month

Commercial and Industrial users whose quarterly sewer discharge or water consumption is in excess of 100,000 gallons shall pay a quarterly charge of $6.20 per 1,000 gallons.

Schedule 7.12

Required Sewer Projects

A. North Bacton Hill Road and Swedesford Road:

   a. Generally consisting of those parcels abutting the following roads:

      i. North Bacton Hill Road from Swedesford Road to Spring Valley Road.

      ii. Spring Valley Road from North Bacton Hill Road to the Conestoga Road.

      iii. South Bacton Hill Road from Swedesford Road to the cul-de-sac.

      iv. Swedesford Road from Bacton Hill Road to a point approximately 620-feet west of the intersection.

B. Planebrook Road:

   a. Generally consisting of those parcels abutting the following roads and/or unopened streets:

      i. Planebroook Road form Bracken Avenue to the Route 202 overpass.

      ii. Elk Drive from Planebrook Road to the cul-de-sac.

      iii. Fairway Drive from Planebrook Road to the cul-de-sac.

      iv. Golf View Lane from Planebrook Road to the cul-de-sac.

      v. Prospect Avenue from Planebrook Road to UPI #42-30-8 (2 Prospect Avenue), including a spur to service UPI #42-3-174.

      vi. Bracken Avenue form Planebrook Road to Coffman Street including the following spurs:

         1. East of Coffman Street to service UPI #42-3-216.1, UPI #42-3-216.2 and UPI #42-3-216.3

         2. North of Bracken Avenue within "Davis Avenue" to service UPI #42-3R-28

The installations in A and B above shall be in general conformance with the following design plans completed by ARRO Consulting Inc.:

- Plans Entitled "*North Bacton Hill & Swedesford Road Areas Sanitary Sewer Phase 2",* 24-sheets, dated January 23, 2020

- Plans Entitled *"Planebrook Road Areas Sanitary Sewers Phase 4",* 19 sheets, dated January 23, 2020.

Gravity and Low Pressure System Service Connections for A and B above:

- The Required Sewer Projects described in sections A and B above will provide service connections to the curb, ROW line, or property line as shown on the plans.
- The respective property owners will be responsible, at their own expense, for connecting to the service connection provided as noted above. Buyer will have no responsibility for infrastructure located within the boundaries of the property owners' properties.
- Notwithstanding references to "E-One Grinder Pumps" on the plans, Buyer will have no responsibility for grinder pumps which will remain the responsibility of the property owners served by such grinder pumps.

Permitting - The Township is in the process of obtaining all required permits for the above projects in A and B above.

Easements - Various easements will be required for portions of the proposed sewer within Prospect Avenue, Bracken Avenue and Davis Avenue in the Planebrook Road project. The Township will retain responsibility for securing all necessary easements per Section 7.12(a) of the Asset Purchase Agreement.

Mr. John Nagel
Township Manager
East Whiteland Township
209 Conestoga Road
Frazer, PA 19355

Re: East Whiteland Township Wastewater Collection System Fair Market Value Appraisal

Dear Mr. Nagel:

AUS Consultants is please to respond to Scott Shearer's (PFM Financial Advisors, LLC) request for a proposal for a valuation of East Whiteland Township's wastewater collection system. We understand the nature and purpose of the request is to determine the fair market value of the Township's wastewater collection property and its operation for compliance with Title 66 (Public Utilities) of the Pennsylvania Consolidated Statues Section 1329 of the "Valuation of Acquired water and wastewater systems" collectively referred to as Act 12 of the Commonwealth of Pennsylvania's 2016 legislative session. AUS Consultants is a Utility Valuation Expert (UVE) as designated by the Pennsylvania Public Utility Commission (PUC) Docket No. A-2016-2566251 Entity Code 9919181 renewed January 13, 2020. Our appraisal assumes an investor-owned utility as the purchaser and that the purchaser would be successful in establishing the purchase price, assumed to be the appraised value, as rate-base for regulatory purposes under Section 1329 of the Public Utility Code of Pennsylvania.

Our response to this request will include the scope of our services, a list of AUS Consultants staff and their qualifications, an initial listing of data required to perform the appraisal and a range of project costs through the completion of the appraisal report; activities subsequent to the delivery of our final report will be billed at our hourly per diems defined below. The appraisal will be prepared under the 2020-2021 edition of the Uniform System of Professional Appraisal Practices (USPAP) which has been extended through 2022.

Before addressing the proposal requirements, it is important to understand the valuation concepts and parameters as they would apply to this project which will be subject to consideration of issues regarding to recent Commission decisions and settlements entered into between the Pennsylvania Office of Consumer Advocate (OCA) and the participants (Aqua Pennsylvania and Pennsylvania American) in other recent Act 12 cases.

Valuation Study

AUS Consultants understands the purpose of the valuation study is to determine the fair market of the Township's wastewater collection system assets and their operation. Fair market value is defined as:

> "The most probable price, as of a specified date, in cash, or in terms equivalent to cash, or in other precisely revealed terms, for which the specified property rights should sell after reasonable exposure in a competitive market under conditions requisite to a fair sale, with the buyer and seller each acting prudently, knowledgeably, and for self-interest, and assuming that neither is under undue duress." The Appraisal of Real Estate, 13th Edition, page 23

Our conclusion will represent the fair market value as a going concern, in this case an operating wastewater collection system and not an amount that would be realized from a liquidation of those assets.

Valuation Methodologies

The valuation of the Township's wastewater collection assets, as part of a going concern, will the three (3) generally accepted valuation methodologies: the cost, income and market approaches.

The primary valuation method that will be utilized is the **cost approach.** In preparing the cost approach we will rely on the "Engineer's Assessment" inventory prepared for the Township and the Purchaser per the Pennsylvania PUC's (Act 12) Final Implementation Order M-2016-2543993. In order for the Engineer's Assessment to be of maximum use to the UVEs it should detail the property by account, type and size of property and or equipment, its date of

installation and its original cost. It should be noted that Section 1329 does not restrict the property to be appraised in any fashion so all property of the Township subject to the sale whether Township constructed and/or developer contributed is subject to the appraisal. The cost approach will give consideration to the Township's wastewater collection plant and equipment's replacement cost adjusted for appraisal depreciation. The replacement cost new will be developed using either trending the property's investment by account and installation year or by application of appraisal date unit costs to property's inventory by account and installation year. Next, appraisal depreciation, physical, function and economic, will be assessed and deducted from the replacement cost new. The physical and functional depreciation will be determined based on the age-life depreciation methods using aging from the Engineer's Assessment, the service lives applicable to wastewater industry depreciation lives and a physical inspections of the property.

The property subsequent to its acquisition, will be regulated by the Pennsylvania PUC utilizing a rate base/rate of return regulation. This form regulation allows for the fair return on and of the Company's capital invested for the provision of wastewater services. The last step in the Cost Approach's we will consider the property's economic returns under PUC regulation in order to determine if economic obsolescence exits in the preliminary Cost Approach conclusion discussed above. We will use the results of Income and Market Approaches (discussed below) in making this determination.

The **income approach** provides an indication of value by evaluation the future returns of the operation of the property as wastewater collection system. There are two commonly used methods of the income approach: the discounted cash flow (DCF) approach and the capitalized income approach. Both procedures discount the future returns of the property using a recognized cost of capital for the wastewater industry.

In the DCF, the expected or future cash flows of the operation of the property are discounted to the appraisal date (present value) using a recognized cost of capital for the wastewater industry. Future cash flows are based on historical results from operation in terms of revenues and expenses as the basis forecast of future operations. The projected cash flow levels must provide for additional cash investment and working capital additions, as well as reflect the specific growth potential of the system being valued.

In the capitalize income approach the property's future returns are consolidated into a single estimate for all future periods. The capitalized income approach to value is determined by the direct capitalization of the estimated income using an adjusted cost of capital removing future growth from the cost of capital rate.

The discount rate used in the income approaches will be developed from a market analysis of debt and equity reflecting the risks associated with a rate regulated water and wastewater companies regulated by the Pennsylvania PUC.

The **market approach** looks to market sales of similar water and wastewater utility properties (companies). There are two methods which are commonly utilized to estimate the market approach: actual market sales and market multiples based on wastewater industry comparables based on financial performance as reported in Value Line Investment Surveys for the water/wastewater industry.

The **final appraised value** will consider each of the three approaches to value both individually and collectively.

AUS Consultants Professional Staff

AUS Consultants' professional staff has extensive nationwide experience in preparing business enterprise valuations for water and wastewater systems.

Jerome C. Weinert, Professional Engineer (PE), Accredited Senior Appraiser (ASA), Certified Depreciation Professional (CDP)

- 49 years in Appraisal and Depreciation Consulting
- BS in Mechanical Engineering – Milwaukee School of Engineering (1972)
- Master's in Business Administration – Marquette University (1988)
- Testimony Experience:
  - Regulatory (Depreciation and Rate Base)
  - Courtroom (Valuations – ad valorem taxation and eminent domain and rate of return)

Michael J. Diedrich, PE, ASA, CDP, Certified General Appraiser

- 38 years in Appraisal and Depreciation Consulting
- BS in Architectural Engineering Technology – Milwaukee School of Engineering (1981)
- Master's in Business Administration – Marquette University (1991)
- Testimony Experience:

Courtroom (Valuations ad valorem taxation and eminent domain)

David Weiler

- 36 years in Valuations of Business Enterprises, Closely-held common Stock, Cost of Capital Studies and Valuations of Intangible Property
- Bachelor of Science in Finance-Drexel University (1978)

David A. Sheffer

- 39 years in Regulatory Consulting (Depreciation, Rate Base, Cost of Service, Valuations and Original Cost Studies)

Elizabeth A Weinert

- 19 years in Appraisal and Depreciation Consulting
- B Bachelor of Science in Mechanical Engineering – Milwaukee School of Engineering (2001)
- Master's in Aeronautical Engineering – University of Alabama (2015)

First Request for Data

In order to expedite the project upon the East Whiteland Township's acceptance of our proposal, AUS Consultants needs the following data:

Inventory of property plant and equipment. Ultimately this inventory needs to be provided by the firm preparing the "Engineer's Assessment" for both the Township and the Purchaser. As stated above:

> "In order for the Engineer's Assessment to be of maximum value use it should detail the property by account, type and size of equipment, its date of installation and its original cost. It should be noted that Section 1329 does not restrict the property to be appraised in any fashion so all property whether municipally constructed and/or developer contributed is subject to the appraisal."

Township's financial information related to the operation of the wastewater collection system over each of the last four to six years.

Customer information for the last four years

This data request is not intended to be all inclusive of the information required. There will be follow-up questions and additional requests for data.

AUS Consultants would like to perform a physical inspection of the Township's wastewater system and schedule interviews, as appropriate, with township personnel familiar with the wastewater collection system's operation.

Fee Estimate

AUS Consultants would offer a professional fee range of $25,000 to $27,000 plus expenses to complete a valuation study. Expenses billed at our cost will include travel and living, report preparation, and Fed X as necessary.

For activities subsequent to our final report the following table of hourly per diems plus expenses:

Consultant	Hourly Per Diems ($s/hr.)
Jerome C. Weinert	275
Michael J Diedrich	250
Earl Robinson	200
David A. Sheffer	200
David Weiler	170
Elizabeth A. Weinert	150
Susan Macchia	70

These activities typically include responding to interrogatories (Commission staff, OCA, Small Business Advocate, and/or other possible intervenors), reviewing the testimony of participating parties, preparing testimony (direct, cross, and possibly sur-rebuttal), attending Commission hearings. If expert testimony is required, Jerome C. Weinert will be the witness and attend any hearings which is required.

Closure

AUS Consultants appreciates the opportunity to respond to East Whiteland Township's request for our services. Should you have any questions regarding our response, please contact the undersigned.

Respectfully submitted,
Jerome C. Weinert

Aqua – East Whiteland 1329 FMV Application

Requirements from Prior Commission Orders for Utility Valuation Experts:

1. Market Approach

    a. If "comparable acquisitions" are used as a factor in determining market value, the purchase price for each "comparable acquisition" shall be based on the actual amount paid for the assets at the time of purchase and future capital improvements shall not be included;

    b. If the number of customers is used as a factor in determining market value, the actual, unadjusted number of customers shall be used rather than projected future number of customers. This applies to the number of customers for both the system being acquired and any "comparable acquisitions" being used in the determination.

    c. Speculative growth adjustments will not be used, consistent with *New Garden* (Order pp. 52-53). U.S. Census Data and relevant and applicable regional planning commission reports may be used as a basis to determine growth in a subject area. OCA reserves the right to challenge the specific use of the data in each case.

    d. The proxy group used for calculating market value should not be limited to only companies which engage in Pennsylvania fair market value acquisitions. Aqua agrees that it will provide the terms of this agreement to any UVE prior to engaging the UVE.

    e. Comparable sales used to establish the valuation should not be limited to those that the UVE previously appraised. Aqua agrees that it will provide the terms of this agreement to any UVE prior to engaging the UVE.

2. Income Approach

    a. The rate base/rate of return methodology is not an appropriate methodology for calculating fair market value.

    b. Calculations done under the Income Approach will clearly describe the basis for discount rate(s) in the report rather than only in the exhibits. The following information should be provided about the discount rate(s) used:

        i. The capital structure used in the analysis with an explanation as to why the capital structure was selected. If Company's actual capital structure was not used, explain why not.

        ii. The cost of equity used in the analysis, and the basis for the cost of equity.

iii. The cost of debt used in the analysis. If Company's actual cost of debt was not used, explain why not.

c. Additionally, if a capitalization rate is used, the calculation of the capitalization rate and the basis for the growth rate will be disclosed and fully explained.

3. Cost Approach

a. If the reproduction cost methodology is used, valuation of the collection mains will not be treated differently or as a special circumstance unless reasonably justified;

b. Future capital projects shall not be considered in determining the cost approach result;

c. The cost of land, if included, shall not be adjusted by the ENR index.

d. Aqua and the OCA reserve the right to present adjustments and oppose other methodologies, inputs and assumptions in appraisals in future cases and proceedings, including methodologies, inputs and assumptions that were present in this case but not challenged by the OCA or that were accepted by the Commission.

4. Other Appraisal Considerations:

a. The "going value," "provision for erosion on return," and "overhead cost" add-ons will not be adopted or included in the appraisals.

GANNETT FLEMING SERVICE AGREEMENT AND INVOICES

Gannett Fleming

Excellence Delivered As Promised

May 24, 2021

Via email to WCPackerJr@essential.co

Mr. William C. Packer
Vice President Controller
Aqua Pennsylvania Wastewater, Inc.
762 W. Lancaster Ave
Bryn Mawr, PA 19010

Dear Mr. Packer:

Fair Market Value Appraisal

In response to your request, Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett") is pleased to submit this cost proposal to provide Aqua Pennsylvania Wastewater, Inc. ("Aqua") with a fair market value appraisal of the East Whiteland Township's wastewater system assets ("Wastewater System") consistent with the date of the Engineer's Assessment.

SCOPE OF SERVICES

Gannett Fleming Valuation and Rate Consultants, LLC proposes to conduct a fair market value appraisal of the Wastewater System in compliance with the Uniform Standards of Professional Appraisal Practices, employing the cost, market, and income approaches. It should be noted that Gannett will utilize asset cost information provided by the Engineering Assessment of the Wastewater System's assets.

Fair market value is defined as "the price, expressed in terms of cash equivalents, at which property would change hands between a hypothetical willing and able buyer and a hypothetical willing and able seller, acting at arm's length in an open and unrestricted market, when neither is under compulsion to buy or sell and when both have reasonable knowledge of the relevant facts."

As stated, the standard of value for this engagement is fair market value. The premise of value is going concern. The going concern premise of business value assumes that the business will continue running normally using all of its assets to produce income and will continue operating beyond the valuation date.

Gannett will value the Wastewater System's assets as a group under the premise that they collectively comprise an ongoing operating business enterprise. In accordance with 66 Pa. C.S.

Section 1329, the original source of funding for any part of the assets of the selling utility will not be relevant to the determination of the value of said assets.

We will accept all information and data provided by the Wastewater System and Aqua as it pertains to this assignment "as is" after a limited review. That is, we will neither audit nor verify any data, original cost study, financial records or operating data provided for this assignment.

We will provide direct testimony summarizing our fair market value appraisal suitable for filing before the Pennsylvania Public Utility Commission (PAPUC). Our appraisal and/or direct testimony will reflect the list of items concerning Utility Valuation Expert appraisals for applications to the PAPUC under 66 Pa. C.S. Section 1329, provided previously by Alexander R. Stahl (letter of February 24, 2021).

SITE INSPECTION

We will visit or inspect the Wastewater System's facilities and rely on the information provided by the Engineering Assessment of the Wastewater System's assets provided by the Wastewater System and Aqua.

APPRAISAL REPORT

We will prepare a written document to substantiate our opinion. Our appraisal will be developed consistent with the Uniform Standards of Professional Appraisal Practices. Our valuation will include a detailed analysis and will be presented in a narrative comprehensive, ''stand-alone'' document for your use. The estimate of value that results from a valuation engagement will be expressed as a conclusion of value to be used for the purposes stated above.

Although our valuation is intended to estimate fair market value, we assume no responsibility for the inability of a seller or buyer to obtain a sale or purchase contract at that price.

QUALIFICATIONS

Since 1915, Gannett and its predecessors have been helping clients in public pricing policy and related financial matters for managerial purposes, before regulatory commissions and in courts of law. Our staff has considerable experience in providing an array of specialized financial services to support the core needs and objectives of our clients.

Our specialized financial services encompass utility valuations, economic valuation studies, cost of capital studies, depreciation studies, rate studies, lead lag studies, analyses of public utility accounting systems, debt financing reports, economic and demographic studies, financial decision studies, optimum capital structure, debt service levels, dividend policy, private placement of debt, financial benchmarking, and conducting property inventories.

We design each study and its related report to meet the specific requirements of our clients. These studies require objective analyses of basic data, informed professional judgment, and clear presentation of the results. Our staff includes professionals specialized in public utility accounting and ratemaking, valuation, cost of capital, lead lag, depreciation, associated technical services, and financial analysis. We are experienced utility valuation experts who determine fair market value using the cost, market, and income approaches in accordance with 66 Pa. C.S. Section 1329. We are a registered Municipal Advisor with the Securities & Exchange Commission (SEC); and are a subsidiary of Gannett Fleming, Inc.

Gannett is approved as a "Utility Valuation Expert" by the PAPUC within the context of 66 Pa. C.S. Section 1329, Valuation of Acquired Water and Wastewater Systems.

FIDUCIARY DUTY

Gannett has a fiduciary duty to, and will, provide a thorough, objective, and fair market valuation using the cost, market and income approaches in accordance with 66 Pa. C.S. Section 1329 and Pennsylvania laws.

Gannett attests that it does not derive any material financial benefit from the sale of, or purchase of, a selling utility other than fees for services rendered. Gannett also verifies it does not have any immediate family members who are directors, officers or employees of either an acquiring public utility, entity or selling utility within a 12-month period of the date of hire to perform an appraisal. We further affirm that Gannett is not directly or indirectly owned, partnered or in any way affiliated with a water/wastewater distribution company.

BASIS FOR COMPENSATION

Gannett will perform the above services, and other related services that you may authorize, based on hourly billing rates for our personnel in effect when we perform the work, plus the reimbursement of direct expenses. Direct expenses include transportation, meals, lodging and incidental expenses incurred while traveling and any other expenses required as a result of the assignment that are not incidental to the normal conduct of business. Attached is a copy of our billing rates currently in effect. We will render invoices monthly for services performed during the preceding month.

Based on our experience, we estimate the cost for a complete study, direct testimony, and other filing requirements will range from $30,000 to $35,000. The actual charges for these services will, of course, depend on the amount of time required to complete the assignment and the extent to which data are provided. The availability and quality of the required data sources of information will affect the final cost.

SCHEDULE

The fair market value appraisal will be completed within 45 to 60 days of timely receipt of an executed proposal, the requested data, and completion of the Engineering Assessment.

PROPOSAL

Based on the understanding outlined in this letter, we propose that Aqua Pennsylvania Wastewater, Inc. retain Gannett Fleming Valuation and Rate Consultants, LLC to perform the services as outlined in this letter. If this proposal is satisfactory to you, please so indicate by signing where indicated below and scanning and emailing the executed copy to me via email at hwalker@gfnet.com, with a copy to Cheryl Rutter at crutter@gfnet.com.

We thank Aqua for this opportunity to provide valuation services in connection with the fair market value appraisal of the Wastewater System's assets. We look forward to acceptance of our proposal and to a successful project.

Respectfully Submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

HAROLD WALKER, III

Mr. John Nagel
Township Manager
East Whiteland Township
209 Conestoga Road
Frazer, PA 19355

Re: East Whiteland Township Wastewater Collection System Fair Market Value Appraisal

Dear Mr. Nagel:

AUS Consultants is please to respond to Scott Shearer's (PFM Financial Advisors, LLC) request for a proposal for a valuation of East Whiteland Township's wastewater collection system. We understand the nature and purpose of the request is to determine the fair market value of the Township's wastewater collection property and its operation for compliance with Title 66 (Public Utilities) of the Pennsylvania Consolidated Statues Section 1329 of the "Valuation of Acquired water and wastewater systems" collectively referred to as Act 12 of the Commonwealth of Pennsylvania's 2016 legislative session. AUS Consultants is a Utility Valuation Expert (UVE) as designated by the Pennsylvania Public Utility Commission (PUC) Docket No. A-2016-2566251 Entity Code 9919181 renewed January 13, 2020. Our appraisal assumes an investor-owned utility as the purchaser and that the purchaser would be successful in establishing the purchase price, assumed to be the appraised value, as rate-base for regulatory purposes under Section 1329 of the Public Utility Code of Pennsylvania.

Our response to this request will include the scope of our services, a list of AUS Consultants staff and their qualifications, an initial listing of data required to perform the appraisal and a range of project costs through the completion of the appraisal report; activities subsequent to the delivery of our final report will be billed at our hourly per diems defined below. The appraisal will be prepared under the 2020-2021 edition of the Uniform System of Professional Appraisal Practices (USPAP) which has been extended through 2022.

Before addressing the proposal requirements, it is important to understand the valuation concepts and parameters as they would apply to this project which will be subject to consideration of issues regarding to recent Commission decisions and settlements entered into between the Pennsylvania Office of Consumer Advocate (OCA) and the participants (Aqua Pennsylvania and Pennsylvania American) in other recent Act 12 cases.

Valuation Study

AUS Consultants understands the purpose of the valuation study is to determine the fair market of the Township's wastewater collection system assets and their operation. Fair market value is defined as:

> "The most probable price, as of a specified date, in cash, or in terms equivalent to cash, or in other precisely revealed terms, for which the specified property rights should sell after reasonable exposure in a competitive market under conditions requisite to a fair sale, with the buyer and seller each acting prudently, knowledgeably, and for self-interest, and assuming that neither is under undue duress." The Appraisal of Real Estate, 13th Edition, page 23

Our conclusion will represent the fair market value as a going concern, in this case an operating wastewater collection system and not an amount that would be realized from a liquidation of those assets.

Valuation Methodologies

The valuation of the Township's wastewater collection assets, as part of a going concern, will the three (3) generally accepted valuation methodologies: the cost, income and market approaches.

The primary valuation method that will be utilized is the **cost approach.** In preparing the cost approach we will rely on the "Engineer's Assessment" inventory prepared for the Township and the Purchaser per the Pennsylvania PUC's (Act 12) Final Implementation Order M-2016-2543993. In order for the Engineer's Assessment to be of maximum use to the UVEs it should detail the property by account, type and size of property and or equipment, its date of

installation and its original cost. It should be noted that Section 1329 does not restrict the property to be appraised in any fashion so all property of the Township subject to the sale whether Township constructed and/or developer contributed is subject to the appraisal. The cost approach will give consideration to the Township's wastewater collection plant and equipment's replacement cost adjusted for appraisal depreciation. The replacement cost new will be developed using either trending the property's investment by account and installation year or by application of appraisal date unit costs to property's inventory by account and installation year. Next, appraisal depreciation, physical, function and economic, will be assessed and deducted from the replacement cost new. The physical and functional depreciation will be determined based on the age-life depreciation methods using aging from the Engineer's Assessment, the service lives applicable to wastewater industry depreciation lives and a physical inspections of the property.

The property subsequent to its acquisition, will be regulated by the Pennsylvania PUC utilizing a rate base/rate of return regulation. This form regulation allows for the fair return on and of the Company's capital invested for the provision of wastewater services. The last step in the Cost Approach's we will consider the property's economic returns under PUC regulation in order to determine if economic obsolescence exits in the preliminary Cost Approach conclusion discussed above. We will use the results of Income and Market Approaches (discussed below) in making this determination.

The **income approach** provides an indication of value by evaluation the future returns of the operation of the property as wastewater collection system. There are two commonly used methods of the income approach: the discounted cash flow (DCF) approach and the capitalized income approach. Both procedures discount the future returns of the property using a recognized cost of capital for the wastewater industry.

In the DCF, the expected or future cash flows of the operation of the property are discounted to the appraisal date (present value) using a recognized cost of capital for the wastewater industry. Future cash flows are based on historical results from operation in terms of revenues and expenses as the basis forecast of future operations. The projected cash flow levels must provide for additional cash investment and working capital additions, as well as reflect the specific growth potential of the system being valued.

In the capitalize income approach the property's future returns are consolidated into a single estimate for all future periods. The capitalized income approach to value is determined by the direct capitalization of the estimated income using an adjusted cost of capital removing future growth from the cost of capital rate.

The discount rate used in the income approaches will be developed from a market analysis of debt and equity reflecting the risks associated with a rate regulated water and wastewater companies regulated by the Pennsylvania PUC.

The **market approach** looks to market sales of similar water and wastewater utility properties (companies). There are two methods which are commonly utilized to estimate the market approach: actual market sales and market multiples based on wastewater industry comparables based on financial performance as reported in Value Line Investment Surveys for the water/wastewater industry.

The **final appraised value** will consider each of the three approaches to value both individually and collectively.

AUS Consultants Professional Staff

AUS Consultants' professional staff has extensive nationwide experience in preparing business enterprise valuations for water and wastewater systems.

Jerome C. Weinert, Professional Engineer (PE), Accredited Senior Appraiser (ASA), Certified Depreciation Professional (CDP)

- 49 years in Appraisal and Depreciation Consulting
- BS in Mechanical Engineering – Milwaukee School of Engineering (1972)
- Master's in Business Administration – Marquette University (1988)
- Testimony Experience:
  - Regulatory (Depreciation and Rate Base)
  - Courtroom (Valuations – ad valorem taxation and eminent domain and rate of return)

Michael J. Diedrich, PE, ASA, CDP, Certified General Appraiser

- 38 years in Appraisal and Depreciation Consulting
- BS in Architectural Engineering Technology – Milwaukee School of Engineering (1981)
- Master's in Business Administration – Marquette University (1991)
- Testimony Experience:

Courtroom (Valuations ad valorem taxation and eminent domain)

David Weiler

- 36 years in Valuations of Business Enterprises, Closely-held common Stock, Cost of Capital Studies and Valuations of Intangible Property
- Bachelor of Science in Finance-Drexel University (1978)

David A. Sheffer

- 39 years in Regulatory Consulting (Depreciation, Rate Base, Cost of Service, Valuations and Original Cost Studies)

Elizabeth A Weinert

- 19 years in Appraisal and Depreciation Consulting
- B Bachelor of Science in Mechanical Engineering – Milwaukee School of Engineering (2001)
- Master's in Aeronautical Engineering – University of Alabama (2015)

First Request for Data

In order to expedite the project upon the East Whiteland Township's acceptance of our proposal, AUS Consultants needs the following data:

Inventory of property plant and equipment. Ultimately this inventory needs to be provided by the firm preparing the "Engineer's Assessment" for both the Township and the Purchaser. As stated above:

> "In order for the Engineer's Assessment to be of maximum value use it should detail the property by account, type and size of equipment, its date of installation and its original cost. It should be noted that Section 1329 does not restrict the property to be appraised in any fashion so all property whether municipally constructed and/or developer contributed is subject to the appraisal."

Township's financial information related to the operation of the wastewater collection system over each of the last four to six years.

Customer information for the last four years

This data request is not intended to be all inclusive of the information required. There will be follow-up questions and additional requests for data.

AUS Consultants would like to perform a physical inspection of the Township's wastewater system and schedule interviews, as appropriate, with township personnel familiar with the wastewater collection system's operation.

Fee Estimate

AUS Consultants would offer a professional fee range of $25,000 to $27,000 plus expenses to complete a valuation study. Expenses billed at our cost will include travel and living, report preparation, and Fed X as necessary.

For activities subsequent to our final report the following table of hourly per diems plus expenses:

Consultant	Hourly Per Diems ($s/hr.)
Jerome C. Weinert	275
Michael J Diedrich	250
Earl Robinson	200
David A. Sheffer	200
David Weiler	170
Elizabeth A. Weinert	150
Susan Macchia	70

These activities typically include responding to interrogatories (Commission staff, OCA, Small Business Advocate, and/or other possible intervenors), reviewing the testimony of participating parties, preparing testimony (direct, cross, and possibly sur-rebuttal), attending Commission hearings. If expert testimony is required, Jerome C. Weinert will be the witness and attend any hearings which is required.

Closure

AUS Consultants appreciates the opportunity to respond to East Whiteland Township's request for our services. Should you have any questions regarding our response, please contact the undersigned.

Respectfully submitted,
Jerome C. Weinert

VERIFIED STATEMENT OF GANNETT FLEMING
VALUATION AND RATE CONSULTANTS, LLC

VERIFIED STATEMENT

I, Harold Walker, III, Manager of Financial Studies of Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett"), a Utility Valuation Expert in the Commonwealth of Pennsylvania, hereby state the following, subject to the penalties of 18 Pa. Cons. Stat. § 4904 (relating to unsworn falsification to authorities):

1. Gannett was selected by Aqua Pennsylvania Wastewater, Inc., to perform a fair market value appraisal of the East Whiteland Township Wastewater Collection System ("System");

2. As Manager of Financial Studies of Gannett, I prepared the foregoing Fair Market Value Appraisal of the System;

3. The facts set forth in the Fair Market Value Appraisal are true and correct to the best of my knowledge, information, and belief;

4. Gannett has no affiliation with either Aqua Pennsylvania Wastewater, Inc. or East Whiteland Township;

5. As Manager of Financial Studies of Gannett, I determined the fair market value of the System in compliance with the most recent edition of the Uniform Standards of Professional Appraisal Practice as of the date of the Appraisal, employing the cost, market and income approaches;

6. As Manager of Financial Studies of Gannett, I applied applicable jurisdictional exceptions to the submitted Appraisal;

7. Neither Gannett nor I have derived any material benefit from the sale of the System other than fees for services rendered; and

8. I am not an immediate family member of a director, officer or employee of either Aqua Pennsylvania Wastewater, Inc. or East Whiteland Township, Chester County, within a 12-month period of the date Gannett was engaged to perform the appraisal.

VERIFIED STATEMENT OF AUS CONSULTANTS

VERIFIED STATEMENT

I, Jerome C. Weinert, ASA, P.E., CDP, Principal and Director of AUS Consultants, Inc. ("AUS"), a Utility Valuation Expert in the Commonwealth of Pennsylvania, hereby state the following subject to the penalties of 18 Pa. Cons. Stat. § 4904 (relating to unsworn falsification to authorities):

1. AUS was selected by East Whiteland Township to perform a fair market value appraisal of the Township's Wastewater Collection System ("System");

2. As Principal and Director of AUS, I prepared the foregoing Fair Market Value Appraisal of the System;

3. The facts set forth in the Fair Market Value Appraisal are true and correct to the best of my knowledge, information, and belief;

4. AUS has no affiliation with either East Whiteland Township or Aqua Pennsylvania Wastewater, Inc.;

5. As Principal and Director of AUS, I determined the fair market value of the System in compliance with the most recent edition of the Uniform Standards of Professional Appraisal Practice as of the date of the Appraisal, employing the cost, market and income approaches;

6. As Principal and Director of AUS, I applied applicable jurisdictional exceptions to the submitted Appraisal;

7. Neither AUS nor I have derived any material benefit from the sale of the System other than fees for services rendered; and

8. I am not an immediate family member of a director, officer or employee of either East Whiteland Township, Chester County, or Aqua Pennsylvania Wastewater, Inc., within a 12-month period of the date AUS was engaged to perform the appraisal.

IX. CONCLUSION 23

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is William C. Packer. My business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

Q. By whom are you employed and in what capacity?

A. I am employed by Essential Utilities, Inc. ("Essential"), as Vice President, Regulatory Accounting and Regional Controller. In this position, I am the Regional Controller of Aqua Pennsylvania, Inc. ("Aqua PA") and Aqua New Jersey, Inc. ("Aqua NJ"). Additionally, I oversee rate issues for all subsidiaries of Essential. Aqua PA is the parent company to Aqua Pennsylvania Wastewater, Inc. ("Aqua" or the "Company").

Q. Please provide a brief description of your education and work experience.

A. I graduated from Richard Stockton College of New Jersey in 1998 with a Bachelor of Science degree in Business Studies with a concentration in Accounting. In 1998, I joined GE Capital Mortgage Services Inc. as a Staff Accountant. In September 1999, I joined New Jersey American Water Company ("American") as a General Staff Accountant responsible for financial statement preparation, account reconciliation, financial support for rate cases, and account analysis. In September 2001, I was transferred to American's Service Company, in its Shared Services operation located in Mt. Laurel, New Jersey. I was employed there for four years in several roles, including Senior Fixed Assets/Job Cost Accountant, Financial Support Analyst, and Accounting Supervisor Fixed Assets. At American, I had the opportunity to support the rate-making process by working

closely with operating subsidiaries in 23 states, preparing schedules and answering interrogatories.

In March 2005, I joined Aqua New Jersey, Inc., where I served as Assistant Controller until December 2006, when I transferred to Aqua America, Inc. In July 2008, I was promoted to the position of Mid-Atlantic Manager of Rates. In April 2011, I became the Manager of Rates and Planning – Northeast Divisions. I was promoted to Regional Controller for Aqua PA and Aqua NJ subsidiaries in October 2012. In April 2017, I was promoted to Vice President – Controller of Aqua PA. In 2020, I was promoted to my current position of Vice President, Regulatory Accounting and Regional Controller where I have additional responsibilities to oversee rates and regulatory accounting matters of Essential.

In addition to my corporate experience, I served three terms as a Councilman in the Borough of Woodbury Heights, New Jersey. In that role, I served as the Chairman of the Finance, Administration, and Personnel committee; in addition, I served as a member of the Public Safety and Streets/Roads committees.

I was elected as Mayor of the Borough of Woodbury Heights in November of 2018 and was sworn in on January 5, 2019. The Borough of Woodbury Heights is one of 565 municipalities in New Jersey and has a population of approximately 3,000 residents.

Q. Have you testified before this Commission before?

A. Yes, I have testified in several proceedings before the Pennsylvania Public Utility Commission ("PUC" or the "Commission"), including Aqua PA's petition to charge a 7.5% Distribution System Improvement Charge ("DSIC") at Docket R-2008-2079310,

Aqua PA's last three rate cases at Docket Nos. R-2009-2132019, R-2011-2267958, R-2018-3003558, and Aqua's seven previous Section 1329 proceedings in Docket Nos. A-2016-2580061, A-2017-2605434, A-2018-3001582, A-2019-3008491, A-2019-3009052, A-2019-3015173 and A-2021-3024267. I have also testified in various other proceedings before the Commission.

Q. What is the purpose of your testimony?

A. The purpose of my testimony is as follows: (1) to provide a general overview of Aqua; (2) to provide a general overview of the proposed transaction ("Proposed Transaction") between Aqua and East Whiteland Township ("EWT" or the "Township"); (3) to describe Aqua's technical, legal, and financial fitness to own and operate the system; and (4) to explain the benefits of the proposed transaction.

Q. Are you sponsoring any Exhibits with your testimony?

A. Yes. Attached to my testimony as Appendix A is a schedule showing the revenue deficiency and overall impact on customers.

Q. Are there any other witnesses submitting testimony with this application?

A. Yes. In addition to my testimony, Aqua is submitting the following statements in support of the Application:

- Aqua Statement No. 2 – Direct Testimony of Mark J. Bubel, Sr. Mr. Bubel will provide testimony regarding the specifics of the system being acquired from an operations/engineering perspective.

- Aqua Statement No. 3 – Direct Testimony of John Nagel. Mr. Nagel will provide testimony regarding the background of the Proposed Transaction from EWT's perspective and benefits of the Proposed Transaction.
- Aqua Statement No. 4 – Direct Testimony of Harold Walker III. Mr. Walker will provide testimony regarding the appraisal conducted on behalf of the Company.
- Aqua Statement No. 5 – Direct Testimony of Jerome C. Weinert. Mr. Weinert will provide testimony regarding the appraisal conducted on behalf of EWT.

Q. Has the Company filed an application with the Commission for regulatory approval to acquire the wastewater system assets of the EWT Sanitary Wastewater Collection System (the "System")?

A. Yes. Aqua filed its Application on July 23, 2021.

Q. What is Aqua seeking in its application?

A. There are four requests. First, Aqua is requesting approval of the acquisition under Section 1102, 66 Pa. C.S. § 1102, similar to many requests that come before the Commission. Second, pursuant to Act 12 of 2016 ("Act 12" or the "Act"), 66 Pa. C.S. § 1329, Aqua is seeking to utilize fair market value for the determination of the ratemaking rate base of the EWT System. Third, Aqua is requesting that the Commission approve, if necessary, its acquisition agreement with EWT and the assignment of twenty-two contracts with municipalities under Section 507, 66 Pa. C.S. § 507. Fourth, Aqua is seeking approval under Section 2102, 66 Pa. C.S. § 2102, to the extent necessary, of the

assignment of a contract to which Aqua Resources, Inc. ("Aqua Resources"), an affiliate of Aqua, is a party.

Q. What does Section 1329 require to be included in the application?

A. Section 1329 requires that the application include (1) copies of the two appraisals, (2) the purchase price, (3) ratemaking rate base, (4) transaction and closing costs, and (5) the proposed tariff. A rate stabilization plan could also be required if it is applicable to the transaction.

Q. Can you generally opine on the purpose of Section 1329 and the Commission's view?

A. Yes, as stated by the Commission, "Section 1329 works to: (1) provide certainty as to the value of acquired utility property; (2) remove regulatory barriers to the prudent sale of public water and wastewater assets; (3) protect a Seller from having to offer public assets for sale at below-market rates; and (4) allow a Buyer to recover market-based investment in those public assets through regulated rates."[1] I also agree with the Commission that Section 1329 "encourages a realistic approach to the sale of public assets based upon the fair market value of those assets."[2] Moreover, as further explained by the Commission:

> Section 1329 recognizes that no reasoned argument would propose that these public assets are of marginal value simply because the book value and the Commission's traditional rate setting methodology dictate as much. Rather, the valuation methods of Section 1329 provide municipalities and authorities with a wholistic recognition of the fair market value of the public assets they seek to sell based on a balancing of accepted business valuation principles, specifically, the cost, market, and income approaches. 66 Pa.

[1] *Implementation of Section 1329 of the Public Utility Code*, Docket No. M-2016-2543193 Tentative Supplemental Implementation Order at 4 (Sep. 20, 2018) (hereinafter "TSIO").
[2] TSIO at 7.

> C.S. § 1329(a). Thus, for sale purposes, Section 1329 works to value the public assets as the businesses they are as opposed to what their value might be under regulatory accounting for depreciated utility assets.[3]
>
> …
>
> Section 1329 enables a Seller to price its public assets at a market value based on reasonable business valuation principles and enables a Buyer to recover its investment in those public assets at that market-based value.[4]

Q. What does the Commission require for the approval of the certificate that utilizes Section 1329?

A. In its Final Implementation Order entered October 27, 2016, in Docket No. M-2016-2543193 ("Final Implementation Order"), the Commission referenced the checklist in the Tentative Implementation Order for items to include with the application for it to be processed in a six-month time frame. This checklist was subsequently updated in March 2017. The Commission released its Final Supplemental Implementation Order on February 28, 2019 in Docket No. M-2016-2543193, which included an updated checklist, standard data requests ("SDR"), jurisdictional exceptions, and form testimony for Utility Valuation Experts ("UVE"). Aqua has included references with the Checklist indicating where in the Application the relevant information is located.

II. OVERVIEW OF AQUA PA AND AQUA

Q. Please provide a general overview of Aqua PA and Aqua.

A. Aqua PA is the second largest investor owned regulated water/wastewater utility operating in the Commonwealth of Pennsylvania. Aqua PA provides water and

[3] TSIO at 6.
[4] TSIO at 7.

wastewater utility service to approximately 488,000 customers, consisting of 443,000 water customers and 45,000 wastewater customers. Aqua PA employs approximately 600 highly trained utility professionals to achieve its mission to provide safe, adequate, and reliable utility service at reasonable rates. In addition, Aqua PA is one of eight regulated subsidiaries of water and wastewater subsidiaries of Essential, which brings to bear its own financial, technical, and managerial resources to assist in our mission.

Aqua is a subsidiary of Aqua PA and is engaged in the business of collecting, treating, transporting, and disposing of wastewater for the public. Aqua provides wastewater service to approximately 45,000 customers in Adams, Bucks, Carbon, Chester, Clarion, Clearfield, Delaware, Lackawanna, Luzerne, Monroe, Montgomery, Pike, Schuylkill, Venango, and Wyoming Counties. Aqua brings extensive expertise in providing wastewater service to citizens of Pennsylvania, and currently operates 39 wastewater treatment plants.

Q. Please provide a description of the EWT.

A. EWT owns the sewer system and provides wastewater service in East Whiteland Township. EWT is a Pennsylvania second-class township. Wastewater utility service is provided to approximately 3,895 customers. The utility infrastructure being acquired includes, but is not limited to, collection and conveyance assets, pumping stations, manholes, and land and land rights. Please see Aqua Statement No. 3, Direct Testimony of Mr. Nagel, for a further description of the Township.

Q. Please provide an overview of the proposed Transaction.

A. Aqua responded to a request for bids by the Township and was ultimately chosen as the successful bidder. After arms-length negotiations between Aqua and the Township, the Asset Purchase Agreement ("APA") was signed and executed on January 8, 2021, providing for the sale of the assets, properties and rights of the wastewater system. The purchase price totaled $54,930,000. According to the APA, the acquired customers will be charged the existing rates of the seller upon closing. Aqua's tariff rules and regulations will apply following closing.

III. FITNESS

Q. Please describe how the Company is legally fit to own and operate the system.

A. Aqua is a public utility operating under Commission granted certificates of public convenience. There are no pending legal proceedings challenging Aqua's ability to provide safe and adequate service to customers.

Q. Please describe how the Company is financially fit to own and operate the system.

A. As I mentioned in my overview, Aqua PA, as parent company to Aqua, is a Class A water utility in the Commonwealth and the largest water/wastewater subsidiary of Essential, with total net utility plant assets of $4.3 billion and annual revenues of $509 million in 2020. Aqua PA had operating income of approximately $261 million and net income of $187 million. Aqua PA's cash flows from operations equaled approximately $231 million. Aqua is a Class A wastewater utility in the Commonwealth, with total net utility plant assets of $350 million and annual revenues of $32 million. Aqua PA has an A rating from Standard and Poor's Rating Service and has approximately $1.825 billion

in outstanding long-term debt at a weighted average interest rate of approximately 4.03%. Aqua PA also utilizes low-cost long-term debt financing instruments through the Pennsylvania Infrastructure Investment Authority ("PENNVEST"), representing about 2% of Aqua PA's total debt portfolio. In addition to Aqua PA's access to long-term debt, Aqua PA has its short-term credit facility of $100 million and has access to equity capital as a subsidiary of Essential. Aqua, as a subsidiary of Aqua PA, has access to all of Aqua PA's financing capabilities.

IV. FUNDING

Q. Please explain how Aqua plans to fund the Proposed Transaction.

A. The Proposed Transaction will be funded using existing short-term credit lines. The short-term credit funding will be converted to a mix of long-term debt and equity capital shortly after closing.

Q. Do you anticipate the Proposed Transaction will affect Aqua PA's corporate credit rating?

A. No. The Company does not anticipate that the Proposed Transaction will affect Aqua PA's corporate credit rating.

V. APA RATE PROVISIONS AND RATE STABILIZATION PLAN

Q. Please explain the rate provisions in paragraph 7.03 of the APA.

A. Under the provisions of Paragraph 7.03 of the APA, as of the day of closing, the Company will charge the same base rates as those previously charged by the Township,

and the Company shall apply its then-existing miscellaneous fees and charges in the Company's Tariff. The base rates shall not be increased until after the third anniversary of the Closing Date.

Q. What is a rate stabilization plan?

A. A rate stabilization plan is defined in Section 1329(g), 66 Pa. C.S. § 1329(g), as a plan that will hold rates constant or phase rates in over a period of time after the next base rate case.

Q. Does the Application include a rate stabilization plan?

A. No.

Q. Does the Application include a proposed tariff that includes language that would constitute a rate stabilization plan?

A. No. The Company is proposing to implement the Township's current rates. There is no language in Aqua's proposed tariff requesting that rates be held constant or phased in over a period of time after the next rate case. Section 7.03 of the APA, accordingly, does not constitute a rate stabilization plan.

Q. Are you requesting the implementation of a DSIC for Township customers at this time?

A. No. Following closing, Aqua intends to amend its Long-Term Infrastructure Improvement Plan ("LTIIP") to include EWT in the LTIIP and file the amended LTIIP

with the PUC. The Company will include a request in that filing to initiate the DSIC to EWT customers as permitted by Section 1329.

Q. Please explain how the Company will bill the Township's customers after closing.

A. Currently, the Township bills their customers on an annual or quarterly basis. The Company will convert customers to monthly billing.

VI. PUBLIC INTEREST

Q. Please explain why the proposed transaction is in the public interest.

A. The PUC has a long-standing record of support for consolidation/regionalization of water/wastewater systems. The PUC understands that in doing so, the utility industry will have a better chance to realize the benefits of better management practices, economies of scale, and the resulting greater customer/environmental/economic benefits. The Commission has previously stated that "acquisitions of smaller systems by larger more viable systems will likely improve the overall long-term viability of the water and wastewater industry. Additionally, these types of acquisitions will also enhance the quality of ratepayers' daily lives, promote community economic development, and provide environmental enhancements."[5] Ultimately, these benefits inure to customers both existing and acquired. The Proposed Transaction with EWT is no exception to the principles noted in the aforementioned policy statement, and Aqua PA has successfully

[5] Pennsylvania Public Utility Commission, Final Policy Statement on Acquisitions of Water and Wastewater Systems, Docket No. M-00051926, Final Order at 18 (Aug. 17, 2006).

acquired numerous water/wastewater utilities in its over approximately 135 years of operation.

Q. Please discuss the Company's track record of acquiring and improving wastewater systems in the Commonwealth.

A. Aqua currently provides utility service to approximately 45,000 wastewater customers in the Commonwealth and has years of experience operating wastewater treatment and collection systems in a safe, reliable and efficient manner. Moreover, Aqua has the managerial, technical, and financial resources to continue to operate, maintain and improve the EWT System.

Aqua has acquired 16 wastewater systems over the past 10 years.[6] Many of these systems required significant investment to correct service and environmental issues. Other systems did not need substantial capital investment. Aqua and Aqua PA are essentially the compilation of smaller systems that have been acquired over the last 135 years and make both utilities what they are today. The inherent diversification of systems and customers provides a foundation of stability in the day to day, month to month, and year to year operations of the utility, in that, they are all not requiring major capital investments at the same time. Thus, spreading the financial impacts over the long-term operations of the utility. I would submit that if Aqua were permitted to acquire only non-viable systems, rather than a mix of viable and non-viable, this would have a significant impact on its existing customers' rates and service. Both types of systems, viable and

[6] New Garden, East Norriton (2020); Cheltenham (2019); East Bradford, Limerick (2018); Tobyhanna, Avon Grove (2017); Emlenton, Honeycroft (2016); Bunker Hill (2015); Penn Township (2014); Treasure Lake (2013); and Sage Hill, Kidder Township, Beech Mountain, Village at Valley Forge (2012).

non-viable, are consistent with the Commission's policy statements regarding acquisitions. The acquisition of the EWT System will continue to address the Commission's supported policy of consolidation and regionalization.

Q. Did the Commonwealth Court refer to the Commission's policy of consolidation/regionalization and Aqua's expertise in system operations and ability to raise capital in its opinion in *McCloskey v. Pa. P.U.C.* addressing Aqua's transaction with New Garden Township?

A. Yes. Although I am not an attorney, I have read the Court's Opinion in the McCloskey case. At the end of Section A of the Opinion, the Court refers to Commission findings that Aqua, as owner of numerous water and wastewater systems in Southeastern Pennsylvania, has sufficient expertise to operate a system and ability to raise capital to support a system and that the Commission has a policy of consolidation and regionalization that allows for increased maintenance, upgrade and expansion of public facilities. The Court concludes that the foregoing are reasons of the type that the Supreme Court in its *Verizon* decision held were sufficient to meet the public benefit standard and substantial evidence to support the notion that there is a public benefit for the transaction. This same analysis is sufficient to support the public benefit and substantial evidence of public benefit in this proceeding.

Q. Will the Township's customers benefit from the transaction?

A. Yes. The Township's customers will become part of a larger scale, efficiently operated, wastewater utility. The Company is already the owner and operator of the EWT water

system. As such, we have key operations in nearby service areas and will be able to assume the operations of the EWT System, fold them into a larger scale, efficiently operated wastewater utility that over time will likely yield further operating efficiencies and improve long term viability as envisioned in the PUC policy statement. The operational overlap between water and wastewater utility operations will provide the opportunity for better coordination of capital activities throughout the EWT service area. Utility activities that involve road openings and restoration can be better aligned to result in less disturbance to EWT as we execute our capital improvement plan.

Additionally, the acquisition will not have any immediate impact on the rates of either the Township's customers or the existing customers of Aqua. The Company is projecting less operating and maintenance costs under the Company's ownership that will likely be realized through reductions in costs for wastewater maintenance, as well as efficiencies in administrative and general costs, such as insurance, auditing and legal, among others. Specifically, referencing EWT 2020 Financial statements, Sewer Fund Operating Expenses were approximately $2.8M, whereas, the Company is projecting annual expenses of approximately $2.0M.

Lastly, given the fact that there are meaningful investments needed in this system, as noted in the testimony of Mark J. Bubel, Sr., Aqua Statement No. 2, the customers of the EWT System will benefit greatly from the Company's technical experience and fitness in deploying resources towards capital improvements.

Q. Will Aqua's existing customers benefit from the acquisition?

A. Yes. The acquisition of the EWT System will be an approximate 9% increase in Aqua's customer base. By virtue of the Company's larger customer base, future infrastructure investments across the state will be shared at a lower incremental cost per customer for all of Aqua's customers.

The EWT System renders the majority of their sewer rents on a per EDU basis and their system is comprised of single-family homes, but also multi-unit structures. As such, the EDU's per the Township's records are approximately 7,658, which equates to approximately $7,200 purchase price per EDU and is almost equal to the Company's existing rate base per EDU, projected at approximately $7,000. Given the similarities in purchase price to rate base per EDU, combined with the meaningfully lower operating cost I mentioned previously, the EWT system characteristics demonstrate that there are economies of scale that can be achieved as a result of this acquisition.

I note again that both Aqua and Aqua PA have developed into the utility they are today by acquiring and operating smaller and mid-sized systems. This progression has successfully happened over the last several decades and taken the form of both viable and non-viable systems. Over the long term, this process has benefitted both current customers, future customers that were acquired, and the Commonwealth.

Q. Will acquired customers benefit from Aqua's customer service?

A. Yes. Aqua and Aqua PA provide customer service through a toll-free number that customers can call from 8:00AM-5:00PM EST for regular business. The same customer service number houses the Company's 24/7/365 emergency response line. EWT customers will benefit from expanded bill payment options including online payment and

payment by text message. EWT customers can go to the Aqua Companies' website and establish an account. EWT customers can also sign up for notifications and alerts to be sent to their email address or phone concerning their service. This service allows customers to stay informed of events impacting their service. EWT customers will also have access to Aqua's customer assistance programs.

Q. Will the acquired customers benefit from customer billing and payment protections?

A. Yes. Aqua has procedures in place under Chapter 14, 66 Pa. C.S. 1401, *et seq.*, that provide for billing, payment, collection, termination and reconnection of service, payment arrangements, medical certifications, and formal and informal complaint procedures. Aqua Services employs customer care teams to help resolve service and billing issues, and has an established process and procedure for addressing formal and informal complaints.

Q. In *McCloskey*, the Commonwealth Court concluded that the Commission must address rate impact "in a general fashion" when deciding whether there is substantial public benefit. Please address the rate impact of the Proposed Transaction.

A. The current average monthly bill of a residential customer in EWT, is approximately $33.33 per month at one EDU. As my calculations in Appendix A demonstrate, applying 100% of the revenue deficiency to the existing rates, the average bill would increase to approximately $77.64 per month or a 132.93% increase. Again, this system has

characteristics that demonstrate that economies of scale can be achieved as a result of this acquisition. Given this fact and the fact that there are again meaningful future investments needed to address deficiencies in the system, those future rate impacts could be spread across a broader customer base thus moderating those future rate increases over time. Yet, while the rates of the EWT System are reasonably expected to increase, either on their own, or whether acquired by the Company, the fact is that there is more flexibility and opportunity to deal with those impacts over a much larger customer base. This benefits both existing and acquired customers alike.

Q. Is the impact on rates outweighed by other positive factors from the Proposed Transaction?

A. Yes. While there is an expectation of increased rates as a result of the transaction, this is not unexpected. The possibility of increased rates is noted by the Commonwealth Court in *McCloskey*. The positive factors from the transaction outweigh the possibility of increased rates. These types of transactions further a recognized legislative objective and are consistent with the Commission's consolidation/regionalization policy. The Company's application demonstrates that there will be both tangible and intangible positive factors that are likely realized as a result of the Proposed Transaction, including capital improvements, expense efficiencies, and economies of scale.

VII. SECTION 1329 FAIR MARKET VALUE CONSIDERATIONS

Q. Is Aqua proposing that its application be evaluated utilizing the Fair Market Value provisions of Section 1329 of the Public Utility Code?

A. Yes. The Company's Application has been prepared with this in mind. Specifically, the Company is requesting that the ratemaking rate base of the EWT System be based on the lesser of the average of the Fair Market Value Appraisals included in the Application or the purchase price pursuant to Section 1329 of the Public Utility Code.

Q. Has Aqua prepared its application in compliance with the Commission's Final Implementation Order and Final Supplemental Implementation Order?

A. Yes. Aqua has complied with all required documentation according to the PUC's application checklist including, but not limited to, the Engineering Assessment of Assets, responses to SDRs, testimony supporting the Application, and two independent Fair Market Value appraisals.

Q. Please provide an overview of the valuation process.

A. Following the execution of the APA, the Company and the Township agreed to engage Pennoni Associates, Inc. to complete the Engineer's Assessment (Exhibit D). Both parties engaged their respective UVEs to perform a Fair Market Value analysis of the system in accordance with the Uniform Standards of Professional Appraisal Practice ("USPAP"), utilizing the cost, market, and income approaches. Aqua engaged the services of Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett") and has attached to its Application their Fair Market Value Appraisal as Exhibit Q. The Township engaged the services of AUS Consultants, Inc. ("AUS") and their Fair Market Value Appraisal is attached to the Application as Exhibit R. Both firms have been pre-

certified as authorized UVEs by the PUC and are on the list of qualified appraisers maintained by the PUC.

Q. Please describe the conclusions of the two appraisals used to determine the fair market value of the Township's assets.

A. The two appraisals used the USPAP employing the cost, market, and income approaches to arrive at the fair market value of the system. The Township sponsored appraisal performed by AUS arrived at a system value of $57,781,548. The Company sponsored appraisal performed by Gannett arrived at a system value of $55,668,000. Therefore, the fair market value as defined in Act 12 is the average of these two appraisals which is $56,724,729.

Q. Pursuant to Section 1329 of the Public Utility Code, what is the resulting rate base determination for the EWT System?

A. According to Section 1329, the ratemaking rate base is the lesser of either the purchase price in the APA, which is $54,930,000, or the fair market value which is $56,724,729. In this instance, since the purchase price is lower than the fair market value, the ratemaking rate base for the EWT System is $54,930,000.

Q. Please state the total of the UVE fees incurred by the Company.

A. The UVE fees for the Company's appraisal received as of the date of the Application totaled $33,420. The Company's UVE fees will be included in the transaction and closing costs of this Proposed Transaction as stated below.

Q. Please explain whether you believe the UVEs' fees are reasonable?

A. Based on the scope of work, the methods used as accepted industry practice, and that the UVEs' fees were less than 5% of the fair market value benchmark noted in the Final Implementation Order and Final Supplemental Implementation Order, I believe the fees are reasonable. Per the Final Implementation Order, Final Supplemental Implementation Order and Checklist, the contract engaging the Company's UVE, Gannett, along with Gannett's invoices are included as Exhibit S1. The contract engaging the Township's UVE, AUS, along with AUS's invoices are included as Exhibit S2.

Q. Please comment on the transaction and closing costs?

A. The Company anticipates that the transaction and closing costs will be approximately $308,300 including the Company's UVE fees. The exact closing costs will be determined at closing.

VIII. SECTION 2102 APPROVAL

Q. Is Aqua requesting approval of an agreement between affiliates?

A. Yes. Aqua is requesting approval to assign certain municipal contracts to Aqua. As part of that request, Aqua will be taking assignment of EWT's rights and responsibilities under an agreement between Aqua Resources, an affiliate of Aqua, and various municipalities for transportation of wastewater, dated November 20, 2018, included in the Application as Exhibit F17 ("November 2018 Agreement"). The November 2018 Agreement is for conveyance of wastewater from six contributing municipalities through

the Valley Creek Trunk Line ("VCTS"), located in Tredyffrin Township, owned by Aqua Resources. One of the contributing municipalities is EWT. Upon assignment of Exhibit F17, the November 2018 Agreement will become an agreement between a public utility, Aqua, and an affiliate, Aqua Resources, which requires Commission approval.

Q. Does the November 2018 Agreement set forth how each party will be charged for wastewater transportation?

A. Yes. Section 9 of the November 2018 Agreement describes that each entity will be charged the amounts set forth in Schedule 9.1 of the November 2018 Agreement, and that after the first three years of the November 2018 Agreement, billings will be based on meter flows at each connection point. No changes in the charges under Section 9 and Schedule 9.1 will occur as a result of the assignment.

Q. Are the charges reasonable?

A. Yes. I believe the charges are reasonable. The charges and the November 2018 Agreement being assigned were negotiated by Aqua Resources and non-affiliates of Aqua and, thus, are reflective of a negotiated, market rate for the conveyance of wastewater service.

IX. CONCLUSION

Q. Does this conclude your testimony?

Yes it does, however I reserve the right to supplement my testimony as additional issues and facts arise during the course of this proceeding.

V. CONCLUSION 19

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is Mark J. Bubel, Sr. My business address is 762 West Lancaster Avenue, Bryn Mawr, Pennsylvania 19010.

Q. By whom are you employed and in what capacity?

A. I am employed by Aqua Pennsylvania, Inc., ("Aqua PA") as a Project Engineer III.

Q. Please provide a brief description of your education and work experience.

A. I received a Bachelor's of Science Degree (B.S.) in Civil Engineering in 1980 from Lehigh University and a Master's Degree in Civil Engineering (M.C.E.) with a concentration in Environmental Engineering in 1983 from Villanova University. I have worked in various engineering roles and have over 40 years of experience in environmental engineering related to municipal and industrial wastewater treatment and operations. I have worked at Aqua America since 2003 in roles related to wastewater treatment facilities including planning, design, start-up, and operational troubleshooting. I am a Registered Professional Engineer in Pennsylvania, Delaware, Maryland, North Carolina, and Florida. I am also a Licensed Water and Wastewater Operator in Pennsylvania.

Q. Have you previously testified before the Pennsylvania Public Utility Commission ("PUC" or the "Commission")?

A. Yes. I provided testimony in Aqua Pennsylvania Wastewater, Inc.'s ("Aqua" or the "Company") New Garden, Limerick, East Bradford, Cheltenham, East Norriton, Delaware County Regional Water Quality Control Authority and Lower Makefield Township Section 1329 Application proceedings at Docket Nos. A-2016-2580061, A-2017-2605434, A-2018-3001582, A-2019-3008491, A-2019-3009052, A-2019-3015173, and A-2021-3024267, respectively. I also provided testimony in Aqua PA and Aqua's most recent base rate case proceeding at Docket Nos. R-2018-3003558 and R-2018-3003561

Q. What is the purpose of your testimony?

A. The purpose of my testimony is as follows: (1) to provide a general description of the acquired system; (2) to explain how the acquired system will be integrated into Aqua's operations; (3) to describe Aqua's technical fitness to run the system, and (4) to discuss the benefits of the transaction.

Q. Are you sponsoring any Exhibits with the Company's filing?

A. No.

II. OVERVIEW OF AQUA AND THE EWT SYSTEM

Q. Please provide a general overview of Aqua.

A. Aqua, a subsidiary of Aqua PA, is engaged in the business of collecting, treating, transporting, and disposing of wastewater for the public. Aqua serves approximately 45,000 customers in Adams, Bucks, Carbon, Chester, Clarion, Clearfield, Delaware,

Lackawanna, Luzerne, Monroe, Montgomery, Pike, Schuylkill, Venango, and Wyoming Counties. Aqua operates 39 wastewater treatment plants ("WWTP") throughout the Commonwealth of Pennsylvania, and 24 systems of Aqua's Southeast Division are in proximity to East Whiteland Township ("EWT" or the "Township") allowing for operational efficiencies. Aqua, and its parent company Aqua PA, have approximately 600 employees bringing extensive expertise in providing water and wastewater service to citizens of Pennsylvania.

Q. Please provide a description of the EWT Sanitary Wastewater Collection System (the "System").

A. The Township is located in the northeast part of Chester County, Pennsylvania and the majority of the Township is served by a public sewer system. The EWT System is a collection and conveyance system owned by EWT that collects wastewater from within EWT and conveys wastewater via 12 Township owned pump stations, associated force mains and approximately 60 miles of gravity sewers and interceptor sewers to a wastewater treatment plant ("WWTP") owned by the Valley Forge Sewer Authority ("VFSA"), National Pollution Discharge Elimination System ("NPDES") Permit No. PA0043974, via the Valley Creek Trunk Sewer. EWT also owns a WWTP, Malvern Hunt WWTP, WQM Permit No. 1599418, which is in the process of being decommissioned and converted into a pump station. Following the decommissioning of the Malvern Hunt WWTP, which is expected to be finished in 2021, all wastewater flows will be treated at the VFSA WWTP. EWT, in addition, collects/conveys flow to /from its system from the Borough of Malvern, Tredyffrin Township, Charlestown Township,

and Willistown Township, which then flows for treatment at the VFSA. EWT also has several areas of its system that are on the border between EWT and East Goshen Township. While EWT owns the facilities within its borders, flows from these customers are sent to the East Goshen Municipal Authority ("EGMA") WWTP, NPDES Permit No. PA0050504.

Description of the System

The VFSA treatment plant began treatment of wastewater in about January 1978. The plant receives flow from the contributing municipalities from two force mains. Flow from the two force mains combines immediately prior to the raw influent structure. The raw influent structure meters and diverts the flow into two primary clarifiers, which are operated in parallel, for gravity settling to remove heavy inorganic and organic solids as well as to reduce biochemical oxygen demand (BOD_5). Following the primary clarifiers, further reduction of BOD_5 sufficient to also allow nitrification, occurs biologically in the two activated sludge aeration tanks. Final settling is achieved following the aeration tanks in four final clarifiers also operated in parallel. The final treatment step prior to discharge to the Schuylkill River is ultraviolet light (UV) disinfection.

Wastewater solids produced during primary clarification are pumped through cyclone de-gritters where grit is removed from the wastewater, sent to one of three treatment plant gravity thickeners where it is combined with other plant solids (scum, trucked wastewater and waste activated sludge).

In addition to its connected customers, VFSA also receives regulated and non-regulated (residential) trucked waste at a designated receiving station for preliminary treatment and equalization prior to combination with other plant solids in gravity

thickeners. The gravity thickened solids produced in the sludge thickeners are pumped to centrifuges for dewatering. The resulting cake solids produced by the centrifuge dewatering process are alkaline stabilized by mixing dewatered sludge solids with hydrated lime, resulting in a biosolids product registered with the Pennsylvania Department of Agriculture as a fertilizer product. VFSA biosolids have been land applied for over 10 years for beneficial agricultural reuse.

The VFSA WWTP is permitted at an annual average flow of 11.75 million gallons per day ("MGD") and has a maximum monthly average flow of 11.75 MGD. The 2020 annual average flow was 6.8 MGD and the 3-month maximum average flow was 7.42 MGD. The WWTP is permitted for a maximum organic loading of 26,700 pounds per day (lbs./day) according to the Pennsylvania Department of Environmental Protection ("DEP") Water Quality Management Permit ("WQM") provided as Exhibit M2. The 2020 maximum month organic loading was 12,830 lbs./day.

The Malvern Hunt WWTP is an aerated lagoon treatment system, consisting of an influent pump station, a headworks with a comminutor and influent bar screen, a secondary treatment lagoon, storage/polishing lagoon, and effluent spray pumps. Sewage flow to the treatment lagoon is continuous, going through aeration, solid – liquid separation settling, and decanting processes. The treated water is discharged through an 8-inch diameter gravity main to the storage/polishing lagoon. The supernatant of the storage/polishing lagoon is chlorinated prior to being pumped out for spray irrigation disposal.

The WWTP spray irrigation is applied to three (3) zones located in woodlands north of the Malvern Hunt development (18.5 acres total).

The Malvern Hunt WWTP is permitted at an annual average flow of 0.105 MGD and has a design hydraulic capacity of 0.128 MGD. The 2020 annual average flow was 0.049 MGD and the 3-month maximum average flow was 0.055 MGD. The WWTP is permitted for a maximum organic loading of 222 lbs./day. The 2020 maximum month organic loading was 176 lbs./day.

The EGMA WWTP is a sequencing batch reactor ("SBR") activated sludge treatment facility consisting of an influent grinder and screen, influent pumping station, 4-tank SBR system, post equalization tanks, effluent filtration, and ultraviolet ("UV") disinfection prior to stream discharge to Ridley Creek. Solids treatment consists of the previously mentioned influent grinder and screen, aerobic sludge digestion, and a dewatering centrifuge with polymer addition. Screenings and dewatered sludge are hauled off site for disposal at a properly permitted solid waste landfill.

The EGMA WWTP is permitted at an annual average flow of 0.750 MGD and permitted at an annual average flow for the Applebrook golf course irrigation pond of 0.135 MGD. The EGMA WWTP has a design hydraulic capacity of 0.750 MGD and the lagoon has a design hydraulic capacity of 0.135 MGD for the subject golf course irrigation. Treated effluent from the WWTP is sent to the irrigation pond when requested by the golf course turf manager. The 2020 annual average flow was 0.461 MGD and the 3-month maximum average flow was 0.497 MGD. The EGMA WWTP is permitted for a maximum organic loading of 2,098 lbs./day. The 2020 maximum month organic loading was 1,123 lbs./day.

The EWT collection and transmission piping is summarized in the Engineering Assessment included as Exhibit D to the Application.

Q. Please provide the elevations[1] for the VFSA WWTP, the Malvern Hunt WWTP, the EGMA WWTP and the Requested Territory.

A. VFSA WWTP: elevation generally varies between EL 90 to EL 105.

Malvern Hunt WWTP: elevation generally varies between EL 356 to EL 362.

EGMA WWTP: elevation generally varies between EL 365 to EL 380.

Requested Territory: Area elevations vary generally from:

- EL 354 to EL 566 along the western boundary.
- EL 364 to EL 582 along the southern boundary.
- EL 388 to EL 666 along the northern boundary.
- EL 198 to EL 364 along the eastern boundary.

EWT Pump Stations: Pump Station elevations are approximately:

- P.S. 1 (Deer Run), EL 329.
- P.S. 2 (Mill Lane), EL 278.
- P.S. 3 (Wilburdale), EL 354.
- P.S. 4 (Lee Boulevard), EL 338.
- P.S. 5 (Meadowview), EL 305.
- P.S. 6 (Flat Road), EL 345.
- P.S. 7 (Lapp Road), EL 241.
- P.S. 8 (Westgate), EL 352.
- P.S. 11 (Hillbrook Circle), EL 335.

[1] Elevation is approximate, and to the nearest two (2) feet interval based on PAMAP Program – Topographic Contours (2 ft Interval) 2006-2008 – DCNR PAMAP Program, https://www.pasda.psu.edu/uci/DataSummary.aspx?dataset=1245

- P.S. 12 (King Road), EL 544.
- P.S. 13 (Malvern Hunt), EL 360.
- P.S. 14 (Planebrook Road), EL 352.

Q. Please state the approximate time of the installation of the component facilities of the system.

A. With regard to the approximate time of the original construction, the VFSA WWTP was finished construction and placed in service in approximately January 1978 and provided basic primary treatment. The plant was upgraded in 2016 with a fourth clarifier as well as a third gravity thicker and a third centrifuge. A new influent fine screen was added in January 2020. The Malvern Hunt WWTP was constructed in 2000 and provided basic aerated wastewater lagoon treatment. The EGMA WWTP was constructed in 1985 as an extended aeration treatment system and was upgraded and expanded to a sequencing batch reactor system in 2010.

The majority of the EWT System was originally constructed between 1968 and 1978 with a second phase of expansion between 1978 and 1988 to accommodate expected growth. The System was expanded in the ensuing decades as new developments were added to the System along with additional pump stations. However, the average age of the pipe in the EWT System is approximately 32 years old.

Q. Is Aqua planning any capital projects over the next 10 years?

A. Yes. Aqua looked at upgrades to pump stations, force mains, and gravity collection systems based on facility conditions observed, facility age, and safety. Aqua estimates that it will invest approximately $16.92 million over the next 10 years.

Aqua will execute capital projects as set forth in Schedule 7.12 to the Asset Purchase Agreement. These projects include sewer extensions for the Bacton Hill Road and Swedesford Road areas as well as the Planebrook Road areas.

Upgrades to pump stations include pump replacement, electrical and mechanical replacement, emergency generator replacement, as well as facilities upgrade. Force main replacement will occur based on pipe age. Gravity collection system pipe rehabilitation and replacement will occur based on an assessment of pipe age and condition. Aqua will work with EWT and the DEP to address the inflow and infiltration ("I&I") and sanitary sewer overflows ("SSOs") within the system if they were to occur. There were no reported SSO's in 2019 or 2020 as reported in the respective Chapter 94 Reports for the respective systems.

Q. Do you foresee any other projects that would be required in the immediate future?

A. Replacement and upgrade of facilities will continue beyond Aqua's 10-year capital plan based on facility age and expected facility life span.

Q. Please state the actual number of EWT customers by class and gallons treated.EWT has 3,895 customers. EWT groups customers by Sewer District A through E, and large volume commercial and industrial customers.

Service Area	District A/B	District C	District D	District E[2]	Large Volume	Total
EWT	3,053	28	279	522	13	3,895

The number of gallons treated by VFSA, EGMA and Malvern Hunt from EWT for the period of January 1, 2020 to December 31, 2020 is 505,789,000 gallons. EWT bills on an EDU basis and does not track consumption by class, except for large volume users.

Q. Are the acquired EWT customers currently Aqua PA water customers?

A. Yes. EWT wastewater customers are currently served by Aqua PA and private wells for water service.

III. ENVIRONMENTAL COMPLIANCE

Q. Does the Application include NPDES permits?

A. Yes, although not part of the EWT System acquisition, the NPDES discharge permits for the VFSA WWTP and the EGMA WWTP are included in the Application as Exhibit N1 and N2.

Q. Does the Application include Water Quality Management ("WQM") Permits?

A. Yes. The WQM permit for the Malvern Hunt WWTP is included with the Application as Exhibit M1. Although not part of the EWT System acquisition, the WQM Permits for the

[2] 2020 Year end customers totaled 522. The Atwater development has since been fully built out with 545 customers.

VFSA WWTP, issued in 2010, and the EGMA WWTP, issued in 2008, are included in the Application as Exhibits M2 and M3.

Q. Are Act 537 plans included in the Application?

A. Yes. EWT's Act 537 plan documents are included with the Application as Exhibit P1 (1995 Plan), Exhibit P2 (Special Study 2011), Exhibit P3 (Special Study 2013), Exhibit P4 (Special Study 2015), Exhibit P5 (Special Study 2016), and Exhibit P6 (Planning Modules). The VFSA and EGMA Act 537 Plans are included with the Application as Exhibit P7 and Exhibit P8, respectively.

Q. Are there any Notices of Violation ("NOV") issued to EWT by the DEP in the last five years?

A. No.

Q. Were there any other NOVs issued to EWT by the DEP during the last five years?

A. To Aqua's knowledge, EWT has no Notices of Violation within the last five years.

Q. Have there been any Consent Assessments of Civil Penalty ("CACP") entered into by the Township and the DEP?

A. No. There are no current CACPs entered into by the Township and the DEP.

Q. Please state if there are any current environmental compliance issues for the EWT System.

A. EWT did not have any SSOs in 2020 per the Chapter 94 reports submitted by the Township. EWT was released from its Corrective Action Plan ("CAP") in 2015.

Q. Are there any noncompliance issues pending with the United States Environmental Protection Agency ("EPA")?

A. No.

Q. Please state the estimated number of future connections for the system for the next 5 years.

A. The below table provides projected equivalent dwelling units ("EDU") for the next five years (2021-2025):

	2021	2022	2023	2024	2025	Total (Rounded)
EWT	550.4	740.5	681	427.5	43	2,442

Q. Is there present system capacity to meet the demands of current and future customers?

A. Yes. While the 2020 Chapter 94 Report for the Mill Lane Pump Station shows an existing and projected hydraulic overload condition, we understand that a spreadsheet error was made in Attachment F of the 2020 Chapter 94 Report which will be corrected and submitted to DEP to show that an existing and projected hydraulic overload in fact does not exist within the 2-year reporting window. The revised Chapter 94 Attachment F will be provided upon revision.

IV. INTEGRATION OF EWT SYSTEM, TECHNICAL FITNESS AND PUBLIC BENEFIT

Q. Please state how many miles the EWT System is from Aqua's existing service territory.

A. The EWT System's distance from Aqua's existing service territory is as follows:

Buyer's Plant	Location	Approximate Distance to EWT (miles)
Willistown Woods System	West Chester, PA	5
Deerfield Knoll System	West Chester, PA	5
Plumsock System	West Chester, PA	5
Bryn Mawr, PA Corporate HQ	Bryn Mawr, PA	11

Q. Will the EWT System be physically interconnected with Aqua's system or be operated as a standalone system?

A. The EWT System will be operated as a standalone system within Aqua's footprint.

Q. Please describe how Aqua will integrate the operation of the EWT System into its current operations.

A. The operation of the EWT System will be managed from Aqua's Southeastern Division headquarters in Bryn Mawr, PA. Management, customer service, regulatory compliance, engineering, financial, and ancillary services will be provided seamlessly from our Southeastern Division office. Aqua plans to hire 3 additional operators to address the

day-to-day operations of the EWT system; however, these operators may be used in other Aqua systems in the area.

Q. Will other Aqua PA employees assist in the operation of the system, if needed?

A. Yes. Aqua has 27 wastewater operators, many holding dual water and wastewater certifications, which may be called upon to assist in the operations of the system. These operators are also supported by Aqua PA employees, which will benefit customers through engineering and field service functions.

Q. Please explain the support services that Aqua Services will provide to the EWT System.

A. Aqua Services, Inc. ("Aqua Services"), the Service Company for Essential, provides expertise in a variety of areas to the subsidiaries of Essential. Aqua Services will provide support to the operation of the system through its employees' expertise in accounting and financial, administrative, communications, corporate secretarial, customer service and billing, engineering, fleet services, human resources, information systems, operations, regulatory compliance, rates and regulatory, risk management, water quality, legal, and purchasing, contracts and sales of real estate.

Q. Does Aqua plan any physical, operational, and managerial changes after closing?

A. As mentioned above, there are planned capital improvements and Aqua plans to hire 3 operators. The EWT System will be operated from Aqua's Southeastern Division office. There will be no other physical, operational, and managerial changes after closing.

Q. Is the EWT System similar to other systems owned and operated by Aqua?

A. Yes. The EWT System, as stated above, is a wastewater collection system only. Aqua owns four (4) other collection only systems located within southeastern Pennsylvania.

Q. Do you believe that Aqua is technically fit to own and operate the system?

A. Yes.

Q. Please describe the Company's technical fitness and how the Company can provide quality and reliable service to EWT wastewater customers.

A. Aqua PA and Aqua are Class A utilities that already have certificates to operate throughout the Commonwealth and have acquired many systems in the last three decades. Aqua will provide quality and reliable service to the EWT wastewater customers given the Company's operational expertise as well as engineering support local to the EWT System. Aqua has expertise in troubleshooting mechanical equipment as well as wastewater treatment processes. Aqua also has expertise in operating wastewater collection and conveyance systems. Aqua strives to ensure the collection, conveyance and pumping systems which the Company owns provide continuous safe and reliable service. Aqua has worked with the Commission and statutory advocates to acquire and improve troubled wastewater systems (e.g., Washington Park Wastewater, Docket No. A230550F2000). In addition, Aqua was appointed receiver for the North Heidelberg Sewer Company system in Berks County by the Commission effective March 5, 2018. Aqua took over daily wastewater operations of the facility serving approximately 274

customers on March 5, 2018. Aqua has provided operations service and improvements to the system to ensure quality and reliable service.

Q. Does Aqua have emergency preparedness measures in place?

A. Yes. Aqua currently has emergency preparedness measures in place in order to ensure security and continued service in emergency circumstances all of which have been reviewed by the Commission.

Q. Please explain Aqua's safety programs.

A. Aqua and Aqua PA maintain safety programs that entail basic safety training in all the major categories which operators and management personnel are required to complete including but not limited to:

- Confined Space Training
- Back and Lifting Safety
- Work Zone Traffic Control
- Excavation Safety Awareness
- Fall Protection Training
- Hazard Communication
- Personal Protective Equipment
- Emergency Egress, Exits and Fire Safety
- Electrical Safety Training
- Control of Hazardous Energy | Lockout Tagout
- Respiratory Protection
- Hearing Conservation

Aqua's safety program and procedures provide public benefits in that the EWT customers will have a leader in the wastewater industry providing service.

Q. Can Aqua provide adequate wastewater collection, treatment, or disposal capacity to meet present and future customer demands?

A. Yes. Aqua can provide adequate wastewater service for present and future customers. Aqua will continue to make improvements to the system to ensure any future customer demands are met.

Q. Please summarize why you believe it is in the public benefit for Aqua to own and operate the system.

A. My explanation of Aqua's current operations, the EWT System's similarity to other systems operated by Aqua, the EWT System's proximity to Aqua's service territory, the additional support that will be provided by Aqua as an experienced wastewater utility, and my explanation of Aqua's technical fitness, all support that it is in the public benefit for Aqua to own and operate the EWT System.

V. CONCLUSION

Q. Does this conclude your testimony?

A. Yes, it does. However, I reserve the right to supplement my testimony as additional issues and facts arise during the course of this proceeding.

VI. CONCLUSION 13

I. INTRODUCTION

Q. Please state your name and business address.

A. My name is John Nagel. My business address is 209 Conestoga Road, Frazer, PA 19355.

Q. In what capacity are you affiliated with the Township of East Whiteland?

A. I am the Township Manager for the Township of East Whiteland (the "Township" or "East Whiteland"). The Township Manager is appointed by the East Whiteland Board of Supervisors (the "Board") and is responsible to the Board for the execution of its policies. The Manager is designated as the Chief Administrative Officer of the Township and directs all administrative departments, prepares the annual budget and recommends other policies and procedures to the Board.

Q. Please provide a brief description of your education and work experience.

A. I attended the Temple University, where I received a bachelor's degree in accounting. I have served as the Township Manager since April 2015. As Manager, I oversee all day-to-day operations and staff for all Township departments. I work to implement the policies of our elected Board and coordinate with staff to bring the Board's goals to fruition. Additionally, I administer an annual budget of $28.9 million including $13.8 million in General Funds and $7.3 million of Sewer Funds. Prior to my current position, I served as the Director of Finance for Whitpain Township from September 2011 to April 2015, the Director of Administrative Services for the City of Reading, PA from February 2011 to September 2011, a Financial Advisor for Public Financial Management from

October 2010 to December 2010, and Township Manager for the Montgomery Township August 1999 to August 2010.

Q. Have you testified before the Pennsylvania Public Utility Commission ("PUC" or the "Commission") before?

A. No.

Q. On whose behalf are you testifying in this proceeding?

A. My testimony is on behalf of the Township and in support of the application of Aqua Pennsylvania Wastewater, Inc. ("Aqua") to purchase the Township's wastewater collection and conveyance system (the "System") that provides sanitary wastewater service to various customers in The Township.

Q. What is the purpose of your direct testimony and summarize the key points?

A. The purpose of my testimony is as follows: (1) to provide a description of the System, (2) to describe the anticipated benefits of the sale of the System assets to Aqua under and in accordance with an Asset Purchase Agreement dated January 8, 2021 between the Township and Aqua (the "Proposed Transaction"), and (3) to describe how Township sets its annual rates.

In particular, I will focus on the numerous benefits of the Proposed Transaction that are most important to the Township and the customers who use the System, including:

- The Township can exit the sanitary sewer business and instead focus its resources on other core government functions while ensuring safe, reliable, and professional service at affordable rates for its residents;
- Receipt of sale proceeds will permit the Township to allocate these funds to various projects in the Township;
- Benefits from Aqua's expertise, long-standing capital improvement programs, and its experience in improving systems throughout the Commonwealth to address capital improvements needed over time in the Township;
- Township residents will benefit from enhanced customer service and operational functions through expanded customer service hours, additional payment options (including by phone or online), access to Aqua's Helping Hand low-income assistance program, and Aqua's team of experienced water and wastewater professionals;
- Aqua's capability to make long-term investments in necessary capital improvements to the wastewater system;
- Aqua's proven record of environmental stewardship for the operation of wastewater systems;
- Regulation of the service provided to Township's customers will fall under PUC jurisdiction, which will ensure regulatory oversight, require approval for all rate increases, and provide significant consumer protections; and
- Enabling the Township to reallocate its administration time to focus on other key initiatives of the Township.

Q. Are you sponsoring any Exhibits with your testimony?

A. No.

II. DESCRIPTION OF THE TOWNSHIP AND ITS WASTEWATER SYSTEM

Q. Please provide a general overview of the Township of East Whiteland.

A. The Township of Whiteland was founded in 1704. In 1732, Whiteland was divided into East Whiteland and West Whiteland. The Township is located in Chester County, and consists of approximately 10.9 square miles. The Township is governed by its five-member Board. Presently, there are approximately 14,720 residents in the Township.

Q. Please provide a description of the Township's wastewater system.

A. The Township owns and operates the System, which consist of twelve (12) pump stations, about 329,072 linear feet of gravity and force mains, approximately 1,506 manholes, associated infrastructure and appurtenances, and related land and land rights. The System's pump stations are: Deer Run; Flat Road; Hillbrook Circle; King Road; Lapp Road; Lee Boulevard; Malvern Hunt; Meadowview; Mill Lane; Planebrook Road; Westgate; and Wilburdale.

The System currently provides service to 3,895 residential and commercial customers, and services approximately 7,908 Equivalent Dwelling Units ("EDU"). EDUs are estimated to increase by nearly 2,500 EDUs through 2025.

East Whiteland is responsible for the safe collection and transmission of over 1.062 million gallons of wastewater per day that is generated in southeastern Pennsylvania. The System accepts flows and collects sewer rental fees from the

adjoining municipalities of East Goshen Township, Charlestown Township and Malvern Borough. In turn, the Township pays sewer rental fees to neighboring Tredyffrin Township and East Goshen Township, and a company for conveyance and to the Valley Forge Sewer Authority Wastewater Treatment Plant—where the Township has purchased capacity.

Q. Please provide an overview of any compliance issues with the wastewater system experienced by the Township.

A. The Township currently has an Act 537 plan with the Pennsylvania Department of Environmental Protection (the "DEP") originally dated May 2, 1995, and subsequently amended as recently as March 2020.

From 2013 to 2014, the Township was under a Corrective Action Plan ("CAP") with the DEP that required various improvements to be made to the Mill Lane and Sidley Collection System, the Lee Boulevard Pump Station, and the sanitary sewer on Conestoga Road. Additionally, the Township installed approximately 3,780 linear feet of new piping to replace the existing deteriorating sewer. In 2015, the DEP lifted the CAP once the Township completed the gravity sewer main replacement from the Mill Lane Pump Station to Lee Boulevard. Lastly, in the past five (5) years, the Township has experienced only three (3) sanitary sewer Overflows (SSO's). All were immediately addressed.

III. SALE PROCESS

Q. Please describe the Township's decision process in concluding that a sale of the wastewater system was in the best interest of the Township.

A. The decision to sell the System was the result of deliberate consideration by the Township, its administration and our residents. Beginning in April 2019, we undertook a thorough process, along with capable outside experts, to review the System, assess future costs of capital and revenue requirements, evaluate the ongoing time commitments of Township personnel to address System issues, and carefully consider from various stakeholder points of view the numerous qualitative and quantitative factors that weigh in favor of or against the Township keeping the System. We weighed and balanced issues at numerous public meetings and working sessions that addressed the Proposed Transaction.

Ultimately, the decision to sell resulted from two primary goals. First, the Township wanted to exit the business of providing sanitary sewer service and instead focus on its core governmental functions while simultaneously ensuring that our residents would have safe and reliable service at affordable rates. The System's aging infrastructure will require additional investment over time, which we project will cause increases in rates if the System remains with the Township. Second, the Township desired to address other Township purposes with the sale proceeds.

After the Board made the decision to sell the System based on these considerations, we issued a Request for Qualifications and a Request for Bids. Once we reviewed the responses, we determined that Aqua submitted a bid that was in the best

interest of, and provided the greatest value to, the Township and its residents, and accepted that bid.

Q. Did the Township request public input on the sale?

A. Yes. The deliberative process undertaken by the Township in deciding to sell the System was public and involved an opportunity for public comment at the November 11, 2020 meeting where the Township, its financial advisors, and Aqua all presented the goals and benefits of the Proposed Transaction.

Q. Please describe the process by which the Township solicited bids for the System.

A. On January 31, 2020, the Township released its Request for Qualifications, and received the responses on February 20, 2020. The Township held various management meetings and asset tours throughout mid-July 2020. The Township continued its due diligence through August 2020, and pre-qualified four (4) potential bidders based on industry established criteria for the possible execution of an agreement for the sale of the System. On September 15, 2020, the Township issued its Request for Bids, and received the responses on October 13, 2020.

After receiving the bids, the Board conducted a public meeting on November 11, 2020. At this meeting, the Township Manager and its financial advisors presented to the Board and the public the reasons the Township explored the sale of the System and the benefits that Township residents may realize from the sale, including uses of the sale proceeds. The Township stated that it would discuss the specific uses of the proceeds in the coming nine (9) to twelve (12) months. After careful consideration of the bids and

public participation, the Township decided that the sale was in the best interest of the Township, and the Board unanimously voted to accept Aqua's bid at the November 11, 2020 meeting.

Q. Please describe the process that the Township used to hire a Utility Valuation Expert for the transaction.

A. When the Board approved the sale on November 11, 2020, it also authorized me to seek proposals from and select a Utility Valuation Expert. On May 27, 2021, the Township received a proposal from AUS Consultants ("AUS"), which was accepted that same day after review and consideration. AUS is not affiliated with the Township.

IV. BENEFITS OF THE PROPOSED TRANSACTION

Q. Please describe the benefits of the Proposed Transaction for the Township.

A. The Township will benefit from the Proposed Transaction as it will transfer its wastewater assets to a long-standing and well-run public utility – Aqua. There are two key benefits of the Proposed Transaction to the Township and its residents. The sale will (1) permit the Township to exit the business of providing sanitary sewer service and instead focus on its core governmental functions while simultaneously ensuring that our residents would have safe and reliable service at affordable rates, and (2) the sale proceeds will allow the Township to address improvements and projects throughout the Township and benefit the Township's overall financial position.

First, given the time and economic impact on the Township of dealing with the System, the Proposed Transaction permits the Township to reallocate its time to focus on

other key initiatives of the Township. For example, due to additional investment required for our aging System, we project that wastewater rates will increase in the coming years regardless if the Township retains ownership of the System. As such, we believe that the sale to Aqua provides the best opportunity for the Township to focus its resources on other core government function while ensuring safe, reliable, and professional service at affordable rates for its residents.

Additionally, the Proposed Transaction will provide the Township with the ability to make improvements within the Township. The Township has identified, *inter alia*, the following potential uses for the proceeds: the reduction of debt; development of the Township Campus, including the construction of a new police station, renovation of the current administration building, etc.; and the implementation of roadway projects to improve traffic flow in the Township.

Q. Please describe any further benefits from the Proposed Transaction.

A. The Township will realize many additional benefits from the sale of its wastewater system to Aqua. These benefits include, but are not limited to, the following:

- The Township will benefit from Aqua's capital improvement programs, and its experience in improving and correcting systems with compliance issues.
- Township residents will benefit from enhanced customer service and operational functions through expanded customer service hours, additional payment options (including by phone or online), access to Aqua's Helping Hand low-income assistance program, and Aqua's team of experienced water and wastewater professionals;

- Aqua's capability to make long-term investments in necessary capital improvements to the aging System; and
- Aqua's proven record of environmental stewardship for the operation of wastewater systems.

Q. Do you believe that the Proposed Transaction provides affirmative public benefits and is in the public interest?

A. Yes. For the reasons set forth above, I believe that the Proposed Transaction provides substantial affirmative public benefits and is in the public interest. I urge the Commission to promptly approve the Proposed Transaction.

V. RATES

Q. How does Township set the rates it charges customers for wastewater treatment and collection?

A. Rates are governed by the Township Code. Pursuant to the Code, the Township is currently divided into five sanitary sewer districts based on geographic boundaries. The Board may establish additional districts by ordinance. The applicable rate for any given district is established by resolution of the Board, and may be amended as the Board deems appropriate. While the rates throughout any given district must be uniform, the rates may vary from district to district. Furthermore, the Township establishes distinct sewer rates for any commercial or industrial user whose total quarterly sewage or water consumption exceeds 100,000 gallons, also referred to as "high volume customers."

Q. How frequently does Township adjust rates?

A. Rates have only been increased when necessary. For example, the rates for Districts A through E were last raised in 2016 and the rates for "high volume customers" were last raised in 2018.

VI. CONCLUSION

Q. Does this conclude your testimony?

A. Yes, it does. However, I reserve the right to file additional testimony at a later date as may be necessary or appropriate.

APPENDIX A **A-1**

INTRODUCTION

Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS FOR THE RECORD.

A. My name is Harold Walker III, and my business address is 1010 Adams Avenue, Audubon, Pennsylvania.

Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?

A. I am employed by Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") as Manager, Financial Studies.

Q. WOULD YOU DESCRIBE BRIEFLY GANNETT FLEMING?

A. Yes. Since 1915, Gannett Fleming and its predecessors have been helping clients in public pricing policy and related financial matters for managerial purposes, before regulatory commissions and courts of law. Gannett Fleming is registered as a Utility Valuation Expert ("UVE") in the Commonwealth of Pennsylvania. Gannett Fleming is also a registered Municipal Advisor with the SEC and I am a licensed Municipal Advisor Representative (Series 50) with the Municipal Securities Rulemaking Board ("MSRB") and the Financial Industry Regulatory Authority ("FINRA"). Gannett Fleming is a subsidiary of Gannett Fleming, Inc.

Q. WHAT ARE YOUR RESPONSIBILITIES AS MANAGER, FINANCIAL STUDIES OF GANNETT FLEMING?

A. I supervise and develop financial and economic studies on behalf of investor-owned and municipally owned water, wastewater, electric, natural gas distribution and transmission, oil pipeline, and telephone utilities, as well as resource-recovery companies.

Q. PLEASE DESCRIBE YOUR QUALIFICATIONS AND YOUR EDUCATIONAL BACKGROUND AND EMPLOYMENT EXPERIENCE?

A. My educational background, business experience and qualifications are provided in a Curriculum Vitae included as **Appendix A**.

Q. HAVE YOU PREVIOUSLY TESTIFIED BEFORE THE PENNSYLVANIA PUBLIC UTILITY COMMISSION?

A. Yes. I have testified before the Pennsylvania Public Utility Commission ("Commission" or "PUC"), as well as other state regulatory commissions, on many occasions, as shown on **Appendix A**.

Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY?

A. My testimony describes and explains the fair market value appraisal of the East Whiteland Township ("Township") wastewater system assets ("Wastewater System") that I and staff, working under my direction, performed. Gannett Fleming was engaged by Aqua Pennsylvania Wastewater, Inc. ("Aqua") to perform this appraisal. Our report is entitled "East Whiteland Township Wastewater System Assets Fair Market Value Appraisal at May 20, 2021" ("Gannett Fleming Appraisal Report"). The appraisal and its report were developed to meet the criteria established in Section 1329 of the Pennsylvania Public

Utility Code ("Code"), 66 Pa. C.S. § 1329 ("Determination of the fair market value of water and wastewater assets").

In its 2015-2016 legislative session, the Pennsylvania Legislature passed Act 12 of 2016 and Governor Wolf signed Act 12 into law adding Section 1329 of the Code which established the legislative requirements facilitating the acquisition of municipal and authority water and wastewater systems by private investor-owned utilities and other entities which are rate-regulated by the Commission. This legislation was intended to facilitate the acquisition of water and wastewater systems in order to facilitate capital improvements to the water and wastewater properties.

QUALIFICATION AS UTILITY VALUATION EXPERT

Q. IS GANNETT FLEMING ON THE COMMISSION'S REGISTRY OF UTILITY VALUATION EXPERTS?

A. Yes. Gannett Fleming is a UVE in the Commonwealth of Pennsylvania approved by the PUC (Utility Code 9919244).

Q. PLEASE DESCRIBE THE PROCESS BY WHICH GANNETT FLEMING WAS PLACED ON THE COMMISSION'S REGISTRY OF UTILITY VALUATION EXPERTS.

A. After passage of Section 1329 of the Code, the Commission established an application process by which the Commission would approve and designate firms to be placed on the Commission's "Registry of Utility Valuation Experts." To be included on the registry, the UVEs must establish their qualifications. Gannett Fleming submitted its original

application and the required proof of experience in September of 2016 and received confirmation and approval from the Commission of Gannett Fleming's placement on the Commission's UVE Registry in December of 2016. Renewal of inclusion on the Commission's UVE Registry must be done annually. Gannett Fleming submitted its 2018 renewal application and the required proof of experience in December of 2017 and received confirmation and approval from the Commission of Gannett Fleming's placement on the Commission's UVE Registry in January of 2018. In 2018, Gannett Fleming submitted its 2019 renewal application and the required proof of experience in December of 2018 and received confirmation and approval from the Commission of Gannett Fleming's placement on the Commission's UVE Registry in January of 2019. Again in 2019, Gannett Fleming submitted its 2020 renewal application and the required proof of experience in December of 2019 and received confirmation and approval from the Commission of Gannett Fleming's placement on the Commission's UVE Registry in January of 2020. In 2020, Gannett Fleming submitted its 2021 renewal application and the required proof of experience in December of 2020 and received confirmation and approval from the Commission of Gannett Fleming's placement on the Commission's UVE Registry in February of 2021.

Q. HAVE YOU EVER HAD YOUR PROFESSIONAL CREDENTIALS REVOKED OR SUSPENDED?

A. No.

Q. DO YOU HAVE SPECIFIC EXPERIENCE WITH THE VALUATION AND APPRAISAL OF UTILITY ASSETS?

A. Yes. In addition to serving as an expert witness on various financial and economic matters before utility regulatory commissions for over 35 years, I have also provided valuations of utility asset services for more than 20 years. In that capacity I have testified on valuation matters before the Commission and sponsored or adopted Gannett Fleming's UVE appraisals under Section 1329 of the Code in the New Garden Township proceeding, the Limerick Township proceeding, the East Bradford Township proceeding, the Mahoning Township (water) proceeding, the Mahoning Township (wastewater) proceeding, the Exeter Township proceeding, the Cheltenham Township proceeding, the East Norriton Township proceeding, the Kane Borough proceeding, the Delaware County Regional Water Quality Control Authority proceeding, the Borough of Royersford proceeding, the Valley Township (water) proceeding, the Valley Township (wastewater) proceeding, the Upper Pottsgrove proceeding, the Lower Makefield Township proceeding and the Borough of Brentwood proceeding. In addition to testifying in Section 1329 proceedings, I have also testified and filed reports on valuation matters in California, Illinois, New Hampshire, and Pennsylvania in courts of law and regulatory commissions.[1]

Q. HAVE YOU OR GANNETT FLEMING OR ANY OF ITS STAFF DERIVED ANY MATERIAL FINANCIAL BENEFIT FROM THE SALE OF THE WASTEWATER SYSTEM'S ASSETS OTHER THAN FEES FOR YOUR SERVICES RENDERED?

[1] An electronic link to the PA PUC Dockets where I have testified in the last two years is provided in response to Section 1329 Application Standard Data Request 15-d. All other testimony relating to valuation is more than two years old and, therefore, is not provided.

A. No.

Q. ARE YOU OR GANNETT FLEMING OR ANY OF ITS STAFF AN IMMEDIATE FAMILY MEMBER OF A DIRECTOR, OFFICER, OR EMPLOYEE OF EITHER AQUA OR THE TOWNSHIP?

A. No.

Q. IS GANNETT FLEMING IN COMPLIANCE WITH APPLICABLE PENNSYLVANIA LAWS?

A. Yes.

Q. DOES GANNETT FLEMING HAVE THE FINANCIAL AND TECHNICAL FITNESS, INCLUDING PROFESSIONAL LICENSES AND TECHNICAL CERTIFICATIONS, TO PERFORM A FAIR MARKET VALUATION OF THE WASTEWATER ASSETS OF THE TOWNSHIP?

A. Yes, to be placed on the Commission's "Registry of Utility Valuation Experts" Gannett Fleming had to establish its qualifications.

Q. ARE YOU AWARE OF ANY FACT, INCLUDING BUT NOT LIMITED TO ANY POTENTIAL CONFLICT OF INTEREST THAT WOULD CAST DOUBT UPON YOUR ABILITY TO PROVIDE A THOROUGH, OBJECTIVE, UNBIASED, AND FAIR VALUATION IN THIS PROCEEDING?

A. No.

Q. HAVE YOU CORRESPONDED WITH SELLER'S UVE WITH REGARD TO ITS RESPECTIVE FAIR MARKET VALUE APPRAISAL OF THE ASSETS AT ISSUE IN THIS CASE?

A. No.

Q. DO YOU HAVE ANY AFFILIATION WITH EITHER THE SELLING UTILITY OR THE ACQUIRING PUBLIC UTILITY?

A. No. Other than the current assignment to provide the subject appraisal, and similar assignments to provide appraisals of other utility systems, I have no business or personal relationships with any party to the proposed acquisition.

FEES PAID FOR UTILITY VALUATION EXPERT SERVICES

Q. WHAT IS THE GANNETT FLEMING FEE ARRANGEMENT TO DELIVER THE APPRAISAL?

A. Gannett Fleming is being compensated on an hourly basis. Our fee arrangement is included as Exhibit S1 to Aqua's Application. True, correct, and complete copies of Gannett Fleming's invoices to Aqua for this matter, as of the date of Aqua's Application filing, are also included in Exhibit S1.

Q. WHAT IS THE ESTIMATED TOTAL COMPENSATION THAT GANNETT FLEMING WILL RECEIVE FOR ITS SERVICES IN THIS MATTER?

A. The estimated total compensation that Gannett Fleming will receive for its services in this matter as of the date of Aqua's Application filing is $32,000, which represents approximately 0.06% of the fair market valuation. I estimate our fee will total $75,000 if this proceeding is fully litigated, which represents approximately 0.14% of the fair market valuation.

Q. PLEASE DESCRIBE THE PROCESS BY WHICH THIS COMPENSATION WAS NEGOTIATED?

A. Gannett Fleming submitted a proposal to provide the required services in May 2021, which Aqua accepted.

Q. ARE THESE FEES CONSISTENT WITH COMPENSATION RECEIVED FOR SIMILAR SERVICES PROVIDED TO OTHER CLIENTS?

A. Yes.

Q. WILL GANNETT FLEMING RECEIVE ITS FEE REGARDLESS OF WHETHER THE COMMISSION APPROVES THE PROPOSED TRANSACTION OR WHETHER IT CLOSES?

A. Yes. 66 Pa. C.S. § 1329(a)(3) mandates that I comply with the Uniform Standards of Professional Appraisal Practice ("USPAP") when developing an appraisal. Under the USPAP, I cannot perform the appraisal with bias, and acceptance of a fee contingent on a particular outcome, like closing or Commission approval, would violate the Ethics Rule.

Q. ARE YOU ADVOCATING FOR ANY PARTY OR OUTCOME?

A. No. The Ethics Rule of the USPAP, applicable here pursuant to 66 Pa. C.S. § 1329(a)(3), requires that I perform the appraisal with impartiality, objectivity, and independence, and without accommodation of personal interests. I have not performed this appraisal assignment with bias, and I am not advocating the cause or interest of any party or issue. Further, I have not accepted this or any assignment that includes the reporting of predetermined opinions and conclusions.

FAIR MARKET VALUATION OF WASTEWATER SYSTEM ASSETS

Q. PLEASE IDENTIFY EXHIBIT Q TO AQUA'S APPLICATION IN THIS PROCEEDING?

A. Exhibit Q of Aqua's application includes Gannett Fleming's appraisal report dated June 25, 2021.

Q. HOW DO YOU RECOGNIZE IT?

A. I personally prepared, and also directed and supervised Gannett Fleming personnel in preparing, the report, and recognize it as Gannett Fleming's work product.

Q. IS EXHIBIT Q A TRUE, COMPLETE, AND ACCURATE COPY OF THE GANNETT FLEMING APPRAISAL REPORT?

A. Yes, and I incorporate it into my direct testimony as if set forth in its entirety.

Q. PLEASE DESCRIBE THE PROCESS BY WHICH YOU PREPARED THE GANNETT FLEMING APPRAISAL REPORT.

A. In accordance with Section 1329 of the Code, Aqua engaged Gannett Fleming to prepare the fair market valuation report of the Wastewater System. The Township/Aqua provided financial statements and budget statements regarding the Wastewater System and a copy of the Engineering Assessment[2] as required by Section 1329(a)(4). In addition, Gannett Fleming reviewed the assets, reviewed additional information provided by the Township/Aqua and conducted additional research regarding the Township and the Wastewater System, including a site visit. After those activities and data gathering, we developed the appraisal.

The appraisal contains a letter of transmittal; a table of contents detailing all the sections of the report and work papers; and a narrative report explaining our methodology and conclusions.

The intent of the valuation report is to provide the appraisal results, as well as the entire appraisal work file, in sufficient detail to satisfy the parties' and Commission's review requirements of Section 1329 and the Commission's Final Implementation Order, *In re: Implementation of Section 1329 of the Public Utility Code*, Docket No. M-2016-2543193 (Order Entered October 27, 2016), and Final Supplemental Implementation Order, *In re: Implementation of Section 1329 of the Public Utility Code*, Docket No. M-2016-2543193 (Order Entered February 28, 2019). In addition to a copy of the appraisal report, I have provided supporting work papers for the appraisal report in Exhibit Q of Aqua's Application. The relevant work papers have also been submitted to the

[2] "East Whiteland Township Sewerage Facilities Engineering Assessment and Original Cost" and related files prepared by Pennoni Associates Inc.

Commission and provided to the public advocates in **CONFIDENTIAL** live electronic format.

Q. IS THERE ANYTHING THAT YOU WOULD CHANGE IN THE GANNETT FLEMING APPRAISAL REPORT SINCE ITS PREPARATION?

A. No.

Q. WAS THE FAIR MARKET VALUATION OF THE WASTEWATER SYSTEM ASSETS DETERMINED IN COMPLIANCE WITH USPAP?

A. Yes. Our fair market valuation was determined in compliance with USPAP 2020-2021 Edition.

Q. DID YOU EMPLOY THE COST, MARKET, AND INCOME APPROACHES IN PREPARING YOUR VALUATION?

A. Yes.

Q. DID YOU INCLUDE ANY EXTRAORDINARY ASSUMPTIONS OR HYPOTHETICAL CONDITIONS IN DEVELOPING YOUR APPRAISAL?

A. No.

Q. DID YOU INCLUDE ANY LIMITING CONDITIONS IN DEVELOPING YOUR APPRAISAL?

A. Yes. We accepted all information and data provided by the Township/Aqua as it pertains to this assignment "as is" after a limited review. That is, we neither audited nor verified any data, engineering assessment, financial record or operating data provided for this assignment. We assumed all title to all assets included in the appraisal is good and marketable and no hazardous conditions or materials exist which could affect the assets.

Q. PLEASE SUMMARIZE YOUR RESULTS OF THE APPLICATION OF THE COST, MARKET, AND INCOME APPROACHES.

A. Please see the below table:

Approach	Indicated Value	Weight	Weighted Value
Cost Approach	$59,118,924	33.33%	$19,704,337
Market Approach	46,741,589	33.34%	15,583,646
Income Approach	61,147,544	33.33%	20,380,476
		100%	$55,668,459
Conclusion			**$55,668,000**

Q. PLEASE FURTHER DESCRIBE EACH APPROACH IN THE DEVELOPMENT OF YOUR APPRAISAL.

A. We developed our appraisal utilizing the cost, income, and market approaches as required by USPAP and Section 1329 of the Code. We used seven methods under the Cost, Market, and Income Approaches to valuation: Original Cost Method, Replacement Cost Method, Capitalization of Earnings Method, Market Multiple Discounted Cash Flow Method, Capitalization Discounted Cash Flow Method, Market Multiples Method, and the Selected Transactions Method.

The results from the market multiple discounted cash flow method and the capitalization discounted cash flow method form the basis for our Income Approach. Our Market Approach is supported by the market multiples method and selected transactions method. The results from the original cost method form the basis for our replacement cost method, and both methods form the basis for our Cost Approach. These approaches are summarized below.

Cost Approach. The cost approach utilized the original cost method and replacement cost method. The original cost method determined the original cost of the assets when "new" or first constructed based on the information contained in the Engineering Assessment. The original cost new inventory was then trended using the Handy Whitman Index of Public Utility Construction Costs for the water industry to produce the trended cost, or reproduction cost, and was converted to replacement cost new after obsolescence was factored. The calculated accrued depreciation was determined for the original cost new and for the replacement cost new as of May 20, 2021. The calculated accrued depreciation was based on the assets' attained ages, and the service life of the assets. The cost basis of depreciable assets was reduced annually by the accumulated depreciation to reflect the loss in the service value of the assets since being constructed. All land and land rights were valued at original cost.

Income Approach. The income approach utilized the capitalization of earning (cash flow) method and two discounted cash flow methods. The capitalization of earning method converted a single base economic income number to a value by dividing it by a capitalization rate. The discounted cash flow methods used estimates of future debt free net cash flow and discounted them to arrive at a present value or price of the cash flows.

The capitalization rate and the discount rate were developed based on market debt and equity rates at the appraisal date. The discounted cash flow methods reflected two types of discounted cash flow analyses, the EBIT and EBITDA terminal value model (market multiple discounted cash flow method) and a capitalization of terminal value model (capitalization discounted cash flow method).[3]

Market Approach. The market approach was developed based on the market multiples method and the selected transaction method. The market multiples method was based on the market price data of publicly traded corporations engaged in the same or a similar line of business as the Wastewater System. The market price data of these comparable publicly traded corporations was used to calculate the market multiples for the comparable publicly traded corporations at the appraisal date. The selected transactions method used certain public information relating to the purchase or sale of businesses involved in the same or a similar business line as the Wastewater System to calculated market multiples at the time of transaction (sale/purchase). The calculated market multiples determined by the market multiples method and the selected transaction method were then multiplied by the corresponding Wastewater System financial and operating statistic to produce an indicated value for the Wastewater System.

Q. PLEASE STATE THE NUMBER OF CUSTOMERS YOU USED IN DEVELOPING YOUR APPRAISAL AND THE SOURCE OF THAT NUMBER.

A. The number of customers I used was 3,895. This customer count number was provided by the Township/Aqua.

[3] EBIT is earnings before interest and taxes and EBITDA is earnings before interest, tax, depreciation, and amortization.

Q. DID YOU MAKE ANY UPDATES TO YOUR APPRAISAL AFTER IT WAS SUBMITTED TO THE SELLER/BUYER, AND IF SO, WHAT WAS THE UPDATE, WHEN WAS IT MADE, AND WHY WAS IT NECESSARY?

A. No.

Q. DID YOU PERFORM AN ON-SITE INSPECTION OF THE WASTEWATER SYSTEM?

A. Yes. Gannett Fleming viewed the wastewater system assets on June 15, 2021.

Q. DID YOU RELY UPON A LICENSED ENGINEER'S ASSESSMENT OF THE TANGIBLE ASSETS OF THE WASTEWATER SYSTEM IN PERFORMING YOUR VALUATION?

A. Yes. The Township/Aqua provided a copy of the Engineering Assessment and this information was incorporated into our Cost Approach in our appraisal.

Cost Approach

Q. DID YOU USE THE REPRODUCTION COST OR THE REPLACEMENT COST IN YOUR COST APPROACH?

A. We utilized the original cost new ("OCN") to calculate the trended original cost ("TOC") measures, or the reproduction cost of the depreciable assets by multiplying the OCN by specific cost indices. We converted reproduction cost new to replacement cost new after factoring in obsolescence. We used the TOC method because the mandated use of the

Engineering Assessment's original cost essentially dictates the use of TOC over the reproduction cost or the replacement cost methods.

Q. WHAT INDEX, IF ANY, DID YOU USE FOR THAT METHOD?

A. The original cost new inventory was trended using the Handy Whitman Index of Public Utility Construction Costs for the water industry to produce the reproduction cost new.

Q. UNDER YOUR APPLICATION OF THE COST APPROACH WHAT ASSETS DID YOU VALUE OR TREND DIFFERENTLY FROM OTHER ASSETS AND WHY WAS THAT NECESSARY?

A. We did not trend land and land rights. That is, all land and land rights were valued at original costs. Plant accounts were trended mainly using the Handy Whitman plant account indices. In limited instances, when Handy Whitman plant account indices were not available, we used the U.S. Bureau of Labor Statistics, Producer Price Index which best matches the assets being trended.[4]

Q. UNDER YOUR APPLICATION OF THE COST APPROACH, WHAT YEAR-END DATE DID YOU USE FOR CALCULATING THE DEPRECIATION RESERVE?

A. We used the date of May 20, 2021.

[4] The plant accounts which Handy Whitman indices were not available included: 390.70 Computers; 391.70 Transportation Equipment; and 395.70 Power Operated Equipment.

Q. HOW DID YOU DETERMINE THE DEPRECIATION PARAMETERS OF SURVIVAL/RETIREMENT CHARACTERISTICS AND SERVICE LIVES FOR THE UTILITY PROPERTY UNDER THE COST APPROACH?

A. We determined the average service lives of depreciable assets based on the materials used for construction and how long the depreciable assets are likely to meet service demands.

Q. WHY ARE THOSE PARAMETERS APPROPRIATE?

A. We believe our average service lives of depreciable assets are appropriate based on our experience of having determined average service lives for numerous other water and wastewater utilities and given the fact they resemble those used by other Pennsylvania wastewater companies.

Income Approach

Q. REGARDING YOUR APPLICATION OF THE INCOME APPROACH, WHAT METHOD DID YOU USE TO DETERMINE THE INCOME APPROACH RESULT?

A. We used the Market Multiple Discounted Cash Flow Method ("Market Multiple DCF"), and Capitalization Discounted Cash Flow Method ("Capitalization DCF") to determine the Income Approach result. We refer to the Market Multiple DCF and the Capitalization DCF collectively as the DCF method. We used the capitalization of earning method to estimate value under current ownership and operations. The capitalization of earning method was not used to determine the Income Approach result.

Q. WHAT ASSUMPTIONS DID YOU EMPLOY TO DEVELOP YOUR INCOME APPROACH RESULT?

A. All general assumptions are listed on page 3 of Exhibit 12, and page 7 of Exhibits 13, 14, 15 and 16.[5]

Q. DID YOU USE AQUA'S CAPITALIZATION RATE OR THEIR DISCOUNT RATE IN YOUR INCOME APPROACH TO VALUATION?

A. No. Use of Aqua's capitalization rate or their discount rate in an income approach to valuation is not consistent with the standard of value of fair market value because the "buyer" under the standard of value of fair market value is not a specific entity (i.e., Aqua), but rather a hypothetical buyer. Use of Aqua's capitalization rate or their discount rate in an income approach to valuation is only used under the standard of value of investment value.[6] In accordance with Section 1329 of the Code, the standard of value is fair market value, not investment value.

Q. PLEASE EXPLAIN THE CAPITALIZATION RATE AND THE DISCOUNT RATE USED IN YOUR INCOME APPROACH TO VALUATION.

A. The capitalization rate used in the capitalization of earnings method and the discount rate used in the DCF method are related. The discount rate is the opportunity cost rate related to the risk of the cash flows. The capitalization rate is simply the discount rate minus the

[5] Exhibit references herein are to the Exhibits in the Gannett Fleming Appraisal Report.

[6] Pratt, Shannon P. "Defining Standards of Value." Valuation 34, no. 2, June 1989. http://www.appraisers.org/docs/default-source/college-of-fellows-articles/defining-standards-of-value.pdf.

expected growth rate. If no growth is assumed, the capitalization rate is equal to the discount rate.

As explained previously, under the standard of value of fair market value the "buyer" is not a specific entity (i.e., Aqua), but rather a hypothetical buyer. Accordingly, the hypothetical bidder/buyer may range from large regional municipal authorities ("MUNI") to investor-owned utilities ("IOU"). For a MUNI, the appropriate discount rate is the current municipal revenue bond yield on May 20, 2021 of 3.09%. The appropriate IOU discount rate is the current net of tax overall cost of capital (weighted average cost of capital) on May 20, 2021 and ranges from 6.57% to 7.79%.[7]

For a MUNI, the appropriate discount rate is the current municipal revenue bond yield, 3.09%, because debt is the only major source of capital available to finance an acquisition (developed on Exhibit 20, pages 2-5). Although a MUNI likely carries equity on their books (balance sheet), all existing equity is already invested in other assets and therefore, cannot be used to finance an acquisition.[8] For valuation purposes, an embedded cost of debt, or the historical cost of all debt issuances outstanding is not used because this capital is already invested in assets. Whereas the marginal cost of debt, 3.09%, at the valuation date is used in accordance with accepted valuation practice and used for market valuation purposes.

As discussed previously, for an IOU, the appropriate discount rate is the net of tax overall cost of capital (weighted average cost of capital), 6.57% to 7.79% (Exhibit 20,

[7] Both the American Society of Appraisers, ASA Business Valuation Standards, 2009, and the National Association of Certified Valuation Analysts, Professional Standards, 2007, use the same definition: "Weighted Average Cost of Capital (WACC). The cost of capital (discount rate) is determined by the weighted average, at market values, of the cost of all financing sources in the business enterprise's capital structure."

[8] For example, when a municipal or government entity, such as the Commonwealth of Pennsylvania, finances construction of a road or bridge, they only consider the marginal debt cost despite having "equity" reflected on their books (balance sheet).

pages 2-8). In this instance, the net of tax overall cost of capital (weighted average cost of capital) is based on the Comparable Group's market value capital structure of 23.9% debt and 76.1% equity, a market cost of debt of 3.37% and a range of market cost of equity of 7.87% to 9.47% based on the Comparable Group's market value CAPM on May 20, 2021.[9] The Comparable Group's net of tax overall cost of capital (weighted average cost of capital) is used as a proxy to conform to the "hypothetical buyer" or "hypothetical seller" of fair market valuation. Use of the buyer's net of tax overall cost of capital (weighted average cost of capital) would produce an investment valuation, not a fair market valuation. The supporting documentation for the development of the MUNI and IOU discount rates is shown on pages 2 to 8 of Exhibit 20.

Q. WHY IS THE NET OF TAX OVERALL COST OF CAPITAL APPROPRIATE TO USE?

A. The net of tax overall cost of capital is appropriate because the cash flows being discounted are after tax, or net of tax. The income approach uses estimates of future free cash flow and discounts them to arrive at a present value or price of the cash flows. Generally, this analysis begins with an estimate of the Debt Free Net Cash Flow over the next five to twenty years along with a terminal value. In each year, the Debt Free Net Cash Flow is comprised of projected EBIT, minus income taxes, plus projected depreciation and amortization, plus or minus projected changes in net cash working capital, less projected capital expenditures.

[9] For an example of the net of tax overall cost of capital, see http://www.investinganswers.com/financial-dictionary/financial-statement-analysis/weighted-average-cost-capital-wacc-2905. Also see http://www.wallstreetmojo.com/weighted-average-cost-capital-wacc/, or http://accountingexplained.com/misc/corporate-finance/wacc.

Q. WHAT IS THE BASIS FOR THE GROWTH RATE USED TO CALCULATE THE CAPITALIZATION RATE USED IN THE INCOME APPROACH?

A. The growth rate used to calculate the capitalization rate reflects the growth in the Debt Free Net Cash Flow after the terminal value year. For the Township, the growth rate of 0.2% was used based on the current level of rates and the unique population growth projected for the Wastewater System. Under both MUNI and IOU ownership a growth rate of 0.2% was used based on the projected growth in population (1.6%), projected inflation (2.5%) and the actual growth in the Debt Free Net Cash Flow in the years prior to the terminal value year. Under MUNI ownership the average growth in the Debt Free Net Cash Flow for the last two years prior to the terminal value year was 0.6% and 1.0% under IOU ownership. A growth of 0.2% was deemed reasonable based on the aforesaid.

Q. WHAT UTILITY EARNINGS REPORT WAS USED TO CREATE THE CAPITAL STRUCTURE USED IN YOUR APPRAISAL?

A. As documented previously in footnotes 6 and 8, book value capitalization is not used in fair market valuation determination. Therefore, we did not use the 6.33% Comparable Group's DSIC (distribution system improvement charge) related net of tax overall cost of capital in our valuation because a "hypothetical buyer" cannot finance an acquisition at such a rate and, therefore, its use would provide a meaningless result. The Comparable Group's 6.33% DSIC related cost was determined based the Comparable Group's book value capital structure of 47.4% debt and 52.6% equity, a cost of debt of 3.37% and a DSIC cost of equity of 9.85% based on the December 2020 Earnings Report (public meeting May

6, 2021). However, we note the 6.33% Comparable Group's DSIC related net of tax overall cost of capital falls below the 6.57% to 7.79% range of discount rates used in our Income Approach.

If we used the 6.33% Comparable Group's DSIC related net of tax overall cost of capital in our valuation shown on Exhibit 16, the results of the Capitalization DCF would show a value for the Wastewater System of $55.5 million. Further, the results of the Market Multiple DCF would show a value of $69.6 million and collectively, the DCF method based on the IOU ownership scenario and a 0.2% growth assumption would indicates a value of $62.8 million for the Wastewater System. The DCF method based on the MUNI ownership scenario indicates a value of $67.1 million and the DCF method based on the IOU ownership scenario using DSIC indicates a value of $62.8 million. Collectively, the DCF method indicates a value of $65.0 million when DSIC is considered.

Q. IF YOU USED A TERMINAL VALUE IN YOUR DISCOUNTED CASH FLOW ANALYSIS WHAT IS THE NUMBER OF YEARS OVER WHICH THE CASH FLOWS ARE CONSIDERED?

A. The use of a "terminal value" in a Discounted Cash Flow analysis is reasonable and is in accordance with accepted valuation practice. Simply put, the "terminal value" is a mathematical shortcut to avoid having to show and/or calculate annual Debt Free Net Cash Flows for hundreds of time periods, or hundreds of years. Within the Discounted Cash Flow analysis, the "terminal value" is simply a point in time in which the growth in annual Debt Free Net Cash Flows changes from multiple growth rates to a constant growth rate. For example, in our Discounted Cash Flow analysis, the growth rate of annual Debt Free

Net Cash Flows during time periods 1 through 24 changes multiple times due to the various general assumptions listed in the Gannett Fleming Appraisal Report. After time period 24, the growth in annual Debt Free Net Cash Flows is a constant growth rate. Accordingly, period 24, or year 24, is the "terminal value" year in our DCF method.

Market Approach

Q. REGARDING YOUR APPLICATION OF THE MARKET APPROACH, WHAT METHODS DID YOU USE TO DETERMINE THE MARKET APPROACH RESULT?

A. I used the market multiples method and the selected transaction method.

Q. WHAT ASSUMPTIONS, ANALYSES, AND/OR ADJUSTMENTS DID YOU MAKE UNDER EACH METHOD?

A. The general assumptions used for the market multiples method are listed on page 1 of Exhibit 17. No assumptions were made under the selected transaction method.

Q. REGARDING YOUR APPLICATION OF THE MARKET MULTIPLES METHOD, DID YOU LIMIT YOUR PROXY GROUP USED FOR CALCULATING MARKET VALUE TO ONLY COMPANIES WHICH ENGAGE IN PENNSYLVANIA FAIR MARKET VALUE ACQUISITIONS?

A. No.

Q. REGARDING YOUR APPLICATION OF THE COMPARABLE SALES USED TO ESTABLISH THE VALUATION, DID YOU LIMIT THE TRANSACTIONS SELECTED TO THOSE THAT YOU PREVIOUSLY APPRAISED?

A. No.

Q. PLEASE STATE THE COMPARABLE TRANSACTIONS YOU USED IN DEVELOPING YOUR MARKET APPROACH.

A. Please see Aqua's Application Exhibit Q (the Gannett Fleming appraisal), Exhibit 18, pages 2 and 3, which shows that we reviewed the following transactions[10] in developing the selected transactions method:

- Sale of the City of McKeesport Wastewater system to Pennsylvania-American Water Company in 2017.
- Sale of New Garden Township Sewer Authority to Aqua Pennsylvania in 2017.
- Sale of Limerick Township Wastewater system to Aqua Pennsylvania in 2017.
- Sale of East Bradford Township Wastewater system to Aqua Pennsylvania in 2018.
- Sale of Mahoning Township Water system to Suez Water Pennsylvania in 2018.
- Sale of Mahoning Township Wastewater system to Suez Water Pennsylvania in 2018.
- Sale of Sadsbury Township Wastewater system to Pennsylvania-American Water Company in 2018.

[10] The years listed indicate when the applicant sought approval or when the Commission approved each of the transactions.

- Sale of Exeter Township Wastewater system to Pennsylvania-American Water Company in 2019.
- Sale of Steelton Borough Authority Water system to Pennsylvania-American Water Company in 2019.
- Sale of Cheltenham Township Wastewater system to Aqua Pennsylvania in 2019.
- Sale of East Norriton Township Wastewater system to Aqua Pennsylvania in 2019.
- Sale of Kane Borough Authority Water system to Pennsylvania-American Water Company in 2020.
- Sale of Royersford Borough Authority Water system to Pennsylvania-American Water Company in 2021.

As a check on the transactions I studied, that are listed above, I also reviewed the purchase of Connecticut Water Service, Inc. by SJW Group (Exhibit 18 page 4) which was announced in 2018 and approved in 2019.

Q. WHAT WERE THE RESULTS OF THE MARKET APPROACH ANALYSIS YOU PERFORMED?

A. The results of the market multiples method are shown on page 1 of Exhibit 17 and the results of the selected transactions method are shown on page 1 of Exhibit 18. The conclusion regarding the Market Approach analysis is explained on page 42 of our appraisal.

CONCLUSION

Q. WHAT IS YOUR CONCLUSION REGARDING THE FAIR MARKET VALUE OF THE WASTEWATER SYSTEM'S ASSETS TO BE PURCHASED BY AQUA?

A. Fair market value is defined as "the price, expressed in terms of cash equivalents, at which property would change hands between a hypothetical willing and able buyer and a hypothetical willing and able seller, acting at arm's length in an open and unrestricted market, when neither is under compulsion to buy or sell and when both have reasonable knowledge of the relevant facts."

Based on our analysis, as described in our appraisal report, the estimate of the fair market value of the Wastewater System as of May 20, 2021 is $55,668,000 (rounded). The results of the analyses and calculations are summarized in Table 1 for the Wastewater System as follows:

Valuation Approach	Indicated Value
Cost Approach	$59,118,924
Income Approach	61,147,544
Market Approach	46,741,589

Table 1

We used seven methods under the Cost, Market, and Income Approaches to valuation: Original Cost Method, Replacement Cost Method, Capitalization of Earnings Method, Market Multiple Discounted Cash Flow Method, Capitalization Discounted Cash Flow Method, Market Multiples Method, and the Selected Transactions Method.

The results from the market multiple discounted cash flow method and the capitalization discounted cash flow method form the basis for our Income Approach. Our

Market Approach is supported by the market multiples method and selected transactions method. The results from the original cost method form the basis for our replacement cost method, and both methods form the basis for our Cost Approach.

We considered the results of each approach as an indicator of value individually, or as independent indicators of value. Therefore, all three approaches to valuation were given consideration in arriving at our estimate of the fair market value conclusion. In our opinion, each of the valuation approaches utilized in our appraisal is relevant. Accordingly, we assign an equal weight to the result of each approach. Our conclusion regarding the fair market value can be described by the weightings given the specific results of the three approaches to valuation. The results of our analyses, shown on Exhibit 19, indicate a range of value for the Wastewater System of $46.7 million to $61.1 million and collectively indicate a fair market value of $55,668,000 for the Wastewater System.

Q. GENERALLY SPEAKING, IS IT COMMON FOR DIFFERENT APPRAISERS TO REACH VARYING OPINIONS OF FAIR MARKET VALUE?

A. Yes. I do not think the underlying results of the models employed for valuation purposes are ever the same from one appraiser to another appraiser. Further, the conclusion of value from one appraiser to another appraiser usually differs as well. I believe these are some of the reasons the results of the conclusion of value from two different UVEs are averaged under Section 1329, 66 Pa. C.S. § 1329.

Q. DOES THIS CONCLUDE YOUR TESTIMONY?

A. Yes. However, I reserve the right to supplement my testimony as additional issues or facts arise during the course of this proceeding.

APPENDIX A

Professional Qualifications
of
Harold Walker, III
Manager, Financial Studies
Gannett Fleming Valuation and Rate Consultants, LLC.

EDUCATION

Mr. Walker graduated from Pennsylvania State University in 1984 with a Bachelor of Science Degree in Finance. His studies concentrated on securities analysis and portfolio management with an emphasis on economics and quantitative business analysis. He has also completed the regulation and the rate-making process courses presented by the College of Business Administration and Economics Center for Public Utilities at New Mexico State University. Additionally, he has attended programs presented by The Institute of Chartered Financial Analysts (CFA).

Mr. Walker was awarded the professional designation "Certified Rate of Return Analyst" (CRRA) by the Society of Utility and Regulatory Financial Analysts. This designation is based upon education, experience, and the successful completion of a comprehensive examination. He is also a member of the Society of Utility and Regulatory Financial Analysts (SURFA) and has attended numerous financial forums sponsored by the Society. The SURFA forums are recognized by the Association for Investment Management and Research (AIMR) and the National Association of State Boards of Accountancy for continuing education credits.

Mr. Walker is also a licensed Municipal Advisor Representative (Series 50) by Municipal Securities Rulemaking Board (MSRB) and Financial Industry Regulatory Authority (FINRA).

BUSINESS EXPERIENCE

Prior to joining Gannett Fleming Valuation and Rate Consultants, LLC., Mr. Walker was employed by AUS Consultants - Utility Services. He held various positions during his eleven years with AUS, concluding his employment there as a Vice President. His duties included providing and supervising financial and economic studies on behalf of investor owned and municipally owned water, wastewater, electric, natural gas distribution and transmission, oil pipeline and telephone utilities as well as resource recovery companies.

In 1996, Mr. Walker joined Gannett Fleming Valuation and Rate Consultants, LLC. In his capacity as Manager, Financial Studies and for the past twenty years, he has continuously studied rates of return requirements for regulated firms. In this regard, he supervised the preparation of rate of return studies in connection with his testimony and in the past, for other individuals. He also assisted and/or developed dividend policy studies, nuclear prudence studies, calculated fixed charge rates for avoided costs involving cogeneration projects, financial decision studies for capital budgeting purposes and developed financial models for determining future capital requirements and the effect of those requirements on investors and ratepayers, valued utility property and common stock for acquisition and divestiture, and assisted in the private placement of fixed capital securities for public utilities.

Head, Gannett Fleming GASB 34 Task Force responsible for developing Governmental Accounting Standards Board (GASB) 34 services and educating Gannett Fleming personnel and Gannett Fleming clients on GASB 34 and how it may affect them. The GASB 34 related services include inventory of assets, valuation of assets, salvage estimation, annual depreciation rate determination, estimation of depreciation reserve, asset service life determination, asset condition assessment, condition assessment documentation, maintenance estimate for asset preservation, establishment of condition level index, geographic information system (GIS) and data management services, management discussion and analysis (MD&A) reporting, required supplemental information (RSI) reporting, auditor interface, and GASB 34 compliance review.

Mr. Walker was also the Publisher of C.A. Turner Utility Reports from 1988 to 1996. C.A. Turner Utility Reports is a financial publication which provides financial data and related ratios and forecasts covering the utility industry. From 1993 to 1994, he became a contributing author for the Fortnightly, a utility trade journal. His column was the Financial News column and focused mainly on the natural gas industry.

In 2004, Mr. Walker was elected to serve on the Board of Directors of SURFA. Previously, he served as an ex-officio directors as an advisor to SURFA's existing President. In 2000, Mr. Walker was elected President of SURFA for the 2001-2002 term. Prior to that, he was elected to serve on the Board of Directors of SURFA during the period 1997-1998 and 1999-2000. Currently, he also serves on the Pennsylvania Municipal Authorities Association, Electric Deregulation Committee.

EXPERT TESTIMONY

Mr. Walker has submitted testimony or been deposed on various topics before regulatory commissions and courts in 26 states including: Arizona, California, Colorado, Connecticut, Delaware, Hawaii, Idaho, Illinois, Indiana, Kentucky, Maryland, Massachusetts, Michigan, Missouri, New Hampshire, Nevada, New Jersey, New York, North Carolina, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Vermont, Virginia, and West Virginia. His testimonies covered various subjects including: fair market value, the taking of natural resources, appropriate capital structure and fixed capital cost rates, depreciation, fair rate of return, purchased water adjustments, synchronization of interest charges for income tax purposes, valuation, cash working capital, lead-lag studies, financial analyses of investment alternatives, benchmarking, and fair value. The following tabulation provides a listing of the electric power, natural gas

distribution, telephone, wastewater, and water service utility cases in which he has been involved as a witness.

* - Testimony related to valuation

EXHIBIT Y

TESTIMONY OF JEROME C. WEINERT

BEFORE THE
PENNSYLVANIA PUBLIC UTILITY COMMISSION

AQUA PENNSYLVANIA WASTEWATER, INC.

DOCKET NO. A-2021-3026132

AQUA STATEMENT NO. 5

DIRECT TESTIMONY OF JEROME C. WEINERT, PE, ASA, CDP UTILITY VALUATION EXPERT SELECTED BY EAST WHITELAND TOWNSHIP, PENNSYLVANIA

Date: July 2021

DIRECT TESTIMONY OF JEROME C. WEINERT

Q. Please state your name, business address, and occupation.

A. My name is Jerome C. Weinert. My business address is 8555 West Forest Home Avenue, Suite 201, Greenfield, WI 53228. I am a Principal and Director of AUS Consultants, Inc. ("AUS Consultants"). This testimony was prepared by me.

Q. Please describe your qualifications and indicate if you are registered as a Utility Valuation Expert with the Pennsylvania Public Utility Commission.

A. My curriculum vitae **("**CV") is attached to my report and this testimony. AUS Consultants is a registered Utility Valuation Expert with the Pennsylvania Public Utility Commission ("PUC"). We obtained that registration in 2016 and were informed of our latest renewal by the PUC's Secretary on January 12, 2021.

Q. What is the purpose of your testimony?

A. This direct testimony provides clarification and explanation of the appraisal I provided to East Whiteland Township, Pennsylvania ("EWT"), the Selling Utility pursuant to 66 Pa. C.S. § 1329(a)(5) and in accordance with the Uniform Standards of Professional Appraisal Practice ("USPAP") (2020-2021 Edition).

Q. Are you advocating for any party or outcome?

A. No. The Ethics Rule of the USPAP, applicable here pursuant to 66 Pa. C.S. § 1329(a)(3), requires that I perform the appraisal with impartiality, objectivity, and independence, and without accommodation of personal interests. In addition, the USPAP Ethics Rule requires that I not perform the assignment with bias, that I must not advocate the cause or interest

of any party or issue and that I must not accept an assignment that includes the reporting of predetermined opinions and conclusions.

Q. Do you have any affiliation with either the Acquiring Utility or the Acquiring Public Utility or Entity?

A. No. Other than the current assignment to provide the subject appraisal, I have no business or personal relationships with any party to the proposed acquisition.

Q. What is your fee arrangement to deliver the appraisal?

A. A copy of the fee arrangement is included with the Application as **Exhibit S2**. In summary, AUS Consultants are to receive $25,000 to $27,000 plus expenses in compensation for our appraisal, which represents approximately 0.47% of the appraised value.

Q. Will you receive that fee regardless of whether the Commission approves the proposed transaction or whether it closes?

A. Yes. 66 Pa. C.S. § 1329(a)(3) mandates that I comply with the USPAP when developing my appraisal. Under the USPAP, I cannot perform the appraisal with bias and acceptance of a fee contingent on a particular outcome like closing or Commission approval would violate that Ethics Rule.

Q. Have you prepared any exhibits, schedules, or appendices to accompany your direct testimony?

A. Yes. The appraisal I submitted to the Seller pursuant to Section 1329(a)(5) is included in the Application as **Exhibit R**. The appraisal includes a narrative and supporting exhibits in sections. All were prepared under my supervision and control. Also, as stated above, attached to this testimony as **Appendix A** is my CV.

Q. Please summarize your results of the application of the cost, market, and income approaches to valuation.

A. The summary results of the cost, income, and market approaches is presented below.

Appraisal Approach	Value Indicator	Weight	Wtd Value Indicator
Cost	59,847,171	50%	29,923,586
Income	55,600,045	40%	22,240,018
Market	56,178,539	10%	5,617,854
Appraisal Conclusion			57,781,458

Q. Please describe any assumptions, extraordinary assumptions, hypothetical conditions, and/or limiting conditions that you applied to the valuation.

A. The major assumptions and limiting conditions used in preparing our appraisal of the East Whiteland's Wastewater Collection System and Purchased Treatment Capacity are described in our appraisal report "Fair Market Appraisal Report of East Whiteland Township, Pennsylvania's (PA) Wastewater Collection System and Purchased Treatment Capacity, as of January 8, 2021." Beyond the above-described assumptions, there are no

extraordinary[1] or hypothetical[2] assumptions (as defined in the 2020-2021 edition of USPAP).

Q. How was each assumption used and what was its result?

A. The assumptions are detailed in my appraisal report and are discussed further in this testimony.

Q. How did you develop the weighting applied to each approach in your appraisal and why are the individual weights you chose appropriate for this proposed transaction?

A. For the cost approach I chose a weighting of 50%. It is my opinion that this weighting is appropriate for the cost approach because the major purpose of this appraisal is to be an input to the Commission's establishment of cost for future ratemaking and the cost approach conclusion is directly reflective of the property cost.

For the market approach, I chose a weighting of 10%. It is my opinion that this weighting is appropriate for the market approach because while the market approach provides some information as to the value of the property, establishing comparability between the individual sales to the subject property is difficult and uncertain therefore requiring less weight of the market approach and the 10% weight accomplishes that objective.

[1] Extraordinary assumption: an assignment-specific assumption as of the effective date regarding uncertain information used in an analysis which, if found to be false, could alter the appraiser's opinions or conclusions. 2020-2021 USPAP page 4.

[2] Hypothetical condition: a condition, directly related to a specific assignment, which is contrary to what is known by the appraiser to exist on the effective date of the assignment results, but used for the purpose of analysis. 2020-2021 USPAP page 4.

For the income approach, I chose a weighting of 40%. It is my opinion that this weighting is appropriate for the income approach because the income approach reflects the value of the property's return to the property's owner. The 40% weight accomplishes that objective.

Q. Did you conduct an on-site inspection of the Selling Utility assets, and if so, what was its result on the appraisal?

A. No. AUS Consultants relied on the aging of the investment provided in the Engineer's Assessment to assess the condition of the system.

Q. What Utility Earnings Report was used to create the capital structure used in your appraisal?

A. I used a market required capital structure (detailed in the Cost of Capital / Required Return portion of our appraisal report). Information used in developing the market capital structure was obtained from financial statistics reported in Value Line Investment Survey for the water / wastewater industry published in their January 1, 2021 issue.

Q. What capital structure was used in your appraisal?

A. The capital structure used in my appraisal is included below.

Water and Wastewater Cost of Capital
First Quarter 2021 (0-01-2021)

As an Investor-Owned Utility

Weighted Cost of Capital (Discount Rate)

(1)	(2)	(2a)	(3)	(3a)	(4)	(4a)	(5)
	Portion of Capital AUS Input	Type of Data	Capital Cost AUS Input	Type of Data	Tax Rate	Tax affect on cost of capital	After-tax Market Capital Cost (2)*(3)*(4a)
Debt	29%	Market	2.79%	Market	28.89%	71.11%	0.58%
Equity	71%	Market	9.85%	Market	0.0%	100.0%	6.99%
Total Capital r	**100.0%**						**7.57%**
Growth (g)							**1.82%**
Rate without Growth: [(1+r)/(1+g)]-1							**5.65%**

Cost Approach

Q. Regarding your application of the cost approach, what method did you use to determine the cost approach result (e.g. original cost, replacement cost, reproduction cost)?

A. I used the replacement cost method.

Q. Please explain why you chose the replacement cost method.

A. I chose the replacement cost method because it is considered the proper starting point for a cost approach. Replacement cost reflects the appraisal date cost of providing the property's functionality and capacity at the appraisal date using recognized materials and labor costs.

Q. What index did you use for that method?

A. I used the Handy Whitman Index of Public Utility Construction Costs for the Water Industry (Northeastern US Region), AUS Telephone Index (General Plant), and various United States Bureau of Labor Statistics cost index series.

Q. Under your application of the cost approach what assets did you value or trend differently from other assets and why was that necessary?

A. I costed each property account with cost trends appropriate for the property contained in the account. As such, the costing of each property account may differ from account to account. It is my opinion that an accurate appraisal requires each property account be costed with cost trends reflective of the property contained in the account. For the assets associated with Land and Land Rights, appraisal date costs were estimated. For the appraisal date cost of obtaining and registering the easement with the Register of Deeds, estimates were developed based on the time and cost associated with developing the easement, contacting the property owner and registering the easement.

East Whiteland Township's property, as detailed in the Pennoni Associates, Inc. "Engineer's Assessment" of $43,447,309.24, including purchase treatment capacity, was determined to have a replacement cost new of $85,964,664 summarized as follows:

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
As of January 8, 2021

		Grand Total	43,447,309.24		1.96	85,233,123	1.01	85,964,664

These results are detailed in Application **Exhibit R** (AUS Appraisal) under the Cost Approach section.

Q. Under your application of the cost approach, what date did you use for calculating the depreciation or condition of the property?

A. I used the date of January 8, 2021.

Q. How did you determine the depreciation parameters of survival/retirement characteristics and service lives for the utility property under the cost approach?

A. I determined those parameters based on our review of the depreciation studies filed by Pennsylvania-American Water Company ("PAWC") and Aqua Pennsylvania Wastewater, Inc. ("Aqua") in support of their depreciation parameters (Iowa-type Survival Characteristics and Service Lives) and the resultant depreciation expense and rate base (net book) in their recent General Rate Cases (R-2017-2595853, R-2020-3019371 and R-2018-3003561) and AUS Consultants' experience in preparing depreciation studies for the water and wastewater industry and our experience appraising water and wastewater properties. The following table summarizes those studies and AUS Consultants' review of the depreciation parameters:

Summary of PAWC & Aqua Depreciation Studies Prepared for Rate Case

398.00	OTHER TANGIBLE PLANT		SQ			25	

Q. Why are those parameters appropriate?

A. Those parameters are appropriate because the parameters reflect the actual service life experienced by Aqua in serving wastewater customers in the Commonwealth of Pennsylvania and which were adjudicated by the PUC in PAWC's 2017 General Rate Case, PAWC's 2020 General Rate Case (Docket Nos. R-2020-3019369 and R-2020-30193371, respectively), and Aqua's 2018 General Rate Case (Docket No. R-2018-3003561). The parameters in the following table also reflect AUS Consultants' experience of the survival / retirement characteristics of normal and functional service lives of wastewater properties:

9 10 11 12 13

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
January 8, 2021

Summary of Account Costing and Depreciation Parameters Used in the Depreciation Original Cost and the Depreciated Replacement Cost New Studies

10 11 12

Also, due the age of East Whiteland Township's early property installations, the maximum depreciation was limited to 85% of the cost new.

Q. What was the result of the application of the depreciation parameters to the previously described replacement cost new of $85,964,664?

A. With the application of the above-described depreciation parameters, the replacement cost new of $85,964,664 results in a replacement cost new less depreciation of $58,078,339 determined as follows:

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
As of January 8, 2021

Grand Total		24.57	85,964,664		68.23	46.41	70.71	0.68	58,078,339

The above replacement cost new less depreciation represents the cost approach of the tangible assets of East Whiteland Township's wastewater system. In addition to the above-described tangible assets, are intangible assets; in East Whiteland Township's case, which

consist of the contracts associated with its wastewater treatment contracts held with the following communities:

Municipality	2020 YTD Projected
Charlestown Township	
Treatment Charge	80,068
Subtotal Charlestown Twp	80,068
Malvern Borough	
Treatment Charge	150,300
Subtotal Malvern Borough	150,300
East Whiteland Service Revenues	
Total Revenues	3,761,787

These contracts represent value assets which are included in the overall income and market approaches which are not specifically addressed in the cost approach of the tangible assets; therefore, in order to make the cost approach comparable to the income and market approaches these intangible assets were separately appraised and included in the cost approach totals. AUS Consultants developed an income approach estimate to the value which was relied upon for the contract values.

The 2020 budget estimate the revenues and expenses of the wastewater treatment contracts were used in order to develop the estimated operating income as a surrogate for the cash flows associated the wastewater treatment contracts. The estimated cash flows were next discounted to appraisal date values using the cost of capital of 5.65% i.e., the cost of capital of 6.99% with the embedded growth rate of 1.82% removed; the development of

which is described in the Cost of Capital section of the workpapers. The income approach to the wastewater treatment contracts was developed as follows:

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
As of January 8, 2021

Income Approach to Trearment Agreements Valuation

Municipality	2020 YTD Actual	2021 Projected		Expenses	Operating Income	Value Capitalized @ 5.65%
						5.65%
Charlestown Township						
Treatment Charge	80,068					
Subtotal Charlestown Twp	80,068	80,068	1.39%	45,324	34,744	614,938
Malvern Borough						
Treatment Charge	150,300					
Subtotal Malvern Borough	150,300	150,300	2.61%	85,105	65,195	1,153,894
Total East Whiteland Revenues						
Total Revenues	5,428,667	5,759,816		3,260,709		1,768,832

Based on the Income Approach analysis, the wastewater treatment contracts were determined to have a value of $1,768,832 which was included in the final cost approach to value as follows:

East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
As of January 8, 2021

	Column Reference in OCLD & RCNLD	Amount in $s
Depreciated Replacement Cost (RCNLD)		
Original Cost (OC)	(9)	43,447,309
Replacement Cost New (RCN)	(16)	85,964,664
Replacement Cost New less Depreciation (RCNLD)	(31)	58,078,339
Intangible Assets - Treatment Contracts		1,768,832
Fair Market Vaue (FMV)	(41)	59,847,171

This conclusion which was tested for economic obsolescence based on the results of the income and market approaches which will be described in the remainder of this testimony. Based on our review of the preliminary cost approach and the results of the income and market approaches, no economic obsolescence exists at the preliminary cost approach conclusion of $59,847,171; therefore, the final cost approach conclusion was determined to be $59,847,171. These results are detailed in Application **Exhibit R** (AUS Appraisal) under the Cost Approach section.

Market Approach

Q. Regarding your application of the market approach, what methods did you use to determine the market approach result?

A. I used the comparable sales of water and wastewater properties in the Commonwealth of Pennsylvania subsequent to the passage of Section 1329 and financial market value ratios of publicly traded water and wastewater companies as reported in the January 1, 2021, issue of Value Line Investment Survey.

Q. What assumptions, analyses, and/or adjustments did you make under each method?

A. Under the comparable sales method, it is my opinion that sales amount to depreciated replacement cost is the best indicator in arriving at the appraised value of physical assets operating as a wastewater collection system. Under the financial ratios method, I believe that an accurate result depends on using the weighted mean of the ratio of the market debt and equity to book debt and equity.

Q. What were the results of each analysis you performed?

A. The comparable sales analysis produced a result of $56,178,539 detailed as follows:

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
As of January 8, 2021

1

Q. What was your market approach result?

A. I used the results of $56,178,539 because I believe those results represent an accurate assessment and it was based on the relationship of market comparable sales to the replacement cost new less depreciation of those properties. These results are detailed in Application **Exhibit R** (AUS Appraisal) under the Market Approach section.

Q. What was the calculation you used to determine your overall market approach results?

A. I used the weighted mean of the purchase price to replacement cost less depreciation.

Q. What comparable transactions or comparable sales did you evaluate to develop your market approach?

A. I examined the following transactions to develop the result of my market approach:

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Investor-Owned Utility
As of January 8, 2021

Comparable Sales Approach

Income Approach

Q. Regarding your application of the income approach, what method did you use to determine the income approach result?

A. I used the discounted cash flow method.

Q. What assumptions did you employ to develop your income approach result?

A. Under the income approach, it is my opinion that the results of the future operations of the East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity must be considered. I believe that an accurate result depends on adjusting recent results of the systems operation to better reflect how those results will migrate over future periods under the operation as a rate regulated wastewater system regulated by the PUC.

Q. What discount rate did you use to calculate your income approach?

A. I used a discount rate of 7.57% and 5.65% capitalization rate.

Q. Please explain how you developed the discount rate.

A. In each case, the discount rate was a market discount rate at the appraisal date and was determined using the weighted average cost of capital ("WACC") of both debt and equity. The inputs to the WACC determination, capital structure, cost of debt, cost of equity, and income tax rate (state and federal) were determined based on an analysis of Value Line Investment Surveys and the Ibbotson Stock, Bonds, Bills, and Inflation ("Ibbotson SBBI") 2021 Edition (SBBI activity over the period 1926 through 2020). The cost of debt was determined at January 1, 2021, based on the Value Line Selected Yields publication. The

cost of equity was based on the capital asset pricing model ("CAPM") and the Dividend Growth Model ("DGM"), two recognized cost of equity estimating models and the PUC's Bureau of Technical Utility Services' Report on Quarterly Earnings of Jurisdictional Utilities for Year-ending December 31, 2020. The above-described data for the East Whiteland Township appraisal can be found in the exhibits to my appraisal report in the section entitled Cost of Capital / Required Return.

Q. What capital structure inputs differ from those identified in capital structure set forth earlier in your testimony?

A. None. As described in the previous discussion of the capital structure, we utilized a market required capital structure based on analysis of the water / wastewater industry's market capital structure as defined by analysis of market financials as published in Value Line Investment Survey (January 1, 2021). The theory in appraisal is to estimate the value of a property in an arm's length transaction wherein the purchaser finances the purchase with capital (debt and equity) available in the financial markets at the appraisal date. Those are the current (appraisal date) financial markets.

Q. What is the source and basis of the alternative input you propose in the income approach?

A. As discussed above, we had used Value Line Investment Survey to develop a market required capital structure. Please see Application **Exhibit R** (AUS Appraisal) Income Approach section for the cost of capital of the Income Approach and Cost of Capital / Required Return section for the basis of the Cost of Capital / Required Return.

Q. If you used a terminal value in your discounted cash flow analysis what is the number of years over which the cash flows are considered?

A. I considered those cash flows over 19 periods with period 20 representing all future periods.

Q. What is the basis for using this number of years?

A. It is my opinion that the use of 19 periods is a reasonable number of periods for the forecast revenues and expenses to stabilize.

Q. What is your Income Approach conclusion?

A. AUS Consultants' income approach conclusion was determined to be $55,600,045 detailed as follows:

East Whiteland Township, Pennsylvania
East Whiteland Township's Wastewater Collection System and Purchased Treatment Capacity
Wastewater Collection System and Purchased Treatment Capacity
Potential Purchaser: Investor-Owned Utility
As of January 8, 2021

These results are detailed in Application **Exhibit R** (AUS Appraisal) under the Income Approach section.

Q. What number of Selling Utility customers or equivalent dwelling units did you use to value the Seller's system and how did you develop that number?

A. I used 3,918 customers based on a customer listing provided by East Whiteland Township in developing the forecasted revenues and expenses. I also used past and budgeted results from operations to establish forecasted operating results.

Q. Did you make any updates to your appraisal after it was submitted to the Seller, and if so, what was the update, when was it made, and why was it necessary?

A. No.

Q. Does this conclude your direct testimony?

A. It does. However, by filing this direct testimony I understand that I may have the opportunity to submit additional testimony responsive to challenges to my appraisal.

Curriculum Vitae (CV) of Jerome C. Weinert, P.E., CDP, ASA

Mr. Weinert is currently Principal and Director of AUS Consultants, Depreciation and Valuation. He has forty-nine (2021-1972) years' experience in valuation and depreciation consulting and management. AUS, with offices across the country, has provided consulting services to the regulated utility industry nationally for over thirty-nine years. A partial list of services provided includes valuations depreciation studies, rate of return studies, cost of service studies, and rate design.

Prior to joining AUS in 1987, Mr. Weinert was employed by American Appraisal Associates, Inc. (American) for sixteen years in their Regulated Industries Group. He held various positions at American, the last being supervising appraiser. Among his other valuation responsibilities, he directed the firm's utility industry capital recovery studies and AUS Consultant's valuation of communication company assets and businesses.

Mr. Weinert graduated from the Milwaukee School of Engineering with a Bachelor of Science degree in Mechanical Engineering and received a master's in business administration from Marquette University. He is a registered professional engineer (1976) (by examination) in the state of Wisconsin as well as a senior member (1982) of the American Society of Appraisers in the public utility valuation field. This latter designation is obtained by written examination primarily in the areas of utility valuation, depreciation, and the economics of regulated firms. He is also a Certified Depreciation Professional (1997) (CDP) and founding member of the Society of Depreciation Professionals and the Society's 1995 President and sponsor of the Society's Certification and re-certification program as such Mr. Weinert developed these programs and oversaw their initial introduction into the Society. He also worked in conjunction with Society members in the development of the Society's training programs which as of 2003 has become the only such formalized depreciation training program in the North America and is an instructor in several of its courses.

During his professional career related to valuations and depreciation matters Mr. Weinert has testified before various courts and public service commissions on these subjects. He has also assisted numerous utilities in preparing capital recovery plans which specifically address the issues of plant replacement. Mr. Weinert has also presented expert testimony on valuation matters. Mr. Weinert has testified before the Pennsylvania Public Utility Commission on regulatory matters associated with Pennsylvania Section 1329 matters. On matters related to eminent domain issues, Mr. Weinert has presented expert testimony in the Massachusetts Superior Court, the Court of Common Pleas, Fayette County, Ohio, the New Hampshire Public Utilities Commission, the Twentieth Judicial Court (deposition only) in Charlotte County, Florida, the Nineteenth Judicial Circuit Court in St. Lucie County, Florida (deposition only). In regard to ad valorem taxation, Mr. Weinert has presented study results to the New York State Board of Equalization and Assessment (now the New York Office of Real Property Services (NY ORPS)), pertaining to useful life and net salvage values for all types of utility property subject to the Board's mass appraisal model. Mr. Weinert has appeared before the Valuation Adjustment Board in Florida for Duval, Hillsborough, Okeechobee, and Palm Beach counties, the Twelfth Judicial Circuit Sarasota County, Florida, the California Board of Equalization and Assessment, the Arizona Board of Assessment, the Missouri Board of Taxation, the Colorado and Texas Departments of Review, the Massachusetts Tax Appeal Court, the Superior Court of the State of Arizona in the County of Maricopa, the State Tax Appeal Board of the State of Montana, the New York City Tax Commission and the Public Utility Commission of Pennsylvania Section 1329 hearings (8).

Mr. Weinert has appeared before regulatory bodies in Alaska, Arkansas, Illinois, Indiana, Iowa, Missouri, Nevada, Nebraska, North Carolina, Ohio, Oregon, Pennsylvania, and South Carolina in support of rate-base valuation determination and capital recovery. He has presented testimony on depreciation matters before the Canadian Radio-Television and Telecommunications Commission (CRTC) and the United

States Federal Energy Regulatory Commission (FERC). In terms of water and wastewater acquisitions and applications for regulatory approval of rate base Mr. Weinert has testified for two investor-owned acquisitions of municipal wastewater authorities one representing the municipality and secondly for the acquiring investor-owned utility. He has submitted study results to the State Commissions of Alabama, Alaska, Arkansas, Idaho, Illinois, Indiana, Iowa, Kentucky, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, North Carolina, Oregon, Pennsylvania, South Carolina, Washington, and Wisconsin, and the Federal Communications Commission.

Mr. Weinert has presented papers on valuation and depreciation topics to professional and utility industry trade organizations. He also directed AUS Consultants' semi-annual week-long depreciation training programs (1988-1997). These specialized training courses, offered at basic and advanced levels, teach depreciation study techniques to public utility and public service commission staff specialists. The training includes depreciation theory and concepts and hands-on experience with personal computer-based analytical depreciation programs.

RESPONSES TO STANDARD DATA REQUESTS

Respondent: William C. Packer
Vice President – Regulatory Accounting and Regional Controller of Aqua Pennsylvania, Inc.
Date: July 23, 2021

AQUA PENNSYLVANIA WASTEWATER, INC.
EAST WHITELAND TOWNSHIP
Section 1329 Application Standard Data Requests

Rates/Ratemaking

1. Estimate the potential monthly incremental cost impact on existing and acquired customers following the actual results of the Buyer's most recently adjudicated base rate proceeding, whether litigated or settled, allocating the fair market value of the acquired system according to the Buyer's previously approved single-tariff pricing model.

   a. In the case of a wastewater acquisition, a Buyer that employs a combined revenue requirement pursuant to 66 Pa. C.S. § 1311 will provide information assuming a combined water and wastewater revenue requirement consistent with its most recent adjudicated base rate proceeding.

   b. If a Buyer has filed the thirty-day notice of 52 Pa. Code § 53.45(a), or has filed a rate case, it should calculate the above using data as proposed in its upcoming or filed rate case.

Response: Regarding a. and b. above, please refer to Appendix A of Aqua Statement No. 1, Direct Testimony of William C. Packer, included as Exhibit U to the Application.

Respondent: William C. Packer
Vice President – Regulatory Accounting and Regional Controller of Aqua Pennsylvania, Inc.
Date: July 23, 2021

AQUA PENNSYLVANIA WASTEWATER, INC.
EAST WHITELAND TOWNSHIP
Section 1329 Application Standard Data Requests

Rates/Ratemaking

2. If the Buyer has a present intention to increase the acquired system's rates to a certain level, please state the basis for the targeted rate.

Response: Aqua has no present intention to increase East Whiteland Township rates to a targeted rate.

Respondent: William C. Packer
Vice President – Regulatory Accounting and Regional Controller of Aqua Pennsylvania, Inc.
Date: July 23, 2021

AQUA PENNSYLVANIA WASTEWATER, INC.
EAST WHITELAND TOWNSHIP
Section 1329 Application Standard Data Requests

Rates/Ratemaking

3. Provide the annual depreciation expense using the purchase price/proposed rate base. If the exact depreciation expense is not available, provide the best estimate of the annual depreciation expense. Show how the depreciation expense is calculated.

Response: Please refer to Appendix A of Aqua Statement No. 1, Direct Testimony of William C. Packer, included as Exhibit U to the Application.

Re: Municipal Facilities – Free Sewer Service

Dear Tom:

As requested, please let this letter serve as your notice that we understand that, if the proposed sale of our sewer system to Aqua is consummated, then free future sewer service to three municipal facilities will be ended. Those buildings are:

- East Whiteland Township Municipal Building, 209 Conestoga Road, Frazer, PA 19355
- East Whiteland Township Public Works Building, 215 Conestoga Road, Frazer, PA 19355
- East Whiteland Township Volunteer Fire Association Building, 205 Conestoga Road, Frazer, PA 19355

If you need any further information, please let me know. Thanks

Sincerely,

John Nagel

9. Are there any leases, easements, and access to public rights-of-way that Buyer will need in order to provide service which will not be conveyed at closing? If yes, identify when the conveyance will take place and whether there will be additional costs involved.

Response: The Company is not presently aware of any needed leases, easements or access to public rights-of-way that will not be transferred at closing. The Township and Abstractor is currently reviewing real property records to determine any needed easements and will be obtaining any needed easements in accordance with Article 6 of the Asset Purchase Agreement.

For professional services rendered to Aqua Pennsylvania Wastewater, Inc. during May and June 2021 in connection with the following matter:

AQUAWW-0033	**Acquisition of East Whiteland Township**	
	[redacted]	$ 3,901.00
		$ 0.00
	TOTAL	**$ 3,901.00**

Respondent: William C. Packer
Vice President – Regulatory Accounting and Regional Controller of Aqua Pennsylvania, Inc.
Date: July 23, 2021

AQUA PENNSYLVANIA WASTEWATER, INC.
EAST WHITELAND TOWNSHIP
Section 1329 Application Standard Data Requests

Costs/Benefits

11. Please describe known and anticipated general expense savings and efficiencies under Buyer's ownership. State the basis for all assumptions used in developing these costs and provide all supporting documentation for the assumptions, if available.

Response: Aqua estimates annual operating and maintenance expenses of approximately $1.97M based on East Whiteland Township's operating expenses presented in the 2019 financial statements adjusted by the Company. The assumed reduction in operating costs is based on Aqua's experience and estimates of costs during the first year of operations. Please also refer to the direct testimony of William C. Packer (Aqua Statement No. 1), included in the Application as Exhibit U, for further costs/benefits of the system under the Buyer's ownership.

AQUA PENNSYLVANIA WASTEWATER, INC.
EAST WHITELAND TOWNSHIP
Section 1329 Application Standard Data Requests

Costs/Benefits

12. Please provide a copy of the Seller's request for proposals (if there was one) and any accompanying exhibits with respect to the proposed sale of the system.

Response: Please see the attachment to SDR-12.

EAST WHITELAND TOWNSHIP

SEWER SYSTEM TRANSACTION - REQUEST FOR BIDS ("RFB")

PRE-QUALIFIED BIDDERS ONLY

RFB Distributed: September 15, 2020

Proposals Due: October 13, 2020

1. GENERAL INFORMATION FOR THE PROPOSER:

This Request for Bids ("RFB") is being provided to your team by the Township of East Whiteland, Chester County (together "East Whiteland" or the "Seller") to solicit a final, binding proposal (the "Proposal") to enter into either the Asset Purchase Agreement (the "APA"), or Asset Lease Agreement (the "ALA") (collectively referred to as the "Bidding Documents") for the sanitary sewer collection and conveyance system (the "Sewer System").

The assets included in the Transaction are described in more detail in the Bidding Documents. Except for removing relevant bracketed information and filling in blanks, and except as otherwise provided herein, no changes will be permitted to the Bidding Documents prior to signing, without written consent from East Whiteland.

All recipients of this RFB submitted responses to the Request for Qualifications for Sewer System Monetization dated January 31, 2020 (the "RFQ") and were determined to be eligible for consideration in moving forward with the proposed transaction process ("Pre-Qualified Proposers"). The Pre-Qualified Proposers were subsequently provided with the opportunity to conduct additional due diligence on the sewer system assets included in the Bidding Documents (the "System"), including (i) access to an online data room, and (ii) meetings with East Whiteland representatives and advisors. In addition, East Whiteland solicited feedback on drafts of the Bidding Documents.

2. SYSTEM DESCRIPTION:

All assets owned by the Seller comprising the System are set forth in Section 2.01 of the Bidding Documents.

3. INFORMATION REQUIRED FROM PROPOSERS AND SELECTION CRITERIA:

All Pre-Qualified Proposers eligible to respond to this RFB were deemed eligible to move forward based on their demonstrated technical and financial qualifications detailed in their response to the RFQ. All Pre-Qualified Proposers who submit a response to this RFB ("Proposers") must comply with the requirements set forth in this document for submitting a Proposal. Provided that the Proposal requirements are met and the Proposer is found to remain qualified, responsible and responsive, the award of the Agreement will be based what the Township deems to be the best overall transaction. In accordance with

62 Pa.C.S. §513(d), the contents of Proposals will not be publically disclosed at the time of opening of the Proposals.

Each Proposal shall be in writing and formatted in accordance with the following outline:

Section 1.0 Executive Summary

Proposal Form 1: Transmittal Letter

Proposal Form 2: Non-Collusion Affidavit

Section 2.0 Project Team and Technical Capability Information

Proposal Form 3: Statement of Ownership - Proposer

Proposal Form 4: Operator Information

Proposal Form 5: Contract and Lobbyist Disclosure

Section 3.0 Business Proposal

Proposal Form 6: Business Proposal – 3 Year Rate Freeze

4. SUBMISSION INSTRUCTIONS AND REQUIREMENTS:

One (1) original and two (2) hard copies of the Proposal shall be submitted, with the original copy of the Proposal clearly marked as the original and must contain the original signature forms and other original documents. ***All packages shall be sealed and clearly marked with the legend: "RESPONSE TO EAST WHITELAND SEWER SYSTEM RFB."*** In accordance with Section 8 of this RFB, the contents of the Proposal will not be made public until after the award of a contract. The Proposal shall be submitted in a sealed envelope or package addressed to:

PFM Financial Advisors LLC
c/o Garrett Moore
213 Market Street
Mail Room Third Floor
Harrisburg, PA 17101

THE SEALED PROPOSAL MUST BE RECEIVED NO LATER THAN 2:00 P.M. EASTERN TIME ON OCTOBER 13, 2020.

To the extent there are any questions regarding delivery of the Proposal, please contact Garrett Moore at mooreg@pfm.com or 717-232-2723.

By submitting a Proposal, Proposers acknowledge and agree to the following conditions:

- All Proposals submitted in response to this RFB shall become the property of East Whiteland. As such, after the award of a contract, or after the opening and rejection of all Proposals, Proposals submitted will become public records subject to public review under applicable law, subject to certain exceptions as described in Section 8 of this RFB.

- The selection of a Proposal by East Whiteland shall not waive or limit any assumptions of risk, provision of indemnity, or other obligations of the Proposer under the Bidding Documents as may be executed between the Proposer and East Whiteland.

- Proposers and their representatives shall comply with the communications protocol set forth in Section 5 of this RFB with respect to all communications concerning this RFB.

- Proposals shall comply with all content requirements of Section 3 of this RFB. Failure to comply with such requirements may result in a Proposer being deemed non-responsive.

- The pre-qualification of Proposers to receive this RFB and provide a Proposal does not waive or abridge the right of East Whiteland to find that any Proposer is not qualified or that the Proposal is non-responsive to the requirements of this RFB.

- **Proposers should ensure that the written and numerical Purchase Price/Consideration in Business Proposal 6 match. Should this not be the case, the binding Purchase Price/Consideration will be assumed to be the lower of the two Purchase Price/Consideration numbers.**

- **Bids must be submitted in the form and on the date required by this RFB. No further proposals, modifications or alternative offers will be considered pursuant to this RFB.**

- **East Whiteland reserves the right to reject any and all bids and to determine not to proceed with a sale of the Sewer System at its sole discretion.**

- **Based on the outcome of regulatory determinations (if applicable) subsequent to the award of the winning bid hereunder, the Seller reserves the right to renegotiate certain terms of the Bidding Documents, including Purchase Price/Consideration, as it deems in its best interests and as are acceptable to the winning bidder.**

5. QUESTIONS AND REQUESTS FOR CLARIFICATION:

All questions and requests for clarification concerning this RFB shall be directed in writing (e-mail) to Garrett Moore, whose contact information is provided below, by **NO LATER THAN 2:00 PM EASTERN TIME ON SEPTEMBER 29, 2020.** No questions, written or oral, shall be accepted after this time.

Garrett Moore
PFM Financial Advisors LLC
mooreg@pfm.com

All questions and clarification requests should be submitted in writing, and Pre-Qualified Proposers are encouraged to submit such questions and clarification requests in advance of the above deadline. Answers to such questions provided by East Whiteland will be in writing and will be made available to all Proposers.

6. APPROVAL AND SIGNING:

East Whiteland intends to select the Proposer that offers the best overall transaction, provided that the Proposer complies with all requirements set forth in this RFB for submitting a final Proposal and is found to remain qualified, responsible and responsive. Execution of the Bidding Documents by East Whiteland will be subject to final approval and authorization by the Seller's Board (the "Board"). A recommendation will be submitted to the Boards, shortly after the conclusion of the proposal process. After selection of a Proposal and approval by the Boards, the selected Proposer and East Whiteland shall be required to execute the Bidding Documents.

7. CONFIDENTIALITY AND DISCLOSURE TO THIRD PARTIES:

The existence and contents of this letter are subject to the confidentiality agreement that you previously executed. We ask you to remind all members of your team of your obligations under such confidentiality agreement and the indemnity obligation for any violation thereof.

Proposers should be aware that records of East Whiteland are subject to the provisions of the Pennsylvania Right-to-Know Law, 65 P.S. §67.101 et seq. ("RTK Law"), and that with certain exceptions, such records are subject to public disclosure. East Whiteland understands that in responding to this RFB, Proposers will be submitting information, including financial data that the parties desire to be kept confidential. It is East Whiteland's position that this RFB is part of a competitive proposal transaction process, and that prior to the award of a contract or prior to the opening and rejection of all proposals, all such submissions are confidential and exempt from disclosure under the Section 708(b)(26) of the RTK Law, 65 P.S. §67.708(b)(26).

Proposers are advised, however, that following award of a contract or the opening and rejection of all Proposals, such submissions may be subject to public disclosure unless they are otherwise exempt from disclosure under another provision of the RTK Law. Records and information submitted by Prospective Proposers that constitute "trade secrets" or "confidential proprietary information" as defined in the RTK Law are exempt from

disclosure under Section 708(b)(11), 65 P.S. §67.708(b)(11). "Confidential proprietary information" includes commercial and financial information which is privileged or confidential to the submitting party and the disclosure of which would cause substantial harm to the competitive position of the person who submitted the information. Proposers are advised that if they believe any information being submitted in response to this Request for Bids constitutes or references trade secret or confidential propriety information, they should clearly so label any such information with a prominent label of either: "TRADE SECRET" or "CONFIDENTIAL PROPRIETARY INFORMATION." Any such claims may be subject to review pursuant to the procedures set forth in the RTK Law. If East Whiteland, the Pennsylvania Office of Open Records or a court determines that such information does not qualify as a trade secret or confidential proprietary information, such information may be subject to public disclosure.

8. RIGHT TO REJECT BIDS AND SALE; MODIFICATION OF PRICE:

East Whiteland reserves the right to reject any and all bids and to determine not to proceed with a sale of the Sewer System. In addition, based on the outcome of regulatory determinations (if applicable) subsequent to the award of the winning bid hereunder, the Seller reserves the right to renegotiate certain terms of the Bidding Documents, including Purchase Price/Consideration, as it deems in its best interests and as are acceptable to the winning bidder.

Re: East Whiteland Sewer System Request for Bids

Dear East Whiteland:

_____ (the "Proposer") hereby submits the attached Proposal in response to East Whiteland Township's Sewer System Request for Bids (the "RFB") issued by East Whiteland Township ("**East Whiteland**") on September 15, 2020, as amended.

The undersigned Proposer hereby unconditionally and irrevocably offers to enter into the Asset Purchase Agreement (the "**APA**"), or Asset Lease Agreement (the "**ALA**")(collectively the "**Bidding Documents**") for identified sewer facilities owned and operated by East Whiteland. Capitalized terms not otherwise defined in this Proposal have the meanings set forth in the Bidding Documents.

The Proposer, by its undersigned duly-authorized representative, hereby covenants, certifies, represents, and warrants, as follows in connection with this Proposal:

1. ***RFB and Addendum Acknowledgement.*** The Proposer acknowledges receipt of the RFB and the following addenda to the RFB:

Addendum No.	Date
_____	_____
_____	_____
_____	_____

2. ***Due Authorization.*** The submittal of the Proposal has been duly authorized by, and in all respects is binding upon, the Proposer.

3. ***Completeness; Warranty as to Proposal Information.*** The Proposer has submitted all Proposal Forms and such Proposal Forms are a part of this Proposal. All information and statements contained in the Proposal are current, correct and complete, and are made with full knowledge that will rely on such information and statements in determining which Proposals are responsive and responsible, and in ultimately selecting the Proposal deemed most advantageous to East Whiteland and executing the respective Bidding Documents.

4. ***Identity of Buyer***. The Buyer will be the Proposer, provided that the Proposer may, prior to the execution of the Bidding Documents pursuant to paragraph 8 below, create a subsidiary to be the Buyer (the "Subsidiary"), in which event the Subsidiary shall carry out all of the obligations of the Buyer under the Bidding Documents from and after such execution.

5. ***Final Agreements.*** The Proposer agrees to enter into the Bidding Documents in each case in the form identified as "Binding Proposal, Execution Copy" as posted in the Virtual Data Room for this Transaction (except for filling in indicated blanks and completion of Schedules as provided therein).

6. ***Purchase Price/Consideration*.** The amount of the Purchase Price/Consideration that Proposer will pay pursuant to Section 3.01 of the Bidding Documents will be the total set forth in Proposal Form 6.

7. ***Proposal Effective Period.*** This Proposal and offer shall remain in effect and irrevocable until 5:00 p.m. Eastern Daylight Savings Time on December 15, 2020, unless extended to 5:00 p.m. Eastern Daylight Savings Time on January 15, 2021 by East Whiteland or unless further extended by mutual consent of both East Whiteland and the Proposer (the "Termination Time"). In the event that the Proposal submission date is delayed, the Termination Time will be extended for the same such period. If East Whiteland does not give written notice to the Proposer that East Whiteland is prepared to enter into the Bidding Documents on or prior to the Termination Time, this offer and the terms of this Proposal shall terminate at the Termination Time.

8. ***Agreement Execution.*** If at any time prior to the Termination Time, East Whiteland gives written notice to the Proposer, at the address specified below, that they are prepared to enter into the Bidding Documents with the Proposer, the Proposer will, within two Business Days of its receipt of such notice, execute and deliver the Bidding Documents to East Whiteland.

9. ***Debarment.*** Neither the Proposer, the Operator, nor any other member of Proposer's project team is currently suspended or debarred from doing business with any governmental entity.

10. ***Contract Disclosures.*** Except as disclosed in Proposal Form 5, neither Proposer nor any member of Proposer's team has entered into any arrangement with any person or entity involving a finder's fee, fee splitting, firm affiliation or relationship with any broker- dealer, payments to consultants, lobbyists, or commissioned representatives or other contractual arrangements that could present a real or perceived conflict of interest.

11. ***No Litigation.*** There is no action, suit or proceeding, at law or in equity, before any

court or similar governmental body, against the Proposer, wherein an unfavorable decision, ruling or finding would have a materially adverse effect on the ability of the Proposer to perform its obligations under the Bidding Documents contemplated hereby, or which, in any way, would have a materially adverse effect on the validity or enforceability of the obligations proposed to be undertaken by the Proposer, or any Bidding Documents or instrument entered into by the Proposer in connection with the Transaction contemplated hereby.

12. ***Certain Representations.*** The Proposer represents and warrants that (1) Proposer has full power and authority to make this offer and submit this Proposal; (2) Proposer, or the Subsidiary, will have full power and authority to execute and deliver the Bidding Documents pursuant to the terms hereof; (3) such actions do not and will not violate the terms of any of the Proposer's or the Subsidiary's organizational documents or any agreement binding upon it or the terms of any Applicable Law; (4) no further consent to this offer or Proposal or to the execution of the Bidding Documents pursuant to the terms hereof is required to be obtained from any other Person or Governmental Authority; and (5) this offer and Proposal constitute, and the Bidding Documents, if executed pursuant to the terms hereof, will constitute duly authorized, valid and legally binding obligations of the Proposer, or the Subsidiary, enforceable in accordance with their respective terms, except as may be limited by bankruptcy, reorganization, insolvency, moratorium, fraudulent conveyance or transfers, or other laws affecting creditor's rights generally, and subject to general principles of equity (regardless of whether in law or in equity).

13. ***Material Changes.*** The Proposer has disclosed as an attachment to this Proposal all material changes from the information provided in the Proposer's RFQ Response.

14. ***Principal Contact.*** The principal contact person who will serve as the interface between the Governmental Party and the Proposer for all communications is:

Re: East Whiteland Sewer System Request for Bids

Dear East Whiteland:

Aqua Pennsylvania Wastewater, Inc. (the "Proposer") hereby submits the attached Proposal in response to East Whiteland Township's Sewer System Request for Bids (the "RFB") issued by East Whiteland Township ("**East Whiteland**") on September 15, 2020, as amended.

The undersigned Proposer hereby unconditionally and irrevocably offers to enter into the Asset Purchase Agreement (the "**APA**") for identified sewer facilities owned and operated by East Whiteland. Capitalized terms not otherwise defined in this Proposal have the meanings set forth in the APA.

The Proposer, by its undersigned duly-authorized representative, hereby covenants, certifies, represents, and warrants, as follows in connection with this Proposal:

1. ***RFB and Addendum Acknowledgement.*** The Proposer acknowledges receipt of the RFB and the following addenda to the RFB:

Addendum No.	Date

2. ***Due Authorization.*** The submittal of the Proposal has been duly authorized by, and in all respects is binding upon, the Proposer.

3. ***Completeness; Warranty as to Proposal Information.*** The Proposer has submitted all Proposal Forms and such Proposal Forms are a part of this Proposal. All information and statements contained in the Proposal are current, correct and complete, and are made with full knowledge that East Whiteland will rely on such information and statements in determining which Proposals are responsive and responsible, and in ultimately selecting the Proposal deemed most advantageous to East Whiteland and executing the Agreement.

4. ***Identity of Buyer***. The Buyer will be the Proposer, provided that the Proposer may, prior to the execution of the Agreement pursuant to paragraph 8 below, create a subsidiary to be the Buyer (the "Subsidiary"), in which event the Subsidiary shall carry out all of the obligations of the Buyer under the Agreement from and after such execution.

5. ***Final Agreements.*** The Proposer agrees to enter into the Agreement in each case in the form identified as "Binding Proposal, Execution Copy" as posted in the Virtual Data Room for this Transaction (except for filling in indicated blanks and completion of Schedules as provided therein).

6. ***Purchase Price.*** The amount of the Purchase Price that Proposer will pay pursuant to Section 3.01 of the Agreement will be the total set forth in Proposal Form 6.

7. ***Proposal Effective Period.*** This Proposal and offer shall remain in effect and irrevocable until 5:00 p.m. Eastern Daylight Savings Time on December 15, 2020, unless extended to 5:00 p.m. Eastern Daylight Savings Time on January 15, 2021 by East Whiteland or unless further extended by mutual consent of both East Whiteland and the Proposer (the "Termination Time"). In the event that the Proposal submission date is delayed, the Termination Time will be extended for the same such period. If East Whiteland does not give written notice to the Proposer that East Whiteland is prepared to enter into the Bidding Documents on or prior to the Termination Time, this offer and the terms of this Proposal shall terminate at the Termination Time.

8. ***Agreement Execution.*** If at any time prior to the Termination Time, East Whiteland gives written notice to the Proposer, at the address specified below, that they are prepared to enter into the Agreement with the Proposer, the Proposer will, within two Business Days of its receipt of such notice, execute and deliver the Agreement to East Whiteland.

9. ***Debarment.*** Neither the Proposer, the Operator, nor any other member of Proposer's project team is currently suspended or debarred from doing business with any governmental entity.

10. ***Contract Disclosures.*** Except as disclosed in Proposal Form 5, neither Proposer nor any member of Proposer's team has entered into any arrangement with any person or entity involving a finder's fee, fee splitting, firm affiliation or relationship with any broker- dealer, payments to consultants, lobbyists, or commissioned representatives or other contractual arrangements that could present a real or perceived conflict of interest.

11. ***No Litigation.*** There is no action, suit or proceeding, at law or in equity, before any court or similar governmental body, against the Proposer, wherein an unfavorable decision, ruling or finding would have a materially adverse effect on the ability of the Proposer to perform its obligations under the Agreement contemplated hereby, or which, in

any way, would have a materially adverse effect on the validity or enforceability of the obligations proposed to be undertaken by the Proposer, or any agreement or instrument entered into by the Proposer in connection with the Transaction contemplated hereby.

12. ***Certain Representations.*** The Proposer represents and warrants that (1) Proposer has full power and authority to make this offer and submit this Proposal; (2) Proposer, or the Subsidiary, will have full power and authority to execute and deliver the Agreement pursuant to the terms hereof; (3) such actions do not and will not violate the terms of any of the Proposer's or the Subsidiary's organizational documents or any agreement binding upon it or the terms of any Applicable Law; (4) no further consent to this offer or Proposal or to the execution of the Agreement pursuant to the terms hereof is required to be obtained from any other Person or Governmental Authority; and (5) this offer and Proposal constitute, and the Agreement, if executed pursuant to the terms hereof, will constitute duly authorized, valid and legally binding obligations of the Proposer, or the Subsidiary, enforceable in accordance with their respective terms, except as may be limited by bankruptcy, reorganization, insolvency, moratorium, fraudulent conveyance or transfers, or other laws affecting creditor's rights generally, and subject to general principles of equity (regardless of whether in law or in equity).

13. ***Material Changes.*** The Proposer has disclosed as an attachment to this Proposal all material changes from the information provided in the Proposer's RFQ Response.

14. ***Principal Contact.*** The principal contact person who will serve as the interface between the Governmental Party and the Proposer for all communications is:

Proposal Form 6- East Whiteland Township Sewer System RFB
Business Proposal

For the purposes of Proposal Form 6 please provide your Purchase Price/Consideration assuming a three-year rate freeze, outlined in the Bidding Documents, **were to be imposed** by East Whiteland.

The amount of the Purchase Price/Consideration that Proposer offers to pay pursuant to Section 3.01 of the Bidding Documents is:

US **$54,930,000.00 (calculated as $55,000,000 less the $70,000 in fees reimbursable to Seller per Section 3.01c)**

Fifty-four Million Nine Hundred and thirty thousand dollars and Zero Cents United States Dollars.

Proposers should ensure that the written and numerical Purchase Price in this Business Proposal exactly match. Should this not be the case, the binding Purchase Price will be assumed to be the lower of the two Purchase Price numbers.

Please provide nonbinding indicative rates that relate to the Purchase Price/Consideration above. For the purpose of transparency, and to aid in comparing bids, please feel free to add any clarifying remarks in the area provided below. AT A MINIMUM, please specify, 1) the amount of subsidization, if any, you are assuming, via Act 11; 2) whether the rates provided below include any DSIC surcharge, and 3) at this time do you anticipate requesting any DSIC surcharge in your next rate filing

Please note, completion of the indicative rates section below is required for your bid to be deemed as "compliant".

Indicative rates for the next 10 years:

2021 **(See Rate Ordinance)**
2022 **(See Rate Ordinance)**
2023 **(See Rate Ordinance) $37.31 (+2.5% DSIC)**
2024 **$53.42**
2025 **$54.76 (+2.5%DSIC)**
2026 **$56.13 (+2.5% DSIC)**
2027 **$56.13**
2028 **$57.53 (+2.5% DSIC)**
2029 **$58.97 (+2.5% DSIC)**
2030 **$59.00 (+0.05% DSIC)**

Description of rates and considerations as outlined above:

1. ***The Company's 10-year projection of rates for the costs associated with the acquisition of the East Whiteland Wastewater system assume base rate increases in 2025 and 2028, assuming an Asset Purchase Agreement is signed no later than March 1, 2021.***
2. ***The Company assumes approximately 30% cost allocation, and a DSIC surcharge beginning no sooner than 2023. These projections are for illustrative purposes and reflect reasonable expectations of the Company based on current industry trends, however, are subject to changes and the approval of the PA Public Utility Commission.***

TOWNSHIP OF EAST WHITELAND
CHESTER COUNTY, PENNSYLVANIA

ORDINANCE NO. #325

AN ORDINANCE AUTHORIZING THE EXECUTION BY EAST WHITELAND TOWNSHIP (THE "TOWNSHIP") OF AN ASSET PURCHASE AGREEMENT (THE "PURCHASE AGREEMENT") BETWEEN THE TOWNSHIP AND THE PURCHASER, AQUA PENNSYLVANIA WASTEWATER, INC. ("AQUA"); AUTHORIZING THE ASSIGNMENT OF THE TOWNSHIP'S RIGHTS AND OBLIGATIONS IN ALL RELEVANT AGREEMENTS TO AQUA; AUTHORIZING AND APPROVING ALL CONVEYANCE INSTRUMENTS; AUTHORIZING COMMUNICATIONS OF INFORMATION AND COOPERATION WITH AQUA; AUTHORIZING ALL ACTIONS RELATING TO THE EXECUTION OF THE PURCHASE AGREEMENT AND THE ASSIGNMENT OF ALL RELEVANT AGREEMENTS; AUTHORIZING INCIDENTAL ACTION TO BE TAKEN BY SPECIFIED OFFICERS OF THE TOWNSHIP; AND REPEALING INCONSISTENT ORDINANCES AND RESOLUTIONS.

WHEREAS, Township is a body corporate and politic, organized and existing under the Second Class Township Code of the Commonwealth of Pennsylvania, 53 P.S. §65101, et. seq. (the "Code").

WHEREAS, the Township currently owns and operates a sanitary wastewater collection and disposal system (the "System") that provides wastewater service to various customers primarily within the Township; and

WHEREAS, the Township previously decided to pursue the sale of all of the assets, properties and rights of the Township (whether tangible, real, personal or mixed) which are exclusively held and used by it in connection with the System, as set forth in the Purchase Agreement (the "System Assets") through a competitive bidding process (the "Assets Sale"); and

WHEREAS, the Township issued a Request for Qualifications (the "RFQ") and qualified four bidders and a subsequent Request for Bids (the "RFB") to solicit binding bids from interested and qualified companies and entities to purchase the System; and

WHEREAS, the Township received four responses to the RFQ and, after the opportunity for due diligence, received binding bids from two interested entities ("Potential Bidders") that were found to be qualified; and

WHEREAS, the Township has reviewed the binding bids submitted in response to the RFB from the Potential Bidders, and has determined that Aqua has submitted a bid that is in the best interest of the Township and offers the greatest value to the Township, as determined by the Board of Supervisors of the Township based on the advice of the Township's Financial Advisor and the Special Counsel; and

DocuSign Envelope ID: 0879D626-A7D0-4478-A359-1A1D97DE5229

WHEREAS, to the extent the Township has determined that the Assets Sale is in the best interests of the Township, such determination to be evidenced through the execution by the Township of the Purchase Agreement, the Township will sell the System Assets to Aqua by entering into the Purchase Agreement with Aqua; and

WHEREAS, pursuant to the Purchase Agreement, the Township will assign the Township 's rights and obligations under all relevant Agreements to Aqua as necessary and appropriate and in accordance with the Purchase Agreement; and

WHEREAS, under the Purchase Agreement, the Township will transfer to Aqua the ownership of the System Assets through the execution and delivery of all necessary and required bills of sale, instruments of assignment, consents to transfer, deeds, and other agreements, documents, and instruments of conveyance (collectively, the "Conveyance Instruments"); and

NOW THEREFORE, BE IT ORDAINED AND ENACTED by the Board of Supervisors of East Whiteland Township as follows:

Section 1. Approval of the Purchase Agreement

The Board of Supervisors hereby authorizes and approves the execution, delivery, and performance of the Purchase Agreement substantially in the form attached hereto as ***Exhibit A***. The Chairperson or Vice Chairperson of the Board of Supervisors or the Township Manager are hereby authorized and directed on behalf of the Township to execute any and all papers and documents and to do and cause to be done any and all actions and things necessary or proper to execute the Purchase Agreement.

Section 2. Assignment of Intermunicipal Agreements and Other Relevant Agreements

The Board of Supervisors hereby authorizes and approves the assignment of the Township's rights and obligations under all relevant agreements. The Chairperson or Vice Chairperson of the Board of Supervisors or the Township Manager are hereby authorized and directed on behalf of the Township to execute any and all papers and documents and to do and cause to be done any and all actions and things necessary or proper to effectuate such assignment, provided that the terms and conditions of all such papers and documents are satisfactory to the Township Solicitor and Special Counsel to the Township.

Section 3. Approval of Deeds, Certificates, and Related Documents

The Board of Supervisors hereby authorizes the execution and delivery by the Chairperson or Vice Chairperson of the Board of Supervisors or the Township Manager of the Conveyance Instruments necessary and required to be executed.

Section 4. Disposition of Proceeds

The proceeds of the sale shall be utilized at the discretion of the Board of Supervisors in a

DocuSign Envelope ID: 0879D626-A7D0-4478-A359-1A1D97DE5229

manner consistent with the Code and other applicable law.

Section 5. Information and Cooperation

The Board of Supervisors hereby authorizes the Township, its agents and employees, to obtain and communicate the System billing information and any and all rights of the Township in connection therewith and other information required or desirable, in the sole discretion of the Township Manager, to Aqua and to cooperate with Aqua for the continued operation of the System and the use of the System Assets.

Section 6. General Authorization

The Board of Supervisors hereby further authorizes the Township, its agents and employees, to take any and all necessary actions required by the Code and other applicable law to complete the sale of the System Assets.

Section 7. Severability

The provisions of this Ordinance are intended to be severable, and if any section, sentence, clause, part or provision hereof shall be held illegal, invalid or unconstitutional by any court of competent jurisdiction, such decision of the court shall not affect or impair the remaining sections, sentences, clauses, parts or provisions of this Ordinance. It is hereby declared to be the intent of the Board of Supervisors that this Ordinance would have been adopted even if such illegal, invalid or unconstitutional section, sentence, clause, part or provisions had not been included herein.

Section 8. Effective Date

This Ordinance shall take effect and be in force five (5) days from and after its approval as required under the Code.

Section 9. Repealer

All other ordinances and resolutions or parts thereof as they are inconsistent with this Ordinance are hereby repealed.

DocuSign Envelope ID: 0879D626-A7D0-4478-A359-1A1D97DE5229

ENACTED AND ORDAINED this 11th day of November, 2020 by the Board of Supervisors of East Whiteland Township.

Appraisals

17. Please explain whether the UVE used replacement cost or reproduction cost and why that methodology was chosen.

Response: Harold Walker III:

Gannett Fleming used the original cost new (OCN) to calculate the trended original cost (TOC) measures, or the reproduction cost of the depreciable assets by multiplying the OCN by specific cost indices. We converted reproduction cost new to replacement cost new (RCN) after factoring in obsolescence. We used the TOC method because the mandated use of the Engineering Assessment's original cost essentially dictates the use of TOC over the reproduction cost or the replacement cost methods. Please see the direct testimony of Harold Walker III, included as Exhibit X to the Application (Aqua Statement No. 4) at p. 16-17 for an explanation of why this method was chosen.

Jerome C. Weinert:

AUS Consultants used replacement cost. Please see the direct testimony of Jerome C. Weinert, Application Exhibit Y (Aqua Statement No. 5) at p. 6 for an explanation of why the replacement cost was chosen.

Appraisals

18. Please provide a copy of the source for the purchase price and number of customers for each comparable acquisition used in the appraisals.

Response: Harold Walker III:

Please see pages 9 to 46 of Exhibit 20 (workpapers) from Exhibit Q to the Application (Gannett Appraisal) for the source for the purchase price and number of customers for each comparable acquisition used in the Gannett Appraisal.

Jerome C. Weinert:

The source of the purchase prices used in the comparable sales approach to the Market Approach was the Asset Purchase Agreements in those transactions. Please see SDR-18 Attachment 1 for excerpts from those Agreements. Mr. Weinert compared those purchase price statistics to the following appraisal statistics: original cost less depreciation, replacement cost new less depreciation, customers, and to cash flows (EBITDA both 5-year and 13-year averages) in developing our comparable sales approach.

Between

NEW GARDEN TOWNSHIP

And

NEW GARDEN TOWNSHIP SEWER AUTHORITY

And

AQUA PENNSYLVANIA WASTEWATER, INC.

August ____, 2016

New Garden

b. The purchase price for the Assets will consist of payment of Twenty-nine Million Five Hundred Thousand Dollars ($29,500,000.00) (the "Purchase Price") to be paid by Buyer at Closing in one lump sum payment of immediately available funds. Buyer and Seller agree that the results of the appraisals pursuant to Act 12 (as defined herein) shall have no effect on the Purchase Price.

c. Buyer also agrees to contribute Twenty Thousand Dollars ($20,000.00) toward Seller's closing costs.

2.6 Assumption of Liabilities and Contracts

a. Buyer will (a) satisfy and comply with all conditions and requirements of the permits specified in Schedule 2.6(a) upon transfer of such permits to Aqua.

b. Seller and Buyer shall: (I) obtain consents to the assignment of the contracts listed on Schedule 2.6(b), section I from all parties to said contracts if required by the terms of the respective contracts; and (II) arrange for the termination or amendment of the contract listed on Schedule 2.6(b), section II and the execution of a new agreement or, in the case of an amendment, an assignment, that is agreeable to Aqua in its sole discretion, with any such new agreement to replace the terminated contract. The contracts listed on Schedule 2.6(b) are collectively referred to herein as the "Assumed Liabilities".

c. Seller hereby acknowledges that, following the effective time of Closing, Aqua shall be responsible for the provision of wastewater service to the customers of Seller.

d. All other liabilities and obligations of Seller shall remain the sole responsibility of Seller. Other than the Assumed Liabilities, Buyer shall not assume and shall not be liable for, and Seller shall indemnify and hold harmless Aqua and its officers, employees and agents from and against, any and all liabilities or obligations of Seller of any nature whatsoever whether express or implied, fixed or contingent, known or unknown at the time of Closing.

3. CLOSING

Closing hereunder (the "Closing") shall take place at the offices of Lamb McErlane PC located at 24 E. Market St., West Chester, PA 19381 or other mutually agreed upon location, commencing at 10:00 a.m. local time, on the later to occur of: (i) one hundred fifty (150) days from the date Seller accepts Buyer's offer, as evidenced by the date of Seller's execution of this Agreement, and (ii) forty-five (45) days (a) after receipt of the last required unappealed regulatory approval of the transactions contemplated herein and (b) fulfillment of all conditions precedent under Section 4 hereof. Seller may terminate this Agreement should Buyer fail to obtain unappealed regulatory approval of the transactions contemplated herein within 365 days of the Effective Date, unless mutually extended in writing. The date of the Closing is referred to herein as the "Closing Date". The effective time of the Closing shall be 12:01 a.m. on the day following the Closing Date.

December 20, 2017

within thirty (30) days after receipt thereof.

First Blanked

1.4 Excluded Assets

The Assets shall not include any of the following (collectively, the "Excluded Assets"):

a. Any and all customer service laterals that run from the curb area (or edge of road or right-of-way) to each of the individual customer's residences or structures.

b. Any and all piping and fixtures internal to each of the individual customer's residences or structures.

c. Any of Seller's cash, investments, cash equivalents and accounts, including without limitation any accounts receivable or unbilled charges for Services furnished for periods prior to and up to the Closing Date.

d. The real and personal property, including the improvements on said real property, described in **Schedule 1.4**.

e. Any other asset, property, easement or interest as is shown in **Schedule 1.4**.

1.5 Consideration

The aggregate cash purchase price for the Assets is FIVE MILLION U.S. Dollars ($5,000,000.00) (the "Purchase Price"). The Purchase Price shall be paid by Buyer at Closing, by wire transfer of immediately available funds to Seller.

Buyer and Seller agree to utilize the procedures under Act 12 of 2016, 66 Pa. C.S. § 1329 ("Section 1329") in completing this transaction.

Buyer agrees to and shall (i) assume at Closing the Assumed Liabilities (hereinafter defined), and (ii) pay at Closing Seller's actual, out-of-pocket costs incurred for services performed, excluding attorneys' fees, after the date of this Agreement in order to comply with the PUC Implementation Order, provided such costs do not relate to the Original Cost Study or any update thereto, and further provided such costs do not relate to the preparation and completion of the Seller's Utility Valuation Expert appraisal report and any additional work by the Seller's Utility Valuation Expert necessary to assist in the processing and prosecution of the application to the Pennsylvania Public Utility Commission ("PUC") in regard to this transaction under Section 1329. Buyer and Seller will be responsible for the costs associated with their respective Utility Valuation Experts. Buyer and Seller agree that the costs associated with the licensed engineer to develop and finalize the Engineer's Assessment will be paid fifty percent (50%) by Buyer and fifty percent (50%) by Seller.

Upon its execution and delivery of this Agreement to the Seller, the Buyer shall obtain a performance bond equal to ten percent (10%) of the Purchase Price (the "Bond"). The Bond

Application of SUEZ Water Pennsylvania Inc., Pursuant to the Pennsylvania Public Utility Code, 66 Pa. C.S. § 1102(a), and 66 Pa. C.S. § 1329 For approval of 1) the transfer, by sale, of Substantially all of the Township of Mahoning's Assets, properties and rights related to its Wastewater collection and conveyance system to SUEZ Water Pennsylvania Inc., and 2) the rights Of SUEZ Water Pennsylvania Inc. to begin to Offer or furnish Wastewater collection and Conveyance service to the public in portions of the Townships of Mahoning, Cooper and Valley, Montour County, Pennsylvania	:	A-2018-3003517
Application of SUEZ Water Pennsylvania Inc., Pursuant to the Pennsylvania Public Utility Code, 66 Pa. C.S. § 1102(a), and 66 Pa. C.S. § 1329 For approval of 1) the transfer, by sale, of Substantially all of the Township of Mahoning's Assets, properties and rights related to its water Distribution system to SUEZ Water Pennsylvania Inc., and 2) the rights of SUEZ Water Pennsylvania Inc. to begin to offer or furnish Water distribution service to the public in Portions of the Townships of Mahoning, Cooper And Valley, Montour County, Pennsylvania	:	A-2018-3003519

RECOMMENDED DECISION

Before
Joel H. Cheskis
Deputy Chief Administrative Law Judge

this issue is ripe for review and does not construe the Joint Petitioners' assent to this term to operate as their preapproval of SUEZ Water Pennsylvania Inc.'s request.

9. That SUEZ Water Pennsylvania Inc. may defer depreciation related to post-acquisition improvements not recovered through the DSIC for book and ratemaking purposes. The Commission recognizes that the Joint Petitioners reserve their rights to litigate their positions fully in future rate cases when this issue is ripe for review and does not construe the Joint Petitioners' assent to this term to operate as their preapproval of SUEZ Water Pennsylvania Inc.'s request.

10. That, pursuant to 66 Pa. C.S. § 1329(d)(iv), SUEZ Water Pennsylvania Inc. may include, in its next base rate case, a claim for transaction and closing costs related to the acquisition of the Mahoning water and wastewater systems. The Commission recognizes that the Joint Petitioners reserve their rights to litigate their positions fully in future rate cases when this issue is ripe for review and does not construe the Joint Petitioners' assent to this term to operate as their preapproval of SUEZ Water Pennsylvania Inc.'s request.

11. That the Commission's Secretary's Bureau shall issue Certificates of Filing or approvals for the following agreements between SUEZ Water Pennsylvania Inc. and a municipal corporation:

(1) Asset Purchase Agreement Between Township of Mahoning and SUEZ Water Pennsylvania Inc., dated April 20, 2018;

(2) Water Service Agreement dated July 9, 2001, between Danville Municipal Authority and Mahoning Township Authority;

(3) Service Agreement dated October 17, 2005 between Valley Township and Mahoning Water Authority;

(4) Connection and Conveyance Agreement dated October 16, 2017 between the Township of Mahoning and Cooper Township Municipal Authority;

(5) Service Agreement dated October 17, 2005 between Valley Township and Mahoning Sewer Authority;

13. SWPA was notified by Mahoning that SWPA was selected as the successful bidder for the Systems, and Mahoning sent a draft asset purchase agreement to SWPA for review and comment. SWPA Statement No. 1 p. 9.

14. The final asset purchase agreement ("APA") was signed on April 20, 2018. SWPA Statement No. 1 p. 9.

15. The APA sets forth the terms and conditions pursuant to which Mahoning will sell, and SWPA will purchase, substantially all assets, properties and rights that Mahoning owns and uses in connection with the Systems. Under the APA, the closing of the Transaction will occur after the receipt of all applicable governmental approvals, including approvals from the Commission, and after all applicable conditions have been met (or waived) by the parties. SWPA Statement No. 1 p. 10.

16. Upon closing of the Transaction, SWPA will take ownership of the Systems and begin rendering water distribution and wastewater collection and conveyance services to Mahoning's current customers and Mahoning will permanently discontinue providing or furnishing water distribution and wastewater collection and conveyance service to the public. SWPA Statement No. 1 p. 10.

17. The negotiated purchase price is $9,500,000 for both the Water System and the Wastewater System. SWPA has allocated $4,734,800 of the negotiated purchase price to the Water System and $4,765,200 of the negotiated purchase price to the Wastewater System. SWPA Statement No. 1 pp. 11-12.

D. The Application and the Utility Valuation Expert ("UVE") Appraisals

18. On July 20, 2018, SWPA filed an application with the Commission to acquire the Water System (the "Water Application") and an application to acquire the Wastewater System ("Wastewater Application") (together, the "Applications"). Water

ASSET PURCHASE AGREEMENT

BETWEEN

TOWNSHIP OF SADSBURY

AND

PENNSYLVANIA-AMERICAN WATER COMPANY

SEPTEMBER 5, 2017

(c) Any and all grinder pumps, piping and fixtures located at the curb-line or edge-of-the road to and throughout the customer's property and included as components of the Customer Sewer Laterals;

(d) Any and all stormwater system facilities including, but not limited to: (a) facilities located on, in, within, or under the real property, including easements, that is a part of the Assets, (b) facilities that are connected to the System and located within the public rights-of-way and (c) facilities or assets used in the operation of a municipal separate stormwater system;

(e) Seller's cash on hand on the date of Closing and Seller's account receivables related to the System for services rendered through the close of business on the Closing Date;

(f) All rights of Seller under this Agreement and related Bill of Sale and Assignment of Contracts Agreement as it pertains to the transfer and sale herein contemplated; and

(g) the specific assets, properties and rights of Seller set forth on **Schedule 1.3**.

1.4 Accounts Receivable. Accounts receivable for wastewater services related to the System rendered through the close of business on the Closing Date shall be excluded assets as per **Section 1.3**, and accounts receivable for wastewater services related to the System rendered thereafter shall belong to PAWC.

ARTICLE 2
PURCHASE PRICE

SADSBURY

2.1 Purchase Price for the Assets.

(a) Upon its execution and delivery of this Agreement to the Seller, PAWC shall remit a deposit of THIRTY SEVEN THOUSAND FIVE HUNDRED DOLLARS ($37,500.00) (i) which shall be retained by Seller in the event that the Closing does not occur for any reason other than Seller's default under this Agreement or a failure of a condition precedent under Section 8.1 below, and (ii) which, in the event of Closing, shall be applied to the Purchase Price.

(b) Subject to the terms and conditions of this Agreement, the purchase price (the "**Purchase Price**") for the Assets shall be NINE MILLION FIVE HUNDRED THOUSAND DOLLARS ($9,500,000.00). The parties agree that the Purchase Price represents the "negotiated purchase price" for such Assets, pursuant to the valuation process set forth in Section 1329 of the Public Utility Code, 66 Pa.C.S. § 1329. The Purchase Price shall be payable directly to Seller on the Closing Date by wire transfer or by corporate check, at Seller's discretion.

2.2 Use of Fair Market Valuation Process. Following the execution of this Agreement, PAWC and Seller shall each take such any and all further actions as are necessary to invoke, commence and complete the fair market valuation process set forth in Section 1329 of the Public Utility Code, 66 Pa.C.S. § 1329. Without limiting the generality of the foregoing, PAWC and Seller have each engaged a utility valuation expert from the list of such experts maintained by the Pennsylvania Public Utility Commission ("**PUC**") and have jointly selected and engaged a licensed engineer for the purposes set forth in Section 1329(a)(4) of the Public Utility Code, 66 Pa.C.S. § 1329(a)(4). The final reports of each of the two utility valuation experts are attached as **Schedule 2.2**. All costs and expenses associated with the utility valuation experts shall be the responsibility of the party engaging such expert. All costs and expenses associated with the licensed engineer jointly selected by the parties were shared equally between PAWC and Seller prior to the execution of this Agreement. PAWC

the Seller with respect to such Nonassignable Asset in connection with the arrangements under this Article II.

(c) If, following the date hereof and prior to the Closing, Buyer identifies any contract to which the Seller is a party which is not identified on Schedule 4.15 as an Assigned Contract as of the date hereof, and Buyer reasonably determines such contract is necessary to the operation of the System, Buyer shall give notice of such determination to the Seller and the Seller shall, promptly following receipt of such notice, deliver to Buyer an updated Schedule 4.15 identifying such contract, and such contract shall thereafter constitute and be deemed an Assigned Contract for all purposes hereunder.

(d) In the event that, during the twelve (12) month period following the Closing, Buyer identifies any contract to which the Seller was a party as of the Closing and which (i) was not set forth on or properly identified on Schedule 4.15 (as may be updated pursuant to (c)) and (ii) Buyer reasonably believes is necessary to the operation of the System, the Seller shall, promptly following Buyer's written request therefor, execute, acknowledge and deliver, or cause to be executed, acknowledged and delivered, such other instruments of conveyance and transfer and other documents, and perform or cause to be performed such further acts, as may be reasonably required to evidence or effectuate, or more fully evidence or effectuate the assignment of such contract to Buyer for no additional consideration, and upon such assignment, such contract shall be deemed an Assigned Contract for all purposes hereunder.

ARTICLE III.

PURCHASE PRICE

STEELTON

Section 3.01 Purchase Price.

(a) Purchase Price for the Assets. Subject to the terms and conditions of this Agreement, the purchase price ("Purchase Price") for the Acquired Assets shall be Twenty Two Million Five Hundred Thousand Dollars ($22,500,000). The Purchase Price shall be payable directly to seller on the Closing Date by wire transfer.

(b) Use of Fair Market Valuation Process. Following the execution of this Agreement, Buyer and Seller shall each take such actions as are necessary to invoke, commence and complete the fair market valuation process set forth in Section 1329 of the Public Utility Code, 66 Pa.C.S. §1329. Without limiting the generality of the foregoing, Buyer and Seller shall each engage a utility valuation expert other than HRG from the list of such experts maintained by the PaPUC and shall jointly utilize HRG, a licensed engineer for the purposes set forth in Section 1329(a)(4) of the Public Utility Code, 66 Pa.C.S. §1329(a)(4). All costs and expenses associated with the licensed engineer jointly utilized by the parties shall be shared equally between the Buyer and Seller. Seller agrees that Buyer shall prosecute an application for approval of the transaction contemplated by this Agreement and Buyer agrees that: (1) Seller has the right to intervene and participate in any regulatory or legal proceeding relating to the application, including negotiation or execution of a settlement agreement related to the application; (2) Buyer shall not oppose

Article 2.4 **Excluded Liabilities**. Any other liabilities and obligations of Seller shall remain the sole responsibility of Seller, including any liabilities and obligations of Seller arising under or to be performed under the Collective Bargaining Agreement and any liabilities or obligations with respect to any Compensation Plan that the Seller maintains, contributes to, has an obligation to contribute to or otherwise has any liability with respect thereto, and any withdrawal liability or funding obligation incurred by Buyer on or after the Closing with respect to any multi-employer pension plan (the "Excluded Liabilities").

Article 2.5 **Customer Billing**. Unless Buyer and Seller agree to a different procedure prior to Closing, Seller shall issue final bills for all customer accounts in accordance with its current billing practices after the Closing Date.

Article 2.6 **Purchase Price**.

a) Purchase Price. Subject to Section 3.4, the purchase price for the sale, transfer, assignment, conveyance and delivery of the Assets shall be $96,000,000.00 as may be adjusted in accordance with the terms of this Agreement (the "Purchase Price"), which shall be paid by Buyer to Seller at Closing in one lump sum payment by cash or by wire transfer of immediately available funds. Buyer and Seller agree that the results of any appraisals pursuant to Act 12 (defined below) shall have no effect on the Purchase Price.

b) Deposit. Within fourteen (14) days after the Effective Date, Buyer shall remit a deposit in the form of a performance bond in substantially the form attached hereto as Exhibit "A" (the "Bond") in the amount of $9,600,000.00 (equal to ten percent (10%) of the Purchase Price) ("Deposit"). The Bond is payable to Seller and the surety company shall pay to Seller the amount of the Bond under the circumstances set forth in Sections 10.1(a) and 10.2(c), if applicable. Upon Closing, Seller will provide a full and unconditional discharge and release of the Bond by way of a written release letter addressed to and in a form reasonably satisfactory to the surety company (the "Bond Release").

c) Intentionally Deleted.

d) Transfer Taxes. Any and all deed stamps or transfer taxes that may be due the Commonwealth of Pennsylvania or any political subdivision in connection with the sale, transfer, assignment, conveyance and delivery hereunder of the Assets to Buyer (collectively, "Transfer Taxes"), shall be borne equally between Buyer and Seller.

ARTICLE 3
CLOSING

Article 3.1 **Closing**. The Closing hereunder (the "Closing") shall take place at the offices of Fox Rothschild LLP at 2000 Market Street, Philadelphia, Pennsylvania, or other mutually agreed upon location, commencing at 10:00 a.m. local time, within five (5) Business Days after the date upon which all the conditions precedent to Closing described in this Agreement have been fulfilled or waived, or at such other place and time as may be mutually agreed to by the

Section 3.01. **Purchase Price**

. The purchase price for the Acquired Assets shall be Fifty Million Two Hundred Fifty Thousand Dollars ($50,250,000) (the "Purchase Price") which shall be paid as follows at Closing:

(a) Buyer shall (i) provide for payment in full of the total amount of Outstanding Indebtedness (less any amounts of Outstanding Indebtedness actually assumed by Buyer pursuant to clause (ii) below) and/or (ii) subject to the provisions of Section 7.07, assume any of Seller's obligations related to the Outstanding Indebtedness and obtain a release of Seller from all obligations thereunder in such form and terms reasonably acceptable to Seller and/or provide written evidence of such payment in full to Seller in such form reasonably acceptable to Seller, at Buyer's discretion;

(b) Buyer shall pay, subject to any adjustment pursuant to Section 3.01(c), to Seller by wire transfer of immediately available funds the balance of the Purchase Price (after taking into account the amount paid or assumed by Buyer pursuant to Section 3.01(b)) to one or more accounts that Seller designates and provides to Buyer at least three (3) Business Days prior to the Closing Date.

(c) Final Billing: The Parties agree that Buyer shall be entitled to all customer billings with respect to sanitary wastewater customers services for the period on or after the Closing Effective Time, and Seller shall be entitled to all such billings for the period prior to the Closing Effective Time. The Parties shall cooperate to calculate an agreed upon proration of billing amounts and to the extent that either Party collects billings that are attributable to service provided by the other Party, the Party holding the other Party's billing collections shall pay such amount to the other Party.

Section 3.02. **Fair Consideration**

. The Parties acknowledge and agree that the consideration provided for in this Article III represents fair consideration and reasonable equivalent value for the sale and transfer of the Acquired Assets and the transactions, covenants and agreements set forth in this Agreement, which consideration was agreed upon as the result of arm's-length good faith negotiations between the Parties and their respective Representatives.

Section 3.03. **Allocation of the Purchase Price**

(c) If, following the Effective Date and prior to the Closing, Buyer identifies any contract to which the Seller is a party which is not identified on Schedule 4.15 as an Assigned Contract as of the Effective Date, and Buyer reasonably determines such contract is necessary to the operation of the System, Buyer shall give notice of such determination to the Seller and the Seller shall, promptly following receipt of such notice, deliver to Buyer an updated Schedule 4.15 identifying such contract, and such contract shall thereafter constitute and be deemed an Assigned Contract for all purposes hereunder.

(d) If, during the twelve (12) month period following the Closing Date, Buyer identifies any contract to which the Seller was a party as of the Closing and which (i) was not set forth on or properly identified on Schedule 4.15 (as may be updated pursuant to (c)) and (ii) Buyer reasonably believes is necessary to the operation of the System, the Seller shall, promptly following Buyer's written request therefor, execute, acknowledge and deliver, or cause to be executed, acknowledged and delivered, such other instruments of conveyance and transfer and other documents, and perform or cause to be performed such further acts, as may be reasonably required to evidence or effectuate, or more fully evidence or effectuate the assignment of such contract to Buyer for no additional consideration, and upon such assignment, such contract shall be deemed an Assigned Contract for all purposes hereunder.

ARTICLE III.

ESCROW; PURCHASE PRICE AND ADDITIONAL PURCHASE PRICE

Section 3.01. **Escrow Amount.**

At Closing, Five Million Dollars ($5,000,000) of the Purchase Price shall be deposited in escrow (the "Escrow Fund") with the Escrow Agent pursuant to an escrow agreement in the form of Exhibit B, by and among the Seller, the Buyer, and the Escrow Agent (the "Escrow Agreement") to provide for Seller's post-Closing obligations pursuant to Article VI. The Escrow Fund shall be released in accordance with the Escrow Agreement. After the Closing Date and notwithstanding any other provision of this Agreement, the Escrow Fund is Buyer's sole recourse with respect to providing for Seller's post-Closing obligations pursuant to Article VI.

Section 3.02. **Purchase Price and Additional Consideration**

The purchase price for the Acquired Assets shall be Two Hundred Seventy-Six Million Five Hundred Thousand Dollars ($276,500,000) (the "Purchase Price") which shall be paid as follows at Closing:

(a) Buyer shall pay in full, fully fund or defease the total amount of Outstanding Indebtedness.

(b) Subject to any adjustment in Purchase Price resulting from the proration procedures set forth in Section 3.02(c) and after making the payments required in Sections 3.01 and 3.02(a), Buyer shall pay to the Seller by wire transfer of immediately available funds the balance of the Purchase Price to one or more accounts that Seller designates and provides to Buyer at least three (3) Business Days prior to the Closing Date.

effectuate the assignment of such contract to Buyer for no additional consideration, and upon such assignment, such contract is deemed an Assigned Contract for all purposes hereunder.

ARTICLE III.
PURCHASE PRICE AND ADDITIONAL PURCHASE PRICE

Section 3.01. Purchase Price.

The purchase price for the Acquired Assets is Thirteen Million Seven Hundred Fifty Thousand Dollars ($13,750,000) (the "Purchase Price") which Buyer shall pay as follows at Closing:

(a) Buyer shall pay, subject to any adjustment pursuant to Section 3.01(b), to Seller by wire transfer of immediately available funds the Purchase Price less (i) debt repayments, if any, required to release any Liens on Acquired Assets, (ii) the deposit as provided in Section 3.01(c), and (iii) Seller's share of Transfer Taxes payable upon recording of real estate, if any, as provided in Section 3.03, to one or more accounts that Seller designates and provides to Buyer at least three (3) Business Days before the Closing Date; and

(b) Final Billing: The Buyer is entitled to all customer billings with respect to sanitary wastewater customers' services for the period on or after the Closing Effective Time, and Seller is entitled to all such billings for the period before the Closing Effective Time. The Parties shall cooperate to calculate an agreed upon proration of billing amounts and to the extent that either Party collects billings that are attributable to service provided by the other Party, the Party holding the other Party's billing collections shall pay such amount to the other Party.

(c) The Buyer shall pay a deposit of Ninety Thousand Dollars ($90,000) within ten (10) days of the Effective Date to the Seller to be used for Seller's incurred engineering and legal fees related to this transaction. At the successful closing of the transaction, the deposit will be deducted from the Purchase Price at settlement. In the event that the transaction does not successfully close, the amount of the deposit that has not been spent on engineering and legal fees will be refunded to the Buyer. The amount of such refund will be calculated as of the date of a termination under Section 14.01 based on the Seller's expenditures and accrued expenses as of such date of termination. Any engineering and legal fees incurred by the Seller related to this transaction that exceed the $90,000 deposit shall be the sole responsibility of the Seller.

Section 3.02. Fair Consideration.

The consideration provided for in this Article III represents fair consideration and reasonable equivalent value for the sale and transfer of the Acquired Assets and the transactions, covenants and agreements set forth in this Agreement, which consideration was agreed upon as the result of arm's length good faith negotiations between the Parties and their respective Representatives.

Section 3.03. Transfer Taxes.

the terms of any applicable contract that constitutes a Nonassignable Asset, as agent or subcontractor for the Seller, pay, perform and discharge the liabilities and obligations of the Seller thereunder from and after the Closing Date, but only to the extent that such liabilities and obligations would constitute Assumed Liabilities if the applicable consent or approval had been obtained on or before the Closing Date and such Nonassignable Asset had been assigned to Buyer at Closing. To the extent permitted under Law, the Seller shall hold in trust for and pay to Buyer promptly upon receipt thereof, such Nonassignable Asset and all income, proceeds and other monies received by the Seller with respect to such Nonassignable Asset in connection with the arrangements under this Article II.

(c) If, following the Effective Date and before the Closing, Buyer identifies any contract to which the Seller is a party which is not identified on Schedule 4.14 as an Assigned Contract as of the Effective Date, and Buyer reasonably determines such contract is necessary to the operation of the System, Buyer shall give notice of such determination to the Seller and the Seller shall, promptly following receipt of such notice, deliver to Buyer an updated Schedule 4.14 identifying such contract, and such contract will thereafter constitute and be deemed an Assigned Contract for all purposes hereunder.

(d) If, during the twelve (12) month period following the Closing Date, Buyer identifies any contract to which the Seller was a party as of the Closing and which (i) was not set forth on or properly identified on Schedule 4.14 (as may be updated pursuant to (c)) and (ii) Buyer reasonably believes is necessary to the operation of the System, the Seller shall, promptly following Buyer's written request therefor, execute, acknowledge and deliver, or cause to be executed, acknowledged and delivered, such other instruments of conveyance and transfer and other documents, and perform or cause to be performed such further acts, as may be reasonably required to evidence or effectuate, or more fully evidence or effectuate the assignment of such contract to Buyer for no additional consideration, and upon such assignment, such contract will be deemed an Assigned Contract for all purposes hereunder.

ARTICLE III.

PURCHASE PRICE AND ADDITIONAL CONSIDERATION

Section 3.01. **Purchase Price and Additional Consideration**

The purchase price for the Acquired Assets is Fifty Three Million Dollars ($53,000,000) (the "Purchase Price") which Buyer shall pay as follows at Closing:

(a) Buyer shall pay Three Million Dollars ($3,000,000) to Seller as a deposit on account of the Purchase Price (the "Deposit") upon the earlier to occur of: (1) the third business day following Buyer's receipt of notice from the PaPUC that the application to the PaPUC for the transaction contemplated by this Agreement has been conditionally accepted; and (2) December 15, 2020. The Deposit shall be governed as follows:

(i) Subject to subparagraph (ii) below, Seller shall be free to use the Deposit upon receipt as it determines in Seller's sole discretion.

Miscellaneous

20. Are there any outstanding compliance issues that the Seller's system has pending with the PA Department of Environmental Protection. If yes, provide the following information:

a. Identify the compliance issue(s);

b. Provide an estimated date of compliance;

c. Explain Buyer's anticipated or actual plan for remediation;

d. Provide Buyer's estimated costs for remediation; and,

e. Indicate whether the cost of remediation was or is anticipated to be factored into either or both fair market valuation appraisals offered in this proceeding.

Response: a.- d. Compliance issues

Mark J. Bubel, Sr.

The Township does not currently have compliance issues. Please see the Direct Testimony of Mark J. Bubel, Sr., Application Exhibit V (Aqua Statement No. 2) page 14. The Township did not have any sanitary sewer overflows ("SSOs") in the system in 2019 or 2020.

e. Cost of remediation

Harold Walker III:

Gannet Fleming's appraisal did not factor in specific projected remediation cost. However, the income approach does factor in (deduct) estimated capital expenditures when calculating future net cash flows. Historical remediation cost is reflected in the cost approach to the extent they are included in the Engineers Assessment's inventory.

AQUA PENNSYLVANIA WASTEWATER, INC.
EAST WHITELAND TOWNSHIP
Section 1329 Application Standard Data Requests

Jerome C. Weinert:

While the cost of remediation of the compliance issues of the system were not specifically considered in AUS's appraisal, the appraisal's various approaches address the remediation issue in their application. The Cost approach's recognition of depreciation, i.e., the difference between the replacement cost new of $85,964,664 (a system without need for remediation) and the replacement cost new less depreciation of $58,078,339 reflects the value diminishment ($37,886,325) resulting from all causes, physical and functional depreciation related to wear and tear including such factors as remediation. Plant investment (replacement cost new less depreciation) was used along with historical plant expenditures in the income approach to project future expenditures (a deduction from cashflows) thus reducing the resultant income approach thereby addressing any remediation. The market approach was based on an analysis of market comparable to the depreciated original cost (OCLD) and the replacement cost less depreciation (RCNLD) both of which include the depreciation related to aging and wear and tear which also addresses any remediation costs.
